Dedication

This book is dedicated to Colonel William LeRoy Thompson, Medical Corps, U.S. Army (1891-1975)

Colonel Thompson, legendary teacher of morphology in radiology and originator of the Gamut concept, received his M.D. degree from the University of Pennsylvania in 1917, and began his long and illustrious career in the U.S. Army Medical Corps that same year. He had various assignments in general medicine and administration and later became one of the early Army radiologists.

It was during his last year before retirement from the Army (1951), however, that he began his most important work, his major contribution to medicine: the organization of the Registry of Radiologic Pathology at the Armed Forces Institute of Pathology. After retirement, he offered his services, without remuneration, to continue as full-time Registrar and Chief of Radiologic Pathology.

In the ensuing 16 years, Colonel Thompson worked laboriously in accessioning new material and collating the material already in the files of the Institute. He was sustained in this labor by hours of daily contact with his "students." It was here, in seminars at the viewbox, that Colonel Thompson drew upon a lifetime of accumulated knowledge and experience to educate residents, fellows, and practicing physicians from all over the world who came to study under his guidance. In this role, Colonel Thompson was the catalyst, igniting in his students a love of learning and an understanding of the vital role that pathology plays in the discipline of radiology. He was primarily a morphologist, and accepted as such by his colleagues and peers at the AFIP.

Colonel Thompson's down-to-earth nature, his éclat in interpersonal relationships, his obvious deep regard for his students as well as medicine, and his abundant and abiding warmth as a human being have made him truly beloved by all who came to know him.

A Tribute to Ben Felson

He was certainly the greatest radiologist of his time, and perhaps of all time. He was one of the great men of this century. He was also my very close and dear friend and colleague. He was like a second father to me and his loss to me is monumental, as is his loss to all whose lives he touched in such a profound and positive manner. He lived the fullest life of anyone I ever knew. He was the quintessential student and teacher, the consummate traveler, and the most compassionate, loving, and lovable human most of us have ever known.

He was that rare combination of Will Rogers and William Osler, and wherever he went, from Cincinnati to Colombia to China, he made a lasting impact and lifelong friends. More than anyone else, he enhanced the reputation and knowledge of the fledgling speciality of Radiology through his inquisitiveness and his gift for communication with both the written and spoken word. He nurtured the careers of countless students, residents, and doctors around the world. He will live forever in the hearts and minds of all who knew and loved him.

Godspeed Ben, and continue to smile down on us from above as you did so often during your all-too-brief stay with us on earth.

Maurice Reeder, M.D.

Foreword to *Gamuts in Radiology*, Third Edition

by Elias G. Theros, M.D.

I. Meschan Distinguished Professor of Radiology,
Wake Forest University Medical Center,
Winston-Salem, North Carolina, USA

Amongst the present generation of radiologists, beguiled by the glamour and excitement of the new high tech imaging and interventional modalities, too few have developed a strong sense of differential diagnosis based on radiologic pattern recognition and its correlation with clinical and laboratory findings. There is no question about the incredible contribution by the new modalities to our diagnostic armamentarium, but in the evolution of modern-day radiologic practice, the cognitive element has been neglected and our abilities as diagnosticians have suffered.

The advent of the third edition of Reeder and Felson's *Gamuts in Radiology* is timely and welcome. As always, use of the gamut lists will help evoke differential thinking, and this has been enhanced by the addition of numerous new gamuts as well as by the updating of over three-fourths of the previously existing gamuts.

Drs. Reeder and Felson in preparing these gamuts have made a major contribution to diagnosis in radiology. This they were able to do because of the depth of their own experience and their powers of observation. Those of us who have worked closely with them know that they are radiologists of consummate skills, both in the teaching and practice settings. They are master teachers to whom we all owe much. It is radiology's great fortune that Dr. Reeder has persisted, after Dr. Felson's untimely death, in laboring long hours in gamut researching and updating. He is providing his professional colleagues with an ever improving powerful diagnostic tool. We are all in his debt.

Preface

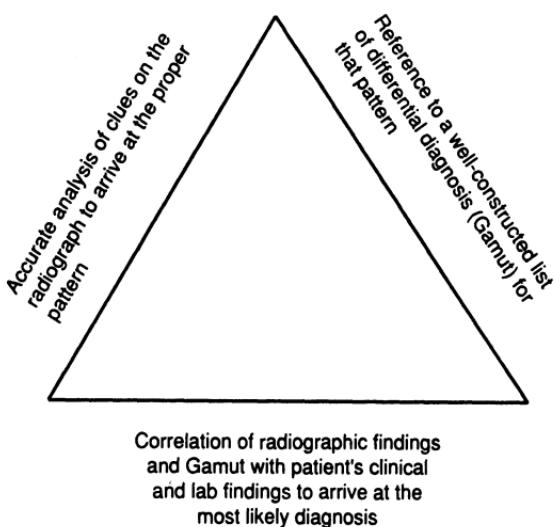

The word *gamut* is defined as the whole range of anything. As used in this book, it indicates a complete list of causes of a particular roentgen finding or pattern.

This book, which consists of material excerpted and reorganized from *Reeder and Felson's Gamuts in Radiology, Third Edition*, was created specifically for radiologists, cardiologists, and cardiovascular surgeons. If used correctly, it will become an indispensable aid to pattern recognition and differential diagnosis when interpreting radiographs in the clinical setting.

Most radiologists use the "Gamut approach" without calling it that. You see an enlarged left atrium and immediately search your memory bank for causes. You recall perhaps six causes, then eliminate two because of rarity or incompatible roentgen pattern. Then, with the clinical information at your elbow, you weed out two more that don't fit the clinical setting, leaving you with perhaps one or two likely diagnoses.

This process is the basis of the triangulation approach to radiologic diagnosis espoused by the originator of the gamut concept, Colonel William LeRoy Thompson. He taught that roentgen diagnosis begins with accurately interpreting all the nuances and data inherent in the radiograph, then using that information to derive a particular pattern. The second side of the triangle involves reference to a well-constructed list of differential diagnosis, which includes not only the common causes, responsible for over 80 percent of the entities, but also the uncommon causes, which are frequently overlooked. The triangle is then completed by reference to the pertinent clinical and laboratory data, age, sex, and other important information concerning the patient.

The purpose of this book is to provide you with complete and accurate lists of differential diagnosis. It is an unobtrusive consultant, quickly available whenever you interpret

films or prepare a presentation. In each patient, the possibilities are narrowed down to those that fit the roentgen signs and the clinical and laboratory findings. Of course, all the pertinent data on the film must be analyzed to find the appropriate roentgen sign or pattern. Study well — to identify a pattern incorrectly will land you in the wrong gamut, which could be a disaster!

Many individual gamuts that first appeared in *Gamuts in Radiology* can also be found reproduced (credited or otherwise) in a variety of publications. Many excellent texts have been published that emphasize the gamut or differential diagnosis approach, including those by Drs. Burgener and Kormano, Chen, Eisenberg, Elliott, Fraser and Pare, Sutton and Young, Swischuk, and Taybi and Lachman. However, residents and practitioners who use abbreviated lists from other, more watered-down, sources are deprived of the true worth of gamuts, which is to provide a comprehensive listing of the multiple causes, both common and uncommon, for a particular pattern. The point is to jog your memory to recall *all* the various possibilities for any given finding.

We are the first to admit that the amount of information and knowledge required to analyze with unerring accuracy and completeness all of the patterns which can present to

the radiologist is beyond the comprehension of any two (or perhaps twenty) individuals. Nevertheless, our combined experience of over 75 years' practice in major medical centers in the United States as well as numerous visiting professorships throughout virtually the entire world, have given us sufficient perspective to at least attempt such a prodigious endeavor. Along the way we have been greatly aided by our close association with many outstanding radiologists who broadened our horizons and added invaluable insights in their own specialty areas.

While the individual gamuts are extensively referenced, you will note that the majority of current references refer to textbooks rather than journal articles. This is because today's general and subspecialty textbooks are much more likely to refer to the multiple causes for a given pattern than individual articles, which are usually focused on specific entities or procedures. Furthermore, exhaustive lists of references would increase the book's size enormously and undermine its primary goal, which is to provide a quick, efficient reference.

You may question whether a specific listed entity can give rise to a given pattern, or whether it is a common or uncommon member of that gamut. Although there may be some errors among the many thousands of entries, virtually all listed causes have appeared in the literature or have been seen by the authors or our colleagues. Obviously, what is common in one part of the world may be rare or unknown elsewhere. For example, Chagas' disease is a common cause of myocardopathy in South America, but is relatively unknown elsewhere. Coronary artery disease, on the other hand, is extremely common in North America and Europe, but is relatively uncommon in the tropics. Thus, while the list of causes for a specific pattern may be quite complete within each gamut, the relative prevalence of those causes can vary widely geographically.

The legendary Colonel Thompson is well remembered by his former students and disciples for his insistence on the triangulation approach to radiographic interpretation. This clinically oriented physician taught an entire generation of radiology residents and fellows the nuances of interpre-

tion and differential diagnosis of various roentgen patterns. In today's clinical setting, where the proliferation of new technologies is colliding with ever increasing pressures to contain costs and optimize the use of diagnostic tests (as Dr. Theros has so eloquently stated in his foreword), it is more important than ever that young radiologists and clinicians learn and apply these principles, which are summarized in these remarks by the Colonel:

"The radiograph is to the radiologist what the gross specimen is to the pathologist. It is a window on the disease, mirroring the many changes occurring within the patient during the course of an illness."

"The clues to the pattern (and often the diagnosis itself) are almost always on the film if you are observant enough and smart enough to pay attention to all the data inherent in the radiograph."

"Remember that the radiograph is only one-tenth of a second in the history of a disease process. You must always think back to what the findings looked like a day or a week or a year ago (preferably with the help of old films if available, but using intuition or deductive reasoning in their absence) and think ahead to what the findings are likely to be tomorrow or next week."

"A good radiologist must be a good anatomist and morphologist and have a clear understanding of the correlation between what is seen on the radiograph and the underlying gross and microscopic pathology."

Finally, I would like to add a few of my own thoughts that I have passed on to residents over the years.

"The radiograph is only one piece of the diagnostic puzzle. It must be evaluated in light of what you know about the patient. The radiologist cannot function as an isolated island unto himself. He or she needs a knowledge of differential diagnosis together with clinical information and interaction with the patient's physician to arrive at the proper solution."

"The radiograph is like a single page in a mystery novel. To find out 'whodunit' you usually need more detailed information than is available at a single glance."

"Remember that what comes out of the automatic processor so often is not a diagnosis but rather a diagnostic challenge, a pattern for which there may be four or forty

possible causes. It is up to us, as the physician's consultant, to interpret this pattern correctly using the triangulation approach."

"With newer modalities such as MRI, it is becoming increasingly important to be conversant with the science behind the images (eg, T1 and T2 changes)."

"The ideal radiologist (or cardiologist or surgeon who routinely analyzes radiographs or angiograms) should combine exceptional visual acuity with the intuition of a good detective, the solid background of a scientist, and the knowledge of odds of a smart card player. It is these qualities and attention to detail that set him or her apart from others who merely 'look at' films."

And perhaps the most important advice to residents and young physicians: "Work hard and play hard. Enjoy your work and free time. Life is short."

MMR

Acknowledgments

In creating a project of this magnitude, the authors will inevitably borrow freely from many sources. Specific citations follow most gamuts, and a list of more general references appears at the end of this volume. For those instances where debts are not acknowledged, the reader should understand that lost notes and jaded memories, not ingratitude, are to blame.

The published works of the following outstanding radiologists resulted in valuable additions to many of the gamuts found in this book: Drs. Kurt Amplatz, Francis A. Burgener, W. R. Castañeda-Zuñiga, J. Chen, Ronald L. Eisenberg, Larry Elliott, Robert Fraser, Eugene Gedgaudas, E. Robert Heitzman, William Meszaros, A. J. Moss, Frederick Silverman, David Sutton, Leonard E. Swischuk, Hooshang Taybi, and, of course, Benjamin Felson, the renowned co-author of the two previous editions of the complete *Gamuts in Radiology* text. We want to especially thank Dr. Elias G. (Lee) Theros for his insightful foreword to this text.

The production and distribution of this book would not have been possible without the unwavering faith and guidance of the Editorial and Book Production staffs of Springer-Verlag New York, who kept the project on track to assure the timely publication of a highly refined end product.

An Appreciation

To my wife, Barbara, whose patience, love, and perseverance made possible the timely publication of this present work, and to the entire Reeder family, and to those colleagues, mentors, and friends, past and present, who have so indelibly defined my own career:

William LeRoy Thompson

Benjamin Felson

Elias G. Theros

Philip E. S. Palmer

Harold G. Jacobson

MMR

How To Use This Book

1. TABLE OF CONTENTS

This book has an extensive index. In addition, each subsection has its own table of contents. It will pay you to take a few minutes to look over the subheadings in the table of contents of each subsection. Gamuts are grouped in what we consider a logical manner. However, our logic may not be your logic; if you don't find a gamut where you think it belongs, scan the entire table of contents of that subsection or refer to the index before assuming that it is absent.

2. SUBGAMUTS

A subgamut amplifies some part of the gamut to which it belongs. Be sure to refer to it after you have finished with the parent gamut.

3. INCIDENCE

In most of the gamuts, the entities are subdivided into two groups, *Common* and *Uncommon*. These refer to the relative, rather than absolute, incidence of the disease. Although a coronary artery aneurysm (Gamut C-56) is an uncommon roentgen finding, if you do see one, the etiology will generally prove to be atherosclerosis or congenital as listed under *Common*. However, there are at least eleven other *Uncommon* entities that must be considered in the differential diagnosis.

The prevalence of many disorders varies both geographically and from one type of institution to another. To avoid major discrepancies, we have based our incidence estimates on our experience at Theoretical General Hospital, Midland, U.S.A.

Admittedly, some of the gamuts deal with seldom seen roentgen signs, but it is in just this type of situation that a gamut is most welcome. It substitutes someone else's experience for your own lack of it.

4. ALPHABETICAL LISTING

The entries in each gamut have been alphabetized for your convenience. Since the entry may not be listed in the form that first comes to your mind, be sure to scan the entire gamut before assuming that a condition is not included. Abbreviations are listed on page 129.

5. SUPPLEMENTARY GAMUTS

Most of the gamuts refer to a roentgen sign, pattern, or complex. However, interspersed throughout the book are classifications, anatomic and physiologic gamuts, and other information useful to the radiologist and clinician. A typical example is Gamut C-5A (Differential Features of Common Left to Right Shunts).

6. TERMINOLOGY

We have usually selected the most widely used terms for each disease, often furnishing a synonym or eponym as well.

In order to shorten the gamut lists, similar or related conditions are combined, often separated by a comma or semicolon (eg, PDA; aortopulmonary window). Inclusive group designations, such as lymphoma or bleeding or clotting disorders, are often utilized. In these instances you will find the subscript _g, which tells you to look in the Glossary (page 131) if you want to know all the entities in that group. Example: Anemia, primary_g. If one member of a group is a more likely cause of a particular roentgen finding, it is specifically listed. To illustrate: Anemia, primary_g (esp. sickle cell).

7. BRACKETS

Brackets are used to indicate a condition that does not actually cause the gamuted roentgen finding, but can produce roentgen changes that simulate it. In Gamut C-45 (Prominence of the Main Pulmonary Artery Segment) *mediastinal or left hilar mass*, which is not a cause, but a mimic, is bracketed.

8. SYNDROMES

S. stands for Syndrome. We must apologize for the great number of congenital syndromes we have included. Since the

information is available, we could hardly ignore it. Lump them together? The pediatric roentgenologists had just split them apart. We had a huge tiger by the tail, an animal with variegated stripes and swollen gamuts. Seckel's bird-headed dwarfism, VATER, and prune-belly syndromes, indeed! They should have their own Gamut Book. We can only advise those of you who seldom see dwarfs and other little people to ignore these entries. For those who are interested, it will be useful to consult Taybi and Lachman's syndrome book for definitions of these congenital disorders.

9. REFERENCES

References are used to cite only articles, books, and other contributions that have provided a number of the disease entities listed in a gamut. To document each entity would be an impossible task. A listing of general references appears in the back of the book.

10. ALTERATIONS

We are fully aware that there are omissions on the Gamut lists. Very rare entities or syndromes or single case reports have been deliberately omitted. There are also some inconsistencies in terminology, coverage, and unity. There may even be occasional factual inaccuracies. We hope these flaws are neither too frequent nor too annoying.

Please correct errors if you encounter them; delete entities that you feel do not belong on a gamut; insert additional disorders and add new gamuts as you discover them in the literature or in your practice; create some gamuts yourself. Send us your changes, with documentation, so that they can be incorporated in future editions.

 - C-83** Right Anterior Cardiophrenic Angle Lesion
 - C-84** Retrocardiac Lesion in a Child
 - C-85** Pleural Effusion with Normal Lung
(See Gamut C-86)
 - C-86** Pleural Effusion with Radiographic Evidence of Other Disease in the Chest
(See Gamut C-85)
 - C-86A** Pleural Effusion with Enlarged Cardiac Silhouette
 - C-87** Massive Pleural Effusion
 - C-88** Chylothorax, Lymphothorax
 - C-89** Classification of Rib Notching
 - C-90** Diseases Common to the Tropics and Developing Countries that May Involve the Cardiovascular System

Gamut C-1

CONGENITAL SYNDROMES WITH CONGENITAL HEART DISEASE

COMMON

1. Adrenogenital S., Addison's disease (aortic, tricuspid, or mitral insufficiency)
2. Asplenia S., polysplenia S. (complex cyanotic conditions)
3. Chondrodysplasia punctata (VSD, PDA)
4. Chondroectodermal dysplasia (Ellis-van Creveld S.)
(septal defects, common atrium)
5. Chronic granulomatous disease of childhood (aortic stenosis)
6. Crouzon S. (PDA, coarctation)
7. Diabetic mother S. (cardiomyopathy, IHSS)
8. Down S. (VSD, ASD, AV communis)
9. Ehlers-Danlos S. (medial necrosis of aorta, dissecting aneurysm, aortic insufficiency, mitral valve prolapse)
10. Fetal alcohol S. (septal defect)
11. Friedreich's ataxia (myocardiopathy)
12. Holt-Oram S. (ASD, VSD)
13. Homocystinuria (medial degeneration of aorta and pulmonary artery causing dilatation; arterial and venous thromboses)
14. Kartagener S., immotile cilia S. (dextrocardia or situs inversus; septal defects)
15. Marfan S. (aortic or mitral insufficiency, cystic medial necrosis of aorta or occasionally pulmonary artery, dissecting aneurysm)
16. Mucopolysaccharidoses (eg, Morquio S., Maroteaux-Lamy S., Scheie S.—aortic insufficiency; Hurler S., Hunter S.—intimal thickening of coronary arteries and valves, myocardial disease)
17. Myotonic dystrophy (conduction abnormalities, mitral valve prolapse)
18. Neurofibromatosis (pulmonary stenosis, aortic stenosis, coarctation, VSD)

(continued)

19. Osteogenesis imperfecta (aortic or mitral valvular incompetence)
20. Rubella S. (PDA, VSD, PS, pulmonary artery branch stenosis)
21. Tuberous sclerosis (myocardiopathy, rhabdomyoma of heart)
22. Turner S. (coarctation of aorta, pulmonary stenosis, aortic stenosis, ASD)
23. Venolobar or scimitar S. (partial APVR)
24. Williams S. (supravalvular aortic stenosis, pulmonary artery branch stenoses)

UNCOMMON

1. Aase-Smith S. (VSD, coarctation)
2. Aminopterin fetopathy (various)
3. Apert S. (VSD)
4. Carcinoid S. (endocardial fibrosis with tricuspid valve lesions, PS)
5. Cardiofacial S. (various)
6. Carpenter S. (PDA)
7. Cerebrohepatorenal S. (PDA, septal defects)
8. Chromosomal deletion S.: 4p-; 5p- (cat cry S.); 18q- (ASD, VSD, PDA)
9. Cornelia de Lange S. (various)
10. Cutis laxa (coarctation, pulmonary artery stenoses)
11. Deaf-mutism (pulmonary stenosis, mitral insufficiency)
12. DiGeorge S. (right arch, coarctation of aorta, tetralogy)
13. Duchenne's muscular dystrophy (myocardiopathy)
14. Fanconi S. (hypoplastic left heart)
15. Fetal hydantoin S. (various)
16. Forney S. (mitral insufficiency)

NEONATAL RESPIRATORY DISTRESS

COMMON

1. Aspiration S. (eg, meconium, amniotic fluid)
2. Congenital heart disease
3. Diaphragmatic hernia
4. Hyaline membrane disease
5. Pneumonia
6. Respirator therapy (eg, PEEP); shock lung; Mikity-Wilson S.
7. Tachypnea of the newborn

UNCOMMON

1. Adenomatoid malformation of lung
2. Choanal atresia
3. Eventration or paralysis of diaphragm
4. Lymphangiectasia, congenital
5. Neuromuscular disorder_g (eg, Werdnig-Hoffman S.)
6. Pierre Robin S.
7. Pulmonary edema or hemorrhage
8. Sequestration of lung
9. Tracheoesophageal fistula
10. Vascular ring

**CARDIOMEGLALY OR CARDIAC
FAILURE IN A NEONATE, INFANT,
OR CHILD**

COMMON

1. Anemia (esp. erythroblastosis, sickle cell disease)
- *2. Coarctation of aorta; interrupted aortic arch
- *3. Left to right shunt, large (VSD, PDA, atrioventricular canal defect)
4. Myocardiopathy (See C-32)
5. [Pericardial effusion] (See C-41)
6. Rheumatic heart disease
- *7. Tetralogy of Fallot_g, severe (incl. pseudotruncus arteriosus)
- *8. Transposition of great vessels

UNCOMMON

- *1. Aortic stenosis or atresia
- *2. APVR, total
3. Arrhythmia (eg, heart block, paroxysmal tachycardia)
- *4. Asphyxia (esp. first day)
5. Asplenia S. or polysplenia S.
6. AV fistula or hemangioma, pulmonary or peripheral (incl. vein of Galen aneurysm, hepatic cavernous hemangioma)
7. Coronary disease (anomalous origin of left coronary from pulmonary artery; progeria; aneurysm in Kawasaki S.)
8. Cor triatriatum
9. Double outlet right ventricle
10. Ebstein's anomaly; Uhl's anomaly
- *11. Endocardial fibroelastosis
- *12. Fluid overload; sodium chloride poisoning
- *13. Foramen ovale closure, prenatal
14. High-output state, other (eg, neonatal hyperthyroidism)
- *15. Hypoplastic left heart S._g

16. Increased intracranial pressure (eg, cerebral disease from birth injury)
17. Maternal diabetes, neonatal hypoglycemia
- *18. Mitral stenosis or insufficiency, congenital
19. Neoplasm of heart, primary or metastatic (See C-35)
20. [Pectus excavatum; straight spine S.]
21. Polycythemia
22. [Pulmonary lymphangiectasia]
- *23. Pulmonary valve atresia or severe stenosis
24. Pulmonary veno-occlusive disease (eg, atresia)
- *25. Single ventricle
26. Tricuspid atresia
27. Truncus arteriosus

*Causes of congestive heart failure in first month of life.

**LEFT TO RIGHT SHUNT IN
CONGENITAL HEART DISEASE**

COMMON

1. ASD
2. PDA
3. VSD

(continued)

UNCOMMON

1. Aortopulmonary window
2. APVR, total or partial (incl. scimitar S.)
3. Atrioventricular canal defect
4. Coronary artery fistula to right heart or pulmonary artery (incl. anomalous origin of left coronary artery from PA)
5. Corrected transposition with VSD
6. Hemitruncus (anomalous origin of right pulmonary artery from ascending aorta)
7. Left ventricular-right atrial shunt
8. Ruptured sinus of Valsalva aneurysm into right heart
9. Sequestration of lung (eg, drainage to azygos system)
10. Tetralogy of Fallot_g, acyanotic ("pink")

References:

Gamut C-6

**RIGHT TO LEFT SHUNT OR
ADMIXTURE LESION IN CONGENITAL
HEART DISEASE**

COMMON

1. Left to right shunt with reversal (Eisenmenger physiology)
2. Tetralogy of Fallot_g
3. Transposition of great vessels
4. Truncus arteriosus

UNCOMMON

1. Anomalous systemic venous return to left atrium (eg, via left SVC)
2. APVR, total (above the diaphragm)
3. Coarctation of aorta, preductal; aortic atresia
4. Double outlet right ventricle
5. Ebstein's malformation with ASD
6. Hypoplastic right heart
7. Mitral atresia or stenosis
8. Pulmonary AV malformation
9. Pulmonary stenosis or atresia with intact ventricular septum and ASD (trilogy of Fallot)
10. Pulmonary vein atresia
11. Right pulmonary artery fistula to left atrium
12. Single atrium
13. Single ventricle
14. Tricuspid atresia

Subgamut C-6A

DIFFERENTIAL FEATURES OF MAJOR CYANOTIC CONGENITAL HEART DISEASES

	CARDIAC SIZE	PULM VASC	AORTIC ARCH	EKG
1. Tetralogy of Fallot, incl. pseudotruncus (40%)*	N,+	-	R(25%)	RVH
2. Transposition of great vessels (15%)	+	+	L	RVH/LVH
3. Tricuspid atresia (10%)	N,+	-	L	LVH
4. Trilogy of Fallot (pulmonary atresia with ASD) (5%)	+	-	L	RVH
5. Truncus arteriosus (10%)	+	+,-	R(25%)	RVH/LVH

Abbreviations:

+ = increased; - = decreased; N = normal

*The five T's comprise approximately 80% of all cyanotic congenital heart disease.

Subgamut C-6B

**ONSET OF CYANOSIS IN CONGENITAL
HEART DISEASE**

**Marked Cyanosis at Birth or in
First Week**

1. Asplenia S. (Ivemark S.)
2. Double outlet right ventricle with pulmonary stenosis
3. Ebstein's anomaly
4. Hypoplastic left heart S_g (eg, aortic atresia or severe stenosis; interrupted aortic arch)
5. Persistent fetal circulation
- *6. Pulmonary atresia
- *7. Single ventricle with pulmonary stenosis and transposition
- *8. Tetralogy of Fallot_g (esp. pseudotruncus)
9. Transposition of great vessels, complete
- *10. Tricuspid atresia

**Mild or Intermittent Cyanosis at Birth or
Soon After**

1. APVR, total (below the diaphragm)
2. Atrioventricular canal defect
3. Large left to right shunt with failure
4. Truncus arteriosus

* Associated with pulmonary oligemia.

Gamut C-7

RIGHT TO LEFT SHUNT AT ATRIAL LEVEL

COMMON

1. APVR, total
2. ASD with pulmonary hypertension (Eisenmenger physiology)
3. Transposition of great vessels with interatrial communication
4. Tricuspid atresia

UNCOMMON

1. Ebstein's anomaly with interatrial communication
2. Hypoplasia of right ventricle, isolated
3. Normal newborn with patent foramen ovale
4. Pentalogy of Fallot
5. Pulmonary hypertension, primary, with interatrial communication
6. Pulmonary stenosis or atresia with intact ventricular septum and ASD (trilogy of Fallot)
7. Single atrium
8. Tricuspid stenosis with interatrial communication
9. Uhl's anomaly

Gamut C-8

COMPLICATED ATRIAL LEVEL SHUNTS

I. CONVENTIONAL ASD ASSOCIATED WITH ANOTHER USUALLY INDEPENDENT ANOMALY

1. APVR, partial
2. Lutembacher's S. (rheumatic mitral valve stenosis and ASD)
3. Mitral valve regurgitation or prolapse (MVP); cleft mitral valve
4. Pulmonary stenosis (eg, trilogy of Fallot)
5. VSD

II. ATRIAL SEPTUM IS INTACT; SITE OF SHUNT IS DISTAL TO ATRIAL SEPTUM BUT MAY DRAIN INTO RA

1. Coronary artery fistula
2. Left ventricular—right atrial communication
3. Rupture of posterior aortic sinus aneurysm into RA

III. ASD IS PART OF A DEVELOPMENTAL COMPLEX

1. APVR, total
2. Complete atrioventricular canal (AV communis or total endocardial cushion defect)
3. Pentalogy of Fallot

Reference:

1. Elliott LP: Cardiac Imaging in Infants, Children, and Adults. Philadelphia: Lippincott, 1991, p 593

Gamut C-9

RIGHT TO LEFT SHUNT AT VENTRICULAR LEVEL

COMMON

1. Complete transposition of great vessels with VSD
2. Pulmonary atresia with VSD
3. Tetralogy of Fallot_g
4. VSD with pulmonary hypertension (Eisenmenger physiology)

UNCOMMON

1. Corrected transposition with VSD and predominant PS
2. Double outlet right ventricle
3. Single ventricle
4. Truncus arteriosus

References:

1. Elliott LP: Cardiac Imaging in Infants, Children, and Adults. Philadelphia: Lippincott, 1991
2. Felson B (ed): Congenital heart disease, part 1. Semin Roentgenol 1985;20:110

Subgamut C-9A

CARDIOVASCULAR ANOMALIES ASSOCIATED WITH VSD

VSD an Essential Part of the Anomaly

COMMON

1. Tetralogy of Fallot_g (incl. pseudotruncus)

(continued)

UNCOMMON

- *1. Complete atrioventricular canal (AV communis)
- 2. Double outlet left ventricle
- 3. Double outlet right ventricle
- 4. Pentalogy of Fallot_g
- 5. Truncus arteriosus

VSD Frequently Associated with the Anomaly

COMMON

- 1. ASD
- 2. Coarctation of aorta
- 3. PDA
- 4. Pulmonary stenosis
- 5. Transposition of great vessels

UNCOMMON

- 1. APVR
- 2. Chromosomal abnormality (eg, trisomy anomalies)
- 3. Ectopia cordis
- 4. Interruption of aortic arch
- 5. Left ventricular outflow tract obstruction
- 6. Prolapse of right aortic cusp with aortic insufficiency
- 7. Sinus of Valsalva aneurysm
- 8. Tricuspid atresia

* Anomalies associated with complete atrioventricular canal (CAVC) include asplenia S., Down S., PDA, single ventricle, and tetralogy of Fallot_g.

References:

- 1. Edwards JE: The pathology of ventricular septal defect. Semin Roentgenol 1966;1:2-23

Gamut C-11

**PULMONARY ARTERIAL VASCULARITY
IN COMMON CONGENITAL HEART
DISEASES**
(See Gamuts C-12 to C-16)

**INCREASED VASCULARITY WITH PROMINENT
PULMONARY ARTERY SEGMENT**

	<u>Incidence</u>
1. APVR	2%
2. ASD	11%
3. Atrioventricular canal defect	2%
4. PDA; aortopulmonary window	12%
5. VSD	22%

**INCREASED VASCULARITY WITH FLAT OR
CONCAVE PULMONARY ARTERY SEGMENT**

- *1. Complete transposition of great vessels 6%
- *2. Double-outlet right ventricle
- *3. Truncus arteriosus
(types I, II, and III) 3%

NORMAL VASCULARITY

1. Aortic stenosis	3%
2. Coarctation of aorta	7%
3. Corrected (L-loop) transposition of great vessels	
4. Endocardial fibroelastosis	2%
5. Pulmonary valvular stenosis	10%
6. Small left to right shunt	
7. Subaortic stenosis	

DECREASED VASCULARITY

- *1. Ebstein's anomaly; Uhl's anomaly 1%
- *2. Pulmonary atresia or severe stenosis with
ASD, transposition, or single ventricle
- *3. Tetralogy of Fallot_g (incl. pseudotruncus) 12%
- *4. Tricuspid atresia or stenosis 3%
- 5. Tricuspid insufficiency

- *6. Trilogy of Fallot
- *7. Truncus arteriosus, type IV

*Cyanotic lesions.

**FLAT OR CONCAVE PULMONARY
ARTERY SEGMENT IN CONGENITAL
HEART DISEASE**

COMMON

1. Tetralogy of Fallot_s (incl. pseudotruncus)
2. Transposition of great vessels

UNCOMMON

1. Asplenia S.
2. Corrected transposition (pulmonary artery medially positioned)
3. Double outlet right ventricle with PS
4. Ebstein's anomaly; Uhl's anomaly
5. Hypoplastic right heart S.
6. Pulmonary atresia with intact ventricular septum
7. Single ventricle with pulmonary valve stenosis
8. Tricuspid atresia or stenosis
9. Truncus arteriosus

Gamut C-18

**VASCULAR RING AND OTHER
ANOMALIES OF THE AORTIC ARCH
AND BRACHIOCEPHALIC ARTERIES**

COMMON

1. Coarctation of aorta
 - a. Preductal (infantile—long segment narrowing)
 - b. Postductal (adult—short, discrete narrowing)
2. Double aortic arch
3. Left aortic arch with aberrant right subclavian artery (incl. aortic diverticulum)
4. Pseudocoarctation of aorta
5. Right anterior aortic arch (Type I) (mirror image branching of major arteries)
6. Right posterior aortic arch (Type II)

UNCOMMON

1. Anomalous innominate artery
2. Anomalous left common carotid artery
3. Cervical aortic arch (right or left)
4. Innominate artery compression S.
5. Left aortic arch, right ductus, and right descending aorta
6. Pulmonary sling (left pulmonary artery arising from right pulmonary artery)
7. Right aortic arch, left descending aorta

8. Right aortic arch, right descending aorta, and aberrant or isolated left subclavian artery arising from pulmonary artery (Type III arch)

Subgamut C-18A

**CONGENITAL HEART DISEASE
ASSOCIATED WITH ANTERIOR RIGHT
AORTIC ARCH (TYPE I)
(MIRROR-IMAGE BRANCHING)**

1. Asplenia S. (30%-40%)*
2. Pseudotruncus arteriosus (pulmonary atresia with VSD) (40%-50%)
3. Tetralogy of Fallot_g (25%); "pink" tetralogy (15%)
4. Transposition of great vessels with VSD and pulmonary stenosis (5%-10%)
5. Tricuspid atresia (5%)

(continued)

6. Truncus arteriosus (25%-35%)
7. Uncomplicated large VSD (2%)

* (%) refers to approximate percentage of all cases of that anomaly with a right aortic arch.

Reference:

1. Elliott L: Cardiac Imaging in Infants, Children, and Adults. Philadelphia: Lippincott, 1991, p 146

Subgamut C-18B

**EXTRINSIC VASCULAR IMPRESSION
ON THE ESOPHAGUS
(See Gamut C-18)**

COMMON

1. Aberrant right subclavian artery
2. Aortic abnormality, acquired (eg, aneurysm, tortuosity)
3. Aortic knob
4. Coarctation of aorta
5. Right aortic arch (esp. posterior or type 2)

UNCOMMON

1. Anomalous innominate artery
2. Anomalous pulmonary venous return (type III)
3. Aortic diverticulum
4. AV malformation
5. Azygos or hemiazygos vein dilatation
6. Cervical aortic arch
7. Corrected transposition (medially placed pulmonary artery)
8. Double aortic arch
9. Enlarged "bronchial" artery (incl. truncus arteriosus, absent main pulmonary artery)
10. Pulmonary artery "sling" (anomalous origin of left pulmonary artery)
11. Pulmonary vein confluence draining into back of left atrium
12. Sequestration of lung (anomalous artery from aorta)

Subgamut C-18C

POSITIONAL ANOMALIES OF THE THORACIC AORTA

	ARCH	DESCENDING L	R	SUBCLAVIAN ARTERY N ANOMALY	AORTIC DIVERTICULUM	CONGENITAL HEART DISEASE
Normal	L	+		+		0
Anomalous descending A	L		+			rare
RAA type I	R	rare	+	+	rare	rare
RAA type II	R	rare	+	rare	com	com
Cervical AA, L	L	rare	com	rare	com	rare
Cervical AA, R	R	+		+	com	rare
Anomalous R subclavian artery	L	+		+	com	com
Double AA	L&R		+			0

Abbreviations:
 N = Normal; A = Aorta, L = Left; com = common; + = Present; AA = Aortic arch; R = Right; 0 = Absent

Gamut C-19

ANOMALOUS ARTERIAL COMMUNICATION IN THE THORAX

DIRECT COMMUNICATION OF AORTA AND PULMONARY ARTERY

1. Aortopulmonary window
2. PDA
3. Postoperative shunt (eg, Blalock-Taussig, Waterston, Potts)
4. Pseudotruncus
5. Truncus arteriosus

AORTIC OR SYSTEMIC ARTERY ANOMALY

1. Fistula
 - a. Aortic—left ventricular tunnel
 - b. Brachiocephalic artery to systemic vein (eg, fistula from transverse cervical artery to internal jugular vein)
 - c. Coronary artery fistula
 - d. Postoperative aortic-cardiac fistula
 - e. Ruptured sinus of Valsalva aneurysm into heart
 - f. Systemic—pulmonary AV malformation (bronchial, brachiocephalic, or chest wall artery to pulmonary artery, pulmonary vein, or azygous system)
2. Anomalous origin of systemic artery
 - a. Left coronary artery from pulmonary artery
 - b. Subclavian artery from pulmonary artery

PULMONARY ARTERY ANOMALY

1. Fistula
 - a. Pulmonary AV malformation
 - b. Right pulmonary artery to left atrium fistula
2. Anomalous origin of pulmonary artery
 - a. Left pulmonary artery from right pulmonary artery (pulmonary sling)

- b. Left or right pulmonary artery from descending aorta
- c. Right pulmonary artery from ascending aorta (hemitruncus)
- 3. Anomalous artery arising from aorta to supply a lung segment
 - a. Sequestration of lung
 - b. Venolobar S.

Gamut C-20

ANOMALOUS PULMONARY VENOUS RETURN (APVR) CONNECTIONS

TOTAL (TAPVR)*

- | | |
|-----------------------------|-----|
| 1. Left vertical vein | 37% |
| 2. Coronary sinus | 16% |
| 3. Infracardiac (abdominal) | 15% |
| 4. Right SVC | 14% |
| 5. Right atrium | 11% |
| 6. Mixed | 7% |

PARTIAL (PAPVR)

- 1. SVC
- 2. Azygos vein
- 3. Right atrium
- 4. IVC, portal vein, hepatic vein (eg, scimitar S.)
- 5. Left innominate vein (via vertical vein)
- 6. Coronary sinus
- 7. Mixed

* 25% to 30% of patients with TAPVR may have other anomalies, such as VSD, PDA, coarctation, or interruption of the aortic arch.

(continued)

Gamut C-21

**ABNORMAL CARDIAC POSITION;
CARDIAC DISPLACEMENT**

CONGENITAL

1. Absence of a pulmonary artery
2. Agenesis or hypoplasia of a lobe or lung; venolobar S.
3. Asplenia or polysplenia S.
4. Congenital absence of left pericardium
5. Dextrocardia, mirror-image type with situs inversus
6. Dextroposition; mesocardia
7. Dextroversion with situs solitus or situs indeterminate
8. Levoversion (levocardia with situs inversus)
9. Pectus excavatum

ACQUIRED

1. Atelectasis; fibrosis
2. Diaphragmatic hernia; elevation of hemidiaphragm
3. Emphysema, unilateral (esp. bullous)
4. Mass lesion (eg, neoplasm, aneurysm)
5. Pleural fluid or thickening; pneumothorax
6. Pneumonectomy
7. Scoliosis (heart shifted to concave side)
8. Technical (rotation of patient)

Subgamut C-21A

DEXTROCARDIA

1. **Situs inversus** (all visceral organs opposite of normal; slightly increased incidence of cardiac anomalies in 5% to 10% of patients)
2. **Dextroposition with situs solitus** (cardiac apex displaced into right hemithorax—eg, hypoplasia of right lung, venolobar S.)
3. **Dextroversion with situs solitus** (anatomic relations are normal, but cardiac apex is in right side of chest—due to abnormal rotation of embryonic cardiac loop)
4. **Dextrocardia with situs ambiguus in asplenia S.** (bilateral right-sidedness) (absent spleen, three lobes in each lung, left lobe of liver same size as right lobe, mal-rotation of bowel, cardiac apex in either hemithorax—cardiac anomalies include common atrium, single ventricle, PS, transposition of great vessels, and TAPVR)
5. **Dextrocardia with situs ambiguus in polysplenia S.** (bilateral left-sidedness) (each lung has two lobes, hepatic segment of IVC is absent, cardiac apex is in right hemithorax in 50% of patients—cardiac anomalies include ASD, PAPVR, and interruption of IVC with azygos continuation)

Gamut C-22

RIGHT ATRIAL ENLARGEMENT

COMMON

1. Left to right shunt into right atrium (eg, ASD, patent foramen ovale, atrioventricular canal defect, APVR, left ventricular-right atrial shunt, ruptured sinus of Valsalva aneurysm into right atrium)
2. [Pericardial cyst, lipoma, or encapsulated fluid]
3. Pulmonary stenosis
4. Right heart failure, any cause (See C-46)
5. Right ventricular enlargement resulting in atrial enlargement (esp. cor pulmonale, mitral stenosis, chronic left heart failure) (See C-23)
6. Tetralogy of Fallot_g
7. Tricuspid insufficiency (See C-22A)

UNCOMMON

1. Congenital or idiopathic right atriomegaly; atrial aneurysm
2. Coronary artery fistula to RA
3. Ebstein's anomaly; Uhl's anomaly
4. Endocardial fibroelastosis
5. Endomyocardial fibrosis
6. Hypoplastic left heart S.; aortic atresia
7. Neoplasm of right atrium or ventricle (eg, myxoma) (See C-35)
8. Post-mitral valve replacement
9. Pulmonary atresia (with tricuspid insufficiency)
10. Transposition of great vessels with interatrial communication
11. Tricuspid atresia or stenosis (incl. carcinoid S.)

Subgamut C-22A

TRICUSPID INSUFFICIENCY

COMMON

1. Pulmonary hypertension
2. Rheumatic heart disease
3. Right ventricular dilatation

UNCOMMON

1. AV canal defect
2. Bacterial endocarditis (esp. in narcotics abuser)
3. Carcinoid S.
4. Ebstein's anomaly
5. Endomyocardial fibrosis
6. Myxoma of right atrium
7. Trauma
8. Tricuspid valve prolapse

Reference:

Gamut C-23

RIGHT VENTRICULAR ENLARGEMENT

COMMON

1. Chronic left heart failure (eg, mitral insufficiency, myocardopathy) (See C-32)
2. Cor pulmonale; pulmonary arterial hypertension, primary or secondary (eg, COPD, interstitial fibrosis, pulmonary emboli) (See C-46)
3. Left to right shunt (esp. ASD, VSD, PDA) (See C-5)
4. Mitral stenosis, acquired

(continued)

5. Pulmonary stenosis
6. Tetralogy of Fallot_g (incl. pseudotruncus arteriosus)

UNCOMMON

1. Double outlet right ventricle
2. Ebstein's anomaly; Uhl's anomaly
3. Hypoplastic left heart syndrome
4. Infarction of right ventricle
5. Neoplasm of right ventricle or left atrium (eg, myxoma) (See C-35)
6. Pulmonary atresia (with tricuspid insufficiency)
7. Pulmonary insufficiency; absent pulmonary valve
8. Pulmonary venous obstruction (eg, congenital mitral stenosis, cor triatriatum, veno-occlusive disease)
9. Transposition of great vessels
10. Tricuspid insufficiency
11. Trilogy of Fallot
12. Truncus arteriosus

FILLING DEFECT IN RIGHT VENTRICLE ON ANGIOCARDIOGRAPHY

COMMON

1. Jet of unopacified blood (eg, VSD with left to right shunt)
2. Thrombus

UNCOMMON

1. Aneurysm or diverticulum of ventricular septum
2. Anomalous muscle bundle
3. [Bernheim S. (left ventricular hypertrophy encroaching on right ventricle)]
4. Endocardial fibroelastosis (with bulging ventricular septum)
5. Foreign body (eg, catheter)
6. Idiopathic myocardial hypertrophy (eg, IHSS)
7. Neoplasm of heart, primary or metastatic (See C-35)
8. Prolapsed valve

Gamut C-24

LEFT ATRIAL ENLARGEMENT

COMMON

1. Left ventricular failure
2. Mitral insufficiency (See C-25)
3. Mitral stenosis, congenital or acquired (incl. prolapsed mitral valve)
4. Myocardiopathy (See C-32)
5. PDA; aortopulmonary window
6. VSD

UNCOMMON

1. ASD with late reversal of shunt (Eisenmenger physiology)
2. Atriomegaly, left, congenital or idiopathic
3. Constrictive pericarditis (See C-40)
4. Coronary artery fistula
5. Double outlet right ventricle
6. Endocardial fibroelastosis
7. Mitral anulus anomaly
8. Neoplasm of left atrium (eg, myxoma) (See C-35)
9. Papillary muscle rupture

(continued)

10. Parachute mitral valve complex
11. Single ventricle (cor triloculare biventriculatum)
12. Thrombus in left atrium (esp. ball-valve)
13. Transposition of great vessels
14. Tricuspid atresia
15. Trilogy of Fallot
16. Truncus arteriosus

Gamut C-25

MITRAL INSUFFICIENCY

COMMON

1. Bacterial endocarditis
2. Functional—left ventricular dilatation (eg, cardiac failure, coarctation of aorta, aortic insufficiency, myocardopathy) (See C-32)
3. Mitral valve prolapse
4. Papillary muscle rupture or dysfunction (eg, infarction, ischemia, trauma)
5. Postoperative (eg, mitral valve repair, valvotomy, balloon valvoplasty; dysfunctional prosthetic mitral valve)
6. Rheumatic endocarditis
7. Ruptured chordae tendineae

UNCOMMON

1. Atrioventricular canal defect
2. Congenital valvular insufficiency

3. Corrected transposition (with anomalous left atrio-ventricular valve)
4. Ehlers-Danlos S.
5. Endocardial fibroelastosis
6. IHSS
7. Marfan S.
8. Mitral anulus anomaly or calcification
9. Neoplasm (eg, carcinoid, left atrial myxoma) (See C-35)
10. Polychondritis; osteogenesis imperfecta
11. Takayasu S.

Gamut C-26

**EXTRA BUMP ALONG THE UPPER
LEFT HEART BORDER
(THE THIRD MOGUL)**

COMMON

1. Aneurysm of left ventricle
2. Left atrial appendage enlargement (esp. rheumatic or congenital heart disease)
3. [Pericardial adhesion, postoperative (eg, CABG) or other]
4. [Thymus gland; mediastinal mass, esp. thymoma, thymic cyst, teratoid lesion, lymphoma_g]

UNCOMMON

1. Absence of the left pericardium
2. Coronary artery aneurysm; coronary AV fistula

(continued)

3. Corrected transposition or single ventricle with left-sided ascending aorta
4. Cyst (eg, pericardial; hydatid)
5. Ebstein's anomaly
6. Myocardiopathy (See C-32)
7. Neoplasm of heart or pericardium (See C-35)
8. [Pleural plaque (asbestosis)]
9. Postoperative deformity (eg, conduit, aneurysm)
10. Right atrial appendage, levoposition
11. Sinus of Valsalva aneurysm (left)
12. Tetralogy of Fallot_g
13. Transposition of great vessels

Gamut C-27

LEFT VENTRICULAR ENLARGEMENT

COMMON

1. Aortic insufficiency (See C-28)
2. Aortic stenosis (rheumatic; congenital—bicuspid aortic valve; degenerative—idiopathic calcific stenosis)
3. Athlete's heart (no disease)
4. Coarctation of aorta
5. Combined aortic insufficiency and stenosis (usually due to rheumatic heart disease)
6. Congestive heart failure (See C-4, C-51)
7. Coronary or arteriosclerotic heart disease (incl. myocardial infarction, left ventricular aneurysm)
8. High output heart disease (eg, anemia, AV fistula, hyperthyroidism) (See C-31)
9. Hypertension

10. Mitral insufficiency
11. Myocardiopathy, myocarditis (See C-32)
12. PDA; aortopulmonary window
13. VSD

UNCOMMON

1. Atrioventricular canal defect
2. Double outlet right ventricle
3. Endocardial fibroelastosis
4. IHSS (subvalvular aortic stenosis)
5. Neoplasm of left ventricle (See C-35)
6. [Pericardial defect, total or partial]
7. Pulmonary atresia with intact ventricular septum
8. Supravalvular aortic stenosis (eg, Williams S.)
9. Transposition of great vessels
10. Tricuspid atresia or stenosis
11. Truncus arteriosus

References:

Gamut C-28

AORTIC INSUFFICIENCY

COMMON

1. Aortic root dilatation with stretched valve ring (eg, aortic ectasia; aneurysm of ascending aorta; atherosclerosis; hypertension)
2. Atherosclerotic aortic valvulitis
- *3. Medial degeneration or dissection of aorta (eg, Marfan S.) (See C-55A)
4. Rheumatic aortic valvulitis

UNCOMMON

1. Aneurysm of left ventricle, subvalvular
2. Aortic-left ventricle tunnel
3. Aortic valve stenosis
4. Aortitis (eg, syphilitic, Takayasu S., rheumatic, rheumatoid arthritis, ankylosing spondylitis, Reiter S., giant cell idiopathic)
- *5. Bacterial endocarditis
6. Behcet S.
7. Blunt chest trauma
8. Collagen disease_g
9. Congenital valvular deformity (eg, bicuspid or fenestrated aortic valve)
10. Mucopolysaccharidoses_g
11. Myxomatous aortic valve degeneration
12. Postoperative (eg, after valvotomy for aortic stenosis or balloon valvoplasty)
13. Prosthetic aortic valve dysfunction, degeneration, or thrombosis
- *14. Rupture of aortic cusp, traumatic or other
15. Sinus of Valsalva aneurysm, congenital or acquired (eg, syphilitic, dissecting, traumatic, mycotic, atherosclerotic)
16. Supravalvular aortic stenosis (eg, Williams S.)
17. VSD high in septum with prolapsed noncoronary aortic cusp

*Acute aortic insufficiency.

HYPERTENSION AND HYPERTENSIVE CARDIOVASCULAR DISEASE

I. ESSENTIAL HYPERTENSION

II. RENAL DISEASE

1. Agenesis or hypoplasia
2. Glomerulonephritis
3. Polycystic kidneys
4. Pyelonephritis, chronic

III. RENOVASCULAR DISEASE

1. Fibromuscular hyperplasia
2. Perirenal hematoma (Page kidney)
3. Renal artery stenosis

IV. ADRENAL DISEASE

1. Adrenocortical adenoma
2. Adrenogenital S.
3. Aldosteronism
4. Carcinoma
5. Cushing S.
6. Pheochromocytoma

V. CENTRAL NERVOUS SYSTEM DISORDER

1. Familial dysautonomia (Riley-Day S.)
2. Pituitary disease (eg, Cushing S.)

VI. COARCTATION OF AORTA

VII. COLLAGEN DISEASE_g (esp. lupus erythematosus, polyarteritis nodosa)

VIII. HYPERTHYROIDISM

(continued)

IX. DRUG THERAPY (eg, estrogen-containing oral contraceptives)

X. NEUROGENIC (eg, psychogenic; familial dysautonomia—Riley-Day S.)

Reference:

1. Streiter ML: Gamut: Unilateral renal lesion that may result in hypertension. Semin Roentgenol 1981;16:75-76

Subgamut C-29A

UNILATERAL RENAL LESION THAT MAY CAUSE HYPERTENSION

LESION OF RENAL ARTERY OR ITS BRANCHES

1. Aneurysm
2. Arteriolar nephrosclerosis
3. Arteritis (eg, syphilis, polyarteritis nodosa, Takayasu S., thromboangiitis obliterans, rubella S., idiopathic)
4. Atherosclerosis
5. AV malformation
6. Congenital narrowing
7. Dissection
8. Fibromuscular hyperplasia
9. Neurofibromatosis
10. Perivascular fibrosis
11. Thrombosis or embolism
12. Trauma

RENAL PARENCHYMAL DISEASE

1. Neoplasm (eg, carcinoma, sarcoma, Wilms' tumor, metastasis)
2. Obstructive uropathy
3. Ptosis of kidney
4. Pyelonephritis
5. Radiation nephritis

RENAL VEIN THROMBOEMBOLISM

RENAL COMPRESSION (PAGE KIDNEY)

1. Extrarenal mass (eg, aortic aneurysm, retroperitoneal hematoma or neoplasm, peripelvic cyst)
2. Subcapsular hemorrhage

ISCHEMIC HEART DISEASE

COMMON

1. Coronary atherosclerosis
2. Coronary embolism or thrombosis
3. Coronary spasm

UNCOMMON

1. Anemia_g
2. Aortic valve stenosis; other left ventricular outflow obstruction
3. Compression of coronary arteries by neoplasm, major vessel, or muscle bridge
4. Coronary artery fistula
5. Kawasaki's disease
6. Syphilis
7. Vasculitis (eg, polyarteritis nodosa)

Reference:

Subgamut C-30A

COMPLICATIONS OF MYOCARDIAL INFARCTION REQUIRING RADIOLOGICAL EVALUATION

1. Congestive heart failure
2. Left ventricular aneurysm
3. Pericardial effusion
4. Ruptured interventricular septum
5. Ruptured papillary muscle

Reference:

1. Wilde P, Hartnell GG: Ischemic heart disease. In: Sutton D, Young JWR (eds): A Short Textbook of Clinical Imaging. London: Springer-Verlag, 1990, pp 161-163

Gamut C-31

HIGH OUTPUT HEART DISEASE*

COMMON

1. Anemia (eg, sickle cell disease, thalassemia); leukemia
2. Hypervolemia (fluid overload; overtransfusion)
3. Pregnancy
4. Thyrotoxicosis

UNCOMMON

1. Athletes, highly trained
2. AV fistula or malformation, peripheral, abdominal (eg, cavernous hemangioma of liver), cerebral (eg, vein of Galen aneurysm), or pulmonary
3. Beriberi (vitamin B₁ deficiency)
4. Liver disease (eg, acute liver failure; advanced cirrhosis)
5. Obesity (Pickwickian S.)
6. Paget's disease
7. Polycythemia vera
8. Pyrexia; septic shock

* Also referred to as high-flow syndromes or hyperkinetic circulatory states.

Gamut C-32

MYOCARDIOPATHY

COMMON

1. Amyloidosis
2. Collagen disease_g (esp. scleroderma, lupus erythematosus, dermatomyositis, rheumatoid arthritis)
- *3. Endocardial fibroelastosis
- *4. Hypertrophic cardiomyopathy, primary or secondary (eg, aortic stenosis, IHSS, coarctation of aorta, hypertension)
5. Idiopathic dilated cardiomyopathy
- *6. Infectious myocarditis (rheumatic fever, sepsis, diphtheria, Chagas' disease, toxoplasmosis, Cox-sackie, rubella, other viral disease)
- *7. Ischemia (incl. coronary disease, hypoxia)
- *8. Nutritional deficiency (eg, beriberi, alcoholism, cirrhosis, starvation)
9. Thyrotoxicosis

UNCOMMON

1. Acromegaly
2. Anemia
- *3. Anomalous origin of left coronary artery from pulmonary artery
4. Congenital syndromes (eg, glycogen storage disease, Hurler S.) (See C-32A)
- *5. Coronary artery calcification in infants

(continued)

6. Cushing S.
7. Endomyocardial fibrosis (eg, African myocardiopathy)
8. Familial
9. Hemochromatosis
- *10. Leukemia, lymphoma_g
11. Myxedema
- *12. Neoplasm, metastatic or primary (eg, fibroma, rhabdomyoma—esp. with tuberous sclerosis) (See C-35)
13. Neuromuscular disorder (eg, Friedreich's ataxia, Duchenne's progressive muscular dystrophy)
14. Postpartum
- *15. Potassium or magnesium depletion
16. Pseudoxanthoma elasticum
17. Radiation therapy
18. Sarcoidosis
- *19. Subvalvular left ventricular aneurysm (African)
- *20. Toxicity (eg, drugs, esp. cytotoxic, Adriamycin; chemicals; cobalt-beer drinker's heart)
- *21. Uremia

*Seen in infants or young children.

**CONGENITAL SYNDROMES WITH
MYOCARDIOPATHY**

COMMON

1. Gaucher's disease; Niemann-Pick disease
2. Glycogen storage disease (types II and III, Pompe's disease)
3. Hemochromatosis
4. Mucolipidoses, types II and III
5. Mucopolysaccharidoses_g (esp. Hurler S.)
6. Neuromuscular disorder (eg, Friedreich's ataxia, Duchenne's muscular dystrophy, Werdnig-Hoffmann disease, Kugelberg-Welander S.)
7. Noonan S.
8. Rubella S.

UNCOMMON

1. Degos S.
2. Fabry disease
3. GM₁ gangliosidosis; fucosidosis; mannosidosis
4. Hyperphosphatasia
5. LEOPARD S.
6. Polymyositis, dermatomyositis
7. Pseudoxanthoma elasticum

Gamut C-33

GROSSLY ENLARGED HEART

COMMON

1. Aortic insufficiency
2. Combined valvular disease (esp. mitral and aortic)
3. Congestive heart failure, advanced
4. Large left to right shunt (esp. ASD, VSD, PDA)
5. Mitral insufficiency
6. Myocardopathy (See C-32)
7. Pericardial effusion; hemopericardium

UNCOMMON

1. Complete atrioventricular canal
2. Congenital valvular atresia
3. Ebstein's anomaly

Gamut C-34

SMALL HEART

COMMON

1. Asthenia
2. Cor pulmonale (AP view)
3. [Emphysema (eg, asthma, cystic fibrosis)]
4. Normal
5. Senile atrophy
6. Wasting disease, cachexia (eg, malnutrition, dehydration, kwashiorkor, tuberculosis, cancer, lymphoma_g, anorexia nervosa, scleroderma)

UNCOMMON

1. Adrenal insufficiency (Addison's disease)
2. Adrenogenital S.
3. Blood loss, severe
4. Constrictive pericarditis (See C-40)
5. Hypovolemia (eg, burn, dysentery)

Reference:

1. Swischuk LE: Microcardia: An uncommon diagnostic problem. AJR 1968;103:115-118

Gamut C-35

**CARDIAC OR PERICARDIAL
NEOPLASM OR CYST**

COMMON

1. Invasive pulmonary or mediastinal neoplasm (eg, from lymphoma_g, bronchogenic or esophageal carcinoma, thymoma)
2. Metastasis (eg, from lung, breast, melanoma, lymphoma_g, leukemia)
- *3. Myxoma (esp. left atrial)
4. Pericardial cyst
5. Rhabdomyoma (esp. with tuberous sclerosis)
6. Sarcoma (eg, rhabdomyosarcoma, fibrosarcoma, liposarcoma, hemangiosarcoma, myxosarcoma, undifferentiated sarcoma)

UNCOMMON

1. Angioma (eg, hemangioma, lymphangioma)
2. Bronchogenic cyst (intrapericardial)
3. Chondroma; osteoma
- *4. Fibroma (fibrous hamartoma)
5. Hydatid cyst
6. Lipoma
- *7. Mesenchymoma, benign or malignant; leiomyoma
8. Mesothelioma
9. Papilloma
10. Pericardial diverticulum
11. Pheochromocytoma
12. Teratoma (intrapericardial)

* May show calcification in tumor.

Gamut C-36

**CALCIFICATION IN THE HEART
OR GREAT VESSELS**

COMMON

- *1. Aneurysm_g of aorta or sinus of Valsalva (See C-55)
- *2. Aortic anulus (atherosclerosis, aging, syphilis) or valve (rheumatic aortic stenosis, infective endocarditis, bicuspid aortic valve)
- 3. Aortitis (eg, syphilis, Takayasu S.)
- 4. Atherosclerosis of aorta
- *5. Coronary arteriosclerosis; Mönckeberg's medial sclerosis (incl. progeria)

6. Mitral anulus (atherosclerosis, Marfan S.) or valve (rheumatic mitral stenosis)
- *7. Myocardial infarction; myocardial aneurysm
- *8. [Pericardial calcification, constrictive pericarditis
(See C-37, C-40)]

UNCOMMON

1. Alkaptonuria (ochronosis)
2. Aneurysm of left ventricle, subvalvular (African)
- *3. Coronary artery aneurysm (eg, Kawasaki S.) (See C-56)
4. Diabetes
- *5. Ductus arteriosus or ligamentum
- *6. Endocardial fibroelastosis
7. Endocardium (eg, jet site from ASD or VSD)
- *8. Hydatid cyst
- *9. Idiopathic
10. Left atrial wall (rheumatic endocarditis, severe mitral valve disease)
- *11. Metastatic calcinosis (eg, hyperparathyroidism, hypervitaminosis D)
- *12. Myocardiopathy (eg, IHSS, Hurler S.)
- *13. Neoplasm of heart (esp. myxoma, fibroma) (See C-35)
14. Oxalosis
15. Postmyocarditis (esp. rheumatic fever)
16. Pulmonary hypertension
- *17. Singleton-Merten S.
18. Thromboembolus in heart chamber (esp. with myocardial infarct or aneurysm) or in great vessel (eg, aorta, inferior vena cava, pulmonary artery)
- *19. Trauma, external or iatrogenic (eg, incision, coronary bypass graft, conduit)

*May occur in children.

Gamut C-38

**GAS EMBOLISM IN THE HEART OR
BLOOD VESSELS
(See Gamut C-39)**

COMMON

1. Fetal death
2. Hyaline membrane disease
3. Intravascular catheterization, cannulation, or therapy (eg, umbilical vein, central venous pressure line, blood transfusion or other infusion, angiography)
4. Postoperative or intraoperative (eg, cardiac bypass, lung resection, biopsy, abdominal aortic graft)
5. Respirator therapy (eg, PEEP)
6. Resuscitation maneuver
7. Trauma, penetrating (eg, laceration, blast, percutaneous high pressure injection, air hose injection)

UNCOMMON

1. Abortion, parturition, vaginal insufflation (eg, cunnilingus, douching)
2. Abscess perforation into vessel
3. ARDS
4. Asthmatic episode
5. Decompression sickness (eg, caisson disease)
6. Dental procedure (root canal treatment, drilling)
7. Emphysematous gastritis; corrosive gastritis
8. Gastrointestinal perforation into vessel (eg, enema, peptic ulcer)
9. Hydrogen peroxide enema
10. Injection of gas (eg, cerebral pneumography, arthrography, Rubin's test, artificial pneumothorax or pneumoperitoneum, suicidal or homicidal attempt)
11. Irrigation (lavage) or drainage of abscess, empyema, or paranasal sinus
12. Necrotizing enterocolitis; mesenteric infarction; toxic megacolon

(continued)

13. Neoplasm, malignant, with invasion of vessel (eg, bronchovascular fistula, esophageal-aortic fistula)
14. Sepsis, gas-producing organism (esp. in a diabetic)
15. Thoracentesis, pericardiocentesis, peritoneocentesis (incl. hemodialysis)
16. Whooping cough

Gamut C-39

PNEUMOPERICARDIUM

COMMON

1. Iatrogenic (eg, postoperative, intubation, pericardiocentesis, resuscitation, respiratory therapy)

UNCOMMON

1. ARDS
2. Congenital absence of the pericardium with pneumothorax
3. Hyaline membrane disease
4. Idiopathic
5. [Intracardiac gas (See C-38)]
6. Perforation from adjacent abscess (esp. amebic), neoplasm, or radiation necrosis; cutaneous fistula
7. Pericarditis due to gas-forming organism

8. Pneumomediastinum or interstitial pulmonary leakage with extension into pericardium
9. Trauma, external (eg, stab wound, tracheal injury)

Reference:

1. Higgins CB, Broderick TW, Edwards DK, et al: The hemodynamic significance of massive pneumopericardium in preterm infants with respiratory distress syndrome. Radiology 1979;133:363-368

Gamut C-40

CONSTRICITIVE PERICARDITIS

COMMON

1. Idiopathic
2. Tuberculosis

UNCOMMON

1. Asbestosis (pleuropericardial); talcosis
2. Histoplasmosis
3. Neoplasm (eg, primary, metastatic, or locally invasive—esp. mesothelioma, malignant thymoma, lymphoma_g) (See C-35)
4. Parasitic (eg, amebic abscess from liver or lung rupturing into pericardial sac)
5. Postpericardiectomy S.
6. Pyogenic infection (esp. staphylococcal, pneumococcal)
7. Radiation therapy
8. Rheumatic
9. Traumatic pericarditis; hemopericardium
10. Uremia
11. Viral pericarditis (esp. Coxsackie B)

(continued)

Gamut C-41

PERICARDIAL EFFUSION

COMMON

1. Cardiac failure
2. Collagen disease_g (esp. lupus erythematosus, rheumatoid disease, scleroderma)
3. Neoplasm of pericardium or heart (primary or secondary) (See C-35)
4. Pericarditis (viral, Coxsackie, bacterial, amebic, toxoplasmic, tuberculous, histoplasmic, rheumatic)
5. Postmyocardial infarction S. (Dressler S.)
6. Postpericardiotomy S. (incl. coronary artery bypass)
7. Trauma, external or iatrogenic (hemopericardium)
8. Uremia; nephrotic S.

UNCOMMON

1. Amyloidosis; Waldenström's macroglobulinemia; Mediterranean fever
2. Anemia_g (eg, thalassemia, erythroblastosis fetalis)
3. Behcet S.
4. Beriberi; hypoalbuminemia
5. Bleeding or clotting disorder_g (eg, hemophilia, thrombocytopenia, hypoprothrombinemia)
6. Congenital syndromes (eg, Chester-Erdheim S., Degos S., Kawasaki S., Turner S., Wissler S.)
7. Dissecting aneurysm with leakage
8. Drug reaction

9. Endomyocardial fibrosis (African)
10. Gout
11. Idiopathic
12. Myxedema
13. Pancreatitis
14. Polyserositis
15. Radiation therapy (eg, for lymphoma, breast or lung cancer)
16. Reiter S.
17. Sarcoidosis
18. Stevens-Johnson S.
19. Superior vena cava obstruction
20. Wegener's granulomatosis
21. Whipple's disease

**COMMON CARDIAC CONDITIONS
DIAGNOSED BY ECHOCARDIOGRAPHY**

1. Aortic stenosis or insufficiency
2. Bacterial endocarditis
3. Cardiac tumor (esp. myxoma of LA)
4. IHSS
5. Mitral stenosis or insufficiency
6. Mitral valve prolapse (MVP)
7. Myocardiopathy

(continued)

8. Pericardial effusion
9. Shunts (with evaluation of flow and direction by pulsed Doppler)

Gamut C-43

**GENERALIZED PULMONARY ARTERIAL HYPERVASCULARITY
(See Gamuts C-13, C-15)**

COMMON

1. High output heart disease (See C-31)
2. Left to right shunt (See C-5)

UNCOMMON

1. Aorta-pulmonary artery fistula (eg, traumatic, post-operative, ruptured aneurysm)
2. Aortic atresia
3. APVR, total
4. Common atrium
5. Cor bilobulare
6. Double outlet right ventricle without PS (incl. Tausig-Bing S.)
7. Pulmonary AV malformation
8. Single ventricle without PS

9. Transposition of great vessels with large VSD
10. Tricuspid atresia without PS
11. Truncus arteriosus

Gamut C-44

INCREASED PULMONARY ARTERIAL CIRCULATION TO ONE LUNG

COMMON

1. Air trapping in contralateral lung (eg, Swyer-James S., bullous emphysema)
2. Arteriovenous malformation (congenital or acquired)
3. Obstruction of contralateral pulmonary artery (eg, thromboembolism, neoplasm, histoplasmic lymphadenopathy)

UNCOMMON

1. Contralateral scimitar S.; hypogenetic lung; pulmonary artery atresia, stenosis, or coarctation
2. Left to right shunt with increased flow to one lung (eg, PDA, AV communis)
3. Postoperative cyanotic congenital heart disease (eg, Waterson, Blalock, or Potts procedure)
4. Unilateral origin of a pulmonary artery from the aorta; truncus arteriosus with single pulmonary artery

(continued)

PROMINENCE OF THE MAIN PULMONARY ARTERY SEGMENT

COMMON

1. "Aneurysm" of pulmonary artery (See C-47)
2. Congestive heart failure (See C-4, C-51)
3. Cor pulmonale, pulmonary hypertension, primary or secondary (See C-46)
4. [Enlarged left atrial appendage]
5. High output heart disease (See C-31)
6. Idiopathic
7. Left to right shunt (eg, ASD, VSD, PDA) (See C-5)
8. [Mediastinal or left hilar mass (incl. metastasis)]
9. Mitral stenosis or insufficiency, acquired or congenital
10. Normal (esp. young woman)
11. Pregnancy
12. Pulmonary thromboembolism
13. Pulmonary valvular stenosis (poststenotic dilatation)
14. [Technical or positional factor (eg, lordotic view, patient rotation, cardiac rotation in left lower lobe collapse, dextroscoliosis, pectus excavatum)]

UNCOMMON

1. Absent pulmonary valve
2. Aortopulmonary fistula, postoperative, traumatic or congenital (eg, laceration, ruptured aneurysm, Potts procedure)
3. APVR, partial or total
4. Coarctation of pulmonary artery or its branches

5. Congenital absence of the pericardium
6. Cor triatriatum
7. Double outlet right ventricle
8. Eisenmenger complex
9. Hypoplastic left heart S._g (incl. interrupted aortic arch)
10. Left to right shunt, other (eg, aortocapillary window, atrioventricular canal defect, coronary artery fistula to right heart or PA)
11. Marfan S.
12. Neoplasm of heart (esp. left atrial myxoma) (See C-35)
13. Parachute mitral valve complex
14. Pulmonary insufficiency
15. Tricuspid atresia without pulmonary stenosis
16. Trilogy of Fallot
17. Truncus arteriosus, type 1

**PULMONARY ARTERIAL
HYPERTENSION
(COR PULMONALE)**

CHRONIC HYPOXIA

1. Chest deformity (eg, kyphoscoliosis, thoracoplasty)
2. Chronic upper airway obstruction (eg, enlarged tonsils or adenoids; Crouzon S.)

(continued)

3. High altitude dwelling
4. Neuromuscular disorder_g
5. Obesity (Pickwickian S.)
6. Pleural fibrothorax

DIFFUSE LUNG DISEASE

1. Alveolar cell carcinoma
2. Alveolar microlithiasis
3. Bronchiectasis
4. Chronic bronchitis; asthma
5. Collagen disease (eg, scleroderma, rheumatoid lung, lupus erythematosus, dermatomyositis)
6. Congenital syndromes (eg, cutis laxa, Ehlers-Danlos S., Marfan S., Melnick-Needles S.)
7. Cystic fibrosis
8. Emphysema (incl. antitrypsinase deficiency)
9. Fat embolism
10. Histiocytosis X_g
11. Interstitial fibrosis
12. Metastases, lymphangitic, embolic (eg, trophoblastic)
13. Pneumoconiosis
14. Sarcoidosis
15. Tuberculosis or fungus disease_g

DIFFUSE PULMONARY VASCULAR OR HEART DISEASE

1. Arteritis (eg, polyarteritis nodosa, lupus erythematosus, Takayasu S., Wegener's granulomatosis)
2. Hypoplastic left heart S._g
3. [Idiopathic (usually young women)]
4. Left to right shunt, chronic (esp. ASD, VSD, PDA—Eisenmenger physiology) (See C-5)
5. Left ventricular failure, chronic
6. Mitral stenosis or insufficiency (long-standing)
7. Primary pulmonary hypertension, idiopathic; pulmonary arteriolar sclerosis
8. Pulmonary artery stenoses or coarctations, multiple (incl. Williams S., arteriohepatic dysplasia)

9. Pulmonary thromboembolism (eg, multiple pulmonary emboli, intravenous drug abuse, sickle cell disease, polycythemia vera, tumor emboli)
10. Pulmonary venous hypertension (See C-51)
11. Schistosomiasis
12. Ventriculoatrial shunt for hydrocephalus

PULMONARY ARTERY “ANEURYSM”

COMMON

1. False aneurysm (external trauma, postoperative)
2. Left to right shunt, large (See C-5)
3. Pulmonary arterial hypertension (eg, emphysema, schistosomiasis) (See C-46)
4. Pulmonary valvular stenosis (poststenotic dilatation)

UNCOMMON

1. Arteritis (eg, polyarteritis nodosa, Takayasu S., syphilis)
2. Atherosclerosis

(continued)

3. AV malformation
4. Behcet S.
5. Hughes-Stovin S. (venous thrombosis plus pulmonary artery aneurysms)
6. Idiopathic
7. Medial degeneration or necrosis (eg, Marfan S., Ehlers-Danlos S., mucopolysaccharidoses, dissection)
8. Mycotic aneurysm (esp. drug addiction)

References:

Gamut C-48

LOCALIZED ENLARGEMENT OF A PULMONARY VESSEL

COMMON

- *1. AV malformation, congenital or acquired (eg, traumatic)
- 2. Obstructed pulmonary vein or artery (eg, thrombus, neoplasm, granulomatous lesion)
- *3. Varix, congenital or acquired (eg, mitral stenosis)

UNCOMMON

- *1. Aneurysm of pulmonary artery (eg, polyarteritis nodosa, Takayasu S.; mycotic aneurysm in drug addiction)
- 2. Anomalous insertion site of pulmonary vein into left atrium
- 3. Anomalous pulmonary vein (eg, scimitar S.); PAPVR
- 4. Atresia or stenosis of pulmonary vein (veno-occlusive disease)

- *5. Bronchial artery dilatation (eg, tetralogy of Fallot)
- 6. Cirsoid aneurysm
- *7. Coarctation or stenosis of pulmonary artery or its branches (poststenotic dilatation)
- *8. Mycotic aneurysm of pulmonary artery
- 9. Sequestration of lung; anomalous pulmonary artery arising from aorta
- 10. Systemic artery-pulmonary artery shunt (See C-52)
- *11. Telangiectasia (eg, portal hypertension, Osler-Weber-Rendu S.)

*Sometimes multiple.

**PULMONARY VALVE OR MAIN
PULMONARY ARTERY OBSTRUCTION
(OFTEN LEADING TO PULMONARY
HYPOVASCULARITY)**

COMMON

- *1. Lymphadenopathy with compression (eg, sarcoidosis, tuberculosis, histoplasmosis)
- *2. Metastatic or locally invasive neoplasm with compression or luminal obstruction (esp. bronchogenic carcinoma, hypernephroma, melanoma, thymoma, lymphoma_g)

(continued)

3. Pulmonary valve stenosis or atresia, congenital
- *4. Thromboembolism in pulmonary artery

UNCOMMON

- *1. Coarctation of pulmonary artery
- *2. Compression by aortic aneurysm_g
3. Constrictive pericarditis
4. Endomyocardial fibroelastosis
5. Hypertrophy of the left ventricle (Bernheim S.)
6. IHSS; African cardiomyopathy
7. Mediastinal fibrosis
- *8. Neoplasm of heart or pulmonary artery (esp. carcinoid, sarcoma, metastatic) (See C-35)
9. Pulmonary stenosis, acquired (eg, rheumatic fever; carcinoid S.)
10. Septal and infundibular hypertrophy from VSD (Gasul S.)
- *11. Takayasu S. involving pulmonary artery
12. Tetralogy of Fallot_g

*Often unilateral.

Gamut C-50

**GENERALIZED PULMONARY ARTERIAL
HYPOVASCULARITY**
(See Gamut C-16)

COMMON

1. Congenital heart disease with right to left shunt (eg, tetralogy or trilogy of Fallot_g)
2. Emphysema, diffuse or bullous
3. Pulmonary hypertension, primary or secondary (eg, schistosomiasis)
4. Right ventricular failure, esp. with marked tricuspid insufficiency

UNCOMMON

1. Compression of pulmonary artery trunk (eg, neoplasm, histoplasmic lymphadenopathy)
2. Ebstein's anomaly; Uhl's anomaly
3. Hypoventilation S.
4. Hypovolemia
5. Mechanical obstruction at, or proximal to, tricuspid valve (eg, right atrial myxoma; hypernephroma extending up IVC into RA; tricuspid stenosis)
6. Mitral stenosis (postcapillary hypertension)
7. Myocardiopathy (See C-32)
8. Pericardial tamponade
9. Pulmonary artery stenosis or coarctation
10. Pulmonary valvular stenosis, congenital or acquired (eg, carcinoid)
11. Thromboembolism to many small pulmonary arteries (incl. trophoblastic embolic metastases)
12. Vasculitis (eg, polyarteritis nodosa)

Gamut C-51

**PULMONARY VENOUS OBSTRUCTION
OR HYPERTENSION
(INCREASED VENOUS VASCULARITY
OR VASCULAR REDISTRIBUTION)**
(See Gamut C-4)

COMMON

1. Left ventricular failure, any cause (eg, hypertension, myocardial ischemia, high output heart disease) (See C-29, C-30, C-31)
2. Mitral stenosis or insufficiency

UNCOMMON

1. Airway obstruction (eg, laryngeal)
2. Aortic stenosis or insufficiency
3. [Basal emphysema or thromboembolism (redistribution)]
4. Coarctation S. (coarctation of aorta with VSD and/or PDA)
5. Hypoplastic left heart S.; aortic atresia
6. Myocardiopathy (See C-32)
7. Neoplasm (esp. left atrial myxoma) (See C-35)
8. Obstruction of pulmonary veins
 - a. Congenital
 1. APVR, total, (below the diaphragm; or above the diaphragm with stenosis of an anomalous venous trunk)

2. Atresia or stenosis of the common or individual pulmonary veins
3. Cor triatriatum
4. Primary pulmonary veno-occlusive disease
- b. Acquired
 1. Constrictive pericarditis (See C-40)
 2. Mediastinal tumor
 3. Mediastinitis or mediastinal fibrosis (eg, histoplasmosis)
 4. Thrombosis of pulmonary veins
9. Parachute mitral valve complex
10. Peripheral AV malformations
11. Thrombus in left atrium (esp. ball-valve)

Gamut C-52

**SYSTEMIC TO PULMONARY
VASCULAR SHUNT ON ANGIOGRAPHY
(See Gamut C-19)**

COMMON

1. Bronchiectasis
2. Congenital cyanotic heart disease (eg, tetralogy of Fallot, tricuspid atresia, single ventricle, double outlet right ventricle, complete or corrected transposition of great vessels)
3. Neoplasm of lung (esp. bronchogenic carcinoma)
4. Occlusion of pulmonary artery (eg, thromboembolism, surgical ligation, mediastinal fibrosis, other external compression) (See C-49)
5. Postoperative (eg, Blalock or Potts procedure for tetralogy, Mustard operation for transposition)
6. Sequestration of lung

UNCOMMON

1. Absence or atresia of pulmonary artery
2. Adenomatoid malformation of the lung
3. Anomalous origin of pulmonary artery (eg, right PA from ascending aorta)
4. AV malformation, congenital or acquired (eg, pulmonary, thoracic wall)
5. Cirrhosis of liver
6. Emphysema; chronic bronchitis
7. Infection of chest wall (eg, chronic granuloma of infants, actinomycosis)
8. Neoplasm of thoracic wall (eg, Hodgkin's disease)
9. Occlusion of pulmonary vein
10. Venolobar S.

Gamut C-53

SMALL ASCENDING AORTA OR AORTIC ARCH

COMMON

1. ASD
2. Coarctation of aorta (long segment infantile type); interrupted aortic arch
3. Decreased cardiac output (eg, endocardial fibro-elastosis or other myocardopathy; small heart; constrictive pericarditis) (See C-32, C-34, C-40)
4. Mitral stenosis or insufficiency
5. [Technical (eg, rotated patient, dextroscoliosis, pectus excavatum)]
6. VSD, large

UNCOMMON

1. APVR, total
2. Atrioventricular canal defect
3. Hypoplastic left heart S._g
4. Supravalvular aortic stenosis (incl. Williams S.)
5. Transposition of great vessels (arch may appear small due to rotation)
6. Tricuspid atresia with transposition

Reference:

1. Meszaros WT: Cardiac Roentgenology. Springfield, IL: CC Thomas, 1969, pp 148-149

Gamut C-54

**PROMINENT ASCENDING AORTA OR
AORTIC ARCH**

COMMON

1. Aneurysm of aorta
2. Aortic arch anomaly (eg, right aortic arch, double aortic arch)
3. Aortic insufficiency
4. Aortic stenosis (congenital, rheumatic, atherosclerotic)
5. Aortitis (eg, syphilitic, giant cell, rheumatoid, Takayasu's)
6. Atherosclerosis (tortuosity, elongation, unfolding, and/or dilatation of aorta)
7. Coarctation of aorta; pseudocoarctation
8. Hypertensive heart disease
9. Medial degeneration of aorta (eg, Marfan S., Ehlers-Danlos S., other connective tissue disorders) (See C-55A)
10. [Mediastinal mass simulating large aorta (eg, thymoma, lymphoma, invasive or metastatic carcinoma)]
11. PDA
12. Tetralogy of Fallot_g (incl. pseudotruncus)

UNCOMMON

1. Aneurysm of sinus of Valsalva or coronary artery (See C-56)
2. Aorta-left ventricle tunnel
3. Aortopulmonary window
4. Corrected transposition with left-sided ascending aorta
5. Pulmonary atresia with intact ventricular septum
6. Tricuspid atresia without transposition
7. Truncus arteriosus
8. VSD with reversal of shunt

Gamut C-55

**ANEURYSM OF AORTA AND OTHER
MAJOR ARTERIES**

COMMON

1. Atherosclerosis
2. Congenital (esp. cerebral—circle of Willis)
3. Dissecting (See C-55A)
4. Trauma (incl. false aneurysm)

UNCOMMON

1. Angiomyolipoma (renal)
2. Cystic medial necrosis (eg, Marfan S.)
3. "Inflammatory" (degenerative abdominal aortic aneurysm with periarterial fibrosis)
4. Mycotic aneurysm (sepsis, bacterial endocarditis, tuberculosis)
5. Necrotizing vasculitis, arteritis (eg, polyarteritis nodosa; lupus erythematosus; Wegener's granulomatosis; drug abuse—esp. metamphetamine; syphilis; Takayasu S.; acute pancreatitis)
6. Neurofibromatosis
7. Osler-Weber-Rendu S.; AV malformation
8. Poststenotic, distal to
 - a. Atheromatous stenosis in any vessel
 - b. Coarctation in thoracic aorta
 - c. Fibromuscular dysplasia (esp. in renal artery)
 - d. Subclavian stenosis in thoracic inlet S.
9. Pseudoxanthoma elasticum

(continued)

Reference:

Subgamut C-55A

**PREDISPOSING CAUSES OF
DISSECTING ANEURYSM OF THE
ASCENDING AORTA OR ARCH**

COMMON

1. Atherosclerosis
2. Coarctation of aorta; bicuspid aortic valve
3. Cystic medial necrosis or degeneration of aorta (esp. Marfan S.)
4. Hypertension
5. Trauma

UNCOMMON

1. Aortic stenosis
2. Cystic medial necrosis, other causes:
 - a. Cogan S.
 - b. Cutis laxa
 - c. Ehlers-Danlos S.
 - d. Idiopathic
 - e. Mucopolysaccharidoses_g
 - f. Osteogenesis imperfecta
 - g. Polychondritis
 - h. Pseudoxanthoma elasticum
 - i. Turner S.
3. Infection (eg, bacterial endocarditis—mycotic aneurysm; syphilis)
4. Intramural injection of contrast medium
5. Pregnancy

Gamut C-56

ANEURYSM OF CORONARY ARTERY

COMMON

1. Atherosclerosis
2. Congenital

UNCOMMON

1. Collagen disease_g
2. Dissection
3. Iatrogenic (eg, catheter or operative injury)
4. Kawasaki S.
5. Marfan S.
6. Mucopolysaccharidoses_g
7. Mycotic (incl. bacterial endocarditis)
8. Necrotizing arteritis
9. Rheumatic heart disease
10. Syphilis
11. Trauma

Gamut C-57

ARTERIAL STENOSIS AND THROMBOSIS

1. Arteritis (eg, Takayasu's; giant cell; mesenteric)
2. Atherosclerosis with atheromatous plaque
3. Buerger's disease (thromboangiitis obliterans)
4. Congenital lesions (eg, coarctation of thoracic or abdominal aorta, fibromuscular hyperplasia)
5. Extrinsic compression of artery (eg, thoracic inlet S., renal artery stenosis due to fibrous band or neurofibromatosis, popliteal entrapment, celiac compression S.)
6. Neoplastic compression or invasion ("cuffing")

Reference:

1. Sutton D, Young JWR (eds): A Short Textbook of Clinical Imaging. London: Springer-Verlag, 1990, p 244

Gamut C-58

EMBOLUS

COMMON

1. Atheromatous plaque or ulcer with mural thrombus
2. Bacterial endocarditis
3. Iatrogenic (eg, postendarterectomy; arterial or venous catheterization)
4. Septic
5. Venous thrombosis or thrombophlebitis (incl. paradoxical embolus from venous system through patent foramen ovale to systemic circulation)

UNCOMMON

1. Arterial aneurysm with mural thrombus
2. Atrial fibrillation with left atrial thrombus
3. Myocardial infarction with left ventricular thrombus
4. Neoplasm (tumor emboli), incl. left atrial myxoma

Gamut C-59

**ARTERITIS AND OTHER CEREBRAL
ARTERIAL DISEASE ON ANGIOGRAPHY
(NARROWING, IRREGULARITY,
OCCLUSION, OR ANEURYSM)**

ARTERITIS

1. Bacterial arteritis, mycotic aneurysm (eg, from abscess, meningitis, osteomyelitis, embolism)
2. Behcet S.
3. Carotid arteritis (infant or child)
4. Collagen disease arteritis (esp. lupus erythematosus)
5. Drug or chemical arteritis (eg, ergot, amphetamine, heroin, arsenic, carbon monoxide)
6. Fungal arteritis (esp. torulosis, actinomycosis, nocardiosis, aspergillosis, phycomycosis)
7. Necrotizing angiitis (eg, polyarteritis nodosa, rheumatic fever, hypersensitivity angiitis, giant cell arteritis, temporal arteritis)
8. Radiation arteritis
9. Rickettsial arteritis
10. Sarcoid arteritis
11. Syphilitic arteritis
12. Takayasu's arteritis
13. Tuberculous arteritis
14. Viral arteritis (eg, herpes zoster)

OTHER CAUSES

1. Arterial spasm (eg, subarachnoid or cerebral hemorrhage; migraine)
2. Arteriosclerosis
3. AV malformation
4. Berry aneurysm
5. Cerebral thrombosis (eg, sickle cell anemia, oral contraceptives)
6. Embolism (eg, subacute bacterial endocarditis, atrial myxoma)
7. Fibromuscular dysplasia (usually extracranial)

(continued)

8. Idiopathic
9. [Increased intracranial pressure]
10. Inflammatory disease of brain (eg, abscess; purulent or tuberculous meningitis)
11. Multiple progressive intracranial artery occlusions with telangiectasia (moyamoya)
12. Neoplasm (eg, glioblastoma, lymphoma_g, metastasis)
13. Neurocutaneous syndromes (eg, neurofibromatosis, Sturge-Weber S., tuberous sclerosis)
14. Trauma

**EXTRACRANIAL ISCHEMIC LESION
SECONDARILY INVOLVING THE BRAIN**

COMMON

1. Occlusion or stenosis of brachiocephalic vessels
2. Steal syndromes (eg, subclavian steal) (See C-61)

UNCOMMON

1. Dissecting aneurysm of thoracic aorta
2. Embolization secondary to mitral valve disease or atrial myxoma
3. Takayasu's arteritis

4. Trauma to neck
5. Tumor in neck compromising cervical vessels (eg, thyroid adenoma, neurilemoma)

Reference:

1. Mishkin MM: Extracranial ischemic lesions which secondarily involve the brain. Radiol Clin North Am 1967;5:395-408

Gamut C-61

SUBCLAVIAN STEAL SYNDROME

COMMON

1. Atherosclerosis

UNCOMMON

1. Coarctation of aorta with obliteration of subclavian orifice
2. Extravascular obstruction (eg, fibrous band)
3. Hypoplasia, atresia, or isolation of subclavian artery with anomalous aortic arch
4. Ligation for correction of tetralogy of Fallot or coarctation of aorta
5. Obstruction of subclavian artery secondary to cannulation
6. Vascular ring

References:

3. Patel A, Toole JF: Subclavian steal syndrome: Reversal of cephalic blood flow. Medicine 1965;44:289-303

Gamut C-62

AZYGOS VEIN DILATATION*

COMMON

1. Congenital absence or interruption of hepatic segment of inferior vena cava with azygos continuation to SVC (eg, polysplenia S.)
2. Congestive heart failure (eg, right ventricular failure secondary to left ventricular failure or mitral stenosis)
3. Constrictive pericarditis (See C-40)
4. [Enlarged azygos node; mediastinal tumor]
5. Normal (expiration, recumbency)
6. Obstruction of inferior vena cava (See C-64)
7. Obstruction of superior vena cava (See C-63)
8. Overhydration
9. Pericardial effusion (See C-41)
10. Portal hypertension; splenic or portal vein thrombosis
11. Pregnancy
12. Tricuspid insufficiency (See C-22A)

UNCOMMON

1. APVR, total (esp. via the azygos vein)
2. AV malformation (esp. thoracic wall)
3. Idiopathic
4. Mechanical obstruction proximal to or at tricuspid valve (eg, myxoma of RA; hypernephroma extending up IVC into RA; rare tricuspid stenosis)
5. [Right aortic arch with displaced azygos vein]
6. Sequestration of lung (esp. extralobar)
7. Traumatic azygos pseudoaneurysm or AV fistula

* Round or oval density crossing over right main bronchus at the tracheobronchial angle and measuring over 10 mm in diameter on erect PA chest radiograph. Azygos vein decreases in size with inspiration, erect position, or Valsalva maneuver.

Gamut C-63

SUPERIOR VENA CAVAL DILATATION

COMMON

1. Bronchogenic carcinoma (eg, superior sulcus)
2. Increased central venous pressure (eg, congestive heart failure; cardiac tamponade from pericardial effusion or constrictive pericarditis)
3. Lymphadenopathy (eg, oat cell carcinoma of lung, histoplasmosis, tuberculosis)
4. Lymphoma_g
5. Mediastinal fibrosis or granuloma (eg, histoplasmosis, tuberculosis, ergotrate, irradiation, idiopathic)
6. Neoplasm of esophagus, thyroid or mediastinum (eg, goiter, cystic hygroma, thymoma, teratoid tumor)
7. Thrombosis (eg, iatrogenic—broken pacemaker wire, central line catheter, ventriculo-atrial shunt for hydrocephalus, post-tetralogy of Fallot repair; polycythemia vera)

UNCOMMON

1. Aneurysm of aorta or great artery_g; AV fistula
2. Axillary vein thromboisis with extension
3. Behcet S.
4. Congenital heart disease (eg, tricuspid insufficiency, TAPVR)
5. Idiopathic
6. Mediastinal emphysema, severe; tension pneumothorax
7. Mediastinitis, acute
8. Myxoma of right atrium
9. Osteomyelitis of clavicle
10. Pneumoconiosis (coal-worker's, silicosis) with conglomerate mass
11. Postoperative (eg, after surgery for congenital heart disease)
12. Sarcoidosis
13. Trauma (eg, laceration, transection, mediastinal hematoma)

(continued)

**OBSTRUCTION OF THE INFERIOR
VENA CAVA OR ILIAC VEINS**

COMMON

1. Direct tumor invasion of IVC (eg, renal cell carcinoma, Wilms' tumor, hepatoma)
2. Extrinsic compression (eg, by lymphadenopathy, retroperitoneal tumor, cyst, hematoma, pelvic lymphocele, aortic aneurysm, liver mass or enlarged liver)
3. Therapeutic interruption of IVC by ligation or filters (eg, to prevent pulmonary emboli, or as therapy for schistosomiasis)
4. Thromboembolism
5. Transient compression (eg, ascites, pregnancy)

UNCOMMON

1. Adhesions
2. [Congenital absence or hypoplasia of IVC]
3. Lymphedema praecox (from compression of left common iliac vein by left common iliac artery)

4. Posttraumatic; post-radiation therapy
5. Retroperitoneal fibrosis
6. Sarcoma of IVC (eg, leiomyosarcoma, angiosarcoma)
7. Web at junction of IVC and RA

Subgamut C-64A

**ANOMALIES OF THE INFERIOR
VENA CAVA**

- | | |
|---|--|
| 1. Absence of IVC | Failure to form a prerenal cava |
| 2. Azygos continuation, unilateral or bilateral | Persistence of left supracardinal vein |
| 3. Bilateral cavae | Failure of dominance of right supracardinal vein |
| 4. Circumaortic venous collar | Failure of regression of superior intersupracardinal anastomosis |
| 5. Left IVC | Regression of right supracardinal vein |
| 6. Retrocaval ureter | Failure of regression of right posterior cardinal vein |

ABNORMAL ABDOMINAL VESSELS ON ANGIOGRAPHY

COMMON

1. Aneurysm_g
2. Anomalous origin or congenital absence of a vessel (eg, pulmonary sequestration)
3. Arterial occlusion, incl. collateral circulation (eg, via artery of Drummond, arc of Riolan, meandering mesenteric artery)
4. Arteritis, microaneurysms (eg, Behcet S., Takayasu's disease, necrotizing angiitis from drug abuse, mycotic aneurysms, polyarteritis nodosa, other collagen disease_g)
5. Atherosclerosis
6. Fibromuscular dysplasia
7. Neoplasm, incl. neovascularity (eg, angiomyolipoma, pheochromocytoma, renal cell carcinoma) or vascular cuffing or displacement (esp. carcinoma)
8. Thromboembolism
9. Trauma (lacerated or transected vessel)
10. Varices (eg, portal venous hypertension or obstruction, inferior vena caval obstruction)

UNCOMMON

1. Anomalous pulmonary vein, draining below the diaphragm (incl. venolobar S.)
2. AV communication
3. Azygos continuation of inferior vena cava
4. Coarctation of abdominal aorta
5. Neurofibromatosis, arterial
6. Phlebitis (esp. pylephlebitis)
7. Portal vein occlusion ("cavernous transformation")
8. Pregnancy (eg, hypertrophied uterine vessels, compression of iliac vein)
9. Pseudoxanthoma elasticum
10. Telangiectasia (eg, Osler-Weber-Rendu S.)

**OBSTRUCTION OF ABDOMINAL
LYMPHATIC VESSELS,
CISTERNA CHYLI, OR THORACIC DUCT
ON LYMPHANGIOGRAPHY
(CHYLOUS OR LYMPHATIC ASCITES)**

COMMON

1. Lymphoma_g
2. Metastasis (esp. lymph node)
3. Neoplasm, benign (esp. lymphangioma)
4. Postoperative
5. Trauma

UNCOMMON

1. Adhesive bands
2. Cirrhosis (hepatic lymphatics visible)
3. [Congenital absence or hypoplasia of lymphatic system]
4. Filariasis
5. Idiopathic
6. Lymphangioleiomyomatosis; tuberous sclerosis
7. Lymphangiomatosis, disseminated (benign metastasizing lymphangiomatosis)
8. Neoplasm compressing or invading lymphatic system (eg, carcinoma of pancreas)
9. Tuberculosis; histoplasmosis

Gamut C-67

**COMPLICATIONS OF CENTRAL
VENOUS (SUBCLAVIAN, JUGULAR) OR
PULMONARY ARTERY
CATHETERIZATION**

COMMON

1. Arterial insertion with perforation (esp. subclavian, carotid artery)
2. Catheter embolism; broken catheter; trapped catheter; occluded catheter
3. Extravascular infusion (eg, mediastinal, intrapleural, subcutaneous)
4. Infection (local or sepsis)
5. Malpositioned or dislodged catheter (eg, in RV, IVC, hepatic vein, jugular vein)
6. Perforation of vessel with hematoma, hemothorax, hydrothorax, hemopericardium, or hemomediastinum
7. Pneumothorax
8. Thrombosis (eg, SVC); thrombophlebitis; pulmonary embolism

UNCOMMON

1. Air embolism
2. AV fistula
3. Cardiac (eg, myocardial perforation, tamponade, arrhythmias)
4. Nerve injury (phrenic or brachial plexus)
5. Subcutaneous or mediastinal emphysema
6. Thoracic duct laceration

VASCULAR CALCIFICATION

COMMON

1. Aneurysm
2. Arteriosclerosis
3. Hemangioma; arteriovenous malformation
- *4. Hyperparathyroidism, primary or secondary (renal osteodystrophy)
5. Mönckeberg's sclerosis (medial sclerosis)
6. Phleboliths (eg, normal, varicose veins, hemangioma, Maffucci S.)
7. Premature atherosclerosis
 - a. Familial hyperlipemia
 - b. Generalized (idiopathic) arterial calcification of infancy
 - c. Osteogenesis imperfecta tarda
 - d. Progeria
 - e. Secondary hyperlipemia
 - i. Cushing S.
 - ii. Diabetes

(continued)

- iii. Glycogen storage disease
- iv. Hypothyroidism
- v. Lipodystrophy
- vi. Nephrotic S.
- vii. Renal homotransplantation
- f. Werner S.

UNCOMMON

- 1. Buerger's disease
 - 2. Calcified thrombus (eg, vena cava, portal vein, left atrium, pulmonary artery, peripheral artery, Leriche S.)
 - 3. Cystic fibrosis
 - 4. Gout, hyperuricemia
 - 5. Homocystinuria
 - *6. Hypervitaminosis D
 - 7. Hypoparathyroidism
 - *8. Idiopathic hypercalcemia (Williams S.)
 - *9. Immobilization
 - *10. Milk-alkali S.
 - 11. Ochronosis (alkaptonuria)
 - 12. Oxalosis
 - 13. Pseudoxanthoma elasticum
 - 14. Radiation therapy
 - 15. Raynaud's disease
 - *16. Sarcoidosis
 - 17. Takayasu's arteritis
 - 18. Thermal injury (eg, burn, frostbite)
 - *19. Widespread bone destruction (eg, metastatic disease)
- * Hypercalcemia.

**ROENTGEN SIGNS OF ALVEOLAR
DISEASE (CONSOLIDATION, AIR
SPACE PATTERN)**

1. Acinar or peribronchiolar nodules
2. Air alveogram and bronchiogram
3. Air bronchogram
4. Butterfly or "bat's wing" distribution
5. Coalescence (early)
6. Fluffy, ill-defined margins
7. Present soon after onset of symptoms; rapid change
8. Segmental or lobar distribution

Gamut C-70

PULMONARY EDEMA

COMMON

- *1. Agonal
- *2. ARDS (eg, shock lung, respirator lung); oxygen toxicity
- *3. Aspiration (eg, Mendelson S.)
- *4. Cardiac failure (eg, left heart failure, mitral stenosis, total APVR, hypoplastic left heart S., myo-cardiopathy) (See C-32)
- *5. Drug reaction (eg, nitrofurantoin, aspirin, hydrochlorothiazide, beta-adrenergic drugs, interleukin-2, radiologic contrast media)
- *6. Glomerulonephritis, acute; nephrosis

(continued)

- *7. Iatrogenic (incl. fluid overload, overtransfusion, drug overdose)
- 8. Narcotics (esp. heroin, morphine, methadone)
- 9. Neurogenic, cerebral (stroke, head trauma, epilepsy, neoplasm, increased intracranial pressure)
- 10. Pulmonary infarction, thromboembolism
- *11. Renal failure, uremia
- 12. Sensitivity pneumonitis, extrinsic allergic alveolitis (eg, farmer's lung, silo-filler's disease, bagassosis)

UNCOMMON

- *1. Cardiopulmonary bypass, open heart surgery
- 2. Collagen disease_g
- *3. Disseminated intravascular coagulopathy
- 4. Fat embolism (incl. oily contrast medium, amniotic fluid)
- *5. Hepatic disease (eg, acute hepatitis)
- 6. High altitude
- *7. Hydrocarbon aspiration
- *8. Hypoproteinemia (eg, malabsorption)
- *9. Hypoxia, any cause
- *10. Inhalation of noxious gas, smoke, paint fumes, sulfur dioxide, beryllium, silica, dinitrogen tetroxide, carbon monoxide, fluorocarbons, hydrocarbons, paraquat, ammonium, chlorine, hydrogen sulfide, phosgene, cadmium
- *11. [Lymphangiectasia]
- *12. Near-drowning
- 13. Neoplasm of heart (esp. left atrial myxoma)
- 14. Pancreatitis, acute
- *15. Parasitic disease (eg, malaria, ascariasis, strongyloidiasis)
- 16. Pericarditis, (esp. constrictive)
- 17. Pheochromocytoma (catecholamine release)
- *18. Pleural air or fluid aspiration, rapid or excessive; reexpansion of lung following treatment for a large pneumothorax
- 19. Pregnancy
- 20. Radiation therapy

- *21. Shock (eg, insulin reaction; gram negative sepsis; snakebite; electric shock; anaphylactic reaction to penicillin, blood transfusion, or radiologic contrast medium)
- *22. Transient tachypnea of newborn (retained fetal lung fluid)
- *23. Trauma, thoracic
- *24. Upper airway obstruction (eg, aspirated food, foreign body, hanging, suffocation, epiglottitis, croup)
- *25. Venous or lymphatic obstruction (eg, pulmonary veno-occlusive disease, blockage by mediastinal mass)

* May occur in an infant.

UNILATERAL PULMONARY EDEMA

COMMON

1. Aspiration, unilateral
2. Contralateral disease (eg, emphysema; occlusion, absence, or hypoplasia of a pulmonary artery — Swyer-James S.)
3. Contusion of one lung

(continued)

4. Idiopathic
5. Postural (prolonged lateral decubitus position)
6. Thoracentesis, too rapid (for pneumothorax or pleural effusion)

UNCOMMON

1. Bronchial obstruction with drowned lung
2. Catheter malposition with infusion into lung
3. Congenital heart disease (eg, unilateral ductus shunt)
4. Postoperative systemic-pulmonary artery shunt (eg, Potts, Blalock, or Waterston operation)

PULMONARY HEMORRHAGE

COMMON

1. Contusion, blunt trauma
2. Renal disease with or without immunologic abnormality (incl. Goodpasture S.)

UNCOMMON

1. Anticoagulant therapy; other drug-induced bleeding
2. Aspiration from a bleeding pulmonary lesion
3. Bleeding or clotting disorder_g (eg, hemophilia, leukemia)

4. Cardiac failure
5. Collagen disease_s (esp. lupus erythematosus)
6. Disseminated intravascular coagulation
7. Drug abuse (esp. heroin)
8. Idiopathic
9. Idiopathic pulmonary hemosiderosis
10. Infection (eg, Rocky Mountain spotted fever, aspergillosis, mucormycosis)
11. Leukocytoclastic vasculitis
12. Mitral stenosis
13. Parasitic disease (esp. strongyloidiasis)
14. Thromboembolism (esp. with infarction)
15. Wegener's granulomatosis

ROENTGEN PATTERNS OF INTERSTITIAL DISEASE

1. Bronchial disease (eg, mucoid impaction, bronchiectasis)
2. Discrete miliary nodules
3. Honeycomb lung

(continued)

4. Kerley lines
5. Small irregular shadows (reticular, reticulonodular)
6. Vascular abnormality (incl. pulmonary arterial, pulmonary venous, or bronchial arterial)

References:

1. Felson B: A new look at pattern recognition of diffuse pulmonary disease. AJR 1979;133:183-189

Gamut C-73

**ACUTE DIFFUSE FINE RETICULAR
DENSITIES
(KERLEY LINES, ACUTE—A, B, AND C)
(See Gamut C-74)**

COMMON

1. Pneumonia (esp. interstitial—viral, mycoplasma, pneumocystis)
2. Pulmonary edema (esp. congestive heart failure, uremia, fluid overload, drug reaction) (See C-90)
3. Transient tachypnea of the newborn (retained fetal lung fluid)

UNCOMMON

1. Hypoproteinemia (eg, cirrhosis, nephrosis, burn, exudative skin disorder)
2. Pulmonary hemorrhage (See C-71)
3. Pulmonary veno-occlusive disease, acute
4. Sensitivity pneumonitis (eg, farmer's lung)

References:

Gamut C-74

**KERLEY LINES, CHRONIC—
A, B, AND C
(See Gamut C-73)**

COMMON

1. Bronchogenic carcinoma (lymphatic obstruction)
2. Idiopathic
3. Lymphangitic metastases
4. Normal
5. Pneumoconiosis
6. Rheumatic mitral stenosis

UNCOMMON

1. Alveolar proteinosis (late)
2. Bronchiolo-alveolar carcinoma
3. Collagen vascular disease (eg, rheumatoid lung, scleroderma)
4. Congenital heart disease (eg, total APVR)
5. Desquamative interstitial pneumonitis (DIP); lymphocytic interstitial pneumonitis (LIP)
6. Interstitial fibrosis
7. Left atrial neoplasm (esp. myxoma)
8. Lipoid pneumonia_g
9. Lymphangiectasia, diffuse
10. Lymphangioleiomyomatosis
11. Lymphoma_g (esp. alveolar); leukemia
12. Mediastinal mass with lymphatic obstruction; sclerosing mediastinitis
13. Pulmonary hemorrhage, late (See C-71)

(continued)

14. Pulmonary veno-occlusive disease
15. Radiation fibrosis
16. Sarcoidosis
17. Thoracic duct ligation, obstruction, or injury

References:

1. Felson B: A new look at pattern recognition of diffuse pulmonary disease. AJR 1979;133:183-189

Gamut C-75

**LONG LINEAR OR CURVILINEAR
SHADOW IN THE LUNG,
SOLITARY OR MULTIPLE**

COMMON

1. Azygos lobe (rarely hemiazygos lobe on left)
2. Bronchial wall thickening, enlarged bronchus (eg, chronic bronchitis, bronchiectasis—"tram lines")
3. Bulla, pneumatocele, or thin-walled cavity (partially visible)
4. Disk atelectasis, transverse or vertical (Fleischner line)
5. Interlobar fissure, normal or thickened
6. Kerley line
7. Pneumothorax (edge of lung)
8. Pulmonary artery or vein (eg, scimitar S., AV malformation, other anomalous vessel)
9. Scar, linear
10. [Skin fold; artifact]

UNCOMMON

1. Bronchial artery (eg, cyanotic congenital heart disease)
2. Mucoid impaction in bronchus
3. [Pleural band or scar]

References:

1. Fleischner F, Hampton AD, Castleman B: Linear shadows in the lung (interlobar pleuritis, atelectasis and healed infarction). AJR 1941;46:610-618

Gamut C-76

BLURRING OF THE HEART BORDER ON PA CHEST FILM

COMMON

1. Idiopathic
2. Infiltrate or edema in lingula, right middle lobe, or anterior segment of an upper lobe
3. Mediastinal lesion, anterior (See C-79)
4. Normal or congested blood vessels (esp. right heart border)
5. Pericardial fat pad
6. Pleural fluid
7. Pleuropericardial adhesion; postinfarction myocardial scar
8. Pneumoconiosis (esp. asbestosis)

UNCOMMON

1. Funnel breast, pectus excavatum
2. Hernia, hepatic
3. Pericarditis, constrictive; mediastinal fibrosis
4. Venolobar S. (areolar tissue)

Reference:

1. Felson B: Chest Roentgenology. Philadelphia: W.B. Saunders, 1973

Gamut C-77

UNILATERAL SMALL HILAR SHADOW

COMMON

1. Air trapping, unilateral
2. Hyperaeration, unilateral
3. Lobar collapse with hilum displaced behind the heart
4. Normal variant
5. Postoperative (eg, lobectomy)
6. Rotation (scoliosis, poor positioning)

UNCOMMON

1. Central pulmonary artery obstruction, unilateral (eg, neoplasm, thromboembolism, histoplasmic lymphadenopathy)
2. Congenital absence, hypoplasia, or coarctation of main pulmonary artery
3. Swyer-James S.

References:

1. Felson B: Chest Roentgenology. Philadelphia: W.B. Saunders, 1973
2. White RI Jr, Kaufman SL, Donner MW: Angiographic diagnosis of venous thromboembolism revisited. Ann Radiol 1980;23:312-315

Gamut C-78

UNILATERAL HILAR ENLARGEMENT

COMMON

1. Bronchial adenoma (carcinoid)
2. Bronchogenic carcinoma
3. Fungus disease (esp. histoplasmosis, coccidiomycosis, actinomycosis, blastomycosis, sporotrichosis)

4. Lymphoma_g
5. Metastasis
6. Pulmonic stenosis, valvular (poststenotic dilatation of left pulmonary artery)
7. Tuberculosis, primary

UNCOMMON

1. Aneurysm of pulmonary artery
2. AV malformation
3. Bronchiolo-alveolar carcinoma
4. Coarctation of a central pulmonary artery (poststenotic dilatation)
5. Cystic fibrosis (mucoviscidosis)
6. Embolus lodged in a main pulmonary artery
7. Infectious lymphadenopathy, other (eg, tularemia, pertussis, mycoplasma, psittacosis)
8. [Mediastinal mass superimposed on hilum (eg, thymoma, bronchogenic cyst)]
9. Obstructed, hypoplastic, or absent contralateral pulmonary artery (eg, neoplasm, histoplasmosis, embolus, Swyer-James S., congenital absence of pulmonary artery)
10. [Pneumonia, juxtahilar]
11. Sarcoidosis

References:

ANTERIOR MEDIASTINAL LESION

**Anterior to a curved vertical line
extending along the posterior border of
the heart and anterior margin of the
trachea; on CT or MRI, alongside and
anterior to the heart and great vessels**

COMMON

- *1. Aneurysm of ascending aorta or sinus of Valsalva
2. Bone lesion (esp. sternum)
3. [Cardiac enlargement]
4. Fat deposition (eg, normal epicardial fat pad, Cushing S., steroid therapy, hibernoma, lipomatosis)
- *5. Hematoma, hemorrhage (eg, traumatic, bleeding disorder)
6. Hernia (eg, Morgagni, hepatic)
7. Innominate or brachiocephalic artery dilatation, buckling or aneurysm
8. Lymphoma_g (esp. nodular sclerosing Hodgkin's); leukemia
9. Pericardial cyst
10. Pericardial disease (eg, effusion, neoplasm, defect)
- *11. Teratoid lesion (eg, benign or malignant teratoma, dermoid cyst, seminoma, choriocarcinoma, embryonal cell carcinoma)
- *12. Thymic lesion (eg, benign or malignant thymoma, thymic cyst, thymolipoma, lymphoma or leukemia arising in thymus, carcinoid tumor)
13. Thymus, normal ("hyperplasia")
- *14. Thyroid mass (intrathoracic goiter, adenoma, carcinoma)

UNCOMMON

1. Anomalous left superior vena cava
2. Bronchogenic cyst

- *3. Cardiac lesion (eg, tumor, aneurysm)
- 4. Cystic hygroma (lymphangioma)
- 5. Giant lymph node hyperplasia (Castleman's disease)
- 6. Hydatid cyst
- 7. Mediastinitis_g, acute; mediastinal abscess
- *8. Mediastinitis, chronic sclerosing (esp. histoplasmosis)
- 9. Metastasis
- *10. Neoplasm, other (eg, spindle cell tumor_g, lipoma, hemangioma, and their sarcomatous counterparts; mesothelioma)
- 11. Paraganglioma (chemodectoma, pheochromocytoma); neurofibroma
- 12. Parathyroid adenoma, carcinoma
- *13. Sarcoidosis
- 14. Superior vena caval dilatation (See C-63)

* May show calcification.

MIDDLE MEDIASTINAL LESION

Between anterior and posterior mediastinum on plain film, CT, or MRI

COMMON

- *1. Aneurysm of aorta or major artery_g (incl. traumatic, mycotic)
- 2. Arygos vein or SVC dilatation
- *3. Duplication cyst_g (eg, bronchogenic, tracheal, enteric)
- 4. Esophageal lesion (eg, achalasia; diverticulum; spindle cell neoplasm_g, esp. leiomyoma)
- 5. Hiatal hernia
- *6. Lymph node enlargement (eg, metastasis, lymphoma_g, tuberculosis, histoplasmosis, sarcoidosis)
- 7. Mediastinitis, chronic sclerosing (esp. histoplasmosis)
- 8. Pulmonary artery dilatation
- 9. Right aortic arch, vascular ring (See C-18)
- *10. Thyroid mass (intrathoracic)
- 11. Varices, mediastinal or esophageal

UNCOMMON

- 1. Chemodectoma (aorticopulmonary paraganglioma)
- 2. Cystic hygroma (lymphangioma)
- 3. Extramedullary hematopoiesis
- 4. Giant lymph node hyperplasia (Castleman's disease)
- 5. Mediastinal hematoma or hemorrhage
- 6. Mediastinitis_g, acute; mediastinal abscess
- 7. Neoplasm, mediastinal (eg, spindle cell tumor_g, lipoma, hemangioma, mesothelioma)
- 8. Neurinoma, vagus or phrenic
- 9. Pancreatic pseudocyst
- 10. Parathyroid tumor
- 11. Sequestration, extralobar (incl. esophageal lung)
- 12. Tracheal tumor
- 13. Vascular lesion, other (eg, left superior vena cava, aberrant right subclavian artery, angiosarcoma of pulmonary artery)

Gamut C-81

**CT OF MEDIASTINAL LESIONS
CLASSIFIED ACCORDING TO THEIR
DENSITY**

FAT DENSITY (-20 to -100 HU)

- *1. Dermoid cyst (cystic teratoma)
- 2. Hernia (eg, omental, mesenteric)
- *3. Lipoma, liposarcoma, hibernoma (incl. thoracoabdominal)
- 4. Lipomatosis (Cushing S., steroid therapy, obesity, diabetes)
- 5. Normal fat (eg, epicardial fat pad, intrapericardial fat)
- 6. Thymolipoma

WATER DENSITY (0-15 HU)

- *1. Cyst (eg, bronchogenic, gastroenteric, neurenteric; dermoid; thymic; pericardial; hydatid)
- 2. Esophageal dilatation
- 3. Lymphocele
- 4. Meningocele, meningocele
- 5. Pancreatic pseudocyst

(continued)

6. Pleural or pericardial effusion, loculated
- *7. Solid neoplasm with cystic degeneration (eg, cystic thymoma, neurogenic tumor)

SOFT TISSUE DENSITY (15-40 HU)

- *1. Cardiac neoplasm (See C-35)
2. Esophageal neoplasm
3. Extramedullary hematopoiesis
- *4. Hematoma
 - 5. Hernia (hepatic, Morgagni, hiatal, Bochdalek)
 - *6. Lymphadenopathy (incl. Castleman's disease)
 - 7. Lymphangioma
 - 8. Lymphoma_g
 - 9. Mediastinal hemorrhage or hematoma
 - 10. Mediastinitis_g, acute; mediastinal abscess; chronic mediastinitis
 - 11. Metastasis
- *12. Neurogenic tumor_g
13. Parathyroid neoplasm
- *14. Sequestration, extralobar
15. Spindle cell tumor_g
- *16. Teratoid lesion
17. [Thoracic kidney]
18. Thymic hyperplasia
- *19. Thymoma
- *20. Thyroid goiter or neoplasm

CALCIFICATION*

1. Aneurysm
2. Bronchogenic cyst
3. Dermoid cyst, teratoma
4. Hemangioma (phleboliths)
5. Hematoma, old
6. Lipoma
7. Lymph nodes
8. Neurogenic tumor with cystic degeneration
9. Thymoma, esp. with cystic degeneration
10. Thyroid goiter

VASCULAR OR ENHANCING

- *1. Aneurysm, aorta or other (incl. dissection)
- 2. Azygos dilatation
- 3. Benign lymphoid hyperplasia (Castleman's disease)
- 4. Carcinoid
- *5. Hemangioma
- 6. Intrathoracic goiter; thyroid malignancy
- 7. Paraganglioma
- 8. Parathyroid adenoma
- 9. Vessels (varices, collaterals, ectatic vessels, vascular anomalies)

* May show calcification.

Gamut C-82

WIDENING OF THE MEDIASTINUM

COMMON

1. Achalasia; Chagas' disease
2. Hematoma or hemorrhage (eg, sternal or vertebral fractures; venous and arterial tears; aortic transection; postoperative; malposition of vascular catheter with vessel injury)
3. Hiatal hernia, large

(continued)

4. Lymphadenopathy
5. Mediastinitis
6. Neoplasm (eg, primary mediastinal tumor or cyst, lymphoma, metastatic disease, esp. from lung or esophageal carcinoma)
7. [Technical factors (eg, expiration or poor inspiration, rotation, AP supine or lordotic film)]
8. Vascular abnormality (eg, dilated or tortuous aorta; aneurysm, dissection or coarctation of aorta; congenital left superior vena cava; dilated SVC)

UNCOMMON

1. Allergic edema of mediastinum
2. Chylomediastinum (eg, thoracic duct obstruction or laceration)
3. Extension of extrathoracic infection (eg, pharyngeal or abdominal abscess, pancreatitis, or pancreatic pseudocyst)
4. Extramedullary hematopoiesis
5. Lipomatosis (eg, obesity, steroid therapy, Cushing S., normal variant)
6. Penetrating trauma (eg, knife or gunshot wound)
7. Pleural disease adjacent to mediastinum (eg, metastatic disease, mesothelioma, effusion)

Reference:

1. Reed JC: Chest Radiology. Plain Film Patterns and Differential Diagnoses. (ed 3) St. Louis: Mosby-Year Book, 1991, pp 83-96

RIGHT ANTERIOR CARDIOPHRENIC ANGLE LESION

COMMON

1. Epicardial fat pad ("lipoma")
2. [Localized paralysis of right hemidiaphragm ("partial eventration")]

3. Morgagni hernia (gut or omentum)
4. Pericardial cyst or diverticulum
5. Pleural effusion, encapsulated; pleural adhesions
6. Right middle lobe disease (eg, neoplasm, pneumonia, atelectasis)

UNCOMMON

1. Cardiac aneurysm or neoplasm
2. Diaphragmatic neoplasm
3. Fat pad necrosis
4. Herniation of liver, traumatic or congenital ("ectopic lobe")
5. Hydatid cyst (cardiac, pericardial, or pulmonary)
6. Lymph node enlargement, juxtapericardial (esp. lymphoma_g)
7. Mediastinal mass, anterior (esp. thymic or teratoid lesion, lymphoma_g) (See C-79)
8. Mesothelioma, pleural or pericardial
9. Metastasis
10. Pericardial effusion, encapsulated
11. [Right atrial dilatation]

References:

1. Castellino RA, Blank N: Adenopathy of the cardiophrenic angle (diaphragmatic) lymph nodes. AJR 1972;114:509-515

3. Fraser RG, Paré JAP, Paré, Fraser RS, Genereux GP: Diagnosis of Diseases of the Chest. (ed 3) Philadelphia: W.B. Saunders, 1988

RETROCARDIAC LESION IN A CHILD

COMMON

1. Atelectasis of lower lobe
2. Hernia, diaphragmatic (eg, hiatal, Bochdalek, traumatic)

(continued)

3. [Left atrial enlargement]
4. Lymphadenopathy
5. Mediastinal lesion, middle or posterior (See C-80)
6. Pleural effusion
7. Pneumonia or other lower lobe disease
8. Sequestration of lung
9. Spinal disease, paraspinal lesion

UNCOMMON

1. Azygos vein dilatation
2. Pulmonary neoplasm or cyst

Gamut C-85

**PLEURAL EFFUSION WITH NORMAL
LUNG
(See Gamut C-86)**

COMMON

1. Abscess, subphrenic or hepatic (eg, amebic, pyogenic)
2. Asbestos related pleural disease
3. Ascites with permeation of diaphragm (eg, cirrhosis; Meigs S.; peritoneal metastases; extension of retroperitoneal urine collection; peritoneal dialysis)
4. Collagen vascular disease_g (esp. lupus erythematosus, rheumatoid disease)
5. Congestive heart failure (esp. posttreatment)
6. Idiopathic
7. Infection, other (eg, bacterial, viral, infectious mononucleosis, mycoplasma, actinomycosis, nocardiosis)
8. Lymphoma_g, mediastinal or retroperitoneal; leukemia
9. Metastasis to pleura (esp. from breast, pancreas, GI tract, ovary, kidney)
10. Normal, physiologic (up to 5 cc); pregnancy

11. Postmyocardial infarction S. (Dressler S.);
postpericardiotomy S.
12. Postoperative, following thoracic, abdominal, or
retroperitoneal surgery (eg, splenectomy, renal surgery)
13. Thromboembolism of lung
14. Trauma to chest wall, great vessels, thoracic duct
(blood, lymph)
15. Tuberculosis

UNCOMMON

1. Bleeding or clotting disorder_g
2. Chest wall neoplasm (eg, Ewing's sarcoma, osteosarcoma, chondrosarcoma)
3. Constrictive pericarditis
4. Drug reaction (eg, methysergide, nitrofurantoin, busulfan, bromcriptine, procarbazine; also lupus reaction from Dilantin, hydralazine, isoniazid, procainamide, propylthiouracil)
5. Empyema from retropharyngeal or neck abscess, or in postpneumonectomy space
6. Esophageal rupture
7. Familial recurring polyserositis (Mediterranean fever)
8. Hypoproteinemia (incl. hepatic failure)
9. Iatrogenic (eg, ventriculopleural or other shunt, improperly inserted intravenous catheter, instillation of medication)
10. Lymphothorax (eg, lymphedema, Milroy's disease)
(See C-88)
11. Mesothelioma of pleura
12. Multiple myeloma
13. Myxedema
14. Pancreatitis; pancreatic pseudocyst, abscess, or neoplasm
15. Parasitic disease (eg, amebiasis, paragonimiasis, malaria)
16. Pleural fistula (eg, gastric, esophageal, bronchial)
17. Radiation therapy
18. Renal disease (eg, renal failure, nephrosis, acute glomerulonephritis, hydronephrosis, uremic pleuritis)

(continued)

Gamut C-86

**PLEURAL EFFUSION WITH
RADIOGRAPHIC EVIDENCE OF OTHER
DISEASE IN THE CHEST
(See Gamut C-85)**

COMMON

1. Abscess, pulmonary or subphrenic
2. Bronchogenic carcinoma
3. Congestive heart failure
4. Metastasis (esp. from lung, breast, pancreas, or GI tract)
5. Pneumonia (esp. bacterial, usually with empyema—
staphylococcal, streptococcal, klebsiella, plague,
tularemia)
6. Postoperative (eg, pneumonectomy)
7. Pulmonary embolism and infarction
8. Trauma, esp. laceration of lung, pulmonary or mediastinal hematoma, aortic rupture, or esophageal perforation (blood, lymph, or chyle)
9. Tuberculosis

UNCOMMON

1. Asbestosis
2. Bronchopleural fistula
3. Collagen disease_g (esp. lupus erythematosus, rheumatoid disease)
4. Constrictive pericarditis
5. Drug-induced pulmonary disease, usually diffuse interstitial (eg, nitrofurantoin, hydralazine, procainamide)
6. Eosinophilic pneumonia_g
7. Infection, other (eg, fungal, actinomycosis, nocardiosis, mycoplasma, viral)
8. Lymphangiomyomatosis; tuberous sclerosis
9. Lymphoma_g
10. Malignant neoplasm, other (eg, bronchiolo-alveolar carcinoma, mesothelioma, multiple myeloma, chest wall tumor)
11. Obstruction of superior vena cava or azygos vein
12. Parasitic disease (eg, amebiasis, paragonimiasis, hydatid disease)
13. Radiation therapy
14. Sarcoidosis
15. Uremia (with pulmonary edema)
16. Waldenström's macroglobulinemia
17. Wegener's granulomatosis_g

References:

Subgamut C-86A

**PLEURAL EFFUSION WITH ENLARGED
CARDIAC SILHOUETTE**

1. Collagen vascular disease_g (esp. lupus erythematosus, rheumatoid disease)
2. Congestive heart failure
3. Malignant neoplasm with direct or metastatic extension to pleura and heart (eg, mesothelioma, malignant thymoma, carcinoma of lung or esophagus)
4. Myocardopathy
5. Myocarditis or pericarditis with pleuritis (eg, tuberculosis, rheumatic fever, viral infection)
6. Postpericardiectomy S. (esp. CABG)
7. Pulmonary embolism

Reference:

1. Reed JC: Chest Radiology. Plain Film Patterns and Differential Diagnoses. (ed 3) St. Louis: Mosby-Year Book, 1991, p 41

Gamut C-87

MASSIVE PLEURAL EFFUSION

COMMON

1. Ascites (leaky diaphragm)
2. Congestive heart failure
3. Empyema; perforated subphrenic or liver abscess
4. Hemothorax (eg, traumatic; bleeding disorder_g)
5. Metastatic disease
6. Nephrosis
7. Postoperative
8. Tuberculosis

UNCOMMON

1. Fungus disease
2. Iatrogenic (eg, perforation by venous catheter)

3. Idiopathic
4. Lymphoma_g
5. Lymphothorax (See C-88)
6. Mesothelioma of pleura, malignant
7. Perforation of esophagus or stomach
8. Polyserositis
9. Pulmonary infarction

Gamut C-88

CHYLOTHORAX, LYMPHOTHORAX

COMMON

1. Iatrogenic (esp. surgical or catheter injury to thoracic duct)
2. Idiopathic
3. Neoplasm involving thoracic duct or mediastinum (eg, lymphoma_g, carcinoma of esophagus or lung, intrathoracic thyroid)
4. Trauma to thoracic duct

UNCOMMON

1. Aneurysm of thoracic duct with rupture
2. Cirrhosis of liver
3. Congenital anomaly (eg, atresia or fistula of thoracic duct; yellow nail S.; Noonan S.)
4. Filariasis
5. Lymphadenopathy (eg, tuberculous, fungal, other infection)
6. Lymphangioleiomyomatosis
7. Lymphangioma

(continued)

8. Mass, nonneoplastic, compressing the thoracic duct
(eg, aortic aneurysm_g, spinal disease)
9. Nephrosis
10. Thromboembolism of left subclavian or innominate vein, or superior vena cava

References:

1. Bower GC: Chylothorax: Observations in 20 cases. Chest 1964;46:464-468

CLASSIFICATION OF RIB NOTCHING

ARTERIAL

1. High aortic obstruction
 - a. Coarctation of aorta
2. Low aortic obstruction
 - a. Aortic thrombosis
3. Subclavian obstruction
 - a. Blalock-Taussig procedure (unilateral)
 - b. Pulseless disease (eg, Takayasu's arteritis); advanced arteriosclerosis
4. Pulmonary oligemia
 - a. Absent pulmonary artery (unilateral)
 - b. Ebstein's anomaly
 - c. Emphysema
 - d. Pseudotruncus arteriosus
 - e. Pulmonary valvular stenosis or atresia
 - f. Tetralogy of Fallot_g

VENOUS

1. Obstruction of superior vena cava, innominate or subclavian vein

ARTERIOVENOUS

1. A-V fistula of chest wall (intercostal artery-vein)
2. Pulmonary A-V fistula

NEUROGENIC

1. Intercostal neurofibroma or neurilemoma
2. Neurofibromatosis
3. Bulbar poliomyelitis; quadriplegia

OSSEOUS

1. Hyperparathyroidism
2. Osteodysplasty (Melnick-Needles S.)
3. Thalassemia

MISCELLANEOUS

1. Idiopathic; normal variant
2. Indwelling catheter

References:

1. Boone ML, Swenson BE, Felson B: Rib notching: Its many causes. Am J Roentgenol 1964;91:1075-1088

Gamut C-90

**DISEASES COMMON TO THE TROPICS
AND DEVELOPING COUNTRIES THAT
MAY INVOLVE THE CARDIOVASCULAR
SYSTEM***

HEART

1. Amebiasis (pneumopericardium after abscess rupture)
2. Aneurysms (subvalvular or idiopathic aortic)
3. Aortitis, idiopathic
4. Burkitt's lymphoma
5. Cardiomegaly (idiopathic, puerperal)
6. Chagas' disease
7. Cysticercosis
8. Endomyocardial fibrosis
9. Hemoglobinopathies
10. Hydatid disease
11. Hypertension, systemic or pulmonary (eg, secondary to schistosomiasis)
12. Kwashiorkor, malnutrition
13. Tuberculosis

PERICARDIAL EFFUSION

1. Amebiasis
2. Hemoglobinopathies
3. Hydatid disease
4. Kaposi's sarcoma
5. Malignant disease
6. Rheumatic fever
7. Tuberculosis
8. Viral disease

**AORTA, PULMONARY ARTERIES, PERIPHERAL
ARTERIES AND VEINS**

1. Idiopathic arteritis (Takayasu's disease); aneurysms
2. Peripheral vascular disease; idiopathic gangrene; varicose veins

3. Pulmonary embolus and infarction
4. Pulmonary hypertension (secondary to schistosomiasis)

* When searching for the differential diagnosis of an abnormal cardiovascular finding on a radiograph of a patient or visitor from the tropics, it will be helpful to consult this list, which refers to the major parasitic, infectious, neoplastic, and other diseases that can affect the cardiovascular system.

Abbreviations

AIDS	acquired immune deficiency S.
AP	anteroposterior
APVR	anomalous pulmonary venous return, total (T) or partial (P)
ARDS	adult respiratory distress syndrome
ASD	atrial septal defect
AV	atrioventricular (communis or canal)
AV(M)	arteriovenous (malformation)
CABG	coronary artery bypass graft
CNS	central nervous system
COPD	chronic obstructive pulmonary disease
eg	for example
esp	especially
g	consult Glossary
HIV	human immunodeficiency virus
IHSS	idiopathic hypertrophic subaortic stenosis
ie	that is
incl	including
IVC	inferior vena cava
L	left
LA	left atrium
LV	left ventricle
occas	occasionally
PA	posteroanterior
PDA	patent ductus arteriosus
PEEP	positive end-expiratory pressure
PS	pulmonary stenosis
pulm	pulmonary
R	right
RA	right atrium
RV	right ventricle
S.	syndrome
SVC	superior vena cava
vasc	vasculature
VATER S.	vertebral (or vascular) anomalies; anal anomalies (or auricular defects); tracheoesophageal fistula; esophageal atresia (or ring); renal anomalies (or radial defects, rib anomalies)
VSD	ventricular septal defect

Glossary

- ANEMIA, PRIMARY** - erythroblastosis, hemolytic anemia, pyruvate kinase deficiency, sickle cell disease and variants, spherocytosis, thalassemia and variants
- ANEURYSM** - arteriosclerotic, arteriovenous (incl. fistula, malformation), dissecting, false, mycotic, poststenotic, syphilitic
(See ANGIOMA)
- ANGIOMA** - arteriovenous malformation, cirloid aneurysm, hemangioma (incl. capillary, cavernous), varices
- ARDS** - adult respiratory distress syndrome, shock lung, respirator lung, adult hyaline membrane disease, and many other synonyms: a confusing term, widely used and poorly defined, associated with widespread pulmonary involvement
- ARTERIOSCLEROTIC HEART DISEASE** - coronary heart disease
- ARTERIOVENOUS MALFORMATION (AVM)** - See ANEURYSM, ANGIOMA
- BLEEDING OR CLOTTING DISORDER** - anticoagulant effect, coagulopathy (eg, disseminated intravascular type-DIC), hemophilia, purpura (eg, Henoch-Schönlein), thrombocytopenia
- COLLAGEN DISEASE** - dermatomyositis, lupus erythematosus, polyarteritis nodosa, scleroderma, mixed connective tissue disease (MCTD), CREST S. (calcinosis-Raynaud's-sclerodactyly-telangiectasia)
- GLYCOGEN STORAGE DISEASE** - von Gierke (Type I), Pompe (Type II), Cori (Type III), McArdle (Type V)
- HYPOPLASTIC LEFT HEART SYNDROME** - includes aortic stenosis or atresia, cor triatriatum, hypoplastic aorta, hypoplastic left ventricle, interrupted aortic arch, infantile coarctation, severe mitral stenosis or atresia
- LYMPHOMA** - includes angioimmunoblastic lymphadenopathy, Burkitt's lymphoma, Hodgkin's disease, non-Hodgkin's lymphoma, leukemia (all varieties, including chloroma), pseudolymphoma, Sézary S.
- MEDIASTINITIS** - abscess, cellulitis, edema, fibrosis, granuloma, phlegmon
- MUCOPOLYSACCHARIDOSES** - also mucolipidoses and other lysosomal storage diseases

-
- NEUROMUSCULAR DISORDERS** - amyotonia congenita, amyotrophic lateral sclerosis, cerebral palsy, Duchenne S., meningomyelocele, muscular dystrophy, myasthenia gravis, myotonic dystrophy, parkinsonism, poliomyelitis, visceral myopathy, Werdnig-Hoffmann disease
- SPINDLE CELL NEOPLASM** - fibroma, leiomyoma, neurofibroma, rhabdomyoma, and their malignant counterparts
- TETRALOGY OF FALLOT** - include also pentalogy (tetralogy plus ASD), pseudotruncus arteriosus, pulmonary atresia with VSD and systemic pulmonary collateral arteries, trilogy of Fallot (pulmonary stenosis with ASD)
- THYROID MASS** - adenoma, goiter, intrathoracic goiter (substernal, retrosternal), struma, thyroiditis
- VASCULAR RING** - aberrant right subclavian artery, double aortic arch, right aortic arch types I and II
- WEGENER'S GRANULOMATOSIS** - include also bronchocentric granulomatosis, Churg and Strauss or other granulomatosis, hypersensitivity angiitis of Zeek, lymphomatoid granulomatosis, midline lethal granuloma

Index

A

Abdominal

aorta or its branches, aneurysm of, 83
lymphatic vessels, obstruction of, 95
vessels, abnormal, on angiography, 94

Admixture lesion, in congenital heart disease, 18

Alphabetical listing, xix

Alterations, xx

Alveolar disease, roentgen signs of, 99

Aneurysm

of abdominal aorta or its branches, 83
of aorta and other major arteries, 83
of coronary artery, 85
dissecting, of ascending aorta or arch, predisposing causes of, 84
pulmonary artery, 73–74

Angiocardiography, filling defect in right ventricle on, 42–43

Angiography

abnormal abdominal vessels on, 94
arteritis and other cerebral arterial disease on, 87–88
systemic to pulmonary vascular shunt on, 80

Aorta

aneurysm of, and other major arteries, 83
ascending (*see* Ascending aorta or aortic arch)

Aortic arch (*see also* Ascending aorta or aortic arch)

anomalies of, 32–33

congenital heart disease associated with anterior right, 33–34

Aortic insufficiency, 49

Arterial

communication in thorax, anomalous, 36–37
disease, cerebral, on angiography, 87–88
stenosis and thrombosis, 86

Arteries, aneurysm of aorta and other major, 83

Arteritis, cerebral, on angiography, 87–88

Ascending aorta or aortic arch

predisposing causes of dissecting aneurysm of, 84
prominent, 82
small, 81

Atrial level

right to left shunt at, 21
shunts, complicated, 22

- Azygos vein dilatation, 90
- B**lood vessels, gas embolism in, 63–64
Brachiocephalic arteries, anomalies of, 32–33
Brackets, xix
Brain, extracranial ischemic lesion secondarily involving, 88–89
- C**alcification
in heart or great vessels, 60–61
pericardial, 62
vascular, 97–98
- Cardiac (*see also* Heart)
abnormalities, 40–68
conditions, common, diagnosed by echocardiography, 67–68
displacement, 38
failure, in neonate, infant, or child, 14–15
neoplasm or cyst, 59
position, abnormal, 38
silhouette, pleural effusion with enlarged, 122
- Cardiomegaly, 14–15
- Cardiophrenic angle lesion, right anterior, 116–117
- Cardiovascular
anomalies, associated with VSD, 23–24
disease, hypertensive, 51–52
- Catheterization, complications of central venous (subclavian, jugular) or pulmonary artery, 96
- Cerebral arterial disease on angiography, 87–88
- Chest, pleural effusion with radiographic evidence of other disease in, 120–121
- Chylothorax, 123–124
- Common group, xviii
- Congenital diseases, of heart and great vessels, 7–39
- Congenital heart disease
acyanotic
with increased pulmonary vascularity, 28
with normal pulmonary vascularity, 27
associated with anterior right aortic arch, 33–34
congenital syndromes with, 7–9
cyanotic
with decreased pulmonary arterial vascularity, 30–31
with increased pulmonary vascularity, 29–30
differential features of major cyanotic, 19
exaggerated intrinsic pulsation of central pulmonary arteries in, 28–29
flat or concave pulmonary artery segment in, 31
key findings in neonatal, 11–12
left to right shunt in, 15–16

- onset of cyanosis in, 20
pulmonary arterial vascularity in common, 26–27
relative incidence of various types of, 10
right to left shunt or admixture lesion in, 18
- Congenital syndromes**
with congenital heart disease, 7–9
with myocardopathy, 57
- Constrictive pericarditis**, 65
- Cor pulmonale**, 71–73
- Coronary artery, aneurysm of**, 85
- CT of mediastinal lesions classified according to their density**, 113–115
- Cyanosis, onset of, in congenital heart disease**, 20
- Cyst, cardiac or pericardial**, 59
- Dextrocardia**, 39
- Dissecting aneurysm of ascending aorta or arch, predisposing causes of**, 84
- Echocardiography, common cardiac conditions diagnosed by**, 67–68
- Edema, pulmonary** (*see Pulmonary edema*)
- Embolii**, 86
- Enlargement**
cardiac silhouette, pleural effusion with, 122
heart, gross, 58
left atrial, 43–44
left ventricular, 46–47
localized, of pulmonary vessels, 74–75
right atrial, 40
right ventricular, 41–42
unilateral hilar, 108–109
- Esophagus, extrinsic vascular impression on**, 34
- Extracranial ischemic lesion secondarily involving brain**, 88–89
- Filling defect in right ventricle on angiography**, 42–43
- Gamuts**
defined, xviii
supplementary, xix
- Gas embolism in heart or blood vessels**, 63–64
- Great vessels**
abnormalities, 68–98
calcification in, 60–61
congenital diseases of, 7–39

- H**eat (*see also* Cardiac border)
 blurring of, on PA chest film, 107
 extra bump along upper left, 45–46
calcification in, 60–61
congenital diseases of, 7–39
diseases common to tropics and developing countries, 126–127
gas embolism in, 63–64
grossly enlarged, 58
small, 58
- H**eat disease
 congenital (*see* Congenital heart disease)
 high output, 54
 ischemic, 53
- H**emorrhage, pulmonary, 102–103
- H**igh output heart disease, 54
- H**ilar
 dance in congenital heart disease, 28–29
 enlargement, unilateral, 108–109
 shadow, unilateral small, 108
- H**ypertension
 pulmonary arterial, 51–52
 pulmonary venous, 78–79
 unilateral renal lesion that may cause, 52–53
- H**ypertensive cardiovascular disease, 51–52
- H**ypervascularity, generalized pulmonary arterial, 68–69
- H**ypovascularity
 generalized pulmonary arterial, 77
 pulmonary, 75–76
- I**liac veins, obstruction of inferior vena cava or, 92–93
- I**ncidence, xviii
- I**nferior vena cava
 anomalies of, 93
 or iliac veins, obstruction of, 92–93
- I**nterstitial disease, roentgen patterns of, 103–104
- I**schemic heart disease, 53
- J**ugular catheterization, complications of central, 96
- K**erley lines
 acute—A, B, and C, 104
 chronic—A, B, and C, 105–106
- K**idney, unilateral lesion that may cause hypertension, 52–53
- L**eft
 atrial enlargement, 43–44

- ventricle size in common diseases with left ventricular strain, 48
ventricular enlargement, 46–47
ventricular strain, pulmonary vasculature in common diseases with, 48
Left to right shunt
in congenital heart disease, 15–16
differential features of common, 17
Long linear or curvilinear shadow in lung, 106–107
Lung (*see also* Pulmonary and Hilar)
increased pulmonary arterial circulation to one, 69
long linear or curvilinear shadow in, 106–107
pleural effusion with normal, 118–119
Lymphangiography, obstruction of abdominal lymphatic vessels, cisterna chyli, or thoracic duct on, 95
Lymphatic vessels, abdominal, obstruction of, 95
Lymphothorax, 123–124

Mediastinal

- lesion
anterior, 110–111
CT of, classified according to their density,
113–115
middle, 112
widening, 115–116

- Mirror-image branching of right aortic arch, 33–34
Miscellaneous gamuts, xix
Mitral insufficiency, 44–45
Myocardial infarction, complications of, requiring radiological evaluation, 54
Myocardiopathy, 55–56
congenital syndromes with, 57

Neoplasm, cardiac or pericardial, 59

- Notching, rib, classification of, 124–125

PA chest film, blurring of heart border on, 107

- Pericardial
abnormalities, 40–68
calcification, 62
effusion, 66–67
diseases common to tropics and developing countries,
126–127
neoplasm or cyst, 59
Pericarditis, constrictive, 65
Peripheral arteries and veins, diseases common to tropics and developing countries, 126–127

- Pleural effusion
 with enlarged cardiac silhouette, 122
 massive, 122–123
 with normal lung, 118–119
 with radiographic evidence of other disease in chest, 120–121
- Pneumopericardium, 64–65
- Prominent ascending aorta or aortic arch, 82
- Prosthetic valve regurgitation, 50
- Pulmonary (*see also Lung and Hilar and Pulmonary artery*)
 edema, 99–101
 unilateral, 101–102
 hemorrhage, 102–103
 hypovascularity, 75–76
 valve obstruction, 75–76
 vascular shunt, systemic to, on angiography, 80
 vascularity
 acyanotic congenital heart disease with increased, 28
 acyanotic congenital heart disease with normal, 27
 cyanotic congenital heart disease with increased, 29–30
 vasculature, in common diseases with left ventricular strain, 48
 venous obstruction, 78–79
 venous return connections, anomalous, 37
 vessels, localized enlargement of, 74–75
- Pulmonary artery
 “aneurysm,” 73–74
 catheterization, complications of central, 96
 circulation, to one lung, increased, 69
 diseases common to tropics and developing countries, 126–127
 exaggerated intrinsic pulsation of central, in congenital heart disease, 28–29
 hypertension, 71–73
 hypervascularity, generalized, 68–69
 hypovascularity, generalized, 77
 obstruction, main, 75–76
 segment
 in congenital heart disease, 31
 flat or concave, 31–32
 prominence of main, 70–71
- R**enal lesion, unilateral, that may cause hypertension, 52–53
- Respiratory distress, neonatal, 13
- Retrocardiac lesion in child, 117–118
- Rib notching, classification of, 124–125
- Right
 atrial enlargement, 40
 ventricle, filling defect in, on angiography, 42–43
 ventricular enlargement, 41–42

- Right to left shunt
at atrial level, 21
at ductus level, 25
at ventricular level, 23
in congenital heart disease, 18
- S.** (Syndrome), xix–xx
- Small**
ascending aorta or aortic arch, 81
heart, 58
hilar shadow, unilateral, 108
- Subclavian catheterization, complications of central, 96
- Subclavian steal syndrome, 89
- Subgamuts, xviii
- Superior vena caval dilatation, 91
- Supplementary gamuts, xix
- Syndromes, xix–xx
- Systemic to pulmonary vascular shunt on angiography, 80
- Thoracic**
aorta, positional anomalies of, 35
duct, obstruction of, 95
- Thorax, anomalous arterial communication in, 36–37
- Tricuspid insufficiency, 41
- Tropics, cardiovascular diseases common to, and developing countries, 126–127
- Ultrasound** (*see* Echocardiography)
- Vascular**
calcification, 97–98
impression, extrinsic, on esophagus, 34
redistribution, 78–79
ring, 32–33
- Venous**
catheterization, complications of central, 96
vascularity, increased pulmonary, 78–79
- Ventricular level, right to left shunt at, 23
- VSD, cardiovascular anomalies associated with, 23–24
- Widening of mediastinum**, 115–116
