A modification is a contract. It must meet the requirements of a valid contract, such as mutual assent (see Section 5.06B), consideration (see Section 5.08), and the Statute of Frauds (see Section 5.10). Service contracts, such as construction, raise special consideration problems. To demonstrate, suppose there is a construction project for \$100,000. The obligations of the contractor are expressed in the contract documents. Suppose that during the term of the agree-

ment the parties mutually agree to increase the contract price to \$110,000. The owner must receive something in exchange for the additional compensation. If the contractor agrees to improve the quality or increase the quantity of the building or to shorten the time for completion, there is an appropriate exchange and the modification agreement is binding. Difficulties arise when the modification agreement encompasses an increase in price without any change in the contractor's obligation. The *preexisting duty rule* can invalidate such an agreement. Unless one of many exceptions applies, the agreement is not binding if the party—in this case the contractor—is obligating itself to do no more than it was previously obligated to perform under the original contract.²²

The preexisting duty rule has been criticized. It limits the autonomy of the parties by denying enforceability of agreements voluntarily made. Implicit in the rule is an assumption that an increased price for the same amount of work is likely to be the result of expressed or implied coercion by the contractor, as if the contractor were saying, "Pay me more money or I will quit and you will have to go to court to get damages." However, suppose the parties have voluntarily arrived at a modification of this type. There is no reason for not giving effect to their agreement. A number of exceptions can relieve the sometimes harsh effect of the preexisting duty rule.

In the construction contract, minor changes in the contractor's obligation have been held sufficient to avoid the rule even where the increase in price was not commensurate with the change in the contractor's obligation. This approach may permit a contract modification to be enforced if the parties have had enough foresight or legal knowledge to provide for some minor and relatively insignificant change in the contractor's obligation as a means of enforcing the increased price.

An exception that developed in construction contracts enforces the modification if it is fair and equitable, in view of circumstances not anticipated by the parties when the contract was made.²³ As this exception (frequently referred to as the "unforeseen circumstances exception") has occurred mainly in the area of subsurface conditions, it is discussed in greater detail in Section 25.01D.

²¹1971 F.2d 272 (9th Cir.1992), cert. denied, 507 U.S. 914 (1993).

²²*Crookham & Vessels, Inc. v. Larry Moyer Trucking, Inc.*, 16 Ark.App. 214, 699 S.W.2d 414 (1985); *Hiers-Wright Assoc., Inc. v. Manufacturer's Hanover Mortgage Corp.*, 182 Ga.App. 732, 356 S.E.2d 903 (1987).

²³*Linz v. Schuck*, 106 Md. 220, 67 A. 286 (1907) followed in the Restatement (Second) of Contracts § 89 (1981).

Dissatisfaction with requiring consideration for a change is also shown by Section 2-209 of the Uniform Commercial Code, dealing with goods transactions. The section states that modifications are valid without consideration. However, a modification obtained in bad faith is not valid.

Curiously, despite the movement toward abolishing the consideration requirement for a modification, the rule is applied vigorously in federal public contracts. Unless the government receives something for an increase in price or a reduced price for a deletion, the modification is not valid. This rigid adherence to the consideration requirement may be justified as a means of preventing gifts of public funds, and corruption and collusion between the contractor and a public official. Giving some advantage to a contractor without the government's getting anything in return may be unfair to the other bidders.

Contracts frequently state that modifications must be in writing. Such provisions generally were not enforced by the common law.²⁴ In enforcing oral modifications despite such clauses, the courts have stated that by making a subsequent oral modification, the parties have changed the agreement requiring that the modification be in writing.

A New York court, applying a statute enforcing such clauses, held that a contract clause requiring a modification be in writing bars an oral agreement unless the oral modification is fully executed or partly performed and unequivocally referable to the oral modification.²⁵

Section 2-209 of the Uniform Commercial Code controls transactions in goods. It provides that oral agreements modifying a written agreement are not effective if the written agreement contains a provision requiring that modifications be in writing. There are some exceptions, but the code expresses a policy that such contractual provisions requiring a writing as a condition to enforcement of an asserted modification agreement should be given more effect than courts have given in the past. It remains to be seen whether this change in the law relating to the sale of goods will have any impact on judicial thinking in other types of contracts.

²⁴*Prince v. R. C. Tolman Constr. Co., Inc.*, 610 P.2d 1267 (Utah 1980). Four states, most notably California, require that modifications of written contracts be in writing. There are many exceptions.

SECTION 19.02 Judicially Determined Terms

A. Necessity to Imply Terms

When making a contract, parties frequently do not consider all problems that may arise. Some matters may have been considered, but the parties believed the resolution of the matters to be so obvious that contract coverage would be unnecessary. Matters have been discussed by the parties during negotiations, but the parties could not agree on a contract solution to the problem. Yet these parties may intend to have a binding contract despite their inability to resolve all problems during negotiation. In such cases, the parties may state in the contract that they will agree in the future on certain less important contract matters or omit the matter from the contract entirely. Courts may be asked to fill in the gaps not covered by the contract or decide matters left for future agreement where the parties cannot agree. Courts will be more likely to perform these functions if convinced that the parties intended to make an enforceable agreement, especially where performance has begun.

Until recently, common law judges hesitated to imply terms. These judges saw themselves as enforcing contracts made by the parties rather than making contracts for the parties. One court stated,

1. The implication must arise from the language used or it must be indispensable to effectuate the intention of the parties.
2. It must appear from the language used that it was so clearly within the contemplation of the parties that they deemed it unnecessary to express it.
3. Implied covenants can be justified only on the grounds of legal necessity.²⁶
4. A promise can be implied only where it can be rightfully assumed that it would have been made if attention had been called to it.
5. There can be no implied covenant where the subject is completely covered by the contract.²⁷

These requirements reflect judicial reluctance to imply terms. In addition, courts during the first half of the twentieth century hesitated to provide a term where the parties had agreed to agree but did not.²⁸

²⁶This means that courts will imply a promise if it is necessary in order to have a valid contract and the parties have so intended.

²⁷*Stockton Dry Goods Co. v. Girsh*, 36 Cal.2d 677, 681, 227 P.2d 1, 3-4 (1951).

²⁸See Section 5.06F.

Modern judges seem less insecure and more realistic about their role in contract disputes. They are beginning to recognize that they “make” contracts for the parties. Because they recognize the proliferation of standard form contracts often made in an adhesion context, they are more willing to imply terms to redress unequal bargaining than were courts a half century ago.

The law should exercise restraint in implying terms where the contract has been negotiated. In such cases, most of the major problems were probably considered and the absence of a promise may be deliberate. Implying a term in such cases could frustrate the bargain.

Even in negotiated contracts it may be necessary to imply terms that were so obvious that the parties did not think it necessary to express them. A court should “complete” the deal by filling in gaps where parties intended to make a contract and have left minor terms for future agreement but have not been able to agree.

Again, a word of caution. The existence of express contract terms generally precludes terms on that subject being implied.²⁹ Also, custom takes precedence over implied terms. First, the contract must be examined. If the contract deals with subject matter that relates to the proposed implication, a court is less likely to imply terms. However, sometimes the effect of implication is achieved by interpreting particular contract terms in a way consistent with the implication.

One court, discussing the owner’s duty to furnish a site, stated,

Each party to a contract is under an implied obligation to restrain from doing any act that would delay or prevent the other party’s performance of the contract. . . . A party who is engaged to do work has a right to proceed free of let or hindrance of the other party, and if such other party interferes, hinders or prevents the doing of the work to such an extent as to render the performance difficult and largely diminish the profits, the first may treat the contract as broken and is not bound to proceed under the added burdens and increased expense.³⁰

²⁹*Weber v. Milpitas County Water Dist.*, 201 Cal.App.2d 666, 20 Cal. Rptr. 45 (1962).

³⁰*United States v. Guy H. James Constr. Co.*, 390 F.Supp. 1193, 1206 (M.D.Tenn.1972), *aff’d* without opinion, 489 F.2d 756 (6th Cir. 1974). See also, *C. A. Davis, Inc. v. City of Miami*, 400 So.2d 536 (Fla. Dist.Ct.App.), *review denied*, 411 So.2d 380 (Fla.1981) (no duty to do contractor’s work—only not to hinder or interfere with that work).

The owner should not prevent the contractor, nor should the prime contractor prevent the subcontractor from performing in a logical, orderly, and efficient manner.³¹ Breach of this obligation can generate a claim for delay or disruption, or better, an inefficiency claim.³²

Implied obligations can go further and, under certain circumstances, require that the owner perform positive acts to assist the contractor in performance. However, the law will be more reluctant to impliedly require affirmative acts of cooperation than to preclude negative acts of hindrance or prevention. Positive acts are more likely to have been thought about if they were important, and failure to express them in the contract may indicate that neither expected them to be done.

Any duty to cooperate should not require undertaking heavy burdens of cooperation that would very likely frustrate the contractual allocations of responsibility made by the parties. However, if one party can assist the other party’s performance at a minimal cost, such cooperation should be required.³³

Some specific illustrations of implied terms in the construction contract have been mentioned earlier, such as the standard for the design professional’s performance³⁴ and, as noted in Section 17.04C, the obligation of the owner to coordinate work of separate contractors or stand behind the obligation of another entity that has that responsibility.

There are other illustrations. The owner impliedly promises that the site will be ready for the contractor to commence performance.³⁵ (Often, as Section 26.02 notes, this is handled by not starting the obligation to commence performance until a notice to proceed has been given.) The owner impliedly promises to obtain the necessary easements or rights to enter the project site or land of another necessary for the contractor’s performance.

³¹*Howard P. Foley Co. v. J. L. Williams & Co., Inc.*, 622 F.2d 402 (8th Cir.1980) (Arkansas law) (work obstructed, interfered with, and delayed) and *Housing Auth. of City of Little Rock v. Forcum-Lannom, Inc.*, 248 Ark. 750, 454 S.W.2d 101 (1970) (claimant could not perform in an orderly manner and could not follow any normal sequence). See also Sweet, *Contract Regulation of Delay and Disruption Claims in America*, [2002] Int’l Constr. L. Rev. 284, 285-289.

³²See also Sections 26.10A and 27.02F.

³³See *Allied Fire & Safety Equip. Co. v. Dick Enterprises, Inc.*, 886 F.Supp. 491 (E.D.Pa.1995) (prime had duty to coordinate the work).

³⁴See Section 14.05A.

³⁵*North Harris County Junior College Dist. v. Fleetwood Constr. Co.*, 604 S.W.2d 247 (Tex.Civ.App.1980).

The prime contractor impliedly promises the owner to use proper workmanship and materials and to complete the project free and clear of liens.³⁶ A contractor in a cost contract promises to inform the owner of prospective overruns of cost estimates.³⁷ One court held that the prime contractor promised the subcontractors that the work would be coordinated and that the prime contractor would process subcontractor claims to the owner.³⁸ But another court refused to imply a promise that the prime contractor would create and maintain an efficient schedule when this was neither customary nor bargained for.³⁹

The owner impliedly promises that it and its designated representative, usually the design professional, will perform in such a way as to reasonably expedite the contractor's performance. For example, the owner impliedly promises that the design professional will give contract interpretations and pass on sufficiency of shop drawings within a reasonable time.⁴⁰

The law usually implies a promise by the owner to supply adequate drawings and specifications (discussed in greater detail in Section 23.05E). However, that such terms are implied does not eliminate the necessity of focusing more closely on the nature of the implication. For example, suppose the owner designates specified material. That will very likely mean that if the contractor uses that material, the contractor will not be responsible if the material proves unsuitable.⁴¹ However, does specifying a material imply that the material is available? Does it imply that the material is stocked by local suppliers? Such questions expose the basic function of implying terms—that of allocating risk and responsibility.

A federal appeals board held that the owner does not warrant that a product specified will be in stock, inasmuch as parties do not usually guarantee the performance

of third parties.⁴² Such a result may also be based on the likelihood that owners know no more about the stock of suppliers than does the contractor.

Usually the owner reserves certain powers during the contractor's performance to protect its interests. This should not automatically convert into an affirmative duty for the benefit of the contractor or subcontractors. For example, it has been held that the power to monitor contractor performance and stop the work if necessary did not imply that the owner had promised to direct the contractor's workers.⁴³

Courts are sometimes asked to imply completion times to construction contracts. The contract usually gives a specified time for completion. If no express provision deals with this question, courts hold that the contractor must complete performance within a reasonable time, given all the surrounding facts and circumstances.

Courts should not imply a reasonable time for performance if performance has not yet commenced and if the failure to agree on a time for performance indicates that the parties have not yet intended to conclude a contract. The absence of agreement on such an important question may mean the parties are still in a bargaining stage.

B. Custom

Customary practices are important in determining rights and duties of contracting parties, particularly in complex transactions such as construction, where not everything can be stipulated in the contract. Section 12.11 mentioned the frequent claim by design professionals that they customarily retain ownership of drawings and specifications. Custom plays other significant roles in construction. In placing such a heavy emphasis on customary practices when interpreting contract terms, courts often state that parties contract with reference to existing customs. In that sense, courts can be said to be simply giving effect to the actual intention of the parties. However, a contracting party may also be held to those customs that it knew or should have known. The law places a burden on contracting parties to learn customs that apply to the type of

³⁶But see AIA Doc. A201-2007, § 9.3.3 (work previously paid for free of liens as far as contractor knows).

³⁷*Jones v. J. H. Hiser Constr. Co., Inc.*, 60 Md.App. 671, 484 A.2d 302 (1984), cert. denied, 303 Md. 114, 492 A.2d 616 (1985).

³⁸*Citizens Nat'l Bank of Orlando v. Vitt*, 367 F.2d 541 (5th Cir.1966), appeal after remand, 414 F.2d 696 (5th Cir.1969). As to duty to coordinate the work, see also *Allied Fire & Safety Equip. Co. v. Dick Enterprises, Inc.*, supra note 33.

³⁹*Drew Brown, Ltd. v. Joseph Rugo, Inc.*, 436 F.2d 632 (1st Cir.1971).

⁴⁰See AIA Doc. A201-2007, §§ 4.2.7, 4.2.11 (reasonable promptness).

⁴¹See Section 24.02.

⁴²*James Walford Constr. Co.*, GSBCA No. 6498, 83-1, BCA ¶16,277, aff'd upon reconsideration, 83-1 BCA ¶16.342. See *Edward M. Crough, Inc. v. Dept. of Gen. Serv. of Dist. of Columbia*, supra note 11 (discussed in Section 19.01D).

⁴³*Nat Harrison Assoc., Inc. v. Louisville Gas & Elec. Co.*, 512 F.2d 511 (6th Cir.), cert. denied, 421 U.S. 988 (1975).

transaction they are about to enter and in the place where they contract.

In any event, an established custom can be a more convenient and proper method of filling gaps than a court determination of what is reasonable. For example, if customarily the contractor obtains a building permit, the court is likely to place this responsibility on the contractor, but only where there is a contract gap on this point.⁴⁴ If the contract does not deal with the matter, custom is preferable to a judge's determination of who should obtain the permit. Custom can help the court interpret terms or conflicts in the contract documents.⁴⁵

Custom is an important part of construction contracts. However, parties should never rely on custom when there are express provisions to the contrary. Custom can trap a contractor who performs a project in a locality where customs may differ from those where it customarily works. Custom can often be difficult to establish. In the absence of an express provision controlling the dispute, the party seeking to establish custom will be given an opportunity to do so.

C. Building Codes and Permits

Building codes and land use controls play a pervasive role in construction. The contract frequently implies or expresses that the contractor will comply with applicable laws. Further analysis is needed to separate several related but distinct problems.

Where design and construction are separate, the former is the owner's responsibility and is usually done by the design professional. Suppose the design violates building code requirements. The contractor may contend that its job is to build the design, but the contractor should not ignore violations of law. It should direct the design professional's attention to any obvious code violations in the design.

The contractor's responsibility in design code violations is dealt with by AIA Document A201-2007 Section 3.2.3, which states that a contractor, upon receipt of the design, is not required to determine whether the Contract Documents are in accord with legal requirements; however, it must promptly report to the architect

any nonconformity discovered or made known to the contractor (presumably by a subcontractor). Under Section 3.7.3, if the contractor performs work knowing it to be contrary to such laws without notifying the architect, the contractor "shall assume appropriate responsibility for such Work and shall bear the costs attributable to correction."⁴⁶

This solution effectuates a sound middle ground between putting an unreasonable responsibility on the contractor and allowing the contractor to close its eyes in the face of danger. A contractor who does not comply with the requirements of Section 3.7.3 is exposed to liability, not only for the cost of correction but also for losses suffered by third parties. (As noted in Section 27.06, it would not be responsible for consequential damages to the owner because Section 15.1.6 included in A201-2007 requires each party to waive consequential damages against the other.)

In many instances no *direct* clash exists between building codes and the design. In such instances, the owner and the design professional expect the contractor to follow building codes. In this sense, the contractor must build in conformity with legal requirements. Essentially, this is a gap-filling instrumentality. In addition, such code compliance provisions are intended to obtain compliance with worker safety rules.

Other legal requirements can consist of permits issued by public officials at various stages of the performance. These permits are not limited to building and occupancy permits. Permits must frequently be obtained from public utilities to connect the utilities of the project to public utility lines. Drainage rights of way may be needed, as well as permits from state highway officials for certain types of construction.

Who must obtain permits required by law? Construction documents should cover these matters.⁴⁷ If the contract does not, custom may allocate responsibility for obtaining permits. In the absence of an express contract provision or accepted custom, the law will be likely to imply that the owner will obtain the more important permanent permits, such as land use control permits,⁴⁸ but the contractor should

⁴⁴In *Weber v. Milpitas County Water Dist.*, supra note 29, custom that the owner procured these permits was not relevant because an express provision in the contract required the contractor to obtain such permits.

⁴⁵*Fifteenth Ave. Christian Church v. Moline Heating & Constr. Co.*, 131 Ill.App.2d 766, 265 N.E.2d 405 (1970).

⁴⁶See Section 14.05D, dealing with design that violates local building codes.

⁴⁷AIA Doc. A201-2007, § 3.7.1 (contractor obtains building permit).

⁴⁸*COAC, Inc. v. Kennedy Eng'rs*, 67 Cal.App.3d 916, 136 Cal.Rptr. 890 (1977) (owner must obtain environmental impact report).

get operational permits, such as building permits⁴⁹ and occupancy permits. The contractor is likely to be required, by implication of law, to obtain from public officials permits that are associated with facilities and equipment. The contractor should obtain utility hookup permits and permits for temporary construction. Determining who should obtain particular construction permits will depend on the extent of experience the particular owner has had in construction projects.

Public authorities, inundated with permit requests, are not always able to process these requests expeditiously, thereby causing significant project delays. To ameliorate this bottleneck, large urban centers (beginning with New York City in 1976) created a process of “self-certification,” under which architects, engineers, or certain trade contractors (such as plumbers and electricians) certify their own work as being in compliance with the building code. Because of the obvious conflict of interest, public authorities continue to spot-check self-certifications, and violators are subject to severe sanctions, including loss of the future ability to self-certify projects and loss of licensure.⁵⁰

Generally, the contractor’s failure to comply with any requirement to obtain a work permit or submit the plan does not affect its right to recover compensation.⁵¹ However, it is dangerous to rely on a court’s subsequent determination that the violation was technical.

D. Good Faith and Fair Dealing

The common law did not usually hold contracting parties to obligations of good faith and fair dealing. Refusal to do so reflected the common law’s belief that the written contract was sacred, contracting parties should take care of themselves, and good faith is imprecise.

Beginning in the mid-twentieth century, however, and heavily influenced by the Uniform Commercial Code,⁵² American contract law began to hold contracting parties to the covenant of good faith and fair dealing. One party cannot be expected to guarantee that the other party will receive the benefit it expects from a contract, nor must a

contracting party make unreasonable sacrifices for the other party. However, each party should not only avoid deliberate and willful frustration of the other party’s expectations but should also extend a helping hand where to do so would not be unreasonably burdensome. Contracting parties, although not partners in a legal sense, must recognize the interdependence of contractual relationships.

Some applications of the doctrine are simply recognition of implied terms, as discussed in 19.02A. But more expansive use of the doctrine emphasizes the unspoken objectives of the contracting parties, the spirit of the contract itself, and the need for elementary fairness. This more expansive use can even dictate an outcome contrary to the literal interpretation of the written contract. Finally, some breaches of this covenant, particularly in contracts of insurance and employment, violate public policy. When they do, they can become the basis for tort remedies, including punitive damages.

Because the doctrine is pervasive and the various parts of the construction process are particularly interdependent, illustrations of the covenant of good faith and fair dealing are sprinkled throughout this book.⁵³ It may be useful to note one case here.

*Maier’s Trucking Co. v. United Construction Co.*⁵⁴ illustrates good faith and fair dealing in the context of a deductive change. The prime contractor suggested a modification that would essentially eliminate a subcontractor’s work. Although the majority held that this did not breach the covenant of good faith and fair dealing, two judges strongly dissented. They would have ordered a trial to determine whether this suggestion had been made in bad faith.

Yet in *Scherer Construction LLC v. Hedquist Construction, Inc.*,⁵⁵ the Supreme Court of Wyoming held that the trial court was incorrect in awarding a summary judgment to the prime contractor in a claim by the subcontractor similar to the claim in the *Maier* case discussed in the preceding paragraph. In the *Scherer* case, the subcontractor claimed that the obligation of good faith and fair dealing was breached when the prime suggested a change to the owner that would have wiped out 75 percent of the value of the subcontract. The subcontractor had spent a substantial amount of money to prepare to perform as required by the original contract. The court held that the obligation of good faith and fair dealing applied to every contract, citing the Restatement of Contracts (Second) Section 205. The court sent the case

⁴⁹*Drost v. Professional Bldg. Service Corp.*, 153 Ind.App. 273, 286 N.E.2d 846 (1972).

⁵⁰Kubes, *The Design Professional’s Project Self-Certification: A Key to Efficiency or Liability?* 26 Constr. Lawyer, No. 4, Fall 2006, p. 5. Wrongful certification may also expose the architect to liability to third parties. See 27 *Jefferson Avenue, Inc. v. Emergi*, 18 Misc.3d 336, 846 N.Y.S.2d 868 (2007).

⁵¹See Annot., 26 A.L.R.3d 1395 (1969).

⁵²U.C.C. § 1-304 (formerly 1-203).

⁵³See Sections 11.04B, 14.04B, 21.04C, 24.04, 26.03C, and *Broadway Maintenance Corp. v. Rutgers*, reproduced at Section 17.04C.

⁵⁴237 Kan. 692, 704 P.2d 2 (1985).

⁵⁵18 P.3d 645 (Wyo.2001).

back to the trial court to see if the subcontractor could prove its claim, the very action suggested by the dissent in the *Maier* case.

The trend is clearly in the direction of the *Scherer* case. The trial court must decide whether there was a breach of the obligation. Much will depend on the prime's motive for suggesting the change. If it were done to "teach the sub a lesson" or to "get even with the sub," the obligation would have been breached. But if the suggestion were made in commercial good faith, made to help the owner cut costs, then the subcontractor will not have a valid claim of breach. These will be hard claims to sustain, but the door is open.

Another element of good faith and fair dealing can be seen in the need for communication. For example, AIA Document A201-2007, Sections 9.4.1 and 9.5.1, require an architect who cannot certify the full amount requested to notify the owner and contractor and give his reasons. Similarly, AIA Document A312, Section 3.1, states that the surety's obligation arises after the owner has notified the contractor and surety that it considers defaulting the contractor and "has requested . . . a conference with the Contractor and Surety . . . to discuss methods of performing the Construction Contract." Both elements illustrate specific requirements of obligations that would very likely be encompassed by the covenant of good faith and fair dealing.

The settlement process and the pressures that attend it are fertile ground for claims of bad faith. One case decision employed the concept of duress to void a settlement.⁵⁶ Another held that a prime contractor who was empowered by contract to negotiate the settlement of a delay claim on behalf of its subcontractors was required to do so in good faith.⁵⁷ Still another case held that a termination by the owner in accordance with the powers given it under the contract was improper, because it had not been made in good faith.⁵⁸

Even this sampling shows the range of breaches. Some are considered tortious, some illustrate that contract language does not necessarily insulate a party from its obligation to act in good faith and to deal fairly, and some are based on implied terms. The outpouring of cases dealing with this

doctrine demonstrates that the doctrine will be an important component of the construction contract obligation.⁵⁹

E. Unconscionability

The common law generally allowed contracting parties to decide the terms of their contracts with relatively minimal judicial intervention. But again, as noted in Section 19.02D, the Uniform Commercial Code regulating transactions in goods led to the broadening of the unconscionability doctrine that had been used in the courts of equity.⁶⁰ The obligation of good faith and fair dealing placed limits on the conduct of contracting parties. The unconscionability doctrine authorizes an inquiry into the circumstances under which the contract was made and permits a judge to refuse to enforce unconscionable clauses or contracts.

The doctrine has rarely invalidated clauses in construction cases.⁶¹ Clauses where it might have some utility, such as those of exculpation or indemnification, have been regulated by requiring a high degree of specificity or by statute.⁶² Unconscionability was the basis for invalidating a provision in a subdivision purchase agreement that required, at the option of the developer, that disputes be referred to a court-appointed referee.⁶³ As seen in Section 30.03D, it can be the basis for challenging an agreement to arbitrate. The unconscionability doctrine is likely to be increasingly invoked in the future.

⁵⁹See Section 18.04E for another illustration—requiring an owner to notify a bidder if it appears a bidding mistake has been made.

⁶⁰U.C.C. § 2-302.

⁶¹*Arcwel Marine, Inc. v. Southwest Marine, Inc.*, 816 F.2d 468 (9th Cir.1987), cert. denied, 484 U.S. 1008 (1988) (exculpatory clause); *State Highway Admin. v. Greiner Eng'g Sciences, Inc.*, 83 Md.App. 621, 577 A.2d 363, cert. denied, 321 Md. 163, 582 A.2d 499 (1990) (no damage clause); *Curtis Elevator Co. v. Contract Interpretation: Chronic Confusion

SECTION 20.01 Basic Objectives

The basic objective in contract interpretation is to determine the intention of the parties. However, within this relatively simple standard lurk many problems, some of which follow:

1. What can be examined to ascertain the intention of the parties?
2. Once the relevant sources are examined, how is the intention of the parties determined?
3. What if each party has different intentions?
4. What if one party knows of the other party's intention?
5. What if the parties have no particular intention about the matter in question?
6. Can the court go beyond these presumed intentions of the parties and interpret in accordance with what the court thinks the parties would have intended had they thought about it?
7. Can a court disregard the intention of the parties and base determination of the rights and duties of the parties on judicial notions of proper allocation of risk?

The problems can be even more complicated when the language has been selected not by any or all of the parties but by a third party such as the American Institute of Architects (AIA) or the Engineers Joint Contract Documents Committee (EJCDC). Should the intention of AIA personnel who selected the language be examined, if it can be ascertained? If it cannot, what should the law do when neither party had any intention whatsoever when it agreed to use AIA documents (not an uncommon phenomenon as to certain types of contract clauses)?

The preceding list is given merely to indicate that phrasing the test as the process of ascertaining the intention of

the parties is deceptively simple, often hiding difficult interpretation problems.

SECTION 20.02 Language Interpretation

Words have no inherent meaning—they develop meanings because people who use them as tools of communication attach meanings to them. A judge asked to interpret contract terms could decide all interpretation questions simply by using a dictionary and choosing the definition that seemed most appropriate. However, even dictionary meanings are not exclusive. Choosing a definition can be a formidable task. Interpretation of contract terms should take into account the setting and function of the transaction and other matters not found in the contract or the dictionary. Courts seek to put themselves in the position of the contracting parties and determine what the contracting parties must have meant or intended when they used the language in question.

Yet judges and juries do not have absolute freedom to determine the meaning of words. This constraint may be traceable to the fear that juries, and sometimes trial judges, will be unduly sympathetic to a hard-luck story and too inclined to protect the party in the weaker bargaining position. Underlying this reluctance is the skepticism the law has toward the ability of the trial process to separate truth from falsehood, especially when parties differ in their testimony as to what transpired during the negotiations.

Reluctance to give absolute discretion to the fact finders may also be traceable in part to the fear that juries, and sometimes trial judges, may not realize the importance to the commercial world of attaching consistent, commercially accepted meanings to terms.

A. Plain Meaning Rule

The *plain meaning rule* has been the method employed to limit interpretation powers of trial judges and juries. A judge must first determine whether the words used by the parties have a plain meaning. If so, the judge cannot look beyond the document itself to determine what the parties meant when they used those particular words.

Of course, the language selected by the parties for inclusion in the contract is relevant, often crucial. It is the starting point for interpreting the contract. But unless the language has a plain meaning, the search is not limited to the contract language.

Most, though not all, courts invoke the plain meaning rule to bar evidence outside the writing (extrinsic evidence). Even if the plain meaning rule blocks the use of extrinsic evidence, the judge may look at the dictionary or dictionaries if she is not confident she can decide the issue based solely upon her linguistic experience.

Whether the plain meaning rule applies is a question of law. This issue is decided by the trial judge and not the fact finder, such as a jury impaneled to hear the case. Being a question of law allows any appellate court to decide this issue without extending any deference to the trial judge's decision.

If not barred by the plain meaning rule, extrinsic evidence can be used to determine the intention of the parties. This evidence highlights the contextual setting of the transaction. Such evidence can include the surrounding facts and circumstances, preliminary negotiations that do not run afoul of the parol evidence rule,¹ customs and practices of the industry, and the practices of the parties before the dispute arose. These will be discussed later in this Section.

There has been scholarly criticism of the plain meaning rule. Unbending use of the rule can generate a contract that neither party intended. Also, critics point to the deficiencies of human language. Even a search for dictionary meanings can involve a choice between different dictionaries and many dictionary meanings.

Yet the great majority of jurisdictions follow the plain meaning rule.² It is also followed more strictly than in private litigation by the United States Court of Appeals for the

Federal Circuit.³ This court hears appeals from the various federal boards of appeals in federal procurement cases and also from the United States Court of Federal Claims. In these disputes the courts are conscious of the need to protect public funds. Too much extrinsic evidence can upset the highly bureaucratic mechanisms that should protect the taxpayers.

The decision as to whether the plain meaning rule applies relates to the objective theory of contracts discussed in Section 5.06A. The plain meaning rule creates an objective standard. If it blocks examination of often subjective extrinsic evidence, the result should be a detached, objective interpretation. If it does not bar inquiry into the contextual meaning, the search is for the actual intention of the parties. This can be said to effectuate the subjective meaning of the parties. But that does not mean that undisclosed intentions prevail. The search is for the *common* intention of the parties, not some objective intention based upon the judge's interpretation, aided by the dictionary.

The plain meaning rule applies only to litigation. An arbitrator can examine extrinsic evidence, if she chooses, without first finding the language was not plain on its face.

B. Illustrative Federal Cases: *TEG-Paradigm Environmental, Inc. v. United States*

It is essential to see these rules of contract interpretation in actual cases. With that in mind, some cases from the federal procurement system will be described. They involve construction disputes that can also arise in state public contracts and in private construction projects. Finally, a case will be reproduced in part decided recently by the United States Court of Appeals for the Federal Circuit, the court that handles many federal procurement disputes.

The conflict between contractual provisions and trade practices can be shown in a construction contract context. In *Jowitt, Inc. v. United States*,⁴ the contract provided that the contractor was to insulate all cold-air supply ducts. In a separate provision an exemption from the insulation requirement was provided for return ducts in ceiling spaces and ceilings which form plenums. The government contended that this exemption applied only to ceilings which form plenums.

³*Travelers Cas. & Sur. of Am. v. United States*, 75 Fed.Cl. 696 (2007). For a critical discussion of the federal courts' adoption of the plain meaning rule, see Johnson, *Interpreting Government Contracts: Plain Meaning Precludes Extrinsic Evidence and Controls at the Federal Circuit*, 34 Pub. Cont.L.J. 635 (2005).

⁴234 F.3d 1365 (Fed.Cir.2000).

¹See Sections 11.04E and 19.01G.

²J. CALAMARI & J. PERILLO, *CONTRACTS*, § 3.10 at 151 (5th ed. 2003).

To rebut the plain language of the specifications, the contractor introduced affidavits from other contractors that standard practice was to not insulate supply ducts in the above-ceiling space. The Court of Federal Claims (the trial court in claims against the federal government) refused to give any weight to the affidavits. Even if they were true as to industry practice, they could not be used to vary or contradict the plain language of the contract.

The Court of Appeals for the Federal Circuit affirmed. But it did state that the trade usage could be relevant to interpret a *term* used in the contract that differs from its ordinary meaning and that reasonable reliance on trade practice showed that the contract was susceptible to two interpretations.

This case shows the difference between interpreting what appears to be a clear, contractual term with the

help of trade usage and simply saying that “this is not the way we do things in the trade.” The court stated that the affidavits did not identify a specific term that needed trade usage to show how the parties were using it in their contract. There was no showing of an accepted industry meaning different from its ordinary meaning.

For example, in *Metric Constructors, Inc. v. National Aeronautics & Space Administration*,⁵ trade usage testimony was permitted to interpret the contract requirement that “new lamps (i.e., light bulbs) shall be installed immediately prior to completion of the project.” The dispute was whether all light bulbs (as contended by the government) or only broken or defective light bulbs (as argued by the contractor) needed to be replaced.

At this point, a case will be reproduced in part decided recently by the United States Court of Appeals for the Federal Circuit.

TEG-PARADIGM ENVIRONMENTAL, INC. v. UNITED STATES

United States Court of Appeals, Federal Circuit, 2006, 465 F.3d 1329

SCHALL, Circuit Judge.

TEG-Paradigm Environmental, Inc. (“TEG”) entered into a contract with the United States Department of Housing and Urban Development (“HUD”). Pursuant to the contract, TEG agreed to perform asbestos abatement work at the Geneva Towers, an apartment complex, in San Francisco. After the contract work was completed, TEG submitted a claim to the contracting officer in which it sought an equitable adjustment in the contract price. In support of its claim, TEG asserted that it had been required to perform excessive cleaning and that it had been required to remove excessive quantities of asbestos. After the contracting officer denied the claim, TEG filed suit in the United States Court of Federal Claims under the Contract Disputes Act of 1978, 41 U.S.C. §§ 601–613 (2000).

[Ed. note: The court gave the procedural history of the case. The issue before the court was TEG’s appeal from the Court of Federal Claims (the trial court) decision granting the government’s motion for summary judgment on its two claims for breach of contract. It affirmed the trial court granting summary judgment in favor of the government.

The court then amplified the facts in the case as follows:

The Geneva Towers were two-high-rise apartment buildings in San Francisco. HUD acquired the buildings in 1991 and decided to implode them to make way for new development. . . . However the buildings contained asbestos, which had to be removed before implosion. . . . HUD solicited bids on a contract for asbestos abatement and TEG was awarded the contract on May 8, 1997, for a fixed price of \$5,153,625.00.

Other salient facts will be given in the court’s decision. The court then stated the rules for granting summary judgment. Contract interpretation in this case is a question of law and the appellate court need give no deference to the trial court’s decision. It can decide the case *de novo* (from the beginning).

The court next gave the contentions of the parties. These will be referred to in the opinion that deals with the main issue, interpretation of the contract.]

⁵169 F.3d 747 (Fed.Cir.1999).

III.

When interpreting a contract, “the language of [the] contract must be given that meaning that would be derived from the contract by a reasonably intelligent person acquainted with the contemporaneous circumstances.” *Metric Constructors, Inc. v. Nat’l Aeronautics & Space Admin.*, 169 F.3d 747, 752 (Fed.Cir.1999) (quoting *Hol–Gar Mfg. Corp. v. United States*, 169 Ct.Cl. 384, 351 F.2d 972, 975 (Ct.Cl.1965)). When deriving this meaning, we begin with the contract’s language. *Coast Fed. Bank, FSB v. United States*, 323 F.3d 1035, 1038 (Fed.Cir.2003) (en banc). When the contract’s language is unambiguous it must be given its “plain and ordinary” meaning and the court may not look to extrinsic evidence to interpret its provisions. *Id.* at 1040; *McAbee Constr.*, 97 F.3d at 1435. Although extrinsic evidence may not be used to interpret an unambiguous contract provision, we have looked to it to confirm that the parties intended for the term to have its plain and ordinary meaning. See *Coast Fed. Bank*. 323 F.3d at 1040 (looking to contemporaneous evidence of the parties’ understanding and “not[ing] that much of it is consistent with the [contract’s] plain meaning”). When a provision in a contract is susceptible to more than one reasonable interpretation, it is ambiguous, *Edward R. Marden Corp. v. United States*, 803 F.2d 701, 705 (Fed.Cir.1986), and we may then resort to extrinsic evidence to resolve the ambiguity, see *McAbee*, 97 F.3d at 1435. We utilize extrinsic evidence to derive a construction that effectuates the parties’ intent at the time they executed the contract. See *Dureiko v. United States*, 209 F.3d 1345, 1356 (Fed.Cir.2000).

Even when a contract is unambiguous, it may be appropriate to turn to one common form of extrinsic evidence—evidence of trade practice and custom. *Hunt Constr. Group, Inc. v. United States*, 281 F.3d 1369, 1373 (Fed.Cir.2002). We have stated that “evidence of trade practice may be useful in interpreting a contract term having an accepted industry meaning different from its ordinary meaning—even where the contract otherwise appears unambiguous—because the ‘parties to a contract . . . can be their own lexicographers and . . . trade practice may serve that lexicographic function in some cases.’” *Id.* (quoting *Jowett, Inc. v. United States*, 234 F.3d 1365, 1368 (Fed. Cir.2000)). Trade practice and custom may not be used, however, “to create an ambiguity where a contract was not reasonably susceptible of differing interpretations at the time of contracting.” *Metric Constructors*, 169 F.3d at 752.

The parol evidence rule provides a further limitation on the use of extrinsic evidence in interpreting contracts. Under the parol evidence rule, extrinsic evidence pre-dating a written agreement may not be used “to add to or otherwise modify the

terms of a written agreement in instances where the written agreement has been adopted by the parties as an expression of their final understanding.” *Barron Bancshares*, 366 F.3d at 1375 (citation and quotation marks omitted). However, extrinsic evidence such as prior agreements and documents will be considered part of a contract when they are incorporated into the contract. See *S. Cal. Fed. Sav. & Loan Ass’n v. United States*, 422 F.3d 1319, 1330 (Fed.Cir.2005). One common way to incorporate extrinsic evidence is through an integration clause that expressly incorporate the extrinsic evidence. *Id.*; *McAbee Constr. v. United States*, 97 F.3d 1431, 1434 (Fed.Cir.1996). Although the parol evidence rule bars the use of extrinsic evidence to supplement or modify a written agreement, the rule does not bar the use of extrinsic evidence to interpret the terms of a contract when the plain and ordinary meaning is not clear from the contract itself. See Restatement (Second) Contracts § 215 cmt. b (1981); 6–26 *Corbin on Contracts* § 579 (2006); Cibinic, Nash & Nagle, *supra*, at 199. Armed with these rules, we turn to the issues TEG raises on appeal.

IV.

We consider first TEG’s claim that the Court of Federal Claims erred in holding that it was required to clean debris and residue from pores and cracks of the Geneva Towers under the contract’s abatement standard. As seen, the provision of the contract containing the abatement standard for the Geneva Towers project, Section 2080, 4.3C, provided:

Asbestos-containing materials applied to concrete, masonry, wood and nonporous surfaces, including, but not limited to, steel structural members (decks, beams and columns), pipes and tanks, shall be cleaned to a degree that no traces of debris or residue are visible by the Observation Services Contractor.

The Court of Federal Claims correctly identified two issues raised by the abatement standard. First, we must determine whether this standard requires the removal of asbestos within pores and cracks. Second, we must determine what asbestos-containing “debris or residue” means.

Based upon the plain language of the abatement standard, we conclude that the Court of Federal Claims did not err in ruling that TEG was required to remove asbestos within pores and cracks. The plain language of the contract indicates that it requires abatement to the point that there is no “debris or residue . . . visible.” Thus, to the extent that “debris or residue” was “visible” within the pores and cracks of concrete or other porous surfaces, it had to be abated under the contract.

However, if the “debris or residue” was not “visible” within the pores and cracks, it was not required to be abated under the contract. Accordingly, we find that the plain and ordinary meaning of the abatement standard required TEG to remove visible asbestos within the pores and cracks of the towers.

As we did in *Coast Federal Bank*, we turn to extrinsic evidence, specifically, the course of dealing of the parties, to confirm that our interpretation of the plain and ordinary meaning was, in fact, the parties’ understanding. See *Coast Fed. Bank*, 323 F.3d at 1040. The original specifications provided for two different abatement standards for friable and non-friable materials. As far as friable materials were concerned, the specifications expressly stated that materials must be cleaned “to a degree that no traces of debris or residue are visible.” In contrast, the specifications provided that non-friable materials “shall be cleaned until no residue is visible other than that which is embedded in the pores, cracks, or other small voids below the surface of the non-friable material.” Thus, the original specifications expressly allowed for the contractor to leave non-friable asbestos in pores and cracks. In a pre-bid conference call, TEG’s representative stated that it was not clear which standard, friable or non-friable, would apply and that this was an important difference. TEG’s representative noted, “It’s a difference, because on one it has to be clean to a degree there’s no trace; on the other, it’s clean to a degree that material can still be embedded in pores, cracks and voids.” In our view, the conference call demonstrates that TEG understood the visibility standard, which was eventually adopted for all asbestos abatement under the contract, to require that no asbestos remain in the pores and cracks.

We find unpersuasive TEG’s argument that the Court of Federal Claims erred by failing to consider other pieces of evidence, including ATC’s letter and Mr. Oberta’s expert opinion. These documents could be considered evidence of trade practice and custom, which we have found appropriate to consider in some cases even when a contract is unambiguous. See *Hunt Constr.*, 281 F.3d at 1373. However, neither of these documents aids in the interpretation of a term of art in the asbestos abatement field. Rather each document offers an alternate explanation of the contract’s abatement standard generally. Under *Hunt Construction*, it is not permissible to use these extrinsic sources to impart ambiguity into an otherwise unambiguous contract—they may only be used to interpret a term of art. *Id.* at 1369; see also *Metric Constructors*, 169 F.3d at 752. Given the clarity of the meaning from the language and the parties’ pre-contractual negotiations, none of the extrinsic evidence cited by TEG carries weight.

We are also not swayed by TEG’s argument that Section 2080, 4.3C requires only that “surfaces” be abated and that “surfaces” do not include pores and cracks. TEG turns to a common usage dictionary that defines a “surface” as “[t]he outer-face, outside, or exterior boundary of a thing; outermost or uppermost layer or area.” Appellant’s Br. at 21 (quoting *Ramdom House Webster’s College Dictionary* 1314 (2nd ed. 1999)). We reject TEG’s argument based on this definition that a “surface,” as used in Section 2080, 4.3C, is only the “outer-face” of the concrete and not the pores and cracks. The definition upon which TEG relies does not expressly state that “surfaces” do not include pores and cracks. Further, if we were to accept TEG’s argument we would have to decide how small a crack or pore had to be in order to be excluded from “surfaces.” The Court of Federal Claims correctly noted that we “would be left to quarreling over the depth of recess needed to differentiate a crack or pore from a smooth surface” if we adopted TEG’s interpretation. *TEG–Paradigm* slip op. at 13. We also find that TEG’s “surfaces” argument is weak in comparison to the evidence of the parties’ understanding of the language in the contract as demonstrated by the conference call. Thus, we believe that the strict visibility abatement standard is more in line with the parties’ contemporaneous understanding of Section 2080, 4.3C.

Turning to the second issue relevant to TEG’s abatement standard claim, the meaning of “debris or residue,” we see no error in the Court of Federal Claims’s holding that, under the contract, any dust or powder found on inspection was assumed to be asbestos-containing “debris or residue” that had to be abated. “Debris” “residue” are not defined in the contract. As previously noted, evidence of trade custom may be used to interpret terms of art such as “debris” and “residue.” See *Hunt Constr.*, 281 F.3d at 1373. The ASTM standard for asbestos abatement provides that debris and residue is “assumed” to contain asbestos. *TEG–Paradigm*, slip op. at 13. Therefore, we agree with the Court of Federal Claims that trade practice and custom demonstrates that in the asbestos abatement field any “debris and residue” found is assumed to contain asbestos. *Id.* Thus, we affirm the Court of Federal Claims’s holding that the contract required TEG to clean all visible powder and dust found on inspection, including powder and dust in cracks and pores.

V

[Ed. note: The court rejected TEG’s contention that its work plan was part of the contract and took precedence over the specifications. Bidders were required to submit a work plan “stating the details of the bidder’s engineering controls and work

procedures.” The court noted that the contract did not state the work plan was integrated into the contract and superceded the specifications. Other documents were specifically incorporated into the contract. The mere fact that the work plan was physically attached to the contract did not in itself make it part of the contract. The court held the requirement of the work plan was a preaward submission “to aid the government in assessing TEG’s ability to perform the contract.”]

CONCLUSION

For the foregoing reasons, we therefore affirm the decision of the Court of Federal Claims granting summary judgment in favor of the government on TEG’s claims for breach of contract.

COSTS

Each party shall bear its own costs.
AFFIRMED.

C. Extrinsic Evidence

Surrounding facts and circumstances often determine how language is interpreted. The relevant surrounding facts and circumstances typically are those that existed at the time the contract was made.⁶ However, to interpret contract language sometimes courts look at circumstances that existed at some time during performance.⁷

Evidence of the surrounding facts and circumstances that courts will not examine is any undisclosed intentions of the parties they claim existed at the time they made the contract. If these intentions are made known to the other party, they may be relevant. Clearly disclosed intention is relevant.⁸

The Uniform Commercial Code (U.C.C.) encourages the use of trade usages.⁹ But the question of whether such evidence can be used in the face of a writing that seems to point in another direction is not clear.¹⁰ Cases governed by the U.C.C. have not been consistent when facing a conflict between trade usage and language in the contract with a clear meaning.¹¹

As an illustration, *Fletcher-Harlee Corp. v. Pote Construction Contractors, Inc.* noted that increasingly common commercial practices aid interpretation of contracts. Yet, despite a finding that commonly subcontractors make firm offers that can be relied upon, a statement on the price

quotation that the price is not firm has greater weight than commercial practices.¹² Here the plain language trumped commercial practices.

Such a clash is inevitable, because both contract language and trade usage are powerful sources of contractual obligations.

D. Practical Interpretation

Statements and, more important, acts of the parties before the dispute arose may indicate how the parties interpreted the language. Courts often invoke and give considerable weight to those acts under what is called *practical interpretation*. The practices of the parties often indicate their intention at the time the contract was made. For example, making two progress payments, without a showing that the work complied with the contract, was considered to manifest an intention that the contractor was entitled to progress payments despite noncompliance.¹³ Likewise, the prime contractor periodically billing the owner in accordance with certain unit prices and the owner paying these billings indicated that the unit prices were correct.¹⁴ The contractor doing what the owner had directed without complaint indicated the contractor’s acquiescence in the owner’s interpretation.¹⁵ Note that the doctrine of practical interpretation applies only to language susceptible to more than one interpretation.¹⁶ However, this rarely is a difficult obstacle.

⁶*Metric Constructors v. United States*, 314 F.3d 578 (Fed.Cir.2002) (interpreting a settlement release).

⁷*Contracting & Material Co. v. City of Chicago*, 20 Ill.App.3d 684, 314 N.E.2d 598 (1974). The holding was reversed, not on the admissibility of the evidence but on finding the evidence irrelevant because of a strict interpretation given to the contract clause in question. See 64 Ill.2d 21, 349 N.E.2d 389 (1976).

E. Canons of Interpretation

Not infrequently the surrounding circumstances and the predispute conduct of the parties provide little assistance. When this occurs, courts sometimes resort to secondary assistance, called “canons of interpretation.” These canons are interpretation guides. Some are used frequently.

Expressio Rule. *Expressio unius est exclusio alterius*, “the expression of one thing excludes the others,” excludes an item from relevance when there is a list of items and the item in question is not expressed. For example, suppose a party were excused from performance in the event of strikes, fire, explosion, storms, or war. Under the *expressio guide*, the occurrence of an event not mentioned, such as a drought, would not excuse performance. Where the parties have expressed five justifiable excuses, they must have intended to exclude all other excuses for failure to perform. This guide is sometimes harshly applied and does not give realistic recognition of the difficulty of drafting a complete list of events.

Ejusdem Generis. Another guide, *ejusdem generis*, states that the meaning of a general term in a contract is limited by the specific illustrations that accompany it. Anything not specifically mentioned must be “of that sort,” that is, similar in meaning to those things that are. For example, damages payable for harm to crops, trees, fences, and premises would not include depreciation in market value of the land. The particular item in question is too unrelated to those items listed to be covered by the contract terms.

Reasonableness. As to other guides, one court stated, “where one interpretation makes a contract unreasonable or such that a prudent person would not normally contract under such circumstances, but another interpretation equally consistent with the language would make it reasonable, fair and just, the latter interpretation would apply.”¹⁷ This does not give the court the power to rewrite the language.¹⁸ Nor does it preclude the contracting parties from agreeing to language that a court might consider unreasonable. However, for an unreasonable

interpretation to be selected, the language must make clear that this is what the parties intended.

Another illustration can be seen in *Medlin Construction Group, Ltd. v. United States*.¹⁹ In this case the specifications gave two alternative performance options to the contractor but the drawings illustrated only one of the options. The government contended that the drawings narrowed the scope of the options given in the specifications. The contractor countered that the drawings merely illustrated one of the options. That did not eliminate its right to use the other option. The court concluded that the contractor’s interpretation was the only reasonable interpretation because it preserved both options. The government’s interpretation would have read one of the options out of the specifications.

Fairness. Another court required that the language be interpreted “so as not to put one side at the mere will or mercy of the other.”²⁰ Another stated that a particular interpretation should be rejected because it “would certainly be both unconscionable and inequitable, and the recognized rule is that the interpretation that makes a contract fair and reasonable will be preferred to one leading to a harsh and unreasonable result.”²¹

Contra Proferentem. Another important interpretation guide, *contra proferentem*, “against the one who puts it forward” (the drafter of the language) interprets ambiguous language against the party who selected the language or supplied the contract. Usually this guide is applied not to negotiated contracts but to those mainly prepared in advance by one party and presented to the other on a take-it-or-leave-it basis (adhesion contracts).

One basis for this guide is to penalize the party who created the ambiguity. Another and perhaps more important rationale is the necessity of protecting the reasonable expectations of the party who had no choice in preparing the contract or choosing the language. This rationale had its genesis in the interpretation of insurance contracts. Insureds frequently received protection despite language that appeared to preclude insurance coverage. This

¹⁷*Elte, Inc. v. S. S. Mullen, Inc.*, 469 F.2d 1127, 1131 (9th Cir.1972).

¹⁸As seen in Section 20.04, the court can reform the written contract if it did not express the intention of the parties.

¹⁹449 F.3d 1195 (Fed.Cir.2006).

²⁰*Contra Costa County Flood Control & Water Conservation Dist. v. United States*, 206 Ct.Cl. 413, 512 F.2d 1094, 1098 (1975).

²¹*Glassman Constr. Co., Inc. v. Maryland City Plaza, Inc.*, 371 F.Supp. 1154, 1159 n.3 (D.Md.1974).

preference recognizes that insurance policies are difficult to read and understand and the insured's expectations as to protection are derived principally from advertising, sales literature, and sales people's representations. Giving preference to the insured's expectations may also rest on the judicial conclusion that insurance companies frequently exclude risks that should be covered.

The *contra proferentem* guide can break a tie when all other evidence is either inconclusive or unpersuasive. The court may mention it to bolster an interpretation that has already been determined by other evidence.

F. Industry Contracts

Design and construction work frequently are performed after parties have assented to a standard prepared contract documents created by associations such as the American Institute of Architects (AIA) or the group of engineering associations who created the Engineers Joint Contract Documents Committee (EJCDC). Sometimes parties agree to such printed contracts without carefully considering the language. On other occasions, the parties carefully considered all or some of the language before entering into the contract. Sometimes the parties have dealt with and understood the language, and on other occasions one party may be unfamiliar with the terminology and concepts employed in the standard contract.

A look at a few cases in the construction context may be instructive. *Durand Associates, Inc. v. Guardian Investment Co.*²² construed an AIA standard contract against the engineer who had supplied it despite the fact that the owner was an investment company about to build a medical clinic that later was changed to an apartment complex. Although the owners in the case seemed to be experienced business people, evidently the court felt that their knowledge and experience did not equip them to carefully appraise the language of the AIA document. Yet the owners read the document and made some revisions that were accepted by the engineer.

Other cases have involved disputes between owners and contractors, with varied outcomes. One case noted that the facts that the contractors were sophisticated business people and the owner was legally represented indicated that the document should not be construed against

either party.²³ Another case pointed to the contract's having been the result of arm's-length bargaining.²⁴ A third interpreted A201 against the owner.²⁵ Another interpreted a subcontract, probably an AIA Doc. A 401, against the prime contractor.²⁶

Although the contract involved was not one published by a professional society, *W. C. James, Inc. v. Phillips Petroleum Co.*,²⁷ is instructive. The plaintiff, a large pipeline contractor, contracted with Phillips, a large gasoline supplier. The contractor contended that the contract had been prepared, or boilerplated, and presented to bidders on a take-it-or-leave-it basis. The trial court noted that the clause in question—waiving damages for delay—was common in construction work. The trial court stated that the contractor entered into the contract voluntarily, intelligently, and knowingly. The trial court upheld the clause, stating that it was not unfair and that the contract was not one of adhesion. The Federal Circuit Court of Appeals affirmed the trial court, noting that the pipeline contractor was of sufficient size, even in relationship to Phillips, so that it could not seek relief on the grounds of an adhesion contract.

Probably the pipeline contractor in the *James* case had no choice. Yet if the contractor was aware that it was risking delay damages, it could adjust its price and take this risk into account. It is not in the same position as a consumer, who is usually not in the position to adjust to the risk that the contract language seeks to place on her.

The preceding discussion has demonstrated the need for an analysis that will recognize some of the particular problems of dealing with standard contracts published by the AIA or EJCDC. First, it is important to look at the surrounding facts and circumstances that led to the use of the standard agreement. One should not always assume that the architect dictates that an AIA document be used for either design or construction services. Nor should one assume that an owner dictates the use of an AIA document for construction services. An AIA document may be selected by each party to the contract because of the

²⁷485 F.2d 22 (10th Cir.1973).

document's reputation for fairness or because of familiarity. This is more likely when AIA construction documents are used, unless the owner has dealt with design services before.

Second, changes are frequently made in AIA documents, principally in the areas of payments, changes, indemnification, arbitration, and the responsibilities of the design professional. It would be administratively inconvenient to use different standards of interpretation when substantial changes have taken place. Where changes have been substantial, the parties have likely considered the entire document, in some cases even jointly negotiating the agreement. If so, the agreement should be interpreted neutrally. Where one party has used some clauses from a standard agreement that favor it and then incorporated other clauses more favorable than those contained in the standard agreement, clearly the language should be interpreted against that party.

Third, it is possible to interpret any AIA B-series agreements—those that deal with design services—in favor of the client, because the AIA receives no input from other organizations for these documents and is likely to be drafting with the best interests of architects in mind.²⁸

Interpretation of AIA A-series documents requires an understanding of the endorsement system used by the AIA. Originally, the AIA sought and obtained the endorsement of A101/201 from the many contractor associations that represented prime contractors and subcontractors. The involvement of the many participants in the construction process gave the documents the appearance of a fair and balanced contract.

This endorsement process was costly and time-consuming, and it deprived the AIA of total control. Beginning in the 1950s, the AIA sought endorsement of A101/201 *only* from the Associated General Contractors of America (AGCA, better known as the AGC). The AGC also published its own documents, but their use never rivaled those of the AIA.

A401, the A-series document for subcontracting, was endorsed by the American Subcontractor Association (ASA) and the Associated Specialty Contractors, Inc. (ASC), the principal umbrella organizations for the many subcontractor associations.

The A101/201 endorsement process involved exchange of drafts and discussions between AIA and AGC. While the AIA made some concessions to the AGC to obtain endorsement of A101/201, the principal bargaining power belonged to the AIA. A similar process led to endorsement of A401 by the ASA and the ASC. The AGC did not participate in the A401 process because it saw no reason for the AIA to be involved in the relationship between primes and subcontracts.

For reasons that cannot be explored here, in 2007 the AGC,²⁹ ASA, and ASC decided not to endorse AIA documents. (It continued to endorse construction documents published by the EJCDC.) Led by the AGC, a group of owner, contractor, subcontractor, and surety associations published ConsensusDOCS. This group states it has published more than 70 documents. It hopes to compete with the AIA. The future will tell whether it will dethrone the AIA from its dominant position.

Contracts drafted by trade associations can create surrogate bargaining. For example, contracts prepared by associations that represent buyers and sellers of certain products can be the result that would be reached if individual buyers and sellers met across the bargaining table. Such standard contracts would be interpreted neutrally or at least in a manner similar to individually made contracts.

During the endorsement period, that is, until 2007, AIA A-series documents could be looked upon as imperfect surrogate bargaining. The parties who use A-series documents are owners and prime contractors. The AGC could be said to represent the prime contractors, and the AIA could be said to represent and look after the interests of the owners. But the interests of architects and owners do not always coincide. On many issues the AIA could be said to be looking out for the owner. But on others, such as role and responsibility of the architect, the interests of the owner and the architect diverge. Yet, despite the imperfect model even in the pre-2007 period, the courts could and often did take a neutral position in resolving interpretation issues.

Since 2007 it is no longer possible to use even the imperfect surrogate bargaining model. Yet the prestige of the AIA and of the architectural profession and the appearance of neutrality will very likely lead to a neutral interpretation, though preferring an interpretation that

²⁸Two cases in which this has been done are *Malo v. Gilman*, 177 Ind. App. 365, 379 N.E.2d 554 (1978) and *Kostohryz v. McGuire*, 298 Minn. 513, 212 N.W.2d 850 (1973).

²⁹See Construction News for a press release of October 12, 2007 announcing refusal to endorse. See the AGC website at www.agc.org.

marginally would favor the contractor. For historical reasons the law might still see the AIA as favoring the owner.

In the pre-2007 period only the AIA, the ASC, and the ASA were involved in A401. The AGC was not part of the process. A401 could not be considered the result of surrogate bargaining. The architects certainly could not be said to represent the prime contractors. In A401 the AIA did act neutrally. Because primes usually possess stronger bargaining power than subcontractors (subcontractors often make up for this by their muscle in state legislatures), it is likely that the law would interpret A401 at least neutrally, if not in favour of the subcontractor.³⁰

The subcontractors no longer participate or endorse. Now it can be said that the AIA is neutral in publishing A401. It seeks to find a fair solution. It will try to recognize the interests and needs of those who will use this document. If so, the law should be neutral in its interpretation of A401.

Whether the emergence of the ConcensusDOCS will result in fewer users of A401 remains to be seen. Yet the involvement of the AGC in the ConcensusDOCS but not in A401 may mean subcontractors will prefer A401 even if they are not part of the A401 process.

Fourth, courts usually seek to find the intention of the contracting parties as the lodestar of contract interpretation. However, it is not uncommon for neither party to an AIA document to have any intention whatsoever as to certain clauses and their function when they have used an AIA document as the basis for their agreement. Does that mean that parties should be allowed to introduce any evidence of the intention of AIA representatives, if any can be obtained? This is analogous to the use of legislative history by courts in interpreting statutes. In 1999, the AIA published its Commentary on AIA Document A201-1997.³¹ As yet the AIA has not published a commentary on documents issued in 2007. Letters or affidavits by AIA officials can be used.

Such evidence is untrustworthy at best, and the parties would have no opportunity to question those who have sought to describe the AIA's intention. It is probably best

³⁰But see *Katzner v. Kelleher Constr.*, supra note 26 (appeared to construe the pre-2007 A401 in favor of the subcontractor).

³¹It can be obtained on its Web site, www.aia.org. See also J. SWEET & J. SWEET, *SWEET ON CONSTRUCTION INDUSTRY CONTRACTS: MAJOR AIA DOCUMENTS* (4th ed. 1999). The 5th edition is scheduled to be published in the Fall of 2008.

for courts to ignore this evidence and decide intention questions based on common law principles and the hypothetical intention of the parties—what they would have intended.

A Florida court faced this problem when it was asked to interpret the meaning of an applicable building code. Expert testimony was submitted by both parties. The architect's expert had served as manager of engineering of the Southern Building Code Congress and had been responsible for building code changes, hearings, plan reviews, and code interpretations. In effect, that expert testified as to what the drafters had in mind when they created the code. The design, he stated, was consistent with the *intent* of the code. However, the court concluded that the most important evidence to interpret the code was the interpretation given by the code official who had authority to implement the code.³²

G. Particular Clauses

Courts will apply particular scrutiny to contract clauses that appear to be one-sided or that could encourage careless conduct. Exculpatory clauses relieve one party from liability for its own negligence.³³ They are not enforced unless evidence of the other party's consent to accept the risk is sufficiently clear. Even if the language is clear, these clauses are not enforced if the conduct in question has been grossly negligent. Indemnification clauses that seek to indemnify the indemnitee against the consequences of its negligence must also convey that intent in the language selected.³⁴

H. Bidding Process—Patent Ambiguity: *Newsom v. United States*

The competitive bidding process has developed special rules. Prospective bidders are given a complex set of construction documents that have been prepared over a long period of time. Bidders are asked to review the materials within the short period of time available to them before submitting a bid. They are also asked to report any errors or inconsistencies they have observed. This laudable

³²*Edward J. Seibert, A.I.A., Architect and Planner, P.A. v. Bayport Beach & Tennis Club Ass'n., Inc.*, 573 So.2d 889 (Fla. Dist. Ct. App. 1990), review denied, 583 So.2d 1034 (Fla. 1991).

³³See Sections 15.03D, 31.05A.

³⁴See Sections 31.05D and E.

attempt to catch errors and invoke the knowledge and skill of the contractor often generates problems. Many errors are detected through submittal review while the work is in progress.

One way of dealing with interpreting construction contracts in this context is to accept the interpretation that a

reasonably prudent bidder would have given.³⁵ However, courts have had to struggle, sometimes painfully, with the question of whether, because the ambiguity was patent and glaring, the contractor should have sought clarification before bidding.³⁶ The following case explores this problem.

NEWSOM v. UNITED STATES

United States Court of Claims, 1982. 676 F.2d 647.
[Ed. note: Footnotes renumbered and some omitted.]

SMITH, Judge.

This case is an appeal by petitioner, George E. Newsom, of a decision of the Veterans Administration Board of Contract Appeals (board). The board found that certain parts of the contract for hospital improvements were patently ambiguous and that, having failed to consult with the contracting officer about the ambiguities, petitioner was barred from recovering for work done beyond that required under petitioner's interpretation of the contract. We affirm the decision of the board.

On August 28, 1978, the Veterans Administration (VA) issued an invitation for bids for building mediprep and janitor rooms in the VA hospital at Knoxville, Iowa. Drawings and specifications for the work to be done were supplied to the prospective bidders.

Paragraphs 4, 5, and 6 of the specifications described, respectively, buildings 81, 82, and 85. Each paragraph had two parts: the first described the first floor of the building and referenced page 7 of the drawings; the second described the second floor of the building and referenced page 8 of the drawings. Conversely, the caption block on page 7 of the drawings indicated that it described work for all three buildings, 81, 82, and 85. However, page 8 of the drawings indicated only building 85. Petitioner at no time inquired about this discrepancy.

As a consequence, petitioner included in his bid the costs of the second floor of building 85 only. He was the low bidder and the contract was awarded to him on October 13, 1978. It was not until March 29, 1979, that the parties realized that there was a discrepancy between what the VA had intended and what petitioner had understood. Petitioner then did the work as intended by the VA at an additional cost of \$14,600, and he appealed the decision of the contracting officer denying relief to the Veterans Administration Board of Contract Appeals. The board held against petitioner on the ground that the error on

page 8 of the drawings was a patent ambiguity which imposed on the contractor a duty to inquire about it. Petitioner now appeals that finding to this court under the Contract Disputes Act.

The doctrine of patent ambiguity is an exception to the general rule of *contra proferentem* which requires that a contract be construed against the party who wrote it. If a patent ambiguity is found in a contract, the contractor has a duty to inquire of the contracting officer the true meaning of the contract before submitting a bid.³⁷ This prevents contractors from taking advantage of the Government; it protects other bidders by ensuring that all bidders bid on the same specifications; and it materially aids the administration of Government contracts by requiring that ambiguities be raised before the contract is bid on, thus avoiding costly litigation after the fact. It is therefore important that we give effect to the patent ambiguity doctrine in appropriate situations.

The existence of a patent ambiguity is a question of contractual interpretation which must be decided *de novo* by the court. This determination cannot be made on the basis of a single general rule, however. Rather, it is a case-by-case judgment based

³⁵*Corbetta Constr. Co. v. United States*, 198 Ct.Cl. 712, 461 F.2d 1330 (1972).

³⁶*Zinger Constr. Co., Inc. v. United States*, 807 F.2d 979 (Fed.Cir. 1986) (design would not produce an operational system; duty to inquire). New Jersey adopted the patent ambiguity rule in *D'Annunzio Bros., Inc. v. New Jersey Transit Corp.*, 245 N.J.Super. 527, 586 A.2d 301 (App. Div.1991). A contractor's failure to seek clarification of a patent ambiguity will not bar its recovery if the government also knew of the ambiguity but did not notify the bidders of it. *Metcalf Constr. Co., Inc. v. United States*, 53 Fed. Cl. 617 (2002).

³⁷*Beacon Constr. Co. v. United States*, 161 Ct.Cl. 1, 6, 314 F.2d 501, 504 (1963); *Blount Bros. Constr. Co. v. United States*, 171 Ct.Cl. 478, 495-96, 346 F.2d 962, 971-72 (1965).

on an objective standard. In coming to our decision, we are bound neither by the legal conclusions of the board, nor by the subjective beliefs of the contractor, subcontractors, or resident engineer as to the obviousness of the ambiguity.

The analytical framework for cases like the instant one was set out authoritatively in *Mountain Home Contractors v. United States*.³⁸ It mandated a two-step analysis. First, the court must ask whether the ambiguity was patent. This is not a simple yes–no proposition but involves placing the contractual language at a point along a spectrum: Is it so glaring as to raise a duty to inquire? Only if the court decides that the ambiguity was not patent does it reach the question whether a plaintiff’s interpretation was reasonable. The existence of a patent ambiguity in itself raises the duty of inquiry, regardless of the reasonableness . . . of the contractor’s interpretation. It is crucial to bear in mind this analytical framework. The court may not consider the reasonableness of the contractor’s interpretation, if at all, until it has determined that a patent ambiguity did not exist.³⁹

Examining the contract itself, we find that a patent ambiguity existed. Two parts of the contract said very different things: the specification required construction on the second floors of buildings 81, 82, and 85, whereas the drawings required construction on the second floor of only building 85. It is impossible from the words of the contract to determine what was really meant. The contractor speculated that it meant that part of the project had been dropped along the way. Looking at the same language, the Government can insist that it was clearly a drafting error. We do not consider which interpretation is correct; at this stage we determine only whether there was an ambiguity. What is significant about the differing interpretations is that neither does away with the contractor’s ambiguity or internal contradiction. There is simply no way to decide what to do on the second floors of buildings 81 and 82 without recognizing that the contract also indicates otherwise.

Mountain Home, discussed above, involved a very similar ambiguity. The specifications ordered inclusion of kitchen fans in certain housing units, but the drawings appeared to indicate that kitchen fans were not to be installed. There is a crucial

difference between that case and this, however. In *Mountain Home* the indication on the drawing was that the fans were to be under an alternate bid. Thus, the drawings indicated that the Government was reserving the option of either including the fans in the main contract or ordering them separately. The drawings did not state that the fans were simply not to be included. The *Mountain Home* contract, therefore, was susceptible of an interpretation which did not leave significant ambiguities or internal contradictions. Here, even petitioner’s interpretation acknowledges that the contract is not internally consistent. Petitioner’s interpretation explains the reason for the inconsistency but does not eliminate it.

We recognize that the instant case does not represent a difference in kind from the *Mountain Home* facts, but this area of the law involves a case-by-case determination of placement along a spectrum. In our opinion, this case is closer to *Beacon Construction*⁴⁰ than to *Mountain Home*. In *Beacon Construction*, the specifications stated only that “weatherstrip shall be provided for all doors,” while the drawings describing the weatherstripping clearly indicated weatherstripping around the windows as well. The conflict between the specifications and the drawings was direct, as in the instant case. And the court was not swayed by the mere fact that the contractor was able to come up with a highly plausible interpretation of the ambiguity. No interpretation could in *Beacon Construction*, or can in the instant case, eliminate the substantial, obvious conflict between the drawings and the specifications.

Finally, we emphasize the negligible time and the ease of effort required to make inquiry of the contracting officer compared with the costs of erroneous interpretation, including protracted litigation. While the court by no means wishes to condone sloppy drafting by the Government, it must recognize the value and importance of a duty of inquiry in achieving fair and expeditious administration of Government contracts.

Accordingly, on consideration of the submissions, and after hearing oral argument, the decision of the Veterans Administration Board of Contract Appeals is
AFFIRMED.

³⁸*Mountain Home Contractors v. United States*, 192 Ct.Cl. 16, 20–21, 425 F.2d 1260, 1263 (1970).

³⁹If the court finds that a patent ambiguity did not exist, the reasonableness of the contractor’s interpretation becomes crucial in deciding whether the normal contra proferentem rule applies.

⁴⁰*Beacon Constr. Co. v. United States*, supra note 37, 161 Ct.Cl. at 4–5, 314 F.2d at 502–03.

Note the difference between the drawings and the specifications in the *Newsom* case. Often contracts seek to deal with this problem by incorporating a precedence-of-documents clause, which gives more weight or precedent to one document than to others. This method of dealing with ambiguity in the construction context is discussed in Section 20.03.

Inasmuch as many of the disputes that have dealt with the duty of the contractor to draw attention to defective design have, such as in the *Newsom* case, come before a federal contracting agency appeal board, it may be useful to look at criteria that have been developed by those boards to determine whether a defect should have been brought to the attention of the owner. Some of these criteria are as follows:

1. Did other bidders discover the error and seek clarification?
2. Did skilled professionals for the agency detect the error?
3. Were the construction documents so complicated that a small detail could have been easily missed?
4. Was the cost of correcting the defect a relatively small part of the contract price?
5. Did the defect occur in one item out of many items involved in the bid?
6. Was there a single prime contractor or many (a “multi-prime” job)?
7. Will the contractor make a profit from a failure to inquire?

Interpretation guides are only guides. Courts look principally at the language, the surrounding facts and circumstances, and the acts of the parties. Nevertheless, interpretation guides are useful in close cases and may provide the court with a rationalization for a result already achieved.

SECTION 20.03 Resolving Conflicts and Inconsistencies

A. Within the Written Agreement

The difficult process of contract interpretation requires a court to put itself in the position of the parties and determine the parties’ intentions at the time of the agreement. This process is complicated by the modern tendency for longer agreements. Often, long agreements are not

carefully examined to avoid conflicts and inconsistencies. This is especially true where a set of standardized general conditions or contract terms is appended to a letter agreement that expresses the basic elements of the contract.

Courts generally interpret the contract as a whole and, wherever possible, seek to reconcile what may appear to be conflicting provisions. It is assumed that every provision was intended to have some effect. Yet this process of reconciliation may not accomplish its objective, and it may be necessary to prefer one provision over another.

Where one clause deals generally with a problem and another deals more specifically with the same problem, the specific takes precedence over the general. The specific clause is likely to better indicate the intention of the parties. For example, suppose a building contract specified that all disputes were subject to arbitration but also stated in a different paragraph that disputes as to aesthetic effect were to be resolved by the design professional whose decision was to be final. It is likely that the parties intended the specific clause dealing with nonreviewability of specific decisions to control the general clause.

If parties have expressed themselves specifically, their failure to change the general clause is likely due to a desire to avoid cluttering up the contract with exceptions and provisos. Also, the parties may not have noticed the discrepancy.

Later clauses take precedence over earlier ones. Although this is rarely used, it is premised on the assumption that parties sharpen their intentions as they proceed, much as an agreement made Tuesday displaces one made the preceding Monday.

Operative clauses take precedence over “whereas” clauses that seek to give the background of the transaction. As to inconsistency between printed, typed, and handwritten provisions, handwritten will be preferred over typed, and typed preferred to printed. These preferences are premised on the assumption that the parties express themselves more accurately when they take the trouble to express themselves by hand. Likewise, specially typed provisions on a printed form are more likely than the printed provisions to indicate the intention of the parties.

Some of these rules may have to be reevaluated in the light of the frequent use of contracts printed by word processors. Such agreements may appear to have been typed particularly for this transaction but may have actually been prepared for a variety of transactions, just like printed contract forms. The test in seeking to reconcile

conflicting language within a written document should be whether some language was specially prepared for this transaction and indicated with greater accuracy the intention of the parties.

These priorities are simply guides to help the court resolve these questions. Guides to the meaning of language *within* a document are similar to the canons of interpretation that were explored in Section 20.02E. Each party can usually point to guides that support its position. What must be done is to focus on Section 20.01 and its emphasis on the intention of the parties. Which meaning is most likely to accomplish those objectives without grossly distorting the language?

UNICON MANAGEMENT CORP. v. UNITED STATES

United States Court of Claims, 1967. 375 F.2d 804.
[Ed. note: Footnotes renumbered and some omitted.]

DAVIS, Judge.

In March 1959 the contractor agreed with the Corps of Engineers to construct, for a fixed price, two phases of the Missile Master Facilities near Pittsburgh. The current claim is that the Government required plaintiff to install in one room a steel-plate flooring which was not called for by the plans and specifications. The contracting officer and the Armed Services Board of Contract Appeals (65-1 BCA para. 4775) refused the demand for an equitable adjustment and this suit was brought. The problem arises because the most pertinent specification, if read alone, could be said to contemplate a wholly concrete rather than a partial steel-plate floor, while the most pertinent drawings, if read alone, direct the steel-plate covering. The contractor resolves the difficulty by relying, mainly, on the contractual clause that “in case of difference between drawings and specifications, the specifications shall govern.” The Board and the defendant invoke another provision that “anything mentioned in the specifications and not shown on the drawings, or shown on the drawings and not mentioned in the specifications, shall be of like effect as if shown or mentioned in both.”⁴¹

⁴¹These sentences are from Article 2 of the General Provisions, which reads as follows:

The Contractor shall keep on the work a copy of the drawings and specifications and shall at all times give the Contracting Officer access thereto. Anything mentioned in the specifications and not shown on the drawings,

B. Between Documents: *Unicon Management Corp. v. United States; Hensel Phelps Construction Co. v. United States*

Construction contracts present particularly difficult interpretation questions because of the number and complexity of contract documents and the frequent incorporation of bulky specifications by reference. Suppose one document calls for work that another does not specifically require. Suppose one document sets up procedures for changes different from those another document sets forth. At the outset, it may be instructive to reproduce a case dealing with this problem.

Since the question is one of contract interpretation, we are free to decide the matter for ourselves.

The room was Equipment Room No. 1 (also designated as Room 117) in one of the buildings being erected by plaintiff. To secure heavy equipment, this space was to have pallets along the floor with parallel cable trenches for bringing electric current to the machines. Steel beams were to be used in and along the floor in connection with these pallets. It is agreed that the top cover of the floor, apart from the portions devoted to the pallets and the trenches, was to be a resilient floor tile. There was also to be a concrete base. The dispute is whether the tile was to be laid directly on this concrete or over a quarter-inch steel plate above the concrete. The specifications, in a section of the Technical Provisions on miscellaneous metalwork, contain a paragraph dealing with the floor of this room and with the

or shown on the drawings and not mentioned in the specifications, shall be of like effect as if shown or mentioned in both. In case of difference between drawings and specifications, the specifications shall govern. In any case of discrepancy either in the figures, in the drawings, or in the specifications, the matter shall be promptly submitted to the Contracting Officer, who shall promptly make a determination in writing. Any adjustment by the Contractor without this determination shall be at his own risk and expense. The Contracting Officer shall furnish from time to time such detail drawings and other information as he may consider necessary, unless otherwise provided.

FIGURE 20.1 Disputed drawings in *Unicon Management Corp. v. United States*.

pallets (TP 17-23).⁴² By itself, this provision can be interpreted as implicitly envisioning an all-concrete floor; there is no reference to steel plate but there are references to “the concrete floor,” “a concrete floor,” “pouring of the floor,” “pouring of the floors,” and steel beams being “embedded” in the concrete floor.

The relevant drawings, by themselves, give a very different impression. The most significant sketch—a cross-section of the

⁴²17-23 Equipment Room No. 1: AAOC Main Building. Floor shall have steel beams embedded in the concrete floor so that they run transversely to the equipment pallet lengths. The flange surfaces shall be flush with the finished cement. Two beam runs shall be used, one at each end of the pallets, as shown on the drawings. These beams will be used to anchor the equipment pallets, to level the equipment pallets and can be used as references for cement finishing tools during pouring of the floor. These beams shall be connected to the building ground system so that they will serve as a grounding means for the equipment pallets. The steel beams shall be on one continuous length, with portions removed to provide clearance for the cable troughs. The cross section area of the beams or jumpers, at the points where metal is removed shall provide at least as much conductivity as the ground cables used to connect the beams to the ground system. The grounding system must be installed prior to the pouring of the floors, as specified in Section 47, ‘Electrical Work.’”

floor of Equipment Room No. 1—shows the trench covered by a removable steel cover plate, with a depression into which the plate’s handle is fitted flush with the floor level; the open-floor portion of the drawing shows the top of two steel beams covered by $\frac{1}{4}$ " steel plate and the resilient floor tile on top of this plate. This is a specific directive to use steel plate immediately beneath the tile. To the same effect, another detail drawing of the trenches and beams in the room shows steel plate on top of an “I” beam and the resilient tile above the steel plate. The other drawings are uninformative or unclear on the point, but they do not contradict the sketches explicitly showing the steel plate. The result is that the drawings as a whole affirmatively support the Government’s understanding as to the nature of the floor of Equipment Room No. 1.

[Ed. note: See Figure 20.1.]

We agree with the Board that these plans need not, and should not, be construed as in conflict with specification TP 17-23 footnote [42], *supra* but, instead, as supplementing the latter. The parties directed in the contract that “anything . . . shown on the drawings and not mentioned in the specifications, shall be of like effect as if shown or mentioned in both” (footnote [41] *supra*). This rule is peculiarly applicable here because

TP 17-23 obviously does not cover the entire subject of floor construction. For instance, it does not mention the important item of resilient floor tile, or the metal plates for the trenches, nor does it even describe fully the construction of the steel beams running transversely to the pallets. When the contract is viewed as a whole, the function of the paragraph is seen as calling attention to the steel beams set in the floor to support the pallets—the references to concrete are in that connection and in that special light—not as drawing together all of the requirements on the makeup of the floor. Certainly, as the Board pointed out, the specification does not provide in terms or by necessary implication that the resilient tile is to rest directly on concrete; nothing is said about the tile or its placing. It is therefore proper to read TP 17-23 as open to complementation by the drawings (or by other specifications) insofar as these cover items or aspects other than the features of the steel beams discussed in the former provision. Plaintiff seems to insist that, if the specification can be read as conflicting with the drawings, that reading must be adopted even though a more harmonious interpretation is also reasonably available. The rule, however, which the courts have always preferred is, where possible, to interpret the provisions of a contract as coordinate not contradictory. . . . Contractors, too, have long been on notice that in reading contract documents they should seek to find concord, rather than discord, if they properly can.

This brings us to another reason why plaintiff's position is weak. There is no evidence as to the view actually taken by the

company's estimators before it submitted its bid (plaintiff did not call them to the stand in the administrative proceeding). But assuming . . . that they read TP 17-23 the way plaintiff now does, if they examined the plans and specifications carefully they could not have helped notice the drawings which specifically embodied the contrary requirement. If they were not aware of this fact they should have been. The contract provided that "in any case of discrepancy either in the figures, in the drawings, or in the specifications, the matter shall be promptly submitted to the Contracting Officer, who shall promptly make a determination in writing. Any adjustment by the Contractor without this determination shall be at his own risk and expense" (footnote [41] *supra*). A warning of this kind calls on the bidder to bring to the Government's attention any serious or patent discrepancy of significance, of which he is or should be cognizant. . . . The discrepancy here—if TP 17-23 was then thought to mean what plaintiff now contends—surely met that standard of importance. Yet there is no suggestion that plaintiff brought it to the contracting officer or sought the required guidance before bidding. If, on the other hand, plaintiff did not study the plans and specifications before bidding, it cannot complain that the Board and this court strive, in accordance with the established canon, to read the relevant contract provisions together rather than at odds.

The plaintiff is not entitled to recover. Its motion for summary judgment is denied and the defendant's is granted. The petition is dismissed.

Other decisions have dealt with conflicts in documents. First, as in the *Unicon* decision, the court attempts to reconcile the apparently conflicting language. When this cannot be done, the court often bases its decision on contract language that seeks to resolve potential conflicts.⁴³

⁴³*U.S. Fidelity & Guar. Co. v. West Rock Dev. Co.*, 50 F. Supp.2d 127 (D.Conn.1999) (HUD provisions over A201 incorporated into the contract); *Graham v. Com.*, 206 Va. 431, 143 S.E.2d 831 (1965) (specifications over general conditions); *Dunlap v. Warmack-Fitts Steel Co.*, 370 F.2d 876 (8th Cir.1967) (specifications over bid proposal). HENSEL PHELPS CONSTRUCTION CO. v. UNITED STATES

United States Court of Appeals, Federal Circuit, 1989. 886 F.2d 1296

ARCHER, Circuit Judge.

[Ed. note: Footnotes renumbered and some omitted.]

Hensel Phelps Construction Co. (Hensel Phelps) appeals the decision of the Armed Services Board of Contract Appeals, ASBCA No. 35757, 88-2 BCA (CCH) ¶20,701, denying its claim for an equitable adjustment in the amount of \$100,983.00 on Contract No. DACA 56-87-C-0002. We reverse and remand.

BACKGROUND

Hensel Phelps' contract with the United States, entered into on October 29, 1986, was for the construction of a jet engine blade repair facility at Tinker Air Force Base, Oklahoma. The initial contract price was \$33,617,000.00.

On December 4, 1986, Hensel Phelps requested a contract interpretation, pointing out that the specifications called for a minimum of 18 inches of non-expansive fill under the concrete floor slabs, whereas a note on the drawings called for 36 inches of non-expansive fill.⁴⁵ The contracting officer was advised that Hensel Phelps and its subcontractor, C. Watts Construction Company (Watts), had used the requirement of the specifications in calculating the bid instead of the conflicting drawing note requirement because the contract provided that the specifications control over the drawings. The pertinent clause, which is commonly referred to as the "order of precedence" clause, provides:

Anything mentioned in the specifications and not shown on the drawings, or shown on the drawings and not mentioned in the specifications, shall be of like effect as if shown or mentioned in both. *In case of difference between drawings and specifications, the specifications shall govern.* In case of discrepancy in the figures, in the drawings, or in the specifications, the matter shall be promptly submitted to the Contracting Officer, who shall promptly make a determination in writing. Any adjustment by the Contractor without such a determination shall be at its own risk and expense.

⁴⁵The difference in the amount of the work is significant. According to the Board, "[t]he 18" requirement would involve 9750 cu. yds of fill and 530 cu. yds of excavation. The 36" requirement, on the other hand, would involve about 5000 cubic yards more of both fill and excavation." 88-2 BCA (CCH) ¶20,701, at 104,600-01.

Contract Clause No. 47, entitled "52.236-21 SPECIFICATIONS AND DRAWINGS FOR CONSTRUCTION (Apr. 1984)" (emphasis added).

The contracting officer directed that 36 inches of non-expansive fill should be placed under the concrete floor slabs as required by the drawings and Hensel Phelps and Watts proceeded as instructed. Thereafter Hensel Phelps timely submitted a \$100,983.00 claim, properly certified, for equitable adjustment in the contract price based on an asserted modification of contract terms. The claim was denied by the contracting officer.

The Board found that Watts, in preparing its subcontract bid to Hensel Phelps,

recognized the clear conflict between the drawings and the specification. There was no way that the conflict could be resolved or harmonized. [Watts] relied on the "Order of Precedence" clause and prepared [its] bid based upon the 18 inches set out in the specification, rather than the 36 inches called for by the contract drawings.

88-2 BCA (CCH) ¶20,701, at 104,600. The board also found that Hensel Phelps "relied upon Watts' bid in preparing its own bid which it submitted to the government on this contract."⁴⁶

The Board concluded however, that the decision of the United States Court of Claims in *Franchi Constr. Co. v. United States*, 609 F.2d 984 (Ct.Cl.1979), and the decision in *Shirley Contracting Corp.*, ASBCA No. 29028, 87-1 BCA (CCH) ¶19,389, applying the *Franchi* case, were controlling and precluded recovery by Hensel Phelps.

OPINION

The Court of Claims has held that when the requirements of the specifications of a government contract conflict with the drawings and the contract contains an order of precedence clause, the specifications shall control as the order of precedence clause provides. *Franchi Constr. Co. v. United States*, 609 F.2d at 989-90; *William F. Klingensmith, Inc. v. United States*, 505 F.2d 1257.

⁴⁶Hensel Phelps apparently learned of the discrepancy when Watts was advised by a government inspector during construction that 36 inches of fill would be required.

The government argues, however, that *Franchi* limits the applicability of the order of precedence clause to situations in which the contractor was not aware of the discrepancy prior to bidding and notes that Hensel Phelps' subcontractor knew of the discrepancy between the specification and the drawings before it submitted its bid. The Board accepted the government's position, stating that

[i]t was clearly unreasonable for the appellant to presume that the Government intended to set out such blatantly conflicting requirements and leave it to the operation of the "boiler plate" clause to resolve and establish the Government's specific needs. In these circumstances, it was unreasonable for appellant to bid as it did, knowing as it must have, that a serious mistake had been made.

88-2 BCA (CCH) ¶20,701 at 104,602. Thus, the Board appeared to interpret *Franchi* as foreclosing reliance on an order of precedence clause whenever the contractor knows, or should know, of a discrepancy prior to bidding. See also *Shirley Contracting Corp.*, ASBCA No. 29028, 87-1 BCA (CCH) ¶19,389 (holding contractor should have sought clarification despite order of precedence clause when three of appellant's representatives knew of the difference between the specification and the drawing before bid). We disagree with the Board's holding and do not find that its interpretation is consistent with *Franchi*.

In *Franchi*, the trial judge found that there was a patent discrepancy between the specifications and drawings but held that the order of precedence clause could be relied on to resolve the discrepancy. In his opinion the trial judge stated:

The Government authored the order of precedence clause as a mechanism to automatically remove conflict between specifications and drawings by assigning preeminence to the former. . . .

The plaintiff is entitled to take the Government sponsored order of precedence clause at face value. Once its right to do so in the present situation is recognized, no conflict sufficient to occasion inquiry remains. . . .

Franchi Constr. Co. v. United States, 609 F.2d at 989-90 (citation omitted). In appealing the trial judge's ruling, the defendant argued that the clause should not apply when a discrepancy is patent. The Court of Claims said:

We cannot in the circumstances say, in face of the precedence clause, our characterization of a discrepancy as patent automatically triggers an obligation to report. The clause itself seems

designed to excuse such reporting, instances where equity would intervene aside.

Id. at 986. As the court in *Franchi* also noted, a critical distinction is made in the order of precedence clause itself. Precedence applies only in the case of "discrepancies between specifications and drawings, while one in figures, drawings, or specifications, each by themselves, must be promptly reported. . . ." *Id.*

The *Franchi* case, therefore, stands for the proposition that clarification must be sought where an internal discrepancy in the "figures, drawings, or specifications" is found, or should have been found, prior to bid, but that a discrepancy *between* the specifications and drawings, a matter covered by the order of precedence clause, will generally be resolved in the manner prescribed by that clause. We believe that this is the proper application of the order of precedence clause. Contractors should, as a general rule, be entitled to rely on the order of precedence clause and not be required to seek clarification of a putative inconsistency between the specifications and drawings. The order of precedence clause itself resolves that inconsistency. It is, after all, the government that is the author of this contract clause, as well as the specifications and drawings.

Despite this general rule, however, we recognize, as the *Franchi* court foresaw, that a strict application of the order of precedence clause in all situations where it literally applies could, under some circumstance, give rise to overreaching. In *Franchi*, the court in *dictum* noted:

We would assume arguendo that a bidder, who noticed or should have noticed a serious mistake in the invitation or other of the contract documents, must divulge what he has or should have noticed to the government, and *will not in equity be allowed to profit by not doing so, as it would be an instance of overreaching*. That is not this case, whether the discrepancy be patent or latent. *Defendant does not accuse plaintiff of overreaching nor could it do so.*

Id. at 985-86 (emphasis added).

In this case, there is no evidence of overreaching by Hensel Phelps or Watts. The findings of the Board demonstrate that Watts' price included only an amount sufficient to perform the specification requirement and that this price was incorporated into Hensel Phelps' bid price. Reliance was properly placed on the order of precedence clause to resolve a discrepancy between the specifications and the drawings and this resolution was reflected in the bid. When the government insisted on 36 inches of fill, rather than the 18 inches called for in the specifications, the contractor was required to perform more work than the

contract required and more than its bid price contemplated. Consequently, on the record here, neither Hensel Phelps nor Watts can be said to have profited or otherwise benefited by reliance on the order of precedence clause.⁴⁷

In sum, we hold that an order of precedence clause may be relied on to resolve a discrepancy between the specifications and drawings even though the discrepancy is known to the contractor prior to bid or is patent. If the contractor is required to perform work in addition to that called for by application of the order of

precedence clause, he may seek an *equitable* adjustment in the price of the contract for such work and, in that event, *equitable principles* would apply to prevent overreaching or profiteering.

The decision of the Board is reversed and the case remanded for a determination of an equitable adjustment.

COSTS

Costs to Hensel Phelps.

REVERSED AND REMANDED.

Another technique for dealing with potential conflict appears in AIA Document A201-2007, Section 1.2.1, which states,

The intent of the Contract Documents is to include all items necessary for the proper execution and completion of the Work by the Contractor. The Contract Documents are complementary, and what is required by one shall be as binding as if required by all; performance by the Contractor shall be required only to the extent consistent with the Contract Documents and reasonably inferable from them as being necessary to produce the indicated results.

This paragraph warns the contractor to assume that work called for under any document will be required even if apparently omitted from other documents. The paragraph requires work not specifically covered if that work is necessary to produce the intended results. Undoubtedly, such a provision gives considerable power to the architect, inasmuch as she may be called on to determine whether particular work is reasonably inferred though not specifically required. A cautious contractor must take this power to determine whether work is inferred into account when submitting a bid. Even though there are limits to the architect's power, the contractor may find itself at the mercy of an architect who wishes to cover up for poor document drafting. Understandably, a provision is needed to take

into account that it is not possible to specifically include every aspect of work that should be done. However, if the architect does not exercise this power fairly, such a provision can generate performance difficulties.

The AIA has chosen not to include a precedence-of-documents clause such as discussed in the *Unicon* case. It believes, as has been seen in the *Hensel Phelps* case, that such a clause can be a disincentive for contractors to report errors, omissions, or inconsistencies in the design documents. Certainly, if such a clause is read to eliminate the need to make inquiry at the bidding or negotiations stage, the AIA's position can be justified. The AIA also believes that including such a clause can lead to "wooden" interpretation decisions that ignore the documents as a whole. As seen in the *Unicon* case, the reconciliation process is not always easy. Further, the AIA believes that no standardized precedence system can be the basis for a provision in a nationally used contract form. The AIA suggests that any parties that wish to include such a provision can simply add it.

Other arguments against a precedence-of-documents clause can be made. The common law has developed a method of reconciling apparently inconsistent clauses within a writing and among writings, which may do as good a job as a precedence-of-documents clause, particularly where the language can be easily supplemented by evidence of industry custom and a course of dealing between the parties. As can be seen in the Court of Claims decisions reproduced in this section, not only is it often difficult to determine whether a precedence clause diminishes or eliminates the obligation to inquire, but it also requires mental gymnastics to distinguish differences within a document from those differences that appear between documents. A precedence-of-documents clause does not always deal well with problems where the

⁴⁷Obviously equitable principles would not permit a contractor to submit a bid priced to include the additional work required by the drawings and then seek additional compensation based on an order of precedence clause argument when the government required the work called for in the drawings, rather than in the specifications, to be performed. This would be overreaching in that the contractor would, in effect, be seeking payment twice for the same work, i.e., the amount included in the bid price for such work and the extra compensation claimed for said work under the order of precedence clause argument.

evidence of a lower-ranked document is strong and the evidence of a higher-ranked document is weak.

Yet the frequent inclusion of precedence-of-documents clauses must indicate that such clauses have value. In insoluble interpretations, they may provide some method of arriving at a solution. This is likely the principal reason they are used despite their weaknesses.

The Engineers Joint Contract Document Committee (EJCDC) C-700, Paragraph 3.06 (2007) deals with electronic data. Expressing concern over electronic data, Paragraph 3.06A states that only hard copy can be relied on. If there is a discrepancy between electronic files and hard copy, the hard copies govern. Paragraph 3.06B expresses concern over deterioration or modification of electronic files, whether inadvertent or otherwise.

SECTION 20.04 Reformation of Contracts

Sometimes parties to a contract reduce their agreement to a writing, and for various reasons, the writing does not correctly express the intention of the parties. The remedy of reformation granted by equity judges rewrites the contract to make the writing conform to the actual agreement of the parties. Because there were no juries in equity cases, courts felt freer to go into the difficult questions of intention and mistake.

Most cases have involved an improper description of land in a deed. These descriptions were complicated and often taken from old deeds and tax bills. It was not unusual for the person copying the old description to make a mistake. If it could be shown by reliable evidence that a mistake had been made, the court would reform the contract. This would be a judicial declaration that the contract covered the particular land the parties actually intended to buy and sell rather than the land covered in the description.

In addition to the cases of mutual mistake in description, other types of mistake would justify reformation. Usually these mistakes would involve the process by which the actual agreement was reduced to writing.

The reformation doctrine has been given an interesting application by the U.S. Court of Claims in federal procurement contracting.⁴⁸ In *National Presto Industries,*

Inc. v. United States,⁴⁹ the contractor under a fixed-price contract sought more money when its costs were substantially increased because a method that it had intended to use was not feasible for mass production. The court found mutual mistake in that the contractor and the government each assumed that the particular process in which the United States had interest could be used. Usually the remedy for mutually mistaken fundamental assumptions is to relieve the performing party—in this case the contractor—from the obligation to perform. But the Court of Claims extended reformation beyond its normal correction of mistakes function to change the fixed-price contract to one of a joint enterprise in which each joint enterpriser would share the unforeseen expenses.

Such a doctrine can impair the certainty and risk assumption features of procurement. As a result, two years later, the Court of Claims seemed to have had second thoughts about its decision in *National Presto* and sought to make clear that the reformation remedy awarded in *National Presto* could be justified only in a joint enterprise experimental situation in which neither party has assumed the particular risk, a great concern on the part of the government in the process and not merely the end product, and a distinct benefit to the government from the contractor's period of trial and error.⁵⁰ Nevertheless, in exceptional circumstances reformation may be the vehicle for redistributing risks, at least in federal procurement.⁵¹

Reformation can correct writings that do not reflect the actual agreement of the parties,⁵² but the requirements for invoking this equitable remedy are formidable. Parties obviously cannot rely on the possibility that the law will correct their mistakes. They must make every effort to make the writing conform to their actual agreement.

⁴⁸This court was replaced by the Claims Court, a trial court, and the U.S. Circuit Court for the Federal Circuit, an appellate court. The former is currently called the U.S. Court of Federal Claims.

⁴⁹167 Ct.Cl. 749, 338 F.2d 99 (1964), cert. denied, 380 U.S. 962 (1965). The value of the *National Presto* case as a precedent is considerably weakened because it has been distinguished 19 times between 1964 and 2001. As an example, see *Northrup Grumman Corp. v. United States*, 47 Fed.Cl. 20 (2000).

⁵⁰*Natus Corp. v. United States*, 178 Ct.Cl. 1, 371 F.2d 450 (1967).
⁵¹*Dynallectron Corp. v. United States*, 207 Ct.Cl. 349, 518 F.2d 594 (1975).

⁵²*Timber Investors, Inc. v. United States*, 218 Ct.Cl. 408, 587 F.2d 472 (1978) (mistaken estimates in quantities). See Section 17.02D.

Changes: Complex Construction Centerpiece

SECTION 21.01 Definitions and Functions of a Changes Clause: *Watson Lumber Co. v. Guennewig*

After award of a construction project, the owner may find it necessary to order changes in the work. The contract documents are at best an imperfect expression of what the design professional and owner intend the contractor to execute. Circumstances develop during the construction process that may make it necessary or advisable to revise the drawings and specifications.

Design may prove inadequate. Methods specified become undesirable. Materials designated become scarce or excessively costly. From the owner's planning standpoint, program or budget may change. Natural events may necessitate changes. For any of many reasons, it often becomes necessary to direct changes after the contract has been awarded to the contractor.

"Changes" problems can arise in a number of different contexts. Most commonly, they involve claims by contractors that they have gone beyond the contract requirements and are entitled to additional compensation, sometimes called *disputed changes*. These are primarily matters of contract interpretation and of the implementation of any system under which the design professional or any Initial Decision Maker (IDM) resolves disputed questions. Although to some degree this chapter examines certain aspects of the changes process that bear on such disputes, the principal focus of this chapter is on the power of the owner to order a change, the process by which the change is ordered, and the effect on the contract price and time of the change.

Less commonly, disputes may arise when a contractor defends a claim brought against it by the owner for non-compliance with the contract requirements by asserting

that the original contract requirements were changed and that the contractor has complied with the contractual obligations as changed.

Preliminarily, differentiations should be made between *changes*, *extras*, and *deletions*, although the AIA encompasses all of them in AIA Document A201-2007, Article 7, dealing with changes. However, this chapter refers to "extras," which, for example, is the way the court classified the problem involved in the *Watson* case reproduced in this section. This *type* of change highlights the difficulties that a long postcompletion list of extras can present to the owner or those furnishing funds for the project. Extras usually involve additional or more expensive items than those in the original contract documents. Conversely, a deletion, depending on how it is priced, can adversely affect planning. Although technically both are changes, additions or deletions that affect contract price or time are sensitive areas.

It can be helpful to compare *changes* with *additional work*. This can be demonstrated in *Eldeco Inc. v. Charleston County School District*.¹ The contract was for construction of a high school. The original design included an unfinished area to be used for vocational training. In the course of performance the school district decided to add some classrooms and a culinary arts uplift addition to the unfinished vocational training space. The school district requested a price quote from its prime contractor. The prime's bid included electrical work by the electrical subcontractor. The school district thought the price given by the subcontractor was too high, and another subcontractor was used for the new work.

One basis for the subcontractor's claim against its prime was that it should have been awarded the new work. As

¹372 S.C. 470, 642 S.E.2d 726 (2007).

shall be seen in Section 21.04E, one issue that can arise is the right of the existing contractor (or subcontractor) to be given changed work. The court concluded that the proposed work was additional work, not part of the changes process, as it was ordered and agreed upon in a supplemental agreement. Unlike change order work, the subcontractor had no contractual right to perform additional work.

The *Eldeco* case will be discussed in Sections 21.04B and 21.04E. But the case does illustrate that even if the existing contractor has some claim to changed work, if the work is additional, the changes process does not apply. It is simply a new contract and is made the way any other contract is made.

Changes must also be contrasted with *modifications* and *waivers*. Modifications are two-party agreements in which owner and contractor mutually agree to change portions of the work. They are discussed in various contexts in Sections 5.11C, 19.01H, and 25.01D. (One way to avoid formal requirements in a changes clause is to conclude that the work in question was a modification agreed on by the parties and not a change. Another is to classify the work as “repairs” rather than additional work requiring a change order. See Sections 21.03A and 21.04H.)

A *change* is the term used in construction contracts that allows the owner to unilaterally direct that changes be made *without* obtaining the contractor’s consent to perform the work.

A *waiver* is generally based on the owner’s acts that either manifest an intention to dispense with some of the contractual requirements or lead the contractor to reasonably believe that the owner is giving up its right to have required work performed. In such a case, the contractor can recover the full contract price despite not complying with the contract documents (discussed in Section 22.06E).

Reference has been made to the changes process and to the changes clause. In 1987, the AIA published a new edition of A201 that not only moved changes from Article 12 to Article 7 but also introduced new terminology. What had been called a *change order*—that is, the exercise of a contractual power to unilaterally direct changes in the work—was now designated under Paragraph 7.3 as a construction change directive (CCD). In 1987, under Paragraph 7.2, a *change order* (CO) became the wrap-up paperwork after there has been agreement as to price and time adjustment. This terminology change carried over to A201-2007, Sections 7.2 and 7.3. What is now a *change order* looks very much like a contract modification.

This change in terminology was designed to expedite the changes process, but it remains to be seen whether other standard contracts will adopt the change. This chapter uses traditional terminology, such as the changes process and the changes clause. However, when the AIA documents are discussed, AIA terminology is used.

As shall be seen in Section 21.04, the changes clause controls the scope of the unilateral power to order changes, the mechanism for doing so, and the pricing of changed work. Section 21.04I will show that the changes clause usually provides a complex process to price the changes. Unit prices, if any, are preferred. If not, the parties, the owner and the contractor, seek to reach an agreement as to any time or price adjustments that should be made because of the change. If that is not achieved, price and time adjustments are made by a third party. As shall be noted in Section 21.04I, if AIA documents are used, under A201-2007, Section 7.3.7, any price and time adjustments are made by the architect.²

The absence of a changes clause with its pricing formulas can make pricing drastic changes difficult. This is demonstrated in *Chong v. Reebea Construction Company*.³ The owner-lawyer and the contractor were both of Chinese ancestry. The original work was remodeling, and the contract price was \$96,208.00. The contractor sought a written contract, but the owner-lawyer said they did not need one and they should base their agreement on honor and trust. There was no written contract.

The owner made many changes and upgrades. Though warned that these changes would increase the contract price, the owner said money was no object and he would pay what it cost. The owner made payments of \$108,000. The contractor billed the owner for an additional \$128,982.

The jury found for the contractor based upon a breach of the contract. But the Georgia intermediate appellate court held that the contractor could not recover for breach of contract as there had been no agreement on price. But it did allow the contractor to recover in *quantum meruit*, based on the reasonable value of the work.

However the Georgia Supreme Court disagreed. It concluded that breach of contract has been established as the contract was not so uncertain as to be unenforceable.⁴ Uncertainty could be cured by subsequent words or

²A dissatisfied party can assert a claim under A201-2007, Section 15.2. Disputed claims are resolved initially by the Interim Decision Maker (IDM) under Section 15.2.1. For more discussion see Section 29.01.

³284 Ga.App. 830, 645 S.E.2d. 47 (2007), reconsideration denied Apr. 10, 2007.

⁴283 Ga.222, 657 S.E.2d 826 (2008).

actions of the parties. When Chong requested upgrades, the contractor warned him that they would increase project cost. Chong stated that money was no object and he should be billed for the additional work.

The case teaches that the absence of a changes clause can create great difficulty when, as is common, the work is changed. (Though not mentioned by the supreme court, honor and trust can plunge into bitter acrimony, not an uncommon event in contracts for home construction.)

The beginning of this Section noted why changes are common in construction projects. Understanding the changes process requires that the process be looked at from the perspective of the principal parties to the construction contract.

Although the contractor recognizes that some changes are inevitable in construction work, it fears it will not receive adequate compensation for changed work or for unchanged work that is affected by the change. It also worries that it will not receive a proper time extension nor adequate compensation for delay or disruption caused by having to do work out of order. It is also concerned that poor administrative practices relating to changes will impede its cash flow and unduly burden its financial planning.

Contractors also express concern that unexpected changes may place a drain on their resources, divert capital they would like to use on other projects, and require more technical skills than they possess.

Contractors also complain about the unilateral nature of the changes clause. They must perform before they know how much they are going to receive in price and time adjustments. Although changes clauses usually provide a pricing mechanism through initial decisions by the

design professional, the contractor may fear that the design professional will not grant fair compensation and time adjustment, especially when the change will reflect on the professional competence of the design professional.

To the owner, the changes process looks quite different. As mentioned earlier, the changes process is needed to make those design changes required by subsequent experience and events. But the owner also fears that the changes process can expose it to large cost overruns that may seriously disrupt its financial planning and capacity. In that sense, the changes process is an important element of cost control. Owners and, perhaps more important, lenders fear a “loose” changes mechanism. They fear that bidders of questionable honesty and competence will bid low on a project with the hope that clever and skillful postaward scrutiny of the drawings and specifications will be rewarded by assertions that requested work is not required under the contract. A loose changes mechanism will generate claims for additional compensation. A changes clause, which gives either too much negotiating power to the contractor or too much discretion to the design professional, any IDM, or arbitrator, will convert a fixed-price contract into an open-ended cost type tied to a generous allowance for overhead and profit. This is why owners and lenders want tight, complete specifications, a mechanical pricing provision, such as unit pricing, and limits on overhead and profit. Their horror is the prospect that the end of the project will witness a long list of claimed extras that, if paid, will substantially increase the ultimate construction contract payout. The following case explores the changes mechanism mainly from the latter perspective.

WATSON LUMBER COMPANY v. GUENNEWIG

Appellate Court of Illinois, 1967. 79 Ill.App.2d 377, 226 N.E.2d 270.

EBERSPACHER, Justice.

[Ed. note: Footnotes renumbered and some omitted.]

The corporate plaintiff, Watson Lumber Company, the building contractor, obtained a judgment for \$22,500.00 in a suit to recover the unpaid balance due under the terms of a written building contract, and additional compensation for extras, against the defendants William and Mary Guennewig. Plaintiff is engaged in the retail lumber business, and is managed by its president and

principal stockholder, Leeds Watson. It has been building several houses each year in the course of its lumber business.

* * *

[Ed. note: The project was a four-bedroom, two-bath house with air-conditioning for a contract price of \$28,206. The total amount claimed as extras and awarded by the trial court was \$3,840.09.]

The contractor claimed a right to extra compensation with respect to no less than 48 different and varied items of labor and/or materials. These items range all the way from \$1.06 for extra plumbing pieces to \$429.00 for an air-conditioner larger than plaintiff's evidence showed to be necessary, and \$630.00 for extra brick work. The evidence, in support of each of these items and circumstances surrounding each being added, is pertinent to the items individually, and the evidence supporting recovery for one, does not necessarily support recovery for another.

* * *

Most of the extras claimed by the contractor were not stipulated in writing as required by the contract. The contractor claims that the requirement was waived. Prior to considering whether the parties, by agreement or conduct dispensed with the requirement that extras must be agreed to in writing, it should first be determined whether the extras claimed are genuine "extras." We believe this is an important area of dispute between these parties. Once it is determined that the work is an "extra" and its performance is justified, the cases frequently state that a presumption arises that it is to be paid for. . . .

No such presumption arises, however, where the contractor proceeds voluntarily; nor does such a presumption arise in cases like this one, where the contract makes requirements which any claim for extras must meet.

* * *

The law assigns to the contractor, seeking to recover for "extras," the burden of proving the essential elements. . . . That is, he must establish by the evidence that (a) the work was outside the scope of his contract promises; (b) the extra items were ordered by the owner, . . . (c) the owner agreed to pay extra, either by his words or conduct, . . . (d) the extras were not furnished by the contractor as his voluntary act, and (e) the extra items were not rendered necessary by any fault of the contractor. . . .

The proof that the items are extra, that the defendant ordered it as such, agreed to pay for it, and waived the necessity of a written stipulation, must be by clear and convincing evidence. The burden of establishing these matters is properly the plaintiff's. Evidence of general discussion cannot be said to supply all of these elements.

The evidence is clear that many of the items claimed as extras were not claimed as extras in advance of their being supplied. Indeed, there is little to refute the evidence that many of the extras were not the subject of any claim until after the contractor requested the balance of the contract price, and claimed the house was complete. This makes the evidence even less susceptible to the view that the owner knew ahead of time that he had ordered these

as extra items and less likely that any general conversation resulted in the contractor rightly believing extras had been ordered.

In a building and construction situation, both the owner and the contractor have interests that must be kept in mind and protected. The contractor should not be required to furnish items that were clearly beyond and outside of what the parties originally agreed that he would furnish. The owner has a right to full and good faith performance of the contractor's promise, but has no right to expand the nature and extent of the contractor's obligation. On the other hand, the owner has a right to know the nature and extent of his promise, and a right to know the extent of his liabilities before they are incurred. Thus, he has a right to be protected against the contractor voluntarily going ahead with extra work at his expense. He also has a right to control his own liabilities. Therefore, the law required his consent be evidenced before he can be charged for an extra . . . and here the contract provided his consent be evidenced in writing.

The amount of the judgment forces us to conclude that the plaintiff contractor was awarded most of the extra compensation he claims. We have examined the record concerning the evidence in support of each of these many items and are unable to find support for any "extras" approaching the \$3,840.09 which plaintiff claims to have been awarded. In many instances the character of the item as an "extra" is assumed rather than established.⁵ In order to recover for items as "extras," they must be shown to be items not required to be furnished under plaintiff's original promise as stated in the contract, including the items that the plans and specifications reasonably implied even though not mentioned. A promise to do or furnish that which the promisor is already bound to do or furnish, is not consideration for even an implied promise to pay additional for such performance or the furnishing of materials. The character of the item is one of the basic circumstances under which the owner's conduct and the contractor's conduct must be judged in determining whether or not that conduct amounts to an order for the extra.

The award obviously includes items which Watson plainly admits "there was no specific conversation." In other instances,

⁵We cite as some examples: An extra charge was made for kitchen and bathroom ceilings, concerning which Watson testified that he was going to give these as gifts "if she had paid her bill." According to the testimony, the ceilings were lowered to cover the duct work. We consider it unlikely that the parties intended to build a house without duct work or with duct work exposed. Likewise an "extra" charge was made for grading, although the contract clearly specifies that grading is the contractor's duty. An "extra" charge is sought for enclosing the basement stairs, although the plans show the basement stairs enclosed. An extra charge is sought for painting, apparently on the basis that more coats were necessary than were provided in the contract.

the only evidence to supply, even by inference, the essential element that the item was furnished pursuant to the owner's request and agreement to pay is Mr. Watson's statement that Mrs. Guennewig "wanted that." No specific conversation is testified to, or fixed in time or place. Thus it cannot be said from such testimony whether she expressed this desire before or after the particular item was furnished. If she said so afterward, the item wasn't furnished on her orders. Nor can such an expression of desire imply an agreement to pay extra. The fact that Mrs. Guennewig may have "wanted" an item and said so to the contractor falls far short of proving that the contractor has a right to extra compensation.

* * *

Many items seem to be included as "extras" merely because plaintiff had not figured them in the original cost figures.

It is clear that the contractor does not have the right to extra compensation for every deviation from the original specification on items that may cost more than originally estimated. The written contract fixes the scope of his undertaking. It fixed the price he is to be paid for carrying it out. The hazards of the undertaking are ordinarily his. . . .

* * *

If the construction of an entire work is called for at a fixed compensation, the hazards of the undertaking are assumed by the builder, and he cannot recover for increased cost, as extra work, on discovering that he has made a mistake on his estimate of the cost, or that the work is more difficult and expensive than he anticipated. 17A C.J.S. Contracts ¶1371(6), p. 413.

Some so called "extras" were furnished, and thereafter the owner's agreement was sought.⁶ Such an agreement has been held to be too late. . . .

The judge, by his remarks at the time of awarding judgment, shows that the definition of extras applied in this case was, indeed, broad. He said,

substantial deviation from the drawings or specifications were made—some deviations in writing signed by the parties, some in writing delivered but not signed, but nevertheless utilized and accepted, some delivered and not signed, utilized and not accepted, some made orally and accepted, some

made orally but not accepted, and some in the trade practice accepted or not accepted.

While the court does not state that he grants recovery for all extras claimed, he does not tell us which ones were and were not allowed. The amount of the judgment requires us to assume that most were part of the recovery. It can be said with certainty that the extras allowed exceeded those for which there is evidence in the record to establish the requirements pointed out.

Mere acceptance of the work by the owner as referred to by the court does not create liability for an extra. . . . In 13 Am.Jur.2d 60, "Building & Cont." § 56, it is stated that "The position taken by most courts considering the question is that the mere occupancy and use do not constitute an acceptance of the work as complying with the contract or amount to a waiver of defects therein." Conversation and conduct showing agreement for extra work or acquiescence in its performance after it has been furnished will not create liability. . . . More than mere acceptance is required even in cases where there is no doubt that the item is an "extra". . . .

The contractor must make his position clear at the time the owner has to decide whether or not he shall incur extra liability. Fairness requires that the owner should have the chance to make such a decision. He was not given that chance in this case in connection with all of these extras. Liability for extras, like all contract liability, is essentially a matter of consent; of promise based on consideration. . . .

The Illinois cases allow recovery for extra compensation only when the contractor has made his claim for an extra, clear and certain, before furnishing the item, not after. They are in accord with the comments to be found in 31 Ill.Law Rev. 791 (1937). There the author, after reviewing the cases, makes the following analysis:

The real issue in these cases is whether or not the contractor has, at the time the question of extra work arises, made his position clear to the owner or his agents and that would seem to be the true test in situations where a written order clause is sought to be disregarded. If he does expressly contend that work demanded is extra, the owner certainly cannot be said to be taken unawares, and if orders are given to go ahead it is with full knowledge of the possible consequences.

The contractor claims that the requirement of written stipulation covering extras was waived by the owner's conduct. The defendants quite agree that such a waiver is possible and common but claim this evidence fails to support a waiver of the requirement. There are many cases in which the owner's conduct has waived such a requirement. . . . In all the cases finding that

⁶The drain tile around the foundation of the house, according to the evidence, was already in place when the owner learned that it was more expensive material. Only then did the contractor secure the owner's consent to pay for one-half the cost of the more expensive material.

such a provision had been waived thus allowing a contractor to collect for extras, the nature and character of the item clearly showed it to be extra. Also, in most cases the owner's verbal consent of request for the item was clear beyond question and was proven to have been made at the time the question first arose while the work was still to be finished. The defendants' refusal to give a written order has in itself been held to negative the idea of a waiver of the contract requirements for a written order. . . .

Undoubtedly, the court is correct in emphasizing the owner's right to know whether particular work will be asserted as extra. However, in a small construction project the Illinois court's requirements would place an inordinate administrative burden on the contractor. It would not only have to make clear its position that particular work was extra but also obtain the written change order executed by the owner. If the contractor did not obtain a written change order, it might be able to assert the doctrine of waiver if it could persuade the court that the work was extra and that the owner was made aware of this and allowed the work to proceed.

Rather than comply with the excessively formal requirements set forth by the court in the *Watson* case, a contractor in a small project, such as that involved in *Watson*, might better add a contingency in the contract price to cover small extras that are very likely to be requested.

The *Watson* case shows that courts often ignore the cost of complying with rules of law. Undoubtedly, larger projects will bear the administrative costs of doing things correctly and "according to the book." But smaller jobs may not permit "by the book" contract administration. The changes process involves the following:

1. the exercise of a power to order a change or a direction the contractor contends is a change in the work
2. methods for the contract or the parties to price the change and its effect on time requirements
3. a residuary provision that controls the price in the event the parties do not agree

SECTION 21.02 Shifts in Bargaining Power

To appreciate the centrality of the changes process to construction, the shifts in bargaining power because of changes must be appreciated. Some of them have been noted in the preceding section. But it is important that these factors be

We think the waiver of such a provision must be proved by clear and convincing evidence and the task of so proving rests on the party relying on the waiver. . . .

[Ed. note: The court ordered a new trial, stating that the contractor could recover only for those extras he could prove were ordered as such by the owner in the proper form, unless he could show that the owner waived the requirements of a writing by clear and convincing evidence.]

underlined. When a dispute develops, the resolution of the dispute, whether by design professional, interim decision maker (IDM), arbitrator, or court, may be influenced in some way by the bargaining power of the parties in structuring the changes process or at the time the dispute develops. In addition, the bargaining power is important at the time the owner must decide whether to issue a change order.

When preparing to engage a contractor, the owner, as a rule, has superior bargaining power. The hotly competitive construction industry and the frequent use of competitive bidding usually allow the owner to control many aspects of the construction contract terms.

A few contractors will deliberately bid low and drive out more prudent and experienced contractors with the hope that they will be able to demand and receive additional compensation by pointing to design ambiguities and amassing large claims toward the end of the project.

The contractor who is performing moves into a much stronger bargaining position. This is clearly so if the owner *must*, for either practical or legal reasons, order any additional work from the contractor. It would be in an even stronger bargaining position if it could refuse to execute the change unless there were a mutually satisfactory agreement on the effect of the change on price or time. Yet any bargaining advantages to the contractor by being in the position to refuse to do the work until there is an agreement are usually tempered by contract provisions that require the contractor to do the work even if there is no agreement on the price or time. (To counter this, a contractor can assert that the direction is a cardinal change, discussed in Section 21.03A.) This can be made even worse by the dominance some owners have over the changes process through their control over the purse strings. This power, exercised either directly or through the design professional, to withhold payment until the contractor agrees on price and time can exert intense pressure on the contractor to accept whatever the owner or design professional is willing to pay.

The changes mechanism can operate adversely to the contractor if the owner makes many small changes but is niggardly in its proposals for adjusting the price. (This can backfire, however, generating claims by the contractor, particularly in a losing contract, that the cumulative effect of any changes has created a cardinal change.)

To sum up, the changes mechanism on the whole favors the owner except if it is dealing with a clever, claims-conscious contractor who uses the changes mechanism to extract large amounts of money at the end of the job. Judicial resolution of disputes that involve changes may take into account the owner's strong position, particularly if the owner seems to have abused its power.

SECTION 21.03 Types of Changes

A number of classifications, in addition to those noted in Section 21.01, can be made that can help one understand the changes process.

A. Cardinal Change

Section 21.04B discusses the limits on the owner's power to order changes. Here it is important to look at the cardinal change, a concept developed in federal procurement law that relates to the power to order a change. The cardinal change concept originated not because of potential abuses created by a changes clause but because of jurisdictional aspects of federal procurement law.⁷ Before 1978, a dispute between a contractor and a federal procurement agency would have to first go before an agency board of contract appeals if it arose under the contract. To bypass the board and bring the dispute before the U.S. Court of Claims (now the U.S. Court of Federal Claims), the contractor had to show a breach of the contract. To accomplish this, the contractor would seek to show a course of conduct—usually a large number of changes, drastic changes, or other wrongful agency conduct—that it could establish as a breach of contract.

⁷The authoritative text on changes in federal procurement is R. NASH & S. FELDMAN, *GOVERNMENT CONTRACT CHANGES* (3d ed. 2007). It deals with the topics discussed in Sections 21.03A and B. See also Sweet, *The Amelco Case: California Bars Abandonment Claims in Public Contracts*, 32 Pub. Cont. L.J. 285, 288–89 (2003) (discussion of federal procurement).

Despite legislation enacted in 1978 that allows the contractor to choose which route to take,⁸ the concept still has utility in both federal procurement and private disputes.

Clearly, any changes clause must be interpreted. Not any change can be ordered. A direction that goes beyond the scope of the work, if that is the standard, need not be obeyed. Such an order shall be called a “one-shot” scope change, to distinguish it from the more common “nibbling” or “aggregate of changes,” currently the most common claim.

Suppose the contractor complies. Now there has been an agreement. But does it fall within the jurisdiction of the changes clause with its procedural and pricing mechanisms? The facts may indicate that the contractor, knowing it could not be compelled to perform because the order went beyond the scope of the work, agreed to waive any “beyond the scope” defense and allow the work to be governed by the changes clause. In the absence of such evidence, the parties have simply made a new agreement. If the parties cannot agree on price, the contractor is entitled to reasonable compensation.⁹

A cardinal change is considered a breach largely because of its origin in federal procurement jurisdictional issues. Can the contractor choose to treat it as a serious material breach and terminate any further contractual obligations it owes the owner? Section 33.04 discusses material breach.

The real nature of the direction or order can now emerge. It is simply a proposal, an order, that the contractor can choose to accept. It is not a breach of contract unless the owner asserts that it will not proceed further unless it is accepted. If so, this is a contract repudiation, and the contractor can terminate and recover any damages it may have suffered.

The other type of cardinal change does not occur all at once, as in the one-shot direction, but occurs throughout the performance of the contract. It consists of many changes,¹⁰

⁸41 U.S.C.A. §§ 601 *et seq.*

⁹*Nat Harrison Assoc., Inc. v. Gulf States Util. Co.*, 491 F.2d 578, rehearing denied, 493 F.2d 1405 (5th Cir. 1974).

¹⁰*Wunderlich Contracting Co. v. United States*, 240 F.2d 201 (10th Cir.1957) (6,000 changes). Rejecting a contention by the defendant prime contractor that the cardinal change should be limited to federal procurement law, the court applying Kentucky law recognized the cardinal change. *L. K. Comstock & Co. v. Becon Constr. Co., Inc.*, 932 F.Supp. 906 (E.D.Ky.1993) (citing this book), *aff'd*, 73 F.3d 362 (6th Cir.1995).

drastic changes,¹¹ or other conduct that has gone beyond the reasonable expectations of the contractor and made the transaction different from what the parties had in mind when they made the contract.¹² This is a breach. But what are the remedies?

Here two scenarios emerge. One involves the contractor's deciding in the middle of the project that it has had enough, that it feels it can walk off the job because the total effect of the owner's conduct constitutes a material breach.¹³ If upheld, the contractor can recover the reasonable value of its work, based on restitution or damages.¹⁴ (The former is selected in losing contracts.) The second, and more common, scenario involves completion of the work by the contractor and a claim for the reasonable value of the services and materials, along with an allowance for overhead and profit, bypassing any contract price or guaranteed maximum price (GMP).¹⁵

¹¹*Saddler v. United States*, 152 Ct.Cl. 557, 287 F.2d 411 (1961) (doubling excavation in small contract).

¹²*Allied Materials & Equip. Co. v. United States*, 215 Ct.Cl. 406, 569 F.2d 562 (1978). *Wunderlich Contracting Co. v. United States*, 173 Ct.Cl. 180, 351 F.2d 956 (1965) (cumulative effect of magnitude and quality of changes). In *Pellerin Constr. Inc. v. Witko Corp.*, 169 F.Supp.2d 568 (E.D. La.2001), the court found no Louisiana case recognizing the cardinal change doctrine. Even if it were allowed, the changes were not so drastic and profound that they altered the thing to be built. But see *Hensel Phelps Constr. Co. v. King County*, 57 Wash.App. 170, 787 P.2d 58 (1990). In this case, the painting subcontractor's claim for a cardinal change entitling it to quantum meruit (as much as it merits, as it is worth) was based on a drastic acceleration, a redoing of its work, and the stacking of trades (more than one trade working at the same time). The court pointed to the contractor having been compensated under the changes clause for its additional expenses and to other clauses indicating the contractor had taken certain risks. The court also pointed to the fact that there had been no fundamental alteration of the project itself, such as the shape or the square footage of the surfaces painted. While recognizing the cardinal change doctrine, the court stated that "this case does not involve the magnitude of changes that existed in the federal cases." 787 P.2d at 65.

¹³See Section 33.04A.

¹⁴See Sections 27.02D, E.

¹⁵*C. Norman Peterson Co. v. Container Corp. of Am.*, 172 Cal.App. 3d 628, 218 Cal.Rptr. 592 (1985) (cardinal change eliminated GMP). The California Supreme Court, while affirming *C. Norman Peterson* (involving a private sector project), ruled that the closely related doctrine of abandonment does not apply to public works contracts. *Amelco Electric v. City of Thousand Oaks*, 27 Cal.4th 228, 38 P.3d 1120, 115 Cal.Rptr.2d 900 (2002), rehearing denied Mar. 13, 2002. See *Rudd v. Anderson*, 153 Ind.App. 11, 285 N.E.2d 836 (1972). See also Section 27.02F.

Some states recognize the cardinal change doctrine; others do not.¹⁶ It is important to recognize the utility of the cardinal change and its close cousin, abandonment, in jurisdictions other than the federal procurement system. If the owner has committed serious breaches, sometime called material breaches, this discharges the obligation of the contractor to proceed further and gives it, as a rule, a claim that either protects the contractor's expectation interest or prevents unjust enrichment.¹⁷ This is also true if the contractor has fully performed and seeks postcompletion damages. Often the value of such a postcompletion claim can be based on crude global formulas, such as total cost or jury verdict.¹⁸ These formulas avoid the need to connect each breach with specific damages.

There are some substantive differences between ordinary breaches and cardinal changes. But both are premised on errors (excessive changes) or poor administrative practices (unreasonable delays) by the owner or persons for whom it must take responsibility, such as the design professional, that increase the contractor's cost.¹⁹ The same method of proving damages, ordinary contract damages with its strict certainty rules and the crude global formulas, are used in both types of claims. Whether the claim is based on ordinary contract damages or a global formula, what types of proof will a court demand?

The real use of cardinal change is to avoid any contract clauses that can affect the claim, such as exculpation clauses or those that limit damages. That is the reason contractors try to convince a court that the cardinal change should be recognized.

Federal procurement has witnessed the beginnings of a cardinal delay.²⁰ The term "cardinal" attached to a change or changes gets rid of the contract price and allows measurement of the claim by damages or the reasonable value of the work. A cardinal delay removes any remedial

¹⁶*Silverman, Abandonment and Cardinal Change Claims on "Projects from Hell,"* 25 Constr. Lawyer, No. 4, Fall 2005, p. 18. Nevada has recently recognized cardinal change and abandonment. *J. A. Jones Constr. Co. v. Lehrer McGovern Bovis, Inc.* 89 P.3d 1009 (Nev.2004). See also Sweet, *supra* note 7 (abandonment not allowed in California public contracts).

provisions in the contract that deal with government-caused delay.

B. Constructive Change

Again, reference must be made to federal procurement law. Claims for breach of contract could be taken only to the Court of Claims before 1978. A claim had to go before any procuring agency appeals board if it arose “under the contract.” Relief had to be provided by statute or by a clause in the contract. To keep claims within the appeals board, the constructive change developed. Had a change order been issued, any claim clearly came under the contract.

In many cases, the contractor claimed that a direction or order was a change. The contracting officer acting for the procuring agency refused to issue a change order because he asserted that the work ordered was within the contract. The fiction of the constructive change allowed the boards of appeal to take jurisdiction by concluding that a change should have been issued if it were to later agree with the contractor. It is then as if a change order had been issued. The doctrine was also used if specifications were defective, requiring the contractor to do additional work. Even though the doctrine has no jurisdictional significance because of 1978 federal legislation,²¹ it still merits comment.

Federal procurement disputes clauses require the contractor to keep working pending resolution of a dispute. If a contractor wishes to stop work, it may assert that its claim is based on breach and does not arise under the contract. Here the agency may assert there has been a constructive change and the contractor must continue under the contract. The changes clause precludes claims after final payment. Postfinal payment claims may be asserted to be based on breach, not “under the contract.” In private contracts, the problem can still arise, although not in a jurisdictional sense.

Suppose that design professional and contractor dispute over work to be done. The design professional contends the work is called for under the contract, and the contractor claims it is not. Suppose the contractor performs the work but makes clear that it considers the

position of the design professional unjustified and that it intends to claim additional compensation.²²

Here, as in so many other aspects of the construction process, it is important to recognize the design professional’s power to interpret the document and his quasi-judicial role if he is the interim decision maker (IDM). If the design professional determines that the work falls within the contract, many construction contracts make his decision final unless it is overturned by arbitration or litigation. If the contractor later requests additional compensation for the work and is met with the contention that no change order has been issued, the absence of a written change order should not bar the contractor’s claim as long as it made clear that it intended to claim additional compensation. However, the claim should be denied if the design professional or the IDM’s decision is binding and has not been overturned. A contractor dissatisfied with the design professional’s decision should invoke any process under which that decision can be appealed. If it later is determined that the design professional or IDM had been incorrect and the decision is overturned, the absence of a written change order should not bar the claim.

Although no change order had been issued, there was a *constructive* change order—that is, one should have been issued.²³ (Some problems of this type are handled under “waiver,” largely because the party directing the change had no authority to do so.)²⁴

Another type of constructive change developed in federal procurement law—the constructive acceleration (discussed in Section 26.03B, dealing with time).

C. Deductive Change (Deletion)

Changes clauses usually permit the owner to delete a portion of the work, sometimes known as a *deductive change*. Although as a rule a deductive change is lumped together with changes that add to the contractor’s contractual commitment, it raises special problems. First (as noted in Section 21.04B), the power to change the work typically is limited to those changes that fall within the scope of the work. Clearly a deductive change cannot be measured

²¹See supra note 8. Before 1968, constructive changes were also used to get around the *Rice* doctrine. In *United States v. Rice*, 317 U.S. 61 (1942), the court barred recovery for additional expense of *unchanged* work.

²²See 48 CFR § 52.243-1(c) (2007); AIA Doc. A201-2007, § 15.1.4.

²³*Chris Berg, Inc. v. United States*, 197 Ct.Cl. 503, 455 F.2d 1037 (1972).

²⁴*Weeshoff Constr. Co. v. Los Angeles County Flood Control Dist.*, 88 Cal.App.3d 579, 152 Cal.Rptr. 19 (1979).

by that standard. Whether the prime suggesting to the owner that certain work be deleted that would wipe out much of the value of the subcontract was a violation of the obligation of good faith and fair dealing toward the subcontractor whose work was deleted was discussed in Section 19.02D.

Similarly, problems can develop over whether deleted work reduces the overhead and profit that are usually added in the event of additional work (discussed in Section 21.04I).

Finally, a problem similar to that discussed in Section 21.04E—the duty to order additional work from the contractor—can arise when there is a deductive change. Suppose the owner wishes to delete part of the work and offer it to another contractor. Unless the owner had good reason to do so, or at least acted in good faith, this would be a breach of the contract.

D. Minor Change

It sometimes becomes necessary to make minor changes in the drawings and specifications that are not intended to affect the contract price or completion date. AIA Document A201-2007, Section 7.4.1, gives the architect the authority to order minor changes as long as the changes are consistent with the intent of the contract documents. (Even if the architect is given authority to order minor changes, it is best that he not make changes when the owner is available.) In 2007 this Section added a requirement that the order be “signed by the architect.”

Suppose the contractor believes the change is not minor and demands additional time and compensation. It should perform the work and make a claim under Sections 15.1.4 and 15.1.5 for more money and more time.

E. Tentative Change

As mentioned in Section 21.01, the classic changes clause requires the contractor to comply with the change order before any agreement is made on price. Contractors generally are not happy with this arrangement. But owners may not wish to be obligated to pay for the change without knowing what it will cost. For that reason, either by contract provisions or by practice, some owners will issue a tentative change, obtain a price from the contractor, and then decide whether to implement it. If time does not per-

mit the processing of such a tentative change order, the owner can direct the change unilaterally, and the contractor must comply.

One problem that sometimes arises when a tentative changes process is invoked is the contractor’s claim that it should be compensated for its expenses in preparing a price quotation if the change is not ordered. Owners usually resist such claims, contending that the cost of preparing a price quotation is similar to the overhead costs of preparing a bid at the outset.

SECTION 21.04 Change Order Mechanisms

A. Judicial Attitude Toward Changes Mechanisms

From a planning standpoint, a changes mechanism is essential. Design flexibility and cost control cannot be accomplished without a system for changing work.

Yet judicial attitude toward the changes mechanism often determines how courts will interpret contract language and how quickly courts will find that the changes mechanism has been waived.

Judicial attitude is reflected by language in opinions that must pass judgment on these questions. For example, Massachusetts held that the contractor could not recover for extra work and concluded, “Although it seems a hardship for the [contractor] not to be able to recover for the extra work which apparently it performed in good faith, yet such failure results from its not obtaining from the architect or his agents written authority to perform the work.”²⁵

A federal court granted recovery to a subcontractor despite the absence of formal requirements by pointing to the fact that “[F]rom the beginning of the contract work the parties to the subcontract ignored the provisions as to written orders and proceeded with the work with little or no regard for them.”²⁶ The court obviously thought the formal requirements simply technicalities that should not preclude a contractor from recovering for work performed beyond the contract requirements.

In a decision denying recovery for extras ordered orally by the city engineer, the Pennsylvania Supreme Court seemed unwilling to force the city of Philadelphia to pay for work not properly ordered and that could not be returned

²⁵*Crane Constr. Co. v. Commonwealth*, 290 Mass. 249, 195 N.E. 110, 112 (1935).

²⁶*Ross Eng’g Co. v. Pace*, 153 F.2d 35, 49 (4th Cir.1946).

by the city.²⁷ Here, control over public funds predominated. Likewise, the West Virginia Supreme Court denied recovery for work performed at the direction and with the knowledge of the county court president and other board members because of statutory requirements that all proceedings of the county court be entered into the record books of such court. In justifying its decision, the court stated,

So the requirements of the statute and the decision that county courts must enter of record its orders for the expenditure of the funds must not be construed as meaningless, but must be enforced for the benefit of the whole public and not for the benefit of any particular individual who may suffer on account of a mistaken reliance on invalid acts of individual officers, however unfortunate, harmful or deceptive any such acts may have been, unless there is a predominant reason not to do so. To extend the doctrine of liability in every instance because of unjust enrichment is to open the door to all such claims as have not been properly authorized. . . . Too often is it apparent that the expenditures first authorized under a contract are enlarged by so-called "extras" without proper authorization, either intentionally or otherwise, and any such practice should certainly not be given judicial sanction. Nor should sloven management of county affairs be approved. In the absence of special reason, based on competent evidence, why the paramount consideration inherent in the legislative act requiring formal orders by county courts should not be made effective, there should be no digression therefrom as to its enforcement.²⁸

It is more difficult to grant recovery to a contractor where there has not been compliance with formal requirements in contracts for public works. However, as seen in the *Watson Lumber* case (reproduced in Section 21.01), courts are also protective of inexperienced owners who are building their first home. Such owners must be made aware of price increases for proposed changed work.

The judicial attitude toward formal requirements must take into account the contract language, experience of the parties in construction, need to protect public funds, reasonable expectations of the owner, and potential unjust

enrichment of the owner that can result if the contractor is unable to recover for admittedly extra work.

B. Limitation on Power to Order Changes

Although a changes clause is essential to construction projects, it is, as suggested earlier in this chapter, amenable to abuse. A contractor can expect some changes, but the changes clause should not be a blank check for the owner to order the contractor to do anything it wishes, to compel the contractor to perform before there has been an agreement on price, and to take care of compensation later. This behavior can be even more abusive if the owner seeks to avoid any increased cost of performing unchanged work or any cost incident to disruption of the contractor's method of performance.

At the outset, there can be a question in a public contract as to whether the additional work must be awarded by competitive bidding rather than as a change. This issue comes up frequently when there is a judicial challenge to the ordering of changed work to the contractor performing the contract. Many of the cases discussed in Section 18.04J deal with illegality caused by failure to award additional work through competitive bidding.²⁹

A recent Illinois statute requires rebidding only if the amount in question is more than 50% of the original bid price. Originally, the limit was 25% but public entities objected. They contended that rebidding increased administrative costs, caused delays, and created a stacking of trades in that original and new contractors needed to work side by side.³⁰

To determine whether a proposed change can be ordered, the overall character of the work must be considered. More particularly, the change must permit the work to retain its specific character, must be similar in nature to the work already contracted for, must not change the extent of the total performance in an intolerable manner, and must be within the capability of the contractor, taking into account the contractor's technical skill and financial capability.

Almost all construction contracts place some limit on the owner's power to direct changes unilaterally. Sometimes

²⁷*Montgomery v. City of Philadelphia*, 391 Pa. 607, 139 A.2d 347 (1958).

²⁸*Earl T. Browder, Inc. v. County Court of Webster County*, 143 W.Va. 406, 102 S.E.2d 425, 432-33 (1958). The California Supreme Court expressed similar sentiments in *Zottman v. San Francisco*, 20 Cal. 96, 104-05 (1862).

²⁹*Bozied v. City of Brookings*, 638 N.W.2d 264 (S.D.2001); *Blum v. City of Hillsboro*, 49 Wis.2d 667, 183 N.W.2d 47 (1991).

³⁰Montez, *Legislative Update: Illinois' Public Works Contract Change Order Act and Similar Statutes from Other Jurisdictions*, 25 Constr. Lawyer, No. 1, Winter 2005, p. 40 (listing 14 other states).

a limit is based on a certain percentage of the contract price. The difficulty is that the limitations may not be known until the contract is close to full performance. More commonly in the United States, the power to direct changes is limited to the scope of the work. For example, an owner may be able to order a 10 percent increase in the floor space of a residential home or that a carport be built or even a swimming pool, but not that a beach house be built twenty miles away.

The difficulty in applying the AIA “scope of the Work” limitation can be shown by *Eldeco Inc. v. Charleston County School District*,³¹ discussed in Section 21.01. In that case the original contract was for a new high school. The court does not tell us the original price. The contract appeared to be an AIA contract with the power to order changes limited to the scope of the work.

The school district decided to finish an unfinished vocational training wing and to add some new classrooms. The court concluded that these were not simply changes but in effect new contracts made not on a change order but as supplementary agreements. The subcontractor plaintiff argued, unsuccessfully, that it had been given 109 change orders, indicating a pattern of how changes of all types were handled. The court spoke of the scope of the contract and referred to Paragraph 1.1.3 that defined the Work.

Clearly, the additional work was not part of the original contract. Changed work never is. The issue is whether the work order is so closely related to the original contract to be considered part of its scope. The court could have concluded that vocational training facilities and added classrooms are functionally part of the high school and could be demanded under the changes clause.

It is not clear what the price of the additional work bore to the original price. The court did not tell us the price quoted by the prime to the school district. But that quote included price quotes of the subcontractor for the additional work of \$968,311. The school district thought the price too high. It requested the prime to get another bid. That bid was \$578,152. It ordered the prime to accept that bid. (The successor subcontractor went bankrupt.)

It is important to separate two issues. The prime had no objection to doing the work. The issue was whether the electrical subcontractor should have been awarded the subcontract. That depended upon whether the school

district was required to award the additional work to the prime.³² This will be discussed in Section 21.04E.

What is important for analyzing the limits on the change order power is whether the additional work was sufficiently connected to the project, in this case the high school, to be within the scope of the work. The amount for which the contractor would be paid was very likely within the 10 percent that often limits the power to order changes.

As mentioned in Section 21.03C, the scope limitation is difficult to apply when the owner wishes to delete part of the work. Here the only suitable guideline is the reasonable expectation of the contractor.

Suppose the owner points to the changes clause and directs that the contractor accelerate its performance. Must the contractor comply? For example, if the contract completion time is 500 days after the notice to proceed, can the owner direct that the work be done in 400 days?

AIA Document A201-2007 does not address this question directly. Section 7.3.1 simply provides that the owner may “order changes in the Work within the general scope of the Contract consisting of additions, deletions or other revisions.” Work is defined in Section 1.1.3 as “the construction and services required by the Contract Documents,” language contemplating the physical structure and not the time during which it must be completed. In the light of the drastic nature of acceleration, A201 should not empower the owner to direct an acceleration. A201 should be interpreted to allow only quantity and quality changes.³³

Can the owner order a delay or a “stretch-out” by a change? For example, suppose the owner directs the 500-day time be increased to 600 days. It is unlikely that Section 7.3.1 would permit such a stretch-out. Yet Section 7.3.1 does allow the owner to suspend, delay, or interrupt performance without cause. If so, under Section 14.3.2 the contractor receives a price adjustment if the suspension increases its cost, plus profit and time.

Some may contend that if the owner can suspend, the owner can stretch out. And if the owner can stretch out, it should be able to speed up. But there is a difference between a suspension, with its generous remedy, and a stretch-out and certainly between a suspension and a speed-up, with

³²The large difference in price is a good reason for not giving a monopoly to the prime (and the sub) on changes. See Section 21.04E.

³³*Mobil Chemical Co. v. Blount Bros. Corp.*, 809 F.2d 1175 (5th Cir.1987) (acceleration order assumed to be a breach of contract). Similarly, see *Hensel Phelps Constr. Co. v. King County*, supra note 12.

³¹Supra note 1.

the indeterminate remedy (which some consider generous) of Section 7.3.7.

The federal procurement system speaks directly to this point, giving the federal agency the power to order accelerations.³⁴ Even if a pure acceleration were permitted, there is still a scope limit. The amount of the acceleration cannot exceed what could be reasonably expected and for which a reasonable price adjustment can be made.

Can the owner through the changes process take over control of means, methods, and techniques by which the contract is to be performed? Under AIA Document A201-2007, Section 3.3.1, this power belongs to the contractor. Such a change would not be within the owner's power. The changes process is limited to quantity and quality changes.

A limitation sometimes ignored is the duration of the power to order changed work. As noted in Section 26.04, some contracts use "substantial compliance" as the benchmark for determining compliance with the contractor's time commitment. If there has been substantial completion the owner can make effective use of the project even though some things still need to be completed. At that point the owner's power to direct changes unilaterally should terminate. Otherwise, the contractor might have to perform for a period of time not contemplated at the time the contract was made.

Another limitation that a contractor with strong bargaining power would like is the power to demand that the owner show evidence that it can pay for additional work it may want done. The AIA gives the contractor, before it begins to perform and under certain circumstances during performance, the power to determine whether a strong likelihood exists that the contractor will be paid for the work it performs.³⁵ A contractor without this contractual protection either at the beginning of the project or when substantial changes are ordered will have to take the owner's ability to pay into account at the time it decides the price for which it is willing to do the work.

Even if such protection is not found in the contract, if the owner directs a substantial change, the obligation of good faith and fair dealing should require that the owner satisfy the contractor that the owner can pay for the work that it has ordered.

For the effect of the law known as the Visual Artists Rights Act on the right of the owner to make changes, see Section 16.05.

C. Authority to Order Change

In the absence of any contract clause dealing with the question of authority to make changes, doctrines of agency control the question of who can order a change. The owner can order changes. Members of the owner's organization may also have the authority to order changes expressly, impliedly, or by the doctrine of apparent authority. Carefully thought-out construction contracts usually specify which members of the owner's organization have the power to order changes.

Neither the design professional,³⁶ the construction manager, nor, surely, the project representative³⁷ has inherent authority by virtue of his position to direct changes in the work. Some public contract cases are instructive. Sometimes the ultimate outcome is based on a contractor's claim that a *direction* had been given by someone clearly *without* the authority to direct the change when this unauthorized act was known by authorized officials. For example, *Chris Berg, Inc. v. United States*³⁸ involved a contract awarded under federal procurement rules. The contractor painted a stairway clearly not required under the contract to be painted. A field memo had been executed by a project engineer and a resident engineer, neither of whom had authority to issue a change order, which impliedly directed the contractor to paint the stairway in question.

Responsible officials in the agency knew the plaintiff was doing work not called for under the contract. The plaintiff had requested a ruling on whether the stairway should be painted and that it be advised of the government's interpretation of the field memo. The court stated that the agency had ample opportunity to warn the plaintiff that the plaintiff was painting a stairway not called for under the contract. The court concluded that this was a constructive change and the contractor was entitled to an equitable adjustment. In addition, the constructive change was based on the contractor's

³⁴ 48 CFR § 52.243-4(a)(4) (2007).

³⁶ *F. Garofalo Elec. Co., Inc. v. New York Univ.*, 270 A.D.2d 76, 705 N.Y.S.2d 327, leave to appeal dismissed, 95 N.Y.2d 825, 734 N.E.2d 762, 712 N.Y.S.2d 450 (2000). But see also Section 17.05B.

³⁷ See Section 17.05B.

³⁸ *Supra* note 23.

having painted certain areas after having received the tacit and undoubted oral approval of the project engineer.

Similarly, in *Weeshoff Construction Co. v. Los Angeles County Flood Control District*,³⁹ the contractor performed additional work in a road construction contract largely under the direction of the agency's site inspector. The court noted the problem of the site inspector's lack of authority to waive the requirement for a written change order. However, the court concluded the change order had already been issued, inasmuch as the procuring agency had threatened to do the work with its own workforce if the contractor did not do it. The court concluded the contractor was justified in relying on the site inspector's statements.

These two decisions demonstrate that directions by project representatives, coupled with other facts that would make denial of recovery unjust, may be the basis for the contractor's receiving additional compensation. (Excusing formal requirements is discussed in Section 21.04H.)

Yet a third case, one arising in federal procurement as did the *Chris Berg* case described earlier in this section, points in a different direction. *Winter v. Cath-dr/Balti Joint Venture*⁴⁰ took a strict position, limiting the authority to order changes to the Contracting Officer (CO) despite facts that might have led to another outcome.

At the preconstruction conference Navy officials instructed the contractor to get written authorization for contract changes from the resident officer in charge of contracts (ROICC). The CO, designated by the contract as the only person to authorize changes, was not present at the conference.

During performance the contractor followed the instructions given at the preconstruction conference, obtaining written authorization from the ROICC. But when the contractor sought an equitable adjustment to pay for the changed work, the Navy took the position that only the CO could authorize the changes.

The United States Court of Appeals for the Federal Circuit agreed with the government. It held that only the CO has authority to enter into or modify contracts.⁴¹ In light of the clear contract language and the regulation, and notwithstanding the instructions given at the preconstruction conference, the ROICC had neither

actual nor apparent authority to change the contract requirements.

These cases demonstrate the uncertainty outcome when this issue arises. The *Chris Berg* and *Weeshoff* cases looked at all the facts and were willing to hold for the contractor based upon its reasonable reliance. The *Winter* case looked only at the formal rules and not at what appears to be the reasonable reliance of the contractor. It shows the strong policy in federal procurement to protect the bureaucratic method devised by the government to control expenditures of public funds.

Private contracts frequently specify who has authority to issue change orders. As an illustration, AIA Document A201-2007, Section 7.2.1, states that a change order is prepared by the architect and signed by the architect, the contractor, and the owner. Section 7.3.1 states that the construction change directive is again prepared by the architect but signed only by the architect and the owner. Finally, for a minor change Section 7.4 requires a written order signed only by the architect.

This set of requirements raises an issue that is rarely addressed. All documents connected to the changes process are prepared by the architect. But Section 7.1.2 requires the architect's agreement, as well as those of the owner and the contractor, for a change order and under Section 7.3.1 for a construction change directive. Can the architect prevent a change either by refusing to prepare the change order or refusing to sign either the change order or the construction change directive?

Suppose AIA Document B101-2007 is used. Section 3.6.5.1 requires the architect to prepare change orders and construction change directives "for the Owner's approval." Is agreement by the architect a purely ministerial (nondiscretionary) act, one that does not give the architect the power to refuse to sign a change order or constructive change directive?

As seen in the *Duncan* case reproduced in Section 10.04B, the law places professional responsibility on the architect because he has been registered and qualified by the state, a responsibility that can take precedence over contract obligations. Surely the architect could refuse to sign if the change clearly would violate law. In addition, suppose his refusal to sign is based on his belief that the finished project would ruin his professional reputation. Would this belief justify his refusal?

To be sure, the architect who refuses to sign a change order or (using AIA current terminology) a construction

³⁹Supra note 24.

⁴⁰497 F.3d 1339 (Fed.Cir.2007).

⁴¹48 CFR § 43.102.

change directive authorized by the owner and agreed to by the contractor, may lose a client. Yet the owner should take seriously any objection the architect may have to signing these documents. This is part of the covenant of good faith and fair dealing the owner owes the architect. As noted, the architect would not be required to sign a change order or construction change directive that clearly violates building laws. Yet even if the matter involved only aesthetics, the owner should take into account the architect's professional standing. Admittedly, the money to be spent is the owner's, and the performance is the contractor's. Yet the owner should meet and confer with the architect and seriously consider the architect's professional judgment. In the end, the owner may decide to go ahead with the change, but its decision to do so must be made in good faith. If the architect cannot continue without either violating the law or compromising his professional integrity, he should terminate the contractual relationship. Neither party has breached, but the architect should be paid for work he has performed for which he has not yet been paid, based on restitution.

Just as the owner can give the design professional express authority, as seen in Section 4.06, so also the owner may cloak the design professional with apparent authority. The owner's acts can reasonably lead the contractor to believe that the design professional has the authority to change the work. Suppose the owner knows the design professional is executing change orders and makes no objection or, even further, pays the contractor, based on change orders issued by the design professional. This activity could reasonably lead the contractor to believe that the design professional has authority to change the work. The contractor is less likely to successfully invoke the apparent authority doctrine if the project involves public work.⁴²

*Fletcher v. Laguna Vista Corp.*⁴³ illustrates enlarged authority. Changes were required to be ordered in writing by owner and architect. However, in concluding that the architect had authority to execute a written change order, the court stated,

the manner in which the parties themselves have interpreted the contract through their course of dealings is of utmost importance. The record in this case is filled with

testimony to the accord that both [owners] and [contractor] had relied on architect Frye to make adjustments in the contract sum and had abided by his decision. [Owners] knew that there would be at least a slight overage in the sums spent by [contractor] for overhead but had never objected. [Owners] accepted decreases in the cost of millwork which were incorporated into a change order signed only by architect Frye and the contractor. The parties themselves have interpreted the contract to allow an increase and a decrease in the contract sum with only the written signature of architect Frye. Even if the contract does not grant this authority to architect Frye, the parties through their course of dealings have interpreted and modified the document so as to place in the hands of architect Frye the final authority to authorize increases and decreases in the contract sum.⁴⁴

It is possible for the owner to give the architect this authority. However, if the basis for enlarging the architect's normal authority is the architect's power to interpret the contract documents, the case is incorrect. The court failed to distinguish the normal power given to the design professional to interpret the contract documents from the power to order changes.

Sometimes there is insufficient time to obtain authorization from the owner for work needed immediately, because there is impending danger to person or property. The contractor should have authority to do such emergency work. Contracts frequently provide that extra work in emergencies can be performed without authorization.⁴⁵ Even without express or implied authority, the contractor should be able to recover for emergency work, based on the principle of unjust enrichment.

D. Misrepresentation of Authority

If the contractor performed the additional work at the order of the design professional and this order was beyond the latter's actual authority, what recourse does the contractor have?

First, the contractor would seek to establish that the design professional had apparent authority to order the work. But in the absence of the owner's having led the contractor to believe that the design professional had this authority, the contractor will not be successful. Likewise, any claim that

⁴²This is discussed in greater detail in Section 21.04H.

⁴³275 So.2d 579 (Fla. Dist. Ct. App.), cert. denied, 281 So.2d 213 (Fla. 1973).

⁴⁴Id. at 580–81 (the court's footnotes omitted).

⁴⁵AIA Doc. A201-2007, § 10.4 (contractor can act in emergency affecting safety of persons or property).

the work has unjustly enriched the owner would not be successful. The contractor would be considered a volunteer, and denied recovery.

Next, the contractor would look to the design professional. The threshold question would be whether the contractor reasonably relied on misrepresented authority. In many cases, reliance would not be reasonable, because design professionals typically are not given this authority and because the contractor should have checked with the owner. But the reliance element is often minimized or even ignored. In any event, if compliance with the order had been reasonable under the circumstances, the contractor can recover, from the design professional,⁴⁶ the cost of performing the unauthorized work and any cost of correction made necessary to make the work conform to the contract documents. A design professional held to have misrepresented his authority should not be able to recover from the owner on the theory of unjust enrichment.

Suppose the contractor had recovered from the owner because the latter's acts cloaked the design professional with apparent authority. Remember, the design professional acted without authority even though the acts of the owner may have created apparent authority. Suppose the owner seeks to transfer this loss to the design professional because of the latter's misrepresentation of authority. Passing by the question of whether the owner had suffered any real loss other than having work it did not choose, the loss was caused both by the design professional's misrepresentation of authority and by the owner's acts making it appear that the design professional had the authority. Because the more culpable act appears to be the misrepresentation of authority, this loss should be borne by the design professional.

Yet if the misrepresentation resulted in the value of the property having been increased, the owner has received a benefit. Although the law does not explicitly divide losses in such cases, it would be fair to do so here. Another method of sharing the loss would be to give the owner any difference between what the owner had to pay the contractor and the enhanced value of the project because of the unauthorized work.

At this point, a distinction should be made between the contractor's recovery having been based on implied authority or on apparent authority. In the former case, there has been no wrongdoing by the agent, who was

authorized to act even though authority was not expressly given. For example, the architect's representation to the subcontractor in the *Bethlehem Fabricators* case mentioned in the notes to Sections 17.05B and 28.07J was authorized implicitly, though not explicitly. Had the architect's statement been *beyond* his authority—express or implied—recovery against the owner would have to have been based on apparent authority. If so, the owner would have had a claim against the architect. In the *Bethlehem Fabricators* case, there was no unjust enrichment of the type present in the preceding discussion. As a result, if the subcontractor's recovery against the owner had been based on an unauthorized representation by the architect, the owner should be reimbursed for what it paid the subcontractor.

An owner who knows of the unauthorized conduct of its agent but who then expressly approves the agent's decision ratifies the decision. The owner can no longer claim that the agent's decision is not binding on it.⁴⁷

E. Duty to Order Change from Contractor

The changes clause clearly gives the owner the power to order that work within the general scope of the contract be performed by the contractor. Suppose the owner asserts the right to award work within the general scope of the contract to a third party or perform that work with its own forces. The power to do this would give the owner some bargaining advantage in negotiating the price for the changed work with the original contractor.

Most changes clauses do not deal with this question specifically. The contractor could contend that giving the owner this power would be unfair, putting the contractor at the mercy of a changes clause without the compensating advantage of being able to perform all work within the general scope of the contract. Giving the contractor the right to do the changed work, it could assert, would not put the owner at a disadvantage. Usually pricing formulas apply to the changed work if the parties do not agree on a price. Although as a practical matter the owner may find it inexpedient to have the original contractor working side by side with a substitute or its own employees, the express language of most changes clauses does not give the contractor the power to perform changed work.

⁴⁶*Brown v. Maryland Cas. Co.*, 246 Ark. 1074, 442 S.W.2d 187 (1969) (dictum).

⁴⁷See Section 4.08.

In *Hunkin Conkey Construction Co. v. United States*,⁴⁸ the contractor had entered into a contract with the Army Corps of Engineers for the construction of a dam. During performance, subsurface problems developed that necessitated a significant change in design. The contractor and the Corps discussed alternative designs but were unable to agree on a price for an alternative design desired by the Corps. As a result, the Corps negotiated a contract with a third party to perform the alternative design work at a cost of \$200,000 less than proposed by the original contractor.

After completion of the project, the contractor contended that the work should have been awarded to it. The Court of Claims was not persuaded that the power to direct changes meant that the government had a duty to order those changes from the original contractor. But the court focused on another provision of the contract. This provision allowed the government to undertake or award other contracts for “additional work” and required the original contractor to cooperate with other contractors or government employees. This, according to the Court of Claims, had to be read together with the changes clause. When it was so read, the government was clearly not obligated to award the additional work to the contractor.

In *Eldeco, Inc. v. Charleston County School District*,⁴⁹ discussed in Sections 21.01 and 21.04B, there was a substantial difference in price between the original electrical subcontractor and a competing subcontractor, and the owner ordered the prime to engage the lower bidding subcontractor. This meant employees of two different subs might be working side by side, perhaps one union and one nonunion. But the original subcontractor’s high bid may have been based on its belief that it was entitled to the work.

It should be noted that, just as in the *Hunkin Conkey* case, the contract in the *Eldeco* case was an AIA contract that stated that there might be separate contractors and the original contractor promised to cooperate. The owner may not want to be “locked in” to the contractor for “extra” work. Conversely, though, the contractor may assert an “expectation” that its price was predicated on a “monop-oly” on “extras.”

F. Formal Requirements

Before proceeding to the formal requirements for a change order, the work in question may fall outside the changes clause. It may be beyond the power granted the owner by the changes clause. As noted in Section 21.04B it may be work needed to correct errors of the design professional or to repair leaks to bring the water and sewer line project into conformity with the contract.⁵⁰ These are not within the jurisdiction of the changes clause and formal requirements specified in that clause do not apply.

As noted in Section 21.04C, construction contracts generally require that change orders be written and signed by the person or persons authorized to execute change orders. Obviously, it is best to have the change order issued and price agreed on before the work is started. If price cannot be agreed on before the work is begun, issuing a change order does assure the owner that if no agreement is reached, the changed work will be compensated in accordance with a changes clause formula. Issuance also assures the contractor that the owner will not contend the work in question falls within the contract requirements.

Should the contract require that the change order be issued before the work is begun? If the change order is issued after the work is begun or completed, issuance generally forecloses any question of whether the work was within the contract requirements. However, not requiring that the change order be issued before the work is begun invites issuance of oral change orders, with the assurance by the owner that a written change order will follow. Although oral orders sometimes may be necessary, suppose the owner denies issuing an oral change order. (In many cases, the owner admits giving a particular direction but contends it was not a change.) In such cases, the owner will insist that no additional compensation should be paid, and the contractor will contend that the issuance of an oral change order has dispensed with a requirement for a writing.

The contract should require that the change order be issued before the start of work even if this means some delay while the written change order is issued.⁵¹

Under AIA Document A201-2007, Section 7.3, the sequence is the issuance of a written construction change

⁵⁰*Town of Palm Beach v. Ryan Inc. Eastern*, 786 So.2d 665 (Fla. Dist. Ct. App.), review dismissed, 794 So.2d 608 (Fla.2001).

⁵¹*In Uhlhorn v. Reid*, 398 S.W.2d 169, 175 (Tex. Ct. App. 1965), the clause stated that “No extra work or charges under this contract will be recognized or paid for unless agreed to in writing before the work is done or the charges made.”

⁴⁸198 Ct.Cl. 638, 461 F.2d 1270 (1972).

⁴⁹Supra note 1.

directive, commencement of the work with a simultaneous attempt to agree on price and time, and the residual power in the architect to decide price or time changes if the parties cannot agree. Some contracts do not require a written change order in advance of the work being done. The contractor can recover if a written change order is subsequently issued. Here the obvious advantage is speed; the disadvantage is the possibility of subsequent disputes over whether the work was extra. At the very least, having a written change order eliminates this difficulty. Selecting a less rigorous changes mechanism may reflect lack of confidence that a more structured clause will be effective. This doubt may be attributed to the belief that courts will not deny compensation to the contractor despite the absence of a written change order if the owner has apparently directed work to be performed that the court decides was beyond the contract documents.⁵²

Another problem that regularly surfaces relates to the conflict between a changes clause, with its formal requirements, and other provisions of the contract that may have different formal requirements. This problem arises most frequently when the contractor encounters subsurface conditions different from those specified or normally expected and seeks to receive an equitable adjustment. (This special problem is discussed in Section 25.06.)

Any suggestions for formal requirements must face two paradoxical observations. In the helter-skelter world of construction, habits of sloppiness and the felt need for rapid action mean there will always be transactions in which the formal requirements fall to the wayside. This invokes the frequent claims of waiver to be noted in Section 21.04H. At the same time, courts often deny claims despite claims of waiver with the hope that demands for strict compliance with the formal requirements of the contract will spare the courts, the arbitrators, and the parties the frustrations of seeking to resolve these waiver claims.⁵³

Finally, increased attention must be paid to the role of the legislatures in regulating consumer construction transactions. The Connecticut Home Improvement Act

requires that a change order be in writing and signed by the owner and the contractor. Yet the statute provides a restitution-like recovery for the reasonable value of the work done if the judge thinks it would be inequitable to deny recovery.⁵⁴ This multipolar approach seeks to get those who deal with home improvements to provide a written memorial of their agreement while providing a “way out” when it seems fair to do so.

G. Intention to Claim a Change

A claim entailing a lengthy list of extra work submitted after completion is a sad, though not infrequent, part of construction work. Section 21.03B, which treated constructive changes, noted that a vehicle for such claims is the contention that particular directions or instructions given by owner or design professional were changes entitling the contractor to extra compensation. One method of minimizing this problem is to require the contractor to give a written notice within a designated number of days after any event that the contractor will claim as the basis for an increase in the contract price. AIA Document A201-2007 requires such a notice under Sections 15.1.4 (more money) and 15.1.5.1 (more time). Except in an emergency, the notice must be given before beginning the work.⁵⁵

A similar provision is used by the California Department of Public Works. A general contractor doing work for the state must submit a written protest to the state architect within thirty days after receiving a *written* order from the state architect to perform any disputed work. Failure to do so precludes compensation for the work.⁵⁶ The California provision also requires that the protest notice specify in detail how requirements were exceeded and the resulting appropriate change in cost. This content requirement goes considerably beyond A201-2007, Section 15.1.4. The latter states that a contractor who “wishes to make a Claim” for more money must give “written notice . . . before proceeding to execute the Work.” There is an exception for emergencies “endangering life or property.”

⁵²As examples, see *Universal Builders, Inc. v. Moon Motor Lodge, Inc.*, 430 Pa. 550, 244 A.2d 10 (1968), and *Ecko Enter., Inc. v. Remi Fortin Constr., Inc.*, 118 N.H. 37, 382 A.2d 368 (1978). See also Section 21.04H.

⁵³*Cameo Homes v. Kraus-Anderson Constr. Co.*, 394 F.3d 1084 (8th Cir.2005) (claim barred for failure to submit claim to architect as required by the contract); *Newmam Marchive Partnership, Inc. v. City of Shreveport*, 944 So.2d 703 (La.App.2006), writ denied, 949 So.2d 448 (La.2007) (failure to get advance authorization for additional work barred claim).

⁵⁴Conn.Gen.Stat. § 20-429(a).

⁵⁵*Pioneer Roofing Co. v. Mardian Constr. Co.*, 152 Ariz. 455, 733 P.2d 652 (1986) (oral order by prime to subcontractor in emergency)

⁵⁶This provision was interpreted in *Acoustics, Inc. v. Trepte Constr. Co. and Weeshoff Constr. Co. v. Los Angeles County Flood Control Dist.*, discussed in Section 21.04H.

H. Excusing Formal Requirements

Not uncommonly, the change order mechanism is disregarded by the parties. This may be because of unrealistically high expectations by the drafters, time pressures, or unwillingness by the parties to make and keep records. When the owner denies contractor claims for extras because of the absence of a written change order or intention to claim an extra, contractors frequently assert the requirements have been waived. Waiver questions can be divided into three issues:

1. Is the requirement waivable?
2. Who has the authority to waive the requirement?
3. Did the facts claimed to create waiver lead the contractor to reasonably believe that the requirements have been eliminated or indicate that the owner intended to eliminate the requirements?

Except where the waiver concept cannot be applied to public contracts,⁵⁷ formal requirements can be waived. They are not considered an important element of the exchange and are often viewed as simply technical requirements.⁵⁸

As a rule, only parties who have authority to order changes have authority to waive the formal requirements.⁵⁹ Usually only the owner or its authorized agent can waive the formal requirements, although a design professional with authority to order changes should have authority to waive the writing requirement.

Waiver can generally be based on acts such as conduct by the owner that indicated no written change order would be required⁶⁰ or oral orders by the owner or by its

⁵⁷In *Delta Constr. Co. of Jackson v. City of Jackson*, 198 So.2d 592 (Miss.1967), appeal after remand 228 So.2d 606 (Miss.1969), the court held that waiver could operate against a municipality but not where the formality in question was a supplemental agreement on price. In *Metropolitan Sanitary Dist. of Greater Chicago v. Anthony Pontarelli & Sons, Inc.*, 7 Ill.App.3d 829, 288 N.E.2d 905 (1972), the court held that a provision giving the public agency the right to recover illegal and excessive payments meant that there was no way the required approval by the board of trustees could be waived.

⁵⁸See Section 21.04A.

⁵⁹See Section 21.04C.

⁶⁰*Huang Int'l Co. v. Foose Constr. Co.*, 734 P.2d 975 (Wyo.1987). But see *Hall Contracting Corp. v. Entergy Services, Inc.*, 309 F.3d 468 (8th Cir.2002) (under Arkansas law, no waiver of written change order requirement where the owner had paid for several written change orders, but did not pay a purported oral request for additional work). Two recent cases found waiver by conduct, the unpublished case of *Spraungel Constr. Co. v. West Bloomington Motel, Inc.*, 2005 WL 832063 (Minn. Ct.App.2005) and *H. E. Contracting v. Franklin Pierce College*, 360 F.Supp.2d 289 (D.N.H.2005). See Annot., 2 A.L.R.3d 620 (1965).

authorized representative.⁶¹ Generally, if the owner apparently gave oral orders for the changed work, the court will assume the writing requirement has been waived.

Unfortunately, courts do not differentiate between cases where the owner admits ordering the work but claims it was within the contract requirements, from cases where the owner admits the work was extra and was ordered. One purpose for requiring a written change order is to eliminate the issue of whether the work was extra. The absence of a writing indicates at the very least that the owner did not consider the work extra. However, courts seem to disregard this factor. If they determine that the work was extra and that the contractor was ordered to perform it, lack of a written change order is not likely to prevent the contractor from recovering. But in a public contract, recovery could be denied even in such a case unless a constructive change is found.

Another factor that must be taken into account is whether the owner or design professional knew of the facts that would be the basis for a the contractor's claim of a change. For example, in *Moore Construction Co. v. Clarksville Department of Electricity*,⁶² one issue was whether one separate contractor could claim delay damages caused by another separate contractor. However, the claimant did not give notice of intention to claim additional compensation as required by the predecessor of AIA Document A201-2007, Section 15.1.4. The court held this notice could be waived. It noted that all the participants knew that the claimant was being delayed and that the delays were not the claimant's fault. The claimant had been given a time extension through a job site memo, but no format change order had been issued.

The court noted that the claimant could have reasonably believed that the owner would not demand that the claimant submit a written notice of a claim for additional compensation because it had been granted a time extension. In addition, throughout this project the requirement that the contractor submit written notices had not been followed. (In fact, most of the formal requirements appear to have been abandoned.) In addition, the court concluded the owner had not shown itself prejudiced by the contractor's failure to give the required written notice.

⁶¹*City of Mound Bayou v. Roy Collins Constr. Co.*, 499 So.2d 1354 (Miss.1986); *T. Lippia & Son, Inc., v. Jorson*, 32 Conn.Supp. 529, 342 A.2d 910 (1975).

⁶²707 S.W.2d 1 (Tenn.App.1985).

Owner payment based on oral change orders by the design professional or conceivably by a resident engineer or project representative can be a waiver. Payment can lead the contractor to reasonably believe the design professional has the authority to order changes orally.⁶³ If payment is accompanied by a notice making clear to the contractor that the formal requirements are not being waived, no waiver should be found.

It may be useful to examine language in some waiver cases. In *Rivercliff Co. v. Linebarger*,⁶⁴ the court found the writing requirement had been waived, stating,

For a second ground, appellant contends that . . . the trial court should not have made any allowance to the contractor because the extra work was not authorized in accordance with the terms of the contract. This contention appears to be supported by the terms of the contract, which provides that extras must be approved in writing prior to execution. This provision was not complied with but it does not constitute a defense available to appellant, because, as we hold, a strict compliance with this provision of the contract was waived by appellant in this instance. It is not disputed that the extra excavation was done with the knowledge and at the direction of Smith who was not only the architect supervising the work for Rivercliff but was also a part owner of the appellant corporation. From his testimony we gather that he refused to approve an allowance for extras mainly because he did not think the contractor was entitled to anything as a result of the changed method of constructing the foundation. It appears that other changes in construction had been made and paid for where no written change order had been previously issued. Although it was shown that several such changes had been made and paid for during the construction of the four buildings, yet Mr. Smith testified that only one written change order had been made.⁶⁵

Another court stated,

Several situations may form the basis for waiver: (1) when the extra work was necessary and had not been foreseen; (2) when the changes were of such magnitude that they could not be supposed to have been made without the knowledge of the owner; (3) when the owner was aware

of the additional work and made no objection to it; and (4) when there was a subsequent verbal agreement authorizing the work.⁶⁶

Finally, in a subcontractor context, a court stated,

the court finds that plaintiff is entitled to recover for several of the jobs which it performed that were not incidental to the building of a cofferdam and that were required to be done due to the insistence or inaction of James. Where a party is aware that extra work is being done without proper authorization but stands by without protest while extra work is being incorporated into the project, there is an implied promise that he will pay for the extra work. See *United States v. Klefstad Engineering Co.*, 324 F.Supp. 972 (W.D. Pa.1971). In *Klefstad*, the prime contractor was given the right to recover for work it performed which was the responsibility of the subcontractor; whereas in the present case the subcontractor, E & R, is entitled to recover for work it performed which was the responsibility of the prime contractor, James. Whether the theory of recovery is considered as quasi-contract, implied-in-fact, or promissory estoppel, a subcontractor is entitled to be compensated for extra work it performed as the result of inducing statements and conduct by the prime contractor.⁶⁷

Two California cases demonstrate the difficulty in predicting when a court will find that formal requirements have been excused. In *Acoustics, Inc. v. Trepte Construction Co.*,⁶⁸ the court held that compliance with contractual provisions for written orders is indispensable, and denied recovery to a contractor who had been verbally ordered to perform changed work. The court noted that the state inspector who had ordered the changes had no authority to waive the formal requirement and that the contractor erred in expecting payment without a written change order from the state architect as required in the contract.

Eight years later, in *Weeshoff Construction Co. v. Los Angeles County Flood Control District*,⁶⁹ which involved a similar claim, the only differentiation being the apparent knowledge by the awarding agency that a site inspector

⁶⁷*United States v. Guy H. James Constr. Co.*, 390 F.Supp. 1193, 1223 (M.D.Tenn.1972), aff'd, 489 F.2d 756 (6th Cir.1974).

⁶⁸14 Cal.App.3d 887, 92 Cal.Rptr. 723 (1971).

⁶⁹See supra note 24.

was directing changes to be made, the court came to the opposite result based on, though not explicitly, the constructive change rationale.

Admittedly, case decisions can appear to reach inconsistent results on similar facts. Often this is due to a failure by the court to apply a sensible and accepted reliance standard. When the issues are who can waive the condition and whether it has been waived, the court should consider whether the contractor (or subcontractor) has been reasonable in its belief that acts of the owner indicate that a written change order would not be a condition to payment.

Two New York lawyers suggest that New York courts draw a distinction between public and private contracts.⁷⁰ They suggest that contractor claims are routinely barred unless the notice is given as required in public contracts, but waiver may be found in private contracts. (In that regard, the *Acoustic* and *Weeshoff* cases discussed earlier in this section were both California public contract cases. Clearly, the courts examined the facts and routinely did not bar the claim because of a failure to give the contractually required notice.)

After canvassing the recent New York cases, these lawyers state that the reason for the distinction between public and private contracts is based on the need to protect “the public fisc,” to uphold the integrity of the competitive bidding process, and the effect of the requirement that public contracts must be awarded to the low responsible bidder. The latter requirement may generate bids by “unsavory” contractors.

Private owners do not need the same protection, they say. They can pick their bidders without the restraints faced by public entities. They may pay more for protection against claims-prone contractors by choosing only reputable ones and paying for this by a higher contract price. But many private contracts contain such notice provisions that are often relied upon by private owners.

It is clear that the public–private distinction is real and plays a role in judicial decisions. But the reliance factor and a scrutiny of the relevant facts are the key factors.

Another way of avoiding the formalities of the changes clause is to conclude the work was not a “change.” Section 21.03A noted that work may be considered outside the

changes clause. Likewise, work made necessary because of errors of the design professional must be paid for despite the absence of the formal requirements set forth in the changes clause. Such work can be regarded as a remedy for defective work given to the contractor.

Similarly, as noted Section 21.04F, it has been held that work needed to conform to contract requirements is not a change requiring a change order.⁷¹

I. Pricing Changed Work

Pricing changed work is an important part of the changes mechanism. A tightly drawn pricing formula, along with clear and complete contract documents, can discourage a deliberately low bid made with the intention of asserting a long list of claims for extra work.

Where possible, work should be compensated by any unit prices specified in the agreement. If no specifically applicable unit price is specified in the contract, compensation should be based on an analogous unit item, taking into account the difference between it and the required work. It is also important, however, to take into account the possibility of great variations in units of work requested and the effect on contractor costs. (See Section 17.02D.)

When the contractor receives the directive under A201-2007, Section 7.3.5, it must proceed with the change in the work and indicate whether it agrees or disagrees with the method set forth in the construction change directive of adjusting price or time. If it agrees, under Section 7.3.6 it signs the construction change directive. If it does not respond promptly or disagrees with the proposed method of adjustment, under Section 7.3.7 the price adjustment will be determined by the architect “on the basis of reasonable expenditures and savings . . . including, in the case of an increase in the Contract Sum an amount for overhead and profit.” It appears that Section 7.3.10 gives the architect the power to make time as well as cost adjustments.

Some contracts, including A201-2007, Section 7.3.7 provide that if the parties cannot agree, the contractor will be paid cost plus a designated percentage of cost in lieu of overhead and profit. Pricing extra work in this fashion can discourage the contractor from reducing costs. However, it may be difficult to arrive at a fixed fee for overhead and profit when the nature of the extra work cannot be

⁷⁰Postner & Cruz, *The Public/Private Distinction in Enforcement of Contractual Notice and Claim Provisions*, Construction and the Law, Vol. 17, No. 1, Spring 2003 (published by Postner and Rubin).

⁷¹*Town of Palm Beach v. Ryan Inc. Eastern*, supra note 50.

determined until the work is ordered. For this reason, cost plus a percentage of cost will probably continue to be used to price changed work.⁷²

When a cost formula is used, the design professional must examine the cost items to see whether they are reasonable and required under the change order. The changes clause can specify that only material, equipment, and labor costs or direct overhead costs are to be included as cost items.⁷³

Public contracts—federal and state—frequently provide that if the parties cannot agree, there will be an “equitable” adjustment of the price.⁷⁴

Suppose the change reduces the work. Does deductive change require that overhead and profit also be deducted for deleted work? Section 7.3.7 of AIA Document A201-2007 permits the architect to add a reasonable allowance for overhead and profit for an increase in the work but Section 7.3.8 appears to preclude reduction of overhead and profit if work is deleted. In contrast, a federal procurement decision held that overhead and profit would be deducted when work is deleted.⁷⁵

Suppose a changes clause specifies that the parties will agree on compensation for changed work and the parties cannot agree. Early cases concluded that such an agreement was not enforceable as simply “an agreement to agree.”⁷⁶ Today, courts would very likely determine a reasonable price for the work where the parties do not

agree.⁷⁷ One case involving changed work on a subcontract held that where the parties could not agree on a price, the subcontractor could receive cost plus overhead and profit.⁷⁸

A changes clause that specifies that the parties will agree should also provide an alternative if the parties do not agree, such as a pricing formula or a broadly drawn arbitration clause. Earlier federal procurement cases seemed to prohibit contractors from recovering for added costs of doing unchanged work caused by the change order.⁷⁹ However, federal procurement regulations have been changed to permit the contractor to recover additional costs of performing unchanged work.⁸⁰

In addition to claims involving the cost of performing unchanged work, an excessive number of change orders of the type that can be considered cardinal changes are, along with other acts of the owner, often the basis for the now frequent delay damage claim (discussed in Section 26.10).

SECTION 21.05 Effect of Changes on Performance Bonds

When sureties were usually uncompensated individuals, courts held that any change in the contract between the principal and the obligee would discharge the surety. This would be unjust where a professional surety bond company is used, especially as changes and modifications are common in construction contracts. Most surety bonds provide that modifications made in the basic construction contract will not discharge the surety. Some changes clauses permit changes up to a designated percentage of the contract price without notifying the surety.

⁷²Federal procurement regulations have developed weighted guidelines for determining profit. The factors taken into account are degree of risk, relative difficulty of the work, size of job, period of performance, contractor’s investment, assistance by government, and subcontracting. Each of these factors is weighted depending on the particular procurement. An illustration of how these guidelines are used can be found in *Norair Eng’g Corp.*, ASBCA No. 10856, 67-2 BCA ¶6619.

Payment: Money Flow as Lifeline

SECTION 22.01 The Doctrine of Conditions

This chapter deals principally with the process by which the contractor is paid for performing work required by the construction documents. The rules that control this process are derived principally from the contract documents, most notably the basic agreement and the general conditions. An important backdrop to these contract provisions is the part of the legal doctrine of conditions that deals with the order of performance.

This important legal doctrine seeks to protect the actual exchange of performance specified in the contract. A party should not have to perform its promise without obtaining the other party's promised performance. For example, suppose a contract is made under which a supplier agrees to deliver supplies to a small manufacturer. The supplies arrive by truck at the warehouse. However, the seller's truck driver refuses to unload the supplies until payment is made. The buyer's employee refuses to pay until the supplies are unloaded and placed on the buyer's receiving dock. Obviously, such a dispute could have been dealt with in the first instance by appropriate contract language dealing with the question of whether delivery precedes payment. When the contract does not deal with this question, the law must determine the sequence of performance.

Before proceeding to the legal resolution of this question, it should be noted that had the seller unloaded the supplies and not been paid, the seller would have had a valid claim for payment. Conversely, had the buyer paid but the supplies not been unloaded, the buyer would have had a valid claim for the value of the supplies or return of the money. However, neither party wishes to exchange its actual performance for a legal claim. Each would prefer to receive the other's performance before rendering its own.

Likewise, buyer and seller of real estate wish to avoid performance without obtaining the other's performance. The seller does not wish to transfer ownership by deed without obtaining the money. Conversely, the buyer does not wish to pay without receiving the deed. In a real estate purchase, protecting the desire of each is usually accomplished by using a third party or escrow holder. The seller will transfer the deed, and the buyer will deliver the money to the third party. Each believes the third party will effectuate the exchange.

In the absence of a third-party system or specific contract clause dealing with sequence of performance, the law must determine whether performance or payment must come first. The common law required that the performance of services precede the payment for those services.¹ This protected the party receiving the services by permitting that party to withhold payment until all the services were performed. Not only did this rule allow the paying party to avoid the risk of paying and then not receiving performance, but it also allowed the paying party to dangle payment before the performing party, a powerful incentive for rendering performance.

However, the "Work first and then be paid" rule is disadvantageous to the performing party. The latter must finance the entire cost of performance. The party performing services must take the risk that any deviation, however trivial, would enable the paying party to withhold money greatly in excess of the damages caused by the deviation. The performing party must assume the risk that the paying party might not pay after complete performance, leaving the performing party with a legal claim.

¹E. A. FARNSWORTH, CONTRACTS § 8.11 at 614 (4th ed. 2004).

The doctrine of conditions is central to the discussion of progress payments (discussed in Section 22.02) and the right of the contractor to recover despite noncompliance (discussed in Section 22.06). Although less important, it is also relevant to retainage and final payment, discussed in Sections 22.03 and 22.05, respectively.

SECTION 22.02 Progress Payments

A. Function

The doctrine of conditions requires that work be performed before any obligation to pay arises. Such a rule places severe financial obligations on the contractor and creates a substantial risk of nonpayment. To avoid these problems, construction contracts generally provide for periodic progress payments made monthly or at designated phases of the work. This section examines the process by which progress payments are made and some common problems involved in this process.²

B. Schedule of Values

To facilitate computation of the amount to be paid under progress payments in a fixed-price contract, the contractor is generally required to submit to the design professional a schedule of values before the first application for payment. This schedule, when approved, constitutes an agreed valuation of designated portions of the work. The aggregate of the schedule should be the contract price. Contracts sometimes permit adjustments as work proceeds.

C. Application for Payment Certificate

The contractor submits an application for a progress payment a designated number of days before payment is due. This application is usually accompanied by documentation that supports the contractor's right to be paid the amount requested. In addition to the work itself, AIA Document A201-2007, Section 9.3.2 allows payment for goods stored at the site or, with advance approval by the owner, off the site for subsequent incorporation in the work. If stored off

site, the location must be agreed upon in writing. Payment for goods stored on or off the site is conditioned upon the contractor complying with procedures satisfactory to the owner to establish the owner's title to the goods.

Allowing the contractor to retain possession of material for which the owner has paid can create legal problems, mainly claims by creditors of the contractor or the trustee in bankruptcy if the contractor is declared bankrupt.³ To avoid this, some owners require that material be stored only in bonded warehouses.

Some contracts require the contractor to give assurance or proof that it has paid its subcontractors and suppliers when progress payments applications are made. Alternatively, such contracts allow the prime contractor to submit documents executed by subcontractors or suppliers that give up their rights to any mechanics' liens.

Neither the standard contract published by the American Institute of Architects (AIA) nor the one published by the Engineers Joint Contracts Documents Committee (EJCDC) requires such assurance or proof of payment or submission of lien waivers at the time *progress* payments are made. This is justified in part by the fact that administrative requirements can be formidable in large projects if partial lien waivers or evidence of partial payment is required. These steps may not be necessary if other techniques exist that protect against such risks. One function of a retainage (discussed in Section 22.03) is to protect against liens. Also, Section 9.3.3 in AIA Document A201-2007 requires the contractor to warrant to the best of its "knowledge, information, and belief" that all work and materials will be "free and clear of liens." This will not preclude liens but may create a right against the contractor or surety under a payment bond.

Allowing design professionals to withhold progress payments when they learn that subcontractors are not being paid or that liens have been or are likely to be filed may be sufficient owner protection. Usually such information is communicated quickly to the design professional. The AIA acceded to requests by subcontractor associations to include more recognition of and protection for subcontractors in A201-1997. For example, Paragraph 9.3.1.2 barred the contractor from including in the payment application "requests for payment for portions of the Work for which

²This section examines the AIA payment process. For a comparison of the AIA approach with that of the Associated General Contractors of America (AGC) and the Engineers Joint Contract Documents Committee (EJCDC), see Nielsen, *Payment Provisions: Form Contract Approaches and Alternative Perspectives*, 24 *Constr. Lawyer*, No. 4, Fall 2004, p. 33.

³See *Traveler's Indem. Co. v. Ewing, Cole, Erdman & Eubank*, 711 F.2d 14 (3d Cir.1983), cert. denied, 464 U.S. 1041 (1984) (architect not liable for not warning owner of bankruptcy risk in paying for materials stored off site).

the Contractor does not intend to pay a Subcontractor or material supplier unless such Work has been performed by others whom the Contractor intends to pay.” Similarly, Paragraph 9.6.3 required the architect, on request, “if practicable” to furnish information to a subcontractor regarding the percentages of completion or amounts applied for by the contractor and action taken thereon on account of work performed by the subcontractor. This language has been incorporated in A201-2007, Sections 9.3.1.2 and 9.6.3. The 2007 A201 adds new language to Section 9.6.4, giving the owner “the right to request written evidence from the Contractor that the Contractor has properly paid” subcontractors and suppliers out of amounts paid by the owner to the contractor. If the contractor does not furnish the written evidence in seven days, the owner has the right to contact the subcontractors and suppliers directly to ascertain whether they have been properly paid.

Also, the AIA recognizes the increasingly difficult problems of cash flow for the contractor. Section 9.3.1.1 allows the contractor to include in its application amounts that had been authorized by construction change directives or by interim determinations of the architect though not formally included in change orders.

To speed the cash flow, Section 7.3.9 allows the contractor to request payment “for Work completed” under a Construction Change Directive (CCD), even if the total cost of the CCD has yet to be determined. The architect then makes “an interim determination for purposes of monthly certification for payment” of the cost of the completed work and certifies it for payment. Either the owner or contractor may challenge the interim determination in accordance with the “claims and disputes” process set forth in Article 15. However, if they agree to the interim determination, then Section 7.3.10 requires the architect to prepare a change order to that effect. Section 7.3.10 makes explicit that “Change Orders may be issued for all or any part of a Construction Change Directive.”

D. Observations and Inspections: Representations from Certificate Issuance

Before issuing a payment certificate, the design professional visits the site to determine how far the work has progressed. This is the basis on which progress payments are made.

The inspection should uncover whatever an inspection principally designed to determine the progress of the work would have uncovered. Each new edition of A201 has

sought to limit the architect’s responsibility during the progress payment certification process. Under A201-2007, Section 9.4.2, issuance of a certificate is “based on the Architect’s evaluation of the Work and the data comprising the Application for Payment.” Section 9.4.2 also states that the certificate warrants only that the work complies with the contract requirements “to the best of the Architect’s knowledge, information and belief.” The architect’s representations are “subject to an evaluation of the Work for conformance with the Contract Documents on Substantial Completion, to results of subsequent tests and inspections, to correction of minor deviations from the Contract Documents prior to completion and to specific qualifications expressed by the Architect.” Finally, Section 9.4.2 states that the issuance of a certificate does not represent that the architect has made exhaustive or continuous on-site inspections, reviewed the construction methods, reviewed copies of requisitions from subcontractors and suppliers, or made any examination to determine how previous payments have been used.

Some owners, particularly developers influenced by their lenders, require more intensive inspections and place more responsibility on the architect. To accomplish these aims, such owners require the architect to give warranties that go beyond the experience of the design professional and the services she has contractually committed to perform. To protect architects, the AIA in its B101-2007, Section 10.4 requires that the architect receive certificate language, for her “review,” “at least 14 days prior to the requested dates of execution” and prevents the owner from requiring certifications “that would require knowledge services, or responsibilities beyond” the scope of B101-2007.

E. Amount Certified for Payment: Incorporation into the Project

The amount certified for payment depends on the pricing provisions in the construction contract. In fixed-price contracts, the pricing benchmark is the contract price. In cost contracts, the principal reference point for determining payments is the allowable costs incurred by the contractor. In unit-priced contracts, the progress payments are based on the number of units of designated work performed.

Each pricing provision commonly uses a retainage system under which a designated amount is withheld from progress payments to provide security to the owner. (Retainage is discussed in Section 22.03.)

The computation of the amount to be paid is facilitated by using a schedule of values, discussed in Section 22.02B. Such an agreed schedule determines the extent to which the work has progressed. Smaller contracts without a schedule of values sometimes provide that specified payments are to be made at designated phases of the work with an appropriate allowance for retainage where used.

Despite a properly prepared schedule of values, measurement problems can develop. Much time elapses between the contractor's ordering material and equipment and incorporating that material and equipment into the work. The contractor prefers payment as early as possible. The owner prefers not to have to pay until the material and equipment have been incorporated into the project. However, as noted in Section 22.02C, AIA Document A201-2007, Section 9.3.2, allows for payment for materials and equipment not incorporated but stored on and off the site. Also, as noted in 22.02C, payment prior to incorporation into the project raises legal and insurance questions.

Construction contracts allow the design professional to make *partial* certification for payment. Partial certificates authorize payments of an amount less than requested by the contractor. Usually such certificates are based on the design professional's determination that the work has not progressed to the extent claimed by the contractor or on a determination that the work does not meet the requirements in the contract documents. If an architect intends to withhold the certificate either in whole or in part, Section 9.4.1 of AIA Document A201-2007 requires the architect to notify the contractor and the owner in writing of such a decision and to give reasons for this action. Under Section 9.5.1, failure by the contractor and architect to agree on payment amount allows the architect to issue a certificate for payment for the amount "for which the Architect is able to make such representations to the Owner."

Construction contracts frequently give the design professional the power to revoke a previously issued certificate. Revocation can be effectuated by a partial certificate or by withholding a certificate for work that has been performed. One reason for revocation is the discovery of defective work that had been the basis of a previously issued certificate.

Section 9.5.1 of AIA Document A201-2007 gives the architect power to make "withholds" from payments due.⁴

⁴See *Howard S. Lease Constr. Co. v. Holly*, 725 P.2d 712 (Alaska 1986) (need not notify contractor before withholding). But see AIA Doc. A201-2007, §§ 9.4.1, 9.5.1.

Withholds are designed to protect the owner from losses that have occurred or may occur in the future. Losses can relate to nonconforming work, nonpayment of subcontractors and suppliers, or claims made by other contractors or other third parties against the owner for which the contractor may be responsible.

Although the law would give the owner certain offset rights under these circumstances without a contractual right of offset, it is advisable to expressly recognize this right. Doing so avoids the necessity of establishing a right to offset and can exceed the protection given by law. However, the design professional should not be unreasonable or arbitrary in determining when and how much to withhold from payment amounts earned by the contractor.⁵ Issuing partial certificates or, more important, withholding certificates can result in contractor default. For this reason, language that requires design professional and contractor to discuss and negotiate on these matters is useful.⁶

Offsets or withholdings from public works contractors raise constitutional issues. For example, state prevailing wage acts require that all workers employed on public construction projects of a certain minimum size be paid the "prevailing wage" (which is essentially the wage and benefits paid to unionized workers). The state department of labor is charged with investigating workers' complaints that they are not receiving the prevailing wage. If the department determines that underpayments have been made, it may order the public agency in charge of the project to withhold from the contractor or subcontractor the amount of the alleged wage underpayments, plus statutory penalties, without first giving the contractor or subcontractor a chance to contest the workers' allegations. In *Lujan v. G & G Fire Sprinklers, Inc.*,⁷ the Supreme Court ruled that California's Prevailing Wage Act, which mandated the immediate withholding of wage underpayments and statutory penalties without a prior hearing from payments otherwise due a subcontractor, does not violate due process.

⁵*City of Mound Bayou v. Roy Collin Constr. Co.*, 499 So.2d 1354 (Miss.1986) (altering requests without proof of poor or incomplete work); *S.I.E.M.E., S. r. 1*, ASBCA No. 25642, 81-2 BCA ¶15,377 (improper to withhold \$10,000 when \$1,000 would have been sufficient to complete the few remaining items).

⁶Nevada by statute has severely limited the owner's right to withhold. See Nev.Rev.Stat. § 624.609, discussed in Sebastian, *Legislative Update*, 27 *Constr. Lawyer*, No. 2, Spring 2007, p. 38.

⁷532 U.S. 189 (2001). California has since amended its Prevailing Wage Act to grant contractors and subcontractors a post-deprivation hearing as to the propriety of the withholding; see West Ann.Cal.Labor Code § 1742.

A federal court of appeals similarly ruled that due process does not require that a public works contractor receive a formal hearing before a design professional withholds progress payments.⁸ Informal hearings are sufficient. The court was concerned that such a requirement could cause delay and unreasonably burden the public entity. Increasingly, contractors invoke constitutional rights in their disputes with state entities.⁹

Federal procurement policy allows reduction or suspension of progress payments despite the absence of any present contract breach by the contractor where the latter's financial position makes future nonperformance likely.¹⁰

F. Time of Payment

The federal government¹¹ and the state legislatures have been increasingly responsive to complaints by contractors and subcontractors that payments are not made promptly to them. For example, California legislation establishes deadlines for making progress payments, places a cap on withholding where amounts are disputed, and imposes penalties for noncompliance.¹² In addition, a prime contractor who violates the law is subject to licensing disciplinary action and must pay the subcontractor a penalty of 2 percent per month in addition to normal interest.

Care must be taken to check for legislation dealing with the payment process. Some such legislation covers public contracts, some private contracts, and some both. Also, such legislation should be checked to see whether it

provides that parties can, by contract, change the legislative rules.

Another payment-timing issue is whether a prime contractor may, by contract, delay payment of subcontractors contingent upon the contractor's receipt of payment by the owner. These "pay when paid" and "pay if paid" clauses are discussed in Section 28.06.

G. Passage of Title

As work proceeds, the materials and equipment are procured and installed in the building or attached to the land. Problems can develop that relate to when title passes from the contractor to the owner. There may be a preliminary question as to when title passes between the vendor of the product and the purchaser, in the construction context, the contractor or subcontractors. But for purposes of the construction contract, the principal question relates to when the materials and equipment belong to the owner.

Passage of title is important. If the materials and equipment still belong to the contractor, the contractor has the risk of loss, and the creditors of the contractor can seize the property or equipment in payment for the contractor's debts. Conversely, once the title has passed to the owner the owner has the risk of loss, and its creditors may have rights in the property.

The risk of loss is usually dealt with by insurance. Either the contractor or, more commonly, the owner takes out insurance on all materials and equipment that reach the site or, in the case of materials and equipment stored, at an earlier point. But typically, the owner would like to have title pass to it as soon as possible to avoid the possibility that creditors of the contractor will claim that they can seize its property in payment for the contractor's debts or because of unsatisfied court judgments.

By law, title passes when the materials and equipment are incorporated into the project. Other solutions can be expressed in the contract, such as when materials are delivered to the site¹³ or when payment is made.

⁸*Signet Constr. Corp. v. Borg*, 775 F.2d 486 (2d Cir.1985).

⁹See Sections 18.04E and 33.03J.

¹⁰This power was exercised in *National Eastern Corp. v. United States*, 201 Ct.Cl. 776, 477 F.2d 1347 (1973).

¹¹Federal Prompt Payment Statutes, 31 U.S.C.A. § 3901 et seq.

¹²West Ann.Cal.Bus. & Prof.Code § 7108.5 (applies to payments by contractors on private and local public contracts); West Ann.Cal. Civ. Code § 3260.1 (applies to private contracts); West Ann.Cal.Pub. Cont. Code § 10261.5 (applies to payment of contractors by state agencies); id. at 10262.5 (applies to payment by contractors on projects for state public works agencies). These statutes are interpreted in *Morton Eng'g & Constr., Inc. v. Patscheck*, 87 Cal.App.4th 712, 104 Cal.Rptr.2d 815 (2001) (subcontractor's claim successful) and *Denver D. Darling, Inc. v. Controlled Environments Constr., Inc.*, 89 Cal.App.4th 1221, 108 Cal. Rptr.2d 213 (2001) (subcontractor's claim denied because a bona fide dispute existed with the contractor). For a state-by-state compilation, see Hays, *Prompt Payment Acts: Recent Developments and Trends*, 22 Constr. Lawyer, No. 3, Summer 2002, p. 29.

¹³In *Franklin Pavkov Constr. Co. v. Roche*, 279 F.3d 989 (Fed.Cir. 2002), rehearing denied Mar. 22, 2002, the court ruled that the contractor, not the government, bore the risk of loss of government-furnished property stored in a fenced-in, but unlocked, enclosure at the project site. The court looked to the U.C.C.'s definition of "delivery" to determine the contractor's responsibility for discovering that the promised items were missing.

H. Assignment of Payments

Contractors or subcontractors often must borrow funds to operate their businesses. Lenders commonly require collateral to secure them against the possibility that the borrower will not repay the loan. Sometimes collateral consists of funds to be earned under specific construction contracts. Lenders often seek information from owners regarding the construction contracts whose payments are to be used as security and assurances by the owner that payments will be made to the lender or that checks will be issued jointly to lender and contractor.

Rather than rely on a promise, lenders more commonly demand that assignments be made to them of the payments. An assignment transfers the right to receive payment and effectuates a change of ownership in the rights transferred. It is a more substantial security than a promise. The party making the transfer is the *assignor*. The party to whom ownership is transferred is the *assignee*. The party owing the obligation being transferred is the *obligor*. Using the fact pattern of the prime contractor seeking a loan, the prime is the assignor, the bank the assignee, and the owner the obligor.

Such assignments were difficult if not impossible to accomplish early in English legal history. Modern law not only makes such assignments possible but also encourages them. However, these assignments should not put the obligor in a substantially worse position. Encouragement of assignments has gone to the extreme of invalidating contract clauses that prohibit assignment of such rights where the assignments are given as collateral to obtain loans.¹⁴ Terms in contracts precluding assignment of payments for such purposes are invalid.

Although the validity of such assignments no longer raises serious questions, other legal problems exist. They center principally on the extent to which the original contract obligation can be changed because a third party (the assignee) now owns contract rights.

Normally, the obligor must pay the assignee after it has received notice of the assignment. But sometimes the obligor, such as the owner, can pay the assignor contractor to enable it to complete the contract.¹⁵

¹⁴*Mississippi Bank v. Nickles & Wells Constr. Co.*, 421 So.2d 1056 (Miss.1982); *Aetna Cas. & Sur. Co. v. Bedford-Stuyvesant Restoration Constr. Corp.*, 90 A.D.2d 474, 455 N.Y.S.2d 265 (1982). See U.C.C. § 9-406(d).

¹⁵*Fricker v. Uddo & Taormina Co.*, 48 Cal.2d 696, 312 P.2d 1085 (1957).

Modification of existing contracts whose rights have been assigned can be made “in good faith and in accordance with reasonable commercial standards” as long as payments assigned have not as yet been earned.¹⁶ The obligor (owner) can offset against the assignee (lender) amounts owed it by the assignor (prime contractor).¹⁷

I. Lender Involvement

The assumption in this section has been that the owner is making payments to its prime contractor. Sometimes lenders involve themselves directly in the payment process. However, this can create the type of problem that was presented in *Davis v. Nevada National Bank*.¹⁸ The lender was held liable for paying directly to a prime contractor despite warning by the owner that there were structural defects. The owner successfully pursued a claim against the contractor, but the contractor’s bankruptcy wiped out that claim. As a result, the owner brought a claim against the lender. Recognizing that this was a “one of a kind” case and seeking to reassure lenders that it would not expose them to unreasonable risk, the court noted,

Nothing we have said should be interpreted beyond the comparatively narrow confines of the instant case. Specifically, under usual construction loan terms and conditions, no lender should consider itself at risk if it elects not to generally inspect the progress of the construction of a project financed by the lender. Nor is a lender to consider itself at risk if it volitionally elects to inspect and does so negligently or ineffectively. A lender also has no duty, under our instant holding, either to withhold payment at borrowers’ requests or to inspect on such requests, for construction deficiencies or omissions of a type that inevitably will occur in all projects and that commonly are remedied by a contractor as part of a “punch list” prior to project completion and the release of retained funds.¹⁹

The *Davis* case involved an owner claim against the lender. Subcontractors too may look to the lender for relief when the prime contractor does not pay them.

¹⁶U.C.C. § 9-405.

¹⁷*Id.* at § 9-404.

¹⁸737 P.2d 503 (Nev.1987).

¹⁹*Id.* at 506. A construction lender was found to have a fiduciary relationship with the owner in *First Nat’l Bank & Trust Co. of the Treasurer Coast v. Pack*, 789 So.2d 411 (Fla.Dist.Ct.App.2001), review denied, 817 So.2d 846 (Fla.2002).

Suppose the prime contractor obtains a loan from a lender. As explained in Section 22.02H, the contractor would provide security for the loan by assigning its future payments on a project to the lender. If the lender applies these payments from the owner to pay off the contractor's outstanding debt, there may be insufficient funds left to pay the subcontractors. For this reason, AIA A201–2007, Section 9.6.7, specifies that payments received by the contractor for work properly performed by subcontractors and suppliers “shall be held by the Contractor for those Subcontractors or suppliers.” This language has been interpreted to create an express trust, which means the owner's payments (the trust funds) can only be used to pay the beneficiaries of the trust (the subcontractors and suppliers). The lender is liable for using the owner's payments to offset the contractor's debt if the bank should have known the funds were for a construction project and may be trust funds.²⁰

Subcontractors may also claim that the lender had a duty to shield them from the contractor's misconduct. In *Hoida, Inc. v. M&I Midstate Bank*,²¹ an unpaid subcontractor, unable to recover from the prime contractor, sued the project's construction lender. The subcontractor argued that the lender's disbursement of progress payments to the prime contractor were negligent because the lender did not first verify that the prime contractor had obtained lien waivers from the subcontractors. (The lien waivers would have meant the subcontractors had been paid.) A divided Wisconsin Supreme Court instead ruled that construction lenders do not breach a common law duty of care by making disbursements, authorized by the owner, without first verifying that the subcontractors had been paid. The court feared that imposing such a duty would place too great an administrative responsibility upon lenders.²² It also pointed out that making the lender liable would violate the public policy of the mechanics' lien act, which gives liens by construction lenders priority over liens filed by subcontractors.²³

²⁰*Chang v. Redding Bank of Commerce*, 29 Cal.App.4th 673, 35 Cal. Rptr.2d 64 (1994); *Westview Investments, Ltd. v. U.S. Bank Nat. Ass'n*, 133 Wash.App. 835, 138 P.3d 638 (2006). As discussed in Section 28.07F, a trust in favor of the subcontractors and suppliers may also be created by statute.

J. Joint Checks

One of the principal aims of the payment process is to make certain that payments go to those who have provided labor or materials. Those who have provided labor or materials for private projects, such as contractors, subcontractors, and suppliers, usually have the right to assert a mechanics' lien on the property they have improved when they are not paid. This gives them a security interest in the property and a right to have the property sold to pay their claims.

To avoid this and also to ensure that those who are doing the work will continue to have the incentive to do the work, those who make payments, such as owners and prime contractors, seek to avoid diversion of the funds from those to whom the funds should go. One method sometimes used to avoid diversion is to have a payment issued by a joint check. For example, an owner may issue a joint check to a prime contractor for work that includes work by a subcontractor or materials furnished by a supplier. The names of both payees appear on the check. Each will have to endorse the check for it to be converted into cash. This should avoid the possibility that the prime contractor will take the funds and not pay those whose services or materials have provided the basis for the payment. Similarly, prime contractors sometimes issue payments to subcontractors by using a joint check, to ensure that the subcontractor pays sub-subcontractors or suppliers.²⁴

This method, though apparently simple, creates legal problems. The first is whether the contract allows the payor to make payments by joint check. Using the owner as payor as an illustration, the power to pay by joint check initially depends on whether the prime contract allows this method of payment. Imposing the joint check method may generate opposition by the prime contractor who does not wish to have to obtain cooperation from the joint payee to cash the check. (Of course, this is the purpose for the joint check method.) Without a contractual power allowing the owner to use the joint check method, its unilateral use would be a breach of contract.²⁵ The contractor can claim with justification that the contract requires payment to the contractor and that any attempt to interject

²⁴Barrett, *Joint Check Arrangements: A Release for the General Contractor and Its Surety*, 8 Constr. Lawyer, No. 2, April 1988, p. 7.

²⁵*Piedmont Eng'g & Constr. Corp. v. Amps Elec. Co.*, 162 Ga.App. 564, 292 S.E.2d 411 (1982).

a third party interferes with its management prerogatives. Where this is discussed in advance and jointly resolved, it is likely that the clause will allow the owner to use the joint check process if the contractor is in default in paying subcontractors or suppliers.

Another contractual solution is to bar the issuance of joint checks if the contractor requests the owner not to do so because of a good-faith dispute it has with a subcontractor or supplier. The more difficult problem is whether the owner would impliedly have the power to use the joint check process if it had reasonable grounds to believe that the payee would not pay those to whom payments should be made. The obligation of good faith and fair dealing would likely give the owner this power under such circumstances, but the outcome of such a dispute would be difficult to predict.

Even if the payor has the power to pay by joint checks, problems can develop if the process misfires, principally because the payee obtains an endorsement from the copayee but the latter does not actually receive payment or the amount owed the copayee and the amount of the payment are not the same. In a California case,²⁶ the owner drew a check payable jointly to the contractor and a supplier, after which the supplier waived its mechanics' lien rights. Both parties endorsed the check. Proceeds were paid to the prime contractor, who gave its personal check to the supplier. Unfortunately for the supplier, the check was dishonored because the contractor did not have sufficient funds in its account.

The supplier then sued the contractor and received a judgment for the amount of the debt but could satisfy only a portion of it from the assets of the prime contractor. Then the supplier brought a lawsuit against the surety of the prime contractor for the balance. The court held that the unpaid supplier did not lose its right to claim on the bond despite having waived its lien and endorsing the check. Yet the joint check process clearly failed because the supplier did not insist on being paid at the time it endorsed the check but relied on a personal check issued by the prime.

K. Surety Requests That Payment Be Withheld

Payment bonds require the surety to pay unpaid subcontractors and suppliers. To recover any losses caused by having to make such payments, sureties often demand

that the owner stop paying the prime contractor when the latter has defaulted in its payments to subcontractors or suppliers.

In public work, unpaid subcontractors and suppliers do not have lien rights. As a result, the owner may decide to pay the prime contractor to enable the latter to continue performance and complete the work. In doing so, the surety's right to reimbursement can be affected adversely. Cases decided in the U.S. Court of Claims, now the U.S. Court of Appeals for the Federal Circuit, have given the contracting officer broad discretion to pay earned progress payments to the contractor despite some minor defaults.²⁷ The court has recognized the government's interest in obtaining a completed project by giving discretion to make payments even though payment can harm the surety.

Although the contracting officer is given considerable discretion, a subsequent opinion by the Court of Claims requires that that discretion be exercised "responsibly" and that the surety's interest be considered.²⁸ In one case, a summary judgment had been granted to the government by the trial court based solely on the contractor's having been on schedule and having completed 91 percent of the project. The appellate court held that the summary judgment in favor of the government was improper where the surety contended that progress payments and retainage should not have been released when it notified the government of the contractor's impending default.²⁹ Other factors must be examined to determine whether the government exercised reasonable discretion in disbursing the funds. Even if the government acted unreasonably in paying the contractor, the surety must still establish that it was damaged by the improper payments.³⁰

Suppose the owner accedes to the surety's requests or demands. In such a case, the unpaid prime contractor may, in addition to claiming a right to the payment withheld, assert a claim against the surety for wrongful interference with the contract that the prime contractor has made with the owner.

L. Remedies for Nonpayment

For convenience, the discussion will assume an unpaid prime contractor. However, any conclusions expressed in that context are likely to apply to unpaid first- or second-tier subcontractors. The law, as noted in Section 22.02F, recognizes the importance of prompt payment. Yet under certain circumstances, drastic remedies for nonpayment may not be appropriate. Sometimes delay in payment is unavoidable. Delay may not harm the contractor. Care must be taken to avoid an unpaid party's using minor delay as an excuse to terminate an unprofitable contract and causing economic dislocation problems. Despite these possibilities, on the whole nonpayment is—and should be—considered a serious matter.

At the outset, there must be a determination that failure to make payment is a breach of contract. Because construction contracts are detailed and contract procedures often ignored, those accused of not paying in accordance with the contract often assert that prompt payment has been waived.

If payment is not made as promised, the contractor is entitled to interest on the payment. Because as a rule the payments are liquidated or relatively certain in amount, the interest runs from the date payment was due.

AIA documents state that in the absence of a specified rate in the contract, late payments are paid at the “legal rate” of interest.³¹ This term generates confusion. Generally, the legal rate is the amount specified by law that is paid on unpaid court judgments. Yet some states hold that the legal rate is the highest rate that can be lawfully exacted for the particular transaction. Until the explosive inflation of the 1970s, the interest rate on unpaid judgments ran roughly between 5 and 8 percent. During that inflationary period, the actual market rate for a commercial loan was between 15 and 20 percent. In states that used the unpaid judgment rate, owners were often tempted to delay payment and pocket the difference between the two rates.

In the 1980s, inflation subsided and some states increased the rate of interest on unpaid judgments. For that reason, generalizations at any given time as to the differential between these two rates can be perilous. To add complexity, in many states commercial loans have no

limits on interest. Contracting parties should agree on an interest rate for late payments related to the market rate, rather than leave it to the legal rate.

As noted in Section 22.02F, state prompt payment statutes increasingly provide stiff penalties for violations. For example, in California, failure to pay a subcontractor triggers a penalty of 2 percent of the amount due per month for each month the payment is not made in addition to whatever interest is provided by law or by contract.³² Also, if the subcontractor must resort to legal action and it prevails, it is entitled to its attorneys' fees and costs.³³ An unpaid prime contractor can recover the 2 percent penalty, but this is in lieu of any other interest it would be entitled to recover. If it prevails, it can also recover attorneys' fees.³⁴ Local law must be consulted.

Contractors *unable* to borrow money may suffer other losses, such as the ability to bid on other projects, loss of key personnel who leave when they are not paid, or eviction caused by nonpayment of rent. If such losses are reasonably foreseeable at the time the contract is made and could not have been reasonably avoided by the contractor, they can be recovered by the contractor if they can be proven with reasonable certainty. The obstacles to recovering for losses of this sort are formidable, and as a rule, interest is all that can be recovered for delayed payment or nonpayment.

A formidable weapon in the event of nonpayment is the power to suspend work. In addition to placing heavy pressure on the owner, suspension avoids the risk of further uncompensated work. The availability of a mechanics' lien is a pale substitute when there is a substantial risk of nonpayment. Until recently, the law was not willing to recognize a remedy short of termination for such breaches. Some cases now hold that the contractor can suspend work if it is not paid.³⁵

Nonpayment certainly should not automatically give the right to suspend performance. Shutting down and starting up a construction project is costly. It would be unfair to allow the contractor to shut down the job simply because payment is not made absolutely on schedule.

³²West Ann.Cal.Bus. & Prof.Code § 7108.5.

³³Ibid.

³⁴West Ann.Cal.Civ.Code § 3260.1(b), § 3260(g).

³⁵*Hart & Son Hauling, Inc. v. MacHaffie*, 706 S.W.2d 586 (Mo.Ct. App.1986); *Zulla Steel, Inc. v. A. & M. Gregos*, 174 N.J.Super. 124, 415 A.2d 1183 (App.Div.1980). See also Restatement (Second) of Contracts § 237 (1981).

³¹AIA Docs. A101-2007, § 8.2; A201-2007, § 13.6; A401-2007, § 15.2; and B101-2007, § 11.10.2. See Section 6.08 for further discussion of interest.

Under AIA Document A201-2007, Section 9.7, seven days after a progress payment should have been made the contractor can give a seven-day notice of an intention to stop work unless payment is made. Failure to pay after expiration of the notice period permits suspension. Section 9.7 also states that the contractor shall receive a price increase for its reasonable costs of shutdown, delay, and startup. Interest is added to these amounts. Undoubtedly, when it is not paid after a reasonable period of time the contractor should be able to suspend work. However, the two seven-day periods may be too short.

Can an unpaid contractor terminate its obligation to perform? Suspension is temporary. Termination relieves the contractor from the legal obligation of having to perform in the future. In the absence of any contract provision dealing with this question, termination is proper if the breach is classified as “material.”

Although materiality of breach is discussed in greater detail in Section 33.04, it may be useful to look at some factors that relate to nonpayment as a material breach. The most important are effect on the contractor’s ability to perform and the likelihood of future nonpayment. Persistent nonpayment may indicate that the problem is a serious one. A clear statement that performance will not be made is a repudiation and clearly gives the right—and probably the obligation—to stop performance. Termination is an important decision. The law looks at many factors before deciding whether there has been a material breach. Many cases, however, have concluded that a failure to pay (often together with other breaches) gives the contractor the right to terminate its obligation to perform under the contract.³⁶

Emphasis in the discussion and in the cases has been on the effect of nonpayment on the contractor’s ability to perform. This can operate to the disadvantage of a financially sound contractor. Another approach, and perhaps a better one, is to permit termination if a changed cash flow will cause the contractor to finance the project to a larger degree than anticipated. If, however, the facts clearly demonstrate that a particular contractor was selected for,

among other factors, its capacity to absorb payment delay, this may show an intention by the contractor to accept the risk of substantial alteration of financing the work.

Suppose the contractor continues performance. Continued performance may indicate that nonpayment was not sufficiently serious to constitute termination. Continued performance may manifest an intention to continue performance that is relied on by the owner. However, continued performance should not invariably preclude nonpayment from justifying termination. An unpaid contractor may choose to continue work for a short period while awaiting performance.³⁷ This would be especially true if the contractor clearly indicated that if payment were not forthcoming, work would cease.

AIA Document A201-2007, Section 14.1.1.3, permits the contractor to terminate if the work has been suspended for thirty days for nonpayment. The contractor must first give a seven-day written notice that it intends to terminate. Does this express termination provision affect any common law power to terminate for nonpayment? That depends on whether the express power to terminate is exclusive. Generally, the law hesitates to make specified remedies in a contract exclusive unless there is a clear indication that this is the intention of the parties.³⁸ This has been codified in A201-2007, Section 13.4.1, which states that remedies specified are in addition to any remedies otherwise imposed or available by law.

Can the owner preclude termination by paying all unpaid progress payments with interest during the seven-day period? As noted in Section 33.03F, the notice period may allow the owner to cure past defaults. Termination is a drastic remedy, and the obligation of good faith and fair dealing support the conclusion that the owner can cure past defaults during the notice period. Section 27.02 discusses remedies to a contractor who has justifiably ceased performance or who has been wrongfully removed from the site. Some courts allow the contractor to recover only for work performed and not for lost profits.³⁹ However, the general tendency is to treat this breach as no different from any other.

³⁹*Palmer v. Watson Constr. Co.*, 265 Minn. 195, 121 N.W.2d 62 (1963).

The effect of owner nonpayment on the right of a subcontractor to recover for its performance is treated in Section 28.06.

M. Payment as Waiver of Defects

Sometimes contractors contend that making progress payments waives any deviations from contract document requirements. Generally, payment in and of itself does not waive defects.⁴⁰ Suppose the owner knows or should know of the defect and makes payment. This may lead the contractor reasonably to believe that the owner intends to pay despite the defect. If so, minor defects are waived.

To preclude waiver in such cases, construction contracts frequently contain provisions stating that progress payments do not waive claims for defects. For example, Section 9.6.6 of AIA Document A201-2007 states that progress payments are not an acceptance of work that is not in compliance with the contract documents. The payment certificate should make clear that payment does not constitute waiver.

Acts that can constitute waiver of defects more commonly arise when the project is accepted or completed and final payment is made. Detailed discussion of this problem is found in Section 24.05.

N. Progress Payments and the Concept of Divisibility

Divisibility, sometimes called *severability*, is a multipurpose legal concept sometimes applied to a contract where performance is made in installments or is divided into designated items. As an illustration of the first, the contract for the sale of goods could allow twelve monthly deliveries with payment at the time of each delivery. An illustration of the second would be a contract for the sale of goods that consisted of five different items to be delivered with different prices for each item.

If a contract is considered divisible, it would be as if there were twelve separate contracts in the first illustration and five in the second. Each partial performance,

whether a monthly delivery or delivery of less than all the five items, would be considered the equivalent of the money promised for each installment or item. Without describing the many legal issues that can sometimes depend on the divisibility classification, the progress payment mechanism should not result in the construction contract being considered divisible. The amounts certified are approximations and not agreed valuations for the work as it proceeds. The amounts can be—and frequently are—adjusted at the time of final payment.⁴¹

O. Payment as Preference

Bankruptcy law prohibits payments to creditors a certain number of days before filing of bankruptcy. Allowing such a payment would prefer some creditors over others. See Section 33.04C.⁴²

SECTION 22.03 Retainage

Retainage (retention) is a contractually created security system under which the owner retains a specified portion of earned progress payments to secure itself against certain risks. For example, suppose the schedule of values establishes that the contractor is entitled to a progress payment of \$50,000. Construction contracts commonly provide that a portion of this \$50,000 will be retained by the owner and paid on completion. Consistent with the AIA position that to a large degree equates substantial with final completion as shown in Sections 22.04 and 26.04, Section 9.8.5 of AIA Document A201-2007 requires that any retainage, with the consent of any surety, be released to the contractor when the owner and contractor have accepted the responsibilities given them in the Certificate of Substantial Completion. The owner may retain an amount “for Work that is incomplete or not in accordance” with the contract requirements.

The purpose of retainage is to provide money out of which claims that the owner has against the contractor can be collected without the necessity of a lawsuit.

⁴⁰*Annen v. Trump*, 913 S.W.2d 16 (Mo.Ct.App.1995) transfer denied, May 2, 1995 (acceptance and payment did not bar claim). See Annot., 66 A.L.R.2d 570 (1959). Waiver generally is discussed in Section 22.06E.

⁴¹*Dravo Corp. v. Litton Systems, Inc.*, 379 F.Supp. 37 (S.D.Miss. 1974); *Kirkland v. Archbold*, 113 N.E.2d 496 (Ohio App.1953).

⁴²See Hughes & Dunning, *Holding on to What You Have Been Paid: Defending a Preference Action Against a Contractor, Subcontractor or Supplier*, 16 Constr. Lawyer, No. 1, Jan. 1996, p. 15.

Retainage is not an agreed damage or damage limit.⁴³ Some states require retainage in public contracts.

Retainage has become controversial. Contractors and subcontractors increasingly request legislators to help them. They contend that retention of money they have earned is unfair to them and costly and unnecessary to the owner. They assert that the reasons for creating the security, such as defective work or the prime contractor not paying subcontractors or suppliers, are dealt with by the contractor's furnishing performance and payment bonds. Contractors and subcontractors also contend that financing costs that are inevitably incurred because of retention are ultimately transferred to the owner through the contract price. They then argue that the owner is paying twice for the same risk—once through financing costs included in the contract price and once by the cost of surety bond premiums.

This argument equates the efficacy of retainage with bonds. Obviously, it is better for the owner to actually have funds within its control that it can use to secure the owner against these risks, rather than have to deal with or send unpaid subcontractors or suppliers to the surety. Also, owners can earn interest on the funds retained. Some owners keep the retainage after completion to address postcompletion defects. As shall be seen, some legislatures have required that retention be released on substantial completion, retaining only an amount related to the estimated cost of punch list items.

Early finishing subcontractors, such as excavating subcontractors, make another attack on retainage. They would like line item retention, in essence decoupling their work from that of the other contractors on the project and granting them the right to the retainage for their work when their work is finished.

As one purpose of retainage is to pay lien claimants, subcontractors and suppliers can benefit from retainage, something shown by state statutes to be discussed later in this section.

Contractors also complain that they should be able to substitute other securities for the retainage and obtain the use of the retainage as quickly as possible. They also assert that owners unfairly earn interest on the retainage. California, by statute, provides that a contractor

on a state project is entitled to interest on any securities deposited in lieu of retainage, and that same right is conferred on subcontractors performing more than five percent of the total bid.⁴⁴ In a Missouri case, a city allowed bidders to establish an escrow account consisting of securities acceptable to the city in lieu of the city withholding retainage. The city's specification did not state who would receive interest generated by the account during the construction period. The court ruled that the contractor, who had established the account, was entitled to the interest on it.⁴⁵

Contractors and subcontractors may worry about the safety of the retainage. Will the owner have the money to pay the retainage at the end of the project? Finally, in the progress payment system, retainage acts as an incentive to move the work along. It is a spur to the contractor to finish the project and obtain the retained amounts.

There has been some tendency to reduce retainage, and some contracts eliminate it entirely. Sometimes retainage is limited to the first 50 percent of the work. This should give the owner an indication of whether the contractor will do a good job and finish on time. After 50 percent has been completed, the amount retained is held until there has been substantial completion. At that point, as has been noted, the owner retains an amount related to the estimated amount needed to complete the work (punch list items). Some contracts allow the contractor to receive the retention at the 50 percent mark.

Complaints of contractors led to a decision by the Office of Federal Procurement Policy⁴⁶ to effectuate a uniform government-wide retainage policy. Retainage must not be used as a substitute for good contract management. The agency cannot withhold funds without good cause. Determinations concerning retainage should be based on an assessment of the contractor's past performance and the likelihood that such performance will continue. The office suggests that retainage not exceed 10 percent and that it be adjusted downward as the contract approaches completion, particularly if there is better than expected

performance or alternate safeguards.⁴⁷ Once all contract requirements have been completed, all retained amounts should be paid promptly to the contractor.

Contractor complaints, as noted, have increasingly led to legislation.⁴⁸ Statutes in some states recognize the problems described earlier in this section and attempt to deal with them. Texas, for example, has long allowed a mechanics' lien on retainage. In contracts for which liens by subcontractors and suppliers may be filed, the owner must retain a 10 percent retainage as security for lien claimants. In addition, lien claimants are given a preference on the retainage that may entitle them to payment ahead of the prime contractor. The owner's failure to comply with its requirement for retainage gives lien claimants preferential mechanics' liens on the property itself.⁴⁹

Michigan limits the retainage to 10 percent until 50 percent of the work is in place. At that point retention stops unless the contractor is not making substantial progress. In that case more than 10 percent can be retained. Michigan prohibits state owners from commingling retainage with other funds. With some exceptions for federally funded projects, retainage must be placed in an interest-bearing account. At final payment, the contractor receives the retainage and the interest it earned. After 94 percent of the work has been completed, the contractor can post an irrevocable letter of credit and receive the retainage.⁵⁰

In contracts over \$500,000, Tennessee requires the owner, public or private (or contractor who holds retainage for subcontractors), to deposit retainage in escrow. The escrow holder must give security for the retainage. The interest earned by the retainage goes to the contractor or subcontractor. Rights granted by the statute cannot be waived.⁵¹ Tennessee allows the prime contractor, by posting security, to obtain the retainage held by local entities.⁵²

California has enacted legislation that requires local entities to include provisions in any invitation to bid, with certain exceptions, that allow the contractor to substitute

certain securities for retainage held by the agency or an escrow agent. When this system is invoked, the owner makes full progress payments to the contractor from which retainage normally would have been withheld. In the event of a default by the contractor, the owner can draw on the securities by notifying the escrow agent, who converts the securities to cash and distributes the cash as instructed by the owner. Alternatively, at the written request of the contractor the owner makes payments of the retainage directly to the escrow agent, who invests it on behalf of the contractor. On satisfactory completion of the contract, the escrow agent distributes to the contractor the securities and any payments made to the escrow agent by the owner. The contractor must pay each subcontractor, no later than twenty days after receipt of this payment, the respective amount of interest earned attributable to funds withheld from each subcontractor. All expenses of the escrow arrangement are paid by the contractor.⁵³

Another indication of legislative activity can be seen by legislation enacted in Idaho in 1990.⁵⁴ The legislation covers private works of improvement. Under the statute, the retainage must not exceed 5 percent of any payment, and the total withheld can never exceed 5 percent of the contract price, but only if the contractor or subcontractor posts a performance bond. The 5 percent maximum does not apply to contracts for the improvement of residential property consisting of from one to four units (one of which is occupied by the owner).

Thirty-five days after substantial completion, the amount retained must be reduced to whichever is less: 150 percent of the estimated value of the work to be completed or the amount retained by the owner—again not to exceed 5 percent. Within thirty-five days from final completion, the retainage must be released except in the event of a dispute. If there is a dispute, the amount that can be withheld from the final payment cannot exceed 150 percent of the estimated value in dispute.

Within ten days from the time of receipt, the prime contractor must pay its subcontractors any retainage plus interest that is received. The prime contractor can deduct from the interest paid a 1 percent fee for administration. However, the retainage need not be paid to the subcontractor if a bona fide dispute exists between the prime

⁴⁷A contracting officer may also release the retainage early in an effort to alleviate the contractor's cash flow problems. *Fireman's Fund Ins. Co. v. United States*, 909 F.2d 495 (Fed.Cir.1990).

⁴⁸A recent canvassing of legislation is found in Stockenberg & Limbaugh, *Fifty-State Review of Retainage Laws*, 22 *Constr. Lawyer*, No. 1, Spring 2002, p. 24.

⁵³West Ann.Cal.Pub.Cont.Code § 10263.

⁵⁴Idaho Code § 29-115.

and the subcontractor. The amount withheld in such case must not be more than 150 percent of the estimated value of the work to be completed or amount in dispute. If the retainage is not paid within the time limits required, the payments will be subject to an additional charge over and above interest of 1½ percent per month. For segregated accounts created by the owner or lender, provisions also exist under which funds are not mixed with other funds of the owner. Retained funds are deposited into these segregated accounts when withheld by the owner, and the accounts bear interest. The interest earned must be paid to the prime contractor, but the owner can deduct from the interest an amount to cover administration. Most important, the Idaho legislation states that the parties cannot waive any provisions of this statute.

It can be seen that increased legislative activity in the field of payments with regard to their promptness and with regard to retainage has meant that parties who are about to engage in a construction contract must check local laws to see whether these laws can be varied by contract and to ensure that these laws are followed. Particular reference must be paid to whether the laws are limited to public contracts, are limited to private contracts, or cover both types. Typically, a regulation of this sort begins in public contracts and often is extended to private contracts. However, as seen in the Idaho statute, smaller projects are sometimes exempt.

One problem incident to retainage can develop at the end of the project. Suppose the retained amount is \$50,000 and the owner is entitled to take \$20,000 from it to remedy defects in the work. A solvent contractor will be paid the balance. However, in the volatile construction industry, it is not uncommon for a contractor to run into financial problems. In such a case, a horde of claimants descends on the owner and demands the money. The claimants can be lenders who have received assignments of contract payments as security for a loan, sureties who have had to discharge the obligations of the contractor, taxing authorities who claim the funds when the contractor has not paid its taxes, and, in the event the contractor has gone bankrupt, the trustee in bankruptcy.

The scramble for funds usually is dealt with by the owner's initiating what is called an "interpleader" action. The owner pays the disputed funds into court, files a lawsuit in which it names as parties all claimants to the funds, and withdraws from the fray. The court must unscramble the claims.

Although the possible multiple claimants' confusion at the end of the job may not in itself be a reason to limit or eliminate retention, the troublesome disputes that relate to retainage ownership should be taken into account in determining whether and to what extent retainage should be used.

SECTION 22.04 Substantial Completion

Sometimes construction contracts provide that a payment will be made to the contractor on substantial completion. A201-2007 defines substantial completion in Section 9.8.1 as "sufficiently complete . . . so that the Owner can occupy or utilize the Work for its intended use." Perhaps more important, the "end of the job" process, which begins with the contractor's representation that it has substantially completed the project and concludes with a certificate of final completion, is one about which a number of legal issues cluster (described in this section and in Section 22.05).

Although time problems are discussed in Chapter 26, it should be noted here that under AIA Document A101-2007, Section 3.3, and A201-2007, Section 8.2.3, compliance with the contractor's time obligation is measured by substantial completion.

The process for determining substantial completion under A201-2007, Section 9.8.2, begins with a submission to the architect by the contractor of a list of items to be completed or corrected. Under Section 9.8.3 this is followed by an inspection by the architect to determine whether she should issue a certificate of substantial completion. Such inspections are more carefully made than are inspections for ordinary progress payments. More important issues are involved. For example, this may be the point at which the owner retakes possession of the site and begins to use the project.⁵⁵ This can have important insurance consequences. Also, statutes of limitation that cut off liability a designated number of years after completion frequently use substantial completion as the event that triggers the commencement of the period.⁵⁶

A201-2007, Section 9.9.1, permits the owner to occupy or use a portion or all of the project prior to substantial completion.

⁵⁵AIA Doc. A201-2007, § 9.8.1.

⁵⁶See Section 23.03G.

SECTION 22.05 Completion and Final Payment

The AIA process begins with an act by the contractor, a notice that the work is ready for final inspection and acceptance, and an application for final payment. The architect inspects the work to determine whether the certificate should be issued—an inspection that should be undertaken with great care.

This stage in the construction process is a benchmark that has serious implications for major participants in the process. If the owner has not taken possession of the project at the time of substantial completion, it will certainly do so at this point.

Possession by the owner involves legal responsibilities that rest on the possessor of land.⁵⁷ Perhaps more important, the end of the job often has an effect on allocation of risks, such as those that relate to defects, and the continued existence of any claim. Because completion is sometimes equated with acceptance—an important legal doctrine that relates to defects—it is discussed in Sections 14.09B and 24.05.

Contractors also have claims that may be affected by completion and final payment. As noted in Section 27.13, the law looks for benchmarks that can put an end to disputes. In the case discussed in that section the benchmark under discussion—payment for changed work—reflected some of the pressure contractors face when seeking final payment.

The effect of final payment accompanied by a release and its effect on contractor claims surfaced in *Mingus Constructors, Inc. v. United States*.⁵⁸ Mingus substantially completed his work on July 30, 1982. In July and August, he sent letters to the contracting officer stating that he intended to file a claim and giving some indication as to the basis of the claim.

On October 28, 1982, the contracting officer inquired about the status of the claims release form the government had sent to Mingus. This was part of the final payment process. Mingus was advised that in the space provided he could “except” his claims against the government and that the exception would not hold up processing of his final payment. On the following day, he executed the claims release form, which stated that he released all claims. In the space provided for exceptions,

Mingus stated that pursuant to correspondence, he would file a claim, the amount of which was undetermined. He was paid on November 2, 1982. On November 5, 1982, he wrote to the government seeking confirmation of his understanding that by inserting the statement in the form he had not waived his claims. The contracting officer replied on November 10, 1982, stating that he could “except” any claims in the space provided without waiving his rights.

Mingus finally submitted his claim on January 5, 1984. When the claim was returned to Mingus, Mingus brought legal action in the Claims Court. The government took the position that Mingus had not protected his claim when he executed the release. The Claims Court held in favor of the government. This decision was affirmed by the federal appellate court based on a contractual provision barring claims after final payment. Preserving the claim, according to the court, can be done only by specifically excepting claims at the time of the general release.

Mingus was barred because of his release. Releases are strictly construed against the contractor. The exception Mingus included in the release, even if supplemented by his prior letters, was a “blunderbuss exception,” which “does nothing to inform the government as to the source, substance, or scope of the contractor’s specific contentions.”⁵⁹ The court felt it was important that releases should put an end to controversies. Although the contractor need not include a final certified claim when it executes the release, merely stating the claim in general terms does nothing to preserve the claim.

Failure to provide a contractually required notice at the time of final payment was held to have waived not only the public contractor’s claims against the public entity but also its negligence claim against the public entity’s engineer. This was based on the acceptance of the final payment form stating that acceptance released the owner and others for any claims or any liability to the contractor arising out of the work.⁶⁰

A201-2007 deals with release of contractor claims in Section 9.10.5. To protect its claim when it has accepted final payment, the contractor must have made the claim previously in writing and must have identified that

⁵⁷See Section 7.08.

⁵⁸812 F.2d 1387 (Fed.Cir.1987).

⁵⁹Id. at 1394.

⁶⁰*McKeney Constr. Co., Inc. v. Town of Rowlesburg*, 187 W.Va. 521, 420 S.E.2d 281 (1992).

claim as unsettled at the time of the application for final payment. Again, the needed specificity of the previous written claim can generate disputes. For the owner to be aware of the nature of the contractor's claim—both to investigate it and to have some idea of the contingencies that must be set aside to deal with it⁶¹—the contractor should give as much information as is reasonably available. As noted in the *Mingus* case, blunderbuss reservations of rights may not be sufficient.

On the other hand, courts will not construe even a broadly worded release to apply to a contractor's pre-existing claim unless the release explicitly refers to that claim. To borrow the *Mingus* court's terminology, even a blunderbuss release will be limited as to its scope in accordance with the parties' intent. Determination of that intent may require the admission of extrinsic evidence.⁶²

Mechanics' liens can surface at the end of the job. Although they are discussed in greater detail in Section 28.07D, dealing with subcontracts, this section looks briefly at liens from the vantage point of the owner, with particular reference to the end of the job.

Owners employ a variety of techniques to avoid liens. Some relate to the payment process. In some contracts, though not those of the AIA, owners seek to avoid liens by requiring evidence that subcontractors and suppliers who have lien rights either have been paid or have executed lien waivers before the contractor receives progress payments. Even if this is not required for a progress payment, it is almost certainly required for final payment. For example, AIA Document A201-2007, Section 9.10.2, conditions final payment on the contractor's submitting an affidavit that it has paid all its bills and gives the owner the right to require other data "such as receipts, releases and waivers of liens . . . arising out of the Contract, to the extent and in such form as may be designated by the Owner." Because of concern that lien waivers or—even worse—"no lien" contracts (under which the prime contractor waives all liens in advance for itself, its subcontractors, and suppliers) may be unfair to subcontractors and suppliers,⁶³ legal controls have

been enacted by the states that regulate these methods.⁶⁴ Where this is the case, as noted in Section 22.02J, owners may choose to issue final payments as well as progress payments through joint checks.

Although these legislative activities have been designed to protect subcontractors and suppliers, other legislative activity protects owners from liens. For example, an Iowa statute provides that the owner need not make final payment until ninety days after completion of the project if the project would be subject to a lien.⁶⁵ This does not apply if the prime contractor has filed a payment bond or supplied signed receipts or lien waivers. Generally, liens must be filed a designated number of days after substantial or final completion.⁶⁶ One way of avoiding liens is to delay final payment until the time for filing liens has expired.

Owner protection does not eliminate the requirement that contracting parties behave fairly toward one another. For example, one case involved a contract with lien avoidance conditions before final payment. Yet the contractor was awarded final payment without complying because the owner had insisted that the contractor waive its delay damage claim before final payment would be made. The court found this tactic unconscionable.⁶⁷

SECTION 22.06 Payment for Work Despite Noncompliance

A. The Doctrine of Conditions

The promise by the owner to make any payments is conditioned on the contractor's compliance with the contract documents. During the course of the work, the contractor is not entitled to be paid unless, as discussed in Section 22.02A, provisions are made for progress payments. At the end of the project, the doctrine of conditions in its strictest sense requires absolute compliance with the contract documents before the contractor is entitled to any unpaid part of the contract price.

⁶¹*Bornstein v. City of New York*, 94 A.D.2d 683, 463 N.Y.S.2d 198 (1983) (contractor had filed claim before accepting final payment).

⁶²*Metric Constructors, Inc. v. United States*, 314 F.3d 578 (Fed.Cir. 2002); *Sedona Contracting, Inc.*, ASBCA No. 52093, 99-2 BCA ¶30,466.

⁶³West Ann.Wis.Stat. § 779.03(1) prohibits general contractors from waiving the lien rights of subcontractors. However, § 779.03(2) allows the owner to eliminate those rights by requiring the contractor to obtain a payment bond.

⁶⁴O.C.G.A. § 44-14-366, enacted in Georgia, makes lien waivers made in advance of furnishing labor and materials null and void and sets forth statutory interim and final lien waiver forms. Similarly, see West Ann.Cal.Civ.Code § 3262. See also Section 28.07D.

⁶⁵Iowa Code Ann. § 572.13.

⁶⁶West Ann.Cal.Civ.Code § 3116 (ninety days after completion or cessation of work or thirty days after notice of cessation or completion filed by owner).

⁶⁷*North Harris County Junior College Dist. v. Fleetwood Constr. Co.*, 604 S.W.2d 247 (Tex.Ct.App.1980).

Although the owner would be permitted to hold back all the money until it receives what has been promised in construction contracts, strict application of the doctrine can cause hardship to the contractor. During performance, progress payments are essential to finance the job and avoid the risk of going unpaid for work. At the end of the job, a strict application of the doctrine of conditions can cause a loss to the contractor disproportionate to the loss caused by nonperformance. Such loss can create unjust enrichment where the owner is occupying the project. This section outlines some of the legal doctrines that have developed to relieve the contractor when performance has not been in exact compliance with contract documents.

A subcontractor's promise to complete by a designated time was held to be a promise and not a condition to the prime contractor's obligation to pay the contract price.⁶⁸ The court noted that conditions are not favored, because they can create forfeiture and unjust enrichment. The contractor can recover the unpaid balance, but it must pay any damages caused by delay.

In the absence of a valid liquidated damages clause, delay damages are very difficult to prove. The ultimate outcome is likely to be that the contractor will collect for the work despite its late performance. However, were timely performance a condition for final payment—unlike defects of quality that can be cured—the prime contractor would have the benefit of the subcontractor's work without paying fully for it.

B. Substantial Performance: *Plante v. Jacobs*

The substantial performance doctrine developed early in English law and made its way into American law. The dimensions of the doctrine will be sketched later in this subsection; in its simplest form, it requires the owner to pay the balance of the construction contract price if the contractor has substantially performed, leaving the owner a claim for damages based on failure of the contractor to perform strictly in accordance with the contract requirements.

Most substantial performance cases involve construction contracts. Construction is a complex undertaking, with detailed contract requirements. A strong likelihood exists that minor deviations will surface at the end of the job. Work performed by prime contractor employees may

escape the scrutiny of the prime's superintendent. Much of the work is performed by subcontractors, and the exact quantity and quality may be difficult to determine while the work is being performed.

The complexity of contract documents frequently generates interpretation questions, and it is often difficult to get an authorized interpretation by the design professional while work is being performed. Likewise, it may be difficult to find someone with authority to direct a change or approve substituted materials or products claimed by the contractor to be equal or equivalent to those specified.

Unlike in other types of contracts, the breaching party—that is, the contractor—cannot take back its performance. The contractor's performance has become incorporated into the owner's land, and very frequently the owner has taken possession of the project.

With some limited exceptions,⁶⁹ substantial performance issues usually arise at the end of the job. The prime contractor contends that the owner has essentially what it bargained for and often points to the owner's occupying and using the project. One court defined substantial performance as “when construction has progressed to the point that the building can be put to the use for which it was intended, even though comparatively minor items remain to be furnished or performed in order to conform to the plans and specifications of the completed building.”⁷⁰

Another case added that the defects must not “so pervade the whole work that a deduction in damage will not be fair compensation.”⁷¹ Yet another case concluded there had not been substantial performance when there was an accumulation of small defects, even though the owner was occupying the premises.⁷²

The ratio of defect correction costs to contract price and the determination of whether the building has met its essential purpose are relevant.⁷³ But one court affirmed a

judgment of substantial performance despite cost of completion and correction of defective work being 31 percent of the contract price.⁷⁴

Jacob & Youngs, Inc. v. Kent,⁷⁵ a leading case, found that there had been substantial performance when it was discovered after completion that one brand of pipe had been substituted for the one specified. The court noted that the pipe substituted was of equal quality to that designated.

*Kirk Reid Co. v. Fine*⁷⁶ involved the installation of an air-conditioning system. The owner proved that the following deviations existed:

1. The system was 46 to 50 tons short of capacity.
2. The primary air unit was of a lower rating by 7,850 cubic feet per minute.
3. The condenser water pipe was 120 gallons per minute short of capacity.

Yet the court held that the contractor had substantially performed, stating, "It appears from the . . . finding that there was a workable air conditioning plant installed and operating by May 1, 1959, the time called for by the contract. It further appears from the record that the system so installed and operating has been used, since that time, by the defendant without complaint by him that it is insufficient to perform its task."⁷⁷

A case dealing with construction of a church held that the contractor had substantially performed when the deviation consisted of a two-foot lower ceiling, windows shorter and narrower than called for, and seats narrower than designated by the specifications.⁷⁸ Another court held that the contractor had substantially performed when it was discovered at the completion of the project that the roof shingles were discolored.⁷⁹ The court noted that the shingles could not be seen from the street and did not constitute a functional defect. However, another roof case came to a contrary result.⁸⁰

Finally, another court concluded that the contractor had substantially performed when it buried pipe six

and one-half feet into the ground instead of the required seven.⁸¹

Early cases required the contractor to show that it was free from fault and that the breach was not willful, such as by establishing that the deviation was caused by a subcontractor or was not done knowingly.⁸² However, recent cases have reflected ambivalence on this issue. One case held that substantial performance could be used despite a finding that the contractor knowingly deviated from the contract.⁸³ Other cases have held that the reason for the breach must be taken into account with other factors to determine whether there has been substantial performance.⁸⁴

Although the substantial performance doctrine is designed to avoid forfeiture and unjust enrichment, it would be difficult to conclude there was unjust enrichment if a contractor testified that it had substituted one brand of pipe for another because "it was just as good" or because the contractor did not feel like going to the warehouse to get the right kind.⁸⁵

It has been stated that explicit contract language precludes substantial performance from determining the contractor's rights to the contract price.⁸⁶ Where such statements are made, they are likely to be in cases where the contractor has been found to have substantially performed.⁸⁷ The dilemma posed by this question requires that the essential nature of the substantial performance doctrine be determined. If the doctrine merely reflects a common intention that minor deviations will not preclude recovery, a contract clause negating this intention should be controlling. However, if the doctrine is based on the avoidance of forfeiture by the contractor and corresponding unjust enrichment of the owner, an express contract clause should not bar use of this doctrine. Resolving this difficult question will be aided by an evaluation of *Plante v. Jacobs* (reproduced next).

Following this case will be a further critique of the substantial performance doctrine and its relationship to contract language dealing with strict compliance.

Usually the contractor must prove it has substantially performed.⁸⁸ However, once substantial performance has been established, as a rule the owner must prove its damages.⁸⁹ Substantial performance, though entitling the contractor to recover the balance of the contract price, is still a breach. Because damages reduce the amount to which the contractor is entitled, once substantial performance has been established the law places the burden of proving

damages on the owner. The extent of damages will likely be an important factor in the owner's attempt to establish that there has not been substantial performance.

A few states place the burden of establishing damages on the contractor, an anomalous result, because the contractor's first line of attack usually is that it has fully performed.⁹⁰

Damages are sometimes measured by the cost of correcting the defect, sometimes by the diminished value of the project, and sometimes by a combination of the two.⁹¹ The interrelation of various damage measurements can be seen in *Plante v. Jacobs*, reproduced here.

PLANTE v. JACOBS

Supreme Court of Wisconsin, 1960. 10 Wis.2d 567, 103 N.W.2d 296.

Suit to establish a lien to recover the unpaid balance of the contract price plus extras of building a house for the defendants, Frank M. and Carol H. Jacobs, who in their answer allege no substantial performance and breach of the contract by the plaintiff and counterclaim for damages due to faulty workmanship and incomplete construction. . . . After a trial [before the judge without a jury] judgment was entered for the plaintiff in the amount of \$4,152.90⁹² plus interest and costs, from which the defendants, Jacobs, appealed and the plaintiff petitioned for a review. . . .

The Jacobses, on or about January 6, 1956, entered into a written contract with the plaintiff to furnish the materials and construct a house on their lot in Brookfield, Waukesha County, in accordance with plans and specifications, for the sum of \$26,765. During the course of construction the plaintiff was paid \$20,000. Disputes arose between the parties, the defendants refused to continue payment, and the plaintiff did not complete the house. On January 12, 1957, the plaintiff duly filed his lien.

The trial court found the contract was substantially performed and was modified in respect to lengthening the house two feet and the reasonable value of this extra was \$960. The court disallowed extras amounting to \$1,748.92 claimed by the plaintiff because they were not agreed on in writing in accordance with the terms of the agreement. In respect to defective workmanship the

court allowed the cost of repairing the following items: \$1,550 for the patio wall; \$100 for the patio floor; \$300 for cracks in the ceiling of the living room and kitchen; and \$20.15 credit balance for hardware. The court also found the defendants were not damaged

⁹⁰ *Vance v. My Apartment Steak House of San Antonio, Inc.*, 677 S.W.2d 480 (Tex.1985). See Note, 22 Hous.L.Rev.1093 (1985), attacking the Texas rule.

⁹¹ These damage measurements are discussed in Section 27.03D. In *Jacob & Youngs, Inc. v. Kent*, supra note 75, the measure of recovery for substitution of pipe was the diminished value of the project that the court concluded was nominal. But in *Salem Towne Apartments, Inc. v. McDaniel & Sons Roofing Co.*, supra note 79, the diminished value of the project was found to have been about one half the cost of correction. But see *Kaiser v. Fishman*, 187 A.D.2d 623, 590 N.Y.S.2d 230 (1992), appeal denied, 81 N.Y.2d 711, 619 N.E.2d 658, 601 N.Y.S.2d 580 (1993) (approved award of almost \$215,000 as the cost of correction, despite what court called quick-fix correction work of \$60,000).

⁹² [Ed. note: The computation of the judgment must have been as follows:

Original contract price	\$26,765.00
Extras	<u>\$ 960.00</u>
Contract price as adjusted	\$27,725.00
Payments received by plaintiff	<u>\$20,000.00</u>
Balance unpaid	\$ 7,725.00
Minus: (1) Amount conceded by plaintiff for omissions (kitchen cabinets, gutters and downspout, sidewalk, closet clothes poles, and entrance seat)	\$ 1,601.95
(2) Cost of correction for patio wall (\$1,550), Patio floor (\$100), cracks in living room and kitchen ceiling (\$300), and credit balance for hardware (\$20.15).	<u>\$ 3,572.10</u>
Amount of Court Judgment	<u>\$ 4,152.90</u>

⁸⁸ *A. W. Therrien Co. v. H. K. Ferguson Co.*, 470 F.2d 912 (1st Cir.1972); *Teramo & Co., Inc. v. O'Brien-Sheipe Funeral Home, Inc.* 283 A.D.2d 635, 725 N.Y.S.2d 87 (2001).

⁸⁹ *Maloney v. Oak Builders, Inc.*, 224 So.2d 161 (La.App.1969), rev'd on other grounds, 256 La. 85, 235 So.2d 386 (1970); *Hopkins Constr. Co. v. Reliance Ins. Co.*, 475 P.2d 223 (Alaska 1970).

by the misplacement of a wall between the kitchen and the living room, and the other items of defective workmanship and incompleteness were not proven. The amount of these credits allowed the defendants was deducted from the gross amount found owing the plaintiff, and the judgment was entered for the difference and made a lien on the premises. . . .

HALLOWS, Justice. The defendants argue the plaintiff cannot recover any amount because he has failed to substantially perform the contract. The plaintiff conceded he failed to furnish the kitchen cabinets, gutters and downspouts, sidewalk, closet clothes poles, and entrance seat amounting to \$1,601.95. This amount was allowed to the defendants. The defendants claim some 20 other items of incomplete or faulty performance by the plaintiff and no substantial performance because the cost of completing the house in strict compliance with the plans and specifications would amount to 25 or 30 percent of the contract price. The defendants especially stress the misplacing of the wall between the living room and the kitchen, which narrowed the living room in excess of one foot. The cost of tearing down this wall and rebuilding it would be approximately \$4,000. The record is not clear why and when this wall was misplaced, but the wall is completely built and the house decorated and the defendants are living therein. Real estate experts testified that the smaller width of the living room would not affect the market price of the house.

The defendants rely on *Manitowoc Steam Boiler Works v. Manitowoc Glue Co.*, . . . for the proposition there can be no recovery on the contract . . . unless there is substantial performance. This is undoubtedly the correct rule at common law. . . . The question here is whether there has been substantial performance. The test of what amounts to substantial performance seems to be whether the performance meets the essential purpose of the contract. In the *Manitowoc* case the contract called for a boiler having a capacity of 150 percent of the existing boiler. The court held there was no substantial performance because the boiler furnished had a capacity of only 82 percent of the old boiler and only approximately one-half of the boiler capacity contemplated by the contract. In *Houlahan v. Clark*, . . . the contract provided the plaintiff was to drive pilings in the lake and place a boat house thereon parallel and in line with a neighbor's dock. This was not done and the contractor so positioned the boat house that it was practically useless to the owner. *Manthey v. Stock*, . . . involved a contract to paint a house and to do a good job, including the removal of the old paint where necessary. The plaintiff did not remove the old paint, and blistering and roughness of the new paint resulted. The court held that the plaintiff failed to show substantial performance. The defendants also cite

Manning v. School District No. 6, . . . However, this case involved a contract to install a heating and ventilating plant in the school building which would meet certain tests which the heating apparatus failed to do. The heating plant was practically a total failure to accomplish the purposes of the contract. See also *Nees v. Weaver*, . . . (roof on a garage).

Substantial performance as applied to construction of a house does not mean that every detail must be in strict compliance with the specifications and the plans. Something less than perfection is the test of specific performance unless all details are made the essence of the contract. This was not done here. There may be situations in which features or details of construction of special or of great personal importance, which if not performed, would prevent a finding of substantial performance of the contract. In this case the plan was a stock floor plan. No detailed construction of the house was shown on the plan. There were no blueprints. The specifications were standard printed forms with some modifications and additions written in by the parties. Many of the problems that arose during the construction had to be solved on the basis of practical experience. No mathematical rule relating to the percentage of the price, of cost of completion or of completeness can be laid down to determine substantial performance of a building contract. Although the defendants received a house with which they are dissatisfied in many respects, the trial court was not in error in finding the contract was substantially performed.

The next question is what is the amount of recovery when the plaintiff has substantially, but incompletely, performed. For substantial performance the plaintiff should recover the contract price less the damages caused the defendant by the incomplete performance. Both parties agree. *Venzke v. Magdanz*, . . . states the correct rule for damages due to faulty construction amounting to such incomplete performance, which is the difference between the value of the house as it stands with faulty and incomplete construction and the value of the house if it had been constructed in strict accordance with the plans and specifications. This is the diminished-value rule. The cost of replacement or repair is not the measure of such damage, but is an element to take into consideration in arriving at value under some circumstances. The cost of replacement or the cost to make whole the omissions may equal or be less than the difference in value in some cases and, likewise, the cost to rectify a defect may greatly exceed the added value to the structure as corrected. The defendants argue that under the *Venzke* rule their damages are \$10,000. The plaintiff on review argues the defendants' damages are only \$650. Both parties agree the trial court applied the wrong rule to the facts.

The trial court applied the cost-of-repair or replacement rule as to several items, relying on *Stern v. Schlafer*, . . . wherein it was stated that when there are a number of small items of defect or omission which can be remedied without the reconstruction of a substantial part of the building or a great sacrifice of work or material already wrought in the building, the reasonable cost of correcting the defect should be allowed. However, in *Mohs v. Quarton*, . . . the court held when the separation of defects would lead to confusion, the rule of diminished value could apply to all defects.

In this case no such confusion arises in separating the defects. The trial court disallowed certain claimed defects because they were not proven. This finding was not against the great weight and clear preponderance of the evidence and will not be disturbed on appeal. Of the remaining defects claimed by the defendants, the court allowed the cost of replacement or repair except as to the misplacement of the living-room wall. Whether a defect should fall under the cost-of-replacement rule or be considered under the diminished-value rule depends on the nature and magnitude of the defect. This court has not allowed items of such magnitude under the cost-of-repair rule as the trial court did. Viewing the construction of the house as a whole and its cost we cannot say, however, that the trial court was in error in allowing the cost of repairing the plaster cracks in the ceilings, the cost of mud jacking and repairing the patio floor, and the cost of reconstructing the nonweight-bearing and nonstructural patio wall. Such reconstruction did not involve an unreasonable economic waste.

The item of misplacing the living room wall under the facts of this case was clearly under the diminished-value rule. There is no evidence that defendants requested or demanded the replacement of the wall in the place called for by the specifications

during the course of construction. To tear down the wall now and rebuild it in its proper place would involve a substantial destruction of the work, if not all of it, which was put into the wall and would cause additional damage to other parts of the house and require replastering and redecorating the walls and ceilings of at least two rooms. Such economic waste is unreasonable and unjustified. The rule of diminished value contemplates the wall is not going to be moved. Expert witnesses for both parties, testifying as to the value of the house, agreed that the misplacement of the wall had no effect on the market price. The trial court properly found that the defendants suffered no legal damage, although the defendants' particular desire for specific room size was not satisfied. . . .

On review the plaintiff raises two questions: Whether he should have been allowed compensation for the disallowed extras, and whether the cost of reconstructing the patio wall was proper. The trial court was not in error in disallowing the claimed extras. None of them was agreed to in writing as provided by the contract, and the evidence is conflicting whether some were in fact extras or that the defendants waived the applicable requirements of the contract. The plaintiff had the burden of proof on these items. The second question raised by the plaintiff has already been disposed of in considering the cost-of-replacement rule.

It would unduly prolong this opinion to detail and discuss all the disputed items of defects of workmanship or omissions. We have reviewed the entire record and considered the points of law raised and believe the findings are supported by the great weight and clear preponderance of the evidence and the law properly applied to the facts. Judgment affirmed.

Returning to the question posed before *Plante v. Jacobs*, to what extent can contract language preclude use of the substantial performance doctrine? In *Plante v. Jacobs* the court stated:

Substantial performance as applied to construction of a house does not mean that every detail must be in strict compliance with the specifications and the plans. Something less than perfection is the test of specific performance *unless all details are made the essence of the contract*. [Editor's emphasis.] This was not done here. There may be situations in which features or details of construction of special or of great personal importance, which if not performed, would prevent a finding of substantial performance of the contract.

A distinction must be drawn between different methods by which the contract itself might preclude use of the doctrine. First, a clause could simply state that strict compliance with all requirements of the contract documents is required. Such a clause is likely to be found among the many clauses included in the general conditions of the contract.

Second, the contract could create, as does AIA in A201-2007, Section 9.8.5, a system dealing with minor defects discovered when an inspection is made to determine whether there has been substantial completion and a mechanism for dealing with these defects between substantial and final completion.

Third, interpretation of specific language in the contract documents and the surrounding facts and circumstances may indicate that exact compliance with certain contract requirements was expected. For example, suppose in *Plante v. Jacobs* that the contractor knew or should have known that the Jacobses had purchased expensive furniture that could not be used because the living room wall had been misplaced. Alternatively, suppose the Jacobses had informed Plante that for aesthetic reasons the living room must comply in all respects to the floor plan dimensions and no deviation would be allowed. In either case, it could be argued that the substantial performance doctrine should not be used, as the owners expected strict performance and this was communicated to the contractor at the time the contract was made.

If the doctrine of substantial performance is based on the implication that “close to perfect” compliance is all the owner could reasonably expect, the doctrine should not be applied to contracts using any of the methods previously outlined. Any method could indicate that the owner expected full compliance and that the contractor was aware of this responsibility. Perhaps a clause of the first type would be less persuasive, as it could be boilerplate (preprinted clauses) and would not sufficiently bring to the contractor’s attention the need for strict compliance. Even here the contractor should be aware of the importance of strict compliance.

A misplaced wall could be troublesome even if the contract appeared to negate use of the substantial performance doctrine. This is the very type of defect for which the doctrine is designed. If so, another objective of the doctrine is to avoid economic waste, a goal that originally helped generate the doctrine.

In *Plante v. Jacobs*, correcting the misplaced wall would have cost \$4,000, but the misplaced wall was found not to have diminished the value of the house. Although the court did not face a contract method for avoiding substantial performance, it is doubtful that the court would have either ordered the contractor to correct the mistake or permitted the owner to deduct \$4,000 from the final payment for damages. Actual replacement of the wall either by court order or by allowing the Jacobses to reimburse themselves out of the final payment after they corrected the work themselves would cause or endorse an uneconomic expenditure of \$4,000 that would not increase the value of the house.

Suppose the Jacobses were allowed to deduct the \$4,000 without the need to show they were sufficiently

concerned to correct the mistake. Would the Jacobses simply take the money and not make the correction? In the likely event they would not make the correction, they would be given a windfall. But this windfall possibility assumes that the Jacobses built their house principally as an investment and not as a place to live. Even assuming that the Jacobses would not invest the \$4,000 to correct the mistake, some recognition should be given to the possibility that the Jacobses might have been damaged in some difficult-to-measure way by having to live in a house with a living room one foot shorter than they had planned even though the misplaced wall gave them an extra foot in the kitchen. Although some might doubt that a mistake of this kind could cause emotional distress, as noted in Section 6.06H the law is slowly moving toward the recognition that certain contracts are made not simply for commercial reasons but for reasons of personal solicitude. Were this the case here, such a loss could have been taken into account in determining the damages caused by the misplaced wall.

The substantial performance doctrine straddles concepts of contract and unjust enrichment. There can be risk assumption by contract, although economic waste and windfall cannot be excluded. As evidence becomes clear that the risk was specifically assumed by the contractor, there may be less room for the doctrine. But as it becomes apparent that there will be economic waste or windfall, the doctrine has more scope despite contract language that might seem to preclude its use.

Plante v. Jacobs illustrates yet another aspect of the interrelationship between the contract and substantial performance. The court stated,

In this case the plan was a stock floor plan, no detailed construction of the house was shown on the plan. There were no blueprints. The specifications were standard printed forms with some modifications and additions written in by the parties. Many of the problems that arose during construction had to be solved on the basis of practical experience.

In this type of transaction, the contract documents, such as they were, may have only been starting points from which the parties work together toward a particular solution. In such a case, it would be unfair to hold the contractor to the original requirements of the contracts, because contractor and owners were essentially designing the house as it was being built.

Similarly, this type of transaction is not likely to involve a detailed set of general terms and conditions that provide a way to determine when there has been substantial completion and ultimately final completion. As a result, it is much easier to insert the common law substantial performance doctrine, because there is no contractual method to deal with disputes where the owner has received largely what it had bargained for but had not received everything.

Plante v. Jacobs also illustrates possible abuse of the doctrine. The defects at the end of the job consisted of the contractor's failure to furnish the kitchen cabinets, gutters and downspouts, sidewalk, closet clothes poles, and entrance seat. The estimated cost of furnishing these items was \$1,610.95. The amount retained was \$7,725. Superficially, it would seem as if Plante had substantially performed and should be entitled to the outstanding balance less the cost of correction. In theory, the deduction from the outstanding balance would compensate the owner for the omissions. In actuality, the legal measure of recovery does not accomplish this. There are additional costs, such as obtaining a substitute contractor, the delay in effectuating the necessary corrections, and the risk of a substitute contractor not performing, which would be difficult to deduct from the outstanding balance.

Even if the contractor *had* removed its workers from the project, it would not impose any serious burden on it to return and complete the job as promised. Would it be unreasonable for the owner to withhold the entire \$7,725 as an unashamedly coercive device to get the contractor to finish the work if the owner chose this route rather than engage a substitute contractor? If the amount withheld appears excessive, it could be reduced to two or three times the projected cost of correction (often statutes use 150 percent). But the amount retained must be enough to make it worthwhile for the contractor to finish the job properly. If not, some contractors will refuse to perform and will invoke the substantial performance doctrine to recover the outstanding balance less the amount deducted as damages. In such a case, a court would likely conclude there had been substantial performance. The court noted that the house had been decorated and occupied by the owners even though the owners were dissatisfied with the contractor's work. Certainly the house, with the omissions, was fit for its primary purpose, and close to strict completion had been accomplished.

The preceding criteria were generated from cases that clearly involved economic waste or windfall because the

defects were discovered at the end of the project and would have involved substantial redoing of the project at expenditures greatly in excess of the diminished value caused by the deviation. However, where these elements are not present, the substantial performance doctrine should not be a device by which contractors can walk away without having completed the project and expect to be paid the balance less the damages allowed by law. Yet one court expressed this view:

The doctrine of substantial performance is a necessary inroad on the pure concept of freedom of contracts. The doctrine recognizes countervailing interests of private individuals and society; and, to some extent, it sacrifices the preciseness of the individual's contractual expectations to society's need for facilitating economic exchange. This is not to say that the rule of substantial performance constitutes a moral or ethical compromise; rather, the wisdom of its application adds legal efficacy to promises by enforcing the essential purposes of contracts and by eliminating trivial excuses for nonperformance.⁹³

This court views the doctrine as one to protect contractors from owners who seek an excuse to avoid paying. This attitude can lead a contractor to walk away from a commitment and be able to force the court to perform an "accounting job," compute the balance owed by deducting the cost of correction or completion, or use the diminished value, a result not bargained for by the owner. It can promote a "just as good" philosophy and encourage sloppy, incomplete work. Whether it promotes promise making is, at best, debatable.

C. Divisible Contract

For various reasons, the law sometimes artificially treats one contract as if it were composed of a number of separate contracts. Section 22.02N discussed whether progress payments in construction contracts make the contract divisible.

One function that can be served by the divisibility fiction is to enable a contractor to recover despite not having fully performed the contract. For example, suppose a construction project has five well-defined phases and designated payments for each phase. Suppose the contractor completes three phases but omits the remaining two.

⁹³*Bruner v. Hines*, 295 Ala. 111, 324 So.2d 265, 269-70 (1975).

In such a case, classifying this essentially single contract into a series of five contracts would enable the contractor to recover for the three phases completed, the owner being left with a deduction for the damages caused by failure to complete the final two.

The presence of progress payments does not mean that the parties have agreed that each segment of work is an agreed equivalent for the amount of the progress payment being made. The progress payments are approximations and not intended as agreed figures. Although it is not inconceivable that a court would classify a construction contract as divisible in order to permit the contractor to recover despite default, the doctrine of substantial performance (discussed in Section 22.06B), and the doctrine of restitution (to be discussed in Section 22.06D), are more appropriate vehicles for giving relief to a contracting party who has not fully performed yet has benefited the other party.

D. Restitution: Unjust Enrichment

The defaulting building contractor may not have performed sufficiently to take advantage of the substantial performance doctrine. Another concept sometimes available that can enable the contractor to recover for any net benefit that its performance has conferred on the owner is restitution, a concept sometimes called *quasi-contract*, or *quantum meruit*.

Restitution, unlike its substantial performance counterpart, has not been uniformly accepted. Early cases were not sympathetic to defaulting parties. Some courts continue to hold that a party who has not substantially performed may not recover for work performed.⁹⁴ However, there has been some relaxation of this attitude, and in many jurisdictions, contractors are able to recover restitution despite their own breach, in order to avoid unjust enrichment of the owner.⁹⁵

⁹⁴Under Massachusetts common law, a contractor must show complete and strict performance to recover under the contract, see *Peabody, N.E., Inc. v. Town of Marshfield*, 426 Mass. 436, 689 N.E.2d 774 (1998), and must show substantial performance to recover in quantum meruit, see *J.A. Sullivan Corp. v. Commonwealth*, 397 Mass. 789, 494 N.E.2d 374 (1986).

⁹⁵*American Sur. Co. of N.Y. v. United States*, 368 F.2d 475 (9th Cir.1966); *United Coastal Industries, Inc. v. Clearheart Constr. Co., Inc.*, 71 Conn.App. 506, 802 A.2d 901 (2002); *Starling v. Housing Auth. of City of Atlanta*, 162 Ga.App. 852, 293 S.E.2d 392 (1982); *R. J. Berke & Co. v. J. P. Griffin, Inc.*, 116 N.H. 760, 367 A.2d 583 (1976); *Kreyer v. Driscoll*, 39 Wis.2d 540, 159 N.W.2d 680 (1968).

Suppose there is a construction contract in which a promise to pay \$100,000 is exchanged for the promise to construct a building. Suppose the contractor unjustifiably leaves the project during the middle of performance. The defaulting contractor may have conferred a net benefit despite its having breached by abandoning the project. For example, suppose the defaulting contractor has received \$20,000 in progress payments but the work has been sufficiently advanced so that it can be completed by a successor contractor for \$75,000. Absent any delay damages, the defaulting contractor has conferred a net benefit of \$5,000 on the owner and should be entitled to this amount.

Some of the same problems as those discussed in relation to substantial performance apply when the contractor seeks to use restitution to recover for the benefit that has been conferred. Such recovery may be precluded if the contractor's breach is considered "willful," and similar problems of measuring the damages caused by the breach arise when restitution rather than substantial performance is the basis of recovery.

Restitution cases do not arise as frequently as do "end of the job" substantial performance disputes. Part of this infrequency may be due to the unlikelihood of a contractor's walking off a project that would be profitable. Only in these cases is there likely to be a net benefit to the owner that exceeds progress payments that have been made.

E. Waiver

During performance or at the end of the project, the owner may manifest a willingness to pay the full contract price despite the contractor's not having fully complied with the contract documents. Such manifestation is often described as a *waiver*. If the deviation is an important aspect of the contract, any promise by the owner to pay despite noncompliance would have to be supported by consideration. Consideration, as discussed in Section 5.08, usually consists of something given in exchange for accepting the deviation, such as a price reduction. Alternatively, the waiver of even important matters would be enforced if the contractor had reasonably relied on the statement. Examples are stating, "Do the extra work, and I won't insist on a written change order," or misleading the contractor by a course of conduct such as paying despite noncompliance.⁹⁶

⁹⁶See Section 21.04H.

Waivers of less important matters are effective despite the absence of any consideration or reliance. All that is needed in such cases is evidence that an intention to waive or give up the requirement was communicated to the other party.

A waiver can be directly expressed (“You told me you would pay even though I omitted the doorstops”). It can be expressed indirectly by implication (“When you made the final payment knowing I omitted the doorstops, I assumed you were waiving the defect”). Waiver is more likely to be found when the defect is small (doorstops) or technical (failure to obtain a written change order). It is more likely to be found where it is directly expressed (“I’ll pay anyway” or “Change orders are a bother, and I know you did the extra work”). It is less likely to be found when expressed by implication (“When you paid, I thought you were waiving those defects of which you were aware” or “When you didn’t complain, I assumed you waived the defects”). These factors recognize that small things can be given up if the evidence is clear that the party entitled to them was willing to do so and that acts are often ambiguous.

The act frequently contended to indicate waiver of defects is the owner’s accepting by using or occupying the project; particularly those defects apparent at the time the owner used or occupied the project will be asserted to have been waived. Although this topic is treated in greater detail in Section 24.05, it should be noted that court decisions are not consistent, though the trend is against using acceptance as waiver of a claim.⁹⁷

General conditions of construction contracts sometimes seek to eliminate the possibility of waiver. For example, Section 9.10.4 of AIA Document A201-2007 states that payment is not an acceptance of nonconforming work. Sometimes clauses more generally state that when one party does not insist on its full contract rights, it shall not be precluded from insisting on these rights in the future. Clauses of this type, though supportive of a conclusion that there has been no waiver,⁹⁸ are not absolutely waiver proof. Where it appears there has been a course of conduct that deviates from contract requirements or

clear evidence that a defect has been given up, waiver can be found. The clause is removed by concluding that the nonwaiver clause itself has been waived.

Waiver, unlike substantial performance or restitution, allows recovery of the entire contract balance without any deduction for damages. Waiver usually deals with technical requirements such as written change orders⁹⁹ for minor defects in the work.

The person asserted to have waived contract rights must have been authorized to do so. Authority is determined by agency concepts and is often dealt with in the contract.¹⁰⁰ However, it is likely that it would take less authority to waive a minor contract defect than to make a contract in the first instance or to modify an existing contract. Waiver is less likely to be applied in public contracts.¹⁰¹

SECTION 22.07 The Certification and Payment Process: Some Liability Problems

The design professional’s role in the certification and payment process can generate a variety of claims, such as failure to discover defects, issuing certificates without determining whether the contractor has paid subcontractors and suppliers or whether liens have been or will be filed, and failure to issue certificates within a reasonable time. But this section looks at the design professional’s liability for certifying an incorrect amount.

As discussed earlier,¹⁰² one of the multifaceted aspects of the design professional’s performance is to interpret the contract, judge performance, and decide disputes. The design professional’s role can be analogized to that of a judge when performing some of these functions. When the design professional looks like a judge, in some states she will be accorded quasi-judicial immunity—being liable for only corrupt or dishonest decisions or those not made in good faith. Quasi-judicial immunity where granted by common law is not likely to be asserted as a defense when

⁹⁷Although moving into the house and signing a form of acceptance for a federal agency was held to waive defects in *Cantrell v. Woodhill Enter., Inc.*, 273 N.C. 490, 160 S.E.2d 476 (1968), *Honolulu Roofing Co. v. Felix*, 49 Haw. 578, 426 P.2d 298 (1967), held that mere occupancy is not a waiver, particularly when the owners had to move in because they had vacated their own home.

⁹⁸*Armour & Co. v. Nard*, 463 F.2d 8 (8th Cir.1972).

⁹⁹See Section 21.04H, dealing with changes and Section 26.08, dealing with waiving formalities to obtain time extensions.

¹⁰⁰On the question of authority, see Section 17.05B.

¹⁰¹See Section 11.01B. But in *Kenny Constr. Co. v. Metro. San. Dist. of Greater Chicago*, 52 Ill.2d 187, 288 N.E.2d 1 (1972), the court treated waiver in a public contract much as if it had been a private contract.

¹⁰²See Section 14.09D.

the design professional has been sued for improper certification. In fact, the landmark English decision reversing earlier decisions granting immunity was based on a claim of improper certification.¹⁰³

Quasi-judicial immunity can also be created by contract. The AIA does not view the architect's role in the certification process as creating quasi-judicial immunity. Under AIA A201-2007, Article 15, if the amount certified is disputed by either owner or contractor, the dispute must be submitted to the architect (assuming the architect is the Initial Decision Maker under Section 15.2) before it can proceed to mediation under Section 15.3, to arbitration under Section 15.4, or to litigation. A201-2007 does not create quasi-judicial immunity for the architect's participation in the disputes process.¹⁰⁴ It does grant immunity under Section 4.2.12 for "interpretations or decisions . . . rendered in good faith." This is part of the administration of the contract under Section 4.2, not the architect's part in the disputes process.

The principal legal issue has been the extent to which persons other than the owner can pursue a claim for improper certification. Potential claimants are the contractor, subcontractors, or sureties. Overcertification shrinks the retainage and can cause harm to the owner. It can also

cause harm to the surety. The surety looks to the retainage for security if the contractor defaults and the surety must take over. Undercertification can harm the contractor and the surety as well. It can adversely affect the contractor's capacity to continue or complete performance.

Case decisions have tended to permit third parties such as contractors and sureties to maintain legal action against the design professional for improper certification.¹⁰⁵ Those cases that have protected the architect have pointed to a lack of privity.¹⁰⁶ The principal protection against such claims in transactions that involve AIA documents is the multitiered disputes process under which the architect's certificate, if challenged, must (ironically) go back to the architect (or IDM) and ultimately to arbitration, if selected. Any mistakes can be corrected by the arbitrators. As to the finality of the decision if challenged in court, see Section 29.09.

¹⁰³*Sutcliffe v. Thackrah* [1974] A.C. 727.

¹⁰⁴See Chapter 29 for discussion of the design professional as judge.

Expectations and Disappointments: Some Performance Problems

SECTION 23.01 Introduction to Chapters 23 through 28

When the contract is created, each party to a construction contract (the contract between owner and contractor will be illustrative) has expectations. The owner expects to receive the project specified in the construction contract at the time promised. It also expects to pay the contract price as adjusted for change orders.

The contractor's expectations are more complex. Its performance entails a variety of tasks that depend on cooperation by many entities as well as on weather conditions. The contractor expects that it will be able to purchase labor and materials at or within certain prices and that work will proceed without excessive slowdowns or stoppages due to weather, labor difficulties, acts of public authorities, or failure by the owner to cooperate. The contractor does not anticipate that construction will be impeded or destroyed by fire, earthquake, or vandalism. It expects to be paid as it performs.

Yet either or both may be disappointed. The owner may not receive the project it expected for a variety of reasons, explored in Chapter 24, dealing with defects, and in Chapter 25, dealing with subsurface problems. The owner may not receive the completed project at the time promised, a disappointment discussed in Chapter 26. Chapter 27 explores the methods of measuring any claims the owner may have against the contractor for not performing.

The contractor's disappointments that relate to failure to receive progress payments treated in Chapter 22 are explored in greater detail in Chapter 27. This chapter deals with the disappointments that relate to obstacles to the contractor's performance or to insecurity about the owner's performance. The special problems of increases

in the cost of performance due to unexpected subsurface conditions are treated in Chapter 25. The contractor's disappointed expectations as to the pace with which it will work are treated in Chapter 26.

Disappointments can encompass losses caused by subcontractors, whose special problems are discussed in Chapter 28.

This chapter introduces performance problems discussed in Chapters 24 through 28. Initially, it describes and briefly illustrates the essential attributes of legal doctrines central to performance problems. In addition, the chapter notes some performance problems that do not justify full chapter treatment.

SECTION 23.02 Affirmative Legal Doctrines: The Bases for Claims

A. Introduction: The Shopping List

This section summarizes in mostly nontechnical terms the legal theories that can be the basis for construction-related claims between owner and contractor. Unfortunately, it has become common for claimants to assert a variety of claims based on assorted legal theories, with the law generously permitting, at least up to a point in a lawsuit, the use of such a shotgun approach. This chapter deals only with claims by contract-connected parties. As will be seen, the variety of doctrines is astounding.

B. Fraud

Fraud is the intentional deception of one contracting party by the other. The deception induces the former to make a contract that it would not have made had it not

been deceived. Usually the deception consists of giving false information or half-truths, or occasionally, of concealing information. The deception must relate to important matters. The party defrauded relies by making the contract. For example, an owner may defraud a contractor who is concerned about the owner's resources by falsely telling the contractor it has received a loan commitment. The contractor may defraud the owner by falsely representing it has access to equipment needed to perform particular work. In most states, fraud can consist of making a promise to induce the making of a contract without intending to perform it.

The defrauded party can rescind the contract and recover any benefit it has conferred on the other party based on restitution. It can affirm the contract, cease or continue performance, and recover damages. Punitive damages are generally available.

Fraud should not play a significant role in construction performance disputes. Although on rare occasions fraud can be committed during performance, such as deceiving by telling an owner that certain work has been performed or has been approved by a city inspector, fraud usually consists of preperformance conduct. Performance disputes over unanticipated subsurface conditions sometimes involve allegations that an owner deliberately gave false information on which the contractor relied.

Fraud is easy to allege, particularly in a free-swinging construction dispute. Although fraud claims have a nuisance and settlement value, they are rarely successful.

C. Concealment of Information

Concealing information, though not always fraudulent, can be the basis for a claim. The early common law placed no duty on a contracting party to disclose information to the other party during negotiation. But as noted in Section 18.04B, there is an increasing tendency to require a party to disclose information to the other party that the latter would want to have known and that it is not likely to discover on its own.

Concealing information, like fraud and misrepresentation (to be discussed in Sections 23.02B and D), relates mainly to subsurface problems, as discussed in Section 25.03. Failure to disclose when disclosure should have been made permits the innocent party to rescind the contract and recover for any benefit it may have conferred on the other party based on restitution. Alternatively, it can

be the basis for a claim for damages, based on either the additional expenses incurred or the difference between the expenses that should have been incurred and those that were incurred.

D. Misrepresentation

Misrepresentation (discussed in Section 7.07) is intentionally, negligently, or innocently furnishing inaccurate information relied on by the other party in deciding to make the contract and its terms—principally price and time. Although, like fraud and concealment, it is principally a preperformance claim, it can be based on conduct during the performance of the contract, such as misrepresenting the value or the quality of work done. But like fraud and concealment, misrepresentations occurring before making the contract are usually discovered during performance. Again, this arises mainly, though not exclusively, in subsurface disputes.

E. Negligence

Negligence claims generally involve parties not connected by contract, such as a claim by a person delivering materials to a site against the contractor based on the latter's negligent conduct. But as seen in Section 14.05E, negligence can be the basis of a claim by one party to a contract against the other party. A negligence claim requires a duty owed to the claimant, a violation of that duty, and a suffering of harm caused factually and proximately by the negligent party.¹

Negligence claims have become more common in construction contract disputes that relate to defects or delays, usually with the hope of involving the contractor's public liability insurer, avoiding exculpatory clauses in the contract, or obtaining a more expansive remedy than one that could be obtained for breach of contract.²

Negligence claims require that the claimant establish that the defendant's conduct did not live up to the standard required by law, something not required in a simple breach-of-contract claim. Negligence claims are barred after a shorter period than breach-of-contract claims. The remedy for negligent conduct related to construction is usually the additional expense incurred. Although this

¹See Section 7.03.

²See Sections 14.05E and 24.08.

remedy is roughly similar to damages for breach of contract, certain defenses used in breach-of-contract claims, such as foreseeability,³ offer less protection to a defendant when the claim is based on negligence. Negligence as a tort can more easily serve as the basis for a claim for emotional distress.⁴ If wrongdoing goes beyond simple negligence and involves intentional misconduct or recklessness, the wrongful party cannot defend on the basis that the loss that was incurred was not reasonably foreseeable, and punitive damages may be recovered.

F. Strict Liability

As noted in Section 7.09, strict liability has its greatest modern use in claims against manufacturers who market defective products. It does not require proof of negligence. In that sense, it is like a breach of contract or its near relative, breach of an implied warranty. Although strict liability is often the basis of claims by those who buy homes or lots built by developers,⁵ it is rarely used as the basis for a claim between owner and contractor in the ordinary construction contract.

G. Breach of Contract

To determine whether a contract breach has occurred, the following must be interpreted:

1. the written contract, if any
2. antecedent negotiations not superseded by a written contract
3. terms implied by law

The contract may prescribe conditions that relate to claims, set forth exculpatory provisions, or control remedies. Breach does not require fault, although doctrines described in Section 23.03 may provide a defense. Remedies were discussed generally in Chapter 6 and are discussed more particularly in Chapter 27. Basically, the claimant can recover gains prevented and losses incurred that are established with reasonable certainty, were caused substantially by the breach, could not have been reasonably avoided, and were reasonably foreseeable at the time the contract was made.

³See Section 6.06C.

⁴See Sections 7.10C and 27.10.

⁵See Sections 7.09K and 24.09.

H. Express Warranty

A warranty is an assurance by one party relied on by the other party to the contract that a particular outcome will be achieved by the warrantor. For example, a manufacturer may expressly warrant that a tank it promises to build will travel 100 miles on 100 gallons of fuel, will not be inoperable more than ten days a month, and will hit a moving target ten miles away while the tank is traveling at 25 miles per hour.

Failure to accomplish the promised objectives is a breach. Fault is not required. (Defenses, though rare, are discussed in Section 23.03.) The method in which the promised outcome is to be achieved is frequently determined by the warrantor. Courts have been reluctant to hold the warrantor to its warranty if the warrantor has not been given the freedom to determine the method by which the warranted outcome is to be achieved.

Express warranty for various purposes has been considered a special form of contract breach. It can be considered simply an outcome promise by the warrantor. Perhaps express warranty continues to be used to emphasize its nonfault nature. It is less susceptible to contract doctrines that can excuse nonperformance by a contracting party. In some jurisdictions, breach of a contract to perform services must be based on negligence.⁶ Warranty, express or implied, in such jurisdictions may simply bring the law back to the normal nonfault contract standard. (Express warranty can create rights for a third party. It was used before the modern law of product liability allowed a user to sue a manufacturer directly without privity and based on nonfault conduct in manufacturing the product.)⁷ Its use in construction relates mainly to warranty or guarantee clauses discussed in Section 24.09. Its remedy is the same as for breach of contract.

I. Implied Warranty

Implied warranty is another “subspecie” of contract breach that developed historically as a separate basis for a claim. Like express warranty, implied warranty must be relied on and an outcome is warranted. Liability is strict.

⁶*Samuelson v. Chutich*, 187 Colo. 155, 529 P.2d 631 (1974).

⁷See *Baxter v. Ford Motor Co.*, 168 Wash. 456, 12 P.2d 409 (1932). It is still used when the product was not defective. *Collins v. Uniroyal, Inc.*, 64 N.J. 260, 315 A.2d 16 (1974).

No negligence need be shown. Remedy is the same as for breach of an express warranty.

In sale of goods, implied warranty usually relates to merchantability or fitness for the buyer's known purposes. Implied warranty developed as an offshoot of modern tort law, mainly to allow a claimant who had suffered harm—usually personal harm—to maintain an action against a manufacturer with whom it was not in privity, without the necessity of establishing negligence. It was also used to avoid real property doctrines that often barred an occupier of a home from maintaining a legal claim against a builder who had sold the home to it or to a predecessor owner—again, with no need to show negligence. Implied warranties in the sale of homes is discussed in Section 24.10.

In construction contract disputes, as shall be seen,⁸ a contractor often claims that the owner impliedly warrants the sufficiency of the design. This could have been described as an implied term, that the owner “promises” that executing the design will achieve the expected outcome of both owner (a successful project) and contractor (performance in a reasonably efficient manner).

Where the construction contract does not specify the quality of the contractor's services,⁹ the law usually implies a warranty that the contractor will perform its services in a workmanlike manner, free of defects of workmanship.¹⁰ In operation, this implied warranty will closely resemble the negligence standard. However, because warranty is more result oriented, application of a warranty is likely to place the burden on the contractor where the work has not measured up to the ordinary expectation of the owner. The closely related implied warranty of habitability applicable to residences is discussed in Section 24.10.

Although sometimes implied terms are justified as simply reflecting the intention of the parties,¹¹ warranties are often implied because of “fairness,” a conscious judicial allocation of risk. In sales transactions, the express warranty may be one that is intended to limit or negate

the warranties that would be provided by the law in the absence of contrary provisions in the contract. Such a disclaimer warranty (it takes away when it appears to give) must be conspicuous to be effective¹² and even if conspicuous may not be enforced if such a warranty is unconscionable.¹³ An implied warranty is preempted (displaced) by an express warranty, just as any express contract term takes precedence over or may bar an implied term.

An implied warranty is not only preempted by an express warranty but may not have been relied on by the other party, an essential element in a claim for breach of warranty. It is an issue in Section 25.05 (which deals with subsurface claims), with the owner often giving information but disclaiming responsibility for the information's accuracy.

J. Consumer Protection Legislation

Most states have enacted consumer protection legislation.¹⁴ Such laws bar misleading or fraudulent business practices in consumer transactions. They provide a list of forbidden activities and enlarge the remedies available to consumers, such as permitting treble damages and awarding attorneys' fees.

In some states, these statutes have been used against contractors who build for consumers. As illustrations, the following acts have been found to constitute unfair trade practices:

1. using substandard material¹⁵
2. failing to complete work within a specified period of time¹⁶
3. failing to adequately supervise the construction project¹⁷
4. intentionally supplying low estimates¹⁸

¹²U.C.C. § 2-316(2).

¹³U.C.C. § 2-302.

¹⁴The closely related federal Magnuson-Moss Warranty Act, governing warranties of consumer products, is described in Section 24.09B.

⁸See Sections 23.05E and 24.02.

⁹See AIA Doc. A201-2007, § 3.5, for a warranty as to labor, material and equipment.

¹⁰*New Zion Baptist Church v. Mecco*, 478 So.2d 1364 (La.App.1985) and *Mascarenas v. Jaramillo*, 111 N.M. 410, 806 P.2d 59 (1991). But see *Milau Assoc. v. North Avenue Dev. Corp.*, 42 N.Y.2d 482, 368 N.E.2d 1247, 398 N.Y.S.2d 882 (1977), which held that there was no implied warranty of fitness in a service contract.

¹¹See Section 19.02A.

5. providing defective workmanship¹⁹
6. misrepresentation as to experience and qualifications of builder²⁰

Consumer protection laws generally govern the relationships between clients (usually homeowners) and the contractor or design professional they directly hire. For example, clients may invoke state consumer protection or deceptive trade practices acts in their claims against design professionals so as to extend these statutes' strict liability provisions to professional services.²¹

Generally deceptive trade practices acts are not applicable to disputes between prime contractors and subcontractors²² or against a supplier who sold to a builder.²³ But the Connecticut Unfair Trade Practices Act was violated when a prime contractor made an oral contract with a subcontractor, listed the subcontractor as a disadvantaged business enterprise in its bid with a public entity, and then sought to renegotiate the contract. In addition to being awarded lost profits, the subcontractor

¹⁹*Jim Walter Homes, Inc. v. White*, 617 S.W.2d 767 (Tex.Ct.App.1981).

²⁰*Gennari v. Weichert Co. Realtors*, 148 N.J. 582, 691 A.2d 350 (1997) (claim against real estate agent-developer); *Plath v. Schonrock*, 314 Mont. 101, 64 P.3d 984 (2003), rehearing denied Mar. 6, 2003 (containing excellent discussion of the history of consumer protection laws and types of legislative relief granted).

²¹*Ragucci v Professional Constr. Services*, 25 A.D.3d 43, 803 N.Y.S.2d 139 (2005). In *White Budd Van Ness Partnership v. Major-Gladys Drive Jt. Venture*, 798 S.W.2d 805 (Tex.Ct.App.1990), cert. denied, 502 U.S. 861 (1991), the Texas Court of Appeals applied the Texas Deceptive Trade Practices Act's (DTPA) strict liability provisions to a client's claim against an architect. The continued viability of that decision is in doubt in light of subsequent legislative and judicial developments. In *Chapman v. Paul R. Wilson, Jr., D.D.S.*, 826 S.W.2d 214, 217 (Tex.Ct.App.1992), the court expressly rejected *White Budd's* holding that the DTPA applies to "purely professional services." Then, in 1995, the DTPA was amended to exclude damages based on the rendering of a professional service, defined as the providing of advice, opinion, or judgment (see Tex.Bus. & Prof.Code Ann. § 17.49(c)). The Kansas Supreme Court extended its state's consumer protection law to a client's claim against his engineer. *Moore v. Bird Eng'g Co.*, 273 Kan.2, 41 P.3d 755 (2002). By dictum, Louisiana seems to allow a client to sue an architect for "unreasonably high fees for services rendered." *Abbyad v. Mathes Group*, 671 So.2d 958, 962 (La.App.1996) (not awarded, because no damages were shown).

²²*Lake County Grading Co. of Libertyville, Inc. v. Advance Mechanical Contractors, Inc.*, 275 Ill.App.3d 452, 654 N.E.2d 1109 (1995) (did not involve consumer protection).

²³*Morris v. Osmose E. Wood Preserving*, 340 Md. 519, 667 A.2d 624 (1995). In this case the claim was brought by homeowners for defective plywood. But the deception occurred in the sale to the developer-builder.

was awarded its attorneys' fees under the act.²⁴ However, these laws do not apply to more remote actors, because there is no "consumer transaction" between subcontractors and the homeowner.²⁵

As noted in Section 10.11, consumer dissatisfaction sometimes results in the charge that the licensed contractor should be disciplined because of its failure to perform properly. Such complaints have generated another method of consumer protection, structuring an informal complaint process, with the contractor's license at stake.

K. Residential Construction Defects Legislation

Several states have consumer protection legislation aimed specifically at buyers of new homes. These statutes are of two types: new home warranty acts and right to cure laws.

New home warranty acts (NHWAs) create statutory warranties that apply to the sale of new homes. They require contractors to guarantee that the home is free of major defects. For example, Connecticut's NHWA implies in every sale of a new residence one-year warranties that the residence is free of faulty materials, constructed according to sound engineering standards, constructed in a workman-like manner, and fit for habitation.²⁶ These statutory warranties are in addition to any warranties implied by law.²⁷

By contrast, Louisiana's NHWA displaces any rights the builder of a new residence and its owner would have under general law. Instead, the act provides these parties with the exclusive remedies, warranties, and limitations periods.²⁸ For example, an owner could sue the contractor for breach of the statutory warranties, but not for breach of contract and negligence.²⁹

Right to cure laws do not give owners new, substantive rights. Instead they seek to prevent unnecessary litigation by giving contractors the opportunity to cure defects before the homeowner is allowed to sue. Homeowners who discover what they believe to be construction defects must

²⁹*Carter v. Duhe*, 921 So.2d 963 (La.2006). For further discussion of new home warranty acts, see Annot., 101 A.L.R.5th 447 (2002).

comply with a statutory prelitigation procedure. They must provide the contractor with written notice of the alleged defects and then give the builder the opportunity to inspect the building and attempt repairs. If the contractor believes the home is not defective or if the owner is dissatisfied with the repairs, California and Hawaii require the parties to submit to mediation.³⁰ In other states, the owner may proceed to litigation without going first to mediation.

California's right to cure law, known generally as Senate Bill (SB) 800, is the most ambitious of these types of laws.³¹ SB 800 applies to purchases of new homes after January 1, 2003. As with most such statutes, it requires the homeowner to provide the builder with written notice of the claimed defects. The contractor has a relatively short time to inspect and then effectuate repairs. Should the contractor fail to cure in a timely manner and the dispute is not resolved by mediation, the homeowner is released from the statute's requirements and may proceed to court.³²

What makes SB 800 unique among right to cure laws is its detailed enumeration of "actionable defects." As described by one commentator:

[V]ery little has been overlooked. In Section 896, the Act defines "water issues" with respect to door and window systems, roofing systems, decks, foundations and slabs, stucco and exterior wall systems, plumbing systems, shower and bath enclosures, countertops, and exterior landscaping, irrigation, and drainage. Section 896 covers structural issues, soil issues, fire protection, plumbing, sewer and electrical issues, and numerous miscellaneous matters right down to the dryer ducts.³³

Although right to cure laws do not grant homeowners new, substantive rights, they do deprive contractors of one common law defense. By defining certain construction defects as "actionable," these statutes preclude the builder from arguing that the economic loss rule (discussed in Section 14.08E) immunizes it from liability.³⁴

SECTION 23.03 Defenses to Claims

A. Introduction: Causation and Fault

On the whole, the doctrines described in this section relate to the occurrence or discovery of a supervening event that one contracting party asserts should relieve it from its obligation to perform. A party asserting such a defense must show that the event has seriously disrupted performance planning or performance itself. If the occurrence of the event could have been prevented or if the effect of the event on performance could have been minimized or avoided, the occurrence of the event does not provide a defense. For example, suppose laborers struck because of illegal conduct by the contractor who employed them. The contractor will not receive relief, because its own conduct caused the disruptive event. Likewise, if work were shut down because of a court order issued because the owner did not comply with land use controls, the owner will not be given relief if a contractor makes a claim.

Similarly, a party who does not appear "innocent" is less likely to be given relief, either because its conduct has caused the event or because its fault denies it the right to obtain relief from its contractual obligations.

Generally, the doctrines described in this section deal with events that affect performance and that cannot be said to have been the fault of either party.

B. Contractual Risk Assumption

Some of the doctrines discussed in this section were developed by the common law. They involve claims for relief based on doctrines that courts develop to deal with drastic changes of circumstances. The willingness or even the power of courts to use these common law doctrines is often affected negatively by specific contract clauses. For example, an owner may defend against a contractor's claim for additional compensation for delays caused by wrongful acts of the owner by pointing to a clause under which the contractor is limited to a time extension.

Similarly, the common law doctrine of impossibility is not likely to be employed if there is a *force majeure*

§ 40.600 et seq., interpreted in *Olson v. Richard*, 120 Nev. 240, 89 P.3d 31 (2004). For further discussion of right to cure laws, see Allen, *Construction Defects Litigation and the "Right to Cure" Revolution*, Constr. Briefings (Thomson/West March 2006), and Quatman & Gonzalez, *Right-to-Cure Laws Try to Cool Off Condo's Hottest Claims*, 27 Constr. Lawyer, No. 3, Summer 2007, p. 13 (listing thirty states that have adopted such laws).

provision, which grants relief under specified circumstances to the performing party. For example, contract clauses frequently allow for a time extension if certain events occur. The contractor may defend a claim by the owner that the contractor has not performed on time by pointing to contract language that justified a time extension.

A fixed-price contract itself is a contractual assumption of risk that in many instances bars the contractor from receiving additional compensation in the event its performance costs have increased because of events over which it may have had no control.

Contractual risk assumption is not limited to express contract terms. Courts often hold that the owner warrants the “sufficiency” of its design. The law will protect a contractor who follows the design if the owner asserts a claim for a defect by concluding that the owner impliedly warranted the design.

As contracts become more detailed, the potential for judicial intervention may narrow. Yet the more open recognition of the adhesive nature of many construction contracts may tempt a court to judge the fairness of contract clauses dealing with these claims for relief.³⁵

C. Mutual Mistake

Each contracting party, particularly the party agreeing to perform services, has fundamental assumptions often not expressed in the contract. For example, often the contracting parties assume that the subsurface conditions that will be encountered will not vary greatly from those expected by the design professional or the contractor. Although some deviation may be expected, drastic deviation that has a tremendous effect on the contractor’s performance may be beyond any mutual assumption of the parties. In such a case, the contractor may be relieved from further performance (discussed in Section 25.01E).

*Gevyn Construction Corp. v. United States*³⁶ involved a contract with the U.S. Postal Service. The specifications referred to a letter that Michigan state officials sent to the Post Office, stating that the contractor could tap a drain into a designated storm sewer of the state of Michigan. Relying on this letter, the contractor made its bid. But the state of Michigan refused permission, and the contractor was forced to connect the drain to a more distant outlet.

Although the court to some degree emphasized that the U.S. Postal Service invited the contractor to rely on the letter, the main basis for relief was the parties’ having based their agreement on the false assumption that the drain could be tapped into the state’s storm sewer.

Another illustration of the occasional use of mutual mistake as a basis for relief is seen in Section 23.05B, dealing with disruptive labor activities.

D. Impossibility: Commercial Impracticability

Despite the generally harsh attitude taken by nineteenth-century common law courts toward claims of impossibility, in that century contracting parties could be relieved if the court concluded that their performance had become impossible.³⁷ However, it soon became recognized that true impossibility is rare, and what is usually asserted as a defense by a performing party is that performance cannot be accomplished without excessive and unreasonable cost. This recognition emphasized “commercial impracticability” rather than actual impossibility.³⁸

Despite the apparently increased willingness to grant relief to a contracting party, the need for commercial certainty meant that relief would be granted sparingly. First, something unexpected must occur. Second, the risk of this unexpected occurrence must not have been allocated to the performing party by agreement or by custom. The occurrence of the event must have rendered performance commercially impracticable.³⁹ These are formidable requirements, and relief requires extraordinary circumstances.

In addition to the differentiation between impossibility and impracticability, other differentiations are useful. First, *objective* impossibility is sometimes differentiated from *subjective* impossibility. To grant relief, it must usually be shown not simply that the contracting party could not perform (subjective impossibility) but also that other contractors similarly situated (objective impossibility) would not have been able to do so.

³⁷*Taylor v. Caldwell*, 122 Eng.Rep. 309 (Q.B. 1863) (theater owner exonerated when theater burned).

³⁸U.C.C. § 2-615(a).

³⁹*Transatlantic Financing Corp. v. United States*, 363 F.2d 312 (D.C. Cir.1966) (charterer not relieved when Suez Canal closed in 1956); *M. J. Paquet, Inc. v. New Jersey Dept. of Transp.*, 171 N.J. 378, 794 A.2d 141, 148–49 (2002) (doctrine of impracticability used to allow a state transportation department to delete work made more expensive to perform by new OSHA regulations, where the parties could not agree upon a price adjustment for that work).

³⁵See Sections 5.04C and 19.02E.

³⁶357 F.Supp. 18 (S.D.N.Y.1972).

Second, *temporary* impossibility should be differentiated from *permanent* impossibility. For example, suppose a severe material shortage makes it impossible for the contractor to continue performance. This shortage may be relieved by eliminating the event that caused the shortage, such as a transportation strike. In such a case, impossibility is only temporary. Unless the contractor is held to assume these risks, the only relief it should obtain is a time extension, not termination. However, if the event will apparently continue for an indefinite time or for so long that it will drastically affect the cost of performance, termination may be appropriate.

Third, *partial* impossibility must be differentiated from *total* impossibility. Suppose a material shortage is caused by a strike. As a result, a supplier who has contract and customer commitments of 1,000 units has only 500 in stock and cannot obtain others. It will be allowed relief if it makes a good-faith allocation of its available supply to all its customers.⁴⁰ Suppose it has a contractual commitment to deliver ten units to a contractor. If it would be an exercise of commercial good faith to supply all customers—those with contracts and those with commercial commitments—alike, the contractual obligation would be discharged if the supplier delivered five units to the contractor.

E. Frustration

Frustration of purpose developed early in the twentieth century. It looked at the effect of subsequent events not on performance but on desirability of performance. For example, the leading English case⁴¹ giving rise to this doctrine involved a contract under which the plaintiff rented rooms to the defendant from which the defendant would have a good view of the coronation of King Edward VII. The coronation was postponed because the king became ill, and the defendant was relieved from his obligation to pay for the rooms. Clearly, this case did not involve impossibility. The coronation parade postponement made the contract much less attractive than originally. This doctrine has great similarity to mutual mistake. Each party probably assumed that the coronation would take place as originally scheduled, and each was equally mistaken.

One can see that relief under this doctrine must be awarded sparingly or contracts would lose much of

their effectiveness. The leading American case, *Lloyd v. Murphy*,⁴² involved a claim by a commercial tenant at the onset of World War II that it should be relieved of its obligation to pay rent on premises from which it intended to sell new cars that became unavailable because of the war. The court held that relief under this doctrine required that the value of the contract be almost totally destroyed by an event that was not reasonably foreseeable by the party seeking relief. The court held that the tenant did not meet these requirements.

Suppose during construction of a racetrack a law were passed that made horse racing illegal in the state. Suppose the owner sought relief from contractual obligation by pointing to this event. If the project can be used only for an activity that is now illegal, perhaps the owner should be freed from its construction contract. However, much would depend on whether the legislative action were reasonably foreseeable and whether the project could be used for other purposes, such as a go-cart track, a tennis court, commercial exhibitions, a nine-hole golf course, or auto racing.

Although frustration claims are rare in construction projects, the Massachusetts Supreme Judicial Court employed this doctrine in a case that involved a contract to resurface and improve a public road.⁴³ The contract required the contractor to replace a grass median strip with precast concrete barriers. The prime contractor entered into subcontracts under which a designated subcontractor would provide the concrete barriers for the median strips. After work began, a citizens' group filed a lawsuit protesting removal of the grass median strip. The public entity settled the case by agreeing not to install any additional barriers for the median strips and deleting the concrete barriers from the project. As a result, the prime contractor canceled its subcontract with the subcontractor to whom the work had been awarded, generating a claim for lost profits by the canceled subcontractor. (The subcontractor had been paid at the contract price for the barriers it had delivered.)

The court held that the prime contractor was not responsible for the elimination of the barriers and that the risk of elimination of the barriers was not allocated by the subcontract. The prime contractor was excused because of the frustration-of-purpose rule, because neither party to the subcontract anticipated that the public entity would

⁴⁰U.C.C. § 2-615(b).

⁴³*Chase Precast Corp. v. John J. Paonessa Co., Inc.*, 409 Mass. 371, 566 N.E.2d 603 (1991).

cancel a major portion of the job. Unlike earlier cases and commentaries, the court's analysis did not draw any significant distinction between frustration and commercial impracticability.

F. Acceptance

Sometimes the contractor claims a defense when a claim is asserted against it for defective work, based on the owner's having accepted the project. Inasmuch as this defense is principally related to defects, it is discussed in Section 24.05.

G. Passage of Time: Statutes of Limitation and Repose

Sometimes a claimant is met with a defense that it did not begin legal action on the claim within the time required. Time limits may be created by contract, by judge-made law, or (most commonly) by statutes. Time limits created by contract or judge-made law are discussed at the end of this Section.

Statutory limits on the time available for bringing a lawsuit has generated immense complexity and must be looked at in any treatment of claims generally. Statutes barring claims based on the passage of time are of two types: statutes of limitations (discussed also elsewhere)⁴⁴ and statutes of repose. Both types of statutes deal with the effect of the passage of time on the maintainability of claims. They are designed to protect defendants from false or fraudulent claims that may be difficult to disprove if not brought until relevant evidence has been lost or destroyed and witnesses become unavailable. In addition, entirely apart from the fault aspect of delay in bringing legal action, the law can also seek to promote certainty and finality in transactions, especially commercial transactions, by terminating contingent liabilities at specific points in time. This second function is accomplished by statutes of repose. The statute can bar a claim of which the claimant was never aware.

Although statutes of limitation are necessary, their implementation has generated great difficulty in construction performance claims, claims often discovered long after the breach by the contractor or completion of the work. Such statutes frequently are unclear as to the time the statutory period begins. In construction, the period can begin when the wrongful act occurred, when the contract performance had been completed, when the defective

work had been discovered, when the owner knew of the defect and its cause, or when the owner knew or should have known all the elements of its claim, including against whom the claim can be made. For example, suppose a contract is made to build a commercial building in 1990. Work proceeds during that year. The contractor does not use proper workmanship in applying adhesive materials when constructing the roof. The building is accepted and occupied in 1990. In 2000, severe roof leaks occur that are traceable to improper workmanship by the contractor.

Suppose the applicable statute of limitations states that a claim for breach of contract must be begun within four years from the time the "cause of action accrued." If the cause of action accrued at the time of the improper workmanship or the acceptance of the building, the claim has been barred by the passage of time. If the claim accrued at the time of damage, should the period begin at the time of completion (at that time the improper workmanship could not have been corrected) or at the time the poor workmanship was discovered? If the cause of action accrued in 2000, legal action can be brought until 2004. If so, the contractor will be forced to defend a claim based on events that occurred fourteen years earlier. Its defense may be hampered by its inability to produce witnesses and documentary evidence. Yet if the earlier time is selected, the owner has lost a claim before it becomes aware it had one, unless an objective standard is used and a reasonable inspection would have discovered the poor workmanship during the time of performance.⁴⁵

Most states would find that the owner's breach of contract claim against the contractor was barred by the four-year statute of limitations because the right to sue the contractor accrued in 1990, when the completed construction was accepted. (Remember that the statute begins to run at the time the "cause of action accrued.") A cause of action accrues at the earliest time a plaintiff may bring a lawsuit under a particular legal theory. A breach of contract action may be brought immediately upon project completion because the owner is deemed

⁴⁴See *D. J. Witherspoon v. Sides Constr. Co.*, 219 Neb. 117, 362 N.W.2d 35 (1985) (where architect merely designs, period begins when design documents delivered; where he supervises, it begins at completion of his services); *Holy Family Catholic Congregation v. Stubenrauch Assoc.*, 136 Wis.2d 515, 402 N.W.2d 382 (App.1987) (period commences when contractor loses significant control and owner can occupy or use the building for its intended purpose; not determined by architect certificate or when contractor stopped work).

⁴⁴See Sections 2.03 and 14.09C.

to have suffered injury, even if it did not yet know the construction was defective. If four years go by before the owner, despite reasonable investigations, discovers the defective workmanship, its contract claim would be barred.

Some states have ameliorated the harsh effect of this rule. They employ the “discovery rule” to delay accrual for latent (hidden) defects until the time when a reasonable and diligent owner would have discovered the defect.⁴⁶ Other states refuse to apply the discovery rule to breach of contract claims.⁴⁷

Unlike a breach of contract claim, which accrues immediately upon the defendant’s wrongful act, a negligence cause of action accrues only when a plaintiff suffers appreciable injury. Deciding when the plaintiff suffered appreciable injury can also be difficult to determine. Suppose a contractor claims that defects in the architect’s design caused the contractor to incur higher-than-anticipated performance costs. The contractor’s negligence or misrepresentation action would not accrue until it suffered economic losses with certainty, caused by the defective design.⁴⁸

Participants in the construction industry persuaded all states but New York and Vermont to enact *statutes of repose* that cut off liability a designated number of years after substantial completion.⁴⁹ Some statutes dealt only with claims based on breach of contract, whereas others included tort claims.⁵⁰ Some differentiated between latent and patent defects, the former being defects not discoverable by reasonable inspection and the latter being defects that were reasonably discoverable. The statutes varied as to the

⁴⁶*Erenhaft v. Malcolm Price, Inc.*, 483 A.2d 1192 (D.C.1984) is a leading case. See also West Ann.Cal.Code Civ.Proc. §§ 337.1 and 337.15 (specifying different limitations periods based on whether the defect was patent or latent); Md.Real Prop.Code § 10-203, interpreted in *Lumsden v. Design Tech Builders, Inc.*, 358 Md. 435, 749 A.2d 796 (2000); Annot., 33 A.L.R.5th 1 (1995).

⁵⁰See *Martinez v. Traubner*, 32 Cal.3d 755, 653 P.2d 1046, 187 Cal. Rptr. 251 (1982) (did not apply to tort claim for personal injury) and *Stoneson Dev. Corp. v. Superior Court*, 197 Cal.App.3d 178, 242 Cal. Rptr. 721 (1987) (applied to claim based on strict liability). See also *Hagerstown Elderly Assocs. Ltd. Partnership v. Hagerstown Elderly Bldg. Associates Ltd. Partnership*, 368 Md. 351, 793 A.2d 579 (2002) (applies to contract and tort actions).

people who could take advantage of them. Typically, those protected were design professionals and contractors, with protection not accorded owners or suppliers. The time period selected by the legislatures also varied.

The statutes were attacked in many states, principally based on the unfairness of depriving a party of the claim that it did not realize it had. More technically, statutes were attacked based on constitutional grounds, mainly as violating the guarantee of equal protection of the law. Some people were given legislative protection, whereas others were not.

Most courts upheld such statutes. Some were held unconstitutional. Those held unconstitutional were usually redrafted to meet constitutional objections. Even some redrafted were found to be unconstitutional.⁵¹ In addition, the statutes generated a great amount of litigation, not only passing on their constitutionality but also seeking to integrate them with the normal statutes of limitations of the state.⁵² As this book cannot provide a detailed description and analysis of these statutes, local law must be consulted.

One observation that relates to risk management (discussed in greater detail in Section 15.03F) merits mention at this point. Racing to the legislatures may have distracted from another approach to the long-delayed claim. It is possible for the contracting parties to regulate this problem. Although contractual regulation will not affect claims of third parties, such as those who may be injured if a building collapses years after it is completed, the bulk of the exposure in this area usually involves claims by the owner against the contractor or design professional.

Parties to a construction contract can regulate the period of time in which the claim may be made. These agreed-upon limits will be enforced by the courts if the time periods are not unreasonably short. AIA Document

⁵¹The leading case refusing to uphold such a statute is *Skinner v. Anderson*, 38 Ill.2d 455, 231 N.E.2d 588 (1967) (statute subsequently revised). The leading case upholding such a statute is *Freezer Storage, Inc. v. Armstrong Cork Co.*, 234 Pa.Super. 441, 341 A.2d 184 (1975). Currently, most courts find statutes of repose constitutional, see *Weston v. McWilliams & Assocs., Inc.*, 716 N.W.2d 634 (Minn.2006) and *Winnisquam Regional School Dist. v. Levine*, 152 N.H. 537, 880 A.2d 369 (2005). Care must be taken not to rely on a court decision holding the statute unconstitutional. The legislature may have subsequently amended the statute to meet the objections of the court decision.

⁵²This topic was dealt with extensively in *Northern Indiana Pub. Service Co. v. Fattore Constr. Co.*, 486 N.E.2d 633 (Ind.App.1985). The court held that a special statute takes preference over a general statute, especially if the former has been more recently enacted. It also held that if either of two statutes can apply, the court is to apply the longer statute.

B101-2007, Section 8.1.1, and A201-2007, Section 13.7, require legal action to be brought “within the time period specified by applicable law, but in any case not more than 10 years after the date of Substantial Completion of the Work.” The 10-year outer limit functions as a contractual statute of repose. Another example of regulation of the time in which the claim can be brought is Section 2-725(1) of the Uniform Commercial Code, which governs transactions in goods and can, by analogy, be applied to service transactions. Section 2-725(1) creates a four-year period of limitation but allows a contractually created period of not less than one year but not longer than the four-year statutory period.

Parties to a construction contract can also regulate when the limitation period begins. AIA Document B141-1997, Paragraph 1.3.7.3, and A201-1997, Paragraph 13.7.1, specified that the limitation period began to run from the time of substantial completion. Although enforced by the courts,⁵³ these provisions were dropped from the 2007 AIA documents in response to owner dissatisfaction.

The doctrine of laches is a judge-made limitation on the time available for bringing a lawsuit. Laches was developed in England by the equity courts and applies to plaintiffs seeking equitable remedies, such as injunctions and specific performance. It generally prevents a person who is aware of his injury from “sitting on his rights” and delaying to bring a claim, to the disadvantage of the defendant. For example, in *Chirco v. Crosswinds Communities, Inc.*,⁵⁴ a copyright holder of architectural plans waited to bring suit for two and one-half years while the defendant built a condominium using the infringed plans. The court ruled that laches barred the copyright holder’s request that the infringing building be destroyed.

Sometimes contractors contend that any warranty or guarantee clause is a private period of limitation (discussed in Section 24.09B, dealing with these clauses).

H. Release

In some disputes, the party against whom a claim is made asserts the claim has been settled. Section 27.13 discusses this defense, and Section 22.05 discusses it in the context of final payment.

⁵³*Gustine Uniontown Assocs., Ltd. v. Anthony Crane Rental, Inc.*, 2006 PA Super 12, 892 A.2d 830 (2006) (interpreting identical language in B141-1987, Paragraph 9.3).

⁵⁴474 F.3d 227 (6th Cir.2007). For further discussion of laches, see D. DOBBS, *REMEDIES* § 2.4(4) (2d ed. 1993).

I. Sovereign Immunity: Federal and State

When the United States enters the marketplace, as a general rule its contracts are treated as would be those made by private parties. To be sure, such contracts are heavily regulated, to some degree by statutes but mainly by administrative regulations. Specified clauses must often be included in contracts. It also means that claims must be brought before the U.S. Court of Federal Claims, the United States having given up its sovereign immunity by the Tucker Act.⁵⁵

The special status of the federal government became an issue that culminated in *United States v. Winstar Corp.*⁵⁶ This case developed from the attempt by the U.S. agencies to sort out the mess that resulted when many savings and loan associations (S&Ls) failed in the 1980s. These agencies urged solvent S&Ls to acquire the defunct S&Ls. To encourage the solvent ones, government officials promised a favorable accounting ruling on the acquisitions. Yet after the acquisitions took place, the United States enacted laws that required less favorable accounting rules. Parties that acquired the defunct S&Ls brought breach-of-contract claims against the United States.

The government asserted a number of defenses, but the main defenses centered on the sovereign status of the United States. These defenses are the doctrines of sovereign acts and of unmistakability. The doctrine of sovereign acts was developed in a 1925 case that involved enactment of a law making illegal the performance of a contract the United States had made before enactment.⁵⁷ The unmistakability doctrine requires unmistakable evidence, at the time of the transaction, showing that the government was surrendering its immunity. Surrender must be shown in unmistakable terms.⁵⁸

In the *Winstar* case, the U.S. Supreme Court—sharply divided both as to outcome and rationale—narrowly applied these defenses and ruled against the government. The opinions tended to prefer *congruence* (that the U.S. government contracts should be treated as would any other) over *exceptionalism* (that government contracts are treated differently).⁵⁹ The sharp debate within the Court

⁵⁵The core of the Tucker Act is found in 28 U.S.C.A. § 1491(a)(1).

⁵⁶518 U.S. 839 (1996).

⁵⁷*Horowitz v. United States*, 267 U.S. 458 (1925).

⁵⁸*Bowen v. Public Agencies Opposed to Social Security Entrapment*, 477 U.S. 41 (1986).

⁵⁹For an analysis of this doctrine and for a survey of all the law on this topic, see Schwartz, *Assembling Winstar: Triumph of the Ideal of Congruence in Government Contracts Law?* 26 Pub.Cont.L.J. 481 (1997). See also Citron, *Lessons From the Damages Decisions Following United States v. Winstar Corp.*, 32 Pub.Cont.L.J. 1 (2002).

shows that making an agreement with the federal government carries some risks not present in normal private contracts. It should be noted, however, that this sharp debate did not involve *making* contracts or asserting claims but whether the government could defend its failure to perform by pointing to a law it enacted after the contract was made and that made performance illegal.⁶⁰ See Section 23.05D.

Although sovereign immunity has been abolished in many states, some states use immunity to provide a defense to a public owner. Despite the many cases abolishing immunity, a 1985 case stated that a statute abolishing immunity must be strictly construed so as not to undermine sovereignty.⁶¹ A number of cases with varied outcomes have recently passed on whether a public entity waives its immunity by entering into a construction contract.⁶²

SECTION 23.04 Restitution

Some of the doctrines described in Section 23.03 must be looked at in connection with restitution. If a contractor is relieved because of common law doctrines described in Section 23.03, it may seek affirmatively to recover for the benefit it has conferred before the time its obligation to perform was terminated. One aspect of this, destruction of the work in progress, is discussed in Section 23.05C. For two reasons, this problem has not generated much difficulty in construction disputes. First, the contractor is usually being paid as its performance progresses, and any restitutionary claim it might have would be reduced by these progress payments. This means the amount at stake is likely to be small. Second,

⁶⁰Predictions of huge damages judgments being awarded against the federal government in the wake of *Winstar* have, according to two recent articles, failed to materialize. See Graves, “Winstar Wars”—*Revenge of the Thrift: A Viable Model to Right a Decade of Wrongs*, 36 Pub. Cont. L. J. 361 (2007); Rizzo & Gomez, *Erosion of the Sovereign Acts Doctrine? How Recent Winstar and Spent Nuclear Fuel Litigation Impacts Government Contractors*, 42 Procur. Lawyer, No. 3, Spring 2007, p. 3.

⁶¹*De Fonce Constr. v. State*, 198 Conn. 185, 501 A.2d 745 (1985).

⁶²Sovereign immunity was applied in *County of Brevard v. Miorelli Eng'g, Inc.*, 703 So.2d 1049 (Fla.1997), rehearing denied Dec. 12, 1997, Jan. 7, 1998; *C & M Constr. Co., Inc. v. Com.*, 396 Mass. 390, 486 N.E.2d 54 (1985); *Travis County, Texas v. Pelzel & Assocs., Inc.*, 77 S.W.3d 246 (Tex.2002); *G. M. McCrossin, Inc. v. W. Va. A waiver of tribal immunity was found in *C & L Enterprises, Inc. v. Citizen Band Potawatomi Indian Tribe of Okla.*, 532 U.S. 411 (2001).

courts have used these relief doctrines sparingly in construction cases. However, in a series of Massachusetts cases, subcontractors were granted broad restitution remedies when the prime contract was found to have been illegally awarded.⁶³

Restitution, however, has another use. Section 23.02 discussed claims and their bases. Sometimes a party wishes to measure its recovery for its claim not by the other party's promised performance but by the benefit it has given the other party (discussed in greater detail in contractor claims analyzed in Section 27.02).

SECTION 23.05 Specific Applications of General Principles

A. Increased Cost of Performance

In the course of performance, the contractor may find that its cost of performance has risen dramatically. Illustrations can be drastic increases in the cost of materials, equipment, supplies, utilities, labor, or transportation. These risks are generally assumed by the contractor under a fixed-price contract.

The common law provided little protection to a contractor who performs under a fixed price. To be sure, extraordinary and unanticipated events may occur that drastically affect the cost of the contractor's performance and may be the basis for a claim for relief. Here again the remedy sought may be influential if not determinative. Additional time is easiest to obtain, although this depends on the language of the clause that grants time extensions. Additional compensation and termination, if sought, are more difficult to obtain.

There are exceptions, most relating to specific contract provisions or terms implied into the contract. Examples of the former are equitable adjustment provisions that relate to subsurface work, as discussed in Section 25.06; escalation clauses that can grant price increases under certain market conditions; and time extension provisions, as discussed in Section 26.08. Examples of the latter are implied warranties by the owner that the design can be constructed economically and efficiently as discussed in Section 23.05E.

B. Labor Disruptions: The Picket Line and Project Labor Agreements

The labor dispute is one of the most disruptive events in a construction project. Such disputes can cause frequent and lengthy work stoppages. Craft unions sometimes dispute who has the right to perform certain work. Not uncommonly, employees of unionized contractors refuse to work on a site with nonunion employees of another contractor. Workers, as noted in Section 19.01D, sometimes refuse to work on a project because prefabricated units are introduced on the site in violation of a “work preservation” clause in a subcontract or collective bargaining agreement. Any of these situations can result in a strike, a picket line, or both. Workers frequently refuse to cross a picket line. Such refusals can shut down a job directly (because no workers are willing to work on the site) or indirectly (through the refusal of workers to deliver materials to a picketed site).

Pressure and even coercion are common tactics in the struggles between employers and groups that are attempting to organize the workers as well as represent them in negotiating wages, hours, job security, and working conditions. Each of the disputants—employer and union—not only seek to persuade but also use economic weapons to obtain a favorable outcome.

Disputants direct pressure at each other by use of economic weapons such as strikes or lockouts. Even these direct primary pressures affect neutrals not involved in the labor dispute. A strike affects nonstriking workers, the families of the strikers, and those who deal with the struck employer, such as those supplying it goods or purchasing its products or services. Likewise, a lockout by the employer affects neutrals.

Economic warfare often expands to include pressure and coercion on third parties important to the employer, such as suppliers or customers. The pressure can be direct, as with communicated coercive threats, or indirect, as with a picket line whose signs describe the union’s reason for its grievance against the employer and ask that certain activity or nonactivity be taken.

As these tactics broaden the field of economic warfare, they may begin to seriously harm neutrals and become what are called *secondary boycotts*. Such impermissible activities are unfair labor practices, giving the party injured by such activity the right to damages and, more important, the right to obtain an injunction ordering that such activities cease or be modified. The U.S. Supreme Court has stated that the law reflects “the dual congressional objectives of preserving the right of labor organizations to bring

pressure to bear on offending employers in primary labor disputes and of shielding unoffending employers and others from pressures and controversies not their own.”⁶⁴

In addition, the Court recognized that the law was concerned not only with pressure brought to bear on the other disputants but also with pressure brought to force third parties “to bring pressure on the employer to agree to the union’s demands.”⁶⁵

The line between permitted primary and prohibited secondary boycotts is difficult to draw in industrial collective bargaining warfare. It is even more difficult in construction work because of the transient nature of the workers, the seasonal nature of the work, the proliferation of craft unions, the frequent occupation of the construction site by employees of many bargaining entities such as contractors and subcontractors, and the special rules that govern collective bargaining in the construction industry.

One of these factors merits additional comment. As indicated, the construction project usually involves work by a number of contractors, sometimes at different stages of the work, but often at the same time. Some of the employers may have collective bargaining agreements with a union, whereas others may not. Some employers may have collective bargaining agreements with one union, and others may have collective bargaining agreements with a different one. For example, a nonunion prime contractor may be working alongside union subcontractors. Sometimes union subcontractors are working on a site with employees of a subcontractor who does not have a collective bargaining agreement with any union. A union engaged in an economic struggle with an employer can maximize its bargaining power if it can shut down the entire project by putting up a picket line that no union workers will cross. The very effectiveness of common situs picketing (picketing an entrance used by all workers) is the reason it can also enmesh many neutrals and cause frequent and costly work stoppages.

The law has limited common situs picketing by allowing the prime contractor to set up separate gates, one for the employees involved in the labor dispute and the other for those not involved in the dispute. This two-gate system prevents the project from being totally shut down. Picketing can be done at the first gate but not at

⁶⁴NLRB v. *Denver Building & Constr. Trades Council*, 341 U.S. 675 (1951).

⁶⁵NLRB v. *Local 825, International Union of Operating Eng’rs*, 400 U.S. 297 (1971).

the second. In *NLRB v. International Union of Elevator Constructors*,⁶⁶ an employee of a neutral subcontractor refused to use the neutral gate when another gate at the site was being picketed as a result of a labor dispute involving another subcontractor. The union attempted to enforce a contractual picket line clause that protected its employees from discipline when they refused to use a neutral gate. The Court of Appeals upheld a decision of the National Labor Relations Board (NLRB) that the union was guilty of violating the National Labor Relations Act when it sought to enforce such a clause, because the employee's refusal to work during picketing by another subcontractor's employees was not a protected activity.

Owners on large projects may circumvent problems of both union and nonunion trades working together and jurisdictional disputes among different unions by having the prime contractor and all subcontractors enter into a Project Labor Agreement (PLA). A PLA is a project-specific labor agreement. It ensures uniform terms and conditions of employment for all workers, whether union or nonunion, covering such matters as working hours, shift times, scheduling, holidays, overtime, and premium pay. All contractors, unions and employees are subject to the same collective bargaining agreement. Nonunion contractors must hire workers through the union hiring hall (although an exception may exist for so-called core employees), but the employees need not actually join the union. Of even greater importance for owners, the PLA establishes a dispute resolution mechanism and prohibits strikes. In short, PLAs are intended to guarantee labor peace through the life of the contract.

Legal challenges to PLAs have arisen on public works projects. In the *Boston Harbor* case, the Supreme Court ruled that PLAs are not preempted by the National Labor Relations Act.⁶⁷ Legal attacks then shifted to state laws. The most frequent complaint by nonunion contractors is that PLAs violate the state competitive bidding laws by restricting competition for public works jobs to union contractors. This narrowing of the number of contractors willing to bid on advertised projects, the opponents to PLAs contend, deprives the state from obtaining the lowest bid for the work. (Competitive bidding statutes are discussed in

Chapter 18.) Most courts apply a balancing test. They will uphold use of PLAs on public projects if the size and complexity of the project are such that the danger of labor disruptions without a PLA would be very high.⁶⁸ Increasingly courts reject the premise of opponents that PLAs discourage bidding by nonunion contractors.⁶⁹ The legality of PLAs notwithstanding, the propriety of public agencies entering into such agreements has generated heated debate.⁷⁰

But suppose a labor dispute does shut down or curtail a project. What effect will this have on the construction contract obligations of participants in the project?

Labor disputes, like damage to a partially completed project, can involve three separate but related questions:

1. Is the contractor entitled to a time extension for the period that work is shut down or curtailed?
2. Can the contractor collect additional compensation for expenses caused by the shutdowns or curtailment of work?
3. Can the contractor whose work is severely disrupted by a labor dispute to which it is not a party terminate its obligation to perform under the contract?

As for the first, construction projects typically provide time extensions for work disrupted by labor difficulties. For example, Section 8.3.1 of AIA Document A201-2007 awards the contractor a time extension for delays caused "by labor disputes."⁷¹ Without such a provision granting relief, a contractor will have a difficult time obtaining a time extension in the event of labor difficulties. The contractor generally assumes the risk of events that would increase the cost and time of performance.

⁶⁶A leading case upholding use of a PLA is *New York State Chapter, Inc. v. New York State Thruway Auth.*, 88 N.Y.2d 56, 666 N.E.2d 185, 643 N.Y.S.2d 480 (1996) (renovation of the Tappan Zee bridge, spanning the Hudson River in New York). Use of a PLA on a routine library construction project was rejected in *Tormee Constr., Inc. v. Mercer County Improvement Auth.*, 143 N.J. 143, 669 A.2d 1369 (1995).

⁶⁹Statistical evidence that PLAs do not discriminate against non-union contractors is cited in *John T. Callahan & Sons, Inc. v. City of Malden*, 430 Mass. 124, 713 N.E.2d 955, 964 (1999) and *Associated Builders & Contractors, Inc. v. Southern Nev. Water Auth.*, 979 P.2d 224, 229 n. 1 (Nev.1999).

⁷⁰A point-counterpoint pair of articles is Baskin, *The Case Against Union-Only Labor Project Agreements*, 19 Constr. Lawyer, No. 1, Jan. 1999, p. 14 and Kopp & Gaal, *The Case for Project Labor Agreements*, 19 Constr. Lawyer, No. 1, Jan. 1999, p. 5.

⁷¹New Jersey held a strike clause used in all elevator installer contracts not unconscionable. *Curtis Elevator Co. v. Hampshire House, Inc.*, 142 N.J.Super. 537, 362 A.2d 73 (Law.Div.1976).

⁶⁶902 F.2d 1297 (8th Cir.1990).

⁶⁷*Building & Constr. Trades Council of the Metro. Dist. v. Associated Builders & Contractors of Mass./R.I., Inc.*, 507 U.S. 218 (1993) (involving a project to clean up the polluted Boston Harbor).

Moving to the second question, it is usually difficult for the contractor to recover additional compensation for costs increased markedly by unusual labor disruptions, because these are, on the whole, assumed risks.⁷²

The third question, that of termination, will depend principally on the construction contract. Interestingly, the AIA standard documents, although providing for time extensions, do not provide for termination.⁷³ The absence of a clause specifically allowing termination should not necessarily preclude termination from being a proper remedy under certain circumstances.⁷⁴ Some courts hold that a contract that specifically mentioned labor problems and did not make them the basis for termination, indicated that the parties contemplated continued performance, with time extensions being the only remedy.

It may be useful to examine a case that involved a defense of impossibility asserted to be grounds for terminating performance obligations where the contract did not treat labor difficulties. In *Mishara Construction Co. v. Transit-Mixed Concrete*,⁷⁵ a prime contractor brought legal action against a supplier who claimed it could not deliver because of a picket line at the site. The court rejected the prime contractor's contention that a labor dispute making performance more difficult never constitutes an excuse for nonperformance. The court instead held that whether a labor dispute excuses the supplier's obligation to perform would be a fact question that must be determined by a jury. The court noted that a picket line might constitute a mere inconvenience and not make performance impracticable. Also, according to the court, a contract made in the context of an industry with a long record of labor difficulties shows that the parties assumed the risk of labor disputes. For example, if the supplier knew it was agreeing to deliver concrete to an employer who had had chronic and bitter labor difficulties, having made a contract without providing for contractual protection could indicate that it was assuming this risk. The court stated, "Where the probability of a labor dispute appears to be practically nil, and where the occurrence of such a dispute provides unusual

difficulty, the excuse of impracticability might well be applicable."⁷⁶

The court concluded by noting that the tendency has been to recognize strikes as an excuse for nonperformance. Although the court indicated that under certain circumstances, absence of protective language might be considered an assumption of risk, the Uniform Commercial Code, with its emphasis on commercial impracticability, might not find the absence of a clause *conclusive* on the question of whether a particular risk was assumed.⁷⁷

C. Partial or Total Destruction of Project: Insurance and Subrogation Waivers

During project construction, the project may be partially or totally destroyed by circumstances for which neither party is chargeable. The work may be destroyed by fire, unstable subsurface conditions, or violent natural acts such as earthquakes or hurricanes. Although destruction is often discussed in terms of impossibility or assumption of risk, it is essential to recognize that at least three issues can arise when such events occur:

1. Are the parties relieved from any further obligation to perform?
2. Must the contractor repair and restore damage to the work?
3. Is the contractor entitled to be paid for work incorporated into the structure before destruction?

As for the first question, the performance obligation is not terminated in the absence of a clause relieving the contractor from its performance obligation. Similarly, with regard to the second question the contractor is responsible for repairing and restoring damaged work. Courts have stated that a party who in unqualified terms promises to perform is itself at fault when it does not expressly protect itself from these contingencies.⁷⁸ If the contract is for repairs or additions to an existing structure or for part of

⁷²*McNamara Constr. of Manitoba, Ltd. v. United States*, 206 Ct.Cl. 1, 509 F.2d 1166 (1975).

⁷³See AIA Doc. A201-2007, Art. 14.

⁷⁴See AIA Doc. A201-2007, § 13.4.1, which states contractual remedies are not exclusive. See also Section 33.03A, which discusses this in the context of termination.

⁷⁵365 Mass. 122, 310 N.E.2d 363 (1974).

⁷⁶310 N.E.2d at 368.

⁷⁷New Jersey stated that even without a clause excusing performance hindered by labor disputes, the doctrine of commercial impracticability might give the performing party relief. *Curtis Elevator Co. v. Hampshire House, Inc.*, supra note 71.

⁷⁸*Stees v. Leonard*, 20 Minn. 494 (1874). Although the principal cases articulating this rule were decided in the nineteenth century, the rule was applied in *Dravo Corp. v. Litton Systems, Inc.*, 379 F.Supp. 37 (S.D.Miss.1974).

a new structure and the work is destroyed in whole or in part without the fault of either party, each party is relieved from further contract obligations.⁷⁹

As to the third question—that of recovery for work performed before destruction—the result depends, as a rule, on the termination issue. If the contractor is not discharged from its obligation to perform, it cannot recover for work performed. If it is discharged, as where it had agreed to build only part of the structure or to repair an existing structure, generally the contractor can recover for work performed prior to destruction.⁸⁰

Usually each participant in the construction process insures its property from loss of the type discussed in this subsection. Typically, the owner insures the work in progress, whereas the contractor insures its equipment and other property that will not go into the project. When the project is destroyed during construction, the owner receives proceeds from the insurance company. It holds these proceeds as fiduciary for those who have suffered property damage covered by the proceeds. Because much of the work has been paid for by progress payments, the proceeds held for the contractor are typically work for which progress payments have not yet been received and work for which progress payments were received but from which the retainage has been deducted. A well-planned property insurance system should reimburse the parties for the losses suffered. If this occurs, an argument can be made for the rule that does not discharge the parties from their obligation to perform further. This result follows whether the construction was for an entire structure or part of one or for the repair of an existing structure.

This appears to be the solution under AIA Document A201-2007, Article 14, dealing with the termination of the contract. Article 14 does not include destruction of the project as a ground for termination. The 1987 AIA Document A201 appeared to assume that work destroyed or damaged would be replaced.

Changes were made in 1997. Prior to 1997 after the loss was adjusted, unless there were a “special agreement,” presumably by the owner and the contractor, the damaged property would be replaced. This provision assumed that there would be no discharge of the contract unless the parties agreed to do so. But in 1997 Paragraph 11.4.9 (replacing old Paragraph 11.3.9) gave the owner a right

to terminate “for convenience.” See Section 33.03B. This provision, renewed in A201-2007 Section 11.3.9, gives the owner the freedom to terminate if the project looks much different after destruction. But no corresponding option is given to the contractor if it believes it made a bad contract or things have occurred that make the contract much less desirable.

If a substantial period of time has elapsed from the making of the contract until the destruction of the project, it would be unfair to require each party to begin over. Even if property losses have been reimbursed through insurance, the original bid was based on prices and conditions existing at the time bids were made. The prime contractor might not be able to hold subcontractors to the original subcontracts in states where those who build only part of a whole structure are relieved from further performance obligations. In these states, new subcontracts would have to be negotiated. Where it would be an essentially different contract than originally made, holding that the contractor must still perform would be unfair. Likewise, the owner’s perspective may be different after the project has been destroyed while being constructed.

New information may bear on the economic viability of the project, and it might be unreasonable to compel the owner to continue as if nothing had happened.

It is advisable to incorporate a provision in the construction contract that would give either party the right to terminate if the project is totally or nearly destroyed after a designated period of time has expired from start of performance.

As indicated throughout this book, legislatures are increasingly enacting laws that regulate the effect of accidental destruction of the work in progress. For example, in 1990 California enacted a law that requires that public contracts “not require the contractor to be responsible for the cost of repairing and restoring damage to the work, which damage is determined to have been proximately caused by an Act of God, in excess of 5% of the contracted amount.”⁸¹

The statute provides this protection only if the contractor has built in accordance with accepted building standards and the project’s plans and specifications. However, the contracts may contain provisions for terminating the contract. The statute defines acts of God to include only tidal waves and earthquakes that exceed 3.5 on the Richter scale.

Although discussion has emphasized destruction for which neither party can be held accountable, another issue

⁷⁹*Fowler v. Ins. Co. of North Am.*, 155 Ga.App. 439, 270 S.E.2d 845 (1980).

⁸⁰Annot., 28 A.L.R.3d 788 (1969).

⁸¹West Ann.Cal.Pub.Cont.Code § 7105.

often arises over responsibility. The most frequent cause of destruction—fire—is usually an insured risk. Fire losses are often traceable to human failings. When the insurer pays, it often looks for reimbursement from a party, other than the insured, who it can claim negligently caused the fire.

Assignment and the equitable doctrine of subrogation are methods insurers use to obtain reimbursement. Insurance policies often provide that on being paid for the loss, the insured assigns to its insurer its claims against third parties who caused the loss. Subrogation allows the insurer to “step into the shoes” of the insured. The insurer can assert any claims the insured may have against third parties (not its insured) who caused the loss. But construction projects, with their wealth of entities, usually provide ample third parties for the insurer to pursue.

Construction contracts frequently use techniques to bar subrogation. One is to require that the property insurance designate all the active participants as additional insureds. The EJCDC Standard General Conditions of the Construction Contract, C-700, Paragraph 5.04(B)1 (2007), uses this technique.

Another technique, often used together with the former method, is to require all active participants to waive any rights they have against other participants. The AIA uses such waiver of subrogation clauses in all AIA documents.⁸² Similarly, the EJCDC, in its C-700, includes a waiver of subrogation in Paragraph 5.07. To illustrate, suppose a fire has been caused by the prime contractor and the insurer pays the owner for the damage. The insurer will not be able to pursue the prime for negligently causing the fire if the owner has waived its rights of subrogation against the prime. This method seeks to place the entire loss on the insurer and frees the participants in the construction project or, more realistically, their public liability insurers from responsibility.

An issue can arise as to whether the AIA waiver of subrogation clause, A201-2007, Section 11.3.7, protects against a subrogation claim for a loss that occurs *after* the project has been completed. That section states that the waiver applies to property damage “to the extent covered by property insurance obtained pursuant to this Section 11.3.” The insurance required by Section 11.3.1

must cover losses until final payment has been made or until no entity other than the owner has an insurable interest, whichever is later. This would preclude the waiver being effective after coverage expires. However, Section 11.3.5 also extends the waiver agreement to property insurance obtained by the owner and “provided on the completed Project through a policy or policies other than those insuring the Project during the construction period.” This Section has been interpreted to extend waiver to post-completion claims.⁸³

Some insurers do not look favorably on such waivers. To them, waivers give away their claims, much like a motorist admitting he was wrong at the scene of an auto accident. An insured lost its coverage by waiving subrogation, held to be a violation of the failure-to-cooperate provision in the insurance policy.⁸⁴ For that reason A201-2007, Section 11.3.7, gives the insurer notice by requiring that the waivers of subrogation be included as an endorsement on the policy.

Insurers defend subrogation claims by contending that as between the blameless insurance company and a negligent third party, the latter or its liability insurer should pay the loss. In addition, they suggest that relieving all the parties from negligent conduct can encourage carelessness. Waivers also create an externality, a cost borne by others that should be allocated to the party whose activity has caused the loss.

Those who oppose subrogation claims point to their transaction costs, a second lawsuit often needed to complete the process. They also state that subrogation recoveries are insurer windfalls, as they are too uncertain to be included in the data used to determine premiums. Finally, those who structure a waiver of subrogation system feel that such a system best accords with the intention of all the parties to the construction project. For this reason, some courts deny the owner’s property insurer’s subrogation claim even in the absence of a waiver provision. These courts reason that the owner’s decision to insure against a risk implied an intent to limit its remedy to insurance coverage.⁸⁵

⁸²See AIA Docs. A201-2007, §§ 5.3, 11.3.7; A401-2007, § 13.9; and B101-2007, § 8.1.2. See *Davlar Corp. v. Superior Court*, 53 Cal. App.4th 1121, 62 Cal.Rptr.2d 199 (1997) (insurer not permitted subrogation against subcontractor based on prime contract incorporated into subcontract).

⁸³*Colonial Properties Realty Ltd. Partnership v. Lowder Constr. Co., Inc.*, 256 Ga.App. 106, 567 S.E.2d 389, 391–92 (2002). See also, *Touchet Valley Grain Growers, Inc. v. Opp & Seibold General Constr., Inc.*, 119 Wash.2d 334, 831 P.2d 724, 728 (1992) (not involving an AIA contract).

⁸⁴*Liberty Mutual Ins. Co. v. Altfillisch Constr. Co.*, 70 Cal.App.3d 789, 139 Cal.Rptr. 91 (1977).

⁸⁵*Morsches Lumber, Inc. v. Probst*, 180 Ind.App. 202, 388 N.E.2d 284, 287 (1979); *Acadia Ins. Co. v. Buck Constr. Co.*, 756 A.2d 515 (Me.2000).

A clear majority of courts have adopted the latter viewpoint and have enforced waiver agreements and disallowed subrogation claims under a variety of circumstances. These courts interpret the waiver clause broadly to encompass damage to all property covered by the owner's property insurance, even if the contractor damaged property not included within its scope of work.⁸⁶ Waiver clauses have also been enforced notwithstanding an insurer's claim that it had no notice of its insured's agreement.⁸⁷ Perhaps most controversial is the willingness of some courts to deny subrogation claims even when the owner alleges gross negligence by the defendant.⁸⁸

Other courts interpret waiver of subrogation provisions more narrowly. These courts are most likely to find the waiver does not extend to damage to property not included in the scope of the contract, an issue that most commonly arises on renovation projects.⁸⁹ Courts may also refuse, on public policy grounds, to apply the waiver provision to claims of gross negligence.⁹⁰

D. Governmental Acts

Government interference can take different forms. After the contract has been made, a law may be passed that makes performance of the contract illegal. For example, suppose a law is passed prohibiting the construction of any nuclear facility. Certainly enactment of such legislation would terminate any contract to build a nuclear plant. Performance would require an illegal act. The contractor's right would be limited to recovery for any work performed before the enactment of the legislation. Such recovery would be restitutionary and based on unjust enrichment. If the party whose performance became illegal was a government entity, special problems develop if that government enacted the law that made the performance by the government entity illegal. In effect it is the act of the contracting party, here the government, that made performance illegal. This situation was discussed in Section 23.03I, dealing with sovereign immunity.

A change in the law, made after the contract was signed and performance begun, may also upset the parties' pricing calculations. For example, in 1972, President Richard M. Nixon discontinued existing wage and price controls, causing the price of materials to escalate. Contractors who at the time were performing fixed price contracts, calculated on the assumption that the price controls would remain in place, had to cope with this unexpected price hike.⁹¹ In a New Jersey public works case, new OSHA regulations made certain work under the contract more expensive to perform. When the parties were unable to agree upon a price increase, the state deleted the affected work.⁹²

Another form of governmental interference would be the issuance of a judicial or administrative order shutting the project down. For example, a project might be shut down because of improper construction methods, an invalid building permit, or a design or use that violated land use controls. If the project is shut down for an appreciable period of time, the party not responsible for the shutdown should be relieved from further performance obligations and may have a cause of action against the other party. For example, if a project is shut down because of improper design or failure to comply with land use controls, the contractor may have a valid claim for

⁹¹*Blake Constr. Co.*, GSBCA No. 4118, 75-1 BCA ¶11,278 (invoking the sovereign immunity doctrine and rejecting the contractor's attempt to hold the government responsible for the price increases).

⁹²*M.J. Pacquet, Inc. v. New Jersey Dept. of Transp.*, 171 N.J. 378, 794 A.2d 141 (2002).

damages as well as be relieved from further performance obligations.⁹³ If the shutdown is due to poor construction methods or failure to comply with the contract documents, the owner should have a valid legal claim against the contractor for breach as well as should be able to terminate any further obligations owed the contractor. The mere fact that performance was stopped by a government official does not necessarily absolve a party from contract breach even if the work is shut down. If the shutdown was due to the unexcused nonperformance by one of the parties, there can be breach as well as a possible termination.

Despite the generalization made in the preceding paragraph, that government intervention may be traceable to the fault of one of the parties or someone for whose acts the parties are responsible, the difficulty of placing clear responsibility on one of the parties for acts of government intervention makes it unlikely that government intervention in the ordinary case will be chargeable to one of the contracting parties.

Suppose the governmental acts that stop performance are not the responsibility of *either* contracting party. The site may have been condemned by the state's exercise of its power of eminent domain. In wartime, the state may have drafted workers, requisitioned essential materials, or commandeered all transportation facilities. Such acts would relieve the contractor from further contractual obligations. (They might also discharge the owner's obligations through frustration of purpose. See Section 23.03E.) Any claims for work performed by the contractor prior to shutdown would be restitutionary.

Suppose a work stoppage results because important equipment being used by the contractor has been repossessed by the owner of the equipment or someone with a security interest in it. Repossession is often accomplished by court order. However, such a court order is a risk clearly assumed by the contractor. That the actual act that interferes with performance is an order by a public official should not relieve the contractor from its obligation to perform.

Suppose the job was shut down because a vital piece of *subcontractor* equipment was seized by court order. The result would be the same as if the equipment were owned by the prime contractor. The prime contractor would not be entitled to a time extension, either because this was an assumed risk, as in the preceding paragraph, or because the job was not really shut down by the state.

Suppose legislation is enacted that would bar a method of performance contemplated at the time the contract was made. It is likely that the performing party will not receive relief if the legislation was reasonably foreseeable and did not increase costs astronomically.⁹⁴

E. Misrepresentation Through Defective Specifications: *United States v. Spearin*

Contractor allegations that the specifications were defective are common in construction performance disputes. Unfortunately, such allegations often produce more heat than light and obscure the real issues in the dispute. Before looking at these issues, it is useful to reproduce the fountain-head case that is often cited to support a "*Spearin*" claim.

UNITED STATES v. SPEARIN

Supreme Court of the United States, 1918. 248 U.S. 132.
[Ed. note: Footnotes renumbered.]

BRANDEIS, Justice.

Spearin brought this suit in the Court of Claims, demanding a balance alleged to be due for work done under a contract to construct a dry-dock and also damages for its annulment. Judgment was entered for him. . . .

First. The decision to be made on the Government's appeal depends on whether or not it was entitled to annul the contract.

The facts essential to a determination of the question are these: *Spearin* contracted to build for \$757,800 a dry-dock at the Brooklyn Navy Yard in accordance with plans and specifications which had been prepared by the Government. The site selected by it was intersected by a 6-foot brick sewer; and it was

⁹³*Gordon v. Indusco Management Corp.*, 164 Conn. 262, 320 A.2d 811 (1973).

⁹⁴See Section 23.03E. For a review of the different legal doctrines that may apply in the event a change in the law impacts the project, see Hinchey & Queen, *Anticipating and Managing Projects: Changes in Law*, 26 Constr. Lawyer, No. 4, Fall 2006, p. 26.

necessary to divert and relocate a section thereof before the work of constructing the dry-dock could begin. The plans and specifications provided that the contractor should do the work and prescribed the dimensions, material, and location of the section to be substituted. All the prescribed requirements were fully complied with by Spearin; and the substituted section was accepted by the Government as satisfactory. It was located about 37 to 50 feet from the proposed excavation for the dry-dock; but a large part of the new section was within the area set aside as space within which the contractor's operations were to be carried on. Both before and after the diversion of the 6-foot sewer, it connected, within the Navy Yard but outside the space reserved for work on the dry-dock, with a 7-foot sewer which emptied into Wallabout Basin.

About a year after this relocation of the 6-foot sewer there occurred a sudden and heavy downpour of rain coincident with a high tide. This forced the water up the sewer for a considerable distance to a depth of 2 feet or more. Internal pressure broke the 6-foot sewer as so relocated, at several places; and the excavation of the dry-dock was flooded. On investigation, it was discovered that there was a dam from 5 to 5½ feet high in the 7-foot sewer; and that dam, by diverting to the 6-foot sewer the greater part of the water, had caused the internal pressure which broke it. Both sewers were a part of the city sewerage system; but the dam was not shown either on the city's plan, nor on the Government's plans and blue-prints, which were submitted to Spearin. On them the 7-foot sewer appeared as unobstructed. The Government officials concerned with the letting of the contract and construction of the dry-dock did not know of the existence of the dam. The site selected for the dry-dock was low ground; and during some years prior to making the contract sued on, the sewers had, from time to time, overflowed to the knowledge of these Government officials and others. But the fact had not been communicated to Spearin by anyone. [Spearin] had, before entering into the contract, made a superficial examination of the premises and sought from the civil engineer's office at the Navy Yard information concerning the conditions and probable cost of the work; but he had made no special examination of the sewers nor special enquiry into the possibility of the work being flooded thereby; and had no information on the subject.

Promptly after the breaking of the sewer Spearin notified the Government that he considered the sewers under existing plans a menace to the work and that he would not resume operations unless the Government either made good or assumed responsibility for the damage that had already occurred and either made such changes in the sewer system as would remove the danger or assumed responsibility for the damage which might thereafter

be occasioned by the insufficient capacity and the location and design of the existing sewers. The estimated cost of restoring the sewer was \$3,875. But it was unsafe to both Spearin and the Government's property to proceed with the work with the 6-foot sewer in its then condition. The Government insisted that the responsibility for remedying existing conditions rested with the contractor. After fifteen months spent in investigation and fruitless correspondence, the Secretary of the Navy annulled the contract and took possession of the plant and materials on the site. Later the dry-dock, under radically changed and enlarged plans, was completed by other contractors, the Government having first discontinued the use of the 6-foot intersecting sewer and then reconstructed it by modifying size, shape and material so as to remove all danger of its breaking from internal pressure. . . .

The general rules of law applicable to these facts are well settled. Where one agrees to do, for a fixed sum, a thing possible to be performed, he will not be excused, or become entitled to additional compensation, because unforeseen difficulties are encountered. *Day v. United States*, 245 U.S. 159; *Phoenix Bridge Co. v. United States*, 211 U.S. 188. Thus one who undertakes to erect a structure on a particular site, assumes ordinarily the risk of subsidence of the soil. *Simpson v. United States*, 172 U.S. 372; *Dermott v. Jones*, 2 Wall. 1. But if the contractor is bound to build according to plans and specifications prepared by the owner, the contractor will not be responsible for the consequences of defects in the plans and specifications. *MacKnight Flintic Stone Co. v. The Mayor*, 160 N.Y. 72; *Filbert v. Philadelphia*, 181 Pa.St. 530; *Bentley v. State*, 73 Wisconsin, 416. See *Sundstrom v. New York*, 213 N.Y. 68. This responsibility of the owner is not overcome by the usual clauses requiring builders to visit the site, to check the plans, and to inform themselves of the requirements of the work, as is shown by *Christie v. United States*, 237 U.S. 234; *Hollerbach v. United States*, 233 U.S. 165, and *United States v. Utah & C. Stage Co.*, 199 U.S. 414, 424, where it was held that the contractor should be relieved, if he was misled by erroneous statements in the specifications.

In the case at bar, the sewer, as well as the other structures, was to be built in accordance with the plans and specifications furnished by the Government. The construction of the sewer constituted as much an integral part of the contract as did the construction of any part of the dry-dock proper. It was as necessary as any other work in the preparation for the foundation. It involved no separate contract and no separate consideration. The contention of the Government that the present case is to be distinguished from the *Bentley Case*, *supra*, other similar cases, on the ground that the contract with reference to the sewer is

purely collateral, is clearly without merit. The risk of the existing system proving adequate might have rested on Spearin, if the contract for the dry-dock had not contained the provision for relocation of the 6-foot sewer. But the insertion of the articles prescribing the character, dimensions and location of the sewer imported a warranty that, if the specifications were complied with, the sewer would be adequate. This implied warranty is not overcome by the general clauses requiring the contractor, to examine the site,⁹⁵ to check up the plans,⁹⁶ and to assume responsibility for the work until completion and acceptance.⁹⁷ The obligation to examine the site did not impose on [the

contractor] the duty of making a diligent enquiry into the history of the locality with a view to determining, at his peril, whether the sewer specifically prescribed by the Government would prove adequate. The duty to check plans did not impose the obligation to pass on their adequacy to accomplish the purpose in view. And the provision concerning contractor's responsibility cannot be construed as abridging rights arising under specific provisions of the contract.

* * *

The judgment of the Court of Claims is, therefore, Affirmed.

The *Spearin* doctrine consists of three components: the owner's issuance of design specifications, misrepresentation to the contractor caused by a defect in those specifications, and injury in the form of the contractor's inability to build the project successfully. All three components must be satisfied for the contractor to recover.

Design Specifications. As explained in Section 19.01D, the distinction between design and performance specifications lies in the amount of discretion given to the contractor in choosing how to build the project. An owner who issues design specifications, which dictate how the contractor is to go about its work, impliedly warrants that following the design will lead to a result acceptable to the owner.⁹⁸

Misrepresentation and Defect. A contractor claiming breach of an owner's implied warranty of design is assert-

ing a *misrepresentation* claim. As the *Spearin* Court explained, "the contractor should be relieved, if he was misled by erroneous statements in the specifications."⁹⁹ Specifications can convey a wide variety of information, all of which provide the potential basis for a *Spearin* claim. According to one treatise:

The owner's breach of its implied warranty of design has been found in factual situations such as: (1) noncompatible soils; (2) structural defects; (3) fire damage; (4) dredging difficulties; (5) highway concrete; (6) sewer design/water infiltration; (7) roof leaks; (8) survey errors; (9) concrete design mix; (10) sealant; and (11) excavation quantity error.¹⁰⁰

A contractor who entered into a contract knowing the specifications were defective was not misled and so cannot assert a claim for misrepresentation.¹⁰¹ More commonly, a court denying a claim will find that the contractor had a duty to investigate the condition and failed to do so. In denying the claim, the court is in effect finding that the contractor's reliance on the misrepresentation was not

⁹⁵271. Examination of site.—Intending bidders are expected to examine the site of the proposed dry-dock and inform themselves thoroughly of the actual conditions and requirements before submitting proposals."

⁹⁶25. Checking plans and dimensions; lines and levels.—The contractor shall check all plans furnished him immediately on their receipt and promptly notify the civil engineer in charge of any discrepancies discovered therein. . . . The contractor will be held responsible for the lines and levels of his work, and he must combine all materials properly, so that the completed structure shall conform to the true intent and meaning of the plans and specifications."

⁹⁷21. Contractor's responsibility.—The contractor shall be responsible for the entire work and every part thereof, until completion and final acceptance by the Chief of Bureau of Yards and Docks, and for all tools, appliances, and property of every description used in connection therewith."

¹⁰⁰3 BRUNER & O'CONNOR ON CONSTRUCTION LAW § 9:81 at 669-70 (2002) (footnotes omitted).

¹⁰¹*Robins Maintenance, Inc. v. United States*, 265 F.3d 1254 (Fed.Cir. 2001) (grounds maintenance contractor entered into a contract renewal knowing the specification erred in the description of the size of the grounds to be maintained); *Helene Curtis Industries, Inc. v. United States*, 160 Ct.Cl. 437, 312 F.2d 774, 779 (1963) (contractor producing a disinfectant, who renewed the contract knowing the specifications describing the manufacturing process were defective, was not misled).

justified, because it should have learned of the true conditions itself.¹⁰² On the other hand, a contractor's failure to investigate will not bar a *Spearin* claim if a reasonable investigation would not have uncovered the erroneous information.¹⁰³

May an owner disclaim the warranty of design adequacy? *Spearin* makes clear that general, nonspecific disclaimers are ineffective.¹⁰⁴ Some courts are sensitive to the need to protect the integrity of the implied warranty and so place high standards on the specificity required for a disclaimer to be enforced. For example, the Federal Circuit Court of Appeals upheld a *Spearin* claim, finding the attempted disclaimer "does not clearly alert the contractor that the design may contain substantive flaws requiring correction and approval before bidding."¹⁰⁵ However, other courts are willing to enforce disclaimers of specific representations, such as soils reports¹⁰⁶ or estimated quantities.¹⁰⁷

The *Spearin* doctrine fits within the broader duty of an owner—and in particular a public owner—to act in good faith with a contractor it hires. It complements a public owner's duty to disclose to a contractor relevant

¹⁰²*Green Constr. Co. v. Kansas Power & Light Co.*, 1 F.3d 1005, 1008-10 (10th Cir.1993) (stating that "where a contractor has a duty to make an independent investigation, reliance on an owner's specifications may very well be unreasonable"); *Allied Contractors, Inc. v. United States*, 180 Ct.Cl. 1057, 381 F.2d 995, 999 (1967) ("[I]t was not true that plaintiff [the contractor] was justified in blithely proceeding with its work in the face of obvious and recognized errors. The obligation was cast upon plaintiff to do something about it.")

¹⁰³*Sherman R. Smoot Co. of Ohio v. Ohio Dept. of Adm. Serv.*, 136 Ohio App.3d 166, 736 N.E.2d 69 (2000) (a contractor's failure to perform a pre-bid inspection did not preclude it from being able to assert an implied warranty of design, where an inspection would not have revealed the problem with the site) and *Zontelli & Sons, Inc. v. City of Nashua*, 373 N.W.2d 744 (Minn.1985).

¹⁰⁴Contract provisions requiring bidders to examine the site, verify the plans and dimensions, and be responsible for the entire work does not negate the owner's implied warranty. 248 U.S. at 137.

information in its possession which the contractor is not likely to discover.¹⁰⁸

Before attempting to break down the imprecise term *defective specifications* into more workable categories, it is important to note the different legal issues affected by the quality of specifications. The risk of building defects may depend on whether the defect was caused by the design. If so, the entity who supplied design specifications (materials and methods)—usually the owner—will not be able to transfer the cost of correction to the contractor who has executed the design. (Whether it can transfer this loss to the design professional was discussed in Chapter 14.) Put another way, the contractor who executes the required design is not liable for the cost of correction, as seen in *United States v. Spearin*.

Suppose the contractor claims that it has expended more than it anticipated because of defective specifications. Sections 25.03 and 25.05 deal with this in the context of subsurface conditions. This subsection looks briefly at this issue in other contexts.

If the design authorizes a *means or method* of performance, the owner impliedly warrants that the contractor's use of that means will achieve an acceptable result. In *Ace Constructors, Inc. v. United States*,¹⁰⁹ the specifications permitted the contractor to pave an airplane runway using either slip-form or fixed-form types of pavers. However, the runway could be built only using slip-form pavers. The contractor's wasted cost of trying to build the runway using fixed-form pavers was compensable under the implied warranty.¹¹⁰

A contractor who cannot comply with the specifications sometimes asserts that the specifications were "impossible." Sometimes specifications are impossible in the sense that they are not coherent, that they do not "fit." Compliance with one part makes compliance with another part an "impossibility." In Section 23.05F,

¹⁰⁸See Section 18.04B.

¹⁰⁹70 Fed.Cl. 253 (2006), aff'd, 499 F.3d 1357 (Fed.Cir.2007).

¹¹⁰Id. at 284-285. See also *Miller v. City of Broken Arrow, Okla.*, 660 F.2d 450, 456-58 (10th Cir.1981), cert. denied sub nom. *Benham-Blair & Affiliates, Inc. v. City of Broken Arrow, Okla.*, 455 U.S. 1020 (1982) (engineer's insistence that contractor use crushed rock to handle unstable soil rendered performance impossible) and *McCree & Co. v. State*, 253 Minn. 295, 91 N.W.2d 713 (1958) (on highway project, it was impossible for the contractor to achieve soil compaction to the specified density using the prescribed method). In these cases the government was found liable under the *Spearin* doctrine.

impossibility as applied to performance specifications means beyond the state of the art, while impossibility as applied to design specifications is more akin to physical impossibility.

It may be helpful to start with the attributes of good or high-quality specifications. This requires an understanding of what specifications include and what they are designed to accomplish.

In the sense that specifications measure the contractor's contract obligations, the specification should make clear to the contractor what it will be expected to do. A complete failure of the specifications to convey to the contractor the result intended by the owner may, in an extreme case, result in the parties not having had a "meeting of the minds," which is a prerequisite to the existence of a contract.¹¹¹

The nature of the information conveyed to the contractor varies by the type of specification. A design specification tells the contractor what it is to do and how it is to do it. A purchase description specification is even more limiting, telling the contractor that the materials and equipment it must furnish will be made by a particular manufacturer and be of a designated model or type.¹¹² A performance specification describes a specific outcome. When the performance specification is combined with a design specification, the owner has sought to tell the contractor what it must do, how it must do it, and the result it must achieve. As noted in Section 24.03, this can cause problems.

In addition, as seen in *United States v. Spearin* specifications can provide relevant information that the contractor needs and uses to determine whether it will enter into the contract, what will be its price, and how it expects to perform. In that case, the United States did not tell the contractor there was a dam in the 7-foot sewer. Put another way, it failed to provide complete information. It described the sewer but did not inform the contractor that there was a dam in it or that there had been prior flooding problems. Information can relate to the site, its subsurface characteristics, its accesses, and any conditions that would be helpful in planning performance.

¹¹¹*Denver D. Darling, Inc. v. Controlled Environments Constr., Inc.*, 89 Cal.App.4th 1221, 108 Cal.Rptr.2d 213 (2001) (no meeting of the minds as to whether the floor flatness standard applied only to the freezer floor or also to the loading dock).

¹¹²See Section 24.02.

High-quality specifications clearly inform the contractor what it will be expected to do and the conditions under which it will perform. They enable the contractor to plan its performance and price with the expectation of predictable and efficient work sequences. Similarly, a subcontractor relies on information supplied by the owner or the prime.¹¹³ From the owner's standpoint, high-quality specifications will advance the owner's anticipated objectives, particularly those objectives expressed in or implied by the contract documents.

Defective specifications do not accomplish these objectives. More detailed classification helps one understand some of the legal issues that surround this term, one that hides a multitude of sins.

Erroneous specifications contain factual errors of the type described in *United States v. Spearin* and subsurface data errors, to be discussed in Section 25.03. They also include *legal* errors, such as noncompliance with applicable laws such as building and housing codes and environmental regulations.¹¹⁴ Usually legal errors are the responsibility of the owner, with ultimate responsibility belonging to the design professional.¹¹⁵ Only if the contractor knew of the errors may this risk have been shifted or shared.¹¹⁶

Specifications may contain errors of a mechanical nature, such as water intrusion, foundation settling, insufficient heating or cooling, or a partial or total collapse of the structure. Although such problems are often classified as defects (the subject of Chapter 24), the party responsible for defects of this type that are caused by the design is the party who created the design or had the design created for it, usually the party with a preponderance of expertise in the element of design that failed. Typically,

¹¹³See *W. F. Magann Corp. v. Diamond Mfg. Co.*, 775 F.2d 1202 (4th Cir.1985) (prime did not disclose information it received from owner to subcontractor). But in *Gillingham Constr., Inc. v. Newby-Wiggins Constr., Inc.*, 136 Idaho 887, 42 P.3d 680 (2002), the court ruled that the implied warranty of design did not extend from a prime contractor to the subcontractor.

¹¹⁴*St. Joseph Hosp. v. Corbetta Constr. Co.*, 21 Ill.App.3d 925, 316 N.E.2d 51 (1974) (paneling violated code); *Atlantic Nat. Bank of Jacksonville v. Modular Age, Inc.*, 363 So.2d 1152 (Fla.Dist.Ct.App.1978) (wall violated code).

¹¹⁵But see *Green v. City of New York*, 283 A.D. 485, 128 N.Y.S.2d 715 (1954) and *Quedding v. Arisumi Bros., Inc.*, 66 Haw. 335, 661 P.2d 706 (1983), where contractors who designed and built were liable where specified materials violated code because of express or implied promise to comply with the law.

¹¹⁶AIA Doc. A201-1997, ¶3.7.4. But this language was cut from A201-2007.

this is the owner, unless the owner has transferred this risk to the contractor.

Errors can be functional, such as a project failing to accomplish the owner's desired objectives. This can result from bad business judgment or changed circumstances—both owner risks. The owner may be able to transfer this risk to the design professional if the latter warranted a successful outcome or if the design professional's failure to perform as other design professionals would have performed caused the project to fail.

Defective specifications can “fail” as a method of communication. For example, specifications that do not describe what will be demanded or that fail to give sufficient design detail to enable the contractor to accomplish the desired objective are “incomplete.”

Where the design is incomplete and the contract does not clearly state who will provide the missing part of the design, it is likely to be the responsibility of the owner.¹¹⁷ It drafted the contract and hired a design professional to provide the design.

Sometimes the specifications are confusing or contradictory, again a problem of failing to communicate the performance that will be demanded. In *Jasper Construction, Inc. v. Foothill Junior College District*,¹¹⁸ the specification stated,

11. CONSTRUCTION JOINTS

A) Locations and details of construction joints shall be as indicated on the structural drawings, or as approved by the Architect. Relate required vertical joints in walls to joints in finish. In general, approved joints shall be located to least impair the strength of the structure.¹¹⁹

The locations of the construction joints were not shown on the drawings. However, Jasper contended that certain structural drawings indicated to him that the steel was from “floor to floor” and therefore the concrete would be poured in the same manner. He began to pour the basement “floor to floor,” but the architect informed him that the joints would have to be “wall to wall.” The contractor complained but did the work as directed and made a claim.

The jury was instructed that a public entity that issues plans and specifications *impliedly warrants* that they are

free of defects, and complete, and will, if followed, result in the project intended.

The appellate court found this jury instruction erroneous. The court recognized that warranties do attach to owner-supplied specifications. However, the court limited the implied warranty doctrine to *affirmative misrepresentations* or concealment of material facts that misled the contractor. The court concluded that the contractor had not been misled. It could have cleared up any ambiguities or incompleteness in advance by seeking a clarification from the architect.

The result in the *Jasper* case in no way undermines the importance or existence of implied warranties. Warranties are implied either where the issue is who bears the risk of inaccurate information, such as in the subsurface cases, or in disputes that involve the outcome of compliance with specifications. In either case, an implied warranty may be found if it is more equitable to make the owner responsible for inaccurate information relied on reasonably by the contractor or to make the owner pay for defects caused by the design or unanticipated expenses of complying with that design. Implied warranties do not depend on fault. They are found if this is what the parties are very likely to have intended or, more commonly, if this is the fairest way of allocating the risk for particular losses.

Most implied warranty cases involve owners who were public entities. There is no reason to differentiate public from private owners. Private owners who have the same resources and expertise of public entities should be held to similar implied warranties of quality specifications. If a private entity does not have these resources and expertise (and there may be cases where public entities do not either) and relies on the contractor, the owner may be the beneficiary of an implied warranty by the contractor.

Injury. The *Spearin* Court invoked the implied warranty to relieve a contractor from liability for a failed project. In addition to this defensive use of the doctrine, contractors may also invoke the warranty in an attempt to recover higher than anticipated construction costs. However, in the latter situation the doctrine applies only if the higher costs were incurred by the contractor in trying to implement unbuildable design specifications. This is the injury addressed by *Spearin*; the warranty does not guarantee a perfect design and trouble-free performance.

A buildable design does not violate the implied warranty, even if the construction process was more expensive

¹¹⁷*Tibshraeny Bros. Constr. v. United States*, 6 Cl.Ct. 463 (1984).

¹¹⁸91 Cal.App.3d 1, 153 Cal.Rptr. 767 (1979).

¹¹⁹153 Cal.Rptr. at 769.

and took longer than the contractor anticipated. A large number of requests for information, while perhaps evidence that the design team did a sloppy job, does not establish an injury within the meaning of the *Spearin* warranty, as long as the design is buildable.¹²⁰

In *Hercules Inc. v. United States*,¹²¹ the Supreme Court addressed the question of whether the *Spearin* doctrine applies to third-party personal injury claims against the contractor. Vietnam War veterans, claiming injury from exposure to the defoliant Agent Orange, sued manufacturers of the chemical. (Agent Orange litigation is discussed in Section 7.09J.) The manufacturers settled, then sued the government to recoup the cost of settlement. The manufacturers contended that the Agent Orange design, which had been created by the government, was defective and resulted in their settlement and defense costs. The Supreme Court refused to extend *Spearin* to the manufacturers' claims:

When the Government provides specifications directing how a contract is to be performed, the Government warrants that the contractor will be able to perform the contract satisfactorily if it follows the specifications. The specifications will not frustrate performance or make it impossible. It is quite logical to infer from the circumstance of one party providing specifications for performance that that party warrants the capability of performance. But this circumstance alone does not support a further inference that would extend the warranty beyond performance to third-party claims against the contractor. In this case, for example, it would be strange to conclude that the United States, understanding the herbicide's military use, actually contemplated a warranty that would extend to sums a manufacturer paid to a third party to settle claims such as are involved in the present action. It seems more likely that the Government would avoid such an obligation, because reimbursement through contract would provide a contractor with what is denied to it through tort law.¹²²

¹²¹516 U.S. 417 (1996).

¹²²*Id.* at 425. The *Hercules* decision is discussed in Leaderman, *The Spearin Doctrine: Is Isn't What It Used to Be*, 16 Constr. Lawyer, No. 4, Oct. 1996, p. 46.

F. "Impossible" Specifications

Performance specifications require the performing party to accomplish a designated objective.¹²³ For example, an aircraft company might agree to manufacture an airplane that will fly twice the speed of sound or a machinery manufacturer might agree to build a system for a plant that would turn out 1,000 units of a particular quality per hour. Suppose the airplane manufacturer or machinery maker fails. Ordinarily, the failure to comply with performance specifications is a breach of contract.¹²⁴ But suppose the party promising to meet these specifications asserts that it was "impossible" to do so. Does proof of impossibility provide a defense?¹²⁵ Does such proof entitle the performing party to reimbursement for the expenses incurred while seeking to meet the performance specification?

The answers to these questions in the first instance depend on the contract. The contract can place such risks on one or both parties. Often contracts are not clear on this point, and the law must determine the answers to these difficult questions.

Unfortunately, such problems are classified as "impossible" specification cases because the performing party, who will be referred to as the contractor, claims that it was "impossible" to meet these performance specifications. But the word *impossible* has a number of subtle shadings that often complicate cases and make prediction uncertain.

Another difficulty with the "impossible" label is that it can obscure the crucial issue of risk assumption. Clearly, a party can promise to do the impossible, although evidence that such a foolish risk was taken should be clear.¹²⁶ The fact that it is not physically possible—that is, beyond the state of the art—should not invariably resolve the matter in favor of the contractor.

¹²³For a cavalier judicial treatment of performance specifications, see *Kurland v. United Pacific Ins. Co.*, discussed in Section 24.03.

¹²⁴*Gurney Indus., Inc. v. St. Paul Fire & Marine Ins. Co.*, 467 F.2d 588 (4th Cir.1972).

¹²⁵The discussion in this subsection emphasizes attempts by the performing party to be reimbursed for its efforts, as this has been the principal issue in cases raising this problem. If there were a sufficient degree of impossibility to justify reimbursement, it seems obvious that the performing party would have a defense if sued by the other party for not complying with the performance specifications. The contractor was given a defense when the plans were considered "impossible" in *City of Littleton v. Employers Fire Ins. Co.*, 169 Colo. 104, 453 P.2d 810 (1969).

¹²⁶*J. C. Penney Co. v. Davis & Davis, Inc.*, 158 Ga.App. 169, 279 S.E.2d 461 (1981).

A key factor in determining if the contractor assumed the risk of performing “impossible” specifications is whether it created the design. *Foster Wheeler Corp. v. United States*,¹²⁷ a Court of Claims opinion, dealt at length with an impossible specifications problem. Foster Wheeler Corporation (FWC) entered into a fixed-price supply contract under which it agreed to design, fabricate, and deliver within thirteen months two boilers and perform a “dynamic shock analysis” study called a DDAM (dynamic design analysis method) that would demonstrate that the boilers could withstand shock up to certain designated intensities set forth in the contract specifications. The total contract price was \$280,000. The boilers were ultimately to be installed in naval ships. Because the boilers could not be subjected to actual shock testing, the DDAM—a mathematical model to represent a piece of equipment and the use of dynamic inputs to substitute for physical stresses and failure criteria—was to substitute.

After many months of design work and creation of mathematical models, the contractor ceased performance and sought an equitable adjustment of \$192,000, claiming the “impossibility” of meeting the specifications. This claim was based on the impossibility of meeting the performance specifications of “shock hardness.” Given other design requirements, this degree of hardness could not be demonstrated by the DDAM.

The court recognized that the term *impossibility* does not require absolute impossibility but encompasses impracticability, a type of commercial impossibility caused by extremely unreasonable expense to perform. *Absolute* impossibility, in the sense of requiring performance beyond the state of the art, would entitle the contractor to recover its cost in attempting to perform unless it assumed this risk. The court concluded that demonstrating the boiler to be shock hard by the DDAM method was both “commercially and absolutely impossible.”

After giving facts that supported a conclusion of absolute impossibility, the court went on to the more controversial “commercial impossibility,” stating,

Under this theory, it is contended that the construction of a shock-hard boiler, even if ultimately possible, could not be accomplished without commercially unacceptable

costs and time input far beyond that contemplated in the contract. To design a shock-hard boiler by means of a mathematical model and dynamic analysis could . . . take an infinite amount of time. . . . The evidence shows . . . that the . . . contract contained specifications which were impossible to meet, either commercially or within the state of the art.¹²⁸

This did not end the matter. The government argued that FWC assumed the contractual responsibility for performing the impossible. To determine who should assume this risk, the court examined which party had the greater expertise in the subject matter of the contract and which party took the initiative in drawing up specifications and promoting a particular method or design. The court ruled for FWC.¹²⁹

The preceding discussion addresses the doctrine of impossibility in the context of performance specifications. The doctrine may also extend to design specifications. Here, the contractor usually argues that the design is physically impossible to implement.¹³⁰ Sometimes, the specifications are impossible to implement because of time constraints.¹³¹

¹²⁸513 F.2d at 598.

¹²⁹For additional cases finding that the contractor assumed the risk of impossible specifications, see *Noslo Eng'g Corp.*, ASBCA No. 27120 86-3 BCA ¶19,168 (contractor created the design); *Austin Co. v. United States*, 161 Ct.Cl. 76, 314 F.2d 518, cert. denied, 375 U.S. 830 (1963) (the contractor convinced the government to revise the specifications before the contract was signed); and *Bethlehem Corp. v. United States*, 199 Ct.Cl. 247, 462 F.2d 1400 (1972) (the contractor did not prepare the specifications but assured the government that the specifications were reasonable and results obtainable). In *National Presto Indus. v. United States*, 167 Ct.Cl. 749, 338 F.2d 99 (1964), cert. denied, 380 U.S. 962 (1965), the court applied the doctrine of mutual mistake where the parties, with equal expertise, agreed on an impossible method of performance.

¹³⁰*R.P. Wallace, Inc. v. United States*, 63 Fed.Cl. 402 (2004) (window model that was impossible to manufacture); *O'Neal Eng'g, Inc.*, ASBCA No. 31804, 86-2 BCA ¶18,906 (design called for installation of a four-inch cable in an existing conduit less than four inches in diameter) and *James W. Sprayberry Constr.*, IBCA No. 2130, 87-1 BCA ¶19,645 (on a re-roofing contract, the specifications were written on the assumption the roof was level; however, the roof was uneven, so the specifications were impossible to implement).

¹³¹*Triax Pacific, Inc. v. West*, 130 F.3d 1496 (Fed.Cir.1997) (the specifications' painting schedule and curing (or drying) requirement, when read together, made timely completion of the project impossible). See also *Southland Enterprises, Inc. v. Newton County*, 838 So.2d 286 (Miss.2003) (county mandated that road resurfacing job be performed

¹²⁷206 Ct.Cl. 533, 513 F.2d 588 (1975).

G. Weather

An empirical study reports that weather is “one of the most important causes of delay in construction, its influence being felt through lost or non-productive working days, idle equipment, spoiled materials, contingency over-heads and consequently higher prices.”¹³² Generally, the weather is considered a risk borne by the contractor.¹³³ Time extensions are granted only if the weather is severe and abnormal for the time and place.¹³⁴

H. Financial Problems

After the construction contract is made and before completion of each party’s performance, either party can suffer severe financial reverses. Such reverses may manifest themselves in difficulties that range from short delay in paying bills to insolvency and even bankruptcy. Financial reverses of this sort can raise two related but separate legal questions. First, the party in financial difficulty may contend that it should be relieved from further performance because it does not have the financial capacity to continue performance. Second, one party may be unwilling to continue performance if it appears the other party’s financial difficulties will make it unlikely that the latter will perform as promised. Under certain circumstances, the law allows a party who has legitimate concern over the other party’s ability to perform to refuse to continue performance until it is reassured that the other party will perform its promise.¹³⁵ AIA, in its A201-2007 relating to construction services, gives the performing party—the contractor in A201-2007—the right to demand certain information regarding the owner’s financial resources.¹³⁶

Suppose the contractor asserts that the owner has made a *promise* to supply adequate information as to its financial resources and that its failure to do so constitutes a breach. Such assertion would be based on the furnishing of information not only being a condition to the contractor’s obligation to execute the contract but also being a promise by

in December; however, winter temperatures prevent the asphalt from adhering to the rock bed).

¹³³See Sections 26.07 and 26.08.

¹³⁴*Hardeman-Monier-Hutcherson v. United States*, 198 Ct.Cl. 472, 458 F.2d 1364 (1972) (no additional compensation in absence of a clause granting it).

¹³⁵Restatement (Second) of Contracts §§ 251, 252 (1981).

¹³⁶AIA Doc. A201-2007, § 2.2.1.

the owner that it will furnish the information if requested. If so, the contractor is entitled to damages. At the very least, damages should encompass its expenses incurred in negotiating or submitting a competitive bid. However, the contractor should not recover lost profits. To avoid such recovery, such a provision would likely be held to create a condition rather than a promise.

Suppose the required information is not provided. As already noted, the common law would give the contractor the right to demand adequate assurance and to suspend performance until it is furnished. In transactions involving goods, a similar right is given the insecure party under the Uniform Commercial Code, Section 2-609. If the information is crucial or if the requested information is not furnished within a reasonable time not exceeding thirty days, the party who is suffering insecurity can terminate. Under AIA Document A201-2007, Section 2.2.1, failure to furnish the requested information on financial resources gives the contractor the right to refuse to begin work or to continue working. A201-2007, Section 14.1.1.4, gives the contractor the right to terminate its obligation if it has ceased performance for thirty days because the owner has not furnished the requested financial information.

Some owners may object to such a provision, particularly the part added in 1997 (and continued in 2007) that bars the owner from materially varying its financial commitments “without prior notice to the Contractor.” (Such a clause can give the contractor an opportunity to get out of the contract if it finds that it has bid too low.) Such owners may justify their refusal by noting that contractors in private construction have a right to mechanics’ liens if they are not paid. However, the contractor would prefer a battery of weapons to deal with financial insecurity and nonpayment.

Suppose an A201-2007 is used but the portion giving the contractor this power is deleted. Would a court use common law doctrines that might otherwise be available to the contractor who has reasonable insecurity as to the owner’s ability to pay?¹³⁷ Deletion appears to indicate the parties did not intend that this “gap filler” to be part of this transaction.

¹³⁷See Section 33.04B. West Ann.Cal.Civ. Code § 3110.5, effective January 1, 2002, may partially displace the common law in California. It requires certain private owners on large projects to provide the prime contractor with either a payment bond, an irrevocable letter of credit, or an escrow account, so as to increase the prime’s financial security.

Suppose the contractor's power is limited to that period between award and execution of the formal contract. Would this limitation preclude a court from using any common law financial insecurity doctrines that might otherwise be available during performance?¹³⁸ Does a contract that deals with a particular problem signal a court that the law should not imply terms? The detailed treatment of this problem would make legal intervention unlikely.

Financial problems encountered by the contractor are not likely to give it any justification for refusal to continue performance. However, construction contracts usually grant the owner certain remedies if the contractor runs into financial difficulties. This grant should make it unnecessary for the law to employ any common law doctrines dealing with financial insecurity. To use provisions giving the owner remedies, such as suspension or termination, if the contractor runs into serious financial problems is unlikely, given the frequent use of surety bonds to provide financial security for the owner if the contractor does not perform as promised. As to the effect of bankruptcy law on contract provisions, see Section 33.04C.

I. Asbestos and Other Hazardous Materials

Section 9.13 described some of the contours of the environmental movement and the increasing liability exposure for those who are involved in any way with hazardous materials. Also, Section 12.09 treated this issue from the perspective of design services. This subsection focuses on the discovery of a condition involving hazardous materials during construction and the effect of this discovery on the contractual obligations of the parties to a construction contract.

How does this discovery affect the obligation of the contractor to continue performance or to resume performance? AIA Document A201-2007, Section 10.3.1, mandates cessation of work if asbestos or polychloride biphenyl (PCB)—given as nonexclusive examples—are encountered and if “reasonable precautions will be inadequate to prevent foreseeable bodily injury or death.”

Under Section 10.3.2, first added in 1997, the owner must use a licensed laboratory to determine whether such danger exists and, if so, the owner shall “cause it to be rendered harmless,” presumably through the use of a licensed

remediation contractor. The architect and contractor may raise reasonable objections over who will do the testing and remediation. If the materials have been rendered harmless, work resumes if the owner and contractor so agree. Also added in 1997, the contractor is given a time extension and a price adjustment amounting to its cost of shutdown, delay, and start-up.

Indemnity will be treated in Chapter 31, but here it should be noted that indemnity for hazardous materials has been created in Sections 10.3.3, 10.3.5 and 10.3.6. Section 10.3.3 requires the owner to indemnify the design and construction participants (architect and contractors) for all risks relating to hazardous materials except to the extent the damage is due to the negligence of an indemnitee. Under Section 10.3.5 the contractor indemnifies the owner if the owner is held liable for costs of remediation caused by the contractor's negligence or breach. Under Section 10.3.6, the owner indemnifies the contractor if the contractor “is held liable by a government agency for the cost of remediation of a hazardous material or substance solely by reason of performing Work”

Cessation and resumption of work raise other legal issues. Suppose the work is stopped, an asbestos abatement contractor performs asbestos removal, and the work is resumed. Who must pay for the cost of asbestos abatement and removal? Can the contractor receive an equitable adjustment if discovery of asbestos or other hazardous material has adversely affected its performance cost? If its work has been drastically affected, does the contractor have the power to terminate the contract? Similarly, if the project looks very different to the owner after the high cost of abatement, can the owner use the impossibility or frustration doctrines to terminate its obligation to proceed further under the contract? Finally, if the owner chooses not to resume the work, has it breached its contract with the contractor?

Some, though not all of these problems, have been addressed in AIA Document A201-2007, Section 10.3. These questions should be addressed in the contract. If the contractor encounters such materials, it should receive an equitable adjustment if it can continue to perform any work. The owner should be allowed to terminate the contract if in good faith it believes it would not be economical to continue working under such conditions.

Hazardous materials at the site may injure the contractor's workers or, on a renovation project, the building's occupants. In the latter situation, the hazardous materials

¹³⁸Ibid.

usually were introduced as part of the construction process. For example, a contractor's application of sealants, curative agents, paints, and glues often releases fumes which may be toxic to some people.

The causal connection between the hazardous materials and the claimed personal injuries is not always clear-cut. If the injury is immediate upon exposure, the connection appears more evident, and the contractor is informed of the possibility of a liability claim. However, as in the case of asbestos, workers may allege that their illness manifested itself many years after the project was over.

Worker injury claims should be covered by workers' compensation insurance. Contractors look to their liability insurance for coverage of claims by third parties, such as building occupants. Unfortunately for contractors, commercial general liability policies increasingly include a so-called "absolute" pollution exclusion. The exclusion purports to negate coverage for any claims caused by the exposure to "pollutants," a term broadly defined to include "any solid, liquid, gaseous, or thermal irritant or contaminant, including smoke, vapor, soot, fumes, acids, alkalis, chemicals and waste."

The courts are deeply split on the scope of the pollution exclusion. Some interpret it literally to apply to all exposures

to hazardous materials.¹³⁹ Other courts find that the intent of the exclusion is to apply to environmental pollution claims. Those courts adopting this narrower view of the exclusion's scope continue to find coverage where the plaintiff was injured by exposure to hazardous substances that are part-and-parcel of the construction process.¹⁴⁰

Another problem relates to the discovery of radon, either during construction or after construction has been completed. Increasingly, radon will create legal problems, both of a public and of a private nature.¹⁴¹

Defects: Design, Execution, and Blurred Roles

SECTION 24.01 Introduction: The Partnership

The sad but not uncommon discovery that the project has defects often generates a claim by the owner against parties it holds responsible for having caused the defect. Claims against the design professional were discussed in Chapter 14. This chapter concentrates on owner claims against the contractor.¹

Defects in a house can include a leaky roof, a sagging floor, structural instability, and an inadequate heating or plumbing system. A commercial structure can include these defects as well as an escalator that is unsafe or inefficient or that requires excessive repairs. An industrial plant can include the preceding defects as well as inadequate space to install machinery or the inability of the computer system to operate the assembly line.

A differentiation must be made between temporary and permanent work. Usually defects deal with permanent work—the finished product that the owner intends to use. Under AIA Document A201-2007, Section 3.3.1, how the permanent work is to be accomplished—such as means, methods, and sequences, including methods for accomplishing the temporary work, such as temporary shoring, bracing, formwork, or coffer dams—is usually the responsibility of the contractor.² Yet the AIA recognizes that this model of responsibility is not universal. In 1997 it added language to Paragraph 3.3.1, which spoke specifically to the possibility that some owners may wish to “give

specific instructions concerning construction methods.” If so, the contractor must evaluate “job site safety” and be responsible for “job site safety of such means.” If the contractor believes the methods specified are not safe, it must notify the owner and architect in writing and must not proceed until instructed to do so. This language is preserved in A201-2007, Section 3.3.1. Of course, AIA assumptions, that of giving execution responsibility to the contractor, could always be changed by the parties. They can add language recognizing that projects can and do use different delivery and risk allocation methods.

It is important to differentiate the different types of owners discussed in Section 8.02A. The most important is a differentiation between an owner who supplies a design—usually by an independent design professional—and one who hires a contractor to both design and build. (Design–build (DB) was discussed in Section 17.04F.)

It is also important to review certain types of specifications noted in Sections 19.01D and 23.05E. They are *design* specifications, *performance* specifications, and *purchase description* specifications. The first requires the contractor to use designated methods and materials. The second gives the contractor particular goals, with the contractor often but not always able to determine how the goals are to be achieved. The third designates materials and equipment by name of manufacturer, trade name, and type. Sometimes purchase description specifications let the contractor request authorization to substitute something equal to or the equivalent of the designated product. Specifications can combine types, such as design and performance. Also, they vary as to completeness of materials and methods requirements.

Often it is difficult to determine what causes a defect. A defect can be caused by the design, by workmanship, by

¹For claims against public liability insurers, see Section 24.08.

²AIA Doc. A201-2007, §1.1.3, defines “Work” as any activity performed by the contractor. This can include temporary work, such as shoring, bracing, or formwork.

extraneous factors such as weather, or by a combination of factors. Perhaps the greatest difficulty involves the defects traceable to materials (discussed in Section 24.02 and 24.09C).

One rough classification is to charge the owner with defects caused by design and hold the contractor accountable for defects caused by failure to follow the design or by poor workmanship. This classification can be deceptive unless account is taken of the increasingly blurred roles related both to design and to its execution. For example, Section 12.08C, dealing with submittals, noted that A201-2007 recognized, by inserting Section 3.12.10, the increasing use of what has been called “design delegation.” Section 12.08C deals with this topic in great detail.

Although design is principally the responsibility of the owner when it has not been delegated to the contractor (the owner usually acting through the design professional), the contractor plays a role in design, particularly a contractor retained because it has specialized skill in certain work or because it retains subcontractors with those skills. Illustrations of this shared responsibility can be contracts that require the contractor to submit drawings indicating how it proposes to do the work (often prepared by specialized subcontractors) and that require the design professional to approve the submittals. (The submittal process was discussed in Section 12.08C.)

Shared design responsibility also should increase as digital technologies play a larger and larger role in design creation. As discussed in Section 12.11, ownership of the design becomes blurred when subcontractors and suppliers contribute electronically to the formation of the original design. As discussed in Section 17.04M, Building Information Modeling contemplates a collaboratively created design, in which the design author cannot easily be traced or determined. Moreover, making electronic media part of the design complicates the contractor’s design review role. AIA A201-2007, Section 3.2.2, requires the contractor, before starting the work, to “carefully study and compare the various Contract Documents” and to report to the architect “any errors, omissions, or inconsistencies” that it discovers. A recent article (commenting on the same language in A201-1997, Paragraph 3.2.1) questions how that review would work in a digitally-based design:

The process of “carefully studying and comparing” interoperable object-oriented CAD files may be quite different from the process of “carefully studying and comparing” paper

Drawings and Specifications. For one thing, there may be “plan-checking” software introduced to the market that the “careful study” standard would obligate the Contractor to use. And the sheer amount of information in an object-oriented interoperable file (including links to other documents and web sites) may be impossible for the Contractor to absorb in detail “before starting each portion of the Work.”³

Another complication is the standard by which the contractor’s review of the design is measured. Section 3.2.2 states that the contractor’s review is made in its capacity as a contractor, not as a design professional. However, as the contractor becomes a more active participant in the collaborative design process, a professional license may become necessary.⁴ At this point, must the contractor meet the professional standard? What types of design defects would the contractor then be expected to discover? Would it, like an architect, have an obligation to determine whether the design complies with applicable laws? In sum, as the sharp line between architect and contractor blurs in the creation and review of the design, so does the demarcation blur as to responsibility for design defects.

Sometimes bidders are asked to provide design alternatives, or do so voluntarily. Before or after award or during performance, the contractor may request to substitute different equipment or material from that specified. Although approval by the design professional is usually required, approval often is based on representations or even warranties by the contractor that the proposed substitution will be at least as good as that specified or will accomplish the desired result. The contractor, though clearly subordinate to the design professional, plays an important role in design.

Similarly, the design professional frequently monitors the contractor’s performance during the work and at the end of the job. Some design professionals may even direct how the work is to be done, although this role is typically not within their power or responsibility.

As shall be seen in Section 24.02, control is a key factor determining responsibility for defects. Yet the rough “partnership” between owner and contractor makes it difficult to neatly divide responsibility by design and execution.

³Stein, Alexander & Noble, *AIA General Conditions in the Digital Age: Does the Square “New Technology” Peg Fit Into the Round A201 Hole?*, 25 *Construction Contracts Law Rep.*, No. 25, Dec. 14, 2001, ¶367, pp. 3, 8. “CAD” refers to computer-assisted design.

⁴Id. at p. 9.

SECTION 24.02 Basic Principle: Responsibility Follows Control

As a basic principle, responsibility for a defect rests on the party to the construction contract who essentially controls and represents that it possesses skill in that phase of the overall construction process that substantially caused the defect. Usually, defects caused by design are the responsibility of the owner in a traditional construction project and the contractor who both designs and builds. Control does not mean simply the power to make design choices. Every owner usually has the power to determine design choices. For example, an owner may require a particular type of tile to be used, a power within its contract rights. But the control needed to invoke the basic principle means a skilled choice, either one made by an owner who has professional skill in tile selection or an adviser such as an architect with those skills.

This principle recognizes that the owner who supplies the design is responsible for design that does not accomplish the owner's objective and yet may not have a claim against the design professional. Usually the standard to which the design professional is held is whether she would have performed as would have other design professionals similarly situated.

Under this principle, the owner, though not at fault, bears the cost of correcting defects. The owner has the principal economic stake in the project and will benefit from a successful project. There is no reason why it cannot be responsible for project failures even though it is blameless and cannot transfer the loss.

Many cases have held that the contractor who follows the design is not responsible for a defect unless it warrants the design or was negligent.⁵ This establishes the principle that the owner is responsible for any design it has

⁵Annot., 6 A.L.R.3d 1394 (1966). See also *John Grace & Co., Inc. v. State Univ. Constr. Fund*, 99 A.D.2d 860, 472 N.Y.S.2d 757, aff'd as modified, 64 N.Y.2d 709, 475 N.E.2d 105, 485 N.Y.S.2d 734 (1984) and *Bunkers v. Jacobson*, 653 N.W.2d 732, 741–42 (S.D.2002). By statute, contractors in Louisiana are not liable to third parties injured by design defects if the contractor followed the design and did not have reason to know that deficiencies in the design would create the hazardous condition. See La.Rev.Stat. § 9:2771, applied in *Dumas v. Angus Chemical Co.*, 729 So.2d 624 (La.App.1999). But see *Calcasieu Parish School Bd. v. Lewing Constr. Co., Inc.*, 931 So.2d 492 (La.App.2006) (architect's specification that floor be installed in accordance with the manufacturer's instructions shifted to the flooring subcontractor, as the party with the greatest expertise, the duty to perform moisture tests).

furnished. Similarly, the owner impliedly warrants the accuracy of specific information it furnishes that is reasonably relied on by the contractor.⁶ It also warrants that any required materials, design features, or construction methods will create a satisfactory end product within the completed time and without extraordinary unanticipated expense.⁷

Cases supporting this principle usually involve traditional construction in which the owner furnishes and monitors the design but is not primarily responsible for its execution. Risk allocation is based on the probable intention of the parties, the greater skill possessed or supplied by the owner, the contractor's lack of discretion, and the owner's being in the best position to avoid the harm, as well as the owner's ability to spread, absorb, or shift the risk to the design professional. Similarly, contractors are generally held to have impliedly warranted the quality of their workmanship.⁸

Contractors who both design and build usually warrant that the finished product will be fit for the owner's purposes of which the contractor knew or should have known, for the same reasons placing risk on the owner in a traditional method. Also, these warranties are similar to those placed on sellers of goods. For example, one court found an implied warranty⁹ where

1. The contractor holds itself out, expressly or by implication, as competent to undertake the contract; and the owner
2. has no particular expertise in the kind of work contemplated;
3. furnishes no plans, designs, specifications, details, or blueprints; and
4. tacitly or specifically indicates its reliance on the experience and skill of the contractor, after making known to him the specific purposes for which the building is intended.

Defective material generates the most difficult problems. The huge variety of available materials (often

Lawyer, No. 3, Summer 2001, p. 11.

⁹*Dobler v. Malloy*, 214 N.W.2d 510, 516 (N.D.1973).

untested), the pressure to cut costs or weight, and the inability to test or rely on manufacturers all combine to make defective materials a prime cause of defects in the project.

Materials specified may be unsuitable and may never accomplish the purpose for which they have been specified. As specification is part of design, responsibility for such materials falls on the person who controls the design or to whom the risk is transferred.¹⁰

Materials may be suitable yet fail either because they were installed improperly—in which case the contractor clearly would be responsible for the failure—or because they were manufactured improperly. Should the owner's control over the design mean that it is also responsible for faulty materials, or is the manufacturer more akin to a subcontractor, for whose defective performance the contractor is responsible? This problem is addressed in greater detail in Section 24.09C, dealing with the AIA warranty clauses. A few observations can be made here.

Arguments can support placing the risk of faulty materials on either owner or contractor. As to putting the risk on the owner, it is often difficult to determine whether the materials were unsuitable or whether they were faulty. It is more efficient to place responsibility for any specified materials on the party that controls the design—the owner, in the case of traditional construction, and the contractor who both designs and builds. It is unfair to use purchase description specifications and then seek to hold the contractor accountable. When a purchase description specification is used, the contractor is not a seller but is simply a procurer of goods ordered by someone else. The contractor should not be held to the warranties of sellers or manufacturers.

Cogent arguments, however, can be made for holding the contractor responsible for faulty materials. It is difficult to determine whether a defect is caused by unsuitable or faulty materials or by the contractor's failure to install them properly. Very likely a contractor is responsible for faulty materials if it knew or should have known they

were faulty. If the contractor is responsible for faulty material that it knew was faulty, it is administratively more efficient to make the contractor responsible for faulty materials, particularly as the contractor is likely to have a better claim against the supplier or manufacturer than the owner.

The federal boards of contracts appeals adopt the latter approach. They reason that, in the event a delivered product is manufactured improperly, the contractor, rather than the government, is in a better position to seek relief from the manufacturer. This is because the contractor is in privity with the manufacturer and so can protect itself contractually, while the government is not in privity with the manufacturer. The boards' reasoning follows the basic principle of responsibility following control, but in this case "control" means the party in the best position to obtain a remedy.¹¹

This deceptively simple problem should be handled specifically in any contract that uses design or purchase description specifications. An owner successfully dealt with this issue through contract language in *Rhone Poulenc Rorer Pharmaceuticals, Inc. v. Newman Glass Works*.¹² In that case, a federal court of appeals ruled that a subcontractor's express warranty that the work will be "free from faults and defects" shifted to it responsibility for latent, manufacturing defects in products designated in the specifications.

SECTION 24.03 Displacing the Basic Principle: Unconscionability

Autonomy (freedom of contract) generally allows contracting parties to determine how particular risks will be borne. But as noted in Sections 5.07D and 19.02E, a clause or contract that is unconscionable will not be enforced. As a rule, the owner is the party who usually seeks to take advantage of autonomy.

¹⁰*Trustees of Indiana University v. Aetna Cas. & Sur. Co.*, 920 F.2d 429 (7th Cir.1990); *Teufel v. Wienir*, 68 Wash.2d 31, 411 P.2d 151 (1966). The *Aetna* case is discussed in great detail by Reynolds, *What Is a Contractor's Warranty Responsibility for Owner-Specified Materials*—Trustees of Indiana University v. Aetna Casualty & Surety, 11 Constr. Lawyer, No. 4, Oct. 1991, p. 1. Although the author represented Aetna in the case and admits that he might be biased, the article is a careful and perceptive treatment of the problem.

¹¹*DeLaval Turbine, Inc.*, ASBCA No. 21797, 78-2 BCA ¶13,521; *Cascade Electric Co.*, ASBCA No. 28674, 84-1 BCA ¶17,210; Baltz, *The Spearin Doctrine: How Far Does It Go?*, 33 Procur. Lawyer, No. 1, Fall 1997, p. 11.

¹²112 F.3d 695 (3rd Cir.1997), rehearing and rehearing *in banc* denied Jun 4, 1997 (Pennsylvania law). See also *Graham Constr. Co., Inc. v. Earl*, 362 Ark. 220, 208 S.W.3d 106 (2005) (contractor's express warranty, coupled with its poor workmanship, made it responsible for leaking skylights specified by the owner).

Displacement should be differentiated from clauses that clarify or augment the basic principle. Section 24.02 defines the basic principle for allocating the risk for defects. It places responsibility on the party that controlled or had the right to control the activity causing the defect. A warranty clause (discussed in Section 24.09) can transfer design risks to the contractor. Such a clause would displace what would otherwise be the common law rule. However, such a clause may make clear that the contractor is responsible for poor workmanship and specify a remedy. The latter warranty clause seeks not to displace but to augment the basic principle.

Any clauses that seek to displace the basic principle will be scrutinized carefully to determine both whether the contracting party on whom the risk is placed was aware of the risk allocation and the fairness of displacing the basic principle. Although cases do not always openly recognize the need to scrutinize the clause, the courts are more willing to determine the fairness of such clauses than to simply enforce the clause as written.

*W. H. Lyman Construction Co. v. Village of Gurnee*¹³ involved a specification requiring that the contractor use a particular manhole base and seal. The specifications also stated that the contractor assumed the risk of complying with infiltration limits. If the contractor thought the design would be inadequate, it was to direct attention to this inadequacy in writing at the time it submitted its bid.

The court held that this was an “impermissible attempt on the part of the Village to shift the responsibility for the sufficiency and adequacy of the plans to the contractor, without providing the contractor the corresponding benefit of something to say about the plans that he is strictly bound to follow.”¹⁴ After noting the “possible” unconscionability of such a clause, the court concluded that the clause would not shield the village from its negligence because of public policy. Shielding the village would discourage bidders, and the public interest would suffer in the long run.

*Kurland v. United Pacific Insurance Co.*¹⁵ demonstrates the unwillingness of courts to simply apply language that seeks to displace the basic principle that risk follows control, as set forth in Section 24.02. It involved a claim by an owner against a subcontractor’s surety. The subcontractor

had undertaken to install an air-conditioning system in an apartment building. The plans and specifications designated equipment to be used and required the contractor to meet performance standards for cooling and heating. The subcontractor did as required, but the air-conditioning system did not function as required.

In affirming a judgment for the surety, the court noted that the plans and specifications had been prepared by the architect. The air-conditioning unit was an owner design choice, perhaps a negligent one. The court held that it could not be reasonably concluded that the subcontractor would assume the responsibility for the adequacy of the plans and specifications. The court concluded that warranty-like language was simply an undertaking by the subcontractor that it would work as effectively as possible to achieve the desired result. The language was not a warranty of a successful outcome.

Nevertheless, courts do not always relieve the contractor if it follows the plans and specifications dictated by the owner. In *United States Fidelity & Guaranty Co. v. Jacksonville State University*,¹⁶ the contractor did as the specifications required. However, the court held the contractor responsible for wall leaks caused by unsuitable sealing material, because it found language in the contract to be a guarantee by the contractor.

The *Kurland* and *Jacksonville* cases, along with *Teufel v. Wienir*,¹⁷ raise a problem that relates to subcontracting. Often the prime contract contains language requiring the prime contractor to obtain a warranty from the subcontractor of the subcontractor’s work. In the case of purchase description specifications, the enforceability of the subcontractor’s warranty may turn on the nature of the defect. In *Kurland*, the failure of the air-conditioning system to work may well have been a design defect, which is the responsibility of the owner. However, in the *Rhone* case,¹⁸ discussed in Section 24.02, the specified product contained a manufacturing defect, and the court interpreted the warranty as shifting to the subcontractor the risk of such defects. As noted earlier,¹⁹ good reasons exist to shift to the party in privity with the manufacturer (the contractor or subcontractor) responsibility for manufacturing defects.

¹⁸Supra note 12.

¹⁹See Section 24.02.

Subcontractor warranties raise another issue reflected in the *Jacksonville* and *Teufel* cases. Do these warranties affect any prime contractor obligation? Contract language commonly makes the prime contractor responsible for the subcontractor's work. However, the contract may indicate that the owner was exclusively relying on the *subcontractor's* warranty. This exonerates the prime contractor.

That a subcontractor can be or has been sued should not change the legal obligation of owner and prime contractor unless the owner, by either demanding or accepting the subcontractor's warranty, manifests an intent to release the prime. For example, the trial court judge gave the prime contractor a defense in *Teufel v. Wienir* because the specifications indicated that the owner agreed to look only to the subcontractor.²⁰

Suppose the design is created by the subcontractor. As between owner and prime, responsibility falls on the contractor.²¹

Another problem of risk shifting results from proposals by the prime contractor for substitutions of materials or equipment for that specified. Although substitutions must be approved by the design professional, to protect herself and to recognize that she may be relying on representations of the contractor, the design professional often obtains a guarantee by the contractor.

The effectiveness of the contractor's warranty will depend on the language of the warranty and surrounding facts and circumstances. Although a few court decisions have upheld warranties in the context of a substitution request,²² the outcome of such a dispute cannot be easily predicted.²³ Review Section 12.08C for more on submittals.

Another method of displacing the basic principle is the frequent inclusion in construction contracts of provisions requiring that the contractor study and compare the design documents and report any observed errors as well

as any violation of building laws that it observes.²⁴ These provisions should be strictly interpreted. If given effect, they displace the basic principle set forth in Section 24.02 by relieving the owner and ultimately the design professional from responsibility for design. The contractor should be required to use whatever design skills it possesses as long as doing so does not place unreasonable burdens on the contractor. Yet design in the traditional method of construction is still the responsibility of the owner. These objectives can be accommodated by requiring the breaching contractor to share the cost of correction and any consequential damages with the owner. This approach is discussed in Section 24.06.

Varying results show that language will not *automatically* displace the basic principle of control outlined in Section 24.02. Yet the outcome can often be predicted. Which party really made the design choice? Which party had the greater experience and skill? Which party relied on the other? The answers do not always implicate the owner, even in a traditional system. Even with these questions answered, account must be taken of the different attitudes toward the use of contract language to achieve what appears to be an unconscionable result.

SECTION 24.04 Good Faith and Fair Dealing: A Supplemental Principle

Parties who plan to enter into a contract are not, as a general rule, expected to look out for each other. Although exceptions arise, this principle is still strong in American contract law.

Once a contract has been made, the law—led by the Uniform Commercial Code (U.C.C.), Section 1-304, dealing with certain commercial transactions—increasingly expects parties to act in good faith and to deal fairly with one another.²⁵ In construction contracts, either party—though most commonly the contractor—must warn the other when the other is proceeding in a way that will cause failure. Sometimes this attitude is reflected in contract clauses requiring that the contractor bring to the attention of the owner or design professional design or other problems that can adversely affect the project.²⁶

²⁰The appellate court affirmed a judgment for the contractor by finding that the prime contractor simply followed the design. *Teufel v. Wienir*, *supra* note 10.

²¹*Stevens Constr. Corp. v. Carolina Corp.*, 63 Wis.2d 342, 217 N.W.2d 291 (1974).

²²*Urania v. M. P. Constr. Co.*, 492 So.2d 888 (La.App.1986); *New Orleans Unity Soc. v. Standard Roofing*, 224 So.2d 60 (La.App.), cert. denied, 254 La. 811, 227 So.2d 146 (1969).

²³A warranty whose meaning was not clear did not shift the risk to the contractor in *Habenicht & Howlett v. Jones-Allen-Dillingham*, Cal. Ct.App., 1 Civ. 46449 (1981) (an unpublished opinion that cannot be cited in California).

²⁴AIA Doc. A201-2007, §§3.2.2 and 3.7.3.

²⁵See Section 19.02D.

²⁶*Supra* note 24.

Suppose there is no specific contract obligation. In this case, what does the law demand of the contractor? Must it examine the contract documents

1. but only to prepare its bid, design errors being none of its business?
2. principally to prepare its bid but also to note and report any errors observed?
3. both to prepare its bid and to check for errors, being held for errors it should have observed?

Even making allowance for factual variations, the cases display diverse results. This is common when a new doctrine of a vague nature limits the powerful principle of autonomy. A few seem to permit the contractor to ignore any design errors it may even observe, with its responsibility simply to build and not design.²⁷ The better reasoned cases and, as indicated, the AIA require the contractor to warn the owner if the contractor believes a suitable result cannot be obtained from the design.²⁸

Is the contractor's conduct measured objectively? Is it responsible for an examination based on what the contractor should have discovered and what it should have reported?

Cases that have given a defense to the contractor who has followed the design have stated that this defense will be lost if the contractor has been negligent—an apparently objective standard.²⁹

However, the AIA has used a subjective standard in A201-2007, Section 3.2.2. To further clarify the standard of review, Section 3.2.2 states that “the Contractor's review is made in the Contractor's capacity as a contractor and

Bolt*, 106 F.3d 155 (6th Cir.1997) (Michigan law; contractor was liable in negligence for installing additional purlins to strengthen the roof in a manner it knew to be improper, albeit pursuant to the specifications); *Eichberger v. Folliard*, 169 Ill. App.3d 145, 523 N.E.2d 389, appeal denied, 122 Ill.2d 573, 530 N.E.2d 243 (1988) (contractor did not perform in a workmanlike manner when it built the house in conformity with the plans, although knowing that the foundation was inadequate because of soil conditions); *Rubin v. Coles*, 142 Misc. 139, 253 N.Y.S. 808 (Cty.Ct.1931).

²⁹See *supra* note 5.

not as a licensed design professional.” The owner is paying for whatever design skill the contractor possesses and uses. The principal purpose for the contractor's reviewing the contract documents is to prepare its bid. The owner should expect attention to be drawn only to those errors that the contractor does discover.

The owner often has years to prepare the design, contrasted to the thirty days or so given the contractor to review the design and prepare its bid.³⁰ An objective approach may operate in a way as to place design risks unfairly on the contractor.

The contractor who *does* notify the owner of errors is not charged for defects that result despite its warnings, and is entitled to be paid for what it has done.³¹ The contractor who does not report obvious errors should not be given advantage of the “following the plans” defense.³² If it performs work *knowing* that the work violates building codes or technical competence, the contractor will not be able to recover for the work performed.

If the contractor's failure to report errors causes a loss, as such a failure will undoubtedly do, should the contractor be responsible for the entire loss? Sharing responsibility rather than placing it all on the contractor is fairer, particularly if the contractor did not have actual knowledge of the error. This is discussed in Section 24.06.

SECTION 24.05 Acceptance of Project

If the owner communicates a clear intention to relinquish a claim for obvious defects, the claim is barred.³³ Acts frequently asserted to have indicated such an intention are payment, particularly the final payment, acceptance, and taking possession of the project.

³⁰For cases directing attention to this, see *Southern New England Contracting Co. v. State*, 165 Conn. 644, 345 A.2d 550 (1974); *Pittman Constr. Co. v. Housing Auth. of New Orleans*, 169 So.2d 122 (La.App. 1964). See also *T. H. Taylor, Inc.*, ASBCA No. 27699, 86-2 BCA ¶18,743, which required the contractor to report only obvious errors.

³¹Architects who pointed out design difficulties can recover for their work if the owner still proceeds. *Greenhaven Corp. v. Hutchcraft & Assoc.*, 463 N.E.2d 283 (Ind.App.Ct.1984) (design violated fire code); *Bowman v. Coursey*, 433 So.2d 251 (La.App.), cert. denied, 440 So.2d 151 (La.1983) (design below acceptable professional practice).

³²*Allied Contractors, Inc. v. United States*, 180 Ct.Cl. 1057, 381 F.2d 995 (1967); *Davis v. Henderlong Lumber Co.*, 221 F.Supp. 129 (N.D.Ind.1963).

³³*Stevens Constr. Corp. v. Carolina Corp.*, *supra* note 21.

Standard documents increasingly make clear that these acts do not constitute a waiver of any claim for defective work.³⁴ The universal presence of warranty (guarantee) clauses makes it quite unlikely that such a claim will be lost because of the occurrence of these acts.³⁵

Generally, the owner by final payment,³⁶ acceptance or taking possession of the project³⁷ does not waive its claim for defective work. Either act alone does not unambiguously indicate the owner's intention to give up a claim for work to which it was entitled and for which it paid. Possession may be taken for reasons other than satisfaction with the work. Such holdings are frequently supported by contract clauses denying that such acts have waived claims for defects. Cases that have *found* waiver have involved disputes over particular work followed by some act of the owner, such as payment or taking possession, which communicated satisfaction with the work and an intention not to assert any claim.³⁸

SECTION 24.06 Owner Claims and Divided Responsibility

If proof establishes the cause of the defect and that cause is clearly the responsibility of one of the parties to the construction contract, the loss is chargeable to that party. But in a venture as complicated as construction, it is not uncommon for a construction defect to be traceable to multiple causes. For example, suppose the owner asserts

³⁴AIA Doc. A201-2007, §§ 9.6.6 and 9.10.4. See Section 22.02M. A federal regulation that stated that taking possession or use is not acceptance was influential in concluding that the project had not been accepted in *M. C. & D. Capital Corp. v. United States*, 948 F.2d 1251 (Fed.Cir.1991).

³⁵AIA Doc. A201-2007, §§ 3.5, 9.10.4.3, and 12.2.2.

³⁷*M. C. & D. Capital Corp. v. United States*, supra note 34 (U.S. not precluded from terminating for default despite the fact that it had taken possession); *Kangas v. Trust*, 110 Ill.App.3d 876, 441 N.E.2d 1271 (1982); *Annen v. Trump*, 913 S.W.2d 16 (Mo.Ct.App.1995), transfer denied May 2, 1995 (acceptance does not bar claim for defective work).

³⁸*Sentell Bros, Inc.*, DOTCAB No. 1824, 89-3 BCA ¶21, 904, reconsideration denied, 89-3 BCA ¶22,219; *Grass Range High School Dist. v. Wallace Diteman, Inc.*, 155 Mont. 10, 465 P.2d 814 (1970). See generally, Sweet, *Completion, Acceptance and Waiver of Claims: Back to Basics*, 17 Forum 1312 (1982).

a claim against the contractor based on the contractor's not having followed the plans and specifications. Suppose the contractor admits having breached the contract but points to other possible causes, such as abnormal weather conditions or third parties for whom the contractor is not responsible. Legal responsibility for breach of contract does not require the claimant to eliminate all causes except acts or omissions by the party against whom the claim has been made. The defendant's breach must only be a substantial factor in causing the harm.³⁹ If other conditions or actors played a minor or trivial part in causing the loss, the contractor is responsible for the entire loss.

Multiple causation becomes more complicated when the defect is traceable both to the party against whom the claim has been made and to the claimant itself. For example, Section 24.02 stated the basic principle that in the traditional construction project, the owner is responsible for the design and the contractor for its execution. Yet as noted in Section 24.01, these activities are not watertight compartments. The owner plays a role in execution because of the design professional's site responsibilities. The contractor plays a role in the design because through a specialty subcontractor, it may supply the design or it may be obliged to study and compare the contract documents and report any errors observed.

Another complicating factor is that the cause of the defect may be traceable to wrongful acts of the design professional, some of which may be chargeable to the owner. This section deals with defect claims by the owner against the contractor, with the defect having been caused in whole or in part by acts of the owner or someone for whom the owner is responsible. More commonly in construction, the owner asserts a claim for defective work against both the contractor and a third party, usually the design professional. This claim is discussed in Section 27.14.

Before analyzing shared responsibility, a threshold question must be addressed. Can a contractor who has not followed the plans and specifications point to defective design? A few cases have precluded such a contractor from pointing to a design defect.⁴⁰ This conclusion is too punitive and does not take into account the role the design

³⁹*Krauss v. Greenberg*, 137 F.2d 569 (3d Cir.), cert. denied, 320 U.S. 791 (1943).

⁴⁰*Valley Constr. Co. v. Lake Hills Sewer Dist.*, 67 Wash.2d 910, 410 P.2d 796 (1965); *Robert G. Regan Co. v. Fiochi*, Ill.App.2d 336, 194 N.E.2d 665 (1963), cert. denied, 379 U.S. 828 (1964).

professional played in causing the loss. A federal court, discussing an Arkansas project but applying California law by agreement of the parties, refused to bar the contractor's claim against the owner for a defective design simply because the contractor failed to execute the design, where the contractor's defective performance was not the cause of the project's failure.⁴¹

Where defects can be traced to both the owner and the contractor, the law has taken two approaches. Some cases have held the loss will be shared, with the owner's claim being reduced by a rough formula comparison such as used in those states that use comparative negligence as part of their tort law.⁴² This formula takes into account the complexity of causation and the desire to avoid all-or-nothing outcomes.

Yet courts in other cases have not been willing to apply comparative fault in a contract claim for economic losses.⁴³ They seek to preserve a sharp line between contract and tort claims, a difficult objective given that the owner in some jurisdictions may be able to choose whether to maintain its claim in contract or tort.⁴⁴

Contract language can control the apportionment problem. For example, in 1987, AIA Document A201 provided that if the contractor did not fulfill its obligation under Paragraph 3.2.1 to report errors it discovers, the contractor "shall assume appropriate responsibility . . . and shall bear an appropriate amount of the attributable costs for correction." This would appear to invite shared responsibility.

But in 1997, the AIA made a change. A201-1997, Paragraph 3.2.3 stated that the contractor "shall pay such costs and damages to the Owner as would have been avoided if the Contractor had performed such obligations." This new language is retained in A201-2007, Section 3.2.4. This would appear to relieve the design professional even though she committed the design error.

⁴¹*Arkansas Rice Growers Coop. Ass'n v. Alchemy Indus., Inc.*, 797 F.2d 565 (8th Cir.1986).

⁴²*Calcasieu Parish School Bd. v. Lewing Constr. Co., Inc.*, supra note 5 (architect responsible for 20 percent of owner's damages); *Grow Constr. Co. v. State*, 56 A.D.2d 95, 391 N.Y.S.2d 726 (1977); *Bunkers v. Jacobson*, supra note 5, 653 N.W.2d at 743; *Circle Elec. Contractors, Inc.*, DOTCAB 76-27, 77-BCA ¶12, 339.

⁴³*Broce-O'Dell Concrete Products, Inc. v. Mel Jarvis Constr. Co.*, 6 Kan.App.2d 757, 634 P.2d 1142 (1981) (claim by subcontractor against concrete supplier).

⁴⁴See Section 14.05E.

Similarly, under A201-2007, Section 3.7.3, if the contractor performs work knowing it to be in violation of the building laws, it must "assume full responsibility for such Work and shall bear the costs attributable to correction." This would appear to place the *entire* responsibility on the contractor. Such an outcome would relieve the owner and ultimately the architect from any responsibility for supplying a design that did not comply with building laws. Admittedly the intervening cause of the contractor's failure to report errors of which it is aware is an intentional act, which can cut off responsibility for a negligent act of the architect, which is charged to the owner. Yet this outcome exculpates the owner (and the architect) from responsibility for the design.

SECTION 24.07 Third-Party Claims

This chapter has emphasized the discovery of defects that harm the owner. However, defects caused either by design, for which the owner is responsible, or by execution, for which the contractor is responsible, or by a combination of the two can also harm third parties. As noted in Section 14.08, third-party claims create complex legal issues.

Damage to the property of a third party—a tort claim—is dealt with as would be any tort claim.⁴⁵

Suppose a third party suffers property damage that can be traced to defective design. The complexity of such third-party tort claims is demonstrated by *Cincinnati Riverfront Coliseum, Inc. v. McNulty Co.*⁴⁶ Five years after completion of construction, an elevated walkway for pedestrian traffic suffered extensive damage and deterioration. The owner repaired the structure and brought legal action against eleven defendants. All settled except the consulting engineer who designed the walkway and the city, which had obligated itself to maintain it.

The jury found that 40 percent of the losses were attributable to the negligence of the consulting engineer and 5 percent to the city. The consulting engineer claimed that he was not responsible for construction defects, because the structure had not been constructed in accordance with the design, and that his tort liability was cut off by the intervening acts of the contractor.

⁴⁵See Section 7.03.

⁴⁶28 Ohio St.3d 333, 504 N.E.2d 415 (1986).

The court stated that the engineer is responsible for the foreseeable consequences of his failure to exercise reasonable care. The jury could have found it was reasonably foreseeable that the contractor would alter the design without approval of the engineer and fail to execute the design properly. The engineer can escape responsibility if the deviations are material and were the “proximate cause” of the loss. The breach by the contractor must independently break the causal connection between the negligent design and the damage. If it does, the breach supersedes the negligent design as the cause.

As noted in Sections 14.08C, D, and E, if the losses suffered by third parties are purely economic losses unconnected to personal harm or damage to property, some jurisdictions do not allow tort claims.

The *Cincinnati Riverfront* case dealt with one party’s liability for negligence being cut off by the acts of another. Other courts have looked on design negligence and failure to follow the design as concurrent and not independent causes. If so, the claimant (in defect cases, the owner) can contend that both caused the loss and can recover an entire, indivisible loss from either party, the ultimate responsibility dealt with by indemnity or contribution.⁴⁷

SECTION 24.08 Claims Against Liability Insurer

Commonly, the contractor is required to carry commercial (formerly called “comprehensive”) general liability (CGL) insurance. A primary purpose of CGL insurance is to indemnify the insured contractor against claims by third parties who assert they have suffered losses because the insured contractor has not acted in accordance with tort law. Usually claimants are workers on the job who are not employees of the contractor (the latter are usually covered by workers’ compensation) or members of the public. Claims covered are those that involve personal harm or property damage.

In the 1970s, contractors began to seek insurance coverage for defective workmanship claims brought against them by the owner. (The owner often alleged that the contractor was negligent in an attempt to bring its claim within the scope of the insurance policy.) Insurance

coverage of owner claims is advantageous to the contractor. The insurer, unlike a surety, cannot claim against its insured.⁴⁸

Generally, CGL policies provide the insured with a legal defense and indemnification (up to the policy limits) against any claims of liability brought against the insured that assert “bodily injury” or “property damage” caused by an “occurrence.” An “occurrence” is defined as an “accident.” Hence, the claim must have been in some way unexpected and unintended by the insured. Coverage for claims alleging “bodily injury” is relatively straightforward.⁴⁹ A more difficult question is whether an owner’s claim of defective workmanship constitutes “property damage” caused by an “occurrence.”

There is no doubt that liability insurance is intended primarily (both by the insurer and the insured) to cover unusual, unexpected losses, such as a wall collapsing and destroying a Porsche automobile parked nearby. Conversely, CGL policies are not intended to cover ordinary business losses; defective work being an example. However, sometimes courts confuse the *purpose* of CGL insurance with the *scope of coverage*. Rather than examine whether the claim against the insured involves “property damage” caused by an “occurrence,” they broadly exclude from coverage all breach of contract claims alleging economic losses, including owner claims for defective workmanship.⁵⁰ However, a more sophisticated analysis is to determine coverage based on the policy language, not on the theory of liability or the broad purpose of commercial liability insurance.⁵¹

⁴⁸See Section 32.02.

⁴⁹This is not to say that coverage is guaranteed, or even likely, since bodily injury claims, especially by construction workers, are subject to numerous exceptions. See M. SCHNEIER, CONSTRUCTION ACCIDENT LAW: A COMPREHENSIVE GUIDE TO LEGAL LIABILITY AND INSURANCE CLAIMS §§ 9:B:II-IX (1999).

⁵⁰*Heile v. Hermann*, 136 Ohio App.3d 351, 736 N.E.2d 566 (1999); *Century Indemnity Co. v. Golden Hills Builders, Inc.*, 348 S.C. 559, 561 S.E.2d 355 (2002); *Erie Ins. Property & Cas. Co. v. Pioneer Home Improvement, Inc.*, 206 W.Va. 506, 526 S.E.2d 28 (1999).

⁵¹*Fejes v. Alaska Ins. Co., Inc.* 984 P.2d 519, 523-24 (Alaska 1999), rehearing denied Sept. 29, 1999 (contract liability claims are not *per se* excluded from CGL coverage); *Vandenberg v. Superior Court*, 21 Cal.4th 815, 982 P.2d 229, 243-46, 88 Cal.Rptr.2d 366 (1999), rehearing denied Oct. 20, 1999 (same); *Travelers Indemnity Co. of Am. v. Moore & Associates, Inc.*, 216 S.W.3d 302 (Tenn.2007); *Lamar Homes, Inc. v. Mid-Continent Cas. Co.*, 242 S.W.3d 1 (Tex.2007), rehearing denied Dec. 14, 2007.

⁴⁷*Northern Petrochemical Co. v. Thorsen & Thorshov, Inc.*, 297 Minn. 118, 211 N.W.2d 159 (1973). See Section 27.14.

Even courts willing to apply the policy language often conclude that there is no coverage for defective workmanship claims. Many find that such claims either were not caused by an “occurrence” or did not result in “property damage.”⁵² Courts which do decide that these threshold requirements for coverage exist may then find coverage defeated through application of the policy’s “business risk” exclusions. Under these standard exclusions, CGL policies usually exclude work products, property in control of the insured (this should be handled by property insurance), or work performed by or on behalf of the contractor, such as work performed by a subcontractor. (But this last exclusion is subject to an exception, discussed *infra*.) In sum, unless the defective workmanship caused collateral damage (such as water damage to the owner’s personal property),⁵³ defective workmanship claims generally fall within the scope of the exclusions.⁵⁴

Where the insured is a prime contractor and the defective workmanship is caused by a subcontractor, it is less clear whether the standard exclusions apply. Does the insured’s “work” include that of its subcontractors, or do the subcontractors produce separate “work”? Analysis of this question reveals a fundamental fact of insurance law: Policy language is constantly being changed by the insurance industry, and apparently, slight changes in wording can impact coverage significantly. Simplifying this issue greatly, earlier policies excluded coverage for work performed “by or on behalf of” the insured, thus including within its scope the work of

subcontractors. However, prime contractors could purchase a separate endorsement—the broad form property damage endorsement—which removed the “on behalf of” language and thereby restored coverage for defective workmanship caused by subcontractors.⁵⁵ Nor did the matter end there: Recent policies either have dropped the “on behalf of” language (thereby obviating the need for a prime contractor to purchase a special endorsement) or have included exceptions to certain “work product” exclusions for claims alleging defective work by subcontractors.⁵⁶

Another problem relates to the duration of coverage. The *standard* CGL policy terminates coverage after final payment. This would bar coverage for defects discovered after that point. It is possible to obtain “completed operations” coverage to cover such claims.⁵⁷

A more detailed analysis of insurance coverage for defective workmanship claims is beyond the scope of this book.⁵⁸

SECTION 24.09 Warranty (Guarantee) Clauses

A. Relationship to Acceptance

Acceptance of the project is an important benchmark in the relationship between owner and contractor. Contractors would like to know when the law can no longer call on them to perform further work or to respond

⁵²*Oak Crest Constr. Co. v. Austin Mutual Ins. Co.*, 329 Or. 620, 998 P.2d 1254 (2000) (breach of contractual obligation cannot be an “occurrence”); *Firemen’s Ins. Co. of Newark v. National Union Fire Ins. Co.*, 387 N.J. Super. 434, 904 A.2d 754 (App.Div.2006) (contractor’s installation of defective firewalls does not constitute “property damage”); *L-J, Inc. v. Bituminous Fire & Marine Ins. Co.*, 366 S.C. 117, 621 S.E.2d 33 (2005) (deterioration of road is not an “occurrence”); *Vogel v. Russo*, 236 Wis.2d 504, 613 N.W.2d 177 (2000) (diminution in value of building, caused by subcontractor’s defective masonry work, is not “property damage”).

⁵³*Canal Indemnity Co. v. Blackshear Farmers Tobacco Warehouse, Inc.*, 227 Ga.App. 637, 490 S.E.2d 129 (1997), reconsideration denied Jul. 28, 1997; *Pekin Ins. Co. v. Richard Marker Assocs., Inc.*, 289 Ill.App.3d 819, 682 N.E.2d 362, appeal denied, 175 Ill.2d 531, 689 N.E.2d 1140 (1997); *Iberia Parish School Bd. v. Sandifer & Son Constr. Co., Inc.*, 721 So.2d 1021 (La.App.1998); *ACUITY v. Bird & Smith Constr., Inc.*, 2006 ND 187, 721 N.W.2d 33 (2006). For a review of what constitutes an “accident” under a CGL policy, see Annot., 7 A.L.R.3d 1262 (1966).

⁵⁴The following courts applied various business risk exclusions: *American Equity Ins. Co. v. Van Ginhoven*, 788 So.2d 388 (Fla. Dist. Ct.App. 2001); *Sapp v. State Farm Fire & Cas. Co.*, 226 Ga.App. 200, 486 S.E.2d 71 (1997); *Supreme Services and Specialty Co., Inc. v. Sonny Greer, Inc.*, 958 So.2d 634 (La.2007); *Alverson v. Northwestern Nat. Cas. Co.*, 559 N.W.2d 234 (S.D.1997), rehearing denied Mar. 20, 1997.

⁵⁵*Fireguard Sprinkler Systems, Inc. v. Scottsdale Ins. Co.*, 864 F.2d 648, 652 (9th Cir.1988) (citing insurance industry bulletins as to the purpose of the broad form endorsement); *Fejes v. Alaska Ins. Co., Inc.*, supra note 51, 984 P.2d at 525; *Maryland Cas. Co. v. Reeder*, 221 Cal.App.3d 961, 270 Cal.Rptr. 719 (1990), review denied Sept. 19, 1990; but see *Knutson v. St. Paul Fire & Marine Ins. Co.*, 396 N.W.2d 229 (Minn.1986) (broad form endorsement does not change loss from business cost to insurance risk). See also Casamassima & Jerles, *Defining Insurable Risk in the Commercial General Liability Insurance Policy: Guidelines for Interpreting the Work Product Exclusion*, 12 Constr. Lawyer, No. 1, Jan. 1992, p. 3 (providing a useful, historical approach).

⁵⁶*Kalchthaler v. Keller Constr. Co.*, 224 Wis.2d 387, 591 N.W.2d 169, 174 (App.1999).

⁵⁷*Pardee Constr. Co. v. Insurance Co. of the West*, 77 Cal.App.4th 1340, 92 Cal.Rptr.2d 443 (2000), review denied April 26, 2000 (extending completed operations coverage in subcontractors’ policies to benefit a prime contractor, who was an “additional insured” on those policies, even though the additional insured endorsement was obtained only after the subcontractors had completed their work).

⁵⁸See INSURANCE COVERAGE FOR DEFECTIVE CONSTRUCTION (American Bar Association 1997) and S. TURNER, INSURANCE COVERAGE OF CONSTRUCTION DISPUTES (2d ed. 2002).

to a legal claim. For that reason, they frequently contend that acceptance of the project manifests owner satisfaction and the owner cannot make any further complaints about the work.

The law has been reluctant to find that “acceptance” has been sufficient to bar any future claims for latent or non-discoverable defects against the contractor.⁵⁹ Undoubtedly this reluctance stems from the difficulty of discovering defects at the time the project is turned over. Many defects will not be apparent until the owner has taken over the project and used it. One method of dealing with the risk

that acceptance will be found and claims barred is to insert a provision making clear that liability does not end on the project’s being turned over to the owner.⁶⁰ The exact nature of that liability is discussed in Section 24.09B.

B. Purposes: *St. Andrew’s Episcopal Day School v. Walsh Plumbing Co.*

The deceptively simple warranty clause obscures a variety of possible purposes. Before discussing the many possible purposes, a case involving such a clause is reproduced.

ST. ANDREW’S EPISCOPAL DAY SCHOOL v. WALSH PLUMBING CO.

Supreme Court of Mississippi, 1970. 234 So.2d 922.

ROBERTSON, Justice.

The appellant, St. Andrew’s Episcopal Day School, a charitable corporation, brought suit in the Chancery Court of the First Judicial District of Hinds County, Mississippi, against Appellee Walsh Plumbing Company, the contractor of the mechanical work, and Appellee The Trane Company, the manufacturer of the major portion of the air conditioning system installed in the new Day School building. The suit was one for breach of warranty or guaranty. The chancellor, after a full trial, dismissed the bill of complaint, and the Day School appeals from this judgment.

On April 8, 1965, appellant entered into a contract with Walsh Plumbing Company whereby, in consideration of \$149,420, Walsh agreed to:

furnish all of the materials and perform all of the work shown on the Drawings and described in the Specifications entitled: Item II, Mechanical Construction, St. Andrews Episcopal Day School, Old Canton Road, Jackson, Mississippi.

The General Conditions of the Contract provided in Article 20:

Correction of the Work After Substantial Completion

The Contractor shall remedy any defects due to faulty materials or workmanship and pay for any damage to other work resulting therefrom, which shall appear within a period of one year from the date of Substantial Completion as defined in these General Conditions, and in accordance with the terms of any special guarantees provided in the Contract. The Owner shall

give notice of observed defects with reasonable promptness. All questions arising under this Article shall be decided by the Architect subject to arbitration, notwithstanding final payment.

The Construction Specifications, in Paragraph 22 of Mechanical Construction, required:

This contractor shall guarantee each and every part of all apparatus entering into this work to be *the best of its respective kind and he shall replace within one year from date of completion all parts which during that time prove to be defective and he must replace these parts at his own expense.*

He shall guarantee to install each and every portion of the work in strict accordance with the plans and specifications and to the satisfaction of the owner.

Guarantee to include replacement of refrigerant loss from air conditioning and refrigerant system. [Emphasis added.]

On August 19, 1966, Lomax, North and Beasley, consulting engineers, by letter, advised Biggs, Weir, Neal & Chastain, architects, that the mechanical contractor should furnish “as built drawings which locate all underground piping and clean-outs, framed operating instructions in the boiler rooms, CFM figures for all air units, and certification that all safety valves and devices have been tested.” The engineers ended their letter with this comment:

Other than the above, we feel that the mechanical work is ready for final certification, subject to contract guarantee provisions.

⁵⁹See Section 24.05.

⁶⁰AIA Doc. A201-2007, §§ 3.5, 9.10.4.3 and 12.2.2.

On August 30, 1966, the engineer wrote the architects:

Final inspections of the subject project have been completed and we recommend final certification of the mechanical contract, subject to contract guarantee provisions.

In accordance with the requirements of Paragraph 22 of the Construction Specifications, on August 16, 1966, Walsh Plumbing Company wrote St. Andrew's Episcopal Day School:

We hereby guarantee all work performed by us on the above captioned project to be free from defective materials and workmanship for a period of one (1) year, unless called for in the specifications to be a longer period of time.

Between August 16, 1966, and July 17, 1967, Appellee Walsh was called on several times to remedy defects in the air conditioning system, and Walsh always responded promptly. On July 17, 1967, the air conditioning system broke down completely and ceased to function. The headmaster, the Reverend James, immediately tried to contact Ray Walsh, only to find that he was out of town. Mrs. Walsh suggested that the School call somebody else.

During the first two weeks of July, 1967, James E. Davis, Jr., operator of Davis-Trane Service Agency and also a salesman and representative of The Trane Company, was contacted by John B. Walsh and together with Mr. Walsh attempted to determine why the air conditioning system was not cooling. Mr. Davis described the meeting that took place on July 18, 1967, in these words:

[T]he meeting that we had on a particular day at the school, in which Mr. Nicholson was there, and Mr. Ray Walsh was there, and Mr. Nicholson said, "We want to get this thing fixed," and Mr. Walsh told me to fix it. He said, "You have the people, the personnel and the know-how, you go ahead and do it and I will just stay out of it," so Mr. Nicholson said, "Okay, Davis-Trane Service Agency, go ahead and fix this machine." [Emphasis added.]

Forrest G. North, the mechanical engineer, testified that the failure of two safety devices, the flow control switch and the freeze protection thermostat caused the copper tubes inside the chiller shell and the shell itself to rupture. The purpose of the flow control switch was to prevent the operation of the machine when there was no circulation of water in the chiller shell. The flow control switch was installed by Walsh outside the chiller and was not Trane equipment. The freeze protection thermostat was a Trane part, and was installed inside the chiller unit by Trane at its factory.

The repairs made by Davis-Trane Service Agency pursuant to Ray Walsh's instructions to Davis to go ahead and fix it amounted to \$6,813.05. One of the major items of expense was a new chiller unit purchased from the Trane Company. The Trane Company and Davis-Trane billed the appellant, and the

appellant paid Trane separately for the new chiller unit, and Davis-Trane for all the repairs.

The appellant is in the business of running a Christian day school; it is not in the air conditioning business. Appellant does not profess to have any knowledge or expertise about air conditioning systems or equipment. That was the main reason for the provision in the Construction Specifications that the mechanical contractor "shall guarantee each and every part of all apparatus entering into this work to be *the best of its respective kind*, and he shall replace within one year from date of completion all parts which during that time prove to be defective and he must replace these parts at his own expense."

Walsh was a reputable, responsible and knowledgeable contractor of mechanical work; and when Lomax, North and Beasley, consulting engineers for the Day School, recommended to the appellant that the bid of Walsh Plumbing Company be accepted, the duty and responsibility was placed squarely on Walsh's shoulders to purchase and properly install the best air conditioning system on the market. Not only was Walsh to purchase and install, he was to guarantee the system and its installation for one year. This was what Walsh contracted to do, and this was what the appellant paid Walsh to do. Not knowing anything about air conditioning systems, the appellant employed experts in this field and reposed full confidence in these experts to look after its interests.

The chancellor was correct in finding that the breakdown of the air conditioning system occurred "within the time of the warranty by Walsh," and that the repairs were made necessary to properly repair the system.

The chancellor was in error in holding that:

St. Andrews never gave any written notice or made any demand on Walsh to comply with his warranty to fix the machine, which would be as I hold a condition precedent to hiring someone else to do the work.

The sole purpose of notice is to give the contractor who selected, purchased and installed the system the first opportunity to remedy the defects at the least possible expense to him. Appellee Walsh was given this opportunity.

The evidence is undisputed that Walsh was at the Day School building on July 18, 1967, the day after the breakdown, with James E. Davis, Jr., of Davis-Trane Service Agency and John W. Nicholson of the Day School. Davis, called as an adverse witness by the appellant, testified that Ray Walsh said at that time:

"You have the people, the personnel and the know-how, you go ahead and do it and I will just stay out of it."

Walsh was afforded the opportunity of doing the work himself or employing somebody else to do it. With full knowledge and full notice he chose to employ Davis to go ahead and remedy the defects and make the necessary repairs.

Appellee Trane was the major supplier of items and equipment going into the air conditioning system and Trane was well paid for these. It is unfortunate that Trane's one-year guaranty to Walsh had run out at the time of the complete breakdown of the air conditioning system. Trane guaranteed the items and equipment furnished by it for one year from the date of shipment; these parts and equipment were shipped in March, 1966. The complete breakdown did not occur until July, 1967. The chancellor was correct in holding that Trane's warranty had expired.

The chancellor found that \$6,813.05 was "a reasonable amount to make the repairs" and put the air conditioning system back in operation.

The judgment of the chancery court is affirmed as the Appellee The Trane Company, but the judgment is reversed as to Appellee Walsh Plumbing Company, and judgment is rendered against Walsh Plumbing Company on its warranty for \$6,813.05, together with 6% interest from July 17, 1967.

Judgment affirmed as to The Trane Company, but reversed and rendered as to Walsh Plumbing Company.

GILLESPIE, P. J., and JONES, BRADY, and INZER, J. J., concur.

From the owner's vantage point, one disadvantage of the traditional contracting system is the possibility of the owner being "whipsawed" between the design professional and the contractor when a defect is discovered. The design professional contends the defect resulted from improper execution of the design. The contractor contends the defect existed because of design inadequacy. To make matters worse, each or both may contend the defect was caused by conditions over which neither had control, such as unusual weather, misuse, or poor maintenance by the owner. One way of dealing with divided responsibility is to hire one entity to both design and build.

Another method of dealing with this problem is to incorporate a provision under which one entity is responsible for defects however and by whomever caused. The owner is likely to place this risk on the contractor. For example, the owner could require the contractor to give a full warranty on a roof that would cover defects however caused.

Despite the undoubted advantage in placing the risks of defects *however caused* on the contractor, this is not often done. Contractors may respond to such a guarantee on a roof by drastically increasing the contract price to take into account the possibility of design errors, the additional cost of checking on the quality of the design, the cost of any special endorsement to be obtained to cover design risks, or the cost of a roofing bond (a bond by a surety that guarantees the roof for a certain number of years). Nevertheless, the owner may decide these additional costs are worth the advantage of centralizing responsibility. Although enforcement requires very clear

language (even that may not be sufficient), such clauses have been enforced.⁶¹

Many issues lurk in a simple warranty clause. Earlier discussion emphasized the owner's purpose in having such a clause. The contractor is also concerned with how such a clause will function. Although it would prefer to be relieved from responsibility on acceptance, it may be willing to accept a warranty clause if it believes that expiration of the period will terminate its obligation. Similarly, the contractor may be concerned with exposure created by such a clause even within the warranty period. Failure to take immediate steps to deal with a defect may increase the loss. The cost of correcting a defect is likely to be greater if the correction is done by someone other than the contractor. For that reason, contractors sometimes contend that the clause is for their benefit, that its function is to give the contractor notice as quickly as possible, to enable the contractor to cut the losses and repair the defect as inexpensively as possible.⁶² Or the owner may contend that the

⁶¹*Potler v. MCP Facilities Corp.*, 471 F.Supp. 1344 (E.D.N.Y.1979); *Bryson v. McCone*, 121 Cal. 153, 53 P. 637 (1898) (construction of industrial plant).

⁶²See *St. Andrew's Episcopal Day School v. Walsh Plumbing Co.*, reproduced in this section; *Barrack v. Kolea*, 438 Pa.Super. 11, 651 A.2d 149 (1994), appeal denied, 542 Pa. 671, 668 A.2d 1134 (1995); *Simek v. Rocky Mountain, Inc.*, 977 P.2d 687 (Wyo.1999). If it is clear that the contractor will not correct the defect, giving the notice is excused. *Orto v. Jackson*, 413 N.E.2d 273 (Ind.Ct.App.1980). See, generally, Slutzky, *Fully Understanding and Utilizing the Call Back Warranty*, 23 Constr. Lawyer, No. 1, Winter, 2003, p. 13; and Senter, *Construction Warranties and Guarantees: A Primer*, 23 Constr. Lawyer, No. 1, Winter 2003, p. 17.

clause is for its benefit. If the owner has lost confidence in the original contractor or wants the right to bring in a successor for other reasons, it need not call back the original contractor (discussed in Section 24.09C).

Another possible purpose is to bar the contractor from contesting how the owner has chosen to correct the defect if the contractor refuses to attempt to correct the work when requested to do so. The clause may place the burden on the warrantor to establish that other causes, such as abnormal weather or owner misuse, caused the defect.

In the consumer context, warranties can mislead the consumer. The consumer may believe that what looks like a very broad warranty has been so hedged about with restrictions that it may not amount to very much. To deal with this problem, Congress enacted the Magnuson-Moss Warranty Act, which carefully regulates consumer warranties.⁶³ The act also specifies remedies for breach of such a warranty and allows the consumer who prevails in a claim based on the act to recover his or her attorneys' fees.

Although the act was thought principally to deal with consumer products, a case held that it also applies to a contract to roof a house.⁶⁴ In this case, the court looked at the legislative history and the desire to protect consumers and concluded that the act was not limited solely to products (the award of attorneys' fees exceeded the damages).

Moving back to the warranty clause as putting a time limit on liability, although a few decisions have held the clause to have created a private (created by the contract) period of limitation,⁶⁵ most have held that such a provision is not intended to cut off liability at the end of the warranty period.⁶⁶ Clearly, the AIA has not made its warranty clause a period of limitation.⁶⁷ The law will *not* bar a claim

by a contractual provision of this type unless the clause clearly shows this intention.⁶⁸

Does the clause affect the remedy? Usually the clause states that the contractor will correct any defect within the warranty period. As discussed in Section 24.09C, will this provision justify the issuance of a court decree *specifically ordering* the contractor to come back and correct the work? If the contractor fails to correct the work, the owner can do so, and charge the contractor. This recognizes the adequacy of the money award, usually a bar to judicially ordered specific performance. A warranty clause should not affect the availability of specific performance.

Remedy can be approached another way. Suppose there were no warranty clause. The owner can recover the cost of correction unless it would be disproportionately high in relation to the diminished value caused by the defect. If the latter, the measure is the difference in value between the project as built and as it should have been built. In addition, the owner may be able to recover consequential damages, such as lost use or profits if reasonably foreseeable and proved with reasonable certainty.

A warranty clause is a promise by the contractor to correct defects within the warranty period. Does this make correction cost the only remedy? Is diminished value barred? Does the clause limit liability to cost of correction? Very likely the clause was not intended to deal with any of these subtle issues. The law should not give the clause any remedial effect.⁶⁹

Although historically such clauses may have been justified as a method to avoid acceptance barring claims, is there a current justification for including a warranty clause? An unfortunate problem that often plagues the owner is the unwillingness of the contractor to return and correct defects for which it is responsible. Including a specific provision under which the contractor promises to return and correct defects if notified to do so within a

Lawyer, No. 3, Summer 2007, p. 5 (recommending contract language to make the one-year warranty the owner's exclusive remedy).

designated period may persuade a contractor that it must do as it has promised.

Exhortation, of course, may not be the sole function of such a clause or even a function of a particular clause. A warranty clause may be designed to shift design risks to a contractor or to affect the legal standard of conduct. Nevertheless, on the average, modern warranty clauses are principally exhortations to get defects corrected quickly before they generate greater losses. This does not mean that the drafter may not want a different purpose. If so, the objective should be expressed clearly in the contract. Even so, clauses will always need interpretation as to coverage.

C. Warranty and Correction of Work Under A201

A201-2007, Section 3.5, creates an express warranty as to the quality of the contractor's work. It must be read together with Section 12.2, which deals with correction of work that does not meet the quality warranty.

Section 3.5 creates three warranties from the contractor to the owner and to the architect:

1. "[M]aterials and equipment . . . will be of good quality and new unless the Contract Documents require or permit otherwise."
2. "The Work will conform to the requirements of the Contract Documents."
3. "The Work . . . will be free from defects, except for those inherent in the quality of the Work."

Section 24.02 discussed the difference between unsuitable and faulty (defective) materials. Suppose purchase description specifications that require the contractor to use particular materials or equipment by manufacturer and model number are not used. Section 3.5 makes the contractor responsible for faulty materials or equipment. Suppose, though, purchase description specifications are used. If the contractor did as ordered, would the contractor be liable under Section 3.5 for defects caused by faulty materials? It failed to supply good quality. But it can be contended that the contractor is relieved because it installed what was "required or permitted." This contention would be supported by the strong body of case law that relieves the contractor when it does as it has been ordered.⁷⁰ That legal doctrine does not apply if the contractor has given a warranty or violated its obligation of good faith and fair

dealing, such as by failing to communicate information that would have warned the architect not to proceed. Yet Section 3.5 is not sufficiently *specific* to create a warranty that can overcome the basic rule that the contractor is relieved if it does what it has been required to do.

Section 3.5 exculpates the contractor from its warranty if the defect is caused by "abuse, alterations to the Work not executed by the Contractor, improper or insufficient maintenance, improper operation, or normal wear and tear and normal usage." The loss of control and the possibility of such exculpatory events are reasons why contractors seek to be relieved from any responsibility after expiration of the warranty period.

If there is a breach of the quality requirement under Section 3.5, Section 12.2 deals with correction of work needed before substantial completion (Section 12.2.1) or after substantial completion (Section 12.2.2). The latter is generally known as the "one year correction-of-work" clause.

Although the Associated General Contractors (AGC) has sought to cut off the contractor's liability for patent (discoverable) defects after the expiration of the one-year period, the AIA has made clear in Section 12.2.5 that expiration of the period does not terminate the contractor's liability, which is terminated only by the expiration of the appropriate statute of limitation. Other issues are not so clearly resolved.

Does the contractor have "first crack" at repairing defective work that is discovered within the first year?⁷¹ Section 12.2.2.1 requires that the contractor correct the defect promptly after receipt of written notice. The owner must give notice promptly after discovery of the condition. In 1997 language was added (continued in 2007) under which the contractor is relieved from responsibility if the owner "fails to notify the Contractor" and give it "an opportunity to make the correction."

If the correction-of-work clause is intended for the owner's benefit, the owner need not give the contractor the first chance to make the corrections.⁷² Applying the obligation of good faith and fair dealing, however, it would not be fair for the owner to have the absolute right to determine whether to give the contractor the first chance to correct the work. The owner can refuse to do so

⁷⁰See Section 24.02. See also *Teufel v. Wienir*, supra note 10.

⁷¹*St. Andrew's Episcopal Day School v. Walsh Plumbing Co.*, reproduced in Section 24.09B.

⁷²*Baker Pool Co. v. Bennett*, 411 S.W.2d 335 (Ky.1967).

only if the owner has had good reason to lose faith in the contractor, such as prior assurances by the contractor having proved unreliable.

What if the defect is discovered after the one-year correction-of-work period expires? Must the owner notify the contractor? Notification provisions should apply only to defects discovered within one year. One court troubled by this problem pointed to Paragraph 7.1.4 (now Section 10.2.8), which requires either party who suffers injury or damage to make a claim in writing to the other party within a reasonable time.⁷³ This was very likely intended to apply only to harm suffered during performance and not to place a notice requirement as a condition precedent for any claim.

The one-year correction-of-work requirement expressed in Section 12.2.2.1 can be expanded if “an applicable special warranty [is] required by the Contract Documents.” This provision recognizes that some specific warranties may exceed the one-year period. For example, roof warranties are often given for lengthy periods. If such a warranty is considered a specific warranty required by the contract, the one-year correction-of-work period should be extended to the period covered in the specific warranty clause.⁷⁴

In 1987, the AIA took the position that the purpose of the warranty clause is remedial, to give the owner a right to specific performance (judicial order to the contractor to correct the defect).⁷⁵ It supported this position by pointing to its language in Paragraph 12.2.1.1 stating that the contractor has a specific obligation to correct the work.

The AIA Commentary on AIA Document A201-1997 issued in 1999 appeared to have retreated from this stance. The remedial purpose was not mentioned. Instead, it stated that Paragraph 12.2.2 was a separate remedy for nonconforming work from the general warranty clause, Paragraph 3.5, and the clause allowed the owner to correct nonconforming work during performance, Paragraph 2.4.1. According to the Commentary, the purpose of the one-year clause was to give the contractor “first crack” at correcting the work.

SECTION 24.10 Implied Warranties in the Sale of Homes: Strict Liability

A. Home Buyers and Their Legal Problems

In the preceding section, project success assumes construction documents that set forth the contractor’s obligations and are the basis for judging the design professional’s performance. Yet people often buy partially or totally completed homes without the protection of plans that must be met before final payment is made. They purchase homes from developers or builder-vendors, each of whom builds homes for immediate sale to home buyers. Suppose after the purchase the basement leaks, the walls crack, or the heating system malfunctions. What recourse does the buyer have?

Before the mid-1960s, home buyers who faced such problems had little recourse against the sellers, or for that matter against anyone. Part of this situation was traceable to legal rules designed to avoid uncertainties in real property transfers and to transfer certain risks by ownership change. In addition, the common law expected buyers to protect themselves, a concept expressed in the maxim *Caveat emptor*, “Let the buyer beware.” Even if these barriers were surmounted, the homeowner discovering these defects could only, as a rule, pursue the party who had sold her the house. Recovery could not be obtained from those more responsible, such as the builder, the designer, or the developer who had not sold the house to the person discovering the defect. In a fast turnover market, such requirements of privity often left the discoverer of the defect with a claim only against the person who had sold the discoverer the house.

B. The Implied Warranty Explosion of the 1960s

Dissatisfaction with the traditional denial of protection meshed with the general consumer movement that began in the 1960s. Consumers of goods began to demand products that worked, and home buyers demanded similar protection. In response to this demand, courts recognized an implied warranty of habitability in the sale of new homes.⁷⁶ Some courts have gone beyond implied warranty and have held

⁷³*First Nat'l Bank of Akron v. Cann*, 669 F.2d 415 (6th Cir.1982).

⁷⁴*Hillcrest Country Club v. N. D. Judd Co.*, 236 Neb. 233, 461 N.W.2d 55 (1990).

⁷⁵Architect’s Handbook of Professional Practice, A201 Commentary p. 69 (1987). But *Gerety v. Poitras*, 126 Vt. 153, 224 A.2d 919 (1966) refused to order specific performance of a guarantee clause.

⁷⁶One of the most interesting of the many opinions is *Humber v. Morton*, 426 S.W.2d 554 (Tex.1968). In *Centex Homes v. Buecher*, 95 S.W.3d 266 (Tex.2002), rehearing denied Feb. 20, 2003, a divided Texas Supreme Court reaffirmed *Humber* and also carefully distinguished between the warranty of habitability and the implied warranty of workmanlike conduct.

that a builder of mass-produced homes can be held strictly liable for injuries caused by the conditions in the home.⁷⁷

C. Current Problems

The breakthrough consisted of overthrowing the old rules that had denied any recovery. With the exception of a few jurisdictions,⁷⁸ most modern courts have recognized the implied warranty of habitability. But the courts and legislatures must still work out details. Courts have articulated similar but somewhat variant formulas for describing the nature of the implied warranty.⁷⁹

The exact nature of the warranty will depend on the price of the house, the customary standards of the community, and the reasonable expectations of the buyer.

For whose protection does the implied warranty exist, and who is subject to its requirements? Clearly, a buyer can sue the seller. Beyond that, the law varies in the different jurisdictions. Some courts allow a subsequent purchaser to maintain an action,⁸⁰ whereas some do not.⁸¹ One case held that the infant son of a tenant could bring an action against the developer.⁸²

⁷⁷*Schipper v. Leavitt & Sons, Inc.*, 44 N.J. 70, 207 A.2d 314 (1965). See Comment, 10 Ohio N.U.L.Rev. 103 (1983). But in *Calloway v. City of Reno*, 116 Nev. 250, 993 P.2d 1259 (2000), the court rejected application of strict products liability law to development housing.

⁷⁸*Bruce Farms, Inc. v. Coupe*, 219 Va. 287, 247 S.E.2d 400 (1978). This decision effectively has been overruled by Virginia's adoption of statutory warranties; see *infra* note 89.

⁷⁹*Hartley v. Ballou*, 20 N.C.App. 493, 201 S.E.2d 712 (1974) (suitable for habitation); *Padula v. Deb-Cin Homes, Inc.*, 111 R.I. 29, 298 A.2d 529 (1973) (fit for human habitation); *Gable v. Silver*, 258 So.2d 11 (Fla. Dist. Ct. App. 1972) (fit and merchantable); *Crawley v. Terhune*, 437 S.W.2d 743 (Ky. 1969) (major structural features constructed in a workmanlike manner with suitable materials); *Albrecht v. Clifford*, 436 Mass. 706, 767 N.E.2d 42 (2002) (implied warranty of habitability and safety); but see *Stuart v. Coldwell Banker Commercial Group, Inc.*, 109 Wash.2d 406, 745 P.2d 1284 (1987) (warranty of habitability does not extend to exterior, nonstructural defect). See generally, Annot., 25 A.L.R.3d 383 (1969). See Conn. Gen. Stat. Ann. § 47-121 (built in accordance with building codes). Implied warranties are discussed in detail in Note, 42 S.C.L.Rev. 503, 514-524 (1991).

⁸⁰*Wells v. Clowers Constr. Co.*, 476 So.2d 105 (Ala. 1985); *Kriegler v. Eichler Homes, Inc.*, 269 Cal.App.2d 224, 74 Cal.Rptr. 749 (1969); *Speight v. Walters Development Co., Ltd.*, 744 N.W.2d 108 (Iowa 2008).

⁸¹*Redarowicz v. Ohlendorf*, 92 Ill.2d 171, 441 N.E.2d 324 (1982); *Barnes v. MacBrown & Co.*, 264 Ind. 227, 342 N.E.2d 619 (1976); *Evans v. Mitchell*, 77 N.C.App. 598, 335 S.E.2d 758 (1985), review denied, 316 N.C. 376, 342 S.E.2d 89 (1986). See Note, 35 Baylor L.Rev. 670 (1983).

⁸²*Schipper v. Leavitt & Sons, Inc.*, *supra* note 77.

As to other potential defendants, successful actions have been brought against a lender who took more than a normal lender's role in creating the development⁸³ and an engineer who conducted soil studies.⁸⁴

Courts seem hesitant to imply a warranty in the sale of an existing home not built for immediate sale.⁸⁵ Here it is more difficult to justify warranty implication as part of the normal enterprise risk of developers or builder-vendors. The *caveat emptor* doctrine, with the modern qualification that sellers disclose serious defects of which they know and that the buyer would not likely be able to discover, seems proper.

Most plaintiffs seek damages based either on the cost of correcting the defect or on the diminished value of the property.⁸⁶ A host of structural defects and incurable water problems should enable the buyer to call the deal off and receive any money paid less any benefit received by occupying the premises. Like cars, houses can be lemons.

Can the seller disclaim the implied warranty by a contract clause? Express contract language usually takes precedence over implied warranties. It is likely that exculpatory clauses will not be effective where the plaintiff has suffered personal harm. Exculpation may be effective where there is damage to property or other economic loss if the exculpatory language was brought to the buyer's attention in such a way as to clearly indicate that the buyer assumed this risk.⁸⁷ Marketing methods of most developers and vendor-builders are not likely to employ this open approach.

⁸³*Connor v. Great Western Sav. & Loan Assn.*, 69 Cal.2d 850, 447 P.2d 609, 73 Cal.Rptr. 369 (1968). But see West Ann. Cal. Civ. Code § 3434, which states that construction lender, acting only in the capacity of a lender, is not liable to third persons for construction defects. See Ferguson, *Lender's Liability for Construction Defects*, 11 Real Est. L.J. 310 (1983). Lender liability is also discussed in Note, S.C.L.Rev. 503, 510-512, 519-520 (1991).

⁸⁴*Avner v. Longridge Estates*, 272 Cal.App.2d 607, 77 Cal.Rptr. 633 (1969).

⁸⁵*Pollard v. Saxe & Yolles Dev. Co.*, 12 Cal.3d 374, 525 P.2d 88, 91, 115 Cal.Rptr. 648, 651 (1974).

⁸⁶These measures of recovery are discussed in more detail in Section 27.03.

⁸⁷Compare *Albrecht v. Clifford*, *supra* note 79 (warranty may not be waived); *Centex Homes v. Buecher*, *supra* note 76 (warranty may be waived only as to known defects); *Board of Managers of the Village Centre Condominium Ass'n, Inc. v. Wilmette Partners*, 198 Ill.2d 132, 760 N.E.2d 976 (2001) (waiver only if warranty of habitability referred to by name in the disclaimer).

While the implied warranty of habitability has its origin in the common law, state legislatures increasingly are addressing the issue of defective residential construction.⁸⁸ The relationship between the judicial doctrine and the statutory schemes will have to be worked out.

D. Insurance Protection

The preceding discussion may have overemphasized the value of the implied warranty to buyers. Although the 1960s did see an explosion of protection for home buyers, the law in any given jurisdiction may still be unclear, especially as to the particular nature of the warranty. Often the defects complained of are not large, and instituting individual legal action to enforce the warranty may cost more than what can be recovered in court. This is a reason for increased use of the class action in which a number of buyers “similarly situated” join together in one lawsuit. In any event, there are often long delays in litigating these cases.

Developers and vendor-builders are engaged in a hazardous business and often are either out of business or unable to pay for damages by the time a claim is brought. It is also more difficult for builders to obtain liability insurance coverage because of the increasing prevalence of homeowners suits.⁸⁹ As a result, private industry has been offering homeowner’s warranties to cover the types of defects discussed in this section.

E. Deceptive Practices Statutes

For a review of statutes governing deceptive practices, see Section 23.02J.

SECTION 24.11 A Suggestion: Defect Response Agreements

This section is directed to owners who are about to engage in projects of a substantial nature, particularly those with the likelihood of defects developing. It is an attempt to outline a skeletal proposal for dealing with defects.

Dealing with defects involves three stages. Stage I, the *diagnostic* stage, involves correcting the defect. Stage II is the *preparation* to resolve the allocation of legal responsibility for the losses caused by the defect. Stage III, the actual trial, involves *judicial* resolution of legal responsibility.

Although Stage III is the most dramatic (and costly), Stages I and II are the most crucial. The defect must be fixed for the owner to receive the project for which it has paid and to avoid large losses. Stage II, the gathering of information that can enable the parties to try to voluntarily settle a dispute, involves a large expenditure of time and money before the parties are in a position to settle the dispute. Stage III is rarely reached. Regardless of how expensive Stages I and II are, the expenses of Stage III with a trial of from one to six months add immense direct and indirect costs and often generate unsatisfactory outcomes. As a result, most disputes on large projects never go beyond Stage II, with the dispute being settled out of court.

Before the parties are seriously in the position to discuss settlement, they must have some idea of what caused the defect, who is legally responsible, and how the losses should be apportioned. To prepare for serious negotiations, much expense must be incurred, such as the expenses of lawyers, experts, and testers, as well as the often ignored indirect expense of officers and key employees of the major participants having to spend time that does not earn their employers any revenue. In disputes of this nature, the stakes are sufficiently high so that no participant feels that it can “cut costs.”

When all the major participants in the dispute—and there are many—have sufficient pressure to seriously discuss negotiations, it is likely that there is enough blame to spread around, enough technical uncertainty and disagreements among experts, and uncertainty as to the legal outcome. As a result, the major participants—the owner, contractors, design professionals, major suppliers, manufacturers, sureties, insurers, and funding agencies, to name the most visible—each decides it will pitch some money into a settlement “pot.”

How do participants determine how much they are willing to pitch into the pot? It will very likely result from hard bargaining with all the variable factors that make negotiation an art, such as willingness or reluctance to continue the fight, financial strength and weakness, appraisal of the strength and weakness of each participant’s position, and

⁸⁸See Section 23.02K.

⁸⁹*Wall Street J.*, Feb. 27, 2002, p. B-7 (builders from Colorado to California having difficulty obtaining liability insurance).

a prediction of how the matter will be resolved, whether decided by arbitration or litigation.

All of this takes place after a large expenditure of time and money needed to amass the information that each party feels it needs before it can enter into meaningful negotiations. Is there any way that this can be avoided?

One method is to simulate in a rough way the type of negotiations that result at Stage II but to do it *before* the project begins. This can be accomplished by a Defect Response Agreement (DRA) made among *all* the major participants. To accomplish this, the major participants enter into the negotiation as they “sign on” the project, all under the direction and supervision of the owner. The DRA deals solely with the response to defects, how to correct the defects, and who is responsible for the “immediate” response as well as with the formula for determining the ultimate loss distribution and possibly the security to back up any such formula.

Because all the major parties are signatories, there would be none of the increasingly complex third-party

problems. The formula itself would be determined by negotiation, influenced very likely by the same matters that affect any negotiation—a calculation of risk and profits. Fear of the open-ended consequential damages would lead to each participant’s giving up claims it would have for such damages.

The DRA would have to be imposed by a strong private owner⁹⁰ that recognizes that *it* bears the large burden of the wasteful costs incurred in the present system. It can “persuade” other participants that they will benefit in the long run by a system that will avoid the worst aspect of the current dispute resolution process.⁹¹

⁹⁰Public owners would be too fearful of accountability requirements to try such a no-fault approach.

⁹¹Another suggestion is to use a property damage policy that would cover defects, however caused, with *all* participants waiving subrogation claims and consequential damages. Defects would then be an insurance problem.

Subsurface Problems: Predictable Uncertainty

SECTION 25.01 Discovery of Unforeseen Conditions

A. Effect on Performance

A contractor during performance may discover unexpected subsurface conditions. On renovation projects, these subsurface conditions exist within the building. For example, removal of drywall may reveal the presence of asbestos. On new projects, the contractor may encounter subsurface *soil* conditions that differ from what was anticipated. While analysis of these two types of subsurface conditions sometimes involve the same legal analysis (for example, the federal differing site conditions clause discussed in Section 25.06 applies equally to both types of conditions), this chapter focuses on subsurface soil conditions.

For reasons explored in Section 25.01B, the discovery of unforeseen subsurface conditions is not unusual in the construction process. When such conditions are discovered, they usually have an adverse effect on the contractor's planned performance and prediction of performance costs.

Sometimes subsurface materials encountered are more difficult to excavate or extract, with many cases involving the discovery of hardpan or more rock than expected. When this occurs, performance is likely to take more time and money. Sometimes the subsurface conditions encountered generate a great increase or decrease in the quantities to be excavated. This also can affect the time and costs, particularly if the contractor has bid a composite unit price that may be adversely affected by finding that certain work runs over and other work runs under the bid. (This was discussed in Section 17.02D, dealing with unit pricing.) Materials (borrow pits) that the contractor expects to use for fill or compaction may turn out to

be unsuitable. If so, the contractor must obtain materials from a site more distant than planned or more costly to extract. When these conditions are discovered, the contractor may request more time and more money.

B. Causes

Why are unexpected subsurface conditions frequently encountered? Soil testing is expensive, and usually the number of borings is limited.¹ As a result, the data reported may not reflect subsurface conditions throughout the entire area. Subsurface conditions even within small areas may vary greatly.

As part of the design preparation process, the owner hires a geotechnical engineer to perform a geotechnical soil report. The engineer determines the load-bearing capacity of soil and rock, and the plasticity (or expansion potential) of different soils or clays. The geotechnical engineer may use this information to recommend the design of the building's foundation.

Geotechnical engineers may be exposed to great liability if the information they report is incorrect or their suggestions do not accomplish the owner's expectations. Although this chapter concentrates mainly on subsurface

¹A soil boring is a three-inch diameter metal tube drilled into the soil to a specified depth. The soil content of the core is examined to determine the nature of the subsurface soil. As one court observed, "[t]he narrowness of a soil boring limits the information that can be inferred from it because it is incapable of giving information of the existence of anything larger than three inches in diameter. However, soil borings can indicate cobbles, and the presence of hard materials can be detected by the resistance encountered when the drilling is pushed through the ground." *Travelers Casualty and Surety Co. of Am. v. United States*, 75 Fed.Cl. 696, 700 n. 6 (2007).

conditions encountered during construction, problems such as structural instability, settling, or cracking can develop later. They are often traceable to the subsurface conditions, often leading to claims against geotechnical engineers. As a result, geotechnical engineers may not perform services where liability exposure greatly exceeds anticipated profit, or may sharply increase their fees. They may also use “limitation of liability” clauses to limit their liability to the owner and require indemnification of any third-party liability.² Refusal to perform geotechnical services, etc., can eliminate testing in smaller projects or make less extensive testing more likely.

Information, however reliable, must be gathered and used by designers and contractors. When real conditions are encountered that vary from what was anticipated, the risk must be borne by someone. This chapter examines contractor claims for additional compensation when contractors’ costs are more than expected because of unforeseen subsurface conditions.

C. Two Models

It is important to recognize the different methods by which people organize construction. First, consider construction done by a contractor who is given a site and asked both to design and to build a particular project. The case of *Steas v. Leonard*,³ cited many times for the proposition that the contractor bears all risks of subsurface conditions, involved a contract under which the contractor both designed and built a house for the owner. As discussed in Section 24.02, in such cases, it is easy to place the risk of success on the contractor.

The traditional American construction process—design, bid, build (DBB)—divides design and construction, with the owner engaging a design professional to design, a geotechnical engineer to gather data, and a contractor to build. This organizational structure makes it more difficult to determine who will bear the risk of unforeseen subsurface conditions.

Although there are abundant factual variations, typically the owner—private or public—calls for bids on a construction project that will involve subsurface excavation. Building specifications may be furnished, but methods of excavation and construction will probably be left to the contractor.

Depending on owner identity and project size, an independent geotechnical engineer makes soil tests for cost estimation, design, and scheduling. The reports are made available to the design professional and the owner. Although the information is likely to be available to the contractor, owners take different approaches as to whether they will take responsibility for the accuracy of the information given to the contractor.

Whichever approach is taken, the bidder will usually be warned that it must inspect the site and, under some contracts, conduct its own soil testing. However, often the bidder will not make independent soil tests because the profit potential may be too small to justify such expenditure or because the bids are due in a relatively short period of time. As a result, contractors frequently bid without knowledge of actual conditions that will be encountered. Bids are calculated on the basis of expected conditions, and if the unexpected is encountered, the actual cost will vary widely from that anticipated. This chapter focuses on who will bear this risk.⁴

D. Enforceability of a Promise to Pay More Money

When unforeseen subsurface conditions are discovered, the owner may promise to pay additional compensation. The enforceability of such a promise depends on the application of the preexisting duty rule. The traditional application of this rule would deny enforceability of such a promise because the owner is getting for its promise nothing more than it was entitled to get under the contract.⁵ However, special rules have developed in subsurface cases that can in some jurisdictions permit enforcement of the promise. Sometimes the promise is enforced because the contractor gave up its right to rescind the contract for a mutual

²*Lanier at McEver, L.P. v. Planners and Engineers Collaborative, Inc.*, 285 Ga.App. 411, 646 S.E.2d 505 (2007) and *Fort Knox Self Storage, Inc. v. Western Technologies, Inc.*, 140 N.M. 233, 142 P.3d 1 (App.2006). Sample limitation of liability clauses are listed in EJCDC Doc. E-500, Exhibit I (2002). See Section 15.03D.

⁴For a comparative study, see Wiegand, *Allocation of the Soil Risk in Construction Contracts: A Legal Comparison*, [1989] Int’l. Constr. L. Rev. 282.

⁵For a case indicating that the traditional rule still retains some of its vigor, see *Crookham & Vessels, Inc. v. Larry Moyer Trucking, Inc.*, 16 Ark. App. 214, 699 S.W.2d 414 (1985). For a collection of cases, see Annot., 85 A.L.R.3d 259, 315–36 (1978).

mistake as consideration for the promise.⁶ More commonly, the law enforces such a promise so long as “the modification is fair and equitable in view of circumstances not anticipated by the parties when the contract was made.”⁷

E. Supervening Geotechnical Conditions and Mistake Claims

Most problems involve encountering unexpected *preexisting* subsurface conditions. Additional costs can result from a change in geological conditions because of unexpected weather (unseasonable rains or frost) or third-party interference (flooding from adjacent lands). A distinction can be drawn between the types of risks involved. If the parties want to spend enough time and money, the risk of a preexisting geological condition can be eliminated. However, the likelihood of a future occurrence, whether from third-party conduct or atmospheric conditions, can rarely be predicted with any accuracy.

Supervening changes of geological conditions are not discussed in this chapter. Usually when such events occur, the contractor seeks a time extension but not additional compensation. The differing site conditions clause used by the federal government and discussed in Section 25.06A generally does not apply to atmospheric difficulties or third-party interference.⁸

If contracting parties share a fundamental mistake as to material assumptions at the time the contract is made, the parties may be discharged from any further obligation to perform because of mutual mistake unless the risk has been allocated by contract or by custom to the party whose performance has been adversely affected. For example, if both parties hold fundamental assumptions as to particular subsurface characteristics, the discovery of substantially different subsurface characteristics could entitle the party adversely affected, usually the contractor, to terminate its obligation under the contract and be paid for what it has performed, based on restitution.

Most subsurface disputes involve claims by the contractor for additional compensation, not for the right to

terminate its obligation. As a rule, these claims rely on misrepresentation, as discussed in Section 25.03, or on contractual provisions, as discussed in Section 25.06. As a result, mutual mistake does not play a significant role in this chapter.

Mistake can be relevant in two instances. As noted in Section 25.01D, mistaken assumptions may be part of the basis for enforcing a subsequent promise to pay additional compensation. Also, the differing site conditions method under which the contractor receives additional compensation as discussed in Section 25.06 can be substituted for any common law right to terminate because of mutual mistake (discussed in that section).

SECTION 25.02 Common Law Rule

The traditional common law rule, universally followed up to the beginning of the twentieth century, placed the risk of project failure caused by defective soil squarely upon the contractor. The owner had a duty not to intentionally deceive the contractor but had no duty to disclose to the contractor soil conditions that the owner knew were relevant to the contractor. Rather, the risks of contract performance—including soil conditions and design adequacy—belonged to the contractor.⁹

In 1918, the Supreme Court announced the modern rule in *United States v. Spearin*,¹⁰ reproduced in Section 23.05E. Under the *Spearin* doctrine, the owner, not the contractor, assumes the risk of defects in design specifications that prevent the contractor from building an acceptable project. Because a building must necessarily be built on a particular plot of land, the owner’s implied warranty of design includes the risk that the design failed to accommodate the soil conditions. As explained by one court:

Plaintiff [owner] contends here that the court below failed to distinguish between defects inherent in the plans and specifications and defects extrinsic to such specifications, *such as a latent defect in the soil*. This argument is untenable, since plans and specifications do not exist in a vacuum; they are made for a particular building at a particular place.

⁶*Healy v. Brewster*, 251 Cal.App.2d 541, 59 Cal.Rptr. 752 (1967).

⁷*Angel v. Murray*, 113 R.I. 482, 322 A.2d 630, 636 (1974), quoting what is now Restatement (Second) of Contracts § 89A. See also *Linz v. Schuck*, 106 Md. 220, 67 A. 286 (1907).

⁸*Hardeman-Monier-Hutcherson v. United States*, 198 Ct.Cl. 472, 458 F.2d 1364 (1972). It can apply if representations are made to the contractor regarding sea or climate conditions.

¹⁰248 U.S. 132 (1918).

The defect in the plans and specifications for the building in question was the failure to make provision for adequate pilings and other support for the floor; the fact that these plans and specifications might provide for an adequate building in some other place does not render the plans and specifications less defective for the location in question. (Emphasis added.)¹¹

The owner's implied warranty as to the adequacy of the design specifications is counterbalanced by its right to rely upon the contractor's expertise in building. As discussed in Section 23.02I, a contractor has an implied duty to perform in a workmanlike manner. Courts include within the contractor's implied warranty of workmanlike conduct a duty to warn the owner of adverse subsurface conditions known or reasonably known to the contractor.

As an illustration, the Mississippi Supreme Court held a builder responsible for severe cracking because the builder was found to have been negligent in not warning the buyer of potential soil problems and not recommending that soil tests be made. The court held in favor of a subsequent purchaser, based on the builder's duty to use its technical knowledge to build a house on yazoo clay in a way that would protect users from the house settling. The dissenting judge would have exonerated the builder because he concluded that no such duty was imposed on the builder and because the builder had built according to plans and specifications required by the Veterans Administration.¹²

As a general proposition, then, the contractor will bear the risk of unforeseen subsurface conditions unless (1) it can establish that it has relied on information furnished by the owner (discussed in Sections 25.03 and 25.05), (2) the contract itself provided protection (discussed in Section 25.06), (3) the owner did not disclose information it should have disclosed,¹³ or (4) the cost of performance was extraordinarily higher than could have been anticipated, a fact that would justify applying the doctrine of mutual mistake or impossibility, as discussed in Sections 23.03C and D.

¹³See *P. T. & L. Constr. Co., Inc. v. State of New Jersey Dep't of Transp.*, 108 N.J. 559, 531 A.2d 330 (1987).

The number of exceptions to the basic rule should not convey the impression that the policy of placing these risks on the performing party no longer exists or does not reflect, at least to some courts, an important legal principle in fixed-price contracts. For example, in *W. H. Lyman Construction Co. v. Village of Gurnee*,¹⁴ a contractor had been engaged to perform a sanitary sewer project. One basis for a claim against the public entity was that the sewer had to be constructed through subsurface soil that was for the most part water-bearing sand and silt rather than clay, as indicated by the soil-boring log shown on the plans. A high groundwater table was also discovered. This required the contractor to install numerous dewatering wells.

It is important to note the judicial attitude in the *Lyman* case, which dealt with the claim by the contractor that the public entity impliedly warranted that the plans and specifications would enable it to accomplish its promised performance in the manner anticipated. In rejecting the contractor's claim, the court stated "It is well settled that a contractor cannot claim it is entitled to additional compensation simply because the task it has undertaken turns out to be more difficult due to weather conditions, the subsidence of the soil, etc. To find otherwise would be contrary to public policy and detrimental to the public interest."¹⁵

The court looked on the common law rule as expressing a principle of great importance, one needed to protect public entities and public funds. It is not clear that the court would have felt as strongly as it did were the contract a private one. Yet private owners and those who supply funds for the project are also greatly concerned with the ultimate cost of the project and rely heavily on the contract price in their planning.

Different rules apply to developers and subdividers. Developers both own the land and build the structures. As discussed in Section 24.10, the developer of a residential development may be liable to the homeowners under the implied warranty of habitability or fitness or under a theory of strict products liability, if the homes are damaged by defective soils.

A subdivider prepares empty land for construction, but does not do the construction work itself. The subdivider grades the land and subdivides it into lots in preparation for a home development. The subdivider then sells these

¹⁴84 Ill.App.3d 28, 403 N.E.2d 1325 (1980).

¹⁵403 N.E.2d at 1328.

lots to contractors who build the houses. If the houses later fail because of defective soils, may either the homeowners or contractors shift responsibility to the subdivider? A subdivider has a duty to disclose to the contractors defects in the soil it knew or should have known through the exercise of reasonable care. Disclosure of these defects to the contractors will shield the subdivider from liability to either the contractors or home purchasers.¹⁶

SECTION 25.03 Information Furnished by Owner

Owners who intend to build substantial projects often make subsurface and soil reports available to prospective contractors. One exception to the general allocation of unexpected costs to the contractor relates to the owner furnishing information relied on by the contractor. The owner may make this information available but may disclaim responsibility for its accuracy. This section emphasizes the effect of providing this information with the full realization that the contractor is likely to rely on it and without any technique to shield the owner from responsibility.

At the outset, differentiation must be made among types of information that may be given to the contractor. Reports of any tests that have been taken are usually included in such information. The reports may also contain opinions or inferences that the geotechnical engineer may have drawn from observation and tests taken. The information may include estimates as to the type and amount of material to be excavated or needed for fill or compaction. (This information may also be included in the specifications.) Although less common, the reports may recommend particular subsurface operational techniques.

Misrepresentation is the basic theory on which the contractor bases its claim. A threshold question involves what constitutes a misrepresentation. Facts and opinions must be differentiated. Reporting the result of tests

is clearly a factual representation, whereas professional judgments that seek to draw inferences from this information may be simply opinions.

A misrepresentation claim may be based on improperly selected test sites, the inference being that a contractor may believe that the test sites selected will generally represent the site. Misrepresentation can consist of a combination of providing some information but not disclosing all the information that qualifies the information given. Half-truths can be just as misleading as complete falsehoods. Misrepresentation is distinguished from simply failing to disclose any information or information that the owner knows would be valuable to the contractor and that the contractor is not likely to be able to discover for itself.

Representations may be fraudulent, that is, made with the intention of deceiving the contractor. Fraud claims, though having a heavy burden of proof, are most valuable to a contractor. The contractor's negligence in failing to check the data generally does not bar recovery.¹⁷ Recovery would be barred only if the contractor relied on information it gathered. Fraud may extend the time a contractor has for bringing suit. Under the "discovery" rule for determining when a cause of action accrues, a distinction exists between when the contractor knew that the subsurface conditions differed from what it expected (a claim grounded in misrepresentation) and the contractor's knowledge that the owner or architect fraudulently misrepresented to it what the soil conditions were.¹⁸ Fraud also offers the contractor a variety of remedies. The contractor can rescind the contract and refuse to perform further, raise fraud as a defense if sued for nonperformance, or—most important—complete the contract and recover additional compensation in a claim for damages.

More commonly, though, misrepresentations are not made with the intention of deceiving the contractor. If the misrepresentations were made negligently, some added complexities develop. Very likely the negligence is that of the geotechnical engineer, and owner recovery against the geotechnical engineer may not always be available.¹⁹

¹⁶*Stepanov v. Gavrilovich*, 594 P.2d 30, 35 (Alaska 1979) (subdivider is not liable for failure to disclose the existence of permafrost, where the geological testing did not reveal that danger); *Anderson v. Bauer*, 681 P.2d 1316, 1322–23 (Wyo.1984) (subdivider warned contractors of the presence of a water table and so was not liable to homeowners); and *Smith v. Frandsen*, 94 P.3d 919 (Utah 2004) (subdivider not liable to homeowners, because the contractors had an independent duty to apprise themselves of the soil conditions).

¹⁷*Seeger v. Odell*, 18 Cal.2d 409, 115 P.2d 977 (1941).

¹⁸*Trafalgar House Constr., Inc. v. ZMM, Inc.*, 211 W.Va. 578, 567 S.E.2d 294 (2002). The discovery rule is discussed in Section 23.03G.

¹⁹See Section 14.05. Compare *Texas Tunneling Co. v. City of Chattanooga*, 329 F.2d 402 (6th Cir.1964) (claim denied), with *M. Miller Co. v. Central Contra Costa Sanitary Dist.*, 198 Cal.App.2d 305, 18 Cal. Rptr. 13 (1961) (claim allowed). The latter has been followed in the Restatement (Second) of Torts, § 525 (1977).

Clearly, if the negligence had been that of the owner, the contractor can recover any losses it suffers caused by the negligence that it could not have reasonably avoided.

What is the responsibility of the owner for any negligent representations in the soil information generated by the geotechnical engineer? If the geotechnical engineer is an independent contractor—which is likely to be the case—the owner would not be chargeable with the latter’s negligence. However, very likely the owner will be chargeable either for breach of contract (that the breach is caused by a person whom it engages to perform services does not relieve it of responsibility),²⁰ or implied warranty of the accuracy of the information supplied by the owner that is relied on by the contractor.²¹

The least culpable conduct is that of innocent misrepresentation. In such cases there is neither intention to deceive nor negligence. Innocent misrepresentation generally allows the contracting party who was misled to rescind the contract. Some states allow a restitutionary damage remedy—the difference between what was received and what was paid out²²—an ineffective remedy in subsurface cases.

Actual rescission in these subsurface cases is rare. Many legal and factual issues may make it difficult to predict whether the right to rescind is available. Walking off the job under these conditions exposes the contractor to liability. Even if its rescission were determined to be justified, the contractor can recover only the reasonable value of its services. This recovery formula should, at least in theory, put the contractor in the position it was in when it made the contract.

It may be difficult to recover lost overhead and profit using this restitutionary remedy.²³ More likely the contractor will continue performance and later claim additional compensation. Because innocent misrepresentation is not a contract breach, however, contractors will shift to implied warranty to justify their claims for additional compensation. The principal problem with the implied warranty theory is the owner’s attempt to exonerate itself by using contract language negating the necessary reliance.²⁴

²²See Section 7.07.

²³See Section 27.02E.

²⁴See Section 25.05.

SECTION 25.04 Risk Allocation Plans

One of the principal planning decisions that those who prepare construction contracts must make relates to subsurface problems, broadly defined. As noted in Section 25.02, in the absence of any contractual risk assumption system incorporated into the contract, the contractor will bear the risk of additional expenses attributable to having to perform work under subsurface conditions that differ from that anticipated. Thus the contractor must bear the cost of any additional expenses and cannot be relieved from any further obligation to perform.

The exceptions to this basic risk allocation were noted in Section 25.02. But those who plan risk allocation for such contracts must keep in mind that generally the law will permit the contract to distribute the risks in any way chosen by the parties. That it is usually the owner who makes this determination, and that the only choice the contractor has is to enter into the contract or not, rarely affects the law’s respect for the contract provisions.

Assuming that the owner chooses the risk distribution, the owner has essentially three options:

1. Gather no information, and let the contractor proceed based on its own evaluation.
2. Gather the necessary information, make it available to the contractor, but disclaim any responsibility for its accuracy (disclaimer system).
3. Gather the information, make it available to the contractor, and promise the contractor to equitably adjust the contract price if the actual conditions turn out to differ from those represented or anticipated (the differing site conditions (DSC) system).

The preceding techniques are discussed in Sections 25.05 and 25.06. In those sections, however, the assumptions are that a particular risk distribution choice has been made and how the law deals with that choice. In this section, the emphasis is on the advantages and disadvantages of the three systems.

Emphasis in this section will be not on the first system but on the second and the third. In construction projects of any size, gathering subsurface information is crucial for design choices, and the owner rarely just allows the contractor to deal with the problem. Contractors are not always geared to gather the information and make these choices, and any attempt to use the first system runs a great risk of construction failure.

With the important exceptions noted in Section 25.06, most private and many state and local public owners make information available to the bidders but use contractual disclaimers in an attempt to relieve themselves from any responsibility for the information's accuracy.

Those who adopt the disclaimer system recognize the possibility or even the likelihood that the contractor will encounter physical conditions different from those represented or anticipated. They expect the contractor to calculate the risks and include contingencies in the bid price, which takes this risk into account. Those who prefer this system also think that if the contractor will have to pay for the added expenses for corrective work, this system will encourage contractors to more carefully evaluate the information and inspect sites. Advocates of this system want the pricing of such uncertainty to go into the contract at the front end—rather than at the back end, through claims. To sum up, the principal justification for the disclaimer system is the need many public entities and many private owners have to know at the outset what the project will cost.

But the disclaimer system has drawbacks. First, as shall be seen in Section 25.05, the disclaimer does not always work. A study by the American Society of Civil Engineers concluded that despite owners seeking to place these risks on the contractor through disclaimer language, contractors will make claims that in the end the owner will compensate. The claims will be based on other contract clauses or different legal theories.²⁵

Second, if the disclaimer system does not protect the geotechnical engineer who furnishes the information, the contractor may be able to make a successful claim against the geotechnical engineer based on negligence.²⁶ This will frustrate the risk allocation system by giving the contractor a windfall if it has priced the contingency in its contract price and can still recover against the engineer. This uncertainty may also force the engineer to protect himself by demanding higher compensation or indemnification.

Third, the ruthlessly competitive construction market may mean that contractors do not include contingencies for subsurface conditions in their bid prices. Although this

may appear beneficial to the owner, the contractor who loses money is likely to make a claim and may win it; in any event, all the parties will suffer extensive claims overhead.

Despite these undoubted disadvantages, the need for certainty, particularly when budgets are fixed and tight, motivates many owners to seek to use the disclaimer system.

The third system—the differing site conditions (DSC) method—assures the contractor that it can bid on what it believes it is likely to encounter and that it will receive an equitable adjustment if actual conditions do not turn out that way. This system is intended to generate lower bid prices because the contractor need not attempt the often difficult task of providing a contingency in its pricing for the subsurface uncertainties and need not incur extensive costs connected with its own testing if it is not certain that the information furnished by the owner under the disclaimer system is accurate.²⁷

Obviously, the DSC method has disadvantages. The most important is the uncertainty of the ultimate contract price. Yet over the long run—and this point is made by many owners who are repeat players—the prices will be lower. Also, the cost of administering the DSC system can be formidable, and a contractor who is not convinced it will be treated fairly may include a contingency price anyway. Determining the amount of the equitable adjustment can generate difficult problems and expensive claims overhead.

Another argument sometimes made against the DSC system is the uncertainty as to whether it actually induces lower bids. Some contend that bids are based on workload, the desirability of keeping the workforce together, and the prospects of a well-administered construction project. The presence of the DSC system may be a relatively insignificant item in determining the actual bid price. Also, the bid price may not be reduced unless the contractor is confident that obtaining an equitable adjustment will not be extraordinarily difficult or administratively expensive.

Finally, another factor in favor of using the DSC system is that it should provide an incentive for the owner to furnish the best subsurface information by hiring competent soil testers and giving them enough time and compensation to develop accurate information.

²⁵*Managing Unforeseen Site Conditions*, 113 J.of Constr.Eng'g & Mgmt, No. 2, June 1987, quoted by Jones, *The U.S. Perspective on Procedures for Subsurface Ground Conditions Claims*, [1990] Int'l Constr. L. Rev. 169.

²⁶See Stein & Popovsky, *Design Professional Liability for Differing Site Conditions and the Risk-Sharing Philosophy*, 20 Constr. Lawyer, No. 2, April 2000, p. 13.

²⁷See *Foster Constr. C. A. & Williams Bros. Co. v. United States*, 193 Ct.Cl. 587, 435 F.2d 873, 887 (1970), for an articulation for the reasons for a differing site conditions clause.

Clearly, no system is perfect, and whoever must plan the risk allocation faces difficult choices. There is an increased tendency, as demonstrated in Section 25.06, to use the DSC system. But in the greater number of construction projects, the disclaimer system will likely still be employed.

SECTION 25.05 Disclaimers— Putting Risk on Contractor

Owners use a variety of techniques to relieve themselves of responsibility for the accuracy of subsurface information they have obtained and made available. Although emphasis is on making the information available and then seeking to disclaim responsibility for it, there is the possibility that the owner will choose simply not to make this information available. Owners may seek to do so if they believe that no sure technique can relieve them of the responsibility for the information's accuracy. Owners are increasingly expected to disclose information that would be valuable to the contractor if the contractor would probably not be able to discover this information for itself. Yet an opinion of the Pennsylvania Commonwealth Court²⁸ held that the owner's failure to include information on subsurface conditions was not constructive fraud. Even more, an opinion of the Post Office Board of Contract Appeals held that the public entity was not required to make a subsurface investigation if it did not want to do so.²⁹

In these cases, other factors made it difficult for the contractor to recover. For example, in the first case, the court noted that the contractor was experienced and had access to public documents describing the mine water levels in the project area. In the second case, the court noted that the contractor was aware of the existence of subsurface rock, that before bidding the contractor anticipated that some rock would be encountered in excavation, and that the amount of rock actually encountered was not unusual for the area. These factors might have been sufficient to enforce any disclaimer if the information given and responsibility for it were disclaimed.

More commonly, the owner needs the information, commissions it, and makes it available to the contractor.

Some owners use a number of techniques to avoid responsibility for the accuracy of the information. Sometimes owners place the responsibility on the contractor to check the site and make its own tests. As seen in *United States v. Spearin* (reproduced in Section 23.05E), these generalized disclaimers are not always successful.

Some owners use a different approach: They do not include subsurface data in the information given bidders but state where the contractor can inspect such information available elsewhere.

Another approach is to give the information but state that it is for information only and is not intended to be part of the contract. This is another way of stating the contractor cannot rely on the accuracy of the information, in the hope of shielding the owner from any claim based on misrepresentation or warranty. These techniques generate varied outcomes, reflecting the difficulties courts face in deciding whether a party can use the contract to shift a risk to the other party.³⁰

Judicial ambivalence when facing disclaimers can be demonstrated by comparing *Wiechmann Engineers v. State Department of Public Works*,³¹ which enforced the disclaimer and barred the claim, with *Stenerson v. City of Kalispell*,³² which did not enforce the disclaimer and allowed the claim. To be sure, the *Wiechmann* and *Stenerson* decisions can be reconciled. The contractor in the *Wiechmann* case had the opportunity to examine the information but did not. It also observed the site and knew that boulders (the basis for its claim) were present. It would be difficult to justify a claim for additional expenses under these conditions. The public entity made available all it knew, and the information was readily accessible to the contractor. The contractor lost its claim because it did not rely on the information. This case invoked the common law rule that places on the contractor the risk of performance that proves to be more expensive than anticipated.

³⁰Compare *City of Columbia, Mo. v. Paul N. Howard Co.*, 707 F.2d 338 (8th Cir.), cert. denied, 464 U.S. 893 (1983) (disclaimer not enforced) with *R. Zoppo Co. v. City of Dover*, 124 N.H. 666, 475 A.2d 12 (1984) (disclaimer enforced).

³¹31 Cal.App.3d 741, 107 Cal.Rptr. 529 (1973). See also *Cook v. Oklahoma Bd. of Public Affairs*, 736 P.2d 140 (Okla.1987). The contractor was denied recovery even where the owner knew of the condition, which it did not mention in bid information. A reasonably prudent bidder would have known of the condition.

³²629 P.2d 773 (Mont.1981). See also *Jack B. Parson Constr. Co. v. State*, 725 P.2d 614 (Utah 1986) (bidder could reasonably rely on specific misrepresentation despite disclaimer).

²⁸*Tri-County Excavating, Inc. v. Borough of Kingston*, 46 Pa.Comm. 315, 407 A.2d 462 (1979).

²⁹*Wyman Constr. Inc.*, PSBCA No. 611, 80-1 BCA ¶14,215.

In the *Stenerson* case, the court concluded that the public entity either knew or should have known that the information would be relied on by the bidders. It also held that no on-site inspection would have revealed any information that was not on the plans. The *Wiechmann* case condemned the contractor because it did not perform as the court felt contractors should perform. The court in *Stenerson* concluded that the contractor did as other contractors would have done—relied on the expertise of the geotechnical engineers.

The fact remains that the *Wiechmann* decision reflects the court's unwillingness to deprive the public entity of the opportunity of disclaiming responsibility and placing the risk on the contractor. The *Stenerson* decision, in contrast, showed an unwillingness to allow the public entity to exonerate itself when it knew that the contractor did rely on the information, and that reliance in the long run was beneficial to the public entity because it generated a lower price.³³ Although all judges are likely to give great autonomy to contracting parties to apportion risks as they choose, they often differ when one party has *dictated* a risk allocation plan, even though the contractor can adjust its bid price to take into account the risks it is being asked to bear.

Judges view the disclaimer process differently. Judges who are unwilling to allow owners to furnish information and disclaim responsibility for its accuracy (the issue here is not fraud or negligent misrepresentation) seem more influenced by the apparent unfairness of allowing the owner to place the risk on a party who is often in a poorer position to distribute or shift that risk. This is even more persuasive if the owner knows that the information will be relied on and derives a benefit through lower bid prices when the contractor does not make its own tests. They are also influenced by the belief that the contracting parties owe each other the duties of good faith and fair dealing. They believe autonomy should not be used to place subsurface risks on the contractor when the contractor did as others and relied.³⁴ Judges favoring broad autonomy are less influenced by these considerations.

³³See Parvin & Araps, *Highway Construction Claims*, 12 Pub.Cont. L.J. 255 (1982).

³⁴In *Sherman R. Smoot Co. v. Ohio Dep't of Adm. Serv.*, 136 Ohio App.3d 166, 736 N.E.2d 69 (2000), the court invoked the *Spearin* doctrine to allow the contractor to rely upon a soils report provided "for information only."

They seek only to determine how the risk was apportioned by the contract.³⁵

SECTION 25.06 Contractual Protection to Contractor

A. Public Contracts: The Federal Approach

In the absence of contract protection, misrepresentation, or breach of warranty, the contractor must bear the risk of unforeseen site and subsurface conditions. If disclaimer language is chosen carefully and the bidder given a reasonable opportunity to observe and test, the disclaimer will likely be effective. Even where the disclaimer language is clear and the contractor could observe and test, the owner will be held responsible for factual representations, not opinions or inferences.

The owner may find that shifting risk to the contractor is not in the owner's best interest. In such a case, the owner may choose to accept the risk of unforeseen site and subsurface conditions. This acceptance is accomplished in federal construction through what was formerly called the *changed-conditions clause* and is now known as the *differing site conditions (DSC) clause*.³⁶

The differing site conditions system plays a significant part in federal procurement. In 1982, an EPA study identified DSC claims as representing 50 percent of the dollar amount in contract modifications.³⁷ A 1984 study showed about 34 percent of all federal contract modifications were based on the DSC.³⁸

³⁵See *Berkel & Co. Contractors, Inc. v. Providence Hosp.*, 454 So.2d 496 (Ala.1984); *Empire Paving, Inc. v. City of Milford*, 57 Conn.App. 261, 747 A.2d 1063 (2000); *Green Constr. Co. v. Kansas Power & Light Co.*, 1 F.3d 1005 (10th Cir.1993) (Kansas law); *Millgard Corp. v. McKeel Mays*, 49 F.3d 1070 (5th Cir.1995) (Texas law); *McDevitt & Street Co. v. Marriott Corp.*, 713 F.Supp. 906 (E.D.Va.1989), *aff'd* in relevant part, 911 F.2d 723 (4th Cir.1990) (Virginia law).

³⁶For an in-depth discussion of the federal DSC clause, see J. CIBINIC, JR., R. NASH, JR. & J. NAGLE, *ADMINISTRATION OF GOVERNMENT CONTRACTS*, Ch. 5 (4th ed. 2006) and Chu, *Differing Site Conditions: Whose Risk Are They?*, 20 Constr. Lawyer, No. 2, April 2000, p. 5.

³⁷*Report of Internal and Management Audit, Environmental Protection Agency, Office of the Inspector General.*

³⁸*Contract and Change Order Summary Reports, Naval Facilities Engineering Command.*

The federal DSC clause states,

(a) The Contractor shall promptly, and before the conditions are disturbed, give a written notice to the Contracting Officer of (1) subsurface or latent physical conditions at the site which differ materially from those indicated in this contract, or (2) unknown physical conditions at the site, of an unusual nature, which differ materially from those ordinarily encountered and generally recognized as inhering in work of the character provided for in the contract.

(b) The Contracting Officer shall investigate the site conditions promptly after receiving the notice. If the conditions do materially so differ and cause an increase or decrease in the Contractor's cost of, or the time required for, performing any part of the work under this contract, whether or not changed as a result of the conditions, an equitable adjustment shall be made under this clause and the contract modified in writing accordingly.

(c) No request by the Contractor for an equitable adjustment to the contract under this clause shall be allowed, unless the Contractor has given the written notice required; *provided*, that the time prescribed in (a) above for giving written notice may be extended by the Contracting Officer.

(d) No request by the Contractor for an equitable adjustment to the contract for differing site conditions shall be allowed if made after final payment under this contract.³⁹

A DSC (differing site condition) creates two methods of obtaining an equitable adjustment, conditions different from those represented (Type I) and unanticipated conditions (Type II).

A Type I DSC requires that there be an actual physical (subsurface or latent) condition encountered at the site that differs materially from the conditions "indicated" in the contract documents. First the contract documents must be examined. In federal procurement, such documents are broadly defined and include the invitation for bids, drawings, specifications, soil-boring data, representations of the type of work to be done, and the geographical area of construction. Included among the contract documents are not only specific information as to the subsurface characteristics but also the description of the nature of the project and the physical conditions that

relate to the work. Physical conditions include the details of excavation or construction work, as they may include representations of the physical conditions.⁴⁰ The contractor, when preparing its bid, must consider not only the representations contained in the physically attached documents, but also information located elsewhere but made available for inspection by the bidders, and even the contractor's own experience on similar projects in the same location.⁴¹ The contractor can draw reasonable inferences as to the physical conditions, and there need not be express representations of them. The important thing is whether the representations are sufficient to provide a reasonably prudent contractor with a sufficient basis on which to rely when the contractor prepared its bid.⁴² Where the contract documents are silent as to subsurface conditions, no Type I DSC claim can be brought.⁴³

Actions by third parties, including economic, governmental, political, or labor conditions, do not constitute physical conditions.⁴⁴ Moreover, natural conditions, such as abnormally heavy rainfall, rough seas, strong winds, hurricanes, severe temperatures, frozen ground, or flooding by themselves do not constitute differing site conditions. However, an abnormal weather condition may interact with a latent physical condition in such a way as

⁴⁰*Ace Constructors, Inc. v. United States*, 70 Fed.Cl. 253, 269–72 (2006), *aff'd*, 499 F.3d 1357 (Fed.Cir.2007) (government's erroneous topological survey, indicating a "balanced" project, when instead the project lacked adequate fill from the cut areas, is a Type I DSC).

⁴¹See *Randa/Madison Jt. Venture III v. Dahlberg*, 239 F.3d 1264 (Fed. Cir.2001) (geotechnical reports made available for inspection) and *T. L. James & Co., Inc. v. Traylor Bros., Inc.*, 294 F.3d 743 (5th Cir.2002) (Louisiana law; dredging contractor is bound by information found in maps in possession of the public owner indicating subsurface obstructions in a river). In *Massman Constr. Co. v. Missouri Highways & Transp. Com'n*, 31 S.W.3d 109 (Mo.App.2000), transfer denied Dec. 5, 2000, the court allowed the contractor to recover under a *Spearin* claim; even though the contractor had placed the rock revetment, it did not know the revetment would interfere with the current project.

⁴²In *H. B. Mac, Inc. v. United States*, 153 F.3d 1338 (Fed.Cir.1998), the court rejected the argument that the "reasonably prudent contractor" standard should be relaxed where the contractor was a "small, disadvantaged business."

⁴³*Conner Brothers Constr. Co., Inc. v. United States*, 65 Fed.Cl. 657, 679–82 (2005).

⁴⁴*Olympus Corp. v. United States*, 98 F.3d 1314 (Fed.Cir.1996) (strike by co-prime's employees, which prevented the plaintiff from accessing the site, not a DSC).

³⁹48 CFR § 52.236-2 (2007).

to create a DSC.⁴⁵ Physical conditions can also include artificial or manufactured conditions, such as underground electric power lines, sewer lines, or gas pipelines that are unexpectedly encountered at the site.

The condition must be subsurface or latent. Most claims involve encountering something different than anticipated in the subsurface materials or structure—usually physical or mechanical properties, behavioral characteristics,⁴⁶ quantities, etc. But a DSC need not always be a subsurface condition; it can also be a latent physical condition at the site, such as undisclosed concrete piles, the thickness of a concrete wall, or the height of ceilings above a suspended ceiling.

The DSC must be encountered at the site, which usually is the place where construction will be undertaken but can include off-site pits from which soil is to be borrowed for fill or disposal sites if the contractor is directed to obtain or dispose of materials off-site.

The physical conditions encountered must be materially different from those indicated—an essentially factual inquiry. Was there a substantial variance from what a reasonably prudent contractor would have expected to encounter, based on its review of the contract documents and what it would have encountered had it complied with the site investigation clause in the contract?⁴⁷ The “reasonably prudent contractor” test imposes upon the contractor not only a duty to examine all the information stated in the contract documents or separately made available, but also to evaluate this information in a balanced manner. As explained in one case:

For example, the contractor must consider whether the borings are numerous and well-spaced, or whether they are few and far between. In addition, the contractor must consider the general description of the site and any warnings of

conditions which might be encountered. . . . [A] reasonable bidder will consider the information provided by the boring logs and then consider how other available information sheds light upon the results of the test borings and upon the extent to which the test borings are representative of conditions throughout the site.⁴⁸

The DSC clause makes the contractor’s actual reliance upon the contract documents when preparing its bid a precondition for bringing a claim. A contractor who did not rely upon certain contract documents when preparing its bid may not then use those documents as the basis for a claim.⁴⁹ Moreover, even without such a clause, a contractor would be expected to make at least a minimal inspection to familiarize itself with the site. Typically, site inspection clauses obligate the contractor to inspect and familiarize itself with the conditions at the site, but the contractor is obligated only to discover conditions apparent through a reasonable investigation. It is not expected to perform burdensome, extensive, or detailed tests or analysis. The contractor can rely on information received from the owner, particularly when it does not have adequate time or opportunity to conduct a thorough investigation. What other bidders did or what they thought they would encounter will bear heavily on the question of whether the site investigation was properly performed.

A Type I DSC clause is in essence a contractual mechanism for dealing with misrepresentation claims concerning subsurface conditions. Within federal procurement jurisprudence, the DSC clause is a subset of the *Spearin* doctrine, discussed in Section 23.05E. In the case of an overlap of these two theories—such as when the specifications are allegedly defective in their misrepresentation of subsurface conditions—the contractor must pursue its claim under the more specific, contractual mechanism.⁵⁰

⁴⁵*Baldi Bros. Constructors v. United States*, 50 Fed.Cl. 74 (2001).

⁴⁶Behavioral DSC claims were raised in two tunneling cases: *Mergentime Corp. H/T Constr., Inc. (JV)*, ENG BCA No. 5756, 94-3 BCA ¶27,119 and *Municipality of Anchorage v. Frank Coluccio Constr. Co.*, 826 P.2d 316 (Alaska 1992). See Smyth, *Behavioral Differing Site Conditions Claims*, 11 Constr.Litig.Rep., No. 6, June 1990, p. 158.

⁴⁷*H. B. Mac, Inc. v. United States*, supra note 42 (in geologically diverse soil, borings logs located 300 yards from the construction site would not be viewed as reliable by a reasonable contractor); *Neal & Co., Inc. v. United States*, 36 Fed.Cl. 600 (1996), aff’d, 121 F.3d 683 (Fed.Cir. 1997) (groundwater was not a Type I DSC where the contract did not indicate dry soil conditions).

⁴⁸*PCL Constr. Services, Inc. v. GSA*, GSBGA No. 16588, 06-2 BCA ¶33,403, p. 165,616.

⁴⁹*Control, Inc. v. United States*, 294 F.3d 1357, 1363–64 (Fed.Cir. 2002); *Fru-Con Constr. Corp. v. United States*, 43 Fed.Cl. 306, 319–21, motion for recon. denied, 44 Fed.Cl. 298 (1999).

⁵⁰*Control, Inc. v. United States*, supra note 49, 294 F.3d at 1362. However, an Ohio court ruled that a contractor who was not entitled to relief under the DSC clause could then bring the same claim under the *Spearin* doctrine; *Sherman R. Smoot Co. v. Ohio Dep’t. of Adm. Serv.*, supra note 34.

The DSC clause is also akin to the *Spearin* doctrine in that courts are loath to allow disclaimers to undermine either theory of recovery.⁵¹

A Type II DSC requires a variance between the site condition actually encountered and that which would be reasonably expected at the time the contract was made. Expectations look at the information furnished to the contractor or information acquired from other sources. Were the conditions encountered common, usual, and customary for that geographical area? The contractor is expected to be aware of conditions under which the work will be performed. For example, a contractor who is working in winter in a mountainous area where snow is common should expect to encounter wet conditions.⁵²

To obtain an equitable adjustment, the contractor must notify the contracting officer promptly in writing. This generates the inevitable difficulty over substantial compliance and waiver.⁵³ Courts seem more willing to waive strict notice requirements if it appears that the owner knew the contractor had encountered unforeseen subsurface conditions and that a claim would likely be made.⁵⁴ In *Kenny Construction Co. v. Metropolitan Sanitary District of Greater Chicago*,⁵⁵ the contractor notified the engineer, who told the contractor to go ahead and they would

figure costs later. Despite the absence of a written order by the engineer, the court granted recovery, because the contractor relied on the engineer's statement and the public entity was estopped (condition cannot be asserted as a defense, as representation that it would not be asserted as a defense had been relied on) to assert the condition.

In *Centex Construction Co.*,⁵⁶ the written notice requirement was waived because the project representative was aware of the oil dump initially at the prebid site investigation and again when the contractor orally advised him of the condition when work commenced. The agency Board of Appeals also noted that failure to provide written notice did not prejudice the government's position.

The argument in favor of enforcement of the notice requirement is made in *Fru-Con Construction Corp. v. United States*.⁵⁷ On a dam renovation project, the blasting method employed by the contractor caused "overbreak" of the existing concrete walls. This delayed the project because the contractor was required to rebuild the walls. The contractor provided no DSC notice, oral or written, even though the evidence of overbreak was immediate and obvious. Indeed, the contractor did not even make a DSC Type II claim until three years after project completion and on the eve of trial. The court rejected the contractor's arguments that late notice was excused because it was on a tight construction schedule and because it did not know the cause of the overbreak (that it was caused by a DSC, rather than its blasting subcontractor's improper work) until it consulted an expert. The court observed that the government was prejudiced by the late notice because it was deprived of the opportunity to consider alternative construction methods.⁵⁸

The use of a DSC is becoming more common in public contracts made by entities other than the federal government. This usage can create difficulties. For example, one case involved a clause that incorporated a Type I DSC but not a Type II DSC.⁵⁹ Similarly, confusion can develop because a local public entity may be compelled to use a DSC because the project is being partially funded with federal money granted by the Environmental Protection Agency (EPA). But the local entity making the contract

⁵¹In *Whiting-Turner/A. L. Johnson Jt. Venture v. General Services Admin.*, GSCA No. 15401, 02-1 BCA ¶1,708 the Board of Contract Appeals refused to enforce disclaimers providing that boring logs are for information only and not part of the contract documents, as doing so would render the Type I DSC clause meaningless. The Board also ruled that the government could not negate its DSC liability to a subcontractor by hiring a construction manager. See also *Condon-Johnson & Assocs., Inc. v. Sacramento Mun. Utility Dist.*, 149 Cal.App.4th 1384, 57 Cal.Rptr.3d 849 (2007), review denied July 25, 2007.

⁵²*Housatonic Valley Constr. Co, Inc.*, AGBCA No. 1999-181-1, 00-1 BCA ¶30,869 (wet soil in the Oregon forest not a Type II condition).

⁵³*Moorhead Constr. Co. v. City of Grand Forks*, 508 F.2d 1008 (8th Cir.1975); *Metropolitan Paving Co. v. City of Aurora, Colo.*, 449 F.2d 177 (10th Cir.1971) (notice waived).

⁵⁴*Brinderson Corp. v. Hampton Roads Sanitation Dist.*, 825 F.2d 41 (4th Cir.1987) (actual or constructive notice of condition by public owner and its opportunity to investigate waives requirement that contractor give formal notice); *Roger J. Au & Son, Inc. v. Northeast Ohio Regional Sewer Dist.*, 29 Ohio App.3d 284, 504 N.E.2d 1209 (1986) (waiver of written notice depends on whether owner already knew of the condition and was not prejudiced by contractor's failure to give it notice of the condition); *Parker Excavating, Inc.*, ASBCA No. 54637, 06-1 BCA ¶33,217.

may have had a practice of using disclaimers, and these disclaimers are sometimes still included in the contract documents. One court faced with this question concluded that the DSC provision took precedence.⁶⁰

Similarly, in 1989 DSC clauses were required to be incorporated into road-building contracts for federally subsidized highway programs under which roads are constructed by private contractors under contract with state highway agencies. However, under the applicable regulations the DSC provisions need not be included if the state law requires a different method of risk distribution.⁶¹ Also, statutes can mandate slight deviations from classic federal DSCs. For example, in 1989 California enacted a statute dealing with public works contracts of local entities that involve digging trenches or other excavations that extend deeper than four feet below the surface. Such contracts are required to include a truncated Type I DSC and a Type II DSC clause.⁶²

If the necessary substantive requirements are met under the DSC, the contractor or the owner receives an equitable adjustment. The legal systems that handle such claims, particularly in federal procurement, have had to struggle with a variety of measurement techniques—all of which tend to employ approximations rather than precise measurements. Using the contractor's claim as an illustration, the best proof is item-by-item proof of the difference (1) between the cost it would have incurred had it not encountered the differing site condition and (2) what it actually incurred. However, often it is impossible to establish those additional costs with anything resembling precision, and the contractor is likely to seek to employ a crude formula such as total cost, modified total cost, or jury verdict.⁶³ These are discussed in greater detail in Section 27.02F.

Sometimes contractors claim that encountering the subsurface conditions required them to perform the work out of sequence or delayed completion of the project. In such cases, contractors sometimes seek additional compensation in addition to time extensions. As shall be seen

in Section 26.10A, claims for additional compensation may be barred by a “no damage” (no pay for delay) clause. Although the law has had considerable difficulty when such clauses are attacked, the current trend seems to be toward increased scope for such exculpatory clauses.

Finally, the law has struggled with contractor claims that it is also entitled to additional overhead and profit.⁶⁴

Suggestions have been made for contract provisions that will deal in some way with the amount of the equitable adjustment. One commentator suggests the possibility of a contractual provision that requires the contractor to include a per-diem calculation of delay damages.⁶⁵ The contractor would include within the stipulated amount field overhead, home office overhead, idle labor and equipment, and any loss of efficiency or impact on later performance. These figures would be included in the bid. Determining the low bidder would also involve an assumed number of delay days appropriate to the project multiplied by the bidder's per-diem daily delay price, which would be added to the bid.

Another method is to include a provision under which the contractor agrees that certain items would not be included in any DSC claim and that any dispute resolution system would not include in its award payment for profit, labor and efficiencies, cost of vital equipment, or project and home office overhead.

It is likely that these attempts to structure remedies for a DSC could be used only in less regulated public contracts or in private contracts.

Does the right to receive an equitable adjustment preclude the contractor from terminating its obligation if the condition discovered would have granted it that power? In addition to taking this potentially disastrous risk away from the contractor, the clause is designed to keep the job going. It should substitute for any common law rights that the contractor might be accorded.

B. AIA Approach: Concealed Conditions

AIA Document A201-2007, Section 3.7.4, uses language similar to the federal DSC clause, with its Type I and II substantive bases for additional compensation. Whether the occasional owner who builds once in a lifetime is better off with such a provision is debatable. One commentator questions the use of a DSC when the owner is a small, “one time” player, private or public.⁶⁶ Its use *may* generate a lower bid price. If so, where it is not so necessary to protect the contract price it might be useful. Yet most small owners cannot manage the disputes process and deal with possible contractor claim manipulation. Also, unlike large “repeat players” in construction, such an owner may not have nor intend to create a long-term relationship with the contractor. Similarly, the contractor may have no long-term relationship with the owner to nurture. Thus, the commentator says, “the incentive to promote future relationships is nonexistent.”⁶⁷ Nor is the small owner concerned, as are “repeat players” such as federal agencies, with preserving a pool of contractors able to build. Finally, she notes that a small owner often lacks the knowledge to assess the risks, and the contractor often has superior knowledge of potentially adverse subsurface conditions. In such a case it may be more important to protect the contract price by not having a DSC and by placing this risk on the contractor through the fixed price. She suggests that at the very least the AIA should give such an owner a choice by alternative provisions. This choice would direct attention to and force negotiation on this important and frequently litigated provision.⁶⁸

Just as it is questionable where a small one-shot owner should use a DSC, it is questionable whether lenders will want a provision that can substantially expand the ultimate cost of the project.

In AIA Document A201-2007, Section 3.2.1, the contractor represents that it has visited the site and familiarized itself with local conditions under which the work is to be performed and “correlated personal observations with the requirements of the Contract Documents.” Conditions that could have been observed at a normal site visit cannot justify additional compensation.

In 1987, the AIA substantially expanded the administrative features of the then Paragraph 4.3.6 (now Section 3.7.4). The observing party must give a notice “promptly before conditions are disturbed and in no event later than 21 days after first observance of the conditions.” Although many notices required by AIA documents can be given to the architect, this notice must go to both the owner and the architect if the contractor is the observing party. The architect can be considered the owner’s agent for this purpose, and a notice to the architect may be sufficient.⁶⁹ The law has been hesitant to give literal effect to notice provisions.⁷⁰

A201-2007 is honeycombed with notice provisions. For example, if the contractor wishes to receive additional compensation, it must give a written notice under Section 15.1.4. If the contractor wishes additional time, it must give a written notice under Section 15.1.5.1. If it has suffered injury to property, the contractor must give a written notice under Section 10.2.8. As can be seen, each of the three previously mentioned sections requires a *written* notice. Yet Section 3.7.4 apparently requires only that notice be given. Certainly it is safer for a contractor discovering such conditions to give notices under Sections 3.7.4, 15.1.4, 15.1.5.1, and 10.2.8. However, if an oral notice were given, apparently sufficient under Section 3.7.4, failure to give the other notices might be waived if the owner knew from the notice given that claims for additional compensation, additional time, and even damage to property are likely to be made.

Returning to the substantive basis for a claim, the Type I claim under Section 3.7.4 requires that conditions be encountered that “differ materially from those indicated in the Contract Documents.” AIA Document A201-2007, Section 1.1.1, excludes bidding requirements from the contract documents. (A101-2007, Section 9.1.7, recognizes that some may wish to include them.)

Because specifications are contract documents, the contractor will not face any obstacles if the information is included in the specifications. But suppose the information is included in the instructions to bidders or is simply made available at the geotechnical engineer’s office. A literal interpretation of Sections 1.1.1 and 3.7.4 could bar the contractor’s claim.

⁶⁶Beh, *supra* note 64.

⁶⁷Id. at 153.

⁶⁸Id. at 153–54.

⁶⁹See Section 17.05B.

⁷⁰See Section 21.04H.

However, it can be contended that including a DSC, yet giving the contractor relevant information in something *other* than a contract document, would be at least a violation of the covenant of good faith and fair dealing, and possibly would be fraud. Put another way, assuring the contractor it will receive an equitable adjustment if it encounters something unexpected and then refusing to grant an equitable adjustment in a Type I claim—the most common basis for equitable adjustments—would violate the obligation of good faith and fair dealing discussed in Section 19.02D.

A201-2007, Section 3.7.4, creates a complicated system to determine the existence of a DSC and the extent of any equitable adjustment. Either party observing an apparent DSC must provide prompt notice to the architect. The architect investigates.

If the architect determines that there is a DSC, he recommends an equitable adjustment. If the owner and contractor cannot agree on the adjustment, this question is referred to the Initial Decision Maker (who could be the architect) under Article 15. If the architect determines that there is no DSC and that no adjustment is warranted, he notifies the owner and contractor in writing, giving his reasons. If either party objects, then the claims resolution procedure under Article 15 is again invoked.

Section 3.7.4 provides no review of the architect's decision that a DSC exists. This decision, favorable to the contractor, is apparently binding on the owner. In addition, A201 gives no guidance as to the amount of the equitable adjustment, but presumably the vast federal jurisprudence can be looked to, especially in light of the identical language used to define a DSC.

As noted in Section 25.06A, the delay that may be caused by the discovery and treatment of the DSC may be compensated by using a liquidated-damages clause. Some have suggested language limiting the remedy to which the contractor is entitled.

C. EJCDC Approach

The Engineers Joint Contracts Documents Committee (EJCDC) employs a more complex methodology in its 2007 “Standard General Conditions of the Construction Contract,” C-700. It divides coverage into subsurface (¶4.03) and underground facilities physical conditions (¶4.04). Paragraph 4.02(A) states that information will be given in the Supplementary Conditions. Under Paragraph

4.02(B), the contractor may rely on “the accuracy of the ‘technical data’” even though the data are not contract documents. But Paragraph 4.02(B)(1) states that the contractor cannot rely on the completeness of the information for purposes of execution or safety nor under Paragraph 4.02(B)(2) on “other data, interpretations, opinions and information.”

Paragraph 4.02(B)(3) precludes a contractor's claim against the owner or engineer with respect to the contractor's interpretation or conclusions drawn from the technical data. This is a sensible line of demarcation and fits the DSC system.

To claim an equitable adjustment, under Paragraph 4.03(A) a written notice must be given describing the technical data the contractor claims it intends to rely on and why the data are materially inaccurate or stating that the condition differs materially from that shown or indicated in the contract documents. The Type II language of Paragraph 4.03(A)(4) is similar to that in the federal procurement system and the AIA.

After a claim is made, under Paragraph 4.03(B) the engineer can review the condition and determine whether the owner should obtain “additional explorations and tests.” Under that paragraph, he advises the owner of his findings and conclusions. If he concludes a change is required, he issues a work change directive. But this does not guarantee price or time changes in the contract. Under Paragraph 4.03(C), an equitable adjustment is granted only to the extent that the condition causes an increase or decrease in the cost or time. The inability of the parties to agree on the amount of adjustment in price or time under Paragraph 4.03(C)(3) is a dispute that falls into the disputes clause, Paragraph 10.05, under which the engineer plays roughly the same role as does the architect under A201-1997.

Underground facilities are treated differently. Information is given by the owners as to these facilities. According to Paragraph 4.04(A)(1), neither the owner nor the engineer is responsible for its “accuracy or completeness.” The contractor must review and check such information. But if uncovering reveals an underground facility “not shown or indicated or indicated with reasonable accuracy,” Paragraph 4.04(B)(2) allows an equitable adjustment “to the extent that they are attributable to the existence or location of any Underground Facility that was not shown or indicated or not shown or indicated with reasonable accuracy . . . and the Contractor did not know

of and could not have reasonably expected to be aware of or to have anticipated.” Again claims are handled under Paragraph 10.05.

EJCDC documents are more detailed than those of the AIA, largely because of the type of engineering projects for which they are designed. But their classifications and detail would be useful in many building contracts.

D. The FIDIC Approach

Although this book emphasizes domestic construction contracts, not those made in an international context, occasionally it is useful to look at a particular problem from the vantage point of a standardized contract used in international transactions. The most commonly used standard contract is the one generally referred to as the FIDIC contract, published by the Federation Internationale des Ingenieurs-Conseil (International Federation of Consulting Engineers).

The FIDIC issued its Conditions of Contract for Construction for Building and Engineering Works Designed by the Employer in 1999, generally known as the Redbook. It demonstrates that there are many ways to deal with unforeseen subsurface conditions encountered during the work.

Section 25.04 sets forth different risk allocation plans to deal with unforeseen subsurface conditions. One is to furnish information to the contractor but disclaim responsibility for its accuracy. Another is to use differing site conditions (DSC) clauses. These are used in federal procurement⁷¹ and by AIA⁷² and EJCDC.⁷³ There are two types of DSCs that justify the contractor receiving an equitable adjustment. Type I requires a comparison of what was represented and what was encountered. Type II requires an inquiry into whether the contractor encountered unusual and unforeseeable subsurface conditions. The FIDIC blends these approaches. It uses a modified-disclaimer method and a Type II DSC.

Subclause 4.10 is a modified-disclaimer provision. It requires the employer (owner) to make available to the contractor all relevant data in its possession “on subsurface and hydrological conditions at the Site, including environmental aspects” 28 days prior to tender (bid) submissions as

well as any data that comes into the employer’s possession after that date. The contractor must interpret this data.⁷⁴

This places all of the risks on the contractor. It includes an assumption that it has inspected and examined the site. The availability of this data means that the contractor is satisfied as to “the form and nature of the Site, including subsurface conditions,” as well as hydrological and climatic conditions.

But Subclause 4.10 limits the disclaimer to the “extent which was practicable (taking into account the cost and time).” This exception to the disclaimer recalls the attacks on such disclaimers by contractors based on the time and cost of verifying the information made available to it and making its own tests.⁷⁵ Many said it was too expensive. The limitation in Subclause 4.10 takes into account the practicalities of prebid activities.

FIDIC contracts are likely to be used in large infrastructure and engineering projects. The contractors are likely to be well financed. But these are often megaprojects in strange, inhospitable, and unexplored places where it is difficult to gather reliable information.

Subclause 4.11 hammers away at the disclaimer, stating the contractor is satisfied with the contract price and that it has based its price on the site data available.

Subclause 4.12 enacts a Type II DSC. If “the contractor encounters adverse physical conditions which he considers to have been unforeseeable,” he must notify the engineer. Physical conditions include subsurface and hydrological conditions but exclude climatic conditions. The engineer inspects, investigates, and determines whether the conditions were unforeseeable and the adjustments to be made. If unforeseen conditions cause the contractor to suffer delay or increased cost, the contract price and time are adjusted.

There are two other interesting aspects to the FIDIC approach. First, under Subclause 4.12, if the engineer finds that there were more favorable conditions than could have been expected, this can offset any cost increase. The net effect of any adjustment may not reduce the contract price. Second, the contract defines cost to include overhead but not profit.⁷⁶

⁷¹See Section 25.06A.

⁷²See Section 25.06B.

⁷³See Section 25.06C.

⁷⁴FIDIC Conditions of Contract for Construction for Building and Engineering Works Designed by the Employer, Subclause 1.1.3.1 (1999).

⁷⁵See Section 25.05.

⁷⁶See supra note 74 at 1.1.4.3.

SECTION 25.07 Some Advice to Courts

Undoubtedly, arguments can be made for a disclaimer system or a system that uses a DSC clause. Courts should effectuate whichever choice has been made. If it appears clear the contractor has, happily or not, accepted the risk of unforeseen subsurface conditions, the court should support that risk allocation and not seek to destroy it by tortured interpretation generated by a belief that it is unconscionable for the owner to place these risks on the contractor. Only if the contractor clearly was not made aware of the risk or if imposing the risk violates the obligation of good faith and fair dealing should the court entertain disturbing the loss distribution selected and

expressed in the contract. An illustration would be the owner deliberately misleading the contractor or not giving the contractor sufficient time to examine the data, visit the site, or take its own tests. What is unclear is whether use of a disclaimer system knowing the contractor is aware of the data is a violation of the obligation of good faith and fair dealing.

Similarly, courts should not let a contractor maintain a tort action against a geotechnical engineer if the contractor clearly was expected to assume this risk. Allowing the contractor to transfer this risk to the geotechnical engineer through a tort action frustrates the efficiency of the system selected.

Time: A Different but Important Dimension

SECTION 26.01 An Overview

The law has not looked at time as part of the basic construction contract exchange—that is, money in exchange for the project. This may be because of the frequency of delayed construction projects. Timely completion depends on proper performance by the many participants as well as on optimal conditions for performance, such as weather and anticipated subsurface conditions.

Delayed performance is less likely to be a valid ground for termination. Delayed performance is also less likely to create legal justification for the owner's refusal to pay the promised compensation, with the owner left to the often inadequate damage remedy. Similarly, delayed payment by the owner is less likely to automatically give the contractor a right to stop the work or terminate its performance. Finally, a strong possibility exists that a performance bond that does not expressly speak of delay will not cover delay damages.

Computation of damages is also different. If the owner does not pay or the contractor does not build properly, measuring the value of the claim is, relatively speaking, simple. If the owner does not pay, at the very least contractors are entitled to interest. If the contractor does not build properly, the owner is entitled to cost of correction or diminished value of the project.¹

Delay creates serious measurement problems. The owner's basic measure of recovery for unexcused contractor delay is lost use of the project. The contractor's basic measure of recovery for owner-caused delay is added expense. Lost use is difficult to establish in noncommercial projects. Added expense is even more difficult to measure.

Because of measurement problems, each contracting party—whether it pictures itself the potential claimant or the party against whom a claim will be made—would like a contractual method to deal with delay claims, either to limit them or to agree in advance on amount. This does not mean time is not important in construction. The desire to speed up completion to minimize financing costs and accelerate revenue-producing activities was a large factor in leading to techniques intended to generate efficient methods of organizing construction (discussed in detail in Section 17.04). Time is another dimension, however.

SECTION 26.02 Commencement

The very nature of construction sometimes makes complicated what in other contracts is simple. In an ordinary contract, such as an employment contract, or in a long-term contract for the sale of goods, as a rule, the commencement dates are simple to establish. In construction, the date when the performance can begin in earnest (procurement can precede site access) is usually the date when site access is given. This cannot always be precisely forecast. The owner may need to obtain permits, easements, and financing before the contractor can be given site access. To avoid responsibility for site access delay and to measure the contractor's time obligation fairly, the commencement of the time commitment period, when measured in days, is often triggered by the contractor's being given access to the site, usually by a notice to proceed (NTP). When an NTP is used, the contractor assumes the risk of ordinary delays in site access but not those that go beyond the reasonable expectations of the contracting parties.

¹See Section 27.03D.

Commencement raises other problems. For example, must the contractor actually begin work at the site when an NTP is given? Is the actual commencement date of the NTP a date specified in the NTP, or the date when the NTP is received? The contract should deal with these issues but frequently does not. What are reasonable expectations of the parties? The custom in the industry? What is fair?

If the NTP does not expressly specify the commencement date, the date should begin when the NTP is received. Any date specified in the NTP should be effective only if it meets the standard of good faith and fair dealing. For example, the notice should not specify a date that the owner knows the contractor cannot meet or that fails to take into account realistic commencement requirements.

If an NTP system is employed, the owner will know when the contractor has commenced performance. However, if it is not employed, the contractor could conceivably commence performance before the commencement date. This could disadvantage the lender who wishes to perfect its security interest before work begins, in order to have priority over any mechanics' liens. Similarly, early commencement before insurance is in place can create a coverage gap.

With perfection of security interests in mind, in the absence of an NTP, the 1987 AIA Document A101, Paragraph 3.1, stated the contractor must notify the owner in writing not less than five days before beginning work to allow time for filing security interests. In A101-1997 the five-day period was deleted and a blank inserted for a date that correlates with any owner need to file security interests. Yet the AIA Document A201-1997, Paragraph 8.2.2 barred the contractor from premature commencement prior to the effective date of insurance and for some reason retained the five-day notice to file security interests.

This system was simplified in the 2007 documents. A101-2007, Section 3.1, remains unchanged from 1997. However, A201-2007, Section 8.2.2, simply states that the contractor should not begin work before the effective date of insurance, unless with the owner's written consent. The language from 1997 requiring the five-day notice has been deleted.²

Suppose there are delays between bid opening and bid award, and between award and execution of a formal contract. These issues were involved in two instructive cases.

²For a neater and sharper method of determining commencement of contract time, see EJCDC C-700, ¶2.03 (2007).

The case of *Quin Blair Enterprises, Inc. v. Julien Construction Co.*³ involved a competitively bid contract to build a motel. Julien's bid stated that it would complete 240 days from the date the contract was signed. Julien was awarded the contract and was asked to prepare the agreement. He used AIA Document A101 and filled in the blank with 240 days, without specifying as to when the period began. But A101 stated the contract was made on October 8, 1971.

AIA Document A201, Paragraph 8.1.2, in effect at that time, stated that the date of commencement, if there is no notice to proceed, begins on the date of the agreement "or such other date as established therein."

Blair signed on October 22 and Julien on October 25. Julien could not start until Blair cleared the site. That was not completed until November 18. When did the 240-day period commence? On October 8? On October 25? On November 18?⁴ The trial court chose October 8, but the Wyoming Supreme Court disagreed. Recognizing the ambiguities and seeking to harmonize all the writings, the court concluded the time began on October 25.

Because no date was specified in A101, the court referred to A201. Because there was no NTP, the commencement date should have been the date of the agreement. But was that date October 8, the date on the agreement, or October 25, when the agreement was signed by the contractor? Because A201 states the date of the agreement, one would think it was the date on the agreement, not the date when it was made. According to the court, each party agreed the bid was part of the contract. The bid stated that time would begin on signing the contract on October 25, and although parties can designate a retroactive date, nothing indicated that "either party ever intended . . . [a] retroactive date."⁵

In *Bloomfield Reorganized School District No. R-14, Stoddard County v. Stites*,⁶ the court did find a retroactive date. The contract was dated August 8, 1955, and provided that the contract was to be substantially completed in 395 calendar days. The architect mailed the contract to the contractor on August 17, 1955. The contractor signed the contract and returned it to the architect, who delivered it to the school superintendent for execution by the school board. School board officials signed the contract,

³597 P.2d 945 (Wyo.1979).

⁴Julien's failure to submit the required notice of an intention to ask for an extension barred a time extension.

⁵597 P.2d at 951.

⁶336 S.W.2d 95 (Mo.Ct.App.1960).

and the superintendent mailed it to the architect on September 14. The latter forwarded the signed copy to the contractor on September 22, six weeks after the contract date. Yet the court looked solely at the language of the contract, which stated that the agreement had been made on August 8, 1955.

SECTION 26.03 Acceleration

A. Specific: The Changes Clause

One way to accelerate the completion date is a specific directive by the owner that the contractor must complete in a time shorter than originally agreed. Power to accelerate is usually determined by the changes clause. See Section 21.04B.

B. Constructive Acceleration

Constructive acceleration originated in federal procurement law. Although the original jurisdictional basis for its development is no longer applicable,⁷ it can be applied to all construction contracts.

Constructive acceleration is based on the owner's unjustified refusal to grant a time extension. To establish constructive acceleration, a contractor must prove five elements:

1. the contractor experienced an excusable delay and is entitled to an extension;
2. the contractor properly requests a time extension;
3. the owner denies the time extension;
4. the owner demands completion by the original completion date; and
5. the contractor incurs reasonable increased costs caused by its actual acceleration.⁸

⁷Like constructive changes, constructive acceleration was a claim based on the contract and not its breach. This gave jurisdiction to the agency appeals board. Since 1978, a claimant can choose to bring a claim before either an appeals board or the U.S. Court of Federal Claims. See Sections 21.03A and B.

⁸*Fraser Constr. Co. v. United States*, 384 F.3d 1354, 1361 (Fed. Cir.2004) (claim denied); *Ace Constructors, Inc. v. United States*, 70 Fed.Cl. 253, 280–81 (2006), *aff'd*, 499 F.3d 1357 (Fed.Cir.2007) (claim granted); *Clark Constr. Group, Inc.*, JCL BCA No. 2003-1, 05-1 BCA ¶32,843 at pp. 162,559–562 (government's cure notice issued to the contractor constituted an order to accelerate, where the contractor was at the same time stymied by a design defect).

The current justification for constructive acceleration is that denying a deserved time extension can force additional expenses when work is not performed in the order planned. Suppose, though, that the contractor continues to perform as it would have performed had an extension been granted. This will very likely lead to untimely completion. If the time extension should have been granted and it is granted later (by agreement, by an arbitrator, or by a court), any attempt by the owner to recover actual or liquidated damages would not succeed. The constructive acceleration doctrine allows the contractor to speed up its performance and recover any additional expenses it can establish, or to use the wrongful denial of the time extension as a defense against any claim that the owner might bring against the contractor for late completion.

C. Voluntary: Early Completion

Delays are so common in construction that attention is rarely paid to the legal effect of the contractor's completing early or claiming it would have completed early had it not been delayed by the owner.

Some owners may find early completion desirable. This can be evidenced by a penalty/bonus clause, as discussed in Section 26.09. Yet early completion may, if unexpected, also frustrate owner plans. For example, suppose a contractor building a factory finishes substantially earlier than planned. The owner may have to take possession before it can install its machinery. Early completion can require payments in advance of resource capabilities. It can be as disruptive as late completion.

AIA Document A101-2007, Section 3.3, requires the contractor to substantially complete the project "not later than" a specified date. This appears to give the contractor the freedom to complete early even if it disrupts owner plans.

Construction contracts of any magnitude usually have schedules. It is unlikely the owner will be greatly surprised by early completion. Yet even awareness during construction that performance will be completed earlier than required may not enable the owner to make the adjustments needed to avoid economic losses.

The obligations of good faith and fair dealing, discussed in Section 19.02D, require that a contractor notify an owner if it intends to finish much earlier than expected or when it appears this is likely. If this notification is made or the owner is aware of that prospect, the contractor should

receive additional compensation if the owner interferes with any realistic schedule under which the contractor would have completed earlier than required by the contract.⁹ To establish an early completion claim, a contractor must prove three elements:

1. from the outset of the contract, the contractor intended to complete early;
2. the contractor had the capacity to complete early; and
3. the contractor would have completed early but for the delay caused by the owner.¹⁰

SECTION 26.04 Completion

Construction contracts generally provide a way to measure compliance with the contractor's time commitment. For example, as discussed in Section 22.04, the AIA has selected substantial completion as the benchmark for determining compliance with the time commitment. Some construction contracts use actual or final completion.

Completion is an important benchmark in the history of a construction project, similar to agreement as to changed work or final payment. The effect of completion, often linked to final payment and acceptance, was discussed in Section 24.05.

SECTION 26.05 Schedules: Simple and Critical Path Method (CPM)

A project schedule is a formal summary of the planned activities, their sequence, and the time required and the conditions necessary for their performance. A schedule alerts the major participants of the tasks they must accomplish to keep the project on schedule. It can reduce project cost by increasing productivity and efficiency, facilitates monitoring of the project, and can support or disprove delay claims.

The schedule for a very simple project, such as the construction of a garage, may simply be starting and completion dates. A somewhat more complex project, such as

a residence, may add designated stages of completion, mainly as benchmarks for progress payments. When construction moves upscale, for example, from a simple commercial structure to a nuclear energy plant, the schedule will take on more complex characteristics. Until the past twenty-five years, schedules in anything but the simplest project would be a bar chart, sometimes referred to as a Gantt chart, after its inventor. One such bar chart¹¹ is shown in Figure 26.1. Bar charts continue to be used where feasible because they are easy and inexpensive to prepare and simple to understand.

Bar charts have deficiencies. They provide no logical relationship between work packages. There are limits to the number of work packages that can be represented in a bar chart—perhaps thirty to fifty—until the level of detail becomes unwieldy. Rates of progress within a package may not be uniform. The different activities are represented equally. In case of a delay, management cannot determine which activities have priority over others and the courts cannot assess the significance of the delay.

On complex projects, a critical path method (CPM) schedule is used.¹² A CPM schedule lacks the intuitive simplicity of a bar chart but is capable of showing many more activities and, even more importantly, the logical relationship between the different activities: how a delay on one activity affects other activities.

A variety of legal issues have surfaced with respect to delay scheduling. Section 26.05A compares the AIA's handling of scheduling with other methods. Section 26.05B discusses CPM scheduling. Section 26.05C concludes with some description of the legal issues involved.

A. Approaches to Scheduling

The approach taken by the AIA is reflected in AIA Document A201-2007, Section 3.10.1. It requires the contractor to submit its construction schedule for the information of the owner and the architect. The schedule must provide "for expeditious and practicable execution of the Work." Although the contractor's failure to conform to the most recent schedule constituted a breach under Paragraph 3.10.3, issued in 1987, both A201-1997 and A201-2007 relaxed this commitment by inserting

⁹BECO Corp., ASBCA No. 27090, 82-2 BCA ¶16,124.

¹⁰*Interstate General Government Contractors, Inc. v. West*, 12 F.3d 1053, 1059 (Fed.Cir.1993) (claim denied); *Fru-Con Constr. Corp.*, ASBCA No. 53544, 05-1 BCA ¶32,936 at pp. 163,160-64 (claim denied).

¹¹B. BRAMBLE & M. CALLAHAN, *CONSTRUCTION DELAY CLAIMS* 11-5 (3d ed. 2000).

¹²Critical path method (CPM) is also discussed in Section 26.05B.

FIGURE 26.1 Bar chart schedule.

“in general accordance” with the “most recent schedules submitted to the Owner and Architect.” This issue will be discussed in Section 26.05C.

Neither details nor schedule type are required. All is left to the contractor. Of course, a contractor is also interested in completing the project as promised. It should develop and meet a schedule that will accomplish that objective. But should responsibility be put solely in the hands of the contractor? Failure to meet the completion date, though giving a claim against the contractor, is not getting an on-time project. Of course, as seen in Section 22.02, payments are keyed to work progress and can be an incentive to move the work along. Failure to supply enough skilled workers may be grounds for termination,¹³ though rarely will this be sought. Taken as a whole, A201 seems to ignore delay claims and contains few levers to obtain timely completion.

Contracts prepared by experienced public or private owners, particularly private owners under the influence of their lenders, usually prescribe much greater detail and take greater control over the contractor’s schedule. This can manifest itself in language requiring that the schedule be on a form approved by the owner or the owner’s lender; that each monthly schedule specify whether the project is on schedule (and if not, the reasons therefore); that monthly schedule reports include a complete list of suppliers and fabricators, the items that they will furnish, the time required for fabrication, and scheduled delivery dates for all suppliers; and that the contractor hold weekly progress meetings and report in detail as to schedule compliance.

Similarly, the Engineers Joint Contract Documents Committee (EJCDC) takes progress much more seriously than does the AIA. For example, the EJCDC’s C-700 (2007), Paragraph 2.05(A), requires the contractor to submit within ten days after the effective date of the contract a *preliminary* progress schedule, a *preliminary* schedule of values, and a *preliminary* schedule of submittals.

¹³AIA Doc. A201-2007, § 14.2.1.1.

Paragraph 2.06 requires a preconstruction conference before any work is started. At that conference, among other topics, the preliminary schedule required by Paragraph 2.05A is discussed.

Paragraph 2.07 requires another conference to review “for acceptability to Engineer” the preliminary schedules. The contractor has ten days to make corrections and adjustments and “to complete and resubmit the schedules.” No progress payments are made “until acceptable schedules are submitted to Engineer.”

B. The Critical Path Method (CPM)

This system has generated burgeoning literature.¹⁴ The description here must be simple, its goal mainly to point out the essential characteristics of the process and note the effect of float or slack time. The CPM process also relates to measuring claims (discussed in Section 27.02F and 27.03E).

To show how a CPM schedule operates, a very simple construction project will be used as illustration, without all the complexities of arrow diagrams, precedence diagrams, and nodes.

First, the contractor divides the total project into different activities or work packages. A major project may have thousands of activities, with each subcontractor generally performing a different activity.

Next, the contractor determines the activities that must be completed before other activities can be started. These constraints are the key to the CPM schedule. For example, usually excavation must be completed before foundation work can be begun. Conversely, plumbing and electrical work can usually be performed at the same time, as neither depends on the other. Subcontractors performing this work can work side by side.

Finally, the contractor estimates how long it will take subcontractors to complete their activities. This estimate

is made after the contractor consults with its subcontractors and analyzes the design drawings. These data influence the number of days allocated to each activity.

In the sample project, the following are activities and their respective durations and constraints:

Activity	Duration (days)	Constraint
1. Excavation	7	None
2. Formwork	5	Excavation
3. Plumbing	4	Excavation
4. Electrical	2	Excavation
5. Concrete pour	5	Formwork and plumbing
6. Roof	4	All

Constraints dictate the form of the CPM schedule. Because excavation has no constraints, it can be performed first. Once it is completed, the formwork, plumbing, and electrical activities can be performed. The concrete pour activity cannot be performed until the formwork and plumbing are completed. The roof cannot be installed until the concrete pour and electrical have been completed. Figure 26.2 illustrates the CPM schedule for this project. The total project under this schedule should be completed in twenty-one days.

The critical path, the longest path on this simple schedule, consists of activities that will delay the total project if they are held up. In the preceding example, excavation, formwork, concrete pour, and roof work are on the critical path. A delay to any of these activities will hold up the entire project.

In contrast, plumbing and electrical activities are not on the critical path. Their delay, up to a point, will not hold up the total project. If electrical work is delayed seven days, the total project will not be held up. The number of days each noncritical path activity can be delayed before the total project is affected is called *float* or *slack time*. In the illustration, plumbing and electrical work have one day and eight days of float, respectively.

If a noncritical path activity is delayed beyond its float period, it becomes part of the critical path. Moreover, some activities that were previously on the critical path will no longer be there. Suppose there is a three-day delay to plumbing. Originally, plumbing had one day of float. Now the CPM must be adjusted as shown in Figure 26.3.

¹⁴B. BRAMBLE & M. CALLAHAN, *supra* note 11, at 11-6 to 11-13; Wickwire & Smith, *The Use of Critical Path Method Techniques in Contract Claims*, 7 Pub.Cont.L.J. 1 (1974). The latter seminal paper was updated in Wickwire, Hurlbut & Lerman, *Critical Path Method Techniques in Contract Claims: Issues and Developments, 1974-1988*, 18 Pub.Cont.L.J. 338 (1989). Wickwire's latest discussion on this topic includes a critical analysis of modern scheduling software. Wickwire & Ockman, *Use of Critical Path Method on Contract Claims—2000*, 19 Constr. Lawyer, No. 4, Oct. 1999, p. 12. For a more skeptical look at CPM, see Laufer & Tucker, *Is Construction Project Planning Really Doing Its Job? A Critical Examination of Focus, Role and Process*, 5 Constr.Mgmt. & Econ. 243 (1987).

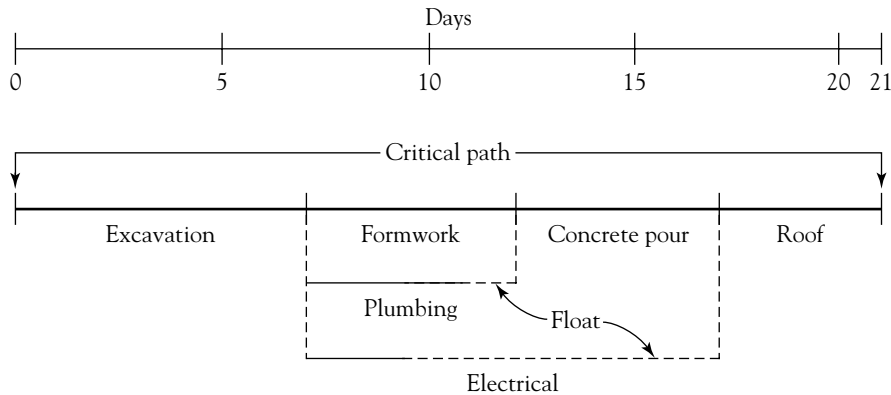

FIGURE 26.2 CPM chart schedule.

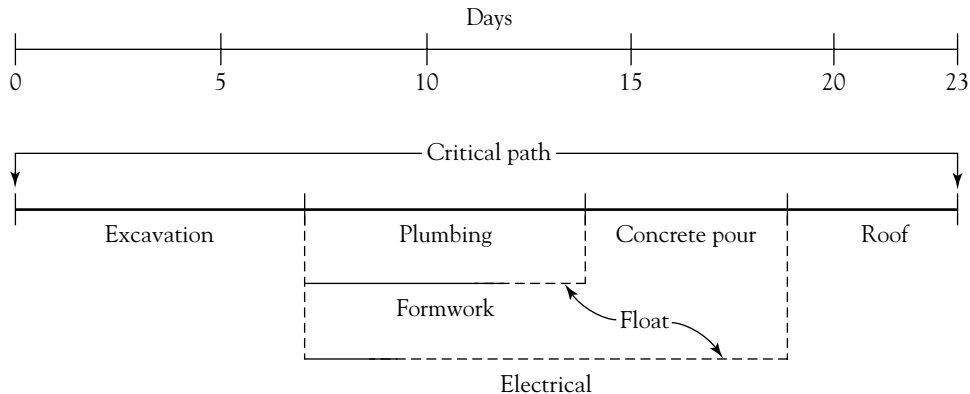

FIGURE 26.3 CPM chart schedule as adjusted.

The total project has now been delayed two days. Plumbing has become part of the critical path, and formwork has moved off the path.

This method can be illustrated by *Morris Mechanical Enterprises, Inc. v. United States*.¹⁵ The contractor was to deliver and install a chiller within 120 days. The contractor delivered the chiller 231 days late. As a result, the government withheld \$23,100 as liquidated damages from the final payment.

In ruling for the contractor, the court pointed to the CPM. The schedule showed that delivery and installa-

tion of the chiller were originally on the critical path. However, they were later taken off because of delays to other activities for which the contractor was not responsible. The chiller was to be installed in an equipment room. Another contractor who was responsible for completing the equipment room had difficulty procuring materials. When the chiller was actually delivered, the room had not yet been completed. Even though the chiller was delivered 231 days late, the contractor's breach did not delay the total project, inasmuch as its performance was no longer on the critical path. The court relieved the contractor by concluding it should have been given a time extension, precluding the agency from deducting from the unpaid contract balance.

¹⁵ 1 Cl.Ct. 50, 554 F.Supp. 433 (1982), *aff'd*, 728 F.2d 497 (Fed.Cir.), *cert. denied*, 469 U.S. 1033 (1984)

Requiring the contractor to construct and maintain a CPM schedule has at least three advantages.¹⁶ First, it should require the contractor to work more efficiently. Second, it gives the owner notice of the actual progress of the work. Third, from a litigation standpoint requiring the contractor to maintain a CPM schedule helps prove or disprove the impact of an owner-caused delay. (Schedules are more persuasive evidence if they are actually used during the construction of the project. By contrast, a schedule compiled after completion and with an eye toward litigation will be given little probative value by the courts.)

A CPM schedule has disadvantages. First, it will increase the total contract price. Such schedules are expensive to create and maintain. Second, the contractor may believe such a requirement an unnecessary intrusion into its work. In such a case, the contractor's creation and maintenance of the schedule during construction may be haphazard.

Authoritative commentators state that the following questions must be asked in evaluating a delay claim in which CPM is going to be employed:

1. How was the project actually constructed?
2. What are the differences between the project as planned and as constructed with respect to activities, sequences, durations, manpower, and other resources?
3. What are the causes of the differences or variations between the project as planned and the actual performance?
4. What are the effects of the variances in activities, sequence, duration, manpower, and other resources as they relate to the costs experienced, both by the contractor and by the owner?¹⁷

As discussed earlier, float is the number of days a noncritical path activity can be delayed before it becomes part of the critical path. Both owner and contractor prefer that the project have float periods. The float periods reflect that every project has some flexibility. A noncritical path activity can be started a few days after it theoretically can

begin without delaying the project. By contrast, a critical path activity must start immediately once the preceding critical path activity has been completed. Furthermore, a noncritical path activity does not have to be completed, as shown in the *Morris* decision, by the date it was scheduled for completion. Again, by contrast, the total project will be delayed only if a critical path activity is delayed. The only constraint on a noncritical path activity is that it cannot be delayed longer than its float period.

A number of cases have explored the problem of "who owns the float."¹⁸ Suppose activity A has a float period of thirty days and is the only activity delayed on the project. If either the owner or the contractor causes activity A to be delayed for fewer than thirty days, neither is responsible for delay damages. The delay did not result in delaying the total project. The project can still be completed by the contract completion date. Conversely, if one of the parties causes activity A to be delayed beyond thirty days, that party is liable for delay damages because activity A has become part of the critical path and the project has been delayed.

Suppose owner and contractor each cause a twenty-day delay to activity A. The total project time will be delayed ten days because this activity originally had a thirty-day float. But who is liable for the ten-day delay? The project would not have been delayed at all if either owner or contractor had not delayed the activity.

If the contractor owned the float, the owner could not charge the contractor for project delay and would be liable for any contractor delay expenses. The contractor's argument that it owns the float can stress that it is responsible for scheduling the activities of the project. In a sense, it created the float because it created the CPM schedule.

But what if the owner requires a CPM schedule or demands ownership of the float? The contractor could change the float period by changing the critical path. Also, owner and contractor rarely bargain for ownership of the float. Usually the contract provides that the contractor must complete by a certain date and the owner must pay a designated sum of money for the completed project. Implicit is that the owner will not interfere with

¹⁶It is misleading to speak of a CPM schedule. In any project where CPMs are used to prove delay claims, it is likely that the claimant will have to show a reasonable "as planned" CPM, an "as-built" CPM reflecting all delays—government, contractor, and excusable—and an adjusted CPM to establish completion of the project absent government delays. See Wickwire, Hurlbut & Lerman, *supra* note 14.

¹⁷Wickwire, Hurlbut & Lerman, *supra* note 14, at 341, analyze these issues in detail in their paper.

¹⁸Compare *Brooks Towers Corp. v. Hunkin-Conkey Constr. Co.*, 454 F.2d 1203 (10th Cir.1972) with *Natkin & Co. v. George A. Fuller Co.*, 347 F.Supp. 17 (W.D.Mo.1972). See generally, Wickwire, Hurlbut, & Lerman, *supra* note 14; Finkle, *The Burden of Proof in Government Contract Delay Claims*, 22 Pub.Cont.L.J. 125 (1992); Lifschitz & Scott, *Who Owns the Float?* Constr. Briefings (Feb. 2005).

the contractor's performance. If there were interference, the contractor would not be able to complete the project by the completion date (this seems to be the AIA hand-off approach). If the owner takes part of the float period, it interferes with the contractor's performance. If interference causes the contractor to incur delay damages, the owner should be liable for the time-related added costs. These are contractor arguments to claim the float.

Some owners take float ownership by contract.¹⁹ Where this is done, the contractor does not receive a time extension even if delayed by the owner. In a noncritical path activity, if the delay can be absorbed, completion is not delayed.²⁰

A responsible contractor will inflate its bid price to cover its potential liability for a delayed project. Also, it must absorb its delay costs. At the bidding stage, the contractor cannot estimate the number of days of float the owner will use. Depending on the complexity of the project, the total increase in the bid can be substantial. In addition, initial enforcement of float ownership clauses may be uncertain, principally because of the owner's superior bargaining position.

The *project* can also own the float, using one of two methods. First, the party actually causing the delay to the project is liable. Suppose, in the preceding example, the owner caused the first twenty-day delay. Then the contractor caused another twenty-day delay. The contractor is liable for the ten-day delay of the total project. The owner's delay had used up twenty days of the total thirty-day float, leaving ten days of float remaining. The contractor's delay used up the balance of that period but then caused the activity to be delayed beyond its float period.

This method works fairest if both parties innocently or negligently caused delays to the same activity. However, if

the owner's delay had been caused intentionally or willfully, the owner rather than the contractor should be liable.

The second method is borrowed from tort law. Liability for the delayed project depends on the comparative fault of the parties. In the preceding example, because both parties had caused an equal delay to activity A, each is liable for one-half of the other's time-related losses. This method can become complicated if liquidated damages are used (see Section 26.09B).

Each of these solutions has advantages and disadvantages. Giving either the contractor or the owner the float provides some certainty. If it exclusively owns the float, a party is exonerated for delays that use up the float of a noncritical path activity.

In complex projects, it may be best to agree that neither owns the float.²¹ In such projects, it is equally likely that both parties will delay the project. The owner will anticipate that it is likely to delay the project but plan on using some of the float. Nevertheless, the contract price may increase if the project owns the float. A responsible contractor will increase its bid when some of its previously recognized rights are taken away but not as much as if the owner exclusively owned the float.

Where the project is simple, it may be best that the contractor own the float. This should develop the lowest contract price. Fewer delays by owner and contractor are likely to occur. If the owner does cause a delay and uses part of the float, the contractor's delay damages may be less than the addition to the contract price that would result if the owner took the entire float for itself.

Generally, the CPM system is practical for only major construction projects. Contractors that bid for these projects already appreciate the usefulness of the schedule. The amount of money spent to construct and maintain the schedule is nominal, compared to the total cost of the project. Liability exposure in such projects can be vast.

C. Other Legal Issues

Sometimes contractors, mainly subcontractors, contend they are entitled to have their work scheduled properly.

¹⁹For example, "The inclusion of float time in the activity listing of the Contractor's Construction Schedule shall be owned entirely by the Owner. The Contractor shall not be entitled to any adjustment in the Contract Time, the Contractor's Construction Schedule, or the Contract Sum, or to any additional payment of any sort by reason of the loss or use of any float time. . . ." This language is found in an unpublished decision, *Construction Enterprises & Constructors, Inc. v. Orting School Dist. No. 344*, 121 Wash.App. 1012, 2004 WL 837912, review denied, 152 Wash. 2d 1034, 103 P.3d 201 (2004). Float is discussed in detail by Wickwire, Hurlbut & Lerman, *supra* note 14, at 361-62; Lifschitz & Scott, *supra* note 18, at 7-8.

²⁰*E. C. Ernst, Inc. v. Manhattan Constr. Co. of Tex.*, 387 F.Supp. 1001 (S.D.Ala.1974), *aff'd* 551 F.2d 1026, rehearing denied in part, granted in part, 559 F.2d 268 (5th Cir.1977), cert. denied sub. nom. *Providence Hosp. v. Manhattan Constr. Co. of Tex.*, 434 U.S. 1067 (1978).

²¹See Wickwire, Hurlbut, & Lerman, *supra* note 14, at 361-62. The authors state that in significant public procurements, contract clauses are included that provide that the float is not for the exclusive benefit of either party to the project. Such clauses permit the individual that gets to the float first to gain the benefit of the float.

One court would not imply an obligation by the prime contractor that it would supply a schedule for subcontractor work because this was not customarily done and the subcontractor did not ask for it in negotiations.²² The court also observed that the subcontractor had not made a showing that scheduling was important in that particular project. However, the increasing use of obligations of good faith and fair dealing may be the basis for implying that there would be a schedule, particularly if this were customarily done.²³

An often-ignored issue is whether failure to comply with a progress schedule is a breach of contract. AIA Document A201-2007, Section 3.10.3, as stated earlier, requires the contractor to perform the work in general accordance with the most recent schedules. EJCDC C-700, Paragraph 6.04 (2007), also requires the contractor to “adhere to the Progress Schedule . . . as it may be adjusted from time to time.” To underline the greater concern with schedules in documents published by the EJCDC, its C-700, Paragraph 4.02(A)(1), states that the owner can terminate if the contractor does not adhere to the current schedule.

Although schedules are important and the contractor’s performance can be terminated for consistent failure to meet the progress schedule, schedule dates must be more flexible than completion dates. The contractor must be given some latitude both in creating and in maintaining the schedule. Yet changing the schedule, not complying with it, and even abandoning it can be serious enough to be a breach, perhaps even a material one.

SECTION 26.06 Causation: Concurrent Causes

A variety of participants and events can cause delays. Delay can be caused by acts of the owner or someone for whose acts the owner is responsible, such as the design professional. Sometimes delays are caused by the contractor or someone for whose acts the contractor is responsible, such as a subcontractor. Sometimes delays are caused by events not chargeable to either owner or contractor, such as nonnegligent fires, unpreventable labor difficulties, or unforeseeably extreme weather. Delays can be

caused by third parties, such as a union shutting down the project over a labor dispute.

The multiple causes for delay create a number of legal problems. For example, delays caused by events not chargeable to either party will not justify additional compensation unless there is a warranty by one party that those events will not occur. If a delay is caused by both owner and contractor, it may be extremely difficult to determine which portion of the delay is caused by either party. This can mean that neither party will be able to recover losses it suffers because of the delay,²⁴ or that any clause liquidating damages will not be upheld, or that the contractor will be limited to a time extension.²⁵

Where a clear apportionment can be made between owner-caused delay and contractor-caused delay, as where those delays are sequential rather than concurrent, the delay damages caused by each party may be divided accordingly. The apportionment also can be used to determine the amount of any time extension as noted in Section 26.08.²⁶

One case illustrates an attempt to use a “total time” theory much like the total cost method of measuring a contractor’s post-completion claim discussed in Section 27.02F.²⁷ The expert witness for the contractor in a concurrent delay case compared the original and extended completion dates, pointed to a number of individual delay incidents for which the government was responsible that contributed to the overall extended time, and sought to conclude that the entire overrun period was attributable to the government. The court concluded that

²⁴ *Singleton Contracting Corp. v. Harvey*, 395 F.3d 1353 (Fed.Cir.2005) (government’s failure to correct the design and contractor’s failure to provide a certificate of insurance were concurrent delays); *Westinghouse Elec. Corp. v. Garrett Corp.*, 601 F.2d 155 (4th Cir. 1979) (discretion in trial judge to deny both damages); *Hartford Elec. Applicators of Thermalux, Inc. v. Alden*, 169 Conn. 177, 363 A.2d 135 (1975) (breach by both converts completion date to a reasonable time).

²⁵ *Hartford Elec. Applicators of Thermalux, Inc. v. Alden*, supra note 24. But see Section 26.09B.

²⁶ *Robinson v. United States*, 261 U.S. 486, 488–89 (1923); *Essex Electro Engineers, Inc. v. Danzig*, 224 F.3d 1283 (Fed.Cir.2000) (delays by government and contractor in submissions-approval process is subject to apportionment); *R.P. Wallace, Inc. v. United States*, 63 Fed.Cl. 402 (2004) (sequential delays by government and contractor are apportioned to reduce liquidated damages). For a general discussion, see Kutil & Ness, *Concurrent Delay: The Challenge to Unravel Competing Causes of Delay*, 17 Constr. Lawyer, No. 4, Oct. 1997, p. 18. For the view in England and other common law jurisdictions, see Marrin, *Concurrent Delay*, 18 Constr.L.J. 436 (2002).

²⁷ *Morganti Nat’l, Inc. v. United States*, 49 Fed.Cl. 110 (2001).

²² *Drew Brown Ltd. v. Joseph Rugo, Inc.*, 436 F.2d 632 (1st Cir.1971).

²³ See Section 19.02D.

this “total time” theory was virtually of no value. It did not prove that the government-caused delay actually delayed the overall completion of the project.²⁸

SECTION 26.07 Allocation of Delay Risks

A. Compensable Vs. Noncompensable

At the outset, it is important to divide risk allocation relating to delay into two categories. First, the party whose performance has been delayed may seek relief from its obligation to perform by a particular time. For example, a contractor who has agreed to complete the project by a given date may justify its failure to do so by pointing to the causes that it claims excuse its obligation to complete by the time specified. Second, this contractor may claim additional compensation based on an increase in its anticipated spending because events occurred that delayed its performance. As a general rule, the law has been more willing to excuse performance than to grant additional compensation. Because of this differentiation, speaking simply of risk allocation of events that impede performance can be misleading. This is demonstrated in this section.

B. Common Law

A party who has agreed to perform by a specific time generally assumes the risks of most events that may delay its performance. In the absence of any common law defenses, such as impossibility or mutual mistake, a contractor will not be relieved of its obligation to perform as promised, let alone receive any additional compensation. Relief, if any, must come from the contract.

The contractor normally does not assume the risk that it will be unreasonably delayed by the owner or someone for whom the owner is responsible. However, under certain special circumstances, a contractor may have assumed even this impediment to its performance. For example, suppose an owner constructs an addition to a functioning plant. The contract provides that the owner can order the contractor off the site if the owner’s manufacturing operation requires. The contractor has assumed the risk of these delays, though not delays that are beyond those normally contemplated, such as constant or excessive delays or those caused by the owner’s bad faith.

C. Fault

The law can take into account the blameworthiness of the party causing the delay. For example, in *Broome Construction, Inc. v. United States*,²⁹ the Court of Claims held the government not liable for delay in making a work site available where it sought to do so in good faith. The contractor assumed the risk of this delay but would not have assumed the risk of negligently caused delay. The contractor’s request for additional compensation requires a clause expressly warranting that the government was making itself strictly liable for its failure to furnish the site.

Fault can also play a role when a party who has been delayed seeks to be relieved from its responsibility. For example, in *J. D. Hedin Construction Co. v. United States*,³⁰ the Court of Claims held that a contractor was entitled to a time extension because of a cement shortage. The court criticized findings by the Agency Appeals Board that the delays were foreseeable and were the fault of the contractor. The court stated that the contractor could not be expected to show prophetic insight but need only resort “to the usual and long-established methods employed by the commercial world in general.”³¹

D. Force Majeure Clauses

Many events can occur that cause delay in construction. The common law placing almost all these risks on the contractor has led to the frequent use of *force majeure* clauses, which single out specific events and general causes as justifying relief to the contractor.³²

The list of specified events justifying a time extension can invoke the canon of interpretation, or better, interpretation guide, of *expressio unius est exclusio alterius* noted in Section 20.02E. Stripped of its Latin phraseology, it means that if one event is specified, those not specified are excluded.

Legal systems can differ in their handling of a catalog of events. Some look upon them as illustrations, and like events can be encompassed within such a clause as justifying relief. Others, such as the common law, look upon the list as exclusive. The common law assumes that if the parties made the effort of specifying some events, they

²⁹203 Ct.Cl. 521, 492 F.2d 829 (1974).

³⁰187 Ct.Cl. 45, 408 F.2d 424 (1969)

³¹408 F.2d at 429.

³²Wright, *Force Majeure Delays*, 26 Constr. Lawyer, No. 4, Fall 2006, p. 33.

²⁸Id. at 134.

must have intended to exclude those not specified.³³ For example, suppose there is an abrupt, sharp rise in the cost of certain material, an event not included in the catalog of events. The *expressio* guide would exclude this event. But such an event might be included were a general “catch-all” phrase included in the clause.

Often, a *force majeure* clause will include a “catch-all” phrase, such as “any other event beyond the control of the contractor.” Such a phrase would grant relief if events, though unspecified, occur, have the designated effect on the contractor’s performance, and are beyond the control of the contractor. Use of such a “catch-all” invokes another interpretation guide: *eiusdem generis*.³⁴

Events claimed to fall within the general or “catch-all” phrase must be *similar* to those events specified. For example, the clause may not encompass an extreme rise in labor costs caused by the outbreak of war, no specific events relating to war being included. But it may encompass delay in transportation of workers to the site because of a strike of public transportation workers when strikes of site workers are specified.

E. Weather

In 1987, the AIA moved weather from its *force majeure* clause (A201, Paragraph 8.3.1) to Paragraph 4.3.8.2, dealing with claims. The latter—currently A201–2007, Section 15.1.5.2—requires the contractor to document “by data substantiating that weather conditions were abnormal for the period of time, could not be reasonably anticipated, and had an adverse effect on the scheduled construction,” before it can receive a time extension for weather conditions.

These requirements can make it difficult for a contractor who does not keep detailed weather records to claim a time extension for adverse weather conditions. They reflect a belief by the AIA that weather generally is a risk assumed by the contractor and that only in extraordinary circumstances should weather be the basis for a time extension.³⁵

³³*Holder Constr. Group v. Georgia Tech Facilities, Inc.*, 282 Ga.App. 796, 640 S.E.2d 296 (2006), reconsideration denied Dec. 8, 2006 (*force majeure* clause—applicable to delayed delivery of materials caused by government order, riot or other civil disorder, and extreme weather conditions—did not apply to a spike in the price of steel). See also Section 20.02E.

³⁴Section 20.02E.

³⁵See Annot., 85 A.L.R.3d 1085 (1978).

Because a contractor will frequently contend that severe weather should be the basis for a time extension, it is useful to look at *Fortec Constructors v. United States*.³⁶ The contractor contended that it should have been given a fifty-seven-day time extension because of unusually severe weather. The contract had provided that the contractor would be relieved if it were delayed for causes “other than normal weather,” including but not restricted to severe weather. The court then stated,

Unusually severe weather is “adverse weather which at the time of year in which it occurred is unusual for the place in which it occurred.” [Citing case.] Proof of unusually severe weather is generally accomplished by comparing previous years’ weather with the weather experienced by the contractor. [Citing cases.] In the present case, contract provision 1A-06(b), a meteorological chart of past weather averages, established the usual weather conditions to be expected during contract performance. Notwithstanding the occurrences of unusually severe weather, however, a plaintiff is only entitled to an extension of contract time if such unusually severe weather has an adverse impact on the construction being performed. [Citing cases.] On a daily basis, the contractor completed a Daily Inspection Report (DIR) and the Government completed a Quality Assurance Report (QAR). These reports record daily rainfall, temperature extremes, and a rating of how the weather affected work that day. While certain testimony indicated that the parties did not always complete the reports on a daily basis, the Court believes that the DIRs and QARs represent the most reliable documents presented regarding both the actual weather at the job site and its effect on job performance. Accordingly, the Court has utilized these documents in assessing the merits of the plaintiff’s weather claims.³⁷

The court compared the DIRs and the QARs for each month against the contract’s chart of bad weather conditions to see whether the contractor had experienced more days of severe weather than expected. The court concluded that for some months, the contractor had experienced less severe weather than expected and awarded it a one-day time extension.

³⁶8 Cl.Ct. 490 (1985), *aff’d*, 804 F.2d 141 (Fed.Cir.1986). This case was also considered a seminal one for determining the effect of a CPM schedule.

³⁷8 Cl.Ct. at 492–93.

F. Subcontractor-Caused Delay

Suppose the prime contractor seeks to excuse its responsibility for delay by pointing to the delay having been caused by a subcontractor. Unlike some contracts, A201-2007, Section 8.3.1, does not expressly include subcontractor-caused delay among those that justify a time extension. It does give the architect the right to grant a time extension for any cause that justifies the delay. However, failure to specifically include a common cause of delay, such as subcontractor-caused delay, should mean that the subcontractor-caused delay should not be encompassed within the “catchall” or within the broad grant of power given the architect.

Another reason for not granting a time extension is the single contract system’s objective of centralizing administration and responsibility in the prime contractor. Only if subcontractor-caused delay is *specifically* included should it excuse the prime contractor.

The independent contractor rule, although subject to many exceptions, relieves the employer of an independent contractor for the losses wrongfully caused by the latter.³⁸ Contractors sometimes assert that the subcontractor is an independent contractor inasmuch as the subcontractor is usually an independent business entity and can, to a large extent, control the details of how the work is performed. Even so, the independent contractor rule does not relieve the employer of an independent contractor when the independent contractor has been hired to perform a contract obligation and the party who suffers the loss caused by the independent contractor is the party to whom the contract obligation was owed.³⁹ In the construction contract context, the owner usually permits the prime contractor to perform obligations through subcontractors. This does not usually mean that the prime contractor is relieved of its obligation to the owner for subcontractor-caused delay unless the owner specifically agrees to exonerate the prime contractor for that delay.

G. Role of Architect

The residual power granted to the architect to grant time extensions in AIA documents has been criticized as leading to a deterioration of any fixed completion date. It does

have the virtue of not forcing the drafter to think of every possible event and to include it in the “catalog of events” justifying a time extension.

Delays caused by a separate contractor to another separate contractor were discussed in Section 17.04C.

SECTION 26.08 Time Extensions

Construction contracts usually provide a mechanism under which the contractor will receive a time extension if it is delayed by the owner or by other designated events such as those described in Section 26.07. This section examines the time extension process.

A. Role of Design Professional

Ideally, owner and contractor should agree on the issuance and extent of a time extension. In many construction contracts, the resolution of these issues, at least in the first instance, is given to the design professional or construction manager. The finality of her decision in the event of subsequent arbitration or litigation is discussed later.⁴⁰ Whether a time extension should be granted usually requires that the *force majeure* clause be applied to the facts that are asserted to justify a time extension.

B. Duration of Extension

Suppose a time extension is justified. How is the amount of time extension determined? To some degree, this was discussed in Section 26.05, dealing with scheduling. Depending on the existence of float and who can take the benefit of it, delay in performance of a particular activity may not justify any time extension.

Suppose abnormal weather conditions not normally anticipatable precluded work from October 1 to October 14. Suppose that period contained ten working days. Unless the contractor can show that it would have worked on other than normal working days, the time extension should be ten days.⁴¹

The extent of time extension need not necessarily, however, be the same as the number of days of delay. Suppose

³⁸See Section 7.03G.

³⁹*Harold A. Newman Co. v. Nero*, 31 Cal.App.3d 490, 107 Cal.Rptr. 464 (1973); *Brooks v. Hayes*, 133 Wis.2d 228, 395 N.W.2d 167 (1986).

⁴⁰See Section 29.09.

⁴¹*Missouri Roofing Co. v. United States*, 357 F.Supp. 918 (E.D.Mo. 1973) appears to support this conclusion.

a fourteen-day delay caused the contractor to work during a period when the weather was more rigorous than during the period of delay. Under such circumstances, a time extension of fifteen days is proper when the contractor was actually precluded from working for only ten days.

One court faced the imprecision of measuring the exact impact of delay. That court arbitrarily granted a time extension of 65 days for a 131-day delay because this amount was “as accurate an estimate as can be made from the actual resulting delay.”⁴² Whoever determines the amount of delay will be given considerable latitude. However, it is vital for both owner and contractor to keep careful and detailed records. (See Sections 26.10E and 27.05.)

C. Notices

Usually time extension mechanisms provide that the contractor must give notice of the occurrence of an event that is to be the basis for a time extension claim and its probable effect.⁴³ Some courts seem to consider such notices as technicalities. For this reason, these courts seem quick to find that the notice condition has been waived if it appears that the owner—or someone with actual or apparent authority—knew of the delay-causing event and that a claim would be made and was not harmed by failure to give the notice. Likewise, the requirement will be waived if in any way the owner has misled the contractor into believing that the notice will not be required.⁴⁴

Notice conditions, however, serve a useful function. In dealing with the requirement that a home buyer give notice of a breach of warranty within a reasonable time after discovery of the breach, a court stated, “The requirement of notice of breach is based on a sound commercial rule designed to allow the defendant opportunity for repairing the defective item, reducing damages, avoiding defective products in the future, and negotiating settlements. The notice requirement also protects against stale claims.”⁴⁵

⁴²*E. C. Ernst, Inc. v. Manhattan Constr. Co. of Tex.*, supra note 20, 387 F.Supp. at 1012–1013.

⁴³AIA Doc. A201-2007, §§ 15.1.2, 15.1.5.1.

⁴⁴*Travelers Indem. Co. v. West Georgia Nat'l Bank*, 387 F.Supp. 1090 (N.D.Ga.1974) (provision that HUD approve time extension waived). For additional discussion on waiver of technical requirements, see Section 21.04H.

⁴⁵*Pollard v. Saxe & Yolles Dev. Co.*, 12 Cal.3d 374, 525 P.2d 88, 92, 115 Cal.Rptr. 648, 652 (1974). See also Section 27.05C.

Likewise, in the context of a time extension mechanism the notice of an intention to claim a time extension serves a number of useful functions. The notice informs the design professional or owner that people for whom it is responsible, such as other separate contractors, consultants, or the design professional, are delaying the contractor. This can enable the owner or design professional to eliminate the cause of the delay and minimize future delays or damage claims. A timely notice should permit the design professional to determine what has occurred while the evidence is still fresh and witnesses remember what actually transpired.

The notice shows that the contractor has been adversely affected and can eliminate long-delayed, sometimes spurious contractor claims made after completion of the work. If the owner or design professional knew of the event causing the delay, the impact of the event on the contractor's performance, and the fact that the contractor would quite likely ask for a time extension, waiver may be proper.⁴⁶ However, the value of the notice requirement declines substantially if courts too frequently ignore the requirement.

SECTION 26.09 Unexcused Contractor Delay

Delay as justification for termination is discussed in Section 33.04A. This section deals with the recovery of damages for the contractor's delayed performance. Although Chapter 27 discusses in greater detail measurement of claims that owners and contractors have against each other, this section deals with damage liquidation—the contractual method used most frequently to deal with contractor delay.

A. Actual Damages

The damage formula applied most frequently by the common law to delayed contractor performance is the value of the lost use of the project caused by the delay. For example, delayed completion of a residence to be occupied

⁴⁶*Southwest Eng'g Co. v. Reorganized School Dist. R-9*, 434 S.W.2d 743 (Mo.Ct.App.1968).

by the owner will be measured by the lost rental value.⁴⁷ Although the owner may have suffered other losses, such as the inconvenience of living in a motel or with relatives or having to transport a child to a more distant school, such consequential damages are generally difficult to recover.

In commercial construction, the owner will very likely be able to recover the lost use value in the event of unexcused delay by the contractor.⁴⁸ Even in projects that have readily ascertainable commercial value, losses are often suffered that may be difficult to recover. This problem is even greater when the project is built for a public entity that intends to use it as a school, an office building, or a freeway. Although some public projects have a readily ascertainable use value, most do not.

B. Liquidated Damages: *Bethlehem Steel Corp. v. Chicago and Rohlin Constr. Co. v. City of Hinton*

Because proving delay damages is very difficult, particularly in public projects, construction contracts commonly include provisions under which the parties agree that certain types of unexcused delay will result in damages of a specific amount. They are usually known as *liquidated damages clauses*. One court stated,

There was a time when the courts were quite strong in their view that almost every contract clause containing a liquidated damage provision was, in fact, a forfeiture provision which equity abhorred, and therefore, nothing but actual damages sustained by the aggrieved party could be recovered in case of contract breach caused by delay past the proposed completion date. But, in modern times, the courts have become more tolerant of such provisions, probably because of the Anglo-Saxon reliance on the importance of keeping one's word, and have become more strongly inclined to allow parties to make their own contracts and to carry out their own intentions, free of judicial interference, even when such non-intervention would result in the recovery of a pre-stated amount as liquidated damages, on

⁴⁷*Muller v. Light*, 538 S.W.2d 487 (Tex.Ct.App.1976) (\$100-a-day clause held a penalty). See also *Miami Heart Institute v. Heery Archs. & Eng'rs*, 765 F.Supp. 1083 (S.D.Fla.1991), aff'd, 44 F.3d 1007 (11th Cir.1994) (delay claim by owner against architect) (discussed in detail in Section 12.14B).

⁴⁸*Ryan v. Thurmond*, 481 S.W.2d 199 (Tex.Ct.App.1972).

proof of a violation of the contract, and without proof of actual damages.⁴⁹

The early common law also felt that contractually stipulated damages could be used unconscionably by parties possessing strong bargaining power. The common law saw its role in awarding contract damages as compensating losses and not punishing or effectuating abuse of power.

The earliest use of such clauses was penal bonds, a precursor of surety bonds explored in Chapter 32. Penal bonds were absolute promises by the maker to pay a designated sum (the penal sum) followed by a condition that this promise would be null and void if certain things occurred, such as the maker, usually a debtor or a surety, paying the full amount of the debt. Frequently the penal sum greatly exceeded the harm caused. Equity courts would not enforce penalties. (This is the historical basis for differentiating liquidated damages clauses from penalties.) In addition, English courts felt that damages were the exclusive province of the courts. They would not enforce clauses that would "oust the court of jurisdiction."

Despite the nineteenth-century common law courts' belief in liberty and autonomy, the common law courts followed equity courts and placed strict limits on enforcement of these clauses. Courts were willing under limited circumstances to enforce liquidated damages clauses. They would do so if the party seeking to enforce the clause showed that the damages were extremely difficult to ascertain at the time the contract was made and that the amount selected was a genuine pre-estimate of the damages likely to occur as a probable result of the breach. In addition, some courts would not enforce these clauses unless it were shown that the parties intended the clause to compensate and not to punish. The amount selected must be the sole money award. The proponent should not have the option of choosing liquidated or actual damages.

Modern courts, particularly in public contracts, recognize the difficulty of proving damages generally, particularly those relating to delay, and the certainty that these clauses can provide both parties. As indicated, the law

⁴⁹*Sides Constr. Co. v. City of Scott City*, 581 S.W.2d 443, 446 (Mo. App.1979).

is more willing to be relieved of the burden of measuring damages.⁵⁰ Although the results are by no means unanimous, clauses liquidating damages for construction delay are generally enforced if they are reasonable as judged by the circumstances existing at the time the contract was

made.⁵¹ Often a comparison is made between the amount stipulated and the contract price.⁵² Some states even require such clauses in public construction contracts.⁵³ A case that typifies the modern judicial attitude toward such clauses is reproduced next.

BETHLEHEM STEEL CORP. v. CHICAGO

United States Court of Appeals, Seventh Circuit, 1965. 350 F.2d 649.
[Ed. note: Footnotes omitted.]

GRANT, District Judge.

Plaintiff-Appellant (Bethlehem) brought this action to recover an item of \$52,000.00 together with certain items of interest, etc., withheld by the Defendant (City), as liquidated damages for delay in furnishing, erecting, and painting of the structural steel for a portion of the South Route Superhighway, now the "Dan Ryan Expressway," in the City of Chicago. . . . [T]he District Court concluded that Plaintiff's claims on the items in controversy should be denied and entered judgment accordingly. We agree and we affirm.

The trial court's findings included the following uncontroverted facts:

* * *

The work which Bethlehem undertook was the erection in Chicago of structural steel for a 22-span steel stringer elevated highway structure, approximately 1,815 feet long, to carry the South Route Superhighway from South Canal Street to the South Branch of the Chicago River. Bethlehem's work was preceded and followed by the work of other contractors on the same section.

The "Proposal and Acceptance" in the instructions to bidders required the bidders to ". . . complete . . . within the specified time the work required. . . ." Time was expressly stated to be the essence of the contract and specified provisions were made for delivery of the steel within 105 days thereafter, which was to be not later than 15 days from notification. The successful bidder was to submit to the Commissioner of Public Works a "Time Schedule" for his work and if "less than the amount . . . specified to be completed" were accomplished "the City may

declare this contract forfeited. . . ." The work had to be completed irrespective of weather conditions.

The all important provision specifying \$1,000 a day "liquidated damages" for delay is as follows:

The work under this contract covers a very important section of the South Route Superhighway, and any delay in the completion of this work will materially delay the completion of and opening of the South Route Superhighway thereby causing great inconvenience to the public, added cost of engineering and supervision, maintenance of detours, and other tangible and intangible losses. Therefore, if any work shall remain uncompleted after the time specified in the Contract Documents for the completion of the work or after any authorized extension of such stipulated time, the Contractor shall pay to the City the sum listed in the following schedule for each and every day that such work remains uncompleted, and such moneys shall be paid as liquidated damages, not a penalty, to partially cover losses and expenses to the City.

Amount of Liquidated Damages per Day . . . \$1,000.00.

The City shall recover said liquidated damages by deducting the amount thereof out of any moneys due or that may become due the Contractor. . . .

⁵⁰*Sides Constr. Co. v. City of Scott City*, supra note 49 (avoids laborious item-by-item damage recitations); *Osceola County v. Bumble Bee Constr., Inc.*, 479 So.2d 310 (Fla. Dist. Ct. App. 1985) (city tourist information center).

⁵¹*Dahlstrom Corp. v. State Highway Comm'n of State of Miss.*, 590 F.2d 614 (5th Cir. 1979); *Pembroke v. Gulf Oil Corp.*, 454 F.2d 606 (5th Cir. 1971); *Dave Gustafson & Co. v. State*, 83 S.D. 160, 156 N.W.2d 185 (1968). Cases are collected in Annot., 12 A.L.R.4th 891 (1982). The Uniform Commercial Code (U.C.C.) enforces them if reasonable in the light of actual or anticipated damages. See U.C.C. § 2-718.

⁵²*Dahlstrom Corp. v. State Highway Comm'n of State of Miss.*, supra note 51.

⁵³West Ann. Cal. Pub. Cont. Code § 10226. The predecessor of this statute, West Ann. Cal. Govt. Code § 14376, is cited in *Westinghouse Elec. Corp. v. County of Los Angeles*, 129 Cal. App.3d 771, 181 Cal. Rptr. 332, 339 (1982).

Provision was made to cover delay in a contractor's starting due to preceding contractor's delay. Unavoidable delays by the contractor were also covered, and extensions therefor accordingly granted.

Bethlehem's work on this project followed the construction of the foundation and piers of the superhighway by another contractor. Bethlehem, in turn, was followed by still another contractor who constructed the deck and the roadway.

Following successive requests for extensions of its own agreed completion date, Bethlehem was granted a total of 63 days' additional time within which to perform its contract. Actual completion by Bethlehem, however, was 52 days after the extended date, which delay the City assessed at \$1,000.00 per day, or a total of \$52,000.00 as liquidated damages.

Bethlehem contends it is entitled to the \$52,000.00 on the ground that the City actually sustained no damages. Bethlehem contends that the above-quoted provision for liquidated damages is, in fact, an invalid penalty provision. It points out that notwithstanding the fact that it admittedly was responsible for 52 days of unexcused delay in the completion of its contract, the superhighway was actually opened to the public on the date scheduled.

In other words, Bethlehem now seeks to re-write the contract and to relieve itself from the stipulated delivery dates for the purposes of liquidated damages, and to substitute therefor the City's target date for the scheduled opening of the superhighway. This the Plaintiff cannot do.

In *Wise v. United States*, . . . the Supreme Court said:

. . . [T]he result of the modern decisions was determined to be that . . . courts will endeavor, by a construction of the agreement which the parties have made, to ascertain what their intention was when they inserted such a stipulation for payment, of a designated sum or on a designated basis, for a breach of a

covenant of their contract. . . . When that intention is clearly ascertainable from the writing, effect will be given to the provision, as freely as to any other, where the damages are uncertain in nature or amount or are difficult of ascertainment or where the amount stipulated for is not so extravagant, or disproportionate to the amount of property loss, as to show that compensation was not the object aimed at or as to imply fraud, mistake, circumvention or oppression. *There is no sound reason why persons competent and free to contract may not agree on this subject as fully as on any other, or why their agreement, when fairly and understandingly entered into with a view to just compensation for the anticipated loss, should not be enforced.*

. . . *The later rule, however, is to look with candor, if not with favor, on such provisions in contracts when deliberately entered into between parties who have equality of opportunity for understanding and insisting on their rights, as promoting prompt performance of contracts and because adjusting in advance, and amicably, matters the settlement of which through courts would often involve difficulty, uncertainty, delay and expense. . . .*

. . . It is obvious that the extent of the loss which would result to the Government from delay in performance must be uncertain and difficult to determine and it is clear that the amount stipulated for is not excessive. . . .

The parties . . . were much more competent to justly determine what the amount of damage would be, an amount necessarily largely conjectural and resting in estimate, than a court or jury would be, directed to a conclusion, as either must be, after the event, by views and testimony derived from witnesses who would be unusual to a degree if their conclusions were not, in a measure, colored and partisan. [Italics supplied.]

* * *

Affirmed.

The *Bethlehem* decision illustrates increased judicial cordiality toward liquidated damages clauses in the construction context, particularly public contracts. The law is more willing to enforce such contracts if they have been bargained for and if actual damages would be difficult to establish in court. Although the amount stipulated is rarely the result of bargaining in a competitive bid contract, the contractor can adjust its bid to take this risk into account.⁵⁴

⁵⁴See Sweet, *Liquidated Damages in California*, 60 Calif.L.Rev. 84, 118-23 (1972). But see *Space Master Internat'l, Inc. v. City of Worcester*, 940 F.2d 16 (1st Cir.1991), to which reference was made in the *Rohlin* case reproduced in this section. The contract involved modular classrooms, and delay meant that children had to have classes in hallways,

In another road-building contract, however, the Supreme Court of Iowa expressed concern with the arbitrary way in which the liquidated damages amount was selected. That case is reproduced next.

gymnasiums, auditoriums, and libraries. Educational programs were forced to be compromised, and morale suffered. These facts would certainly have been good enough to allow damages that could be liquidated. The court pointed to the fact that the amount selected was not the result of arm's-length bargaining but was simply put out to competitive bidding. It used this fact to support its holding that a summary judgment should not be granted. It did not recognize the difficulties of negotiating a liquidated damages clause in competitive bidding for public work.

ROHLIN CONSTRUCTION CO., INC. v. CITY OF HINTON

Supreme Court of Iowa, 1991. 476 N.W.2d 78.

Considered by HARRIS, P.J., and SCHULTZ, CARTER, LAVORATO and SNELL, J.J.
SCHULTZ, Justice.

The issues in this appeal center on the question of whether the liquidated damage clauses in three road construction contracts were actually penalty clauses and therefore void. The trial court refused to impose liquidated damages on the contractor. Our court of appeals affirmed. We affirm both courts.

In the spring of 1988, defendants Plymouth County (county) and the City of Hinton (city) entered a joint project for resurfacing certain county and city roads. Defendants jointly planned and advertised for bids on one city and two county resurfacing projects. Plaintiff Rohlin Construction Co., Inc. (Rohlin) was the successful bidder and entered into two contracts with the county for total prices of \$221,588.39 and \$251,696.99, and one contract with the city for a price of \$37,957. The two county contracts were dated May 31, 1988, and the city contract was dated June 16, 1988.

All three contracts contained a provision requiring that work be completed within forty "working days." The contracts specified a completion date of September 2, 1988, but did not specify a starting date. The contract language was prepared by the Iowa Department of Transportation on "proposal forms" which contained the following language:

If this bid is accepted, Bidder agrees . . . to either complete the work within the contract period or pay liquidated damages, which shall accrue at the daily rate specified below, for each additional working day the work remains uncompleted.

Each contract established \$400.00 per day as the amount of liquidated damages.

Rohlin commenced work on September 17 and completed the project in less than thirty days. Rohlin completed the project 25.5 days past the September 2 deadline on the city contract and 27.5 days and 28 days late on the county contracts. The city withheld \$10,200 and the county withheld \$22,200 as liquidated damages for late completion of the project.

Rohlin then commenced separate law suits against the city and county seeking judgments against both defendants for the sums withheld, plus interest and attorney fees. Following trial, the court ruled in favor of Rohlin, allowing recovery for the amount of the withholdings plus interest at eight percent from November 15, but denying attorney fees.

* * *

In the past, we disfavored the use of liquidated damage clauses and favored interpretation of contracts that make stipulated sums penalties. . . . Later, we relaxed this penalty rule and recognized that parties may fix damages by contract when the amount of damages is uncertain and the amount fixed is fair. . . . This change in contractual interpretations is consistent with the trend of favoring liquidated damage clauses.

* * *

We often turn to Restatements of the Law and believe it is appropriate to do so in this case. The American Law Institute adopts a more conservative approach as follows:

Damages for breach by either party may be liquidated in the agreement but only at an amount that is reasonable in the light of the anticipated or actual loss caused by the breach and the difficulties of proof of loss. A term fixing unreasonably large liquidated damages is unenforceable on grounds of public policy as a penalty.

Restatement (Second) of Contracts § 356(1) (1981). However, the American Law Institute shows no hostility toward liquidated damages by stating:

The parties to a contract may effectively provide in advance the damages that are to be payable in the event of breach as long as the provision does not disregard the principle of compensation. The enforcement of such provisions for liquidated damages saves the time of courts, juries, parties and witnesses and reduces the expense of litigation. This is especially important if the amount in controversy is small. However, the parties to a contract are not free to provide a penalty for its breach. The central objective behind the system of contract remedies is compensatory, not punitive. Punishment of a promisor for having broken his promise has no justification on either economic or other grounds and a term providing such a penalty is unenforceable on grounds of public policy.

Id. comment a. This Restatement section also sets out the test for a penalty:

Under the test stated in Subsection (1), two factors combine in determining whether an amount of money fixed as damages is so unreasonably large as to be a penalty. The first factor is the

anticipated or actual loss caused by the breach. The amount fixed is reasonable to the extent that it approximates the actual loss that has resulted from the particular breach, even though it may not approximate the loss that might have been anticipated under other possible breaches. Furthermore, the amount fixed is reasonable to the extent that it approximates the loss anticipated at the time of the making of the contract, even though it may not approximate the actual loss. The second factor is the difficulty of proof of loss. The greater the difficulty either of proving that loss has occurred or of establishing its amount with the requisite certainty, the easier it is to show that the amount fixed is reasonable. To the extent that there is uncertainty as to the harm, the estimate of the court or jury may not accord with the principle of compensation any more than does the advance estimate of the parties. A determination whether the amount fixed is a penalty turns on a combination of these two factors. If the difficulty of proof of loss is great, considerable latitude is allowed in the approximation of anticipated or actual harm. If, on the other hand, the difficulty of proof of loss is slight, less latitude is allowed in that approximation. If, to take an extreme case, it is clear that no loss at all has occurred, a provision fixing a substantial sum as damages is unenforceable.

Id. comment b (citations omitted). We believe that application of these principles is appropriate to our determination in this case.

A review of the record reveals uncertainty of how the sum of \$400 per day for liquidated damages was derived. This liquidated damage amount was placed in the specifications as a result of the county engineer's consultation with someone in the office of the Department of Transportation (DOT). A DOT construction manual contained a schedule of suggested rates for liquidated damages based strictly on the engineer's estimate of the contract price. According to the schedule in the manual, the city's contract called for \$100 per day in liquidated damages and the two county contracts called for liquidated damages of \$200 and \$300 per day respectively, for a total of \$600. As noted previously, there were three separate contracts but the resurfacing project was a joint city-county project involving connected highways. Thus, if the total amount rather than the individual amounts of the three contracts is used, then the manual's suggested rate is \$400 per day in liquidated damages.

The county engineer indicated that the reason for deviating from the manual's suggested rates was due to the city and county's desire for a completion date prior to the increased traffic that would accompany the start of school and the grain-hauling season in Hinton. In addition, the engineer stated that "we wanted the

liquidated damage amount to be sufficient to make the contractor aware that we need that project completed."

There is no valid justification for the individual liquidated damage amounts contained in each of the three contracts. Under the record of this case, the person who set the \$400-per-day amount in each contract is unknown and was not called as a witness. Additionally, no witness was called to justify the suggested liquidated damage amounts contained in the DOT manual schedule. The county engineer did not conduct studies or present any other data suggesting that defendants anticipated that the government entities and the public could sustain damages equivalent to the \$400-per-day liquidated damage amount contained in each of the three contracts. Furthermore, plaintiff called the school superintendent as a witness to give evidence that the school experienced no problems due to the road work. The county engineer also indicated that a Hinton grain elevator company had not complained that delayed completion of the road work caused the company or its patrons any damages or losses.

Plaintiffs seem to contend that Rohlin's delayed completion of the project caused no damages. The county did sustain damages, however, due to erosion because it could not seed the highway shoulders because of the delay. Undoubtedly, there was some inconvenience to school bus drivers and to grain haulers because of the late completion.

We agree with the trial court that the provisions for liquidated damages in the three contracts were penalties rather than reasonable amounts for liquidated damages. "Liquidated damages must compensate for loss rather than punish for breach. . . ." *Space Master Int'l, Inc. v. City of Worcester*, 940 F.2d 16, 18 (1st Cir.1991). We recognize that proving the amount of loss with any degree of certainty is difficult; nevertheless, the amount of liquidated damages set in each contract appears to be unreasonably large and goes far beyond the anticipated loss caused by delay in performance of the contract. The road project would inevitably cause some inconvenience to the parties and the public for a certain number of days regardless of when performed. Therefore, we conclude that the \$400-per-day liquidated damage clause contained in each of the three contracts is an unrealistic amount and is therefore a penalty that should not be enforced.

The court of appeals affirmed the trial court's denial of an award of attorney fees to plaintiff. We agree that this determination is a matter within the discretion of the trial court and it did not abuse its discretion in denying plaintiff attorney fees.

Costs on appeal are taxed two-thirds to Plymouth County and one-third to the City of Hinton.

DECISION OF COURT OF APPEALS AND JUDGMENT OF DISTRICT COURT AFFIRMED.

The court's concern over the absence of evidence indicating why the particular amount was selected, with particular reference to the DOT manual schedule, will place unreasonable obstacles to the enforcement of such clauses. The difficulty of amassing proof of this sort is one of the reasons why parties liquidate and why modern courts as exemplified in the *Bethlehem* decision are more inclined to enforce such clauses. Had the public entity introduced testimony indicating why it felt it necessary to deviate from the manual schedule, the outcome might have been different. But if all the bidders had taken into account the likely enforcement of the liquidated damages clauses and had seen the importance the public entity attached to timely completion, they should have included in their bids an amount to take care of the possibility that additional resources would have to be used to accomplish timely completion. If Rohlin did not, and thereby obtained the contract, this would not have been fair to the other bidders who bid rationally. If Rohlin had included these pricing contingencies, it unjustly enriched itself in this contract. To be sure, there would not have been unjust enrichment if Rohlin had signed the contracts on the assumption that the liquidated damages clause would never be enforced.

The court's decision also reflects its belief that if a party's delayed performance cannot be said to have caused monetary losses, the liquidated damages clause should not be enforced. It is clear that actual losses in such cases cannot be established at the time the contract is made or even after it is performed. This is the reason for using liquidated damages clauses.

While both *Bethlehem Steel* and *Rohlin* involved public contracts, liquidated damages are widely enforced in private works agreements as well. Delayed completion causes a private owner to suffer a variety of losses, both direct and indirect, including lost rental income, higher financing costs, higher administrative expenses, the cost of an idled workforce, and other damages. An owner faces a daunting task of proving all of these damages with reasonable certainty. In addition, the cascading consequences of delayed completion means that the owner would have to establish that its claimed damages were direct, rather than consequential.⁵⁵ Supplanting proof of actual damages with a stipulated damages sum provides many advantages to a private owner, whether commercial or residential.

⁵⁵Heckman & Edwards, *Time Is Money: Recovery of Liquidated Damages by the Owner*, 24 Constr. Lawyer, No. 4, Fall 2004, p. 28.

Although there is a greater willingness of modern courts to enforce liquidated damages clauses, additional legal issues remain. For example, if both the owner and contractor delay the project, liquidated damages will be assessed only to that period of delay apportioned solely to the contractor.⁵⁶ Judicial acceptance of such clauses also means that the party challenging the clause, not the party seeking to enforce the clause, bears the burden of establishing that it is a penalty.⁵⁷

One reason courts enforce liquidated damages clauses is that the application of such clauses precludes the need for a lengthy and difficult trial on the issue of the owner's damages. Owners must understand, however, that these clauses also preclude them from recovering actual damages, even if those damages are apparently well in excess of the liquidated sum.⁵⁸ On the other hand, contractors are precluded from arguing that the owner's actual damages were less or even nonexistent.⁵⁹ As explained by two commentators, "liquidated damages become a ceiling as well as a floor for establishing an owner's recovery for contractor-caused delay."⁶⁰

Should a liquidation clause be applied if the contractor *abandons* the project? It can be contended that parties drafting such clauses are thinking principally of *delayed* completion by the contractor and not *abandonment*, particularly if followed by abandonment of the project by the owner.⁶¹ Another reason for not applying the clause is the fear that the owner may be tempted to delay completion and thereby increase the liquidated damages amount.

Although application can appear to create open-ended liability, the clause can be applied for a reasonable period

⁶¹*City of Elmira v. Larry Walter, Inc.*, 76 N.Y.2d 912, 564 N.E.2d 655, 563 N.Y.S.2d 45 (1990).

of time, not for infinity. Another way of dealing with this problem is to contractually “cap” the liquidation amount and thereby avoid the open-ended liability that can generate a forfeiture vastly disproportionate to the actual damages.⁶²

Unjustified abandonment by the contractor or proper termination by the owner can cause the owner *two* harms: additional cost to complete the project and additional cost caused by delayed completion. Damage liquidation can apply to the second, delay in completion that is determined by the actual completion by a successor contractor or when the project could have been reasonably completed by a successor.⁶³

Another problem relates to the difference between substantial and final completion of the project.⁶⁴ This issue was treated in *Hungerford Construction Co. v. Florida Citrus Exposition, Inc.*⁶⁵ The contract involved an exhibition center for the citrus industry. One important feature of the project was a concrete dome 170 feet in diameter that was to operate as the center’s roof. The roof was to be waterproof without independent waterproof covering. Completion time was 180 calendar days, and the liquidated damages were specified to be \$200 per calendar day of delay.

The project was completed within 180 days, and the owner moved into the project. However, from the beginning the roof leaked, and corrective work was necessary. The corrective work did not require the owner to leave the premises, but it did preclude the owner from making the premises available to those who might want to rent it for exhibitions. The court referred to this use as a secondary use. Even after the corrective work, the secondary use was diminished because the leaking and correction had caused unsightly discolored plaster across the roof.

The court held that the liquidated damages clause would not be applied in this case. The court stated that the

building was available to the owner for its primary use and that the loss of secondary use was entirely speculative.

To deal with this problem, the contract can create a two-tier liquidation system, with one tier dealing with substantial completion and the other with final completion. This would avoid the *Hungerford* case result, in which it is likely that the owner will be unable to establish losses with sufficient certainty for the reduced use value of the structure while corrective work was being performed.

Applicability of the clause also was an issue in *Northern Petrochemical Co. v. Thorsen & Thorshov, Inc.*⁶⁶ After completion, serious structural defects were discovered. This necessitated large-scale redesign and reconstruction. Correcting the defects took eight months. The court affirmed an award based on lost profits because of delayed occupancy and excess operating costs while awaiting occupancy. The court rejected application of the contractual liquidated damages clause, noting that it was intended to apply to normal delay in the “rate of construction,” not to an extraordinary eight months’ delay due to redesign and reconstruction.

The use of fast-tracking⁶⁷ can generate particular problems, especially if the project is being built by a number of separate contractors or multiple prime contractors. In *Casson Construction Co.*,⁶⁸ the contractor, though finishing on time, failed to complete a phase of its work that delayed a follow-on contractor. The follow-on contractor was ordered to accelerate. It did so by the use of overtime and double shifts for several weeks. This acceleration cost \$174,000.

The breaching contractor claimed its liability was limited to the liquidation of a damages amount of \$240 a day, as contained in its contract. The cost of acceleration was \$644 a day. The board pointed to another provision in the contract stating that the contractor would indemnify the public agency for acceleration payments made to other contractors. The court held that the latter clause controlled and that the same breach can invoke different clauses. The board would not apply the liquidated damages clause to milestone date delays, only to delay in completing the entire contract performance. The board noted that the standardized language used in the contract was adopted long before the advent of fast-track construction.

⁶⁸GSBCA No. 4884, 78-1 BCA ¶13,032.

Subcontracting raises special problems. Sometimes prime contractors seek to charge all subcontractors a ratable amount of any liquidated damages that the prime contractor must pay the owner. This avoids the often difficult question of which subcontractors have caused the delay, yet it requires a subcontractor who has not caused the delay to share the liquidation loss.⁶⁹ As a result, AIA Document A401-2007, Section 3.3.1, expressly provides that liquidated damages against the subcontractor are assessed “only to the extent caused by the Subcontractor” or those for whom it is responsible. Unfortunately, this language could justify a claim by the prime contractor against a subcontractor who has caused the delay even if the subcontractor has not breached its contract.

Actual damages suffered by the prime contractor itself can be separated from amounts that the prime contractor must pay the owner.⁷⁰ There is no reason why the liquidated damages clause cannot encompass both. Although sometimes the amount that the prime contractor may have to pay the owner can be ascertained at the time the contract is made (the stipulated amount in the owner–prime contract), the *other* damages that the prime may suffer in *addition* may be difficult to establish. Two provisions can be included: one making clear that the subcontractor will reimburse the prime for any amounts it must pay the owner attributable to the subcontractor’s breach, and another to liquidate damages for other harm suffered by the prime. Alternatively, the contract can specify that the liquidation amount applies only to the liquidation amounts that must be paid by the prime contractor to the owner, not precluding the recovery of actual damages suffered by the contractor as well. But the parties should be able to include both in one clause.

Project completion dates can be “hard” or “soft,” depending on the importance attached to timely completion. When a high liquidation amount is selected, the contractor should increase its contract price either to ensure timely completion (double time, expedited deliveries, more workers) or to pay damage liquidation. Coupling a soft completion date with a stiff damage liquidation amount will generate timely completion at a high cost when timely completion is not crucial.

⁶⁹*United States v. Arundel Corp.*, 814 F.2d 193, decision clarified on denial of rehearing, 826 F.2d 298 (5th Cir.1987), appeal after remand, 896 F.2d 143 (5th Cir.1990), rehearing denied Apr. 11, 1990.

⁷⁰*United States v. Foster Constr. (Panama) S.A.*, 456 F.2d 250 (5th Cir.1972).

When the completion date is hard, the amount selected must be sufficiently high (but not too high so as to risk finding that it is a penalty) to make it more profitable for the contractor to finish on time than to delay and pay liquidated damages. Selecting an amount to accomplish this objective requires a sophisticated understanding of contractor costs. It involves awareness of the increased administrative costs of such a clause. Invariably, there will be more requests for time extensions. Any stiff clause should be accompanied with a contractual justification for the amount, as in the *Bethlehem* case.

This advice is inconsistent with the stated requirement that liquidated damages be based on a genuine pre-estimate of actual damages that will result in the event of delay. In many construction contracts—mainly public but also private—the amount selected does not in reality represent an attempt to estimate damages. In such contracts, it is almost impossible to estimate the economic loss caused by delay. For example, the \$1,000 a day selected in the *Bethlehem* case probably did not reflect the City of Chicago’s judgment as to the economic loss that it or its citizens would suffer if the project was delayed. It is more likely that the amount was selected to make it more economical for the contractor to perform on time than to delay and pay damages. Although courts do not overtly concede that they are doing so, their enforcement of liquidated damages clauses for a delay in many construction contracts amounts to enforcing reasonable penalties.

Sometimes liquidation clauses are joined with bonus provisions. Under such clauses, the contractor forfeits a designated amount for each day of unexcused delay but gains a designated daily bonus if it completes the project before the completion date. Although enforceability does not require that a bonus be attached to a damage liquidation, it may be tactically desirable to do so. The bonus clause may help to enforce the liquidation clause, because “mutuality” is attractive. A bonus clause may also make it appear that the amount had actually been bargained by the contractor and owner. However, a bonus clause should not be used unless it is very important to obtain early completion.

Section 27.06D will discuss contractual methods of excluding consequential damages. The relationship of such contractual provisions and liquidated damages will be discussed in that section. However, it should be noted here that the AIA’s effort to exclude consequential damages could, according to the AIA, be frustrated by the owner’s use of harsh liquidated damages clauses. As a

result, the two subjects were treated together in AIA Document A201-2007, Section 15.1.6.

Damage liquidation for unexcused contractor delay is usually desirable even though claims based on liquidated damages clauses are often traded away in a final settlement. Liquidated damages clauses must be drafted carefully. First, the applicable law must be determined. Second, the clause must be tailored to the particular type of delay to which it is expected to apply. Third, the amount selected should take into account the importance of timely completion, the likely lost use value, and the likelihood that the amount selected will actually achieve the objective.

SECTION 26.10 Owner-Caused Delay

A. Assumed Contractual Risk: No-Damage Clauses: *Triple R Paving, Inc. v. Broward County*

Increasingly, contractors make large claims for delay damages. The substantive basis for what are sometimes called “delay and disruption” or inefficiency claims is the implied obligation not to prevent the contractor from performing its obligations in a logical, orderly, and efficient manner.⁷¹ Delay can mean not being able to work, causing the project not to be completed on time. Disruption can mean being prevented from working efficiently. This section deals with the response of the owner to the possibility of delay and disruption claims being made.

Before looking at these responses, it is important to examine the nature of these claims. Some are based on the owner, or those for whom the owner is responsible,⁷² not doing a proper job of *communicating information* (*Spearin* claims),⁷³ *designing* (excessive changes or changes beyond the power granted the owner by the changes clause),⁷⁴ or *administering* the project.⁷⁵

As illustrations, cases have pointed to failure to schedule the work so that it could be done smoothly and quickly;⁷⁶ creating site congestion, failing to coordinate the project (where that was the owner’s responsibility);⁷⁷

failure to deliver owner-supplied material on time;⁷⁸ acceleration, which generates excessive working hours and overcrowded conditions;⁷⁹ and constant revision of drawings causing confusion and interruption of the orderly progress of the work.⁸⁰ These adversely affect productivity and impede “job rhythm,” a necessary condition for good productivity.⁸¹

Returning to owner responses to the threat of such contractor claims, public entities are often limited by appropriations and bond issues. As a result, they must know in advance the ultimate cost of a construction project. To do so, many public entities use the disclaimer system for unforeseen subsurface conditions described in Section 25.05. Similarly, they wish to avoid end-of-project claims based on allegations that they have delayed completion or required the contractor to perform work out of sequence. These entities recognize that barring claims may cause higher bids, but they would prefer to see bidders increase their bids to take this risk into account rather than face claims at the end of the job.

Before looking at the troublesome question of the validity of no-damage clauses, it is important to note other methods that can be used to eliminate or reduce the likelihood of such claims. The contract may specify that the owner has the right to delay the contractor and that the interference is not a contract breach. The surrounding facts and circumstances may indicate that the claimant, prime, or subcontractor could expect to have its performance interrupted. For example, a subcontractor knew that it was working on an existing, functioning hospital and that it could not expect to hold the prime contractor responsible for the inevitable delays.⁸² Even in such a case, there would be limits to the extent of interference.⁸³

⁷⁷*Howard P. Foley Co. v. J. L. Williams & Co. Inc.*, 622 F.2d 402 (8th Cir.1980) (Arkansas law).

Another technique is to contend that any time extension mechanism is the exclusive remedy. Generally, the availability and use of the time extension mechanism does not impliedly preclude delay damages.⁸⁴ The AIA's time extension mechanism specifically states that it does not bar the contractor from recovering delay damages.⁸⁵

Many public and some private construction contracts meet the delay damage problem head on. These contracts contain no-damage or no-pay-for-delay clauses. Such clauses attempt to place the entire risk for delay damages on the contractor and to limit the contractor to time extensions.

Such clauses have become very controversial. Owners—usually public entities, but increasingly private owners—justify these clauses as a means of fiscal control. Public owners are often limited as to what they can spend by appropriation bills or bond issues. Also, cost overruns can be politically devastating. Public owners want *all* costs, including delay and disruption, to be put “up front” in the contract price. They do not want potentially opened delay or disruption claims at the end of the project.

Contractors oppose such clauses. First, they claim that in public contracts they have no choice but to take these clauses. They also say that such costs cannot be rationally priced and included in the contract price. Most such claims result from poor administrative practices, such as excessive change orders, delay in furnishing necessary information, and dilatory submittal approvals. (Other illustrations will be given later in this section.) How can a contractor know, at the time it bids, the likelihood of such delay and disruption and what they will cost? Also, contractors say if they do price these risks and put them in their bid prices, in the cutthroat competition of the construction world, they will lose the awards to contractors who will not. The latter will take their chances that they will not suffer such losses or that they can avoid these clauses in court.

Finally, contractors point to the moral hazard such clauses create. An owner and its design professional insulated by such clauses will not do their best to administer the project efficiently.

These objections have not gone unnoticed by courts and legislatures. As shall be seen, although a few courts

will interpret the clauses “as written,”⁸⁶ most will find exceptions that will justify not applying such a clause literally.⁸⁷ *U.S. for Use and Benefit of Williams Electric Co., Inc. v. Metric Constructors, Inc.*,⁸⁸ after stating that generally such clauses are enforced, stated,

A majority of jurisdictions, however, recognize certain exceptions to such clauses. . . . Among the recognized exceptions are (a) delay caused by fraud, misrepresentation, or other bad faith; (b) delay caused by active interference; (c) delay which has extended such an unreasonable length of time that the party delayed would have been justified in abandoning the contract; (d) delay that was not contemplated by the parties and (e) delay caused by gross negligence.⁸⁹

It also noted,

The most contested of the exceptions is that for “delay not contemplated by the parties.”⁹⁰ Under this exception, a number of courts find that a “no damage” provision will not bar claims resulting from delays caused by the contractee if the delays “were not within the contemplation of the parties at the time they entered into the contract.” *Corinno Civetta Constr. v. City of New York*, 67 N.Y.2d 297, 502 N.Y.S.2d 681, 686, 493 N.E.2d 905, 910 (1986). The rationale for this exception, as stated by the *Corinno Civetta* court, is that “[i]t can hardly be presumed . . . that the contractor bargained away his right to bring a claim for damages resulting from delays which the parties did not contemplate at the time.”

⁸⁶*I. L. & B. Constr. Co. v. Ragan Enterprises*, 367 Ga. 809, 482 S.E.2d 279 (1997).

⁸⁷*J.A. Jones Constr. Co. v. Lehrer McGovern Bovis, Inc.*, 120 Nev. 277, 89 P.3d 1009 (2004). See Parvin & Araps, *Highway Construction Claims*, 12 Pub.Cont.L.J. 255, 277–81 (1982); Vance, *Fully Compensating the Contractor for Delay Damages in Washington Public Works Contracts*, 13 Gonz.L.Rev. 410 (1978); Comment, 28 Loy.L.Rev. 129 (1982). For a review of the American experience directed at an international audience, see Sweet, *Contract Regulation of Delay and Disruption Claims in America* [2002] *Int'l Constr. L. Rev.* 284.

⁸⁸325 S.C. 129, 480 S.E.2d 447 (1997).

⁸⁹480 S.E.2d at 448.

⁹⁰This exception resembles the cardinal delay that has been recognized by the Armed Services Board of Contract Appeals. *Godwin Equip. Inc.*, ASBCA No. 51939, 01-1 BCA ¶31,221. Cardinal delay, in turn, resembles the cardinal change; a change or changes so different than could have been expected that the contract price is removed and the contractor entitled to recover its damages or the reasonable value of its services. See Section 21.03A. If the delays fall into the cardinal category, increased cost and lost profit can be recovered despite contractual provisions that limit the contractor's remedy for government-caused delay.

⁸⁴*Selden Breck Constr. Co. v. Regents of Univ. of Michigan*, 274 F. 982 (E.D.Mich.1921).

⁸⁵AIA Doc. A201-2007, § 8.3.3.

However, this view is not universally accepted and has recently been questioned by a number of courts. See e.g. *State Highway Administrator v. Greiner*, 83 Md.App. 621, 577 A.2d 363 (1990); *Gregory and Son, Inc. v. Guenther and Sons*, 147 Wis.2d 298, 432 N.W.2d 584 (1988). These courts hold that a clear, unambiguous clause which precludes a contractor's recovery of damages for "any delays" is binding, notwithstanding unanticipated delays, absent some allegation of intentional wrongdoing, gross negligence, fraud, or misrepresentation. *Greiner, supra*. In *Gregory*, the Wisconsin Supreme Court stated:

Indeed, the adoption of a no-damage-for-delay clause shows that the parties realize that some delays cannot be contemplated at the time of the drafting of the contract.

... The parties can deal with delays they contemplate by adjusting the start and completion dates or by including particular provisions in the contract. "[I]t is the unforeseen events which occasion the broad language of the clause since foreseeable ones could be readily provided for by specific language." *City of Houston v. R.F. Ball Constr. Co., Inc.*, 570 S.W.2d 75, 78 (Tex.Civ.App.1978).⁹¹

Judicial application of the exceptions to enforcement of no damages clauses outlined in the *Williams* case described earlier in this section is demonstrated by *Triple R Paving, Inc. v. Broward County*. This case dealt with exceptions (a) and (b) noted in that case: fraud, misrepresentation, bad faith, and active interference. It is reproduced in part at this point.

TRIPLE R PAVING, INC. v. BROWARD COUNTY

District Court of Appeal of Florida, Fourth District, 2000. 774 So.2d 50,
Rehearing denied Jan. 12, 2001.

STONE, J.

Triple R Paving, Inc. ("Triple R"), plaintiff below, and Frederic R. Harris, Inc. ("Harris"), third-party defendant, appeal from a judgment awarding damages to Triple R resulting from construction delays in the performance of its road construction contract with Broward County, Harris' indemnitee. The appeals have been consolidated for review.

Triple R successfully bid on a road construction contract, the design for which was prepared by Harris. The contract called for widening a portion of Rock Island Road, including widening a bridge which spanned a canal. During construction, delays resulted from a horizontal sight distance design flaw, a Florida Power & Light (FP & L) utility relocation, and detention pond elevation problems. Triple R filed suit against Broward County for delay damages, which included lost home office overhead and lost efficiency. The county, in turn, filed a third-party complaint against Harris for indemnification. [Ed. note: Lost home office overhead claim omitted. See Section 27.02B.]

The standard form contract, used by the county, contained the following pertinent [clause]:

43: No Damages for Delay:

NO CLAIM FOR DAMAGES OR ANY CLAIM OTHER THAN FOR AN EXTENSION OF TIME SHALL BE MADE OR ASSERTED AGAINST THE COUNTY BY REASON OF ANY DELAYS. The

CONTRACTOR shall not be entitled to an increase in the Contract Sum or payment or compensation of any kind from the COUNTY for direct, indirect, consequential, impact or other costs, expenses or damages, including but not limited to costs of acceleration or inefficiency, arising because of delay, disruption, interference or hindrance from any cause whatsoever, . . .; provided, however, that this provision shall not preclude recovery or damages by the CONTRACTOR for hindrances or delays due solely to fraud, bad faith or active interference on the part of the COUNTY or its agents. Otherwise, the CONTRACTOR shall be entitled only to extensions of the Contract Time as the sole an sic [and] exclusive remedy for such resulting delay, in accordance with and to the extent specifically provided above.

* * *

During the construction, Triple R determined that it would be more cost efficient to build the bridge with a single span rather than two spans and submitted what is known as a value engineering contract proposal (VECP) to make that change. The county indicated it was interested in pursuing the VECP and asked Triple R to have its engineer design a single span bridge.

⁹¹*U.S. for Use and Benefit of Williams Electric Co., Inc. v. Metric Constructors, Inc.*, supra note 88, 480 S.E.2d at 450.

Triple R retained engineer Joe Roles to design the single span bridge. He testified that his design of the bridge for the VECP did not change any element of the horizontal geometry, and he did not check horizontal sight distances because his work did not affect them. Both Roles and Hawks, Triple R's president, stated that Harris' representative, John Wise, knew that the plans did not meet horizontal sight distance standards. According to Hawks, John Wise was aware of the problem as early as 1992, but never mentioned throughout the VECP process, or in any meetings regarding the VECP, that the horizontal sight distance should be checked, despite the fact that he agreed to personally check the sight distance against standards at the time the VECP was under discussion for approval.

In September 1994, during construction, it became apparent that the bridge was too close to the Inverrary driveway and Triple R sent a letter to the county advising them of the problem. Broward County then refused to allow the bridge to open in the condition it was in on September 2, 1994. In September 1994, Triple R advised Harris that it would move its manpower and equipment off the job until a solution to the horizontal sight distance problem was discovered; however, it was directed not to do so.

While a solution was being worked out, Triple R worked on a portion of the project north of the bridge, but the inability to open the bridge and switch traffic to the other lane impeded its ability to proceed efficiently with its work.

A second delay occurred once the driveway was completed and construction was to be resumed. Terry Opdyke, Harris' chief inspector for the job, stated from the beginning of the job that he would coordinate all utilities because he wanted to control them. FP & L was scheduled to remove the power lines that went over the existing bridge. Opdyke told Triple R that the utility relocation would take only a matter of hours and that work could be resumed the same day or the next day. Triple R's subcontractor went out to the job, but FP & L did not show up to remove the power lines because of maintenance problems with its equipment. This delay lasted for several days.

The third delay resulted from problems involving the detention pond, as designed by Harris, which was to drain into a canal controlled by the City of Tamarac. The canal's elevation was higher than depicted in the design and higher than the pond; however, no proof was elicited to show that either the county or Harris was aware of this design flaw prior to actual construction. Had the construction proceeded as designed, a backward flow would have resulted. When the problem was recognized, Opdyke was told to ensure that the canal was at a specified elevation; however, when he approached the city of Tamarac to request

that it drop the elevation for the canal, the city refused. The detention pond design delay also led to extended performance costs for Triple R.

The entire project was finished in late August of 1995, within the extension period granted for the delays, but not within the original contract period. The work was never completely suspended on the project. According to Triple R, it was never able to become more efficient in performing the remainder of the work.

* * *

Harris moved for directed verdict at the close of Triple R's case claiming that Section 43 of the contract precluded delay damages inasmuch as Triple R had failed to prove that the construction delays were the result of fraud, bad faith, or active interference. The trial judge reserved ruling.

* * *

The jury returned a verdict which awarded damages to Triple R for loss of efficiency in the amount of \$112,929.31,

Harris raises several points, only one of which merits discussion: whether the trial court erred in denying its motion for directed verdict as to Triple R's delay damages claim in the face of Section 43 of the contract, which prohibits damages for delay absent fraud, bad faith, or active interference.

Clauses providing for "no damages for delay," except in the case of fraud, bad faith, or active interference by the owner, are legal and enforceable. See *Newberry Square Dev. Corp. v. Southern Landmark, Inc.*, 578 So.2d 750 (Fla. 1st DCA 1991); *Southern Gulf Util., Inc. v. Boca Ciega Sanitary Dist.*, 238 So.2d 458 (Fla. 2d DCA 1970); see also *McIntire v. Green-Tree Communities, Inc.*, 318 So.2d 197 (Fla. 2d DCA 1975); *Peter Kiewit Sons' Co. v. Iowa S. Util. Co.*, 355 F.Supp. 376 (S.D.Iowa 1973); *Williams Elec. Co. v. Metric Constructors, Inc.*, 325 S.C. 129, 480 S.E.2d 447 (1997). See generally Susan Siskind Dunne, "No Damage for Delay" Clauses, CONSTR. LAW, Apr. 1999 at 38.

It is Harris' assertion that, as a matter of law, Triple R failed to establish sufficient proof of either fraud, bad faith, or active interference to overcome the contract prohibition against delay damages. We agree with Harris with respect to the delays occasioned by the FP & L utility relocation and the detention pond elevation. See *Southern Gulf Util.*, 238 So.2d at 458 ("mere lethargy or bureaucratic bungling" would not overcome no damage for delay clause). However, we find that the facts surrounding the delay which resulted from the horizontal sight distance design flaw were sufficient to allow a jury to decide the question of fraud, bad faith, or active interference.

* * *

In *Newberry Square*, the court recognized that a “no damage for delay” clause would be vitiated by “delays resulting from a party’s fraud, concealment, or active interference with performance under the contract.” *Id.* Furthermore, “willful concealment of foreseeable circumstances which impact timely performance” will also limit applicability of a “no damages for delay clause.” *Id.* Active interference was found in *Newberry Square* where the property owner delayed approving plans and change orders and ordered that construction not proceed absent such orders. Furthermore, the president of the corporation failed to make timely payments required by the contract and had threatened to “break” the contractor before he would pay him. *See id.*

We recognize that the facts of *Newberry Square* are more egregious than the circumstances surrounding the horizontal sight distance design flaw which resulted in the first construction delay at issue here; however, evidence of Harris’ knowledge of the design flaw and the subsequent failure to apprise Triple R of the problem is sufficient to constitute “willful concealment of foreseeable circumstances which impact timely performance,” such that the “no damages for delay” clause may be overcome. *See also McIntire*, 318 So.2d at 200 (“[C]ircumstances which caused the delay were brought about by appellee and were even foreseen but concealed by appellee when the contract was made.”).

It is undisputed that, where a public authority does not willfully or knowingly delay job progress, it is protected by a “no damage for delay clause.” *See C.A. Davis, Inc. v. City of Miami*, 400 So.2d 536, 539 (Fla. 3d DCA1981). In this case, however, the evidence showed a “knowing delay” and silence when assigned the responsibility of verifying compliance with standards on this point.

We note that Black’s Law Dictionary 134 (7th ed. 1999) defines “bad faith” as “Dishonesty of belief or purpose <the lawyer filed the pleading in bad faith>” [sic] and includes the following quotation from the Restatement (Second) of Contracts § 205 cmt. d (1981):

A complete catalogue of types of bad faith is impossible, but the following types are among those which have been recognized in judicial decisions: . . . interference with or failure to cooperate in the other party’s performance.

Black’s at 134. The evidence of Harris’ knowledge of the plan defect and failure to apprise Triple R of the problem while simultaneously agreeing to check the horizontal sight distance against standards during the VECP approval process is evidence of interference with, or at the very least, “failure to cooperate in the other party’s performance,” and, therefore, was sufficient proof

of bad faith to allow the jury to decide the question of Triple R’s entitlement to delay damages.

Decisions of other jurisdictions lend further support to our conclusion. *See, e.g., Port Chester Elec. Constr. Corp. v. HBE Corp.* 894 F.2d 47 (2d Cir.1990); *P.T. & L. Constr. Co. v. New Jersey, Dep’t of Transp.*, 108 N.J. 539, 531 A.2d 1330 (1987); *Buckley & Co. v. State of New Jersey*, 140 N.J.Super. 289, 356 A.2d 56 (1975). In *Port Chester Electrical*, the court of appeals premised its holding on the “universally accepted proposition that contract provisions aimed at relieving a party from the consequences of his own fault are not viewed with favor by the courts.” *Id.* at 48 (citations omitted).

In *P.T. & L.*, the court recognized:

When the government makes a positive statement of fact about the character of work to be performed, upon which the contractor may reasonably rely, it is binding on the government notwithstanding the inclusion of exculpatory clauses in the contract.

P.T. & L., 531 A.2d at 1335. Accordingly, the court refused to apply a no damages for delay clause where the watery condition of the construction site caused construction delay after the state had misled the contractor into believing that the conditions of the site would be dry or normal. *See id.* Similarly, in this case, the evidence adduced by Triple R in its case-in-chief established that Harris was well aware of the design flaw in the bridge construction, but withheld that information from Triple R. Thus, there is sufficient evidence to allow a jury to determine whether fraud, bad faith, or active interference vitiated the no damages for delay clause. *See also Buckley*; 391 PLI/REAL ESTATE LAW AND PRACTICE COURSE HANDBOOK SERIES, “Defending Against the Contractor’s Delay Damages Claim” at 395-97.

Accordingly, we affirm the trial court’s denial of Harris’ motion for directed verdict on the “no damages for delay” clause with respect to the horizontal sight distance delay. However, in view of the county’s and Harris’ lack of control over FP & L and the lack of proof of knowledge as to the detention pond flaw, we find the evidence insufficient, as a matter of law, to show fraud, bad faith, or active interference with respect to the FP & L relocation delay and the detention pond delay and, accordingly, reverse and remand for judgment in favor of the county and Harris on those damage claims. As to all other issues raised by Harris, we affirm.

* * *

REVERSE AND REMAND for proceedings consistent with this opinion.

KLEIN, J. and OWEN, WILLIAM C., Jr., Senior Judge, concur.

The ceaseless struggle between private autonomy (freedom of contract) and judicial control of what can be overreaching and abuse of contract power are demonstrated in the varying attitude of the courts toward “no-damage” clauses.⁹² It is also seen in increasing legislative efforts to limit the use of such clauses.⁹³ To develop an understanding of this struggle, it is useful to look at other cases to see how these exceptions are applied.

The court in *Broadway Maintenance Corp. v. Rutgers*⁹⁴ (reproduced in part in Section 17.04C) enforced such a clause. The court stated, “No-damage provisions are a part of the economic package upon which the parties agree. The contractor who chooses to accept these risks will reflect the accompanying responsibility in his price.”⁹⁵

The contractor had complained of backfill problems, slow-pouring concrete, and lack of temporary heat. The court affirmed a finding by the intermediate court that the situations were not sufficiently exceptional to fall outside the no-damage clause. Such situations are ordinary and usual types of damage that most contractors frequently encounter.

Another court⁹⁶ held that such a clause would bar *delay* damages, which it defined as time lost when work cannot be performed because materials have not been delivered or preliminary work done. But it does not bar a claim based on hindering the work, such as failure to coordinate the work

or supply temporary heat. The court’s holding that hindering is not barred by the clause may only illustrate active interference. Another illustration of the exception for active interference was based on the owner’s testimony that he would “break” the contractor before he would pay.⁹⁷

Pennsylvania held that such clauses will not be enforced if there is affirmative or positive interference or a failure to act in some essential matter necessary to prosecution of the work.⁹⁸ The court held that failure to keep a lake drained actively interfered with a contractor’s lake excavation contract. The court looked at the facts liberally from the perspective of the contractor and concluded that this was not the type of interference contemplated by the parties.

Similarly, the bad-faith or active interference exception was applied in *United States Steel Corp. v. Missouri Pacific Railroad Co.*⁹⁹ The claim of active interference was based on the owner’s directing the contractor to proceed before requisite work of an earlier contractor had been completed. Access to the work was denied during completion of the earlier contractor’s work, causing a delay of 170 days. The owner granted a time extension for this delay but, based on a no-damage clause, refused to pay any delay damages.

The court noted that the owner had an implied obligation to refrain from anything that would reasonably interfere with the contractor’s opportunity to proceed with its work and to allow the contractor to carry on that work “with reasonable economy and dispatch.” The court concluded that issuing the notice to proceed was an affirmative, willful act and that the owner’s bad faith was demonstrated by its knowledge of circumstances that would prevent the contractor from proceeding timely with its work.

The preceding discussion has assumed a clause that *bars any damages* for owner-caused delay. It is possible to employ a targeted clause that does not have the sweep of a classic no-damage clause. Such a clause can target specific causes and specific losses. It can bar recovery for specific acts of the public entity, such as issuing a permit, scheduling adjustments, or a delay in the delivery of owner-supplied material.

⁹⁸*Coatesville Contractors & Eng’rs, Inc. v. Borough of Ridley Park*, 509 Pa. 553, 506 A.2d 862 (1986).

⁹⁹668 F.2d 435 (8th Cir.), cert. denied, 459 U.S. 836 (1982).

As to specific losses, contracts can allow recovery only for direct additional expenses, excluding additional overhead and profit. Such a clause can limit recovery to designated costs, such as for premiums paid on its bonds, for wages and salaries needed to maintain the work, or for plant and equipment when work is stopped.¹⁰⁰

Another targeted approach is to provide a corridor period of losses being chargeable against the owner after a designated number of days of delay caused by the owner have elapsed.

Another method, though more uncertain of enforcement, to control owner exposure is to bar use of the broad global formulas, such as total cost, modified total cost, or jury verdict.¹⁰¹ These formulas can create a large damage award and frighten owners.

Another approach is to limit the use of exceptions to enforcement of classic “no-damage” clauses that have been noted in this section.

It is unclear whether attempts to bar a court from using a global formula or to limit the exceptions to enforcement will be successful. As noted, courts do extend considerable freedom (private autonomy) to contracting parties. Yet attempts to tie the hands of courts when they administer remedies for breach of contract or determine the enforceability of clauses that exculpate a contracting party will be examined carefully by the courts, much as they look carefully at clauses that liquidate damages for delay.¹⁰²

The advantage of such targeted clauses is that they are more likely to be interpreted neutrally, unlike the broad, “no-damage” or “no-pay-for delay” clause.¹⁰³ But the popularity of delay or disruption claims by contractors will force courts to pass on the validity of such exculpatory clauses. Undoubtedly, case decisions in different jurisdictions will apply different tests and will come to different outcomes.

B. Subcontractor Claims

Delays caused by the owner not only harm the prime contractor but also may harm subcontractors. The absence of a contract between subcontractors and the owner generally

precludes direct legal action, and as a rule precludes direct negotiations between subcontractors and owners over delay claims. Often the prime contractor processes the subcontractor’s claim. This processing is dealt with in Section 28.08B.¹⁰⁴

C. Liquidated Damages

Until recently, it was rare for owners to liquidate damages for delays they caused. Public owners usually protected themselves, or at least hoped to, by using no-damage clauses. However, it is becoming more common to liquidate damages as an alternative to exposure to the often open-ended and difficult to establish or to disprove delay damage claims. Although no judicial analysis of these clauses has been found, very likely courts will enforce them. The process of establishing the additional costs incurred by the contractor for delay is even *more* complex and *more* difficult than establishing lost use by owners, even public owners. This should encourage enforcement, provided the amount bears some reasonable relationship to the anticipated or actual damages.

D. Measurement

Section 27.02F deals with the measurement of the value of the contractor’s claim when without excuse the owner delays the contractor’s performance.

E. Records

In delay disputes, the party with the best records has a great advantage. Each party should keep job records such as the site representative’s daily field reports, correspondence, memoranda, photographs or video recordings, and change orders. These records should include data on labor, equipment, and materials used for each activity and should document the cause and impact of every delay. See Section 27.05.

¹⁰⁰*Calumet Constr. Corp. v. Metropolitan San. Dist.*, 222 Ill. App.3d 374, 581 N.E.2d 206 (1991), appeal denied, 143 Ill.2d 636, 587 N.E.2d 1012 (1992).

¹⁰¹See Section 27.02F.

¹⁰²See Section 26.09B.

¹⁰³See Section 20.02.

¹⁰⁴Sometimes the prime and the subcontractor use liquidating agreements under which the prime confesses liability to the subcontractor for owner-caused delay and the subcontractor releases the prime for all other liability. Under such agreements, the subcontractor is relegated to whatever delay damages the prime can recover from the owner (discussed in Section 28.08B).

Claims: By-Products of Construction Process

SECTION 27.01 Introduction

Review Chapter 6, the basic building block dealing with remedies for breach of contract.

The law seeks to compensate the contracting party who has suffered losses because of the other party's breach of contract. Generally it does not punish the party that has breached the contract.¹ The court judgment seeks to put the injured party in the position it would have reached had there been no breach (expectation), or seeks to restore the party to the position it occupied before performance began (restitution).

The law developed conventional formulas to implement the compensation objective. At times, a choice can be made between different formulas. Judicial attempts to determine what would have happened can lead to unsupported speculation and guesswork. The complexity of construction performance, especially in large projects, makes it difficult to determine what has happened.

As a result, claims measurement uses rough approximations that may be all that is available. This chapter reveals a constant tension between demanding specific and solid proof and the willingness to use formulas or approximations.

Measurement of claims and remedies for breach of the construction contract have generated a sea of reported case decisions from the fifty U.S. jurisdictions and the federal courts. The differing judicial attitudes toward claims, the multitude of American jurisdictions, and the inevitable factual variations make generalizations treacherous, except at the most abstract levels. Although the basic principle of compensation is the foundation of claims

measurement (except for the increasing use of punitive damages), implementing the compensation objective can invoke different formulas. This chapter describes the varying rules, discusses the reasons behind them, provides illustrations, and notes trends.

SECTION 27.02 Measurement: Contractor Versus Owner

A. Illustrations

Claims by contractors against owners can arise in many contexts. The principal claims are based on the following:

1. refusal to award the contract to the successful bidder
2. refusal of the owner to permit the contractor to commence performance after the contract has been awarded
3. wrongfully terminating the contractor's right to perform during performance
4. committing acts that justify the contractor in ceasing performance
5. failing to pay the contractor for work performed under the contract
6. committing acts that increase the contractor's cost of performance

B. Cost Contracts

This section does not deal with claims by the contractor for additional compensation under cost contracts. Usually such claims are based on assertions that costs were incurred and that the owner's payment did not cover those costs. Those questions generally involve factual

¹See Section 6.04.

determinations of whether particular work was done or whether it was called for under the contract and the value of the work performed. Although the contractor must establish the particular work done and its cost, the owner has the burden of showing that the cost of particular work was unreasonable.² The purpose of the cost contract is to place the risk of costs incurred on the owner.

C. Project Never Commenced

Section 27.02 describes the measure of recovery granted a claimant contractor that begins performance but does not complete performance (D and E) or contractor claims after it has completed (F). This Section examines contractor claims when it has not begun to perform. Failure to commence performance may result from not being awarded the contract to which it was entitled in a competitively bid process. Failure to begin performance may also result from the owner repudiating the contract without legal justification. The owner may simply state it does not wish to receive performance.

The contractor is entitled to protection of its expectation interest.³ This would put it in the position it would have been had it been allowed to complete performance. Had it performed, it would have received the contract price. But from that would be subtracted the expense saved, the cost of performance. The difference would have been the contractor's profit on the project.

*Horsfield Construction, Inc. v. Dubuque County, Iowa*⁴ involved a competitively bid repaving contract. The contract price was \$1,260,000 (all amounts approximations). The contractor claimed its costs would have been \$750,000 resulting in a gross profit of \$510,000. It sought to protect its expectation interest, its profit on the contract.

The trial judge (this is a trial court opinion) rejected the defendant's claim that this should be reduced by any amount

that the contractor earned on other work it performed during the time it would have spent on this contract. Profit on the other work performed was not caused by the breach as the contractor could have performed both the original and the additional work.

The gross payments would be reduced by the contractor's direct cost of performance, such as "material, subcontract, labor and equipment costs." There was no deduction for overhead as this "would be constant whether the contract was performed or not."⁵ There was no showing that overhead costs would be increased had the contractor performed this contract.

The judge also rejected the defendant's claim that it failed to mitigate its damages by not submitting the same bid on a re-bid.⁶ The contractor had no obligation to lower its bid on the re-bid. Whether the contractor would have won the re-bid is too speculative.

But not all arrows shot by the defendant missed the mark. It claimed that the contractor's price prediction did not take into account "a single adverse circumstance." The contractor's vice president testified that it would add a 15 to 20% contingency for unforeseen circumstances.⁷

The judge also had difficulty with the 40.1% gross profit submitted by the contractor.⁸ The evidence showed that in the past three years its profit margin was 27%. But the contractor responded that in paving contracts it made an average of 35% profit. The judge accepted the contractor's explanation for the greater profitability in paving contracts.

The defendant's attempt to reduce the award by taxes that would be paid was rejected by the judge.

The judge used expert testimony as a basis for concluding that the gross profit would have been 35%. The judge reduced the damage award to \$442,000, plus interest from the time it should have been awarded the contract.

D. Project Partially Completed: Damages

The damages award should place the contractor in the position it *would* have been in had the owner performed in accordance with the contract. Three possible formulas,

²*Sloane v. Malcolm Price, Inc.*, 339 A.2d 43 (D.C.App.1975).

³See Section 6.05.

⁴2003 Westlaw 24141325 (Iowa Dist.2003). An earlier stage of this dispute involved the issue of whether the contractor had a valid claim despite no formal contract having been made. The Iowa Supreme Court held that the contractor had a valid claim and sent the case back to the trial court to determine damages. 653 N.W.2d 563 (Iowa 2002). This case is noted in Section 18.04G. The opinion of the trial court judge on remand is described in the text. A trial court decision does not create a precedent. But it provides a valuable illustration of how damages are computed in a real case. It is not reported in the *Northwest Regional Reporter*.

⁵See Section 27.03F for an analysis of extended home office overhead in a claim by a contractor who has completed performance.

⁶See Section 27.07.

⁷See Section 25.04.

⁸Profits on contracts other than the one in dispute will be discussed in Section 27.06C.

which for convenience are referred to as Formulas 1, 2, and 3, can determine the amount of recovery.

Formula 1 determines what *would* have happened by awarding the contractor the contract price. This is the amount the contractor *would* have had on completion. But from this amount the cost of completion must be deducted.⁹ This expense is saved by the breach. Progress payments received also must be deducted. Completion cost is what a reasonably prudent contractor in the contractor's position would have had to spend to complete the work.¹⁰

A contractor who finds it difficult to prove what its costs *would have* been can use the costs of a successor, provided those costs were reasonable.¹¹ If the owner can establish that the contractor would have sustained a loss had it completed the project, this loss will be deducted from the recovery.¹² (As seen in Section 27.02E, a deduction need not be made if the claim brought by the contractor is based on restitution.)

Formula 2 is the contractor's expenditures in part performance, including preparation, and, if the contractor can establish them, profits on the entire project.¹³ To illustrate Formulas 1 and 2, assume that a project has the following figures:

1. contract price—\$100,000
2. expenditures in part performance—\$60,000
3. cost of completion—\$30,000
4. progress payments received—\$50,000

Under Formula 1, the contractor would receive the following:

\$ 100,000	(contract price)
-30,000	(cost of completion)
\$ 70,000	
-50,000	(progress payments received)
\$ 20,000	(net recovery)

Under Formula 2, the recovery would be as follows:

\$ 60,000	(expenditures in part performance)
+10,000	(profits—\$100,000 contract price less \$90,000, total cost of project)
\$ 70,000	
-50,000	(progress payments received)
\$ 20,000	(net recovery)

The result using Formulas 1 and 2 is identical. But suppose expenditures in part performance were \$90,000. Had the contract been completely performed, the contractor would have lost \$20,000. Using Formula 2, the contractor would still receive \$20,000, inasmuch as the two principal items of the formula are not changed. However, the contractor has already expended \$90,000 and has received \$70,000 through progress payments (\$50,000) and the money award (\$20,000). This would create the same loss of \$20,000 that the contractor would have suffered had it completed the contract.

Formula 2—that is, expenditures in part performance plus profits or minus losses—would compute recovery as follows:

\$ 90,000	(expenditures in part performance)
-20,000	(loss that would have been suffered)
70,000	
-50,000	(progress payments received)
\$ 20,000	(net recovery)

Under Formula 2, the contractor would be in the same position as under Formula 1. The contractor expended \$90,000 and received \$70,000, leaving the same \$20,000 loss.

Formula 3 entitles the contractor to such proportion of the contract price as the cost of the work done bears to the entire cost of completing performance and, for the remaining portion of the work, the profit that would have been made on that work.¹⁴ Formula 3 should produce the same recovery on profitable contracts but will produce a different result in losing contracts. Formula 3 is rarely used, however, so detailed illustrations of its application will not be given.

Compensation can involve the difficult question of establishing lost profits. Some contracting systems make a sharp differentiation between profits on performed and unperformed work. For example, federal procurement policies rarely give recognition to the profit on unperformed work.¹⁵ However, the ordinary contract

measurement formulas that have been set forth do not make this differentiation. In such cases, the principal problem has been the standard of certainty required to recover lost profits.

Early case decisions took a negative view toward accepting lost profits as part of contract damages. Many cases held that profits could not be established for a new business.¹⁶ Even lost profits by someone in an existing business were closely scrutinized. Was the profit reasonably foreseeable by the contract parties at the time the contract was made? In contracts for the sale of goods, this often excluded recovery of unusual resale profits.

In construction contracts, however, the principal problem has been certainty. This is discussed in Section 27.04. How does the contractor establish not only the profits on work performed but also the profits on unperformed work? If it uses Formula 1—contract price less cost of completion—lost profits need not be established directly. However, what it would have cost to complete the project can often be difficult to show. As a result, more commonly, contractors use Formula 2—expenditures in part performance, coupled with profits. Although the former can be difficult to establish if the contractor has not kept good records, it is generally easier to prove than cost of completion. However, the contractor will have to establish profits.

E. Project Partially Completed: Restitution¹⁷

The law generally permits a contracting party who has not fully performed to use an alternative measure of recovery where the other party has committed a serious

breach.¹⁸ Breaches sufficiently serious to justify restitution have been failure to make progress payments,¹⁹ excessive changes,²⁰ and failure to perform those acts during performance that would allow the contractor to perform in the most expeditious way.²¹

Sometimes restitution through *quantum meruit* provides the basis for recovery to a contractor whose claim based upon its construction contract failed due to a lack of required certainty.²²

Expectation (discussed in Section 27.02D) looks forward and seeks to determine what would have happened had the parties completed performance. Restitution looks backward to the position the parties were in at the time they entered into the contract. In some contracts, this is accomplished by a party's returning any performance the other party may have conferred on it. In construction, actual restitution is ordinarily impracticable, as the work has been attached to the owner's land. Instead, the contractor is entitled to receive the value that its performance has benefited the owner, generally the reasonable value of the materials and labor it contributed to improving the owner's land.

Restitution should be measured objectively, with the contractor recovering an amount that equals what the owner would have had to pay to purchase the materials and services from one in the contractor's position at the time and place the services were rendered.²³ Ordinarily, the contractor seeks to introduce evidence of its actual costs incurred in performing its contractual obligations.

¹⁶J. FISCHER, UNDERSTANDING REMEDIES 62 (1999).

¹⁷One confusing aspect of restitution is the frequent mention of the term *quantum meruit*. Often courts state that a particular action is brought on a *quantum meruit*. Early in English legal history, a party seeking relief had to bring itself within the language of writs issued by public officials commanding persons to appear before one of the King's courts. One frequently used writ was *Assumpsit*. This writ was broken down into a number of subwrits, one of which was called *General Assumpsit*. Because of common usage of certain subwrits such as *General Assumpsit*, many of them became known as *Common Counts*. One of the *Common Counts* was given the name of *quantum meruit*, which usually dealt with a method of recovering for the reasonable value of services furnished the defendant at his request. It was used as a method of recovering for breach of contract and could be used when the claim was based on unjust enrichment. This book refers to restitution rather than *quantum meruit*, even though some courts still use that term in describing the process by which the plaintiff recovers based on benefit conferred rather than damages.

The court held that failure to agree upon one major term deprived the contract of certainty. Some courts would not reach this conclusion. See Section 5.06D.

²³*United States v. Algernon Blair, Inc.*, supra note 19.

Although this evidence is not conclusive, the court is likely to accept it unless the owner can establish that they were not market rate costs or that they were costs incurred to correct deficiencies chargeable to the contractor. One case affirmed a judgment for a subcontractor in its claim against the prime contractor by pointing to the opinion testimony of the subcontractor as to the direct costs and the court's examination of the site.²⁴ Another court looked at the bids submitted by unsuccessful bidders in determining the reasonable value of the services.²⁵

The contractor should be able to recover its overhead costs, as they are incurred by the contractor in improving the owner's land and should be considered as benefiting the owner.²⁶

Clearly, the contractor who seeks restitution cannot recover profit on unperformed work. The contractor has been allowed to recover profit on work that has been performed.²⁷ This profit would be included in what other contractors would have charged.²⁸

The most difficult problem relates to the effect of the contract price on the contractor's recovery. Should the court ignore the contract price, use it as evidence of the value of the benefit conferred, use the pro rata contract price to actually measure the recovery, or use the contract price to put a limit on the contractor's restitutionary claim? Although the general tendency has been to use the contract price only as evidence of value,²⁹ some cases have limited the contractor to the contract price.³⁰ Florida strikes a middle ground. It limits the claimant to the contract price unless the breach by the defendant is willful. If so, recovery can exceed the contract price.³¹

³¹*Ballard v. Krause*, 248 So.2d 233 (Fla.Dist.Ct.App.1971).

The effect of contract price on recovery has stirred great debate. The majority rule—that of giving the contract price only evidentiary effect—can allow a contractor who has entered into a losing contract to at least break even. One argument given to justify this result has been that the restitutionary principle (that is, looking backward and avoiding unjust enrichment) has as much validity as expectation (that is, looking forward to what would have happened had the contract been performed properly). Another justification for the majority rule is that an owner who has breached a contract should not be able to take advantage of the contract price. A reason frequently given is that the expenses most likely exceed the contract price because of breaches by the owner. Perhaps—most persuasive—restitution not limited to the contract price is relatively easy to administer. If expectation (discussed in Section 27.02D) were used, losses would be deducted. This computation would require a determination of cost of completion, often at best a guess. If the contract price is not controlling, all that is needed is to determine the reasonable value of the work performed.

Those who support using the contract price either to measure the value or to limit recovery point to the anomaly that can result if the contractor does complete performance. Restitution cannot be used if the contractor has completed performance and all that is left is for the owner to pay the balance of the contract price. If the owner's breach has caused the contractor to lose money, the contractor must establish such losses. (As shall be seen, various crude formulas are sometimes allowed, making proof easier. See Section 27.02F.) Barring the owner from using the contract price because it has breached does not take into account the possibility or even the likelihood that the question of breach has been a close one, with much fault attributable to both parties. Why take away the benefit of the bargain made by the owner because it is ultimately determined that the owner has breached?

The difficulty with the majority rule is that it can encourage a contractor in a losing contract to claim that it has adequate grounds for termination and to stop work. If it continues to perform, it will almost certainly lose money and face difficult problems if it seeks to recover compensation based on breaches by the owner. If it stops and claims the right to terminate, it runs the risk that it will be found to be in default and have to pay heavy damages. These damages may be no greater, however, than the contractor will suffer if it continues to perform a losing contract when there is very little hope of turning things around.

In the confusion of a construction dispute in court, a good chance exists that the contractor may be exonerated.

One method for handling this use of restitution is to examine the nature of the conduct of each party. If the contractor's claim of material breach by the owner is a tactic to allow the contractor to bail out of a losing contract that resulted from causes that are the responsibility of the contractor, restitution does not seem attractive. Since restitution requires that the contractor show that the owner has committed a serious, and in some states even a willful breach, restitution gives the contractor the reasonable value of its services. This allows the contractor to avoid having to prove its damages caused by such breach.³²

It is important to consider the reasons for the contract being a losing one. A losing contract can result from incompetent estimating by the contractor, its taking on a losing contract deliberately, its inability to perform efficiently, or the occurrence of events that fall within the contractor's zone of risk. If so, it is difficult to justify restitution and its disregard of the contract price.

Restitution requires that the contractor show the reasonable value of its services that benefited the owner. A loss that resulted from the contractor's poor performance should be reflected in the proof as to the reasonable value of the services. A loss that resulted from poor estimating or deliberately making a losing contract (to keep the workforce together or learn new skills) also will be reflected in the evidence that establishes the reasonable value of the contractor's services. This operates as a check against the unjust use of restitution.

Most restitution claims are based upon the owner's failure to pay the contractor as required by the contract.³³ It is the most important owner obligation. The importance of payment is reflected in the remedies granted the contractor when payment is not made, such as the invocation of prompt payment statutes³⁴ or the power to suspend³⁵ or terminate.³⁶ Another powerful incentive for the owner to pay is to avoid granting the contractor the remedy of restitution, including the ability to by-pass the contract price.

If full performance precludes use of restitution and the loss resulted from breaches by the owner, the contractor must, as indicated, show the specific damages resulting

from each breach. As shall be seen in Section 27.02F, in some cases, the contractor may be able to surmount this obstacle by use of one of the global formulas: such as total cost, modified total cost, or the jury verdict.

This section has discussed restitution as a method for measuring the recovery for breach of contract. In *C. Norman Peterson Co. v. Container Corp. of America*,³⁷ restitution, including an allowance for overhead and profit, was granted a contractor based on an "implied" agreement to abandon the original cost contract with its guaranteed maximum price coupled with the subsequent "implicit" understanding by the parties that the parties would proceed on a *quantum meruit* basis. These implications resulted from an incomplete design and vast number of changes.³⁸

F. Project Completed: *Complete General Construction Co. v. Ohio Department of Transportation and New Pueblo Constructors v. State of Arizona*

Denial of Restitution. A contractor who has fully performed but has not been paid the balance of the contract price cannot measure its recovery by the reasonable value of its services.³⁹ This contractor recovers only the unpaid balance of the contract price and any other losses it can prove.

Limitation on the restitutionary remedy is sometimes justified on historic grounds. However, the modern justification is the ease of using the contract price as a measure compared with making the more complicated factual determination of the reasonable value of the services. Here, unlike the past performance discussed in Section 27.02E, there is no need to determine value.

Site Chaos and Productivity. Most complex construction contract disputes involve claims by the contractor who has completed the project are not, as a rule, for the unpaid balance of the contract price (it has probably been paid), but instead for the additional costs it incurred. The contractor asserts that defective specifications required it to perform

³⁷Supra note 27. But see *Hensel Phelps v. King County*, 57 Wash.App. 170, 787 P.2d 58 (1990) (*quantum meruit* not allowed where contract exculpated owner or provided relief such as equitable adjustments and time extensions).

³⁸This case and the California cases decided subsequent to it are discussed in Sweet, *The Amelco Case: California Bars Abandonment Claims in Public Contracts*, 32 Pub.Cont.L.J. 285 (2003).

³⁹See supra note 18.

in an inefficient and costly manner, and, most important, that unexcused delays caused by the owner increased its cost of performance.

The problems of defective specifications and unforeseen subsurface conditions, to the extent that they do not involve delay, cause less difficulty. It is not difficult, comparatively speaking, to establish the value of additional services and materials that were necessary because of defective specifications or unforeseen subsurface conditions. Even more, in the case of claims based on unforeseen subsurface conditions, the justification for additional compensation is usually based on a differing site conditions clause, which either may contain a formula for measuring the additional compensation or has developed legal rules that provide a solution for measuring compensation. (Where delay does result, the crude formulas for measuring damages such as total cost, modified total cost, jury verdict, and extended home office overhead may have to be applied.)

However, the greatest difficulty arises in cases where the contractor claims it had to perform work in an inefficient manner mainly because of excessive changes by the owner or administrative incompetence of the owner or someone for whose conduct it is responsible. To set the scene, a court facing such a claim stated,

We note parenthetically and at the outset that, except in the middle of a battlefield, nowhere must men coordinate the movement of other men and all materials in the midst of such chaos and with such limited certainty of present facts and future occurrences as in a huge construction project such as the building of this 100 million dollar hospital. Even the most painstaking planning frequently turns out to be mere conjecture and accommodation to changes must necessarily be of the rough, quick and *ad hoc* sort, analogous to ever-changing commands on the battlefield. Further, it is a difficult task for a court to be able to examine testimony and evidence in the quiet of a courtroom several years later concerning such confusion and then extract from them a determination of precisely when the disorder and constant readjustment, which is to be expected by any subcontractor on a job site, become so extreme, so debilitating and so unreasonable as to constitute a breach of contract between a contractor and a subcontractor. This was the formidable undertaking faced by the trial judge in the instant case and which we now review on the record made by the parties before him.⁴⁰

⁴⁰*Blake Constr. Co. v. C. J. Coakley Co.*, 431 A.2d 569, 575 (D.C. App.1981).

*Walter Kidde Constructors, Inc. v. State*⁴¹ involved a contractor (Kidde-Briscoe) claim in a dispute over a project that finished almost 900 days later than planned. Much of the responsibility fell on the public owner. The owner failed to make certain parts of the site available as promised. It issued many hold orders that substantially interfered with and disrupted construction while plans were being redesigned. It was late in processing change orders and approving shop drawings while still insisting that the contractors accelerate their work under threat of imposing \$250-per-day penalty for not completing within the time requirements of the contract. In describing the effect of these delays, the court stated,

The long delay in completing construction had a devastating impact on Kidde-Briscoe. They were not only required to provide labor and materials far in excess of and different from that called for in the original contract but to perform work out of sequence at an accelerated rate and in a manner not planned and not utilized under normal conditions. The unanticipated almost two and a half years of delayed construction extended through a period of increasing inflation and escalation in labor rates and material costs, through two winters with adverse building conditions and into a time when Kidde-Briscoe was faced with an 89 day regional strike by the sheet metal workers and 137 day regional strike by the plumbers union.

A computation of the consequent damages to Kidde-Briscoe involves damages of two sorts: (a) delay damages due to the extended periods of field and home office overhead and (b) damages due to disruption, loss of productivity, inefficiency, acceleration and escalation.

In addition to the items noted in the *Walter Kidde* decision, contractors often claim and are sometimes awarded the following:⁴²

1. idleness and underemployment of facilities, equipment, and labor
2. increased cost and scarcity of labor and materials
3. use of more expensive modes of operation
4. stopgap work needed to prevent deterioration

⁴¹37 Conn.Supp. 50, 434 A.2d 962, 977 (1981).

⁴²For an opinion that illustrates a claim involving a large number of these items, see *Contracting & Material Co. v. City of Chicago*, 20 Ill. App.3d 684, 314 N.E.2d 598 (1974). The opinion was reversed by the Illinois Supreme Court for failure by the contractor to comply with a contractual condition precedent of working double shifts, 64 Ill.2d 21, 349 N.E.2d 389 (1976), but the facts provide a good illustration.

5. shutdown and restarting costs
6. maintenance
7. supervision
8. equipment and machinery rentals and cost of handling and moving
9. travel
10. bond and insurance premiums
11. interest

In the *Walter Kidde* decision just discussed, the court stated that damages could include loss of productivity and inefficiency. *Luria Bros. & Co., Inc. v. United States*,⁴³ discussed a claim by a contractor that the defendant's delay had caused diminished productivity of its workforce. The workers were required to work during severe winter conditions as well as under adverse water conditions as a result of constant revisions in the contract drawings that resulted in confusion and interruption of the orderly progress of the work.

The court noted that loss of productivity can rarely be proven by books and records and that it almost always must be proven by opinions of expert witnesses. But any expression of opinion will be looked at skeptically if no further evidence supports that opinion or provides a sufficient basis for making a reasonable approximation of damages.

The plaintiff presented testimony of an expert witness. Although the court found the witness was competent and well qualified to express an opinion, it did note that the witness had been a former employee of the contractor and that he might have "a certain predilection for his old employer"⁴⁴ and might have "wanted to 'help them out' all he could."⁴⁵ The witness testified that productivity was reduced, because men had to work outside on trench excavations and foundation construction in winter weather. This required the men to wear gloves and warmer clothing and work on frozen or extremely wet ground. The witness estimated that the loss of productivity during this period was 33⅓ percent, and as to other periods, he estimated the loss of productivity between 25 and 20 percent.

The court, although noting that the testimony had not been rebutted, observed that these percentages were merely estimates based on observation and experience. The court reduced the estimates from 33⅓ percent to 20 percent, from 25 percent to 10 percent, and from 20 percent to 10 percent, respectively.

Extended Home Office Overhead: Eichleay Formula. The *Luria* case also involved an award for extended home office overhead. This has been one of the more complicated questions in measuring damages for owner breach, particularly in the field of federal procurement.

Contractors seek to use the *Eichleay* formula to measure extended home office overhead. The claimant must submit proof that (1) a government-caused delay extended the contract completion date; (2) the contractor was required to be on standby for an uncertain period of time; and (3) the contractor was unable to take on replacement or substitute work during the delay.⁴⁶ Proof of the elements is, to a large degree, in the hands of accountants employed as expert witnesses and requires careful understanding of job site overhead, home office overhead, fixed overhead costs, variable overhead costs, and unabsorbed home office overhead.

When a contractor bids for construction work, it usually takes into account not only job site overhead but also home office overhead. Many decisions of the federal boards of appeal and the old Court of Claims dealt with the question of home office overhead costs incurred after the original contract completion date and caused by compensable delays during the project. Home office overhead includes costs that are incurred to the mutual benefit of all contracts and cannot be tied to a specific project. One commentator stated,

Costs which are normally included are: executive and clerical salaries, outside legal and accounting expense, mortgage expense, rent, depreciation, property taxes, insurance, utilities/telephone, auto/travel, professional and trade licenses and fees, employee recruitment, relocation, training and education, photocopying, data processing, office supplies, postage, books and periodicals, miscellaneous general and administrative expenses, advertising, interest on borrowing and other financial costs, entertainment, contributions and donations, bad debts, losses on other contracts, and bid and proposal costs.⁴⁷

Under various federal regulations, some of these costs cannot be included in home office overhead. Illustrations are advertising, interest on borrowing, entertainment costs, and contributions and donations.

⁴³177 Ct.Cl. 676, 369 F.2d 701 (1966).

⁴⁷Long, *Extended Home Office Overhead Damages*, VI KC News, No. 2, June 1989, p. 1.

The *Complete General* case reproduced in this section explains and analyzes the *Eichleay* formula for allocating extended home office overhead when the government agency causes an indefinite suspension in the contractor's performance. But it is important to recognize at the outset that an *Eichleay* claim is based on unabsorbed home office overhead, an indirect cost. When work is suspended indefinitely, the contractor has been placed on "standby." Though its indirect costs continue to run, it is not receiving payments against which these indirect costs can be charged. But if the contractor can use its

resources to take on other work, that work can absorb the indirect costs. In that case there are no unabsorbed overhead costs and no *Eichleay* claim. But if the replacement work absorbs part of the indirect overhead, the contractor can recover the balance of the unabsorbed overhead incurred during the standby period under the *Eichleay* formula.⁴⁸

A recent Ohio case, distinguishing overhead costs and providing an approved formula that can be used as an alternative to the *Eichleay* formula, is reproduced in part at this point.

COMPLETE GENERAL CONSTRUCTION CO. v. OHIO DEPARTMENT OF TRANSPORTATION

Supreme Court of Ohio, 2002. 94 Ohio St.3d 54, 760 N.E.2d 364.

PFEIFER, J.

This case evolved out of a contractor's claim for additional costs on a highway construction project as a result of delays caused by the Ohio Department of Transportation ("ODOT"). The bulk of this case concerns the method of calculating unabsorbed home office overhead—the cost of running a contractor's home office during the delay period—and whether Ohio should adopt the "*Eichleay* formula," an equation employed by federal courts in determining such costs. The formula acquired its name from the Armed Services Board of Contract Appeals decision in *Eichleay Corp.* (1960), ASBCA No. 5183, 60-2 BCA ¶2688, 1960 WL 538, and "is the most well-known formula for calculating unabsorbed overhead" costs arising out of government-caused delay. Shapiro & Worthington, *Use of the Eichleay Formula to Calculate Unabsorbed Overhead for Government Caused Delay Under Manufacturing Contracts* (1996), 25 Pub.Contr.L.J. 513, 514. We hold that Ohio courts may use the *Eichleay* formula, with certain important modifications, in calculating such costs. We do not find that the *Eichleay* formula is the exclusive manner of determining unabsorbed home office overhead.

Factual Background

This action arises out of the construction of a stretch of I-670 from just north of downtown Columbus to Port Columbus International Airport. Construction of that portion of I-670 was broken into five sections, with each section being bid as a separate project. Appellee and cross-appellant, Complete General Construction Company ("Complete General"), successfully bid

on four of those five projects. One of those four, Project 56-91 ("the Project"), is the focus of this action.

The Project provided for the construction of I-670 from the Greater Columbus Convention Center to a point just west of I-71. The contract called for the construction of that stretch of highway, including the erection of three new bridges and the widening of another. Work on the Project began on March 15, 1991, with a slated completion date of August 31, 1992.

However, early on in the Project, design errors relating to the bridges and attributable to ODOT caused a seven-month delay. Due to the delay, on May 13, 1992, ODOT granted Complete General a twelve-month work extension, moving the completion date to August 31, 1993. While the actual delay was seven months, an extension to March 31, 1993, automatically triggered an additional five-month extension under the contract because the March date fell within the winter shutdown period.

Later, ODOT granted Complete General an additional sixty-day extension for other work not contemplated by the original contract, moving the completion date to October 31, 1993.

Following the completion of the Project, the parties entered into negotiations to compensate Complete General for costs it incurred as a result of the extension of the completion date. On October 31, 1996, they agreed that ODOT would pay Complete General \$177,662.47 as final compensation for all costs related to the contract extensions, except "home office overhead,

⁴⁸*Melka Marine, Inc. v. United States*, 187 F.3d 1370 (Fed.Cir.1999), cert. denied, 529 U.S. 1053 (2000).

interest, major equipment costs and bond costs.” The settlement was a part of Change Order 39. The parties continued negotiating on the unresolved issues.

On January 7, 1997, Complete General sued ODOT to recover unabsorbed home office overhead, idle equipment costs, extended equipment costs, and additional bond costs, as well as interest on all these costs from the time of completion of the Project. ODOT offered to pay Complete General \$196,410.34: \$182,500 for unabsorbed overhead, \$888.31 for bond costs, and \$13,022.03 for interest. Complete General accepted the amount as partial payment for the disputed claims, and continued on with its lawsuit. This partial settlement was memorialized in Change Order 40.

The parties tried the case before the Court of Claims beginning on April 13, 1998. On November 18, 1998, the court awarded Complete General \$374,231.08. The award broke down as follows: \$184,947 for unabsorbed home office overhead, \$62,622.50 for idle equipment costs, \$115,171.49 in interest on the overhead and idle equipment awards, and \$11,490.09 in additional bond costs. The court found for ODOT on Complete General’s claim for extended equipment costs, *i.e.*, costs for additional equipment time required beyond that originally allocated in Complete General’s bid.

[Ed. note: Discussion of idle equipment costs, interest, additional bond costs, and extended equipment costs omitted.]

Both parties appealed the decision of the Court of Claims. In its decision, the Franklin County Court of Appeals affirmed the judgment of the Court of Claims in part, reversed it in part, and remanded the cause for further proceedings.

The cause is before this court upon the allowance of a discretionary appeal and cross-appeal.

Law and Analysis

Both parties appeal aspects of the court of appeals’ decision. We resolve those issues below.

Unabsorbed Home Office Overhead

ODOT appeals this part of Complete General’s award based upon the lower courts’ reliance on the *Eichleay* formula for the calculation of home office overhead during the delay period.

Bids on construction projects incorporate two different kinds of costs. The first type, direct costs, include construction wages and equipment expenses and are attributed to specific projects. The second type, indirect costs, are the expenses involved in generally running a business, not attributable to any one project. The most significant indirect cost is home office overhead. Such costs typically include salaries of executive or administrative personnel, general insurance, rent, utilities, telephone, depreciation, professional fees, legal and accounting expenses, advertising, and

interest on loans. See *Interstate Gen. Govt. Contrs., Inc. v. West* (Fed.Cir.1993), 12 F.3d 1053, 1058.

Each project a contractor undertakes derives benefits from the home office, and each contributes to paying for home office overhead. Contractors typically do not apportion overhead costs among individual projects. Each project in some degree is responsible for the contractor’s costs of simply doing business, and each project plays its proportionate part in paying those costs. When a delay occurs on a particular construction project, that particular project ceases to carry its weight in regard to running the business, which can result in damages to the contractor. See Kauffman & Holman, *The Eichleay Formula: A Resilient Means for Recovering Unabsorbed Overhead* (1995), 24 Pub.Contr.L.J. 319, 320–321.

Assigning a value to a delayed project’s effect on home office overhead can be difficult. Calculating overhead costs allocable to a delay on a given project is generally achieved through the employment of a mathematical formula. The most prominent of those formulas, especially in the federal government context, is the *Eichleay* formula.

* * *

The *Eichleay* formula “seeks to equitably determine allocation of unabsorbed [home office] overhead to allow fair compensation of a contractor for government delay.” *Satellite Elec. Co. v. Dalton* (Fed.Cir.1997), 105 F.3d 1418, 1421, quoting *Wickham Contracting Co., Inc. v. Fischer* (Fed.Cir.1994), 12 F.3d 1574, 1578. The formula was developed in the federal court system, beginning in 1960 with *Eichleay Corp., supra*, ASBCA No. 5183, 60-2 CBA ¶2688, and has been adopted by the Federal Circuit Court of Appeals as the prevailing method for calculating home office overhead expenses attributable to owner-caused delay on federal contracts. *Wickham*, 12 F.3d at 1579–1581.

The *Eichleay* formula creates a *per diem* rate for overhead costs attributable to a single project, multiplying that rate by the number of days of delay to arrive at a total home office overhead award. *Wickham*, 12 F.3d at 1577 fn. 3. The formula is calculated as follows:

1. $(\text{Total billings for the contract at issue} / \text{Total billings from all contracts during the original contract period}) \times (\text{Total overhead during the original contract period}) = \text{Overhead Allocable to the Contract.}$
2. $(\text{Overhead Allocable to the Contract}) / (\text{Original planned length of the contract in days}) = \text{Daily Contract Overhead Rate.}$
3. $(\text{Daily Contract Overhead Rate}) \times (\text{Compensable period in days}) = \text{Unabsorbed Overhead Damages.}$

See *West v. All State Boiler, Inc.* (Fed.Cir.1998), 146 F.3d 1368, 1379, fn. 4.

[Ed. note: In 1 and 2 the slash mark (/) means “divided by.”]

The above is simply the mathematics for the *Eichleay* formula—an owner-caused delay in construction does not necessarily lead to an award of damages for home office overhead. Indeed, “recovery under the *Eichleay* formula is an extraordinary remedy designed to compensate a contractor for unabsorbed overhead costs that accrue when contract completion requires more time than originally anticipated because of government-caused delay.” *All State Boiler*, 146 F.3d at 1377.

Before the *Eichleay* formula may be applied, the contractor must demonstrate two important elements in order to establish a prima facie case for the award of damages. First, the contractor must demonstrate that it was on “standby.” *Interstate Gen. Govt. Contractors*, 12 F.3d at 1056. A contractor is on standby “when work on a project is suspended for a period of uncertain duration and the contractor can at any time be required to return to work immediately.” *All State Boiler*, 146 F.3d at 1373. In effect, the contractor is not working on the project, yet remains bound to the project. The contractor must be ready to immediately resume performance at any time.

The second element in a prima facie case is that the contractor must prove that it was unable to take on other work while on standby. *Id.* That is, the contractor must show that the uncertainty of the duration of the delay made it unable to commit to replacement work on another project. Impracticability, rather than impossibility, of other work is the standard, and the contractor is entitled to damages “only if its inability to take on additional work results from its standby status, *i.e.*, is attributable to the government.” (Emphasis *sic*) *Id.*, 146 F.3d at 1375, quoting *Satellite Elec. Co.*, 105 F.3d at 1421.

In establishing a prima facie case, then, a contractor demonstrates that it has committed a portion of its overhead costs to a particular project and that not only has the project’s suspension left those costs unabsorbed, but that the character of the government-caused delay is such that it is impractical for the contractor to obtain other work to fill the gap. Once the contractor commits resources to a project, the resources remain committed whether the project moves forward or not. The contractor is all geared up with nowhere to go.

That problem results in damages once the original contract period runs out and the extension period begins. At that point the contractor begins expending home office overhead on the project beyond what the contract had contemplated. It is important to note that a contractor may recover under *Eichleay* only if the suspension of the project results in the extension of the completion date. If the suspension does not affect the completion date, the contractor cannot claim damages because he

has not suffered any injury, *i.e.*, he spent the time he had originally allocated on the project. *All State Boiler*, 146 F.3d at 1379. Thus, as the court holds in *All State Boiler*, damages are measured based on the number of days the contractor continues to expend home office overhead on the project beyond what was allocated:

“Once the contract performance period extends beyond the initial deadline, indirect costs continue to accrue but the contractor has neither allocated them to the newly-extended contract nor is able to begin a new contract to absorb the next portion of these continuing costs.

* * *

The ordinary course of the contractor’s business is thus interrupted by the suspension; where normally the contractor would begin the next contract, to which a new portion of its indirect costs would be attributable, it is forced to extend performance on the old, suspended contract, while additional indirect costs accrue with no additional revenue to support them.” *All State Boiler*, 146 F.3d at 1379.

The government can rebut the contractor’s prima facie case for unabsorbed overhead damages by demonstrating either “(1) that it was not impractical for the contractor to obtain ‘replacement work’ during the delay, or (2) that the contractor’s inability to obtain such work, or to perform it, was not caused by the government’s suspension.” *Melka Marine, Inc. v. United States* (Fed.Cir.1999), 187 F.3d 1370, 1375.

ODOT argues that the *Eichleay* formula allows contractors to recover for breach of contract without establishing causation. To the contrary, we find that before the formula can be applied, a contractor must prove a rather extraordinary set of circumstances that by their very nature demonstrate causation and damages.

The *Eichleay* formula goes nowhere without causation. A contractor may recover only if there is an *owner-caused* construction delay. Moreover, the “standby” character of the delay must also be caused by the owner, and must prevent the contractor from finding replacement projects to cover the overhead.

The fact that a delay that creates an uncertain extension period causes damages for a contractor is axiomatic. The outlay of overhead on a delayed project increases as the time allotted for the project is extended. *Eichleay* starts with the proposition that all of a contractor’s projects share in a contractor’s home office overhead. It only follows that the suspension of a particular project creates a gap in the coverage of overhead costs. The fact that damages are caused by an owner’s breach is self-evident—the very nature of the formula requires that overhead costs are not replaced by another job.

Finally, as with any other contract claim, the contractor also has the duty to mitigate damages. Central to *Eichleay* is the

requirement that, if able, the contractor must take on other work to absorb the overhead allotted to the delayed project.

Thus, *Eichleay* does no violence to contract law. However, we agree with ODOT that differences between federal and Ohio public contracting law allow contractors to recover inappropriate costs when the *Eichleay* formula is applied in Ohio. Comparing federal and Ohio highway contracting systems is like comparing apples and orange barrels. The federal government has adopted the Federal Acquisition Regulations (“FARs”), which set forth “uniform policies and procedures for acquisition by all executive agencies.” Section 1.101, Title 48, C.F.R. Section 31.205-1 *et seq.* governs which costs are allowable and which are not. FAR prohibitions include interest on borrowings, *id.* at Section 31.205-20, entertainment expenses, Section 31.205-14, contributions and/or donations, Section 31.205-8, bid and proposal costs, 31.205-18, and bad debts, 31.205-3. See, generally, Section 31.205-1 *et seq.*, Title 48, C.F.R. Therefore, those types of costs go uncompensated in federal cases applying the *Eichleay* formula.

In general, these unrecognized costs are of the variety that do not bestow any benefit on the government owner in regard to the project at issue. The idea that the government should fund a contractor’s parties, sports tickets, political contributions, or other expenses that bring nothing tangible to the government’s project is unreasonable. Under the federal system, such costs are not included in recoverable overhead costs and should not be recoverable in an Ohio case applying the *Eichleay* formula.

Thus, we modify the use of the *Eichleay* formula in Ohio. Courts applying the formula must allow owners the opportunity to dispute particular items a contractor submits in an overall overhead cost presentation. Government agencies would do well to consider the FAR’s dissection of allowable and unallowable indirect costs, Sections 31.205-1 through 31.205-52, Title 48, C.F.R., for guidance.

We find today that the *Eichleay* formula is *one* way of determining unabsorbed home office overhead damages in public construction delay cases. Once it is determined that an owner-caused

delay has caused a contractor to suffer unabsorbed overhead costs, then the *Eichleay* formula can be employed, but not necessarily exclusively. For instance, a court could utilize the direct cost formula. The direct cost method compares the direct costs actually attributed to a project as a portion of all of the direct costs incurred by the business over a particular period. The result is a ratio by which the percentage of indirect costs can be calculated, including home office overhead applicable to a particular project. *Royal Elec. Constr. Co. v. Ohio State Univ.* (Dec. 21, 1993), Franklin App. Nos. 93AP-399 and 93AP-424, unreported, 1993 WL 532013, reversed on other grounds (1995), 73 Ohio St.3d 110, 652 N.E.2d 687.

We find that the trial court acted within its discretion in applying the *Eichleay* formula in this case and we defer to the trial court’s finding that Complete General did suffer unabsorbed home office overhead as a result of ODOT’s delay on the project at issue. We find that the court correctly measured Complete General’s damages stemming from the extension period. However, the court erred in applying the *Eichleay* formula without allowing ODOT to dispute items of overhead that did not bestow any benefit to the project at issue. Accordingly, we affirm the judgment of the court of appeals in part, reverse it in part, and remand the matter to the trial court for a determination of damages that makes specific findings regarding specific items of overhead disputed by ODOT. . . .

Conclusion

Accordingly, we reverse the judgment of the appellate court on the issue of home office overhead, idle equipment costs, and interest, and affirm the appellate court’s judgment on the issue of extended equipment costs. We remand the cause to the trial court for a determination consistent with this opinion.

Judgment affirmed in part, reversed in part and cause remanded.

MOYER, C. J., DOUGLAS, RESNICK, FRANCIS E. SWEENEY, SR. and LUNDBERG STRATTON, J. J., concur.

COOK, J., concurs in part and dissents in part.

[Ed. note: Concurring and dissenting opinion omitted.]

Courts have not been uniform in their treatment of methods by which a contractor can establish its damages for extended home office overhead. Some are strict in demanding accurate proof of the loss caused by the delay and are unwilling to allow formulas to be employed in place of strict proof requirements.⁴⁹ Others are more

willing to employ formulas such as the *Eichleay* formula, recognizing the difficulties of proof and being willing to give the contractor the benefit of the doubt.⁵⁰ (As noted in Section 27.06D, the documents the AIA issued in 1997 and continued in A201-2007, Section 15.1.6.2, would bar

⁴⁹*W. G. Cornell Co. etc. v. Ceramic Coating Co., Inc.*, 626 F.2d 990 (D.C.Cir. 1980); *Berley Industries, Inc. v. City of New York*, 45 N.Y.2d 683, 385 N.E.2d 281, 412 N.Y.S.2d 589 (1978).

⁵⁰*Southern New England Contracting Co. v. State*, 165 Conn. 644, 345 A.2d 550 (1974), followed in *Walter Kidde Constructors, Inc. v. State*, supra note 41. *Broward County v. Russell, Inc.*, 589 So.2d 983 (Fla. Dist. Ct.App.1991).

the contractor from recovering for extended home office overhead.) Strict application of certainty rules can make it difficult if not impossible for the contractor to establish the exact amount of its loss.⁵¹ To counter this, some courts have been willing to relax these rules by using formulas, such as the *Eichleay* formula, that, though not perfect, provide a rough way of measuring an undoubted but difficult-to-establish loss caused by the delay.

Productivity Loss Preferred Formulas: Measured Mile and Industry Productivity Studies. Before proceeding to the more controversial global formulas, two other techniques have been approved to measure productivity losses. The measured mile compares contractor productivity “in an undisputed area of work with the contractor’s productivity on a similar task during a disrupted work period.”⁵² One commentator suggests that while comparisons usually are made of activities on the same project, comparisons also can be made of work on a different project “involving the same or similar type of work.”⁵³ This method had been used on different, though similar, activities of the same project.⁵⁴

Another preferred method of proving diminished productivity is industry or trade productivity studies.⁵⁵

Total Cost. Some contractors seek to use an even rougher formula than those that have been noted in this section. A contractor faced with the almost insurmountable obstacle of establishing actual losses knows it has lost money and feels its losses were attributable, not to its own poor estimating or inefficient performance, but to acts of the owner or to those for whom the owner is responsible. As a result, the contractor will sometimes seek to use what is called the *total cost method*, a comparison of the actual

costs of performance with what the contractor contends should have been the cost of the project.

Some courts have not been willing to accept the total cost formula because it assumes that the defendant’s breaches caused all the expenditures in excess of the original estimate, that the original estimate accurately represented the cost of performance, and that the contractor efficiently performed its work.⁵⁶ Although the Court of Claims allowed this method in *WRB Corporation v. United States*, it placed limits on possible abuse by requiring proof that

- (1) The nature of the particular losses make it impossible or highly impracticable to determine them with a reasonable degree of accuracy;
- (2) The plaintiff’s bid or estimate was realistic;
- (3) Its actual costs were reasonable; and
- (4) It was not responsible for the added expenses.⁵⁷

Pennsylvania will apply the total cost *only* if there are no other means of determining damages and the claimant has presented reasonably accurate evidence of the various costs incurred.⁵⁸

The *modified* total cost method seeks to avoid the crudeness of the total cost method. It focuses on the impacted work activities⁵⁹ and adjusts the original estimate to remove mistakes, inaccuracies, and work items not affected.

As to the reasonableness of the contractor’s original estimate, the second item noted in the *WRB* case noted above, one commentator stated that the original bid could be considered realistic by factors such as:

The experience of the person responsible for estimating the bid, the failure of a competitor to challenge the bid (on a public project), the relative similarity of competing bids, and the track record of the bidder on similar jobs. The very acceptance of the contractor’s bid should be seen as some proof of its reasonableness.⁶⁰

Koppers Co.*, 626 F.2d 324 (3d Cir.1980); *Seattle Western Indus., Inc. v. David A. Mowat Co.*, 110 Wash.2d 1, 750 P.2d 245 (1988) (deducted cost for which subcontractor claimant responsible).

⁶⁰Sobel, *The Modified Total Cost Method of Determining Damages*, 21 Constr. Lawyer, No 4, Fall 2001, p.p.3, 7

Yet the often insurmountable proof problems have led an increasing number of courts, often in road construction disputes, to recognize total cost where appropriate limitations are observed.⁶¹

Jury Verdict. Another rough measurement sometimes employed either in conjunction with a total cost theory or by itself is the jury verdict. The jury verdict seeks to employ the same educated guesswork used by a jury. This formula recognizes the inherently imprecise nature of

the proof that can be produced in such cases. However, a jury verdict can be used only where there is a clear proof of injury, there is no more reliable method for computing damages, and the evidence is sufficient to make a fair and reasonable approximation of damages.⁶² Inasmuch as these crude formulas depend heavily on the facts in a particular case, understanding their use requires that case decisions be examined. The following case, reproduced in part, involves these crude formulas and comes to the conclusion that using these formulas was appropriate.

NEW PUEBLO CONSTRUCTORS, INC. v. STATE OF ARIZONA

Supreme Court of Arizona, En Banc, 1985. 144 Ariz. 95, 696 P.2d 185.

[Ed. note: A catastrophic storm and unusually heavy rainfall caused extensive damage to road work. The contractor (NPC) performed corrective work and sued the state (ADOT) to recover its added expenses under a clause that relieved the contractor for “Acts of God.”]

* * *

III. THE MEASURE OF DAMAGES

The jury awarded damages of approximately \$201,000 in actual damages (without overhead) including the following amounts:

- | | |
|---|------------|
| 1. Cleaning and refurbishing medians and ditches | \$ 3,500 |
| 2. Replacing eroded material in the Anamax pit lost in the flood, including costs of hauling substitute material from the Duval pit to the Anamax pit | \$ 28,500 |
| 3. Restoring eroded and lost special backfill material | \$ 8,000 |
| 4. Restoring mineral aggregate from new area after flooding of the Agua Linda pit | \$ 102,000 |

⁶¹*Moorhead Constr. Co. v. City of Grand Forks*, 508 F.2d 1008 (8th Cir.1975); *C. Norman Peterson Co. v. Container Corp. of Am.*, supra note 27, but see *Amelco Elec. v. City of Thousand Oaks*, 27 Cal. 4th 228, 38 P.3d 1120, 115 Cal.Rptr.2d 900 (2000) (rejected total cost in claim against public entity); *Amp-Rite Elec. Co., Inc. v. Wheaton San. Dist.*, 220 Ill.App.3d 130, 580 N.E.2d 622, appeal denied, 143 Ill.2d 635, 587 N.E.2d 1011 (1992); *McKie v. Huntley*, 620 N.W.2d 599 (S.D.2000). For a comprehensive analysis, see Aaen, *The Total Cost Method of Calculating Damages in Construction Cases*, 22 Pac.L.J. 1185 (1991) (noting that majority of appellate cases accept total cost and illustrating various formulas).

- | | |
|---|--------------------------------|
| 5. Additional stripping of the Duval mineral aggregate pit | \$ 19,000 |
| 6. Dewatering of the Duval and Agua Linda mineral aggregate pit | <u>\$ 40,000</u>
\$ 201,000 |

The contractor kept records of the actual costs of the entire project but did not keep separate records of the actual costs of the rebuilding and rework caused by the weather, except for item #6.

* * *

When additional work is performed on construction projects, there are traditionally at least three ways of proving costs. Specifically:

1. *Actual cost.* Keeping separate records of the actual costs of additional work is the most reliable method of qualifying costs.

* * *

⁶²*Fattore Co. v. Metropolitan Sewerage Comm'n*, 505 F.2d 1 (7th Cir.1974) (approved jury verdict but warned that such formulas must require clear proof that the contractor has suffered a loss and that there was no more reliable method for computing damages); *Meva Corp. v. United States*, 206 Ct.Cl. 203, 511 F.2d 548 (1975); *State Department of Transp. v. Guy F. Atkinson Co.*, 187 Cal.App.3d 25, 231 Cal.Rptr. 382 (1986) (approved decision by arbitrator in a required judicial-like arbitration in claim against state entity who arbitrarily reduced award 35 percent from the highest claim estimates submitted by contractor); *State Highway Comm'n of Wyo. v. Brasel & Sims Constr. Co.*, 688 P.2d 871 (Wyo.1984); *Bechtel National Inc., NASA BCA No. 1186-7, 90-1 BCA ¶22,549.*

2. *Jury verdict.* Where the contractor cannot prove actual costs, the contractor may present evidence of the cost of additional work to the finder of fact including any actual cost data, accounting records, estimates by law and expert witnesses, and calculations from similar projects.

* * *

3. *Total cost.* Under certain circumstances, the contractor may subtract the estimated cost or bid of the entire project from the final cost of the entire project. The resulting figure is the amount claimed as damages.

* * *

Courts have resorted to the total cost method only under exceptional circumstances and then only as a last resort method. . . . This method of measuring costs suffers from many defects. By simply subtracting the bid estimate from the cost of the overall project, the total cost method:

- (a) presumes that the bid estimate was realistic;
- (b) can pass along costs to the state which might have been incurred despite the act of God or the other party's breach;
- (c) can reward the contractor's inefficiency, managerial ineptitude, financial difficulties and other failings by passing these costs along to the state.

* * *

To avoid these defects of the total cost method, NPC proposes a fourth method of measuring costs in construction contract cases.

4. *Modified total cost (or cost variance).* The original bid for a particular item of work is subtracted from the actual costs for this item of work, though both the bid and actual costs are limited and adjusted in the following manner. Damages are limited to only certain time intervals wherein the work was adversely affected by the weather. The actual costs are totaled only for these work activities affected by the weather and to only those cost accounts recording such work. The employee and machinery time used for a particular item of work is determined by reference to the superintendent's reports describing the weekly work performed, engineer's diaries, labor distribution reports, and equipment distribution reports. Actual costs which were otherwise compensated or unrelated to such work activity are eliminated. The original bid estimate is redetermined in the light of the actual unit costs for the month before and after the months adversely affected. The unit cost overrun for a particular work item during the rainy months would be multiplied by the total actual work performed to arrive at the cost of

rework. The adjusted estimate of the particular items of work in dispute is subtracted from the actual adjusted cost of this work only if: (1) the nature of the particular losses makes it impossible or highly impracticable to determine them with a reasonable degree of accuracy; (2) the contractor's bid was realistic; (3) his actual costs were reasonable; (4) the added expense was not caused by the contractor or by some cause for which he assumed the risk, but was proximately caused by the unforeseen circumstance or the other party's breach.

It is misleading to refer to this as a separate "method" for determining damages. Most courts refuse to apply the total cost method in the absence of the aforementioned circumstances. . . . Additionally, the acceptability of such a determination of damages involves a factual question as to how carefully the total cost method was modified to restrict its deficiencies. The trial judge must play an active role in this fact-bound inquiry in determining that the measure of damages is appropriate to the nature of the harm involved and that the specific estimates have been appropriately adjusted to avoid recovery of unrelated costs by the contractor.

* * *

First, a sufficient foundation for the use of the cost variance method has been established in this case. Most of the additional expenses were caused by an invisible, rising subterranean water table, so that segregating and precisely recording rework costs and original work costs was impracticable. Other cases have applied a similarly modified total method as a last resort method on similar facts. See *J. D. Hedin Construction Co. v. United States*, 171 Ct.Cl. 70, 85-88, 347 F.2d 235, 246-47 (1965) (contractor suffered weather-related damage during extended period of work caused by faulty and changed government specifications); *State Highway Comm'n v. Brasel & Sims Construction*, supra, 688 P.2d at 878-79 (contractor suffered increased expenses and delay due to failure of a state to supply adequate water and inferior quality of state supplied gravel); *Moorhead Construction Co. v. City of Grand Forks* [508 F.2d 1008 (8th Cir.1975)] (excess moisture and lack of soil compaction caused additional expense and are different than represented); *Thorn Construction Co. v. Utah Dept. of Transp.*, 598 P.2d 365 (Utah 1979) (additional expense is caused contractor by inferior quality of road material and it is necessary to excavate other materials at another pit).

Because the additional work was best performed concurrently with the principal contract work, it was not feasible in this situation to quantify the actual costs of rework.

* * *

Nor has ADOT shown that NPC's adjusted estimates of the costs of rework were unrealistic. NPC submitted the low bids on both the Tubac and Carmen projects and increased these estimates to reflect the costs actually experienced on the project. The jury obviously concluded that the weather was the cause of the contractor's cost overruns during the months in question. NPC did keep some actual cost records where it was feasible to do so, namely, for item #6 of the damages, the dewatering of the mineral aggregate pits.

* * *

NPC used the jury verdict method to determine damages for . . . additional stripping of the Duval aggregate pit. The use of the jury verdict method is appropriate when (1) the state is liable for a changed condition that increases the contractor's expenses, (2) due to circumstances beyond his control, the claimant cannot feasibly prove specific damages by a more reliable method, and (3) when there is sufficient evidence in the record to provide a reasonable basis for approximating the damages.

* * *

We also believe that there is sufficient foundation for the use of the jury verdict method. Courts have approved this method of damages on similar facts. *Metro Sewerage Comm'n v. R. W. Constr.*, supra, 78 Wis. at 466, 255 N.W.2d at 302 (contractor suffered increased costs due to dewatering of tunnel caused by artesian water not shown on specifications); *Foster Constr. v. United States*, 193 Ct.Cl. 587, 435 F.2d 873 (1970) (contractor caused additional expense of uncertain amount by misrepresented subsurface conditions in constructing pier). We believe

that the use of the jury verdict was appropriate in this case for much the same reasons that the use of the modified total cost method was warranted. We are far from unqualifiedly endorsing either the jury verdict or the modified total cost measure of damages. The availability of both measures of damage must be proven by the contractor. Neither measure of damages can be used where there is no excuse for the failure to keep track of actual costs. *Pickard's Sons Co. v. United States*, 209 Ct.Cl. 643, 532 F.2d 739 (1976); *Appeal of Soledad Enterprises, Inc.*, ASBCA 20376, 77-2 BCA 12757 (1977).

We do not believe that this is a case wherein the contractor inexcusably failed to keep track of costs because this was not feasible due to circumstances beyond his control. The case at bar is quite different from the cases cited in this respect. *Id.*

Nor can the contractor use the modified total cost method when there is sufficient evidence to use the jury verdict method.

* * *

The contractor cannot use the jury verdict method if he can prove only that the state caused part of the damages and cannot make a reasonable approximation of those damages. See *Electronic & Missile Facilities, Inc. v. United States*, 189 Ct.Cl. 237, 256-57, 416 F.2d 1345, 1357-58 (1969) (contractor was caused additional expense to remove contaminated gravel, but cannot reasonably approximate government causation of damages). Even on facts where the use of both these measures of damages is appropriate, they are subject to close judicial scrutiny to insure that the contractor does not receive a windfall. We find no error, however, on the facts of this case.

The *New Pueblo* case's apparent preference for the jury verdict over the one that measured the loss to the contractor by the modified total cost formula would not be shared by other courts. While the modified total cost formula even in its refined form is "rough," the jury verdict is even "rougher." Only if the modified total cost formula cannot be employed is it likely that the jury verdict would be the formula used by the court.

SECTION 27.03 Measurement: Owner Vs. Contractor

A. Illustrations

The principal measurement problems relate to the contractor's unjustified failure to start or complete the

project, to complete the project as specified, or to complete the project on time. Because the issues are similar—except for the uncompleted or defective work being on the owner's land, which raises unjust enrichment problems—this section will encompass claims by primes against subcontractors.

B. Project Never Begun

Damages are determined by subtracting the contract price from the market price of the work. Market price is usually based on the best competitive price that can be obtained from a successor contractor for the same work. Suppose the contract price were \$100,000 and the successor cost \$120,000. The owner would be entitled to \$20,000. This would protect its contract bargain.

Claims for lost bargains do not receive the protection that claims based on out-of-pocket losses do. It is conceivable that in a case of this type it would be concluded that there was no difference between contract and market price, no lost bargain, and no recovery for that element of the breach.

In addition to the expectation interest (loss of bargain), the owner would be entitled to any losses caused by the delay (discussed in Section 27.03E).

C. Project Partially Completed

Suppose the contractor ceases performance unjustifiably or is properly terminated by the owner. Restitution is one way of measuring the owner's claim. This measure seeks to restore the status quo as it existed at the time the contract was made. This can be accomplished by restoring to the owner any progress payments it has made to the contractor. From this is deducted the benefit to the owner of the partially completed project. However, the difficulty of measuring the benefit conferred may lead a court to conclude that restitution is not proper. For example, one case denied the owner restitution of its payments in a well-drilling contract in which the well produced 80 percent of the required amount of water.⁶³ In such a case, diminished expectation would be more appropriate. The owner would be entitled to the cost of performance that would generate the promised performance by the contractor, less the payments it had made.

When a fallout shelter leaked and finally caved in, the owner was allowed to recover progress payments.⁶⁴ To restore the status quo, the contractor would be entitled to deduct the extent to which its work added value to the land. The more likely event is that it added no value, with the owner being entitled to recover the cost of removing the shelter and restoring the land to its precontract condition.⁶⁵

Restitution is rarely used to measure owner claims in construction contract disputes. More commonly, failure to complete generates two types of damages: excess cost of procurement and damages for omitted or defective work. First, the owner very likely will have to pay more than the balance of the contract price to have the work completed by a successor.

⁶³*Village of Wells v. Layne-Minnesota Co.*, 240 Minn. 132, 60 N.W.2d 621 (1953).

⁶⁴*Economy Swimming Pool Co., Inc. v. Freeling*, 236 Ark. 888, 370 S.W.2d 438 (1963).

⁶⁵*Bougeois v. Arrow Fence Co.*, 592 So.2d 445 (La.App.1991) (addition so defective so as to be irreparable permitted owner to recover payments made and cost of demolition), writ denied, 596 So.2d 214 (La.1992).

Usually the cost of engaging a successor contractor or subcontractor will exceed the balance of the contract price outstanding. The successor will not, as a rule, be selected by competitive bidding, because of time constraints. Also, a successor will need to incur expenses to bring its own equipment and personnel to the site. It may also determine that it will need a premium to take into account that it may in the end be held liable for defective work performed by the original contractor. Similarly, it may worry about working with an owner with whom the original contractor had problems, no matter who may have been at fault in causing the termination. Finally, the refusal by the original contractor to continue work may be based on the belief that market forces make it advisable to use its resources elsewhere. The market may have risen.

The law would award the owner any excess costs in using a successor for doing the work required to be performed under the contract. This would put the owner in the position it would have been had the work been completed by the original contractor. The AIA in Document A201-2007, Section 14.2.4, codified this common law outcome. But that section also takes into account the unlikely possibility that the cost of completion by a successor may be less than the amount outstanding. In such a case Section 14.2.4 states "such excess shall be paid to the Contractor." A similar result would occur under A401-2007, Section 7.2.1, governing subcontracts.

In *Saxon Construction and Management Corp. v. Masterclean of North Carolina, Inc.*,⁶⁶ the cost of engaging a successor subcontractor was *much less* than the amount outstanding. The court does not state why this occurred. It may have been due to a blown-up original price, a shift in the market, a desire by the successor to get into a new market or sharp bargaining by the prime. In any event the contract required the prime to give the excess to the defaulting subcontractor. But the court found this outcome promotes waste, provides an incentive to breach, creates unjust enrichment, is unconscionable, and violates public policy.

Although arguments can be made for either outcome, the court refused unfortunately to enforce the clause. The clause properly reflected the concept that the breaching contractor is not a criminal deserving of punishment and

⁶⁶273 N.J.Super. 231, 641 A.2d 1056 (App.Div.), cert. denied, 137 N.J. 314, 645 A.2d 142 (1994). For the trial court opinion, see 273 N.J.Super. 374, 641 A.2d 1129 (Law.Div.1992).

the common law rule that the damages should simply put the claimant—here, the prime—in the position it would have been in had the contract been performed but not in a *better* position.

Second, in many cases, the work will have been performed defectively, and this too may justify additional compensation (discussed in Section 27.03D). Completion is likely to be delayed (delay damages are discussed in Section 27.03E).

D. Defective Performance: Correction Cost or Diminished Value?

Claims relating to defective performance may arise when a contractor has performed improperly, never having reached the level of substantial performance. This situation has been discussed in Section 22.06B. More commonly, defective performance cases involve attempts by the contractor to recover the balance of the contract price by alleging either substantial or full performance, the secondary issue being the deduction available to the owner if the work was only substantially performed.

The law seeks to place the owner in the position it would have occupied had the contractor performed properly. One way of doing so is by giving the owner the *cost of correction*—the amount necessary to correct the defective work or complete the work to bring it to the state required under the contract.

Another method of giving the owner what it was promised is to award the *diminished value*—the difference between the value of the project as defectively built and what it would have been worth had it been completed as promised. This measure gives the owner's balance sheet what it would have had by the time of full performance. This aim is achieved by combining the value of the project as it sits with the diminished-value measure of recovery because performance has been less than complete.

Each method presents problems. Suppose cost of correction is used, and the correction costs greatly exceed the value correction would add to the property. The likelihood that the owner will not use the money for this purpose presents the possibility that the money will be a windfall. The award would put the owner in a better position than if the contractor had performed properly. If the owner *did* correct defective work or complete the work when it would not be economically sound to do so, this would waste scarce societal resources.

But awarding diminished value deprives the owner of the performance bargained for and forces the owner to take an amount that is usually determined by the testimony of expert witnesses. Such testimony is expensive to procure and may not take into account the subjective expectations of the owner when it made the contract. In addition, this evidence is “softer” than the evidence of the cost of correcting the work. Finally, if the award is less than the cost of correction and the owner elects to correct or complete, the award will be inadequate.

Some courts have begun to speak of a “stigma” effect, a term taken from environmental remediation cases.⁶⁷ These cases involve mold or environmental hazards that may diminish the resale value of a sound and defect-free building.⁶⁸ The stigma effect is more likely to relate to cost of correction. In such cases, despite correcting the defect, the value of the property may be reduced, much like a car that has been in an accident or a house where a heinous murder has been committed. Buyers may be hesitant to buy because of the stigma attached to the house. The stigma factor means that the claim combines cost of correction with diminished value caused by the stigma.

Events that occur after the claim has arisen can create problems. Suppose the owner sells the house and cannot effectuate the repairs. One case held that the jury properly awarded the owner the costs of correction that exceeded diminished value despite the owner's having sold the house and being unable to correct the defects.⁶⁹ The court in effect held that the owner's right vested at the time of the wrongful act and was unaffected by subsequent events. Yet another case limited the owner to the diminished value as she could no longer correct the defects.⁷⁰

As a rule, the owner is entitled to the quality spelled out in the contract and no more. It is not entitled to a better or different house than it bargained for. But one case held the corrected work need not be the same as that called for under the contract.⁷¹ The case involved the failure of an earthen trench system. The owner was entitled

⁶⁷See Section 9.13.

⁶⁸*Vista Resorts, Inc. v. Goodyear Tire & Rubber Co.*, 117 P.3d 60 (Colo.App.2004), cert. denied, 2005 Westlaw 1864133 (Colo.2005) (defective radiant heating systems).

⁶⁹*St. Louis L.L.C. v. Final Touch Glass & Mirror, Inc.*, 386 N.J.Super.177, 899 A.2d 1018 (App.Div.2006). Similarly see *Vaughn v. Dame Constr. Co.*, 223 Cal.App.3d 144, 272 Cal.Rptr. 261 (1990) (owner did not lose her right to recover by subsequent sale).

⁷⁰*Wentworth v. Air Line Pilots Ass'n*, 336 A.2d 542 (D.C.App.1975).

⁷¹*Stovall v. Reliance Ins. Co.*, 278 Kan.777, 107 P.3d 1219 (2005).

to replacement damages to install the superior concrete shallow trench system where that cost would be less than installing a new earthen trench system.

Predictably, different jurisdictions will go off in different directions; there may even be contradictions within a particular jurisdiction. A few states employ only the cost of completion or correction. Some hold that diminished value is the only proper measure. Some states hold that the owner can elect to invoke either measure. A few hold that the proper measure of recovery is cost of correction or diminution in value, whichever is less.⁷² As shown in *Plante v. Jacobs*,⁷³ (reproduced in Section 22.06B), one formula can be applied to some items and the other to other items. If cost of correction will diminish the value, both can be applied.⁷⁴ Most states prefer the cost of correction measure unless it would generate “economic waste.”⁷⁵ One author stated,

“Economic waste” is primarily a result-oriented concept, not a fiscal one. Economic waste comes into play in those cases in which the defective building is still serviceable and useful to society. If repairs are possible but would completely destroy a substantial portion of the work, damage or injure good parts of the building, impair the building as a whole, or involve substantial tearing down and rebuilding, then that is “economic waste.”⁷⁶

⁷²*Thompson v. King Feed & Nutrition Service, Inc.*, 153 Wash.2d 447, 105 P.3d 378 (2005) (unless the building was entirely destroyed, rather than merely damaged).

⁷³10 Wis.2d 567, 103 N.W.2d 296 (1960).

⁷⁴*Italian Economic Corp. v. Community Eng'rs, Inc.*, 135 Misc.2d 209, 514 N.Y.S.2d 630 (1987) (structural repairs needed to comply with code reduced floor space and windows).

⁷⁵The many cases are collected in Annot., 41 A.L.R.4th 131 (1985). For some recent cases, see *Fisher v. Qualico Contracting Corp.*, 98 N.Y.2d 534, 779 N.E.2d 178, 749 N.Y.S.2d 467 (2002) (New York statute changing common law collateral source rule applied to property insurance payments and the New York rule using the measure that produces the lower amount); *Granite Constr. Co. v. United States*, 962 F.2d 998 (Fed. Cir.1992) (though material did not meet technical requirements of the specifications, it exceeded by 20 the safety factor for the overall project: diminution in value applied), cert. denied, 506 U.S. 1048 (1993); *City of Charlotte v. Skidmore, Owings, & Merrill*, 103 N.C.App. 667, 407 S.E.2d 571 (1991) (sidewalk deteriorated because of negligent design by architect; replacement value applied). See also Abney, *Determining Damages for Breach of Implied Warranties in Construction Defect Cases*, 16 Real Est. L.J. 210 (1988); Chomsky, *Of Spoil Pits and Swimming Pools: Reconsidering the Measure of Damages for Construction Contracts*, 75 Minn.L.Rev. 1445 (1991) (suggests that measure exceed diminution of market value if cost to complete too burdensome; wants all factors considered that relate to owner's loss and uses highest level consistent with fairness to the contractor).

⁷⁶Abney, supra note 75 at 218 (footnotes omitted).

The choice of an appropriate measure may also depend on whether either party, particularly the contractor, has acted in good faith. If there does not appear to have been a good reason for the deviation, there is a stronger likelihood that a measure preferable to the owner will be selected.⁷⁷

This topic was dealt with in Section 22.06B, which examined substantial performance. If the contractor has substantially performed, the owner can offset against the balance of the contract price the damages caused by the contractor's failure to perform the contract as promised. The offset sometimes is the cost of correction and sometimes the diminution in value or a combination of the two. Please review Section 22.06B.

The most difficult cases involve a residence constructed for the use of the owner. In one case, the contractor had installed discolored roofing shingles. The cost to correct this properly functioning roof by replacing the roofing material was estimated at between \$14,000 and \$25,000. The contractor contended that the shingles would ultimately weather to a uniform color and that the roof was not visible to passersby. The court concluded the measure of recovery to be \$7,500, based on diminution in value.⁷⁸

Another case involving the installation of a shingled roof concluded that the contractor had not substantially performed, because the roof had yellow streaks, although it was structurally sound and would protect the owner from the elements. The court concluded that in matters relating to homes and their decoration, taste or preference “almost approaching whimsy” may be controlling with the homeowner so that variations that under other circumstances might be considered trifling would preclude a finding that there had been substantial performance.⁷⁹ This gave the owner a defense to any contractor claim for

⁷⁷In *Kaiser v. Fishman*, 187 A.D.2d 623, 590 N.Y.S.2d 230 (1992), leave to appeal denied, 81 N.Y.2d 711, 619 N.E.2d 658, 601 N.Y.S.2d 580 (1993), the court affirmed an award for cost of correction that involved physically lifting the residence off its pilings and performing substantial corrective work, mainly because the contractor had deliberately failed to comply with the contract terms.

⁷⁸*Salem Towne Apartments, Inc. v. McDaniel & Sons Roofing Co.*, 330 F.Supp. 906 (E.D.N.C.1970). In *Orndorff v. Christiana Community Builders*, 217 Cal. App.3d 683, 266 Cal.Rptr. 193 (1990) homeowners were awarded repairs costs that exceeded the loss of market value by 2.5 percent.

⁷⁹*O. W. Grun Roofing & Constr. Co. v. Cope*, 529 S.W.2d 258 (Tex. Ct.App.1975).

the balance and a basis for an owner claim measured by the cost of replacing the roof.

As noted earlier, a combination of the two measures is appropriate. For example, some deviations can be measured by diminution in value, and others by cost of correction.⁸⁰ The two formulas can be applied together if the cost of correction will not achieve the outcome promised under the contract. For example, in one case, settling and slanting had been caused by a failure to sink piles far enough. The court held that the owner could recover not only the cost of doing as well as could be done to correct the problem but also the diminished value, as the cost of correction could never accomplish the contractual requirements.⁸¹

When cost of correction is used, several other factors must be considered. First, the cost of correction cannot be recovered if the corrective work includes work not called for under the original contract. In one case, replacing leaky gutters and downspouts with galvanized gutters was not the proper measure of recovery when aluminum had originally been called for.⁸² The measure should have been the cost of installing aluminum gutters that would have stopped the leaking, assuming this was the contractor's responsibility.

Suppose the original construction is in some way inherently defective or inadequate. Here, an award using the cost of repair standard may not require simply repairs, but the actual removal and replacement of the structure, with the new structure often being of better quality than the original. For example, in *Parsons v. Beaulieu* the defendant had contracted to build a septic tank for the plaintiff. The completed work did not comply with legal requirements. The plaintiff replaced the tank with a larger one that did comply. The court held that the defendant contractor had to pay for the cost of the larger septic tank because the original one would not function in a way that would meet the contractor's implied warranty. The court noted that the owner had installed the least expensive one that would meet the legal requirements. In the *Parsons* case,

the owner was not being put in a better position, as it had contracted for a tank that met the legal requirements.⁸³

Suppose the correction takes place a year after completion. Installing new materials and equipment can be said to put the owner in a better position than that bargained for. The old materials and equipment have used up some of their useful life, as they have depreciated. Generally, the law takes into account any extended life that replacement may give the owner.⁸⁴ But in *Dickerson Construction Co. v. Process Engineering Co., Inc.*,⁸⁵ the court refused to deduct any amount for extending the life of the building, inasmuch as the defects had been discovered only six months after completion.

At what point is the cost of correction determined? Usually it is at the time of the breach, assuming the owner knows of the defect and is in a position to have the defective work corrected. However, courts in some cases have used the time of trial as the benchmark for determining when the cost of correction should be computed. These courts looked at the highly inflationary period of the 1970s and noted that an award based on time of breach rendered years after the work has been completed would not put the owner in the position it would have been had the work been done correctly in the first place.⁸⁶

A similar problem can arise when the issue is diminution in value. A Florida case is instructive on this and other points: *Hourihan v. Grossman Holdings, Limited* involved a claim by the owners against a contractor for failure to build a house as promised. The owners contracted with the developer to purchase a house to be built in a planned development. Both the model and the office drawings showed the house with a southeast exposure, and the contract stated that the developer would construct the house "substantially the same" as in the plans and specifications or as in the model. A short time later, a new model and map went on display that showed the owners'

⁸⁵341 So.2d 646 (Miss.1977). Similarly, see *Five M. Palmer Trust v. Clover Contractors, Inc.*, 513 So.2d 364 (La.App.1987).

⁸⁶*Anchorage Asphalt Paving Co. v. Lewis*, 629 P.2d 65 (Alaska 1981); *Corbetta Constr. Co. of Illinois, Inc. v. Lake County Public Bldg. Comm'n.*, 64 Ill.App.3d 313, 381 N.E.2d 758 (1978) (contractor denied breach and refused to correct).

lot and to-be-built house facing the opposite direction from what they expected and wanted. The owners brought this discrepancy to the attention of the developer and demanded the construction of the house that they had contracted for. (They wanted the house facing a particular direction for aesthetic and energy-saving reasons.) The developer refused to change the plans and began constructing the house facing in the direction opposite of that expected by the owner.

The trial court refused to award any damages, finding that the cost of turning the house around would have been economically wasteful and out of proportion to the good to be attained. It also noted that the value of the house had risen above the contract price since the date of the contract.

The intermediate court of appeals applied a different measure of damages.⁸⁷ That court held that the economic waste doctrine does not apply to residential construction. It also found that the developer's willful and intentional failure to perform as promised barred it from using the substantial compliance doctrine. The court held that the proper damages would have been an amount necessary to reconstruct the dwelling to make it conform to the plans and specifications.

The Florida Supreme Court did not agree.⁸⁸ First, it noted that the proper remedy for breach of a construction contract is usually the reasonable cost of correction if this is possible and does not involve unreasonable economic waste. Where it does, the measure is the difference between the value of the product contracted for and the value of the performance received. The court saw no reason to separate residential buildings from other construction. The court concluded that repositioning the house would result in economic waste but held that the trial court had incorrectly applied the proper formula—diminution in value. The court stated that the measurement is to be determined at the date of breach. Fluctuations in value after breach do not affect the measure of recovery. (The house would have been worth even more had it been built properly.)

The *Grossman* case also reflects the difference between objective and subjective measurements of value. The

impersonal marketplace may not have found any difference in the house facing in one direction or the other. But the Hourihans did.

There is something to be said for the intermediate appeals court decision that refused to use the economic waste argument in residential construction.⁸⁹ Balance sheet gains or losses are appropriate for certain types of commercial ventures but hardly make sense when a couple is buying a home in which they expect to live.

The case also rejects, or at least seems to reject, the statement made in other cases that allows the economic waste measurement to be used only if the breach is not willful. Here the owners complained as soon as they noticed that the developer was starting to turn the house around, and the developer simply refused to make any change. To be sure, the developer might have wanted all the houses facing in a particular way and might have thought it had sufficient discretion to make that sort of change inasmuch as the contract stated that the house that was built would be *substantially* the same as the model and house as shown on the maps. Yet this could be classified as a willful and deliberate breach.

The assumption generally is that there are two possibilities, *diminished value* with the possibility of the idiosyncratic owner not getting what it wanted and *cost of correction*, with the possibility of excessive damages and economic waste. There is a third, though not as yet a formula that has achieved judicial recognition. Where either of the two accepted formulas would not achieve a just outcome, the court could award the owner the difference between what the work *should have cost* had it been done properly and the *actual cost*. This would prevent the contractor from being unjustly enriched when the owner cannot establish damages under either of the two accepted formulas.⁹⁰

E. Delay

Chapter 26 discussed the problems of delay, and Section 26.09B looked at contractual attempts to agree on damages in advance, liquidating damages. Delay was noted in Section 27.02F, dealing with contractor claims for

⁸⁷396 So.2d 753 (Fla.Dist.Ct.App.1981).

⁸⁸*Grossman Holdings, Ltd. v. Hourihan*, 414 So.2d 1037 (Fla.1982). The case before the intermediate appellate court was captioned (titled) *Hourihan v. Grossman Holdings, Ltd.* When the case was accepted for review by the Florida Supreme Court, the first party in the caption became the party seeking review. That was *Grossman Holdings, Ltd.*

⁸⁹*Edenfield v. Woodlawn Manor, Inc.*, 62 Tenn.Ct.App. 280, 462 S.W.2d 237 (1970). See *Orndorff v. Christiana Community Builders*, supra note 78.

⁹⁰For a discussion of this damages measure in England, see Wallace, *Cost of Repair or Diminution in Value: An Intermediate Measure? Or, the Too Shallow Deep End and How Both Sides Lost*, [1996] Int'l.Constr.L.Rev. 238.

unabsorbed home office costs. This section looks briefly at owner claims for unexcused contractor delay, delay claims that were not liquidated in the contract.

The basic measurement formula used for delay is lost use, measured as a rule by rental value.⁹¹ Suppose the owners made leases with tenants who could not be put into possession because of delayed construction. One case allowed the owner to recover for such rentals that were not paid.⁹² Other cases have concluded that no damages were suffered when the leases were extended to the full lease period, as long as the tenants made no claims against the owner for the delay.⁹³

The uncertainties over the lost rental value and other related expenses provide an incentive to liquidate damages for contractor-caused delay.

As noted in Section 27.06D, AIA documents issued in 1997 and continued in A201-2007, Section 15.1.6.2, contain waivers of consequential damages and limitations on liquidation of damages. Under these documents some of the losses suffered by the owner for lost use would not be recoverable and liquidation might prove difficult.

SECTION 27.04 Certainty

Please review Section 6.06B for background on the certainty requirement. Construction litigation can require adequate proof of the following:

1. contractor cost of performing the work
2. owner or contractor projected cost of completing the work
3. additional cost incurred by contractor because of owner disruption or delay
4. contractor profit on performed work, unperformed work, or other consequential damages
5. owner lost profit for delayed performance or faulty work

⁹¹Ryan v. Thurmond, 481 S.W.2d 199 (Tex.Ct.App.1972). See Miami Heart Institute v. Heery Architects & Engineers, Inc., 765 F.Supp. 1083 (S.D.Fla.), aff'd, 44 F.3d 1007 (11th Cir.1991), discussed in Section 12.14B, in which the court employed lost use value in a claim by an owner against its architect.

⁹²Herbert & Brooner Constr. Co. v. Golden, 499 S.W.2d 541 (Mo. App.1973).

⁹³Ryan v. Thurmond, supra note 91; Ralph D. Nelson Co. v. Beil, 671 P.2d 85 (Okla.App.1983) (owner may not keep property for full term of twenty-five-year lease).

As to item 1, a contractor who kept time records but who did not segregate them by jobs was able to prove how much should have been attributed to the defendant's project by testimony of his foreman.⁹⁴ Similarly, subcontractors are sometimes relieved from strict certainty proof.⁹⁵

However, a prime contractor was limited to the amount that it could prove by time cards for labor work performed after the defendant subcontractor had defaulted.⁹⁶ Similarly, an estimate by the owner as to the cost of correction was held inadequate to prove damages.⁹⁷

Item 2 is usually established by introducing evidence of estimates by other contractors or, even better, contracts for completion and correction.

As to item 3, see Section 27.02F.

As to item 4, although one court refused to award profits in a construction contract claim because of the lack of experience, personnel, equipment, and background of the contractor,⁹⁸ the principal questions have been the type of proof that will support a claim for lost profits. One court allowed a subcontractor to establish general profitability of the job.⁹⁹ Another submitted lost profits to the jury based on testimony of the president of the plaintiff contractor as to profits on other similar work, his method of estimating profits, and his expectation as to profits.¹⁰⁰ In the latter case, another witness had testified as to a range of profits. However, the appellate court reduced the judgment to the smallest profit that could be supported by the testimony.¹⁰¹

Court decisions are not always consistent as to the amount of certainty required to establish a loss. Some courts will not hold the claimant to a high standard of certainty if they are convinced that a loss has occurred,

⁹⁴Don Lloyd Builders, Inc. v. Paltrow, 133 Vt. 79, 330 A.2d 82 (1974).

⁹⁵St. Paul-Mercury Indem. Co. v. United States, 238 F.2d 917 (10th Cir.1956); McDowell-Purcell, Inc. v. Manhattan Constr. Co., 383 F.Supp. 802 (N.D.Ala.1974), aff'd, 515 F.2d 1181 (5th Cir.1975), cert. denied, 424 U.S. 915 (1976); Certain-Teed Products Corp. v. Goslee Roofing & Sheet Metal, Inc., 26 Md.App. 452, 339 A.2d 302, cert. denied, 276 Md. 739, 741 (1975).

⁹⁶Welch & Corr Constr. Corp. v. Wheeler, 470 F.2d 140 (1st Cir. 1972).

⁹⁷Gross v. Breaux, 144 So.2d 763 (La.App.1962).

⁹⁸Electric Service Co. of Duluth v. Lakehead Elec. Co., 291 Minn. 22, 189 N.W.2d 489 (1971).

⁹⁹Construction, Ltd. v. Brooks-Skinner Bldg. Co., 488 F.2d 427 (3d Cir.1973).

¹⁰⁰Natco, Inc. v. Williams Bros. Eng'g Co., 489 F.2d 639 (5th Cir. 1974).

¹⁰¹See Section 27.02D for formulas that include profit. For lost profit unconnected to this contract, see Section 27.06C.

that it has been caused by the defendant's breach, and that the claimant has marshaled the best available evidence. But other courts, particularly in cases in which the issue of breach is a close one and it appears that the defendant has performed in good faith, will use the certainty requirement to either limit or bar recovery.¹⁰²

In arbitration or other nonjudicial systems, certainty will be less of an obstacle to obtaining the amount claimed. Nonjudicial dispute resolution involves practical people aware of the realities of recordkeeping and more willing to guess, compromise, or use rough formulas in these intractable proof problems.

SECTION 27.05 Records and Notices

A. During Performance

The certainty requirement for establishing damages discussed in Section 27.04 demonstrates the importance of recordkeeping during performance of the contract. The contractor who seeks to prove the reasonable value of the labor and materials it has furnished will be in a substantially better position if it can produce accurate, detailed records of what it spent in performing the work. If it seeks to prove additional expenditures that it claims resulted from wrongful acts of the owner, it will be in a substantially better position if it can establish those costs that resulted from the breach by the owner. If it cannot do so, the contractor may be able to take advantage of crude formulas, such as total cost, modified total cost, or the jury verdict discussed in Section 27.02F. But the party that goes into settlement negotiations, arbitration, or litigation with the most complete and detailed records is in the best position to obtain an optimal settlement, award, or court judgment.

In addition, the contractor should keep and maintain its records on *other* contracts, particularly records that establish its worker productivity, scheduling, and profit margins.

A contractor who wishes to obtain a time extension for bad weather should maintain careful records of the weather conditions at the place of performance. This is particularly important to those who use AIA documents.

¹⁰²In *Huber, Hunt & Nichols, Inc. v. Moore*, 67 Cal.App.3d 278, 136 Cal.Rptr. 603 (1977), the court refused to admit computer costs records as they did not segregate costs incurred because of the breach.

A201-2007, Section 15.1.5.2, requires the contractor to produce records relating to weather and establish the effect weather had on its performance.

The importance of records is demonstrated in *Clark Construction Group, Inc.*¹⁰³ In dealing with an inefficiency claim by a subcontractor, the board pointed to the absence of daily logs, CPM fragments, correspondence, and other documentation that would support the disruption claim.

In another recent case failure to set up special accounts for investigative work barred a claim based upon the "total cost" method discussed in Section 27.02F.¹⁰⁴

One commentator indicated that this demonstrates a new trend in the Federal Boards of Contract Appeals to require documentary evidence supporting the alleged inefficiencies. This would consist of contemporary documents such as "daily reports, change order requests, RFIs [Ed. note: Request for Information.], project logs or journals, correspondence, and other types of project materials." He states that this evidence "must identify the impacts on which the claim is based, as well as the cause and even the effect of the impact on the contractor's work." He concludes that without this "contemporaneous documentary evidence" the contractor will have difficulty recovering its costs.¹⁰⁵

Recordkeeping is a prime motivation for having a full-time site representative.¹⁰⁶

B. After Dispute Arises

After a dispute has arisen, each party seeks to augment its records with the records of the other party to the dispute. Usually this is handled through discovery prior to trial.¹⁰⁷

Those who deal with public owners may be able to invoke the federal or any state freedom-of-information laws¹⁰⁸ or any federal or state constitutional due process

¹⁰³Supra note 54.

¹⁰⁸*De Maria Bldg. Co., Inc. v. Dept. of Management and Budget*, 159 Mich.App. 729, 407 N.W.2d 72 (1987). But see *Sea Crest Constr. Corp. v. Stubbing*, 82 A.D.2d 546, 442 N.Y.S.2d 130 (1981), which held that the correspondence between the public agency and its consultants was, with some exceptions, exempt and did not have to be disclosed. See also *Suffolk Constr. Co., Inc. v. Division of Capital Asset Management*, 449 Mass. 444, 870 N.E.2d 33 (2007) (Massachusetts public records law does not impliedly repeal the government's attorney-client privilege).

rights as a basis for obtaining relevant records of the public owner.¹⁰⁹

C. Notices

Notices play a crucial role in construction contract administration. As examples, Section 21.04G treats the frequent contractual requirement that the contractor must give a notice that it intends to request additional compensation, usually because it was ordered to do work not part of its contractual obligation. As noted in Section 25.06, if the contractor discovers unexpected subsurface conditions that justify additional compensation under a Differing Sites Condition (DSC) clause, it must notify the owner before conditions are disturbed. If the contractor seeks a time extension as discussed in Section 26.08C, it must give a notice. Other illustrations can be given, but it should be clear that notice requirements are often central to claims. Not giving a required notice can bar the claim.¹¹⁰

While the function of a notice depends upon the particular issue, all notices have a basic function. The notice system allows the person in control, usually the owner or the design professional, to make needed adjustments in its program to eliminate or lessen further losses. Notices are also needed to prepare for future claims and disputes, such as disputed changes, time extensions, or DSC claims. Notices should trigger an investigation while facts are fresh and before the claimant can create conditions to justify a spurious claim. Also, the absence of a notice may reflect on the honesty of the claimant and the legitimacy of the claim.

In specific cases the defense by an owner that the required notice was not given may seem like an excuse to avoid paying a legitimate claim. When this occurs, the person resolving the dispute may search for evidence that the notice requirement has been waived. While waiver is a handy tool to avoid barring what appears to be a just claim, those resolving disputes should be aware of the crucial role notices play.

¹⁰⁹*Zum Eng'rs v. State of California ex. rel. Dept. of Water Resources*, 69 Cal.App.3d 798, 138 Cal.Rptr. 478, cert. denied, 434 U.S. 985 (1977).

¹¹⁰Section 17.05 treats how notices are to be prepared, to whom they must be given, and when notice requirements are waived.

SECTION 27.06 Consequential Damages: Lost Profits

A. Defined

Direct losses can occur in any construction contract. They are usually measured by conventional objective formulas, such as lost use for unexcused contractor completion delay,¹¹¹ cost of correction or diminished value for other contractor defaults,¹¹² interest for owner-delayed payment,¹¹³ the balance of the purchase price for nonpayment, and the additional costs caused by owner disruption or delay.¹¹⁴

Before examining specific consequential damages claims, lost profits on the contract that has been breached must be distinguished from profits on other transactions that the claimant asserts it would have made had there been no breach of contract. The first were covered in Section 27.02D. There lost profits are part of the conventional formula for measuring the contractor's claim when the owner has breached. In this section profits lost on *other transactions* are examined.

Among the difficulties encountered in this Section are the different labels given to these claims by courts in different states. Some courts distinguish general from specific damages. Others differentiate direct from indirect damages. Some contrast generally accepted conventional formulas, such as part performance plus profits, from consequential damages.

Whatever the formula selected by the courts, the law must recognize the difference between normal, routine damages from unusual or unanticipated damages. If the damages are normal, routine damages, the claimant can plead them generally and proof of them is not subject to an elevated level of proof. If the damages claimed are special, indirect, or consequential, the law will establish hurdles that must be surmounted before there can be recovery. Consequential damages are more difficult to establish than direct losses.

One reason for carefully scrutinizing claims for consequential damages is the difficult issue of whether something that did not happen would have happened. Would the contractor have won the contracts it claims it lost because of the owner's breach? In such claims the law

¹¹¹See Section 26.09A.

¹¹²See Section 27.03D.

¹¹³See Sections 6.08 and 22.02L.

¹¹⁴See Section 27.02F.

must try to decide what *would* have happened. These are difficult issues to resolve.

In addition, the law seeks rules that enable contracting parties to know the extent of their exposure. They must know this if they are deciding whether to enter into the contract. Normal, general, routine damages can be expected and have to be taken into account when a party decides to make the contract and agree to its terms. Special, unusual, unforeseeable, consequential damages do not go into the planning calculus.

For these reasons, the legal doctrines relevant to consequential damages are foreseeability, discussed in Section 6.06C, and certainty, discussed in Sections 6.06B and 27.04.

B. Owner Claims

Generally, owners' consequential damage claims are for lost profits caused by delay in completing the project.¹¹⁵ Traditionally, recovery of lost profits was denied if the business in which the owner intended to engage was a new one, an inflexible application of the certainty rule.¹¹⁶ However, the modern tendency has been to treat this issue as any other issue and regard it as a question of fact that should be resolved based on relevant evidence.¹¹⁷

C. Contractor Claims

Generally, contractor claims are based on the loss of other business opportunities or business goodwill in general.¹¹⁸ Often claims for lost profits are made because the owner's conduct has reduced or impaired the contractor's bonding capacity. Most cases have denied these claims as being too

speculative.¹¹⁹ Some claims have been allowed in cases where the contractor could clearly establish a history of making consistent profits.¹²⁰ The contractor must also establish that these damages were reasonably foreseeable by the parties at the time the contract was made.¹²¹

As noted, many lost profit claims by contractors involve loss or reduction of their bonding capacity. Cases from California show the difficulty of predicting outcomes in these cases.

California faced this issue in *Lewis Jorge Construction Management, Inc. v. Pomona Unified School District*.¹²² The contractor claimed that the breach by the owner adversely affected its bonding capacity. It claimed that this caused it to lose profits on unidentified future projects. The California Supreme Court held that these were not general damages, that is, not routine, expected losses. They were special or consequential damages. Here the contractor did not establish the requirements for special damages as its proof was too general. Had the contractor showed it lost specific projects because of its loss of its bonding capacity, it could have recovered lost profits.

The court had its attention directed to a Montana case that had awarded damages in such a case.¹²³ The court was not obligated to follow a case from Montana. But it did note that that decision had not been followed outside Montana for 33 years and was distinguished even in Montana.¹²⁴ It was "one of kind" and at best a questionable precedent.

Yet three years later a California intermediate appeals court decided *BEGL Construction Co., Inc. v. Los Angeles Unified School District*.¹²⁵ The court distinguished the *Jorge* case, one basis being that the contractor in the *Jorge* case only showed evidence of unidentified projects, not specific projects lost.

¹¹⁶*Drs. Sellke & Conlon, Ltd. v. Twin Oaks Realty, Inc.*, 143 Ill.App.3d 168, 491 N.E.2d 912 (1986); *Exton Drive-In v. Home Indem. Co.*, 436 Pa. 480, 261 A.2d 319 (1969), cert. denied, 400 U.S. 819 (1970).

¹¹⁷*Mechanical Wholesale, Inc. v. Universal-Rundle Corp.*, 432 F.2d 228 (5th Cir.1970) (recovery not automatically excluded for new businesses); *Grossman v. Sea Air Towers, Ltd.*, 513 So.2d 686 (Fla. Dist. Ct. App.1987), review denied, 520 So.2d 584 (Fla.1988) (lost rents are reasonably certain in nature).

¹¹⁸*Larry Armbruster & Sons, Inc. v. State Public School Bldg. Auth.*, 505 A.2d 395 (Pa. Commw.1986), appeal denied, 115 Pa. 636, 520 A.2d 1386 (1987) (not established).

¹¹⁹*Indiana & Michigan Elec. Co. v. Terre Haute Indus., Inc.*, 507 N.E.2d 588 (Ind. Ct. App.1987).

¹²⁰*Tempo, Inc. v. Rapid Elec. Sales and Service, Inc.*, 132 Mich. App. 93, 347 N.W.2d 728 (1984).

¹²¹*Texas Power & Light Co. v. Barnhill*, 639 S.W.2d 331 (Tex. Ct. App. 1982) (owner aware of existence of collateral contracts).

¹²²34 Cal. 4th 960, 102 P.3d 257, 22 Cal. Rptr.3d 340 (2004), rehearing denied, Feb. 16, 2005.

¹²³*Laas v. Montana State Highway Comm'n*, 157 Mont. 121, 483 P.2d 699 (1971) (contractor had earned profit for past twenty-two years).

¹²⁴*Zook Bros. Constr. Co. v. State*, 171 Mont. 64, 556 P.2d 911 (1976).

¹²⁵154 Cal. App.4th 970, 66 Cal. Rptr.3d 110 (2007), rehearing denied Sep. 18, 2007, rev. denied and ordered not to be published Nov. 28, 2007. The history of this case demonstrates the uncertainty of the law in California as to lost profits.

B EGL introduced expert testimony that it is well-known that a surety will not bond a contractor that is having a dispute with its prior surety. While BEGL could not show specific projects lost because of its inability to become bonded, experts testified as to BEGL's profits.

Despite the *Jorge* case a contractor that has been wrongfully terminated and loses its bonding capacity has some chance of recovering lost profits on future projects if its case is properly presented.

The two cases do show that this issue is unsettled in California and probably elsewhere.

D. Waiver of Consequential Damages: AIA Approach

The uncertainty of liability exposure caused by the specter of large and often unquantifiable consequential damages often leads to contractual provisions that seek to bar such claims. In a commercial context, in dealings between commercial people who know what they are doing, such a clause will be very likely to be upheld.¹²⁶

Beginning in 1997 the American Institute of Architects included such waiver provisions (continued in 2007) in its principal documents for design and construction.¹²⁷ This decision was generated in part by a case in which a construction manager who received a fee of some \$600,000 was held liable in an arbitration award in favor of a casino for consequential damages of \$14.5 million.¹²⁸ But the AIA went farther than simply requiring waiver of such claims. It also gives *examples*:

1. damages incurred by the Owner for rental expenses, for losses of use, income, profit, financing, business and reputation, and for loss of management or employee productivity or of the services of such persons; and
2. damages incurred by the Contractor for principal office expenses including the compensation of personnel

¹²⁶For a trial court decision upholding such a clause in a commercial context, see *Department of Water and Power of L.A. v. ABB Power*, 902 F.Supp. 1178 (C.D.Cal.1995).

¹²⁷A201-2007, § 15.1.6., A401-2007 § 15.4, and B101-2007 § 8.1.3.

¹²⁸*Perini Corp. v. Grete Bay Hotel & Casino, Inc.*, 129 N.J. 479, 610 A.2d 364 (1992). Two years later the Supreme Court of New Jersey had second thoughts about its decision that had allowed a bit more room for judicial review of an arbitration award, even though it stated the normal rule that mistakes of law are not enough to upset the award. In *Tretina Printing, Inc. v. Fitzpatrick & Assoc. Inc.*, 135 N.J. 349, 640 A.2d 788 (1994), the court adopted a concurring opinion in the *Perini* case that limited the scope of judicial review. This case is discussed in Section 30.14.

stationed there, for losses of financing, business and reputation, and for loss of profit except anticipated profit arising directly from the Work.¹²⁹

Most important, A201-2007 excludes the much-debated home office overhead that generated the *Eichleay* formula.

During discussions with the Associated General Contractors (AGC), the latter contended that strong owners would bypass the prohibition by including harsh liquidated damages clauses. This discussion led to language in A201-1997, Paragraph 4.3.10, which, although allowing damage liquidation of "direct" damages, presumably would not allow liquidation of damages for breaches that could be classified as indirect or consequential.

This approach does not take into account the difficulties of determining what are *direct* damages that can be liquidated, the fact that it is in the area of consequential damages that liquidation is most needed, and that strong owners who want to reserve their right to recover consequential damages will simply strike Paragraph 4.3.10 (and now A201-2007, Section 15.1.6), assuming they know it is there.

SECTION 27.07 Avoidable Consequences: The Concept of Mitigation

The general dimensions of the mitigation doctrine (the claimant cannot recover damages that it could have reasonably avoided, sometimes called the "duty to mitigate damages") were discussed in Section 6.06D. Some defendants have invoked this concept in construction disputes. In *C.A.Davis, Inc. v. City of Miami*,¹³⁰ a defendant contractor sought to reduce the recovery by the owner by asserting that the owner spent more than was necessary to correct the contractor's work. The court held that the contractor could challenge the completion cost only if it could show waste, extravagance, or lack of good faith. It will be unusual for a court to conclude that expenses incurred by the claimant to correct defective work by the contractor were out of line and not recoverable. Yet one court did reduce an award because it concluded that overtime was not necessary and the claimant's refusal to allow

¹²⁹A201-2007, §§ 15.1.6.1, 15.1.6.2.

¹³⁰400 So.2d 536 (Fla.Dist.Ct.App.1981), petition for review denied, 411 So.2d 380 (Fla.1981).

the designer–builder to provide free engineering services was not justified.¹³¹

This doctrine was invoked, strangely, in *S. J. Groves & Sons Co. v. Warner Co.*, by a subcontractor in default who claimed the prime contractor should have fired the subcontractor.¹³² The prime contractor sought damages against the subcontractor, who had failed to supply ready-mixed concrete.

Trouble developed almost at the outset. The owner was forced repeatedly to reject the concrete supplied by the subcontractor. In addition, the subcontractor frequently failed to make deliveries in accordance with the prime contractor's instructions. The prime contractor considered using other sources but felt it had no real alternatives. Building its own plant would cost too much. The only other concrete source had not been certified to do state work, and its price was higher than that of the subcontractor. In addition, the only alternative source had limited facilities and trucks and the subcontractor continued to assure the prime contractor that things would improve.

Despite these promises, the subcontractor's performance continued to be erratic, and the public entity ordered all construction halted until the subcontractor's performance could be discussed at a conference. Again after renewed assurances that things would improve, the public entity allowed work to resume. For succeeding months, the subcontractor's performance continued to be uneven and unpredictable.

During performance, the prime contractor approached the alternate source, which by then had been certified by the state. The alternate source agreed to reduce its price to the same price as the subcontractor, but the prime contractor continued to use its subcontractor as its sole supplier.

Had the prime contractor acted reasonably in continuing to use the subcontractor despite its poor performance? The trial court concluded that the prime contractor had not, but the appellate court did not agree.

After noting that the breaching party had the burden of proving that the losses could have been avoided by reasonable effort, the court looked at the alternatives available to the prime contractor. One alternative was to simply terminate the subcontractor, an alternative the

court did not find realistic. Another alternative was for the prime contractor to set up its own cement-batching plant, an alternative the court found impractical because of time and expense. Another alternative was to accept the subcontractor's assurances that performance would be satisfactory in the future, the alternative selected. Another alternative was to use the alternate supplier as a supplemental source or as a substitute.

The appellate court concluded that all the alternatives had their drawbacks. Even if the alternate supplier had been engaged as a supplemental source, there was still no guarantee that the subcontractor would perform properly. The use of two suppliers might raise other problems, and there was a question as to whether the alternate supplier would have been able to perform.

The court concluded that confronted with these choices, the prime contractor's decision to stay with the subcontractor may not have been the best choice. The test is, however, whether the course chosen was *reasonable*, not whether it was necessarily the best. The court was not willing to engage in hypercritical examination of the choice made. It concluded that staying with the subcontractor may have been not only reasonable but also the best choice under the circumstances. The court noted that the breaching subcontractor, who sought to second-guess the choice made by the prime contractor, could also have engaged a supplemental supplier and that, where each party had the equal alternative to reduce the damages, the defendant was in no position to contend that the plaintiff failed to mitigate.

Another aspect of the rule of avoidable consequences is often ignored. Can a person who takes action to avoid a foreseeable loss *before* it occurs recover the costs incurred from the person who would have been responsible? Put another way, suppose the owner performs a prophylactic replacement of questionable material to mitigate likely future damages that would be much more costly. Can it recover its costs from the manufacturer to prevent (mitigate) greater losses in the future if nothing were done?

This issue is illustrated by *Toll Bros., Inc. v. Dryvit Systems, Inc.*¹³³ Toll Bros., a national developer, built a housing project using synthetic stucco exterior. Afterward, the media began to publicize defects with synthetic stucco—that it permits moisture to enter the building. Although the development's houses showed no evidence

¹³¹*First Nat'l Bank of Akron v. Cann*, 503 F.Supp. 419 (N. D. Ohio 1980), *aff'd*, 669 F.2d 415 (6th Cir.1982).

¹³³432 F.3d 564 (4th Cir.2005) (Connecticut law).

of water infiltration, Toll Bros. replaced the exterior stucco and sought to recoup that expense from the manufacturer. A divided court allowed the developer to recover from the manufacturer in tort the cost of prophylactically replacing the stucco in order to avoid future water damage to its houses.

SECTION 27.08 Collateral Source Rule: Off-Setting Benefits

The collateral source rule was described generally in Sections 6.06F and 7.10B. There it was noted that a good number of states have modified the common law rule by statute. These statutes require that reimbursement for losses from third parties be taken into account in measuring damages.

The collateral source rule must be seen against the backdrop of what can be called the “single recovery” rule. A claimant should not recover more than it has lost. The claimant would be unjustly enriched if this occurs. As shall be seen in some of the cases described in this Section, a claimant who is paid by one defendant must reduce its recovery against another defendant so it is not paid twice for the same loss.

The collateral source rule is an exception to the single recovery rule. If the person or entity that has paid the claimant is considered *collateral*, such as an insurer or public entity through some form of social insurance, that payment does not reduce the claim.

A review of some cases helps illustrate applications of the collateral source rule in construction disputes. In *New Foundation Baptist Church v. Davis*¹³⁴ a church sued the contractor for defects in the sanctuary floor that caused collapse during a funeral three years after the church was completed. A church member carpenter donated his labor and repaired the damage for a total cost to the church of \$3,000. Yet the jury’s award of \$6,500 to the church was upheld. The court noted that the church member had no wish to benefit the contractor, and it would be unfair for the contractor to receive the advantage of the church member’s generosity.

One commentator states that gifts and friendly help are considered collateral and do not reduce the recovery to the claimant.¹³⁵ This may explain the result in the *New Foundation* case discussed earlier in this Section.

The issue of whether “the single recovery” rule or the “collateral source” rule applied also arose in *Huber, Hunt & Nichols, Inc. v. Moore*.¹³⁶ A contractor claimed against the owner and the architect. The contractor settled with the owner before trial. One reason given for denying recovery against the architect was that the owner had paid the contractor substantial amounts. This was a tort claim, there being no contract between contractor and architect. Although this would make the payments come from a collateral source that cannot be used to reduce the claim, the court held that the owner and the architect were sufficiently associated with each other to preclude the owner from being considered a collateral source.

RPR & Associations v. University of N.C.—Chapel Hill also involved the triangle of owner, architect, and contractor.¹³⁷ In this case, the contractor brought a legal claim based upon breach of contract against the owner and the owner’s architect. It settled with the architect and pursued its claim against the owner. The owner asserted that it was entitled to offset the amount received in the settlement with the architect in the claim against it by the contractor.

The court agreed, stating that refusal to do so would overcompensate the contractor. No mention was made of the collateral source rule.

Putting together the *Huber, Hunt* and *RPR* cases, it would appear that the owner and its architect are considered one entity for determining the scope of the contractor’s recovery. Any amount received from the owner (the *Huber, Hunt* case) would offset any liability of the architect; while any amount received from the architect (*RPR* case) would offset any liability against the owner. There appears to be no role for the collateral source rule in disputes between owner, architect, and contractor, whether the claim is brought in tort or contract.

On rare occasion, the breach may *benefit* the non-breaching party. If so, a benefit that is direct and that clearly would not have occurred were it not for the breach, can be offset against any losses.

Benefit conferred by the breaching party can arise in a number of different contexts. Professional liability claims against a design professional based on negligent cost estimates are treated in Section 12.03F. Items that should have been included in the design in a professional

liability claim are discussed in Section 12.14B. Benefits to an awarding authority when the successful bidder refuses to enter into the contract are discussed in Section 18.04E. Cases for a reduction of damages because cost of correction extended the life of the original item are discussed in Section 27.03D. Correction of the defective work using a more expensive item is also covered in Section 27.03D.

SECTION 27.09 Noneconomic Losses:

Erlich v. Menezes

The recovery of noneconomic losses for breach of contract was discussed in general in Section 6.06H. There it was noted that the general rule was that such losses could

not be recovered for a breach of contract. But there are exceptions. One is a contract breach that can be classified as an independent tort. (*Erlich v. Menezes*,¹³⁸ a case that is reproduced in part in this section, dealt with this exception.) A second is a personal contract or one made to provide mental sollicitude. It can be difficult to determine which contracts fall into the category of those that lie outside of the basic rule that such damages cannot be recovered for breach of contract.

In addition, presenting a frightening residential construction nightmare, a case is reproduced in part at this point that sought to canvas the many cases that have dealt with this issue. It also stated why the law should venture very cautiously, if at all, into granting recovery for emotional distress in the context of a residential construction contract.

ERLICH v. MENEZES

Supreme Court of California, 1999. 21 Cal. 4th 543, 981 P.2d 978, 87 Cal.Rptr.2d 886.

BROWN, J.

We granted review in this case to determine whether emotional distress damages are recoverable for the negligent breach of a contract to construct a house. A jury awarded the homeowners the full cost necessary to repair their home as well as damages for emotional distress caused by the contractor's negligent performance. Since the contractor's negligence directly caused only economic injury and property damage, and breached no duty independent of the contract, we conclude the homeowners may not recover damages for emotional distress based upon breach of a contract to build a house.

I. FACTUAL AND PROCEDURAL BACKGROUND

Both parties agree with the facts as ascertained by the Court of Appeal. Barry and Sandra Erlich contracted with John Menezes,

a licensed general contractor, to build a "dreamhouse" on their ocean-view lot. The Erlichs moved into their house in December 1990. In February 1991, the rains came. "[T]he house leaked from every conceivable location. Walls were saturated in [an upstairs bedroom], two bedrooms downstairs, and the pool room. Nearly every window in the house leaked. The living room filled with three inches of standing water. In several locations water 'poured in [] streams' from the ceilings and walls. The ceiling in the garage became so saturated . . . the plaster liquefied and fell in chunks to the floor."

Menezes attempts to stop the leaks proved ineffectual. Caulking placed around the windows melted, " 'ran down [the] windows and stained them and ran across the driveway and ran down the house [until it] . . . looked like someone threw balloons with paint in them at the house.'" Despite several repair efforts, which included using sledgehammers and jackhammers to cut holes in the exterior walls and ceilings, application of new waterproofing materials on portions of the roof and exterior walls, and more caulk, the house continued to leak—from the windows, from the roofs, and water seeped between the floors. Fluorescent light fixtures in the garage filled with water and had to be removed.

"The Erlichs eventually had their home inspected by another general contractor and a structural engineer. In addition to confirming defects in the roof, exterior stucco, windows and waterproofing, the inspection revealed serious errors in the

¹³⁸21 Cal. 4th 543, 981 P.2d 978, 87 Cal.Rptr.2d 886 (1999). This case has generated controversy, particularly in California. Nine California cases refused to extend it in unpublished opinions. Five California cases distinguished it, four in unpublished opinions and one in a published opinion. *Gu v. BMW of North America, LLC*, 132 Cal.App.4th 195, 33 Cal.Rptr.3d 617 (2005). Other cases show that claims for emotional distress for what is essentially breach of contract may, in extreme cases, have a chance of succeeding. For example, Colorado refused to follow the *Erlich* case. *Giampapa v. American Family Mut. Ins. Co.*, 64 P.3d 230 (Colo.2003). See also *Kishmarton v. William Bailey Constr. Co.*, *infra* note 139, which allowed recovery for emotional distress.

construction of the home's structural components. None of the 20 shear, or load-bearing walls specified in the plans were properly installed. The three turrets on the roof were inadequately connected to the roof beams and, as a result, had begun to collapse. Other connections in the roof framing were also improperly constructed. Three decks were in danger of 'catastrophic collapse' because they had been finished with mortar and ceramic tile, rather than with the light-weight roofing material originally specified. Finally, the foundation of the main beam for the two-story living room was poured by digging a shallow hole, dumping in 'two sacks of dry concrete mix, putting some water in the hole and mixing it up with a shovel.'" This foundation, required to carry a load of 12,000 pounds, could only support about 2,000. The beam is settling and the surrounding concrete is cracking.

According to the Erlichs' expert, problems were major and pervasive, concerning everything "related to a window or waterproofing, everywhere that there was something related to framing," stucco, or the walking deck.

Both of the Erlichs testified that they suffered emotional distress as a result of the defective condition of the house and Menezes invasive and unsuccessful repair attempts. Barry Erlich testified he felt "absolutely sick" and had to be "carted away in an ambulance" when he learned the full extent of the structural problems. He has a permanent heart condition, known as supraventricular tachyarrhythmia, attributable, in part, to excessive stress. Although the condition can be controlled with medication, it has forced him to resign his positions as athletic director, department head and track coach.

Sandra Erlich feared the house would collapse in an earthquake and feared for her daughter's safety. Stickers were placed on her bedroom windows, and alarms and emergency lights installed so rescue crews would find her room first in an emergency.

Plaintiffs sought recovery on several theories, including breach of contract, fraud, negligent misrepresentation, and negligent construction. Both the breach of contract claim and the negligence claim alleged numerous construction defects.

Menezes prevailed on the fraud and negligent misrepresentation claims. The jury found he breached his contract with the Erlichs by negligently constructing their home and awarded \$406,700 as the cost of repairs. Each spouse was awarded \$50,000 for emotional distress, and Barry Erlich received an additional \$50,000 for physical pain and suffering and \$15,000 for lost earnings.

By a two-to-one majority, the Court of Appeal affirmed the judgment, including the emotional distress award. The majority noted the breach of a contractual duty may support an action in tort. The jury found Menezes was negligent. Since his negligence

exposed the Erlichs to "intolerable living conditions and a constant, justifiable fear about the safety of their home," the majority decided the Erlichs were properly compensated for their emotional distress.

The dissent pointed out that no reported California case has upheld an award of emotional distress damages based upon simple breach of a contract to build a house. Since Menezes negligence directly caused only economic injury and property damage, the Erlichs were not entitled to recover damages for their emotional distress.

We granted review to resolve the question.

[Ed. note: The court noted that damages for breach of contract are limited to those losses within the contemplation of the parties when the contract was made. Then it discussed the difference between contract (enforce the intention of the parties and encourage contractual relations by enabling parties to plan the "financial risks" of their enterprise) and tort (vindicate social policy). The court pointed to the intermediate appellate court's conclusion that the same wrongful act can be both a breach of contract and a tort. But the court stated that breach of contract can be a tort only if it violates "a duty independent of the contract arising from principles of tort law." Cases where tort damages have been permitted in contract cases require an independent tort or conduct that is intended to harm. That mental distress is foreseeable does not alone create an independent duty.]

The court held that "mere negligent breach of a contract is not a tort." While California has held that a breach of contract can be a tort in the context of an insurance policy, this is based on the special relationship between insured and insurer. Such a special relationship does not apply to single-family construction contracts. The law, as a rule, keeps tort and contract apart. Tort, with its expansive remedies, could adversely affect predictability in commercial relationships.

Even if the contractor's negligence were linked to a sufficient independent duty to the plaintiffs, these facts would not allow recovery for emotional distress. Property damage and economic injury cannot be the basis for damages for negligent infliction of emotional distress. This also holds true for construction of a home. There was no physical injury here.]

The Erlichs may have hoped to build their dream home and live happily ever after, but there is a reason that tag line belongs only in fairy tales. Building a house may turn out to be a stress-free project; it is much more likely to be the stuff of urban legends—the cause of bankruptcy, marital dissolution, hypertension and fleeting fantasies ranging from homicide to suicide. As Justice Yegan noted below, "No reasonable homeowner can embark on a building project with certainty that the project will

be completed to perfection. Indeed, errors are so likely to occur that few if any homeowners would be justified in resting their peace of mind on [its] timely or correct completion. . . .” The connection between the service sought and the aggravation and distress resulting from incompetence may be somewhat less tenuous than in a malpractice case, but the emotional suffering still derives from an inherently economic concern.

* * *

. . . [D]amages for mental suffering and emotional distress are generally not recoverable in an action for breach of an ordinary commercial contract in California. (*Kwan v. Mercedes-Benz of North America, Inc.*, 23 Cal.App.4th 174, 188, 28 Cal.Rptr.2d 371 (1994) (*Kwan*); *Sawyer v. Bank of America* (1978) 83 Cal. App.3d 135, 139, 145 Cal.Rptr. 623). “Recovery for emotional disturbance will be excluded unless the breach also caused bodily harm or the contract or the breach is of such a kind that serious emotional disturbance was a particularly likely result.” (Rest.2d Contracts, § 353.) The Restatement specifically notes the breach of a contract to build a home is not “particularly likely” to result in “serious emotional disturbance.” (*Ibid.*)

Cases permitting recovery for emotional distress typically involve mental anguish stemming from more personal undertakings the traumatic results of which were unavoidable. (See, e.g., *Burgess v. Superior Court*, *supra*, 2 Cal.4th 1064, 9 Cal.Rptr.2d 615, 831 P.2d 1197 [infant injured during childbirth]; *Molien v. Kaiser Foundation Hospitals* (1980) 27 Cal.3d 916, 167 Cal.Rptr. 831, 616 P.2d 813 [misdiagnosed venereal disease and subsequent failure of marriage]; *Kately v. Wilkinson* (1983) 148 Cal.App.3d 576, 195 Cal.Rptr. 902 [fatal waterskiing accident]; *Chelini v. Nieri* (1948) 32 Cal.2d 480, 196 P.2d 915 [failure to adequately preserve a corpse].) Thus, when the express object of the contract is the mental and emotional well-being of one of the contracting parties, the breach of the contract may give rise to damages for mental suffering or emotional distress. (See *Wynn v. Monterey Club* (1980) 111 Cal.App.3d 789, 799-801, 168 Cal.Rptr. 878 [agreement of two gambling clubs to exclude husband’s gambling-addicted wife from clubs and not to cash her checks]; *Ross v. Forest Lawn Memorial Park* (1984) 153 Cal.App.3d 988, 992-996, 203 Cal.Rptr. 468 [cemetery’s agreement to keep burial service private and to protect grave from vandalism]; *Windeler v. Scheers Jewelers* (1970) 8 Cal.App.3d 844, 851-852, 88 Cal.Rptr. 39 [bailment for heirloom jewelry where jewelry’s great sentimental value was made known to bailee].)

Cases from other jurisdictions have formulated a similar rule, barring recovery of emotional distress damages for breach of con-

tract except in cases involving contracts in which emotional concerns are the essence of the contract. (See, e.g., *Hancock v. Northcutt* (Alaska 1991) 808 P.2d 251, 258 [“contracts pertaining to one’s dwelling are not among those contracts which, if breached, are particularly likely to result in serious emotional disturbance”]; typical damages for breach of house construction contracts can appropriately be calculated in terms of monetary loss]; *McMeakin v. Roofing & Sheet Metal Supply* (Okla.Ct. App.1990) 807 P.2d 288 [affirming order granting summary judgment in favor of defendant roofing company after it negligently stacked too many brick tiles on roof, causing roof to collapse and completely destroy home, leading to plaintiff’s heart attack one month later]; *Day v. Montana Power Company* (1990) 242 Mont. 195, 789 P.2d 1224 [owner of restaurant that was destroyed in gas explosion allegedly caused by negligence of utility company employee not entitled to recover damages for emotional distress]; *Creger v. Robertson* (La.Ct.App.1989) 542 So.2d 1090 [reversing award for emotional distress damages caused by foul odor emanating from a faulty foundation, preventing plaintiff from entertaining guests in her residence]; *Groh v. Broadland Builders, Inc.* (Mich. Ct.App.1982) 120 Mich. App. 214, 327 N.W.2d 443 [reversing order denying motion to strike allegations of mental anguish in case involving malfunctioning septic tank system, and noting adequacy of monetary damages to compensate for pecuniary loss of “having to do the job over,” as distinguished from cases allowing recovery because situation could never be adequately corrected].)

Plaintiffs argue strenuously that a broader notion of damages is appropriate when the contract is for the construction of a home. *Amicus curiae* [Ed. note: friends of the court] urge us to permit emotional distress damages in cases of negligent construction of a personal residence when the negligent construction causes gross interference with the normal use and habitability of the residence.

Such a rule would make the financial risks of construction agreements difficult to predict. Contract damages must be clearly ascertainable in both nature and origin. (Civ.Code, § 3301.) A contracting party cannot be required to assume limitless responsibility for all consequences of a breach and must be advised of any special harm that might result in order to determine whether or not to accept the risk of contracting. (1 Witkin, *Summary of Cal. Law, supra*, Contracts, § 815, p. 733.)

Moreover, adding an emotional distress component to recovery for construction defects could increase the already prohibitively high cost of housing in California, affect the availability of insurance for builders, and greatly diminish the supply of affordable housing. The potential for such broad-ranging economic consequences—costs likely to be paid by the public

generally—means the task of fashioning appropriate limits on the availability of emotional distress claims should be left to the Legislature. (See Tex.Prop.Code Ann., § 27.001 et seq. (1999); Hawaii Rev. Stat., § 663-8.9 (1998).)

Permitting damages for emotional distress on the theory that certain contracts carry a lot of emotional freight provides no useful guidance. Courts have carved out a narrow range of exceptions to the general rule of exclusion where emotional tranquility is the contract's essence. Refusal to broaden the bases for recovery reflects a fundamental policy choice. A rule which focuses not on the risks contracting parties voluntarily assume but on one party's reaction to inadequate performance, cannot provide any principled limit on liability.

The discussion in *Kwan*, a case dealing with the breach of a sales contract for the purchase of a car, is instructive. “[A] contract for [the] sale of an automobile is not essentially tied to the buyer's mental or emotional well-being. Personal as the choice of a car may be, the central reason for buying one is usually transportation. . . . [¶] In spite of America's much-discussed ‘love affair with the automobile,’ disruption of an owner's relationship with his or her car is not, in the normal case, comparable to the loss or mistreatment of a family member's remains [citation], an invasion of one's privacy [citation], or the loss of one's spouse to a gambling addiction [citation]. In the latter situations, the contract exists primarily to further or protect emotional interests; the direct and foreseeable injuries resulting from a breach are also primarily emotional. In contrast, the undeniable aggravation, irritation and anxiety that may result from [the] breach of an automobile warranty are secondary effects deriving from the decreased usefulness of the car and the frequently frustrating process of having an automobile repaired. While [the] purchase of an automobile may sometimes lead to severe emotional distress, such a result is not ordinarily foreseeable from the nature of the contract.” (*Kwan*, *supra*, 23 Cal.App.4th at p. 190, 28 Cal. Rptr.2d 371.)

While *Erllich v. Menezes* represents the majority rule (that emotional distress cannot be recovered for negligent breach of a construction contract), a few cases have allowed such claims to succeed.¹³⁹ One was a tort claim based upon intentional infliction of emotional

Most other jurisdictions have reached the same conclusion. (See *Sanders v. Zeagler* (La.1997) 686 So.2d 819, 822–823 [principal object of a contract for the construction of a house was to obtain a place to live and emotional distress damages were not recoverable]; *Hancock v. Northcutt*, *supra*, 808 P.2d at pp. 258–259 [no recovery for emotional distress as a result of defective construction; typical damages for breach of house construction contracts can appropriately be calculated in terms of monetary loss]; *City of Tyler v. Likes* (Tex.1997) 962 S.W.2d 489, 497 [mental anguish based solely on property damage is not compensable as a matter of law].)

We agree. The available damages for defective construction are limited to the cost of repairing the home, including lost use or relocation expenses, or the diminution in value. (*Orndorff v. Christiana Community Builders* (1990) 217 Cal.App.3d 683, 266 Cal.Rptr. 193.) The Erlichs received more than \$400,000 in traditional contract damages to correct the defects in their home. While their distress was undoubtedly real and serious, we conclude the balance of policy considerations—the potential for significant increases in liability in amounts disproportionate to culpability, the court's inability to formulate appropriate limits on the availability of claims, and the magnitude of the impact on stability and predictability in commercial affairs—counsel against expanding contract damages to include mental claims in negligent construction cases.

DISPOSITION

The judgement of the Court of appeal is reversed and the matter is remanded for further proceedings consistent with this opinion.

GEORGE, C.J., KENNARD, J., BAXTER, J., and CHIN, J., concur.

Concurring and Dissenting Opinion by WERDEGAR, J. [omitted].

distress.¹⁴⁰ This would have been allowed under the decision in *Erllich v. Menezes*.

is likely to result from contract breach. *Kishmarton v. William Bailey Constr., Inc.* 93 Ohio St.3d 226, 754 N.E.2d 785 (2001).

¹⁴⁰*Randa v. United States Homes, Inc.*, 325 N.W.2d 905 (Iowa App.1982) (wife of buyer spent time in hospital for nervous breakdown, petrified when she was told she couldn't put mirrors in bedroom, got sick, and started to cry when liens filed).

¹³⁹A recent case came to the opposite conclusion in a claim by a homebuyer against a builder–vendor. It would allow recovery for emotional distress if there were physical harm or if serious emotional distress

Another was *B & M Homes, Inc. v. Hogan*¹⁴¹ involving a negligence claim by the Hogans against Morrow (the owner of B & M Homes) based on the contract under which the Hogans agreed to buy a lot and a house to be built by Morrow. During construction, Mrs. Hogan discovered a hairline crack in the concrete slab. Morrow told her such cracks were common and not to worry. After the Hogans moved in, the crack widened and caused extended damage. Morrow was notified and dealt with the damage but did not attempt to repair the slab himself. The claim was based in part on mental anguish that the Hogans suffered. The Hogans introduced evidence that they were concerned over their safety because they believed the house to be structurally defective, that the condition of the house might cause gas and water lines to burst, and that they were forced to live in a defective house because they could not afford to move.

The court noted that as a general rule, damages for mental anguish are not recoverable for breach of contract. However, an exception is made for contracts that involve “mental concern or solicitude.” The court held that this contract fell into that category and that it was reasonably foreseeable that faulty construction of a house would cause the homeowners to suffer severe mental anguish. The court noted that a home is the largest single investment for most families and one that places the family in debt for many years. The court pointed to an earlier decision that had allowed recovery for mental anguish when a builder performed improperly under a contract to build a home, emphasizing the homeowner’s view of her home as her castle and a place to protect her against the elements and to shelter her belongings. One commentator described *B & M Homes v. Hogan* as “an unusually liberal decision.”¹⁴²

SECTION 27.10 Punitive Damages

Punitive damages were discussed in the contract context in Section 6.04, in the tort context in Section 7.10C, and will be discussed in the arbitration context in Section 30.12.

¹⁴¹376 So.2d 667 (Ala.1979). See Annot., 7 A.L.R.4th 1178 (1981). That this was a controversial holding is shown by one court refusing to follow it, *Hancock v. Northcutt*, 808 P.2d 251 (Alaska 1991), rehearing denied April 8, 1991, and two cases distinguishing it. See also *Orto v. Jackson*, 413 N.E.2d 273, 278 (Ind.Ct.App.1980) (damages for aggravation and inconvenience).

¹⁴²E. A. FARNSWORTH, *CONTRACTS*, § 12.17 at note 18 (1982). This language was deleted in subsequent editions.

Punitive damages, almost unheard of in construction contract disputes, cannot be ignored today. To justify punitive damages the conduct must go beyond a simple or even negligent breach of contract. It must be at least grossly negligent, outrageous, or malicious.

Despite the windfall aspects of punitive damages where the plaintiff recovers an amount in excess of its losses, both contract law and tort law have begun to look at punitive damages as a way of deterring outrageous conduct, particularly in that part of the construction world that involves ordinary consumers rather than knowledgeable businesspeople.

Again, particular cases are instructive. In *F. D. Borkholder Co. v. Sandock*,¹⁴³ the contractor deviated from the plans. The court justified the punitive damages award by concluding that the defendant was guilty of intentional and wrongful acts that constituted fraud, misrepresentation, deceit, and gross negligence in its dealings. The court stated,

The Court of Appeals cited our decision in *Hibschman Pontiac, Inc. v. Batchelor*, 266 Ind. 310, 362 N.E.2d 845 (1977) for the proposition that punitive damages are recoverable in breach of contract actions only when a separate tort accompanies the breach or tort-like conduct mingles in the breach. Here, prior to the execution of the contract, Sandock representatives expressed their concern about moisture on the walls. Under the terms of the contract, they were to pay \$200 for plans to be drawn up by Borkholder’s architect. The contract provided that all labor and material would be furnished in accordance with specifications. Sandock was given a copy of the plans. However, contrary to these plans, the top and bottom courses of block forming the one wall were not filled with concrete, thus constituting latent variances. Furthermore, the roofline was shortened which represented an additional deviation from the plans.

There was testimony that the cut-off roofline enabled water to leak down into the top of the block wall. Other evidence indicated that the wetness problem resulted from this water percolating down through the inside of the wall, collecting at the bottom, and then rising again by capillary action. Sandock made numerous complaints but was constantly reassured by several Borkholder representatives that the problem was caused by simple condensation, a

¹⁴³274 Ind. 612, 413 N.E.2d 567, 570–71 (1980). Similarly, see *Jeffers v. Nysse*, 98 Wis.2d 543, 297 N.W.2d 495 (1980) (misrepresentation of insulation and heating costs).

theory ultimately disproved by an on-site test conducted by the Borkholder firm. Sam Sandock testified that Freeman Borkholder, president of the company, promised that the situation would be remedied whereupon Sandock tendered all but \$1,000 of the contract price. The problem was never corrected. The Borkholder people knew, of course, that the blocks in the wall were not filled with concrete. Also, Borkholder himself conceded that the roofline adjustment increased the likelihood of water running down into the core of the wall.

We believe that there is cogent and convincing proof that the Borkholder firm engaged in intentional wrongful acts constituting fraud, misrepresentation, deceit, and gross negligence in its dealings with Sandock. *Hibschman Pontiac, Inc.*, supra. Accordingly, we agree with the Court of Appeals that the trial court could have concluded that separate torts accompanied the breach. Next, relying on *Hibschman*, the Court of Appeals attempted to identify the public interest to be served by imposing punitive damages. However, the majority could not perceive any such interest and refused to let the award stand. We disagree. As Judge Garrard stated in his dissent:

"I have no problem identifying the public interest to be served in requiring that the builders of public buildings be deterred from fraudulently disregarding building code requirements or those contained in the plans and specifications they have agreed to comply with." *Sandock v. Borkholder*, supra, at 959.

The purpose of punitive damages generally is to punish the wrongdoer and to deter him and others from engaging in similar conduct in the future. . . . An award of such damages is particularly appropriate in proper cases involving consumer fraud. . . .

The building contractor occupies a position of trust with members of the public for whom he agrees to do the desired construction. Few people are knowledgeable about this industry, and most are not aware of the techniques that must be employed to produce a sound structure. Necessarily, they rely on the expertise of the builder. Here, the builder has been found to have engaged in fraudulent or deceptive practices by constructing a building with latent deviations from the plans which resulted in damage to the owner. Further, the builder has attempted to disclaim responsibility for such damage when it may be inferred that it knew or should have known that its work was the cause. Under these circumstances, certainly the imposition of punitive damages furthers the public interest.

The cases described have involved performance problems. However, *Brant Construction Co., Inc. v. Lumen Construction, Inc.*,¹⁴⁴ involved a smoke screen to hide evasion of the Minority Business Enterprise (MBE) requirements of a public contract. The prime contractor deceived the subcontractor and used it as a "front" to obtain award of a federally funded contract that required good-faith effort toward employing a designated percentage of minority contractors.

The MBE program is designed to give experience to minority contractors. The prime contractor entered into a contract with a minority subcontractor but for much of the contract period used another subcontractor. When it finally gave some work to the designated subcontractor, the prime did not offer the required assistance and prevented it from performing properly. This attempted circumvention of the MBE program justified awarding punitive damages to the subcontractor to deter other primes from similar conduct by making an example of the prime.

But noting cases in which punitive damages were awarded should not be taken to mean that they are common in construction contract disputes. For example, one case refused to award punitive damages when there had been a wrongful termination, because there had been no showing of malicious or oppressive conduct. The court did not want to open the claims floodgates in the wake of bitterly disputed construction contracts.¹⁴⁵

Finally, punitive damages were denied in a breach of contract case involving only delay or nonperformance.¹⁴⁶ In that case, the intentional breach of an underpriced contract was held not to subject the breaching party to punitive damages. The court was unwilling to force a contractor faced with a substantial financial loss to perform when it made a sound business judgment not to perform, knowing it would be subject only to compensatory damages.

Although punitive damages will still be rare in the ordinary construction contract dispute, the increased willingness of courts to award such open-ended damages determined by a jury means that punitive damages will play an increasingly important role in construction dis-

¹⁴⁴515 N.E.2d 868 (Ind.Ct.App.1987).

putes, particularly where contractors prey on unsuspecting owners and where ordinary compensatory damages will not be sufficient to deter such conduct.¹⁴⁷

SECTION 27.11 Cost of Dispute Resolution: Attorneys' Fees

See Section 6.07.

SECTION 27.12 Interest

See Section 6.08.

SECTION 27.13 Disputes and Settlements: *Rich & Whillock v. Ashton Development, Inc.*

When important benchmarks in a transaction are reached, the law must deal with the effect of those benchmarks on claims. Illustration of such benchmarks in the construction process are the issuance of progress payment certificates, the issuance of certificates of substantial and final

completion, and the acceptance of the project by the owner.

At these important benchmarks, either party, the owner for claims for defect or delay and the contractor for delay and disruption or inefficiency claims, may lose its claim unless it has been reserved.¹⁴⁸ It is also at these crucial points that the parties will seek to settle their claims.

Settlement negotiations inevitably involve pressure, mostly on the contractor (or subcontractors). They often face excruciatingly difficult cash flow problems. Creditors demand payment or refuse to extend loans. Government officials insist on being paid back taxes. Workers expect and demand wages.

Under these conditions, some owners will seek to take advantage of the financial stress on contractors by offering amounts that contractors desperately need but are far below what is justified. Under this pressure, the contractor may accept payment, usually by check, with endorsements stating that cashing the check extinguishes the claim.¹⁴⁹ Extinguishing the claim was accomplished through the doctrine of accord and satisfaction.

To deal with the effect of payment on its claim, the following case employed economic duress to set aside a settlement that had been made between a prime and a subcontractor.

RICH & WHILLOCK, INC. v. ASHTON DEVELOPMENT, INC.

California Court of Appeal, 1984. 157 Cal.App.3d 1154, 204 Cal.Rptr. 86.
[Ed. note: Footnotes omitted.]

WIENER, Associate Justice.

Ashton Development, Inc. and Bob Britton, Inc. appeal from the judgment awarding Rich & Whillock, Inc. \$22,286.45 for the balance due under a grading and excavating contract. Following a non-jury trial the court entered judgment after it found a settlement agreement and release signed by Rich & Whillock, Inc. were the products of economic duress and thus provided no defense to its contract claim. We conclude substantial evidence supports the court's finding and affirm the judgment.

¹⁴⁷See *Gennari v. Weichert Co. Realtors*, 148 N.J. 582, 691 A.2d 350 (1997) (punitive damages awarded against real estate agent in favor of purchasers based on fraudulent representation as to builder's experience and quality).

FACTUAL AND PROCEDURAL BACKGROUND

On February 17, 1981, Bob Britton, president of Bob Britton, Inc., signed a contract for grading and excavating services to be provided by Rich & Whillock, Inc. at a price of \$112,990. The work was to be done on a project by Ashton Development, Inc. Bob Britton, Inc. was general contractor on the project and the agent for Ashton Development, Inc. in all dealings with Rich & Whillock, Inc. Work began the day the contract was signed.

In late March 1981 Rich & Whillock, Inc. encountered rock on the project site. A meeting was held at the site to discuss the problem. In attendance were Greg Whillock and Jim Rich,

¹⁴⁸See Sections 22.02M (payment), 24.05 (acceptance of project), and 22.05 (completion and final payment).

president and vice-president of Rich & Whillock, Inc., Bob Britton, Berj Aghadjian, president of Ashton Development, Inc., and a man from a blasting company. Everyone agreed the rock would have to be blasted. The \$112,990 contract price expressly excluded blasting. The contract also stated “[a]ny rock encountered will be considered an extra at current rental rates.” In response to Britton’s inquiry, Whillock and Rich estimated the extra cost to remove the rock would be about \$60,000, for a total contract price of approximately \$172,000. They also emphasized, however, the estimate was not firm and the actual cost could go much higher due to the unpredictable nature of rock work.

Britton directed Whillock and Rich to go ahead with the rock work and bill him for the extra costs and said they would be paid. Rich & Whillock, Inc. proceeded accordingly, submitting invoices and receiving payments every other week. The invoices separately stated the charges for the regular contract work and the extra rock work and were supported by attached employee time sheets. Toward the end of April Whillock asked Britton if he had any questions and [he] told Whillock to continue with the rock work because it had to be done.

By June 17, 1981, after receiving payments totaling \$190,363.50, Rich & Whillock, Inc. submitted a final billing for an additional \$72,286.45. After consulting with Aghadjian, Britton refused to pay. When Whillock asked why, Britton explained he and Aghadjian were short on funds for the project and had no money left to pay the final billing. Up until he received that billing, Britton had no complaints about the work done or the invoices submitted by Rich & Whillock, Inc. and had never asked for any accounting of charges in addition to that already provided. Whillock told Britton he and Rich would “go broke” if not paid because they were a new company, the project was a big job for them, they had rented most of their equipment and they had numerous subcontractors waiting to be paid. Britton replied he and Aghadjian would pay them \$50,000 or nothing, and they could sue for the full amount if unsatisfied with the compromise.

On July 10, 1981, Britton presented Rich with an agreement for a final compromise payment of \$50,000. The agreement provided \$25,000 would be paid “upon receipt of this signed agreement,” to be followed by a second \$25,000 payment on August 10, 1981 “upon receipt of full and unconditional releases for all

labor, material, equipment, supplies, etc., purchased, acquired or furnished for this contract up to and including August 10, 1981.” Rich repeated Whillock’s earlier statements about the probable effects of nonpayment on their business. Britton replied: “I have a check for you, and just take it or leave it, this is all you get. If you don’t want this, you have got to sue me.” Rich then signed the agreement and received a \$25,000 check after telling Britton the agreement was “blackmail” and he was signing it only because he had to in order to survive. Rich & Whillock, Inc. received the second \$25,000 payment on August 20, 1981, at which time Whillock signed a standard release form.

In December 1981 Rich & Whillock, Inc. filed this action for damages for breach of contract. The court found Ashton Development, Inc. and Bob Britton, Inc. were liable for the \$22,286.45 balance due under the contract, and that the July 10 agreement and August 20 release were unenforceable due to economic duress. On the latter point the court found Britton and Aghadjian “never really disputed the amount of plaintiff’s charge in that they never asked for an accounting nor documentation concerning the extra work.” The court also stated it disbelieved Britton when he testified Rich & Whillock, Inc. had agreed to do the extra work for a sum not to exceed \$90,000. By disbelieving Britton and finding no dispute about the actual amount owed, the court impliedly found Britton and Aghadjian acted in bad faith when they refused to pay Rich & Whillock, Inc.’s final billing and offered instead to pay a compromise amount of \$50,000. Based on its finding of bad faith, the court concluded the July 10 agreement and August 20 release were signed “under duress in that plaintiff felt they would face financial ruin if they did not accept the lesser sum and that defendants, knowing this, threatened no further payment unless plaintiff accepted the lesser sum.”

DISCUSSION

“At the outset it is helpful to acknowledge the various policy considerations which are involved in cases involving economic duress. Typically, those claiming such coercion are attempting to avoid the consequences of a modification of an original contract or of a settlement and release agreement. On the one hand, courts are reluctant to set aside agreements because of the notion of freedom of contract and because of the desirability of having private dispute resolutions be final. On the other hand, there is an increasing recognition of the law’s role in correcting inequitable or unequal exchanges between parties of disproportionate bargaining power and a greater willingness to not enforce agreements which were entered into under coercive circumstances.” (*Totem Marine T. & B. v. Alyeska Pipeline, Etc.* (Alaska 1978) 584 P.2d 15, 21, fn. omitted.)

¹⁴⁹Usually, it is the owner who seeks to use the check endorsement as a means of extinguishing the contractor’s claim by accord and satisfaction. But in an Alabama case, a customer of a termite inspection company sent in its renewal check with a statement that it no longer agreed to arbitrate disputes as provided for in the contract. The customer succeeded. *Cook’s Pest Control v. Rebar*, 852 So.2d 730 (Ala.2002).

California courts have recognized the economic duress doctrine in private sector cases for at least 50 years. (*Young v. Hoagland* (1931) 212 Cal. 426, 430–432, 298 P. 996.) The doctrine is equitably based (*Burke v. Gould*, supra, 105 Cal. at p. 281, 38 P. 733) and represents “but an expansion by courts of equity of the old common law doctrine of duress.” (*Sistrom v. Anderson* (1942) 51 Cal.App.2d 213, 220, 124 P.2d 372.) As it has evolved to the present day, the economic duress doctrine is not limited by early statutory and judicial expressions requiring an unlawful act in the nature of a tort or a crime. (Civ.Code, § 1569, subd. 2; . . .)

Instead, the doctrine now may come into play on the doing of a wrongful act which is sufficiently coercive to cause a reasonably prudent person faced with no reasonable alternative to succumb to the perpetrator’s pressure. . . . The assertion of a claim known to be false or a bad faith threat to breach a contract or to withhold a payment may constitute a wrongful act for purposes of the economic duress doctrine. . . .

Further, a reasonably prudent person subject to such an act may have no reasonable alternative but to succumb when the only other alternative is bankruptcy or financial ruin. . . .

The underlying concern of the economic duress doctrine is the enforcement in the marketplace of certain minimal standards of business ethics. Hard bargaining, “efficient” breaches and reasonable settlements of good faith disputes are all acceptable, even desirable, in our economic system. That system can be viewed as a game in which everybody wins, to one degree or another, so long as everyone plays by the common rules. Those rules are not limited to precepts of rationality and self-interest. They include equitable notions of fairness and propriety which preclude the wrongful exploitation of business exigencies to obtain disproportionate exchanges of value. Such exchanges make a mockery of freedom of contract and undermine the proper functioning of our economic system. The economic duress doctrine serves as a last resort to correct these aberrations when conventional alternatives and remedies are unavailing. The necessity for the doctrine in cases such as this has been graphically described:

Nowadays, a wait of even a few weeks in collecting on a contract claim is sometimes serious or fatal for an enterprise at a crisis in its history. The business of a creditor in financial straits is at the mercy of an unscrupulous debtor, who need only suggest that if the creditor does not care to settle on the debtor’s own hard terms, he can sue. This situation, in which promptness in payment is vastly more important than even approximate justice in the settlement terms, is

too common in modern business relations to be ignored by society and the courts. (Dalzell, Duress by Economic Pressure II (1942) 20 N. Carolina L.Rev. 340, 370.)

Totem Marine T.&B. v. Alyeska Pipeline, Etc., supra, 584 P.2d 15, presents an example of economic duress remarkably parallel to the circumstances of this case. Totem, a new corporation, contracted with Alyeska to transport pipeline construction materials from Houston, Texas to a port in southern Alaska, with the possibility of one or two cargo stops along the way. Totem chartered the equipment necessary to perform the contract. Unfortunately, numerous unanticipated problems arose from the outset which impeded Totem’s performance. When Totem’s chartered tugs and barge arrived in the port of Long Beach, California, Alyeska caused the barge to be unloaded and unilaterally terminated the contract. Totem then submitted termination invoices totaling somewhere between \$260,000 and \$300,000. At the same time, Totem notified Alyeska it was in urgent need of cash to pay creditors and that without immediate payment it would go bankrupt. After some negotiations, Alyeska offered to settle Totem’s account for \$97,500. In order to avoid bankruptcy, Totem accepted Alyeska’s compromise offer and signed an agreement releasing Alyeska from all claims under the contract. (Id., at pp. 17–19.)

About four months after signing the release agreement Totem sued Alyeska for the balance due under the contract. The trial court entered summary judgment for Alyeska based on the release agreement. (*Totem Marine T. & B. v. Alyeska Pipeline, Etc.*, supra, 584 P.2d at p. 19.) The Supreme Court of Alaska reversed, explaining:

[W]e believe that Totem’s allegations, if proved, would support a finding that it executed a release of its contract claims against Alyeska under economic duress. Totem has alleged that Alyeska deliberately withheld payment of an acknowledged debt, knowing that Totem had no choice but to accept an inadequate sum in settlement of that debt; that Totem was faced with impending bankruptcy; that Totem was unable to meet its pressing debts other than by accepting the immediate cash payment offered by Alyeska; and that through necessity, Totem thus involuntarily accepted an inadequate settlement offer from Alyeska and executed a release of all claims under the contract. If the release was in fact executed under these circumstances, we think that under the legal principles discussed above that this would constitute the type of wrongful conduct and lack of alternatives that would render the release voidable by Totem on the ground of economic duress. (Id., at pp. 23–24, fn. omitted.)

Here, Britton and Aghadjian acted in bad faith when they refused to pay Rich & Whillock, Inc.'s final billing and offered instead to pay a compromise amount of \$50,000. At the time of their bad faith breach and settlement offer, Britton, and through him, Aghadjian, knew Rich & Whillock, Inc. was a new company overextended to creditors and subcontractors and faced with imminent bankruptcy if not paid its final billing. Whillock and Rich strenuously protested Britton's and Aghadjian's coercive tactics, and succumbed to them only to avoid economic disaster to themselves and the adverse ripple effects of their bankruptcy on those to whom they were indebted. Under these

circumstances, the trial court found the July 10 agreement and August 20 release were the products of economic duress. That finding is consistent with the legal principles discussed above and is supported by substantial evidence. Accordingly, the court correctly concluded Ashton Development, Inc. and Bob Britton, Inc. were liable for the \$22,286.45 balance due under the contract.

DISPOSITION

Judgment affirmed.

COLOGNE, Acting P.J., and STANIFORTH, J., concur.

While contractors occasionally have prevailed on their claims of economic duress,¹⁵⁰ economic duress claims are difficult to sustain.¹⁵¹ The law will look at the extent of the pressure on the contractor (threat of bankruptcy), the lack of practical choice (the existence of realistic, practical alternatives), whether the pressure was compounded by actual or threatened breach of contract by the owner, and the state of mind of the owner (lack of good faith) as in the *Rich & Whillock* case.

Yet the reason for difficulty, the crucial role of private autonomy (freedom of contract) in American law, makes prediction of the outcome of these duress cases treacherous. One English judge stated that the aim is “to distinguish between contracts which are entered into as a result of illegitimate pressure from those entered into under the rough and tumble of the pressures of normal commercial bargaining. . . .”¹⁵²

As noted, an accord and satisfaction can bar claims. Yet there have been inroads on this venerable doctrine, such as case decisions emphasizing economic duress as

in the *Rich & Whillock* case, judicial outrage at unconscionable conduct by the stronger party,¹⁵³ and state legislation.¹⁵⁴ Although a party that accepts tender of an amount under these circumstances still runs a substantial risk that its claim will be barred, increasingly the law is willing to allow the claim to be pursued despite the claimant's having accepted the tendered payment with the restrictive conditions.¹⁵⁵

SECTION 27.14 Claims Against Multiple Parties

Chapter 24—particularly Sections 24.06 and 24.07—noted the not uncommon phenomenon of defects that can be traceable to design and to failure by the contractor to execute the design properly. That chapter looked at disputes between owner and contractor. In this section, emphasis is on a claim made by the owner against both its independent design professional and the contractor. How is recovery measured when there are multiple causes?

¹⁵⁰*Centric Corp. v. Morrison-Knudsen Co.*, 731 P.2d 411 (Okla.1986) (CM took advantage of the trade contractor's precarious financial condition).

¹⁵¹*Selmer Co. v. Blakeslee-Midwest Co.*, 704 F.2d 924 (7th Cir.1983) (financial difficulty not enough); *Pellerin Constr. Co. v. Witko Corp.*, 169 F. Supp.2d 568 (E.D.La.2001) (stress of business conditions does not create duress unless the defendant engaged in conduct designed to produce that distress); *Turner v. Low Rent Housing Agency of the City of Des Moines*, 387 N.W.2d 596 (Iowa1986).

¹⁵²*DSND Subsea v. Petroleum Geo-Services*, [2000] Build.L. R. 530, 545. The recent English cases are analyzed in Tan, *Constructing a Doctrine of Economic Duress*, 18 Constr.L.J. 87 (2002). Tan provides a “guided” three-stage test at 95–96.

¹⁵³*City of Mound Bayou v. Roy Collins Constr. Co.*, 499 So.2d 1354 (Miss.1986); *North Harris County Junior College Dist. v. Fleetwood Constr. Co.*, 604 S.W.2d 247 (Tex.Ct.App.1980).

¹⁵⁴West Ann.Cal.Pub.Cont.Code § 7100 (barred in state contracts). In 1987, California drastically reduced the effectiveness of accord and satisfaction in the check-cashing situation. See West Ann.Cal.Civ. Code § 1526. A creditor can strike out a “paid in full” notation, cash the check, and still preserve a disputed claim.

¹⁵⁵*John Grier Constr. Co. v. Jones Welding & Repair, Inc.*, 238 Va. 270, 383 S.E.2d 719 (1989) (subcontractor's claim not barred despite its endorsement of a check marked “paid in full” because its lack of knowledge meant no meeting of the minds).

The problem is best illustrated by *Northern Petrochemical Co. v. Thorsen & Thorshov, Inc.*¹⁵⁶ The owner contracted with an architect to design its new headquarters, which contained offices, a warehouse, and a manufacturing plant. It also contracted with a prime contractor under a fixed-price contract. The construction began in the fall of 1967 and was virtually completed in April 1968. At that time, it became clear that there were major structural flaws in the building. Large cracks were developing. Walls and columns were out of plumb. An investigation led to remedial action, but the deterioration continued. It became apparent that the building was moving in fits and starts. An agreement was made by the major participants to perform corrective work.

Until actual reconstruction began, it was believed that the sole reason for the building's failure was a structural defect in a support wall. When corrective work began, it was determined that the reinforcing steel for the concrete flooring had not been imbedded in the concrete and the underlying fill had not been compacted as required. These omissions left large voids under the floor that caused cracking and uneven settling. Correcting these faults required a massive reconstruction process that took approximately eight months. The trial court concluded that the owner's damages were approximately \$750,000. It determined that some of the problem was traceable to design, some to faulty construction, and the balance to both.

Interestingly, the court treated this as a tort case, finding that both the architect and the contractor had been negligent. It then shifted to tort principles applicable when there are co-wrongdoers and there is no difference in the culpability of wrongdoing. It concluded that where it is not reasonably possible to make a division of the damage caused by the separate acts of negligence closely related in point of time, the negligent parties, even though they acted independently, are jointly and severally liable. Each was responsible for the entire indivisible loss, even though they did not act together. The court adopted a rule that puts the burden on either architect or contractor to limit its liability by providing a method of apportionment. In other words, either the architect or the contractor must prove that its negligence caused a particular harm for which it is responsible. In the absence of a rational method of apportionment, each is responsible for the entire loss. (Rights and duties between the co-wrongdoers are discussed in Section 31.02.)

¹⁵⁶297 Minn. 118, 211 N.W.2d 159 (1973).

The issue of joint and several liability is controversial. If two or more defendants are responsible for an indivisible loss, one may be much more at fault than the other. For example, if one is 90 percent at fault and the other 10 percent, and the party 90 percent at fault cannot pay a court judgment, the entire loss may fall on the party who was 10 percent at fault.

This possibility led the Iowa legislature to enact a law allowing joint and several liability only if a party is at least 50 percent negligent. Under such a statute, a case involving a claim against a contractor and a design professional concluded that the contractor was 86 percent responsible and the design professional 14 percent. However, the contractor was judgment proof; that is, it could not respond to a judgment. As a result, the owner desperately sought to show that the design professional was 50 percent responsible so that it could saddle the design professional with the entire loss. This was not successful, and the design professional was responsible for only 14 percent of the loss.¹⁵⁷

The increased use of comparative negligence and shared responsibility can lead to another approach. The loss can be divided by comparing negligence or, in the absence of a tort standard being appropriate, the level or intensity of wrongdoing in a nontort sense.¹⁵⁸

Suppose the architect were looked on as having caused 60 percent of the loss and the contractor 40 percent. This would place 60 percent of the loss on the architect and 40 percent on the contractor. Here cause would be replaced by "fault." This formula could also bypass complicated contribution and indemnity issues. But it would expose the owner to a greater likelihood of being uncompensated if either defendant could not pay the judgment.

This Section deals with co-wrongdoers and the amount each must pay the claimant and the effect of joint and several liability. Another issue can arise when claims are made against multiple parties. How will the ultimate

¹⁵⁷*Eventide Lutheran Home for the Aged v. Smithson Elec. & Gen. Constr., Inc.*, 445 N.W.2d 789 (Iowa 1989), applying Iowa Code Ann. § 668.4. In 1986 California passed Proposition 51, which changed the joint and several liability rule. In claims for noneconomic losses the defendants pay only for the percentage of their fault. This was enacted as West Ann.Cal. Civ. Code §§ 1431–1431.5. In *Thomas v. Duggins Constr. Co., Inc.*, 139 Cal. App.4th 1105, 44 Cal.Rptr.3d 66 (2006), the court held that Proposition 51 does not protect a defendant whose employee intentionally injured an innocent person.

¹⁵⁸*Shepard v. City of Palatka*, 414 So.2d 1077 (Fla. Dist. Ct. App. 1981) (dictum).

liability be determined? This is particularly difficult when one defendant settles and seeks to use that settlement as a defense when another wrongdoer seeks to pin the entire loss on it or at least seeks to apportion some of the loss to the party that has settled.

California law provides that, if a settlement is made by one defendant in “good faith,” it cannot be sued for indemnity or contribution by defendants who have not settled.¹⁵⁹ This is done to encourage settlements.

The lawsuits with multiple claimants, claims, and defendants generate complexity that cannot be discussed in this book. Also, such lawsuits have generated many legislative solutions to the substantive and procedural problems created by these lawsuits.

SECTION 27.15 Security for Claims

A. Owner Claims

The owner can secure its claim against a contractor by withholding payment of funds for work performed¹⁶⁰ or refusing to release retainage.¹⁶¹ Another method is to require that the contractor furnish either individual guarantees, unsecured or backed-up security interests in property, or a performance or warranty bond.

B. Prime Contractor Claims

The contractor indirectly can secure its claim against the owner by the pressure of a threatened or actual stoppage or even termination until payment is made. It can file a mechanics’ lien against any private property that the prime contractor has improved.¹⁶²

C. Subcontractor Claims

In addition to the methods described in Section 27.15B, in public projects, the subcontractor can secure its claim by looking to any payment bond that the prime contractor

has been required to furnish. In some states, stop notice rights (unpaid subcontractor can stop flow payments from owner or lender to prime) can be effective to obtain payment.¹⁶³

D. Summary

Claims related to the construction project are often worth very little unless they can be collected. Obtaining a court judgment in many instances does not provide actual reparation for the loss. For that reason, participants in the construction project should plan their transactions to give them as much security as they can obtain by their contracts and should use every effort to perfect any security that is given to them under the contract, such as a surety bond, or perfect security provided by law, such as a mechanics’ lien or stop notice.

SECTION 27.16 Claims Against Public Entities: Federal False Claims Act

The negotiation process that follows the making of a claim has been noted in Section 27.13. There focus was upon taking advantage of the claimant’s financial difficulties. As noted in that Section the parties are given a good deal of room to negotiate the best settlement they can. But as seen in that Section even in the freewheeling negotiation atmosphere a few settlements will be set aside. Setting aside the settlement has been based upon economic duress. Usually this consists of taking undue advantage of the financial difficulties of the other party.

Rough tactics are often part of the negotiation process. The air can be filled with threats, bluster, and wild exaggerations. But the rules are different when the claim is made against a public entity, whether federal, state, or local. Such claims are governed by special statutes that seek to protect public funds.

This is demonstrated by *Daewoo Engineering & Construction Co. v. United States*.¹⁶⁴ Daewoo was a Korean company that contracted with the U.S. Corps of Engineers to build a 53-mile road on the Island of Palau. Daewoo presented a claim against the Corps for \$64 million

¹⁵⁹West Ann.Cal. Code of Civ.Proc. § 877.6. This statute was discussed in connection with a construction dispute in *TSI Seismic etc. v. Superior Court*, 149 Cal.App.4th 159, 56 Cal.Rptr.3d 751 (2007). This case is discussed in Section 15.03D at note 6.

¹⁶⁰See Section 22.02E.

¹⁶¹See Section 22.03.

¹⁶²See Section 28.07D.

¹⁶³See Section 28.07E. See also Sections 28.07F, G, H, and J for additional methods available to subcontractors.

¹⁶⁴73 Fed.Cl.547 (2006), appeal filed Jun. 13, 2007.

(the original contract price was \$73 million) but ended up being ordered to pay the Corps more than \$50 million. The trial judge found Daewoo had violated the Contract Disputes Act's fraud provisions and the Federal False Claims Act (FCA).¹⁶⁵

The government did not make its claim until Daewoo had rested its case. It claimed that there had been unexpected testimony. A number of factors persuaded the trial judge to make this order against Daewoo. He found that some of the legal arguments by Daewoo were not credible. He concluded that its witnesses testified in a vague and unreliable manner. Most important for purposes of this Section there had been testimony by one of Daewoo's executives that it made the large claim as a negotiating ploy to make the government pay attention. The judge pointed to Daewoo having misled the Corps as to its actual costs and its having lowered its claim from \$50 million to \$29 million. It used heightened theoretical projections instead of actual acquisition costs, claimed equipment that had been fully depreciated, and relied on an incorrect production rate to calculate its productivity loss. These can constitute fraud and an intention to deceive.¹⁶⁶

¹⁶⁵31 U.S.C.A. § 3729. Each amendment strengthens the Act. For a detailed analysis of the FCA and related statutes, see FALSE CLAIMS IN CONSTRUCTION CONTRACTS: FEDERAL, STATE and LOCAL (ed. Sink & Pages, 2007).

¹⁶⁶The discussion of the *Daewoo* case owes much to Littlejohn, *Turnabout at Trial: Contractor Ordered to Pay \$50 Million for Fraudulent Claims*, Update Construction Law, Spring 2007, pp. 1, 3.

What is interesting about the *Daewoo* case is that some of its tactics would have been normal in claims against private entities. But its claim against the Corps of Engineers invoked a number of federal statutes that deal with false claims and was the basis for a huge fine. Also, in another case the claimant forfeited its claim for \$53,534,679 under the Forfeiture of Fraudulent Claims Act because its requests for reimbursement for bond premiums were false.¹⁶⁷

The FCA originated in the Civil War period. What is unusual about this and related statutes is that the person (the whistleblower) who alerts the public agency to the wrongdoing under certain circumstances can pursue the claim itself (a *qui tam* claim) and recover a generous award for bringing this matter to the attention of public authorities. Because this disclosure to the federal entity, usually by an employee, will not be appreciated by the employer, the FCA protects the whistleblower from retaliation. A significant number of states have enacted similar statutes.¹⁶⁸

Those who engage in public projects must be aware of these statutes and their requirements. They must also emphasize to its employees that these special rules must be followed.

¹⁶⁷*Morse-Diesel Intern. Inc. v. United States*, 74 Fed.Cl. 601 (2007). In a connected case the government was awarded \$7,292,213 for violations of the Anti-Kickback Act and the FCA. 79 Fed.Cl. 116 (2007), reconsideration denied, 81 Fed.Cl. 311 (2008).

¹⁶⁸At present 14 states have similar statutes and the list is growing.

The Subcontracting Process: An “Achilles Heel”

SECTION 28.01 An Overview of the Process

At the risk of oversimplifying, the subcontracting process, as used in this chapter, is defined as the method of construction organization under which the prime contractor is allowed to perform some or even much of its contract obligations through other contracting entities. The latter contracting entities are first-tier subcontractors. Likewise, the process in a large construction project can involve first-tier subcontractors performing their contract obligations through other contracting entities called *second-tier subcontractors*, or *sub-subcontractors*.

Other business entities frequently furnish equipment, machinery, products, supplies, or materials incorporated into the project or used to construct the project. These entities—collectively called *suppliers*—usually make contracts with prime contractors or subcontractors. Although the line between subcontractors and suppliers is sometimes difficult to draw, for purposes of this discussion subcontractors are defined as people who perform significant services at the site.¹

The subcontracting process results in a chain of contracts that runs from owner to prime contractor or separate contractors, from prime or separate contractors (multiple primes) to subcontractors, and from subcontractors to sub-subcontractors. Likewise, there are direct contract lines between contractors that for purposes of discussion include prime contractors and subcontractors and their suppliers.

Some legal problems generated by the subcontracting process have already been discussed, and others are

discussed later in this book. But subcontracting is the legal Achilles heel of the construction process. It generates many legal problems and therefore merits a separate chapter.

The principal advantage of a subcontracting system is improved efficiency, accomplished by breaking down work into categories that require a small number of related skills and the development of those skills by repetition. People who perform services, whether laborers working on the site, cost estimators making bid proposals, or managers making procurement decisions, should become more skilled as they repeatedly perform these specified services.

The subcontracting process, if working properly, can reduce costs not only by allowing more efficient work but also by creating many competitive prime contractors and subcontractors. Entry into the prime contract field is facilitated by allowing contractors to conserve capital, by relieving them of investment and financial burdens to the extent that subcontractors are used. The subcontracting system enables prime contractors to shift over much of the contract risks to subcontractors. If these risks involve the particular skill of the subcontractor and are ones over which the subcontractor has direct control, this can be an efficient allocation of risk.

As for subcontractors, the subcontracting system should encourage many smaller, highly competitive subcontractors to enter the construction field. The subcontracting system may be one reason why the construction industry, unlike the automobile industry, is made up of many contractors with specialized talents who operate mainly in limited localities. This has meant vigorous competition for work that, although it has the disadvantage of economic instability, frequent financial failures, and disputes, should, through competition, reduce construction cost.

¹U.S. *Industries v. Blake Constr. Co.*, 671 F.2d 539, 543 (D.C.Cir. 1982) (citing earlier edition of this book).

An often ignored advantage of the subcontracting system is that many subcontracting entities can create social mobility and avoid the rigidity of class structures that are more closed. This is accomplished by permitting individuals or small business units to enter the field with a minimum amount of capital.

These undoubted potential and actual advantages have their cost. The subcontracting system generates a large share of construction legal problems.

Subcontractors are normally the financially weakest participants in the project and so are subject to the harshest contract obligations.² The principal subcontract problem deals with payments. As shall be seen in Section 28.06, the subcontracting system creates risk of delayed payment and nonpayment to subcontractors. Typically, the prime contractor on any substantial project is paid monthly as work progresses, with a customary retainage of from 5 to 10 percent. This delays cash flow from prime contractor to those to whom it owes payment. Even in no-retainage contracts, the prime contractor often faces cash flow problems caused by the lag between payments to it and its obligations. When there are retainages, the cash flow problem is more serious. To the extent of payment delay, the prime contractor is providing the owner with financing services that it seeks to transfer to subcontractors.

Prime contractors generally use subcontract payment provisions to minimize cash flow problems. These provisions frequently permit the prime contractor to delay paying subcontractors until the former have been paid by the owner. Such delayed payment provisions may squeeze subcontractors who must pay for their labor and supplies. Even those with credit face financial hardship when credit is withdrawn or limited.

Cash flow problems are increased as a greater percentage of work is performed by subcontractors. Increased subcontracting means a greater likelihood that nonperformance by one subcontractor will delay payment to others who have performed properly.

The construction industry is composed of many small businesses with limited financial capacity and credit. This is particularly true with regard to subcontractors, many of whom started as tradesmen and many of whose businesses are family owned. A short delay in the flow-through of

funds from the owner to those contractors performing services on the site can cause financial hardship that may deprive a contractor, especially at the lowest tier, of funds needed to continue performance. The subcontracting system heightens the financial stress inherent in the flow-through process because it increases the distance of the money flow. See Figure 28.1.

The extent of work subcontracted also plays a role in creating legal problems. Subcontractors frequently assert that prime contractors are merely assemblers or brokers for the services of others. Prime contractors deny this and claim that they supply much of the materials and services themselves. Prime contractors and subcontractors agree that the *amount* of work subcontracted depends on the *type* of construction. Whether or not prime contractors or subcontractors are correct on this controversial question, it is clear that the greater the percentage of subcontracted work, the greater the likelihood of severe cash flow problems. A prime contractor who does not have much money tied up in the project is less concerned about the swiftness of the cash flow. This is especially true if the prime contractor's obligation to pay subcontractors is conditioned on receiving payments from the owner.

Moving from cash flow delay to nonpayment problems, the volatility of the construction industry must again be emphasized. Business failures and bankruptcies frequently occur in the construction industry. The higher the proportion of work subcontracted, the greater the risk that unpaid subcontractors will seek some type of legal relief when their work has benefited the owner. One type of relief often sought by unpaid subcontractors and suppliers is a mechanics' lien. Valid liens usually result in owners paying lien claimants to remove the liens. To avoid liens, owners create payment structures to minimize payment diversion by the prime contractors. Owners—private and especially public—frequently require payment bonds to give an effective remedy to unpaid subcontractors and suppliers. Bond requirements inject the complexity of surety bonds and additional parties into the already complicated construction structure.

Problems of delayed payment and nonpayment highlight another significant feature of the subcontracting process. The subcontractor is "a contract away" from the major source of power and control over the project—the owner. Because the subcontractor has no direct contractual relationship with the owner, it must look to the prime contractor for payment, for dealing with disputes over

²Sklar, *A Subcontractor's View of Construction Contracts*, 8 Constr. Lawyer, No. 1, Jan. 1988, p. 1.

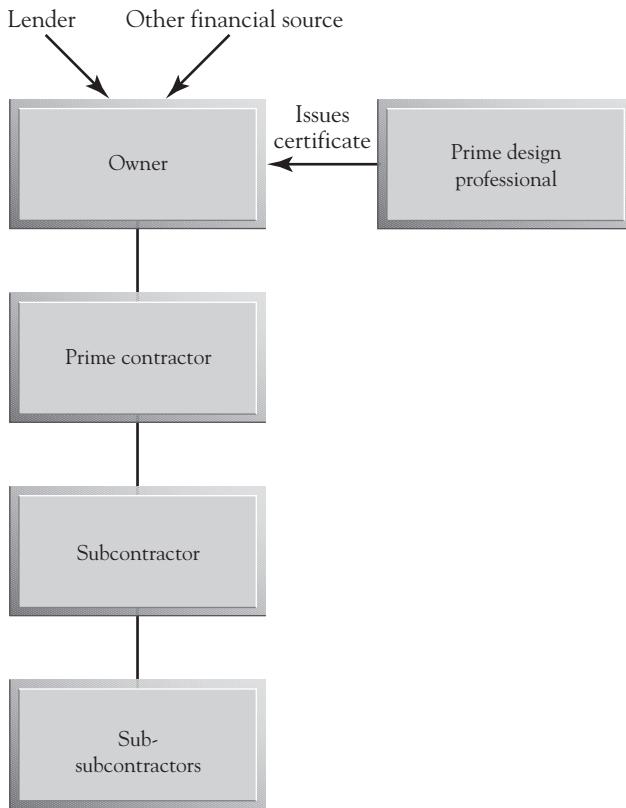

FIGURE 28.1 Cash flow in traditional system.

performance, and to process claims against the owner. This can create a sense of powerlessness in subcontractors, leading to friction and lawsuits at worst and poor communication at best.

Subcontracting compounds the already difficult problems caused by the multitude of construction documents regulating construction relationships. One principal cause of legal problems is the wealth of potentially conflicting documents that regulate the relationship between owner and contractor. Adding first- and second-tier subcontracts, which frequently refer *generally* to contract provisions in contracts above them on the contract chain, dumps in additional ingredients for disputes.

The subcontracting process generates a potentially large number of construction contractors—all working on the same site and often at the same time. For purposes of this discussion, contractors include prime contractors, separate contractors, and the various tiers of subcontractors. Contractors may disagree on who will

have access to a particular part of the site at a particular time. One contractor's performance often depends on another contractor's work being completed or at least in a certain state of readiness. One contractor's work may be disturbed or ruined by another contractor's workers, and disputes may develop over which contractor is responsible. One contractor may employ workers who belong to a construction trade union, whereas another uses non-union workers. One contractor's employee may be injured or killed, and the responsibility may be asserted against or shared by a number of other contractors. The sheer number of different contractors at work can create immense administrative and, ultimately, legal problems.

The illustrations given do not exhaust the legal problems incident to subcontracting. In addition, there is frequent bargaining disparity present in construction contracts and especially in subcontracts. Generally, the dominant bargaining strengths parallel the money flow. Lenders can exact terms from owners because the total number of borrowers seek more money than lenders have to lend. The owner who has funds or can borrow them seeks a contractor from among the many willing to perform the work. This position gives the owner substantial bargaining advantage over the prime contractor. Although the prime contractor awarded the contract does not as yet have funds, it has contract rights. These rights generally give the prime contractor bargaining advantage over subcontractors, many of whom are looking for work. As a result, at this stage, the prime contractor usually has the bargaining power to demand, and often obtain, favorable terms from subcontractors, sometimes terms more favorable than those in the prime contract. Likewise, subcontractors frequently exert parallel bargaining advantage over sub-subcontractors.

Lawyers do not play a significant role drafting and reviewing construction contracts generally, and particularly with subcontractor contracts. Lawyers are frequently not brought into the picture until the need for legal action becomes imminent. This can mean that extraordinarily one-sided contracts may be forced on subcontractors, who are generally unaware of legislation or case decisions that might protect them.

The bargaining position of suppliers and contractors cannot be so easily generalized. Suppliers range from large manufacturing companies with strong financial positions to small distributors with limited financial capacity. As a result, some suppliers are in the position to dictate terms

to subcontractors and even to prime contractors. Yet even suppliers in this advantageous position must sell and must often extend credit to do so. Often their extension of credit is predicated on statutory lien rights or the existence of payment bonds.

In the typical construction project, on the lowest tier is the subcontractor with the weakest bargaining power. This bargaining pattern is illustrated by the frequent passing down of increasingly harsh and one-sided indemnity agreements. In addition to strong bargaining pressures from prime contractors or higher-tier subcontractors, lower-tier subcontractors also face the strong bargaining power of large suppliers and construction trade unions. Subcontractors, especially those at the lowest tier, often find themselves squeezed on all sides because of their poor bargaining position.

Institutional bargaining disparities generate legal problems. Harsh terms exacted at the bargaining table may be resisted by the weaker party when disputes develop. The law looks with disfavor on harsh terms, even though the legal system generally allows parties to write their own contracts. As a result, the uncertain enforcement of harsh terms exacted by the dominant party generates legal disputes that often require judicial resolution.

Those in vulnerable bargaining positions may seek other avenues of relief. For example, as seen in Section 31.05D, industry associations sometimes obtain legislative enactments such as anti-indemnity legislation to overturn contract clauses exacted from them by parties in a stronger bargaining position. Injecting legislative rules in a field regulated largely by private contracts adds a further complication to construction.

Associations composed of members who are often in a weak bargaining position often seek to remedy this weakness by participating in the creation of standard construction contracts such as those published by the American Institute of Architects (AIA) and the Engineers' Joint Contracts Documents Committee (EJCDC). In the past, prime contractors, through the Associated General Contractors of America (AGC), sought to persuade the AIA to incorporate or eliminate language in the AIA standard documents that they might not otherwise be able to do in dealing with an owner. Likewise, associations representing subcontractors frequently asked the AIA to incorporate provisions in the AIA prime contract requiring that certain rights be accorded subcontractors when these rights might not be obtainable in normal bargaining between prime contractors and subcontractors. When the prime

contract deals with subcontracting and subcontractors, an increased likelihood exists of conflicting contract documents and a more generally complicated prime contract.

Subcontractor associations had sought protective language not only in prime contract documents published by the AIA but also in the AIA's standard subcontract, A401. Just as prime contractors prefer an AIA document over a construction contract drafted by the owner, subcontractors are likely to prefer a subcontract drafted by the AIA to one prepared by the prime contractor.

Past attempts by the AGC and subcontractor associations to influence the AIA gave way in 2007 to creation of their own standard documents, called ConsensusDOCS. ConsensusDOCS 750 is the standard form subcontract. Some provisions are written to the advantage of the subcontractor. Disavowing the use of pay-when-paid clauses (see Section 28.06), Section 8.2.5 states that if the owner fails to pay the contractor for work satisfactorily performed by the subcontractor, the contractor must pay the subcontractor "within a reasonable time." Under Section 8.2.6, if the subcontractor has not been paid within a reasonable time, then, upon giving seven days' written notice to the contractor "and without prejudice to and in addition to any other legal remedies," the subcontractor "may stop work until payment of the full amount owing to the Subcontractor has been received." The impact of the ConsensusDOCS at this point is unknown.

One final aspect of the subcontracting process adds complexity. Contracts for the performance of design and construction services are basically regulated by common law rules, that is, rules that have evolved through court decisions. However, contracts for the sale of goods are governed by the Uniform Commercial Code (U.C.C.), a comprehensive statutory regulation. When a subcontractor, as is usually the case, provides both goods and services, which rules apply—the common law or the U.C.C.? Generally the test is whether the goods or services are the predominant aspect of the transaction.³ This can mean that a particular subcontract or a severable part of a particular subcontract is governed by the U.C.C., whereas the rest may be governed by the common law.

To sum up, the subcontracting system has undoubted advantages, but generates a host of legal problems. Bear this in mind as some particular subcontract problems are addressed next.

³*Bonebrake v. Cox*, 499 F.2d 951 (8th Cir.1974).

SECTION 28.02 The Subcontractor Bidding Process

A. Using Sub-Bids

In technical projects requiring specialized skills, the prime contractor may do very little work itself. In such projects, the cost to the prime contractor of work to be done by subcontractors is not likely to be known until subcontractors submit sub-bids. The prime contractor cannot bid until hearing from all the prospective subcontractors, something that does not usually occur until close to time for submitting the bid to the owner. In submitting its own bid, the prime contractor relies on the subcontractors' bids.

The prime contractor's reliance on subcontractors is most acute in the mechanical specialty trades (e.g., electrical, plumbing, air conditioning). Prime contractors also use a large number of subcontractors from the non-mechanical specialty trades (e.g., masons, roofers). Reliance upon subcontractors' bids provides the prime contractor with a relatively accurate means of calculating its own bid to the owner, while the sub-bids provide it with downside protection. These subcontractors, in addition, provide the prime contractor with a skilled workforce, which the prime contractor could not possibly afford to employ between projects.

Prime contractors generally use the bids given by subcontractors in computing their bids. Suppose a subcontractor withdraws its bid, usually because it contends that its bid had been inaccurately computed or communicated. Can the prime contractor hold the subcontractor to its bid by contending that the prime had relied on the sub-bid in making its own bid?

B. Irrevocable Sub-Bids

The early cases dealing with this problem used traditional contract analysis to allow the subcontractor to revoke its bid. Generally the prime contractor does not contract with the subcontractor, conditioned on the prime contractor's being awarded the bid. The prime contractor wishes to preserve maximum freedom to renegotiate with the low bidder or negotiate with other bidders. Ignoring the prime contractor having relied on the sub-bid in making its own bid, *James Baird Co. v. Gimbel Brothers*⁴ did not hold the subcontractor to its bid.

However, contract law, under the concept of "promissory estoppel," has expanded reliance as a basis for making an offer irrevocable. This carried over into subcontractor bid cases, the leading case being *Drennan v. Star Paving Co.*⁵ The subcontractor had submitted the lowest sub-bid for the paving portion of the work, a sub-bid the prime contractor used in computing its overall bid. The prime contractor listed the defendant on the owner's bid form as required by statute.⁶ The prime contractor was awarded the contract and stopped by the subcontractor's office the next day to firm up the "subcontract." On arrival, the subcontractor immediately informed the prime contractor that it had made a mistake in preparing its bid and would not honor it. The prime contractor sued and was awarded the difference in cost between the subcontractor's sub-bid and the cost of a replacement.

The court concluded that using the sub-bid did not create a bilateral—or two-sided—contract between the plaintiff and the defendant.⁷ But the court held the subcontractor to its bid because the bid was a promise relied on reasonably by the prime contractor when it submitted its own bid. The possible uncertainty of subcontract terms (discussed later in this section) was brushed aside.

To satisfy the doctrine of promissory estoppel as articulated in the Restatement (Second) of Contracts Section 90, there must be a clear and definite offer; a reasonable expectation that the offer will induce reliance; actual and reasonable reliance by the offeree; and an "injustice" that can be avoided only by enforcement of the offer. To be clear and definite, the offer must be more than a mere estimate or price quote. Courts rely upon industry custom

⁵1 Cal.2d 409, 333 P.2d 757 (1958), followed in the Restatement (Second) of Contracts, § 90 (1981). But *Drennan* was not followed in *Home Elec. Co. of Lenoir, Inc. v. Hall and Underdown Heating and Air Conditioning Co.*, 86 N.C.App. 540, 358 S.E.2d 539 (1987) (rejected as one-sided), aff'd, 322 N.C. 107, 366 S.E.2d 441 (1988), noted in 10 Campbell L.Rev. 293 (1988).

⁶As to listing laws, see Section 28.03. In *Southern California Acoustics Co. v. C. V. Holder, Inc.*, 71 Cal.2d 719, 456 P.2d 975, 79 Cal.Rptr. 319 (1969), the court held that an improper substitution created a claim based on the statutory violation against the prime contractor in favor of the improperly substituted subcontractor. This approximates binding both parties. But listing the subcontractor to comply with the statute generally does not create a bilateral (two-sided) contract. *Holman Erection Co. v. Orville E. Madsen & Sons, Inc.*, 330 N.W.2d 693 (Minn.1983).

⁷For a case holding that using the bid is not an acceptance, see *Mitchell v. Siqueiros*, 99 Idaho 396, 582 P.2d 1074 (1978). Similarly, see *Four Nines Gold, Inc. v. 71 Constr., Inc.*, 809 P.2d 236, 239 (Wyo.1991) (citing an earlier edition of this book).

⁴64 F.2d 344 (2d Cir.1933).

to conclude that a prime contractor's reliance is reasonable. The final element of injustice is met where the prime contractor will suffer a detriment if the subcontractor's offer is not enforced. However, promissory estoppel is an equitable doctrine (meaning the court promotes a fair outcome), and misconduct by the contractor (such as bid shopping, snatching up an unreasonably low bid, or unreasonable terms of acceptance) will release the subcontractor from being held to its offer.⁸ The prime contractor's damages is the difference in price between the withdrawn bid and the replacement subcontractor's cost. A recent article concludes that a majority of states follow promissory estoppel, a very few reject it outright, and in several the issue remains undecided.⁹

C. Bargaining Situation: Shopping and Peddling

The *Drennan* rule improves the prime contractor's already powerful bargaining position. Although the prime contractor under the *Drennan* rule is not free to delay its acceptance or to reopen bargaining with the subcontractor and still claim a right to accept the original bid, it can at least for a short period seek or receive lower bid proposals from other subcontractors.

Under the *Drennan* rule, until the prime contractor is ready to sign a contract with the subcontractor whose bid it has used, the subcontractor is not assured of getting the job. Before the award of the prime contract, the plurality of competing prime contractors' bidding on a project tends to diffuse their bargaining power over subcontractors. This competition before the award of the contract should result in lower sub-bids and consequently lower overall bids by the prime contractors, a definite benefit to the owner. Although subcontractors often wait until the last minute to submit their sub-bids in an effort to minimize the prime contractor's superior bargaining position, a substantial amount of competition still exists among the subcontractors themselves.

After award of the contract, the relative bargaining strengths of the successful prime contractor and the competing subcontractors change drastically. The prime contractor now has a "monopoly" and a substantially superior bargaining position over the subcontractors under the *Drennan* rule. The sub-bids used provide the prime

contractor with a protective ceiling on the cost of the work with no obligation to use the subcontractors. The prime contractor is therefore free to look elsewhere for yet a better price and is able to increase its profits by engaging in postaward negotiations.

Postaward negotiations have become controversial. Sometimes they are called "bid shopping"; the prime contractor uses the lowest sub-bid to "shop around" with the hope of getting still lower sub-bids. "Bid peddling" is the converse, with other subcontractors attempting to undercut the sub-bid to the prime, in essence engaging in a second round of bidding. Subcontractors often refer to these postaward negotiations as "bid chopping" and "bid chiseling." (These tactics can also be used before prime bids are submitted.)

Both subcontractors and owners have reasons to condemn postaward competition. The subcontractors assert that preparing a bid involves considerable expense. Subcontractors who "bid peddle" may not even prepare their own bids, thus saving overhead expenses. The subcontractor who went to the expense of calculating a bid subsidizes the bid-peddling subcontractor's overhead costs as well as the prime contractor's costs of bid preparation.¹⁰

Subcontractors who fear bid shopping often wait until the last minute to submit their sub-bids to the prime contractor to give the prime contractor as little time as possible to bid shop. This last-minute rush is the cause for many mistakes by both subcontractors and prime contractors. Some subcontractors simply refrain from bidding on jobs where bid shopping is anticipated, to save the expense of preparing a bid. To that extent, competition among subcontractors is diminished and higher prices can result.

Subcontractors feel they must pad their bids to make allowance for the eventual postaward negotiations. This "puffing" raises the cost to the owner, as the inflated bid is the bid the prime contractor uses to compute its overall bid. Any subsequent negotiations that result in reducing the price benefit only the prime contractor.

The superior bargaining position of a successful prime contractor spurs cutthroat competition among subcontractors, resulting in lost profits that can upset industry stability. Prime contractors respond by noting that

⁸Sections 28.02C & D.

⁹Kovars & Schollaert, *Truth and Consequences: Withdrawn Bids and Legal Remedies*, 26 Constr. Lawyer, No. 3, Summer 2006, p. 5.

¹⁰One court has held that bid shopping by a prime contractor constitutes an unfair trade practice; see *Johnson Elec. Co., Inc. v. Salce Contracting Assocs., Inc.*, 72 Conn.App. 342, 805 A.2d 735, certification denied, 262 Conn. 922, 812 A.2d 864 (2002).

sub-bids are often unresponsive to the specifications and require further clarification and negotiation. This may be especially true when prime contractors are dealing with subcontractors with whom they have never dealt. They must investigate the subcontractor's reputation and work experience before making a firm contract. A prime contractor who goes through the effort of deciding upon a specific subcontractor is, at the very least, inconvenienced by a withdrawal of a sub-bid on the eve of project commencement.¹¹

Prime contractors state that bids are often requested for alternative proposals, and they lack the time to evaluate all the alternatives in the short time available between receipt of the sub-bids and bid closing. They assert that negotiations are sometimes required to decide on the specific alternative to be chosen. Prime contractors also justify postaward negotiation by stating that estimating a job is a normal cost of overhead in the construction industry.

D. Avoiding *Drennan*

Subcontractors can avoid their sub-bids' being firm offers that bind them and not the contractor. They can call their bids "requests for the prime to make offers" to them, or "quotations," given only for the prime contractor's convenience.¹² They can state in their bids that the bid is provided for information only and is not a firm offer.¹³ They may also try to annex language stating that using the bid constitutes an acceptance that ties the prime contractor to them. They may refuse to submit bids unless they receive a promise by the prime contractor to accept the bid if it is low and the prime contractor is awarded the contract.¹⁴ They may refuse to begin work without receiving a letter of intent from the prime contractor that provides that they will be paid if the parties

cannot agree on the terms of the subcontract. Finally, one subcontractor notified the public owner that it had made a mistake in its bid to the prime, and the owner canceled the procurement.¹⁵

The difficulty with most methods of avoiding the *Drennan* rule is that either the subcontractors do not have the bargaining power to implement them or the process does not make it convenient to use them.

Courts will not apply promissory estoppel if the conditions for finding a contract are not present. The *Drennan* rule can be avoided if many crucial areas have been left for further negotiation¹⁶ or if there is no "meeting of the minds" as to the scope of work.¹⁷ Promissory estoppel is inappropriate if the prime contractor does not accept the bid within a reasonable time¹⁸ or proposes a subcontract that contains new unreasonable or onerous terms.¹⁹ Although this defense was unsuccessful in the *Drennan* case, other courts have upheld the subcontractor's claim of mistake.²⁰

Finally, a subcontractor who provides an oral bid may try to invoke the Statute of Frauds as a defense.²¹ However, the Restatement (Second) of Contracts, Section 139, views promissory estoppel as an exception to the Statute of Frauds, and most courts find oral bids enforceable.²²

E. Uniform Commercial Code

Offers generally at common law are revocable even if stated to be irrevocable. Dissatisfaction with this rule has generated solutions taking many forms, including the *Drennan* rule making the bids irrevocable. Another method adopted is Section 2-205 of the Uniform Commercial Code (U.C.C.). Section 2-205 recognizes firm offers and enforces them if certain requirements are met.

The U.C.C. does not apply to service contracts or those that involve interests in land. The U.C.C. has also had limited use in making sub-bids by suppliers irrevocable. Section 2-205 requires a written offer stating that the bid will be held open. Bids are often communicated by telephone, facsimile, or electronic medium.

The U.C.C. is not a viable solution to the problem of sub-bids for another reason. Rarely will all the needed terms be expressed by the offer, however made. Even if the bid is communicated by a writing with all the terms, rarely do prime contractors intend to be bound to those terms, choosing to either use terms used before or dictate terms later. The firm offer of Section 2-205 does not fit the sub-bid, another reason why the *Drennan* rule, a substitute for the U.C.C. firm offer, was incorrectly decided.

California revised its version of the U.C.C. in 1980.²³ A written or oral sub-bid for goods made to a licensed contractor that the bidder knows or should know will be relied on is irrevocable for ten days after the prime contractor is awarded the contract but not later than ninety days after the bid. Oral bids of over \$2,500 must be confirmed in writing within forty-eight hours. The bid can limit the duration of the offer.

Again the problem of terms can arise. The statute does not preclude the sub-bidder from asserting that the terms needed to cure any completeness requirement were not included in the offer, particularly if it were oral. Although the California statute as revised expands the enforcement of oral sub-bids for goods, it has the same defects as the *Drennan* rule (noted in Section 28.02B).

F. A Suggestion

The *Drennan* rule, now firmly in the saddle in most American jurisdictions, was a laudable attempt to avoid the common law rule of revocability and expand reliance

as a method of enforcing *promises that should be enforced*. It is singularly inappropriate for construction sub-bids. First, it gives advantage to the prime contractors that already have a strong bargaining position. Second, it creates a binding offer before there has been agreement on important terms such as bonds, payment, indemnification, and dispute resolution.²⁴ The traditional common law rule expressed in the *Baird* case²⁵ is more appropriate. One-sided contracts should be found only when this is clearly intended or where absolutely necessary. Neither occurs here.

Using the bid should be an acceptance of the offer, and a contract concluded if there are sufficient terms supplied by well-established custom or a course of dealings between the parties which can supply the ancillary terms in addition to the work to be performed and payment. When such customs do not exist, neither party should be bound until both parties work out the terms needed to make a binding contract.²⁶

G. Teaming Agreements

Teaming agreements are, as a rule, informal arrangements between prime contractors who wish to obtain federal procurement high-technology contracts and subcontractors who help devise proposals designed to help the prime contractor win the competition. The informality of these arrangements can often lead to litigation if the prime contractor wins the competition and does not award subcontract work to its "teaming partner." This situation was discussed in Section 17.04H.

SECTION 28.03 Subcontractor Selection and Approval: The Owner's Perspective

Owners wish to have competent contractors building their projects. They want subcontractors treated fairly and given an incentive to perform the work expedi-

²⁴This problem was recognized in *Saliba-Kringlen Corp. v. Allen Eng'g Co.*, 15 Cal.App.3d 95, 92 Cal.Rptr. 799 (1971). But too much emphasis on this would frustrate the *Drennan* rule, an outcome the court was not willing to endorse.

²⁵Supra note 4.

²⁶This approach has been suggested in *Loranger Constr. Corp. v. E. F. Hauserman Co.*, 376 Mass. 757, 384 N.E.2d 176 (1978). See, generally, Cloisen & Weiland, *The Construction Industry Bidding Cases*, 13 J.Mar.L.Rev. 565 (1980).

²³West Ann.Cal.Comm.Code § 2205.

tiously. Some owners contract directly with the specialty trades to avoid the prime contractor as an “intermediary” between owner and specialized trades. Some contract directly with the specialized trades and assign those contracts to a main or prime contractor. Some owners dictate to the prime contractor which subcontractors will be used, known in England as the *nominated subcontractor* system.

The American version used in some public contract systems is called “prefiled” bids. Prospective subcontractors file sub-bids with the public entity. The successful prime bidder must contract with the lowest subcontract bidders.²⁷

These methods of direct intervention are not common in the traditional contracting system. Some owners leave subcontracting exclusively to the prime contractor. Others take a role that gives them *some* control but does not involve the owner *directly* with the subcontractor. Using the prime contractor as a buffer is done for administrative and legal reasons. The subcontracting system requires a well-defined organizational and communication structure under which each participant knows what it must do and with whom it must deal. From a legal standpoint, the owner does not want to be responsible for subcontract work, does want the prime contractor to be responsible for defective subcontract work, and does not want to be responsible if subcontractors are not paid.

One “part-way” control is to require that prime contractors list their subcontractors at the time they make their bids. Statutes in some states, called *listing laws*,²⁸ impose this on prime contractors in public projects. Although undoubtedly some impetus for such laws came from subcontractor trade associations,²⁹ one reason for the listing laws is to assure the awarding authority that only competent subcontractors will perform on the project.³⁰

²⁷This is described in *J. F. White Contracting Co. v. Dept. of Public Works*, 24 Mass.Ct.App. 932, 508 N.E.2d 637, review denied, 400 Mass. 1104, 511 N.E.2d 620 (1987).

²⁸West Ann.Cal.Pub.Cont.Code §§ 4100 *et seq.*

²⁹*Clark Pacific v. Krump Constr., Inc.*, 942 F.Supp. 1324 (D.Nev. 1996) (citing earlier edition of this book).

³⁰*Ibid.* The court stated at 1338 that listing laws were also enacted “because of the indirect effects of ruthless bid-shopping, which include poor workmanship provided by subcontractors who, desperate to retain their subcontracts, shave their profits and expenses below a level which guarantees quality work, subcontractors’ insolvencies, and construction workers’ lost wages.”

Legislatures frequently justify listing statutes by condemning bid shopping and bid peddling that, they assert, cause poor quality of materials and workmanship to the detriment of the public and also deny “the public of . . . the full benefits of fair competition among prime contractors and subcontractors, and lead to insolvencies, loss of wages to employees, and other evils.”³¹

Listing laws usually regulate substitution of listed subcontractors by providing specific justifications for substitutions and a procedure for determining the grounds for replacing one subcontractor with another. Complications have developed not only as to grounds for substitution but also as to who has a claim for violating the statute.³² From the subcontractor’s viewpoint, listing laws dampen any attempt by the prime contractor to reopen negotiations.

Listing is used by the American Institute of Architects (AIA) in a more limited way. AIA Document A201-2007, Section 5.2.1, requires the contractor “as soon as practicable after award of the contract” to furnish the owner and architect the names of subcontractors and those who will furnish materials and equipment fabricated to a special design. Before 1976, the architect had to *approve* subcontractors. To make the architect’s role more passive and to minimize the likelihood of liability, A201-2007, Section 5.2.1, states that the architect “may reply” to the contractor within 14 days stating (1) whether the owner or contractor has “reasonable objection to any such proposed person or entity” or (2) that the architect needs additional time for review. Failure to “reply within the 14-day period shall constitute notice of no reasonable objection.” If the architect has reasonable objection, Section 5.2.3 requires an increase or decrease in the contract price caused by any substitution. Responding to criticism, the AIA in A201-1997, Paragraph 5.2.3, allowed the price change only if the rejected subcontractor “was reasonably capable of performing the Work,” and this language is continued in A201-2007, Section 5.2.3.

Some control over subcontractors, though desirable, has negative features. Requiring that a subcontractor not

³¹West Ann.Cal.Pub. Cont. Code § 4101.

³²See *Golden State Boring & Pipe Jacking, Inc. v. Orange County Water Dist.*, 143 Cal.App.4th 718, 49 Cal.Rptr.3d 447 (2006); *R. J. Land & Assocs. Constr. Co. v. Kiewit-Shea*, 69 Cal.App.4th 416, 81 Cal.Rptr.2d 615 (1999). See also *Southern California Acoustics Co. v. C. V. Holder, Inc.*, *supra* note 6; *Clark Pacific v. Krump Constr. Co.*, *supra* note 29. The latter opinion contains a good discussion of listing laws and their purposes.

be removed unless there is "due investigation" can invite a subcontractor who has been removed to assert a claim that the architect or owner has intentionally interfered with its actual or prospective contract. As noted, to get a price increase if a proposed subcontractor has been rejected under Section 5.2.3 the contractor must show that its proposed subcontractor was reasonably capable of performing the work. It is difficult to tell whether this 1997 change will have any effect on a claim by a rejected subcontractor against the owner or architect. It can be contended that proposing a subcontractor was a representation by the prime that the proposed subcontractor could do the work. At the very least this change may shift the burden of showing there were good reasons for the rejection to those who are rejecting the proposed subcontractor. The change made in 1997 will likely mean fewer rejections of proposed subcontractors. Although there may be defenses,³³ this does increase potential liability exposure to the owner or architect.

The Engineers Joint Contracts Documents Committee (EJCDC), in its C-700, Paragraph 6.06B (2007), does not require that the identity of subcontractors be furnished. Only if the supplementary conditions require the identity of subcontractors and suppliers are their names to be submitted to the owner for acceptance by the owner. The owner can revoke any acceptance "on the basis of reasonable objection after due investigation." A price adjustment is made if the contractor must use a replacement.

But Paragraph 6.06A states that the prime will not use a subcontractor "against whom Owner may have reasonable objection." That paragraph also provides, as does A201-2007, Section 5.2.2, that the prime cannot be forced to use a subcontractor against whom the prime has "reasonable objection."

Suppose the contractor wishes to remove an approved subcontractor? AIA Document A201-2007, Section 5.2.4, bars a contractor from doing so if the owner or architect makes a reasonable objection. But objections to proposed substitutions must be exercised carefully. In *Meva Corp. v. United States*,³⁴ the contracting officer denied the contractor permission to substitute, and the contractor was forced to keep the original subcontractor. The subcontractor did a poor job, however, and the contractor recovered from the public agency losses caused by the subcontractor.

³⁴206 Ct.Cl. 203, 511 F.2d 548 (1975).

To sum up, owner intervention into the relationship between prime contractor and subcontractor may be essential, but carries risks. If the risks are so great but the need for intervention so strong, the owner should consider a method other than the traditional contracting system, such as separate contractors (multiple primes). (The owner's attempt to keep subcontractors "on board" if the prime contract is terminated is discussed in Section 33.06.)

SECTION 28.04 Sources of Subcontract Rights and Duties: Flow-Through Clauses

The principal source of contract rights and duties between prime contractor and first-tier subcontractor is the subcontract itself. Similarly, the principal source of contract rights and duties between first- and second-tier subcontractors is the sub-subcontract, and so on down the subcontract chain. However, this source is not exclusive. As with any contract, the express terms will be supplemented by terms implied judicially into the subcontract relationship.

In addition, each contract on the subcontract chain can be and frequently is affected by contracts higher up the chain. The subcontract relationship is usually affected and may be controlled by terms in the prime contract. Correspondingly, second-tier subcontract relationships are affected and may be controlled by both first-tier subcontract and prime contract provisions. For convenience, discussion focuses on the relationship between prime contractor and first-tier subcontractor and the effect of the prime contract to which the subcontractor is not a party on that relationship.

The discussion in this section centers principally on the subcontractor's being bound to provisions of the prime contract because the latter is referred to or incorporated in the subcontract. However, it has been contended that a series of interrelated contracts can create a single contract binding all parties to the entire series even though each party may not have signed each contract in the series. Although such a contention was rejected in the context of an architect-owner contract followed by an owner-prime contractor contract,³⁵ a California decision intimated that

³⁵*C. H. Leavell & Co. v. Glantz Contracting Corp.*, 322 F.Supp. 779 (E.D.La.1971).

such a conclusion might be sustained in a case involving a subcontract followed shortly by a prime contract.³⁶

Even absent a one-contract theory, a court may look to the terms of the prime contract to discern the intent of the subcontract terms. In a Wyoming case, the city was required to give the prime contractor seven days to cure any defects; however, the subcontract permitted the contractor to repair the subcontractor's defective work only "after reasonable notice." The court, reading the two contracts together, ruled that the contractor breached the subcontract when it gave the subcontractor less than seven days to repair defective work.³⁷

The owner and the prime contractor generally seek to bind the subcontractors at least to the performance provisions of the prime contract. The prime contractor's objective is to ensure that the entity it has selected to perform its obligations is obligated to do so. The owner's reason is less obvious. It could simply bind the contractor and let the prime take care of ensuring consistent performance obligation down the line. But the owner seeks proper performance and not claims against its prime contractor. It is most likely to obtain proper performance if the subcontractors down the line have committed themselves to do so. As an ancillary but much less important reason for obtaining such commitments from subcontractors, some owners might be seeking to perfect a claim against their subcontractors by asserting that they are intended beneficiaries of the subcontracts. This is discussed in Section 28.05B.

To tie subcontractors, the prime contract will usually contain a "flow-through," or conduit, clause. Such a clause requires the prime contractor to tie the subcontractors to provisions of the prime contract that affect their work. But flow-through clauses are not self-executing, the objective being accomplished only if the prime contractor does incorporate the prime contract into the subcontract. It is crucial to be aware of the maze of different contract documents and those administrative provisions, such as those that deal with disputes, that go beyond substantive performance obligations. To implement the objectives of owner and prime, the latter must obtain a promise by the subcontractor to perform the performance commitments of the prime and be bound to the administrative provisions, such as design professional decisions and arbitration. When a

total system is used, such as AIA Documents A101-201 and A401, this is done automatically. But if the prime uses its own subcontract or one negotiated with a subcontractor, the owner should check the ultimate subcontracts to be certain the prime contractor has done what it has obligated itself to do in the prime contract.

Implementation usually is accomplished by incorporation by reference. This must be distinguished from simply referring to the prime contract. If there is merely a reference to the prime contract, the subcontract will be interpreted in the light of the prime contract, or the prime will take precedence in the event of a conflict.³⁸ Although the prime contract—principally the general and supplementary conditions and technical writings—need not be physically attached to the subcontract, the subcontract should clearly state that the prime contract is incorporated by reference. If properly incorporated, it is part of the subcontract.³⁹

Except for interpreting specifications or what work is included in the work of a particular specialty, debates over whether the subcontractor must comply with the performance aspects of the prime contract are rare. Most reported appellate decisions involve dispute resolution—principally the issue of whether particular disputes between prime and subcontractor must be resolved by arbitration. The cases have struggled with conflicting arbitration clauses in prime and subcontract, with transactions where arbitration is included in the prime but not in the subcontract, and even with contracts that do not contain an arbitration clause and do not even refer to another contract that does contain one.

Before examining specific cases, it is important to look at flow-through, or conduit, clauses. As noted, the principal reason for such a clause is to ensure that subcontractors commit themselves to the performance requirements of the prime contract. As an illustration, AIA Document A201-2007, Section 5.3, states that the contractor will "require each Subcontractor, to the extent of the Work to be performed by the Subcontractor, to be bound to the Contractor by the terms of the Contract Documents, and to assume toward the Contractor all the obligations and

³⁸*Oxford Dev. Corp. v. Rausauer Builders, Inc.*, 158 Ind.App. 622, 304 N.E.2d 211 (1973) (conflict over work to be performed); *United States v. Foster Constr. (Panama) S.A.*, 456 F.2d 250 (5th Cir.1972) (conflict over terms and conditions).

³⁹*West Bank Steel Erectors Corp. v. Charles Carter & Co.*, 248 So.2d 52 (La.App.1971), held that a subcontractor was required to perform in accordance with specifications in the prime contract.

responsibilities which the Contractor . . . assumes toward the Owner and Architect."

But this clause goes beyond that objective. Under it, the *benefits* given the prime in A201 flow down to the subcontractor. For example Section 5.3 gives the subcontractor all the "rights, remedies and redress" against the contractor that the contractor has against the owner unless the subcontract specifically provides otherwise. For example, prime contracts usually contain *force majeure* provisions that excuse delayed performance if certain events occur. Such a provision for flow-through of benefits would give identical rights to the subcontractor if a claim is made against it by the prime contractor for delay.

A201's flow-through of benefits applies only if the subcontract does not specify otherwise. The flow-through provision may not be of much value to the subcontractor, because subcontracts frequently contain provisions less favorable to the subcontractor than the prime contractor has in its contract with the owner. Note that Section 5.3 requires the contractor to make available to proposed subcontractors, before execution of the contract, copies of the general conditions to which the subcontractor will be bound and "upon written request of the Subcontractor, identify to the Subcontractor terms and conditions of the proposed subcontract agreement which may be at variance with the Contract Documents." The AIA hopes to give the subcontractor some bargaining muscle when the prime contractor seeks to force provisions on the subcontractor that are harsher than those in the prime contract. Whether this will have any effect on the bargaining power in the actual subcontracts is debatable.

Provisions for flow-through of benefits raise problems. For example, AIA Document A201-2007, Section 2.2.1, gives the prime contractor a right to inquire into the owner's financial arrangements. Does the benefits flow-through provision give a similar right to the subcontractor to inquire into the financial sources of the prime contractor? The prime contractor may with justification contend that this power constitutes a trap for unwary prime contractors who may not realize how using a boilerplated flow-through provision can compel it to disclose sensitive information to subcontractors.

The attempt to give negotiation power to the subcontractor to augment its weak position at the bargaining table has other difficulties. For example, A201-2007, Article 15, sets up a dispute resolution system under which initially disputes are decided by the Initial Decision Maker,

subject to arbitration if chosen by the parties. If this is a *burden* under the prime contract, the subcontractor must accept this method of dispute resolution. If, however, it is a *benefit*, the subcontractor is entitled to it only if there is nothing specific in the subcontract to the contrary.

Similarly, the benefits and burdens dilemma can be illustrated by *Dawlar Corp. v. Superior Court of Los Angeles County*.⁴⁰ In this case an insurer paid a loss to the prime and brought a subrogation claim against the subcontractor. The subcontractor defended by pointing to the waiver-of-subrogation clause in the prime contract and claiming that the prime contract was incorporated into the subcontract by reference. The insurer pointed to the absence of a waiver-of-subrogation clause in the subcontract and the inclusion of an indemnity clause in the subcontract. In essence it claimed the waiver was inconsistent with the indemnity clause and should not be incorporated into the subcontract.

The court did not find inconsistency. It held that the waiver covered insured losses, whereas the indemnity clause applied to noncovered claims, presumably property damage claims.

Structuring the provision for flow-through of benefits to apply only if nothing to the contrary is found in the subcontract raises the inevitable problem of seeking to determine when a benefit has been specifically excluded by the subcontract. Not only that, this attempt to give bargaining power to the subcontractor, as noted earlier in this section, seems to depend on a requirement in Section 5.3 that the contractor make available to proposed subcontractors copies of the prime contract and identify to the subcontractor "terms or conditions" of the subcontract that may be "at variance" with the prime contract.

Some prime contractors complain that requiring them to identify to the subcontractor provisions in the proposed subcontract, which may vary from the prime contract, requires that they act as the subcontractor's attorney.

This benefits flow-through provision demonstrates some of the difficulties in construction contract drafting. It seems attractive to include a clause that helps the subcontractor in its often difficult negotiations, if there are any at all, with the prime contractor. However, often drafters do not think about the possible applications of a general clause both as to substance and procedures. This

⁴⁰53 Cal.App.4th 1121, 62 Cal.Rptr.2d 199 (1997).

well-meaning attempt to aid the subcontractors may only create more problems in construction contract administration and in dispute resolution.

As to specific cases, *Pioneer Industries v. Geyvyn Construction Corp.*⁴¹ involved legal action by a subcontractor against the prime contractor and its surety for work performed before the public awarding authority terminated the prime contract. The prime contractor disputed the termination and sought arbitration in accordance with the prime contract arbitration provision. However, the subcontractor sought to have the dispute decided by the court rather than by arbitrators. The prime contractor pointed to a provision in the subcontract that incorporated the arbitration clause of the prime contract into the subcontract. The court pointed to subcontract provisions, stating that any conflict between prime contract and subcontract would be controlled by the subcontract and that disputes arising out of termination would be arbitrated only if the dispute involved less than \$3,500. Because the dispute in the lawsuit involved over \$3,500, the court concluded that the dispute did not fall within the arbitration clause of the subcontract. This holding illustrates that the specific subcontract arbitration clause takes precedence over the incorporation by reference of the prime contract arbitration clause. The probably unintended result was an arbitration between prime contractor and owner and litigation between prime contractor and subcontractor.

The *Pioneer* case enforced the subcontract arbitration clause. However, the court in *John F. Harkins Co., Inc. v. The Waldinger Corp.*,⁴² chose the arbitration clause in the prime contract. The subcontract contained a broad arbitration clause but also contained a clause stating that the subcontractor would be bound by all applicable provisions of the prime contract, the latter containing a much narrower arbitration clause.

After a dispute arose, the subcontractor sought to invoke the arbitration clause in the subcontract. The prime contractor contended it did not have to arbitrate, as the dispute was not arbitrable under the prime contract. The appellate court upheld a decision of the trial court that the dispute was not subject to arbitration.

The court pointed to preliminary negotiations that indicated that the subcontractor realized that the subcontract

was favorable to the prime contractor and sought unsuccessfully to obtain language that would give it the benefit of provisions in the prime contract. Evidence also showed that both parties intended that incorporating the prime contract would not give the subcontractor greater rights against the prime than the prime had under the prime contract. This conclusion, over a vigorous dissent, came in the face of federal law generally extending great scope to arbitration clauses.

Two cases held that arbitration would be required even though the subcontract did not contain an arbitration clause. The first, *Maxum Foundations, Inc. v. Salus Corporation*,⁴³ involved AIA Document A201, which incorporated the general conditions into the subcontract and also contained a flow-through provision. The court held that this was sufficient to incorporate the arbitration clause of A201 into the subcontract. Despite the prime contractor not having “passed through” prime contract obligations, the court concluded that all the evidence indicated that the clause was intended to be part of the subcontract, even though not expressly included in it. The court was influenced by the policy of federal courts favoring arbitration.

The second case, *John Ashe Associates v. Envirogenics Co.*,⁴⁴ involved a purchase order subcontract that did not even refer to the prime general conditions with its arbitration clause. Yet the subcontractor was bound to arbitrate because

1. The prime normally sent its prime general conditions with an arbitration clause to all prospective subcontractors.
2. The specifications and special conditions of the specifications referred to the prime general conditions.
3. The subcontractor referred to the prime general conditions to prepare its bid.

These reasons were held sufficient to put the subcontractor on notice that the arbitration clause of the general conditions was incorporated into the purchase order executed by the subcontractor.

Most of the cases noted have involved dispute resolution. As provisions seeking to limit claims—such as waivers

⁴¹ 458 F.2d 582 (1st Cir.1972).

⁴² 796 F.2d 657 (3d Cir.1986), cert. denied sub nom. *TWC Holdings, Inc. v. John F. Harkins Co.*, 479 U.S. 1059 (1987).

⁴³ 779 F.2d 974 (4th Cir.1985), appeal after remand, 817 F.2d 1086 (4th Cir.1987).

⁴⁴ 425 F.Supp. 238 (E.D.Pa.1977).

of consequential damages as noted in Section 27.06D and "no-damage" clauses, discussed in Section 26.10A—become more common, there will be more attempts to pass them through to the subcontractor through a "flow-through" clause. The devastating effect such clauses can have on subcontractor claims, particularly when the subcontractor may not be aware of them or have participated in their creation, may mean courts will carefully scrutinize such "flow-through" provisions.⁴⁵

These cases reveal some of the chaos that can occur in dispute resolution because of the subcontract system. Although, as indicated earlier in this section, there is no requirement that the prime and subcontracts be perfectly parallel, the risk of contradictory dispute resolution provisions or the absence of such provisions in one contract and their presence in another generates complicated issues. This makes disputes between prime and subcontractors extraordinarily difficult to settle and resolve.

SECTION 28.05 Subcontractor Defaults

A. Claims by Contract-Connected Parties

A subcontractor's unexcused refusal or failure to perform in accordance with its contract obligations can damage those with whom the subcontractor has contracted, such as the prime contractor or a lower-tier subcontractor. As shall be seen in Section 28.05C, a prime contractor may be accountable to the owner for defaults of the subcontractor. This can mean that the extent of the claim and the method of resolving any dispute over it may be affected by provisions in contracts other than the subcontract.

B. Claims by Third Parties

Some tort claims against a subcontractor are made by those who suffer personal harm. This section looks at claims against a subcontractor based on economic losses suffered by third parties, principally the owner.

Owners employ three theories to recover losses they have suffered that were caused by a subcontractor breach. First, an owner may contend that the subcontractor has

breached its contract with the prime contractor—the contract intended for the benefit of the owner. Second, the owner may assert that the subcontractor's breach was tortious in that it failed to live up to the legal standard of care.⁴⁶ Third, the owner may contend that the prime contractor was merely a conduit between owner and subcontractor—essentially a contention based on the prime contractor's contracting as an agent of the owner.⁴⁷

Generally, attempts have met with mixed success, with some courts allowing the owner to assert a claim as an intended beneficiary,⁴⁸ whereas others, taking a realistic look at the intention-to-benefit test, have not.⁴⁹ However, a prime contractor who began dealing with a sub-subcontractor because the subcontractor was having financial problems, was allowed to sue the sub-subcontractor for defective work.⁵⁰

Because of the unsettled state of the law, the third party's principal claim is against the party with whom it has a contractual relationship and that party institutes action against the subcontractor. For example, if the owner has suffered a loss it is likely that the owner's action will be against the prime contractor and the prime contractor will bring an action against the subcontractor.

The third-party claim—that is, the direct claim against the subcontractor—may also be asserted. But the uncertainty of its success makes it ancillary to the principal claim unless the claim against the contract-connected party would be uncollectible.

⁴⁶See cases cited in Sections 14.08C, D, and E.

⁴⁷*National Cash Register Co. v. UNARCO Industries, Inc.*, 490 F.2d 285 (7th Cir.1974) (dictum that owner could sue as principal of an agency relationship but claim allowed under subrogation); *Seither & Cherry Co. v. Illinois Bank Bldg. Co.*, infra note 56.

⁴⁸*Chestnut Hill Dev. Corp. v. Otis Elevator*, 653 F.Supp. 927 (D.Mass.1987) (ambiguity because clause that allowed the owner to assume the contractor's rights did not appear in the subcontract, but subcontract required sub to perform strictly in accordance with prime contract); *United States v. Ogden Technologies Laboratories, Inc.*, 406 F.Supp. 1090 (E.D.N.Y.1973); *Gilbert Financial Corp. v. Steelform Contracting Co.*, 82 Cal.App.3d 65, 145 Cal.Rptr. 448 (1978).

⁴⁹*Vogel Bros. Building Co. v. Scarborough Constructors, Inc.*, 513 So.2d 260 (Fla.Dist.Ct.App.1987) (owner could not compel prime and sub to arbitrate); *Vogel v. Reed Supply Co.*, 277 N.C. 119, 177 S.E.2d 273 (1970); *Manor Junior College v. Kaller's, Inc.*, 352 Pa.Super. 310, 507 A.2d 1245 (1986).

⁵⁰*White Constr. Co., Inc. v. Sauter Constr. Co.*, 731 P.2d 784 (Colo. App.1987).

⁴⁵But see *L. & B. Constr. Co. v. Regan Enterp., Inc.*, 267 Ga. 809, 482 S.E.2d 279 (1997), which held a subcontractor bound to a "no-damage" clause that flowed through to its subcontract and barred its claim.

C. Responsibility of Prime Contractor

The subcontracting process permits the prime contractor to discharge its obligations by using a subcontractor. However, this power to perform through another does not relieve the prime contractor of responsibility for subcontractor nonperformance.⁵¹ Most standard construction contracts make the prime contractor responsible for subcontractor defaults.⁵²

In *Norair Engineering Corp. v. St. Joseph's Hospital, Inc.*,⁵³ one issue involved the responsibility for defective work performed by a subcontractor who was hired at the owner's demand by the contractor who had been brought in by the bonding company to replace the original prime. The court concluded that the contractor was well aware that it was taking the risk of the subcontractor's default when it entered into the prime contract, that it was not without remedies against the subcontractor, and that it would never have been awarded the contract to complete the work unless it had agreed to the provisions under which the owner could select and approve subcontractors.

Owners can exercise a variety of controls over the selection of subcontractors.⁵⁴ That the owner approves a proposed subcontractor should not relieve the prime contractor of responsibility. Clearly, this is a matter for negotiation, and the law should enforce the choice that the contracting parties have made. Where there is no clear evidence one way or the other, a strong argument can be made that the owner *dictating* the use of a particular subcontractor should relieve the prime contractor of responsibility.⁵⁵ In such a case, the prime contractor may be acting as an agent of the owner to engage a particular subcontractor and should not be responsible unless it knew or should

have known that the subcontractor was incompetent.⁵⁶ If the owner steps in and takes away the prime contractor's power to manage the subcontractors, the prime contractor cannot be held accountable for the work of the subcontractors. Its obligation is conditioned on its right to manage the job without unreasonable interference.⁵⁷

Sometimes the prime contractor contends that it should not be held responsible, pointing to the independent contractor rule. This rule, though subject to many exceptions, relieves the employer of an independent contractor from responsibility from the latter's improper performance.⁵⁸ However, this defense, where available, does not relieve the employer of the independent contractor when the independent contractor's failure to perform properly has damaged a party to whom the employer of the independent contractor owed a contract right of proper performance.⁵⁹

This section has looked largely at judicial claims against the prime contractor based on conduct of the subcontractor. However, increasing attention is being directed toward claims by public safety officials against the prime contractor under powers granted by the Occupational Safety and Health Act (OSHA), a federal law that regulates the workplace. An OSHA citation was issued against a prime contractor for defective work performed by its electrical subcontractor.⁶⁰ The citation was based on the conclusion that the prime should have general knowledge of electrical requirements. Although the prime was entitled to rely on the knowledge and expertise of its subcontractors, the OSHA Review Commission concluded that the prime did not show evidence of its reasonable reliance on the subcontractor. This may mean that a prime contractor will be accountable under OSHA for defective work performed by specialty trades unless it obtains some written acknowledgment from the subcontractors that requirements are being complied with and that the prime is relying on the subcontractor's expertise.

SECTION 28.06 Payment Claims Against Prime Contractor

One particularly sensitive area in the subcontract relationship relates to money flow, with subcontractors frequently contending that they invest substantial funds in their performance and are entitled to be paid as they work and to be completely paid when their work is completed. This issue surfaces around two concepts: line item retention and payment conditions. The subcontractors wish to divorce their work and payment for it from the prime contract. They argue *for* line item retention and *against* payment conditions.

Line item retention gives the subcontractor the right to be paid after it has fully performed. Delay usually occurs because the owner holds back retainage—a designated amount of the contract price for the entire performance, that of prime contractor and all subcontractors. When all the work is completed and the project accepted, the owner will pay the retainage. However, early finishing subcontractors may have to wait a substantial period of time after they have completed their work for the retention allocated to their contract because the entire project is not yet completed. They would like to disassociate their contract from the rest of the subcontracts and the prime contract.

A payment condition ("pay when paid" clause or more realistically, from the position of the prime, "pay *only* if paid") makes payment to the prime contractor a condition of the prime contractor's obligation to pay the subcontractor. Prime contractors seek to create such a condition by including language in the subcontract stating that the prime contractor will pay "if paid by the owner," "when paid by the owner," or "as paid by the owner." An endless number of cases have interpreted this language. Does the language create a condition to payment or simply indicate that the payment flow contemplated some delay, with payment in any event being required after a reasonable time expires?

All courts agree, or at least so they state, that the parties can make a payment condition under which the subcontractor assumes the risk that it will not be paid for its work. The legal issue has centered around the requisite degree of specificity needed to create such a condition. On the surface, the courts simply examine the language and seek to determine the intention of the parties. Other factors are operating, however. This section looks at what

courts have done, discusses some reasons for such clauses, and concludes by looking briefly at the system used in the AIA standard documents.

In 1933, New York held that language of the type that appears to tie the subcontractor's right to payment to the contractor's receiving payment created a payment condition precluding the subcontractor from recovering when the prime contractor had not been paid.⁶¹ In 1962 the court in the leading case of *Thomas J. Dyer Co. v. Bishop International Engineering Co.*,⁶² came to a different conclusion. The court stated that performing parties usually expect to be paid for their work. Any result under which a party would suffer a forfeiture (that is, performing the work and not being paid) must be supported by clear and specific language that this risk has been taken. The court stated that the subcontractor, in addition to its mechanics' lien protection, contracts mainly on the basis of the solvency of the prime contractor. To change this normal credit risk, the contract should "contain an express condition clearly showing that to be the intention of the parties."⁶³ The court concluded that the language dealing with linkage of payment to payment to the prime contractor was designed "to postpone payment for a reasonable period of time after the work was completed, during which the general contractor would be afforded the opportunity of procuring from the owner the funds necessary to pay the subcontractor."⁶⁴

Most recent cases have followed the reasoning in the *Dyer* case.⁶⁵ But some decisions have concluded that the language showed a payment condition had been created.⁶⁶ Courts here are not simply construing contract language. The language used usually indicates that the prime contractor need not pay *until* or even *if* it is paid. Courts have

Lawyer, No. 3, July 1996, pp. 12, 16–20. See also *Federal Ins. Co. v. I. Kruger, Inc.*, 829 So.2d 732 (Ala.2002) (clause is only a timing mechanism).

⁶⁶Hendricks, *supra* note 65, pp. 23–24; *Associated Mechanical Corp., Inc. v. Martin K. Eby Constr. Co., Inc.*, 67 F.Supp.2d 1375 (M.D.Ga. 1999), *aff'd*, 271 F.3d 1309 (11th Cir.2001) (pay-when-paid clause prevents subcontractor from receiving interest on retainage, without regard to prime's multi-year delay in suing the owner).

tilted the balance toward the subcontractor because of the feeling that the subcontractor has little choice as to the contract language, that the subcontractor has no opportunity to evaluate the solvency of the owner, and that it would be unfair for subcontractors to have to bear this risk when the prime contractor is in the best position to evaluate the credit of the owner.

The *reason* for nonpayment is important. *Some* cases should be set aside. First, if the nonpayment to the prime contractor results from the *subcontractor's* failure to perform properly, the subcontractor is not entitled to recovery. Second, if the reason for nonpayment is improper performance by the prime contractor or an unwillingness to make reasonable efforts to obtain payment, the subcontractor is entitled to be paid. Even if a condition to payment *has* been created, preventing its occurrence or not taking reasonable efforts to make it occur excuses the condition, allowing the subcontractor to recover.⁶⁷

The more difficult questions involve the owner's nonpayment under circumstances for which neither the prime contractor nor the subcontractor can be held directly responsible. Suppose the nonpayment results from the design professional's refusal to issue a payment certificate or revocation of a previously issued certificate.⁶⁸ For example, suppose work by *another* subcontractor had been previously accepted but was discovered to be defective after payment to the subcontractor. In such a case, the latter's correction of the work will start the money flow again. Under these circumstances, the prime contractor should be required to pay the unpaid subcontractor who *had* performed properly. The prime contractor hired the subcontractor whose performance was improper and is in the best position to put pressure on *that* subcontractor to correct the defective work. In addition, the prime contractor could have required the subcontractor whose work had been found to be defective, to post a performance bond. This would have entitled the prime contractor to look to the surety for the nonperformance. Allowing the prime contractor to refuse to pay the unpaid subcontractor whose work was properly performed would also strengthen the already strong bargaining position the prime contractor is likely to

have. This can give the latter additional leverage to force settlement of disputes between prime and unpaid contractor even for projects unaffected by the payment dispute.

Another difficult problem involves nonpayment due to owner insolvency or bankruptcy. Generally, such risks should be borne by the prime contractor.⁶⁹ The prime has entered into the contract with the owner and is in the best position to make financial capacity judgments.⁷⁰ Although the subcontractor's willingness to perform work may have rested to some degree on its evaluation of the financial position of the owner, it would not be sufficient to conclude that the prime contractor has transferred the risk to its subcontractors in the absence of a clear showing that this was intended.

Other factors exist that may determine whether a payment condition has been created. If the prime contractor has invested substantial amounts of money into the project itself, it can more persuasively contend that it and the unpaid subcontractor should share the loss. If the prime contractor has invested very little of its own money, a stronger argument can be made for refusing to find a payment condition, the prime contractor in such a case acting as a broker who should take the risk of the owner's insolvency.

Suppose the unpaid subcontractor would have a right to a mechanics' lien if it has improved the owner's property. Some recent cases have held that even clear language indicating a condition precedent has been created will not provide the prime contractor a defense. To do so would frustrate mechanics' lien laws.⁷¹

Although it can be argued that a mechanics' lien is a security interest based on a valid contract claim, these courts have been emphasizing the lien as being based on unjust enrichment. It takes precedence over a payment

⁶⁹ *Pacific Lining Co. v. Algernon Blair Constr. Co.*, 819 F.2d 602 (5th Cir.1987) (payment to prime not a condition precedent).

⁷⁰ This conclusion would be strengthened under AIA Document A201-2007, § 2.2.1. Under it, a contractor can require the owner to furnish the contractor reasonable evidence that the owner has made financial arrangements to fulfill its obligation.

⁷¹ *Hendricks*, supra note 65 pp. 20–22; *Wm. R. Clarke Corp. v. Safeco Ins. Co. of Am.*, 15 Cal.4th 882, 938 P.2d 372, 376–77, 64 Cal.Rptr.2d 578 (1997), adopting the reasoning of *West-Fair Elec. Contractors v. Aetna Cas. & Sur. Co.*, 87 N.Y.2d 148, 661 N.E.2d 967, 971, 638 N.Y.S.2d 394 (1995). But if the parties choose that a project located in New York will be governed by the law of another state that *does* enforce pay-when-paid clauses, New York courts will enforce the clause. *Welsbach Electric Corp. v. MasTec North Am., Inc.*, 7 N.Y.3d 624, 859 N.E.2d 498, 825 N.Y.S.2d 692 (2006).

⁶⁷ *Urban Masonry v. N & N Contractors, Inc.*, 676 A.2d 26 (D.C.App.1996) (sub recovers as prime and owner made a "walkaway settlement" that frustrated the condition).

⁶⁸ *R. C. Small & Assoc., Inc. v. Southern Mechanical, Inc.*, 730 S.W.2d 100 (Tex.Ct.App.1986) (certificate not a condition precedent).

condition clause. In effect, the mechanics' lien has a life of its own.

How does language that seeks to control the subcontractor's right to be paid despite nonpayment to the prime interact with any surety payment bonds that have been issued? Of course, if the prime has the legal obligation to pay, the surety is responsible. But the more difficult cases have been ones involving a claim against a surety where the prime has a defense. As usual, the cases are divided, although much will depend on the language of the bond and whether the bond has been incorporated into the subcontract.⁷² On federal projects, courts view the Miller Act payment bond as providing subcontractors with a separate and independent guarantee of payment. They allow the subcontractor recovery against the bond even if the subcontract contains a pay when paid clause shielding the prime contractor from liability.⁷³

The AIA is not entirely clear on whether it allows the prime contractor to delay payment to the subcontractor until the prime receives payment from the owner. AIA Document A201-2007, Section 9.6.2, requires the contractor to pay each subcontractor "no later than seven days after receipt of payment from the Owner." This language leaves unanswered the subcontractor's rights if the owner fails to pay the prime contractor through no fault of the subcontractor.

Yet A401-2007, the AIA's standard construction subcontract, appears to provide more succor to subcontractors. Sections 11.3 and 12.1 both state that if the contractor does not receive payment "for any cause which is not the fault of the Subcontractor," then the contractor shall pay the subcontractor "on demand." (Under Section 11.3, the subcontractor would receive a progress payment; under Section 12.1 it would receive final payment.) In addition,

⁷²*Hendricks*, supra note 65, pp. 25–27; see also *Moore Bros. Co. v. Brown & Root, Inc.*, 207 F.3d 717 (4th Cir.2000) (Virginia law), permitting a subcontractor claim against the payment bond even though the pay-when-paid clause would have shielded the prime contractor from liability. But see *Wellington Power Corp. v. CAN Surety Corp.*, 217 W.Va. 33, 614 S.E.2d 680 (2005), permitting a surety to invoke a pay-when-paid clause as a defense to a subcontractor's claim.

⁷³See *United States v. Weststar Eng'g, Inc.*, 290 F.3d 1199 (9th Cir.2002) and *Kanzler & McCarter, The Effect of a Disputes Clause and Pay-If-Paid Provisions on Miller Act Claims and the Types of Damages Recoverable Under the Act*, 21 Constr. Lawyer, No. 3, Summer 2001, p. 28. The Miller Act requires prime contractors on federal projects to post a payment bond for the benefit of subcontractors, who cannot file mechanics' liens on federal buildings. See Section 28.071.

Section 4.7 provides that if the contractor is seven days late in paying the subcontractor through no fault of the subcontractor, then the subcontractor, "upon seven additional days' written notice to the Contractor," may stop the work until it has received the payment due, plus "reasonable costs of demobilization, delay and remobilization."

In light of the A401 provisions, a prime contractor who has not received timely payment from the owner pertaining to the subcontractor's work has little option but to pay the subcontractor out of the contractor's own funds. Most prime contractors would rather advance payment to a fault-free subcontractor than risk that subcontractor's stopping work.

The struggle between primes and subcontractors in some states has moved to the legislative arena.

The statutes take many forms. North Carolina will not enforce either a "pay when paid" or "pay if paid" clause.⁷⁴ Wisconsin voids any payment condition (i.e., "pay if paid" clause) while also permitting clauses which delay payment of the subcontractor until the contractor receives payment.⁷⁵ Missouri does not directly invalidate payment conditions but limits their effectiveness by stating that they are not a defense to a mechanics' lien.⁷⁶ Maryland, in addition to protecting the lien rights in the face of the nonoccurrence of the payment condition, also bars the payment condition defense to the surety.⁷⁷

SECTION 28.07 Payment Claims Against Property, Funds, or Entities Other Than Prime Contractor

A. Court Judgments and Specific Remedies

Legal relief generally comes in the form of court-issued judgments. Most judgments simply state that the judgment creditor (the person who seeks and obtains the judgment) is entitled to a specific amount of money from the judgment debtor (the person against whom the judgment is issued). The judgment creditor is given methods of collecting on these judgments, but as mentioned in Section 2.13, such remedies are often cumbersome and ineffective. If the

⁷⁴N.C.Gen.Stat. § 22C-2.

⁷⁵West Ann.Wis.Stat. § 799.135(3).

⁷⁶Mo. Rev.Stat. § 431.183.

⁷⁷Md.Real Prop. Ann.Code § 9-113(b).

judgment debtor does not pay voluntarily, collection problems sometimes make the judgment worthless.

Specific remedies, in contrast, are remedies that either command the defendant to do or not do a particular act (specific performance decrees or injunctions) or operate against specific property (liens against particular funds, goods, or property). Specific remedies are equitable decrees backed up by the contempt power of the court. The judge can punish a person adjudged to be in contempt of court by a fine or imprisonment. See Section 6.03. Specific remedies are more effective, as a rule, than the ordinary money award court judgment.

One reason unpaid subcontractors seek mechanics' liens⁷⁸ or other specific remedies is that they operate against particular property and are more effective than ordinary judgments, whether obtained against the prime contractor or third parties such as the owner. Sometimes even specific remedies are ineffective, but on the whole they are preferable to ordinary court judgments.

B. Statutory and Nonstatutory Remedies

Most of the material discussed in this section, such as mechanics' liens, stop notices, and trust fund protection, have been created by the state legislatures. Many bonds are required on public work because of legislative enactments. The statutory nature of these remedies has added complications.

Reported appellate cases that seem contradictory are often traceable to the variant statutes before the courts. Statutes change frequently. Compliance is difficult, and the law becomes murky. Although state statutes follow broad patterns of similarity, variance in details places a heavy burden on those contractors who operate in different states and may in part account for the local character of the construction industry.

Much of the law in this area involves interpretation of these frequently complex state statutes. Such state statutes create many requirements for the creation of lien

rights or stop notice protection. Who will be accorded statutory protection, how such protection is achieved, and the nature of the protection are often resolved by reference to the complicated, almost unreadable statutes. Frequently, such interpretation questions are resolved by holding that the statutes are designed to prevent unjust enrichment by protecting unpaid subcontractors, the intended beneficiaries of the legislative protection. Matters can become even more complicated in jurisdictions that state that the standards for perfecting a mechanics' lien will be *strictly* required, but once the lien has been perfected, the remedy will be administered *liberally*.⁷⁹ Strained interpretations and language distortion often result, yet construing these statutes to protect subcontractors does not invariably result in lien protection. The principal legacy of this approach is legal uncertainty and unpredictability.

The extensiveness of the statutory system can make it more difficult for subcontractors to assert nonstatutory claims. Where the subcontractor has been given statutory protection but did not take the necessary steps to obtain it, courts sometimes deny the nonstatutory claim.⁸⁰ Although the statutory systems are not exclusive, their existence can persuade courts that they offer sufficient protection to justify denial of a nonstatutory claim.

C. Public and Private Work

The nature of the remedy available may depend on whether the work is public or private. Mechanics' liens, to the extent that they permit foreclosure rights against public buildings, are not available. As a result, the federal government enacted the Miller Act, a compulsory prime bonding system. Many states have enacted comparable legislation for state construction projects.

The demarcation between public and private work is not always clear. Municipalities may confer public benefits to lure private businesses to build within the city limits. These benefits may include direct cash grants, reduced property taxes on the improved property, allowing the

⁷⁸The many mechanics' lien laws make generalizations perilous. For example, a mechanics' lien generally creates only a security interest in the property improved by the lien claimant. However, Florida permits a lien claimant a personal judgment against the owner even if there is no contract relationship between them. West Ann.Fla.Stat. § 713.75. Similarly, what are called "liens" against public buildings may only be liens against funds. See Section 28.07E. Also, Texas gives a lien on the retainage. Tex.Prop.Code Ann. § 53.103.

⁷⁹*Talco Capital Corp. v. State Underground Parking Comm'n*, 41 Ohio App.2d 171, 324 N.E.2d 762 (1974).

⁸⁰*Engle Acoustic & Tile, Inc. v. Grenfell*, 223 So.2d 613 (Miss.1969); *Banks v. City of Cincinnati*, 31 Ohio App.3d 54, 508 N.E.2d 966 (1987). See, generally, Comment, *Mississippi Law Governing Private Construction Projects: Some Problems and Proposals*, 47 Miss.L.J. 437 (1976).

proprietor to divert sales taxes to pay off its construction costs, or publicly built infrastructure whose sole purpose is to benefit the new development. These arrangements raise the legal question of whether the project is a private or public work.⁸¹ In *North Bay Construction, Inc. v. City of Petaluma*,⁸² a city leased its land to a developer to build a sports complex. The court ruled that, because the underlying land was publicly owned, sovereign immunity barred the filing of mechanics' liens.

Sometimes systems developed in public work spill over into private construction. For example, stop notices (discussed in Section 28.07E) were originally developed to compensate contractors for public work because they were not accorded lien rights. However, in those states that have stop notices, the stop notice is often available for private work.

D. Mechanics' Liens

Mechanics' lien laws are complicated and vary considerably from state to state.⁸³ For that reason, it would be inadvisable to attempt a summary of all aspects of these statutory protections accorded certain participants in the construction process. Instead, this discussion focuses on rationales for such protection and salient features and current criticisms of lien laws.

Participants in the construction process who can in various ways trace their labor and materials into property improvements of another are given lien rights against the property in the event they are not paid by the party who has promised to pay them. The remedy accorded a lien holder is the right to demand a judicial foreclosure or sale of the property and be paid out of the proceeds, including,

⁸¹For example, in *City of Long Beach v. Department of Industrial Relations*, 34 Cal.4th 942, 102 P.3d 904, 22 Cal.Rptr.3d 518 (2004), a city gave the Society for the Prevention of Cruelty to Animals money to cover preconstruction costs for the building of a new animal control center. The court found the construction was not a public work and so not subject to the prevailing wage act.

⁸²143 Cal.App.4th 552, 49 Cal.Rptr.3d 455 (2006).

⁸³The National Conference of Commissioners of Uniform State Laws has proposed a new "Uniform Construction Lien Act." One of its features would be to protect against double payment by the owner, a failing of many mechanics' lien laws. Only one state has adopted it in full. See Neb.Rev.Stat. § 52-125 to 52-159. An earlier attempt at uniformity failed, no state adopting the proposed act. The commissioners withdrew the earlier act. See Benfield, *The Uniform Construction Lien Act: What, Whither, and Why*, 27 Wake Forest L. Rev. 527 (1991).

in some states, the legal costs of perfecting the lien, such as attorneys' fees. Section 28.06 treated the effect of liens on payment conditions in subcontracts.

Among the many lien recipients are prime contractors, subcontractors, suppliers, laborers, and design professionals.⁸⁴ Lien claimants are divided into two principal categories, those who have direct contract relations with the owner and those who do not. Typical illustrations of the first are design professionals and prime contractors. Illustrations of the second are subcontractors, laborers, and suppliers to prime contractors and subcontractors. Owners can avoid liens by paying their design professionals and prime contractors. But because the majority of the difficult problems are generated by lien claimants not connected by contract with the owner and because this chapter focuses on subcontractor problems, the discussion centers around the second class of lien claimants. The usual justification given for granting these liens is unjust enrichment. Those whose labor or materials have gone into the property of another should have lien rights in the property when they are not paid as promised.

The unjust enrichment rationale loses some of its attractiveness when "double payment" is considered. An owner who pays the prime contractor may have to pay again to an unpaid subcontractor if it wants to remove the lien. States increasingly protect residential owners from double payment. Unpaid Michigan subcontractors are given a claim against a state-administered fund created by payments of licensed contractors.⁸⁵

Mechanics' lien laws provide a quick and effective remedy for unpaid workers who cannot wait until a full trial to collect their wages. Quick and certain remedies can induce workers to work on construction by assuring them they will be paid.⁸⁶

Amplification of this inducement so vital to a developing country's lien laws were first enacted to spur development of Washington D.C. more than 200 years ago could and did lead to expansion of lien beneficiaries

⁸⁴Architects or engineers who are involved in the planning stage of a project may find their services are not lienable, see *New England Sav. Bank v. Meadow Lakes Realty Co.*, 243 Conn. 601, 706 A.2d 465 (1998) (services lienable after a statutory amendment). For a review of the lien rights of design professionals, see Annot., 31 A.L.R.5th 664 (1995). See Section 11.02B.

⁸⁵See Section 28.07G.

⁸⁶*Judd Fire Protection, Inc. v. Davidson*, 138 Md.App. 654, 773 A.2d 573 (2001).

to include not only laborers but also all those who participate directly in the construction process. The state gives credit to prime contractors by granting subcontractors lien rights, which encourages people to furnish labor and materials for construction. This state credit was especially needed to bolster an unstable construction industry composed of many contractors unwilling or unable to pay subcontractors and suppliers. This support is probably the principal reason for giving lien rights today.

Expansion of lien laws is undoubtedly traceable to the realities of the political process. Once some participants in the construction process had received lien rights on a frequently asserted unjust enrichment theory, it was relatively easy to expand the list of lien beneficiaries. Those who might oppose lien expansion, such as owners, are often unrepresented as an organized group in the legislatures. This too may have accounted for expansion of lien beneficiaries and lien rights.

The desire by participants to expand mechanics' lien rights is understandable, because the mechanics' lien is a more effective remedy than a money award. However, legislatures that respond to such pressures often ignore the fact that these liens come at the expense of others: In the case of subcontractor liens, they come at the expense of the unsecured creditors of prime contractors; in the case of prime contractor liens, they come at the expense of the unsecured creditors of the owner.

Some salient characteristics of lien laws have been mentioned. A lien is a security interest in the property and can be foreclosed on by the lien claimant. Some states known as having New York-type statutes limit the amount of the lien to the unpaid balance owed the prime contractor by the owner. Some states known as having Pennsylvania-type statutes do not place a limit of this type on the lien. States with an open-ended lien permit the owner to limit the lien to the contract price by filing a copy of the contract and posting a bond—something rarely done.

Although owners typically set the lien-creating events into motion by contracting with prime contractors, tenants can create liens by hiring contractors. Property owners can avoid such liens by posting a notice of non-responsibility within a designated time after the owners learn the improvement is being made.⁸⁷

⁸⁷A notice of nonresponsibility was found ineffective under the “participating owner” doctrine in *Howard S. Wright Constr. Co. v. Superior Court*, 106 Cal.App.4th 314, 130 Cal.Rptr.2d 641 (2003), review denied

Those entitled to liens are usually set forth in the statute, and the list typically is lengthy and expanding. Because of the lien statutes, whether particular work qualifies for a lien is often unclear. Some statutes use generic terms such as *improvement*, *building*, or *structure*. Others that attempt to be detailed do not always keep up with changes in the construction process. For example, liens have been denied where the lien claimant had placed engineering stakes and markers;⁸⁸ where a claimant had graded and installed storm and sanitary sewers, paving, curbing, and seating;⁸⁹ where a claimant had performed demolition work;⁹⁰ where a claimant had installed a swimming pool;⁹¹ where a claimant had performed electrical work on a modular home erected at a factory;⁹² and where an entity had helped subcontractors assemble a workforce, had dealt with payroll, and had advanced funds.⁹³ Most states deny liens to lessors of equipment used in construction unless the items are consumed in the process of use.⁹⁴ Not all work that would be considered part of the

Jun. 11, 2003. In subsequent litigation, the court ruled that the tenant's anticipatory breach of the construction contract entitled the contractor to immediately file a mechanics' lien. *Howard S. Wright Constr. Co. v. BBIC Investors, LLC*, 136 Cal.App.4th 228, 38 Cal.Rptr.3d 769 (2006), review denied Apr. 26, 2006.

⁸⁸*South Bay Eng'g Corp. v. Citizens Sav. & Loan Ass'n*, 51 Cal.App.3d 453, 124 Cal.Rptr. 221 (1975).

⁸⁹*Sampson-Miller Assoc. Companies v. Landmark Realty Co.*, 224 Pa.Super. 25, 303 A.2d 43 (1973). The court reached its result reluctantly and urged that the legislature liberalize the statute to permit liens for work similar to that done by the claimant. The court noted a number of states where liens are available for preliminary work, such as California, Hawaii, Texas, and Illinois.

⁹⁰*John F. Bushelman Co. v. Troxell*, 44 Ohio App.2d 365, 338 N.E.2d 780 (1975). The court noted that it could not extend the right to demolition work but left the problem for legislative action.

⁹¹*Freeform Pools, Inc. v. Strawbridge Home for Boys, Inc.*, 228 Md. 297, 179 A.2d 683 (1962). The statute gave liens for buildings, and the court concluded that a swimming pool was not a building.

⁹²*C & W Elec., Inc. v. Casa Dorado Corp.*, 34 Colo.App. 117, 523 P.2d 137 (1974). The court noted that no owner of real property had requested that the work be performed, and this was a requirement of the statute.

⁹³*Primo Team v. Blake Constr. Co.*, 3 Cal.App.4th 801, 4 Cal.Rptr.2d 701 (1992) and *Onsite Eng'g & Management, Inc. v. Illinois Tool Works, Inc.*, 319 Ill.App.3d 362, 744 N.E.2d 928 (2001).

⁹⁴Annot., 3 A.L.R.3d 573, 578 (1965). In California, the seller of equipment who retains a security interest cannot obtain a mechanics' lien. *Davies Machinery Co. v. Pine Mountain Club, Inc.*, 39 Cal.App.3d 18, 113 Cal.Rptr. 784 (1974). But Louisiana granted a lien for nails, lumber, and plyform consumed in temporary work. *Slagle-Johnson Lumber Co. v. Landis Constr. Co.*, 379 So.2d 479 (La.1979).

construction process can qualify for a lien.⁹⁵ In short, both the identity of the claimant and the type of service or item that may be lienied can be subject to dispute.⁹⁶

Lien laws typically create an obstacle course of technical requirements for claimants. Generally, any failure to comply with these requirements will invalidate the lien. Substantial compliance is insufficient.⁹⁷

If the lien amounts exceed the value of the property after parties with security interests that take priority are paid, all claimants are treated equally. In some states, liens of prime contractors are subordinated to other lien claimants, whereas in other states, laborers are sometimes given preference.

As between lien claimants and others with security interests in the property, such as the seller of the property who retains a security interest or a construction lender, the party who perfects its interest first takes priority. For this reason, lenders will not make construction loans if work has begun on the project, for fear that their security interest will not take priority over those who have already begun work. As a rule, lenders and other security holders in the land perfect their security interest before work begins. As a result, lien claims can become valueless if trouble develops and prior security holders foreclose on the property. This occurs frequently because of market imperfections. The lender is typically able to buy in at less than the amount owing on the construction loan because the liens of other claimants are not extensive enough to justify bidding in or they may not have sufficient funds to be able to compete with the lender.

To deal with this problem, New Hampshire enacted a statute that with some exceptions gives mechanics' lien claimants priority over construction lenders.⁹⁸

Lien claimants must establish that they have performed work under the terms of a valid contract. As has been emphasized throughout this book, there has been a proliferation of legal controls on the construction process. (Licensing laws, land use controls, building and housing codes, and the controls imposed on projects built in part with public funds are illustrations.) As a result, a lien may be denied because of a technical violation of a law or regulation.⁹⁹

Mechanics' lien laws have been attacked as violating the U.S. Constitution. Attacks were based on decisions of the U.S. Supreme Court that had invalidated certain remedies granted before a full trial as depriving the defendants against whom the remedy was allowed the use of their property without due process of law. Generally, such attacks have been unsuccessful in part because the Supreme Court in *Spielman-Fond, Inc. v. Hanson's, Inc.*¹⁰⁰ summarily upheld Arizona's mechanics' lien laws from constitutional attack.¹⁰¹ Courts have held that the owner's deprivation of the use of its property is not substantial. Although marketability may be somewhat impaired, there is no interference with the owner's possession. Courts that have not sustained these attacks have emphasized that the work of the claimants has improved the value of the property and that the owner can force an expeditious adjudication of the lien claim within a short period.

The question of the constitutionality of mechanics' lien laws was brought into renewed focus with the Supreme Court's issuance of *Connecticut v. Doehr*.¹⁰² A plaintiff brought a civil action for assault and battery against Mr. Doehr and, as permitted by Connecticut law, also filed a prejudgment "attachment"—a form of lien—on Doehr's home, even though the plaintiff did not have a preexisting interest in Doehr's real estate. The

⁹⁵Mechanics' liens were denied in the following cases: *Nickel Mine Brook Assocs. v. Joseph E. Sakal, P.C.*, 217 Conn. 361, 585 A.2d 1210 (1991) (legal services for developer); *Thompson & Peck, Inc. v. Division Drywall, Inc.*, 241 Conn. 370, 696 A.2d 326 (1997) (sub's unpaid insurance premiums); *CIT Group/Equipment Financing, Inc. v. Horizon Potash Corp.*, 118 N.M. 665, 884 P.2d 821 (App.1994) (workers' compensation premium); and *Integon Indemnity Corp. v. Bull*, 311 Ark. 61, 842 S.W.2d 1 (1992) (creditor who paid subs directly on behalf of prime contractor).

⁹⁸N.H.Rev.Stat. Ann. 447:12-a.

⁹⁹In *Stokes v. Millen Roofing Co.*, 466 Mich. 660, 649 N.W.2d 371 (2002), the court denied a mechanics' lien to an unlicensed contractor. The case produced four opinions—the majority, two concurrences and a dissent—all addressing the same issue: the equity of preventing payment based solely on the contractor's unlicensed status, where the contractor produced quality workmanship and the owners hired it knowing it was unlicensed.

¹⁰⁰417 U.S. 901 (1974).

¹⁰¹*Columbia Group, Inc. v. Jackson*, 151 Ariz. 76, 725 P.2d 1110 (1986); *Connolly Dev., Inc. v. Superior Court*, 17 Cal.3d 803, 553 P.2d 637, 132 Cal.Rptr. 477 (1976); and *York Roofing, Inc. v. Adcock*, 333 Md. 158, 634 A.2d 39 (1993). All three cases upheld mechanics' lien laws, although sometimes only after those laws were first declared unconstitutional and then amended.

¹⁰²501 U.S. 1 (1991).

Doehr court ruled that Connecticut's prejudgment attachment lien procedures violate due process. The court found that the lien deprived the owner of significant property interests because it: clouds title, impairs the owner's ability to sell, taints the owner's credit rating, reduces the owner's chances of getting a new mortgage or home equity loan, and can even constitute a technical default of an existing mortgage which has an "insecurity" clause.¹⁰³ (These same interests would be impaired by the filing of a mechanics' lien.) The court, in addition, announced that the *Spielman* decision, which had been decided summarily and not after argument on the merits, was no longer to be accorded full precedential value.¹⁰⁴ However, both the majority in its reference to *Spielman* and a concurrence by Chief Justice Rehnquist pointed out that mechanics' liens differ from attachment liens because the mechanics' lien claimants, unlike a general judgment creditor, have a pre-existing interest in the property they helped improve.¹⁰⁵ Over a dozen years later, state courts consistently have refused to view *Doehr* as a basis for finding mechanics' lien laws unconstitutional.¹⁰⁶

The brief examination of some of the salient characteristics of mechanics' lien protection has revealed the weaknesses of the remedy. Most important, the statutes are complex and change frequently. Carelessness in compliance can result in the lien's being lost. On the other hand, strict compliance is costly—perhaps, in smaller jobs, more than the value of the lien. The lien is most important in construction projects that fail. It is in such situations that it is most likely that lien claimants will find their claims wiped out because prior security holders have foreclosed and the funds left over for lien claimants are nonexistent. Because mechanics' liens differ from state to state, a large contractor with operations in several states must deal with different lien perfection and enforcement requirements.

These deficiencies have led some critics to contend that the mechanics' lien system gives subcontractors a

false belief that they will receive compensation even in the case of default by the owner or contractor. In the view of these critics, abolition of mechanics' lien acts would not imperil subcontractors' payment options and might well compel them to demand contractual protections, such as bonding.¹⁰⁷ In any event, subcontractors have sought other forms of legislative and judicial relief—the focal point of the balance of Section 28.07.

Discussion has centered on the weaknesses of mechanics' lien laws as protection for unpaid subcontractors and suppliers. However, as noted earlier in this section, another frequently made criticism of such laws is that they can compel an inexperienced owner to pay twice for the same work. The owner may pay the prime contractor and then have to pay an unpaid subcontractor to remove a lien. The possibility of double payment has led to some legislative change to protect homeowners.¹⁰⁸

Another obstacle to asserting a mechanics' lien is the presence in the prime contract of a provision under which the prime contractor gives up liens for itself and its subcontractors. In some states, such no-lien contracts are common. Whether a subcontractor will be precluded from asserting a mechanics' lien under such circumstances depends on whether the law requires that it consent to giving up its lien.¹⁰⁹

Because of the circumstances under which such lien waivers are given, legislatures have started to regulate these transactions.¹¹⁰

E. Stop Notices

The ineffectiveness of mechanics' liens in private work and the unavailability in public work has led some states to supplement mechanics' lien protection by enacting stop notice laws. A stop notice imposes a lien not on the improved property but on the unpaid contract funds. Like mechanics' lien laws, these statutes vary from state to state.¹¹¹ Essentially, compliance stops the payment flow.

In California, if the funds withheld are insufficient to pay all stop notice claimants, each claimant shares pro rata in the funds without regard to when the stop notices were filed.¹¹² An owner, lender, or prime contractor who questions the amount of the notice can file a bond for 1.25 times the amount stated with the party served with a stop notice. When such a bond is filed, the funds withheld must be released.¹¹³ California statutes authorizing stop notices on public works specify a detailed, speedy procedure to deal with disputed stop notices.¹¹⁴

The stop notice is more effective than a mechanics' lien in obtaining payment, as it can stop the flow of funds crucial to the project.

F. Trust Fund Legislation: Criminal and Civil Penalties

A number of states have enacted legislation designed to prevent prime contractors from diverting funds received from the owner and meant for payment of subcontractors and suppliers. These trust fund statutes make the prime contractor a trustee with a statutory duty to use the trust funds (the owner's payment) to pay the trust fund beneficiaries (the subcontractors and suppliers). Some trust fund statutes apply to public works, some to private works, and some to both.

If the funds paid can be located—ordinarily a difficult task—the statutes typically give the claimant priority over bankruptcy trustees and creditors.¹¹⁵ To enforce the trust, the court can order an accounting, set aside as a diversion any unauthorized payments, award damages for breach

of trust, or issue an order terminating or eliminating the authority of the contractor to apply trust assets.

Because such funds often disappear, the main effect of trust fund statutes is to provide harsh penalties for those who violate the trust. Sanctions for violation of the trust vary. Frequently, the breach of trust caused by diversion is a crime. For example, in New York, a diverting prime contractor is guilty of larceny.¹¹⁶ In New Jersey the contractor can be convicted of theft.¹¹⁷ In Oklahoma, the managing officers of a corporate contractor are guilty of embezzlement.¹¹⁸ Although the penal sanction is rarely used,¹¹⁹ its existence should deter diversion and result in payments to subcontractors and suppliers.

Some statutes give the trust beneficiaries (the subcontractors and suppliers) enhanced civil remedies. New York law gives beneficiaries¹²⁰ a right to punitive damages against the prime contractor.¹²¹ Wisconsin also allows a civil remedy against an officer of the diverting corporation, but requires the subcontractor to prove by a preponderance of the evidence (more than 50 percent) a "specific intent" on the part of the diverter.¹²² Some states allow a civil remedy without express language in the statute creating such a remedy.¹²³

While trust fund statutes normally impose trustee status on the contractor or subcontractor, some claimants have sought to extend the statute's reach to the project lender under a theory of "involuntary trustee." Courts have been

¹¹³Id. at § 3171.

¹¹⁴Id. at §§ 3197–3205.

¹¹⁵*In re Munton*, 352 B.R. 707 (9th Cir.BAP 2006) (developer who violated Texas trust fund statute cannot use bankruptcy law to erase its debt to a subcontractor).

amenable to this argument when the lender was actively involved in the payment process.¹²⁴

California does not have a trust fund statute, but does make it a crime to divert funds intended for subcontractors and suppliers and to submit a false voucher to receive payment from a construction lender.¹²⁵

G. Michigan Homeowners Construction Lien Recovery Fund

In 1982 Michigan enacted legislation that avoids a residential owner paying twice (owner pays prime and then pays the unpaid subcontractor to remove the latter's lien).¹²⁶ At the same time, Michigan allows a licensed subcontractor who could not receive a lien because the prime contractor had been paid, to recover from a state-administered fund created by fees paid by all licensed contractors. The subcontractor who seeks to recover from the fund must establish that it would have had a lien, that payments were made to its prime, that the prime retained the funds, and that the subcontractor demanded payment from the prime. A cap of \$100,000 was placed on claims against the fund for any residence.¹²⁷

H. Texas Trapping Statute

The Texas "trapping statute" is designed to aid subcontractors and suppliers. It allows an owner to withhold and pay a subcontractor directly if the latter notifies the owner that it has not been paid and the prime does not object.¹²⁸

¹²⁴See *Phillips Way, Inc. v. Presidential Financial Corp. of the Chesapeake*, 137 Md.App. 209, 768 A.2d 94 (2001) and *Sandpiper North Apartments, Ltd. v. American Nat'l Bank & Trust Co.*, 680 P.2d 983, 988 (Okla.1984).

¹²⁵West Ann.Cal.Penal Code §§ 484b, 484c. Enforcement of this statute was made more difficult by *People v. Butcher*, 185 Cal.App.3d 929, 229 Cal.Rptr. 910 (1986), in which the court required the state to prove that the diversion caused damage to the project—a requirement not found in the statute itself.

¹²⁷Id. at § 570.1204. See also *Mercantile Nat'l Bank of Indiana v. First Builders of Indiana, Inc.*, 774 N.E.2d 488 (Ind.2002), rehearing denied Nov. 18, 2002 (under Indiana's Personal Liability statute, an owner may be personally liable to an unpaid sub, limited, however, to the amount the owner owed the prime contractor).

¹²⁸Tex.Prop.Code Ann. §§ 53.081–53.084, applied in *Don Hill Constr. Co. v. Dealers Elec. Supply Co.*, 790 S.W.2d 805 (Tex.Ct.App.1990).

I. Compulsory Bonding Legislation

There are no lien remedies against public structures. To compensate for this and to encourage work on public projects, most public work—federal (Miller Act) and state (Little Miller Acts)—requires that prime contractors post payment bonds to protect subcontractors and suppliers. Statutes and case decisions vary as to how far down the line such protection exists.

Like mechanics' lien laws, the compulsory bonding legislation has its pitfalls. Again, rules determine who must file notices, to whom they must be sent, and what they must state, as well as requirements relating to when the lawsuit must be filed. On the whole, with their deficiencies, payment bonds on public work are a more effective remedy for subcontractors and suppliers than are mechanics' liens.¹²⁹

Suppose a public agency fails to require the posting of a bond, or accepts a bond without investigation and the surety named on the bond is found to be a sham company. May the unpaid subcontractors sue the public agency for failure to enforce the bonding statute?

Most claims against the federal government, brought under the Federal Tort Claims Act, have proved unsuccessful.¹³⁰ The states are divided on whether a public entity's failure to require its prime contractor to obtain a proper bond subjects the government entity to liability to the unpaid subcontractors.¹³¹

J. Nonstatutory Claims

Subcontractors and suppliers who do not receive payment for work performed sometimes seek remedies against third parties not based on statutes of the type described earlier in the section. Instead or alternatively, they seek recovery based on a variety of theories against a number of parties other than the party with whom they have made the construction contract. To illustrate,

¹²⁹See *Yarbrough, Rights and Remedies Under Mississippi's New Public Construction Bond Statute*, 51 Miss. L.J. 351 (1980–81).

¹³⁰Cann, *What to Do When There Is No Miller Act Payment Bond*, 14 Constr. Lawyer, No. 2, April 1994, p. 1.

¹³¹Compare *Imperial Mfg. Ice Cold Coolers, Inc. v. Shannon*, 101 P.3d 627 (Alaska 2004) (subcontractor has no private right of action under the Little Miller Act) with *N.V. Heathorn, Inc. v. County of San Mateo*, 126 Cal.App.4th 1526, 25 Cal.Rptr.3d 400 (2005) (city liability under the California Tort Claims Act). See also *Mercier, Little Miller Acts: Liability of Public Owners for Failure to Obtain Payment Bonds on Public Construction Projects*, 14 Constr. Lawyer, No. 4, Oct. 1994, p. 7; Annot., 54 A.L.R.5th 649 (1997).

an unpaid subcontractor may seek recovery for work performed from the owner, the lender, or a design professional. Similarly, a claim may be made by another party farther down on the subcontract chain, such as a second-tier subcontractor against all parties on the contract chain other than the first-tier subcontractor with whom the contract was made.

Nonstatutory claims can be further divided into specific remedies and ordinary court judgments. An illustration of a specific remedy is a claim against funds, in the hands of the owner, or lender earmarked for the project. An illustration of other remedies is a claim generally against the owner, lender, or design professional that would result in an ordinary judgment and not a claim against specific property.

Claims to specific funds such as funds in the hands of a lender or owner are usually based on assertion of an equitable lien—an equitable remedy based on unjust enrichment. Such claims generally point to the claimant's having improved the property of the defendant owner or having improved the land in which the lender has a security interest. Some courts have granted equitable liens on construction loan funds held by owners,¹³² by lenders,¹³³ or on the retainage.¹³⁴

Although the law is somewhat unsettled, it seems likely that claimants such as unpaid subcontractors or suppliers or those sureties that have had to pay such parties will be able to recover from the design professional if the latter did not perform in accordance with the professional standards established by the law when approving payments to the prime contractor.¹³⁵ Alternatively, if the claimant can show that the design professional breached the contract with the owner and that this contract was in part for the claimant's benefit, recovery is possible. These burdens

have been difficult to sustain.¹³⁶ Claims against owners and lenders are based on similar theories but have been difficult to sustain.¹³⁷

One differentiation between claims brought against design professionals and those brought against owners is that claims against the latter can be based on unjust enrichment. Claimants assert that their work or materials have benefited the owner and that it would be unjust for the owner to retain this benefit without paying the claimants.

As a rule, such claims have not been successful because the owner can show it has paid someone, usually the prime contractor, or that the retention of benefit was not unjust because the claimant could have protected itself by using the statutory remedies.¹³⁸ One case granted recovery where the owner had not paid anyone, with the prime contractor's having left town before payment.¹³⁹

The subcontractor's reliance on a promise made by the owner's authorized agent that the prime contractor would be required to file a surety bond was the basis for a successful subcontractor claim against the owner.¹⁴⁰

With the exception of an occasional recovery based on reliance on a direct promise or unjust enrichment, claimants such as subcontractors and suppliers have had limited success against owners. Subcontractors must use statutory remedies or bonds or they will be left to whatever claim they have against the party with whom they dealt directly.

Second-tier subcontractors sometimes, like first-tier subcontractors, look up the subcontract chain for a solvent party to pay for work when the party who has promised to do so does not. In *Friendly Ice Cream Corp. v. Andrew E. Mitchell & Sons, Inc.*,¹⁴¹ an unpaid second-tier

¹⁴¹340 A.2d 168 (Del. Super. 1975).

subcontractor asserted claims based on a number of theories against a prime contractor but was unsuccessful. But a third-tier subcontractor was allowed to recover against a first-tier sub based on the latter's promise to the prime contractor to pay all suppliers.¹⁴²

The preceding discussion should indicate the importance of dealing with a party who has the desire and financial capability to pay for work that is ordered. Obviously, a subcontractor's principal concern would be the financial responsibility of the prime contractor with whom it has dealt. Yet the panoply of legislative protection and the occasional nonstatutory relief given indicates that such parties frequently are not paid and seek other methods to collect.

K. Joint Checks

One way owners and prime contractors seek to avoid liens and other claims is to issue joint checks. For example, the owner may issue a joint check to the prime and to the subcontractors, and the prime contractor may issue joint checks to subcontractors and their sub-subcontractors and suppliers. This was discussed in Section 22.02J.

SECTION 28.08 Other Subcontractor Claims

A. Against Prime Contractor

Suppose a subcontractor asserts that its cost of performance was wrongfully increased because of acts or omissions by the prime contractor or someone for whom the prime contractor is responsible. Generally, the law implies an obligation on the part of the prime contractor to take reasonable measures to ensure that the subcontractor can perform expeditiously and is not unreasonably delayed.¹⁴³ However, terms will not be implied if express provisions in the subcontract directly deal with this matter. Commonly subcontracts, amplified by relevant provisions in prime contracts incorporated into the subcontract, deal in some way with this problem. Express provisions can place such a responsibility on the prime contractor, such as the contract requiring that the site be ready by a particular date or that the work be in a sufficient state of readiness by a designated time to enable the subcontractor to perform specific work.

¹⁴²*Aetna Cas. & Sur. Co. v. Kemp Smith Co.*, 208 A.2d 737 (D.C. App.1965).

¹⁴³Annot., 16 A.L.R.3d 1252, 1254 (1967). See also Section 19.02A.

Conversely, contract provisions may indicate that the subcontractor has assumed certain risks regarding the sequence of performance. For example, the subcontract might require that the work be performed "as directed by the prime contractor," and such a provision would give the prime contractor wide latitude to determine when the subcontractor will be permitted to work.¹⁴⁴

Additional clauses in the prime contract to which the subcontract refers or that are incorporated into the subcontract are also relevant. The contract can specify that certain delay-causing risks were contractually assumed risks or grant only a time extension.

In addition, contract clauses may control by denying recoverability of delay damages. For example, a no-damage clause that limited the subcontractor to a time extension in the subcontract, especially if tracked with a no-damage clause in the prime contract, would very likely preclude recovery of delay damages by the subcontractor against the prime contractor for delays caused by owner or prime contractor.¹⁴⁵

The problems of tracking or parallelism in prime contracts or subcontracts complicate these claims. As a general rule, prime contracts and subcontracts are parallel in terms of rights and responsibilities. For example, should a prime contractor be held liable for delay to the subcontractor for acts caused by the owner when the prime contractor is precluded from recovering from the owner because of a no-damage clause?

The bargaining situation sometimes permits the prime contractor to better its position through the subcontract. For example, the prime contractor might be able to include a no-damage clause in the subcontract when the prime contract allows the prime contractor its delay damages against the owner. Although a careful subcontractor might be able to preclude this possibility, time or realities of the process often frustrate parallel rights. An abuse of prime contractor bargaining power can result in discontented subcontractors and poor performance. It is becoming increasingly common for owners to insist that

¹⁴⁴*Keeney Constr. v. James Talcott Constr. Co., Inc.*, 309 Mont. 226, 45 P.3d 19 (2002), rehearing denied Apr. 30, 2002 ("as directed" clause precluded sub's delay claim).

¹⁴⁵*McDaniel v. Ashton-Mardian Co.*, 357 F.2d 511 (9th Cir.1966) (subcontractor assumed the risk of government-caused delays). But in *J. J. Brown Co. v. J. L. Simmons Co.*, 2 Ill.App.2d 132, 118 N.E.2d 781 (1954), a subcontractor recovered delay damages from the prime contractor when the former was delayed by another subcontractor.

prime contracts contain provisions requiring the prime contractor to give the subcontractor benefits parallel to those given the prime contractor in its contract with the owner. (See Section 28.04.)

Other disputes between prime and subcontractor can arise. For example, a case that sharply divided the Kansas Supreme Court involved a claim by a subcontractor against the prime based on the latter having suggested a modification in the contract with the owner that would have essentially eliminated all of the subcontractor's performance. The court, over a dissent, held that this suggestion did not violate the obligation of good faith and fair dealing owed by the prime to the subcontractor.¹⁴⁶ However, the Wyoming Supreme Court, when faced with near-identical circumstances, remanded the case to the trial court to determine whether the prime contractor's conduct violated the implied covenant of good faith and fair dealing.¹⁴⁷

B. Pass-Through Claims Against Owner: Liquidating Agreements and *Severin* Doctrine

When a project is disrupted or delayed by the owner or other responsible entity, all participants incur expenses. Frequently, they seek to transfer these expenses to the owner. Because of the high costs of pursuing claims, subcontractors often pool their claims with those of the prime, and the prime will present them against the owner. However, even where there is an agreement under which the subcontractors take whatever the prime gets for them, the prime must pursue the subcontractors' claims in good faith.¹⁴⁸

One mechanism for accomplishing this is a liquidating agreement. Under such an agreement, the prime confesses liability to the subcontractor for owner-caused delay, the subcontractor releases the prime from all other liability, and the subcontractor is relegated to whatever delay damages the prime can recover from the owner.

In addition to saving costs in authorizing the prime to handle the subcontractor's claim, such pass-through or liquidating agreements avoid the problem of the subcontractor

not being in privity of contract with the owner. Usually, to make a claim against the owner the prime must show it has suffered a loss that it seeks to transfer to the owner. Usually the prime does this by showing either that it has reimbursed the subcontractor for the latter's damages or that it remains liable for such reimbursement. Sometimes, as noted, the liquidating agreement is drafted so as to make the contractor liable to the subcontractor but only as, when, and to the extent that the contractor recovers from the owner based on the subcontractor's claim.

Such pass-through claims have generated litigation. For example, in one case the liquidating agreement obligated the contractor to pay the subcontractor 9.5 percent of the first \$20 million recovered and 5 percent of any excess. Combined with a partial payment, this formula left the contractor responsible for passing through less than the face amount of the subcontractor's claim. The court rejected the owner's attempt to limit its liability to the prime to the amount the prime would pay its subcontractor under the liquidating agreement. The court noted that the prime's liability to its subcontractor and therefore the prime contractor's right to recover on the subcontractor's claims are not connected to the agreed division of the recovery.¹⁴⁹

Although these cases should encourage such pass-through or liquidating claims, a decision by the New York Court of Appeals created grave doubts about the utility of liquidating agreements. In that case, the subcontractor sued a separate prime contractor for delays caused primarily by the owner, its engineer, other prime contractors, and bad weather. At the end of the subcontractor's case, the court granted the separate prime contractor's motion to dismiss, concluding that the subcontractor would not be able to recover damages from the prime and that the prime did not cause the loss over which it had no control.¹⁵⁰

This result is in no way unusual, but it must be looked at in the light of liquidating agreements under which the prime confesses liability for owner-caused delay and the subcontractor releases the prime from all other liability and relegates itself to whatever delay damages the prime

can recover from the owner. If the subcontractor cannot recover from its prime, it is difficult to see how the prime can “confess” liability to its subcontractor and, if so, how a prime can recover from an owner for subcontractor claims for which the prime is not independently responsible to the subcontractor.

Special rules apply on public works projects. The federal government is immune from contract liability to parties with whom it does not have an express or implied contract.¹⁵¹ For this reason, any subcontractor who wishes to bring a claim against the government must enter into a pass-through agreement with the prime contractor. However, under the *Severin* doctrine,¹⁵² the prime cannot prosecute the claim unless it is at least potentially liable to the subcontractor. While the *Severin* court placed upon the contractor the burden of proving its potential liability to the subcontractor,¹⁵³ the Federal Circuit Court of Appeals has relaxed the standard for subcontractor claims by placing upon the government the burden of asserting and proving that the prime contractor is not responsible for the subcontractor’s costs.¹⁵⁴ State courts have generally adopted the *Severin* doctrine.¹⁵⁵

C. Against Third Parties

Suppose the costs of performance are increased because of acts of third parties such as owners or design professionals. Suppose a subcontractor, in addition to making any claim that might be available against the prime contractor, seeks legal relief directly against those third parties who it asserts caused the loss. For example, Section 28.07J stated that subcontractors sometimes seek payment against third parties such as owners or design professionals when the prime contractor does not pay them. Claims for additional cost of performance are not treated as favorably as claims to be paid for work performed. Even the latter claims are difficult to sustain against third parties. Very likely, claims against third parties for increased cost of performance will meet more severe resistance. However, a subcontractor who can persuade a court that the third party did not live up to the legal obligation imposed by law and thereby committed a tort or that the third party promised to perform in a certain way to the prime contractor and that this promise was for the benefit of the subcontractor can recover against third parties.¹⁵⁶

March 31, 1999; *Department of Transp. v. Claussen Paving Co.*, 246 Ga. 807, 273 S.E.2d 161, 164 (1980) (burden remains on prime contractor); *Board of County Comm’rs of Frederick County v. ¹⁵⁶The owner who had negotiated a contract with subcontractors and then assigned the contract to a prime contractor was held liable to a subcontractor for the owner’s change of the critical path method. *Natkin & Co. v. George A. Fuller Co.*, 347 F.Supp. 17 (W.D.Mo.1972).

The Design Professional as Judge: A Tradition Under Attack

SECTION 29.01 Overview

A. Introducing the Initial Decision Maker

In many construction projects, the design professional makes decisions affecting the rights and duties of owners, contractors, and subcontractors. Usually the power to make these decisions is created by the contract between owner and contractor.

Using A201-1997 as a starting point for discussion, the architect's role was divided into two broad categories. Under the rubric of contract administration,¹ the architect interpreted the contract documents and determined whether the contractor's performance complied with the design requirements. The architect was given the right to make inspections and uncover work. He had the right to grant time extensions, determine price adjustments to changed work if the parties did not agree, approve substitutions of subcontractors, and pass judgment on the sufficiency of the contractor's submittals. The architect reviewed the contractor's applications for payment and determined the dates of substantial and final completion. The architect was the owner's representative and acted as the conduit through which the owner and contractor communicated with each other. This administrative function continues unchanged under A201-2007.²

The second broad category of architect responsibilities under A201-1997 was as initial judge. (The term "judge" is not found in the AIA documents.) Contractor claims, including those alleging negligence by the architect, were first sent to the architect for an initial decision.³ If either

the owner or contractor was dissatisfied with the architect's decision, that person could seek mediation and then either arbitration or litigation.⁴ In addition, although the owner had the right to terminate the contractor, the architect played an important role by certifying that grounds existed under the contract to terminate.⁵

This second category of architect responsibility—the design professional as judge—has come under attack by contractors. Contractors expressed concern that architects could not be objective in evaluating their claims, especially since the architect is paid by the owner and the contractor's claim may require the architect to find his own design to be defective.

In response, the American Institute of Architects in A201-2007 created a new project *position*: the Initial Decision Maker (IDM).⁶ The IDM is a new position, not necessarily a new participant. If the parties do not designate an IDM, the architect is the IDM. The parties need not agree that the IDM is to be the architect. He is the default choice. If the architect acts as IDM, then the design professional's judging function largely mirrors that found in A201-1997. Regardless of who occupies the position, the IDM's primary roles are to issue an initial decision when presented with a contractor or owner claim⁷ and also to certify that grounds exist for the owner to terminate the contractor for cause.⁸

If the parties elect to have a different person (or different persons) fulfill the role of IDM, then they must resolve several issues—such as selection process and payment

mechanism—for which A201-2007 provides no guidance. Complications arising from the use of an IDM other than the architect are discussed in Section 29.11.

B. Relation to Chapter 30

This chapter must also be seen against the backdrop of the material in Chapter 30 that deals with dispute resolution outside of the courtroom. Sections 30.01 through 30.17 deal with arbitration. Often, but not always, any decision made by the design professional can be taken to arbitration.

More important, the construction industry has been seeking alternatives to the traditional method under which disputes are decided initially by the design professional with the right to challenge that decision by seeking arbitration or going to court. These alternatives are canvassed in Sections 30.18 through 30.20 in the context of both private and public projects. The methods discussed there reflect dissatisfaction with the traditional method under which the architect or engineer initially resolves disputes. Some of the difficulties noted in this chapter were instrumental in generating the search for alternative methods.

Also, methods discussed in Section 17.04 that deviated from the traditional design-bid-build (DBB) system, such as Design-Build, did not use the designer in the same way as in the DBB method.

Yet the role of the architect or engineer in the A201-1997 DBB system, as the person who both designs and administers the contract, including resolving disputes in the first instance, is still a prominent feature in the American construction industry. It is the initial subject of this chapter.

SECTION 29.02 The Doctrine of Conditions

Parties to a contract can condition specific obligations on the occurrence of designated events. Normally, unless these events occur or are excused, the duty to perform does not arise or ceases to exist.

Commonly, parties to a construction contract give the design professional power to make certain decisions. Such third-party decisions can be expressed as conditions. For example, if a certificate issued by the design professional conditions payment, issuance of that certificate—or the existence of facts that excuse issuance—is necessary before the owner is obligated to pay.

Although a decision of a third party can be a valid condition, there are two aspects of the circumstances under which third-party dispute resolution is created in construction contracts that bear on legal treatment of such conditions. First, the owner pays, and for all practical purposes selects, the design professional. Under these circumstances, one basic element of a decision-making process—that of an impartial judge—may not be present in the construction contract disputes process. Second, in many construction contracts the contractor, and even more so the subcontractor, has no real choice but to accept the decision-making process under which the design professional is given broad powers.

As shall be seen,⁹ the law accords a degree of finality to decisions made by the design professional. But the degree to which these two factors cast doubt on the impartiality of the design professional may cause courts to scrutinize these decisions carefully.

SECTION 29.03 Excusing the Condition

Under certain circumstances, the condition can be excused. If so, any disputes between owner and contractor would have to be negotiated by the parties, submitted to arbitrators if the parties have agreed to use this process, or decided by a court.

The condition is excused if the design professional becomes unavailable or unable¹⁰ to interpret the contract or judge its performance. The construction contract can provide for a successor design professional when the one originally designated cannot or will not perform this function. For example, AIA Document A201-2007, Section 4.1.3, allows the owner to appoint a successor “as to whom the Contractor has no reasonable objection.” Even if no successor mechanism is specified in the contract, the parties can agree to use a replacement design professional. But if there were neither an agreement nor a mechanism for a successor design professional, any obligation conditioned on the issuance of a certificate or the resolution of a dispute by the design professional would be unconditional and the condition no longer be part of the contract.

⁹See Section 29.09.

¹⁰*United States v. Klefstad Engineering Co.*, 324 F.Supp. 972 (W.D.Pa. 1971) (surveyor lost records); *Grenier v. Compratt Constr. Co.*, 189 Conn. 144, 454 A.2d 1289 (1983); *Manalili v. Commercial Mowing & Grading*, 442 So.2d 411 (Fla.Dist.Ct.App.1983).

Other acts can excuse the condition. For example, one court excused the condition when the architect examined the work, found it satisfactory, but still refused to issue the certificate.¹¹ Similarly, another court held that the requirement of the issuance of a payment certificate had been waived because the architect failed to reinspect the work and specify which terms remained to be corrected.¹² The condition was excused in a private contract for developing a road when the city engineer, whose approval was a condition, simply refused to act.¹³

Clearly, collusion between the design professional and either owner or contractor excuses the condition.¹⁴ A condition can be excused if the parties agree to eliminate it.¹⁵

The condition can be excused if the party for whom the condition is principally inserted manifests an intention to perform its obligations despite nonoccurrence of the condition. Although one case held that the condition of a certificate is for the owner's benefit and the owner can waive it,¹⁶ there is no reason why such a condition cannot be considered for the benefit of *both* parties, particularly where the contractor establishes that it entered into the contract on the assumption that a *particular* design professional would make these decisions.

SECTION 29.04 The Design Professional as Judge: Reasons

To a continental European, the design professional as judge seems incongruous. With the exception of Great Britain, European construction administration might include the design professional giving his interpretation of design documents he drafted, but he would not be given a "judging role." The close association between owner and design professional based on the former's selection and payment of the latter precludes this role being given to the latter.

¹¹*Anderson-Ross Floors, Inc. v. Scherrer Constr. Co.*, 62 Ill.App.3d 713, 379 N.E.2d 786 (1978).

¹²*Hartford Elec. Applicators of Thermalux, Inc. v. Alden*, 169 Conn. 177, 363 A.2d 135 (1975).

¹³*Grenier v. Compratt Constr. Co.*, supra note 10.

¹⁴*Metropolitan Sanitary Dist. of Greater Chicago v. Anthony Pontarelli & Sons, Inc.*, 7 Ill.App.3d 829, 288 N.E.2d 905 (1972).

¹⁵*Steffek v. Wichers*, 211 Kan. 342, 507 P.2d 274, 281–82 (1973).

¹⁶*Halvorson v. Blue Mountain Prune Growers Co-op*, 188 Or. 661, 214 P.2d 986, rehearing denied, 217 P.2d 254 (1950).

Despite the close association between owner and design professional, most American construction contracts, both public and private, give the design professional broad decision-making powers.¹⁷ A number of reasons can be given for the development of this system.

First, the stature and integrity of the design professions may give both parties to the construction contract confidence that the decisions will reflect technical skill and basic elements of fairness.¹⁸

Second, the design professional's role in design before construction equips the design professional with the skill to make decisions that will successfully implement the project objectives of the owner. In a sense, the role as interpreter and judge is a continuation of design.

Third, owners are often unsophisticated in matters of construction and need the protection of a design professional to obtain what they have been promised in the construction documents. Implicit is the assumption that without a champion and protector, the owner might be taken advantage of by the contractor. Couple this with the owner's bargaining strength, and the present system results.

Fourth, even assuming that complete objectivity is lacking and that the contractor rarely has much choice, the alternative would be worse.

Suppose the design professional did not act as interpreter and judge. Such matters would have to be resolved by owner and contractor, which for many owners would require professional advice. If owner and contractor cannot agree, the complexity of construction documents and performance will necessitate many costly delays, because the alternative forums for owners and contractors who cannot agree—litigation and arbitration—still involve time and expense.

Fifth, despite the dangers of partiality and conflict of interest (the design professional may overlook defective workmanship to induce the contractor not to press a delay claim or a claim for extras based on the design professional's negligence, or the design professional may find a defect due to poor workmanship rather than expose himself to a claim for defective design), the system seems to have kept the project going notwithstanding inevitable disputes. Perhaps a quick decision that may at times be

¹⁷The history is described in Dreifus, *The "Engineer Decision" in California Public Contract Law*, 11 Pub.Cont.L.J. 1 (1979).

¹⁸See *Zurn Eng'rs v. State Dep't of Water Resources*, 69 Cal.App.3d 798, 138 Cal.Rptr. 478, cert. denied, 434 U.S. 985 (1977).

unfair was better than a more costly, cumbersome system that might give better and more impartial decisions.¹⁹

The potential for bias toward the owner²⁰ and decision making often involving the design professional's own prior design work are bound to reflect themselves in the judicial treatment of the design professional's decisions and whether the design professional will be held responsible for decisions (discussed in Section 14.09D).

SECTION 29.05 Jurisdiction of Decision-Making Powers

The design professional's interpreting and judging functions are created by the contract between the owner and the contractor. As a result, interpretation of the contract determines whether the design professional has jurisdiction to resolve the dispute. The contract will also govern the finality of the design professional's decision.²¹

Generally, jurisdictional grants to decide disputes are likely to be broader in matters that involve the experience and expertise of the design professional. Jurisdictional grants are likely to be broad where an on-the-spot decision during the operational phases, as opposed to post-completion disputes, must be made.²² Despite these basic guidelines, decisions are likely to vary, depending on the particular language of the contract and judicial attitude toward this decision-making process.

In 1987, the AIA drastically revised the part of AIA Document A201 that dealt with the role of the architect in interpreting the contract documents and resolving disputes. First, a line was drawn between the architect's interpreting and deciding matters concerning performance and the architect's resolving claims and disputes. The architect's jurisdiction to interpret and decide performance matters under Paragraph 4.2.11 related to the requirements of the contract documents. This jurisdiction was very broad, because the contract documents covered many matters,

¹⁹*Cofell's Plumbing & Heating, Inc. v. Stumpf*, 290 N.W.2d 230 (N.D.1980).

²⁰To avoid the false impression that the cases generally involve the design professional's refusing to award a certificate, note that many cases involve the owner's refusal to pay despite the design professional's having issued a certificate.

²¹See Sections 29.09, 29.10.

²²*Cofell's Plumbing & Heating, Inc. v. Stumpf*, supra note 19. See also *Rockland County v. Primiano Constr. Co.*, 51 N.Y.2d 1, 409 N.E.2d 951, 431 N.Y.S.2d 478 (1980).

some technical, some administrative, and some legal. The architect's jurisdiction to pass on claims and resolve disputes under Paragraph 4.3.1 was even more broad, covering almost any dispute related to the project that could involve the owner and the contractor. Under Paragraph 4.3.2, disputes must first (subject to some exceptions) go to the architect.

A201-1997 retained the broad jurisdiction language. Jurisdiction was enlarged by deleting the exceptions to jurisdiction that had existed in 1987. (These exceptions related to there being no architect, delay in making the decision and the dispute relating to a mechanics' lien.) Most important, the AIA retained language in Paragraph 4.4.1 making clear that the architect's jurisdiction was not affected by the claim involving "an error or omission by the Architect." But Paragraph 4.4.2 allowed the architect in his own discretion to advise the parties that it would be "inappropriate" for him to resolve the claim. This was likely intended to allow the architect to remove himself if he believed there was too great a conflict of interest, as noted in Section 29.05.

Two limits to jurisdiction were added in 1997. Paragraph 4.4.1 excluded claims that relate to hazardous material and to disputes between the contractor and entities other than the owner.

As noted in Section 29.01A, A201-2007 retains the architect's jurisdiction over operational decisions during the construction phase. A new Section 4.2.14 specifies that the architect reviews and responds to requests for information forwarded by the contractor. This Section formalizes a process, no doubt already in existence on an informal basis, by which a contractor may seek clarification of questions it has with the design.

"Claims" must now be presented for review first to the Initial Decision Maker (IDM), who can be either the architect or a new project participant.²³ In Section 15.1.1, a claim is defined as a "demand or assertion by one of the parties seeking, as a matter of right, payment of money or other relief with respect to the terms of the Contract." As compared with the A201-1997 definition, A201-2007, Section 15.1.1, excludes from the definition of a claim "adjustment or interpretation of Contract terms" and "extension of time." However, jurisdiction over claims for

²³A201-2007, § 15.1.2, states claims by either the owner or contractor must be initiated by written notice to the other party and to the IDM, "with a copy to the Architect, if the Architect is not serving as the Initial Decision Maker."

additional time is granted in Section 15.1.5. In addition, under Section 14.2.2, the IDM, not the architect, must certify to the owner that grounds exist for termination of the contractor for cause.

Some matters are outside the IDM's jurisdiction. Under Section 15.2.1, the IDM has no jurisdiction over claims concerning hazardous materials, actions by the contractor in response to an emergency situation, the owner's bonding against insured losses and the owner's settlement of property insurance claims. Also under Section 15.2.1, the IDM may decide disputes only between the contractor and owner, unless "all affected parties" agree otherwise. Under Section 4.2.13, the architect's decision on aesthetic matters is final "if consistent with the intent expressed in the Contract Documents." Should either the owner or contractor disagree with the architect as to aesthetic matters, the IDM's jurisdiction is limited to whether the decision was inconsistent with the design intent—a narrow basis for review.

SECTION 29.06 Who Can Make the Decision?

The interpreting and judging powers given the design professional by the contract are important, and the parties—particularly the owner—can expect those powers to be exercised by the particular person or persons in whom the parties have confidence. If a design professional partnership is named, any principal partner should be able to make such interpretations and judgments. However, the owner may expect that the particular partner with whom it dealt or the partner with principal responsibility for the design would be the appropriate and suitable person to interpret and judge. An individual design professional who is empowered to make such determinations cannot delegate this power without the permission of the contracting parties.²⁴

AIA Document A201-1997, Paragraph 4.1.1, assumed the architect had an authorized representative. But this should not permit the designated architect to delegate

²⁴*Huggins v. Atlanta Tile & Marble Co.*, 98 Ga.App. 597, 106 S.E.2d 191 (1958). But see *Atlantic Nat'l Bank of Jacksonville v. Modular Age, Inc.*, 363 So.2d 1152 (Fla.Dist.Ct.App.1978), cert. denied, 372 So.2d 466 (Fla.1979), where a different architect judged the quality of modular units, the delegation issue not having been raised. An A201 was used.

the responsibility of interpreting the contract or resolving disputes, even to a person in his firm. A representative may be appropriate for some administrative purposes, such as receiving notices or even executing change orders. But delegating the highly personal service of giving interpretations or resolving disputes requires consent of owner and contractor. A201-2007, Section 4.1.1 eliminates reference to an architect's authorized representative.

SECTION 29.07 The Contract as a Control on Decision-Making Powers

In addition to jurisdiction, there are other limits to the decision-making powers of design professionals or IDMs. The contract may limit the *grounds* upon which a claim may be made. For example, A201-1997, Paragraph 8.3.1, gave a laundry list of grounds upon which a claim for additional time may be made, including changes ordered in the work, labor disputes, fire and unusual delay in deliveries, as well as "other causes which the Architect determines may justify delay." (But adverse weather conditions is not one of the enumerated causes.) In A201-2007, Section 15.1.5.1, this enumeration of events is dropped, so that the IDM has jurisdiction over any claim for additional time, regardless of cause. However, Section 15.1.5.2 then states that if adverse weather is the basis for the claim, then the claim "shall be documented by data substantiating that weather conditions were abnormal for the period of time, could not have been reasonably anticipated and had an adverse effect on the scheduled construction."

Similarly, the power to decide disputes does not give the design professional authority to change the specifications.²⁵

SECTION 29.08 Procedural Matters

A. Requirements of Elemental Fairness: A201

The IDM's role as interpreter or judge invites comparison with arbitration and litigation. Should the IDM conduct a hearing similar to that used in arbitration or litigation? Clearly, the formalities of the courtroom would be

²⁵*Northwestern Marble & Tile Co. v. Megrath*, 72 Wash. 441, 130 P. 484 (1913).

inappropriate and unnecessary. Even the informal hearings conducted by an arbitrator would not be required. Unless a clause that confers jurisdiction requires a hearing, no hearing at all is necessary.

Cogent reasons exist for some semblance of elemental fairness to both parties. First, continued good relations on the project necessitate a feeling on the part of the participants that they have been treated fairly. Each party should feel it has been given a fair chance to state its case and be informed of the other party's position. A fair chance need not necessarily include even an informal hearing. The IDM should listen to the positions of each party where feasible before making a decision.

The exact nature of what is fair will depend on the facts and circumstances existing at the time the matter is submitted to the design professional. Small matters and those that require quick decisions may not justify the procedural caution that would be necessary where large amounts of money are at stake or where an urgent decision is less important.

The second reason for elemental fairness is the likelihood that a decision made without it will not be accorded much finality. For example, *John W. Johnson, Inc. v. Basic Construction Co.*,²⁶ involved a dispute in which the architect had ordered a prime contractor to terminate a particular subcontractor. The trial judge stated,

This amazing directive was issued by the architect's office without notice to the plaintiff and without giving the plaintiff any opportunity to be heard, orally or in writing, formally or informally. This action on the part of the architect's office was contrary to the fundamental ideas of justice and fair play. The suggestion belatedly made at the trial that it was not appropriate for the architect to maintain any contacts with subcontractors is fallacious in this connection. Any such principle as that did not bar the architect's representative from according a hearing to the subcontractor before directing that his subcontract be cancelled.²⁷

Termination is a serious matter, and more process fairness in such matters can be expected. But the case also reflects judicial unwillingness to uphold rash, impetuous decisions.

The third reason relates to the immunity sometimes given to design professionals when they act in a quasi-judicial role

(explored in Section 14.09D). The more design professionals act like judges or arbitrators, the more likely they will be given judicial protection from a lawsuit by someone dissatisfied with the decision.

As indicated in Section 29.04, in 1987, the AIA greatly amplified the jurisdictional rules in A201 for resolving disputes. It also provided detailed procedural directions and time deadlines. This was done to give greater guidance to architects and to resolve disputes as they develop, to avoid their being "blown up" at the end of the project. Yet it is likely these provisions will not be followed in many transactions—either because parties become impatient with the burdens and paperwork or because the transaction does not involve enough money to make it worthwhile incurring the overhead expenses such a system would inevitably entail.

Despite the criticism of the overdetailed procedures outlined in the 1987 A201, A201-1997 amplified the procedural instructions and A201-2007 preserved the changes made in 1997 but transferred them to the IDM. For example, Section 15.2 (corresponding to A201-1997, Paragraph 4.4.3) gives the IDM the power to consult outside experts if they will help him make the decision. Section 15.2.2 (Paragraph 4.4.2) states he can advise the parties that he cannot resolve the claim because he lacks sufficient information. Section 15.2.4 (Paragraph 4.4.4) details how he seeks additional supporting data. Section 15.2.5 (Paragraph 4.4.5) makes clear that his decision must be in writing and must state his reasons for the decision.

B. Standard of Interpretation

Section 29.09 deals with the finality to be accorded decisions by the design professional. This section emphasizes the process from the vantage point of the design professional. How should relevant contract language be interpreted?

This book has dealt extensively with methods by which contracts—especially construction contracts—are to be interpreted.²⁸ Were it not for the fact that design professionals are often called on to interpret construction documents that they either have prepared or have had a role in preparing, the earlier discussion would suffice. However,

²⁶292 F.Supp. 300 (D.D.C.1968), aff'd, 429 F.2d 764 (D.C.Cir.1970).

²⁷Id. at 304.

²⁸See Section 20.02.

the complexity of interpreting and judging one's own work requires some additional comments in this section.

In addition to the limits imposed by the contract language being interpreted, contracts that give interpreting and judging powers to the design professional often specify general standards of interpretation for the design professional to use. For example, AIA Document A201-2007, Section 4.2.12, requires that all "interpretations and decisions of the Architect . . . be consistent with the intent of and reasonably inferable from the Contract Documents." Despite the limits and guides, the design professional often faces the formidable task of deciding disputes over the meaning of contract document language. The prior participation in developing contract documents makes this task even more difficult.

N. E. Redlon Co. v. Franklin Square Corp.,²⁹ held that the architect must not take into account the intention of the owner or contractor or his intention at the time he drafted the documents in question. According to the court, the architect should first look at the contract documents to see whether they have provided guidance in interpretation matters. In *Redlon*, the contract specifications stated that terms were to be used in their trade or technical sense. After applying any contractual guides given, the architect was to use an objective standard to determine the meaning of contract language.

If an objective standard is desired, design professionals should not consider their or the owner's intention.³⁰ However, the court may have gone too far when it directed the architect to ignore any intention the contractor may have had when it made the contract.

The design professional should judge the contract documents from the perspective of an honest contractor examining them before bid or negotiation. The owner's preparation of the contract documents, through the design professional, takes a long time, much longer than the contractor has to examine and bid. Any ambiguities the contractor should not have been expected to notice, and to which attention should not have been directed before bid submission or negotiation, should be resolved in favor of the contractor. Conversely, unclear language to which the contractor should have directed attention should be resolved against it.

This conclusion should not be eliminated by a printed clause in the general conditions or specifications that seeks to put the risk of all unclear language in the contract documents on the contractor unless the contractor draws this to the design professional's attention. For reasons described elsewhere,³¹ this is an unfair burden to place on the contractor.

Admittedly, a standard that looks at the honest contractor can place design professionals in a difficult position where the language in question was derived from the drawings and specifications they prepared.³² Openly acknowledging that the specifications were unclear can be a confession of professional failure. The standard of interpretation suggested—that of favoring the contractor under certain circumstances—can inhibit the design professional from ever finding language unclear for fear that it would reflect on his work. An honest design professional should be fair to both owner and contractor despite this possibility.

Perhaps it will be expecting too much for the design professional to step back from his own work and judge it objectively. This possibility may be a reason to accord less finality to the decision. It is certainly a reason the 2007 A201 uses an IDM to review contractor claims. In any event, if unwilling to construe unclear language in favor of the contractor, the design professional will likely use or claim to use the objective standard required in the *Redlon* decision.

C. Form of Decision

The contract clause giving the design professional the power to interpret documents can require that a particular form be followed when a decision is made. AIA Document A201-2007, Section 4.2.12, requires that interpretations be in writing or in the form of drawings. As noted in Section 29.08A, Section 15.2.5 requires that decisions resolving claims must be in writing with the reasons for the decision stated. For this and other reasons, it is generally advisable for decisions to be made in writing and communicated as soon as possible to each party. Where it is not feasible to make a decision in writing on the spot, any

²⁹89 N.H. 137, 195 A. 348 (1937), *aff'd*, 197 A. 329 (1938).

³⁰The architect's intention was overcome by other evidence in *Alabama Society for Crippled Children & Adults v. Still Constr. Co., Inc.*, 54 Ala.App. 390, 309 So.2d 102 (1975).

³¹See Section 24.03.

³²The discussion assumes that the language in question was not part of the basic contract or general conditions, writings that should have been drafted or supplied by an attorney. See Sections 12.07, 19.01B, and 19.01D.

oral decision should be confirmed in writing and sent by a reliable means of communication to each party. A written communication giving the design professional's interpretation of his decision need not give reasons to support the decision. The essential requirement is that the parties know that a decision has been made and that they know the nature of the decision. However, the process will work more smoothly if the participants are given a reasoned explanation for the decision. The decision need not be elaborate or detailed but should specify the relevant contract language and facts and the process by which the decision has been made.

Under A201-2007, Section 15.2.6.1, either party may, within 30 days from the date of the initial decision, demand that the other party file for mediation within 60 days of the initial decision. If that demand is made, and the other party does not ask for mediation within the time allowed, then both parties waive their rights to mediate or to pursue "binding dispute resolution proceedings with respect to the initial decision."

D. Appeal

Many construction contracts specify a method of resolving disputes, such as mediation or arbitration. These will be discussed in Chapter 30. By and large the IDM's decision-making powers are designed to create an initial decision that can be appealed. The finality of his decision will be discussed in Section 29.09.

E. Costs

The architect's costs during the construction phase—including interpreting the contract, reviewing submittals, inspecting the contractor's work, and responding to the contractor's requests for information—are included within his basic fee. If the architect is not the Initial Decision Maker, then the architect's cost in assisting the IDM is an additional service.³³

The AIA documents do not specify how the IDM is to be paid. One reason for creation of the IDM position was the concern of contractors that the architect, because he is paid by the owner, would be biased in favor of the owner. However, if the cost of the IDM is borne by the owner, then the possibility of bias in favor of the owner remains.

If, instead, the cost of the IDM is borne equally by the owner and contractor, then this expense must be budgeted in advance by the contractor when entering into the contract. In either case, the payment mechanism of the IDM should be addressed by separate agreement between the owner and contractor.

The Engineers Joint Contracts Documents Committee (EJCDC) provides in its E-500, A2.02(6) (2002), that evaluating "an unreasonable claim or an excessive number of claims" is a *required* additional service justifying additional compensation above the basic fee. It parallels A201-1997, Paragraph 2.8.2.5, which provided that the architect's "evaluation of an extensive number of claims" was an additional service.

The costs incurred by the parties, such as transporting witnesses to any informal hearing, obtaining any expert testimony, or attending any informal hearings, will be borne by the parties who incur them unless the contract provides otherwise. As most dispute resolution done by the design professional is informal, costs of this sort are not likely to be comparable to those incurred in an arbitration or litigation. Under A201-2007, Section 15.1.3, if the IDM elects to consult with experts or persons with specialized knowledge, then the owner must cover any cost involved.

Suppose the IDM orders that work be uncovered. Uncovering work is costly. Often contracts specify who will pay for the cost of uncovering and recovering. AIA Document A201-2007, Section 12.1.1, states that if work had been *improperly* covered by the contractor, such as covering work despite a request by the architect that it not be covered, the cost must be borne by the contractor even if the work had been properly performed. Section 12.1.2 deals with work properly covered. If the work is found "in accordance with the Contract Documents," costs are borne by the owner. If the work did not comply, the contractor must pay the cost of uncovering and recovering unless the deviation was caused by the owner or a separate contractor (on a project involving multiple primes). Similarly, Section 13.5.3 places the entire cost of "testing, inspection or approval" on the contractor if these processes reveal that the contractor has not complied with the contract documents.

Should the contractor be required to pay the entire cost if any deviation is discovered? One purpose of having the architect visit the site periodically is to observe work before it is covered. The assumption under Section 12.1.2

³³B101-2007, § 4.3.1.11.

is that the architect did not see the defective work before it was covered or request the contractor not to cover it until he had a chance to inspect it. Under such circumstances, the architect may be fearful of a claim being made against him unless some defective work is found.

The all-or-nothing solution is justified only if there were major deviations or if the work was covered to hide defective work. If the defect is slight or inadvertent, it is better to share the cost of covering and uncovering.

SECTION 29.09 Finality of Initial Decision

Parties to a contract can create a mechanism by which disputed matters or other matters that require judgment can be submitted to a third party for a decision. The finality of that decision—that is, whether it can be challenged and the extent of the challenge—can range from 0 to 100 percent. It can be absolutely unchallengeable. At the other extreme, a decision by a third party can be simply advisory.

Issuance of an initial decision by the Initial Decision Maker is a condition precedent to mediation.³⁴ The AIA does not specify whether the mediator should give deference to the IDM's decision. However, the purpose of a mediator is not to decide issues but to help the parties settle. Mediation should be viewed as a fresh start to resolution of the dispute, and the mediator and parties are not in any way bound by the IDM's decision.

Outside the context of modern AIA contracts, most impartial third-party decisions have some finality but not the finality of an arbitral award, as noted in Section 30.14, or a court ruling. But such decisions are clearly more than advisory. Unless they are shown either to have been dishonestly made or to be clearly wrong, they are likely to be upheld if challenged in court.³⁵

The preceding discussion has dealt with decisions by impartial third parties. A design professional cannot be said to be a disinterested third party. In discussing the reasons for limiting the effect of the refusal by an architect to issue a certificate for payment, a New York judge

stated, “The rule is based upon the fact that the architect, in contracts of this sort, rarely a disinterested arbiter, is usually the representative of the party, often the owner, who must ultimately bear the cost of the work.”³⁶ This factor—the dubious impartiality of the decision maker—and others noted in this section make the law uncertain and apparently contradictory.

Disputes submitted to the design professional can range from purely factual (Did the work meet certain specific standards?) to matters that though sometimes called legal are really factual (How should this clause be interpreted?) to legal questions (Is the substantial performance doctrine applicable where the design professional is to judge performance?).³⁷

The wide range of issues, along with the ambivalent status of the design professional and possible conflict of interest, has led to uncertainty over finality of the design professional's decision. Finality in the first instance depends on the language of the contract giving the design professional the power to make decisions. If it says nothing about conclusiveness or finality, the decision would be purely advisory. But clauses giving this power generally state that the decision shall be “final and binding.”

Suppose the architect's decision is final and binding unless arbitration is invoked. If the arbitration clause has been deleted or arbitration waived, the court will extend a considerable amount of deference to the architect's decision.³⁸ (If arbitration is sought, the arbitrators need pay no attention to the architect's decision. This can encourage arbitration by the party that is dissatisfied with the architect's decision.)

As noted earlier in this section, however, language of finality does not actually mean that the decision is final. One court held the decision to be binding unless there was fraud or bad faith.³⁹ The Restatement (Second) of Contracts makes the decision binding as long as it is made

³⁴A201-2007, § 15.2.1.

³⁵Earlier edition of this book cited and followed in *Bolton Corp. v. T. A. Loving Co.*, 94 N.C.App. 392, 380 S.E.2d 796, 801, review denied, 325 N.C. 545, 385 S.E.2d (1989).

³⁶*Arc Elec. Constr. Co. v. George A. Fuller Co.*, 24 N.Y.2d 99, 247 N.E.2d 111, 113, n. 2, 299 N.Y.S.2d 129, 133 n. 2 (1969). See also *Martel v. Bulotti*, 65 P.3d 192 (Idaho 2003) (refused to apply arbitration standard of review to architect's decision).

honestly and not on the basis of gross mistake as to the facts.⁴⁰

New York gives greater finality to a certificate that has been issued than to the absence of a certificate. In the absence of a certificate, the contractor can recover if it can show substantial performance, with refusal to issue the certificate being unreasonable.⁴¹

These varying, though related, degrees of finality make the decision conclusive if honestly made unless it is clear that the design professional made a serious mistake.⁴² But the standards do not tell the entire story. Other relevant factors determine the degree of finality.

The particular nature of the dispute is important. If the dispute is more technical and less legal, the decision will be given more finality.⁴³

AIA Document A201-2007, Section 4.2.13, states that architect decisions as to aesthetic effect “will be final if consistent with the intent expressed in the Contract Documents.” While A201-1997, Paragraph 4.6.1 made clear that such decisions could not be arbitrated, this language was deleted from A201-2007, Section 15.4.1. Nonetheless, the arbitrator’s review is narrowly limited to whether the architect’s decision was inconsistent with the design intent. The very subjectivity of aesthetic effect and the power for abuse that such a clause can create will inevitably lead to a difference of opinion among courts as to the enforceability of such a clause.⁴⁴

⁴⁰Restatement (Second) of Contracts § 227, comment c, illustrations 7 and 8 (1981). Other somewhat variant standards are expressed in *Perini Corp. v. Massachusetts Port Auth.*, 2 Mass.App.Ct. 34, 308 N.E.2d 562 (1974) (binding unless arbitrary or in bad faith); *City of Mound Bayou v. Roy Collins Constr. Co.*, 499 So.2d 1354 (Miss.1986) (binding if made in good faith, an honest judgment after a fair consideration of the facts); and *E. C. Ernst, Inc. v. Manhattan Constr. Co. of Texas*, 387 F.Supp. 1001 (S.D.Ala.1974), *aff’d*, 551 F.2d 1026, rehearing denied in part and granted in part, 559 F.2d 268 (5th Cir.1977) (engineer must use good faith), *cert. denied*, 434 U.S. 1067 (1978).

⁴⁴Compare *Baker v. Keller Constr. Corp.*, 219 So.2d 569 (La.App. 1969) (reviewed decision), with *Mississippi Coast Coliseum Comm’n v. Stuart Constr. Co.*, 417 So.2d 541 (Miss.1982) (refused to review).

If a certificate is issued and the owner refuses to pay, it is likely that the certificate will be considered final.⁴⁵ Undoubtedly, this recognizes that the owner for all practical purposes has selected the design professional and should be given less opportunity to challenge the decision. If a subcontractor’s rights are at stake, less finality will be given.⁴⁶ The subcontractor had even less of a role in selecting the design professional. Giving power to the design professional is often accomplished by incorporating prime contract general terms by reference into the subcontract. The subcontractor may not have had much opportunity to present its case to the design professional.⁴⁷

The availability of arbitration may also play a role. If the decision can be appealed to arbitration, arguably more finality can be given.⁴⁸ Another factor that may bear on the degree of finality to be given design professional decisions is the process by which the decision is made. If it appears to have been made precipitously and without elemental notions of fairness, less finality, if any, will be accorded.⁴⁹

Another problem relates to the interaction between language giving finality to a design professional decision and language that bars acceptance of the project from waiving claims for defective work subsequently discovered.⁵⁰ One case held that the architect’s power to judge performance did not give his decisions finality because of a clause stating that neither the issuance of a final certificate nor final payment relieved the contractor from responsibility for faulty materials or workmanship.⁵¹ Yet another decision more sensibly reconciled these two clauses by concluding that the issuance of a certificate is conclusive where defects are patent or obvious but not where defects are latent, that is, not reasonably discoverable.⁵²

SECTION 29.10 Finality: A Comment

If the parties to a contract voluntarily designate a third party to make certain determinations or decide certain disputes and agree that these determinations or decisions shall be binding on both parties, the law should give effect to such an agreement. Parties who genuinely agree to abide by such third-party decisions and who are satisfied that the decision was honestly made are likely to perform in accordance with the decision. In the view of the contracting parties, the third party may be better equipped to give a fair and quick decision. Failure to make such agreements final may discourage parties from agreeing to submit determinations and disputes to third parties or may encourage them not to live up to such agreements. The result can be an increasing burden on an already burdened judicial system.

Contract language and courts often state that in making certain determinations, the design professional is acting in a quasi-judicial function and not as representative of one of the contracting parties. This does not change the realities. The design professional is not a neutral judge, and the contractor has little choice but to accept the current system.

Generally, determinations and decisions by the design professional are followed by the parties. This may be because the parties are satisfied, because it is too costly to arbitrate or litigate, or because of the need to retain the goodwill of the design professional. Giving the design professional initial but reviewable decision-making powers will provide a quick method of handling construction disputes. According such decisions some degree of finality simply gives effect to the superior bargaining position the owner frequently enjoys at the time a construction contract is made.

In *Cofell's Plumbing & Heating, Inc. v. Stumpf*,⁵³ one issue related to the finality of an engineer's decision under a contract that gave the engineer "binding authority to determine all questions concerning specification interpretations in the execution of the contract." After completion, a dispute arose that related to how particular work should be priced. The project engineer had concluded the work should be compensated under a particular provision in the contract. The owner refused to pay, but the trial court concluded the contractor was entitled to be paid in accordance with the engineer's decision.

The appellate court held that a line must be drawn between "disputes or specification interpretations which deal with work performance and require immediate resolution and those which deal with other contractual disputes, such as rates, method, or time of payment, and do not require prompt on-the-site determination."⁵⁴ The court held the contract should be interpreted to give finality to the former but not to the latter. The project will continue whatever the determination by the engineer, at least in the view of the majority.

The dissenting judge wished to expand the finality provision to *both* types of decisions, to prevent unnecessary delays in the construction process while disputes are settled. He contended that the majority's decision will invite delays by contractors who will be forced to stop work while resolving other types of disputes that the engineer, under the interpretation of the majority, cannot resolve with any degree of finality.

It is important to keep the project moving. Decisions needed to accomplish this goal may be given finality. Yet the project can likely be expedited by getting a decision but still allowing a dissatisfied party to challenge it later.

Some American jurisdictions give immunity to the design professional when that party is acting as a judge.⁵⁵ In those jurisdictions, to both give the design professional immunity and accord substantial finality to his decisions concentrates too much power in the hands of the design professional. Because this power will occasionally be abused, in those jurisdictions very little, if any, finality should be given to the design professional's decision. Even where the design professional has *no* immunity, it is better to accord no finality to his decisions. The system will work without it, and a needless issue can thus be removed from construction litigation.

SECTION 29.11 The Initial Decision Maker: Some Observations

Creation of the Initial Decision Maker (IDM) position is one of the most significant changes made in A201-2007. This change was made in response to several contractor concerns. Historically, contractors have viewed the architect as biased because the architect was both selected and

⁵³See *supra* note 19.

⁵⁴290 N.W.2d at 234.

⁵⁵See Section 14.09D.

paid by the owner. Many also believed the architect could not be impartial in response to allegations of negligent design or failure to timely respond to requests made during the construction phase. The architect would likely be reluctant to render an initial decision blaming himself, both for psychological reasons and in the event of future legal disputes with the owner.

While good reasons may exist for the creation of an IDM position, A201-2007 suffers from a lack of detail as to how the new system would work, especially if the IDM is someone other than the architect. There is no explanation of how the IDM is selected. While the architect must be licensed,⁵⁶ there is no similar requirement for the IDM; indeed, the IDM might be a retired judge, lawyer, contractor, or scientist, rather than a design professional. Unless the IDM is put “on staff” from the beginning of the project waiting for disputes to arise (essentially a one-person

dispute resolution board as discussed in Section 30.18E), there may be a significant delay while the IDM is “brought up to speed” on the facts leading up to the present dispute. In any event, significant costs may be involved with employment of an outside IDM; yet A201-2007 gives no indication as to how the IDM is to be paid.⁵⁷ There is also no provision shielding the IDM from potential liability and no insurance requirement. If the IDM is a contractor and does not carry professional liability insurance, he may not be covered against a claim. In short, the general lack of guidance in A201 as to the nature of this new arrangement will likely foster disputes.⁵⁸

⁵⁷ By comparison, the owner and contractor must share equally in the cost of the mediator; see A201-2007, § 15.3.3.

⁵⁸ Several of these points are made in Lesser & Bacon, *Meet the 2007 A201 “General Conditions of the Contract for Construction”—Part I: Letting Go of Paper and Making Way for the IDM*, 29 *Constr.Litg.Rep.*, No. 4, Apr. 2008, p. 143.

⁵⁶ A201-2007, § 4.1.1.

Construction Disputes: Arbitration and Other Methods to Reduce Costs and Save Time

SECTION 30.01 Introduction

This chapter deals principally with a voluntary method of resolving disputes by submitting disputes to a third party and agreeing to be bound by that party's decision. Third-party resolution can be used to determine narrow issues such as the strength of concrete or the value of property. The former would be classified as third-party testing and the latter as third-party appraisal. The parties can go further and authorize a third party to decide any dispute that might arise between them in the performance of a contract. Such a general referral to the third party can encompass specific disputes narrow in character or broad disputes that can encompass any matter that might be resolved by a court. This latter system, frequently called *arbitration*, is the focal point of this chapter.

This chapter also looks at some methods that are implemented by the judicial system, such as the use of special referees or masters or a summary jury trial. In addition, the chapter looks at techniques by which a third party will facilitate an agreement by the disputing parties. What links these methods is that they all seek to avoid the traditional lawsuit as a means of resolving construction disputes.

Although this chapter deals with intervention by third parties in some form, it must be emphasized that about 95 percent of the disputes in the construction process are resolved through negotiation. It has become fashionable to speak of alternative dispute resolution (ADR) and its various methodologies, but it cannot be overemphasized that the most important initial step toward resolving disputes is good-faith negotiations by the parties to try to solve the problem. This means that the parties must gather information, look at the dispute from the other

party's position as well as their own, and recognize the horrendous costs that can be incurred in terms of time, money, and irrational outcomes because of the intervention of third parties, either through ADR or through the litigation system.

SECTION 30.02 The Law and Arbitration

Until the 1920s, the law was openly hostile to arbitration. Although courts would enforce an arbitral award after it was made, they frustrated agreements to arbitrate disputes that might arise in the future. Some courts found such agreements invalid, some allowed a party to revoke such an agreement prior to award, and some would give only nominal damages for breaching a contract to arbitrate future disputes. In such a legal system, arbitration could not thrive.

In the 1920s, commercial arbitration was greatly encouraged by statutory enactments in a substantial number of states, including commercially important states, that sought to remedy some of the deficiencies in the legal treatment of arbitration. Principally, these arbitration statutes accomplished the following:

1. made agreements to submit future disputes to arbitration irrevocable
2. gave the party seeking arbitration the power to obtain a court order compelling the other party to arbitrate
3. required courts to stop any litigation where there had been a valid agreement to arbitrate a pending arbitration
4. authorized courts to appoint arbitrators and fill vacancies when one party would not designate the arbitrator or arbitrators withdrew or were unable to serve

5. limited the court's power to review findings of fact by the arbitrator and her application of the law
6. set forth specific procedural defects that could invalidate arbitral awards and gave time limits for challenges

Almost all states and the federal government currently have modern arbitration statutes. Many of the modern state statutes were adopted from the Uniform Arbitration Act (UAA) revised in 2000.¹ Clearly, this has greatly encouraged the use of arbitration. Yet this has also created concurrent jurisdiction, where a party is often free to invoke either state or federal arbitration laws. If this does occur, one party may contend that the Federal Arbitration Act (FAA) preempts state arbitration law. As noted in Section 30.03C, this potential conflict has led to recent U.S. Supreme Court cases that have struck down state laws in conflict with the FAA. These disputes can slow down the arbitration process, as such an issue must be resolved in court. The more opportunities to seek judicial rulings, the less desirable it is to include an arbitration clause.

The more favorable attitude toward arbitration in the legislatures and the courts has been tempered by the modern judicial recognition that many agreements to arbitrate are forced on the weaker party through an adhesion contract. This can be demonstrated by two cases. The first case, *Spence v. Omnibus Industries*,² involved a dispute between a homeowner and a remodeling contractor over a remodeling contract. The contract—a standardized contract—included a clause requiring arbitration in accordance with the rules of the American Arbitration Association (AAA).

After the dispute arose, the homeowner brought a lawsuit against the remodeling contractor, seeking damages of \$37,000. The remodeling contractor filed a petition for arbitration. The petition was granted, and the court ordered that the homeowner pay the arbitration filing fee of \$720. The homeowner was willing to arbitrate but appealed the court's decision requiring her to pay the filing fee.

The court reversed the decision regarding the filing fee and in doing so compared the cost of beginning an action in court with the cost of submitting the dispute to arbitration. The court noted that the filing fee for commencing

an action in court would have been \$50.50, but it would cost the homeowner \$720 to submit the matter to arbitration. The court stated,

The reason for this disparity is obvious. Courts are established and supported by the State in order to afford forums to which all, rich and poor alike, may present controversies at minimum cost to the parties. Arbitration is supported by the parties. If the parties are equal in bargaining power, arbitration is good. If the parties are not equal, arbitration may deny a forum to the weaker.³

After characterizing the contract as one of adhesion (see Section 5.04C), imposed by the party of greater bargaining power on the weaker, the court noted the contract was over 2,000 words jammed into a tightly printed jumble of “terms and conditions.” The court noted it was quite unlikely that one homeowner in one hundred would ever read the massive information on the reverse page. Despite the judicial policy favoring arbitration, the court pointed to the strong judicial policy to protect the weaker party to the bargain. The court felt that a \$720 fee could discourage a homeowner from presenting a claim against a builder.

Concluding that the homeowner waived her right to arbitrate by filing an action in court,⁴ the court held that the contractor seeking arbitration became the initiating party and required the latter to pay the filing fee. Had the homeowner wanted arbitration, according to the court, she would have had to pay the filing fee.

The second case, *Player v. George M. Brewster & Son, Inc.*,⁵ involved an arbitration clause in a subcontract. The work was to be performed in California, and the arbitration clause required that arbitration be governed by New Jersey law and be held in New Jersey. The arbitration clause specified that each party would select one arbitrator and the third would be picked by a New Jersey trial judge.⁶ The prime contractor, though having its home office in New Jersey, performed much of its work in the western United States.

¹119 Cal.Rptr. at 172. But, applying Kentucky law, *Stutler v. T.K. Constructors, Inc.*, 448 F.3d 343 (6th Cir.2006) rejected the claim that up-front costs were so prohibitive that arbitration should not be compelled.

²See Section 30.05.

³18 Cal.App.3d 526, 96 Cal.Rptr. 149 (1971).

⁴By the time the matter went to court, the prime contractor was willing to have the arbitration heard in California but insisted that the third arbitrator be picked by the New Jersey trial court judge.

¹The UAA is discussed in Section 30.14. For a discussion of the Revised UAA, see Ness, *Legislative Update: The Revised Uniform Arbitration Act of 2000*, 21 Constr. Lawyer, No. 4, Fall 2001, p. 35. See also Section 30.09.

²44 Cal.App.3d 970, 119 Cal.Rptr. 171 (1975).

The court interpreted the clause to determine whether it covered the particular dispute. Like the court in *Spence v. Omnibus Industries*, this court noted that this was a contract of adhesion and should be construed in favor of the subcontractor. The court stated, “As a whole it appears to be a ‘house attorney’ prepared form intended by Brewster to be submitted to all of its subcontractors on a take-it-or-leave-it basis.”⁷ The court then paid some tribute to arbitration, stating,

The law favors contracts for arbitration of disputes between parties. They are binding when they are openly and fairly entered into and when they accomplish the purpose for which they are intended.

Our trial courts are clogged with cases, many of them involving disputes between contracting parties. One of the principal purposes which arbitration proceedings accomplish is to relieve that congestion and to obviate the delays of litigation.⁸

The court was concerned that a strong prime contractor that made all its subcontractors agree to such clauses could deprive subcontractors access to the courts in their states. The prime contractor would possess a powerful weapon enabling it to force the subcontractors to arbitrate thousands of miles away from the subcontractor’s place of business and to have the third arbitrator, the neutral, be selected by a hometown judge where the prime contractor had its offices. The court concluded,

A skepticism is born when we read paragraph 13 as to whether it was written as Brewster wrote it for the purpose of expeditious disposition of controversies with its subcontractors. Its plan, it is suggested, may have been designed to effectuate a more unilateral benefit to itself.

We think the courts would and should scan closely contracts which bear facial resemblance to contracts of adhesion and which contain cross-country arbitration clauses before giving them approval.⁹

The *Player* and *Spence* cases were decided in 1971 and 1975, respectively. They showed the tension between

⁷Supra note 5, 96 Cal.Rptr. at 154.

⁸Ibid.

⁹Id. at 156.

encouraging arbitration as a fast, inexpensive method that avoids the courthouse and relieves an overburdened judicial system and making certain that the right to judicial resolution, including the right to a jury, of the dispute in a convenient forum is given up willingly and knowingly. Two cases decided by two different divisions of the same California intermediate appeals court, that came to different outcomes on slightly different facts, show that this tension has not abated.¹⁰

Returning to the *Player* case discussed earlier, the court would not permit a stronger party to force the weaker to agree to an inconvenient forum. Yet a different attitude toward arbitration led to another court to uphold a clause that required arbitration in California despite the subcontractor being a Mississippi company and the project a federal one in Mississippi.¹¹

Despite increased recognition of realities in the contract-making process, arbitration continues to be looked on favorably as a way to avoid the courthouse.¹²

Still, arbitration is exceedingly controversial in contracts that deal with employment, brokerage, franchises, in addition to consumer contracts.

SECTION 30.03 Agreements to Arbitrate and Their Validity

Arbitration is a voluntary system based on a valid contract to arbitrate. For that reason, analysis of the validity of a general arbitration clause involves the requisite elements for a valid contract as well as an awareness of the special treatment the courts accord agreements to arbitrate.

A. Legal Controls: Submissions and Agreements to Arbitrate Future Disputes

Arbitration requires a valid agreement to arbitrate. As noted, modern law looks favorably upon arbitration. Arbitration relieves courts from having to resolve many disputes. This enables courts to use their facilities and

¹⁰*Pardee Constr. Co. v. Superior Court*, 100 Cal.App.4th 1081, 123 Cal.Rptr.2d 288 (2002) and *Woodside Homes of California, Inc. v. Superior Court*, 107 Cal.App.4th 723, 132 Cal.Rptr.2d 35 (2003).

¹¹*Ellefson Plumbing Co. v. Holmes & Narver Constructors, Inc.*, 143 F.Supp.2d 652 (N.D.Miss.2000).

¹²See West Ann.Cal.Bus.&Prof.Code § 7085 (consumer complaints to California Contractors Licensing Board resolved by arbitration). See Section 10.11.

skills to resolve other disputes that cannot be handled by arbitration, such as criminal cases, family disputes, or accident claims. Classically, and in the ideal, a properly structured arbitration can provide skilled dispute resolution. When arbitration first developed arbitrators were selected from a pool of persons who were experts in the context of the transaction and possessed knowledge of the customs and risks of the relevant market.

Ideally, arbitration should be quicker and cheaper than judicial resolution of disputes. Also, arbitration is private. Most disputants dislike public airing of their disputes.

The parties can agree to arbitrate after a dispute has arisen, in what are called submission agreements. They do not raise the difficulties encountered when parties agree to arbitrate all future disputes. These latter agreements have generated complexity and controversy.

The legal requirements for a valid agreement to arbitrate clearly go beyond those needed to make an ordinary contract. Section 30.02 illustrated that arbitration can be abused, usually by the party with the economic power to require that disputes be resolved by arbitration. As a rule, this is the party that provides goods and services to another. Arbitration can be the method by which it can deny the party with whom it dealt the right to have its claims addressed in a court presided over by a neutral judge and decided by an impartial jury. Often the party that agrees to arbitrate does not realize what it is getting and what it is giving up.

Section 30.02 noted that the early common law was not friendly toward arbitration. Its rules made arbitration unworkable. This led to statutes, such as the Federal Arbitration Act (FAA) and similar state statutes that encouraged arbitration.

Since the enactment of this legislation, the law became concerned with the possibility of abuse of the dispute resolution process. The economically more powerful party could use arbitration to control the disputes process. The arbitration clause could control the jurisdiction of the arbitrator, the identity of the arbitrator, the place and structure of the hearing, the nature of the award, the remedies allowed, and the finality of the award.

Ironically, in their haste to encourage arbitration, the early arbitration statutes made it almost impossible to challenge the award. As shall be seen in Section 30.14, virtually unchallengeable awards can generate unjust outcomes and citizen discontent.

B. State Statutes

Concern with the one-sided nature of some arbitration clauses generated an outpouring of state statutes. They were designed to ensure that parties asked to assent to arbitration clauses knew what they were getting and to prevent the system from operating in such a way as to bar a dispute from being resolved in a convenient forum by a neutral person after a fair hearing. While the details varied from state to state, these statutes sought to make certain that all the parties, particularly the ones inexperienced and lacking bargaining power, were aware of what they were getting and what they were giving up.

Some statutes compelled arbitration clauses to be in capital letters, be of a different print and a different color than the rest of the contract, be signed separately, and be signed by both the parties and their attorneys, even that the signer knew it was giving up its “day in court.”¹³

Statutes took other forms. One bars arbitration in adhesion transactions.¹⁴ Another bars agreements to arbitrate future disputes in consumer transactions.¹⁵ Texas bars agreements to arbitrate that are unconscionable.¹⁶ Others barred clauses that required that the arbitration be held in an inconvenient place, as was seen in the *Player* case discussed in Section 30.02.¹⁷

These notice statutes sought to avoid what came to be known as procedural unconscionability, a contract that

¹³As examples, Montana had required that an arbitration clause in a home improvement contract be in special type and placed just before the signature line. This was held to have been preempted by the FAA in *Doctor's Assocs., Inc. v. Casarotto*, 517 U.S. 681 (1996) and later repealed by Mont.Code Ann. §29-5-114(4). California requires that arbitration clauses in residential projects of four or less units be printed in a certain type, in red, in capital letters and placed before the signature line. It also requires that the clause include language stating that the parties give up their right to go to court. West Ann. Cal.Bus.&Prof. Code §7191. Texas requires in certain transaction of \$50,000 or less that there be a special agreement signed by the parties and their attorneys. Tex.Civ.Prac.&Rem. Code Ann. §171.002.

¹⁴Mo.Rev.Stat. § 435.350. This statute was interpreted and applied in *State ex. rel. Vincent v. Schneider*, 194 S.W.3d 853 (Mo.2006). Iowa requires a separately signed writing in adhesion contracts. Iowa Ann. Code § 697A-1.

¹⁵N.Y.Gen.Bus.Code § 399-c. This was interpreted to control a contract between an architect and her client in *Ragucci v. Professional Constr. Services*, 25 A.D.3d 43, 803 N.Y.S.2d 139 (2005).

¹⁶Tex.Civ.Prac.&Rem. Code Ann. § 171.022. Unconscionability is discussed in Section 30.03D.

¹⁷West Ann. Cal. Code Civ.Proc. § 410.42a; La.Rev.Stat. § 9-2779; Va. Code Ann. § 8.01-262.1(b); West Wis.Stat. Ann. § 779.135.

did not bring home to the inexperienced party what it was doing.¹⁸

C. Federal Preemption

This outpouring of state statutes led to a new problem, that of federal preemption. This doctrine bars the application of state law that burdens interstate commerce or frustrates the policy of encouraging arbitration expressed in the FAA. Since most construction transactions affect interstate commerce,¹⁹ a number of cases held that certain state statutes were preempted by federal law.²⁰ One writer stated that the states must enforce the substantive provisions of the FAA but that state laws that were procedural in nature could be enforced.²¹ In any event, some states found that their attempts to regulate arbitration were swept aside by the preemption doctrine. But not every preemption attack succeeded.²² The uncertainty of the application of preemption added another complication to arbitration.

D. Unconscionability

There was another obstacle to arbitration, the common law doctrine of unconscionability. This was discussed in Section 5.07D. Unconscionability is divided into procedural and substantive elements. As with the state statutes, one purpose of this doctrine is to notify contracting parties that they were agreeing to arbitrate, how it would work and that they were giving up their right to go to court. The doctrine also refuses to enforce unfair or one-sided clauses.

Procedural unconscionability examines how the contract was put together. It seeks to prevent oppression or surprise. Oppression could result from vast disparity of bargaining power, the lack of an opportunity to negotiate, and

the absence of meaningful choice.²³ Surprise directs the inquiry toward hidden terms, ones that were not pointed out to the weaker party and to language that could not be understood.

Substantive unconscionability directs attention to the effect of enforcing a challenged clause. The purpose of the doctrine is to bar enforcement of unfair, one-sided clauses and those that control the outcome by the structure of the arbitration process.

The unconscionability doctrine gives the judge the power to rewrite a contract. This means the judicial attitude will vary from state to state and even from judge to judge. California combines both types of unconscionability and requires that both be met. But a close case of procedural unconscionability can be made up for by a strong case of substantive unconscionability.²⁴

Generally, the law has been reluctant to refuse to enforce a contract or a contract clause. The dimensions of the doctrine are imprecise. The doctrine limits freedom of contract. In rare cases courts have set aside contracts or contractual clauses, mainly in consumer or quasi consumer transactions.²⁵ Where it has been applied to arbitration clauses it has been used mainly in the choice of the arbitrators and the location of the arbitration.²⁶ This common law doctrine, while operating as a brake on some who would take advantage of arbitration, created additional uncertainty in the enforcement of agreements to arbitrate.

²³*Avid Eng'g, Inc. v. Orlando Market Place, Ltd.*, 809 So.2d 1 (Fla. Dist.Ct.App.2001), rehearing denied Feb. 7, 2002 (enforced as negotiated in good faith by sophisticated parties).

²⁴*Nagrampa v. Mailcoups, Inc.*, 469 F.3d 1257 (9th Cir.2006). This case applied California law. The issue divided the court and resulted in an *en banc* court (nine judges rather than the usual three). It also noted the division in the federal circuit courts on whether the judge or the arbitrator would decide the issue of unconscionability. This issue will be noted in Section 30.04C.

²⁵*Ibid.* The *Nagrampa* case was a dealer franchise dispute that the court treated as a consumer transaction.

²⁶*Schulster Tunnels/Pre-Con v. Traylor Bros., Inc./Obayashi Corp.*, 111 Cal.App.4th 1328, 4 Cal.Rptr.3d 655 (2003) (dispute review board to which the subcontractor was to submit claim consisted of members approved by the city and the prime). Dispute review boards will be discussed in Section 30.18E. *State ex.rel. Vincent v. Schroeder*, supra note 14 (dispute with developer; arbitrator was president of the Homebuilders Association of Greater St. Louis, who was the defendant seller at that time). In *D. R. Horton, Inc. Green*, 120 Nev. 549, 96 P.3d 1159 (2004) the court refused to enforce an arbitration clause. The clause entitled the developer to \$10,000 if the buyer went to court and did not arbitrate as agreed. Also, the clause did not notify the buyer that it was giving up its legal rights.

¹⁸See Sections 5.07D and 19.02E.

¹⁹*Citizens Bank v. Alafabco, Inc.*, 539 U.S. 52 (2003) (commerce protected to the fullest extent possible).

²⁰*Doctor's Assocs., Inc. v. Casarotto*, supra note 13; *Shepard v. Edward Mackey Enterprises, Inc.*, 144 Cal.App.4th 1092, 56 Cal.Rptr.3d 326 (2007) (statute allowed defect claims to go directly to court despite arbitration clause in purchase agreement).

²¹Turner, *Under Construction*, ABA Forum Newsletter, March 2007, p. 6.

²²*Woolfs v. Superior Court*, 127 Cal.App.4th 197, 25 Cal.Rptr.3d 426 (2005), review denied June 5, 2005. (Single-family residence did not affect interstate commerce); *Joseph v. Advest, Inc.*, 2006 PA Super 213, 906 A.2d 1205 (2006) (statute providing shorter time to appeal award than the FAA not preempted by FAA).

*Remza Drywall, Inc. v. W. G. Yates & Sons Construction*²⁷ provides a good example of the attacks on arbitration based upon unconscionability. It is an opinion by a trial court judge in a federal court applying Mississippi law. A trial court opinion does not create a legal precedent.

The dispute was between a prime and subcontractor over amounts owed the latter on six different projects. The parties had agreed to a broad arbitration clause that required arbitration of all disputes under the rules of the American Arbitration Association. But if the dispute involved third parties, such as the owner or the architect, the prime had the sole discretion to remove the dispute to another forum, arbitral or judicial “to promote economy and avoid inconsistent results.”²⁸ This power could be used to enable consolidation of claims and parties in one hearing. The clause also required that the arbitration be held in a specific city in Mississippi unless the prime designated another city to facilitate the policy of having all claims in one hearing. Also, the subcontractor agreed to waive special, consequential, or punitive damages.

The subcontractor sought to avoid arbitration by asserting both procedural and substantive unconscionability. The assertion of procedural unconscionability was based on the subcontractor’s claim that the clauses were “hidden within the contract with no heading,” that the clauses were so “complex and legalistic” that it did not have the opportunity “to present the subcontracts to legal counsel,” and that the primary language of its principal who signed the agreements was Spanish.

The court rejected this contention. It stated the clause was in the same font and same size as the rest of the contract. (Some statutes require that the clause be larger, in different color and in all caps.²⁹) The court found the language clear and not “complex nor legalistic.” The court stated that the subcontractor had time to consult with its attorney. It concluded by noting that inability to understand a contract is not a basis to conclude the contract is unconscionable. Most importantly, the court pointed to this not being a consumer transaction but one between two corporations contracting for over 6 million dollars worth of work.

The next attack was that the contract was substantively unconscionable. Such assertions are often based

upon one-sidedness or rigged systems, such as in the appointment of arbitrators. The court found the power given the prime to remove the case from arbitration and take it to court in order to effectuate consolidation was not unconscionable. It concluded that mutuality is not needed, that the power served a useful business function, and that it had to be exercised in good faith. The power given the prime over venue was not, according to the court, too burdensome.

But barring the subcontractor but not the prime from recovering special, consequential, or punitive damages was indeed unconscionable. However, the unconscionability doctrine allows severance of the offending clause. The court severed the clause from the rest of the contract and enforced the arbitration clause.

This case is presented as an example. Other judges might have come to different conclusions. The *Remza* case demonstrates that, in addition to the statutory control over arbitration, the common law also plays a role. But the common law protections tend to be used in noncommercial transactions, such as those that involve consumers who buy goods and services for their own use. But even in the construction world unconscionability can play a role, though a minor one, in arbitration.

E. Mutuality

Another attack often made on arbitration is based upon the clause forcing one party to arbitrate but giving the option to arbitrate to the other. Sometimes attacks on these one-sided clauses are based upon unconscionability.³⁰ However, often such attacks are premised on the common law doctrine of lack of mutuality, a doctrine that is often linked to consideration.³¹ They will be dealt with in Section 30.03H.

F. Underlying Contract

Discussion has centered upon the arbitration clause itself and the laws that seek to prevent abuse of arbitration. On occasion there is a validity attack on the underlying contract containing the arbitration clause. If sustained, the arbitration clause is not enforced. The clause can rise no higher than the underlying contract in which it

²⁷2007 U. S. Lexis 50287, 2007 Westlaw 2033047 (S.D. Miss. 2007).

²⁸See Section 30.09 for discussion of multiparty arbitrations.

²⁹See supra note 13.

³⁰*Avid Eng'g Inc. v. Orlando Marketplace Ltd.*, supra note 23 (exchanged one forum for another).

³¹See Section 5.08.

is contained. For example, the arbitration clause was not effective when the underlying contract violated public procurement laws.³²

The discussion until this point has assumed that an agreement to arbitrate is easily found and the issue is the validity of this agreement. In construction disputes this is often not the case. The search for the relevant language is made difficult because of the set of complex contracts that connect the participants in the construction project. Some complexity results from the common practice of incorporating by reference parts or entire contracts into another contract or at the very least referring provisions to another contract. This is done to save space in an already lengthy contract, to provide a consistent set of rules, and to pass risks down from higher participants to those lower on the chain. These problems are most common in subcontracts.³³

G. Contract Formalities and Nonsignatories

Usually, the contract that contains an arbitration clause is written and signed by the parties. But those who make contracts do not always follow the method intended to show they assented to the contract. For example, a court concluded that there was a valid contract to arbitrate even though an officer of the contractor did not sign in the blank provided in the contract for his signature.³⁴

The court concluded that a signature was not the only way that assent could be manifested. Here, conduct of the parties can make up for the lack of a signature. In this case, the contractor's performance of the contract requirements clearly showed it was bound to the contract and expected the owner to perform as well.

Because of the inherently ambiguous nature of acts, cases often come to different conclusions when the process of making the contract is not followed yet work proceeds.³⁵

³²C. R. Klewin Northeast LLC v. City of Bridgeport, 282 Conn. 54, 919 A.2d 1002 (2007).

³³See Section 28.04.

³⁴Stinson v. America's Home Place, Inc., 108 F.Supp.2d 1278 (M.D.Ala.2000). Among the many cases holding the signature is not always needed, see Medical Dev. Corp. v. Industrial Molding Corp., 479 F.2d 345 (10th Cir.1973). Cases are collected in Windle, Arbitration and the Unsigned Contract, 15 Common Sense Contracting, No. 13, ¶408 (Smith Currie & Hancock).

³⁵Compare Landmark Properties, Inc. v. Architects International-Chicago, 172 Ill.App.3d 379, 526 N.E.2d 603 (1988) (developer bound to arbitration clause despite not having signed or returned the contract:

It is much better to follow the formalities (sign and return the contract) by which the contract is supposed to be made. Sloppiness may be rescued by the court's willingness to consider the total picture. But contracting parties should not rely on being saved by the court.

Usually, the person demanding arbitration and the person against whom it is demanded are parties to the same contract. But on rare occasions, they are not. For example, in *Cunningham Hamilton Quiter P.A. v. M.L. of Miami*, the owner in a design-build (DB) contract sued the architect engaged by the contractor. The architect successfully invoked arbitration based on the arbitration clause in the DB contract.³⁶

But the reverse may not be true. In one case the contractor sought to arbitrate with the husband who had participated in the negotiations but had not been a party to the construction contract made by his wife. The contractor claimed unsuccessfully that the wife was the agent of the husband.³⁷

The usual method of showing an agreement to arbitrate is a signature on a written contract. But the increasing use of electronic means of communication has led assent to arbitration being done electronically. The FAA requires that agreements to arbitrate must be in writing. However, a federal circuit court held that electronic mail can satisfy the requirement.³⁸

The employee claimed he had been terminated in violation of the Americans with Disabilities Act (ADA). The employer sent e-mails to its employees. The e-mail did mention that disputes resolution had a four-step approach, the final being arbitration before a qualified and independent arbitrator. Included was an embedded link to its brochure and handbook that stated all, including ADA disputes, would be arbitrated. The employee claimed he never saw the e-mail. The employer set up a tracking log to monitor whether the employees opened the e-mail, but it did not require a response.

having referred to the contract and not objecting showed an intent to be bound) with *Brooks & Co. General Contractors, Inc. v. Randy Robinson Contracting, Inc.*, 257 Va. 240, 513 S.E.2d 858 (1999) (contract not signed or returned and starting work without objection did not show agreement with terms).

³⁶776 So.2d 940 (Fla. Dist. Ct. App. 2000), rehearing denied Jan. 21, 2001.

³⁷*Ellsworth v. American Arbitration Ass'n*, 148 P.3d 983 (Utah 2006).

³⁸*Campbell v. General Dynamics Government Systems Corp.*, 407 F.3d 546 (1st Cir. 2005) (Massachusetts law).

The court held under the right circumstances e-mail can satisfy the FAA writing requirement. But there must be some minimal level of notice to the employee. There was no actual notice. Then the issue was whether a reasonable person would have recognized this new method of resolving disputes. Here, according to the court, this communication involved a term of employment, and the e-mail itself did not make clear what the employee was being asked to do: to submit his dispute to an arbitrator and give up his right to go to court to assert his rights under the ADA. An e-mail can be effective if the proponent shows minimally sufficient notice.³⁹

Another case with a different outcome involved a notice of arbitration on the seller's website that had become incorporated by reference into the purchase agreement. The website notice was in blue type.⁴⁰ This made it conspicuous. The purchaser purchased online and was not a novice in using computers.

Electronic communications can be effective but the facts in each case will determine whether the needed notice was present.

H. Fraud, Mutuality, Termination of Contract and Conditions Precedent

Section 30.03 deals with the validity of the agreement to arbitrate. Other attacks surface in construction contract disputes. The main ones are fraud, mutuality (one-sided clauses), the effect of termination of the underlying construction contract, or frustration of the disputes process due to nonoccurrence of a condition precedent to arbitration.

Fraud can be a challenge to any agreement to arbitrate. Where fraud is claimed, the principal issue is who decides whether the challenge is meritorious. For that reason fraud will be examined in Section 30.04C. It treats who decides certain issues. That section also introduces the seminal *Prima Paint* doctrine. It is central to the issue of who decides when these attacks are made. Other legal attacks on arbitration are discussed here.

One attack on an arbitration clause is that it lacks mutuality—when one party is required to arbitrate but the other is not.

A Florida case shed light on this method of avoiding arbitration.⁴¹ The contract was between a shopping center and an engineer. The contract provided that all disputes would be arbitrated under the Construction Industry Rules of the American Arbitration Association “at the sole discretion of the Engineer.”⁴² The shopping center brought a lawsuit against the engineer. The engineer sought arbitration. The trial court refused to order arbitration as the arbitration clause lacked mutuality since only one party, the engineer, could demand arbitration.

The mutuality concept is an offshoot of the consideration requirement for enforcement of a contract discussed in Section 5.08. Here there was adequate consideration for the contract. The appellate court concluded the issue was one of unconscionability.⁴³ The court held this clause was not procedurally unconscionable. The contract had been negotiated at arms' length by sophisticated parties. Also, the clause was not substantively unconscionable. It merely exchanged one forum for another.

There may be contrary outcomes in cases that involve one-sided clauses, depending on the facts. But the fact that one party can choose to arbitrate will not as a rule automatically invalidate the arbitration even in consumer transactions.⁴⁴

Discussion in this Section has centered on the validity of agreements to arbitrate. Suppose a valid contract with an arbitration clause is terminated? What effect does termination have on the agreement to arbitrate?

Termination can result from a serious breach by one of the parties,⁴⁵ unforeseen events that cause termination

⁴¹*Avid Eng'g, Inc. v. Orlando Marketplace, Ltd.*, supra note 23.

⁴²Id. at 2.

⁴³See Sections 5.07D, 19.02E, 30.02 and 30.03D.

⁴⁴*Kalman Floor Co. v. Jos. L. Muscarelle, Inc.*, 196 N.J. Super 16, 481 A.2d 553 (App.Div.1984), aff'd, 98 N.J. 266, 486 A.2d 334 (1985) (after reviewing decisions with different conclusions upheld clause). See also *Albert M. Higley Co. v. N/S Corp.*, 445 F.3d 861 (6th Cir.2006) (enforced even if prime had discretion in prime-subcontractor dispute); *State ex. rel. Vincent v. Schroeder*, supra note 14 (enforced even if seller could go to court to obtain an injunction to protect its intellectual property and buyer had to submit all of its claims to arbitration). See also Nahmias, *The Enforceability of Contract Clauses Giving One Party the Unilateral Right to Choose Between Arbitration and Litigation*, 21 Constr. Lawyer, No. 3, Summer 2001, p. 36 (trend toward enforcement but no majority rule or consensus in courts).

⁴⁵See Section 33.04.

³⁹*Caley v. Gulfstream Aerospace Corp.*, 428 F.3d 1359 (11th Cir.2005) (Georgia law) declining to follow *Campbell*, supra note 38.

⁴⁰*Hubbert v. Dell Corp.*, 359 Ill.App.3d 976, 835 N.E.2d 113 (2006).

(*force majeure*),⁴⁶ or an exercise of a power to terminate for convenience.⁴⁷ Termination will be discussed more fully in Chapter 33.

Termination not based on a formation defect should not and does not abrogate any broad arbitration clause.⁴⁸ This can become cloudy because some dispute resolution systems include steps that must be taken prior to arbitration; for example, the AIA system requires an initial decision by a design professional or any Initial Decision Maker (IDM). These steps are usually a condition precedent to arbitration. But the power of the architect or any IDM under A201-2007, Section 15.2.1 terminates 60 days after final payment is due.

Suppose the IDM or any design professional given the power to initially resolve disputes is no longer “on board” because her power expired. This should mean that the dispute can proceed directly to arbitration because the condition precedent had been excused.⁴⁹ One case held that the failure to have an interim decision eliminates the arbitration requirement.⁵⁰ This frustrates the intention of the parties and the agreed dispute resolution method.

This issue raises the question of whether the arbitration clause covers post-completion claims. This will be discussed in Section 30.04A.

SECTION 30.04 Specific Arbitration Clauses: Jurisdiction of Arbitrator and Timeliness of Arbitration Requests

A. Jurisdiction Conferred by Clause

A frequently disputed issue relates to whether the arbitration clause covers the particular matter in dispute. Obviously, much depends on the language of the clause,

and a broadly drafted arbitration clause can cover almost anything that relates to the contract between the parties. Alternatively, the clause can specify that it applies only to claims that do not exceed a certain amount or claims that involve *factual* as opposed to *legal* disputes.

Whether the clause has conferred jurisdiction on the arbitrator depends on the language of the arbitration clause as well as judicial attitude toward arbitration. A few examples illustrate this. Courts have differed as to whether delay damages fall within an arbitration clause.⁵¹ A court seeking to encourage arbitration would not limit arbitration to damages solely to person or property.⁵² Another court less favorable to arbitration held that a general arbitration clause did not cover the owner’s possible liability for water damage.⁵³ That court required that the clause be “crystal clear” before it would confer jurisdiction on the arbitrator.

Another court held that a general arbitration clause in a subcontract did not confer jurisdiction on the arbitrator to determine which portion of the funds the prime contractor received to train minority workers should go to the subcontractor.⁵⁴ That same decision refused to permit the architect to arbitrate a dispute between prime contractor and subcontractor when the subcontractor’s principal claim was that the architect had committed design errors.

Courts have differed in their willingness to encompass implied terms under the arbitration clause.⁵⁵ Most courts hold that the arbitration clause will be applied to disputes that arise after the work is completed despite a provision

⁴⁶See Section 23.03D.

⁴⁷See Section 33.03B.

⁴⁸*Middlesex County v. Gevyn Constr. Co.*, 50 F.2d 53 (1st Cir.1971), cert. denied, 405 U.S. 955 (1972); *Reiss v. Murchison*, 384 F.2d 277 (9th Cir.1967); *Auchter Co. v. Zagloul*, 949 So.2d 1189 (Fla. Dist. Ct.App.2007). But see *Tri-Star Petroleum Co. v. Tipperary Corp.*, 107 S.W.3d 607 (Tex.Civ.App.2003), rehearing overruled July 2, 2003, review denied April 7, 2004, mandamus denied April 7, 2004, rehearing for petition for review denied June 25, 2004, rehearing for petition for mandamus overruled July 2, 2004 (refusing to follow *Middlesex* case).

⁴⁹*Auchter Co. v. Zagloul*, supra note 48.

⁵⁰*Lopez v. 14th Street Development LLC*, 40 A.D.3d 313, 835 N.Y.S.2d 186 (2007).

⁵¹*Harrison F. Blades, Inc. v. Jarman Memorial Hosp. Bldg. Fund, Inc.*, infra note 55, held a delay damage claim beyond the scope of arbitration, while *Aberthaw Constr. Co. v. Centre County Hosp.*, 366 F.Supp. 513 (M.D.Pa.1973), aff’d, 503 F.2d 1398 (3d Cir.1974), held that arbitration was required. See *Smay v. E. R. Stuebner, Inc.*, infra note 62.

⁵²*Muhlenberg Township School Dist. Auth. v. Pennsylvania Fortunato Constr. Co.*, 460 Pa.260, 333 A.2d 184 (1975).

⁵³*Silver Cross Hosp. v. S. N. Nielsen Co.*, 8 Ill.App.3d 1000, 291 N.E.2d 247 (1972).

⁵⁴*Paschen Contractors, Inc. v. John J. Calnan, Co.*, 13 Ill.App.3d 485, 300 N.E.2d 795 (1973).

⁵⁵*Roosevelt Univ. v. Mayfair Constr. Co.*, 28 Ill.App.3d 1045, 331 N.E.2d 835 (1975) and *Allentown Supply Corp. v. Hamburg Municipal Auth.*, 463 Pa. 167, 344 A.2d 477 (1975), held that arbitration encompassed implied terms, whereas *Harrison F. Blades, Inc. v. Jarman Memorial Hosp. Bldg. Fund, Inc.*, 109 Ill.App.2d 224, 248 N.E.2d 289 (1969), did not.

in the arbitration clause stating that work will continue while the dispute is being arbitrated.⁵⁶

Prior to 2007, AIA Document A201-1997, Paragraph 4.6.1, dealing with arbitration was very broad. It covered any claim “arising out of or relating to the Contract.” It excluded only claims relating to aesthetic effect, claims waived by final payment, and those dealing with consequential damages.

But in 2007 changes were made in dispute resolution. A101/201 set up a three-step process and gave more scope to mediation. The first was a decision by an Initial Decision Maker (IDM). She could be a named individual designated in A101-2007, Section 6.1. In the absence of a named IDM the architect acted in this role.

Mediation was the next step and the third, arbitration, if selected in A101-2007, Section 6.2. Since the steps are interlocked, attention to each step must be noted to determine the jurisdiction of the arbitrator. Special attention will be directed to disputes relating to aesthetic effect because this was clearly excluded in 1997 and in prior editions of A201.

Before looking at A201-2007 Article 15 dealing with disputes, it should be noted that A201-1997 Paragraph 4.2.13 stated that “decisions on matters relating to aesthetic effect will be final. . . .” This was unchanged in A201-2007. But what was clear in 1997 became less clear in 2007. Section 15.2.1 excludes claims that must be sent to the IDM, including those related to hazardous materials⁵⁷ and distribution of funds received from an insurer for property damage.⁵⁸ There was no exclusion for aesthetic effect disputes as in 1997.

The second step is mediation. Section 15.2.1 requires that all claims and disputes be mediated except those waived by final payment and those that affect consequential damages. Disputes that involve hazardous materials or distribution of insurance proceeds are not excluded.

Arbitration under Section 15.4 is the third step. All disputes not resolved by mediation must be arbitrated if that method is selected in A101, but mediation is a condition precedent to arbitration.⁵⁹ If a claim need not be mediated, apparently it need not be arbitrated. But not all claims that go to mediation need first go to the IDM.

In this Byzantine system what happens to matters relating to aesthetic effect clearly excluded in A201-1997? All that remains is Section 4.2.13, which states that the architect’s decision is final “if consistent with the intent expressed in the Contract Documents.” If there is a dispute over consistency, it must be mediated and possibly arbitrated. That the AIA removed the exclusion in 2007 from both mediation and arbitration that had been included in A201-1997 would support this conclusion.

Another jurisdictional issue relates to the arbitrability of tort claims.⁶⁰ Florida has allowed tort claims to be arbitrated, even ones for noneconomic losses.⁶¹ Similarly, an indemnity claim triggered by a tort claim for personal harm fell within the arbitration clause.⁶² As noted earlier, judicial resolution of the jurisdictional question is likely to be influenced by the court’s attitude toward arbitration, the relative bargaining power of the parties, and the apparent appropriateness of arbitration for a particular dispute.

A recent Utah case showed the difficulty that jurisdiction of the arbitrator can generate. In this case, a developer and a subcontractor had a dispute that involved two parcels of land. They settled the dispute over the first and agreed to arbitrate their dispute over the second. At the arbitration, both introduced evidence that related to the first parcel that was not before the arbitrator. The arbitrator considered this a modification of the submission agreement and ruled on both parcels.

The Utah intermediate court of appeals agreed, concluding that the parties could expand the written submission agreement by their conduct.⁶³

⁵⁶*Warren Bros. Co. v. Cardi Corp.*, 471 F.2d 1304 (1st Cir.1973); *Auchter v. Zagloul*, supra note 48; *Hudik-Ross, Inc. v. 1530 Palisade Ave. Corp.*, 131 N.J.Super. 159, 329 A.2d 70 (App.Div.1974); *Warwick Tp. Water & Sewer Auth. v. Boucher & James*, 2004 PA Super 201, 851 A.2d 953 (2004). But see *Lopez v. 14th Street Development LLC*, supra note 50 (absence of a decision by the architect precluded arbitration). A case to the contrary was *Hussey Metal Div. v. Lectromelt Furnace Div.*, 471 F.2d 556 (3d Cir.1972) (clause stating that no demand for arbitration could be made after final payment). See Section 33.031.

⁵⁷A201-2007, §§ 10.3, 10.4.

⁶²*Smay v. E.R. Stuebner, Inc.*, 2004 PA Super 493, 864 A.2d 1266 (2004).

⁶³*Pacific Dev. L.C. v. Orton*, 982 P.2d 94 (Utah App.1999) cert. granted, 20 P.3d 403 (table) 1999.

The Utah Supreme Court reversed, concluding that there could be no implied expansion of a written submission agreement.⁶⁴ It expressed concern that this sort of informal expansion would discourage persons from arbitrating, that the written agreement should set firm boundaries, and that Utah law required a written agreement.

This holding shows that the sometimes casual approach the law takes to informal modification of contracts will not be applied where the issue is the jurisdictional aspects of agreements to arbitrate.⁶⁵

Although arbitration typically involves performance problems, it has been held that a claim by a contractor that it should be relieved from a bidding mistake should be decided by arbitration.⁶⁶

Although it will be discussed again in Section 30.12, dealing with arbitral remedies, *Advanced Micro Devices v. Intel Corp.*⁶⁷ can be looked at in a jurisdictional sense as well. In that case the arbitrator ruled for the claimant, AMD, on its claim that Intel violated its obligation of good faith and fair dealing. The arbitrator ruled that AMD could use certain Intel intellectual property, in effect requiring that Intel forfeit a defense in a separate federal copyright suit *not* before the arbitrator. Although the intermediate California appellate court found this ruling to be beyond the arbitrator's jurisdiction, the California Supreme Court confirmed it in a 4-to-3 decision. The majority held that the remedy bore a rational relationship to the underlying contract as interpreted by the arbitrator or the breach of contract found by the arbitrator. While all the judges agreed that this award went *beyond* what a court could do, the dissenters did not agree with the broad interpretation of jurisdiction given by the majority.

The arbitrator must have found Intel guilty of extremely oppressive conduct and held that the only way to "make things right" was to bar it from using a defense in another dispute not before the arbitrator—in effect punishing Intel.

This decision may lead some parties to contractually specify very sharp limitations on the remedies the arbitrator can award, to state in the contract that the award must

be in accord with state law, or to give up arbitration in favor of another method of resolving the dispute.

The increasing attempt of nonparties to enforce contracts by claiming that they are intended beneficiaries of contracts made by others has added to arbitration complexity. This increases the likelihood that contracting parties in this context will exclude third-party claims by appropriate contract language. Courts should use caution in granting enforcement rights to a third party as an intended beneficiary.

Expiration of any time limit specified in the contract or statute for making the award generally ends jurisdiction of the arbitrator, and any awards made after expiration are invalid. This rule has been eroded where an award made after expiration of the time limit is enforced on the basis of waiver, such as proceeding with the arbitration without protest after expiration or failure to protest after a late award has been rendered. Waiver can also be predicated on a course of conduct that shows the parties did not consider time of the essence, especially where no prejudice is shown. If the expiration period for making the award has been waived, the award must be made within a reasonable time.⁶⁸ One of the more difficult jurisdictional questions relates to the application of an arbitration clause to a disputed termination (discussed in Section 33.031).

Jurisdiction problems highlight drafting approaches between no arbitration and a general arbitration clause. They are discussed in Section 30.17.

B. Timeliness of Arbitration Demand

AIA Document A201-1997 had set two standards for timeliness. Decisions by the architect that state that they are final and subject to appeal must be appealed to arbitration within thirty days.⁶⁹ If the decision did not contain such a statement, arbitration must be requested within a reasonable time.⁷⁰ This method was criticized in the seventh edition of this book because it gave the architect the power to create a fixed period in her award. Failure to do so would inject a reasonable time into the formula for deciding the time limit on submission of claims. This can raise proof issues.

AIA Document A201-2007 made a change. Section 15.3.1 makes mediation a condition precedent to

⁶⁴23 P.3d 1035 (Utah 2001).

⁶⁵See Section 19.01H.

⁶⁸Annot., 56 A.L.R.3d 815 (1974).

⁶⁹AIA Doc. A201-1997, ¶4.4.6.

⁷⁰Id. at ¶4.6.3.

arbitration, and Section 15.4.1.1 requires that a demand for arbitration be “made no earlier” than the filing of a request to mediate “but in no event shall it be made after the date” when a legal action “would be barred by the applicable statute of limitations.” This would make local law the standard, and, as shown in Section 23.03G, this can be a difficult standard to apply.

Another method of handling this seemingly simple issue is shown by the EJCDC. Dealing with the issue of when a claim must be made to the engineer, EJCDC C-700 (2007), Paragraph 10.05B, states the claim must be made “promptly (but in no event later than 30 days) after the start of the event giving rise” to the claim. Here the general standard is promptness with a thirty-day cap.

Paragraph 11.05E states the decision of the engineer becomes final unless one of the parties elects to mediate the dispute under Article 16. The engineer’s decision is final and binding thirty days after termination of the mediation unless one party submits the claim to the disputes process selected in the Supplementary Conditions. Fixed time limits set forth in the contract are preferable.

C. Who Decides Jurisdiction and Timeliness: *Prima Paint* Doctrine

One question has generated a large number of cases: whether the court or the arbitrator decides preliminary issues.⁷¹ These issues do not relate to the substantive disputes that determine who should prevail. Instead they deal with the validity of the arbitration clause and its underlying contract. These issues include compliance with any formal requirements and attacks on the formation of the contract, such as claims of fraud, unconscionability, or illegality of the underlying contract. Other issues that precede the actual hearing can include whether any conditions precedent have occurred, such as submitting the dispute to a third party or mediators. There are other illustrations, but even this list brief list shows that many disputes can arise before the actual arbitration hearing.

The question of who decides these preliminary issues uncovers some strategic characteristics of dispute resolution. Often arbitrating parties admit they agreed to

arbitrate but choose strategies to either avoid the process they have selected or hope to delay the actual arbitration for tactical reasons.

They may have second thoughts about arbitration and now prefer to go to court. Alternatively, they may believe that delay will help them make a better settlement. Some parties have financial problems and need the money they hope to receive. Delay then benefits the other party, who may be able to use this to make a better settlement.

These tactics often lead parties to allege that the underlying agreement was procured by fraud. Fraud is easy to allege but difficult to prove. This led to *Prima Paint Corp. v. Flood & Conklin Manufacturing Co.*⁷² and the *Prima Paint* doctrine. The United States Supreme Court used the divisibility fiction that artificially severs the arbitration clause from the underlying contract. If the fraud attack challenges the arbitration clause itself, the issue goes to the judge. If it asserts other challenges to the underlying contract, the issue is decided by the arbitrator. This doctrine made it more difficult to attack the arbitration clause and strengthened arbitration.

The *Prima Paint* doctrine was recently affirmed in *Buckeye Check Cashing, Inc. v. Cardegna*.⁷³ The *Buckeye* case held that a charge that the underlying contract was an illegal usurious contract was to be decided by the arbitrator. The entire contract, not the arbitration clause, was challenged as illegal.

But it is important to see what the Court stated it was not deciding. It was not deciding whether any valid agreement to arbitrate was made, such as whether the party signed the agreement to arbitrate, whether the signer had authority, and whether the signer had the mental capacity to make a contract.⁷⁴

Implementation of the *Prima Paint* doctrine has not been easy. For example, in the *Buckeye* case the trial court held the issue was to be decided by the court. The Florida intermediate court of appeals disagreed and held it should be decided by the arbitrator.⁷⁵ The Florida Supreme Court held it should be decided by the court.⁷⁶ And as seen, the United States Supreme Court held that the arbitrator decided this issue.

⁷¹The singular will be used. Of course, there may be a panel of arbitrators. Three is common where the claims are for very large sums. See Section 30.18A.

⁷²388 U.S. 395 (1967).

⁷³546 U.S. 440 (2006)

⁷⁴Id. at 444, n. 1.

⁷⁵824 So.2d 228 (Fla. Dist. Ct. App. 2005).

⁷⁶894 So.2d 860 (Fla. 2006).

Another illustration of the vexatious nature of the *Prima Paint* doctrine can be seen in a recent decision of a federal appeals court.⁷⁷ In that case the trial court held that the issue of unconscionability would be decided by the arbitrator; the federal appeals court, sitting in a three-judge panel, agreed, but the court meeting *en banc* (an expanded panel of nine judges) in a divided opinion disagreed and held that the issue would be decided by the court. The dissent noted the disagreements in the federal circuit courts over this issue.⁷⁸

At the extremes there is no confusion. All would agree that the issue of whether there was valid agreement to arbitrate, not the validity of the underlying contract, should be decided by the court. At the other extreme, procedural issues, such as how the arbitrator conducts the hearing, should be decided by the arbitrator.⁷⁹ But on issues in between these extremes there can be wide variation in judicial outcomes. While some courts give these issues to the trial court to decide,⁸⁰ the tendency has been to give more preliminary issues to the arbitrator.⁸¹

The complexities of who decides can be shown by *Wagner Construction Co. v. Pacific Mechanical Corp.*, a

recent California case.⁸² The court held that the arbitrator decides whether the underlying claim is barred by the statute of limitations. The court decides whether the claim has been filed within the period specified in the arbitration clause or set by the association handling the arbitration. Waiver of arbitration is decided by the court.

Arbitration works best when all or almost all of the issues are decided by the arbitrator and not the judge. Repeated trips to the courthouse defeat the main purpose of arbitration, that of an alternate process that is cheaper, quicker, and more expert than litigation.

Yet it must be recognized that arbitrators are not perfect. For that reason, Section 30.14 describes the constant struggle over the scope of judicial review. But in this section, the issue is who will decide preliminary questions, not the substantive outcome of the arbitration.

To be sure, some of these preliminary questions are important, such as the validity of the agreement to arbitrate future disputes, any submission agreement to submit existing disputes to arbitration, and the jurisdiction of the arbitrator. Yet in addition to the *Prima Paint* doctrine of severability, recent cases cited in note 81 show that the law increasingly allows arbitrators to decide these preliminary questions. This smoothes the path to arbitration.

⁷⁷*Nagrapma v. Mailcoups, Inc.*, supra note 24.

Inc.*, 321 F.3d 1094 (11th Cir.2003) (arbitrator decides whether unlicensed contractor can recover for work performed); *C. R. Klewin Northeast LLC v. City of Bridgeport*, supra note 32 (illegality of underlying contract to arbitrator); *O'Keefe Architects, Inc. v. CED Constr. Partners Ltd.*, 944 So.2d 181 (Fla.2006) (arbitrator decides timeliness of arbitration demand); *City of Lenexa v. C. L. Fairly Constr. Co.*, 15 Kan.App.2d 207, 805 P.2d 507 (1991), review denied Apr. 23, 1991 (arbitrator decides timeliness of arbitration demand); *Rockland County v. Primiano Constr. Co.*, 51 N.Y.2d 1, 409 N.E.2d 951, 431 N.Y.S.2d 478 (1980) (arbitrator decides timeliness of demand and conditions precedent); *Industra/Matrix Jt. Venture v. Pope & Talbot, Inc.*, supra note 79 (arbitrator decides timeliness of demand, conditions precedents met, and effect of lack of license); *Ross Development Co. v. Advanced Bldg Development Inc.*, 2002 Pa. Super. 194, 803 A.2d 194 (2002) (arbitrator decides whether condition precedents met or excused).

SECTION 30.05 Waiver of Arbitration

The law generally favors arbitration. Yet a party may indicate by its acts that it chooses to litigate even though it had agreed to arbitrate. If it does so, the other party has a choice. It can compel arbitration by filing a motion in court to hold off litigation until the dispute is submitted to arbitration. Alternatively, it can decide to have the dispute handled in court.

The issue of waiver arises when the party who took steps inconsistent with the desire to arbitrate changes its mind and seeks to arbitrate. The court, or in some cases, the arbitrator must decide whether that party has waived or lost its right to arbitrate.

In deciding whether the right to arbitrate has been waived, two factors may be relevant. The first is whether the acts by one party in pursuing litigation were so inconsistent with the desire to arbitrate that it is clear that party no longer wishes to arbitrate. The second is whether

⁸²41 Cal.4th 19, 157 P.3d 1029, 58 Cal.Rptr.3d 434 (2007).

“blowing hot and cold” on arbitration, first seeking another way of resolving the dispute, and then seeking to go back to arbitration, prejudiced the other party.

Some courts emphasize the first factor, the issue of intent to waive arbitration. Was the evidence clear that the party who now seeks to arbitrate manifested a desire to waive it? If so, arbitration has been waived.

Other courts, more supportive of arbitration, require that there be evidence not only of an intent to waive arbitration but that the other party has been prejudiced by this change of course. Has it been put in a worse position by the “blowing hot and cold” by the other party? Only then has there been waiver of arbitration.

Regarding inconsistent acts as a waiver, two writers state:

Actions that have been held to be inconsistent with the continued right to arbitrate include the initiation of litigation, participation in discovery on claims subject to an arbitration agreement, or, more generally, taking actions “adverse to the arbitration process.” The courts generally recognize exceptions for pretrial actions or motions designed to avoid litigation or to stay proceedings, where they are potentially consistent with enforcement of the arbitration provision. Similarly “a party can also ‘conduct discovery with respect to non-arbitrable claims without waiving their right to arbitrate.’” The Fifth Circuit stated that inconsistent activity can be marked by acts that indicate intent to repudiate the right to arbitrate. This can occur either prior to or during litigation, but most frequently involves participation in a lawsuit without seeking to invoke the arbitration agreement.⁸³

As to a prejudicial change of position these commentators state:

For example, prejudice may arise from delay in asserting the right to arbitrate and the consequential risk of lost evidence, the duplication of effort in litigating first and then arbitrating, the use of discovery methods in litigation that would be unavailable in arbitration, or, more generally, “when a party instigates litigation of substantial issues going to the merits.”⁸⁴

Just as these waiver cases may be influenced by the favorable attitude toward arbitration, the AAA Construction

Industry Arbitration (CIA) Rule R-49(a) states that “No judicial proceeding by a party relating to the subject matter of the arbitration shall be deemed a waiver of the party’s right to arbitrate.” The AIA more specifically seeks to avoid the filing of a lien as a waiver of contractual dispute resolution system.⁸⁵ These efforts to avoid waiver of arbitration will not always be effective.⁸⁶ One court held that the court decides waiver of arbitration.⁸⁷ As to who decides whether the right to arbitration has been waived, see Section 30.04C.

Although cases will continue to seem contradictory because of the many factual situations, the general trend may be indicated by a case that stated that arbitration was favored and that waiver would not be lightly inferred. The court noted the necessity for showing prejudice rather than simply showing inconsistent acts and indicated that recent waiver cases had involved demands for arbitration long after suits had been started and after discovery proceedings had taken place.⁸⁸

A number of recent cases continue this trend.⁸⁹ But if a lien claimant wishes to protect its rights to arbitrate, legal advice should be obtained.

SECTION 30.06 Prehearing Activities: Discovery

The party initiating arbitration usually files a notice of an intention to arbitrate and, under the AAA Construction Industry Arbitration Rules (CIA Rules) (there are also Fast-Track and Large/Complex Rules) (see Appendix F),

⁸⁵A201-2007, § 15.2.8; B101-2007, § 8.2.1.

⁸⁶See *Joba Constr. Co., Inc. v. Monroe County Drain Comm’r*, 150 Mich.App. 173, 388 N.W.2d 251 (1986), appeal denied June 20, 1986 (despite waiver language in predecessor of CIA Rule R-49(a)).

⁸⁷*Zedot Constr., Inc. v. Red Sullivan’s Conditioned Air Services*, infra note 89. See also Section 30.04C, notes 80, 81.

⁸⁸*Gavlik Constr. Co. v. H. F. Campbell Co.*, 526 F.2d 777 (3d Cir. 1975).

⁸⁹*Nagrama v. Mailcoups, Inc.*, supra note 24 (limited involvement in pretrial matters not a waiver: strong dissent); *Zedot Constr. Inc., Red Sullivan’s Conditioned Air Services*, 947 So.2d 396 (Ala.2006) (filing of motion for summary judgment not a waiver: no hearings, discovery or, date for trial set); *Brendsel v. Winchester Constr. Co. Inc.*, 392 Md. 601, 898 A.2d 472 (2006) (obtaining and filing lien not a waiver). The *Winchester* court emphasized intent to waive and noted the trend in favor of not waiving arbitration when the contractor seeks to protect its lien rights. But see *Kaneko Ford Design v. Citipark, Inc.*, 202 Cal.App.3d 1220, 249 Cal.Rptr. 554 (1988) (arbitration waived when lien filed and no demand for arbitration for five months while seeking to settle).

⁸³Ness & Peden, *Arbitration Developments: Defects and Solutions*, 22 Constr. Lawyer, No. 3, Summer 2002, pp. 10, 12 (footnotes omitted).

⁸⁴Id. pp. 12–13 (footnotes omitted).

must pay a fee based on the amount of the claim. The notice usually contains a statement setting forth the nature of the dispute, the amount involved, and any remedies sought.⁹⁰

A much-debated issue is whether the parties to an arbitration should have the right to examine people who might be witnesses for the other party and examine documents in the other's possession to evaluate the other party's case, to prepare for trial, and possibly to settle. In judicial proceedings, these activities are classified as "discovery."⁹¹

Discovery itself, one should add, has become controversial. Originally created to preclude the trial from taking unexpected twists and turns because of surprises, it has become largely uncontrolled, often with excessive demands to produce documents and lengthy and often irrelevant questioning of many potential witnesses. To a large degree it has been run by the lawyers, although increasingly courts are beginning to take control to prevent costly and time-consuming excesses.

Yet despite the increasing concern over full-blown, lawyer-controlled discovery, it seems clear that parties cannot begin to negotiate to settle disputes or even seek to mediate them without having some idea of the merits of the case. Obtaining basic information need not require full-blown discovery. The latter would change the informal nature of arbitration. (Yet lawyers used to this system often insert provisions in contract arbitration clauses that require judicial-like discovery.)

It can be useful to conduct a restricted, limited discovery to get to the point where the parties realistically can appraise the costs and benefits of settlement. This can be accomplished if the parties must preserve and exchange those routinely kept records that can present a true picture of the dispute, such as contract documents, bidding documents, accounting records, correspondence, site meeting minutes logs, diaries, weather reports, lab reports, and

⁹⁰CIA Rule R-4 (Regular Track rules are preceded by R; Fast-Track by F; and Large/Complex by L.).

⁹¹For a debate (Hinchey arguing the affirmative and House & Corgan arguing the negative), see *Do We Need Special ADR Rules for Complex Construction Cases?* 11 *Constr. Lawyer*, No. 3, Aug. 1991, p. 1. A trial lawyer bemoans the lack of statutory or common law authority that grants full litigation-type discovery. He also complains that arbitration rules, such as the CIA Rules of the AAA, make any right to discovery within the discretion of the arbitrator. He offers suggestions how such rights can be written into the contract. See Moseley, *What Do You Mean I Can't Get That? Discovery in Arbitration Proceedings*, 26 *Constr.Lawyer*, No. 4, Fall 2006, p. 18.

inspection records. If settlement efforts fail, then full-blown discovery may be useful, although many oppose it as destructive of the informality and speed needed for arbitration.

In complicated arbitrations that involve stakes high enough to justify pre-hearing activities, it may be useful to permit or even suggest that the arbitrating parties submit in advance a written statement giving in detail the facts and legal justification for the contentions of the arbitrating parties. Such an advance submission can eliminate much irrelevant testimony at the hearing. In addition, advance statements can give each party some idea of what the other party will seek to assert. Like limited discovery, advance submissions can help the parties prepare for the hearing, can make the hearing more expeditious, and may lead to settlement.⁹²

When alternative dispute resolution (ADR) systems are discussed in Section 30.18, the right to discovery again will be addressed.

SECTION 30.07 Selecting Arbitrators

A leading treatise states, "The most important tactical step in an arbitration proceeding is the selection of the arbitrator."⁹³

Usually the method for selecting arbitrators is specified in the arbitration clause. Sometimes a particular arbitrator or specific panel of arbitrators is designated by the parties in advance and is incorporated in the arbitration clause. Advance agreement on the arbitrators or a panel of arbitrators should build confidence in the arbitration process. However, in construction contracts such advance agreement is uncommon.

Generally a procedure to select arbitrators rather than a designation of particular individuals is used. For example, the procedure can require each party to name an arbitrator, with the two-party-appointed arbitrators designating a third or neutral arbitrator. Some arbitration clauses provide that each party will appoint an arbitrator and only if they cannot agree on the disposition of the dispute do they appoint a third arbitrator, who makes the decision. The methods used in private arbitration systems, such as the American Arbitration Association, are discussed in Section 30.18A.

⁹²See Section 30.18A for discussion of the AAA Large/Complex arbitration.

⁹³J. ACRET CONSTRUCTION ARBITRATION HANDBOOK, §6.1 at 6-1 (2d ed. 2006).

In *Commonwealth Coatings Corp. v. Continental Casualty Co.*,⁹⁴ the U.S. Supreme Court dealt with the extent to which the neutral arbitrator must disclose facts that may bear on the arbitrator's impartiality. This case has stirred controversy and influenced arbitration law. The arbitration involved a dispute between a subcontractor and the surety on a prime contractor's bond. The neutral member performed services as an engineering consultant for owners and building contractors. One regular customer was the prime contractor with whom the subcontractor had the dispute in question. That relationship was sporadic. The arbitrator's services were used only from time to time, and there had been no dealings between the arbitrator and the prime contractor for about a year before the arbitration. The prime contractor had paid fees of about \$12,000 to the arbitrator over a four- or five-year period. These facts were not revealed by the arbitrator until after the award had been made. When this was disclosed, the subcontractor sought to invalidate the award.

The court noted the resemblance between a judge and an arbitrator exercising quasi-judicial powers. Clearly, the judge must avoid any appearance of partiality. But the court felt it even more important for an arbitrator to avoid any appearance of partiality because the arbitrator's decision is only subject to limited review.

The court refused to confirm the arbitration award because the arbitrator had not disclosed this relationship. Although the court recognized that arbitrators cannot sever all their ties from the business world, it held that failure to disclose prior activities of this type would create the impression of possible bias.

The concurring justices emphasized that arbitrators are people of affairs and part of the marketplace and cannot be compared strictly to judges. The concurring justices were concerned that too great a burden of disclosure would disqualify the best informed and most capable arbitrators. These justices felt that the arbitrator cannot be expected to provide the parties with a complete and unexpurgated business biography. Nevertheless, the concurring justices felt that in this case the relationship was more than trivial and for that reason agreed that the arbitration award should be set aside.

The dissenting justices felt that the losing party was simply grasping at straws and such a requirement of disclosure would discourage arbitrators from serving and would

render arbitration less effective because it would be too easily challengeable.

The *Commonwealth Coatings* decision has come in for criticism for reasons given by the concurring and dissenting justices. This is also demonstrated by a recent decision of an *en banc* (16 judges rather than the usual three) court of the Fifth U.S. Circuit Court of Appeals.⁹⁵ It gave a narrow reading of *Commonwealth Coatings*. It refused to vacate an award because of what it saw as a trivial and insubstantial relationship. The contacts between the arbitrator challenged and an attorney in the arbitration were tangential, limited and stale. The majority stated that arbitration needed finality, that the standard sought was greater than for a judge (appearance of bias) and many skilled arbitrators would not serve rather than expose themselves to the risk of blemishing their reputations by a post-award charge of bias. Five judges dissented.

Other subsequent cases have reflected ambivalence toward the *Commonwealth Coatings* requirement of disclosure, especially in the context of a trade association or closely knit industry.⁹⁶ Yet the spirit of *Commonwealth Coatings* has been followed in other decisions.⁹⁷

The issue of arbitrator disclosure and qualification to serve as arbitrator reveals an important potential conflict. Many states' arbitration statutes provide solutions to these issues. At the same time private arbitration organizations, such as the American Arbitration Association (AAA), create detailed rules that govern the arbitration.⁹⁸ The state statutes and the rules, such as the AAA's Construction Industry Arbitration Rules, can conflict.

⁹⁵*Positive Software Solutions, Inc. v. New Century Mortgage Corp.*, 476 F.3d 278 (5th Cir.2007).

⁹⁶*Garfield & Co. v. Wiest*, 432 F.2d 849 (2d Cir.1970), cert. denied, 401 U.S. 940 (1971) (stock exchange arbitration: waiver); *Baar & Beards, Inc. v. Oleg Cassini, Inc.*, 30 N.Y.2d 649, 282 N.E.2d 624, 331 N.Y.S.2d 670 (1972) (need for specialized knowledge and skill); *Reed & Martin, Inc. v. Westinghouse Elec. Corp.*, 439 F.2d 1268 (2d Cir.1971) (arbitrator need not provide complete and unexpurgated business biography); *William B. Lucke, Inc. v. Spiegel*, 131 Ill.App.2d 532, 266 N.E.2d 504 (1970) (bias too remote).

⁹⁷*Sanko S. S. Co. Ltd. v. Cook Indus., Inc.*, 495 F.2d 1260 (2d Cir.1973); *J. P. Stevens & Co. v. Rytex Corp.*, 41 A.D.2d 15, 340 N.Y.S.2d 933, aff'd 34 N.Y.2d 123, 312 N.E.2d 466, 356 N.Y.S.2d 278 (1974) (stating major burden of disclosure properly falls on arbitrator). The cases are discussed generally in Annot., 56 A.L.R.3d 697 (1974). For CIA Rules, see Appendix F, Rule R-20.

⁹⁸The Rules are sponsored by over twenty organizations that make up the National Construction Dispute Resolution Committee. It is likely that AAA plays the major role in drafting these rules but provides drafts to all committee members for comment and suggestions.

⁹⁴393 U.S. 145 (1968).

This was demonstrated in a California case, *Azteca Construction, Inc. v. ADR Consulting, Inc.*⁹⁹

In this case the court was faced with a conflict between the California statute and the CIA Rules over disqualification of a potential arbitrator. The statute provides a more strict test for arbitrator disclosure than does the CIA Rules incorporated into the contract.¹⁰⁰ Also, the California statute states that a party shall be disqualified on the basis of the disclosure statement if either party serves a notice of disqualification within 15 days.¹⁰¹ The CIA Rules give the power to disqualify to the AAA and its decision is conclusive.¹⁰²

The trial court held that the agreement of the parties to use the CIA Rules took precedence over the statute. But the appellate court disagreed. It held that the partiality statute was intended to counterbalance the limited right to appeal an arbitration award. The court also stated that neutrality is a structural aspect of arbitration and is so crucial to the process that the statute cannot be displaced by a private agreement.

Despite the attitude toward arbitrator bias being so crucial in the *Azteca* case, a California court took a more relaxed attitude in a recent case.¹⁰³ This reveals the tension inherent in seeking to reconcile the different policies highlighted by the *Commonwealth Coatings* case. It also demonstrates increased legislative activity in arbitration, as shown in Section 30.03B.

The conflicting policies must be accommodated. A pool of skilled arbitrators is clearly needed. But the parties must believe that they were given a fair hearing if they are expected not to challenge the award. Finally, as shall be seen in Section 30.14, the virtual finality of the award makes the choice of a skilled and unbiased arbitrator crucial. It remains to be seen what the future cases will hold as to the duty of a prospective arbitrator to disclose and the standard that will be applied to determine her qualifications to serve as an arbitrator.

¹⁰¹West Ann.Cal.Code Civ.Pro. § 1281.9(b)(1).

¹⁰²CIA Rules R-20(b).

¹⁰³*Fininen v. Barlow*, 142 Cal.App.4th 185, 47 Cal.Rptr.3d 687 (2006) (award not vacated when arbitrator failed to disclose participation in prior mediation with one of the parties where he was recognized before the hearing and all participants consented to his participation).

SECTION 30.08 Place of Arbitration

The arbitration clause need not specify where the arbitration is to take place. Any contractual designation of locale will be given effect as long as the selection is reasonable.¹⁰⁴ If hearing site selection is based on factors that will expedite the process and make it less expensive, the selection will certainly be considered reasonable. However, if the place is designated by the stronger party in order to frustrate the weaker party's right to have disputes heard, such a clause has not been given effect.¹⁰⁵ See Section 30.18A for discussion of private arbitral systems.

Increasingly, as noted in Section 30.03B, state statutes place limitations on the place of arbitration.

SECTION 30.09 Multiple-Party Arbitrations: Joinder and Consolidation

Frequently, a linked set of construction contracts contains identical arbitration provisions. For example, there are identical arbitration clauses in AIA standard contracts between owner and contractor and between owner and architect. Likewise, identical arbitration clauses are contained in the AIA standard contracts between architect and consulting engineer and between prime contractor and subcontractor.

Suppose a building collapses, and the owner wants to assert a claim. It may not be certain whether the collapse resulted from poor design or poor workmanship. The first would be chargeable primarily to the design professional and the second to the contractor. The owner may wish to arbitrate. Suppose there are identical arbitration clauses in the owner's contracts with the design professional and contractor. The owner can arbitrate separately with each, but there are disadvantages. Two arbitrations will very likely take longer and cost more than one. The owner may lose both arbitrations. (Although this loss may be unpalatable to the owner, the result may be correct if the design professional performed in accordance with the standards required of design professionals and the contractor executed the design properly.)

¹⁰⁴*Central Contracting Co. v. Maryland Cas. Co.*, 367 F.2d 341 (3d Cir.1966). Similarly, in an international context, see *Republic Int'l Corp. v. Amco Eng'rs, Inc.*, 516 F.2d 161 (9th Cir.1975).

¹⁰⁵*Player v. George M. Brewster & Son, Inc.*, supra note 5.

Inconsistent findings may result. For example, one arbitrator may conclude that the design professional performed in accordance with the professional standard, whereas the other may not. One may conclude that the contractor followed the design, and the other may not. To avoid this inconsistency and save time and costs, the owner may wish to consolidate the two arbitrations.

Suppose the owner demands arbitration only with the contractor. The contractor may believe that the principal responsibility for the collapse was defective design. In such a case, it might wish to add the design professional as a party to the arbitration or, in legal terminology, “join” the design professional in the arbitration proceedings.¹⁰⁶

A contractor can be caught in a similar dilemma if it felt the responsibility for the owner’s claim against it was work by a subcontractor. In such a case, the prime contractor may wish to seek arbitration with the subcontractor and consolidate the two arbitrations. Similarly, the architect may find it advisable to consolidate any arbitration she might have with her consulting engineer and any arbitration proceedings with the owner.

There is general agreement that the courts will respect any contract language that deals with consolidating existing arbitrations or adding a new party (joinder) to an existing arbitration. But where the parties have not spoken on this issue, there is great variation in court decisions in state and federal courts where one party seeks to consolidate or join while others object.

Some states preclude consolidation unless there is express statutory authority allowing it. Other states hold that, even in the absence of statutory authority, a court has the judicial authority to do so. Some states have enacted statutes granting the court authority to consolidate, while others give the arbitrator this authority. Some states permit a court to order a stay in the arbitration until related litigation has been completed.¹⁰⁷

¹⁰⁶This assumes that contractor and design professional have agreed to arbitrate under the same rules as owner and contractor. Ordinarily, contractor and design professional do not have a contract, but they can agree to arbitrate their disputes. “Joining” the design professional as a party to the original arbitration is similar to but procedurally slightly different from consolidation. The latter merges two existing arbitrations into one.

¹⁰⁷West Ann.Cal.Code Civ.Pro. § 1281.2(c). The California Supreme Court held that this statute did not run afoul of the FAA. *Cronus Investments, Inc. v. Concierge Services*, 35 Cal. 4th 376, 107 P.3d 217, 25 Cal.Rptr.3d 540 (2005). See also *Elizabethtown Co. v. Watchung Square Assoc., LLC*, 376 N.J.Super. 571, 871 A.2d 140 (App. Div.2005) (litigation stayed pending resolution of arbitration involving the same

While early cases in the federal courts seemed to favor consolidation, the most recent cases permit consolidation only if the parties expressly or by implication have consented.¹⁰⁸

This picture appears to be one of confusion. But the variation in outcomes simply shows that there is a constant struggle between legislatures and courts as well as different opinions as to the desirability of consolidation and joinder by the various actors in the construction industry. In any given state, the answer can be found. This picture also shows how there are strong arguments for and against consolidation and the need to treat this issue in the contract.¹⁰⁹

As noted earlier, arguments of economy and efficiency support the use of consolidation. Many of those involved in construction dispute resolution favor consolidation. A survey revealed that 83 percent of construction arbitrators favor consolidation and that 82 percent of lawyers surveyed were also in favor of resolving multiparty disputes through consolidation.¹¹⁰

CIA Rule R-7 states that if the contract provides for “consolidation or joinder of related arbitrations” the parties will seek to agree on a process to effectuate it. If the parties cannot agree, the AAA will appoint a single arbitrator to decide whether there should be consolidation or joinder and if so, a fair process to accomplish it. The AAA has always been in favor of consolidation or joinder, and this rule seeks to accomplish it.

Finally, the Revised Uniform Arbitration Act (RUAA) was published in 2000. It is the successor to the Uniform Arbitration Act that was adopted in whole or in part in many states. The RUAA has been or will be presented to state legislatures for adoption.

It has taken a positive stance toward consolidation and joinder. Section 10 specifically empowers courts to consolidate in appropriate cases. It has adopted consolidation

(construction project). For a thorough review see McCurnin, *Two-Party Arbitrations in a Multiple Party World*, 26 Constr. Lawyer, No.1, Winter 2006, p. 5.

¹⁰⁸See Ness & Peden, *supra* note 83, pp. 10–11 (collecting and summarizing cases).

¹⁰⁹See Stipanowich, *Arbitration and the Multi-Party Dispute: The Search for Workable Solutions*, 72 Iowa L. Rev. 473 (1987).

¹¹⁰Thomson, *Arbitration Theory and Practice: A Survey of Construction Arbitrators*, 23 Hofstra L. Rev. 137, 165–167 (1994) and Thomson, *The Forum’s Survey on the Current and Proposed AIA A201 Dispute Resolution Provisions*, 16 Constr. Lawyer, No. 3, July 1996, pp. 3, 5.

as its “default” position. It permits consolidation, with limitations, in the absence of a clause expressly barring consolidation.

There can be reasons for refusing to add parties and consolidating existing arbitrations. Arbitrator selection is a crucial element of arbitration. Consolidation should not require a party to go before an arbitrator it has not selected. It should not have to arbitrate under evidentiary rules, or no rules of evidence, if it has not agreed to do so. Section 10(a)(4) of the RUAA states that if prejudice can be shown, such as undue delay or other hardship, this can overcome the efficiency and economy of consolidation and preclude consolidation.

Recognition of potential prejudice should not overcome the generally favorable attitude toward consolidation. For many years the AIA did not permit the architect to be a party to a multiparty arbitration without her written consent. After years of criticism of this policy, in 2007 the AIA permitted joinder and consolidation.¹¹¹

Why treat the two consolidation questions differently? One reason given is that an arbitration between architect and owner will involve determining whether the architect has lived up to the professional standard, whereas the issue between owner and contractor is whether the contractor has performed in accordance with the contract documents. Although the legal standards may slightly differ, this is not sufficient justification to bar consolidation.

For reasons mentioned, consolidation and joinder are generally desirable. The possibility of confusion because of the potentially large number of parties in a consolidated arbitration can be handled by according the arbitrator the power to decide the number of parties and issues that would make consolidation or joinder too confusing. If so, a request to do so could be denied.

If a party would be seriously disadvantaged by consolidation, adjustments can be made to overcome them. If not, consolidation can be refused. This is recognized in Section 10(a)(4) of the RUAA, mentioned earlier. That it may be necessary to make adjustments should not deprive the disputing parties of an efficient way of resolving multiparty disputes.

Another method by which participants in the linked set of contracts can be involved in arbitration is what is called the “vouching in” system. This is a method by

which a person involved in the arbitration—although not a party—is given the opportunity to participate and to seek to persuade the arbitrators to make an award in accordance with its contentions.¹¹²

SECTION 30.10 The Hearing

A. A Differentiation of Issues: Desirable Vs. Required

Section 30.14 discusses attempts by the party satisfied with the award to have it confirmed in court or by the party dissatisfied with the award to have it vacated—that is, upset. That section refers principally to defects in the process that are important enough to justify not confirming or vacating the award. Even though complaints are made regarding the arbitration hearing that will not justify upsetting the award, examination of complaints might provide a blueprint for conducting a fair hearing. The arbitrator should consider not only what is compelled—which, as shall be seen, is relatively minimal—but also the type of hearing that will persuade the parties they have been treated fairly.

The exact type of hearing will largely depend on the intensity of the parties’ feelings, the amount at stake, and the need for an expeditious decision. The discussion in this section assumes that a serious matter is brought before the arbitrators, one with sufficient economic importance to justify a careful and fair hearing. Because attorneys are frequently present in these arbitrations, unless otherwise indicated it is assumed the parties will be represented by legal counsel. This assumption does not negate the possibility or even likelihood that many arbitrations do not justify some of the steps suggested because of matters mentioned earlier in this paragraph. Nor does this assumption ignore the important differentiation between arbitration and litigation as to speed. Overjudicializing the arbitration process, by giving it those attributes of the legal process that led to arbitration in the first place, is clearly undesirable.

¹¹¹AIA Doc. A201-2007, § 15.4.4, B101-2007, § 8.3.4.

¹¹²Such a system is described in detail in *Perkins & Will Partnership v. Syska & Hennessy & Garfinkel, etc.*, 50 A.D.2d 226, 376 N.Y.S.2d 533 (1975), *aff’d*, 41 N.Y.2d 1045, 364 N.E.2d 832, 396 N.Y.S.2d 167 (1977).

B. Waiver

Parties can agree to submit the dispute to arbitration based solely on written statements, the contract documents, or any other written data the parties feel relevant. Such a paper submission can save time and can be valuable in minor disputes. However, such submissions are often deceptive and may provide insufficient information to make an award. Even if the parties have agreed no hearing is necessary, an arbitrator can request a hearing in the presence of both parties, if resolving the dispute requires.

C. Time

The arbitrators should schedule the hearing as early as possible, but must take into account the time needed to prepare for the hearing. A complicated dispute may require the opinions or services of engineers, architects, accountants, attorneys, and photographers, among others. If adequate time is not allowed for preparation, continual requests will be made for recesses after the hearing process has begun.

Arbitrators should grant reasonable party requests to postpone a scheduled hearing or recess a hearing early. However, arbitrators must take into account that requests for delays and recesses are sometimes bargaining tactics used by the party who feels the other party's financial position will not tolerate delay. Arbitrators should avoid disrupting the process for their own convenience.

D. Proceeding Without the Presence of One of the Parties

Suppose one party to the arbitration indicates that it will not participate in the hearings. Under such conditions, should the arbitrator proceed with the hearings, or can the party who does attend be awarded the amount of the claim? It is better practice for the arbitrators to hear the evidence submitted by the party attending before making the award. Obviously, doubts will be resolved against the party who has chosen not to attend the hearings.

Rule R-32 of the CIA Rules states that the arbitration may proceed if a party despite "due notice, fails to be present or fails to obtain a postponement." But an award under this paragraph cannot be made "solely on the default of a party." The party attending must present such evidence as the arbitrator "may require."

E. The Arbitrators

At the outset, the parties should be permitted to question the arbitrators relating to any matters that could affect their impartiality. The arbitrators must disclose matters that could affect their impartiality.

The arbitrators should comply with any state arbitration laws requiring arbitrators to take an oath at the beginning of a hearing. Even if an oath is not required, it is good practice for arbitrators to take an oath that they will conduct the hearing and render their award impartially and to the best of their ability.

F. Rules for Conducting the Hearing

Arbitration clauses generally do not prescribe detailed rules relating to the method of conducting the hearing. Certain arbitration statutes give general directives, such as requiring that the arbitrator permit each party to present its case and to cross-examine witnesses for the other party. Arbitration associations or trade groups that conduct arbitration often have simple rules relating to the conduct of the hearing. In the absence of rules, the arbitrator determines how the hearing is to be conducted.

G. Opening Statements

In a complicated arbitration, or even in matters that may not appear complicated, it is often helpful to permit the parties or their attorneys to make a brief opening statement. The statement can help the arbitrator determine which evidence is relevant and can reduce the number of issues by having the parties agree to certain facts and issues.

H. Production of Evidence: Subpoena Powers

Most states give arbitrators the power to issue subpoenas that compel witnesses to appear and testify and requires people to bring in relevant records. Without such power, the arbitrator cannot compel witnesses to appear or documents to be produced.

Usually the arbitrating parties produce witnesses and supply whatever records are advantageous to their positions. If issues can be resolved more easily if certain witnesses are produced or certain documents are presented, the arbitrator can resolve those questions against the party who refuses to produce the witnesses or records within its control. If the arbitrator indicates this likelihood to a reluctant party, the latter is likely to produce the witnesses or the records.

I. Legal Rules of Evidence

The arbitrator need not follow the rules of evidence applied in courts. Principally, the rules of evidence that can be dispensed with relate to the form evidence must take to be admissible. However, certain principles that are part of the legal rules of evidence should guide the arbitrator when determining whether material submitted by the parties should be considered. These principles relate to relevance and administrative expediency.

One experienced arbitrator states that even though the strict rules of evidence do not apply, there should be some standards. He suggests that the rules of evidence be a guideline and that the “ultimate target is to take only evidence upon which a reasonable business person would rely to establish facts in the everyday conduct of business.” If the evidence is not probative of the issue or the time and expense would greatly outweigh its probative value or add nothing to evidence already introduced, the arbitrator should exclude the evidence.¹¹³

The arbitrator should not go into matters not germane to the dispute. Germaneness, however, is often difficult to determine. At the outset, the arbitrator should not cut off a line of testimony that may not appear relevant at the moment it is presented. The relevance of this testimony may become clear as the hearing proceeds. However, the arbitrator should ask the party presenting the evidence what it intends to thereby establish. If then the arbitrator determines that what the party intends to establish is not germane, the evidence should be disregarded and testimony cut off. Evidence presented should be relevant and should not be cumulative. Once a fact has been established, it is usually not necessary to establish that fact again.

J. Documentary Evidence

As stated, the arbitrator need not follow the many technical rules of evidence that relate to the admissibility of documentary evidence. Any documentary evidence submitted by the parties can be examined provided that it is relevant and not cumulative. The authenticity of the document can be taken into account. An excessive preoccupation with form, notarial seals, and witnesses to the document can slow down the hearing. Unless a party

questions the authenticity of a document, the arbitrator should consider it.

K. Questioning Witnesses

One important constituent of a hearing is the testimony of witnesses. Failure to hear testimony of witnesses is likely to be procedural misconduct that can vitiate any award made by the arbitrator. Arbitrators should follow any state laws requiring the witnesses to be placed under oath. Even where the law does not require this, a simple oath adds to the dignity of the hearing and may induce truthful testimony.

Legal rules of evidence generally prohibit an attorney from asking witnesses leading questions (questions that suggest the answer in the question). However, leading questions are permitted by the opposing attorney. This process, called *cross-examination*, is designed to test the credibility of the witness and expose dishonest or inaccurate statements.

Arbitrators need not follow these courtroom rules. However, cross-examination, whether by the opposing attorney or by the arbitrators, can be a useful device to test the veracity of the witness. Sometimes the narrative method permits the witness to testify in a logical and understandable fashion. However, the form of examining witnesses lies largely within the discretion of the arbitrators.

L. Visiting the Site

The hearing is often conducted in a hearing room or in an office. It is possible, and often helpful, to conduct a hearing at the site where the evidence is available to the arbitrator or arbitrators. Even when the hearing is not conducted at the site, the arbitrator—either on her own motion or when requested by a party or the parties—may view the premises. It is best that the viewing of the premises be done in the presence of the arbitrating parties or their attorneys.

M. *Ex Parte* Communications

Ex parte communications are information or arguments communicated by one party to a dispute or by a third party to the person deciding the dispute without the knowledge of the other party. It would be improper for a judge to receive privately communicated information relative to a pending case from one of the parties, one of the attorneys

¹¹³Myers, *Ten Techniques for Managing Arbitration Hearings*, 51 *Dispute Res.J.*, No. 1, Jan–March 1996, p. 28 (Am.Arb.Ass’n) (many other valuable suggestions).

for the parties, or a third party not connected with the case. The attorneys who represent the litigating parties should know what communications are being made to the judge, in order to respond to them or to point out inaccuracies. This openness is one reason why arbitrators should notify the parties if they plan to view the premises and set a time that will enable the parties to be present.

CIA Rule R-19(a) prohibits a party from communicating *ex parte* (that is, without knowledge or consent of the other party) with an arbitrator or candidate for direct appointment concerning the arbitration. A party may do so with “a candidate for direct appointment . . . in order to advise the candidate of the general nature of the controversy . . .” and to discuss the candidate’s qualifications, availability, or independence or the suitability of other candidates under certain circumstances. Under R-19(b) this limitation does not apply to arbitrators directly appointed by the parties.

N. Transcript

Normally, there is no requirement that testimony be transcribed or that a written transcript be made. Some arbitrators prefer to have the testimony transcribed and reproduced for their own use as well as for settling any disputes that may arise between the arbitrators and the parties over the exact testimony of witnesses.

O. Reopening Hearing

After the hearing has been closed, either party may request to reopen the hearing to introduce additional evidence. The arbitrator can determine whether to reopen the hearing. Newly discovered evidence usually will be sufficient basis to reopen the hearing as long as the arbitrators have not yet made their award. If the evidence proposed to be introduced at an additional hearing could have been available for the original hearing or is merely cumulative, the arbitrator should not reopen the hearing. However, such matters are largely within the discretion of the arbitrator.

SECTION 30.11 Substantive Standards

Sometimes the arbitration clause or the rules under which the arbitration is to be held give general guidelines to the arbitrator regarding standards by which to decide the dispute.

Some arbitration clauses or rules permit the arbitrator to do almost anything regardless of the language of the contract as long as what is done accords with justice or fairness. As a rule, however, arbitrators decide the dispute based on the evidence, and in a contract dispute the contract terms play a central role.

Arbitrators need not follow case precedents. One reason frequently given for arbitrating is that the arbitrator is free to make a proper decision without the constraint of earlier precedent or rules of law. However, in complicated arbitrations, attorneys may present legal precedents in an attempt to persuade the arbitrators. Although the arbitrators would be free to consider these precedents, clearly they would not be required to follow them.

Must the arbitrator apply legal rules that would provide a defense to the claim were it litigated? For example, suppose the claim would be barred because of the statute of limitations¹¹⁴ or because the claimant is not licensed in accordance with state law.¹¹⁵ Usually such defenses are asserted when the demand for arbitration is made. The party opposing arbitration goes to court contending that the contract including the arbitration clause no longer has any legal validity because the claim has been made beyond the period allowed by law. Similarly, the party may seek to oppose arbitration by contending that the party demanding arbitration cannot be allowed to recover because it does not have the requisite license.

Section 30.04C dealt with the issue of whether certain preliminary issues are decided by the arbitrator or the court. Footnotes to the discussion there cited recent cases dealing with the contention by the party opposing arbitration that the arbitration is barred by the statute of limitations or that the contractor was unlicensed. Those cases held that these issues were to be decided by the arbitrator.¹¹⁶

These decisions may have been based in part on the desirability of having these issues resolved by the arbitrator. The arbitral system gives the arbitrator the flexibility to

¹¹⁴As to statutes of limitation, see Annot., 94 A.L.R.3d 533 (1979).

¹¹⁵As to licensing, see *Merkle v. Rice Constr. Co.*, 271 So.2d 220 (Fla. Dist.Ct.App.), cert. denied, 274 So.2d 234 (Fla.1973) (issue for the arbitrator); *Parking Unlimited, Inc. v. Monsour Medical Foundation*, 299 Pa.Super. 289, 445 A.2d 758 (Fla. 1982) (arbitrator upheld). But see *Loving & Evans v. Blick*, 33 Cal.2d 603, 204 P.2d 23 (1949) (refused to confirm award, as party not licensed). (For a discussion of the rights of unlicensed contractors, see Section 10.07B.)

¹¹⁶See supra note 81.

arrive at a just decision based on the merits unhampered by what may appear to be technical impediments that would have to be applied by a judge.

This admonition to the arbitrator to make a just and fair award is one reason why some do not wish to have arbitration clauses in their contracts while others see this a great strength of arbitration. This difference of opinion repeats itself through all aspects of arbitration: whether to use it and how the arbitrator's award should be treated when challenged in court. The latter will be dealt with in Section 30.14.

SECTION 30.12 Remedies

The arbitration clause or rules under which the arbitration is being held commonly state remedies that can be awarded. For example, R-44(a) of the CIA Rules allows the arbitrator to "grant any remedy or relief that the arbitrator deems just and equitable and within the scope of the agreement of the parties, including, but not limited to, equitable relief and specific performance of a contract." Also, Rule R-35 allows the arbitrator to take interim measures "he or she deems necessary, including injunctive relief and measures for the protection or conservation of property and disposition of perishable goods." It also states that security can be required. It concludes that a request by a party to a court is not a waiver of arbitration.

Usually the arbitrator issues a money award, stating that one party owes the other party a designated amount of money.

Yet there have been increasing efforts by arbitrators, generally sustained by the courts, to do more than simply award the winner a specified amount of money. Often these expansionary remedies could not be awarded by a court. But such awards are generally sustained by the courts, either because the arbitration agreement gave the arbitrator this power or because a final, just solution required such a remedy.

For example, *Grayson-Robinson Stores, Inc. v. Iris Construction Corp.*,¹¹⁷ sustained an award that ordered the developer to build a shopping center. This was an award that the court admitted could not be awarded by a court. It was an equitable award that many courts would not make

because it would involve the court in supervising a complex transaction.

As noted, CIA Rule R-44(a) gives the arbitrator the power to award specific performance of a contract. But the arbitrator cannot do what a court can do: order specific performance and have the coercive power to issue a contempt order if its order is not obeyed. A finding of contempt can be the basis for a fine or jail sentence. The *Grayson-Robinson* court did sustain the award, but there is no showing that it would back up the decree with its broad contempt powers.

Sometimes arbitrators order that the party perform and state in the award that failure to perform in accordance with the order will entitle the other party to a specified amount of damages. This technique, where enforced, can give a method of enforcement without seeking court confirmation. However, such a technique is not likely to be effective unless the alternative damage claim is high enough to coerce performance. Although this may obtain enforcement of the award without going to court, California has held that its arbitration law did not authorize imposition of such an economic sanction. But it saw no legal impediment to enforcing an agreement by the parties giving the arbitrator this power. However, the agreement did not give the arbitrator this power.¹¹⁸

The arbitrator's determination of whether damages or a specific order are appropriate should take into account whether the parties will continue to be able to work together after the arbitration. One reason why courts are hesitant to order parties to perform in accordance with promises is that by the time the matter has reached court, the parties will no longer cooperate with each other. The same can be true in arbitration. However, if there is a cooperative attitude between the parties and if the work continues to be performed during arbitration, it may be useful to specifically order that work be performed rather than to award damages.

In *David Co. v. Jim W. Miller Construction Co.*,¹¹⁹ the arbitrator made an award that was not sought by either party, something a court would not do. He ordered the builder to buy back from the developer buildings the

¹¹⁸*Luster v. Collins*, 15 Cal.App.4th 1338, 19 Cal.Rptr. 2d 215 (1993) (arbitrator ordered wrongdoer to pay \$50 a day for each day wrongful act continued).

¹¹⁹444 N.W.2d 836 (Minn.1989).

¹¹⁷8N.Y.2d 133, 168 N.E.2d 377, 202 N.Y.S.2d 303 (1960).

builder had built. There were many serious defects and numerous code violations. These exposed the developer to liability.

In *Advanced Micro Devices, Inc. v. Intel Corp.*,¹²⁰ discussed in Section 30.04A, the court, in a 4-to-3 decision, concluded that the limited scope of review of an arbitrator's decision will also be applied to the *remedy* awarded by the arbitrator. The court pointed to the broad remedies permitted under the agreement to arbitrate (identical to current CIA Rule R-44a). The majority approved the award, which in essence barred Intel from asserting a defense in a *separate* federal case between AMD and Intel and granted a license to AMD that it would not have received under full performance of the contract. The majority held that the award must and did bear "a rational relationship to the underlying contract as interpreted, expressly or impliedly, by the arbitrator and to the breach of contract found, expressly or impliedly, by the arbitrator."¹²¹ The only apparent limitations are an express provision in the contract prohibiting such a remedy or the use of a source outside the contract. The majority refused to limit the remedy to one that could be awarded by the court, the position taken by the three dissenting judges.

The majority emphasized the need to end the dispute by limiting the scope of judicial review. Judicial review is discussed in Section 30.14. But some contend that giving the arbitrator so much power can act as a disincentive to arbitrate.

Under CIA Rule R-50 the filing fees must be advanced by the party or parties or can be apportioned by the arbitrator in the award. The AAA can "in the event of extreme hardship . . . defer or reduce the administrative fees." Under R-51 each party must pay its own witnesses. Other expenses shall be borne equally by the parties, unless they agree otherwise, or unless the arbitrator assesses expenses against any specified party or parties. Attorneys' fees are not in the items listed of expenses.

Rule R-44(d) allows the arbitrator in the final award to include interest at "such rate and from such date as the arbitrator may deem appropriate." That rule also allows the award to include attorneys' fees "if all parties have requested such an award or it is authorized by law or their arbitration agreement." The AIA, in its standard documents, does not provide for attorneys' fees,

but parties often add such a provision. *Harris v. Dyer*,¹²² which involved an earlier AIA Document A201, awarded the winning party who had filed a mechanics' lien its attorneys' fees incurred in arbitration.

A leading Illinois case categorized the judicial attitudes toward the power of the arbitrator to award punitive damages.¹²³ One group, led by the federal courts, permits the arbitrator to award punitive damages, unless the agreement states otherwise. A second group reserves punitive damages to the state and denies the arbitrator this power. A third group allows the arbitrator to award punitive damages only if an express contract provision grants the arbitrator this power.

The centrality accorded remedies in all legal disputes has led to increased focus on remedies in arbitration. Some believe that an arbitrator, often not being a judge, should require great judicial scrutiny over the remedies awarded. Others see the great need to accord the arbitrator remedial power to accomplish a just outcome.

This uncertainty of judicial outcome has led one writer to propose remedial language in the agreement to arbitrate.¹²⁴ He suggests language that deals with all significant aspects of remedies such as consequential damages,¹²⁵ home office overhead,¹²⁶ profits,¹²⁷ interest,¹²⁸ interim relief,¹²⁹ counterclaims, punitive damages,¹³⁰ arbitration

¹²²292 Or. 233, 637 P.2d 918 (1981).

¹²³*Edward Elec. Co. v. Automation, Inc.*, 229 Ill.App.3d 89, 593 N.E.2d 833, 842 (1992). In *Stark v. Sandberg, Phoenix & von Gontard, P.C.*, 381 F.3d 793 (8th Cir.2004) the clause stated punitive damages were waived to the fullest extent permitted by law. The law does not permit waiver of punitive damages. An award of \$6 million punitive damages by the arbitrator was affirmed despite the compensatory damages being \$4,000. The arbitrator also awarded \$22,780 for attorneys' fees and \$9,300 for the cost of arbitration. For a thorough analysis of this issue see Stipanowich, *Punitive Damages in Arbitration: Lyle Stuart, Inc. Reconsidered*, 66 B.U.L.Rev. 953 (1986). The *Lyle Stuart* case, the leading case refusing to allow punitive damages in arbitration, was effectively overruled by the United States Supreme Court on the ground that New York law was preempted by the FAA. *Mastrobuono v. Shearson Lehman Hutton, Inc.*, 514 U.S. 52 (1995).

fees and costs,¹³¹ attorneys' fees and costs,¹³² limitation of damages,¹³³ and liquidated damages.¹³⁴

SECTION 30.13 Award

Before making the award, the arbitrators review any documents submitted and listen to or read any transcription of the hearings. They consider any briefs that may have been submitted by the parties or their attorneys. Submission of briefs is uncommon except for disputes involving large amounts of money. The decision need not be unanimous unless the arbitration clause or the rules under which the arbitration is being held so require.

The form of the award can be simple. The arbitrator need not give reasons for the award. There are arguments for and against a reasoned explanation of the decision accompanying the award. An explanation may persuade the parties that the arbitrators have considered the case carefully. This may lead to voluntary compliance, which is obviously better than costly court confirmation.

A disadvantage of giving an explanation is the possibility that the dissatisfied party or parties may refuse to comply and seek to reopen the matter by objecting to the reasons given.

A more persuasive argument against reasons accompanying the award is the additional time and expense entailed. Making the arbitration too much like a court trial can lose some of the advantages of arbitration.

Taking all this into account, a short, reasoned explanation accompanying the award is advisable even if not required. This will be discussed in the context of specific arbitral systems in Section 30.18.

The rules under which an arbitration is conducted often specify when the award must be made. For example, R-42 of the CIA Rules requires an award be promptly made and, unless otherwise agreed or required by law, "no later than thirty (30) calendar days from the date of closing the hearing, or, if oral hearings have been waived, from the date of the AAA's transmittal of the final statements and proofs to the arbitrator." Failure to make the award by the designated time may terminate the jurisdiction of the

arbitrators, although more commonly the parties agree to waive any time deadlines. More important, failure to make the award in the time required may deprive the arbitrators of any quasi-judicial immunity (discussed in Section 30.16). If there are no specific time requirements, the award must be made within a reasonable time.

SECTION 30.14 Enforcement and Limited Judicial Review

Failure to comply with an arbitration award may necessitate judicial involvement and review. A party wishing enforcement may have to go to court to obtain confirmation. The party seeking to challenge the award may go to court and ask that the award be vacated.

Most state arbitration statutes specify grounds for reviewing an arbitrator's award. As to grounds, Section 12 of the Uniform Arbitration Act, enacted in whole or with minor variations in a substantial number of states, permits an award to be vacated (set aside) if there has been corruption or fraud, partiality by the arbitrator, taking excess jurisdiction, procedural misconduct, or lack of a valid agreement to arbitrate.

Section 13 of the act allows modification or correction of an award within ninety days after delivery of a copy of the award where any of the following exists:

1. There was an evident miscalculation of figures or an evident mistake in the description of any person, thing, or property referred to in the award.
2. The arbitrators have awarded on a matter not submitted to them and the award may be corrected without affecting the merits of the decision on the issues submitted.
3. The award is imperfect in a matter of form, not affecting the merits of the controversy.

Similar language is contained in the Federal Arbitration Act.¹³⁵ Grounds for vacating are limited and principally look to serious procedural misconduct on the part of the arbitrators. Courts are reluctant to upset the award because the arbitrator refuses to admit evidence, particularly after the hearing has been closed.

¹³¹See Section 30.12.

¹³²See Sections 6.07, 30.12.

¹³³See Section 13.01M.

¹³⁴See Section 26.09B.

¹³⁵9 U.S.C.A. §§ 10, 11.

In one case misconduct was found where the arbitrator refused to reopen the hearing to receive evidence. That evidence indicated that the contract had been procured as part of a bribery scheme. The court found that the evidence was relevant, not cumulative, and central to the plaintiff city's case. While sympathetic to the need for finality and reluctance to interfere, this decision of the arbitrator was misconduct that required that the award be vacated.¹³⁶

Similarly, case decisions have employed language indicating a very limited judicial review of arbitration awards, mainly the manner of holding the arbitration. One court stated that the court will not inquire whether the determination was right or wrong.¹³⁷ Another stated that errors of fact or law are not sufficient to set aside the award.¹³⁸ Courts have held that an error of law was not reviewable unless the arbitrator gave a completely irrational construction to the provision in dispute.¹³⁹ Another stated that honest errors were not reviewable.¹⁴⁰ Another stated that arbitrators may apply their own sense of justice and make an award reflecting the spirit rather than the letter of the agreement.¹⁴¹ Lawyers who have lavished a great deal of attention to specifically allocating risks and remedies in the contract may not appreciate arbitrators ignoring the contract in their attempt to "do the right thing." Finally, California, pointing to the statutory grounds as exclusive and overruling earlier precedents, held that with certain exceptions, an arbitrator's decision is not reviewable for errors of fact or law whether or not such error appears on the face of the award and causes substantial injustice

to the parties.¹⁴² It stated that, if the scope of review can create too much judicial interference, it will ruin the arbitration process. Errors of law are a tolerable part of the arbitration process.

Despite a pattern emerging under which there would be relatively little review of an arbitration award, the issue continues to divide the appellate courts. For example, this issue so fragmented the New Jersey Supreme Court in *Perini Corp. v. Greate Bay Hotel & Casino, Inc.*,¹⁴³ that no majority opinion could be written.

The dispute involved the contract between a casino in Atlantic City and a construction manager under which the casino would be renovated. The arbitration consumed sixty-four days of hearings, involved twenty-one witnesses, and resulted in almost 11,000 pages of transcript. The arbitrators (two to one) awarded the casino lost profits of \$14.5 million against the construction manager. The CM's fee was \$600,000 plus reimbursables.

The arbitration was followed by three and a half years of litigation, first at the trial level, then before the intermediate appellate court, and then before the Supreme Court of New Jersey. The litigation produced five judicial opinions (excluding the concurring opinion of sixteen double-columned pages) of over 150 pages. Except for two dissenting judges, the rest of the court was willing to affirm the arbitrator's award, but the three-judge plurality and the two-judge concurring opinion (of a seven-person court) strongly differed on the proper scope of judicial review.

The plurality of three judges devoted an extensive part of its opinion to examining the legal issues that had been resolved in favor of the casino. Although recognizing that a simple mistake of law is not a sufficient reason to overturn the award—that ground for reversal not being in the New Jersey statute—the plurality was willing to extensively review the award to see whether it complied with New Jersey law. It noted that an award would be sustained unless the mistake or error of law or fact resulted from a failure of intent or error so gross as to suggest fraud or misconduct.

¹⁴²*Moncharsh v. Heily & Blase*, 3 Cal.4th 1, 832 P.2d 899, 10 Cal. Rptr.2d 183 (1992), rehearing denied Sept. 24, 1992. As to the scope of review of the remedy awarded by the arbitrator in California, see *Advanced Micro Devices, Inc. v. Intel Corp.*, supra note 67, discussed in Sections 30.04A and 30.12.

¹⁴³129 N.J. 479, 610 A.2d 364 (1992).

The concurring judges felt this would open up too many arbitration awards to judicial scrutiny and concluded that the only basis for overturning an arbitration award should be those reasons set forth in the arbitration statute (principally those dealing with corruption, fraud, or undue means).

The instability of the scope of judicial review is demonstrated by the fact that the concurring opinion, one that limited the grounds for reversal to the statutory grounds, was adopted in New Jersey just two years later.¹⁴⁴

The concept of limited judicial review was undoubtedly designed to encourage arbitration by limiting the likelihood that an award will be overturned in court. However, limited judicial review almost to the point of no review can make contracting parties reluctant to use the arbitration process. As shall be seen in Section 30.17, one reason sometimes given for reluctance to enter into arbitration agreements is the absence of any meaningful review of the arbitrator's decision.

Yet it is hard to escape the logic of the concurring opinion in the *Perini* decision. Even opening the door as little as is done by the plurality to include gross mistakes of law creates sufficient uncertainty and encourages appeals to the courts.

Can parties in their agreement to arbitrate provide a broad scope of judicial review? Such a provision came before the California intermediate appellate court in *Crowell v. Downey Community Hospital Foundation*.¹⁴⁵ The

¹⁴⁴*Tretina Printing Inc. v. Fitzpatrick & Assoc. Inc.*, 135 N.J. 349, 640 A.2d 788 (1994). The judge who had concurred in the *Perini* case, supra note 143, explains why he changed his mind in this richly revealing statement: "Much as I would prefer to announce that my change of position is attributable to some epiphany, to some deeply moving event that produced a sudden startling cerebral awakening, to some lightning bolt of cognitive awareness and intellectual enrichment, the plain truth of the matter is that I have thought more about it and have changed my mind. My awakening, however belated, puts me squarely in the Chief Justice's camp. For whatever ambivalence that progression demonstrates I refuse to commit myself to the psychiatrist's couch, content to resurrect—as apparently I must every couple of decades—that reassuring old turkey, 'The matter does not appear to me now as it appears to have appeared to me then.' (quoting an English judge of a statement made in 1872) 640 A.2d at 797."

¹⁴⁵95 Cal.App. 4th 730, 115 Cal.Rptr.2d 810 (2002). Similarly, see *Azteca Constr. Inc. v. ADR Consulting, Inc.*, supra note 99. It held the California statute on qualification of arbitrators displaced a contract provision that dealt differently with this issue. For a thorough discussion and citation to many cases, see *John T. Jones Constr. Co. v. City of Grand Forks*, 665 N.W.2d 698 (N.D.2003). For an expansion of the issues raised in this case, see Anderson, *Stepping on the Judiciary's Toes: Can Arbitration*

contract required that the arbitrator issue written findings of fact and conclusions of law that are supported by law and substantial evidence. The contract provided that "a court shall have the authority . . . to vacate the arbitrator's award . . . on the basis that the award is not supported by substantial evidence or is based on an error of law. . . ."¹⁴⁶

The court cited and followed a case decided by the California Supreme Court in 1992.¹⁴⁷ That case held that the statutory grounds for review were exclusive. Even though arbitration is a system created by contract, there are limits to what the parties can do. In the *Crowell* case, they were not allowed to create a standard of judicial review that mirrored the review given by an appellate court to a trial court decision.

The outcome in the *Crowell* case suggests two questions. First, will this conclusion be reached in other states? The varying outcomes in these cases suggest some states will and some will not. This issue of whether the parties can by their contract change the review standards set forth in the FAA has divided the courts.¹⁴⁸ One held there was no right to change the standards. Another held this could be done by clear language.¹⁴⁹

Second, what affect will this have on the use of arbitration in California? Will it encourage or discourage arbitration? It is likely to discourage arbitration.

The limited review does not mean arbitration awards are never upset. For example, a court that articulated the standard of complete irrationality nevertheless upset an arbitrator's decision by concluding that the words of the contract were so clear there was nothing left to interpret.¹⁵⁰ For all practical purposes, however, an arbitrator's decision is final.

Agreements Modify the Standard of Review That the Judiciary Must Apply to Arbitration Decisions? 24 Constr. Lawyer, No. 3, Summer 2004, p. 13. On this issue see also Goldman, *Contractually Expanded Review of Arbitration Awards*, 8 Harv. Negot. L. Rev. 171 (2003).

Similarly, an award was set aside because it would violate state public bidding law in *State v. R. A. Civitello Co., Inc.*, 6 Conn.App. 438, 505 A.2d 1277, certification denied, 199 Conn. 810, 508 A.2d 770 (1986).

SECTION 30.15 Insurers and Sureties

A commercial general liability (CGL) insurance policy carried by a contractor or a professional liability insurance policy carried by a design professional generally indemnifies the insured if it incurs liability to a third party. Insurers in fixing their rates must be able to predict their losses. The professional liability insurer assumes its liability will be based on the normal professional activity performed by its insured. Similarly, an insurer who issues public liability insurance to a contractor expects to indemnify the insured only if accidents arise out of its normal construction activities.

To standardize risks, insurers traditionally excluded liability assumed by contract. An insured who wished to do so, such as a contractor who has contractually agreed to indemnify the owner or architect, would often obtain a special endorsement. This gives the insurer the chance to examine the risk and decide whether to accept it, refuse it, or accept it with a premium adjustment. Under current underwriting practices, the contractor need not obtain a special endorsement in its CGL policy. The “contractual liability” exclusion contains an exception for liability assumed under an “insured contract,” basically an indemnity agreement.

Arbitration, though not *imposing* liability by contract, substitutes one form of dispute resolution for another. This problem is more serious for professional liability insurers. Unlike claims against a contractor, claims against a design professional are likely to be made by parties with contracts (often containing arbitration clauses) against the insured design professional.

Insurers are usually at least *wary* of arbitration. Although most do not specifically *exclude* arbitration, they may counsel that it not be used, suggest that only a certain clause be used, or, in rare cases, deny coverage for a design professional who intends to use or uses a general arbitration clause. If insurers are aware of such a clause at the time they insure or make no objection if they are asked their opinion, they have consented. Design professionals should check their policies, bring them to the insurers if they are in doubt as to the advisability of arbitration or its effect on coverage, and notify their insurer if they plan to submit an existing dispute to arbitration.

Sureties are discussed in greater detail in Chapter 32. The surety issues a bond to the prime contractor to protect the obligee—usually the owner—from the risk that any claim

the owner will have against the prime contractor cannot be collected. Usually the surety bond either incorporates the construction contract by reference or refers to it.

Some cases have involved attempts by the surety to compel arbitration when the principal parties to the dispute, such as owner and prime contractor or prime contractor and subcontractor, do not wish to arbitrate. Usually the surety cannot compel arbitration, as it is not a party to the construction contracts that contain arbitration clauses.¹⁵¹

The more difficult problems are attempts by sureties to distance themselves from the arbitration and then refuse to pay the arbitration award. This may be done simply to delay payment by invoking a technical defense. But the surety in good faith may also feel it cannot participate in the arbitration because it does not have sufficient information or records.

As a rule, the obligee (owner on a prime’s bond or prime on a subcontractor’s bond) prefers the surety to participate in the arbitration. Participation will ensure that the surety will pay or at least be liable for the award. This overcomes any disadvantage to the obligee of possibly having to face two opponents and two attorneys. Most often, though, the surety does not participate and then seeks to deny its responsibility to pay the award.

The surety must pay the award if it has involved itself in some way in the process, such as taking an assignment of the construction contract, being subrogated (placed in the contractor’s position) to the contractor’s rights, completing the project, or participating in the arbitration. It must pay the award if it has expressly promised to participate or be bound by the award.¹⁵² A surety will generally be obligated to pay the arbitration award if it had notice of the arbitration and an opportunity to defend. Even if the surety is not obligated to participate, its decision to

¹⁵¹*Aetna Cas. & Sur. Co. v. Jelac Corp.*, 505 So.2d 37 (Fla. Dist. Ct. App. 1987) (surety only incidental, not intended, beneficiary). But see *Henderson Investment Corp. v. International Fidelity Ins. Co.*, 575 So.2d 770 (Fla. Dist. Ct. App. 1987) (incorporated arbitration clause into the surety bond) and see *J&S Constr. Co., Inc. v. Travelers Indem. Co.*, 520 F.2d 809 (1st Cir. 1975) (surety could invoke arbitration, as construction contract incorporated in bond).

¹⁵²*Town of Melville v. Safeco Ins. Co. of America*, 589 So.2d 625 (La. App. 1991). The summary judgment in this case was reversed and the case remanded to the trial court because there were genuine issues of fact that may not have been precluded by the arbitration award. 593 So.2d 376 (La. 1992).

forgo participation when it knows of the arbitration and has had the opportunity to defend should result in it being bound to pay any arbitration award.¹⁵³

To bind the surety to any arbitration award, the owner should incorporate the construction contract into the bond, notify the surety of any default, notify the surety of any arbitration, and invite the surety to participate. If the surety chooses not to participate, it should still have to pay the award.

Increasing legislative regulation of the settlement practices of sureties may make it more difficult for sureties to refuse to participate in any arbitration and to use this as the basis for refusing to pay an arbitration award against its principal debtor.¹⁵⁴

SECTION 30.16 Arbitrator Immunity

As noted in Section 14.09D, some American states grant the design professional quasi-judicial immunity when acting as judge. More clearly, arbitrators are granted quasi-judicial immunity.¹⁵⁵ Arbitrators are even more like judges than are design professionals. However, *Baar v. Tigerman*¹⁵⁶ stripped an arbitrator of his quasi-judicial immunity when he did not make an award in accordance with the time requirements of the arbitration rules. In addition, the court refused to grant immunity to the American Arbitration Association (AAA).

¹⁵³*Sheffield Assembly of God Church v. American Ins. Co.*, 870 S.W.2d 926 (Mo.Ct.App.1994) (need actual but not formal notice); *Raymond Internat'l Builders, Inc. v. First Indem. of America Ins. Co.*, 104 N.J. 182, 516 A.2d 620 (1986). But see West Ann.Cal.Civ.Code § 2855, which appears to require that the surety be a party to the arbitration before it can be compelled to pay the award. It has been held that the surety must participate in the arbitration if the prime contract with an arbitration clause was incorporated into the bond. *United States Fid. & Guar. Co. v. West Point Constr. Co., Inc.*, 837 F.2d 1507 (11th Cir.1988). See generally Ruck, *Can a Contract Bond Surety Be Compelled to Arbitrate Claims Against It?* 16 Forum 765 (1981).

¹⁵⁴See Section 32.10I.

¹⁵⁵*Baar v. Tigerman*, 140 Cal.App.3d 979, 189 Cal.Rptr. 834 (1983). The case is noted in 67 Marq.L.Rev. 147 (1983). *Pullara v. American Arbitration Ass'n, Inc.*, 191 S.W.3d 903 (Tex.App.Ct.2006), rehearing overruled May 31, 2006, review denied Oct. 29, 2006, rehearing for petition to review overruled Dec. 15, 2006 (arbitrator and association conducting arbitration granted absolute immunity similar to judge).

¹⁵⁶Supra note 155.

Although immunity was restored by subsequent legislation,¹⁵⁷ the case is a warning to arbitrators and those who run arbitral systems to set up reasonable deadlines for making the award and then to comply with them or obtain extensions.

SECTION 30.17 Arbitration and Litigation Compared

Arbitration is voluntary. Parties can choose to employ it. Choice involves a number of considerations, some apparent and some not.

A lawsuit begins with the filing of pleadings by a lawyer. An arbitration process can start by the filing of a claim, which does not require a lawyer. However, the claimant may wish legal advice to decide whether arbitration or litigation can better handle the dispute. It is usually quicker and less expensive to begin arbitration than litigation.

However, the filing fees for beginning litigation are modest compared with those required to initiate arbitration (see Section 30.02). The CIA Rules employ a sliding scale of filing fees. These fees apply to both claims and counterclaims, something common in construction disputes.

Arbitration and litigation differ in the ease with which basically one dispute involving a large number of claimants and claims resisters can be handled. Generally, joinder of parties and consolidation of disputes is more easily accomplished in a lawsuit than in arbitration (discussed in Section 30.09). This may change because of AIA changes made in 2007.

Until recently arbitral systems did not provide for compulsory discovery, the process by which attorneys in litigation can obtain evidence from the other party to prepare for the hearing. Although the arbitrator can frequently compel the production of evidence at the hearing, this is not the same as judicial discovery. Of course, an arbitration system can and, as noted in Section 30.18A, increasingly does contractually compel discovery.

Discovery availability demonstrates the balance between process fairness and a quick resolution of disputes. Its availability can make arbitration more desirable

¹⁵⁷West Ann.Cal.Civ.Proc.Code § 1280.1. This was repealed by its own terms in 1997. Now see § 1297.119. It grants immunity to an arbitrator.

to attorneys. Yet its use can be costly, and its availability can slow down the process and allow one party to delay for bargaining purposes.

Two advantages frequently claimed for arbitration are informality and speed of the process. Although lawyers are generally required in litigation, arbitration does not require parties to have legal representation. However, parties arbitrating important matters usually retain lawyers. This can hamper the arbitration, as arbitrators need not be lawyers. Having nonlawyer arbitrators deciding legal questions argued by attorneys can be undesirable. In addition, difficult legal questions may have to be decided by nonlawyer arbitrators.

The skill with which a judge or arbitrator conducts a hearing not only determines how quickly the hearing can be completed but also affects a party's perception of the fairness of the process. Because judges generally possess greater hearing experience, the hearing process in court will be conducted by a person with greater hearing experience. Although some arbitrators who work permanently or frequently can develop the skill to conduct good hearings, in the construction industry hearing expertise is rarer than in other classes of arbitration. Arbitrators who decide construction disputes rarely make their living at arbitration. Not only does this result in less experienced arbitrators, but the part-time and, even more important, volunteer arbitrators must often take lengthy recesses in the hearings because of having to work at their profession or business.

One advantage of arbitration in terms of hearing speed is the freedom the arbitrator has to move the hearing along unhampered by technical rules of evidence that, when accompanied by contentious attorneys, can make court hearings excessively long. The arbitrator, unlike the judge, need not make a transcript of the hearing; although helpful, a transcript is costly and time consuming.

Looking at all aspects of this problem, arbitration is likely to be quicker than judicial dispute resolution. Speedy hearings should not only result in faster decisions but also avoid the indirect costs of lengthy hearings, such as the unproductivity of witnesses who must attend the hearing, and direct costs, such as travel expense and attorneys' fees.

Hearing location is likely to be different. A court hearing is likely to take place at the principal city in the county where the lawsuit was commenced and whose court has jurisdiction over the dispute. This does not necessarily mean the trial will be close to the project or convenient for witnesses. Often lawyers seek to gain tactical

advantages by having the matter heard in a particular court. In contrast, the arbitrator has more flexibility to schedule the hearing at a place more convenient for the witnesses. However, sometimes the arbitration clause can be deliberately designed to make it inconvenient for one party to demand arbitration.

Another differentiation relates to the public nature of the hearing. Although arbitration hearings are private, the judicial process is public. Sometimes trials are reported to local newspapers. The privacy of the arbitration not only may avoid unwanted publicity but also can be a more sympathetic setting for witnesses.

One differentiation is often ignored: The courtroom and the services of judge and clerk are furnished free to the litigants, whereas the room for the hearing and the arbitrator's fee are expenses that must be paid by the parties.

Viewing the project, often a helpful activity, is more easily accomplished in arbitration.

Quality comparisons are difficult. Arbitration has frequently been supported because of the expertise (often absent in judges) that arbitrators bring to the disputes. Doubtless, construction experience is useful. However, the dispute resolver who is too expert may conceive of her role not as providing a hearing and then making a decision but as simply deciding the dispute based on her own knowledge. On the assumption that experience in construction is likely to produce a better decision, it is worth comparing the experience in construction between an arbitrator and a judge.

Judges have legal training and as a rule have spent ten to twenty years practicing law before they are appointed or elected to the judiciary. This experience may have involved construction matters, but on the average, most judges have probably had little construction experience before becoming a judge. They often learn on the job. A trial judge who has been on the bench for five or ten years in a jurisdiction that has a wide range of cases may have gathered enough experience to be knowledgeable about construction matters. On the whole, though, trial judges do not bring great expertise to resolving construction disputes. Yet in some states, special masters or referees can be appointed to handle certain parts of the lawsuit. Often they are experienced.

Arbitrators frequently have experience in the types of matters arbitrated before them, particularly those who arbitrate under collective bargaining agreements or who arbitrate highly specialized disputes, such as disputes

between members of the stock exchange, the diamond industry, or textile trade associations. Most disputes in these industries are between members of these associations, are repetitive, deal with technical matters, and are handled well through arbitration.

However, the construction industry arbitration panels, though made up of people with experience in construction, such as attorneys, architects, engineers, and contractors, do not have enough cases to justify full-time arbitrators or even part-time arbitrators who work with sufficient regularity to develop specialized knowledge. As noted in Section 30.18A, private arbitral systems are seeking to improve the quality of the panels, the JAMS system by using only retired judges and experienced retired attorneys and the American Arbitration Association by seeking to reduce the size of the panels and training those on them. The segments of the construction industry, although having some elements in common, are highly specialized, and an arbitrator's experience in electrical contracting may not prepare the arbitrator to handle a dispute involving road building. On the whole, though, arbitrators are more likely to have had more experience in construction matters than have judges.

It is beyond the scope of this book to attempt a detailed comparison from a substantive standpoint between arbitration awards and court judgments. However, two frequently raised issues merit brief comment.

It has been asserted that a dispute that runs through the arbitral process is less likely to be decided by the plain meaning of contract language than one proceeding through the judicial process. To some degree, this trait is inherent in the concept of arbitration, which is supposed to be less formal and technical than the judicial process. Also, the arbitral process is generally not designed to create binding precedents, something that can be created if a dispute culminates with a written opinion by an appellate court. Anecdotal evidence suggests that a party who seeks to base its claim or defense on language of the construction contract is more likely to succeed in a judicial proceeding than in an arbitration.

The second criticism made of arbitration is that arbitrators often refuse to decide wholly on the merits but seek to award each party something, so that no one should walk away from the arbitration feeling demolished.

Although opinions may differ on the desirability of accomplishing the latter objective, again anecdotal evidence indicates that lawyers generally prefer arbitrators to decide strictly on the merits, and lawyers

are not pleased when the arbitrator "splits the difference." An AAA study sought to determine whether this is the case. The study reviewed all construction arbitrations administered by the AAA in 1990 and concluded that in the vast majority of cases arbitrators decide clearly in favor of one party or the other. According to this study, in only 12 percent of the cases was the award split between the parties within the 40 percent to 59 percent range.

Another comparison of great importance is the degree of finality in the decision. A decision by a trial judge can be appealed to an appellate court. Although appeals on the whole have a low probability of success, a litigant who appeals will succeed if it can show that the trial judge has made an error of law or that the evidence did not support factual findings. However, for all practical purposes an arbitrator's decision is final. To some, this is a great advantage of arbitration, as it ends the dispute quickly. To others, it is a disadvantage because the arbitrator possesses immense power—including the power to make completely wrong decisions.

Comparing arbitration and litigation should not assume that the only alternatives are a general arbitration clause or none at all. Different clauses can be employed that may be preferable to either a general arbitration clause or no arbitration clause at all. Although the variations suggested are by no means exclusive, they do demonstrate that an arbitration clause can be "tailored" to make it preferable to either a general arbitration clause or none at all. Variations can include the following:

1. limiting arbitration to factual disputes such as those involving technical performance standards or eliminating arbitration of other types of more "legal" disputes such as termination
2. specifying the place of arbitration
3. providing a designated person or persons as arbitrator or arbitrators
4. limiting arbitration to claims not exceeding a designated amount or percentage of the contract price¹⁵⁸
5. limiting disputes to those that occur while the work is proceeding with an expedited one-person panel

¹⁵⁸The Engineers Joint Contract Documents Committee (EJCDC) has limited arbitration to claims under an amount set forth in EJCDC E-500 (2002), Exhibit H at H.6.09(A2) with a blank provided for the amount. E-500 is its Standard Form of Agreement Between Owner and Engineer for Professional Services. Currently, EJCDC is working on a new set of E-series documents. Earlier documents had limited arbitration to claims not to exceed \$200,000.

(see CIA Rules F-1 through F-13, the fast-track system to be discussed in Section 30.18A)

6. permitting consolidation of separate arbitrations
7. providing a right to discovery
8. limiting the award to the most fair of the last proposals or an amount between the two final proposals of the parties (baseball arbitration)
9. eliminating the use of attorneys
10. making the award “nonbinding”¹⁵⁹

The more variables, obviously, the greater the cost of obtaining agreement and expressing it. This probably inhibits specialized arbitration clauses, at least where one party cannot dictate the clause to the other. A look at the variables and attendant complexity may persuade an exasperated drafter or negotiator that it may be simpler where possible to agree to waive a jury and have all disputes tried before the judge.

Choosing a general arbitration clause may be influenced by those who issue surety bonds and professional liability insurance. If the insurer or surety will not cover work done under a contract with a general arbitration clause, this factor can be significant in the choice.

Whether to agree to a general arbitration clause at a particular time and place requires that the choice go beyond simply comparing abstract models of dispute resolution. For example, if the choice is between taking a dispute to an efficient and competent legal system or an unknown panel of AAA arbitrators, the former is preferable. However, an inefficient court system with questionable judgment is much less preferable than a highly skilled arbitration system.

As shall be seen in Section 30.19, many state dispute resolution systems have developed techniques that have eliminated the worst aspects of incompetence and delay that can cause parties to choose arbitration.

The *Perini* case, noted in Section 30.14, demonstrated that arbitration is not always a simple, expeditious, or inexpensive method of adjudicating commercial controversies. Any system will have its “horror story” cases, and perhaps the quality of the arbitrator’s award could conceivably have been better than what would have resulted in court. It is unlikely, however, that arbitration in this case saved time or money.

¹⁵⁹For another attempt at tailoring a clause see Riggs, *Update on Arbitration “Fixes,”* 16 Common Sense Contracting, No. 3, p. 4 (Smith, Currie & Hancock). Riggs worries about enforceability of clauses that seem to reject arbitration policy. See *Crowell v. Downey Community Foundation Hosp.*, supra note 145, discussed in Section 30.14.

Another important aspect of arbitration choice that favors arbitration relates to the likelihood that the parties will accept the arbitrator’s decision without repeated and costly trips to the courthouse. This is becoming even more complicated by the expansion of jurisdiction under the Federal Arbitration Act and the increasing likelihood that arbitration may be sought in either state or federal court and under either a state arbitration statute or the federal act. This will undoubtedly add to the complexity of legal issues and may in the long run discourage arbitration.

This section has pointed to advantages and disadvantages of arbitration. The contracting parties and their attorneys should carefully consider such factors when choosing contract language dealing with dispute resolution. Choosing among a general arbitration clause, a limited arbitration clause, or no arbitration clause is an important decision that should be made with care.

SECTION 30.18 Private Systems

The cost, the time consumed, and the quality of litigation outcome has discouraged taking disputes to court. As a result, new nonjudicial methods have mushroomed. These other methods are collectively referred to as alternative dispute resolution (ADR). But as arbitration has become more like litigation as to time, expense, and formalities, emphasis has shifted to methods that seek techniques designed to prevent disputes, such as partnering (Section 17.04G), Project Counsel (Section 30.18G), Conflict Manager (Section 30.18I), Project Neutral (Section 30.18F), and methods to help the parties resolve disputes such as mediation (Section 30.18B), minitrials (Section 30.18D), and dispute review boards (Section 30.18E).

As ADR consists of fluid methodologies, so discussion must concentrate on the basic elements of these systems. See the notes for sources that can be consulted.¹⁶⁰

¹⁶⁰For a comprehensive survey of ADR, see *Stipanowich, Beyond Arbitration: Innovation and Evolution in the United States Construction Industry*, 31 Wake Forest L. Rev. 65 (1996). For a survey of ADR methods, including many described briefly in Sections 30.18–30.20, see *Stipanowich, The Multi-Door Contract and Other Possibilities*, 13 Ohio St.J. on Disp. Res. 303 (1998). It will be referred to as *Stipanowich, Multi-Door*. For an incisive analysis, see *Hinchey, Evolution of ADR Techniques for Major Construction Projects in the Nineties and Beyond: A United States Perspective*, 12 Constr. L.J. 14 (1996).

A. Arbitration

Arbitration has generally been thought of as the “alternate” part of ADR. Yet, as noted in the preceding paragraph, the controversy over arbitration engendered by the change from simple to an excruciatingly more complex process has led both to a search for other methods and attempts by those who operate arbitral systems such as the American Arbitration Association (AAA) and JAMS to search for better methods to attract users by responding to customer complaints.

Although AAA is a nonprofit organization whereas JAMS is “for profit,” both seek to attract the same users and can be compared. As AAA is built into AIA documents and has a much greater caseload, the emphasis here will be on AAA.

The movement from simple to complex requires consideration of classic, simple arbitration. The scene is a district where cloth manufacturers are located. The buyer of a bolt of cloth complains to the seller about the quality. Each walks over to the shop of a trusted and experienced clothing manufacturer. Buyer and seller agree to accept her decision. (This might even be implied.) She examines the cloth and pronounces that it would pass in the trade as acceptable. Even if the buyer disagrees, the buyer accepts the decision. The buyer pays the seller. The dispute is concluded.

A normal construction dispute, such as one over the quality of workmanship, *can* be that simple. But the normal construction dispute will be much more complex. A construction project is much more complex than the sale of cloth. The contract is much longer, consisting of pages of technical and contractual provisions. Resolving the dispute may require the re-creation of events that transpired months or even years before. Chapter 8 explored many of the reasons both for the likelihood of disputes and difficulty resolving them.

The difference in the nature of the dispute between the classic paradigm and most construction disputes, plus the tendency of parties involved in disputes to use lawyers, has led to the judicializing of the process. This shift often creates the same problems that caused ADR to develop as a substitute for litigation: cost, time, and quality of the decision.

The recognition by AAA that its users were unhappy with certain aspects of its process led AAA to convene a group of experts to evaluate its system and make

suggestions for its improvement. The task force assembled and produced a report.¹⁶¹ Its main criticisms were

1. the need for different “tracks” of differing complexity depending on the dispute
2. the need for a more expert panel
3. lack of clear standards for discovery
4. the form of the decision accompanying the award

The AAA responded both internally and in the Construction Industry Arbitration (CIA) Rules published by the National Construction Dispute Resolution Committee. The latter has representatives from twenty-two national professional and trade associations. The rules are a component of the Construction Industry Dispute Resolution Procedures (CIDRP).

Before looking at efforts made by the AAA to improve the quality of its arbitrators, it is helpful to see the method by which arbitrators are selected in the AAA system.

Over the years, the AAA has changed its method of appointing arbitrators. Rule R-3 states that the AAA will establish and maintain a National Roster of Construction Arbitrators (National Roster). The CIA Rules are in Appendix F.

If the parties have not appointed an arbitrator or provided a method of appointment, Rule R-11 provides that the AAA shall send to each party a list of names chosen from the panel. If the parties cannot agree upon an arbitrator, the parties have fifteen days to strike names on the national roster and number the remaining names in order of preference. Taking this into account, the AAA appoints the arbitrators. If this process does not work, the AAA can select the arbitrator from the panel “without submission of additional lists.”

Rule R-14 permits the parties to appoint party-appointed arbitrators. These arbitrators select a neutral third arbitrator, called a chairperson. If this method does not work, the AAA selects the chairperson.

Administratively, the AAA sought to improve the quality of its arbitrators by slimming down the panel, vetting the applicants more carefully, and requiring panelists to develop greater skill by using arbitrators more frequently. Also, training programs were created with criteria for evaluating trainee arbitrators.

¹⁶¹CONSTRUCTION ADR TASK FORCE REPORT (Am.Arb. Ass'n, Oct. 26, 1995).

In addition to developing a panel of skilled and experienced panelists, those admitted to the panel must agree to set aside consecutive days to hear important cases or at least to hear them in large blocks of consecutive days. This provision is to avoid the too frequent “stop and go” nature of private arbitration.

The JAMS panel originally consisted of retired judges. JAMS recently added retired experienced attorneys. Currently it describes its panels as Resolution Experts. Its panelists have had considerable experience and are likely to hear the matter from beginning to end without interruption.

To provide rules that are appropriate to the dispute, the AAA created three tracks. The Fast Track (Rules F-1 through F-13) applies to claims which do not exceed \$75,000. Highlights of this track are a single arbitrator, informal notices, a sixty-day time limit from appointment of arbitrator to award, a single-day hearing, fourteen days from hearing to award, and allowing a “paper only” arbitration for claims, none of which exceeds \$10,000, “unless any party requests an oral hearing or conference call, or the arbitrator determines that an oral hearing or conference call is necessary.”¹⁶²

The Regular Track Rules (R-1 through R-55) apply to claims of from \$75,000 to \$500,000.¹⁶³ Unless the parties have selected party appointed arbitrators, the dispute is heard by a single neutral arbitrator with an increased role in her selection given to the parties.¹⁶⁴ Greater authority is given the arbitrator to control the discovery process.¹⁶⁵ This will be discussed later in this section.

The Large/Complex Track (Rules L-1 through L-4) applies to claims of at least \$500,000.¹⁶⁶ Claims can be heard by one to three arbitrators depending on the agreement of the parties. If they cannot agree, the claim is heard by three arbitrators if the claim is at least \$1 million.¹⁶⁷ If the claim is for less than \$1 million, a single arbitrator hears the case similar to the regular track.¹⁶⁸ There is a mandatory preliminary hearing to discuss the issues, exchange documents, identify and schedule witnesses,

schedule hearings, discuss the extent of discovery, and take up other matters relevant to the arbitration.¹⁶⁹

Because discovery (as noted in Section 30.06) has been one of those sensitive issues in arbitration, it may be useful to look at those rules that deal with discovery. It must be remembered that many lawyers want full judicial-like discovery, whereas many oppose it because of the cost and time. Most believe some form of information exchange is needed to prepare for any settlement discussions. Also, complaints have been made about the lawyers in judicial discovery being essentially “in control.”

Fast-Track rules provide that the parties must “exchange copies of all exhibits they intend to submit at the hearing.”¹⁷⁰ This exchange must be made at least two days before the hearing. There is no discovery, unless it is ordered by the arbitrator “in extraordinary cases when the demands of justice require it.”¹⁷¹

The Regular Track requires exchange of information. The arbitrator is empowered to direct the production of documents and other information and “the identification of any witnesses to be called.”¹⁷² The arbitrator resolves disputes concerning “the exchange of information.” There is no discovery under Rule R-22. But the arbitrator, as in Rule F-7, can order it “in extraordinary cases when the demands of justice require it.”¹⁷³

Rule L-4 for Large/Complex cases requires the parties to participate in a preliminary hearing at which items “to be considered” are “the extent to which discovery shall be conducted.” Information as to witnesses is exchanged. These rules incorporate the Regular-Track rules. If there is a conflict, the Large/Complex Rules apply.

Because Rule L-4 lists the extent of discovery among matters to be discussed at the preliminary hearing, apparently discovery can be demanded. The arbitrator decides disputes over discovery.

As to the award, the AAA has made similar moves to a more judicialized arbitration. Nothing is stated as to the award in the Fast-Track rules. Under the Regular rules, the arbitrator must “provide a concise, written breakdown of the award.”¹⁷⁴ If requested by all parties prior to the

¹⁷⁴Id. at R-43.

appointment of the arbitrator “or if the arbitrator believes it is appropriate to do so” she must provide “a written explanation of the award.”¹⁷⁵

JAMS also has moved to a more judicialized arbitration. In addition to a good faith exchange of information under Rule 17(a), Rule 17(c) permits each party to take one deposition of an opposing party “or individual under the control of the opposing party.” Rule 17(c) continues “The necessity of additional depositions shall be determined by the Arbitrator based on the reasonable need for the requested information, the availability of other discovery options and the burdensomeness of the request on the opposing Parties and the witness.”¹⁷⁶

JAMS has also provided for methods of making the award that go beyond simply letting the arbitrator decide. Rule 32 allows the parties to choose a Bracketed (or High-Low) Arbitration Option. The parties may agree on minimum and maximum damages. This agreement is given to the case manager, but not to the arbitrator without consent of the parties. If the award is between the agreed minimum and maximum, the award stands. If the award is below the agreed minimum, the award is corrected to the agreed minimum. If it exceeds the agreed maximum, the award is corrected to reflect the agreed maximum.

Rule 33 allows use of the Final Offer Award Option, known as the “baseball” award. Under this option, at least seven days before the hearing, the parties exchange proposals for the amount they would offer or demand. This is given to the case manager and to the arbitrator, unless the parties do not wish the arbitrator to receive it. These proposals can be revised until the close of the hearing.

If the arbitrator has received the proposals, she must choose the proposal she finds most fair and appropriate. If the arbitrator is not given the proposals, she renders the award. The award is corrected to conform to the closest of the last proposals and becomes the award.

Finally, Rule 34 allows the parties to agree to the JAMS Operational Arbitration Appeal Procedure before the award. This would resemble an appeal to an appellate court. Few have chosen this option.

These rules seem to respond to complaints of lawyers for discovery and the right to appeal and to publicity

given baseball-arbitration disputes, as well as the need to curb outrageous demands and “stonewalling” positions so common in negotiations.

The relentless move toward making arbitration more like litigation may entice some lawyers to suggest arbitration to their clients (or relieve lawyers from having to insert the right to discovery in the contracts to arbitrate). But it may induce parties not to arbitrate and either litigate or look for another ADR method.

B. Mediation

Mediation has become a popular ADR technique. Although it takes a number of forms, essentially it involves the use of a neutral, third party, usually an individual but on occasion a team of two co-mediators, to seek to bring disputants together and settle the dispute. Hinchey described three types of mediation as follows:

1. *Rights-based* mediation seeks to achieve a settlement focusing on the legal rights of the parties.
2. *Interest-based* mediation is more “freewheeling,” directing attention less to legal rights and more to “the parties’ legal interests or compelling issues of the dispute.”
3. *Therapeutic* mediation emphasizes “the emotional dimensions of the dispute” and seeks methods to handle future conflicts.¹⁷⁷

The first is the type with which most lawyers are familiar. The second type resembles what the arbitrator did in *Advanced Micro Devices, Inc. v. Intel Corp.*, discussed in Sections 30.04A and 30.12. In that case the arbitrator sought to wrap up the entire disagreement between the parties even if this effort went beyond the narrow contract dispute submitted to arbitration. The third type resembles the function of a labor mediator engaged by the parties to a collective bargaining agreement or to a marital dispute involving the nature of the a marital relationship, child custody, or visitation rights.

Hinchey states the process can be stopped by any party at any time.¹⁷⁸ As mediation is a voluntary process, Hinchey states that it is important for the disputants to seek mediation as a solution and not have mediation thrust on them.

¹⁷⁵Ibid. The changes in AAA procedures are discussed in Stipanowich, *MultiDoor*, supra note 160 at 343–347.

¹⁷⁶All references are to the JAMS Comprehensive Arbitration Rules and Procedures, Jan. 2007. JAMS also publishes streamlined Rules.

¹⁷⁷Hinchey, supra note 160 at 17–18.

¹⁷⁸Id. at 18.

There is a difference of opinion as to the desirability of standard contracts containing an obligation to mediate. Objection is based upon the concept of voluntariness crucial to mediation. There were voluntary mediations long before it began to receive the attention currently given to it.

Yet others believe a structured system spelled out in advance and agreed upon by the parties can advance mediation. This is the basis for inclusion of mediation in AIA Documents. AIA gave mediations a power impetus when it included them in 1997.¹⁷⁹

In 2007 the AIA went further, making mediation a central part of its disputes process. A201-2007, Section 15.2.5, states that a decision by the Initial Decision Maker (IDM) is “final and binding but subject to mediation.” If mediation does not dispose of the dispute, it goes to binding dispute resolution (arbitration), if selected by the parties. Section 15.2.6 allows each party to demand mediation of an initial decision at any time. Section 15.2.6.1 states a party can demand in writing that the other party file for mediation within sixty days of the initial decision. If it does not, “both parties waive their rights to mediate or pursue dispute resolution.” Failure to mediate precludes arbitration or litigation and makes the initial decision binding. Under Section 15.3.2 mediation is governed by the AAA’s Construction Industry Mediation Procedures, a formidable set of seventeen rules. See Appendix F. B101-2007, Section 8.2, provides a similar mechanism for mediation, except there is no requirement for an initial decision by an IDM.

The assumption has been that the parties have made a valid agreement to mediate. Unlike arbitration that resolves the dispute, mediation does not attract the attention given to arbitration as a system that can be abused. In fact mediation currently occupies a benign position in dispute resolution.

As seen in Section 30.03B, one aspect of arbitration that has received the attention of legislatures is the location of the arbitration. Increasingly, states are placing limits on agreements to arbitrate that require the arbitration be held in a locality inconvenient to one of the parties.¹⁸⁰

One such statute is California Code of Civil Procedure Section 410.42(a). It bars enforcement of a clause that requires arbitration or litigation outside California in

certain contracts. It also adds the phrase “or otherwise.” A California court held that this can be interpreted to include mediation.¹⁸¹ It held that a clause requiring mediation in Nevada would not be enforced. The issue will arise more often as mediation becomes increasingly highlighted.

Hinchey suggests it is important to make certain mediators are not compelled to testify in any litigation and that any material the mediator develops is not used if mediation fails.¹⁸² Mediators must be knowledgeable in the subject matter and appreciate the subtleties needed to persuade each party to see the strengths and weaknesses of its respective position. Also, mediators need the trust and confidence of the disputants. The mediator does not render a decision and has no power to compel a party to submit any proposal or counterproposal, but seeks to catalyze, to induce the parties to reach a voluntary settlement. When mediation is done successfully, the parties themselves negotiate a settlement that allows them to control the terms.

Mediator styles vary. Some operate as messengers. They simply communicate the positions of the parties but in a less hostile way. Others are more active. These mediators inject their own view and seek to persuade each party of the strengths of the other party’s position, the weakness of their own, and the cost of unreasonable rigidity.¹⁸³

Section 30.19 examines approaches used within the legal system to deal with construction disputes. Because there is greater focus on mediation of construction disputes, it is inevitable that courts will try to use mediation of disputes brought before them. As a result, cases are beginning to reach appellate courts that deal with the power of the courts to order mediation.

One court held that the court could not compel litigants to attend and pay for private mediation.¹⁸⁴ Another held that the twelve parties to the lawsuit could be ordered to mediate before a private mediator and share the costs. The court was not able to find specific authority to give

this order but held the inherent power of the court to manage and control its calendar was sufficient.¹⁸⁵ Clearly, this issue will arise more frequently.

C. Mediation-Arbitration

Another method that has been proposed is mediation-arbitration, which has been developed in some collective bargaining contexts and places the third party in two roles. The third party seeks to mediate disputes between the parties by aiding in the negotiation process with a view toward settlement, but if parties do not settle a dispute the third party can use normal arbitration power to decide the dispute.

Because the third party must possess a variety of skills and would have considerable power, this mediator-arbitrator would likely be selected in advance by the parties. For this reason, the system contemplates the use of the mediator-arbitrator throughout the performance period. Although this arrangement is technically available in ordinary arbitration, experience has shown that most disputes during performance are decided by the design professional. A mediator-arbitrator would very likely be called on more frequently during performance and may in practice supplant the dispute resolution role of the design professional.

Mediation-arbitration is rarely used in construction disputes. One difficulty is finding a third party in whom the contracting parties have confidence and who has not only the skill but also the time to play an ongoing role during construction. Opposition can come from design professionals or construction managers who see the injection of yet another major participant as a threat to their status and as an additional complicating factor in an already complicated system. Yet it does have the advantage of moving *automatically* from one method, mediation, to another, arbitration.

D. Mini-Trials

The mini-trial has received attention in the popular press and is beginning to receive attention in the scholarly journals.¹⁸⁶ Although there can be many variations (the

¹⁸⁵*In re Atlantic Pipe Corp.*, 304 F.3d 135 (1st Cir.2002). The court held the order should have put limits on duration and fees.

¹⁸⁶For discussions of mini-trials, see Green, Marks, & Olson, *Settling Large Case Litigation: An Alternative Approach*, 11 Loy.L.A.L.Rev. 493 (1978); Nilsson, *A Litigation Settling Experiment*, 65 ABAJ 1818 (1979);

process being essentially a private one made by a contract), attention has been directed toward a particular mini-trial and the process it used.

After a lengthy process of negotiation, the disputants worked out an agreement for a mini-trial. The parties agreed on a judge, or a neutral adviser. They were allowed an expedited discovery procedure and exchanged briefs. They were given a designated time to present their positions before executives of each disputant not *directly* connected with the dispute who had authority to settle. The hearing itself was limited to two days, moderated by the adviser. If the executives were unable to reach a settlement after the hearing, the adviser would issue a nonbinding opinion. The executives would meet again with the hope of settling. If they could not, the parties could go to court, with any admissions made or the tentative opinion of the adviser not admissible in any subsequent trial.

E. Dispute Review Board

Although dispute review boards (DRB) originated in tunneling contracts, their use has extended to complex contracts, often of an international nature.¹⁸⁷ A DRB is essentially a committee that familiarizes itself with the site and work in progress, meets periodically, gets to know the major actors, learns of problems as they arise, and suggests interim solutions to claims and disputes.

Members are construction industry experts selected by the parties. Two commentators state that as a rule, “the owner selects one board member (subject to approval by the contractor) and the contractor appoints another (subject to approval by the owner), and the first two appoint a third (subject to approval by the owner and the contractor). This last appointee customarily serves as the chairperson. Each of the three members is to be impartial, neutral, and not an advocate for either side.”¹⁸⁸

Anderson & Snipes, *Stretching the Concept of Mini-Trials: The Case of Bechtel and the Corps of Engineers*, 9 Constr. Lawyer, No. 2, April 1989, p. 3; Klitgaard & Mussman, *High Technology Disputes: The Mini-Trial as the Emerging Solution*, 8 Santa Clara Computer & High Tech.L.J. 1 (1992).

¹⁸⁷For a thorough analysis by a DRB member in international contexts, see Renton, *The Role of the DRB in Long Term Contracts*, 18 Constr. L.J. 8 (2002).

¹⁸⁸McMillan & Rubin, *Dispute Resolution Boards: Key Issues, Recent Case Law and Standard Agreements*, 25 Constr. Lawyer, No. 2, Spring 2005, p. 14. This paper contains a thorough, thoughtful review of DRBs.

The construction contract establishes the DRB. Provisions deal with selection of members, the board's operation, meetings, hearings, recommendations, and admissibility of recommendations if litigation develops. Usually a party must submit a claim to the board before initiating litigation. But the board does not make a binding decision. Yet its recommendations can aid in getting the parties to settle.

In addition, a tripartite agreement is executed by the board members, the owner, and the contractor. It deals with board responsibilities, removal, compensation, and methods of resolving disputes among the members.

Some issues that have come before the courts are the removal of members¹⁸⁹ and the effect of such boards on other participants, such as subcontractors.

The DRB process can be expensive but if operated properly can save a great deal of claims overhead.¹⁹⁰

The composition of the DRB has begun to raise legal issues. Most issues have been the contractual obligations of the members and those that appoint them. But in a recent case a contract required a subcontractor to submit its claim to a DRB as a condition precedent to litigation. The DRB consisted of members approved by the owner and the prime contractor. This method of selection was found unconscionable.¹⁹¹ That method would be appropriate for relations between the owner and the prime but not one that should pass upon subcontractor claims even to the extent of submission to the DRB being a condition precedent to litigation. The condition precedent was excused.

F. Project Neutral

The project neutral resembles the dispute review board. Each seeks to establish an "on the ground" presence during construction. Its use creates a rapid, expert technique for sorting out problems and helping parties resolve disputes before they fester and grow.

¹⁸⁹*Los Angeles County Metro. Transp. Auth. v. Shea-Kiewit-Kenny*, 59 Cal. App.4th 676, 69 Cal.Rptr.2d 431 (1997).

¹⁹⁰For general background on DRBs see R. MATYAS, A. MATTHEWS, R. SMITH, & P. SPERRY, CONSTRUCTION DISPUTE BOARD MANUAL (1996): Carr, Rubin & Smith, *Dispute Review Boards*, Chapter 5 WILEY CONSTRUCTION LAW UPDATE p. 111 (1992).

¹⁹¹*Schulster Tunnels Pre-Con v. Traylor Bros., Inc./Obayashi Corp.*, supra note 26.

The project neutral usually is a *group* of experts much like the early neutral evaluation groups used in federal courts. Although developed principally for ongoing disputes, it can be adapted for use during performance. It uses expert skills to find the facts, evaluate claims, and make recommendations to the parties.

G. Project Counsel

Some have advocated the use of a project lawyer who does not represent any of the parties but represents the project. Such a lawyer seeks to get the project built properly on time, without claims.

The Project Counsel would work with the owner and other participants to help select a delivery system for design and construction. She would advise the owner on a process to select other participants. She would help produce a draft set of construction documents. She would help the participants affirm their relationship and produce a set of enforceable agreements. She would work with the participants to develop a conflict resolution system that could be administered by the Project Counsel. The Project Counsel would harmonize the contractual arrangements with insurance, bonding, and risk management devices. She would play an important role in the close-out process and be available to address post-completion disputes.

Any proponents would have to see if there is a market for such a person, determine whether there would be funding, how compensation would be defined and structured, analyze the effect of being a project lawyer from the perspective of ethical and professional responsibility, evaluate liability risks, and determine the best association for performance of such services.¹⁹²

H. Partnering

Partnering has been discussed in Section 17.04G. There it was treated as part of the system for organizing the project. But it can be considered a part of dispute resolution. Proper implementation of partnering can diminish the incidence of claims by reducing friction and adversarial postures.¹⁹³

¹⁹²Noble, *Friend of the Project—A New Paradigm for Construction Law Services in a "Partnered" Construction Industry*, [1998] Int'l Constr.L.Rev., 79, 81–84.

¹⁹³See Stipanowich, *MultiDoor*, supra note 160 at 378–384.

I. Conflict Manager

In addition to describing the Dispute Resolution Advisor used in a Hong Kong hospital project,¹⁹⁴ Professor Stipanowich has proposed use of a Conflict Manager.¹⁹⁵ Her role would be much the same as the Project Counsel noted in Section 30.18G. She would facilitate initial partnering workshops. She would assist the key actors in conducting a “conflict diagnosis” for the project and in developing a conflict management system.

Her role would continue during the project. She would make monthly visits, confer with the key participants, and mediate any conflicts, much like a Project Neutral or Dispute Review Board. She might suggest sending the failed negotiation to any Project Neutral or Dispute Review Board. She could “help the parties identify the issues to be addressed, assist in structuring limited discovery to elicit relevant information and fine-tune ADR procedures.”¹⁹⁶ While her role would be facilitative, she might be authorized to decide the dispute.

Stipanowich recognizes the cost concerns, the enforceability of the program, the qualification and standards for Conflict Managers, and ethical issues.¹⁹⁷ But he, like others who propose these interactive systems,¹⁹⁸ sees the need for an active hands-on role for the neutral.

J. Court-Appointed Arbitrators: Adjudicator (Great Britain)

The Adjudication system is required in most British construction contracts made after March 1, 1998.¹⁹⁹ It allows a party to send disputes to an adjudicator. Within a short and defined term, the adjudicator resolves the dispute. Her decision is final unless reversed by an arbitrator or a judge. If taken up, the arbitrator or judge resolves the dispute without regard to the adjudicator’s decision.²⁰⁰

¹⁹⁴Id. at 387–389.

¹⁹⁵Id. at 392–394.

¹⁹⁶Id. at 393.

¹⁹⁷Id. at 394–403.

¹⁹⁸See Noble, *supra* note 192.

¹⁹⁹Housing Grants, Construction and Regeneration Act of 1996.

²⁰⁰Adjudication has spawned a great deal of literature in Great Britain. See Aeberli, *Binning the Black Bag (What Material Can an Adjudicator Consider?)*, 23 *Constr.L.J.* 399 (2007); Sheridan & Helps, *Construction Act Review*, 19 *Constr.L.J.* 25 (2003); Tweeddale, *Challenging Jurisdiction in Adjudication Proceedings*, 17 *Constr.L.J.* 3 (2001); Kennedy & Milligan, *Research Analysis of the Progress of Adjudication Based on Questionnaires*

The system originated in payment disputes between prime and subcontractor where there was no architect or engineer to resolve such disputes. It received a big push when the first edition of the New Engineering Contract split up the functions of the engineer so that a new party unconnected with the project adjudicated disputes.

It is clear that this system developed because of dissatisfaction with the traditional method of having the architect or engineer resolve disputes, as described in Chapter 29. But it reflects the need for a quick, though not necessarily final, decision by a neutral.

While this need is best reflected in the need to resolve disputes while the project is proceeding, experience shows that most adjudication takes place after the project has been completed. If that is the case, the system mimics court-appointed arbitrators used in many American courts. In these courts disputes under a certain amount must go to an arbitrator. Her decision can be appealed but few are. This demonstrates that parties want a neutral person to look at their dispute and are satisfied with this method or the cost of taking the dispute to court discourages that step.

K. Multi-Tier Systems

Some contracts use a multi-tier system of resolving disputes. As an example, the dispute would be referred to a mediator. If there is no agreement, the dispute might be sent to a mini-trial. If that does not produce a settlement, the dispute is referred to arbitration. Another multi-tiered system is the Dispute Review Board–Mediation–Arbitration.²⁰¹ In some public contracts, there may be an agency internal review process before the multi-tier system is invoked. Multi-tier systems are designed to start with less expensive, informal procedures; move to more expensive, somewhat more formal procedures; and conclude with the most formal, and most expensive, arbitration or litigation.

L. Architect/Engineer Resolution

These systems must be seen against the backdrop of the traditional process for resolving, at least initially, disputes. This process requires that the dispute be submitted to the

Returned from Adjudicator Nominating Bodies (ANBS) and Practicing Adjudicators, 17 *Constr.L.J.* 231 (2001) and Blunt, *Adjudicators’ Time Defaults*, 17 *Constr.L.J.* 371 (2001).

²⁰¹Renton, *supra* note 187, p. 13.

architect or engineer. In addition to the objections made to this method noted in Chapter 29, particularly Section 29.04, these alternatives show the need for ongoing neutral monitoring of the project from beginning to end.

The relationship between resolution by the design professional and arbitration is demonstrated in *Martel v. Bulotti*.²⁰² The dispute in this case was resolved by the architect. The issue was whether the standard of review was the limited one provided by the arbitration statutes²⁰³ or the somewhat broader common law review of third-party decisions.²⁰⁴ The court held determination by the architect was not arbitration, and so the arbitration standard of review did not apply. Instead, the standard was the common law review standard of third-party decisions.

SECTION 30.19 Adjuncts of Judicial Systems

Just as outsiders saw problems in the judicial system, people operating the system were well aware of the system's flaws. Although wholesale restructuring was not considered possible, some judicial systems at federal and state court levels developed techniques to reduce the time and expense of providing a method of resolving private disputes. Two of these systems are noted in this section.

A. Special Masters and Referees

As courts have struggled with better methods of dealing with construction disputes, some have appointed individuals—called *masters* or *referees*—who are given certain powers to expedite construction litigation. Sometimes these individuals are given authority to set rules for the deposition process, which has become a costly method of obtaining information. Sometimes masters or referees informally act as mediators with a view toward persuading the litigants to settle the dispute. Finally, such individuals are sometimes authorized by the parties to resolve the dispute and are sometimes authorized by the judge to make findings of fact and conclusions of law, which can then be passed on and adopted by the judge if the parties have given up their rights to a jury trial. Sometimes a presiding judge designates a referee or master as a temporary judge

or a judge *pro tem*. Where the determination by the master or referee has been approved by the court or where the referee or master is a temporary judge or judge *pro tem*, the judgment is final and subject to the same appeal as an ordinary trial court judgment.

B. Summary Jury Trials

Summary jury trials have been developed in the federal trial courts. Although the Seventh Federal Circuit Court of Appeals has limited the trial judge's authority to compel use of such a method,²⁰⁵ this process will likely be used increasingly, by agreement or in federal circuits that disagree with the Seventh.²⁰⁶

A jury is selected as would be a real jury. The judge informs the jury that the parties have agreed in advance to an abbreviated procedure, to save time and money. Not until after the proceedings is the jury told that its determinations are not binding.

Each attorney makes what in a real trial would be a combined opening and closing statement. Attorneys may use charts, graphs, or other visual aids that would be used in a normal closing argument. However, no witnesses offer testimony. The other attorney responds, and the first attorney is given a limited amount of rebuttal time. The time allotted for the arguments runs between one-half and one full day. After the attorneys make the presentation, the judge instructs the jury as at the conclusion of a normal jury trial. After instructions, the jury retires and then presents its verdict. Because the verdict is not binding, either party can demand a regular trial. But if the parties believe that the verdict is very likely what a real jury would determine, the mock verdict should encourage settlement. The obvious advantages to such a method are avoiding the expensive marshaling of documents, preparing a lengthy pretrial order, participating in a pretrial

²⁰⁵*Strandell v. Jackson County, Ill.*, 838 F.2d 884 (7th Cir.1988), noted in 40 Case W.Res.L. Rev. 491 (1989–1990). See Metzloff, *Reconfiguring the Summary Jury Trial*, 41 Duke L.J. 806 (1992).

²⁰⁶*In re Atlantic Pipe Corp.*, supra note 185, disagreed with the *Strandell* case and allowed a trial judge to order private mediation. This was based on the inherent power of a trial court to manage and control its calendar. The scholars are divided on this issue. See Ponte, *Putting Mandatory Summary Trial Back on the Docket: Recommendations on the Exercise of Judicial Power*, 63 Fordham L.Rev. 1069, 1094 (1995) (favoring such power). But see O'Hearne, *Compelled Participation in Innovative Pretrial Proceedings*, 84 Nw.U.L.Rev. 290, 317 (1989) (opposing such power).

²⁰²65 P.3d 192 (Idaho 2003).

²⁰³See Section 30.14.

²⁰⁴See Section 29.09.

conference, and preparing and presenting the witnesses. If the parties take their obligation to present their cases in good faith and then negotiate in good faith after the jury verdict, this method should save time and money.

However, some believe that a real jury is so different that what an advisory jury concludes may not be what a real jury would determine. Also, those who are not in favor of the summary jury trial emphasize the great difference between hearing summaries of the type that would be presented in a summary jury trial and actually seeing witnesses and listening to their testimony.

C. Mediation

Court-ordered mediation is being used more frequently. This has been discussed in Section 30.18B.

SECTION 30.20 Public Contracts

Public construction contracts involve considerations not found in private contracts. Many statutes, rules, and regulations govern the award of contracts, and the resolution of disputes under those contracts. This book cannot examine the details of these legal restraints, because of their complexity and variations. However, the increased and often intense spotlighting of disputes in construction work necessitates some observations regarding dispute resolution in the context of public construction contracts.

A. Federal Procurement Contracts

Before 1978, the disputes process in federal procurement contracts was based on the disputes clause, which gave the contracting officer of the federal agency awarding the contract the power to decide disputed questions that arose during performance or thereafter. The contracting officer is usually a high administrative official of the agency awarding the contract whose decisions were conclusive unless appealed to the head of the agency within thirty days from the decision.

The agency appeals boards are appointed by the head of the agency. Their hearings and decisions are very much like those of a court. Before 1978, contractors had to go before the agency appeals boards if the dispute arose under the contract. If their claims were based on a breach of contract, they could appeal to the then Court of Claims.

Alternatively, in claims under \$10,000 they could appeal to a federal district court. They could appeal from board decisions, but a board's decision was final on questions of fact if supported by substantial evidence. The Court of Claims could make its own determination on legal questions. Many federal procurement doctrines were developed that had as their objective either to keep a dispute before an agency appeals board or to allow the board to be bypassed in favor of the Court of Claims.

In 1978, Congress enacted the Federal Contract Disputes Act,²⁰⁷ which gave *legislative* authorization for a disputes process that up to that time had been created solely by contract. In addition, changes were made. Appeals cannot be taken as in the past to the federal district courts for claims under \$10,000. Also, Section 605 of the act requires contracting officers to issue decisions within sixty days on claims of \$100,000 or less. Claims over that amount require a decision within sixty days or a notification of the time within which a decision will be issued. Failure to issue a decision within the time required permits the contractor to bypass the contracting officer and go directly to an agency board of appeals or to court. Under Section 606 the contractor is given ninety days from the contracting officer's decision to appeal to the agency appeals board. Section 609 allows a contractor to bring an action directly to the U.S. Court of Federal Claims.

The Federal Courts Improvement Act made drastic changes in 1982.²⁰⁸ It created a new U.S. Court of Appeals for the Federal Circuit and a new U.S. Claims Court²⁰⁹ (to be distinguished from the earlier Court of Claims). On January 6, 2007 the Civilian Board of Contract Appeals was established. It combines a number of nonmilitary agencies, such as Departments of Agriculture, Housing and Urban Development, Interior, Labor, Transportation, Veterans Affairs, and the General Services Administration. The new board will follow the decisions of the Court of Federal Claims and the Court of Appeals of the Federal Circuit, as well as the predecessor boards of appeals. Claims are initially presented either to the board of contract appeals or the U.S. Court of Federal

²⁰⁷41 U.S.C.A. §§ 601 et seq.

²⁰⁸96 Stat. 25, Pub.L. 97-164. See Anthony & Smith, *The Federal Courts Improvement Act of 1982*, 13 Pub.Cont. L.J. 201 (1983); Miller, *The New United States Claims Court*, 32 Clev.St.L.Rev. 7 (1983-84).

²⁰⁹This court is now called the U.S. Court of Federal Claims.

Claims. Appeals go to the new Court of Appeals for the Federal Circuit.

The federal procurement system has been a pioneer in the more inventive forms of ADR.²¹⁰

B. State and Local Contracts

A detailed treatment of the many state and local laws and regulations cannot be given in this book. It is important, though, to recognize the importance of complying with specialized requirements for disputes under such public contracts of this type. Special rules exist for making claims. Also, there is a great variety of contractual methods for resolving claims. Some make a decision of an employee of the public entity a condition precedent to litigation.²¹¹ Some give broad dispute resolution power to an official of the public entity, with her decision final unless the decision was arbitrary or capricious.²¹² Some states have created special courts to deal with these claims. Early decisions in some states precluded arbitration of public contract disputes, as it would place in the hands of private parties the power to decide public matters and expend public funds.²¹³ However, hostility has been fading, and contracts to arbitrate future disputes have been upheld. Some states even require the arbitration of these disputes.²¹⁴

California's experience demonstrates the movement from a system where an official of the public entity decided

the dispute with limited judicial review, to a judicialized form of arbitration. Before 1978, California state agencies followed the traditional pattern of having disputes resolved initially by a high official of the agency—the state engineer. The state engineer could issue a decision that had a substantial amount of finality, being final and conclusive unless fraudulent, capricious, arbitrary, or so grossly erroneous as to necessarily imply bad faith, a standard much like that applied to decisions by independent design professionals.

In 1977, a California appeals court decided a case that led to drastic overhaul of the dispute resolution system. In that case, the contractor appealed to the trial court after an adverse decision by the state engineer. The trial court found that errors had been committed, disregarded the decision of the state engineer, and retried the case.

The Court of Appeals agreed that the state engineer committed procedural errors²¹⁵ but did not set aside the decision as had the trial court. It sent the claim back to the state engineer for reconsideration. In doing so, the court emphasized that the parties had “by voluntary contract” agreed the disputes would be resolved by a designated person. This conclusion was disputed by state contractors, who stated they had no choice but to agree to such a provision.

The furor caused by this case led to an executive order and later to a statute that required major state procuring agencies to use a judicialized arbitration.²¹⁶ Disputes would be decided by the persons certified as competent arbitrators by an arbitration committee composed of representatives of the state agencies and the construction industry. Those approved were placed on the State Construction Arbitration Panel. Those who wished to be placed on the panel had to submit information that indicated their education and experience and set a rate at which they were willing to serve. The disputants selected from this certified list.

Discovery is required. The arbitrator can use expert technical or legal advisers, depending on whether the arbitrator is an attorney or a technically trained person. Consolidation and joinder are permitted. Hearings are

²¹⁰For an article dealing with how the federal procurement agencies can use new methods of ADR, see Crowell & Pou, *Appealing Government Contract Decisions: Reducing Cost and Delay of Procurement Litigation with Alternative Dispute Resolution Techniques*, 49 Md.L.Rev. 183 (1990). But see Mackey, *ADR Can Banish Due Process From Public Contract Disputes*, 30 Proc. Lawyer, No. 4, Summer 1995, p. 3.

²¹¹*Yonkers Contracting Co., Inc. v. Port Authority Trans-Hudson Corp.*, 87 N.Y.2d 927, 663 N.E.2d 907, 640 N.Y.S.2d 866 (1996).

²¹³*City of Madison v. Frank Lloyd Wright Found.*, 20 Wis.2d 361, 122 N.W.2d 409 (1963).

²¹⁴North Dakota requires arbitration of highway construction contract disputes. *Gratech Co., Ltd. v. Wohl Eng'g, P.C.*, 672 N.W.2d 672 (N.D.2003) (statute expansively interpreted to require arbitration of a highway contractor's tort claims against the project engineer). Arbitration is also required for certain public contracts in Rhode Island. See *Sterling Eng'g & Constr. Co. v. Town of Burrillville Housing Auth.*, 108 R.I. 723, 279 A.2d 445 (1971). Likewise, Pennsylvania requires that public contracts contain arbitration clauses. See *U.S. Fid. & Guar. Co. v. Bangor Area Joint School Auth.*, 355 F.Supp. 913 (E.D.Pa.1973).

²¹⁵*Zum Eng'rs v. State Dep't of Water Resources*, 69 Cal.App.3d 798, 138 Cal.Rptr. 478, cert. denied, 434 U.S. 985 (1977).

²¹⁶See West Ann.Cal.Pub.Cont.Code § 10240 *et seq.* See also West Ann.Cal.Civ.Code § 1670, which requires local entities to either arbitrate or litigate. Employees of the agency cannot, as before, decide the dispute.

open to the public. The award must contain findings of fact, a summary of the evidence, and reasons underlying the award as well as conclusions of law. If the award is not supported by substantial evidence or is based on an error of law, it can be vacated (set aside).

California continued its innovation in 1990, enacting legislation that regulates disputes between contractors and local public entities for claims of \$375,000 or less. This process uses informal conferences, nonbinding judicially supervised mediation, and judicial arbitration. The agencies were required to incorporate this process in plans and specifications that could give rise to a claim.²¹⁷

SECTION 30.21 International Arbitration: FIDIC

Sections 2.15 and 8.09 mentioned the difference between domestic construction contracts and those that involve nationals of different countries, particularly contracts made by American construction companies requiring them to build projects in a foreign country. (Increasingly, foreign contractors build in the U.S.) Transactions of this type generate some issues of minimal or no importance in domestic contracts.

The contracts themselves may be expressed in more than one language, often generating problems that result from imprecise translation. They may also involve payment in currency that varies greatly in value. Contractors in such transactions may often have to deal with tight and often changing laws relating to repatriation of profits and import of personnel and materials. Perhaps most important, neither party may trust the other's legal system, and the contractor may believe it will not obtain an impartial hearing if forced to bring disputes to courts in the foreign country, particularly if the owner is, as so common in lesser developed countries, an instrumentality of the government.

Contractors making these contracts commonly insist on international arbitration to resolve disputes. Such arbitrations are usually held in neutral countries or in centers of respected commercial arbitration. Such awards are enforceable worldwide because of the Convention of the Recognition and Enforcement of Foreign Arbitration

Awards, known as the New York Convention. Because of the complexities generated by international arbitration, this book does not discuss the subject in detail. Yet the emphasis on dispute resolution worldwide is a justification for some information regarding systems used for international transactions.²¹⁸

The most commonly used contract for international engineering is the one published by the Federation Internationale des Ingenieurs-Conseils (International Federation of Consulting Engineers). The federation's contract, generally known as the FIDIC contract, for civil engineering construction provides for international arbitration.

Traditionally, the FIDIC had a two-step procedure. First, a dispute would be submitted to the consulting engineer who administered the project and may have played a significant role in design. Her decision could be taken to international arbitration if either or both parties were dissatisfied.

The same dissatisfaction that led the United Kingdom to inject an adjudicator in place of the architect or engineer,²¹⁹ and led some Americans to use the Disputes Review Board to monitor the project and give an opinion as to existing disputes.²²⁰ This generated a change in the FIDIC issued in 1999. In its Red Book, subclause 20 creates an impure three-tiered system for handling disputes.²²¹ Subclause 20.2 requires that disputes be submitted first to a Dispute Adjudication Board (DAB). The DAB consists of one to three "suitably qualified" persons. Members are selected by the parties.

Subclause 20.4 requires the DAB to give a reasoned decision within eighty-four days after the dispute has been submitted to it. If either party is dissatisfied, it has twenty-eight days to express its dissatisfaction and ask for arbitration. If there is no notice of dissatisfaction, the decision is binding and the parties must give it effect,

²¹⁸Black, Venoit, & Pierson, *Arbitration of Cross-Border Disputes*, 27 *Constr. Lawyer*, No. 2, Spring 2006, p. 5 (helpful introduction). See also Paterson, *Canadian Developments in International Arbitration Law: A Step Beyond Mauro Rubino-Sammartano's International Arbitration Law*, 27 *Willamette L.Rev.* 573 (1991); Tiefenbrun, *A Comparison of International Arbitral Rules*, 15 *B.C. Int'l & Comp.L.Rev.* 25 (1992).

²¹⁹See Section 30.18J.

²²⁰See Section 30.18E. Of course, there were other reasons for the DRB.

²²¹*Conditions of Contract for Construction for Building and Engineering Works Designed by the Employer* (1999) (known as the Red Book).

²¹⁷West Ann.Cal.Pub.Cont.Code § 20104 *et seq.*

unless and until it is revised in an amicable settlement or by arbitration.

Subclause 20.6 requires the parties to “attempt to settle the dispute amicably.” Unless settled amicably under subclause 20.6, the dispute is sent to international arbitration. But arbitration can begin fifty-six days from notice of dissatisfaction even if there has been an attempt to settle amicably.

This creates a three-step procedure, although not a pure one. There is first the DAB. Then there is an attempt to settle. Then there is submission to arbitration. It is not pure because the arbitration is not postponed while there is an attempt to settle.

Most important, the FIDIC eliminated the engineer in favor of the DAB, a person or panel unconnected with the project who gives a final and binding decision unless it is taken to arbitration. The attempt to settle amicably is traditional in international contracts. It probably is present in all ADR systems.

Another system has been proposed by the World Bank. In its instruction to bidders, contained in its sample bidding documents for smaller (under \$10 million) projects,

Paragraph 35.1 provides that the owner will propose that a particular person be appointed as an adjudicator at a designated hourly fee. If the bidder disagrees, it must so state in its bid and make a counterproposal. If there is disagreement, the adjudicator will be appointed by a designated appointing authority. The rules under which the adjudicator would operate are specified in Paragraph 25 of the general conditions of the contract. The adjudicator must give her decision within twenty-eight days. The costs are divided. Either party may refer a decision of the adjudicator to an arbitration within twenty-eight days of the adjudicator’s written decision. In essence, the World Bank suggests that one role that has typically been performed by the consulting engineer—that of initially resolving disputes—be given to a different entity whose decision can be taken to arbitration.²²²

²²²This is derived from the New Engineering Contract issued by the Institution of Civil Engineers in England. There have been two new editions, NEC-2 and NEC-3.

Indemnification and Other Forms of Shifting and Sharing Risks: Who Ultimately Pays?

SECTION 31.01 First Instance and Ultimate Responsibility Compared

Today there is increasing likelihood that those who suffer losses incident to the construction process will be compensated, especially where those losses involve personal harm. Although claimants do not always receive judicial awards, the tendency has been to expand liability to ensure that those who suffer losses are compensated.

Lawsuits today generally begin with claims against a number of defendants, something that is legally permissible and relatively inexpensive. Typically, these defendants make claims against each other as well as claims against parties who have not been sued by the original claimant. The result is a multiparty lawsuit that generally involves as many as a half-dozen interested participants as well as an almost equal number of sureties and insurers. For example, the injured employee of a prime contractor is likely to sue all contractors who are not immune, such as other separate contractors (multiple primes) and subcontractors, the owner, the design professional, any construction manager, and, depending on the facts, those who have supplied equipment or materials. Each of the defendants will very likely bring claims against the others based on indemnification. If there is a building defect, such as the failure of an air-conditioning system, the owner is likely to assert claims against the design professional, the contractor, and the manufacturers and sellers of the system. Again, those against whom claims have been asserted are likely to assert claims against each other.

These lawsuits show two levels of responsibility. There is *first-instance* responsibility to the original claimant, such as the injured worker or the owner. Resolving this issue depends on whether any of the defendants or someone for whom they are responsible had a duty to the claimant,

failed to live up to the standard required by the contract or by the law, and was the legal and proximate cause of the claimant's injury. After this determination is made, the next level, *ultimate* responsibility, must be addressed. Who among those responsible will ultimately bear the loss? This inquiry—the focal point of this chapter—has developed unbelievably complex and costly legal controversies.

SECTION 31.02 Contribution Among Wrongdoers

Suppose A and B, *acting together* in pursuing a common plan or design, injure C. C can recover its loss from either A or B if each has committed a wrong. Because each has committed the wrong and because they have acted together, neither A nor B can receive contribution from the other if either has paid more than half of the total judgment. In this particular instance, A and B are joint wrongdoers. For example, if the design professional and owner acted together to destroy the contractor's business or reputation, the contractor could sue either or both and recover its loss from either or both. In such a case, neither design professional nor owner would have a claim against the other if either paid more than half of the judgment.

But a number of defendants may be sued in the same legal action even though they have not acted together. They are co-defendants because each may have played a substantial role in causing the injury and for procedural convenience, all the claims are decided in one lawsuit. The defendants are concurrent wrongdoers, not in the sense that their wrongdoing occurred at the same time but in the sense that each played a substantial role in causing an indivisible loss to the claimant.

Suppose three defendants are held liable to the plaintiff and one defendant pays the award. Can the one defendant seek reimbursement or “contribution” from the other defendants? The basis for awarding contribution is the unfairness of one defendant paying the entire judgment when all are responsible. Most American courts do not require contribution among wrongdoers. But half of the states have created contribution by statute. The statutes vary considerably, but where they exist, two factors have reduced the effectiveness of contribution statutes. First, some states require that there be a joint judgment against the defendants before contribution can be compelled. This requirement has obvious disadvantages, because it inhibits settlement.¹ Second, and more important for purposes of construction accidents, courts frequently deny contribution against a party who was immune from the original claim. For example, it would not be available against the employer (actual or statutory, as described in Section 7.04C) of the injured party if the employer were immune from liability because of workers’ compensation laws. To encourage settlement, some states have enacted legislation under which a defendant who settles with the claimant and seeks to be relieved from any claim that other claimants may make can ask the court to determine whether the settlement was made in good faith. If the court so determines, the settling defendant is released from any claims that may be made against it by other defendants.²

Where contribution does exist, either by judicial rule or legislation, how is liability among the wrongdoers apportioned? Two basic approaches exist. The minority view is that each wrongdoer contributes a pro rata share. Where there are three wrongdoers, each would contribute one-third. Pro rata apportionment disregards the comparative fault of the individual defendants.

The clear majority approach, consistent with the doctrine of comparative negligence discussed in Section 31.03E, is apportionment based on *fault*.³ Suppose there are three wrongdoers: A, B, and C. A is 50 percent

at fault, B is 30 percent at fault, and C is 20 percent at fault. If A pays the plaintiff the entire judgment, then A may recover 30 percent of that amount from B and 20 percent of that amount from C. (Under the pro rata system, B and C are each liable to A for one-third of the settlement amount.) The “comparative fault” approach has been adopted by the Restatement (Third) of Torts: Apportionment of Liability.⁴

Of particular significance to the construction industry, contribution applies where the indivisible injury caused by the multiple defendants involved physical harm, whether death, personal injury or property damage. In addition, the defendants, in inflicting the injury upon the plaintiff, must have each committed a tort. This means that no right of contribution exists if an owner sues the architect and prime contractor for the same financial injury caused by each defendant’s breach of contract.⁵

SECTION 31.03 Noncontractual Indemnity⁶

A. Basic Principle: Unjust Enrichment

Like contribution, noncontractual indemnity transfers responsibility for the plaintiff’s injury from the defendant who pays the claim to another person who in fairness should bear that cost. Contribution and noncontractual indemnity differ in three respects.

First, while contribution applies to an indivisible, physical injury caused by joint tortfeasors, indemnity may apply whether the harm is physical or financial and whether the injury was caused by a tort or by breach of contract. Second, contribution arises when the plaintiff sues multiple defendants; in indemnity, the plaintiff may

⁴Restatement (Third) of Torts: Apportionment of Liability § 23(b), which states: “A person entitled to recover contribution may recover no more than the amount paid to the plaintiff in excess of the person’s comparative share of responsibility.”

⁵*Board of Educ. of Hudson City School Dist. v. Sargent, Webster, Crenshaw & Folley*, 71 N.Y.2d 21, 517 N.E.2d 1360, 523 N.Y.S.2d 475 (1987).

⁶This categorization separates indemnification based on express or implied-from-the-contract agreements from other forms of indemnification. The latter have various designations, such as common law indemnity, quasi-contractual indemnity, and equitable indemnity. Rather than attempt to sort out these terms and their implications, indemnification is divided into noncontractual and contractual.

¹The Restatement (Third) of Torts: Apportionment of Liability § 23 (2000), extends a right of contribution to a co-defendant who “discharges the liability of another by settlement or discharge of judgment.” Section 23 represents the majority rule.

²West Ann.Cal.Civ.Proc. Code § 877.6.

³*Pacesetter Pools, Inc. v. Pierce Homes, Inc.*, 86 S.W.3d 827 (Tex.App. Ct.2002).

sue only one defendant, who then brings a third-party claim for indemnity against another party. Third, while contribution sought to distribute the liability among the many defendants, indemnity historically sought to transfer the *entire* liability, not just part of it. For such an all-or-nothing transfer to occur, the culpability of the two parties in an indemnity action must be qualitatively different.

Suppose a worker employed by a prime contractor is injured because of deliberate safety violations by his employer. Under certain circumstances, the worker can recover from the owner. Liability in such a case may be based on the owner's nondelegable duty to furnish a safe workplace. Alternatively, liability may be based on the failure to determine whether safe practices were being followed or on the failure to discharge the contractor after becoming aware of the violations.

In this example, the *degree* of wrongdoing between the owner and contractor is qualitatively different. The owner's liability to the employee is *passive* or secondary and that of the contractor is *active* or primary. The contractor would be unjustly enriched and the owner unjustly impoverished if financial responsibility for the employee's injury stayed with the owner. To rectify this situation, the owner can receive indemnification from the contractor.

Similarly, suppose the prime contractor violated safety orders and a claim was made against the design professional based on the latter's failure to detect the violation or to exercise corrective power given by the contract. The contractor's conduct can be considered active if it orders an employee to work under dangerous conditions. However, the conduct of the design professional can be considered passive, his liability based on failure to act. Although judicial determination of active and passive conduct is sometimes at variance with ordinary meaning (a point to be explored later in this section), courts sometimes make this differentiation the basis for giving the design professional indemnity from the contractor or from someone else more directly connected with the injury or loss.⁷ Indemnity in such a case is based on the unjust enrichment of the more culpable wrongdoer that would result if it were not required to bear this loss.

⁷In *Owings v. Rosé*, 262 Or. 247, 497 P.2d 1183 (1972), an architect was given indemnity against a consulting engineer when the architect was held vicariously liable essentially for the negligence of the engineer.

B. Noncontract and Contract Indemnity Differentiated

Sections 31.04 and 31.05 treat indemnification implied from or expressed in a construction contract. As indicated, noncontractual indemnity is based principally on unjust enrichment and the concept that losses should be shifted from one wrongdoer to another based on qualitative comparative fault. For historical reasons, however, courts have tended to treat noncontractual indemnity as more analogous to a contract claim than to a tort claim. For this reason, courts tend to classify this form of indemnity as quasi-contractual (something like a contract) even though it is not based on consent. Also, in some states such indemnity is called *equitable* as it can be based on equitable notions of fairness.

C. Some Classifications

Courts have articulated various tests to determine whether noncontractual indemnification will be awarded. Although one court recognized an indemnification obligation in order to impose an ultimate burden on one who was the "active delinquent" in bringing about the injury rather than the "lesser delinquent,"⁸ most courts have employed the primary–secondary or passive–active differentiation, singly or together. See Figure 31.1. For example, one court stated that indemnity would be granted "to a person who, without active fault on his own part, has been compelled, by reason of some legal obligation, to pay damages occasioned by the initial negligence of another, and for which he himself is only secondarily liable."⁹ The court stated that both vicarious liability—that is, liability for the wrongs of another—that arises out of a positive rule of common or statutory law, and liability imposed for failure to discover or correct a defect or remedy a dangerous condition caused by the act of the one primarily responsible, are illustrations of *secondary* liability. The passive–active differentiation, perhaps used more frequently, looks to similar factors. Again, some positive acts create liability, whereas sometimes negative or passive inaction, though creating liability, is less morally objectionable though enough to justify indemnification.

⁸*Miller v. De Witt*, 37 Ill.2d 273, 226 N.E.2d 630, 642 (1967).

⁹*Builders Supply Co. v. McCabe*, 366 Pa. 322, 77 A.2d 368, 370 (1951).

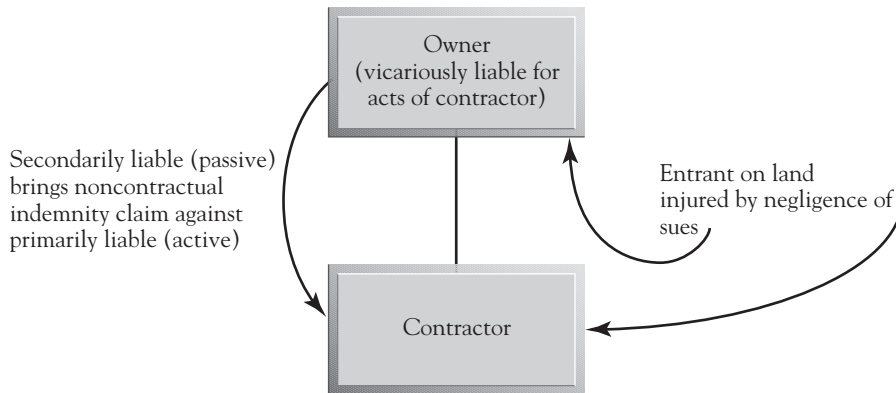

FIGURE 31.1 Noncontractual (equitable) indemnity illustrated.

It may be useful to look at a few cases that have dealt with noncontractual indemnity. In *Adams v. Combs*,¹⁰ a road contractor sought indemnity from the city for whom the road work had been performed. An accident occurred two years after completion of the contract. The court denied the claim, however, holding that any negligence on the part of the city in not maintaining the road was secondary and passive, whereas the contractor's negligence was primary and active.

Architects sought indemnity in *St. Joseph Hospital v. Corbetta Constuction Co.*,¹¹ and *Owings v. Rosé*.¹² In the first case, the architect was *denied* indemnity from a supplier of defective tile because the architect knew the tile was defective. In the second case, the architect was *granted* indemnification against a negligent consulting engineer when the architect, who was *not* negligent, was liable because he had a nondelegable duty. Where each party has violated the same duty, indemnity is usually denied. For example, in *Harris v. Algonquin Ready Mix, Inc.*,¹³ the electric company and the contractor it had hired each failed to warn employees of certain dangers. The absence of any qualitative difference in their liability precluded indemnity.

It is generally stated that failure to discover or remedy the defect caused by another is merely passive negligence.¹⁴ However, in *Becker v. Black & Veatch Consulting*

*Engineers*¹⁵ an engineer's failure to inspect was held to be *active* negligence when the engineer was employed for this express purpose. This active negligence precluded the engineer from receiving indemnity from owner or contractor, as all were considered actively negligent.

Contribution would have been permitted if such right existed and, generally, if all could have been held liable. If the contractor was immune because the injured person was its employee, however, the contractor could not be compelled to contribute to the judgment unless there was contractual indemnity. The judgment would be shared by owner and engineer unless there was contractual indemnity.

The perils of generalizations in this area are emphasized in an Illinois decision that, in discussing active and passive liability, stated,

Determination of this question is not a matter of proceeding according to the usual dictionary definitions of the words "active" and "passive." These words are terms of art and they must be applied in accordance with concepts worked out by courts of review on a case-by-case basis. Under appropriate circumstances, inaction or passivity in the ordinary sense may well constitute the primary cause of a mishap or active negligence. . . . It has been appropriately stated that "mere motion does not define the distinction between active and passive negligence."¹⁶

¹⁰465 S.W.2d 288 (Ky.1971).

¹²See *supra* note 7.

¹³59 Ill.2d 445, 322 N.E.2d 58 (1974).

¹⁴See *Builders Supply Co. v. McCabe*, *supra* note 9.

¹⁵509 F.2d 42 (8th Cir.1974). See *Associated Eng'rs, Inc. v. Job*, 370 F.2d 633 (8th Cir.1966), cert. denied sub nom. *Troy Cannon Constr. Co. v. Job*, 389 U.S. 823 (1967).

¹⁶*Moody v. Chicago Transit Auth.*, 17 Ill.App.3d 113, 117, 307 N.E.2d 789, 792-93 (1974).

Noting that certain terms have become words of art is a signal that a particular doctrine has developed difficulty, and it is therefore important to read between the lines of judicial opinions dealing with that doctrine. It is also an indication of considerable uncertainty in the law and the importance of using contract language to specifically deal with the problem rather than leave the matter to the vagaries of court decisions when either vague concepts must be applied¹⁷ or legal terminology varies from ordinary meaning.

Noncontractual indemnity may be appropriate not under the active-passive test, but where one party has delegated to another exclusive responsibility to perform a specific duty. In *17 Vista Fee Associates v. Teachers Insurance & Annuity Association of America*,¹⁸ an owner built a new building and hired an engineer to create the mechanical design. Building inspectors refused to approve the completed building unless the owner made upgrades to the mechanical system, which the owner did. The court permitted the owner to recover the cost of the upgrade from the engineer under a theory of noncontractual indemnity because the owner “was compelled to discharge a duty that it had delegated fully to, and that should have been discharged by, the engineer, whose negligence was the actual cause of the loss.”¹⁹

D. Employer Indemnification

Sometimes the propriety of shifting liability depends on substantive law policies that tend to either protect a particular person from this responsibility or place it on him. Many noncontractual indemnity claims are brought against employers of injured persons. For example, suppose a subcontractor’s employee is injured and the primary responsibility for the injury was the employer’s failure to comply with safety rules. Because the injured employee cannot sue his own employer,²⁰ he institutes legal action

against the prime contractor. Suppose the prime contractor can be sued as a third party; liability against the prime contractor is based on its responsibility as the employer to provide safe working conditions, and this duty cannot be delegated. This would be a classic case for granting the prime contractor noncontractual indemnity. The prime contractor’s liability is based on a nondelegable duty, and clearly the subcontractor’s negligence is active and primary.

Nevertheless, allowing indemnity would place *ultimate* liability on the subcontractor. Would this deny the subcontractor immunity from tort action granted by workers’ compensation law? One of the tradeoffs in workers’ compensation was granting immunity to the employer from tort liability in exchange for denying the employer rights possessed before workers’ compensation statutes were enacted. Indemnification can, by indirection, frustrate this.

But there are cogent arguments for allowing indemnity in these cases. The third party, here the prime contractor, received nothing in the “trade” and arguably should not have existing rights taken away. This argument, however, ignores the likelihood that third parties are also employers who are part of some workers’ compensation legislative trade. In addition to this argument, it would appear to be unjust to exonerate the more culpable employer when liability against the third party, such as a prime contractor or owner, may be vicarious, based on passive negligence or a statutory violation. It might also be argued that denial of indemnity may encourage carelessness by the employer.

The difficulty of this question is reflected in the case law. It has been considered the most evenly balanced issue in workers’ compensation law.²¹ But now it appears that a slight majority precludes noncontractual indemnity against an employer.²² Those that grant indemnity usually find a separate duty owed by the employer to the third party seeking indemnity.²³

¹⁷In *Santisteven v. Dow Chemical Co.*, 506 F.2d 1216 (9th Cir.1974), the court stated that quasi-contractual indemnity is based on whether it is “just” to shift liability.

¹⁸259 A.D.2d 75, 693 N.Y.S.2d 554 (1999).

¹⁹*Id.*, 693 N.Y.S.2d at 556. Because the owner and engineer were in privity, this result could also have been reached under a theory of implied contractual indemnity, discussed in Section 31.04.

²⁰The employee cannot sue his employer because the employee received workers’ compensation benefits to cover his injury; in return, the employer is immune from tort liability. See Section 7.04C.

²¹See A. LARSON, 2A WORKMEN’S COMPENSATION § 76.11 (2002). Larson, a leading scholar in this field, advocates abolition of noncontractual indemnification against the employer. See Larson, *Third-Party Action Over Against Worker’s Compensation Employer* [1982] Duke L.J. 483.

²²See Annot., 100 A.L.R.3d 350 (1980). California has effectively barred noncontractual indemnity against the employer of the claimant by requiring an express indemnity agreement. West Ann.Cal.Lab.Code § 3864. Note that express indemnification is permitted.

²³*Santisteven v. Dow Chemical Co.*, supra note 17.

E. Comparative Negligence

Currently, the great majority of states, whether through legislative or judicial initiative, have embraced comparative negligence. Comparative negligence, in which liability is proportionate to the degree of the defendant's fault, is fundamentally inconsistent with the traditional form of noncontractual indemnity, which sought to transfer the entirety of the loss from one tortfeasor to another. One commentator has concluded that the "active-passive kind of indemnity is now in disrepute and probably has little or no future in apportioning responsibility among tortfeasors."²⁴ While courts continue to use terms such as "equitable indemnity,"²⁵ the new regime of loss apportionment among multiple tortfeasors who have caused an indivisible injury is, in actuality, fault-based contribution.²⁶

F. Preemption

Although express indemnification is discussed in detail in Section 31.05, one problem relating to indemnity clauses must be mentioned here. Does the presence of an express indemnification clause bar noncontractual indemnity?

If noncontractual indemnification is based on the likely intention of the parties, the matter should be resolved simply by interpreting the language of the indemnity clause. If no language deals specifically with preemption, it is likely that the parties, by focusing on contractual indemnification, have demonstrated an intention to exclude other forms of indemnification. If noncontractual indemnification is based on unjust enrichment, however, the problem becomes more difficult. On the one hand, it can be contended that there should be no inquiry into unjust enrichment where the parties have dealt specifically with the issue. On the other hand, unjust enrichment can have a life of its own, based on what the law considers fair and just.

The difficulty is reflected in case decisions that have passed on this problem. Most cases have concluded that the presence of an express indemnification provision bars indemnification based on a comparison of culpability.²⁷ But another case, *E. L. White, Inc. v. City of Huntington Beach*,²⁸ not only came to a different conclusion but also demonstrated some of the complexity raised by indemnification. For that reason, it may be useful to look at the facts in that case.

The city of Huntington Beach contracted with White to build a drain sewer. Under the contract, White agreed to indemnify the city. Problems developed after completion. White hired a subcontractor to make repairs. One employee of the subcontractor was killed and another injured in a cave-in caused by failure to shore or slope the trenches. The legal action by the workers resulted in judgments against the city and White. Before the legal claim was filed by the workers, the city filed a separate claim against White and its insurer asking, among other things, that a declaration be made that the city be entitled to indemnification from White under the indemnification clause contained in the prime contract. California law does not grant indemnity when the contractual indemnity clause is written in general terms and the party seeking indemnification is actively negligent. The city was found to have been actively negligent, which barred its indemnification claim.

After the judgment had been rendered, White and its insurer brought a legal action against the city seeking *equitable* indemnity against the city for amounts the insurer paid to satisfy the judgments.

The city contended that equitable indemnity was barred by the contractual indemnification clause, but the court did not agree. The court held that the two forms of indemnification—contractual and equitable—are separate bases for transferring a loss. If the express contractual provision does not apply to the factual setting before the court, equitable indemnification can come into play.

²⁴D. DOBBS, TORTS, 1079 (2000) (footnote omitted).

²⁵*American Motorcycle Ass'n v. Superior Court*, 20 Cal.3d 578, 578 P.2d 899, 146 Cal.Rptr. 182 (1978).

²⁶*Frank v. Meadowlakes Development Corp.*, 6 N.Y.3d 687, 849 N.E.2d 938, 816 N.Y.S.2d 715 (2006) (under contribution statute, subcontractor who was less than 50 percent at fault was liable only for its proportionate share of fault when sued by the developer for noncontractual indemnity).

²⁷*Felker v. Corning, Inc.*, 90 N.Y.2d 219, 682 N.E.2d 950, 660 N.Y.S.2d 349 (1997); *Southern Pac. Co. v. Morrison-Knudsen Co.*, 216 Or. 398, 338 P.2d 665 (1959); *Wyoming Johnson, Inc. v. Stag Indus., Inc.*, 662 P.2d 96 (Wyo.1983).

²⁸21 Cal.3d 497, 579 P.2d 505, 146 Cal.Rptr. 614 (1978). See also *Ranchwood Communities, Ltd. Partnership v. Jim Beat Constr. Co.*, 49 Cal.App.4th 1397, 57 Cal.Rptr.2d 386 (1996) (indemnitee allowed to bring an equitable indemnity claim but not a contractual indemnity claim as it was not licensed).

The indemnity clause must be interpreted to see whether it expresses any intention by the parties that all equitable indemnity is to be eliminated. The indemnification clause protected only the city. The court permitted equitable indemnity when a claim was made by the contractor, because the clause did not preclude equitable indemnity.²⁹

G. Settlements

When there are a number of joint wrongdoers the law seeks to provide incentives to settle. Some states have enacted statutes that allow a settling defendant to petition the court to conclude that the settlement was made in good faith, as a means of relieving the settling defendant from claims by other defendants. See Section 31.02.

SECTION 31.04 Implied Contractual Indemnity

As mentioned in Section 31.03F, one form of contractual indemnity rests not on express language but on the presumed intention of the contracting parties that one party will respond for a loss it causes to the other party. For example, suppose the prime contractor negligently leaves a hole uncovered. A mail deliverer who enters the site during construction with permission is injured. Suppose the latter successfully asserts a claim against the owner based on the owner's obligation, as a possessor of land, to keep the premises reasonably safe. Even in the absence of a specific indemnity clause in the prime contract, one can contend that the prime contractor has impliedly promised the owner that it will indemnify the owner if its negligent conduct harms a third party who asserts a claim against the owner and obtains a court judgment.

This form of implied indemnity has had a complicated history in admiralty law where longshoremen have been injured. The relatively uniform presence of indemnifica-

tion clauses and the expansive use of noncontractual indemnity, however, have made this form of indemnification relatively unimportant in modern construction disputes.³⁰

SECTION 31.05 Contractual Indemnity

A. Indemnification Compared to Exculpation, Liability Limitation, and Liquidated Damages

This subsection compares indemnification clauses to other clauses that seek to distribute losses. Distinct differences exist between the various loss distributing clauses, but there is also much overlap. Indemnification—the principal topic in this chapter—has become controversial and highly regulated because it can be in effect exculpatory; that is, it can relieve one party of the cost of liability that it would otherwise have to bear. For that reason, it is instructive to look carefully at both exculpation and indemnification.

One of the most simple yet effective ways of relieving a party from responsibility is by a contractual exculpation under which a party that may suffer losses agrees it will not pursue the party that is legally responsible for such losses. For example, suppose a patient, on being admitted to a hospital, signs a form in which he agrees the hospital will not be responsible if he is harmed as a result of the hospital's negligence. The hospital would be seeking to relieve itself from liability. Although the law accords considerable freedom to contracting parties to make their own rules and distribute losses as they wish,³¹ the hospital admissions room is hardly the place for the contract process. For that reason, such an agreement was held invalid.³² Similarly, some courts and legislatures do not

²⁹The Alaska Supreme Court has adopted the preemption approach expressed in *E. L. White, Inc. v. City of Huntington Beach*, supra note 24. See *Fairbanks North Star Borough v. Roen Design Associates, Inc.*, 727 P.2d 758 (Alaska 1986). For subsequent history not involving the preemption issue, see 795 P.2d 793 (1990) (measure of recovery) and 823 P.2d 632 (1991) (reversing jury's rejection of the borough's implied contractual indemnity claim against the project designer and remanding).

³⁰See *Fall River Housing Auth. v. H.V. Collins Co.*, 414 Mass. 10, 604 N.E.2d 1310, 1313–14 (1992) (denying implied contractual indemnity where the parties could sue for breach of contract); but see *Kemper Architects, P.C. v. McFall, Konkel & Kimball Consulting Eng'rs*, 843 P.2d 1178 (Wyo.1992) (permitting the indemnity claim). A history of implied contractual indemnity in California is found in *Garlock Sealing Technologies, LLC v. NAK Sealing Technologies Corp.*, 148 Cal.App.4th 937, 56 Cal.Rptr.3d 177, 202–04 (2007).

³¹*Rutter v. Arlington Park Jockey Club*, 510 F.2d 1065 (7th Cir.1975) (exculpation in race track stabling contract enforced).

³²*Tunkl v. Regents of the Univ. of California*, 60 Cal.2d 92, 383 P.2d 441, 32 Cal.Rptr. 33 (1963).

allow exculpation in a residential lease³³ or one in which the tenant is a small business.³⁴

In addition to the potential for abuse in the examples just given, an exculpatory clause also eliminates the exculpated party's incentive to act with due care, because the clause deprives the plaintiff of his right to use the legal process when he would otherwise have had the opportunity to do so. For these reasons, clauses that exculpate one party from the consequences of its future negligence are often found to violate public policy.³⁵

Indemnification, in contrast, does not preclude first-instance liability. It deals with ultimate responsibility by shifting the loss from one party to another. For example, if an injured worker recovers against the owner, permitting the owner to shift the loss to the contractor by indemnification in no way precludes the injured worker from recovering. A shift of ultimate responsibility from owner to contractor occurs. If, however, the owner is not able to recover against the contractor, for example because the contractor has filed for bankruptcy, the owner remains liable to the worker. The contingent nature of the owner's contractual right to be indemnified means that it continues to have an incentive to act with due care toward the worker. These twin facts—that the worker receives a remedy and the owner has an incentive to act with due care—means that indemnity agreements, unlike exculpatory clauses, do not violate public policy.³⁶

If the owner was in any way at fault in causing the worker's injury, then risk shifting through indemnification resembles exculpation. Not only is the owner relieved of the consequences of its negligence, but indemnity agreements are often written in favor of the stronger party and against the weaker. Concern with the fairness of indemnity clauses, in particular when used in the construction industry, has led about half the states to regulate such clauses.³⁷ In addition, courts often interpret such clauses narrowly where the indemnified party was itself negligent.³⁸

³³*Crowell v. Housing Auth. of the City of Dallas*, 495 S.W.2d 887 (Tex.1973).

³⁴*McLean v. L. P. W. Realty Corp.*, 507 F.2d 1032 (2d Cir.1974).

³⁵*Hiatt v. Lake Barcroft Community Ass'n*, 244 Va. 191, 418 S.E.2d 894 (1992).

³⁶*Estes Express Lines, Inc. v. Chopper Express, Inc.*, 273 Va. 358, 641 S.E.2d 476 (2007).

³⁷See Section 31.05D.

³⁸See Section 31.05E

Another contract clause that can be compared with an indemnity clause is one that seeks to limit the legal remedy. For example, sellers of machinery sometimes seek to limit their liability to repair and replace defective parts. Similarly, some design professionals seek to limit their liability to their client to a designated amount of money or a certain percentage of the fee.³⁹ If the actual damages in the latter illustration are less than the specified amount, only actual damages can be recovered. But a liability limitation sets a ceiling on the damages.

Many of the same considerations that have been discussed with regard to exculpatory clauses apply to liability limitations. Where they are determined in a proper setting, by parties of relatively equal bargaining power, and where the language clearly expresses an intention to limit the liability, they are given effect.⁴⁰

Contract clauses sometimes stipulate the amount of damages in advance. As seen in Section 26.09B, such clauses are frequently used for unexcused time delay. They are generally given effect as long as they are reasonable. However, some of the same considerations that relate to bargaining power and appropriateness of advance agreement will be taken into account. Liquidated damages clauses, unlike indemnity clauses, do not shift losses.

If the surrounding circumstances justify enforcement of an exculpatory clause or one that limits liability, those same circumstances may justify enforcement of an indemnification clause that has an exculpatory element.

B. Indemnity Clauses Classified

This section uses the prime contract as an illustration. The prime contractor is the *indemnitor*, that is, the party promising to indemnify. The owner is the *indemnitee*, that is, the party to whom indemnification has been promised. The analysis in this section also applies to a subcontract where the prime contractor is the indemnitee and the subcontractor the indemnitor.

Looking first at a claim as it relates to the indemnitor's conduct, the indemnity clause can be "work related." Such a clause covers a broad variety of claims that third parties such as injured workers or adjacent landowners may assert against the indemnitee owners. These claims may be

³⁹See Section 15.03D.

⁴⁰*Delta Air Lines, Inc. v. Douglas Aircraft Co.*, 238 Cal.App.2d 95, 47 Cal.Rptr. 518 (1966).

predicated on fault of the indemnitor prime. However, the only indemnification requirement is that the claim “arise out of,” “be occasioned by,” or “be due to,” to use common indemnity phrases, the work or activity of the prime.⁴¹

Suppose the indemnitor was not at fault, and the indemnitee was instead the sole cause of the accident. Enforcing a “work related” indemnity agreement would then mean that the mere presence of the indemnitor at the work site is sufficient to impose upon it a contractual duty to indemnify. Courts are reluctant to reach this conclusion and instead require some casual connection between the indemnitor’s conduct and the injury or damage. Unusually, these cases involve a solely negligent prime contractor who is the indemnitor suing the fault-free subcontractor indemnitee.⁴²

The clause can be more limited. It may cover only claims based on wrongful conduct of the prime. This is employed by AIA Document A201-2007, Section 3.18 (discussed in Section 31.05G).

Focusing on the *indemnitee*, the claim usually asserts one or a number of bases for owner liability. The claimant may point to acts or failures to act by the owner itself or someone for whom it is responsible, such as design professional or prime contractor. This can raise questions about whose fault is passive versus active or primary versus secondary (as discussed in Section 31.03). The claim may be based on *status*, such as the owner being the possessor of land or the employer with common law or statutory responsibilities often strict in nature. Also, the claim against the indemnitee may be based *in whole or in part* on the indemnitee’s own wrongful acts. Clauses that cover claims solely based on the negligence of the indemnitee are called “broad-form” indemnity clauses, and those that cover claims based in part on the negligence of the indemnitee are called “intermediate-form” indemnity clauses.

The exculpatory feature of many clauses, along with work-related clauses that do not require any legal wrong by the indemnitor prime, has caused courts to scrutinize such clauses. Also, the bargaining power that often enables apparently one-sided clauses to be passed “down the line” from owner to prime, from prime to subcontractor, and so

on, also has generated judicial concern, making it hazardous to try to predict the outcome of litigation.

C. Functions of Indemnity Clauses

The hostility the law has shown toward clauses under which one party has promised to indemnify another often ignores the important function served by the indemnification process. As an illustration, suppose an owner plans to make a construction contract with a prime contractor. The owner recognizes the increased likelihood that claims will be made against it that are based on the contractor’s performance, sometimes but not always negligent. Recognizing that the law increasingly makes the owner responsible to third parties or at least that the law has made it more likely that third parties may make claims against the owner, the owner may say to the contractor,

I have turned over the site to you. It is your responsibility to see to it that the building is constructed properly. You must not expose others to unreasonable risk of harm. The increasing likelihood that I will be sued for what you do makes it fair that you relieve me of ultimate responsibility for these claims by your agreeing to hold me harmless or to indemnify me.

Alternatively, a reassuring proposal may come from the contractor, who may say to the owner,

I know you may be concerned about the possibility that a claim will be made against you by a third party during the course of my performance and that you will have to defend against that claim and either negotiate a settlement or even pay a court judgment. I always conduct my work in accordance with the best construction practices, and I have promised in my contract to do the work in a proper manner. I am so confident that I will do this that I am willing to relieve your anxiety by holding you harmless or by indemnifying you if any claim is made against you by third parties relating to my work. You will have nothing to worry about, as I will stand behind my work. If you are concerned about my ability to pay you, I will agree to back it up by public liability insurance coverage.

In this context, indemnification acts to seal a deal when one party is anxious. The same scenario can be played but in a slightly different way. Suppose the architect asks the owner to obtain indemnification for him from the prime through the prime contract in the manner accomplished

⁴¹*Nabholz Constr. Corp. v. Graham*, 319 Ark. 396, 892 S.W.2d 456 (1995).

⁴²*Jones v. Strom Constr. Co., Inc.*, 84 Wash.2d 518, 527 P.2d 1115 (1974).

by AIA Document A201-2007, Section 3.18. The architect may be saying to the contractor through the owner,

The law may hold me accountable for injury to your workers or to employees of your subcontractors because they may connect their injury with something they claim I did or should have done. You are being paid for your expertise in construction methods and your knowledge of safety rules. These are not activities in which I have been trained or in which I claim to have great skill or experience. For that reason, if a claim is made against me for conduct that is your responsibility, I want you to hold me harmless and indemnify me.

In addition, either owner or architect may back up its request for indemnification from the prime contractor by noting that it is exposed to potentially open-ended tort liability if claims are made by employees of the contractor or other subcontractors, whereas the actual employer, either the prime contractor or subcontractor, who is most directly responsible, need only pay the more limited liability that workers' compensation law imposes on it.

Insurance plays a significant part in the indemnification process, because the promise to indemnify may be worthless unless it is backed up by a solvent insurer. As explained in Section 31.05H, modern standard form liability insurance policies provide coverage for obligations assumed by a contractor under an indemnity agreement with the owner (although contractually assumed liability is generally excluded). Since the contractor is also the party in the best position to prevent a claim from being made under the indemnity clause, distribution of risks through indemnification can facilitate insurance at the cheapest possible cost.⁴³ (An architect who is asked to indemnify, as noted in Section 15.05D, may not be persuaded of this rationale if his professional liability insurance has a high deductible.)

Insurance facilitation assumes some accidents will occur and seeks an efficient method of distributing the ultimate loss to an insurer. Yet indemnification can be looked on from the perspective of worker safety and

avoidance of accidents.⁴⁴ Here the emphasis is on the exculpatory aspects of indemnification. This escape from consequences is particularly a problem with an indemnification provision, such as a broad form or intermediate form, which can exculpate the indemnitee from its own wrongdoing. Even more, a prime contractor who extracts indemnification provisions from all its subcontractors may have little incentive to control project operations in a way that minimizes the likelihood of injuries to workers.

A federal judge, focusing on safety, stated that indemnification seeks to place the ultimate responsibility on the party who can most cheaply avoid the harm.⁴⁵ An application of this principle would extend broad scope to clauses under which subcontractors (closest to the actual operation) indemnify prime contractors and prime contractors (overall control) indemnify owners and design professionals. Despite this, some legislatures, as seen in Section 31.05D, and some courts, as seen in Section 31.05E, have not permitted full contractual freedom to the parties to decide how risks should be allocated by indemnification. Undoubtedly, much of this unwillingness is influenced by the belief that indemnification freely permitted will encourage carelessness. Yet it is unlikely that unregulated indemnification (enforcing clauses as written) would be a disincentive for creating and monitoring a safety program.

The factor that bears most heavily on how the contractor performs is its insurance rates, which may in part be predicated on the number of claims made against it. But the insurance premium is more likely to be predicated on the type of work, the locality, and the volume of the prime contractor's business. Other factors can deter careless performance, such as the possibility that public officials will take action against the prime contractor or the contractor's license will be placed in jeopardy.

In any event, the law allows parties to procure insurance even though the existence of insurance can encourage carelessness. Indemnification is a form of insurance, and there is no reason why the law should be hostile to this process. Undoubtedly, some of the hostility is also generated by the way in which indemnification is forced on the weaker party, which must usually accept such a clause on a take-it-or-leave-it basis. Again, if the risk

⁴³*Guy F. Atkinson Co. v. Schatz*, 102 Cal.App.3d 351, 161 Cal. Rptr. 436 (1980) (citing earlier edition of this book); *Leitao v. Damon G. Douglas Co.*, 301 N.J. Super. 187, 693 A.2d 1209, 1211-12 (App. Div.), certification denied, 151 N.J. 466, 700 A.2d 879 (1997); *Di Lonardo v. Gilbane Bldg. Co.*, 114 R.I. 469, 334 A.2d 422 (1975).

⁴⁴*Ft. Wayne Cablevision v. Indiana & Michigan Elec. Co.*, 443 N.E.2d 863 (Ind.App.1983); *Bosio v. Branigar Org., Inc.*, 154 Ill.App.3d 611, 506 N.E.2d 996 (1987).

⁴⁵*McMunn v. Hertz*, 791 F.2d 88 (7th Cir.1986) (per Judge Posner).

is clearly brought to the attention of the weaker party and that party can insure against that risk and pass the cost of insurance on to the stronger party in its contract price, hostility is not justified.⁴⁶ Courts, adopting the view that indemnity clauses are simply insurance-procurement mechanisms and are enforceable just like any other contract provision, are discussed in Section 31.05E.

D. Statutory Regulation

The concern over indemnification that has been noted in Section 31.05C has led to frequent statutory regulation and, as shall be seen in Section 31.05E, to court decisions that in effect regulate indemnification clauses. Regulation does not view indemnification as a method of reassuring a nervous contract maker, obtaining insurance at the best possible cost, or placing the risk on the party that can avoid the harm most cheaply. Those who regulate indemnification look principally at the exculpatory aspects of all-or-nothing indemnification and the means by which the stronger party obtains indemnification from the weaker party.

Legislative intervention initially resulted from a struggle between the American Institute of Architects (AIA) and the Associated General Contractors of America (AGC)—really a struggle between professional liability insurers of design professionals and general liability insurers of primes and subcontractors. In 1966, the AIA for the first time included an indemnification provision in A201. The AGC, using the muscle of general liability insurers, fought this and ultimately obtained a modification in 1967. But the turf war extended to state legislatures. Contractors' associations were instrumental in obtaining legislation that limited enforceability of construction contract indemnification clauses. Even after the associations settled their dispute in 1967, parties continued to demand that legislatures limit indemnification. Finally, in the 1970s, long after the battle between the AIA and the AGC was over, some legislatures were persuaded to eliminate the exculpatory features of such clauses with their all-or-nothing solutions. A New York court explained the legislature's motivation in passing that state's anti-indemnity statute:

The [anti-indemnity statute] was enacted in 1975 to prevent a practice prevalent in the construction industry of requiring

contractors and subcontractors to assume liability by contract for the negligence of others. The Legislature believed that such "coercive" bidding requirements restricted the number of contractors able to obtain or afford the necessary hold harmless insurance and that it unfairly imposed liability on a contractor or subcontractor for the fault of others over whom it had no control. Moreover, such insurance raised the costs of construction unnecessarily, since the cost of the insurance was added to the bid price, and it also resulted in double coverage in many cases by requiring both hold harmless insurance and protective liability insurance.⁴⁷

Although a detailed examination of anti-indemnity statutes is beyond the scope of this book,⁴⁸ these statutes generally are of two types: "sole negligence" and "own negligence." A "sole negligence" statute prohibits indemnification of losses caused by the indemnitee's sole negligence. Under these statutes, an indemnitor who is fault-free is not required to indemnify, regardless of the wording of the indemnity clause. These statutes were motivated by the view that the stronger party who had also caused the loss should not be allowed to transfer its liability to a weaker party who was without fault. Still, an indemnitor who was only 1 percent at fault may (if the indemnity clause so provides) be liable for the entire loss. While most anti-indemnity legislation consists of "sole negligence" statutes, they are rarely applied to preclude enforcement of the indemnity clause. Most claims for which indemnification is sought do not result solely from the activity or inactivity of the indemnitee. To the contrary, the interdependent nature of elements in the construction project means that claims are usually attributable to both the indemnitee and the indemnitor.⁴⁹

⁴⁷*Brown v. Two Exchange Plaza Partners*, 76 N.Y.2d 172, 556 N.E.2d 430, 434, 556 N.Y.S.2d 991 (1990).

⁴⁸The statutes are categorized and discussed in M. SCHNEIER, CONSTRUCTION ACCIDENT LAW: A COMPREHENSIVE GUIDE TO LEGAL LIABILITY AND INSURANCE CLAIMS, 462-82 (1999) and Gwyn & Davis, *Fifty-State Survey of Anti-Indemnity Statutes and Related Case Law*, 23 Constr. Lawyer, No. 3, Summer 2003, p. 26.

⁴⁹See, for example, N.J.Stat. Ann. § 2A:40A-1 and Mich.Comp.Laws Ann. § 691.991. In *Secallus v. Muscarelle*, 245 N.J.Super. 535, 586 A.2d 305 (App.Div.), aff'd, 126 N.J. 288, 597 A.2d 1083 (1991), the court refused to invalidate an overly broad indemnity clause where the indemnitor was, in fact, negligent. California bars indemnification for both sole negligence and willful misconduct of the indemnitee; see West Ann. Cal.Civ.Code § 2782(a).

⁴⁶*Di Lonardo v. Gilbane Bldg. Co.*, supra note 43.

“Own negligence” statutes bar clauses under which the indemnitor would have to pay for part of the loss caused by the indemnitee’s negligence. Each party must bear the cost of the damage it had caused. The parties are not allowed by agreement to circumvent comparative negligence.⁵⁰

Many in the construction industry deal with risk management. Professional and trade associations, lenders, insurers and sureties, to name some, play important roles in the legislative process. This being a political process insures the need for compromises and trade-offs to get the legislation enacted. Exceptions and complex statutes are inherent in that process. Numerous statutes do not apply to agreements to procure general liability insurance, workers’ compensation insurance or construction bonds.⁵¹ Minnesota permits an owner to indemnify a contractor against strict liability under environmental laws.⁵² California creates exceptions from its “sole negligence” statute for inspecting engineers who obtain indemnification from clients that have a designated financial capacity, indemnification for design defects, and indemnification for engineers dealing with hazardous materials, if liability did not arise out of the gross negligence or willful misconduct of the engineer.⁵³

As already noted, one motivation for anti-indemnity statutes is to prevent prime contractors from imposing expensive insurance requirements on subcontractors—a cost that ultimately is transferred to the owner. Perhaps to bring down the cost of home construction, California bars residential builders from demanding indemnification from their subcontractors for losses that did not arise out of the subcontractor’s work.⁵⁴

Some statutes apply to public works. California prohibits public agencies from seeking indemnification against design professionals who were fault-free,⁵⁵ and Colorado prohibits

public agencies from being indemnified for the losses caused by their own negligence.⁵⁶ Indiana does not apply its “sole negligence” statute to highway construction contracts.⁵⁷

Florida bars indemnity agreements covering the indemnitee’s negligence unless the contract contains a monetary cap on the amount of indemnification which bears a reasonable commercial relationship to the contract and is contained in the bid documents. Even if these conditions are fulfilled, the promise to indemnify cannot extend to damages resulting from the indemnitee’s gross negligence; willful, wanton or intentional misconduct; or for statutory violations or punitive damages (unless these last two damages were caused by the indemnitor).⁵⁸ The effect of this language is to permit indemnity agreements covering the indemnitee’s negligence, but only if the amount of indemnification is capped at a reasonable amount and the indemnitor had warning of the indemnity provision before entering into the contract. One effect of this type of legislation may be to lower the cost to the contractor of obtaining “contractual liability” insurance coverage, since the extent of potential liability is not open-ended.

The patchwork of state anti-indemnity statutes creates a number of problems. First, contractors whose work crosses state lines must be certain their liability insurance will cover the variety of indemnification clauses they may face. Second, additional legal difficulties can be generated if the contract was valid in state A where it was made but a dispute culminated in a lawsuit in state B. Usually the courts in state B will enforce the clause if it is valid where it was made. However, Maryland refused to enforce an indemnification clause that was not harmonious with its own anti-indemnification statute. It looked on enforcement of such a clause as violative of Maryland public policy.⁵⁹

E. Common Law Regulation: Specificity Requirements

Long before the enactment of the anti-indemnification legislation just described, the common law looked with hostility at such clauses. Such clauses were enforced only

⁵⁰Minn.Stat. Ann. § 337.02; N.Y.McKinney’s Gen.Oblig.Law § 5-322.1; West Ann.Wash.Rev.Code § 4.24.115. The Minnesota statute is attacked in Kleinberger, *No Risk Allocation Need Apply: The Twisted Minnesota Law of Indemnification*, 17 Wm.Mitchell L.Rev. 775 (1987). The New York statute is interpreted in *Itri Brick & Concrete Corp. v. Aetna Cas. & Sur. Co.*, 89 N.Y.2d 786, 680 N.E.2d 1200, 658 N.Y.S.2d 903 (1997).

⁵¹740 Ill.Comp.Stat. Ann. § 35/3, interpreted in *Bosio v. Branigar Org., Inc.*, supra note 44.

⁵²Minn.Stat. Ann. § 337.02(2)

⁵³West Ann.Cal.Civ.Code §§ 2782.2, 2782.5, 2782.6.

⁵⁴Id., § 2782(c).

⁵⁵Id., § 2782.8. See also § 2782(b), which shields a contractor from liability for a public agency’s active negligence.

⁵⁶West Ann. Colo.Rev.Stat. § 13-50.5-102(8).

⁵⁷West Ann.Ind.Code § 26-2-5-1.

⁵⁸West Ann.Fla.Stat. § 725.06.

⁵⁹*Bethlehem Steel Corp. v. G. C. Zarnas & Co.*, 304 Md. 183, 498 A.2d 605 (1985). Illinois follows the same rule; see *Lyons v. Turner Constr. Co.*, 195 Ill.App.3d 36, 551 N.E.2d 1062 (1990).

if the language clearly stated that indemnification would be made even if the loss had been caused in whole or in part by the indemnitee's negligence.⁶⁰ Some even required that negligence be mentioned specifically.⁶¹ Regulating such clauses reflected the belief that indemnification often exculpated the indemnitee and could be a disincentive for good safety practices, as well as the belief that such clauses were forced on weaker parties. In operation, the effectiveness of such an approach depended on the skill of the person drafting the indemnification clause.

Although insurance is discussed in Section 31.05H, it is important to note here that many courts look at the contract in which the indemnification clause is contained to see whether the indemnitor is required to purchase and maintain liability insurance.⁶² This focus may indicate an intention that indemnification is to cover claims caused at least in part by the indemnitee's negligence.

In recent years, there has been a modest tendency to look on indemnification clauses neutrally as representing a rational attempt to distribute losses efficiently by facilitating insurance coverage. Courts espousing a more favorable attitude toward such clauses seek to determine the intention of the parties as they would when interpreting any other clause.⁶³

⁶⁰For a few of the many cases, see *Becker v. Black & Veatch Consulting Eng'rs*, 509 F.2d 42 (8th Cir.1974); *Warburton v. Phoenix Steel Corp.*, 321 A.2d 345 (Del.Super.1974), aff'd, 334 A.2d 225 (Del.1975). Pennsylvania, in *Ruzzi v. Butler Petroleum Co.*, 527 Pa. 1, 588 A.2d 1 (1991), followed the majority rule of requiring that a clause be clear and unequivocal if it is to cover negligence of the indemnitee. Although *Ruzzi* was criticized as inflexible and mechanical, depriving the court of the opportunity of hearing testimony outside the writing itself that can indicate the intention of the parties; see *Pennsylvania Supreme Court Review*, 1991, 65 Temp.L.Rev. 679 (1992); the decision was reaffirmed in *Greer v. City of Philadelphia*, 568 Pa. 244, 795 A.2d 376 (2002).

⁶¹*Burns & Roe, Inc. v. Central Maine Power Co.*, 659 F.Supp. 141 (D.Me.1987); *Ethyl Corp. v. Daniel Constr. Co.*, 725 S.W.2d 705 (Tex. 1987).

⁶²*Pennsylvania Supreme Court Review*, 1991, 65 Temp.L.Rev. 679 at 696, note 114 (1992) (citing cases).

⁶³*New England Tel. & Tel. Co. v. Central Vermont Pub. Serv. Corp.*, 391 F.Supp. 420 (D.Vt.1975) (emphasizing two substantial corporations of equal bargaining power who knew what they were doing when they made the contract); *C. J. M. Constr., Inc. v. Chandler Plumbing & Heating*, 708 P.2d 60 (Alaska 1985) (two dissenting); *Washington Elementary School Dist. No. 6 v. Baglino Corp.*, 169 Ariz. 58, 817 P.2d 3, 6 (1991) (interpreting AIA contract); *Morton Thiokol, Inc., v. Metal Bldg. Alteration Co.*, 193 Cal.App.3d 1025, 238 Cal.Rptr. 722 (1987), review denied Oct. 17, 1987 (focuses on intention of the parties rather than applying prior California rule that general indemnification clauses

As noted in Section 20.02, finding the intention of the contracting parties is often difficult if the parties have contracted on the basis of a standard contract published by the American Institute of Architects (AIA) or the Engineers Joint Contracts Documents Committee (EJCDC).

Indemnification is often a key contract clause (especially for insurers), but very frequently, contracting parties do not understand such provisions. They may have selected an AIA or EJCDC document without carefully analyzing its terms. The drafts by these organizations (often influenced or dominated by liability insurers) makes the process of interpretation difficult. In these contracts, a more mechanical and predictable rule may be preferable than focus on the intention of the contracting parties.

The modest tendency toward interpreting indemnification clauses "as written" has by no means become majority rule. This is demonstrated by *Ethyl Corp. v. Daniel Construction Co.*⁶⁴ Earlier Texas decisions had required that the language be clear and unequivocal as to the obligation of the indemnitor to indemnify the indemnitee against the consequences of its own negligence. The court cited Texas decisions that had indicated a trend toward strict construction of such clauses, decisions that came close to adopting the requirement that negligence be expressly mentioned.

However, the court was concerned because

[t]he scribes of indemnity agreements have devised novel ways of writing provisions which failed to expressly state the true intent of those provisions. The intent of the scribes is to indemnify the indemnitee for its negligence, yet be just ambiguous enough to conceal that intent from the indemnitor. The result has been a plethora of lawsuits to construe those ambiguous contracts. We hold the better policy is to cut through the ambiguity of those provisions and adopt the express negligence doctrine.

Under the doctrine of express negligence, the intent of the parties must be specifically stated within the four corners of the contract.⁶⁵

do not cover active negligence); *Columbus v. Alden E. Stilson & Assocs.*, 90 Ohio App.3d 608, 630 N.E.2d 59, 63 (1993) (enforcing work-related indemnity clause), motion to certify overruled, 68 Ohio St.3d 1461, 627 N.E.2d 1002 (1994).

⁶⁴Supra note 61.

⁶⁵Id. at 707-708.

The often inelegantly drafted anti-indemnification statutes and the ambivalent attitude of judges toward indemnification make this process one of the most difficult in construction law.

Complexity is confounded by some jurisdictions that attempt to distinguish between active and passive negligence, concluding that the requisite degree of specificity applies to active but not to passive negligence.⁶⁶ Other courts do not make the active-passive distinction for this purpose.⁶⁷

The plethora of cases that have interpreted indemnity clauses and have come to variant results caused the Illinois Supreme Court to state in despair,

We have examined the authorities cited by the parties and many of those collected at 27 A.L.R.3d 663, and conclude that the contractual provisions involved are so varied that each must stand on its own language and little is to be gained by an attempt to analyze, distinguish or reconcile the decisions. The only guidance afforded is found in the accepted rule of interpretation which requires that the agreement be given a fair and reasonable interpretation based on a consideration of all of its language and provisions.⁶⁸

Despite this neutral approach, the court held that the language did not cover negligence of the indemnitee, as such intention was not expressed clearly and explicitly.

F. Interpretation Issues

Losses and Indemnity Coverage. Clauses can cover certain losses but not others. For example, indemnity clauses can be drawn broadly enough to cover any loss, even those relating to property damage that the indemnitee has suffered. Indemnity, however, is generally designed to transfer losses relating to claims third parties make against the indemnitee.⁶⁹

⁶⁶*Morgan v. Stubblefield*, 6 Cal.3d 606, 493 P.2d 465, 100 Cal.Rptr. 1 (1972). But see *Morton Thiokol, Inc. v. Metal Bldg. Alteration Co.*, supra note 63; *Wrobel v. Trapani*, 129 Ill.App.3d 306, 264 N.E.2d 240 (1970).

⁶⁷*Becker v. Black & Veatch Consulting Eng'rs*, supra note 60.

⁶⁸*Tatar v. Maxon Constr. Co.*, 54 Ill.2d 64, 294 N.E.2d 272, 273-74 (1973). However, the court has recently interpreted similar indemnity language to cover an indemnitee's negligence; see *Buenz v. Frontline Transp. Co.*, 227 Ill.2d 302, 882 N.E.2d 525 (2008).

⁶⁹In *Pacific Gas & Elec. Co. v. G. W. Thomas Drayage & Rigging Co.*, 69 Cal.2d 33, 442 P.2d 641, 69 Cal.Rptr. 561 (1968), the indemnitee sought recovery for damage to its own property. The court held that

Drafters of indemnification clauses should anticipate the types of losses that can occur. Typically, such clauses cover claims for harm to person or damage to property made by third parties. But clauses drafted with these claims in mind will not cover claims for purely economic losses unrelated to personal harm or damage to property.⁷⁰ Sometimes assertions of indemnity appear to be a grasping at straws. For example, an indemnity claim was made for damage resulting to window frames built faultily by the indemnitee prime contractor and then installed by the indemnitor subcontractor.⁷¹ The court saw no specific language covering this loss and refused to include it within the general language.

Similarly, an indemnification clause between prime contractor and owner was held not to cover a loss incurred by the owner to a third party based on the prime contractor having trespassed on the third party's land while doing the work.⁷² The owner did not comply with its contract requirement to obtain an easement. The court held that the loss did not arise out of the prime contractor's performance even though the trespass was caused by its performance. A claim made based on an injury that occurred after the work had been completed, however, falls within the ambit of the indemnity clause. Injuries, whether they occur during or after performance, are the type of loss typically covered by insurance and part of the indemnification process.⁷³

Work-Relatedness of Injury. The indemnitee who uses a work-related indemnity clause usually seeks protection against claims made incident to or arising out of the indemnitor's performance. Interpretation problems develop when a claimant is injured while at work, yet the principal cause of the injury is not him doing the work but the activity of the indemnitee, who later seeks indemnification from, as a rule, the indemnitor employer

evidence submitted by the indemnitor that tended to show that the parties intended to cover only claims made by third parties should have been admitted into evidence.

⁷⁰*Mobil Chemical Co. v. Blount Bros. Corp.*, 809 F.2d 1175 (5th Cir.1987); *Fairbanks North Star Borough v. Roen Design Assoc., Inc.*, supra note 29.

⁷¹*Mesker Bros. Iron Co. v. Des Lauriers Column Mould Co.*, 8 Ill.App.3d 113, 289 N.E.2d 223 (1972).

⁷²*Serafine v. Metropolitan Sanitary Dist.*, 133 Ill.App.2d 93, 272 N.E.2d 716 (1971).

⁷³*Becker v. Black & Veatch Consulting Eng'rs*, supra note 60.

of the claimant. The only connection that can be made between the accident and the activity of the indemnitor is that the accident would not have happened had the indemnitor not been on the job. These problems usually involve an accident to an employee of the subcontractor, a work-related clause, and a demand for indemnification from the indemnitee prime to the indemnitor subcontractor.⁷⁴

Another interpretation issue arose in *General Accident Fire & Life Assurance Corp. v. Finegan & Burgess*.⁷⁵ A sign subcontract included an indemnity provision. After completion of the sign subcontractor's work, the owner's project engineer went to inspect the sign, accompanied by an employee of the sign subcontractor. After inspection, the engineer indicated he wished to check a particular switch that had been installed by another subcontractor. The employee of the sign subcontractor indicated the location of the switch and then left.

On his way to inspect the switch, the engineer fell from a walkway, which had no railing because of the prime contractor's negligence. The injured engineer sued both prime and sign subcontractor. The jury found that the prime contractor had been negligent but that the sign subcontractor had not. The prime contractor's insurer paid the claim and then brought an action against the sign subcontractor based on the indemnity provision. The purpose of inspection was to enable a tenant to move in earlier and was not directly related to the sign subcontractor's performance. The area where the injury had occurred was under the general contract of the prime contractor. For these reasons, the court held that the clause did not cover this accident. It seems that the engineer was no longer dealing with the sign subcontractor's work.

Amount Payable. Usually the indemnitee seeks to transfer its entire loss to the indemnitor. This, as a rule, includes any money paid to the claimant, any costs of investigating the claim, any legal, investigative, or expert witness costs, and interest from the time the payment was made to the third party.⁷⁶ Most clauses deal with these issues. The most troublesome questions relate to amounts

paid under a settlement and costs to defend when it is determined that no liability existed.

As to the first, although one court seemed to require that the indemnitee establish that it would have been *liable*,⁷⁷ it is better to require indemnity if a settlement were made in *good faith*.⁷⁸ It should not be necessary for the indemnitee to have to either litigate or settle and then establish legal responsibility.

Invoking the insurance contract, which also promises to defend and indemnify, some courts have held only if the indemnitor was given notice and an opportunity to defend is the indemnitor bound to a settlement made by the indemnitee who has undertaken the defense. But even here the indemnitee must establish that the settlement was reasonable and prudent under all circumstances. It need not establish that it would have lost the case but need only establish that the settlement was reasonable.⁷⁹

That indemnification may require the indemnitor to indemnify (pay off the claimant) and *defend* or pay the *cost of defense* raises another issue. The promise to defend may be broader than the promise to indemnify. The indemnitor may have the obligation to defend even if it is later determined that the indemnitor was not negligent. For example, suppose the indemnification is "work related" as defined in Section 31.05B. Work-relatedness is the threshold to indemnification. So long as the loss arose out of the indemnitor's work, it has a duty to defend the indemnitee, regardless of whether the indemnitee will ultimately be found entitled to indemnification.⁸⁰ Conversely, if it is determined that the indemnitee was indeed negligent but

⁷⁷*Ford Motor Co. v. W. F. Holt & Sons, Inc.*, 453 F.2d 116 (6th Cir.1971), cert. denied, 405 U.S. 1067 (1972). As shall be seen in Section 31.05G, this is one of the deficiencies of the AIA clause.

⁷⁸*Miller v. Shugart*, 316 N.W.2d 729 (Minn.1982) (indemnitor must pay settlement made by indemnitee if reasonable and prudent). But see *Peter Culley & Assocs. v. Superior Court*, 10 Cal.App.4th 1484, 13 Cal. Rptr.2d 624 (1992), which held that if the indemnitee settles without a trial, it must show that the liability is covered by the contract and that liability existed and the extent thereof. The court also held that the settlement is presumptive evidence of liability and the amount of liability but may be overcome by proof from the indemnitor that there was no liability or the settlement amount was unreasonable. This decision places too great a burden on the indemnitee.

⁷⁹*United States Auto Ass'n v. Morris*, 154 Ariz. 113, 741 P.2d 246 (1987).

⁸⁰*Hoffman Constr. Co. of Alaska v. U.S. Fabrication & Erection, Inc.*, 32 P.3d 464 (Alaska 2001); *Crawford v. Weather Shield Mfg. Inc.*, 9 Cal. Rptr.3d 721, 187 P.3d 424 (Cal. 2008).

⁷⁴*Twin City Fire Ins. Co., Inc. v. Ohio Casualty Ins. Co., Inc.*, 480 F.3d 1254, 1264 (11th Cir.2007) (Alabama law; contractor must indemnify solely negligent owner under a "work related" indemnity clause).

⁷⁵351 F.2d 168 (6th Cir.1965).

⁷⁶*Larive v. United States*, 449 F.2d 150 (8th Cir.1971).

the accident did not relate to the work, the indemnitor would like to recover its cost of defense on the basis of there never having been an obligation to indemnify.⁸¹

The question of who pays defense costs when there is no liability requires that liability insurance be addressed. Indemnification has attributes similar to liability insurance. The obligation to defend is determined by the claimant's allegations, augmented in some states by the discovery of facts as they evolve in the investigation. If there is *potential* liability, the insurer must defend. The insurer's refusal to defend may not stem from its belief that its insured was not liable. The refusal to defend may stem from the insurer's belief that the policy excluded coverage of the claim, that there had been misrepresentation by the insured, or that the insured did not cooperate.

When the insurer doubts its obligation to defend and indemnify, it may wish to assert that defense *later* but not lose control of the defense or be subject to huge liability for failure to defend. As a result the insurer will undertake the defense under a "reservation of rights." This means the insurer reserves the right to assert it had no obligation to the insured after the claim has been resolved. If later it is determined the insurer was not obligated to defend, it may seek to recover its cost of defense from its insured.

Returning to the illustration of the work-related indemnification clause, unless the indemnitor reserved its rights to assert that the claim was not work related, it would probably not be able to assert later that there was no obligation to indemnify and defend on that ground. Taking over the defense without such a reservation would preclude the indemnitor from recovering its defense costs. In such a case its obligation to defend was broader than its obligation to indemnify.

But suppose it was determined that the indemnitee was not negligent, and negligence triggers the indemnification obligation. Probably the same result would follow. The trigger to the obligation to defend is the *claim* of negligence. If there is a *bona fide* claim that the indemnitee was negligent, the indemnitor must defend. If it does so successfully, it need not pay the claimant, because the duty to indemnify does not arise. But the indemnitor cannot recover its cost of defense any more than an insurer can.

The AIA has chosen not to make the indemnitor defend, as in liability insurance, but to make the indemnitor *pay* the *cost of defense* provided by the indemnitee.

The issue of the successful defense is applied to an AIA indemnity clause, as discussed in Section 31.05G.

Who May Enforce Indemnity Clause. Usually, the question of who may enforce the indemnity agreement is straightforward, since the indemnitee is clearly identified. However, protection usually is extended also to persons acting under the direction of the indemnitee, such as its employees, agents, and contractors. At the same time, construction contracts typically state that they do not confer rights or benefits upon parties not signatory to the agreement.

The interplay between these various clauses was the subject of a California case, *The Ratcliff Architects v. Vanir Construction Management, Inc.*⁸² A public owner entered into separate contracts with a construction manager (CM) and an architect. After project completion, the architect asserted that the CM, through its negligent performance, caused the architect to incur higher costs than anticipated and to suffer lost profits. The architect argued that it was an "agent" of the owner within the meaning of the indemnity clause and so had the right to enforce the clause against the CM.

The court rejected the architect's argument, finding that it would conflict with the contract clauses which denied the conferral of rights or benefits upon third parties. The court interpreted the contract as giving only the owner the right to enforce an indemnity clause against the CM on behalf of itself and any of its agents or employees.⁸³ For similar reasons, courts have refused to allow an independent contractor of the owner to enforce an indemnity agreement between the owner and prime contractor.⁸⁴

G. The AIA Indemnity Clause

Before 1966, AIA Document A201 did not contain an indemnification clause. But the liability explosion of the 1960s persuaded the AIA and its insurance counsel that the sting from increased liability could be reduced if

⁸²88 Cal.App.4th 595, 106 Cal.Rptr.2d 1 (2001).

⁸³Id., 106 Cal.Rptr.2d at 7. The court also found the architect's negligence claim was barred by the economic loss rule; see id. at 8–9.

⁸⁴*Pepe v. Township of Plainsboro*, 337 N.J.Super. 209, 766 A.2d 837 (App.Div.2001) (owner's contract administrator cannot sue the prime for contractual indemnity); *Tonking v. Port Auth. of N.Y. and N.J.*, 3 N.Y.3d 486, 821 N.E.2d 133, 787 N.Y.S.2d 708 (2004) (owner's construction manager cannot sue prime).

⁸¹*Titan Steel Corp. v. Walton*, 365 F.2d 542 (10th Cir.1966).

the contractor was required to indemnify the owner and the architect against certain losses. As noted in Section 31.05D, this attempt generated a struggle with the AGC and liability insurers of contractors. The issue was resolved in 1967.⁸⁵ Both groups and the insurers approved a clause, then designated Paragraph 4.18. The clause required the contractor to indemnify owner and architect against certain losses (harm to person or damage to property other than the work itself) that arose out of the work and was caused by the negligence of the contractor, despite the loss's having been caused in part by the indemnitee. However, indemnification was excluded for losses arising out of specified design activities of the architect or "the giving of or the failure to give directions or instructions by the Architect . . . provided such giving or failure to give is the primary cause of the injury or damage." The 1967 Paragraph 4.18.1 was an all-or-nothing intermediate indemnification clause. Noncontractual indemnification was not preempted by the indemnification clause. Unlike many indemnity clauses, this does not require the indemnitor to *defend* as well as indemnify. Instead, the indemnitor pays the cost of defense.

The drafts for the A201 published in 1987 had included language that would have created comparative indemnity, an approach the AIA had taken in its standard subcontract, A401. This would have complied with the increasing number of state statutes that require comparative indemnification.⁸⁶ Insurers resisted this approach; the troubled insurance industry was not in an adventurous mood. What emerged in 1987 was Paragraph 3.18.1. It stated that the indemnification applies "only to the extent caused in whole or in part" by the negligence of the contractor or those for whom it was responsible. This statement appears to change the clause from an all-or-nothing to a comparative clause. Yet the clause also states that indemnification applies whether the claim is caused in whole or in part by the indemnitee. The latter would not be necessary were the clause simply one under which the contractor indemnifies for that portion of the loss caused by its negligence. It is unlikely that the AIA intended Paragraph 3.18.1 to be a comparative indemnification clause. The phrase "only to the extent caused" may have been included inadvertently.

⁸⁵Changes in 1970 and 1976 were marginal. In A201-1997, the clause is ¶3.18.

⁸⁶See Section 31.05D.

Yet most of the cases⁸⁷ and the commentators⁸⁸ looked at the language as creating a comparative indemnity clause. The offending language was deleted in 1997 and that deletion was continued in 2007. Now it is clear that Section 3.18 is a comparative indemnity clause. It also appears that the cost of defense, as well as indemnification, will be apportioned by the percentage of fault.⁸⁹ (See Figure 31.2.)

This apportionment raises the issue discussed in Section 31.05F: Who pays the defense costs if the claim is defended successfully? Before the clarification in 1997, it was held that if the architect (the indemnitee) defended the claim successfully, the contractor (the indemnitor) would still have to pay the cost of the defense.⁹⁰ However, these cases looked at Paragraph 3.18.3, which limited the broad indemnification required by Paragraph 3.18.1 by excluding design and site services of the architect under certain conditions. This exclusion generated claims, generally unsuccessful, by contractors that if the claim was based on activities excluded from indemnification, there was no obligation to indemnify and the costs of defense should not be borne by the indemnitor contractor.⁹¹

Because that exclusion was deleted in 1997, this threshold to indemnification issue should not arise. In A201-2007, indemnification covers only claims based on the negligence of the indemnitor contractor. Claims based on negligence of the architect or the owner will need to be defended and paid for by them.

A few other aspects of the indemnification provision in A201-2007 merit comment. First, Section 3.18.1 states that the indemnification is done to "the fullest extent permitted by the law." This can simply signal to users that local legislation must be checked. Or the statement can be

⁹¹*Ibid.*

FIGURE 31.2 AIA Document A201-1997, Paragraph 3.18: Comparative indemnity clause.

interpreted to invite the court to scale down or “reform” any clauses that state legislation would invalidate.⁹²

Indemnification applies only if the contractor is negligent. This requirement could preclude indemnity if there were a settlement in which no one admitted having been negligent. Indemnification, as noted in Section 31.05F, should apply to settlements made in good faith.

Finally, the architect given indemnification under Section 3.18 is not a party to the construction contract. His right to enforce indemnification depends on Section 1.1.2 or common law third-party beneficiary law.⁹³ Section 1.1.2 states that the architect shall be entitled to enforcement of those obligations “intended to facilitate performance of the Architect’s duties.”

H. Insurance

Owners frequently require that contractors procure insurance covering the risks specified in the indemnification clause. Even without this requirement, a prudent contractor will be certain that its insurance will cover this risk. Generally, liability policies cover only liability imposed by law and not that imposed or assumed by contract.⁹⁴

⁹²*Robertson v. Swindell-Dressler Co.*, 82 Mich.App. 382, 267 N.W.2d 131 (1978).

⁹³Owners have been able to recover on indemnification clauses in subcontracts to which they are not a party. *Schroeder v. C. F. Braum & Co.*, 502 F.2d 235 (7th Cir.1974); *Titan Steel Corp. v. Walton*, supra note 81.

⁹⁴But in *Vandenberg v. Superior Court*, 21 Cal.4th 815, 982 P.2d 229, 88 Cal.Rptr.2d 366 (1999), the court ruled that a commercial liability policy may cover contract claims, so long as other requirements for

At one time, it was necessary for the contractor to obtain a specific endorsement covering the liability assumed by these indemnification clauses. However, modern standard form commercial liability policies provide coverage for liability assumed under an “insured contract,” which has been interpreted to mean an indemnity agreement.⁹⁵ Contractors should be certain, as should owners, that the liability policy covers this risk.

As noted, agreements to procure insurance to back up an indemnity provision are generally not invalidated by anti-indemnity legislation. Sometimes clarification that insurance does not run afoul of anti-indemnity legislation is done expressly by statute.⁹⁶ When courts have faced this issue without the benefit of a statute, they have recognized the difference between an indemnity clause with exculpatory features and a liability insurance policy.⁹⁷ The former is often thought to induce carelessness on the site, whereas the latter is looked on as a proper method of distributing risks.

coverage are met. The requirements for coverage, and not the plaintiff’s theory of recovery, determine whether the policy applies. See also *Roger H. Proulx & Co. v. Crest-Liners, Inc.*, 98 Cal.App.4th 182, 119 Cal.Rptr.2d 442 (2002), as modified on denial of rehearing, May 28, 2002, review denied July 17, 2002.

⁹⁵For coverage granted under the “insured contract” language, see *Gibson & Assocs., Inc. v. Home Ins. Co.*, 966 F.Supp. 468, 475–76 (N.D.Tex.1997).

⁹⁶West Ann.Minn.Stat. § 337.05(1). The statutes are collected in 14 *Constr.Litig.Rep.*, No. 1, Jan. 1993, p. 9.

⁹⁷*Holmes v. Watson-Forsberg Co.*, 488 N.W.2d 473 (Minn.1992), M. SCHNEIER, *CONSTRUCTION ACCIDENT LAW*, supra note 48, at 473–75

Another difficulty that arises when an indemnity obligation is backed up by insurance is whether the insurance obligation remains in force if the indemnity clause is found invalid, either under an anti-indemnity statute or a common law analysis. Some courts find that the two obligations rise and fall together, so that a party not liable for indemnification also has no duty to provide insurance to cover the loss.⁹⁸ Other courts find the insurer's duty to provide coverage remains, even if its insured's liability under the indemnity agreement has been negated. These courts

⁹⁸*Hurlburt v. Northern States Power Co.*, 549 N.W.2d 919 (Minn.1996).

point out that the owner could hardly have intended the requested insurance coverage to fail precisely when its indemnity rights against the contractor are lost. They also note that the insurance coverage trigger (usually under an additional insured endorsement) may be broader than the duty to indemnify. Courts also reason that the insurer, having accepted a premium, should not be allowed to escape coverage for reasons having nothing to do with the policy itself.⁹⁹

⁹⁹*Shell Oil Co. v. National Union Fire Ins. Co.*, 44 Cal.App.4th 1633, 52 Cal.Rptr.2d 580, 585 (1996), review denied Aug. 14, 1996 (intent of owner); *Acceptance Ins. Co. v. Syufy Enterprises*, 69 Cal.App.4th 321, 81 Cal.Rptr.2d 557 (1999), review denied Apr. 14, 1999 (insurance coverage for owner's own negligence involving a premises defect not part of the contract work); *Heat & Power Corp. v. Air Products & Chemicals, Inc.*, 320 Md. 584, 578 A.2d 1202, 1208 (1990) (insurer collected premium).

Surety Bonds: Backstopping Contractors

SECTION 32.01 Mechanics and Terminology

The surety bond transaction is a peculiar arrangement and differs procedurally from most contracts. The typical surety arrangement is essentially triangular. The “surety” obligates itself to perform or to pay a specified amount of money if the “principal debtor” (usually called the “principal”) does not perform. The person to whom this performance is promised is usually called the “obligee” (sometimes called the “creditor”). In the building contract context, the surety is usually a professional bonding company. The principal is the prime contractor or, in the case of subcontractor bonds, a subcontractor. The obligee is the owner or, in the case of a subcontractor bond, the prime contractor.¹

If the owner requires, the prime contractor (the principal) applies for a bond from a bonding company. Usually the owner indirectly pays the cost of the bond, because the bidder adds the bond premium to its costs when computing its bid. The bond is issued to the owner (the obligee). The bond “runs to” the owner in that performance by the surety has been promised to the owner even though the prime contractor applied for the bond.

Another problem in dealing with surety bonds results from the antiquated way in which bonds are written. The earliest bonds were called *penal bonds*. The surety made an absolute promise to render a certain performance or to pay a specified amount of money. This was followed by a paragraph stating that the bond would be void if the

principal promptly and properly performed all the obligations under the contract between principal and obligee. As seen later in this section, use of this antiquated language has continued to the present.

This format can cause problems. The transaction for which the surety provides financial security can be simple or complex. As an illustration of the former, the bail bondsperson will pay if the accused fails to appear at the hearing, or a banker’s blanket bond requires the surety to pay if the bank official embezzles funds. However, a prime contractor backed by a surety has a wide variety of obligations set forth in the construction contract. For example, the prime contractor promises to build the project properly, not to damage the land of adjacent landowners,² to perform the work in such a way as to avoid exposing workers and others to unreasonable risk of harm, and to indemnify the owner and design professional if certain claims are made.

Often bond language does not state which duties the bond covers. For example, AIA Document A311 (issued in 1970) refers to the construction contract and simply states that “if Contractor shall promptly and faithfully perform said Contract then this obligation shall be null and void; otherwise it shall remain in full force and effect.” Which aspects of the contractor’s performance does the surety back up? This will be discussed in Section 32.10D.

²Generally the surety is not responsible for tort claims against its principal debtor, often those made by adjacent landowners. See Barker, *Third-Party Tort Claimants and the Contract Bond Surety*, 5 *Constr. Lawyer*, No. 1, Spring 1984, p. 7. But if the bond exceeds a statutory amount and has broad language, one commentator believes a tort claimant may be able to recover from the surety. Perry, *Third Party Tort Claimants Can Recover Against Sureties Under Construction Bonds: Is the Bond a Comprehensive General Liability Policy?* 5 *Constr. Lawyer*, No. 4, Apr. 1985, p. 5.

¹The Restatement (Third) of Torts: Suretyship and Guaranty (1996) uses somewhat different terminology: the principal is the “principal obligor,” the surety is the “secondary obligor,” and the term “obligee” is unchanged.

Also, bond language often does not specifically control problems of coverage, problems of notices, and other things that are normally part of any contract. Improvement in this regard has been made, and some bonds such as AIA Document 312 (issued in 1984) today do contain specific provisions that better inform parties of rights and duties under the bond. See Appendix D.

Another terminological distinction is between the conditional nature of bonds used in the American construction industry and “on demand” or unconditional bonds commonly used in British and international construction projects. These will be discussed in Section 32.10C.

SECTION 32.02 Function of Surety: Insurer Compared

A surety’s function is to assure one party that the entity with whom it is dealing will be backed up by someone who is financially responsible. Sureties are used in transactions where people deal with individuals or organizations of doubtful financial capacity. They provide credit. Sureties must be distinguished from insurers, though each provides financial security.

Yet the similarities between insurers and sureties, as noted in Section 32.10I, mean that for regulatory purposes they are often lumped together. For example, the California Supreme Court found invalid a legislative attempt to exempt sureties from the rate control that Proposition 103 adopted in California to regulate insurance rates, as altering the proposition.³

An insured is concerned that unusual, unexpected events will cause it to suffer losses or expose it to liability. Although it can self-insure—that is, bear the risk itself—it usually chooses to indemnify itself against this risk by buying a promise from an insurance company, in exchange for paying a premium. The insurer distributes this risk among its policyholders.

In public liability insurance, the insured itself may be at fault and cause a loss to the insurer. But the insurer cannot recover its loss from its own insured. Although it may seek to recover its losses from third parties through subrogation (stepping into the position of the person it

has paid—its insured—and thereby acquiring any claims of its insured against those who caused the loss), it cannot recover from those named as insureds in the policy.⁴

Sureties, in contrast, in addition to dealing with ordinary construction contract performance problems, which can be considered business losses (not the “accidents” central to insurance), seek, through indemnity agreements, to recover any losses they have suffered from the principal party on whom it has written a bond as well as individual shareholders of a corporate principal. In the late 1970s, contractors who were liable because of defective workmanship sought to recover from their commercial (formerly called “comprehensive”) general liability (CGL) insurers, preferring this arrangement to having their sureties pay the loss.⁵ Their sureties would seek to recover from them; their CGL insurers could not.

SECTION 32.03 Judicial Treatment of Sureties

Judicial attitude toward sureties has changed. Before professional sureties developed, the surety would be a private person (perhaps a relative of the principal) who sought to aid the principal to obtain a contract or to stave off a creditor by obligating himself to perform if the principal did not. Such a surety was frequently not paid and received no direct benefit for taking this risk. For these reasons, the surety was considered a “favorite” of the law.

One illustration of this favored position was the Statute of Frauds, which requires that certain types of promises must be evidenced by a written memorandum.⁶ The original Statute of Frauds, enacted in 1677, included promises to answer for the debts, defaults, or miscarriages of another. Without a writing, the surety was not held liable. This requirement was to protect her from the enforcement of an impulsive oral promise often made without due deliberation.⁷ Also, any minor change in the contract between the principal and the obligee would discharge the surety (relieve her of liability).⁸ The personal, unpaid

⁴Subrogation is discussed in Section 23.05C.

⁵See Section 24.08.

⁶See Section 5.10.

⁷A written memorandum was not required where the main purpose or leading object of the surety was to benefit herself.

⁸See Section 32.10C for additional applications of this doctrine (called the *stricti juris* rule).

³*Amwest Surety v. Wilson*, 11 Cal.4th 1243, 906 P.2d 1112, 48 Cal. Rptr. 12 (1995).

surety could not handle assurance needs in a commercial economy; the personal surety herself might not be financially responsible. For this reason, the professional paid surety has developed as an important institution in both economic life generally and in building contracts.

The development of professional sureties casts doubt on protective rules developed largely when sureties were uncompensated. Although some protective rules are still applied, the professional surety is not regarded with the tender solicitude accorded the personal, uncompensated surety. This changeover from a legally favored position to one of neutrality—and perhaps even to one of disfavor—creates uncertainty in the law. Older cases are sometimes cited as precedents to protect sureties, but these precedents may be of limited value, because being a surety is now a business.

The ambivalence toward sureties is illustrated by *Winston Corp. v. Continental Casualty Co.*,⁹ which involved a claim by an owner against the surety on a performance bond. The bond incorporated all the provisions of the construction contract.

The contractor ran into financial difficulty causing delays, all known to the surety. Five months after the scheduled completion date, the owner met with the contractor and invited the surety to meet also. The surety, however, refused to attend. (The performance bond part of AIA Document 312, Paragraphs 2 and 3.1, requires the surety to participate in conferences when the owner considers declaring the contractor “in default.” See Appendix D.) At this meeting, the owner and the contractor entered into an agreement designed to accelerate construction. Under the agreement, the contractor assigned the construction contract to the owner, permitted the owner to take possession of the premises, and assigned the contractor’s subcontracts to the owner. However, the contractor’s continued participation was expected. The owner immediately telephoned the surety, notifying it of the new arrangement, and mailed a copy of the letter agreement to the surety. A year after the scheduled completion date, the project was completed.

The owner sued on performance and payment bonds. The surety’s defense was that the agreement between owner and contractor modified the original construction

contract and discharged the surety. Also, the surety contended that it was released by the owner’s failure to give the surety seven days’ written notice before terminating the contractor. The trial court, noting that sureties were favorites of the law, sustained the surety. The appellate court reversed, concluding that the owner had an absolute right to terminate the contract if the contractor was in default and that taking over the contract merely exercised this right.

As for the failure to give notice before taking over construction, the court agreed that historically, any slight deviation from the contract terms would discharge the surety. But, noted the court, applying this doctrine often caused harsh and unjust results, especially when compensated sureties were relieved of their obligations because technical breaches of the construction contract were incorporated as part of the bond. This harshness induced most courts to deviate from the doctrine under which the surety was the favorite of the law and to require the compensated surety to show that the change in the original agreement was material and prejudicial to the surety. The surety must show that the change increased the surety’s risk or changed the risk to the surety’s detriment.

In addition to no longer considering the surety as a favorite, courts generally construe ambiguities against the surety for the same reasons that most insurance policies are construed against the insurance company.¹⁰

SECTION 32.04 Surety Bonds in Construction Contracts

Surety bonds play a vital part in the construction process. The contracting industry is volatile: Bankruptcies are not uncommon, and a few unsuccessful projects can cause financial catastrophe. Estimating costs is difficult and requires much skill. Fixed-price contracts place many risks on the contractor, such as price increases, labor difficulties, subsurface conditions, and changing governmental policy.

Some construction companies are poorly managed and supervised. Often they are undercapitalized and rely heavily on the technological skill of a few individuals. If

⁹508 F.2d 1298 (6th Cir.), cert. denied, 423 U.S. 914 (1975). But see *In re Liquidation of Union*, 220 A.D.2d 339, 632 N.Y.S.2d 788 (1995) (surety discharged by change orders without consent of surety).

¹⁰*United States v. Algernon Blair, Inc.*, 329 F.Supp. 1360 (D.S.C.1971); *School Dist. No. 65R of Lincoln County v. Universal Sur. Co., Lincoln, Neb.*, 178 Neb. 746, 135 N.W.2d 232 (1965).

these people become unavailable, difficulties will likely arise. For many construction companies, credit may be difficult to obtain. Some contractors do not insure against the risks and calamities that can be covered by insurance. Finally, anti-inflationary government policies such as tight money policies almost always hit the building industry first.

In most construction projects, bonds are needed to protect the owner.¹¹ The owner in most projects would like to have a financially solvent surety if the successful bidder does not enter into the construction contract (bid bond), the prime contractor does not perform its work properly (performance bond), or the prime contractor does not pay its subcontractors or suppliers (payment bond). (Bond requirements can act as preliminary screen for contractor selection.)

If these events do not occur, the amount paid for a surety bond may seem wasted. Some institutional owners believe there is no need for a surety bond system if the prime contractor is chosen carefully and if a well-administered payment system eliminates the risk of unpaid subcontractors and suppliers. Such owners may choose to be self-insurers and not obtain bonds. They realize there may be losses, but they believe the losses over a long period will be less than the cost of bond premiums.

Even where a bond is not required at the outset, it is best to include a provision in the prime contract that will require the prime contractor to obtain a bond before or during performance if the owner so requests. Usually the owner pays the cost of a bond issued after the price of the project is agreed on.

Public construction frequently requires performance and payment bonds. The latter are required to protect subcontractors and suppliers who have no lien rights on public work. The Miller Act¹² requires federal prime contractors to obtain performance bonds and payment bonds based on the contract price, and similar requirements exist in state public contracting under "Little Miller Acts." In addition, often local housing development legislation requires that the developer furnish bonds to protect the local government if improvements the developer has

promised are not made. Legal advice should be obtained to determine whether the project requires bonds.

The invitation to bid usually states whether the contractor is required to obtain a surety bond, the type or types of bonds, and the amount of the bonds. In some cases, the owner wishes to approve the form of bond and surety used. Also, the owner may want to have the right to refuse any substitution of the surety without its express written consent given before substitution.

Should the owner specify which surety bond company must be used? The choice depends on rates, bond provisions, and the reputation of particular bonding companies for efficient operation and for fairness in adjusting claims. If relative standardization exists on these matters, it is advisable to let the contractor choose the bonding company. The contractor may have an established relationship with a particular bonding company. In most cases, it is probably sufficient to permit the contractor to choose the bonding company, as long as the bonding company selected is licensed to operate in the state where the project will be built.

Occasionally a designated bonding company is unsatisfactory to the owner. This dissatisfaction may be based on suspicion of financial instability or a past record of arbitrariness in claims handling. One method of exercising some control over the selection of the bonding company is to provide in the contract that the contractor submit to the owner the bond of a proposed bonding company for the owner's review. If the owner, in exercising its best judgment, determines that it is inadvisable to use that bonding company, the owner can veto the proposed bonding company and designate another.¹³

SECTION 32.05 Bid Bond

The function of a bid bond is to provide the owner with a financially responsible party who will pay all or a portion of the damages caused if the bidder to whom a contract is awarded refuses to enter into it.¹⁴

¹¹The relationship between the surety's obligation and any obligation to arbitrate was discussed in Section 30.15.

¹²40 U.S.C.A. § 270a-f, revised by Pub. L. No. 107-217, 116 Stat. 1062 (Aug. 21, 2002), codified at 40 U.S.C.A. §§ 3131-3133 (West Supp. 2003).

¹³In *Weisz Trucking Co. v. Emil R. Wohl Constr.*, 13 Cal.App.3d 256, 91 Cal.Rptr. 489 (1970), the standard for approval was held to be objective. However, a good-faith standard can be inserted in the contract.

¹⁴See Section 18.04E. Bid bonds are rare in Europe because bidders are frequently prequalified. This is also the reason why European bonds are for 5 to 10 percent of the contract price, compared with the 50 to 100 percent in the United States.

SECTION 32.06 Performance Bond

The performance bond provides a financially responsible party to stand behind some aspects of the contractor's performance. If a payment bond is furnished, the performance bond will not include payment of subcontractors, their suppliers, and suppliers of the prime contractor. See Figure 32.1. The AIA performance bond is reproduced in Appendix D.

Bonds usually place a designated dollar limit on the surety's liability. Typically, bond limits are 50 percent or 100 percent of the contract price. Some statutory bonds are required to be 50 percent of the contract price.

SECTION 32.07 Payment Bond

The payment bond is an undertaking by the surety to pay unpaid subcontractors and suppliers. See Figure 32.2. Appendix D reproduces the AIA payment bond. An understanding of the function of a payment bond requires a differentiation between private and public construction work. All states give unpaid subcontractors and suppliers liens if they improve private construction projects. This process was described in Section 28.07D.

Although there are various ways to avoid liens, one method has been to require prime contractors to obtain payment bonds. A payment bond obligates a surety to pay subcontractors and suppliers if the prime contractor does not pay them.¹⁵ The owner seeks to avoid liens filed against its property. Although the owner generally has no contractual relationship with unpaid subcontractors or suppliers, the latter parties if unpaid can assert liens against the owner's property they have improved. The owner would prefer to direct them to the bonding company for payment.

Also, subcontractors are more likely to make bids when they can be assured of a surety if they are unpaid. The competent subcontractor who deals with a prime contractor of uncertain financial responsibility should add a contingency to its bid to cover possible collection costs and the risk of not collecting. Having a payment bond should eliminate the need for this cost factor. In addition, subcontractors and suppliers should be more willing to perform properly and deliver materials as quickly as

¹⁵Whether an unpaid subcontractor or supplier can recover on a payment bond if it has endorsed a joint check but did not receive payment is discussed in Section 22.02J.

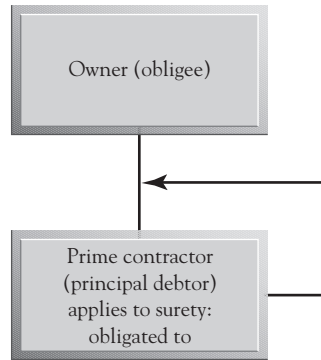

FIGURE 32.1 Performance bond.

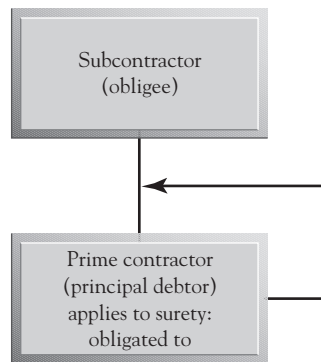

FIGURE 32.2 Payment bond.

possible when they are assured they will be paid. Although they have a right to a mechanics' lien, the procedures for perfecting the lien and satisfying the unpaid obligation out of foreclosure proceeds are cumbersome and often ineffective. Payment bonds are preferable to mechanics' liens.

Generally, subcontractors and suppliers cannot impose liens on public work. In some states, they can file a stop notice, which informs the owner that a subcontractor has not been paid and requires the owner to hold up payments to the prime contractor. However, the stop notice applies only to the unpaid balance still held by the owner when the notice was filed. A payment bond for the full contract price provides subcontractors with greater fiscal protection.

Competent subcontractors and willing suppliers are essential to the construction industry. These important components should have a mechanism that lets them collect for their work. Payment bonds do this. Without a reliable payment mechanism, a substantial number of

subcontractors might go out of business. Eliminating competent subcontractors can have the unfortunate effect of reducing competition and the quality of construction work.

SECTION 32.08 Subcontractor Bonds

Sometimes the prime contractor requires that subcontractors also obtain payment and performance bonds. If a subcontractor does not perform as obligated, the prime contractor (or its surety looking toward reimbursement) wants to have a financially responsible person to stand behind the subcontractor. This is the justification for a subcontractor performance bond. See Figure 32.3. The justification for the subcontractor payment bond is similar to the justifications given for prime contractor payment bonds. If a subcontractor does not pay its sub-subcontractors or suppliers, the prime contractor (or its surety) is likely to be responsible, as it usually obligates itself to erect the project free and clear of liens. In many cases, unpaid sub-subcontractors and suppliers of subcontractors have lien rights against projects. In a large construction project, a substantial number of bonding companies may have written bonds on the various contractors in the project. This web makes the litigation in such cases complicated. Often the principal participants in a litigation are bonding companies, each seeking to shift the responsibility to the other.

SECTION 32.09 Other Bonds

Bonds also serve other purposes in the construction process. For example, in some states owners can post a bond that can preclude a lien from being filed or dissolve a lien that has been filed. The party filing the mechanics' lien must pursue its rights against the bond and the owner's title (or ownership rights) for the property to remain free and clear. Sometimes warranty bonds are used to back up the owner's claim under a warranty given by the contractor.

SECTION 32.10 Some Legal Problems

A. Who Can Sue on the Bond?

The most troublesome legal issue has been the seemingly simple question of whether unpaid subcontractors and suppliers can sue on a surety bond. Unpaid

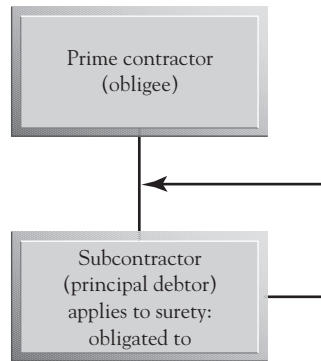

FIGURE 32.3 Subcontractor bond.

subcontractors and suppliers are not obligees under the bond. That is, the bond is not written to them, and the surety does not specifically obligate itself to them. Owners on prime contractor bonds or prime contractors on subcontractor bonds have no difficulty instituting legal action, because they are obligees and the bonds are written to them.

Early legal problems were complicated by using a single bond called the “faithful performance bond.” Because the legal standard applied to determine the right of someone other than the obligee to sue on the bond was whether the owner as obligee intended to benefit unpaid subcontractors and suppliers, some courts denied unpaid subcontractors and suppliers the right to sue on the bond. These courts reasoned that the owner must have intended to benefit itself. The bonds covered aspects of the prime contractor’s performance other than nonpayment of subcontractors and suppliers. Also, the interests of owner and unpaid subcontractors and suppliers could conflict if each had claims against the prime contractor and if the amount of the bond could not satisfy all claims. As a result, the practice changed to encompass two bonds. The payment bond was to cover default consisting of nonpayment of subcontractors and suppliers, whereas the performance bond covered all other aspects of nonperformance by the prime contractor. Yet even where two bonds are issued, some courts still deny unpaid subcontractors and suppliers the right to sue on the bond.¹⁶

¹⁶See cases at *infra* note 17.

This already complicated area was muddled further by courts that differentiated between bonds on public works and those for private projects. These courts permitted subcontractors and suppliers to sue on bonds executed for public projects. They noted that liens could not be asserted on public projects and the intention of the public agency requiring the bonds must have been to benefit the unpaid subcontractors and suppliers. But on private projects that were lienable, an unpaid subcontractor or supplier could not sue on the bond, because the intention must have been to benefit the owner. Courts deciding this question often focus solely on a private owner's desire to avoid liens being filed against its property. This ignores the other functions of surety bonds, such as those mentioned in Section 32.07.

Although the cases are not unanimous (bond language will vary), a strong modern tendency allows subcontractors and suppliers to sue directly on payment bonds if the bond states that the surety will pay unpaid subcontractors or suppliers.¹⁷ This outcome is reflected in AIA bonds (in Appendix D), which clearly give unpaid subcontractors and suppliers a right to sue the surety. Courts interpreting unclear language in a bond should recognize that the owner wants to be able to tell an unpaid subcontractor or supplier that it will be paid by the bonding company and that if the bonding company wrongfully refuses to pay, the subcontractor or supplier will be able to institute legal action itself. A bond purchases this right. The party paying for the bond intends that unpaid subcontractors and suppliers have this right, and this intention should be controlling.

Where bonds are required for public work or where bonds are filed on private work under statutes that allow such filing as a substitute for lien rights, the language of the statute frequently determines who can sue on the bond.¹⁸ Typically the claimant has furnished labor or

materials that have gone into the project. Yet cases have permitted a contractor's lender,¹⁹ a pension fund,²⁰ an unpaid architect,²¹ a subcontractor's assignee,²² and state and federal governments²³ to institute action on a payment bond.

Coverage under payment bonds sometimes turns on where the claimant is located in the chain of contracts ultimately leading to the prime contractor. The farther down a claimant is on the chain, the less likely it will be covered by the bond. A further complication is whether a remote claimant's contract is with a subcontractor or a supplier (also called a materialman). Because subcontractors provide on-site services, whereas suppliers do not, those who contract with a subcontractor are more likely to come within the scope of a payment bond than those who contract with a supplier.

The Miller Act—the bonding statute for federal construction projects over a given size—reflects this dichotomy between subcontractor and supplier. The furthest extent of payment bond coverage under the Miller Act is to one who has “a direct contractual relationship with a subcontractor.”²⁴ Under this language, a subcontractor to a subcontractor may be a claimant, but a subcontractor to a supplier may not be a claimant. The Miller Act does not define the term “subcontractor,” but it has been defined by the Supreme Court as one who assumes from the prime contractor a specific part of the contract requirements.²⁵ The courts split on whether a party that supplies a significant portion of the project's materials but that does not

¹⁷*Socony-Vacuum Oil Co. v. Continental Cas. Co.*, 219 F.2d 645 (2d Cir.1955) (a leading case); *Jacobs Assoc. v. Argonaut Ins. Co.*, 282 Or. 551, 580 P.2d 529 (1978) (reversing earlier opinion denying right of direct action), noted in 58 Or.L.Rev. 252 (1979). But in *Wyoming Machinery Co. v. United States Fid. & Guar. Co.*, 614 P.2d 716 (Wyo.1980), subcontractors were denied third-party beneficiary status on a prime contractor's payment bond. Material suppliers were denied bond coverage in *State of Florida v. Wesley Constr. Co.*, 316 F.Supp. 490 (S.D.Fla.1970), aff'd, 453 F.2d 1366 (5th Cir.1972) and *Day & Night Mfg. Co. v. Fidelity & Cas. Co. of New York*, 85 Nev. 227, 452 P.2d 906 (1969) (right to sue only if language clear).

¹⁸*Houdaille Indus., Inc. v. United Bonding Ins. Co.*, 453 F.2d 1048 (5th Cir.1972).

¹⁹*First Nat'l Bank of South Carolina v. United States Fid. & Guar. Co.*, 373 F.Supp. 235 (D.S.C.1974).

²¹*Herbert S. Newman and Partners, P.C. v. CFC Constr. Ltd. Partnership*, 236 Conn. 750, 674 A.2d 1313 (1996).

²²*Quantum Corporate Funding, Ltd. v. Westway Industries, Inc.*, 4 N.Y.3d 211, 825 N.E.2d 117, 791 N.Y.S.2d 876 (2005).

²³*Island Ins. Co., Ltd. v. Hawaiian Foliage & Landscape, Inc.*, 288 F.3d 1161 (9th Cir.2002). The bond was acquired by a subcontractor so the prime contractor, not the governments, was the obligee (the party for whose protection the bond was acquired). Nonetheless, the court ruled that the governments were third-party beneficiaries of the bond and could recover from the surety the employment taxes the subcontractor had failed to pay.

²⁴40 U.S.C.A. § 3133(b)(2).

²⁵*Clifford F. MacEvoy Co. v. United States ex rel. Calvin Tomkins Co.*, 322 U.S. 102, 109 (1944).

actually install these supplies qualifies as a subcontractor.²⁶ Claimants who contracted with a supplier are too remote from the prime contractor to come within the protection of the Miller Act.

As construction has become more complicated, with linked sets of contracts connecting a variety of parties, problems as to who can sue on surety bonds take new forms. For example, an Illinois case involved an attempt by the ultimate user of a project (a school district) to bring a claim on the performance bond given by the prime contractor. The construction contract clearly indicated that the ultimate user was to be an intended beneficiary of the construction contract, and that contract was incorporated into the performance bond. But the school district was denied any direct rights on the bond because the bond itself made clear that only the obligee—the public entity acting as owner—could maintain an action on the bond.²⁷ Similarly, a number of cases have involved unsuccessful attempts by separate contractors (multiple primes) to bring claims on bonds where the principal was a separate contractor and the bond was issued to the owner as obligee.²⁸

Planning in the context of a traditional construction organization should include ensuring that unpaid subcontractors and suppliers can bring action on these bonds. This can be accomplished relatively easily by including language similar to that in AIA bonds. Where a nontraditional system is used, such as separate contracts (multiple primes) or the party most interested in performance is not a nominal owner but an ultimate user, planning must consider who can bring legal action on any bonds that are supplied by contractors and that choice expressed in the contract and the bond.

B. Validity of Bond

Suppose the contractor misrepresents its resources when it applies for the bond. This would be misrepresentation by the applicant, not by the obligee-owner. In such

²⁶*United States ex rel. E & H Steel Corp. v. C. Pyramid Enterprises, Inc.*, 509 F.3d 184 (3d Cir.2007) (neither installation nor special fabrication of the product is a requirement for subcontractor status).

²⁷*Board of Educ., School Dist. No. 15 DuPage County v. Fred L. Ockerlund, Jr. & Assoc., Inc.*, 165 Ill.App.3d 439, 519 N.E.2d 95 (1988).

²⁸*M. G. M. Constr. Corp. v. New Jersey Educ. Facilities Auth.*, 220 N.J.Super. 483, 532 A.2d 764 (Law Div.1987); *Moore Constr. Co., Inc. v. Clarksville Dep't. of Elec.*, 707 S.W.2d 1 (Tenn.Ct.App.1985), *aff'd* Mar. 24, 1986.

a case, the bond is generally valid, and the surety bond company must pursue any remedies it has against the contractor-applicant. Fraud on the part of the obligee-owner, however, gives the surety the power to avoid having to perform under the bond. If the obligee-owner participates in or knows about the fraudulent statements made by the applicant contractor or misleads the bonding company in some other way, the bond would not have been validly obtained and cannot be legally enforced.

For various reasons, the principal contract—that is, between owner and contractor—may not be enforceable. For example, suppose the building contract involved constructing a hideout for leaders of organized crime. To permit the owner to sue on the surety bond in such a case would further an illegal activity and would involve the court in that activity. For that reason, the bond would not be enforced.

Legal infirmities of contracts of a less serious nature may exist, however. Suppose the contractor is not licensed. In *Cohen v. Mayflower Corp.*,²⁹ the court held that the owner can recover on a bond written on an unlicensed contractor. The court held that the licensing law was designed to protect owners and the owner could have sued the contractor even though the unlicensed contractor could not have sued the owner. The court concluded that the surety would be held on the bond because the principal debtor, the contractor, could have been held liable.

The stronger the public policy making the contract illegal, the less likely the bond will be enforced. If the policy is designed to protect the owner, however, as in the *Cohen* case, it is more likely that the bond will be enforced.

C. Surety Defenses: On Demand Bonds

Suppose the owner does not make progress payments despite the issuance of progress payment certificates. Suppose the design professional unjustifiably interferes with the work of the contractor or does not approve shop drawings in sufficient time to permit proper performance. The contractor's performance may be rendered impossible because of a court order, the death of the contractor, or some natural catastrophe. The performance may be rendered impracticable due to the discovery of unforeseen subsurface conditions. Most defenses the contractor has against the owner would be available to the surety who has issued a performance bond.

²⁹196 Va. 1153, 86 S.E.2d 860 (1955).

Likewise, defenses that the prime contractor could assert against a subcontractor or supplier claimant can generally be asserted by the surety who has issued a payment bond.³⁰ The surety's function is to provide financial responsibility for the acts of the prime contractor. Generally, the surety's obligation is coextensive with that of the principal debtor—that is, the prime contractor—but only to the extent of the bond limit.³¹

That the construction contract and the bond are linked together is illustrated by AIA Doc. 312, Paragraph 6. It states that the surety's obligation to the owner is not greater than those of the contractor under the construction contract and that the obligations of the owner to the surety are not greater than the owner's obligation under the construction contract.

The dependent nature of the bond in American construction practices may be contrasted to the security instruments that the contractor usually is required to furnish the employer (owner) in construction projects in other countries and in international engineering projects. In those transactions, the contractor usually is expected to furnish an unconditional bank guarantee, a standby letter of credit, or an "on demand" bond. These are unconditional promises by the issuing bank or surety that are not tied to default by the contractor. These are powerful securities that can be used in an abusive way. They can be unfair to the contractor who will be expected to indemnify the bank or surety. As a result, they have spawned considerable litigation in Great Britain and in international transactions.³²

Suppose the claimant is an unpaid subcontractor or supplier under a payment bond. In *Houdaille Industries, Inc. v. United Bonding Insurance Co.*,³³ the surety was denied a defense based on an asserted claim that the owner had breached its contract with the contractor who was the principal on the bond. The court noted that although normally the surety can assert such defenses against the owner, this defense could not be asserted against a

claimant "so long as it is not participated in or authorized by the materialman."³⁴

Suppose the owner and the contractor modify the construction contract or the owner directs changes in the work. The surety's commitment can be limited by a fixed limit on the bond. Any change in the basic agreement, however, traditionally released the surety. The advent of the paid surety has made inroads on this rule. Bonds frequently provide that the surety "waives notice of any alteration or extension of time made by the owner." Without such a provision, the surety could be released because the principal obligation has been changed.³⁵

A financially troubled contractor presents difficult problems for both the owner and surety. To keep the contractor afloat and the project moving forward, the owner may advance monies to the contractor for work the contractor has not yet performed. However, any diminishment in the contract balance reduces the funds from which the surety may obtain payment if, for example, it is later called upon to complete the contractor's work. The surety may argue that the owner's prepayment increased the surety's risk and so discharged the surety from its obligations under the bond. However, so long as the payments are used to build the project, thereby reducing the performance bond surety's ultimate liability, the fact that the payments were made ahead of schedule should not discharge the surety. The owner must have reasonable latitude to deal with a financially distressed contractor without fear of losing its protections under the bond.³⁶

Suppose the construction process concludes with claims made by the participants. Two issues that may arise are the method of resolving disputes and whether claims have been barred by the passage of time. The first issue was discussed in Section 30.15, which deals with arbitration.

The second issue—that of the passage of time barring a claim—has caused difficulty. For example, in

³⁰See Section 28.06 for a discussion of pay-when-paid clauses and whether they insure to the benefit of a payment bond surety.

³¹Restatement (Third) of Torts: Suretyship and Guaranty § 34. That the bond limits will not always limit the surety's obligation is discussed in Section 32.10E.

³²See 2 I. N. DUNCAN WALLACE, HUDSON'S BUILDING & ENGINEERING CONTRACTS, §§ 17-054-17-079 (11th ed. 1995); Bailey, *Unconditional Bank Guarantees* [2003] Int'l Constr.L.Rev., Part 2, p. 240.

³³Supra note 18.

³⁴453 F.2d at 1053 n. 4. But see *Chicago Bridge & Iron Co. v. Reliance Ins. Co.*, 46 Ill.2d 522, 264 N.E.2d 134 (1970) (surety was given a defense when the claimant subcontractor submitted false lien waivers that allowed the prime to dissipate progress payments).

³⁵*In re Liquidation of Union*, supra note 9. But see *Winston Corp. v. Continental Cas. Co.*, supra note 9, discussed in Section 32.03.

³⁶*United States Fid. & Guar. Co. v. Braspetro Oil Services, Co.*, 369 F.3d 34, 61-66 (2d Cir.2004) (efforts by owner to keep project afloat did not discharge surety); *John T. Callahan & Sons, Inc. v. Dykeman Elec. Co., Inc.*, 266 F.Supp.2d 208 (D.Mass.2003) (surety is not discharged by prime's delay in declaring a struggling subcontractor in default).

State v. Bi-States Construction Co.,³⁷ the state of Iowa brought a claim against a contractor who had abandoned a project and its surety. The contractor, a Nebraska corporation, had been dissolved under the laws of Nebraska on March 26, 1969. Iowa law required that any claim against a dissolved corporation be made within two years. The owner's claim was barred because it did not institute the claim until almost five years after the contractor had been dissolved. The court held that the claim against the bonding company was also barred. The court recognized that divided authority on the question exists, but Iowa "adheres to the rule [that] a surety may assert as a defense the statute of limitation if available to the principal."³⁸

Once disputes develop, both obligee and principal debtor should notify the surety and keep the surety informed as to the posture and process of the dispute. In this regard, Section 14.2.2 of AIA Document A201-2007 requires the surety to be notified in writing if the owner has terminated the contractor's performance.

D. Surety Responsibility

Some background must be kept in mind in understanding the responsibility of the surety. First, the surety's responsibility cannot exceed that owed by the principal debtor (the prime contractor on a prime contract performance bond and the subcontractor on a subcontractor performance bond) to the obligee (the owner on a prime bond and the prime on a subcontractor bond). Second, subject to some exceptions to be discussed in Section 32.10E, the surety's obligation is limited to the penal sum on the bond (the bond limit). Third, much depends on the language of the bond.

Fourth, with the prime contractor performance bond, the surety has no obligation to perform until the owner declares the principal prime contractor in default and communicates that declaration to the surety.³⁹ That communication is the dividing line from the surety's perspective between merely a troubled project and one under

which its bond obligations are triggered. The surety's options, at this point, are spelled out in the bond.

Suppose the prime contractor's default is that it abandoned the project without justification. Here, the principal item of damages will be the excess cost of reprocurement. AIA Document A312, Paragraph 4, allows the surety to arrange for the original contractor to return and complete the work, usually by pumping additional resources into the original contractor. Alternatively, the surety can complete the project itself (here the surety must be aware of contractor licensing laws) or get a substitute to do so. Finally, Paragraph 4.4 appears to let the surety pay whatever damages the owner would be entitled to recover from the defaulting contractor.⁴⁰ This will be the cost of correction or the diminished value of the project. As seen in Section 27.03D, the latter formulas will also be used if the prime contractor has completed the project but has not performed in accordance with its contractual commitment.

More complicated problems result when there has been delayed completion by the contractor or after its default by a successor contractor. To determine whether delay comes within the bond commitment, the language of the bond is crucial. One court, pointing to the bond language and emphasizing that the most important responsibility of the prime contractor is to build the project, did not allow the obligee to recover delay damages from the surety.⁴¹ Its decision may have been traceable to a belief that delays are inherent in all construction projects. But other courts have allowed recovery against the surety for the contractor's delayed performance.⁴²

⁴⁰One option not available to the surety is to do nothing, force the owner to complete the performance itself, then offer to reimburse the owner for its reasonable costs. *National Fire Ins. Co. of Hartford v. Fortune Constr. Co.*, 320 F.3d 1260 (11th Cir.), cert. denied, 540 U.S. 873 (2003).

⁴¹*American Home Assur. v. Larkin General Hosp.*, 593 So.2d 195 (Fla.1992). Similarly, see *Downington Area School Dist. v. International Fidelity Ins. Co.*, 769 A.2d 560 (Pa.Cmwlth.), appeal denied, 567 Pa. 731, 786 A.2d 991 (2001).

⁴²*MAI Steel Service, Inc. v. Blake Constr. Co.*, 981 F.2d 414 (9th Cir.1992); *National Fire Ins. Co. of Hartford v. Fortune Constr. Co.*, supra note 40 (applying Florida law and distinguishing *American Home Assur. v. Larkin General Hosp.*, supra note 41, on the ground that the subcontracts in *National Fire* contained liquidated damages clauses, which were incorporated into the bond); *Cates Constr., Inc. v. Talbot Partners*, 21 Cal.4th 28, 980 P.2d 407, 86 Cal.Rptr.2d 855 (1999); *New Amsterdam Cas. Co. v. Bettes*, 407 S.W.2d 307 (Tex.Ct.App.1966). See Douglas, *Delay Claims Against the Surety*, 17 Constr. Lawyer, No. 3, July 1997, p. 4.

³⁷269 N.W.2d 455 (Iowa 1978).

³⁸269 N.W.2d at 457. See also *Housing Auth. of City of Huntsville v. Hartford Accident & Indem. Co.*, 954 So.2d 577 (Ala.2006) (performance bond surety may assert statute of limitations defense available to its principal).

³⁹See *Bank of Brewton, Inc. v. International Fidelity Ins. Co.*, 827 So.2d 747 (Ala.2002) (surety not liable where the owner did not unequivocally declare the principal in default).

The owner should be able to recover its delay damages from the surety, based on a liquidated damages clause or actual damages. Time, though not as important as the work itself, still merits bond protection. Such protection would be reasonably expected by the owner-obligee. This is reflected in AIA Doc. 312, Paragraph 6.3. It requires the surety to pay any liquidated or actual damages caused by the contractor's delay. The recovery against the surety should be the same as the amount that would be recovered from the prime contractor.

Does the scope of the surety's obligation extend to the contractor's liability for defective work discovered during performance where there is no termination or discovered after completion where the contractor has completed performance? In the latter situation, there is no possibility of termination and default.

Of course, much would depend on the language of the bond. The difficulty is the consistent use of the term "default" in bonds as well as case decisions that speak almost universally about default triggering the surety's obligation. Generally, default is thought to mean a contractor who quits without justification or an owner's justifiable decision to terminate the contractor and prevent it from completion. Yet it can go farther.

The surety's obligation can include failure to complete on time by a contractor or late ultimate completion caused by the contractor's default and the work being finished late by a successor. Default does not fit delay cases where the contractor simply has not finished on time. Yet there is authority for bringing this delay into the ambit of the surety's obligation.

What does default mean? Is it simply a synonym for any breach or one serious enough to remove the contractor from the project? If a contractor stops work without justification, this is a serious breach that discharges the owner's obligation to allow it to work any more. Similarly, if the owner orders the contractor to leave, this decision requires that the contractor have committed a serious incurable breach as seen in Sections 33.04 and 33.05.

It can be argued that the surety's obligation does not include defective work that would not be serious enough to justify termination. This would be based on the failure to find a serious enough breach to be a default if that triggers the surety's obligation. Default works well if the issue is the failure of the contractor to complete the work.

But does that mean the surety's obligation does not extend to defective work where there has been no termination?

If the defective work is discovered during performance and the owner chose not to terminate, or it is discovered after completion and no termination is possible, if default is the trigger, then defective work does not fall within the surety's obligation under the bond.

There are arguments for extending defective work to the surety's obligation. If the purpose of the bond is to provide a financially sound party to stand behind the contractor, why should this be limited to failure to finish or even failure to finish on time?

Of course, the bond language would be examined and could be crucial. Still, if the language is unclear and focus is upon the reasonable expectation of the owner, the surety could lose.⁴³ Yet it must be admitted that the slavish use of "default" and the surety usually being called in when there is failure to finish would be substantial hurdles for the owner to overcome.

Generally, the surety will not be responsible for punitive damages that might be awarded against the prime contractor.⁴⁴ But the surety might, as noted in Section 32.10I, be liable for punitive damages for its bad-faith refusal to settle the claim made on the bond.

Special problems can occur when one separate prime contractor has been damaged by the acts of another separate prime contractor. As noted earlier, it is unlikely that the surety on a prime contract bond would be liable for a claim made by another separate contractor unless that contractor could sustain a claim that it was an intended beneficiary.⁴⁵ But if the claim by the separate contractor were against the owner, based on the owner's responsibility for coordinating the work properly, and the owner sought to transfer this loss to the separate prime contractor, who had caused the additional expense to the claimant, the surety for the latter should be liable.

As to payment bonds, much depends on any statute under which the payment bond was compelled or on the language of the bond itself. Clearly, an unpaid subcontractor or supplier can recover on the payment bond for the reasonable value of the work it has performed or materials it has supplied. Unless profit can be encompassed in the preceding formula, however, some courts have difficulty

⁴³*DCC Constructors, Inc. v. Randall Mechanical, Inc.*, 791 So.2d 575 (Fla. Dist. Ct. App. 2001) (obligee need not terminate to declare a default in a warranty breach case likely discovered after completion).

⁴⁴Annot. 2 A.L.R.4th 1254 (1980).

⁴⁵See *supra* note 28.

awarding profits against the surety—probably a reflection of the view that a payment bond is a substitute for lien rights.⁴⁶ Others have allowed a claim against the surety for increased costs of performance incurred by the subcontractor.⁴⁷

A surety's obligations under its bond are triggered when the obligee declares the principal in default.⁴⁸ In the case of a performance bond, what is the effect on the surety's liability if it delays paying the owner? The surety may be liable for interest on the unpaid money, even if this results in an amount in excess of the bond's penal sum.⁴⁹ If the surety's failure to pay promptly delays completion of the project, resulting in higher performance costs, the surety will be liable for these increased costs, again without regard to the bond limit.⁵⁰

A prime contractor who is having financial difficulties may ask its surety to advance funds to complete the project. (The effect of an owner advancing funds to a financially troubled prime is discussed in Section 32.10C.) Usually, at the time the bond is issued the surety obtains an indemnification agreement from the prime contractor in which the surety carefully disclaims any responsibility to advance funds. Claims of prime contractors have been based on an assertion that sureties have a good-faith obligation to investigate the request and provide the financing in order to minimize the prime's liability under the indemnification agreement, despite the latter's contract usually providing that advance of funds by the surety will be within the sole discretion of the surety. Although two commentators contend there should be no obligation to investigate in good faith, they also note that some court decisions have tended to go in that direction.⁵¹

⁵¹Toomey & Fisher, *Is a Surety Obligated to Investigate Financing a Contractor Who Requests Financial Assistance?* 12 Constr. Lawyer, No. 4, Nov. 1992, p. 11.

E. Bond Limits and Surety Bad Faith

As noted, surety bonds generally contain what is called a *penal sum*, which limits the obligation of the surety. Generally, this bond limit is effective.⁵² However, as noted in Section 32.10I, the law has begun to inquire into the settlement practices of sureties, just as it has examined the settlement practices of insurance companies. As a result, some exceptions have emerged to the general rule that the penal sum limits the surety's obligation. An important trial court opinion held that the surety's liability would not be limited by the bond limit, mainly because of improper settlement tactics of the surety.⁵³ Similarly, in another case where the surety was not cooperative in settlement discussions concerning an award of prejudgment interest, the bond limit did not place a ceiling on the liability of the surety.⁵⁴

Bad faith settlement practices by the surety includes its duty to investigate once the obligee declares the principal debtor (the prime contractor) in default. In one case the owner properly declared the contractor in default. In bad faith the performance bond surety threatened the owner with a lengthy investigation before performing its bond obligation. This threat forced the owner to complete performance with its own funds. The court held the owner was entitled to prejudgment interest even if this exceeded the penal sum of the bond.⁵⁵

F. Bankruptcy of Contractor

If, as discussed in Section 33.04C, during the course of the contractor's performance, the contractor is adjudicated a bankrupt, the trustee in bankruptcy (the person who takes

⁵²*Dawson Corp. v. National Union Fire Ins. Co. of Pittsburgh, Pa.*, 285 N.J.Super. 137, 666 A.2d 604, (App.Div.1995), cert. denied, 143 N.J. 517, 673 A.2d 276 (1996) (surety liability limited to original contract price and did not include unauthorized correction of work).

⁵³*Continental Realty Corp. v. Andrew J. Crevolin Co.*, 380 F.Supp. 246 (S.D.W.Va.1974). As the case was settled, there was no appeal. The opinion is reviewed and criticized in Wisner, *Liability in Excess of the Contract Bond Penalty*, 43 Ins.Couns.J. 105 (1976).

⁵⁴*Insurance Co. of North America v. United States*, supra note 48.

⁵⁵*United States Fid. & Guar. Co. v. Braspetro Oil Services, Co.*, supra note 36, 369 F.3d at 78–81, enforcing McKinney's N.Y.Gen.Obl.Law § 7–301, which states that the obligee's recovery against the surety "shall not exceed the amount specified in the undertaking except that interest in addition to this amount shall be awarded from the time of default by the surety."

over the affairs of the bankrupt contractor) can determine whether to continue the contract. Usually it does not. If the contract is not continued, the bankrupt contractor has no further obligation to perform under the contract. The owner has a claim against the bankrupt contractor but is not likely to recover much. Ending the contractor's obligation, however, should not release the surety. This is the risk contemplated when the surety bond is purchased.⁵⁶

G. Asserting Claims: Time Requirements

The surety's obligation usually requires that claimants give certain notices.⁵⁷ Likewise, statutes requiring public work to be bonded, such as the federal Miller Act and state "Little Miller Acts" (noted in Section 32.04), often specify that notices must be given within certain periods of time to designated persons.

Frequently, bonds require that legal action on the bond be brought within a designated time, usually shorter than the period specified by law. Such shortened periods to begin legal action are enforceable if reasonable.⁵⁸ In *Gateway Communications, Inc. v. John R. Hess, Inc.*, the court enforced the bond's two year limitations period and also refused to apply the "discovery rule" so as to toll the running of the period.⁵⁹ (The "discovery rule" prevents the limitations period from beginning to run until the owner knew or should have known that the building contained defects.)

Bonds often specify the court in which legal action must be brought, usually to courts—state or federal—in the state in which the project is located.⁶⁰

Suppose a claimant does not comply with all the many requirements specified by bonds or statutes. A surety that

denies responsibility because of some failure to comply appears to be using a technicality to avoid an obligation it was paid to perform. Courts generally interpret these requirements liberally in favor of claimants⁶¹ and often require the surety to show prejudice caused by noncompliance before being given a defense.⁶²

Courts have held that under certain circumstances the surety will be estopped to assert these provisions or be found to have waived them.⁶³

The bond may also impose time limits on a surety's response to an obligee's claim. AIA Doc. 312, Paragraph 6.1, requires the surety to respond to a claim "within 45 days after receipt of the claim, stating the amounts that are undisputed and the basis for challenging any amounts that are disputed." Where a surety failed to make any response within the forty-five-day period, a court ruled the surety was precluded from contesting the claim.⁶⁴

H. Reimbursement of Surety

It is sometimes said that sureties do not expect to take a loss. Sureties do not see themselves as insurers. As a result, they assert defenses that the principal debtor could have asserted. They seek bond language protection. Finally, they seek to recoup payments made under the bond, first from the principal and then, if unsuccessful, from third parties, including the obligee.

As a condition to receiving bonding, the prime contractor and often also the individuals who control it agree to indemnify the surety for any payments made in good faith under the bond. The agreement to indemnify extends also to the surety's settlement of any claims brought against the bond, whether or not the prime contractor turns out to have been liable to the bond

⁵⁶Restatement (Third) of Torts: Suretyship and Guaranty § 34(1)(a).

⁵⁷*Seaboard Sur. Co. v. Town of Greenfield*, 370 F.3d 215 (1st Cir.2004) (town's failure to give the performance bond surety a bond-mandated fifteen-day cure notice, before undertaking performance itself, discharged the surety).

⁵⁸In *Rumsey Elec. Co. v. University of Delaware*, 358 A.2d 712 (Del. 1976), a one-year bond provision was held valid where the statutory period was three years. Sometimes statutes of limitation are excessively long. But *City of Weippe v. Yarno*, 94 Idaho 257, 486 P.2d 268 (1971), held that the period for bringing the action cannot be shortened by the parties, as it would be unconscionable. The court stated that stipulating a longer period would be enforced if reasonable.

⁶²*Winston Corp. v. Continental Cas. Co.*, supra note 9.

⁶³*Contee Sand & Gravel Co. v. Reliance Ins. Co.*, 209 Va. 672, 166 S.E.2d 290 (1969) (surety estopped to plead a one-year period of limitations in the bond because subcontractor was misled by surety statement that its prime contractor did not have a surety bond).

⁶⁴*National Union Fire Ins. Co. of Pittsburgh v. David A. Bramble, Inc.*, 388 Md. 195, 879 A.2d 101 (2005). The intermediate court's decision in this case is discussed in Dranoff & Barther, *Payment Bond Payout: The Forty-Five-Day Countdown*, 25 Constr. Lawyer, No. 1, Winter 2005, p. 17.

claimants paid by the surety.⁶⁵ While courts will enforce such clauses, a surety who acts in bad faith will either lose its right of indemnification or have that right reduced to the extent of losses caused by improper settlement practices.⁶⁶

The surety's indemnity right will be of little use if, as often happens, a defaulting principal is not in a position to reimburse the surety. The surety may turn next to the obligee as a source of recovery. When the prime contractor defaults and the surety takes over, the surety usually notifies the owner that it should be paid all payments that would have gone to the prime contractor.⁶⁷ In addition, the surety usually demands at the end of the job any retainage that the owner has withheld to secure the owner against claims.⁶⁸

In seeking the retainage, the surety usually competes with other creditors of the prime contractor, the taxing authorities, and the trustee in bankruptcy if the prime has been declared bankrupt. As a rule, many more claims than can be satisfied exist, and the result is a complicated lawsuit. Typically, the owner pays the retainage into court and notifies all claimants, and the court determines how the fund is to be distributed.

The surety's priority over competing claims of the government (for example, a claim that the principal owes taxes) and the owner depends upon whether the surety is seeking reimbursement of costs under a performance or payment bond. Under a performance bond, the surety may be required to complete the project, either performing the work itself, hiring a replacement contractor, or funding the original contractor. Such a surety acquires subrogation rights of—or, to use a colloquialism, “steps into the shoes of”—both the prime contractor (whose obligations the surety took over) and the owner (for whom the surety completed the project). This surety has priority to the

retainage over all competing claims except those of the government.⁶⁹

By contrast, a payment bond surety steps into the shoes of the subcontractors and suppliers to the extent it has paid them. That surety's claim to the retainage is superior to the claims of both the owner and prime contractor but is inferior to that of the government.⁷⁰

In addition, the surety who takes over after default usually succeeds to any claims the prime contractor may have against the owner or third parties. It is common for the prime contractor to ascribe its difficulties to the owner, the design professional, subcontractors, or other third parties.

Sureties make strong efforts to be reimbursed and often succeed in salvaging a substantial amount of their loss when they are called on to respond for their principals' default.

I. Regulation: Bad-Faith Claims

Surety companies are regulated by the states in which they operate. In addition, sureties who wish to write bonds for federal projects must qualify under regulations of the U.S. Treasury Department. The financial capability of a surety limits the size of the projects a surety can bond. Bond dollar limits place a ceiling on exposure. In larger projects, there may be co-sureties or the surety may be required to reinsure a portion with another surety. Surety rates are usually regulated and are based on a specified percentage of the limit of the surety bond.

Section 32.10E noted that the surety's obligation is usually limited to the amount of the bond. It also cited cases in which the surety's obligation extended beyond the bond limit, largely because of the settlement tactics of the surety.

⁶⁵*Gulf Ins. Co. v. AMSCO, Inc.*, 153 N.H. 28, 889 A.2d 1040 (2005).

⁶⁶*PSE Consulting, Inc. v. Frank Mercede and Sons, Inc.*, 267 Conn. 279, 838 A.2d 135 (2004); *Republic Ins. Co. v. Prince George's County*, supra note 50.

⁶⁷In *Gerstner Elec., Inc. v. American Ins. Co.*, 520 F.2d 790 (8th Cir. 1975), the court rejected a contention of the contractor that the request for payments by the surety to the owner was a wrongful interference in the contract between contractor and owner.

⁶⁸Retainage is discussed in Section 22.03.

⁶⁹While a completing surety's subrogation claim may be inferior to the federal government's tax lien, New York's high court found the surety's claim superior to the State's claim that the public works principal underpaid prevailing wages on a different project. See *RLI Ins. Co. v. New York State Dept. of Labor*, 97 N.Y.2d 256, 766 N.E.2d 934, 740 N.Y.S.2d 272 (2002).

⁷⁰*National Fire Ins. Co. of Hartford v. Fortune Constr. Co.*, supra note 40 (payment bond surety's claim is superior to owner's claim of set-off for delay damages). For a delineation of these subrogation rights, see the Restatement (Third) of Torts: Suretyship and Guaranty §§ 27–29.

The law has taken steps to deter insurers from conduct unfair to their policyholders. Most states allow claims based on tortious bad-faith conduct by the insurer to policyholders and in some states to those who have claims against policyholders. These techniques have enabled claimants to obtain awards that exceed the policy limits, usually through awards for emotional distress or punitive damages.

Building on increased judicial regulation of insurers, some states have allowed similar claims against sureties.⁷¹ Where bad-faith claims are allowed and where the sureties' conduct falls below that required by law, the sureties' obligations can exceed the stated limit of the bond. This is accomplished by finding that the surety has committed a tort that in some instances may justify the award

⁷¹*United States v. Atul Constr. Co.*, 85 F.Supp.2d 414 (D.N.J.2000) (subcontractor may sue prime contractor's payment bond surety for bad faith delay in responding to claim); *Farmer's Union Central Exch., Inc. v. Reliance Ins. Co.*, 626 F.Supp. 583 (D.N.D.1985) (stalling, deceiving, and then refusing to pay based on failure to bring legal action); *Tonkin v. Bob Eldridge Constr. Co.*, 808 S.W.2d 849 (Mo.Ct.App.1991) (surety liable to owner under state statute for attorneys' fees and interest for a bad-faith failure to investigate the claim). For a case holding that the conduct did not constitute bad faith but only constituted litigating tactics, see *United States v. Seaboard Ins. Co.*, 817 F.2d 956 (2d Cir.1987) (surety denied liability, knowing the contractor was in default, failed to properly investigate, and told consultants not to put comments in writing).

of punitive damages as well as normal tort damages.⁷² However, some courts, fearful of blurring tort and contract distinctions, have not allowed tort claims of bad faith against sureties.⁷³

In addition to statutes regulating claims settlement practices of insurers, courts may also extend a state's Deceptive Trade Practices Act to the surety. This too may result in the surety paying damages in excess of the bond's penal sum.⁷⁴

⁷²*Riva Ridge Apartments v. Roger J. Fisher Co.*, 745 P.2d 1034 (Colo. App.1987), cert. denied Nov. 9, 1987.

⁷³*Shannon R. Ginn Constr. Co. v. Reliance Ins. Co.*, 51 F.Supp.2d 1347 (S.D.Fla.1999) (principal is not an insured and does not have a claim against its surety for bad-faith failure to settle); *Cates Constr., Inc. v. Talbot Partners*, supra note 42 (obligee may not sue performance bond surety for breach of the implied covenant of good faith and fair dealing); *Republic Ins. Co. v. Bd. of County Comm'rs of Saint Mary's County*, 68 Md.App. 248, 511 A.2d 1136 (1986) (court fearful bad-faith claims will be "boilerplate" and destroy differentiation between tort and contract); *Insurance Co. of the West v. Gibson Tile Co., Inc.*, 122 Nev. 455, 134 P.3d 698 (2006) (prime contractor may not sue performance bond surety for breach of the covenant of good faith and fair dealing to recover punitive damages); *Masterclean, Inc. v. Star Ins. Co.*, 347 S.C. 405, 556 S.E.2d 371 (2001) (prime contractor may not sue its performance bond surety for bad faith); *Great American Ins. Co. v. North Austin Util.*, 908 S.W.2d 415 (Tex.1995) (surety not an insurer and no duty of good faith and fair dealing to obligee).

Terminating a Construction Contract: Sometimes Necessary but Always Costly

SECTION 33.01 Termination: A Drastic Step

Termination does not occur frequently in construction contracts. One reason for this is the difficulty of determining whether a legal right to terminate exists, a point discussed principally in Sections 33.03 and 33.04. Often each party can correctly claim the other has breached. It may be difficult to determine whether a party wishing to terminate is sufficiently free from fault and can find a serious deviation on the part of the other. Another reason is the often troublesome question of whether the right to terminate has been lost (to be discussed in Section 33.03E). A third reason, the serious consequences of terminating without proper cause, is treated in this section.

Two cases illustrate the danger of an improper termination. The first, *Paul Hardeman, Inc. v. Arkansas Power & Light Co.*,¹ involved a contract under which Hardeman was to construct electric transmission lines for the Power & Light Company for a contract price of \$2.7 million. Hardeman's bid had been much lower than the other bids. This was known only to the owner because this private project did not use a public bid opening. Despite the likelihood that there had been a mistake, the Power & Light Company proceeded to award the contract without discussing the mistake possibilities.

Many difficulties developed, mainly because of Hardeman's inexperience. Several months before the completion date, at a time when somewhat less than one-half of the work had been completed, Hardeman discovered that its bid had been substantially lower than the other bids because of a calculation mistake. It immediately communicated this to the Power & Light Company and accused it

of wrongfully awarding the contract while knowing of the likelihood of the mistake. It threatened to leave the project unless some equitable adjustment was made. A conference was held, but no resolution was accomplished. Finally the Power & Light Company and its engineer terminated Hardeman's contract, claiming that there had been unexcused delays as well as defective workmanship and materials. Evidently, the real reason for the termination was that the Power & Light Company sought the best tactical position for the inevitable lawsuit. Before the termination, Hardeman had claimed to have spent \$3 million on the work. After termination, a successor contractor completed performance on a cost-plus basis and received \$8 million.

Hardeman brought legal action claiming that the Power & Light Company wrongfully accepted its bid and that the termination had been improper. It sought restitution based on its asserted expenditures of \$3 million minus payments made of \$600,000. The Power & Light Company sought \$5.8 million on its part as damages.

Although the court seemed sympathetic to Hardeman's first claim, it felt it could not grant relief, because Hardeman's estimator had been grossly negligent.² A convenient alternative solution, however, arose. The termination had not been made in good faith. According to the court, such a drastic step had been taken prematurely at best.

Termination proved useful to Hardeman. The court concluded that improper termination entitled Hardeman to recover the reasonable value of its services, which the court found to be \$2 million, less the amount paid of \$600,000. The defendant's counterclaim for the excess cost of correction was denied.

¹380 F.Supp. 298 (E.D.Ark.1974).

²For a further discussion of relief from mistaken bids, see Section 18.04E.

Perhaps the case is not typical. The court seemed sympathetic to Hardeman's bidding mistake claim. Yet the case demonstrates that a precipitous termination by the owner can be very costly when the contractor has made a losing contract.

The second case, *Indiana & Michigan Electric Co. v. Terre Haute Industries*,³ was tried before a jury. It lasted eighty-one trial days and generated a 36,000-page transcript, which was bound into 138 volumes. The reported appellate court decision filled thirty-three double-columned pages in the regional reports. The contract was for the installation of pollution control equipment for an energy plant using coal-fired generators. The state pollution control board had been exerting pressure on the utility to install an electrostatic precipitator and fix strict deadlines for its installation.

The contractor submitted the low bid of approximately \$7 million. At a point at which approximately 80 percent of the by now contract price of \$8 million had been paid, the utility and the contractor disagreed as to whether the contractor was on schedule. Claiming that the contractor was not and that it was the contractor's fault, the utility demanded an acceleration. Concluding that the contract would not be completed on time, the utility terminated the contractor because of its alleged failure to maintain the schedule. Evidence at the trial indicated that at the time of termination the project was 60 percent complete. The utility spent an additional \$5 million to complete the work. At the time of termination, the utility took possession of construction equipment and used it for approximately four months, based on a power given to it in the termination clause of the construction contract.

The contractor's claim and the judgment it obtained in the trial court indicate the high degree of risk that termination can entail. The judgment was for \$17 million (all figures approximations), broken down as follows:

1. retainage and interest, lost profits on the project, extras, and additional expenses—\$2 million
2. loss of future business—\$3 million
3. punitive damages—\$12 million

In addition, the trial court did not grant the utility's counterclaim, because it concluded the termination by the utility had not been proper.

On appeal, the court reduced the award drastically, concluding that the contractor was not entitled to one small expense item, future profits, and punitive damages, leaving an award of \$2 million.

The case demonstrates the difficult position in which the utility found itself when it decided to terminate the contractor's performance. It was difficult to determine who was responsible for the delay. Acrimonious disputes had arisen throughout the entire performance. Although the court ultimately concluded that punitive damages were not appropriate for this wrongful termination, certainly at the time of the termination an award of open-ended punitive damages could not be excluded as a possibility. To be sure, not terminating carried risks as well. But undoubtedly the economic dislocation and legal exposure make termination in construction disputes relatively rare.

The *Hardeman* and *Indiana Power* cases show the risks of termination. Were there adequate grounds to terminate? What is the cost of being wrong?

Other factors must be taken into account, even when there are grounds to terminate. What happens after termination? What will be the effect of termination on the contractor?

This is shown by the federal procurement guidelines that apply to termination even when there is a legal right to terminate.

Among the factors the contracting officer must take into account when he considers whether to declare a default termination are: "The availability of the supplies or services from other sources" and "The urgency of the need for the supplies or services and the period of time required to obtain them from other sources, as compared with the time delivery could be obtained from the delinquent contractor."

These factors stress what happens after termination. The contracting officer also should consider whether the contractor is important to the acquisition program and the effect termination would have on other contracts with the delinquent contractor.

Finally, the contracting officer should take into account the effect of termination on the contractor's ability to service loans and pay back progress and advance payments to which the government might be entitled.⁴

³507 N.E.2d 588 (Ind.Ct.App.1987).

⁴48 CFR § 49.402-3 (2007). This was applied in *Marshall Associated Contractors, Inc. and Columbia Excavating, Inc. (JV)*, IBCA Nos. 1901 et.al., 01-1 BCA ¶31,248. Even though the contracting officer has considerable discretion, the board held he did not apply these criteria correctly.

It may sometimes be necessary to terminate a construction contract. Performance may be going so badly and relations may be so strained that continued performance would be a disaster. But because of the reasons mentioned, the drastic step of termination should not be taken precipitously.

SECTION 33.02 Termination by Agreement of the Parties

Just as parties have the power to make a contract, they can “unmake” it. In legal parlance, exercising this power may be described as *rescission*, *cancellation*, *mutual termination*, or some other synonym. However described, the parties have agreed that each is to be relieved from any further performance obligations. In lay terms, they have “called the deal off.”

The legal requirements for such an arrangement are generally the same as those for making a contract: manifestations of mutual assent, consideration, a lawful purpose, and compliance with any formal requirements. By and large, the mutual assent requirement does not present unusual difficulty. Suppose, however, one party makes a proposal to cancel but the other party does not expressly accept. In most cases, silence is not acceptance, but silence can be sufficient coupled with other acts that lead the proposer to believe there has been an agreement.

If each party has obligations yet to perform, the consideration consists of each party relieving the other of performance obligations. If one party has fully performed, however, enforcement problems may arise. For example, suppose a contractor has been paid the full contract price but has not finished performance. If the parties agree to cancel remaining obligations of the contractor, the owner is not receiving anything for its promise. Courts generally relax consideration requirements somewhat when parties adjust or cancel existing contracts. Such an agreement can be enforced by calling it a waiver or completed gift. Although problems can arise, agreements under which each party agrees to relieve the other are generally enforced.

Because most construction contracts need not be expressed by a written memorandum, formal requirements rarely impede enforcement of contracts of mutual termination. Because proof is desirable, however, such agreements will usually be expressed in writing.

SECTION 33.03 Contractual Power to Terminate

Construction contracts frequently contain provisions giving one or both parties the power to terminate the contract. These provisions are a backdrop for material to be discussed in Section 33.04—the common law right to terminate a contract. Although contracts are not always clear on this point, often an interrelationship exists between specific termination provisions and the common law. Specific provisions can be considered illustrations or amplifications of common law doctrines, with the common law doctrines still applicable. Alternatively, contractual termination provisions can be said to have supplanted common law doctrines. The interaction between contractual and common law termination will be discussed in Section 33.03D. Generally, as noted in Section 22.02L, common law termination rights have not been eliminated by express contract termination provisions.

A. Default Termination

Construction contracts drafted by an owner generally give explicit termination rights only to the owner. In contrast, construction contracts published by professional associations provide that either owner or contractor can terminate for certain designated defaults by the other. Although great variations exist, it may be useful to begin discussion with AIA documents.

AIA Document A201-2007, Section 14.2.1.1, permits the owner to terminate “for cause” if the contractor “repeatedly refuses or fails to supply enough properly skilled workers or proper materials.” Failure to pay subcontractors is grounds for termination under Section 14.2.1.2. Section 14.2.1.3 makes repeated disregard of laws grounds for termination. Finally, Section 14.2.1.4 is a “catch-all.” It allows the owner to terminate the contract if the contractor is “guilty of a substantial breach of a provision of the Contract Documents.”

There are two problems with Section 14.2.1.4. As shall be seen in Section 33.04A, the common law specifies that for a breach to permit termination, it must be material. Section 14.2.1.4 speaks of a substantial breach of presumably any contract provision. The common law looks more at the importance of the provision breached, not whether the breach is substantial. In most cases, though, the result will be similar under A201-2007 or the common law.

The second question relates to whether the provision referred to in Section 14.2.1.4 would encompass implied terms as well as those expressed in the contract. The duties of good faith and fair dealing and those of good workmanship are illustrations of implied terms. They are part of the contractual obligations, though rarely expressed in the written contract.

Is good workmanship expressly included in A201-2007? Section 14.2.1.1 mentions properly skilled workers. This relates to their training and experience, not to the quality of their work. Section 3.5 constitutes the warranty given to the owner by the contractor. It states that the work will conform to the contract and will be free of defects. But the well accepted quality standard of good workmanship is not expressly covered. Nevertheless, it is likely that this standard would be implied and should be included in Section 14.2.1.4 as a possible basis for termination.

This termination does not specifically allow partial termination, something that may be useful if the owner wishes to retain the contractor for part of the work and find a successor for the rest.

The Federal Acquisition Regulations (FAR) control federal procurement. They provide that the government may “terminate the contract completely or partially” if the contractor does not perform the required services within the specified time, does not perform any other contract provision, or does not make progress “and that failure endangers performance of the contract.”⁵ This resembles the common law requirement that discharge of the contract requires a material breach.⁶

Partial termination may be useful from the contractor’s perspective. In a decision by the General Services Administration Board of Contract Appeals, the contractor had properly performed part (35 percent) of the work and improperly performed another part (35 percent). The board held that the agency could terminate only for the improperly performed part, based on the fiction of divisibility.⁷

Can the owner terminate if the contractor falls behind its schedule? As noted, federal construction contracts permit termination if the contractor fails to make progress and that failure endangers performance of the contract.⁸

Suppose the owner wishes to bring in a successor contractor when the original contractor is falling far behind schedule. AIA Document A201-2007, Section 14.2.1.1, as seen above, does permit the owner to terminate for repeated failure to supply proper workers or materials. But delays, even unexcused ones, may be caused by other factors. Does Section 8.3, with its provision for time extensions, preclude termination? Does presence of a liquidated damages clause indicate an intention that termination is not appropriate for failure to comply with schedule or completion requirements? Again, the nonexclusivity of the termination clause⁹ can support a conclusion that protracted delay—particularly if it appears completion will not be “on time”—will create a power to terminate under common law principles.¹⁰ Any exercise of such a power should be preceded by warnings and, where appropriate, an opportunity to cure.

A termination may be wrongful if the owner has not used good faith in exercising its contractual power to terminate. In *Paul Hardeman, Inc. v. Arkansas Power & Light Co.*, the court admitted that contractual grounds to terminate existed but held that the termination had not been made in good faith.¹¹

Also, while not mentioning good faith specifically, a decision of a federal board of contract appeals pointed to elements that could indicate lack of good faith as a basis for holding that the contracting officer’s default termination was an abuse of his discretion.¹² The board noted that the contracting officer:

1. Did not fully consider the contractor’s claim
2. Did not review the contractor’s expert analyses
3. Failed to share relevant information
4. Did not review analysis of his own personnel
5. Did not seek independent evaluations of borrow pit conditions
6. Authorized reprocurement that substantially relaxed the specifications
7. Authorized reprocurement that provided more time and information to bidders
8. Did not assess liquidated damages when the reprocurement contractor fell seriously behind schedule

¹⁰Whether the architect’s certificate or that of any IDM needed under ¶14.2.2 would be required is discussed in Section 33.03D.

¹¹See supra note 1.

¹²*Marshall Associated Contractors, Inc. and Columbia Excavating, Inc. (JV)*, supra note 4.

The board converted the default termination to one for convenience, as discussed in Section 33.03B.

The law has been reluctant to inject the good-faith principle as a limitation on the exercise of a contractual power to terminate. This reluctance is due in part to the possibility that termination not made in good faith would be sufficiently wrongful to be considered a tort and sufficiently intentional to be considered the basis for punitive damages. This position is illustrated by the unwillingness of the court in *Indiana & Michigan Elec. Co. v. Terre Haute Industries*¹³ to impose punitive damages after it concluded that the owner did not have grounds for terminating the contract. The award of punitive damages had been based on a finding that termination had been malicious and oppressive. The appellate court found that at worst the conduct was “substandard business practice, and arrogance.”¹⁴ It noted that the law did not impose punitive damages simply because “the contracting party or his agents are disagreeable people.”¹⁵ Awarding punitive damages, according to the court, would “let all disputes and quarrels over broken contracts and disappointed business ventures become the subject of acrimonious litigation over punitive damages.”¹⁶ Section 19.02D chronicles the increasing use of the good-faith concept in American contract law. Its use in most termination disputes should be limited to whether the termination was proper and should not be the basis for invoking tort law.¹⁷

Often contracts provide that the default termination does not take effect until the contractor has been given a notice that it must cure the default within a designated period of time. Curing provisions are useful. They can avoid a costly termination where the contractor has performance problems that can be cured.

AIA Document A201-2007 does not include a cure provision, though the seven-day notice period required by Section 14.2.2 can be considered a period to cure. The EJCDC C-700, Paragraph 14.02D precludes termination if the contractor begins to correct its failure to perform within the seven-day notice period required by Paragraph 14.02B and completes cure within 30 days from the receipt of the notice. Federal Procurement requires a ten-day curing

period before there can be a default termination.¹⁸ Even without a specific curing provision, it has been held that before there can be a termination, good faith requires that the contractor be given an opportunity to cure.¹⁹ Of course, if the defect is not curable within the cure period, the termination can take place in accordance with the termination clause without waiting for any cure period to elapse. As noted in Section 33.03B, a wrongful default termination may be converted into a termination for convenience.

It has been held that the owner cannot exercise its contractual power to terminate if the owner has caused or is responsible for the occurrence that is the basis for termination.²⁰ AIA A201-2007, Section 14.1, gives the contractor specific rights to suspend or terminate. But Section 14.1 must be looked at carefully. Four subsections—14.1.1.1 (court order stopping work), 14.1.1.2 (declaration of national emergency ordering work be stopped), 14.1.1.3 (nonpayment), and 14.1.1.4 (failure to receive evidence showing owner solvency under Section 2.2.1)—allow the contractor to terminate. But occurrence of these events does not automatically give the contractor a power to terminate. The contractor can terminate only “if the Work is stopped for a period of 30 consecutive days . . . for any of the following reasons: . . .” This precludes hasty termination if the contractor is looking for an excuse to stop its performance.

Section 14.1.2 gives another ground to terminate to the contractor. If the work is delayed, interrupted, or suspended through no fault of the contractor for “more than 100 percent of the total number of days scheduled for completion, or 120 days in any 365-day period, whichever is less,” the contractor can terminate.

Section 14.1.3 requires a seven-day written notice of termination. The contractor can recover for work done, reasonable overhead and profit, termination costs, and “damages.” In 2007 the AIA deleted “proven loss with respect to materials, equipment, tools, and construction equipment and machinery” that had been in A201-1997. Presumably these losses will be compensated as termination costs.

¹⁸48 CFR § 52.249-8 (2007). Curing in federal procurement is canvassed in *Empire Energy Management Systems, Inc. v. Roche*, 362 F.3d 1343 (Fed. Cir.2004).

¹⁹*Bensch v. Davidson*, 354 S.C. 173, 580 S.E.2d 128 (2003).

²⁰*Department of Transp. v. Arapaho Constr., Inc.*, 257 Ga. 269, 357 S.E.2d 593 (1987).

Section 14.1.4 adds another ground: work stoppage for sixty consecutive days because the owner repeatedly fails to fulfill its obligations “with respect to matters important to the progress of the Work.” This recognizes the materiality requirement for a common law termination. Again the contractor must give a seven-day written notice. Because of A201-2007, Section 15.1.6, as discussed in Section 27.06D, damages do not include consequential damages. But Section 13.4.1 implicitly allows the contractor common law damages for wrongful termination by stating that specifying remedies in the contract does not exclude common law remedies.

The sparse grounds for termination and, as noted in Section 23.05C, the absence of a contractual right to terminate when the work in progress is destroyed show that AIA documents seek to continue performance and avoid the economic disruption caused by a contract termination.

Also, as noted in Section 33.01 under federal procurement regulations, authority to declare a default termination requires the evaluation of factors that go beyond grounds for termination.

B. Termination or Suspension for Convenience

Private construction contracts increasingly give private owners the right (pioneered by federal procurement regulations)²¹ to terminate for convenience. This right is also found in subcontracts, particularly those tied to prime contracts where the owner has this power. An example is EJCDC C-700, Standard General Conditions of the Construction Contract, Paragraph 15.03, and as shall be seen later in this section, AIA Document A201-2007, Section 14.4. Invoking such a clause under federal procurement requires the contractor to stop work, place no further orders, cancel orders that have been placed, and perform other acts designed to terminate performance and protect the interests of the government. The contractor is reimbursed for work performed, unavoidable losses suffered, and expenditures incurred to preserve and protect government property. The contractor is also paid a designated profit for *work performed*.

In addition, federal procurement law has developed the concept of *constructive* convenience termination.²² Under it,

a contract with a convenience termination clause converts a *wrongful* government default termination into a *convenience* termination.

On its face (convenience, without cause), the power given to the owner by such contracts appears unlimited. As illustrated, the owner may terminate if the project is no longer needed or has become outmoded or uneconomical. Yet, as demonstrated by federal procurement law, this power is not completely unrestricted. *Torncello v. United States*²³ outlined the history of such clauses and noted the importance of the government’s ability to change its procurement objectives. Yet the court did not permit the agency to terminate when the agency used another contractor to do the work for less. (When it made the contract, the agency knew a cheaper source existed.) A plurality of the judges held that a termination for convenience can be used only when the circumstances of the bargain have changed. The changed-circumstances standard, according to the plurality opinion²⁴ in the *Torncello* case, was needed to save the validity of the contract. The prior limitation—bad faith and abuse of discretion—would be an insufficient limitation on the government and would make the government’s contractual promise “illusory” and the contract invalid. One concurring judge disagreed, agreeing that in this case the termination was in bad faith, but seeing no reason for the more limiting “change-of-circumstances” standard.

The plurality standard significantly limited the use of the termination-for-convenience clause. As a result, later decisions tended to limit the *Torncello* plurality holding. Finally, in *Krygoski Construction Co. v. United States*,²⁵ a 1996 decision by a panel of the Court of Appeals for the Federal Circuit, although not overruling the *Torncello* plurality standard,

1986). It was adopted in New York by *Fruin-Colnon Corp. Traylor Bros., Inc. & Onyx Constr. & Equipment Inc. v. Niagara Frontier Transp. Auth.*, 180 A.D.2d 222, 585 N.Y.S.2d 248 (1992). The concept was attacked in Note, 52 Geo.Wash.L.Rev. 892 (1984).

²³231 Ct.Cl. 20, 681 F.2d 756 (1982), overruling *Colonial Metals Co. v. United States*, 204 Ct.Cl. 320, 494 F.2d 1355 (1974). The *Colonial Metals* case employed the bad faith/abuse of discretion standard and had allowed the United States to terminate when it found a cheaper source it should have known of when it made the contract.

²⁴A plurality opinion is one not signed by the majority of the judges hearing the appeal. But the number signing the plurality opinion, amplified by judges concurring (agreeing with the outcome of the plurality though not their reasoning), decides the appeal.

²⁵94 F.3d 1537 (Fed.Cir.), cert. denied, 520 U.S. 1210 (1997). This subject is canvassed in Garson, *Krygoski and the Termination for Convenience: Have Circumstances Really Changed?* 27 Pub.Cont.L.J. 117 (1997).

²¹48 CFR § 52.249.1, 2, et. seq. (2007).

²²*Torncello v. United States*, infra note 23. The constructive convenience termination was rejected in a case involving a private contract. *Rogerson Aircraft Corp. v. Fairchild Ind., Inc.*, 632 F.Supp. 1494 (C.D.Cal.

applied the standard of prior bad faith/abuse of discretion. This is less limiting than the plurality in the *Torncello* case. Under these circumstances it cannot be stated with clarity which standard applies in federal procurement law.

Those owners who use a termination-for-convenience clause may have, at least judging by federal procurement, a false impression that the owner's rights are unlimited.

The early federal need for such clauses related to wartime or end-of-the-war needs to cancel the procurement of unneeded items. Also, they were needed to adjust weapons needs as technology changed. This war procurement flexibility remained even while procurement circumstances changed.

State courts have different opinions regarding the requirements to terminate for convenience. States do not have weapons procurement policies that must be changed in the middle or at the end of a war. Nor do they deal with new weapons technology. Their current use is to protect public funds when circumstances change. Not only do states use such clauses, but, as shall be seen, they are found in private contracts. Some state courts are willing to allow the state to use them in much the same way as does the federal government. Others are more wary of them. Two cases demonstrate differing attitudes.

Capital Safety, Inc. v. State Division of Buildings & Construction involved a specially drafted clause.²⁶ It stated that the termination for convenience clause could be used if the contractor is unable to complete the project or if termination would be "in the public interest." The public owner could not relocate some of its employees. This prevented the contractor from working. The court held that the termination clause gave broad power to the state agency as long as it did not act in bad faith. The court cited federal procurement policies and followed the *Krygoski* case. It noted the heavy burden on the attacker of the clause and that rarely can bad faith be shown.

But another attitude was reflected in the same year by an Arizona intermediate appellate court in *Ry-Tan Construction, Inc. v. Washington Elementary School District No. 6*.²⁷ The case did not involve the usual attempt to terminate in the middle of performance. Instead, the principal issue was whether a contract had been formed when the school board accepted the low bid or whether no contract was formed

until the formal contract was signed.²⁸ The court (later reversed) concluded that there was a valid contract. The school district sought to avoid the claim by claiming (two years after the litigation began) that it was "constructively" terminating for its convenience. This would have severely limited the amount that could be recovered as damages.

The court, though not bound by federal law, looked to federal authorities. The court noted that the doctrine first was used in wartime and then later only when there was a change in circumstances. The court found no changed circumstances in this case. It concluded that the clause did not give unbounded discretion to the public entity and was not a license to dishonor contract obligations.

A series of cases from New York demonstrate the relationship between default terminations as well as another limitation on the power to terminate for convenience. *Paragon Restoration Group, Inc. v. Cambridge Square Condominiums*,²⁹ the most recent of the three cases, held that a party who terminates for convenience cannot make a claim for damages caused by defective construction. Usually, the contractor receives what it has spent, compensation for the losses it has suffered, and under some clauses profit on unperformed work. (In the federal system the contractor does not recover profit on unperformed work.) At first blush it seems strange that the owner should lose its claim when it uses its power to terminate for convenience. Generally the law is hesitant to bar a claim unless there is strong evidence that the claimant intended to give up its claim.

But this case shows the relationship between default termination and termination for convenience. The power to terminate for default requires a serious breach. In construction it is often difficult to predict whether there is the power to terminate for default because the facts may be hotly contested and application of the law may be hard to predict. To get the contractor off the project, the owner may decide to terminate for convenience and hope to deal with the performance dispute by offsetting its losses against the contractor's compensation under the clause. (This proved unsuccessful.)

²⁸See Section 18.04G.

²⁹42 A.D.3d 905, 839 N.Y.S.2d 658 (2007). The court cited *Tishman Constr. Corp. v. City of New York*, 228 A.D.2d 292, 643 N.Y.S.2d 589 (1996) and *Fruin-Colmon Corp. Traylor Bros., Inc. Onyx Constr. and Equipment, Inc. v. Niagara Frontier Transp. Auth.*, supra note 22. The latter case involved a wrongful default termination because it did not give the contractor a chance to cure. But this was constructively converted into a termination for convenience, with no right to recover for payments made to third parties to perform remedial work.

²⁶369 N.J.Super 295, 848 A.2d 863 (App.Div.2004).

²⁷208 Ariz. 379, 93 P.3d 1095 (App. 2004), reversed on the contract issue, 210 Ariz. 419, 111 P.3d 1019 (2005).

Also, a termination for default usually requires that the contractor be given a chance to cure, as noted in Section 33.03A. If the owner wants to be compensated for the contractor's breach, it should terminate for default, not convenience. The *Paragon* case is another limitation on termination for convenience. If the owner seeks to recover damages for breach in New York, it cannot use a convenience termination.

A201-2007 includes such a power in Section 14.4. Under Section 14.4.3 the contractor's remedy is payment for work performed, compensation for losses it cannot reasonably avoid because of the cancellation, reasonable overhead, and profits on *performed* and *unperformed* work. This remedy is more liberal than the federal formula, the federal government being unwilling to give the contractor profit on unperformed work. It remains to be seen whether the vast body of federal jurisprudence, including cases such *Torncello*, will be used when termination for convenience occurs under A201-2007. The federal system has its own unique characteristics, tightly regulated and with its own special disputes process. The availability of the well-developed federal jurisprudence, even if premised on federal administrative mechanisms, will mean continued use of federal sources by the states. Most states have not developed a detailed systematic jurisprudence to deal with these issues.³⁰

A201-2007, Section 14.3.1, provides that the owner can *suspend, delay or interrupt the Work* without cause. Section 14.3.2 grants the contractor an adjustment "for increases in the cost and time caused by the suspension, delay or interruption" as well as profit on those adjustments.

As noted above, Section 14.1.2 permits the contractor to *terminate* if there are repeated suspensions, delays, or interruptions that aggregate more than 100 percent of the total number of days scheduled for completion, or 120 days in any 365-day period, whichever is less.

C. Events for Which Neither Party Is Responsible

Some contracts specifically allow termination when events have a devastating effect on performance, such as would justify common law relief for impracticability or impossibility. AIA documents do not specifically provide that these

³⁰*New Pueblo Constructors, Inc. v. State*, 144 Ariz. 95, 696 P.2d 185 (1985), reproduced in part in Section 27.02F; *Ry-Tan Constr. Inc. v. Washington Elementary School Dist. No. 6*, supra note 27, and *Capital Safety, Inc. v. State, Division of Buildings & Constr.*, supra note 26, both applied state law but looked at the federal procurement system for guidance.

events permit termination. The party whose performance has been adversely affected receives time extensions and occasionally an equitable adjustment.

D. Role of Design Professional

Despite the AIA's movement toward reducing the activities and responsibilities of the architect, the owner's power to terminate under A201-2007, Section 14.2.2, requires the architect or any Initial Decision Maker (IDM) to certify "that sufficient cause exists to justify such action." No similar requirement exists for a termination by the contractor.

Termination is a drastic step. Why require the architect to certify that there are adequate grounds?³¹ Such a decision, although involving some issues for which the architect may be trained, requires legal expertise rather than design skill. The owner may want the architect's advice. That need not require giving power to the architect to decide a sensitive and liability-exposing issue. The only possible justification is that such a preliminary step can act as a brake on any hasty, ill-conceived decision by the owner to terminate. It would be better to have the owner's attorney perform this function, especially if the architect's conduct is itself an issue in the termination.

Would an architect's certificate be needed for common law termination? Although it is unlikely such a procedure would apply to a common law termination, the common law can add grounds but should not destroy any agreed-on conditions precedent.

The requirement for such an architect certification and the interrelationship between contractual and common law termination came before the court in *Ingrassia Construction Co. v. Vernon Township Board of Education*.³² The parties used A201, very likely the edition issued in 1987. However, the parties deleted the arbitration provision.

The board sought to terminate the contract based upon the contractor's failure to meet time milestones and to comply with quality requirements. It requested that the architect provide the certification under old Paragraph 14.2.2 that sufficient cause exists to justify termination. The architect was licensed in Canada but not in the United States. He refused to certify that there were sufficient

³¹When "architect" is used, it includes the IDM. It remains to be seen whether this role will be played mainly by the architect or, as in England, a new specialist will be developed. In England he is called the adjudicator. See Section 30.18J.

³²345 N.J.Super. 130, 784 A.2d 73 (App.Div.2001).

grounds to terminate. He stated that he had not been on the job daily and he “would not be able to certify from his own knowledge and observations that there was sufficient cause for termination.”³³ He did certify that milestone dates had not been met, but not that this was a substantial breach or sufficient ground for termination.

The court upheld the determination by the trial judge that the certificate was defective, as it did not certify what was required under old Paragraph 14.2.2 (The trial judge pointed to the fact that the architect was unlicensed.) The appellate court did not comment on lack of a license. It simply concluded that the certificate did not meet the requirement of old Paragraph 14.2.2. That, stated the court, deprived the board of “any finality, presumption of correctness, or obligation of judicial deference that would otherwise attach to a proper architect’s certification.”³⁴

That the certificate was defective, held the court, did not deprive the board of its common law right to claim that it had proper grounds to terminate the contractor. It pointed to old Paragraphs 13.4.1 and 14.2.2 that state the contractual remedies are not exclusive. The court concluded that a proper certificate is not a condition precedent to the board’s exercise of its common law rights. The board’s traditional burden to establish a material breach would have been largely exempted by the issuance of a proper certificate. The court did not have to decide how much finality to extend to a proper certificate, but it seems clear that issuance would have been very beneficial to the board.

The case raises many questions. Would a proper certificate by an unlicensed architect have been valid? The trial court seemed troubled by this, but the appellate court was not. It did not have to address this issue, as it was clear that the certificate was not adequate. A201-2007, Section 4.1.1, requires the owner to state that the architect is licensed. If both parties knew the architect was not licensed, that could have waived old Paragraph 4.1.1. A proper certificate would have been valid. (The architect would still be guilty of violating the licensing law.) But if the contractor did not know this, the certificate was not valid. The agreement to have the certification requirement in the contract was premised on the architect being licensed.

What of the architect’s refusal to give the certificate because he had no personal knowledge? This would not accord with the intention of the parties. They knew the

architect was not on the site every day. More likely, the architect should have conducted an investigation of the type specified in old Paragraph 4.3 dealing with claims. (Perhaps his unwillingness to do so was based upon his unlicensed status.)

This raises the issue of the interaction between old Paragraphs 14.2.2 dealing with termination and 4.3 dealing with all claims and disputes. If there had been no provision such as 14.2.2 and the board terminated, it would seem that the contractor could contest this by invoking Paragraph 4.3. The architect’s decision, it might be noted, could not be taken to arbitration as the arbitration clause had been deleted.

Yet, as shall be suggested in Section 33.03I, termination is a special procedure and may not be treated the same as any other dispute. In that case, the issue would simply be one for the common law to resolve. The board would have to prove that the contractor committed a material breach to justify termination.

Finally, the court did not have to face the issue of the proper weight to be accorded an architect decision. But certainly, it would be given some finality, as the court noted.³⁵

In sum, in addition to the cooling-off function noted earlier in this section, Section 14.2.2 gives a tactical advantage to the owner. It can relieve it of the burden of establishing a common law termination.

E. Waiver of Termination and Reinstatement of Completion Date

Suppose one party has the power to terminate but does not exercise it. Has the power to terminate been lost? Under what conditions can it be revived?

Cases that have dealt with this problem have usually involved a performing party—usually the contractor—who has not met the completion date, but for various reasons the owner decides not to terminate. The contractor continues to perform, believing the power to terminate will not be exercised. At some point during continued performance, the owner wishes either to terminate immediately or to set a firm date for completion, which, if not met, will then be grounds for termination.

Clearly, a termination after the contractor has been led to believe there will be no termination would be improper.³⁶

³³784 A.2d at 77.

³⁴Ibid.

³⁵See Section 29.09.

³⁶*DeVito v. United States*, 188 Ct.Cl. 979, 413 F.2d 1147 (1969); *United States v. Zara Contracting Co.*, 146 F.2d 606 (2d Cir.1944).

The more difficult question relates to the requirements for reinstating a firm deadline that will allow termination if performance is not met by that time. The parties can agree to extend the time for completion, with the clear understanding that failure to comply would entitle the owner to terminate. The most difficult question involves unilateral attempts by the owner to reinstate a firm completion date and revive the right to terminate.

In *DeVito v. United States*,³⁷ the contractor did not meet a revised completion date of November 29, 1960, because of performance problems. Having anticipated default, on November 25, 1960, the contracting officer requested permission from higher headquarters to terminate the contract. The request moved slowly through various offices of the agency, and for unexplained reasons, authority to terminate was not granted until January 16, 1961. This was communicated to the contractor on January 17, 1961. During this period, the contractor continued to perform, made commitments, and delivered some units that were accepted by the government. At the time of termination, the contractor had many assemblies in various stages of completion and claimed to be on the verge of reaching full production.

In a legal action brought on behalf of the contractor, the court first noted that the government is habitually lenient in granting reasonable extensions, “for it is more interested in production than in litigation.” Moreover, the court said, “default terminations—as a species of forfeiture—are strictly construed.”³⁸ The court noted that permitting a delinquent contractor to continue performance can preclude the government from terminating if its actions or nonactions have led the contractor to believe no termination would occur; the contractor relied on this belief. The court held the government had waived its right to terminate by allowing the contractor to continue performance under these circumstances.

As to reinstatement, the court stated,

When a due date has passed and the contract has not been terminated for default within a reasonable time, the inference is created that time is no longer of the essence so long as the constructive election not to terminate continues and the contractor proceeds with performance. The proper way thereafter for time to again become of the essence is for the Government to issue a notice under the Default clause setting a reasonable but specific time for performance on pain

of default termination. The election to waive performance remains in force until the time specified in the notice, and thereupon time is reinstated as being of the essence. The notice must set a new time for performance that is both reasonable and specific from the standpoint of the performance capabilities of the contractor at the time the notice is given.³⁹

The court held that such a process would not be required if the contractor had renounced its contract or was incapable of performance.

In the *DeVito* case, the court emphasized that there could be no fixed rules regarding the government’s waiver of its right to terminate. The decision in *H. N. Bailey & Associates v. United States*,⁴⁰ decided by the Court of Claims two years after *DeVito*, illustrated this fluidity. The contractor had been awarded a contract set aside for small businesses and was relatively inexperienced in manufacturing the products sought by the procurement. The delivery date was July 27, 1966, and it seemed clear to the government that the contractor would not be able to perform. As a result, on August 10, 1966, the government notified the contractor that there had been a default and that any assistance given the contractor, or acceptance of delinquent goods, would be solely for the purpose of mitigating damages and not to be construed as an indication that the government was waiving its rights. The notice also gave the contractor ten days to advise the procuring agency of any reason why the contract should not be terminated.

On August 19, 1966, the contractor responded by stating it was confident it could produce the goods by the end of the following month. Yet production was still not made, and the government terminated for default on September 6, 1966.

The contractor claimed the conduct of the government was inconsistent with its right to terminate, and constituted a waiver. The court did not agree, and concluded that the government did not encourage or induce the contractor to continue performance; it characterized the government’s conduct as “displaying a benevolent attitude towards the defaulting contractor.”⁴¹

Sometimes two issues arise in the context of waiver. This is illustrated by *Consolidated Engineering Co., Inc. v. Southern Steel Co.*,⁴² a dispute between a prime and subcontractor.

³⁷See *supra* note 36.

³⁸413 F.2d at 1153.

³⁹*Id.* at 1154.

⁴⁰196 Ct.Cl. 166, 449 F.2d 376 (1971).

⁴¹*Id.* at 385.

⁴²699 S.W.2d 188 (Tex.1985).

The subcontractor was to install steel furnished by the prime contractor. It was unable to do so because of the prime's delay in furnishing the materials. Although the subcontractor contended it had the right to terminate, it continued to work for three more months. Then it abandoned the contract.

The prime claimed damages, contending that the subcontractor wrongfully abandoned the contract. The subcontractor claimed damages for not being able to perform its contract. The court concluded that the prime contractor had indeed breached and that the subcontractor was justified in stopping performance. This gave the subcontractor a defense to the claim by the prime contractor. It also gave the subcontractor a claim for damages against the prime contractor.

The prime did not contend that the subcontractor remaining on the job waived its rights to terminate; it contended that remaining on the job waived the subcontractor's claim for damages. The court disagreed, noting that the subcontractor reserved its rights at the time it continued performance. It in no way indicated it was giving up its right to recover damages for the prime contractor's breach.

F. Notice of Termination

Termination clauses often require that a notice of termination be sent by the terminating party to the party whose performance is being terminated and, in many contracts, to the lender or surety. The notice usually states that termination will become effective a designated number of days after dispatch or receipt of the notice.

In addition to problems common to all notices and communications,⁴³ such notice requirements create other legal problems. What are the rights and duties of the parties during the notice period? Can the defaulting party cure any defaults specified in the notice during the notice period and thereby keep the contract in effect? Can the party giving the notice to terminate demand continued performance or even accelerated performance during the notice period?⁴⁴ Answers to such questions often depend on the reason for requiring a notice to terminate.⁴⁵

The notice period may be designed to allow the terminating party to "cool off." Construction performance problems often generate animosity, and before the important step of termination is effective, the terminating party may wish to rethink its position. The notice period can permit a defaulting party to cure defaults in order to keep the contract in effect for the benefit of both parties. Whether the notice period is designed to "cure" may depend on the facts that give rise to termination and on the notice period.

A recent case, noted in Section 33.03A, held that termination was wrongful unless the owner gave the contractor an opportunity to cure defects.⁴⁶ While this may have been an application of the obligation to act in good faith, it shows the importance of cure, especially when something as serious as termination is being considered.

Finally, the notice period can be used to wind down and protect the site. This allows each party to cut losses and make new arrangements. Such a position does not allow cure.⁴⁷ But if the owner terminates, it should have the option of ordering that work be done that can be completed by the effective date of termination.⁴⁸

Such questions should be, but rarely are, answered by the termination clause.

The termination clause should clearly indicate whether it permits *cure*, provides a *cooling-off period*, or sets into motion a *winding down* of the project. To illustrate a cure provision, standard construction contracts used in Canada allow the owner to terminate if the contractor fails to perform after the owner notifies the contractor in writing that it is in default, based on a certificate from the architect. The notice must instruct the contractor to correct the default within five working days from receipt of the notice. If the default cannot be cured within the five working days, the owner cannot terminate if the contractor begins correction of the default within the specified time, provides the owner with an acceptable schedule for such correction, and completes the correction in accordance with that schedule. This is a sensible procedure. Termination is the last desperate step in a troubled contract.

⁴³See Sections 12.13F and 17.05C.

⁴⁸See supra note 40.

G. Taking Over Materials and Equipment

AIA Document A201-2007, Section 14.2.2, permits the owner to “exclude the Contractor from the site and take possession of all materials, equipment, tools, construction equipment and machinery thereon owned by the Contractor . . . [and] . . . finish the Work by whatever reasonable method the Owner may deem expedient.” Construction contracts commonly include these provisions. The following reasons are given for such provisions:

1. to provide incentive to the contractor to take away its property from the site so that the owner can efficiently bring in a successor
2. to provide the owner with material and equipment by which it can expeditiously continue the work with a successor (note the conflict with item 1)
3. to give the owner property that can be sold and the proceeds used to pay for any claim it may have against the contractor

The owner, however, must first give a seven-day termination notice. Will this encourage the contractor to take away its property before the owner does? If so, the first justification will be accomplished, but the second will be frustrated. Also, suppose the successor contractor does not want to use the materials and equipment. Does the contractor have the right to take away the materials and equipment during the seven-day period? (It is unlikely that the contractor will stand by passively when the owner takes possession of its property.) Can the owner take materials or equipment owned by a subcontractor? If not, the clause may be of little value. This may depend on the implementation of any flow-through clause, as discussed in Section 28.04.

In addition, who actually owns the equipment? Much equipment is leased or purchased under conditional sales contracts. Even if the contractor owns the property, any attempt to use the equipment as security may force a struggle with others who contend that they have security interests that take precedence over any right created by such a clause or any other lien rights. If the contractor goes bankrupt, the trustee in bankruptcy surely will enter the fray. Also, if the contractor’s property is used, a subsequent dispute may arise as to its use value.

As if these problems were not enough, suppose the termination is wrongful. Taking the contractor’s property constitutes the tort of conversion. The owner must pay the

reasonable value of property converted, restore any gains made through converting the property, and may have to pay punitive damages.⁴⁹

The AIA did not expressly create a security interest. There is no express power to sell the materials and equipment and retain any amounts obtained to set off against claims it has against the contractor.

The 1987 AIA Document A201, Paragraph 12.2.4, dealing with failure to correct and remove defective work, did create such a security interest. This was deleted from A201-1997. But its earlier inclusion shows the AIA knew how to create a security interest when it wanted to do so.

Some justify the clause permitting takeover of materials and equipment as a basis to back up emergency measures under which it is essential that the materials and equipment be used to keep the project performance going. They would deal with legal subtleties later. The risks are greater if equipment, particularly construction machinery, rather than materials is taken. In any event, continued inclusion of such clauses in construction contracts may indicate that they do have utility.⁵⁰

H. Effect on Existing Claims for Delay

Termination of the contract is usually accompanied by claims by each party against the other. If the owner terminated, the contractor, as a rule, claims not only that the termination was wrongful but also that the owner had committed earlier breaches that caused it losses. The terminating owner also is likely to have claims for damages based on delay and improper workmanship. Sometimes the terminated party will contend that invoking the termination remedy was a waiver of any claims that existed before termination. In *Armour & Co. v. Nard*,⁵¹ this contention was rejected. After pointing to a provision stating that failure to exercise a right shall not be considered a waiver, the court noted that a contractual remedy for breach generally

⁴⁹See *Indiana & Michigan Elec. Co. v. Terre Haute Indus., Inc.*, supra note 3 (punitive damages not awarded despite wrongful termination followed by takeover of contractor’s equipment; independent tort required).

⁵⁰In *Northway Decking & Sheet Metal Corp. v. Inland Ryerson Constr. Products Co.*, 426 F.Supp. 417 (D.R.I.1977), the court appears to have enforced such a clause. It denied a terminated subcontractor an injunction permitting him to remove unique hanging scaffolding.

⁵¹463 F.2d 8 (8th Cir.1972).

does not exclude other remedies unless the clause shows a clear intention of the party to do so. Rarely will a terminating party implicitly give up damage claims. But as noted in Section 33.03B, New York holds that an owner who terminates for convenience cannot recover from the contractor for its costs to correct defective work.

I. Disputed Terminations

Suppose the owner terminates the contract in accordance with the termination clause and orders the contractor to leave the site. The contractor contends the termination is not justified and demands arbitration under a provision similar to AIA Document A201-2007, Section 15.1.4. This provides for arbitration for all claims, disputes, and other matters arising out of or relating to the contract documents or the breach thereof. Section 15.1.3 states that pending final resolution of a claim, both parties continue to perform. The following issues can arise:

1. Does a contractor's demand for arbitration give it the right to remain on the site pending the arbitrator's decision?
2. If the *contractor* wishes to terminate, may the owner demand arbitration and insist that the contractor continue work?
3. Is the disputed termination subject to arbitration?
4. If arbitration takes place, should the arbitrator order that work be resumed?

Requiring the contractor under Section 15.1.3 to continue working while the dispute is being resolved assumes performance disputes that do not involve termination.⁵² Termination is a special dispute. The specific provisions of a termination clause should take precedence over the general arbitration clause. Section 15.1.3 does not require continued performance during arbitration *when agreed otherwise in writing*. This can refer to the termination clause with its specific mechanism. Also, that Section can be for the owner's benefit. The owner can waive its right to continued performance during arbitration by ordering the contractor to leave the site. Finally, the owner's ownership and control of the site should empower the owner to remove

⁵²But *Keyway Contractors, Inc. v. Leek Corp., Inc.*, 189 Ga.App. 467, 376 S.E.2d 212 (1988), cert. denied Jan. 11, 1989, held that a subcontractor who left the site when a dispute arose for which arbitration was required had breached the subcontract.

the contractor. Whether the termination was proper can be resolved by any applicable arbitration clause.⁵³ The termination has not attacked the validity of the arbitration clause.⁵⁴

Generally, arbitrators have remedial discretion. Any award to continue performance, at least in New York,⁵⁵ would be upheld. But termination is usually acrimonious and the last desperate step. Rarely will reinstatement be chosen as the remedy; this is another reason to force the contractor to leave the site even if termination is challenged. If termination were improper, a damage award would be adequate.

Suppose the contractor wishes to terminate and the owner seeks arbitration. The issue here is less clear. The provision for removing the contractor from the site can be for the benefit of the owner. This interpretation would allow the owner to order the contractor to continue working. It is more likely, however, that the conclusion will not depend on which party terminates.

J. Public Contracts and Constitutional Protection

The increasing use of constitutional doctrines has been noted earlier.⁵⁶ In the context of terminating a public construction contract, the contractor may contend that the contract cannot be terminated without extending it due process of law, usually taken to mean some basic procedural rights. In *Riblet Tramway Co., Inc. v. Stickney*,⁵⁷ the court held that the contract could be terminated despite the lack of a prior hearing. The court recognized that the contractor's interest in the contract could not be taken away without cause. But what process would be appropriate? Using the standard of fundamental fairness, the court held that the contractor could sue for breach. This was sufficient to satisfy the contractor's due process rights.

⁵³Many cases hold that arbitration survives termination. See *Middlesex County v. Gevyn Constr. Corp.*, 450 F.2d 53 (1st Cir.1971), cert. denied, 405 U.S. 955 (1972); *State v. Lombard Co.*, 106 Ill.App.3d 307, 436 N.E.2d 566 (1982). But see *G&N Constr. Co. v. Kirpatovsky*, 181 So.2d 664 (Fla.Dist.Ct.App.1966). See Section 30.03B.

⁵⁴*Riess v. Murchison*, 384 F.2d 727 (9th Cir.1976).

⁵⁷129 N.H. 140, 523 A.2d 107 (1987).

SECTION 33.04 Termination by Law

A. Material Breach

If the contract does not expressly create a power to terminate, termination is allowed in the event of a material breach. Even with a contract clause dealing with termination, many of the factors that determine materiality can be influential when such clauses are interpreted. Also, as indicated, the termination clause may not be the exclusive source for determining when a party has the power to terminate.

Rather than establishing fixed rules, such as the importance of the clause breached, the law examines all the facts and circumstances surrounding the breach to determine whether it would be fair to permit termination. For example, the Restatement (Second) of Contracts articulates factors in Section 241 that are significant in determining whether a particular breach is material.⁵⁸ They are

- (a) the extent to which the injured party will be deprived of the benefit which he reasonably expected;
- (b) the extent to which the injured party can be adequately compensated for the part of that benefit of which he will be deprived;
- (c) the extent to which the party failing to perform or to offer to perform will suffer forfeiture;
- (d) the likelihood that the party failing to perform or to offer to perform will cure his failure, taking account of all the circumstances including any reasonable assurances;
- (e) the extent to which the behavior of the party failing to perform or to offer to perform comports with standards of good faith and fair dealing.

Looking first at breaches by the contractor, item (a) seeks to determine the importance of the deviation and the likelihood of future nonperformance. Item (b) examines whether the owner can be easily compensated for nonperformance. This factor would depend on whether the defect could be easily corrected or whether compensation for an uncorrected defect would be easy to measure. In construction contracts, the latter can be difficult. Item (c) looks for uncompensated losses that the contractor would suffer from termination. If the contractor had ordered materials

⁵⁸Section 242 dealing with delay expands the list to include the extent to which the delay will hinder the injured party in making substitute arrangements and the extent to which the agreement provides for performance without delay.

that had not yet been used and were not usable in other projects, this would militate against termination. Item (d) examines the likelihood that the contractor will be able to cure defects, and item (e) examines the reason for the breach. An example of the latter—a breach by a subcontractor that the prime contractor could not have reasonably prevented—might militate against materiality.

An owner breach would probably be nonpayment of money, failure to furnish the site, or noncooperation. Item (a) would look at the extent of the breach and the likelihood of future performance, while item (b) would look at whether the breach was easily compensable, such as interest for a breach consisting of not making a progress payment.

Item (c) examines the harm termination would cause the owner, such as lost loan commitments, liability to prospective tenants, or other lost business opportunities. Item (d) seeks to determine whether the breaches are likely to be cured. Finally, item (e) examines the reasons for nonperformance. Financial reverses or a steep rise in interest rates makes it less likely that the contractor can terminate for failure to pay. If, however, there was “bad blood” between the design professional and the contractor and the latter seized on the breach by the owner to injure the design professional, termination would be less likely. Likewise, if it appears the contractor sought an excuse to end the contract, the breach would less likely be material.

The case of *Oak Ridge Construction Co. v. Tolley*⁵⁹ involved a dispute between Tolley, the owner of land, and Oak Ridge, the contractor who had agreed to build a house and dig a well. Tolley disputed and refused to pay the invoice for extra drilling and casing. Oak Ridge stated that Tolley’s failure to pay the invoice was a breach entitling Oak Ridge to terminate under the contract’s termination provisions. It also notified Tolley that it was stopping work and would arbitrate the dispute. Tolley refused to arbitrate at that time, and the work proceeded no further.

After concluding Tolley had not committed a breach by anticipatory repudiation (see Section 33.04B), the court found that the work stoppage by Oak Ridge was a breach. To determine whether the breach was material, it applied the sections of the Restatement noted earlier. It stated,

We must therefore consider whether that breach was material in light of the factors enumerated above. The Tolleys, as the injured party, were deprived of the expected benefits of their

⁵⁹351 Pa.Super. 32, 504 A.2d 1343 (1985).

contract (i.e., receiving a completed home) by Oak Ridge's work stoppage, and could be adequately compensated for that deprivation by an award of damages. Furthermore, Oak Ridge's letter of September 7 gave no indication that the company would cure its failure to perform, and, in fact, the record indicates that Oak Ridge never did so act. Of course, a finding of material breach will result in forfeiture for Oak Ridge (i.e., the Tolleys will be discharged from all liability on the contract), however, Oak Ridge will be entitled to restitution for any benefit conferred upon the Tolleys by part performance or reliance (i.e., the cost of digging the well) in excess of the loss Oak Ridge caused by its own breach. See Restatement, *supra*, §§ 241 comment d, 374(1). We note that the record contains no evidence concerning whether Oak Ridge's conduct "comports with standards of good faith and fair dealing." Under these circumstances, we find that Oak Ridge's breach constituted a material failure of performance thereby discharging the Tolleys from all liability under the contract.⁶⁰

Many factors are relevant. Perhaps the most relevant factors are the particular nature of the nonperformance, the likelihood of future breaches, and the possibility of forfeiture. Some courts may look at good faith not simply of the party failing to perform but of the party who seeks to exercise the power to terminate.⁶¹ For example, Tennessee held that in the absence of a clause permitting the prime contractor to take over the subcontractor's work (the court noting that such clauses usually require a notice and an opportunity to cure), the prime contractor could not terminate the contract without notifying the subcontractor of its intention to do so and giving the subcontractor an opportunity to cure.⁶²

Nonpayment—perhaps the most frequently asserted justification for termination—was discussed in Section 22.02L. The owner's failure to make an equitable adjustment when unforeseen underground conditions were discovered and the contractor was in financial trouble allowed the prime contractor to terminate.⁶³ A prime contractor's failure to have the site ready for the flooring subcontractor

was a material breach.⁶⁴ Failure to make satisfactory progress justified termination.⁶⁵ Hindering the subcontractor's operation was a material breach when coupled with the prime contractor's having stopped payment on a check that the subcontractor was about to negotiate.⁶⁶ Another court held that the collapse of a fallout shelter was sufficient grounds for the owner to terminate the contractor's performance and recover a down payment.⁶⁷ These obviously incomplete illustrations are not designed to indicate that breaches of the type described will always be considered material. As emphasized in this subsection, determining whether a breach is material requires a careful evaluation of the facts and circumstances surrounding the breach as well as the effect of termination.

B. Future Breach: Prospective Inability and Breach by Anticipatory Repudiation

Section 33.04A dealt with breaches that have occurred. This subsection deals with breaches that may occur in the future. It may appear that one party may not be able to perform when the time for performance arrives, or one party may state it will not perform when the time for performance arrives. The contractor may discharge some of its employees, or a number of employees may quit. The contractor may cancel orders for supplies, or its suppliers may indicate they will not perform at the time for performance. In such cases, the owner may realize the contractor will be unable to perform.

Such inability to perform—whether on the part of the owner, or the contractor, or subcontractors—is likely to be a breach. Each party owes the other party the duty to appear to be ready to perform when the time for performance arises. Even if no such promise is implied, under certain circumstances events may permit one party to suspend its performance or terminate the contract unless the other party who appears unable to perform can give assurance or security that when the time comes for performance, it

⁶⁷*Economy Swimming Pool Co. v. Freeling*, 236 Ark. 888, 370 S.W.2d 438 (1963).

will perform.⁶⁸ Insolvency as a basis for insecurity may be affected in a construction dispute by AIA Document A201-2007, Section 2.2.1, which gives the contractor the power to ask the owner for evidence of its financial arrangements. Failure to exercise this power may preclude the contractor's suspending its obligation to perform if the owner later becomes insolvent. The owner's failure to make payments, as indicated in Section 22.02L, gives the contractor a right under A201-2007, Section 9.7.1, to suspend performance.

Prospective inability deals with probabilities. In the examples given, the question is whether the owner must wait to see whether actual performance or defective performance will occur or whether it can demand assurance and, in the absence of this assurance, legally terminate any obligation to use the contractor.

Contracts often deal with termination rights. In the absence of such provisions, it will take a strong showing on the part of the owner to terminate the contractor's performance on the grounds that the contractor may not be able to perform in the future. In many cases, a combination of present and prospective nonperformance exists. If present nonperformance exists, such as the installation of defective materials or poor workmanship, the likelihood of this continuing will strongly influence the court to let the owner terminate the contractor's performance. Pure prospective inability without present breach is likely to be considered insufficient grounds unless the probabilities are very strong or unless a contract provision exists giving the owner this right.

A breach by anticipatory repudiation occurs when one party indicates to the other that it cannot or will not perform.⁶⁹ Each party is entitled to reasonable assurance that the other will perform in accordance with the contract. If one party indicates that it will not or cannot perform, the other party loses this assurance. Should the latter be required to wait and see whether the threat or the indication of inability to perform will come to fruition?

The rights of a party to terminate a contract because of the other party's repudiation have expanded. A feeling of

assurance is important, as this is one purpose for making a contract. Sometimes a party who indicates it will not perform is jockeying for position. The owner may be trying to pay less or obtain more than the called-for performance. If either party does repudiate, the other party will be given the right to terminate the obligation. The party to whom the repudiation is made need not terminate the obligation immediately. It may state that it intends to hold the other party to the contract. If the repudiator relies on the statement that the contract will be continued, the nonrepudiating party will lose its right to terminate based on the earlier repudiation.

The right to continue one's performance despite repudiation by the other party is qualified by the rule against enhancing damages. One party cannot recover damages caused by the other party's breach when those damages could have been avoided by taking reasonable steps to cut down or eliminate the loss. If the contractor repudiates the contract, for example, the owner cannot recover for damages caused by breach that could have been avoided by hiring a replacement contractor.

Suppose the contractor states unequivocally without justification that it will leave the job in three days. It might be reasonable for the owner to insist that it will hold the contractor to the contract for a short period, such as until the date of the walkout or even for a few days after the walkout. But when it is clear the contractor will not return to the project, the owner should take reasonable steps to replace the contractor if the owner wishes to continue the project. A replacement should be obtained when the repudiating contractor has committed its workers and machinery to another project and apparently has neither the willingness nor the capacity to return to the job. Any damages that could have been avoided by hiring a replacement will not be assessable against the repudiating contractor.

Repudiation may accompany present or prospective breach. The greater the scope of any present or prospective breach, the greater the likelihood that the court will release the innocent party by reason of both the present breach and the repudiation. Even a small breach, coupled with a repudiation, may be enough to terminate the innocent party's obligation to perform further.

C. Bankruptcy

Bankruptcy can affect contracts. Two types of bankruptcy are important for the purposes of this chapter. The first is liquidation under Chapter 7 and is known as *straight bankruptcy*.

⁶⁸Restatement (Second) of Contracts §§ 251, 252 (1981) followed in *Danzig v. AEC Corp.*, 224 F.3d 1333 (Fed.Cir.2000), cert. denied sub nom. *ABC Corp. v. Pirie*, 532 U.S. 995 (2001).

⁶⁹As to the existence of a repudiation, compare *Oak Ridge Constr. Co. v. Tolley*, supra note 59 (owner questioning invoice charges and saying they were in dispute, not a repudiation), with *Twenty-Four Collection, Inc. v. M. Weinbaum Constr., Inc.*, 427 So.2d 1110 (Fla.Dist.Ct.App. 1983) (contractor's mailgram threatening to shut down project unless a certain clause was eliminated constituted anticipatory repudiation).

It has two principal objectives. First, the bankrupt can wipe the slate clean, or mostly clean, by discharging most of the bankrupt's debts. Second, bankruptcy should provide a fair and efficient liquidation of the bankrupt's estate. The trustee for the bankrupt takes over the bankrupt's estate, collects any money owed the bankrupt, compels repayment of any preferential payments made to creditors,⁷⁰ turns over specific property in the hands of the bankrupt to those who have security interests in it, and, after paying expenses of administering the estate, distributes any amount remaining pro rata to unsecured creditors. For example, if the amount of unsecured debts is \$1 million and the amount remaining is \$100,000, each unsecured creditor receives ten cents for each dollar of unsecured debt. Payments to unsecured creditors, if made at all, are usually only a small fraction of the debts.

The second type is a petition for reorganization under Chapter 11. Such a petition protects the petitioner from creditor claims while it seeks to reorganize in order to put its business on a more sound financial basis. The petitioner submits for judicial approval a plan that involves reorganizing the interests of owners and creditors, rescheduling debts, and (one hopes), infusing cash and credit.

Bankruptcy law gives the trustee a choice to assume (continue performance) or reject (refuse further performance) existing contracts. The U.S. Congress precluded any contract clause from automatically barring this choice or election.⁷¹ The trustee can assume any contract if it has the capacity to continue performance, or can pay compensation if it does not.

It was common for contracts to permit automatic termination if a party filed for bankruptcy. In construction contracts, the owner was usually given the power to terminate if the contractor filed for bankruptcy or had serious financial problems. Despite the change in the law, some contracts still contain such provisions, either because of ignorance as to their ineffectiveness or simply because of inertia. In any event, assumptions of construction contracts are rare. The trustee seldom has the resources to continue performance.

More important and more controversial were well-publicized Chapter 11 petitions by troubled airlines seeking to rid themselves of onerous labor contracts or asbestos

manufacturers facing thousands of large tort claims by people who claimed that asbestos gave them cancer.

In *NLRB v. Bildisco and Bildisco*,⁷² the contractor filed a Chapter 11 petition and immediately stopped paying pension, health plan, and wage increases agreed on in a recent collective bargaining agreement with the union representing its workers. The U.S. Supreme Court held that this labor practice would not be unfair if the contractor could show that the contract burdened its financial affairs and the equities balanced in favor of rejection. Congress responded to complaints by trade unions by creating difficult procedural requirements before a collective bargaining agreement could be set aside under Chapter 11.⁷³

SECTION 33.05 Restitution When a Contract Is Terminated

When a contract is terminated, each party, as a rule, has conferred benefit on the other. The owner has made progress payments, and the contractor has performed work. What effect does termination have on the right of either to recover the value of what it has conferred on the other?

If termination has been made for the convenience of the owner, the clause permitting termination usually provides a formula for compensating the contractor for the work performed. Terminations for default made by the owner usually involve claims by the latter that exceed the value of any unpaid work performed by the contractor. If they do not, the contractor, though in default, in most jurisdictions would be entitled to recover the net benefit conferred on the owner.⁷⁴ If the contractor terminated based on an owner default, the contractor can use a restitutionary recovery that permits it in most cases to recover the reasonable value of the services performed.⁷⁵ If termination has been accomplished by mutual consent, the agreement will usually deal with compensation for benefits conferred. If it does not, either party is entitled to recover the net benefit it has conferred on the other. For example, if the work performed has a value of \$100,000 and the contractor has been paid \$90,000, the latter should recover \$10,000. Conversely, if the figures were reversed, the owner would be entitled to that amount.

⁷⁰Broadly speaking, a preference favors one creditor over the others without any legitimate business reason. For details, see 11 U.S.C.A. § 547.

⁷⁵See Section 27.02E.

SECTION 33.06 Keeping Subcontractors After Termination

An owner (or its financial backers) who exercises its power to terminate the prime contract may want to employ a successor to continue the project. Alternatively, the surety on a performance bond may exercise its option to complete the project with a successor.

Default by the prime contractor is likely to result in failure to pay the subcontractors. This would give subcontractors the power to terminate their obligations under their subcontracts. The owner or surety may wish to take an assignment of some subcontracts (those of subcontractors who are performing well and are not owed an excessive amount of money) without having to renegotiate with them. Renegotiation always causes delay and may result in a higher contract price. Yet most subcontracts contain

nonassignment clauses that preclude assignment of any rights under the contract without the consent of the party whose performance is being assigned—in this case, the subcontractors.

To avoid this tangle, it has become common for the prime contract to include an assignment conditioned on default by the prime to the owner of those subcontracts that the owner wishes to take over, with a promise by the prime contractor to obtain the subcontractors' consent to these assignments.⁷⁶

EXHIBIT A INITIAL INFORMATION

ARTICLE 1 INITIAL INFORMATION

§ 1.1 This Agreement is based on the Initial Information set forth in this Article 1 and in optional Exhibit A, Initial Information:

(Complete Exhibit A, Initial Information, and incorporate it into the Agreement at Section 13.2, or state below Initial Information such as details of the Project's site and program, Owner's contractors and consultants, Architect's consultants, Owner's budget for the Cost of the Work, authorized representatives, anticipated procurement method, and other information relevant to the Project.)

§ 1.2 The Owner's anticipated dates for commencement of construction and Substantial Completion of the Work are set forth below:

- .1 Commencement of construction date:
- .2 Substantial Completion date:

§ 1.3 The Owner and Architect may rely on the Initial Information. Both parties, however, recognize that such information may materially change and, in that event, the Owner and the Architect shall appropriately adjust the schedule, the Architect's services and the Architect's compensation.

ARTICLE 2 ARCHITECT'S RESPONSIBILITIES

§ 2.1 The Architect shall provide the professional services as set forth in this Agreement.

Init.

AIA Document B101™ – 2007 (formerly B151™ – 1997). Copyright © 1974, 1978, 1987, 1997 and 2007 by The American Institute of Architects. All rights reserved. WARNING: This AIA® Document is protected by U.S. Copyright Law and International Treaties. Unauthorized reproduction or distribution of this AIA® Document, or any portion of it, may result in severe civil and criminal penalties, and will be prosecuted to the maximum extent possible under the law. Purchasers are permitted to reproduce ten (10) copies of this document when completed. To report copyright violations of AIA Contract Documents, e-mail The American Institute of Architects' legal counsel, copyright@aia.org.

§ 2.2 The Architect shall perform its services consistent with the professional skill and care ordinarily provided by architects practicing in the same or similar locality under the same or similar circumstances. The Architect shall perform its services as expeditiously as is consistent with such professional skill and care and the orderly progress of the Project.

§ 2.3 The Architect shall identify a representative authorized to act on behalf of the Architect with respect to the Project.

§ 2.4 Except with the Owner's knowledge and consent, the Architect shall not engage in any activity, or accept any employment, interest or contribution that would reasonably appear to compromise the Architect's professional judgment with respect to this Project.

§ 2.5 The Architect shall maintain the following insurance for the duration of this Agreement. If any of the requirements set forth below exceed the types and limits the Architect normally maintains, the Owner shall reimburse the Architect for any additional cost:

(Identify types and limits of insurance coverage, and other insurance requirements applicable to the Agreement, if any.)

- .1 General Liability
- .2 Automobile Liability
- .3 Workers' Compensation
- .4 Professional Liability

ARTICLE 3 SCOPE OF ARCHITECT'S BASIC SERVICES

§ 3.1 The Architect's Basic Services consist of those described in Article 3 and include usual and customary structural, mechanical, and electrical engineering services. Services not set forth in Article 3 are Additional Services.

§ 3.1.1 The Architect shall manage the Architect's services, consult with the Owner, research applicable design criteria, attend Project meetings, communicate with members of the Project team and report progress to the Owner.

§ 3.1.2 The Architect shall coordinate its services with those services provided by the Owner and the Owner's consultants. The Architect shall be entitled to rely on the accuracy and completeness of services and information furnished by the Owner and the Owner's consultants. The Architect shall provide prompt written notice to the Owner if the Architect becomes aware of any error, omission or inconsistency in such services or information.

§ 3.1.3 As soon as practicable after the date of this Agreement, the Architect shall submit for the Owner's approval a schedule for the performance of the Architect's services. The schedule initially shall include anticipated dates for the commencement of construction and for Substantial Completion of the Work as set forth in the Initial Information. The schedule shall include allowances for periods of time required for the Owner's review, for the performance of the Owner's consultants, and for approval of submissions by authorities having jurisdiction over the Project. Once approved by the Owner, time limits established by the schedule shall not, except for reasonable cause, be exceeded by the Architect or Owner. With the Owner's approval, the Architect shall adjust the schedule, if necessary as the Project proceeds until the commencement of construction.

§ 3.1.4 The Architect shall not be responsible for an Owner's directive or substitution made without the Architect's approval.

§ 3.1.5 The Architect shall, at appropriate times, contact the governmental authorities required to approve the Construction Documents and the entities providing utility services to the Project. In designing the Project, the Architect shall respond to applicable design requirements imposed by such governmental authorities and by such entities providing utility services.

§ 3.1.6 The Architect shall assist the Owner in connection with the Owner's responsibility for filing documents required for the approval of governmental authorities having jurisdiction over the Project.

§ 3.2 SCHEMATIC DESIGN PHASE SERVICES

§ 3.2.1 The Architect shall review the program and other information furnished by the Owner, and shall review laws, codes, and regulations applicable to the Architect's services.

§ 3.2.2 The Architect shall prepare a preliminary evaluation of the Owner's program, schedule, budget for the Cost of the Work, Project site, and the proposed procurement or delivery method and other Initial Information, each in terms of the other, to ascertain the requirements of the Project. The Architect shall notify the Owner of (1) any inconsistencies discovered in the information, and (2) other information or consulting services that may be reasonably needed for the Project.

§ 3.2.3 The Architect shall present its preliminary evaluation to the Owner and shall discuss with the Owner alternative approaches to design and construction of the Project, including the feasibility of incorporating environmentally responsible design approaches. The Architect shall reach an understanding with the Owner regarding the requirements of the Project.

§ 3.2.4 Based on the Project's requirements agreed upon with the Owner, the Architect shall prepare and present for the Owner's approval a preliminary design illustrating the scale and relationship of the Project components.

§ 3.2.5 Based on the Owner's approval of the preliminary design, the Architect shall prepare Schematic Design Documents for the Owner's approval. The Schematic Design Documents shall consist of drawings and other documents including a site plan, if appropriate, and preliminary building plans, sections and elevations; and may include some combination of study models, perspective sketches, or digital modeling. Preliminary selections of major building systems and construction materials shall be noted on the drawings or described in writing.

§ 3.2.5.1 The Architect shall consider environmentally responsible design alternatives, such as material choices and building orientation, together with other considerations based on program and aesthetics, in developing a design that is consistent with the Owner's program, schedule and budget for the Cost of the Work. The Owner may obtain other environmentally responsible design services under Article 4.

§ 3.2.5.2 The Architect shall consider the value of alternative materials, building systems and equipment, together with other considerations based on program and aesthetics in developing a design for the Project that is consistent with the Owner's program, schedule and budget for the Cost of the Work.

§ 3.2.6 The Architect shall submit to the Owner an estimate of the Cost of the Work prepared in accordance with Section 6.3.

§ 3.2.7 The Architect shall submit the Schematic Design Documents to the Owner, and request the Owner's approval.

§ 3.3 DESIGN DEVELOPMENT PHASE SERVICES

§ 3.3.1 Based on the Owner's approval of the Schematic Design Documents, and on the Owner's authorization of any adjustments in the Project requirements and the budget for the Cost of the Work, the Architect shall prepare Design Development Documents for the Owner's approval. The Design Development Documents shall illustrate and describe the development of the approved Schematic Design Documents and shall consist of drawings and other documents including plans, sections, elevations, typical construction details, and diagrammatic layouts of building systems to fix and describe the size and character of the Project as to architectural, structural, mechanical and electrical systems, and such other elements as may be appropriate. The Design Development Documents shall also include outline specifications that identify major materials and systems and establish in general their quality levels.

§ 3.3.2 The Architect shall update the estimate of the Cost of the Work.

§ 3.3.3 The Architect shall submit the Design Development documents to the Owner, advise the Owner of any adjustments to the estimate of the Cost of the Work, and request the Owner's approval.

§ 3.4 CONSTRUCTION DOCUMENTS PHASE SERVICES

§ 3.4.1 Based on the Owner's approval of the Design Development Documents, and on the Owner's authorization of any adjustments in the Project requirements and the budget for the Cost of the Work, the Architect shall prepare Construction Documents for the Owner's approval. The Construction Documents shall illustrate and describe the further development of the approved Design Development Documents and shall consist of Drawings and

Specifications setting forth in detail the quality levels of materials and systems and other requirements for the construction of the Work. The Owner and Architect acknowledge that in order to construct the Work the Contractor will provide additional information, including Shop Drawings, Product Data, Samples and other similar submittals, which the Architect shall review in accordance with Section 3.6.4.

§ 3.4.2 The Architect shall incorporate into the Construction Documents the design requirements of governmental authorities having jurisdiction over the Project.

§ 3.4.3 During the development of the Construction Documents, the Architect shall assist the Owner in the development and preparation of (1) bidding and procurement information that describes the time, place and conditions of bidding, including bidding or proposal forms; (2) the form of agreement between the Owner and Contractor; and (3) the Conditions of the Contract for Construction (General, Supplementary and other Conditions). The Architect shall also compile a project manual that includes the Conditions of the Contract for Construction and Specifications and may include bidding requirements and sample forms.

§ 3.4.4 The Architect shall update the estimate for the Cost of the Work.

§ 3.4.5 The Architect shall submit the Construction Documents to the Owner, advise the Owner of any adjustments to the estimate of the Cost of the Work, take any action required under Section 6.5, and request the Owner's approval.

§ 3.5 BIDDING OR NEGOTIATION PHASE SERVICES

§ 3.5.1 GENERAL

The Architect shall assist the Owner in establishing a list of prospective contractors. Following the Owner's approval of the Construction Documents, the Architect shall assist the Owner in (1) obtaining either competitive bids or negotiated proposals; (2) confirming responsiveness of bids or proposals; (3) determining the successful bid or proposal, if any; and, (4) awarding and preparing contracts for construction.

§ 3.5.2 COMPETITIVE BIDDING

§ 3.5.2.1 Bidding Documents shall consist of bidding requirements and proposed Contract Documents.

§ 3.5.2.2 The Architect shall assist the Owner in bidding the Project by

- .1 procuring the reproduction of Bidding Documents for distribution to prospective bidders;
- .2 distributing the Bidding Documents to prospective bidders, requesting their return upon completion of the bidding process, and maintaining a log of distribution and retrieval and of the amounts of deposits, if any, received from and returned to prospective bidders;
- .3 organizing and conducting a pre-bid conference for prospective bidders;
- .4 preparing responses to questions from prospective bidders and providing clarifications and interpretations of the Bidding Documents to all prospective bidders in the form of addenda; and
- .5 organizing and conducting the opening of the bids, and subsequently documenting and distributing the bidding results, as directed by the Owner.

§ 3.5.2.3 The Architect shall consider requests for substitutions, if the Bidding Documents permit substitutions, and shall prepare and distribute addenda identifying approved substitutions to all prospective bidders.

§ 3.5.3 NEGOTIATED PROPOSALS

§ 3.5.3.1 Proposal Documents shall consist of proposal requirements and proposed Contract Documents.

§ 3.5.3.2 The Architect shall assist the Owner in obtaining proposals by

- .1 procuring the reproduction of Proposal Documents for distribution to prospective contractors, and requesting their return upon completion of the negotiation process;
- .2 organizing and participating in selection interviews with prospective contractors; and
- .3 participating in negotiations with prospective contractors, and subsequently preparing a summary report of the negotiation results, as directed by the Owner.

§ 3.5.3.3 The Architect shall consider requests for substitutions, if the Proposal Documents permit substitutions, and shall prepare and distribute addenda identifying approved substitutions to all prospective contractors.

§ 3.6 CONSTRUCTION PHASE SERVICES**§ 3.6.1 GENERAL**

§ 3.6.1.1 The Architect shall provide administration of the Contract between the Owner and the Contractor as set forth below and in AIA Document A201™–2007, General Conditions of the Contract for Construction. If the Owner and Contractor modify AIA Document A201–2007, those modifications shall not affect the Architect's services under this Agreement unless the Owner and the Architect amend this Agreement.

§ 3.6.1.2 The Architect shall advise and consult with the Owner during the Construction Phase Services. The Architect shall have authority to act on behalf of the Owner only to the extent provided in this Agreement. The Architect shall not have control over, charge of, or responsibility for the construction means, methods, techniques, sequences or procedures, or for safety precautions and programs in connection with the Work, nor shall the Architect be responsible for the Contractor's failure to perform the Work in accordance with the requirements of the Contract Documents. The Architect shall be responsible for the Architect's negligent acts or omissions, but shall not have control over or charge of, and shall not be responsible for, acts or omissions of the Contractor or of any other persons or entities performing portions of the Work.

§ 3.6.1.3 Subject to Section 4.3, the Architect's responsibility to provide Construction Phase Services commences with the award of the Contract for Construction and terminates on the date the Architect issues the final Certificate for Payment.

§ 3.6.2 EVALUATIONS OF THE WORK

§ 3.6.2.1 The Architect shall visit the site at intervals appropriate to the stage of construction, or as otherwise required in Section 4.3.3, to become generally familiar with the progress and quality of the portion of the Work completed, and to determine, in general, if the Work observed is being performed in a manner indicating that the Work, when fully completed, will be in accordance with the Contract Documents. However, the Architect shall not be required to make exhaustive or continuous on-site inspections to check the quality or quantity of the Work. On the basis of the site visits, the Architect shall keep the Owner reasonably informed about the progress and quality of the portion of the Work completed, and report to the Owner (1) known deviations from the Contract Documents and from the most recent construction schedule submitted by the Contractor, and (2) defects and deficiencies observed in the Work.

§ 3.6.2.2 The Architect has the authority to reject Work that does not conform to the Contract Documents. Whenever the Architect considers it necessary or advisable, the Architect shall have the authority to require inspection or testing of the Work in accordance with the provisions of the Contract Documents, whether or not such Work is fabricated, installed or completed. However, neither this authority of the Architect nor a decision made in good faith either to exercise or not to exercise such authority shall give rise to a duty or responsibility of the Architect to the Contractor, Subcontractors, material and equipment suppliers, their agents or employees or other persons or entities performing portions of the Work.

§ 3.6.2.3 The Architect shall interpret and decide matters concerning performance under, and requirements of, the Contract Documents on written request of either the Owner or Contractor. The Architect's response to such requests shall be made in writing within any time limits agreed upon or otherwise with reasonable promptness.

§ 3.6.2.4 Interpretations and decisions of the Architect shall be consistent with the intent of and reasonably inferable from the Contract Documents and shall be in writing or in the form of drawings. When making such interpretations and decisions, the Architect shall endeavor to secure faithful performance by both Owner and Contractor, shall not show partiality to either, and shall not be liable for results of interpretations or decisions rendered in good faith. The Architect's decisions on matters relating to aesthetic effect shall be final if consistent with the intent expressed in the Contract Documents.

§ 3.6.2.5 Unless the Owner and Contractor designate another person to serve as an Initial Decision Maker, as that term is defined in AIA Document A201–2007, the Architect shall render initial decisions on Claims between the Owner and Contractor as provided in the Contract Documents.

§ 3.6.3 CERTIFICATES FOR PAYMENT TO CONTRACTOR

§ 3.6.3.1 The Architect shall review and certify the amounts due the Contractor and shall issue certificates in such amounts. The Architect's certification for payment shall constitute a representation to the Owner, based on the Architect's evaluation of the Work as provided in Section 3.6.2 and on the data comprising the Contractor's Application for Payment, that, to the best of the Architect's knowledge, information and belief, the Work has

Init.

AIA Document B101™ – 2007 (formerly B151™ – 1997). Copyright © 1974, 1978, 1987, 1997 and 2007 by The American Institute of Architects. All rights reserved. WARNING: This AIA® Document is protected by U.S. Copyright Law and International Treaties. Unauthorized reproduction or distribution of this AIA® Document, or any portion of it, may result in severe civil and criminal penalties, and will be prosecuted to the maximum extent possible under the law. Purchasers are permitted to reproduce ten (10) copies of this document when completed. To report copyright violations of AIA Contract Documents, e-mail The American Institute of Architects' legal counsel, copyright@aia.org.

progressed to the point indicated and that the quality of the Work is in accordance with the Contract Documents. The foregoing representations are subject (1) to an evaluation of the Work for conformance with the Contract Documents upon Substantial Completion, (2) to results of subsequent tests and inspections, (3) to correction of minor deviations from the Contract Documents prior to completion, and (4) to specific qualifications expressed by the Architect.

§ 3.6.3.2 The issuance of a Certificate for Payment shall not be a representation that the Architect has (1) made exhaustive or continuous on-site inspections to check the quality or quantity of the Work, (2) reviewed construction means, methods, techniques, sequences or procedures, (3) reviewed copies of requisitions received from Subcontractors and material suppliers and other data requested by the Owner to substantiate the Contractor's right to payment, or (4) ascertained how or for what purpose the Contractor has used money previously paid on account of the Contract Sum.

§ 3.6.3.3 The Architect shall maintain a record of the Applications and Certificates for Payment.

§ 3.6.4 SUBMITTALS

§ 3.6.4.1 The Architect shall review the Contractor's submittal schedule and shall not unreasonably delay or withhold approval. The Architect's action in reviewing submittals shall be taken in accordance with the approved submittal schedule or, in the absence of an approved submittal schedule, with reasonable promptness while allowing sufficient time in the Architect's professional judgment to permit adequate review.

§ 3.6.4.2 In accordance with the Architect-approved submittal schedule, the Architect shall review and approve or take other appropriate action upon the Contractor's submittals such as Shop Drawings, Product Data and Samples, but only for the limited purpose of checking for conformance with information given and the design concept expressed in the Contract Documents. Review of such submittals is not for the purpose of determining the accuracy and completeness of other information such as dimensions, quantities, and installation or performance of equipment or systems, which are the Contractor's responsibility. The Architect's review shall not constitute approval of safety precautions or, unless otherwise specifically stated by the Architect, of any construction means, methods, techniques, sequences or procedures. The Architect's approval of a specific item shall not indicate approval of an assembly of which the item is a component.

§ 3.6.4.3 If the Contract Documents specifically require the Contractor to provide professional design services or certifications by a design professional related to systems, materials or equipment, the Architect shall specify the appropriate performance and design criteria that such services must satisfy. The Architect shall review shop drawings and other submittals related to the Work designed or certified by the design professional retained by the Contractor that bear such professional's seal and signature when submitted to the Architect. The Architect shall be entitled to rely upon the adequacy, accuracy and completeness of the services, certifications and approvals performed or provided by such design professionals.

§ 3.6.4.4 Subject to the provisions of Section 4.3, the Architect shall review and respond to requests for information about the Contract Documents. The Architect shall set forth in the Contract Documents the requirements for requests for information. Requests for information shall include, at a minimum, a detailed written statement that indicates the specific Drawings or Specifications in need of clarification and the nature of the clarification requested. The Architect's response to such requests shall be made in writing within any time limits agreed upon, or otherwise with reasonable promptness. If appropriate, the Architect shall prepare and issue supplemental Drawings and Specifications in response to requests for information.

§ 3.6.4.5 The Architect shall maintain a record of submittals and copies of submittals supplied by the Contractor in accordance with the requirements of the Contract Documents.

§ 3.6.5 CHANGES IN THE WORK

§ 3.6.5.1 The Architect may authorize minor changes in the Work that are consistent with the intent of the Contract Documents and do not involve an adjustment in the Contract Sum or an extension of the Contract Time. Subject to the provisions of Section 4.3, the Architect shall prepare Change Orders and Construction Change Directives for the Owner's approval and execution in accordance with the Contract Documents.

§ 3.6.5.2 The Architect shall maintain records relative to changes in the Work.

§ 3.6.6 PROJECT COMPLETION

§ 3.6.6.1 The Architect shall conduct inspections to determine the date or dates of Substantial Completion and the date of final completion; issue Certificates of Substantial Completion; receive from the Contractor and forward to the Owner, for the Owner's review and records, written warranties and related documents required by the Contract Documents and assembled by the Contractor; and issue a final Certificate for Payment based upon a final inspection indicating the Work complies with the requirements of the Contract Documents.

§ 3.6.6.2 The Architect's inspections shall be conducted with the Owner to check conformance of the Work with the requirements of the Contract Documents and to verify the accuracy and completeness of the list submitted by the Contractor of Work to be completed or corrected.

§ 3.6.6.3 When the Work is found to be substantially complete, the Architect shall inform the Owner about the balance of the Contract Sum remaining to be paid the Contractor, including the amount to be retained from the Contract Sum, if any, for final completion or correction of the Work.

§ 3.6.6.4 The Architect shall forward to the Owner the following information received from the Contractor:
 (1) consent of surety or sureties, if any, to reduction in or partial release of retainage or the making of final payment;
 (2) affidavits, receipts, releases and waivers of liens or bonds indemnifying the Owner against liens; and (3) any other documentation required of the Contractor under the Contract Documents.

§ 3.6.6.5 Upon request of the Owner, and prior to the expiration of one year from the date of Substantial Completion, the Architect shall, without additional compensation, conduct a meeting with the Owner to review the facility operations and performance.

ARTICLE 4 ADDITIONAL SERVICES

§ 4.1 Additional Services listed below are not included in Basic Services but may be required for the Project. The Architect shall provide the listed Additional Services only if specifically designated in the table below as the Architect's responsibility, and the Owner shall compensate the Architect as provided in Section 11.2.

(Designate the Additional Services the Architect shall provide in the second column of the table below. In the third column indicate whether the service description is located in Section 4.2 or in an attached exhibit. If in an exhibit, identify the exhibit.)

Additional Services	Responsibility <i>(Architect, Owner or Not Provided)</i>	Location of Service Description <i>(Section 4.2 below or in an exhibit attached to this document and identified below)</i>

§ 4.2 Insert a description of each Additional Service designated in Section 4.1 as the Architect's responsibility, if not further described in an exhibit attached to this document.

§ 4.3 Additional Services may be provided after execution of this Agreement, without invalidating the Agreement. Except for services required due to the fault of the Architect, any Additional Services provided in accordance with this Section 4.3 shall entitle the Architect to compensation pursuant to Section 11.3 and an appropriate adjustment in the Architect's schedule.

§ 4.3.1 Upon recognizing the need to perform the following Additional Services, the Architect shall notify the Owner with reasonable promptness and explain the facts and circumstances giving rise to the need. The Architect shall not proceed to provide the following services until the Architect receives the Owner's written authorization:

- .1 Services necessitated by a change in the Initial Information, previous instructions or approvals given by the Owner, or a material change in the Project including, but not limited to, size, quality, complexity, the Owner's schedule or budget for Cost of the Work, or procurement or delivery method;
- .2 Services necessitated by the Owner's request for extensive environmentally responsible design alternatives, such as unique system designs, in-depth material research, energy modeling, or LEED® certification;
- .3 Changing or editing previously prepared Instruments of Service necessitated by the enactment or revision of codes, laws or regulations or official interpretations;
- .4 Services necessitated by decisions of the Owner not rendered in a timely manner or any other failure of performance on the part of the Owner or the Owner's consultants or contractors;
- .5 Preparing digital data for transmission to the Owner's consultants and contractors, or to other Owner authorized recipients;
- .6 Preparation of design and documentation for alternate bid or proposal requests proposed by the Owner;
- .7 Preparation for, and attendance at, a public presentation, meeting or hearing;
- .8 Preparation for, and attendance at a dispute resolution proceeding or legal proceeding, except where the Architect is party thereto;
- .9 Evaluation of the qualifications of bidders or persons providing proposals;
- .10 Consultation concerning replacement of Work resulting from fire or other cause during construction; or
- .11 Assistance to the Initial Decision Maker, if other than the Architect.

§ 4.3.2 To avoid delay in the Construction Phase, the Architect shall provide the following Additional Services, notify the Owner with reasonable promptness, and explain the facts and circumstances giving rise to the need. If the Owner

Init.

subsequently determines that all or parts of those services are not required, the Owner shall give prompt written notice to the Architect, and the Owner shall have no further obligation to compensate the Architect for those services:

- .1 Reviewing a Contractor's submittal out of sequence from the submittal schedule agreed to by the Architect;
- .2 Responding to the Contractor's requests for information that are not prepared in accordance with the Contract Documents or where such information is available to the Contractor from a careful study and comparison of the Contract Documents, field conditions, other Owner-provided information, Contractor-prepared coordination drawings, or prior Project correspondence or documentation;
- .3 Preparing Change Orders and Construction Change Directives that require evaluation of Contractor's proposals and supporting data, or the preparation or revision of Instruments of Service;
- .4 Evaluating an extensive number of Claims as the Initial Decision Maker;
- .5 Evaluating substitutions proposed by the Owner or Contractor and making subsequent revisions to Instruments of Service resulting therefrom; or
- .6 To the extent the Architect's Basic Services are affected, providing Construction Phase Services 60 days after (1) the date of Substantial Completion of the Work or (2) the anticipated date of Substantial Completion identified in Initial Information, whichever is earlier.

§ 4.3.3 The Architect shall provide Construction Phase Services exceeding the limits set forth below as Additional Services. When the limits below are reached, the Architect shall notify the Owner:

- .1 () reviews of each Shop Drawing, Product Data item, sample and similar submittal of the Contractor
- .2 () visits to the site by the Architect over the duration of the Project during construction
- .3 () inspections for any portion of the Work to determine whether such portion of the Work is substantially complete in accordance with the requirements of the Contract Documents
- .4 () inspections for any portion of the Work to determine final completion

§ 4.3.4 If the services covered by this Agreement have not been completed within () months of the date of this Agreement, through no fault of the Architect, extension of the Architect's services beyond that time shall be compensated as Additional Services.

ARTICLE 5 OWNER'S RESPONSIBILITIES

§ 5.1 Unless otherwise provided for under this Agreement, the Owner shall provide information in a timely manner regarding requirements for and limitations on the Project, including a written program which shall set forth the Owner's objectives, schedule, constraints and criteria, including space requirements and relationships, flexibility, expandability, special equipment, systems and site requirements. Within 15 days after receipt of a written request from the Architect, the Owner shall furnish the requested information as necessary and relevant for the Architect to evaluate, give notice of or enforce lien rights.

§ 5.2 The Owner shall establish and periodically update the Owner's budget for the Project, including (1) the budget for the Cost of the Work as defined in Section 6.1; (2) the Owner's other costs; and, (3) reasonable contingencies related to all of these costs. If the Owner significantly increases or decreases the Owner's budget for the Cost of the Work, the Owner shall notify the Architect. The Owner and the Architect shall thereafter agree to a corresponding change in the Project's scope and quality.

§ 5.3 The Owner shall identify a representative authorized to act on the Owner's behalf with respect to the Project. The Owner shall render decisions and approve the Architect's submittals in a timely manner in order to avoid unreasonable delay in the orderly and sequential progress of the Architect's services.

§ 5.4 The Owner shall furnish surveys to describe physical characteristics, legal limitations and utility locations for the site of the Project, and a written legal description of the site. The surveys and legal information shall include, as applicable, grades and lines of streets, alleys, pavements and adjoining property and structures; designated wetlands; adjacent drainage; rights-of-way, restrictions, easements, encroachments, zoning, deed restrictions, boundaries and contours of the site; locations, dimensions and necessary data with respect to existing buildings, other improvements and trees; and information concerning available utility services and lines, both public and private, above and below grade, including inverts and depths. All the information on the survey shall be referenced to a Project benchmark.

WARNING: This AIA™ Document is protected by U.S. Copyright Law and International Treaties. Unauthorized reproduction or distribution of this AIA™ Document, or any portion of it, may result in severe civil and criminal penalties, and will be prosecuted to the maximum extent possible under the law. Purchasers are permitted to reproduce ten (10) copies of this document when completed. To report copyright violations of AIA Contract Documents, e-mail The American Institute of Architects' legal counsel, copyright@aia.org.

§ 5.5 The Owner shall furnish services of geotechnical engineers, which may include but are not limited to test borings, test pits, determinations of soil bearing values, percolation tests, evaluations of hazardous materials, seismic evaluation, ground corrosion tests and resistivity tests, including necessary operations for anticipating subsoil conditions, with written reports and appropriate recommendations.

§ 5.6 The Owner shall coordinate the services of its own consultants with those services provided by the Architect. Upon the Architect's request, the Owner shall furnish copies of the scope of services in the contracts between the Owner and the Owner's consultants. The Owner shall furnish the services of consultants other than those designated in this Agreement, or authorize the Architect to furnish them as an Additional Service, when the Architect requests such services and demonstrates that they are reasonably required by the scope of the Project. The Owner shall require that its consultants maintain professional liability insurance as appropriate to the services provided.

§ 5.7 The Owner shall furnish tests, inspections and reports required by law or the Contract Documents, such as structural, mechanical, and chemical tests, tests for air and water pollution, and tests for hazardous materials.

§ 5.8 The Owner shall furnish all legal, insurance and accounting services, including auditing services, that may be reasonably necessary at any time for the Project to meet the Owner's needs and interests.

§ 5.9 The Owner shall provide prompt written notice to the Architect if the Owner becomes aware of any fault or defect in the Project, including errors, omissions or inconsistencies in the Architect's Instruments of Service.

§ 5.10 Except as otherwise provided in this Agreement, or when direct communications have been specially authorized, the Owner shall endeavor to communicate with the Contractor and the Architect's consultants through the Architect about matters arising out of or relating to the Contract Documents. The Owner shall promptly notify the Architect of any direct communications that may affect the Architect's services.

§ 5.11 Before executing the Contract for Construction, the Owner shall coordinate the Architect's duties and responsibilities set forth in the Contract for Construction with the Architect's services set forth in this Agreement. The Owner shall provide the Architect a copy of the executed agreement between the Owner and Contractor, including the General Conditions of the Contract for Construction.

§ 5.12 The Owner shall provide the Architect access to the Project site prior to commencement of the Work and shall obligate the Contractor to provide the Architect access to the Work wherever it is in preparation or progress.

ARTICLE 6 COST OF THE WORK

§ 6.1 For purposes of this Agreement, the Cost of the Work shall be the total cost to the Owner to construct all elements of the Project designed or specified by the Architect and shall include contractors' general conditions costs, overhead and profit. The Cost of the Work does not include the compensation of the Architect, the costs of the land, rights-of-way, financing, contingencies for changes in the Work or other costs that are the responsibility of the Owner.

§ 6.2 The Owner's budget for the Cost of the Work is provided in Initial Information, and may be adjusted throughout the Project as required under Sections 5.2, 6.4 and 6.5. Evaluations of the Owner's budget for the Cost of the Work, the preliminary estimate of the Cost of the Work and updated estimates of the Cost of the Work prepared by the Architect, represent the Architect's judgment as a design professional. It is recognized, however, that neither the Architect nor the Owner has control over the cost of labor, materials or equipment; the Contractor's methods of determining bid prices; or competitive bidding, market or negotiating conditions. Accordingly, the Architect cannot and does not warrant or represent that bids or negotiated prices will not vary from the Owner's budget for the Cost of the Work or from any estimate of the Cost of the Work or evaluation prepared or agreed to by the Architect.

§ 6.3 In preparing estimates of the Cost of Work, the Architect shall be permitted to include contingencies for design, bidding and price escalation; to determine what materials, equipment, component systems and types of construction are to be included in the Contract Documents; to make reasonable adjustments in the program and scope of the Project; and to include in the Contract Documents alternate bids as may be necessary to adjust the estimated Cost of the Work to meet the Owner's budget for the Cost of the Work. The Architect's estimate of the Cost of the Work shall be based on current area, volume or similar conceptual estimating techniques. If the Owner requests detailed cost estimating services, the Architect shall provide such services as an Additional Service under Article 4.

§ 6.4 If the Bidding or Negotiation Phase has not commenced within 90 days after the Architect submits the Construction Documents to the Owner, through no fault of the Architect, the Owner's budget for the Cost of the Work shall be adjusted to reflect changes in the general level of prices in the applicable construction market.

§ 6.5 If at any time the Architect's estimate of the Cost of the Work exceeds the Owner's budget for the Cost of the Work, the Architect shall make appropriate recommendations to the Owner to adjust the Project's size, quality or budget for the Cost of the Work, and the Owner shall cooperate with the Architect in making such adjustments.

§ 6.6 If the Owner's budget for the Cost of the Work at the conclusion of the Construction Documents Phase Services is exceeded by the lowest bona fide bid or negotiated proposal, the Owner shall

- .1 give written approval of an increase in the budget for the Cost of the Work;
- .2 authorize rebidding or renegotiating of the Project within a reasonable time;
- .3 terminate in accordance with Section 9.5;
- .4 in consultation with the Architect, revise the Project program, scope, or quality as required to reduce the Cost of the Work; or
- .5 implement any other mutually acceptable alternative.

§ 6.7 If the Owner chooses to proceed under Section 6.6.4, the Architect, without additional compensation, shall modify the Construction Documents as necessary to comply with the Owner's budget for the Cost of the Work at the conclusion of the Construction Documents Phase Services, or the budget as adjusted under Section 6.6.1. The Architect's modification of the Construction Documents shall be the limit of the Architect's responsibility under this Article 6.

ARTICLE 7 COPYRIGHTS AND LICENSES

§ 7.1 The Architect and the Owner warrant that in transmitting Instruments of Service, or any other information, the transmitting party is the copyright owner of such information or has permission from the copyright owner to transmit such information for its use on the Project. If the Owner and Architect intend to transmit Instruments of Service or any other information or documentation in digital form, they shall endeavor to establish necessary protocols governing such transmissions.

§ 7.2 The Architect and the Architect's consultants shall be deemed the authors and owners of their respective Instruments of Service, including the Drawings and Specifications, and shall retain all common law, statutory and other reserved rights, including copyrights. Submission or distribution of Instruments of Service to meet official regulatory requirements or for similar purposes in connection with the Project is not to be construed as publication in derogation of the reserved rights of the Architect and the Architect's consultants.

§ 7.3 Upon execution of this Agreement, the Architect grants to the Owner a nonexclusive license to use the Architect's Instruments of Service solely and exclusively for purposes of constructing, using, maintaining, altering and adding to the Project, provided that the Owner substantially performs its obligations, including prompt payment of all sums when due, under this Agreement. The Architect shall obtain similar nonexclusive licenses from the Architect's consultants consistent with this Agreement. The license granted under this section permits the Owner to authorize the Contractor, Subcontractors, Sub-subcontractors, and material or equipment suppliers, as well as the Owner's consultants and separate contractors, to reproduce applicable portions of the Instruments of Service solely and exclusively for use in performing services or construction for the Project. If the Architect rightfully terminates this Agreement for cause as provided in Section 9.4, the license granted in this Section 7.3 shall terminate.

§ 7.3.1 In the event the Owner uses the Instruments of Service without retaining the author of the Instruments of Service, the Owner releases the Architect and Architect's consultant(s) from all claims and causes of action arising from such uses. The Owner, to the extent permitted by law, further agrees to indemnify and hold harmless the Architect and its consultants from all costs and expenses, including the cost of defense, related to claims and causes of action asserted by any third person or entity to the extent such costs and expenses arise from the Owner's use of the Instruments of Service under this Section 7.3.1. The terms of this Section 7.3.1 shall not apply if the Owner rightfully terminates this Agreement for cause under Section 9.4.

§ 7.4 Except for the licenses granted in this Article 7, no other license or right shall be deemed granted or implied under this Agreement. The Owner shall not assign, delegate, sublicense, pledge or otherwise transfer any license granted herein to another party without the prior written agreement of the Architect. Any unauthorized use of the

Instruments of Service shall be at the Owner's sole risk and without liability to the Architect and the Architect's consultants.

ARTICLE 8 CLAIMS AND DISPUTES

§ 8.1 GENERAL

§ 8.1.1 The Owner and Architect shall commence all claims and causes of action, whether in contract, tort, or otherwise, against the other arising out of or related to this Agreement in accordance with the requirements of the method of binding dispute resolution selected in this Agreement within the period specified by applicable law, but in any case not more than 10 years after the date of Substantial Completion of the Work. The Owner and Architect waive all claims and causes of action not commenced in accordance with this Section 8.1.1.

§ 8.1.2 To the extent damages are covered by property insurance, the Owner and Architect waive all rights against each other and against the contractors, consultants, agents and employees of the other for damages, except such rights as they may have to the proceeds of such insurance as set forth in AIA Document A201-2007, General Conditions of the Contract for Construction. The Owner or the Architect, as appropriate, shall require of the contractors, consultants, agents and employees of any of them similar waivers in favor of the other parties enumerated herein.

§ 8.1.3 The Architect and Owner waive consequential damages for claims, disputes or other matters in question arising out of or relating to this Agreement. This mutual waiver is applicable, without limitation, to all consequential damages due to either party's termination of this Agreement, except as specifically provided in Section 9.7.

§ 8.2 MEDIATION

§ 8.2.1 Any claim, dispute or other matter in question arising out of or related to this Agreement shall be subject to mediation as a condition precedent to binding dispute resolution. If such matter relates to or is the subject of a lien arising out of the Architect's services, the Architect may proceed in accordance with applicable law to comply with the lien notice or filing deadlines prior to resolution of the matter by mediation or by binding dispute resolution.

§ 8.2.2 The Owner and Architect shall endeavor to resolve claims, disputes and other matters in question between them by mediation which, unless the parties mutually agree otherwise, shall be administered by the American Arbitration Association in accordance with its Construction Industry Mediation Procedures in effect on the date of the Agreement. A request for mediation shall be made in writing, delivered to the other party to the Agreement, and filed with the person or entity administering the mediation. The request may be made concurrently with the filing of a complaint or other appropriate demand for binding dispute resolution but, in such event, mediation shall proceed in advance of binding dispute resolution proceedings, which shall be stayed pending mediation for a period of 60 days from the date of filing, unless stayed for a longer period by agreement of the parties or court order. If an arbitration proceeding is stayed pursuant to this section, the parties may nonetheless proceed to the selection of the arbitrator(s) and agree upon a schedule for later proceedings.

§ 8.2.3 The parties shall share the mediator's fee and any filing fees equally. The mediation shall be held in the place where the Project is located, unless another location is mutually agreed upon. Agreements reached in mediation shall be enforceable as settlement agreements in any court having jurisdiction thereof.

§ 8.2.4 If the parties do not resolve a dispute through mediation pursuant to this Section 8.2, the method of binding dispute resolution shall be the following:

(Check the appropriate box. If the Owner and Architect do not select a method of binding dispute resolution below, or do not subsequently agree in writing to a binding dispute resolution method other than litigation, the dispute will be resolved in a court of competent jurisdiction.)

- Arbitration pursuant to Section 8.3 of this Agreement
- Litigation in a court of competent jurisdiction
- Other *(Specify)*

§ 8.3 ARBITRATION

§ 8.3.1 If the parties have selected arbitration as the method for binding dispute resolution in this Agreement, any claim, dispute or other matter in question arising out of or related to this Agreement subject to, but not resolved by, mediation shall be subject to arbitration which, unless the parties mutually agree otherwise, shall be administered by the American Arbitration Association in accordance with its Construction Industry Arbitration Rules in effect on the date of this Agreement. A demand for arbitration shall be made in writing, delivered to the other party to this Agreement, and filed with the person or entity administering the arbitration.

§ 8.3.1.1 A demand for arbitration shall be made no earlier than concurrently with the filing of a request for mediation, but in no event shall it be made after the date when the institution of legal or equitable proceedings based on the claim, dispute or other matter in question would be barred by the applicable statute of limitations. For statute of limitations purposes, receipt of a written demand for arbitration by the person or entity administering the arbitration shall constitute the institution of legal or equitable proceedings based on the claim, dispute or other matter in question.

§ 8.3.2 The foregoing agreement to arbitrate and other agreements to arbitrate with an additional person or entity duly consented to by parties to this Agreement shall be specifically enforceable in accordance with applicable law in any court having jurisdiction thereof.

§ 8.3.3 The award rendered by the arbitrator(s) shall be final, and judgment may be entered upon it in accordance with applicable law in any court having jurisdiction thereof.

§ 8.3.4 CONSOLIDATION OR JOINDER

§ 8.3.4.1 Either party, at its sole discretion, may consolidate an arbitration conducted under this Agreement with any other arbitration to which it is a party provided that (1) the arbitration agreement governing the other arbitration permits consolidation; (2) the arbitrations to be consolidated substantially involve common questions of law or fact; and (3) the arbitrations employ materially similar procedural rules and methods for selecting arbitrator(s).

§ 8.3.4.2 Either party, at its sole discretion, may include by joinder persons or entities substantially involved in a common question of law or fact whose presence is required if complete relief is to be accorded in arbitration, provided that the party sought to be joined consents in writing to such joinder. Consent to arbitration involving an additional person or entity shall not constitute consent to arbitration of any claim, dispute or other matter in question not described in the written consent.

§ 8.3.4.3 The Owner and Architect grant to any person or entity made a party to an arbitration conducted under this Section 8.3, whether by joinder or consolidation, the same rights of joinder and consolidation as the Owner and Architect under this Agreement.

ARTICLE 9 TERMINATION OR SUSPENSION

§ 9.1 If the Owner fails to make payments to the Architect in accordance with this Agreement, such failure shall be considered substantial nonperformance and cause for termination or, at the Architect's option, cause for suspension of performance of services under this Agreement. If the Architect elects to suspend services, the Architect shall give seven days' written notice to the Owner before suspending services. In the event of a suspension of services, the Architect shall have no liability to the Owner for delay or damage caused the Owner because of such suspension of services. Before resuming services, the Architect shall be paid all sums due prior to suspension and any expenses incurred in the interruption and resumption of the Architect's services. The Architect's fees for the remaining services and the time schedules shall be equitably adjusted.

§ 9.2 If the Owner suspends the Project, the Architect shall be compensated for services performed prior to notice of such suspension. When the Project is resumed, the Architect shall be compensated for expenses incurred in the interruption and resumption of the Architect's services. The Architect's fees for the remaining services and the time schedules shall be equitably adjusted.

§ 9.3 If the Owner suspends the Project for more than 90 cumulative days for reasons other than the fault of the Architect, the Architect may terminate this Agreement by giving not less than seven days' written notice.

§ 9.4 Either party may terminate this Agreement upon not less than seven days' written notice should the other party fail substantially to perform in accordance with the terms of this Agreement through no fault of the party initiating the termination.

AIA Document B101™ – 2007 (formerly B151™ – 1997). Copyright © 1974, 1978, 1987, 1997 and 2007 by The American Institute of Architects. All rights reserved. WARNING: This AIA® Document is protected by U.S. Copyright Law and International Treaties. Unauthorized reproduction or distribution of this AIA® Document, or any portion of it, may result in severe civil and criminal penalties, and will be prosecuted to the maximum extent possible under the law. Purchasers are permitted to reproduce ten (10) copies of this document when completed. To report copyright violations of AIA Contract Documents, e-mail The American Institute of Architects' legal counsel, copyright@aia.org.

§ 9.5 The Owner may terminate this Agreement upon not less than seven days' written notice to the Architect for the Owner's convenience and without cause.

§ 9.6 In the event of termination not the fault of the Architect, the Architect shall be compensated for services performed prior to termination, together with Reimbursable Expenses then due and all Termination Expenses as defined in Section 9.7.

§ 9.7 Termination Expenses are in addition to compensation for the Architect's services and include expenses directly attributable to termination for which the Architect is not otherwise compensated, plus an amount for the Architect's anticipated profit on the value of the services not performed by the Architect.

§ 9.8 The Owner's rights to use the Architect's Instruments of Service in the event of a termination of this Agreement are set forth in Article 7 and Section 11.9.

ARTICLE 10 MISCELLANEOUS PROVISIONS

§ 10.1 This Agreement shall be governed by the law of the place where the Project is located, except that if the parties have selected arbitration as the method of binding dispute resolution, the Federal Arbitration Act shall govern Section 8.3.

§ 10.2 Terms in this Agreement shall have the same meaning as those in AIA Document A201-2007, General Conditions of the Contract for Construction.

§ 10.3 The Owner and Architect, respectively, bind themselves, their agents, successors, assigns and legal representatives to this Agreement. Neither the Owner nor the Architect shall assign this Agreement without the written consent of the other, except that the Owner may assign this Agreement to a lender providing financing for the Project if the lender agrees to assume the Owner's rights and obligations under this Agreement.

§ 10.4 If the Owner requests the Architect to execute certificates, the proposed language of such certificates shall be submitted to the Architect for review at least 14 days prior to the requested dates of execution. If the Owner requests the Architect to execute consents reasonably required to facilitate assignment to a lender, the Architect shall execute all such consents that are consistent with this Agreement, provided the proposed consent is submitted to the Architect for review at least 14 days prior to execution. The Architect shall not be required to execute certificates or consents that would require knowledge, services or responsibilities beyond the scope of this Agreement.

§ 10.5 Nothing contained in this Agreement shall create a contractual relationship with or a cause of action in favor of a third party against either the Owner or Architect.

§ 10.6 Unless otherwise required in this Agreement, the Architect shall have no responsibility for the discovery, presence, handling, removal or disposal of, or exposure of persons to, hazardous materials or toxic substances in any form at the Project site.

§ 10.7 The Architect shall have the right to include photographic or artistic representations of the design of the Project among the Architect's promotional and professional materials. The Architect shall be given reasonable access to the completed Project to make such representations. However, the Architect's materials shall not include the Owner's confidential or proprietary information if the Owner has previously advised the Architect in writing of the specific information considered by the Owner to be confidential or proprietary. The Owner shall provide professional credit for the Architect in the Owner's promotional materials for the Project.

§ 10.8 If the Architect or Owner receives information specifically designated by the other party as "confidential" or "business proprietary," the receiving party shall keep such information strictly confidential and shall not disclose it to any other person except to (1) its employees, (2) those who need to know the content of such information in order to perform services or construction solely and exclusively for the Project, or (3) its consultants and contractors whose contracts include similar restrictions on the use of confidential information.

ARTICLE 11 COMPENSATION

§ 11.1 For the Architect's Basic Services described under Article 3, the Owner shall compensate the Architect as follows:

(Insert amount of, or basis for, compensation.)

§ 11.2 For Additional Services designated in Section 4.1, the Owner shall compensate the Architect as follows:

(Insert amount of, or basis for, compensation. If necessary, list specific services to which particular methods of compensation apply.)

§ 11.3 For Additional Services that may arise during the course of the Project, including those under Section 4.3, the Owner shall compensate the Architect as follows:

(Insert amount of, or basis for, compensation.)

§ 11.4 Compensation for Additional Services of the Architect's consultants when not included in Section 11.2 or 11.3, shall be the amount invoiced to the Architect plus _____ percent (_____ %), or as otherwise stated below:

§ 11.5 Where compensation for Basic Services is based on a stipulated sum or percentage of the Cost of the Work, the compensation for each phase of services shall be as follows:

Schematic Design Phase:	percent (%)
Design Development Phase:	percent (%)
Construction Documents Phase:	percent (%)
Bidding or Negotiation Phase:	percent (%)
Construction Phase:	percent (%)
 Total Basic Compensation	 one hundred percent (100.00%)

§ 11.6 When compensation is based on a percentage of the Cost of the Work and any portions of the Project are deleted or otherwise not constructed, compensation for those portions of the Project shall be payable to the extent services are performed on those portions, in accordance with the schedule set forth in Section 11.5 based on (1) the lowest bona fide bid or negotiated proposal, or (2) if no such bid or proposal is received, the most recent estimate of the Cost of the Work for such portions of the Project. The Architect shall be entitled to compensation in accordance with this Agreement for all services performed whether or not the Construction Phase is commenced.

§ 11.7 The hourly billing rates for services of the Architect and the Architect's consultants, if any, are set forth below. The rates shall be adjusted in accordance with the Architect's and Architect's consultants' normal review practices. *(If applicable, attach an exhibit of hourly billing rates or insert them below.)*

§ 11.8 COMPENSATION FOR REIMBURSABLE EXPENSES

§ 11.8.1 Reimbursable Expenses are in addition to compensation for Basic and Additional Services and include expenses incurred by the Architect and the Architect's consultants directly related to the Project, as follows:

- .1 Transportation and authorized out-of-town travel and subsistence;
- .2 Long distance services, dedicated data and communication services, teleconferences, Project Web sites, and extranets;
- .3 Fees paid for securing approval of authorities having jurisdiction over the Project;
- .4 Printing, reproductions, plots, standard form documents;
- .5 Postage, handling and delivery;
- .6 Expense of overtime work requiring higher than regular rates, if authorized in advance by the Owner;
- .7 Renderings, models, mock-ups, professional photography, and presentation materials requested by the Owner;
- .8 Architect's Consultant's expense of professional liability insurance dedicated exclusively to this Project, or the expense of additional insurance coverage or limits if the Owner requests such insurance in excess of that normally carried by the Architect's consultants;
- .9 All taxes levied on professional services and on reimbursable expenses;
- .10 Site office expenses; and
- .11 Other similar Project-related expenditures.

§ 11.8.2 For Reimbursable Expenses the compensation shall be the expenses incurred by the Architect and the Architect's consultants plus _____ percent (_____ %) of the expenses incurred.

§ 11.9 COMPENSATION FOR USE OF ARCHITECT'S INSTRUMENTS OF SERVICE

If the Owner terminates the Architect for its convenience under Section 9.5, or the Architect terminates this Agreement under Section 9.3, the Owner shall pay a licensing fee as compensation for the Owner's continued use of the Architect's Instruments of Service solely for purposes of completing, using and maintaining the Project as follows:

§ 11.10 PAYMENTS TO THE ARCHITECT

§ 11.10.1 An initial payment of _____ Dollars (\$ _____) shall be made upon execution of this Agreement and is the minimum payment under this Agreement. It shall be credited to the Owner's account in the final invoice.

§ 11.10.2 Unless otherwise agreed, payments for services shall be made monthly in proportion to services performed. Payments are due and payable upon presentation of the Architect's invoice. Amounts unpaid (_____) days after the invoice date shall bear interest at the rate entered below, or in the absence thereof at the legal rate prevailing from time to time at the principal place of business of the Architect. *(Insert rate of monthly or annual interest agreed upon.)*

§ 11.10.3 The Owner shall not withhold amounts from the Architect's compensation to impose a penalty or liquidated damages on the Architect, or to offset sums requested by or paid to contractors for the cost of changes in the Work unless the Architect agrees or has been found liable for the amounts in a binding dispute resolution proceeding.

§ 11.10.4 Records of Reimbursable Expenses, expenses pertaining to Additional Services, and services performed on the basis of hourly rates shall be available to the Owner at mutually convenient times.

ARTICLE 12 SPECIAL TERMS AND CONDITIONS

Special terms and conditions that modify this Agreement are as follows:

ARTICLE 13 SCOPE OF THE AGREEMENT

§ 13.1 This Agreement represents the entire and integrated agreement between the Owner and the Architect and supersedes all prior negotiations, representations or agreements, either written or oral. This Agreement may be amended only by written instrument signed by both Owner and Architect.

§ 13.2 This Agreement is comprised of the following documents listed below:

- .1 AIA Document B101™–2007, Standard Form Agreement Between Owner and Architect
- .2 AIA Document E201™–2007, Digital Data Protocol Exhibit, if completed, or the following:

- .3 Other documents:
(List other documents, if any, including Exhibit A, Initial Information, and additional scopes of service, if any, forming part of the Agreement.)

 **AIA**[®] Document B101[™] – 2007 Exhibit A

Initial Information

for the following PROJECT:

(Name and location or address)

THE OWNER:

(Name and address)

This document has important legal consequences. Consultation with an attorney is encouraged with respect to its completion or modification.

THE ARCHITECT:

(Name and address)

This Agreement is based on the following information.

(Note the disposition for the following items by inserting the requested information or a statement such as "not applicable," "unknown at time of execution" or "to be determined later by mutual agreement.")

ARTICLE A.1 PROJECT INFORMATION

§ A.1.1 The Owner's program for the Project:

(Identify documentation or state the manner in which the program will be developed.)

§ A.1.2 The Project's physical characteristics:

(Identify or describe, if appropriate, size, location, dimensions, or other pertinent information, such as geotechnical reports; site, boundary and topographic surveys; traffic and utility studies; availability of public and private utilities and services; legal description of the site; etc.)

§ A.1.3 The Owner's budget for the Cost of the Work, as defined in Section 6.1:

(Provide total, and if known, a line item break down.)

Init.

§ A.1.4 The Owner's other anticipated scheduling information, if any, not provided in Section 1.2:

§ A.1.5 The Owner intends the following procurement or delivery method for the Project:
(Identify method such as competitive bid, negotiated contract, or construction management.)

§ A.1.6 Other Project information:
(Identify special characteristics or needs of the Project not provided elsewhere, such as environmentally responsible design or historic preservation requirements.)

ARTICLE A.2 PROJECT TEAM

§ A.2.1 The Owner identifies the following representative in accordance with Section 5.3:
(List name, address and other information.)

§ A.2.2 The persons or entities, in addition to the Owner's representative, who are required to review the Architect's submittals to the Owner are as follows:
(List name, address and other information.)

§ A.2.3 The Owner will retain the following consultants and contractors:
(List discipline and, if known, identify them by name and address.)

§ A.2.4 The Architect identifies the following representative in accordance with Section 2.3:
(List name, address and other information.)

§ A.2.5 The Architect will retain the consultants identified in Sections A.2.5.1 and A.2.5.2.
(List discipline and, if known, identify them by name and address.)

§ A.2.5.1 Consultants retained under Basic Services:

- .1 Structural Engineer

- .2 Mechanical Engineer

- .3 Electrical Engineer

§ A.2.5.2 Consultants retained under Additional Services:

§ A.2.6 Other Initial Information on which the Agreement is based:
(Provide other Initial Information.)

ARTICLE 1 THE CONTRACT DOCUMENTS

The Contract Documents consist of this Agreement, Conditions of the Contract (General, Supplementary and other Conditions), Drawings, Specifications, Addenda issued prior to execution of this Agreement, other documents listed in this Agreement and Modifications issued after execution of this Agreement, all of which form the Contract, and are as fully a part of the Contract as if attached to this Agreement or repeated herein. The Contract represents the entire and integrated agreement between the parties hereto and supersedes prior negotiations, representations or agreements, either written or oral. An enumeration of the Contract Documents, other than a Modification, appears in Article 9.

ARTICLE 2 THE WORK OF THIS CONTRACT

The Contractor shall fully execute the Work described in the Contract Documents, except as specifically indicated in the Contract Documents to be the responsibility of others.

ARTICLE 3 DATE OF COMMENCEMENT AND SUBSTANTIAL COMPLETION

§ 3.1 The date of commencement of the Work shall be the date of this Agreement unless a different date is stated below or provision is made for the date to be fixed in a notice to proceed issued by the Owner.

(Insert the date of commencement if it differs from the date of this Agreement or, if applicable, state that the date will be fixed in a notice to proceed.)

If, prior to the commencement of the Work, the Owner requires time to file mortgages and other security interests, the Owner's time requirement shall be as follows:

§ 3.2 The Contract Time shall be measured from the date of commencement.

Init.

WARNING: This AIA® Document is protected by U.S. Copyright Law and International Treaties. Unauthorized reproduction or distribution of this AIA® Document, or any portion of it, may result in severe civil and criminal penalties, and will be prosecuted to the maximum extent possible under the law. Purchasers are permitted to reproduce ten (10) copies of this document when completed. To report copyright violations of AIA Contract Documents, e-mail The American Institute of Architects' legal counsel, copyright@aia.org.

§ 3.3 The Contractor shall achieve Substantial Completion of the entire Work not later than () days from the date of commencement, or as follows:
(Insert number of calendar days. Alternatively, a calendar date may be used when coordinated with the date of commencement. If appropriate, insert requirements for earlier Substantial Completion of certain portions of the Work.)

, subject to adjustments of this Contract Time as provided in the Contract Documents.
(Insert provisions, if any, for liquidated damages relating to failure to achieve Substantial Completion on time or for bonus payments for early completion of the Work.)

ARTICLE 4 CONTRACT SUM

§ 4.1 The Owner shall pay the Contractor the Contract Sum in current funds for the Contractor's performance of the Contract. The Contract Sum shall be Dollars (\$) , subject to additions and deductions as provided in the Contract Documents.

§ 4.2 The Contract Sum is based upon the following alternates, if any, which are described in the Contract Documents and are hereby accepted by the Owner:
(State the numbers or other identification of accepted alternates. If the bidding or proposal documents permit the Owner to accept other alternates subsequent to the execution of this Agreement, attach a schedule of such other alternates showing the amount for each and the date when that amount expires.)

§ 4.3 Unit prices, if any:
(Identify and state the unit price; state quantity limitations, if any, to which the unit price will be applicable.)

Item	Units and Limitations	Price Per Unit
------	-----------------------	----------------

§ 4.4 Allowances included in the Contract Sum, if any:
(Identify allowance and state exclusions, if any, from the allowance price.)

Item	Price
------	-------

ARTICLE 5 PAYMENTS

§ 5.1 PROGRESS PAYMENTS

§ 5.1.1 Based upon Applications for Payment submitted to the Architect by the Contractor and Certificates for Payment issued by the Architect, the Owner shall make progress payments on account of the Contract Sum to the Contractor as provided below and elsewhere in the Contract Documents.

§ 5.1.2 The period covered by each Application for Payment shall be one calendar month ending on the last day of the month, or as follows:

§ 5.1.3 Provided that an Application for Payment is received by the Architect not later than the () day of a month, the Owner shall make payment of the certified amount to the Contractor not later than the () day of the () day of the () month. If an Application for Payment is received by the Architect after the application date fixed above, payment shall be made by the Owner not later than () days after the Architect receives the Application for Payment.
(Federal, state or local laws may require payment within a certain period of time.)

§ 5.1.4 Each Application for Payment shall be based on the most recent schedule of values submitted by the Contractor in accordance with the Contract Documents. The schedule of values shall allocate the entire Contract Sum among the various portions of the Work. The schedule of values shall be prepared in such form and supported by such data to substantiate its accuracy as the Architect may require. This schedule, unless objected to by the Architect, shall be used as a basis for reviewing the Contractor's Applications for Payment.

§ 5.1.5 Applications for Payment shall show the percentage of completion of each portion of the Work as of the end of the period covered by the Application for Payment.

§ 5.1.6 Subject to other provisions of the Contract Documents, the amount of each progress payment shall be computed as follows:

- 1 Take that portion of the Contract Sum properly allocable to completed Work as determined by multiplying the percentage completion of each portion of the Work by the share of the Contract Sum allocated to that portion of the Work in the schedule of values, less retainage of percent () Pending final determination of cost to the Owner of changes in the Work, amounts not in dispute shall be included as provided in Section 7.3.9 of AIA Document A201™-2007, General Conditions of the Contract for Construction;
- 2 Add that portion of the Contract Sum properly allocable to materials and equipment delivered and suitably stored at the site for subsequent incorporation in the completed construction (or, if approved in advance by the Owner, suitably stored off the site at a location agreed upon in writing), less retainage of percent () %;
- 3 Subtract the aggregate of previous payments made by the Owner; and
- 4 Subtract amounts, if any, for which the Architect has withheld or nullified a Certificate for Payment as provided in Section 9.5 of AIA Document A201-2007.

§ 5.1.7 The progress payment amount determined in accordance with Section 5.1.6 shall be further modified under the following circumstances:

- 1 Add, upon Substantial Completion of the Work, a sum sufficient to increase the total payments to the full amount of the Contract Sum, less such amounts as the Architect shall determine for incomplete Work, retainage applicable to such work and unsettled claims; and
(Section 9.8.5 of AIA Document A201-2007 requires release of applicable retainage upon Substantial Completion of Work with consent of surety, if any.)
- 2 Add, if final completion of the Work is thereafter materially delayed through no fault of the Contractor, any additional amounts payable in accordance with Section 9.10.3 of AIA Document A201-2007.

§ 5.1.8 Reduction or limitation of retainage, if any, shall be as follows:

(If it is intended, prior to Substantial Completion of the entire Work, to reduce or limit the retainage resulting from the percentages inserted in Sections 5.1.6.1 and 5.1.6.2 above, and this is not explained elsewhere in the Contract Documents, insert here provisions for such reduction or limitation.)

§ 5.1.9 Except with the Owner's prior approval, the Contractor shall not make advance payments to suppliers for materials or equipment which have not been delivered and stored at the site.

§ 5.2 FINAL PAYMENT

§ 5.2.1 Final payment, constituting the entire unpaid balance of the Contract Sum, shall be made by the Owner to the Contractor when

- .1 the Contractor has fully performed the Contract except for the Contractor's responsibility to correct Work as provided in Section 12.2.2 of AIA Document A201-2007, and to satisfy other requirements, if any, which extend beyond final payment; and
- .2 a final Certificate for Payment has been issued by the Architect.

§ 5.2.2 The Owner's final payment to the Contractor shall be made no later than 30 days after the issuance of the Architect's final Certificate for Payment, or as follows:

ARTICLE 6 DISPUTE RESOLUTION

§ 6.1 INITIAL DECISION MAKER

The Architect will serve as Initial Decision Maker pursuant to Section 15.2 of AIA Document A201-2007, unless the parties appoint below another individual, not a party to this Agreement, to serve as Initial Decision Maker.

(If the parties mutually agree, insert the name, address and other contact information of the Initial Decision Maker, if other than the Architect.)

§ 6.2 BINDING DISPUTE RESOLUTION

For any Claim subject to, but not resolved by, mediation pursuant to Section 15.3 of AIA Document A201-2007, the method of binding dispute resolution shall be as follows:

(Check the appropriate box. If the Owner and Contractor do not select a method of binding dispute resolution below, or do not subsequently agree in writing to a binding dispute resolution method other than litigation, Claims will be resolved by litigation in a court of competent jurisdiction.)

- Arbitration pursuant to Section 15.4 of AIA Document A201-2007
- Litigation in a court of competent jurisdiction
- Other *(Specify)*

ARTICLE 7 TERMINATION OR SUSPENSION

§ 7.1 The Contract may be terminated by the Owner or the Contractor as provided in Article 14 of AIA Document A201-2007.

§ 7.2 The Work may be suspended by the Owner as provided in Article 14 of AIA Document A201-2007.

ARTICLE 8 MISCELLANEOUS PROVISIONS

§ 8.1 Where reference is made in this Agreement to a provision of AIA Document A201–2007 or another Contract Document, the reference refers to that provision as amended or supplemented by other provisions of the Contract Documents.

§ 8.2 Payments due and unpaid under the Contract shall bear interest from the date payment is due at the rate stated below, or in the absence thereof, at the legal rate prevailing from time to time at the place where the Project is located. *(Insert rate of interest agreed upon, if any.)*

§ 8.3 The Owner’s representative:
(Name, address and other information)

§ 8.4 The Contractor’s representative:
(Name, address and other information)

§ 8.5 Neither the Owner’s nor the Contractor’s representative shall be changed without ten days written notice to the other party.

§ 8.6 Other provisions:

ARTICLE 9 ENUMERATION OF CONTRACT DOCUMENTS

§ 9.1 The Contract Documents, except for Modifications issued after execution of this Agreement, are enumerated in the sections below.

§ 9.1.1 The Agreement is this executed AIA Document A101–2007, Standard Form of Agreement Between Owner and Contractor.

§ 9.1.2 The General Conditions are AIA Document A201–2007, General Conditions of the Contract for Construction.

§ 9.1.3 The Supplementary and other Conditions of the Contract:

Document	Title	Date	Pages
----------	-------	------	-------

§ 9.1.4 The Specifications:
(Either list the Specifications here or refer to an exhibit attached to this Agreement.)

Section	Title	Date	Pages
---------	-------	------	-------

Init.

§ 9.1.5 The Drawings:
(Either list the Drawings here or refer to an exhibit attached to this Agreement.)

Number	Title	Date
--------	-------	------

§ 9.1.6 The Addenda, if any:

Number	Date	Pages
--------	------	-------

Portions of Addenda relating to bidding requirements are not part of the Contract Documents unless the bidding requirements are also enumerated in this Article 9.

§ 9.1.7 Additional documents, if any, forming part of the Contract Documents:

.1 AIA Document E201™–2007, Digital Data Protocol Exhibit, if completed by the parties, or the following:

.2 Other documents, if any, listed below:

(List here any additional documents that are intended to form part of the Contract Documents. AIA Document A201–2007 provides that bidding requirements such as advertisement or invitation to bid, Instructions to Bidders, sample forms and the Contractor’s bid are not part of the Contract Documents unless enumerated in this Agreement. They should be listed here only if intended to be part of the Contract Documents.)

ARTICLE 10 INSURANCE AND BONDS

The Contractor shall purchase and maintain insurance and provide bonds as set forth in Article 11 of AIA Document A201–2007.

(State bonding requirements, if any, and limits of liability for insurance required in Article 11 of AIA Document A201–2007.)

This Agreement entered into as of the day and year first written above.

ARTICLE 1 GENERAL PROVISIONS**§ 1.1 BASIC DEFINITIONS****§ 1.1.1 THE CONTRACT DOCUMENTS**

The Contract Documents are enumerated in the Agreement between the Owner and Contractor (hereinafter the Agreement) and consist of the Agreement, Conditions of the Contract (General, Supplementary and other Conditions), Drawings, Specifications, Addenda issued prior to execution of the Contract, other documents listed in the Agreement and Modifications issued after execution of the Contract. A Modification is (1) a written amendment to the Contract signed by both parties, (2) a Change Order, (3) a Construction Change Directive or (4) a written order for a minor change in the Work issued by the Architect. Unless specifically enumerated in the Agreement, the Contract Documents do not include the advertisement or invitation to bid, Instructions to Bidders, sample forms, other information furnished by the Owner in anticipation of receiving bids or proposals, the Contractor's bid or proposal, or portions of Addenda relating to bidding requirements.

§ 1.1.2 THE CONTRACT

The Contract Documents form the Contract for Construction. The Contract represents the entire and integrated agreement between the parties hereto and supersedes prior negotiations, representations or agreements, either written or oral. The Contract may be amended or modified only by a Modification. The Contract Documents shall not be construed to create a contractual relationship of any kind (1) between the Contractor and the Architect or the Architect's consultants, (2) between the Owner and a Subcontractor or a Sub-subcontractor, (3) between the Owner and the Architect or the Architect's consultants or (4) between any persons or entities other than the Owner and the Contractor. The Architect shall, however, be entitled to performance and enforcement of obligations under the Contract intended to facilitate performance of the Architect's duties.

§ 1.1.3 THE WORK

The term "Work" means the construction and services required by the Contract Documents, whether completed or partially completed, and includes all other labor, materials, equipment and services provided or to be provided by the Contractor to fulfill the Contractor's obligations. The Work may constitute the whole or a part of the Project.

§ 1.1.4 THE PROJECT

The Project is the total construction of which the Work performed under the Contract Documents may be the whole or a part and which may include construction by the Owner and by separate contractors.

§ 1.1.5 THE DRAWINGS

The Drawings are the graphic and pictorial portions of the Contract Documents showing the design, location and dimensions of the Work, generally including plans, elevations, sections, details, schedules and diagrams.

§ 1.1.6 THE SPECIFICATIONS

The Specifications are that portion of the Contract Documents consisting of the written requirements for materials, equipment, systems, standards and workmanship for the Work, and performance of related services.

§ 1.1.7 INSTRUMENTS OF SERVICE

Instruments of Service are representations, in any medium of expression now known or later developed, of the tangible and intangible creative work performed by the Architect and the Architect's consultants under their respective professional services agreements. Instruments of Service may include, without limitation, studies, surveys, models, sketches, drawings, specifications, and other similar materials.

§ 1.1.8 INITIAL DECISION MAKER

The Initial Decision Maker is the person identified in the Agreement to render initial decisions on Claims in accordance with Section 15.2 and certify termination of the Agreement under Section 14.2.2.

§ 1.2 CORRELATION AND INTENT OF THE CONTRACT DOCUMENTS

§ 1.2.1 The intent of the Contract Documents is to include all items necessary for the proper execution and completion of the Work by the Contractor. The Contract Documents are complementary, and what is required by one shall be as binding as if required by all; performance by the Contractor shall be required only to the extent consistent with the Contract Documents and reasonably inferable from them as being necessary to produce the indicated results.

§ 1.2.2 Organization of the Specifications into divisions, sections and articles, and arrangement of Drawings shall not control the Contractor in dividing the Work among Subcontractors or in establishing the extent of Work to be performed by any trade.

§ 1.2.3 Unless otherwise stated in the Contract Documents, words that have well-known technical or construction industry meanings are used in the Contract Documents in accordance with such recognized meanings.

§ 1.3 CAPITALIZATION

Terms capitalized in these General Conditions include those that are (1) specifically defined, (2) the titles of numbered articles or (3) the titles of other documents published by the American Institute of Architects.

§ 1.4 INTERPRETATION

In the interest of brevity the Contract Documents frequently omit modifying words such as “all” and “any” and articles such as “the” and “an,” but the fact that a modifier or an article is absent from one statement and appears in another is not intended to affect the interpretation of either statement.

§ 1.5 OWNERSHIP AND USE OF DRAWINGS, SPECIFICATIONS AND OTHER INSTRUMENTS OF SERVICE

§ 1.5.1 The Architect and the Architect’s consultants shall be deemed the authors and owners of their respective Instruments of Service, including the Drawings and Specifications and will retain all common law, statutory and other reserved rights, including copyrights. The Contractor, Subcontractors, Sub-subcontractors, and material or equipment suppliers shall not own or claim a copyright in the Instruments of Service. Submittal or distribution to meet official regulatory requirements or for other purposes in connection with this Project is not to be construed as publication in derogation of the Architect’s or Architect’s consultants’ reserved rights.

§ 1.5.2 The Contractor, Subcontractors, Sub-subcontractors and material or equipment suppliers are authorized to use and reproduce the Instruments of Service provided to them solely and exclusively for execution of the Work. All copies made under this authorization shall bear the copyright notice, if any, shown on the Instruments of Service. The Contractor, Subcontractors, Sub-subcontractors, and material or equipment suppliers may not use the Instruments of Service on other projects or for additions to this Project outside the scope of the Work without the specific written consent of the Owner, Architect and the Architect’s consultants.

§ 1.6 TRANSMISSION OF DATA IN DIGITAL FORM

If the parties intend to transmit Instruments of Service or any other information or documentation in digital form, they shall endeavor to establish necessary protocols governing such transmissions, unless otherwise already provided in the Agreement or the Contract Documents.

ARTICLE 2 OWNER

§ 2.1 GENERAL

§ 2.1.1 The Owner is the person or entity identified as such in the Agreement and is referred to throughout the Contract Documents as if singular in number. The Owner shall designate in writing a representative who shall have express authority to bind the Owner with respect to all matters requiring the Owner’s approval or authorization. Except as otherwise provided in Section 4.2.1, the Architect does not have such authority. The term “Owner” means the Owner or the Owner’s authorized representative.

§ 2.1.2 The Owner shall furnish to the Contractor within fifteen days after receipt of a written request, information necessary and relevant for the Contractor to evaluate, give notice of or enforce mechanic’s lien rights. Such information shall include a correct statement of the record legal title to the property on which the Project is located, usually referred to as the site, and the Owner’s interest therein.

§ 2.2 INFORMATION AND SERVICES REQUIRED OF THE OWNER

§ 2.2.1 Prior to commencement of the Work, the Contractor may request in writing that the Owner provide reasonable evidence that the Owner has made financial arrangements to fulfill the Owner’s obligations under the Contract. Thereafter, the Contractor may only request such evidence if (1) the Owner fails to make payments to the Contractor as the Contract Documents require; (2) a change in the Work materially changes the Contract Sum; or (3) the Contractor identifies in writing a reasonable concern regarding the Owner’s ability to make payment when due. The Owner shall furnish such evidence as a condition precedent to commencement or continuation of the Work or the portion of the Work affected by a material change. After the Owner furnishes the evidence, the Owner shall not materially vary such financial arrangements without prior notice to the Contractor.

Purchasers are not permitted to reproduce this document. To report copyright violations of AIA Contract Documents, e-mail The American Institute of Architects’ legal counsel, copyright@aia.org.

§ 2.2.2 Except for permits and fees that are the responsibility of the Contractor under the Contract Documents, including those required under Section 3.7.1, the Owner shall secure and pay for necessary approvals, easements, assessments and charges required for construction, use or occupancy of permanent structures or for permanent changes in existing facilities.

§ 2.2.3 The Owner shall furnish surveys describing physical characteristics, legal limitations and utility locations for the site of the Project, and a legal description of the site. The Contractor shall be entitled to rely on the accuracy of information furnished by the Owner but shall exercise proper precautions relating to the safe performance of the Work.

§ 2.2.4 The Owner shall furnish information or services required of the Owner by the Contract Documents with reasonable promptness. The Owner shall also furnish any other information or services under the Owner's control and relevant to the Contractor's performance of the Work with reasonable promptness after receiving the Contractor's written request for such information or services.

§ 2.2.5 Unless otherwise provided in the Contract Documents, the Owner shall furnish to the Contractor one copy of the Contract Documents for purposes of making reproductions pursuant to Section 1.5.2.

§ 2.3 OWNER'S RIGHT TO STOP THE WORK

If the Contractor fails to correct Work that is not in accordance with the requirements of the Contract Documents as required by Section 12.2 or repeatedly fails to carry out Work in accordance with the Contract Documents, the Owner may issue a written order to the Contractor to stop the Work, or any portion thereof, until the cause for such order has been eliminated; however, the right of the Owner to stop the Work shall not give rise to a duty on the part of the Owner to exercise this right for the benefit of the Contractor or any other person or entity, except to the extent required by Section 6.1.3.

§ 2.4 OWNER'S RIGHT TO CARRY OUT THE WORK

If the Contractor defaults or neglects to carry out the Work in accordance with the Contract Documents and fails within a ten-day period after receipt of written notice from the Owner to commence and continue correction of such default or neglect with diligence and promptness, the Owner may, without prejudice to other remedies the Owner may have, correct such deficiencies. In such case an appropriate Change Order shall be issued deducting from payments then or thereafter due the Contractor the reasonable cost of correcting such deficiencies, including Owner's expenses and compensation for the Architect's additional services made necessary by such default, neglect or failure. Such action by the Owner and amounts charged to the Contractor are both subject to prior approval of the Architect. If payments then or thereafter due the Contractor are not sufficient to cover such amounts, the Contractor shall pay the difference to the Owner.

ARTICLE 3 CONTRACTOR

§ 3.1 GENERAL

§ 3.1.1 The Contractor is the person or entity identified as such in the Agreement and is referred to throughout the Contract Documents as if singular in number. The Contractor shall be lawfully licensed, if required in the jurisdiction where the Project is located. The Contractor shall designate in writing a representative who shall have express authority to bind the Contractor with respect to all matters under this Contract. The term "Contractor" means the Contractor or the Contractor's authorized representative.

§ 3.1.2 The Contractor shall perform the Work in accordance with the Contract Documents.

§ 3.1.3 The Contractor shall not be relieved of obligations to perform the Work in accordance with the Contract Documents either by activities or duties of the Architect in the Architect's administration of the Contract, or by tests, inspections or approvals required or performed by persons or entities other than the Contractor.

§ 3.2 REVIEW OF CONTRACT DOCUMENTS AND FIELD CONDITIONS BY CONTRACTOR

§ 3.2.1 Execution of the Contract by the Contractor is a representation that the Contractor has visited the site, become generally familiar with local conditions under which the Work is to be performed and correlated personal observations with requirements of the Contract Documents.

§ 3.2.2 Because the Contract Documents are complementary, the Contractor shall, before starting each portion of the Work, carefully study and compare the various Contract Documents relative to that portion of the Work, as well as the information furnished by the Owner pursuant to Section 2.2.3, shall take field measurements of any existing conditions related to that portion of the Work, and shall observe any conditions at the site affecting it. These obligations are for the purpose of facilitating coordination and construction by the Contractor and are not for the purpose of discovering errors, omissions, or inconsistencies in the Contract Documents; however, the Contractor shall promptly report to the Architect any errors, inconsistencies or omissions discovered by or made known to the Contractor as a request for information in such form as the Architect may require. It is recognized that the Contractor's review is made in the Contractor's capacity as a contractor and not as a licensed design professional, unless otherwise specifically provided in the Contract Documents.

§ 3.2.3 The Contractor is not required to ascertain that the Contract Documents are in accordance with applicable laws, statutes, ordinances, codes, rules and regulations, or lawful orders of public authorities, but the Contractor shall promptly report to the Architect any nonconformity discovered by or made known to the Contractor as a request for information in such form as the Architect may require.

§ 3.2.4 If the Contractor believes that additional cost or time is involved because of clarifications or instructions the Architect issues in response to the Contractor's notices or requests for information pursuant to Sections 3.2.2 or 3.2.3, the Contractor shall make Claims as provided in Article 15. If the Contractor fails to perform the obligations of Sections 3.2.2 or 3.2.3, the Contractor shall pay such costs and damages to the Owner as would have been avoided if the Contractor had performed such obligations. If the Contractor performs those obligations, the Contractor shall not be liable to the Owner or Architect for damages resulting from errors, inconsistencies or omissions in the Contract Documents, for differences between field measurements or conditions and the Contract Documents, or for nonconformities of the Contract Documents to applicable laws, statutes, ordinances, codes, rules and regulations, and lawful orders of public authorities.

§ 3.3 SUPERVISION AND CONSTRUCTION PROCEDURES

§ 3.3.1 The Contractor shall supervise and direct the Work, using the Contractor's best skill and attention. The Contractor shall be solely responsible for, and have control over, construction means, methods, techniques, sequences and procedures and for coordinating all portions of the Work under the Contract, unless the Contract Documents give other specific instructions concerning these matters. If the Contract Documents give specific instructions concerning construction means, methods, techniques, sequences or procedures, the Contractor shall evaluate the jobsite safety thereof and, except as stated below, shall be fully and solely responsible for the jobsite safety of such means, methods, techniques, sequences or procedures. If the Contractor determines that such means, methods, techniques, sequences or procedures may not be safe, the Contractor shall give timely written notice to the Owner and Architect and shall not proceed with that portion of the Work without further written instructions from the Architect. If the Contractor is then instructed to proceed with the required means, methods, techniques, sequences or procedures without acceptance of changes proposed by the Contractor, the Owner shall be solely responsible for any loss or damage arising solely from those Owner-required means, methods, techniques, sequences or procedures.

§ 3.3.2 The Contractor shall be responsible to the Owner for acts and omissions of the Contractor's employees, Subcontractors and their agents and employees, and other persons or entities performing portions of the Work for, or on behalf of, the Contractor or any of its Subcontractors.

§ 3.3.3 The Contractor shall be responsible for inspection of portions of Work already performed to determine that such portions are in proper condition to receive subsequent Work.

§ 3.4 LABOR AND MATERIALS

§ 3.4.1 Unless otherwise provided in the Contract Documents, the Contractor shall provide and pay for labor, materials, equipment, tools, construction equipment and machinery, water, heat, utilities, transportation, and other facilities and services necessary for proper execution and completion of the Work, whether temporary or permanent and whether or not incorporated or to be incorporated in the Work.

§ 3.4.2 Except in the case of minor changes in the Work authorized by the Architect in accordance with Sections 3.12.8 or 7.4, the Contractor may make substitutions only with the consent of the Owner, after evaluation by the Architect and in accordance with a Change Order or Construction Change Directive.

§ 3.4.3 The Contractor shall enforce strict discipline and good order among the Contractor's employees and other persons carrying out the Work. The Contractor shall not permit employment of unfit persons or persons not properly skilled in tasks assigned to them.

§ 3.5 WARRANTY

The Contractor warrants to the Owner and Architect that materials and equipment furnished under the Contract will be of good quality and new unless the Contract Documents require or permit otherwise. The Contractor further warrants that the Work will conform to the requirements of the Contract Documents and will be free from defects, except for those inherent in the quality of the Work the Contract Documents require or permit. Work, materials, or equipment not conforming to these requirements may be considered defective. The Contractor's warranty excludes remedy for damage or defect caused by abuse, alterations to the Work not executed by the Contractor, improper or insufficient maintenance, improper operation, or normal wear and tear and normal usage. If required by the Architect, the Contractor shall furnish satisfactory evidence as to the kind and quality of materials and equipment.

§ 3.6 TAXES

The Contractor shall pay sales, consumer, use and similar taxes for the Work provided by the Contractor that are legally enacted when bids are received or negotiations concluded, whether or not yet effective or merely scheduled to go into effect.

§ 3.7 PERMITS, FEES, NOTICES, AND COMPLIANCE WITH LAWS

§ 3.7.1 Unless otherwise provided in the Contract Documents, the Contractor shall secure and pay for the building permit as well as for other permits, fees, licenses, and inspections by government agencies necessary for proper execution and completion of the Work that are customarily secured after execution of the Contract and legally required at the time bids are received or negotiations concluded.

§ 3.7.2 The Contractor shall comply with and give notices required by applicable laws, statutes, ordinances, codes, rules and regulations, and lawful orders of public authorities applicable to performance of the Work.

§ 3.7.3 If the Contractor performs Work knowing it to be contrary to applicable laws, statutes, ordinances, codes, rules and regulations, or lawful orders of public authorities, the Contractor shall assume appropriate responsibility for such Work and shall bear the costs attributable to correction.

§ 3.7.4 Concealed or Unknown Conditions. If the Contractor encounters conditions at the site that are (1) subsurface or otherwise concealed physical conditions that differ materially from those indicated in the Contract Documents or (2) unknown physical conditions of an unusual nature that differ materially from those ordinarily found to exist and generally recognized as inherent in construction activities of the character provided for in the Contract Documents, the Contractor shall promptly provide notice to the Owner and the Architect before conditions are disturbed and in no event later than 21 days after first observance of the conditions. The Architect will promptly investigate such conditions and, if the Architect determines that they differ materially and cause an increase or decrease in the Contractor's cost of, or time required for, performance of any part of the Work, will recommend an equitable adjustment in the Contract Sum or Contract Time, or both. If the Architect determines that the conditions at the site are not materially different from those indicated in the Contract Documents and that no change in the terms of the Contract is justified, the Architect shall promptly notify the Owner and Contractor in writing, stating the reasons. If either party disputes the Architect's determination or recommendation, that party may proceed as provided in Article 15.

§ 3.7.5 If, in the course of the Work, the Contractor encounters human remains or recognizes the existence of burial markers, archaeological sites or wetlands not indicated in the Contract Documents, the Contractor shall immediately suspend any operations that would affect them and shall notify the Owner and Architect. Upon receipt of such notice, the Owner shall promptly take any action necessary to obtain governmental authorization required to resume the operations. The Contractor shall continue to suspend such operations until otherwise instructed by the Owner but shall continue with all other operations that do not affect those remains or features. Requests for adjustments in the Contract Sum and Contract Time arising from the existence of such remains or features may be made as provided in Article 15.

§ 3.8 ALLOWANCES

§ 3.8.1 The Contractor shall include in the Contract Sum all allowances stated in the Contract Documents. Items covered by allowances shall be supplied for such amounts and by such persons or entities as the Owner may direct,

but the Contractor shall not be required to employ persons or entities to whom the Contractor has reasonable objection.

§ 3.8.2 Unless otherwise provided in the Contract Documents,

- 1 allowances shall cover the cost to the Contractor of materials and equipment delivered at the site and all required taxes, less applicable trade discounts;
- 2 Contractor's costs for unloading and handling at the site, labor, installation costs, overhead, profit and other expenses contemplated for stated allowance amounts shall be included in the Contract Sum but not in the allowances; and
- 3 whenever costs are more than or less than allowances, the Contract Sum shall be adjusted accordingly by Change Order. The amount of the Change Order shall reflect (1) the difference between actual costs and the allowances under Section 3.8.2.1 and (2) changes in Contractor's costs under Section 3.8.2.2.

§ 3.8.3 Materials and equipment under an allowance shall be selected by the Owner with reasonable promptness.

§ 3.9 SUPERINTENDENT

§ 3.9.1 The Contractor shall employ a competent superintendent and necessary assistants who shall be in attendance at the Project site during performance of the Work. The superintendent shall represent the Contractor, and communications given to the superintendent shall be as binding as if given to the Contractor.

§ 3.9.2 The Contractor, as soon as practicable after award of the Contract, shall furnish in writing to the Owner through the Architect the name and qualifications of a proposed superintendent. The Architect may reply within 14 days to the Contractor in writing stating (1) whether the Owner or the Architect has reasonable objection to the proposed superintendent or (2) that the Architect requires additional time to review. Failure of the Architect to reply within the 14 day period shall constitute notice of no reasonable objection.

§ 3.9.3 The Contractor shall not employ a proposed superintendent to whom the Owner or Architect has made reasonable and timely objection. The Contractor shall not change the superintendent without the Owner's consent, which shall not unreasonably be withheld or delayed.

§ 3.10 CONTRACTOR'S CONSTRUCTION SCHEDULES

§ 3.10.1 The Contractor, promptly after being awarded the Contract, shall prepare and submit for the Owner's and Architect's information a Contractor's construction schedule for the Work. The schedule shall not exceed time limits current under the Contract Documents, shall be revised at appropriate intervals as required by the conditions of the Work and Project, shall be related to the entire Project to the extent required by the Contract Documents, and shall provide for expeditious and practicable execution of the Work.

§ 3.10.2 The Contractor shall prepare a submittal schedule, promptly after being awarded the Contract and thereafter as necessary to maintain a current submittal schedule, and shall submit the schedule(s) for the Architect's approval. The Architect's approval shall not unreasonably be delayed or withheld. The submittal schedule shall (1) be coordinated with the Contractor's construction schedule, and (2) allow the Architect reasonable time to review submittals. If the Contractor fails to submit a submittal schedule, the Contractor shall not be entitled to any increase in Contract Sum or extension of Contract Time based on the time required for review of submittals.

§ 3.10.3 The Contractor shall perform the Work in general accordance with the most recent schedules submitted to the Owner and Architect.

§ 3.11 DOCUMENTS AND SAMPLES AT THE SITE

The Contractor shall maintain at the site for the Owner one copy of the Drawings, Specifications, Addenda, Change Orders and other Modifications, in good order and marked currently to indicate field changes and selections made during construction, and one copy of approved Shop Drawings, Product Data, Samples and similar required submittals. These shall be available to the Architect and shall be delivered to the Architect for submittal to the Owner upon completion of the Work as a record of the Work as constructed.

§ 3.12 SHOP DRAWINGS, PRODUCT DATA AND SAMPLES

§ 3.12.1 Shop Drawings are drawings, diagrams, schedules and other data specially prepared for the Work by the Contractor or a Subcontractor, Sub-subcontractor, manufacturer, supplier or distributor to illustrate some portion of the Work.

§ 3.12.2 Product Data are illustrations, standard schedules, performance charts, instructions, brochures, diagrams and other information furnished by the Contractor to illustrate materials or equipment for some portion of the Work.

§ 3.12.3 Samples are physical examples that illustrate materials, equipment or workmanship and establish standards by which the Work will be judged.

§ 3.12.4 Shop Drawings, Product Data, Samples and similar submittals are not Contract Documents. Their purpose is to demonstrate the way by which the Contractor proposes to conform to the information given and the design concept expressed in the Contract Documents for those portions of the Work for which the Contract Documents require submittals. Review by the Architect is subject to the limitations of Section 4.2.7. Informational submittals upon which the Architect is not expected to take responsive action may be so identified in the Contract Documents. Submittals that are not required by the Contract Documents may be returned by the Architect without action.

§ 3.12.5 The Contractor shall review for compliance with the Contract Documents, approve and submit to the Architect Shop Drawings, Product Data, Samples and similar submittals required by the Contract Documents in accordance with the submittal schedule approved by the Architect or, in the absence of an approved submittal schedule, with reasonable promptness and in such sequence as to cause no delay in the Work or in the activities of the Owner or of separate contractors.

§ 3.12.6 By submitting Shop Drawings, Product Data, Samples and similar submittals, the Contractor represents to the Owner and Architect that the Contractor has (1) reviewed and approved them, (2) determined and verified materials, field measurements and field construction criteria related thereto, or will do so and (3) checked and coordinated the information contained within such submittals with the requirements of the Work and of the Contract Documents.

§ 3.12.7 The Contractor shall perform no portion of the Work for which the Contract Documents require submittal and review of Shop Drawings, Product Data, Samples or similar submittals until the respective submittal has been approved by the Architect.

§ 3.12.8 The Work shall be in accordance with approved submittals except that the Contractor shall not be relieved of responsibility for deviations from requirements of the Contract Documents by the Architect's approval of Shop Drawings, Product Data, Samples or similar submittals unless the Contractor has specifically informed the Architect in writing of such deviation at the time of submittal and (1) the Architect has given written approval to the specific deviation as a minor change in the Work, or (2) a Change Order or Construction Change Directive has been issued authorizing the deviation. The Contractor shall not be relieved of responsibility for errors or omissions in Shop Drawings, Product Data, Samples or similar submittals by the Architect's approval thereof.

§ 3.12.9 The Contractor shall direct specific attention, in writing or on resubmitted Shop Drawings, Product Data, Samples or similar submittals, to revisions other than those requested by the Architect on previous submittals. In the absence of such written notice, the Architect's approval of a resubmission shall not apply to such revisions.

§ 3.12.10 The Contractor shall not be required to provide professional services that constitute the practice of architecture or engineering unless such services are specifically required by the Contract Documents for a portion of the Work or unless the Contractor needs to provide such services in order to carry out the Contractor's responsibilities for construction means, methods, techniques, sequences and procedures. The Contractor shall not be required to provide professional services in violation of applicable law. If professional design services or certifications by a design professional related to systems, materials or equipment are specifically required of the Contractor by the Contract Documents, the Owner and the Architect will specify all performance and design criteria that such services must satisfy. The Contractor shall cause such services or certifications to be provided by a properly licensed design professional, whose signature and seal shall appear on all drawings, calculations, specifications, certifications, Shop Drawings and other submittals prepared by such professional. Shop Drawings and other submittals related to the Work designed or certified by such professional, if prepared by others, shall bear such professional's written approval when submitted to the Architect. The Owner and the Architect shall be entitled

to rely upon the adequacy, accuracy and completeness of the services, certifications and approvals performed or provided by such design professionals, provided the Owner and Architect have specified to the Contractor all performance and design criteria that such services must satisfy. Pursuant to this Section 3.12.10, the Architect will review, approve or take other appropriate action on submittals only for the limited purpose of checking for conformance with information given and the design concept expressed in the Contract Documents. The Contractor shall not be responsible for the adequacy of the performance and design criteria specified in the Contract Documents.

§ 3.13 USE OF SITE

The Contractor shall confine operations at the site to areas permitted by applicable laws, statutes, ordinances, codes, rules and regulations, and lawful orders of public authorities and the Contract Documents and shall not unreasonably encumber the site with materials or equipment.

§ 3.14 CUTTING AND PATCHING

§ 3.14.1 The Contractor shall be responsible for cutting, fitting or patching required to complete the Work or to make its parts fit together properly. All areas requiring cutting, fitting and patching shall be restored to the condition existing prior to the cutting, fitting and patching, unless otherwise required by the Contract Documents.

§ 3.14.2 The Contractor shall not damage or endanger a portion of the Work or fully or partially completed construction of the Owner or separate contractors by cutting, patching or otherwise altering such construction, or by excavation. The Contractor shall not cut or otherwise alter such construction by the Owner or a separate contractor except with written consent of the Owner and of such separate contractor; such consent shall not be unreasonably withheld. The Contractor shall not unreasonably withhold from the Owner or a separate contractor the Contractor's consent to cutting or otherwise altering the Work.

§ 3.15 CLEANING UP

§ 3.15.1 The Contractor shall keep the premises and surrounding area free from accumulation of waste materials or rubbish caused by operations under the Contract. At completion of the Work, the Contractor shall remove waste materials, rubbish, the Contractor's tools, construction equipment, machinery and surplus materials from and about the Project.

§ 3.15.2 If the Contractor fails to clean up as provided in the Contract Documents, the Owner may do so and Owner shall be entitled to reimbursement from the Contractor.

§ 3.16 ACCESS TO WORK

The Contractor shall provide the Owner and Architect access to the Work in preparation and progress wherever located.

§ 3.17 ROYALTIES, PATENTS AND COPYRIGHTS

The Contractor shall pay all royalties and license fees. The Contractor shall defend suits or claims for infringement of copyrights and patent rights and shall hold the Owner and Architect harmless from loss on account thereof, but shall not be responsible for such defense or loss when a particular design, process or product of a particular manufacturer or manufacturers is required by the Contract Documents, or where the copyright violations are contained in Drawings, Specifications or other documents prepared by the Owner or Architect. However, if the Contractor has reason to believe that the required design, process or product is an infringement of a copyright or a patent, the Contractor shall be responsible for such loss unless such information is promptly furnished to the Architect.

§ 3.18 INDEMNIFICATION

§ 3.18.1 To the fullest extent permitted by law the Contractor shall indemnify and hold harmless the Owner, Architect, Architect's consultants, and agents and employees of any of them from and against claims, damages, losses and expenses, including but not limited to attorneys' fees, arising out of or resulting from performance of the Work, provided that such claim, damage, loss or expense is attributable to bodily injury, sickness, disease or death, or to injury to or destruction of tangible property (other than the Work itself), but only to the extent caused by the negligent acts or omissions of the Contractor, a Subcontractor, anyone directly or indirectly employed by them or anyone for whose acts they may be liable, regardless of whether or not such claim, damage, loss or expense is caused in part by a party indemnified hereunder. Such obligation shall not be construed to negate, abridge, or reduce

other rights or obligations of indemnity that would otherwise exist as to a party or person described in this Section 3.18.

§ 3.18.2 In claims against any person or entity indemnified under this Section 3.18 by an employee of the Contractor, a Subcontractor, anyone directly or indirectly employed by them or anyone for whose acts they may be liable, the indemnification obligation under Section 3.18.1 shall not be limited by a limitation on amount or type of damages, compensation or benefits payable by or for the Contractor or a Subcontractor under workers' compensation acts, disability benefit acts or other employee benefit acts.

ARTICLE 4 ARCHITECT

§ 4.1 GENERAL

§ 4.1.1 The Owner shall retain an architect lawfully licensed to practice architecture or an entity lawfully practicing architecture in the jurisdiction where the Project is located. That person or entity is identified as the Architect in the Agreement and is referred to throughout the Contract Documents as if singular in number.

§ 4.1.2 Duties, responsibilities and limitations of authority of the Architect as set forth in the Contract Documents shall not be restricted, modified or extended without written consent of the Owner, Contractor and Architect. Consent shall not be unreasonably withheld.

§ 4.1.3 If the employment of the Architect is terminated, the Owner shall employ a successor architect as to whom the Contractor has no reasonable objection and whose status under the Contract Documents shall be that of the Architect.

§ 4.2 ADMINISTRATION OF THE CONTRACT

§ 4.2.1 The Architect will provide administration of the Contract as described in the Contract Documents and will be an Owner's representative during construction until the date the Architect issues the final Certificate For Payment. The Architect will have authority to act on behalf of the Owner only to the extent provided in the Contract Documents.

§ 4.2.2 The Architect will visit the site at intervals appropriate to the stage of construction, or as otherwise agreed with the Owner, to become generally familiar with the progress and quality of the portion of the Work completed, and to determine in general if the Work observed is being performed in a manner indicating that the Work, when fully completed, will be in accordance with the Contract Documents. However, the Architect will not be required to make exhaustive or continuous on-site inspections to check the quality or quantity of the Work. The Architect will not have control over, charge of, or responsibility for, the construction means, methods, techniques, sequences or procedures, or for the safety precautions and programs in connection with the Work, since these are solely the Contractor's rights and responsibilities under the Contract Documents, except as provided in Section 3.3.1.

§ 4.2.3 On the basis of the site visits, the Architect will keep the Owner reasonably informed about the progress and quality of the portion of the Work completed, and report to the Owner (1) known deviations from the Contract Documents and from the most recent construction schedule submitted by the Contractor, and (2) defects and deficiencies observed in the Work. The Architect will not be responsible for the Contractor's failure to perform the Work in accordance with the requirements of the Contract Documents. The Architect will not have control over or charge of and will not be responsible for acts or omissions of the Contractor, Subcontractors, or their agents or employees, or any other persons or entities performing portions of the Work.

§ 4.2.4 COMMUNICATIONS FACILITATING CONTRACT ADMINISTRATION

Except as otherwise provided in the Contract Documents or when direct communications have been specially authorized, the Owner and Contractor shall endeavor to communicate with each other through the Architect about matters arising out of or relating to the Contract. Communications by and with the Architect's consultants shall be through the Architect. Communications by and with Subcontractors and material suppliers shall be through the Contractor. Communications by and with separate contractors shall be through the Owner.

§ 4.2.5 Based on the Architect's evaluations of the Contractor's Applications for Payment, the Architect will review and certify the amounts due the Contractor and will issue Certificates for Payment in such amounts.

§ 4.2.6 The Architect has authority to reject Work that does not conform to the Contract Documents. Whenever the Architect considers it necessary or advisable, the Architect will have authority to require inspection or testing of the

Work in accordance with Sections 13.5.2 and 13.5.3, whether or not such Work is fabricated, installed or completed. However, neither this authority of the Architect nor a decision made in good faith either to exercise or not to exercise such authority shall give rise to a duty or responsibility of the Architect to the Contractor, Subcontractors, material and equipment suppliers, their agents or employees, or other persons or entities performing portions of the Work.

§ 4.2.7 The Architect will review and approve, or take other appropriate action upon, the Contractor's submittals such as Shop Drawings, Product Data and Samples, but only for the limited purpose of checking for conformance with information given and the design concept expressed in the Contract Documents. The Architect's action will be taken in accordance with the submittal schedule approved by the Architect or, in the absence of an approved submittal schedule, with reasonable promptness while allowing sufficient time in the Architect's professional judgment to permit adequate review. Review of such submittals is not conducted for the purpose of determining the accuracy and completeness of other details such as dimensions and quantities, or for substantiating instructions for installation or performance of equipment or systems, all of which remain the responsibility of the Contractor as required by the Contract Documents. The Architect's review of the Contractor's submittals shall not relieve the Contractor of the obligations under Sections 3.3, 3.5 and 3.12. The Architect's review shall not constitute approval of safety precautions or, unless otherwise specifically stated by the Architect, of any construction means, methods, techniques, sequences or procedures. The Architect's approval of a specific item shall not indicate approval of an assembly of which the item is a component.

§ 4.2.8 The Architect will prepare Change Orders and Construction Change Directives, and may authorize minor changes in the Work as provided in Section 7.4. The Architect will investigate and make determinations and recommendations regarding concealed and unknown conditions as provided in Section 3.7.4.

§ 4.2.9 The Architect will conduct inspections to determine the date or dates of Substantial Completion and the date of final completion; issue Certificates of Substantial Completion pursuant to Section 9.8; receive and forward to the Owner, for the Owner's review and records, written warranties and related documents required by the Contract and assembled by the Contractor pursuant to Section 9.10; and issue a final Certificate for Payment pursuant to Section 9.10.

§ 4.2.10 If the Owner and Architect agree, the Architect will provide one or more project representatives to assist in carrying out the Architect's responsibilities at the site. The duties, responsibilities and limitations of authority of such project representatives shall be as set forth in an exhibit to be incorporated in the Contract Documents.

§ 4.2.11 The Architect will interpret and decide matters concerning performance under, and requirements of, the Contract Documents on written request of either the Owner or Contractor. The Architect's response to such requests will be made in writing within any time limits agreed upon or otherwise with reasonable promptness.

§ 4.2.12 Interpretations and decisions of the Architect will be consistent with the intent of, and reasonably inferable from, the Contract Documents and will be in writing or in the form of drawings. When making such interpretations and decisions, the Architect will endeavor to secure faithful performance by both Owner and Contractor, will not show partiality to either and will not be liable for results of interpretations or decisions rendered in good faith.

§ 4.2.13 The Architect's decisions on matters relating to aesthetic effect will be final if consistent with the intent expressed in the Contract Documents.

§ 4.2.14 The Architect will review and respond to requests for information about the Contract Documents. The Architect's response to such requests will be made in writing within any time limits agreed upon or otherwise with reasonable promptness. If appropriate, the Architect will prepare and issue supplemental Drawings and Specifications in response to the requests for information.

ARTICLE 5 SUBCONTRACTORS

§ 5.1 DEFINITIONS

§ 5.1.1 A Subcontractor is a person or entity who has a direct contract with the Contractor to perform a portion of the Work at the site. The term "Subcontractor" is referred to throughout the Contract Documents as if singular in number and means a Subcontractor or an authorized representative of the Subcontractor. The term "Subcontractor" does not include a separate contractor or subcontractors of a separate contractor.

§ 5.1.2 A Sub-subcontractor is a person or entity who has a direct or indirect contract with a Subcontractor to perform a portion of the Work at the site. The term "Sub-subcontractor" is referred to throughout the Contract Documents as if singular in number and means a Sub-subcontractor or an authorized representative of the Sub-subcontractor.

§ 5.2 AWARD OF SUBCONTRACTS AND OTHER CONTRACTS FOR PORTIONS OF THE WORK

§ 5.2.1 Unless otherwise stated in the Contract Documents or the bidding requirements, the Contractor, as soon as practicable after award of the Contract, shall furnish in writing to the Owner through the Architect the names of persons or entities (including those who are to furnish materials or equipment fabricated to a special design) proposed for each principal portion of the Work. The Architect may reply within 14 days to the Contractor in writing stating (1) whether the Owner or the Architect has reasonable objection to any such proposed person or entity or (2) that the Architect requires additional time for review. Failure of the Owner or Architect to reply within the 14-day period shall constitute notice of no reasonable objection.

§ 5.2.2 The Contractor shall not contract with a proposed person or entity to whom the Owner or Architect has made reasonable and timely objection. The Contractor shall not be required to contract with anyone to whom the Contractor has made reasonable objection.

§ 5.2.3 If the Owner or Architect has reasonable objection to a person or entity proposed by the Contractor, the Contractor shall propose another to whom the Owner or Architect has no reasonable objection. If the proposed but rejected Subcontractor was reasonably capable of performing the Work, the Contract Sum and Contract Time shall be increased or decreased by the difference, if any, occasioned by such change, and an appropriate Change Order shall be issued before commencement of the substitute Subcontractor's Work. However, no increase in the Contract Sum or Contract Time shall be allowed for such change unless the Contractor has acted promptly and responsively in submitting names as required.

§ 5.2.4 The Contractor shall not substitute a Subcontractor, person or entity previously selected if the Owner or Architect makes reasonable objection to such substitution.

§ 5.3 SUBCONTRACTUAL RELATIONS

By appropriate agreement, written where legally required for validity, the Contractor shall require each Subcontractor, to the extent of the Work to be performed by the Subcontractor, to be bound to the Contractor by terms of the Contract Documents, and to assume toward the Contractor all the obligations and responsibilities, including the responsibility for safety of the Subcontractor's Work, which the Contractor, by these Documents, assumes toward the Owner and Architect. Each subcontract agreement shall preserve and protect the rights of the Owner and Architect under the Contract Documents with respect to the Work to be performed by the Subcontractor so that subcontracting thereof will not prejudice such rights, and shall allow to the Subcontractor, unless specifically provided otherwise in the subcontract agreement, the benefit of all rights, remedies and redress against the Contractor that the Contractor, by the Contract Documents, has against the Owner. Where appropriate, the Contractor shall require each Subcontractor to enter into similar agreements with Sub-subcontractors. The Contractor shall make available to each proposed Subcontractor, prior to the execution of the subcontract agreement, copies of the Contract Documents to which the Subcontractor will be bound, and, upon written request of the Subcontractor, identify to the Subcontractor terms and conditions of the proposed subcontract agreement that may be at variance with the Contract Documents. Subcontractors will similarly make copies of applicable portions of such documents available to their respective proposed Sub-subcontractors.

§ 5.4 CONTINGENT ASSIGNMENT OF SUBCONTRACTS

§ 5.4.1 Each subcontract agreement for a portion of the Work is assigned by the Contractor to the Owner, provided that

- .1 assignment is effective only after termination of the Contract by the Owner for cause pursuant to Section 14.2 and only for those subcontract agreements that the Owner accepts by notifying the Subcontractor and Contractor in writing; and
- .2 assignment is subject to the prior rights of the surety, if any, obligated under bond relating to the Contract.

When the Owner accepts the assignment of a subcontract agreement, the Owner assumes the Contractor's rights and obligations under the subcontract.

§ 5.4.2 Upon such assignment, if the Work has been suspended for more than 30 days, the Subcontractor's compensation shall be equitably adjusted for increases in cost resulting from the suspension.

§ 5.4.3 Upon such assignment to the Owner under this Section 5.4, the Owner may further assign the subcontract to a successor contractor or other entity. If the Owner assigns the subcontract to a successor contractor or other entity, the Owner shall nevertheless remain legally responsible for all of the successor contractor's obligations under the subcontract.

ARTICLE 6 CONSTRUCTION BY OWNER OR BY SEPARATE CONTRACTORS

§ 6.1 OWNER'S RIGHT TO PERFORM CONSTRUCTION AND TO AWARD SEPARATE CONTRACTS

§ 6.1.1 The Owner reserves the right to perform construction or operations related to the Project with the Owner's own forces, and to award separate contracts in connection with other portions of the Project or other construction or operations on the site under Conditions of the Contract identical or substantially similar to these including those portions related to insurance and waiver of subrogation. If the Contractor claims that delay or additional cost is involved because of such action by the Owner, the Contractor shall make such Claim as provided in Article 15.

§ 6.1.2 When separate contracts are awarded for different portions of the Project or other construction or operations on the site, the term "Contractor" in the Contract Documents in each case shall mean the Contractor who executes each separate Owner-Contractor Agreement.

§ 6.1.3 The Owner shall provide for coordination of the activities of the Owner's own forces and of each separate contractor with the Work of the Contractor, who shall cooperate with them. The Contractor shall participate with other separate contractors and the Owner in reviewing their construction schedules. The Contractor shall make any revisions to the construction schedule deemed necessary after a joint review and mutual agreement. The construction schedules shall then constitute the schedules to be used by the Contractor, separate contractors and the Owner until subsequently revised.

§ 6.1.4 Unless otherwise provided in the Contract Documents, when the Owner performs construction or operations related to the Project with the Owner's own forces, the Owner shall be deemed to be subject to the same obligations and to have the same rights that apply to the Contractor under the Conditions of the Contract, including, without excluding others, those stated in Article 3, this Article 6 and Articles 10, 11 and 12.

§ 6.2 MUTUAL RESPONSIBILITY

§ 6.2.1 The Contractor shall afford the Owner and separate contractors reasonable opportunity for introduction and storage of their materials and equipment and performance of their activities, and shall connect and coordinate the Contractor's construction and operations with theirs as required by the Contract Documents.

§ 6.2.2 If part of the Contractor's Work depends for proper execution or results upon construction or operations by the Owner or a separate contractor, the Contractor shall, prior to proceeding with that portion of the Work, promptly report to the Architect apparent discrepancies or defects in such other construction that would render it unsuitable for such proper execution and results. Failure of the Contractor so to report shall constitute an acknowledgment that the Owner's or separate contractor's completed or partially completed construction is fit and proper to receive the Contractor's Work, except as to defects not then reasonably discoverable.

§ 6.2.3 The Contractor shall reimburse the Owner for costs the Owner incurs that are payable to a separate contractor because of the Contractor's delays, improperly timed activities or defective construction. The Owner shall be responsible to the Contractor for costs the Contractor incurs because of a separate contractor's delays, improperly timed activities, damage to the Work or defective construction.

§ 6.2.4 The Contractor shall promptly remedy damage the Contractor wrongfully causes to completed or partially completed construction or to property of the Owner, separate contractors as provided in Section 10.2.5.

§ 6.2.5 The Owner and each separate contractor shall have the same responsibilities for cutting and patching as are described for the Contractor in Section 3.14.

§ 6.3 OWNER'S RIGHT TO CLEAN UP

If a dispute arises among the Contractor, separate contractors and the Owner as to the responsibility under their respective contracts for maintaining the premises and surrounding area free from waste materials and rubbish, the Owner may clean up and the Architect will allocate the cost among those responsible.

ARTICLE 7 CHANGES IN THE WORK**§ 7.1 GENERAL**

§ 7.1.1 Changes in the Work may be accomplished after execution of the Contract, and without invalidating the Contract, by Change Order, Construction Change Directive or order for a minor change in the Work, subject to the limitations stated in this Article 7 and elsewhere in the Contract Documents.

§ 7.1.2 A Change Order shall be based upon agreement among the Owner, Contractor and Architect; a Construction Change Directive requires agreement by the Owner and Architect and may or may not be agreed to by the Contractor; an order for a minor change in the Work may be issued by the Architect alone.

§ 7.1.3 Changes in the Work shall be performed under applicable provisions of the Contract Documents, and the Contractor shall proceed promptly, unless otherwise provided in the Change Order, Construction Change Directive or order for a minor change in the Work.

§ 7.2 CHANGE ORDERS

§ 7.2.1 A Change Order is a written instrument prepared by the Architect and signed by the Owner, Contractor and Architect stating their agreement upon all of the following:

- .1 The change in the Work;
- .2 The amount of the adjustment, if any, in the Contract Sum; and
- .3 The extent of the adjustment, if any, in the Contract Time.

§ 7.3 CONSTRUCTION CHANGE DIRECTIVES

§ 7.3.1 A Construction Change Directive is a written order prepared by the Architect and signed by the Owner and Architect, directing a change in the Work prior to agreement on adjustment, if any, in the Contract Sum or Contract Time, or both. The Owner may by Construction Change Directive, without invalidating the Contract, order changes in the Work within the general scope of the Contract consisting of additions, deletions or other revisions, the Contract Sum and Contract Time being adjusted accordingly.

§ 7.3.2 A Construction Change Directive shall be used in the absence of total agreement on the terms of a Change Order.

§ 7.3.3 If the Construction Change Directive provides for an adjustment to the Contract Sum, the adjustment shall be based on one of the following methods:

- .1 Mutual acceptance of a lump sum properly itemized and supported by sufficient substantiating data to permit evaluation;
- .2 Unit prices stated in the Contract Documents or subsequently agreed upon;
- .3 Cost to be determined in a manner agreed upon by the parties and a mutually acceptable fixed or percentage fee; or
- .4 As provided in Section 7.3.7.

§ 7.3.4 If unit prices are stated in the Contract Documents or subsequently agreed upon, and if quantities originally contemplated are materially changed in a proposed Change Order or Construction Change Directive so that application of such unit prices to quantities of Work proposed will cause substantial inequity to the Owner or Contractor, the applicable unit prices shall be equitably adjusted.

§ 7.3.5 Upon receipt of a Construction Change Directive, the Contractor shall promptly proceed with the change in the Work involved and advise the Architect of the Contractor's agreement or disagreement with the method, if any, provided in the Construction Change Directive for determining the proposed adjustment in the Contract Sum or Contract Time.

§ 7.3.6 A Construction Change Directive signed by the Contractor indicates the Contractor's agreement therewith, including adjustment in Contract Sum and Contract Time or the method for determining them. Such agreement shall be effective immediately and shall be recorded as a Change Order.

21

§ 7.3.7 If the Contractor does not respond promptly or disagrees with the method for adjustment in the Contract Sum, the Architect shall determine the method and the adjustment on the basis of reasonable expenditures and savings of those performing the Work attributable to the change, including, in case of an increase in the Contract Sum, an amount for overhead and profit as set forth in the Agreement, or if no such amount is set forth in the Agreement, a reasonable amount. In such case, and also under Section 7.3.3.3, the Contractor shall keep and present, in such form as the Architect may prescribe, an itemized accounting together with appropriate supporting data. Unless otherwise provided in the Contract Documents, costs for the purposes of this Section 7.3.7 shall be limited to the following:

- .1 Costs of labor, including social security, old age and unemployment insurance, fringe benefits required by agreement or custom, and workers' compensation insurance;
- .2 Costs of materials, supplies and equipment, including cost of transportation, whether incorporated or consumed;
- .3 Rental costs of machinery and equipment, exclusive of hand tools, whether rented from the Contractor or others;
- .4 Costs of premiums for all bonds and insurance, permit fees, and sales, use or similar taxes related to the Work; and
- .5 Additional costs of supervision and field office personnel directly attributable to the change.

§ 7.3.8 The amount of credit to be allowed by the Contractor to the Owner for a deletion or change that results in a net decrease in the Contract Sum shall be actual net cost as confirmed by the Architect. When both additions and credits covering related Work or substitutions are involved in a change, the allowance for overhead and profit shall be figured on the basis of net increase, if any, with respect to that change.

§ 7.3.9 Pending final determination of the total cost of a Construction Change Directive to the Owner, the Contractor may request payment for Work completed under the Construction Change Directive in Applications for Payment. The Architect will make an interim determination for purposes of monthly certification for payment for those costs and certify for payment the amount that the Architect determines, in the Architect's professional judgment, to be reasonably justified. The Architect's interim determination of cost shall adjust the Contract Sum on the same basis as a Change Order, subject to the right of either party to disagree and assert a Claim in accordance with Article 15.

§ 7.3.10 When the Owner and Contractor agree with a determination made by the Architect concerning the adjustments in the Contract Sum and Contract Time, or otherwise reach agreement upon the adjustments, such agreement shall be effective immediately and the Architect will prepare a Change Order. Change Orders may be issued for all or any part of a Construction Change Directive.

§ 7.4 MINOR CHANGES IN THE WORK

The Architect has authority to order minor changes in the Work not involving adjustment in the Contract Sum or extension of the Contract Time and not inconsistent with the intent of the Contract Documents. Such changes will be effected by written order signed by the Architect and shall be binding on the Owner and Contractor.

ARTICLE 8 TIME

§ 8.1 DEFINITIONS

§ 8.1.1 Unless otherwise provided, Contract Time is the period of time, including authorized adjustments, allotted in the Contract Documents for Substantial Completion of the Work.

§ 8.1.2 The date of commencement of the Work is the date established in the Agreement.

§ 8.1.3 The date of Substantial Completion is the date certified by the Architect in accordance with Section 9.8.

§ 8.1.4 The term "day" as used in the Contract Documents shall mean calendar day unless otherwise specifically defined.

§ 8.2 PROGRESS AND COMPLETION

§ 8.2.1 Time limits stated in the Contract Documents are of the essence of the Contract. By executing the Agreement the Contractor confirms that the Contract Time is a reasonable period for performing the Work.

§ 8.2.2 The Contractor shall not knowingly, except by agreement or instruction of the Owner in writing, prematurely commence operations on the site or elsewhere prior to the effective date of insurance required by Article 11 to be

Init.

furnished by the Contractor and Owner. The date of commencement of the Work shall not be changed by the effective date of such insurance.

§ 8.2.3 The Contractor shall proceed expeditiously with adequate forces and shall achieve Substantial Completion within the Contract Time.

§ 8.3 DELAYS AND EXTENSIONS OF TIME

§ 8.3.1 If the Contractor is delayed at any time in the commencement or progress of the Work by an act or neglect of the Owner or Architect, or of an employee of either, or of a separate contractor employed by the Owner; or by changes ordered in the Work; or by labor disputes, fire, unusual delay in deliveries, unavoidable casualties or other causes beyond the Contractor's control; or by delay authorized by the Owner pending mediation and arbitration; or by other causes that the Architect determines may justify delay, then the Contract Time shall be extended by Change Order for such reasonable time as the Architect may determine.

§ 8.3.2 Claims relating to time shall be made in accordance with applicable provisions of Article 15.

§ 8.3.3 This Section 8.3 does not preclude recovery of damages for delay by either party under other provisions of the Contract Documents.

ARTICLE 9 PAYMENTS AND COMPLETION

§ 9.1 CONTRACT SUM

The Contract Sum is stated in the Agreement and, including authorized adjustments, is the total amount payable by the Owner to the Contractor for performance of the Work under the Contract Documents.

§ 9.2 SCHEDULE OF VALUES

Where the Contract is based on a stipulated sum or Guaranteed Maximum Price, the Contractor shall submit to the Architect, before the first Application for Payment, a schedule of values allocating the entire Contract Sum to the various portions of the Work and prepared in such form and supported by such data to substantiate its accuracy as the Architect may require. This schedule, unless objected to by the Architect, shall be used as a basis for reviewing the Contractor's Applications for Payment.

§ 9.3 APPLICATIONS FOR PAYMENT

§ 9.3.1 At least ten days before the date established for each progress payment, the Contractor shall submit to the Architect an itemized Application for Payment prepared in accordance with the schedule of values, if required under Section 9.2., for completed portions of the Work. Such application shall be notarized, if required, and supported by such data substantiating the Contractor's right to payment as the Owner or Architect may require, such as copies of requisitions from Subcontractors and material suppliers, and shall reflect retainage if provided for in the Contract Documents.

§ 9.3.1.1 As provided in Section 7.3.9, such applications may include requests for payment on account of changes in the Work that have been properly authorized by Construction Change Directives, or by interim determinations of the Architect, but not yet included in Change Orders.

§ 9.3.1.2 Applications for Payment shall not include requests for payment for portions of the Work for which the Contractor does not intend to pay a Subcontractor or material supplier, unless such Work has been performed by others whom the Contractor intends to pay.

§ 9.3.2 Unless otherwise provided in the Contract Documents, payments shall be made on account of materials and equipment delivered and suitably stored at the site for subsequent incorporation in the Work. If approved in advance by the Owner, payment may similarly be made for materials and equipment suitably stored off the site at a location agreed upon in writing. Payment for materials and equipment stored on or off the site shall be conditioned upon compliance by the Contractor with procedures satisfactory to the Owner to establish the Owner's title to such materials and equipment or otherwise protect the Owner's interest, and shall include the costs of applicable insurance, storage and transportation to the site for such materials and equipment stored off the site.

§ 9.3.3 The Contractor warrants that title to all Work covered by an Application for Payment will pass to the Owner no later than the time of payment. The Contractor further warrants that upon submittal of an Application for Payment all Work for which Certificates for Payment have been previously issued and payments received from the

Owner shall, to the best of the Contractor's knowledge, information and belief, be free and clear of liens, claims, security interests or encumbrances in favor of the Contractor, Subcontractors, material suppliers, or other persons or entities making a claim by reason of having provided labor, materials and equipment relating to the Work.

§ 9.4 CERTIFICATES FOR PAYMENT

§ 9.4.1 The Architect will, within seven days after receipt of the Contractor's Application for Payment, either issue to the Owner a Certificate for Payment, with a copy to the Contractor, for such amount as the Architect determines is properly due, or notify the Contractor and Owner in writing of the Architect's reasons for withholding certification in whole or in part as provided in Section 9.5.1.

§ 9.4.2 The issuance of a Certificate for Payment will constitute a representation by the Architect to the Owner, based on the Architect's evaluation of the Work and the data comprising the Application for Payment, that, to the best of the Architect's knowledge, information and belief, the Work has progressed to the point indicated and that the quality of the Work is in accordance with the Contract Documents. The foregoing representations are subject to an evaluation of the Work for conformance with the Contract Documents upon Substantial Completion, to results of subsequent tests and inspections, to correction of minor deviations from the Contract Documents prior to completion and to specific qualifications expressed by the Architect. The issuance of a Certificate for Payment will further constitute a representation that the Contractor is entitled to payment in the amount certified. However, the issuance of a Certificate for Payment will not be a representation that the Architect has (1) made exhaustive or continuous on-site inspections to check the quality or quantity of the Work, (2) reviewed construction means, methods, techniques, sequences or procedures, (3) reviewed copies of requisitions received from Subcontractors and material suppliers and other data requested by the Owner to substantiate the Contractor's right to payment, or (4) made examination to ascertain how or for what purpose the Contractor has used money previously paid on account of the Contract Sum.

§ 9.5 DECISIONS TO WITHHOLD CERTIFICATION

§ 9.5.1 The Architect may withhold a Certificate for Payment in whole or in part, to the extent reasonably necessary to protect the Owner, if in the Architect's opinion the representations to the Owner required by Section 9.4.2 cannot be made. If the Architect is unable to certify payment in the amount of the Application, the Architect will notify the Contractor and Owner as provided in Section 9.4.1. If the Contractor and Architect cannot agree on a revised amount, the Architect will promptly issue a Certificate for Payment for the amount for which the Architect is able to make such representations to the Owner. The Architect may also withhold a Certificate for Payment or, because of subsequently discovered evidence, may nullify the whole or a part of a Certificate for Payment previously issued, to such extent as may be necessary in the Architect's opinion to protect the Owner from loss for which the Contractor is responsible, including loss resulting from acts and omissions described in Section 3.3.2, because of

- 1 defective Work not remedied;
- 2 third party claims filed or reasonable evidence indicating probable filing of such claims unless security acceptable to the Owner is provided by the Contractor;
- 3 failure of the Contractor to make payments properly to Subcontractors or for labor, materials or equipment;
- 4 reasonable evidence that the Work cannot be completed for the unpaid balance of the Contract Sum;
- 5 damage to the Owner or a separate contractor;
- 6 reasonable evidence that the Work will not be completed within the Contract Time, and that the unpaid balance would not be adequate to cover actual or liquidated damages for the anticipated delay; or
- 7 repeated failure to carry out the Work in accordance with the Contract Documents.

§ 9.5.2 When the above reasons for withholding certification are removed, certification will be made for amounts previously withheld.

§ 9.5.3 If the Architect withholds certification for payment under Section 9.5.1.3, the Owner may, at its sole option, issue joint checks to the Contractor and to any Subcontractor or material or equipment suppliers to whom the Contractor failed to make payment for Work properly performed or material or equipment suitably delivered. If the Owner makes payments by joint check, the Owner shall notify the Architect and the Architect will reflect such payment on the next Certificate for Payment.

§ 9.6 PROGRESS PAYMENTS

§ 9.6.1 After the Architect has issued a Certificate for Payment, the Owner shall make payment in the manner and within the time provided in the Contract Documents, and shall so notify the Architect.

Init.

§ 9.6.2 The Contractor shall pay each Subcontractor no later than seven days after receipt of payment from the Owner the amount to which the Subcontractor is entitled, reflecting percentages actually retained from payments to the Contractor on account of the Subcontractor's portion of the Work. The Contractor shall, by appropriate agreement with each Subcontractor, require each Subcontractor to make payments to Sub-subcontractors in a similar manner.

§ 9.6.3 The Architect will, on request, furnish to a Subcontractor, if practicable, information regarding percentages of completion or amounts applied for by the Contractor and action taken thereon by the Architect and Owner on account of portions of the Work done by such Subcontractor.

§ 9.6.4 The Owner has the right to request written evidence from the Contractor that the Contractor has properly paid Subcontractors and material and equipment suppliers amounts paid by the Owner to the Contractor for subcontracted Work. If the Contractor fails to furnish such evidence within seven days, the Owner shall have the right to contact Subcontractors to ascertain whether they have been properly paid. Neither the Owner nor Architect shall have an obligation to pay or to see to the payment of money to a Subcontractor, except as may otherwise be required by law.

§ 9.6.5 Contractor payments to material and equipment suppliers shall be treated in a manner similar to that provided in Sections 9.6.2, 9.6.3 and 9.6.4.

§ 9.6.6 A Certificate for Payment, a progress payment, or partial or entire use or occupancy of the Project by the Owner shall not constitute acceptance of Work not in accordance with the Contract Documents.

§ 9.6.7 Unless the Contractor provides the Owner with a payment bond in the full penal sum of the Contract Sum, payments received by the Contractor for Work properly performed by Subcontractors and suppliers shall be held by the Contractor for those Subcontractors or suppliers who performed Work or furnished materials, or both, under contract with the Contractor for which payment was made by the Owner. Nothing contained herein shall require money to be placed in a separate account and not commingled with money of the Contractor, shall create any fiduciary liability or tort liability on the part of the Contractor for breach of trust or shall entitle any person or entity to an award of punitive damages against the Contractor for breach of the requirements of this provision.

§ 9.7 FAILURE OF PAYMENT

If the Architect does not issue a Certificate for Payment, through no fault of the Contractor, within seven days after receipt of the Contractor's Application for Payment, or if the Owner does not pay the Contractor within seven days after the date established in the Contract Documents the amount certified by the Architect or awarded by binding dispute resolution, then the Contractor may, upon seven additional days' written notice to the Owner and Architect, stop the Work until payment of the amount owing has been received. The Contract Time shall be extended appropriately and the Contract Sum shall be increased by the amount of the Contractor's reasonable costs of shut-down, delay and start-up, plus interest as provided for in the Contract Documents.

§ 9.8 SUBSTANTIAL COMPLETION

§ 9.8.1 Substantial Completion is the stage in the progress of the Work when the Work or designated portion thereof is sufficiently complete in accordance with the Contract Documents so that the Owner can occupy or utilize the Work for its intended use.

§ 9.8.2 When the Contractor considers that the Work, or a portion thereof which the Owner agrees to accept separately, is substantially complete, the Contractor shall prepare and submit to the Architect a comprehensive list of items to be completed or corrected prior to final payment. Failure to include an item on such list does not alter the responsibility of the Contractor to complete all Work in accordance with the Contract Documents.

§ 9.8.3 Upon receipt of the Contractor's list, the Architect will make an inspection to determine whether the Work or designated portion thereof is substantially complete. If the Architect's inspection discloses any item, whether or not included on the Contractor's list, which is not sufficiently complete in accordance with the Contract Documents so that the Owner can occupy or utilize the Work or designated portion thereof for its intended use, the Contractor shall, before issuance of the Certificate of Substantial Completion, complete or correct such item upon notification by the Architect. In such case, the Contractor shall then submit a request for another inspection by the Architect to determine Substantial Completion.

§ 9.8.4 When the Work or designated portion thereof is substantially complete, the Architect will prepare a Certificate of Substantial Completion that shall establish the date of Substantial Completion, shall establish responsibilities of the Owner and Contractor for security, maintenance, heat, utilities, damage to the Work and insurance, and shall fix the time within which the Contractor shall finish all items on the list accompanying the Certificate. Warranties required by the Contract Documents shall commence on the date of Substantial Completion of the Work or designated portion thereof unless otherwise provided in the Certificate of Substantial Completion.

§ 9.8.5 The Certificate of Substantial Completion shall be submitted to the Owner and Contractor for their written acceptance of responsibilities assigned to them in such Certificate. Upon such acceptance and consent of surety, if any, the Owner shall make payment of retainage applying to such Work or designated portion thereof. Such payment shall be adjusted for Work that is incomplete or not in accordance with the requirements of the Contract Documents.

§ 9.9 PARTIAL OCCUPANCY OR USE

§ 9.9.1 The Owner may occupy or use any completed or partially completed portion of the Work at any stage when such portion is designated by separate agreement with the Contractor, provided such occupancy or use is consented to by the insurer as required under Section 11.3.1.5 and authorized by public authorities having jurisdiction over the Project. Such partial occupancy or use may commence whether or not the portion is substantially complete, provided the Owner and Contractor have accepted in writing the responsibilities assigned to each of them for payments, retainage, if any, security, maintenance, heat, utilities, damage to the Work and insurance, and have agreed in writing concerning the period for correction of the Work and commencement of warranties required by the Contract Documents. When the Contractor considers a portion substantially complete, the Contractor shall prepare and submit a list to the Architect as provided under Section 9.8.2. Consent of the Contractor to partial occupancy or use shall not be unreasonably withheld. The stage of the progress of the Work shall be determined by written agreement between the Owner and Contractor or, if no agreement is reached, by decision of the Architect.

§ 9.9.2 Immediately prior to such partial occupancy or use, the Owner, Contractor and Architect shall jointly inspect the area to be occupied or portion of the Work to be used in order to determine and record the condition of the Work.

§ 9.9.3 Unless otherwise agreed upon, partial occupancy or use of a portion or portions of the Work shall not constitute acceptance of Work not complying with the requirements of the Contract Documents.

§ 9.10 FINAL COMPLETION AND FINAL PAYMENT

§ 9.10.1 Upon receipt of the Contractor's written notice that the Work is ready for final inspection and acceptance and upon receipt of a final Application for Payment, the Architect will promptly make such inspection and, when the Architect finds the Work acceptable under the Contract Documents and the Contract fully performed, the Architect will promptly issue a final Certificate for Payment stating that to the best of the Architect's knowledge, information and belief, and on the basis of the Architect's on-site visits and inspections, the Work has been completed in accordance with terms and conditions of the Contract Documents and that the entire balance found to be due the Contractor and noted in the final Certificate is due and payable. The Architect's final Certificate for Payment will constitute a further representation that conditions listed in Section 9.10.2 as precedent to the Contractor's being entitled to final payment have been fulfilled.

§ 9.10.2 Neither final payment nor any remaining retained percentage shall become due until the Contractor submits to the Architect (1) an affidavit that payrolls, bills for materials and equipment, and other indebtedness connected with the Work for which the Owner or the Owner's property might be responsible or encumbered (less amounts withheld by Owner) have been paid or otherwise satisfied, (2) a certificate evidencing that insurance required by the Contract Documents to remain in force after final payment is currently in effect and will not be canceled or allowed to expire until at least 30 days' prior written notice has been given to the Owner, (3) a written statement that the Contractor knows of no substantial reason that the insurance will not be renewable to cover the period required by the Contract Documents, (4) consent of surety, if any, to final payment and (5), if required by the Owner, other data establishing payment or satisfaction of obligations, such as receipts, releases and waivers of liens, claims, security interests or encumbrances arising out of the Contract, to the extent and in such form as may be designated by the Owner. If a Subcontractor refuses to furnish a release or waiver required by the Owner, the Contractor may furnish a bond satisfactory to the Owner to indemnify the Owner against such lien. If such lien remains unsatisfied after payments are made, the Contractor shall refund to the Owner all money that the Owner may be compelled to pay in discharging such lien, including all costs and reasonable attorneys' fees.

§ 9.10.3 If, after Substantial Completion of the Work, final completion thereof is materially delayed through no fault of the Contractor or by issuance of Change Orders affecting final completion, and the Architect so confirms, the Owner shall, upon application by the Contractor and certification by the Architect, and without terminating the Contract, make payment of the balance due for that portion of the Work fully completed and accepted. If the remaining balance for Work not fully completed or corrected is less than retainage stipulated in the Contract Documents, and if bonds have been furnished, the written consent of surety to payment of the balance due for that portion of the Work fully completed and accepted shall be submitted by the Contractor to the Architect prior to certification of such payment. Such payment shall be made under terms and conditions governing final payment, except that it shall not constitute a waiver of claims.

§ 9.10.4 The making of final payment shall constitute a waiver of Claims by the Owner except those arising from

- .1 liens, Claims, security interests or encumbrances arising out of the Contract and unsettled;
- .2 failure of the Work to comply with the requirements of the Contract Documents; or
- .3 terms of special warranties required by the Contract Documents.

§ 9.10.5 Acceptance of final payment by the Contractor, a Subcontractor or material supplier shall constitute a waiver of claims by that payee except those previously made in writing and identified by that payee as unsettled at the time of final Application for Payment.

ARTICLE 10 PROTECTION OF PERSONS AND PROPERTY

§ 10.1 SAFETY PRECAUTIONS AND PROGRAMS

The Contractor shall be responsible for initiating, maintaining and supervising all safety precautions and programs in connection with the performance of the Contract.

§ 10.2 SAFETY OF PERSONS AND PROPERTY

§ 10.2.1 The Contractor shall take reasonable precautions for safety of, and shall provide reasonable protection to prevent damage, injury or loss to

- .1 employees on the Work and other persons who may be affected thereby;
- .2 the Work and materials and equipment to be incorporated therein, whether in storage on or off the site, under care, custody or control of the Contractor or the Contractor's Subcontractors or Sub-subcontractors; and
- .3 other property at the site or adjacent thereto, such as trees, shrubs, lawns, walks, pavements, roadways, structures and utilities not designated for removal, relocation or replacement in the course of construction.

§ 10.2.2 The Contractor shall comply with and give notices required by applicable laws, statutes, ordinances, codes, rules and regulations, and lawful orders of public authorities bearing on safety of persons or property or their protection from damage, injury or loss.

§ 10.2.3 The Contractor shall erect and maintain, as required by existing conditions and performance of the Contract, reasonable safeguards for safety and protection, including posting danger signs and other warnings against hazards, promulgating safety regulations and notifying owners and users of adjacent sites and utilities.

§ 10.2.4 When use or storage of explosives or other hazardous materials or equipment or unusual methods are necessary for execution of the Work, the Contractor shall exercise utmost care and carry on such activities under supervision of properly qualified personnel.

§ 10.2.5 The Contractor shall promptly remedy damage and loss (other than damage or loss insured under property insurance required by the Contract Documents) to property referred to in Sections 10.2.1.2 and 10.2.1.3 caused in whole or in part by the Contractor, a Subcontractor, a Sub-subcontractor, or anyone directly or indirectly employed by any of them, or by anyone for whose acts they may be liable and for which the Contractor is responsible under Sections 10.2.1.2 and 10.2.1.3, except damage or loss attributable to acts or omissions of the Owner or Architect or anyone directly or indirectly employed by either of them, or by anyone for whose acts either of them may be liable, and not attributable to the fault or negligence of the Contractor. The foregoing obligations of the Contractor are in addition to the Contractor's obligations under Section 3.18.

§ 10.2.6 The Contractor shall designate a responsible member of the Contractor's organization at the site whose duty shall be the prevention of accidents. This person shall be the Contractor's superintendent unless otherwise designated by the Contractor in writing to the Owner and Architect.

§ 10.2.7 The Contractor shall not permit any part of the construction or site to be loaded so as to cause damage or create an unsafe condition.

§ 10.2.8 INJURY OR DAMAGE TO PERSON OR PROPERTY

If either party suffers injury or damage to person or property because of an act or omission of the other party, or of others for whose acts such party is legally responsible, written notice of such injury or damage, whether or not insured, shall be given to the other party within a reasonable time not exceeding 21 days after discovery. The notice shall provide sufficient detail to enable the other party to investigate the matter.

§ 10.3 HAZARDOUS MATERIALS

§ 10.3.1 The Contractor is responsible for compliance with any requirements included in the Contract Documents regarding hazardous materials. If the Contractor encounters a hazardous material or substance not addressed in the Contract Documents and if reasonable precautions will be inadequate to prevent foreseeable bodily injury or death to persons resulting from a material or substance, including but not limited to asbestos or polychlorinated biphenyl (PCB), encountered on the site by the Contractor, the Contractor shall, upon recognizing the condition, immediately stop Work in the affected area and report the condition to the Owner and Architect in writing.

§ 10.3.2 Upon receipt of the Contractor's written notice, the Owner shall obtain the services of a licensed laboratory to verify the presence or absence of the material or substance reported by the Contractor and, in the event such material or substance is found to be present, to cause it to be rendered harmless. Unless otherwise required by the Contract Documents, the Owner shall furnish in writing to the Contractor and Architect the names and qualifications of persons or entities who are to perform tests verifying the presence or absence of such material or substance or who are to perform the task of removal or safe containment of such material or substance. The Contractor and the Architect will promptly reply to the Owner in writing stating whether or not either has reasonable objection to the persons or entities proposed by the Owner. If either the Contractor or Architect has an objection to a person or entity proposed by the Owner, the Owner shall propose another to whom the Contractor and the Architect have no reasonable objection. When the material or substance has been rendered harmless, Work in the affected area shall resume upon written agreement of the Owner and Contractor. By Change Order, the Contract Time shall be extended appropriately and the Contract Sum shall be increased in the amount of the Contractor's reasonable additional costs of shut-down, delay and start-up.

§ 10.3.3 To the fullest extent permitted by law, the Owner shall indemnify and hold harmless the Contractor, Subcontractors, Architect, Architect's consultants and agents and employees of any of them from and against claims, damages, losses and expenses, including but not limited to attorneys' fees, arising out of or resulting from performance of the Work in the affected area if in fact the material or substance presents the risk of bodily injury or death as described in Section 10.3.1 and has not been rendered harmless, provided that such claim, damage, loss or expense is attributable to bodily injury, sickness, disease or death, or to injury to or destruction of tangible property (other than the Work itself), except to the extent that such damage, loss or expense is due to the fault or negligence of the party seeking indemnity.

§ 10.3.4 The Owner shall not be responsible under this Section 10.3 for materials or substances the Contractor brings to the site unless such materials or substances are required by the Contract Documents. The Owner shall be responsible for materials or substances required by the Contract Documents, except to the extent of the Contractor's fault or negligence in the use and handling of such materials or substances.

§ 10.3.5 The Contractor shall indemnify the Owner for the cost and expense the Owner incurs (1) for remediation of a material or substance the Contractor brings to the site and negligently handles, or (2) where the Contractor fails to perform its obligations under Section 10.3.1, except to the extent that the cost and expense are due to the Owner's fault or negligence.

§ 10.3.6 If, without negligence on the part of the Contractor, the Contractor is held liable by a government agency for the cost of remediation of a hazardous material or substance solely by reason of performing Work as required by the Contract Documents, the Owner shall indemnify the Contractor for all cost and expense thereby incurred.

§ 10.4 EMERGENCIES

In an emergency affecting safety of persons or property, the Contractor shall act, at the Contractor's discretion, to prevent threatened damage, injury or loss. Additional compensation or extension of time claimed by the Contractor on account of an emergency shall be determined as provided in Article 15 and Article 7.

ARTICLE 11 INSURANCE AND BONDS**§ 11.1 CONTRACTOR'S LIABILITY INSURANCE**

§ 11.1.1 The Contractor shall purchase from and maintain in a company or companies lawfully authorized to do business in the jurisdiction in which the Project is located such insurance as will protect the Contractor from claims set forth below which may arise out of or result from the Contractor's operations and completed operations under the Contract and for which the Contractor may be legally liable, whether such operations be by the Contractor or by a Subcontractor or by anyone directly or indirectly employed by any of them, or by anyone for whose acts any of them may be liable:

- .1 Claims under workers' compensation, disability benefit and other similar employee benefit acts that are applicable to the Work to be performed;
- .2 Claims for damages because of bodily injury, occupational sickness or disease, or death of the Contractor's employees;
- .3 Claims for damages because of bodily injury, sickness or disease, or death of any person other than the Contractor's employees;
- .4 Claims for damages insured by usual personal injury liability coverage;
- .5 Claims for damages, other than to the Work itself, because of injury to or destruction of tangible property, including loss of use resulting therefrom;
- .6 Claims for damages because of bodily injury, death of a person or property damage arising out of ownership, maintenance or use of a motor vehicle;
- .7 Claims for bodily injury or property damage arising out of completed operations; and
- .8 Claims involving contractual liability insurance applicable to the Contractor's obligations under Section 3.18.

§ 11.1.2 The insurance required by Section 11.1.1 shall be written for not less than limits of liability specified in the Contract Documents or required by law, whichever coverage is greater. Coverages, whether written on an occurrence or claims-made basis, shall be maintained without interruption from the date of commencement of the Work until the date of final payment and termination of any coverage required to be maintained after final payment, and, with respect to the Contractor's completed operations coverage, until the expiration of the period for correction of Work or for such other period for maintenance of completed operations coverage as specified in the Contract Documents.

§ 11.1.3 Certificates of insurance acceptable to the Owner shall be filed with the Owner prior to commencement of the Work and thereafter upon renewal or replacement of each required policy of insurance. These certificates and the insurance policies required by this Section 11.1 shall contain a provision that coverages afforded under the policies will not be canceled or allowed to expire until at least 30 days' prior written notice has been given to the Owner. An additional certificate evidencing continuation of liability coverage, including coverage for completed operations, shall be submitted with the final Application for Payment as required by Section 9.10.2 and thereafter upon renewal or replacement of such coverage until the expiration of the time required by Section 11.1.2. Information concerning reduction of coverage on account of revised limits or claims paid under the General Aggregate, or both, shall be furnished by the Contractor with reasonable promptness.

§ 11.1.4 The Contractor shall cause the commercial liability coverage required by the Contract Documents to include (1) the Owner, the Architect and the Architect's Consultants as additional insureds for claims caused in whole or in part by the Contractor's negligent acts or omissions during the Contractor's operations; and (2) the Owner as an additional insured for claims caused in whole or in part by the Contractor's negligent acts or omissions during the Contractor's completed operations.

§ 11.2 OWNER'S LIABILITY INSURANCE

The Owner shall be responsible for purchasing and maintaining the Owner's usual liability insurance.

§ 11.3 PROPERTY INSURANCE

§ 11.3.1 Unless otherwise provided, the Owner shall purchase and maintain, in a company or companies lawfully authorized to do business in the jurisdiction in which the Project is located, property insurance written on a builder's

risk “all-risk” or equivalent policy form in the amount of the initial Contract Sum, plus value of subsequent Contract Modifications and cost of materials supplied or installed by others, comprising total value for the entire Project at the site on a replacement cost basis without optional deductibles. Such property insurance shall be maintained, unless otherwise provided in the Contract Documents or otherwise agreed in writing by all persons and entities who are beneficiaries of such insurance, until final payment has been made as provided in Section 9.10 or until no person or entity other than the Owner has an insurable interest in the property required by this Section 11.3 to be covered, whichever is later. This insurance shall include interests of the Owner, the Contractor, Subcontractors and Sub-subcontractors in the Project.

§ 11.3.1.1 Property insurance shall be on an “all-risk” or equivalent policy form and shall include, without limitation, insurance against the perils of fire (with extended coverage) and physical loss or damage including, without duplication of coverage, theft, vandalism, malicious mischief, collapse, earthquake, flood, windstorm, falsework, testing and startup, temporary buildings and debris removal including demolition occasioned by enforcement of any applicable legal requirements, and shall cover reasonable compensation for Architect’s and Contractor’s services and expenses required as a result of such insured loss.

§ 11.3.1.2 If the Owner does not intend to purchase such property insurance required by the Contract and with all of the coverages in the amount described above, the Owner shall so inform the Contractor in writing prior to commencement of the Work. The Contractor may then effect insurance that will protect the interests of the Contractor, Subcontractors and Sub-subcontractors in the Work, and by appropriate Change Order the cost thereof shall be charged to the Owner. If the Contractor is damaged by the failure or neglect of the Owner to purchase or maintain insurance as described above, without so notifying the Contractor in writing, then the Owner shall bear all reasonable costs properly attributable thereto.

§ 11.3.1.3 If the property insurance requires deductibles, the Owner shall pay costs not covered because of such deductibles.

§ 11.3.1.4 This property insurance shall cover portions of the Work stored off the site, and also portions of the Work in transit.

§ 11.3.1.5 Partial occupancy or use in accordance with Section 9.9 shall not commence until the insurance company or companies providing property insurance have consented to such partial occupancy or use by endorsement or otherwise. The Owner and the Contractor shall take reasonable steps to obtain consent of the insurance company or companies and shall, without mutual written consent, take no action with respect to partial occupancy or use that would cause cancellation, lapse or reduction of insurance.

§ 11.3.2 BOILER AND MACHINERY INSURANCE

The Owner shall purchase and maintain boiler and machinery insurance required by the Contract Documents or by law, which shall specifically cover such insured objects during installation and until final acceptance by the Owner; this insurance shall include interests of the Owner, Contractor, Subcontractors and Sub-subcontractors in the Work, and the Owner and Contractor shall be named insureds.

§ 11.3.3 LOSS OF USE INSURANCE

The Owner, at the Owner’s option, may purchase and maintain such insurance as will insure the Owner against loss of use of the Owner’s property due to fire or other hazards, however caused. The Owner waives all rights of action against the Contractor for loss of use of the Owner’s property, including consequential losses due to fire or other hazards however caused.

§ 11.3.4 If the Contractor requests in writing that insurance for risks other than those described herein or other special causes of loss be included in the property insurance policy, the Owner shall, if possible, include such insurance, and the cost thereof shall be charged to the Contractor by appropriate Change Order.

§ 11.3.5 If during the Project construction period the Owner insures properties, real or personal or both, at or adjacent to the site by property insurance under policies separate from those insuring the Project, or if after final payment property insurance is to be provided on the completed Project through a policy or policies other than those insuring the Project during the construction period, the Owner shall waive all rights in accordance with the terms of Section 11.3.7 for damages caused by fire or other causes of loss covered by this separate property insurance. All separate policies shall provide this waiver of subrogation by endorsement or otherwise.

Purchasers are not permitted to reproduce this document. To report copyright violations of AIA Contract Documents, e-mail The American Institute of Architects’ legal counsel, copyright@aia.org.

§ 11.3.6 Before an exposure to loss may occur, the Owner shall file with the Contractor a copy of each policy that includes insurance coverages required by this Section 11.3. Each policy shall contain all generally applicable conditions, definitions, exclusions and endorsements related to this Project. Each policy shall contain a provision that the policy will not be canceled or allowed to expire, and that its limits will not be reduced, until at least 30 days' prior written notice has been given to the Contractor.

§ 11.3.7 WAIVERS OF SUBROGATION

The Owner and Contractor waive all rights against (1) each other and any of their subcontractors, sub-subcontractors, agents and employees, each of the other, and (2) the Architect, Architect's consultants, separate contractors described in Article 6, if any, and any of their subcontractors, sub-subcontractors, agents and employees, for damages caused by fire or other causes of loss to the extent covered by property insurance obtained pursuant to this Section 11.3 or other property insurance applicable to the Work, except such rights as they have to proceeds of such insurance held by the Owner as fiduciary. The Owner or Contractor, as appropriate, shall require of the Architect, Architect's consultants, separate contractors described in Article 6, if any, and the subcontractors, sub-subcontractors, agents and employees of any of them, by appropriate agreements, written where legally required for validity, similar waivers each in favor of other parties enumerated herein. The policies shall provide such waivers of subrogation by endorsement or otherwise. A waiver of subrogation shall be effective as to a person or entity even though that person or entity would otherwise have a duty of indemnification, contractual or otherwise, did not pay the insurance premium directly or indirectly, and whether or not the person or entity had an insurable interest in the property damaged.

§ 11.3.8 A loss insured under the Owner's property insurance shall be adjusted by the Owner as fiduciary and made payable to the Owner as fiduciary for the insureds, as their interests may appear, subject to requirements of any applicable mortgagee clause and of Section 11.5.18. The Contractor shall pay Subcontractors their just shares of insurance proceeds received by the Contractor, and by appropriate agreements, written where legally required for validity, shall require Subcontractors to make payments to their Sub-subcontractors in similar manner.

§ 11.3.9 If required in writing by a party in interest, the Owner as fiduciary shall, upon occurrence of an insured loss, give bond for proper performance of the Owner's duties. The cost of required bonds shall be charged against proceeds received as fiduciary. The Owner shall deposit in a separate account proceeds so received, which the Owner shall distribute in accordance with such agreement as the parties in interest may reach, or as determined in accordance with the method of binding dispute resolution selected in the Agreement between the Owner and Contractor. If after such loss no other special agreement is made and unless the Owner terminates the Contract for convenience, replacement of damaged property shall be performed by the Contractor after notification of a Change in the Work in accordance with Article 7.

§ 11.3.10 The Owner as fiduciary shall have power to adjust and settle a loss with insurers unless one of the parties in interest shall object in writing within five days after occurrence of loss to the Owner's exercise of this power; if such objection is made, the dispute shall be resolved in the manner selected by the Owner and Contractor as the method of binding dispute resolution in the Agreement. If the Owner and Contractor have selected arbitration as the method of binding dispute resolution, the Owner as fiduciary shall make settlement with insurers or, in the case of a dispute over distribution of insurance proceeds, in accordance with the directions of the arbitrators.

§ 11.4 PERFORMANCE BOND AND PAYMENT BOND

§ 11.4.1 The Owner shall have the right to require the Contractor to furnish bonds covering faithful performance of the Contract and payment of obligations arising thereunder as stipulated in bidding requirements or specifically required in the Contract Documents on the date of execution of the Contract.

§ 11.4.2 Upon the request of any person or entity appearing to be a potential beneficiary of bonds covering payment of obligations arising under the Contract, the Contractor shall promptly furnish a copy of the bonds or shall authorize a copy to be furnished.

ARTICLE 12 UNCOVERING AND CORRECTION OF WORK

§ 12.1 UNCOVERING OF WORK

§ 12.1.1 If a portion of the Work is covered contrary to the Architect's request or to requirements specifically expressed in the Contract Documents, it must, if requested in writing by the Architect, be uncovered for the Architect's examination and be replaced at the Contractor's expense without change in the Contract Time.

AIA Document A201™ – 2007. Copyright © 1888, 1911, 1915, 1918, 1925, 1937, 1951, 1958, 1961, 1963, 1966, 1970, 1976, 1987, 1997 and 2007 by The American Institute of Architects. All rights reserved. WARNING: This AIA® Document is protected by U.S. Copyright Law and International Treaties. Unauthorized reproduction or distribution of this AIA® Document, or any portion of it, may result in severe civil and criminal penalties, and will be prosecuted to the maximum extent possible under the law. Purchasers are not permitted to reproduce this document. To report copyright violations of AIA Contract Documents, e-mail The American Institute of Architects' legal counsel, copyright@aia.org.

§ 12.1.2 If a portion of the Work has been covered that the Architect has not specifically requested to examine prior to its being covered, the Architect may request to see such Work and it shall be uncovered by the Contractor. If such Work is in accordance with the Contract Documents, costs of uncovering and replacement shall, by appropriate Change Order, be at the Owner's expense. If such Work is not in accordance with the Contract Documents, such costs and the cost of correction shall be at the Contractor's expense unless the condition was caused by the Owner or a separate contractor in which event the Owner shall be responsible for payment of such costs.

§ 12.2 CORRECTION OF WORK

§ 12.2.1 BEFORE OR AFTER SUBSTANTIAL COMPLETION

The Contractor shall promptly correct Work rejected by the Architect or failing to conform to the requirements of the Contract Documents, whether discovered before or after Substantial Completion and whether or not fabricated, installed or completed. Costs of correcting such rejected Work, including additional testing and inspections, the cost of uncovering and replacement, and compensation for the Architect's services and expenses made necessary thereby, shall be at the Contractor's expense.

§ 12.2.2 AFTER SUBSTANTIAL COMPLETION

§ 12.2.2.1 In addition to the Contractor's obligations under Section 3.5, if, within one year after the date of Substantial Completion of the Work or designated portion thereof or after the date for commencement of warranties established under Section 9.9.1, or by terms of an applicable specific warranty required by the Contract Documents, any of the Work is found to be not in accordance with the requirements of the Contract Documents, the Contractor shall correct it promptly after receipt of written notice from the Owner to do so unless the Owner has previously given the Contractor a written acceptance of such condition. The Owner shall give such notice promptly after discovery of the condition. During the one-year period for correction of Work, if the Owner fails to notify the Contractor and give the Contractor an opportunity to make the correction, the Owner waives the rights to require correction by the Contractor and to make a claim for breach of warranty. If the Contractor fails to correct nonconforming Work within a reasonable time during that period after receipt of notice from the Owner or Architect, the Owner may correct it in accordance with Section 2.4.

§ 12.2.2.2 The one-year period for correction of Work shall be extended with respect to portions of Work first performed after Substantial Completion by the period of time between Substantial Completion and the actual completion of that portion of the Work.

§ 12.2.2.3 The one-year period for correction of Work shall not be extended by corrective Work performed by the Contractor pursuant to this Section 12.2.

§ 12.2.3 The Contractor shall remove from the site portions of the Work that are not in accordance with the requirements of the Contract Documents and are neither corrected by the Contractor nor accepted by the Owner.

§ 12.2.4 The Contractor shall bear the cost of correcting destroyed or damaged construction, whether completed or partially completed, of the Owner or separate contractors caused by the Contractor's correction or removal of Work that is not in accordance with the requirements of the Contract Documents.

§ 12.2.5 Nothing contained in this Section 12.2 shall be construed to establish a period of limitation with respect to other obligations the Contractor has under the Contract Documents. Establishment of the one-year period for correction of Work as described in Section 12.2.2 relates only to the specific obligation of the Contractor to correct the Work, and has no relationship to the time within which the obligation to comply with the Contract Documents may be sought to be enforced, nor to the time within which proceedings may be commenced to establish the Contractor's liability with respect to the Contractor's obligations other than specifically to correct the Work.

§ 12.3 ACCEPTANCE OF NONCONFORMING WORK

If the Owner prefers to accept Work that is not in accordance with the requirements of the Contract Documents, the Owner may do so instead of requiring its removal and correction, in which case the Contract Sum will be reduced as appropriate and equitable. Such adjustment shall be effected whether or not final payment has been made.

ARTICLE 13 MISCELLANEOUS PROVISIONS**§ 13.1 GOVERNING LAW**

The Contract shall be governed by the law of the place where the Project is located except that, if the parties have selected arbitration as the method of binding dispute resolution, the Federal Arbitration Act shall govern Section 15.4.

§ 13.2 SUCCESSORS AND ASSIGNS

§ 13.2.1 The Owner and Contractor respectively bind themselves, their partners, successors, assigns and legal representatives to covenants, agreements and obligations contained in the Contract Documents. Except as provided in Section 13.2.2, neither party to the Contract shall assign the Contract as a whole without written consent of the other. If either party attempts to make such an assignment without such consent, that party shall nevertheless remain legally responsible for all obligations under the Contract.

§ 13.2.2 The Owner may, without consent of the Contractor, assign the Contract to a lender providing construction financing for the Project, if the lender assumes the Owner's rights and obligations under the Contract Documents. The Contractor shall execute all consents reasonably required to facilitate such assignment.

§ 13.3 WRITTEN NOTICE

Written notice shall be deemed to have been duly served if delivered in person to the individual, to a member of the firm or entity, or to an officer of the corporation for which it was intended; or if delivered at, or sent by registered or certified mail or by courier service providing proof of delivery to, the last business address known to the party giving notice.

§ 13.4 RIGHTS AND REMEDIES

§ 13.4.1 Duties and obligations imposed by the Contract Documents and rights and remedies available thereunder shall be in addition to and not a limitation of duties, obligations, rights and remedies otherwise imposed or available by law.

§ 13.4.2 No action or failure to act by the Owner, Architect or Contractor shall constitute a waiver of a right or duty afforded them under the Contract, nor shall such action or failure to act constitute approval of or acquiescence in a breach there under, except as may be specifically agreed in writing.

§ 13.5 TESTS AND INSPECTIONS

§ 13.5.1 Tests, inspections and approvals of portions of the Work shall be made as required by the Contract Documents and by applicable laws, statutes, ordinances, codes, rules and regulations or lawful orders of public authorities. Unless otherwise provided, the Contractor shall make arrangements for such tests, inspections and approvals with an independent testing laboratory or entity acceptable to the Owner, or with the appropriate public authority, and shall bear all related costs of tests, inspections and approvals. The Contractor shall give the Architect timely notice of when and where tests and inspections are to be made so that the Architect may be present for such procedures. The Owner shall bear costs of (1) tests, inspections or approvals that do not become requirements until after bids are received or negotiations concluded, and (2) tests, inspections or approvals where building codes or applicable laws or regulations prohibit the Owner from delegating their cost to the Contractor.

§ 13.5.2 If the Architect, Owner or public authorities having jurisdiction determine that portions of the Work require additional testing, inspection or approval not included under Section 13.5.1, the Architect will, upon written authorization from the Owner, instruct the Contractor to make arrangements for such additional testing, inspection or approval by an entity acceptable to the Owner, and the Contractor shall give timely notice to the Architect of when and where tests and inspections are to be made so that the Architect may be present for such procedures. Such costs, except as provided in Section 13.5.3, shall be at the Owner's expense.

§ 13.5.3 If such procedures for testing, inspection or approval under Sections 13.5.1 and 13.5.2 reveal failure of the portions of the Work to comply with requirements established by the Contract Documents, all costs made necessary by such failure including those of repeated procedures and compensation for the Architect's services and expenses shall be at the Contractor's expense.

§ 13.5.4 Required certificates of testing, inspection or approval shall, unless otherwise required by the Contract Documents, be secured by the Contractor and promptly delivered to the Architect.

§ 13.5.5 If the Architect is to observe tests, inspections or approvals required by the Contract Documents, the Architect will do so promptly and, where practicable, at the normal place of testing.

§ 13.5.6 Tests or inspections conducted pursuant to the Contract Documents shall be made promptly to avoid unreasonable delay in the Work.

§ 13.6 INTEREST

Payments due and unpaid under the Contract Documents shall bear interest from the date payment is due at such rate as the parties may agree upon in writing or, in the absence thereof, at the legal rate prevailing from time to time at the place where the Project is located.

§ 13.7 TIME LIMITS ON CLAIMS

The Owner and Contractor shall commence all claims and causes of action, whether in contract, tort, breach of warranty or otherwise, against the other arising out of or related to the Contract in accordance with the requirements of the final dispute resolution method selected in the Agreement within the time period specified by applicable law, but in any case not more than 10 years after the date of Substantial Completion of the Work. The Owner and Contractor waive all claims and causes of action not commenced in accordance with this Section 13.7.

ARTICLE 14 TERMINATION OR SUSPENSION OF THE CONTRACT

§ 14.1 TERMINATION BY THE CONTRACTOR

§ 14.1.1 The Contractor may terminate the Contract if the Work is stopped for a period of 30 consecutive days through no act or fault of the Contractor or a Subcontractor, Sub-subcontractor or their agents or employees or any other persons or entities performing portions of the Work under direct or indirect contract with the Contractor, for any of the following reasons:

1. Issuance of an order of a court or other public authority having jurisdiction that requires all Work to be stopped;
2. An act of government, such as a declaration of national emergency that requires all Work to be stopped;
3. Because the Architect has not issued a Certificate for Payment and has not notified the Contractor of the reason for withholding certification as provided in Section 9.4.1, or because the Owner has not made payment on a Certificate for Payment within the time stated in the Contract Documents; or
4. The Owner has failed to furnish to the Contractor promptly, upon the Contractor's request, reasonable evidence as required by Section 2.2.1.

§ 14.1.2 The Contractor may terminate the Contract if, through no act or fault of the Contractor or a Subcontractor, Sub-subcontractor or their agents or employees or any other persons or entities performing portions of the Work under direct or indirect contract with the Contractor, repeated suspensions, delays or interruptions of the entire Work by the Owner as described in Section 14.3 constitute in the aggregate more than 100 percent of the total number of days scheduled for completion, or 120 days in any 365-day period, whichever is less.

§ 14.1.3 If one of the reasons described in Section 14.1.1 or 14.1.2 exists, the Contractor may, upon seven days' written notice to the Owner and Architect, terminate the Contract and recover from the Owner payment for Work executed, including reasonable overhead and profit, costs incurred by reason of such termination, and damages.

§ 14.1.4 If the Work is stopped for a period of 60 consecutive days through no act or fault of the Contractor or a Subcontractor or their agents or employees or any other persons performing portions of the Work under contract with the Contractor because the Owner has repeatedly failed to fulfill the Owner's obligations under the Contract Documents with respect to matters important to the progress of the Work, the Contractor may, upon seven additional days' written notice to the Owner and the Architect, terminate the Contract and recover from the Owner as provided in Section 14.1.3.

§ 14.2 TERMINATION BY THE OWNER FOR CAUSE

§ 14.2.1 The Owner may terminate the Contract if the Contractor

1. repeatedly refuses or fails to supply enough properly skilled workers or proper materials;
2. fails to make payment to Subcontractors for materials or labor in accordance with the respective agreements between the Contractor and the Subcontractors;
3. repeatedly disregards applicable laws, statutes, ordinances, codes, rules and regulations, or lawful orders of a public authority; or
4. otherwise is guilty of substantial breach of a provision of the Contract Documents.

§ 14.2.2 When any of the above reasons exist, the Owner, upon certification by the Initial Decision Maker that sufficient cause exists to justify such action, may without prejudice to any other rights or remedies of the Owner and after giving the Contractor and the Contractor's surety, if any, seven days' written notice, terminate employment of the Contractor and may, subject to any prior rights of the surety:

- .1 Exclude the Contractor from the site and take possession of all materials, equipment, tools, and construction equipment and machinery thereon owned by the Contractor;
- .2 Accept assignment of subcontracts pursuant to Section 5.4; and
- .3 Finish the Work by whatever reasonable method the Owner may deem expedient. Upon written request of the Contractor, the Owner shall furnish to the Contractor a detailed accounting of the costs incurred by the Owner in finishing the Work.

§ 14.2.3 When the Owner terminates the Contract for one of the reasons stated in Section 14.2.1, the Contractor shall not be entitled to receive further payment until the Work is finished.

§ 14.2.4 If the unpaid balance of the Contract Sum exceeds costs of finishing the Work, including compensation for the Architect's services and expenses made necessary thereby, and other damages incurred by the Owner and not expressly waived, such excess shall be paid to the Contractor. If such costs and damages exceed the unpaid balance, the Contractor shall pay the difference to the Owner. The amount to be paid to the Contractor or Owner, as the case may be, shall be certified by the Initial Decision Maker, upon application, and this obligation for payment shall survive termination of the Contract.

§ 14.3 SUSPENSION BY THE OWNER FOR CONVENIENCE

§ 14.3.1 The Owner may, without cause, order the Contractor in writing to suspend, delay or interrupt the Work in whole or in part for such period of time as the Owner may determine.

§ 14.3.2 The Contract Sum and Contract Time shall be adjusted for increases in the cost and time caused by suspension, delay or interruption as described in Section 14.3.1. Adjustment of the Contract Sum shall include profit. No adjustment shall be made to the extent

- .1 that performance is, was or would have been so suspended, delayed or interrupted by another cause for which the Contractor is responsible; or
- .2 that an equitable adjustment is made or denied under another provision of the Contract.

§ 14.4 TERMINATION BY THE OWNER FOR CONVENIENCE

§ 14.4.1 The Owner may, at any time, terminate the Contract for the Owner's convenience and without cause.

§ 14.4.2 Upon receipt of written notice from the Owner of such termination for the Owner's convenience, the Contractor shall

- .1 cease operations as directed by the Owner in the notice;
- .2 take actions necessary, or that the Owner may direct, for the protection and preservation of the Work; and
- .3 except for Work directed to be performed prior to the effective date of termination stated in the notice, terminate all existing subcontracts and purchase orders and enter into no further subcontracts and purchase orders.

§ 14.4.3 In case of such termination for the Owner's convenience, the Contractor shall be entitled to receive payment for Work executed, and costs incurred by reason of such termination, along with reasonable overhead and profit on the Work not executed.

ARTICLE 15 CLAIMS AND DISPUTES

§ 15.1 CLAIMS

§ 15.1.1 DEFINITION

A Claim is a demand or assertion by one of the parties seeking, as a matter of right, payment of money, or other relief with respect to the terms of the Contract. The term "Claim" also includes other disputes and matters in question between the Owner and Contractor arising out of or relating to the Contract. The responsibility to substantiate Claims shall rest with the party making the Claim.

§ 15.1.2 NOTICE OF CLAIMS

Claims by either the Owner or Contractor must be initiated by written notice to the other party and to the Initial Decision Maker with a copy sent to the Architect, if the Architect is not serving as the Initial Decision Maker.

AIA Document A201™ – 2007. Copyright © 1888, 1911, 1915, 1918, 1925, 1937, 1951, 1958, 1961, 1963, 1966, 1970, 1976, 1987, 1997 and 2007 by The American Institute of Architects. All rights reserved. WARNING: This AIA® Document is protected by U.S. Copyright Law and International Treaties. Unauthorized reproduction or distribution of this AIA® Document, or any portion of it, may result in severe civil and criminal penalties, and will be prosecuted to the maximum extent possible under the law. Purchasers are not permitted to reproduce this document. To report copyright violations of AIA Contract Documents, e-mail The American Institute of Architects' legal counsel, copyright@aia.org.

Claims by either party must be initiated within 21 days after occurrence of the event giving rise to such Claim or within 21 days after the claimant first recognizes the condition giving rise to the Claim, whichever is later.

§ 15.1.3 CONTINUING CONTRACT PERFORMANCE

Pending final resolution of a Claim, except as otherwise agreed in writing or as provided in Section 9.7 and Article 14, the Contractor shall proceed diligently with performance of the Contract and the Owner shall continue to make payments in accordance with the Contract Documents. The Architect will prepare Change Orders and issue Certificates for Payment in accordance with the decisions of the Initial Decision Maker.

§ 15.1.4 CLAIMS FOR ADDITIONAL COST

If the Contractor wishes to make a Claim for an increase in the Contract Sum, written notice as provided herein shall be given before proceeding to execute the Work. Prior notice is not required for Claims relating to an emergency endangering life or property arising under Section 10.4.

§ 15.1.5 CLAIMS FOR ADDITIONAL TIME

§ 15.1.5.1 If the Contractor wishes to make a Claim for an increase in the Contract Time, written notice as provided herein shall be given. The Contractor's Claim shall include an estimate of cost and of probable effect of delay on progress of the Work. In the case of a continuing delay, only one Claim is necessary.

§ 15.1.5.2 If adverse weather conditions are the basis for a Claim for additional time, such Claim shall be documented by data substantiating that weather conditions were abnormal for the period of time, could not have been reasonably anticipated and had an adverse effect on the scheduled construction.

§ 15.1.6 CLAIMS FOR CONSEQUENTIAL DAMAGES

The Contractor and Owner waive Claims against each other for consequential damages arising out of or relating to this Contract. This mutual waiver includes

1. damages incurred by the Owner for rental expenses, for losses of use, income, profit, financing, business and reputation, and for loss of management or employee productivity or of the services of such persons; and
2. damages incurred by the Contractor for principal office expenses including the compensation of personnel stationed there, for losses of financing, business and reputation, and for loss of profit except anticipated profit arising directly from the Work.

This mutual waiver is applicable, without limitation, to all consequential damages due to either party's termination in accordance with Article 14. Nothing contained in this Section 15.1.6 shall be deemed to preclude an award of liquidated damages, when applicable, in accordance with the requirements of the Contract Documents.

§ 15.2 INITIAL DECISION

§ 15.2.1 Claims, excluding those arising under Sections 10.3, 10.4, 11.3.9, and 11.3.10, shall be referred to the Initial Decision Maker for initial decision. The Architect will serve as the Initial Decision Maker, unless otherwise indicated in the Agreement. Except for those Claims excluded by this Section 15.2.1, an initial decision shall be required as a condition precedent to mediation of any Claim arising prior to the date final payment is due, unless 30 days have passed after the Claim has been referred to the Initial Decision Maker with no decision having been rendered. Unless the Initial Decision Maker and all affected parties agree, the Initial Decision Maker will not decide disputes between the Contractor and persons or entities other than the Owner.

§ 15.2.2 The Initial Decision Maker will review Claims and within ten days of the receipt of a Claim take one or more of the following actions: (1) request additional supporting data from the claimant or a response with supporting data from the other party, (2) reject the Claim in whole or in part, (3) approve the Claim, (4) suggest a compromise, or (5) advise the parties that the Initial Decision Maker is unable to resolve the Claim if the Initial Decision Maker lacks sufficient information to evaluate the merits of the Claim or if the Initial Decision Maker concludes that, in the Initial Decision Maker's sole discretion, it would be inappropriate for the Initial Decision Maker to resolve the Claim.

§ 15.2.3 In evaluating Claims, the Initial Decision Maker may, but shall not be obligated to, consult with or seek information from either party or from persons with special knowledge or expertise who may assist the Initial Decision Maker in rendering a decision. The Initial Decision Maker may request the Owner to authorize retention of such persons at the Owner's expense.

Init.

§ 15.2.4 If the Initial Decision Maker requests a party to provide a response to a Claim or to furnish additional supporting data, such party shall respond, within ten days after receipt of such request, and shall either (1) provide a response on the requested supporting data, (2) advise the Initial Decision Maker when the response or supporting data will be furnished or (3) advise the Initial Decision Maker that no supporting data will be furnished. Upon receipt of the response or supporting data, if any, the Initial Decision Maker will either reject or approve the Claim in whole or in part.

§ 15.2.5 The Initial Decision Maker will render an initial decision approving or rejecting the Claim, or indicating that the Initial Decision Maker is unable to resolve the Claim. This initial decision shall (1) be in writing; (2) state the reasons therefor; and (3) notify the parties and the Architect, if the Architect is not serving as the Initial Decision Maker, of any change in the Contract Sum or Contract Time or both. The initial decision shall be final and binding on the parties but subject to mediation and, if the parties fail to resolve their dispute through mediation, to binding dispute resolution.

§ 15.2.6 Either party may file for mediation of an initial decision at any time, subject to the terms of Section 15.2.6.1.

§ 15.2.6.1 Either party may, within 30 days from the date of an initial decision, demand in writing that the other party file for mediation within 60 days of the initial decision. If such a demand is made and the party receiving the demand fails to file for mediation within the time required, then both parties waive their rights to mediate or pursue binding dispute resolution proceedings with respect to the initial decision.

§ 15.2.7 In the event of a Claim against the Contractor, the Owner may, but is not obligated to, notify the surety, if any, of the nature and amount of the Claim. If the Claim relates to a possibility of a Contractor's default, the Owner may, but is not obligated to, notify the surety and request the surety's assistance in resolving the controversy.

§ 15.2.8 If a Claim relates to or is the subject of a mechanic's lien, the party asserting such Claim may proceed in accordance with applicable law to comply with the lien notice or filing deadlines.

§ 15.3 MEDIATION

§ 15.3.1 Claims, disputes, or other matters in controversy arising out of or related to the Contract except those waived as provided for in Sections 9.10.4, 9.10.5, and 15.1.6 shall be subject to mediation as a condition precedent to binding dispute resolution.

§ 15.3.2 The parties shall endeavor to resolve their Claims by mediation which, unless the parties mutually agree otherwise, shall be administered by the American Arbitration Association in accordance with its Construction Industry Mediation Procedures in effect on the date of the Agreement. A request for mediation shall be made in writing, delivered to the other party to the Contract, and filed with the person or entity administering the mediation. The request may be made concurrently with the filing of binding dispute resolution proceedings but, in such event, mediation shall proceed in advance of binding dispute resolution proceedings, which shall be stayed pending mediation for a period of 60 days from the date of filing, unless stayed for a longer period by agreement of the parties or court order. If an arbitration is stayed pursuant to this Section 15.3.2, the parties may nonetheless proceed to the selection of the arbitrator(s) and agree upon a schedule for later proceedings.

§ 15.3.3 The parties shall share the mediator's fee and any filing fees equally. The mediation shall be held in the place where the Project is located, unless another location is mutually agreed upon. Agreements reached in mediation shall be enforceable as settlement agreements in any court having jurisdiction thereof.

§ 15.4 ARBITRATION

§ 15.4.1 If the parties have selected arbitration as the method for binding dispute resolution in the Agreement, any Claim subject to, but not resolved by, mediation shall be subject to arbitration which, unless the parties mutually agree otherwise, shall be administered by the American Arbitration Association in accordance with its Construction Industry Arbitration Rules in effect on the date of the Agreement. A demand for arbitration shall be made in writing, delivered to the other party to the Contract, and filed with the person or entity administering the arbitration. The party filing a notice of demand for arbitration must assert in the demand all Claims then known to that party on which arbitration is permitted to be demanded.

§ 15.4.1.1 A demand for arbitration shall be made no earlier than concurrently with the filing of a request for mediation, but in no event shall it be made after the date when the institution of legal or equitable proceedings based on the Claim would be barred by the applicable statute of limitations. For statute of limitations purposes, receipt of a written demand for arbitration by the person or entity administering the arbitration shall constitute the institution of legal or equitable proceedings based on the Claim.

§ 15.4.2 The award rendered by the arbitrator or arbitrators shall be final, and judgment may be entered upon it in accordance with applicable law in any court having jurisdiction thereof.

§ 15.4.3 The foregoing agreement to arbitrate and other agreements to arbitrate with an additional person or entity duly consented to by parties to the Agreement shall be specifically enforceable under applicable law in any court having jurisdiction thereof.

§ 15.4.4 CONSOLIDATION OR JOINDER

§ 15.4.4.1 Either party, at its sole discretion, may consolidate an arbitration conducted under this Agreement with any other arbitration to which it is a party provided that (1) the arbitration agreement governing the other arbitration permits consolidation, (2) the arbitrations to be consolidated substantially involve common questions of law or fact, and (3) the arbitrations employ materially similar procedural rules and methods for selecting arbitrator(s).

§ 15.4.4.2 Either party, at its sole discretion, may include by joinder persons or entities substantially involved in a common question of law or fact whose presence is required if complete relief is to be accorded in arbitration, provided that the party sought to be joined consents in writing to such joinder. Consent to arbitration involving an additional person or entity shall not constitute consent to arbitration of any claim, dispute or other matter in question not described in the written consent.

§ 15.4.4.3 The Owner and Contractor grant to any person or entity made a party to an arbitration conducted under this Section 15.4, whether by joinder or consolidation, the same rights of joinder and consolidation as the Owner and Contractor under this Agreement.

OWNER'S REPRESENTATIVE (*Architect, Engineer or other party*):

§ 1 The Contractor and the Surety, jointly and severally, bind themselves, their heirs, executors, administrators, successors and assigns to the Owner for the performance of the Construction Contract, which is incorporated herein by reference.

§ 2 If the Contractor performs the Construction Contract, the Surety and the Contractor shall have no obligation under this Bond, except to participate in conferences as provided in Section 3.1.

§ 3 If there is no Owner Default, the Surety's obligation under this Bond shall arise after:

§ 3.1 The Owner has notified the Contractor and the Surety at its address described in Section 10 below that the Owner is considering declaring a Contractor Default and has requested and attempted to arrange a conference with the Contractor and the Surety to be held not later than fifteen days after receipt of such notice to discuss methods of performing the Construction Contract. If the Owner, the Contractor and the Surety agree, the Contractor shall be allowed a reasonable time to perform the Construction Contract, but such an agreement shall not waive the Owner's right, if any, subsequently to declare a Contractor Default; and

§ 3.2 The Owner has declared a Contractor Default and formally terminated the Contractor's right to complete the contract. Such Contractor Default shall not be declared earlier than twenty days after the Contractor and the Surety have received notice as provided in Section 3.1; and

§ 3.3 The Owner has agreed to pay the Balance of the Contract Price to the Surety in accordance with the terms of the Construction Contract or to a contractor selected to perform the Construction Contract in accordance with the terms of the contract with the Owner.

§ 4 When the Owner has satisfied the conditions of Section 3, the Surety shall promptly and at the Surety's expense take one of the following actions:

§ 4.1 Arrange for the Contractor, with consent of the Owner, to perform and complete the Construction Contract; or

§ 4.2 Undertake to perform and complete the Construction Contract itself, through its agents or through independent contractors; or

§ 4.3 Obtain bids or negotiated proposals from qualified contractors acceptable to the Owner for a contract for performance and completion of the Construction Contract, arrange for a contract to be prepared for execution by the Owner and the contractor selected with the Owner's concurrence, to be secured with performance and payment bonds executed by a qualified surety equivalent to the bonds issued on the Construction Contract, and pay to the Owner the amount of damages as described in Section 6 in excess of the Balance of the Contract Price incurred by the Owner resulting from the Contractor's default; or

§ 4.4 Waive its right to perform and complete, arrange for completion, or obtain a new contractor and with reasonable promptness under the circumstances:

- .1 After investigation, determine the amount for which it may be liable to the Owner and, as soon as practicable after the amount is determined, tender payment therefor to the Owner; or
- .2 Deny liability in whole or in part and notify the Owner citing reasons therefor.

§ 5 If the Surety does not proceed as provided in Section 4 with reasonable promptness, the Surety shall be deemed to be in default on this Bond fifteen days after receipt of an additional written notice from the Owner to the Surety demanding that the Surety perform its obligations under this Bond, and the Owner shall be entitled to enforce any remedy available to the Owner. If the Surety proceeds as provided in Section 4.4, and the Owner refuses the payment tendered or the Surety has denied liability, in whole or in part, without further notice the Owner shall be entitled to enforce any remedy available to the Owner.

§ 6 After the Owner has terminated the Contractor's right to complete the Construction Contract, and if the Surety elects to act under Section 4.1, 4.2, or 4.3 above, then the responsibilities of the Surety to the Owner shall not be greater than those of the Contractor under the Construction Contract, and the responsibilities of the Owner to the Surety shall not be greater than those of the Owner under the Construction Contract. To the limit of the amount of this Bond, but subject to commitment by the Owner of the Balance of the Contract Price to mitigation of costs and damages on the Construction Contract, the Surety is obligated without duplication for:

§ 6.1 The responsibilities of the Contractor for correction of defective work and completion of the Construction Contract;

§ 6.2 Additional legal, design professional and delay costs resulting from the Contractor's Default, and resulting from the actions or failure to act of the Surety under Section 4; and

§ 6.3 Liquidated damages, or if no liquidated damages are specified in the Construction Contract, actual damages caused by delayed performance or non-performance of the Contractor.

§ 7 The Surety shall not be liable to the Owner or others for obligations of the Contractor that are unrelated to the Construction Contract, and the Balance of the Contract Price shall not be reduced or set off on account of any such unrelated obligations. No right of action shall accrue on this Bond to any person or entity other than the Owner or its heirs, executors, administrators or successors.

§ 8 The Surety hereby waives notice of any change, including changes of time, to the Construction Contract or to related subcontracts, purchase orders and other obligations.

§ 9 Any proceeding, legal or equitable, under this Bond may be instituted in any court of competent jurisdiction in the location in which the work or part of the work is located and shall be instituted within two years after Contractor Default or within two years after the Contractor ceased working or within two years after the Surety refuses or fails to perform its obligations under this Bond, whichever occurs first. If the provisions of this Paragraph are void or prohibited by law, the minimum period of limitation available to sureties as a defense in the jurisdiction of the suit shall be applicable.

§ 10 Notice to the Surety, the Owner or the Contractor shall be mailed or delivered to the address shown on the signature page.

§ 11 When this Bond has been furnished to comply with a statutory or other legal requirement in the location where the construction was to be performed, any provision in this Bond conflicting with said statutory or legal requirement shall be deemed deleted here from and provisions conforming to such statutory or other legal requirement shall be deemed incorporated herein. The intent is that this Bond shall be construed as a statutory bond and not as a common law bond.

§ 12 DEFINITIONS

§ 12.1 Balance of the Contract Price: The total amount payable by the Owner to the Contractor under the Construction Contract after all proper adjustments have been made, including allowance to the Contractor of any amounts received or to be received by the Owner in settlement of insurance or other claims for damages to which the Contractor is entitled, reduced by all valid and proper payments made to or on behalf of the Contractor under the Construction Contract.

§ 12.2 Construction Contract: The agreement between the Owner and the Contractor identified on the signature page, including all Contract Documents and changes thereto.

§ 12.3 Contractor Default: Failure of the Contractor, which has neither been remedied nor waived, to perform or otherwise to comply with the terms of the Construction Contract.

§ 12.4 Owner Default: Failure of the Owner, which has neither been remedied nor waived, to pay the Contractor as required by the Construction Contract or to perform and complete or comply with the other terms thereof.

AGENT or BROKER:

OWNER'S REPRESENTATIVE (Architect, Engineer or other party):

§ 1 The Contractor and the Surety, jointly and severally bind themselves, their heirs, executors, administrators, successors and assigns to the Owner to pay for labor, materials and equipment furnished for use in the performance of the Construction Contract, which is incorporated herein by reference.

§ 2 With respect to the Owner, this obligation shall be null and void if the Contractor:

§ 2.1 Promptly makes payment, directly or indirectly, for all sums due Claimants, and

§ 2.2 Defends, indemnifies and holds harmless the Owner from claims, demands, liens or suits by any person or entity whose claim, demand, lien or suit is for the payment for labor, materials or equipment furnished for use in the performance of the Construction Contract, provided the Owner has promptly notified the Contractor and the Surety (at the address described in Section 12) of any claims, demands, liens or suits and tendered defense of such claims, demands, liens or suits to the Contractor and the Surety, and provided there is no Owner Default.

§ 3 With respect to Claimants, this obligation shall be null and void if the Contractor promptly makes payment, directly or indirectly, for all sums due.

§ 4 The Surety shall have no obligation to Claimants under this Bond until:

§ 4.1 Claimants who are employed by or have a direct contract with the Contractor have given notice to the Surety (at the address described in Section 12) and sent a copy, or notice thereof, to the Owner, stating that a claim is being made under this Bond and, with substantial accuracy, the amount of the claim.

§ 4.2 Claimants who do not have a direct contract with the Contractor:

- 1 Have furnished written notice to the Contractor and sent a copy, or notice thereof, to the Owner, within 90 days after having last performed labor or last furnished materials or equipment included in the claim stating, with substantial accuracy, the amount of the claim and the name of the party to whom the materials were furnished or supplied or for whom the labor was done or performed; and
- 2 Have either received a rejection in whole or in part from the Contractor, or not received within 30 days of furnishing the above notice any communication from the Contractor by which the Contractor has indicated the claim will be paid directly or indirectly; and
- 3 Not having been paid within the above 30 days, have sent a written notice to the Surety (at the address described in Section 12) and sent a copy, or notice thereof, to the Owner, stating that a claim is being made under this Bond and enclosing a copy of the previous written notice furnished to the Contractor.

§ 5 If a notice required by Section 4 is given by the Owner to the Contractor or to the Surety, that is sufficient compliance.

§ 6 When the Claimant has satisfied the conditions of Section 4, the Surety shall promptly and at the Surety's expense take the following actions:

§ 6.1 Send an answer to the Claimant, with a copy to the Owner, within 45 days after receipt of the claim, stating the amounts that are undisputed and the basis for challenging any amounts that are disputed.

§ 6.2 Pay or arrange for payment of any undisputed amounts.

§ 7 The Surety's total obligation shall not exceed the amount of this Bond, and the amount of this Bond shall be credited for any payments made in good faith by the Surety.

§ 8 Amounts owed by the Owner to the Contractor under the Construction Contract shall be used for the performance of the Construction Contract and to satisfy claims, if any, under any Construction Performance Bond. By the Contractor furnishing and the Owner accepting this Bond, they agree that all funds earned by the Contractor in the performance of the Construction Contract are dedicated to satisfy obligations of the Contractor and the Surety under this Bond, subject to the Owner's priority to use the funds for the completion of the work.

§ 9 The Surety shall not be liable to the Owner, Claimants or others for obligations of the Contractor that are unrelated to the Construction Contract. The Owner shall not be liable for payment of any costs or expenses of any Claimant under this Bond, and shall have under this Bond no obligations to make payments to, give notices on behalf of, or otherwise have obligations to Claimants under this Bond.

§ 10 The Surety hereby waives notice of any change, including changes of time, to the Construction Contract or to related subcontracts, purchase orders and other obligations.

§ 11 No suit or action shall be commenced by a Claimant under this Bond other than in a court of competent jurisdiction in the location in which the work or part of the work is located or after the expiration of one year from the date (1) on which the Claimant gave the notice required by Section 4.1 or Section 4.2.3, or (2) on which the last labor or service was performed by anyone or the last materials or equipment were furnished by anyone under the Construction Contract, whichever of (1) or (2) first occurs. If the provisions of this Paragraph are void or prohibited by law, the minimum period of limitation available to sureties as a defense in the jurisdiction of the suit shall be applicable.

§ 12 Notice to the Surety, the Owner or the Contractor shall be mailed or delivered to the address shown on the signature page. Actual receipt of notice by Surety, the Owner or the Contractor, however accomplished, shall be sufficient compliance as of the date received at the address shown on the signature page.

§ 13 When this Bond has been furnished to comply with a statutory or other legal requirement in the location where the construction was to be performed, any provision in this Bond conflicting with said statutory or legal requirement shall be deemed deleted herefrom and provisions conforming to such statutory or other legal requirement shall be deemed incorporated herein. The intent is that this Bond shall be construed as a statutory bond and not as a common law bond.

§ 14 Upon request by any person or entity appearing to be a potential beneficiary of this Bond, the Contractor shall promptly furnish a copy of this Bond or shall permit a copy to be made.

§ 15 DEFINITIONS

§ 15.1 Claimant: An individual or entity having a direct contract with the Contractor or with a subcontractor of the Contractor to furnish labor, materials or equipment for use in the performance of the Contract. The intent of this Bond shall be to include without limitation in the terms "labor, materials or equipment" that part of water, gas, power, light, heat, oil, gasoline, telephone service or rental equipment used in the Construction Contract, architectural and engineering services required for performance of the work of the Contractor and the Contractor's subcontractors, and all other items for which a mechanic's lien may be asserted in the jurisdiction where the labor, materials or equipment were furnished.

§ 15.2 Construction Contract: The agreement between the Owner and the Contractor identified on the signature page, including all Contract Documents and changes thereto.

§ 15.3 Owner Default: Failure of the Owner, which has neither been remedied nor waived, to pay the Contractor as required by the Construction Contract or to perform and complete or comply with the other terms thereof.

**Standard Form of Agreement Between
Contractor and Subcontractor**

AIA DOCUMENT A401-2007

 **AIA® Document A401™ – 2007**

Standard Form of Agreement Between Contractor and Subcontractor

AGREEMENT made as of the _____ day of _____
in the year _____
(In words, indicate day, month and year)

BETWEEN the Contractor:
(Name, address and other information)

and the Subcontractor:
(Name, address and other information)

The Contractor has made a contract for construction (hereinafter, the Prime Contract) dated:

with the Owner:
(Name, address and other information)

for the following Project:
(Name, location and detailed description)

The Prime Contract provides for the furnishing of labor, materials, equipment and services in connection with the construction of the Project. A copy of the Prime Contract, consisting of the Agreement Between Owner and Contractor (from which compensation amounts may be deleted) and the other Contract Documents enumerated therein, has been made available to the Subcontractor.

The Architect for the Project:
(Name, address and other information)

The Contractor and the Subcontractor agree as follows.

This document has important legal consequences. Consultation with an attorney is encouraged with respect to its completion or modification. AIA Document A201™–2007, General Conditions of the Contract for Construction, is adopted in this document by reference.

16	ENUMERATION OF SUBCONTRACT DOCUMENTS

ARTICLE 1 THE SUBCONTRACT DOCUMENTS

§ 1.1 The Subcontract Documents consist of (1) this Agreement; (2) the Prime Contract, consisting of the Agreement between the Owner and Contractor and the other Contract Documents enumerated therein; (3) Modifications issued subsequent to the execution of the Agreement between the Owner and Contractor, whether before or after the execution of this Agreement; (4) other documents listed in Article 16 of this Agreement; and (5) Modifications to this Subcontract issued after execution of this Agreement. These form the Subcontract, and are as fully a part of the Subcontract as if attached to this Agreement or repeated herein. The Subcontract represents the entire and integrated agreement between the parties hereto and supersedes prior negotiations, representations or agreements, either written or oral. An enumeration of the Subcontract Documents, other than Modifications issued subsequent to the execution of this Agreement, appears in Article 16.

§ 1.2 Except to the extent of a conflict with a specific term or condition contained in the Subcontract Documents, the General Conditions governing this Subcontract shall be the AIA Document A201™–2007, General Conditions of the Contract for Construction.

§ 1.3 The Subcontract may be amended or modified only by a Modification. The Subcontract Documents shall not be construed to create a contractual relationship of any kind (1) between the Architect and the Subcontractor, (2) between the Owner and the Subcontractor, or (3) between any persons or entities other than the Contractor and Subcontractor.

§ 1.4 The Contractor shall make available the Subcontract Documents to the Subcontractor prior to execution of this Agreement, and thereafter, upon request, but the Contractor may charge the Subcontractor for the reasonable cost of reproduction.

Init.

ARTICLE 2 MUTUAL RIGHTS AND RESPONSIBILITIES

The Contractor and Subcontractor shall be mutually bound by the terms of this Agreement and, to the extent that the provisions of AIA Document A201–2007 apply to this Agreement pursuant to Section 1.2 and provisions of the Prime Contract apply to the Work of the Subcontractor, the Contractor shall assume toward the Subcontractor all obligations and responsibilities that the Owner, under such documents, assumes toward the Contractor, and the Subcontractor shall assume toward the Contractor all obligations and responsibilities which the Contractor, under such documents, assumes toward the Owner and the Architect. The Contractor shall have the benefit of all rights, remedies and redress against the Subcontractor that the Owner, under such documents, has against the Contractor, and the Subcontractor shall have the benefit of all rights, remedies and redress against the Contractor that the Contractor, under such documents, has against the Owner, insofar as applicable to this Subcontract. Where a provision of such documents is inconsistent with a provision of this Agreement, this Agreement shall govern.

ARTICLE 3 CONTRACTOR**§ 3.1 SERVICES PROVIDED BY THE CONTRACTOR**

§ 3.1.1 The Contractor shall cooperate with the Subcontractor in scheduling and performing the Contractor's Work to avoid conflicts or interference in the Subcontractor's Work and shall expedite written responses to submittals made by the Subcontractor in accordance with Section 4.1 and Article 5. Promptly after execution of this Agreement, the Contractor shall provide the Subcontractor copies of the Contractor's construction schedule and schedule of submittals, together with such additional scheduling details as will enable the Subcontractor to plan and perform the Subcontractor's Work properly. The Contractor shall promptly notify the Subcontractor of subsequent changes in the construction and submittal schedules and additional scheduling details.

§ 3.1.2 The Contractor shall provide suitable areas for storage of the Subcontractor's materials and equipment during the course of the Work. Additional costs to the Subcontractor resulting from relocation of such storage areas at the direction of the Contractor, except as previously agreed upon, shall be reimbursed by the Contractor.

§ 3.1.3 Except as provided in Article 14, the Contractor's equipment will be available to the Subcontractor only at the Contractor's discretion and on mutually satisfactory terms.

§ 3.2 COMMUNICATIONS

§ 3.2.1 The Contractor shall promptly make available to the Subcontractor information, including information received from the Owner, that affects this Subcontract and that becomes available to the Contractor subsequent to execution of this Subcontract.

§ 3.2.2 The Contractor shall not give instructions or orders directly to the Subcontractor's employees or to the Subcontractor's Sub-subcontractors or material suppliers unless such persons are designated as authorized representatives of the Subcontractor.

§ 3.2.3 The Contractor shall permit the Subcontractor to request directly from the Architect information regarding the percentages of completion and the amount certified on account of Work done by the Subcontractor.

§ 3.2.4 If hazardous substances of a type of which an employer is required by law to notify its employees are being used on the site by the Contractor, a subcontractor or anyone directly or indirectly employed by them (other than the Subcontractor), the Contractor shall, prior to harmful exposure of the Subcontractor's employees to such substance, give written notice of the chemical composition thereof to the Subcontractor in sufficient detail and time to permit the Subcontractor's compliance with such laws.

§ 3.2.5 The Contractor shall furnish to the Subcontractor within 30 days after receipt of a written request, or earlier if so required by law, information necessary and relevant for the Subcontractor to evaluate, give notice of or enforce mechanic's lien rights. Such information shall include a correct statement of the record legal title to the property, usually referred to as the site, on which the Project is located and the Owner's interest therein.

§ 3.2.6 If the Contractor asserts or defends a claim against the Owner that relates to the Work of the Subcontractor, the Contractor shall promptly make available to the Subcontractor all information relating to the portion of the claim that relates to the Work of the Subcontractor.

§ 3.3 CLAIMS BY THE CONTRACTOR

§ 3.3.1 Liquidated damages for delay, if provided for in Section 9.3 of this Agreement, shall be assessed against the Subcontractor only to the extent caused by the Subcontractor or any person or entity for whose acts the Subcontractor may be liable, and in no case for delays or causes arising outside the scope of this Subcontract.

§ 3.3.2 The Contractor's claims for the costs of services or materials provided due to the Subcontractor's failure to execute the Work shall require

- .1 seven days' written notice prior to the Contractor's providing services or materials, except in an emergency; and
- .2 written compilations to the Subcontractor of services and materials provided by the Contractor and charges for such services and materials no later than the fifteenth day of the month following the Contractor's providing such services or materials.

§ 3.4 CONTRACTOR'S REMEDIES

If the Subcontractor defaults or neglects to carry out the Work in accordance with this Agreement and fails within five working days after receipt of written notice from the Contractor to commence and continue correction of such default or neglect with diligence and promptness, the Contractor may, by appropriate Modification, and without prejudice to any other remedy the Contractor may have, make good such deficiencies and may deduct the reasonable cost thereof from the payments then or thereafter due the Subcontractor.

ARTICLE 4 SUBCONTRACTOR**§ 4.1 EXECUTION AND PROGRESS OF THE WORK**

§ 4.1.1 For all Work the Subcontractor intends to subcontract, the Subcontractor shall enter into written agreements with Sub-subcontractors performing portions of the Work of this Subcontract by which the Subcontractor and the Sub-subcontractor are mutually bound, to the extent of the Work to be performed by the Sub-subcontractor, assuming toward each other all obligations and responsibilities that the Contractor and Subcontractor assume toward each other and having the benefit of all rights, remedies and redress each against the other that the Contractor and Subcontractor have by virtue of the provisions of this Agreement.

§ 4.1.2 The Subcontractor shall supervise and direct the Subcontractor's Work, and shall cooperate with the Contractor in scheduling and performing the Subcontractor's Work to avoid conflict, delay in or interference with the Work of the Contractor, other subcontractors, the Owner, or separate contractors.

§ 4.1.3 The Subcontractor shall promptly submit Shop Drawings, Product Data, Samples and similar submittals required by the Subcontract Documents with reasonable promptness and in such sequence as to cause no delay in the Work or in the activities of the Contractor or other subcontractors.

§ 4.1.4 The Subcontractor shall furnish to the Contractor periodic progress reports on the Work of this Subcontract as mutually agreed, including information on the status of materials and equipment that may be in the course of preparation, manufacture, or transit.

§ 4.1.5 The Subcontractor agrees that the Contractor and the Architect each have the authority to reject Work of the Subcontractor that does not conform to the Prime Contract. The Architect's decisions on matters relating to aesthetic effect shall be final and binding on the Subcontractor if consistent with the intent expressed in the Prime Contract.

§ 4.1.6 The Subcontractor shall pay for all materials, equipment and labor used in connection with the performance of this Subcontract through the period covered by previous payments received from the Contractor, and shall furnish satisfactory evidence, when requested by the Contractor, to verify compliance with the above requirements.

§ 4.1.7 The Subcontractor shall take necessary precautions to protect properly the work of other subcontractors from damage caused by operations under this Subcontract.

§ 4.1.8 The Subcontractor shall cooperate with the Contractor, other subcontractors, the Owner, and separate contractors whose work might interfere with the Subcontractor's Work. The Subcontractor shall participate in the preparation of coordinated drawings in areas of congestion, if required by the Prime Contract, specifically noting and advising the Contractor of potential conflicts between the Work of the Subcontractor and that of the Contractor, other subcontractors, the Owner, or separate contractors.

Init.

§ 4.2 PERMITS, FEES, NOTICES, AND COMPLIANCE WITH LAWS

§ 4.2.1 The Subcontractor shall give notices and comply with applicable laws, statutes, ordinances, codes, rules and regulations, and lawful orders of public authorities bearing on performance of the Work of this Subcontract. The Subcontractor shall secure and pay for permits, fees, licenses and inspections by government agencies necessary for proper execution and completion of the Subcontractor's Work, the furnishing of which is required of the Contractor by the Prime Contract.

§ 4.2.2 The Subcontractor shall comply with Federal, state and local tax laws, social security acts, unemployment compensation acts and workers' compensation acts insofar as applicable to the performance of this Subcontract.

§ 4.3 SAFETY PRECAUTIONS AND PROCEDURES

§ 4.3.1 The Subcontractor shall take reasonable safety precautions with respect to performance of this Subcontract, shall comply with safety measures initiated by the Contractor and with applicable laws, statutes, ordinances, codes, rules and regulations, and lawful orders of public authorities for the safety of persons and property in accordance with the requirements of the Prime Contract. The Subcontractor shall report to the Contractor within three days an injury to an employee or agent of the Subcontractor which occurred at the site.

§ 4.3.2 If hazardous substances of a type of which an employer is required by law to notify its employees are being used on the site by the Subcontractor, the Subcontractor's Sub-subcontractors or anyone directly or indirectly employed by them, the Subcontractor shall, prior to harmful exposure of any employees on the site to such substance, give written notice of the chemical composition thereof to the Contractor in sufficient detail and time to permit compliance with such laws by the Contractor, other subcontractors and other employers on the site.

§ 4.3.3 If reasonable precautions will be inadequate to prevent foreseeable bodily injury or death to persons resulting from a hazardous material or substance, including but not limited to asbestos or polychlorinated biphenyl (PCB), encountered on the site by the Subcontractor, the Subcontractor shall, upon recognizing the condition, immediately stop Work in the affected area and promptly report the condition to the Contractor in writing. When the material or substance has been rendered harmless, the Subcontractor's Work in the affected area shall resume upon written agreement of the Contractor and Subcontractor. The Subcontract Time shall be extended appropriately and the Subcontract Sum shall be increased in the amount of the Subcontractor's reasonable additional costs of demobilization, delay and remobilization, which adjustments shall be accomplished as provided in Article 5 of this Agreement.

§ 4.3.4 To the fullest extent permitted by law, the Contractor shall indemnify and hold harmless the Subcontractor, the Subcontractor's Sub-subcontractors, and agents and employees of any of them from and against claims, damages, losses and expenses, including but not limited to attorneys' fees, arising out of or resulting from performance of the Work in the affected area if in fact the material or substance presents the risk of bodily injury or death as described in Section 4.3.3 and has not been rendered harmless, provided that such claim, damage, loss or expense is attributable to bodily injury, sickness, disease or death, or to injury to or destruction of tangible property (other than the Work itself) except to the extent that such damage, loss or expense is due to the fault or negligence of the party seeking indemnity.

§ 4.3.5 The Subcontractor shall indemnify the Contractor for the cost and expense the Contractor incurs 1) for remediation of a material or substance brought to the site and negligently handled by the Subcontractor or 2) where the Subcontractor fails to perform its obligations under Section 4.3.3, except to the extent that the cost and expense are due to the Contractor's fault or negligence.

§ 4.4 CLEANING UP

§ 4.4.1 The Subcontractor shall keep the premises and surrounding area free from accumulation of waste materials or rubbish caused by operations performed under this Subcontract. The Subcontractor shall not be held responsible for conditions caused by other contractors or subcontractors.

§ 4.4.2 As provided under Section 3.3.2, if the Subcontractor fails to clean up as provided in the Subcontract Documents, the Contractor may charge the Subcontractor for the Subcontractor's appropriate share of cleanup costs.

§ 4.5 WARRANTY

The Subcontractor warrants to the Owner, Architect, and Contractor that materials and equipment furnished under this Subcontract will be of good quality and new unless the Subcontract Documents require or permit otherwise. The Subcontractor further warrants that the Work will conform to the requirements of the Subcontract Documents and will be free from defects, except for those inherent in the quality of the Work the Subcontract Documents require or permit. Work, materials, or equipment not conforming to these requirements may be considered defective. The Subcontractor's

warranty excludes remedy for damage or defect caused by abuse, alterations to the Work not executed by the Subcontractor, improper or insufficient maintenance, improper operation, or normal wear and tear under normal usage. If required by the Architect and Contractor, the Subcontractor shall furnish satisfactory evidence as to the kind and quality of materials and equipment.

§ 4.6 INDEMNIFICATION

§ 4.6.1 To the fullest extent permitted by law, the Subcontractor shall indemnify and hold harmless the Owner, Contractor, Architect, Architect's consultants, and agents and employees of any of them from and against claims, damages, losses and expenses, including but not limited to attorney's fees, arising out of or resulting from performance of the Subcontractor's Work under this Subcontract, provided that any such claim, damage, loss or expense is attributable to bodily injury, sickness, disease or death, or to injury to or destruction of tangible property (other than the Work itself), but only to the extent caused by the negligent acts or omissions of the Subcontractor, the Subcontractor's Sub-subcontractors, anyone directly or indirectly employed by them or anyone for whose acts they may be liable, regardless of whether or not such claim, damage, loss or expense is caused in part by a party indemnified hereunder. Such obligation shall not be construed to negate, abridge, or otherwise reduce other rights or obligations of indemnity which would otherwise exist as to a party or person described in this Section 4.6.

§ 4.6.2 In claims against any person or entity indemnified under this Section 4.6 by an employee of the Subcontractor, the Subcontractor's Sub-subcontractors, anyone directly or indirectly employed by them or anyone for whose acts they may be liable, the indemnification obligation under Section 4.6.1 shall not be limited by a limitation on the amount or type of damages, compensation or benefits payable by or for the Subcontractor or the Subcontractor's Sub-subcontractors under workers' compensation acts, disability benefit acts or other employee benefit acts.

§ 4.7 REMEDIES FOR NONPAYMENT

If the Contractor does not pay the Subcontractor through no fault of the Subcontractor, within seven days from the time payment should be made as provided in this Agreement, the Subcontractor may, without prejudice to any other available remedies, upon seven additional days' written notice to the Contractor, stop the Work of this Subcontract until payment of the amount owing has been received. The Subcontract Sum shall, by appropriate Modification, be increased by the amount of the Subcontractor's reasonable costs of demobilization, delay and remobilization.

ARTICLE 5 CHANGES IN THE WORK

§ 5.1 The Owner may make changes in the Work by issuing Modifications to the Prime Contract. Upon receipt of such a Modification issued subsequent to the execution of the Subcontract Agreement, the Contractor shall promptly notify the Subcontractor of the Modification. Unless otherwise directed by the Contractor, the Subcontractor shall not thereafter order materials or perform Work that would be inconsistent with the changes made by the Modification to the Prime Contract.

§ 5.2 The Subcontractor may be ordered in writing by the Contractor, without invalidating this Subcontract, to make changes in the Work within the general scope of this Subcontract consisting of additions, deletions or other revisions, including those required by Modifications to the Prime Contract issued subsequent to the execution of this Agreement, the Subcontract Sum and the Subcontract Time being adjusted accordingly. The Subcontractor, prior to the commencement of such changed or revised Work, shall submit promptly to the Contractor written copies of a claim for adjustment to the Subcontract Sum and Subcontract Time for such revised Work in a manner consistent with requirements of the Subcontract Documents.

§ 5.3 The Subcontractor shall make all claims promptly to the Contractor for additional cost, extensions of time and damages for delays or other causes in accordance with the Subcontract Documents. A claim which will affect or become part of a claim which the Contractor is required to make under the Prime Contract within a specified time period or in a specified manner shall be made in sufficient time to permit the Contractor to satisfy the requirements of the Prime Contract. Such claims shall be received by the Contractor not less than two working days preceding the time by which the Contractor's claim must be made. Failure of the Subcontractor to make such a timely claim shall bind the Subcontractor to the same consequences as those to which the Contractor is bound.

ARTICLE 6 MEDIATION AND BINDING DISPUTE RESOLUTION

§ 6.1 MEDIATION

§ 6.1.1 Any claim arising out of or related to this Subcontract, except those waived in this Subcontract, shall be subject to mediation as a condition precedent to binding dispute resolution.

Init.

§ 6.1.2 The parties shall endeavor to resolve their claims by mediation which, unless the parties mutually agree otherwise, shall be administered by the American Arbitration Association in accordance with its Construction Industry Mediation Procedures in effect on the date of the Agreement. A request for mediation shall be made in writing, delivered to the other party to this Subcontract and filed with the person or entity administering the mediation. The request may be made concurrently with the filing of binding dispute resolution proceedings but, in such event, mediation shall proceed in advance of binding dispute resolution proceedings, which shall be stayed pending mediation for a period of 60 days from the date of filing, unless stayed for a longer period by agreement of the parties or court order. If an arbitration is stayed pursuant to this Section, the parties may nonetheless proceed to the selection of the arbitrators(s) and agree upon a schedule for later proceedings.

§ 6.1.3 The parties shall share the mediator's fee and any filing fees equally. The mediation shall be held in the place where the Project is located, unless another location is mutually agreed upon. Agreements reached in mediation shall be enforceable as settlement agreements in any court having jurisdiction thereof.

§ 6.2 BINDING DISPUTE RESOLUTION

For any claim subject to, but not resolved by mediation pursuant to Section 6.2, the method of binding dispute resolution shall be as follows:

(Check the appropriate box. If the Contractor and Subcontractor do not select a method of binding dispute resolution below, or do not subsequently agree in writing to a binding dispute resolution method other than litigation, claims will be resolved by litigation in a court of competent jurisdiction.)

- Arbitration pursuant to Section 6.3 of this Agreement
- Litigation in a court of competent jurisdiction
- Other (Specify)

§ 6.3 ARBITRATION

§ 6.3.1 If the Contractor and Subcontractor have selected arbitration as the method of binding dispute resolution in Section 6.2, any claim subject to, but not resolved by, mediation shall be subject to arbitration which, unless the parties mutually agree otherwise, shall be administered by the American Arbitration Association in accordance with its Construction Industry Arbitration Rules in effect on the date of the Agreement. A demand for arbitration shall be made in writing, delivered to the other party to the Subcontract, and filed with the person or entity administering the arbitration. The party filing a notice of demand for arbitration must assert in the demand all claims then known to that party on which arbitration is permitted to be demanded.

§ 6.3.2 A demand for arbitration shall be made no earlier than concurrently with the filing of a request for mediation but in no event shall it be made after the date when the institution of legal or equitable proceedings based on the claim would be barred by the applicable statute of limitations. For statute of limitations purposes, receipt of a written demand for arbitration by the person or entity administering the arbitration shall constitute the institution of legal or equitable proceedings based on the claim.

§ 6.3.3 Either party, at its sole discretion, may consolidate an arbitration conducted under this Agreement with any other arbitration to which it is a party provided that (1) the arbitration agreement governing the other arbitration permits consolidation; (2) the arbitrations to be consolidated substantially involve common questions of law or fact; and (3) the arbitrations employ materially similar procedural rules and methods for selecting arbitrator(s).

§ 6.3.4 Either party, at its sole discretion, may include by joinder persons or entities substantially involved in a common question of law or fact whose presence is required if complete relief is to be accorded in arbitration, provided that the party sought to be joined consents in writing to such joinder. Consent to arbitration involving an additional person or entity shall not constitute consent to arbitration of a claim not described in the written consent.

§ 6.3.5 The Contractor and Subcontractor grant to any person or entity made a party to an arbitration conducted under this Section 6.3, whether by joinder or consolidation, the same rights of joinder and consolidation as the Contractor and Subcontractor under this Agreement.

§ 6.3.6 This agreement to arbitrate and any other written agreement to arbitrate with an additional person or persons referred to herein shall be specifically enforceable under applicable law in any court having jurisdiction thereof. The award rendered by the arbitrator or arbitrators shall be final, and judgment may be entered upon it in accordance with applicable law in any court having jurisdiction thereof.

ARTICLE 7 TERMINATION, SUSPENSION OR ASSIGNMENT OF THE SUBCONTRACT

§ 7.1 TERMINATION BY THE SUBCONTRACTOR

The Subcontractor may terminate the Subcontract for the same reasons and under the same circumstances and procedures with respect to the Contractor as the Contractor may terminate with respect to the Owner under the Prime Contract, or for nonpayment of amounts due under this Subcontract for 60 days or longer. In the event of such termination by the Subcontractor for any reason which is not the fault of the Subcontractor, Sub-subcontractors or their agents or employees or other persons performing portions of the Work under contract with the Subcontractor, the Subcontractor shall be entitled to recover from the Contractor payment for Work executed and for proven loss with respect to materials, equipment, tools, and construction equipment and machinery, including reasonable overhead, profit and damages.

§ 7.2 TERMINATION BY THE CONTRACTOR

§ 7.2.1 If the Subcontractor repeatedly fails or neglects to carry out the Work in accordance with the Subcontract Documents or otherwise to perform in accordance with this Subcontract and fails within a ten-day period after receipt of written notice to commence and continue correction of such default or neglect with diligence and promptness, the Contractor may, by written notice to the Subcontractor and without prejudice to any other remedy the Contractor may have, terminate the Subcontract and finish the Subcontractor's Work by whatever method the Contractor may deem expedient. If the unpaid balance of the Subcontract Sum exceeds the expense of finishing the Subcontractor's Work and other damages incurred by the Contractor and not expressly waived, such excess shall be paid to the Subcontractor. If such expense and damages exceed such unpaid balance, the Subcontractor shall pay the difference to the Contractor.

§ 7.2.2 If the Owner terminates the Contract for the Owner's convenience, the Contractor shall promptly deliver written notice to the Subcontractor.

§ 7.2.3 Upon receipt of written notice of termination, the Subcontractor shall

- .1 cease operations as directed by the Contractor in the notice;
- .2 take actions necessary or that the Contractor may direct, for the protection and preservation of the Work; and
- .3 except for Work directed to be performed prior to the effective date of termination stated in the notice, terminate all existing Sub-subcontracts and purchase orders and enter into no further Sub-subcontracts and purchase orders.

§ 7.2.4 In case of such termination for the Owner's convenience, the Subcontractor shall be entitled to receive payment for Work executed, and costs incurred by reason of such termination, along with reasonable overhead and profit on the Work not executed.

§ 7.3 SUSPENSION BY THE CONTRACTOR FOR CONVENIENCE

§ 7.3.1 The Contractor may, without cause, order the Subcontractor in writing to suspend, delay or interrupt the Work of this Subcontract in whole or in part for such period of time as the Contractor may determine. In the event of suspension ordered by the Contractor, the Subcontractor shall be entitled to an equitable adjustment of the Subcontract Time and Subcontract Sum.

§ 7.3.2 An adjustment shall be made for increases in the Subcontract Time and Subcontract Sum, including profit on the increased cost of performance, caused by suspension, delay or interruption. No adjustment shall be made to the extent that

- .1 performance is, was or would have been so suspended, delayed or interrupted by another cause for which the Subcontractor is responsible; or
- .2 an equitable adjustment is made or denied under another provision of this Subcontract.

§ 7.4 ASSIGNMENT OF THE SUBCONTRACT

§ 7.4.1 In the event the Owner terminates the Prime Contract for cause, this Subcontract is assigned to the Owner pursuant to Section 5.4 of A201-2007 provided the Owner accepts the assignment.

§ 7.4.2 Without the Contractor's written consent, the Subcontractor shall not assign the Work of this Subcontract, subcontract the whole of this Subcontract, or subcontract portions of this Subcontract.

Init.

ARTICLE 8 THE WORK OF THIS SUBCONTRACT

The Subcontractor shall execute the following portion of the Work described in the Subcontract Documents, including all labor, materials, equipment, services and other items required to complete such portion of the Work, except to the extent specifically indicated in the Subcontract Documents to be the responsibility of others.

(Insert a precise description of the Work of this Subcontract, referring where appropriate to numbers of Drawings, sections of Specifications and pages of Addenda, Modifications and accepted alternates.)

ARTICLE 9 DATE OF COMMENCEMENT AND SUBSTANTIAL COMPLETION

§ 9.1 Subcontract Time is the period of time, including authorized adjustments, allotted in the Subcontract Documents for Substantial Completion of the Work described in the Subcontract Documents. The Subcontractor's date of commencement is the date from which the Subcontract Time of Section 9.3 is measured; it shall be the date of this Agreement, as first written above, unless a different date is stated below or provision is made for the date to be fixed in a notice to proceed issued by the Contractor.

(Insert the date of commencement, if it differs from the date of this Agreement or, if applicable, state that the date will be fixed in a notice to proceed.)

§ 9.2 Unless the date of commencement is established by a notice to proceed issued by the Contractor, or the Contractor has commenced visible Work at the site under the Prime Contract, the Subcontractor shall notify the Contractor in writing not less than five days before commencing the Subcontractor's Work to permit the timely filing of mortgages, mechanic's liens and other security interests.

§ 9.3 The Work of this Subcontract shall be substantially completed not later than

(Insert the calendar date or number of calendar days after the Subcontractor's date of commencement. Also insert any requirements for earlier substantial completion of certain portions of the Subcontractor's Work, if not stated elsewhere in the Subcontract Documents.)

, subject to adjustments of this Subcontract Time as provided in the Subcontract Documents.

(Insert provisions, if any, for liquidated damages relating to failure to complete on time.)

§ 9.4 With respect to the obligations of both the Contractor and the Subcontractor, time is of the essence of this Subcontract.

§ 9.5 No extension of time will be valid without the Contractor's written consent after claim made by the Subcontractor in accordance with Section 5.3.

ARTICLE 10 SUBCONTRACT SUM

§ 10.1 The Contractor shall pay the Subcontractor in current funds for performance of the Subcontract the Subcontract Sum of _____ Dollars (\$ _____), subject to additions and deductions as provided in the Subcontract Documents.

§ 10.2 The Subcontract Sum is based upon the following alternates, if any, which are described in the Subcontract Documents and have been accepted by the Owner and the Contractor:

(Insert the numbers or other identification of accepted alternates.)

§ 10.3 Unit prices, if any:
(Identify and state the unit price, and state the quantity limitations, if any, to which the unit price will be applicable.)

Item	Units and Limitations	Price per Unit
------	-----------------------	----------------

§ 10.4 Allowances included in the Subcontract Sum, if any:
(Identify allowance and state exclusions, if any, from the allowance price.)

Item	Price
------	-------

ARTICLE 11 PROGRESS PAYMENTS

§ 11.1 Based upon applications for payment submitted to the Contractor by the Subcontractor, corresponding to applications for payment submitted by the Contractor to the Architect, and certificates for payment issued by the Architect, the Contractor shall make progress payments on account of the Subcontract Sum to the Subcontractor as provided below and elsewhere in the Subcontract Documents. Unless the Contractor provides the Owner with a payment bond in the full penal sum of the Contract Sum, payments received by the Contractor and Subcontractor for Work properly performed by their contractors and suppliers shall be held by the Contractor and Subcontractor for those contractors or suppliers who performed Work or furnished materials, or both, under contract with the Contractor or Subcontractor for which payment was made to the Contractor by the Owner or to the Subcontractor by the Contractor, as applicable. Nothing contained herein shall require money to be placed in a separate account and not commingled with money of the Contractor or Subcontractor, shall create any fiduciary liability or tort liability on the part of the Contractor or Subcontractor for breach of trust or shall entitle any person or entity to an award of punitive damages against the Contractor or Subcontractor for breach of the requirements of this provision.

§ 11.2 The period covered by each application for payment shall be one calendar month ending on the last day of the month, or as follows:

§ 11.3 Provided an application for payment is received by the Contractor not later than the _____ day of a month, the Contractor shall include the Subcontractor’s Work covered by that application in the next application for payment which the Contractor is entitled to submit to the Architect. The Contractor shall pay the Subcontractor each progress payment no later than seven working days after the Contractor receives payment from the Owner. If the Architect does not issue a certificate for payment or the Contractor does not receive payment for any cause which is not the fault of the Subcontractor, the Contractor shall pay the Subcontractor, on demand, a progress payment computed as provided in Sections 11.7, 11.8 and 11.9.

§ 11.4 If the Subcontractor’s application for payment is received by the Contractor after the application date fixed above, the Subcontractor’s Work covered by it shall be included by the Contractor in the next application for payment submitted to the Architect.

§ 11.5 The Subcontractor shall submit to the Contractor a schedule of values prior to submitting the Subcontractor’s first Application for Payment. Each subsequent application for payment shall be based upon the most recent schedule of values submitted by the Subcontractor in accordance with the Subcontract Documents. The schedule of values shall allocate the entire Subcontract Sum among the various portions of the Subcontractor’s Work and be prepared in such

form and supported by such data to substantiate its accuracy as the Contractor may require. This schedule, unless objected to by the Contractor, shall be used as a basis for reviewing the Subcontractor's applications for payment.

§ 11.6 Applications for payment submitted by the Subcontractor shall indicate the percentage of completion of each portion of the Subcontractor's Work as of the end of the period covered by the application for payment.

§ 11.7 Subject to the provisions of the Subcontract Documents, the amount of each progress payment shall be computed as set forth in the sections below.

§ 11.7.1 Take that portion of the Subcontract Sum properly allocable to completed Work as determined by multiplying the percentage completion of each portion of the Subcontractor's Work by the share of the total Subcontract Sum allocated to that portion of the Subcontractor's Work in the schedule of values, less that percentage actually retained, if any, from payments to the Contractor on account of the Work of the Subcontractor. Pending final determination of cost to the Contractor of changes in the Work that have been properly authorized by the Contractor, amounts not in dispute shall be included to the same extent provided in the Prime Contract, even though the Subcontract Sum has not yet been adjusted;

§ 11.7.2 Add that portion of the Subcontract Sum properly allocable to materials and equipment delivered and suitably stored at the site by the Subcontractor for subsequent incorporation in the Subcontractor's Work or, if approved by the Contractor, suitably stored off the site at a location agreed upon in writing, less the same percentage retainage required by the Prime Contract to be applied to such materials and equipment in the Contractor's application for payment;

§ 11.7.3 Subtract the aggregate of previous payments made by the Contractor; and

§ 11.7.4 Subtract amounts, if any, calculated under Section 11.7.1 or 11.7.2 that are related to Work of the Subcontractor for which the Architect has withheld or nullified, in whole or in part, a certificate of payment for a cause that is the fault of the Subcontractor.

§ 11.8 Upon the partial or entire disapproval by the Contractor of the Subcontractor's application for payment, the Contractor shall provide written notice to the Subcontractor. When the basis for the disapproval has been remedied, the Subcontractor shall be paid the amount withheld.

§ 11.9 SUBSTANTIAL COMPLETION

When the Subcontractor's Work or a designated portion thereof is substantially complete and in accordance with the requirements of the Prime Contract, the Contractor shall, upon application by the Subcontractor, make prompt application for payment for such Work. Within 30 days following issuance by the Architect of the certificate for payment covering such substantially completed Work, the Contractor shall, to the full extent allowed in the Prime Contract, make payment to the Subcontractor, deducting any portion of the funds for the Subcontractor's Work withheld in accordance with the certificate to cover costs of items to be completed or corrected by the Subcontractor. Such payment to the Subcontractor shall be the entire unpaid balance of the Subcontract Sum if a full release of retainage is allowed under the Prime Contract for the Subcontractor's Work prior to the completion of the entire Project. If the Prime Contract does not allow for a full release of retainage, then such payment shall be an amount which, when added to previous payments to the Subcontractor, will reduce the retainage on the Subcontractor's substantially completed Work to the same percentage of retainage as that on the Contractor's Work covered by the certificate.

ARTICLE 12 FINAL PAYMENT

§ 12.1 Final payment, constituting the entire unpaid balance of the Subcontract Sum, shall be made by the Contractor to the Subcontractor when the Subcontractor's Work is fully performed in accordance with the requirements of the Subcontract Documents, the Architect has issued a certificate for payment covering the Subcontractor's completed Work and the Contractor has received payment from the Owner. If, for any cause which is not the fault of the Subcontractor, a certificate for payment is not issued or the Contractor does not receive timely payment or does not pay the Subcontractor within seven days after receipt of payment from the Owner, final payment to the Subcontractor shall be made upon demand.

(Insert provisions for earlier final payment to the Subcontractor, if applicable.)

§ 12.2 Before issuance of the final payment, the Subcontractor, if required, shall submit evidence satisfactory to the Contractor that all payrolls, bills for materials and equipment, and all known indebtedness connected with the Subcontractor's Work have been satisfied. Acceptance of final payment by the Subcontractor shall constitute a waiver of claims by the Subcontractor, except those previously made in writing and identified by the Subcontractor as unsettled at the time of final application for payment.

ARTICLE 13 INSURANCE AND BONDS

§ 13.1 The Subcontractor shall purchase and maintain insurance of the following types of coverage and limits of liability as will protect the Subcontractor from claims that may arise out of, or result from, the Subcontractor's operations and completed operations under the Subcontract:

§ 13.2 Coverages, whether written on an occurrence or claims-made basis, shall be maintained without interruption from the date of commencement of the Subcontractor's Work until the date of final payment and termination of any coverage required to be maintained after final payment to the Subcontractor, and, with respect to the Subcontractor's completed operations coverage, until the expiration of the period for correction of Work or for such other period for maintenance of completed operations coverage as specified in the Prime Contract.

§ 13.3 Certificates of insurance acceptable to the Contractor shall be filed with the Contractor prior to commencement of the Subcontractor's Work. These certificates and the insurance policies required by this Article 13 shall contain a provision that coverages afforded under the policies will not be canceled or allowed to expire until at least 30 days' prior written notice has been given to the Contractor. If any of the foregoing insurance coverages are required to remain in force after final payment and are reasonably available, an additional certificate evidencing continuation of such coverage shall be submitted with the final application for payment as required in Article 12. If any information concerning reduction of coverage is not furnished by the insurer, it shall be furnished by the Subcontractor with reasonable promptness according to the Subcontractor's information and belief.

§ 13.4 The Subcontractor shall cause the commercial liability coverage required by the Subcontract Documents to include: (1) the Contractor, the Owner, the Architect and the Architect's consultants as additional insureds for claims caused in whole or in part by the Subcontractor's negligent acts or omissions during the Subcontractor's operations; and (2) the Contractor as an additional insured for claims caused in whole or in part by the Subcontractor's negligent acts or omissions during the Subcontractor's completed operations.

§ 13.5 The Contractor shall furnish to the Subcontractor satisfactory evidence of insurance required of the Contractor under the Prime Contract.

§ 13.6 The Contractor shall promptly, upon request of the Subcontractor, furnish a copy or permit a copy to be made of any bond covering payment of obligations arising under the Subcontract.

§ 13.7 Performance Bond and Payment Bond:

(If the Subcontractor is to furnish bonds, insert the specific requirements here.)

§ 13.8 PROPERTY INSURANCE

§ 13.8.1 When requested in writing, the Contractor shall provide the Subcontractor with copies of the property and equipment policies in effect for the Project. The Contractor shall notify the Subcontractor if the required property insurance policies are not in effect.

§ 13.8.2 If the required property insurance is not in effect for the full value of the Subcontractor's Work, then the Subcontractor shall purchase insurance for the value of the Subcontractor's Work, and the Subcontractor shall be reimbursed for the cost of the insurance by an adjustment in the Subcontract Sum.

§ 13.8.3 Property insurance for the Subcontractor's materials and equipment required for the Subcontractor's Work, stored off site or in transit and not covered by the Project property insurance, shall be paid for through the application for payment process.

§ 13.9 WAIVERS OF SUBROGATION

The Contractor and Subcontractor waive all rights against (1) each other and any of their subcontractors, sub-subcontractors, agents and employees, each of the other, and (2) the Owner, the Architect, the Architect's consultants, separate contractors, and any of their subcontractors, sub-subcontractors, agents and employees for damages caused by fire or other causes of loss to the extent covered by property insurance provided under the Prime Contract or other property insurance applicable to the Work, except such rights as they may have to proceeds of such insurance held by the Owner as a fiduciary. The Subcontractor shall require of the Subcontractor's Sub-subcontractors, agents and employees, by appropriate agreements, written where legally required for validity, similar waivers in favor of the parties enumerated herein. The policies shall provide such waivers of subrogation by endorsement or otherwise. A waiver of subrogation shall be effective as to a person or entity even though that person or entity would otherwise have a duty of indemnification, contractual or otherwise, did not pay the insurance premium directly or indirectly, and whether or not the person or entity had an insurable interest in the property damaged.

ARTICLE 14 TEMPORARY FACILITIES AND WORKING CONDITIONS

§ 14.1 The Contractor shall furnish and make available at no cost to the Subcontractor the Contractor's temporary facilities, equipment and services, except as noted below.

§ 14.2 Specific working conditions:

(Insert any applicable arrangements concerning working conditions and labor matters for the Project.)

ARTICLE 15 MISCELLANEOUS PROVISIONS

§ 15.1 Where reference is made in this Subcontract to a provision of another Subcontract Document, the reference refers to that provision as amended or supplemented by other provisions of the Subcontract Documents.

§ 15.2 Payments due and unpaid under this Subcontract shall bear interest from the date payment is due at such rate as the parties may agree upon in writing or, in the absence thereof, at the legal rate prevailing from time to time at the place where the Project is located.

(Insert rate of interest agreed upon, if any.)

§ 15.3 Retainage and any reduction thereto is as follows:

§ 15.4 The Contractor and Subcontractor waive claims against each other for consequential damages arising out of or relating to this Subcontract, including without limitation, any consequential damages due to either party's termination in accordance with Article 7.

ARTICLE 16 ENUMERATION OF SUBCONTRACT DOCUMENTS

§ 16.1 The Subcontract Documents, except for Modifications issued after execution of this Subcontract, are enumerated in the sections below.

§ 16.1.1 This executed AIA Document A401–2007, Standard Form of Agreement Between Contractor and Subcontractor.

§ 16.1.2 The Prime Contract, consisting of the Agreement between the Owner and Contractor dated as first entered above and the other Contract Documents enumerated in the Owner-Contractor Agreement.

§ 16.1.3 The following Modifications to the Prime Contract, if any, issued subsequent to the execution of the Owner-Contractor Agreement but prior to the execution of this Agreement:

Modification	Date
--------------	------

§ 16.1.4 Additional Documents, if any, forming part of the Subcontract Documents:

- .1 AIA Document E201™–2007, Digital Data Protocol Exhibit, if completed by the parties, or the following:

- .2 Other documents:
(List here any additional documents that are intended to form part of the Subcontract Documents. Requests for proposal and the Subcontractor's bid or proposal should be listed here only if intended to be made part of the Subcontract Documents.)

This Agreement entered into as of the day and year first written above.

NATIONAL CONSTRUCTION DISPUTE RESOLUTION COMMITTEE

Representatives of the more than 30 organizations listed below constitute the National Construction Dispute Resolution Committee (NCDRC). This Committee serves as an advisory body to the American Arbitration Association on mediation and arbitration procedures.

American Association of Airport Executives
American Bar Association - Construction Forum
American Bar Association - Construction Litigation Committee
American Bar Association - Public Contract Law Section
American College of Construction Lawyers
American Consulting Engineers Council
American Institute of Architects
American Public Works Association
American Road and Transportation Builders Association
American Society of Civil Engineers
American Subcontractors Association
Associated Builders & Contractors, Inc.
Associated General Contractors of America
American Specialty Contractors, Inc.
Buildings Future Council
Construction Specifications Institute
Construction Management Association of America
Design Build Institute of America
Engineers Joint Contract Documents Committee
National Association of Home Builders
National Association of Minority Contractors
National Society of Professional Engineers
National Utility Contractors Association
Victor O. Schinnerer
Women Construction Owners & Executives, USA

IMPORTANT NOTICE

These rules and any amendment of them shall apply in the form in effect at the time the administrative filing requirements are met for a demand for arbitration or submission agreement

received by the AAA. To insure that you have the most current information, see our Web site at www.adr.org.

INTRODUCTION

Each year, many thousands of construction transactions take place. Occasionally, disagreements develop over these transactions. Many of these disputes are resolved by arbitration, the voluntary submission of a dispute to a disinterested person or persons for final and binding determination. Arbitration has proven to be an effective way to resolve disputes privately, promptly, and economically.

The American Arbitration Association (AAA) is a public-service, not-for-profit organization offering a broad range of dispute resolution services to business executives, attorneys, individuals, trade associations, unions, management, consumers, families, communities, and all levels of government. Services are available through AAA headquarters in New York City and through offices located in major cities throughout the United States and Europe. Hearings may be held at locations convenient for the parties and are not limited to cities with AAA offices. In addition, the AAA serves as a center for education and training, issues specialized publications, and conducts research on all forms of out-of-court dispute settlement.

Mediation

Because of the increasing popularity of mediation, especially as a prelude to arbitration, the Association has combined its mediation procedures and arbitration rules into a single brochure.

By agreement, the parties may submit their dispute to mediation before arbitration under the mediation procedures in this brochure. Mediation involves the services of one or more individuals, to assist parties in settling a controversy or claim by direct negotiations between or among themselves. The mediator participates impartially in the negotiations, guiding and consulting the various parties involved. The result of the mediation should be an agreement that the parties find acceptable. The mediator cannot impose a settlement, but can only guide the parties toward achieving their own settlement.

The AAA will administer the mediation process to achieve orderly, economical, and expeditious mediation, utilizing to the greatest possible extent the competence and acceptability of the mediators on the AAA's Construction Mediation Panel. Depending on the expertise needed for a given dispute, the parties can obtain the services of one or more individuals who are willing to serve as mediators and who are trained by the AAA in the necessary mediation skills. In identifying those persons most qualified to mediate, the AAA is assisted by the NCDRC.

The AAA itself does not act as mediator. Its function is to administer the mediation process in accordance with the agreement of the parties, to teach mediation skills to members of the construction industry, and to maintain the National Roster from which topflight mediators can be chosen.

There is no additional administrative fee where parties to a pending arbitration attempt to mediate their dispute under the AAA's auspices. Procedures for mediation cases are described in Sections M-1 through M-17.

Arbitration

Regular Track Procedures:

The rules contain Regular Track Procedures which are applied to the administration of all arbitration

cases, unless they conflict with any portion of the Fast Track Procedures or the Procedures for Large, Complex Construction Disputes whenever these apply. In the event of a conflict, either the Fast Track procedures or the Large, Complex Construction Disputes procedures apply.

The highlights of the Regular Track Procedures are:

- party input into the AAA's preparation of lists of proposed arbitrators;
- express arbitrator authority to control the discovery process;
- broad arbitrator authority to control the hearing;
- a concise written breakdown of the award and, if requested in writing by all parties prior to the appointment of the arbitrator or at the discretion of the arbitrator, a written explanation of the award;
- arbitrator compensation, with the AAA to provide the arbitrator's compensation policy with the biographical information sent to the parties;
- a demand form and an answer form, both of which seek more information from the parties to assist the AAA in better serving the parties.

Fast Track Procedures:

The Fast Track Procedures were designed for cases involving claims of no more than \$75,000. The highlights of this system are:

- a 60-day "time standard" for case completion;
- establishment of a special pool of arbitrators who are pre-qualified to serve on an expedited basis;
- an expedited arbitrator appointment process, with party input;
- presumption that cases involving \$10,000 or less will be decided on a documents only basis;
- requirement of a hearing within 30 calendar days of the arbitrator's appointment;
- a single day of hearing in most cases;
- an award in no more than 14 calendar days after completion of the hearing.

Procedures for Large, Complex Construction Disputes:

Unless the parties agree otherwise, the Procedures for Large, Complex Construction Disputes, which appear in this pamphlet, will be applied to all cases administered by the AAA under the Construction Arbitration Rules in which the disclosed claim or counterclaim of any party is at least \$500,000 exclusive of claimed interest, arbitration fees and costs.

The key features of these procedures include:

- mandatory use of the procedures in cases involving claims of \$500,000 or more;
- a highly qualified, trained Panel of Neutrals, compensated at their customary rates;
- a mandatory preliminary hearing with the arbitrators, which may be conducted by telephone;
- broad arbitrator authority to order and control discovery, including depositions;
- presumption that hearings will proceed on a consecutive or block basis.

The National Roster

The AAA has established and maintains as members of its National Roster individuals competent to hear and decide disputes administered under the Construction Industry Arbitration Rules. The AAA considers for appointment to the construction industry roster persons recommended by Regional Panel Advisory Committees as qualified to serve by virtue of their experience in the construction field. The majority of neutrals are actively engaged in the construction industry. Attorney neutrals generally devote at least half of their practice to construction matters. Neutrals serving under these rules must also attend periodic training.

The services of the AAA are generally concluded with the transmittal of the award. Although there is voluntary compliance with the majority of awards, judgment on the award can be entered in a court

having appropriate jurisdiction if necessary.

Administrative Fees

The AAA charges a filing fee based on the amount of claim or counterclaim. This fee information, which is contained with these rules, allows the parties to exercise control over their administrative fees.

The fees cover AAA administrative services; they do not cover arbitrator compensation or expenses, if any, reporting services, hearing room rental or any post-award charges incurred by the parties in enforcing the award.

ADR Clauses

Mediation

If the parties elect to adopt mediation as a part of their contractual dispute settlement procedure, they can insert the following mediation clause into their contract in conjunction with a standard arbitration provision:

If a dispute arises out of or relates to this contract, or the breach thereof, and if the dispute cannot be settled through negotiation, the parties agree first to try in good faith to settle the dispute by mediation administered by the American Arbitration Association under its Construction Industry Mediation Procedures before resorting to arbitration, litigation, or some other dispute resolution procedure.

If the parties choose to use a mediator to resolve an existing dispute, they can enter into the following submission.

The parties hereby submit the following dispute to mediation administered by the American Arbitration Association under its Construction Industry Mediation Procedures. (The clause may also provide for the qualifications of the mediator(s), method of payment, locale of meetings, and any other item of concern to the parties.)

Arbitration

When an agreement to arbitrate is included in a construction contract, it might expedite peaceful settlement without the necessity of going to arbitration at all. Thus, an arbitration clause is a form of insurance against loss of good will. The parties can provide for arbitration of future disputes by inserting the following clause into their contracts.

Any controversy or claim arising out of or relating to this contract, or the breach thereof, shall be settled by arbitration administered by the American Arbitration Association under its Construction Industry Arbitration Rules, and judgment on the award rendered by the arbitrator(s) may be entered in any court having jurisdiction thereof.

Arbitration of existing disputes may be accomplished by use of the following.

We, the undersigned parties, hereby agree to submit to arbitration administered by the American Arbitration Association under its Construction Industry Arbitration Rules the following controversy: (cite briefly). We further agree that the above controversy be submitted to (one)(three) arbitrator(s). We further agree that we will faithfully observe this agreement and the rules, that we will abide by and perform any award rendered by the arbitrator(s), and that a judgment of the court having jurisdiction may be entered on the

award.

For further information about the AAA's Construction Dispute Avoidance and Resolution Services, as well as the full range of other AAA services, contact the nearest AAA office or visit our Web site at www.adr.org.

CONSTRUCTION INDUSTRY MEDIATION PROCEDURES

M-1. Agreement of Parties

Whenever, by stipulation or in their contract, the parties have provided for mediation or conciliation of existing or future disputes under the auspices of the American Arbitration Association (AAA) or under these procedures, the parties and their representatives, unless agreed otherwise in writing, shall be deemed to have made these procedural guidelines, as amended and in effect as of the date of filing of a request for mediation, a part of their agreement and designate the AAA as the administrator of their mediation.

The parties by mutual agreement may vary any part of these procedures including, but not limited to, agreeing to conduct the mediation via telephone or other electronic or technical means.

M-2. Initiation of Mediation

Any party or parties to a dispute may initiate mediation under the AAA's auspices by making a request for mediation to any of the AAA's regional offices or case management centers via telephone, email, regular mail or fax. Requests for mediation may also be filed online via WebFile at www.adr.org.

The party initiating the mediation shall simultaneously notify the other party or parties of the request. The initiating party shall provide the following information to the AAA and the other party or parties as applicable:

- i. A copy of the mediation provision of the parties' contract or the parties' stipulation to mediate.
- ii. The names, regular mail addresses, email addresses, and telephone numbers of all parties to the dispute and representatives, if any, in the mediation.
- iii. A brief statement of the nature of the dispute and the relief requested.
- iv. Any specific qualifications the mediator should possess.

Where there is no preexisting stipulation or contract by which the parties have provided for mediation of existing or future disputes under the auspices of the AAA, a party may request the AAA to invite another party to participate in "mediation by voluntary submission". Upon receipt of such a request, the AAA will contact the other party or parties involved in the dispute and attempt to obtain a submission to mediation.

M-3. Representation

Subject to any applicable law, any party may be represented by persons of the party's choice. The names and addresses of such persons shall be communicated in writing to all parties and to the AAA.

M-4. Appointment of the Mediator

Parties may search the online profiles of the AAA's Panel of Mediators at www.aaamediation.com in an effort to agree on a mediator. If the parties have not agreed to the appointment of a mediator and have not provided any other method of appointment, the mediator shall be appointed in the following manner:

- i. Upon receipt of a request for mediation, the AAA will send to each party a list of mediators from the AAA's Panel of Mediators.

- The parties are encouraged to agree to a mediator from the submitted list and to advise the AAA of their agreement.
- ii. If the parties are unable to agree upon a mediator, each party shall strike unacceptable names from the list, number the remaining names in order of preference, and return the list to the AAA. If a party does not return the list within the time specified, all mediators on the list shall be deemed acceptable. From among the mediators who have been mutually approved by the parties, and in accordance with the designated order of mutual preference, the AAA shall invite a mediator to serve.
 - iii. If the parties fail to agree on any of the mediators listed, or if acceptable mediators are unable to serve, or if for any other reason the appointment cannot be made from the submitted list, the AAA shall have the authority to make the appointment from among other members of the Panel of Mediators without the submission of additional lists.

M-5. Mediator's Impartiality and Duty to Disclose

AAA mediators are required to abide by the Model Standards of Conduct for Mediators in effect at the time a mediator is appointed to a case. Where there is a conflict between the Model Standards and any provision of these Mediation Procedures, these Mediation Procedures shall govern. The Standards require mediators to (i) decline a mediation if the mediator cannot conduct it in an impartial manner, and (ii) disclose as soon as practicable, all actual and potential conflicts of interest that are reasonably known to the mediator and could reasonably be seen as raising a question about the mediator's impartiality.

Prior to accepting an appointment, AAA mediators are required to make a reasonable inquiry to determine whether there are any facts that a reasonable individual would consider likely to create a potential or actual conflict of interest for the mediator. AAA mediators are required to disclose any circumstance likely to create a presumption of bias or prevent a resolution of the parties' dispute within the time-frame desired by the parties. Upon receipt of such disclosures, the AAA shall immediately communicate the disclosures to the parties for their comments.

The parties may, upon receiving disclosure of actual or potential conflicts of interest of the mediator, waive such conflicts and proceed with the mediation. In the event that a party disagrees as to whether the mediator shall serve, or in the event that the mediator's conflict of interest might reasonably be viewed as undermining the integrity of the mediation, the mediator shall be replaced.

M-6. Vacancies

If any mediator shall become unwilling or unable to serve, the AAA will appoint another mediator, unless the parties agree otherwise, in accordance with section M-4.

M-7. Duties and Responsibilities of the Mediator

- i. The mediator shall conduct the mediation based on the principle of party self-determination. Self-determination is the act of coming to a voluntary, uncoerced decision in which each party makes free and informed choices as to process and outcome.
- ii. The mediator is authorized to conduct separate or *ex parte* meetings and other communications with the parties and/or their representatives, before, during, and after any scheduled mediation conference. Such communications may be conducted via telephone, in writing, via email, online, in person or otherwise.
- iii. The parties are encouraged to exchange all documents pertinent to the relief requested. The mediator may request the exchange of memoranda on issues, including the underlying interests and the history of the parties' negotiations. Information that a party wishes to keep confidential may be sent to the mediator, as necessary, in a separate communication with the mediator.
- iv. The mediator does not have the authority to impose a settlement on the parties but will attempt to help them reach a satisfactory resolution of their dispute. Subject to the discretion of the mediator, the mediator may make oral or written recommendations for settlement to a party privately or, if the parties agree, to all parties jointly.
- v. In the event a complete settlement of all or some issues in dispute is not achieved within the scheduled mediation session(s), the mediator may continue to communicate with the parties, for a period of time, in an ongoing effort to facilitate a complete settlement.
- vi. The mediator is not a legal representative of any party and has no fiduciary duty to any party.

M-8. Responsibilities of the Parties

The parties shall ensure that appropriate representatives of each party, having authority to consummate a settlement, attend the mediation conference.

Prior to and during the scheduled mediation conference session(s) the parties and their representatives shall, as appropriate to each party's circumstances, exercise their best efforts to

prepare for and engage in a meaningful and productive mediation.

M-9. Privacy

Mediation sessions and related mediation communications are private proceedings. The parties and their representatives may attend mediation sessions. Other persons may attend only with the permission of the parties and with the consent of the mediator.

M-10. Confidentiality

Subject to applicable law or the parties' agreement, confidential information disclosed to a mediator by the parties or by other participants (witnesses) in the course of the mediation shall not be divulged by the mediator. The mediator shall maintain the confidentiality of all information obtained in the mediation, and all records, reports, or other documents received by a mediator while serving in that capacity shall be confidential.

The mediator shall not be compelled to divulge such records or to testify in regard to the mediation in any adversary proceeding or judicial forum.

The parties shall maintain the confidentiality of the mediation and shall not rely on, or introduce as evidence in any arbitral, judicial, or other proceeding the following, unless agreed to by the parties or required by applicable law:

- i. Views expressed or suggestions made by a party or other participant with respect to a possible settlement of the dispute;
- ii. Admissions made by a party or other participant in the course of the mediation proceedings;
- iii. Proposals made or views expressed by the mediator; or
- iv. The fact that a party had or had not indicated willingness to accept a proposal for settlement made by the mediator.

M-11. No Stenographic Record

There shall be no stenographic record of the mediation process.

M-12. Termination of Mediation

The mediation shall be terminated:

- i. By the execution of a settlement agreement by the parties; or
- ii. By a written or verbal declaration of the mediator to the effect that further efforts at mediation would not contribute to a resolution of the parties' dispute; or
- iii. By a written or verbal declaration of all parties to the effect that the mediation proceedings are terminated; or
- iv. When there has been no communication between the mediator and any party or party's representative for 21 days following the conclusion of the mediation conference.

M-13. Exclusion of Liability

Neither the AAA nor any mediator is a necessary party in judicial proceedings relating to the mediation. Neither the AAA nor any mediator shall be liable to any party for any error, act or omission in connection with any mediation conducted under these procedures.

M-14. Interpretation and Application of Procedures

The mediator shall interpret and apply these procedures insofar as they relate to the mediator's duties and responsibilities. All other procedures shall be interpreted and applied by the AAA.

M-15. Deposits

Unless otherwise directed by the mediator, the AAA will require the parties to deposit in advance of

the mediation conference such sums of money as it, in consultation with the mediator, deems necessary to cover the costs and expenses of the mediation and shall render an accounting to the parties and return any unexpended balance at the conclusion of the mediation.

M-16. Expenses

All expenses of the mediation, including required traveling and other expenses or charges of the mediator, shall be borne equally by the parties unless they agree otherwise. The expenses of participants for either side shall be paid by the party requesting the attendance of such participants.

M-17. Cost of the Mediation

There is no filing fee to initiate a mediation or a fee to request the AAA to invite parties to mediate.

The cost of mediation is based on the hourly mediation rate published on the mediator's AAA profile. This rate covers both mediator compensation and an allocated portion for the AAA's services. There is a four-hour minimum charge for a mediation conference. Expenses referenced in Section M-16 may also apply.

If a matter submitted for mediation is withdrawn or cancelled or results in a settlement after the agreement to mediate is filed but prior to the mediation conference the cost is \$250 plus any mediator time and charges incurred.

The parties will be billed equally for all costs unless they agree otherwise.

If you have questions about mediation costs or services visit our website at www.adr.org or contact your local AAA office.

Conference Room Rental

The costs described above do not include the use of AAA conference rooms. Conference rooms are available on a rental basis. Please contact your local AAA office for availability and rates.

CONSTRUCTION INDUSTRY ARBITRATION RULES

REGULAR TRACK PROCEDURES

R-1. Agreement of Parties

- (a) The parties shall be deemed to have made these rules a part of their arbitration agreement whenever they have provided for arbitration by the American Arbitration Association (hereinafter AAA) under its Construction Industry Arbitration Rules. These rules and any amendment of them shall apply in the form in effect at the time the administrative requirements are met for a demand for arbitration or submission agreement received by the AAA. The parties, by written agreement, may vary the procedures set forth in these rules. After appointment of the arbitrator, such modifications may be made only with the consent of the arbitrator.
- (b) Unless the parties or the AAA determines otherwise, the Fast Track Procedures shall apply in any case in which no disclosed claim or counterclaim exceeds \$75,000, exclusive of interest and arbitration fees and costs. Parties may also agree to use these procedures in larger cases. Unless the parties agree otherwise, these procedures will not apply in cases involving more than two parties. The Fast Track Procedures shall be applied as described in Sections F-1 through F-13 of these rules, in addition to any other portion of these rules that is not in conflict with the Fast Track Procedures.

- (c) Unless the parties agree otherwise, the Procedures for Large, Complex Construction Disputes shall apply to all cases in which the disclosed claim or counterclaim of any party is at least \$500,000, exclusive of claimed interest, arbitration fees and costs. Parties may also agree to use these procedures in cases involving claims or counterclaims under \$500,000, or in nonmonetary cases. The Procedures for Large, Complex Construction Disputes shall be applied as described in Sections L-1 through L-4 of these rules, in addition to any other portion of these rules that is not in conflict with the Procedures for Large, Complex Construction Disputes.
- (d) All other cases shall be administered in accordance with Sections R-1 through R-55 of these rules.

R-2. AAA and Delegation of Duties

When parties agree to arbitrate under these rules, or when they provide for arbitration by the AAA and an arbitration is initiated under these rules, they thereby authorize the AAA to administer the arbitration. The authority and duties of the AAA are prescribed in the agreement of the parties and in these rules, and may be carried out through such of the AAA's representatives as it may direct. The AAA may, in its discretion, assign the administration of an arbitration to any of its offices.

R-3. National Roster of Neutrals

In cooperation with the National Construction Dispute Resolution Committee the AAA shall establish and maintain a National Roster of Construction Arbitrators ("National Roster") and shall appoint arbitrators as provided in these rules. The term "arbitrator" in these rules refers to the arbitration panel, constituted for a particular case, whether composed of one or more arbitrators, or to an individual arbitrator, as the context requires.

R-4. Initiation under an Arbitration Provision in a Contract

- (a) Arbitration under an arbitration provision in a contract shall be initiated in the following manner.
 - (i) The initiating party (the "claimant") shall, within the time period, if any, specified in the contract(s), give to the other party (the "respondent") written notice of its intention to arbitrate (the "demand"), which demand shall contain a statement setting forth the nature of the dispute, the names and addresses of all other parties, the amount involved, if any, the remedy sought, and the hearing locale requested.
 - (ii) The claimant shall file at any office of the AAA two copies of the demand and two copies of the arbitration provisions of the contract, together with the appropriate filing fee as provided in the schedule included with these rules.
 - (iii) The AAA shall confirm notice of such filing to the parties.
- (b) A respondent may file an answering statement in duplicate with the AAA within 15 calendar days after confirmation of notice of filing of the demand is sent by the AAA. The respondent shall, at the time of any such filing, send a copy of the answering statement to the claimant. If a counterclaim is asserted, it shall contain a statement setting forth the nature of the counterclaim, the amount involved, if any, and the remedy sought. If a counterclaim is made, the party making the counterclaim shall forward to the AAA with the answering statement the appropriate fee provided in the schedule included with these rules.
- (c) If no answering statement is filed within the stated time, respondent will be deemed to deny the claim. Failure to file an answering statement shall not operate to delay the arbitration.

- (d) When filing any statement pursuant to this section, the parties are encouraged to provide descriptions of their claims in sufficient detail to make the circumstances of the dispute clear to the arbitrator.

R-5. Initiation under a Submission

Parties to any existing dispute may commence an arbitration under these rules by filing at any office of the AAA two copies of a written submission to arbitrate under these rules, signed by the parties. It shall contain a statement of the matter in dispute, the names and addresses of the parties, any claims and counterclaims, the amount involved, if any, the remedy sought, and the hearing locale requested, together with the appropriate filing fee as provided in the schedule included with these rules. Unless the parties state otherwise in the submission, all claims and counterclaims will be deemed to be denied by the other party.

R-6. Changes of Claim

A party may at any time prior to the close of the hearing increase or decrease the amount of its claim or counterclaim. Any new or different claim or counterclaim, as opposed to an increase or decrease in the amount of a pending claim or counterclaim, shall be made in writing and filed with the AAA, and a copy shall be mailed to the other party, who shall have a period of ten calendar days from the date of such mailing within which to file an answer with the AAA.

After the arbitrator is appointed no new or different claim or counterclaim may be submitted to the arbitrator except with the arbitrator's consent.

R-7. Consolidation or Joinder

If the parties' agreement or the law provides for consolidation or joinder of related arbitrations, all involved parties will endeavor to agree on a process to effectuate the consolidation or joinder.

If they are unable to agree, the Association shall directly appoint a single arbitrator for the limited purpose of deciding whether related arbitrations should be consolidated or joined and, if so, establishing a fair and appropriate process for consolidation or joinder. The AAA may take reasonable administrative action to accomplish the consolidation or joinder as directed by the arbitrator.

R-8. Jurisdiction

- (a) The arbitrator shall have the power to rule on his or her own jurisdiction, including any objections with respect to the existence, scope or validity of the arbitration agreement.
- (b) The arbitrator shall have the power to determine the existence or validity of a contract of which an arbitration clause forms a part. Such an arbitration clause shall be treated as an agreement independent of the other terms of the contract. A decision by the arbitrator that the contract is null and void shall not for that reason alone render invalid the arbitration clause.
- (c) A party must object to the jurisdiction of the arbitrator or to the arbitrability of a claim or counterclaim no later than the filing of the answering statement to the claim or counterclaim that gives rise to the objection. The arbitrator may rule on such objections as a preliminary matter or as part of the final award.

R-9. Mediation

At any stage of the proceedings, the parties may agree to conduct a mediation conference under the

Construction Industry Mediation Procedures in order to facilitate settlement. The mediator shall not be an arbitrator appointed to the case. Where the parties to a pending arbitration agree to mediate under the AAA's rules, no additional administrative fee is required to initiate the mediation.

R-10. Administrative Conference

At the request of any party or upon the AAA's own initiative, the AAA may conduct an administrative conference, in person or by telephone, with the parties and/or their representatives. The conference may address such issues as arbitrator selection, potential mediation of the dispute, potential exchange of information, a timetable for hearings and any other administrative matters.

R-11. Fixing of Locale

The parties may mutually agree on the locale where the arbitration is to be held. If any party requests that the hearing be held in a specific locale and the other party files no objection thereto within fifteen calendar days after notice of the request has been sent to it by the AAA, the locale shall be the one requested. If a party objects to the locale requested by the other party, the AAA shall have the power to determine the locale, and its decision shall be final and binding.

R-12. Appointment from National Roster

If the parties have not appointed an arbitrator and have not provided any other method of appointment, the arbitrator shall be appointed in the following manner:

- (a) Immediately after the filing of the submission or the answering statement or the expiration of the time within which the answering statement is to be filed, the AAA shall send simultaneously to each party to the dispute an identical list of 10 (unless the AAA decides that a different number is appropriate) names of persons chosen from the National Roster, unless the AAA decides that a different number is appropriate. The parties are encouraged to agree to an arbitrator from the submitted list and to advise the AAA of their agreement. Absent agreement of the parties, the arbitrator shall not have served as the mediator in the mediation phase of the instant proceeding.
- (b) If the parties are unable to agree upon an arbitrator, each party to the dispute shall have 15 calendar days from the transmittal date in which to strike names objected to, number the remaining names in order of preference, and return the list to the AAA. If a party does not return the list within the time specified, all persons named therein shall be deemed acceptable. From among the persons who have been approved on both lists, and in accordance with the designated order of mutual preference, the AAA shall invite the acceptance of an arbitrator to serve. If the parties fail to agree on any of the persons named, or if acceptable arbitrators are unable to act, or if for any other reason the appointment cannot be made from the submitted lists, the AAA shall have the power to make the appointment from among other members of the National Roster without the submission of additional lists.
- (c) Unless the parties agree otherwise when there are two or more claimants or two or more respondents, the AAA may appoint all the arbitrators.

R-13. Direct Appointment by a Party

- (a) If the agreement of the parties names an arbitrator or specifies a method of appointing an arbitrator, that designation or method shall be followed. The notice of appointment, with the name and address of the arbitrator, shall be filed with the AAA by the appointing party. Upon the request of any appointing party, the AAA shall submit a list of members of the National Roster from which the party may, if it so desires, make the appointment.

- (b) Where the parties have agreed that each party is to name one arbitrator, the arbitrators so named must meet the standards of Section R-18 with respect to impartiality and independence unless the parties have specifically agreed pursuant to Section R-18(a) that the party-appointed arbitrators are to be non-neutral and need not meet those standards.
- (c) If the agreement specifies a period of time within which an arbitrator shall be appointed and any party fails to make the appointment within that period, the AAA shall make the appointment.
- (d) If no period of time is specified in the agreement, the AAA shall notify the party to make the appointment. If within 15 calendar days after such notice has been sent, an arbitrator has not been appointed by a party, the AAA shall make the appointment.

R-14. Appointment of Chairperson by Party-Appointed Arbitrators or Parties

- (a) If, pursuant to Section R-13, either the parties have directly appointed arbitrators, or the arbitrators have been appointed by AAA, and the parties have authorized them to appoint a chairperson within a specified time and no appointment is made within that time or any agreed extension, the AAA may appoint the chairperson.
- (b) If no period of time is specified for appointment of the chairperson and the party-appointed arbitrators or the parties do not make the appointment within 15 calendar days from the date of the appointment of the last party-appointed arbitrator, the AAA may appoint the chairperson.
- (c) If the parties have agreed that their party-appointed arbitrators shall appoint the chairperson from the National Roster, the AAA shall furnish to the party-appointed arbitrators, in the manner provided in Section R-12, a list selected from the National Roster, and the appointment of the chairperson shall be made as provided in that Section.

R-15. Nationality of Arbitrator in International Arbitration

Where the parties are nationals of different countries, the AAA, at the request of any party or on its own initiative, may appoint as arbitrator a national of a country other than that of any of the parties. The request must be made before the time set for the appointment of the arbitrator as agreed by the parties or set by these rules.

R-16. Number of Arbitrators

If the arbitration agreement does not specify the number of arbitrators, the dispute shall be heard and determined by one arbitrator, unless the AAA, in its discretion, directs that three arbitrators be appointed. A party may request three arbitrators in the demand or answer, which request the AAA will consider in exercising its discretion regarding the number of arbitrators appointed to the dispute.

R-17. Disclosure

- (a) Any person appointed or to be appointed as an arbitrator shall disclose to the AAA any circumstance likely to give rise to justifiable doubt as to the arbitrator's impartiality or independence, including any bias or any financial or personal interest in the result of the arbitration or any past or present relationship with the parties or their representatives. Such obligation shall remain in effect throughout the arbitration.
- (b) Upon receipt of such information from the arbitrator or another source, the AAA shall communicate the information to the parties and, if it deems it appropriate to do so, to the arbitrator and others.

- (c) In order to encourage disclosure by arbitrators, disclosure of information pursuant to this Section R-17 is not to be construed as an indication that the arbitrator considers that the disclosed circumstances is likely to affect impartiality or independence.

R-18. Disqualification of Arbitrator

- (a) Any arbitrator shall be impartial and independent and shall perform his or her duties with diligence and in good faith, and shall be subject to disqualification for
 - (i) partiality or lack of independence,
 - (ii) inability or refusal to perform his or her duties with diligence and in good faith, and
 - (iii) any grounds for disqualification provided by applicable law. The parties may agree in writing, however, that arbitrators directly appointed by a party pursuant to Section R-13 shall be non-neutral, in which case such arbitrators need not be impartial or independent and shall not be subject to disqualification for partiality or lack of independence.
- (b) Upon objection of a party to the continued service of an arbitrator, or on its own initiative, the AAA shall determine whether the arbitrator should be disqualified under the grounds set out above, and shall inform the parties of its decision, which decision shall be conclusive.

R-19. Communication with Arbitrator

- (a) No party and no one acting on behalf of any party shall communicate ex parte with an arbitrator or a candidate for arbitrator concerning the arbitration, except that a party, or someone acting on behalf of a party, may communicate ex parte with a candidate for direct appointment pursuant to Section R-13 in order to advise the candidate of the general nature of the controversy and of the anticipated proceedings and to discuss the candidate's qualifications, availability or independence in relation to the parties or to discuss the suitability of the candidates for selection as a third arbitrator where the parties or party-designated arbitrators are to participate in that selection.
- (b) Section R-19(a) does not apply to arbitrators directly appointed by the parties who, pursuant to Section R-18(a), the parties have agreed in writing are non-neutral. Where the parties have so agreed under Section R-18(a), the AAA shall as an administrative practice suggest to the parties that they agree further that Section R-19(a) should nonetheless apply prospectively.

R-20. Vacancies

- (a) If for any reason an arbitrator is unable to perform the duties of the office, the AAA may, on proof satisfactory to it, declare the office vacant. Vacancies shall be filled in accordance with the applicable provisions of these rules.
- (b) In the event of a vacancy in a panel of neutral arbitrators after the hearings have commenced, the remaining arbitrator or arbitrators may continue with the hearing and determination of the controversy, unless the parties agree otherwise.
- (c) In the event of the appointment of a substitute arbitrator, the panel of arbitrators shall determine in its sole discretion whether it is necessary to repeat all or part of any prior hearings.

R-21. Preliminary Hearing

- (a) At the request of any party or at the discretion of the arbitrator or the AAA, the arbitrator may schedule as soon as practicable a preliminary hearing with the parties and/or their

representatives. The preliminary hearing may be conducted by telephone at the arbitrator's discretion.

- (b) During the preliminary hearing, the parties and the arbitrator should discuss the future conduct of the case, including clarification of the issues and claims, a schedule for the hearings and any other preliminary matters.

R-22. Exchange of Information

- (a) At the request of any party or at the discretion of the arbitrator, consistent with the expedited nature of arbitration, the arbitrator may direct
 - (i) the production of documents and other information, and
 - (ii) the identification of any witnesses to be called.
- (b) At least five business days prior to the hearing, the parties shall exchange copies of all exhibits they intend to submit at the hearing.
- (c) The arbitrator is authorized to resolve any disputes concerning the exchange of information.
- (d) There shall be no other discovery, except as indicated herein or as ordered by the arbitrator in extraordinary cases when the demands of justice require it.

R-23. Date, Time, and Place of Hearing

The arbitrator shall set the date, time, and place for each hearing and/or conference. The parties shall respond to requests for hearing dates in a timely manner, be cooperative in scheduling the earliest practicable date, and adhere to the established hearing schedule. The AAA shall send a notice of hearing to the parties at least ten calendar days in advance of the hearing date, unless otherwise agreed by the parties.

R-24. Attendance at Hearings

The arbitrator and the AAA shall maintain the privacy of the hearings unless the law provides to the contrary. Any person having a direct interest in the arbitration is entitled to attend hearings. The arbitrator shall otherwise have the power to require the exclusion of any witness, other than a party or other essential person, during the testimony of any other witness. It shall be discretionary with the arbitrator to determine the propriety of the attendance of any person other than a party and its representative.

R-25. Representation

Any party may be represented by counsel or other authorized representative. A party intending to be so represented shall notify the other party and the AAA of the name and address of the representative at least three calendar days prior to the date set for the hearing at which that person is first to appear. When such a representative initiates an arbitration or responds for a party, notice is deemed to have been given.

R-26. Oaths

Before proceeding with the first hearing, each arbitrator may take an oath of office and, if required by law, shall do so. The arbitrator may require witnesses to testify under oath administered by any duly qualified person and, if it is required by law or requested by any party, shall do so.

R-27. Stenographic Record

Any party desiring a stenographic record shall make arrangements directly with a stenographer and shall notify the other parties of these arrangements at least three days in advance of the hearing. The requesting party or parties shall pay the cost of the record. If the transcript is agreed by the parties, or determined by the arbitrator to be the official record of the proceeding, it must be provided to the arbitrator and made available to the other parties for inspection, at a date, time, and place determined by the arbitrator.

R-28. Interpreters

Any party wishing an interpreter shall make all arrangements directly with the interpreter and shall assume the costs of the service.

R-29. Postponements

The arbitrator for good cause shown may postpone any hearing upon agreement of the parties, upon request of a party, or upon the arbitrator's own initiative.

R-30. Arbitration in the Absence of a Party or Representative

Unless the law provides to the contrary, the arbitration may proceed in the absence of any party or representative who, after due notice, fails to be present or fails to obtain a postponement. An award shall not be made solely on the default of a party. The arbitrator shall require the party who is present to submit such evidence as the arbitrator may require for the making of an award.

R-31. Conduct of Proceedings

- (a) The claimant shall present evidence to support its claim. The respondent shall then present evidence supporting its defense. Witnesses for each party shall also submit to questions from the arbitrator and the adverse party. The arbitrator has the discretion to vary this procedure, provided that the parties are treated with equality and that each party has the right to be heard and is given a fair opportunity to present its case.
- (b) The arbitrator, exercising his or her discretion, shall conduct the proceedings with a view to expediting the resolution of the dispute and may direct the order of proof, bifurcate proceedings, and direct the parties to focus their presentations on issues the decision of which could dispose of all or part of the case. The arbitrator shall entertain motions, including motions that dispose of all or part of a claim, or that may expedite the proceedings, and may also make preliminary rulings and enter interlocutory orders.
- (c) The parties may agree to waive oral hearings in any case.

R-32. Evidence

- (a) The parties may offer such evidence as is relevant and material to the dispute and shall produce such evidence as the arbitrator may deem necessary to an understanding and determination of the dispute. Conformity to legal rules of evidence shall not be necessary.
- (b) The arbitrator shall determine the admissibility, relevance, and materiality of the evidence offered. The arbitrator may request offers of proof and may reject evidence deemed by the arbitrator to be cumulative, unreliable, unnecessary, or of slight value compared to the time and expense involved. All evidence shall be taken in the presence of all of the arbitrators and all of the parties, except where: 1) any of the parties is absent, in default, or has waived the right to be

present, or 2) the parties and the arbitrators agree otherwise.

- (c) The arbitrator shall take into account applicable principles of legal privilege, such as those involving the confidentiality of communications between a lawyer and client.
- (d) An arbitrator or other person authorized by law to subpoena witnesses or documents may do so upon the request of any party or independently.

R-33. Evidence by Affidavit and Post-hearing Filing of Documents or Other Evidence

- (a) The arbitrator may receive and consider the evidence of witnesses by declaration or affidavit, but shall give it only such weight as the arbitrator deems it entitled to after consideration of any objection made to its admission.
- (b) If the parties agree or the arbitrator directs that documents or other evidence be submitted to the arbitrator after the hearing, the documents or other evidence, unless otherwise agreed by the parties and the arbitrator, shall be filed with the AAA for transmission to the arbitrator. All parties shall be afforded an opportunity to examine and respond to such documents or other evidence.

R-34. Inspection or Investigation

An arbitrator finding it necessary to make an inspection or investigation in connection with the arbitration shall direct the AAA to so advise the parties. The arbitrator shall set the date and time and the AAA shall notify the parties. Any party who so desires may be present at such an inspection or investigation. In the event that one or all parties are not present at the inspection or investigation, the arbitrator shall make an oral or written report to the parties and afford them an opportunity to comment.

R-35. Interim Measures

- (a) The arbitrator may take whatever interim measures he or she deems necessary, including injunctive relief and measures for the protection or conservation of property and disposition of perishable goods.
- (b) Such interim measures may be taken in the form of an interim award, and the arbitrator may require security for the costs of such measures.
- (c) A request for interim measures addressed by a party to a judicial authority shall not be deemed incompatible with the agreement to arbitrate or a waiver of the right to arbitrate.

R-36. Closing of Hearing

When satisfied that the presentation of the parties is complete, the arbitrator shall declare the hearing closed.

If documents or responses are to be filed as provided in Section R-33, or if briefs are to be filed, the hearing shall be declared closed as of the final date set by the arbitrator for the receipt of documents, responses, or briefs. The time limit within which the arbitrator is required to make the award shall commence to run, in the absence of other agreements by the parties and the arbitrator, upon the closing of the hearing.

R-37. Reopening of Hearing

The hearing may be reopened on the arbitrator's initiative, or by direction of the arbitrator upon application of a party, at any time before the award is made. If reopening the hearing would prevent the making of the award within the specific time agreed to by the parties in the arbitration agreement, the matter may not be reopened unless the parties agree to an extension of time. When no specific date is fixed by agreement of the parties, the arbitrator shall have 30 calendar days from the closing of the reopened hearing within which to make an award.

R-38. Waiver of Rules

Any party who proceeds with the arbitration after knowledge that any provision or requirement of these rules has not been complied with and who fails to state an objection in writing shall be deemed to have waived the right to object.

R-39. Extensions of Time

The parties may modify any period of time by mutual agreement. The AAA or the arbitrator may for good cause extend any period of time established by these rules, except the time for making the award. The AAA shall notify the parties of any extension.

R-40. Serving of Notice

- (a) Any papers, notices, or process necessary or proper for the initiation or continuation of an arbitration under these rules; for any court action in connection therewith, or for the entry of judgment on any award made under these rules, may be served on a party by mail addressed to the party or its representative at the last known address or by personal service, in or outside the state where the arbitration is to be held, provided that reasonable opportunity to be heard with regard thereto has been granted to the party.
- (b) The AAA, the arbitrator and the parties may also use overnight delivery or electronic facsimile transmission (fax) to give the notices required by these rules. Where all parties and the arbitrator agree, notices may be transmitted by electronic mail (email), or other methods of communication.
- (c) Unless otherwise instructed by the AAA or by the arbitrator, any documents submitted by any party to the AAA or to the arbitrator shall simultaneously be provided to the other party or parties to the arbitration.

R-41. Majority Decision

When the panel consists of more than one arbitrator, unless required by law or by the arbitration agreement, a majority of the arbitrators must make all decisions.

R-42. Time of Award

The award shall be made promptly by the arbitrator and, unless otherwise agreed by the parties or specified by law, no later than 30 calendar days from the date of closing the hearing, or, if oral hearings have been waived, from the date of the AAA's transmittal of the final statements and proofs to the arbitrator.

R-43. Form of Award

- (a) Any award shall be in writing and signed by a majority of the arbitrators. It shall be executed in the manner required by law.

- (b) The arbitrator shall provide a concise, written breakdown of the award. If requested in writing by all parties prior to the appointment of the arbitrator, or if the arbitrator believes it is appropriate to do so, the arbitrator shall provide a written explanation of the award.

R-44. Scope of Award

- (a) The arbitrator may grant any remedy or relief that the arbitrator deems just and equitable and within the scope of the agreement of the parties, including, but not limited to, equitable relief and specific performance of a contract.
- (b) In addition to the final award, the arbitrator may make other decisions, including interim, interlocutory, or partial rulings, orders, and awards. In any interim, interlocutory, or partial award, the arbitrator may assess and apportion the fees, expenses, and compensation related to such award as the arbitrator determines is appropriate.
- (c) In the final award, the arbitrator shall assess fees, expenses, and compensation as provided in Sections R-50, R-51, and R-52. The arbitrator may apportion such fees, expenses, and compensation among the parties in such amounts as the arbitrator determines is appropriate.
- (d) The award of the arbitrator may include interest at such rate and from such date as the arbitrator may deem appropriate; and an award of attorneys' fees if all parties have requested such an award or it is authorized by law or their arbitration agreement.

R-45. Award Upon Settlement

If the parties settle their dispute during the course of the arbitration and if the parties so request, the arbitrator may set forth the terms of the settlement in a "consent award." A consent award must include an allocation of arbitration costs, including administrative fees and expenses as well as arbitrator fees and expenses.

R-46. Delivery of Award to Parties

Parties shall accept as notice and delivery of the award the placing of the award or a true copy thereof in the mail addressed to the parties or their representatives at the last known address, personal or electronic service of the award, or the filing of the award in any other manner that is permitted by law.

R-47. Modification of Award

Within twenty calendar days after the transmittal of an award, the arbitrator on his or her initiative, or any party, upon notice to the other parties, may request that the arbitrator correct any clerical, typographical, technical or computational errors in the award. The arbitrator is not empowered to redetermine the merits of any claim already decided.

If the modification request is made by a party, the other parties shall be given ten calendar days to respond to the request. The arbitrator shall dispose of the request within twenty calendar days after transmittal by the AAA to the arbitrator of the request and any response thereto.

If applicable law provides a different procedural time frame, that procedure shall be followed.

R-48. Release of Documents for Judicial Proceedings

The AAA shall, upon the written request of a party, furnish to the party, at its expense, certified copies of any papers in the AAA's possession that may be required in judicial proceedings relating to

the arbitration.

R-49. Applications to Court and Exclusion of Liability

- (a) No judicial proceeding by a party relating to the subject matter of the arbitration shall be deemed a waiver of the party's right to arbitrate.
- (b) Neither the AAA nor any arbitrator in a proceeding under these rules is a necessary or proper party in judicial proceedings relating to the arbitration.
- (c) Parties to these rules shall be deemed to have consented that judgment upon the arbitration award may be entered in any federal or state court having jurisdiction thereof.
- (d) Parties to an arbitration under these rules shall be deemed to have consented that neither the AAA nor any arbitrator shall be liable to any party in any action for damages or injunctive relief for any act or omission in connection with any arbitration under these rules.

R-50. Administrative Fees

As a not-for-profit organization, the AAA shall prescribe filing and other administrative fees and service charges to compensate it for the cost of providing administrative services. The fees in effect when the fee or charge is incurred shall be applicable.

The filing fee shall be advanced by the party or parties, subject to final apportionment by the arbitrator in the award.

The AAA may, in the event of extreme hardship on the part of any party, defer or reduce the administrative fees.

R-51. Expenses

The expenses of witnesses for either side shall be paid by the party producing such witnesses. All other expenses of the arbitration, including required travel and other expenses of the arbitrator, AAA representatives, and any witness and the cost of any proof produced at the direct request of the arbitrator, shall be borne equally by the parties, unless they agree otherwise or unless the arbitrator in the award assesses such expenses or any part thereof against any specified party or parties.

R-52. Neutral Arbitrator's Compensation

Arbitrators shall be compensated a rate consistent with the arbitrator's stated rate of compensation.

If there is disagreement concerning the terms of compensation, an appropriate rate shall be established with the arbitrator by the Association and confirmed to the parties.

Any arrangement for the compensation of a neutral arbitrator shall be made through the AAA and not directly between the parties and the arbitrator.

R-53. Deposits

The AAA may require the parties to deposit in advance of any hearings such sums of money as it deems necessary to cover the expense of the arbitration, including the arbitrator's fee, if any, and shall render an accounting to the parties and return any unexpended balance at the conclusion of the case.

R-54. Interpretation and Application of Rules

The arbitrator shall interpret and apply these rules insofar as they relate to the arbitrator's powers and duties. When there is more than one arbitrator and a difference arises among them concerning the meaning or application of these rules, it shall be decided by a majority vote. If that is not possible, either an arbitrator or a party may refer the question to the AAA for final decision. All other rules shall be interpreted and applied by the AAA.

R-55. Suspension for Nonpayment

If arbitrator compensation or administrative charges have not been paid in full, the AAA may so inform the parties in order that one of them may advance the required payment. If such payments are not made, the arbitrator may order the suspension or termination of the proceedings. If no arbitrator has yet been appointed, the AAA may suspend the proceedings.

FAST TRACK PROCEDURES

F-1. Limitation on Extensions

In the absence of extraordinary circumstances, the AAA or the arbitrator may grant a party no more than one seven-day extension of the time in which to respond to the demand for arbitration or counterclaim as provided in Section R-4.

F-2. Changes of Claim or Counterclaim

A party may at any time prior to the close of the hearing increase or decrease the amount of its claim or counterclaim. Any new or different claim or counterclaim, as opposed to an increase or decrease in the amount of a pending claim or counterclaim, shall be made in writing and filed with the AAA, and a copy shall be mailed to the other party, who shall have a period of five calendar days from the date of such mailing within which to file an answer with the AAA. After the arbitrator is appointed no new or different claim or counterclaim may be submitted to that arbitrator except with the arbitrator's consent.

If an increased claim or counterclaim exceeds \$75,000, the case will be administered under the Regular procedures unless: 1) the party with the claim or counterclaim exceeding \$75,000 agrees to waive any award exceeding that amount; or 2) all parties and the arbitrator agree that the case may continue to be processed under the Fast Track Procedures.

F-3. Serving of Notice

In addition to notice provided by Section R-40, the parties shall also accept notice by telephone. Telephonic notices by the AAA shall subsequently be confirmed in writing to the parties. Should there be a failure to confirm in writing any such oral notice, the proceeding shall nevertheless be valid if notice has, in fact, been given by telephone.

F-4. Appointment and Qualification of Arbitrator

Immediately after the filing of (a) the submission or (b) the answering statement or the expiration of the time within which the answering statement is to be filed, the AAA will simultaneously submit to each party a listing and biographical information from its panel of arbitrators knowledgeable in construction who are available for service in Fast Track cases. The parties are encouraged to agree to an arbitrator from this list, and to advise the Association of their agreement, or any factual objections to any of the listed arbitrators, within seven calendar days of the AAA's transmission of the list. The AAA will appoint the agreed-upon arbitrator, or in the event the parties cannot agree on an arbitrator,

will designate the arbitrator from among those names not stricken for factual objections. Absent agreement of the parties, the arbitrator shall not have served as the mediator in the mediation phase of the instant proceeding.

The parties will be given notice by the AAA of the appointment of the arbitrator, who shall be subject to disqualification for the reasons specified in Section R-18. Within the time period established by the AAA, the parties shall notify the AAA of any objection to the arbitrator appointed. Any objection by a party to the arbitrator shall be for cause and shall be confirmed in writing to the AAA with a copy to the other party or parties.

F-5. Preliminary Telephone Conference

Unless otherwise agreed by the parties and the arbitrator, as promptly as practicable after the appointment of the arbitrator, a preliminary telephone conference shall be held among the parties or their attorneys or representatives, and the arbitrator.

F-6. Exchange of Exhibits

At least two business days prior to the hearing, the parties shall exchange copies of all exhibits they intend to submit at the hearing. The arbitrator is authorized to resolve any disputes concerning the exchange of exhibits.

F-7. Discovery

There shall be no discovery, except as provided in Section F-6 or as ordered by the arbitrator in extraordinary cases when the demands of justice require it.

F-8. Proceedings on Documents

Where no party's claim exceeds \$10,000, exclusive of interest and arbitration costs, and other cases in which the parties agree, the dispute shall be resolved by submission of documents, unless any party requests an oral hearing or conference call, or the arbitrator determines that an oral hearing or conference call is necessary. The arbitrator shall establish a fair and equitable procedure for the submission of documents.

F-9. Date, Time, and Place of Hearing

In cases in which a hearing is to be held, the arbitrator shall set the date, time, and place of the hearing, to be scheduled to take place within 30 calendar days of confirmation of the arbitrator's appointment. The AAA will notify the parties in advance of the hearing date.

F-10. The Hearing

- (a) Generally, the hearing shall not exceed one day. Each party shall have equal opportunity to submit its proofs and complete its case. The arbitrator shall determine the order of the hearing, and may require further submission of documents within two business days after the hearing. For good cause shown, the arbitrator may schedule one additional hearing day within seven business days after the initial day of hearing.
- (b) Generally, there will be no stenographic record. Any party desiring a stenographic record may arrange for one pursuant to the provisions of Section R-27.

F-11. Time of Award

Unless otherwise agreed by the parties, the award shall be rendered not later than fourteen calendar days from the date of the closing of the hearing or, if oral hearings have been waived, from the date of the AAA's transmittal of the final statements and proofs to the arbitrator.

F-12. Time Standards

The arbitration shall be completed by settlement or award within 60 calendar days of confirmation of the arbitrator's appointment, unless all parties and the arbitrator agree otherwise or the arbitrator extends this time in extraordinary cases when the demands of justice require it. The Association will relax these time standards in the event the arbitration is stayed pending mediation.

F-13. Arbitrator's Compensation

Arbitrators will receive compensation at a rate to be suggested by the AAA regional office.

PROCEDURES FOR LARGE, COMPLEX CONSTRUCTION DISPUTES

L-1. Administrative Conference

Prior to the dissemination of a list of potential arbitrators, the AAA shall, unless the parties agree otherwise, conduct an administrative conference with the parties and/or their attorneys or other representatives by conference call. The conference call will take place within 14 days after the commencement of the arbitration. In the event the parties are unable to agree on a mutually acceptable time for the conference, the AAA may contact the parties individually to discuss the issues contemplated herein. Such administrative conference shall be conducted for the following purposes and for such additional purposes as the parties or the AAA may deem appropriate:

- (a) to obtain additional information about the nature and magnitude of the dispute and the anticipated length of hearing and scheduling;
- (b) to discuss the views of the parties about the technical and other qualifications of the arbitrators;
- (c) to obtain conflicts statements from the parties; and
- (d) to consider, with the parties, whether mediation or other non-adjudicative methods of dispute resolution might be appropriate.

L-2. Arbitrators

- (a) Large, Complex Construction Cases shall be heard and determined by either one or three arbitrators, as may be agreed upon by the parties. If the parties are unable to agree upon the number of arbitrators and a claim or counterclaim involved at least \$1,000,000, then three arbitrator(s) shall hear and determine the case. If the parties are unable to agree on the number of arbitrators and each claim and counterclaim is less than \$1,000,000, then one arbitrator shall hear and determine the case.
- (b) The AAA shall appoint arbitrator(s) as agreed by the parties. If they are unable to agree on a method of appointment, the AAA shall appoint arbitrator from the Large, Complex Construction Case Panel, in the manner provided in the Regular Construction Industry Arbitration Rules. Absent agreement of the parties, the arbitrator (s) shall not have served as the mediator in the mediation phase of the instant proceeding.

L-3. Preliminary Hearing

As promptly as practicable after the selection of the arbitrator(s), a preliminary hearing shall be held among the parties and/or their attorneys or other representatives and the arbitrator(s). Unless the parties agree otherwise, the preliminary hearing will be conducted by telephone conference call rather than in person.

At the preliminary hearing the matters to be considered shall include, without limitation:

- (a) service of a detailed statement of claims, damages and defenses, a statement of the issues asserted by each party and positions with respect thereto, and any legal authorities the parties may wish to bring to the attention of the arbitrator(s);
- (b) stipulations to uncontested facts;
- (c) the extent to which discovery shall be conducted;
- (d) exchange and premarking of those documents which each party believes may be offered at the hearing;
- (e) the identification and availability of witnesses, including experts, and such matters with respect to witnesses including their biographies and expected testimony as may be appropriate;
- (f) whether, and the extent to which, any sworn statements and/or depositions may be introduced;
- (g) the extent to which hearings will proceed on consecutive days;
- (h) whether a stenographic or other official record of the proceedings shall be maintained;
- (i) the possibility of utilizing mediation or other non-adjudicative methods of dispute resolution; and
- (j) the procedure for the issuance of subpoenas.

By agreement of the parties and/or order of the arbitrator(s), the pre-hearing activities and the hearing procedures that will govern the arbitration will be memorialized in a Scheduling and Procedure Order.

L-4. Management of Proceedings

- (a) Arbitrator(s) shall take such steps as they may deem necessary or desirable to avoid delay and to achieve a just, speedy and cost-effective resolution of Large, Complex Construction Cases.
- (b) Parties shall cooperate in the exchange of documents, exhibits and information within such party's control if the arbitrator(s) consider such production to be consistent with the goal of achieving a just, speedy and cost effective resolution of a Large, Complex Construction Case.
- (c) The parties may conduct such discovery as may be agreed to by all the parties provided, however, that the arbitrator(s) may place such limitations on the conduct of such discovery as the arbitrator (s) shall deem appropriate. If the parties cannot agree on production of document and other information, the arbitrator(s), consistent with the expedited nature of arbitration, may establish the extent of the discovery.
- (d) At the discretion of the arbitrator(s), upon good cause shown and consistent with the expedited

nature of arbitration, the arbitrator(s) may order depositions of, or the propounding of interrogatories to such persons who may possess information determined by the arbitrator(s) to be necessary to a determination of the matter.

- (e) The parties shall exchange copies of all exhibits they intend to submit at the hearing 10 business days prior to the hearing unless the arbitrator(s) determine otherwise.
- (f) The exchange of information pursuant to this rule, as agreed by the parties and/or directed by the arbitrator(s), shall be included within the Scheduling and Procedure Order.
- (g) The arbitrator is authorized to resolve any disputes concerning the exchange of information.
- (h) Generally hearings will be scheduled on consecutive days or in blocks of consecutive days in order to maximize efficiency and minimize costs.

ADMINISTRATIVE FEES

The administrative fees of the AAA are based on the amount of the claim or counterclaim. Arbitrator compensation is not included in this schedule. Unless the parties agree otherwise, arbitrator compensation and administrative fees are subject to allocation by the arbitrator in the award.

Fees

An initial filing fee is payable in full by a filing party when a claim, counterclaim or additional claim is filed.

A case service fee will be incurred for all cases that proceed to their first hearing. This fee will be payable in advance at the time that the first hearing is scheduled. This fee will be refunded at the conclusion of the case if no hearings have occurred.

However, if the Association is not notified at least 24 hours before the time of the scheduled hearing, the case service fee will remain due and will not be refunded.

These fees will be billed in accordance with the following schedule:

Amount of Claim	Initial Filing Fee	Case Service Fee
Above \$0 to \$10,000	\$750	\$200
Above \$10,000 to \$75,000	\$950	\$300
Above \$75,000 to \$150,000	\$1,800	\$750
Above \$150,000 to \$300,000	\$2,750	\$1,250
Above \$300,000 to \$500,000	\$4,250	\$1,750
Above \$500,000 to \$1,000,000	\$6,000	\$2,500
Above \$1,000,000 to \$5,000,000	\$8,000	\$3,250
Above \$5,000,000 to \$10,000,000	\$10,000	\$4,000
Above \$10,000,000	*	*
Nonmonetary Claims**	\$3,250	\$1,250

Fee Schedule for Claims in Excess of \$10 Million .

The following is the fee schedule for use in disputes involving claims in excess of \$10 million. If you have any questions, please consult your local AAA office or case management center.

Claim Size	Fee	Case Service Fee
\$10 million and above	Base fee of \$ 12,500 plus .01% of the amount of claim above \$ 10 million.	\$6,000
	Filing fees capped at \$65,000	

**This fee is applicable when a claim or counterclaim is not for a monetary amount. Where a monetary claim is not known, parties will be required to state a range of claims or be subject to the highest possible filing fee.

Fees are subject to increase if the amount of a claim or counterclaim is modified after the initial filing date. Fees are subject to decrease if the amount of a claim or counterclaim is modified before the first hearing.

The minimum fees for any case having three or more arbitrators are \$2,750 for the filing fee, plus a \$1,250 case service fee.

Fast Track Procedures are applied in any case where no disclosed claim or counterclaim exceeds \$75,000, exclusive of interest and arbitration costs.

Parties on cases held in abeyance for one year by agreement, will be assessed an annual abeyance fee of \$300. If a party refuses to pay the assessed fee, the other party or parties may pay the entire fee on behalf of all parties, otherwise the matter will be closed.

Refund Schedule

The AAA offers a refund schedule on filing fees. For cases with claims up to \$75,000 a minimum filing fee of \$300 will not be refunded. For all other cases, a minimum fee of \$500.00 will not be refunded. Subject to the minimum fee requirements, refunds will be calculated as follows:

- ' 100% of the filing fee, above the minimum fee, will be refunded if the case is settled or withdrawn with five calendar days of filing.
- ' 50% of the filing fee will be refunded if the case is settled or withdrawn between six and 30 calendar days of filing.
- ' 25% of the filing fee will be refunded if the case is settled or withdrawn between 31 and 60 calendar days of filing.

No refund will be made once an arbitrator has been appointed (this includes one arbitrator on a three arbitrator panel). No refunds will be granted on awarded cases.

Note: The date of receipt of the demand for arbitration with the AAA will be used to calculate refunds of filing fees for both claims and counterclaims.

Hearing Room Rental

The fees described above do not cover the rental of hearing rooms, which are available on a rental basis. Check with the AAA for availability and rates.

SAMPLE

This Agreement has been prepared for use with the Standard General Conditions of the Construction Contract (No. C-700, 2002 Edition) of the Engineers Joint Contract Documents Committee. Their provisions are interrelated, and a change in one may necessitate a change in the other. For guidance on the completion and use of this Agreement, see EJCDC User's Guide to the Owner-Engineer Agreement, No. E-001, 2002 Edition.

8.03 Designated Representatives	9

Engineer's services, and the rates and amounts of Engineer's compensation, shall be adjusted equitably.

D. Owner shall make decisions and carry out its other responsibilities in a timely manner so as not to delay the Engineer's performance of its services.

E. If Engineer fails, through its own fault, to complete the performance required in this Agreement within the time set forth, as duly adjusted, then Owner shall be entitled to the recovery of direct damages resulting from such failure.

ARTICLE 4 - INVOICES AND PAYMENTS

4.01 Invoices

A. *Preparation and Submittal of Invoices.* Engineer shall prepare invoices in accordance with its standard invoicing practices and the terms of Exhibit C. Engineer shall submit its invoices to Owner on a monthly basis. Invoices are due and payable within 30 days of receipt.

4.02 Payments

A. *Application to Interest and Principal.* Payment will be credited first to any interest owed to Engineer and then to principal.

B. *Failure to Pay.* If Owner fails to make any payment due Engineer for services and expenses within 30 days after receipt of Engineer's invoice, then:

1. amounts due Engineer will be increased at the rate of 1.0% per month (or the maximum rate of interest permitted by law, if less) from said thirtieth day; and

2. Engineer may, after giving seven days written notice to Owner, suspend services under this Agreement until Owner has paid in full all amounts due for services, expenses, and other related charges. Owner waives any and all claims against Engineer for any such suspension.

C. *Disputed Invoices.* If Owner contests an invoice, Owner may withhold only that portion so contested, and must pay the undisputed portion.

D. *Legislative Actions.* If after the Effective Date of the Agreement any governmental entity takes a legislative action that imposes taxes, fees, or charges on Engineer's services or compensation under this Agreement, then the Engineer may invoice such new taxes, fees, or charges as a Reimbursable Expense to which a factor of 1.0 shall be applied. Owner shall pay such invoiced new taxes, fees, and charges; such payment shall be in addition to the compensation to which Engineer is entitled under the terms of Exhibit C.

ARTICLE 5 - OPINIONS OF COST

5.01 Opinions of Probable Construction Cost

A. Engineer's opinions of probable Construction Cost are to be made on the basis of Engineer's experience and qualifications and represent Engineer's best judgment as an experienced and qualified professional generally familiar with the construction industry. However, since Engineer has no control over the cost of labor, materials, equipment, or services furnished by others, or over contractors' methods of determining prices, or over competitive bidding or market conditions, Engineer cannot and does not guarantee that proposals, bids, or actual Construction Cost will not vary from opinions of probable Construction Cost prepared by Engineer. If Owner wishes greater assurance as to probable Construction Cost, Owner shall employ an independent cost estimator as provided in Exhibit B.

5.02 Designing to Construction Cost Limit

A. If a Construction Cost limit is established between Owner and Engineer, such Construction Cost limit and a statement of Engineer's rights and responsibilities with respect thereto will be specifically set forth in Exhibit F, "Construction Cost Limit," to this Agreement.

5.03 Opinions of Total Project Costs

A. The services, if any, of Engineer with respect to Total Project Costs shall be limited to assisting the Owner in collating the various cost categories which comprise Total Project Costs. Engineer assumes no responsibility for the accuracy of any opinions of Total Project Costs.

ARTICLE 6 - GENERAL CONSIDERATIONS

6.01 Standards of Performance

A. The standard of care for all professional engineering and related services performed or furnished by Engineer under this Agreement will be the care and skill ordinarily used by members of the subject profession practicing under similar circumstances at the same time and in the same locality. Engineer makes no warranties, express or implied, under this Agreement or otherwise, in connection with Engineer's services.

B. Owner shall not be responsible for discovering deficiencies in the technical accuracy of Engineer's services. Engineer shall correct any such deficiencies in technical accuracy without additional compensation except to the extent such corrective action is directly attributable to deficiencies in Owner-furnished information.

C. Engineer may employ such Consultants as Engineer deems necessary to assist in the performance or furnishing of the services, subject to reasonable, timely, and substantive objections by Owner.

D. Subject to the standard of care set forth in paragraph 6.01.A, Engineer and its Consultants may use or rely upon design elements and information ordinarily or customarily furnished by others, including, but not limited to, specialty contractors, manufacturers, suppliers, and the publishers of technical standards.

E. Engineer and Owner shall comply with applicable Laws and Regulations and Owner-mandated standards that Owner has provided to Engineer in writing. This Agreement is based on these requirements as of its Effective Date. Changes to these requirements after the Effective Date of this Agreement may be the basis for modifications to Owner's responsibilities or to Engineer's scope of services, times of performance, and compensation.

G. Engineer shall not be required to sign any documents, no matter by whom requested, that would result in the Engineer having to certify, guarantee, or warrant the existence of conditions whose existence the Engineer cannot ascertain. Owner agrees not to make resolution of any dispute with the Engineer or payment of any amount due to the Engineer in any way contingent upon the Engineer signing any such documents.

H. The General Conditions for any construction contract documents prepared hereunder are to be the "Standard General Conditions of the Construction Contract" as prepared by the Engineers Joint Contract Documents Committee (No. C-700, 2002 Edition) unless both parties mutually agree to use other General Conditions by specific reference in Exhibit J.

I. Engineer shall not at any time supervise, direct, or have control over Contractor's work, nor shall Engineer have authority over or responsibility for the means, methods, techniques, sequences, or procedures of construction selected or used by Contractor, for security or safety at the Site, for safety precautions and programs incident to the Contractor's work in progress, nor for any failure of Contractor to comply with Laws and Regulations applicable to Contractor's furnishing and performing the Work.

J. Engineer neither guarantees the performance of any contractor nor assumes responsibility for any contractor's failure to furnish and perform the Work in accordance with the Contract Documents.

K. Engineer shall not be responsible for the acts or omissions of any contractor, subcontractor, or supplier, or of any of their agents or employees or of any other persons (except Engineer's own employees and its Consultants) at the Site or otherwise furnishing or performing any Work; or for any decision made on interpretations or clarifications of the Contract Documents given by Owner without consultation and advice of Engineer.

6.02 Design without Construction Phase Services

A. If Engineer's Basic Services under this Agreement do not include Project observation, or review of the Contractor's performance, or any other Construction Phase services, then (1) Engineer's services under this Agreement shall be deemed complete no later than the end of the Bidding or Negotiating Phase; (2) Engineer shall have no design or shop drawing review obligations during construction; (3) Owner assumes all responsibility for the application and interpretation of the Contract Documents, contract administration, construction observation and review, and all other necessary Construction Phase engineering and professional services; and (4) Owner waives any claims against the Engineer that may be connected in any way thereto.

6.03 Use of Documents

A. All Documents are instruments of service in respect to this Project, and Engineer shall retain an ownership and property interest therein (including the copyright and the right of reuse at the discretion of the Engineer) whether or not the Project is completed. Owner shall not rely in any way on any Document unless it is in printed form, signed or sealed by the Engineer or one of its Consultants.

B. A party may rely that data or information set forth on paper (also known as hard copies) that the party receives from the other party by mail, hand delivery, or facsimile, are the items that the other party intended to send. Files in electronic media format of text, data, graphics, or other types that are furnished by one party to the other are furnished only for convenience, not reliance by the receiving party. Any conclusion or information obtained or derived from such electronic files will be at the user's sole risk. If there is a discrepancy between the electronic files and the hard copies, the hard copies govern.

C. Because data stored in electronic media format can deteriorate or be modified inadvertently or otherwise without authorization of the data's creator, the party receiving electronic files agrees that it will perform acceptance tests or procedures within 60 days, after which the receiving party shall be deemed to have accepted the data thus transferred. Any transmittal errors detected within the 60-day acceptance period will be corrected by the party delivering the electronic files.

D. When transferring documents in electronic media format, the transferring party makes no representations as to long term compatibility, usability, or readability of such documents resulting from the use of software application packages, operating systems, or computer hardware differing from those used by the documents' creator.

E. Owner may make and retain copies of Documents for information and reference in connection with use on the Project by Owner. Engineer grants Owner a license to use the Documents on the Project, extensions of the Project, and other projects of Owner, subject to the following limitations: (1) Owner acknowledges that such Documents are not intended or represented to be suitable for use on the Project unless completed by Engineer, or for use or reuse by Owner or others on extensions of the Project or on any other project without written verification or adaptation by Engineer; (2) any such use or reuse, or any modification of the Documents, without written verification, completion, or adaptation by Engineer, as appropriate

for the specific purpose intended, will be at Owner's sole risk and without liability or legal exposure to Engineer or to Engineer's Consultants; (3) Owner shall indemnify and hold harmless Engineer and Engineer's Consultants from all claims, damages, losses, and expenses, including attorneys' fees, arising out of or resulting from any use, reuse, or modification without written verification, completion, or adaptation by Engineer; (4) such limited license to Owner shall not create any rights in third parties.

F. If Engineer at Owner's request verifies or adapts the Documents for extensions of the Project or for any other project, then Owner shall compensate Engineer at rates or in an amount to be agreed upon by Owner and Engineer.

6.04 Insurance

A. Engineer shall procure and maintain insurance as set forth in Exhibit G, "Insurance." Engineer shall cause Owner to be listed as an additional insured on any applicable general liability insurance policy carried by Engineer.

B. Owner shall procure and maintain insurance as set forth in Exhibit G, "Insurance." Owner shall cause Engineer and Engineer's Consultants to be listed as additional insureds on any general liability or property insurance policies carried by Owner which are applicable to the Project.

C. Owner shall require Contractor to purchase and maintain general liability and other insurance in accordance with the requirements of paragraph 5.04 of the "Standard General Conditions of the Construction Contract," (No. C-700, 2002 Edition) as prepared by the Engineers Joint Contract Documents Committee and to cause Engineer and Engineer's Consultants to be listed as additional insureds with respect to such liability and other insurance purchased and maintained by Contractor for the Project.

D. Owner and Engineer shall each deliver to the other certificates of insurance evidencing the coverages indicated in Exhibit G. Such certificates shall be furnished prior to commencement of Engineer's services and at renewals thereafter during the life of the Agreement.

E. All policies of property insurance relating to the Project shall contain provisions to the effect that Engineer's and Engineer's Consultants' interests are covered and that in the event of payment of any loss or damage the insurers will have no rights of recovery against Engineer or its Consultants, or any insureds or additional insureds thereunder.

F. At any time, Owner may request that Engineer or its Consultants, at Owner's sole expense, provide additional insurance coverage, increased limits, or revised deductibles that are more protective than those specified in Exhibit G. If so requested by Owner, and if commercially available, Engineer shall obtain and shall require its Consultants to obtain such additional insurance coverage, different limits, or revised deductibles for such periods of time as requested by Owner, and Exhibit G will be supplemented to incorporate these requirements.

6.05 Suspension and Termination

A. Suspension.

By Owner: Owner may suspend the Project upon seven days written notice to Engineer.

By Engineer: If Engineer's services are substantially delayed through no fault of Engineer, Engineer may, after giving seven days written notice to Owner, suspend services under this Agreement.

B. *Termination.* The obligation to provide further services under this Agreement may be terminated:

1. For cause,

a. By either party upon 30 days written notice in the event of substantial failure by the other party to perform in accordance with the terms hereof through no fault of the terminating party.

b. By Engineer:

1) upon seven days written notice if Owner demands that Engineer furnish or perform services contrary to Engineer's responsibilities as a licensed professional; or

2) upon seven days written notice if the Engineer's services for the Project are delayed or suspended for more than 90 days for reasons beyond Engineer's control.

3) Engineer shall have no liability to Owner on account of such termination.

c. Notwithstanding the foregoing, this Agreement will not terminate under paragraph

6.05.B.1.a if the party receiving such notice begins, within seven days of receipt of such notice, to correct its substantial failure to perform and proceeds diligently to cure such failure within no more than 30 days of receipt thereof; provided, however, that if and to the extent such substantial failure cannot be reasonably cured within such 30 day period, and if such party has diligently attempted to cure the same and thereafter continues diligently to cure the same, then the cure period provided for herein shall extend up to, but in no case more than, 60 days after the date of receipt of the notice.

2) For convenience,

a. By Owner effective upon Engineer's receipt of notice from Owner.

C. *Effective Date of Termination.* The terminating party under paragraph 6.05.B may set the effective date of termination at a time up to 30 days later than otherwise provided to allow Engineer to demobilize personnel and equipment from the Site, to complete tasks whose value would otherwise be lost, to prepare notes as to the status of completed and uncompleted tasks, and to assemble Project materials in orderly files.

D. Payments Upon Termination.

1. In the event of any termination under paragraph 6.05, Engineer will be entitled to invoice Owner and to receive full payment for all services performed or furnished and all Reimbursable Expenses incurred through the effective date of termination. Upon making such payment, Owner shall have the limited right to the use of Documents, at Owner's sole risk, subject to the provisions of paragraph 6.03.E.

2. In the event of termination by Owner for convenience or by Engineer for cause, Engineer shall be entitled, in addition to invoicing for those items identified in paragraph 6.05.D.1, to invoice Owner and to payment of a reasonable amount for services and expenses directly attributable to termination, both before and after the effective date of termination, such as reassignment of personnel, costs of terminating contracts with Engineer's Consultants, and other related close-out costs, using methods and rates for Additional Services as set forth in Exhibit C.

6.06 Controlling Law

A. This Agreement is to be governed by the law of the state in which the Project is located.

6.07 Successors, Assigns, and Beneficiaries

A. Owner and Engineer each is hereby bound and the partners, successors, executors, administrators and legal representatives of Owner and Engineer (and to the extent permitted by paragraph 6.07.B the assigns of Owner and Engineer) are hereby bound to the other party to this Agreement and to the partners, successors, executors, administrators and legal representatives (and said assigns) of such other party, in respect of all covenants, agreements, and obligations of this Agreement.

B. Neither Owner nor Engineer may assign, sublet, or transfer any rights under or interest (including, but without limitation, moneys that are due or may become due) in this Agreement without the written consent of the other, except to the extent that any assignment, subletting, or transfer is mandated or restricted by law. Unless specifically stated to the contrary in any written consent to an assignment, no assignment will release or discharge the assignor from any duty or responsibility under this Agreement.

C. Unless expressly provided otherwise in this Agreement:

1. Nothing in this Agreement shall be construed to create, impose, or give rise to any duty owed by Owner or Engineer to any Contractor, Contractor's subcontractor, supplier, other individual or entity, or to any surety for or employee of any of them.

2. All duties and responsibilities undertaken pursuant to this Agreement will be for the sole and exclusive benefit of Owner and Engineer and not for the benefit of any other party.

3. Owner agrees that the substance of the provisions of this paragraph 6.07.C shall appear in the Contract Documents.

6.08 Dispute Resolution

A. Owner and Engineer agree to negotiate all disputes between them in good faith for a period of 30 days from the date of notice prior to invoking the procedures of Exhibit H or

other provisions of this Agreement, or exercising their rights under law.

B. If the parties fail to resolve a dispute through negotiation under paragraph 6.08.A, then either or both may invoke the procedures of Exhibit H. If Exhibit H is not included, or if no dispute resolution method is specified in Exhibit H, then the parties may exercise their rights under law.

6.09 Environmental Condition of Site

A. Owner has disclosed to Engineer in writing the existence of all known and suspected Asbestos, PCBs, Petroleum, Hazardous Waste, Radioactive Material, hazardous substances, and other Constituents of Concern located at or near the Site, including type, quantity, and location.

B. Owner represents to Engineer that to the best of its knowledge no Constituents of Concern, other than those disclosed in writing to Engineer, exist at the Site.

C. If Engineer encounters an undisclosed Constituent of Concern, then Engineer shall notify (1) Owner and (2) appropriate governmental officials if Engineer reasonably concludes that doing so is required by applicable Laws or Regulations.

D. It is acknowledged by both parties that Engineer's scope of services does not include any services related to Constituents of Concern. If Engineer or any other party encounters an undisclosed Constituent of Concern, or if investigative or remedial action, or other professional services, are necessary with respect to disclosed or undisclosed Constituents of Concern, then Engineer may, at its option and without liability for consequential or any other damages, suspend performance of services on the portion of the Project affected thereby until Owner: (1) retains appropriate specialist consultant(s) or contractor(s) to identify and, as appropriate, abate, remediate, or remove the Constituents of Concern; and (2) warrants that the Site is in full compliance with applicable Laws and Regulations.

E. If the presence at the Site of undisclosed Constituents of Concern adversely affects the performance of Engineer's services under this Agreement, then the Engineer shall have the option of (1) accepting an equitable adjustment in its compensation or in the time of completion, or both; or (2) terminating this Agreement for cause on 30 days notice.

F. Owner acknowledges that Engineer is performing professional services for Owner and that Engineer is not and

shall not be required to become an "arranger," "operator," "generator," or "transporter" of hazardous substances, as defined in the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), as amended, which are or may be encountered at or near the Site in connection with Engineer's activities under this Agreement.

6.10 Indemnification and Mutual Waiver

A. *Indemnification by Engineer.* To the fullest extent permitted by law, Engineer shall indemnify and hold harmless Owner, and Owner's officers, directors, partners, agents, consultants, and employees from and against any and all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals, and all court, arbitration, or other dispute resolution costs) arising out of or relating to the Project, provided that any such claim, cost, loss, or damage is attributable to bodily injury, sickness, disease, or death, or to injury to or destruction of tangible property (other than the Work itself), including the loss of use resulting therefrom, but only to the extent caused by any negligent act or omission of Engineer or Engineer's officers, directors, partners, employees, or Consultants. The indemnification provision of the preceding sentence is subject to and limited by the provisions agreed to by Owner and Engineer in Exhibit I, "Allocation of Risks," if any.

B. *Indemnification by Owner.* To the fullest extent permitted by law, Owner shall indemnify and hold harmless Engineer, Engineer's officers, directors, partners, agents, employees, and Consultants from and against any and all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals, and all court, arbitration, or other dispute resolution costs) arising out of or relating to the Project, provided that any such claim, cost, loss, or damage is attributable to bodily injury, sickness, disease, or death or to injury to or destruction of tangible property (other than the Work itself), including the loss of use resulting therefrom, but only to the extent caused by any negligent act or omission of Owner or Owner's officers, directors, partners, agents, consultants, or employees, or others retained by or under contract to the Owner with respect to this Agreement or to the Project.

C. *Environmental Indemnification.* In addition to the indemnity provided under paragraph 6.10.B of this Agreement, and to the fullest extent permitted by law, Owner shall indemnify and hold harmless Engineer and its officers, directors, partners, agents, employees, and Consultants from and against any

and all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys and other professionals, and all court, arbitration, or other dispute resolution costs) caused by, arising out of, relating to, or resulting from a Constituent of Concern at, on, or under the Site, provided that (i) any such claim, cost, loss, or damage is attributable to bodily injury, sickness, disease, or death, or to injury to or destruction of tangible property (other than the Work itself), including the loss of use resulting therefrom, and (ii) nothing in this paragraph shall obligate Owner to indemnify any individual or entity from and against the consequences of that individual's or entity's own negligence or willful misconduct.

D. *Percentage Share of Negligence.* To the fullest extent permitted by law, a party's total liability to the other party and anyone claiming by, through, or under the other party for any cost, loss, or damages caused in part by the negligence of the party and in part by the negligence of the other party or any other negligent entity or individual, shall not exceed the percentage share that the party's negligence bears to the total negligence of Owner, Engineer, and all other negligent entities and individuals.

E. *Mutual Waiver.* To the fullest extent permitted by law, Owner and Engineer waive against each other, and the other's employees, officers, directors, agents, insurers, partners, and consultants, any and all claims for or entitlement to special, incidental, indirect, or consequential damages arising out of, resulting from, or in any way related to the Project.

6.11 Miscellaneous Provisions

A. *Notices.* Any notice required under this Agreement will be in writing, addressed to the appropriate party at its address on the signature page and given personally, by facsimile, by registered or certified mail postage prepaid, or by a commercial courier service. All notices shall be effective upon the date of receipt.

B. *Survival.* All express representations, waivers, indemnifications, and limitations of liability included in this Agreement will survive its completion or termination for any reason.

C. *Severability.* Any provision or part of the Agreement held to be void or unenforceable under any Laws or Regulations shall be deemed stricken, and all remaining provisions shall continue to be valid and binding upon Owner and Engineer, who agree that the Agreement shall be reformed to replace such

stricken provision or part thereof with a valid and enforceable provision that comes as close as possible to expressing the intention of the stricken provision.

D. *Waiver.* A party's non-enforcement of any provision shall not constitute a waiver of that provision, nor shall it affect the enforceability of that provision or of the remainder of this Agreement.

E. *Accrual of Claims.* To the fullest extent permitted by law, all causes of action arising under this Agreement shall be deemed to have accrued, and all statutory periods of limitation shall commence, no later than the date of Substantial Completion.

ARTICLE 7 - DEFINITIONS

7.01 Defined Terms

A. Wherever used in this Agreement (including the Exhibits hereto) terms (including the singular and plural forms printed with initial capital letters have the meanings indicated in the text above or in the exhibits; in the following provisions; or in the "Standard General Conditions of the Construction Contract," prepared by the Engineers Joint Contract Documents Committee (No. C-700, 2002 Edition):

1. *Additional Services*—The services to be performed for or furnished to Owner by Engineer in accordance with Exhibit A, Part 2, of this Agreement.

2. *Basic Services*—The services to be performed for or furnished to Owner by Engineer in accordance with Exhibit A, Part 1, of this Agreement.

3. *Construction Cost*—The cost to Owner of those portions of the entire Project designed or specified by Engineer. Construction Cost does not include costs of services of Engineer or other design professionals and consultants, cost of land, rights-of-way, or compensation for damages to properties, or Owner's costs for legal, accounting, insurance counseling or auditing services, or interest and financing charges incurred in connection with the Project, or the cost of other services to be provided by others to Owner pursuant to Exhibit B of this Agreement. Construction Cost is one of the items comprising Total Project Costs.

4. *Constituent of Concern*—Any substance, product, waste, or other material of any nature whatsoever (including, but not limited to, Asbestos, Petroleum, Radioactive Material, and PCBs) which is or becomes listed, regulated, or addressed pursuant to [a] the Comprehensive Environmental Response, Compensation and Liability Act, 42 U.S.C. §§9601 et seq. ("CERCLA"); [b] the Hazardous Materials Transportation Act, 49 U.S.C. §§1801 et seq.; [c] the Resource Conservation and Recovery Act, 42 U.S.C. §§6901 et seq. ("RCRA"); [d] the Toxic Substances Control Act, 15 U.S.C. §§2601 et seq.; [e] the Clean Water Act, 33 U.S.C. §§1251 et seq.; [f] the Clean Air Act, 42 U.S.C. §§7401 et seq.; and [g] any other federal, state, or local statute, law, rule, regulation, ordinance, resolution, code, order, or decree regulating, relating to, or imposing liability or standards of conduct concerning, any hazardous, toxic, or dangerous waste, substance, or material.

5. *Consultants*—Individuals or entities having a contract with Engineer to furnish services with respect to this Project as Engineer's independent professional associates, consultants, subcontractors, or vendors.

6. *Documents*—Data, reports, Drawings, Specifications, Record Drawings, and other deliverables, whether in printed or electronic media format, provided or furnished in appropriate phases by Engineer to Owner pursuant to this Agreement.

7. *Drawings*—That part of the Contract Documents prepared or approved by Engineer which graphically shows the scope, extent, and character of the Work to be performed by Contractor. Shop Drawings are not Drawings as so defined.

8. *Laws and Regulations; Laws or Regulations*—Any and all applicable laws, rules, regulations, ordinances, codes, and orders of any and all governmental bodies, agencies, authorities, and courts having jurisdiction.

9. *Reimbursable Expenses*—The expenses incurred directly by Engineer in connection with the performing or furnishing of Basic and Additional Services for the Project.

10. *Resident Project Representative*—The authorized representative of Engineer, if any, assigned to assist Engineer at the Site during the Construction Phase. The Resident Project Representative will be Engineer's agent or

employee and under Engineer's supervision. As used herein, the term Resident Project Representative includes any assistants of Resident Project Representative agreed to by Owner. The duties and responsibilities of the Resident Project Representative, if any, are as set forth in Exhibit D.

11. *Specifications*—That part of the Contract Documents consisting of written technical descriptions of materials, equipment, systems, standards, and workmanship as applied to the Work and certain administrative details applicable thereto.

12. *Total Project Costs*—The sum of the Construction Cost, allowances for contingencies, and the total costs of services of Engineer or other design professionals and consultants, together with such other Project-related costs that Owner furnishes for inclusion, including but not limited to cost of land, rights-of-way, compensation for damages to properties, Owner's costs for legal, accounting, insurance counseling and auditing services, interest and financing charges incurred in connection with the Project, and the cost of other services to be provided by others to Owner pursuant to Exhibit B of this Agreement.

ARTICLE 8 - EXHIBITS AND SPECIAL PROVISIONS

8.01 Exhibits Included

- A. Exhibit A, "Engineer's Services," consisting of ____ pages.
- B. Exhibit B, "Owner's Responsibilities," consisting of ____ pages.
- C. Exhibit C, "Payments to Engineer for Services and Reimbursable Expenses," consisting of ____ pages.
- D. Exhibit D, "Duties, Responsibilities and Limitations of Authority of Resident Project Representative," consisting of ____ pages.
- E. Exhibit E, "Notice of Acceptability of Work," consisting of ____ pages.
- F. Exhibit F, "Construction Cost Limit," consisting of ____ pages.

G. Exhibit G, "Insurance," consisting of ____ pages.

H. Exhibit H, "Dispute Resolution," consisting of ____ pages.

I. Exhibit I, "Allocation of Risks," consisting of ____ pages.

J. Exhibit J, "Special Provisions," consisting of ____ pages.

K. Exhibit K, "Amendment to Standard Form of Agreement," consisting of ____ pages.

8.02 Total Agreement

A. This Agreement (consisting of pages 1 to ____ inclusive, together with the exhibits identified above) constitutes the entire agreement between Owner and Engineer and supersedes all prior written or oral understandings. This Agreement may only be amended, supplemented, modified, or canceled by a duly executed written instrument based on the format of Exhibit K to this Agreement.

8.03 Designated Representatives

A. With the execution of this Agreement, Engineer and Owner shall designate specific individuals to act as Engineer's and Owner's representatives with respect to the services to be performed or furnished by Engineer and responsibilities of Owner under this Agreement. Such individuals shall have authority to transmit instructions, receive information, and render decisions relative to the Project on behalf of each respective party.

IN WITNESS WHEREOF, the parties hereto have executed this Agreement, the Effective Date of which is indicated on page 1.

This is **EXHIBIT A**, consisting of ___ pages, referred to in and part of the Agreement between Owner and Engineer for Professional Services dated ___, ___.

Engineer's Services

Article 1 of the Agreement is amended and supplemented to include the following agreement of the parties. Engineer shall provide Basic and Additional Services as set forth below.

PART 1 – BASIC SERVICES

A1.01 Study and Report Phase

A. Engineer shall:

1. Consult with Owner to define and clarify Owner's requirements for the Project and available data.
2. Advise Owner of any need for Owner to provide data or services of the types described in Exhibit B which are not part of Engineer's Basic Services.
3. Identify, consult with, and analyze requirements of governmental authorities having jurisdiction to approve the portions of the Project designed or specified by Engineer, including but not limited to mitigating measures identified in the environmental assessment.
4. Identify and evaluate insert specific number or list here alternate solutions available to Owner and, after consultation with Owner, recommend to Owner those solutions which in Engineer's judgment meet Owner's requirements for the Project.
5. Prepare a report (the "Report") which will, as appropriate, contain schematic layouts, sketches, and conceptual design criteria with appropriate exhibits to indicate the agreed-to requirements, considerations involved, and those alternate solutions available to Owner which Engineer recommends. For each recommended solution Engineer will provide the following, which will be separately itemized: opinion of probable Construction Cost; proposed allowances for contingencies; the estimated total costs of design, professional, and related services to be provided by Engineer and its Consultants; and, on the basis of information furnished by Owner, a summary of allowances for other items and services included within the definition of Total Project Costs.
6. Perform or provide the following additional Study and Report Phase tasks or deliverables: here list any such tasks or deliverables
7. Furnish ___ review copies of the Report and any other deliverables to Owner within ___ calendar days of authorization to begin services and review it with Owner. Within ___ calendar days of receipt, Owner shall submit to Engineer any comments regarding the Report and any other deliverables.
8. Revise the Report and any other deliverables in response to Owner's comments, as appropriate, and furnish ___ copies of the revised Report and any other deliverables to the Owner within ___ calendar days of receipt of Owner's comments.

B. Engineer's services under the Study and Report Phase will be considered complete on the date when the revised Report and any other deliverables have been delivered to Owner.

Page 1 of ___ Pages
(Exhibit A—Engineer's Services)

A1.02 Preliminary Design Phase

A. After acceptance by Owner of the Report and any other deliverables, selection by Owner of a recommended solution and indication of any specific modifications or changes in the scope, extent, character, or design requirements of the Project desired by Owner, and upon written authorization from Owner, Engineer shall:

1. Prepare Preliminary Design Phase documents consisting of final design criteria, preliminary drawings, outline specifications, and written descriptions of the Project.
2. Provide necessary field surveys and topographic and utility mapping for design purposes. Utility mapping will be based upon information obtained from utility owners.
3. Advise Owner if additional reports, data, information, or services of the types described in Exhibit B are necessary and assist Owner in obtaining such reports, data, information, or services.
4. Based on the information contained in the Preliminary Design Phase documents, prepare a revised opinion of probable Construction Cost, and assist Owner in collating the various cost categories which comprise Total Project Costs.
5. Perform or provide the following additional Preliminary Design Phase tasks or deliverables: here list any such tasks or deliverables
6. Furnish ___ review copies of the Preliminary Design Phase documents and any other deliverables to Owner within ___ calendar days of authorization to proceed with this phase, and review them with Owner. Within ___ calendar days of receipt, Owner shall submit to Engineer any comments regarding the Preliminary Design Phase documents and any other deliverables.
7. Revise the Preliminary Design Phase documents and any other deliverables in response to Owner's comments, as appropriate, and furnish to Owner ___ copies of the revised Preliminary Design Phase documents, revised opinion of probable Construction Cost, and any other deliverables within ___ calendar days after receipt of Owner's comments.

B. Engineer's services under the Preliminary Design Phase will be considered complete on the date when the revised Preliminary Design Phase documents, revised opinion of probable Construction Cost, and any other deliverables have been delivered to Owner.

A1.03 Final Design Phase

A. After acceptance by Owner of the Preliminary Design Phase documents, revised opinion of probable Construction Cost as determined in the Preliminary Design Phase, and any other deliverables subject to any Owner-directed modifications or changes in the scope, extent, character, or design requirements of or for the Project, and upon written authorization from Owner, Engineer shall:

1. Prepare final Drawings and Specifications indicating the scope, extent, and character of the Work to be performed and furnished by Contractor. If appropriate, Specifications shall conform to the 16-division format of the Construction Specifications Institute.
2. Provide technical criteria, written descriptions, and design data for Owner's use in filing applications for permits from or approvals of governmental authorities having jurisdiction to review or approve the final design of the Project; assist Owner in consultations with such authorities; and revise the Drawings and Specifications in response to directives from such authorities.

3. Advise Owner of any adjustments to the opinion of probable Construction Cost known to Engineer.
4. Perform or provide the following additional Final Design Phase tasks or deliverables: [here list any such tasks or deliverables]
5. Prepare and furnish Bidding Documents for review by Owner, its legal counsel, and other advisors, and assist Owner in the preparation of other related documents. Within ___ days of receipt, Owner shall submit to Engineer any comments and, subject to the provisions of paragraph 6.01.G, instructions for revisions.
6. Revise the Bidding Documents in accordance with comments and instructions from the Owner, as appropriate, and submit ___ final copies of the Bidding Documents, a revised opinion of probable Construction Cost, and any other deliverables to Owner within ___ calendar days after receipt of Owner's comments and instructions.

B. Engineer's services under the Final Design Phase will be considered complete on the date when the submittals required by paragraph A1.03.A.6 have been delivered to Owner.

C. In the event that the Work designed or specified by Engineer is to be performed or furnished under more than one prime contract, or if Engineer's services are to be separately sequenced with the work of one or more prime Contractors (such as in the case of fast-tracking), Owner and Engineer shall, prior to commencement of the Final Design Phase, develop a schedule for performance of Engineer's services during the Final Design, Bidding or Negotiating, Construction, and Post-Construction Phases in order to sequence and coordinate properly such services as are applicable to the work under such separate prime contracts. This schedule is to be prepared and included in or become an amendment to Exhibit A whether or not the work under such contracts is to proceed concurrently.

D. The number of prime contracts for Work designed or specified by Engineer upon which the Engineer's compensation has been established under this Agreement is _____. If more prime contracts are awarded, Engineer shall be entitled to an equitable increase in its compensation under this Agreement.

A1.04 Bidding or Negotiating Phase

A. After acceptance by Owner of the Bidding Documents and the most recent opinion of probable Construction Cost as determined in the Final Design Phase, and upon written authorization by Owner to proceed, Engineer shall:

1. Assist Owner in advertising for and obtaining bids or proposals for the Work and, where applicable, maintain a record of prospective bidders to whom Bidding Documents have been issued, attend pre-Bid conferences, if any, and receive and process contractor deposits or charges for the Bidding Documents.
2. Issue Addenda as appropriate to clarify, correct, or change the Bidding Documents.
3. Provide information or assistance needed by Owner in the course of any negotiations with prospective contractors.
4. Consult with Owner as to the acceptability of subcontractors, suppliers, and other individuals and entities proposed by prospective contractors for those portions of the Work as to which such acceptability is required by the Bidding Documents.
5. Perform or provide the following additional Bidding or Negotiating Phase tasks or deliverables: [here list any such tasks or deliverables]

6. Attend the Bid opening, prepare Bid tabulation sheets, and assist Owner in evaluating Bids or proposals and in assembling and awarding contracts for the Work.

B. The Bidding or Negotiating Phase will be considered complete upon commencement of the Construction Phase or upon cessation of negotiations with prospective contractors (except as may be required if Exhibit F is a part of this Agreement).

A1.05 Construction Phase

A. Upon successful completion of the Bidding and Negotiating Phase, and upon written authorization from Owner, Engineer shall:

1. *General Administration of Construction Contract.* Consult with Owner and act as Owner's representative as provided in the General Conditions. The extent and limitations of the duties, responsibilities, and authority of Engineer as assigned in the General Conditions shall not be modified, except as Engineer may otherwise agree in writing. All of Owner's instructions to Contractor will be issued through Engineer, which shall have authority to act on behalf of Owner in dealings with Contractor to the extent provided in this Agreement and the General Conditions except as otherwise provided in writing.

2. *Resident Project Representative (RPR).* Provide the services of an RPR at the Site to assist the Engineer and to provide more extensive observation of Contractor's work. Duties, responsibilities, and authority of the RPR are as set forth in Exhibit D. The furnishing of such RPR's services will not limit, extend, or modify Engineer's responsibilities or authority except as expressly set forth in Exhibit D. [If Engineer will not be providing the services of an RPR, then delete this paragraph 2 by inserting the word "DELETED" after the paragraph title, and do not include Exhibit D.]

3. *Selecting Independent Testing Laboratory.* Assist Owner in the selection of an independent testing laboratory to perform the services identified in Exhibit B, paragraph B2.01.0.

4. *Pre-Construction Conference.* Participate in a Pre-Construction Conference prior to commencement of Work at the Site.

5. *Schedules.* Receive, review, and determine the acceptability of any and all schedules that Contractor is required to submit to Engineer, including the Progress Schedule, Schedule of Submittals, and Schedule of Values.

6. *Baselines and Benchmarks.* As appropriate, establish baselines and benchmarks for locating the Work which in Engineer's judgment are necessary to enable Contractor to proceed.

7. *Visits to Site and Observation of Construction.* In connection with observations of Contractor's Work while it is in progress:

a. Make visits to the Site at intervals appropriate to the various stages of construction, as Engineer deems necessary, to observe as an experienced and qualified design professional the progress and quality of Contractor's executed Work. Such visits and observations by Engineer, and the Resident Project Representative, if any, are not intended to be exhaustive or to extend to every aspect of Contractor's Work in progress or to involve detailed inspections of Contractor's Work in progress beyond the responsibilities specifically assigned to Engineer in this Agreement and the Contract Documents, but rather are to be limited to spot checking, selective sampling, and similar methods of general observation of the Work based on Engineer's exercise of professional judgment as assisted by the Resident Project Representative, if any. Based on information obtained during such visits and observations, Engineer will determine in general if the Work is proceeding in accordance with the Contract Documents, and Engineer shall keep Owner informed of the progress of the Work.

b. The purpose of Engineer's visits to, and representation by the Resident Project Representative, if any, at the Site, will be to enable Engineer to better carry out the duties and responsibilities assigned to and undertaken by Engineer during the Construction Phase, and, in addition, by the exercise of Engineer's efforts as an experienced and qualified design professional, to provide for Owner a greater degree of confidence that the completed Work will conform in general to the Contract Documents and that Contractor has implemented and maintained the integrity of the design concept of the completed Project as a functioning whole as indicated in the Contract Documents. Engineer shall not, during such visits or as a result of such observations of Contractor's Work in progress, supervise, direct, or have control over Contractor's Work, nor shall Engineer have authority over or responsibility for the means, methods, techniques, sequences, or procedures of construction selected or used by Contractor, for security or safety on the Site, for safety precautions and programs incident to Contractor's Work, nor for any failure of Contractor to comply with Laws and Regulations applicable to Contractor's furnishing and performing the Work. Accordingly, Engineer neither guarantees the performance of any Contractor nor assumes responsibility for any Contractor's failure to furnish and perform the Work in accordance with the Contract Documents.

8. *Defective Work.* Recommend to Owner that Contractor's Work be rejected while it is in progress if, on the basis of Engineer's observations, Engineer believes that such Work will not produce a completed Project that conforms generally to the Contract Documents or that it will threaten the integrity of the design concept of the completed Project as a functioning whole as indicated in the Contract Documents.

9. *Clarifications and Interpretations; Field Orders.* Issue necessary clarifications and interpretations of the Contract Documents as appropriate to the orderly completion of Contractor's work. Such clarifications and interpretations will be consistent with the intent of and reasonably inferable from the Contract Documents. Engineer may issue Field Orders authorizing minor variations in the Work from the requirements of the Contract Documents.

10. *Change Orders and Work Change Directives.* Recommend Change Orders and Work Change Directives to Owner, as appropriate, and prepare Change Orders and Work Change Directives as required.

11. *Shop Drawings and Samples.* Review and approve or take other appropriate action in respect to Shop Drawings and Samples and other data which Contractor is required to submit, but only for conformance with the information given in the Contract Documents and compatibility with the design concept of the completed Project as a functioning whole as indicated by the Contract Documents. Such reviews and approvals or other action will not extend to means, methods, techniques, sequences, or procedures of construction or to safety precautions and programs incident thereto. Engineer shall meet any Contractor's submittal schedule that Engineer has accepted.

12. *Substitutes and "or-equal."* Evaluate and determine the acceptability of substitute or "or-equal" materials and equipment proposed by Contractor, but subject to the provisions of paragraph A2.02.A.2 of this Exhibit A.

13. *Inspections and Tests.* Require such special inspections or tests of Contractor's work as deemed reasonably necessary, and receive and review all certificates of inspections, tests, and approvals required by Laws and Regulations or the Contract Documents. Engineer's review of such certificates will be for the purpose of determining that the results certified indicate compliance with the Contract Documents and will not constitute an independent evaluation that the content or procedures of such inspections, tests, or approvals comply with the requirements of the Contract Documents. Engineer shall be entitled to rely on the results of such tests.

14. *Disagreements between Owner and Contractor.* Render formal written decisions on all duly submitted issues relating to the acceptability of Contractor's work or the interpretation of the requirements of the Contract Documents pertaining to the execution, performance, or progress of Contractor's Work; review each duly submitted Claim by Owner or Contractor, and in writing either deny such Claim in whole or in part, approve such Claim, or decline to resolve such Claim if Engineer in its

discretion concludes that to do so would be inappropriate. In rendering such decisions, Engineer shall be fair and not show partiality to Owner or Contractor and shall not be liable in connection with any decision rendered in good faith in such capacity.

15. *Applications for Payment.* Based on Engineer's observations as an experienced and qualified design professional and on review of Applications for Payment and accompanying supporting documentation:

a. Determine the amounts that Engineer recommends Contractor be paid. Such recommendations of payment will be in writing and will constitute Engineer's representation to Owner, based on such observations and review, that, to the best of Engineer's knowledge, information and belief, Contractor's Work has progressed to the point indicated, the quality of such Work is generally in accordance with the Contract Documents (subject to an evaluation of the Work as a functioning whole prior to or upon Substantial Completion, to the results of any subsequent tests called for in the Contract Documents, and to any other qualifications stated in the recommendation), and the conditions precedent to Contractor's being entitled to such payment appear to have been fulfilled in so far as it is Engineer's responsibility to observe Contractor's Work. In the case of unit price work, Engineer's recommendations of payment will include final determinations of quantities and classifications of Contractor's Work (subject to any subsequent adjustments allowed by the Contract Documents).

b. By recommending any payment, Engineer shall not thereby be deemed to have represented that observations made by Engineer to check the quality or quantity of Contractor's Work as it is performed and furnished have been exhaustive, extended to every aspect of Contractor's Work in progress, or involved detailed inspections of the Work beyond the responsibilities specifically assigned to Engineer in this Agreement and the Contract Documents. Neither Engineer's review of Contractor's Work for the purposes of recommending payments nor Engineer's recommendation of any payment including final payment will impose on Engineer responsibility to supervise, direct, or control Contractor's Work in progress or for the means, methods, techniques, sequences, or procedures of construction or safety precautions or programs incident thereto, or Contractor's compliance with Laws and Regulations applicable to Contractor's furnishing and performing the Work. It will also not impose responsibility on Engineer to make any examination to ascertain how or for what purposes Contractor has used the moneys paid on account of the Contract Price, or to determine that title to any portion of the Work in progress, materials, or equipment has passed to Owner free and clear of any liens, claims, security interests, or encumbrances, or that there may not be other matters at issue between Owner and Contractor that might affect the amount that should be paid.

16. *Contractor's Completion Documents.* Receive, review, and transmit to Owner maintenance and operating instructions, schedules, guarantees, bonds, certificates or other evidence of insurance required by the Contract Documents, certificates of inspection, tests and approvals, Shop Drawings, Samples and other data approved as provided under paragraph A1.05.A.11, and the annotated record documents which are to be assembled by Contractor in accordance with the Contract Documents to obtain final payment. The extent of such review by Engineer will be limited as provided in paragraph A1.05.A.11.

17. *Substantial Completion.* Promptly after notice from Contractor that Contractor considers the entire Work ready for its intended use, in company with Owner and Contractor, conduct an inspection to determine if the Work is substantially complete. If after considering any objections of Owner, Engineer considers the Work substantially complete, Engineer shall deliver a certificate of Substantial Completion to Owner and Contractor.

18. *Additional Tasks.* Perform or provide the following additional Construction Phase tasks or deliverables: [here list any such tasks or deliverables].

19. *Final Notice of Acceptability of the Work.* Conduct a final inspection to determine if the completed Work of Contractor is acceptable so that Engineer may recommend, in writing, final payment to Contractor. Accompanying the recommendation for final payment, Engineer shall also provide a notice in the form attached hereto as Exhibit E (the "Notice of Acceptability of

Work") that the Work is acceptable (subject to the provisions of paragraph A1.05.A.15.b) to the best of Engineer's knowledge, information, and belief and based on the extent of the services provided by Engineer under this Agreement.

B. *Duration of Construction Phase.* The Construction Phase will commence with the execution of the first construction Contract for the Project or any part thereof and will terminate upon written recommendation by Engineer for final payment to Contractors. If the Project involves more than one prime contract as indicated in paragraph A1.03.C, Construction Phase services may be rendered at different times in respect to the separate contracts. Subject to the provisions of Article 3, Engineer shall be entitled to an equitable increase in compensation if Construction-Phase services are required after the original date for final completion of the Work as set forth in the construction Contract.

C. *Limitation of Responsibilities.* Engineer shall not be responsible for the acts or omissions of any Contractor, or of any subcontractors, suppliers, or other individuals or entities performing or furnishing any of the Work. Engineer shall not be responsible for the failure of any Contractor to perform or furnish the Work in accordance with the Contract Documents.

A1.06 Post-Construction Phase

A. Upon written authorization from Owner, Engineer, during the Post-Construction Phase, shall:

1. Provide assistance in connection with the adjusting of Project equipment and systems.
2. Assist Owner in training Owner's staff to operate and maintain Project equipment and systems.
3. Assist Owner in developing procedures for control of the operation and maintenance of, and record keeping for Project equipment and systems.
4. Together with Owner, visit the Project to observe any apparent defects in the Work, assist Owner in consultations and discussions with Contractor concerning correction of any such defects, and make recommendations as to replacement or correction of Defective Work, if present.
5. Perform or provide the following additional Post-Construction Phase tasks or deliverables: ____.
6. In company with Owner or Owner's representative, provide an inspection of the Project within one month before the end of the Correction Period to ascertain whether any portion of the Work is subject to correction.

B. The Post-Construction Phase services may commence during the Construction Phase and, if not otherwise modified in this Exhibit A, will terminate at the end of the Construction Contract's correction period.

PART 2 — ADDITIONAL SERVICES

A2.01 Additional Services Requiring Owner's Written Authorization

A. If authorized in writing by Owner, Engineer shall furnish or obtain from others Additional Services of the types listed below.

1. Preparation of applications and supporting documents (in addition to those furnished under Basic Services) for private or governmental grants, loans, or advances in connection with the Project; preparation or review of environmental assessments and impact statements; review and evaluation of the effects on the design requirements for the Project of any such

statements and documents prepared by others; and assistance in obtaining approvals of authorities having jurisdiction over the anticipated environmental impact of the Project.

2. Services to make measured drawings of or to investigate existing conditions or facilities, or to verify the accuracy of drawings or other information furnished by Owner or others.

3. Services resulting from significant changes in the scope, extent, or character of the portions of the Project designed or specified by Engineer or its design requirements including, but not limited to, changes in size, complexity, Owner's schedule, character of construction, or method of financing; and revising previously accepted studies, reports, Drawings, Specifications, or Contract Documents when such revisions are required by changes in Laws and Regulations enacted subsequent to the Effective Date of this Agreement or are due to any other causes beyond Engineer's control.

4. Services resulting from Owner's request to evaluate additional Study and Report Phase alternative solutions beyond those identified in paragraph A1.01.A.4.

5. Services required as a result of Owner's providing incomplete or incorrect Project information to Engineer.

6. Providing renderings or models for Owner's use.

7. Undertaking investigations and studies including, but not limited to, detailed consideration of operations, maintenance, and overhead expenses; the preparation of feasibility studies, cash flow and economic evaluations, rate schedules, and appraisals; assistance in obtaining financing for the Project; evaluating processes available for licensing, and assisting Owner in obtaining process licensing; detailed quantity surveys of materials, equipment, and labor; and audits or inventories required in connection with construction performed by Owner.

8. Furnishing services of Engineer's Consultants for other than Basic Services.

9. Services attributable to more prime construction contracts than specified in paragraph A1.03.C.

10. Services during out-of-town travel required of Engineer other than for visits to the Site or Owner's office.

11. Preparing for, coordinating with, participating in and responding to structured independent review processes, including, but not limited to, construction management, cost estimating, project peer review, value engineering, and constructibility review requested by Owner; and performing or furnishing services required to revise studies, reports, Drawings, Specifications, or other Bidding Documents as a result of such review processes.

12. Preparing additional Bidding Documents or Contract Documents for alternate bids or prices requested by Owner for the Work or a portion thereof.

13. Determining the acceptability of substitute materials and equipment proposed during the Bidding or Negotiating Phase when substitution prior to the award of contracts is allowed by the Bidding Documents.

14. Assistance in connection with Bid protests, rebidding, or renegotiating contracts for construction, materials, equipment, or services, except when such assistance is required by Exhibit F.

15. Providing construction surveys and staking to enable Contractor to perform its work other than as required under paragraph A1.05.A.5, and any type of property surveys or related engineering services needed for the transfer of interests in real property; and providing other special field surveys.

16. Providing Construction Phase services beyond the original date for final completion of the Work.
17. Providing assistance in responding to the presence of any Constituent of Concern at the Site, in compliance with current Laws and Regulations.
18. Preparing and furnishing to Owner Record Drawings showing appropriate record information based on Project annotated record documents received from Contractor.
19. Preparation of operation and maintenance manuals.
20. Preparing to serve or serving as a consultant or witness for Owner in any litigation, arbitration, or other dispute resolution process related to the Project.
21. Providing more extensive services required to enable Engineer to issue notices or certifications requested by Owner.
22. Other services performed or furnished by Engineer not otherwise provided for in this Agreement.

A2.02 Additional Services Not Requiring Owner's Written Authorization

A. Engineer shall advise Owner that Engineer is commencing to perform or furnish the Additional Services of the types listed below. For such Additional Services, Engineer need not request or obtain specific advance written authorization from Owner. Engineer shall cease performing or furnishing such Additional Services upon receipt of written notice from Owner.

1. Services in connection with Work Change Directives and Change Orders to reflect changes requested by Owner.
2. Services in making revisions to Drawings and Specifications occasioned by the acceptance of substitute materials or equipment other than "or-equal" items; and services after the award of the Construction Contract in evaluating and determining the acceptability of a substitution which is found to be inappropriate for the Project or an excessive number of substitutions.
3. Services resulting from significant delays, changes, or price increases occurring as a direct or indirect result of materials, equipment, or energy shortages.
4. Additional or extended services during construction made necessary by (1) emergencies or acts of God endangering the Work, (2) the presence at the Site of any Constituent of Concern, (3) Work damaged by fire or other cause during construction, (4) a significant amount of defective, neglected, or delayed work by Contractor, (5) acceleration of the progress schedule involving services beyond normal working hours, or (6) default by Contractor.
5. Services (other than Basic Services during the Post-Construction Phase) in connection with any partial utilization of any part of the Work by Owner prior to Substantial Completion.
6. Evaluating an unreasonable claim or an excessive number of claims submitted by Contractor or others in connection with the Work.
7. Services during the Construction Phase rendered after the date stated in A1.05.B.

(for use with E-500, 2002 Edition)

This is EXHIBIT B, consisting of ____ pages, referred to in and part of the Agreement between Owner and Engineer for Professional Services dated _____.

Owner's Responsibilities

Article 2 of the Agreement is amended and supplemented to include the following agreement of the parties.

B2.01 In addition to other responsibilities of Owner as set forth in this Agreement, Owner shall at its expense:

A. Provide Engineer with all criteria and full information as to Owner's requirements for the Project, including design objectives and constraints, space, capacity and performance requirements, flexibility, and expandability, and any budgetary limitations; and furnish copies of all design and construction standards which Owner will require to be included in the Drawings and Specifications; and furnish copies of Owner's standard forms, conditions, and related documents for Engineer to include in the Bidding Documents, when applicable.

B. Furnish to Engineer any other available information pertinent to the Project including reports and data relative to previous designs, or investigation at or adjacent to the Site.

C. Following Engineer's assessment of initially available Project information and data and upon Engineer's request, furnish or otherwise make available such additional Project related information and data as is reasonably required to enable Engineer to complete its Basic and Additional Services. Such additional information or data would generally include the following:

1. Property descriptions.
2. Zoning, deed, and other land use restrictions.
3. Property, boundary, easement, right-of-way, and other special surveys or data, including establishing relevant reference points.
4. Explorations and tests of subsurface conditions at or contiguous to the Site, drawings of physical conditions in or relating to existing surface or subsurface structures at or contiguous to the Site, or hydrographic surveys, with appropriate professional interpretation thereof.
5. Environmental assessments, audits, investigations, and impact statements, and other relevant environmental or cultural studies as to the Project, the Site, and adjacent areas.
6. Data or consultations as required for the Project but not otherwise identified in the Agreement or the Exhibits thereto.

D. Give prompt written notice to Engineer whenever Owner observes or otherwise becomes aware of the presence at the Site of any Constituent of Concern, or of any other development that affects the scope or time of performance of Engineer's services, or any defect or nonconformance in Engineer's services, the Work, or in the performance of any Contractor.

- E. Authorize Engineer to provide Additional Services as set forth in Part 2 of Exhibit A of the Agreement as required.
- F. Arrange for safe access to and make all provisions for Engineer to enter upon public and private property as required for Engineer to perform services under the Agreement.
- G. Examine all alternate solutions, studies, reports, sketches, Drawings, Specifications, proposals, and other documents presented by Engineer (including obtaining advice of an attorney, insurance counselor, and other advisors or consultants as Owner deems appropriate with respect to such examination) and render in writing timely decisions pertaining thereto.
- H. Provide reviews, approvals, and permits from all governmental authorities having jurisdiction to approve all phases of the Project designed or specified by Engineer and such reviews, approvals, and consents from others as may be necessary for completion of each phase of the Project.
- I. Provide, as required for the Project:
1. Accounting, bond and financial advisory, independent cost estimating, and insurance counseling services.
 2. Legal services with regard to issues pertaining to the Project as Owner requires, Contractor raises, or Engineer reasonably requests.
 3. Such auditing services as Owner requires to ascertain how or for what purpose Contractor has used the moneys paid.
 4. Placement and payment for advertisement for Bids in appropriate publications.
- J. Advise Engineer of the identity and scope of services of any independent consultants employed by Owner to perform or furnish services in regard to the Project, including, but not limited to, cost estimating, project peer review, value engineering, and constructibility review.
- K. Furnish to Engineer data as to Owner's anticipated costs for services to be provided by others (including, but not limited to, accounting, bond and financial, independent cost estimating, insurance counseling, and legal advice) for Owner so that Engineer may assist Owner in collating the various cost categories which comprise Total Project Costs.
- L. If Owner designates a construction manager or an individual or entity other than, or in addition to, Engineer to represent Owner at the Site, define and set forth as an attachment to this Exhibit B the duties, responsibilities, and limitations of authority of such other party and the relation thereof to the duties, responsibilities, and authority of Engineer.
- M. If more than one prime contract is to be awarded for the Work designed or specified by Engineer, designate a person or entity to have authority and responsibility for coordinating the activities among the various prime Contractors, and define and set forth the duties, responsibilities, and limitations of authority of such individual or entity and the relation thereof to the duties, responsibilities, and authority of Engineer as an attachment to this Exhibit B that is to be mutually agreed upon and made a part of this Agreement before such services begin.
- N. Attend the pre-bid conference, bid opening, pre-construction conferences, construction progress and other job related meetings, and Substantial Completion and final payment inspections.
- O. Provide the services of an independent testing laboratory to perform all inspections, tests, and approvals of Samples, materials, and equipment required by the Contract Documents, or to evaluate the performance of materials, equipment, and facilities of Owner, prior to their incorporation into the Work with appropriate professional interpretation thereof.

P. Provide Engineer with the findings and reports generated by the entities providing services to Owner pursuant to this paragraph.

Q. Perform or provide the following additional services: _____

This is EXHIBIT F, consisting of ___ pages, referred to in and part of the Agreement between Owner and Engineer for Professional Services dated __, __.

Construction Cost Limit

Paragraph 5.02 of the Agreement is amended and supplemented to include the following agreement of the parties:

F5.02 Designing to Construction Cost Limit

- A. Owner and Engineer hereby agree to a Construction Cost limit in the amount of Dollars (\$___).
- B. A bidding or negotiating contingency of ___ percent will be added to any Construction Cost limit established.
- C. The acceptance by Owner at any time during Basic Services of a revised opinion of probable Construction Cost in excess of the then established Construction Cost limit will constitute a corresponding increase in the Construction Cost limit.
- D. Engineer will be permitted to determine what types and quality of materials, equipment and component systems are to be included in the Drawings and Specifications. Engineer may make reasonable adjustments in the scope, extent, and character of the Project to the extent consistent with the Project requirements and sound engineering practices, to bring the Project within the Construction Cost limit.
- E. If the Bidding or Negotiating Phase has not commenced within three months after completion of the Final Design Phase, or if industry-wide prices are changed because of unusual or unanticipated events affecting the general level of prices or times of delivery in the construction industry, the established Construction Cost limit will not be binding on Engineer. In such cases, Owner shall consent to an adjustment in the Construction Cost limit commensurate with any applicable change in the general level of prices in the construction industry between the date of completion of the Final Design Phase and the date on which proposals or Bids are sought.
- F. If the lowest bona fide proposal or Bid exceeds the established Construction Cost limit, Owner shall (1) give written approval to increase such Construction Cost limit, or (2) authorize negotiating or rebidding the Project within a reasonable time, or (3) cooperate in revising the Project's scope, extent, or character to the extent consistent with the Project's requirements and with sound engineering practices. In the case of (3), Engineer shall modify the Contract Documents as necessary to bring the Construction Cost within the Construction Cost Limit. Owner shall pay Engineer's cost to provide such modification services, including the costs of the services of Engineer's Consultants, all overhead expenses reasonably related thereto, and Reimbursable Expenses, but without profit to Engineer on account of such services. The providing of such services will be the limit of Engineer's responsibility in this regard and, having done so, Engineer shall be entitled to payment for services and expenses in accordance with this Agreement and will not otherwise be liable for damages attributable to the lowest bona fide proposal or Bid exceeding the established Construction Cost limit.

SUGGESTED FORMAT
(for use with E-500, 2002 Edition)

This is EXHIBIT H, consisting of ____ pages, referred to in and part of the Agreement between Owner and Engineer for Professional Services dated _____.

Dispute Resolution

Paragraph 6.09 of the Agreement is amended and supplemented to include the following agreement of the parties:

[NOTE: Select one of the two alternatives provided]

H6.09 Dispute Resolution

A. Mediation. Owner and Engineer agree that they shall first submit any and all unsettled claims, counterclaims, disputes, and other matters in question between them arising out of or relating to this Agreement or the breach thereof ("Disputes") to mediation by [insert name of mediator, or mediation service]. If such mediation is unsuccessful in resolving a Dispute, then (a) the parties may mutually agree to a dispute resolution of their choice, or (b) either party may seek to have the Dispute resolved by a court of competent jurisdiction.

[or]

A. Arbitration. All Disputes between Owner and Engineer shall be settled by arbitration in accordance with the [here insert the name of a specified arbitration service or organization] rules effective at the Effective Date of the Agreement, subject to the conditions stated below. This agreement to arbitrate and any other agreement or consent to arbitrate entered into in accordance with this paragraph H6.09.A will be specifically enforceable under prevailing law of any court having jurisdiction.

1. Notice of the demand for arbitration must be filed in writing with the other party to the Agreement and with the [specified arbitration service or organization]. The demand must be made within a reasonable time after the Dispute has arisen. In no event may the demand for arbitration be made after the date when institution of legal or equitable proceedings based on such Dispute would be barred by the applicable statute of limitations.

2. All demands for arbitration and all answering statements thereto which include any monetary claims must contain a statement that the total sum or value in controversy as alleged by the party making such demand or answering statement is not more than \$____ (exclusive of interest and costs). The arbitrators will not have jurisdiction, power, or authority to consider, or make findings (except in denial of their own jurisdiction) concerning any Dispute if the amount in controversy in such Dispute is more than \$____ (exclusive of interest and costs), or to render a monetary award in response thereto against any party which totals more than \$____ (exclusive of interest and costs). Disputes that are not subject to arbitration under this paragraph may be resolved in any court of competent jurisdiction.

3. The award rendered by the arbitrators shall be in writing, and shall include: (i) a precise breakdown of the award; and (ii) a written explanation of the award specifically citing the Agreement provisions deemed applicable and relied on in making the award.

4. The award rendered by the arbitrators will be consistent with the Agreement of the parties and final, and judgment may be entered upon it in any court having jurisdiction thereof, and will not be subject to appeal or modification.

5. If a Dispute in question between Owner and Engineer involves the work of a Contractor, subcontractor, or consultants to the Owner or Engineer (each a "Joinable Party"), either Owner or Engineer may join each Joinable Party as a party to the arbitration between Owner and Engineer hereunder, and Engineer or Owner, as appropriate, shall include in each contract with each such Joinable Party a specific provision whereby such Joinable Party consents to being joined in an arbitration between Owner and Engineer involving the work of such Joinable Party. Nothing in this paragraph H6.09.A.5 nor in the provision of such contract consenting to joinder shall create any claim, right, or cause of action in favor of the Joinable Party and against Owner or Engineer that does not otherwise exist.

This is EXHIBIT I, consisting of ____ pages, referred to in and part of the Agreement between Owner and Engineer for Professional Services dated _____, _____.

Allocation of Risks

Paragraph 6.11 of the Agreement is amended and supplemented to include the following agreement of the parties:

16.11.B Limitation of Engineer's Liability

[NOTE: Select one of the three alternatives listed below for 16.11.B.M.]

1. *Engineer's Liability Limited to Amount of Engineer's Compensation.* To the fullest extent permitted by law, and notwithstanding any other provision of this Agreement, the total liability, in the aggregate, of Engineer and Engineer's officers, directors, partners, employees, agents, and Engineer's Consultants, and any of them, to Owner and anyone claiming by, through, or under Owner for any and all claims, losses, costs, or damages whatsoever arising out of, resulting from or in any way related to the Project or the Agreement from any cause or causes, including but not limited to the negligence, professional errors or omissions, strict liability or breach of contract, or warranty express or implied of Engineer or Engineer's officers, directors, partners, employees, agents, or Engineer's Consultants, or any of them, shall not exceed the total compensation received by Engineer under this Agreement.

[or]

1. *Engineer's Liability Limited to Amount of Insurance Proceeds.* Engineer shall procure and maintain insurance as required by and set forth in Exhibit G to this Agreement. Notwithstanding any other provision of this Agreement, and to the fullest extent permitted by law, the total liability, in the aggregate, of Engineer and Engineer's officers, directors, partners, employees, agents, and Engineer's Consultants, and any of them, to Owner and anyone claiming by, through, or under Owner for any and all claims, losses, costs, or damages whatsoever arising out of, resulting from or in any way related to the Project or the Agreement from any cause or causes, including but not limited to the negligence, professional errors or omissions, strict liability or breach of contract, or warranty express or implied, of Engineer or Engineer's officers, directors, partners, employees, agents, or Engineer's Consultants, or any of them (hereafter "Owner's Claims"), shall not exceed the total insurance proceeds paid on behalf of or to Engineer by Engineer's insurers in settlement or satisfaction of Owner's Claims under the terms and conditions of Engineer's insurance policies applicable thereto (excluding fees, costs and expenses of investigation, claims adjustment, defense, and appeal). If no such insurance coverage is provided with respect to Owner's Claims, then the total liability, in the aggregate, of Engineer and Engineer's officers, directors, partners, employees, agents, and Engineer's Consultants, and any of them to Owner and anyone claiming by, through, or under Owner for any and all such uninsured Owner's claims shall not exceed \$____.

[or]

1. *Engineer's Liability Limited to the Amount of \$ ____.* Notwithstanding any other provision of this Agreement, and to the fullest extent permitted by law, the total liability, in the aggregate, of Engineer and Engineer's officers, directors, partners, employees, agents, and Engineer's Consultants, and any of them, to Owner and anyone claiming by, through, or under Owner for

any and all claims, losses, costs, or damages whatsoever arising out of, resulting from, or in any way related to the Project or the Agreement from any cause or causes, including but not limited to the negligence, professional errors or omissions, strict liability or breach of contract, or warranty express or implied of Engineer or Engineer's officers, directors, partners, employees, agents, or Engineer's Consultants, or any of them, shall not exceed the total amount of \$_____.

[NOTE: If appropriate and desired, include 16.11.B.2 below]

2. *Exclusion of Special, Incidental, Indirect, and Consequential Damages.* To the fullest extent permitted by law, and notwithstanding any other provision in the Agreement, consistent with the terms of paragraph 6.11.E the Engineer and Engineer's officers, directors, partners, employees, agents, and Engineer's Consultants, or any of them, shall not be liable to Owner or anyone claiming by, through, or under Owner for any special, incidental, indirect, or consequential damages whatsoever arising out of, resulting from, or in any way related to the Project or the Agreement from any cause or causes, including but not limited to any such damages caused by the negligence, professional errors or omissions, strict liability, breach of contract, or warranties, express or implied, of Engineer or Engineer's officers, directors, partners, employees, agents, or Engineer's Consultants, or any of them, and including but not limited to:

[NOTE: list here particular types of damages that may be of special concern because of the nature of the project or specific circumstances, e.g., cost of replacement power, loss of use of equipment or of the facility, loss of profits or revenue, loss of financing, regulatory fines, etc. If the parties prefer to leave the language general, then end the sentence after the phrase "or any of them."]

[NOTE: the above exclusion of consequential and other damages can be converted to a limitation on the amount of such damages, following the format of paragraph 16.11.B.1 above, by providing that "Engineer's total liability for such damages shall not exceed \$_____."]

[NOTE: If appropriate and desired, include 16.11.B.3 below]

[NOTE: The foregoing provisions may be included as a supplement to paragraph 6.11.E, which contains a mutual waiver of damages applicable to the benefit of both Owner and Engineer.]

3. *Agreement Not to Claim for Cost of Certain Change Orders.* Owner recognizes and expects that certain Change Orders may be required to be issued as the result in whole or part of imprecision, incompleteness, errors, omissions, ambiguities, or inconsistencies in the Drawings, Specifications, and other design documentation furnished by Engineer or in the other professional services performed or furnished by Engineer under this Agreement ("Covered Change Orders"). Accordingly, Owner agrees not to sue and otherwise to make no claim directly or indirectly against Engineer on the basis of professional negligence, breach of contract, or otherwise with respect to the costs of approved Covered Change Orders unless the costs of such approved Covered Change Orders exceed ___% of Construction Cost, and then only for an amount in excess of such percentage. Any responsibility of Engineer for the costs of Covered Change Orders in excess of such percentage will be determined on the basis of applicable contractual obligations and professional liability standards. For purposes of this paragraph, the cost of Covered Change Orders will not include any costs that Owner would have incurred if the Covered Change Order work had been included originally without any imprecision, incompleteness, error, omission, ambiguity, or inconsistency in the Contract Documents and without any other error or omission of Engineer related thereto. Nothing in this provision creates a presumption that, or changes the professional liability standard for determining if, Engineer is liable for the cost of Covered Change Orders in excess of the percentage of Construction Cost stated above or for any other Change Order. Wherever used in this paragraph, the term Engineer includes Engineer's officers, directors, partners, employees, agents, and Engineer's Consultants.

[NOTE: The parties may wish to consider the additional limitation contained in the following sentence.]

[Owner further agrees not to sue and otherwise to make no claim directly or indirectly against Engineer with respect to any Covered Change Order not in excess of such percentage stated above, and Owner agrees to hold Engineer harmless from and against any suit or claim made by the Contractor relating to any such Covered Change Order.

This Suggested Form of Agreement has been prepared for use with the Standard General Conditions of the Construction Contract (EJCDC C-700, 2007 Edition). Their provisions are interrelated, and a change in one may necessitate a change in the other. The language contained in the Suggested Instructions to Bidders (EJCDC C-200, 2007 Edition) is also carefully interrelated with the language of this Agreement. Their usage is discussed in the Narrative Guide to the 2007 EJCDC Construction Documents (EJCDC C-001, 2007 Edition).

INTRODUCTION

This Suggested Form of Agreement between Owner and Contractor for Construction Contract (Stipulated Price) ("Agreement") has been prepared for use with the Suggested Instructions to Bidders for Construction Contracts ("Instructions to Bidders") (EJCDC C-200, 2007 Edition); the Suggested Bid Form for Construction Contracts ("Bid Form") (EJCDC C-410, 2007 Edition); and the Standard General Conditions of the Construction Contract ("General Conditions") (EJCDC C-700, 2007 Edition). Their provisions are interrelated, and a change in one may necessitate a change in the others. See also the Guide to the Preparation of Supplementary Conditions (EJCDC C-800, 2007 Edition), and the Narrative Guide to the 2007 EJCDC Construction Documents (EJCDC C-001, 2007 Edition).

This Agreement form assumes use of a Project Manual that contains the following documentary information for a construction project:

- Bidding Requirements, which include the advertisement or invitation to bid, the Instructions to Bidders, and the Bid Form that is suggested or prescribed, all of which provide information and guidance for all Bidders; and
- Contract Documents, which include the Agreement, performance and payment bonds, the General Conditions, the Supplementary Conditions, the Drawings, and the Specifications.

The Bidding Requirements are not Contract Documents because much of their substance pertains to the relationships prior to the award of the Contract and has little effect or impact thereafter, and because many contracts are awarded without going through the bidding process. In some cases, however, the actual Bid may be attached as an exhibit to the Agreement to avoid extensive rekeying. (The definitions of terms used in this Agreement, including "Bidding Documents," "Bidding Requirements," and "Contract Documents," are set forth Article 1 of the General Conditions.)

Suggested provisions are accompanied by "Notes to User" to assist in preparing the Agreement. The provisions have been coordinated with the other forms produced by EJCDC. Much of the language should be usable on most projects, but modifications and additional provisions will often be necessary. When modifying the suggested language or writing additional provisions, the user must check the other documents thoroughly for conflicts and coordination of terms and make appropriate revisions in all affected documents.

All parties involved in construction projects benefit significantly from a standardized approach in the location of subject matter throughout the documents. Experience confirms the danger of addressing the same subject matter in more than one location: doing so frequently leads to confusion and unanticipated legal consequences. When preparing documents for a construction project, careful attention should be given to the guidance provided in the Uniform Location of Subject Matter (EJCDC N-122).

EJCDC has designated Section 00520 for this Agreement. If this convention is used, the first page of the Agreement would be numbered 00520-1. If CSI's MasterFormat 04™ is being used for the Project Manual, consult MasterFormat 04 for the appropriate section number and number the pages accordingly.

For brevity, paragraphs of the Instructions to Bidders are referenced with the prefix "I," those of the Bid Form are referenced with the prefix "BF," and those of this Agreement are referenced with the prefix "A."

NOTE: EJCDC publications may be purchased from any of the organizations listed on the page immediately following the cover page of this document.

Sample

**SUGGESTED FORM OF AGREEMENT
BETWEEN OWNER AND CONTRACTOR
FOR CONSTRUCTION CONTRACT (STIPULATED PRICE)**

THIS AGREEMENT is by and between _____ (“Owner”) and

_____ (“Contractor”).

Owner and Contractor hereby agree as follows:

ARTICLE 1 – WORK

- 1.1 Contractor shall complete all Work as specified or indicated in the Contract Documents. The Work is generally described as follows:

ARTICLE 2 – THE PROJECT

- 2.1 The Project for which the Work under the Contract Documents may be the whole or only a part is generally described as follows:

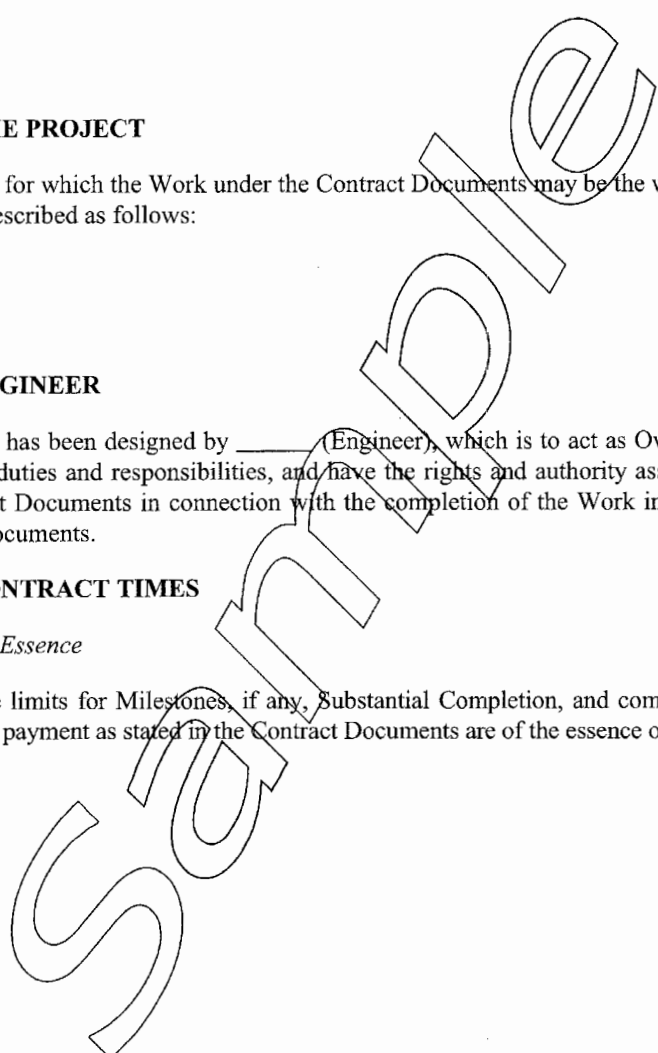

ARTICLE 3 – ENGINEER

- 3.1 The Project has been designed by _____ (Engineer), which is to act as Owner’s representative, assume all duties and responsibilities, and have the rights and authority assigned to Engineer in the Contract Documents in connection with the completion of the Work in accordance with the Contract Documents.

ARTICLE 4 – CONTRACT TIMES

- 4.1 *Time of the Essence*

- A. All time limits for Milestones, if any, Substantial Completion, and completion and readiness for final payment as stated in the Contract Documents are of the essence of the Contract.

4.2 *Dates for Substantial Completion and Final Payment*

A. The Work will be substantially completed on or before _____ and completed and ready for final payment in accordance with Paragraph 14.07 of the General Conditions on or before _____.

[or]

4.2 *Days to Achieve Substantial Completion and Final Payment*

A. The Work will be substantially completed within _____ days after the date when the Contract Times commence to run as provided in Paragraph 2.03 of the General Conditions, and completed and ready for final payment in accordance with Paragraph 14.07 of the General Conditions within _____ days after the date when the Contract Times commence to run.

4.3 *Liquidated Damages*

A. Contractor and Owner recognize that time is of the essence as stated in Paragraph 4.01 above and that Owner will suffer financial loss if the Work is not completed within the times specified in Paragraph 4.02 above, plus any extensions thereof allowed in accordance with Article 12 of the General Conditions. The parties also recognize the delays, expense, and difficulties involved in proving in a legal or arbitration proceeding the actual loss suffered by Owner if the Work is not completed on time. Accordingly, instead of requiring any such proof, Owner and Contractor agree that as liquidated damages for delay (but not as a penalty), Contractor shall pay Owner \$ _____ for each day that expires after the time specified in Paragraph 4.02 above for Substantial Completion until the Work is substantially complete. After Substantial Completion, if Contractor shall neglect, refuse, or fail to complete the remaining Work within the Contract Time or any proper extension thereof granted by Owner, Contractor shall pay Owner \$ _____ for each day that expires after the time specified in Paragraph 4.02 above for completion and readiness for final payment until the Work is completed and ready for final payment.

NOTE TO USER

If failure to reach a Milestone on time is of such consequence that the assessment of liquidated damages for failure to reach one or more Milestones on time is to be provided, appropriate amending or supplementing language should be inserted here.

ARTICLE 5 – CONTRACT PRICE

5.1 Owner shall pay Contractor for completion of the Work in accordance with the Contract Documents an amount in current funds equal to the sum of the amounts determined pursuant to Paragraphs 5.01.A, 5.01.B, and 5.01.C below:

A. For all Work other than Unit Price Work, a lump sum of: \$ _____

All specific cash allowances are included in the above price in accordance with Paragraph 11.02 of the General Conditions.

- B. For all Unit Price Work, an amount equal to the sum of the established unit price for each separately identified item of Unit Price Work times the actual quantity of that item:

<u>Item No.</u>	<u>Description</u>	<u>UNIT PRICE WORK</u>		<u>Bid Unit Price</u>	<u>Bid Price</u>
		<u>Unit</u>	<u>Estimated Quantity</u>		
Total of all Bid Prices (Unit Price Work)					\$ _____

The Bid prices for Unit Price Work set forth as of the Effective Date of the Agreement are based on estimated quantities. As provided in Paragraph 11.03 of the General Conditions, estimated quantities are not guaranteed, and determinations of actual quantities and classifications are to be made by Engineer as provided in Paragraph 9.07 of the General Conditions.

- C. For all Work, at the prices stated in Contractor's Bid, attached hereto as an exhibit.

NOTES TO USER

1. If adjustment prices for variations from stipulated Base Bid quantities have been agreed to, insert appropriate provisions.
2. Depending upon the particular project bid form used, use 5.01.A alone, 5.01.A and 5.01.B together, 5.01.B alone, or 5.01.C alone, deleting those not used and renumbering accordingly. If 5.01.C is used, Contractor's Bid is attached as an exhibit and listed as a Contract Document in A-9.

ARTICLE 6 – PAYMENT PROCEDURES

6.1 *Submittal and Processing of Payments*

- A. Contractor shall submit Applications for Payment in accordance with Article 14 of the General Conditions. Applications for Payment will be processed by Engineer as provided in the General Conditions.

6.2 *Progress Payments; Retainage*

- A. Owner shall make progress payments on account of the Contract Price on the basis of Contractor's Applications for Payment on or about the _____ day of each month during

performance of the Work as provided in Paragraph 6.02.A.1 below. All such payments will be measured by the schedule of values established as provided in Paragraph 2.07.A of the General Conditions (and in the case of Unit Price Work based on the number of units completed) or, in the event there is no schedule of values, as provided in the General Requirements.

1. Prior to Substantial Completion, progress payments will be made in an amount equal to the percentage indicated below but, in each case, less the aggregate of payments previously made and less such amounts as Engineer may determine or Owner may withhold, including but not limited to liquidated damages, in accordance with Paragraph 14.02 of the General Conditions.
 - a. _____ percent of Work completed (with the balance being retainage). If the Work has been 50 percent completed as determined by Engineer, and if the character and progress of the Work have been satisfactory to Owner and Engineer, then as long as the character and progress of the Work remain satisfactory to Owner and Engineer, there will be no additional retainage; and
 - b. _____ percent of cost of materials and equipment not incorporated in the Work (with the balance being retainage).
- B. Upon Substantial Completion, Owner shall pay an amount sufficient to increase total payments to Contractor to _____ percent of the Work completed, less such amounts as Engineer shall determine in accordance with Paragraph 14.02.B.5 of the General Conditions and less _____ percent of Engineer's estimate of the value of Work to be completed or corrected as shown on the tentative list of items to be completed or corrected attached to the certificate of Substantial Completion.

NOTE TO USER

Typical values used in Paragraph 6.02.B are 100 percent and 200 percent respectively.

6.3 *Final Payment*

- A. Upon final completion and acceptance of the Work in accordance with Paragraph 14.07 of the General Conditions, Owner shall pay the remainder of the Contract Price as recommended by Engineer as provided in said Paragraph 14.07.

ARTICLE 7 – INTEREST

- 7.1 All moneys not paid when due as provided in Article 14 of the General Conditions shall bear interest at the rate of _____ percent per annum.

ARTICLE 8 – CONTRACTOR'S REPRESENTATIONS

- 8.1 In order to induce Owner to enter into this Agreement, Contractor makes the following representations:

- A. Contractor has examined and carefully studied the Contract Documents and the other related data identified in the Bidding Documents.
- B. Contractor has visited the Site and become familiar with and is satisfied as to the general, local, and Site conditions that may affect cost, progress, and performance of the Work.
- C. Contractor is familiar with and is satisfied as to all federal, state, and local Laws and Regulations that may affect cost, progress, and performance of the Work.
- D. Contractor has carefully studied all: (1) reports of explorations and tests of subsurface conditions at or contiguous to the Site and all drawings of physical conditions relating to existing surface or subsurface structures at the Site (except Underground Facilities), if any, that have been identified in Paragraph SC-4.02 of the Supplementary Conditions as containing reliable "technical data," and (2) reports and drawings of Hazardous Environmental Conditions, if any, at the Site that have been identified in Paragraph SC-4.06 of the Supplementary Conditions as containing reliable "technical data."

NOTE TO USER

Modify the above paragraph if there are no such reports or drawings.

- E. Contractor has considered the information known to Contractor; information commonly known to contractors doing business in the locality of the Site; information and observations obtained from visits to the Site; the Contract Documents; and the Site-related reports and drawings identified in the Contract Documents, with respect to the effect of such information, observations, and documents on (1) the cost, progress, and performance of the Work; (2) the means, methods, techniques, sequences, and procedures of construction to be employed by Contractor, including any specific means, methods, techniques, sequences, and procedures of construction expressly required by the Contract Documents; and (3) Contractor's safety precautions and programs.

NOTE TO USER

If the Contract Documents do not identify any Site-related reports and drawings, modify this paragraph accordingly.

- F. Based on the information and observations referred to in Paragraph 8.01.E above, Contractor does not consider that further examinations, investigations, explorations, tests, studies, or data are necessary for the performance of the Work at the Contract Price, within the Contract Times, and in accordance with the other terms and conditions of the Contract Documents.
- G. Contractor is aware of the general nature of work to be performed by Owner and others at the Site that relates to the Work as indicated in the Contract Documents.
- H. Contractor has given Engineer written notice of all conflicts, errors, ambiguities, or discrepancies that Contractor has discovered in the Contract Documents, and the written resolution thereof by Engineer is acceptable to Contractor.

- I. The Contract Documents are generally sufficient to indicate and convey understanding of all terms and conditions for performance and furnishing of the Work.

ARTICLE 9 – CONTRACT DOCUMENTS

9.1 Contents

- A. The Contract Documents consist of the following:
 1. This Agreement (pages 1 to __, inclusive).
 2. Performance bond (pages ____ to ____, inclusive).
 3. Payment bond (pages ____ to ____, inclusive).
 4. Other bonds (pages ____ to ____, inclusive).
 - a. ____ (pages ____ to ____, inclusive).
 - b. ____ (pages ____ to ____, inclusive).
 - c. ____ (pages ____ to ____, inclusive).
 5. General Conditions (pages ____ to ____, inclusive).
 6. Supplementary Conditions (pages ____ to ____, inclusive).
 7. Specifications as listed in the table of contents of the Project Manual.
 8. Drawings consisting of ____ sheets with each sheet bearing the following general title: ____ [or] the Drawings listed on attached sheet index.
 9. Addenda (numbers ____ to ____, inclusive).
 10. Exhibits to this Agreement (enumerated as follows):
 - a. Contractor's Bid (pages ____ to ____, inclusive).
 - b. Documentation submitted by Contractor prior to Notice of Award (pages ____ to ____, inclusive).
 - c. *[List other required attachments (if any), such as documents required by funding or lending agencies].*
 11. The following which may be delivered or issued on or after the Effective Date of the Agreement and are not attached hereto:
 - a. Notice to Proceed (pages ____ to ____, inclusive).

- b. Work Change Directives.
- c. Change Orders.

NOTE TO USER

If any of the items listed are not to be included as Contract Documents, remove such item from the list and renumber the remaining items.

- B. The documents listed in Paragraph 9.01.A are attached to this Agreement (except as expressly noted otherwise above).
- C. There are no Contract Documents other than those listed above in this Article 9.
- D. The Contract Documents may only be amended, modified, or supplemented as provided in Paragraph 3.04 of the General Conditions.

ARTICLE 10 – MISCELLANEOUS

10.1 Terms

- A. Terms used in this Agreement will have the meanings stated in the General Conditions and the Supplementary Conditions.

10.2 Assignment of Contract

- A. No assignment by a party hereto of any rights under or interests in the Contract will be binding on another party hereto without the written consent of the party sought to be bound; and, specifically but without limitation, moneys that may become due and moneys that are due may not be assigned without such consent (except to the extent that the effect of this restriction may be limited by law), and unless specifically stated to the contrary in any written consent to an assignment, no assignment will release or discharge the assignor from any duty or responsibility under the Contract Documents.

10.3 Successors and Assigns

- A. Owner and Contractor each binds itself, its partners, successors, assigns, and legal representatives to the other party hereto, its partners, successors, assigns, and legal representatives in respect to all covenants, agreements, and obligations contained in the Contract Documents.

10.4 Severability

- A. Any provision or part of the Contract Documents held to be void or unenforceable under any Law or Regulation shall be deemed stricken, and all remaining provisions shall continue to be valid and binding upon Owner and Contractor, who agree that the Contract Documents shall be reformed to replace such stricken provision or part thereof with a valid and enforceable provision that comes as close as possible to expressing the intention of the stricken provision.

10.5 *Contractor's Certifications*

- A. Contractor certifies that it has not engaged in corrupt, fraudulent, collusive, or coercive practices in competing for or in executing the Contract. For the purposes of this Paragraph 10.05:
1. "corrupt practice" means the offering, giving, receiving, or soliciting of any thing of value likely to influence the action of a public official in the bidding process or in the Contract execution;
 2. "fraudulent practice" means an intentional misrepresentation of facts made (a) to influence the bidding process or the execution of the Contract to the detriment of Owner, (b) to establish Bid or Contract prices at artificial non-competitive levels, or (c) to deprive Owner of the benefits of free and open competition;
 3. "collusive practice" means a scheme or arrangement between two or more Bidders, with or without the knowledge of Owner, a purpose of which is to establish Bid prices at artificial, non-competitive levels; and
 4. "coercive practice" means harming or threatening to harm, directly or indirectly, persons or their property to influence their participation in the bidding process or affect the execution of the Contract.

10.6 *Other Provisions*

NOTES TO USER

1. *If Owner intends to assign a procurement contract (for goods and services) to the Contractor, see Notes to User at Article 23 of Suggested Instructions to Bidders for Procurement Contracts (EJCDC P-200, 2000 Edition) for provisions to be inserted in this Article.*
2. *Insert other provisions here if applicable.*

IN WITNESS WHEREOF, Owner and Contractor have signed this Agreement. Counterparts have been delivered to Owner and Contractor. All portions of the Contract Documents have been signed or have been identified by Owner and Contractor or on their behalf.

NOTE TO USER

See I-21 and correlate procedures for format and signing of the documents.

This Agreement will be effective on _____ (which is the Effective Date of the Agreement).

NOTE TO USER

The Effective Date of the Agreement and the dates of any Construction Performance Bond (EJCDC C-610) and Construction Payment Bond (EJCDC C-615) should be the same, if possible. In no case may the date of any bonds be earlier than the Effective Date of the Agreement.

9.07	Determinations for Unit Price Work	39
9.08	Decisions on Requirements of Contract Documents and Acceptability of Work.....	39
9.09	Limitations on Engineer’s Authority and Responsibilities.....	39
9.10	Compliance with Safety Program.....	40
Article 10 – Changes in the Work; Claims		40
10.01	Authorized Changes in the Work	40
10.02	Unauthorized Changes in the Work	40
10.03	Execution of Change Orders.....	41
10.04	Notification to Surety.....	41
10.05	Claims.....	41
Article 11 – Cost of the Work; Allowances; Unit Price Work.....		42
11.01	Cost of the Work	42
11.02	Allowances.....	45
11.03	Unit Price Work	45
Article 12 – Change of Contract Price; Change of Contract Times		46
12.01	Change of Contract Price	46
12.02	Change of Contract Times	47
12.03	Delays.....	47
Article 13 – Tests and Inspections; Correction, Removal or Acceptance of Defective Work		48
13.01	Notice of Defects	48
13.02	Access to Work	48
13.03	Tests and Inspections	48
13.04	Uncovering Work.....	49
13.05	Owner May Stop the Work.....	50
13.06	Correction or Removal of Defective Work.....	50
13.07	Correction Period.....	50
13.08	Acceptance of Defective Work.....	51
13.09	Owner May Correct Defective Work	51
Article 14 – Payments to Contractor and Completion		52
14.01	Schedule of Values.....	52
14.02	Progress Payments	52
14.03	Contractor’s Warranty of Title	55
14.04	Substantial Completion	55
14.05	Partial Utilization	56
14.06	Final Inspection.....	56
14.07	Final Payment.....	57
14.08	Final Completion Delayed.....	58
14.09	Waiver of Claims	58

Article 15 – Suspension of Work and Termination	58
15.01 Owner May Suspend Work	58
15.02 Owner May Terminate for Cause	58
15.03 Owner May Terminate For Convenience	60
15.04 Contractor May Stop Work or Terminate	60
Article 16 – Dispute Resolution	61
16.01 Methods and Procedures	61
Article 17 – Miscellaneous	61
17.01 Giving Notice	61
17.02 Computation of Times	61
17.03 Cumulative Remedies	62
17.04 Survival of Obligations	62
17.05 Controlling Law	62
17.06 Headings	62

SAMPLE

ARTICLE 1 – DEFINITIONS AND TERMINOLOGY

1.01 *Defined Terms*

- A. Wherever used in the Bidding Requirements or Contract Documents and printed with initial capital letters, the terms listed below will have the meanings indicated which are applicable to both the singular and plural thereof. In addition to terms specifically defined, terms with initial capital letters in the Contract Documents include references to identified articles and paragraphs, and the titles of other documents or forms.
1. *Addenda*—Written or graphic instruments issued prior to the opening of Bids which clarify, correct, or change the Bidding Requirements or the proposed Contract Documents.
 2. *Agreement*—The written instrument which is evidence of the agreement between Owner and Contractor covering the Work.
 3. *Application for Payment*—The form acceptable to Engineer which is to be used by Contractor during the course of the Work in requesting progress or final payments and which is to be accompanied by such supporting documentation as is required by the Contract Documents.
 4. *Asbestos*—Any material that contains more than one percent asbestos and is friable or is releasing asbestos fibers into the air above current action levels established by the United States Occupational Safety and Health Administration.
 5. *Bid*—The offer or proposal of a Bidder submitted on the prescribed form setting forth the prices for the Work to be performed.
 6. *Bidder*—The individual or entity who submits a Bid directly to Owner.
 7. *Bidding Documents*—The Bidding Requirements and the proposed Contract Documents (including all Addenda).
 8. *Bidding Requirements*—The advertisement or invitation to bid, Instructions to Bidders, Bid security of acceptable form, if any, and the Bid Form with any supplements.
 9. *Change Order*—A document recommended by Engineer which is signed by Contractor and Owner and authorizes an addition, deletion, or revision in the Work or an adjustment in the Contract Price or the Contract Times, issued on or after the Effective Date of the Agreement.
 10. *Claim*—A demand or assertion by Owner or Contractor seeking an adjustment of Contract Price or Contract Times, or both, or other relief with respect to the terms of the Contract. A demand for money or services by a third party is not a Claim.
 11. *Contract*—The entire and integrated written agreement between the Owner and Contractor concerning the Work. The Contract supersedes prior negotiations, representations, or agreements, whether written or oral.

12. *Contract Documents*—Those items so designated in the Agreement. Only printed or hard copies of the items listed in the Agreement are Contract Documents. Approved Shop Drawings, other Contractor submittals, and the reports and drawings of subsurface and physical conditions are not Contract Documents.
13. *Contract Price*—The moneys payable by Owner to Contractor for completion of the Work in accordance with the Contract Documents as stated in the Agreement (subject to the provisions of Paragraph 11.03 in the case of Unit Price Work).
14. *Contract Times*—The number of days or the dates stated in the Agreement to: (i) achieve Milestones, if any; (ii) achieve Substantial Completion; and (iii) complete the Work so that it is ready for final payment as evidenced by Engineer's written recommendation of final payment.
15. *Contractor*—The individual or entity with whom Owner has entered into the Agreement.
16. *Cost of the Work*—See Paragraph 11.01 for definition.
17. *Drawings*—That part of the Contract Documents prepared or approved by Engineer which graphically shows the scope, extent, and character of the Work to be performed by Contractor. Shop Drawings and other Contractor submittals are not Drawings as so defined.
18. *Effective Date of the Agreement*—The date indicated in the Agreement on which it becomes effective, but if no such date is indicated, it means the date on which the Agreement is signed and delivered by the last of the two parties to sign and deliver.
19. *Engineer*—The individual or entity named as such in the Agreement.
20. *Field Order*—A written order issued by Engineer which requires minor changes in the Work but which does not involve a change in the Contract Price or the Contract Times.
21. *General Requirements*—Sections of Division 1 of the Specifications.
22. *Hazardous Environmental Condition*—The presence at the Site of Asbestos, PCBs, Petroleum, Hazardous Waste, or Radioactive Material in such quantities or circumstances that may present a substantial danger to persons or property exposed thereto.
23. *Hazardous Waste*—The term Hazardous Waste shall have the meaning provided in Section 1004 of the Solid Waste Disposal Act (42 USC Section 6903) as amended from time to time.
24. *Laws and Regulations; Laws or Regulations*—Any and all applicable laws, rules, regulations, ordinances, codes, and orders of any and all governmental bodies, agencies, authorities, and courts having jurisdiction.
25. *Liens*—Charges, security interests, or encumbrances upon Project funds, real property, or personal property.
26. *Milestone*—A principal event specified in the Contract Documents relating to an intermediate completion date or time prior to Substantial Completion of all the Work.

27. *Notice of Award*—The written notice by Owner to the Successful Bidder stating that upon timely compliance by the Successful Bidder with the conditions precedent listed therein, Owner will sign and deliver the Agreement.
28. *Notice to Proceed*—A written notice given by Owner to Contractor fixing the date on which the Contract Times will commence to run and on which Contractor shall start to perform the Work under the Contract Documents.
29. *Owner*—The individual or entity with whom Contractor has entered into the Agreement and for whom the Work is to be performed.
30. *PCBs*—Polychlorinated biphenyls.
31. *Petroleum*—Petroleum, including crude oil or any fraction thereof which is liquid at standard conditions of temperature and pressure (60 degrees Fahrenheit and 14.7 pounds per square inch absolute), such as oil, petroleum, fuel oil, oil sludge, oil refuse, gasoline, kerosene, and oil mixed with other non-Hazardous Waste and crude oils.
32. *Progress Schedule*—A schedule, prepared and maintained by Contractor, describing the sequence and duration of the activities comprising the Contractor's plan to accomplish the Work within the Contract Times.
33. *Project*—The total construction of which the Work to be performed under the Contract Documents may be the whole, or a part.
34. *Project Manual*—The bound documentary information prepared for bidding and constructing the Work. A listing of the contents of the Project Manual, which may be bound in one or more volumes, is contained in the table(s) of contents.
35. *Radioactive Material*—Source, special nuclear, or byproduct material as defined by the Atomic Energy Act of 1954 (42 USC Section 2011 et seq.) as amended from time to time.
36. *Resident Project Representative*—The authorized representative of Engineer who may be assigned to the Site or any part thereof.
37. *Samples*—Physical examples of materials, equipment, or workmanship that are representative of some portion of the Work and which establish the standards by which such portion of the Work will be judged.
38. *Schedule of Submittals*—A schedule, prepared and maintained by Contractor, of required submittals and the time requirements to support scheduled performance of related construction activities.
39. *Schedule of Values*—A schedule, prepared and maintained by Contractor, allocating portions of the Contract Price to various portions of the Work and used as the basis for reviewing Contractor's Applications for Payment.

40. *Shop Drawings*—All drawings, diagrams, illustrations, schedules, and other data or information which are specifically prepared or assembled by or for Contractor and submitted by Contractor to illustrate some portion of the Work.
41. *Site*—Lands or areas indicated in the Contract Documents as being furnished by Owner upon which the Work is to be performed, including rights-of-way and easements for access thereto, and such other lands furnished by Owner which are designated for the use of Contractor.
42. *Specifications*—That part of the Contract Documents consisting of written requirements for materials, equipment, systems, standards and workmanship as applied to the Work, and certain administrative requirements and procedural matters applicable thereto.
43. *Subcontractor*—An individual or entity having a direct contract with Contractor or with any other Subcontractor for the performance of a part of the Work at the Site.
44. *Substantial Completion*—The time at which the Work (or a specified part thereof) has progressed to the point where, in the opinion of Engineer, the Work (or a specified part thereof) is sufficiently complete, in accordance with the Contract Documents, so that the Work (or a specified part thereof) can be utilized for the purposes for which it is intended. The terms “substantially complete” and “substantially completed” as applied to all or part of the Work refer to Substantial Completion thereof.
45. *Successful Bidder*—The Bidder submitting a responsive Bid to whom Owner makes an award.
46. *Supplementary Conditions*—That part of the Contract Documents which amends or supplements these General Conditions.
47. *Supplier*—A manufacturer, fabricator, supplier, distributor, materialman, or vendor having a direct contract with Contractor or with any Subcontractor to furnish materials or equipment to be incorporated in the Work by Contractor or Subcontractor.
48. *Underground Facilities*—All underground pipelines, conduits, ducts, cables, wires, manholes, vaults, tanks, tunnels, or other such facilities or attachments, and any encasements containing such facilities, including those that convey electricity, gases, steam, liquid petroleum products, telephone or other communications, cable television, water, wastewater, storm water, other liquids or chemicals, or traffic or other control systems.
49. *Unit Price Work*—Work to be paid for on the basis of unit prices.
50. *Work*—The entire construction or the various separately identifiable parts thereof required to be provided under the Contract Documents. Work includes and is the result of performing or providing all labor, services, and documentation necessary to produce such construction, and furnishing, installing, and incorporating all materials and equipment into such construction, all as required by the Contract Documents.
51. *Work Change Directive*—A written statement to Contractor issued on or after the Effective Date of the Agreement and signed by Owner and recommended by Engineer ordering an

addition, deletion, or revision in the Work, or responding to differing or unforeseen subsurface or physical conditions under which the Work is to be performed or to emergencies. A Work Change Directive will not change the Contract Price or the Contract Times but is evidence that the parties expect that the change ordered or documented by a Work Change Directive will be incorporated in a subsequently issued Change Order following negotiations by the parties as to its effect, if any, on the Contract Price or Contract Times.

1.02 Terminology

A. The words and terms discussed in Paragraph 1.02.B through F are not defined but, when used in the Bidding Requirements or Contract Documents, have the indicated meaning.

B. *Intent of Certain Terms or Adjectives:*

1. The Contract Documents include the terms “as allowed,” “as approved,” “as ordered,” “as directed” or terms of like effect or import to authorize an exercise of professional judgment by Engineer. In addition, the adjectives “reasonable,” “suitable,” “acceptable,” “proper,” “satisfactory,” or adjectives of like effect or import are used to describe an action or determination of Engineer as to the Work. It is intended that such exercise of professional judgment, action, or determination will be solely to evaluate, in general, the Work for compliance with the information in the Contract Documents and with the design concept of the Project as a functioning whole as shown or indicated in the Contract Documents (unless there is a specific statement indicating otherwise). The use of any such term or adjective is not intended to and shall not be effective to assign to Engineer any duty or authority to supervise or direct the performance of the Work, or any duty or authority to undertake responsibility contrary to the provisions of Paragraph 9.09 or any other provision of the Contract Documents.

C. *Day:*

1. The word “day” means a calendar day of 24 hours measured from midnight to the next midnight.

D. *Defective:*

1. The word “defective,” when modifying the word “Work,” refers to Work that is unsatisfactory, faulty, or deficient in that it:

- a. does not conform to the Contract Documents; or
- b. does not meet the requirements of any applicable inspection, reference standard, test, or approval referred to in the Contract Documents; or
- c. has been damaged prior to Engineer’s recommendation of final payment (unless responsibility for the protection thereof has been assumed by Owner at Substantial Completion in accordance with Paragraph 14.04 or 14.05).

E. *Furnish, Install, Perform, Provide:*

1. The word “furnish,” when used in connection with services, materials, or equipment, shall mean to supply and deliver said services, materials, or equipment to the Site (or some other specified location) ready for use or installation and in usable or operable condition.
 2. The word “install,” when used in connection with services, materials, or equipment, shall mean to put into use or place in final position said services, materials, or equipment complete and ready for intended use.
 3. The words “perform” or “provide,” when used in connection with services, materials, or equipment, shall mean to furnish and install said services, materials, or equipment complete and ready for intended use.
 4. When “furnish,” “install,” “perform,” or “provide” is not used in connection with services, materials, or equipment in a context clearly requiring an obligation of Contractor, “provide” is implied.
- F. Unless stated otherwise in the Contract Documents, words or phrases that have a well-known technical or construction industry or trade meaning are used in the Contract Documents in accordance with such recognized meaning.

ARTICLE 2 – PRELIMINARY MATTERS

2.01 *Delivery of Bonds and Evidence of Insurance*

- A. When Contractor delivers the executed counterparts of the Agreement to Owner, Contractor shall also deliver to Owner such bonds as Contractor may be required to furnish.
- B. *Evidence of Insurance.* Before any Work at the Site is started, Contractor and Owner shall each deliver to the other, with copies to each additional insured identified in the Supplementary Conditions, certificates of insurance (and other evidence of insurance which either of them or any additional insured may reasonably request) which Contractor and Owner respectively are required to purchase and maintain in accordance with Article 5.

2.02 *Copies of Documents*

- A. Owner shall furnish to Contractor up to ten printed or hard copies of the Drawings and Project Manual. Additional copies will be furnished upon request at the cost of reproduction.

2.03 *Commencement of Contract Times; Notice to Proceed*

- A. The Contract Times will commence to run on the thirtieth day after the Effective Date of the Agreement or, if a Notice to Proceed is given, on the day indicated in the Notice to Proceed. A Notice to Proceed may be given at any time within 30 days after the Effective Date of the Agreement. In no event will the Contract Times commence to run later than the sixtieth day after the day of Bid opening or the thirtieth day after the Effective Date of the Agreement, whichever date is earlier.

2.04 *Starting the Work*

- A. Contractor shall start to perform the Work on the date when the Contract Times commence to run. No Work shall be done at the Site prior to the date on which the Contract Times commence to run.

2.05 *Before Starting Construction*

- A. *Preliminary Schedules:* Within 10 days after the Effective Date of the Agreement (unless otherwise specified in the General Requirements), Contractor shall submit to Engineer for timely review:
 - 1. a preliminary Progress Schedule indicating the times (numbers of days or dates) for starting and completing the various stages of the Work, including any Milestones specified in the Contract Documents;
 - 2. a preliminary Schedule of Submittals; and
 - 3. a preliminary Schedule of Values for all of the Work which includes quantities and prices of items which when added together equal the Contract Price and subdivides the Work into component parts in sufficient detail to serve as the basis for progress payments during performance of the Work. Such prices will include an appropriate amount of overhead and profit applicable to each item of Work.

2.06 *Preconstruction Conference; Designation of Authorized Representatives*

- A. Before any Work at the Site is started, a conference attended by Owner, Contractor, Engineer, and others as appropriate will be held to establish a working understanding among the parties as to the Work and to discuss the schedules referred to in Paragraph 2.05.A, procedures for handling Shop Drawings and other submittals, processing Applications for Payment, and maintaining required records.
- B. At this conference Owner and Contractor each shall designate, in writing, a specific individual to act as its authorized representative with respect to the services and responsibilities under the Contract. Such individuals shall have the authority to transmit instructions, receive information, render decisions relative to the Contract, and otherwise act on behalf of each respective party.

2.07 *Initial Acceptance of Schedules*

- A. At least 10 days before submission of the first Application for Payment a conference attended by Contractor, Engineer, and others as appropriate will be held to review for acceptability to Engineer as provided below the schedules submitted in accordance with Paragraph 2.05.A. Contractor shall have an additional 10 days to make corrections and adjustments and to complete and resubmit the schedules. No progress payment shall be made to Contractor until acceptable schedules are submitted to Engineer.
 - 1. The Progress Schedule will be acceptable to Engineer if it provides an orderly progression of the Work to completion within the Contract Times. Such acceptance will not impose on Engineer responsibility for the Progress Schedule, for sequencing, scheduling, or progress of

the Work, nor interfere with or relieve Contractor from Contractor's full responsibility therefor.

2. Contractor's Schedule of Submittals will be acceptable to Engineer if it provides a workable arrangement for reviewing and processing the required submittals.
3. Contractor's Schedule of Values will be acceptable to Engineer as to form and substance if it provides a reasonable allocation of the Contract Price to component parts of the Work.

ARTICLE 3 – CONTRACT DOCUMENTS: INTENT, AMENDING, REUSE

3.01 *Intent*

- A. The Contract Documents are complementary; what is required by one is as binding as if required by all.
- B. It is the intent of the Contract Documents to describe a functionally complete project (or part thereof) to be constructed in accordance with the Contract Documents. Any labor, documentation, services, materials, or equipment that reasonably may be inferred from the Contract Documents or from prevailing custom or trade usage as being required to produce the indicated result will be provided whether or not specifically called for, at no additional cost to Owner.
- C. Clarifications and interpretations of the Contract Documents shall be issued by Engineer as provided in Article 9.

3.02 *Reference Standards*

- A. Standards, Specifications, Codes, Laws, and Regulations
 1. Reference to standards, specifications, manuals, or codes of any technical society, organization, or association, or to Laws or Regulations, whether such reference be specific or by implication, shall mean the standard, specification, manual, code, or Laws or Regulations in effect at the time of opening of Bids (or on the Effective Date of the Agreement if there were no Bids), except as may be otherwise specifically stated in the Contract Documents.
 2. No provision of any such standard, specification, manual, or code, or any instruction of a Supplier, shall be effective to change the duties or responsibilities of Owner, Contractor, or Engineer, or any of their subcontractors, consultants, agents, or employees, from those set forth in the Contract Documents. No such provision or instruction shall be effective to assign to Owner, Engineer, or any of their officers, directors, members, partners, employees, agents, consultants, or subcontractors, any duty or authority to supervise or direct the performance of the Work or any duty or authority to undertake responsibility inconsistent with the provisions of the Contract Documents.

3.03 *Reporting and Resolving Discrepancies*

- A. *Reporting Discrepancies:*

1. *Contractor's Review of Contract Documents Before Starting Work:* Before undertaking each part of the Work, Contractor shall carefully study and compare the Contract Documents and check and verify pertinent figures therein and all applicable field measurements. Contractor shall promptly report in writing to Engineer any conflict, error, ambiguity, or discrepancy which Contractor discovers, or has actual knowledge of, and shall obtain a written interpretation or clarification from Engineer before proceeding with any Work affected thereby.
2. *Contractor's Review of Contract Documents During Performance of Work:* If, during the performance of the Work, Contractor discovers any conflict, error, ambiguity, or discrepancy within the Contract Documents, or between the Contract Documents and (a) any applicable Law or Regulation, (b) any standard, specification, manual, or code, or (c) any instruction of any Supplier, then Contractor shall promptly report it to Engineer in writing. Contractor shall not proceed with the Work affected thereby (except in an emergency as required by Paragraph 6.16.A) until an amendment or supplement to the Contract Documents has been issued by one of the methods indicated in Paragraph 3.04.
3. Contractor shall not be liable to Owner or Engineer for failure to report any conflict, error, ambiguity, or discrepancy in the Contract Documents unless Contractor had actual knowledge thereof.

B. *Resolving Discrepancies:*

1. Except as may be otherwise specifically stated in the Contract Documents, the provisions of the Contract Documents shall take precedence in resolving any conflict, error, ambiguity, or discrepancy between the provisions of the Contract Documents and:
 - a. the provisions of any standard, specification, manual, or code, or the instruction of any Supplier (whether or not specifically incorporated by reference in the Contract Documents); or
 - b. the provisions of any Laws or Regulations applicable to the performance of the Work (unless such an interpretation of the provisions of the Contract Documents would result in violation of such Law or Regulation).

3.04 *Amending and Supplementing Contract Documents*

- A. The Contract Documents may be amended to provide for additions, deletions, and revisions in the Work or to modify the terms and conditions thereof by either a Change Order or a Work Change Directive.
- B. The requirements of the Contract Documents may be supplemented, and minor variations and deviations in the Work may be authorized, by one or more of the following ways:
 1. A Field Order;
 2. Engineer's approval of a Shop Drawing or Sample (subject to the provisions of Paragraph 6.17.D.3); or

3. Engineer's written interpretation or clarification.

3.05 *Reuse of Documents*

A. Contractor and any Subcontractor or Supplier shall not:

1. have or acquire any title to or ownership rights in any of the Drawings, Specifications, or other documents (or copies of any thereof) prepared by or bearing the seal of Engineer or its consultants, including electronic media editions; or
2. reuse any such Drawings, Specifications, other documents, or copies thereof on extensions of the Project or any other project without written consent of Owner and Engineer and specific written verification or adaptation by Engineer.

B. The prohibitions of this Paragraph 3.05 will survive final payment, or termination of the Contract. Nothing herein shall preclude Contractor from retaining copies of the Contract Documents for record purposes.

3.06 *Electronic Data*

- A. Unless otherwise stated in the Supplementary Conditions, the data furnished by Owner or Engineer to Contractor, or by Contractor to Owner or Engineer, that may be relied upon are limited to the printed copies (also known as hard copies). Files in electronic media format of text, data, graphics, or other types are furnished only for the convenience of the receiving party. Any conclusion or information obtained or derived from such electronic files will be at the user's sole risk. If there is a discrepancy between the electronic files and the hard copies, the hard copies govern.
- B. Because data stored in electronic media format can deteriorate or be modified inadvertently or otherwise without authorization of the data's creator, the party receiving electronic files agrees that it will perform acceptance tests or procedures within 60 days, after which the receiving party shall be deemed to have accepted the data thus transferred. Any errors detected within the 60-day acceptance period will be corrected by the transferring party.
- C. When transferring documents in electronic media format, the transferring party makes no representations as to long term compatibility, usability, or readability of documents resulting from the use of software application packages, operating systems, or computer hardware differing from those used by the data's creator.

ARTICLE 4 – AVAILABILITY OF LANDS; SUBSURFACE AND PHYSICAL CONDITIONS; HAZARDOUS ENVIRONMENTAL CONDITIONS; REFERENCE POINTS

4.01 *Availability of Lands*

- A. Owner shall furnish the Site. Owner shall notify Contractor of any encumbrances or restrictions not of general application but specifically related to use of the Site with which Contractor must comply in performing the Work. Owner will obtain in a timely manner and pay for easements for permanent structures or permanent changes in existing facilities. If Contractor and Owner are unable to agree on entitlement to or on the amount or extent, if any, of any adjustment in the

Contract Price or Contract Times, or both, as a result of any delay in Owner's furnishing the Site or a part thereof, Contractor may make a Claim therefor as provided in Paragraph 10.05.

- B. Upon reasonable written request, Owner shall furnish Contractor with a current statement of record legal title and legal description of the lands upon which the Work is to be performed and Owner's interest therein as necessary for giving notice of or filing a mechanic's or construction lien against such lands in accordance with applicable Laws and Regulations.
- C. Contractor shall provide for all additional lands and access thereto that may be required for temporary construction facilities or storage of materials and equipment.

4.02 *Subsurface and Physical Conditions*

A. *Reports and Drawings:* The Supplementary Conditions identify:

- 1. those reports known to Owner of explorations and tests of subsurface conditions at or contiguous to the Site; and
- 2. those drawings known to Owner of physical conditions relating to existing surface or subsurface structures at the Site (except Underground Facilities).

B. *Limited Reliance by Contractor on Technical Data Authorized:* Contractor may rely upon the accuracy of the "technical data" contained in such reports and drawings, but such reports and drawings are not Contract Documents. Such "technical data" is identified in the Supplementary Conditions. Except for such reliance on such "technical data," Contractor may not rely upon or make any claim against Owner or Engineer, or any of their officers, directors, members, partners, employees, agents, consultants, or subcontractors with respect to:

- 1. the completeness of such reports and drawings for Contractor's purposes, including, but not limited to, any aspects of the means, methods, techniques, sequences, and procedures of construction to be employed by Contractor, and safety precautions and programs incident thereto; or
- 2. other data, interpretations, opinions, and information contained in such reports or shown or indicated in such drawings; or
- 3. any Contractor interpretation of or conclusion drawn from any "technical data" or any such other data, interpretations, opinions, or information.

4.03 *Differing Subsurface or Physical Conditions*

A. *Notice:* If Contractor believes that any subsurface or physical condition that is uncovered or revealed either:

- 1. is of such a nature as to establish that any "technical data" on which Contractor is entitled to rely as provided in Paragraph 4.02 is materially inaccurate; or
- 2. is of such a nature as to require a change in the Contract Documents; or

3. differs materially from that shown or indicated in the Contract Documents; or
4. is of an unusual nature, and differs materially from conditions ordinarily encountered and generally recognized as inherent in work of the character provided for in the Contract Documents;

then Contractor shall, promptly after becoming aware thereof and before further disturbing the subsurface or physical conditions or performing any Work in connection therewith (except in an emergency as required by Paragraph 6.16.A), notify Owner and Engineer in writing about such condition. Contractor shall not further disturb such condition or perform any Work in connection therewith (except as aforesaid) until receipt of written order to do so.

- B. *Engineer's Review:* After receipt of written notice as required by Paragraph 4.03.A, Engineer will promptly review the pertinent condition, determine the necessity of Owner's obtaining additional exploration or tests with respect thereto, and advise Owner in writing (with a copy to Contractor) of Engineer's findings and conclusions.
- C. *Possible Price and Times Adjustments:*
 1. The Contract Price or the Contract Times, or both, will be equitably adjusted to the extent that the existence of such differing subsurface or physical condition causes an increase or decrease in Contractor's cost of, or time required for, performance of the Work; subject, however, to the following:
 - a. such condition must meet any one or more of the categories described in Paragraph 4.03.A; and
 - b. with respect to Work that is paid for on a unit price basis, any adjustment in Contract Price will be subject to the provisions of Paragraphs 9.07 and 11.03.
 2. Contractor shall not be entitled to any adjustment in the Contract Price or Contract Times if:
 - a. Contractor knew of the existence of such conditions at the time Contractor made a final commitment to Owner with respect to Contract Price and Contract Times by the submission of a Bid or becoming bound under a negotiated contract; or
 - b. the existence of such condition could reasonably have been discovered or revealed as a result of any examination, investigation, exploration, test, or study of the Site and contiguous areas required by the Bidding Requirements or Contract Documents to be conducted by or for Contractor prior to Contractor's making such final commitment; or
 - c. Contractor failed to give the written notice as required by Paragraph 4.03.A.
 3. If Owner and Contractor are unable to agree on entitlement to or on the amount or extent, if any, of any adjustment in the Contract Price or Contract Times, or both, a Claim may be made therefor as provided in Paragraph 10.05. However, neither Owner or Engineer, or any of their officers, directors, members, partners, employees, agents, consultants, or subcontractors shall be liable to Contractor for any claims, costs, losses, or damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other

professionals and all court or arbitration or other dispute resolution costs) sustained by Contractor on or in connection with any other project or anticipated project.

4.04 *Underground Facilities*

A. *Shown or Indicated:* The information and data shown or indicated in the Contract Documents with respect to existing Underground Facilities at or contiguous to the Site is based on information and data furnished to Owner or Engineer by the owners of such Underground Facilities, including Owner, or by others. Unless it is otherwise expressly provided in the Supplementary Conditions:

1. Owner and Engineer shall not be responsible for the accuracy or completeness of any such information or data provided by others; and
2. the cost of all of the following will be included in the Contract Price, and Contractor shall have full responsibility for:
 - a. reviewing and checking all such information and data;
 - b. locating all Underground Facilities shown or indicated in the Contract Documents;
 - c. coordination of the Work with the owners of such Underground Facilities, including Owner, during construction; and
 - d. the safety and protection of all such Underground Facilities and repairing any damage thereto resulting from the Work.

B. *Not Shown or Indicated:*

1. If an Underground Facility is uncovered or revealed at or contiguous to the Site which was not shown or indicated, or not shown or indicated with reasonable accuracy in the Contract Documents, Contractor shall, promptly after becoming aware thereof and before further disturbing conditions affected thereby or performing any Work in connection therewith (except in an emergency as required by Paragraph 6.16.A), identify the owner of such Underground Facility and give written notice to that owner and to Owner and Engineer. Engineer will promptly review the Underground Facility and determine the extent, if any, to which a change is required in the Contract Documents to reflect and document the consequences of the existence or location of the Underground Facility. During such time, Contractor shall be responsible for the safety and protection of such Underground Facility.
2. If Engineer concludes that a change in the Contract Documents is required, a Work Change Directive or a Change Order will be issued to reflect and document such consequences. An equitable adjustment shall be made in the Contract Price or Contract Times, or both, to the extent that they are attributable to the existence or location of any Underground Facility that was not shown or indicated or not shown or indicated with reasonable accuracy in the Contract Documents and that Contractor did not know of and could not reasonably have been expected to be aware of or to have anticipated. If Owner and Contractor are unable to agree on entitlement to or on the amount or extent, if any, of any such adjustment in Contract Price

or Contract Times, Owner or Contractor may make a Claim therefor as provided in Paragraph 10.05.

4.05 Reference Points

- A. Owner shall provide engineering surveys to establish reference points for construction which in Engineer's judgment are necessary to enable Contractor to proceed with the Work. Contractor shall be responsible for laying out the Work, shall protect and preserve the established reference points and property monuments, and shall make no changes or relocations without the prior written approval of Owner. Contractor shall report to Engineer whenever any reference point or property monument is lost or destroyed or requires relocation because of necessary changes in grades or locations, and shall be responsible for the accurate replacement or relocation of such reference points or property monuments by professionally qualified personnel.

4.06 Hazardous Environmental Condition at Site

- A. *Reports and Drawings:* The Supplementary Conditions identify those reports and drawings known to Owner relating to Hazardous Environmental Conditions that have been identified at the Site.
- B. *Limited Reliance by Contractor on Technical Data Authorized:* Contractor may rely upon the accuracy of the "technical data" contained in such reports and drawings, but such reports and drawings are not Contract Documents. Such "technical data" is identified in the Supplementary Conditions. Except for such reliance on such "technical data," Contractor may not rely upon or make any claim against Owner or Engineer, or any of their officers, directors, members, partners, employees, agents, consultants, or subcontractors with respect to:
1. the completeness of such reports and drawings for Contractor's purposes, including, but not limited to, any aspects of the means, methods, techniques, sequences and procedures of construction to be employed by Contractor and safety precautions and programs incident thereto; or
 2. other data, interpretations, opinions and information contained in such reports or shown or indicated in such drawings; or
 3. any Contractor interpretation of or conclusion drawn from any "technical data" or any such other data, interpretations, opinions or information.
- C. Contractor shall not be responsible for any Hazardous Environmental Condition uncovered or revealed at the Site which was not shown or indicated in Drawings or Specifications or identified in the Contract Documents to be within the scope of the Work. Contractor shall be responsible for a Hazardous Environmental Condition created with any materials brought to the Site by Contractor, Subcontractors, Suppliers, or anyone else for whom Contractor is responsible.
- D. If Contractor encounters a Hazardous Environmental Condition or if Contractor or anyone for whom Contractor is responsible creates a Hazardous Environmental Condition, Contractor shall immediately: (i) secure or otherwise isolate such condition; (ii) stop all Work in connection with such condition and in any area affected thereby (except in an emergency as required by

Paragraph 6.16.A); and (iii) notify Owner and Engineer (and promptly thereafter confirm such notice in writing). Owner shall promptly consult with Engineer concerning the necessity for Owner to retain a qualified expert to evaluate such condition or take corrective action, if any. Promptly after consulting with Engineer, Owner shall take such actions as are necessary to permit Owner to timely obtain required permits and provide Contractor the written notice required by Paragraph 4.06.E.

- E. Contractor shall not be required to resume Work in connection with such condition or in any affected area until after Owner has obtained any required permits related thereto and delivered written notice to Contractor: (i) specifying that such condition and any affected area is or has been rendered safe for the resumption of Work; or (ii) specifying any special conditions under which such Work may be resumed safely. If Owner and Contractor cannot agree as to entitlement to or on the amount or extent, if any, of any adjustment in Contract Price or Contract Times, or both, as a result of such Work stoppage or such special conditions under which Work is agreed to be resumed by Contractor, either party may make a Claim therefor as provided in Paragraph 10.05.
- F. If after receipt of such written notice Contractor does not agree to resume such Work based on a reasonable belief it is unsafe, or does not agree to resume such Work under such special conditions, then Owner may order the portion of the Work that is in the area affected by such condition to be deleted from the Work. If Owner and Contractor cannot agree as to entitlement to or on the amount or extent, if any, of an adjustment in Contract Price or Contract Times as a result of deleting such portion of the Work, then either party may make a Claim therefor as provided in Paragraph 10.05. Owner may have such deleted portion of the Work performed by Owner's own forces or others in accordance with Article 7.
- G. To the fullest extent permitted by Laws and Regulations, Owner shall indemnify and hold harmless Contractor, Subcontractors, and Engineer, and the officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to a Hazardous Environmental Condition, provided that such Hazardous Environmental Condition: (i) was not shown or indicated in the Drawings or Specifications or identified in the Contract Documents to be included within the scope of the Work, and (ii) was not created by Contractor or by anyone for whom Contractor is responsible. Nothing in this Paragraph 4.06.G shall obligate Owner to indemnify any individual or entity from and against the consequences of that individual's or entity's own negligence.
- H. To the fullest extent permitted by Laws and Regulations, Contractor shall indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to a Hazardous Environmental Condition created by Contractor or by anyone for whom Contractor is responsible. Nothing in this Paragraph 4.06.H shall obligate Contractor to indemnify any individual or entity from and against the consequences of that individual's or entity's own negligence.

- I. The provisions of Paragraphs 4.02, 4.03, and 4.04 do not apply to a Hazardous Environmental Condition uncovered or revealed at the Site.

ARTICLE 5 – BONDS AND INSURANCE

5.01 *Performance, Payment, and Other Bonds*

- A. Contractor shall furnish performance and payment bonds, each in an amount at least equal to the Contract Price as security for the faithful performance and payment of all of Contractor's obligations under the Contract Documents. These bonds shall remain in effect until one year after the date when final payment becomes due or until completion of the correction period specified in Paragraph 13.07, whichever is later, except as provided otherwise by Laws or Regulations or by the Contract Documents. Contractor shall also furnish such other bonds as are required by the Contract Documents.
- B. All bonds shall be in the form prescribed by the Contract Documents except as provided otherwise by Laws or Regulations, and shall be executed by such sureties as are named in the list of "Companies Holding Certificates of Authority as Acceptable Sureties on Federal Bonds and as Acceptable Reinsuring Companies" as published in Circular 570 (amended) by the Financial Management Service, Surety Bond Branch, U.S. Department of the Treasury. All bonds signed by an agent or attorney-in-fact must be accompanied by a certified copy of that individual's authority to bind the surety. The evidence of authority shall show that it is effective on the date the agent or attorney-in-fact signed each bond.
- C. If the surety on any bond furnished by Contractor is declared bankrupt or becomes insolvent or its right to do business is terminated in any state where any part of the Project is located or it ceases to meet the requirements of Paragraph 5.01.B, Contractor shall promptly notify Owner and Engineer and shall, within 20 days after the event giving rise to such notification, provide another bond and surety, both of which shall comply with the requirements of Paragraphs 5.01.B and 5.02.

5.02 *Licensed Sureties and Insurers*

- A. All bonds and insurance required by the Contract Documents to be purchased and maintained by Owner or Contractor shall be obtained from surety or insurance companies that are duly licensed or authorized in the jurisdiction in which the Project is located to issue bonds or insurance policies for the limits and coverages so required. Such surety and insurance companies shall also meet such additional requirements and qualifications as may be provided in the Supplementary Conditions.

5.03 *Certificates of Insurance*

- A. Contractor shall deliver to Owner, with copies to each additional insured and loss payee identified in the Supplementary Conditions, certificates of insurance (and other evidence of insurance requested by Owner or any other additional insured) which Contractor is required to purchase and maintain.

- B. Owner shall deliver to Contractor, with copies to each additional insured and loss payee identified in the Supplementary Conditions, certificates of insurance (and other evidence of insurance requested by Contractor or any other additional insured) which Owner is required to purchase and maintain.
- C. Failure of Owner to demand such certificates or other evidence of Contractor's full compliance with these insurance requirements or failure of Owner to identify a deficiency in compliance from the evidence provided shall not be construed as a waiver of Contractor's obligation to maintain such insurance.
- D. Owner does not represent that insurance coverage and limits established in this Contract necessarily will be adequate to protect Contractor.
- E. The insurance and insurance limits required herein shall not be deemed as a limitation on Contractor's liability under the indemnities granted to Owner in the Contract Documents.

5.04 *Contractor's Insurance*

- A. Contractor shall purchase and maintain such insurance as is appropriate for the Work being performed and as will provide protection from claims set forth below which may arise out of or result from Contractor's performance of the Work and Contractor's other obligations under the Contract Documents, whether it is to be performed by Contractor, any Subcontractor or Supplier, or by anyone directly or indirectly employed by any of them to perform any of the Work, or by anyone for whose acts any of them may be liable:
 - 1. claims under workers' compensation, disability benefits, and other similar employee benefit acts;
 - 2. claims for damages because of bodily injury, occupational sickness or disease, or death of Contractor's employees;
 - 3. claims for damages because of bodily injury, sickness or disease, or death of any person other than Contractor's employees;
 - 4. claims for damages insured by reasonably available personal injury liability coverage which are sustained:
 - a. by any person as a result of an offense directly or indirectly related to the employment of such person by Contractor, or
 - b. by any other person for any other reason;
 - 5. claims for damages, other than to the Work itself, because of injury to or destruction of tangible property wherever located, including loss of use resulting therefrom; and
 - 6. claims for damages because of bodily injury or death of any person or property damage arising out of the ownership, maintenance or use of any motor vehicle.
- B. The policies of insurance required by this Paragraph 5.04 shall:

1. with respect to insurance required by Paragraphs 5.04.A.3 through 5.04.A.6 inclusive, be written on an occurrence basis, include as additional insureds (subject to any customary exclusion regarding professional liability) Owner and Engineer, and any other individuals or entities identified in the Supplementary Conditions, all of whom shall be listed as additional insureds, and include coverage for the respective officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of all such additional insureds, and the insurance afforded to these additional insureds shall provide primary coverage for all claims covered thereby;
2. include at least the specific coverages and be written for not less than the limits of liability provided in the Supplementary Conditions or required by Laws or Regulations, whichever is greater;
3. include contractual liability insurance covering Contractor's indemnity obligations under Paragraphs 6.11 and 6.20;
4. contain a provision or endorsement that the coverage afforded will not be canceled, materially changed or renewal refused until at least 30 days prior written notice has been given to Owner and Contractor and to each other additional insured identified in the Supplementary Conditions to whom a certificate of insurance has been issued (and the certificates of insurance furnished by the Contractor pursuant to Paragraph 5.03 will so provide);
5. remain in effect at least until final payment and at all times thereafter when Contractor may be correcting, removing, or replacing defective Work in accordance with Paragraph 13.07; and
6. include completed operations coverage:
 - a. Such insurance shall remain in effect for two years after final payment.
 - b. Contractor shall furnish Owner and each other additional insured identified in the Supplementary Conditions, to whom a certificate of insurance has been issued, evidence satisfactory to Owner and any such additional insured of continuation of such insurance at final payment and one year thereafter.

5.05 *Owner's Liability Insurance*

- A. In addition to the insurance required to be provided by Contractor under Paragraph 5.04, Owner, at Owner's option, may purchase and maintain at Owner's expense Owner's own liability insurance as will protect Owner against claims which may arise from operations under the Contract Documents.

5.06 *Property Insurance*

- A. Unless otherwise provided in the Supplementary Conditions, Owner shall purchase and maintain property insurance upon the Work at the Site in the amount of the full replacement cost thereof (subject to such deductible amounts as may be provided in the Supplementary Conditions or required by Laws and Regulations). This insurance shall:

1. include the interests of Owner, Contractor, Subcontractors, and Engineer, and any other individuals or entities identified in the Supplementary Conditions, and the officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them, each of whom is deemed to have an insurable interest and shall be listed as a loss payee;
 2. be written on a Builder's Risk "all-risk" policy form that shall at least include insurance for physical loss or damage to the Work, temporary buildings, falsework, and materials and equipment in transit, and shall insure against at least the following perils or causes of loss: fire, lightning, extended coverage, theft, vandalism and malicious mischief, earthquake, collapse, debris removal, demolition occasioned by enforcement of Laws and Regulations, water damage (other than that caused by flood), and such other perils or causes of loss as may be specifically required by the Supplementary Conditions.
 3. include expenses incurred in the repair or replacement of any insured property (including but not limited to fees and charges of engineers and architects);
 4. cover materials and equipment stored at the Site or at another location that was agreed to in writing by Owner prior to being incorporated in the Work, provided that such materials and equipment have been included in an Application for Payment recommended by Engineer;
 5. allow for partial utilization of the Work by Owner;
 6. include testing and startup; and
 7. be maintained in effect until final payment is made unless otherwise agreed to in writing by Owner, Contractor, and Engineer with 30 days written notice to each other loss payee to whom a certificate of insurance has been issued.
- B. Owner shall purchase and maintain such equipment breakdown insurance or additional property insurance as may be required by the Supplementary Conditions or Laws and Regulations which will include the interests of Owner, Contractor, Subcontractors, and Engineer, and any other individuals or entities identified in the Supplementary Conditions, and the officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them, each of whom is deemed to have an insurable interest and shall be listed as a loss payee.
- C. All the policies of insurance (and the certificates or other evidence thereof) required to be purchased and maintained in accordance with this Paragraph 5.06 will contain a provision or endorsement that the coverage afforded will not be canceled or materially changed or renewal refused until at least 30 days prior written notice has been given to Owner and Contractor and to each other loss payee to whom a certificate of insurance has been issued and will contain waiver provisions in accordance with Paragraph 5.07.
- D. Owner shall not be responsible for purchasing and maintaining any property insurance specified in this Paragraph 5.06 to protect the interests of Contractor, Subcontractors, or others in the Work to the extent of any deductible amounts that are identified in the Supplementary Conditions. The risk of loss within such identified deductible amount will be borne by Contractor, Subcontractors, or others suffering any such loss, and if any of them wishes property

insurance coverage within the limits of such amounts, each may purchase and maintain it at the purchaser's own expense.

- E. If Contractor requests in writing that other special insurance be included in the property insurance policies provided under this Paragraph 5.06, Owner shall, if possible, include such insurance, and the cost thereof will be charged to Contractor by appropriate Change Order. Prior to commencement of the Work at the Site, Owner shall in writing advise Contractor whether or not such other insurance has been procured by Owner.

5.07 *Waiver of Rights*

- A. Owner and Contractor intend that all policies purchased in accordance with Paragraph 5.06 will protect Owner, Contractor, Subcontractors, and Engineer, and all other individuals or entities identified in the Supplementary Conditions as loss payees (and the officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them) in such policies and will provide primary coverage for all losses and damages caused by the perils or causes of loss covered thereby. All such policies shall contain provisions to the effect that in the event of payment of any loss or damage the insurers will have no rights of recovery against any of the insureds or loss payees thereunder. Owner and Contractor waive all rights against each other and their respective officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them for all losses and damages caused by, arising out of or resulting from any of the perils or causes of loss covered by such policies and any other property insurance applicable to the Work; and, in addition, waive all such rights against Subcontractors and Engineer, and all other individuals or entities identified in the Supplementary Conditions as loss payees (and the officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them) under such policies for losses and damages so caused. None of the above waivers shall extend to the rights that any party making such waiver may have to the proceeds of insurance held by Owner as trustee or otherwise payable under any policy so issued.
- B. Owner waives all rights against Contractor, Subcontractors, and Engineer, and the officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them for:
1. loss due to business interruption, loss of use, or other consequential loss extending beyond direct physical loss or damage to Owner's property or the Work caused by, arising out of, or resulting from fire or other perils whether or not insured by Owner; and
 2. loss or damage to the completed Project or part thereof caused by, arising out of, or resulting from fire or other insured peril or cause of loss covered by any property insurance maintained on the completed Project or part thereof by Owner during partial utilization pursuant to Paragraph 14.05, after Substantial Completion pursuant to Paragraph 14.04, or after final payment pursuant to Paragraph 14.07.
- C. Any insurance policy maintained by Owner covering any loss, damage or consequential loss referred to in Paragraph 5.07.B shall contain provisions to the effect that in the event of payment of any such loss, damage, or consequential loss, the insurers will have no rights of recovery

against Contractor, Subcontractors, or Engineer, and the officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them.

5.08 *Receipt and Application of Insurance Proceeds*

- A. Any insured loss under the policies of insurance required by Paragraph 5.06 will be adjusted with Owner and made payable to Owner as fiduciary for the loss payees, as their interests may appear, subject to the requirements of any applicable mortgage clause and of Paragraph 5.08.B. Owner shall deposit in a separate account any money so received and shall distribute it in accordance with such agreement as the parties in interest may reach. If no other special agreement is reached, the damaged Work shall be repaired or replaced, the moneys so received applied on account thereof, and the Work and the cost thereof covered by an appropriate Change Order.
- B. Owner as fiduciary shall have power to adjust and settle any loss with the insurers unless one of the parties in interest shall object in writing within 15 days after the occurrence of loss to Owner's exercise of this power. If such objection be made, Owner as fiduciary shall make settlement with the insurers in accordance with such agreement as the parties in interest may reach. If no such agreement among the parties in interest is reached, Owner as fiduciary shall adjust and settle the loss with the insurers and, if required in writing by any party in interest, Owner as fiduciary shall give bond for the proper performance of such duties.

5.09 *Acceptance of Bonds and Insurance; Option to Replace*

- A. If either Owner or Contractor has any objection to the coverage afforded by or other provisions of the bonds or insurance required to be purchased and maintained by the other party in accordance with Article 5 on the basis of non-conformance with the Contract Documents, the objecting party shall so notify the other party in writing within 10 days after receipt of the certificates (or other evidence requested) required by Paragraph 2.01.B. Owner and Contractor shall each provide to the other such additional information in respect of insurance provided as the other may reasonably request. If either party does not purchase or maintain all of the bonds and insurance required of such party by the Contract Documents, such party shall notify the other party in writing of such failure to purchase prior to the start of the Work, or of such failure to maintain prior to any change in the required coverage. Without prejudice to any other right or remedy, the other party may elect to obtain equivalent bonds or insurance to protect such other party's interests at the expense of the party who was required to provide such coverage, and a Change Order shall be issued to adjust the Contract Price accordingly.

5.10 *Partial Utilization, Acknowledgment of Property Insurer*

- A. If Owner finds it necessary to occupy or use a portion or portions of the Work prior to Substantial Completion of all the Work as provided in Paragraph 14.05, no such use or occupancy shall commence before the insurers providing the property insurance pursuant to Paragraph 5.06 have acknowledged notice thereof and in writing effected any changes in coverage necessitated thereby. The insurers providing the property insurance shall consent by endorsement on the policy or policies, but the property insurance shall not be canceled or permitted to lapse on account of any such partial use or occupancy.

ARTICLE 6 – CONTRACTOR’S RESPONSIBILITIES6.01 *Supervision and Superintendence*

- A. Contractor shall supervise, inspect, and direct the Work competently and efficiently, devoting such attention thereto and applying such skills and expertise as may be necessary to perform the Work in accordance with the Contract Documents. Contractor shall be solely responsible for the means, methods, techniques, sequences, and procedures of construction. Contractor shall not be responsible for the negligence of Owner or Engineer in the design or specification of a specific means, method, technique, sequence, or procedure of construction which is shown or indicated in and expressly required by the Contract Documents.
- B. At all times during the progress of the Work, Contractor shall assign a competent resident superintendent who shall not be replaced without written notice to Owner and Engineer except under extraordinary circumstances.

6.02 *Labor; Working Hours*

- A. Contractor shall provide competent, suitably qualified personnel to survey and lay out the Work and perform construction as required by the Contract Documents. Contractor shall at all times maintain good discipline and order at the Site.
- B. Except as otherwise required for the safety or protection of persons or the Work or property at the Site or adjacent thereto, and except as otherwise stated in the Contract Documents, all Work at the Site shall be performed during regular working hours. Contractor will not permit the performance of Work on a Saturday, Sunday, or any legal holiday without Owner’s written consent (which will not be unreasonably withheld) given after prior written notice to Engineer.

6.03 *Services, Materials, and Equipment*

- A. Unless otherwise specified in the Contract Documents, Contractor shall provide and assume full responsibility for all services, materials, equipment, labor, transportation, construction equipment and machinery, tools, appliances, fuel, power, light, heat, telephone, water, sanitary facilities, temporary facilities, and all other facilities and incidentals necessary for the performance, testing, start-up, and completion of the Work.
- B. All materials and equipment incorporated into the Work shall be as specified or, if not specified, shall be of good quality and new, except as otherwise provided in the Contract Documents. All special warranties and guarantees required by the Specifications shall expressly run to the benefit of Owner. If required by Engineer, Contractor shall furnish satisfactory evidence (including reports of required tests) as to the source, kind, and quality of materials and equipment.
- C. All materials and equipment shall be stored, applied, installed, connected, erected, protected, used, cleaned, and conditioned in accordance with instructions of the applicable Supplier, except as otherwise may be provided in the Contract Documents.

6.04 *Progress Schedule*

- A. Contractor shall adhere to the Progress Schedule established in accordance with Paragraph 2.07 as it may be adjusted from time to time as provided below.
1. Contractor shall submit to Engineer for acceptance (to the extent indicated in Paragraph 2.07) proposed adjustments in the Progress Schedule that will not result in changing the Contract Times. Such adjustments will comply with any provisions of the General Requirements applicable thereto.
 2. Proposed adjustments in the Progress Schedule that will change the Contract Times shall be submitted in accordance with the requirements of Article 12. Adjustments in Contract Times may only be made by a Change Order.

6.05 *Substitutes and "Or-Equals"*

- A. Whenever an item of material or equipment is specified or described in the Contract Documents by using the name of a proprietary item or the name of a particular Supplier, the specification or description is intended to establish the type, function, appearance, and quality required. Unless the specification or description contains or is followed by words reading that no like, equivalent, or "or-equal" item or no substitution is permitted, other items of material or equipment or material or equipment of other Suppliers may be submitted to Engineer for review under the circumstances described below.
1. *"Or-Equal" Items:* If in Engineer's sole discretion an item of material or equipment proposed by Contractor is functionally equal to that named and sufficiently similar so that no change in related Work will be required, it may be considered by Engineer as an "or-equal" item, in which case review and approval of the proposed item may, in Engineer's sole discretion, be accomplished without compliance with some or all of the requirements for approval of proposed substitute items. For the purposes of this Paragraph 6.05.A.1, a proposed item of material or equipment will be considered functionally equal to an item so named if:
 - a. in the exercise of reasonable judgment Engineer determines that:
 - 1) it is at least equal in materials of construction, quality, durability, appearance, strength, and design characteristics;
 - 2) it will reliably perform at least equally well the function and achieve the results imposed by the design concept of the completed Project as a functioning whole; and
 - 3) it has a proven record of performance and availability of responsive service.
 - b. Contractor certifies that, if approved and incorporated into the Work:
 - 1) there will be no increase in cost to the Owner or increase in Contract Times; and
 - 2) it will conform substantially to the detailed requirements of the item named in the Contract Documents.

2. *Substitute Items:*

- a. If in Engineer's sole discretion an item of material or equipment proposed by Contractor does not qualify as an "or-equal" item under Paragraph 6.05.A.1, it will be considered a proposed substitute item.
- b. Contractor shall submit sufficient information as provided below to allow Engineer to determine if the item of material or equipment proposed is essentially equivalent to that named and an acceptable substitute therefor. Requests for review of proposed substitute items of material or equipment will not be accepted by Engineer from anyone other than Contractor.
- c. The requirements for review by Engineer will be as set forth in Paragraph 6.05.A.2.d, as supplemented by the General Requirements, and as Engineer may decide is appropriate under the circumstances.
- d. Contractor shall make written application to Engineer for review of a proposed substitute item of material or equipment that Contractor seeks to furnish or use. The application:
 - 1) shall certify that the proposed substitute item will:
 - a) perform adequately the functions and achieve the results called for by the general design,
 - b) be similar in substance to that specified, and
 - c) be suited to the same use as that specified;
 - 2) will state:
 - a) the extent, if any, to which the use of the proposed substitute item will prejudice Contractor's achievement of Substantial Completion on time,
 - b) whether use of the proposed substitute item in the Work will require a change in any of the Contract Documents (or in the provisions of any other direct contract with Owner for other work on the Project) to adapt the design to the proposed substitute item, and
 - c) whether incorporation or use of the proposed substitute item in connection with the Work is subject to payment of any license fee or royalty;
 - 3) will identify:
 - a) all variations of the proposed substitute item from that specified, and
 - b) available engineering, sales, maintenance, repair, and replacement services; and

- 4) shall contain an itemized estimate of all costs or credits that will result directly or indirectly from use of such substitute item, including costs of redesign and claims of other contractors affected by any resulting change.
- B. *Substitute Construction Methods or Procedures:* If a specific means, method, technique, sequence, or procedure of construction is expressly required by the Contract Documents, Contractor may furnish or utilize a substitute means, method, technique, sequence, or procedure of construction approved by Engineer. Contractor shall submit sufficient information to allow Engineer, in Engineer's sole discretion, to determine that the substitute proposed is equivalent to that expressly called for by the Contract Documents. The requirements for review by Engineer will be similar to those provided in Paragraph 6.05.A.2.
- C. *Engineer's Evaluation:* Engineer will be allowed a reasonable time within which to evaluate each proposal or submittal made pursuant to Paragraphs 6.05.A and 6.05.B. Engineer may require Contractor to furnish additional data about the proposed substitute item. Engineer will be the sole judge of acceptability. No "or equal" or substitute will be ordered, installed or utilized until Engineer's review is complete, which will be evidenced by a Change Order in the case of a substitute and an approved Shop Drawing for an "or equal." Engineer will advise Contractor in writing of any negative determination.
- D. *Special Guarantee:* Owner may require Contractor to furnish at Contractor's expense a special performance guarantee or other surety with respect to any substitute.
- E. *Engineer's Cost Reimbursement:* Engineer will record Engineer's costs in evaluating a substitute proposed or submitted by Contractor pursuant to Paragraphs 6.05.A.2 and 6.05.B. Whether or not Engineer approves a substitute so proposed or submitted by Contractor, Contractor shall reimburse Owner for the reasonable charges of Engineer for evaluating each such proposed substitute. Contractor shall also reimburse Owner for the reasonable charges of Engineer for making changes in the Contract Documents (or in the provisions of any other direct contract with Owner) resulting from the acceptance of each proposed substitute.
- F. *Contractor's Expense:* Contractor shall provide all data in support of any proposed substitute or "or-equal" at Contractor's expense.

6.06 *Concerning Subcontractors, Suppliers, and Others*

- A. Contractor shall not employ any Subcontractor, Supplier, or other individual or entity (including those acceptable to Owner as indicated in Paragraph 6.06.B), whether initially or as a replacement, against whom Owner may have reasonable objection. Contractor shall not be required to employ any Subcontractor, Supplier, or other individual or entity to furnish or perform any of the Work against whom Contractor has reasonable objection.
- B. If the Supplementary Conditions require the identity of certain Subcontractors, Suppliers, or other individuals or entities to be submitted to Owner in advance for acceptance by Owner by a specified date prior to the Effective Date of the Agreement, and if Contractor has submitted a list thereof in accordance with the Supplementary Conditions, Owner's acceptance (either in writing or by failing to make written objection thereto by the date indicated for acceptance or objection in the Bidding Documents or the Contract Documents) of any such Subcontractor, Supplier, or

other individual or entity so identified may be revoked on the basis of reasonable objection after due investigation. Contractor shall submit an acceptable replacement for the rejected Subcontractor, Supplier, or other individual or entity, and the Contract Price will be adjusted by the difference in the cost occasioned by such replacement, and an appropriate Change Order will be issued. No acceptance by Owner of any such Subcontractor, Supplier, or other individual or entity, whether initially or as a replacement, shall constitute a waiver of any right of Owner or Engineer to reject defective Work.

- C. Contractor shall be fully responsible to Owner and Engineer for all acts and omissions of the Subcontractors, Suppliers, and other individuals or entities performing or furnishing any of the Work just as Contractor is responsible for Contractor's own acts and omissions. Nothing in the Contract Documents:
1. shall create for the benefit of any such Subcontractor, Supplier, or other individual or entity any contractual relationship between Owner or Engineer and any such Subcontractor, Supplier or other individual or entity; nor
 2. shall create any obligation on the part of Owner or Engineer to pay or to see to the payment of any moneys due any such Subcontractor, Supplier, or other individual or entity except as may otherwise be required by Laws and Regulations.
- D. Contractor shall be solely responsible for scheduling and coordinating the Work of Subcontractors, Suppliers, and other individuals or entities performing or furnishing any of the Work under a direct or indirect contract with Contractor.
- E. Contractor shall require all Subcontractors, Suppliers, and such other individuals or entities performing or furnishing any of the Work to communicate with Engineer through Contractor.
- F. The divisions and sections of the Specifications and the identifications of any Drawings shall not control Contractor in dividing the Work among Subcontractors or Suppliers or delineating the Work to be performed by any specific trade.
- G. All Work performed for Contractor by a Subcontractor or Supplier will be pursuant to an appropriate agreement between Contractor and the Subcontractor or Supplier which specifically binds the Subcontractor or Supplier to the applicable terms and conditions of the Contract Documents for the benefit of Owner and Engineer. Whenever any such agreement is with a Subcontractor or Supplier who is listed as a loss payee on the property insurance provided in Paragraph 5.06, the agreement between the Contractor and the Subcontractor or Supplier will contain provisions whereby the Subcontractor or Supplier waives all rights against Owner, Contractor, Engineer, and all other individuals or entities identified in the Supplementary Conditions to be listed as insureds or loss payees (and the officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them) for all losses and damages caused by, arising out of, relating to, or resulting from any of the perils or causes of loss covered by such policies and any other property insurance applicable to the Work. If the insurers on any such policies require separate waiver forms to be signed by any Subcontractor or Supplier, Contractor will obtain the same.

6.07 *Patent Fees and Royalties*

- A. Contractor shall pay all license fees and royalties and assume all costs incident to the use in the performance of the Work or the incorporation in the Work of any invention, design, process, product, or device which is the subject of patent rights or copyrights held by others. If a particular invention, design, process, product, or device is specified in the Contract Documents for use in the performance of the Work and if, to the actual knowledge of Owner or Engineer, its use is subject to patent rights or copyrights calling for the payment of any license fee or royalty to others, the existence of such rights shall be disclosed by Owner in the Contract Documents.
- B. To the fullest extent permitted by Laws and Regulations, Owner shall indemnify and hold harmless Contractor, and its officers, directors, members, partners, employees, agents, consultants, and subcontractors from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals, and all court or arbitration or other dispute resolution costs) arising out of or relating to any infringement of patent rights or copyrights incident to the use in the performance of the Work or resulting from the incorporation in the Work of any invention, design, process, product, or device specified in the Contract Documents, but not identified as being subject to payment of any license fee or royalty to others required by patent rights or copyrights.
- C. To the fullest extent permitted by Laws and Regulations, Contractor shall indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to any infringement of patent rights or copyrights incident to the use in the performance of the Work or resulting from the incorporation in the Work of any invention, design, process, product, or device not specified in the Contract Documents.

6.08 *Permits*

- A. Unless otherwise provided in the Supplementary Conditions, Contractor shall obtain and pay for all construction permits and licenses. Owner shall assist Contractor, when necessary, in obtaining such permits and licenses. Contractor shall pay all governmental charges and inspection fees necessary for the prosecution of the Work which are applicable at the time of opening of Bids, or, if there are no Bids, on the Effective Date of the Agreement. Owner shall pay all charges of utility owners for connections for providing permanent service to the Work.

6.09 *Laws and Regulations*

- A. Contractor shall give all notices required by and shall comply with all Laws and Regulations applicable to the performance of the Work. Except where otherwise expressly required by applicable Laws and Regulations, neither Owner nor Engineer shall be responsible for monitoring Contractor's compliance with any Laws or Regulations.
- B. If Contractor performs any Work knowing or having reason to know that it is contrary to Laws or Regulations, Contractor shall bear all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all

court or arbitration or other dispute resolution costs) arising out of or relating to such Work. However, it shall not be Contractor's responsibility to make certain that the Specifications and Drawings are in accordance with Laws and Regulations, but this shall not relieve Contractor of Contractor's obligations under Paragraph 3.03.

- C. Changes in Laws or Regulations not known at the time of opening of Bids (or, on the Effective Date of the Agreement if there were no Bids) having an effect on the cost or time of performance of the Work shall be the subject of an adjustment in Contract Price or Contract Times. If Owner and Contractor are unable to agree on an entitlement to or on the amount or extent, if any, of any such adjustment, a Claim may be made therefor as provided in Paragraph 10.05.

6.10 Taxes

- A. Contractor shall pay all sales, consumer, use, and other similar taxes required to be paid by Contractor in accordance with the Laws and Regulations of the place of the Project which are applicable during the performance of the Work.

6.11 Use of Site and Other Areas

A. Limitation on Use of Site and Other Areas:

1. Contractor shall confine construction equipment, the storage of materials and equipment, and the operations of workers to the Site and other areas permitted by Laws and Regulations, and shall not unreasonably encumber the Site and other areas with construction equipment or other materials or equipment. Contractor shall assume full responsibility for any damage to any such land or area, or to the owner or occupant thereof, or of any adjacent land or areas resulting from the performance of the Work.
2. Should any claim be made by any such owner or occupant because of the performance of the Work, Contractor shall promptly settle with such other party by negotiation or otherwise resolve the claim by arbitration or other dispute resolution proceeding or at law.
3. To the fullest extent permitted by Laws and Regulations, Contractor shall indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to any claim or action, legal or equitable, brought by any such owner or occupant against Owner, Engineer, or any other party indemnified hereunder to the extent caused by or based upon Contractor's performance of the Work.

- B. *Removal of Debris During Performance of the Work:* During the progress of the Work Contractor shall keep the Site and other areas free from accumulations of waste materials, rubbish, and other debris. Removal and disposal of such waste materials, rubbish, and other debris shall conform to applicable Laws and Regulations.

- C. *Cleaning:* Prior to Substantial Completion of the Work Contractor shall clean the Site and the Work and make it ready for utilization by Owner. At the completion of the Work Contractor

shall remove from the Site all tools, appliances, construction equipment and machinery, and surplus materials and shall restore to original condition all property not designated for alteration by the Contract Documents.

- D. *Loading Structures:* Contractor shall not load nor permit any part of any structure to be loaded in any manner that will endanger the structure, nor shall Contractor subject any part of the Work or adjacent property to stresses or pressures that will endanger it.

6.12 *Record Documents*

- A. Contractor shall maintain in a safe place at the Site one record copy of all Drawings, Specifications, Addenda, Change Orders, Work Change Directives, Field Orders, and written interpretations and clarifications in good order and annotated to show changes made during construction. These record documents together with all approved Samples and a counterpart of all approved Shop Drawings will be available to Engineer for reference. Upon completion of the Work, these record documents, Samples, and Shop Drawings will be delivered to Engineer for Owner.

6.13 *Safety and Protection*

- A. Contractor shall be solely responsible for initiating, maintaining and supervising all safety precautions and programs in connection with the Work. Such responsibility does not relieve Subcontractors of their responsibility for the safety of persons or property in the performance of their work, nor for compliance with applicable safety Laws and Regulations. Contractor shall take all necessary precautions for the safety of, and shall provide the necessary protection to prevent damage, injury or loss to:
1. all persons on the Site or who may be affected by the Work;
 2. all the Work and materials and equipment to be incorporated therein, whether in storage on or off the Site; and
 3. other property at the Site or adjacent thereto, including trees, shrubs, lawns, walks, pavements, roadways, structures, utilities, and Underground Facilities not designated for removal, relocation, or replacement in the course of construction.
- B. Contractor shall comply with all applicable Laws and Regulations relating to the safety of persons or property, or to the protection of persons or property from damage, injury, or loss; and shall erect and maintain all necessary safeguards for such safety and protection. Contractor shall notify owners of adjacent property and of Underground Facilities and other utility owners when prosecution of the Work may affect them, and shall cooperate with them in the protection, removal, relocation, and replacement of their property.
- C. Contractor shall comply with the applicable requirements of Owner's safety programs, if any. The Supplementary Conditions identify any Owner's safety programs that are applicable to the Work.

- D. Contractor shall inform Owner and Engineer of the specific requirements of Contractor's safety program with which Owner's and Engineer's employees and representatives must comply while at the Site.
- E. All damage, injury, or loss to any property referred to in Paragraph 6.13.A.2 or 6.13.A.3 caused, directly or indirectly, in whole or in part, by Contractor, any Subcontractor, Supplier, or any other individual or entity directly or indirectly employed by any of them to perform any of the Work, or anyone for whose acts any of them may be liable, shall be remedied by Contractor (except damage or loss attributable to the fault of Drawings or Specifications or to the acts or omissions of Owner or Engineer or anyone employed by any of them, or anyone for whose acts any of them may be liable, and not attributable, directly or indirectly, in whole or in part, to the fault or negligence of Contractor or any Subcontractor, Supplier, or other individual or entity directly or indirectly employed by any of them).
- F. Contractor's duties and responsibilities for safety and for protection of the Work shall continue until such time as all the Work is completed and Engineer has issued a notice to Owner and Contractor in accordance with Paragraph 14.07.B that the Work is acceptable (except as otherwise expressly provided in connection with Substantial Completion).

6.14 *Safety Representative*

- A. Contractor shall designate a qualified and experienced safety representative at the Site whose duties and responsibilities shall be the prevention of accidents and the maintaining and supervising of safety precautions and programs.

6.15 *Hazard Communication Programs*

- A. Contractor shall be responsible for coordinating any exchange of material safety data sheets or other hazard communication information required to be made available to or exchanged between or among employers at the Site in accordance with Laws or Regulations.

6.16 *Emergencies*

- A. In emergencies affecting the safety or protection of persons or the Work or property at the Site or adjacent thereto, Contractor is obligated to act to prevent threatened damage, injury, or loss. Contractor shall give Engineer prompt written notice if Contractor believes that any significant changes in the Work or variations from the Contract Documents have been caused thereby or are required as a result thereof. If Engineer determines that a change in the Contract Documents is required because of the action taken by Contractor in response to such an emergency, a Work Change Directive or Change Order will be issued.

6.17 *Shop Drawings and Samples*

- A. Contractor shall submit Shop Drawings and Samples to Engineer for review and approval in accordance with the accepted Schedule of Submittals (as required by Paragraph 2.07). Each submittal will be identified as Engineer may require.

1. *Shop Drawings:*
 - a. Submit number of copies specified in the General Requirements.
 - b. Data shown on the Shop Drawings will be complete with respect to quantities, dimensions, specified performance and design criteria, materials, and similar data to show Engineer the services, materials, and equipment Contractor proposes to provide and to enable Engineer to review the information for the limited purposes required by Paragraph 6.17.D.
2. *Samples:*
 - a. Submit number of Samples specified in the Specifications.
 - b. Clearly identify each Sample as to material, Supplier, pertinent data such as catalog numbers, the use for which intended and other data as Engineer may require to enable Engineer to review the submittal for the limited purposes required by Paragraph 6.17.D.
- B. Where a Shop Drawing or Sample is required by the Contract Documents or the Schedule of Submittals, any related Work performed prior to Engineer's review and approval of the pertinent submittal will be at the sole expense and responsibility of Contractor.
- C. *Submittal Procedures:*
 1. Before submitting each Shop Drawing or Sample, Contractor shall have:
 - a. reviewed and coordinated each Shop Drawing or Sample with other Shop Drawings and Samples and with the requirements of the Work and the Contract Documents;
 - b. determined and verified all field measurements, quantities, dimensions, specified performance and design criteria, installation requirements, materials, catalog numbers, and similar information with respect thereto;
 - c. determined and verified the suitability of all materials offered with respect to the indicated application, fabrication, shipping, handling, storage, assembly, and installation pertaining to the performance of the Work; and
 - d. determined and verified all information relative to Contractor's responsibilities for means, methods, techniques, sequences, and procedures of construction, and safety precautions and programs incident thereto.
 2. Each submittal shall bear a stamp or specific written certification that Contractor has satisfied Contractor's obligations under the Contract Documents with respect to Contractor's review and approval of that submittal.
 3. With each submittal, Contractor shall give Engineer specific written notice of any variations that the Shop Drawing or Sample may have from the requirements of the Contract Documents. This notice shall be both a written communication separate from the Shop

Drawings or Sample submittal; and, in addition, by a specific notation made on each Shop Drawing or Sample submitted to Engineer for review and approval of each such variation.

D. *Engineer's Review:*

1. Engineer will provide timely review of Shop Drawings and Samples in accordance with the Schedule of Submittals acceptable to Engineer. Engineer's review and approval will be only to determine if the items covered by the submittals will, after installation or incorporation in the Work, conform to the information given in the Contract Documents and be compatible with the design concept of the completed Project as a functioning whole as indicated by the Contract Documents.
2. Engineer's review and approval will not extend to means, methods, techniques, sequences, or procedures of construction (except where a particular means, method, technique, sequence, or procedure of construction is specifically and expressly called for by the Contract Documents) or to safety precautions or programs incident thereto. The review and approval of a separate item as such will not indicate approval of the assembly in which the item functions.
3. Engineer's review and approval shall not relieve Contractor from responsibility for any variation from the requirements of the Contract Documents unless Contractor has complied with the requirements of Paragraph 6.17.C.3 and Engineer has given written approval of each such variation by specific written notation thereof incorporated in or accompanying the Shop Drawing or Sample. Engineer's review and approval shall not relieve Contractor from responsibility for complying with the requirements of Paragraph 6.17.C.1.

E. *Resubmittal Procedures:*

1. Contractor shall make corrections required by Engineer and shall return the required number of corrected copies of Shop Drawings and submit, as required, new Samples for review and approval. Contractor shall direct specific attention in writing to revisions other than the corrections called for by Engineer on previous submittals.

6.18 *Continuing the Work*

- A. Contractor shall carry on the Work and adhere to the Progress Schedule during all disputes or disagreements with Owner. No Work shall be delayed or postponed pending resolution of any disputes or disagreements, except as permitted by Paragraph 15.04 or as Owner and Contractor may otherwise agree in writing.

6.19 *Contractor's General Warranty and Guarantee*

- A. Contractor warrants and guarantees to Owner that all Work will be in accordance with the Contract Documents and will not be defective. Engineer and its officers, directors, members, partners, employees, agents, consultants, and subcontractors shall be entitled to rely on representation of Contractor's warranty and guarantee.
- B. Contractor's warranty and guarantee hereunder excludes defects or damage caused by:

1. abuse, modification, or improper maintenance or operation by persons other than Contractor, Subcontractors, Suppliers, or any other individual or entity for whom Contractor is responsible; or
 2. normal wear and tear under normal usage.
- C. Contractor's obligation to perform and complete the Work in accordance with the Contract Documents shall be absolute. None of the following will constitute an acceptance of Work that is not in accordance with the Contract Documents or a release of Contractor's obligation to perform the Work in accordance with the Contract Documents:
1. observations by Engineer;
 2. recommendation by Engineer or payment by Owner of any progress or final payment;
 3. the issuance of a certificate of Substantial Completion by Engineer or any payment related thereto by Owner;
 4. use or occupancy of the Work or any part thereof by Owner;
 5. any review and approval of a Shop Drawing or Sample submittal or the issuance of a notice of acceptability by Engineer;
 6. any inspection, test, or approval by others; or
 7. any correction of defective Work by Owner.

6.20 *Indemnification*

- A. To the fullest extent permitted by Laws and Regulations, Contractor shall indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to the performance of the Work, provided that any such claim, cost, loss, or damage is attributable to bodily injury, sickness, disease, or death, or to injury to or destruction of tangible property (other than the Work itself), including the loss of use resulting therefrom but only to the extent caused by any negligent act or omission of Contractor, any Subcontractor, any Supplier, or any individual or entity directly or indirectly employed by any of them to perform any of the Work or anyone for whose acts any of them may be liable .
- B. In any and all claims against Owner or Engineer or any of their officers, directors, members, partners, employees, agents, consultants, or subcontractors by any employee (or the survivor or personal representative of such employee) of Contractor, any Subcontractor, any Supplier, or any individual or entity directly or indirectly employed by any of them to perform any of the Work, or anyone for whose acts any of them may be liable, the indemnification obligation under Paragraph 6.20.A shall not be limited in any way by any limitation on the amount or type of damages, compensation, or benefits payable by or for Contractor or any such Subcontractor,

Supplier, or other individual or entity under workers' compensation acts, disability benefit acts, or other employee benefit acts.

- C. The indemnification obligations of Contractor under Paragraph 6.20.A shall not extend to the liability of Engineer and Engineer's officers, directors, members, partners, employees, agents, consultants and subcontractors arising out of:
1. the preparation or approval of, or the failure to prepare or approve maps, Drawings, opinions, reports, surveys, Change Orders, designs, or Specifications; or
 2. giving directions or instructions, or failing to give them, if that is the primary cause of the injury or damage.

6.21 *Delegation of Professional Design Services*

- A. Contractor will not be required to provide professional design services unless such services are specifically required by the Contract Documents for a portion of the Work or unless such services are required to carry out Contractor's responsibilities for construction means, methods, techniques, sequences and procedures. Contractor shall not be required to provide professional services in violation of applicable law.
- B. If professional design services or certifications by a design professional related to systems, materials or equipment are specifically required of Contractor by the Contract Documents, Owner and Engineer will specify all performance and design criteria that such services must satisfy. Contractor shall cause such services or certifications to be provided by a properly licensed professional, whose signature and seal shall appear on all drawings, calculations, specifications, certifications, Shop Drawings and other submittals prepared by such professional. Shop Drawings and other submittals related to the Work designed or certified by such professional, if prepared by others, shall bear such professional's written approval when submitted to Engineer.
- C. Owner and Engineer shall be entitled to rely upon the adequacy, accuracy and completeness of the services, certifications or approvals performed by such design professionals, provided Owner and Engineer have specified to Contractor all performance and design criteria that such services must satisfy.
- D. Pursuant to this Paragraph 6.21, Engineer's review and approval of design calculations and design drawings will be only for the limited purpose of checking for conformance with performance and design criteria given and the design concept expressed in the Contract Documents. Engineer's review and approval of Shop Drawings and other submittals (except design calculations and design drawings) will be only for the purpose stated in Paragraph 6.17.D.1.
- E. Contractor shall not be responsible for the adequacy of the performance or design criteria required by the Contract Documents.

ARTICLE 7 – OTHER WORK AT THE SITE

7.01 *Related Work at Site*

- A. Owner may perform other work related to the Project at the Site with Owner's employees, or through other direct contracts therefor, or have other work performed by utility owners. If such other work is not noted in the Contract Documents, then:
1. written notice thereof will be given to Contractor prior to starting any such other work; and
 2. if Owner and Contractor are unable to agree on entitlement to or on the amount or extent, if any, of any adjustment in the Contract Price or Contract Times that should be allowed as a result of such other work, a Claim may be made therefor as provided in Paragraph 10.05.
- B. Contractor shall afford each other contractor who is a party to such a direct contract, each utility owner, and Owner, if Owner is performing other work with Owner's employees, proper and safe access to the Site, provide a reasonable opportunity for the introduction and storage of materials and equipment and the execution of such other work, and properly coordinate the Work with theirs. Contractor shall do all cutting, fitting, and patching of the Work that may be required to properly connect or otherwise make its several parts come together and properly integrate with such other work. Contractor shall not endanger any work of others by cutting, excavating, or otherwise altering such work; provided, however, that Contractor may cut or alter others' work with the written consent of Engineer and the others whose work will be affected. The duties and responsibilities of Contractor under this Paragraph are for the benefit of such utility owners and other contractors to the extent that there are comparable provisions for the benefit of Contractor in said direct contracts between Owner and such utility owners and other contractors.
- C. If the proper execution or results of any part of Contractor's Work depends upon work performed by others under this Article 7, Contractor shall inspect such other work and promptly report to Engineer in writing any delays, defects, or deficiencies in such other work that render it unavailable or unsuitable for the proper execution and results of Contractor's Work. Contractor's failure to so report will constitute an acceptance of such other work as fit and proper for integration with Contractor's Work except for latent defects and deficiencies in such other work.

7.02 *Coordination*

- A. If Owner intends to contract with others for the performance of other work on the Project at the Site, the following will be set forth in Supplementary Conditions:
1. the individual or entity who will have authority and responsibility for coordination of the activities among the various contractors will be identified;
 2. the specific matters to be covered by such authority and responsibility will be itemized; and
 3. the extent of such authority and responsibilities will be provided.
- B. Unless otherwise provided in the Supplementary Conditions, Owner shall have sole authority and responsibility for such coordination.

7.03 *Legal Relationships*

- A. Paragraphs 7.01.A and 7.02 are not applicable for utilities not under the control of Owner.
- B. Each other direct contract of Owner under Paragraph 7.01.A shall provide that the other contractor is liable to Owner and Contractor for the reasonable direct delay and disruption costs incurred by Contractor as a result of the other contractor's wrongful actions or inactions.
- C. Contractor shall be liable to Owner and any other contractor under direct contract to Owner for the reasonable direct delay and disruption costs incurred by such other contractor as a result of Contractor's wrongful action or inactions.

ARTICLE 8 – OWNER'S RESPONSIBILITIES8.01 *Communications to Contractor*

- A. Except as otherwise provided in these General Conditions, Owner shall issue all communications to Contractor through Engineer.

8.02 *Replacement of Engineer*

- A. In case of termination of the employment of Engineer, Owner shall appoint an engineer to whom Contractor makes no reasonable objection, whose status under the Contract Documents shall be that of the former Engineer.

8.03 *Furnish Data*

- A. Owner shall promptly furnish the data required of Owner under the Contract Documents.

8.04 *Pay When Due*

- A. Owner shall make payments to Contractor when they are due as provided in Paragraphs 14.02.C and 14.07.C.

8.05 *Lands and Easements; Reports and Tests*

- A. Owner's duties with respect to providing lands and easements and providing engineering surveys to establish reference points are set forth in Paragraphs 4.01 and 4.05. Paragraph 4.02 refers to Owner's identifying and making available to Contractor copies of reports of explorations and tests of subsurface conditions and drawings of physical conditions relating to existing surface or subsurface structures at the Site.

8.06 *Insurance*

- A. Owner's responsibilities, if any, with respect to purchasing and maintaining liability and property insurance are set forth in Article 5.

8.07 *Change Orders*

- A. Owner is obligated to execute Change Orders as indicated in Paragraph 10.03.

8.08 *Inspections, Tests, and Approvals*

- A. Owner's responsibility with respect to certain inspections, tests, and approvals is set forth in Paragraph 13.03.B.

8.09 *Limitations on Owner's Responsibilities*

- A. The Owner shall not supervise, direct, or have control or authority over, nor be responsible for, Contractor's means, methods, techniques, sequences, or procedures of construction, or the safety precautions and programs incident thereto, or for any failure of Contractor to comply with Laws and Regulations applicable to the performance of the Work. Owner will not be responsible for Contractor's failure to perform the Work in accordance with the Contract Documents.

8.10 *Undisclosed Hazardous Environmental Condition*

- A. Owner's responsibility in respect to an undisclosed Hazardous Environmental Condition is set forth in Paragraph 4.06.

8.11 *Evidence of Financial Arrangements*

- A. Upon request of Contractor, Owner shall furnish Contractor reasonable evidence that financial arrangements have been made to satisfy Owner's obligations under the Contract Documents.

8.12 *Compliance with Safety Program*

- A. While at the Site, Owner's employees and representatives shall comply with the specific applicable requirements of Contractor's safety programs of which Owner has been informed pursuant to Paragraph 6.13.D.

ARTICLE 9 – ENGINEER'S STATUS DURING CONSTRUCTION

9.01 *Owner's Representative*

- A. Engineer will be Owner's representative during the construction period. The duties and responsibilities and the limitations of authority of Engineer as Owner's representative during construction are set forth in the Contract Documents.

9.02 *Visits to Site*

- A. Engineer will make visits to the Site at intervals appropriate to the various stages of construction as Engineer deems necessary in order to observe as an experienced and qualified design professional the progress that has been made and the quality of the various aspects of Contractor's executed Work. Based on information obtained during such visits and observations, Engineer, for the benefit of Owner, will determine, in general, if the Work is proceeding in accordance with the Contract Documents. Engineer will not be required to make exhaustive or continuous inspections on the Site to check the quality or quantity of the Work. Engineer's efforts will be directed toward providing for Owner a greater degree of confidence that the completed Work will conform generally to the Contract Documents. On the basis of such visits

and observations, Engineer will keep Owner informed of the progress of the Work and will endeavor to guard Owner against defective Work.

- B. Engineer's visits and observations are subject to all the limitations on Engineer's authority and responsibility set forth in Paragraph 9.09. Particularly, but without limitation, during or as a result of Engineer's visits or observations of Contractor's Work, Engineer will not supervise, direct, control, or have authority over or be responsible for Contractor's means, methods, techniques, sequences, or procedures of construction, or the safety precautions and programs incident thereto, or for any failure of Contractor to comply with Laws and Regulations applicable to the performance of the Work.

9.03 *Project Representative*

- A. If Owner and Engineer agree, Engineer will furnish a Resident Project Representative to assist Engineer in providing more extensive observation of the Work. The authority and responsibilities of any such Resident Project Representative and assistants will be as provided in the Supplementary Conditions, and limitations on the responsibilities thereof will be as provided in Paragraph 9.09. If Owner designates another representative or agent to represent Owner at the Site who is not Engineer's consultant, agent or employee, the responsibilities and authority and limitations thereon of such other individual or entity will be as provided in the Supplementary Conditions.

9.04 *Authorized Variations in Work*

- A. Engineer may authorize minor variations in the Work from the requirements of the Contract Documents which do not involve an adjustment in the Contract Price or the Contract Times and are compatible with the design concept of the completed Project as a functioning whole as indicated by the Contract Documents. These may be accomplished by a Field Order and will be binding on Owner and also on Contractor, who shall perform the Work involved promptly. If Owner or Contractor believes that a Field Order justifies an adjustment in the Contract Price or Contract Times, or both, and the parties are unable to agree on entitlement to or on the amount or extent, if any, of any such adjustment, a Claim may be made therefor as provided in Paragraph 10.05.

9.05 *Rejecting Defective Work*

- A. Engineer will have authority to reject Work which Engineer believes to be defective, or that Engineer believes will not produce a completed Project that conforms to the Contract Documents or that will prejudice the integrity of the design concept of the completed Project as a functioning whole as indicated by the Contract Documents. Engineer will also have authority to require special inspection or testing of the Work as provided in Paragraph 13.04, whether or not the Work is fabricated, installed, or completed.

9.06 *Shop Drawings, Change Orders and Payments*

- A. In connection with Engineer's authority, and limitations thereof, as to Shop Drawings and Samples, see Paragraph 6.17.

- B. In connection with Engineer's authority, and limitations thereof, as to design calculations and design drawings submitted in response to a delegation of professional design services, if any, see Paragraph 6.21.
- C. In connection with Engineer's authority as to Change Orders, see Articles 10, 11, and 12.
- D. In connection with Engineer's authority as to Applications for Payment, see Article 14.

9.07 *Determinations for Unit Price Work*

- A. Engineer will determine the actual quantities and classifications of Unit Price Work performed by Contractor. Engineer will review with Contractor the Engineer's preliminary determinations on such matters before rendering a written decision thereon (by recommendation of an Application for Payment or otherwise). Engineer's written decision thereon will be final and binding (except as modified by Engineer to reflect changed factual conditions or more accurate data) upon Owner and Contractor, subject to the provisions of Paragraph 10.05.

9.08 *Decisions on Requirements of Contract Documents and Acceptability of Work*

- A. Engineer will be the initial interpreter of the requirements of the Contract Documents and judge of the acceptability of the Work thereunder. All matters in question and other matters between Owner and Contractor arising prior to the date final payment is due relating to the acceptability of the Work, and the interpretation of the requirements of the Contract Documents pertaining to the performance of the Work, will be referred initially to Engineer in writing within 30 days of the event giving rise to the question.
- B. Engineer will, with reasonable promptness, render a written decision on the issue referred. If Owner or Contractor believes that any such decision entitles them to an adjustment in the Contract Price or Contract Times or both, a Claim may be made under Paragraph 10.05. The date of Engineer's decision shall be the date of the event giving rise to the issues referenced for the purposes of Paragraph 10.05.B.
- C. Engineer's written decision on the issue referred will be final and binding on Owner and Contractor, subject to the provisions of Paragraph 10.05.
- D. When functioning as interpreter and judge under this Paragraph 9.08, Engineer will not show partiality to Owner or Contractor and will not be liable in connection with any interpretation or decision rendered in good faith in such capacity.

9.09 *Limitations on Engineer's Authority and Responsibilities*

- A. Neither Engineer's authority or responsibility under this Article 9 or under any other provision of the Contract Documents nor any decision made by Engineer in good faith either to exercise or not exercise such authority or responsibility or the undertaking, exercise, or performance of any authority or responsibility by Engineer shall create, impose, or give rise to any duty in contract, tort, or otherwise owed by Engineer to Contractor, any Subcontractor, any Supplier, any other individual or entity, or to any surety for or employee or agent of any of them.

- B. Engineer will not supervise, direct, control, or have authority over or be responsible for Contractor's means, methods, techniques, sequences, or procedures of construction, or the safety precautions and programs incident thereto, or for any failure of Contractor to comply with Laws and Regulations applicable to the performance of the Work. Engineer will not be responsible for Contractor's failure to perform the Work in accordance with the Contract Documents.
- C. Engineer will not be responsible for the acts or omissions of Contractor or of any Subcontractor, any Supplier, or of any other individual or entity performing any of the Work.
- D. Engineer's review of the final Application for Payment and accompanying documentation and all maintenance and operating instructions, schedules, guarantees, bonds, certificates of inspection, tests and approvals, and other documentation required to be delivered by Paragraph 14.07.A will only be to determine generally that their content complies with the requirements of, and in the case of certificates of inspections, tests, and approvals that the results certified indicate compliance with, the Contract Documents.
- E. The limitations upon authority and responsibility set forth in this Paragraph 9.09 shall also apply to the Resident Project Representative, if any, and assistants, if any.

9.10 *Compliance with Safety Program*

- A. While at the Site, Engineer's employees and representatives shall comply with the specific applicable requirements of Contractor's safety programs of which Engineer has been informed pursuant to Paragraph 6.13.D.

ARTICLE 10 – CHANGES IN THE WORK; CLAIMS

10.01 *Authorized Changes in the Work*

- A. Without invalidating the Contract and without notice to any surety, Owner may, at any time or from time to time, order additions, deletions, or revisions in the Work by a Change Order, or a Work Change Directive. Upon receipt of any such document, Contractor shall promptly proceed with the Work involved which will be performed under the applicable conditions of the Contract Documents (except as otherwise specifically provided).
- B. If Owner and Contractor are unable to agree on entitlement to, or on the amount or extent, if any, of an adjustment in the Contract Price or Contract Times, or both, that should be allowed as a result of a Work Change Directive, a Claim may be made therefor as provided in Paragraph 10.05.

10.02 *Unauthorized Changes in the Work*

- A. Contractor shall not be entitled to an increase in the Contract Price or an extension of the Contract Times with respect to any work performed that is not required by the Contract Documents as amended, modified, or supplemented as provided in Paragraph 3.04, except in the case of an emergency as provided in Paragraph 6.16 or in the case of uncovering Work as provided in Paragraph 13.04.D.

10.03 *Execution of Change Orders*

- A. Owner and Contractor shall execute appropriate Change Orders recommended by Engineer covering:
1. changes in the Work which are: (i) ordered by Owner pursuant to Paragraph 10.01.A, (ii) required because of acceptance of defective Work under Paragraph 13.08.A or Owner's correction of defective Work under Paragraph 13.09, or (iii) agreed to by the parties;
 2. changes in the Contract Price or Contract Times which are agreed to by the parties, including any undisputed sum or amount of time for Work actually performed in accordance with a Work Change Directive; and
 3. changes in the Contract Price or Contract Times which embody the substance of any written decision rendered by Engineer pursuant to Paragraph 10.05; provided that, in lieu of executing any such Change Order, an appeal may be taken from any such decision in accordance with the provisions of the Contract Documents and applicable Laws and Regulations, but during any such appeal, Contractor shall carry on the Work and adhere to the Progress Schedule as provided in Paragraph 6.18.A.

10.04 *Notification to Surety*

- A. If the provisions of any bond require notice to be given to a surety of any change affecting the general scope of the Work or the provisions of the Contract Documents (including, but not limited to, Contract Price or Contract Times), the giving of any such notice will be Contractor's responsibility. The amount of each applicable bond will be adjusted to reflect the effect of any such change.

10.05 *Claims*

- A. *Engineer's Decision Required:* All Claims, except those waived pursuant to Paragraph 14.09, shall be referred to the Engineer for decision. A decision by Engineer shall be required as a condition precedent to any exercise by Owner or Contractor of any rights or remedies either may otherwise have under the Contract Documents or by Laws and Regulations in respect of such Claims.
- B. *Notice:* Written notice stating the general nature of each Claim shall be delivered by the claimant to Engineer and the other party to the Contract promptly (but in no event later than 30 days) after the start of the event giving rise thereto. The responsibility to substantiate a Claim shall rest with the party making the Claim. Notice of the amount or extent of the Claim, with supporting data shall be delivered to the Engineer and the other party to the Contract within 60 days after the start of such event (unless Engineer allows additional time for claimant to submit additional or more accurate data in support of such Claim). A Claim for an adjustment in Contract Price shall be prepared in accordance with the provisions of Paragraph 12.01.B. A Claim for an adjustment in Contract Times shall be prepared in accordance with the provisions of Paragraph 12.02.B. Each Claim shall be accompanied by claimant's written statement that the adjustment claimed is the entire adjustment to which the claimant believes it is entitled as a result of said event. The

opposing party shall submit any response to Engineer and the claimant within 30 days after receipt of the claimant's last submittal (unless Engineer allows additional time).

- C. *Engineer's Action:* Engineer will review each Claim and, within 30 days after receipt of the last submittal of the claimant or the last submittal of the opposing party, if any, take one of the following actions in writing:
1. deny the Claim in whole or in part;
 2. approve the Claim; or
 3. notify the parties that the Engineer is unable to resolve the Claim if, in the Engineer's sole discretion, it would be inappropriate for the Engineer to do so. For purposes of further resolution of the Claim, such notice shall be deemed a denial.
- D. In the event that Engineer does not take action on a Claim within said 30 days, the Claim shall be deemed denied.
- E. Engineer's written action under Paragraph 10.05.C or denial pursuant to Paragraphs 10.05.C.3 or 10.05.D will be final and binding upon Owner and Contractor, unless Owner or Contractor invoke the dispute resolution procedure set forth in Article 16 within 30 days of such action or denial.
- F. No Claim for an adjustment in Contract Price or Contract Times will be valid if not submitted in accordance with this Paragraph 10.05.

ARTICLE 11 – COST OF THE WORK; ALLOWANCES; UNIT PRICE WORK

11.01 *Cost of the Work*

- A. *Costs Included:* The term Cost of the Work means the sum of all costs, except those excluded in Paragraph 11.01.B, necessarily incurred and paid by Contractor in the proper performance of the Work. When the value of any Work covered by a Change Order or when a Claim for an adjustment in Contract Price is determined on the basis of Cost of the Work, the costs to be reimbursed to Contractor will be only those additional or incremental costs required because of the change in the Work or because of the event giving rise to the Claim. Except as otherwise may be agreed to in writing by Owner, such costs shall be in amounts no higher than those prevailing in the locality of the Project, shall not include any of the costs itemized in Paragraph 11.01.B, and shall include only the following items:
1. Payroll costs for employees in the direct employ of Contractor in the performance of the Work under schedules of job classifications agreed upon by Owner and Contractor. Such employees shall include, without limitation, superintendents, foremen, and other personnel employed full time on the Work. Payroll costs for employees not employed full time on the Work shall be apportioned on the basis of their time spent on the Work. Payroll costs shall include, but not be limited to, salaries and wages plus the cost of fringe benefits, which shall include social security contributions, unemployment, excise, and payroll taxes, workers' compensation, health and retirement benefits, bonuses, sick leave, vacation and holiday pay applicable thereto. The expenses of performing Work outside of regular working hours, on

Saturday, Sunday, or legal holidays, shall be included in the above to the extent authorized by Owner.

2. Cost of all materials and equipment furnished and incorporated in the Work, including costs of transportation and storage thereof, and Suppliers' field services required in connection therewith. All cash discounts shall accrue to Contractor unless Owner deposits funds with Contractor with which to make payments, in which case the cash discounts shall accrue to Owner. All trade discounts, rebates and refunds and returns from sale of surplus materials and equipment shall accrue to Owner, and Contractor shall make provisions so that they may be obtained.
3. Payments made by Contractor to Subcontractors for Work performed by Subcontractors. If required by Owner, Contractor shall obtain competitive bids from subcontractors acceptable to Owner and Contractor and shall deliver such bids to Owner, who will then determine, with the advice of Engineer, which bids, if any, will be acceptable. If any subcontract provides that the Subcontractor is to be paid on the basis of Cost of the Work plus a fee, the Subcontractor's Cost of the Work and fee shall be determined in the same manner as Contractor's Cost of the Work and fee as provided in this Paragraph 11.01.
4. Costs of special consultants (including but not limited to engineers, architects, testing laboratories, surveyors, attorneys, and accountants) employed for services specifically related to the Work.
5. Supplemental costs including the following:
 - a. The proportion of necessary transportation, travel, and subsistence expenses of Contractor's employees incurred in discharge of duties connected with the Work.
 - b. Cost, including transportation and maintenance, of all materials, supplies, equipment, machinery, appliances, office, and temporary facilities at the Site, and hand tools not owned by the workers, which are consumed in the performance of the Work, and cost, less market value, of such items used but not consumed which remain the property of Contractor.
 - c. Rentals of all construction equipment and machinery, and the parts thereof whether rented from Contractor or others in accordance with rental agreements approved by Owner with the advice of Engineer, and the costs of transportation, loading, unloading, assembly, dismantling, and removal thereof. All such costs shall be in accordance with the terms of said rental agreements. The rental of any such equipment, machinery, or parts shall cease when the use thereof is no longer necessary for the Work.
 - d. Sales, consumer, use, and other similar taxes related to the Work, and for which Contractor is liable, as imposed by Laws and Regulations.
 - e. Deposits lost for causes other than negligence of Contractor, any Subcontractor, or anyone directly or indirectly employed by any of them or for whose acts any of them may be liable, and royalty payments and fees for permits and licenses.

- f. Losses and damages (and related expenses) caused by damage to the Work, not compensated by insurance or otherwise, sustained by Contractor in connection with the performance of the Work (except losses and damages within the deductible amounts of property insurance established in accordance with Paragraph 5.06.D), provided such losses and damages have resulted from causes other than the negligence of Contractor, any Subcontractor, or anyone directly or indirectly employed by any of them or for whose acts any of them may be liable. Such losses shall include settlements made with the written consent and approval of Owner. No such losses, damages, and expenses shall be included in the Cost of the Work for the purpose of determining Contractor's fee.
- g. The cost of utilities, fuel, and sanitary facilities at the Site.
- h. Minor expenses such as telegrams, long distance telephone calls, telephone service at the Site, express and courier services, and similar petty cash items in connection with the Work.
- i. The costs of premiums for all bonds and insurance Contractor is required by the Contract Documents to purchase and maintain.

B. *Costs Excluded:* The term Cost of the Work shall not include any of the following items:

1. Payroll costs and other compensation of Contractor's officers, executives, principals (of partnerships and sole proprietorships), general managers, safety managers, engineers, architects, estimators, attorneys, auditors, accountants, purchasing and contracting agents, expeditors, timekeepers, clerks, and other personnel employed by Contractor, whether at the Site or in Contractor's principal or branch office for general administration of the Work and not specifically included in the agreed upon schedule of job classifications referred to in Paragraph 11.01.A.1 or specifically covered by Paragraph 11.01.A.4, all of which are to be considered administrative costs covered by the Contractor's fee.
2. Expenses of Contractor's principal and branch offices other than Contractor's office at the Site.
3. Any part of Contractor's capital expenses, including interest on Contractor's capital employed for the Work and charges against Contractor for delinquent payments.
4. Costs due to the negligence of Contractor, any Subcontractor, or anyone directly or indirectly employed by any of them or for whose acts any of them may be liable, including but not limited to, the correction of defective Work, disposal of materials or equipment wrongly supplied, and making good any damage to property.
5. Other overhead or general expense costs of any kind and the costs of any item not specifically and expressly included in Paragraphs 11.01.A.

C. *Contractor's Fee:* When all the Work is performed on the basis of cost-plus, Contractor's fee shall be determined as set forth in the Agreement. When the value of any Work covered by a Change Order or when a Claim for an adjustment in Contract Price is determined on the basis of Cost of the Work, Contractor's fee shall be determined as set forth in Paragraph 12.01.C.

- D. *Documentation:* Whenever the Cost of the Work for any purpose is to be determined pursuant to Paragraphs 11.01.A and 11.01.B, Contractor will establish and maintain records thereof in accordance with generally accepted accounting practices and submit in a form acceptable to Engineer an itemized cost breakdown together with supporting data.

11.02 Allowances

- A. It is understood that Contractor has included in the Contract Price all allowances so named in the Contract Documents and shall cause the Work so covered to be performed for such sums and by such persons or entities as may be acceptable to Owner and Engineer.
- B. *Cash Allowances:*
1. Contractor agrees that:
 - a. the cash allowances include the cost to Contractor (less any applicable trade discounts) of materials and equipment required by the allowances to be delivered at the Site, and all applicable taxes; and
 - b. Contractor's costs for unloading and handling on the Site, labor, installation, overhead, profit, and other expenses contemplated for the cash allowances have been included in the Contract Price and not in the allowances, and no demand for additional payment on account of any of the foregoing will be valid.
- C. *Contingency Allowance:*
1. Contractor agrees that a contingency allowance, if any, is for the sole use of Owner to cover unanticipated costs.
- D. Prior to final payment, an appropriate Change Order will be issued as recommended by Engineer to reflect actual amounts due Contractor on account of Work covered by allowances, and the Contract Price shall be correspondingly adjusted.

11.03 Unit Price Work

- A. Where the Contract Documents provide that all or part of the Work is to be Unit Price Work, initially the Contract Price will be deemed to include for all Unit Price Work an amount equal to the sum of the unit price for each separately identified item of Unit Price Work times the estimated quantity of each item as indicated in the Agreement.
- B. The estimated quantities of items of Unit Price Work are not guaranteed and are solely for the purpose of comparison of Bids and determining an initial Contract Price. Determinations of the actual quantities and classifications of Unit Price Work performed by Contractor will be made by Engineer subject to the provisions of Paragraph 9.07.
- C. Each unit price will be deemed to include an amount considered by Contractor to be adequate to cover Contractor's overhead and profit for each separately identified item.

- D. Owner or Contractor may make a Claim for an adjustment in the Contract Price in accordance with Paragraph 10.05 if:
1. the quantity of any item of Unit Price Work performed by Contractor differs materially and significantly from the estimated quantity of such item indicated in the Agreement; and
 2. there is no corresponding adjustment with respect to any other item of Work; and
 3. Contractor believes that Contractor is entitled to an increase in Contract Price as a result of having incurred additional expense or Owner believes that Owner is entitled to a decrease in Contract Price and the parties are unable to agree as to the amount of any such increase or decrease.

ARTICLE 12 – CHANGE OF CONTRACT PRICE; CHANGE OF CONTRACT TIMES

12.01 *Change of Contract Price*

- A. The Contract Price may only be changed by a Change Order. Any Claim for an adjustment in the Contract Price shall be based on written notice submitted by the party making the Claim to the Engineer and the other party to the Contract in accordance with the provisions of Paragraph 10.05.
- B. The value of any Work covered by a Change Order or of any Claim for an adjustment in the Contract Price will be determined as follows:
1. where the Work involved is covered by unit prices contained in the Contract Documents, by application of such unit prices to the quantities of the items involved (subject to the provisions of Paragraph 11.03); or
 2. where the Work involved is not covered by unit prices contained in the Contract Documents, by a mutually agreed lump sum (which may include an allowance for overhead and profit not necessarily in accordance with Paragraph 12.01.C.2); or
 3. where the Work involved is not covered by unit prices contained in the Contract Documents and agreement to a lump sum is not reached under Paragraph 12.01.B.2, on the basis of the Cost of the Work (determined as provided in Paragraph 11.01) plus a Contractor's fee for overhead and profit (determined as provided in Paragraph 12.01.C).
- C. *Contractor's Fee:* The Contractor's fee for overhead and profit shall be determined as follows:
1. a mutually acceptable fixed fee; or
 2. if a fixed fee is not agreed upon, then a fee based on the following percentages of the various portions of the Cost of the Work:
 - a. for costs incurred under Paragraphs 11.01.A.1 and 11.01.A.2, the Contractor's fee shall be 15 percent;
 - b. for costs incurred under Paragraph 11.01.A.3, the Contractor's fee shall be five percent;

- c. where one or more tiers of subcontracts are on the basis of Cost of the Work plus a fee and no fixed fee is agreed upon, the intent of Paragraphs 12.01.C.2.a and 12.01.C.2.b is that the Subcontractor who actually performs the Work, at whatever tier, will be paid a fee of 15 percent of the costs incurred by such Subcontractor under Paragraphs 11.01.A.1 and 11.01.A.2 and that any higher tier Subcontractor and Contractor will each be paid a fee of five percent of the amount paid to the next lower tier Subcontractor;
- d. no fee shall be payable on the basis of costs itemized under Paragraphs 11.01.A.4, 11.01.A.5, and 11.01.B;
- e. the amount of credit to be allowed by Contractor to Owner for any change which results in a net decrease in cost will be the amount of the actual net decrease in cost plus a deduction in Contractor's fee by an amount equal to five percent of such net decrease; and
- f. when both additions and credits are involved in any one change, the adjustment in Contractor's fee shall be computed on the basis of the net change in accordance with Paragraphs 12.01.C.2.a through 12.01.C.2.e, inclusive.

12.02 *Change of Contract Times*

- A. The Contract Times may only be changed by a Change Order. Any Claim for an adjustment in the Contract Times shall be based on written notice submitted by the party making the Claim to the Engineer and the other party to the Contract in accordance with the provisions of Paragraph 10.05.
- B. Any adjustment of the Contract Times covered by a Change Order or any Claim for an adjustment in the Contract Times will be determined in accordance with the provisions of this Article 12.

12.03 *Delays*

- A. Where Contractor is prevented from completing any part of the Work within the Contract Times due to delay beyond the control of Contractor, the Contract Times will be extended in an amount equal to the time lost due to such delay if a Claim is made therefor as provided in Paragraph 12.02.A. Delays beyond the control of Contractor shall include, but not be limited to, acts or neglect by Owner, acts or neglect of utility owners or other contractors performing other work as contemplated by Article 7, fires, floods, epidemics, abnormal weather conditions, or acts of God.
- B. If Owner, Engineer, or other contractors or utility owners performing other work for Owner as contemplated by Article 7, or anyone for whom Owner is responsible, delays, disrupts, or interferes with the performance or progress of the Work, then Contractor shall be entitled to an equitable adjustment in the Contract Price or the Contract Times, or both. Contractor's entitlement to an adjustment of the Contract Times is conditioned on such adjustment being essential to Contractor's ability to complete the Work within the Contract Times.
- C. If Contractor is delayed in the performance or progress of the Work by fire, flood, epidemic, abnormal weather conditions, acts of God, acts or failures to act of utility owners not under the

control of Owner, or other causes not the fault of and beyond control of Owner and Contractor, then Contractor shall be entitled to an equitable adjustment in Contract Times, if such adjustment is essential to Contractor's ability to complete the Work within the Contract Times. Such an adjustment shall be Contractor's sole and exclusive remedy for the delays described in this Paragraph 12.03.C.

- D. Owner, Engineer, and their officers, directors, members, partners, employees, agents, consultants, or subcontractors shall not be liable to Contractor for any claims, costs, losses, or damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) sustained by Contractor on or in connection with any other project or anticipated project.
- E. Contractor shall not be entitled to an adjustment in Contract Price or Contract Times for delays within the control of Contractor. Delays attributable to and within the control of a Subcontractor or Supplier shall be deemed to be delays within the control of Contractor.

ARTICLE 13 – TESTS AND INSPECTIONS; CORRECTION, REMOVAL OR ACCEPTANCE OF DEFECTIVE WORK

13.01 Notice of Defects

- A. Prompt notice of all defective Work of which Owner or Engineer has actual knowledge will be given to Contractor. Defective Work may be rejected, corrected, or accepted as provided in this Article 13.

13.02 Access to Work

- A. Owner, Engineer, their consultants and other representatives and personnel of Owner, independent testing laboratories, and governmental agencies with jurisdictional interests will have access to the Site and the Work at reasonable times for their observation, inspection, and testing. Contractor shall provide them proper and safe conditions for such access and advise them of Contractor's safety procedures and programs so that they may comply therewith as applicable.

13.03 Tests and Inspections

- A. Contractor shall give Engineer timely notice of readiness of the Work for all required inspections, tests, or approvals and shall cooperate with inspection and testing personnel to facilitate required inspections or tests.
- B. Owner shall employ and pay for the services of an independent testing laboratory to perform all inspections, tests, or approvals required by the Contract Documents except:
 1. for inspections, tests, or approvals covered by Paragraphs 13.03.C and 13.03.D below;
 2. that costs incurred in connection with tests or inspections conducted pursuant to Paragraph 13.04.B shall be paid as provided in Paragraph 13.04.C; and
 3. as otherwise specifically provided in the Contract Documents.

- C. If Laws or Regulations of any public body having jurisdiction require any Work (or part thereof) specifically to be inspected, tested, or approved by an employee or other representative of such public body, Contractor shall assume full responsibility for arranging and obtaining such inspections, tests, or approvals, pay all costs in connection therewith, and furnish Engineer the required certificates of inspection or approval.
- D. Contractor shall be responsible for arranging and obtaining and shall pay all costs in connection with any inspections, tests, or approvals required for Owner's and Engineer's acceptance of materials or equipment to be incorporated in the Work; or acceptance of materials, mix designs, or equipment submitted for approval prior to Contractor's purchase thereof for incorporation in the Work. Such inspections, tests, or approvals shall be performed by organizations acceptable to Owner and Engineer.
- E. If any Work (or the work of others) that is to be inspected, tested, or approved is covered by Contractor without written concurrence of Engineer, Contractor shall, if requested by Engineer, uncover such Work for observation.
- F. Uncovering Work as provided in Paragraph 13.03.E shall be at Contractor's expense unless Contractor has given Engineer timely notice of Contractor's intention to cover the same and Engineer has not acted with reasonable promptness in response to such notice.

13.04 *Uncovering Work*

- A. If any Work is covered contrary to the written request of Engineer, it must, if requested by Engineer, be uncovered for Engineer's observation and replaced at Contractor's expense.
- B. If Engineer considers it necessary or advisable that covered Work be observed by Engineer or inspected or tested by others, Contractor, at Engineer's request, shall uncover, expose, or otherwise make available for observation, inspection, or testing as Engineer may require, that portion of the Work in question, furnishing all necessary labor, material, and equipment.
- C. If it is found that the uncovered Work is defective, Contractor shall pay all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to such uncovering, exposure, observation, inspection, and testing, and of satisfactory replacement or reconstruction (including but not limited to all costs of repair or replacement of work of others); and Owner shall be entitled to an appropriate decrease in the Contract Price. If the parties are unable to agree as to the amount thereof, Owner may make a Claim therefor as provided in Paragraph 10.05.
- D. If the uncovered Work is not found to be defective, Contractor shall be allowed an increase in the Contract Price or an extension of the Contract Times, or both, directly attributable to such uncovering, exposure, observation, inspection, testing, replacement, and reconstruction. If the parties are unable to agree as to the amount or extent thereof, Contractor may make a Claim therefor as provided in Paragraph 10.05.

13.05 *Owner May Stop the Work*

- A. If the Work is defective, or Contractor fails to supply sufficient skilled workers or suitable materials or equipment, or fails to perform the Work in such a way that the completed Work will conform to the Contract Documents, Owner may order Contractor to stop the Work, or any portion thereof, until the cause for such order has been eliminated; however, this right of Owner to stop the Work shall not give rise to any duty on the part of Owner to exercise this right for the benefit of Contractor, any Subcontractor, any Supplier, any other individual or entity, or any surety for, or employee or agent of any of them.

13.06 *Correction or Removal of Defective Work*

- A. Promptly after receipt of written notice, Contractor shall correct all defective Work, whether or not fabricated, installed, or completed, or, if the Work has been rejected by Engineer, remove it from the Project and replace it with Work that is not defective. Contractor shall pay all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to such correction or removal (including but not limited to all costs of repair or replacement of work of others).
- B. When correcting defective Work under the terms of this Paragraph 13.06 or Paragraph 13.07, Contractor shall take no action that would void or otherwise impair Owner's special warranty and guarantee, if any, on said Work.

13.07 *Correction Period*

- A. If within one year after the date of Substantial Completion (or such longer period of time as may be prescribed by the terms of any applicable special guarantee required by the Contract Documents) or by any specific provision of the Contract Documents, any Work is found to be defective, or if the repair of any damages to the land or areas made available for Contractor's use by Owner or permitted by Laws and Regulations as contemplated in Paragraph 6.11.A is found to be defective, Contractor shall promptly, without cost to Owner and in accordance with Owner's written instructions:
1. repair such defective land or areas; or
 2. correct such defective Work; or
 3. if the defective Work has been rejected by Owner, remove it from the Project and replace it with Work that is not defective, and
 4. satisfactorily correct or repair or remove and replace any damage to other Work, to the work of others or other land or areas resulting therefrom.
- B. If Contractor does not promptly comply with the terms of Owner's written instructions, or in an emergency where delay would cause serious risk of loss or damage, Owner may have the defective Work corrected or repaired or may have the rejected Work removed and replaced. All claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute

resolution costs) arising out of or relating to such correction or repair or such removal and replacement (including but not limited to all costs of repair or replacement of work of others) will be paid by Contractor.

- C. In special circumstances where a particular item of equipment is placed in continuous service before Substantial Completion of all the Work, the correction period for that item may start to run from an earlier date if so provided in the Specifications.
- D. Where defective Work (and damage to other Work resulting therefrom) has been corrected or removed and replaced under this Paragraph 13.07, the correction period hereunder with respect to such Work will be extended for an additional period of one year after such correction or removal and replacement has been satisfactorily completed.
- E. Contractor's obligations under this Paragraph 13.07 are in addition to any other obligation or warranty. The provisions of this Paragraph 13.07 shall not be construed as a substitute for, or a waiver of, the provisions of any applicable statute of limitation or repose.

13.08 *Acceptance of Defective Work*

- A. If, instead of requiring correction or removal and replacement of defective Work, Owner (and, prior to Engineer's recommendation of final payment, Engineer) prefers to accept it, Owner may do so. Contractor shall pay all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) attributable to Owner's evaluation of and determination to accept such defective Work (such costs to be approved by Engineer as to reasonableness) and for the diminished value of the Work to the extent not otherwise paid by Contractor pursuant to this sentence. If any such acceptance occurs prior to Engineer's recommendation of final payment, a Change Order will be issued incorporating the necessary revisions in the Contract Documents with respect to the Work, and Owner shall be entitled to an appropriate decrease in the Contract Price, reflecting the diminished value of Work so accepted. If the parties are unable to agree as to the amount thereof, Owner may make a Claim therefor as provided in Paragraph 10.05. If the acceptance occurs after such recommendation, an appropriate amount will be paid by Contractor to Owner.

13.09 *Owner May Correct Defective Work*

- A. If Contractor fails within a reasonable time after written notice from Engineer to correct defective Work, or to remove and replace rejected Work as required by Engineer in accordance with Paragraph 13.06.A, or if Contractor fails to perform the Work in accordance with the Contract Documents, or if Contractor fails to comply with any other provision of the Contract Documents, Owner may, after seven days written notice to Contractor, correct, or remedy any such deficiency.
- B. In exercising the rights and remedies under this Paragraph 13.09, Owner shall proceed expeditiously. In connection with such corrective or remedial action, Owner may exclude Contractor from all or part of the Site, take possession of all or part of the Work and suspend Contractor's services related thereto, take possession of Contractor's tools, appliances, construction equipment and machinery at the Site, and incorporate in the Work all materials and

equipment stored at the Site or for which Owner has paid Contractor but which are stored elsewhere. Contractor shall allow Owner, Owner's representatives, agents and employees, Owner's other contractors, and Engineer and Engineer's consultants access to the Site to enable Owner to exercise the rights and remedies under this Paragraph.

- C. All claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) incurred or sustained by Owner in exercising the rights and remedies under this Paragraph 13.09 will be charged against Contractor, and a Change Order will be issued incorporating the necessary revisions in the Contract Documents with respect to the Work; and Owner shall be entitled to an appropriate decrease in the Contract Price. If the parties are unable to agree as to the amount of the adjustment, Owner may make a Claim therefor as provided in Paragraph 10.05. Such claims, costs, losses and damages will include but not be limited to all costs of repair, or replacement of work of others destroyed or damaged by correction, removal, or replacement of Contractor's defective Work.
- D. Contractor shall not be allowed an extension of the Contract Times because of any delay in the performance of the Work attributable to the exercise by Owner of Owner's rights and remedies under this Paragraph 13.09.

ARTICLE 14 – PAYMENTS TO CONTRACTOR AND COMPLETION

14.01 *Schedule of Values*

- A. The Schedule of Values established as provided in Paragraph 2.07.A will serve as the basis for progress payments and will be incorporated into a form of Application for Payment acceptable to Engineer. Progress payments on account of Unit Price Work will be based on the number of units completed.

14.02 *Progress Payments*

A. *Applications for Payments:*

1. At least 20 days before the date established in the Agreement for each progress payment (but not more often than once a month), Contractor shall submit to Engineer for review an Application for Payment filled out and signed by Contractor covering the Work completed as of the date of the Application and accompanied by such supporting documentation as is required by the Contract Documents. If payment is requested on the basis of materials and equipment not incorporated in the Work but delivered and suitably stored at the Site or at another location agreed to in writing, the Application for Payment shall also be accompanied by a bill of sale, invoice, or other documentation warranting that Owner has received the materials and equipment free and clear of all Liens and evidence that the materials and equipment are covered by appropriate property insurance or other arrangements to protect Owner's interest therein, all of which must be satisfactory to Owner.
2. Beginning with the second Application for Payment, each Application shall include an affidavit of Contractor stating that all previous progress payments received on account of the

Work have been applied on account to discharge Contractor's legitimate obligations associated with prior Applications for Payment.

3. The amount of retainage with respect to progress payments will be as stipulated in the Agreement.

B. Review of Applications:

1. Engineer will, within 10 days after receipt of each Application for Payment, either indicate in writing a recommendation of payment and present the Application to Owner or return the Application to Contractor indicating in writing Engineer's reasons for refusing to recommend payment. In the latter case, Contractor may make the necessary corrections and resubmit the Application.
2. Engineer's recommendation of any payment requested in an Application for Payment will constitute a representation by Engineer to Owner, based on Engineer's observations of the executed Work as an experienced and qualified design professional, and on Engineer's review of the Application for Payment and the accompanying data and schedules, that to the best of Engineer's knowledge, information and belief:
 - a. the Work has progressed to the point indicated;
 - b. the quality of the Work is generally in accordance with the Contract Documents (subject to an evaluation of the Work as a functioning whole prior to or upon Substantial Completion, the results of any subsequent tests called for in the Contract Documents, a final determination of quantities and classifications for Unit Price Work under Paragraph 9.07, and any other qualifications stated in the recommendation); and
 - c. the conditions precedent to Contractor's being entitled to such payment appear to have been fulfilled in so far as it is Engineer's responsibility to observe the Work.
3. By recommending any such payment Engineer will not thereby be deemed to have represented that:
 - a. inspections made to check the quality or the quantity of the Work as it has been performed have been exhaustive, extended to every aspect of the Work in progress, or involved detailed inspections of the Work beyond the responsibilities specifically assigned to Engineer in the Contract Documents; or
 - b. there may not be other matters or issues between the parties that might entitle Contractor to be paid additionally by Owner or entitle Owner to withhold payment to Contractor.
4. Neither Engineer's review of Contractor's Work for the purposes of recommending payments nor Engineer's recommendation of any payment, including final payment, will impose responsibility on Engineer:
 - a. to supervise, direct, or control the Work, or

- b. for the means, methods, techniques, sequences, or procedures of construction, or the safety precautions and programs incident thereto, or
 - c. for Contractor's failure to comply with Laws and Regulations applicable to Contractor's performance of the Work, or
 - d. to make any examination to ascertain how or for what purposes Contractor has used the moneys paid on account of the Contract Price, or
 - e. to determine that title to any of the Work, materials, or equipment has passed to Owner free and clear of any Liens.
5. Engineer may refuse to recommend the whole or any part of any payment if, in Engineer's opinion, it would be incorrect to make the representations to Owner stated in Paragraph 14.02.B.2. Engineer may also refuse to recommend any such payment or, because of subsequently discovered evidence or the results of subsequent inspections or tests, revise or revoke any such payment recommendation previously made, to such extent as may be necessary in Engineer's opinion to protect Owner from loss because:
- a. the Work is defective, or completed Work has been damaged, requiring correction or replacement;
 - b. the Contract Price has been reduced by Change Orders;
 - c. Owner has been required to correct defective Work or complete Work in accordance with Paragraph 13.09; or
 - d. Engineer has actual knowledge of the occurrence of any of the events enumerated in Paragraph 15.02.A.

C. Payment Becomes Due:

1. Ten days after presentation of the Application for Payment to Owner with Engineer's recommendation, the amount recommended will (subject to the provisions of Paragraph 14.02.D) become due, and when due will be paid by Owner to Contractor.

D. Reduction in Payment:

1. Owner may refuse to make payment of the full amount recommended by Engineer because:
 - a. claims have been made against Owner on account of Contractor's performance or furnishing of the Work;
 - b. Liens have been filed in connection with the Work, except where Contractor has delivered a specific bond satisfactory to Owner to secure the satisfaction and discharge of such Liens;
 - c. there are other items entitling Owner to a set-off against the amount recommended; or

- d. Owner has actual knowledge of the occurrence of any of the events enumerated in Paragraphs 14.02.B.5.a through 14.02.B.5.c or Paragraph 15.02.A.
2. If Owner refuses to make payment of the full amount recommended by Engineer, Owner will give Contractor immediate written notice (with a copy to Engineer) stating the reasons for such action and promptly pay Contractor any amount remaining after deduction of the amount so withheld. Owner shall promptly pay Contractor the amount so withheld, or any adjustment thereto agreed to by Owner and Contractor, when Contractor remedies the reasons for such action.
3. Upon a subsequent determination that Owner's refusal of payment was not justified, the amount wrongfully withheld shall be treated as an amount due as determined by Paragraph 14.02.C.1 and subject to interest as provided in the Agreement.

14.03 Contractor's Warranty of Title

- A. Contractor warrants and guarantees that title to all Work, materials, and equipment covered by any Application for Payment, whether incorporated in the Project or not, will pass to Owner no later than the time of payment free and clear of all Liens.

14.04 Substantial Completion

- A. When Contractor considers the entire Work ready for its intended use Contractor shall notify Owner and Engineer in writing that the entire Work is substantially complete (except for items specifically listed by Contractor as incomplete) and request that Engineer issue a certificate of Substantial Completion.
- B. Promptly after Contractor's notification, Owner, Contractor, and Engineer shall make an inspection of the Work to determine the status of completion. If Engineer does not consider the Work substantially complete, Engineer will notify Contractor in writing giving the reasons therefor.
- C. If Engineer considers the Work substantially complete, Engineer will deliver to Owner a tentative certificate of Substantial Completion which shall fix the date of Substantial Completion. There shall be attached to the certificate a tentative list of items to be completed or corrected before final payment. Owner shall have seven days after receipt of the tentative certificate during which to make written objection to Engineer as to any provisions of the certificate or attached list. If, after considering such objections, Engineer concludes that the Work is not substantially complete, Engineer will, within 14 days after submission of the tentative certificate to Owner, notify Contractor in writing, stating the reasons therefor. If, after consideration of Owner's objections, Engineer considers the Work substantially complete, Engineer will, within said 14 days, execute and deliver to Owner and Contractor a definitive certificate of Substantial Completion (with a revised tentative list of items to be completed or corrected) reflecting such changes from the tentative certificate as Engineer believes justified after consideration of any objections from Owner.
- D. At the time of delivery of the tentative certificate of Substantial Completion, Engineer will deliver to Owner and Contractor a written recommendation as to division of responsibilities

pending final payment between Owner and Contractor with respect to security, operation, safety, and protection of the Work, maintenance, heat, utilities, insurance, and warranties and guarantees. Unless Owner and Contractor agree otherwise in writing and so inform Engineer in writing prior to Engineer's issuing the definitive certificate of Substantial Completion, Engineer's aforesaid recommendation will be binding on Owner and Contractor until final payment.

- E. Owner shall have the right to exclude Contractor from the Site after the date of Substantial Completion subject to allowing Contractor reasonable access to remove its property and complete or correct items on the tentative list.

14.05 *Partial Utilization*

- A. Prior to Substantial Completion of all the Work, Owner may use or occupy any substantially completed part of the Work which has specifically been identified in the Contract Documents, or which Owner, Engineer, and Contractor agree constitutes a separately functioning and usable part of the Work that can be used by Owner for its intended purpose without significant interference with Contractor's performance of the remainder of the Work, subject to the following conditions:
1. Owner at any time may request Contractor in writing to permit Owner to use or occupy any such part of the Work which Owner believes to be ready for its intended use and substantially complete. If and when Contractor agrees that such part of the Work is substantially complete, Contractor, Owner, and Engineer will follow the procedures of Paragraph 14.04.A through D for that part of the Work.
 2. Contractor at any time may notify Owner and Engineer in writing that Contractor considers any such part of the Work ready for its intended use and substantially complete and request Engineer to issue a certificate of Substantial Completion for that part of the Work.
 3. Within a reasonable time after either such request, Owner, Contractor, and Engineer shall make an inspection of that part of the Work to determine its status of completion. If Engineer does not consider that part of the Work to be substantially complete, Engineer will notify Owner and Contractor in writing giving the reasons therefor. If Engineer considers that part of the Work to be substantially complete, the provisions of Paragraph 14.04 will apply with respect to certification of Substantial Completion of that part of the Work and the division of responsibility in respect thereof and access thereto.
 4. No use or occupancy or separate operation of part of the Work may occur prior to compliance with the requirements of Paragraph 5.10 regarding property insurance.

14.06 *Final Inspection*

- A. Upon written notice from Contractor that the entire Work or an agreed portion thereof is complete, Engineer will promptly make a final inspection with Owner and Contractor and will notify Contractor in writing of all particulars in which this inspection reveals that the Work is incomplete or defective. Contractor shall immediately take such measures as are necessary to complete such Work or remedy such deficiencies.

14.07 *Final Payment*

A. Application for Payment:

1. After Contractor has, in the opinion of Engineer, satisfactorily completed all corrections identified during the final inspection and has delivered, in accordance with the Contract Documents, all maintenance and operating instructions, schedules, guarantees, bonds, certificates or other evidence of insurance, certificates of inspection, marked-up record documents (as provided in Paragraph 6.12), and other documents, Contractor may make application for final payment following the procedure for progress payments.
2. The final Application for Payment shall be accompanied (except as previously delivered) by:
 - a. all documentation called for in the Contract Documents, including but not limited to the evidence of insurance required by Paragraph 5.04.B.6;
 - b. consent of the surety, if any, to final payment;
 - c. a list of all Claims against Owner that Contractor believes are unsettled; and
 - d. complete and legally effective releases or waivers (satisfactory to Owner) of all Lien rights arising out of or Liens filed in connection with the Work.
3. In lieu of the releases or waivers of Liens specified in Paragraph 14.07.A.2 and as approved by Owner, Contractor may furnish receipts or releases in full and an affidavit of Contractor that: (i) the releases and receipts include all labor, services, material, and equipment for which a Lien could be filed; and (ii) all payrolls, material and equipment bills, and other indebtedness connected with the Work for which Owner might in any way be responsible, or which might in any way result in liens or other burdens on Owner's property, have been paid or otherwise satisfied. If any Subcontractor or Supplier fails to furnish such a release or receipt in full, Contractor may furnish a bond or other collateral satisfactory to Owner to indemnify Owner against any Lien.

B. Engineer's Review of Application and Acceptance:

1. If, on the basis of Engineer's observation of the Work during construction and final inspection, and Engineer's review of the final Application for Payment and accompanying documentation as required by the Contract Documents, Engineer is satisfied that the Work has been completed and Contractor's other obligations under the Contract Documents have been fulfilled, Engineer will, within ten days after receipt of the final Application for Payment, indicate in writing Engineer's recommendation of payment and present the Application for Payment to Owner for payment. At the same time Engineer will also give written notice to Owner and Contractor that the Work is acceptable subject to the provisions of Paragraph 14.09. Otherwise, Engineer will return the Application for Payment to Contractor, indicating in writing the reasons for refusing to recommend final payment, in which case Contractor shall make the necessary corrections and resubmit the Application for Payment.

C. Payment Becomes Due:

1. Thirty days after the presentation to Owner of the Application for Payment and accompanying documentation, the amount recommended by Engineer, less any sum Owner is entitled to set off against Engineer's recommendation, including but not limited to liquidated damages, will become due and will be paid by Owner to Contractor.

14.08 *Final Completion Delayed*

- A. If, through no fault of Contractor, final completion of the Work is significantly delayed, and if Engineer so confirms, Owner shall, upon receipt of Contractor's final Application for Payment (for Work fully completed and accepted) and recommendation of Engineer, and without terminating the Contract, make payment of the balance due for that portion of the Work fully completed and accepted. If the remaining balance to be held by Owner for Work not fully completed or corrected is less than the retainage stipulated in the Agreement, and if bonds have been furnished as required in Paragraph 5.01, the written consent of the surety to the payment of the balance due for that portion of the Work fully completed and accepted shall be submitted by Contractor to Engineer with the Application for such payment. Such payment shall be made under the terms and conditions governing final payment, except that it shall not constitute a waiver of Claims.

14.09 *Waiver of Claims*

- A. The making and acceptance of final payment will constitute:
 1. a waiver of all Claims by Owner against Contractor, except Claims arising from unsettled Liens, from defective Work appearing after final inspection pursuant to Paragraph 14.06, from failure to comply with the Contract Documents or the terms of any special guarantees specified therein, or from Contractor's continuing obligations under the Contract Documents; and
 2. a waiver of all Claims by Contractor against Owner other than those previously made in accordance with the requirements herein and expressly acknowledged by Owner in writing as still unsettled.

ARTICLE 15 – SUSPENSION OF WORK AND TERMINATION

15.01 *Owner May Suspend Work*

- A. At any time and without cause, Owner may suspend the Work or any portion thereof for a period of not more than 90 consecutive days by notice in writing to Contractor and Engineer which will fix the date on which Work will be resumed. Contractor shall resume the Work on the date so fixed. Contractor shall be granted an adjustment in the Contract Price or an extension of the Contract Times, or both, directly attributable to any such suspension if Contractor makes a Claim therefor as provided in Paragraph 10.05.

15.02 *Owner May Terminate for Cause*

- A. The occurrence of any one or more of the following events will justify termination for cause:

1. Contractor's persistent failure to perform the Work in accordance with the Contract Documents (including, but not limited to, failure to supply sufficient skilled workers or suitable materials or equipment or failure to adhere to the Progress Schedule established under Paragraph 2.07 as adjusted from time to time pursuant to Paragraph 6.04);
 2. Contractor's disregard of Laws or Regulations of any public body having jurisdiction;
 3. Contractor's repeated disregard of the authority of Engineer; or
 4. Contractor's violation in any substantial way of any provisions of the Contract Documents.
- B. If one or more of the events identified in Paragraph 15.02.A occur, Owner may, after giving Contractor (and surety) seven days written notice of its intent to terminate the services of Contractor:
1. exclude Contractor from the Site, and take possession of the Work and of all Contractor's tools, appliances, construction equipment, and machinery at the Site, and use the same to the full extent they could be used by Contractor (without liability to Contractor for trespass or conversion);
 2. incorporate in the Work all materials and equipment stored at the Site or for which Owner has paid Contractor but which are stored elsewhere; and
 3. complete the Work as Owner may deem expedient.
- C. If Owner proceeds as provided in Paragraph 15.02.B, Contractor shall not be entitled to receive any further payment until the Work is completed. If the unpaid balance of the Contract Price exceeds all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) sustained by Owner arising out of or relating to completing the Work, such excess will be paid to Contractor. If such claims, costs, losses, and damages exceed such unpaid balance, Contractor shall pay the difference to Owner. Such claims, costs, losses, and damages incurred by Owner will be reviewed by Engineer as to their reasonableness and, when so approved by Engineer, incorporated in a Change Order. When exercising any rights or remedies under this Paragraph, Owner shall not be required to obtain the lowest price for the Work performed.
- D. Notwithstanding Paragraphs 15.02.B and 15.02.C, Contractor's services will not be terminated if Contractor begins within seven days of receipt of notice of intent to terminate to correct its failure to perform and proceeds diligently to cure such failure within no more than 30 days of receipt of said notice.
- E. Where Contractor's services have been so terminated by Owner, the termination will not affect any rights or remedies of Owner against Contractor then existing or which may thereafter accrue. Any retention or payment of moneys due Contractor by Owner will not release Contractor from liability.

F. If and to the extent that Contractor has provided a performance bond under the provisions of Paragraph 5.01.A, the termination procedures of that bond shall supersede the provisions of Paragraphs 15.02.B and 15.02.C.

15.03 *Owner May Terminate For Convenience*

- A. Upon seven days written notice to Contractor and Engineer, Owner may, without cause and without prejudice to any other right or remedy of Owner, terminate the Contract. In such case, Contractor shall be paid for (without duplication of any items):
1. completed and acceptable Work executed in accordance with the Contract Documents prior to the effective date of termination, including fair and reasonable sums for overhead and profit on such Work;
 2. expenses sustained prior to the effective date of termination in performing services and furnishing labor, materials, or equipment as required by the Contract Documents in connection with uncompleted Work, plus fair and reasonable sums for overhead and profit on such expenses;
 3. all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) incurred in settlement of terminated contracts with Subcontractors, Suppliers, and others; and
 4. reasonable expenses directly attributable to termination.
- B. Contractor shall not be paid on account of loss of anticipated profits or revenue or other economic loss arising out of or resulting from such termination.

15.04 *Contractor May Stop Work or Terminate*

- A. If, through no act or fault of Contractor, (i) the Work is suspended for more than 90 consecutive days by Owner or under an order of court or other public authority, or (ii) Engineer fails to act on any Application for Payment within 30 days after it is submitted, or (iii) Owner fails for 30 days to pay Contractor any sum finally determined to be due, then Contractor may, upon seven days written notice to Owner and Engineer, and provided Owner or Engineer do not remedy such suspension or failure within that time, terminate the Contract and recover from Owner payment on the same terms as provided in Paragraph 15.03.
- B. In lieu of terminating the Contract and without prejudice to any other right or remedy, if Engineer has failed to act on an Application for Payment within 30 days after it is submitted, or Owner has failed for 30 days to pay Contractor any sum finally determined to be due, Contractor may, seven days after written notice to Owner and Engineer, stop the Work until payment is made of all such amounts due Contractor, including interest thereon. The provisions of this Paragraph 15.04 are not intended to preclude Contractor from making a Claim under Paragraph 10.05 for an adjustment in Contract Price or Contract Times or otherwise for expenses or damage directly attributable to Contractor's stopping the Work as permitted by this Paragraph.

ARTICLE 16 – DISPUTE RESOLUTION

16.01 *Methods and Procedures*

- A. Either Owner or Contractor may request mediation of any Claim submitted to Engineer for a decision under Paragraph 10.05 before such decision becomes final and binding. The mediation will be governed by the Construction Industry Mediation Rules of the American Arbitration Association in effect as of the Effective Date of the Agreement. The request for mediation shall be submitted in writing to the American Arbitration Association and the other party to the Contract. Timely submission of the request shall stay the effect of Paragraph 10.05.E.
- B. Owner and Contractor shall participate in the mediation process in good faith. The process shall be concluded within 60 days of filing of the request. The date of termination of the mediation shall be determined by application of the mediation rules referenced above.
- C. If the Claim is not resolved by mediation, Engineer's action under Paragraph 10.05.C or a denial pursuant to Paragraphs 10.05.C.3 or 10.05.D shall become final and binding 30 days after termination of the mediation unless, within that time period, Owner or Contractor:
1. elects in writing to invoke any dispute resolution process provided for in the Supplementary Conditions; or
 2. agrees with the other party to submit the Claim to another dispute resolution process; or
 3. gives written notice to the other party of the intent to submit the Claim to a court of competent jurisdiction.

ARTICLE 17 – MISCELLANEOUS

17.01 *Giving Notice*

- A. Whenever any provision of the Contract Documents requires the giving of written notice, it will be deemed to have been validly given if:
1. delivered in person to the individual or to a member of the firm or to an officer of the corporation for whom it is intended; or
 2. delivered at or sent by registered or certified mail, postage prepaid, to the last business address known to the giver of the notice.

17.02 *Computation of Times*

- A. When any period of time is referred to in the Contract Documents by days, it will be computed to exclude the first and include the last day of such period. If the last day of any such period falls on a Saturday or Sunday or on a day made a legal holiday by the law of the applicable jurisdiction, such day will be omitted from the computation.

17.03 *Cumulative Remedies*

- A. The duties and obligations imposed by these General Conditions and the rights and remedies available hereunder to the parties hereto are in addition to, and are not to be construed in any way as a limitation of, any rights and remedies available to any or all of them which are otherwise imposed or available by Laws or Regulations, by special warranty or guarantee, or by other provisions of the Contract Documents. The provisions of this Paragraph will be as effective as if repeated specifically in the Contract Documents in connection with each particular duty, obligation, right, and remedy to which they apply.

17.04 *Survival of Obligations*

- A. All representations, indemnifications, warranties, and guarantees made in, required by, or given in accordance with the Contract Documents, as well as all continuing obligations indicated in the Contract Documents, will survive final payment, completion, and acceptance of the Work or termination or completion of the Contract or termination of the services of Contractor.

17.05 *Controlling Law*

- A. This Contract is to be governed by the law of the state in which the Project is located.

17.06 *Headings*

- A. Article and paragraph headings are inserted for convenience only and do not constitute parts of these General Conditions.
