Again notice that the average accumulated expenditures are less than the total accumulated expenditures of \$1,500,000. If Mills had borrowed exactly the amount necessary to finance the project, it would not have incurred interest on a loan of \$1,500,000 for the whole year but only on an average loan of \$950,000. The next step is to determine the interest to be capitalized for the average accumulated expenditures.

²⁰FASB ASC 835–20–25: Interest–Capitalization of Interest–Recognition (previously “Capitalization of Interest Costs,” *Statement of Financial Accounting Standards No. 34* (Stamford, Conn.: FASB, 1979)).

On January 1, 2013, the Mills Conveying Equipment Company began construction of a building to be used as its office headquarters. The building was completed on June 30, 2014. Expenditures on the project, mainly payments to subcontractors, were as follows:

January 3, 2013	\$ 500,000
March 31, 2013	400,000
September 30, 2013	<u>600,000</u>
Accumulated expenditures at December 31, 2013 (before interest capitalization)	\$1,500,000
January 31, 2014	600,000
April 30, 2014	300,000

On January 2, 2013, the company obtained a \$1 million construction loan with an 8% interest rate. The loan was outstanding during the entire construction period. The company's other interest-bearing debt included two long-term notes of \$2,000,000 and \$4,000,000 with interest rates of 6% and 12%, respectively. Both notes were outstanding during the entire construction period.

Illustration 10–17

Interest Capitalization

INTEREST RATES. In this situation, debt financing was obtained specifically for the construction project, and the amount borrowed is sufficient to cover the average accumulated expenditures. To determine the interest capitalized, then, we simply multiply the construction loan rate of 8% by the average accumulated expenditures.

$$\text{Interest capitalized for 2013} = \$950,000 \times 8\% = \$76,000$$

Notice that this is the same answer we would get by assuming separate 8% construction loans were made for each expenditure at the time each expenditure was made:

Loans		Annual Rate		Portion of Year Outstanding		Interest
\$500,000	×	8%	×	$\frac{1}{2}$	=	\$40,000
400,000	×	8%	×	$\frac{1}{2}$	=	24,000
600,000	×	8%	×	$\frac{3}{4}$	=	<u>12,000</u>
Interest capitalized for 2013						<u><u>\$76,000</u></u>

The interest of \$76,000 is added to the cost of the building, bringing accumulated expenditures at December 31, 2013, to \$1,576,000 (\$1,500,000 + 76,000). The remaining interest cost incurred but not capitalized is expensed.

It should be emphasized that interest capitalization does not require that funds actually be borrowed for this specific purpose, only that the company does have outstanding debt. The presumption is that even if the company doesn't borrow specifically for the project, funds from other borrowings must be diverted to finance the construction. Either way—directly or indirectly—interest costs are incurred. In our illustration, for instance, even without the construction loan, interest would be capitalized because other debt was outstanding. The capitalized interest would be the average accumulated expenditures multiplied by the weighted-average rate on these other loans. The weighted-average interest rate on all debt other than the construction loan would be 10%, calculated as follows:²¹

Loans		Rate		Interest
\$2,000,000	×	6%	=	\$120,000
4,000,000	×	12%	=	480,000
<u>\$6,000,000</u>				<u>\$600,000</u>

STEP 2: Calculate the amount of interest to be capitalized.

The amount of interest capitalized is determined by multiplying an interest rate by the average accumulated expenditures.

²¹The same result can be obtained simply by multiplying the individual debt interest rates by the relative amount of debt at each rate. In this case, one-third of total debt is at 6% and two-thirds of the total debt is at 12% [(1/3 × 6%) + (2/3 × 12%)].

$$\text{Weighted-average rate: } \frac{\$600,000}{\$6,000,000} = 10\%$$

This is a weighted average because total interest is \$600,000 on total debt of \$6,000,000.

Additional Consideration

The weighted-average rate isn't used for 2013 in our illustration because the specific construction loan is sufficient to cover the average accumulated expenditures. If the specific construction loan had been insufficient to cover the average accumulated expenditures, its 8% interest rate would be applied to the average accumulated expenditures up to the amount of the specific borrowing, and any remaining average accumulated expenditures in excess of specific borrowings would be multiplied by the weighted-average rate on all other outstanding interest-bearing debt. Suppose, for illustration, that the 8% construction loan had been only \$500,000 rather than \$1,000,000. We would calculate capitalized interest using both the specific rate and the weighted-average rate:

	Average Accumulated Expenditures		Rate		Interest
Total	\$950,000				
Specific borrowing	500,000	×	8%	=	\$40,000
Excess	\$450,000	×	10%	=	45,000
Capitalized interest					<u>\$85,000</u>

In our illustration, it's necessary to use this approach in 2014.

Interest capitalized is limited to interest incurred.

It's possible that the amount of interest calculated to be capitalized exceeds the amount of interest actually incurred. If that's the case, we limit the interest capitalized to the actual interest incurred. In our illustration, total interest cost incurred during 2013 far exceeds the \$76,000 of capitalized interest calculated, so it's not necessary to limit the capitalized amount.

STEP 3: Compare calculated interest with actual interest incurred.

Loans		Annual Rate		Actual Interest	Calculated Interest
\$1,000,000	×	8%	=	\$ 80,000	
2,000,000	×	6%	=	120,000	
4,000,000	×	12%	=	480,000	
				<u>\$680,000</u>	<u>\$76,000</u>
					↑
					Use lower amount

Continuing the example based on the information in Illustration 10–17, let's determine the amount of interest capitalized during 2014 for the building. The total accumulated expenditures by the end of the project are:

Accumulated expenditures at the beginning of 2014 (including interest capitalization)	\$1,576,000
January 31, 2014	600,000
April 30, 2014	<u>300,000</u>
Accumulated expenditures at June 30, 2014 (before 2014 interest capitalization)	<u>\$2,476,000</u>

The weighted-average accumulated expenditures by the end of the project are:

January 1, 2014	$\$1,576,000 \times \frac{1}{2} =$	\$1,576,000
January 31, 2014	$600,000 \times \frac{1}{2} =$	500,000
April 30, 2014	$300,000 \times \frac{1}{2} =$	100,000
Average accumulated expenditures for 2014		<u>\$2,176,000</u>

STEP 1: Determine the average accumulated expenditures.

Notice that the 2014 expenditures are weighted relative to the construction period of six months because the project was finished on June 30, 2014. Interest capitalized for 2014 would be **\$98,800**, calculated as follows:

	Average Accumulated Expenditures	Annual Rate	Fraction of Year		
	\$2,176,000				
Specific borrowing	<u>1,000,000</u>	× 8%	× $\frac{1}{2}$	=	\$40,000
Excess	<u>\$1,176,000</u>	× 10%	× $\frac{1}{2}$	=	58,800
Capitalized interest					<u>\$98,800</u>

STEP 2: Calculate the amount of interest to be capitalized.

Multiplying by six-twelfths reflects the fact that the interest rates are annual rates (12-month rates) and the construction period is only 6 months.

Loans	Annual Rate	Actual Interest	Calculated Interest
\$1,000,000	× 8% × $\frac{1}{2}$ =	\$ 40,000	
2,000,000	× 6% × $\frac{1}{2}$ =	60,000	
4,000,000	× 12% × $\frac{1}{2}$ =	240,000	
		<u>\$340,000</u>	
			<u>\$98,800</u>
			↑ Use lower amount

STEP 3: Compare calculated interest with actual interest incurred.

Additional Consideration

To illustrate how the actual interest limitation might come into play, let's assume the nonspecific borrowings in our illustration were \$200,000 and \$400,000 (instead of \$2,000,000 and \$4,000,000). Our comparison would change as follows:

Loans	Annual Rate	Actual Interest	Calculated Interest
\$1,000,000	× 8% × $\frac{1}{2}$ =	\$40,000	
2,000,000	× 6% × $\frac{1}{2}$ =	6,000	
4,000,000	× 12% × $\frac{1}{2}$ =	24,000	
		<u>\$70,000</u>	
			<u>\$98,800</u>
		↑ Use lower amount	

For the first six months of 2014, **\$98,800** of interest would be capitalized, bringing the total capitalized cost of the building to \$2,574,800 (\$2,476,000 + 98,800), and \$241,200 in interest would be expensed (\$340,000 – 98,800).

The method of determining interest to capitalize that we've discussed is called the **specific interest method** because we use rates from specific construction loans to the extent of

specific borrowings before using the average rate of other debt. Sometimes, though, it's difficult to associate specific borrowings with projects. In these situations, it's acceptable to just use the weighted-average rate on all interest-bearing debt, including all construction loans. This is known as the **weighted-average method**. In our illustration, for example, if the \$1,000,000, 8% loan had not been specifically related to construction, we would calculate a single weighted-average rate as shown below.

Weighted-average method

Loans		Rate		Interest
\$1,000,000	×	8%	=	\$ 80,000
2,000,000	×	6%	=	120,000
4,000,000	×	12%	=	480,000
<u>\$7,000,000</u>				<u>\$680,000</u>

$$\text{Weighted-average rate: } \frac{\$680,000}{\$7,000,000} = 9.7\%$$

If we were using the weighted-average method rather than the specific interest method, we would simply multiply this single rate times the average accumulated expenditures to determine capitalizable interest.

If material, the amount of interest capitalized during the period must be disclosed.

DISCLOSURE. For an accounting period in which interest costs are capitalized, both the total amount of interest costs incurred and the amount that has been capitalized should be disclosed. Illustration 10–18 shows an interest capitalization disclosure note that was included in a recent annual report of **Wal-Mart Stores, Inc.**, the world's largest retailer.

Illustration 10–18

Capitalized Interest Disclosure—Wal-Mart Stores, Inc.

Real World Financials

Capitalized Interest

The interest costs associated with construction projects are capitalized and included as part of the cost of the project. When no debt is incurred specifically for a project, interest is capitalized on amounts expended on the project using our weighted-average cost of borrowing. Capitalization of interest ceases when the project is substantially complete. Interest costs capitalized on construction projects were \$63 million, \$85 million, and \$88 million in fiscal 2011, 2010, and 2009, respectively.

Research and Development (R&D)

- LO10–8 Prior to 1974, the practice was to allow companies to either expense or capitalize R&D costs, but GAAP now requires all research and development costs to be charged to expense when incurred.²² This was a controversial change opposed by many companies that preferred delaying the recognition of these expenses until later years when presumably the expenditures bear fruit.

Most R&D costs are expensed in the periods incurred.

R&D costs entail a high degree of uncertainty of future benefits and are difficult to match with future revenues.

A company undertakes an R&D project because it believes the project will eventually provide benefits that exceed the current expenditures. Unfortunately, though, it's difficult to predict which individual research and development projects will ultimately provide benefits. In fact, only 1 in 10 actually reaches commercial production. Moreover, even for those projects that pan out, a direct relationship between research and development costs and specific future revenue is difficult to establish. In other words, even if R&D costs do lead to future benefits, it's difficult to objectively determine the size of the benefits and in which periods the costs should be expensed if they are capitalized. These are the issues that prompted the FASB to require immediate expensing.

The FASB's approach is certain in most cases to understate assets and overstate current expense because at least some of the R&D expenditures will likely produce future benefits.

²²FASB ASC 730–10–25–1: Research and Development—Overall—Recognition (previously “Accounting for Research and Development Costs,” *Statement of Financial Accounting Standards No. 2* (Stamford, Conn.: FASB, 1974), par. 12).

DETERMINING R&D COSTS. GAAP distinguishes research and development as follows:

Research is planned search or critical investigation aimed at discovery of new knowledge with the hope that such knowledge will be useful in developing a new product or service or a new process or technique or in bringing about a significant improvement to an existing product or process.

Development is the translation of research findings or other knowledge into a plan or design for a new product or process or for a significant improvement to an existing product or process whether intended for sale or use.²³

R&D costs include salaries, wages, and other labor costs of personnel engaged in R&D activities, the costs of materials consumed, equipment, facilities, and intangibles used in R&D projects, the costs of services performed by others in connection with R&D activities, and a reasonable allocation of indirect costs related to those activities. General and administrative costs should not be included unless they are clearly related to the R&D activity.

If an asset is purchased specifically for a single R&D project, its cost is considered R&D and expensed immediately even though the asset's useful life extends beyond the current year. However, the cost of an asset that has an alternative future use beyond the current R&D project is *not* a current R&D expense. Instead, the depreciation or amortization of these alternative-use assets is included as R&D expenses in the current and future periods the assets are used for R&D activities.

In general, R&D costs pertain to activities that occur prior to the start of commercial production, and costs of starting commercial production and beyond are not R&D costs. Illustration 10–19 captures this concept with a time line beginning with the start of an R&D project and ending with the ultimate sale of a developed product or the use of a developed process. The illustration also provides examples of activities typically included as R&D and examples of activities typically excluded from R&D.²⁴

R&D expense includes the depreciation and amortization of assets used in R&D activities.

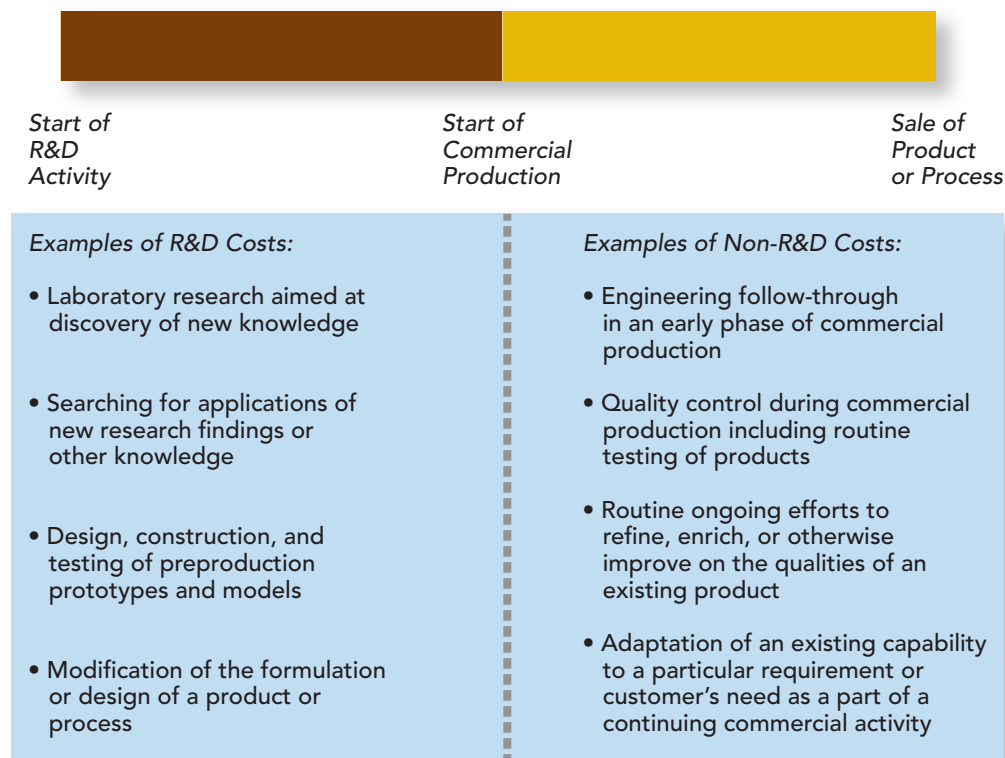

Illustration 10–19

Research and Development Expenditures

Costs incurred *before* the start of commercial production are all expensed as R&D.

Costs incurred *after* commercial production begins would be either expensed or included in the cost of inventory.

²³Ibid., section 730–10–20 (previously par. 8 of SFAS No. 2).

²⁴Ibid., section 730–10–55 (previously par. 9 of SFAS No. 2).

Costs incurred before the start of commercial production are all expensed as R&D. The costs incurred after commercial production begins would be either expensed or treated as manufacturing overhead and included in the cost of inventory. Let's look at an example in Illustration 10–20.

Illustration 10–20

Research and Development Costs

The Askew Company made the following cash expenditures during 2013 related to the development of a new industrial plastic:

R&D salaries and wages	\$10,000,000
R&D supplies consumed during 2013	3,000,000
Purchase of R&D equipment	5,000,000
Patent filing and legal costs	100,000
Payments to others for services performed in connection with R&D activities	<u>1,200,000</u>
Total	<u><u>\$19,300,000</u></u>

The project resulted in a new product to be manufactured in 2014. A patent was filed with the U.S. Patent Office. The equipment purchased will be employed in other projects. Depreciation on the equipment for 2013 was \$500,000.

Filing and legal costs for patents, copyrights, and other developed intangibles are capitalized and amortized in future periods.

The salaries and wages, supplies consumed, and payments to others for R&D services are expensed in 2013 as R&D. The equipment is capitalized and the 2013 depreciation is expensed as R&D. Even though the costs to develop the patented product are expensed, the filing and legal costs for the patent are capitalized and amortized in future periods just as similar costs are capitalized for purchased intangibles. Amortization of the patent is discussed in Chapter 11.

The various expenditures would be recorded as follows:

R&D expense (\$10,000,000 + 3,000,000 + 1,200,000)	14,200,000	
Cash		14,200,000
<i>To record R&D expenses.</i>		
Equipment	5,000,000	
Cash		5,000,000
<i>To record the purchase of equipment.</i>		
R&D expense	500,000	
Accumulated depreciation—equipment		500,000
<i>To record R&D depreciation.</i>		
Patent	100,000	
Cash		100,000
<i>To capitalize the patent filing and legal costs.</i>		

Expenditures reconciliation:

Recorded as R&D	\$14,200,000
Capitalized as equipment	5,000,000
Capitalized as patent	<u>100,000</u>
Total expenditures	<u><u>\$19,300,000</u></u>

GAAP requires disclosure of total R&D expense incurred during the period.

GAAP requires that total R&D expense incurred must be disclosed either as a line item in the income statement or in a disclosure note. For example, **Microsoft** reported over \$9 billion of R&D expense on the face of its 2011 income statement. In our illustration, total R&D expense disclosed in 2013 would be \$14,700,000 (\$14,200,000 in expenditures and \$500,000 in depreciation). Note that if Askew later sells this patent to another company for, say, \$15 million, the buyer would capitalize the entire purchase price rather than only the filing and legal costs. Once again, the reason for the apparent inconsistency in accounting

treatment of internally generated intangibles and externally purchased intangibles is the difficulty of associating costs and benefits.

R&D PERFORMED FOR OTHERS. The principle requiring the immediate expensing of R&D does not apply to companies that perform R&D for other companies under contract. In these situations, the R&D costs are capitalized as inventory and carried forward into future years until the project is completed. Of course, justification is that the benefits of these expenditures are the contract fees that are determinable and are earned over the term of the project. Income from these contracts can be recognized using either the percentage-of-completion or completed contract method. We discussed these alternatives in Chapter 5.

Another exception pertains to a company that develops computer software. Expenditures made after the software is determined to be technologically feasible but before it is ready for commercial production are capitalized. Costs incurred before technological feasibility is established are expensed as incurred. We discuss software development costs below.

START-UP COSTS. For the fiscal year ended December 31, 2010, **Chipotle Mexican Grill, Inc.**, opened 129 new restaurants. The company incurred a variety of one-time pre-opening costs for wages, benefits and travel for the training and opening teams, food and other restaurant operating costs totaling \$7.8 million. In fact, whenever a company introduces a new product or service, or commences business in a new territory or with a new customer, it incurs similar **start-up costs**. As with R&D expenditures, a company must expense all the costs related to a company's start-up activities in the period incurred, rather than capitalize those costs as an asset. Start-up costs also include **organization costs** related to organizing a new entity, such as legal fees and state filing fees to incorporate.²⁵

Start-up costs are expensed in the period incurred.

Additional Consideration

Development Stage Enterprises

A development stage enterprise is a new business that has either not commenced its principal operations or has begun its principal operations but has not generated significant revenues. Years ago, many of these companies recorded an asset for the normal operating costs incurred during the development stage. This asset was then expensed over a period of time beginning with the commencement of operations.

GAAP requires that these enterprises comply with the same generally accepted accounting principles that apply to established operating companies in determining whether a cost is to be charged to expense when incurred or capitalized and expensed in future periods.²⁶ Therefore, normal operating costs incurred during the development stage are expensed, not capitalized. Development stage enterprises are allowed to provide items of supplemental information to help financial statement readers more readily assess their future cash flows.

SOFTWARE DEVELOPMENT COSTS. The computer software industry has become a large and important U.S. business over the last two decades. Relative newcomers such as **Microsoft** and **Adobe Systems**, as well as traditional hardware companies like **IBM**, are leaders in this multibillion dollar industry. A significant expenditure for these companies is the cost of developing software. In the early years of the software industry, some software companies were capitalizing software development costs and expensing them in future periods and others were expensing these costs in the period incurred.

Now GAAP requires that companies record R&D as an expense, until **technological feasibility** of the software has been established, for costs they incur to develop or purchase computer

GAAP requires the capitalization of software development costs incurred after technological feasibility is established.

²⁵FASB ASC 720-15-25-1: Other Expenses—Start-Up Costs—Recognition (previously “Reporting on the Costs of Start-Up Activities,” *Statement of Position 98-5* (New York: AICPA, 1998)).

²⁶FASB ASC 915: Development Stage Entities (previously “Accounting and Reporting by Development Stage Enterprises,” *Statement of Financial Accounting Standards No. 7* (Stamford, Conn.: FASB, 1975)).

software to be sold, leased, or otherwise marketed.²⁷ We account for the costs incurred to develop computer software *to be used internally* in a similar manner. Costs incurred during the preliminary project stage are expensed as R&D. After the application development stage is reached (for example, at the coding stage or installation stage), we capitalize any further costs.²⁸ We generally capitalize the costs of computer software *purchased* for internal use.

Technological feasibility is established “when the enterprise has completed all planning, designing, coding, and testing activities that are necessary to establish that the product can be produced to meet its design specifications including functions, features, and technical performance requirements.”²⁹ Costs incurred after technological feasibility but before the software is available for general release to customers are capitalized as an intangible asset. These costs include coding and testing costs and the production of product masters. Costs incurred after the software release date usually are not R&D expenditures. Illustration 10–21 shows the R&D time line introduced earlier in the chapter modified to include the point at which technological feasibility is established. Only the costs incurred between technological feasibility and the software release date are capitalized.

Illustration 10–21

Research and Development Expenditures—Computer Software

The amortization of capitalized computer software development costs begins when the product is available for general release to customers. The periodic amortization percentage is the greater of (1) the ratio of current revenues to current and anticipated revenues (percentage-of-revenue method) or (2) the straight-line percentage over the useful life of the asset, as shown in Illustration 10–22.

Illustration 10–22

Software Development Costs

The Astro Corporation develops computer software graphics programs for sale. A new development project begun in 2012 reached technological feasibility at the end of June 2013, and the product was available for release to customers early in 2014. Development costs incurred in 2013 prior to June 30 were \$1,200,000 and costs incurred from June 30 to the product availability date were \$800,000. 2014 revenues from the sale of the new product were \$3,000,000 and the company anticipates an additional \$7,000,000 in revenues. The economic life of the software is estimated at four years.

Astro Corporation would expense the \$1,200,000 in costs incurred prior to the establishment of technological feasibility and capitalize the \$800,000 in costs incurred between technological feasibility and the product availability date. 2014 amortization of the intangible asset, software development costs, is calculated as follows:

1. Percentage-of-revenue method:

$$\frac{\$3,000,000}{\$3,000,000 + 7,000,000} = 30\% \times \$800,000 = \$240,000$$

2. Straight-line method:

$$\frac{1}{4} \text{ or } 25\% \times \$800,000 = \$200,000.$$

The percentage-of-revenue method is used because it produces the greater amortization, \$240,000.

²⁷FASB ASC 985–20–25–1: Software—Costs of Software to be Sold, Leased, or Marketed—Recognition (previously “Accounting for the Costs of Computer Software to be Sold, Leased, or Otherwise Marketed,” *Statement of Financial Accounting Standards No. 86* (Stamford, Conn.: FASB, 1985)).

²⁸FASB ASC 350–40–25: Intangibles—Goodwill and Other—Internal-Use Software—Recognition (previously “Accounting for the Costs of Computer Software Developed or Obtained for Internal Use,” *Statement of Position 98-1* (New York: AICPA, 1998)).

²⁹FASB ASC 985–20–25–2: Software—Costs of Software to be Sold, Leased, or Marketed—Recognition (previously “Accounting for the Costs of Computer Software to be Sold, Leased, or Otherwise Marketed,” *Statement of Financial Accounting Standards No. 86* (Stamford, Conn.: FASB, 1985), par. 4).

Illustration 10–23 shows the software disclosure included in a recent annual report of **CA, Inc.** The note provides a good summary of the accounting treatment of software development costs.

Capitalized Development Costs (in part)

Capitalized development costs in the accompanying Consolidated Balance Sheets include costs associated with the development of computer software to be sold, leased or otherwise marketed. Software development costs associated with new products and significant enhancements to existing software products are expensed as incurred until technological feasibility has been established. Annual amortization of capitalized software costs is the greater of the amount computed using the ratio that current gross revenues for a product bear to the total of current and anticipated future gross revenues for that product or the straight-line method over the remaining estimated economic life of the software product, generally estimated to be five years from the date the product became available for general release to customers.

Why do generally accepted accounting principles allow this exception to the general rule of expensing all R&D? We could attribute it to the political process. Software is a very important industry to our economy and perhaps its lobbying efforts resulted in the standard allowing software companies to capitalize certain R&D costs.

We could also attribute the exception to the nature of the software business. Recall that R&D costs in general are expensed in the period incurred for two reasons: (1) they entail a high degree of uncertainty of future benefits, and (2) they are difficult to match with future benefits. With software, there is an important identifiable engineering milestone, technological feasibility. When this milestone is attained, the probability of the software product's success increases significantly. And because the useful life of software is fairly short (one to four years in most cases), it is much easier to determine the periods of increased revenues than for R&D projects in other industries. Compare this situation with, say, the development of a new drug. Even after the drug has been developed, it must go through extensive testing to meet FDA (Food and Drug Administration) approval, which may never be attained. If attained, the useful life of the drug could be anywhere from a few months to many years.

International Financial Reporting Standards

Research and Development Expenditures. Except for software development costs incurred after technological feasibility has been established, U.S. GAAP requires all research and development expenditures to be expensed in the period incurred. *IAS No. 38*³⁰ draws a distinction between research activities and development activities. Research expenditures are expensed in the period incurred. However, development expenditures that meet specified criteria are capitalized as an intangible asset. Under both U.S. GAAP and IFRS, any direct costs to secure a patent, such as legal and filing fees, are capitalized.

Heineken, a company based in Amsterdam, prepares its financial statements according to IFRS. The following disclosure note describes the company's adherence to *IAS No. 38*. The note also describes the criteria for capitalizing development expenditures as well as the types of expenditures capitalized.

Software, Research and Development and Other Intangible Assets (in part)

Expenditures on research activities, undertaken with the prospect of gaining new technical knowledge and understanding, are recognized in the income statement when incurred. Development activities involve a plan or design for the production of new or substantially improved products and processes. Development expenditures are capitalized only if development costs can be measured reliably, the product or process is technically and

³⁰“Intangible Assets,” *International Accounting Standard No. 38* (IASCF), as amended effective January 1, 2011.

(concluded)

commercially feasible, future economic benefits are probable, and Heineken intends to and has sufficient resources to complete development and to use or sell the asset. The expenditures capitalized include the cost of materials, direct labor and overhead costs that are directly attributable to preparing the asset for its intended use, and capitalized borrowing costs.

Amortization of capitalized development costs begins when development is complete and the asset is available for use. Heineken disclosed that it amortizes its capitalized development costs using the straight-line method over an estimated 3-year useful life.

PURCHASED RESEARCH AND DEVELOPMENT. It's not unusual for one company to buy another company in order to obtain technology that the acquired company has developed or is in the process of developing. Any time a company buys another, it values the tangible and intangible assets acquired at fair value. When technology is involved, we distinguish between *developed technology* and *in-process research and development*. To do that, we borrow a criterion used in accounting for software development costs, and determine whether *technological feasibility* has been achieved. If so, the value of that technology is considered "developed," and we capitalize its fair value (record it as an asset) and amortize that amount over its useful life just like any other finite-life intangible asset.

In business acquisitions, the fair value of in-process research and development is capitalized as an indefinite-life intangible asset.

We treat in-process R&D differently. GAAP requires the capitalization of the fair value of in-process R&D. But, unlike developed technology, we view it as an *indefinite-life* intangible asset.³¹ As you will learn in Chapter 11, we don't amortize indefinite-life intangibles. Instead, we test them for impairment at least annually. If the R&D project is completed successfully, we switch to the way we account for developed technology and amortize the capitalized amount over the estimated period the product or process developed will provide benefits. If the project instead is abandoned, we expense the entire balance immediately. Research and development costs incurred after the acquisition to complete the project are expensed as incurred, consistent with the treatment of any other R&D expenditure not acquired in an acquisition.

Real World Financials

As an example, during its fiscal year ended April 1, 2011, **Symantec Corporation**, a global provider of data security and storage systems, acquired the identity and authentication business of **VeriSign, Inc.**, for \$1.29 billion. The fair values assigned included \$354 million for finite-life intangible assets (including \$123 million in developed technology), \$602 million for goodwill, and \$274 million for indefinite-life intangibles (tradenames and trademarks). No in-process R&D was recorded.

● LO10-9

International Financial Reporting Standards

Software Development Costs. The percentage we use to amortize computer software development costs under U.S. GAAP is the greater of (1) the ratio of current revenues to current and anticipated revenues or (2) the straight-line percentage over the useful life of the software. This approach is allowed under IFRS, but not required.

³¹FASB ASC 805: Business Combinations (previously "Business Combinations," *Statement of Financial Accounting Standards No. 141 (revised)* (Norwalk, Conn.: FASB, 2007)).

Financial Reporting Case Solution

1. **Describe to Stan what it means to capitalize an expenditure. What is the general rule for determining which costs are capitalized when property, plant, and equipment or an intangible asset is acquired?** (p. 532) To capitalize an expenditure simply means to record it as an asset. All expenditures other than payments to shareholders and debt repayments are either expensed as incurred or capitalized. In general, the choice is determined by whether the expenditure benefits more than just the current period. Exceptions to this general principle are discussed in the chapter. The initial cost of an asset includes all expenditures necessary to bring the asset to its desired condition and location for use.
2. **Which costs might be included in the initial cost of equipment?** (p. 532) In addition to the purchase price, the cost of equipment might include the cost of transportation, installation, testing, and legal fees to establish title.
3. **In what situations is interest capitalized rather than expensed?** (p. 551) Interest is capitalized only for assets constructed for a company's own use or for assets constructed as discrete products for sale or lease. For example, **Walt Disney** capitalizes interest on assets constructed for its theme parks, resorts and other property, and on theatrical and television productions in process. During the construction period, interest is considered a cost necessary to get the asset ready for its intended use.
4. **What is the three-step process used to determine the amount of interest capitalized?** (p. 552) The first step is to determine the average accumulated expenditures for the period. The second step is to multiply the average accumulated expenditures by an appropriate interest rate or rates to determine the amount of interest capitalized. A final step compares the interest determined in step two with actual interest incurred. Interest capitalized is limited to the amount of interest incurred.
5. **What is goodwill and how is it measured?** (p. 539) Goodwill represents the unique value of a company as a whole over and above its identifiable tangible and intangible assets. Because goodwill can't be separated from a company, it's not possible for a buyer to acquire it without also acquiring the whole company or a controlling portion of it. Goodwill will appear as an asset in a balance sheet only when it was purchased in connection with the acquisition of another company. In that case, the capitalized cost of goodwill equals the fair value of the consideration exchanged for the company less the fair value of the net assets acquired. Goodwill is a residual asset; it's the amount left after other assets are identified and valued. Just like for other intangible assets that have indefinite useful lives, we do not amortize goodwill. ●

The Bottom Line

- **LO10-1** The initial cost of property, plant, and equipment and intangible assets acquired in an exchange transaction includes the purchase price and all expenditures necessary to bring the asset to its desired condition and location for use. The cost of a natural resource includes the acquisition costs for the use of land, the exploration and development costs incurred before production begins, and restoration costs incurred during or at the end of extraction. Purchased intangible assets are valued at their original cost to include the purchase price and legal and filing fees. (p. 532)
- **LO10-2** If a lump-sum purchase involves different assets, it is necessary to allocate the lump-sum acquisition price among the separate items according to some logical allocation method. A widely used allocation method is to divide the lump-sum purchase price according to the individual assets' relative fair values. (p. 540)
- **LO10-3** Assets acquired in exchange for deferred payment contracts are valued at their fair value or the present value of payments using a realistic interest rate. (p. 542)

- **LO10-4** Assets acquired through the issuance of equity securities are valued at the fair value of the securities if known; if not known, the fair value of the assets received is used. Donated assets are valued at their fair value. (p. 543)
- **LO10-5** A key to profitability is how well a company manages and utilizes its assets. Financial analysts often use activity, or turnover, ratios to evaluate a company's effectiveness in managing its assets. Property, plant, and equipment (PP&E) usually are a company's primary revenue-generating assets. Their efficient use is critical to generating a satisfactory return to owners. One ratio that analysts often use to measure how effectively managers use PP&E is the fixed-asset turnover ratio. This ratio is calculated by dividing net sales by average fixed assets. (p. 545)
- **LO10-6** When an item of property, plant, and equipment or an intangible asset is sold, a gain or loss is recognized for the difference between the consideration received and the asset's book value. The basic principle used for nonmonetary exchanges is to value the asset(s) received based on the fair value of the asset(s) given up. In certain situations, the valuation of the asset(s) received is based on the book value of the asset(s) given up. (p. 546)
- **LO10-7** The cost of a self-constructed asset includes identifiable materials and labor and a portion of the company's manufacturing overhead costs. In addition, GAAP provides for the capitalization of interest incurred during construction. The amount of interest capitalized is equal to the average accumulated expenditures for the period multiplied by the appropriate interest rates, not to exceed actual interest incurred. (p. 551)
- **LO10-8** Research and development costs incurred to internally develop an intangible asset are expensed in the period incurred. Filing and legal costs for developed intangibles are capitalized. (p. 556)
- **LO10-9** Other than software development costs incurred after technological feasibility has been established, U.S. GAAP requires all research and development expenditures to be expensed in the period incurred. *IAS No. 38* draws a distinction between research activities and development activities. Research expenditures are expensed in the period incurred. However, development expenditures that meet specified criteria are capitalized as an intangible asset. *IAS No. 20* requires that government grants be recognized in income over the periods necessary to match them on a systematic basis with the related costs that they are intended to compensate. (pp. 540, 545, 561, and 562) ●

APPENDIX 10

Oil And Gas Accounting

Chapter 1 characterized the establishment of accounting and reporting standards as a political process. Standards, particularly changes in standards, can have significant differential effects on companies, investors and creditors, and other interest groups. The FASB must consider potential economic consequences of a change in an accounting standard or the introduction of a new standard. The history of oil and gas accounting provides a good example of this political process and the effect of possible adverse economic consequences on the standard-setting process.

There are two generally accepted methods that companies can use to account for oil and gas exploration costs. The **successful efforts method** requires that exploration costs that are known *not* to have resulted in the discovery of oil or gas (sometimes referred to as *dry holes*) be included as expenses in the period the expenditures are made. The alternative, the **full-cost method**, allows costs incurred in searching for oil and gas within a large geographical area to be capitalized as assets and expensed in the future as oil and gas from the successful wells are removed from that area. Both of these methods are widely used. Illustration 10A-1 compares the two alternatives.

Using the full-cost method, Shannon would capitalize the entire \$20 million which is expensed as oil from the two successful wells is depleted. On the other hand, using the successful efforts method, the cost of the unsuccessful wells is expensed in 2013, and only the \$4 million cost related to the successful wells is capitalized and expensed in future periods as the oil is depleted.

The Shannon Oil Company incurred \$2,000,000 in exploration costs for each of 10 oil wells drilled in 2013 in west Texas. Eight of the 10 wells were dry holes.

The accounting treatment of the \$20 million in total exploration costs will vary significantly depending on the accounting method used. The summary journal entries using each of the alternative methods are as follows:

Successful Efforts		Full Cost	
Oil deposit	4,000,000	Oil deposit.....	20,000,000
Exploration expense	16,000,000	Cash	20,000,000
Cash.....	20,000,000		

In 1977 the FASB attempted to establish uniformity in the accounting treatment of oil and gas exploration costs. A standard was issued requiring all companies to use the successful efforts method.³²

This Standard met with criticism from the oil and gas companies that were required to switch from full cost to successful efforts accounting. These companies felt that the switch would seriously depress their reported income over time. As a result, they argued, their ability to raise capital in the securities markets would be inhibited, which would result in a cutback of new exploration. The fear that the standard would cause domestic companies to significantly reduce oil and gas exploration and thus increase our dependence on foreign oil was compelling to the U.S. Congress, the SEC, and the Department of Energy.

Extensive pressure from Congress, the SEC, and affected companies forced the FASB to rescind the Standard. Presently, oil and gas companies can use either the successful efforts or full-cost method to account for oil and gas exploration costs. Of course, the method used must be disclosed. For example, Illustration 10A–2 shows how **Chevron Corp.** disclosed its use of the successful efforts method in a note to recent financial statements. ●

Illustration 10A–1

Oil and Gas Accounting

Many feared that the requirement to switch to successful efforts accounting would cause a significant cutback in the exploration for new oil and gas in the United States.

Properties, Plant and Equipment

The successful efforts method is used for crude oil and gas exploration and production activities.

Illustration 10A–2

Oil and Gas Accounting Disclosure—Chevron Corp.

Real World Financials

³²The rescinded standard was “Financial Accounting and Reporting by Oil and Gas Producing Companies,” *Statement of Financial Accounting Standards No. 19* (Stamford, Conn.: FASB, 1977). Authoritative guidance on this topic can now be found at FASB ASC 932: Extractive Activities—Oil and Gas.

Questions For Review of Key Topics

- Q 10–1 Explain the difference between tangible and intangible long-lived, revenue-producing assets.
- Q 10–2 What is included in the original cost of property, plant, and equipment and intangible assets acquired in an exchange transaction?
- Q 10–3 Identify the costs associated with the initial valuation of a developed natural resource.
- Q 10–4 Briefly summarize the accounting treatment for intangible assets, explaining the difference between purchased and internally developed intangible assets.
- Q 10–5 What is goodwill and how is it measured?
- Q 10–6 Explain the method generally used to allocate the cost of a lump-sum purchase to the individual assets acquired.
- Q 10–7 When an asset is acquired and a note payable is assumed, explain how acquisition cost of the asset is determined when the interest rate for the note is less than the current market rate for similar notes.
- Q 10–8 Explain how assets acquired in exchange for equity securities are valued.
- Q 10–9 Explain how property, plant, and equipment and intangible assets acquired through donation are valued.

- Q 10-10** When an item of property, plant, and equipment is disposed of, how is gain or loss on disposal computed?
- Q 10-11** What is the basic principle for valuing property, plant, and equipment and intangible assets acquired in exchange for other nonmonetary assets?
- Q 10-12** Identify the two exceptions to valuing property, plant, and equipment and intangible assets acquired in nonmonetary exchanges at the fair value of the asset(s) given up.
- Q 10-13** In what situations is interest capitalized?
- Q 10-14** Define average accumulated expenditures and explain how it is computed.
- Q 10-15** Explain the difference between the specific interest method and the weighted-average method in determining the amount of interest to be capitalized.
- Q 10-16** Define R&D according to U.S. GAAP.
- Q 10-17** Explain the accounting treatment of equipment acquired for use in R&D projects.
- Q 10-18** Explain the accounting treatment of costs incurred to develop computer software.
- Q 10-19** Explain the difference in the accounting treatment of the cost of developed technology and the cost of in-process R&D in an acquisition.
- IFRS** **Q 10-20** Identify any differences between U.S. GAAP and International Financial Reporting Standards in the treatment of research and development expenditures.
- IFRS** **Q 10-21** Identify any differences between U.S. GAAP and International Financial Reporting Standards in the treatment of software development costs.
- IFRS** **Q 10-22** Identify any differences between U.S. GAAP and International Financial Reporting Standards in accounting for government grants received.
- Q 10-23** (Based on Appendix 10) Explain the difference between the successful efforts and the full-cost methods of accounting for oil and gas exploration costs.

Brief Exercises

- BE 10-1**
Acquisition cost; machine
● LO10-1
Beaverton Lumber purchased a milling machine for \$35,000. In addition to the purchase price, Beaverton made the following expenditures: freight, \$1,500; installation, \$3,000; testing, \$2,000; personal property tax on the machine for the first year, \$500. What is the initial cost of the machine?
- BE 10-2**
Acquisition cost; land and building
● LO10-1
Fullerton Waste Management purchased land and a warehouse for \$600,000. In addition to the purchase price, Fullerton made the following expenditures related to the acquisition: broker's commission, \$30,000; title insurance, \$3,000; miscellaneous closing costs, \$6,000. The warehouse was immediately demolished at a cost of \$18,000 in anticipation of the building of a new warehouse. Determine the amounts Fullerton should capitalize as the cost of the land and the building.
- BE 10-3**
Lump-sum acquisition
● LO10-2
Refer to the situation described in BE 10-2. Assume that Fullerton decides to use the warehouse rather than demolish it. An independent appraisal estimates the fair values of the land and warehouse at \$420,000 and \$280,000, respectively. Determine the amounts Fullerton should capitalize as the cost of the land and the building.
- BE 10-4**
Cost of a natural resource
● LO10-1
Smithson Mining operates a silver mine in Nevada. Acquisition, exploration, and development costs totaled \$5.6 million. After the silver is extracted in approximately five years, Smithson is obligated to restore the land to its original condition, including constructing a wildlife preserve. The company's controller has provided the following three cash flow possibilities for the restoration costs: (1) \$500,000, 20% probability; (2) \$550,000, 45% probability; and (3) \$650,000, 35% probability. The company's credit-adjusted, risk-free rate of interest is 6%. What is the initial cost of the silver mine?
- BE 10-5**
Cost of a natural resource
● LO10-1
Refer to the situation described in BE 10-4. What is the carrying value of the asset retirement liability at the end of one year? Assuming that the actual restoration costs incurred after extraction is completed are \$596,000, what amount of gain or loss will Smithson recognize on retirement of the liability?
- BE 10-6**
Goodwill
● LO10-1
Pro-tech Software acquired all of the outstanding stock of Reliable Software for \$14 million. The book value of Reliable's net assets (assets minus liabilities) was \$8.3 million. The fair values of Reliable's assets and liabilities equaled their book values with the exception of certain intangible assets whose fair values exceeded book values by \$2.5 million. Calculate the amount paid for goodwill.

BE 10-7

Acquisition cost;
noninterest-
bearing note

● LO10-3

On June 30, 2013, Kimberly Farms purchased custom-made harvesting machinery from a local producer. In payment, Kimberly signed a noninterest-bearing note requiring the payment of \$60,000 in two years. The fair value of the machinery is not known, but an 8% interest rate properly reflects the time value of money for this type of loan agreement. At what amount will Kimberly initially value the machinery? How much interest expense will Kimberly recognize in its income statement for this note for the year ended December 31, 2013?

BE 10-8

Acquisition cost;
issuance of equity
securities

● LO10-4

Shackelford Corporation acquired a patent from its founder, Jim Shackelford, in exchange for 50,000 shares of the company's noper common stock. On the date of the exchange, the common stock had a fair value of \$22 per share. Determine the cost of the patent.

BE 10-9

Fixed-asset
turnover ratio;
solve for
unknown

● LO10-5

The balance sheets of Pinewood Resorts reported net fixed assets of \$740,000 and \$940,000 at the end of 2012 and 2013, respectively. The fixed-asset turnover ratio for 2013 was 3.25. Calculate Pinewood's net sales for 2013.

BE 10-10

Disposal of
property, plant,
and equipment

● LO10-6

Lawler Clothing sold manufacturing equipment for \$16,000. Lawler originally purchased the equipment for \$80,000, and depreciation through the date of sale totaled \$71,000. What was the gain or loss on the sale of the equipment?

BE 10-11

Nonmonetary
exchange

● LO10-6

Calaveras Tire exchanged machinery for two pickup trucks. The book value and fair value of the machinery were \$20,000 (original cost of \$65,000 less accumulated depreciation of \$45,000) and \$17,000, respectively. To equalize fair values, Calaveras paid \$8,000 in cash. At what amount will Calaveras value the pickup trucks? How much gain or loss will the company recognize on the exchange? Assume the exchange has commercial substance.

BE 10-12

Nonmonetary
exchange

● LO10-6

Refer to the situation described in BE 10-11. Answer the questions assuming that the fair value of the machinery was \$24,000, instead of \$17,000.

BE 10-13

Nonmonetary
exchange

● LO10-6

Refer to the situation described in BE 10-12. Answer the questions assuming that the exchange lacks commercial substance.

BE 10-14

Interest
capitalization

● LO10-7

A company constructs a building for its own use. Construction began on January 1 and ended on December 30. The expenditures for construction were as follows: January 1, \$500,000; March 31, \$600,000; June 30, \$400,000; October 30, \$600,000. To help finance construction, the company arranged a 7% construction loan on January 1 for \$700,000. The company's other borrowings, outstanding for the whole year, consisted of a \$3 million loan and a \$5 million note with interest rates of 8% and 6%, respectively. Assuming the company uses the *specific interest method*, calculate the amount of interest capitalized for the year.

BE 10-15

Interest
capitalization

● LO10-7

Refer to the situation described in BE 10-14. Assuming the company uses the *weighted-average method*, calculate the amount of interest capitalized for the year.

BE 10-16

Research and
development

● LO10-8

Maxtor Technology incurred the following costs during the year related to the creation of a new type of personal computer monitor:

Salaries	\$220,000
Depreciation on R&D facilities and equipment	125,000
Utilities and other direct costs incurred for the R&D facilities	66,000
Patent filing and related legal costs	22,000
Payment to another company for performing a portion of the development work	120,000
Costs of adapting the new monitor for the specific needs of a customer	80,000

What amount should Maxtor report as research and development expense in its income statement?

Exercises

An alternate exercise and problem set is available on the text website: www.mhhe.com/spiceland7e

E 10-1

Acquisition costs;
land and building

● LO10-1

On March 1, 2013, Beldon Corporation purchased land as a factory site for \$60,000. An old building on the property was demolished, and construction began on a new building that was completed on December 15, 2013. Costs incurred during this period are listed below:

Demolition of old building	\$ 4,000
Architect's fees (for new building)	12,000
Legal fees for title investigation of land	2,000
Property taxes on land (for period beginning March 1, 2013)	3,000
Construction costs	500,000
Interest on construction loan	5,000

Salvaged materials resulting from the demolition of the old building were sold for \$2,000.

Required:

Determine the amounts that Beldon should capitalize as the cost of the land and the new building.

E 10-2

Acquisition cost;
machinery

● LO10-1

Oaktree Company purchased a new machine and made the following expenditures:

Purchase price	\$45,000
Sales tax	2,200
Freight charges for shipment of machine	700
Insurance on the machine for the first year	900
Installation of machine	1,000

The machine, including sales tax, was purchased on open account, with payment due in 30 days. The other expenditures listed above were paid in cash.

Required:

Prepare the necessary journal entries to record the above expenditures.

E 10-3

Acquisition costs;
lump-sum acquisition

● LO10-1,
LO10-2

Semtech Manufacturing purchased land and building for \$4 million. In addition to the purchase price, Semtech made the following expenditures in connection with the purchase of the land and building:

Title insurance	\$16,000
Legal fees for drawing the contract	5,000
Pro-rated property taxes for the period after acquisition	36,000
State transfer fees	4,000

An independent appraisal estimated the fair values of the land and building, if purchased separately, at \$3.3 and \$1.1 million, respectively. Shortly after acquisition, Semtech spent \$82,000 to construct a parking lot and \$40,000 for landscaping.

Required:

- Determine the initial valuation of each asset Semtech acquired in these transactions.
- Repeat requirement 1, assuming that immediately after acquisition, Semtech demolished the building. Demolition costs were \$250,000 and the salvaged materials were sold for \$6,000. In addition, Semtech spent \$86,000 clearing and grading the land in preparation for the construction of a new building.

E 10-4

Cost of a natural
resource

● LO10-1

Jackpot Mining Company operates a copper mine in central Montana. The company paid \$1,000,000 in 2013 for the mining site and spent an additional \$600,000 to prepare the mine for extraction of the copper. After the copper is extracted in approximately four years, the company is required to restore the land to its original condition, including repaving of roads and replacing a greenbelt. The company has provided the following three cash flow possibilities for the restoration costs:

	Cash Outflow	Probability
1	\$300,000	25%
2	400,000	40%
3	600,000	35%

To aid extraction, Jackpot purchased some new equipment on July 1, 2013, for \$120,000. After the copper is removed from this mine, the equipment will be sold. The credit-adjusted, risk-free rate of interest is 10%.

Required:

1. Determine the cost of the copper mine.
2. Prepare the journal entries to record the acquisition costs of the mine and the purchase of equipment.

E 10-5
Intangibles

● LO10-1

Freitas Corporation was organized early in 2013. The following expenditures were made during the first few months of the year:

Attorneys' fees in connection with the organization of the corporation	\$ 12,000
State filing fees and other incorporation costs	3,000
Purchase of a patent	20,000
Legal and other fees for transfer of the patent	2,000
Purchase of furniture	30,000
Pre-opening salaries	40,000
Total	<u>\$107,000</u>

Required:

Prepare a summary journal entry to record the \$107,000 in cash expenditures.

E 10-6
Goodwill

● LO10-1

On March 31, 2013, Wolfson Corporation acquired all of the outstanding common stock of Barney Corporation for \$17,000,000 in cash. The book values and fair values of Barney's assets and liabilities were as follows:

	Book Value	Fair Value
Current assets	\$ 6,000,000	\$ 7,500,000
Property, plant, and equipment	11,000,000	14,000,000
Other assets	1,000,000	1,500,000
Current liabilities	4,000,000	4,000,000
Long-term liabilities	6,000,000	5,500,000

Required:

Calculate the amount paid for goodwill.

E 10-7
Goodwill

● LO10-1

Johnson Corporation acquired all of the outstanding common stock of Smith Corporation for \$11,000,000 in cash. The book value of Smith's net assets (assets minus liabilities) was \$7,800,000. The fair values of all of Smith's assets and liabilities were equal to their book values with the following exceptions:

	Book Value	Fair Value
Receivables	\$1,300,000	\$1,100,000
Property, plant, and equipment	8,000,000	9,400,000
Intangible assets	200,000	1,200,000

Required:

Calculate the amount paid for goodwill.

E 10-8
Lump-sum
acquisition

● LO10-2

Pinewood Company purchased two buildings on four acres of land. The lump-sum purchase price was \$900,000. According to independent appraisals, the fair values were \$450,000 (building A) and \$250,000 (building B) for the buildings and \$300,000 for the land.

Required:

Determine the initial valuation of the buildings and the land.

E 10-9
Acquisition cost;
noninterest-
bearing note

● LO10-3

On January 1, 2013, Byner Company purchased a used tractor. Byner paid \$5,000 down and signed a noninterest-bearing note requiring \$25,000 to be paid on December 31, 2015. The fair value of the tractor is not determinable. An interest rate of 10% properly reflects the time value of money for this type of loan agreement. The company's fiscal year-end is December 31.

Required:

1. Prepare the journal entry to record the acquisition of the tractor. Round computations to the nearest dollar.
2. How much interest expense will the company include in its 2013 and 2014 income statements for this note?
3. What is the amount of the liability the company will report in its 2013 and 2014 balance sheets for this note?

E 10-10
Acquisition costs;
noninterest-
bearing note

● LO10-1,
LO10-3

Teradene Corporation purchased land as a factory site and contracted with Maxtor Construction to construct a factory. Teradene made the following expenditures related to the acquisition of the land, building, and machinery to equip the factory:

Purchase price of the land	\$1,200,000
Demolition and removal of old building	80,000
Clearing and grading the land before construction	150,000
Various closing costs in connection with acquiring the land	42,000
Architect's fee for the plans for the new building	50,000
Payments to Maxtor for building construction	3,250,000
Machinery purchased	860,000
Freight charges on machinery	32,000
Trees, plants, and other landscaping	45,000
Installation of a sprinkler system for the landscaping	5,000
Cost to build special platforms and install wiring for the machinery	12,000
Cost of trial runs to ensure proper installation of the machinery	7,000
Fire and theft insurance on the factory for the first year of use	24,000

In addition to the above expenditures, Teradene purchased four forklifts from **Caterpillar**. In payment, Teradene paid \$16,000 cash and signed a noninterest-bearing note requiring the payment of \$70,000 in one year. An interest rate of 7% properly reflects the time value of money for this type of loan.

Required:

Determine the initial valuation of each of the assets Teradene acquired in the above transactions.

E 10-11
Acquisition cost;
issuance of equity
securities and
donation

● LO10-4,
LO10-9

On February 1, 2013, the Xilon Corporation issued 50,000 shares of its noper common stock in exchange for five acres of land located in the city of Monrovia. On the date of the acquisition, Xilon's common stock had a fair value of \$18 per share. An office building was constructed on the site by an independent contractor. The building was completed on November 2, 2013, at a cost of \$6,000,000. Xilon paid \$4,000,000 in cash and the remainder was paid by the city of Monrovia.

Required:

1. Prepare the journal entries to record the acquisition of the land and the building.
2. Assuming that Xilon prepares its financial statements according to International Financial Reporting Standards, explain the alternatives the company has for recording the acquisition of the office building.

 IFRS

E 10-12
Acquisition
cost; acquisition
by donation;
government
grant

● LO10-9

Cranston LTD. prepares its financial statements according to International Financial Reporting Standards. In October 2013, the company received a \$2 million government grant. The grant represents 20% of the total cost of equipment that will be used to improve the roads in the local area. Cranston recorded the grant and the purchase of the equipment as follows:

Cash.....	2,000,000	
Revenue.....		2,000,000
Equipment.....	10,000,000	
Cash.....		10,000,000

 IFRS

Required:

1. Explain the alternative accounting treatments available to Cranston for accounting for this government grant.
2. Prepare any necessary correcting entries under each of the alternatives described in requirement 1.

E 10-13
Fixed-asset
turnover ratio;
Plantronics

● LO10-5

Plantronics, Inc., a leading worldwide manufacturer of communication and telephone headset systems, reported the following information in its 2011 financial statements (\$ in thousands):

	2011	2010
Balance sheets		
Property, plant, and equipment (net)	\$ 70,622	\$65,700
Income statement		
Net sales for 2011	\$683,602	

Real World Financials

Required:

1. Calculate the company's 2011 fixed-asset turnover ratio.
2. How would you interpret this ratio?

E 10-14
Disposal of
property, plant,
and equipment
● LO10-6

Funseth Farms Inc. purchased a tractor in 2010 at a cost of \$30,000. The tractor was sold for \$3,000 in 2013. Depreciation recorded through the disposal date totaled \$26,000.

Required:

1. Prepare the journal entry to record the sale.
2. Assuming that the tractor was sold for \$10,000, prepare the journal entry to record the sale.

E 10-15
Nonmonetary
exchange
● LO10-6

Cedric Company recently traded in an older model computer for a new model. The old model's book value was \$180,000 (original cost of \$400,000 less \$220,000 in accumulated depreciation) and its fair value was \$200,000. Cedric paid \$60,000 to complete the exchange which has commercial substance.

Required:

Prepare the journal entry to record the exchange.

E 10-16
Nonmonetary
exchange
● LO10-6

[This is a variation of the previous exercise.]

Required:

Assume the same facts as in Exercise 10-15, except that the fair value of the old equipment is \$170,000. Prepare the journal entry to record the exchange.

E 10-17
Nonmonetary
exchange
● LO10-6

The Bronco Corporation exchanged land for equipment. The land had a book value of \$120,000 and a fair value of \$150,000. Bronco paid the owner of the equipment \$10,000 to complete the exchange which has commercial substance.

Required:

1. What is the fair value of the equipment?
2. Prepare the journal entry to record the exchange.

E 10-18
Nonmonetary
exchange
● LO10-6

[This is a variation of the previous exercise.]

Required:

Assume the same facts as in Exercise 10-17 except that Bronco *received* \$10,000 from the owner of the equipment to complete the exchange.

1. What is the fair value of the equipment?
2. Prepare the journal entry to record the exchange.

E 10-19
Nonmonetary
exchange
● LO10-6

The Tinsley Company exchanged land that it had been holding for future plant expansion for a more suitable parcel located farther from residential areas. Tinsley carried the land at its original cost of \$30,000. According to an independent appraisal, the land currently is worth \$72,000. Tinsley gave \$14,000 in cash to complete the transaction.

Required:

1. What is the fair value of the new parcel of land received by Tinsley?
2. Prepare the journal entry to record the exchange assuming the exchange has commercial substance.
3. Prepare the journal entry to record the exchange assuming the exchange lacks commercial substance.

E 10-20
Acquisition cost;
multiple methods
● LO10-1,
LO10-3,
LO10-4,
LO10-6

Connors Corporation acquired manufacturing equipment for use in its assembly line. Below are four *independent* situations relating to the acquisition of the equipment.

1. The equipment was purchased on account for \$25,000. Credit terms were 2/10, n/30. Payment was made within the discount period and the company records the purchases of equipment net of discounts.
2. Connors gave the seller a noninterest-bearing note. The note required payment of \$27,000 one year from date of purchase. The fair value of the equipment is not determinable. An interest rate of 10% properly reflects the time value of money in this situation.
3. Connors traded in old equipment that had a book value of \$6,000 (original cost of \$14,000 and accumulated depreciation of \$8,000) and paid cash of \$22,000. The old equipment had a fair value of \$2,500 on the date of the exchange. The exchange has commercial substance.
4. Connors issued 1,000 shares of its noper common stock in exchange for the equipment. The market value of the common stock was not determinable. The equipment could have been purchased for \$24,000 in cash.

Required:

For each of the above situations, prepare the journal entry required to record the acquisition of the equipment. Round computations to the nearest dollar.

E 10-21
FASB codification
research

● LO10-6

The *FASB Accounting Standards Codification* represents the single source of authoritative U.S. generally accepted accounting principles.

Required:

1. Obtain the relevant authoritative literature on nonmonetary exchanges using the FASB's Codification Research System at the FASB website (www.fasb.org). Identify the Codification topic number for nonmonetary transactions.
2. What are the specific citations that list the disclosure requirements for nonmonetary transactions?
3. Describe the disclosure requirements.

E 10-22
FASB codification
research

● LO10-1,
LO10-6,
LO10-7,
LO10-8

Access the FASB's Codification Research System at the FASB website (www.fasb.org). Determine the specific citation for each of the following items:

1. The disclosure requirements in the notes to the financial statements for depreciation on property, plant, and equipment.
2. The criteria for determining commercial substance in a nonmonetary exchange.
3. The disclosure requirements for interest capitalization.
4. The elements of costs to be included as R&D activities.

E 10-23
Interest
capitalization

● LO10-7

On January 1, 2013, the Marjlee Company began construction of an office building to be used as its corporate headquarters. The building was completed early in 2014. Construction expenditures for 2013, which were incurred evenly throughout the year, totaled \$6,000,000. Marjlee had the following debt obligations which were outstanding during all of 2013:

Construction loan, 10%	\$1,500,000
Long-term note, 9%	2,000,000
Long-term note, 6%	4,000,000

Required:

Calculate the amount of interest capitalized in 2013 for the building using the specific interest method.

E 10-24
Interest
capitalization

● LO10-7

On January 1, 2013, the Shagri Company began construction on a new manufacturing facility for its own use. The building was completed in 2014. The only interest-bearing debt the company had outstanding during 2013 was long-term bonds with a book value of \$10,000,000 and an effective interest rate of 8%. Construction expenditures incurred during 2013 were as follows:

January 1	\$500,000
March 1	600,000
July 31	480,000
September 30	600,000
December 31	300,000

Required:

Calculate the amount of interest capitalized for 2013.

E 10-25
Interest
capitalization

● LO10-7

On January 1, 2013, the Highlands Company began construction on a new manufacturing facility for its own use. The building was completed in 2014. The company borrowed \$1,500,000 at 8% on January 1 to help finance the construction. In addition to the construction loan, Highlands had the following debt outstanding throughout 2013:

\$5,000,000, 12% bonds
\$3,000,000, 8% long-term note

Construction expenditures incurred during 2013 were as follows:

January 1	\$ 600,000
March 31	1,200,000
June 30	800,000
September 30	600,000
December 31	400,000

Required:

Calculate the amount of interest capitalized for 2013 using the specific interest method.

E 10-26
Research and
development
● LO10-8

In 2013, Space Technology Company modified its model Z2 satellite to incorporate a new communication device. The company made the following expenditures:

Basic research to develop the technology	\$2,000,000
Engineering design work	680,000
Development of a prototype device	300,000
Acquisition of equipment	60,000
Testing and modification of the prototype	200,000
Legal and other fees for patent application on the new communication system	40,000
Legal fees for successful defense of the new patent	20,000
Total	<u>\$3,300,000</u>

The equipment will be used on this and other research projects. Depreciation on the equipment for 2013 is \$10,000.

During your year-end review of the accounts related to intangibles, you discover that the company has capitalized all of the above as costs of the patent. Management contends that the device simply represents an improvement of the existing communication system of the satellite and, therefore, should be capitalized.

Required:

Prepare correcting entries that reflect the appropriate treatment of the expenditures.

E 10-27
Research and
development
● LO10-8

Delaware Company incurred the following research and development costs during 2013:

Salaries and wages for lab research	\$ 400,000
Materials used in R&D projects	200,000
Purchase of equipment	900,000
Fees paid to outsiders for R&D projects	320,000
Patent filing and legal costs for a developed product	65,000
Salaries, wages, and supplies for R&D work performed for another company under a contract	350,000
Total	<u>\$2,235,000</u>

The equipment has a seven-year life and will be used for a number of research projects. Depreciation for 2013 is \$120,000.

Required:

Calculate the amount of research and development expense that Delaware should report in its 2013 income statement.

E 10-28
IFRS; research
and development
● LO10-8,
LO10-9

Janson Pharmaceuticals incurred the following costs in 2013 related to a new cancer drug:

Research for new formulas	\$2,425,000
Development of a new formula	1,600,000
Legal and filing fees for a patent for the new formula	60,000
Total	<u>\$4,085,000</u>

The development costs were incurred after technological and commercial feasibility was established and after the future economic benefits were deemed probable. The project was successfully completed and the new drug was patented before the end of the 2013 fiscal year.

Required:

1. Calculate the amount of research and development expense Janson should report in its 2013 income statement related to this project.
2. Repeat requirement 1 assuming that Janson prepares its financial statements according to International Financial Reporting Standards.

E 10-29
Concepts;
terminology
● LO10-1,
LO10-4,
LO10-6,
LO10-7

Listed below are several terms and phrases associated with property, plant, and equipment and intangible assets. Pair each item from List A with the item from List B (by letter) that is most appropriately associated with it.

List A	List B
___ 1. Depreciation	a. Exclusive right to display a word, a symbol, or an emblem.
___ 2. Depletion	b. Exclusive right to benefit from a creative work.
___ 3. Amortization	c. Operational assets that represent rights.
___ 4. Average accumulated expenditures	d. The allocation of cost for natural resources.
	e. Purchase price less fair value of net identifiable assets.

(continued)

(concluded)

- | | |
|----------------------------------|---|
| ___ 5. Revenue—donation of asset | f. The allocation of cost for plant and equipment. |
| ___ 6. Nonmonetary exchange | g. Approximation of average amount of debt if all construction funds were borrowed. |
| ___ 7. Natural resources | h. Account credited when assets are donated to a corporation. |
| ___ 8. Intangible assets | i. The allocation of cost for intangible assets. |
| ___ 9. Copyright | j. Basic principle is to value assets acquired using fair value of assets given. |
| ___ 10. Trademark | k. Wasting assets. |
| ___ 11. Goodwill | |

E 10-30

Software development costs

● LO10-8

Early in 2013, the Excalibur Company began developing a new software package to be marketed. The project was completed in December 2013 at a cost of \$6 million. Of this amount, \$4 million was spent before technological feasibility was established. Excalibur expects a useful life of five years for the new product with total revenues of \$10 million. During 2014, revenue of \$3 million was recognized.

Required:

1. Prepare a journal entry to record the 2013 development costs.
2. Calculate the required amortization for 2014.
3. At what amount should the computer software costs be reported in the December 31, 2014, balance sheet?

E 10-31

Full-cost and successful efforts methods compared

● Appendix

The Manguino Oil Company incurred exploration costs in 2013 searching and drilling for oil as follows:

Well 101	\$ 50,000
Well 102	60,000
Well 103	80,000
Wells 104-108	260,000
Total	<u>\$450,000</u>

It was determined that Wells 104-108 were dry holes and were abandoned. Wells 101, 102, and 103 were determined to have sufficient oil reserves to be commercially successful.

Required:

1. Prepare a summary journal entry to record the indicated costs assuming that the company uses the full-cost method of accounting for exploration costs. All of the exploration costs were paid in cash.
2. Prepare a summary journal entry to record the indicated costs assuming that the company uses the successful efforts method of accounting for exploration costs. All of the exploration costs were paid in cash.

CPA and CMA Review Questions

CPA Exam Questions

● LO10-1

The following questions are adapted from a variety of sources including questions developed by the AICPA Board of Examiners and those used in the Kaplan CPA Review Course to study property, plant, and equipment and intangible assets while preparing for the CPA examination. Determine the response that best completes the statements or questions.

1. Simons Company purchased land to build a new factory. The following expenditures were made in conjunction with the land purchase:
 - Purchase price of the land, \$150,000
 - Real estate commissions of 7% of the purchase price
 - Land survey, \$5,000
 - Back taxes, \$5,000

What is the initial value of the land?

- a. \$160,000
- b. \$160,500
- c. \$165,500
- d. \$170,500

● LO10-2

2. During 2013, Burr Co. made the following expenditures related to the acquisition of land and the construction of a building:

Purchase price of land	\$ 60,000
Legal fees for contracts to purchase land	2,000
Architects' fees	8,000
Demolition of old building on site	5,000
Sale of scrap from old building	3,000
Construction cost of new building (fully completed)	350,000

What amounts should be recorded as the initial values of the land and the building?

	<u>Land</u>	<u>Building</u>
a.	\$60,000	\$360,000
b.	\$62,000	\$360,000
c.	\$64,000	\$358,000
d.	\$65,000	\$362,000

● LO10-3

3. On December 31, 2013, Bart Inc. purchased a machine from Fell Corp. in exchange for a noninterest-bearing note requiring eight payments of \$20,000. The first payment was made on December 31, 2013, and the remaining seven payments are due annually on each December 31, beginning in 2014. At the date of the transaction, the prevailing rate of interest for this type of note was 11%. Present value factors are as follows:

<u>Period</u>	<u>Present value of ordinary annuity of 1 at 11%</u>	<u>Present value of an annuity due of 1 at 11%</u>
7	4.712	5.231
8	5.146	5.712

The initial value of the machine is

- \$ 94,240
- \$102,920
- \$104,620
- \$114,240

● LO10-6

4. Amble Inc. exchanged a truck with a book value of \$12,000 and a fair value of \$20,000 for a truck and \$5,000 cash. The exchange has commercial substance. At what amount should Amble record the truck received?
- \$12,000
 - \$15,000
 - \$20,000
 - \$25,000

● LO10-7

5. Dahl Corporation has just built a machine to produce car doors. Dahl had to build this machine because it couldn't purchase one that met its specifications. The following are the costs related to the machine's construction and the first month of operations:
- Construction materials, \$20,000
 - Labor, \$9,000 (construction, \$3,000; testing, \$1,000; operations, \$5,000)
 - Engineering fees, \$5,000
 - Utilities, \$4,000 (construction, \$1,000; testing, \$1,000; operations, \$2,000)

What is the initial value of the machine?

- \$28,000
- \$29,000
- \$31,000
- \$38,000

● LO10-7

6. Cole Co. began constructing a building for its own use in January 2013. During 2013, Cole incurred interest of \$50,000 on specific construction debt, and \$20,000 on other borrowings. Interest computed on the weighted-average amount of accumulated expenditures for the building during 2013 was \$40,000. What amount of interest should Cole capitalize?
- \$20,000
 - \$40,000
 - \$50,000
 - \$70,000

● LO10-8

7. On December 31, 2012, Bit Co. had capitalized costs for a new computer software product with an economic life of five years. Sales for 2013 were 30 percent of expected total sales of the software. At December 31, 2013,

the software had a fair value equal to 90 percent of the capitalized cost. What percentage of the original capitalized cost should be reported as the net amount in Bit's December 31, 2013, balance sheet?

- 70%
- 72%
- 80%
- 90%

● LO10-8

8. During the current year, Orr Company incurred the following costs:

Research and development services performed by Key Corp. for Orr	\$150,000
Design, construction, and testing of preproduction prototypes and models	200,000
Testing in search for new products or process alternatives	175,000

In its income statement for the current year, what amount should Orr report as research and development expense?

- \$150,000
- \$200,000
- \$350,000
- \$525,000

Beginning in 2011, International Financial Reporting Standards are tested on the CPA exam along with U.S. GAAP. The following questions deal with the application of IFRS to accounting for property, plant, and equipment.

● LO10-9

9. Under IFRS

- research and development expenditures are expensed in the period incurred.
- research and development expenditures are capitalized and amortized.
- development expenditures that meet certain criteria are capitalized and amortized; research expenditures are expensed in the period incurred.
- research expenditures that meet certain criteria are capitalized and amortized; development expenditures are expensed in the period incurred.

● LO10-9

10. In 2013 Sanford LTD. received a government grant of \$100,000 to be used for the purchase of a machine. Sanford prepares its financial statements using IFRS. The grant must be recognized
- as revenue in 2013.
 - as a reduction in the cost of the machine.
 - as deferred income in the balance sheet and then recognized in the income statement systematically over the asset's useful life.
 - either b or c.

CMA Exam Questions

The following questions dealing with property, plant, and equipment and intangible assets are adapted from questions that previously appeared on Certified Management Accountant (CMA) examinations. The CMA designation sponsored by the Institute of Management Accountants (www.imanet.org) provides members with an objective measure of knowledge and competence in the field of management accounting. Determine the response that best completes the statements or questions.

● LO10-1

1. Pearl Corporation acquired manufacturing machinery on January 1 for \$9,000. During the year, the machine produced 1,000 units, of which 600 were sold. There was no work-in-process inventory at the beginning or at the end of the year. Installation charges of \$300 and delivery charges of \$200 were also incurred. The machine is expected to have a useful life of five years with an estimated salvage value of \$1,500. Pearl uses the straight-line depreciation method. The original cost of the machinery to be recorded in Pearl's books is
- \$9,500
 - \$9,300
 - \$9,200
 - \$9,000

● LO10-6

Questions 2 and 3 are based on the following information. Harper is contemplating exchanging a machine used in its operations for a similar machine on May 31. Harper will exchange machines with either Austin Corporation or Lubin Company. The data relating to the machines are presented below. Assume that the exchanges would have commercial substance.

	Harper	Austin	Lubin
Original cost of the machine	\$162,500	\$180,000	\$150,000
Accumulated depreciation thru May 31	98,500	70,000	65,000
Fair value at May 31	80,000	95,000	60,000

2. If Harper exchanges its used machine and \$15,000 cash for Austin's used machine, the gain that Harper should recognize from this transaction for financial reporting purposes would be
 - a. \$0
 - b. \$2,526
 - c. \$15,000
 - d. \$16,000
3. If Harper exchanges its used machine for Lubin's used machine and also receives \$20,000 cash, the gain that Harper should recognize from this transaction for financial reporting purposes would be
 - a. \$0
 - b. \$4,000
 - c. \$16,000
 - d. \$25,000

Problems

An alternate exercise and problem set is available on the text website: www.mhhe.com/spiceland7e

P 10-1

Acquisition costs

- LO10-1 through LO10-4

Tristar Production Company began operations on September 1, 2013. Listed below are a number of transactions that occurred during its first four months of operations.

1. On September 1, the company acquired five acres of land with a building that will be used as a warehouse. Tristar paid \$100,000 in cash for the property. According to appraisals, the land had a fair value of \$75,000 and the building had a fair value of \$45,000.
2. On September 1, Tristar signed a \$40,000 noninterest-bearing note to purchase equipment. The \$40,000 payment is due on September 1, 2014. Assume that 8% is a reasonable interest rate.
3. On September 15, a truck was donated to the corporation. Similar trucks were selling for \$2,500.
4. On September 18, the company paid its lawyer \$3,000 for organizing the corporation.
5. On October 10, Tristar purchased machinery for cash. The purchase price was \$15,000 and \$500 in freight charges also were paid.
6. On December 2, Tristar acquired various items of office equipment. The company was short of cash and could not pay the \$5,500 normal cash price. The supplier agreed to accept 200 shares of the company's nonpar common stock in exchange for the equipment. The fair value of the stock is not readily determinable.
7. On December 10, the company acquired a tract of land at a cost of \$20,000. It paid \$2,000 down and signed a 10% note with both principal and interest due in one year. Ten percent is an appropriate rate of interest for this note.

Required:

Prepare journal entries to record each of the above transactions.

P 10-2

Acquisition costs; land and building

- LO10-1, LO10-2, LO10-7

On January 1, 2013, the Blackstone Corporation purchased a tract of land (site number 11) with a building for \$600,000. Additionally, Blackstone paid a real estate broker's commission of \$36,000, legal fees of \$6,000, and title insurance of \$18,000. The closing statement indicated that the land value was \$500,000 and the building value was \$100,000. Shortly after acquisition, the building was razed at a cost of \$75,000.

Blackstone entered into a \$3,000,000 fixed-price contract with Barnett Builders, Inc., on March 1, 2013, for the construction of an office building on land site 11. The building was completed and occupied on September 30, 2014. Additional construction costs were incurred as follows:

Plans, specifications, and blueprints	\$12,000
Architects' fees for design and supervision	95,000

To finance the construction cost, Blackstone borrowed \$3,000,000 on March 1, 2013. The loan is payable in 10 annual installments of \$300,000 plus interest at the rate of 14%. Blackstone's average amounts of accumulated building construction expenditures were as follows:

For the period March 1 to December 31, 2013	\$ 900,000
For the period January 1 to September 30, 2014	2,300,000

Required:

1. Prepare a schedule that discloses the individual costs making up the balance in the land account in respect of land site 11 as of September 30, 2014.
2. Prepare a schedule that discloses the individual costs that should be capitalized in the office building account as of September 30, 2014.

(AICPA adapted)

P 10-3

Acquisition costs

- LO10-1,
- LO10-4,
- LO10-6

The plant asset and accumulated depreciation accounts of Pell Corporation had the following balances at December 31, 2012:

	Plant Asset	Accumulated Depreciation
Land	\$ 350,000	\$ —
Land improvements	180,000	45,000
Building	1,500,000	350,000
Machinery and equipment	1,158,000	405,000
Automobiles	150,000	112,000

Transactions during 2013 were as follows:

- a. On January 2, 2013, machinery and equipment were purchased at a total invoice cost of \$260,000, which included a \$5,500 charge for freight. Installation costs of \$27,000 were incurred.
- b. On March 31, 2013, a machine purchased for \$58,000 in 2009 was sold for \$36,500. Depreciation recorded through the date of sale totaled \$24,650.
- c. On May 1, 2013, expenditures of \$50,000 were made to repave parking lots at Pell’s plant location. The work was necessitated by damage caused by severe winter weather.
- d. On November 1, 2013, Pell acquired a tract of land with an existing building in exchange for 10,000 shares of Pell’s common stock that had a market price of \$38 per share. Pell paid legal fees and title insurance totaling \$23,000. Shortly after acquisition, the building was razed at a cost of \$35,000 in anticipation of new building construction in 2014.
- e. On December 31, 2013, Pell purchased a new automobile for \$15,250 cash and trade-in of an old automobile purchased for \$18,000 in 2009. Depreciation on the old automobile recorded through December 31, 2013, totaled \$13,500. The fair value of the old automobile was \$3,750.

Required:

1. Prepare a schedule analyzing the changes in each of the plant assets during 2013, with detailed supporting computations.
2. Prepare a schedule showing the gain or loss from each asset disposal that would be recognized in Pell’s income statement for the year ended December 31, 2013.

(AICPA adapted)

P 10-4

Intangibles

- LO10-1,
- LO10-8

The Horstmeyer Corporation commenced operations early in 2013. A number of expenditures were made during 2013 that were debited to one account called *intangible asset*. A recap of the \$644,000 balance in this account at the end of 2013 is as follows:

Date	Transaction	Amount
2/3/13	State incorporation fees and legal costs related to organizing the corporation	\$ 7,000
3/1/13	Fire insurance premium for three-year period	6,000
3/15/13	Purchased a copyright	20,000
4/30/13	Research and development costs	40,000
6/15/13	Legal fees for filing a patent on a new product resulting from an R&D project	3,000
9/30/13	Legal fee for successful defense of patent developed above	12,000
10/13/13	Entered into a 10-year franchise agreement with franchisor	40,000
Various	Advertising costs	16,000
11/30/13	Acquired all of the outstanding common stock of Stiltz Corp.	500,000
	Total	<u>\$644,000</u>

The total amount paid for the Stiltz Corp. stock was debited to this account. The fair values of Stiltz Corp.’s assets and liabilities on the date of the acquisition were as follows:

Receivables	\$ 100,000
Equipment	350,000
Patent	150,000
Total assets	600,000
Note payable assumed	(220,000)
Fair value of net assets	<u>\$ 380,000</u>

Required:

Prepare the necessary journal entries to clear the intangible asset account and to set up accounts for separate intangible assets, other types of assets, and expenses indicated by the transactions.

P 10-5Acquisition costs;
journal entries

- LO10-1,
- LO10-3,
- LO10-6,
- LO10-8

Consider each of the transactions below. All of the expenditures were made in cash.

1. The Edison Company spent \$12,000 during the year for experimental purposes in connection with the development of a new product.
2. In April, the Marshall Company lost a patent infringement suit and paid the plaintiff \$7,500.
3. In March, the Cleanway Laundromat bought equipment. Cleanway paid \$6,000 down and signed a noninterest-bearing note requiring the payment of \$18,000 in nine months. The cash price for this equipment was \$23,000.
4. On June 1, the Jamsen Corporation installed a sprinkler system throughout the building at a cost of \$28,000.
5. The Mayer Company, plaintiff, paid \$12,000 in legal fees in November, in connection with a successful infringement suit on its patent.
6. The Johnson Company traded its old machine with an original cost of \$7,400 and a book value of \$3,000 plus cash of \$8,000 for a new one that had a fair value of \$10,000. The exchange has commercial substance.

Required:

Prepare journal entries to record each of the above transactions.

P 10-6Nonmonetary
exchange

- LO10-6

Southern Company owns a building that it leases to others. The building's fair value is \$1,400,000 and its book value is \$800,000 (original cost of \$2,000,000 less accumulated depreciation of \$1,200,000). Southern exchanges this for a building owned by the Eastern Company. The building's book value on Eastern's books is \$950,000 (original cost of \$1,600,000 less accumulated depreciation of \$650,000). Eastern also gives Southern \$140,000 to complete the exchange. The exchange has commercial substance for both companies.

Required:

Prepare the journal entries to record the exchange on the books of both Southern and Eastern.

P 10-7Nonmonetary
exchange

- LO10-6

On September 3, 2013, the Robers Company exchanged equipment with Phifer Corporation. The facts of the exchange are as follows:

	Robers' Asset	Phifer's Asset
Original cost	\$120,000	\$140,000
Accumulated depreciation	55,000	63,000
Fair value	75,000	70,000

Required:

Record the exchange for both Robers and Phifer. The exchange has commercial substance for both companies.

P 10-8Nonmonetary
exchange

- LO10-6

Case A. Kaponno Farms exchanged an old tractor for a newer model. The old tractor had a book value of \$12,000 (original cost of \$28,000 less accumulated depreciation of \$16,000) and a fair value of \$9,000. Kaponno paid \$20,000 cash to complete the exchange. The exchange has commercial substance.

Required:

1. What is the amount of gain or loss that Kaponno would recognize on the exchange? What is the initial value of the new tractor?
2. Repeat requirement 1 assuming that the fair value of the old tractor is \$14,000 instead of \$9,000.

Case B. Kaponno Farms exchanged 100 acres of farmland for similar land. The farmland given had a book value of \$500,000 and a fair value of \$700,000. Kaponno paid \$50,000 cash to complete the exchange. The exchange has commercial substance.

Required:

1. What is the amount of gain or loss that Kaponno would recognize on the exchange? What is the initial value of the new land?
2. Repeat requirement 1 assuming that the fair value of the farmland given is \$400,000 instead of \$700,000.
3. Repeat requirement 1 assuming that the exchange lacked commercial substance.

P 10-9Interest
capitalization;
specific interest
method

- LO10-7

On January 1, 2013, the Mason Manufacturing Company began construction of a building to be used as its office headquarters. The building was completed on September 30, 2014.

Expenditures on the project were as follows:

January 1, 2013	\$1,000,000
March 1, 2013	600,000
June 30, 2013	800,000
October 1, 2013	600,000
January 31, 2014	270,000
April 30, 2014	585,000
August 31, 2014	900,000

On January 1, 2013, the company obtained a \$3 million construction loan with a 10% interest rate. The loan was outstanding all of 2013 and 2014. The company's other interest-bearing debt included two long-term notes of \$4,000,000 and \$6,000,000 with interest rates of 6% and 8%, respectively. Both notes were outstanding during all of 2013 and 2014. Interest is paid annually on all debt. The company's fiscal year-end is December 31.

Required:

1. Calculate the amount of interest that Mason should capitalize in 2013 and 2014 using the specific interest method.
2. What is the total cost of the building?
3. Calculate the amount of interest expense that will appear in the 2013 and 2014 income statements.

[This is a variation of the previous problem, modified to focus on the weighted-average interest method.]

Required:

Refer to the facts in Problem 10–9 and answer the following questions:

1. Calculate the amount of interest that Mason should capitalize in 2013 and 2014 using the weighted-average method.
2. What is the total cost of the building?
3. Calculate the amount of interest expense that will appear in the 2013 and 2014 income statements.

P 10–10

Interest capitalization; weighted-average method

● LO10–7

eXcel

**P 10–11**

Research and development

● LO10–8

In 2013, Starsearch Corporation began work on three research and development projects. One of the projects was completed and commercial production of the developed product began in December. The company's fiscal year-end is December 31. All of the following 2013 expenditures were included in the R&D expense account:

Salaries and wages for:	
Lab research	\$ 300,000
Design and construction of preproduction prototype	160,000
Quality control during commercial production	20,000
Materials and supplies consumed for:	
Lab research	60,000
Construction of preproduction prototype	30,000
Purchase of equipment	600,000
Patent filing and legal fees for completed project	40,000
Payments to others for research	120,000
Total	<u>\$1,330,000</u>

\$200,000 of equipment was purchased solely for use in one of the projects. After the project is completed, the equipment will be abandoned. The remaining \$400,000 in equipment will be used on future R&D projects. The useful life of equipment is five years. Assume that all of the equipment was acquired at the beginning of the year.

Required:

Prepare journal entries, reclassifying amounts in R&D expense, to reflect the appropriate treatment of the expenditures.

P 10–12

Acquisition costs; lump-sum acquisition; noninterest-bearing note; interest capitalization

● LO10–1,
LO10–2,
LO10–3,
LO10–7

Early in its fiscal year ending December 31, 2013, San Antonio Outfitters finalized plans to expand operations. The first stage was completed on March 28 with the purchase of a tract of land on the outskirts of the city. The land and existing building were purchased for \$800,000. San Antonio paid \$200,000 and signed a noninterest-bearing note requiring the company to pay the remaining \$600,000 on March 28, 2015. An interest rate of 8% properly reflects the time value of money for this type of loan agreement. Title search, insurance, and other closing costs totaling \$20,000 were paid at closing.

During April, the old building was demolished at a cost of \$70,000, and an additional \$50,000 was paid to clear and grade the land. Construction of a new building began on May 1 and was completed on October 29.

Construction expenditures were as follows:

May 30	\$1,200,000
July 30	1,500,000
September 1	900,000
October 1	1,800,000

San Antonio borrowed \$3,000,000 at 8% on May 1 to help finance construction. This loan, plus interest, will be paid in 2014. The company also had the following debt outstanding throughout 2013:

\$2,000,000, 9% long-term note payable
\$4,000,000, 6% long-term bonds payable

In November, the company purchased 10 identical pieces of equipment and office furniture and fixtures for a lump-sum price of \$600,000. The fair values of the equipment and the furniture and fixtures were \$455,000 and \$245,000, respectively. In December, San Antonio paid a contractor \$285,000 for the construction of parking lots and for landscaping.

Required:

1. Determine the initial values of the various assets that San Antonio acquired or constructed during 2013. The company uses the specific interest method to determine the amount of interest capitalized on the building construction.
2. How much interest expense will San Antonio report in its 2013 income statement?

Broaden Your Perspective

Apply your critical-thinking ability to the knowledge you've gained. These cases will provide you an opportunity to develop your research, analysis, judgment, and communication skills. You also will work with other students, integrate what you've learned, apply it in real world situations, and consider its global and ethical ramifications. This practice will broaden your knowledge and further develop your decision-making abilities.

Judgment Case 10-1

Acquisition costs

- LO10-1,
LO10-3,
LO10-6

A company may acquire property, plant, and equipment and intangible assets for cash, in exchange for a deferred payment contract, by exchanging other assets, or by a combination of these methods.

Required:

1. Identify six types of costs that should be capitalized as the cost of a parcel of land. For your answer, assume that the land has an existing building that is to be removed in the immediate future in order that a new building can be constructed on the site.
2. At what amount should a company record an asset acquired in exchange for a deferred payment contract?
3. In general, at what amount should assets received in exchange for other nonmonetary assets be valued? Specifically, at what amount should a company value a new machine acquired by exchanging an older, similar machine and paying cash?

(AICPA adapted)

Research Case 10-2

FASB

codification; locate and extract relevant information and cite authoritative support for a financial reporting issue; restoration costs; asset retirement obligation

- LO10-1

Your client, Hazelton Mining, recently entered into an agreement to obtain the rights to operate a coal mine in West Virginia for \$15 million. Hazelton incurred development costs of \$6 million in preparing the mine for extraction, which began on July 1, 2013. The contract requires Hazelton to restore the land and surrounding area to its original condition after extraction is complete in three years.

The company controller, Alice Cushing, is not sure how to account for the restoration costs and has asked your advice. Alice is aware of an accounting standard addressing this issue, but is not sure of its provisions. She has narrowed down the possible cash outflows for the restoration costs to four possibilities:

Cash Outflow	Probability
\$3 million	20%
4 million	30%
5 million	25%
6 million	25%

Alice also informs you that the company's credit-adjusted risk-free interest rate is 9%. Before responding to Alice, you need to research the issue.

Required:

1. Obtain the relevant authoritative literature on accounting for asset retirement obligations using the FASB's Codification Research System. You might gain access at the FASB website (www.fasb.org). Explain the basic treatment of asset retirement obligations. What are the specific citations that you would rely on to determine (a) the accounting treatment for an asset retirement obligation and (b) how to measure the obligation?
2. Determine the capitalized cost of the coal mine.
3. Prepare a summary journal entry to record the acquisition costs of the mine.
4. How much accretion expense will the company record in its income statement for the 2013 fiscal year, related to this transaction? What are the specific citations from the FASB's Codification Research System that address (a) the calculation of accretion expense and (b) the classification of accretion expense in the income statement?

5. Explain to Alice how Hazelton would account for the restoration if the restoration costs differed from the recorded liability in three years. By way of explanation, prepare the journal entry to record the payment of the retirement obligation in three years assuming that the actual restoration costs were \$4.7 million.
6. Describe to Alice the necessary disclosure requirements for the obligation. What is the specific citation from the FASB's Codification Research System that contains these disclosure requirements?

Judgment**Case 10-3**

Self-constructed assets

- LO10-7

Chilton Peripherals manufactures printers, scanners, and other computer peripheral equipment. In the past, the company purchased equipment used in manufacturing from an outside vendor. In March 2013, Chilton decided to design and build equipment to replace some obsolete equipment. A section of the manufacturing plant was set aside to develop and produce the equipment. Additional personnel were hired for the project. The equipment was completed and ready for use in September.

Required:

1. In general, what costs should be capitalized for a self-constructed asset?
2. Discuss two alternatives for the inclusion of overhead costs in the cost of the equipment constructed by Chilton. Which alternative is generally accepted for financial reporting purposes?
3. Under what circumstance(s) would interest be included in the cost of the equipment?

Judgment**Case 10-4**

Interest capitalization

- LO10-7

GAAP provides guidelines for the inclusion of interest in the initial cost of a self-constructed asset.

Required:

1. What assets qualify for interest capitalization? What assets do not qualify for interest capitalization?
2. Over what period should interest be capitalized?
3. Explain average accumulated expenditures.
4. Explain the two methods that could be used to determine the appropriate interest rate(s) to be used in capitalizing interest.
5. Describe the three steps used to determine the amount of interest capitalized during a reporting period.

Research**Case 10-5**

Goodwill

- LO10-1

Accounting for acquired goodwill has been a controversial issue for many years. In the United States, the amount of acquired goodwill is capitalized and not amortized. Globally, the treatment of goodwill varies significantly, with some countries not recognizing goodwill as an asset. Professors Johnson and Petrone, in "Is Goodwill an Asset?" discuss this issue.

Required:

1. In your library or from some other source, locate the indicated article in *Accounting Horizons*, September 1998.
2. Does goodwill meet the FASB's definition of an asset?
3. What are the key concerns of those that believe goodwill is not an asset?

Real World**Case 10-6**

Property, plant, and equipment; intangibles; Saks

- LO10-1

Saks Incorporated, a major U.S. retailer, reported the following amounts in the asset section of its balance sheets for the years ended January 29, 2011, and January 30, 2010:

	(\$ in thousands)	
	January 29, 2011	January 30, 2010
Property and equipment, net	\$890,364	\$956,082

Real World Financials

In addition, the 2011 statement of cash flows reported the following items (\$ in thousands):

Depreciation	\$118,696
Additions to property and equipment	55,721
Proceeds from the sale of property and equipment	548

Also, the company wrote off \$1,940 (\$ in thousands) in property and equipment during 2011

Required:

What was the gain or loss Saks recognized in the year ended January 29, 2011, from the sale of property and equipment?

Judgment
Case 10–7
 Goodwill
 ● LO10–1

Athena Paper Corporation acquired for cash 100% of the outstanding common stock of Georgia, Inc., a supplier of wood pulp. The \$4,500,000 amount paid was significantly higher than the book value of Georgia's net assets (assets less liabilities) of \$2,800,000. The Athena controller recorded the difference of \$1,700,000 as an asset, goodwill.

Required:

1. Discuss the meaning of the term *goodwill*.
2. In what situation would the Athena controller be correct in her valuation of goodwill?

Judgment
Case 10–8
 Research and development
 ● LO10–8

Prior to 1974, accepted practice was for companies to either expense or capitalize R&D costs. In 1974, the FASB issued a Standard that requires all research and development costs to be charged to expense when incurred. This was a controversial standard, opposed by many companies who preferred delaying the recognition of these expenses until later years when presumably the expenditures bear fruit.

Several research studies have been conducted to determine if the standard had any impact on the behavior of companies. One interesting finding was that, prior to 1974, companies that expensed R&D costs were significantly larger than those companies that capitalized R&D costs.

Required:

1. Explain the FASB's logic in deciding to require all companies to expense R&D costs in the period incurred.
2. Identify possible reasons to explain why, prior to 1974, companies that expensed R&D costs were significantly larger than those companies that capitalized R&D costs.

Judgment
Case 10–9
 Research and development
 ● LO10–8

Clonal, Inc., a biotechnology company, developed and patented a diagnostic product called Trouver. Clonal purchased some research equipment to be used exclusively for Trouver and subsequent research projects. Clonal defeated a legal challenge to its Trouver patent, and began production and marketing operations for the project.

Corporate headquarters' costs were allocated to Clonal's research division as a percentage of the division's salaries.

Required:

1. How should the equipment purchased for Trouver be reported in Clonal's income statements and statements of financial position?
2. a. Describe the matching principle.
 b. Describe the accounting treatment of research and development costs and consider whether this is consistent with the matching principle. What is the justification for the accounting treatment of research and development costs?
3. How should corporate headquarters' costs allocated to the research division be classified in Clonal's income statements? Why?
4. How should the legal expenses incurred in defending Trouver's patent be reported in Clonal's financial statements?

(AICPA adapted)

Communication
Case 10–10
 Research and development
 ● LO10–8

The focus of this case is the situation described in Case 10–9. What is the appropriate accounting for R&D costs? Do you believe that (1) capitalization is the correct treatment of R&D costs, (2) expensing is the correct treatment of R&D costs, or (3) that companies should be allowed to choose between expensing and capitalizing R&D costs?

Required:

1. Develop a list of arguments in support of your view prior to the class session for which the case is assigned. Do not be influenced by the method required by the FASB. Base your opinion on the conceptual merit of the options.
2. In class, your instructor will pair you (and everyone else) with a classmate who also has independently developed a position.
 - a. You will be given three minutes to argue your view to your partner. Your partner likewise will be given three minutes to argue his or her view to you. During these three-minute presentations, the listening partner is not permitted to speak.
 - b. Then after each person has had a turn attempting to convince his or her partner, the two partners will have a three-minute discussion in which they will decide which alternative is more convincing and arguments will be merged into a single view for each pair.
3. After the allotted time, a spokesperson for each of the three alternatives will be selected by the instructor. Each spokesperson will field arguments from the class as to the appropriate alternative. The class will then discuss the merits of the alternatives and attempt to reach a consensus view, though a consensus is not necessary.

Communication**Case 10–11**

Research and development

● LO10–8

Thomas Plastics is in the process of developing a revolutionary new plastic valve. A new division of the company was formed to develop, manufacture, and market this new product. As of year-end (December 31, 2013), the new product has not been manufactured for sale; however, prototype units were built and are in operation.

Throughout 2013, the new division incurred a variety of costs. These costs included expenses (including salaries of administrative personnel) and market research costs. In addition, approximately \$500,000 in equipment (estimated useful life of 10 years) was purchased for use in developing and manufacturing the new valve. Approximately \$200,000 of this equipment was built specifically for developing the design of the new product; the remaining \$300,000 of the equipment was used to manufacture the preproduction prototypes and will be used to manufacture the new product once it is in commercial production.

The president of the company, Sally Rogers, has been told that research and development costs must be expensed as incurred, but she does not understand this treatment. She believes the research will lead to a profitable product and to increased future revenues. Also, she wonders how to account for the \$500,000 of equipment purchased by the new division. “I thought I understood accounting,” she growled. “Explain to me why expenditures that benefit our future revenues are expensed rather than capitalized!”

Required:

Write a one-to two-page report to Sally Rogers explaining the generally accepted accounting principles relevant to this issue. The report should also address the treatment of the equipment purchases.

(AICPA adapted)

Ethics**Case 10–12**

Research and development

● LO10–8

Mayer Biotechnical, Inc., develops, manufactures, and sells pharmaceuticals. Significant research and development (R&D) expenditures are made for the development of new drugs and the improvement of existing drugs. During 2013, \$220 million was spent on R&D. Of this amount, \$30 million was spent on the purchase of equipment to be used in a research project involving the development of a new antibiotic.

The controller, Alice Cooper, is considering capitalizing the equipment and depreciating it over the five-year useful life of the equipment at \$6 million per year, even though the equipment likely will be used on only one project. The company president has asked Alice to make every effort to increase 2013 earnings because in 2014 the company will be seeking significant new financing from both debt and equity sources. “I guess we might use the equipment in other projects later,” Alice wondered to herself.

Required:

1. Assuming that the equipment was purchased at the beginning of 2013, by how much would Alice’s treatment of the equipment increase before tax earnings as opposed to expensing the equipment cost?
2. Discuss the ethical dilemma Alice faces in determining the treatment of the \$30 million equipment purchase.

IFRS Case 10–13

Research and development; comparison of U.S. GAAP and IFRS; Roche Group

● LO10–8, LO10–9

Roche Group, a Swiss company, is one of the largest pharmaceutical companies in the world. The company prepares its financial statements according to IFRS.

Required:

1. Use the Internet to locate Roche’s most recent annual report. The address is www.roche.com. Locate the significant accounting policies disclosure note.
2. How does the company account for research and development expenditures? Does this policy differ from U.S. GAAP?

**IFRS****Analysis****Case 10–14**

Fixed-asset turnover ratio; Bed Bath & Beyond, Inc.

● LO10–5

Bed Bath & Beyond Inc. is a leading retailer of domestic merchandise and home furnishings. The company’s 2011 fixed-asset turnover ratio, using the average book value of property, plant, and equipment (PP&E) as the denominator, was approximately 7.8355. Additional information taken from the company’s 2011 annual report is as follows:

	(\$ in thousands)
Book value of PP&E—beginning of 2011	\$1,119,292
Purchases of PP&E during 2011	183,474
Depreciation of PP&E for 2011	183,820

Equipment having a book value of \$2,649 thousand was sold during 2011.

Real World Financials

Required:

1. How is the fixed-asset turnover ratio computed? How would you interpret Bed Bath & Beyond's ratio of 7.8355?
2. Use the data to determine Bed Bath & Beyond's net sales for 2011.
3. Obtain annual reports from three corporations in the same primary industry as Bed Bath & Beyond (Cost Plus and Pier 1 Imports are two well-known companies in the same industry) and compare the management of each company's investment in property, plant, and equipment.

Note: You can obtain copies of annual reports from your library, from friends who are shareholders, from the investor relations department of the corporations, from a friendly stockbroker, or from EDGAR (Electronic Data Gathering, Analysis, and Retrieval) on the Internet (www.sec.gov).

**Judgment
Case 10–15**

Computer software costs

- LO10–8

The Elegant Software Company recently completed the development and testing of a new software program that provides the ability to transfer data from among a variety of operating systems. The company believes this product will be quite successful and capitalized all of the costs of designing, developing, coding, and testing the software. These costs will be amortized over the expected useful life of the software on a straight-line basis.

Required:

1. Was Elegant correct in its treatment of the software development costs? Why?
2. Explain the appropriate method for determining the amount of periodic amortization for any capitalized software development costs.

**Real World
Case 10–16**

Property, plant, and equipment; Home Depot

- LO10–1, LO10–7

EDGAR, the Electronic Data Gathering, Analysis, and Retrieval system, performs automated collection, validation, indexing, and forwarding of submissions by companies and others who are required by law to file forms with the U.S. Securities and Exchange Commission (SEC). All publicly traded domestic companies use EDGAR to make the majority of their filings. (Some foreign companies file voluntarily.) Form 10-K, which includes the annual report, is required to be filed on EDGAR. The SEC makes this information available on the Internet.

Required:

1. Access EDGAR on the Internet. The web address is www.sec.gov.
2. Search for **Home Depot, Inc.** Access the 10-K filing for the most recent fiscal year. Search or scroll to find the financial statements and related notes.
3. Answer the following questions related to the company's property, plant, and equipment:
 - a. Name the different types of assets the company lists in its balance sheet under property, plant, and equipment.
 - b. How much cash was used for the acquisition of property, plant, and equipment during the year?
 - c. What was the amount of interest capitalized during the year?
 - d. Compute the fixed-asset turnover ratio for the fiscal year.

Real World Financials
**Analysis
Case 10–17**

Reporting property, plant, and equipment and intangible assets

- LO10–1, LO10–5

Refer to the financial statements and related disclosure notes of **Dell Inc.** in Appendix B located at the back of the text.

Required:

1. What categories of property, plant, and equipment and intangible assets does Dell report in its 2011 balance sheet?
2. How much cash was used in 2011 to purchase property and equipment? How does this compare with purchases in previous years?
3. The fixed-asset turnover ratio for **Hewlett-Packard Company**, a Dell competitor, is 10.91. How does this compare with Dell's ratio? What is the ratio intended to measure?

Air France—KLM Case

AIRFRANCE

- LO10–9

Air France—KLM (AF), a French company, prepares its financial statements according to International Financial Reporting Standards. AF's annual report for the year ended March 31, 2011, which includes financial statements and disclosure notes, is provided with all new textbooks. This material also is included in AF's "Registration Document 2010–11," dated June 15, 2011 and is available at www.airfranceklm.com.

Required:

1. What method does Air France-KLM use to amortize the cost of computer software development costs? How does this approach differ from U.S. GAAP?
2. AF does not report any research and development expenditures. If it did, its approach to accounting for research and development would be significantly different from U.S. GAAP. Describe the differences between IFRS and U.S. GAAP in accounting for research and development expenditures.
3. AF does not report the receipt of any governments grants. If it did, its approach to accounting for government grants would be significantly different from U.S. GAAP. Describe the differences between IFRS and U.S. GAAP in accounting for government grants. If AF received a grant for the purchase of assets, what alternative accounting treatments are available under IFRS?

Property, Plant, and Equipment and Intangible Assets: Utilization and Impairment

OVERVIEW

This chapter completes our discussion of accounting for property, plant, and equipment and intangible assets. We address the allocation of the cost of these assets to the periods benefited by their use.

The usefulness of most of these assets is consumed as the assets are applied to the production of goods or services. Cost allocation corresponding to this consumption of usefulness is known as *depreciation* for plant and equipment, *depletion* for natural resources, and *amortization* for intangibles.

We also consider impairment of these assets, and the treatment of expenditures incurred subsequent to acquisition.

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- **LO11-1** Explain the concept of cost allocation as it pertains to property, plant, and equipment and intangible assets. (p. 590)
- **LO11-2** Determine periodic depreciation using both time-based and activity-based methods. (p. 592)
- **LO11-3** Calculate the periodic depletion of a natural resource. (p. 602)
- **LO11-4** Calculate the periodic amortization of an intangible asset. (p. 603)
- **LO11-5** Explain the appropriate accounting treatment required when a change is made in the service life or residual value of property, plant, and equipment and intangible assets. (p. 609)
- **LO11-6** Explain the appropriate accounting treatment required when a change in depreciation, amortization, or depletion method is made. (p. 610)
- **LO11-7** Explain the appropriate treatment required when an error in accounting for property, plant, and equipment and intangible assets is discovered. (p. 611)
- **LO11-8** Identify situations that involve a significant impairment of the value of property, plant, and equipment and intangible assets and describe the required accounting procedures. (p. 613)
- **LO11-9** Discuss the accounting treatment of repairs and maintenance, additions, improvements, and rearrangements to property, plant, and equipment and intangible assets. (p. 622)
- **LO11-10** Discuss the primary differences between U.S. GAAP and IFRS with respect to the utilization and impairment of property, plant, and equipment and intangible assets. (pp. 597, 600, 604, 606, 615, 617, 619, 621, 622, and 625)

FINANCIAL REPORTING CASE

What's in a Name?

"I don't understand this at all," your friend Penny Lane moaned. "Depreciation, depletion, amortization; what's the difference? Aren't they all the same thing?" Penny and you are part of a class team working on a case involving **Weyerhaeuser Company**, a large forest products company. Part of the project involves comparing reporting methods over a three-year period. "Look at these disclosure notes from last year's annual report. Besides mentioning those three terms, they also talk about asset impairment. How is that different?" Penny showed you the disclosure notes.

Property and Equipment and Timber and Timberlands (in part)

Depreciation is calculated using a straight-line method at rates based on estimated service lives. Logging railroads and truck roads are generally amortized—as timber is harvested—at rates based on the volume of timber estimated to be removed. We carry timber and timberlands at cost less depletion. To determine depletion rates, we divide the net carrying value by the related volume of timber estimated to be available over the growth cycle.

Impairment of Long-lived Assets (in part)

We review long-lived assets—including certain identifiable intangibles—for impairment whenever events or changes in circumstances indicate that the carrying amount of the assets may not be recoverable.

By the time you finish this chapter, you should be able to respond appropriately to the questions posed in this case. Compare your response to the solution provided at the end of the chapter.

1. Is Penny correct? Do the terms *depreciation*, *depletion*, and *amortization* all mean the same thing? (p. 590)
2. Weyerhaeuser determines depletion based on the "volume of timber estimated to be available." Explain this approach. (p. 594)
3. Explain how asset impairment differs from depreciation, depletion, and amortization. How do companies measure impairment losses for property, plant, and equipment and intangible assets with finite useful lives? (p. 613)

QUESTIONS

PART A

DEPRECIATION, DEPLETION, AND AMORTIZATION

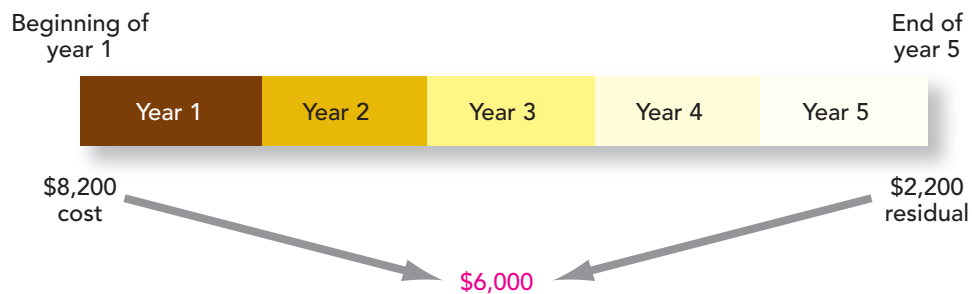

Cost Allocation—An Overview

● LO11-1

Property, plant, and equipment and intangible assets are purchased with the expectation that they will provide future benefits, usually for several years. Specifically, they are acquired to be used as part of the revenue-generating operations. Logically, then, the costs of acquiring the assets should be allocated to expense during the reporting periods benefited by their use. That is, their costs are matched with the revenues they help generate.

Let's suppose that a company purchases a used delivery truck for \$8,200 to be used to deliver product to customers. The company estimates that five years from the acquisition date the truck will be sold for \$2,200. It is estimated, then, that \$6,000 ($\$8,200 - 2,200$) of the truck's purchase price will be used up (consumed) during a five-year useful life. The situation is portrayed in Illustration 11-1.

Illustration 11-1
Cost Allocation

Theoretically, the matching principle requires that the \$6,000 be allocated to the five individual years of asset use in direct proportion to the role the asset played in revenue production. However, very seldom is there a clear-cut relationship between the use of the asset and revenue production. In other words, we can't tell precisely the portion of the total benefits of the asset that was consumed in any particular period. As a consequence, we must resort to arbitrary allocation methods to approximate a matching of expense with revenue. Contrast this situation with the \$24,000 prepayment of one year's rent on an office building at \$2,000 per month. In that case, we know precisely that the benefits of the asset, prepaid rent, are consumed at a rate of \$2,000 per month.

Cost allocation is known as **depreciation** for plant and equipment, **depletion** for natural resources, and **amortization** for intangibles. The process often is confused with measuring a decline in fair value of an asset. For example, let's say our delivery truck purchased for \$8,200 can be sold for \$5,000 at the end of one year but we intend to keep it for the full five-year estimated life. It has experienced a decline in value of \$3,200 ($\$8,200 - 5,000$). However, *depreciation is a process of cost allocation, not valuation*. We would not record depreciation expense of \$3,200 for year one of the truck's life. Instead, we would distribute the cost of the asset, less any anticipated residual value, over the estimated useful life in a systematic and rational manner that attempts to match revenues with the *use* of the asset, not the decline in its value. After all, the truck is purchased to be used in operations, not to be sold.

The specific accounting treatment depends on the intended use of the asset. For assets used in the manufacture of a product, for example, depreciation, depletion, or amortization is considered a product cost to be included as part of the cost of inventory. Eventually, when the product is sold, it becomes part of the cost of goods sold. For assets *not* used in production, primarily plant and equipment and certain intangibles used in the selling and administrative functions of the company, periodic depreciation or amortization is reported as expense in the income statement. You might recognize this distinction as the difference between a product cost and a period cost. When a product cost is reported as an expense (cost of goods sold) depends on when the product is sold; when a period cost is reported as an expense depends on the reporting period in which it is incurred.

**FINANCIAL
Reporting Case**

Q1, p. 589

Depreciation, depletion, and amortization are processes that attempt to satisfy the matching principle.

Depreciation, depletion, and amortization for an asset used to manufacture a product are included in the cost of inventory.

Measuring Cost Allocation

The process of cost allocation requires that three factors be established at the time the asset is put into use. These factors are:

1. **Service life**—the estimated use that the company expects to receive from the asset.
2. **Allocation base**—the value of the usefulness that is expected to be consumed.
3. **Allocation method**—the pattern in which the usefulness is expected to be consumed.

Let's consider these one at a time.

Service Life

The **service life**, or **useful life**, is the amount of use that the company expects to obtain from the asset before disposing of it. This use can be expressed in units of time, or in units of activity. For example, the estimated service life of a delivery truck could be expressed in terms of years or in terms of the number of miles that the company expects the truck to be driven before disposition. We use the terms service life and useful life interchangeably throughout the chapter.

Physical life provides the upper bound for service life of tangible, long-lived assets. Physical life will vary according to the purpose for which the asset is acquired and the environment in which it is operated. For example, a diesel powered electric generator may last for many years if it is used only as an emergency backup or for only a few years if it is used regularly.

The service life of a tangible asset may be less than physical life for a variety of reasons. For example, the expected rate of technological change may shorten service life. If suppliers are expected to develop new technologies that are more efficient, the company may keep an asset for a period of time much shorter than physical life. Likewise, if the company sells its product in a market that frequently demands new products, the machinery and equipment used to produce products may be useful only for as long as its output can be sold. Similarly, a mineral deposit might be projected to contain 4 million tons of a mineral, but it may be economically feasible with existing extraction methods to mine only 2 million tons. For intangible assets, legal or contractual life often is a limiting factor. For instance, a patent might be capable of providing enhanced profitability for 50 years, but the legal life of a patent is only 20 years.

Management intent also may shorten the period of an asset's usefulness below its physical, legal, or contractual life. For example, a company may have a policy of using its delivery trucks for a three-year period and then trading the trucks for new models.

Companies quite often disclose the range of service lives for different categories of assets. For example, Illustration 11–2 shows how **IBM Corporation** disclosed its service lives in a note accompanying recent financial statements.

Summary of Significant Accounting Policies (in part)

Depreciation and Amortization

The estimated useful lives of certain depreciable assets are as follows: buildings, 30 to 50 years; building equipment, 10 to 20 years; land improvements, 20 years; plant, laboratory and office equipment, 2 to 20 years; and computer equipment, 1.5 to 5 years.

Allocation Base

The total amount of cost to be allocated over an asset's service life is called its **allocation base**. The amount is the difference between the initial value of the asset at its acquisition (its cost) and its **residual value**. Residual or **salvage value** is the amount the company expects to receive for the asset at the end of its service life less any anticipated disposal costs. In our delivery truck example above, the allocation base is \$6,000 (\$8,200 cost less \$2,200 anticipated residual value).

In certain situations, residual value can be estimated by referring to a company's prior experience or to publicly available information concerning resale values of various types of assets. For example, if a company intends to trade its delivery trucks in three years for

The service life, or useful life, can be expressed in units of time or in units of activity.

Expected obsolescence can shorten service life below physical life.

Illustration 11–2

Machines Corporation

Real World Financials

Allocation base is the difference between the cost of the asset and its anticipated residual value.

the new model, approximations of the three-year residual value for that type of truck can be obtained from used truck values.

However, estimating residual value for many assets can be very difficult due to the uncertainty about the future. For this reason, along with the fact that residual values often are immaterial, many companies simply assume a residual value of zero. Companies usually do not disclose estimated residual values.

Allocation Method

The allocation method used should be systematic and rational and correspond to the pattern of asset use.

In determining how much cost to allocate to periods of an asset's use, a method should be selected that corresponds to the pattern of the loss of the asset's usefulness. Generally accepted accounting principles state that the chosen method should allocate the asset's cost "as equitably as possible to the periods during which services are obtained from [its] use." GAAP further specifies that the method should produce a cost allocation in a "systematic and rational manner."¹ The objective is to try to allocate cost to the period in an amount that is proportional to the amount of benefits generated by the asset during the period relative to the total benefits provided by the asset during its life.

In practice, there are two general approaches that attempt to obtain this systematic and rational allocation. The first approach allocates the cost base according to the *passage of time*. Methods following this approach are referred to as **time-based** methods. The second approach allocates an asset's cost base using a measure of the asset's *input* or *output*. This is an **activity-based** method. We compare these approaches first in the context of depreciation. Later we see that depletion of natural resources typically follows an activity-based approach and the amortization of intangibles typically follows a time-based approach.

Depreciation

- LO11-2 To demonstrate and compare the most common depreciation methods, we refer to the situation described in Illustration 11-3.

Illustration 11-3

Depreciation Methods

The Hogan Manufacturing Company purchased a machine for \$250,000. The company expects the service life of the machine to be five years. During that time, it is expected that the machine will produce 140,000 units. The anticipated residual value is \$40,000. The machine was disposed of after five years of use. Actual production during the five years of the asset's life was:

Year	Units Produced
1	24,000
2	36,000
3	46,000
4	8,000
5	16,000
Total	130,000

The straight-line depreciation method allocates an equal amount of depreciable base to each year of the asset's service life.

Time-Based Depreciation Methods

STRAIGHT-LINE METHOD. By far the most easily understood and widely used depreciation method is **straight line**. By this approach, an equal amount of depreciable base is allocated to each year of the asset's service life. The depreciable base is simply divided by the number of years in the asset's life to determine annual depreciation. In our illustration, the straight-line annual depreciation is \$42,000, calculated as follows:

$$\frac{\$250,000 - 40,000}{5 \text{ years}} = \$42,000 \text{ per year}$$

¹FASB ASC 360-10-35-4: Property, Plant, and Equipment—Overall—Subsequent Measurement (previously "Restatement and Revision of Accounting Research Bulletins," *Accounting Research Bulletin No. 43* (New York: AICPA, 1953), Ch. 9).

ACCELERATED METHODS. Using the straight-line method implicitly assumes that the benefits derived from the use of the asset are the same each year. In some situations it might be more appropriate to assume that the asset will provide greater benefits in the early years of its life than in the later years. In these cases, a more appropriate matching of depreciation with revenues is achieved with a declining pattern of depreciation, with higher depreciation in the early years of the asset's life and lower depreciation in later years. An accelerated depreciation method also would be appropriate when benefits derived from the asset are approximately equal over the asset's life, but repair and maintenance costs increase significantly in later years. The early years incur higher depreciation and lower repairs and maintenance expense, while the later years have lower depreciation and higher repairs and maintenance. Two commonly used ways to achieve such a declining pattern are the sum-of-the-years'-digits method and declining balance methods.

Accelerated depreciation methods are appropriate when the asset is more useful in its earlier years.

Sum-of-the-years'-digits method. The **sum-of-the-years'-digits (SYD) method** has no logical foundation other than the fact that it accomplishes the objective of accelerating depreciation in a systematic manner. This is achieved by multiplying the depreciable base by a fraction that declines each year and results in depreciation that decreases by the same amount each year. The denominator of the fraction remains constant and is the sum of the digits from one to n , where n is the number of years in the asset's service life. For example, if there are five years in the service life, the denominator is the sum of 1, 2, 3, 4, and 5, which equals 15.² The numerator decreases each year; it begins with the value of n in the first year and decreases by one each year until it equals one in the final year of the asset's estimated service life. The annual fractions for an asset with a five-year life are: $\frac{5}{15}$, $\frac{4}{15}$, $\frac{3}{15}$, $\frac{2}{15}$, and $\frac{1}{15}$. We calculate depreciation for the five years of the machine's life using the sum-of-the-years'-digits method in Illustration 11-3A.

The SYD method multiplies depreciable base by a declining fraction.

Illustration 11-3A Sum-of-the-Years'-Digits Depreciation

Year	Depreciable Base (\$250,000 - 40,000)	×	Depreciation Rate per Year	=	Depreciation	Accumulated Depreciation	Book Value End of Year (\$250,000 less Accum. Depreciation)
1	\$210,000		$\frac{5}{15}$ *		\$ 70,000	\$ 70,000	\$180,000
2	210,000		$\frac{4}{15}$		56,000	126,000	124,000
3	210,000		$\frac{3}{15}$		42,000	168,000	82,000
4	210,000		$\frac{2}{15}$		28,000	196,000	54,000
5	210,000		$\frac{1}{15}$		14,000	210,000	40,000
Totals			$\frac{15}{15}$		<u>\$210,000</u>		

* $\frac{n(n+1)}{2} = \frac{5(5+1)}{2} = 15$

Declining balance methods. As an alternative, an accelerated depreciation pattern can be achieved by various declining balance methods. Rather than multiplying a constant balance by a declining fraction as we do in SYD depreciation, we multiply a constant fraction by a declining balance each year. Specifically, we multiply a constant percentage rate times the decreasing book value (cost less accumulated depreciation), also referred to as carrying value, of the asset (not depreciable base) at the beginning of the year. Because the rate remains constant while the book value declines, annual depreciation is less each year.

Declining balance depreciation methods multiply beginning-of-year book value, not depreciable base, by an annual rate that is a multiple of the straight-line rate.

The rates used are multiples of the straight-line rate. The straight-line rate is simply one, divided by the number of years in the asset's service life. For example, the straight-line rate for an asset with a five-year life is one-fifth, or 20%. Various multiples used in practice are

²A formula useful when calculating the denominator is $n(n+1)/2$.

125%, 150%, or 200% of the straight-line rate. When 200% is used as the multiplier, the method is known as the **double-declining-balance (DDB) method** because the rate used is twice the straight-line rate.

In our illustration, the double-declining-balance rate would be 40% (two times the straight-line rate of 20%). Depreciation is calculated in Illustration 11–3B for the five years of the machine's life using the double-declining-balance method.

Illustration 11–3B

Double-Declining-Balance Depreciation

Year	Book Value Beginning of Year	×	Depreciation Rate per Year	=	Depreciation	Accumulated Depreciation	Book Value End of Year (\$250,000 less Accum. Depreciation)
1	\$250,000		40%		\$100,000	\$100,000	\$150,000
2	150,000		40%		60,000	160,000	90,000
3	90,000		40%		36,000	196,000	54,000
4	54,000				14,000*	210,000	40,000
5	40,000				—		40,000
Total					\$210,000		

*Amount necessary to reduce book value to residual value.

Notice that in the fourth year depreciation expense is a plug amount that reduces book value to the expected residual value (book value beginning of year, \$54,000, minus expected residual value, \$40,000 = \$14,000). There is no depreciation expense in year 5 since book value has already been reduced to the expected residual value. Declining balance methods often allocate the asset's depreciable base over fewer years than the expected service life.

It is not uncommon for a company to switch from accelerated to straight line approximately halfway through an asset's useful life as part of the company's planned depreciation approach.

SWITCH FROM ACCELERATED TO STRAIGHT LINE. The result of applying the double-declining-balance method in our illustration produces an awkward result in the later years of the asset's life. By using the double-declining-balance method in our illustration, no depreciation expense is recorded in year 5 even though the asset is still producing benefits. In practice, many companies switch to the straight-line method approximately halfway through an asset's useful life.

In our illustration, the company would switch to straight line in either year 3 or year 4. Assuming the switch is made at the beginning of year 4, and the book value at the beginning of that year is \$54,000, an additional \$14,000 (\$54,000 – 40,000 in residual value) of depreciation must be recorded. Applying the straight-line concept, \$7,000 (\$14,000 divided by two remaining years) in depreciation is recorded in both year 4 and year 5.

It should be noted that this switch to straight line is not a change in depreciation method. The switch is part of the company's planned depreciation approach. However, as you will learn later in the chapter, the accounting treatment is the same as a change in depreciation method.

Activity-Based Depreciation Methods

The most logical way to allocate an asset's cost to periods of an asset's use is to measure the usefulness of the asset in terms of its productivity. For example, we could measure the service life of a machine in terms of its *output* (for example, the estimated number of units it will produce) or in terms of its *input* (for example, the number of hours it will operate). We have already mentioned that one way to measure the service life of a vehicle is to estimate the number of miles it will operate. The most common activity-based method is called the **units-of-production method**.

The measure of output used is the estimated number of units (pounds, items, barrels, etc.) to be produced by the machine. We could also use a measure of input such as the number of hours the machine is expected to operate. By the units-of-production method, we first compute the average depreciation rate per unit by dividing the depreciable base by the number

Activity-based depreciation methods estimate service life in terms of some measure of productivity.

FINANCIAL Reporting Case

of units expected to be produced. This per unit rate is then multiplied by the number of units produced each period. In our illustration, the depreciation rate per unit is \$1.50, computed as follows:

$$\frac{\$250,000 - 40,000}{140,000 \text{ units}} = \$1.50 \text{ per unit}$$

Each unit produced will require \$1.50 of depreciation to be recorded. As we are estimating service life based on units produced rather than in years, depreciation is not constrained by time. However, total depreciation is constrained by the asset's cost and the anticipated residual value. In our illustration, suppose the company intended to dispose of the asset at the end of five years. Depreciation for year five must be modified. Depreciation expense would be an amount necessary to bring the book value of the asset down to residual value. Depreciation for the five years is determined in Illustration 11-3C using the units-of-production method. Notice that the last year's depreciation expense is a plug amount that reduces book value to the expected residual value.

The units-of-production method computes a depreciation rate per measure of activity and then multiplies this rate by actual activity to determine periodic depreciation.

Year	Units Produced	×	Depreciation Rate per Unit	=	Depreciation	Accumulated Depreciation	Book Value End of Year (\$250,000 less Accum. Depreciation)
1	24,000		\$1.50		\$ 36,000	\$ 36,000	\$214,000
2	36,000		1.50		54,000	90,000	160,000
3	46,000		1.50		69,000	159,000	91,000
4	8,000		1.50		12,000	171,000	79,000
5	16,000				39,000*	210,000	40,000
Totals	130,000				\$210,000		

*Amount necessary to reduce book value to residual value.

Illustration 11-3C

Units-of-Production Depreciation

Decision Makers' Perspective—Selecting A Depreciation Method

Illustration 11-3D compares periodic depreciation calculated using each of the alternatives we discussed and illustrated.

Illustration 11-3D Comparison of Various Depreciation Methods

Year	Straight Line	Sum-of-the-Years' Digits	Double-Declining Balance	Units of Production
1	\$ 42,000	\$ 70,000	\$100,000	\$ 36,000
2	42,000	56,000	60,000	54,000
3	42,000	42,000	36,000	69,000
4	42,000	28,000	14,000	12,000
5	42,000	14,000	0	39,000
Total	\$210,000	\$210,000	\$210,000	\$210,000

All methods provide the same total depreciation over an asset's life.

Theoretically, using an activity-based depreciation method provides a better matching of revenues and expenses. Clearly, the productivity of a plant asset is more closely associated with the benefits provided by that asset than the mere passage of time. Also, these methods allow for random patterns of depreciation to correspond with the random patterns of asset use.

Activity-based methods are theoretically superior to time-based methods but often are impractical to apply in practice.

However, activity-based methods quite often are either infeasible or too costly to use. For example, buildings don't have an identifiable measure of productivity. Even for machinery, there may be an identifiable measure of productivity such as machine hours or units produced, but it frequently is more costly to determine each period than it is to simply measure the passage of time. For these reasons, most companies use time-based depreciation methods.

Illustration 11–4 shows the results of a recent survey of depreciation methods used by large public companies.³

Illustration 11–4

Use of Various Depreciation Methods

Depreciation Method	Number of Companies
Straight line	492
Declining balance	10
Sum-of-the-years'-digits	2
Accelerated method—not specified	13
Units of production	15
Group/composite	4

Why do so many companies use the straight-line method as opposed to other time-based methods? Many companies perhaps consider the benefits derived from the majority of plant assets to be realized approximately evenly over these assets' useful lives. Certainly a contributing factor is that straight-line is the easiest method to understand and apply.

Another motivation is the positive effect on reported income. Straight-line depreciation produces a higher net income than accelerated methods in the early years of an asset's life. In Chapter 8 we pointed out that reported net income can affect bonuses paid to management or debt agreements with lenders.

Conflicting with the desire to report higher profits is the desire to reduce taxes by reducing taxable income. An accelerated method serves this objective by reducing taxable income more in the early years of an asset's life than straight line. You probably recall a similar discussion from Chapter 8 in which the benefits were described of using the LIFO inventory method during periods of increasing costs. However, remember that the LIFO conformity rule requires companies using LIFO for income tax reporting to also use LIFO for financial reporting. *No such conformity rule exists for depreciation methods.* Income tax regulations allow firms to use different approaches to computing depreciation in their tax returns and in their financial statements. The method used for tax purposes is therefore not a constraint in the choice of depreciation methods for financial reporting. As a result, most companies use the straight-line method for financial reporting and the Internal Revenue Service's prescribed accelerated method (discussed in Appendix 11A) for income tax purposes. For example, Illustration 11–5 shows **Merck & Co.**'s depreciation policy as reported in a disclosure note accompanying recent financial statements.

A company does not have to use the same depreciation method for both financial reporting and income tax purposes.

Illustration 11–5

Depreciation Method Disclosure—Merck & Co.

Real World Financials

Summary of Accounting Policies (in part): Depreciation

Depreciation is provided over the estimated useful lives of the assets, principally using the straight-line method. For tax purposes, accelerated methods are used.

It is not unusual for a company to use different depreciation methods for different classes of assets. For example, Illustration 11–6 illustrates the **International Paper Company** depreciation policy disclosure contained in a note accompanying recent financial statements.

³Accounting Trends and Techniques—2011 (New York: AICPA, 2011), p. 394.

**Summary of Accounting Policies (in part):
Plants, Properties, and Equipment**

Plants, properties, and equipment are stated at cost, less accumulated depreciation. The units-of-production method of depreciation is used for major pulp and paper mills and the straight-line method is used for other plants and equipment. ●

International Financial Reporting Standards

Depreciation. IAS No. 16 requires that each component of an item of property, plant, and equipment must be depreciated separately if its cost is significant in relation to the total cost of the item.⁴ In the United States, component depreciation is allowed but is not often used in practice.

Consider the following illustration:

Cavandish LTD. purchased a delivery truck for \$62,000. The truck is expected to have a service life of six years and a residual value of \$12,000. At the end of three years, the oversized tires, which have a cost of \$6,000 (included in the \$62,000 purchase price), will be replaced.

Under U.S. GAAP, the typical accounting treatment is to depreciate the \$50,000 (\$62,000 – 12,000) depreciable base of the truck over its six-year useful life. Using IFRS, the depreciable base of the truck is \$44,000 (\$62,000 – 12,000 – 6,000) and is depreciated over the truck's six-year useful life, and the \$6,000 cost of the tires is depreciated separately over a three-year useful life.

U.S. GAAP and IFRS determine depreciable base in the same way, by subtracting estimated residual value from cost. However, IFRS requires a review of residual values at least annually.

Sanofi-Aventis, a French pharmaceutical company, prepares its financial statements using IFRS. In its property, plant, and equipment note, the company discloses its use of the component-based approach to accounting for depreciation.

Property, plant, and equipment (in part)

The component-based approach to accounting for property, plant, and equipment is applied. Under this approach, each component of an item of property, plant, and equipment with a cost which is significant in relation to the total cost of the item and which has a different useful life from the other components must be depreciated separately.

Depreciation Methods. IAS No. 16 specifically mentions three depreciation methods: straight-line, units-of-production, and the diminishing balance method. The diminishing balance method is similar to the declining balance method sometimes used by U.S. companies. As in the U.S., the straight-line method is used by most companies. A recent survey of large companies that prepare their financial statement according to IFRS reports that in 2009, 93% of the surveyed companies used the straight-line method.⁵

Concept Review Exercise

The Sprague Company purchased a fabricating machine on January 1, 2013, at a net cost of \$130,000. At the end of its four-year useful life, the company estimates that the machine will be worth \$30,000. Sprague also estimates that the machine will run for 25,000 hours during its four-year life. The company's fiscal year ends on December 31.

Required:

Compute depreciation for 2013 through 2016 using each of the following methods:

1. Straight line.
2. Sum-of-the-years'-digits.

**DEPRECIATION
METHODS**

⁴“Property, Plant and Equipment,” *International Accounting Standard No. 16* (IASCF), par. 42, as amended effective January 1, 2011.

⁵“IFRS Accounting Trends and Techniques” (New York, AICPA, 2010), p. 328.

3. Double-declining balance.
4. Units of production (using machine hours). Actual production was as follows:

Year	Machine Hours
2013	6,000
2014	8,000
2015	5,000
2016	7,000

Solution:

1. Straight line.

$$\frac{\$130,000 - 30,000}{4 \text{ years}} = \$25,000 \text{ per year}$$

2. Sum-of-the-years'-digits.

Year	Depreciable Base	×	Depreciation Rate per Year	=	Depreciation
2013	\$100,000		$\frac{4}{10}$		\$ 40,000
2014	100,000		$\frac{3}{10}$		30,000
2015	100,000		$\frac{2}{10}$		20,000
2016	100,000		$\frac{1}{10}$		10,000
Total					<u>\$100,000</u>

3. Double-declining balance.

Year	Book Value Beginning of Year	×	Depreciation Rate per Year	=	Depreciation	Book Value End of Year
2013	\$130,000		50%		\$ 65,000	\$65,000
2014	65,000		50		32,500	32,500
2015	32,500				2,500*	30,000
2016	30,000				—	30,000
Total					<u>\$100,000</u>	

*Amount necessary to reduce book value to residual value.

4. Units of production (using machine hours).

Year	Machine Hours	×	Depreciation Rate per Hour	=	Depreciation	Book Value End of Year
2013	6,000		\$4*		\$ 24,000	\$106,000
2014	8,000		4		32,000	74,000
2015	5,000		4		20,000	54,000
2016	7,000				24,000 [†]	30,000
Total					<u>\$100,000</u>	

* $(\$130,000 - 30,000) / 25,000 \text{ hours} = \4 per hour .

[†]Amount necessary to reduce book value to residual value.

Group and Composite Depreciation Methods

As you might imagine, depreciation records could become quite cumbersome and costly if a company has hundreds, or maybe thousands, of depreciable assets. However, the burden can be lessened if the company uses the group or composite method to depreciate assets collectively rather than individually. The two methods are the same except for the way the collection of assets is aggregated for depreciation. The **group depreciation method** defines the collection as depreciable assets that share similar service lives and other attributes. For example, group depreciation could be used for fleets of vehicles or collections of machinery. The

Group and composite depreciation methods aggregate assets to reduce the recordkeeping costs of determining periodic depreciation.

composite depreciation method is used when assets are physically dissimilar but are aggregated anyway to gain the convenience of a collective depreciation calculation. For instance, composite depreciation can be used for all of the depreciable assets in one manufacturing plant, even though individual assets in the composite may have widely diverse service lives.

Both approaches are similar in that they involve applying a single straight-line rate based on the average service lives of the assets in the group or composite.⁶ The process is demonstrated using Illustration 11–7.

Illustration 11–7 Group Depreciation

The Express Delivery Company began operations in 2013. It will depreciate its fleet of delivery vehicles using the group method. The cost of vehicles purchased early in 2013, along with residual values, estimated lives, and straight-line depreciation per year by type of vehicle, are as follows:

Asset	Cost	Residual Value	Depreciable Base	Estimated Life (yrs.)	Depreciation per Year (straight line)
Vans	\$150,000	\$30,000	\$120,000	6	\$20,000
Trucks	120,000	16,000	104,000	5	20,800
Wagons	60,000	12,000	48,000	4	12,000
Totals	<u>\$330,000</u>	<u>\$58,000</u>	<u>\$272,000</u>		<u>\$52,800</u>

The *group depreciation rate* is determined by dividing the depreciation per year by the total cost. The group's *average service life* is calculated by dividing the depreciable base by the depreciation per year:

$$\text{Group depreciation rate} = \frac{\$52,800}{\$330,000} = 16\%$$

$$\text{Average service life} = \frac{\$272,000}{\$52,800} = 5.15 \text{ years (rounded)}$$

If there are no changes in the assets contained in the group, depreciation of **\$52,800** per year ($16\% \times \$330,000$) will be recorded for 5.15 years. This means the depreciation in the sixth year will be \$7,920 (.15 of a full year's depreciation = $15\% \times \$52,800$), which depreciates the cost of the group down to its estimated residual value. In other words, the group will be depreciated over the average service life of the assets in the group.

In practice, there very likely will be changes in the assets constituting the group as new assets are added and others are retired or sold. Additions are recorded by increasing the group asset account for the cost of the addition. Depreciation is determined by multiplying the group rate by the total cost of assets in the group for that period. Once the group or composite rate and the average service life are determined, they normally are continued despite the addition and disposition of individual assets. This implicitly assumes that the service lives of new assets approximate those of individual assets they replace.

Because depreciation records are not kept on an individual asset basis, dispositions are recorded under the assumption that the book value of the disposed item exactly equals any proceeds received and no gain or loss is recorded. For example, if a delivery truck in the above illustration that cost \$15,000 is sold for \$3,000 in the year 2016, the following journal entry is recorded:

Cash	3,000	
Accumulated depreciation (difference)	12,000	
Vehicles		15,000

The depreciation rate is applied to the total cost of the group or composite for the period.

No gain or loss is recorded when a group or composite asset is retired or sold.

⁶A declining balance method could also be used with either the group or composite method by applying a multiple (e.g., 200%) to the straight-line group or composite rate.

Any actual gain or loss is included in the accumulated depreciation account. This practice generally will not distort income as the unrecorded gains tend to offset unrecorded losses.

The group and composite methods simplify the recordkeeping of depreciable assets. This simplification justifies any immaterial errors in income determination. Illustration 11–8 shows a disclosure note accompanying recent financial statements of the **El Paso Natural Gas Company (EPNG)** describing the use of the group depreciation method for its regulated property.

Summary of Significant Accounting Policies (in part) Property, Plant, and Equipment (in part)

We use the group method to depreciate property, plant, and equipment. Under this method, assets with similar lives and characteristics are grouped and depreciated as one asset. We apply the FERC-accepted depreciation rate to the total cost of the group until its net book value equals its salvage value. For certain general plant and rights-of-way, we depreciate the asset to zero. The majority of our property, plant, and equipment are on our EPNG system which has depreciation rates ranging from one to 20 percent and the depreciable lives ranging from five to 92 years consistent with our rate settlements with the FERC.

When we retire property, plant, and equipment, we charge accumulated depreciation and amortization for the original cost of the assets in addition to the cost to remove, sell, or dispose of the assets, less their salvage value. We do not recognize a gain or loss unless we sell an entire operating unit, as defined by FERC.

Additional group-based depreciation methods, the retirement and replacement methods, are discussed in Appendix 11B.

● LO11–10

International Financial Reporting Standards

Valuation of Property, Plant, and Equipment. As we've discussed, under U.S. GAAP a company reports property, plant, and equipment (PP&E) in the balance sheet at cost less accumulated depreciation (book value). *IAS No. 16*⁷ allows a company to report property, plant, and equipment at that amount or, alternatively, at its fair value (revaluation). If a company chooses revaluation, all assets within a class of PP&E must be revalued on a regular basis. U.S. GAAP prohibits revaluation.

If the revaluation option is chosen, the way the company reports the difference between fair value and book value depends on which amount is higher:

- If fair value is higher than book value, the difference is reported as *other comprehensive income (OCI)* which then accumulates in a "revaluation surplus" (sometimes called revaluation reserve) account in equity.
- If book value is higher than fair value, the difference is reported as an *expense in the income statement*. An exception is when a revaluation surplus account relating to the same asset has a balance from a previous *increase* in fair value, that balance is eliminated before debiting revaluation expense.

Consider the following illustration:

Candless Corporation prepares its financial statements according to IFRS. At the beginning of its 2013 fiscal year, the company purchased equipment for \$100,000. The equipment is expected to have a five-year useful life with no residual value, so depreciation for 2013 is \$20,000. At the end of the year, Candless chooses to revalue the equipment as permitted by *IAS No. 16*. Assuming that the fair value of the equipment at year-end is \$84,000, Candless records depreciation and the revaluation using the following journal entries:

(continued)

IFRS ILLUSTRATION

⁷"Property, Plant and Equipment," *International Accounting Standard No. 16* (IASCF), as amended effective January 1, 2011.

(continued)

(a) Depreciation expense (\$100,000 ÷ 5 years)	20,000	
Accumulated depreciation		20,000

After this entry, the book value of the equipment is \$80,000; the fair value is \$84,000. We use the ratio of the two amounts to adjust both the equipment and the accumulated depreciation accounts (and thus the book value) to fair value (\$ in thousands):

December 31, 2013	Before Revaluation				After Revaluation
Equipment	\$100	×	$\frac{84}{80}$	=	\$105
Accumulated depreciation	20	×	$\frac{84}{80}$	=	21
Book value	\$ 80	×	$\frac{84}{80}$	=	\$ 84

The entries to revalue the equipment and the accumulated depreciation accounts (and thus the book value) are:

(b) Equipment (\$105,000 – 100,000)	5,000	
Accumulated depreciation (\$21,000 – 20,000)		1,000
Revaluation surplus—OCI (\$84,000 – 80,000)		4,000

To record the revaluation of equipment to its fair value.

The new basis for the equipment is its fair value of \$84,000 (\$105,000 – 21,000), and the following years' depreciation is based on that amount. Thus, 2014 depreciation would be \$84,000 divided by the four remaining years, or \$21,000:⁸

(a) Depreciation expense (\$84,000 ÷ 4 years)	21,000	
Accumulated depreciation		21,000

After this entry, the book value of the equipment is \$63,000. Let's say the fair value now is \$57,000. We use the ratio of the two amounts (fair value of \$57,000 divided by book value of \$63,000) to adjust both the equipment and the accumulated depreciation accounts (and thus the book value) to fair value (\$ in thousands):

December 31, 2014	Before Revaluation				After Revaluation
Equipment	\$105	×	$\frac{57}{63}$	=	\$95
Accumulated depreciation (\$21 + 21)	42	×	$\frac{57}{63}$	=	38
Book value	\$ 63	×	$\frac{57}{63}$	=	\$57

The entries to revalue the equipment and the accumulated depreciation accounts (and thus the book value) are:

(b) Revaluation surplus—OCI (\$57,000 – 63,000 = \$6,000; limit: \$4,000 balance)	4,000	
Revaluation expense (to balance)	2,000	
Accumulated depreciation (\$38,000 – 42,000)		4,000
Equipment (\$95,000 – 105,000)		10,000

A decrease in fair value, as occurred in 2014, is expensed unless it reverses a revaluation surplus account relating to the same asset, as in this illustration. So, of the \$6,000 decrease in value (\$63,000 book value less \$57,000 fair value), \$4,000 is debited to the previously created revaluation surplus and the remaining \$2,000 is recorded as revaluation expense in the income statement.

Investcorp, a provider and manager of alternative investment products headquartered in London, prepares its financial statements according to IFRS. The following disclosure

Real World Financials

(continued)

⁸IAS No. 16 allows companies to choose between the method illustrated here and an alternative. The second method eliminates the entire accumulated depreciation account and adjusts the asset account (equipment in this illustration) to fair value. Using either method the revaluation surplus (or expense) would be the same.

(concluded)

note included in a recent annual report discusses the company's decision to change its method of valuing its premises and equipment.

Change in Accounting Policy

During the current period, the Group changed its policy with respect of carrying value of premises and equipment. These assets have been revalued to their fair value in the current period and shall be carried at their revalued amount less any accumulated depreciation and cumulative impairment losses. The revaluation surplus has been recognized in other comprehensive income and included as separate component of equity as revaluation surplus.

The revaluation alternative is used infrequently. A recent survey of large companies that prepare their financial statements according to IFRS reports that in 2009, only 10 of the 160 surveyed companies used the revaluation alternative for at least one asset class.⁹

Depletion of Natural Resources

● LO11-3

Allocation of the cost of natural resources is called **depletion**. Because the usefulness of natural resources generally is directly related to the amount of the resources extracted, the activity-based units-of-production method is widely used to calculate periodic depletion. Service life is therefore the estimated amount of natural resource to be extracted (for example, tons of mineral or barrels of oil).

Depletion base is cost less any anticipated residual value. Residual value could be significant if cost includes land that has a value after the natural resource has been extracted.

The example in Illustration 11-9 was first introduced in Chapter 10.

Illustration 11-9

Depletion of Natural Resources

The Jackson Mining Company paid \$1,000,000 for the right to explore for a coal deposit on 500 acres of land in Pennsylvania. Costs of exploring for the coal deposit totaled \$800,000 and intangible development costs incurred in digging and erecting the mine shaft were \$500,000. In addition, Jackson purchased new excavation equipment for the project at a cost of \$600,000. After the coal is removed from the site, the equipment will be sold for an anticipated residual value of \$60,000.

The company geologist estimates that 1 million tons of coal will be extracted over the three-year period. During 2013, 300,000 tons were extracted. Jackson is required by its contract to restore the land to a condition suitable for recreational use after it extracts the coal.

In Chapter 10 on page 536 we determined that the capitalized cost of the natural resource, coal mine, including the restoration costs, is **\$2,768,360**. Since there is no residual value to the land, the depletion base equals cost and the depletion rate per ton is calculated as follows:

$$\text{Depletion per ton} = \frac{\text{Depletion base}}{\text{Estimated extractable tons}}$$

$$\text{Depletion per ton} = \frac{\$2,768,360}{1,000,000 \text{ tons}} = \$2.76836 \text{ per ton}$$

For each ton of coal extracted, \$2.768360 in depletion is recorded. In 2013, the following journal entry records depletion.

Depletion (\$2.76836 × 300,000 tons)	830,508	
Coal mine		830,508

Depletion of the cost of natural resources usually is determined using the units-of-production method.

⁹“IFRS Accounting Trends and Techniques” (New York, AICPA, 2010), p. 171.

Notice that the credit is to the asset, coal mine, rather than to a contra account, accumulated depletion. Although this approach is traditional, the use of a contra account is acceptable.

Depletion is a product cost and is included in the cost of the inventory of coal, just as the depreciation on manufacturing equipment is included in inventory cost. The depletion is then included in cost of goods sold in the income statement when the coal is sold.

What about depreciation on the \$600,000 cost of excavation equipment? If the equipment can be moved from the site and used on future projects, the equipment's depreciable base should be allocated over its useful life. If the asset is not movable, as in our illustration, then it should be depreciated over its useful life or the life of the natural resource, whichever is shorter.

Quite often, companies use the units-of-production method to calculate depreciation and amortization on assets used in the extraction of natural resources. The activity base used is the same as that used to calculate depletion, the estimated recoverable natural resource. In our illustration, the depreciation rate would be \$.54 per ton, calculated as follows.

$$\text{Depreciation per ton} = \frac{\$600,000 - 60,000}{1,000,000 \text{ tons}} = \$.54 \text{ per ton}$$

In 2013, \$162,000 in depreciation (\$.54 × 300,000 tons) is recorded and also included as part of the cost of the coal inventory.

The summary of significant accounting policies disclosure accompanying recent financial statements of **ConocoPhillips** shown in Illustration 11–10 provides a good summary of depletion, amortization, and depreciation for natural resource properties.

The units-of-production method often is used to determine depreciation and amortization on assets used in the extraction of natural resources.

Summary of Significant Accounting Policies (in part)

Depletion and Amortization—Leasehold costs of producing properties are depleted using the units-of-production method based on estimated proved oil and gas reserves. Amortization of intangible development costs is based on the units-of-production method using estimated proved developed oil and gas reserves.

Depreciation and Amortization—Depreciation and amortization of properties, plants and equipment on producing hydrocarbon properties and certain pipeline assets, are determined by the units-of-production method.

Illustration 11–10

Depletion Method Disclosure—
ConocoPhillips

Real World Financials

Additional Consideration

Percentage Depletion

Depletion of cost less residual value required by GAAP should not be confused with percentage depletion (also called *statutory depletion*) allowable for income tax purposes for oil, gas, and most mineral natural resources. Under these tax provisions, a producer is allowed to deduct the greater of cost-based depletion or a fixed percentage of gross income as depletion expense. Over the life of the asset, depletion could exceed the asset's cost. The percentage allowed for percentage-based depletion varies according to the type of natural resource.

Because percentage depletion usually differs from cost depletion, a difference between taxable income and financial reporting income before tax results. These differences are discussed in Chapter 16.

Amortization of Intangible Assets

Let's turn now to a third type of long-lived asset—intangible assets. As with other assets we have discussed, we allocate the cost of an intangible asset over its service or useful life. However, for the few intangible assets with indefinite useful lives, amortization is inappropriate.

● LO11-4

● LO11-10

Real World Financials

International Financial Reporting Standards

Biological Assets. Living animals and plants, including the trees in a timber tract or in a fruit orchard, are referred to as *biological assets*. Under U.S. GAAP, a timber tract is valued at cost less accumulated depletion and a fruit orchard at cost less accumulated depreciation. Under IFRS, biological assets are valued at their fair value less estimated costs to sell, with changes in fair value included in the calculation of net income.¹⁰

Mondi Limited, an international paper and packing group headquartered in Johannesburg, South Africa, prepares its financial statements according to IFRS. The following disclosure note included in a recent annual report discusses the company's policy for valuing its forestry assets.

Owned Forestry Assets (in part)

Owned forestry assets are measured at fair value. The fair value is calculated by applying the expected selling price, less cost to harvest and deliver, to the estimated volume of timber on hand at each reporting date.

Changes in fair value are recognized in the consolidated income statement.

The cost of an intangible asset with a *finite* useful life is *amortized*.

Intangible Assets Subject to Amortization

Allocating the cost of intangible assets is called **amortization**. For an intangible asset with a finite useful life, we allocate its capitalized cost less any estimated residual value to periods in which the asset is expected to contribute to the company's revenue-generating activities. This requires that we determine the asset's useful life, its amortization base (cost less estimated residual value), and the appropriate allocation method, similar to our depreciating tangible assets.

USEFUL LIFE. Legal, regulatory, or contractual provisions often limit the useful life of an intangible asset. On the other hand, useful life might sometimes be less than the asset's legal or contractual life. For example, the useful life of a patent would be considerably less than its legal life of 20 years if obsolescence were expected to limit the longevity of a protected product.

RESIDUAL VALUE. We discussed the cost of intangible assets in Chapter 10. The expected residual value of an intangible asset usually is zero. This might not be the case, though, if at the end of its useful life to the reporting entity the asset will benefit another entity. For example, if Quadra Corp. has a commitment from another company to purchase one of Quadra's patents at the end of its useful life at a determinable price, we use that price as the patent's residual value.

ALLOCATION METHOD. The method of amortization should reflect the pattern of use of the asset in generating benefits. Most companies use the straight-line method. We discussed and illustrated a unique approach to determining the periodic amortization of software development costs in Chapter 10. Recall that the periodic amortization percentage for software development costs is the *greater* of (1) the ratio of current revenues to current and anticipated revenues (percentage of revenue method), or (2) the straight-line percentage over the useful life of the asset.

Intel Corporation reported several intangible assets in a recent balance sheet. A note, shown in Illustration 11-11, disclosed the range of estimated useful lives and the use of the straight-line method of amortization.

¹⁰"Agriculture," *International Accounting Standard No. 41* (IASCF), as amended effective January 1, 2011.

Summary of Significant Accounting Policies (in part) Identified Intangible Assets

Intellectual property assets primarily represent rights acquired under technology licenses and are generally amortized on a straight-line basis over periods of benefit, ranging from 3 to 17 years. We amortize acquisition-related developed technology based on economic benefit over the estimated useful life, ranging from 4 to 7 years. We amortize other intangible assets over periods ranging from 4 to 7 years.

Illustration 11–11

Intangible Asset Useful
Life Disclosure—Intel
Corporation

Real World Financials

Like depletion, amortization expense traditionally is credited to the asset account itself rather than to accumulated amortization. However, the use of a contra account is acceptable. Let's look at an example in Illustration 11–12.

Hollins Corporation began operations in 2013. Early in January, the company purchased a franchise from Ajax Industries for \$200,000. The franchise agreement is for a period of 10 years. In addition, Hollins purchased a patent for \$50,000. The remaining legal life of the patent is 13 years. However, due to expected technological obsolescence, the company estimates that the useful life of the patent is only 8 years. Hollins uses the straight-line amortization method for all intangible assets. The company's fiscal year-end is December 31.

The journal entries to record a full year of amortization for these intangibles are as follows:

Amortization expense ($\$200,000 \div 10$ years)	20,000	
Franchise		20,000
<i>To record amortization of franchise.</i>		
Amortization expense ($\$50,000 \div 8$ years)	6,250	
Patent		6,250
<i>To record amortization of patent.</i>		

Illustration 11–12

Amortization of
Intangibles

Similar to depreciation, amortization is either a product cost or a period cost depending on the use of the asset. For intangibles used in the manufacture of a product, amortization is a product cost and is included in the cost of inventory (and doesn't become an expense until the inventory is sold). For intangible assets not used in production, such as the franchise cost in our illustration, periodic amortization is expensed in the period incurred.

Intangible Assets Not Subject to Amortization

An intangible asset that is determined to have an indefinite useful life is not subject to periodic amortization. Useful life is considered indefinite if there is no foreseeable limit on the period of time over which the asset is expected to contribute to the cash flows of the entity.¹¹

Indefinite does not necessarily mean permanent. For example, suppose Collins Corporation acquired a trademark in conjunction with the acquisition of a tire company. Collins plans to continue to produce the line of tires marketed under the acquired company's trademark. Recall from our discussion in Chapter 10 that trademarks have a legal life of 10 years, but the registration can be renewed for an indefinite number of 10-year periods. The life of the purchased trademark is initially considered to be indefinite and the cost of the trademark is not amortized. However, if after several years management decides to phase out production of the tire line over the next three years, Collins would amortize the remaining book value over a three-year period.

Recall the **Hewlett-Packard Company (HP)** acquisition of **Compaq Computer Corporation** discussed in Chapter 10. HP allocated \$1.4 billion of the purchase price to Compaq's tradename, which is not being amortized. Illustration 11–13 provides another example in a disclosure made by **The Estee Lauder Companies Inc.**, in a recent annual report.

The cost of an intangible asset with an *indefinite* useful life is *not* amortized

Trademarks or tradenames often are considered to have indefinite useful lives.

¹¹FASB ASC 350–30–35–4: Intangibles—Goodwill and Other—General Intangibles Other than Goodwill—Subsequent Measurement (previously “Goodwill and Other Intangible Assets,” *Statement of Financial Accounting Standards No. 142* (Norwalk, Conn.: FASB, 2001), par. B45).

Illustration 11–13

Indefinite-Life Intangibles Disclosure—The Estee Lauder Companies Inc.

Real World Financials

Goodwill is an intangible asset whose cost is not expensed through periodic amortization.

Other Intangible Assets

Indefinite-lived intangible assets (e.g. trademarks) are not subject to amortization and are assessed at least annually for impairment during the fiscal fourth quarter, or more frequently if certain events or circumstances warrant.

Goodwill is the most common intangible asset with an indefinite useful life. Recall that goodwill is measured as the difference between the purchase price of a company and the fair value of all of the identifiable net assets (tangible and intangible assets minus the fair value of liabilities assumed). Does this mean that goodwill and other intangible assets with indefinite useful lives will remain in a company’s balance sheet at their original capitalized values indefinitely? Not necessarily. Like other assets, intangibles are subject to the impairment of value rules we discuss in a subsequent section of this chapter. In fact, indefinite-life intangible assets must be tested for impairment annually, or more frequently if events or circumstances indicate that the asset might be impaired.

● LO11–10

International Financial Reporting Standards

Valuation of Intangible Assets. IAS No. 38¹² allows a company to value an intangible asset subsequent to initial valuation at (1) cost less accumulated amortization or (2) fair value, if fair value can be determined by reference to an active market. If revaluation is chosen, all assets within that class of intangibles must be revalued on a regular basis. Goodwill, however, cannot be revalued. U.S. GAAP prohibits revaluation of any intangible asset.

Notice that the revaluation option is possible only if fair value can be determined by reference to an active market, making the option relatively uncommon. However, the option possibly could be used for intangibles such as franchises and certain license agreements.

If the revaluation option is chosen, the accounting treatment is similar to the way we applied the revaluation option for property, plant, and equipment earlier in this chapter. Recall that the way the company reports the difference between fair value and book value depends on which amount is higher. If fair value is higher than book value, the difference is reported as other comprehensive income (OCI) and then accumulates in a revaluation surplus account in equity. On the other hand, if book value is higher than fair value, the difference is expensed.

Consider the following illustration:

Amershan LTD. prepares its financial statements according to IFRS. At the beginning of its 2013 fiscal year, the company purchased a franchise for \$500,000. The franchise has a 10-year contractual life and no residual value, so amortization in 2013 is \$50,000. The company does not use an accumulated amortization account and credits the franchise account directly when amortization is recorded. At the end of the year, Amershan chooses to revalue the franchise as permitted by IAS No. 38. Assuming that the fair value of the franchise, determined by reference to an active market, at year-end is \$600,000, Amershan records amortization and the revaluation using the following journal entries:

Amortization expense (\$500,000 ÷ 10 years)	50,000	
Franchise		50,000
Franchise (\$600,000 – 450,000)	150,000	
Revaluation surplus—OCI		150,000

With the second entry Amershan increases the book value of the franchise from \$450,000 (\$500,000 – 50,000) to its fair value of \$600,000 and records a revaluation surplus for the difference. The new basis for the franchise is its fair value of \$600,000, and the following years’ amortization is based on that amount. Thus, 2014 amortization would be \$600,000 divided by the nine remaining years, or \$66,667.

IFRS ILLUSTRATION

To record the revaluation of franchise to its fair value.

¹²“Intangible Assets,” *International Accounting Standard No. 38* (IASCF), as amended effective January 1, 2011.

Concept Review Exercise

DEPLETION AND AMORTIZATION

Part A:

On March 29, 2013, the Horizon Energy Corporation purchased the mineral rights to a coal deposit in New Mexico for \$2 million. Development costs and the present value of estimated land restoration costs totaled an additional \$3.4 million. The company removed 200,000 tons of coal during 2013 and estimated that an additional 1,600,000 tons would be removed over the next 15 months.

Required:

Compute depletion on the mine for 2013.

Solution:

Cost of Coal Mine:	(\$ in millions)
Purchase price of mineral rights	\$2.0
Development and restoration costs	<u>3.4</u>
	<u>\$5.4</u>

Depletion:

$$\text{Depletion per ton} = \frac{\$5.4 \text{ million}}{1.8 \text{ million tons}^*} = \$3 \text{ per ton}$$

*200,000 + 1,600,000

$$2013 \text{ depletion} = \$3 \times 200,000 \text{ tons} = \$600,000$$

Part B:

On October 1, 2013, Advanced Micro Circuits, Inc., completed the purchase of Zotec Corporation for \$200 million. Included in the allocation of the purchase price were the following identifiable intangible assets (\$ in millions), along with the fair values and estimated useful lives:

Intangible Asset	Fair value	Useful Life (in years)
Patent	\$10	5
Developed technology	50	4
Customer list	10	2

In addition, the fair value of acquired tangible assets was \$100 million. Goodwill was valued at \$30 million. Straight-line amortization is used for all purchased intangibles.

During 2013, Advanced finished work on a software development project. Development costs incurred after technological feasibility was achieved and before the product release date totaled \$2 million. The software was available for release to the general public on September 29, 2013. During the last three months of the year, revenue from the sale of the software was \$4 million. The company estimates that the software will generate an additional \$36 million in revenue over the next 45 months.

Required:

Compute amortization for purchased intangibles and software development costs for 2013.

Solution:

Amortization of Purchased Intangibles:

Patent	\$10 million / 5 = \$2 million × $\frac{3}{12}$ year = \$.5 million
Developed technology	\$50 million / 4 = \$12.5 million × $\frac{3}{12}$ year = \$3.125 million
Customer list	\$10 million / 2 = \$5 million × $\frac{3}{12}$ year = \$1.25 million
Goodwill	The cost of goodwill is not amortized.

Amortization of Software Development Costs:

(1) Percentage-of-revenue method:

$$\frac{\$4 \text{ million}}{(\$4 \text{ million} + 36 \text{ million})} = 10\% \times \$2 \text{ million} = \$200,000$$

(2) Straight-line:

$$\frac{3 \text{ months}}{48 \text{ months}} \text{ or } 6.25\% \times \$2 \text{ million} = \$125,000$$

Advanced will use the percentage-of-revenue method since it produces the greater amortization, \$200,000.

PART B**ADDITIONAL ISSUES**

In this part of the chapter, we discuss the following issues related to cost allocation:

1. Partial periods.
2. Changes in estimates.
3. Change in depreciation method.
4. Error correction.
5. Impairment of value.

Partial Periods

Only in textbooks are property, plant, and equipment and intangible assets purchased and disposed of at the very beginning or very end of a company's fiscal year. When acquisition and disposal occur at other times, a company theoretically must determine how much depreciation, depletion, and amortization to record for the part of the year that each asset actually is used.

Let's repeat the Hogan Manufacturing Company illustration used earlier in the chapter but modify it in Illustration 11–14 to assume that the asset was acquired *during* the company's fiscal year.

Illustration 11–14

Depreciation Methods—
Partial Year

On April 1, 2013, the Hogan Manufacturing Company purchased a machine for \$250,000. The company expects the service life of the machine to be five years and the anticipated residual value is \$40,000. The machine was disposed of after five years of use. The company's fiscal year-end is December 31. Partial-year depreciation is recorded based on the number of months the asset is in service.

Notice that no information is provided on the estimated output of the machine. Partial-year depreciation presents a problem only when time-based depreciation methods are used. In an activity-based method, the rate per unit of output simply is multiplied by the actual output for the period, regardless of the length of that period.

Depreciation per year of the asset's life calculated earlier in the chapter for the various time-based depreciation methods is shown in Illustration 11–14A.

Illustration 11–14A

Yearly Depreciation

Year	Straight Line	Sum-of-the-Years'-Digits	Double-Declining Balance
1	\$ 42,000	\$ 70,000	\$100,000
2	42,000	56,000	60,000
3	42,000	42,000	36,000
4	42,000	28,000	14,000
5	42,000	14,000	0
Total	<u>\$210,000</u>	<u>\$210,000</u>	<u>\$210,000</u>

Illustration 11-14B shows how Hogan would depreciate the machinery by these three methods assuming an April 1 acquisition date.

Illustration 11–14B Partial-Year Depreciation

Year	Straight Line	Sum-of-the-Years'-Digits	Double-Declining Balance
2013	$\$42,000 \times \frac{3}{4} = \$ 31,500$	$\$70,000 \times \frac{3}{4} = \$ 52,500$	$\$100,000 \times \frac{3}{4} = \$ 75,000$
2014	\$ 42,000	$\$70,000 \times \frac{1}{4} = \$ 17,500$ $+ \$56,000 \times \frac{3}{4} = 42,000$ \$ 59,500	$\$100,000 \times \frac{1}{4} = \$ 25,000$ $+ \$60,000 \times \frac{3}{4} = 45,000$ \$ 70,000*
2015	\$ 42,000	$\$56,000 \times \frac{1}{4} = \$ 14,000$ $+ \$42,000 \times \frac{3}{4} = 31,500$ \$ 45,500	$\$60,000 \times \frac{1}{4} = \$ 15,000$ $+ \$36,000 \times \frac{3}{4} = 27,000$ \$ 42,000
2016	\$ 42,000	$\$42,000 \times \frac{1}{4} = \$ 10,500$ $+ \$28,000 \times \frac{3}{4} = 21,000$ \$ 31,500	$\$36,000 \times \frac{1}{4} = \$ 9,000$ $+ \$14,000 \times \frac{3}{4} = 10,500$ \$ 19,500
2017	\$ 42,000	$\$28,000 \times \frac{1}{4} = \$ 7,000$ $+ \$14,000 \times \frac{3}{4} = 10,500$ \$ 17,500	$\$14,000 \times \frac{1}{4} = \$ 3,500$
2018	$\$42,000 \times \frac{1}{4} = \$ 10,500$	$\$14,000 \times \frac{1}{4} = \$ 3,500$	
Totals	\$210,000	\$210,000	\$210,000

*Could also be determined by multiplying the book value at the beginning of the year by twice the straight-line rate: $(\$250,000 - 75,000) \times 40\% = \$70,000$.

Notice that 2013 depreciation is three-quarters of the full year's depreciation for the first year of the asset's life, because the asset was used nine months, or $\frac{3}{4}$ of the year. The remaining one-quarter of the first year's depreciation is included in 2014's depreciation along with $\frac{3}{4}$ of the depreciation for the second year of the asset's life. This calculation is not necessary for the straight-line method because a full year's depreciation is the same for each year of the asset's life.

Usually, the above procedure is impractical or at least cumbersome. As a result, most companies adopt a simplifying assumption, or convention, for computing partial year's depreciation and use it consistently. A common convention is to record one-half of a full year's depreciation in the year of acquisition and another half year in the year of disposal. This is known as the **half-year convention**.¹³

Changes in Estimates

The calculation of depreciation, depletion, or amortization requires estimates of both service life and residual value. It's inevitable that at least some estimates will prove incorrect. Chapter 4 briefly introduced the topic of changes in estimates along with coverage of changes in accounting principles and the correction of errors. Here and in subsequent sections of this chapter, we provide overviews of the accounting treatment and disclosures required for these changes and errors when they involve property, plant, and equipment and intangible assets.

Changes in estimates are accounted for prospectively. When a company revises a previous estimate based on new information, prior financial statements are not restated. Instead, the company merely incorporates the new estimate in any related accounting determinations from then on. So, it usually will affect some aspects of both the balance sheet and the income statement in the current and future periods. A disclosure note should describe the effect of a change in estimate on income before extraordinary items, net income, and related per share amounts for the current period.

● LO11-5

A change in estimate should be reflected in the financial statements of the current period and future periods.

¹³Another common method is the modified half-year convention. This method records a full year's depreciation when the asset is acquired in the first half of the year or sold in the second half. No depreciation is recorded if the asset is acquired in the second half of the year or sold in the first half. These half-year conventions are simple and, in most cases, will not result in material differences from a more precise calculation.

Consider the example in Illustration 11–15.

Illustration 11–15

Change in Accounting Estimate

On January 1, 2011, the Hogan Manufacturing Company purchased a machine for \$250,000. The company expects the service life of the machine to be five years and its anticipated residual value to be \$40,000. The company's fiscal year-end is December 31 and the straight-line depreciation method is used for all depreciable assets. During 2013, the company revised its estimate of service life from five to eight years and also revised estimated residual value to \$22,000.

For 2011 and 2012, depreciation is \$42,000 per year $[(\$250,000 - 40,000) \div 5 \text{ years}]$ or \$84,000 for the two years. However, with the revised estimate, depreciation for 2013 and subsequent years is determined by allocating the book value remaining at the beginning of 2013 less the revised residual value equally over the remaining service life of six years $(8 - 2)$. The remaining book value at the beginning of 2013 is \$166,000 $(\$250,000 - 84,000)$ and depreciation for 2013 and subsequent years is recorded as follows:

Depreciation expense (below)	24,000																																	
Accumulated depreciation		24,000																																
<table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 15%;"></td> <td style="width: 15%; text-align: right;">\$250,000</td> <td style="width: 15%;"></td> <td style="width: 55%;">Cost</td> </tr> <tr> <td style="text-align: right;">\$42,000</td> <td></td> <td></td> <td>Previous annual depreciation $(\\$210,000 \div 5 \text{ years})$</td> </tr> <tr> <td style="text-align: right;"><u>$\times 2 \text{ years}$</u></td> <td style="text-align: right;"><u>84,000</u></td> <td></td> <td>Depreciation to date (2011–2012)</td> </tr> <tr> <td></td> <td style="text-align: right;">166,000</td> <td></td> <td>Book value as of 1/1/13</td> </tr> <tr> <td></td> <td style="text-align: right;"><u>22,000</u></td> <td></td> <td>Less revised residual value</td> </tr> <tr> <td></td> <td style="text-align: right;">144,000</td> <td></td> <td>Revised depreciable base</td> </tr> <tr> <td></td> <td style="text-align: right;"><u>$\div 6$</u></td> <td></td> <td>Estimated remaining life $(8 \text{ years} - 2 \text{ years})$</td> </tr> <tr> <td></td> <td style="text-align: right; color: #e91e63;"><u><u>\$ 24,000</u></u></td> <td></td> <td>New annual depreciation</td> </tr> </table>				\$250,000		Cost	\$42,000			Previous annual depreciation $(\$210,000 \div 5 \text{ years})$	<u>$\times 2 \text{ years}$</u>	<u>84,000</u>		Depreciation to date (2011–2012)		166,000		Book value as of 1/1/13		<u>22,000</u>		Less revised residual value		144,000		Revised depreciable base		<u>$\div 6$</u>		Estimated remaining life $(8 \text{ years} - 2 \text{ years})$		<u><u>\$ 24,000</u></u>		New annual depreciation
	\$250,000		Cost																															
\$42,000			Previous annual depreciation $(\$210,000 \div 5 \text{ years})$																															
<u>$\times 2 \text{ years}$</u>	<u>84,000</u>		Depreciation to date (2011–2012)																															
	166,000		Book value as of 1/1/13																															
	<u>22,000</u>		Less revised residual value																															
	144,000		Revised depreciable base																															
	<u>$\div 6$</u>		Estimated remaining life $(8 \text{ years} - 2 \text{ years})$																															
	<u><u>\$ 24,000</u></u>		New annual depreciation																															

The asset's book value is depreciated down to the anticipated residual value of \$22,000 at the end of the revised eight-year service life. In addition, a note discloses the effect of the change in estimate on income, if material. The before-tax effect is an increase in income of \$18,000 (depreciation of \$42,000 if the change had not been made, less \$24,000 depreciation after the change).

Zumiez Inc. is a leading specialty retailer of action sports related apparel. The company recently revised its estimates of the service lives of its leasehold improvements. Illustration 11–16 shows the note that disclosed the change.

Illustration 11–16

Change in Estimate Disclosure—Zumiez Inc.

Real World Financials

Fixed Assets (in part)

In accordance with our fixed asset policy, we review the estimated useful lives of our fixed assets on an ongoing basis. This review indicated that the actual lives of leasehold improvements were longer than the estimated useful lives used for depreciation purposes in our consolidated financial statements. As a result, effective January 31, 2010, we changed our estimate of the useful lives of our leasehold improvements to the lesser of 10 years or the term of the lease to better reflect the estimated periods during which these assets will remain in service. The useful lives of leasehold improvements were previously estimated to be the lesser of 7 years or the term of the lease. For the fiscal year ended January 29, 2011, the effect of this change in estimate was to reduce depreciation expense by \$4.2 million, increase net income by \$2.7 million and increase basic and diluted earnings per share by \$0.09.

Change in Depreciation, Amortization, or Depletion Method

● LO11–6

Changes in depreciation, amortization, or depletion methods are accounted for the same way as a change in accounting estimate.

Generally accepted accounting principles require that a change in depreciation, amortization, or depletion method be considered a change in accounting estimate that is achieved by a change in accounting principle. We account for these changes prospectively, exactly as we would any other change in estimate. One difference is that most changes in estimate do not require a company to justify the change. However, this change in estimate is a result of changing an accounting principle and therefore requires a clear justification as to why the new method is preferable. Consider the example in Illustration 11–17.

On January 1, 2011, the Hogan Manufacturing Company purchased a machine for \$250,000. The company expects the service life of the machine to be five years and its anticipated residual value to be \$30,000. The company's fiscal year-end is December 31 and the double-declining-balance (DDB) depreciation method is used. During 2013, the company switched from the DDB to the straight-line method. In 2013, the adjusting entry is:

Depreciation expense (below)	20,000	
Accumulated depreciation		20,000

DDB depreciation:

2011	\$100,000	(\$250,000 × 40%*)
2012	60,000	[(250,000 – 100,000) × 40%*]
Total	\$160,000	

*Double the straight-line rate for 5 years ($\frac{1}{5} = 20\%$) × 2 = 40%

\$250,000	Cost
160,000	Depreciation to date, DDB (2011–2012)
<u>90,000</u>	Undepreciated cost as of 1/1/13
30,000	Less residual value
<u>60,000</u>	Depreciable base
÷ 3 yrs.	Remaining life (5 years – 2 years)
<u>\$ 20,000</u>	New annual depreciation

A disclosure note reports the effect of the change on net income and earnings per share along with clear justification for changing depreciation methods.

Illustration 11–17

Change in Depreciation Method

Illustration 11–18 provides an example of a disclosure describing a recent change in depreciation method by **Composite Technology Corporation**, a producer of renewable energy products for the electrical utility industry.

Change in Accounting Estimate (in part)

Effective on October 1, 2009, the Company changed its method of depreciation for production machinery and equipment from the straight-line method to the units-of-production method. This change in depreciation method resulted from the use of new internally developed cost-effective machines that provided improved production rates, provided longer service lives and substantially increased production capacity. The new production machines actual pattern of consumption of the expected benefits is significantly less than straight-lining over time, therefore the units-of-production method was preferable and appropriate. In accordance with U.S. GAAP, the Company accounted for this change in accounting estimate prospectively beginning October 1, 2009. For the year ended September 30, 2010, the change in our method of depreciating production machinery and equipment resulted in lowering depreciation expense (included in Cost of Revenue), Net Loss from Continuing Operations and Net Loss by \$184,000. For the year ended September 30, 2010, basic and diluted earnings per share from continuing operations and net loss were not affected.

Illustration 11–18

Change in Depreciation Method—Composite Technology Corporation

Real World Financials

Frequently, when a company changes depreciation method, the change will be effective only for assets placed in service after that date. Of course, that means depreciation schedules do not require revision because the change does not affect assets depreciated in prior periods. A disclosure note still is required to provide justification for the change and to report the effect of the change on the current year's income.

Error Correction

Errors involving property, plant, and equipment and intangible assets include computational errors in the calculation of depreciation, depletion, or amortization and mistakes made in determining whether expenditures should be capitalized or expensed. These errors can affect many years. For example, let's say a major addition to equipment should be capitalized but

● LO11-7

incorrectly is expensed. Not only is income in the year of the error understated, but subsequent years' income is overstated because depreciation is omitted.

Recall from our discussion of inventory errors in Chapter 9 that if a material error is discovered in an accounting period subsequent to the period in which the error is made, any previous years' financial statements that were incorrect as a result of the error are retrospectively restated to reflect the correction. Any account balances that are incorrect as a result of the error are corrected by journal entry. If retained earnings is one of the incorrect accounts, the correction is reported as a *prior period adjustment* to the beginning balance in the statement of shareholders' equity.¹⁴ In addition, a disclosure note is needed to describe the nature of the error and the impact of its correction on net income, income before extraordinary items, and earnings per share.

Here is a summary of the treatment of material errors occurring in a previous year:

- Previous years' financial statements are retrospectively restated.
- Account balances are corrected.
- If retained earnings requires correction, the correction is reported as a prior period adjustment.
- A note describes the nature of the error and the impact of the correction on income.

Consider Illustration 11–19. The 2011 and 2012 financial statements that were incorrect as a result of the error are *retrospectively restated* to report the addition to the patent and to reflect the correct amount of amortization expense, assuming both statements are reported again for comparative purposes in the 2013 annual report.

Illustration 11–19
Error Correction

Sometimes, the analysis is easier if you re-create the entries actually recorded incorrectly and those that would have been recorded if the error hadn't occurred, and then compare them.

In 2013, the controller of the Hathaway Corporation discovered an error in recording \$300,000 in legal fees to successfully defend a patent infringement suit in 2011. The \$300,000 was charged to legal fee expense but should have been capitalized and amortized over the five-year remaining life of the patent. Straight-line amortization is used by Hathaway for all intangibles.

Analysis

		(\$ in thousands)			
		Correct (Should Have Been Recorded)		Incorrect (As Recorded)	
2011	Patent	300		Expense	300
	Cash		300	Cash	300
2011	Expense	60		Amortization entry omitted	
	Patent		60		
2012	Expense	60		Amortization entry omitted	
	Patent		60		

During the two-year period, amortization expense was *understated* by \$120 thousand, but other expenses were *overstated* by \$300 thousand, so net income during the period was *understated* by \$180 thousand (ignoring income taxes). This means retained earnings is currently *understated* by that amount.

Patent is understated by \$180 thousand.

		(\$ in thousands)
Patent		180
Retained earnings		180

To correct incorrect accounts.

Because retained earnings is one of the accounts incorrect as a result of the error, a correction to that account of **\$180,000** is reported as a prior period adjustment to the 2013

¹⁴The prior period adjustment is applied to beginning retained earnings for the year following the error, or for the earliest year being reported in the comparative financial statements when the error occurs prior to the earliest year presented. The retained earnings balances in years after the first year also are adjusted to what those balances would be if the error had not occurred, but a company may choose not to explicitly report those adjustments as separate line items.

beginning retained earnings balance in Hathaway's comparative statements of shareholders' equity. Assuming that 2012 is included with 2013 in the comparative statements, a correction would be made to the 2012 beginning retained earnings balance as well. That prior period adjustment, though, would be for the pre-2012 difference: $\$300,000 - 60,000 = \$240,000$.

Also, a disclosure note accompanying Hathaway's 2013 financial statements should describe the nature of the error and the impact of its correction on each year's net income (understated by \$240,000 in 2011 and overstated by \$60,000 in 2012), income before extraordinary items (same as net income), and earnings per share.

Chapter 20 provides in-depth coverage of changes in estimates and methods, and of accounting errors. We cover the tax effect of these changes and errors in that chapter.

Impairment of Value

Depreciation, depletion, and amortization reflect a gradual consumption of the benefits inherent in property, plant, and equipment and intangible assets. An implicit assumption in allocating the cost of an asset over its useful life is that there has been no significant reduction in the anticipated total benefits or service potential of the asset. Situations can arise, however, that cause a significant decline or impairment of those benefits or service potentials. An extreme case would be the destruction of a plant asset—say a building destroyed by fire—before the asset is fully depreciated. The remaining carrying value of the asset in that case should be written off as a loss. Sometimes, though, the impairment of future value is more subtle.

The way we recognize and measure an impairment loss differs depending on whether the assets are to be held and used or are being held to be sold. Accounting is different, too, for assets with finite lives and those with indefinite lives. We consider those differences now.

Assets to Be Held and Used

An increasingly common occurrence in practice is the partial write-down of property, plant, and equipment and intangible assets that remain in use. For example, in the second quarter of 2001, **American Airlines** reduced the carrying value (book value) of certain aircraft by \$685 million. The write-down reflected the significant reduction in demand for air travel that occurred even before the September 11, 2001, terrorist attacks on the World Trade Center and the Pentagon.

Conceptually, there is considerable merit for a policy requiring the write-down of an asset when there has been a significant decline in value. A write-down can provide important information about the future cash flows that a company can generate from using the asset. However, in practice, this process is very subjective. Even if it appears certain that significant impairment of value has occurred, it often is difficult to measure the amount of the required write-down.

For example, let's say a company purchased \$2,000,000 of equipment to be used in the production of a new type of laser printer. Depreciation is determined using the straight-line method over a useful life of six years and the residual value is estimated at \$200,000. At the beginning of year 3, the machine's book value has been reduced by accumulated depreciation to \$1,400,000 [$\$2,000,000 - (\$300,000 \times 2)$]. At that time, new technology is developed causing a significant reduction in the selling price of the new laser printer as well as a reduction in anticipated demand for the product. Management estimates that the equipment will be useful for only two more years and will have no significant residual value.

This situation is not simply a matter of a change in the estimates of useful life and residual value. Management must decide if the events occurring in year 3 warrant a write-down of the asset below \$1,400,000. A write-down would be appropriate if the company decided that it would be unable to fully recover this amount through future use.

For assets to be held and used, different guidelines apply to (1) property, plant, and equipment and intangible assets with finite useful lives (subject to depreciation, depletion, or amortization) and (2) intangible assets with indefinite useful lives (not subject to amortization).

PROPERTY, PLANT, AND EQUIPMENT AND FINITE-LIFE INTANGIBLE ASSETS. Generally accepted accounting principles provide guidelines for when to recognize and how to measure impairment losses of long-lived tangible assets and intangible

• LO11-8

FINANCIAL Reporting Case

Q3, p. 589

An asset held for use should be written down if there has been a significant impairment of value.

assets with finite useful lives.¹⁵ For purposes of this recognition and measurement, assets are grouped at the lowest level for which identifiable cash flows are largely independent of the cash flows of other assets.

Property, plant, and equipment and finite-life intangible assets are tested for impairment only when events or changes in circumstances indicate book value may not be recoverable.

When to Test for Impairment. It would be impractical to test all assets or asset groups for impairment at the end of every reporting period. GAAP requires investigation of possible impairment only if events or changes in circumstances indicate that the book value of the asset or asset group may not be recoverable. This might happen from:

- A significant decrease in market price.
- A significant adverse change in how the asset is being used or in its physical condition.
- A significant adverse change in legal factors or in the business climate.
- An accumulation of costs significantly higher than the amount originally expected for the acquisition or construction of an asset.
- A current-period loss combined with a history of losses or a projection of continuing losses associated with the asset.
- A realization that the asset will be disposed of significantly before the end of its estimated useful life.¹⁶

STEP 1—An impairment loss is required only when the undiscounted sum of future cash flows is less than book value.

Measurement. Determining whether to record an impairment loss and actually recording the loss is a two-step process. The first step is a *recoverability* test—an impairment loss is required only when the undiscounted sum of estimated future cash flows from an asset is less than the asset's book value. The *measurement* of impairment loss—step 2—is the difference between the asset's book value and its fair value. If an impairment loss is recognized, the written-down book value becomes the new cost base for future cost allocation. Later recovery of an impairment loss is prohibited.

STEP 2—The impairment loss is the excess of book value over fair value.

Let's look closer at the measurement process (step two). Fair value is the amount at which the asset could be bought or sold in a current transaction between willing parties. Quoted market prices could be used if they're available. If fair value is not determinable, it must be estimated.

The process is best described by an example. Consider Illustration 11–20.

In the entry in Illustration 11–20, we reduce accumulated depreciation to zero and decrease the cost of the assets to their fair value of \$135 million ($\$300 - 165$). This adjusted amount serves as the revised basis for subsequent depreciation over the remaining useful life of the assets, just as if the assets had been acquired on the impairment date for their fair values.

The present value of future cash flows often is used as a measure of fair value.

Because the fair value of the factory assets was not readily available to Dakota in Illustration 11–20, the \$135 million had to be estimated. One method that can be used to estimate fair value is to compute the discounted present value of future cash flows expected from the asset. Keep in mind that we use *undiscounted* estimates of cash flows in step one to determine whether an impairment loss is indicated, but *discounted* estimates of cash flows to determine the amount of the loss. In calculating present value, either a traditional approach or an expected cash flow approach can be used. The traditional approach is to incorporate risk and uncertainty into the discount rate. Recall from discussions in previous chapters that the expected cash flow approach incorporates risk and uncertainty instead into a determination of a probability-weighted cash flow expectation, and then discounts this expected cash flow using a risk-free interest rate. We discussed and illustrated the expected cash flow approach in previous chapters.

A disclosure note is needed to describe the impairment loss. The note should include a description of the impaired asset or asset group, the facts and circumstances leading to the impairment, the amount of the loss if not separately disclosed on the face of the income statement, and the method used to determine fair value.

The Great Atlantic and Pacific Tea Company, Inc., is a large supermarket chain. Illustration 11–21 shows the company's disclosure note describing recent impairment losses. The note provides a summary of the process used to identify and measure impairment losses for property, plant, and equipment and finite-life intangible assets.

¹⁵FASB ASC 360–10–35–15 through 20: Property, Plant, and Equipment—Overall—Subsequent Measurement—Impairment or Disposal of Long-Lived Assets (previously “Accounting for the Impairment of Long-Lived Assets and for Long-Lived Assets to Be Disposed Of,” *Statement of Financial Accounting Standards No. 144* (Norwalk, Conn.: FASB, 2001)).

¹⁶FASB ASC 360–10–35–21: Property, Plant, and Equipment—Overall—Subsequent Measurement—Impairment or Disposal of Long-Lived Assets (previously “Accounting for the Impairment of Long-Lived Assets and for Long-Lived Assets to Be Disposed Of,” *Statement of Financial Accounting Standards No. 144* (Norwalk, Conn.: FASB, 2001), par.8).

The Dakota Corporation operates several factories that manufacture medical equipment. Near the end of the company's 2013 fiscal year, a change in business climate related to a competitor's innovative products indicated to management that the \$170 million book value (original cost of \$300 million less accumulated depreciation of \$130 million) of the assets of one of Dakota's factories may not be recoverable.

Management is able to identify cash flows from this factory and estimates that future cash flows over the remaining useful life of the factory will be \$150 million. The fair value of the factory's assets is not readily available but is estimated to be \$135 million.

Change in circumstances. A change in the business climate related to a competitor's innovative products requires Dakota to investigate for possible impairment.

Step 1. Recoverability. Because the book value of \$170 million exceeds the \$150 million undiscounted future cash flows, an impairment loss is indicated.

Step 2. Measurement of impairment loss. The impairment loss is \$35 million, determined as follows:

Book value	\$170 million
Fair value	<u>135 million</u>
Impairment loss	<u>\$ 35 million</u>

The entry to record the loss is (\$ in millions):

Loss on impairment	35	
Accumulated depreciation	130	
Factory assets		165

The loss normally is reported in the income statement as a separate component of operating expenses.

Illustration 11–20

Impairment Loss—
Property, Plant, and
Equipment

Note 4 – Valuation of Long-Lived Assets (in part)

We review the carrying values of our long-lived assets for possible impairment whenever events or changes in circumstances indicate that the carrying amount of assets may not be recoverable. Such review is primarily based upon groups of assets and the undiscounted estimated future cash flows from such assets to determine if the carrying value of such assets is recoverable from their respective cash flows. If such review indicates impairment exists, we measure such impairment as the difference between the fair value and carrying value of the assets.

Impairments due to unrecoverable assets (in part)

As a result of experiencing cash flow losses at certain stores, we determined that triggering events had occurred that required us to test the related long-lived assets for potential impairment. We recorded an impairment charge of \$45.3 million during the fiscal year ended February 26, 2011 to partially write down these stores' long-lived assets.

International Financial Reporting Standards

Impairment of Value: Property, Plant, and Equipment and Finite-Life Intangible Assets. Highlighted below are some important differences in accounting for impairment of value for property, plant, and equipment and finite-life intangible assets between U.S. GAAP and IAS No. 36.¹⁷

	U.S. GAAP	IFRS
When to Test	When events or changes in circumstances indicate that book value may not be recoverable.	Assets must be assessed for indicators of impairment at the end of each reporting period. Indicators of impairment are similar to U.S. GAAP.

(continued)

● LO11-10

¹⁷“Impairment of Assets,” *International Accounting Standard No. 36* (IASCF), as amended effective January 1, 2011.

(concluded)

Recoverability	An impairment loss is required when an asset's book value exceeds the undiscounted sum of the asset's estimated future cash flows.	There is no equivalent recoverability test. An impairment loss is required when an asset's book value exceeds the higher of the asset's value-in-use (present value of estimated future cash flows) and fair value less costs to sell.
Measurement	The impairment loss is the difference between book value and fair value.	The impairment loss is the difference between book value and the "recoverable amount" (the higher of the asset's value-in-use and fair value less costs to sell).
Subsequent Reversal of Loss	Prohibited.	Required if the circumstances that caused the impairment are resolved.

IFRS ILLUSTRATION

Let's look at an illustration highlighting the important differences described above. The Jasmine Tea Company has a factory that has significantly decreased in value due to technological innovations in the industry. Below are data related to the factory's assets:

	(\$ in millions)
Book value	\$18.5
Undiscounted sum of estimated future cash flows	19.0
Present value of future cash flows	16.0
Fair value less cost to sell (determined by appraisal)	15.5

What amount of impairment loss should Jasmine Tea recognize, if any, under U.S. GAAP? Under IFRS?

U.S. GAAP There is no impairment loss. The sum of undiscounted estimated future cash flows exceeds the book value.

IFRS Jasmine should recognize an impairment loss of \$2.5 million. Indicators of impairment are present and book value exceeds both value-in-use (present value of cash flows) and fair value less costs to sell. The recoverable amount is \$16 million, the higher of value-in-use (\$16 million) and fair value less costs to sell (\$15.5 million). The impairment loss is the difference between book value of \$18.5 million and the \$16 million recoverable amount.

Real World Financials

Nokia, a Finnish company, prepares its financial statements according to IFRS. The following disclosure note describes the company's impairment policy:

Impairment Review (in part)

The Group assesses the carrying amount of identifiable intangible assets and long-lived assets if events or changes in circumstances indicate that such carrying amount may not be recoverable. Factors that trigger an impairment review include underperformance relative to historical or projected future results, significant changes in the manner of the use of the acquired assets or the strategy for the overall business and significant negative industry or economic trends.

The Group conducts its impairment testing by determining the recoverable amount for the asset. The recoverable amount of an asset is the higher of its fair value less costs to sell and its value in use. The recoverable amount is then compared to its carrying amount and an impairment loss is recognized if the recoverable amount is less than the carrying amount.

Intangible assets with indefinite useful lives should be tested for impairment at least annually.

INDEFINITE-LIFE INTANGIBLE ASSETS OTHER THAN GOODWILL. Intangible assets with indefinite useful lives should be tested for impairment annually, or more frequently if events or changes in circumstances indicate that the asset may be impaired. The measurement of an impairment loss for indefinite-life intangible assets other than goodwill is a one-step process. We compare the fair value of the asset with its book value. If book value exceeds fair value, an impairment loss is recognized for the difference. Notice that we omit the recoverability test with these assets. Because we anticipate cash flows to continue indefinitely, recoverability is not a good indicator of impairment.

Similar to property, plant, and equipment and finite-life intangible assets, if an impairment loss is recognized, the written-down book value becomes the new cost base for future cost allocation. Recovery of the impairment loss is prohibited. Disclosure requirements also are similar.

If book value exceeds fair value, an impairment loss is recognized for the difference.

International Financial Reporting Standards

Impairment of Value: Indefinite-Life Intangible Assets Other than Goodwill. Similar to U.S. GAAP, IFRS requires indefinite-life intangible assets other than goodwill to be tested for impairment at least annually. However, under U.S. GAAP, the impairment loss is measured as the difference between book value and fair value, while under IFRS the impairment loss is the difference between book value and the recoverable amount. The recoverable amount is the higher of the asset's value-in-use (present value of estimated future cash flows) and fair value less costs to sell.

IFRS requires the reversal of an impairment loss if the circumstances that caused the impairment are resolved. Reversals are prohibited under U.S. GAAP.

Also, indefinite-life intangible assets may not be combined with other indefinite-life intangible assets for the required annual impairment test. Under U.S. GAAP, though, if certain criteria are met, indefinite-life intangible assets should be combined for the required annual impairment test.

● LO11-10

GOODWILL. Recall that goodwill is a unique intangible asset. Unlike other assets, its cost (a) can't be directly associated with any specific identifiable right and (b) is not separable from the company as a whole. Because of these unique characteristics, we can't measure the impairment of goodwill the same way as we do other assets. GAAP provides guidelines for impairment, which while similar to general impairment guidelines, are specific to goodwill.¹⁸ Let's compare the two-step process for measuring goodwill impairment with the two-step process for measuring impairment for property, plant, and equipment and finite-life intangible assets.

In Step 1, for all classifications of assets, we decide whether a write-down due to impairment is required by determining whether the value of an asset has fallen below its book value. However, in this comparison, the value of assets for property, plant, and equipment and finite-life intangible assets is considered to be value-in-use as measured by the sum of undiscounted cash flows expected from the asset. But due to its unique characteristics, the value of goodwill is not associated with any specific cash flows and must be measured in a unique way. By its very nature, goodwill is inseparable from a particular *reporting unit*. So, for this step, we compare the value of the reporting unit itself with its book value. If the fair value of the reporting unit is less than its book value, an impairment loss is indicated. A reporting unit is an operating segment of a company or a component of an operating segment for which discrete financial information is available and segment management regularly reviews the operating results of that component.

If goodwill is tested for impairment at the same time as other assets of the reporting unit, the other assets must be tested first and any impairment loss and asset write-down recorded prior to testing goodwill.

In Step 2, for all classifications of property, plant, and equipment and intangible assets, if impairment is indicated from step 1, we measure the amount of impairment as the excess of the book value of the asset over its fair value. However, unlike for most other assets, the fair value of goodwill cannot be measured directly (market value, present value of associated cash flows, etc.) and so must be "implied" from the fair value of the reporting unit that acquired the goodwill.

The implied fair value of goodwill is calculated in the same way that goodwill is determined in a business combination. That is, it's a residual amount measured by subtracting the fair value of all identifiable net assets from the purchase price using the unit's previously determined fair value as the purchase price.¹⁹

STEP 1—A goodwill impairment loss is indicated when the fair value of the reporting unit is less than its book value.

STEP 2—A goodwill impairment loss is measured as the excess of the book value of the goodwill over its "implied" fair value.

¹⁸FASB ASC 350-20-35: Intangibles—Goodwill and Other—Goodwill—Subsequent Measurement (previously "Goodwill and Other Intangible Assets," *Statement of Financial Accounting Standards No. 142* (Norwalk, Conn.: FASB, 2001)).

¹⁹The impairment loss recognized cannot exceed the book value of goodwill.

When to test for impairment. Prior to 2012, companies were required to perform *step one* of the two-step test for goodwill impairment at least once a year, as well as in between annual test dates if something occurred that would indicate that the fair value of the reporting unit was below its book value. Then, if the first step indicated that the fair value of the reporting unit was indeed below book value, the company would perform *step two* to measure the amount of goodwill impairment.

In response to concerns about the cost and complexity of performing step one every year, the FASB issued an Accounting Standards Update (ASU) in 2011 that allows companies the option to decide whether step one is necessary.²⁰ Companies selecting this option will evaluate relevant events and circumstances to determine whether it is “more likely than not” (a likelihood of more than 50 percent) that the fair value of a reporting unit is now less than its book value. Only if that’s determined to be the case will the company perform the first step of the two-step goodwill impairment test. A list of possible events and circumstances that a company should consider in this qualitative assessment is provided in the ASU.

A goodwill impairment example is provided in Illustration 11–22.

Illustration 11–22

Impairment Loss—
Goodwill

The “implied” fair value of goodwill is a residual amount measured by subtracting the fair value of all identifiable net assets from the unit’s fair value.

In 2012, the Upjane Corporation acquired Pharmacopia Corporation for \$500 million. Upjane recorded \$100 million in goodwill related to this acquisition because the fair value of the net assets of Pharmacopia was \$400 million. After the acquisition, Pharmacopia continues to operate as a separate company and is considered a reporting unit.

At the end of 2013, events and circumstances indicated that it is more likely than not that the fair value of Pharmacopia is less than its book value requiring Upjane to perform step one of the goodwill impairment test. The book value of Pharmacopia’s net assets at the end of 2013 is \$440 million, including the \$100 million in goodwill. On that date, the fair value of Pharmacopia is estimated to be \$360 million and the fair value of all of its identifiable tangible and intangible assets, excluding goodwill, is estimated to be \$335 million.

Step 1. Recoverability. Because the book value of the net assets of \$440 million exceeds the \$360 million fair value of the reporting unit, an impairment loss is indicated.

Step 2. Measurement of impairment loss. The impairment loss is \$75 million, determined as follows:

Determination of implied goodwill:

Fair value of Pharmacopia	\$360 million
Fair value of Pharmacopia’s net assets (excluding goodwill)	<u>335 million</u>
Implied value of goodwill	<u>\$ 25 million</u>

Measurement of impairment loss:

Book value of goodwill	\$100 million
Implied value of goodwill	<u>25 million</u>
Impairment loss	<u>\$ 75 million</u>

The entry to record the loss is (\$ in millions):

Loss on impairment of goodwill	75	
Goodwill		75

The loss normally is reported in the income statement as a separate component of operating expenses.

The acquiring company in a business combination often pays for the acquisition using its own stock. In the late 1990s, the stock prices of many companies were unusually high. These often-inflated stock prices meant high purchase prices for many acquisitions and, in many cases, incredibly high values allocated to goodwill. When stock prices retreated in 2000 and 2001, it became obvious that the book value of goodwill for many companies would never be recovered. Some examples of multibillion dollar goodwill impairment losses are shown in Illustration 11–23.

²⁰FASB ASC 350–20–35-3: Intangibles—Goodwill and Other—Goodwill—Subsequent Measurement (previously “Goodwill and Other Intangible Assets,” *Statement of Financial Accounting Standards No. 142* (Norwalk, Conn.: FASB, 2001)).

Company	Goodwill Impairment Loss
AOL Time Warner	\$99 billion
JDS Uniphase	50 billion
Nortel Networks	12 billion
Lucent Technologies	4 billion
Vivendi Universal SA	15 billion (Euros)

Illustration 11–23

Goodwill Impairment Losses

The Clorox Company provides a more recent example. In Illustration 11–24 we see the disclosure note that describes a \$258 million impairment charge.

Note 5. Goodwill, Trademarks, and Other Intangible Assets (in part)

During the fiscal 2011 second quarter, the Company identified challenges in increasing sales for the Burt's Bees business in new international markets in accordance with projections, particularly in the European Union and Asia. Additionally, during the fiscal 2011 second quarter, the Company initiated its process for updating the three-year long-range financial and operating plan for the Burt's Bees business. In addition to slower than projected growth of international sales and challenges in the timing of certain international expansion plans, the domestic natural personal care category had not recovered in accordance with the Company's projections. Following the comprehensive reevaluation, the Company recognized a goodwill impairment charge of \$258 million.

Illustration 11–24

Goodwill Impairment Disclosure—The Clorox Company

Real World Financials

International Financial Reporting Standards

Impairment of Value—Goodwill. Highlighted below are some important differences in accounting for the impairment of goodwill between U.S. GAAP and IAS No. 36.

	U.S. GAAP	IFRS
Level of Testing	<i>Reporting unit</i> —a segment or a component of an operating segment for which discrete financial information is available.	<i>Cash-generating unit (CGU)</i> —the lowest level at which goodwill is monitored by management. A CGU can't be lower than a segment.
Measurement	<p>A <i>two-step process</i>:</p> <ol style="list-style-type: none"> 1. Compare the fair value of the reporting unit with its book value. A loss is indicated if fair value is less than book value. 2. The impairment loss is the excess of book value over implied fair value. 	<p>A <i>one-step</i>:</p> <p>Compare the recoverable amount of the CGU to book value. If the recoverable amount is less, reduce goodwill first, then other assets. The recoverable amount is the higher of fair value less costs to sell and value-in-use (present value of estimated future cash flows).</p>

IAS No. 36 requires goodwill to be tested for impairment at least annually. U.S. GAAP allows a company to avoid annual testing by making qualitative evaluations of the likelihood of goodwill impairment to determine if step one is necessary. Both U.S. GAAP and IAS No. 36 prohibit the reversal of goodwill impairment losses.

Let's look at an illustration highlighting these differences.

Canterbury LTD. has \$38 million of goodwill in its balance sheet from the 2011 acquisition of Denton, Inc. At the end of 2013, Canterbury's management provided the following information for the year-end goodwill impairment test (\$ in millions):

Fair value of Denton (determined by appraisal)	\$132
Fair value of Denton's net assets (excluding goodwill)	120
Book value of Denton's net assets (including goodwill)	150
Present value of Denton's estimated future cash flows	135

(continued)

● LO11-10

IFRS ILLUSTRATION

(concluded)

Assume that Denton is considered a reporting unit under U.S. GAAP and a cash-generating unit under IFRS, and that its fair value approximates fair value less costs to sell. What is the amount of goodwill impairment loss that Canterbury should recognize, if any, under U.S. GAAP? Under IFRS?

U.S. GAAP	Fair value of Denton	\$132
	Fair value of Denton's net assets (excluding goodwill)	120
	Implied value of goodwill	<u>\$ 12</u>
	Book value of goodwill	\$38
	Implied value of goodwill	<u>12</u>
	Impairment loss	<u>\$ 26</u>
IFRS	The recoverable amount is \$135 million, the higher of the \$135 million value-in-use (present value of estimated future cash flows) and the \$132 million fair value less costs to sell.	
	Denton's book value	\$150
	Recoverable amount	<u>135</u>
	Impairment loss	<u>\$ 15</u>

Real World Financials

Nestle SA, a Swiss company, is one of the largest food and nutrition companies in the world. The company prepares its financial statements according to IFRS. The following disclosures describe the company's goodwill impairment policy as well as a \$105 million Swiss franc goodwill impairment loss related to its Sports Nutrition unit.

Impairment of Goodwill (in part)

Goodwill is tested for impairment at least annually and upon the occurrence of an indication of impairment.

The impairment tests are performed annually at the same time each year at the cash-generating unit (CGU) level. . . . The impairment tests are performed by comparing the carrying value of the amount of assets of these CGU with their recoverable amount, based on their future projected cash flows discounted at an appropriate pre-tax rate.

Impairment charge during the period (in part)

Goodwill related to the acquisition of PowerBar in 2000 has been allocated for the impairment test to the Cash-Generating Unit (CGU) Sports Nutrition Worldwide. . . . Competitive environment and economic conditions in the USA led to lower than anticipated sales demand, resulting in downward revision of projected cash flows since the last impairment test and the recoverable amount of the CGU is lower than its carrying amount. An impairment of goodwill amounting to CHF 105 million has been recognized.

Assets to Be Sold

We have been discussing the recognition and measurement for the impairment of value of assets to be held and used. We also test for impairment of assets held for sale. These are assets management has actively committed to immediately sell in their present condition and for which sale is probable.

An asset or group of assets classified as held for sale is measured at the lower of its book value, or fair value less cost to sell. An impairment loss is recognized for any write-down to fair value less cost to sell.²¹ Except for including the cost to sell, notice the similarity to

For assets held for sale, if book value exceeds fair value less cost to sell, an impairment loss is recognized for the difference.

²¹If the asset is unsold at the end of a subsequent reporting period, a gain is recognized for any increase in fair value less cost to sell, but not in excess of the loss previously recognized.

impairment of assets to be held and used. We don't depreciate or amortize these assets while classified as held for sale and we report them separately in the balance sheet. Recall from our discussion of discontinued operations in Chapter 4 that similar rules apply for a component of an entity that is classified as held for sale.

Illustration 11–25 summarizes the guidelines for the recognition and measurement of impairment losses.

Type of Asset	When to Test for Impairment	Impairment Test
To Be Held and Used		
Property, plant, and equipment and finite-life intangible assets	When events or circumstances indicate book value may not be recoverable.	Step 1—An impairment loss is required only when book value is not recoverable (undiscounted sum of estimated future cash flows less than book value). Step 2—The impairment loss is the excess of book value over fair value.
Indefinite-life intangible assets (other than goodwill)	At least annually, or more frequently if indicated.	If book value exceeds fair value, an impairment loss is recognized for the difference.
Goodwill	At least annually, or more frequently if indicated. Option to avoid annual testing by making qualitative evaluations of the likelihood of goodwill impairment to determine if step one is necessary.	Step 1—A loss is indicated when the fair value of the reporting unit is less than its book value. Step 2—An impairment loss is measured as the excess of book value over implied fair value.
To Be Sold	When considered held for sale	If book value exceeds fair value less cost to sell, an impairment loss is recognized for the difference.

Illustration 11–25

Summary of Asset Impairment Guidelines

Where We're Headed

As we discussed briefly in Chapter 10 on page 540, the FASB and IASB have developed a new joint standard update involving revenue recognition that allows sellers to capitalize, as an intangible asset, the incremental costs of obtaining and fulfilling a long-term (longer than one year) contract. Sales commissions is an example of a contract acquisition cost that could be capitalized, rather than expensed, under this new ASU. If capitalized, these intangible assets are amortized on a systematic basis consistent with the pattern of transfer of the goods or services to which the asset relates. An impairment loss would be recognized to the extent that the book value of the intangible asset exceeds its recoverable amount. The recoverable amount is the amount of consideration the company expects to receive from the sale of goods or services to which the asset relates less costs related directly to providing those goods or services.

● LO11–10

Impairment Losses and Earnings Quality

What do losses from the write-down of inventory and restructuring costs have in common? The presence of these items in a corporate income statement presents a challenge to an analyst trying to determine a company's permanent earnings—those likely to continue in the future. We discussed these issues in prior chapters.

An analyst must decide whether to consider asset impairment losses as transitory in nature or as a part of permanent earnings.

We now can add asset impairment losses to the list of “big bath” accounting techniques some companies use to manipulate earnings. By writing off large amounts of assets, companies significantly reduce earnings in the year of the write-off but are able to increase future earnings by lowering future depreciation, depletion, or amortization. Here’s how. We measure the impairment loss as the difference between an asset’s book value and its fair value. However, in most cases, fair value must be estimated, and the estimation process usually involves a forecast of future net cash flows the company expects to generate from the asset’s use. If a company underestimates future net cash flows, fair value is understated. This has two effects: (1) current year’s income is unrealistically low due to the impairment loss being overstated and (2) future income is unrealistically high because depreciation, depletion, and amortization are based on understated asset values.

Where We’re Headed

● LO11-10

The FASB and IASB have identified impairment as a topic for longer-term convergence.

In their 2006 *Memorandum of Understanding*, the FASB and IASB included impairment as one of their short-term convergence projects. However, in 2008 the Boards agreed to defer work on impairment. Early in 2009, the Boards identified impairment as a topic for longer term convergence. When this text was published, no specific impairment project had been proposed.

PART C

SUBSEQUENT EXPENDITURES

Now that we have acquired and measured assets, we can address accounting issues incurred subsequent to their acquisition. This part of the chapter deals with the treatment of expenditures made over the life of these assets to maintain and/or improve them.

Expenditures Subsequent to Acquisition

- LO11-9 Many long-lived assets require expenditures to repair, maintain, or improve them. These expenditures can present accounting problems if they are material. In general, a choice must be made between capitalizing the expenditures by either increasing the asset’s book value or creating a new asset, or expensing them in the period in which they are incurred. Conceptually, we can refer to the matching principle that requires the capitalization of expenditures that are expected to produce benefits beyond the current fiscal year. Expenditures that simply maintain a given level of benefits are expensed in the period they are incurred.

Expenditures related to assets can increase future benefits in the following ways:

1. An extension of the *useful life* of the asset.
2. An increase in the *operating efficiency* of the asset resulting in either an increase in the quantity of goods or services produced or a decrease in future operating costs.
3. An increase in the *quality* of the goods or services produced by the asset.

Theoretically, expenditures that cause any of these results should be capitalized initially and then expensed in future periods through depreciation, depletion, or amortization. This permits the matching of the expenditure with the future benefits. Of course, materiality is an important factor in the practical application of this approach.

For expediency, many companies set materiality thresholds for the capitalization of any expenditure. For example, a company might decide to expense all expenditures under \$200 regardless of whether or not future benefits are increased. Judgment is required to determine the appropriate materiality threshold as well as the appropriate treatment of expenditures over \$200. There often are practical problems in capitalizing these expenditures. For example, even if future benefits are increased by the expenditure, it may be difficult to determine how long the benefits will last. It’s important for a company to establish a policy for treating these expenditures and apply it consistently.

Many companies do not capitalize any expenditure unless it exceeds a predetermined amount that is considered material.

We classify subsequent expenditures as (1) repairs and maintenance, (2) additions, (3) improvements, or (4) rearrangements.

Repairs and Maintenance

These expenditures are made to *maintain* a given level of benefits provided by the asset and do not *increase* future benefits. For example, the cost of an engine tune-up or the repair of an engine part for a delivery truck allows the truck to continue its productive activity. If the maintenance is not performed, the truck will not provide the benefits originally anticipated. In that sense, future benefits are provided; without the repair, the truck will no longer operate. The key, though, is that future benefits are not provided *beyond those originally anticipated*. Expenditures for these activities should be expensed in the period incurred.

Expenditures for *repairs and maintenance* generally are expensed when incurred.

Additional Consideration

If repairs and maintenance costs are seasonal, interim financial statements may be misstated. For example, suppose annual maintenance is performed on a company's fleet of delivery trucks. The annual income statement correctly includes one year's maintenance expense. However, for interim reporting purposes, if the entire expenditure is made in one quarter, should that quarter's income statement include as expense the entire cost of the annual maintenance? If these expenditures can be anticipated, they should be accrued evenly throughout the year by crediting an allowance account. The allowance account is then debited when the maintenance is performed.

Additions

As the term implies, **additions** involve adding a new major component to an existing asset and should be capitalized because future benefits are increased. For example, adding a refrigeration unit to a delivery truck increases the capability of the truck, thus increasing its future benefits. Other examples include the construction of a new wing on a building and the addition of a security system to an existing building.

The costs of *additions* usually are capitalized.

The capitalized cost includes all necessary expenditures to bring the addition to a condition and location for use. For a building addition, this might include the costs of tearing down and removing a wall of the existing building. The capitalized cost of additions is depreciated over the remaining useful life of the original asset or its own useful life, whichever is shorter.

Improvements

Expenditures classified as **improvements** involve the replacement of a major component of an asset. The replacement can be a new component with the same characteristics as the old component or a new component with enhanced operating capabilities. For example, an existing refrigeration unit in a delivery truck could be replaced with a new but similar unit or with a new and improved refrigeration unit. In either case, the cost of the improvement usually increases future benefits and should be capitalized by increasing the book value of the related asset (the delivery truck) and depreciated over the useful life of the improved asset. There are three methods used to record the cost of improvements.

The costs of *improvements* usually are capitalized.

1. *Substitution*. The improvement can be recorded as both (1) a disposition of the old component and (2) the acquisition of the new component. This approach is conceptually appealing but it is practical only if the original cost and accumulated depreciation of the old component can be separately identified.
2. *Capitalization of new cost*. Another way to record an improvement is to include the cost of the improvement (net of any consideration received from the disposition of the old component) as a debit to the related asset account, without removing the original cost and accumulated depreciation of the original component. This approach is acceptable only

if the book value of the original component has been reduced to an immaterial amount through prior depreciation.

3. *Reduction of accumulated depreciation.* Another way to increase an asset's book value is to leave the asset account unaltered but decrease its related accumulated depreciation. The argument for this method is that many improvements extend the useful life of an asset and are equivalent to a partial recovery of previously recorded depreciation. This approach produces the same book value as the capitalization of cost to the asset account. However, cost and accumulated depreciation amounts will differ under the two methods.

The three methods are compared in Illustration 11–26.

Illustration 11–26

Improvements

Substitution

(1) Disposition of old component.

(2) Acquisition of new component.

Capitalization of new cost

Reduction of accumulated depreciation

The Palmer Corporation replaced the air conditioning system in one of its office buildings that it leases to tenants. The cost of the old air conditioning system, \$200,000, is included in the cost of the building. However, the company has separately depreciated the air conditioning system. Depreciation recorded up to the date of replacement totaled \$160,000. The old system was removed and the new system installed at a cost of \$230,000, which was paid in cash. Parts from the old system were sold for \$12,000.

Accounting for the improvement differs depending on the alternative chosen.

Cash	12,000	
Accumulated depreciation—buildings	160,000	
Loss on disposal (difference)	28,000	
Buildings		200,000
Buildings	230,000	
Cash		230,000
Buildings	218,000	
Cash (\$230,000 – 12,000)		218,000
Accumulated depreciation—buildings	218,000	
Cash (\$230,000 – 12,000)		218,000

Rearrangements

Expenditures made to restructure an asset without addition, replacement, or improvement are termed **rearrangements**. The objective is to create a new capability for the asset and not necessarily to extend its useful life. Examples include the rearrangement of machinery on the production line to increase operational efficiency and the relocation of a company's operating plant or office building. If these expenditures are material and they clearly increase future benefits, they should be capitalized and expensed in the future periods benefited. If the expenditures are not material or if it's not certain that future benefits have increased, they should be expensed in the period incurred.

Illustration 11–27 provides a summary of the accounting treatment for the various types of expenditures related to property, plant, and equipment.

Costs of Defending Intangible Rights

Repairs, additions, improvements, and rearrangements generally relate to property, plant, and equipment. A possible significant expenditure incurred subsequent to the acquisition of intangible assets is the cost of defending the right that gives the asset its value. If an intangible right is *successfully* defended, the litigation costs should be capitalized and amortized over the remaining useful life of the related intangible. This is the appropriate treatment of these expenditures even if the intangible asset was originally developed internally rather than purchased.

If the defense of an intangible right is *unsuccessful*, then the litigation costs should be expensed as incurred because they provide no future benefit. In addition, the book value of any intangible asset should be reduced to realizable value. For example, if a company is unsuccessful in defending a patent infringement suit, the patent's value may be eliminated. The book value of the patent should be written off as a loss.

The costs of material **rearrangements** should be capitalized if they clearly increase future benefits.

The costs incurred to **successfully defend** an intangible right should be capitalized.

The costs incurred to **unsuccessfully defend** an intangible right should be expensed.

Type of Expenditure	Definition	Usual Accounting Treatment
Repairs and maintenance	Expenditures to maintain a given level of benefits	Expense in the period incurred
Additions	The addition of a new major component to an existing asset	Capitalize and depreciate over the remaining useful life of the <i>original asset or its own useful life</i> , whichever is shorter
Improvements	The replacement of a major component	Capitalize and depreciate over the useful life of the improved asset
Rearrangements	Expenditures to restructure an asset without addition, replacement, or improvement	If expenditures are material and clearly increase future benefits, capitalize and depreciate over the future periods benefited

Illustration 11–27

Expenditures Subsequent to Acquisition

International Financial Reporting Standards

Costs of Defending Intangible Rights. Under U.S. GAAP, litigation costs to successfully defend an intangible right are capitalized and amortized over the remaining useful life of the related intangible. Under IFRS, these costs are expensed, except in rare situations when an expenditure increases future benefits.²²

● LO11–10

Financial Reporting Case Solution

- 1. Is Penny correct? Do the terms *depreciation*, *depletion*, and *amortization* all mean the same thing?** (p. 590) Penny is correct. Each of these terms refers to the cost allocation of assets over their service lives. The term *depreciation* is used for plant and equipment, *depletion* for natural resources, and *amortization* for intangibles.
- 2. Weyerhaeuser determines depletion based on the “volume of timber estimated to be available.” Explain this approach.** (p. 594) Weyerhaeuser is using the units-of-production method to determine depletion. The units-of-production method is an activity-based method that computes a depletion (or depreciation or amortization) rate per measure of activity and then multiplies this rate by actual activity to determine periodic cost allocation. The method is used by Weyerhaeuser to measure depletion of the cost of timber harvested and the amortization of logging railroads and truck roads. The costs of logging are intangible assets because the company does not own the roads.
- 3. Explain how asset impairment differs from depreciation, depletion, and amortization. How do companies measure impairment losses for property, plant, and equipment and intangible assets with finite useful lives?** (p. 613) Depreciation, depletion, and amortization reflect a gradual consumption of the benefits inherent in a long-lived asset. An implicit assumption in allocating the cost of an asset over its useful life is that there has been no significant reduction in the anticipated total benefits or service potential of the asset. Situations can arise, however, that cause a significant decline or *impairment* of those benefits or service potentials. Determining whether to record an impairment loss for an asset and actually recording the loss is a two-step process. The first step is a recoverability test—an impairment loss is required only when the undiscounted sum of estimated future cash flows from an asset is less than the asset’s book value. The measurement of impairment loss—step 2—is the difference between the asset’s book value and its fair value. If an impairment loss is recognized, the written-down book value becomes the new cost base for future cost allocation. ●

²²“Intangible Assets,” *International Accounting Standard No. 38* (IASCF), par. 20, as amended effective January 1, 2011.

The Bottom Line

- LO11-1 The use of property, plant, and equipment and intangible assets represents a consumption of benefits, or service potentials, inherent in the assets. The matching principle requires that the cost of these inherent benefits or service potentials that were consumed be recognized as an expense. As there very seldom is a direct relationship between the use of assets and revenue production, accounting resorts to arbitrary allocation methods to achieve a matching of expenses with revenues. (p. 590)
- LO11-2 The allocation process for plant and equipment is called *depreciation*. Time-based depreciation methods estimate service life in years and then allocate depreciable base, cost less estimated residual value, using either a straight-line or accelerated pattern. Activity-based depreciation methods allocate the depreciable base by estimating service life according to some measure of productivity. (p. 592)
- LO11-3 The allocation process for natural resources is called *depletion*. The activity-based method called units-of-production usually is used to determine periodic depletion. (p. 602)
- LO11-4 The allocation process for intangible assets is called *amortization*. For an intangible asset with a finite useful life, the capitalized cost less any estimated residual value must be allocated to periods in which the asset is expected to contribute to the company's revenue-generating activities. An intangible asset that is determined to have an indefinite useful life is not subject to periodic amortization. Goodwill is perhaps the most typical intangible asset with an indefinite useful life. (p. 603)
- LO11-5 A change in either the service life or residual value of property, plant, and equipment and intangible assets should be reflected in the financial statements of the current period and future periods by recalculating periodic depreciation, depletion, or amortization. (p. 609)
- LO11-6 A change in depreciation, depletion, or amortization method is considered a change in accounting estimate that is achieved by a change in accounting principle. We account for these changes prospectively, exactly as we would any other change in estimate. One difference is that most changes in estimate do not require a company to justify the change. However, this change in estimate is a result of changing an accounting principle and therefore requires a clear justification as to why the new method is preferable. (p. 610)
- LO11-7 A material error in accounting for property, plant, and equipment and intangible assets that is discovered in a year subsequent to the year of the error requires that previous years' financial statements that were incorrect as a result of the error are retrospectively restated to reflect the correction. Any account balances that are incorrect as a result of the error are corrected by journal entry. If retained earnings is one of the incorrect accounts, the correction is reported as a prior period adjustment to the beginning balance in the statement of shareholders' equity. In addition, a disclosure note is needed to describe the nature of the error and the impact of its correction on income. (p. 611)
- LO11-8 Conceptually, there is considerable merit for a policy requiring the write-down of an asset when there has been a *significant* decline in value below carrying value (book value). The write-down provides important information about the future cash flows to be generated from the use of the asset. However, in practice this policy is very subjective. GAAP [FASB ASC 360] establishes guidance for when to recognize and how to measure impairment losses of property, plant, and equipment and intangible assets that have finite useful lives. GAAP [FASB ASC 350] also provides guidance for the recognition and measurement of impairment for indefinite-life intangibles and goodwill. (p. 613)
- LO11-9 Expenditures for repairs and maintenance generally are expensed when incurred. The costs of additions and improvements usually are capitalized. The costs of material rearrangements should be capitalized if they clearly increase future benefits. (p. 622)
- LO11-10 Among the several differences between U.S. GAAP and IFRS with respect to the utilization and impairment of property, plant, and equipment and intangible assets pertains to reporting assets in the balance sheet. IFRS allows a company to value property, plant, and equipment (PP&E) and intangible assets subsequent to initial valuation at (1) cost less accumulated depreciation/amortization or (2) fair value (revaluation). U.S. GAAP prohibits revaluation. There also are significant differences in accounting for the impairment of property, plant, and equipment and intangible assets. (pp. 597, 600, 604, 606, 615, 617, 619, 621, 622, and 625) ●

Comparison With Macrs (Tax Depreciation)

APPENDIX 11A

Depreciation for financial reporting purposes is an attempt to distribute the cost of the asset, less any anticipated residual value, over the estimated useful life in a systematic and rational manner that attempts to match revenues with the use of the asset. Depreciation for income tax purposes is influenced by the revenue needs of government as well as the desire to influence economic behavior. For example, accelerated depreciation schedules currently allowed are intended to provide incentive for companies to expand and modernize their facilities thus stimulating economic growth.

The federal income tax code allows taxpayers to compute depreciation for their tax returns on assets acquired after 1986 using the **modified accelerated cost recovery system (MACRS)**.²³ Key differences between the calculation of depreciation for financial reporting and the calculation using MACRS are:

1. Estimated useful lives and residual values are not used in MACRS.
2. Firms can't choose among various accelerated methods under MACRS.
3. A half-year convention is used in determining the MACRS depreciation amounts.

Under MACRS, each asset generally is placed within a recovery period category. The six categories for personal property are 3, 5, 7, 10, 15, and 20 years. For example, the 5-year category includes automobiles, light trucks, and computers.

Depending on the category, fixed percentage rates are applied to the original cost of the asset. The rates for the 5-year asset category are as follows:

Year	Rate
1	20.00%
2	32.00
3	19.20
4	11.52
5	11.52
6	5.76
Total	<u>100.00%</u>

These rates are equivalent to applying the double-declining-balance method with a switch to straight-line in the year straight-line yields an equal or higher deduction than DDB. In most cases, the half-year convention is used regardless of when the asset is placed in service.²⁴ The first-year rate of 20% for the five-year category is one-half of the DDB rate for an asset with a five-year life ($2 \times 20\%$). The sixth year rate of 5.76% is one-half of the straight-line rate established in year 4, the year straight-line depreciation exceeds DDB depreciation.

Companies have the option to use the straight-line method for the entire tax life of the asset, applying the half-year convention, rather than using MACRS depreciation schedules. Because of the differences discussed above, tax depreciation for a given year will likely be different from GAAP depreciation. ●

Retirement And Replacement Methods Of Depreciation

APPENDIX 11B

Retirement and **replacement** depreciation methods occasionally are used to depreciate relatively low-valued assets with short service lives. Under either approach, an aggregate asset account that represents a group of similar assets is increased at the time the initial collection is acquired.

²³For assets acquired between 1981 and 1986, tax depreciation is calculated using the accelerated cost recovery system (ACRS), which is similar to MACRS. For assets acquired before 1981, tax depreciation can be calculated using any of the depreciation methods discussed in the chapter. Residual values are used in the calculation of depreciation for pre-1981 assets.

²⁴In certain situations, mid-quarter and mid-month conventions are used.

The retirement depreciation method records depreciation when assets are disposed of and measures depreciation as the difference between the proceeds received and cost.

Retirement Method

Using the **retirement depreciation method**, the asset account also is increased for the cost of subsequent expenditures. When an item is disposed of, the asset account is credited for its cost, and depreciation expense is recorded for the difference between cost and proceeds received, if any. No other entries are made for depreciation. As a consequence, one or more periods may pass without any expense recorded. For example, the following entry records the purchase of 100 handheld calculators at \$50 acquisition cost each:

Calculators (100 × \$50)	5,000	
Cash		5,000
<i>To record the acquisition of calculators.</i>		

If 20 new calculators are acquired at \$45 each, the asset account is increased.

Calculators (20 × \$45)	900	
Cash		900
<i>To record additional calculator acquisitions.</i>		

Thirty calculators are disposed of (retired) by selling them secondhand to a bookkeeping firm for \$5 each. The following entry reflects the retirement method:

Cash (30 × \$5)	150	
Depreciation expense (difference)	1,350	
Calculators (30 × \$50)		1,500
<i>To record the sale/depreciation of calculators.</i>		

Notice that the retirement system assumes a FIFO cost flow approach in determining the cost of assets, \$50 each, that were disposed.

Replacement Method

By the replacement method, depreciation is recorded when assets are replaced.

By the **replacement depreciation method**, the initial acquisition of assets is recorded the same way as by the retirement method; that is, the aggregate cost is increased. However, depreciation expense is the amount paid for new or replacement assets. Any proceeds received from asset dispositions reduces depreciation expense. For our example, the acquisition of 20 new calculators at \$45 each is recorded as depreciation as follows:

Depreciation expense (20 × \$45)	900	
Cash		900
<i>To record the replacement/depreciation of calculators.</i>		

The sale of the old calculators is recorded as a reduction of depreciation:

Cash (30 × \$5)	150	
Depreciation expense		150
<i>To record the sale of calculators.</i>		

The asset account balance remains the same throughout the life of the aggregate collection of assets.

Because these methods are likely to produce aggregate expense measurements that differ from individual calculations, retirement and replacement methods are acceptable only in situations where the distortion in depreciation expense does not have a material effect on income. These methods occasionally are encountered in regulated industries such as utilities. ●

Questions For Review of Key Topics

- Q 11-1** Explain the similarities in and differences among depreciation, depletion, and amortization.
- Q 11-2** Depreciation is a process of cost allocation, not valuation. Explain this statement.
- Q 11-3** Identify and define the three characteristics of an asset that must be established to determine periodic depreciation, depletion, or amortization.
- Q 11-4** Discuss the factors that influence the estimation of service life for a depreciable asset.
- Q 11-5** What is meant by depreciable base? How is it determined?
- Q 11-6** Briefly differentiate between activity-based and time-based allocation methods.
- Q 11-7** Briefly differentiate between the straight-line depreciation method and accelerated depreciation methods.
- Q 11-8** Why are time-based depreciation methods used more frequently than activity-based methods?
- Q 11-9** What are some factors that could explain the predominant use of the straight-line depreciation method?
- Q 11-10** Briefly explain the differences and similarities between the group approach and composite approach to depreciating aggregate assets.
- Q 11-11** Define depletion and compare it with depreciation.
- Q 11-12** Compare and contrast amortization of intangible assets with depreciation and depletion.
- Q 11-13** What are some of the simplifying conventions a company can use to calculate depreciation for partial years?
- Q 11-14** Explain the accounting treatment required when a change is made to the estimated service life of a machine.
- Q 11-15** Explain the accounting treatment and disclosures required when a change is made in depreciation method.
- Q 11-16** Explain the steps required to correct an error in accounting for property, plant, and equipment and intangible assets that is discovered in a year subsequent to the year the error was made.
- Q 11-17** Explain what is meant by the impairment of the value of property, plant, and equipment and intangible assets. How should these impairments be accounted for?
- Q 11-18** Explain the differences in the accounting treatment of repairs and maintenance, additions, improvements, and rearrangements.
-  **IFRS Q 11-19** Identify any differences between U.S. GAAP and International Financial Reporting Standards in the subsequent valuation of property, plant, and equipment and intangible assets.
-  **IFRS Q 11-20** Briefly explain the difference between U.S. GAAP and IFRS in the *measurement* of an impairment loss for property, plant, and equipment and finite-life intangible assets.
-  **IFRS Q 11-21** Briefly explain the differences between U.S. GAAP and IFRS in the measurement of an impairment loss for goodwill.
-  **IFRS Q 11-22** Under U.S. GAAP, litigation costs to successfully defend an intangible right are capitalized and amortized over the remaining useful life of the related intangible. How are these costs typically accounted for under IFRS?

Brief Exercises

- BE 11-1**
Cost allocation
● LO11-1
At the beginning of its fiscal year, Koeplin Corporation purchased a machine for \$50,000. At the end of the year, the machine had a fair value of \$32,000. Koeplin's controller recorded depreciation expense of \$18,000 for the year, the decline in the machine's value. Why is this an incorrect approach to measuring periodic depreciation?
- BE 11-2**
Depreciation methods
● LO11-2
On January 1, 2013, Canseco Plumbing Fixtures purchased equipment for \$30,000. Residual value at the end of an estimated four-year service life is expected to be \$2,000. The company expects the machine to operate for 10,000 hours. Calculate depreciation expense for 2013 and 2014 using each of the following depreciation methods: (a) straight line, (b) sum-of-the-years'-digits, (c) double-declining balance, and (d) units-of-production using machine hours. The machine operated for 2,200 and 3,000 hours in 2013 and 2014, respectively.
- BE 11-3**
Depreciation methods; partial years
● LO11-2
Refer to the situation described in BE 11-2. Assume the machine was purchased on March 31, 2013, instead of January 1. Calculate depreciation expense for 2013 and 2014 using each of the following depreciation methods: (a) straight line, (b) sum-of-the-years'-digits, and (c) double-declining balance.
- BE 11-4**
Group depreciation
● LO11-2
Mondale Winery depreciates its equipment using the group method. The cost of equipment purchased in 2013 totaled \$425,000. The estimated residual value of the equipment was \$40,000 and the group depreciation rate was determined to be 18%. What is the annual depreciation for the group? If equipment that cost \$42,000 is sold in 2014 for \$35,000, what amount of gain or loss will the company recognize for the sale?

BE 11-5 Depletion
● LO11-3
Fitzgerald Oil and Gas incurred costs of \$8.25 million for the acquisition and development of a natural gas deposit. The company expects to extract 3 million cubic feet of natural gas during a four-year period. Natural gas extracted during years 1 and 2 were 700,000 and 800,000 cubic feet, respectively. What was the depletion for year 1 and year 2?

BE 11-6 Amortization
● LO11-4
On June 28 Lexicon Corporation acquired 100% of the common stock of Gulf & Eastern. The purchase price allocation included the following items: \$4 million, patent; \$3 million, developed technology; \$2 million, in-process research and development; \$5 million, goodwill. Lexicon's policy is to amortize intangible assets using the straight-line method, no residual value, and a five-year useful life. What is the total amount of expenses (ignoring taxes) that would appear in Lexicon's income statement for the year ended December 31 related to these items?

BE 11-7 Change in estimate; useful life of equipment
● LO11-5
At the beginning of 2011, Robotics Inc. acquired a manufacturing facility for \$12 million. \$9 million of the purchase price was allocated to the building. Depreciation for 2011 and 2012 was calculated using the straight-line method, a 25-year useful life, and a \$1 million residual value. In 2013, the estimates of useful life and residual value were changed to 20 years and \$500,000, respectively. What is depreciation on the building for 2013?

BE 11-8 Change in principle; change in depreciation method
● LO11-6
Refer to the situation described in BE 11-7. Assume that instead of changing the useful life and residual value, in 2013 the company switched to the double-declining-balance depreciation method. How should Robotics account for the change? What is depreciation on the building for 2013?

BE 11-9 Error correction
● LO11-7
Refer to the situation described in BE 11-7. Assume that 2011 depreciation was incorrectly recorded as \$32,000. This error was discovered in 2013. How should Robotics account for the error? What is depreciation on the building for 2013 assuming no change in estimate of useful life or residual value?

BE 11-10 Impairment; property, plant, and equipment
● LO11-8
Collison and Ryder Company (C&R) has been experiencing declining market conditions for its sportswear division. Management decided to test the assets of the division for possible impairment. The test revealed the following: book value of division's assets, \$26.5 million; fair value of division's assets, \$21 million; sum of estimated future cash flows generated from the division's assets, \$28 million. What amount of impairment loss should C&R recognize?

BE 11-11 Impairment; property, plant, and equipment
● LO11-8
Refer to the situation described in BE 11-10. Assume that the sum of estimated future cash flows is \$24 million instead of \$28 million. What amount of impairment loss should C&R recognize?

BE 11-12 IFRS; impairment; property, plant, and equipment
● LO11-8, LO11-10
Refer to the situation described in BE 11-10. Assume that the present value of the estimated future cash flows generated from the division's assets is \$22 million and that their fair value approximates fair value less costs to sell. What amount of impairment loss should C&R recognize if the company prepares its financial statements according to IFRS?

IFRS

BE 11-13 Impairment; goodwill
● LO11-8
WebHelper Inc. acquired 100% of the outstanding stock of Silicon Chips Corporation (SCC) for \$45 million, of which \$15 million was allocated to goodwill. At the end of the current fiscal year, an impairment test revealed the following: fair value of SCC, \$40 million; fair value of SCC's net assets (excluding goodwill), \$31 million; book value of SCC's net assets (including goodwill), \$42 million. What amount of impairment loss should WebHelper recognize?

BE 11-14 Impairment; goodwill
● LO11-8
Refer to the situation described in BE 11-13. Assume that the fair value of SCC is \$44 million instead of \$40 million. What amount of impairment loss should WebHelper recognize?

- BE 11–15**
IFRS; impairment;
goodwill
● LO11–10

Refer to the situation described in BE 11–13. Assume that SCC's fair value of \$40 million approximates fair value less costs to sell and that the present value of SCC's estimated future cash flows is \$41 million. If WebHelper prepares its financial statements according to IFRS and SCC is considered a cash-generating unit, what amount of impairment loss, if any, should WebHelper recognize?

- BE 11–16**
Subsequent
expenditures
● LO11–9

Demmert Manufacturing incurred the following expenditures during the current fiscal year: annual maintenance on its machinery, \$5,400; remodeling of offices, \$22,000; rearrangement of the shipping and receiving area resulting in an increase in productivity, \$35,000; addition of a security system to the manufacturing facility, \$25,000. How should Demmert account for each of these expenditures?

Exercises

An alternate exercise and problem set is available on the text website: www.mhhe.com/spiceland7e

- E 11–1**
Depreciation
methods
● LO11–2

On January 1, 2013, the Excel Delivery Company purchased a delivery van for \$33,000. At the end of its five-year service life, it is estimated that the van will be worth \$3,000. During the five-year period, the company expects to drive the van 100,000 miles.

Required:

Calculate annual depreciation for the five-year life of the van using each of the following methods. Round all computations to the nearest dollar.

1. Straight line.
2. Sum-of-the-years' digits.
3. Double-declining balance.
4. Units of production using miles driven as a measure of output, and the following actual mileage:

Year	Miles
2013	22,000
2014	24,000
2015	15,000
2016	20,000
2017	21,000

- E 11–2**
Depreciation
methods
● LO11–2

On January 1, 2013, the Allegheny Corporation purchased machinery for \$115,000. The estimated service life of the machinery is 10 years and the estimated residual value is \$5,000. The machine is expected to produce 220,000 units during its life.

Required:

Calculate depreciation for 2013 and 2014 using each of the following methods. Round all computations to the nearest dollar.

1. Straight line.
2. Sum-of-the-years' digits.
3. Double-declining balance.
4. One hundred fifty percent declining balance.
5. Units of production (units produced in 2013, 30,000; units produced in 2014, 25,000).

- E 11–3**
Depreciation
methods; partial
years
● LO11–2

[This is a variation of Exercise 11–2 modified to focus on depreciation for partial years.]

On October 1, 2013, the Allegheny Corporation purchased machinery for \$115,000. The estimated service life of the machinery is 10 years and the estimated residual value is \$5,000. The machine is expected to produce 220,000 units during its life.

Required:

Calculate depreciation for 2013 and 2014 using each of the following methods. Partial-year depreciation is calculated based on the number of months the asset is in service. Round all computations to the nearest dollar.

1. Straight line.
2. Sum-of-the-years' digits.
3. Double-declining balance.
4. One hundred fifty percent declining balance.
5. Units of production (units produced in 2013, 10,000; units produced in 2014, 25,000).

E 11-4
Depreciation
methods; asset
addition

- LO11-2,
LO11-9

Funseth Company purchased a five-story office building on January 1, 2011, at a cost of \$5,000,000. The building has a residual value of \$200,000 and a 30-year life. The straight-line depreciation method is used. On June 30, 2013, construction of a sixth floor was completed at a cost of \$1,650,000.

Required:

Calculate the depreciation on the building and building addition for 2013 and 2014 assuming that the addition did not change the life or residual value of the building.

E 11-5
Depreciation
methods; solving
for unknowns

- LO11-2

For each of the following depreciable assets, determine the missing amount (?). Abbreviations for depreciation methods are SL for straight line, SYD for sum-of-the-years' digits, and DDB for double-declining balance.

Asset	Cost	Residual Value	Service Life (Years)	Depreciation Method	Depreciation (Year 2)
A	?	\$ 20,000	5	DDB	\$ 24,000
B	\$ 40,000	?	8	SYD	7,000
C	65,000	5,000	?	SL	6,000
D	230,000	10,000	10	?	22,000
E	200,000	20,000	8	150%DB	?

E 11-6
Depreciation
methods

- LO11-2

On April 29, 2013, Quality Appliances purchased equipment for \$260,000. The estimated service life of the equipment is six years and the estimated residual value is \$20,000. Quality's fiscal year ends on December 31.

Required:

Calculate depreciation for 2013 and 2014 using each of the three methods listed. Quality calculates partial year depreciation based on the number of months the asset is in service. Round all computations to the nearest dollar.

- Straight-line.
- Sum-of-the-years' digits.
- Double-declining balance.

E 11-7
IFRS; depreciation

- LO11-2,
LO11-10

On June 30, 2013, Rosetta Granite purchased a machine for \$120,000. The estimated useful life of the machine is eight years and no residual value is anticipated. An important component of the machine is a specialized high-speed drill that will need to be replaced in four years. The \$20,000 cost of the drill is included in the \$120,000 cost of the machine. Rosetta uses the straight-line depreciation method for all machinery.

Required:

- Calculate depreciation for 2013 and 2014 applying the typical U.S. GAAP treatment.
- Repeat requirement 1 applying IFRS.

E 11-8
IFRS; revaluation
of machinery;
depreciation

- LO11-10

Dower Corporation prepares its financial statements according to IFRS. On March 31, 2013, the company purchased equipment for \$240,000. The equipment is expected to have a six-year useful life with no residual value. Dower uses the straight-line depreciation method for all equipment. On December 31, 2013, the end of the company's fiscal year, Dower chooses to revalue the equipment to its fair value of \$220,000.

Required:

- Calculate depreciation for 2013.
- Prepare the journal entry to record the revaluation of the equipment. Round calculations to the nearest thousand.
- Calculate depreciation for 2014.
- Repeat requirement 2 assuming that the fair value of the equipment at the end of 2013 is \$195,000.

E 11-9
Group
depreciation

- LO11-2

Highsmith Rental Company purchased an apartment building early in 2013. There are 20 apartments in the building and each is furnished with major kitchen appliances. The company has decided to use the group depreciation method for the appliances. The following data are available:

Appliance	Cost	Residual Value	Service Life (in Years)
Stoves	\$15,000	\$3,000	6
Refrigerators	10,000	1,000	5
Dishwashers	8,000	500	4

In 2016, three new refrigerators costing \$2,700 were purchased for cash. The old refrigerators, which originally cost \$1,500, were sold for \$200.

Required:

1. Calculate the group depreciation rate, group life, and depreciation for 2013.
2. Prepare the journal entries to record the purchase of the new refrigerators and the sale of the old refrigerators.

E 11-10

Double-declining-balance method; switch to straight line

- LO11-2, LO11-6

On January 2, 2013, the Jackson Company purchased equipment to be used in its manufacturing process. The equipment has an estimated life of eight years and an estimated residual value of \$30,625. The expenditures made to acquire the asset were as follows:

Purchase price	\$154,000
Freight charges	2,000
Installation charges	4,000

Jackson's policy is to use the double-declining-balance (DDB) method of depreciation in the early years of the equipment's life and then switch to straight line halfway through the equipment's life.

Required:

1. Calculate depreciation for each year of the asset's eight-year life.
2. Discuss the accounting treatment of the depreciation on the equipment.

E 11-11

Depletion

- LO11-3

On April 17, 2013, the Loadstone Mining Company purchased the rights to a coal mine. The purchase price plus additional costs necessary to prepare the mine for extraction of the coal totaled \$4,500,000. The company expects to extract 900,000 tons of coal during a four-year period. During 2013, 240,000 tons were extracted and sold immediately.

Required:

1. Calculate depletion for 2013.
2. Discuss the accounting treatment of the depletion calculated in requirement 1.

E 11-12

Depreciation and depletion

- LO11-2, LO11-3

At the beginning of 2013, Terra Lumber Company purchased a timber tract from Boise Cantor for \$3,200,000. After the timber is cleared, the land will have a residual value of \$600,000. Roads to enable logging operations were constructed and completed on March 30, 2013. The cost of the roads, which have no residual value and no alternative use after the tract is cleared, was \$240,000. During 2013, Terra logged 500,000 of the estimated five million board feet of timber.

Required:

Calculate the 2013 depletion of the timber tract and depreciation of the logging roads assuming the units-of-production method is used for both assets.

E 11-13

Cost of a natural resource; depletion and depreciation; Chapters 10 and 11

- LO11-2, LO11-3

[This exercise is a continuation of Exercise 10-4 in Chapter 10 focusing on depletion and depreciation.]

Jackpot Mining Company operates a copper mine in central Montana. The company paid \$1,000,000 in 2013 for the mining site and spent an additional \$600,000 to prepare the mine for extraction of the copper. After the copper is extracted in approximately four years, the company is required to restore the land to its original condition, including repaving of roads and replacing a greenbelt. The company has provided the following three cash flow possibilities for the restoration costs:

	Cash Outflow	Probability
1	\$300,000	25%
2	400,000	40%
3	600,000	35%

To aid extraction, Jackpot purchased some new equipment on July 1, 2013, for \$120,000. After the copper is removed from this mine, the equipment will be sold for an estimated residual amount of \$20,000. There will be no residual value for the copper mine. The credit-adjusted risk-free rate of interest is 10%.

The company expects to extract 10 million pounds of copper from the mine. Actual production was 1.6 million pounds in 2013 and 3 million pounds in 2014.

Required:

1. Compute depletion and depreciation on the mine and mining equipment for 2013 and 2014. The units-of-production method is used to calculate depreciation.
2. Discuss the accounting treatment of the depletion and depreciation on the mine and mining equipment.

E 11-14

Amortization

- LO11-4, LO11-5

Janes Company provided the following information on intangible assets:

- a. A patent was purchased from the Lou Company for \$700,000 on January 1, 2011. Janes estimated the remaining useful life of the patent to be 10 years. The patent was carried on Lou's accounting records at a net book value of \$350,000 when Lou sold it to Janes.

- b. During 2013, a franchise was purchased from the Rink Company for \$500,000. The contractual life of the franchise is 10 years and Janes records a full year of amortization in the year of purchase.
- c. Janes incurred research and development costs in 2013 as follows:

Materials and supplies	\$140,000
Personnel	180,000
Indirect costs	60,000
Total	<u>\$380,000</u>

- d. Effective January 1, 2013, based on new events that have occurred, Janes estimates that the remaining life of the patent purchased from Lou is only five more years.

Required:

1. Prepare the entries necessary for years 2011 through 2013 to reflect the above information.
2. Prepare a schedule showing the intangible asset section of Janes's December 31, 2013, balance sheet.

E 11-15

Patent
amortization;
patent defense

- LO11-4,
LO11-9

On January 2, 2013, David Corporation purchased a patent for \$500,000. The remaining legal life is 12 years, but the company estimated that the patent will be useful only for eight years. In January 2015, the company incurred legal fees of \$45,000 in successfully defending a patent infringement suit. The successful defense did not change the company's estimate of useful life.

Required:

Prepare journal entries related to the patent for 2013, 2014, and 2015.

E 11-16

Change in
estimate; useful
life of patent

- LO11-4,
LO11-5

Van Frank Telecommunications has a patent on a cellular transmission process. The company has amortized the patent on a straight-line basis since 2009, when it was acquired at a cost of \$9 million at the beginning of that year. Due to rapid technological advances in the industry, management decided that the patent would benefit the company over a total of six years rather than the nine-year life being used to amortize its cost. The decision was made at the end of 2013 (before adjusting and closing entries).

Required:

Prepare the appropriate adjusting entry for patent amortization in 2013 to reflect the revised estimate.

E 11-17

IFRS; revaluation
of patent;
amortization

- LO11-10

Saint John Corporation prepares its financial statements according to IFRS. On June 30, 2013, the company purchased a franchise for \$1,200,000. The franchise is expected to have a 10-year useful life with no residual value. Saint John uses the straight-line amortization method for all intangible assets. On December 31, 2013, the end of the company's fiscal year, Saint John chooses to revalue the franchise. There is an active market for this particular franchise and its fair value on December 31, 2013, is \$1,180,000.

Required:

1. Calculate amortization for 2013.
2. Prepare the journal entry to record the revaluation of the patent.
3. Calculate amortization for 2014.

IFRS

E 11-18

Change in
estimate;
useful life and
residual value of
equipment

- LO11-2,
LO11-5

Wardell Company purchased a minicomputer on January 1, 2011, at a cost of \$40,000. The computer was depreciated using the straight-line method over an estimated five-year life with an estimated residual value of \$4,000. On January 1, 2013, the estimate of useful life was changed to a total of 10 years, and the estimate of residual value was changed to \$900.

Required:

1. Prepare the appropriate adjusting entry for depreciation in 2013 to reflect the revised estimate.
2. Repeat requirement 1 assuming that the company uses the sum-of-the-years'-digits method instead of the straight-line method.

E 11-19

Change in
principle; change
in depreciation
methods

- LO11-2, LO11-6

Alteran Corporation purchased a machine for \$1.5 million in 2010. The machine is being depreciated over a 10-year life using the sum-of-the-years'-digits method. The residual value is expected to be \$300,000. At the beginning of 2013, Alteran decided to change to the straight-line depreciation method for this machine.

Required:

Prepare the 2013 depreciation adjusting entry.

E 11-20

Change in principle; change in depreciation methods

- LO11-2, LO11-6

For financial reporting, Clinton Poultry Farms has used the declining-balance method of depreciation for conveyor equipment acquired at the beginning of 2010 for \$2,560,000. Its useful life was estimated to be six years, with a \$160,000 residual value. At the beginning of 2013, Clinton decides to change to the straight-line method. The effect of this change on depreciation for each year is as follows:

Year	(\$ in 000s)		
	Straight Line	Declining Balance	Difference
2010	\$ 400	\$ 853	\$453
2011	400	569	169
2012	400	379	(21)
	<u>\$1,200</u>	<u>\$1,801</u>	<u>\$601</u>

Required:

1. Briefly describe the way Clinton should report this accounting change in the 2012–2013 comparative financial statements.
2. Prepare any 2013 journal entry related to the change.

E 11-21

Error correction

- LO11-2, LO11-7

In 2013, internal auditors discovered that PKE Displays, Inc., had debited an expense account for the \$350,000 cost of a machine purchased on January 1, 2010. The machine's life was expected to be five years with no residual value. Straight-line depreciation is used by PKE.

Required:

1. Prepare the appropriate correcting entry assuming the error was discovered in 2013 before the adjusting and closing entries. (Ignore income taxes.)
2. Assume the error was discovered in 2015 after the 2014 financial statements are issued. Prepare the appropriate correcting entry.

E 11-22

Impairment; property, plant, and equipment

- LO11-8

Chadwick Enterprises, Inc., operates several restaurants throughout the Midwest. Three of its restaurants located in the center of a large urban area have experienced declining profits due to declining population. The company's management has decided to test the assets of the restaurants for possible impairment. The relevant information for these assets is presented below.

Book value	\$6.5 million
Estimated undiscounted sum of future cash flows	4.0 million
Fair value	3.5 million

Required:

1. Determine the amount of the impairment loss, if any.
2. Repeat requirement 1 assuming that the estimated undiscounted sum of future cash flows is \$6.8 million and fair value is \$5 million.

E 11-23

IFRS; impairment; property, plant, and equipment

- LO11-10

Refer to the situation described in Exercise 11-22.

Required:

How might your solution differ if Chadwick Enterprises, Inc., prepares its financial statements according to International Financial Reporting Standards? Assume that the fair value amount given in the exercise equals both (a) the fair value less costs to sell and (b) the present value of estimated future cash flows.

IFRS

E 11-24

IFRS; Impairment; property, plant, and equipment

- LO11-8, LO11-10

Collinsworth LTD., a U.K. company, prepares its financial statements according to International Financial Reporting Standards. Late in its 2013 fiscal year, a significant adverse change in business climate indicated to management that the assets of its appliance division may be impaired. The following data relate to the division's assets:

	(£ in millions)
Book value	£220
Undiscounted sum of estimated future cash flows	210
Present value of future cash flows	150
Fair value less cost to sell (determined by appraisal)	145

IFRS

Required:

1. What amount of impairment loss, if any, should Collinsworth recognize?
2. Assume that Collinsworth prepares its financial statements according to U.S. GAAP and that fair value less cost to sell approximates fair value. What amount of impairment loss, if any, should Collinsworth recognize?

E 11–25
Impairment;
property, plant,
and equipment

● LO11–8

General Optic Corporation operates a manufacturing plant in Arizona. Due to a significant decline in demand for the product manufactured at the Arizona site, an impairment test is deemed appropriate. Management has acquired the following information for the assets at the plant:

Cost	\$32,500,000
Accumulated depreciation	14,200,000
General's estimate of the total cash flows to be generated by selling the products manufactured at its Arizona plant, not discounted to present value	15,000,000

The fair value of the Arizona plant is estimated to be \$11,000,000.

Required:

1. Determine the amount of impairment loss, if any.
2. If a loss is indicated, where would it appear in General Optic's multiple-step income statement?
3. If a loss is indicated, prepare the entry to record the loss.
4. Repeat requirement 1 assuming that the estimated undiscounted sum of future cash flows is \$12,000,000 instead of \$15,000,000.
5. Repeat requirement 1 assuming that the estimated undiscounted sum of future cash flows is \$19,000,000 instead of \$15,000,000.

E 11–26
Impairment;
goodwill

● LO11–8

In 2011, Alliant Corporation acquired Centerpoint Inc. for \$300 million, of which \$50 million was allocated to goodwill. At the end of 2013, management has provided the following information for a required goodwill impairment test:

Fair value of Centerpoint, Inc.	\$220 million
Fair value of Centerpoint's net assets (excluding goodwill)	200 million
Book value of Centerpoint's net assets (including goodwill)	250 million

Required:

1. Determine the amount of the impairment loss.
2. Repeat requirement 1 assuming that the fair value of Centerpoint is \$270 million.

E 11–27
IFRS; impairment;
goodwill

● LO11–10

Refer to the situation described in Exercise 11–26, requirement 1. Alliant prepares its financial statements according to IFRS, and Centerpoint is considered a cash-generating unit. Assume that Centerpoint's fair value of \$220 million approximates fair value less costs to sell and that the present value of Centerpoint's estimated future cash flows is \$225 million.

Required:

Determine the amount of goodwill impairment loss Alliant should recognize.

 IFRS

E 11–28
Goodwill
valuation and
impairment;
Chapters 10
and 11

● LO11–8

On May 28, 2013, Pesky Corporation acquired all of the outstanding common stock of Harman, Inc., for \$420 million. The fair value of Harman's identifiable tangible and intangible assets totaled \$512 million, and the fair value of liabilities assumed by Pesky was \$150 million.

Pesky performed a goodwill impairment test at the end of its fiscal year ended December 31, 2013. Management has provided the following information:

Fair value of Harman, Inc.	\$400 million
Fair value of Harman's net assets (excluding goodwill)	370 million
Book value of Harman's net assets (including goodwill)	410 million

Required:

1. Determine the amount of goodwill that resulted from the Harman acquisition.
2. Determine the amount of goodwill impairment loss that Pesky should recognize at the end of 2013, if any.
3. If an impairment loss is required, prepare the journal entry to record the loss.

E 11-29

FASB codification research

- LO11-8

The *FASB Accounting Standards Codification* represents the single source of authoritative U.S. generally accepted accounting principles.

Required:

1. Obtain the relevant authoritative literature on the impairment or disposal of long-lived assets using the FASB's Codification Research System at the FASB website (www.fasb.org). Indicate the Codification topic number that provides guidance on accounting for the impairment of long-lived assets.
2. What is the specific citation that discusses the disclosures required in the notes to the financial statements for the impairment of long-lived assets classified as held and used?
3. Describe the disclosure requirements.

E 11-30

FASB codification research

- LO11-2,
LO11-4,
LO11-6,
LO11-8

Access the FASB's Codification Research System at the FASB website (www.fasb.org). Determine the specific citation for each of the following items:

1. Depreciation involves a systematic and rational allocation of cost rather than a process of valuation.
2. The calculation of an impairment loss for property, plant, and equipment.
3. Accounting for a change in depreciation method.
4. Goodwill should not be amortized.

E 11-31

Subsequent expenditures

- LO11-9

Belltone Company made the following expenditures related to its 10-year-old manufacturing facility:

1. The heating system was replaced at a cost of \$250,000. The cost of the old system was not known. The company accounts for improvements as reductions of accumulated depreciation.
2. A new wing was added at a cost of \$750,000. The new wing substantially increases the productive capacity of the plant.
3. Annual building maintenance was performed at a cost of \$14,000.
4. All of the machinery on the assembly line in the plant was rearranged at a cost of \$50,000. The rearrangement clearly increases the productive capacity of the plant.

Required:

Prepare journal entries to record each of the above expenditures.

E 11-32

IFRS; amortization; cost to defend a patent

- LO11-4,
LO11-9,
LO11-10

IFRS

On September 30, 2011, Leeds LTD. acquired a patent in conjunction with the purchase of another company. The patent, valued at \$6 million, was estimated to have a 10-year life and no residual value. Leeds uses the straight-line method of amortization for intangible assets. At the beginning of January 2013, Leeds successfully defended its patent against infringement. Litigation costs totaled \$500,000.

Required:

1. Calculate amortization of the patent for 2011 and 2012.
2. Prepare the journal entry to record the 2013 litigation costs.
3. Calculate amortization for 2013.
4. Repeat requirements 2 and 3 assuming that Leeds prepares its financial statements according to IFRS.

E 11-33

Depreciation methods; disposal; Chapters 10 and 11

- LO11-2

Howarth Manufacturing Company purchased a lathe on June 30, 2009, at a cost of \$80,000. The residual value of the lathe was estimated to be \$5,000 at the end of a five-year life. The lathe was sold on March 31, 2013, for \$17,000. Howarth uses the straight-line depreciation method for all of its plant and equipment. Partial-year depreciation is calculated based on the number of months the asset is in service.

Required:

1. Prepare the journal entry to record the sale.
2. Assuming that Howarth had instead used the sum-of-the-years'-digits depreciation method, prepare the journal entry to record the sale.

E 11-34

Concepts; terminology

- LO11-1 through
LO11-6, LO11-8

Listed below are several items and phrases associated with depreciation, depletion, and amortization. Pair each item from List A with the item from List B (by letter) that is most appropriately associated with it.

List A	List B
___ 1. Depreciation	a. Cost allocation for natural resource.
___ 2. Service life	b. Accounted for prospectively.
___ 3. Depreciable base	c. When there has been a significant decline in value.
___ 4. Activity-based methods	d. The amount of use expected from an operational asset.
___ 5. Time-based methods	e. Estimates service life in units of output.
___ 6. Double-declining balance	f. Cost less residual value.
___ 7. Group method	g. Cost allocation for plant and equipment.
___ 8. Composite method	h. Does not subtract residual value from cost.
___ 9. Depletion	i. Accounted for in the same way as a change in estimate.
___ 10. Amortization	j. Aggregates assets that are similar.
___ 11. Change in useful life	k. Aggregates assets that are physically unified.
___ 12. Change in depreciation method	l. Cost allocation for an intangible asset.
___ 13. Write-down of asset	m. Estimates service life in years.

E 11–35
Retirement and replacement depreciation
● Appendix B

Cadillac Construction Company uses the retirement method to determine depreciation on its small tools. During 2011, the first year of the company's operations, tools were purchased at a cost of \$8,000. In 2013, tools originally costing \$2,000 were sold for \$250 and replaced with new tools costing \$2,500.

Required:

1. Prepare journal entries to record each of the above transactions.
2. Repeat requirement 1 assuming that the company uses the replacement depreciation method instead of the retirement method.

CPA and CMA Review Questions

CPA Exam Questions

● LO11–2

The following questions are adapted from a variety of sources including questions developed by the AICPA Board of Examiners and those used in the Kaplan CPA Review Course to study property, plant, and equipment and intangible assets while preparing for the CPA examination. Determine the response that best completes the statements or questions.

1. Slovak Company purchased a machine that has an estimated useful life of eight years for \$7,500. Its salvage value is estimated at \$500. What is the depreciation for the second year of the asset's life, assuming Slovak uses the double-declining balance method of depreciation?

- a. \$1,406
- b. \$1,438
- c. \$1,875
- d. \$3,750

● LO11–2

2. Calculate depreciation for year 2 based on the following information:

Historical cost \$40,000
Useful life 5 years
Salvage value \$3,000
Year 1 depreciation \$7,400

- a. \$7,000
- b. \$7,400
- c. \$8,000
- d. \$8,600

● LO11–3

3. A company pays \$20,000 for the rights to a well with 5 million gallons of water. If the company extracts 250,000 gallons of water in the first year, what is the total depletion in year 1?

- a. \$ 400
- b. \$1,000
- c. \$1,250
- d. \$5,000

● LO11–4

4. Black, Inc., purchased another company for \$5,000,000. The fair value of all identifiable tangible and intangible assets was \$4,500,000. Black will amortize any goodwill over the maximum number of years allowed. What is the annual amortization of goodwill for this acquisition?

- a. \$12,500
- b. \$20,000

- c. \$25,000
- d. 0

● LO11-4

5. On January 2, 2013, Rafa Company purchased a franchise with a useful life of 10 years for \$50,000. An additional franchise fee of 3% of franchise operating revenues also must be paid each year to the franchisor. Revenues during 2013 totaled \$400,000. In its December 31, 2013, balance sheet, what net amount should Rafa report as an intangible asset-franchise?
- a. \$33,000
 - b. \$43,800
 - c. \$45,000
 - d. \$50,000

● LO11-5

6. JME acquired a depreciable asset on January 1, 2011, for \$60,000 cash. At that time JME estimated the asset would last 10 years and have no salvage value. During 2013, JME estimated the remaining life of the asset to be only three more years with a salvage value of \$3,000. If JME uses straight-line depreciation, what is the depreciation for 2013?
- a. \$ 6,000
 - b. \$12,000
 - c. \$15,000
 - d. \$16,000

● LO11-8

7. The following information concerns Franklin Inc.'s stamping machine:

Acquired: January 1, 2007
 Cost: \$22 million
 Depreciation: straight-line method
 Estimated useful life: 12 years
 Salvage value: \$4 million

As of December 31, 2013, the stamping machine is expected to generate \$1,500,000 per year for five more years and will then be sold for \$1,000,000. The stamping machine is

- a. Impaired because expected salvage value has declined.
- b. Not impaired because annual expected revenue exceeds annual depreciation.
- c. Not impaired because it continues to produce revenue.
- d. Impaired because its book value exceeds expected future cash flows.

● LO11-9

8. During 2012, Yvo Corp. installed a production assembly line to manufacture furniture. In 2013, Yvo purchased a new machine and rearranged the assembly line to install this machine. The rearrangement did not increase the estimated useful life of the assembly line, but it did result in significantly more efficient production. The following expenditures were incurred in connection with this project:

Machine	\$75,000
Labor to install machine	14,000
Parts added in rearranging the assembly line to provide future benefits	40,000
Labor and overhead to rearrange the assembly line	18,000

What amount of the above expenditures should be capitalized in 2013?

- a. \$ 75,000
- b. \$ 89,000
- c. \$107,000
- d. \$147,000

Beginning in 2011, International Financial Reporting Standards are tested on the CPA exam along with U.S. GAAP. The following questions deal with the application of IFRS.

● LO11-10

9. On January 1, 2013, D Company acquires for \$100,000 a new machine with an estimated useful life of 10 years and no residual value. The machine has a drum that must be replaced every five years and costs \$20,000 to replace. The company uses straight-line depreciation. Under IFRS, what is depreciation for 2013?
- a. \$10,000.
 - b. \$10,800.
 - c. \$12,000.
 - d. \$13,200.

● LO11-10

10. Under IFRS, when a company chooses the revaluation model as its accounting policy for measuring property, plant, and equipment, which of the following statements is correct?
- When an asset is revalued, the entire class of property, plant, and equipment to which the asset belongs must be revalued.
 - When an asset is revalued, individual assets within a class of property, plant, and equipment to which that asset belongs can be revalued.
 - Revaluations of property, plant, and equipment must be made every three years.
 - An increase in an asset's carrying value as a result of the first revaluation must be recognized as a component of profit and loss.

● LO11-10

11. Under IFRS, the initial revaluation of equipment when book value exceeds fair value results in
- An increase in net income.
 - A decrease in net income.
 - An increase in other comprehensive income.
 - A decrease in other comprehensive income.

● LO11-10

12. Under IFRS, a company that acquires an intangible asset may use the revaluation model for subsequent measurement only if
- The useful life of the intangible asset can be readily determined.
 - An active market exists for the intangible asset.
 - The cost of the intangible asset can be measured reliably.
 - The intangible asset is a monetary asset.

● LO11-10

13. The management of Clayton LTD. determined that the cost of one of its factories may be impaired. Below are data related to the assets of the factory (\$ in millions):

Book value	\$400
Undiscounted sum of future estimated cash flows	420
Present value of future cash flows	320
Fair value less costs to sell (determined by appraisal)	330

Under IFRS, what amount of impairment loss, if any, should Clayton recognize?

- \$90 million.
- \$80 million.
- \$70 million.
- No impairment loss is required.

● LO11-10

14. Blankbank Corporation has \$150 million of goodwill on its books from the 2011 acquisition of Walsh Technology. Walsh is considered a cash-generating unit under IFRS. At the end of its 2013 fiscal year, management provided the following information for its annual goodwill impairment test (\$ in millions):

Fair value of Walsh less costs to sell	\$455
Fair value of Walsh's net assets (excluding goodwill)	400
Book value of Walsh's net assets (including goodwill)	500
Present value of estimated future cash flows	440

Under IFRS, what amount of goodwill impairment loss, if any, should Blankbank recognize?

- \$100 million.
- \$60 million.
- \$50 million.
- \$45 million.

CMA Exam Questions

The following questions dealing with property, plant, and equipment and intangible assets are adapted from questions that previously appeared on Certified Management Accountant (CMA) examinations. The CMA designation sponsored by the Institute of Management Accountants (www.imanet.org) provides members with an objective measure of knowledge and competence in the field of management accounting. Determine the response that best completes the statements or questions.

● LO11-3

1. WD Mining Company purchased a section of land for \$600,000 in 2002 to develop a zinc mine. The mine began operating in 2004. At that time, management estimated that the mine would produce 200,000 tons of quality ore. A total of 100,000 tons of ore was mined and processed from 2004 through December 31, 2011. During January 2012, a very promising vein was discovered. The revised estimate of ore still to be mined was 250,000 tons. Estimated salvage value for the mine land was \$100,000 in both 2004 and 2012. Assuming that 10,000 tons of ore was mined in 2012, the computation WD Mining Company should use to determine the amount of depletion to record in 2012 would be
- $((\$600,000 - \$100,000)/450,000 \text{ tons}) \times 10,000 \text{ tons}$.
 - $((\$600,000 - \$100,000)/350,000 \text{ tons}) \times 10,000 \text{ tons}$.
 - $((\$600,000 - \$100,000 - \$250,000)/350,000 \text{ tons}) \times 10,000 \text{ tons}$.
 - $((\$600,000 - \$100,000 - \$250,000)/250,000 \text{ tons}) \times 10,000 \text{ tons}$.

- LO11-4
 2. On September 1, year 1, for \$4,000,000 cash and \$2,000,000 notes payable, Norbend Corporation acquired the net assets of Crisholm Company, which had a fair value of \$5,496,000 on that date. Norbend's management is of the opinion that the goodwill generated has an indefinite life. During the year-end audit for year 3 after all adjusting entries have been made, the goodwill is determined to be worthless. The amount of the write-off as of December 31, year 3 should be
 - a. \$504,000.
 - b. \$478,800.
 - c. \$466,200.
 - d. \$474,600.
- LO11-9
 3. Costs that are capitalized with regard to a patent include
 - a. Legal fees of obtaining the patent, incidental costs of obtaining the patent, and costs of successful patent infringement suits.
 - b. Legal fees of obtaining the patent, incidental costs of obtaining the patent, and research and development costs incurred on the invention that is patented.
 - c. Legal fees of obtaining the patent, costs of successful patent infringement suits, and research and development costs incurred on the invention that is patented.
 - d. Incidental costs of obtaining the patent, costs of successful and unsuccessful patent infringement suits, and the value of any signed patent licensing agreement.

Problems

An alternate exercise and problem set is available on the text website: www.mhhe.com/spiceland7e

- P 11-1**
Depreciation methods; change in methods
- LO11-2, LO11-6

The fact that generally accepted accounting principles allow companies flexibility in choosing between certain allocation methods can make it difficult for a financial analyst to compare periodic performance from firm to firm.

Suppose you were a financial analyst trying to compare the performance of two companies. Company A uses the double-declining-balance depreciation method. Company B uses the straight-line method. You have the following information taken from the 12/31/13 year-end financial statements for Company B:

Income Statement	
Depreciation expense	\$ 10,000
Balance Sheet	
Assets:	
Plant and equipment, at cost	\$200,000
Less: Accumulated depreciation	(40,000)
Net	\$160,000

You also determine that all of the assets constituting the plant and equipment of Company B were acquired at the same time, and that all of the \$200,000 represents depreciable assets. Also, all of the depreciable assets have the same useful life and residual values are zero.

Required:

1. In order to compare performance with Company A, estimate what B's depreciation expense would have been for 2013 if the double-declining-balance depreciation method had been used by Company B since acquisition of the depreciable assets.
2. If Company B decided to switch depreciation methods in 2013 from the straight line to the double-declining-balance method, prepare the 2013 adjusting journal entry to record depreciation for the year.

- P 11-2**
Comprehensive problem; Chapters 10 and 11
- LO11-2, LO11-4

At December 31, 2012, Cord Company's plant asset and accumulated depreciation and amortization accounts had balances as follows:

Category	Plant Asset	Accumulated Depreciation and Amortization
Land	\$ 175,000	\$ —
Buildings	1,500,000	328,900
Machinery and equipment	1,125,000	317,500
Automobiles and trucks	172,000	100,325
Leasehold improvements	216,000	108,000
Land improvements	—	—

Depreciation methods and useful lives:

Buildings—150% declining balance; 25 years.

Machinery and equipment—Straight line; 10 years.

Automobiles and trucks—150% declining balance; 5 years, all acquired after 2009.

Leasehold improvements—Straight line.

Land improvements—Straight line.

Depreciation is computed to the nearest month and residual values are immaterial. Transactions during 2013 and other information:

- a. On January 6, 2013, a plant facility consisting of land and building was acquired from King Corp. in exchange for 25,000 shares of Cord's common stock. On this date, Cord's stock had a fair value of \$50 a share. Current assessed values of land and building for property tax purposes are \$187,500 and \$562,500, respectively.
- b. On March 25, 2013, new parking lots, streets, and sidewalks at the acquired plant facility were completed at a total cost of \$192,000. These expenditures had an estimated useful life of 12 years.
- c. The leasehold improvements were completed on December 31, 2009, and had an estimated useful life of eight years. The related lease, which would terminate on December 31, 2015, was renewable for an additional four-year term. On April 29, 2013, Cord exercised the renewal option.
- d. On July 1, 2013, machinery and equipment were purchased at a total invoice cost of \$325,000. Additional costs of \$10,000 for delivery and \$50,000 for installation were incurred.
- e. On August 30, 2013, Cord purchased a new automobile for \$12,500.
- f. On September 30, 2013, a truck with a cost of \$24,000 and a carrying amount of \$9,100 on date of sale was sold for \$11,500. Depreciation for the nine months ended September 30, 2013, was \$2,650.
- g. On December 20, 2013, a machine with a cost of \$17,000 and a book value of \$2,975 at date of disposition was scrapped without cash recovery.

Required:

1. Prepare a schedule analyzing the changes in each of the plant asset accounts during 2013. This schedule should include columns for beginning balance, increase, decrease, and ending balance for each of the plant asset accounts. Do not analyze changes in accumulated depreciation and amortization.
2. For each asset category, prepare a schedule showing depreciation or amortization expense for the year ended December 31, 2013. Round computations to the nearest whole dollar.

*(AICPA adapted)***P 11-3**

Depreciation methods; Chapters 10 and 11

● LO11-2

[This problem is a continuation of Problem 10-3 in Chapter 10 focusing on depreciation.]

Required:

For each asset classification, prepare a schedule showing depreciation expense for the year ended December 31, 2013, using the following depreciation methods and useful lives:

Land improvements—Straight line; 15 years.

Building—150% declining balance; 20 years.

Machinery and equipment—Straight line; 10 years.

Automobiles—150% declining balance; 3 years.

Depreciation is computed to the nearest month and no residual values are used.

*(AICPA adapted)***P 11-4**

Partial-year depreciation; asset addition; increase in useful life

● LO11-2, LO11-5, LO11-9

On April 1, 2011, the KB Toy Company purchased equipment to be used in its manufacturing process. The equipment cost \$48,000, has an eight-year useful life, and has no residual value. The company uses the straight-line depreciation method for all manufacturing equipment.

On January 4, 2013, \$12,350 was spent to repair the equipment and to add a feature that increased its operating efficiency. Of the total expenditure, \$2,000 represented ordinary repairs and annual maintenance and \$10,350 represented the cost of the new feature. In addition to increasing operating efficiency, the total useful life of the equipment was extended to 10 years.

Required:

Prepare journal entries for the following:

1. Depreciation for 2011 and 2012.
2. The 2013 expenditure.
3. Depreciation for 2013.

P 11-5
Property,
plant, and
equipment and
intangible assets;
comprehensive

● LO11-2

The Thompson Corporation, a manufacturer of steel products, began operations on October 1, 2011. The accounting department of Thompson has started the fixed-asset and depreciation schedule presented below. You have been asked to assist in completing this schedule. In addition to ascertaining that the data already on the schedule are correct, you have obtained the following information from the company's records and personnel:

- Depreciation is computed from the first of the month of acquisition to the first of the month of disposition.
- Land A and Building A were acquired from a predecessor corporation. Thompson paid \$812,500 for the land and building together. At the time of acquisition, the land had a fair value of \$72,000 and the building had a fair value of \$828,000.
- Land B was acquired on October 2, 2011, in exchange for 3,000 newly issued shares of Thompson's common stock. At the date of acquisition, the stock had a par value of \$5 per share and a fair value of \$25 per share. During October 2011, Thompson paid \$10,400 to demolish an existing building on this land so it could construct a new building.
- Construction of Building B on the newly acquired land began on October 1, 2012. By September 30, 2013, Thompson had paid \$210,000 of the estimated total construction costs of \$300,000. Estimated completion and occupancy are July 2014.
- Certain equipment was donated to the corporation by the city. An independent appraisal of the equipment when donated placed the fair value at \$16,000 and the residual value at \$2,000.
- Machine A's total cost of \$110,000 includes installation charges of \$550 and normal repairs and maintenance of \$11,000. Residual value is estimated at \$5,500. Machine A was sold on February 1, 2013.
- On October 1, 2012, Machine B was acquired with a down payment of \$4,000 and the remaining payments to be made in 10 annual installments of \$4,000 each beginning October 1, 2013. The prevailing interest rate was 8%.

THOMPSON CORPORATION
Fixed Asset and Depreciation Schedule
For Fiscal Years Ended September 30, 2012, and September 30, 2013

Assets	Acquisition Date	Cost	Residual	Depreciation Method	Estimated Life in Years	Depreciation for Year Ended 9/30	
						2012	2013
Land A	10/1/11	\$(1)	N/A	N/A	N/A	N/A	N/A
Building A	10/1/11	(2)	\$47,500	SL	(3)	\$14,000	\$(4)
Land B	10/2/11	(5)	N/A	N/A	N/A	N/A	N/A
Building B	Under construction	210,000 to date	—	SL	30	—	(6)
Donated Equipment	10/2/11	(7)	2,000	150% Declining balance	10	(8)	(9)
Machine A	10/2/11	(10)	5,500	Sum-of-the-years'-digits	10	(11)	(12)
Machine B	10/1/12	(13)	—	SL	15	—	(14)

N/A = not applicable

Required:

Supply the correct amount for each numbered item on the schedule. Round each answer to the nearest dollar.

(AICPA adapted)

P 11-6
Depreciation methods;
partial-year depreciation; sale of assets

● LO11-2

On March 31, 2013, the Herzog Company purchased a factory complete with machinery and equipment. The allocation of the total purchase price of \$1,000,000 to the various types of assets along with estimated useful lives and residual values are as follows:

Asset	Cost	Estimated Residual Value	Estimated Useful Life in Years
Land	\$ 100,000	N/A	N/A
Building	500,000	none	25
Machinery	240,000	10% of cost	8
Equipment	160,000	\$13,000	6
Total	<u>\$1,000,000</u>		

On June 29, 2014, machinery included in the March 31, 2013, purchase that cost \$100,000 was sold for \$80,000. Herzog uses the straight-line depreciation method for buildings and machinery and the sum-of-the-years'-digits method for equipment. Partial-year depreciation is calculated based on the number of months an asset is in service.

Required:

1. Compute depreciation expense on the building, machinery, and equipment for 2013.
2. Prepare the journal entries to record (1) depreciation on the machinery sold on June 29, 2014, and (2) the sale of machinery.
3. Compute depreciation expense on the building, remaining machinery, and equipment for 2014.

P 11-7
Depletion;
change in
estimate

- LO11-3,
LO11-5

In 2013, the Marion Company purchased land containing a mineral mine for \$1,600,000. Additional costs of \$600,000 were incurred to develop the mine. Geologists estimated that 400,000 tons of ore would be extracted. After the ore is removed, the land will have a resale value of \$100,000.

To aid in the extraction, Marion built various structures and small storage buildings on the site at a cost of \$150,000. These structures have a useful life of 10 years. The structures cannot be moved after the ore has been removed and will be left at the site. In addition, new equipment costing \$80,000 was purchased and installed at the site. Marion does not plan to move the equipment to another site, but estimates that it can be sold at auction for \$4,000 after the mining project is completed.

In 2013, 50,000 tons of ore were extracted and sold. In 2014, the estimate of total tons of ore in the mine was revised from 400,000 to 487,500. During 2014, 80,000 tons were extracted, of which 60,000 tons were sold.

Required:

1. Compute depletion and depreciation of the mine and the mining facilities and equipment for 2013 and 2014. Marion uses the units-of-production method to determine depreciation on mining facilities and equipment.
2. Compute the book value of the mineral mine, structures, and equipment as of December 31, 2014.
3. Discuss the accounting treatment of the depletion and depreciation on the mine and mining facilities and equipment.

P 11-8
Amortization

- LO11-4

The following information concerns the intangible assets of Epstein Corporation:

- a. On June 30, 2013, Epstein completed the acquisition of the Johnstone Corporation for \$2,000,000 in cash. The fair value of the net identifiable assets of Johnstone was \$1,700,000.
- b. Included in the assets purchased from Johnstone was a patent that was valued at \$80,000. The remaining legal life of the patent was 13 years, but Epstein believes that the patent will only be useful for another eight years.
- c. Epstein acquired a franchise on October 1, 2013, by paying an initial franchise fee of \$200,000. The contractual life of the franchise is 10 years.

Required:

1. Prepare year-end adjusting journal entries to record amortization expense on the intangibles at December 31, 2013.
2. Prepare the intangible asset section of the December 31, 2013, balance sheet.

P 11-9
Straight-line
depreciation;
change in useful
life and residual
value

- LO11-2,
LO11-5

The property, plant, and equipment section of the Jasper Company's December 31, 2012, balance sheet contained the following:

Property, plant, and equipment:		
Land		\$120,000
Building	\$ 840,000	
Less: Accumulated depreciation	(200,000)	640,000
Equipment	180,000	
Less: Accumulated depreciation	?	?
Total property, plant, and equipment		<u>?</u>

The land and building were purchased at the beginning of 2008. Straight-line depreciation is used and a residual value of \$40,000 for the building is anticipated.

The equipment is comprised of the following three machines:

Machine	Cost	Date Acquired	Residual Value	Life in Years
101	\$70,000	1/1/10	\$7,000	10
102	80,000	6/30/11	8,000	8
103	30,000	9/1/12	3,000	9

The straight-line method is used to determine depreciation on the equipment. On March 31, 2013, Machine 102 was sold for \$52,500. Early in 2013, the useful life of machine 101 was revised to seven years in total, and the residual value was revised to zero.

Required:

1. Calculate the accumulated depreciation on the equipment at December 31, 2012.
2. Prepare the journal entry to record the sale of machine 102. Also prepare the journal entry to record 2013 depreciation on machine 102 up to the date of sale.
3. Prepare the 2013 year-end adjusting journal entries to record depreciation on the building and equipment.

P 11-10
Accounting changes; three accounting situations

● LO11-2,
LO11-5,
LO11-6

Described below are three independent and unrelated situations involving accounting changes. Each change occurs during 2013 before any adjusting entries or closing entries are prepared.

- On December 30, 2009, Rival Industries acquired its office building at a cost of \$10,000,000. It has been depreciated on a straight-line basis assuming a useful life of 40 years and no residual value. Early in 2013, the estimate of useful life was revised to 28 years in total with no change in residual value.
- At the beginning of 2009, the Hoffman Group purchased office equipment at a cost of \$330,000. Its useful life was estimated to be 10 years with no residual value. The equipment has been depreciated by the sum-of-the-years'-digits method. On January 1, 2013, the company changed to the straight-line method.
- At the beginning of 2013, Jantzen Specialties, which uses the sum-of-the-years'-digits method, changed to the straight-line method for newly acquired buildings and equipment. The change increased current year net income by \$445,000.

Required:

For each situation:

- Identify the type of change.
- Prepare any journal entry necessary as a direct result of the change as well as any adjusting entry for 2013 related to the situation described. (Ignore income tax effects.)
- Briefly describe any other steps that should be taken to appropriately report the situation.

P 11-11
Error correction; change in depreciation method

● LO11-2,
LO11-6,
LO11-7

Collins Corporation purchased office equipment at the beginning of 2011 and capitalized a cost of \$2,000,000. This cost figure included the following expenditures:

Purchase price	\$1,850,000
Freight charges	30,000
Installation charges	20,000
Annual maintenance charge	100,000
Total	<u>\$2,000,000</u>

The company estimated an eight-year useful life for the equipment. No residual value is anticipated. The double-declining-balance method was used to determine depreciation expense for 2011 and 2012.

In 2013, after the 2012 financial statements were issued, the company decided to switch to the straight-line depreciation method for this equipment. At that time, the company's controller discovered that the original cost of the equipment incorrectly included one year of annual maintenance charges for the equipment.

Required:

- Ignoring income taxes, prepare the appropriate correcting entry for the equipment capitalization error discovered in 2013.
- Ignoring income taxes, prepare any 2013 journal entry(s) related to the change in depreciation methods.

P 11-12
Depreciation and amortization; impairment

● LO11-2,
LO11-4,
LO11-8

At the beginning of 2011, Metatec Inc. acquired Ellison Technology Corporation for \$600 million. In addition to cash, receivables, and inventory, the following assets and their fair values were also acquired:

Plant and equipment (depreciable assets)	\$150 million
Patent	40 million
Goodwill	100 million

The plant and equipment are depreciated over a 10-year useful life on a straight-line basis. There is no estimated residual value. The patent is estimated to have a 5-year useful life, no residual value, and is amortized using the straight-line method.

At the end of 2013, a change in business climate indicated to management that the assets of Ellison might be impaired. The following amounts have been determined:

Plant and equipment:	
Undiscounted sum of future cash flows	\$ 80 million
Fair value	60 million
Patent:	
Undiscounted sum of future cash flows	\$ 20 million
Fair value	13 million
Goodwill:	
Fair value of Ellison Technology	\$450 million
Fair value of Ellison's net assets (excluding goodwill)	390 million
Book value of Ellison's net assets (including goodwill)	470 million*

*After first recording any impairment losses on plant and equipment and the patent.

Required:

1. Compute the book value of the plant and equipment and patent at the end of 2013.
2. When should the plant and equipment and the patent be tested for impairment?
3. When should goodwill be tested for impairment?
4. Determine the amount of any impairment loss to be recorded, if any, for the three assets.

P 11-13

Depreciation and depletion; change in useful life; asset retirement obligation; Chapters 10 and 11

- LO11-2, LO11-3, LO11-5

On May 1, 2013, Hecala Mining entered into an agreement with the state of New Mexico to obtain the rights to operate a mineral mine in New Mexico for \$10 million. Additional costs and purchases included the following:

Development costs in preparing the mine	\$3,200,000
Mining machinery	140,000
Construction of various structures on site	68,000

After the minerals are removed from the mine, the machinery will be sold for an estimated residual value of \$10,000. The structures will be torn down.

Geologists estimate that 800,000 tons of ore can be extracted from the mine. After the ore is removed the land will revert back to the state of New Mexico.

The contract with the state requires Hecala to restore the land to its original condition after mining operations are completed in approximately four years. Management has provided the following possible outflows for the restoration costs:

Cash Outflow	Probability
\$600,000	30%
700,000	30%
800,000	40%

Hecala’s credit-adjusted risk-free interest rate is 8%. During 2013, Hecala extracted 120,000 tons of ore from the mine. The company’s fiscal year ends on December 31.

Required:

1. Determine the amount at which Hecala will record the mine.
2. Calculate the depletion of the mine and the depreciation of the mining facilities and equipment for 2013, assuming that Hecala uses the units-of-production method for both depreciation and depletion. Round depletion and depreciation rates to four decimals.
3. How much accretion expense will the company record in its income statement for the 2013 fiscal year?
4. Are depletion of the mine and depreciation of the mining facilities and equipment reported as separate expenses in the income statement? Discuss the accounting treatment of these items in the income statement and balance sheet.
5. During 2014, Hecala changed its estimate of the total amount of ore originally in the mine from 800,000 to 1,000,000 tons. Briefly describe the accounting treatment the company will employ to account for the change and calculate the depletion of the mine and depreciation of the mining facilities and equipment for 2014 assuming Hecala extracted 150,000 tons of ore in 2014.

Broaden Your Perspective

Apply your critical-thinking ability to the knowledge you’ve gained. These cases will provide you an opportunity to develop your research, analysis, judgment, and communication skills. You also will work with other students, integrate what you’ve learned, apply it in real world situations, and consider its global and ethical ramifications. This practice will broaden your knowledge and further develop your decision-making abilities.

Analysis

Case 11-1

Depreciation, depletion, and amortization

- LO11-1

The terms depreciation, depletion, and amortization all refer to the process of allocating the cost of an asset to the periods the asset is used.

Required:

Discuss the differences between depreciation, depletion, and amortization as the terms are used in accounting for property, plant, and equipment and intangible assets.

Communication

Case 11-2

Depreciation

- LO11-1

At a recent luncheon, you were seated next to Mr. Hopkins, the president of a local company that manufactures bicycle parts. He heard that you were a CPA and made the following comments to you:

Why is it that I am forced to recognize depreciation expense in my company's income statement when I know that I could sell many of my assets for more than I paid for them? I thought that the purpose of the balance sheet was to reflect the value of my business and that the purpose of the income statement was to report the net change in value or wealth of a company. It just doesn't make sense to penalize my profits when there hasn't been any loss in value from using the assets.

At the conclusion of the luncheon, you promised to send him a short explanation of the rationale for current depreciation practices.

Required:

Prepare a letter to Mr. Hopkins. Explain the accounting concept of depreciation and include a brief example in your explanation showing that over the life of the asset the change in value approach to depreciation and the allocation of cost approach will result in the same total effect on income.

Judgment
Case 11-3
Straight-line method; composite depreciation
● LO11-1, LO11-2

Portland Co. uses the straight-line depreciation method for depreciable assets. All assets are depreciated individually except manufacturing machinery, which is depreciated by the composite method.

Required:

1. What factors should have influenced Portland's selection of the straight-line depreciation method?
2. a. What benefits should derive from using the composite method rather than the individual basis for manufacturing machinery?
b. How should Portland have calculated the manufacturing machinery's annual depreciation in its first year of operation?

(AICPA adapted)

Judgment
Case 11-4
Depreciation
● LO11-1, LO11-2

At the beginning of the year, Patrick Company acquired a computer to be used in its operations. The computer was delivered by the supplier, installed by Patrick, and placed into operation. The estimated useful life of the computer is five years, and its estimated residual value is significant.

Required:

1. a. What costs should Patrick capitalize for the computer?
b. What is the objective of depreciation accounting?
2. What is the rationale for using accelerated depreciation methods?

(AICPA adapted)

Judgment
Case 11-5
Capitalize or expense; materiality
● LO11-9

Redline Publishers, Inc. produces various manuals ranging from computer software instructional booklets to manuals explaining the installation and use of large pieces of industrial equipment. At the end of 2013, the company's balance sheet reported total assets of \$62 million and total liabilities of \$40 million. The income statement for 2013 reported net income of \$1.1 million, which represents an approximate 3% increase from the prior year. The company's effective income tax rate is 30%.

Near the end of 2013, a variety of expenditures were made to overhaul the company's manufacturing equipment. None of these expenditures exceeded \$750, the materiality threshold the company has set for the capitalization of any such expenditure. Even though the overhauls extended the service life of the equipment, the expenditures were expensed, not capitalized.

John Henderson, the company's controller, is worried about the treatment of the overhaul expenditures. Even though no individual expenditure exceeded the \$750 materiality threshold, total expenditures were \$70,000.

Required:

Should the overhaul expenditures be capitalized or expensed?

Communication
Case 11-6
Capitalize or expense; materiality
● LO11-9

The focus of the case is the situation described in Case 11-5. Your instructor will divide the class into two to six groups depending on the size of the class. The mission of your group is to determine the treatment of the overhaul expenditures.

Required:

1. Each group member should deliberate the situation independently and draft a tentative argument prior to the class session for which the case is assigned.
2. In class, each group will meet for 10 to 15 minutes in different areas of the classroom. During the meeting, group members will take turns sharing their suggestions for the purpose of arriving at a single group treatment.
3. After the allotted time, a spokesperson for each group (selected during the group meetings) will share the group's solution with the class. The goal of the class is to incorporate the views of each group into a consensus approach to the situation.

Integrating Case 11–7

Errors; change in estimate; change in principle; inventory, patent, and equipment

- LO11–5 through LO11–7

Whaley Distributors is a wholesale distributor of electronic components. Financial statements for the year ended December 31, 2013, reported the following amounts and subtotals (\$ in millions):

	Assets	Liabilities	Shareholders' Equity	Net Income	Expenses
2012	\$640	\$330	\$310	\$210	\$150
2013	\$820	\$400	\$420	\$230	\$175

In 2014 the following situations occurred or came to light:

- a. Internal auditors discovered that ending inventories reported in the financial statements the two previous years were misstated due to faulty internal controls. The errors were in the following amounts:

2012 inventory	Overstated by \$12 million
2013 inventory	Understated by \$10 million

- b. A patent costing \$18 million at the beginning of 2012, expected to benefit operations for a total of six years, has not been amortized since acquired.
- c. Whaley's conveyer equipment has been depreciated by the sum-of-the-years'-digits (SYD) method since constructed at the beginning of 2012 at a cost of \$30 million. It has an expected useful life of five years and no expected residual value. At the beginning of 2014, Whaley decided to switch to straight-line depreciation.

Required:

For each situation:

1. Prepare any journal entry necessary as a direct result of the change or error correction as well as any adjusting entry for 2014 related to the situation described. (Ignore tax effects.)
2. Determine the amounts to be reported for each of the items shown above from the 2012 and 2013 financial statements when those amounts are reported again in the 2014, 2013, and 2012 comparative financial statements.

There are various types of accounting changes, each of which is required to be reported differently.

Required:

1. What type of accounting change is a change from the sum-of-the-years'-digits method of depreciation to the straight-line method for previously recorded assets? Under what circumstances does this type of accounting change occur?
2. What type of accounting change is a change in the expected service life of an asset arising because of more experience with the asset? Under what circumstances does this type of accounting change occur?

(AICPA adapted)

Judgment Case 11–8

Accounting changes

- LO11–5, LO11–6

The company controller, Barry Melrose, has asked for your help in interpreting the authoritative accounting literature that addresses the recognition and measurement of impairment losses for property, plant, and equipment and intangible assets. "We have a significant amount of goodwill on our books from last year's acquisition of Churchill Corporation. Also, I think we may have a problem with the assets of some of our factories out West. And one of our divisions is currently considering disposing of a large group of depreciable assets."

Your task as assistant controller is to research the issue.

Required:

1. Obtain the relevant authoritative literature on accounting for the impairment of property, plant, and equipment and intangible assets using the FASB's Codification Research System. You might gain access at the FASB website (www.fasb.org). Cite the reference locations regarding impairment of property, plant, and equipment and intangible assets.
2. When should property, plant, and equipment and intangible assets be tested for impairment?
3. Explain the process for measuring an impairment loss for property, plant, and equipment and intangible assets to be held and used.
4. What are the specific criteria that must be met for an asset or asset group to be classified as held-for-sale? What is the specific citation reference from the FASB's Codification Research System that contains these criteria?
5. Explain the process for measuring an impairment loss for property, plant, and equipment and intangible assets classified as held-for-sale.

Research Case 11–9

FASB codification; locate and extract relevant information and cite authoritative support for a financial reporting issue; impairment of property, plant, and equipment and intangible assets

- LO11–8

Ethics**Case 11–10**

Asset impairment

- LO11–8

At the beginning of 2011, the Healthy Life Food Company purchased equipment for \$42 million to be used in the manufacture of a new line of gourmet frozen foods. The equipment was estimated to have a 10-year service life and no residual value. The straight-line depreciation method was used to measure depreciation for 2011 and 2012.

Late in 2013, it became apparent that sales of the new frozen food line were significantly below expectations. The company decided to continue production for two more years (2014 and 2015) and then discontinue the line. At that time, the equipment will be sold for minimal scrap values.

The controller, Heather Meyer, was asked by Harvey Dent, the company's chief executive officer (CEO), to determine the appropriate treatment of the change in service life of the equipment. Heather determined that there has been an impairment of value requiring an immediate write-down of the equipment of \$12,900,000. The remaining book value would then be depreciated over the equipment's revised service life.

The CEO does not like Heather's conclusion because of the effect it would have on 2013 income. "Looks like a simple revision in service life from 10 years to 5 years to me," Dent concluded. "Let's go with it that way, Heather."

Required:

1. What is the difference in before-tax income between the CEO's and Heather's treatment of the situation?
2. Discuss Heather Meyer's ethical dilemma.

Judgment**Case 11–11**

Earnings management and accounting changes; impairment

- LO11–5,
LO11–6,
LO11–8

Companies often are under pressure to meet or beat Wall Street earnings projections in order to increase stock prices and also to increase the value of stock options. Some resort to earnings management practices to artificially create desired results.

Required:

1. How can a company manage earnings by changing its depreciation method? Is this an effective technique to manage earnings?
2. How can a company manage earnings by changing the estimated useful lives of depreciable assets? Is this an effective technique to manage earnings?
3. Using a fictitious example and numbers you make up, describe in your own words how asset impairment losses could be used to manage earnings. How might that benefit the company?

Judgment**Case 11–12**

Subsequent expenditures

- LO11–9

The Cummings Company charged various expenditures made during 2013 to an account called repairs and maintenance expense. You have been asked by your supervisor in the company's internal audit department to review the expenditures to determine if they were appropriately recorded. The amount of each of the transactions included in the account is considered material.

1. Engine tune-up and oil change on the company's 12 delivery trucks—\$1,300.
2. Rearrangement of machinery on the main production line—\$5,500. It is not evident that the rearrangement will increase operational efficiency.
3. Installation of aluminum siding on the manufacturing plant—\$32,000.
4. Replacement of the old air conditioning system in the manufacturing plant with a new system—\$120,000.
5. Replacement of broken parts on three machines—\$1,500.
6. Annual painting of the manufacturing plant—\$11,000.
7. Purchase of new forklift to move finished product to the loading dock—\$6,000.
8. Patching leaks in the roof of the manufacturing plant—\$6,500. The repair work did not extend the useful life of the roof.

Required:

For each of the transactions listed above, indicate whether the expenditure is appropriately charged to the repair and maintenance expense account, and if not, indicate the proper account to be charged.

Real World**Case 11–13**

Disposition and depreciation; Chapters 10 and 11; Caterpillar

- LO11–1

Real World Financials

Caterpillar Inc. (CAT) is a world leader in the manufacture of construction and mining equipment, diesel and natural gas engines, and industrial gas turbines. CAT reported the following in a disclosure note accompanying its 2010 financial statements:

	2010	2009
(\$ in millions)		
Property, plant and equipment	\$24,906	\$24,221
Less: Accumulated depreciation	<u>12,367</u>	<u>11,835</u>
Property, plant and equipment - Net	<u>\$12,539</u>	<u>\$12,386</u>

Also, Note 8 disclosed that the total cost of property, plant, and equipment included \$682 and \$639 (dollars in millions) in land at the end of 2010 and 2009, respectively. In addition, the statement of cash flows for the year ended December 31, 2010, reported the following as cash flows from investing activities:

(\$ in millions)	
Payments for property, plant and equipment	\$(2,586)
Proceeds from disposition of property, plant and equipment	1,469

The statement of cash flows also reported 2010 depreciation and amortization of \$2,296 million (depreciation of \$2,220 and amortization of \$76).

Required:

1. Assume that all property, plant, and equipment acquired during 2010 were purchased for cash. Determine the amount of gain or loss from dispositions of property, plant, and equipment that Caterpillar recognized during 2010.
2. Assume that Caterpillar uses the straight-line method to depreciate plant and equipment. What is the approximate average service life of CAT's depreciable assets?

Real World

Case 11-14
Depreciation and depletion method; asset impairment; subsequent expenditures; Chevron

- LO11-2, LO11-3, LO11-8, LO11-9

Real World Financials

EDGAR, the Electronic Data Gathering, Analysis, and Retrieval system, performs automated collection, validation, indexing, and forwarding of submissions by companies and others who are required by law to file forms with the U.S. Securities and Exchange Commission (SEC). All publicly traded domestic companies use EDGAR to make the majority of their filings. (Some foreign companies file voluntarily.) Form 10-K, which includes the annual report, is required to be filed on EDGAR. The SEC makes this information available on the Internet.

Required:

1. Access EDGAR on the Internet. The web address is www.sec.gov.
2. Search for **Chevron Corporation**. Access the 10-K filing for most recent fiscal year. Search or scroll to find the financial statements and related notes.
3. Answer the following questions related to the company's property, plant, and equipment and intangible assets:
 - a. Describe the company's depreciation and depletion policies.
 - b. Describe the company's policy for subsequent expenditures made for plant and equipment.

IFRS Case 11-15

Subsequent valuation of property, plant, and equipment; comparison of U.S. GAAP and IFRS; GlaxoSmithKline

- LO11-10

Real World Financials

GlaxoSmithKline is a global pharmaceutical and consumer health-related products company located in the United Kingdom. The company prepares its financial statements in accordance with International Financial Reporting Standards.

Required:

1. Use the Internet to locate GlaxoSmithKline's most recent annual report. The address is www.gsk.com/investors. Locate the significant accounting policies disclosure note.
2. How does the company value its property, plant, and equipment? Does the company have any other options under IFRS for valuing these assets? How do these options differ from U.S. GAAP?
3. What are the company's policies for possible reversals of impairment losses for goodwill and for other non-current assets? How do these policies differ from U.S. GAAP?

Analysis

Case 11-16

Depreciation and amortization

- LO11-2, LO11-4

Refer to the financial statements and related disclosure notes of **Dell** in Appendix B located at the back of the text.

Required:

1. What amount of depreciation and amortization did the company report in the fiscal year ended January 30, 2011?
2. What depreciation method is used for financial reporting purposes and what are the service lives of depreciable assets?

Air France—KLM Case

AIRFRANCE

LO11-10

IFRS

Air France—KLM (AF), a French company, prepares its financial statements according to International Financial Reporting Standards. AF's annual report for the year ended March 31, 2011, which includes financial statements and disclosure notes, is provided with all new textbooks. This material also is included in AF's "Registration Document 2010–11," dated June 15, 2011 and is available at www.airfranceklm.com.

Required:

1. AF's property, plant, and equipment is reported at cost. The company has a policy of not revaluing property, plant, and equipment. Suppose AF decided to revalue its flight equipment on March 31, 2011, and that the fair value of the equipment on that date was €12,000 million. Prepare the journal entry to record the revaluation assuming that the journal entry to record annual depreciation had already been recorded. (*Hint*: you will need to locate the original cost and accumulated depreciation of the equipment at the end of the year in the appropriate disclosure note.)
2. Under U.S. GAAP, what alternatives do companies have to value their property, plant, and equipment?
3. AF calculates depreciation of plant and equipment on a straight-line basis, over the useful life of the asset. Describe any differences between IFRS and U.S. GAAP in the calculation of depreciation.
4. When does AF test for the possible impairment of fixed assets? How does this approach differ from U.S. GAAP?
5. Describe the approach AF uses to determine fixed asset impairment losses. (*Hint*: see Note 3.14) How does this approach differ from U.S. GAAP?
6. The following is included in AF's disclosure note 3.12: "Intangible assets are held at initial cost less accumulated amortization and any accumulated impairment losses." Assume that on March 31, 2011, AF decided to revalue its Other intangible assets (see Note 16) and that the fair value on that date was determined to be €360 million. Amortization expense for the year already has been recorded. Prepare the journal entry to record the revaluation.

The Fukisan Inc. simulation tests your knowledge of calculating depreciation using various methods and accounting for the change in the useful life of a depreciable asset.

12

Investments

OVERVIEW

In this chapter you will learn about various approaches used to account for investments that companies make in the debt and equity of other companies. An investing company always has the option to account for these investments at fair value, with changes in fair values reported on the income statement. However, depending on the nature of an investment, investors can use alternative accounting approaches that ignore most fair value changes (e.g., *held-to-maturity* investments) or that include fair value changes only in other comprehensive income (e.g., *available-for-sale* investments). And, when an equity investor can significantly influence an investee but does not control it, the investor can use the *equity method* of accounting, which ignores fair value changes but includes the investee's income when reporting the investor's income. In appendices to this chapter, you will learn about other types of investments, and also about how to deal with other-than-temporarily impairments. The chapter concludes with a Where We're Headed Supplement explaining in detail a proposed Accounting Standards Update (hereafter, "the proposed ASU") that the FASB plans to issue in 2012 that substantially changes how we account for investments.

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- **LO12-1** Demonstrate how to identify and account for investments classified for reporting purposes as held-to-maturity. (p. 656)
- **LO12-2** Demonstrate how to identify and account for investments classified for reporting purposes as trading securities. (p. 659)
- **LO12-3** Demonstrate how to identify and account for investments classified for reporting purposes as available-for-sale securities. (p. 663)
- **LO12-4** Explain what constitutes significant influence by the investor over the operating and financial policies of the investee. (p. 680)
- **LO12-5** Demonstrate how to account for investments accounted for under the equity method. (p. 680)
- **LO12-6** Explain the adjustments made in the equity method when the fair value of the net assets underlying an investment exceeds their book value at acquisition. (p. 682)
- **LO12-7** Explain how electing the fair value option affects accounting for investments. (pp. 672 and 688)
- **LO12-8** Discuss the primary differences between U.S. GAAP and IFRS with respect to investments. (pp. 672, 673, 674, 679, 688, and 701)

FINANCIAL REPORTING CASE

A Case of Coke

You are the lone accounting major in your five-member group in your Business Policy class. A part of the case your group is working on is the analysis of the financial statements of the **Coca-Cola Company**.

The marketing major in the group is confused by the following disclosure note from Coca-Cola's 2010 annual report:

NOTE 3: INVESTMENTS (in part) Certain Debt and Marketable Equity Securities

Investments in debt and marketable securities, other than investments accounted for under the equity method, are classified as trading, available-for-sale or held-to-maturity. Our marketable equity investments are classified as either trading or available-for-sale with their cost basis determined by the specific identification method.

Realized and unrealized gains and losses on trading securities and realized gains and losses on available-for-sale securities are included in net income. Unrealized gains and losses, net of deferred taxes, on available-for-sale securities are included in our consolidated balance sheets as a component of AOCI.

Our investments in debt securities are carried at either amortized cost or fair value. Investments in debt securities that the Company has the positive intent and ability to hold to maturity are carried at amortized cost and classified as held-to-maturity. Investments in debt securities that are not classified as held-to-maturity are carried at fair value and classified as either trading or available-for-sale.

"They say unrealized gains and losses on available-for-sale securities are reported as part of AOCI. What's that? I don't see these gains and losses on the income statement," he complained. "And held-to-maturity securities—why are they treated differently? And what about equity method investments? On the balance sheet they have almost \$9 billion of investments accounted for under the equity method. They made over \$1 billion on those investments in 2010! Is that cash they can use?"

Real World Financials

By the time you finish this chapter, you should be able to respond appropriately to the questions posed in this case. Compare your response to the solution provided at the end of the chapter.

1. How should you respond? Why are held-to-maturity securities treated differently from other investment securities? (p. 656)
2. Why are unrealized gains and losses on trading securities reported in the income statement? (p. 660)
3. Why are unrealized gains and losses on available-for-sale securities not reported in the income statement, but instead are in other comprehensive income, and then shown in accumulated other comprehensive income (AOCI) in the balance sheet? (p. 664)
4. Explain why Coke accounts for some of its investments by the equity method and what that means. (p. 681)

QUESTIONS

To finance its operations, and often the expansion of those operations, a corporation raises funds by selling equity securities (common and preferred stock) and debt securities (bonds and notes). These securities, also called financial instruments, are purchased as investments by individual investors, mutual funds, and also by other corporations. In later chapters we discuss equity and debt securities from the perspective of the issuing company. Our focus in this chapter is on the corporations that invest in debt and equity securities issued by other corporations as well as debt securities issued by governmental units (bonds, Treasury bills, and Treasury bonds).

Most companies invest in financial instruments issued by other companies. For some investors, these investments represent ongoing affiliations with the companies whose securities are acquired. For instance, recent investments include **Pfizer**'s acquisition of **Wyeth** for \$68 billion, creating the world's largest pharmaceutical company, and the Belgian company **InBev**'s acquisition of **Anheuser-Busch** for \$52 billion, creating the global leader in beer. Some investments, though, are made not to obtain a favorable business relationship with another firm but simply to earn a return from the dividends or interest the securities pay or from increases in the market prices of the securities—the same reasons that might motivate you to buy stocks, bonds, or other investment securities.

With such diversity in investment objectives, it's not surprising that there is diversity in the approaches used to account for investments. As you'll discover when reading this chapter, investments are accounted for in five primary ways, depending on the nature of the investment relationship and the preferences of the investor. Before we discuss the approaches in detail, see the quick overview in Illustration 12–1.

In Part A of this chapter we discuss accounting for investments when the investor lacks significant influence over the operating and financial policies of the investee. In Part B we discuss accounting for “significant influence” investments. In both Parts A and B, we first discuss specific reporting methods and then discuss how the reporting changes if the investor elects the fair value option.

PART A

INVESTOR LACKS SIGNIFICANT INFLUENCE

The reporting approaches we use for investments differ according to how the approaches account for one or more of the four critical events that an investor experiences in the life of an investment:

1. Purchasing the investment.
2. Recognizing investment revenue (interest in the case of debt, dividends in the case of equity).
3. Holding the investment during periods in which the investment's fair value changes (and thus incurring *unrealized holding* gains and losses, since the security has not yet been sold).
4. Selling the investment (and thus incurring *realized* gains and losses, since the security has been sold and the gains or losses actually incurred).

As shown in Illustration 12–1, when the investor lacks significant influence over the investee, the investment is classified in one of three categories: held-to-maturity securities (HTM), trading securities (TS), and available-for-sale securities (AFS). Each type of investment has its own reporting method. However, regardless of the investment type, investors can elect the “fair value option” that we discuss later in the chapter and classify HTM and AFS securities as TS. The key difference among the reporting approaches is how we account for unrealized holding gains and losses (critical event number 3 above), as shown in Illustration 12–2.

Control Characteristics of the Investment**Reporting Method Used by the Investor****The investor lacks significant influence over the operating and financial policies of the investee:**

Investments in debt securities for which the investor has the "positive intent and ability" to hold to maturity

Investments held in an active trading account

Other

Held-to-maturity ("HTM")—investment reported at amortized cost*

Trading securities ("TS")—investment reported at fair value (with unrealized holding gains and losses included in net income)

Securities available-for-sale ("AFS")—investment reported at fair value (with unrealized holding gains and losses excluded from net income and reported in other comprehensive income)*

The investor has significant influence over the operating and financial policies of the investee:

Typically the investor owns between 20% and 50% of the voting stock of the investee

Equity method—investment cost adjusted for subsequent earnings and dividends of the investee*

The investor controls the investee:

The investor owns more than 50% of the investee

Consolidation—the financial statements of the investor and investee are combined as if they are a single company

*If the investor elects the *fair value option*, this type of investment also can be accounted for using the same approach that's used for trading securities, with the investment reported at fair value and unrealized holding gains and losses included in net income.

Illustration 12–1

Reporting Categories for Investments

Reporting Approach	Treatment of Unrealized Holding Gains and Losses	Investment Reported in the Balance Sheet at
Held-to-maturity (HTM) : used for debt that is planned to be held for its entire life	Not recognized	Amortized Cost
Trading (TS) : used for debt or equity that is held in an active trading account for immediate resale.	Recognized in net income, and therefore in retained earnings as part of shareholders' equity	Fair Value
Available-for-sale (AFS) : used for debt or equity that does not qualify as held-to-maturity or trading	Recognized in other comprehensive income, and therefore in accumulated other comprehensive income in shareholders' equity	Fair Value

Illustration 12–2

Accounting for Unrealized Holding Gains and Losses When Investor Lacks Significant Influence

Illustration 12–3 provides a description from a recent annual report of how the **Bank of America** accounts for its debt investments in each of the three reporting categories.

Note 1 (in part): Securities

Debt securities which management has the intent and ability to hold to maturity are classified as held-to-maturity (HTM) and reported at amortized cost. Debt securities that are bought and held principally for the purpose of resale in the near term are classified as trading and are carried at fair value with unrealized gains and losses included in trading account profits (losses). Other debt securities are classified as AFS and carried at fair value with net unrealized gains and losses included in accumulated OCI on an aftertax basis.

Illustration 12–3

Disclosure about Investments—Bank of America

Real World Financials

**FINANCIAL
Reporting Case**

Q1, p. 653

Why treat unrealized gains and losses differently depending on the type of investment? As you know, the primary purpose of accounting is to provide information useful for making decisions. What's most relevant for that purpose is not necessarily the same for each investment a company might make. For example, a company might invest in corporate bonds to provide a steady return until the bonds mature, in which case day-to-day changes in market value may not be viewed as very relevant, so the held-to-maturity approach is preferable. On the other hand, a company might invest in the same bonds because it plans to sell them at a profit in the near future, in which case the day-to-day changes in market value could be viewed as very relevant, and the trading security or available-for-sale approach is preferable.

Let's examine the three reporting classifications, one by one.

Securities to Be Held to Maturity

● LO12-1

Unlike a share of stock, a bond or other debt security has a specified date on which it matures. On its maturity date, the principal (also called the "face amount") is paid to investors. In the meantime, interest equal to a specified percentage of the principal is paid to investors on specified interest dates. Think of the principal and interest payments of the bond as a stream of cash flows that an investor will receive in exchange for purchasing the bond. The investor values that stream of cash flows using the prevailing market interest rate for debt of similar risk and maturity. If the interest rate paid by the bond (the "stated rate") is higher than the market rate, the bond can be sold for more than its maturity value (so it is "sold at a premium"). If the stated rate is lower than the market rate, the bond must be sold for less than its maturity value (so it is "sold at a discount"). For an example of valuing a bond, see Illustration 12-4.

Illustration 12-4

Bonds Purchased at a Discount

Because interest is paid semiannually, the present value calculations use:

- one-half the stated rate (6%),
- one-half the market rate (7%), and
- 6 ($= 3 \times 2$) semiannual periods.

The market value of a fixed-rate investment moves in the opposite direction of market rates of interest.

On July 1, 2013, Masterwear Industries issued \$700,000 of 12% bonds, dated July 1. Interest of \$42,000 is payable semiannually on June 30 and December 31. The bonds mature in three years, on June 30, 2016. The market interest rate for bonds of similar risk and maturity is 14%. The entire bond issue was purchased by United Intergroup, Inc.*

Calculation of the Price of the Bonds

		Present Values
Interest	$\$ 42,000 \times 4.76654^{**}$	= \$200,195
Principal (face amount)	$\$700,000 \times 0.66634^{\dagger}$	= 466,438
Present value (price) of the bonds		<u>\$666,633</u>

*The numbers in this illustration are the same as those in Illustration 14-3 in Chapter 14 (except for some differences in dates between the two chapters). This helps us to better appreciate in Chapter 14 how Masterwear's accounting for its bond liability to United compares to United's accounting for its investment in Masterwear bonds. You can find an explanation of why we calculate the bond price this way on page 801.

**Present value of an ordinary annuity of \$1: $n = 6$, $i = 7\%$ (Table 4).

\dagger Present value of \$1: $n = 6$, $i = 7\%$ (Table 2).

Note: Present value tables are provided at the end of this textbook. If you need to review the concept of the time value of money, refer to the discussions in Chapter 6.

The fair value of a bond changes when market interest rates change. If market rates of interest *rise* after a fixed-rate security is purchased, the value of the fixed-interest payments declines. So, the fair value of the investment falls. Conversely, if market rates of interest *fall* after a fixed-rate security is purchased, the fixed interest payments become relatively more attractive, so the fair value of the investment rises.

Increases and decreases in fair value between the day a debt security is acquired and the day it matures to a prearranged maturity value are less important if sale before maturity isn't

an alternative. For this reason, if an investor has the “positive intent and ability” to hold the securities to maturity, investments in debt securities can be classified as **held-to-maturity (HTM)** and reported at their *amortized cost* in the balance sheet.¹ A debt security cannot be classified as held-to-maturity if the investor might sell it before maturity in response to changes in market prices or interest rates, to meet the investor’s liquidity needs, or similar factors.

Let’s use the bond from Illustration 12–4 to see how we account for an investment in held-to-maturity debt securities.

PURCHASE OF INVESTMENT. The journal entry to record the *purchase* of the HTM investments is:

July 1		
Investment in bonds (face amount)	700,000	
Discount on bond investment (difference)		33,367
Cash (price paid for the bonds)		666,633

Discount on bond investment is a contra-asset to the investment in bonds asset account that serves to reduce the carrying value of the bond asset to its cost at the date of purchase.

RECOGNIZE INVESTMENT REVENUE. The Masterwear bonds pay cash interest at a rate of 12%, but were issued at a time when the market rate of interest was 14%. As a result, the bonds were sold at a discount that was large enough to provide bond purchasers with the same effective rate of return on their investment (14%) that they could get elsewhere in the market. Think of it this way: a little piece of that initial discount serves each period to make up the difference between the relatively low rate of interest that the bond pays (12%) and the higher rate of interest that the market demands (14%). Recording interest each period as the *effective market rate of interest multiplied by the outstanding balance of the investment* is referred to as the effective interest method. This simply is an application of the accrual concept, consistent with accruing all revenues as they are earned, regardless of when cash is received.

Continuing our example, the initial investment is \$666,633. Since the effective interest rate is 14%, interest recorded as revenue to the investor for the first six-month interest period is **\$46,664**:

$$\begin{array}{rcccl} \$666,633 & \times & [14\% \div 2] & = & \$46,664 \\ \text{Outstanding balance} & & \text{Effective rate} & & \text{Effective interest} \end{array}$$

However, the bond calls for semiannual interest payments of only \$42,000—the *stated rate* ($12\% \div 2 = 6\%$) times the *face amount* (\$700,000). As always, when only a portion of revenue is received, the remainder becomes an asset (a receivable). In this case we increase the investment by \$4,664 by reducing the discount to \$28,703 ($\$33,367 - 4,664$). The journal entry to record the interest received for the first six months as investment revenue is:

December 31		
Cash (stated rate \times face amount)	42,000	
Discount on bond investment (difference)	4,664	
Investment revenue (market rate \times outstanding balance)		46,664

Changes in market value are less relevant to an investor who will hold a security to its maturity regardless of those changes.

All investment securities are initially recorded at cost.

The effective interest on debt is the market rate of interest multiplied by the outstanding balance of the debt.

¹FASB ASC 320–10–25–1: Investments–Debt and Equity Securities–Overall–Recognition (previously “Accounting for Certain Investments in Debt and Equity Securities,” *Statement of Financial Accounting Standards No. 115* (Norwalk, Conn.: FASB, 1993)).

The amortized cost of the investment now is $\$700,000 - \$28,703 = \$671,297$.

Illustration 12–5 demonstrates interest being recorded at the effective rate over the life of this investment. As you can see, the amortization of discount gradually increases the carrying value of the investment, until the investment reaches its face amount of \$700,000 at the time when the debt matures.

We discuss accounting for discounts and premiums in much greater detail in Chapter 14.

Illustration 12–5

Amortization
Schedule—Discount

If a bond is purchased at a discount, less cash is received each period than the effective interest earned by the investor, so the unpaid difference increases the outstanding balance of the investment.

Date	Cash Interest	Effective Interest	Increase in Balance	Outstanding Balance
	(6% × Face amount)	(7% × Outstanding balance)	(Discount reduction)	
7/1/2013				666,633
12/31/2013	42,000	.07 (666,633) = 46,664	4,664	671,297
6/30/2014	42,000	.07 (671,297) = 46,991	4,991	676,288
12/31/2014	42,000	.07 (676,288) = 47,340	5,340	681,628
6/30/2015	42,000	.07 (681,628) = 47,714	5,714	687,342
12/31/2015	42,000	.07 (687,342) = 48,114	6,114	693,456
6/30/2016	42,000	.07 (693,456) = 48,544*	6,544	700,000
	<u>252,000</u>	<u>285,367</u>	<u>33,367</u>	

*Rounded.

DO NOT RECOGNIZE UNREALIZED HOLDING GAINS AND LOSSES FOR HTM INVESTMENTS.

Suppose that, as of the end of the first reporting period, the market interest rate for similar securities has fallen to 11%. A market participant valuing the Masterwear bonds at that time would do so at the current market interest rate (11%) because that's the rate of return she or he could get from similar bonds. Calculating the present value of the bonds using a lower discount rate results in a higher present value. Let's say that checking market prices in *The Wall Street Journal* indicates that the fair value of the Masterwear bonds on that date is \$714,943. How will United account for this increase in fair value? If United views the bonds as HTM investments, that change in fair value will be ignored so long as it is viewed as temporary.² The investment simply will be recorded

Using Excel, enter:
=PV(.055,5,42000,700000)
Output: 714,946

Using a calculator:
enter: 5 5.5
 -42000
 -700000
Output: = 714,946

Additional Consideration

Suppose the bonds are not traded on an active exchange. How would you determine the fair value of the Masterwear bonds on December 31, 2013? Recall from Chapter 1 that GAAP identifies different ways that a firm can determine fair value. If the Masterwear bonds are publicly traded, United can find the fair value by looking up the current market price (this way of obtaining fair value is consistent with "level one" of the fair value hierarchy). On the other hand, if the bonds are not publicly traded, United can calculate the fair value by using the present value techniques shown in Illustration 12–1 (this way of obtaining fair value is consistent with "level two" of the fair value hierarchy). With five interest periods remaining, and a current market rate of 11% (5.5% semi-annually), the present value would be \$714,943:

			Present Values
Interest	\$ 42,000 × 4.27028*	=	\$179,352
Principal	\$700,000 × 0.76513 [†]	=	535,591
	Present value of the bonds		\$714,943

*Present value of an ordinary annuity of \$1: $n = 5$, $i = 5.5\%$. (Table 4)

[†]Present value of \$1: $n = 5$, $i = 5.5\%$. (Table 2)

²If an unrealized loss from holding an HTM investment is not viewed as temporary, an "other-than-temporary impairment" (OTT impairment) may have to be recorded. We discuss OTT impairments in more detail in Appendix 12B.

at amortized cost (the amounts in the right-hand column of the amortization schedule in Illustration 12–5). United will *disclose* the fair value of its HTM investments in a footnote, but will not recognize any fair value changes in the income statement or balance sheet.³

SELL HTM INVESTMENTS. Typically, held-to-maturity investments are—you guessed it—held to maturity. However, suppose that due to unforeseen circumstances the company decided to sell its debt investment for \$725,000 on January 15, 2014.⁴ United would record the sale as follows (for simplicity we ignore any interest earned during 2014):

January 15, 2014		
Cash	725,000	
Discount on bond investment	28,703	
Investment in Masterwear bonds		700,000
Gain on sale of investments (to balance)		53,703

In other words, United would record this sale just like any other asset sale, with a gain or loss determined by comparing the cash received with the carrying value (in this case, the amortized cost) of the asset given up.

We will revisit our discussion of investments in debt securities to be “held to maturity” in Chapter 14, “Bonds and Long-Term Notes.” This way we can more readily see that accounting by the company that issues bonds and by the company that invests in those bonds is opposite but parallel; that is, each side of the transaction is the mirror image of the other.

Obviously, not all investments are intended to be held to maturity. When an investment is acquired to be held for an *unspecified period of time*, we classify the investment as either (a) “trading securities” or (b) “securities available-for-sale.” These include investments in *debt* securities that are not classified as held-to-maturity and *equity* securities that have *readily determinable fair values*. You’ll notice that, unlike held-to-maturity securities, we report investments in the other two categories at their fair values.

Trading Securities

Some companies—primarily financial institutions—actively and frequently buy and sell securities, expecting to earn profits on short-term differences in price. Investments in debt or equity securities acquired principally for the purpose of selling them in the near term are classified as **trading securities**. The holding period for trading securities generally is measured in hours and days rather than months or years. These investments typically are reported among the investor’s current assets. Relatively few investments are classified this way, because usually only banks and other financial operations invest in securities in the manner and for the purpose necessary to be categorized as trading securities.

Just like other investments, trading securities initially are recorded at cost—that is, the total amount paid for the securities, including any brokerage fees. However, when a balance sheet is prepared in subsequent periods, this type of investment is written up or down to its fair value, or “marked to market.”

Be sure to notice that fair value accounting is a departure from amortized cost, which is the way most assets are reported in balance sheets. Why the difference? For these investments, fair value information is more relevant than for other assets intended primarily to be used in company operations, like buildings, land and equipment, or for investments to be *held to maturity*.⁵

For instance, consider an investment in debt. As interest rates rise or fall, the fair value of the investment will decrease or increase. Movements in fair values are less relevant if the

LO12-2

Trading securities are actively managed in a trading account for the purpose of profiting from short-term price changes.

Unrealized holding gains and losses for trading securities are included in net income in the period in which fair value changes.

³If United had chosen the fair value option for this investment, it would classify the investment as a trading security rather than as an HTM security. We’ll illustrate the fair value option when we discuss trading securities.

⁴GAAP [FASB ASC 320–10–25–6: Investments–Debt and Equity Securities–Overall–Recognition, previously *SFAS No. 115*] lists major unforeseen events that could justify sale of an HTM investment. Sale for other reasons could call into question whether the company actually had the intent and ability to hold the investment to maturity. In that case, the company’s HTM classification is viewed as “tainted,” and the company can be required to reclassify *all* of its HTM investments as AFS investments and avoid using the HTM classification for two years. Similar provisions exist under IFRS for public companies.

⁵Investments to be held to maturity, of course, include only debt securities.

investment is to be held to maturity; the investor receives the same contracted interest payments and principal at maturity, regardless of changes in fair value.

However, if the debt investment is held for active trading, changes in market values, and thus market returns, provide an indication of management’s success in deciding when to acquire the investment, when to sell it, whether to invest in fixed-rate or variable-rate securities, and whether to invest in long-term or short-term securities. For that reason, it makes sense to report unrealized holding gains and losses on trading securities in net income during a period that fair values change, even though those gains and losses haven’t yet been realized through the sale of the securities.

To see how we account for trading securities, let’s modify the example we used for HTM securities. We’ll assume that those debt investments are held in an active trading portfolio, with United intending to profit from short-term changes in price. In addition, let’s add a couple of equity (stock) investments to highlight that, while the HTM approach applies only to debt securities, the TS approach applies to both debt and equity securities. The relevant facts are included in Illustration 12–6. Assuming all investments are classified as trading securities, the accounting would be as follows.

FINANCIAL Reporting Case

Q2, p. 653

Illustration 12–6

Accounting for Trading Securities and Securities Available-for-Sale

United Intergroup, Inc. buys and sells both debt and equity securities of other companies as investments. United’s fiscal year-end is December 31. The following events during 2013 and 2014 pertain to the investment portfolio.

<p>Purchase Investments July 1, 2013</p>	<ul style="list-style-type: none"> • Purchased Masterwear Industries’ 12%, 3-year bonds for \$666,633 to yield an effective interest rate of 14%. • Purchased \$1,500,000 of Arjent, Inc., common stock. • Purchased \$1,000,000 of Bendac common stock.
<p>Receive Investment Revenue December 31, 2013</p>	<ul style="list-style-type: none"> • Received a semi-annual cash interest payment of \$42,000 from Masterwear. • Received a cash dividend of \$75,000 from Arjent. (Bendac does not pay dividends)
<p>Adjust Investments to Fair Value December 31, 2013</p>	<ul style="list-style-type: none"> • Valued the Masterwear bonds at \$714,943. • Valued the Arjent stock at \$1,450,000. • Valued the Bendac stock at \$990,000.
<p>Sell Investments January 15, 2014</p>	<ul style="list-style-type: none"> • Sold the Masterwear bonds for \$725,000. • Sold the Arjent stock for \$1,446,000.
<p>Adjust Remaining Investments to Fair Value December 31, 2014</p>	<ul style="list-style-type: none"> • Valued the Bendac stock at \$985,000.

PURCHASE INVESTMENTS. The journal entry to record the purchase of the bond investment is the same as it is for HTM securities. The journal entries to record the equity investments are even simpler, just exchanging one asset (cash) for another (investment):

All investment securities are recorded initially at cost.

July 1, 2013		
Investment in Masterwear bonds.....	700,000	
Discount on bond investment		33,367
Cash.....		666,633
Investment in Arjent stock	1,500,000	
Cash.....		1,500,000
Investment in Bendac stock	1,000,000	
Cash.....		1,000,000

RECOGNIZE INVESTMENT REVENUE. The journal entry to record the receipt of bond interest is the same as it is for HTM securities, with the carrying value of the investment increasing due to amortization of \$4,664 of discount. The journal entry to record the

receipt of dividends related to the Arjent equity investment is straightforward. There is no entry for the Bendac equity investment, because Bendac doesn't pay dividends.

December 31, 2013		
Cash (6% × \$700,000).....	42,000	
Discount on bond investment (difference).....	4,664	
Investment revenue (interest: 7% × \$666,633).....		46,664
Cash.....	75,000	
Investment revenue (dividends)		75,000

Dividend and interest income are included in net income.

ADJUST TRADING SECURITY INVESTMENTS TO FAIR VALUE (2013).

Unlike HTM securities, trading securities are carried at fair value in the balance sheet, so their carrying value must be adjusted to fair value at the end of every reporting period. Rather than increasing or decreasing the investment account itself, we use a valuation allowance, *fair value adjustment*, to increase or decrease the carrying value of the investment. At the same time, we record an unrealized holding gain or loss that is included in net income in the period in which fair value changes (the gain or loss is *unrealized* because the securities haven't actually been sold). The next table summarizes the relevant facts for United's investments.

Trading securities are adjusted to their fair value at each reporting date.

December 31, 2013			
Security	Amortized Cost	Fair Value	Fair Value Adjustment
Masterwear	\$ 671,297	\$ 714,943	\$ 43,646
Arjent	1,500,000	1,450,000	(50,000)
Bendac	1,000,000	990,000	(10,000)
Total	<u>\$3,171,297</u>	<u>\$3,154,943</u>	<u>\$(16,354)</u>
	Existing balance in fair value adjustment:		–0–
	Increase (decrease) needed in fair value adjustment:		<u>\$(16,354)</u>

United has an unrealized loss of \$16,354. Note that, to determine the amount of unrealized holding gain or loss on the Masterwear bonds, United first identifies the bonds' *amortized cost* and then determines the amount necessary to adjust them to fair value:

Face amount of the bond	\$700,000
Less: Discount on bond investment	
\$33,367 initial discount	
(4,664) accumulated amortization	
<u>\$28,703 discount at 12/31/2013</u>	<u>(28,703)</u>
Amortized cost of the bonds	671,297
+/- Fair value adjustment (plug)	+ 43,646
Fair value of the bond at 12/31/2013	<u>\$714,943</u>

There is no discount to amortize for the equity investments, so for the Arjent and Bendac investments, their amortized cost is simply their initial cost. The journal entry to record the unrealized loss in United's fair value adjustment is:

December 31, 2013 ⁶		
Net unrealized holding gains and losses—I/S ⁷	16,354	
Fair value adjustment		16,354

For trading securities, unrealized gains or losses are included in net income.

⁶Sometimes companies don't bother with a separate fair value adjustment account and simply adjust the investment account to fair value. Also, sometimes companies set up separate fair value adjustment accounts for each investment.

⁷We title this account "Net unrealized holding gains and losses—I/S" to highlight that, for trading securities, unrealized holding gains and losses are included in the income statement (I/S) in the period in which they occur.

Additional Consideration

Don't Shoot the Messenger

Or, as written in *The Economist*, "Messenger, Shot: Accounting rules are under attack. Standard-setters should defend them. Politicians and banks should back off."⁸ Using fair values that are hard to estimate is controversial. For example, during the recent financial crisis many financial-services companies had to recognize huge unrealized losses associated with their investments. Some blamed their losses on GAAP for requiring estimates of fair value that were driven by depressed current market prices, argued that those losses worsened the financial crisis, and lobbied for a move away from fair-value accounting. Others countered that these companies were using GAAP's requirement for fair value accounting as a "scapegoat" for their bad investment decisions. "Fair value accounting . . . does not create losses but rather reflects a firm's present condition," says Georgene Palacky, director of the CFA's financial reporting group.⁹

SELL TRADING SECURITY INVESTMENTS. To record the gain or loss realized on the sale of the Masterwear and Arjent investments, United records the receipt of cash (\$725,000 for Masterwear and \$1,446,000 for Arjent), removes all balance sheet accounts that are directly associated with the investments, and calculates the difference to determine realized gain or loss.¹⁰

Realized gain or loss for the difference between carrying value and the cash received from selling a trading security is included in net income.

January 15, 2014			
Cash (amount received)	725,000		
Discount on bond investment (account balance)	28,703		
Investment in Masterwear bonds (account balance)		700,000	
Gain on sale of investments (to balance)		53,703	
Cash (amount received)	1,446,000		
Loss on sale of investments (to balance)	54,000		
Investment in Arjent stock (account balance)			1,500,000

When trading securities are sold, unrealized gains or losses that were recorded previously are removed from the fair value adjustment and net income at the end of the accounting period.

For the Masterwear bonds, this journal entry is identical to what United used when recording the sale of held-to-maturity investments. However, United isn't done yet. Now that those investments are sold, United needs to remove the fair value adjustment from the balance sheet. Also, because United has recognized in this period's net income the entire gain or loss *realized* on sale of the investments, it must back out of this period's net income any *unrealized* gains and losses that were included in net income in prior periods. That way, this period's net income includes only the fair value changes arising since the last period, and United avoids double counting gains and losses (once when unrealized, and again when realized). United can accomplish all of this when it adjusts its investment portfolio to fair value at the end of the reporting period.

ADJUST TRADING SECURITY INVESTMENTS TO FAIR VALUE (2014).

The following table summarizes the situation at the end of 2014:

December 31, 2014			
Security	Amortized Cost	Fair Value	Fair Value Adjustment
Masterwear	(sold)	–0–	–0–
Arjent	(sold)	–0–	–0–
Bendac	<u>\$1,000,000</u>	<u>\$985,000</u>	<u>(\$15,000)</u>
Total	<u>\$1,000,000</u>	<u>\$985,000</u>	<u>(\$15,000)</u>
		Existing balance in fair value adjustment:	<u>(\$16,354)</u>
		Increase (decrease) needed in fair value adjustment:	<u>\$ 1,354</u>

⁸"Messenger, Shot," *The Economist*, April 8, 2009.

⁹Sarah Johnson, "The Fair Value Blame Game," CFO.com, March 19, 2008.

¹⁰For purposes of this example, we ignore any unpaid interest associated with the bonds. In practice, that amount would be added to the sales price of the bonds and included in investment revenue.

The journal entry necessary to show the appropriate balance in the fair value adjustment at the end of 2014 is

December 31, 2014		
Fair value adjustment	1,354	
Net unrealized holding gains and losses—1/S		1,354

This journal entry serves two purposes: it (a) accounts for changes in the fair value of investments that have not been sold (in this case, Bendac), and (b) removes from the fair value adjustment and net income any unrealized holding gains or losses that were recognized in prior periods and that are associated with investments that now have been sold (in this case, Masterwear and Arjent). We discuss those purposes in more detail when we show later in this chapter how these investments would be accounted for as available-for-sale securities.

FINANCIAL STATEMENT PRESENTATION. We present trading securities in the financial statements as follows:

- **Income Statement and Statement of Comprehensive Income:** For trading securities, fair value changes are included in the income statement in the periods in which they occur, regardless of whether they are realized or unrealized. Investments in trading securities do not affect other comprehensive income.
- **Balance Sheet:** Investments in trading securities are reported at fair value, typically as current assets, and do not affect accumulated other comprehensive income in shareholders' equity.
- **Cash Flow Statement:** Cash flows from buying and selling trading securities typically are classified as operating activities, because the financial institutions that routinely hold trading securities consider them as part of their normal operations. However, as discussed in more detail later, it may be appropriate to classify cash flows from buying and selling some trading securities as investing activities if they are not held for sale in the near term (which is particularly likely when an investment is classified as a trading security as a result of electing the fair value option).¹¹

United's 2013 and 2014 financial statements will include the amounts shown in Illustration 12–7 on the next page.

Securities Available-for-Sale

When you or I buy stock in a corporation, say **Coca-Cola**, we hope the market value will rise before we sell it. We also may look forward to the cash dividends Coca-Cola pays its shareholders every three months. We may even have planned when we will sell the stock, or we may intend to wait and see what happens to market prices. In either case, we aren't planning to trade the investment actively, but our investment is available to sell given the right combination of market factors and our own cash situation. These same considerations apply to companies that invest in the securities of other corporations or governmental entities. When a company acquires an investment, not for an active trading account (as a financial institution might) or to be held to maturity (which of course couldn't be stock because it has no maturity date), the company classifies its investment as **securities available-for-sale (AFS)**. Like trading securities, we report investments in AFS securities in the balance sheet at fair value. Unlike trading securities, though, unrealized holding gains and losses on AFS securities are *not* included in net income. Instead, they are reported in the statement of comprehensive income as other comprehensive income (OCI).

● LO12–3

Investments in available-for-sale securities typically are reported at their fair values.

¹¹FASB ASC 320: Investments (previously "The Fair Value Option for Financial Assets and Financial Liabilities," *Statement of Financial Accounting Standards No. 159* (Norwalk, Conn.: FASB, 2007, par. A42)). The relevant paragraphs from the original standard are not codified in the FASB Research System as they primarily provide a basis for conclusions.

Illustration 12–7

Reporting Trading Securities

For trading securities, fair value changes affect net income in the period in which they occur.

Trading securities are reported at fair value in the balance sheet.

Cash flows from buying and selling trading securities are classified as operating activities.

Income Statement	2013	2014
Revenues	\$ ◆	\$ ◆
Expenses	◆	◆
Other income (expense):		
Interest and dividend income	121,664 ^a	–0–
Realized and unrealized gains and losses on investments	(16,354) ^b	\$1,057 ^c
Tax expense	◆	◆
Net income	◆	◆
Balance Sheet		
Assets:		
Trading securities	3,154,943	985,000
Statement of Cash Flows (direct method)		
Operating Activities:		
Cash from investment revenue	117,000	–0–
Purchase of trading securities	(3,166,633)	–0–
Sale of trading securities	–0–	2,171,000
^a \$121,664 is the sum of \$46,664 interest revenue from Masterwear and \$75,000 dividends from Arjent. ^b \$16,354 is the net unrealized loss from the 2013 fair value adjustment. ^c \$1,057 is the \$1,354 net unrealized gain from the 2014 fair value adjustment minus the \$297 loss realized on sale of investments during 2014 (the \$297 net realized loss results from the \$54,000 loss realized on sale of the Arjent stock and the \$53,703 gain realized on sale of the Masterwear bonds).		

Comprehensive income includes not only net income, but also other changes in equity that don't arise from transactions with owners.

COMPREHENSIVE INCOME. You may recall from Chapter 4 that comprehensive income is a more all-encompassing view of changes in shareholders' equity, including not only net income but also all other changes in equity that do not arise from transactions with owners.¹² Comprehensive income therefore includes net income and *other comprehensive income (OCI)*. Both net income and OCI accumulate in shareholders' equity in the balance sheet, but in different accounts. While net income accumulates in retained earnings, OCI accumulates in *accumulated other comprehensive income (AOCI)*.

FINANCIAL Reporting Case

Q3, p. 653

RATIONALE FOR AFS TREATMENT OF UNREALIZED HOLDING GAINS AND LOSSES. Why use an approach for accounting for AFS securities that differs from that used for trading securities? The big concern is that including in net income unrealized holding gains and losses on AFS investments might make income appear more volatile than it really is. For example, many companies purchase AFS investments for the purpose of having the changes in fair value of those investments offset changes in the fair value of liabilities. This *hedging* insulates the company from risk and ensures that earnings are stable. However, if fair value changes for investments were to be recognized in income (as is the case with trading securities), but the offsetting fair value changes for liabilities were not recognized in income as well, we could end up with income appearing very volatile when in fact the underlying assets and liabilities are hedged effectively.¹³

More generally, because AFS securities are likely to be held for multiple reporting periods, one could argue that there is sufficient time for unrealized holding gains in some periods to balance out with unrealized holding losses in other periods, so including unrealized holding gains and losses in income would confuse investors by making income appear more volatile than it really is over the long run. Of course, one could counter-argue that these unrealized holding gains and losses still are relevant, given that each period an investor has discretion over whether or not to continue holding the security or sell that security to realize a gain or loss.

¹²Transactions with owners primarily include dividends and the sale or purchase of shares of the company's stock.

¹³The option to report in earnings changes in the fair value of liabilities was not permitted at the time the FASB wrote the initial standard (*SFAS No. 115*) that specified appropriate accounting for investments in debt and equity securities. As we will see in Chapter 14, that option now is allowed.

To consider accounting for AFS investments, refer to the facts shown in Illustration 12–6. Let's assume now that United classifies its investments as AFS rather than trading securities.

PURCHASE INVESTMENTS. The journal entries to record the purchase of the investments are the same for AFS securities as they are for trading securities:

July 1, 2013		
Investment in Masterwear bonds	700,000	
Discount on bond investment		33,367
Cash		666,633
Investment in Arjent stock	1,500,000	
Cash		1,500,000
Investment in Bendac stock	1,000,000	
Cash		1,000,000

All investment securities are initially recorded at cost.

RECOGNIZE INVESTMENT REVENUE. The journal entries to record the receipt of investment revenue also are the same for AFS securities as they are for trading securities.

December 31, 2013		
Cash (6% × \$700,000)	42,000	
Discount on bond investment	4,664	
Investment revenue (interest: 7% × \$666,633)		46,664
Cash	75,000	
Investment revenue (dividends received)		75,000

Interest income and dividends on AFS investments are included in net income.

ADJUST AFS INVESTMENTS TO FAIR VALUE (2013). Let's first recall the facts:

December 31, 2013			
Security	Amortized Cost	Fair Value	Fair Value Adjustment
Masterwear	\$ 671,297	\$ 714,943	\$ 43,646
Arjent	1,500,000	1,450,000	(50,000)
Bendac	1,000,000	990,000	(10,000)
Total	\$3,171,297	\$3,154,943	\$(16,354)
		Existing balance in fair value adjustment:	–0–
		Increase (decrease) needed in fair value adjustment:	(\$ 16,354)

Like trading securities, AFS securities are adjusted to fair value at the end of each reporting period, which produces an unrealized holding gain or loss due to holding the securities while their fair values change. The journal entry to record United's unrealized holding loss is:

December 31, 2013		
Net unrealized holding gains and losses—OCI ¹⁴	16,354	
Fair value adjustment.....		16,354

AFS securities are adjusted to their fair value at each reporting date.

Notice that the amount of unrealized holding loss is the same as with trading securities. What differs is that the net unrealized holding loss of \$16,354 is included in net income for trading securities and in OCI for AFS securities.¹⁵ At the end of the reporting period the

For AFS securities, unrealized holding gains and losses from fair value changes are not included in net income, but instead are recorded as OCI.

¹⁴We title this account "Net unrealized holding gains and losses—OCI" to highlight that, for available-for-sale securities, unrealized holding gains and losses are included in other comprehensive income (OCI) in the period in which they occur.

¹⁵As with trading securities, we could have not used a separate valuation allowance and simply adjusted the AFS investment account itself to fair value, and we also could set up separate valuation allowances and record separate journal entries for each AFS investment.

net unrealized holding loss ends up being closed to a shareholders' equity account for both approaches. What differs is that it gets closed to retained earnings for trading securities and to AOCI for AFS securities.

SELL AFS INVESTMENTS. AFS investments require the same journal entry on the date of sale as is made to record the sale of trading securities. United simply records the receipt of cash, removes from the balance sheet any accounts that are directly associated with the investment, and calculates the difference to determine realized gain or loss.

Realized gain or loss for the difference between carrying value and the cash received from selling a trading security is included in net income.

January 15, 2014			
Cash (amount received)	725,000		
Discount on bond investment (account balance)	28,703		
Investment in Masterwear bonds (account balance)		700,000	
Gain on sale of investments (to balance)		53,703	
Cash (amount received)	1,446,000		
Loss on sale of investments (to balance)	54,000		
Investment in Arjent stock (account balance)			1,500,000

When AFS securities are sold, unrealized gains or losses that were recorded previously are removed from the fair value adjustment and OCI.

United also needs to adjust the fair value adjustment account and AOCI to remove any unrealized gains or losses previously recorded that relate to the sold investments. That is typically done at the end of the accounting period as part of the journal entry that adjusts the AFS investment portfolio to fair value, as we see below.

ADJUST AFS INVESTMENTS TO FAIR VALUE (2014). The following table summarizes the situation at the end of 2014:

December 31, 2014			
Security	Amortized Cost	Fair Value	Fair Value Adjustment
Masterwear	(sold)	—0—	—0—
Arjent	(sold)	—0—	—0—
Bendac	\$1,000,000	\$985,000	(\$15,000)
Total	\$1,000,000	\$985,000	(\$15,000)
		Existing balance in fair value adjustment:	(\$16,354)
		Increase (decrease) needed in fair value adjustment:	\$ 1,354

This analysis indicates that United needs to increase the fair value adjustment by \$1,354 and record an unrealized gain of the same amount in OCI.

December 31, 2014		
Fair value adjustment	1,354	
Net unrealized holding gains and losses—OCI		1,354

This journal entry serves two purposes: it (a) accounts for new changes during 2014 in the fair value of investments that haven't been sold, and (b) removes amounts associated with investments that were sold during 2014.

(\$5,000)	to add 2014 unrealized loss associated with investments not sold
<u>6,354</u>	to remove 2013 net unrealized loss that's no longer unrealized
\$1,354	2014 adjustment to OCI

Let's consider the two purposes separately.

New changes in the fair value of investments held. The first purpose of the journal entry is to record in OCI any new unrealized gains or losses associated with investments that

have not been sold. For United, that's the Bendac stock. The new unrealized gain or loss equals whatever amount is necessary to report the Bendac investment at fair value as of the end of 2014.

\$1,000,000	initial cost of Bendac stock
<u>(985,000)</u>	fair value at the end of 2014
\$ 15,000	balance needed at end of 2014
<u>(10,000)</u>	balance at end of 2013
\$ 5,000	new unrealized loss in 2014

If the 2014 journal entry had focused only on this first purpose, the journal entry would have been to recognize an unrealized holding loss of \$5,000:

Net unrealized holding gains and losses—OCI	5,000	
Fair value adjustment		5,000

Reclassification adjustment. The second purpose of the journal entry is to remove from OCI any amounts associated with *sold* investments. What amounts must United consider? Last year, in 2013, United recorded a net unrealized loss of \$6,354 on the Arjent and Masterwear investments as part of the \$16,354 fair value adjustment made at the end of that year.

\$50,000	2013 unrealized loss for the Arjent stock
<u>43,646</u>	2013 unrealized gain for the Masterwear bonds
\$ 6,354	net unrealized loss in 2013

If the 2013 fair value adjustment had only included the net unrealized loss on the Arjent and Masterwear investments, it would have been:

Net unrealized holding gains and losses—OCI	6,354	
Fair value adjustment		6,354

For AFS securities, unrealized gains and losses affect OCI and accumulate in AOCI until such time as the investment is sold.

Because those investments have now been sold, United must reverse this entry in 2014 to remove their effects from OCI and the fair value adjustment. If the 2014 journal entry had focused only on this second purpose, it would have been:

Fair value adjustment	6,354	
Net unrealized holding gains and losses—OCI		6,354

See how the two purposes combine to create the single journal entry we use?

Fair value adjustment (\$6,354 – 5,000)	1,354	
Net unrealized holding gains and losses—OCI		1,354

Now, why is this often referred to as a “reclassification adjustment”? Remember that United included a \$6,354 unrealized loss in 2013 OCI (and therefore in AOCI). Then, in 2014, it backed out that amount from OCI (and AOCI) as part of the fair value adjustment entry, and included the realized gain or loss in net income (and therefore retained earnings) as part of the journal entry that recorded the sale of those investments. From the perspective of shareholders' equity, the amount was basically reclassified from AOCI to retained earnings in the period of sale.¹⁶

Note that we don't separately *record* this reclassification. That happens automatically as part of the fair value adjustment entry at the end of the period. What we do is *report* the reclassification in the statement of comprehensive income, as you will see in the next section.

¹⁶Reclassification also avoids double accounting with respect to comprehensive income and equity. If United didn't back out the 2013 unrealized loss from 2014 OCI, it would end up having included it in comprehensive income twice, once in OCI (2013) and once in net income (2014), thereby overstating total shareholders' equity.

FINANCIAL STATEMENT PRESENTATION. We present AFS securities in the financial statements as follows:

- **Income Statement and Statement of Comprehensive Income:** *Realized* gains and losses are shown in net income in the period in which securities are sold. *Unrealized* gains and losses are shown in OCI in the periods in which changes in fair value occur, and reclassified out of OCI in the periods in which securities are sold.
- **Balance Sheet:** Investments in AFS securities are reported at fair value. *Unrealized* gains and losses affect AOCI in shareholders' equity, and are reclassified out of AOCI in the periods in which securities are sold.
- **Cash Flow Statement:** Cash flows from buying and selling AFS securities typically are classified as investing activities.

United's 2013 and 2014 financial statements will include the amounts shown in Illustration 12–8.

Illustration 12–8

Reporting Available-for-Sale Securities

Only *realized* gains and losses are included in net income.

Other comprehensive income includes *unrealized* holding gains and losses that occur during the reporting period.

AFS securities are reported at fair value.

AOCI (in shareholders' equity) includes net unrealized holding gains or losses accumulated over the current and prior periods.

Cash flows from buying and selling AFS securities are classified as investing activities.

	2013	2014
Comprehensive Income Statement		
Revenues	\$ ◆	\$ ◆
Expenses	◆	◆
Other income (expense):		
Interest and dividend income	121,664 ^a	–0–
Realized net loss on sale of investments	–0–	(297) ^c
Tax Expense	◆	◆
Net income	◆	◆
Other comprehensive income (loss) items (OCI): ¹⁷		
Unrealized holding gains (losses) on investments	(16,354) ^b	(5,000) ^d
Reclassification adjustment for net gains and losses included in net income	–0–	6,354 ^e
Total	(16,354)	1,354
Comprehensive income	◆	◆
Balance Sheet		
Assets:		
Available-for-sale securities	3,154,943	985,000
Stockholders' equity:		
Accumulated other comprehensive income (AOCI)	(16,354)	(15,000)
Statement of Cash Flows (direct method)		
Operating Activities:		
Cash from investment revenue	117,000	–0–
Investing Activities:		
Purchase of available-for-sale securities	(3,166,633)	–0–
Sale of available-for-sale securities	–0–	2,171,000

^a\$121,664 is the sum of \$46,664 interest revenue from Masterwear and \$75,000 dividends from Arjent.
^b\$16,354 is the net unrealized loss from the 2013 fair value adjustment.
^c\$297 is the loss realized on sale of investments during 2014, resulting from the \$54,000 loss realized on sale of the Arjent stock and the \$53,703 gain realized on sale of the Masterwear bonds.
^d\$5,000 is the new net unrealized loss included in the 2014 fair value adjustment for Bendac.
^e\$6,354 is the reclassification adjustment included in the 2014 fair value adjustment to remove from AOCI amounts associated with investments that now have been sold.

¹⁷This illustration follows ASU 2011-05 (Comprehensive Income (Topic 220): *Presentation of Comprehensive Income* (Norwalk, Conn.: FASB 2011)), which requires that, for items reclassified from OCI to net income, reclassification adjustments be presented on the face of the financial statement where the components of net income and OCI are presented. Prior to ASU 2011-05, reclassification adjustments typically were only disclosed in the notes.

Individual securities available for sale are classified as either current or noncurrent assets, depending on how long they're likely to be held. An example from the 2011 annual report of **Cisco Systems** is shown in Illustration 12–9.

Item 1A: Risk Factors (in part)

We maintain an investment portfolio of various holdings, types, and maturities. These securities are generally classified as available-for-sale and, consequently, are recorded on our Consolidated Balance Sheets at fair value with unrealized gains or losses reported as a component of accumulated other comprehensive income, net of tax.

Note 7: Investments (in part)

The following tables summarize the Company's in available-for-sale investments (in millions):

July 30, 2011	Amortized Cost	Gross Unrealized Gains	Gross Unrealized Losses	Fair Value
Fixed income securities:				
U.S. Government securities	\$ 19,087	\$ 52	\$ —	\$19,139
U.S. Government agency securities	8,742	35	(1)	8,776

Comparison of HTM, TS, and AFS Approaches

Illustration 12–10 compares accounting for the Masterwear bonds under the three different approaches used when an investor lacks significant influence.

Illustration 12–10 Comparison of HTM, TS, and AFS Approaches

		Held-to-Maturity (Htm)		Trading (TS)		Available-for-Sale (AFS)	
Purchase bonds at a discount	Investments	700,000					
	Discount		33,367	Same as HTM		Same as HTM	
	Cash		666,633				
Receive investment revenue	Cash	42,000					
	Discount		4,664	Same as HTM		Same as HTM	
	Invest. income		46,664				
Adjust to fair value	No entry (unless impaired)			FV adjustment	43,646	FV adjustment	43,646
				Net unrealized gain/loss—I/S		Net unrealized gain/loss—OCI	43,646
Sell bonds for a realized gain	Discount	28,703		Recognize gain or loss:		Recognize gain or loss:	
	Cash	725,000		Same as HTM		Same as HTM	
	Investments	700,000		Reverse out previously recorded		Reverse out previously recorded	
	Gain	53,703		unrealized gain or loss that's no longer unrealized (automatically part of next adjustment to fair value):		unrealized gain or loss that's no longer unrealized (automatically part of next adjustment to fair value):	
				Net unrealized gain/loss—I/S	43,646	Net unrealized gain/loss—OCI	43,646*
				FV adjustment	43,646	FV adjustment	43,646

*Reported as a reclassification adjustment in the statement of comprehensive income.

This side-by-side comparison highlights several aspects of these accounting approaches:

- To record the purchase of an investment and the receipt of investment revenue, we use identical entries in all three approaches.
- To record changes in fair value, the entries we use for TS and AFS securities have the same effect on the investment (via the fair value adjustment valuation allowance) and the same eventual effect on shareholders' equity. What differs is whether the unrealized gain or loss is recognized in the income statement and then in retained earnings (TS) or recognized in OCI and then in AOCI (AFS).
- To record the sale of the security, we use identical entries in all three approaches. For TS and AFS securities, the fair value adjustment and unrealized holding gains and losses associated with sold securities are dealt with automatically as part of the next adjustment to fair value.
- Regardless of approach, the cash flows are the same, and the same total amount of gain or loss is recognized in the income statement (TS: \$43,646 in 2013 + [\$53,703 - \$43,646] in 2014 = \$53,703 total; AFS and HTM: \$53,703 in 2014). Thus, the question is not how much total net income is recognized, but *when* that net income is recognized.

Additional Consideration

Available-for-Sale Investments and Income Taxes

When comparing accounting for TS and AFS securities, we saw that total shareholders' equity ends up being the same amount, regardless of whether unrealized gains and losses are included in net income and closed to retained earnings in shareholders' equity (for TS) or included only in OCI and shown in AOCI in shareholders' equity (for AFS securities). But what about taxes? Tax expense affects net income, so retained earnings includes after-tax amounts. For AOCI to be equivalent to retained earnings, it also should include only after-tax amounts. Therefore, adjustments must be made to OCI and AOCI to account for tax effects. Typically these adjustments also give rise to deferred tax assets and liabilities, as unrealized holding gains and losses rarely affect the current period's taxes payable. The effect of taxes on each component of OCI must be disclosed in the notes to the financial statements or presented in the statement in which OCI is presented.

International Financial Reporting Standards

Accounting for Investments When Investor Lacks Significant Influence. Until recently, IAS No. 39¹⁸ was the standard that specified appropriate accounting for investments under IFRS. The primary categories in IAS No. 39 are similar to those in U.S. GAAP, consisting of "Fair Value through Profit & Loss" ("FVTPL," similar to TS), HTM, and AFS.

IFRS No. 9,¹⁹ issued November 12, 2009, will be required after January 1, 2015, and earlier adoption is allowed in some jurisdictions, so in the time period between 2010 and 2014 either IAS No. 39 or IFRS No. 9 might be in effect for a particular company. IFRS No. 9 eliminates the HTM and AFS classifications, replaced by new classifications that are more restrictive. Specifically, under IFRS No. 9:

- Investments in debt securities are classified as either "Amortized Cost" or FVTPL. Like the HTM classification, debt in the amortized cost classification is accounted for at (you guessed it) amortized cost. However, to be included in the amortized cost category, a debt investment has to meet both (a) the "cash flow characteristics" test (which requires that the debt instrument consist of only principal and interest payments) and (b) the "business model test" (which requires that the objective of the company's business model is to hold the investment to collect the contractual cash flows rather than to sell

(continued)

¹⁸"Financial Instruments: Recognition and Measurement," *International Accounting Standard No. 39* (IASCF), as amended effective January 1, 2011.

¹⁹"Financial Instruments," *International Financial Reporting Standard No. 9* (IASCF), November 12, 2009, as amended effective January 1, 2011.

(concluded)

the investment at a gain). If debt isn't classified in "amortized cost," it is classified in FVTPL—there is no equivalent to AFS accounting for debt under *IFRS No. 9*.

- Investments in equity securities are classified as either "FVTPL" or "FVTOCI" ("Fair Value through Other Comprehensive Income"). If the equity is held for trading, it must be classified as FVTPL, but otherwise the company can irrevocably elect to classify it as FVTOCI. Like the previous AFS classification, equity in the FVTOCI category has *unrealized* gains and losses included in OCI. However, unlike AFS, *realized* gains and losses are not reclassified out of OCI and into net income when the investment is later sold. Rather, the accumulated gain or loss associated with a sold investment is just transferred from AOCI to retained earnings (both shareholders' equity accounts), without passing through the income statement.

One other difference between U.S. GAAP and IFRS is worth noting. U.S. GAAP allows specialized accounting (beyond the scope of this textbook) for particular industries like securities brokers/dealers, investment companies, and insurance companies. IFRS does not.

Transfers between Reporting Categories

At acquisition, an investor assigns debt and equity securities to one of the three reporting classifications—held-to-maturity, available-for-sale, or trading. At each reporting date, the appropriateness of the classification is reassessed. For instance, if the investor no longer has the ability to hold certain securities to maturity and will now hold them for resale, those securities would be reclassified from HTM to AFS. When a security is reclassified between two reporting categories, the security is transferred at its fair value on the date of transfer. Any unrealized holding gain or loss at reclassification should be accounted for *in a manner consistent with the classification into which the security is being transferred*. A summary is provided in Illustration 12–11.

A transfer of a security between reporting categories is accounted for at fair value and in accordance with the new reporting classification.

Transfer from:	To:	Unrealized Gain or Loss from Transfer at Fair Value
Either HTM or AFS	Trading	Include in current net income the total unrealized gain or loss, as if it all occurred in the current period.
Trading	Either HTM or AFS	Include in current net income any unrealized gain or loss that occurred in the current period prior to the transfer. (Unrealized gains and losses that occurred in prior periods already were included in net income in those periods.)
Held-to-maturity	Available-for-sale	No current income effect. Report total unrealized gain or loss as a separate component of shareholders' equity (in AOCI).
Available-for-sale	Held-to-maturity	No current income effect. Don't write off any existing unrealized holding gain or loss in AOCI, but amortize it to net income over the remaining life of the security (fair value amount becomes the security's amortized cost basis).

Illustration 12–11

Transfer between Investment Categories

Reclassifications are quite unusual, so when they occur, disclosure notes should describe the circumstances that resulted in the transfers. Other note disclosures are described in a later section.

● LO12-8

IFRS ILLUSTRATION

Real World Financials

International Financial Reporting Standards

Transfers Between Investment Categories. Until recently, IFRS did not allow transfers out of the “Fair Value through P&L” (FVTPL) classification (which is roughly equivalent to the trading securities classification in U.S. GAAP). However, in October 2008 the IASB responded to the financial crisis underway at that time by amending *IAS No. 39* to allow transfers of debt investments out of the FVTPL category into AFS or HTM in “rare circumstances,” and indicated that the financial crisis qualified as one of those circumstances.²⁰ The change was justified as increasing convergence to U.S. GAAP, which also allows transfers out of the trading security category, but in fact reclassifications in U.S. GAAP continue to be rarer events than occurred under IFRS with this change.

This change allowed banks in October 2008 to transfer investments out of the FVTPL category as of July 1, 2008, and thus avoid recognizing in earnings the losses they knew had already occurred during the third quarter of 2008. The effect on bank profits was substantial. A study by J. P. Morgan indicated that 32 of 43 West European banks it covered reclassified assets worth almost €620 billion, increasing pretax profits by almost €27 billion.²¹

Lloyds Banking Group of the United Kingdom wrote the following explanation:

Note 49 Financial Risk Management (in part)

Reclassification of Financial Assets

In accordance with the amendment to *IAS 39* as disclosed in note 2, the Group reviewed the categorisation of its assets classified as held for trading and available-for-sale financial assets. On the basis that there was no longer an active market for some of those assets, which are therefore more appropriately managed as loans, the Group reclassified £2,993 million of assets classified as held for trading (measured at fair value through profit or loss immediately prior to reclassification) to loans and receivables with effect from 1 July 2008 . . . If the assets had not been transferred and had been kept as held for trading, a loss of £347 million would have been recognised in the income statement for the six months to 31 December 2008 within net trading income.

Under *IFRS No. 9* (discussed earlier in this chapter), transfers of debt investments between the FVTPL and the amortized cost categories can occur only if the company changes its business model with respect to the debt investment. No transfers of equity investments between the FVTPL and FVTOCI categories are allowed.

Fair Value Option

● LO12-7

TS already are accounted for at fair value, so there is no need to choose the fair value option for them.

Choosing the fair value option for HTM and AFS investments just means reclassifying those investments as TS.

You may recall from Chapter 1 that GAAP allows a fair value option that permits companies to elect to account for most financial assets and liabilities at fair value. Under the fair value option, unrealized gains and losses are recognized in net income in the period in which they occur. That accounting approach should sound familiar—it’s the same approach we use to account for trading securities.

Here’s how the fair value option works for these investments. When a security that qualifies for HTM or AFS treatment is purchased, the investor makes an irrevocable decision about whether to elect the fair value option. The company can elect the fair value option for some securities and not for identical others—it’s entirely up to the company, but the company has to explain in the notes why it made a partial election. If the fair value option is elected for a security that would normally be accounted for as HTM or AFS, the company just classifies that security as a trading security, and that’s how it appears in the financial statements.²² The only difference is that, unlike most trading securities, purchases and sale of investments accounted for under the fair value option are likely to be classified as investing activities in the statement of cash flows, because those investments are not held for sale

²⁰“Reclassification of Financial Assets” *Amendments to IAS 39 Financial Instruments: Recognition and Measurement and IFRS 7 Financial Instruments: Disclosures*, IASB, October 2008.

²¹J.P. Morgan, *IAS 39 Reclassification: Impact on Banks’ FY 08 Results and Equity*, May 11, 2009.

²²FASB ASC 825-10-25: Financial Instruments—Overall—Recognition (previously “The Fair Value Option for Financial Assets and Financial Liabilities,” *Statement of Financial Accounting Standards No. 159* (Norwalk, Conn.: FASB, 2007, par. 29)).

in the near term and therefore are not operational in nature. Also, note that electing the fair value option is irrevocable. If a company elects the fair value option and later believes that the fair value of an investment is likely to decline, it can't change the election and discontinue use of fair value accounting.

Why allow the fair value option? Recall that a primary reason for creating the AFS approach was to allow companies to avoid excess earnings volatility that would result from reporting in earnings the fair value changes of only part of a hedging arrangement. As described in Appendix A of the text, other accounting rules apply to hedging arrangements that involve derivatives, but those rules are very complex and don't cover all forms of hedging arrangements. The fair value option simplifies this process by allowing companies to choose whether to use fair value for most types of financial assets and liabilities. Thus, when a company enters into a hedging arrangement, it just has to make sure to elect the fair value option for each asset and liability in the hedging arrangement, and fair value changes of those assets and liabilities will be included in earnings.

International Financial Reporting Standards

Fair Value Option. International accounting standards are more restrictive than U.S. standards for determining when firms are allowed to elect the fair value option. Under both *IAS No. 39* and *IFRS No. 9*, companies can elect the fair value option only in specific circumstances. For example, a firm could elect the fair value option for an asset or liability in order to avoid the "accounting mismatch" that occurs when some parts of a fair value risk-hedging arrangement are accounted for at fair value and others are not. Although U.S. GAAP indicates that the intent of the fair value option is to address these sorts of circumstances, it does not require that those circumstances exist.

● LO12-8

Impairment of Investments

In this chapter we've seen that declines (as well as increases) in the fair value of some investments are reported in earnings. For instance, if the fair value of an investment in trading securities declines, we reduce the reported amount of that investment in the balance sheet and include the loss from the fair value decline in the income statement. Likewise, if the investor has elected the fair value option for HTM or AFS investments, those investments are accounted for as trading securities, so fair value changes always are recognized in earnings. Otherwise, fair value changes for HTM and AFS investment typically are not recognized in earnings.

However, there is an exception. If the fair value of an HTM or AFS investment declines below the amortized cost of the investment, and that decline is deemed to be *other-than-temporary (OTT)*, the company recognizes an OTT impairment loss in earnings. The specific process for determining whether an investment has an OTT impairment differs between equity and debt investments.²³ For equity investments, the question is whether the company has the intent and ability to hold the investment until fair value recovers. If it doesn't, the company recognizes an OTT impairment loss in earnings and reduces the carrying value of the investment in the balance sheet by that amount. For debt investments, the process is more complicated than for equity investments, both in determining whether an impairment is OTT and in determining the amount of the impairment to include in earnings. For both equity and debt investments, after an OTT impairment is recognized, the ordinary treatment of unrealized gains and losses is resumed; that is, further changes in fair value are reported in OCI for AFS investments and not recognized for HTM investments. An in-depth discussion of accounting for OTT impairments is provided in Appendix 12B.

An "other-than-temporary" impairment loss is recognized in net income even though the security hasn't been sold.

²³FASB ASC 320-10-35: Investments—Overall—Subsequent Measurement (previously "Recognition and Presentation of Other-Than-Temporary Impairments," *FASB Staff Position No. 115-2 and 124-2* (Norwalk, Conn.: FASB April 9, 2009)).

Additional Consideration

What if the Fair Value Isn't "Readily Determinable"?

According to GAAP, the fair value of an equity security is considered readily determinable only if its selling price is currently available on particular securities exchanges or over-the-counter markets.²⁴ If the fair value of an equity security is *not* readily determinable, we use the *cost method* (except when the equity method described in Part B of this chapter is appropriate). The cost method is so named because the investment is carried in the balance sheet at cost, and temporary unrealized holding gains and losses are not recognized in either net income or other comprehensive income. Any dividends received are reported as investment revenue, and any gain or loss realized upon selling the investment is included in income. However, fair values still matter under the cost method, because the investment still is subject to testing for other-than-temporary impairments. Therefore, even if the fair value of an equity investment isn't viewed as readily determinable, companies have to determine it if there are indications that the investment has been impaired.

● LO12-8

International Financial Reporting Standards

Cost Method. Under IAS No. 39, equity investments typically are measured at fair value, even if they are not listed on an exchange or over-the-counter market. The cost method is used only if fair value cannot be measured reliably, which occurs when the range of reasonable fair value estimates is significant and the probability of various estimates within the range cannot be reasonably estimated. IFRS No. 9 does not allow the cost method, but may allow cost as an estimate of fair value in some circumstances. In general, use of the cost method is less prevalent under IFRS than under U.S. GAAP.

Concept Review Exercise

VARIOUS INVESTMENT SECURITIES

Diversified Services, Inc., offers a variety of business services, including financial services through its escrow division. Diversified's fiscal year ends on December 31. The only securities held by Diversified at December 1 were 12 million common shares of Shelby Laminations, Inc., purchased in November for \$50 million and classified as available-for-sale. Diversified entered into the following investment activities during the last month of 2013 and the first week of 2014:

2013

- Dec. 1 Purchased \$30 million of 12% bonds of Vince-Gill Amusement Corporation and \$24 million of 10% bonds of Eastern Waste Disposal Corporation, both at face value and both to be held until they mature. Interest on each bond issue is payable semiannually on November 30 and May 31.
- 9 Sold one-half of the Shelby Laminations common shares for \$26 million.
- 29 Received cash dividends of \$1.5 million from the Shelby Laminations common shares.
- 30 Purchased U.S. Treasury bonds for \$5.8 million as trading securities hoping to earn profits on short-term differences in prices.
- 31 Recorded the necessary adjusting entry(s) relating to the investments.

²⁴FASB ASC 320-10-20: Investments—Overall—Glossary—Readily Determinable Fair Value (previously "Accounting for Certain Investments in Debt and Equity Securities (as amended)," *Statement of Financial Accounting Standards No. 115* (Norwalk, Conn.: FASB 2008), par. 3a).

The year-end market price of the Shelby Laminations common stock was \$4.25 per share. The fair values of the bond investments were \$32 million for Vince-Gill Amusement Corporation and \$20 million for Eastern Waste Disposal Corporation. A sharp rise in short-term interest rates on the last day of the year caused the fair value of the Treasury bonds to fall to \$5.7 million.

2014

Jan. 7 Sold the remaining Shelby Laminations common shares for \$27 million.

Required:

Prepare the appropriate journal entry for each transaction or event and show the amounts that would be reported in the company's 2013 income statement relative to these investments. Determine the effects of the Shelby Laminations investment on net income, other comprehensive income, and comprehensive income for 2013, 2014, and combined over both years.

2013

Dec. 1 Purchased \$30 million of 12% bonds of Vince-Gill Amusement Corporation and \$24 million of 10% bonds of Eastern Waste Disposal Corporation, both at face value and both to be held until they mature. Interest on each bond issue is payable semiannually on November 30 and May 31.

Investment in Vince-Gill Amusement bonds	30	
Investment in Eastern Waste Disposal bonds	24	
Cash		54

Dec. 9 Sold one-half of the Shelby Laminations common shares for \$26 million.

Sale of one-half of the Shelby Laminations shares results in a \$1 million gain (\$26 million sales price – [\$50 million cost ÷ 2]).

Cash (selling price)	26	
Investment in Shelby Laminations common shares ($\$50 \times \frac{1}{2}$)		25
Gain on sale of investments (difference)		1

Dec. 29 Received cash dividends of \$1.5 million from the Shelby Laminations common shares.

Cash	1.5	
Investment revenue		1.5

Dec. 30 Purchased U.S. Treasury bonds for \$5.8 million as trading securities, hoping to earn profits on short-term differences in prices.

Investment in U.S. Treasury bonds	5.8	
Cash		5.8

Dec. 31 Recorded the necessary adjusting entry(s) relating to the investments.

Accrued Interest (one month)		
Investment revenue receivable—Vince-Gill Amusement (\$30 million \times 12% \times $\frac{1}{12}$)	0.3	
Investment revenue receivable—Eastern Waste Disposal (\$24 million \times 10% \times $\frac{1}{12}$)	0.2	
Investment revenue		0.5
Fair Value Adjustments		
Net unrealized holding gains and losses—I/S (\$5.7 – 5.8) Fair value adjustment, TS investments	0.1	0.1
Fair value adjustment, AFS investments ([12 million shares \times $\frac{1}{2}$ \times \$4.25] – [\$50 million \times $\frac{1}{2}$])	0.5	
Net unrealized holding gains and losses—OCI		0.5

Note: Securities held-to-maturity are not adjusted to fair value.

Reported in the 2013 Income Statement:	(\$ in millions)
Investment revenue (\$1.5 dividends + 0.5 interest)	\$2.0
Gain on sale of investments (Shelby)	1.0
Unrealized holding loss on investments (trading securities)	(0.1)

Note: The \$0.5 million unrealized holding gain for the Shelby Laminations common shares is not included in income because it pertains to securities available-for-sale rather than trading securities, and so is reflected in OCI.

2014

Jan. 7 Sold the remaining Shelby Laminations common shares for \$27 million.

The fair value of the Shelby shares at the time of sale is \$27 million. Those shares were purchased for \$25 million (\$50 million \times $\frac{1}{2}$), so the gain realized on the sale is \$2 million.

Cash (selling price)	27	
Investment in Shelby Laminations common shares (cost: $\frac{1}{2}$ \times \$50)		25
Gain on sale of investments (difference)		2

Given that the fair value adjustment for the Shelby shares has a \$0.5 million balance (recorded on 12/31/2013), we need to remove that amount and eliminate the corresponding unrecognized gain from AOCI. This happens automatically when we next adjust the portfolio to fair value. If we were to make the adjustment separately, the entry would be:

Net unrealized holding gains and losses—OCI	0.5	
Fair value adjustment, AFS investments		0.5

The Shelby investment's unrealized and realized gains and losses affected net income, other comprehensive income, and comprehensive income as follows (\$ in millions):

2013

\$1.0	realized gain on sale of investments (in net income)
<u>0.5</u>	unrealized gain on investments (in OCI)
\$1.5	total 2013 effect in comprehensive income

2014

\$2.0	realized gain on sale of investments (in net income)
<u>(0.5)</u>	reclassification out of OCI of previously recognized unrealized gain associated with sold investments
\$1.5	total 2014 effect in comprehensive income

\$3.0 grand total effect in comprehensive income (\$1.5 + 1.5).

\$3.0 grand total effect in net income (\$1.0 + 2.0).

\$0.0 grand total effect in other comprehensive income (\$0.5 + (0.5)).

Note that the \$3.0 grand total effect of the Shelby shares on comprehensive income and net income reconciles with the difference between their purchase price (\$50) and their sales price (\$53, which is equal to the sum of \$26 for the half sold in 2013 and \$27 for the half sold in 2014). The only difference between comprehensive income and net income is timing.

Financial Statement Presentation and Disclosure

Trading securities, held-to-maturity securities and available-for-sale securities are either current or noncurrent depending on when they are expected to mature or to be sold. However, it's not necessary that a company report individual amounts for the three categories of investments—held-to-maturity, available-for-sale, or trading—on the face of the balance sheet as long as that information is presented in the disclosure notes.²⁵

On the statement of cash flows, inflows and outflows of cash from buying and selling trading securities typically are considered operating activities because, for companies that routinely transact in trading securities (financial institutions), trading in those securities constitutes an appropriate part of the companies' normal operations. But because held-to-maturity and available-for-sale securities are not purchased and held principally to be sold in the near term, cash flows from the purchase, sale, and maturity of these securities are considered investing activities. Also, if an investment that normally would be HTM or AFS is classified as a trading security because the company chose the fair value option, cash flows may be classified as investing, because they are viewed as nonoperating in nature.

Investors should disclose the following in the disclosure notes for each year presented:

- Aggregate fair value.
- Gross realized and unrealized holding gains.
- Gross realized and unrealized holding losses.
- Change in net unrealized holding gains and losses.
- Amortized cost basis by major security type.

The notes also include disclosures designed to help financial statement users understand the quality of the inputs companies use when determining fair values and to identify parts of the financial statements that are affected by those fair value estimates. For example, the notes should include the level of the fair value hierarchy (levels 1, 2, or 3) in which all fair value measurements fall. For fair value measurements that use unobservable inputs (level 3), the notes need to provide information about the effect of fair value measurements on earnings, including a reconciliation of beginning and ending balances of the investment that identifies:

- Total gains or losses for the period (realized and unrealized), unrealized gains and losses associated with assets and liabilities still held at the reporting date, and where those amounts are included in earnings or shareholders' equity.
- Purchases, sales, issuances and settlements.
- Transfers in and out of level 3 of the fair value hierarchy (for example, because of changes in the observability of inputs used to determine fair values).
- For instruments accounted for under the fair value option, an estimate of the gains or losses included in earnings that are attributable to changes in instrument-specific credit risk.

For example, as shown in Illustration 12–12, note 2 of **Dell Inc.**'s 2011 annual report includes a discussion of fair values.

Extensive footnote disclosure is provided to help financial statement users assess the quality of fair value measurements and understand where they affect the financial statements.

²⁵FASB ASC 320–10–45–13: Investments—Debt and Equity Securities—Overall—Other Presentation Matters (previously *Statement of Financial Accounting Standards No. 115*, "Accounting for Certain Investments in Debt and Equity Securities," (Norwalk, Conn.: FASB, 1993), par. 18).

Where We're Headed

The FASB and the IASB are working together on a joint project that overhauls accounting for financial instruments. Under the proposed Accounting Standards Update, investments are classified in three categories that are similar to those used in U.S. GAAP: amortized cost (similar to HTM, but not requiring that investments be held to maturity), FV-NI (similar to TS), and FV-OCI (similar to AFS), but the criteria for classifying investments into those categories differ from current practice. In the supplement to this chapter we discuss these proposed changes in more detail.²⁷

● LO12-8

INVESTOR HAS SIGNIFICANT INFLUENCE

When a company invests in the equity securities (primarily common stock) of another company, the investing company can benefit either (a) *directly* through dividends and/or market price appreciation or (b) *indirectly* through the creation of desirable operating relationships with the investee. The way we report a company's investment in the stock of another company depends on the nature of the relationship between the investor and the investee.

For reporting purposes, we classify the investment relationship in one of three ways, and account for the investment differently depending on the classification, as shown in Illustration 12-13.

Relationship: How much does the investor influence the operating and financial policies of the investee?

Reporting Method

Lacks significant influence (usually < 20% equity ownership)	Varies by type of investment (see Part A of this chapter)
Has significant influence (usually 20%–50% equity ownership)	Equity method
Has control (usually > 50% equity ownership)	Consolidation

Illustration 12-13

Reporting Classifications for Investment Relationships

We focused on situations in which the investor lacks significant influence in Part A of this chapter. In Part B of this chapter we focus on situations in which the investor has significant influence and discuss the **equity method** and **fair value option** that are used to account for those investments.

A detailed discussion of the third classification—consolidated financial statements—is beyond the scope of this book. That discussion often is a focus of the advanced accounting course or is taught as a separate consolidations course. In this chapter, we'll briefly overview consolidation only to provide perspective to aspects of the equity method that purposely mimic some effects of consolidation. Let's do that now, before addressing the specifics of the equity method.

The equity method can be used when an investor can't control, but can significantly influence, the investee.

How the Equity Method Relates to Consolidated Financial Statements

If a company acquires more than 50% of the voting stock of another company, it's said to have a controlling interest, because by voting those shares, the investor actually can control the company acquired. The investor is referred to as the *parent*; the investee is termed the

²⁷For the current status of both of these projects, see "Accounting for Financial Instruments" under "Projects" at www.fasb.org.

subsidiary. For reporting purposes (although not legally), the parent and subsidiary are considered to be a single reporting entity, and their financial statements are *consolidated*. Both companies continue to operate as separate legal entities and the subsidiary reports separate financial statements. However, because of the controlling interest, the parent company reports consolidated financial statements.

Consolidated financial statements combine the individual elements of the parent and subsidiary statements.

Consolidated financial statements combine the separate financial statements of the parent and the subsidiary each period into a single aggregate set of financial statements as if there were only one company. This entails an item-by-item combination of the parent and subsidiary statements (after first eliminating any amounts that are shared by the separate financial statements).²⁸ For instance, if the parent has \$8 million cash and the subsidiary has \$3 million cash, the consolidated balance sheet would report \$11 million cash.

The acquired company's assets are included in consolidated financial statements at their fair values as of the date of the acquisition, and the difference between the acquisition price and the sum of the fair values of the acquired net assets is recorded as goodwill.

Two aspects of the consolidation process are of particular interest to us in understanding the equity method. First, in consolidated financial statements, the acquired company's assets are included in the financial statements at their fair values as of the date of the acquisition, rather than their book values on that date. Second, if the acquisition price is more than the sum of the separate fair values of the acquired net assets (assets less liabilities), that difference is recorded as an intangible asset—goodwill.²⁹ We'll return to the discussion of these two aspects when we reach the point in our discussion of the equity method where their influence is felt. As we'll see, the equity method is in many ways a partial consolidation.

We use the equity method when the investor can't control the investee but can exercise significant influence over the operating and financial policies of an investee.

What Is Significant Influence?

● LO12-4

Usually an investor can exercise significant influence over the investee when it owns between 20% and 50% of the investee's voting shares.

When effective control is absent, the investor still may be able to exercise significant influence over the operating and financial policies of the investee. This would be the case if the investor owns a large percentage of the outstanding shares relative to other shareholders. By voting those shares as a block, decisions often can be swayed in the direction the investor desires. When significant influence exists, the investment should be accounted for by the equity method. It should be presumed, in the absence of evidence to the contrary, that the investor has the ability to exercise **significant influence** over the investee when it owns between 20% and 50% of the investee's voting shares.³⁰

A Single Entity Concept

● LO12-5

The investor's ownership interest in individual assets and liabilities of the investee is represented by a single investment account.

Much like consolidation, the equity method views the investor and investee collectively as a special type of single entity (as if the two companies were one company). However, using the equity method, the investor doesn't include separate financial statement items of the investee on an item-by-item basis as in consolidation. Instead, the investor reports its equity interest in the investee as a single investment account. For that reason, the equity method sometimes is referred to as a "one-line consolidation," because it essentially collapses the consolidation approach into single lines in the balance sheet and income statement, while having the same effect on total income and shareholders' equity.

Under the equity method, the investor recognizes investment income equal to its percentage share (based on stock ownership) of the net income earned by the investee rather than the portion of that net income received as cash dividends. The rationale for this approach is the presumption of the equity method that the fortunes of the investor and investee are

²⁸This avoids double counting those amounts in the consolidated statements. For example, amounts owed by one company to the other are represented by accounts payable in one set of financial statements and accounts receivable in the other. These amounts are not included in the statements of the consolidated entity because a company can't "owe itself."

²⁹This is the usual case because most companies are worth more than the sum of the values of individual components of the company due to reputation, longevity, managerial expertise, customer loyalty, or a host of other possibilities. Accounting for goodwill in acquisitions is discussed in Chapter 10.

³⁰Shareholders are the owners of the corporation. By voting their shares, it is they who determine the makeup of the board of directors—who, in turn, appoint officers—who, in turn, manage the company. Common stock usually is the class of shares that has voting privileges. However, a corporation can create classes of preferred shares that also have voting rights. This is discussed at greater length in Chapter 18.

sufficiently intertwined that as the investee prospers, the investor prospers proportionately. Stated differently, as the investee earns additional net assets, the investor's share of those net assets increases.

Initially, the investment is recorded at cost. The carrying amount of this investment subsequently is:

- Increased by the investor's percentage share of the investee's net income (or decreased by its share of a loss).
- Decreased by dividends paid.

FINANCIAL Reporting Case

Q4, p. 653

Additional Consideration

It's possible that a company owns more than 20% of the voting shares but still cannot exercise significant influence over the investee. If, for instance, another company or a small group of shareholders owns 51% or more of the shares, they control the investee regardless of how other investors vote their shares. GAAP provides this and other examples of indications that an investor may be unable to exercise significant influence:

- The investee challenges the investor's ability to exercise significant influence (through litigation or complaints to regulators).
- The investor surrenders significant shareholder rights in a signed agreement.
- The investor is unable to acquire sufficient information about the investee to apply the equity method.
- The investor tries and fails to obtain representation on the board of directors of the investee.³¹

In such cases, the equity method would not be appropriate, and the investment would likely be treated as AFS.

Conversely, it's also possible that a company owns less than 20% of the voting shares but is able to exercise significant influence over the investee. Ability to exercise significant influence with less than 20% ownership might be indicated, for example, by having an officer of the investor corporation on the board of directors of the investee corporation or by having, say, 18% of the voting shares while no other single investor owns more than 50%. In such cases the equity method would be appropriate.

To see how the equity method works, let's assume that United Intergroup purchased 30% of Arjent, Inc.'s, common stock for \$1,500,000 cash. Illustration 12–14 highlights that buying 30% of Arjent can be viewed as buying 30% of all of Arjent's assets and liabilities. Those assets and liabilities likely have book values on Arjent's balance sheet that differ from their separate fair values. We can think of United as paying a price equal to 30% of the sum of the fair values of all of those assets and liabilities, plus an extra amount, goodwill, that captures 30% of the value of other attractive aspects of Arjent (e.g., loyal customers, well-trained workers) that GAAP doesn't capture as separate assets or liabilities. We will see that, under the equity method, all of those amounts are shown in a single investment account, but we still need to track their individual information to account for them correctly.

PURCHASE OF INVESTMENT. Recording United's purchase of 30% of Arjent is straightforward. In fact, it requires the same entry used to record the purchase of the Arjent investment in Part A of this chapter.

The cost principal governs the acquisition of assets.

Investment in Arjent stock	1,500,000	
Cash		1,500,000

³¹FASB ASC 323–10–15–10: Investments—Equity Method and Joint Ventures—Overall—Scope and Scope Exceptions (previously “Criteria for Applying the Equity Method of Accounting for Investments in Common Stock,” *FASB Interpretation No. 35* (Stamford, Conn.: FASB, 1981)).

Illustration 12–14

Equity Method

Account	Book Value on Arjent's Financial Statements	Fair Value at Time of United's Investment
Buildings (10-year remaining useful life, no salvage value)	\$1,000,000	\$ 2,000,000
Land	500,000	1,000,000
Other net assets*	600,000	600,000
Net assets	<u>2,100,000</u>	<u>3,600,000</u>
Goodwill		1,400,000 (to balance)
	Total fair value of Arjent	\$ 5,000,000
		× 30% purchased
		<u>\$1,500,000</u> purchase price
Other information:		
	Arjent's 2013 net income:	\$500,000
	Arjent's 2013 dividends:	\$250,000

*Other net assets = other assets – liabilities

As the investee earns additional net assets, the investor's investment in those net assets increases.

As the investee prospers, the investor prospers proportionately.

As the investee distributes net assets as dividends, the investor does not recognize revenue. Rather, the investor's investment in the investee's net assets is reduced.

RECORDING INVESTMENT REVENUE. Under the equity method, the investor includes in net income its proportionate share of the investee's net income. The reasoning is that, as the investee earns additional net assets, the investor's equity interest in those net assets also increases, so the investor increases its investment by the amount of income recognized. United's entry would be:

Investment in Arjent stock	150,000	
Investment revenue (30% × \$500,000)		150,000

Of course, if Argent had recorded a net loss rather than net income, United would *reduce* its investment in Arjent and recognize a *loss* on investment for its share of the loss. Note that you won't always see these amounts called "investment revenue" or "investment loss." Rather, United might call this line "equity in earnings (losses) of affiliate" or some other title that suggests it is using the equity method.

RECEIVING DIVIDENDS. Because investment revenue is recognized as it is earned by the investee, it would be inappropriate to recognize revenue again when earnings are distributed as dividends. That would be double counting. Instead, we view the dividend distribution as a reduction of the investee's net assets. The rationale is that the investee is returning assets to its investors in the form of a cash payment, so each investor's equity interest in the remaining net assets declines proportionately.

Cash	75,000	
Investment in Arjent stock (30% × \$250,000)		75,000

Further Adjustments

● LO12–6

When the investor's expenditure to acquire an investment exceeds the book value of the underlying net assets acquired, additional adjustments to both the investment account and investment revenue might be needed. The purpose is to approximate the effects of consolidation, without actually consolidating financial statements. More specifically, after the date of acquisition, both the investment account and investment revenue are adjusted for differences between net income reported by the investee and what that amount would have been if consolidation

procedures had been followed. This process is often referred to as “amortizing the differential,” because it mimics the process of expensing some of the difference between the price paid for the investment and the book value of the investment. Let’s look closer at what that means.

As mentioned earlier, consolidated financial statements report (a) the acquired company’s assets at their fair values on the date of acquisition rather than their book values, subsequently adjusted for amortization, and (b) goodwill for the excess of the acquisition price over the fair value of the identifiable net assets acquired.

The first of these two consequences of the consolidation process usually has an effect on income, and it’s the income effect that we’re interested in when applying the equity method. Increasing asset balances to their fair values usually will result in higher expenses in subsequent periods. For instance, if buildings, equipment, or other depreciable assets are written up to higher values, depreciation expense will be higher during their remaining useful lives. Likewise, if the recorded amount of inventory is increased, cost of goods sold will be higher when the inventory is sold. As a consequence of increasing these asset balances to fair value, expenses will rise and income will fall. It is this negative effect on income that the equity method seeks to imitate.

However, if it’s land that’s increased, there is no income effect because we don’t depreciate land. Also, goodwill will not result in higher expenses. Goodwill is an intangible asset, but one whose cost usually is not charged to earnings.³²

In our example, United needs to make adjustments for the fact that, at the time it purchased its investment in Arjent, the fair values of Arjent’s assets and liabilities were higher than the book values of those assets and liabilities in Arjent’s balance sheet. Illustration 12–15 highlights the portions of United’s investment that may require adjustment:

Notice in Illustration 12–15 that United paid (in thousands) \$1,500 for identifiable net assets that, sold separately, would be worth \$1,080 and the \$420 difference is attributable to goodwill. The identifiable net assets worth \$1,080 have a book value of only \$630, and we assumed the \$450 difference is attributable to undervalued buildings (\$300) and land (\$150).

	Investee Net Assets	Net Assets Purchased	Difference Attributed to:	
	↓	↓	↓	
Cost	$\$5,000 \times 30\% =$	\$1,500	Goodwill:	\$420
Fair value	$\$3,600 \times 30\% =$	\$1,080		
Book value	$\$2,100 \times 30\% =$	\$630	Undervaluation of:	
				Buildings
			Land	\$150

Illustration 12–15

Source of Differences between the Investment and the Book Value of Net Assets Acquired

ADJUSTMENTS FOR ADDITIONAL DEPRECIATION. When Arjent determines its net income, it bases depreciation expense on the book value of its buildings, but United needs to depreciate its share of the *fair value* of those buildings at the time it made its investment. Therefore, United must adjust its investment revenue for additional depreciation expense. Over the life of the buildings, United will need to recognize its 30% share of a total of \$1,000,000 of additional depreciation expense (\$2,000,000 fair value less \$1,000,000 book value), or \$300,000. Assuming a 10-year life of the buildings and straight-line depreciation, United must recognize \$30,000 of additional depreciation each year. Had Arjent recorded that additional depreciation, United’s portion of Arjent’s net income would

The investor adjusts its share of the investee’s net income to reflect revenues and expenses associated with differences between the fair value and book value of the investee’s assets and liabilities that existed at the time the investment was made.

³²Goodwill is not amortized periodically to expense. Only if the asset’s value is subsequently judged to be impaired is all or a portion of the recorded amount charged against earnings. FASB ASC 350–20–35: Intangibles–Goodwill and Other–Goodwill–Subsequent Measurement (previously “Goodwill and Other Intangible Assets,” *Statement of Financial Accounting Standards No. 141* (Norwalk, Conn.: FASB, 2001)). For review, see Chapter 11.

have been lower by \$30,000 (ignoring taxes). To act as if Arjent had recorded the additional depreciation, United adjusts the accounts to reduce investment revenue and reduce its investment in Arjent stock by \$30,000.

Investment revenue	30,000	
Investment in Arjent stock ($30\% \times [\$2,000,000 - 1,000,000] \div 10 \text{ yrs.}$)		30,000

NO ADJUSTMENTS FOR LAND OR GOODWILL. United makes no adjustments for land or goodwill. Land, unlike buildings, is not an asset that we depreciate. As a result, the difference between the fair value and book value of the land would not cause higher expenses, and we have no need to adjust investment revenue or the investment in Arjent stock for the land.

Recall from Chapter 11 that goodwill, unlike most other intangible assets, is not amortized. In that sense, goodwill resembles land. Thus, acquiring goodwill will not cause higher expenses, so we have no need to adjust investment revenue or the investment in Arjent stock for goodwill.

If the fair value of purchased inventory exceeds its book value, we usually assume the inventory is sold in the next year and reduce investment revenue in the next year by the entire difference.

ADJUSTMENTS FOR OTHER ASSETS AND LIABILITIES. Also, because in our example there was no difference between the book value and fair value of the remaining net assets, we don't need an adjustment for them either. However, that often will not be the case.

For example, Arjent's inventory could have had a fair value that exceeded its book value at the time United purchased its Arjent investment. To recognize expense associated with that higher fair value, United would need to identify the period in which that inventory is sold (usually the next year) and, in that period, reduce its investment revenue and its investment in Arjent stock by its 30% share of the difference between the fair value and book value of the inventory. If, for instance, the \$300,000 difference between fair value and book value had been attributable to inventory rather than buildings, and that inventory was sold by Arjent in the year following United's investment, United would reduce investment revenue by the entire \$300,000 in the year following the investment. By so doing, United would be making an adjustment that yielded the same net investment revenue as if Arjent had carried the inventory on its books at fair value at the time the Arjent investment was made and therefore recorded higher cost of goods sold (\$300,000) when it was sold in the next year. More generally, an equity method investor needs to make these sorts of adjustments whenever there are revenues or expenses associated with an asset or liability that had a difference between book value and fair value at the time the investment was made.

Additional Consideration

Effect on Deferred Income Taxes

Investment revenue is recorded by the equity method when income is earned by the investee, but that revenue is not taxed until it's actually received as cash dividends. This creates a temporary difference between book income and taxable income. You will learn in Chapter 16 that the investor must report a deferred tax liability for the income tax that ultimately will be paid when the income eventually is received as dividends.

Reporting the Investment

The fair value of the investment shares at the end of the reporting period is not reported when using the equity method. The investment account is reported at its original cost, increased by the investor's share of the investee's net income (adjusted for additional expenses like depreciation), and decreased by the portion of those earnings actually received as dividends. In other words, the investment account represents the investor's share of the investee's net assets initially acquired, adjusted for the investor's share of the subsequent increase in the investee's net assets (net assets earned and not yet distributed as dividends).

The carrying amount of the investment is its initial cost plus the investor's equity in the undistributed earnings of the investee.

The balance of United's 30% investment in Arjent at December 31, 2013, would be calculated as follows:

Investment in Arjent Stock			
Cost	1,500,000		
Share of income	150,000	30,000	Depreciation adjustment
		75,000	Dividends
	1,545,000		

In the statement of cash flows, the purchase and sale of the investment are reported as outflows and inflows of cash in the investing section, and the receipt of dividends is reported as an inflow of cash in the operating section.³³

WHEN THE INVESTEE REPORTS A NET LOSS. Our illustration assumed the investee earned net income. If the investee reports a *net loss* instead, the investment account would be *decreased* by the investor's share of the investee's net loss (adjusted for additional expenses).

Additional Consideration

It's possible that the investor's proportionate share of investee losses could exceed the carrying amount of the investment. If this happens, the investor should discontinue applying the equity method until the investor's share of subsequent investee earnings has equaled losses not recognized during the time the equity method was discontinued. This avoids reducing the investment account below zero.

WHEN THE INVESTMENT IS ACQUIRED IN MID-YEAR. Obviously, we've simplified the illustration by assuming the investment was acquired at the beginning of 2013, entailing a full year's income, dividends, and adjustments to account for the income effects of any differences between book value and fair value on the date the investment was acquired. In the more likely event that an investment is acquired sometime after the beginning of the year, the application of the equity method is easily modified to include the appropriate fraction of each of those amounts. For example, if United's purchase of 30% of Arjent had occurred on October 1 rather than January 2, we would simply record income, dividends, and adjustments for three months ($\frac{3}{12}$) of the year. This would result in the following entries to the investment account:

Investment in Arjent Stock			
Cost	1,500,000		
Share of income ($\frac{3}{12} \times \$150,000$)	37,500		
		7,500	Depreciation adjustment ($\frac{3}{12} \times \$30,000$)
		18,750	Dividends ($\frac{3}{12} \times \$75,000$)
	1,511,250		

Changes in the investment account the first year are adjusted for the fraction of the year the investor has owned the investment.

³³Some companies prepare a statement of cash flows using the indirect method of reporting operating activities. In that case, the operating section begins with net income and adjustments are made to back out the effects of accrual accounting and calculate cash from operations. For companies with equity method investments, net income will include investment revenue and gains or losses associated with sold investments, but cash from operations should include only cash dividends. As an example, because United's 2013 net income includes \$120,000 of investment revenue from Arjent (\$150,000 portion of income - \$30,000 depreciation adjustment), but United received only \$75,000 of dividends from Arjent, an indirect method statement of cash flows would include an adjustment, often titled "undistributed earnings of investee," that reduces net income by \$45,000 (\$75,000 - \$120,000) when determining cash from operations.

AT&T reported its 2010 investments in affiliated companies for which it exercised significant influence using the equity method as shown in Illustration 12–16.

Illustration 12–16

Other assets	6,705	6,275
Total assets	<u>\$268,488</u>	<u>\$268,312</u>

What If Conditions Change?

Both the investment and retained earnings would be increased by the investor's share of the undistributed earnings in years prior to a change to the equity method.

A CHANGE FROM THE EQUITY METHOD TO ANOTHER METHOD.

When the investor's level of influence changes, it may be necessary to change from the equity method to another method. For example, when Air-France–KLM's ownership interest in WAM (Amadeus) declined from 22% to 15% during the 2011 fiscal year, it changed from accounting for the investment under the equity method to accounting for the investment as AFS.

When this situation happens, *no adjustment* is made to the remaining carrying amount of the investment. Instead, the equity method is simply discontinued and the new method applied from then on. The balance in the investment account when the equity method is discontinued would serve as the new cost basis for writing the investment up or down to fair value on the next set of financial statements.

A CHANGE FROM ANOTHER METHOD TO THE EQUITY METHOD. Sometimes companies change from another method to the equity method. For example, in 2011 the **Mitsubishi UFJ Financial Group** converted its investment in the convertible preferred stock of **Morgan Stanley** into common stock, and as a result started accounting for that investment under the equity method. When a change *to* the equity method is appropriate, the investment account should be retroactively adjusted to the balance that would have existed if the equity method always had been used. As income also would have been different, retained earnings would be adjusted as well. For example, assume it's determined that an investor's share of investee net income, reduced by dividends, was \$4 million during a period when the equity method was not used, but additional purchases of shares cause the equity method to be appropriate now. The following journal entry would record the change (ignoring taxes):

	(\$ in millions)
Investment in equity securities	4
Retained earnings (investment revenue from the equity method)	4

In addition to the adjustment of account balances, financial statements would be restated to the equity method for each year reported in the annual report for comparative purposes. Also, the income effect for years prior to those shown in the comparative statements is reported on the statement of retained earnings as an adjustment to beginning retained earnings of the earliest year reported. A disclosure note also should describe the change. Reporting accounting changes is described in more detail in Chapter 20.

If an Equity Method Investment Is Sold

When an investment reported by the equity method is sold, a gain or loss is recognized if the selling price is more or less than the carrying amount (book value) of the investment. For example, let's continue our illustration and assume United sells its investment in Arjent on January 1, 2014, for \$1,446,000. A journal entry would record a loss as follows:

When an equity method investment is sold, a gain or loss is recognized for the difference between its selling price and its carrying amount.

Cash	1,446,000	
Loss on sale of investments (to balance)	99,000	
Investment in Arjent stock (account balance)		1,545,000

Comparison of Fair Value and the Equity Method

Illustration 12–17 compares accounting for the Arjent investment at fair value (as trading securities or securities available for sale, discussed in Part A of this chapter) and under the equity method (covered in Part B of this chapter):

Illustration 12–17 Comparison of Fair Value and Equity Methods

	Fair Value		Equity Method	
Purchase equity investment	Investment in Arjent	1,500,000	Same as Fair Value Method	
	Cash	1,500,000		
Recognize proportionate share of investee's net income and any related adjustments	No entry		Investment in Arjent	150,000
			Investment revenue	150,000
			Investment revenue	30,000
			Investment in Arjent	30,000
Adjust investment to reflect changes in fair value from \$1,500,000 to \$1,450,000	Net unrealized gain/loss* FV adjustment	50,000 50,000	No entry	
Receive dividend	Cash	75,000	Cash	75,000
	Investment revenue	75,000	Investment in Arjent	75,000
Sell equity investment	Recognize gain or loss:		Cash	1,446,000
	Cash	1,446,000	Loss (to balance)	99,000
	Loss (to balance)	54,000	Investment in Arjent	1,545,000
	Investment in Arjent	1,500,000		
	Reverse out previously recorded unrealized gain or loss that's no longer unrealized (automatically part of next adjustment to fair value):			
	FV adjustment	50,000		
	Net unrealized gain/loss*	50,000		

*Net unrealized holding gains and losses are reported in net income for trading securities and in other comprehensive income for available-for-sale securities.

This side-by-side comparison highlights several aspects of these accounting approaches:

- To record the purchase of an investment, we use identical entries for both approaches.
- The two approaches differ in whether we record investment revenue when dividends are received and whether we recognize unrealized holding gains and losses associated with changes in the fair value of the investment.
- The differences in how the two approaches account for unrealized holding gains and losses result in different book values for the investment at the time the investment is sold, and therefore result in different realized gains or losses when the investment is sold.

- Regardless of approach, the same cash flows occur, and the same total amount of net income is recognized over the life of the investment. In the case of Arjent:
 - **Fair value method:** A total of \$21,000 of net income is recognized over the life of the investment, equal to \$75,000 of dividend revenue minus \$54,000 realized loss on sale of investment.
 - **Equity method:** A total of \$21,000 of net income is recognized over the life of the investment, equal to \$150,000 of United's portion of Arjent's income minus \$30,000 depreciation adjustment and minus \$99,000 realized loss on sale of investment.
 - Thus, the question is not how much total net income is recognized, but *when* that net income is recognized.

Fair Value Option

LO12-7

We learned in Part A of this chapter that GAAP allows a fair value option with respect to investments that otherwise would be accounted for using the held-to-maturity or available-for-sale approaches. Electing the fair value option for those investments is simple—the investments are reclassified as trading securities and accounted for in that manner.

If the fair value option is chosen for investments otherwise accounted for by the equity method, the amount that is reported at fair value is clearly indicated.

Companies also can choose the fair value option for “significant influence” investments that otherwise would be accounted for under the equity method. The company makes an irrevocable decision about whether to elect the fair value option, and can make that election for some investments and not for others. As shown for the fair value method in Illustration 12-17, the company carries the investment at fair value in the balance sheet and includes unrealized gains and losses in earnings.

However, investments that otherwise would be accounted for under the equity method but for which the fair value option has been elected are not reclassified as trading securities. Instead, these investments are shown on their own line in the balance sheet or are combined with equity method investments with the amount at fair value shown parenthetically. Still, they are reported at fair value with changes in fair value reported in earnings as if they were trading securities. Also, all of the disclosures that are required when reporting fair values as well as some of those that would be required under the equity method still must be provided.³⁴

Exactly how a company does the bookkeeping necessary to comply with these broad requirements is up to the company. One alternative is to account for the investment using entries similar to those that would be used to account for trading securities. A second alternative is to record all of the accounting entries during the period under the equity method, and then record a fair value adjustment at the end of the period. Regardless of which alternative the company uses to account for the investment during the period, though, the same fair value is reported in the balance sheet at the end of the period, and the same total amount is shown on the income statement (the fair value adjustment amount plus the investment revenue recorded).

LO12-8

International Financial Reporting Standards

Equity Method. Like U.S. GAAP, international accounting standards require the equity method for use with significant influence investees (which they call “associates”), but there are a few important differences. First, IAS No. 28 governs application of the equity method and requires that the accounting policies of investees be adjusted to correspond to those of the investor when applying the equity method.³⁵ U.S. GAAP has no such requirement.

Second, IFRS does not provide the fair value option for most investments that qualify for the equity method. U.S. GAAP provides the fair value option for all investments that qualify for the equity method.

(continued)

³⁴FASB ASC 825-10-50-28: Financial Instruments—Overall—Disclosure—Fair Value Option (previously “The Fair Value Option for Financial Assets and Financial Liabilities,” *Statement of Financial Accounting Standards No. 159* (Norwalk, Conn.: FASB, 2007), paragraph 18.f).

³⁵“Investments in Associates,” *International Accounting Standard 28* (London, UK: IASCF, 2003), as amended effective January 1, 2011.

(concluded)

Third, IFRS is in transition with respect to a particular type of investment, called a *joint venture*, in which two or more investors have joint control of another entity. Under IAS No. 31 investors can account for a joint venture using either the equity method or a method called “proportionate consolidation,” whereby the investor combines its proportionate share of the investee’s accounts with its own accounts on an item-by-item basis.³⁶ U.S. GAAP requires that the equity method be used to account for joint ventures.

For a quick example of proportionate consolidation, return to Illustration 12–14 but assume that United spends \$2,500,000 to invest in a joint venture called Arjent. With its investment, United owns 50% of Argent, another investor owns the other 50%, and the two investors must agree on decisions concerning Arjent’s activities. Recall that the journal entry to record the investment under the equity method was:

Investment in Arjent stock	2,500,000	
Cash		2,500,000

If United instead accounted for its investment under proportionate consolidation, the effect of the purchase would be disaggregated and assigned to the appropriate accounts in United’s balance sheet:

Buildings (50% × \$2,000,000 fair value	1,000,000	
Land (50% × \$1,000,000 fair value)	500,000	
Other net assets (50% × \$600,000)	300,000	
Goodwill (50% × \$1,400,000)	700,000	
Cash		2,500,000

Note that the net effect under proportionate consolidation is the same as under the equity method, with United adding net assets of \$2,500,000 in exchange for \$2,500,000 of cash. However, under proportionate consolidation the effects are distributed across the balance sheet in the various asset and liability accounts, and in subsequent periods any income effects will appear on various lines in the income statement (“depreciation expense,” for instance) rather than being aggregated and shown as part of investment revenue.

The IASB recently issued *IFRS No. 11*.³⁷ That standard clarifies the definition of a joint venture, and requires that only the equity method be used to account for joint ventures, thus doing away with proportionate consolidation. This change is a move towards convergence with U.S. GAAP, which likewise requires the equity method for these arrangements. Firms reporting under IFRS must comply with *IFRS No. 11* for fiscal years beginning after January 1, 2013, and earlier adoption is permitted.

Concept Review Exercise

Delta Apparatus bought 40% of Clay Crating Corp.’s outstanding common shares on January 2, 2013, for \$540 million. The carrying amount of Clay Crating’s net assets (shareholders’ equity) at the purchase date totaled \$900 million. Book values and fair values were the same for all financial statement items except for inventory and buildings, for which fair values exceeded book values by \$25 million and \$225 million, respectively. All inventory on hand at the acquisition date was sold during 2013. The buildings have average remaining useful lives of 18 years. During 2013, Clay Crating reported net income of \$220 million and paid an \$80 million cash dividend.

THE EQUITY METHOD

³⁶“Interests in Joint Ventures,” *International Accounting Standard 31* (London, UK: IASCF, 2003), as amended effective January 1, 2011.

³⁷“Joint Arrangements” *International Financial Reporting Standard No. 11* (London, UK: IASCF, 2011).

Required:

1. Prepare the appropriate journal entries during 2013 for the investment.
2. Determine the amounts relating to the investment that Delta Apparatus should report in the 2013 financial statements:
 - a. As an investment in the balance sheet.
 - b. As investment revenue in the income statement.
 - c. As investing and/or operating activities in the statement of cash flows (direct method).

Solution

1. Prepare the appropriate journal entries during 2013 for the investment.

	(\$ in millions)	
Purchase		
Investment in Clay Crating shares	540	
Cash		540
Net income		
Investment in Clay Crating shares (40% × \$220 million)	88	
Investment revenue		88
Dividends		
Cash (40% × \$80 million)	32	
Investment in Clay Crating shares		32
Inventory		
Investment revenue (as if 2013 cost of goods sold is higher because beginning inventory was adjusted to fair value)	10	
Investment in Clay Crating shares (40% × \$25 million)		10
Buildings		
Investment revenue ((\$225 million × 40%) ÷ 18 years)	5	
Investment in Clay Crating shares		5

	Investee Net Assets	Net Assets Purchased	Difference Attributed to
Cost		\$540	
Fair value	\$1,150 [†] × 40% =	\$460	Goodwill: \$80 [difference]
Book value	\$ 900 × 40% =	\$360	Undervaluation of inventory \$10 [\$25 × 40%] Undervaluation of buildings \$90 [\$225 × 40%]

[†](\$900 + 25 + 225)

2. Determine the amounts that Delta Apparatus should report in the 2013 financial statements:
 - a. As an investment in the balance sheet:

Investment in Clay Crating Shares

(\$ in millions)	
Cost	540
Share of income	88
	32 Dividends
	10 Cost of goods sold adjustment for inventory
	5 Depreciation adjustment for buildings
Balance	<u>581</u>

- b. As investment revenue in the income statement:

$$\begin{array}{r} \$88 \text{ million} \\ \text{(share of income)} \end{array} - \begin{array}{r} [\$10 + 5] \text{ million} \\ \text{(adjustments)} \end{array} = \$73 \text{ million}$$

- c. In the statement of cash flows (direct method):
- Investing activities: \$540 million cash outflow
 - Operating activities: \$32 million cash inflow

Decision Makers' Perspective

The various approaches used to account for investments can have very different effects on an investor's income statement and balance sheet. Consequently, it's critical that both managers and external decision makers clearly understand those effects and make decisions accordingly.

To highlight key considerations, suppose that, on January 1, 2013, BigCo spent \$5,000,000 to purchase 20% of TechStart, a small start-up company that is developing products that apply an exciting new technology. The purchase price included \$500,000 for BigCo's share of the difference between the fair value and book value of TechStart's inventory, all of which was then sold in 2013. TechStart paid a small dividend of \$100,000 in 2013, so BigCo received 20% of it, or \$20,000. TechStart incurs and expenses large amounts of research and development costs as it develops new technology, so it had a net loss in 2013 of \$1,000,000. Yet, the future income-generating potential of the products that TechStart is developing has made TechStart a hot stock, and the fair value of BigCo's 20% investment increased to \$5,500,000 by the end of 2013. Illustration 12–18 shows how BigCo's investment would be accounted for under three alternative approaches.

Illustration 12–18

Comparison of Methods Used to Account for Investments

	Trading Security	Available-for-Sale	Equity Method
Share of investee net income ^a	–0–	–0–	(\$ 700,000)
Dividend income ^b	\$ 20,000	\$ 20,000	–0–
Increase in investee's fair value ^c	\$ 500,000	–0–	–0–
Total 2013 effect on net income	\$ 520,000	\$ 20,000	(\$ 700,000)
12/31/2013 investment book value ^d	\$5,500,000	\$5,500,000	\$4,280,000

^aNot recognized for trading securities or available-for-sale securities. Under the equity method, investment revenue (loss) is $20\% \times (\$1,000,000 \text{ loss}) + (\$500,000) \text{ additional expense for fair value inventory adjustment} = (\$700,000)$.

^bNot recognized for equity method investments. Instead, dividends reduce book value of the investment.

^cRecognized in net income for trading securities, in other comprehensive income for available-for-sale securities, and not recognized for equity method investments.

^dEquals fair value for trading securities and available-for-sale securities. Equals initial cost plus income (or minus loss) and minus dividends for equity method.

The accounting method does not affect cash flows, but it has a big effect on net income in current and future periods. Also, because the accounting method affects the book value of the investment, it affects gain or loss on sale of that investment. In our example, if BigCo sold its TechStart investment at the beginning of 2014 for \$5,000,000, it would recognize a \$720,000 gain on sale if the investment was accounted for under the equity method, but a \$500,000 loss if it was accounted for as a trading security or available-for-sale security. All of these income effects are predictable, but only if a user understands the relevant accounting methods and the fact that those methods all end up recognizing the same amount of total gain or loss over the life of an investment. Nevertheless, sometimes even experienced analysts get confused.³⁸

The way an investment is accounted for affects net income, investment book value, and the amount of gain or loss recognized in the future when the investment is sold.

³⁸For example, in 2000, analysts were accustomed to including Intel's investment gains as ordinary income, because those amounts were not particularly large and could be viewed as part of Intel's business. However, in the 2nd quarter of 2000, Intel recorded a net \$2.1 billion gain from selling securities in its available-for-sale portfolio. Analysts were surprised and confused, with some eliminating the gain from their earnings estimates but others including them ("Intel Says Net Jumped 79%; Analysts Upset," *The Wall Street Journal*, July 19, 2000, p. A3).

Managers may structure investments to include only the amount of equity that qualifies for their preferred accounting approach.

If investments are not accounted for at fair value, their sale can be timed to recognize gains or losses in particular accounting periods.

A concern with fair value accounting is that management has much discretion over fair values, and may not be able to estimate fair values accurately.

One strength of the equity method is that it prevents the income manipulation that would be possible if a company recognized income when it received dividends and could significantly influence an investee to pay dividends whenever the company needed an income boost. Remember, under the equity method dividends aren't income, but rather reduce the book value of the investment. Nevertheless, users still need to realize that managers may choose and apply methods in ways that make their company appear most attractive. For example, research suggests that investments sometimes are structured to avoid crossing the 20 to 25 percent threshold that typically requires using the equity method,³⁹ presumably to avoid the negative effect on earnings that comes from having to recognize the investor's share of investee losses and other income adjustments. Also, a company might smooth income by timing the sale of available-for-sale or equity method investments to realize gains in otherwise poor periods and realize losses in otherwise good periods. While consistent with GAAP, mixing these sorts of one-time gains and losses with operating income could encourage users to think that operating income is less volatile than it really is.

Of particular concern is the potential for inaccurate fair value estimates. Even if management is trying to provide the most accurate fair value estimate possible, there is much potential for error, particularly when making estimates at level 3 of the fair value hierarchy. Also, a company conceivably could use the discretion inherent in fair value estimation to manage earnings with respect to trading securities or other investments for which they have elected the fair value option. Given this potential for error and bias, it's not surprising that investors are nervous about the accuracy of fair value estimates. To address these sorts of concerns, the FASB has required extensive note disclosure about the quality of inputs associated with estimates of fair value, but financial statement users need to know to look for those disclosures and still must understand that they cannot assess fully the accuracy of fair value estimates. ●

Financial Instruments and Investment Derivatives

A **financial instrument** is defined as:

- Cash,
- Evidence of an *ownership interest* in an entity,⁴⁰
- A contract that (a) imposes on one entity an obligation to *deliver* cash (say accounts payable) or another financial instrument and (b) conveys to the second entity a right to *receive* cash (say accounts receivable) or another financial instrument, or
- A contract that (a) imposes on one entity an obligation to *exchange* financial instruments on potentially unfavorable terms (say the issuer of a stock option) and (b) conveys to a second entity a right to *exchange* other financial instruments on potentially favorable terms (say the holder of a stock option).⁴¹

Derivatives are financial instruments that “derive” their values from some other security or index.

A complex class of financial instruments exists in financial markets in response to the desire of firms to manage risks. In fact, these financial instruments would not exist in their own right, but have been created solely to hedge against risks created by other financial instruments or by transactions that have yet to occur but are anticipated. Financial futures, interest rate swaps, forward contracts, and options have become commonplace. These financial instruments often are called **derivatives** because they “derive” their values or contractually required cash flows from some other security or index. For instance, an option to buy an asset in the future at a preset price has a value that is dependent on, or derived from, the value of the underlying asset. Their rapid acceptance as indispensable components of the corporate capital structure has left the accounting profession scrambling to keep pace.

The urgency to establish accounting standards for financial instruments has been accelerated by headline stories in the financial press reporting multimillion-dollar losses on exotic

³⁹E. E. Comiskey and C. W. Mulford, “Investment Decisions and the Equity Accounting Standard,” *The Accounting Review* 61, no. 3 (July 1986), pp. 519–525.

⁴⁰This category includes not just shares of stock, but also partnership agreements and stock options.

⁴¹FASB ASC Master Glossary: Financial Instrument (previously “Disclosure of Information about Financial Instruments with Off-Balance-Sheet Risk and Financial Instruments with Concentrations of Credit Risk,” *Statement of Financial Accounting Standards No. 105* (Stamford, Conn.: FASB, 1990), par. 6).

derivatives by **Enron Corporation**, **Procter & Gamble**, **Orange County** (California), **Piper Jaffrey**, and **Gibson Greetings**, to mention a few. The headlines have tended to focus attention on the misuse of these financial instruments rather than their legitimate use in managing risk.

The FASB has been involved since 1986 in a project to provide a consistent framework for resolving financial instrument accounting issues, including those related to derivatives and other “off-balance-sheet” instruments. The financial instruments project has three separate but related parts: disclosure, recognition and measurement, and distinguishing between liabilities and equities. Unfortunately, issues to be resolved are extremely complex and will likely require several more years to resolve. To help fill the disclosure gap in the meantime, the FASB has offered a series of temporary, “patchwork” solutions. These are primarily in the form of additional disclosures for financial instruments. More recently, the FASB has tackled the issues of recognition and measurement. We discuss these requirements in Appendix A after we’ve spent some time with the measurement issues necessary to understand accounting for derivatives.

The FASB’s ongoing financial instruments project is expected to lead to a consistent framework for accounting for all financial instruments.

Financial Reporting Case Solution

- 1. How should you respond? Why are held-to-maturity securities treated differently from other investment securities?** (p. 656) You should explain that if an investor has the positive intent and ability to hold the securities to maturity, investments in debt securities are classified as held-to-maturity and reported at amortized cost in the balance sheet. Increases and decreases in fair value are not reported in the financial statements. The reasoning is that the changes are not as relevant to an investor who will hold a security to its maturity regardless of those changes. Changes in the fair value between the time a debt security is acquired and the day it matures to a prearranged maturity value aren’t as important if sale before maturity isn’t an alternative.⁴²
- 2. Why are unrealized gains and losses on trading securities reported in the income statement?** (p. 660) Trading securities are acquired for the purpose of profiting from short-term market price changes, so gains and losses from holding these securities while prices change are often viewed as relevant performance measures that should be included in net income.
- 3. Why are unrealized gains and losses on available-for-sale securities not reported in the income statement, but instead are in other comprehensive income, and then shown in accumulated other comprehensive income (AOCI) on the balance sheet?** (p. 669) Available-for-sale securities are not acquired for the purpose of profiting from short-term market price changes, so gains and losses from holding these securities while prices change are viewed as insufficiently relevant performance measures to be included in net income. Instead, those amounts are shown in other comprehensive income (OCI) and accumulated in an owners’ equity account (AOCI). It’s likely that holding gains in some periods will be offset by holding losses in other periods. When the investment is sold, the net amount of gain or loss is removed from AOCI and recognized in net income.
- 4. Explain why Coke accounts for some of its investments by the equity method and what that means.** (p. 681) When an investor does not have “control,” but still is able to exercise *significant influence* over the operating and financial policies of the investee, the investment should be accounted for by the equity method. Apparently Coke owns between 20% and 50% of the voting shares of some of the companies it invests in. By the equity method, Coke recognizes investment income in an amount equal to its percentage share of the net income earned by those companies, instead of the amount of that net income it receives as cash dividends. The rationale is that as the investee earns additional net assets, Coke’s share of those net assets increases. ●

⁴²Interest rate futures were traded for the first time in 1975 on the Chicago Board of Trade. Interest rate swaps were invented in the early 1980s. They now comprise over 70% of derivatives in use.

The Bottom Line

- **LO12-1** When an investor lacks significant influence over the operating and financial policies of the investee, its investment is classified for reporting purposes as held-to-maturity (HTM), available-for-sale (AFS), or trading securities (TS). If an investor has the positive intent and ability to hold the securities to maturity, investments in debt securities are classified as HTM and reported at amortized cost in the balance sheet. These investments are recorded at cost, and holding gains or losses from fair value changes are ignored. (p. 656)
- **LO12-2** Investments in debt or equity securities acquired principally for the purpose of selling them in the near term are classified as trading securities. They are reported at their fair values. Holding gains and losses for trading securities are included in earnings. (p. 659)
- **LO12-3** Investments in debt and equity securities that don't fit the definitions of the other reporting categories are classified as available-for-sale. They are reported at their fair values. Holding gains and losses from retaining securities during periods of price change are not included in the determination of income for the period; they are reported as a separate component of shareholders' equity. (p. 663)
- **LO12-4** When an investor is able to exercise significant influence over the operating and financial policies of the investee, the investment should be accounted for by the equity method. Usually an investor is presumed to have the ability to exercise significant influence when it owns between 20% and 50% of the investee's voting shares. (p. 680)
- **LO12-5** By the equity method, the investor recognizes investment income equal to its percentage share (based on share ownership) of the net income earned by the investee, rather than the portion of that net income received as cash dividends. The investment account is adjusted for the investor's percentage share of net income or loss reported by the investee. When the investor actually receives dividends, the investment account is reduced accordingly. (p. 680)
- **LO12-6** When the cost of an investment exceeds the book value of the underlying net assets acquired, both the investment account and investment revenue are adjusted for differences between net income reported by the investee and what that amount would have been if consolidation procedures had been followed. (p. 682)
- **LO12-7** The fair value option allows companies to account for most financial assets and liabilities in the same way they account for trading securities, with unrealized holding gains and losses included in net income and the investment carried at fair value in the balance sheet. For HTM and AFS investments, this simply requires reclassifying those investments as trading securities. For equity method investments, this requires clearly identifying the portion of those investments classified in the significant-influence category that is being accounted for at fair value. In all cases, additional disclosures are required that indicate the quality of inputs used to calculate fair values. (pp. 672 and 688)
- **LO12-8** U.S. GAAP and IFRS are similar in most respects concerning how they account for investments, but accounting in this area is being overhauled by both the IASB and the FASB, and IFRS companies may report under two different standards (either *IAS No. 39* or *IFRS No. 9*) for the 2009–2014 time period. IFRS allows proportionate consolidation as well as the equity method to account for joint ventures, although the option to use proportionate consolidation will be eliminated soon. IFRS is more restrictive in terms of the circumstances in which the fair-value option can be used. Finally, as discussed in Appendix 12B, IFRS recognizes different amounts of OTT impairment for HTM and AFS debt investments, and allows recovery of OTT impairments for debt investments (but not equity investments). (pp. 672, 673, 674, 679, 688, and 701) ●

APPENDIX 12A

Other Investments (Special Purpose Funds, Investments in Life Insurance Policies)

Special Purpose Funds

Some special purpose funds—like petty cash—are current assets.

It's often convenient for companies to set aside money to be used for specific purposes. You learned about one such special purpose fund in Chapter 7 when we discussed petty cash funds. Recall that a petty cash fund is money set aside to conveniently make small expenditures using currency rather than having to follow the time-consuming, formal procedures

normally used to process checks. Similar funds sometimes are used to pay interest, payroll, or other short-term needs. Like petty cash, these short-term special purpose funds are reported as current assets.

Special purpose funds also are sometimes established to serve longer-term needs. It's common, for instance, to periodically set aside cash into a fund designated to repay bonds and other long-term debt. Such funds usually accumulate cash over the debt's term to maturity and are composed of the company's periodic contributions plus interest or dividends from investing the money in various return-generating investments. In fact, some debt contracts require the borrower to establish such a fund to repay the debt. In similar fashion, management might voluntarily choose to establish a fund to accumulate money to expand facilities, provide for unexpected losses, buy back shares of stock, or any other special purpose that might benefit from an accumulation of funds. Of course, funds that won't be used within the upcoming operating cycle are noncurrent assets. They typically are reported as part of investments. The same criteria for classifying securities into reporting categories that we discussed previously should be used to classify securities in which funds are invested. Any investment revenue from these funds is reported as such on the income statement.

A special purpose fund can be established for virtually any purpose.

Noncurrent special purpose funds are reported within the category investments and funds.

Investments in Life Insurance Policies

Companies frequently buy life insurance policies on the lives of their key officers. Under normal circumstances, the company pays the premium for the policy and, as beneficiary, receives the proceeds when the officer dies. Of course, the objective is to compensate the company for the untimely loss of a valuable resource in the event the officer dies. However, some types of life insurance policies can be surrendered while the insured is still alive in exchange for a determinable amount of money, called the **cash surrender value**. In effect, a portion of each premium payment is not used by the insurance company to pay for life insurance coverage, but instead is invested on behalf of the insured company in a fixed-income investment. Accordingly, the cash surrender value increases each year by the portion of premiums invested plus interest on the previous amount invested. This is simply a characteristic of whole life insurance, unlike term insurance that has lower premiums and that provides death benefits only.

Certain life insurance policies can be surrendered while the insured is still alive in exchange for its cash surrender value.

From an accounting standpoint, the periodic insurance premium should not be expensed in its entirety. Rather, part of each premium payment, the investment portion, is recorded as an asset. Illustration 12A-1 provides an example. ●

Part of each insurance premium represents an increase in the cash surrender value.

Several years ago, American Capital acquired a \$1 million insurance policy on the life of its chief executive officer, naming American Capital as beneficiary. Annual premiums are \$18,000, payable at the beginning of each year. In 2013, the cash surrender value of the policy increased according to the contract from \$5,000 to \$7,000. The CEO died at the end of 2013.

Insurance expense (difference)	16,000	
Cash surrender value of life insurance (\$7,000 – 5,000)	2,000	
Cash (2013 premium)		18,000

To record insurance expense and the increase in the investment.

The cash surrender value is considered to be a noncurrent investment and would be reported in the investments and funds section of the balance sheet. Of course when the insured officer dies, the corporation receives the death benefit of the insurance policy, and the cash surrender value ceases to exist because canceling the policy no longer is an option. The corporation recognizes a gain for the amount of the death benefit less the cash surrender value:

Cash (death benefit)	1,000,000	
Cash surrender value of life insurance (balance)		7,000
Gain on life insurance settlement (difference)		993,000

To record the proceeds at death.

Illustration 12A-1

Cash Surrender Value

Part of the annual premium represents a build-up in the cash surrender value.

When the death benefit is paid, the cash surrender value becomes null and void.

APPENDIX 12B

Impairment of Investments

An “other-than-temporary” impairment loss is recognized in net income even though the security hasn’t been sold.

We saw in Chapter 11 that intangible assets and property, plant, and equipment are subject to impairment losses that reduce earnings if a decline in fair value indicates that the assets’ value has been impaired. The same is true for investments. As indicated in Chapter 12, if the fair value of an investment declines to a level below cost, and that decline is not viewed as temporary, companies typically have to recognize an other-than-temporary (OTT) impairment loss in earnings. We don’t need to worry about OTT impairments for trading securities or other investments for which a company has chosen the fair value option, because all changes in the fair values of those investments (whether temporary or OTT) always are recognized in earnings. However, that is not the case for HTM and AFS investments. Declines in fair value typically are ignored for HTM investments and recorded in OCI for AFS investments. Therefore, companies need to evaluate HTM and AFS investments to determine whether an OTT impairment loss has occurred.

We use a three-step process to determine whether an OTT impairment loss must be recognized and how that loss is to be measured and recorded: (1) determine if the investment is impaired, (2) determine whether any impairment is OTT, (3) determine where to report the OTT impairment.⁴³ Illustration 12B–1 summarizes those steps. As you can see, the specifics of accounting for OTT impairments depend on whether the investment is in equity or debt, so we’ll discuss each in turn.

Illustration 12B–1

Other-Than-Temporary Impairment of Equity Investments and Debt Investments Compared

	Equity Investment	Debt Investment
Is the investment impaired?	Yes, if the fair value is less than the investment’s cost	Same (yes, if the fair value is less than the investment’s amortized cost)
Is any of the impairment other-than-temporary (OTT)?	Yes, if the investor cannot assert that it has the intent and ability to hold the investment until fair value recovers	Yes, if the investor (a) intends to sell the investment, (b) believes it is “more likely than not” that the investor will be required to sell the investment prior to recovering the amortized cost of the investment, less any current-period credit loss, or (c) has incurred credit losses
Where is the OTT impairment reported?	In net income	In net income, if the investor intends to sell the security or is “more likely than not” to be required to sell it before recovery of its amortized cost. Otherwise: <ul style="list-style-type: none"> • Credit loss portion in net income. (Credit loss = amortized cost – PV of expected cash flows); • Noncredit loss portion in OCI (Noncredit loss portion = total impairment – credit loss)

Impairments of Equity Investments

Recall that OTT impairments don’t apply to trading securities and that equity investments cannot be classified as held-to-maturity. Therefore, when we consider OTT impairments of equity investments, we are looking at available-for-sale investments. Here are the three steps:

1. **Is the investment impaired?** Impairment occurs when fair value has declined to a level below the investment’s cost (which equals the investment’s purchase price less previously recognized impairments and other adjustments).

⁴³FASB ASC 320–10–35: Investments—Overall—Subsequent Measurement (originally “The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments,” FASB Staff Position No. 115-1 and 124-1 (Norwalk, Conn.: FASB, November 3, 2005)).

2. **Is any impairment other-than-temporary (OTT)?** The impairment is temporary if the investing company can assert that it has the intent and ability to hold the investment until fair value recovers to a level that once again exceeds cost. That assertion is more difficult to defend if the expected recovery period is relatively long, the amount of impairment is large, or the financial condition of the investor or the issuer of the equity is weak.⁴⁴
3. **Where is the OTT impairment reported?** A temporary impairment of an equity investment is simply accounted for as an unrealized loss in OCI, as demonstrated previously for fair value declines in AFS securities in Illustration 12–6. However, if the impairment is viewed as OTT, the investor recognizes the loss in the income statement, just as if the loss had been realized by selling the investment. Also, because the equity investment is classified as AFS, recognizing an OTT impairment likely will involve reclassifying amounts out of OCI that were recorded previously as unrealized gains or losses.

Equity impairments are OTT if the investor cannot assert it has the intent and ability to hold the investment until fair value recovers.

If an equity impairment is OTT:

- Investment is written down to fair value
- All of the OTT impairment loss is included in net income

Illustration 12B–2 provides a description of the OTT equity impairment process from **Bank of America**'s recent annual report.

Note 1 (in part): Securities

All AFS marketable equity securities are carried at fair value with net unrealized gains and losses included in accumulated OCI on an after-tax basis. If there is an other-than-temporary decline in the fair value of any individual AFS marketable equity security, the Corporation reclassifies the associated net unrealized loss out of accumulated OCI with a corresponding charge to equity investment income.

Illustration 12B–2

Disclosure about OTT Impairments of Equity Investments—Bank of America

Real World Financials

For an example of an OTT impairment of an equity investment, Illustration 12B–3 modifies a portion of Illustration 12–6:

United Intergroup, Inc., buys and sells both debt and equity securities of other companies as investments. United's fiscal year-end is December 31. The following events during 2013 and 2014 pertain to the investment portfolio.

Purchase Investment

July 1, 2013 Purchased \$1,000,000 of Bendac common stock.

Adjust Investment to Fair Value

December 31, 2013 Valued the Bendac stock at \$990,000 and determined that the decline in FV should *not* be treated as an OTT impairment.

December 31, 2014 Valued the Bendac stock at \$985,000 and determined that the decline in FV **should be treated as an OTT impairment.**

The journal entries to record the adjustments of the Bendac stock investment to fair value are:

December 31, 2013

Net unrealized holding gains and losses—OCI	10,000	
Fair value adjustment		10,000

December 31, 2014

Other-than-temporary impairment loss—I/S	15,000	
Investment in Bendac		15,000
Fair value adjustment	10,000	
Net unrealized holding gains and losses—OCI		10,000

Illustration 12B–3

Other-Than-Temporary (OTT) Impairment of an Equity Investment

The first 2014 journal entry in Illustration 12B–3 reduces the Bendac investment to reflect the OTT impairment and recognizes the entire \$15,000 in 2014 earnings. United adjusts the Bendac investment directly rather than using a fair value adjustment account because the OTT impairment cannot be recovered. The second 2014 journal entry reclassifies any previously

⁴⁴FASB ASC 320–10–S99: Investments—Overall—SEC Materials (previously “Other-Than-Temporary Impairment of Certain Investments in Equity Securities,” *Staff Accounting Bulletin Topic 5.M*).

recognized unrealized losses associated with the investment, the same as if the investment had been sold. In 2013 United debited OCI and credited the fair value adjustment for \$10,000 to reflect the decline in Bendac's fair value to \$990,000, so the second 2014 journal entry reverses the 2013 entry to remove those amounts.

Impairments of Debt Investments

As with equity investments, a three-step process is used to determine whether an impairment loss on debt investments must be recognized and how that loss is to be measured and recorded.⁴⁵ Debt investments can be classified either as HTM or AFS. We'll start with the assumption that the investment is AFS, and then indicate what is different if it is HTM.

Debt impairments can be divided into credit losses and noncredit losses.

Credit losses are due to anticipated reductions in cash flows from the debt investment; all others are noncredit losses.

Debt impairments are OTT if the investor:

- a. intends to sell the investment, or
- b. believes it is more likely than not that they will sell the investment prior to fair value recovery, or
- c. has suffered a credit loss.

If a debt impairment is OTT:

- Investment is written down to fair value.
- If OTT because of (a) or (b), all of the OTT impairment loss is recognized in net income.
- If OTT because of (c), only the credit loss is recognized in net income; noncredit loss in OCI.

1. **Is the investment impaired?** As with equity, impairment of a debt investment occurs when fair value has declined to a level below amortized cost. For debt investments, though, it also may be necessary to split the total amount of impairment into credit losses and noncredit losses. *Credit losses* reflect expected reductions in future cash flows from anticipated defaults on interest or principal payments. We calculate credit losses as the difference between the amortized cost of the debt and the *present value of the cash flows* expected to be collected, using a discount rate equal to the effective interest rate that existed at the date the investment was acquired. *Noncredit losses* capture other reductions in fair value such as those due to changes in general economic conditions.

2. **Is any impairment other-than-temporary (OTT)?** We view a debt impairment as OTT if one of three conditions holds:

- a. The investor intends to sell the investment,
- b. The investor believes it is "more likely than not" that the investor will be required to sell the investment prior to recovering the amortized cost of the investment less any current-period credit losses, or
- c. The investor determines that a credit loss exists on the investment.

The rationale for 2a and 2b is that an impairment is OTT if the investor is likely to sell the investment before fair value can recover. The rationale for 2c is that an impairment is OTT if the company believes the cash flows provided by the investment won't be enough to allow it to recover the amortized cost of the investment over the life of the investment.

3. **Where is the OTT impairment reported?** If the debt impairment is considered OTT, the investor always writes the investment down to fair value in the balance sheet, but the amount included in net income or other comprehensive income depends on the reason the impairment is considered OTT:

- a. If the impairment is considered OTT due to reasons 2a or 2b above, the entire impairment loss is included in net income, because it is likely that the company will incur a loss equal to the entire difference between fair value and amortized cost.
- b. If the impairment is considered OTT due to reason 2c above, *only the credit loss* component is included in net income, as that amount of amortized cost is unlikely to be recovered. Any noncredit loss component reduces OCI, similar to how we normally account for unrealized gains and losses on AFS investments.

Also, if the debt investment is classified as AFS, recognizing an OTT impairment may involve reclassifying amounts out of OCI that were recorded previously as unrealized gains or losses.

Illustration 12B-4 provides a description of the OTT debt impairment process from **Bank of America's** recent annual report.

For an example of an OTT impairment for a debt investment, we modify our Bendac example again in Illustration 12B-5. In both Cases 1 and 2 of Illustration 12B-5, the amortized cost of the investment is reduced by the amount of OTT impairment that is recognized in earnings. United achieves this by crediting a contra-asset, discount on bond investment,

⁴⁵FASB ASC 320-10-35: Investments—Overall—Subsequent Measurement (previously "Recognition and Presentation of Other-Than-Temporary Impairments," FASB Staff Position No. 115-2 and 124-2 (Norwalk, Conn.: FASB April 9, 2009)).

Note 1 (in part): Securities

The Corporation regularly evaluates each AFS and HTM debt security where the value has declined below amortized cost to assess whether the decline in fair value is other-than-temporary. In determining whether an impairment is other-than-temporary, the Corporation considers the severity and duration of the decline in fair value, the length of time expected for recovery, the financial condition of the issuer, and other qualitative factors, as well as whether the Corporation either plans to sell the security or it is more likely than not that it will be required to sell the security before recovery of its amortized cost. Beginning in 2009, under new accounting guidance for impairments of debt securities that are deemed to be other-than-temporary, the credit component of an other-than-temporary impairment (OTTI) loss is recognized in earnings and the non-credit component is recognized in accumulated OCI in situations where the Corporation does not intend to sell the security and it is not more-likely-than-not that the Corporation will be required to sell the security prior to recovery. If there is an OTTI on any individual security classified as HTM, the Corporation writes down the security to fair value with a corresponding charge to other income (loss).

Illustration 12B-4

Disclosure about OTT Impairments of Debt Investments—Bank of America

Real World Financials

which United amortizes over the remaining life of the debt the same way it would if it had initially purchased the debt at that discounted amount. In Case 2, the *noncredit loss* component of the impairment is recognized in OCI, the same way it would be if it were viewed as an unrealized loss under normal accounting for fair value declines of AFS investments. In both cases the carrying value of the debt becomes \$950,000, reduced by the entire amount of the OTT impairment. In Case 1 this occurs via the \$50,000 discount, and in Case 2 via the combination of the \$30,000 discount and \$20,000 fair value adjustment.

In both cases all of the OTT impairment is reflected in comprehensive income. The question is how much is reflected in net income as opposed to OCI. To clarify this distinction, GAAP requires that the entire OTT impairment be shown in the income statement, and then the portion attributed to noncredit losses backed out, such that only the credit loss portion reduces net income. That way, financial statement users are aware of the total amount as

United Intergroup, Inc., buys and sells both debt and equity securities of other companies as investments, and classifies these investments as AFS. United's fiscal year-end is December 31. The following events occurred during 2014.

Purchase Investment

July 1, 2014 Purchased \$1,000,000 of Bendac bonds, maturing on December 31, 2019.

Adjust Investment to Fair Value

December 31, 2014 Valued the Bendac bonds at \$950,000. Of the \$50,000 impairment, \$30,000 is credit loss and \$20,000 is noncredit loss.

We'll consider two cases:

- **Case 1:** United either plans to sell the investment or believes it is more likely than not that it will have to sell the investment before fair value recovers (such that the impairment is viewed as OTT under 2a or 2b above).
- **Case 2:** United does *not* intend to sell the investment and does *not* believe it is more likely than not that it will have to sell the Bendac investment before fair value recovers, but estimates that \$30,000 of credit losses have occurred (such that the impairment is viewed as OTT under 2c above).

	Case 1	Case 2
December 31, 2014		
OTT impairment loss—I/S	50,000	30,000
Discount on bond investment	50,000	30,000
OTT impairment loss—OCI		20,000
Fair value adjustment—Noncredit loss		20,000

Note: if United had included unrealized gains or losses for this investment in OCI in a prior period, it also would have to make a reclassification entry, as demonstrated for an equity OTT impairment in Illustration 12B-3.

Illustration 12B-5

Other-than-temporary Impairment of Debt Investment

well as the amount included in net income. Continuing Illustration 12B–5, income statement presentation of the two cases would be as follows:

Income Statement Presentation, December 31, 2014	Case 1	Case 2
<i>OTT impairment of AFS investments:</i>		
Total OTT impairment loss	\$50,000	\$50,000
Less: portion recognized in OCI	—0—	20,000
Net impairment loss recognized in net income	\$50,000	\$30,000

Additional Consideration

A Little Credit Loss Goes a Long Way

Here's a twist: Consider Case 2 from Illustration 12B–5, in which United does *not* intend to sell its debt investment and does *not* consider it more likely than not that it will have to sell the investment prior to recovering fair value. According to GAAP, if the entire \$50,000 impairment is due to noncredit loss, there is no credit loss, so the impairment is not viewed as OTT and does not show up on the income statement. On the other hand, if any of the impairment is due to credit loss, the impairment is viewed as OTT. Therefore, whether the impairment is OTT depends on whether it includes a credit loss, and a small amount of credit loss can matter a lot, as it makes the company show the entire impairment loss as OTT in the income statement and then back out the noncredit-loss portion to include in OCI.

What if a debt investment is classified as HTM rather than AFS? Most of the accounting is the same, but an important difference relates to the recognition of *noncredit* losses in OCI. HTM investments normally don't include unrealized gains and losses in OCI, so these won't routinely be adjusted up or down over time. Therefore, for HTM investments, GAAP requires that companies gradually reverse any amounts included in OCI over the remaining life of the investment, debiting the fair value adjustment and crediting OCI each period.

After an OTT impairment is recorded, the usual treatment of unrealized gains or losses is resumed. Changes in fair value are reported in OCI for AFS investments, and are ignored for HTM investments. Reversals of impairments of debt and equity securities are prohibited under U.S. GAAP (except, as indicated in Chapter 7, a debt investment is classified as a note or loan receivable). ●

Additional Consideration

OTT Impairments: An Ongoing Debate

Other-than-temporary impairments of debt instruments previously were accounted for the same as OTT impairments of equity instruments; that is, the entire impairment was shown in net income if it was viewed as OTT. Then the recent credit crisis hit, financial institutions started having to recognize huge OTT impairments for their investments, and impairment accounting was blamed by many for worsening the crisis. Critics argued that it is inappropriate to recognize impairment losses in earnings when all of the cash flows associated with an investment still are anticipated to be collected despite current fair value declines. Proponents argued that fair value declines still are relevant and that critics were simply looking for an accounting fix to reduce their losses. This disagreement came to a head in Spring of 2009, when the FASB responded to pressure from Congress by changing OTT impairment accounting to provide more latitude and avoid including noncredit losses in net income. Firms were allowed to use that approach for OTT impairments occurring in the first quarter of 2009. This had a large effect for some firms, for example, increasing the pretax earnings of twenty banks and other financial institutions by an estimated \$4.9 billion in that quarter.⁴⁶

⁴⁶Credit Suisse, *Focusing on Fair Value: An Update*, June 4, 2009.

International Financial Reporting Standards

● LO12-8

Accounting for OTT impairments. Under IAS No. 39, companies recognize OTT impairments if there exists objective evidence of impairment. Objective evidence must relate to one or more events occurring after initial recognition of the asset that affect the future cash flows that are going to be generated by the asset. Examples of objective evidence include significant financial difficulty of the issuer and default on interest or principal payments. For an equity security, a significant or prolonged decline in fair value below cost is viewed as objective evidence.

Calculation of the amount of impairment differs depending on the classification of an investment. For an HTM investment, the impairment is calculated as the difference between the amortized cost of the asset and the present value of expected future cash flows, estimated at the asset's original effective rate. So, the impairment is essentially equal to the amount that would be considered a credit loss in U.S. GAAP. For an AFS investment (debt or equity), the impairment is calculated as the difference between amortized cost and fair value. Thus, under IFRS, an OTT impairment for a debt investment is likely to be larger if it is classified as AFS than if it is classified as HTM, because it includes the entire decline in fair value if classified as AFS but only the credit loss if classified as HTM. Under IFRS, all OTT impairments are recognized in earnings (there is no equivalent to recognizing in OCI any non-credit losses on debt investments).

IFRS allows recoveries of impairments to be recognized in earnings for debt investments, but not for equity investments. This is a difference from U.S. GAAP, which does not allow recoveries of any OTT impairment of equity or debt (other than debt that is classified as a loan).

To illustrate, let's modify our Bendac debt example from Illustration 12B-2 to assume amortized cost of €1,000,000 and fair value of €950,000, with the €50,000 impairment consisting of €30,000 of credit losses and €20,000 of noncredit losses. If the investment was classified as AFS, IFRS would recognize a €50,000 OTT impairment:

Other-than-temporary impairment loss—I/S	50,000	
Investment in Bendac		50,000

If Bendac had recognized any cumulative unrealized losses in AOCI associated with these investments, it would also need to reclassify those amounts out of AOCI and recognize them in the income statement by debiting the OTT impairment loss and crediting OCI.

If the investment had been classified as HTM rather than AFS, IFRS would recognize an OTT impairment of €30,000:

Other-than-temporary impairment loss—I/S	30,000	
Investment in Bendac		30,000

If in a subsequent period the fair value of the debt investment improved by €15,000, IFRS would allow *reversal* of that amount of impairment charge:

Investment in Bendac	15,000	
Reversal of other-than-temporary impairment loss—I/S		15,000

Recent events highlight the judgmental nature of OTT impairments. A financial crisis in Greece prompted OTT impairments of Greek government bonds by various European banks. In late 2011 the chairman of the IASB, Hans Hoogervorst, complained to the EU's market regulator about inconsistency in how banks were valuing the bonds. Some banks took only a 21% impairment, while others took an impairment of over 50% on the exact same bonds!⁴⁷

At the time this text was printed, the IASB had not yet finalized changes in impairment accounting with respect to IFRS No. 9. The IASB is considering impairments in collaboration with the FASB, as discussed further in the supplement to this chapter.

⁴⁷Jones, A., and J. Thompson. "IASB Criticises Greek Debt Writedowns", *FT.com*, 8/30/2011.

Questions For Review of Key Topics

- Q 12-1** All investments in *debt* securities and investments in *equity* securities for which the investor lacks significant influence over the operation and financial policies of the investee are classified for reporting purposes in one of three categories, and can be accounted for differently depending on the classification. What are these three categories?
- Q 12-2** When market rates of interest *rise* after a fixed-rate security is purchased, the value of the now-below-market, fixed-interest payments declines, so the market value of the investment falls. On the other hand, if market rates of interest *fall* after a fixed-rate security is purchased, the fixed-interest payments become relatively attractive, and the market value of the investment rises. Assuming these price changes are not viewed as giving rise to an other-than-temporary impairment, how are they reflected in the investment account for a security classified as held-to-maturity?
- Q 12-3** Does GAAP distinguish between fair values that are readily determinable from a securities exchange versus those needing to be calculated based on the company's own assumptions? Explain how a user will know about the reliability of the inputs used to determine fair value.
- Q 12-4** When an investment is acquired to be held for an unspecified period of time as opposed to being held to maturity, it is reported at the fair value of the investment securities on the reporting date. Why?
- Q 12-5** Reporting an investment at its fair value means adjusting its carrying amount for changes in fair value after its acquisition (or since the last reporting date if it was held at that time). Such changes are called unrealized holding gains and losses because they haven't yet been realized through the sale of the security. If the security is classified as available-for-sale, how are unrealized holding gains and losses reported if they are not viewed as giving rise to an other-than-temporary impairment?
- Q 12-6** What is "comprehensive income"? Its composition varies from company to company but may include which investment-related items that are not included in net income?
- Q 12-7** Why are holding gains and losses treated differently for trading securities and securities available-for-sale?
- Q 12-8** Western Die-Casting Company holds an investment in unsecured bonds of LGB Heating Equipment, Inc. When the investment was acquired, management's intention was to hold the bonds for resale. Now management has the positive intent and ability to hold the bonds to maturity. How should the reclassification of the investment be accounted for?
- Q 12-9** Is it necessary for an investor to report individual amounts for the three categories of investments—held-to-maturity, available-for-sale, or trading—in the financial statements? What information should be disclosed about these investments?
-  **IFRS Q 12-10** Under *IFRS No. 9*, which reporting categories are used to account for debt investments? What about for equity investments when the investor lacks the ability to significantly influence the operations of the investee?
-  **IFRS Q 12-11** Are there circumstances in which the cost method is required under U.S. GAAP but not under IFRS? Explain.
- Q 12-12** What is the effect of a company electing the fair value option with respect to a held-to-maturity investment or an available-for-sale investment?
-  **IFRS Q 12-13** Do U.S. GAAP and IFRS differ in the amount of flexibility that companies have in electing the fair value option? Explain.
- Q 12-14** Under what circumstances is the equity method used to account for an investment in stock?
- Q 12-15** The equity method has been referred to as a *one-line consolidation*. What might prompt this description?
- Q 12-16** In the application of the equity method, how should dividends from the investee be accounted for? Why?
- Q 12-17** The fair value of depreciable assets of Penner Packaging Company exceeds their book value by \$12 million. The assets' average remaining useful life is 10 years. They are being depreciated by the straight-line method. Finest Foods Industries buys 40% of Penner's common shares. When adjusting investment revenue and the investment by the equity method, how will the situation described affect those two accounts?
- Q 12-18** Superior Company owns 40% of the outstanding stock of Bernard Company. During 2013, Bernard paid a \$100,000 cash dividend on its common shares. What effect did this dividend have on Superior's 2013 financial statements?
- Q 12-19** Sometimes an investor's level of influence changes, making it necessary to change from the equity method to another method. How should the investor account for this change in accounting method?
-  **IFRS Q 12-20** How does IFRS differ from U.S. GAAP with respect to using the equity method?
- Q 12-21** What is the effect of a company electing the fair value option with respect to an investment that otherwise would be accounted for using the equity method?
- Q 12-22** Define a financial instrument. Provide three examples of current liabilities that represent financial instruments.
- Q 12-23** Some financial instruments are called derivatives. Why?

- Q 12-24** (Based on Appendix 12A) Northwest Carburetor Company established a fund in 2010 to accumulate money for a new plant scheduled for construction in 2013. How should this special purpose fund be reported in Northwest's balance sheet?
- Q 12-25** (Based on Appendix 12A) Whole-life insurance policies typically can be surrendered while the insured is still alive in exchange for a determinable amount of money called the *cash surrender value*. When a company buys a life insurance policy on the life of a key officer to protect the company against the untimely loss of a valuable resource in the event the officer dies, how should the company account for the cash surrender value?
- Q 12-26** (Based on Appendix 12B) When market rates of interest *rise* after a fixed-rate security is purchased, the value of the now-below-market, fixed-interest payments declines, so the market value of the investment falls. If that drop in fair value is viewed as giving rise to an other-than-temporary impairment, how would it be reflected in the investment account for a security classified as held-to-maturity?
- Q 12-27** (Based on Appendix 12B) Reporting an investment at its fair value requires adjusting its carrying amount for changes in fair value after its acquisition (or since the last reporting date if it was held at that time). Such changes are called unrealized holding gains and losses because they haven't yet been realized through the sale of the security. If a security is classified as available-for-sale, and an unrealized holding loss is viewed as giving rise to an other-than-temporary (OTT) impairment, how is it reported in the financial statements?
- Q 12-28** (Based on Appendix 12B) The market value of Helig Forestry and Mining Corporation common stock dropped 6 1/8 points when the federal government passed new legislation banning one of the company's primary techniques for extracting ore. Harris Corporation owns shares of Helig and classifies its investment as securities available-for-sale. How should the decline in market value be handled by Harris?
-  **IFRS Q 12-29** (Based on Appendix 12B) Do U.S. GAAP and IFRS differ in how they account for other-than-temporary impairments? Explain.

Brief Exercises

- BE 12-1**
Securities held-to-maturity; bond investment; effective interest
● LO12-1
Lance Brothers Enterprises acquired \$720,000 of 3% bonds, dated July 1, on July 1, 2013, as a long-term investment. Management has the positive intent and ability to hold the bonds until maturity. The market interest rate (yield) was 4% for bonds of similar risk and maturity. Lance Brothers paid \$600,000 for the investment in bonds and will receive interest semiannually on June 30 and December 31. Prepare the journal entries (a) to record Lance Brothers' investment in the bonds on July 1, 2013, and (b) to record interest on December 31, 2013, at the effective (market) rate.
- BE 12-2**
Trading securities
● LO12-2
S&L Financial buys and sells securities expecting to earn profits on short-term differences in price. On December 27, 2013, S&L purchased **Coca-Cola** common shares for \$875,000 and sold the shares on January 3, 2014, for \$880,000. At December 31, the shares had a fair value of \$873,000. What pretax amounts did S&L include in its 2013 and 2014 earnings as a result of this investment?
- BE 12-3**
Available-for-sale securities
● LO12-3
S&L Financial buys and sells securities which it classifies as available-for-sale. On December 27, 2013, S&L purchased **Coca-Cola** common shares for \$875,000 and sold the shares on January 3, 2014, for \$880,000. At December 31, the shares had a fair value of \$873,000, and S&L has the intent and ability to hold the investment until fair value recovers. What pretax amounts did S&L include in its 2013 and 2014 earnings as a result of this investment?
- BE 12-4**
Securities available-for-sale; adjusting entry
● LO12-3
For several years Fister Links Products has held shares of **Microsoft** common stock, considered by the company to be securities available-for-sale. The shares were acquired at a cost of \$500,000. Their fair value last year was \$610,000 and is \$670,000 this year. At what amount will the investment be reported in this year's balance sheet? What adjusting entry is required to accomplish this objective?
- BE 12-5**
Classification of securities; reporting
● LO12-3
Adams Industries holds 40,000 shares of **FedEx** common stock. On December 31, 2012, and December 31, 2013, the market value of the stock is \$95 and \$100 per share, respectively. What is the appropriate reporting category for this investment and at what amount will it be reported in the 2013 balance sheet?
- BE 12-6**
Fair value option; available-for-sale securities
● LO12-7
S&L Financial buys and sells securities that it typically classifies as available-for-sale. On December 27, 2013, S&L purchased **Coca-Cola** common shares for \$875,000 and sold the shares on January 3, 2014, for \$880,000. At December 31, the shares had a fair value of \$873,000. When it purchased the Coca-Cola shares, S&L Financial decided to elect the fair value option for this investment. What pretax amounts did S&L include in its 2013 and 2014 earnings as a result of this investment?

BE 12-7 Trading securities, securities available-for-sale and dividends

Turner Company owns 10% of the outstanding stock of ICA Company. During the current year, ICA paid a \$5 million cash dividend on its common shares. What effect did this dividend have on Turner's 2013 financial statements? Explain the reasoning for this effect.

- LO12-2, LO12-3

BE 12-8 Equity method and dividends

Turner Company owns 40% of the outstanding stock of ICA Company. During the current year, ICA paid a \$5 million cash dividend on its common shares. What effect did this dividend have on Turner's 2013 financial statements? Explain the reasoning for this effect.

- LO12-5

BE 12-9 Equity method

The fair value of Wallis, Inc.'s depreciable assets exceeds their book value by \$50 million. The assets have an average remaining useful life of 15 years and are being depreciated by the straight-line method. Park Industries buys 30% of Wallis's common shares. When Park adjusts its investment revenue and the investment by the equity method, how will the situation described affect those two accounts?

- LO12-6

BE 12-10 Equity method investments

Refer to the situation described in BE 12-9, but assume that Park Industries buys 50% of Wallis's common shares. Also assume that Park reports under International Financial Reporting Standards, and has elected the "proportionate consolidation" method to account for the Wallis investment. How would the situation described affect Park's depreciable asset accounts?

- LO12-6, LO12-8

IFRS

BE 12-11 Change in principle; change to the equity method

At the beginning of 2013, Pioneer Products' ownership interest in the common stock of LLB Co. increased to the point that it became appropriate to begin using the equity method of accounting for the investment. The balance in the investment account was \$44 million at the time of the change but would have been \$56 million if Pioneer had used the equity method and the account had been adjusted for investee net income and dividends. How should Pioneer report the change? Would your answer be the same if Pioneer is changing *from* the equity method rather than *to* the equity method?

- LO12-5

BE 12-12 Fair value option; equity method investments

Turner Company purchased 40% of the outstanding stock of ICA Company for \$10,000,000 on January 2, 2013. Turner elects the fair value option to account for the investment. During 2013, ICA earns \$750,000 of income and on December 30 pays a dividend of \$500,000. On December 31, 2013, the fair value of Turner's investment has increased to \$11,500,000. What journal entries would Turner make to account for this investment during 2013, assuming Turner will account for the investment similar to how it would account for a trading security?

- LO12-7

BE 12-13 Available-for-sale securities and impairment (Appendix 12B)

LED Corporation owns 100,000 shares of Branch Pharmaceuticals common stock and classifies its investment as securities available-for-sale. The market price of LED's investment in Branch's stock fell more than 30%, by \$4.50 per share, due to concerns about one of the company's principal drugs. The concerns were justified when the FDA banned the drug. \$1.00 per share of that decline in value already had been included in OCI as a temporary unrealized loss in a prior period. What journal entries should LED record to account for the decline in market value in the current period? How should the decline affect net income and comprehensive income?

- LO12-3

BE 12-14 Available-for-sale securities and impairment (Appendix 12B)

LED Corporation owns \$1,000,000 of Branch Pharmaceuticals bonds and classifies its investment as securities available-for-sale. The market price of LED's investment in Branch's bonds fell by \$450,000, due to concerns about one of the company's principal drugs. The concerns were justified when the FDA banned the drug. \$100,000 of that decline in value already had been included in OCI as a temporary unrealized loss in a prior period. LED views \$200,000 of the \$450,000 loss as related to *credit* losses, and the other \$250,000 as *noncredit* losses. LED thinks it is more likely than not that it will have to sell the investment before fair value recovers. What journal entries should LED record to account for the decline in market value in the current period? How should the decline affect net income and comprehensive income?

- LO12-3

BE 12-15
Available-for-sale securities and impairment (Appendix 12B)
● LO12-3

LED Corporation owns \$1,000,000 of Branch Pharmaceuticals bonds and classifies its investment as securities available-for-sale. The market price of Branch's bonds fell by \$450,000, due to concerns about one of the company's principal drugs. The concerns were justified when the FDA banned the drug. \$100,000 of that decline in value already had been included in OCI as a temporary unrealized loss in a prior period. LED views \$200,000 of the \$450,000 loss as related to *credit* losses, and the other \$250,000 as *noncredit* losses. LED does not plan to sell the investment and does not think it is more likely than not that it will have to sell the investment before fair value recovers. What journal entries should LED record to account for the decline in market value in the current period? How should the decline affect net income and comprehensive income?

BE 12-16
Recovery of impairments under IFRS (Appendix 12B)
● LO12-3,
LO12-8

Wickum Corporation reports under IFRS, and recognized a \$500,000 other-than-temporary impairment of an HTM debt investment in Right Corporation. Subsequently, the fair value of Wickum's investment in Right increased by \$300,000. How would Wickum account for that increase in fair value?

Exercises

An alternate exercise and problem set is available on the text website: www.mhhe.com/spiceland7e

E 12-1
Securities held-to-maturity; bond investment; effective interest
● LO12-1

Tanner-UNF Corporation acquired as a long-term investment \$240 million of 6% bonds, dated July 1, on July 1, 2013. Company management has the positive intent and ability to hold the bonds until maturity. The market interest rate (yield) was 8% for bonds of similar risk and maturity. Tanner-UNF paid \$200 million for the bonds. The company will receive interest semiannually on June 30 and December 31. As a result of changing market conditions, the fair value of the bonds at December 31, 2013 was \$210 million.

Required:

1. Prepare the journal entry to record Tanner-UNF's investment in the bonds on July 1, 2013.
2. Prepare the journal entry by Tanner-UNF to record interest on December 31, 2013, at the effective (market) rate.
3. At what amount will Tanner-UNF report its investment in the December 31, 2013, balance sheet? Why?
4. Suppose Moody's bond rating agency downgraded the risk rating of the bonds motivating Tanner-UNF to sell the investment on January 2, 2014, for \$190 million. Prepare the journal entry to record the sale.

E 12-2
Securities held-to-maturity
● LO12-1

FF&T Corporation is a confectionery wholesaler that frequently buys and sells securities to meet various investment objectives. The following selected transactions relate to FF&T's investment activities during the last two months of 2013. At November 1, FF&T held \$48 million of 20-year, 10% bonds of Convenience, Inc., purchased May 1, 2013, at face value. Management has the positive intent and ability to hold the bonds until maturity. FF&T's fiscal year ends on December 31.

Nov. 1	Received semiannual interest of \$2.4 million from the Convenience, Inc., bonds.
Dec. 1	Purchased 12% bonds of Facsimile Enterprises at their \$30 million face value, to be held until they mature in 2026. Semiannual interest is payable May 31 and November 30.
31	Purchased U.S. Treasury bills that mature in two months for \$8.9 million.
31	Recorded any necessary adjusting entry(s) relating to the investments.

The fair values of the investments at December 31 were:

Convenience bonds	\$44.7 million
Facsimile Enterprises bonds	30.9 million
U.S. Treasury bills	8.9 million

Required:

Prepare the appropriate journal entry for each transaction or event.

E 12-3
FASB codification
research

● LO12-1

The *FASB Accounting Standards Codification* represents the single source of authoritative U.S. generally accepted accounting principles.

Required:

1. Obtain the relevant authoritative literature on accounting for investments in held-to-maturity securities using the FASB's Codification Research System at the FASB website (www.fasb.org).
2. What is the specific citation that describes examples of circumstances under which an investment in debt is available to be sold and therefore should not be classified as held-to-maturity?
3. List the circumstances and conditions.

E 12-4
Purchase and sale
of investment
securities

● LO12-2,
LO12-3

Shott Farm Supplies Corporation purchased 800 shares of **General Motors** stock at \$50 per share and paid a brokerage fee of \$1,200. Two months later, the shares were sold for \$53 per share. The brokerage fee on the sale was \$1,300.

Required:

Prepare entries for the purchase and the sale.

E 12-5
Various
transactions
relating to
trading securities

● LO12-2

Rantzow-Lear Company buys and sells securities expecting to earn profits on short-term differences in price. The company's fiscal year ends on December 31. The following selected transactions relating to Rantzow-Lear's trading account occurred during December 2013 and the first week of 2014.

2013

- Dec. 17 Purchased 100,000 Grocers' Supply Corporation preferred shares for \$350,000.
28 Received cash dividends of \$2,000 from the Grocers' Supply Corporation preferred shares.
31 Recorded any necessary adjusting entry relating to the Grocers' Supply Corporation preferred shares. The market price of the stock was \$4 per share.

2014

- Jan. 5 Sold the Grocers' Supply Corporation preferred shares for \$395,000.

Required:

1. Prepare the appropriate journal entry for each transaction.
2. Indicate any amounts that Rantzow-Lear Company would report in its 2013 balance sheet and income statement as a result of this investment.

E 12-6
FASB codification
research

● LO12-2,
LO12-3,
LO12-5

Access the *FASB's Codification Research System* at the FASB website (www.fasb.org).

Required:

Determine the specific citation for accounting for each of the following items:

1. Unrealized holding gains for trading securities should be included in earnings.
2. Under the equity method, the investor accounts for its share of the earnings or losses of the investee in the periods they are reported by the investee in its financial statements.
3. Transfers of securities between categories are accounted for at fair value.
4. Disclosures for available-for-sale securities should include total losses for securities that have net losses included in accumulated other comprehensive income.

E 12-7
Securities
available-for-sale;
adjusting entries

● LO12-3

Loreal-American Corporation purchased several marketable securities during 2013. At December 31, 2013, the company had the investments in common stock listed below. None was held at the last reporting date, December 31, 2012, and all are considered securities available-for-sale.

	Cost	Fair Value	Unrealized Holding Gain (Loss)
Short term:			
Blair, Inc.	\$ 480,000	\$ 405,000	\$(75,000)
ANC Corporation	450,000	480,000	30,000
Totals	<u>\$ 930,000</u>	<u>\$ 885,000</u>	<u>\$(45,000)</u>
Long term:			
Drake Corporation	\$ 480,000	\$ 560,000	\$ 80,000
Aaron Industries	720,000	660,000	(60,000)
Totals	<u>\$1,200,000</u>	<u>\$1,220,000</u>	<u>\$ 20,000</u>

Required:

1. Prepare the appropriate adjusting entry at December 31, 2013.
2. What amounts would be reported in the income statement at December 31, 2013, as a result of the adjusting entry?

E 12-8
Classification
of securities;
adjusting entries
● LO12-3

On February 18, 2013, Union Corporation purchased 10,000 shares of **IBM** common stock as a long-term investment at \$60 per share. On December 31, 2013, and December 31, 2014, the market value of IBM stock is \$58 and \$61 per share, respectively.

Required:

1. What is the appropriate reporting category for this investment? Why?
2. Prepare the adjusting entry for December 31, 2013.
3. Prepare the adjusting entry for December 31, 2014.

E 12-9
Various
transactions
related to
securities
available-for-sale
● LO12-3

Construction Forms Corporation buys securities to be available for sale when circumstances warrant, not to profit from short-term differences in price and not necessarily to hold debt securities to maturity. The following selected transactions relate to investment activities of Construction Forms whose fiscal year ends on December 31. No investments were held by Construction Forms at the beginning of the year.

2013

- Mar. 2 Purchased 1 million Platinum Gauges, Inc., common shares for \$31 million, including brokerage fees and commissions.
- Apr. 12 Purchased \$20 million of 10% bonds at face value from Zenith Wholesale Corporation.
- July 18 Received cash dividends of \$2 million on the investment in Platinum Gauges, Inc., common shares.
- Oct. 15 Received semiannual interest of \$1 million on the investment in Zenith bonds.
- 16 Sold the Zenith bonds for \$21 million.
- Nov. 1 Purchased 500,000 LTD International preferred shares for \$40 million, including brokerage fees and commissions.
- Dec. 31 Recorded the necessary adjusting entry(s) relating to the investments. The market prices of the investments are \$32 per share for Platinum Gauges, Inc., and \$74 per share for LTD International preferred shares.

2014

- Jan. 23 Sold half the Platinum Gauges, Inc., shares for \$32 per share.
- Mar. 1 Sold the LTD International preferred shares for \$76 per share.

Required:

1. Prepare the appropriate journal entry for each transaction or event.
2. Show the amounts that would be reported in the company's 2013 combined statement of net income and other comprehensive income relative to these investments.

E 12-10
Securities
available-for-sale;
journal entries
● LO12-3

On January 2, 2013, Sanborn Tobacco Inc. bought 5% of Jackson Industry's capital stock for \$90 million as a temporary investment. Sanborn classified the securities acquired as available-for-sale. Jackson Industry's net income for the year ended December 31, 2013, was \$120 million. The fair value of the shares held by Sanborn was \$98 million at December 31, 2013. During 2013, Jackson declared a dividend of \$60 million.

Required:

1. Prepare all appropriate journal entries related to the investment during 2013.
2. Indicate the effect of this investment on 2013 income before taxes.

E 12-11
Various
investment
securities
● LO12-1,
LO12-2,
LO12-3

At December 31, 2013, Hull-Meyers Corp. had the following investments that were purchased during 2013, its first year of operations:

	Cost	Fair Value
Trading Securities:		
Security A	\$ 900,000	\$ 910,000
Security B	105,000	100,000
Totals	<u>\$1,005,000</u>	<u>\$1,010,000</u>
Securities Available-for-Sale:		
Security C	\$ 700,000	\$ 780,000
Security D	900,000	915,000
Totals	<u>\$1,600,000</u>	<u>\$1,695,000</u>
Securities to Be Held-to-Maturity:		
Security E	\$ 490,000	\$ 500,000
Security F	615,000	610,000
Totals	<u>\$1,105,000</u>	<u>\$1,110,000</u>

No investments were sold during 2013. All securities except Security D and Security F are considered short-term investments. None of the fair value changes is considered permanent.

Required:

Determine the following amounts at December 31, 2013.

1. Investments reported as current assets.
2. Investments reported as noncurrent assets.
3. Unrealized gain (or loss) component of income before taxes.
4. Unrealized gain (or loss) component of accumulated other comprehensive income in shareholders' equity.

E 12-12

Securities available-for-sale; adjusting entries
● LO12-3

The accounting records of Jamaican Importers Inc. at January 1, 2013, included the following:

Assets:		
Investment in IBM common shares		\$1,345,000
Less: Fair value adjustment		(145,000)
		\$1,200,000
Shareholders' Equity:		
Accumulated unrealized holding gains and losses		\$ 145,000

No changes occurred during 2013 in the investment portfolio.

Required:

Prepare appropriate adjusting entry(s) at December 31, 2013, assuming the fair value of the IBM common shares was:

1. \$1,175,000
2. \$1,275,000
3. \$1,375,000

E 12-13

Securities available-for-sale; fair value adjustment
● LO12-3

The investments of Harlon Enterprises included the following cost and fair value amounts:

(\$ in millions)	Securities Available-for-Sale	Cost	Fair Value, Dec. 31	
			2013	2014
	A Corporation shares	\$ 20	\$14	na
	B Corporation bonds	35	35	\$ 37
	C Corporation shares	15	na	14
	D Industries shares	45	46	50
	Totals	\$115	\$95	\$101

Harlon Enterprises sold its holdings of A Corporation shares on June 1, 2014, for \$15 million. On September 12, 2014, it purchased the C Corporation shares.

Required:

1. What is the effect of the sale of the A Corporation shares and the purchase of the C Corporation shares on Harlon's 2014 pretax earnings?
2. At what amount should Harlon's securities available-for-sale portfolio be reported in its 2014 balance sheet? What adjusting entry is needed to accomplish this? What is the effect of the adjustment on Harlon's 2014 pretax earnings?

E 12-14

Investment securities and equity method investments compared
● LO12-3, LO12-4, LO12-5

As a long-term investment, Painters' Equipment Company purchased 20% of AMC Supplies Inc.'s 400,000 shares for \$480,000 at the beginning of the fiscal year of both companies. On the purchase date, the fair value and book value of AMC's net assets were equal. During the year, AMC earned net income of \$250,000 and distributed cash dividends of 25 cents per share. At year-end, the fair value of the shares is \$505,000.

Required:

1. Assume no significant influence was acquired. Prepare the appropriate journal entries from the purchase through the end of the year.
2. Assume significant influence was acquired. Prepare the appropriate journal entries from the purchase through the end of the year.

E 12-15

Equity method; purchase; investee income; dividends
● LO12-4, LO12-5

As a long-term investment at the beginning of the fiscal year, Florists International purchased 30% of Nursery Supplies Inc.'s 8 million shares for \$56 million. The fair value and book value of the shares were the same at that time. During the year, Nursery Supplies earned net income of \$40 million and distributed cash dividends of \$1.25 per share. At the end of the year, the fair value of the shares is \$52 million.

Required:

Prepare the appropriate journal entries from the purchase through the end of the year.

E 12-16

Change in principle; change to the equity method

● LO12-5

The Trump Companies Inc. has ownership interests in several public companies. At the beginning of 2013, the company's ownership interest in the common stock of Milken Properties increased to the point that it became appropriate to begin using the equity method of accounting for the investment. The balance in the investment account was \$31 million at the time of the change. Accountants working with company records determined that the balance would have been \$48 million if the account had been adjusted for investee net income and dividends as prescribed by the equity method.

Required:

1. Prepare the journal entry to record the change in principle.
2. Briefly describe other steps Trump should take to report the change.
3. Suppose Trump is changing *from* the equity method rather than *to* the equity method. How would your answers to requirements 1 and 2 differ?

E 12-17

Error corrections; investment

● LO12-1,
LO12-2,
LO12-3

On December 12, 2013, an investment costing \$80,000 was sold for \$100,000. The total of the sale proceeds was credited to the investment account.

Required:

1. Prepare the journal entry to correct the error assuming it is discovered before the books are adjusted or closed in 2013. (Ignore income taxes.)
2. Prepare the journal entry to correct the error assuming it is not discovered until early 2014. (Ignore income taxes.)

E 12-18

Equity method; adjustment for depreciation

● LO12-5,
LO12-6

Fizer Pharmaceutical paid \$68 million on January 2, 2013, for 4 million shares of Carne Cosmetics common stock. The investment represents a 25% interest in the net assets of Carne and gave Fizer the ability to exercise significant influence over Carne's operations. Fizer received dividends of \$1 per share on December 21, 2013, and Carne reported net income of \$40 million for the year ended December 31, 2013. The fair value of Carne's common stock at December 31, 2013, was \$18.50 per share.

- The book value of Carne's net assets was \$192 million.
- The fair value of Carne's depreciable assets exceeded their book value by \$32 million. These assets had an average remaining useful life of eight years.
- The remainder of the excess of the cost of the investment over the book value of net assets purchased was attributable to goodwill.

Required:

Prepare all appropriate journal entries related to the investment during 2013.

E 12-19

Equity method

● LO12-5,
LO12-6

On January 1, 2013, Cameron Inc. bought 20% of the outstanding common stock of Lake Construction Company for \$300 million cash. At the date of acquisition of the stock, Lake's net assets had a fair value of \$900 million. Their book value was \$800 million. The difference was attributable to the fair value of Lake's buildings and its land exceeding book value, each accounting for one-half of the difference. Lake's net income for the year ended December 31, 2013, was \$150 million. During 2013, Lake declared and paid cash dividends of \$30 million. The buildings have a remaining life of 10 years.

Required:

1. Prepare all appropriate journal entries related to the investment during 2013, assuming Cameron accounts for this investment by the equity method.
2. Determine the amounts to be reported by Cameron:
 - a. As an investment in Cameron's 2013 balance sheet.
 - b. As investment revenue in the income statement.
 - c. Among investing activities in the statement of cash flows.

E 12-20

Proportionate consolidation of investments under IFRS

● LO12-6,
LO12-8

[This is a variation of Exercise 12-19 focusing on using proportionate consolidation to account for joint ventures under IFRS.]

Refer to the situation described in Exercise 12-19, but assume that Cameron bought 50% of the outstanding stock of Lake for \$750 million cash, that half of the book value and fair value of Lake's individual net assets is attributable to land and the other half to buildings, that Cameron reports under IFRS, and that Cameron has elected the proportionate consolidation method to account for its investment in Lake.

Required:

1. What would be the effect on January 1, 2013, of the Lake investment on the following accounts on Cameron's consolidated balance sheet?
 - a. Buildings
 - b. Land
 - c. Goodwill
 - d. Equity method investments

IFRS

2. What would be the effect on December 31, 2013, of the Lake investment on the following accounts on Cameron's consolidated balance sheet?
 - a. Buildings
 - b. Land
 - c. Goodwill
 - d. Equity method investments
3. Would the effect on Cameron's December 31, 2013, retained earnings differ between an equity method and a proportionate consolidation treatment? Explain.

E 12-21

Fair value option;
held-to-maturity
investments

- LO12-1,
LO12-2,
LO12-7

[This is a variation of Exercise 12-1 focusing on the fair value option.]

Tanner-UNF Corporation acquired as a long-term investment \$240 million of 6% bonds, dated July 1, on July 1, 2013. Company management has the positive intent and ability to hold the bonds until maturity, but when the bonds were acquired Tanner-UNF decided to elect the fair value option for accounting for its investment. The market interest rate (yield) was 8% for bonds of similar risk and maturity. Tanner-UNF paid \$200 million for the bonds. The company will receive interest semiannually on June 30 and December 31. As a result of changing market conditions, the fair value of the bonds at December 31, 2013, was \$210 million.

Required:

1. Would this investment be classified on Tanner-UNF's balance sheet as held-to-maturity securities, trading securities, available-for-sale securities, significant-influence investments, or other? Explain.
2. Prepare the journal entry to record Tanner-UNF's investment in the bonds on July 1, 2013.
3. Prepare the journal entry used by Tanner-UNF to record interest on December 31, 2013, at the effective (market) rate.
4. Prepare any journal entry necessary to recognize fair value changes as of December 31, 2013.
5. At what amount will Tanner-UNF report its investment in the December 31, 2013, balance sheet? Why?
6. Suppose Moody's bond rating agency downgraded the risk rating of the bonds motivating Tanner-UNF to sell the investment on January 2, 2014, for \$190 million. Prepare the journal entry to record the sale.

E 12-22

Fair value option;
available-for-sale
investments

- LO12-2,
LO12-3,
LO12-7

[This is a variation of Exercise 12-10 focusing on the fair value option.]

On January 2, 2013, Sanborn Tobacco, Inc., bought 5% of Jackson Industry's capital stock for \$90 million as a temporary investment. Sanborn realized that these securities normally would be classified as available-for-sale, but elected the fair value option to account for the investment. Jackson Industry's net income for the year ended December 31, 2013, was \$120 million. The fair value of the shares held by Sanborn was \$98 million at December 31, 2013. During 2013, Jackson declared a dividend of \$60 million.

Required:

1. Would this investment be classified on Sanborn's balance sheet as held-to-maturity securities, trading securities, available-for-sale securities, significant-influence investments, or other? Explain.
2. Prepare all appropriate journal entries related to the investment during 2013.
3. Indicate the effect of this investment on 2013 income before taxes.

E 12-23

Fair value option;
equity method
investments

- LO12-2,
LO12-5,
LO12-7

[This is a variation of Exercise 12-15 focusing on the fair value option.]

As a long-term investment at the beginning of the fiscal year, Florists International purchased 30% of Nursery Supplies Inc.'s 8 million shares for \$56 million. The fair value and book value of the shares were the same at that time. The company realizes that this investment typically would be accounted for under the equity method, but instead chooses the fair value option. During the year, Nursery Supplies earned net income of \$40 million and distributed cash dividends of \$1.25 per share. At the end of the year, the fair value of the shares is \$52 million.

Required:

1. Would this investment be classified on Florists' balance sheet as held-to-maturity securities, trading securities, available-for-sale securities, significant-influence investments, or other? Explain.
2. Prepare all appropriate journal entries related to the investment during 2013.
3. Indicate the effect of this investment on 2013 income before taxes.

E 12-24

Life
insurance policy
(Appendix 12A)

Edible Chemicals Corporation owns a \$4 million whole life insurance policy on the life of its CEO, naming Edible Chemicals as beneficiary. The annual premiums are \$70,000 and are payable at the beginning of each year. The cash surrender value of the policy was \$21,000 at the beginning of 2013.

Required:

1. Prepare the appropriate 2013 journal entry to record insurance expense and the increase in the investment assuming the cash surrender value of the policy increased according to the contract to \$27,000.
2. The CEO died at the end of 2013. Prepare the appropriate journal entry.

E 12-25

Life insurance policy (Appendix 12A)

Below are two unrelated situations relating to life insurance.

Required:

Prepare the appropriate journal entry for each situation.

1. Ford Corporation owns a whole life insurance policy on the life of its president. Ford Corporation is the beneficiary. The insurance premium is \$25,000. The cash surrender value increased during the year from \$2,500 to \$4,600.
2. Petroleum Corporation received a \$250,000 life insurance settlement when its CEO died. At that time, the cash surrender value was \$16,000.

E 12-26

Held-to-maturity securities; impairments (Appendix 12B)

● LO12-1

Bloom Corporation purchased \$1,000,000 of Taylor Company 5% bonds at par with the intent and ability to hold the bonds until they matured in 2020, so Bloom classifies their investment as HTM. Unfortunately, a combination of problems at Taylor Company and in the debt market caused the fair value of the Taylor investment to decline to \$600,000 during 2013.

Required:

For each of the following scenarios, prepare appropriate entry(s) at December 31, 2013, and indicate how the scenario will affect the 2013 income statement (ignoring income taxes).

1. Bloom now believes it is more likely than not that it will have to sell the Taylor bonds before the bonds have a chance to recover their fair value. Of the \$400,000 decline in fair value, Bloom attributes \$250,000 to credit losses, and \$150,000 to noncredit losses.
2. Bloom does not plan to sell the Taylor bonds prior to maturity, and does not believe it is more likely than not that it will have to sell the Taylor bonds before the bonds have a chance to recover their fair value. Of the \$400,000 decline in fair value, Bloom attributes \$250,000 to credit losses, and \$150,000 to noncredit losses.
3. Bloom does not plan to sell the Taylor bonds prior to maturity, and does not believe it is more likely than not that it will have to sell the Taylor bonds before the bonds have a chance to recover their fair value. Bloom attributes the entire \$400,000 decline in fair value to noncredit losses.

E 12-27

Available-for-sale debt securities; impairments (Appendix 12B)

● LO12-3

(Note: This exercise is a variation of Exercise 12-26, modified to categorize the investment as securities available-for-sale.)

Assume all of the same facts and scenarios as E12-26, except that Bloom Corporation classifies their Taylor investment as AFS.

Required:

1. For each of the scenarios shown in E12-26, prepare the appropriate entry(s) at December 31, 2013. Indicate how the scenario will affect the 2013 income statement, OCI, and comprehensive income.
2. Repeat requirement 1, but now assume that, at the end of 2012, Bloom had recorded a temporary unrealized loss (not an OTT impairment) of \$100,000 on the Taylor investment.

E 12-28

Available-for-sale equity securities; impairments (Appendix 12B)

● LO12-3

In early December of 2013, Kettle Corp purchased \$50,000 of Icalc Company common stock, which constitutes less than 1% of Icalc's outstanding shares. By December 31, 2013, the value of Icalc's investment had fallen to \$40,000, and Kettle recorded an unrealized loss. By December 31, 2014, the value of the Icalc investment had fallen to \$25,000, and Kettle determined that it can no longer assert that it has both the intent and ability to hold the shares long enough for their fair value to recover, so Kettle recorded an OTT impairment. By December 31, 2015, fair value had recovered to \$30,000.

Required:

Prepare appropriate entry(s) at December 31, 2013, 2014, and 2015, and for each year indicate how the scenario will affect net income, OCI, and comprehensive income.

E 12-29

Accounting for impairments under IFRS (Appendix 12B)

● LO12-1,
LO12-3,
LO12-8

(Note: This exercise is a variation of E12-26 modified to consider accounting under IFRS.)

Flower Corporation uses IFRS, and purchased €1,000,000 of James Company 5% bonds at face value during 2013. Unfortunately, a combination of problems at James Company and in the debt market caused the fair value of the James investment to decline to €600,000 by December 31, 2013. On December 31, 2013, Flower calculated the present value of the future cash flows expected to be collected from the James investment (using the interest rate effective when the investment was made) to equal €750,000. Flower recognized an OTT impairment. By December 31, 2014 the fair value of the investment increased to €875,000, and Flower calculated the present value of the future cash flows expected to be collected from the James investment (again using the interest rate effective when the investment was made) to equal €800,000.

Required:

1. Prepare appropriate entry(s) to account for the James investment at December 31, 2013, assuming Flower classifies its James investment as held to maturity.

IFRS

- Prepare appropriate entry(s) to account for the James investment at December 31, 2014, assuming Flower classifies its James investment as held to maturity.
- Prepare appropriate entry(s) to account for the James investment at December 31, 2013, assuming Flower classifies its James investment as available for sale.
- Prepare appropriate entry(s) to account for the James investment at December 31, 2014, assuming Flower classifies its James investment as available for sale.
- How would your answer to requirement 4 change if the James investment was equity rather than debt?

CPA and CMA Review Questions

CPA Exam Questions

The following questions are adapted from a variety of sources including questions developed by the AICPA Board of Examiners and those used in the Kaplan CPA Review Course to study investments while preparing for the CPA examination. Determine the response that best completes the statements or questions.

LO12-2

- During year 4, Wall Co. purchased 2,000 shares of Hemp Corp. common stock for \$31,500 as a short-term investment. The investment was appropriately classified as a trading security. The market value of this investment was \$29,500 at December 31, year 4. Wall sold all of the Hemp common stock for \$14 per share on January 15, year 5, incurring \$1,400 in brokerage commissions and taxes. On the sale, Wall should report a realized loss of:
 - \$1,500
 - \$2,900
 - \$3,500
 - \$4,900

LO12-3

- The following information pertains to Lark Corp.'s long-term marketable equity securities portfolio:

	December 31	
	2013	2012
Cost	\$200,000	\$200,000
Fair value	240,000	180,000

Differences between cost and market values are considered to be temporary. The decline in market value was properly accounted for at December 31, 2012. At December 31, 2013, what is the net unrealized holding gain or loss to be reported as:

	Other Comprehensive Income	Accumulated Other Comprehensive Income
a.	\$60,000 gain	\$40,000 gain
b.	\$40,000 gain	\$60,000 gain
c.	\$20,000 loss	\$20,000 loss
d.	-0-	-0-

LO12-3

- The following information was extracted from Gil Co.'s December 31, 2013, balance sheet:

Noncurrent assets:	
Long-term investments in marketable equity securities (at fair value)	\$96,450
Stockholders' equity:	
Accumulated other comprehensive income**	(25,000)

**Includes a net unrealized holding loss on long-term investments in marketable equity securities of \$19,800.

The historical cost of the long-term investments in marketable equity securities was:

- \$ 63,595
- \$ 76,650
- \$ 96,450
- \$116,250

LO12-3

- On both December 31, 2012, and December 31, 2013, Kopp Co.'s only equity security investment had the same fair value, which was below its original cost. Kopp considered the decline in value to be temporary in 2012 but other-than-temporary in 2013. At the end of both years the security was classified as

a noncurrent asset. Kopp could not exercise significant influence over the investee. What should be the effects of the determination that the decline was other-than-temporary on Kopp's 2013 net noncurrent assets and net income?

- a. Decrease in both net noncurrent assets and net income.
- b. No effect on both net noncurrent assets and net income.
- c. Decrease in net noncurrent assets and no effect on net income.
- d. No effect on net noncurrent assets and decrease in net income.

● LO12-5

5. When the equity method is used to account for investments in common stock, which of the following affect(s) the investor's reported investment income?

	A Change in Fair Value of Investee's Common Stock	Cash Dividends from Investee
a.	Yes	Yes
b.	No	Yes
c.	Yes	No
d.	No	No

● LO12-5

6. A corporation uses the equity method to account for its 40% ownership of another company. The investee earned \$20,000 and paid \$5,000 in dividends. The investor made the following entries:

Investment in affiliate	\$8,000	
Equity in earnings of affiliate		\$8,000
Cash	2,000	
Dividend revenue		2,000

What effect will these entries have on the investor's statement of financial position?

- a. Investment in affiliate overstated, retained earnings understated.
- b. Financial position will be fairly stated.
- c. Investment in affiliate overstated, retained earnings overstated.
- d. Investment in affiliate understated, retained earnings understated.

● LO12-6

7. Park Co. uses the equity method to account for its January 1, 2013, purchase of Tun Inc.'s common stock. On January 1, 2013, the fair values of Tun's FIFO inventory and land exceeded their carrying amounts. How do these excesses of fair values over carrying amounts affect Park's reported equity in Tun's 2013 earnings?

	Inventory Excess	Land Excess
a.	Decrease	Decrease
b.	Decrease	No effect
c.	Increase	No effect
d.	Increase	Increase

● LO12-4

8. On January 2, 2013, Well Co. purchased 10% of Rea Inc.'s outstanding common shares for \$400,000. Well is the largest single shareholder in Rea, and Well's officers are a majority on Rea's board of directors. Rea reported net income of \$500,000 for 2013, and paid dividends of \$150,000. In its December 31, 2013, balance sheet, what amount should Well report as investment in Rea?
- a. \$435,000
 - b. \$450,000
 - c. \$400,000
 - d. \$385,000

Beginning in 2011, International Financial Reporting Standards are tested on the CPA exam along with U.S. GAAP. The following questions deal with the application of IFRS to accounting for investments.

● LO12-8

9. Under *IFRS No. 9*, which of the following is *not* a category into which a debt investment can be classified?
- a. FVTPL ("fair value through profit and loss").
 - b. FVTOCI ("fair value through other comprehensive income").
 - c. Amortized cost.
 - d. Parts a-c are all classifications in which a debt investment might be classified under *IFRS No. 9*.

● LO12-8

10. Under *IFRS No. 9*, which of the following is *not* a category in which an equity investment can be classified?
- a. FVTPL ("Fair Value through Profit and Loss").
 - b. FVTOCI ("Fair Value through Other Comprehensive Income").
 - c. Amortized cost.
 - d. Parts a-c are all classifications in which an equity investment is classified under *IFRS No. 9*.

● LO12-8

11. Which of the following is *not* true about transfers between investment categories under IFRS?
- Under *IAS No. 39*, transfers of debt investments out of FVTPL into AFS or HTM is permitted under rare circumstances.
 - Under *IFRS No. 9*, transfers of debt investments out of FVTPL to amortized cost are possible if the business model changes with respect to the debt investment.
 - Under *IFRS No. 9*, transfers of equity investments out of FVTOCI to FVTPL are possible if the business model changes with respect to the equity investment.
 - Parts a–c are all true about transfers between investment categories under IFRS.

● LO12-8

12. Which of the following is true about use of the equity method under IFRS?
- IFRS allows use of the fair value option under essentially the same circumstances as does U.S. GAAP for investments that otherwise would be accounted for under the equity method.
 - IFRS No. 11* allows proportionate consolidation rather than the equity method for investments that qualify as joint ventures.
 - FVTPL is preferred to the equity method when the investor can exercise significant influence over the operations of the investee.
 - IAS No. 28* requires that the accounting policies of investees be adjusted to correspond to those of the investor.

● LO12-8

13. Which of the following is true about accounting for other-than-temporary impairments under IFRS?
- Recoveries of OTT impairments for debt investments can be recognized in earnings.
 - Recoveries of OTT impairments for equity investments can be recognized in earnings.
 - Under IFRS, the amount of OTT impairment calculated for a debt investment is the same regardless of whether the investment is classified as held-to-maturity or available-for-sale.
 - Two of the three answers included in a–c are true.

CMA Exam Questions

The following questions dealing with investments are adapted from questions that previously appeared on Certified Management Accountant (CMA) examinations. The CMA designation sponsored by the Institute of Management Accountants (www.imanet.org) provides members with an objective measure of knowledge and competence in the field of management accounting. Determine the response that best completes the statements or questions.

● LO12-3

1. An investment in available-for-sale securities is valued on the balance sheet at
- The cost to acquire the asset.
 - Accumulated income minus accumulated dividends since acquisition.
 - Fair value.
 - The par or stated value of the securities.

Questions 2 and 3 are based on the following information concerning Monahan Company's portfolio of debt securities at May 31, year 2 and May 31, year 3. All of the debt securities were purchased by Monahan during June, year 1. Prior to June, year 1, Monahan had no investments in debt or equity securities.

As of May 31, Year 2	Amortized Cost	Fair Value
Cleary Company bonds	\$164,526	\$168,300
Beauchamp Industry bonds	204,964	205,200
Morrow Inc. bonds	305,785	285,200
Total	\$675,275	\$658,700

As of May 31, Year 3	Amortized Cost	Fair Value
Cleary Company bonds	\$152,565	\$147,600
Beauchamp Industry bonds	193,800	204,500
Morrow Inc. bonds	289,130	291,400
Total	\$635,495	\$643,500

● LO12-3

2. Assuming that the above securities are properly classified as available-for-sale securities under U.S. GAAP, the unrealized holding gain or loss as of May 31, year 3 would be
- recognized as an \$8,005 unrealized holding gain on the income statement.
 - recognized in accumulated other comprehensive income by a year-end credit balance of \$8,005.
 - recognized in accumulated other comprehensive income by a year-end debit balance of \$8,005.
 - not recognized.

● LO12-1

3. Assuming that the above securities are properly classified as held-to-maturity securities under U.S. GAAP, the unrealized holding gain or loss as of May 31, year 3 would be
- recognized as an \$8,005 unrealized holding gain on the income statement.
 - recognized in accumulated other comprehensive income by a year-end credit balance of \$8,005.
 - recognized in accumulated other comprehensive income by a year-end debit balance of \$8,005.
 - not recognized.

Problems

An alternate exercise and problem set is available on the text website: www.mhhe.com/spiceland7e

P 12-1

Securities held-to-maturity; bond investment; effective interest

● LO12-1

Fuzzy Monkey Technologies, Inc., purchased as a long-term investment \$80 million of 8% bonds, dated January 1, on January 1, 2013. Management has the positive intent and ability to hold the bonds until maturity. For bonds of similar risk and maturity the market yield was 10%. The price paid for the bonds was \$66 million. Interest is received semiannually on June 30 and December 31. Due to changing market conditions, the fair value of the bonds at December 31, 2013, was \$70 million.

Required:

1. Prepare the journal entry to record Fuzzy Monkey's investment on January 1, 2013.
2. Prepare the journal entry by Fuzzy Monkey to record interest on June 30, 2013 (at the effective rate).
3. Prepare the journal entry by Fuzzy Monkey to record interest on December 31, 2013 (at the effective rate).
4. At what amount will Fuzzy Monkey report its investment in the December 31, 2013, balance sheet? Why?
5. How would Fuzzy Monkey's 2013 statement of cash flows be affected by this investment?

P 12-2

Trading securities; bond investment; effective interest

● LO12-2

[This problem is a variation of Problem 12-1, modified to categorize the investment as trading securities.]

Fuzzy Monkey Technologies, Inc., purchased as a short-term investment \$80 million of 8% bonds, dated January 1, on January 1, 2013. Management intends to include the investment in a short-term, active trading portfolio. For bonds of similar risk and maturity the market yield was 10%. The price paid for the bonds was \$66 million. Interest is received semiannually on June 30 and December 31. Due to changing market conditions, the fair value of the bonds at December 31, 2013, was \$70 million.

Required:

1. Prepare the journal entry to record Fuzzy Monkey's investment on January 1, 2013.
2. Prepare the journal entry by Fuzzy Monkey to record interest on June 30, 2013 (at the effective rate).
3. Prepare the journal entry by Fuzzy Monkey to record interest on December 31, 2013 (at the effective rate).
4. At what amount will Fuzzy Monkey report its investment in the December 31, 2013, balance sheet? Why? Prepare any entry necessary to achieve this reporting objective.
5. How would Fuzzy Monkey's 2013 statement of cash flows be affected by this investment?

P 12-3

Securities available-for-sale; bond investment; effective interest

● LO12-3

[This problem is a variation of Problem 12-1, modified to categorize the investment as securities available-for-sale.]

Fuzzy Monkey Technologies, Inc., purchased as a long-term investment \$80 million of 8% bonds, dated January 1, on January 1, 2013. Management intends to have the investment available for sale when circumstances warrant. For bonds of similar risk and maturity the market yield was 10%. The price paid for the bonds was \$66 million. Interest is received semiannually on June 30 and December 31. Due to changing market conditions, the fair value of the bonds at December 31, 2013, was \$70 million.

Required:

1. Prepare the journal entry to record Fuzzy Monkey's investment on January 1, 2013.
2. Prepare the journal entry by Fuzzy Monkey to record interest on June 30, 2013 (at the effective rate).
3. Prepare the journal entry by Fuzzy Monkey to record interest on December 31, 2013 (at the effective rate).
4. At what amount will Fuzzy Monkey report its investment in the December 31, 2013, balance sheet? Why? Prepare any entry necessary to achieve this reporting objective.
5. How would Fuzzy Monkey's 2013 statement of cash flows be affected by this investment?

P 12-4

Fair value option; bond investment; effective interest

● LO12-1,
LO12-2,
LO12-3,
LO12-7

[This problem is a variation of Problem 12-3, modified to cause the investment to be accounted for under the fair value option.]

Fuzzy Monkey Technologies, Inc., purchased as a long-term investment \$80 million of 8% bonds, dated January 1, on January 1, 2013. Management intends to have the investment available for sale when circumstances warrant. When the company purchased the bonds, management elected to account for them under the fair value option. For bonds of similar risk and maturity the market yield was 10%. The price paid for the bonds was \$66 million. Interest is received semiannually on June 30 and December 31. Due to changing market conditions, the fair value of the bonds at December 31, 2013, was \$70 million.

Required:

1. Prepare the journal entry to record Fuzzy Monkey's investment on January 1, 2013.
2. Prepare the journal entry by Fuzzy Monkey to record interest on June 30, 2013 (at the effective rate).
3. Prepare the journal entries by Fuzzy Monkey to record interest on December 31, 2013 (at the effective rate).
4. At what amount will Fuzzy Monkey report its investment in the December 31, 2013, balance sheet? Why? Prepare any entry necessary to achieve this reporting objective.

- How would Fuzzy Monkey's 2013 statement of cash flows be affected by this investment?
- How would your answers to requirements 1–5 differ if management had the intent and ability to hold the investments until maturity?

P 12–5
Various transactions related to securities available-for-sale
● LO12–3

The following selected transactions relate to investment activities of Ornamental Insulation Corporation. The company buys securities, *not* intending to profit from short-term differences in price and *not* necessarily to hold debt securities to maturity, but to have them available for sale when circumstances warrant. Ornamental's fiscal year ends on December 31. No investments were held by Ornamental on December 31, 2012.

2013

- | | |
|---------|--|
| Feb. 21 | Acquired Distribution Transformers Corporation common shares costing \$400,000. |
| Mar. 18 | Received cash dividends of \$8,000 on the investment in Distribution Transformers common shares. |
| Sep. 1 | Acquired \$900,000 of American Instruments' 10% bonds at face value. |
| Oct. 20 | Sold the Distribution Transformers shares for \$425,000. |
| Nov. 1 | Purchased M&D Corporation common shares costing \$1,400,000. |
| Dec. 31 | Recorded any necessary adjusting entry(s) relating to the investments. The market prices of the investments are: |

American Instruments bonds	\$ 850,000
M&D Corporation shares	\$1,460,000

(Hint: Interest must be accrued for the American Instruments' bonds.)

2014

- | | |
|---------|--|
| Jan. 20 | Sold the M&D Corporation shares for \$1,485,000. |
| Mar. 1 | Received semiannual interest of \$45,000 on the investment in American Instruments bonds. |
| Aug. 12 | Acquired Vast Communication common shares costing \$650,000. |
| Sept. 1 | Received semiannual interest of \$45,000 on the investment in American Instruments bonds. |
| Dec. 31 | Recorded any necessary adjusting entry(s) relating to the investments. The market prices of the investments are: |

Vast Communication shares	\$670,000
American Instruments bonds	\$830,000

Required:

- Prepare the appropriate journal entry for each transaction or event during 2013.
- Indicate any amounts that Ornamental Insulation would report in its 2013 balance sheet and income statement as a result of these investments.
- Prepare the appropriate journal entry for each transaction or event during 2014.
- Indicate any amounts that Ornamental Insulation would report in its 2014 balance sheet and income statement as a result of these investments.

P 12–6
Various transactions relating to trading securities
● LO12–2

American Surety and Fidelity buys and sells securities expecting to earn profits on short-term differences in price. For the first 11 months of 2013, gains from selling trading securities totaled \$8 million, losses were \$11 million, and the company had earned \$5 million in investment revenue. The following selected transactions relate to American's trading account during December 2013, and the first week of 2014. The company's fiscal year ends on December 31. No trading securities were held by American on December 1, 2013.

2013

- | | |
|---------|--|
| Dec. 12 | Purchased FF&G Corporation bonds for \$12 million. |
| 13 | Purchased 2 million Ferry Intercommunications common shares for \$22 million. |
| 15 | Sold the FF&G Corporation bonds for \$12.1 million. |
| 22 | Purchased U.S. Treasury bills for \$56 million and Treasury bonds for \$65 million. |
| 23 | Sold half the Ferry Intercommunications common shares for \$10 million. |
| 26 | Sold the U.S. Treasury bills for \$57 million. |
| 27 | Sold the Treasury bonds for \$63 million. |
| 28 | Received cash dividends of \$200,000 from the Ferry Intercommunications common shares. |
| 31 | Recorded any necessary adjusting entry(s) and closing entries relating to the investments. The market price of the Ferry Intercommunications stock was \$10 per share. |

2014

- | | |
|--------|--|
| Jan. 2 | Sold the remaining Ferry Intercommunications common shares for \$10.2 million. |
| 5 | Purchased Warehouse Designs Corporation bonds for \$34 million. |

Required:

1. Prepare the appropriate journal entry for each transaction or event during 2013, including the closing entry to income summary for the year.
2. Indicate any amounts that American would report in its 2013 balance sheet and income statement as a result of these investments.
3. Prepare the appropriate journal entry for each transaction or event during 2014.

P 12-7

Securities held-to-maturity, securities available for sale, and trading securities

- LO12-1, LO12-2, LO12-3

Amalgamated General Corporation is a consulting firm that also offers financial services through its credit division. From time to time the company buys and sells securities intending to earn profits on short-term differences in price. The following selected transactions relate to Amalgamated's investment activities during the last quarter of 2013 and the first month of 2014. The only securities held by Amalgamated at October 1 were \$30 million of 10% bonds of Kansas Abstractors, Inc., purchased on May 1 at face value. The company's fiscal year ends on December 31.

2013

- Oct. 18 Purchased 2 million preferred shares of Millwork Ventures Company for \$58 million as a speculative investment to be sold under suitable circumstances.
- 31 Received semiannual interest of \$1.5 million from the Kansas Abstractors bonds.
- Nov. 1 Purchased 10% bonds of Holistic Entertainment Enterprises at their \$18 million face value, to be held until they mature in 2018. Semiannual interest is payable April 30 and October 31.
- 1 Sold the Kansas Abstractors bonds for \$28 million because rising interest rates are expected to cause their fair value to continue to fall.
- Dec. 1 Purchased 12% bonds of Household Plastics Corporation at their \$60 million face value, to be held until they mature in 2028. Semiannual interest is payable May 31 and November 30.
- 20 Purchased U. S. Treasury bonds for \$5.6 million as trading securities, hoping to earn profits on short-term differences in prices.
- 21 Purchased 4 million common shares of NXS Corporation for \$44 million as trading securities, hoping to earn profits on short-term differences in prices.
- 23 Sold the Treasury bonds for \$5.7 million.
- 29 Received cash dividends of \$3 million from the Millwork Ventures Company preferred shares.
- 31 Recorded any necessary adjusting entry(s) and closing entries relating to the investments. The market price of the Millwork Ventures Company preferred stock was \$27.50 per share and \$11.50 per share for the NXS Corporation common. The fair values of the bond investments were \$58.7 million for Household Plastics Corporation and \$16.7 million for Holistic Entertainment Enterprises.

2014

- Jan. 7 Sold the NXS Corporation common shares for \$43 million.

Required:

Prepare the appropriate journal entry for each transaction or event.

P 12-8

Securities available-for-sale; fair value adjustment; reclassification adjustment

- LO12-3

At December 31, 2013, the investments in securities available-for-sale of Beale Developments were reported at \$78 million:

Securities available-for-sale	\$74	
Plus: Fair value adjustment	<u>4</u>	\$78

During 2014, Beale sold its investment in Schwab Pharmaceuticals, which had cost \$25 million, for \$28 million. Those shares had a fair value at December 31, 2013, of \$27 million. No other investments were sold. At December 31, 2014, the investments in securities available-for-sale included the cost and fair value amounts shown below.

(\$ in millions)	Cost	Fair Value	Unrealized Gain (Loss)
Securities Available-for-Sale			
Daisy Theaters, Inc. shares	\$40	\$42	\$2
Orpheum Entertainment bonds	<u>9</u>	<u>12</u>	<u>3</u>
Totals	\$49	\$54	\$5

Required:

1. At what amount should Beale report its securities available-for-sale in its December 31, 2014, balance sheet?
2. What journal entry is needed to enable the investment to be reported at this amount?
3. What is the amount of the reclassification adjustment to 2014 other comprehensive income? Show how the reclassification adjustment should be reported.

P 12-9

Investment securities and equity method investments compared

- LO12-3, LO12-4, LO12-5, LO12-6

On January 4, 2013, Runyan Bakery paid \$324 million for 10 million shares of Lavery Labeling Company common stock. The investment represents a 30% interest in the net assets of Lavery and gave Runyan the ability to exercise significant influence over Lavery's operations. Runyan received dividends of \$2.00 per share on December 15, 2013, and Lavery reported net income of \$160 million for the year ended December 31, 2013. The market value of Lavery's common stock at December 31, 2013, was \$31 per share. On the purchase date, the book value of Lavery's net assets was \$800 million and:

- a. The fair value of Lavery's depreciable assets, with an average remaining useful life of six years, exceeded their book value by \$80 million.
- b. The remainder of the excess of the cost of the investment over the book value of net assets purchased was attributable to goodwill.

Required:

1. Prepare all appropriate journal entries related to the investment during 2013, assuming Runyan accounts for this investment by the equity method.
2. Prepare the journal entries required by Runyan, assuming that the 10 million shares represent a 10% interest in the net assets of Lavery rather than a 30% interest.

P 12-10

Fair value option; equity method investments

- LO12-2, LO12-4, LO12-7

[This problem is a variation of Problem 12-9 focusing on the fair value option.]

On January 4, 2013, Runyan Bakery paid \$324 million for 10 million shares of Lavery Labeling Company common stock. The investment represents a 30% interest in the net assets of Lavery and gave Runyan the ability to exercise significant influence over Lavery's operations. Runyan chose the fair value option to account for this investment. Runyan received dividends of \$2.00 per share on December 15, 2013, and Lavery reported net income of \$160 million for the year ended December 31, 2013. The market value of Lavery's common stock at December 31, 2013, was \$31 per share. On the purchase date, the book value of Lavery's net assets was \$800 million and:

- a. The fair value of Lavery's depreciable assets, with an average remaining useful life of six years, exceeded their book value by \$80 million.
- b. The remainder of the excess of the cost of the investment over the book value of net assets purchased was attributable to goodwill.

Required:

1. Prepare all appropriate journal entries related to the investment during 2013, assuming Runyan accounts for this investment under the fair value option in a manner similar to what they would use for trading securities.
2. What would be the effect of this investment on Runyan's 2013 net income?

P 12-11

Fair value option; equity method investments

- LO12-2, LO12-4, LO12-5, LO12-7

[This problem is an expanded version of Problem 12-10 that considers alternative ways in which a firm might apply the fair value option to account for significant-influence investments that would normally be accounted for under the equity method.]

Companies can choose the fair value option for investments that otherwise would be accounted for under the equity method. If the fair value option is chosen, the investment is shown at fair value in the balance sheet, and unrealized holding gains and losses are recognized in the income statement. However, exactly how a company complies with those broad requirements is up to the company. This problem requires you to consider alternative ways in which a company might apply the fair value option for investments that otherwise would be accounted for under the equity method.

On January 4, 2013, Runyan Bakery paid \$324 million for 10 million shares of Lavery Labeling Company common stock. The investment represents a 30% interest in the net assets of Lavery and gave Runyan the ability to exercise significant influence over Lavery's operations. Runyan chose the fair value option to account for this investment. Runyan received dividends of \$2.00 per share on December 15, 2013, and Lavery reported net income of \$160 million for the year ended December 31, 2013. The market value of Lavery's common stock at December 31, 2013, was \$31 per share. On the purchase date, the book value of Lavery's net assets was \$800 million and:

- a. The fair value of Lavery's depreciable assets, with an average remaining useful life of six years, exceeded their book value by \$80 million.
- b. The remainder of the excess of the cost of the investment over the book value of net assets purchased was attributable to goodwill.

Required:

1. Prepare all appropriate journal entries related to the investment during 2013, assuming Runyan accounts for this investment under the fair value option, and simply accounts for the Lavery investment in a manner similar to what it would use for trading securities. Indicate the effect of these journal entries on 2013 net income, and show the amount at which the investment is carried in the December 31, 2013, balance sheet.

- Prepare all appropriate journal entries related to the investment during 2013, assuming Runyan accounts for this investment under the fair value option, but uses equity method accounting to account for Lavery's income and dividends, and then records a fair value adjustment at the end of the year that allows it to comply with GAAP. Indicate the effect of these journal entries on 2013 net income, and show the amount at which the investment is carried in the December 31, 2013, balance sheet. (Note: You should end up with the same total 2013 income effect and same carrying value on the balance sheet for requirements 1 and 2.)

P 12-12
Equity method
● LO12-5,
LO12-6

Northwest Paperboard Company, a paper and allied products manufacturer, was seeking to gain a foothold in Canada. Toward that end, the company bought 40% of the outstanding common shares of Vancouver Timber and Milling, Inc., on January 2, 2013, for \$400 million.

At the date of purchase, the book value of Vancouver's net assets was \$775 million. The book values and fair values for all balance sheet items were the same except for inventory and plant facilities. The fair value exceeded book value by \$5 million for the inventory and by \$20 million for the plant facilities.

The estimated useful life of the plant facilities is 16 years. All inventory acquired was sold during 2013.

Vancouver reported net income of \$140 million for the year ended December 31, 2013. Vancouver paid a cash dividend of \$30 million.

Required:

- Prepare all appropriate journal entries related to the investment during 2013.
- What amount should Northwest report as its income from its investment in Vancouver for the year ended December 31, 2013?
- What amount should Northwest report in its balance sheet as its investment in Vancouver?
- What should Northwest report in its statement of cash flows regarding its investment in Vancouver?

P 12-13
Equity method
● LO12-5,
LO12-6

On January 2, 2013, Miller Properties paid \$19 million for 1 million shares of Marlon Company's 6 million outstanding common shares. Miller's CEO became a member of Marlon's board of directors during the first quarter of 2013.

The carrying amount of Marlon's net assets was \$66 million. Miller estimated the fair value of those net assets to be the same except for a patent valued at \$24 million above cost. The remaining amortization period for the patent is 10 years.

Marlon reported earnings of \$12 million and paid dividends of \$6 million during 2013. On December 31, 2013, Marlon's common stock was trading on the NYSE at \$18.50 per share.

Required:

- When considering whether to account for its investment in Marlon under the equity method, what criteria should Miller's management apply?
- Assume Miller accounts for its investment in Marlon using the equity method. Ignoring income taxes, determine the amounts related to the investment to be reported in its 2013:
 - Income statement.
 - Balance sheet.
 - Statement of cash flows.

P 12-14
Classifying investments
● LO12-1 through
LO12-5

Indicate (by letter) the way each of the investments listed below most likely should be accounted for based on the information provided.

Item	Reporting Category
___ 1. 35% of the nonvoting preferred stock of American Aircraft Company.	T. Trading securities M. Securities held-to-maturity
___ 2. Treasury bills to be held to maturity.	A. Securities available-for-sale
___ 3. Two-year note receivable from affiliate.	E. Equity method
___ 4. Accounts receivable.	C. Consolidation
___ 5. Treasury bond maturing in one week.	N. None of these
___ 6. Common stock held in trading account for immediate resale.	
___ 7. Bonds acquired to profit from short-term differences in price.	
___ 8. 35% of the voting common stock of Computer Storage Devices Company.	
___ 9. 90% of the voting common stock of Affiliated Peripherals, Inc.	
___ 10. Corporate bonds of Primary Smelting Company to be sold if interest rates fall ½%.	
___ 11. 25% of the voting common stock of Smith Foundries Corporation: 51% family-owned by Smith family; fair value determinable.	
___ 12. 17% of the voting common stock of Shipping Barrels Corporation: Investor's CEO on the board of directors of Shipping Barrels Corporation.

Fair value option;
held-to-maturity
investments

- LO12-1,
LO12-7

On January 1, 2013, Ithaca Corp. purchases Cortland Inc. bonds that have a face value of \$150,000. The Cortland bonds have a stated interest rate of 6%. Interest is paid semiannually on June 30 and December 31, and the bonds mature in 10 years. For bonds of similar risk and maturity, the market yield on particular dates is as follows:

January 1, 2013	7.0%
June 30, 2013	8.0%
December 31, 2013	9.0%

Required:

1. Calculate the price Ithaca would have paid for the Cortland bonds on January 1, 2013 (ignoring brokerage fees), and prepare a journal entry to record the purchase.
2. Prepare all appropriate journal entries related to the bond investment during 2013, assuming Ithaca accounts for the bonds as a held-to-maturity investment. Ithaca calculates interest revenue at the effective interest rate as of the date it purchased the bonds.
3. Prepare all appropriate journal entries related to the bond investment during 2013, assuming that Ithaca chose the fair value option when the bonds were purchased, and that Ithaca determines fair value of the bonds semi-annually. Ithaca calculates interest revenue at the effective interest rate as of the date it purchased the bonds.

P 12-16

Accounting
for other-than-
temporary
impairments
(Appendix 12B)

- LO12-1,
LO12-2,
LO12-3

Stewart Enterprises has the following investments, all purchased prior to 2013:

1. Bee Company 5% bonds, purchased at face value, with an amortized cost of \$4,000,000, and classified as held to maturity. At December 31, 2013, the Bee investment had a fair value of \$3,500,000, and Stewart calculated that \$240,000 of the fair value decline is a credit loss and \$260,000 is a noncredit loss. At December 31, 2014, the Bee investment had a fair value of \$3,700,000, and Stewart calculated that \$140,000 of the difference between fair value and amortized cost was a credit loss and \$160,000 was a noncredit loss.
2. Oliver Corporation 4% bonds, purchased at face value, with an amortized cost of \$2,500,000, classified as a trading security. Because of unrealized losses prior to 2013, the Oliver bonds have a fair value adjustment account with a credit balance of \$200,000, such that the carrying value of the Oliver investment is \$2,300,000 prior to making any adjusting entries in 2013. At December 31, 2013, the Oliver investment had a fair value of \$2,200,000, and Stewart calculated that \$120,000 of the difference between amortized cost and fair value is a credit loss and \$180,000 is a noncredit loss. At December 31, 2014, the Oliver investment had a fair value of \$2,700,000.
3. Jones Inc. 6% bonds, purchased at face value, with an amortized cost of \$3,500,000, and classified as an available-for-sale investment. Because of unrealized losses prior to 2013, the Jones bonds have a fair value adjustment account with a credit balance of \$400,000, such that the carrying value of the Jones investment is \$3,100,000 prior to making any adjusting entries in 2013. At December 31, 2013, the Jones investment had a fair value of \$2,700,000, and Stewart calculated that \$225,000 of the difference between amortized cost and fair value is a credit loss and \$575,000 is a noncredit loss. At December 31, 2014, the Jones investment had a fair value of \$2,900,000, and Stewart calculated that \$125,000 of the difference between amortized cost and fair value is a credit loss and \$475,000 is a noncredit loss.
4. Helms Corp. equity, purchased for \$1,000,000, classified as available for sale. Because of unrealized gains prior to 2013, the Helms shares have a fair value adjustment account with a debit balance of \$120,000, such that the carrying value of the Helms investment is \$1,120,000 prior to making any adjusting entries in 2013. At December 31, 2013 and 2014, the Helms investment had a fair value of \$600,000 and \$700,000, respectively.

Stewart does not intend to sell any of these investments and does not believe it is more likely than not that it will have to sell any of the bond investments before fair value recovers. However, Stewart cannot assert that it has the ability to hold the Helms equity investment before fair value recovers.

Required:

Prepare the appropriate adjusting journal entries to account for fair value changes during 2013 and 2014, assuming that each investment is viewed as qualifying as an other-than-temporary (OTT) impairment as of December 31, 2013, and then is accounted for normally during 2014 (with no additional OTT impairment in 2014).

[This problem is a variation of Problem 12-16, modified to consider accounting for impairments under IFRS.]

Required:

Consider the facts presented in P12-16, and assume that Stewart accounts for its investments under IFRS. Prepare the appropriate adjusting journal entries to account for fair value changes during 2013 and 2014, assuming that Stewart views each investment as meeting any criteria necessary for recognizing an other-than-temporary (OTT) impairment as of December 31, 2013, and then is accounted for normally during 2014 (with no additional OTT impairment in 2014).

Real World Case 12-1 Intel's investments

● LO12-3

The following disclosure note appeared in the July 2, 2011 quarterly financial statement of the **Intel Corporation**.

Note 7: Available-for-Sale Investments (partial)

Table 1: Available-for-sale investments as of July 2, 2011, and December 25, 2010, were as follows:

(In millions)	July 2, 2011				December 25, 2010			
	Adjusted Cost	Gross Unrealized Gains	Gross Unrealized Losses	Fair Value	Adjusted Cost	Gross Unrealized Gains	Gross Unrealized Losses	Fair Value
Commercial paper	\$ 3,777	\$ —	\$ —	\$ 3,777	\$ 5,312	\$ —	\$ —	\$ 5,312
Government bonds	1,392	1	(1)	1,392	10,075	9	(5)	10,079
Corporate bonds	1,332	13	(3)	1,342	2,250	9	(4)	2,255
Bank deposits	1,155	—	(1)	1,154	1,550	1	—	1,551
Marketable equity securities	334	568	(10)	892	380	629	(1)	1,008
Asset-backed securities	69	—	(10)	59	76	—	(9)	67
Money market fund deposits	550	—	—	550	34	—	—	34
Total available-for-sale investments	\$ 8,609	\$ 582	\$ (25)	\$ 9,166	\$19,677	\$ 648	\$ (19)	\$20,306

Table 2: The before-tax net unrealized holding gains (losses) on available-for-sale investments that have been included in accumulated other comprehensive income (loss) were as follows:

(In millions)	Three Months Ended		Six Months Ended	
	July 2, 2011	June 26, 2010	July 2, 2011	June 26, 2010
Net unrealized holding gains (losses) included in other comprehensive income (loss)	\$ (12)	\$ (17)	\$ 24	\$ 134
Net gains (losses) reclassified from accumulated other comprehensive income (loss) into earnings	\$ 44	\$ 7	\$ 88	\$ 74

Required:

- Looking only at Table 1, draw a T-account that shows the change between the December 25, 2010, and July 2, 2011, balances for the fair value adjustment associated with Intel's AFS investments for the first half of 2011. By how much did the fair value change during the first half of 2011?
- Now look at Table 2, and prepare a journal entry that recognizes for the first six months of 2011 any net unrealized holding gains and losses. Ignore income taxes.
- Using your journal entry from requirement 2, adjust your T-account from requirement 1. Have you accounted for the entire change in the fair value adjustment that occurred during the first half of 2011? Reconsider Table 2, and speculate as to what could be causing the difference.

Real World Case 12–2

Reporting securities available-for-sale; obtain and critically evaluate an annual report

● LO12–3

Investments in common stocks potentially affect each of the various financial statements as well as the disclosure notes that accompany those statements.

Required:

1. Locate a recent annual report of a public company that includes a disclosure note that describes an investment in securities available-for-sale. You can use EDGAR at www.sec.gov.
2. Under what caption are the investments reported in the comparative balance sheets? Are they reported as current or noncurrent assets?
3. Are realized gains or losses reported in the comparative income statements?
4. Where are unrealized gains or losses reported in the comparative financial statements?
5. Under what caption are unrealized gains or losses listed in the comparative balance sheets? Why are unrealized gains or losses reported here rather than in the income statements?
6. Are cash flow effects of these investments reflected in the company's comparative statements of cash flows? If so, what information is provided by this disclosure?
7. Does the disclosure note provide information not available in the financial statements?

Comparison of equity method between IFRS and U.S. GAAP

● LO12–4,
LO12–5,
LO12–6,
LO12–8

IFRS

The following are excerpts from the 2010 financial statements of **Renault**, a large French automobile manufacturer.

14–INVESTMENT IN NISSAN

A–Nissan consolidation method

Following the operations described in “Significant events,” Renault’s investment in Nissan was down slightly, from 44.3% in 2009 to 43.4% in 2010. Renault and Nissan have chosen to develop a unique type of alliance between two distinct companies with common interests, uniting forces to achieve optimum performance. The Alliance is organized so as to preserve individual brand identities and respect each company’s corporate culture.

Consequently:

- Renault does not hold the majority of Nissan voting rights.
- The terms of the Renault-Nissan agreements do not entitle Renault to appoint the majority of Nissan directors, nor to hold the majority of voting rights at meetings of Nissan’s Board of Directors; at December 31, 2010 as in 2009, Renault supplied four of the total nine members of Nissan’s Board of Directors.
- Renault Nissan BV, owned 50% by Renault and 50% by Nissan, is the Alliance’s joint decision-making body for strategic issues concerning either group individually. Its decisions are applicable to both Renault and Nissan. This entity does not enable Renault to direct Nissan’s financial and operating strategies, and cannot therefore be considered to represent contractual control by Renault over Nissan. The matters examined by Renault Nissan BV since it was formed have remained strictly within this contractual framework, and are not an indication that Renault exercises control over Nissan.
- Renault can neither use nor influence the use of Nissan’s assets in the same way as its own assets.
- Renault provides no guarantees in respect of Nissan’s debt.

In view of this situation, Renault is considered to exercise significant influence in Nissan, and therefore uses the equity method to include its investment in Nissan in the consolidation.

F–Nissan financial information under IFRS (partial)

(When accounting for its investment in Nissan, Renault makes restatements that) include adjustments for harmonisation of accounting standards and the adjustments to fair value of assets and liabilities applied by Renault at the time of acquisitions in 1999 and 2002.

Required:

1. Go to Deloitte’s IAS Plus website and examine the summary of the IASB’s *IAS No. 28* (at <http://www.iasplus.com/standard/ias28.htm>), which governs application of the equity method. Focus on two areas: Identification of Associates and Applying the Equity Method of Accounting.
2. Evaluate Renault’s decision to use the equity method to account for its investment in Nissan. Does Renault have insignificant influence, significant influence, or control?
3. Evaluate the fact that, when accounting for its investment in Nissan under the equity method, Renault makes adjustments that take into account the fair value of assets and liabilities at the time Renault invested in Nissan.

Give an example of the sorts of adjustments that might be made. Are such adjustments consistent with IFRS? With U.S. GAAP? Explain.

- Evaluate the fact that, when accounting for its investment in Nissan under the equity method, Renault makes adjustments for harmonization of accounting standards. Are such adjustments consistent with IFRS? With U.S. GAAP? Explain.

International Case 12-4

Comparison of equity method and proportionate consolidation under IFRS

Real World Case 12-7

Comprehensive income—Microsoft

- LO12-3

Obtain the 2011 annual report of Vodafone (www.vodafone.com).

Required:

- Contrast the accounting approaches used in Notes 13 for “investments in joint ventures” and 14 for “investments in associated undertakings.” What are key similarities and differences? *Hint:* Note 2 is useful here as well.
- Do you think it is likely that Vodafone’s accounting for joint ventures will change after it implements *IFRS No. 11*? Explain.

All publicly traded domestic companies use EDGAR, the Electronic Data Gathering, Analysis, and Retrieval system, to make the majority of their filings with the SEC. You can access EDGAR at www.sec.gov.

Required:

- Search for a public company with which you are familiar. Access its most recent 10-K filing. Search or scroll to find financial statements and related notes.
- Answer the following questions. (If the chosen company does not report investments in the securities of other companies, choose another company.)
 - What is the amount and classification of any investment securities reported in the balance sheet? Are unrealized gains or losses reported in the shareholders’ equity section?
 - Are any investments reported by the equity method?
 - What amounts from these investments are reported in the comparative income statements? Has that income increased or decreased over the years reported?
 - Are any acquisitions or disposals of investments reported in the statement of cash flows?

Corporations frequently invest in securities issued by other corporations. Some investments are acquired to secure a favorable business relationship with another company. On the other hand, others are intended only to earn an investment return from the dividends or interest the securities pay or from increases in the market prices of the securities—the same motivations that might cause you to invest in stocks, bonds, or other securities. This diversity in investment objectives means no single accounting method is adequate to report every investment.

Merck & Co., Inc., invests in securities of other companies. Access Merck’s 2010 10-K (which includes financial statements) using EDGAR at www.sec.gov.

Required:

- What is the amount and classification of any investment securities reported on the balance sheet? In which current and noncurrent asset categories are investments reported by Merck? What criteria are used to determine the classifications?
- How are unrealized gains or losses reported? Realized gains and losses?
- Are any investments reported by the equity method?
- What amounts from equity method investments are reported in the comparative income statements?
- Are cash flow effects of these investments reflected in the company’s comparative statements of cash flows? If so, what information is provided by this disclosure?

As required by GAAP [FASB ASC 320, previously *SFAS No. 115*], **Microsoft Corporation** reports its investments available-for-sale at the *fair value* of the investment securities. The *net* unrealized holding gain is not reported in the income statement. Instead, it’s reported as part of Other comprehensive income and added to Accumulated other comprehensive income in shareholders’ equity.

Comprehensive income is a broader view of the change in shareholders’ equity than traditional net income, encompassing all changes in equity from nonowner transactions. Microsoft chose to report its Other comprehensive income as a separate statement in a disclosure note in its 2011 annual report.

NOTE 19 OTHER COMPREHENSIVE INCOME

The activity in other comprehensive income and related income tax effects were as follows:

(in millions)

Year Ended June 30	2011	2010	2009
Net unrealized gains on derivatives:			
Unrealized gains, net of tax effect of \$(340), \$188, and \$472	\$ (632)	\$ 349	\$ 876
Reclassification adjustment for gains included in net income, net of tax effect of \$2, \$(173), and \$(309)	5	(322)	(574)
Net unrealized gains on derivative	<u>(627)</u>	<u>27</u>	<u>302</u>
Net unrealized gains (losses) on investments:			
Unrealized gains (losses), net of tax effect of \$726, \$263, and \$(142)	1,349	488	(263)
Reclassification adjustment for losses (gains) included in net income, net of tax effect of \$(159), \$(120), and \$16	(295)	(223)	30
Net unrealized gains (losses) on investments	<u>1,054</u>	<u>265</u>	<u>(233)</u>
Translation adjustments and other, net of tax effects of \$205, \$(103), and \$(133)	381	(206)	(240)
Other comprehensive income (loss)	<u>\$ 808</u>	<u>\$ 86</u>	<u>\$ (171)</u>

The components of accumulated other comprehensive income were as follows:

(in millions)

Year Ended June 30	2011	2010	2009
Net unrealized gains on derivatives	\$ (163)	\$ 464	\$ 437
Net unrealized gains on investments	1,821	767	502
Translation adjustments and other	205	(176)	30
Accumulated other comprehensive income	<u>\$1,863</u>	<u>\$1,055</u>	<u>\$ 969</u>

Required:

1. The note indicates Unrealized holding losses during 2011 in the amount of \$1,349 million. Is this the balance of accumulated other comprehensive income that Microsoft would include as a separate component of shareholders' equity? Explain.
2. What does Microsoft mean by the term, "Reclassification adjustment for (losses) gains included in net income"?

Trueblood Accounting Case 12-8

Impairments
(Appendix 12B)

● LO12-3

The following Trueblood case is recommended for use with this chapter. The case provides an excellent opportunity for class discussion, group projects, and writing assignments. The case, along with Professor's Discussion Material, can be obtained from the Deloitte Foundation at its website: www.deloitte.com/us/truebloodcases.

Case: 03-7: Impaired Abilities

This case gives students an opportunity to discuss accounting for other-than-temporary impairments.

Research Case 12-9

Changes in accounting for other-than-temporary impairments
(Appendix 12B)

● LO12-1,
LO12-3

In Appendix 12B you learned that accounting for other-than-temporary impairments has changed recently. You also learned that these changes were controversial. In fact, two of the five members of the FASB voted against the changes and provided an explanation for their position when the standard that defined the changes was issued. That information isn't included in the FASB's Accounting Standards Codification, but you can find it in the original standard, "Recognition and Presentation of Other-Than-Temporary Impairments," FASB Staff Position (FSP) No. 115-2 and 124-2 (Norwalk, Conn.: FASB April 9, 2009), which is available under the "Standards" link at www.FASB.org.

Required:

Access the FSP and turn to p. 17, and read why FASB members Linsmeier and Siegel dissented. What were their major concerns with the new approach for accounting for OTT impairments? Do you find those concerns compelling?

Air France—KLM Case

AIRFRANCE

● LO12-8

Air France—KLM (AF), a French company, prepares its financial statements according to International Financial Reporting Standards. AF's annual report for the year ended March 31, 2011, which includes financial statements and disclosure notes, is provided with all new textbooks. This material also is included in AF's "Registration Document 2010–11," dated June 15, 2011 and is available at www.airfranceklm.com.

Required:

1. Read Notes 3.10.2, 3.10.5, 22, 32.3 and 32.4. Focusing on investments accounted for at fair value through profit and loss (FVTPL):
 - a. As of March 31, 2011, what is the balance of those investments in the balance sheet? Be specific regarding which line of the balance sheet includes the balance.
 - b. How much of that balance is classified as current and how much as noncurrent?
 - c. Is that balance stated at fair value? How do you know?
 - d. How much of the fair value of those investments is accounted for using level 1, level 2, and level 3 inputs of the fair value hierarchy? Given that information, assess the reliability (representational faithfulness) of this fair value estimate.
2. Complete Requirement 1 again, but for investments accounted for as available for sale.
3. Read Notes 3.3.2, 10, and 20.
 - a. When AF can exercise significant influence over an investee, what accounting approach do they use to account for the investment? How does AF determine if it can exercise significant influence?
 - b. If AF exercises joint control over an investee by virtue of a contractual agreement, what accounting method does it use? Is there an alternative?
 - c. Why did AF change how it accounts for its investment in WAM (Amadeus)? What was the initial approach that AF used, and what approach did it change to using for this investment?
 - d. What is the carrying value of AF's equity-method investments in its March 31, 2011 balance sheet?
 - e. How did AF's equity-method investments affect AF's 2011 net income from continuing operations?

CPA Simulation 12—1

Barbados Investments Investments

CPA Review

Test your knowledge of the concepts discussed in this chapter, practice critical professional skills necessary for career success, and prepare for the computer-based CPA exam by accessing our CPA simulations at the text website: www.mhhe.com/spiceland7e.

The Barbados Investments simulation tests your knowledge of (a) the way we classify investment securities among the categories of trading securities, available-for-sale securities, and those held-to-maturity, (b) how we account for those investments, (c) the way accounting for investments affects comprehensive income, and (d) the appropriate use of the equity method.

As on the CPA exam itself, you will be asked to use tools including a spreadsheet, a calculator, and generally accepted accounting principles, to conduct research, derive solutions, and communicate conclusions related to these issues in a simulated environment.

Specific tasks in the simulation include:

- Analyzing various transactions involving investment securities and determining their appropriate balance sheet classification.
- Applying judgment in the application of the equity method.
- Determining the amount of interest revenue to be reported from a debt investment.
- Demonstrating an understanding of comprehensive income and how it is affected by investments in securities.
- Communicating the way we account for investments using the equity method.
- Researching the financial reporting ramifications of changing the classification of investment securities.

Where We're Headed

PREFACE

The FASB and the IASB are collaborating on several major new standards designed in part to move U.S. GAAP and IFRS closer together (convergence). This reading is based on the FASB's Exposure Draft of an Accounting Standards Update (ASU) that addresses accounting for financial instruments and "tentative decisions" of the Board after receiving feedback about the Exposure Draft as of the date this text went to press.⁴⁸

Even after the proposed ASU is issued, previous GAAP will be relevant until the proposed ASU becomes effective, and students taking the CPA or CMA exams will be responsible for the previous GAAP until six months after that effective date. Conversely, prior to the effective date of the proposed ASU, it is useful for students to have an understanding of the new guidance on the horizon.

The FASB and the IASB have been working to revise accounting for financial instruments for several years. Although the two boards intend to develop a joint approach, their development of new guidance in this area has been somewhat separate. The FASB issued an exposure draft of a proposed ASU in 2010,⁴⁹ subsequently revised that ASU in important ways, and likely will re-expose major changes in the future. As discussed in the main chapter, the IASB issued *IFRS No. 9* in 2009, but is not requiring adoption until 2015, and as of the date this text was written the European Union had not yet endorsed *IFRS No. 9* for use by members of the EU.⁵⁰ Also, the IASB has indicated that it will request comments on the FASB's new proposed ASU as it considers in the future whether *IFRS No. 9* should be modified. So, it's fair to say that accounting in the area of financial instruments remains in a state of change.

In this chapter supplement we discuss the main points of the proposed ASU. We focus in particular on important changes from current GAAP, identified with a **GAAP Change** note in the margin of the supplement. We also use IFRS boxes to identify key differences between the proposed ASU and *IFRS No. 9*.

It's important to understand that much of the proposed ASU is very similar to current GAAP. As shown in Illustration 12–19, the proposed ASU uses the same five basic categories to account for investments that you learned about in the main chapter, but with different names and minor differences. The journal entries we use to account for the investments in each category are the same as they are under current GAAP.

The five categories used in the proposed ASU to classify and account for investments are very similar to those used in current U.S. GAAP.

⁴⁸Because the proposed ASU had not been finalized as of the date this text went to press, it is possible that some aspects of the proposed ASU are different from what we show in this supplement. Check the FASB Updates page (<http://lsb.scu.edu/jsepe/fasb-update-7e.htm>) to see if any changes have occurred.

⁴⁹*Proposed Accounting Standards Update*, "Accounting for Financial Instruments and Revisions to the Accounting for Derivative Instruments and Hedging Activities (Topics 825 and 815)," (Norwalk, Conn.: FASB, May 26, 2010).

⁵⁰"Financial Instruments," *International Financial Reporting Standard No. 9* (IASCF, November 12, 2009, as amended effective January 1, 2011).

Reporting Category Used in		
Current GAAP	Proposed ASU	Accounting Approach
Held-to-maturity ("HTM")*	Amortized Cost**	Investment reported at amortized cost.
Trading securities ("TS")	Fair Value through Net Income ("FV-NI")	Investment reported at fair value. Unrealized holding gains and losses included in net income.
Securities available-for-sale ("AFS")*	Fair Value through Other Comprehensive Income ("FV-OCI") **	Investment reported at fair value. Unrealized holding gains and losses excluded from net income and reported in OCI. Gains and losses reclassified from OCI and reported in net income when realized through the sale of the investment.
Equity method*	Equity method**	Investment reported at cost adjusted for subsequent earnings and dividends of the investee.
Consolidation	Consolidation	The financial statements of the investor and investee are combined as if they are a single company.

*If the investor elects the *fair value option*, this type of investment also can be accounted for using the same approach that's used for trading securities, with the investment reported at fair value and unrealized holding gains and losses included in net income.

**The proposed ASU eliminates the fair value option for almost all investments. The only exception occurs when the investor manages a group of financial assets and liabilities according to their net exposure to market risks and reports information on that basis to management. In that case, the investor can irrevocably elect the fair value option when the investments are acquired.

Illustration 12–19

Reporting Categories for Investments under the Proposed ASU

The proposed ASU differs from current GAAP primarily in the criteria used to classify investments within the first three categories.

The proposed ASU differs from current GAAP primarily in the criteria we use to classify an investment into one of the three categories when the investor lacks significant influence over the investee (under the proposed ASU, those categories are amortized cost, fair value through net income, and fair value through other comprehensive income). In addition, the proposed ASU eliminates the fair value option for almost all investments, and impairment rules differ between the proposed ASU and current GAAP.

We start by discussing criteria for determining how to account for *equity* investments. Then we discuss criteria for determining how to account for *debt* investments. We finish with discussions of accounting for impairments and the equity method.

Accounting for Equity Investments

Determining how to account for equity investments (investments in stock) under the proposed ASU is easy. If the investor does not have “significant influence”⁵¹ over the investee, the equity investment is accounted for as FV-NI.⁵² If the investor has significant influence over the investee, but lacks *control*, the equity method is used. If the investor has *control*, the investment is consolidated.

Equity investments are always accounted for as FV-NI if the investor lacks significant influence over the investee.

⁵¹Remember from the main chapter that we assume an investor has significant influence over the investee when the investor owns between 20% and 50% of the investee's voting shares of stock. However, we also may conclude from additional evidence that an investor who owns less than 20% is able to exercise significant influence.

⁵²The proposed ASU provides a “practicability exception” when investors that do not sell shares of stock to the public (those investors are called “nonpublic entities”) hold equity that is not sold frequently (called “nonmarketable equity”). Nonpublic investors can measure nonmarketable equity investments at cost, adjusted for impairments and any changes in the price of the equity observed when sales of similar equity occur.

GAAP Change

Current GAAP requires the equity method or consolidation under the same circumstances as the proposed ASU requires, but differs in its treatment of investments when the investor lacks significant influence. Under current GAAP, the investor accounts for the equity investment as a trading security if the investment is held for trading purposes, or as an AFS security if it is held for a more long-term investment purpose. Under the proposed ASU, an equity investment *always* is treated as FV-NI (equivalent to being accounted for as a trading security). This difference means that we will see many more unrealized gains and losses on equity investments reported in net income under the proposed ASU, because there is no opportunity for the investments to be classified as AFS with unrealized gains and losses shown in OCI.

International Financial Reporting Standards

Accounting for Equity Investments When Investor Lacks Significant Influence. Under *IFRS No. 9*, investments in equity securities typically are classified as “FVTPL” (“Fair Value through Profit and Loss,” equivalent to “FV-NI”). However, if the equity is not held for trading, the investor has the option to irrevocably classify it as “FVTOCI” (“Fair Value through Other Comprehensive Income,” equivalent to “FV-OCI”). Thus, *IFRS No. 9* offers two alternative treatments of equity investments, similar to the trading and AFS categories in current GAAP, and *IFRS No. 9* differs from the proposed ASU in the same way that current GAAP does. Equity investments may have unrealized gains and losses in OCI under *IFRS No. 9*, but not under the proposed ASU.

Accounting for a debt investment depends on (1) the characteristics of the debt and (2) the business activity in which the debt is used.

Accounting for Debt Investments

Determining how to account for debt investments under the proposed ASU is more complicated than accounting for equity investments. Under the proposed ASU we base classification of debt investments on two criteria: (a) the characteristics of the debt instrument and (b) the business activity in which the instrument is used. We discuss each of the criteria in turn.

CHARACTERISTICS OF THE DEBT INSTRUMENT

The first criterion we look at when classifying a debt instrument is to identify whether it is **simple** or **complex**.⁵³ As shown in Illustration 12–20, “simple” debt has characteristics that you would typically associate with debt.

Illustration 12–20

Characteristics of a Simple Debt Instrument Under the Proposed ASU

Characteristics of a Simple Debt Instrument

1. An amount is transferred to the borrower (debtor) when the debt instrument is issued that will be returned to the lender (creditor) when the debt matures or is settled. The amount is the principal or face amount of the debt adjusted for any discount or premium.
2. The debt cannot be prepaid or settled in such a way that the lender does not recover substantially all of its original investment, unless the lender chooses to allow it.
3. The debt instrument is not a derivative.⁵⁴

Simple debt involves return of principal to the lender and can only be settled by the lender’s choice.

In other words, simple debt is not a derivative, involves a lender providing an amount up front that eventually must be repaid, and doesn’t permit the borrower to prepay or settle the debt unless the lender allows it. Accounts receivable and notes receivable would qualify as simple debt instruments, as would a bond.⁵⁵

⁵³The proposed ASU indicates two categories but does not use the terms *simple* and *complex* to describe them. We use those terms for clarity as we discuss the criteria for debt classification.

⁵⁴We discuss derivatives in an appendix to this book.

⁵⁵We discuss bonds in Chapter 14.

Debt that lacks one or more of the characteristics of simple debt is considered *complex*. Under the proposed ASU, debt that is complex always is classified as FV-NI. As discussed in the next section, the accounting approach used for debt that is simple depends on the business purpose of the debt.

If debt is not simple, it is **complex**. Complex debt always is accounted for as FV-NI.

Business Purpose of a Debt Instrument

For simple debt, we next must consider the business activity that motivates the investor to hold the debt. The proposed ASU identifies three primary business activities: **lending**, long-term **investing**, or **held for sale**. Illustration 12–21 summarizes the three business purposes discussed in the proposed ASU and the accounting approach that's appropriate for each.

Business Purpose	Accounting Approach
<p>Lending: The debt holder's purpose is lending or customer financing with a focus on collecting cash flows (interest and principal). The debt holder must have the ability to renegotiate, sell or settle the debt to minimize losses due to a borrower's deteriorating credit.⁵⁶</p>	Amortized Cost
<p>Investing: The debt holder may choose to hold on to the debt investment or sell it as a way of either (a) maximizing its return on investment or (b) managing risk.</p>	FV-OCI
<p>Held for Sale: The debt instrument is either (a) held for the purpose of being sold or (b) actively managed internally on a fair value basis but doesn't qualify for FV-OCI.</p>	FV-NI

Illustration 12–21

Business Purposes of Debt Investments Under the Proposed ASU

If simple debt is used for **lending or customer financing**, it is accounted for at amortized cost.

If simple debt is used for **long-term investing**, it is accounted for as FV-OCI.

If simple debt is **held for sale** when acquired, it is accounted for as FV-NI.

Although the requirements listed in Illustration 12–21 may seem complicated, the basic ideas are straightforward. If debt is held to facilitate lending or customer financing, the focus is on collecting all of the cash flows that are contractually specified in the debt. Therefore, fair values are not very relevant to current operations, and the debt investment is accounted for at amortized cost with interest revenue included in net income.

However, if debt instead is held as an investment, the focus is on maximizing investment returns or managing risk. For such long-term investments, unrealized gains or losses due to fair value changes are not that relevant to assessing current performance (because fair values likely will fluctuate over time), so those amounts are shown in OCI, and only *realized* gains or losses are reported in net income.

And if debt is acquired with the intention of selling it soon, unrealized gains and losses are very relevant to assessing current performance because managers could choose to realize them at any time. So, those gains and losses are reported in net income.

The proposed ASU focuses on the business activity the company uses to manage a portfolio of debt instruments. So, it's possible that identical debt instruments (say bonds issued by IBM) that are held for two different purposes could be accounted for in two different ways by the same company. Illustration 12–22 clarifies this distinction.

The proposed ASU does not allow transfers of debt from one category to another. After the debt is initially classified, reclassifications are not permitted.

The classification criteria for debt investments differ in important ways from current GAAP. First, there is no characteristics criterion (simple vs. complex) in current GAAP. Also, while current GAAP does base classification of debt investments on the intent of the investor, the specifics differ from the proposed ASU. Under current GAAP, an investor

The proposed ASU does not allow transfers between reporting categories.

GAAP Change

⁵⁶Although this supplement focuses on investments, the amortized cost category also would apply to accounts receivable and notes receivable that are discussed in Chapter 7.

Illustration 12–22

Classifying Debt
According to Business
Activity

Gregg Associates purchased 100 IBM bonds. Gregg intends to use the bonds in the following activities:

- Twenty of the bonds will be held for immediate resale to another company that wants to invest in them.
- Eighty of the bonds will be held as a long-term investment. Gregg may sell the bonds if the price of the bonds increases sufficiently, or it may hold the bonds until the bonds mature.

Gregg also made a long-term loan to a customer to facilitate the customer's purchase of Gregg's products.

How would Gregg account for these investments?

- The twenty bonds held for immediate resale would be accounted for at **FV-NI**.
- The eighty bonds held as a long-term investment would be accounted for as **FV-OCI**.
- The long-term loan would be accounted for at **amortized cost**.

should only account for debt at amortized cost if the investor intends to hold the debt to maturity, and an investor that sells HTM debt prior to maturity may be disallowed from using the HTM classification in subsequent years. The proposed ASU does not require that debt classified as amortized cost be held to maturity. Current GAAP also is not as explicit as the proposed ASU regarding how to determine whether an investment should be classified as trading (FV-NI in the proposed ASU) or AFS (FV-OCI in the proposed ASU). And, current GAAP allows transfers between classifications. The proposed ASU does not.

One other difference relates to disclosure. The proposed ASU requires that the balance sheet parenthetically display fair value as well as amortized cost for investments reported at amortized cost. Current GAAP requires disclosure of the fair value of these investments in the notes to the financial statements, but not on the face of the balance sheet. Receivables due within one year would not be subject to this requirement.

International Financial Reporting Standards

Accounting for Debt Investments When the Investor Lacks Significant Influence.

Under *IFRS No. 9*, investments in debt securities are classified either as amortized cost or as "FVTPL" ("Fair Value through Profit and Loss," equivalent to "FV-NI"). Similar to the proposed ASU, to be included in the amortized cost category a debt investment must meet both (a) the "cash flow characteristics" test (which requires that the debt instrument consist of only principal and interest payments) and (b) the "business model test" (which requires that the objective of the company's business model is to hold the investment to collect the contractual cash flows). If debt isn't classified in "amortized cost," it is classified in FVTPL—there is no equivalent to FV-OCI for debt under *IFRS No. 9*. Therefore, it's likely that more debt would be accounted for under FVTPL under *IFRS No. 9* than is accounted for under FV-NI under the proposed ASU. All else equal, this would lead to more volatile earnings under *IFRS No. 9*.

Another difference is that *IFRS No. 9* allows reclassification to a new category when the business model changes with respect to the debt. *IFRS No. 9* has been criticized for providing this flexibility and potential incomparability. The proposed ASU does not allow reclassification.

Illustration 12–23 summarizes the classification criteria for determining how to account for investments in debt and equity securities for which the investor does not exercise significant influence.

FV-NI

Illustration 12–23Classifying Investments
Under the Proposed ASU**Other Issues****INITIAL MEASUREMENT**

You have seen throughout this book that assets typically are initially recorded at the transaction price at which they are acquired. Under the proposed ASU, that is the case for investments reported at amortized cost or at FV-OCI. However, the proposed ASU requires that investments reported at FV-NI be recorded initially at fair value, which might differ from the transaction price in some unusual circumstances.⁵⁷

IMPAIRMENTS WHEN THE INVESTOR DOES NOT EXERCISE SIGNIFICANT INFLUENCE

Because equity investments are reported at FV-NI, no impairment guidance is necessary. The same is true for debt investments recorded at FV-NI. Declines in fair value always are reported in net income.

However, for debt investments reported at amortized cost or at FV-OCI, impairment losses are possible. As indicated in Appendix 12B, this is a controversial topic, and one that the FASB and IASB have struggled to come to terms with. At the date this textbook was written, the Boards were working on a “three-bucket” approach in which impairment losses would be recognized and an allowance for losses would be established to capture three phases of deterioration of credit quality. All investments would start in bucket 1 and then transfer to bucket 2 and then 3 as credit worthiness deteriorates:

Bucket 1: Investments *not affected* by observed events. This bucket contains portfolios of debt investments that are evaluated individually or collectively for impairment in light of general risks of future default.

Bucket 2: Investments *affected* by observed events (but individual defaults have not been identified). This bucket contains portfolios of debt investments that have been affected by events that indicate potential for future default, but specific investments have not been identified as suffering default.

Bucket 3: Individual debt investments *suffering credit losses*. This bucket contains specific investments for which default has occurred or is expected to occur.

For bucket 1, expected losses would be estimated for the near term (say, one or two years). For buckets 2 and 3, expected losses would be estimated for the life of the investment. Expected losses would include all expected losses of contractual cash flows (interest and principal), discounted for the time value of money.

This approach differs from current GAAP. As indicated in Appendix 12B, current GAAP focuses on the intent and ability to hold the investment until fair value recovers, and for

GAAP Change

⁵⁷If fair value differs from the transaction price upon acquisition of a FV-NI investment, the investor may need to record a gain or loss immediately upon acquisition. That situation is beyond the scope of an intermediate accounting course.

some debt investments also accounts differently for credit losses (due to not being able to collect future cash flows) and noncredit losses (due to other fair-value changes).

EQUITY METHOD

The criteria for applying the equity method are the same in the proposed ASU as in current GAAP. If a company is holding an investment for sale that normally would qualify for the equity method, the investment is accounted for as FV-NI. As with most other investments, the proposed ASU eliminates the fair value option for the equity method. If qualitative factors suggest that it is more likely than not that an equity method investment is impaired, the investor recognizes an amount of impairment equal to the excess of the investment's carrying value over its fair value. If fair value increases in future periods, impairments cannot be reversed.

The proposed ASU applies the equity method very similarly to current GAAP.

Concept Review Exercise

IDENTIFYING THE ACCOUNTING APPROACH USED FOR INVESTMENTS

MelCo purchases residential mortgages from banks and either holds them or sells them to various investors. In January of 2013, MelCo purchased 20 mortgages. The mortgages do not allow early settlement by the homeowners unless MelCo chooses to permit it. MelCo's intentions with respect to the mortgages are as follows:

- Pool A consists of five mortgages that MelCo intends to sell within the next month to meet near-term cash flow needs.
- Pool B consists of seven mortgages that MelCo is holding for future business needs. It is possible that MelCo will sell the mortgages, particularly if the price it can receive for the mortgages is sufficiently high. Alternatively, MelCo may hold the mortgages until the mortgages mature.
- Pool C consists of eight mortgages that MelCo intends to hold until maturity. MelCo maintains those mortgages as part of a business model under which the payments from the mortgages will meet MelCo's obligations to provide interest payments to creditors.

MelCo also purchased a mortgage by which Welch Construction is permitted to prepay the mortgage at a substantial discount within two years. In the event Welch chooses prepayment, MelCo could suffer a loss on the mortgage. MelCo believes prepayment is unlikely, and MelCo's intention is to hold this mortgage until it matures.

MelCo also invested in the stock of two other banks during January.

- MelCo purchased 2% of the outstanding shares of BigBank. MelCo has no seat on BigBank's board of directors. Three other shareholders have 10–20% of outstanding shares and sit on BigBank's board of directors.
- MelCo purchased 30% of the outstanding shares of SmallBank. No other shareholder has more than a 10% ownership stake. MelCo's CEO and CFO were named to SmallBank's board of directors.

Required:

1. Classify each of MelCo's debt and equity investments according to the accounting approach that would be used for the investment under the proposed ASU.
2. Briefly summarize how each of the accounting approaches indicated in your answer to requirement 1 would have MelCo account for (a) unrealized gains and losses due to fair value changes and (b) realized gains and losses due to sales of the investment.

Solution:

1. Classify each of MelCo's debt and equity investments according to the accounting approach that would be used for the investment under the proposed ASU.

The mortgages in Pools A–C all are “simple” debt, because they consist primarily of payments that include interest and return of principal, do not allow the debtor to choose prepayment that could provide a loss to MelCo unless MelCo allows it, and do not

involve derivatives. Therefore, those mortgages are classified according to the business activity that motivates investing in them.

- **Pool A:** FV-NI, because the mortgages are held for sale.
- **Pool B:** FV-OCI, because the mortgages are held for investment.
- **Pool C:** amortized cost, because the mortgages are held to collect contractual cash flows.

Welch mortgage: FV-NI, because this is “complex” debt, including a prepayment option for Welch that could result in losses for MedCo.

BigBank stock: FV-NI, because this is an equity investment for which MelCo cannot exercise significant influence over the activities of the investee.

SmallBank stock: equity method, because this is an equity investment for which MelCo can exercise significant influence over the activities of the investee.

- Briefly summarize how each of the accounting approaches indicated in your answer to requirement 1 would have MelCo account for (a) unrealized gains and losses due to fair value changes, and (b) realized gains and losses due to sales of the investment.
 - **FV-NI:** include unrealized and realized gains and losses in net income.
 - **FV-OCI:** include unrealized gains and losses in OCI. Reclassify unrealized gains and losses from OCI to NI when those gains and losses are realized due to sales of the investment.
 - **Amortized cost:** do not include unrealized gains and losses in OCI or NI. Recognize only gains and losses realized through sale in NI.
 - **Equity method:** do not include unrealized gains and losses in OCI or NI. Recognize only gains and losses realized through sale in NI.

Respond to the questions, brief exercises, exercises, and problems in this Supplement with the presumption that the guidance provided by the proposed Accounting Standards Update is being applied.

Questions For Review of Key Topics

- Q 12-30** What are the three reporting classifications by which investors can account for debt investments?
- Q 12-31** What criteria indicate that a debt investment should be accounted for at amortized cost?
- Q 12-32** What criteria indicate that a debt investment should be accounted for at FV-OCI?
- Q 12-33** What criteria indicate that a debt investment should be accounted for at FV-NI?
- Q 12-34** How is an equity investment accounted for when the investor lacks the ability to significantly influence the investee? Are there any exceptions?

Brief Exercises

BE 12-17
Accounting for fair value changes in debt investments.

Lemp LLP purchases a bond for \$1,000 with the intention of holding the bond for investment purposes. The bond promises to pay Lemp semiannual interest payments and to return to Lemp a principal of \$1,000 after 10 years. During the first year of purchase, the bond’s fair value declines to \$900. How would Lemp report that change in its financial statements, if at all?

BE 12-18
Accounting for fair value changes in debt investments.

Fowler Inc. accepts a \$75,000 note from an affiliate. Fowler’s intention is to sell the note as quickly as possible to a third party. During the first year of the note, the fair value of the note increases to \$80,000. How would Fowler report that change in its financial statements, if at all?

BE 12-19
Accounting for fair value changes in debt investments.

Assume the same facts as in BE12-18, but that Fowler issued the note to provide customer financing and intends to hold the note until it is collected. How would Fowler report that change in its financial statements, if at all?

BE 12-20
Accounting for fair value changes in equity investments.

Barrett Associates purchased \$100,000 of equity in the Atkinson Group. Barrett does not have significant influence over Atkinson's operations. As of the end of the fiscal year, the fair value of Barrett's equity investment has declined to \$80,000, but Barrett is confident the fair value will recover within the next month, well before Barrett intends to sell the investment. How would Barrett report that change in fair value in its financial statements, if at all?

Exercises

E 12-30
Accounting for debt investments

Watney Inc. purchased \$10,000 of 6% Hamel bonds at par on July 1, 2013. The bonds pay interest semiannually. Watney intends to hold the Hamel bonds for the life of the bonds. During the second half of 2013, an increase in interest rates reduced the fair value of the bonds to \$9,000.

Required:

1. Prepare a journal entry to record Watney's receipt of six months of interest revenue.
2. Prepare a journal entry (if any is required) to record any unrealized gains or losses on the Hamel bonds during 2013. (Only consider ordinary accounting for unrealized gains or losses. Do not consider whether an impairment should be recorded.)

E 12-31
Accounting for debt investments

Assume the same facts as in E12-30, but that Watney intends to sell half of the Hamel bonds immediately and to hold the other half of the bonds to sell once the price of the bonds appreciates sufficiently.

Required:

1. Prepare a journal entry to record Watney's receipt of six months of interest revenue.
2. Prepare a journal entry (if any is required) to record any unrealized gains or losses on the Hamel bonds during 2013. (Only consider ordinary accounting for unrealized gains or losses. Do not consider whether an impairment should be recorded.)

Problem

P 12-18
Accounting for debt and equity investments

Feherty, Inc., purchased the following investments during December 2013:

1. **50 of Donald Company's \$1,000 bonds.** The bonds pay semiannual interest payments and return principal in eight years. Feherty plans to hold 10 of the bonds to collect contractual cash flows over the life of the investment, to hold 10 for investment purposes, possibly selling the bonds if their price appreciates sufficiently, and to sell 30 of the bonds within a few weeks following purchase. Subsequent to Feherty's purchase of the bonds, but prior to December 31, the fair value of the bonds increased to \$1,040 per bond, and Feherty sold 15 of the 30 bonds it had held for sale. Feherty also sold 5 of the 10 bonds it had planned to hold to collect contractual cash flows over the life of the investment, and 5 of the bonds it had planned to hold for investment purposes. The fair value of the bonds remained at \$1,040 as of December 31, 2013.
2. **\$25,000 of Watson Company common stock.** Feherty does not have the ability to significantly influence the operations of Watson. Subsequent to Feherty's purchase of the equity, the fair value of the equity declined to \$20,000, which was the fair value of the equity as of December 31, 2013. Ignore taxes.

Required:

1. Indicate how Feherty would account for its investments when it acquired the Donald bonds and Watson stock.
2. Calculate the effect of unrealized gains and losses associated with the Donald bonds and the Watson equity on Feherty's net income, other comprehensive income, and comprehensive income for the year ended December 31, 2013.

13

Current Liabilities
and Contingencies**OVERVIEW**

Chapter 13 is the first of five chapters devoted to liabilities. In Part A of this chapter, we discuss liabilities that are classified appropriately as current. In Part B we turn our attention to situations in which there is uncertainty as to whether an obligation really exists. These are designated as loss contingencies. Some loss contingencies are accrued as liabilities, but others only are disclosed in the notes.

**LEARNING
OBJECTIVES**

After studying this chapter, you should be able to:

- **LO13-1** Define liabilities and distinguish between current and long-term liabilities. (p. 739)
- **LO13-2** Account for the issuance and payment of various forms of notes and record the interest on the notes. (p. 741)
- **LO13-3** Characterize accrued liabilities and liabilities from advance collection and describe when and how they should be recorded. (p. 746)
- **LO13-4** Determine when a liability can be classified as a noncurrent obligation. (p. 748)
- **LO13-5** Identify situations that constitute contingencies and the circumstances under which they should be accrued. (p. 752)
- **LO13-6** Demonstrate the appropriate accounting treatment for contingencies, including unasserted claims and assessments. (p. 753)
- **LO13-7** Discuss the primary differences between U.S. GAAP and IFRS with respect to current liabilities and contingencies. (pp. 750, 763, and 764)

FINANCIAL REPORTING CASE

Dinstuhl's Dad

"My dad is confused," your friend Buzz Dinstuhl proclaimed at the office one morning. "You see, we're competing against each other in that investment game I told you about, and one of his hot investments is Syntel Microsystems. When he got their annual report yesterday afternoon, he started analyzing it, you know, really studying it closely. Then he asked me about this part here." Buzz pointed to the current liability section of the balance sheet and related disclosure note:

he started analyzing it, you know, really studying it closely. Then he asked me about this part here." Buzz pointed to the current liability section of the balance sheet and related disclosure note:

SYNTEL MICROSYSTEMS, INC.
Balance Sheet
December 31, 2013 and 2012
(\$ in millions)

Current Liabilities	2013	2012
Accounts payable	\$233.5	\$241.6
Short-term borrowings (Note 3)	187.0	176.8
Accrued liabilities	65.3	117.2
Accrued loss contingency	76.9	—
Other current liabilities	34.6	45.2
Current portion of long-term debt	44.1	40.3
Total current liabilities	<u>\$641.4</u>	<u>\$621.1</u>

Note 3: Short-Term Borrowings (in part)

The components of short-term borrowings and their respective weighted average interest rates at the end of the period are as follows:

\$ in millions

	2013		2012	
	Amount	Average Interest Rate	Amount	Average Interest Rate
Commercial paper	\$ 34.0	5.2%	\$ 27.1	5.3%
Bank loans	218.0	5.5	227.7	5.6
Amount reclassified to long-term liabilities	<u>(65.0)</u>	—	<u>(78.0)</u>	—
Total short-term borrowings	<u>\$187.0</u>		<u>\$176.8</u>	

The Company maintains bank credit lines sufficient to cover outstanding short-term borrowings. As of December 31, 2013, the Company had \$200.0 million fee-paid lines available. At December 31, 2013 and 2012, the Company classified \$65.0 million and \$78.0 million, respectively, of commercial paper and bank notes as long-term debt. The Company has the intent and ability, through formal renewal agreements, to renew these obligations into future periods.

Note 6: Contingencies (in part)

Between 2011 and 2012, the Company manufactured cable leads that, the Company has learned, contribute to corrosion of linked components with which they are installed. At December 31, 2013, the Company accrued \$132.0 million in anticipation of remediation and claims settlement deemed probable, of which \$76.9 million is considered a current liability.

(continued)

(continued)

“So, what’s the problem?” you asked.

“Well, he thinks I’m some sort of financial wizard because I’m in business.”

“And because you tell him so all the time,” you interrupted.

“Maybe so, but he’s been told that current liabilities are riskier than long-term liabilities, and now he’s focusing on that. He can’t see why some long-term debt is reported here in the current section. And it also looks like some is reported the other way around; some current liabilities reported as long term. Plus, the contingency amount seems like it’s not even a contractual liability. Then he wants to know what some of those terms mean. Lucky for me, I had to leave before I had to admit I didn’t know the answers. You’re the accounting graduate; help me out.”

QUESTIONS

By the time you finish this chapter, you should be able to respond appropriately to the questions posed in this case. Compare your response to the solution provided at the end of the chapter.

1. What are accrued liabilities? What is commercial paper? (p. 744)
2. Why did Syntel Microsystems include some long-term debt in the current liability section? (p. 749)
3. Did they also report some current amounts as long-term debt? Explain. (p. 749)
4. Must obligations be known contractual debts in order to be reported as liabilities? (p. 753)
5. Is it true that current liabilities are riskier than long-term liabilities? (p. 766)

PART A

Liabilities and owners’ equity accounts represent specific sources of a company’s assets.

CURRENT LIABILITIES

Before a business can invest in an asset it first must acquire the money to pay for it. This can happen in either of two ways—funds can be provided by owners or the funds must be borrowed. You may recognize this as a description of the basic accounting equation: $\text{Assets} = \text{Liabilities} + \text{Owners' Equity}$. Liabilities and owners’ equity on the right-hand side of the equation represent the two basic sources of the assets on the left-hand side. You studied assets in the chapters leading to this one and you will study owners’ equity later. This chapter and the next four describe the various liabilities that constitute creditors’ claims on a company’s assets.

Characteristics of Liabilities

Most liabilities obligate the debtor to pay cash at specified times and result from legally enforceable agreements.

You already know what liabilities are. You encounter them every day. If you are paying for a car or a home with monthly payments, you have a personal liability. Similarly, when businesses issue notes and bonds, their creditors are the banks, individuals, and organizations that exchange cash for those securities. Each of these obligations represents the most common type of liability—one to be paid in cash and for which the amount and timing are specified by a legally enforceable contract.

Entities routinely incur most liabilities to acquire the funds, goods, and services they need to operate and just as routinely settle the liabilities they incur.¹

¹“Elements of Financial Statements,” *Statement of Financial Accounting Concepts No. 6* (Stamford, Conn.: FASB, 1985), par. 38.

However, to be reported as a **liability**, an obligation need not be payable in cash. Instead, it may require the company to transfer other assets or to provide services. A liability doesn't have to be represented by a written agreement nor be legally enforceable. Even the amount and timing of repayment need not be precisely known.

From a financial reporting perspective, a liability has three essential characteristics. Liabilities:

1. Are *probable, future* sacrifices of economic benefits.
2. Arise from *present* obligations (to transfer goods or provide services) to other entities.
3. Result from *past* transactions or events.²

Notice that the definition of a liability involves the past, the present, and the future. It is a present responsibility to sacrifice assets in the future because of a transaction or other event that happened in the past.

Later in the chapter we'll discuss several liabilities that possess these characteristics but have elements of uncertainty regarding the amount and timing of payments and sometimes even their existence.

What Is a Current Liability?

In a classified balance sheet, we categorize liabilities as either **current liabilities** or long-term liabilities. We often characterize current liabilities as obligations payable within one year or within the firm's operating cycle, whichever is longer. This general definition usually applies. However, a more discriminating definition identifies current liabilities as those expected to be satisfied with *current assets* or by the creation of other *current liabilities*.³

Classifying liabilities as either current or long term helps investors and creditors assess the risk that the liabilities will require expenditure of cash or other assets in the near term. Is the due date years in the future, permitting resources to be used for other purposes without risking default? Or, will payment require the use of current assets and reduce the amount of liquid funds available for other uses? If so, are sufficient liquid funds available to make necessary payments of liabilities in addition to meeting current operating needs, or must additional funds be obtained by raising capital? The answers to these questions can have significant implications. For example, a major factor contributing to the collapse of the financial giant **Bear Stearns** in 2008 was the reliance on short-term liabilities that it couldn't refinance when lenders, clients, and trading partners grew concerned about the quality of Bear's investments.⁴

Conceptually, liabilities should be recorded at their present values. In other words, the amount recorded is the present value of all anticipated future cash payments resulting from the debt (specifically, principal and interest payments).⁵ However, in practice, liabilities payable within one year ordinarily are recorded instead at their maturity amounts.⁶ This inconsistency usually is inconsequential because the relatively short-term maturity of current liabilities makes the interest or time value component immaterial.

The most common obligations reported as current liabilities are accounts payable, notes payable, commercial paper, income tax liability, dividends payable, and accrued liabilities. Liabilities related to income taxes are the subject of Chapter 16. We discuss the others here.

Before we examine specific current liabilities, let's use the current liability section of the balance sheet of **General Mills, Inc.**, and related disclosure notes to overview the chapter and to provide perspective on the liabilities we discuss (Illustration 13-1).

Some liabilities are not contractual obligations and may not be payable in cash.

● LO13-1

Current liabilities are expected to require current assets and usually are payable within one year.

Classifying liabilities as either current or long term helps investors and creditors assess the relative risk of a business's liabilities.

Current liabilities ordinarily are reported at their maturity amounts.

²Ibid.

³FASB ASC Master Glossary (previously Committee on Accounting Procedure, American Institute of CPAs, *Accounting Research and Terminology Bulletin, Final Edition* (New York: AICPA, August 1961), p. 21).

⁴William D. Cohan, *House of Cards: A Tale of Hubris and Wretched Excess on Wall Street* (New York: Doubleday, 2009).

⁵The concepts of the time value of money and the mechanics of present value calculations are covered in Chapter 6.

⁶In fact, those arising in connection with suppliers in the normal course of business and due within a year are specifically exempted from present value reporting by FASB ASC 835-30-15-3: Interest—Imputation of Interest—Scope and Scope Exceptions (previously “Interest on Receivables and Payables,” *Accounting Principles Board Opinion No. 21* (New York: AICPA, August 1971), par. 3).

Illustration 13–1Current Liabilities—
General Mills

In practice, there is little uniformity regarding precise captions used to describe current liabilities or in the extent to which accounts are combined into summary captions. The presentation here is representative and fairly typical.

Real World Financials

Amounts reported on the face of the balance sheet seldom are sufficient to adequately describe current liabilities. Additional descriptions are provided in disclosure notes.

GENERAL MILLS, INC.
Excerpt From Balance Sheet (\$ in millions)
May 29, 2011 and May 30, 2010

Liabilities		
Current Liabilities:	2011	2010
Accounts payable	\$ 995.1	\$ 849.5
Current portion of long-term debt	1,031.3	107.3
Notes payable	311.3	1,050.1
Other current liabilities	1,321.5	1,762.2
Total current liabilities	<u>\$3,659.2</u>	<u>\$3,769.1</u>

8. Debt

Notes Payable. The components of notes payable and their respective weighted average interest rates at the end of the period are as follows:

Dollars in millions:	2011		2010	
	Note Payable	Weighted Average Interest Rate	Note Payable	Weighted Average Interest Rate
U.S. commercial paper	\$192.5	0.2%	\$ 973.0	0.3%
Financial institutions	118.8	11.5	77.1	10.6
Total notes payable	<u>\$311.3</u>	4.5%	<u>\$1,050.1</u>	1.1%

To ensure availability of funds, we maintain bank credit lines sufficient to cover our outstanding short-term borrowings. Commercial paper is a continuing source of short-term financing. We issue commercial paper in the United States and Europe. Our commercial paper borrowings are supported by \$2.9 billion of fee-paid committed credit lines, consisting of a \$1.8 billion facility expiring in October 2012 and a \$1.1 billion facility expiring in October 2013. We also have \$311.8 million in uncommitted credit lines that support our foreign operations. As of May 29, 2011, there were no amounts outstanding on the fee-paid committed credit lines and \$118.8 million was drawn on the uncommitted lines. The credit facilities contain several covenants, including a requirement to maintain a fixed charge coverage ratio of at least 2.5. We were in compliance with all credit facility covenants as of May 29, 2011.

You may want to refer back to portions of Illustration 13–1 as corresponding liabilities are described later in the chapter. We discuss accounts payable and notes payable first.

Open Accounts and Notes

Many businesses buy merchandise or supplies on credit. Most also find it desirable to borrow cash from time to time to finance their activities. In this section we discuss the liabilities these borrowing activities create: namely, trade accounts and trade notes, bank loans, and commercial paper.

Accounts Payable and Trade Notes Payable

Accounts payable are obligations to suppliers of merchandise or of services purchased on *open account*. Most trade credit is offered on open account. This means that the only formal credit instrument is the invoice. Because the time until payment usually is short (often 30, 45, or 60 days), these liabilities typically are noninterest-bearing and are reported at their face amounts. As shown in Illustration 13–1, General Mills' accounts payable in 2011 was \$995.1 million. The key accounting considerations relating to accounts payable are determining their existence and ensuring that they are recorded in the appropriate accounting

Buying merchandise on account in the ordinary course of business creates *accounts payable*.

period. You studied these issues and learned how cash discounts are handled during your study of inventories in Chapter 8.

Trade notes payable differ from accounts payable in that they are formally recognized by a written promissory note. Often these are of a somewhat longer term than open accounts and bear interest.

Short-Term Notes Payable

The most common way for a corporation to obtain temporary financing is to arrange a short-term bank loan. When a company borrows cash from a bank and signs a promissory note (essentially an IOU), the firm’s liability is reported as *notes payable* (sometimes *bank loans* or *short-term borrowings*). About two-thirds of bank loans are short term, but because many are routinely renewed, some tend to resemble long-term debt. In fact, in some cases we report them as long-term financing (as you’ll see later in the chapter).

Very often, smaller firms are unable to tap into the major sources of long-term financing to the extent necessary to provide for their capital needs. So they must rely heavily on short-term financing. Even large companies typically utilize short-term debt as a significant and indispensable component of their capital structure. One reason is that short-term funds usually offer lower interest rates than long-term debt. Perhaps most importantly, corporations desire flexibility. As a rule, managers want as many financing alternatives as possible.

CREDIT LINES. Usually short-term bank loans are arranged under an existing **line of credit** with a bank or group of banks. These can be noncommitted or committed lines of credit. A *noncommitted* line of credit is an informal agreement that permits a company to borrow up to a prearranged limit without having to follow formal loan procedures and paperwork. Banks sometimes require the company to maintain a compensating balance on deposit with the bank, say, 5% of the line of credit.⁷ A *committed* line of credit is a more formal agreement that usually requires the firm to pay a commitment fee to the bank. A typical annual commitment fee is ¼% of the total committed funds, and may also require a compensating balance. A recent annual report of **IBM Corporation** illustrates a combination of committed and noncommitted lines of credit (Illustration 13–2).

● LO13–2

A line of credit allows a company to borrow cash without having to follow formal loan procedures and paperwork.

K. Borrowings (in part)

LINES OF CREDIT: The company maintains a five-year, \$10 billion Credit Agreement, which expires on June 28, 2012. . . . The company’s other lines of credit, most of which are uncommitted, totaled approximately \$14,679 million and \$9,790 million at December 31, 2010, and 2009, respectively. Interest rates and other terms of borrowing under these lines of credit vary from country to country, depending on local market conditions.

(\$ in millions)

At December 31:	2010	2009
Unused lines:		
From the committed global credit facility	\$ 9,926	\$ 9,910
From other committed and uncommitted lines	11,462	7,404
TOTAL UNUSED LINES OF CREDIT	<u>\$21,388</u>	<u>\$17,314</u>

Illustration 13–2

Disclosure of Credit Lines—IBM Corporation

Real World Financials

General Mills’ disclosure notes that we looked at in Illustration 13–1 indicate that the company has both noncommitted and committed lines of credit.

INTEREST. When a company borrows money, it pays the lender **interest** in return for using the lender’s money during the term of the loan. You might think of the interest as the “rent” paid for using money. Interest is stated in terms of a percentage rate to be applied to

⁷A compensating balance is a deposit kept by a company in a low-interest or noninterest-bearing account at the bank. The required deposit usually is some percentage of the committed amount or the amount used (say, 2% to 5%). The effect of the compensating balance is to increase the borrower’s effective interest rate and the bank’s effective rate of return.

the face amount of the loan. Because the stated rate typically is an annual rate, when calculating interest for a short-term note we must adjust for the fraction of the annual period the loan spans. Interest on notes is calculated as:

$$\text{Face amount} \times \text{Annual rate} \times \text{Time to maturity}$$

This is demonstrated in Illustration 13–3.

Illustration 13–3

Note Issued for Cash

Interest on notes is calculated as:

$$\frac{\text{Face amount}}{\text{Face amount}} \times \frac{\text{Annual rate}}{\text{rate}} \times \frac{\text{Time to maturity}}{\text{maturity}}$$

On May 1, Affiliated Technologies, Inc., a consumer electronics firm borrowed \$700,000 cash from First BancCorp under a noncommitted short-term line of credit arrangement and issued a six-month, 12% promissory note. Interest was payable at maturity.

May 1		
Cash	700,000	
Notes payable		700,000
November 1		
Interest expense (\$700,000 × 12% × $\frac{6}{12}$)	42,000	
Notes payable	700,000	
Cash (\$700,000 × 42,000)		742,000

Sometimes a bank loan assumes the form of a so-called **noninterest-bearing note**. Obviously, though, no bank will lend money without interest. Noninterest-bearing loans actually do bear interest, but the interest is deducted (or discounted) from the face amount to determine the cash proceeds made available to the borrower at the outset. For example, the preceding note could be packaged as a \$700,000 noninterest-bearing note, with a 12% discount rate. In that case, the \$42,000 interest would be discounted at the outset, rather than explicitly stated:⁸

The proceeds of the note are reduced by the interest in a noninterest-bearing note.

May 1		
Cash (difference)	658,000	
Discount on notes payable (\$700,000 × 12% × $\frac{6}{12}$)	42,000	
Notes payable (face amount)		700,000
November 1		
Interest expense	42,000	
Discount on notes payable		42,000
Notes payable (face amount)	700,000	
Cash		700,000

Notice that the amount borrowed under this arrangement is only \$658,000, but the interest is calculated as the discount rate times the \$700,000 face amount. This causes the *effective* interest rate to be higher than the 12% stated rate:

$$\frac{\$42,000 \text{ Interest for 6 months}}{\$658,000 \text{ Amount borrowed}} = 6.38\% \text{ Rate for 6 months}$$

To annualize:

$$6.38\% \times 2 = 12.76\% \text{ Effective interest rate}$$

When interest is discounted from the face amount of a note, the effective interest rate is higher than the stated discount rate.

⁸Be sure to understand that we are actually recording the note at 658,000, *not* 700,000, but are recording the interest portion separately in a contra-liability account, *discount on notes payable*. The entries shown reflect the gross method. By the net method, the interest component is netted against the face amount of the note as follows:

May 1		
Cash	658,000	
Notes payable		658,000
November 1		
Interest expense (\$700,000 × 12% × $\frac{6}{12}$)	42,000	
Notes payable	658,000	
Cash		700,000

We studied short-term notes from the perspective of the lender (note receivable) in Chapter 7.

SECURED LOANS. Sometimes short-term loans are *secured*, meaning a specified asset of the borrower is pledged as collateral or security for the loan. Although many kinds of assets can be pledged, the secured loans most frequently encountered in practice are secured by inventory or accounts receivable. For example, **Collins Industries, Inc.**, which sells vehicle chassis to major vehicle manufacturers, disclosed the secured notes described Illustration 13–4.

Inventory or accounts receivable often are pledged as security for short-term loans.

Note 4: Chassis Floorplan Notes Payable (in part)

Chassis floorplan notes are payable to a financing subsidiary of a chassis manufacturer. These notes are secured by the related chassis and are payable upon the earlier of the date the Company sells the chassis or 180 days from the date of the note.

Illustration 13–4

Disclosure of Notes Secured by Inventory—Collins Industries, Inc.

Real World Financials

When accounts receivable serve as collateral, we refer to the arrangement as *pledging* accounts receivable. Sometimes, the receivables actually are sold outright to a finance company as a means of short-term financing. This is called *factoring* receivables.⁹

Commercial Paper

Some large corporations obtain temporary financing by issuing **commercial paper**, often purchased by other companies as a short-term investment. Commercial paper refers to unsecured notes sold in minimum denominations of \$25,000 with maturities ranging from 30 to 270 days (beyond 270 days the firm would be required to file a registration statement with the SEC). Interest often is discounted at the issuance of the note. Usually commercial paper is issued directly to the buyer (lender) and is backed by a line of credit with a bank. This allows the interest rate to be lower than in a bank loan. Commercial paper has become an increasingly popular way for large companies to raise funds, the total amount having expanded over fivefold in the last decade. In fact, large companies have become so dependent on obtaining financing through the commercial paper market that a freeze-up of that market contributed to a global economic crisis in 2008.¹⁰ A disclosure note in the March 31, 2009, 10Q of **GMAC Financial Services** describes the challenges it was facing during the financial crisis due to a combination of a tight commercial paper market and a poor credit rating, as shown in Illustration 13–5.

Large, highly rated firms sometimes sell commercial paper to borrow funds at a lower rate than through a bank loan.

12. Short-Term Debt (in part)

We obtain short-term funding from the sale of floating-rate demand notes under our Demand Notes program. These notes can be redeemed at any time at the option of the holder without restriction. Our domestic and international unsecured and secured commercial paper programs also provide short-term funding, as do short-term bank loans. Renewing our short-term debt maturities, particularly unsecured debt, including Demand Notes, continues to be challenging due to the heightened credit market turmoil and our credit-rating profile.

Illustration 13–5

Disclosure of Commercial Paper Backed by a Line of Credit—GMAC Financial Services.

Real World Financials

The name *commercial paper* refers to the fact that a paper certificate traditionally is issued to the lender to signify the obligation, although there is a trend toward total computerization of paper sold directly to the lender so that no paper is created. Since commercial paper is a form of notes payable, recording its issuance and payment is exactly the same as our earlier illustration.

⁹Both methods of accounts receivable financing are discussed in Chapter 7, “Cash and Receivables.”

¹⁰Alan Greenspan, “Finance and Economics: Banks Need More Capital,” *The Economist*, December 20, 2008, p. 122.

**FINANCIAL
Reporting Case**

Q1, p. 738

In a statement of cash flows, the cash a company receives from using short-term notes to borrow funds as well as the cash it uses to repay the notes are reported among cash flows from financing activities. Most of the other liabilities we study in this chapter, such as accounts payable, interest payable, and bonuses payable, are integrally related to a company's primary operations and thus are part of operating activities. We discuss long-term notes in the next chapter.

Accrued Liabilities

Accrued liabilities represent expenses already incurred but not yet paid (accrued expenses). These liabilities are recorded by adjusting entries at the end of the reporting period, prior to preparing financial statements. You learned how to record accrued liabilities in your study of introductory accounting and you reinforced your understanding in Chapter 2. Common examples are salaries and wages payable, income taxes payable, and interest payable. Although recorded in separate liability accounts, accrued liabilities usually are combined and reported under a single caption or perhaps two accrued liability captions in the balance sheet. General Mills includes accrued liabilities in other liabilities (totaling \$1,321.5 as of May 29, 2011).

● LO13-3

Liabilities accrue for expenses that are incurred but not yet paid.

Accrued Interest Payable

Accrued interest payable arises in connection with notes like those discussed earlier in this chapter (as well as other forms of debt). For example, to continue Illustration 13-3, let's assume the fiscal period for Affiliated Technologies ends on June 30, two months after the six-month note is issued. The issuance of the note, intervening adjusting entry, and note payment would be recorded as shown in Illustration 13-6.

Illustration 13-6

Note with Accrued Interest

At June 30, two months' interest has accrued and is recorded to avoid misstating expenses and liabilities on the June 30 financial statements.

Issuance of Note on May 1			
Cash	700,000		
Note payable		700,000	
Accrual of Interest on June 30			
Interest expense ($\$700,000 \times 12\% \times \frac{2}{12}$)	14,000		
Interest payable			14,000
Note Payment on November 1			
Interest expense ($\$700,000 \times 12\% \times \frac{4}{12}$)	28,000		
Interest payable (from adjusting entry)	14,000		
Note payable	700,000		
Cash ($\$700,000 + 42,000$)			742,000

Salaries, Commissions, and Bonuses

Compensation for employee services can be in the form of hourly wages, salary, commissions, bonuses, stock compensation plans, and pensions.¹¹ Accrued liabilities arise in connection with compensation expense when employees have provided services but have not yet been paid as of a financial statement date. These accrued expenses/accrued liabilities are recorded by adjusting entries at the end of the reporting period, prior to preparing financial statements.

VACATIONS, SICK DAYS, AND OTHER PAID FUTURE ABSENCES. Suppose a firm grants two weeks of paid vacation each year to nonsalaried employees. Some employees take their vacations during the year in which the vacations are earned and are compensated then. Some wait. Should the firm recognize compensation expense during the year for only those employees who actually are paid that year for their absence? When you recall what you've learned about accrual accounting, you probably conclude otherwise.

¹¹We discuss pensions in Chapter 17 and share-based compensation plans in Chapter 19.

An employer should accrue an expense and the related liability for employees' compensation for future absences (such as vacation pay) if the obligation meets *all* of the four conditions listed in Illustration 13–7.

1. The obligation is attributable to employees' services already performed.
2. The paid absence can be taken in a later year—the benefit vests (will be compensated even if employment is terminated) or the benefit can be accumulated over time.
3. Payment is probable.
4. The amount can be reasonably estimated.

Illustration 13–7
Conditions for Accrual of Paid Future Absences

If these conditions look familiar, it's because they are simply the characteristics of a liability we discussed earlier, adapted to relate to a potential obligation for future absences of employees. Also, these conditions are consistent with the requirement that we accrue loss contingencies only when the obligation is both (a) probable and (b) can be reasonably estimated, as discussed in Part B of this chapter.

The liability for paid absences usually is accrued at the existing wage rate rather than at a rate estimated to be in effect when absences occur.¹² So, if wage rates have risen, the difference between the accrual and the amount paid increases compensation expense that year. This situation is demonstrated in Illustration 13–8, in which vacation time carried over from 2013 is taken in 2014 and the actual amount paid to employees is \$5,700,000.

Davidson-Getty Chemicals has 8,000 employees. Each employee earns two weeks of paid vacation per year. Vacation time not taken in the year earned can be carried over to subsequent years. During 2013, 2,500 employees took both weeks' vacation, but at the end of the year, 5,500 employees had vacation time carryovers as follows:

Employees	Vacation Weeks Earned But Not Taken	Total Carryover Weeks
2,500	0	0
2,000	1	2,000
3,500	2	7,000
8,000		9,000

During 2013, compensation averaged \$600 a week per employee.

When Vacations Were Taken in 2013

Salaries and wages expense (2,500 × 2 wks. × \$600) +		
(2,000 × 1 wk. × \$600)	4,200,000	
Cash (or wages payable)		4,200,000

December 31, 2013 (adjusting entry)

Salaries and wages expense (9,000 carryover weeks × \$600)	5,400,000	
Liability—compensated future absences		5,400,000

Illustration 13–8
Paid Future Absences

When the necessary conditions are met, compensated future absences are accrued in the year the compensation is earned.

When Year 2013 Vacations Are Taken in 2014

Liability—compensated future absences (account balance)	5,400,000	
Salaries and wages expense (difference)	300,000	
Cash (or salaries and wages payable) (given)		5,700,000

¹²Actually, FASB ASC 710–10–25: Compensation—General—Overall—Recognition (previously SFAS 43, “Accounting for Compensated Absences”) is silent on how the liability should be measured. In practice, most companies accrue at the current rate because it avoids estimates and usually produces a lower expense and liability. Then, later, they remeasure periodically at updated rates.

Customary practice should be considered when deciding whether an obligation exists.

Company policy and actual practice should be considered when deciding whether the rights to payment for absences have been earned by services already rendered. Consider an illustrative situation. Suppose scientists in a private laboratory are eligible for paid sabbaticals every seven years. Should a liability be accrued at the end of a scientist's sixth year? No—if sabbatical leave is granted only to perform research beneficial to the employer. Yes—if past practice indicates that sabbatical leave is intended to provide unrestricted compensated absence for past service and other conditions are met.

Custom and practice also influence whether unused rights to paid absences expire or can be carried forward. Obviously, if rights vest (payable even if employment is terminated) they haven't expired. But holiday time, military leave, maternity leave, and jury time typically do not accumulate if unused, so a liability for those benefits usually is not accrued. On the other hand, if it's customary that a particular paid absence, say holiday time, can be carried forward—if employees work on holidays, in this case—a liability is accrued if it's probable that employees will be compensated in a future year.

Accrual of sick pay is not required, but may be appropriate in some circumstances.

Interestingly, sick pay quite often meets the conditions for accrual, but accrual is not mandatory because future absence depends on future illness, which usually is not a certainty. Similar to other forms of paid absences, the decision of whether to accrue nonvesting sick pay should be based on actual policy and practice. If company policy or custom is that employees are paid sick pay even when their absences are not due to illness, it's appropriate to record a liability for unused sick pay. For example, some companies routinely allow unused sick pay benefits to be accumulated and paid at retirement (or to beneficiaries if death comes before retirement). If each condition is met except that the company finds it impractical to reasonably estimate the amount of compensation for future absences, a disclosure note should describe the situation.

A wide variety of bonus plans provide compensation tied to performance other than stock prices.

ANNUAL BONUSES. Sometimes compensation packages include annual bonuses tied to performance objectives designed to provide incentive to executives. The most common performance measures are earnings per share, net income, and operating income, each being used by about a quarter of firms having bonus plans. Nonfinancial performance measures, such as customer satisfaction and product or service quality, also are used.¹³ In recent years, **annual bonuses** have been gaining in popularity, not just for executives, but for non-managerial personnel as well. Unfortunately for employees, bonuses often take the place of annual raises. This allows a company to increase employee pay without permanently locking in the increases in salaries. Bonuses are compensation expense of the period in which they are earned.

Bonuses sometimes take the place of permanent annual raises.

Liabilities from Advance Collections

Liabilities are created when amounts are received that will be returned or remitted to others. Deposits and advances from customers and collections for third parties are cases in point.

● LO13-3 Deposits and Advances from Customers

Collecting cash from a customer as a refundable deposit or as an advance payment for products or services creates a liability to return the deposit or to supply the products or services.¹⁴

REFUNDABLE DEPOSITS. In some businesses it's typical to require customers to pay cash as a deposit that will be refunded when a specified event occurs. You probably have encountered such situations. When apartments are rented, security or damage deposits often are collected. Utility companies frequently collect deposits when service is begun. Similarly, deposits sometimes are required on returnable containers, to be refunded when the containers are returned. That situation is demonstrated in Illustration 13-9.

¹³C. D. Ittner, D. F. Larcker, and M. V. Rajan, "The Choice of Performance Measures in Annual Bonus Contracts," *The Accounting Review*, vol. 72, No. 2 (April, 1997), pp. 231-255.

¹⁴SFAC 6 specifically identifies customer advances and deposits as liabilities under the definition provided in that statement. "Elements of Financial Statements," *Statement of Financial Accounting Concepts No. 6* (Stamford, Conn.: FASB, 1985), par. 197.

Rancor Chemical Company sells combustible chemicals in expensive, reusable containers. Customers are charged a deposit for each container delivered and receive a refund when the container is returned. Deposits collected on containers delivered during the year were \$300,000. Deposits are forfeited if containers are not returned within one year. Ninety percent of the containers were returned within the allotted time. Deposits charged are twice the actual cost of containers. The inventory of containers remains on the company's books until deposits are forfeited.

When Deposits Are Collected

Cash	300,000	
Liability—refundable deposits		300,000

When Containers Are Returned*

Liability—refundable deposits	270,000	
Cash		270,000

When Deposits Are Forfeited*

Liability—refundable deposits	30,000	
Revenue—sale of containers		30,000

Cost of goods sold	15,000	
Inventory of containers		15,000

*Of course, not all containers are returned at the same time, nor does the allotted return period expire at the same time for all containers not returned. These entries summarize the several individual returns and forfeitures.

Illustration 13–9
Refundable Deposits

When a deposit becomes nonrefundable, inventory should be reduced to reflect the fact that the containers won't be returned.

ADVANCES FROM CUSTOMERS. At times, businesses require advance payments from customers that will be applied to the purchase price when goods are delivered or services provided. Gift certificates, magazine subscriptions, layaway deposits, special order deposits, and airline tickets are examples. These customer advances, also called *unearned revenue* or *deferred revenue*, represent liabilities until the related product or service is provided. For instance, one of the largest liabilities reported by the **Washington Post Co.** is deferred revenue from the sale of newspaper and magazine subscriptions (\$379 million as of the second quarter, 2011). Advances are demonstrated in Illustration 13–10.

Tomorrow Publications collects magazine subscriptions from customers at the time subscriptions are sold. Subscription revenue is recognized over the term of the subscription. Tomorrow collected \$20 million in subscription sales during its first year of operations. At December 31, the average subscription was one-fourth expired.

(\$ in millions)

When Advance Is Collected

Cash	20	
Unearned subscriptions revenue		20

When Product Is Delivered

Unearned subscriptions revenue	5	
Subscriptions revenue		5

Illustration 13–10
Customer Advance

A customer advance produces an obligation that is satisfied when the product or service is provided.

This illustration highlights that unearned revenue gets reduced when the revenue associated with the advance has been earned, either because the seller has delivered the goods or services as promised or because the buyer has forfeited the advance payment (for example, not redeeming a gift certificate before it expires). Less often, unearned revenue is reduced when an advance payment is returned by the seller to the buyer because the seller didn't deliver the goods or services as promised. This should sound familiar—recall from Chapter 5 that revenue recognition must be delayed if the seller hasn't delivered. When revenue recognition is delayed, but some advanced payment is received, the seller reports an unearned revenue liability until delivery has occurred.

Gift Cards

Gift cards or gift certificates are particularly common forms of advanced payments. When a company sells a gift card, it initially records the cash received as unearned revenue, and then recognizes revenue either when the gift card is redeemed or when the probability of redemption is viewed as remote (called *gift card breakage*, and based on expiration or the company's experience). Illustration 13–11 provides an example from **Best Buy's** fiscal 2011 Annual Report.

Illustration 13–11

Gift Cards—Best Buy, Inc.

Real World Financials

Note 1: Summary of Significant Accounting Policies (in part)

Gift Cards

We sell gift cards to our customers in our retail stores, through our websites, and through selected third parties. We do not charge administrative fees on unused gift cards, and our gift cards do not have an expiration date. We recognize revenue from gift cards when: (i) the gift card is redeemed by the customer, or (ii) the likelihood of the gift card being redeemed by the customer is remote ("gift card breakage"), and we determine that we do not have a legal obligation to remit the value of unredeemed gift cards to the relevant jurisdictions. We determine our gift card breakage rate based upon historical redemption patterns. Based on our historical information, the likelihood of a gift card remaining unredeemed can be determined 24 months after the gift card is issued. At that time, we recognize breakage income for those cards for which the likelihood of redemption is deemed remote and we do not have a legal obligation to remit the value of such unredeemed gift cards to the relevant jurisdictions. Gift card breakage income is included in revenue in our consolidated statements of earnings.

Liabilities for unearned revenue are classified as current or long-term depending on when the obligation is expected to be satisfied.

Collections for Third Parties

Companies often make collections for third parties from customers or from employees and periodically remit these amounts to the appropriate governmental (or other) units. Amounts collected this way represent liabilities until remitted.

An example is sales taxes. For illustration, assume a state sales tax rate of 4% and local sales tax rate of 3%. Adding the tax to a \$100 sale creates a \$7 liability until the tax is paid:

Sales taxes collected from customers represent liabilities until remitted.

Cash (or accounts receivable)	107	
Sales revenue		100
Sales taxes payable (4% + 3%) × \$100		7

Amounts collected from employees in connection with payroll also represent liabilities until remitted.

Payroll-related deductions such as withholding taxes, Social Security taxes, employee insurance, employee contributions to retirement plans, and union dues also create current liabilities until the amounts collected are paid to appropriate parties. These payroll-related liabilities are discussed further in the appendix to this chapter.

A Closer Look at the Current and Noncurrent Classification

LO13–4

Given a choice, do you suppose management would prefer to report an obligation as a current liability or as a noncurrent liability? Other things being equal, most would choose the noncurrent classification. The reason is that in most settings outsiders (like banks, bondholders, and shareholders) consider debt that is payable currently to be riskier than debt that need not be paid for some time, because the current payable requires the company to be able to access the necessary cash relatively soon. Relatedly, the long-term classification enables the company to report higher working capital (current assets minus current liabilities) and a higher current ratio (current assets/current liabilities). Working capital and the current ratio

often are explicitly restricted in loan contracts. As you study this section, you should view the classification choice from this perspective. That is, a manager might not so much ask the question “What amount should I report as a current liability?” but rather “What amount can I exclude from classification as a current liability?”

Current Maturities of Long-Term Debt

Long-term obligations (bonds, notes, lease liabilities, deferred tax liabilities) usually are reclassified and reported as current liabilities when they become payable within the upcoming year (or operating cycle, if longer than a year). For example, a 20-year bond issue is reported as a long-term liability for 19 years but normally is reported as a current liability on the balance sheet prepared during the 20th year of its term to maturity.¹⁵ General Mills reported \$1,031.3 million of its long-term debt as a current liability in 2011 (see Illustration 13–1).

Obligations Callable by the Creditor

The requirement to classify currently maturing debt as a current liability includes debt that is *callable* (in other words, due on demand) *by the creditor* in the upcoming year (or operating cycle, if longer), even if the debt is not expected to be called. The current liability classification also is intended to include situations in which the creditor has the right to demand payment because an *existing violation* of a provision of the debt agreement makes it callable (say, working capital has fallen below a minimum covenant specified by a debt agreement). This also includes situations in which debt is not yet callable but will be callable within the year if an existing violation is not corrected within a specified grace period (unless it’s probable the violation will be corrected within the grace period or waived by the creditor).¹⁶

When Short-Term Obligations Are Expected to Be Refinanced

Reconsider the 20-year bond issue we discussed earlier. Normally we would reclassify it as a current liability on the balance sheet prepared during its 20th year. But suppose a second 20-year bond issue is sold specifically to refund the first issue when it matures. Do we have a long-term liability for 19 years, then a current liability in year 20, and then another long-term liability in years 21 and beyond? Or, do we have a single 40-year, long-term liability? If we look beyond the outward form of the transactions, the substance of the events obviously supports a single, continuing, noncurrent obligation. The concept of substance over form influences the classification of obligations expected to be refinanced.

Short-term obligations (including the callable obligations we discussed in the previous section) that are expected to be refinanced on a long-term basis can be reported as noncurrent, rather than current, liabilities only if two conditions are met:

- (1) the firm must intend to refinance on a long-term basis, and
- (2) the firm must actually have demonstrated the ability to refinance on a long-term basis.

Ability to refinance on a long-term basis can be demonstrated by either an existing refinancing agreement or by actual financing prior to the issuance of the financial statements.¹⁷ An example will provide perspective (Illustration 13–12).

If shares of stock had been issued to refinance the bonds in the illustration, the bonds still would be excluded from classification as a current liability. The specific form of the long-term refinancing (bonds, bank loans, equity securities) is irrelevant when determining the appropriate classification. Requiring companies to actually demonstrate the ability to refinance on a long-term basis in addition to merely intending to do so avoids intentional or unintentional understatements of current liabilities.

¹⁵Debt to be refinanced is an exception we discuss later.

¹⁶FASB ASC 470–10–45: Debt–Overall–Other Presentation Matters (previously “Classification of Obligations That Are Callable by the Creditor,” *Statement of Financial Accounting Standards No. 78* (Stamford, Conn.: FASB, 1983)).

¹⁷FASB ASC 470–10–45–14: Debt Overall–Other Presentation Matters (previously “Classification of Obligations Expected to Be Refinanced,” *Statement of Financial Accounting Standards No. 6* (Stamford, Conn.: FASB, 1975)).

FINANCIAL Reporting Case

Q2, p. 738

The currently maturing portion of a long-term debt must be reported as a current liability.

FINANCIAL Reporting Case

Q3, p. 738

Short-term obligations can be reported as noncurrent liabilities if the company (a) *intends* to refinance on a long-term basis and (b) *demonstrates the ability to do so by a refinancing agreement or by actual financing.*

Illustration 13–12

Short-Term Obligations that Are Expected to Be Refinanced on a Long-Term Basis

Brahm Bros. Ice Cream had \$12 million of notes that mature in May 2014 and also had \$4 million of bonds issued in 1984 that mature in February 2014. On December 31, 2013, the company's fiscal year-end, management intended to refinance both on a long-term basis.

On February 7, 2014, the company issued \$4 million of 20-year bonds, applying the proceeds to repay the bond issue that matured that month. In early March, prior to the actual issuance of the 2013 financial statements, Brahm Bros. negotiated a line of credit with a commercial bank for up to \$7 million any time during 2014. Any borrowings will mature two years from the date of borrowing. Interest is at the prime London interbank borrowing rate.*

	December 31, 2013
Classification	(\$ in 000s)
Current Liabilities	
Notes payable	\$5,000
Long-Term Liabilities	
Notes payable	\$7,000
Bonds payable	4,000

Management's ability to refinance the \$4 million of bonds on a long-term basis was demonstrated by actual financing prior to the issuance of the financial statements. Management's ability to refinance \$7 million of the \$12 million of notes was demonstrated by a refinancing agreement. The remaining \$5 million must be reported as a current liability.

*This is a widely available rate often used as a basis for establishing interest rates on lines of credit and often abbreviated as LIBOR.

It's important to remember that several weeks usually pass between the end of a company's fiscal year and the date the financial statements for that year actually are issued. Events occurring during that period can be used to clarify the nature of financial statement elements at the reporting date. Here we consider refinancing agreements and actual securities transactions to support a company's ability to refinance on a long-term basis. Later in the chapter we use information that becomes available during this period to decide how loss contingencies are reported.

● LO13–7

International Financial Reporting Standards

Classification of Liabilities to be Refinanced. Under U.S. GAAP, liabilities payable within the coming year are classified as long-term liabilities if refinancing is completed before the date of issuance of the financial statements. Under IFRS, refinancing must be completed before the balance sheet date.¹⁸

Where We're Headed

As discussed more in Chapters 4 and 21, the FASB and IASB have a performance reporting project under way that eventually could dramatically change the format of the financial statements.¹⁹ Among the changes that may occur are the specific rules determining whether a liability is classified as short or long term. The Boards' *Preliminary Views* statement indicates that they are considering defining "short term" as one year, regardless of the length of a company's operating cycle.

¹⁸"Presentation of Financial Statements" *International Accounting Standard No. 1* (IASCF), as amended effective January 1, 2011.

¹⁹Discussion Paper, *Preliminary Views on Financial Statement Presentation*, FASB/IASB, October 16, 2008.

Concept Review Exercise

The following selected transactions relate to liabilities of Southern Communications, Inc., for portions of 2013 and 2014. Southern’s fiscal year ends on December 31.

CURRENT LIABILITIES

Required:

Prepare the appropriate journal entries for these transactions.

2013

- July 1 Arranged an uncommitted short-term line of credit with First City Bank amounting to \$25,000,000 at the bank’s prime rate (11.5% in July). The company will pay no commitment fees for this arrangement.
- Aug. 9 Received a \$30,000 refundable deposit from a major customer for copper-lined mailing containers used to transport communications equipment.
- Oct. 7 Received most of the mailing containers covered by the refundable deposit and a letter stating that the customer will retain containers represented by \$2,000 of the deposit and forfeits that amount. The cost of the forfeited containers was \$1,500.
- Nov. 1 Borrowed \$7 million cash from First City Bank under the line of credit arranged in July and issued a nine-month promissory note. Interest at the prime rate of 12% was payable at maturity.
- Dec. 31 Recorded appropriate adjusting entries for the liabilities described above.

2014

- Feb. 12 Using the unused portion of the credit line as support, issued \$9 million of commercial paper and issued a six-month promissory note. Interest was discounted at issuance at a 10% discount rate.
- Aug. 1 Paid the 12% note at maturity.
- 12 Paid the commercial paper at maturity.

2013

July 1		
No entry is made for a line of credit until a loan actually is made. The existence and terms of the line would be described in a disclosure note.		
August 9		
Cash	30,000	
Liability—refundable deposits		30,000
October 7		
Liability—refundable deposits	30,000	
Cash		28,000
Revenue—sale of containers		2,000
Cost of goods sold	1,500	
Inventory of containers		1,500

Note payable (face amount)	9,000,000		
Cash ($\$8,550,000 + \$450,000$)			9,000,000

PART B

CONTINGENCIES

The feature that distinguishes the loss contingencies we discuss in this part of the chapter from the liabilities we discussed previously is uncertainty as to whether an obligation really exists. The circumstance giving rise to the contingency already has occurred, but there is uncertainty about whether a liability exists that will be resolved only when some future event occurs (or doesn't occur). We also discuss gain contingencies because of their similarity to loss contingencies.

Loss Contingencies

Flextronics International Limited's 2011 financial statements indicated potential obligations from pending lawsuits (shown in Illustration 13–13).

Illustration 13–13

Disclosure of Pending Litigation—Flextronics International Limited

Real World Financials

Note 7: Commitments and Contingencies (in part)

The Company is subject to legal proceedings, claims, and litigation arising in the ordinary course of business. The Company defends itself vigorously against any such claims. Although the outcome of these matters is currently not determinable, management does not expect that the ultimate costs to resolve these matters will have a material adverse effect on its consolidated financial position, results of operations, or cash flows.

● LO13–5

These “legal proceedings, claims, and litigation” all relate to situations that already have occurred (for example, selling an electronic component with an alleged defect). However, it is not clear that these situations have given rise to liabilities, because Flextronics doesn't know if the situation will result in future payments. Certainly the liabilities *may* exist on the date of the financial statements, given that very large expenditures could result from some outcomes. But how likely is an unfavorable outcome? Also, precise amounts of Flextronics' potential obligation are not known, but can they be estimated reliably? These are the key questions addressed by accounting standards for loss contingencies.

A loss contingency involves an existing uncertainty as to whether a loss really exists, where the uncertainty will be resolved only when some future event occurs.

A **loss contingency** is an existing, uncertain situation involving potential loss depending on whether some future event occurs. Whether a contingency is accrued and reported as a liability depends on (a) the likelihood that the confirming event will occur and (b) what can be determined about the amount of loss. Consider an EPA investigation of possible violation of clean air laws, pending at year-end, and for which the outcome will not be known until after the financial statements are issued. The likelihood must be assessed that the company will pay penalties, and if so, what the payment amount will be.

Note that the event that gives rise to the potential liability must occur before the financial statement date. Otherwise, regardless of the likelihood of the eventual outcome, no liability could have existed at the statement date. Remember, one of the essential characteristics of a liability is that it results “from past transactions or events.”

Generally accepted accounting principles require that the likelihood that the future event(s) will confirm the incurrence of the liability be (somewhat arbitrarily) categorized as probable, reasonably possible, or remote.²⁰

Probable	Confirming event is likely to occur.
Reasonably possible	The chance the confirming event will occur is more than remote but less than likely.
Remote	The chance the confirming event will occur is slight.

Also key to reporting a contingent liability is its dollar amount. The amount of the potential loss is classified as either known, reasonably estimable, or not reasonably estimable.

A liability is accrued if it is both probable that the confirming event will occur and the amount can be at least reasonably estimated. A general depiction of the accrual of a loss contingency is:

Loss (or expense)	x,xxx	
Liability		x,xxx

If one amount within a range of possible loss appears better than other amounts within the range, that amount is accrued. When no amount within the range appears more likely than others, the minimum amount should be recorded and the possible additional loss should be disclosed.²¹

As an example of accruing a contingent loss, consider a recent filing by the **Alabama Gas Corporation (Alagasco)** (Illustration 13–14). Consistent with GAAP, Alagasco accrued the lower end of a range of possible values and disclosed the potential for other losses above that amount.

7. Commitments and Contingencies (in part)

In October 2008, Alagasco received a request from the United States Environmental Protection Agency (EPA) . . . in connection with a former manufactured gas plant site located in Huntsville, Alabama. The site, along with the Huntsville gas distribution system, was sold by Alagasco to the City of Huntsville in 1949. . . . Based on the limited information available at this time, Alagasco preliminarily estimates that it may incur costs associated with the site ranging from \$2.9 million to \$5.9 million. At the present time, the Company cannot conclude that any amount within this range is a better estimate than any other, and accordingly the Company has accrued a contingent liability of \$2.9 million. The estimate assumes an action plan for surface soil. If it is determined that a greater scope of work is appropriate, then actual costs will likely exceed the preliminary estimate.

It is important to note that some contingent losses don't involve liabilities at all. Rather, these contingencies, when resolved, cause a noncash asset to be impaired, so accruing the contingency means reducing the related asset rather than recording a liability:

Loss (or expense)	x,xxx	
Asset (or valuation account)		x,xxx

The most common loss contingency of this type is an uncollectible receivable. You have recorded these before without knowing you were accruing a loss contingency (*Debit*: bad debt expense; *Credit*: allowance for uncollectible accounts).²²

²⁰Because FASB ASC 740–10–25: Income Taxes–Overall–Recognition (previously “Accounting for Uncertainty in Income Taxes,” *FASB Interpretation No. 48* (Norwalk, Conn.: FASB, 2006)) provides guidance on accounting for uncertainty in income taxes, FASB ASC 450–10: Contingencies–Loss Contingencies (previously *SFAS No. 5*) no longer applies to income taxes. GAAP regarding uncertainty in income taxes changes the threshold for recognition of tax positions from the most probable amount to the amount that has a “more likely than not” chance of being sustained upon examination. We discuss accounting for uncertainty in income taxes in Chapter 16.

²¹FASB ASC 450–20–30: Contingencies–Loss Contingencies–Initial Measurement (previously “Reasonable Estimation of the Amount of the Loss,” *FASB Interpretation No. 14* (Stamford, Conn.: FASB, 1976)).

²²FASB ASC 310–10–35–7: Receivables–Overall–Subsequent Measurement–Losses from Uncollectible Receivables (previously “Accounting for Contingencies” *SFAS No. 5*, Norwalk, Conn.: FASB 1975, para. 22).

FINANCIAL Reporting Case

Q4, p. 738

Likelihood That a Liability Exists

● LO13–6

Accrual of a Loss Contingency—Liability

Illustration 13–14

Accrual of Loss Contingency—Alabama Gas Corporation

Real World Financials

Accrual of a Loss Contingency—Asset Impairment

A loss contingency is disclosed in notes to the financial statements if there is at least a reasonable possibility that the loss will occur.

Not all loss contingencies are accrued. If one or both criteria for accrual are not met, but there is at least a reasonable possibility that a loss will occur, a disclosure note should describe the contingency. It also should provide an estimate of the potential loss or range of loss, if possible. If an estimate cannot be made, a statement to that effect is needed.

As an example of only disclosing a contingent loss, consider a disclosure note accompanying a 2011 quarterly report of **U.S. Steel Corporation**. As shown in Illustration 13–15, U.S. Steel considered its potential liability for carbon dioxide emissions to be impossible to estimate, and so only disclosed that contingent loss.

Illustration 13–15

Disclosure of Loss Contingency—U.S. Steel

Real World Financials

Note 20: Contingencies and Commitments (in part)

The regulation of carbon dioxide (CO₂) emissions has either become law or is being considered by legislative bodies of many nations, including countries where we have operating facilities. . . . It is impossible to estimate the timing or impact of these or other future government action on U.S. Steel, although it could be significant. Such impacts may include substantial capital expenditures, costs for emission allowances, restriction of production, and higher prices for coking coal, natural gas and electricity generated by carbon based systems.

Illustration 13–16 highlights the appropriate accounting treatment for each possible combination of (a) the likelihood of an obligation's being confirmed and (b) the determinability of its dollar amount.

Illustration 13–16

Accounting Treatment of Loss Contingencies

Likelihood	Dollar Amount of Potential Loss		
	Known	Reasonably Estimable	Not Reasonably Estimable
Probable	Liability accrued and disclosure note	Liability accrued and disclosure note	Disclosure note only
Reasonably possible	Disclosure note only	Disclosure note only	Disclosure note only
Remote	No disclosure required*	No disclosure required*	No disclosure required*

*Except for certain guarantees and other specified off-balance-sheet risk situations discussed in the next chapter.

Most consumer products are accompanied by a guarantee.

Product Warranties and Guarantees

MANUFACTURER'S ORIGINAL WARRANTY. Satisfaction guaranteed! Your money back if not satisfied! If anything goes wrong in the first five years or 100,000 miles . . . ! Three-year guarantee! These and similar promises accompany most consumer goods. The reason—to boost sales. It follows, then, that any costs of making good on such guarantees should be estimated and recorded as expenses in the same accounting period the products are sold (matching expenses with revenues). Also, it is in the period of sale that the company becomes obligated to eventually make good on a guarantee, so it makes sense that it recognizes a liability in the period of sale. The challenge is that much of the cost of satisfying a guarantee usually occurs later, sometimes years later. So, this is a loss contingency. There may be a future sacrifice of economic benefits (cost of satisfying the guarantee) due to an existing circumstance (the guaranteed products have been sold) that depends on an uncertain future event (customer claim).

The criteria for accruing a contingent loss (rather than only disclosing it) almost always are met for product warranties (or product guarantees). While we usually can't predict the liability associated with an individual sale, reasonably accurate estimates of the *total* liability for a period usually are possible, because prior experience makes it possible to predict how many warrantees or guarantees (on average) will need to be satisfied. Illustration 13–17 demonstrates accrual of the contingent liability for warranties in the reporting period in which the product under warranty is sold.

Estimates of warranty costs cannot be expected to be precise. However, if the estimating method is monitored and revised when necessary, overestimates and underestimates should cancel each other over time. The estimated liability may be classified as current or as part current and part long-term, depending on when warranty claims are expected to be satisfied.

The contingent liability for product warranties almost always is accrued.

Caldor Health, a supplier of in-home health care products, introduced a new therapeutic chair carrying a two-year warranty against defects. Estimates based on industry experience indicate warranty costs of 3% of sales during the first 12 months following the sale and 4% the next 12 months. During December 2013, its first month of availability, Caldor sold \$2 million of chairs.

During December

Cash (and accounts receivable)	2,000,000	
Sales revenue		2,000,000

December 31, 2013 (adjusting entry)

Warranty expense [(3% + 4%) × \$2,000,000]	140,000	
Estimated warranty liability		140,000

When customer claims are made and costs are incurred to satisfy those claims, the liability is reduced (let's say \$61,000 in 2014):

Estimated warranty liability	61,000	
Cash, wages payable, parts and supplies, etc		61,000

Illustration 13–17
Product Warranty

The costs of satisfying guarantees should be recorded as expenses in the same accounting period the products are sold.

EXPECTED CASH FLOW APPROACH. In Chapter 6, you learned of a framework for using future cash flows as the basis for measuring assets and liabilities, introduced by the FASB in 2000 with *Statement of Financial Accounting Concepts No. 7*, “Using Cash Flow Information and Present Value in Accounting Measurements.”²³ The approach described in the Concept Statement offers a way to take into account *any uncertainty concerning the amounts and timing of the cash flows*. Although future cash flows in many instances are contractual and certain, the amounts and timing of cash flows are less certain in other situations, such as warranty obligations.

As demonstrated in Illustration 13–17, the traditional way of measuring a warranty obligation is to report the “best estimate” of future cash flows, ignoring the time value of money on the basis of immateriality. However, when the warranty obligation spans more than one year and we can associate probabilities with possible cash flow outcomes, the approach described by *SFAC No. 7* offers a more plausible estimate of the warranty obligation. This “expected cash flow approach” incorporates specific probabilities of cash flows into the analysis. In Chapter 6, we discussed the expected cash flow approach to determining present value. Illustration 13–18 provides an example.

SFAC No. 7 provides a framework for using future cash flows in accounting measurements.

²³“Using Cash Flow Information and Present Value in Accounting Measurements,” *Statement of Financial Accounting Concepts No. 7* (Norwalk, Conn.: FASB, 2000). Recall that Concept Statements do not directly prescribe GAAP, but instead provide structure and direction to financial accounting.

Illustration 13–18

Product Warranty

Probabilities are associated with possible cash outcomes.

The probability-weighted cash outcomes provide the expected cash flows.

The present value of the expected cash flows is the estimated liability.

Caldor Health, a supplier of in-home health care products, introduced a new therapeutic chair carrying a two-year warranty against defects. During December of 2013, its first month of availability, Caldor sold \$2 million of the chairs. Industry experience indicates the following probability distribution for the potential warranty costs:

Warranty Costs	Probability
2014	
\$50,000	20%
\$60,000	50%
\$70,000	30%
2015	
\$70,000	20%
\$80,000	50%
\$90,000	30%

An arrangement with a service firm requires that costs for the two-year warranty period be settled at the end of 2014 and 2015. The risk-free rate of interest is 5%. Applying the expected cash flow approach, at the end of the 2013 fiscal year, Caldor would record a warranty liability (and expense) of \$131,564, calculated as follows:

\$50,000 × 20%	=	\$10,000	
60,000 × 50%	=	30,000	
70,000 × 30%	=	21,000	
		<u>\$61,000</u>	
	× .95238*		\$ 58,095
\$70,000 × 20%	=	\$14,000	
80,000 × 50%	=	40,000	
90,000 × 30%	=	27,000	
		<u>\$81,000</u>	
	× .90703†		73,469
			<u>\$131,564</u>

*Present value of \$1, $n = 1$, $i = 5\%$ (from Table 2)

†Present value of \$1, $n = 2$, $i = 5\%$ (from Table 2)

December 31, 2013 (adjusting entry)

Warranty expense	131,564	
Estimated warranty liability (calculated above)		131,564

EXTENDED WARRANTY CONTRACTS. It's difficult these days to buy a CD player, a digital camera, a car, or almost any durable consumer product without being asked to buy an extended warranty agreement. An extended warranty provides warranty protection beyond the manufacturer's original warranty. Because an extended warranty is priced and sold separately from the warranted product, it essentially constitutes a separate sales transaction. So, rather than only worrying about how to recognize the contingent liability associated with an extended warranty, we face another accounting question: When should the revenue from the sale of an extended warranty be recognized?

By the accrual concept, revenue is recognized when earned, not necessarily when cash is received. Because the earnings process for an extended warranty continues over the entire warranty period, revenue should be recognized over the same period. However, cash typically is received up front, when the extended warranty is sold. Similar to other advanced payments for future products and services, revenue from separately priced extended warranty contracts is deferred as an "unearned revenue" liability at the time of sale and recognized as

revenue over the contract period, typically on a straight-line basis. We demonstrate accounting for extended warranties in Illustration 13–19.

Brand Name Appliances sells major appliances that carry a one-year manufacturer’s warranty. Customers are offered the opportunity at the time of purchase to also buy a three-year extended warranty for an additional charge. On January 3, 2013, Brand Name sold a \$60 extended warranty, covering years 2014, 2015, and 2016.

January 3, 2013

Cash (or accounts receivable)	60	
Unearned revenue—extended warranties		60

December 31, 2014, 2015, 2016 (adjusting entries)

Unearned revenue—extended warranties	20	
Revenue—extended warranties (\$60 ÷ 3)		20

Illustration 13–19

Extended Warranty

Revenue from the extended warranty is recognized during the three years of the contract period.

The costs incurred to satisfy customer claims under the extended warranties also will be recorded during the same three-year period, achieving a proper matching of revenues and expenses. If sufficient historical evidence indicates that the costs of satisfying customer claims will be incurred on other than a straight-line basis, revenue should be recognized by the same pattern (proportional to the costs).²⁴

Premiums

Cash rebates are commonplace. Cash register receipts, bar codes, rebate coupons, or other proofs of purchase often can be mailed to the manufacturer for cash rebates. Sometimes promotions offer premiums other than cash (like toys, dishes, and utensils) to buyers of certain products. Of course the purpose of these premium offers is to stimulate sales. So it follows that the estimated amount of the cash rebates or the cost of noncash premiums estimated to be given out represents both an expense and an estimated liability in the reporting period the product is sold. Like a manufacturer’s warranty, this loss contingency almost always meets accrual criteria. As with warranties, even though it is difficult to predict whether a particular buyer will redeem a premium, it is much easier to predict the total number of premiums that will be redeemed based on experience with customer redemptions in similar circumstances. Premiums are illustrated in Illustration 13–20.

CMX Corporation offered \$2 cash rebates on a particular model of hand-held hair dryer. To receive the rebate, customers must mail in a rebate certificate enclosed in the package plus the cash register receipt. Previous experience indicates that 30% of coupons eventually will be redeemed. One million hair dryers were sold in 2013 and total payments to customers were \$525,000.

To record the estimated liability for premiums.

Promotional expense (30% × \$2 × 1,000,000)	600,000	
Estimated premium liability		600,000

To record payments to customers for coupons.

Estimated premium liability	525,000	
Cash		525,000

Illustration 13–20

Premiums

The costs of promotional offers should be recorded as expenses in the same accounting period the products are sold.

²⁴FASB ASC 605–20–25: Revenue Recognition—Services—Recognition (previously “Accounting for Separately Priced Extended Warranty and Product Maintenance Contracts,” *FASB Technical Bulletin 90-1*, 1990.)

Additional Consideration

Accounting for contingencies is controversial. Many accountants dislike the idea of only recognizing a liability for a contingent loss when it is probable, and then reporting the liability at the best estimate of the future expenditure. The obvious alternative is fair value, which does not incorporate probability into determining whether to *recognize* a loss but rather considers probability when *measuring* the amount of loss. Recent changes in GAAP have adopted fair value approaches for some types of events that are contingent losses (or appear to be close relatives). Consider the following examples:

- Illustration 13–18 uses a discounted expected cash flow approach to measure the contingent liability associated with a warranty. That approach approximates fair value.
- Recall from Chapter 10 that asset retirement obligations are recorded at fair value when an asset is acquired. The offsetting liability is similar to a contingent liability because it is an uncertain future amount arising from the past purchase of the asset but is recorded at fair value.
- Sometimes a company provides a guarantee that may require it to make payment to another party based on some future event. For example, a company might guarantee the debt of an affiliated company to make it easier for the affiliate to obtain financing. Recent GAAP views this sort of guarantee as having two parts: (1) a certain “stand ready obligation” to meet the terms of the guarantee, and (2) the uncertain contingent obligation to make future payments depending on future events (for example, the affiliate defaulting on their debt). The “stand ready obligation” is recorded initially at fair value, while the contingent obligation is handled as an ordinary contingent loss.²⁵

The remaining liability of \$75,000 is reported in the 2013 balance sheet and is reduced as future rebates are paid. The liability should be classified as current or long term depending on when future rebates are expected to be paid. In this case the liability likely would be classified as current, as rebates are unlikely to be requested beyond a year after sale.

Of course, if premiums actually are included in packages of products sold, no contingent liability is created. For example, the costs of toys in Cracker Jack boxes and cereal boxes are simply expenses of the period the product is sold, for which the amount is readily determinable.

Additional Consideration

Cents-off coupons are a popular marketing tool. Coupons clipped from newspapers, from mail offers, or included in packages are redeemable for cash discounts at the time promoted items are purchased. Issuing the coupons creates a contingent liability to be recorded in the period the coupons are issued. However, because the hoped-for sales don't materialize until later, a question arises as to when the related expense should be recognized. Logically, since the purpose of coupon offers is to stimulate sales, the expense properly should be deferred as an asset until the coupons are redeemed (when the future sales occur).

Illustration

On December 18, 2013, Craft Foods distributed coupons in newspaper inserts offering 50 cents off the purchase price of one of its cereal brands when coupons are presented to retailers. Retailers are reimbursed by Craft for the face amount of coupons plus 10% for handling. Previous experience indicates that 20% of coupons will be redeemed. Coupons

(continued)

²⁵FASB ASC 460–10–25: Guarantees—Overall—Recognition (previously “Guarantor’s Accounting and Disclosure Requirements for Guarantees, Including Indirect Guarantees of Indebtedness of Others,” *FASB Interpretation No. 45* (Stamford, Conn.: FASB, 2002)).

(concluded)

issued had a total face amount of \$1,000,000 and total payments to retailers were \$50,000 in 2013 and \$170,000 in 2014.

To record payments to retailers for coupons in 2013.

Promotional expense (redeemed in 2013)	50,000	
Cash		50,000

To record the estimated liability for coupons at end of 2013.

Deferred promotional expense (an asset)	170,000	
Estimated coupon liability ($[20\% \times \$1,000,000 \times 1.10] - \$50,000$)....		170,000

To record payments to retailers for coupons in 2014.

Estimated coupon liability	170,000	
Cash		170,000
Promotional expense (redeemed in 2014)	170,000	
Deferred promotional expense		170,000

In practice, most firms don't account for coupons this accurately. Rather, they either (a) recognize the entire expense with the liability in the period the coupons are issued, like we record premiums, or (b) recognize no liability in the period the coupons are issued, recording the expense when reimbursements are made. One reason is that the same coupons are reissued periodically, making it difficult to associate specific reimbursements with specific offers. Another reason is that the time lag between the time a merchant receives a coupon from customers and the time it's presented to the manufacturer for reimbursement prevents appropriate apportionment of the expense. Any error introduced by these approaches typically is not viewed as material.

Litigation Claims

Pending litigation similar to that disclosed by **Flextronics** in Illustration 13–13 is not unusual. In fact, the majority of medium and large corporations annually report multiple loss contingencies due to litigation. For example **Dell's** 2011 annual report lists four pages of notes discussing contingencies related to legal matters such as an SEC investigation of Dell's accounting and financial reporting, ongoing securities litigation against Dell and some of its current and former directors and officers, responsibility to collect copyright fees in the European Union, alleged trademark infringement, and so on.

In practice, accrual of a loss from pending or ongoing litigation is rare. Can you guess why? Suppose you are chief financial officer of Feinz Foods. Feinz is the defendant in a \$44 million class action suit. The company's legal counsel informally advises you that the chance the company will win the lawsuit is quite doubtful. Counsel feels the company might lose \$30 million. Now suppose you decide to accrue a \$30 million loss in your financial statements. Later, in the courtroom, your disclosure that Feinz management feels it is probable that the company will lose \$30 million would be welcome ammunition for the opposing legal counsel. Understanding this, most companies rely on the knowledge that in today's legal environment the outcome of litigation is highly uncertain, making likelihood predictions difficult.

Therefore, while companies may accrue estimated lawyer fees and other legal costs, they usually do not record a loss until after the ultimate settlement has been reached or negotiations for settlement are substantially completed. While companies should provide extensive disclosure of these contingent liabilities, they do not always do so in practice.²⁶ In 2010 the SEC began pressuring firms for more complete disclosure of litigation, including better descriptions of the range of losses that are reasonably possible to occur. As an example, Illustration 13–21 provides a few excerpts from the eight pages of litigation note that appears in **JP Morgan Chase & Company's** 2011 quarterly report.

²⁶For research indicating incomplete disclosure of litigation-related contingent liabilities, see R. Desir, K. Fanning, and R. Pfeiffer, "Are Revisions to SFAS No. 5 Needed? *Accounting Horizons* 24(4): December, 2010: 525–546.

Illustration 13–21

Disclosure of Litigation Contingencies—JP Morgan Chase & Company

Real World Financials**Note 32: Litigation (in part)**

As of June 30, 2011, the Firm and its subsidiaries are defendants or putative defendants in more than 10,000 legal proceedings, in the form of regulatory/government investigations as well as private, civil litigations. . . . The Firm believes the estimate of the aggregate range of reasonably possible losses, in excess of reserves established, for its legal proceedings is from \$0 to approximately \$5.1 billion at June 30, 2011. This estimated aggregate range of reasonably possible losses is based upon currently available information for those proceedings in which the Firm is involved, taking into account the Firm's best estimate of such losses for those cases for which such estimate can be made. For certain cases, the Firm does not believe that an estimate can currently be made.

Even after a firm loses in court, it may not make an accrual. As you can see in Illustration 13–22, the **Las Vegas Sands Corporation**, in a recent quarterly report, disclosed but did not accrue damages from a lawsuit it lost, because the company was appealing the verdict.

Illustration 13–22

Disclosure of a Lawsuit—Las Vegas Sands Corporation

Real World Financials**8: Commitments and Contingencies****Litigation Relating to Macao Operations (in part)**

. . . . On June 30, 2008, a judgment was entered in this matter in the amount of \$58.6 million (including pre-judgment interest). . . . The Company intends to continue to vigorously pursue available appeals up to the Nevada Supreme Court. The Company believes that it has valid bases in law and fact to overturn or appeal the verdict. As a result, the Company believes that the likelihood that the amount of the judgment will be affirmed is not probable, and, accordingly, that the amount of any loss cannot be reasonably estimated at this time. Because the Company believes that this potential loss is not probable or estimable, it has not recorded any reserves or contingencies related to this legal matter. In the event that the Company's assumptions used to evaluate this matter as neither probable nor estimable change in future periods, it may be required to record a liability for an adverse outcome.

Subsequent Events

It's important to remember that several weeks usually pass between the end of a company's fiscal year and the date the financial statements for that year actually are issued or available to be issued.²⁷ As shown on the following time line, events occurring during this period can be used to clarify the nature of financial statement elements at the report date.

When the cause of a loss contingency occurs before the year-end, a clarifying event before financial statements are issued can be used to determine how the contingency is reported.

For instance, if information becomes available that sheds light on a claim that existed when the fiscal year ended, that information should be used in determining the probability of a loss contingency materializing and in estimating the amount of the loss. The settlement of a lawsuit after the December 31 report date of **ADESA Inc.** apparently influenced its accrual of a loss contingency (Illustration 13–23).

²⁷Financial statements are viewed as *issued* if they have been widely distributed to financial statement users in a format consistent with GAAP. Some entities (for example, private companies) do not widely distribute their financial statements to users. For those entities, the key date for subsequent events is not the date of issuance but rather the date upon which the financial statements are *available to be issued*, which occurs when the financial statements are complete, in a format consistent with GAAP, and have obtained the necessary approvals for issuance. Entities must disclose the date through which subsequent events have been evaluated (FASB ASC 855: Subsequent Events (previously “Subsequent Events,” *Statement of Financial Accounting Standards No. 165* (Stamford, Conn.: FASB, 2009)).

Note 21 Commitments and Contingencies (in part)

In January 2007, the settlement agreement was finalized and the federal district court formally dismissed the litigation. The Company recorded provisions totaling approximately \$0.6 million in the third quarter of 2006 . . .

Illustration 13–23
Accrual of Litigation Contingencies—ADESA Inc.

Real World Financials

For a loss contingency to be accrued, the cause of the lawsuit must have occurred before the accounting period ended. It’s not necessary that the lawsuit actually was filed during that reporting period.

Sometimes, the cause of a loss contingency occurs after the end of the year but before the financial statements are issued:

If an event giving rise to a contingency occurs after the year-end, a liability should not be accrued.

When a contingency comes into existence after the company’s fiscal year-end, a liability cannot be accrued because it didn’t exist at the end of the year. However, if the failure to disclose the possible loss would cause the financial statements to be misleading, the situation should be described in a disclosure note, including the effect of the possible loss on key accounting numbers affected.²⁸

In fact, any event occurring after the fiscal year-end but before the financial statements are issued that has a material effect on the company’s financial position must be disclosed in a subsequent events disclosure note. Examples are an issuance of debt or equity securities, a business combination, and discontinued operations.

A disclosure note of **Pfizer** from its 2008 annual report is shown in Illustration 13–24 and describes an event that occurred in the first quarter of 2009.

Illustration 13–24
Subsequent Events—Pfizer

Real World Financials

21. Subsequent events (in part)

On January 26, 2009, we announced that we have entered into a definitive merger agreement under which we will acquire Wyeth in a cash-and-stock transaction valued on that date at \$50.19 per share, or a total of \$68 billion. We plan to finance this acquisition with a combination of cash (about \$22.5 billion), debt financing (about \$22.5 billion) and the issuance of common stock (about \$23.0 billion, based on the price of our common stock on January 23, 2009, the last trading day prior to our announcement on January 26). We have received a commitment from a syndicate of banks for the debt financing related to this transaction.

Additional Consideration

Contingent liabilities that a company takes on when it acquires another company may be treated differently from those that arise during the normal course of business. If the acquirer can determine the fair value of a contingent liability, the liability is measured at fair value. For example, the acquisition-date fair value of a warranty obligation often can be determined. If the acquirer cannot determine the fair value, then the acquirer uses the normal criteria that apply to contingent liabilities. That is, the contingent liability is accrued

(continued)

²⁸FASB ASC 450–20–50v9: Contingencies—Loss Contingencies—Disclosure (previously “Accounting for Contingencies,” *Statement of Financial Accounting Standards No. 5* (Stamford, Conn.: FASB, 1975), par. 11).

(concluded)

if (1) available information indicates that it is probable a liability has been incurred as of the acquisition date, and (2) the amount of the liability can be reasonably estimated. In periods subsequent to the acquisition, GAAP is vague about how the acquirer should account for these contingent liabilities, indicating that “An acquirer shall develop a systematic and rational basis for subsequently measuring and accounting for assets and liabilities arising from contingencies depending on their nature.”²⁹ This lack of clear guidance suggests that there could be a lack of comparability between firms in how they account for acquired contingent liabilities.

It must be probable that an unasserted claim or assessment or an unfiled lawsuit will occur before considering whether and how to report the possible loss.

Unasserted Claims and Assessments

Even if a claim has yet to be made when the financial statements are issued, a contingency may warrant accrual or disclosure. In this case, a two-step process is involved in deciding how the unasserted claim should be reported:

1. Is the claim or assessment probable? If the answer to this question is “no,” stop. No disclosure is needed. If the answer is “yes,” go on to step 2.
2. If the claim or assessment is probable (satisfying step 1), the decision as to whether or not a liability is accrued or disclosed is the same as it is when a claim or assessment already has been asserted, requiring evaluation of (a) the likelihood of an unfavorable outcome and (b) whether the dollar amount can be estimated.

For example, suppose a trucking company frequently transports hazardous waste materials and is subject to environmental laws and regulations. Management has identified several sites at which it is or may be liable for remediation. For those sites for which no penalties have been asserted, management must assess the likelihood that a claim will be made, and if so, whether the company actually will be held liable. If management feels an assessment is probable, an estimated loss and contingent liability would be accrued only if an unfavorable outcome is probable and the amount can be reasonably estimated. However, a disclosure note alone would be appropriate if an unfavorable settlement is only reasonably possible or if the settlement is probable but cannot be reasonably estimated. No action is needed if chances of that outcome occurring are remote.

As described in a March 31, 2011, disclosure note (see Illustration 13–25), **Union Pacific** felt that some unasserted claims met the criteria for accrual under this two-step decision process.

Illustration 13–25

Union Pacific
Corporation

Real World Financials

15. Commitments and Contingencies (in part)

Asserted and Unasserted Claims—Various claims and lawsuits are pending against us and certain of our subsidiaries. We cannot fully determine the effect of all asserted and unasserted claims on our consolidated results of operations, financial condition, or liquidity; however, to the extent possible, where asserted and unasserted claims are considered probable and where such claims can be reasonably estimated, we have recorded a liability.

Notice that the treatment of contingent liabilities is consistent with the accepted definition of liabilities as (a) probable, future sacrifices of economic benefits (b) that arise from present obligations to other entities and (c) that result from past transactions or events.³⁰ The inherent uncertainty involved with contingent liabilities means additional care is required to determine whether future sacrifices of economic benefits are probable and whether the amount of the sacrifices can be quantified.

²⁹FASB ASC 805-20-25: Business Combinations—Identifiable Assets and Liabilities, and Any Noncontrolling Interest—Recognition (previously “Accounting for Assets Acquired and Liabilities Assumed in a Business Combination that Arise from Contingencies,” FASB Staff Position No. 141R-1 (Norwalk, Conn.: FASB, 2009)).

International Financial Reporting Standards

● LO13-7

Loss Contingencies. Accounting for contingencies is part of a broader international standard, IAS No. 37, “Provisions, Contingent Liabilities and Contingent Assets.” Overall, accounting for contingent losses under IFRS is quite similar to accounting under U.S. GAAP. A contingent loss is accrued if it’s both probable and can be reasonably estimated, and disclosed if it’s of at least a remote probability. However, there are some important differences:

- IFRS refers to accrued liabilities as “provisions,” and refers to possible obligations that are not accrued as “contingent liabilities.” The term “contingent liabilities” is used for all of these obligations in U.S. GAAP.
- IFRS requires disclosure (but not accrual) of two types of contingent liabilities: (1) possible obligations whose existence will be confirmed by some uncertain future events that the company does not control, and (2) a present obligation for which either it is not probable that a future outflow will occur or the amount of the future outflow cannot be measured with sufficient reliability. U.S. GAAP does not make this distinction but typically would require disclosure of the same contingencies.
- IFRS defines “probable” as “more likely than not” (greater than 50%), which is a lower threshold than typically associated with “probable” in U.S. GAAP.
- If a liability is accrued, IFRS measures the liability as the best estimate of the expenditure required to settle the present obligation. If there is a range of equally likely outcomes, IFRS would use the midpoint of the range, while U.S. GAAP requires use of the low end of the range.
- If the effect of the time value of money is material, IFRS requires the liability to be stated at present value. U.S. GAAP allows using present values under some circumstances, but liabilities for loss contingencies like litigation typically are not discounted for time value of money.³¹
- IFRS recognizes provisions and contingencies for “onerous” contracts, defined as those in which the unavoidable costs of meeting the obligations exceed the expected benefits.³² Under U.S. GAAP we generally don’t disclose or recognize losses on such money-losing contracts, although there are some exceptions (for example, losses on long-term construction contracts are accrued, as are losses on contracts that have been terminated).

Here’s a portion of a footnote from the 2011 financial statements of **Vodafone**, which reports under IFRS:

Note 2: Significant Accounting Policies (in part)

Provisions are recognised when the Group has a present obligation (legal or constructive) as a result of a past event, it is probable that the Group will be required to settle that obligation and a reliable estimate can be made of the amount of the obligation. Provisions are measured at the directors’ best estimate of the expenditure required to settle the obligation at the balance sheet date and are discounted to present value where the effect is material.

IFRS ILLUSTRATION

Real World Financials

Where We’re Headed

The controversy over accounting for contingencies and the mixture of approaches is likely to continue. The FASB recently removed from its agenda a project to reconsider the recognition and measurement of contingent losses, and has postponed further work on a project intended to enhance note disclosures of contingent losses. The IASB has a project ongoing that would eliminate the requirement that an amount be “probable” to be

(continued)

³¹See, for example, FASB ASC 410–30–35–12: Asset Retirements and Environmental Obligations–Environmental Obligations–Subsequent Measurement.

³²Paragraph 10 of “Provisions, Contingent Liabilities and Contingent Assets”, *International Accounting Standard 37* (London, UK: IASB, 2008).

(concluded)

recognized, such that amounts that now are only disclosed in the notes would be accrued and included as expenses and liabilities. Probability of loss still would matter, but only will be factored into measuring the “expected value” of the liability.³³ Progress on this project has been slow as the IASB has focused on more pressing convergence projects.

One area of near-term change likely will be with respect to recognizing liabilities for “onerous contracts” with customers in U.S. GAAP. An onerous contract is a contract for which the costs to fulfill or cancel the contract exceed the expected benefits. A new revenue recognition standard probably will require that sellers recognize a loss and a liability for an onerous contract in the period in which the contract is determined to be onerous.³⁴ This approach is similar to how losses are recognized under long-term construction contracts in U.S. GAAP, but the calculations are different

Gain Contingencies

Gain contingencies are not accrued.

A gain contingency is an uncertain situation that might result in a gain. For example, in a pending lawsuit, one side—the defendant—faces a loss contingency; the other side—the plaintiff—has a gain contingency. As we discussed earlier, loss contingencies are accrued when it’s probable that an amount will be paid and the amount can reasonably be estimated. However, gain contingencies are not accrued. The nonparallel treatment of gain contingencies is an example of conservatism, following the reasoning that it’s desirable to anticipate losses, but recognizing gains should await their realization.

Though gain contingencies are not recorded in the accounts, material ones are disclosed in notes to the financial statements. Care should be taken that the disclosure note not give “misleading implications as to the likelihood of realization.”³⁵

● LO13–7

International Financial Reporting Standards

Gain Contingencies. Under U.S. GAAP, gain contingencies are never accrued. Under IFRS, gain contingencies are accrued if their future realization is “virtually certain” to occur. Both U.S. GAAP and IFRS *disclose* contingent gains when future realization is probable, but under IFRS “probable” is defined as “more likely than not” (greater than 50 percent), and so has a lower threshold than it does under U.S. GAAP.

Concept Review Exercise

CONTINGENCIES

Hanover Industries manufactures and sells food products and food processing machinery. While preparing the December 31, 2013, financial statements for Hanover, the following information was discovered relating to contingencies and possible adjustments to liabilities. Hanover’s 2013 financial statements were issued on April 1, 2014.

- On November 12, 2013, a former employee filed a lawsuit against Hanover alleging age discrimination and asking for damages of \$750,000. At December 31, 2013, Hanover’s attorney indicated that the likelihood of losing the lawsuit was possible but not probable. On March 5, 2014, Hanover agreed to pay the former employee \$125,000 in return for withdrawing the lawsuit.

³³Exposure Draft of Proposed Amendments to IAS 37: Measurement of Liabilities in IAS 37, IASB, January 2010.

³⁴*Proposed Accounting Standards Update: Revenue Recognition (Revised) (Topic 605)*. “Revenue from Contracts with Customers.” (Norwalk, Conn: FASB, November 14, 2011).

³⁵FASB ASC 450–30–50: Contingencies—Gain Contingencies—Disclosure (previously “Accounting For Contingencies,” *Statement of Financial Accounting Standards No. 5* (Stamford, Conn.: FASB, 1975), par. 17).

- b. Hanover believes there is a possibility a service provider may claim that it has been undercharged for outsourcing a processing service based on verbal indications of the company's interpretation of a negotiated rate. The service provider has not yet made a claim for additional fees as of April 2014, but Hanover feels it will. Hanover's accountants and legal counsel believe the charges were appropriate but that if an assessment is made, there is a reasonable possibility that subsequent court action would result in an additional tax liability of \$55,000.
- c. Hanover grants a two-year warranty for each processing machine sold. Past experience indicates that the costs of satisfying warranties are approximately 2% of sales. During 2013, sales of processing machines totaled \$21,300,000. 2013 expenditures for warranty repair costs were \$178,000 related to 2013 sales and \$220,000 related to 2012 sales. The January 1, 2013, balance of the warranty liability account was \$250,000.
- d. Hanover is the plaintiff in a \$600,000 lawsuit filed in 2012 against Ansdale Farms for failing to deliver on contracts for produce. The suit is in final appeal. Legal counsel advises that it is probable that Hanover will prevail and will be awarded \$300,000 (considered a material amount).
- e. Included with certain food items sold in 2013 were coupons redeemable for a kitchen appliance at the rate of five coupons per appliance. During 2013, 30,000 coupons were issued and 5,000 coupons were redeemed. Although this is the first such promotion in years, past experience indicates that 60% of coupons are never redeemed. An inventory of kitchen appliances is maintained, and a count shows that 1,000 are on hand at December 31, 2013, with a normal retail value of \$20,000 and a cost to Hanover of \$8,000.

Required:

- Determine the appropriate reporting for each situation. Briefly explain your reasoning.
- Prepare any necessary journal entries and state whether a disclosure note is needed.

Solution:

- a. This is a loss contingency. Hanover can use the information occurring after the end of the year in determining appropriate disclosure. The cause for the suit existed at the end of the year. Hanover should accrue the \$125,000 loss because an agreement has been reached confirming the loss and the amount is known.

Loss—litigation	125,000	
Liability—litigation		125,000

A disclosure note also is appropriate.

- b. At the time financial statements are issued, a claim is as yet unasserted. However, an assessment is probable. Thus, (a) the likelihood of an unfavorable outcome and (b) whether the dollar amount can be estimated are considered. No accrual is necessary because an unfavorable outcome is not probable. But because an unfavorable outcome is reasonably possible, a disclosure note is appropriate.

Note: If the likelihood of a claim being asserted is not probable, disclosure is not required even if an unfavorable outcome is thought to be probable in the event of an assessment and the amount is estimable.

- c. The contingency for warranties should be accrued because it is probable that expenditures will be made and the amount can be estimated from past experience. When customer claims are made and costs are incurred to satisfy those claims the liability is reduced.

Warranty expense (2% × \$21,300,000)	426,000	
Estimated warranty liability		426,000
Estimated warranty liability (\$178,000 + 220,000)	398,000	
Cash, wages payable, parts and supplies, etc.		398,000

The liability at December 31, 2013, would be reported as \$278,000:

		250	Balance, Jan. 1
		426	2013 expense
2013 expenditures	398		
		278	Balance, Dec. 31

A disclosure note also is appropriate.

- d. This is a gain contingency. Gain contingencies cannot be accrued even if the gain is probable and reasonably estimable. The gain should be recognized only when realized. It can be disclosed, but care should be taken to avoid misleading language regarding the realizability of the gain.
- e. The contingency for premiums should be accrued because it is probable that coupons will be redeemed and the amount can be estimated from past experience. When coupons are redeemed and appliances are issued, the liability is reduced.

Promotional expense ($40\% \times [30,000 \div 5] \times \8^*)	19,200	
Estimated premium liability		19,200
Estimated premium liability ($[5,000 \div 5] \times \$8^*$)	8,000	
Inventory of premiums		8,000
* $\$8,000 \div 1,000 = \8		

The liability at December 31, 2013, would be reported as \$11,200:

		19,200	2013 expense
2013 expenditures	8,000		
		11,200	Balance, Dec. 31

Decision Makers' Perspective

A risk analyst should be concerned with a company's ability to meet its short-term obligations.

FINANCIAL Reporting Case

Current liabilities impact a company's liquidity. Liquidity refers to a company's cash position and overall ability to obtain cash in the normal course of business. A company is said to be liquid if it has sufficient cash (or other assets convertible to cash in a relatively short time) to pay currently maturing debts. Because the lack of liquidity can cause the demise of an otherwise healthy company, it is critical that managers as well as outside investors and creditors maintain close scrutiny of this aspect of a company's well-being.

Keeping track of the current ratio is one of the most common ways of doing this. The current ratio is intended as a measure of short-term solvency and is determined by dividing current assets by current liabilities.

When we compare liabilities that must be satisfied in the near term with assets that either are cash or will be converted to cash in the near term, we get a useful measure of a company's liquidity. A ratio of 1 to 1 or higher often is considered a rule-of-thumb standard, but like other ratios, acceptability should be evaluated in the context of the industry in which the company operates and other specific circumstances. Keep in mind, though, that industry

averages are only one indication of adequacy and that the current ratio is but one indication of liquidity.

We can adjust for the implicit assumption of the current ratio that all current assets are equally liquid. The acid-test, or quick, ratio is similar to the current ratio but is based on a more conservative measure of assets available to pay current liabilities. Specifically, the numerator, quick assets, includes only cash and cash equivalents, short-term investments, and accounts receivable. By eliminating current assets such as inventories and prepaid expenses that are less readily convertible into cash, the acid-test ratio provides a more rigorous indication of a company's short-term solvency than does the current ratio.

If either of these liquidity ratios is less than that of the industry as a whole, does that mean that liquidity is a problem? Not necessarily. It does, though, raise a red flag that suggests caution when assessing other areas. It's important to remember that each ratio is but one piece of the puzzle. For example, profitability is probably the best long-run indication of liquidity. Also, management may be very efficient in managing current assets so that some current assets—receivables or inventory—are converted to cash more quickly than they otherwise would be and are more readily available to satisfy liabilities. The turnover ratios discussed in earlier chapters help measure the efficiency of asset management in this regard.

In fact, some companies view their accounts payable as a free loan from their suppliers, just as they view their accounts receivable as a free loan to their customers. These companies tend to pressure their customers to pay quickly, but try to obtain more extended terms with their suppliers. Although this would produce relatively low current assets and high current liabilities, and therefore a lower current ratio, it could be a very intelligent way to manage cash and decrease the overall amount of capital needed by the company to finance operations.

Given the actual and perceived importance of a company's liquidity in the minds of analysts, it's not difficult to adopt a management perspective and imagine efforts to manipulate the ratios that measure liquidity. For instance, a company might use its economic muscle or persuasive powers to influence the timing of accounts payable recognition by asking suppliers to change their delivery schedules. Because accounts payable is included in the denominator in most measures of liquidity, such as the current ratio, the timing of their recognition could mean the difference between an unacceptable ratio and an acceptable one, or between violating a debt covenant and compliance. For example, suppose a company with a current ratio of 1.25 (current assets of \$5 million and current liabilities of \$4 million) is in violation of a debt covenant requiring a minimum current ratio of 1.3. By delaying the delivery of \$1 million of inventory, the ratio would be 1.33 (current assets of \$4 million and current liability of \$3 million).

It is important for creditors and analysts to be attentive for evidence of activities that would indicate timing strategies, such as unusual variations in accounts payable levels. You might notice that such timing strategies are similar to earnings management techniques we discussed previously—specifically, manipulating the timing of revenue and expense recognition in order to “smooth” income over time.

Finally, all financial statement users need to keep in mind the relation between the recognition of unearned revenue associated with advance payments and the later recognition of revenue. On the one hand, increases in unearned revenue can signal future revenue recognition because the unearned revenue likely will eventually be recognized as revenue. On the other hand, research suggests that some firms that report unearned revenue may manipulate the timing of revenue recognition to manage their earnings.³⁶

In the next chapter, we continue our discussion of liabilities. Our focus will shift from current liabilities to long-term liabilities in the form of bonds and long-term notes. ●

A manager should actively monitor a company's liquidity.

A liquidity ratio is but one indication of a company's liquidity.

Some companies maintain relatively high current liabilities as part of a cash-management strategy.

Analysts should be alert for efforts to manipulate measures of liquidity.

Changes in unearned revenue provide information about future revenue, and may be used to manipulate it.

³⁶Marcus Caylor, “Strategic Revenue Recognition to Achieve Earnings Benchmarks,” *Journal of Accounting and Public Policy*, 2011 forthcoming.

Financial Reporting Case Solution

1. **What are accrued liabilities? What is commercial paper?** (p. 744) Accrued liabilities are reported for expenses already incurred but not yet paid (accrued expenses). These include salaries and wages payable, income taxes payable, and interest payable. Commercial paper is a form of notes payable sometimes used by large corporations to obtain temporary financing. It is sold to other companies as a short-term investment. It represents unsecured notes sold in minimum denominations of \$25,000 with maturities ranging from 30 to 270 days. Typically, commercial paper is issued directly to the buyer (lender) and is backed by a line of credit with a bank.
2. **Why did Syntel Microsystems include some long-term debt in the current liability section?** (p. 749) Syntel Microsystems did include some long-term debt in the current liability section. The currently maturing portion of a long-term debt must be reported as a current liability. Amounts are reclassified and reported as current liabilities when they become payable within the upcoming year.
3. **Did they also report some current amounts as long-term debt? Explain.** (p. 749) Yes they did. It is permissible to report short-term obligations as noncurrent liabilities if the company (a) intends to refinance on a long-term basis and (b) demonstrates the ability to do so by a refinancing agreement or by actual financing. As the disclosure note explains, this is the case for a portion of Syntel's currently payable debt.
4. **Must obligations be known contractual debts in order to be reported as liabilities?** (p. 753) No. From an accounting perspective, it is not necessary that obligations be known, legally enforceable debts to be reported as liabilities. They must only be probable and the dollar amount reasonably estimable.
5. **Is it true that current liabilities are riskier than long-term liabilities?** (p. 766) Other things being equal, current liabilities generally are considered riskier than long-term liabilities. For that reason, management usually would rather report a debt as long term. Current debt, though, is not necessarily risky. The liquidity ratios we discussed in the chapter attempt to measure liquidity. Remember, any such measure must be assessed in the context of other factors: industry standards, profitability, turnover ratios, and risk management activities, to name a few. ●

The Bottom Line

- **LO13-1** Liabilities are present obligations to sacrifice assets in the future because of something that already has occurred. Current liabilities are expected to require current assets (or the creation of other current liabilities) and usually are payable within one year. (p. 739)
- **LO13-2** Short-term bank loans usually are arranged under an existing line of credit with a bank or group of banks. When interest is discounted from the face amount of a note (a type of noninterest-bearing note), the effective interest rate is higher than the stated discount rate. Large, highly rated firms sometimes sell commercial paper directly to the buyer (lender) to borrow funds at a lower rate than through a bank loan. (p. 741)
- **LO13-3** Accrued liabilities are recorded by adjusting entries for expenses already incurred, but for which cash has yet to be paid (accrued expenses). Familiar examples are salaries and wages payable, income taxes payable, and interest payable. (p. 746)
- **LO13-4** Short-term obligations can be reported as noncurrent liabilities if the company (a) intends to refinance on a long-term basis and (b) demonstrates the ability to do so by actual financing or a formal agreement to do so. (p. 748)
- **LO13-5** A loss contingency is an existing, uncertain situation involving potential loss depending on whether some future event occurs. Whether a contingency is accrued and reported as a liability depends on (a) the likelihood that the confirming event will occur and (b) what can be determined about the amount of loss. It is accrued if it is both probable that the confirming event will occur and the amount can be at least reasonably estimated. (p. 752)

- **LO13-6** A clarifying event before financial statements are issued, but after the year-end, can be used to determine how a contingency is reported. An unasserted suit, claim, or assessment warrants accrual or disclosure if it is probable it will be asserted. A gain contingency is a contingency that might result in a gain. A gain contingency is not recognized until it actually is realized. (p. 753)
- **LO13-7** IFRS and U.S. GAAP are relatively similar with respect to current liabilities and contingencies. Relatively minor differences relate to when financing must be in place for a liability expected to be refinanced to be classified as long term. Also, with respect to contingent losses, IFRS defines “probable” at a lower threshold, requires the accrual of the expected value of loss, and requires the use of present values when measuring amounts to be accrued. Contingent gains are not accrued under U.S. GAAP, but are accrued under IFRS when they are considered to be virtually certain to occur (pp. 750, 763, and 764) ●

Payroll-Related Liabilities

APPENDIX 13

All firms incur liabilities in connection with their payrolls. These arise primarily from legal requirements to withhold taxes from employees’ paychecks and from payroll taxes on the firms themselves. Some payroll-related liabilities result from voluntary payroll deductions of amounts payable to third parties.

Employees’ Withholding Taxes

Employers are required by law to withhold federal (sometimes state) income taxes and Social Security taxes from employees’ paychecks and remit these to the Internal Revenue Service. The amount withheld for federal income taxes is determined by a tax table furnished by the IRS and varies according to the amount earned and the number of exemptions claimed by the employee. Also, the Federal Insurance Contributions Act (FICA) requires employers to withhold a percentage of each employee’s earnings up to a specified maximum. Both the percentage and the maximum are changed intermittently. As this text went to print, the deduction for Social Security was 6.2% of the first \$106,800 an employee earns, but will increase to \$110,100 in 2012.³⁷ Additionally, a deduction for Medicare tax was 1.45% with no limit on the base amount. The employer also must pay an equal (matching) amount on behalf of the employee. Self-employed persons must pay both the employer and employee portions (12.4% for Social Security and 2.9% for Medicare).

Voluntary Deductions

Besides the required deductions for income taxes and Social Security taxes, employees often authorize their employers to deduct other amounts from their paychecks. These deductions might include union dues, contributions to savings or retirement plans, and insurance premiums. Amounts deducted this way represent liabilities until paid to the appropriate organizations.

Employers’ Payroll Taxes

One payroll tax mentioned previously is the employer’s matching amount of FICA taxes. The employer also must pay federal and state unemployment taxes on behalf of its employees. The Federal Unemployment Tax Act (FUTA) requires a tax of 6.0% of the first \$7,000 earned by each employee. This amount is reduced by a 5.4% (maximum) credit for contributions to state unemployment programs, so the net federal rate often is 0.6%.³⁸ In many states the state rate is 5.4% but may be reduced if the employer maintains relatively low employee turnover.

³⁷For 2011 only, employees paid a rate of 4.2% rather than the normal 6.2% as part of Congress’ efforts to stimulate the U.S. economy. Employers still paid 6.2%

³⁸All states presently have unemployment tax programs.

Fringe Benefits

In addition to salaries and wages, withholding taxes, and payroll taxes, many companies provide employees a variety of fringe benefits. Most commonly, employers pay all or part of employees' insurance premiums and/or contributions to retirement income plans.

Representative payroll-related liabilities are presented in Illustration 13A-1.

Illustration 13A-1

Payroll-Related Liabilities

Crescent Lighting and Fixtures' payroll for the second week in January was \$100,000. The following deductions, fringe benefits, and taxes apply:

Federal income taxes to be withheld	\$20,000
State income taxes to be withheld	3,000
Medical insurance premiums (Blue Cross)— 70% paid by employer	1,000
Employee contribution to voluntary retirement plan (Fidelity Investments)—contributions matched by employer	4,000
Union dues (Local No. 222)—paid by employees	100
Life insurance premiums (Prudential Life)— 100% paid by employer	200
Social Security tax rate	6.2%
Medicare tax rate	1.45%
Federal unemployment tax rate (after state deduction)	0.60%
State unemployment tax rate	5.40%

Crescent's journal entries to record payroll:

Salaries and wages expense (total amount earned)	100,000	
Withholding taxes payable (federal income tax)	20,000	
Withholding taxes payable (state income tax)	3,000	
Social Security taxes payable (employees' portion, 6.2%)	6,200	←
Medicare taxes payable (employees' portion, 1.45%)	1,450	←
Payable to Blue Cross (employee's portion of insurance premiums—30%)	300	←
Payable to Fidelity Investments (employees' investment)	4,000	←
Payable to Local No. 222 (union dues)	100	
Salaries and wages payable (net pay)	64,950	
Payroll tax expense (total)	13,650	
Social Security taxes payable (employer's matching amount)	6,200	←
Medicare taxes payable (employer's matching amount)	1,450	←
FUTA payable (federal unemployment tax: 0.6%)	600	
State unemployment tax payable (5.4%)	5,400	
Salaries and wages expense (fringe benefits)	4,900	
Payable to Blue Cross (insurance premiums—70%)	700	←
Payable to Fidelity Investments (employer's matching amount)	4,000	←
Payable to Prudential life (insurance premiums)	200	

Amounts withheld from paychecks represent liabilities until remitted to third parties.

The employer's share of FICA and unemployment taxes constitute the employer's payroll tax expense.

Fringe benefits are part of salaries and wages expense and represent liabilities until remitted to third parties.

As you study the illustration, you should note the similarity among all payroll-related liabilities. Amounts withheld from paychecks—voluntarily or involuntarily—are liabilities until turned over to appropriate third parties. Payroll taxes and expenses for fringe benefits are incurred as a result of services performed by employees and also are liabilities until paid to appropriate third parties. ●

Questions For Review of Key Topics

- Q 13-1** What are the essential characteristics of liabilities for purposes of financial reporting?
- Q 13-2** What distinguishes current liabilities from long-term liabilities?
- Q 13-3** Bronson Distributors owes a supplier \$100,000 on open account. The amount is payable in three months. What is the theoretically correct way to measure the reportable amount for this liability? In practice, how will it likely be reported? Why?
- Q 13-4** Bank loans often are arranged under existing lines of credit. What is a line of credit? How does a noncommitted line of credit differ from a committed line?
- Q 13-5** Banks sometimes loan cash under noninterest-bearing notes. Is it true that banks lend money without interest?
- Q 13-6** How does commercial paper differ from a bank loan? Why is the interest rate often less for commercial paper?
- Q 13-7** Salaries of \$5,000 have been earned by employees by the end of the period but will not be paid to employees until the following period. How should the expense and related liability be recorded? Why?
- Q 13-8** Under what conditions should an employer accrue an expense and the related liability for employees' compensation for future absences? How do company custom and practice affect the accrual decision?
- Q 13-9** How are refundable deposits and customer advances similar? How do they differ?
- Q 13-10** How do companies account for gift cards?
- Q 13-11** Amounts collected for third parties represent liabilities until remitted. Provide several examples of this kind of collection.
- Q 13-12** When companies have debt that is not due to be paid for several years but that is callable (due on demand) by the creditor, do they classify the debt as current or as long-term?
- Q 13-13** Long-term obligations usually are reclassified and reported as current liabilities when they become payable within the upcoming year (or operating cycle, if longer than a year). So, a 25-year bond issue is reported as a long-term liability for 24 years but normally is reported as a current liability on the balance sheet prepared during the 25th year of its term to maturity. Name a situation in which this would not be the case.
-  **IFRS Q 13-14** How do IFRS and U.S. GAAP differ with respect to the classification of debt that is expected to be refinanced?
- Q 13-15** Define a loss contingency. Provide three examples.
- Q 13-16** List and briefly describe the three categories of likelihood that a future event(s) will confirm the incurrence of the liability for a loss contingency.
- Q 13-17** Under what circumstances should a loss contingency be accrued?
-  **IFRS Q 13-18** What is the difference between the use of the term *contingent liability* in U.S. GAAP and IFRS?
- Q 13-19** Suppose the analysis of a loss contingency indicates that an obligation is not probable. What accounting treatment if any is warranted?
- Q 13-20** Name two loss contingencies that almost always are accrued.
- Q 13-21** Distinguish between the accounting treatment of a manufacturer's warranty and an extended warranty. Why the difference?
- Q 13-22** At December 31, the end of the reporting period, the analysis of a loss contingency indicates that an obligation is only reasonably possible, though its dollar amount is readily estimable. During February, before the financial statements are issued, new information indicates the loss is probable. What accounting treatment is warranted?
- Q 13-23** After the end of the reporting period, a contingency comes into existence. Under what circumstances, if any, should the contingency be reported in the financial statements for the period ended?
-  **IFRS Q 13-24** How do U.S. GAAP and IFRS differ in their treatment of a range of equally likely losses?
-  **IFRS Q 13-25** How do U.S. GAAP and IFRS differ in their use of present values when measuring contingent liabilities?
- Q 13-26** Suppose the Environmental Protection Agency is in the process of investigating Ozone Ruination Limited for possible environmental damage but has not proposed a penalty as of December 31, 2013, the company's fiscal year-end. Describe the two-step process involved in deciding how this unasserted assessment should be reported.
- Q 13-27** You are the plaintiff in a lawsuit. Your legal counsel advises that your eventual victory is inevitable. "You will be awarded \$12 million," your attorney confidently asserts. Describe the appropriate accounting treatment.
-  **IFRS Q 13-28** Answer Q 13-27, but assume that you report under IFRS.

Brief Exercises

- BE 13-1**
Bank loan; accrued interest
● LO13-2
- On October 1, Eder Fabrication borrowed \$60 million and issued a nine-month, 12% promissory note. Interest was payable at maturity. Prepare the journal entry for the issuance of the note and the appropriate adjusting entry for the note at December 31, the end of the reporting period.
- BE 13-2**
Non-interest-bearing note; accrued interest
● LO13-2
- On October 1, Eder Fabrication borrowed \$60 million and issued a nine-month promissory note. Interest was discounted at issuance at a 12% discount rate. Prepare the journal entry for the issuance of the note and the appropriate adjusting entry for the note at December 31, the end of the reporting period.
- BE 13-3**
Determining accrued interest
● LO13-2
- On July 1, Orcas Lab issued a \$100,000, 12%, 8-month note. Interest is payable at maturity. What is the amount of interest expense that should be recorded in a year-end adjusting entry if the fiscal year-end is (a) December 31? (b) September 30?
- BE 13-4**
Commercial paper
● LO13-2
- Branch Corporation issued \$12 million of commercial paper on March 1 on a nine-month note. Interest was discounted at issuance at a 9% discount rate. Prepare the journal entry for the issuance of the commercial paper and its repayment at maturity.
- BE 13-5**
Non-interest-bearing note; effective interest rate
● LO13-2
- Life.com** issued \$10 million of commercial paper on April 1 on a nine-month note. Interest was discounted at issuance at a 6% discount rate. What is the effective interest rate on the commercial paper?
- BE 13-6**
Advance collection
● LO13-3
- On December 12, 2013, Pace Electronics received \$24,000 from a customer toward a cash sale of \$240,000 of diodes to be completed on January 16, 2014. What journal entries should Pace record on December 12 and January 16?
- BE 13-7**
Advance collection
● LO13-3
- In Lizzie Shoes' experience, gift cards that have not been redeemed within 12 months are not likely to be redeemed. Lizzie Shoes sold gift cards for \$18,000 during August of 2013. \$4,000 of cards were redeemed in September of 2013, \$3,000 in October, \$2,500 in November, and \$2,000 in December of 2013. In 2014 an additional \$1,000 of cards were redeemed in January and \$500 in February. How much gift card revenue associated with the August 2013 gift card sales would Lizzie get to recognize in 2013 and 2014?
- BE 13-8**
Sales tax
● LO13-3
- During December, Rainey Equipment made a \$600,000 credit sale. The state sales tax rate is 6% and the local sales tax rate is 1.5%. Prepare the appropriate journal entry.
- BE 13-9**
Classifying debt
● LO13-4
- Consider the following liabilities of Future Brands, Inc., at December 31, 2013, the company's fiscal year-end. Should they be reported as current liabilities or long-term liabilities?
- \$77 million of 8% notes are due on May 31, 2017. The notes are callable by the company's bank, beginning March 1, 2014.
 - \$102 million of 8% notes are due on May 31, 2018. A debt covenant requires Future to maintain a current ratio (ratio of current assets to current liabilities) of at least 2 to 1. Future is in violation of this requirement but has obtained a waiver from the bank until May 2014, since both companies feel Future will correct the situation during the first half of 2014.
- BE 13-10**
Refinancing debt
● LO13-4
- Coulson Company is in the process of refinancing some long-term debt. Its fiscal year ends on December 31, 2013, and its financial statements will be issued on March 15, 2014. Under current U.S. GAAP, how would the debt be classified if the refinancing is completed on December 15, 2013? What if instead it is completed on January 15, 2014?

- BE 13-11** Refinancing debt
● LO13-4, LO13-7
-  **IFRS**
- BE 13-12** Warranties
● LO13-5, LO13-6
- BE 13-13** Product recall
● LO13-5, LO13-6
- BE 13-14** Contingency
● LO13-5, LO13-6
- BE 13-15** Contingency
● LO13-5, LO13-6
- BE 13-16** Contingencies
● LO13-5, LO13-6
- BE 13-17** Contingencies
● LO13-5, LO13-6, LO13-7
-  **IFRS**
- BE 13-18** Unasserted assessment
● LO13-5, LO13-6
- Fleener Company is in the process of refinancing some long-term debt. Its fiscal year ends on December 31, 2013, and its financial statements will be issued on March 15, 2014. Under current IFRS, how would the debt be classified if the refinancing is completed on December 15, 2013? What if instead it is completed on January 15, 2014?
- Right Medical introduced a new implant that carries a five-year warranty against manufacturer's defects. Based on industry experience with similar product introductions, warranty costs are expected to approximate 1% of sales. Sales were \$15 million and actual warranty expenditures were \$20,000 for the first year of selling the product. What amount (if any) should Right report as a liability at the end of the year?
- Consultants notified management of Goo Goo Baby Products that a crib toy poses a potential health hazard. Counsel indicated that a product recall is probable and is estimated to cost the company \$5.5 million. How will this affect the company's income statement and balance sheet this period?
- Skill Hardware is the plaintiff in a \$16 million lawsuit filed against a supplier. The litigation is in final appeal and legal counsel advises that it is virtually certain that Skill will win the lawsuit and be awarded \$12 million. How should Skill account for this event?
- Bell International can estimate the amount of loss that will occur if a foreign government expropriates some company property. Expropriation is considered reasonably possible. How should Bell report the loss contingency?
- Household Solutions manufactures kitchen storage products. During the year, the company became aware of potential costs due to (1) a possible product defect that is reasonably possible and can be reasonably estimated, (2) a safety hazard that is probable and cannot be reasonably estimated, and (3) a new product warranty that is probable and can be reasonably estimated. Which, if any, of these costs should be accrued?
- Quandary Corporation has a major customer who is alleging a significant product defect. Quandary engineers and attorneys have analyzed the claim and have concluded that there is a 51% chance that the customer would be successful in court and that a successful claim would result in a range of damages from \$10 million to \$20 million, with each part of the range equally likely to occur. The damages would need to be paid soon enough that time-value-of-money considerations are not material. Would a liability be accrued under U.S. GAAP? Under IFRS? If a liability were accrued, what amount would be accrued under U.S. GAAP? Under IFRS?
- At March 13, 2014, the Environmental Protection Agency is in the process of investigating a possible emissions leak last summer at a facility of Now Chemical. The EPA has not yet proposed a penalty assessment. Now's fiscal year ends on December 31, 2013, and its financial statements are published in March 2014. Management feels an assessment is *reasonably possible*, and if an assessment is made an unfavorable settlement of \$13 million is *probable*. What, if any, action should Now take for its financial statements?

Exercises

An alternate exercise and problem set is available on the text website: www.mhhe.com/spiceland7e

- E 13-1** Bank loan; accrued interest
● LO13-2
- On November 1, 2013, Quantum Technology, a geothermal energy supplier, borrowed \$16 million cash to fund a geological survey. The loan was made by Nevada BancCorp under a noncommitted short-term line of credit arrangement. Quantum issued a nine-month, 12% promissory note. Interest was payable at maturity. Quantum's fiscal period is the calendar year.
- Required:**
1. Prepare the journal entry for the issuance of the note by Quantum Technology.
 2. Prepare the appropriate adjusting entry for the note by Quantum on December 31, 2013.
 3. Prepare the journal entry for the payment of the note at maturity.
- E 13-2** Determining accrued interest in various situations
● LO13-2
- On July 1, 2013, Ross-Livermore Industries issued nine-month notes in the amount of \$400 million. Interest is payable at maturity.

Required:

Determine the amount of interest expense that should be recorded in a year-end adjusting entry under each of the following independent assumptions:

	Interest Rate	Fiscal Year-End
1.	12%	December 31
2.	10%	September 30
3.	9%	October 31
4.	6%	January 31

E 13-3
Short-term notes
● LO13-2

The following selected transactions relate to liabilities of United Insulation Corporation. United's fiscal year ends on December 31.

Required:

Prepare the appropriate journal entries through the maturity of each liability.

2013

- Jan. 13 Negotiated a revolving credit agreement with Parish Bank that can be renewed annually upon bank approval. The amount available under the line of credit is \$20 million at the bank's prime rate.
- Feb. 1 Arranged a three-month bank loan of \$5 million with Parish Bank under the line of credit agreement. Interest at the prime rate of 10% was payable at maturity.
- May 1 Paid the 10% note at maturity.
- Dec. 1 Supported by the credit line, issued \$10 million of commercial paper on a nine-month note. Interest was discounted at issuance at a 9% discount rate.
- 31 Recorded any necessary adjusting entry(s).

2014

- Sept. 1 Paid the commercial paper at maturity.

E 13-4
Paid future
absences
● LO13-3

JWS Transport Company's employees earn vacation time at the rate of 1 hour per 40-hour work period. The vacation pay vests immediately (that is, an employee is entitled to the pay even if employment terminates). During 2013, total wages paid to employees equaled \$404,000, including \$4,000 for vacations actually taken in 2013 but not including vacations related to 2013 that will be taken in 2014. All vacations earned before 2013 were taken before January 1, 2013. No accrual entries have been made for the vacations. No overtime premium and no bonuses were paid during the period.

Required:

Prepare the appropriate adjusting entry for vacations earned but not taken in 2013.

E 13-5
Paid future
absences
● LO13-3

On January 1, 2013, Poplar Fabricators Corporation agreed to grant its employees two weeks' vacation each year, with the stipulation that vacations earned each year can be taken the following year. For the year ended December 31, 2013, Poplar Fabricators' employees each earned an average of \$900 per week. Seven hundred vacation weeks earned in 2013 were not taken during 2013.

Required:

1. Prepare the appropriate adjusting entry for vacations earned but not taken in 2013.
2. Suppose that, by the time vacations actually are taken in 2014, wage rates for employees have risen by an average of 5 percent from their 2013 level. Also, assume wages earned in 2014 (including vacations earned and taken in 2014) were \$31 million. Prepare a journal entry that summarizes 2014 wages and the payment for 2013 vacations taken in 2014.

E 13-6
Customer
advances; sales
taxes
● LO13-3

Bavarian Bar and Grill opened for business in November 2013. During its first two months of operation, the restaurant sold gift certificates in various amounts totaling \$5,200, mostly as Christmas presents. They are redeemable for meals within two years of the purchase date, although experience within the industry indicates that 80% of gift certificates are redeemed within one year. Certificates totaling \$1,300 were presented for redemption during 2013 for meals having a total price of \$2,100. The sales tax rate on restaurant sales is 4%, assessed at the time meals (not gift certificates) are purchased. Sales taxes will be remitted in January.

Required:

1. Prepare the appropriate journal entries (in summary form) for the gift certificates sold during 2013 (keeping in mind that, in actuality, each sale of a gift certificate or a meal would be recorded individually).
2. Determine the liability for gift certificates to be reported on the December 31, 2013, balance sheet.
3. What is the appropriate classification (current or noncurrent) of the liabilities at December 31, 2013? Why?

E 13-7
Customer
deposits
● LO13-3

Diversified Semiconductors sells perishable electronic components. Some must be shipped and stored in reusable protective containers. Customers pay a deposit for each container received. The deposit is equal to the container's cost. They receive a refund when the container is returned. During 2013, deposits collected on containers shipped were \$850,000.

Deposits are forfeited if containers are not returned within 18 months. Containers held by customers at January 1, 2013, represented deposits of \$530,000. In 2013, \$790,000 was refunded and deposits forfeited were \$35,000.

Required:

1. Prepare the appropriate journal entries for the deposits received and returned during 2013.
2. Determine the liability for refundable deposits to be reported on the December 31, 2013, balance sheet.

E 13-8
Various
transactions
involving advance
collections
● LO13-3

The following selected transactions relate to liabilities of Interstate Farm Implements for December of 2013. Interstate's fiscal year ends on December 31.

Required:

Prepare the appropriate journal entries for these transactions.

1. On December 15, received \$7,500 from Bradley Farms toward the purchase of a \$98,000 tractor to be delivered on January 6, 2014.
2. During December, received \$25,500 of refundable deposits relating to containers used to transport equipment parts.
3. During December, credit sales totaled \$800,000. The state sales tax rate is 5% and the local sales tax rate is 2%. (This is a summary journal entry for the many individual sales transactions for the period.)

E 13-9
Gift Cards
● LO13-3

CircuitTown commenced a gift card program in January 2013 and sold \$10,000 of gift cards in January, \$15,000 in February, and \$16,000 in March of 2013 before discontinuing further gift card sales. During 2013, gift card redemptions were \$6,000 for the January gift cards sold, \$4,500 for the February cards, and \$4,000 for the March cards. CircuitTown considers gift cards to be "broken" (not redeemable) 10 months after sale. (For purposes of this question, assume that gift-card sales occur halfway through each month on average.)

Required:

1. How much revenue will CircuitTown recognize with respect to January gift card sales during 2013?
2. Prepare journal entries to record the sale of January gift cards, redemption of gift cards (ignore sales tax), and breakage (expiration) of gift cards.
3. How much revenue will CircuitTown recognize with respect to March gift card sales during 2013?
4. What liability for unearned revenue associated with gift card sales would CircuitTown show as of December 31, 2013?

E 13-10
FASB codification
research
● LO13-3,
LO13-4,
LO13-5

Access the FASB's Codification Research System at the FASB website (www.fasb.org).

Required:

Determine the specific citation for accounting for each of the following items:

1. If it is only reasonably possible that a contingent loss will occur, the contingent loss should be disclosed.
2. Criteria allowing short-term liabilities expected to be refinanced to be classified as long-term liabilities.
3. Accounting for the revenue from separately priced extended warranty contracts.
4. The criteria to determine if an employer must accrue a liability for vacation pay.

E 13-11
Current-
noncurrent
classification
of debt; Sprint
Corporation
● LO13-1,
LO13-4

An annual report of **Sprint Corporation** contained a rather lengthy narrative entitled "Review of Segmental Results of Operation." The narrative noted that short-term notes payable and commercial paper outstanding at the end of the year aggregated \$756 million and that during the following year "This entire balance will be replaced by the issuance of long-term debt or will continue to be refinanced under existing long-term credit facilities."

Required:

How did Sprint report the debt in its balance sheet? Why?

E 13-12
Current-
noncurrent
classification
of debt; Sprint
Corporation

- LO13-1,
LO13-4,
LO13-7

Consider the information presented in E13-11.

Required:

1. How would Sprint report the debt in its balance sheet if it reported under IFRS? Why?
2. Would your answer to requirement 1 change if Sprint obtained its long-term credit facility after the balance sheet date? Why?

E 13-13
Current-
noncurrent
classification of
debt

- LO13-1, LO13-4

At December 31, 2013, Newman Engineering’s liabilities include the following:

1. \$10 million of 9% bonds were issued for \$10 million on May 31, 1994. The bonds mature on May 31, 2024, but bondholders have the option of calling (demanding payment on) the bonds on May 31, 2014. However, the option to call is not expected to be exercised, given prevailing market conditions.
2. \$14 million of 8% notes are due on May 31, 2017. A debt covenant requires Newman to maintain current assets at least equal to 175% of its current liabilities. On December 31, 2013, Newman is in violation of this covenant. Newman obtained a waiver from National City Bank until June 2014, having convinced the bank that the company’s normal 2 to 1 ratio of current assets to current liabilities will be reestablished during the first half of 2014.
3. \$7 million of 11% bonds were issued for \$7 million on August 31, 1984. The bonds mature on July 31, 2014. Sufficient cash is expected to be available to retire the bonds at maturity.

Required:

What portion of the debt can be excluded from classification as a current liability (that is, reported as a noncurrent liability)? Explain.

E 13-14
FASB codification
research

- LO13-5

The *FASB Accounting Standards Codification* represents the single source of authoritative U.S. generally accepted accounting principles.

Required:

1. Obtain the relevant authoritative literature on recognition of contingent losses using the FASB’s Codification Research System at the FASB website (www.fasb.org). What is the specific citation that describes the guidelines for determining when an expense and liability should be accrued for a contingent loss?
2. List the guidelines.

E 13-15
Warranties

- LO13-5, LO13-6

Cupola Awning Corporation introduced a new line of commercial awnings in 2013 that carry a two-year warranty against manufacturer’s defects. Based on their experience with previous product introductions, warranty costs are expected to approximate 3% of sales. Sales and actual warranty expenditures for the first year of selling the product were:

Sales	Actual Warranty Expenditures
\$5,000,000	\$37,500

Required:

1. Does this situation represent a loss contingency? Why or why not? How should Cupola account for it?
2. Prepare journal entries that summarize sales of the awnings (assume all credit sales) and any aspects of the warranty that should be recorded during 2013.
3. What amount should Cupola report as a liability at December 31, 2013?

E 13-16
Extended
warranties

- LO13-5, LO13-6

Carnes Electronics sells consumer electronics that carry a 90-day manufacturer’s warranty. At the time of purchase, customers are offered the opportunity to also buy a two-year extended warranty for an additional charge. During the year, Carnes received \$412,000 for these extended warranties (approximately evenly throughout the year).

Required:

1. Does this situation represent a loss contingency? Why or why not? How should it be accounted for?
2. Prepare journal entries that summarize sales of the extended warranties (assume all credit sales) and any aspects of the warranty that should be recorded during the year.

- E 13-17**
Contingency;
product recall
● LO13-5, LO13-6

Sound Audio manufactures and sells audio equipment for automobiles. Engineers notified management in December 2013 of a circuit flaw in an amplifier that poses a potential fire hazard. An intense investigation indicated that a product recall is virtually certain, estimated to cost the company \$2 million. The fiscal year ends on December 31.

Required:

1. Should this loss contingency be accrued, disclosed only, or neither? Explain.
2. What loss, if any, should Sound Audio report in its 2013 income statement?
3. What liability, if any, should Sound Audio report in its 2013 balance sheet?
4. Prepare any journal entry needed.

- E 13-18**
Impairment
of accounts
receivable
● LO13-5, LO13-6

The Manda Panda Company uses the allowance method to account for bad debts. At the beginning of 2013, the allowance account had a credit balance of \$75,000. Credit sales for 2013 totaled \$2,400,000 and the year-end accounts receivable balance was \$490,000. During this year, \$73,000 in receivables were determined to be uncollectible. Manda Panda anticipates that 3% of all credit sales will ultimately become uncollectible. The fiscal year ends on December 31.

Required:

1. Does this situation describe a loss contingency? Explain.
2. What is the bad debt expense that Manda Panda should report in its 2013 income statement?
3. Prepare the appropriate journal entry to record the contingency.
4. What is the net realizable value (book value) Manda Panda should report in its 2013 balance sheet?

- E 13-19**
Premiums
● LO13-5, LO13-6

Drew-Richards iMusic is a regional music media reseller. As a promotion, it offered \$5 cash rebates on specific CDs. Customers must mail in a proof-of-purchase seal from the package plus the cash register receipt to receive the rebate. Experience suggests that 70% of the rebates will be claimed. Twenty thousand of the CDs were sold in 2013. Total rebates to customers in 2013 were \$22,000 and were recorded as promotional expense when paid. The fiscal year ends on December 31.

Required:

1. What is the promotional expense that Drew-Richards should report in its 2013 income statement?
2. What is the premium liability that Drew-Richards should report in its 2013 balance sheet?
3. Prepare the appropriate journal entry to record the contingency.

- E 13-20**
Unasserted
assessment
● LO13-6

At April 1, 2014, the Environmental Protection Agency is in the process of investigating a possible chemical leak last June at a facility of Shu Lamination, Inc. The EPA has not yet proposed a penalty assessment. Shu's fiscal year ends on December 31, 2013. The company's financial statements are issued in April 2014.

Required:

For each of the following scenarios, determine the appropriate way to report the situation. Explain your reasoning and prepare any necessary journal entry.

1. Management feels an assessment is *reasonably possible*, and if an assessment is made an unfavorable settlement of \$13 million is *reasonably possible*.
2. Management feels an assessment is *reasonably possible*, and if an assessment is made an unfavorable settlement of \$13 million is *probable*.
3. Management feels an assessment is *probable*, and if an assessment is made an unfavorable settlement of \$13 million is *reasonably possible*.
4. Management feels an assessment is *probable*, and if an assessment is made an unfavorable settlement of \$13 million is *probable*.

- E 13-21**
Various
transactions
involving
contingencies
● LO13-5, LO13-6

The following selected transactions relate to contingencies of Classical Tool Makers, Inc., which began operations in July 2013. Classical's fiscal year ends on December 31. Financial statements are issued in April 2014.

Required:

Prepare the year-end entries for any amounts that should be recorded as a result of each of these contingencies and indicate whether a disclosure note is indicated.

1. Classical's products carry a one-year warranty against manufacturer's defects. Based on previous experience, warranty costs are expected to approximate 4% of sales. Sales were \$2 million (all credit) for 2013. Actual warranty expenditures were \$30,800 and were recorded as warranty expense when incurred.
2. Although no customer accounts have been shown to be uncollectible, Classical estimates that 2% of credit sales will eventually prove uncollectible.

3. In December 2013, the state of Tennessee filed suit against Classical, seeking penalties for violations of clean air laws. On January 23, 2014, Classical reached a settlement with state authorities to pay \$1.5 million in penalties.
4. Classical is the plaintiff in a \$4 million lawsuit filed against a supplier. The suit is in final appeal and attorneys advise that it is virtually certain that Classical will win the case and be awarded \$2.5 million.
5. In November 2013, Classical became aware of a design flaw in an industrial saw that poses a potential electrical hazard. A product recall appears unavoidable. Such an action would likely cost the company \$500,000.
6. Classical offered \$25 cash rebates on a new model of jigsaw. Customers must mail in a proof-of-purchase seal from the package plus the cash register receipt to receive the rebate. Experience suggests that 60% of the rebates will be claimed. Ten thousand of the jigsaws were sold in 2013. Total rebates to customers in 2013 were \$105,000 and were recorded as promotional expense when paid.

E 13-22

Various transactions involving contingencies; IFRS

- LO13-5, LO13-6, LO13-7

The following selected circumstances relate to pending lawsuits for Erismus, Inc. Erismus's fiscal year ends on December 31. Financial statements are issued in March 2014. Erismus prepares its financial statements according to International Financial Reporting Standards.

Required:

Indicate the amount of asset or liability that Erismus would record, and explain your answer.

1. Erismus is defending against a lawsuit. Erismus's management believes the company has a slightly worse than 50/50 chance of eventually prevailing in court, and that if it loses, the judgment will be \$1,000,000.
2. Erismus is defending against a lawsuit. Erismus's management believes it is probable that the company will lose in court. If it loses, management believes that damages could fall anywhere in the range of \$2,000,000 to \$4,000,000, with any damage in that range equally likely.
3. Erismus is defending against a lawsuit. Erismus's management believes it is probable that the company will lose in court. If it loses, management believes that damages will eventually be \$5,000,000, with a present value of \$3,500,000.
4. Erismus is a plaintiff in a lawsuit. Erismus's management believes it is probable that the company eventually will prevail in court, and that if it prevails, the judgment will be \$1,000,000.
5. Erismus is a plaintiff in a lawsuit. Erismus's management believes it is virtually certain that the company eventually will prevail in court, and that if it prevails, the judgment will be \$500,000.

E 13-23

Disclosures of liabilities

- LO13-1 through LO13-6

Indicate (by letter) the way each of the items listed below should be reported in a balance sheet at December 31, 2013.

Item	Reporting Method
___ 1. Commercial paper.	N. Not reported
___ 2. Noncommitted line of credit.	C. Current liability
___ 3. Customer advances.	L. Long-term liability
___ 4. Estimated warranty cost.	D. Disclosure note only
___ 5. Accounts payable.	A. Asset
___ 6. Long-term bonds that will be callable by the creditor in the upcoming year unless an existing violation is not corrected (there is a reasonable possibility the violation will be corrected within the grace period).	
___ 7. Note due March 3, 2014.	
___ 8. Interest accrued on note, Dec. 31, 2013.	
___ 9. Short-term bank loan to be paid with proceeds of sale of common stock.	
___ 10. A determinable gain that is contingent on a future event that appears extremely likely to occur in three months.	
___ 11. Unasserted assessment of back taxes that probably will be asserted, in which case there would probably be a loss in six months.	
___ 12. Unasserted assessment of back taxes with a reasonable possibility of being asserted, in which case there would probably be a loss in 13 months.	
___ 13. A determinable loss from a past event that is contingent on a future event that appears extremely likely to occur in three months.	
___ 14. Bond sinking fund.	
___ 15. Long-term bonds callable by the creditor in the upcoming year that are not expected to be called.	

E 13-24
 Warranty expense; change in estimate
 ● LO13-5, LO13-6

Woodmier Lawn Products introduced a new line of commercial sprinklers in 2012 that carry a one-year warranty against manufacturer’s defects. Because this was the first product for which the company offered a warranty, trade publications were consulted to determine the experience of others in the industry. Based on that experience, warranty costs were expected to approximate 2% of sales. Sales of the sprinklers in 2012 were \$2.5 million. Accordingly, the following entries relating to the contingency for warranty costs were recorded during the first year of selling the product:

Accrued liability and expense		
Warranty expense (2% × \$2,500,000)	50,000	
Estimated warranty liability		50,000
Actual expenditures (summary entry)		
Estimated warranty liability	23,000	
Cash, wages payable, parts and supplies, etc.		23,000

In late 2013, the company’s claims experience was evaluated and it was determined that claims were far more than expected—3% of sales rather than 2%.

Required:

1. Assuming sales of the sprinklers in 2013 were \$3.6 million and warranty expenditures in 2013 totaled \$88,000, prepare any journal entries related to the warranty.
2. Assuming sales of the sprinklers were discontinued after 2012, prepare any journal entry(s) in 2013 related to the warranty.

E 13-25
 Change in accounting estimate
 ● LO13-3

The Commonwealth of Virginia filed suit in October 2011 against Northern Timber Corporation, seeking civil penalties and injunctive relief for violations of environmental laws regulating forest conservation. When the 2012 financial statements were issued in 2013, Northern had not reached a settlement with state authorities, but legal counsel advised Northern Timber that it was probable the ultimate settlement would be \$1,000,000 in penalties. The following entry was recorded:

Loss—litigation	1,000,000	
Liability—litigation		1,000,000

Late in 2013, a settlement was reached with state authorities to pay a total of \$600,000 to cover the cost of violations.

Required:

1. Prepare any journal entries related to the change.
2. Briefly describe other steps Northern should take to report the change.

E 13-26
 Contingency; Dow Chemical Company disclosure
 ● LO13-5, LO13-6
 Real World Financials

The **Dow Chemical Company** provides chemical, plastic, and agricultural products and services to various consumer markets. The following excerpt is taken from the disclosure notes of Dow’s 2010 annual report:

At December 31, 2010, the Company had accrued obligations of \$607 million for environmental remediation and restoration costs, including \$59 million for the remediation of Superfund sites. This is management’s best estimate of the costs for remediation and restoration with respect to environmental matters for which the Company has accrued liabilities, although the ultimate cost with respect to these particular matters could range up to approximately twice that amount.

Required:

Does the excerpt describe a loss contingency? Under what conditions would Dow accrue such a contingency? What journal entry would Dow use to record this amount of provision (loss)?

E 13-27
 Payroll-related liabilities
 ● Appendix

Lee Financial Services pays employees monthly. Payroll information is listed below for January 2013, the first month of Lee’s fiscal year. Assume that none of the employees exceeded any relevant wage base.

Salaries	\$500,000
Federal income taxes to be withheld	100,000
Federal unemployment tax rate	0.60%
State unemployment tax rate (after FUTA deduction)	5.40%
Social Security (FICA) tax rate	7.65%

Required:

Prepare the appropriate journal entries to record salaries and wages expense and payroll tax expense for the January 2013 pay period.

CPA and CMA Review Questions

CPA Exam Questions

The following questions are adapted from a variety of sources including questions developed by the AICPA Board of Examiners and those used in the Kaplan CPA Review Course to study accounting for current liabilities and contingencies while preparing for the CPA examination. Determine the response that best completes the statements or questions.

- LO13-3
 1. On March 1, 2012, Fine Co. borrowed \$10,000 and signed a two-year note bearing interest at 12% per annum compounded annually. Interest is payable in full at maturity on February 28, 2014. What amount should Fine report as a liability for accrued interest at December 31, 2013?
 - a. \$ 0
 - b. \$1,000
 - c. \$1,200
 - d. \$2,320
- LO13-3
 2. North Corp. has an employee benefit plan for compensated absences that gives employees 10 paid vacation days and 10 paid sick days. Both vacation and sick days can be carried over indefinitely. Employees can elect to receive payment in lieu of vacation days; however, no payment is given for sick days not taken. At December 31, 2013, North's unadjusted balance of liability for compensated absences was \$21,000. North estimated that there were 150 vacation days and 75 sick days available at December 31, 2013. North's employees earn an average of \$100 per day. In its December 31, 2013, balance sheet, what amount of liability for compensated absences is North required to report?
 - a. \$15,000
 - b. \$21,000
 - c. \$22,500
 - d. \$36,000
- LO13-4
 3. On December 31, 2013, Largo, Inc., had a \$750,000 note payable outstanding, due July 31, 2014. Largo borrowed the money to finance construction of a new plant. Largo planned to refinance the note by issuing long-term bonds. Because Largo temporarily had excess cash, it prepaid \$250,000 of the note on January 12, 2014. In February 2014, Largo completed a \$1,500,000 bond offering. Largo will use the bond offering proceeds to repay the note payable at its maturity and to pay construction costs during 2014. On March 3, 2014, Largo issued its 2013 financial statements. What amount of the note payable should Largo include in the current liabilities section of its December 31, 2013, balance sheet?
 - a. \$250,000
 - b. \$750,000
 - c. \$500,000
 - d. \$ 0
- LO13-5
 4. In May 2010, Caso Co. filed suit against Wayne, Inc., seeking \$1,900,000 in damages for patent infringement. A court verdict in November 2013 awarded Caso \$1,500,000 in damages, but Wayne's appeal is not expected to be decided before 2015. Caso's counsel believes it is probable that Caso will be successful against Wayne for an estimated amount in the range between \$800,000 and \$1,100,000, with \$1,000,000 considered the most likely amount. What amount should Caso record as income from the lawsuit in the year ended December 31, 2013?
 - a. \$ 0
 - b. \$ 800,000
 - c. \$1,000,000
 - d. \$1,500,000
- LO13-6
 5. In December 2013, Mill Co. began including one coupon in each package of candy that it sells and offering a toy in exchange for 50 cents and five coupons. The toys cost Mill 80 cents each. Eventually 60% of the coupons will be redeemed. During December, Mill sold 110,000 packages of candy and no coupons were redeemed. In its December 31, 2013, balance sheet, what amount should Mill report as estimated liability for coupons?
 - a. \$ 3,960
 - b. \$10,560
 - c. \$19,800
 - d. \$52,800
- LO13-6
 6. During 2013, Gum Co. introduced a new product carrying a two-year warranty against defects. The estimated warranty costs related to dollar sales are 2% within 12 months following the sale and 4% in the second 12 months

following the sale. Sales and actual warranty expenditures for the years ended December 31, 2013, and 2014, are as follows:

	Sales	Actual Warranty Expenditures
2013	\$150,000	\$2,250
2014	<u>250,000</u>	<u>7,500</u>
	\$400,000	\$9,750

What amount should Gum report as estimated warranty liability in its December 31, 2014, balance sheet?

- a. \$ 2,500
- b. \$ 4,250
- c. \$11,250
- d. \$14,250

Beginning in 2011, International Financial Reporting Standards are tested on the CPA exam along with U.S. GAAP. The following questions deal with the application of IFRS in accounting for current liabilities and contingencies.

● LO13-7

7. Wilhelm Company prepares its financial statements according to International Accounting Standards (IFRS). It recently estimated that it has a 55 percent chance of losing a lawsuit. Assuming Wilhelm can reliably estimate the amount it would pay if it loses the lawsuit, it should.
- a. Accrue a liability for the lawsuit.
 - b. Disclose the matter in the notes to the financial statements but not accrue a liability for the lawsuit.
 - c. Make no mention of the lawsuit in the financial statements or notes.
 - d. None of the above.

● LO13-7

8. Tweedy Inc. prepares its financial statements according to International Accounting Standards (IFRS). It recently estimated that it has a 99 percent chance of winning a lawsuit. Assuming Tweedy can reliably estimate the amount it would receive if it wins the lawsuit, it should.
- a. Accrue an asset for the lawsuit.
 - b. Disclose the matter in the notes to the financial statements but not accrue an asset for the lawsuit.
 - c. Make no mention of the lawsuit in the financial statements or notes.
 - d. None of the above.

● LO13-7

9. Cline Inc. prepares its financial statements according to International Accounting Standards (IFRS). It recently concluded that it will lose a lawsuit, and that it will pay a range of damages falling somewhere between \$10 million and \$20 million. Cline should accrue a liability in the amount of.
- a. \$0, as no specific amount is probable to be incurred.
 - b. \$10 million, the lower end of the range of probable amounts.
 - c. \$15 million, the expected value of the amount to be paid.
 - d. \$20 million, the upper end of the range of probable amounts.

The following questions dealing with current liabilities and contingencies are adapted from questions that previously appeared on Certified Management Accountant (CMA) examinations. The CMA designation sponsored by the Institute of Management Accountants (www.imanet.org) provides members with an objective measure of knowledge and competence in the field of management accounting. Determine the response that best completes the statements or questions.

● LO13-4

1. Lister Company intends to refinance a portion of its short-term debt next year and is negotiating a long-term financing agreement with a local bank. This agreement will be noncancelable and will extend for 2 years. The amount of short-term debt that Lister Company can exclude from its statement of financial position at December 31
- a. May exceed the amount available for refinancing under the agreement.
 - b. Depends on the demonstrated ability to consummate the refinancing.
 - c. Must be adjusted by the difference between the present value and the market value of the short-term debt.
 - d. Is reduced by the proportionate change in the working capital ratio.

● LO13-5

2. An employee has the right to receive compensation for future paid leave, and the payment of compensation is probable. If the obligation relates to rights that vest but the amount cannot be reasonably estimated, the employer should
- a. Accrue a liability with proper disclosure.
 - b. Not accrue a liability nor disclose the situation.
 - c. Accrue a liability; however, the additional disclosure is not required.
 - d. Not accrue a liability; however, disclosure is required.

- LO13-5
 3. The accrual of a contingent liability and the related loss should be recorded when the
 - a. Loss resulting from a future event may be material in relation to income.
 - b. Future event that gives rise to the liability is unusual in nature and nonrecurring.
 - c. Amount of the loss resulting from the event is reasonably estimated and the occurrence of the loss is probable.
 - d. Event that gives rise to the liability is unusual and its occurrence is probable.
- LO13-6
 4. For the past 3 months, Kenton Inc. has been negotiating a labor contract with potentially significant wage increases. Before completing the year-end financial statements on November 30, Kenton determined that the contract was likely to be signed in the near future. Kenton has estimated that the effect of the new contract will cost the company either \$100,000, \$200,000, or \$300,000. Also Kenton believes that each estimate has an equal chance of occurring and that the likelihood of the new contract being retroactive to the fiscal year ended November 30 is probable. According to GAAP regarding contingencies, Kenton should
 - a. Do nothing because no loss will occur if the contract is never signed.
 - b. Disclose each loss contingency amount in the notes to the November 30 financial statements.
 - c. Accrue \$100,000 in the income statement, and disclose the nature of the contingency and the additional loss exposure.
 - d. Follow conservatism and accrue \$300,000 in the income statement, and disclose the nature of the contingency.

Problems

An alternate exercise and problem set is available on the text website: www.mhhe.com/spiceland7e

- P 13-1**
Bank loan;
accrued interest
● LO13-2

Blanton Plastics, a household plastic product manufacturer, borrowed \$14 million cash on October 1, 2013, to provide working capital for year-end production. Blanton issued a four-month, 12% promissory note to L&T Bank under a prearranged short-term line of credit. Interest on the note was payable at maturity. Each firm's fiscal period is the calendar year.

Required:

1. Prepare the journal entries to record (a) the issuance of the note by Blanton Plastics and (b) L&T Bank's receivable on October 1, 2013.
2. Prepare the journal entries by both firms to record all subsequent events related to the note through January 31, 2014.
3. Suppose the face amount of the note was adjusted to include interest (a noninterest-bearing note) and 12% is the bank's stated discount rate. (a) Prepare the journal entries to record the issuance of the noninterest-bearing note by Blanton Plastics on October 1, 2013, the adjusting entry at December 31, and payment of the note at maturity. (b) What would be the effective interest rate?

- P 13-2**
Various
transactions
involving
liabilities
● LO13-2 through
LO13-4

Camden Biotechnology began operations in September 2013. The following selected transactions relate to liabilities of the company for September 2013 through March 2014. Camden's fiscal year ends on December 31. Its financial statements are issued in April.

2013

- a. On September 5, opened checking accounts at Second Commercial Bank and negotiated a short-term line of credit of up to \$15,000,000 at the bank's prime rate (10.5% at the time). The company will pay no commitment fees.
- b. On October 1, borrowed \$12 million cash from Second Commercial Bank under the line of credit and issued a five-month promissory note. Interest at the prime rate of 10% was payable at maturity. Management planned to issue 10-year bonds in February to repay the note.
- c. Received \$2,600 of refundable deposits in December for reusable containers used to transport and store chemical-based products.
- d. For the September–December period, sales on account totaled \$4,100,000. The state sales tax rate is 3% and the local sales tax rate is 3%. (This is a summary journal entry for the many individual sales transactions for the period.)
- e. Recorded the adjusting entry for accrued interest.

2014

- f. In February, issued \$10 million of 10-year bonds at face value and paid the bank loan on the March 1 due date.
- g. Half of the storage containers covered by refundable deposits were returned in March. The remaining containers are expected to be returned during the next six months.

Required:

1. Prepare the appropriate journal entries for these transactions.
2. Prepare the current and long-term liability sections of the December 31, 2013, balance sheet. Trade accounts payable on that date were \$252,000.

P 13-3
Current–
noncurrent
classification of
debt
● LO13-1, LO13-4

The balance sheet at December 31, 2013, for Nevada Harvester Corporation includes the liabilities listed below:

- a. 11% bonds with a face amount of \$40 million were issued for \$40 million on October 31, 2004. The bonds mature on October 31, 2024. Bondholders have the option of calling (demanding payment on) the bonds on October 31, 2014, at a redemption price of \$40 million. Market conditions are such that the call is not expected to be exercised.
- b. Management intended to refinance \$6 million of its 10% notes that mature in May 2014. In early March, prior to the actual issuance of the 2013 financial statements, Nevada Harvester negotiated a line of credit with a commercial bank for up to \$5 million any time during 2014. Any borrowings will mature two years from the date of borrowing.
- c. Noncallable 12% bonds with a face amount of \$20 million were issued for \$20 million on September 30, 1988. The bonds mature on September 30, 2014. Sufficient cash is expected to be available to retire the bonds at maturity.
- d. A \$12 million 9% bank loan is payable on October 31, 2019. The bank has the right to demand payment after any fiscal year-end in which Nevada Harvester’s ratio of current assets to current liabilities falls below a contractual minimum of 1.7 to 1 and remains so for six months. That ratio was 1.45 on December 31, 2013, due primarily to an intentional temporary decline in inventory levels. Normal inventory levels will be reestablished during the first quarter of 2014.

Required:

1. Determine the amount that can be excluded from classification as a current liability (that is, reported as a noncurrent liability) for each. Explain the reasoning behind your classifications.
2. Prepare the liability section of a classified balance sheet and any necessary footnote disclosure for Nevada Harvester at December 31, 2013. Accounts payable and accruals are \$22 million.

P 13-4
Various liabilities
● LO13-1 through
LO13-4

The unadjusted trial balance of the Manufacturing Equitable at December 31, 2013, the end of its fiscal year, included the following account balances. Manufacturing’s 2013 financial statements were issued on April 1, 2014.

Accounts receivable	\$ 92,500
Accounts payable	35,000
Bank notes payable	600,000
Mortgage note payable	1,200,000

Other information:

- a. The bank notes, issued August 1, 2013, are due on July 31, 2014, and pay interest at a rate of 10%, payable at maturity.
- b. The mortgage note is due on March 1, 2014. Interest at 9% has been paid up to December 31 (assume 9% is a realistic rate). Manufacturing intended at December 31, 2013, to refinance the note on its due date with a new 10-year mortgage note. In fact, on March 1, Manufacturing paid \$250,000 in cash on the principal balance and refinanced the remaining \$950,000.
- c. Included in the accounts receivable balance at December 31, 2013, were two subsidiary accounts that had been overpaid and had credit balances totaling \$18,000. The accounts were of two major customers who were expected to order more merchandise from Manufacturing and apply the overpayments to those future purchases.
- d. On November 1, 2013, Manufacturing rented a portion of its factory to a tenant for \$30,000 per year, payable in advance. The payment for the 12 months ended October 31, 2014, was received as required and was credited to rent revenue.

Required:

1. Prepare any necessary adjusting journal entries at December 31, 2013, pertaining to each item of other information (a–d).
2. Prepare the current and long-term liability sections of the December 31, 2013, balance sheet.

P 13-5
Bonus
compensation;
algebra
● LO13-3

Sometimes compensation packages include bonuses designed to provide performance incentives to employees. The difficulty a bonus can cause accountants is not an accounting problem, but a math problem. The complication is that the bonus formula sometimes specifies that the calculation of the bonus is based in part on the bonus itself. This occurs anytime the bonus is a percentage of income because expenses are components of income, and the bonus is an expense.

Regalia Fashions has an incentive compensation plan through which a division manager receives a bonus equal to 10% of the division’s net income. Division income in 2013 before the bonus and income tax was \$150,000. The tax rate is 30%.

Required:

1. Express the bonus formula as one or more algebraic equation(s).*
2. Using these formulas calculate the amount of the bonus.
3. Prepare the adjusting entry to record the bonus compensation.
4. Bonus arrangements take many forms. Suppose the bonus specifies that the bonus is 10% of the division's income before tax, but after the bonus itself. Calculate the amount of the bonus.

P 13-6

Various contingencies

- LO13-5, LO13-6

Eastern Manufacturing is involved with several situations that possibly involve contingencies. Each is described below. Eastern's fiscal year ends December 31, and the 2013 financial statements are issued on March 15, 2014.

- a. Eastern is involved in a lawsuit resulting from a dispute with a supplier. On February 3, 2014, judgment was rendered against Eastern in the amount of \$107 million plus interest, a total of \$122 million. Eastern plans to appeal the judgment and is unable to predict its outcome though it is not expected to have a material adverse effect on the company.
- b. In November 2012, the State of Nevada filed suit against Eastern, seeking civil penalties and injunctive relief for violations of environmental laws regulating hazardous waste. On January 12, 2014, Eastern reached a settlement with state authorities. Based upon discussions with legal counsel, the Company feels it is probable that \$140 million will be required to cover the cost of violations. Eastern believes that the ultimate settlement of this claim will not have a material adverse effect on the company.
- c. Eastern is the plaintiff in a \$200 million lawsuit filed against United Steel for damages due to lost profits from rejected contracts and for unpaid receivables. The case is in final appeal and legal counsel advises that it is probable that Eastern will prevail and be awarded \$100 million.
- d. At March 15, 2014, the Environmental Protection Agency is in the process of investigating possible soil contamination at various locations of several companies including Eastern. The EPA has not yet proposed a penalty assessment. Management feels an assessment is reasonably possible, and if an assessment is made an unfavorable settlement of up to \$33 million is reasonably possible.

Required:

1. Determine the appropriate means of reporting each situation. Explain your reasoning.
2. Prepare any necessary journal entries and disclosure notes.

P 13-7

Various liabilities

- LO13-4, LO13-5
LO13-6, LO13-7

Holmes Watson (HW) is considering what the effect would be of reporting its liabilities under IFRS rather than U.S. GAAP. The following facts apply:

- a. HW is defending against a lawsuit and believes it is virtually certain to lose in court. If it loses the lawsuit, management estimates it will need to pay a range of damages that falls between \$5,000,000 and \$10,000,000, with each amount in that range equally likely.
- b. HW is defending against another lawsuit that is identical to item (a), but the relevant losses will only occur far into the future. The present values of the endpoints of the range are \$3,000,000 and \$8,000,000, with the timing of cash flow somewhat uncertain. HW considers these effects of the time value of money to be material.
- c. HW is defending against another lawsuit for which management believes HW has a slightly worse than 50/50 chance of losing in court. If it loses the lawsuit, management estimates HW will need to pay a range of damages that falls between \$3,000,000 and \$9,000,000, with each amount in that range equally likely.
- d. HW has \$10,000,000 of short-term debt that it intends to refinance on a long-term basis. Soon after the balance sheet date, but before issuance of the financial statements, HW obtained the financing necessary to refinance the debt.

Required:

1. For each item, indicate how treatment of the amount would differ between U.S. GAAP and IFRS.
2. Consider the total effect of items a–d. If HW's goal is to show the lowest total liabilities, which set of standards, U.S. GAAP or IFRS, best helps it meet that goal?

P 13-8

Expected cash flow approach; product recall

- LO13-6

The Heinrich Tire Company recalled a tire in its subcompact line in December 2013. Costs associated with the recall were originally thought to approximate \$50 million. Now, though, while management feels it is probable the company will incur substantial costs, all discussions indicate that \$50 million is an excessive amount. Based on prior recalls in the industry, management has provided the following probability distribution for the potential loss:

Loss Amount	Probability
\$40 million	20%
\$30 million	50%
\$20 million	30%

*Remember when you were studying algebra and you wondered if you would ever use it?

An arrangement with a consortium of distributors requires that all recall costs be settled at the end of 2014. The risk-free rate of interest is 5%.

Required:

1. Applying the expected cash flow approach of *SFAC No. 7*, estimate Heinrich’s liability at the end of the 2013 fiscal year.
2. Prepare the journal entry to record the contingent liability (and loss).
3. Prepare the journal entry to accrue interest on the liability at the end of 2014.
4. Prepare the journal entry to pay the liability at the end of 2014, assuming the actual cost is \$30 million. Heinrich records an additional loss if the actual costs are higher or a gain if the costs are lower.
5. By the traditional approach to measuring loss contingencies, what amount would Heinrich record at the end of 2013 for the loss and contingent liability?

P 13–9
Subsequent events
● LO13–6

Lincoln Chemicals became involved in investigations by the U.S. Environmental Protection Agency in regard to damages connected to waste disposal sites. Below are four possibilities regarding the timing of (A) the alleged damage caused by Lincoln, (B) an investigation by the EPA, (C) the EPA assessment of penalties, and (D) ultimate settlement. In each case, assume that Lincoln is unaware of any problem until an investigation is begun. Also assume that once the EPA investigation begins, it is probable that a damage assessment will ensue and that once an assessment is made by the EPA, it is reasonably possible that a determinable amount will be paid by Lincoln.

Required:

For each case, decide whether (a) a loss should be accrued in the financial statements with an explanatory note, (b) a disclosure note only should be provided, or (c) no disclosure is necessary.

P 13–10
Subsequent events; classification of debt; loss contingency; financial statement effects
● LO13–4, LO13–5

Van Rushing Hunting Goods’ fiscal year ends on December 31. At the end of the 2013 fiscal year, the company had notes payable of \$12 million due on February 8, 2014. Rushing sold 2 million shares of its \$0.25 par, common stock on February 3, 2014, for \$9 million. The proceeds from that sale along with \$3 million from the maturation of some 3-month CDs were used to pay the notes payable on February 8.

Through his attorney, one of Rushing’s construction workers notified management on January 5, 2014, that he planned to sue the company for \$1 million related to a work-site injury on December 20, 2013. As of December 31, 2013, management had been unaware of the injury, but reached an agreement on February 23, 2014, to settle the matter by paying the employee’s medical bills of \$75,000.

Rushing’s financial statements were finalized on March 3, 2014.

Required:

1. What amount(s) if any, related to the situations described should Rushing report among current liabilities in its balance sheet at December 31, 2013? Why?
2. What amount(s) if any, related to the situations described should Rushing report among long-term liabilities in its balance sheet at December 31, 2013? Why?
3. How would your answers to requirements 1 and 2 differ if the settlement agreement had occurred on March 15, 2014, instead? Why?
4. How would your answers to requirements 1 and 2 differ if the work-site injury had occurred on January 3, 2014, instead? Why?

Various liabilities;
balance sheet
classification;
prepare liability
section of
balance sheet;
write footnotes

- LO13-4, LO13-5

Transit Airlines provides regional jet service in the Mid-South. The following is information on liabilities of Transit at December 31, 2013. Transit's fiscal year ends on December 31. Its annual financial statements are issued in April.

1. Transit has outstanding 6.5% bonds with a face amount of \$90 million. The bonds mature on July 31, 2022. Bondholders have the option of calling (demanding payment on) the bonds on July 31, 2014, at a redemption price of \$90 million. Market conditions are such that the call option is not expected to be exercised.
2. A \$30 million 8% bank loan is payable on October 31, 2019. The bank has the right to demand payment after any fiscal year-end in which Transit's ratio of current assets to current liabilities falls below a contractual minimum of 1.9 to 1 and remains so for 6 months. That ratio was 1.75 on December 31, 2013, due primarily to an intentional temporary decline in parts inventories. Normal inventory levels will be reestablished during the sixth week of 2014.
3. Transit management intended to refinance \$45 million of 7% notes that mature in May of 2014. In late February 2014, prior to the issuance of the 2013 financial statements, Transit negotiated a line of credit with a commercial bank for up to \$40 million any time during 2014. Any borrowings will mature two years from the date of borrowing.
4. Transit is involved in a lawsuit resulting from a dispute with a food caterer. On February 13, 2014, judgment was rendered against Transit in the amount of \$53 million plus interest, a total of \$54 million. Transit plans to appeal the judgment and is unable to predict its outcome though it is not expected to have a material adverse effect on the company.

Required:

1. How should the 6.5% bonds be classified by Transit among liabilities in its balance sheet? Explain.
2. How should the 8% bank loan be classified by Transit among liabilities in its balance sheet? Explain.
3. How should the 7% notes be classified by Transit among liabilities in its balance sheet? Explain.
4. How should the lawsuit be reported by Transit? Explain.
5. Prepare the liability section of a classified balance sheet for Transit Airlines at December 31, 2013. Transit's accounts payable and accruals were \$43 million.
6. Draft appropriate footnote disclosures for Transit's financial statements at December 31, 2013, for each of the five items described.

P 13-13
Payroll-related liabilities
● Appendix

Alamar Petroleum Company offers its employees the option of contributing retirement funds up to 5% of their wages or salaries, with the contribution being matched by Alamar. The company also pays 80% of medical and life insurance premiums. Deductions relating to these plans and other payroll information for the first biweekly payroll period of February are listed as follows:

Wages and salaries	\$2,000,000
Employee contribution to voluntary retirement plan	84,000
Medical insurance premiums	42,000
Life insurance premiums	9,000
Federal income taxes to be withheld	400,000
Local income taxes to be withheld	53,000
Payroll taxes:	
Federal unemployment tax rate	0.60%
State unemployment tax rate (after FUTA deduction)	5.40%
Social Security tax rate	6.20%
Medicare tax rate	1.45%

Required:

Prepare the appropriate journal entries to record salaries and wages expense and payroll tax expense for the biweekly pay period. Assume that no employee’s cumulative wages exceed the relevant wage bases.

Broaden Your Perspective

Apply your critical-thinking ability to the knowledge you’ve gained. These cases will provide you an opportunity to develop your research, analysis, judgment, and communication skills. You also will work with other students, integrate what you’ve learned, apply it in real world situations, and consider its global and ethical ramifications. This practice will broaden your knowledge and further develop your decision-making abilities.

Research Case 13-1
Bank loan; accrued interest
● LO13-1, LO13-2

A fellow accountant has solicited your opinion regarding the classification of short-term obligations repaid prior to being replaced by a long-term security. Cheshire Foods, Inc., issued \$5,000,000 of short-term commercial paper during 2012 to finance construction of a plant. At September 30, 2013, Cheshire’s fiscal year-end, the company intends to refinance the commercial paper by issuing long-term bonds. However, because Cheshire temporarily has excess cash, in November 2013 it liquidates \$2,000,000 of the commercial paper as the paper matures. In December 2013, the company completes a \$10,000,000 long-term bond issue. Later during December, it issues its September 30, 2013, financial statements. The proceeds of the long-term bond issue are to be used to replenish \$2,000,000 in working capital, to pay \$3,000,000 of commercial paper as it matures in January 2014, and to pay \$5,000,000 of construction costs expected to be incurred later that year to complete the plant.

You initially are hesitant because you don’t recall encountering a situation in which short-term obligations were repaid prior to being replaced by a long-term security. However, you are encouraged by a vague memory that this general topic is covered by GAAP literature you came across when reading an Internet article.

Required:

Determine how the \$5,000,000 of commercial paper should be classified by consulting the authoritative GAAP literature and citing the appropriate location in the FASB Codification. Before doing so, formulate your own opinion on the proper treatment.

Real World Case 13-2
Returnable containers
● LO13-1, LO13-3

Real World Financials

The **Zoo Doo Compost Company** processes a premium organic fertilizer made with the help of the animals at the Memphis Zoo. Zoo Doo is sold in a specially designed plastic pail that may be kept and used for household chores or returned to the seller. The fertilizer is sold for \$12.50 per two-gallon pail (including the \$1.76 cost of the pail). For each pail returned, Zoo Doo donates \$1 to the Memphis Zoo and the pail is used again.³⁹

Required:

The founder and president of this start-up firm has asked your opinion on how to account for the donations to be made when fertilizer pails are returned. (Ignore any tax implications.)

Research Case 13-3
Relationship of liabilities to assets and owners’ equity
● LO13-1

SFAC No. 6, “Elements of Financial Statements,” states that “an entity’s assets, liabilities, and equity (net assets) all pertain to the same set of probable future economic benefits.” Explain this statement.

³⁹Case based on Kay McCullen, “Take The Zoo Home With You!” *Head Lions*, July 1991; and a conversation with the Zoo Doo Compost Company president, Pierce Ledbetter.

Judgment
Case 13–4
 Paid future
 absences

● LO13–3

Cates Computing Systems develops and markets commercial software for personal computers and workstations. Three situations involving compensation for possible future absences of Cates's employees are described below.

- Cates compensates employees at their regular pay rate for time absent for military leave, maternity leave, and jury time. Employees are allowed predetermined absence periods for each type of absence.
- Members of the new product development team are eligible for three months' paid sabbatical leave every four years. Five members of the team have just completed their fourth year of participation.
- Company policy permits employees four paid sick days each year. Unused sick days can accumulate and can be carried forward to future years.

Required:

- What are the conditions that require accrual of an expense and related liability for employees' compensation for future absences?
- For each of the three situations, indicate the circumstances under which accrual of an expense and related liability is warranted.

Ethics Case 13–5
 Outdoors R Us

● LO13–1

Outdoors R Us owns several membership-based campground resorts throughout the Southwest. The company sells campground sites to new members, usually during a get-acquainted visit and tour. The campgrounds offer a wider array of on-site facilities than most. New members sign a multiyear contract, pay a down payment, and make monthly installment payments. Because no credit check is made and many memberships originate on a spur-of-the-moment basis, cancellations are not uncommon.

Business has been brisk during its first three years of operations, and since going public in 2000, the market value of its stock has tripled. The first sign of trouble came in 2013 when the new sales dipped sharply.

One afternoon, two weeks before the end of the fiscal year, Diane Rice, CEO, and Gene Sun, controller, were having an active discussion in Sun's office.

Sun: I've thought more about our discussion yesterday. Maybe something can be done about profits.

Rice: I hope so. Our bonuses and stock value are riding on this period's performance.

Sun: We've been recording unearned revenues when new members sign up. Rather than recording liabilities at the time memberships are sold, I think we can justify reporting sales revenue for all memberships sold.

Rice: What will be the effect on profits?

Sun: I haven't run the numbers yet, but let's just say very favorable.

Required:

- Why do you think liabilities had been recorded previously?
- Is the proposal ethical?
- Who would be affected if the proposal is implemented?

Trueblood
Case 13–6
 Contingencies

● LO13–5

The following Trueblood case is recommended for use with this chapter. The case provides an excellent opportunity for class discussion, group projects, and writing assignments. The case, along with Professor's Discussion Material, can be obtained from the Deloitte Foundation at its website: www.deloitte.com/us/truebloodcases.

Case 10–5: Danle Corporation

This case gives students the opportunity to apply GAAP regarding accrual and disclosure of contingencies with respect to a complex lawsuit. As an addition to the case, students should cite the appropriate location of relevant GAAP in the FASB Codification.

Case 13–7

Exceptions to
 the general
 classification
 guideline; group
 interaction

● LO13–4

Domestic Transfer and Storage is a large trucking company headquartered in the Midwest. Rapid expansion in recent years has been financed in large part by debt in a variety of forms. In preparing the financial statements for 2014, questions have arisen regarding the way certain of the liabilities are to be classified in the company's classified balance sheet.

A meeting of several members of the accounting area is scheduled for tomorrow, April 8, 2014. You are confident that that meeting will include the topic of debt classification. You want to appear knowledgeable at the meeting, but realizing it's been a few years since you have dealt with classification issues, you have sought out information you think relevant. Questionable liabilities at the company's fiscal year-end (January 31, 2014) include the following:

- \$15 million of 9% commercial paper is due on July 31, 2014. Management intends to refinance the paper on a long-term basis. In early April 2014, Domestic negotiated a credit agreement with a commercial bank for up to \$12 million any time during the next three years, any borrowings from which will mature two years from the date of borrowing.
- \$17 million of 11% notes were issued on June 30, 2011. The notes are due on November 30, 2014. The company has investments of \$20 million classified as "available for sale."

- c. \$25 million of 10% notes were due on February 28, 2014. On February 21, 2014, the company issued 30-year, 9.4% bonds in a private placement to institutional investors.
- d. Recently, company management has considered reducing debt in favor of a greater proportion of equity financing. \$20 million of 12% bonds mature on July 31, 2014. Discussions with underwriters, which began on January 4, 2014, resulted in a contractual arrangement on March 15 under which new common shares will be sold in July for approximately \$20 million.

In order to make notes to yourself in preparation for the meeting concerning the classification of these items, you decide to discuss them with a colleague. Specifically, you want to know what portion of the debt can be excluded from classification as a current liability (that is, reported as a noncurrent liability) and why.

Required:

1. What is the appropriate classification of each liability? Develop a list of arguments in support of your view prior to the class session for which the case is assigned.
2. In class, your instructor will pair you (and everyone else) with a classmate (who also has independently developed a position). You will be given three minutes to argue your view to your partner. Your partner likewise will be given three minutes to argue his or her view to you. During these three-minute presentations, the listening partner is not permitted to speak.
3. Then after each person has had a turn attempting to convince his or her partner, the two partners will have a three-minute discussion to decide which classifications are more convincing. Arguments will be merged into a single view for each pair.
4. After the allotted time, a spokesperson for each of the four liabilities will be selected by the instructor. Each spokesperson will field arguments from the class as to the appropriate classification. The class then will discuss the merits of the classification and attempt to reach a consensus view, though a consensus is not necessary.

**Communication
Case 13–8**

Various contingencies

- LO13–5, LO13–6

“I see an all-nighter coming on,” Gayle grumbled. “Why did Mitch just now give us this assignment?” Your client, Western Manufacturing, is involved with several situations that possibly involve contingencies. The assignment Gayle refers to is to draft appropriate accounting treatment for each situation described below in time for tomorrow’s meeting of the audit group. Western’s fiscal year is the calendar year 2013, and the 2013 financial statements are issued on March 15, 2014.

1. During 2013, Western experienced labor disputes at three of its plants. Management hopes an agreement will soon be reached. However negotiations between the Company and the unions have not produced an acceptable settlement and, as a result, strikes are ongoing at these facilities since March 1, 2014. It is virtually certain that material costs will be incurred but the amount of possible costs cannot be reasonably ascertained.
2. In accordance with a 2011 contractual agreement with A. J. Conner Company, Western is entitled to \$37 million for certain fees and expense reimbursements. These were written off as bad debts in 2012. A. J. Conner has filed for bankruptcy. The bankruptcy court on February 4, 2014, ordered A. J. Conner to pay \$23 million immediately upon consummation of a proposed merger with Garner Holding Group.
3. Western warrants most products it sells against defects in materials and workmanship for a period of a year. Based on their experience with previous product introductions, warranty costs are expected to approximate 2% of sales. A warranty liability of \$39 million was reported at December 31, 2012. Sales of warranted products during 2013 were \$2,100 million and actual warranty expenditures were \$40 million. Expenditures in excess of the existing liability were debited to warranty expense.
4. Western is involved in a suit filed in January 2014 by Crump Holdings seeking \$88 million, as an adjustment to the purchase price in connection with the Company’s sale of its textile business in 2013. The suit alleges that Western misstated the assets and liabilities used to calculate the purchase price for the textile division. Legal counsel advises that it is reasonably possible that Western could end up losing an indeterminate amount not expected to have a material adverse effect on the Company’s financial position.

Required:

1. Determine the appropriate means of reporting each situation.
2. In a memo to the audit manager, Mitch Riley, explain your reasoning. Include any necessary journal entries and drafts of appropriate disclosure notes.

**Judgment
Case 13–9**

Loss contingency and full disclosure

- LO13–5, LO13–6

In the March 2014 meeting of Valleck Corporation’s board of directors, a question arose as to the way a possible obligation should be disclosed in the forthcoming financial statements for the year ended December 31. A veteran board member brought to the meeting a draft of a disclosure note that had been prepared by the controller’s office for inclusion in the annual report. Here is the note:

On May 9, 2013, the United States Environmental Protection Agency (EPA) issued a Notice of Violation (NOV) to Valleck alleging violations of the Clean Air Act. Subsequently, in June 2013, the EPA commenced a civil action with respect to the foregoing violation seeking civil penalties of approximately \$853,000. The EPA alleges that Valleck exceeded applicable volatile organic substance emission limits. The Company estimates that the cost to achieve compliance will be \$190,000; in addition the Company expects to settle the EPA lawsuit for a civil penalty of \$205,000 which will be paid in 2014.

“Where did we get the \$205,000 figure?” he asked. On being informed that this is the amount negotiated last month by company attorneys with the EPA, the director inquires, “Aren’t we supposed to report a liability for that in addition to the note?”

Required:

Explain whether Valleck should report a liability in addition to the note. Why or why not? For full disclosure, should anything be added to the disclosure note itself?

**Communication
Case 13–10**

Change in loss contingency; write a memo

● LO13–5, LO13–6

Late in 2013, you and two other officers of Curbo Fabrications Corporation just returned from a meeting with officials of The City of Jackson. The meeting was unexpectedly favorable even though it culminated in a settlement with city authorities that required your company pay a total of \$475,000 to cover the cost of violations of city construction codes. Jackson had filed suit in November 2011 against Curbo Fabrications Corporation, seeking civil penalties and injunctive relief for violations of city construction codes regulating earthquake damage standards. Alleged violations involved several construction projects completed during the previous three years. When the financial statements were issued in 2012, Curbo had not reached a settlement with state authorities, but legal counsel had advised the Company that it was probable the ultimate settlement would be \$750,000 in penalties. The following entry had been recorded:

Loss—litigation	750,000	
Liability—litigation		750,000

The final settlement, therefore, was a pleasant surprise. While returning from the meeting, your conversation turned to reporting the settlement in the 2013 financial statements. You drew the short straw and were selected to write a memo to Janet Zeno, the financial vice president, advising the proper course of action.

Required:

Write the memo. Include descriptions of any journal entries related to the change in amounts. Briefly describe other steps Curbo should take to report the settlement.

Research

Case 13–11

Researching the way contingencies are reported; retrieving information from the Internet

● LO13–5, LO13–6

EDGAR (Electronic Data Gathering, Analysis, and Retrieval system) performs automated collection, validation, indexing, acceptance, and forwarding of submissions by companies and others who are required by law to file forms with the U.S. Securities and Exchange Commission (SEC). All publicly traded domestic companies use EDGAR to make the majority of their filings. Form 10-K, which includes the annual report, is required to be filed on EDGAR. The SEC makes this information available on the Internet.

Required:

1. Access the FASB’s Codification Research System at the FASB website (www.fasb.org). Identify the authoritative literature that provides guidance on accounting for contingent losses, and indicate the specific citations that describe the guidelines for determining when an expense and liability associated with a contingent loss should be accrued vs. only disclosed in the footnotes?
2. Access EDGAR on the Internet at: www.sec.gov.
3. Search for a public company with which you are familiar. Access its most recent 10-K filing. Search or scroll to find the financial statements and related notes.
4. Specifically, look for any contingency(s) reported in the disclosure notes. Identify the nature of the contingency(s) described and explain the reason(s) the loss or losses was or was not accrued.
5. Repeat requirements 2 and 3 for two additional companies.

**Communication
Case 13–12**

Accounting changes

● LO13–5, LO13–6

Kevin Brantly is a new hire in the controller’s office of Fleming Home Products. Two events occurred in late 2013 that the company had not previously encountered. The events appear to affect two of the company’s liabilities, but there is some disagreement concerning whether they also affect financial statements of prior years. Each change occurred during 2013 before any adjusting entries or closing entries were prepared. The tax rate for Fleming is 40% in all years.

- Fleming Home Products introduced a new line of commercial awnings in 2012 that carry a one-year warranty against manufacturer’s defects. Based on industry experience, warranty costs were expected to approximate 3% of sales. Sales of the awnings in 2012 were \$3,500,000. Accordingly, warranty expense and a warranty

liability of \$105,000 were recorded in 2012. In late 2013, the company’s claims experience was evaluated and it was determined that claims were far fewer than expected—2% of sales rather than 3%. Sales of the awnings in 2013 were \$4,000,000 and warranty expenditures in 2013 totaled \$91,000.

- In November 2011, the State of Minnesota filed suit against the company, seeking penalties for violations of clean air laws. When the financial statements were issued in 2012, Fleming had not reached a settlement with state authorities, but legal counsel advised Fleming that it was probable the company would have to pay \$200,000 in penalties. Accordingly, the following entry was recorded:

Loss—litigation	200,000	
Liability—litigation		200,000

Late in 2013, a settlement was reached with state authorities to pay a total of \$350,000 in penalties.

Required:

Kevin’s supervisor, perhaps unsure of the answer, perhaps wanting to test Kevin’s knowledge, e-mails the message, “Kevin, send me a memo on how we should handle our awning warranty and that clean air suit.” Wanting to be accurate, Kevin consults his reference materials. What will he find? Prepare the memo requested.

SkillSoft is a leading provider of content resources and complementary technologies for integrated enterprise learning. The company’s fiscal year ends January 31, 2006, and it plans to file its financial statements with the SEC on April 17, 2006. On April 13, the company issued the following press release (in part):

NASHUA, N.H., April 13 /PRNewswire-FirstCall/—SkillSoft PLC (Nasdaq: SKIL), . . . has agreed . . . to settle a lawsuit filed against it and certain of its former and current officers and directors in late 2004 related to the 2002 securities class action lawsuit. This lawsuit included substantially the same claims as those set forth in the previously settled 2002 securities class action lawsuit. Under the terms of the settlement, SkillSoft will pay a total of \$1.79 million to the plaintiffs prior to April 17, 2006.

Required:

1. From an accounting perspective, how should SkillSoft have treated the settlement?
2. Relying on the information provided by the press release, re-create the journal entry SkillSoft recorded for the settlement.
3. Suppose the settlement had occurred after April 17. How should SkillSoft have treated the settlement?

This was Joel Craig’s first visit to the controller’s corner office since being recruited for the senior accountant position in May. Because he’d been directed to bring with him his preliminary report on year-end adjustments, Craig presumed he’d done something wrong in preparing the report. That he had not was Craig’s first surprise. His second surprise was his boss’s request to reconsider one of the estimated expenses.

S & G Fasteners was a new company, specializing in plastic industrial fasteners. All products carry a generous long-term warranty against manufacturer’s defects. “Don’t you think 4% of sales is a little high for our warranty expense estimate?” his boss wondered. “After all, we’re new at this. We have little experience with product introductions. I just got off the phone with Blanchard (the company president). He thinks we’ll have trouble renewing our credit line with the profits we’re projecting. The pressure’s on.”

Required:

1. Should Craig follow his boss’s suggestion?
2. Does revising the warranty estimate pose an ethical dilemma?
3. Who would be affected if the suggestion is followed?

As a second-year financial analyst for A.J. Straub Investments, you are performing an initial analysis on Fizer Pharmaceuticals. A difficulty you’ve encountered in making comparisons with its chief rival is that Fizer uses U.S. GAAP and the competing company uses International Financial Reporting Standards. Some areas of concern are the following:

1. Fizer has been designated as a potentially responsible party by the United States Environmental Protection Agency with respect to certain waste sites. These claims are in various stages of administrative or judicial proceedings and include demands for recovery of past governmental costs and for future investigations or remedial actions. Fizer accrues costs associated with environmental matters when they become probable and reasonably estimable. Counsel has advised that the likelihood of payments of about \$70 million is slightly more than 50%. Accordingly, payment is judged reasonably possible and the contingency was disclosed in a footnote.

● LO13–5

IFRS Case 13–15
Current liabilities and contingencies; differences between U.S. GAAP and IFRS
● LO13–4, LO13–5, LO13–7

- Fizer had \$10 million of bonds issued in 1985 that mature in February 2014. On December 31, 2013, the company's fiscal year-end, management intended to refinance the bonds on a long-term basis. On February 7, 2014, Fizer issued \$10 million of 20-year bonds, applying the proceeds to repay the bond issue that matured that month. The bonds were reported in Fizer's balance sheet as long-term debt.
- Fizer reported in its 2013 financial statements a long-term contingency at its face amount rather than its present value even though the difference was considered material. The reason the cash flows were not discounted is that their timing is uncertain.

Required:

If Fizer used IFRS as does its competitor, how would the items described be reported differently?

Retained earnings	2,730	2,428
Total shareholders' equity	<u>\$2,931</u>	<u>\$2,671</u>
Total liabilities and shareholders' equity	<u><u>\$5,345</u></u>	<u><u>\$4,684</u></u>

Liquidity refers to a company's cash position and overall ability to obtain cash in the normal course of business. A company is said to be liquid if it has sufficient cash or is capable of converting its other assets to cash in a relatively short period of time so that currently maturing debts can be paid.

Required:

- Calculate the current ratio for IGF for 2013. The average ratio for the stocks listed on the New York Stock Exchange in a comparable time period was 1.5. What information does your calculation provide an investor?
- Calculate IGF's acid-test or quick ratio for 2013. The ratio for the stocks listed on the New York Stock Exchange in a comparable time period was .80. What does your calculation indicate about IGF's liquidity?

Analysis**Case 13–17**

Reporting current liabilities; liquidity

- LO13–1

Refer to the financial statements and related disclosure notes of **Dell** located in the company's 2011 annual report included with all new copies of the text. They also can be found at www.dell.com. At the end of its 2011 fiscal year, Dell reported current liabilities of \$19.5 billion in its balance sheet.

Required:

1. What are the four components of current liabilities?
2. Are current assets sufficient to cover current liabilities? What is the current ratio for 2011? How does the ratio compare with 2010?
3. Dell reported short-term deferred revenue among its current liabilities. That deferred revenue is associated with extended warranty and service contracts. Is that deferred revenue likely to require Dell to pay cash in order to reduce that liability? Explain.

Real World**Case 13–18**

Contingencies

- LO13–5

Real World Financials

The following is an excerpt from *USAToday.com*:

Microsoft (MSFT) on Thursday extended the warranty on its Xbox 360 video game console and said it will take a charge of more than \$1 billion to pay for "anticipated costs." Under the new warranty, Microsoft will pay for shipping and repairs for three years, worldwide, for consoles afflicted with what gamers call "the red ring of death." Previously, the warranty expired after a year for U.S. customers and two years for Europeans. The charge will be \$1.05 billion to \$1.15 billion for the quarter ended June 30. Microsoft reports its fourth-quarter results July 19.

Required:

1. Why must Microsoft report this charge of over \$1 billion entirely in one quarter, the last quarter of the company's fiscal year?
2. When the announcement was made, analyst Richard Doherty stated that either a high number of Xbox 360s will fail or the company is being overly conservative in its warranty estimate. From an accounting standpoint, what will Microsoft do in the future if the estimate of future repairs is overly conservative (too high)?

Real World**Case 13–19**

Contingencies

- LO13–5

Real World Financials

Reporting requirements for contingent liabilities under IFRS differ somewhat from those under U.S. GAAP.

Required:

For each of the following, access the online version of the indicated financial report and answer the question. Also compare reporting under IFRS to similar reporting under U.S. GAAP.

1. **SUBSEA 7 S.A.** (Form 20-F, filed 3/2/2011): When there is a continuous range of possible outcomes, with each point in the range as likely as any other, what amount is accrued as the estimate of the obligation?
2. **B Communications LTD** (Form 20-F, filed 6/30/2011): With respect to legal claims, at what probability level would B Communications accrue a liability for a possible litigation loss?
3. **Nestle** (form 20-F, Filed 7/20/2011): What measurement attribute (e.g., historical cost, fair value) is used to measure contingent liabilities acquired in a business combination?

Real World**Case 13–20**

Contingencies and Subsequent events

- LO13–5, LO13–6

Real World Financials

The following events are indicated in note 15 of **J. Crew's** 10K annual report for the fiscal year ended January 29, 2011, and its 10K was filed on March 21, 2011.

Acquisition

On November 23, 2010, the Company entered into an Agreement and Plan of Merger (the "Merger Agreement") with Chinos Holdings, Inc., a Delaware corporation ("Parent") At a special meeting of shareholders held in March 1, 2011, our shareholders voted to approve the Acquisition, and Parent acquired us on March 7, 2011 through a reverse subsidiary merger with J. Crew Group, Inc. being the surviving company. . . .

Litigation

In connection with the Acquisition, between November 24, 2010 and December 16, 2010, sixteen purported class action complaints were filed against some or all of the following: the Company, certain officers of the Company, members of the Company's Board of Directors, Holdings, the Issuer, TPG, TPG Fund VI and LGP. The plaintiffs in each of these complaints allege, among other things, (1) that certain officers of the Company and members of the Company's Board breached their fiduciary duties to the Company's public stockholders by authorizing the Acquisition for inadequate consideration and pursuant to an inadequate

(continued)

(concluded)

process, and (2) that the Company, TPG and LGP aided and abetted the other defendants' alleged breaches of fiduciary duty. The purported class action complaints sought, among other things, an order enjoining the consummation of the Acquisition or an order rescinding the Acquisition and an award of compensatory damages. Although the Company, the Company's Board, TPG, and LGP have entered into a memorandum of understanding to settle the actions filed in Delaware, they believe that the claims asserted in that action, as well as the claims asserted in New York and Federally, are without merit and intend to defend against the actions vigorously. The Company has notified its insurers of the actions and believes that any and all costs, expenses, and/or losses associated with the lawsuits are covered by its applicable insurance policies. The Company has recorded a reserve for litigation settlement of \$10 million in the consolidated financial statements as of and for the fiscal year ended January 29, 2011.

Required:

1. Is the acquisition a subsequent event? What are J. Crew's responsibilities in its financial statements with respect to disclosing it?
2. With respect to litigation,
 - a. Has J. Crew recorded any journal entry with respect to the litigation associated with the acquisition? If so, prepare the journal entry.
 - b. Do you believe that there is some amount associated with the litigation that J. Crew considers to be probable and reasonably estimable? What about reasonably possible, or probable but not reasonably estimable? Explain your reasoning.

Air France—KLM Case

AIRFRANCE /

● LO13-8

 **IFRS**

Air France—KLM (AF), a French company, prepares its financial statements according to International Financial Reporting Standards. AF's annual report for the year ended March 31, 2011, which includes financial statements and disclosure notes, is provided with all new textbooks. This material also is included in AF's "Registration Document 2010–11," dated June 15, 2011 and is available at www.airfranceklm.com.

Required:

1. Read Notes 3.6 and 31. What do you think gave rise to total deferred income of €121 as of the end of fiscal 2011? Would transactions of this type be handled similarly under U.S. GAAP?
2. Is the threshold for recognizing a provision under IFRS different than it is under U.S. GAAP? Explain.
3. Note 29 lists "provisions and retirement benefits."
 - a. Do the beginning and ending balances of total provisions and retirement benefits shown in Note 29 for fiscal 2011 tie to the balance sheet? By how much has the total amount of the AF's "provisions and retirement benefits" increased or decreased during fiscal 2011?
 - b. Prepare journal entries for the following changes in the litigation provision that occurred during fiscal 2011, assuming any amounts recorded on the income statement are recorded as "provision expense", and any use of provisions is paid for in cash. In each case, provide a brief explanation of the event your journal entry is capturing.
 - i. New provision
 - ii. Use of provision
 - iii. Reversal of unnecessary provisions.
 - c. Is AF's treatment of litigation provision under IFRS similar to how it would be treated under U.S. GAAP?
4. Note 29.3 lists a number of contingent liabilities. Are amounts for those items recognized as a liability on AF's balance sheet? Explain.

Bonds and Long-Term Notes

OVERVIEW

This chapter continues the presentation of liabilities. Specifically, the discussion focuses on the accounting treatment of long-term liabilities. Long-term notes and bonds are discussed, as well as the extinguishment of debt and debt convertible into stock.

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- **LO14-1** Identify the underlying characteristics of debt instruments and describe the basic approach to accounting for debt. (p. 797)
- **LO14-2** Account for bonds issued at face value, at a discount, or at a premium, recording interest using the effective interest method or using the straight-line method. (p. 799)
- **LO14-3** Characterize the accounting treatment of notes, including installment notes, issued for cash or for noncash consideration. (p. 810)
- **LO14-4** Describe the disclosures appropriate to long-term debt in its various forms and calculate related financial ratios. (p. 814)
- **LO14-5** Record the early extinguishment of debt and its conversion into equity securities. (p. 819)
- **LO14-6** Understand the option to report liabilities at their fair values. (p. 825)
- **LO14-7** Discuss the primary differences between U.S. GAAP and IFRS with respect to accounting for bonds and long-term notes. (pp. 801, 809, 821, and 828).

FINANCIAL REPORTING CASE

Service Leader, Inc.

The mood is both upbeat and focused on this cool October morning. Executives and board members of Service Leader, Inc., are meeting with underwriters and attorneys to discuss the company's first bond offering in its 20-year history. You are attending in the capacity of company controller and two-year member of

the board of directors. The closely held corporation has been financed entirely by equity, internally generated funds, and short-term bank borrowings.

Bank rates of interest, though, have risen recently and the company's unexpectedly rapid, but welcome, growth has prompted the need to look elsewhere for new financing. Under consideration are 15-year, 6.25% first mortgage bonds with a principal amount of \$70 million. The bonds would be callable at 103 any time after June 30, 2015, and convertible into Service Leader common stock at the rate of 45 shares per \$1,000 bond.

Other financing vehicles have been discussed over the last two months, including the sale of additional stock, nonconvertible bonds, and unsecured notes. This morning *The Wall Street Journal* indicated that market rates of interest for debt similar to the bonds under consideration are about 6.5%.

By the time you finish this chapter, you should be able to respond appropriately to the questions posed in this case. Compare your response to the solution provided at the end of the chapter.

1. What does it mean that the bonds are "first mortgage" bonds? What effect does that have on financing? (p. 799)
2. From Service Leader's perspective, why are the bonds callable? What does that mean? (p. 799)
3. How will it be possible to sell bonds paying investors 6.25% when other, similar investments will provide the investors a return of 6.5%? (p. 799)
4. Would accounting differ if the debt were designated as notes rather than bonds? (p. 810)
5. Why might the company choose to make the bonds convertible into common stock? (p. 820)

QUESTIONS

The Nature of Long-Term Debt

A company must raise funds to finance its operations and often the expansion of those operations. Presumably, at least some of the necessary funding can be provided by the company's own operations, though some funds must be provided by external sources. Ordinarily, external financing includes some combination of equity and debt funding. We explore debt financing first.

In the present chapter, we focus on debt in the form of bonds and notes. The following three chapters deal with liabilities also, namely those arising in connection with leases (Chapter 15), deferred income taxes (Chapter 16), and pensions and employee benefits (Chapter 17). Some employee benefits create equity rather than debt, which are discussed in Chapter 19. In Chapter 18, we examine shareholders' interests arising from external

● LO14-1

Liabilities signify creditors' interests in a company's assets.

equity financing. In Chapter 21, we see that cash flows from both debt and equity financing are reported together in a statement of cash flows as “cash flows from financing activities.”

As you read this chapter, you will find the focus to be on the liability side of the transactions we examine. Realize, though, that the mirror image of a liability is an asset (bonds payable/investment in bonds, note payable/note receivable, etc.). So as we discuss accounting for debts from the viewpoint of the issuers of the debt instruments (borrowers), we also will take the opportunity to see how the lender deals with the corresponding asset. Studying the two sides of the same transaction in tandem will emphasize their inherent similarities.

Accounting for a liability is a relatively straightforward concept. This is not to say that all debt instruments are unchallenging, “plain vanilla” loan agreements. Quite the contrary, the financial community continually devises increasingly exotic ways to flavor financial instruments in the attempt to satisfy the diverse and evolving tastes of both debtors and creditors.

Packaging aside, a liability requires the future payment of cash in specified (or estimated) amounts, at specified (or projected) dates. As time passes, interest accrues on debt. As a general rule, the periodic interest is the effective interest rate times the amount of the debt outstanding during the period. This same principle applies regardless of the specific form of the liability—note payable, bonds payable, lease liability, pension obligation, or other debt instruments. Also, as a general rule, long-term liabilities are reported at their present values. The present value of a liability is the present value of its related cash flows (principal and/or interest payments), discounted at the effective rate of interest at issuance.

We begin our study of long-term liabilities by examining accounting for bonds. We follow that section with a discussion of debt in the form of notes in Part B. It’s important to note that, although particulars of the two forms of debt differ, the basic approach to accounting for each type is precisely the same. In Part C, we look at various ways bonds and notes are retired or converted into other securities. Finally, in Part D we discuss the option companies have to report liabilities at their fair values.

A note payable and a note receivable are two sides of the same coin.

Periodic interest is the effective interest rate times the amount of the debt outstanding during the interest period.

PART A

BONDS

A company can borrow cash from a bank or other financial institution by signing a promissory note. We discuss notes payable later in the chapter. Medium- and large-sized corporations often choose to borrow cash by issuing bonds. In fact, the most common form of corporate debt is bonds. A bond issue, in effect, breaks down a large debt (large corporations often borrow hundreds of millions of dollars at a time) into manageable parts—usually \$1,000 or \$5,000 units. This avoids the necessity of finding a single lender who is both willing and able to loan a large amount of money at a reasonable interest rate. So rather than signing a \$400 million note to borrow cash from a financial institution, a company may find it more economical to sell 400,000 \$1,000 bonds to many lenders—theoretically up to 400,000 lenders.

Bonds obligate the issuing corporation to repay a stated amount (variously referred to as the *principal*, *par value*, *face amount*, or *maturity value*) at a specified *maturity date*. Maturities for bonds typically range from 10 to 40 years. In return for the use of the money borrowed, the company also agrees to pay *interest* to bondholders between the issue date and maturity. The periodic interest is a stated percentage of face amount (variously referred to as the *stated rate*, *coupon rate*, or *nominal rate*). Ordinarily, interest is paid semiannually on designated interest dates beginning six months after the day the bonds are “dated.”

A bond issue divides a large liability into many smaller liabilities.

Corporations issuing bonds are obligated to repay a stated amount at a specified *maturity date* and *periodic interest* between the issue date and maturity.

The Bond Indenture

The specific promises made to bondholders are described in a document called a **bond indenture**. Because it would be impractical for the corporation to enter into a direct agreement with each of the many bondholders, the bond indenture is held by a trustee, usually a commercial bank or other financial institution, appointed by the issuing firm to represent the rights of the bondholders. If the company fails to live up to the terms of the bond indenture, the trustee may bring legal action against the company on behalf of the bondholders.

Most corporate bonds are debenture bonds. A **debenture bond** is secured only by the “full faith and credit” of the issuing corporation. No specific assets are pledged as security.

A bond indenture describes the specific promises made to bondholders.

Investors in debentures usually have the same standing as the firm's other general creditors. So in case of bankruptcy, debenture holders and other general creditors would be treated equally. An exception is the **subordinated debenture**, which is not entitled to receive any liquidation payments until the claims of other specified debt issues are satisfied.

A **mortgage bond**, on the other hand, is backed by a lien on specified real estate owned by the issuer. Because a mortgage bond is considered less risky than debentures, it typically will command a lower interest rate.

Today most corporate bonds are registered bonds. Interest checks are mailed directly to the owner of the bond, whose name is registered with the issuing company. Years ago, it was typical for bonds to be structured as **coupon bonds** (sometimes called *bearer bonds*). The name of the owner of a coupon bond was not registered. Instead, to collect interest on a coupon bond the holder actually clipped an attached coupon and redeemed it in accordance with instructions in the indenture. A carryover effect of this practice is that we still sometimes see the term *coupon rate* in reference to the stated interest rate on bonds.

Most corporate bonds are **callable** (or redeemable). The call feature allows the issuing company to buy back, or call, outstanding bonds from bondholders before their scheduled maturity date. This feature affords the company some protection against being stuck with relatively high-cost debt in the event interest rates fall during the period before maturity. The call price must be pre-specified and often exceeds the bond's face amount (a call premium), sometimes declining as maturity is approached.

For example, financial statements of **Emhart Corporation** included this disclosure note:

The Company's 9¼% (9.65% effective interest rate, after discount) sinking fund debentures are callable at prices decreasing from 105% of face amount currently to 100%.

"No call" provisions usually prohibit calls during the first few years of a bond's life. Very often, calls are mandatory. That is, the corporation may be required to redeem the bonds on a pre-specified, year-by-year basis. Bonds requiring such **sinking fund** redemptions often are labeled *sinking fund debentures*.

Serial bonds provide a more structured (and less popular) way to retire bonds on a piece-meal basis. Serial bonds are retired in installments during all or part of the life of the issue. Each bond has its own specified maturity date. So for a typical 30-year serial issue, 25 to 30 separate maturity dates might be assigned to specific portions of the bond issue.

Convertible bonds are retired as a consequence of bondholders choosing to convert them into shares of stock. We look closer at convertible bonds a little later in the chapter.

Recording Bonds at Issuance

Bonds represent a liability to the corporation that issues the bonds and an asset to a company that buys the bonds as an investment. Each side of the transaction is the mirror image of the other.¹ This is demonstrated in Illustration 14-1.

Most bonds these days are issued on the day they are dated (date printed in the indenture contract). On rare occasions, there may be a delay in issuing bonds that causes them to be issued between interest dates, in which case the interest that has accrued since the day they are dated is added to the bonds' price. We discuss this infrequent event in Appendix 14A.

Determining the Selling Price

The price of a bond issue at any particular time is not necessarily equal to its face amount. The \$700,000, 12% bond issue in the previous illustration, for example, may sell for more than face amount (at a **premium**) or less than face amount (at a **discount**), depending on

¹You should recall from Chapter 12 that investments in bonds that are to be held to maturity by the investor are reported at amortized cost, which is the method described here. However, also remember that investments in debt securities *not* to be held to maturity are reported at the fair value of the securities held, as described in Chapter 12, with the interest determined by the effective interest method.

FINANCIAL Reporting Case

Illustration 14–1
Bonds Sold at Face Amount

On January 1, 2013, Masterwear Industries issued \$700,000 of 12% bonds. Interest of \$42,000 is payable semiannually on June 30 and December 31. The bonds mature in three years (an unrealistically short maturity to shorten the illustration). The entire bond issue was sold in a private placement to United Intergroup, Inc., at the face amount.

At Issuance (January 1)		
Masterwear (Issuer)		
Cash	700,000	
Bonds payable (face amount)		700,000
United (Investor)		
Investment in bonds (face amount)	700,000	
Cash		700,000

Other things being equal, the lower the perceived riskiness of the corporation issuing bonds, the higher the price those bonds will command.

how the 12% *stated* interest rate compares with the prevailing *market* or *effective* rate of interest (for securities of similar risk and maturity). For instance, if the 12% bonds are competing in a market in which similar bonds are providing a 14% return, the bonds could be sold only at a price less than \$700,000. On the other hand, if the market rate is only 10%, the 12% stated rate would seem relatively attractive and the bonds would sell at a premium over face amount. The reason the stated rate often differs from the market rate, resulting in a *discount* or *premium*, is the inevitable delay between the date the terms of the issue are established and the date the issue comes to market.

In addition to the characteristic terms of a bond agreement as specified in the indenture, the market rate for a specific bond issue is influenced by the creditworthiness of the company issuing the bonds. To evaluate the risk and quality of an individual bond issue, investors rely heavily on bond ratings provided by **Standard & Poor’s Corporation** and by **Moody’s Investors Service, Inc.** See the bond ratings in Illustration 14–2.

Illustration 14–2
Bond Ratings*

	S&P	Moody’s
Investment Grades:		
Highest	AAA	Aaa
High	AA	Aa
Medium	A	A
Minimum investment grade	BBB	Baa
“Junk” Ratings:		
Speculative	BB	Ba
Very speculative	B	B
Default or near default	CCC	Caa
	CC	Ca
	C	C
	D	

*Adapted from *Bond Record* (New York: Moody’s Investors Service, monthly) and *Bond Guide* (New York: Standard & Poor’s Corporation, monthly).

A bond issue will be priced by the marketplace to yield the market rate of interest for securities of similar risk and maturity.

Forces of supply and demand cause a bond issue to be *priced to yield the market rate*. In other words, an investor paying that price will earn an effective rate of return on the investment equal to the market rate. The price is calculated as the present value of all the cash flows required of the bonds, where the discount rate used in the present value calculation is the market rate. Specifically, the price will be the present value of the periodic cash interest payments (face amount × stated rate) plus the present value of the principal payable at maturity, both discounted at the market rate.

Bonds priced at a discount are described in Illustration 14–3.

On January 1, 2013, Masterwear Industries issued \$700,000 of 12% bonds, dated January 1. Interest of \$42,000 is payable semiannually on June 30 and December 31. The bonds mature in three years. The market yield for bonds of similar risk and maturity is 14%. The entire bond issue was purchased by United Intergroup, Inc.

Calculation of the Price of the Bonds

	Present Values	
Interest	\$ 42,000 × 4.76654*	= \$200,195
Principal	\$700,000 × 0.66634†	= 466,438
Present value (price) of the bonds		<u>\$666,633</u>

*Present value of an ordinary annuity of \$1: $n = 6, i = 7%$ (Table 4).

†Present value of \$1: $n = 6, i = 7%$ (Table 2).

Because interest is paid semiannually, the present value calculations use: (a) one-half the stated rate (6%) to determine cash payments, (b) one-half the market rate (7%) as the discount rate, and (c) six (3 × 2) semiannual periods.

Note: Present value tables are provided at the end of this textbook. If you need to review the concept of the time value of money, refer to the discussions in Chapter 6.

Rounding: Because present value tables truncate decimal places, the solution may be slightly different if you use a calculator or Excel.

Illustration 14–3

Bonds Sold at a Discount

Using a calculator:

Enter: N 6 I 7
 PMT -42000 FV -700000
 Output: PV 666,634

Using Excel, enter:

=PV(.07,6,42000,700000)
 Output: 666,634

The calculation is illustrated in Illustration 14–4:

Illustration 14–4

Cash Flows from a Bond Issue

Although the cash flows total \$952,000, the present value of those future cash flows as of January 1, 2013, is only \$666,633. This is due to the time value of money. These bonds are issued at a discount because the present value of the cash flows is less than the face amount of the bonds.

Masterwear (Issuer)

Cash (price calculated above)	666,633	
Discount on bonds payable (difference)	33,367	
Bonds payable (face amount)		700,000

United (Investor)

Investment in bonds (face amount)	700,000	
Discount on bond investment (difference)		33,367
Cash (price calculated above)		666,633

Note: A sometimes-used alternative way to record bonds is the “net method,” shown next, in which the discount is included directly in the carrying amount.

Masterwear (Issuer)

Cash	666,633	
Bonds payable		666,633

United (Investor)

Investment in bonds	666,633	
Cash		666,633

The net method actually is the preferred method for companies that prepare financial statements according to International Financial Reporting Standards. It also is the common approach for an investor to record its investment.

Journal Entries at Issuance—Bonds Sold at a Discount

● LO14–7

When bond prices are quoted in financial media, they typically are stated in terms of a percentage of face amounts. Thus, a price quote of 98 means a \$1,000 bond will sell for \$980; a bond priced at 101 will sell for \$1,010.

Determining Interest—Effective Interest Method

The effective interest on debt is the market rate of interest multiplied by the outstanding balance of the debt.

Interest accrues on an outstanding debt at a constant percentage of the debt each period. Of course, under the concept of accrual accounting, the periodic effective interest is not affected by the time at which the cash interest actually is paid. Recording interest each period as the *effective market rate of interest multiplied by the outstanding balance of the debt* (during the interest period) is referred to as the **effective interest method**. Although giving this a label—the effective interest method—implies some specialized procedure, this simply is an application of the accrual concept, consistent with accruing all expenses as they are incurred.

Continuing our example, we determined that the amount of debt when the bonds are issued is \$666,633. Since the effective interest rate is 14%, interest recorded (as expense to the issuer and revenue to the investor) for the first six-month interest period is \$46,664:

$$\begin{array}{rcccl} \$666,633 & \times & [14\% \div 2] & = & \$46,664 \\ \text{Outstanding balance} & & \text{Effective rate} & & \text{Effective interest} \end{array}$$

However, the bond indenture calls for semiannual interest payments of only \$42,000—the *stated rate* (6%) times the *face amount* (\$700,000). The remainder, \$4,664, increases the liability and is reflected as a reduction in the discount (a contra-liability account). This is illustrated in Illustration 14–5.

Illustration 14–5

Change in Debt When Effective Interest Exceeds Cash Paid

The difference between the effective interest and the interest paid increases the existing liability.

	Outstanding Balance	Account Balances		
		Bonds Payable (face amount)		Discount on Bonds Payable
January 1	\$666,633	=	\$700,000	less \$33,367
Interest accrued at 7%	46,664			
Portion of interest paid	(42,000)			(4,664)
June 30	\$671,297	=	\$700,000	less \$28,703

Interest is calculated on the outstanding debt balance at the effective (or market) rate. Interest *paid* is the amount specified in the bond indenture—the *stated* rate times the face amount. These amounts and the change in the outstanding debt are recorded as follows:

Journal Entries—The Interest Method

The effective interest is calculated each period as the market rate times the amount of the debt outstanding during the interest period.

At the First Interest Date (June 30)		
Masterwear (Issuer)		
Interest expense (effective rate × outstanding balance)	46,664	
Discount on bonds payable (difference)		4,664
Cash (stated rate × face amount)		42,000
United (Investor)		
Cash (stated rate × face amount)	42,000	
Discount on bond investment (difference)		4,664
Interest revenue (effective rate × outstanding balance)		46,664

Because the balance of the debt changes each period, the dollar amount of interest (balance × rate) also will change each period. To keep up with the changing amounts, it usually is convenient to prepare a schedule that reflects the changes in the debt over its term to maturity. An amortization schedule for the situation under discussion is shown in Illustration 14–6.

Amounts for the journal entries each interest date are found in the second, third, and fourth columns of the schedule. The essential point to remember is that the effective interest method is a straightforward application of the accrual concept, whereby interest expense (or revenue) is accrued periodically at the effective rate. We record that amount of interest expense or revenue accrued even though the cash interest is a different amount.

Determining interest in this manner has a convenient side effect. It results in reporting the liability at the present value of future cash payments—the appropriate valuation method for any liability. This is obvious at issuance; we actually calculated the present value to be

Illustration 14–6Amortization
Schedule—Discount

Date	Cash Interest (6% × Face amount)	Effective Interest (7% × Outstanding balance)	Increase in Balance (Discount reduction)	Outstanding Balance
1/1/13				666,633
6/30/13	42,000	.07 (666,633) = 46,664	4,664	671,297
12/31/13	42,000	.07 (671,297) = 46,991	4,991	676,288
6/30/14	42,000	.07 (676,288) = 47,340	5,340	681,628
12/31/14	42,000	.07 (681,628) = 47,714	5,714	687,342
6/30/15	42,000	.07 (687,342) = 48,114	6,114	693,456
12/31/15	42,000	.07 (693,456) = 48,544*	6,544	700,000
	<u>252,000</u>	<u>285,367</u>	<u>33,367</u>	

*Rounded.

\$666,633. What perhaps is not quite as obvious is that the outstanding amount of debt each subsequent period (shown in the right-hand column of the amortization schedule) is still the present value of the remaining cash flows, discounted at the original rate.

Before moving on, notice some key characteristics of the amortization schedule. As mentioned earlier, the unpaid interest each period (\$4,664 the first period) adds to the balance. Since this happens each period, the balance continually increases, eventually becoming the face amount at maturity. Conveniently, that's the amount to be paid at maturity. Also, because the balance increases each period, so does the effective interest. That's because effective interest is the same percentage rate times a higher balance each period.

Now look at the column totals. The total interest expense (from the issuer's perspective) is equal to the sum of the total cash interest plus the total change in the balance (the discount). One way we might view this is to say the total interest paid (\$285,367) is the \$252,000 cash interest paid during the term to maturity plus the "extra" amount paid at maturity. That \$33,367 amount is extra in the sense that, by selling the bonds, we borrow \$666,633 but must repay \$700,000 at maturity.

Additional Consideration

Although the reported amount each period is the present value of the bonds, at any date after issuance this amount is not necessarily equal to the market value (fair value) of the bonds. This is because the market rate of interest will not necessarily remain the same as the rate implicit in the original issue price (the effective rate). Of course, for negotiable financial instruments, the issue price is the market price at any given time. Differences between market values and present values based on the original rate are holding gains and losses. If we were to use the market rate to revalue bonds on each reporting date—that is, recalculate the present value using the market rate—the reported amount always would be the market value. As we will see later, companies have the option to report their liabilities at fair value.

Zero-Coupon Bonds

A zero-coupon bond pays no interest. Instead, it offers a return in the form of a "deep discount" from the face amount. For illustration, let's look at the zero-coupon bonds issued by **General Mills, Inc.** Two billion, two hundred thirty million dollars face amount of the 20-year securities sold for one billion, five hundred one million dollars. As the amortization schedule in Illustration 14–7 (next page) demonstrates, they were priced to yield 2%.²

²The present value of \$2,230M, discounted at 2% for 20 years, is \$1,501M.

Illustration 14–7

Zero-Coupon Securities—General Mills, Inc.

Real World Financials

(\$ in millions)	Cash Interest (0% × Face amount)	Effective Interest (2% × Outstanding debt)	Increase in Balance (Discount reduction)	Outstanding Balance*
				1,501
2002	0	.02 (1,501) = 30	30	1,531
2003	0	.02 (1,531) = 31	31	1,561
2004	0	.02 (1,561) = 31	31	1,593
◆	◆	◆	◆	◆
◆	◆	◆	◆	◆
◆	◆	◆	◆	◆
2021	0	.02 (2,143) = 43	43	2,186
2022	0	.02 (2,186) = 44	44	2,230
		729	729	

*Some numbers appear not to total because the underlying calculations are not rounded. Note that the final number in the schedule (\$2,230 million) is the face amount payable at maturity.

Zero-coupon bonds provide us with a convenient opportunity to reinforce a key concept we just learned: that we accrue the interest expense (or revenue) each period at the effective rate regardless of how much cash interest actually is paid (zero in this case). An advantage of issuing zero-coupon bonds or notes is that the corporation can deduct for tax purposes the annual interest expense (see schedule) but has no related cash outflow until the bonds mature. However, the reverse is true for investors in “zeros.” Investors receive no periodic cash interest, even though annual interest revenue is reportable for tax purposes. So those who invest in zero-coupon bonds usually have tax-deferred or tax-exempt status, such as pension funds, individual retirement accounts (IRAs), and charitable organizations. Zero-coupon bonds and notes have popularity but still constitute a relatively small proportion of corporate debt.

Bonds Sold at a Premium

In Illustration 14–3, Masterwear Industries sold the bonds at a price that would yield an effective rate higher than the stated rate. The result was a discount. On the other hand, if the 12% bonds had been issued when the market yield for bonds of similar risk and maturity was *lower* than the stated rate, say 10%, the issue would have been priced at a *premium*. Because the 12% rate would seem relatively attractive in a 10% market, the bonds would command an issue price of more than \$700,000, calculated in Illustration 14–8.

Illustration 14–8

Bonds Sold at a Premium

Because interest is paid *semiannually*, the present value calculations use:

- one-half the stated rate (6%),
- one-half the market rate (5%), and
- 6 (3 × 2) semiannual periods.

On January 1, 2013, Masterwear Industries issued \$700,000 of 12% bonds, dated January 1. Interest of \$42,000 is payable semiannually on June 30 and December 31. The bonds mature in three years. The market yield for bonds of similar risk and maturity is 10%. The entire bond issue was purchased by United Intergroup, Inc.

Calculation of the Price of the Bonds

	Present Values
Interest	\$ 42,000 × 5.07569* = \$213,179
Principal	\$700,000 × 0.74622† = 522,354
Present value (price) of the bonds	<u>\$735,533</u>

*Present value of an ordinary annuity of \$1: $n = 6, i = 5\%$.

†Present value of \$1: $n = 6, i = 5\%$.

Masterwear (Issuer)		
Cash (price calculated above)	735,533	
Bonds payable (face amount)		700,000
Premium on bonds payable (difference)		35,533
United (Investor)		
Investment in bonds (face amount)	700,000	
Premium on bond investment (difference)	35,533	
Cash (price calculated above)		735,533

Journal Entries at Issuance—Bonds Sold at Premium

Interest on bonds issued at a premium is determined in precisely the same manner as on bonds issued at a discount. Again, interest is the effective interest rate applied to the debt balance outstanding during each period (balance at the end of the previous interest period), and the cash paid is the stated rate times the face amount, as shown in Illustration 14–9.

Date	Cash Interest (6% × Face amount)	Effective Interest (5% × Outstanding balance)	Decrease in Balance (Premium reduction)	Outstanding Balance
1/1/13				735,533
6/30/13	42,000	.05 (735,533) = 36,777	5,223	730,310
12/31/13	42,000	.05 (730,310) = 36,516	5,484	724,826
6/30/14	42,000	.05 (724,826) = 36,241	5,759	719,067
12/31/14	42,000	.05 (719,067) = 35,953	6,047	713,020
6/30/15	42,000	.05 (713,020) = 35,651	6,349	706,671
12/31/15	42,000	.05 (706,671) = 35,329*	6,671	700,000
	<u>252,000</u>	<u>216,467</u>	<u>35,533</u>	

*Rounded.

Illustration 14–9

Amortization Schedule—Premium

Since more cash is paid each period than the effective interest, the debt outstanding is reduced by the overpayment.

Notice that the debt declines each period. As the premium is reduced by amortization, the carrying value of the bonds declines toward face value. This is because the effective interest each period is less than the cash interest paid. Remember, this is precisely the opposite of when debt is sold at a discount, when the effective interest each period is more than the cash paid. As the discount is reduced by amortization, the carrying value of the bonds increases toward face value. This is illustrated in Illustration 14–10.

Illustration 14–10

Premium and Discount Amortization Compared

Whether bonds are issued at a premium or a discount, the outstanding balance becomes zero at maturity.

In practice, corporate bonds rarely are issued at a premium. Because of the delay between the date the terms of the bonds are established and when the bonds are issued, it's difficult to set the stated rate equal to the ever-changing market rate. Knowing that, for marketing reasons, companies deliberately set the terms to more likely create a small discount rather than a premium at the issue date. Some investors are psychologically prone to prefer buying at a discount rather than a premium even if the yield is the same (the market rate).

Additional Consideration

The preceding illustrations describe bonds sold at a discount and at a premium. The same concepts apply to bonds sold at face amount. But some of the procedures would be unnecessary. For instance, calculating the present value of the interest and the principal always will give us the face amount when the effective rate and the stated rate are the same:

Calculation of the Price of the Bonds

	Present Values	
Interest	\$ 42,000 × 4.91732*	= \$206,528
Principal	\$700,000 × 0.70496†	= 493,472
Present value (price) of the bonds		\$700,000

*Present value of an ordinary annuity of \$1: $n = 6$, $i = 6\%$.

†Present value of \$1: $n = 6$, $i = 6\%$.

When Financial Statements Are Prepared between Interest Dates

Any interest that has accrued since the last interest date must be recorded by an adjusting entry prior to preparing financial statements.

When an accounting period ends between interest dates, it is necessary to record interest that has accrued since the last interest date. As an example, refer again to Illustration 14–3 on page 801. If the fiscal years of Masterwear and United end on October 31 and interest was last paid and recorded on June 30, four months' interest must be accrued in a year-end adjusting entry. Because interest is recorded for only a portion of a semiannual period, amounts recorded are simply the amounts shown in the amortization schedule (Illustration 14–6, p. 803) times the appropriate fraction of the semiannual period (in this case $\frac{4}{6}$).

Adjusting Entries—To Accrue Interest

To avoid understating interest in the financial statements, four months' interest is recorded at the end of the reporting period.

At October 31		
Masterwear (Issuer)		
Interest expense ($\frac{4}{6} \times 46,991$)	31,327	
Discount on bonds payable ($\frac{4}{6} \times 4,991$)		3,327
Interest payable ($\frac{4}{6} \times 42,000$)		28,000
United (Investor)		
Interest receivable ($\frac{4}{6} \times 42,000$)	28,000	
Discount on bond investment ($\frac{4}{6} \times 4,991$)	3,327	
Interest revenue ($\frac{4}{6} \times 46,991$)		31,327

Two months later, when semiannual interest is paid next, the remainder of the interest is allocated to the first two months of the next fiscal year—November and December:

Of the six months' interest paid December 31, only the November and December interest is expensed in the new fiscal year.

At the December 31 Interest Date		
Masterwear (Issuer)		
Interest expense ($\frac{2}{6} \times 46,991$)	15,664	
Interest payable (from adjusting entry)	28,000	
Discount on bonds payable ($\frac{2}{6} \times 4,991$)		1,664
Cash (stated rate × face amount)		42,000

United (Investor)

Cash (stated rate × face amount)	42,000	
Discount on bond investment (% × 4,991)	1,664	
Interest receivable (from adjusting entry)		28,000
Interest revenue (% × 46,991)		15,664

The Straight-Line Method—A Practical Expediency

In some circumstances the profession permits an exception to the conceptually appropriate method of determining interest for bond issues. A company is allowed to determine interest indirectly by allocating a discount or a premium equally to each period over the term to maturity—if doing so produces results that are not materially different from the usual (and preferable) interest method. The decision should be guided by whether the **straight-line method** would tend to mislead investors and creditors in the particular circumstance.

By the straight-line method, the discount in Illustration 14–3 and Illustration 14–6 would be allocated equally to the six semiannual periods (three years):

$$\$33,367 \div 6 \text{ periods} = \$5,561 \text{ per period}$$

At Each of the Six Interest Dates

Masterwear (Issuer)

Interest expense (to balance)	47,561	
Discount on bonds payable (discount ÷ 6 periods)		5,561
Cash (stated rate × face amount)		42,000

United (Investor)

Cash (stated rate × face amount)	42,000	
Discount on bond investment (discount ÷ 6 periods)	5,561	
Interest revenue (to balance)		47,561

**Journal Entries—
Straight-Line Method**

By the straight-line method, interest (expense and revenue) is a plug figure, resulting from calculating the amount of discount reduction.

Allocating the discount or premium equally over the life of the bonds by the straight-line method results in a constant dollar amount of interest each period. An amortization schedule, then, would serve little purpose. For example, if we prepared one for the straight-line method in this situation, it would provide the same amounts each period as shown in Illustration 14–11.

	Cash Interest	Recorded Interest	Increase in Balance	Outstanding Balance
	(6% × Face amount)	(Cash + Discount reduction)	(\$33,367 ÷ 6)	
1/1/13				666,633
6/30/13	42,000	(42,000 + 5,561) = 47,561	5,561	672,194
12/31/13	42,000	(42,000 + 5,561) = 47,561	5,561	677,755
6/30/14	42,000	(42,000 + 5,561) = 47,561	5,561	683,316
12/31/14	42,000	(42,000 + 5,561) = 47,561	5,561	688,877
6/30/15	42,000	(42,000 + 5,561) = 47,561	5,561	694,438
12/31/15	42,000	(42,000 + 5,561) = 47,561	5,561	700,000*
	252,000	285,366	33,366	

*Rounded.

Illustration 14–11

Amortization Schedule—
Straight-Line Method

By the straight-line method, the amount of the discount to be reduced periodically is calculated, and the recorded interest is the plug figure.

Remember, constant dollar amounts are not produced when the effective interest method is used. By that method, the dollar amounts of interest vary over the term to maturity because the percentage rate of interest remains constant but is applied to a changing debt balance.

Determining interest by allocating the discount (or premium) on a straight-line basis is a practical expediency permitted in some situations by the materiality concept.

Also, be sure to realize that the straight-line method is not an alternative method of determining interest in a conceptual sense. Instead, it is an application of the materiality concept, by which an appropriate application of GAAP (e.g., the effective interest method) can be bypassed for reasons of practical expediency in situations when doing so has no material effect on the results. Based on the frequency with which the straight-line method is used in practice, we can infer that managers very frequently conclude that its use has no material impact on investors' decisions.

Concept Review Exercise

ISSUING BONDS AND RECORDING INTEREST

On January 1, 2013, the Meade Group issued \$8,000,000 of 11% bonds, dated January 1. Interest is payable semiannually on June 30 and December 31. The bonds mature in four years. The market yield for bonds of similar risk and maturity is 10%.

Required:

1. Determine the price these bonds issued to yield the 10% market rate and record their issuance by the Meade Group.
2. Prepare an amortization schedule that determines interest at the effective rate and record interest on the first interest date, June 30, 2013.

Solution:

1. Determine the price these bonds sold for to yield the 10% market rate and record their issuance by the Meade Group.

Calculation of the Price of the Bonds

There are eight semiannual periods and one-half the market rate is 5%.		
Interest	\$ 440,000 × 6.46321*	= \$2,843,812
Principal	\$8,000,000 × 0.67684†	= 5,414,720
Present value (price) of the bonds		\$8,258,532

*Present value of an ordinary annuity of \$1: $n = 8, i = 5\%$.

†Present value of \$1: $n = 8, i = 5\%$.

Journal Entries at Issuance

Cash (price calculated above)	8,258,532	
Bonds payable (face amount)		8,000,000
Premium on bonds payable (difference)		258,532

2. Prepare an amortization schedule that determines interest at the effective rate and record interest on the first interest date, June 30, 2013.

Amortization Schedule

Date	Cash Interest (5.5% × Face amount)	Effective Interest (5% × Outstanding balance)	Decrease in Balance (Premium reduction)	Outstanding Balance
1/1/13				8,258,532
6/30/13	440,000	.05 (8,258,532) = 412,927	27,073	8,231,459
12/31/13	440,000	.05 (8,231,459) = 411,573	28,427	8,203,032
6/30/14	440,000	.05 (8,203,032) = 410,152	29,848	8,173,184
12/31/14	440,000	.05 (8,173,184) = 408,659	31,341	8,141,843
6/30/15	440,000	.05 (8,141,843) = 407,092	32,908	8,108,935
12/31/15	440,000	.05 (8,108,935) = 405,447	34,553	8,074,382
6/30/16	440,000	.05 (8,074,382) = 403,719	36,281	8,038,101
12/31/16	440,000	.05 (8,038,101) = 401,899*	38,101	8,000,000
	3,520,000	3,261,468	258,532	

*Rounded.

More cash is paid each period than the effective interest, so the debt outstanding is reduced by the "overpayment."

Interest expense ($5\% \times \$8,258,532$)	412,927	
Premium on bonds payable (difference)	27,073	
Cash ($5.5\% \times \$8,000,000$)		440,000
<i>To record interest for six months.</i>		

Debt Issue Costs

Rather than sell bonds directly to the public, corporations usually sell an entire issue to an underwriter who then resells them to other security dealers and the public. By committing to purchase bonds at a set price, investment banks such as **JPMorgan Chase** and **Goldman Sachs** are said to underwrite any risks associated with a new issue. The underwriting fee is the spread between the price the underwriter pays and the resale price.

Alternatively, the issuing company may choose to sell the debt securities directly to a single investor (as we assumed in previous illustrations)—often a pension fund or an insurance company. This is referred to as *private placement*. Issue costs are less because privately placed securities are not subject to the costly and lengthy process of registering with the SEC that is required of public offerings. Underwriting fees also are avoided.³

With either publicly or privately sold debt, the issuing company will incur costs in connection with issuing bonds or notes, such as legal and accounting fees and printing costs, in addition to registration and underwriting fees. These **debt issue costs** are recorded *separately* and are amortized over the term of the related debt. GAAP requires a debit to an asset account—debt issue costs. The asset is allocated to expense, usually on a straight-line basis.

For example, let's assume issue costs in Illustration 14–8 had been **\$12,000**. The entries for the issuance of the bonds would include a separate asset account for the issue costs:

Cash ($\$735,533$ minus $\$12,000$ issue costs)	723,533	
Debt issue costs	12,000	
Bonds payable (face amount)		700,000
Premium on bonds payable ($\$735,533$ minus face amount)		35,533

Semiannual amortization of the asset would be:

Debt issue expense ($\$12,000 \div 6$)	2,000	
Debt issue costs		2,000

Costs of issuing debt securities are recorded as a debit to an asset account, "debt issue costs," and amortized to expense over the term to maturity.

The premium (or discount) is unaffected by debt issue costs because they are recorded in a separate account.

International Financial Reporting Standards

Debt issue costs. Under U.S. GAAP, these costs are recorded separately as an asset. A conceptually more appealing treatment, and the one prescribed by IFRS, is to reduce the recorded amount of the debt by the debt issue costs (called transaction costs under IFRS). The cost of these services reduces the net cash the issuing company receives from the sale of the financial instrument. A lower [net] amount is borrowed at the same cost, increasing the effective interest rate. However, unless the debt is recorded net of the transaction costs, the higher rate is not reflected in a higher recorded interest expense. The actual increase in the effective interest rate is reflected in the interest expense only if the issue cost is allowed to reduce the carrying amount of the debt:

Cash (price minus transaction costs).....	723,533	
Bonds payable ($\$735,533 - 12,000$)		723,533*
		(continued)

● LO14-7

³Rule 144A of the Securities Act of 1933, as amended, allows for the private resale of unregistered securities to "qualified institutional buyers," which are generally large institutional investors with assets exceeding \$100 million.

(concluded)

Also, this approach is consistent with the treatment of issue costs when equity securities are sold. You will see in Chapter 18 that the effect of share issue costs is to reduce the amount credited to stock accounts.

*Notice that the premium is combined with the face amount of the bonds. This is the “net method” that, as we saw earlier, is the preferred method under IFRS.

The corporate bond is the basic long-term debt instrument for most large companies. But for many firms, the debt instrument often used is a *note*. We discuss notes next.

PART B

LONG-TERM NOTES

● LO14-3

When a company borrows cash from a bank and signs a promissory note (essentially an IOU), the firm’s liability is reported as a *note payable*. Or a note might be issued in exchange for a noncash asset—perhaps to purchase equipment on credit. In concept, notes are accounted for in precisely the same way as bonds. In fact, we could properly substitute notes payable for bonds payable in each of our previous illustrations.

FINANCIAL Reporting Case

Q4, p. 797

Note Issued for Cash

The interest rate stated in a note is likely to be equal to the market rate because the rate usually is negotiated at the time of the loan. So discounts and premiums are less likely for notes than for bonds. Accounting for a note issued for cash is demonstrated in Illustration 14–12.

Illustration 14–12

Note Issued for Cash

On January 1, 2013, Skill Graphics, Inc., a product-labeling and graphics firm, borrowed \$700,000 cash from First BancCorp and issued a three-year, \$700,000 promissory note. Interest of \$42,000 was payable semiannually on June 30 and December 31.

At Issuance

Skill Graphics (Borrower)		
Cash	700,000	
Notes payable (face amount)		700,000
First BancCorp (Lender)		
Notes receivable (face amount)	700,000	
Cash		700,000

At Each of the Six Interest Dates

Skill Graphics (Borrower)		
Interest expense	42,000	
Cash (stated rate \times face amount)		42,000
First BancCorp (Lender)		
Cash (stated rate \times face amount)	42,000	
Interest revenue		42,000

At Maturity

Skill Graphics (Borrower)		
Notes payable	700,000	
Cash (face amount)		700,000
First BancCorp (Lender)		
Cash (face amount)	700,000	
Notes receivable		700,000

Note Exchanged for Assets or Services

Occasionally the *stated* interest rate is not indicative of the *market* rate at the time a note is negotiated. The value of the asset (cash or noncash) or service exchanged for the note establishes the market rate.⁴ For example, let's assume Skill Graphics purchased a package-labeling machine from Hughes–Barker Corporation by issuing a 12%, \$700,000, three-year note that requires interest to be paid semiannually. Let's also assume that the machine could have been purchased at a cash price of \$666,633. You probably recognize this numerical situation as the one used earlier to illustrate bonds sold at a discount (Illustration 14–3). Reference to the earlier example will confirm that exchanging this \$700,000 note for a machine with a cash price of \$666,633 implies an annual market rate of interest of 14%. That is, 7% is one-half the discount rate that yields a present value of \$666,633 for the note's cash flows (interest plus principal):

Present Values		
Interest	$\$ 42,000 \times 4.76654^*$	= \$200,195
Principal	$\$700,000 \times 0.66634^\dagger$	= 466,438
Present value of the note		\$666,633

*Present value of an ordinary annuity of \$1: $n = 6, i = 7\%$.

†Present value of \$1: $n = 6, i = 7\%$.

This is referred to as the **implicit rate of interest**—the rate implicit in the agreement. It may be that the implicit rate is not apparent. Sometimes the value of the asset (or service) is not readily determinable, but the interest rate stated in the transaction is unrealistic relative to the rate that would be expected in a similar transaction under similar circumstances. Deciding what the appropriate rate should be is called *imputing* an interest rate.

For example, suppose the machine exchanged for the 12% note is custom-made for Skill Graphics so that no customary cash price is available with which to work backwards to find the implicit rate. In that case, the appropriate rate would have to be found externally. It might be determined, for instance, that a more realistic interest rate for a transaction of this type, at this time, would be 14%. Then it would be apparent that Skill Graphics actually paid less than \$700,000 for the machine and that part of the face amount of the note in effect makes up for the lower than normal interest rate. You learned early in your study of accounting that the economic essence of a transaction should prevail over its outward appearance. In keeping with this basic precept, the accountant should look beyond the *form* of this transaction and record its *substance*. The amount actually paid for the machine is the present value of the cash flows called for by the loan agreement, discounted at the market rate—imputed in this case to be 14%. So both the asset acquired and the liability used to purchase it should be recorded at the real cost, \$666,633.

A basic concept of accounting is *substance over form*.

Additional Consideration

For another example, let's assume the more realistic interest rate for a transaction of this type is, say, 16%. In that case we would calculate the real cost of the machine by finding the present value of both the interest and the principal, discounted at half the 16% rate:

(continued)

⁴If the debt instrument is negotiable and a dependable exchange price is readily available, the market value of the debt may be better evidence of the value of the transaction than the value of a noncash asset, particularly if it has no established cash selling price. The value of the asset or the debt, whichever is considered more reliable, should be used to record the transaction.

(concluded)

	Present Values	
Interest	\$ 42,000 × 4.62288*	= \$194,161
Principal	\$700,000 × 0.63017†	= 441,119
Present value of the note		<u>\$635,280</u>

*Present value of an ordinary annuity of \$1: $n = 6, i = 8\%$.
 †Present value of \$1: $n = 6, i = 8\%$.

Both the asset acquired and the liability used to purchase it would be recorded at \$635,280.

The accounting treatment is the same whether the amount is determined directly from the market value of the machine (and thus the note) or indirectly as the present value of the note (and thus the value of the asset):⁵

Journal Entries at Issuance—Note with Unrealistic Interest Rate

Skill Graphics (Buyer/Issuer)		
Machinery (cash price)	666,633	
Discount on notes payable (difference)	33,367	
Notes payable (face amount)		700,000
Hughes–Barker (Seller/Lender)		
Notes receivable (face amount)	700,000	
Discount on notes receivable (difference)		33,367
Sales revenue (cash price)		<u>666,633</u>

Likewise, whether the effective interest rate is determined as the rate implicit in the agreement, given the asset’s market value, or whether the effective rate is imputed as the appropriate interest rate if the asset’s value is unknown, both parties to the transaction should record periodic interest (interest expense to the borrower, interest revenue to the lender) at the effective rate, rather than the stated rate.

Journal Entries—The Interest Method

The effective interest (expense to the issuer; revenue to the investor) is calculated each period as the effective rate times the amount of the debt outstanding during the interest period.

At the First Interest Date (June 30)		
Skill Graphics (Borrower)		
Interest expense (effective rate × outstanding balance)	46,664	
Discount on notes payable (difference)		4,664
Cash (stated rate × face amount)		42,000
Hughes–Barker (Seller/Lender)		
Cash (stated rate × face amount)	42,000	
Discount on notes receivable (difference)	4,664	
Interest revenue (effective rate × outstanding balance)		<u>46,664</u>

The interest expense (interest revenue for the lender) varies as the balance of the note changes over time. See the amortization schedule in Illustration 14–13.⁶ Be sure to notice that this amortization schedule is identical to the one in Illustration 14–6 for bonds issued at a discount.

⁵The method shown is the *gross method*. Alternatively, the *net method* can be used as follows:

Skill Graphics (Buyer/Issuer)		
Machinery (cash price)	666,633	
Notes payable		666,633
Hughes–Barker (Seller/Lender)		
Notes receivable	666,633	
Sales revenue (cash price)		<u>666,633</u>

Under the net method, the note is recorded at the face amount reduced by the discount on notes payable, which is the difference between face value and present value. As cash interest is paid, the note balance increases by the difference between the cash interest payment and the interest revenue (and interest expense). After the last payment, the note account balance will be equal to the face amount of the note.

⁶The creation of amortization schedules is simplified by an electronic spreadsheet such as Microsoft Excel.

Date	Cash Interest	Effective Interest	Increase in Balance	Outstanding Balance
	(6% × Face amount)	(7% × Outstanding balance)	(Discount reduction)	
1/1/13				666,633
6/30/13	42,000	.07 (666,633) = 46,664	4,664	671,297
12/31/13	42,000	.07 (671,297) = 46,991	4,991	676,288
6/30/14	42,000	.07 (676,288) = 47,340	5,340	681,628
12/31/14	42,000	.07 (681,628) = 47,714	5,714	687,342
6/30/15	42,000	.07 (687,342) = 48,114	6,114	693,456
12/31/15	42,000	.07 (693,456) = 48,544*	6,544	700,000
	<u>252,000</u>	<u>285,367</u>	<u>33,367</u>	

*Rounded.

Illustration 14–13

Amortization
Schedule—Note

Since less cash is paid each period than the effective interest, the unpaid difference (the discount reduction) increases the outstanding balance (carrying value) of the note.

Installment Notes

You may have recently purchased a car, or maybe a house. If so, unless you paid cash, you signed a note promising to pay a portion of the purchase price over, say, five years for the car, or 30 years for the house. Car and house notes usually call for payment in monthly installments rather than by a single amount at maturity. Corporations, too, often borrow using installment notes. Typically, installment payments are equal amounts each period. Each payment includes both an amount that represents interest and an amount that represents a reduction of the outstanding balance (principal reduction). The periodic reduction of the balance is sufficient that at maturity the note is completely paid. This amount is easily calculated by dividing the amount of the loan by the appropriate discount factor for the present value of an annuity. The installment payment amount that would pay the note described in the previous section is:

$$\begin{array}{rcccl} \$666,633 & \div & 4.76654 & = & \$139,857 \\ \text{Amount of loan} & & \text{(from Table 4} & & \text{Installment} \\ & & n = 6, i = 7.0\%) & & \text{payment} \end{array}$$

Consider Illustration 14–14.

Date	Cash Payment	Effective Interest	Decrease in Debt	Outstanding Balance
		(7% × Outstanding balance)		
1/1/13				666,633
6/30/13	139,857	.07 (666,633) = 46,664	93,193	573,440
12/31/13	139,857	.07 (573,440) = 40,141	99,716	473,724
6/30/14	139,857	.07 (473,724) = 33,161	106,696	367,028
12/31/14	139,857	.07 (367,028) = 25,692	114,165	252,863
6/30/15	139,857	.07 (252,863) = 17,700	122,157	130,706
12/31/15	139,857	.07 (130,706) = 9,151*	130,706	0
	<u>839,142</u>	<u>172,509</u>	<u>666,633</u>	

*Rounded.

Illustration 14–14

Amortization Schedule—
Installment Note

Each installment payment includes interest on the outstanding debt at the effective rate. The remainder of each payment reduces the outstanding balance.

For installment notes, the outstanding balance of the note does not eventually become its face amount as it does for notes with designated maturity amounts. Instead, at the maturity

date the balance is zero. The procedure is the same as for a note whose principal is paid at maturity, but the periodic cash payments are larger and there is no lump-sum payment at maturity. We calculated the amount of the payments so that after covering the interest on the existing debt each period, the excess would exactly amortize the debt to zero at maturity (rather than to a designated maturity amount).

Consequently, the significance is lost of maintaining separate balances for the face amount (in a note account) and the discount (or premium). So an installment note typically is recorded at its net carrying amount in a single note payable (or receivable) account:

Journal Entries at Issuance—Installment Note

Skill Graphics (Buyer/Issuer)		
Machinery	666,633	
Note payable		666,633
Hughes–Barker (Seller/Lender)		
Note receivable	666,633	
Sales revenue		666,633

Each payment includes both an amount that represents interest and an amount that represents a reduction of principal.

At the First Interest Date (June 30)

Skill Graphics (Borrower)		
Interest expense (effective rate × outstanding balance)	46,664	
Notes payable (difference)	93,193	
Cash (installment payment calculated above)		139,857
Hughes–Barker (Seller/Lender)		
Cash (installment payment calculated above)	139,857	
Notes receivable (difference)		93,193
Interest revenue (effective rate × outstanding balance)		46,664

Additional Consideration

You will learn in the next chapter that the liability associated with a lease is accounted for the same way as this installment note. In fact, if the asset described above had been leased rather than purchased, the cash payments would be designated lease payments rather than installment loan payments, and a virtually identical amortization schedule would apply.

The reason for the similarity is that we view a lease as being, in substance, equivalent to an installment purchase of the right to use an asset. Naturally, then, accounting treatment of the two essentially identical transactions should be consistent. Be sure to notice the parallel treatment as you study leases in the next chapter.

Financial Statement Disclosures

● LO14-4

Supplemental disclosure is required of the fair value of bonds, notes, and other financial instruments.

In the balance sheet, long-term debt (liability for the debtor; asset for the creditor) typically is reported as a single amount, net of any discount or increased by any premium, rather than at its face amount accompanied by a separate valuation account for the discount or premium. Any portion of the debt to be paid (received) during the upcoming year, or operating cycle if longer, should be reported as a current amount.

The fair value of financial instruments must be disclosed either in the body of the financial statements or in disclosure notes.⁷ These fair values are available for bonds and other securities traded on market exchanges in the form of quoted market prices. On the other hand, financial instruments not traded on market exchanges require other evidence of market value. For example, the market value of a note payable might be approximated by the present value of principal and interest payments using a current discount rate commensurate with the risks involved.

⁷FASB ASC 825-10-50-10: Financial Instruments—Overall—Disclosure (previously “Disclosures About Fair Values of Financial Instruments,” *Statement of Financial Accounting Standards No. 107* (Norwalk, Conn.: FASB, 1991)).

The disclosure note for debt includes the nature of the company's liabilities, interest rates, maturity dates, call provisions, conversion options, restrictions imposed by creditors, and any assets pledged as collateral. For all long-term borrowings, disclosures also should include the aggregate amounts payable for each of the next five years. To comply, **Toys R Us, Inc.**'s annual report for the fiscal year ended January 31, 2011, included the disclosure shown in Illustration 14–15:

The total fair values of our Long-term debt, with carrying values of \$5.3 billion and \$5.2 billion at January 29, 2011 and January 30, 2010, were \$5.4 billion and \$4.8 billion, respectively. The fair values of our Long-term debt are estimated using the quoted market prices for the same or similar issues and other pertinent information available to management as of the end of the respective periods.

The annual maturities of our Long-term debt, including current portions, at January 29, 2011, are as follows:

(In millions)	Annual Maturities
2011	\$ 570
2012	312
2013	1,101
2014	38
2015	71
2016 and subsequent	<u>3,196</u>
Total	\$5,288

In a statement of cash flows, issuing bonds or notes are reported as cash flows from financing activities by the issuer (borrower) and cash flows from investing activities by the investor (lender). Similarly, as the debt is repaid, the issuer (borrower) reports a financing activity while the investor (lender) reports an investing activity. However, because both interest expense and interest revenue are components of the income statement, both parties to the transaction report interest among operating activities. We discuss the cash flow reporting process in more depth in Chapter 21.

Illustration 14–15

Debt Disclosures—Toys R Us, Inc.

Real World Financials

Borrowing is a financing activity; lending is an investing activity.

Paying or receiving interest is an operating activity.

Decision Makers' Perspective

Business decisions involve risk. Failure to properly consider risk in those decisions is one of the most costly, yet one of the most common mistakes investors and creditors can make. Long-term debt is one of the first places decision makers should look when trying to get a handle on risk.

In general, debt increases risk. As an owner, debt would place you in a subordinate position relative to creditors because the claims of creditors must be satisfied first in case of liquidation. In addition, debt requires payment, usually on specific dates. Failure to pay debt interest and principal on a timely basis may result in default and perhaps even bankruptcy. The debt to equity ratio, total liabilities divided by shareholders' equity, often is calculated to measure the degree of risk. Other things being equal, the higher the debt to equity ratio, the higher the risk. The type of risk this ratio measures is called *default risk* because it presumably indicates the likelihood a company will default on its obligations.

Debt also can be an advantage. It can be used to enhance the return to shareholders. This concept, known as leverage, was described and illustrated in Chapter 3. If a company earns a return on borrowed funds in excess of the cost of borrowing the funds, shareholders are provided with a total return greater than what could have been earned with equity funds alone. This desirable situation is called *favorable financial leverage*. Unfortunately, leverage is not always favorable. Sometimes the cost of borrowing the funds exceeds the returns they generate. This illustrates the typical risk-return trade-off faced by shareholders.

Generally speaking, debt increases risk.

To evaluate a firm's risk, you might start by calculating its debt to equity ratio.

As a manager, you would try to create favorable financial leverage to earn a return on borrowed funds in excess of the cost of borrowing the funds.

As an external analyst or a manager, you are concerned with a company's ability to repay debt.

Creditors demand interest payments as compensation for the use of their capital. Failure to pay interest as scheduled may cause several adverse consequences, including bankruptcy. Therefore, another way to measure a company's ability to pay its obligations is by comparing interest payments with income available to pay those charges. The times interest earned ratio does this by dividing income, before subtracting interest expense or income tax expense, by interest expense.

Two points about this ratio are important. First, because interest is deductible for income tax purposes, income before interest and taxes is a better indication of a company's ability to pay interest than is income after interest and taxes (i.e., net income). Second, income before interest and taxes is a rough approximation for cash flow generated from operations. The primary concern of decision makers is, of course, the cash available to make interest payments. In fact, this ratio often is computed by dividing cash flow generated from operations by interest payments.

For illustration, let's compare the ratios for **Coca-Cola** and **PepsiCo**. Illustration 14–16 provides condensed financial statements adapted from 2010 annual reports of those companies.

Illustration 14–16

Condensed Financial Statements—Coca-Cola, PepsiCo

Real World Financials

Balance Sheets		
(\$ in millions)		
	Coca-Cola	PepsiCo
Assets		
Current assets	\$21,579	\$17,569
Property, plant, and equipment (net)	14,727	19,058
Intangibles and other assets	36,615	31,526
Total assets	<u>\$72,921</u>	<u>\$68,153</u>
Liabilities and Shareholders' Equity		
Current liabilities	\$18,508	\$15,892
Long-term liabilities	23,096	30,785
Total liabilities	\$41,604	\$46,677
Shareholders' equity	31,317	21,476
Total liabilities and shareholders' equity	<u>\$72,921</u>	<u>\$68,153</u>
Income Statements		
Net sales	\$35,119	\$57,838
Cost of goods sold	(12,693)	(26,575)
Gross profit	\$22,426	\$31,263
Operating and other expenses	(7,450)	(22,128)
Interest expense	(733)	(903)
Income before taxes	\$ 14,243	\$ 8,232
Tax expense	(2,384)	(1,894)
Net income	<u>\$11,859</u>	<u>\$ 6,338</u>

The debt to equity ratio is much higher for PepsiCo:

$$\text{Debt to equity ratio} = \frac{\text{Total liabilities}}{\text{Shareholders' equity}}$$

$$\text{Coca-Cola} = \frac{\$41,604}{\$31,317} = 1.33$$

$$\text{PepsiCo} = \frac{\$46,667}{\$21,476} = 2.17$$

The debt to equity ratio indicates the extent of trading on the equity, or financial leverage.

Remember, that's not necessarily a positive or a negative. Let's look closer. When the return on shareholders' equity is greater than the return on assets, management is using debt

funds to enhance the earnings for shareholders. Both firms do this. We calculate return on assets as follows:

$$\begin{aligned}\text{Rate of return on assets}^8 &= \frac{\text{Net income}}{\text{Total assets}} \\ \text{Coca-Cola} &= \frac{\$11,859}{\$72,921} = 16.3\% \\ \text{PepsiCo} &= \frac{\$6,338}{\$68,153} = 9.3\%\end{aligned}$$

The rate of return on assets indicates profitability without regard to how resources are financed.

The return on assets indicates a company's overall profitability, ignoring specific sources of financing. In this regard, Coca-Cola's profitability is 75% higher than PepsiCo's. That advantage, though, narrows when we compare the return to shareholders:

$$\begin{aligned}\text{Rate of return on shareholders' equity} &= \frac{\text{Net income}}{\text{Shareholders' equity}} \\ \text{Coca-Cola} &= \frac{\$11,859}{\$31,317} = 37.9\% \\ \text{PepsiCo} &= \frac{\$6,338}{\$21,476} = 29.5\%\end{aligned}$$

The rate of return on shareholders' equity indicates the effectiveness of employing resources provided by owners.

Coca-Cola's return on assets is 75% higher than PepsiCo's, but its return on shareholders' equity is only 29% higher. The reason is that higher leverage has been used to provide a relatively greater return to shareholders. PepsiCo increased its return to shareholders 3.17 times (29.5%/9.3%) the return on assets. Coca-Cola increased its return to shareholders 2.33 times (37.9%/16.3%) the return on assets. Interpret this with caution, though. PepsiCo's higher leverage means higher risk as well. In down times, PepsiCo's return to shareholders will suffer proportionally more than will Coca-Cola's.

From the perspective of a creditor, we might look at which company offers the most comfortable margin of safety in terms of its ability to pay fixed interest charges:

$$\begin{aligned}\text{Times interest earned ratio} &= \frac{\text{Net income plus interest plus taxes}}{\text{Interest}} \\ \text{Coca-Cola} &= \frac{\$11,859 + 733 + 2,384}{\$733} = 20.4 \text{ times} \\ \text{PepsiCo} &= \frac{\$6,338 + 903 + 1,894}{\$903} = 10.1 \text{ times}\end{aligned}$$

The times interest earned ratio indicates the margin of safety provided to creditors.

In this regard, Coca-Cola provides a slightly greater margin of safety. And, Pepsi has more debt in its capital structure relative to Coca-Cola. However, it clearly is able to pay the cost of borrowing and provide an impressive return to its shareholders. Both firms trade quite favorably on their leverage.

Liabilities also can have misleading effects on the income statement. Decision makers should look carefully at gains and losses produced by early extinguishment of debt. These have nothing to do with a company's normal operating activities. Unchecked, corporate management can be tempted to schedule debt buybacks to provide discretionary income in down years or even losses in up years to smooth income over time.

Decision makers should be alert to gains and losses that have nothing to do with a company's normal operating activities.

Alert investors and lenders also look outside the financial statements for risks associated with "off-balance-sheet" financing and other commitments that don't show up on the face of

⁸A more accurate way to calculate this ratio is:

$$\text{Rate of return on assets} = \frac{\text{Net income} + \text{Interest expense} (1 - \text{tax rate})}{\text{Average total assets}}$$

The reason for adding back interest expense (net of tax) is that interest represents a return to suppliers of debt capital and should not be deducted in the computation of net income when computing the return on total assets. In other words, the numerator is the total amount of income available to both debt and equity capital.

Outside analysts as well as managers should actively monitor risk management activities.

financial statements but nevertheless expose a company to risk. Relatedly, most companies attempt to actively manage the risk associated with these and other obligations. It is important for top management to understand and closely monitor risk management strategies. Some of the financial losses that have grabbed headlines in recent years were permitted by a lack of oversight and scrutiny by senior management of companies involved. It is similarly important for investors and creditors to become informed about risks companies face and how well-equipped those companies are in managing that risk. The supplemental disclosures designed to communicate the degree of risk associated with the financial instruments we discuss in this chapter contribute to that understanding. We examine the significance of lease commitments in the next chapter. ●

Concept Review Exercise

NOTE WITH AN UNREALISTIC INTEREST RATE

Cameron-Brown, Inc., constructed for Harmon Distributors a warehouse that was completed and ready for occupancy on January 2, 2013. Harmon paid for the warehouse by issuing a \$900,000, four-year note that required 7% interest to be paid on December 31 of each year. The warehouse was custom-built for Harmon, so its cash price was not known. By comparison with similar transactions, it was determined that an appropriate interest rate was 10%.

Required:

1. Prepare the journal entry for Harmon’s purchase of the warehouse on January 2, 2013.
2. Prepare (a) an amortization schedule for the four-year term of the note and (b) the journal entry for Harmon’s first interest payment on December 31, 2013.
3. Suppose Harmon’s note had been an installment note to be paid in four equal payments. What would be the amount of each installment if payable (a) at the end of each year, beginning December 31, 2013? or (b) at the beginning of each year, beginning on January 2, 2013?

Solution:

1. Prepare the journal entry for Harmon’s purchase of the warehouse on January 2, 2013.

	Present Values
Interest	$\$ 63,000 \times 3.16987^* = \$199,702$
Principal	$\$900,000 \times 0.68301^\dagger = 614,709$
Present value of the note	\$814,411

*Present value of an ordinary annuity of \$1: $n = 4, i = 10\%$.

†Present value of \$1: $n = 4, i = 10\%$.

Warehouse (price determined above)	814,411	
Discount on notes payable (difference)	85,589	
Notes payable (face amount)		900,000

2. Prepare (a) an amortization schedule for the four-year term of the note and (b) the journal entry for Harmon’s first interest payment on December 31, 2013.

a.

Dec. 31	Cash	Effective Interest	Increase in Balance	Outstanding Balance
	(7% × Face amount)	(10% × Outstanding balance)	(Discount reduction)	
				814,411
2013	63,000	.10 (814,411) = 81,441	18,441	832,852

(continued)

Each period the unpaid interest increases the outstanding balance of the debt.

(concluded)

2014	63,000	.10 (832,852) = 83,285	20,285	853,137
2015	63,000	.10 (853,137) = 85,314	22,314	875,451
2016	63,000	.10 (875,451) = 87,549*	24,549	900,000
	252,000		337,589	85,589

*Rounded.

b.

Interest expense (effective rate \times outstanding balance)	81,441
Discount on notes payable (difference)	18,441
Cash (stated rate \times face amount)	63,000

The effective interest is the market rate times the amount of the debt outstanding during the year.

3. Suppose Harmon's note had been an installment note to be paid in four equal payments. What would be the amount of each installment if payable (a) at the end of each year, beginning December 31, 2013? or (b) at the beginning of each year, beginning on January 2, 2013?

a.	\$814,411	\div	3.16987	=	\$256,923
	Amount of loan		(from Table 4 $n = 4, i = 10\%$)		Installment payment
b.	\$814,411	\div	3.48685	=	\$233,566
	Amount of loan		(from Table 6 $n = 4, i = 10\%$)		Installment payment

Because money has a time value, installment payments delayed until the end of each period must be higher than if the payments are made at the beginning of each period.

DEBT RETIRED EARLY, CONVERTIBLE INTO STOCK, OR PROVIDING AN OPTION TO BUY STOCK

PART C

Early Extinguishment of Debt

As we saw in the previous section, debt paid in installments is systematically retired over the term to maturity so that at the designated maturity date the outstanding balance is zero. On the other hand, when a maturity amount is specified as in our earlier illustrations, any discount or premium has been systematically reduced to zero as of the maturity date and the debt is retired simply by paying the maturity amount. Sometimes, though, companies choose to retire debt before its scheduled maturity. In that case, a gain or a loss may result.

● LO14-5

Earlier we noted that a call feature accompanies most bonds to protect the issuer against declining interest rates. Even when bonds are not callable, the issuing company can retire bonds early by purchasing them on the open market. Regardless of the method, when debt of any type is retired prior to its scheduled maturity date, the transaction is referred to as **early extinguishment of debt**.

To record the extinguishment, the account balances pertinent to the debt obviously must be removed from the books. Of course cash is credited for the amount paid—the call price or market price. The difference between the carrying amount of the debt and the reacquisition price represents either a gain or a loss on the early extinguishment of debt. When the debt is retired for less than carrying value, the debtor is in a favorable position and records a gain. The opposite occurs for a loss. Let's continue an earlier example to illustrate the retirement of debt prior to its scheduled maturity (Illustration 14-17).

Any difference between the outstanding debt and the amount paid to retire that debt represents either a gain or a loss.

For instance, in its income statement for the third quarter of 2011, **Cyberonics, Inc.**, an epilepsy management company, reported a gain on the early extinguishment of debt in each of its first two quarters.

Illustration 14–17

Early Extinguishment of Debt

On January 1, 2014, Masterwear Industries called its \$700,000, 12% bonds when their carrying amount was \$676,288. The indenture specified a call price of \$685,000. The bonds were issued previously at a price to yield 14%.

Bonds payable (face amount)	700,000	
Loss on early extinguishment ⁹ (\$685,000 – 676,288)	8,712	
Discount on bonds payable (\$700,000 – 676,288)		23,712
Cash (call price)		685,000

Convertible Bonds

Sometimes corporations include a convertible feature as part of a bond offering. **Convertible bonds** can be converted into (that is, exchanged for) shares of stock at the option of the bondholder. Among the reasons for issuing convertible bonds rather than straight debt are (a) to sell the bonds at a higher price (which means a lower effective interest cost),¹⁰ (b) to use as a medium of exchange in mergers and acquisitions, and (c) to enable smaller firms or debt-heavy companies to obtain access to the bond market. Sometimes convertible bonds serve as an indirect way to issue stock when there is shareholder resistance to direct issuance of additional equity.

Central to each of these reasons for issuing convertible debt is that the conversion feature is attractive to investors. This hybrid security has features of both debt and equity. The owner has a fixed-income security that can become common stock if and when the firm's prosperity makes that feasible. This increases the investor's upside potential while limiting the downside risk. The conversion feature has monetary value. Just how valuable it is depends on both the conversion terms and market conditions. But from an accounting perspective the question raised is how to account for its value. To evaluate the question, consider Illustration 14–18.

FINANCIAL Reporting Case

Q5, p. 797

Convertible bonds can be exchanged for shares of stock at the option of the investor.

Convertible bonds have features of both debt and equity.

Illustration 14–18

Convertible Bonds

On January 1, 2013, HTL Manufacturers issued \$100 million of 8% convertible debentures due 2033 at 103 (103% of face value). The bonds are convertible at the option of the holder into no par common stock at a conversion ratio of 40 shares per \$1,000 bond. HTL recently issued nonconvertible, 20-year, 8% debentures at 98.

It would appear that the conversion feature is valued by the market at \$5 million—the difference between the market value of the convertible bonds, \$103 million, and the market value of the nonconvertible bonds, \$98 million. Some accountants argue that we should record the value of the conversion option in a shareholders' equity account (\$5 million in this case) and the debt value in the bond accounts (\$100 million bonds payable less \$2 million discount). However, counter to that intuitive argument, the currently accepted practice is to record the entire issue price as debt in precisely the same way as for nonconvertible bonds.¹¹ Treating the features as two inseparable parts of a single security avoids the practical difficulty of trying to measure the separate values of the debt and the conversion option.

Because of the inseparability of their debt and equity features, the entire issue price of convertible bonds is recorded as debt, as if they are nonconvertible bonds.

Journal Entry at Issuance—Convertible Bonds

	(\$ in millions)	
Cash (103% × \$100 million)	103	
Convertible bonds payable (face amount)		100
Premium on bonds payable (difference)		3

⁹These gains and losses are subject to the same criteria as other gains and losses for designation as “extraordinary” items: namely, that they be both (a) unusual and (b) infrequent. FASB ASC 470–50–45: Debt—Modifications and Extinguishments—Other Presentation Matters (previously *Statement of Financial Accounting Standards No. 145*, “Rescission of FASB Statements No. 4, 44, and 64, Amendment of FASB Statement No. 13, and Technical Corrections” (Norwalk, Conn.: FASB, 2002)).

¹⁰Remember, there is an inverse relationship between bond prices and interest rates. When the price is higher, the rate (yield) is lower, and vice versa.

¹¹FASB ASC 470–20–25: Debt—Debt with Conversion Options—Recognition (previously “Accounting for Convertible Debt and Debt Issued with Stock Purchase Warrants,” *Accounting Principles Board Opinion No. 14* (New York: APB, 1969)).

Since we make no provision for the separate value of the conversion option, all subsequent entries, including the periodic reduction of the premium, are exactly the same as if these were nonconvertible bonds. So the illustrations and examples of bond accounting we discussed earlier would pertain equally to nonconvertible or convertible bonds.

The value of the conversion feature is not separately recorded.

Additional Consideration

While we normally don't separate the conversion option from the debt for convertible bonds, an exception is when the conversion option is deemed to be a "beneficial conversion feature." That's the case when the conversion option has a positive "intrinsic value" at the time the bonds are issued, meaning the fair value of the stock into which the bonds are convertible exceeds the face amount of the bonds.¹² Suppose, for instance, that HTL's stock in Illustration 14–18 has a fair value of \$30 per share when the bonds are issued. This implies an intrinsic value of the conversion feature of \$5 per share:

Price per share to convert: \$1,000 ÷ 40 shares = \$25 per share	
Fair value of stock at issue date	\$30
Conversion price for shares	25
Intrinsic value of beneficial conversion option per share	<u>\$ 5</u>

Intrinsic value of beneficial conversion feature:

$$100,000 \text{ bonds} \times 40 \text{ shares} = 4,000,000 \text{ shares} \times \$5 \text{ per share} = \$20,000,000$$

The intrinsic value of the conversion option is recorded separately:

	(\$ in millions)	
Cash (103% × \$100 million)	103	
Discount on bonds (to balance)	17	
Convertible bonds payable (face amount)		100
Equity—conversion option (intrinsic value)		20

Where We're Headed

Accounting for convertible debt is likely to change. In fact, the FASB and IASB are working on a joint project on "Financial Instruments with Characteristics of Equity."¹³ A pre-Codification FASB Staff Position gives us another hint, perhaps, of the direction the project might take. For a limited subset of convertible securities not within the scope of current GAAP—those that could possibly be settled in cash rather than shares—companies must divide the proceeds from convertible securities into its two components and record the fair value of the debt as a liability and the conversion option in an equity account. Lending credence to that projection is the fact that international standards already require that convertible debt be divided into its liability and equity elements, so moving in that direction would be a step closer to convergence of U.S. GAAP and IFRS.

● LO14–7

¹²FASB ASC 470–20–25–5: Debt—Debt with Conversion and Other Options—Recognition—Beneficial Conversion Features (previously "Accounting for Convertible Securities with Beneficial Conversion Features or Contingently Adjustable Conversion Ratios," *EITF Issue No. 98-5* (Norwalk, Conn.: FASB, 1998)).

¹³The Boards are developing a classification model that includes consideration of which financial instruments might be divided into separate components of liabilities and equity. In its tentative decisions reached to date as of October, 2010, the Boards had decided that "A bond (or other debt instrument) should be separated into a liability component and an equity component if it is convertible at the option of the holder into a specified number of instruments that will be equity in their entirety when issued."

International Financial Reporting Standards

Journal Entry at Issuance—Convertible Bonds

The components of compound financial instruments such as convertible bonds are valued and reported separately under IFRS.

Convertible bonds. Under IFRS, unlike U.S. GAAP, convertible debt is divided into its liability and equity elements. In Illustration 14–18, if HTL prepared its financial statements in accordance with IFRS, it would record the convertible bonds as follows:

	(\$ in millions)	
Cash ($103\% \times \$100$ million).....	103	
Convertible bonds payable (value of the debt only).....		98*
Equity—conversion option (to balance).....		5

*Notice that the discount is combined with the face amount of the bonds. This is the “net method” that we saw earlier and is the preferred method under IFRS.

In essence, HTL is selling two securities—(1) bonds and (2) an option to convert to stock—for one package price. The bonds represent a liability; the option is shareholders’ equity. Compound instruments such as this one are separated into their liability and equity components in accordance with IAS No. 32.¹⁴ Because the bonds have a separate fair value of \$98 million, we record that amount as the liability and the remaining \$5 million (the difference between the fair value of the convertible bonds, \$103 million, and the \$98 million) as equity. If the fair value of the bonds cannot be determined from an active trading market, that value can be calculated as the present value of the bonds’ cash flows, using the market rate of interest.

When the Conversion Option Is Exercised

If and when the bondholder exercises his or her option to convert the bonds into shares of stock, the bonds are removed from the accounting records and the new shares issued are recorded at the same amount (in other words, at the book value of the bonds). To illustrate, assume that half the convertible bonds issued by HTL Manufacturers are converted at a time when the remaining unamortized premium is \$2 million:

Journal Entry at Conversion

The 2 million shares issued are recorded at the \$51 million book value of the bonds retired.

	(\$ in millions)	
Convertible bonds payable ($\frac{1}{2}$ the account balance)	50	
Premium on bonds payable ($\frac{1}{2}$ the account balance)	1	
Common stock (to balance).....		51

Additional Consideration

The method just described is referred to as the *book value method*, since the new shares are recorded at the book value of the redeemed bonds. It is by far the most popular method in practice. Another acceptable approach, the *market value method*, records the new shares at the market value of the shares themselves or of the bonds, whichever is more determinable. Because the market value most likely will differ from the book value of the bonds, a gain or loss on conversion will result. Assume for illustration that the market value of HTL’s stock is \$30 per share at the time of the conversion:

	(\$ in millions)	
Convertible bonds payable ($\frac{1}{2}$ the account balance)	50	
Premium on bonds payable ($\frac{1}{2}$ the account balance)	1	
Loss on conversion of bonds (to balance)	9	
Common stock [$(50,000 \text{ bonds} \times 40 \text{ shares}) \times \30]		60

¹⁴“Financial Statements: Presentation,” *International Accounting Standard (IAS) No. 32* (IASCF) as amended effective January 1, 2011.

If the 50,000 convertible bonds were held by a single investor, that company would record the conversion as follows:

	(\$ in millions)	
Investment in common stock	51	
Investment in convertible bonds (account balance)		50
Premium on bond investment (account balance)		1

Induced Conversion

Investors often are reluctant to convert bonds to stock, even when share prices have risen significantly since the convertible bonds were purchased. This is because the market price of the convertible bonds will rise along with market prices of the stock. So companies sometimes try to induce conversion. The motivation might be to reduce debt and become a better risk to potential lenders or achieve a lower debt-to-equity ratio.

One way is through the call provision. As we noted earlier, most corporate bonds are callable by the issuing corporation. When the specified call price is less than the conversion value of the bonds (the market value of the shares), calling the convertible bonds provides bondholders with incentive to convert. Bondholders will choose the shares rather than the lower call price.

Occasionally, corporations may try to encourage voluntary conversion by offering an added inducement in the form of cash, stock warrants, or a more attractive conversion ratio. When additional consideration is provided to induce conversion, the fair value of that consideration is considered an expense incurred to bring about the conversion.¹⁵

Any additional consideration provided to induce conversion of convertible debt is recorded as an expense of the period.

Bonds with Detachable Warrants

Another (less common) way to sweeten a bond issue is to include **detachable stock purchase warrants** as part of the security issue. A stock warrant gives the investor an option to purchase a stated number of shares of common stock at a specified *option price*, often within a given period of time. Like a conversion feature, warrants usually mean a lower interest rate and often enable a company to issue debt when borrowing would not be feasible otherwise.

However, unlike the conversion feature for convertible bonds, warrants can be separated from the bonds. This means they can be exercised independently or traded in the market separately from bonds, having their own market price. In essence, two different securities—the bonds and the warrants—are sold as a package for a single issue price. Accordingly, the issue price is allocated between the two different securities on the basis of their fair values. If the independent market value of only one of the two securities is reliably determinable, that value establishes the allocation. This is demonstrated in Illustration 14–19.

On January 1, 2013, HTL Manufacturers issued \$100 million of 8% debentures due 2020 at 103 (103% of face value). Accompanying each \$1,000 bond were 20 warrants. Each warrant permitted the holder to buy one share of no par common stock at \$25 per share. Shortly after issuance, the warrants were listed on the stock exchange at **\$3 per warrant**.

	(\$ in millions)	
Cash (103% × \$100 million)	103	
Discount on bonds payable (difference)	3	
Bonds payable (face amount)		100
Equity—stock warrants* (100,000 bonds × 20 warrants × \$3)		6

*Reported as part of shareholders' equity rather than as a liability.

Illustration 14–19

Bonds with Detachable Warrants

The issue price of bonds with detachable warrants is allocated between the two different securities on the basis of their fair values.

¹⁵FASB ASC 470–20–40: Debt—Debt with Conversion Options—Derecognition (previously “Induced Conversions of Convertible Debt,” *Statement of Financial Accounting Standards No. 84* (Stamford, Conn.: FASB, 1985)).

Additional Consideration

Market imperfections may cause the separate market values not to sum to the issue price of the package. In this event, allocation is achieved on the basis of the **relative market values** of the two securities. Let's say the bonds have a separate market price of \$940 per bond (priced at 94):

Market Values	Dollars	Percent
	(\$ in millions)	
Bonds (100,000 bonds × \$94)	\$ 94	94%
Warrants (100,000 bonds × 20 warrants × \$3)	<u>6</u>	<u>6</u>
Total	\$100	100%

Proportion of Issue Price Allocated to Bonds:

$$\$103 \text{ million} \times 94\% = \$96,820,000$$

Proportion of Issue Price Allocated to Warrants:

$$\$103 \text{ million} \times 6\% = \$6,180,000$$

	(\$ in millions)	
Cash (103% × \$100 million)	103.00	
Discount on bonds payable (\$100 million – \$96.82 million) ...	3.18	
Bonds payable (face amount)		100.00
Equity—stock warrants (\$103 million × 6% = \$6,180,000) ...		6.18

Notice that this is the same approach we used in Chapter 10 to allocate a single purchase price to two or more assets bought for that single price. We also will allocate the total selling price of two equity securities sold for a single issue in proportion to their relative market values in Chapter 18.

If one-half of the warrants (1 million) in Illustration 14–19 are exercised when the market value of HTL's common stock is \$30 per share, 1 million shares would be issued for one warrant each plus the exercise price of \$25 per share.

Journal Entry at Exercise of Detachable Warrants

	(\$ in millions)	
Cash (1,000,000 warrants × \$25)	25	
Equity—stock warrants (1,000,000 warrants × \$3)	3	
Common stock (to balance)		28

The \$30 market value at the date of exercise is not used in valuing the additional shares issued. The new shares are recorded at the total of the previously measured values of both the warrants and the shares.

Concept Review Exercise

ISSUANCE AND EARLY EXTINGUISHMENT OF DEBT

The disclosure notes to the 2013 financial statements of Olswanger Industries included the following:

NOTE 12: BONDS

On September 15, 2012, the Corporation sold bonds with an aggregate principal amount of \$500,000,000 bearing a 14% interest rate. The bonds will mature on September 15, 2022, and are unsecured subordinated obligations of the Corporation. Interest is payable semiannually on March 15 and September 15. The Corporation may redeem the bonds at any time beginning September 15, 2012, as a whole or from time to time in

part, through maturity, at specified redemption prices ranging from 112% of principal in declining percentages of principal amount through 2019 when the percentage is set at 100% of principal amount. The cost of issuing the bonds, totaling \$11,000,000, and the discount of \$5,000,000 are being amortized over the life of the bonds, using the straight-line method and the interest method, respectively. Amortization of these items for the year ended December 31, 2013, was \$960,000 and \$252,000, respectively.

During the year ended December 31, 2013, the Corporation repurchased, in open market transactions, \$200,000,000 in face amount of the bonds for \$219,333,000. The unamortized cost of issuing these bonds and the unamortized discount, \$3,972,000 and \$1,892,000, respectively, have been deducted in the current period.

From the information provided by Olswanger in Note 12, you should be able to recreate some of the journal entries the company recorded in connection with this bond issue.

Required:

1. Prepare the journal entry for the issuance of these bonds on September 15, 2012.
2. Prepare the journal entry for the repurchase of these bonds, assuming the date of repurchase was September 15, 2013. The cash paid to repurchase the bonds was \$219,333,000.

Solution:

1. Prepare the journal entry for the issuance of these bonds on September 15, 2012.

	(\$ in 000s)
Cash (to balance)	484,000
Bond issue costs (given in note)	11,000
Discount on bonds payable (given in note)	5,000
Bonds payable (face amount—given in note)	500,000

2. Prepare the journal entry for the repurchase of these bonds, assuming the date of repurchase was September 15, 2013.

	(\$ in 000s)
Bonds payable (face amount repurchased)	200,000
Loss on early extinguishment (to balance)	25,197
Discount on bonds payable (given in note)	1,892
Bond issue costs (given in note)	3,972
Cash (given in requirement 2)	219,333

OPTION TO REPORT LIABILITIES AT FAIR VALUE

Companies are not required to, but have the option to, value some or all of their financial assets and liabilities at fair value.¹⁶ In Chapter 12, we saw examples of the option applied to financial assets—specifically, companies reporting their investments in securities at fair value. Now, we see how liabilities, too, can be reported at fair value.

How does a liability's fair value change? Remember that there are two sides to every investment. For example, if a company has an investment in **General Motors'** bonds, that investment is an asset to the investor, and the same bonds are a liability to General Motors. So, the same market forces that influence the fair value of an investment in debt securities (interest rates, economic conditions, risk, etc.) influence the fair value of liabilities. For bank loans or other debts that aren't traded on a market exchange, the mix of factors will differ, but in any case, changes in the current market rate of interest will be a major contributor to changes in fair value.

¹⁶FASB ASC 825-10-25-1: Financial Instruments—Overall—Recognition—Fair Value Option (previously “The Fair Value Option for Financial Assets and Financial Liabilities,” *Statement of Financial Accounting Standards No. 159* (Norwalk, Conn.: FASB, 2007)).

PART D

● LO14-6

A company has the option to value financial assets and liabilities at fair value.

Changes in interest rates cause changes in the fair value of liabilities.

Determining Fair Value

For demonstration, we revisit the Masterwear Industries bonds that sold at a discount in Illustration 14–3 on page 801. Now, suppose it's six months later, the market rate of interest has fallen to 11%, and June 30 is the end of Masterwear's fiscal year. A decline in market interest rates means bond prices rise. Let's say that checking market prices in *The Wall Street Journal* indicates that the fair value of the Masterwear bonds on June 30, 2013, is \$714,943. Referring to the amortization schedule on page 804, we see that on the same date, with 5 periods remaining to maturity, the present value of the bonds—their price—would have been \$671,297 if the market rate still had been 14% (7% semiannually).

Additional Consideration

If the bonds are not traded on an open-market exchange, their fair value would not be readily observable. In that case, the next most preferable way to determine fair value would be to calculate the fair value as the present value of the remaining cash flows discounted at the current interest rate. If the rate is 11% (5.5% semiannually), as we're assuming now, that present value would be \$714,943:

	Present Values
Interest	\$ 42,000 × 4.27028* = \$179,352
Principal	\$700,000 × 0.76513 [†] = 535,591
Present value of the bonds	<u>\$714,943</u>

*Present value of an ordinary annuity of \$1: $n = 5$, $i = 5.5\%$.

[†]Present value of \$1: $n = 5$, $i = 5.5\%$

When the bonds were issued, Masterwear had a choice—report this liability (a) at its amortized initial measurement throughout the term to maturity or (b) at its current fair value on each reporting date. Had the company *not* elected the fair value option, on June 30 it would report the \$671,297 we calculated earlier for the amortization schedule. On the other hand, if Masterwear had elected the fair value option, it would report the bonds at their current fair value, \$714,943.

Reporting Changes in Fair Value

If a company chooses the option to report at fair value, then it must report *changes* in fair value in the income statement. In our example, Masterwear would report the increase in fair value from \$666,633 to \$714,943, or \$48,310. Note, though, that part of the change is due to the unpaid interest we discussed earlier. Here's a recap.

At June 30, 2013, the interest that accrued during the first six months was \$46,664, but only \$42,000 of that was paid in cash; so the debt balance increased by the \$4,664 unpaid interest. We recorded the following entry:

Bonds payable
Less: Discount
Carrying value

Interest expense	46,664	
Discount on bonds payable		4,664
Cash		42,000

Amortizing the discount in this entry increased the book value of the liability by \$4,664 to \$671,297:

January 1 carrying value and fair value	\$666,633
Increase from discount amortization	<u>4,664</u>
June 30 carrying value (amortized initial amount)	\$671,297

FAIR VALUE RISES. Comparing that amount with the fair value of the bonds on that date provides the amount needed to adjust the bonds to their fair value.

June 30 fair value	\$714,943
June 30 carrying value (amortized initial amount)	<u>671,297</u>
Fair value adjustment needed	\$ 43,646

When the fair value option is elected, we report changes in fair value in the income statement.

Rather than increasing the bonds payable account itself, though, we instead adjust it *indirectly* with a credit to a valuation allowance (or contra) account:

Unrealized holding loss	43,646	
Fair value adjustment (\$714,943 – 671,297)		43,646

Masterwear must recognize the unrealized holding loss in the June 30, 2013, income statement. Notice that the effect on earnings is:

Interest expense	\$46,664
Unrealized holding loss	<u>43,646</u>
Net decrease in earnings	\$90,310

Electing the fair value option means reporting unrealized holding gains and losses in earnings.

The new carrying value of the bonds is now the fair value:

Bonds payable	\$700,000
Less: Discount (\$33,367 – 4,664)	<u>(28,703)</u>
Amortization schedule value	\$671,297
Plus: Fair value adjustment	<u>43,646</u>
Carrying value, June 30	\$714,943

The *credit* balance in the fair value adjustment *increases* the carrying value; the discount *reduces* it.

FAIR VALUE FALLS. Suppose the fair value at June 30, 2013, had been \$650,000 instead of \$714,943. In that case, Masterwear would record a *reduction* in the liability from \$671,297 to \$650,000, or \$21,297. The entry would be:

Fair value adjustment (\$671,297 – 650,000)	21,297	
Unrealized holding gain		21,297

The effect on earnings in the second scenario is:

Interest expense	\$46,664
Unrealized holding gain	<u>(21,297)</u>
Net decrease in earnings	\$25,367

The new carrying value of the bonds is the fair value:

Bonds payable	\$700,000
Less: Discount (\$33,367 – 4,664)	<u>(28,703)</u>
Amortization schedule value	\$671,297
Less: Fair value adjustment	<u>(21,297)</u>
Carrying value, June 30	\$650,000

The *debit* balance in the fair value adjustment *reduces* the carrying value; as does the discount.

The outstanding balance in the last column of the amortization schedule at any date up to and including the balance at maturity will be the bonds payable less the discount (for instance \$671,297 at June 30, 2013, on page 803). But the amount we report in the balance sheet at any reporting date, the fair value, will be that amortized initial amount from the amortization schedule plus or minus the fair value adjustment. That's the \$714,943 or the \$650,000 in the two scenarios above.

Companies choose which financial instruments to report at fair value.

Mix and Match

Remember from our discussions in prior chapters that if a company elects the fair value option, it's not necessary that the company elect the option to report all of its financial instruments at fair value or even all instruments of a particular type at fair value. They can "mix and match" on an instrument-by-instrument basis. So Masterwear, for instance, might choose to report these bonds at fair value but all its other liabilities at their amortized initial measurement. However, the company must make the election when the item originates, in this case when the bonds are issued, and is not allowed to switch methods once a method is chosen.

Counterintuitive Effect

As a result of adjusting for fair value changes in its debt, **J.P. Morgan Chase & Co.** reported an impressive \$1.9 billion gain in its 2011 third-quarter income statement. This is reason for the company's shareholders and creditors to celebrate, right? Not so fast. It's true that the company followed the proper procedure for recording a decline in the fair value of its debt, which was to record a gain as we saw demonstrated above. But suppose the reason the fair value declined was that the company's financial situation had worsened, resulting in increased credit risk, and the increased credit risk caused the fair value of liabilities to decline. This, in fact, is the reason for most if not all of J.P. Morgan's huge gain. Higher income because of worsening credit ratings? Many see that as counterintuitive.

Illustration 14–20 presents an excerpt from an online report that followed the earnings announcement.

Illustration 14–20

Earnings Report—
J.P. Morgan Chase

Real World Financials

Retail and investment banking giant JPMorgan Chase & Co. (JPM) late Wednesday posted higher-than-expected third quarter earnings, but results were bolstered by a one-time pretax gain. The New York-based company reported third quarter net income of \$4.3 billion, or \$1.02 per share, compared with \$4.4 billion, or \$1.01 per share, in the year-ago period.

On average, Wall Street analysts expected a smaller profit of 91 cents per share. However, JPM's results were bolstered by a one-time \$1.9 billion gain resulting from a revaluation of its debt. . . .

JPMorgan Chase shares fell 46 cents, or - 1.4%, in premarket trading Thursday.

Source: "JPMorgan Chase Q3 Earnings Beat View, Aided by Accounting Gain," Dividend.com, October 13, 2011.

It would appear from the decline in stock price, despite surprisingly high income, that market analysts did not view the gain that resulted from a worsening of credit risk to be equivalent to other gains. The FASB is aware of this counterintuitive result of its accounting standard and requires companies to clearly disclose such gains. The FASB also is reconsidering the issue as part of its project to revise accounting for financial assets and liabilities.

● LO14–7

International Financial Reporting Standards

Fair Value Option. International accounting standards are more restrictive than U.S. standards for determining when firms are allowed to elect the fair value option for financial assets and liabilities. Under *IFRS No. 39*, companies can elect the fair value option only in specific circumstances.

To avoid misuse, the fair value option is limited to only those financial instruments falling into one of the following categories:

- A group of financial assets, financial liabilities, or both is managed and its performance is evaluated on a fair value basis, in accordance with a documented risk management or investment strategy.

(continued)

(concluded)

- The fair value option designation eliminates or significantly reduces an “accounting mismatch” that would otherwise arise if we measured the assets or liabilities or recognized gains and losses on them on different measurement bases.¹⁷

Although U.S. GAAP guidance indicates that the intent of the fair value option under U.S. GAAP is to address these sorts of circumstances, it does not require that those circumstances exist.

Where We're Headed

Under a proposed change in the way we account for financial assets and liabilities, financial assets would be measured at (a) fair value with changes reported in net income (FV-NI), (b) at fair value through OCI (FV-OCI), or (c) at amortized cost, the classification depending on the assets' characteristics and the company's business strategy for holding the assets. This approach is described in the Where We're Headed section of Chapter 12. Most *liabilities* would be accounted for at amortized cost as described in this chapter. The fair value option, though, would no longer be permitted except in unique circumstances. Companies would, though, be required to parenthetically present fair value on the face of the balance sheet for all financial liabilities measured at amortized cost (except demand deposit liabilities of banks).

The proposed change is a result of a joint project on financial instruments by the International Accounting Standards Board (IASB) and the FASB as part of a broader goal of achieving a single set of high-quality global accounting standards. At the time this text is being written, a final standard is expected to be issued in 2012.

Financial Reporting Case Solution

- 1. What does it mean that the bonds are first mortgage bonds? What effect does that have on financing?** (p. 799) A mortgage bond is backed by a lien on specified real estate owned by the issuer. This makes it less risky than unsecured debt, so Service Leader can expect to be able to sell the bonds at a higher price (lower interest rate).
- 2. From Service Leader's perspective, why are the bonds callable? What does that mean?** (p. 799) The call feature gives Service Leader some protection against being stuck with relatively high-cost debt in case interest rates fall during the 15 years to maturity. Service Leader can buy back, or call, the bonds from bondholders before the 15-year maturity date, after June 30, 2012. The call price is prespecified at 103 percent of the face value—\$1,030 per \$1,000 bond.
- 3. How will it be possible to sell bonds paying investors 6.25% when other, similar investments will provide the investors a return of 6.5%?** (p. 799) Service Leader will be able to sell its 6.25% bonds in a 6.5% market only by selling them at a discounted price, below face amount. Bonds are priced by the marketplace to yield the market rate of interest for securities of similar risk and maturity. The price will be the present value of all the periodic cash interest payments (face amount \times stated rate) plus the present value of the principal payable at maturity, both discounted at the market rate.

¹⁷A basic principle in IAS 39 is that derivatives are carried at fair value. Gains and losses on many derivatives are reported immediately in the income statement. However, derivatives are commonly used to hedge assets and liabilities that, instead, are measured at cost, amortized cost, or at fair value with gains and losses recognized in equity. This creates a mismatch in the timing of gain and loss recognition.

4. **Would accounting differ if the debt were designated as notes rather than bonds?** (p. 810) No. Other things being equal, whether they're called bonds, notes, or some other form of debt, the same accounting principles apply. They will be recorded at present value and interest will be recorded at the market rate over the term to maturity.
5. **Why might the company choose to make the bonds convertible into common stock?** (p. 820) Convertible bonds can be converted at the option of the bondholders into shares of stock. Sometimes the motivation for issuing convertible bonds rather than straight debt is to use the bonds as a medium of exchange in mergers and acquisitions, as a way for smaller firms or debt-heavy companies to obtain access to the bond market, or as an indirect way to issue stock when there is shareholder resistance to direct issuance of additional equity. None of these seems pertinent to Service Leader. The most likely reason is to sell at a higher price. The conversion feature is attractive to investors. Investors have a fixed-income security that can become common stock if circumstances make that attractive. The investor has additional possibilities for higher returns, with downside risk limited by the underlying debt. ●

The Bottom Line

- **LO14-1** A liability requires the future payment of cash in specified amounts at specified dates. As time passes, interest accrues on debt at the effective interest rate times the amount of the debt outstanding during the period. This same principle applies regardless of the specific form of the liability. (p. 797)
- **LO14-2** Forces of supply and demand cause a bond to be priced to yield the market rate, calculated as the present value of all the cash flows required, where the discount rate is the market rate. Interest expense is calculated as the effective market rate of interest multiplied by the outstanding balance (during the interest period). A company is permitted to allocate a discount or a premium equally to each period over the term to maturity if doing so produces results that are not materially different from the interest method. (p. 799)
- **LO14-3** In concept, notes are accounted for in precisely the same way as bonds. When a note is issued with an unrealistic interest rate, the effective market rate is used both to determine the amount recorded in the transaction and to record periodic interest thereafter. (p. 810)
- **LO14-4** In the balance sheet, disclosure should include, for all long-term borrowings, the aggregate amounts maturing and sinking fund requirements (if any) for each of the next five years. Supplemental disclosures are needed for (a) off-balance-sheet credit or market risk, (b) concentrations of credit risk, and (c) the fair value of financial instruments. (p. 814)
- **LO14-5** A gain or loss on early extinguishment of debt should be recorded for the difference between the reacquisition price and the carrying amount of the debt. Convertible bonds are accounted for as straight debt, but the value of the equity feature is recorded separately for bonds issued with detachable warrants. (p. 819)
- **LO14-6** Companies are not required to, but have the option to, value some or all of their liabilities at fair value. If the option is elected, an increase (or decrease) in fair value from one balance sheet to the next is reported as a loss (or gain) in the income statement. It's a one-time election for each liability when the liability is created. (p. 825)
- **LO14-7** U.S. GAAP and IFRS are generally compatible with respect to accounting for bonds and long-term notes. Some differences exist in determining which securities are reported as debt, the way convertible securities and debt issuance costs are reported, and when the fair value option can be elected. (pp. 801, 809, 821, and 828). ●

APPENDIX 14A

Bonds Issued Between Interest Dates

All bonds sell at their price plus any interest that has accrued since the last interest date.

In Part A of this chapter, we assumed that the bonds were issued on the day they were dated (date printed in the indenture contract). But suppose a weak market caused a delay in selling the bonds until two months after that date (four months before semiannual interest was to be paid). In that case, the buyer would be asked to pay the seller **accrued interest** for two months in addition to the price of the bonds.

For illustration, assume that in Illustration 14–1 on page 800, Masterwear was unable to sell the bonds in the previous example until March 1—two months after they are dated. This variation is shown in Illustration 14A–1. United would pay the price of the bonds (\$700,000) plus \$14,000 accrued interest:

$$\begin{array}{ccccccc}
 \$700,000 & \times & 12\% & \times & \frac{2}{12} & = & \$14,000 \\
 \text{Face} & & \text{Annual} & & \text{Fraction of the} & & \text{Accrued} \\
 \text{amount} & & \text{rate} & & \text{annual period} & & \text{interest}
 \end{array}$$

At Issuance (March 1)	
Masterwear (Issuer)	
Cash (price plus accrued interest)	714,000
Bonds payable (face amount)	700,000
Interest payable (accrued interest determined above)	14,000
United (Investor)	
Investment in bonds (face amount)	700,000
Interest receivable (accrued interest determined above)	14,000
Cash (price plus accrued interest)	714,000

Illustration 14A–1

Bonds Sold at Face Amount between Interest Dates

When Masterwear pays semiannual interest on June 30, a full six months' interest is paid. But having received two months' accrued interest in advance, Masterwear's net interest expense will be four months' interest, for the four months the bonds have been outstanding at that time. Likewise, when United receives six months' interest—after holding the bonds for only four months—United will net only the four months' interest to which it is entitled: ●

Since the investor will hold the bonds for only four months before receiving six months' interest, two months' accrued interest must be added to the price paid.

At the First Interest Date (June 30)	
Masterwear (Issuer)	
Interest expense (6 mo. – 2 mo. = 4 mo.)	28,000
Interest payable ¹⁸ (accrued interest determined above)	14,000
Cash (stated rate × face amount)	42,000
United (Investor)	
Cash (stated rate × face amount)	42,000
Interest receivable (accrued interest determined above).....	14,000
Interest revenue (6 mo. – 2 mo. = 4 mo.)	28,000

The issuer incurs interest expense, and the investor earns interest revenue, for only the four months the bonds are outstanding.

Troubled Debt Restructuring

APPENDIX 14B

A respected real estate developer, Brillard Properties, was very successful developing and managing a number of properties in the southeastern United States. To finance these investments, the developer had borrowed hundreds of millions of dollars from several regional banks. For years, events occurred as planned. The investments prospered. Cash flow was high. Interest payments on the debt were timely and individual loans were repaid as they matured.

Almost suddenly, however, the real estate climate soured. Investments that had provided handsome profits now did not provide the cash flow necessary to service the debt. Bankers

¹⁸Some accountants prefer to credit interest expense, rather than interest payable, when the bonds are sold. When that is done, this entry would require simply a debit to interest expense and a credit to cash for \$42,000. The interest expense account would then reflect the same net debit of four months' interest (\$42,000 – \$14,000).

Interest Expense	
6 months	2 months
4 months	

Similarly, the investor could debit interest revenue, rather than interest receivable when buying the bonds.

A sharp rise in debt restructurings accompanied the 2008/2009 economic crisis.

who had loaned substantial funds to Brillard now faced a dilemma. Because contractual interest payments were unpaid, the bankers had the legal right to demand payment, which would force the developer to liquidate all or a major part of the properties to raise the cash. Sound business practice? Not necessarily.

If creditors force liquidation, they then must share among themselves the cash raised from selling the properties—at forced sale prices. Believing the developer’s financial difficulties were caused by temporary market forces, not by bad management, the bankers felt they could minimize their losses by *restructuring* the debt agreements, rather than by forcing liquidation.

When changing the original terms of a debt agreement is motivated by financial difficulties experienced by the debtor (borrower), the new arrangement is referred to as a **troubled debt restructuring**. By definition, a troubled debt restructuring involves some concessions on the part of the creditor (lender). In the first half of 2009, the economic crisis prompted nearly 40 companies to negotiate such deals with their creditors, a huge increase over the handful that normally would do so during a six-month period.¹⁹ A troubled debt restructuring may be achieved in either of two ways:

1. The debt may be *settled* at the time of the restructuring.
2. The debt may be *continued*, but with *modified terms*.

Debt Is Settled

In the situation described above, one choice the bankers had was to try to actually settle the debt outright at the time of the troubled debt restructuring. For instance, a bank holding a \$30 million note from the developer might agree to accept a property valued at, let’s say, \$20 million as final settlement of the debt. In that case, the developer has a \$10 million gain equal to the difference between the carrying amount of the debt and the fair value of the property transferred. The debtor may need to adjust the carrying amount of an asset to its fair value prior to recording its exchange for a debt. The developer in our example, for instance, would need to change the recorded amount for the property specified in the exchange agreement if it is carried at an amount other than its \$20 million fair value. In such an instance, an ordinary gain or loss on disposition of assets should be recorded as shown in Illustration 14B–1.

In all areas of accounting, a noncash transaction is recorded at fair value.

Illustration 14B–1 Debt Settled

An asset is adjusted to fair value prior to recording its exchange for a debt.

First Prudent Bank agrees to settle Brillard’s \$30 million debt in exchange for property having a fair value of \$20 million. The carrying amount of the property on Brillard’s books is \$17 million:

	(\$ in millions)	
Land (\$20 million minus \$17 million)	3	
Gain on disposition of assets		3
Note payable (carrying amount)	30	
Gain on troubled debt restructuring		10
Land (fair value)		20

The payment to settle a debt in a troubled debt restructuring might be cash, or a noncash asset (as in the example here), or even shares of the debtor’s stock. An example of shares of stock given in exchange for debt forgiveness is the celebrated reorganization of TWA in 1992 (since acquired by American Airlines), when creditors received a 55% stake in the company’s common shares in return for forgiving about \$1 billion of the airline’s \$1.5 billion debt. In any case, the debtor’s gain is the difference between the carrying amount of the debt and the fair value of the asset(s) or equity securities transferred.

Debt Is Continued, but with Modified Terms

We assumed in the previous example that First Prudent Bank agreed to accept property in full settlement of the debt. A more likely occurrence would be that the bank allows the debt to continue, but modifies the terms of the debt agreement to make it easier for

¹⁹David Henry, “The Time Bomb in Corporate Debt,” *BusinessWeek*, July 15, 2009.

the debtor to comply. The bank might agree to reduce or delay the scheduled *interest payments*. Or, it may agree to reduce or delay the *maturity amount*. Often a troubled debt restructuring will call for some combination of these concessions. Distressed by the 2008/2009 economic downturn, amusement park operator **Six Flags** persuaded a group of creditors to trim its debt by 5%, or \$130 million, a restructuring designed to give Six Flags a financial cushion going into its busy 2009 summer season and an opportunity to recover its interest-paying ability.

Let's say the stated interest rate on the note in question is 10% and annual interest payments of \$3 million (10% × \$30 million) are payable in December of each of two remaining years to maturity. Also assume that the developer was unable to pay the \$3 million interest payment for the year just ended. This means that the amount owed—the carrying amount (or book value) of the debt—is \$33 million (\$30 million plus one year's accrued interest).

The way the debtor accounts for the restructuring depends on the extent of the reduction in cash payments called for by the restructured arrangement. More specifically, the accounting procedure depends on whether, under the new agreement, total cash payments (a) are *less than* the carrying amount of the debt or (b) still *exceed* the carrying amount of the debt.

WHEN TOTAL CASH PAYMENTS ARE LESS THAN THE CARRYING AMOUNT OF THE DEBT

By the original agreement, the debtor was to pay at maturity the \$30 million loaned, plus enough periodic interest to provide a 10% effective rate of return. If the new agreement calls for less cash than the \$33 million now owed, interest is presumed to have been eliminated.

As one of many possibilities, suppose the bank agrees to (1) forgive the interest accrued from last year, (2) reduce the two remaining interest payments from \$3 million each to \$2 million each, and (3) reduce the face amount from \$30 million to \$25 million. Clearly, the debtor will pay less by the new agreement than by the original one. In fact, if we add up the total payments called for by the new agreement, the total [(\$2 million × 2) plus \$25 million] is less than the \$33 million carrying amount. Because the \$29 million does not exceed the amount owed, the restructured debt agreement no longer provides interest on the debt. Actually, the new payments are \$4 million short of covering the debt itself. So, after the debt restructuring, no interest expense is recorded. All subsequent cash payments are considered to be payment of the debt itself. Consider Illustration 14B–2.

The carrying amount of a debt is the current balance of the primary debt plus any accrued (unpaid) interest.

Two quite different situations are created when the terms of a debt are modified, depending on whether the cash payments are reduced to the extent that interest is eliminated.

Brillard Properties owes First Prudent Bank \$30 million under a 10% note with two years remaining to maturity. Due to financial difficulties of the developer, the previous year's interest (\$3 million) was not paid. First Prudent Bank agrees to:

1. Forgive the interest accrued from last year.
2. Reduce the remaining two interest payments to \$2 million each.
3. Reduce the principal to \$25 million.

Analysis:

Carrying amount		\$30 million + \$3 million =	\$33 million
Future payments		(\$2 million × 2) + \$25 million =	29 million
Gain			\$ 4 million

(\$ in millions)

Accrued interest payable (10% × \$30 million)	3		
Note payable (\$30 million – 29 million)	1		
Gain on debt restructuring			4

Illustration 14B–2

Cash Payments Less than the Debt

Carrying Amount		
Before Restr.	Adj.	After Restr.
\$30	(1)	\$29
3	(3)	0
\$33	(4)	\$29

After restructuring, no interest expense is recorded. All cash payments are considered to be payment of the note itself.

When the total future cash payments are less than the carrying amount of the debt, the difference is recorded as a gain at the date of restructure. No interest should be recorded thereafter. That is, all subsequent cash payments result in reductions of principal.

The \$25 million payment at maturity reduces the note to zero.

At Each of the Two Interest Dates		(\$ in millions)
Note payable		2
Cash (revised "interest" amount)		2
At Maturity		
Note payable		25
Cash (revised principal amount)		25

WHEN TOTAL CASH PAYMENTS EXCEED THE CARRYING AMOUNT OF THE DEBT

Let's modify the example in the previous section. Now suppose the bank agrees to delay the due date for all cash payments until maturity and accept \$34,333,200 at that time in full settlement of the debt. Rather than just reducing the cash payments as in the previous illustration, the payments are delayed. It is not the nature of the change that creates the need to account differently for this situation, but the amount of the total cash payments under the agreement relative to the carrying amount of the debt. This situation is demonstrated in Illustration 14B-3.

Illustration 14B-3

Cash Payments More than the Debt

The discount rate that equates the present value on the debt (\$33 million) and its future value (\$34,333,200) is the effective rate of interest.

Brillard Properties owes First Prudent Bank \$30 million under a 10% note with two years remaining to maturity. Due to Brillard's financial difficulties, the previous year's interest (\$3 million) was not paid. First Prudent Bank agrees to:

1. Delay the due date for all cash payments until maturity.
2. Accept \$34,333,200 at that time in full settlement of the debt.

Analysis:	Future payments	\$34,333,200
	Carrying amount	\$30 million + \$3 million = 33,000,000
	Interest	\$ 1,333,200

Calculation of the New Effective Interest Rate

- $\$33,000,000 \div 34,333,200 = .9612$, the Table 2 value for $n = 2, i = ?$
- In row 2 of Table 2, the number .9612 is in the **2%** column. So, this is the new effective interest rate.

As long as cash payments exceed the amount owed there will be interest—although at a lower effective rate.

Unpaid interest is accrued at the effective rate times the carrying amount of the note.

The carrying amount of the debt is increased by the unpaid interest from the previous year.

The total of the accrued interest account plus the note account is equal to the amount scheduled to be paid at maturity.

Now the total payments called for by the new agreement, \$34,333,200, exceed the \$33 million carrying amount. Because the payments exceed the amount owed, the restructured debt agreement still provides interest on the debt—but less than before the agreement was revised. No longer is the effective rate 10%. The accounting objective now is to determine what the new effective rate is and *record interest for the remaining term of the loan at that new, lower rate*, as shown in Illustration 14B-3.

Because the total future cash payments are not less than the carrying amount of the debt, no reduction of the existing debt is necessary and no entry is required at the time of the debt restructuring. Even though no cash is paid until maturity under the restructured debt agreement, interest expense still is recorded annually—but at the new rate.

At the End of the First Year		
Interest expense [2% × (\$30,000,000 + 3,000,000)].....		660,000
Accrued interest payable.....		660,000
At the End of the Second Year		
Interest expense [2% × (\$30,000,000 + 3,660,000)].....		673,200
Accrued interest payable.....		673,200
At Maturity (End of the Second Year)		
Note payable.....	30,000,000	
Accrued interest payable (\$3,000,000 + 660,000 + 673,200)	4,333,200	
Cash (required by new agreement)		34,333,200

Additional Consideration

To keep up with the changing amounts, it may be convenient to prepare an amortization schedule for the debt.

Year	Cash Interest	Effective Interest (2% × Outstanding balance)	Increase in Balance	Outstanding Balance
				33,000,000
1	0	.02 (33,000,000) = 660,000	660,000	33,660,000
2	0	.02 (33,660,000) = 673,200	673,200	34,333,200
	0	1,333,200	1,333,200	

An amortization schedule is particularly helpful if there are several years remaining to maturity.

In our example, the restructured debt agreement called for a single cash payment at maturity (\$34,333,200). If more than one cash payment is required (as in the agreement in our earlier example), calculating the new effective rate is more difficult. The concept would remain straightforward: (1) determine the interest rate that provides a present value of all future cash payments that is equal to the current carrying amount and (2) record the interest at that rate thereafter. Mechanically, though, the computation by hand would be cumbersome, requiring a time-consuming trial-and-error calculation. Since our primary interest is understanding the concepts involved, we will avoid the mathematical complexities of such a situation.

You also should be aware that when a restructuring involves modification of terms, accounting for a liability by the debtor, as described in this section, and accounting for a receivable by the creditor (essentially an impairment of a receivable), which was described in Chapter 7, are inconsistent. You may recall that when a creditor's investment in a receivable becomes impaired, due to a troubled debt restructuring or for any other reason, the receivable is remeasured based on the discounted present value of currently expected cash flows at the loan's original effective rate (regardless of the extent to which expected cash receipts have been reduced). For ease of comparison, the example in this chapter (Illustration 14B-3) describes the same situation as the example in Chapter 7 (Illustration 7B-2). There is no conceptual justification for the asymmetry between debtors' and creditors' accounting for troubled debt restructurings. The FASB will likely reconsider debtors' accounting in the future. ●

Questions For Review of Key Topics

- Q 14-1 How is periodic interest determined for outstanding liabilities? For outstanding receivables? How does the approach compare from one form of debt instrument (say bonds payable) to another (say notes payable)?
- Q 14-2 As a general rule, how should long-term liabilities be reported on the debtor's balance sheet?
- Q 14-3 How are bonds and notes the same? How do they differ?
- Q 14-4 What information is contained in a bond indenture? What purpose does it serve?
- Q 14-5 On January 1, 2013, Brandon Electronics issued \$85 million of 11.5% bonds, dated January 1. The market yield for bonds of maturity issued by similar firms in terms of riskiness is 12.25%. How can Brandon sell debt paying only 11.5% in a 12.25% market?

- Q 14-6** How is the price determined for a bond (or bond issue)?
- Q 14-7** A zero-coupon bond pays no interest. Explain.
- Q 14-8** When bonds are issued at a premium the debt declines each period. Explain.
- Q 14-9** Compare the two commonly used methods of determining interest on bonds.
- Q 14-10** GAAP requires that debt issue costs be recorded separately and amortized over the term of the related debt. Describe a logical alternative to this accounting treatment.
- Q 14-11** When a note's stated rate of interest is unrealistic relative to the market rate, the concept of substance over form should be employed. Explain.
- Q 14-12** Mandatorily redeemable shares obligate the issuing company to buy back the shares in exchange for cash or other assets. Where in the balance sheet are these securities reported?
- Q 14-13** How does an installment note differ from a note for which the principal is paid as a single amount at maturity?
- Q 14-14** Long-term debt can be reported either (a) as a single amount, net of any discount or increased by any premium or (b) at its face amount accompanied by a separate valuation account for the discount or premium. Any portion of the debt to be paid during the upcoming year, or operating cycle if longer, should be reported as a current amount. Regarding amounts to be paid in the future, what additional disclosures should be made in connection with long-term debt?
- Q 14-15** Early extinguishment of debt often produces a gain or a loss. How is the gain or loss determined?
- Q 14-16** What criteria are used to classify a gain or loss on early extinguishment of debt as an extraordinary item in the income statement?
- Q 14-17** Both convertible bonds and bonds issued with detachable warrants have features of both debt and equity. How does the accounting treatment differ for the two hybrid securities? Why is the accounting treatment different?
- Q 14-18** At times, companies try to induce voluntary conversion by offering an added incentive—maybe cash, stock warrants, or a more favorable conversion ratio. How is such an inducement accounted for? How is it measured?
- Q 14-19** Cordova Tools has bonds outstanding during a year in which the market rate of interest has risen. If Cordova has elected the fair value option for the bonds, will it report a gain or a loss on the bonds for the year? Explain.
-  **IFRS Q 14-20** If a company prepares its financial statements according to International Financial Reporting Standards, how would it account for convertible bonds it issues for \$12.5 million? What is the conceptual justification?
- Q 14-21** (Based on Appendix A) Why will bonds always sell at their price plus any interest that has accrued since the last interest date?
- Q 14-22** (Based on Appendix B) When the original terms of a debt agreement are changed because of financial difficulties experienced by the debtor (borrower), the new arrangement is referred to as a *troubled debt restructuring*. Such a restructuring can take a variety of forms. For accounting purposes, these possibilities are categorized. What are the accounting classifications of troubled debt restructurings?
- Q 14-23** (Based on Appendix B) Pratt Industries owes First National Bank \$5 million but, due to financial difficulties, is unable to comply with the original terms of the loan. The bank agrees to settle the debt in exchange for land having a fair value of \$3 million. The carrying amount of the property on Pratt's books is \$2 million. For the reporting period in which the debt is settled, what amount(s) will Pratt report on its income statement in connection with the troubled debt restructuring?
- Q 14-24** (Based on Appendix B) The way a debtor accounts for the restructuring depends on the extent of the reduction in cash payments called for by the restructured arrangement. Describe, in general, the accounting procedure for the two basic cases: when, under the new agreement, total cash payments (a) are less than the carrying amount of the debt or (b) still exceed the carrying amount of the debt.

Brief Exercises

BE 14-1
Bond interest

● LO14-1

Holiday Brands issued \$30 million of 6%, 30-year bonds for \$27.5 million. What is the amount of interest that Holiday will pay semiannually to bondholders?

BE 14-2
Determining the price of bonds

● LO14-2

A company issued 5%, 20-year bonds with a face amount of \$80 million. The market yield for bonds of similar risk and maturity is 6%. Interest is paid semiannually. At what price did the bonds sell?

- BE 14-3**
Determining the price of bonds
● LO14-2
- A company issued 6%, 15-year bonds with a face amount of \$75 million. The market yield for bonds of similar risk and maturity is 6%. Interest is paid semiannually. At what price did the bonds sell?
- BE 14-4**
Determining the price of bonds
● LO14-2
- A company issued 5%, 20-year bonds with a face amount of \$100 million. The market yield for bonds of similar risk and maturity is 4%. Interest is paid semiannually. At what price did the bonds sell?

Effective interest on bonds
● LO14-2
- On January 1, a company issued 7%, 15-year bonds with a face amount of \$90 million for \$82,218,585 to yield 8%. Interest is paid semiannually. What was interest expense at the effective interest rate on June 30, the first interest date?
- BE 14-6**
Effective interest on bonds
● LO14-2
- On January 1, a company issued 3%, 20-year bonds with a face amount of \$80 million for \$69,033,776 to yield 4%. Interest is paid semiannually. What was the interest expense at the effective interest rate on the December 31 annual income statement?
- BE 14-7**
Straight-line interest on bonds
● LO14-2
- On January 1, a company issued 3%, 20-year bonds with a face amount of \$80 million for \$69,033,776 to yield 4%. Interest is paid semiannually. What was the straight-line interest expense on the December 31 annual income statement?
- BE 14-8**
Investment in bonds
● LO14-2
- On January 1, a company purchased 3%, 20-year corporate bonds for \$69,033,776 as an investment. The bonds have a face amount of \$80 million and are priced to yield 4%. Interest is paid semiannually. Prepare the journal entry to record revenue at the effective interest rate on December 31, the second interest payment date.
- BE 14-9**
Note with unrealistic interest rate
● LO14-3
- Snipes Construction paid for earth-moving equipment by issuing a \$300,000, 3-year note that specified 2% interest to be paid on December 31 of each year. The equipment's retail cash price was unknown, but it was determined that a reasonable interest rate was 5%. At what amount should Snipes record the equipment and the note? What journal entry should it record for the transaction?
- BE 14-10**
Installment note
● LO14-3
- On January 1, a company borrowed cash by issuing a \$300,000, 5%, installment note to be paid in three equal payments at the end of each year beginning December 31. What would be the amount of each installment? Prepare the journal entry for the second installment payment.
- BE 14-11**
Early extinguishment; effective interest
● LO14-5
- A company retired \$60 million of its 6% bonds at 102 (\$61.2 million) before their scheduled maturity. At the time, the bonds had a remaining discount of \$2 million. Prepare the journal entry to record the redemption of the bonds.
- BE 14-12**
Bonds with detachable warrants
● LO14-5
- Hoffman Corporation issued \$60 million of 5%, 20-year bonds at 102. Each of the 60,000 bonds was issued with 10 detachable stock warrants, each of which entitled the bondholder to purchase, for \$20, one share of \$1 par common stock. At the time of sale, the market value of the common stock was \$25 per share and the market value of each warrant was \$5. Prepare the journal entry to record the issuance of the bonds.
- BE 14-13**
Convertible bonds
● LO14-5
- Hoffman Corporation issued \$60 million of 5%, 20-year bonds at 102. Each of the 60,000 bonds was convertible into one share of \$1 par common stock. Prepare the journal entry to record the issuance of the bonds.
- BE 14-14**
Reporting bonds at fair value
● LO14-6
- AI Tool and Dye issued 8% bonds with a face amount of \$160 million on January 1, 2013. The bonds sold for \$150 million. For bonds of similar risk and maturity the market yield was 9%. Upon issuance, AI elected the option to report these bonds at their fair value. On June 30, 2013, the fair value of the bonds was \$145 million as determined by their market value on the NASDAQ. Will AI report a gain or will it report a loss when adjusting the bonds to fair value? If the change in fair value is attributable to a change in the interest rate, did the rate increase or decrease?

Exercises

An alternate exercise and problem set is available on the text website: www.mhhe.com/spiceland7e

E 14-1
Bond valuation
● LO14-2

Your investment department has researched possible investments in corporate debt securities. Among the available investments are the following \$100 million bond issues, each dated January 1, 2013. Prices were determined by underwriters at different times during the last few weeks.

	Company	Bond Price	Stated Rate
1.	BB Corp.	\$109 million	11%
2.	DD Corp.	\$100 million	10%
3.	GG Corp.	\$ 91 million	9%

Each of the bond issues matures on December 31, 2032, and pays interest semiannually on June 30 and December 31. For bonds of similar risk and maturity, the market yield at January 1, 2013, is 10%.

Required:

Other things being equal, which of the bond issues offers the most attractive investment opportunity at the prices stated? the least attractive? Why?

E 14-2
Determine the price of bonds in various situations
● LO14-2

Determine the price of a \$1 million bond issue under each of the following independent assumptions:

	Maturity	Interest Paid	Stated Rate	Effective (Market) Rate
1.	10 years	annually	10%	12%
2.	10 years	semiannually	10%	12%
3.	10 years	semiannually	12%	10%
4.	20 years	semiannually	12%	10%
5.	20 years	semiannually	12%	12%

E 14-3
Determine the price of bonds; issuance; effective interest
● LO14-2

The Bradford Company issued 10% bonds, dated January 1, with a face amount of \$80 million on January 1, 2013. The bonds mature on December 31, 2022 (10 years). For bonds of similar risk and maturity, the market yield is 12%. Interest is paid semiannually on June 30 and December 31.

Required:

- Determine the price of the bonds at January 1, 2013.
- Prepare the journal entry to record their issuance by The Bradford Company on January 1, 2013.
- Prepare the journal entry to record interest on June 30, 2013 (at the effective rate).
- Prepare the journal entry to record interest on December 31, 2013 (at the effective rate).

E 14-4
Investor; effective interest
● LO14-2

(Note: This is a variation of the previous exercise modified to consider the investor's perspective.) The Bradford Company sold the entire bond issue described in the previous exercise to Saxton-Bose Corporation.

Required:

- Prepare the journal entry to record the purchase of the bonds by Saxton-Bose on January 1, 2013.
- Prepare the journal entry to record interest revenue on June 30, 2013 (at the effective rate).
- Prepare the journal entry to record interest revenue on December 31, 2013 (at the effective rate).

E 14-5
Bonds; issuance; effective interest; financial statement effects
● LO14-2

Myriad Solutions, Inc., issued 10% bonds, dated January 1, with a face amount of \$320 million on January 1, 2013 for \$283,294,720. The bonds mature on December 31, 2022 (10 years). For bonds of similar risk and maturity the market yield is 12%. Interest is paid semiannually on June 30 and December 31.

Required:

- What would be the net amount of the liability Myriad would report in its balance sheet at December 31, 2013?
- What would be the amount related to the bonds that Myriad would report in its income statement for the year ended December 31, 2013?
- What would be the amount(s) related to the bonds that Myriad would report in its statement of cash flows for the year ended December 31, 2013?

E 14-6
Bonds; issuance; effective interest
● LO14-2

The Gorman Group issued \$900,000 of 13% bonds on June 30, 2013, for \$967,707. The bonds were dated on June 30 and mature on June 30, 2033 (20 years). The market yield for bonds of similar risk and maturity is 12%. Interest is paid semiannually on December 31 and June 30.

Required:

1. Prepare the journal entry to record their issuance by The Gorman Group on June 30, 2013.
2. Prepare the journal entry to record interest on December 31, 2013 (at the effective rate).
3. Prepare the journal entry to record interest on June 30, 2014 (at the effective rate).

E 14-7

Determine the price of bonds; issuance; straight-line method

● LO14-2

Universal Foods issued 10% bonds, dated January 1, with a face amount of \$150 million on January 1, 2013. The bonds mature on December 31, 2027 (15 years). The market rate of interest for similar issues was 12%. Interest is paid semiannually on June 30 and December 31. Universal uses the straight-line method.

Required:

1. Determine the price of the bonds at January 1, 2013.
2. Prepare the journal entry to record their issuance by Universal Foods on January 1, 2013.
3. Prepare the journal entry to record interest on June 30, 2013.
4. Prepare the journal entry to record interest on December 31, 2020.

E 14-8

Investor; straight-line method

● LO14-2

(Note: This is a variation of the previous exercise modified to consider the investor's perspective.) Universal Foods sold the entire bond issue described in the previous exercise to Wang Communications.

Required:

1. Prepare the journal entry to record the purchase of the bonds by Wang Communications on January 1, 2013.
2. Prepare the journal entry to record interest revenue on June 30, 2013.
3. Prepare the journal entry to record interest revenue on December 31, 2020.

E 14-9

Issuance of bonds; effective interest; amortization schedule; financial statement effects

● LO14-2

When Patey Pontoons issued 6% bonds on January 1, 2013, with a face amount of \$600,000, the market yield for bonds of similar risk and maturity was 7%. The bonds mature December 31, 2016 (4 years). Interest is paid semiannually on June 30 and December 31.

Required:

1. Determine the price of the bonds at January 1, 2013.
2. Prepare the journal entry to record their issuance by Patey on January 1, 2013.
3. Prepare an amortization schedule that determines interest at the effective rate each period.
4. Prepare the journal entry to record interest on June 30, 2013.
5. What is the amount(s) related to the bonds that Patey will report in its balance sheet at December 31, 2013?
6. What is the amount(s) related to the bonds that Patey will report in its income statement for the year ended December 31, 2013? (Ignore income taxes.)
7. Prepare the appropriate journal entries at maturity on December 31, 2016.

E 14-10

Issuance of bonds; effective interest; amortization schedule

● LO14-2

National Orthopedics Co. issued 9% bonds, dated January 1, with a face amount of \$500,000 on January 1, 2013. The bonds mature on December 31, 2016 (4 years). For bonds of similar risk and maturity the market yield was 10%. Interest is paid semiannually on June 30 and December 31.

Required:

1. Determine the price of the bonds at January 1, 2013.
2. Prepare the journal entry to record their issuance by National on January 1, 2013.
3. Prepare an amortization schedule that determines interest at the effective rate each period.
4. Prepare the journal entry to record interest on June 30, 2013.
5. Prepare the appropriate journal entries at maturity on December 31, 2016.

E 14-11

Bonds; effective interest; adjusting entry

● LO14-2

On February 1, 2013, Strauss-Lombardi issued 9% bonds, dated February 1, with a face amount of \$800,000. The bonds sold for \$731,364 and mature on January 31, 2033 (20 years). The market yield for bonds of similar risk and maturity was 10%. Interest is paid semiannually on July 31 and January 31. Strauss-Lombardi's fiscal year ends December 31.

Required:

1. Prepare the journal entry to record their issuance by Strauss-Lombardi on February 1, 2013.
2. Prepare the journal entry to record interest on July 31, 2013 (at the effective rate).
3. Prepare the adjusting entry to accrue interest on December 31, 2013.
4. Prepare the journal entry to record interest on January 31, 2014.

E 14-12
 Bonds; straight-line method; adjusting entry
 ● LO14-2

On March 1, 2013, Stratford Lighting issued 14% bonds, dated March 1, with a face amount of \$300,000. The bonds sold for \$294,000 and mature on February 28, 2033 (20 years). Interest is paid semiannually on August 31 and February 28. Stratford uses the straight-line method and its fiscal year ends December 31.

Required:

1. Prepare the journal entry to record the issuance of the bonds by Stratford Lighting on March 1, 2013.
2. Prepare the journal entry to record interest on August 31, 2013.
3. Prepare the journal entry to accrue interest on December 31, 2013.
4. Prepare the journal entry to record interest on February 28, 2014.

E 14-13
 Issuance of bonds; effective interest
 ● LO14-2

Federal Semiconductors issued 11% bonds, dated January 1, with a face amount of \$800 million on January 1, 2013. The bonds sold for \$739,814,813 and mature on December 31, 2032 (20 years). For bonds of similar risk and maturity the market yield was 12%. Interest is paid semiannually on June 30 and December 31.

Required:

1. Prepare the journal entry to record their issuance by Federal on January 1, 2013.
2. Prepare the journal entry to record interest on June 30, 2013 (at the effective rate).
3. Prepare the journal entry to record interest on December 31, 2013 (at the effective rate).
4. At what amount will Federal report the bonds among its liabilities in the December 31, 2013, balance sheet?

E 14-14
 New debt issues; offerings announcements
 ● LO14-2

When companies offer new debt security issues, they publicize the offerings in the financial press and on Internet sites. Assume the following were among the debt offerings reported in December 2013:

New Securities Issues

Corporate

National Equipment Transfer Corporation—\$200 million bonds via lead managers Second Tennessee Bank N.A. and Morgan, Dunavant & Co., according to a syndicate official. Terms: maturity, Dec. 15, 2019; coupon 7.46%; issue price, par; yield, 7.46%; noncallable, debt ratings: Ba-1 (Moody’s Investors Service, Inc.), BBB+ (Standard & Poor’s).

IgWig Inc.—\$350 million of notes via lead manager Stanley Brothers, Inc., according to a syndicate official. Terms: maturity, Dec. 1, 2021; coupon, 6.46%; Issue price, 99; yield, 6.56%; call date, NC; debt ratings: Baa-1 (Moody’s Investors Service, Inc.), A (Standard & Poor’s).

Required:

1. Prepare the appropriate journal entries to record the sale of both issues to underwriters. Ignore share issue costs and assume no accrued interest.
2. Prepare the appropriate journal entries to record the first semiannual interest payment for both issues.

E 14-15
 Error correction; accrued interest on bonds
 ● LO14-2

At the end of 2012, Majors Furniture Company failed to accrue \$61,000 of interest expense that accrued during the last five months of 2012 on bonds payable. The bonds mature in 2026. The discount on the bonds is amortized by the straight-line method. The following entry was recorded on February 1, 2013, when the semiannual interest was paid:

Interest expense	73,200	
Discount on bonds payable		1,200
Cash		72,000

Required:

Prepare any journal entry necessary to correct the errors as of February 2, 2013 when the errors were discovered. Also, prepare any adjusting entry at December 31, 2013, related to the situation described. (Ignore income taxes.)

E 14-16
 Error in amortization schedule
 ● LO14-3

Wilkins Food Products, Inc., acquired a packaging machine from Lawrence Specialists Corporation. Lawrence completed construction of the machine on January 1, 2011. In payment for the machine Wilkins issued a three-year installment note to be paid in three equal payments at the end of each year. The payments include interest at the rate of 10%.

Lawrence made a conceptual error in preparing the amortization schedule, which Wilkins failed to discover until 2013. The error had caused Wilkins to understate interest expense by \$45,000 in 2011 and \$40,000 in 2012.

Required:

1. Determine which accounts are incorrect as a result of these errors at January 1, 2013, before any adjustments. Explain your answer. (Ignore income taxes.)
2. Prepare a journal entry to correct the error.
3. What other step(s) would be taken in connection with the error?

E 14-17

Note with unrealistic interest rate; amortization schedule

● LO14-3

Amber Mining and Milling, Inc., contracted with Truax Corporation to have constructed a custom-made lathe. The machine was completed and ready for use on January 1, 2013. Amber paid for the lathe by issuing a \$600,000, three-year note that specified 4% interest, payable annually on December 31 of each year. The cash market price of the lathe was unknown. It was determined by comparison with similar transactions that 12% was a reasonable rate of interest.

Required:

1. Prepare the journal entry on January 1, 2013, for Amber Mining and Milling's purchase of the lathe.
2. Prepare an amortization schedule for the three-year term of the note.
3. Prepare the journal entries to record (a) interest for each of the three years and (b) payment of the note at maturity.

E 14-18

Installment note; amortization schedule

● LO14-3

American Food Services, Inc., acquired a packaging machine from Barton and Barton Corporation. Barton and Barton completed construction of the machine on January 1, 2013. In payment for the \$4 million machine, American Food Services issued a four-year installment note to be paid in four equal payments at the end of each year. The payments include interest at the rate of 10%.

Required:

1. Prepare the journal entry for American Food Services' purchase of the machine on January 1, 2013.
2. Prepare an amortization schedule for the four-year term of the installment note.
3. Prepare the journal entry for the first installment payment on December 31, 2013.
4. Prepare the journal entry for the third installment payment on December 31, 2015.

E 14-19

Installment note

● LO14-3

LCD Industries purchased a supply of electronic components from Entel Corporation on November 1, 2013. In payment for the \$24 million purchase, LCD issued a 1-year installment note to be paid in equal monthly payments at the end of each month. The payments include interest at the rate of 12%.

Required:

1. Prepare the journal entry for LCD's purchase of the components on November 1, 2013.
2. Prepare the journal entry for the first installment payment on November 30, 2013.
3. What is the amount of interest expense that LCD will report in its income statement for the year ended December 31, 2013?

E 14-20

FASB codification research

● LO14-2,
LO14-3,
LO14-4

Access the FASB's Codification Research System at the FASB website (www.fasb.org). Determine the specific citation for accounting for each of the following items:

1. Disclosure requirements for maturities of long-term debt.
2. How to estimate the value of a note when a note having no ready market and no interest rate is exchanged for a noncash asset without a readily available fair value.
3. When the straight-line method can be used as an alternative to the interest method of determining interest.

**E 14-21**

Early extinguishment

● LO14-5

The balance sheet of Indian River Electronics Corporation as of December 31, 2012, included 12.25% bonds having a face amount of \$90 million. The bonds had been issued in 2005 and had a remaining discount of \$3 million at December 31, 2012. On January 1, 2013, Indian River Electronics called the bonds before their scheduled maturity at the call price of 102.

Required:

Prepare the journal entry by Indian River Electronics to record the redemption of the bonds at January 1, 2013.

E 14-22

Convertible bonds

● LO14-5

On January 1, 2013, Gless Textiles issued \$12 million of 9%, 10-year convertible bonds at 101. The bonds pay interest on June 30 and December 31. Each \$1,000 bond is convertible into 40 shares of Gless's no par common stock. Bonds that are similar in all respects, except that they are nonconvertible, currently are selling at 99 (that is, 99% of face amount). Century Services purchased 10% of the issue as an investment.

Required:

1. Prepare the journal entries for the issuance of the bonds by Gless and the purchase of the bond investment by Century.
2. Prepare the journal entries for the June 30, 2017, interest payment by both Gless and Century assuming both use the straight-line method.
3. On July 1, 2018, when Gless's common stock had a market price of \$33 per share, Century converted the bonds it held. Prepare the journal entries by both Gless and Century for the conversion of the bonds (book value method).

E 14-23

IFRS; convertible bonds

- LO14-5, LO14-7

Refer to the situation described in the previous exercise.

Required:

How might your solution to requirement 1 for the issuer of the bonds differ if Gless Textiles prepares its financial statements according to International Financial Reporting Standards? Include any appropriate journal entry in your response.

E 14-24

Convertible bonds; induced conversion

- LO14-5

On January 1, 2013, Madison Products issued \$40 million of 6%, 10-year convertible bonds at a net price of \$40.8 million. Madison recently issued similar, but nonconvertible, bonds at 99 (that is, 99% of face amount). The bonds pay interest on June 30 and December 31. Each \$1,000 bond is convertible into 30 shares of Madison's no par common stock. Madison records interest by the straight-line method.

On June 1, 2015, Madison notified bondholders of its intent to call the bonds at face value plus a 1% call premium on July 1, 2015. By June 30 all bondholders had chosen to convert their bonds into shares as of the interest payment date. On June 30, Madison paid the semiannual interest and issued the requisite number of shares for the bonds being converted.

Required:

1. Prepare the journal entry for the issuance of the bonds by Madison.
2. Prepare the journal entry for the June 30, 2013, interest payment.
3. Prepare the journal entries for the June 30, 2015, interest payment by Madison and the conversion of the bonds (book value method).

E 14-25

IFRS; convertible bonds

- LO14-5, LO14-7

Refer to the situation described in the previous exercise.

Required:

How might your solution for the issuer of the bonds differ if Madison Products prepares its financial statements according to International Financial Reporting Standards? Include any appropriate journal entries in your response.

E 14-26

Bonds with detachable warrants

- LO14-5

On August 1, 2013, Limbaugh Communications issued \$30 million of 10% nonconvertible bonds at 104. The bonds are due on July 31, 2033. Each \$1,000 bond was issued with 20 detachable stock warrants, each of which entitled the bondholder to purchase, for \$60, one share of Limbaugh Communications' no par common stock. Interstate Containers purchased 20% of the bond issue. On August 1, 2013, the market value of the common stock was \$58 per share and the market value of each warrant was \$8.

In February 2024, when Limbaugh's common stock had a market price of \$72 per share and the unamortized discount balance was \$1 million, Interstate Containers exercised the warrants it held.

Required:

1. Prepare the journal entries on August 1, 2013, to record (a) the issuance of the bonds by Limbaugh and (b) the investment by Interstate.
2. Prepare the journal entries for both Limbaugh and Interstate in February 2024, to record the exercise of the warrants.

E 14-27

Reporting bonds at fair value

- LO14-6

(Note: This is a variation of E14-13 modified to consider the fair value option for reporting liabilities.) Federal Semiconductors issued 11% bonds, dated January 1, with a face amount of \$800 million on January 1, 2013. The bonds sold for \$739,814,813 and mature on December 31, 2032 (20 years). For bonds of similar risk and maturity the market yield was 12%. Interest is paid semiannually on June 30 and December 31. Federal determines interest at the effective rate. Federal elected the option to report these bonds at their fair value. On December 31, 2013, the fair value of the bonds was \$730 million as determined by their market value in the over-the-counter market.

Required:

1. Prepare the journal entry to adjust the bonds to their fair value for presentation in the December 31, 2013, balance sheet.
2. Assume the fair value of the bonds on December 31, 2014, had risen to \$736 million. Prepare the journal entry to adjust the bonds to their fair value for presentation in the December 31, 2014, balance sheet.

E 14-28

Reporting bonds at fair value

- LO14-6

On January 1, 2013, Rapid Airlines issued \$200 million of its 8% bonds for \$184 million. The bonds were priced to yield 10%. Interest is payable semiannually on June 30 and December 31. Rapid Airlines records interest at the effective rate and elected the option to report these bonds at their fair value. On December 31, 2013, the fair value of the bonds was \$188 million as determined by their market value in the over-the-counter market.

Required:

1. Prepare the journal entry to record interest on June 30, 2013 (the first interest payment).
2. Prepare the journal entry to record interest on December 31, 2013 (the second interest payment).
3. Prepare the journal entry to adjust the bonds to their fair value for presentation in the December 31, 2013, balance sheet.

E 14-29
Reporting bonds
at fair value;
calculate fair
value

● LO14-6

On January 1, 2013, Essence Communications issued \$800,000 of its 10-year, 8% bonds for \$700,302. The bonds were priced to yield 10%. Interest is payable semiannually on June 30 and December 31. Essence Communications records interest at the effective rate and elected the option to report these bonds at their fair value. On December 31, 2013, the market interest rate for bonds of similar risk and maturity was 9%. The bonds are not traded on an active exchange.

Required:

1. Using the information provided, estimate the fair value of the bonds at December 31, 2013.
2. Prepare the journal entry to record interest on June 30, 2013 (the first interest payment).
3. Prepare the journal entry to record interest on December 31, 2013 (the second interest payment).
4. Prepare the journal entry to adjust the bonds to their fair value for presentation in the December 31, 2013, balance sheet.

E 14-30
Accrued interest

● Appendix A

On March 1, 2013, Brown-Ferring Corporation issued \$100 million of 12% bonds, dated January 1, 2013, for \$99 million (plus accrued interest). The bonds mature on December 31, 2032, and pay interest semiannually on June 30 and December 31. Brown-Ferring's fiscal period is the calendar year.

Required:

1. Determine the amount of accrued interest that was included in the proceeds received from the bond sale.
2. Prepare the journal entry for the issuance of the bonds by Brown-Ferring.

E 14-31
Troubled debt
restructuring;
debt settled

● Appendix B

At January 1, 2013, Transit Developments owed First City Bank Group \$600,000, under an 11% note with three years remaining to maturity. Due to financial difficulties, Transit was unable to pay the previous year's interest.

First City Bank Group agreed to settle Transit's debt in exchange for land having a fair value of \$450,000. Transit purchased the land in 2009 for \$325,000.

Required:

Prepare the journal entry(s) to record the restructuring of the debt by Transit Developments.

E 14-32
Troubled debt
restructuring;
modification of
terms

● Appendix B

At January 1, 2013, Brainard Industries, Inc., owed Second BancCorp \$12 million under a 10% note due December 31, 2015. Interest was paid last on December 31, 2011. Brainard was experiencing severe financial difficulties and asked Second BancCorp to modify the terms of the debt agreement. After negotiation Second BancCorp agreed to:

- a. Forgive the interest accrued for the year just ended.
- b. Reduce the remaining two years' interest payments to \$1 million each and delay the first payment until December 31, 2014.
- c. Reduce the unpaid principal amount to \$11 million.

Required:

Prepare the journal entries by Brainard Industries, Inc., necessitated by the restructuring of the debt at (1) January 1, 2013; (2) December 31, 2014; and (3) December 31, 2015.

E 14-33
Troubled debt
restructuring;
modification of
terms; unknown
effective rate

● Appendix B

At January 1, 2013, NCI Industries, Inc., was indebted to First Federal Bank under a \$240,000, 10% unsecured note. The note was signed January 1, 2009, and was due December 31, 2014. Annual interest was last paid on December 31, 2011. NCI was experiencing severe financial difficulties and negotiated a restructuring of the terms of the debt agreement. First Federal agreed to reduce last year's interest and the remaining two years' interest payments to \$11,555 each and delay all payments until December 31, 2014, the maturity date.

Required:

Prepare the journal entries by NCI Industries, Inc., necessitated by the restructuring of the debt at: (1) January 1, 2013; (2) December 31, 2013; and (3) December 31, 2014.

E 14-34
FASB codification
research;
legal fees in a
troubled debt
restructuring

● Appendix B

In negotiating and effecting a troubled debt restructuring, the creditor usually incurs various legal costs. The *FASB Accounting Standards Codification* represents the single source of authoritative U.S. generally accepted accounting principles.

Required:

1. Obtain the relevant authoritative literature on the accounting treatment of legal fees incurred by a creditor to effect a troubled debt restructuring using the FASB's Codification Research System at the FASB website (www.fasb.org).
2. What is the specific citation that describes the guidelines for reporting legal costs?
3. What is the appropriate accounting treatment?

CPA and CMA Review Questions

CPA Exam Questions

The following questions are adapted from a variety of sources including questions developed by the AICPA Board of Examiners and those used in the Kaplan CPA Review Course to study long-term debt while preparing for the CPA examination. Determine the response that best completes the statements or questions.

- LO14-1
 1. The market price of a bond issued at a discount is the present value of its principal amount at the market (effective) rate of interest
 - a. Less the present value of all future interest payments at the rate of interest stated on the bond.
 - b. Plus the present value of all future interest payments at the rate of interest stated on the bond.
 - c. Plus the present value of all future interest payments at the market (effective) rate of interest.
 - d. Less the present value of all future interest payments at the market (effective) rate of interest.

- LO14-2
 2. A bond issue on June 1, 2013, has interest payment dates of April 1 and October 1. Bond interest expense for the year ended December 31, 2013, is for a period of
 - a. Three months
 - b. Four months
 - c. Six months
 - d. Seven months

- LO14-2
 3. On July 1, 2013, Pell Co. purchased Green Corp. 10-year, 8% bonds with a face amount of \$500,000 for \$420,000. The bonds mature on June 30, 2023, and pay interest semiannually on June 30 and December 31. Using the effective interest method, Pell recorded bond discount amortization of \$1,800 for the six months ended December 31, 2013. From this long-term investment, Pell should report 2013 revenue of
 - a. \$16,800
 - b. \$18,200
 - c. \$20,000
 - d. \$21,800

- LO14-2
 4. The following information pertains to Camp Corp.'s issuance of bonds on July 1, 2013:

Face amount	\$800,000	
Terms	10 years	
Stated interest rate	6%	
Interest payment dates	Annually on July 1	
Yield	9%	
	At 6%	At 9%
Present value of \$1 for 10 periods	0.558	0.422
Future value of \$1 for 10 periods	1.791	2.367
Present value of ordinary annuity of \$1 for 10 periods	7.360	6.418

What should be the issue price for each \$1,000 bond?

- a. \$ 700
 - b. \$ 807
 - c. \$ 864
 - d. \$1,000

- LO14-2
 5. For a bond issue that sells for less than its face value, the market rate of interest is
 - a. Higher than the rate stated on the bond.
 - b. Dependent on the rate stated on the bond.
 - c. Equal to the rate stated on the bond.
 - d. Less than the rate stated on the bond.

- LO14-2
 6. On January 31, 2013, Beau Corp. issued \$300,000 maturity value, 12% bonds for \$300,000 cash. The bonds are dated December 31, 2012, and mature on December 31, 2022. Interest will be paid semiannually on June 30 and December 31. What amount of accrued interest payable should Beau report in its September 30, 2013, balance sheet?
 - a. \$ 9,000
 - b. \$18,000
 - c. \$27,000
 - d. \$24,000

- LO14-5
7. On January 1, 2008, Fox Corp. issued 1,000 of its 10%, \$1,000 bonds for \$1,040,000. These bonds were to mature on January 1, 2018, but were callable at 101 any time after December 31, 2011. Interest was payable semiannually on July 1 and January 1. On July 1, 2013, Fox called all of the bonds and retired them. Bond premium was amortized on a straight-line basis. Before income taxes, Fox's gain or loss in 2013 on this early extinguishment of debt was
- \$ 8,000 gain
 - \$10,000 loss
 - \$12,000 gain
 - \$30,000 gain
- LO14-5
8. On April 30, 2013, Witt Corp. had outstanding 8%, \$1,000,000 face amount, convertible bonds maturing on April 30, 2021. Interest is payable on April 30 and October 31. On April 30, 2013, all these bonds were converted into 40,000 shares of \$20 par common stock. On the date of conversion:
- Unamortized bond discount was \$30,000.
 - Each bond had a market price of \$1,080.
 - Each share of stock had a market price of \$28.
- Using the book value method, how much of a gain or loss should be recognized?
- \$ 0
 - \$150,000
 - \$110,000
 - \$ 30,000
- LO14-5
9. On June 30, 2013, King Co. had outstanding 9%, \$5,000,000 face value bonds maturing on June 30, 2018. Interest was payable semiannually every June 30 and December 31. On June 30, 2013, after amortization was recorded for the period, the unamortized bond premium and bond issuance costs were \$30,000 and \$50,000, respectively. On that date, King acquired all its outstanding bonds on the open market at 98 and retired them. At June 30, 2013, what amount should King recognize as gain before income taxes on redemption of bonds?
- \$ 20,000
 - \$ 80,000
 - \$120,000
 - \$180,000
- LO14-5
10. Ray Corp. issued bonds with a face amount of \$200,000. Each \$1,000 bond contained detachable stock warrants for 100 shares of Ray's common stock. Total proceeds from the issue amounted to \$240,000. The market value of each warrant was \$2, and the market value of the bonds without the warrants was \$196,000. The bonds were issued at a discount of (rounding the allocation percentage to two decimal places):
- \$ 0
 - \$ 800
 - \$ 4,000
 - \$33,898

Beginning in 2011, International Financial Reporting Standards are tested on the CPA exam along with U.S. GAAP. The following questions deal with the application of IFRS in accounting for long-term debt.

- LO14-7
-  IFRS
11. On May 1, 2013, Maine Co. issued 10-year convertible bonds at 103. During 2015, the bonds were converted into common stock. Maine prepares its financial statements according to International Accounting Standards (IFRS). On May 1, 2013, cash proceeds from the issuance of the convertible bonds should be reported as
- A liability for the entire proceeds.
 - Paid-in capital for the entire proceeds.
 - Paid-in capital for the portion of the proceeds attributable to the conversion feature and as a liability for the balance.
 - A liability for the face amount of the bonds and paid-in capital for the premium over the par value.
- LO14-7
-  IFRS
12. When bonds and other debt securities are issued, payments such as legal costs, printing costs, and underwriting fees, are referred to as debt issuance costs (called transaction costs under IFRS). If Rushing International prepares its financial statements using IFRS:
- the recorded amount of the debt is increased by the transaction costs.
 - the decrease in the effective interest rate caused by the transaction costs is reflected in the interest expense.
 - the transaction costs are recorded separately as an asset.
 - the increase in the effective interest rate caused by the transaction costs is reflected in the interest expense.

The following questions dealing with long-term liabilities are adapted from questions that previously appeared on Certified Management Accountant (CMA) examinations. The CMA designation sponsored by the Institute of Management Accountants (www.imanet.org) provides members with an objective measure of knowledge and competence in the field of management accounting. Determine the response that best completes the statements or questions.

Questions 1 and 2 are based on the following information. On January 1, Matthew Company issued 7% term bonds with a face amount of \$1,000,000 due in 8 years. Interest is payable semiannually on January 1 and July 1. On the date of issue, investors were willing to accept an effective interest rate of 6%.

- LO14-1
 1. The bonds were issued on January 1 at
 - a. a premium.
 - b. an amortized value.
 - c. book value.
 - d. a discount.

- LO14-2
 2. Assume the bonds were issued on January 1 for \$1,062,809. Using the effective interest amortization method, Matthew Company recorded interest expense for the 6 months ended June 30 in the amount of
 - a. \$35,000
 - b. \$70,000
 - c. \$63,769
 - d. \$31,884

- LO14-4
 3. A bond issue sold at a premium is valued on the statement of financial position at the
 - a. maturity value.
 - b. maturity value plus the unamortized portion of the premium.
 - c. cost at the date of investment.
 - d. maturity value less the unamortized portion of the premium.

Problems

An alternate exercise and problem set is available on the text website: www.mhhe.com/spiceland7e

P 14-1
Determining the price of bonds; discount and premium; issuer and investor

● LO14-2

On January 1, 2013, Instaform, Inc., issued 10% bonds with a face amount of \$50 million, dated January 1. The bonds mature in 2032 (20 years). The market yield for bonds of similar risk and maturity is 12%. Interest is paid semiannually.

Required:

1. Determine the price of the bonds at January 1, 2013, and prepare the journal entry to record their issuance by Instaform.
2. Assume the market rate was 9%. Determine the price of the bonds at January 1, 2013, and prepare the journal entry to record their issuance by Instaform.
3. Assume Broadcast Electronics purchased the entire issue in a private placement of the bonds. Using the data in requirement 2, prepare the journal entry to record the purchase by Broadcast.

P 14-2
Effective interest; financial statement effects

● LO14-2

On January 1, 2013, Baddour, Inc., issued 10% bonds with a face amount of \$160 million. The bonds were priced at \$140 million to yield 12%. Interest is paid semiannually on June 30 and December 31. Baddour's fiscal year ends September 30.

Required:

1. What amount(s) related to the bonds would Baddour report in its balance sheet at September 30, 2013?
2. What amount(s) related to the bonds would Baddour report in its income statement for the year ended September 30, 2013?
3. What amount(s) related to the bonds would Baddour report in its statement of cash flows for the year ended September 30, 2013? In which section(s) should the amount(s) appear?

P 14-3
Straight-line and effective interest compared

● LO14-2

On January 1, 2013, Bradley Recreational Products issued \$100,000, 9%, four-year bonds. Interest is paid semiannually on June 30 and December 31. The bonds were issued at \$96,768 to yield an annual return of 10%.

Required:

1. Prepare an amortization schedule that determines interest at the effective interest rate.
2. Prepare an amortization schedule by the straight-line method.
3. Prepare the journal entries to record interest expense on June 30, 2015, by each of the two approaches.

4. Explain why the pattern of interest differs between the two methods.
5. Assuming the market rate is still 10%, what price would a second investor pay the first investor on June 30, 2015, for \$10,000 of the bonds?

P 14-4

Bond
amortization
schedule

● LO14-2

On January 1, 2013, Tennessee Harvester Corporation issued debenture bonds that pay interest semiannually on June 30 and December 31. Portions of the bond amortization schedule appear below:

Payment	Cash Payment	Effective Interest	Increase in Balance	Outstanding Balance
				6,627,273
1	320,000	331,364	11,364	6,638,637
2	320,000	331,932	11,932	6,650,569
3	320,000	332,528	12,528	6,663,097
4	320,000	333,155	13,155	6,676,252
5	320,000	333,813	13,813	6,690,065
6	320,000	334,503	14,503	6,704,568
~	~	~	~	~
~	~	~	~	~
~	~	~	~	~
38	320,000	389,107	69,107	7,851,247
39	320,000	392,562	72,562	7,923,809
40	320,000	396,191	76,191	8,000,000

Required:

1. What is the face amount of the bonds?
2. What is the initial selling price of the bonds?
3. What is the term to maturity in years?
4. Interest is determined by what approach?
5. What is the stated annual interest rate?
6. What is the effective annual interest rate?
7. What is the total cash interest paid over the term to maturity?
8. What is the total effective interest expense recorded over the term to maturity?

P 14-5

Issuer and
investor;
effective interest;
amortization
schedule;
adjusting entries

● LO14-2

On February 1, 2013, Cromley Motor Products issued 9% bonds, dated February 1, with a face amount of \$80 million. The bonds mature on January 31, 2017 (4 years). The market yield for bonds of similar risk and maturity was 10%. Interest is paid semiannually on July 31 and January 31. Barnwell Industries acquired \$80,000 of the bonds as a long-term investment. The fiscal years of both firms end December 31.

Required:

1. Determine the price of the bonds issued on February 1, 2013.
2. Prepare amortization schedules that indicate (a) Cromley's effective interest expense and (b) Barnwell's effective interest revenue for each interest period during the term to maturity.
3. Prepare the journal entries to record (a) the issuance of the bonds by Cromley and (b) Barnwell's investment on February 1, 2013.
4. Prepare the journal entries by both firms to record all subsequent events related to the bonds through January 31, 2015.

P 14-6

Issuer and
investor; straight-
line method;
adjusting entries

● LO14-2,
Appendix A

On April 1, 2013, Western Communications, Inc., issued 12% bonds, dated March 1, 2013, with face amount of \$30 million. The bonds sold for \$29.3 million and mature on February 28, 2016. Interest is paid semiannually on August 31 and February 28. Stillworth Corporation acquired \$30,000 of the bonds as a long-term investment. The fiscal years of both firms end December 31, and both firms use the straight-line method.

Required:

1. Prepare the journal entries to record (a) issuance of the bonds by Western and (b) Stillworth's investment on April 1, 2013.
2. Prepare the journal entries by both firms to record all subsequent events related to the bonds through maturity.

P 14-7

Issuer and
investor; effective
interest

● LO14-2

McWherter Instruments sold \$400 million of 8% bonds, dated January 1, on January 1, 2013. The bonds mature on December 31, 2032 (20 years). For bonds of similar risk and maturity, the market yield was 10%. Interest is paid semiannually on June 30 and December 31. Blanton Technologies, Inc., purchased \$400,000 of the bonds as a long-term investment.

**Required:**

1. Determine the price of the bonds issued on January 1, 2013.
2. Prepare the journal entries to record (a) their issuance by McWherter and (b) Blanton's investment on January 1, 2013.
3. Prepare the journal entries by (a) McWherter and (b) Blanton to record interest on June 30, 2013 (at the effective rate).
4. Prepare the journal entries by (a) McWherter and (b) Blanton to record interest on December 31, 2013 (at the effective rate).

P 14-8

Bonds; effective interest; partial period interest; financial statement effects

● LO14-2

The fiscal year ends December 31 for Lake Hamilton Development. To provide funding for its Moonlight Bay project, LHD issued 5% bonds with a face amount of \$500,000 on November 1, 2013. The bonds sold for \$442,215, a price to yield the market rate of 6%. The bonds mature October 31, 2033 (20 years). Interest is paid semiannually on April 30 and October 31.

Required:

1. What amount of interest expense related to the bonds will LHD report in its income statement for the year ending December 31, 2013?
2. What amount(s) related to the bonds will LHD report in its balance sheet at December 31, 2013?
3. What amount of interest expense related to the bonds will LHD report in its income statement for the year ending December 31, 2014?
4. What amount(s) related to the bonds will LHD report in its balance sheet at December 31, 2014?

P 14-9

Zero-coupon bonds

● LO14-2

On January 1, 2013, Darnell Window and Pane issued \$18 million of 10-year, zero-coupon bonds for \$5,795,518.

Required:

1. Prepare the journal entry to record the bond issue.
2. Determine the effective rate of interest.
3. Prepare the journal entry to record annual interest expense at December 31, 2013.
4. Prepare the journal entry to record annual interest expense at December 31, 2014.
5. Prepare the journal entry to record the extinguishment at maturity.

P 14-10

Notes exchanged for assets; unknown effective rate

● LO14-3

At the beginning of the year, Lambert Motors issued the three notes described below. Interest is paid at year-end.

1. The company issued a two-year, 12%, \$600,000 note in exchange for a tract of land. The current market rate of interest is 12%.
2. Lambert acquired some office equipment with a fair value of \$94,643 by issuing a one-year, \$100,000 note. The stated interest on the note is 6%.
3. The company purchased a building by issuing a three-year installment note. The note is to be repaid in equal installments of \$1 million per year beginning one year hence. The current market rate of interest is 12%.

Required:

Prepare the journal entries to record each of the three transactions and the interest expense at the end of the first year for each.

P 14-11

Note with unrealistic interest rate

● LO14-3

At January 1, 2013, Brant Cargo acquired equipment by issuing a five-year, \$150,000 (payable at maturity), 4% note. The market rate of interest for notes of similar risk is 10%.

Required:

1. Prepare the journal entry for Brant Cargo to record the purchase of the equipment.
2. Prepare the journal entry for Brant Cargo to record the interest at December 31, 2013.
3. Prepare the journal entry for Brant Cargo to record the interest at December 31, 2014.

P 14-12

Noninterest-bearing installment note

● LO14-3

At the beginning of 2013, VHF Industries acquired a machine with a fair market value of \$6,074,700 by issuing a four-year, noninterest-bearing note in the face amount of \$8 million. The note is payable in four annual installments of \$2 million at the end of each year.

Required:

1. What is the effective rate of interest implicit in the agreement?
2. Prepare the journal entry to record the purchase of the machine.
3. Prepare the journal entry to record the first installment payment at December 31, 2013.
4. Prepare the journal entry to record the second installment payment at December 31, 2014.
5. Suppose the market value of the machine was unknown at the time of purchase, but the market rate of interest for notes of similar risk was 11%. Prepare the journal entry to record the purchase of the machine.

P 14-13
Note and
installment note
with unrealistic
interest rate

● LO14-3

Braxton Technologies, Inc., constructed a conveyor for A&G Warehouse that was completed and ready for use on January 1, 2013. A&G paid for the conveyor by issuing a \$100,000, four-year note that specified 5% interest to be paid on December 31 of each year, and the note is to be repaid at the end of four years. The conveyor was custom-built for A&G, so its cash price was unknown. By comparison with similar transactions it was determined that a reasonable interest rate was 10%.

Required:

1. Prepare the journal entry for A&G's purchase of the conveyor on January 1, 2013.
2. Prepare an amortization schedule for the four-year term of the note.
3. Prepare the journal entry for A&G's third interest payment on December 31, 2015.
4. If A&G's note had been an installment note to be paid in four equal payments at the end of each year beginning December 31, 2013, what would be the amount of each installment?
5. Prepare an amortization schedule for the four-year term of the installment note.
6. Prepare the journal entry for A&G's third installment payment on December 31, 2015.

P 14-14
Early
extinguishment
of debt

● LO14-5

Three years ago American Insulation Corporation issued 10 percent, \$800,000, 10-year bonds for \$770,000. Debt issue costs were \$3,000. American Insulation exercised its call privilege and retired the bonds for \$790,000. The corporation uses the straight-line method both to determine interest and to amortize debt issue costs.

Required:

Prepare the journal entry to record the call of the bonds.

P 14-15
Early
extinguishment;
effective interest

● LO14-5

The long-term liability section of Twin Digital Corporation's balance sheet as of December 31, 2012, included 12% bonds having a face amount of \$20 million and a remaining discount of \$1 million. Disclosure notes indicate the bonds were issued to yield 14%.

Interest expense is recorded at the effective interest rate and paid on January 1 and July 1 of each year. On July 1, 2013, Twin Digital retired the bonds at 102 (\$20.4 million) before their scheduled maturity.

Required:

1. Prepare the journal entry by Twin Digital to record the semiannual interest on July 1, 2013.
2. Prepare the journal entry by Twin Digital to record the redemption of the bonds on July 1, 2013.

P 14-16
Debt issue
costs; issuance;
expensing; early
extinguishment;
straight-line
interest

● LO14-2,
LO14-5

Cupola Fan Corporation issued 10%, \$400,000, 10-year bonds for \$385,000 on June 30, 2013. Debt issue costs were \$1,500. Interest is paid semiannually on December 31 and June 30. One year from the issue date (July 1, 2014), the corporation exercised its call privilege and retired the bonds for \$395,000. The corporation uses the straight-line method both to determine interest expense and to amortize debt issue costs.

Required:

1. Prepare the journal entry to record the issuance of the bonds.
2. Prepare the journal entries to record the payment of interest and amortization of debt issue costs on December 31, 2013.
3. Prepare the journal entries to record the payment of interest and amortization of debt issue costs on June 30, 2014.
4. Prepare the journal entry to record the call of the bonds.

P 14-17
Early
extinguishment

● LO14-5

The long-term liability section of Eastern Post Corporation's balance sheet as of December 31, 2012, included 10% bonds having a face amount of \$40 million and a remaining premium of \$6 million. On January 1, 2013, Eastern Post retired some of the bonds before their scheduled maturity.

Required:

Prepare the journal entry by Eastern Post to record the redemption of the bonds under each of the independent circumstances below:

1. Eastern Post called half the bonds at the call price of 102 (102% of face amount).
2. Eastern Post repurchased \$10 million of the bonds on the open market at their market price of \$10.5 million.

P 14-18
Convertible
bonds; induced
conversion;
bonds with
detachable
warrants

● LO14-5

Bradley-Link's December 31, 2013, balance sheet included the following items:

Long-Term Liabilities	(\$ in millions)
9.6% convertible bonds, callable at 101 beginning in 2014, due 2017 (net of unamortized discount of \$2) [note 8]	\$198
10.4% registered bonds callable at 104 beginning in 2023, due 2027 (net of unamortized discount of \$1) [note 8]	49
Shareholders' Equity	
Equity—stock warrants	4

Note 8: Bonds (in part)

The 9.6% bonds were issued in 2000 at 97.5 to yield 10%. Interest is paid semiannually on June 30 and December 31. Each \$1,000 bond is convertible into 40 shares of the Company's no par common stock.

The 10.4% bonds were issued in 2004 at 102 to yield 10%. Interest is paid semiannually on June 30 and December 31. Each \$1,000 bond was issued with 40 detachable stock warrants, each of which entitles the holder to purchase one share of the Company's no par common stock for \$25, beginning 2014.

On January 3, 2014, when Bradley-Link's common stock had a market price of \$32 per share, Bradley-Link called the convertible bonds to force conversion. 90% were converted; the remainder were acquired at the call price. When the common stock price reached an all-time high of \$37 in December of 2014, 40% of the warrants were exercised.

Required:

1. Prepare the journal entries that were recorded when each of the two bond issues was originally sold in 2000 and 2004.
2. Prepare the journal entry to record (book value method) the conversion of 90% of the convertible bonds in January 2014 and the retirement of the remainder.
3. Assume Bradley-Link induced conversion by offering \$150 cash for each bond converted. Prepare the journal entry to record (book value method) the conversion of 90% of the convertible bonds in January 2014.
4. Assume Bradley-Link induced conversion by modifying the conversion ratio to exchange 45 shares for each bond rather than the 40 shares provided in the contract. Prepare the journal entry to record (book value method) the conversion of 90% of the convertible bonds in January 2014.
5. Prepare the journal entry to record the exercise of the warrants in December 2014.

P 14-19

Convertible bonds; zero coupon; potentially convertible into cash; FASB codification research

● LO14-5

The 2011 annual report of **Microsoft Corporation** reports zero-coupon convertible notes that the company issued in June of 2010.

Required:

1. Access the **Microsoft** website: www.microsoft.com. Select "Investor Relations" and then "SEC Filings." Access the 10-K filing for the year ended January 29, 2011. Search or scroll to find the disclosure notes related to the zero-coupon convertible notes. What is the amount of the convertible notes issued?
2. Prepare the journal entry that was recorded when the notes were issued in 2010. Use the information in the financial statement note accessed in Requirement 1. The actual present value of the debt was \$1,183,115 (PV of \$1,250,000 discounted for 3 years at 1.85%). Consider the conversion component and the debt issue costs for the entry.
3. What amount of interest expense, if any, did Microsoft record the first year the notes were outstanding? Use the information from Requirement 2.
4. Normally, under U.S. GAAP, we record the entire issue price of convertible debt as a liability. However, Microsoft separately recorded the liability and equity components of the notes. Why?
5. Obtain the relevant authoritative literature on classification of debt expected to be financed using the FASB's Codification Research System. You might gain access from the FASB website (www.fasb.org), from your school library, or some other source. Determine the criteria for reporting debt potentially convertible into cash. What is the specific codification citation that Microsoft would rely on in applying that accounting treatment?

P 14-20

Concepts; terminology

● LO14-1 through LO14-5

Listed below are several terms and phrases associated with long-term debt. Pair each item from List A with the item from List B (by letter) that is most appropriately associated with it.

List A	List B
_____ 1. Effective rate times balance	a. Straight-line method
_____ 2. Promises made to bondholders	b. Discount
_____ 3. Present value of interest plus present value of principal	c. Liquidation payments after other claims satisfied
_____ 4. Call feature	d. Name of owner not registered
_____ 5. Debt issue costs	e. Premium
_____ 6. Market rate higher than stated rate	f. Checks are mailed directly
_____ 7. Coupon bonds	g. No specific assets pledged
_____ 8. Convertible bonds	h. Bond indenture
_____ 9. Market rate less than stated rate	i. Backed by a lien

List A

- _____ 10. Stated rate times face amount
- _____ 11. Registered bonds
- _____ 12. Debenture bond
- _____ 13. Mortgage bond
- _____ 14. Materiality concept
- _____ 15. Subordinated debenture

List B

- j. Interest expense
- k. May become stock
- l. Legal, accounting, printing
- m. Protection against falling rates
- n. Periodic cash payments
- o. Bond price

P 14-21

Determine bond price; record interest; report bonds at fair value

● LO14-6

On January 1, 2013, NFB Visual Aids issued \$800,000 of its 20-year, 8% bonds. The bonds were priced to yield 10%. Interest is payable semiannually on June 30 and December 31. NFB Visual Aids records interest expense at the effective rate and elected the option to report these bonds at their fair value. On December 31, 2013, the fair value of the bonds was \$668,000 as determined by their market value in the over-the-counter market.

Required:

1. Determine the price of the bonds at January 1, 2013, and prepare the journal entry to record their issuance.
2. Prepare the journal entry to record interest on June 30, 2013 (the first interest payment).
3. Prepare the journal entry to record interest on December 31, 2013 (the second interest payment).
4. Prepare the journal entry to adjust the bonds to their fair value for presentation in the December 31, 2013, balance sheet.

P 14-22

Report bonds at fair value; quarterly reporting

● LO14-6

Appling Enterprises issued 8% bonds with a face amount of \$400,000 on January 1, 2013. The bonds sold for \$331,364 and mature in 2032 (20 years). For bonds of similar risk and maturity the market yield was 10%. Interest is paid semiannually on June 30 and December 31. Appling determines interest expense at the effective rate. Appling elected the option to report these bonds at their fair value. The fair values of the bonds at the end of each quarter during 2013 as determined by their market values in the over-the-counter market were the following:

March 31	\$350,000
June 30	340,000
September 30	335,000
December 31	342,000

Required:

1. By how much will Appling's earnings be increased or decreased by the bonds (ignoring taxes) in the March 31 *quarterly* financial statements?
2. By how much will Appling's earnings be increased or decreased by the bonds (ignoring taxes) in the June 30 *quarterly* financial statements?
3. By how much will Appling's earnings be increased or decreased by the bonds (ignoring taxes) in the September 30 *quarterly* financial statements?
4. By how much will Appling's earnings be increased or decreased by the bonds (ignoring taxes) in the December 31 *annual* financial statements?

P 14-23

Investments in bonds; accrued interest; sale; straight-line interest

● LO14-2

● Appendix A

The following transactions relate to bond investments of Livermore Laboratories. The company's fiscal year ends on December 31. Livermore uses the straight-line method to determine interest.

2013

- July 1 Purchased \$16 million of Bracecourt Corporation 10% debentures, due in 20 years (June 30, 2033), for \$15.7 million. Interest is payable on January 1 and July 1 of each year.
- Oct. 1 Purchased \$30 million of 12% Framm Pharmaceuticals debentures, due May 31, 2023, for \$31,160,000 plus accrued interest. Interest is payable on June 1 and December 1 of each year.
- Dec. 1 Received interest on the Framm bonds.
- 31 Accrued interest.

2014

- Jan. 1 Received interest on the Bracecourt bonds.
- June 1 Received interest on the Framm bonds.
- July 1 Received interest on the Bracecourt bonds.
- Sept. 1 Sold \$15 million of the Framm bonds at 101 plus accrued interest.
- Dec. 1 Received interest on the remaining Framm bonds.
- 31 Accrued interest.

2015

- Jan. 1 Received interest on the Bracecourt bonds.
- Feb. 28 Sold the remainder of the Framm bonds at 102 plus accrued interest.
- Dec. 31 Accrued interest.

Required:

1. Prepare the appropriate journal entries for these long-term bond investments.
2. By how much will Livermore Labs' earnings increase in each of the three years as a result of these investments? (Ignore income taxes.)

P 14-24
 Troubled debt
 restructuring

● Appendix B

At January 1, 2013, Rothschild Chair Company, Inc., was indebted to First Lincoln Bank under a \$20 million, 10% unsecured note. The note was signed January 1, 2010, and was due December 31, 2016. Annual interest was last paid on December 31, 2011. Rothschild Chair Company was experiencing severe financial difficulties and negotiated a restructuring of the terms of the debt agreement.

Required:

Prepare all journal entries by Rothschild Chair Company, Inc., to record the restructuring and any remaining transactions relating to the debt under each of the independent circumstances below:

1. First Lincoln Bank agreed to settle the debt in exchange for land having a fair value of \$16 million but carried on Rothschild Chair Company's books at \$13 million.
2. First Lincoln Bank agreed to (a) forgive the interest accrued from last year, (b) reduce the remaining four interest payments to \$1 million each, and (c) reduce the principal to \$15 million.
3. First Lincoln Bank agreed to defer all payments (including accrued interest) until the maturity date and accept \$27,775,000 at that time in settlement of the debt.

Broaden Your Perspective

Apply your critical-thinking ability to the knowledge you've gained. These cases will provide you an opportunity to develop your research, analysis, judgment, and communication skills. You also will work with other students, integrate what you've learned, apply it in real world situations, and consider its global and ethical ramifications. This practice will broaden your knowledge and further develop your decision-making abilities.

Communication**Case 14-1**

Convertible securities and warrants; concepts

● LO14-5

It is not unusual to issue long-term debt in conjunction with an arrangement under which lenders receive an option to buy common stock during all or a portion of the time the debt is outstanding. Sometimes the vehicle is convertible bonds; sometimes warrants to buy stock accompany the bonds and are separable. Interstate Chemical is considering these options in conjunction with a planned debt issue.

"You mean we have to report \$7 million more in liabilities if we go with convertible bonds? Makes no sense to me," your CFO said. "Both ways seem pretty much the same transaction. Explain it to me, will you?"

Required:

Write a memo. Include in your explanation each of the following:

1. The differences in accounting for proceeds from the issuance of convertible bonds and of debt instruments with separate warrants to purchase common stock.
2. The underlying rationale for the differences.
3. Arguments that could be presented for the alternative accounting treatment.

Real World**Case 14-2**

Zero-coupon debt; Hewlett-Packard Company

● LO14-2

Real World Financials

The 2010 annual report of **Hewlett-Packard Company** reports zero-coupon notes issued at the end of its 1997 fiscal year. One billion, eight hundred million dollars face amount of 20-year debt sold for \$968 million, a price to yield 3.149%. In fiscal 2002, HP repurchased \$257 million in face value of the notes for a purchase price of \$127 million, resulting in a gain on the early extinguishment of debt.

Required:

1. What journal entry did Hewlett-Packard use to record the sale in 1997?
2. Using an electronic spreadsheet, prepare an amortization schedule for the notes. Assume interest is calculated annually and use numbers expressed in millions of dollars; that is, the face amount is \$1,800.
3. What was the effect on HP's earnings in 1998? Explain.
4. From the amortization schedule, determine the book value of the debt at the end of 2002.
5. What journal entry did Hewlett-Packard use to record the early extinguishment of debt in 2002, assuming the purchase was made at the end of the year?

Communication**Case 14–3**

Is convertible debt a liability or is it shareholders' equity? Group Interaction

● LO14–5

Some financial instruments can be considered compound instruments in that they have features of both debt and shareholders' equity. The most common example encountered in practice is convertible debt—bonds or notes convertible by the investor into common stock. A topic of debate for several years has been whether:

View 1: Issuers should account for an instrument with both liability and equity characteristics entirely as a liability or entirely as an equity instrument depending on which characteristic governs.

View 2: Issuers should account for an instrument as consisting of a liability component and an equity component that should be accounted for separately.

In considering this question, you should disregard what you know about the current position of the FASB on the issue. Instead, focus on conceptual issues regarding the practicable and theoretically appropriate treatment, unconstrained by GAAP. Also, focus your deliberations on convertible bonds as the instrument with both liability and equity characteristics.

Required:

1. Which view do you favor? Develop a list of arguments in support of your view prior to the class session for which the case is assigned.
2. In class, your instructor will pair you (and everyone else) with a classmate (who also has independently developed an argument).
 - a. You will be given three minutes to argue your view to your partner. Your partner likewise will be given three minutes to argue his or her view to you. During these three-minute presentations, the listening partner is not permitted to speak.
 - b. After each person has had a turn attempting to convince his or her partner, the two partners will have a three-minute discussion in which they will decide which view is more convincing. Arguments will be merged into a single view for each pair.
3. After the allotted time, a spokesperson for each of the two views will be selected by the instructor. Each spokesperson will field arguments from the class in support of that view's position and list the arguments on the board. The class then will discuss the merits of the two lists of arguments and attempt to reach a consensus view, though a consensus is not necessary.

Analysis**Case 14–4**

Issuance of bonds

● LO14–2

The following appeared in the October 15, 2013, issue of the *Financial Smarts Journal*:

This announcement is not an offer of securities for sale or an offer to buy securities.
 New Issue October 15, 2013

\$750,000,000
CRAFT FOODS, INC.
7.75% Debentures Due October 1, 2023
 Price 99.57%
 plus accrued interest if any from date of issuance

Copies of the prospectus and the related prospectus supplement may be obtained from such of the undersigned as may legally offer these securities under applicable securities laws.

Keegan Morgan & Co. Inc.
Coldwell Bros. & Co.
Robert Stacks & Co.
Sherwin-William & Co.

Required:

1. Explain what is being described by the announcement.
2. Can you think of a psychological reason for the securities to be priced as they are?
3. What are the accounting considerations for Craft Foods, Inc.? Describe how Craft recorded the sale.

Judgment**Case 14–5**

Noninterest-bearing debt

● LO14–3

While reading a recent issue of *Health & Fitness*, a trade journal, Brandon Wilde noticed an ad for equipment he had been seeking for use in his business. The ad offered oxygen therapy equipment under the following terms:

Model BL 44582
 \$204,000 zero interest loan
 Quarterly payments of \$17,000 for only 3 years

The ad captured Wilde's attention, in part, because he recently had been concerned that the interest charges incurred by his business were getting out of line. The price, though, was somewhat higher than prices for this model he had seen elsewhere.

Required:

Advise Mr. Wilde on the purchase he is considering.

Judgment

Case 14–6

Noninterest-bearing note exchanged for cash and other privileges

● LO14–3

The Jaecke Group, Inc., manufactures various kinds of hydraulic pumps. In June 2013, the company signed a four-year purchase agreement with one of its main parts suppliers, Hydraulics, Inc. Over the four-year period, Jaecke has agreed to purchase 100,000 units of a key component used in the manufacture of its pumps. The agreement allows Jaecke to purchase the component at a price lower than the prevailing market price at the time of purchase. As part of the agreement, Jaecke will lend Hydraulics \$200,000 to be repaid after four years with no stated interest (the prevailing market rate of interest for a loan of this type is 10%).

Jaecke's chief accountant has proposed recording the note receivable at \$200,000. The parts inventory purchase from Hydraulics over the next four years will then be recorded at the actual prices paid.

Required:

Do you agree with the accountant's valuation of the note and his intention to value the parts inventory acquired over the four-year period of the agreement at actual prices paid? If not, how would you account for the initial transaction and the subsequent inventory purchases?

Communication

Case 14–7

Note receivable exchanged for cash and other services

● LO14–3

The Pastel Paint Company recently loaned \$300,000 to KIX 96, a local radio station. The radio station signed a noninterest-bearing note requiring the \$300,000 to be repaid in three years. As part of the agreement, the radio station will provide Pastel with a specified amount of free radio advertising over the three-year term of the note.

The focus of this case is the valuation of the note receivable by Pastel Paint Company and the treatment of the "free" advertising provided by the radio station. Your instructor will divide the class into two to six groups depending on the size of the class. The mission of your group is to reach consensus on the appropriate note valuation and accounting treatment of the free advertising.

Required:

1. Each group member should deliberate the situation independently and draft a tentative argument prior to the class session for which the case is assigned.
2. In class, each group will meet for 10 to 15 minutes in different areas of the classroom. During that meeting, group members will take turns sharing their suggestions for the purpose of arriving at a single group treatment.
3. After the allotted time, a spokesperson for each group (selected during the group meetings) will share the group's solution with the class. The goal of the class is to incorporate the views of each group into a consensus approach to the situation.

Ethics Case 14–8

Debt for equity swaps; have your cake and eat it too

● LO14–5

The cloudy afternoon mirrored the mood of the conference of division managers. Claude Meyer, assistant to the controller for Hunt Manufacturing, wore one of the gloomy faces that were just emerging from the conference room. "Wow, I knew it was bad, but not that bad," Claude thought to himself. "I don't look forward to sharing those numbers with shareholders."

The numbers he discussed with himself were fourth quarter losses which more than offset the profits of the first three quarters. Everyone had known for some time that poor sales forecasts and production delays had wreaked havoc on the bottom line, but most were caught off guard by the severity of damage.

Later that night he sat alone in his office, scanning and rescanning the preliminary financial statements on his computer monitor. Suddenly his mood brightened. "This may work," he said aloud, though no one could hear. Fifteen minutes later he congratulated himself, "Yes!"

The next day he eagerly explained his plan to Susan Barr, controller of Hunt for the last six years. The plan involved \$300 million in convertible bonds issued three years earlier.

Meyer: By swapping stock for the bonds, we can eliminate a substantial liability from the balance sheet, wipe out most of our interest expense, and reduce our loss. In fact, the book value of the bonds is significantly more than the market value of the stock we'd issue. I think we can produce a profit.

Barr: But Claude, our bondholders are not inclined to convert the bonds.

Meyer: Right. But, the bonds are callable. As of this year, we can call the bonds at a call premium of 1%. Given the choice of accepting that redemption price or converting to stock, they'll all convert. We won't have to pay a cent. And, since no cash will be paid, we won't pay taxes either.

Required:

Do you perceive an ethical dilemma? What would be the impact of following up on Claude's plan? Who would benefit? Who would be injured?

**Judgment
Case 14–9**

Analyzing financial statements; financial leverage; interest coverage

- LO14–1, LO14–4

AGF Foods Company is a large, primarily domestic, consumer foods company involved in the manufacture, distribution, and sale of a variety of food products. Industry averages are derived from Troy's *The Almanac of Business and Industrial Financial Ratios*. Following are the 2013 and 2012 comparative income statements and balance sheets for AGF. (The financial data we use are from actual financial statements of a well-known corporation, but the company name is fictitious and the numbers and dates have been modified slightly to disguise the company's identity.)

AGF FOODS COMPANY		
Years Ended December 31, 2013 and 2012		
(\$ in millions)		
Comparative Income Statements		
Net sales	2013	2012
	\$6,440	\$5,800
Cost of goods sold	(3,667)	(3,389)
Gross profit	2,773	2,411
Operating expenses	(1,916)	(1,629)
Operating income	857	782
Interest expense	(54)	(53)
Income from operations before tax	803	729
Income taxes	(316)	(287)
Net income	<u>\$ 487</u>	<u>\$ 442</u>
Comparative Balance Sheets		
Assets		
Total current assets	\$1,879	\$1,490
Property, plant, and equipment (net)	2,592	2,291
Intangibles (net)	800	843
Other assets	74	60
Total assets	<u>\$5,345</u>	<u>\$4,684</u>
Liabilities and Shareholders' Equity		
Total current liabilities	\$1,473	\$ 941
Long-term debt	534	728
Deferred income taxes	407	344
Total liabilities	<u>2,414</u>	<u>2,013</u>
Shareholders' equity:		
Common stock	180	180
Additional paid-in capital	21	63
Retained earnings	2,730	2,428
Total shareholders' equity	<u>2,931</u>	<u>2,671</u>
Total liabilities and shareholders' equity	<u>\$5,345</u>	<u>\$4,684</u>

Long-term solvency refers to a company's ability to pay its long-term obligations. Financing ratios provide investors and creditors with an indication of this element of risk.

Required:

1. Calculate the debt to equity ratio for AGF for 2013. The average ratio for the stocks listed on the New York Stock Exchange in a comparable time period was 1.0. What information does your calculation provide an investor?
2. Is AGF experiencing favorable or unfavorable financial leverage?
3. Calculate AGF's times interest earned ratio for 2013. The coverage for the stocks listed on the New York Stock Exchange in a comparable time period was 5.1. What does your calculation indicate about AGF's risk?

Research**Case 14–10**

FASB codification research; researching the way long-term debt is reported; Macy's, Inc.

- LO14–1 through LO14–4

EDGAR, the Electronic Data Gathering, Analysis, and Retrieval system, performs automated collection, validation, indexing, acceptance and forwarding of submissions by companies and others who are required by law to file forms with the U.S. Securities and Exchange Commission (SEC). All publicly traded domestic companies use EDGAR to make the majority of their filings. (Some foreign companies do so voluntarily.) Form 10-K, including the annual report, is required to be filed on EDGAR. The SEC makes this information available on the Internet.

Required:

1. Access EDGAR on the Internet at www.sec.gov or the **Macy's, Inc.**, website: www.macys.com.
2. Search for Macy's. Access its 10-K filing for the year ended January 29, 2011. Search or scroll to find the financial statements and related notes.

Real World Financials

3. What is the total debt (including current liabilities and deferred taxes) reported in the balance sheet? How has that amount changed over the most recent two years?
4. Compare the total liabilities (including current liabilities and deferred taxes) with the shareholders' equity and calculate the debt to equity ratio for the most recent two years. Has the proportion of debt financing and equity financing changed recently?
5. Does Macy's obtain more financing through notes, bonds, or commercial paper? Are required debt payments increasing or decreasing over time? Is any short-term debt classified as long-term? Why?
6. **Note 8: Financing** includes the following statement: "On June 23, 2008, the Company issued \$650 million aggregate principal amount of 7.875% senior notes due 2015. The net proceeds of the debt issuance were used for the repayment of amounts due on debt maturing in 2008." Under some circumstances, Macy's could have reported the amounts due in 2008 as long-term debt at the end of the previous year even though these amounts were due within the coming year. Obtain the relevant authoritative literature on classification of debt expected to be financed using the FASB's Codification Research System. You might gain access from the FASB website (www.fasb.org), from your school library, or some other source. Determine the criteria for reporting currently payable debt as long-term. What is the specific codification citation that Macy's would rely on in applying that accounting treatment?

Analysis

Case 14-11

Bonds;
conversion;
extinguishment

● LO14-5

On August 31, 2010, Chickasaw Industries issued \$25 million of its 30-year, 6% convertible bonds dated August 31, priced to yield 5%. The bonds are convertible at the option of the investors into 1,500,000 shares of Chickasaw's common stock. Chickasaw records interest expense at the effective rate. On August 31, 2013, investors in Chickasaw's convertible bonds tendered 20% of the bonds for conversion into common stock that had a market value of \$20 per share on the date of the conversion. On January 1, 2012, Chickasaw Industries issued \$40 million of its 20-year, 7% bonds dated January 1 at a price to yield 8%. On December 31, 2013, the bonds were extinguished early through acquisition in the open market by Chickasaw for \$40.5 million.

Required:

1. Using the book value method, would recording the conversion of the 6% convertible bonds into common stock affect earnings? If so, by how much? Would earnings be affected if the market value method is used? If so, by how much?
2. Were the 7% bonds issued at face value, at a discount, or at a premium? Explain.
3. Would the amount of interest expense for the 7% bonds be higher in the first year or second year of the term to maturity? Explain.
4. How should gain or loss on early extinguishment of debt be determined? Does the early extinguishment of the 7% bonds result in a gain or loss? Explain.

Air France—KLM Case

AIRFRANCE

● LO14-7

Air France—KLM (AF), a French company, prepares its financial statements according to International Financial Reporting Standards. AF's annual report for the year ended March 31, 2011, which includes financial statements and disclosure notes, is provided with all new textbooks. This material also is included in AF's "Registration Document 2010-11," dated June 15, 2011 and is available at www.airfranceklm.com.

Required:

1. **Sealy Corporation** reported the following line items in its statement of cash flows for the three months ended February 27, 2011:

Amortization of discount on secured notes	382,000
Amortization of debt issuance costs and other	1,175,000

- In AF's financial statements, Note 30: "Financial Debt" describes the company's long-term debt. Neither of the two items above is reported in the financial statements of Air France, and neither is likely to appear there in the future. Why?
2. Examine the long-term borrowings in AF's balance sheet and the related note. Note that AF has convertible bonds outstanding that it issued in 2005. Prepare the journal entry AF would use to record the issue of convertible bonds. Prepare the journal entry AF would use to record the issue of the convertible bonds if AF used U.S. GAAP.
 3. AF does not elect the fair value option (FVO) to report its financial liabilities. Examine Note 32:3. "Market value of financial instruments." If the company had elected the FVO for all of its debt measured at amortized cost, what would be the balance at March 31, 2011, in the fair value adjustment account?
 4. Is IFRS or U.S. GAAP more restrictive for determining when firms are allowed to elect the fair value option for financial assets and liabilities? Explain.

Leases

OVERVIEW

In the previous chapter, we saw how companies account for their long-term debt. The focus of that discussion was *bonds* and *notes*. In this chapter we continue our discussion of debt, but we now turn our attention to liabilities arising in connection with *leases*. Leases that produce such debtor/creditor relationships are referred to as *capital* leases by the lessee and as either *direct financing* or *sales-type* leases by the lessor. We also will see that some leases do not produce debtor/creditor relationships, but instead are accounted for as rental agreements. These are designated as *operating* leases. The chapter concludes with a Where We're Headed Supplement explaining in detail a proposed Accounting Standards Update (hereafter, "the proposed ASU") the FASB plans to issue in 2012 that substantially changes how we account for leases.

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- **LO15-1** Identify and describe the operational, financial, and tax objectives that motivate leasing. (p. 860)
- **LO15-2** Explain why some leases constitute rental agreements and some represent purchases/sales accompanied by debt financing. (p. 861)
- **LO15-3** Explain the basis for each of the criteria and conditions used to classify leases. (p. 862)
- **LO15-4** Record all transactions associated with operating leases by both the lessor and lessee. (p. 866)
- **LO15-5** Describe and demonstrate how both the lessee and lessor account for a capital lease. (p. 868)
- **LO15-6** Describe and demonstrate how the lessor accounts for a sales-type lease. (p. 873)
- **LO15-7** Describe the way a bargain purchase option affects lease accounting. (p. 876)
- **LO15-8** Explain how lease accounting is affected by the residual value of a leased asset. (p. 879)
- **LO15-9** Explain the impact on lease accounting of executory costs, the discount rate, initial direct costs, and contingent rentals. (p. 883)
- **LO15-10** Explain sale-leaseback agreements and other special leasing arrangements and their accounting treatment. (p. 894)
- **LO15-11** Discuss the primary differences between U.S. GAAP and IFRS with respect to leases. (pp. 865, 875, 886, 897 and 898)

FINANCIAL REPORTING CASE

It's a Hit!

"Don't get too comfortable with those big numbers," said Aaron Sanchez, controller for your new employer. "It's likely our revenues will take a hit over the next couple of years as more of our customers lease our machines rather than buy them."

You've just finished your first look at Higher Graphics' third quarter earnings report. Like most companies in your industry, HG leases its labeling machines to some customers and sells them to others. Eager to understand the implications of your new supervisor's concerns, you pull out your old intermediate accounting book and turn to the leases chapter.

By the time you finish this chapter, you should be able to respond appropriately to the questions posed in this case. Compare your response to the solution provided at the end of the chapter.

1. How would HG's revenues "take a hit" as a result of more customers leasing rather than buying labeling machines? (p. 866)
2. Under what kind of leasing arrangements would the "hit" not occur? (p. 874)

QUESTIONS

ACCOUNTING BY THE LESSOR AND LESSEE

If you ever have leased an apartment, you know that a lease is a contractual arrangement by which a **lessor** (owner) provides a **lessee** (user) the right to use an asset for a specified period of time. In return for this right, the lessee agrees to make stipulated, periodic cash payments during the term of the lease. An apartment lease is a typical rental agreement in which the fundamental rights and responsibilities of ownership are retained by the lessor; the lessee merely uses the asset temporarily. Businesses, too, lease assets under similar arrangements. These are referred to as **operating leases**. Many contracts, though, are formulated outwardly as leases, but in reality are installment purchases/sales. These are called **capital leases** (**direct financing** or **sales-type leases** to the lessor). Illustration 15-1 compares the classification possibilities.

PART A

An apartment lease is a typical rental agreement referred to as an **operating lease**.

Basic Lease Classifications

After looking at some of the possible advantages of leasing assets rather than buying them in certain circumstances, we will explore differences in leases further.

Decision Makers' Perspective—Advantages of Leasing

● LO15-1

Leasing can facilitate asset acquisition.

The number one method of external financing by U.S. businesses is leasing.

Tax incentives often motivate leasing.

Leasing sometimes is used as a means of off-balance-sheet financing.

When a young entrepreneur started a computer training center a few years ago, she had no idea how fast her business would grow. Now, while she knows she needs computers, she doesn't know how many. Just starting out, she also has little cash with which to buy them.

The mutual funds department of a large investment firm often needs new computers and peripherals—fast. The department manager knows he can't afford to wait up to a year, the time it sometimes takes, to go through company channels to obtain purchase approval.

An established computer software publisher recently began developing a new line of business software. The senior programmer has to be certain he's testing the company's products on the latest versions of computer hardware. And yet he views large expenditures on equipment subject to rapid technological change and obsolescence as risky business.

Each of these individuals is faced with different predicaments and concerns. The entrepreneur is faced with uncertainty and cash flow problems, the department manager with time constraints and bureaucratic control systems, the programmer with fear of obsolescence. Though their specific concerns differ, these individuals have all met their firms' information technology needs with the same solution: each has decided to lease the computers rather than buy them.

Computers are by no means the only assets obtained through leasing arrangements. To the contrary, leasing has grown to be the most popular method of external financing of corporate assets in America. The airplane in which you last flew probably was leased, as was the gate from which it departed. Your favorite retail outlet at the local shopping mall likely leases the space it operates. Many companies actually exist for the sole purpose of acquiring assets and leasing them to others. And, leasing often is a primary method of "selling" a firm's products. **IBM** and **Boeing** are familiar examples.

In light of its popularity, you may be surprised that leasing usually is more expensive than buying. Of course, the higher apparent cost of leasing is because the lessor usually shoulders at least some of the financial and risk burdens that a purchaser normally would assume. So, why the popularity?

The lease decisions described above are motivated by operational incentives. Tax and market considerations also motivate firms to lease. Sometimes leasing offers tax saving advantages over outright purchases. For instance, a company with little or no taxable income—maybe a business just getting started, or one experiencing an economic downturn—will get little benefit from depreciation deductions. But the company can benefit *indirectly* by leasing assets rather than buying. By allowing the *lessor* to retain ownership and thus benefit from depreciation deductions, the lessee often can negotiate lower lease payments. Lessees with sufficient taxable income to take advantage of the depreciation deductions, but still in lower tax brackets than lessors, also can achieve similar indirect tax benefits.

The desire to obtain "off-balance-sheet financing" also is sometimes a leasing stimulus. When funds are borrowed to purchase an asset, the liability has a detrimental effect on the company's debt to equity ratio and other quantifiable indicators of riskiness. Similarly, the purchased asset increases total assets and correspondingly lowers calculations of the rate of return on assets. Despite research that indicates otherwise, management actions continue to reflect a belief that the financial market is naive and is fooled by off-balance-sheet financing. Managers continue to avoid reporting assets and liabilities by leasing rather than buying and by constructing lease agreements in such a way that capitalizing the assets and liabilities is not required.¹

The U.S. Navy once leased a fleet of tankers to avoid asking Congress for appropriations.

¹You will learn later in the chapter that accounting standards are designed to identify lease arrangements that, despite their outward appearance, are in reality purchases of assets. Assets acquired by these arrangements, *capital leases*, are required to be recorded as well as the related lease liability. Managers often structure lease terms so that capitalization requirements are avoided.

Whether or not there is any real effect on security prices, sometimes off-balance-sheet financing helps a firm avoid exceeding contractual limits on designated financial ratios (like the debt to equity ratio, for instance).² When the operational, tax, and financial market advantages are considered, the *net* cost of leasing often is less than the cost of purchasing. ●

Operational, tax, and financial market incentives often make leasing an attractive alternative to purchasing.

Capital Leases and Installment Notes Compared

You learned in the previous chapter how to account for an installment note. To a great extent, then, you already have learned how to account for a capital lease. To illustrate, let's recall the situation described in the previous chapter. We assumed that Skill Graphics purchased a package-labeling machine from Hughes–Barker Corporation by issuing a three-year installment note that required six semiannual installment payments of \$139,857 each. That arrangement provided for the purchase of the \$666,633 machine as well as interest at an annual rate of 14% (7% twice each year). Remember, too, that each installment payment consisted of part interest (7% times the outstanding balance) and part payment for the machine (the remainder of each payment).

● LO15-2

Now let's suppose that Skill Graphics instead acquired the package-labeling machine from Hughes–Barker Corporation under a three-year *lease* that required six semiannual rental payments of \$139,857 each. Obviously, the fundamental nature of the transaction remains the same regardless of whether it is negotiated as an installment purchase or as a lease. So, it would be inconsistent to account for this lease in a fundamentally different way than for an installment purchase:

At Inception (January 1)		
Installment Note		
Machinery	666,633	
Note payable		666,633
Capital Lease		
Leased machinery	666,633	
Lease payable		666,633

Comparison of a Note and Capital Lease

In keeping with the basic accounting concept of substance over form, accounting for a capital lease parallels that for an installment purchase.

Consistent with the nature of the transaction, interest expense accrues each period at the effective rate times the outstanding balance:

At the First Semiannual Payment Date (June 30)		
Installment Note		
Interest expense (7% × \$666,633)	46,664	
Note payable (difference)	93,193	
Cash (installment payment)		139,857
Capital Lease		
Interest expense (7% × \$666,633)	46,664	
Lease payable (difference)	93,193	
Cash (rental payment)		139,857

Interest Compared for a Note and Capital Lease

Each payment includes both an amount that represents interest and an amount that represents a reduction of principal.

Because the lease payable balance declines with each payment, the amount of interest expense decreases each period. An amortization schedule is convenient to track the changing amounts as shown in Illustration 15–2.

²It is common for debt agreements, particularly long-term ones, to include restrictions on the debtor as a way to provide some degree of protection to the creditor. Sometimes a minimum level is specified for current assets relative to current liabilities, net assets, debt as a ratio of equity, or many other financial ratios. Often a restriction is placed on dividend payments, share repurchases, or other activities that might impede the debtor's ability to repay the debt. Typically, the debt becomes due on demand when the debtor becomes in violation of such a debt covenant, often after a specified grace period.

Illustration 15–2

Lease Amortization Schedule

Each rental payment includes interest on the outstanding balance at the effective rate. The remainder of each payment reduces the outstanding balance.

Date	Payments	Effective Interest (7% × Outstanding balance)	Decrease in Balance	Outstanding Balance
				666,633
1	139,857	.07(666,633) = 46,664	93,193	573,440
2	139,857	.07(573,440) = 40,141	99,716	473,724
3	139,857	.07(473,724) = 33,161	106,696	367,028
4	139,857	.07(367,028) = 25,692	114,165	252,863
5	139,857	.07(252,863) = 17,700	122,157	130,706
6	139,857	.07(130,706) = 9,151*	130,706	0
	839,142	172,509	666,633	

*Rounded

You should recognize this as essentially the same amortization schedule we used in the previous chapter in connection with our installment note example. The reason for the similarity is that we view a capital lease as being, in substance, equivalent to an installment purchase. So naturally the accounting treatment of the two essentially identical transactions should be consistent.

Lease Classification

A lease is accounted for as either a rental agreement or a purchase/sale accompanied by debt financing. The choice of accounting method hinges on the nature of the leasing arrangement.

Capital leases are agreements that we identify as being formulated outwardly as leases, but which are in reality essentially installment purchases. Sometimes the true nature of an arrangement is obvious. For example, a 10-year noncancelable lease of a computer with a 10-year useful life, by which title passes to the lessee at the end of the lease term, obviously more nearly represents a purchase than a rental agreement. But what if the terms of the contract do not transfer title, and the lease term is for only seven years of the asset's 10-year life? Suppose contractual terms permit the lessee to obtain title under certain prearranged conditions? What if compensation provided by the lease contract is nearly equal to the value of the asset under lease? These situations are less clear-cut.

Professional judgment is needed to differentiate between leases that represent rental agreements and those that in essence are installment purchases/sales. It's important to note that from an accounting perspective legal ownership is irrelevant in the decision. The essential question is whether the usual risks and rewards of ownership have been transferred to the lessee. But judgment alone is likely to lead to inconsistencies in practice. The desire to encourage consistency in practice motivated the FASB to provide guidance for distinguishing between two fundamental types of leases: capital leases and operating leases.³ As you study the classification criteria in the following paragraphs, keep in mind that some leases clearly fit the classifications we give them, but others fall in a gray area somewhere between the two extremes. For those, we end up forcing them into one category or the other by somewhat arbitrary criteria.

Classification Criteria

- LO15–3 A lessee should classify a lease transaction as a *capital lease* if it includes a noncancelable lease term and one or more of the four criteria listed in Illustration 15–3 are met.⁴ Otherwise, it is an *operating lease*.

³FASB ASC 840–10–15: Leases—Overall—Recognition (previously “Accounting for Leases,” *Statement of Financial Accounting Standards No. 13* (Stamford, Conn.: FASB, 1980), par. 7).

⁴Noncancelable in this context does not preclude the agreement from specifying that the lease is cancelable after a designated noncancelable lease term. Unless some portion of the lease term is noncancelable, it is an operating lease. Later in this section, we discuss treatment of any cancelable portion of the lease term.

A basic concept of accounting is substance over form.

Accounting for leases attempts to see through the legal form of the agreements to determine their economic substance.

1. The agreement specifies that ownership of the asset transfers to the lessee.
2. The agreement contains a bargain purchase option.
3. The noncancelable lease term is equal to 75% or more of the expected economic life of the asset.
4. The present value of the "minimum lease payments"⁵ is equal to or greater than 90% of the fair value of the asset.

Illustration 15–3

Criteria for Classification as a Capital Lease

Let's look closer at these criteria.

Since our objective is to determine when the risks and rewards of ownership have been transferred to the lessee, the first criterion is self-evident. If legal title passes to the lessee during, or at the end of, the lease term, obviously ownership attributes are transferred.

A **bargain purchase option (BPO)** is a provision in the lease contract that gives the lessee the option of purchasing the leased property at a bargain price. This is defined as a price sufficiently lower than the expected fair value of the property (when the option becomes exercisable) that the exercise of the option appears reasonably assured at the inception of the lease. Because exercise of the option appears reasonably assured, transfer of ownership is expected. So the logic of the second criterion is similar to that of the first. Applying criterion 2 in practice, though, often is more difficult because it is necessary to make a judgment now about whether a future option price will be a bargain.

If an asset is leased for most of its useful life, then most of the benefits and responsibilities of ownership are transferred to the lessee. GAAP specifies, quite arbitrarily, that 75% or more of the **expected economic life** of the asset is an appropriate threshold point for this purpose.

Although the intent of this criterion is fairly straightforward, implementation sometimes is troublesome. First, the lease term may be uncertain. It may be renewable beyond its initial term. Or the lease may be cancelable after a designated noncancelable period. When either is an issue, we ordinarily consider the lease term to be the noncancelable⁶ term of the lease plus any periods covered by **bargain renewal options**.⁷ A bargain renewal option gives the lessee the option to renew the lease at a bargain rate. That is, the rental payment is sufficiently lower than the expected fair rental of the property at the date the option becomes exercisable that exercise of the option appears reasonably assured.

Criterion 1: Transfer of ownership.

Criterion 2: Bargain purchase option.

Criterion 3: Lease term is 75% of economic life.

Additional Consideration

Periods covered by bargain renewal options are not included in the lease term if a **bargain purchase option** is present. This is because the lease term should not extend beyond the date a bargain purchase option becomes exercisable. For example, assume a BPO allows a lessee to buy a leased delivery truck at the end of the noncancelable five-year lease term. Even if an option to renew the lease beyond that date is considered to be a bargain renewal option, that extra period would not be included as part of the lease term. Remember, we presume the BPO will be exercised after the initial five-year term, making the renewal option irrelevant.

⁵Minimum lease payments are defined on the next page.

⁶Noncancelable in this context is a lease that is cancelable only by (a) the occurrence of some remote contingency, (b) permission of the lessor, (c) a new lease with the same lessor, or (d) payment by the lessee of a penalty in an amount such that continuation of the lease appears, at inception, reasonably assured. FASB ASC Master Glossary—Noncancelable Lease Term (previously "Accounting for Leases: Sale and Leaseback Transactions Involving Real Estate, Sales-Type Leases of Real Estate, Definition of the Lease Term, Initial Direct Costs of Direct Financing Leases," *Statement of Financial Accounting Standards No. 98* (Stamford, Conn.: FASB, 1988), par. 22).

⁷If applicable, the lease term also should include (a) periods for which failure to renew the lease imposes a penalty on the lessee in an amount such that renewal appears reasonably assured, (b) periods covered by ordinary renewal options during which a guarantee by the lessee of the lessor's debt directly or indirectly related to the leased property is expected to be in effect or a loan from the lessee to the lessor directly or indirectly related to the leased property is expected to be outstanding, (c) periods covered by ordinary renewal options preceding the date that a bargain purchase option is exercisable, or (d) periods representing renewals or extensions of the lease at the lessor's option. FASB ASC Master Glossary—Lease Term (previously "Accounting for Leases: Sale and Leaseback Transactions Involving Real Estate, Sales-Type Leases of Real Estate, Definition of the Lease Term, Initial Direct Costs of Direct Financing Leases," *Statement of Financial Accounting Standards No. 98* (Stamford, Conn.: FASB, 1988), par. 22).

Another implementation issue is estimating the economic life of the leased property. This is the estimated remaining time the property is expected to be economically usable for its intended purpose, with normal maintenance and repairs, at the inception of the lease. Estimates of the economic life of leased property are subject to the same uncertainty limitations of most estimates. This uncertainty presents the opportunity to arrive at estimates that cause this third criterion not to be met.

Finally, if the inception of the lease occurs during the last 25% of an asset's economic life, this third criterion does not apply. This is consistent with the basic premise of this criterion that most of the risks and rewards of ownership occur during the first 75% of an asset's life.

Criterion 4: Present value of payments is 90% of fair value.

If the lease payments required by a lease contract substantially pay for a leased asset, it is logical to identify the arrangement as a lease equivalent to an installment purchase. This situation is considered to exist when the present value of the **minimum lease payments** is equal to or greater than 90% of the fair value of the asset at the inception of the lease. In general, minimum lease payments are payments the lessee is required to make in connection with the lease and consist of:

- the total of periodic rental payments
- any guaranteed residual value
- any bargain purchase option price

We look closer at the make-up of minimum lease payments later in the chapter when we discuss residual values and bargain purchase options in more detail.

The 90% of fair value criterion often is the decisive one in identifying a capital lease. As mentioned earlier, lessees often try to avoid writing a lease agreement that will require recording an asset and liability. When this is an objective, it usually is relatively easy to avoid meeting the first three criteria. However, when the underlying motive for the lease agreement is that the lessee substantively acquire the asset, it is more difficult to avoid meeting the 90% recovery criterion without defeating that motive. New ways, though, continually are being devised to structure leases to avoid meeting this criterion. Later we will look at some popular devices that are used.

Again consistent with the basic premise that most of the risks and rewards of ownership occur during the first 75% of an asset's life, this fourth criterion does not apply if the inception of the lease occurs during the last 25% of an asset's economic life.

Additional Lessor Conditions

As we saw in the previous section, the lessee accounts for a capital lease as if an asset were purchased; that is, the lessee records both an asset and a liability at the inception of the lease. Consistency would suggest that the lessor in the same lease transaction should record the sale of an asset. Indeed, consistency is a goal of the FASB's lease accounting standards. The four classification criteria discussed in the previous section apply to both parties to the transaction, lessees and lessors. However, a fundamental difference is that for a lessor to record the sale side of the transaction, it is necessary also to satisfy the conditions of the realization principle we discussed in Chapter 5. In particular, the FASB specifies that for the lessor to record a lease as a direct financing lease or a sales-type lease, two conditions must be met in addition to one of the four classification criteria. These are listed in Illustration 15-4.

Illustration 15-4

Additional Conditions for Classification as a Capital Lease by the Lessor

1. The collectibility of the lease payments must be reasonably predictable.
2. If any costs to the lessor have yet to be incurred, they are reasonably predictable. (Performance by the lessor is substantially complete.)

Additional lessor conditions for classification as a capital lease are consistent with criteria of the revenue realization principle.

In the case of a sales-type lease (discussed later in Part A of this chapter) in which the lessor recognizes sales revenue, the reason for these additional conditions is apparent; collectibility of payments and substantial completion of the earnings process are conditions of the revenue realization principle. This logic is extended to agreements classified as direct financing leases. Although sales revenue is not recorded in a direct financing lease, the leased asset is removed from the lessor's books and is replaced by a receivable.

Although uniformity of classification is a goal of lease accounting standards, it is obvious that the additional conditions allow inconsistencies.⁸ Indeed, in lease negotiations an objective of the parties involved often is to devise terms that will result in a sale by the lessor but an operating lease by the lessee.⁹

In the remaining sections of Part A of this chapter we consider, in order, operating leases, direct financing leases (capital leases to the lessee), and sales-type leases (capital leases to the lessee).

International Financial Reporting Standards

● LO15-11

Lease Classification.

Lease accounting under U.S. GAAP and IFRS provides a good general comparison of “**rules-based accounting**,” as U.S. GAAP often is described, and “**principles-based accounting**,” which often is the description assigned to IFRS. We discussed four classification criteria used under U.S. GAAP to determine whether a lease is a capital lease. Under IFRS, we don’t have such bright-line rules. Instead, a lease is deemed a capital lease (called a **finance lease** under *IAS No. 17, “Leases”*¹⁰), if substantially all risks and rewards of ownership are judged to have been transferred. Judgment is made based on a number of “indicators” including some similar to the specific criteria of U.S. GAAP. Here is a comparison:

IFRS Illustration	
IFRS	U.S. GAAP
Situations (individually or in combination) that normally would lead to classification as a finance lease are:	Situations that require classification as a capital lease if any one (or more) is met are:
<ul style="list-style-type: none"> The agreement specifies that ownership of the asset transfers to the lessee. 	Same as IFRS.
<ul style="list-style-type: none"> The agreement contains a bargain purchase option. 	Same as IFRS.
<ul style="list-style-type: none"> The noncancelable lease term is for a “major portion” of the expected economic life of the asset. 	“Major portion” is defined specifically as 75% or more.
<ul style="list-style-type: none"> The present value of the minimum lease payments is equal to or greater than “substantially all” of the fair value of the asset. 	“Substantially all” is defined specifically as 90%.
<ul style="list-style-type: none"> The leased asset is of a specialized nature such that only the lessee can use it without major modifications being made. 	No similar situation specified.
Other situations (individually or in combination) that might also lead to classification as a finance lease are:	
<ul style="list-style-type: none"> The lessor’s losses are borne by the lessee upon cancellation. 	No similar situation specified.
<ul style="list-style-type: none"> Gains or losses from changes in the fair value of the residual value go to the lessee (for instance, by means of a rebate of lease payments). 	No similar situation specified.

(continued)

⁸“FASB ASC 840-10-25-42: Leases—Overall—Recognition (previously “Accounting for Leases,” *Statement of Financial Accounting Standards No. 13* (Stamford, Conn.: FASB, 1980)).

⁹Later in the chapter we discuss ways this is done.

¹⁰“Leases,” *International Accounting Standard No. 17* (IASCF), as amended effective January 1, 2011.

(concluded)

- The lease contains a “bargain renewal option” whereby the lessee can continue the lease for substantially less than market rent.

No similar situation specified.

Ordinarily, it will not be a single indicator, but the combined implication of two or more indicators that will sway the classification decision under IFRS. Often the appropriate classification is obvious. At other times, careful consideration of all aspects of the agreement with reference to the classification indicators is needed. Substance over form is the goal. Professional judgment is key.

Operating Leases

FINANCIAL Reporting Case

Q1, p. 859

• LO15-4

If a lease does not meet any of the criteria for a capital lease it is considered to be more in the nature of a rental agreement and is referred to as an **operating lease**.¹¹ We assume that the fundamental rights and responsibilities of ownership are retained by the lessor and that the lessee merely is using the asset temporarily. In keeping with that presumption, a sale is not recorded by the lessor; a purchase is not recorded by the lessee. Instead, the periodic rental payments are accounted for merely as rent by both parties to the transaction—*rent revenue* by the lessor; *rent expense* by the lessee.

Let’s look at an example that illustrates the relatively straightforward accounting for operating leases. The earlier example comparing a capital lease to an installment purchase assumed rental payments at the *end* of each period. A more typical leasing arrangement requires rental payments at the *beginning* of each period. This more realistic payment schedule is assumed in Illustration 15–5.

Illustration 15–5

Application of Classification Criteria

Using Excel, enter:
= PV(.10,4,100000, 1)
Output: 348685.2

Using a calculator:
enter: BEG mode \square 4 \square 10
 \square PMT – 100000 \square FV
Output: \square PV 348685

On January 1, 2013, Sans Serif Publishers, Inc., a computer services and printing firm, leased printing equipment from First LeaseCorp.

The lease agreement specifies four annual payments of \$100,000 beginning January 1, 2013, the inception of the lease, and at each January 1 thereafter through 2016. The useful life of the equipment is estimated to be six years.

Before deciding to lease, Sans Serif considered purchasing the equipment for its cash price of \$479,079. If funds were borrowed to buy the equipment, the interest rate would have been 10%.

How should this lease be classified? We apply the four classification criteria:

- | | |
|---|---------------------------------------|
| 1. Does the agreement specify that ownership of the asset transfers to the lessee? | No |
| 2. Does this agreement contain a bargain purchase option? | No |
| 3. Is the lease term equal to 75% or more of the expected economic life of the asset? | No |
| 4. Is the present value of the minimum lease payments equal to or greater than 90% of the fair value of the asset? | (4 yrs < 75% of 6 yrs) |
| | No |
| | (\$348,685 < 90% of \$479,079) |
| | \$100,000 × 3.48685* = \$348,685 |
| | Lease payments Present value |

Since none of the four classification criteria is met, this is an operating lease.

*Present value of an annuity due of \$1: $n = 4$, $i = 10\%$. Recall from Chapter 6 that we refer to periodic payments at the beginning of each period as an *annuity due*.

¹¹The term *operating lease* got its name long ago when a lessee routinely received from the lessor an operator along with leased equipment.

Journal entries for Illustration 15–5 are shown in Illustration 15–5A.

The operating lease described in Illustration 15–5 is recorded as follows:

At Each of the Four Payment Dates

Sans Serif Publishers, Inc. (Lessee)

Prepaid rent	100,000	
Cash		100,000

First LeaseCorp (Lessor)

Cash	100,000	
Unearned rent revenue		100,000

At the End of Each Year

Sans Serif Publishers, Inc. (Lessee)

Rent expense	100,000	
Prepaid rent		100,000

First LeaseCorp (Lessor)

Unearned rent revenue	100,000	
Rent revenue		100,000

Depreciation expense	x,xxx	
Accumulated depreciation		x,xxx

Illustration 15–5A

Journal Entries for an Operating Lease

At the beginning of the year, the rent payments are prepaid rent to the lessee and unearned rent to the lessor.

The lessor retains the asset on its books, and accordingly records depreciation on the asset.

In an operating lease, rent is recognized on a straight-line basis unless another systematic method more clearly reflects the benefits of the asset's use. So, if rental payments are uneven—for instance, if rent increases are scheduled—the total scheduled payments ordinarily would be expensed equally (straight-line basis) over the lease term.¹²

Advance Payments

Often lease agreements call for advance payments to be made at the inception of the lease that represent prepaid rent. For instance, it is common for a lessee to pay a bonus in return for negotiating more favorable lease terms. Such payments are recorded as prepaid rent and allocated (normally on a straight-line basis) to rent expense/rent revenue over the lease term. So the rent that is periodically reported in those cases consists of the periodic rent payments themselves plus an allocated portion of prepaid rent.

In the journal entries above and throughout the chapter, we look at the entries of the lessee and the lessor together. This way, we can be reminded that the entries for the lessor usually are essentially the mirror image of those for the lessee, the other side of the same coin.¹³

Sometimes advance payments include security deposits that are refundable at the expiration of the lease or prepayments of the last period's rent. A refundable security deposit is recorded as a long-term receivable (by the lessee) and liability (by the lessor) unless it is not expected to be returned. A prepayment of the last period's rent is recorded as prepaid rent and allocated to rent expense/rent revenue during the last period of the lease term.

At times, lease agreements call for uneven rent payments during the term of the lease. One way this can occur is when the initial payment (or maybe several payments) is waived. This is called a **rent abatement or rent holiday**. Alternatively, rent payments may be scheduled to increase periodically over the lease term. But, there is no such thing as free rent. Instead, later rent payments are high enough to compensate the lessor for receiving no payments or low payments early in the life of the lease. In response, we account for these arrangements by summing the total payments over the life of the lease and then expensing them in each period of the lease on a straight-line basis. This means the rent expense will

A rent abatement occurs when the initial payment (or maybe several payments) is waived.

¹²FASB ASC 840–20–25: Leases—Operating Leases—Recognition (previously “Accounting for Operating Leases with Scheduled Rent Increases,” *FASB Technical Bulletin 85-3* (Stamford, Conn.: FASB, 1985), par. 1).

¹³We see later in the chapter that sometimes this is not the case, particularly when the lease is a “sales-type” lease. Even when the two sides are not mirror images there are many similarities, so the comparison still is helpful.

be the same amount for all periods of the lease, even those in which no rent is actually paid. The (temporarily) unpaid portion of rent expense early in the life of the lease must be credited to a liability, deferred rent expense payable, until later in the lease term, and then the liability is reduced to zero later in the lease term when rent payments exceed rent expense.

Leasehold Improvements

Sometimes a lessee will make improvements to leased property that reverts back to the lessor at the end of the lease. If a lessee constructs a new building or makes modifications to existing structures, that cost represents an asset just like any other capital expenditure. Like other assets, its cost is allocated as depreciation expense over its useful life to the lessee, which will be the shorter of the physical life of the asset or the lease term.¹⁴ Theoretically, such assets can be recorded in accounts descriptive of their nature, such as buildings or plant. In practice, the traditional account title used is **leasehold improvements**.¹⁵ In any case, the undepreciated cost usually is reported in the balance sheet under the caption *property, plant, and equipment*. Movable assets like office furniture and equipment that are not attached to the leased property are not considered leasehold improvements.

During 2005 hundreds of companies, particularly in the retail and restaurant industries, underwent one of the most widespread accounting correction events ever. Corrections were in the way these companies, including **Pep Boys, Ann Taylor, Target, and Domino's Pizza**, had allocated the cost of leasehold improvements. Rather than expensing leasehold improvements properly over the lease terms, these firms for years had inappropriately expensed the cost over the longer estimated useful lives of the properties. Prompting the sweeping revisions was a Securities and Exchange Commission letter on February 7, 2005, urging companies to follow long-standing accounting standards in this area. A result of the improper practices was to defer expense, thereby accelerating earnings. For instance, **McDonald's Corp.** recorded a charge of \$139 million in its 2004 fourth quarter to adjust for the difference.

Let's turn our attention now to accounting for leases that meet the criteria and conditions for classification as capital leases by both the lessee and the lessor.

Capital Leases—Lessee and Lessor

In the operating lease illustration, we assumed Sans Serif leased equipment directly from the manufacturer. Now, in Illustration 15–6, let's assume a financial intermediary provided financing by acquiring the equipment and leasing it to the user.

● LO15–5

The amount recorded (capitalized) by the lessee is the present value of the minimum lease payments. However, if the fair value of the asset is lower than this amount, the recorded value of the asset should be limited to fair value. Unless the lessor is a manufacturer or dealer, the fair value typically will be the lessor's cost (\$479,079 in this case). However, if considerable time has elapsed between the purchase of the property by the lessor and the inception of the lease, the fair value might be different. When the lessor is a manufacturer or dealer, the fair value of the property at the inception of the lease ordinarily will be its normal selling price (reduced by any volume or trade discounts). We study this situation (a sales-type lease) later. In unusual cases, market conditions may cause fair value to be less than the normal selling price.¹⁶

Be sure to note that the entire \$100,000 first rental payment is applied to principal reduction.¹⁷ Because it occurred at the inception of the lease, no interest had yet accrued. Subsequent rental payments include interest on the outstanding balance as well as a portion that reduces that outstanding balance. As of the second rental payment date, one year's interest has accrued on the \$379,079 balance outstanding during 2014, recorded as in Illustration 15–6A.

The cost of a leasehold improvement is depreciated over its useful life to the lessee.

Hundreds of firms in 2005 corrected the way they accounted for leases.

A leased asset is recorded by the lessee at the present value of the minimum lease payments or the asset's fair value, whichever is lower.

Interest is a function of time. It accrues at the effective rate on the balance outstanding during the period.

¹⁴If the agreement contains an option to renew, and the likelihood of renewal is uncertain, the renewal period is ignored.

¹⁵Also, traditionally, depreciation sometimes is labeled amortization when in connection with leased assets and leasehold improvements. This is of little consequence. Remember, both depreciation and amortization refer to the process of allocating an asset's cost over its useful life.

¹⁶FASB ASC 840–10: Leases—Overall (previously “Accounting for Leases,” *Statement of Financial Accounting Standards No. 13* (Stamford, Conn.: FASB, 1980)).

¹⁷Another way to view this is to think of the first \$100,000 as a down payment with the remaining \$379,079 financed by 5 (i.e., 6–1) year-end lease payments.

Illustration 15-6

Capital Leases

On January 1, 2013, Sans Serif Publishers, Inc., leased printing equipment from First LeaseCorp. First LeaseCorp purchased the equipment from CompuDec Corporation at a cost of \$479,079.

The lease agreement specifies annual payments beginning January 1, 2013, the inception of the lease, and at each December 31 thereafter through 2017. The six-year lease term ending December 31, 2018, is equal to the estimated useful life of the equipment.

First LeaseCorp routinely acquires electronic equipment for lease to other firms. The interest rate in these financing arrangements is 10%.

Since the lease term is equal to the expected useful life of the equipment (>75%), the transaction must be recorded by the lessee as a **capital lease**.¹⁸ If we assume also that collectibility of the lease payments and any costs to the lessor that are yet to be incurred are reasonably predictable, this qualifies also as a **direct financing lease** to First LeaseCorp. To achieve its objectives, First LeaseCorp must (a) recover its \$479,079 investment as well as (b) earn interest revenue at a rate of 10%. So, the lessor determined that annual rental payments would be \$100,000:

$$\$479,079 \div 4.79079^* = \$100,000$$

Lessor's cost Rental payments

*Present value of an annuity due of \$1: $n = 6, i = 10\%$.

Of course, Sans Serif Publishers, Inc., views the transaction from the other side. The price the lessee pays for the equipment is the present value of the rental payments:

$$\$100,000 \times 4.79079^* = \$479,079$$

Rental payments Lessee's cost

*Present value of an annuity due of \$1: $n = 6, i = 10\%$.

Direct Financing Lease (January 1, 2013)

Sans Serif Publishers, Inc. (Lessee)

Leased equipment (present value of lease payments)	479,079	
Lease payable (present value of lease payments)		479,079

First LeaseCorp (Lessor)

Lease receivable (present value of lease payments)	479,079	
Inventory of equipment (lessor's cost)		479,079

First Lease Payment (January 1, 2013)*

Sans Serif Publishers, Inc. (Lessee)

Lease payable	100,000	
Cash		100,000

First LeaseCorp (Lessor)

Cash	100,000	
Lease receivable		100,000

*Of course, the entries to record the lease and the first payment could be combined into a single entry since they occur at the same time.

Using Excel, enter:

= PMT(.10,6,479079, 1)

Output: 100000

Using a calculator:

enter: BEG mode $N \ 6 \ I \ 10$

$PV - 479079 \ FV$

Output: $PMT \ 100000$

Notice that the lessor's entries are the flip side or mirror image of the lessee's entries.

The first lease payment reduces the balances in the lease payable and the lease receivable by \$100,000 to \$379,079.

Second Lease Payment (December 31, 2013)

Sans Serif Publishers, Inc. (Lessee)

Interest expense $[10\% \times (\$479,079 - 100,000)]$	37,908	
Lease payable (difference)	62,092	
Cash (lease payment)		100,000

First LeaseCorp (Lessor)

Cash (lease payment)	100,000	
Lease receivable		62,092
Interest revenue $[10\% \times (\$479,079 - 100,000)]$		37,908

Notice that the outstanding balance is reduced by \$62,092—the portion of the \$100,000 payment remaining after interest is covered.

Illustration 15-6A

Journal Entries for the Second Lease Payment

LESSEE
Lease Payable
\$479,079
(100,000)
\$379,079
(62,092)
\$316,987
LESSOR
Lease Receivable
\$479,079
(100,000)
\$379,079
(62,092)
\$316,987

¹⁸The fourth criterion also is met. The present value of lease payments (\$479,079) is 100% (>90%) of the fair value of the equipment (\$479,079). Meeting any one of the four criteria is sufficient.

Additional Consideration

Some lessors use what's called the "gross method" to record the receivable in a capital lease. By this method, the lessor debits lease receivable for the gross sum of the lease payments and credits *unearned interest revenue* for the difference between the total of the payments and the present value of the payments since that's the amount that eventually will be recorded as interest revenue over the term of the lease. In Illustration 15-6, the lessor's entry by the gross method at the inception of the lease would be:

Lease receivable ($\$100,000 \times 6$)	600,000	
Unearned interest revenue (difference)		120,921
Inventory of equipment (lessor's cost)		479,079

The same ultimate result is achieved either way. We use the net method in our illustrations to more easily demonstrate the lessee's entries and the lessor's entries being "two sides of the same coin." Whichever method is used, both the lessee and the lessor must report in the disclosure notes both the net and gross amounts of the lease.

The amortization schedule in Illustration 15-6B shows how the lease balance and the effective interest change over the six-year lease term. Each rental payment after the first includes both an amount that represents interest and an amount that represents a reduction of principal. The periodic reduction of principal is sufficient that, at the end of the lease term, the outstanding balance is zero.

Illustration 15-6B

Lease Amortization
Schedule

The first rental payment
includes no interest.

The total of the cash
payments (\$600,000)
provides for:

1. Payment for the equipment (\$479,079).
2. Interest (\$120,921) at an effective rate of 10%.

	Payments	Effective Interest	Decrease in Balance	Outstanding Balance
		(10% × Outstanding balance)		
1/1/13				479,079
1/1/13	100,000		100,000	379,079
12/31/13	100,000	.10 (379,079) = 37,908	62,092	316,987
12/31/14	100,000	.10 (316,987) = 31,699	68,301	248,686
12/31/15	100,000	.10 (248,686) = 24,869	75,131	173,555
12/31/16	100,000	.10 (173,555) = 17,355	82,645	90,910
12/31/17	100,000	.10 (90,910) = 9,090*	90,910	0
	<u>600,000</u>	<u>120,921*</u>	<u>479,079</u>	

*Adjusted for rounding of other numbers in the schedule.

An interesting aspect of the amortization schedule that you may want to note at this point relates to a disclosure requirement that we discuss at the end of the chapter. Among other things, the lessee and lessor must report separately the current and noncurrent portions of the outstanding lease balance. Both amounts are provided by the amortization schedule. For example, if we want the amounts to report on the 2013 balance sheet, refer to the next row of the schedule. The portion of the 2014 payment that represents principal (\$68,301) is the *current* (as of December 31, 2013) balance. The *noncurrent* amount is the balance outstanding after the 2014 reduction (\$248,686). These amounts are the current and noncurrent lease liability for the lessee and the current and noncurrent net investment for the lessor.

Depreciation

Depreciation is recorded for leased assets in a manner consistent with the lessee's usual policy for depreciating its depreciable assets.

End of Each Year		
Sans Serif Publishers, Inc. (Lessee)		
Depreciation expense (\$479,079 ÷ 6 years*)	79,847	
Accumulated depreciation		79,847
*If the lessee depreciates assets by the straight-line method.		

Because a capital lease assumes the lessee purchased the asset, the lessee depreciates its cost.

DEPRECIATION PERIOD. The lessee normally should depreciate a leased asset over the term of the lease. However, if ownership transfers or a bargain purchase option is present (i.e., either of the first two classification criteria is met), the asset should be depreciated over its useful life. This means depreciation is recorded over the useful life of the asset *to the lessee* whether or not that useful life is limited by the term of the lease.

The depreciation period is restricted to the lease term unless the lease provides for transfer of title or a BPO.

A description of leased assets and related depreciation provided in a recent disclosure note (Illustration 15–7) of **Kroger Company** is representative of leased asset disclosures.

3. PROPERTY, PLANT AND EQUIPMENT, NET

Property, plant and equipment, net consists of:

\$ in millions	Jan. 29, 2011	Jan. 30 2010
Land	\$ 2,168	\$ 2,058
Buildings and land improvements	7,417	6,999
Equipment	9,806	9,553
Leasehold improvements	5,852	5,483
Construction-in-progress	904	1,010
Leased property under capital leases	569	570
	26,716	25,673
Accumulated depreciation and amortization	(12,569)	(11,774)
Total	\$ 14,147	\$13,929

Accumulated depreciation for leased property under capital leases was \$317 at January 29, 2011, and \$299 at January 30, 2010.

Illustration 15–7

Disclosure of Leased Assets—Kroger Company

Real World Financials

Accrued Interest

If a company's reporting period ends at any time between payment dates, it's necessary to record (as an adjusting entry) any interest that has accrued since interest was last recorded. We purposely avoided this step in the previous illustration by assuming that the lease agreement specified rental payments on December 31—the end of the reporting period. But if payments were made on another date, or if the company's fiscal year ended on a date other than December 31, accrued interest would be recorded prior to preparing financial statements. For example, if lease payments were made on January 1 of each year, the effective interest amounts shown in the lease amortization schedule still would be appropriate but would be recorded one day prior to the actual rental payment. For instance, the second cash payment of \$100,000 would occur on January 1, 2014, but the interest component of that payment (\$37,908) would be accrued a day earlier as shown in Illustration 15–6C.

At each financial statement date, any interest that has accrued since interest was last recorded must be accrued for all liabilities and receivables, including those relating to leases.

Notice that this is consistent with recording accrued interest on any debt, whether in the form of a note, a bond, or a lease.

We assumed in this illustration that First LeaseCorp bought the equipment for \$479,079 and then leased it for the same price. There was no profit on the "sale" itself. The only income derived by the lessor was interest revenue earned over the lease term. In effect, First LeaseCorp financed the purchase of the equipment by Sans Serif Publishers. This type of lease is a direct financing lease. This kind of leasing is a thriving industry. It is a profitable part of operations for banks and other financial institutions (**Citicorp** is one of the largest). Some leasing companies do nothing else. Often leasing companies, like **IBM Credit Corporation**, are subsidiaries of larger corporations, formed for the sole purpose of conducting financing activities for their parent corporations.

Illustration 15–6C

Journal Entries When Interest Is Accrued Prior to the Lease Payment

December 31, 2013 (to accrue interest)		
Sans Serif Publishers, Inc. (Lessee)		
Interest expense [10% × (\$479,079 – 100,000)]	37,908	
Interest payable		37,908
First LeaseCorp (Lessor)

Concept Review Exercise

DIRECT FINANCING LEASE

United Cellular Systems leased a satellite transmission device from Pinnacle Leasing Services on January 1, 2014. Pinnacle paid \$625,483 for the transmission device. Its fair value is \$625,483.

Terms of the Lease Agreement and Related Information:

Lease term	3 years (6 semiannual periods)
Semiannual rental payments	\$120,000 at beginning of each period
Economic life of asset	3 years
Interest rate	12%

Required:

1. Prepare the appropriate entries for both United Cellular Systems and Pinnacle Leasing Services on January 1, the inception of the lease.
2. Prepare an amortization schedule that shows the pattern of interest expense for United Cellular Systems and interest revenue for Pinnacle Leasing Services over the lease term.
3. Prepare the appropriate entries to record the second lease payment on July 1, 2014, and adjusting entries on December 31, 2014 (the end of both companies' fiscal years).

Solution:

1. Prepare the appropriate entries for both United Cellular Systems and Pinnacle Leasing Services on January 1, the inception of the lease.

Calculation of the present value of minimum lease payments.

Present value of periodic rental payments:

$$(\$120,000 \times 5.21236^*) = \$625,483$$

*Present value of an annuity due of \$1: $n = 6, i = 6\%$.

January 1, 2014		
United Cellular Systems (Lessee)		
Leased equipment (calculated above)	625,483	
Lease payable (calculated above)		625,483
Lease payable	120,000	
Cash (lease payment)		120,000

(continued)

(concluded)

Pinnacle Leasing Services (Lessor)		
Lease receivable (calculated above)	625,483	
Inventory of equipment (lessor's cost)		625,483
Cash (lease payment)	120,000	
Lease receivable		120,000

2. Prepare an amortization schedule that shows the pattern of interest expense for United Cellular Systems and interest revenue for Pinnacle Leasing Services over the lease term.

Date	Payments	Effective Interest	Decrease in Balance	Outstanding Balance
		(6% × Outstanding balance)		
1/1/14				625,483
1/1/14	120,000		120,000	505,483
7/1/14	120,000	.06 (505,483) = 30,329	89,671	415,812
1/1/15	120,000	.06 (415,812) = 24,949	95,051	320,761
7/1/15	120,000	.06 (320,761) = 19,246	100,754	220,007
1/1/16	120,000	.06 (220,007) = 13,200	106,800	113,207
7/1/16	120,000	.06 (113,207) = 6,793*	113,207	0
	720,000	94,517	625,483	

*Adjusted for rounding of other numbers in the schedule.

3. Prepare the appropriate entries to record the second lease payment on July 1, 2014, and adjusting entries on December 31, 2014 (the end of both companies' fiscal years).

July 1, 2014				
United Cellular Systems (Lessee)				
Interest expense [6% × (\$625,483 – 120,000)]	30,329			
Lease payable (difference)	89,671			
Cash (lease payment)				120,000
Pinnacle Leasing Services (Lessor)				
Cash (lease payment)	120,000			
Lease receivable (difference)				89,671
Interest revenue [6% × (\$625,483 – 120,000)]				30,329
December 31, 2014				
United Cellular Systems (Lessee)				
Interest expense (6% × \$415,812: from schedule)	24,949			
Interest payable				24,949
Depreciation expense (\$625,483 ÷ 3 years)	208,494			
Accumulated depreciation				208,494
Pinnacle Leasing Services (Lessor)				
Interest receivable	24,949			
Interest revenue (6% × \$415,812: from schedule)				24,949

Let's turn our attention now to situations in which the lessors are manufacturers or retailers and use lease arrangements as a means of selling their products.

Sales-Type Leases

A **sales-type lease** differs from a direct financing lease in only one respect. In addition to interest revenue earned over the lease term, the lessor receives a manufacturer's or dealer's profit on the "sale" of the asset.¹⁹ This additional profit exists when the fair value of the

● LO15-6

¹⁹A lessor need not be a manufacturer or a dealer for the arrangement to qualify as a sales-type lease. The existence of a profit (or loss) on the sale is the distinguishing factor.

FINANCIAL Reporting Case

Q2, p. 859

Illustration 15–8

Sales-Type Lease

Sales revenue	\$479,079
– COGS	300,000
Dealer's profit	\$179,079

Remember, no interest has accrued when the first payment is made at the inception of the lease.

Recording a sales-type lease is similar to recording a sale of merchandise on account:

A/R	{price}
Sales rev	{price}
COGS	{cost}
Inventory ...	{cost}

Real World Financials

asset (usually the present value of the minimum lease payments, or “selling price”) exceeds the cost or carrying value of the asset sold. Accounting for a sales-type lease is the same as for a direct financing lease except for recognizing the profit at the inception of the lease.²⁰

To illustrate, let’s modify our previous illustration. Assume all facts are the same except Sans Serif Publishers leased the equipment directly from CompuDec Corporation, rather than through the financing intermediary. Also assume CompuDec’s cost of the equipment was \$300,000. If you recall that the lease payments (their present value) provide a selling price of \$479,079, you see that CompuDec earns a gross profit on the sale of \$479,079 – 300,000 = \$179,079. This sales-type lease is demonstrated in Illustration 15–8.

On January 1, 2013, Sans Serif Publishers, Inc., leased printing equipment from CompuDec Corporation at a price of \$479,079.

The lease agreement specifies annual payments of \$100,000 beginning January 1, 2013, the inception of the lease, and at each December 31 thereafter through 2017. The six-year lease term ending December 31, 2018, (a year after the final payment) is equal to the estimated useful life of the equipment.

CompuDec manufactured the equipment at a cost of \$300,000.
CompuDec’s interest rate for financing the transaction is 10%.

Sales-Type Lease*

CompuDec Corporation (Lessor)

Lease receivable (present value of lease payments)	479,079	
Cost of goods sold (lessor’s cost)	300,000	
Sales revenue (present value of lease payments)		479,079
Inventory of equipment (lessor’s cost)		300,000

First Lease Payment*

CompuDec Corporation (Lessor)

Cash	100,000	
Lease receivable		100,000

*Of course, the entries to record the lease and the first payment could be combined into a single entry:

Lease receivable (\$479,079 – \$100,000)	379,079	
Cost of goods sold	300,000	
Cash	100,000	
Sales revenue		479,079
Inventory of equipment		300,000

You should recognize the similarity between recording both the revenue and cost components of this sale by lease and recording the same components of other sales transactions. As in the sale of any product, gross profit is the difference between sales revenue and cost of goods sold. **Dell Inc.** “sells” some of its products using sales-type leases and disclosed the following in a recent annual report:

Note 1 (in part)

Dell records revenue from the sale of equipment under sales-type leases as product revenue at the inception of the lease. Sales-type leases also produce financing income, which Dell recognizes at consistent rates of return over the lease term.

All entries other than the entry at the inception of the lease, which includes the gross profit on the sale, are the same for a sales-type lease and a direct financing lease.

Accounting by the lessee is not affected by how the lessor classifies the lease. All lessee entries are precisely the same as in the previous illustration of a direct financing lease.

Illustration 15–9 shows the relationships among various lease components, using dollar amounts from the previous illustration.

²⁰It is possible that the asset’s carrying value will exceed its fair value, in which case a dealer’s loss should be recorded.

Lessor:		Lessee:
SALES-TYPE LEASE		CAPITAL LEASE
Gross Investment in Lease*	\$600,000	Minimum Lease Payments
	Less:	
	Interest during lease term (\$120,921)	
	Equals:	
Selling Price (present value of payments)	\$479,079	Purchase Price (present value of payments)
	Less:	
	Profit on sale [†] (\$179,079)	
	Equals:	
Cost to Lessor	\$300,000	(irrelevant to lessee)

*The lessor's gross investment in the lease also would include any *unguaranteed* residual value in addition to the minimum lease payments. Any residual value *guaranteed* by the lessee is included in the minimum lease payments (both companies). We address these issues later in the chapter.

[†]If profit is zero, this would be a direct financing lease.

Illustration 15–9

Lease Payment Relationships

The difference between the total payments and their present value (selling price of the asset) represents interest.

If the price is higher than the cost to the lessor, the lessor realizes a profit on the sale.

Where We're Headed

The IASB and FASB are collaborating on a joint project for a revision of lease accounting standards. The Boards have agreed on a "right of use" model by which the lessee recognizes an asset representing the right to use the leased asset for the lease term and also recognizes a corresponding liability for the present value of the lease payments, regardless of the term of the lease. Many people expect the new standard to result in most, if not all, leases being recorded as an asset for the right of use and a liability for the present value of the lease payments. Thus, the notion of operating leases will likely disappear.

For an example, let's revisit Sans Serif's operating lease in Illustration 15–5 on p. 866. None of the four criteria was met that would have caused it to be a capital lease, including Criterion 4:

Is the present value of the minimum lease payments equal to or greater than 90% of the fair value of the asset:

$$\begin{array}{r} \text{NO} \\ (\$348,685 < 90\% \text{ of } \$479,079) \\ \$100,000 \times 3.48685 = \$348,685 \\ \text{Lease payments} \qquad \qquad \text{Present value} \end{array}$$

Accordingly, under existing standards, we recorded no asset and no liability for this operating lease. Under the new standard update, on the other hand, Sans Serif would be deemed to have received the "right of use" of the asset and would record an asset for the right of use and a liability for the present value of the lease payments:

Leased equipment	348,685	
Lease payable (present value of lease payments)		348,685

The impact of any changes will be significant; U.S. companies alone have over \$1.25 trillion in operating lease obligations.²¹ The new leases standard update is being finalized at the time this text is being written. The new guidance is slated for issuance in 2012, and adoption by companies will be required no sooner than 2016. We provide a detailed discussion of the new standard update in the Chapter Supplement.

LO15–11

The FASB and IASB are working together on a standard that would dramatically impact the way we account for leases, perhaps eliminating the concept of operating leases.

IFRS ILLUSTRATION

²¹John Hepp, "Proposed Standard Would Eliminate Operating Lease Accounting," *Grant Thornton Marquee*, Winter 2009.

PART B

BARGAIN PURCHASE OPTIONS AND RESIDUAL VALUE

Bargain Purchase Options

● LO15-7

We mentioned earlier that a **bargain purchase option (BPO)** is a provision of some lease contracts that gives the lessee the option of purchasing the leased property at a bargain price. We have discussed BPOs in the context of how they affect the classification of leases, but none of our earlier illustrations included a situation in which a BPO was present. You should have noted that a bargain price is defined in such a way that an additional cash payment is expected when a BPO is included in the agreement. Remember, a bargain price is one that is sufficiently below the property's expected fair value that the exercise of the option appears reasonably assured. Because exercise of the option appears at the inception of the lease to be reasonably assured, payment of the option price is expected to occur when the option becomes exercisable.

When a BPO is present, both the lessee and the lessor view the option price as an additional cash payment.

The expectation that the option price will be paid effectively adds an additional cash flow to the lease for both the lessee and the lessor. That additional payment is included as a component of minimum lease payments for both the lessor and the lessee. It therefore (a) is included in the computation of the amount to be capitalized (as an asset and a liability) by the *lessee* and recorded as a receivable by the *lessor*; but (b) reduces the amount of the periodic rent payments the *lessor* will need to receive from the lessee to recover the desired "selling price." This is indicated in Illustration 15-10.

Illustration 15-10

Effect of a Bargain Purchase Option

- The **lessee** adds the present value of the BPO price to the present value of periodic rental payments when computing the amount to be recorded as a leased asset and a lease liability.
- The **lessor**, when computing periodic rental payments, *subtracts* the present value of the BPO price from the amount to be recovered (fair value) to determine the amount that must be recovered from the lessee through the periodic rental payments.

For demonstration, let's suppose the equipment leased in Illustration 15-7 could be purchased by Sans Serif for an option price of **\$60,000** at the conclusion of the lease. To make this a "bargain" purchase option, assume the residual value at the conclusion of the lease is expected to be \$75,000. This situation is assumed in Illustration 15-11.

Illustration 15-11

Bargain Purchase Option

On January 1, 2013, Sans Serif Publishers, Inc., leased printing equipment from CompuDec Corporation at a price of \$479,079. The lease agreement specifies annual payments beginning January 1, 2013, the inception of the lease, and at each December 31 thereafter through 2017. On December 31, 2018, at the end of the six-year lease term, the equipment is expected to be worth \$75,000, and Sans Serif has the option to purchase it for **\$60,000** on that date. The estimated useful life of the equipment is seven years. The residual value after seven years is zero.²² CompuDec manufactured the equipment at a cost of \$300,000 and its interest rate for financing the transaction is 10%.

Lessee's calculation of PV of minimum lease payments:

Present value of periodic rental payments ($\$92,931 \times 4.79079^\dagger$)	\$445,211
Plus: Present value of the BPO price ($\$60,000 \times .56447^*$)	<u>33,868</u>
Present value of minimum lease payments (Recorded as a leased asset and a lease liability)	<u>\$479,079</u>

(continued)

The lessee adds the PV of the BPO price to determine its asset and liability.

²²Our discussion of the effect of a bargain purchase option would be precisely the same if our illustration were of a direct financing lease (for instance, if the lessor's cost were \$479,079) except that neither sales revenue nor cost of goods sold would be recorded in a direct financing lease.

(concluded)

Lessor's calculation of rental payments:

Amount to be recovered (fair value)	\$479,079
Less: Present value of the BPO price ($\$60,000 \times .56447^*$)	<u>(33,868)</u>
Amount to be recovered through periodic rental payments	<u>\$445,211</u>
Rental payments at the beginning of each of the next six years: ($\$445,211 \div 4.79079^\dagger$)	<u>\$ 92,931</u>

[†]Present value of \$1: $n = 6, i = 10\%$.*Present value of an annuity due of \$1: $n = 6, i = 10\%$.

The lessor *subtracts* the PV of the BPO price to determine rental payments.

The lease amortization schedule for CompuDec and Sans Serif when a BPO is included in the lease agreement is shown in Illustration 15–11A.

	Payments	Effective Interest (10% × Outstanding balance)	Decrease in Balance	Outstanding Balance
1/1/13				479,079
1/1/13	92,931		92,931	386,148
12/31/13	92,931	.10 (386,148) = 38,615	54,316	331,832
12/31/14	92,931	.10 (331,832) = 33,183	59,748	272,084
12/31/15	92,931	.10 (272,084) = 27,208	65,723	206,361
12/31/16	92,931	.10 (206,361) = 20,636	72,295	134,066
12/31/17	92,931	.10 (134,066) = 13,407	79,524	54,542
12/31/18	<u>60,000</u>	.10 (54,542) = 5,458*	<u>54,542</u>	0
	617,586	138,507	479,079	

*Adjusted for rounding of other numbers in the schedule.

Illustration 15–11A

Amortization Schedule—
with BPO

Both the lessor and lessee view the BPO price (\$60,000) as an additional cash payment.

Be aware of several points the amortization schedule reveals. First, the six periodic cash payments are now \$92,931 as we calculated in Illustration 15–11. Notice also that we now include the \$60,000 BPO price as an additional lease payment. Despite the different composition of the minimum lease payments, their present value (\$479,079) is the same as when we assumed \$100,000 periodic payments and no residual value. However, the effective interest that will be recorded over the lease term (as interest expense by the lessee and interest revenue by the lessor) now is more: \$138,507. (It was \$120,921 before.) The higher interest reflects the fact that payments are farther in the future, causing the outstanding lease balances (and interest on those balances) to be higher during the lease term. Also, note that the total of the lease payments now is more: \$617,586. (It was \$600,000 before.) This total is referred to as the lessor's **gross investment in the lease** and is disclosed in the lessor's disclosure note about leases.

The lessor's *gross investment in the lease* is the total of periodic rental payments and any residual value.

Recording the exercise of the option is similar to recording the periodic rent payments. That is, a portion of the payment covers interest for the year, and the remaining portion reduces the outstanding liability/receivable balance (to zero with this last payment), as shown in Illustration 15–11B.

Note that depreciation also is affected by the BPO. As pointed out earlier, the lessee normally depreciates a leased asset over the term of the lease. But if ownership transfers by contract or by the expected exercise of a bargain purchase option, the asset should be depreciated over the asset's useful life. This reflects the fact that the lessee anticipates using the

Illustration 15–11B

Journal Entries—with BPO

The cash payment expected when the BPO is exercised represents part interest and part principal just like the other cash payments.

December 31, 2018		
Sans Serif Publishers, Inc. (Lessee)		
Depreciation expense ($\$479,079^* \div 7$ years)	68,440	
Accumulated depreciation		68,440
Interest expense ($10\% \times \$54,542$)	5,458	
Lease payable (difference)	54,542	
Cash (BPO price)		60,000
CompuDec Corporation (Lessor)		
Cash (BPO price)	60,000	
Lease receivable (account balance)		54,542
Interest revenue ($10\% \times$ outstanding balance)		5,458

*The residual value is zero after the full seven-year useful life.

leased asset for its full useful life. In this illustration, the equipment is expected to be useful for seven years, so depreciation is \$68,440 ($\$479,079 \div 7$ years).

When a BPO Is Exercisable Before the End of the Lease Term

In Illustration 15–11 we assumed that the BPO was exercisable on December 31, 2018—the end of the lease term. Sometimes, though, the lease contract specifies that a BPO becomes exercisable before the designated lease term ends. Since a BPO is expected to be exercised, the lease term ends for accounting purposes when the option becomes exercisable. For example, let's say the BPO in the illustration could be exercised a year earlier—at the end of the fifth year. The effect this would have on accounting for the lease is to change the lease term from six years to five. All calculations would be modified accordingly. Stated differently, minimum lease payments include only the periodic cash payments specified in the agreement that occur prior to the date a BPO becomes exercisable. (We assume the option is exercised at that time and the lease ends.)

The length of the lease term is limited to the time up to when a bargain purchase option becomes exercisable.

Ethical Dilemma

"I know we had discussed that they're supposed to be worth \$24,000 when our purchase option becomes exercisable," Ferris insisted. "That's why we agreed to the lease terms. But, Jenkins, you know how fast computers become dated. We can make a good case that they'll be worth only \$10,000 in three years."

The computers to which Ferris referred were acquired by lease. The lease meets none of the criteria for classification as a capital lease except that it would contain a bargain purchase option if the computers could be purchased for \$10,000 after three years.

"We could avoid running up our debt that way," Jenkins agreed.

How could debt be avoided?

Do you perceive an ethical problem?

Residual Value

The **residual value** of leased property is an estimate of what its commercial value will be at the end of the lease term. In our previous examples of capital leases for which no BPOs were present, we assumed that the residual value was negligible. Now let's consider the economic effect of a leased asset that does have a material residual value and how that will affect the way both the lessee and the lessor account for the lease agreement.

Suppose the equipment leased in Illustration 15–11 was expected to be worth \$60,000 at the end of the six-year lease term. Should this influence the lessor's (CompuDec) calculation of periodic rental payments? Other than the possible influence on rental payments, should the lessee (Sans Serif Publishers) be concerned with the residual value of the leased asset? The answer to both questions is maybe. We'll use Illustration 15–12 to see why.

● LO15–8

On January 1, 2013, Sans Serif Publishers, Inc., leased printing equipment from CompuDec Corporation at a price of \$479,079. The lease agreement specifies annual payments beginning January 1, 2013, the inception of the lease, and at each December 31 thereafter through 2017. The estimated useful life of the equipment is seven years. On December 31, 2018, at the end of the six-year lease term, the equipment is expected to be worth \$60,000. CompuDec manufactured the equipment at a cost of \$300,000* and its interest rate for financing the transaction is 10%.

*This provision is for consistency with Illustration 15–8, which described a sales-type lease. However, our discussion of the effect of a residual value would be precisely the same if our illustration were of a direct financing lease (for instance, if the lessor's cost is \$479,079) except that neither sales revenue nor cost of goods sold would be recorded in a direct financing lease.

Illustration 15–12

Residual Value

We consider the lessee first.

Effect on the Lessee of a Residual Value

Should the lessee view the residual value as an additional “payment” by the lessee as it did for the BPO price in the previous section? That depends on whether the lessee *guarantees* the residual value to be a particular amount at the end of the lease term.

GUARANTEED RESIDUAL VALUE. Sometimes the lease agreement includes a guarantee by the lessee that the lessor will recover a specified residual value when custody of the asset reverts back to the lessor at the end of the lease term. This not only reduces the lessor's risk but also provides incentive for the lessee to exercise a higher degree of care in maintaining the leased asset to preserve the residual value. The lessee promises to return not only the property but also sufficient cash to provide the lessor with a minimum combined value. In effect, the guaranteed residual value is an additional lease payment that is to be paid in property, or cash, or both. As such, it is included in the minimum lease payments and affects the amount the lessee records as both a leased asset and a lease liability, as shown in Illustration 15–12A.

The guaranteed residual value is considered an additional lease payment that is to be paid in property, or cash, or both.

Present value of periodic rental payments ($\$92,931 \times 4.79079^*$)	\$445,211
Plus: Present value of the residual value ($\$60,000 \times .56447^\dagger$)	33,868
Present value of minimum lease payments (recorded as a leased asset and a lease liability)	<u>\$479,079</u>

*Present value of an annuity due of \$1: $n = 6, i = 10\%$.

†Present value of \$1: $n = 6, i = 10\%$.

Illustration 15–12A

Lessee's Calculation of the Present Value of Minimum Lease Payments Including a Guaranteed Residual Value

You should recognize this as the same calculation we used in the previous section when we had a BPO, and so the BPO price was considered an additional lease payment. In fact, the amortization schedule is precisely the same as in Illustration 15–11A on page 877 when we had a BPO.

A question you might have at this point is: Earlier, when we had a BPO, why didn't we also view the residual value at the end of the lease term as an additional payment when calculating the present value of lease payments? The reason is obvious when you recall an

If the lessee obtains title, the lessor's computation of rental payments is unaffected by any residual value.

essential characteristic of a BPO is that it's expected to be exercised. So, when it is exercised, title to the leased asset passes to the lessee and, with title, any residual value. When that happens, the residual value cannot be considered an additional lease payment to the lessor, and it therefore is not incorporated into the computation of lease payments.

Unguaranteed residual value. The previous example demonstrates that when the residual value is guaranteed, the lessee views it as a component of minimum lease payments. But what if the lessee does *not* guarantee the residual value? In that case, the lessee is not obligated to make any payments other than the periodic rental payments. As a result, the present value of the minimum lease payments—recorded as a leased asset and a lease liability—is simply the present value of periodic rental payments (\$445,211). The same is true when the residual value is guaranteed by a third-party guarantor. (Insurance companies sometimes assume this role.)

Effect on the Lessor of a Residual Value

Guaranteed residual value. When the residual value is guaranteed, the lessor as well as the lessee views it as a component of minimum lease payments. If CompuDec retains title to the asset at the end of the lease term, then it would anticipate receiving the \$60,000 residual value at the conclusion of the lease term. That amount would contribute to the total amount to be recovered by the lessor and would reduce the amount needed to be recovered from the lessee through periodic rental payments. The amount of each payment would be reduced from \$100,000 to \$92,931, calculated in Illustration 15–12B.

The lessor *subtracts* the PV of the residual value to determine rental payments, but includes it in the lease receivable.

Illustration 15–12B

Lessor's Calculation of Rental Payments When Lessor Retains Residual Value

Amount to be recovered (fair value)	\$479,079
Less: Present value of the residual value (\$60,000 × .56447*)	(33,868)
Amount to be recovered through periodic rental payments	<u>\$445,211</u>
Rental payments at the beginning of each of the next six years: (\$445,211 ÷ 4.79079 [†])	<u>\$ 92,931</u>

*Present value of \$1: $n = 6, i = 10\%$.
[†]Present value of an annuity due of \$1: $n = 6, i = 10\%$.

You should notice that the lessor's calculation of periodic rental payments is precisely the same as when we had the \$60,000 BPO price in a previous section. It also is precisely the reverse of the *lessee's* calculation of the amount to capitalize when the residual value is guaranteed. This is because when the residual value is guaranteed, both view it as an additional lease payment. In accordance with GAAP, the guaranteed residual value is a component of the minimum lease payments for both the lessor and lessee.²³ In fact, the amortization schedule is precisely the same as in Illustration 15–11A on page 877 when we had a BPO.

If CompuDec had acquired the equipment for the \$479,079 "selling price," it would be a direct financing lease recorded as follows:

Lease receivable (present value of minimum lease payments)	479,079
Inventory of equipment (lessor's cost)	479,079

Illustration 15–12, though, states that CompuDec manufactured it at a cost of \$300,000, making it a sales-type lease. In Illustration 15–12C, we see the lessor's entries for this sales-type lease along with the lessee's entries for comparison. Only the lessor's initial entry on

²³Later you will see that when the residual value is *not* guaranteed, it is *not* considered a component of minimum lease payments for either the lessor or the lessee; but it still affects the amount of periodic lease payments.

January 1, 2013, is different. All other entries in Illustration 15–12C are the same whether it’s a sales-type lease or a direct financing lease.

Sales-Type Lease, January 1, 2013		
Sans Serif Publishers, Inc. (Lessee)		
Leased equipment (present value of lease payments)	479,079	
Lease payable (present value of lease payments)		479,079
CompuDec Corporation (Lessor)		
Lease receivable (present value of minimum lease payments*)	479,079	
Cost of goods sold (lessor’s cost)	300,000	
Sales revenue (present value of minimum lease payments*)		479,079
Inventory of equipment (lessor’s cost)		300,000
First Lease Payment, January 1, 2013		
Sans Serif Publishers, Inc. (Lessee)		
Lease payable	92,931	
Cash		92,931
CompuDec Corporation (Lessor)		
Cash	92,931	
Lease receivable		92,931

*Minimum lease payments include the \$60,000 residual value because it’s guaranteed.

Illustration 15–12C

Sales-Type Lease with Guaranteed Residual Value

Sales revenue	\$479,079
– COGS	300,000
Dealer’s profit	\$179,079

The lessor’s minimum lease payments include a residual value only if it is guaranteed (by either the lessee or a third-party guarantor).

Notice, too, that the timing of the \$60,000 payment is December 31, 2018, the end of the lease term. Remember, the final periodic cash payment on December 31, 2017, is at the beginning of the final year. The journal entries that accompany this final cash payment are shown in Illustration 15–12D

December 31, 2017		
Sans Serif Publishers, Inc. (Lessee)		
Depreciation expense [(\$479,079 – 60,000)* ÷ 6 years]	69,847	
Accumulated depreciation		69,847
Interest expense (10% × outstanding balance)	13,407	
Lease payable (difference)	79,524	
Cash (lease payment)		92,931
CompuDec Corporation (Lessor)		
Cash (lease payment)	92,931	
Lease receivable		79,524
Interest revenue (10% × outstanding balance)		13,407

*The depreciable cost is reduced by the lessee-guaranteed residual value.

Illustration 15–12D

Entries to Accompany Final Periodic Payment

The residual value reduces the asset’s depreciable cost to \$419,079.

As the outstanding balance becomes less toward the end of the lease term, the portion of each payment that represents interest also becomes less.

At December 31, 2018, the lessee’s book value of the fully depreciated equipment is its \$60,000 estimated residual value. If we assume that the actual residual value also is at least \$60,000, then the lessee is not obligated to pay cash in addition to returning the equipment to the lessor (demonstrated in Illustration 15–12E).²⁴

²⁴If the actual value is more than the guaranteed residual value, the lessor may realize a gain if and when the asset subsequently is sold. Alternatively, the lessee could sell the asset, make the required \$60,000 payment to the lessor, and realize the gain. Regardless, the potential gain does not affect the entries at the end of the lease term.

Illustration 15–12E

End of Lease Term—
Actual Residual Value
Equals the Guaranteed
Amount

The sixth and final
depreciation charge
increases the balance
in accumulated
depreciation to \$419,079.

The equipment is
reinstated on the books
of the lessor at its fair
value at the end of the
lease term.

The lessor's minimum
lease payments include a
residual value only if it is
guaranteed (by either the
lessee or a third-party
guarantor).

When the lessee doesn't
guarantee the residual
value, the lessee's
net liability (\$445,211)
and the lessor's net
receivable (\$479,079) will
differ because the lessee
does not include the
unguaranteed residual
amount.

December 31, 2018		
Sans Serif Publishers, Inc. (Lessee)		
Depreciation expense [(\$479,079 – 60,000)* ÷ 6 years]	69,847	
Accumulated depreciation		69,847
Interest expense (10% × outstanding balance)	5,458	
Lease payable (difference)	54,542	
Accumulated depreciation (account balance)	419,079	
Leased equipment (account balance)		479,079
CompuDec Corporation (Lessor)		
Inventory of equipment (residual value)	60,000	
Lease receivable (account balance)		54,542
Interest revenue (10% × outstanding balance)		5,458

*The depreciable cost is reduced by the lessee-guaranteed residual value.

However, if we assume that the actual residual value at December 31, 2018, is only \$25,000, then the lessee is required to pay \$35,000 cash to the lessor in addition to returning the equipment. The lessee records this payment as a loss.²⁵

UNGUARANTEED RESIDUAL VALUE. The previous example demonstrates that when the residual value is guaranteed, both the lessor and lessee view it as a component of minimum lease payments. But what if the lessee does *not* guarantee the residual value? From the lessor's perspective, the residual value is a component of *minimum lease payments* only if it is guaranteed (by either the lessee or a third-party guarantor). Yet, even if it is not guaranteed, the lessor still expects to receive it. So, if we modify the previous illustration to assume the residual value is not guaranteed, the lessor's receivable still is \$479,079, the present value of the lease payments, including the residual value, so a direct financing lease would be the same as if the residual value is guaranteed.

However, the sales revenue is only \$445,211—the present value of the minimum lease payments *not* including the residual value. In other words, sales revenue includes the present value only of the periodic rental payments, not the unguaranteed residual value. Cost of goods sold is similarly reduced by the present value of the unguaranteed residual value, so the initial lessor entry would be modified as follows:

Sans Serif Publishers, Inc. (Lessee)		
Leased equipment (present value of lease payments)	445,211	
Lease payable (present value of lease payments)		445,211
CompuDec Corporation (Lessor)		
Lease receivable (PV of lease payments plus PV of \$60,000 residual value)	479,079	
Cost of goods sold (\$300,000 – 33,868)	266,132	
Sales revenue (\$479,079 – 33,868)*		445,211
Inventory of equipment (lessor's cost)		300,000

*Also can be calculated as the present value of the lessor's minimum lease payments, which does not include the unguaranteed residual value.

Sales revenue does not include the unguaranteed residual value because the revenue to be recovered from the lessee is lease payments only. The remainder of the lessor's investment is to be recovered—not from payment by the lessee (as is presumed when the residual value is guaranteed), but by selling, re-leasing, or otherwise obtaining value from the asset when

²⁵Sometimes by mutual agreement the lessee will sell the leased asset at the end of the lease term and remit the proceeds (plus any deficiency under the guarantee) to the lessor.

it reverts back to the lessor. You might want to view the situation this way: The portion of the asset sold is the portion not represented by the unguaranteed residual value. So, both the asset's cost and its selling price are reduced by the present value of the portion not sold.

When the residual value is not guaranteed, the lessor bears any loss that results from the actual residual value of the leased asset being less than the original estimate. The lessor would record (a) any cash received as well as (b) the returned asset at its actual residual value. It then would record a loss or gain if that total differs from the anticipated residual value.

Illustration 15–13 summarizes the effect of the residual value of a leased asset for each of the various possibilities regarding the nature of the residual value.

Is the residual value of a leased asset included in:	the Lessor's		the Lessee's
	(a) Computation of Lease Payments	(b) Minimum Lease Payments	(c) Minimum Lease Payments
Lessee gets the residual value (by transfer of title or the expected exercise of a bargain purchase option)	No	No	No
Lessor gets the residual value (title does not transfer; no bargain purchase option)			
• Residual value is not guaranteed	Yes	No	No
• Residual value is guaranteed by the lessee.	Yes	Yes	Yes
• Residual value is guaranteed by a <i>third party</i> guarantor.	Yes	Yes	No

(a) The lessor, when computing periodic rental payments, subtracts the present value of the residual value from the amount to be recovered (fair value) to determine the amount that must be recovered from the lessee through the periodic rent payments.

(b) The present value of the lessor's minimum lease payments is the lease receivable and, in a sales-type lease, the sales revenue.

(c) The present value of the lessee's minimum lease payments is the amount to be capitalized as an asset and a liability.

Illustration 15–13

Effect of a Residual Value: A Summary

We have seen how minimum lease payments are affected by a residual value and by a bargain purchase option. Let's now consider how maintenance, insurance, taxes, and other costs usually associated with ownership (called *executory costs*) affect minimum lease payments.

OTHER LEASE ACCOUNTING ISSUES

PART C

Executory Costs

One of the responsibilities of ownership that is transferred to the lessee in a capital lease is the responsibility to pay for maintenance, insurance, taxes, and any other costs usually associated with ownership. These are referred to as **executory costs**. Lease agreements usually are written in such a way that these costs are borne by the lessee. These expenditures simply are expensed by the lessee as incurred: repair expense, insurance expense, property tax expense, and so on. Let's return, for example, to Illustration 15–6 on page 869. Now, suppose that a \$2,000 per year maintenance agreement was arranged with an outside service for the leased equipment. Sans Serif (the lessee) would expense this fee each year as incurred:

● LO15–9

The lessee simply expenses executory costs as incurred.

Any portion of rental payments that represents maintenance, insurance, taxes, or other executory costs is not considered when calculating the PV of lease payments.

Illustration 15–14

Rental Payments Including Executory Costs Paid by the Lessor

Executory costs that are included in periodic rental payments to be paid by the lessor are, in effect, indirectly paid by the lessee—and expensed by the lessee.

The lessee uses the lower of the interest rate implicit in the lease or the lessee’s own incremental borrowing rate.

Maintenance expense	2,000	
Cash (annual fee)		2,000

The lessor is unaffected by executory costs paid by the lessee.

Sometimes, as an expediency, a lease contract will specify that the lessor is to pay executory costs, but that the lessee will reimburse the lessor through higher periodic rental payments. When rental payments are inflated for this reason, these executory costs are excluded in determining the present value of the minimum lease payments. They still are expensed by the lessee, even though paid through the lessor. For demonstration, let’s modify Illustration 15–6 to assume the periodic rental payments were increased to \$102,000 with the provision the lessor (First LeaseCorp) pays the maintenance fee. We do this in Illustration 15–14.

On January 1, 2013, Sans Serif Publishers, Inc., leased printing equipment from First LeaseCorp. First LeaseCorp purchased the equipment from CompuDec Corporation at a cost of \$479,079.

Additional information:

- Six annual payments of \$102,000 beginning January 1, 2013.
- Payments include \$2,000 which First LeaseCorp will use to pay an annual maintenance fee.
- The interest rate in these financing arrangements is 10%.
- Capital lease to Sans Serif.
- Direct financing lease to First LeaseCorp.

First Payment (January 1, 2013)

Sans Serif Publishers, Inc. (Lessee)		
Maintenance expense (2013 fee)	2,000	
Lease payable	100,000	
Cash (lease payment)		102,000
First LeaseCorp (Lessor)		
Cash (rental payment)	102,000	
Lease receivable		100,000
Maintenance fee payable*		2,000

*This assumes the \$2,000 maintenance fee has not yet been paid to the outside maintenance service.

Discount Rate

An important factor in the overall lease equation that we’ve glossed over until now is the discount rate used in present value calculations. Because lease payments occur in future periods, we must consider the time value of money when evaluating their present value. The rate is important because it influences virtually every amount reported by both the lessor and the lessee in connection with the lease.

One rate is implicit in the lease agreement. This is the effective interest rate the lease payments provide the lessor over and above the price at which the asset is sold under the lease. It is the desired rate of return the lessor has in mind when deciding the size of the lease payments. (Refer to our earlier calculations of the periodic rental payments.) Usually the lessee is aware of the lessor’s implicit rate or can infer it from the asset’s fair value.²⁶ When the lessor’s implicit rate is unknown, the lessee should use its own incremental borrowing rate.

This is the rate the lessee would expect to pay a bank if funds were borrowed to buy the asset. When the lessor’s implicit rate is known, the lessee should use the lower of the two rates.²⁷

²⁶The corporation laws of some states, Florida for instance, actually require the interest rate to be expressly stated in the lease agreement.

²⁷Incremental borrowing rate refers to the fact that lending institutions tend to view debt as being increasingly risky as the level of debt increases. Thus, additional (i.e., incremental) debt is likely to be loaned at a higher interest rate than existing debt, other things being equal.

When the Lessee's Incremental Borrowing Rate is Less Than the Lessor's Implicit Rate

Instances are few in which the lessee actually would use its incremental borrowing rate. Here's why. We noted earlier that, like any other asset, a leased asset should not be recorded at more than its fair value. Look what happens to the present value payments if Sans Serif uses a discount rate less than the 10% rate implicit in Illustration 15–6 (let's say 9%):

$$\$100,000 \times 4.88965^* = \$488,965$$

Rental payments	Lessee's cost
--------------------	------------------

*Present value of an annuity due of \$1: $n = 6, i = 9\%$.

But remember, the fair value of the equipment was \$479,079. The \$100,000 amount for the rental payments was derived by the lessor, contemplating a fair value of \$479,079 and a desired rate of return (implicit rate) of 10%. So, using a discount rate lower than the lessor's implicit rate usually would result in the present value of minimum lease payments being more than the fair value, and we record the lease at the fair value.

This conclusion does not hold when the leased asset has an unguaranteed residual value. You will recall that the lessor's determinations always include any residual value that accrues to the lessor; but when the lessee doesn't guarantee the residual value, it is *not* included in the lessee's present value calculations. Combining two previous examples, let's modify our demonstration of an unguaranteed residual value to assume the lessee's incremental borrowing rate was 9%. Because the residual value was expected to contribute to the lessor's recovery of the \$479,079 fair value, the rental payments were only \$92,931. But, the lessee would ignore the unguaranteed residual value and calculate its cost of the leased asset to be \$454,400.

$$\$92,931 \times 4.88965^* = \$454,400$$

Rental payments	Lessee's cost
--------------------	------------------

*Present value of an annuity due of \$1: $n = 6, i = 9\%$.

In this case, the present value of minimum lease payments would be *less than* the fair value even though a lower discount rate is used. But again, if there is no residual value, or if the lessee guarantees the residual value, or if the unguaranteed residual value is relatively small, a discount rate lower than the lessor's implicit rate will result in the present value of minimum lease payments being more than the fair value.

When the Lessor's Implicit Rate is Unknown

What if the lessee is unaware of the lessor's implicit rate? This is a logical question in light of the rule that says the lessee should use its own incremental borrowing rate when the lessor's implicit rate is unknown to the lessee. But in practice the lessor's implicit rate usually is known. Even if the lessor chooses not to explicitly disclose the rate, the lessee usually can deduce the rate using information he knows about the value of the leased asset and the lease payments. After all, in making the decision to lease rather than buy, the lessee typically becomes quite knowledgeable about the asset.

Even so, it is possible that a lessee might be unable to derive the lessor's implicit rate. This might happen, for example, if the leased asset has a relatively high residual value. Remember, a residual value (guaranteed or not) is an ingredient in the lessor's calculation of the rental payments. Sometimes it may be hard for the lessee to identify the residual value estimated by the lessor if the lessor chooses not to make it known.²⁸ As the lease term and risk of obsolescence increase, the residual value typically is less of a factor.

²⁸Disclosure requirements provide that the lessor company must disclose the components of its investments in nonoperating leases, which would include any estimated residual values. But the disclosures are aggregate amounts, not amounts of individual leased assets.

Additional Consideration

As pointed out earlier, the management of a lessee company sometimes will try to structure a lease to avoid the criteria that would cause the lease to be classified as a capital lease in order to gain the questionable advantages of off-balance-sheet financing. On the other hand, a lessor normally would prefer recording a capital lease, other things being equal. Two ways sometimes used to structure a lease to qualify as an operating lease by the lessee, but as a capital lease by the lessor are: (1) cause the two parties to use different interest rates and (2) avoid including the residual value in the lessee's minimum lease payments. Let's see how they work:

1. Cause the Two Parties to Use Different Interest Rates.

It was pointed out earlier that a lessee sometimes can claim to be unable to determine the lessor's implicit rate. Not knowing the lessor's implicit rate would permit the lessee to use its own incremental borrowing rate. If higher than the lessor's implicit rate, the present value it produces may cause the 90% of fair value criterion not to be met for the lessee (thus an operating lease) even though the criterion is met for the lessor (thus a capital lease).

2. Avoid Including the Residual Value in the Lessee's Minimum Lease Payments.

The residual value, if guaranteed by the lessee or by a third party guarantor, is included in the minimum lease payments by the lessor when applying the 90% of fair value criterion and thus increases the likelihood that a capital lease will be recorded. However, when the residual value is guaranteed by a third-party guarantor and not by the lessee, it is not included in the lessee's minimum lease payments. So, if a residual value is sufficiently large and guaranteed by a third-party guarantor, it may cause the 90% of fair value criterion to be met by the lessor, but not by the lessee.

Both schemes are unintentionally encouraged by lease accounting rules. As long as arbitrary cutoff points are used (90% of fair value in this case), maneuvers will be devised to circumvent them.

● LO15-11

International Financial Reporting Standards

Present Value of Minimum Lease Payments. Under IAS No. 17, both parties to a lease generally use the rate implicit in the lease to discount minimum lease payments.²⁹ Under U.S. GAAP, lessors use the implicit rate and lessees use the incremental borrowing rate unless the implicit rate is known and is the lower rate.

Lessor's Initial Direct Costs

The costs incurred by the lessor that are associated directly with originating a lease and are essential to acquire that lease are referred to as **initial direct costs**. They include legal fees, commissions, evaluating the prospective lessee's financial condition, and preparing and processing lease documents. The method of accounting for initial direct costs depends on the nature of the lease. Remember, a lessor can classify a lease as (1) an operating lease, (2) a direct financing lease, or (3) a sales-type lease. The accounting treatment for initial direct costs by each of the three possible lease types is summarized next.

1. For *operating leases*, initial direct costs are recorded as assets and amortized over the term of the lease. Since the only revenue an operating lease produces is rental revenue, and that revenue is recognized over the lease term, initial direct costs also are automatically recognized over the lease term to match these costs with the rent revenues they help generate.

²⁹“Leases,” *International Accounting Standard No. 17* (IASCF), as amended effective January 1, 2011.

2. In *direct financing leases*, interest revenue is earned over the lease term, so initial direct costs are matched with the interest revenues they help generate. Therefore, initial direct costs are not expensed at the outset but are deferred and recognized over the lease term. This can be accomplished by increasing the lessor's *lease receivable* by the total of initial direct costs. Then, as interest revenue is recognized over the lease term at a constant effective rate, the initial direct costs are recognized at the same rate (that is, proportionally).
3. For *sales-type leases*, initial direct costs are expensed at the inception of the lease. Since the usual reason for a sales-type lease is for a manufacturer or a dealer to sell its product, it's reasonable to recognize the costs of creating the transaction as a selling expense in the period of the sale.

Contingent Rentals

Sometimes rental payments may be increased (or decreased) at some future time during the lease term, depending on whether or not some specified event occurs. Usually the contingency is related to revenues, profitability, or usage above some designated level. For example, a quarterly report of **Dollar General Corporation** included the note re-created in Illustration 15–15.

As of January 28, 2011, approximately 35% of our stores had provisions for contingent rentals based upon a percentage of defined sales volume. We recognize contingent rental expense when the achievement of specified sales targets is considered probable..

Illustration 15–15

Disclosure of Contingent Rentals—Dollar General

Real World Financials

Contingent rentals are *not* included in the minimum lease payments because they are not determinable at the inception of the lease. Instead, they are included as components of income when (and if) they occur or when they are considered probable. Increases or decreases in rental payments that are dependent only on the passage of time are not contingent rentals; these are part of minimum lease payments.

Although contingent rentals are not included in minimum lease payments, they are reported in disclosure notes by both the lessor and lessee.

A Brief Summary

Leasing arrangements often are complex. In studying this chapter you've encountered several features of lease agreements that alter the way we make several of the calculations needed to account for leases. Illustration 15–16 on the next page provides a concise review of the essential lease accounting components, using calculations from a hypothetical lease situation to provide a numerical perspective.

Lease Disclosures

Lease disclosure requirements are quite extensive for both the lessor and lessee. Virtually all aspects of the lease agreement must be disclosed. For *all* leases (a) a general description of the leasing arrangement is required as well as (b) minimum future payments, in the aggregate and for each of the five succeeding fiscal years. Other required disclosures are specific to the type of lease and include: residual values, contingent rentals, sublease rentals, and executory costs. The lessor must disclose its **net investment in the lease**. This amount is the present value of the **gross investment in the lease**, which is the total of the minimum lease

The lessor's net investment in the lease is the present value of the gross investment, which is the total of the minimum lease payments (plus any unguaranteed residual value).

Illustration 15–16 Lease Terms and Concepts: A Comprehensive Summary

Lease Situation for Calculations			
(\$ in 000s)			
Lease term (years)	4	Lessor's cost	\$300
Asset's useful life (years)	5	Residual value (Total: \$8 + 6 + 5 = \$19):	
Lessor's implicit rate (known by lessee)	12%	Guaranteed by lessee	\$8
Lessee's incremental borrowing rate	13%	Guaranteed by third party ^a	\$6
Rental payments (including executory costs) at the beginning of each year	\$102	Unguaranteed	\$5
		Executory costs paid annually by lessor	\$2
		Bargain purchase option	none
Amount	Description	Calculation	
Lessee's:			
Minimum lease payments	Total of periodic rental payments ^b plus residual value guaranteed by lessee or plus BPO price ^d	$(\$100 \times 4) + \$8 = \$408$	
Leased asset	Present value of minimum lease payments (using lower of lessor's rate and lessee's incremental borrowing rate); cannot exceed fair value	$(\$100 \times 3.40183^e) + (\$8 \times .63552^f) = \$345$	
Lease liability at inception	Same as leased asset	$(\$100 \times 3.40183^e) + (\$8 \times .63552^f) = \$345$	
Lessor's:			
Minimum lease payments	Total of periodic rental payments ^b plus guaranteed ^c residual value or plus BPO price ^d	$(\$100 \times 4) + (\$8 + 6) = \$414$	
Lease receivable	Present value of periodic rental payments ^b plus any residual value that reverts to the lessor (guaranteed or not) or plus any BPO price ^d (discounted at the lessor's rate) plus any initial direct costs in a direct financing lease	$(\$100 \times 3.40183^e) + (\$8 \times .63552^f) = \$352$	
If sales-type lease:			
Sales revenue	Present value of lessor's minimum lease payments	$(\$100 \times 3.40183^e) + ((\$19 - 5) \times .63552^f) = \349	
Cost of goods sold	Lessor's cost – present value of unguaranteed residual value	$\$300 - (\$5 \times .63552^f) = \$297$	
Dealer's profit	Sales revenue – cost of goods sold	$\$349 - 297 = \52	
^a Beyond any amount guaranteed by the lessee (\$8 + 6 minus any amount paid by the lessee). ^b Any portion of rental payments that represents maintenance, insurance, taxes, or other executory costs is not considered part of minimum lease payments. In this case, rentals are reduced as follows: $\$102 - 2 = \100 . ^c By lessee and/or by third party. ^d In this context, a residual value and a BPO price are mutually exclusive: if a BPO exists, any residual value is expected to remain with the lessee and is not considered an additional payment. ^e Present value of annuity due of \$1: $n = 4, i = 12\%$. ^f Present value of \$1: $n = 4, i = 12\%$.			

payments (plus any unguaranteed residual value). Some representative disclosure examples are shown in Illustrations 15–17 (lessor) and 15–18 (lessee).

IBM is a manufacturer that relies heavily on leasing as a means of selling its products. Its disclosure of sales-type leases is shown in Illustration 15–17.

G Financing Receivables (in part)
(dollars in millions)

At December 31:	2010	2009
Current:		
Net investment in sales-type and direct financing leases	\$ 3,945	\$ 4,105
Commercial financing receivables	6,777	5,604
Customer loans receivable	4,718	4,475
Installment payment receivables	816	730
Total	<u>\$16,257</u>	<u>\$14,914</u>
Noncurrent:		
Net investment in sales-type and direct financing leases	\$ 5,384	\$ 5,331
Commercial financing receivables	43	58
Customer loans receivable	4,734	4,759
Installment payment receivables	388	496
Total	<u>\$10,548</u>	<u>\$10,644</u>

Net investment in sales-type and direct financing leases is for leases that relate principally to the company's equipment and are for terms ranging from two to six years. Net investment in sales-type and direct financing leases includes unguaranteed residual values of \$871 million and \$849 million at December 31, 2010 and 2009, respectively, and is reflected net of unearned income of \$816 million and \$905 million and of allowance for uncollectible accounts receivable of \$151 million and \$159 million at those dates, respectively.

Walmart leases facilities under both operating and capital leases. Its long-term obligations under these lease agreements are disclosed in a note to its financial statements (see Illustration 15–18).

Illustration 15–17

Lessor Disclosure of Sales-Type Leases—IBM Corporation

Real World Financials

Note 9 Commitments (in part)

The Company and certain of its subsidiaries have long-term leases for stores and equipment. Rentals (including, for certain leases, amounts applicable to taxes, insurance, maintenance, other operating expenses and contingent rentals) under all operating leases were \$2 billion in fiscal 2011 and \$1.8 billion in each of fiscal 2010 and 2009. Aggregate minimum annual rentals at January 31, 2011, under non-cancelable leases are as follows (in millions):

Fiscal Year	Operating Leases	Capital Leases
2012	\$ 1,406	\$ 609
2013	1,336	574
2014	1,271	545
2015	1,205	496
2016	1,120	462
Thereafter	7,785	3,230
Total minimum rentals	<u>\$14,123</u>	<u>\$5,916</u>
Less estimated executory costs		(51)
Net minimum lease payments		<u>5,865</u>
Less imputed interest		<u>(2,379)</u>
Present value of minimum lease payments		<u>\$3,486</u>

Lessee Disclosure of Leases—Walmart

Real World Financials

Decision Makers' Perspective—Financial Statement Impact

Leasing sometimes is used as a means of off-balance-sheet financing.

Lease liabilities affect the debt to equity ratio and the rate of return on assets.

Do operating leases create long-term commitments equivalent to liabilities?

Operating lease commitments create problems during an economic downturn.

The net income difference between treating a lease as a capital lease versus an operating lease generally is not significant.

The difference in impact on the balance sheet between capital leases and operating leases is significant.

As indicated in the Decision Makers' Perspective at the beginning of the chapter, leasing can allow a firm to conserve assets, to avoid some risks of owning assets, and to obtain favorable tax benefits. These advantages are desirable. It also was pointed out earlier that some firms try to obscure the realities of their financial position through off-balance-sheet financing or by avoiding violating terms of contracts that limit the amount of debt a company can have. Accounting guidelines are designed to limit the ability of firms to hide financial realities. Nevertheless, investors and creditors should be alert to the impact leases can have on a company's financial position and on its risk. ●

Balance Sheet and Income Statement

Capital lease transactions impact several of a firm's financial ratios. Because we record liabilities for capital leases, the debt-equity ratio (liabilities divided by shareholders' equity) is immediately impacted. Because we also record leased assets, the immediate impact on the rate of return on assets (net income divided by assets) is negative, but the lasting effect depends on how leased assets are utilized to enhance future net income. As illustrated in this chapter, the financial statement impact of a capital lease is no different from that of an installment purchase.

Even operating leases, though, can significantly affect risk. Operating leases represent long-term commitments that can become a problem if business declines and cash inflows drop off. For example, in 2009 the economic crisis caught many companies with a deadly combination of declining cash inflows and cash outflow commitments for lease agreements. Nearly four billion dollars in off-balance sheet obligations related to operating lease commitments was a major contributor to **Circuit City's** demise after a 60-year history as a leader in the electronics industry.

Whether leases are capitalized or treated as operating leases affects the income statement as well as the balance sheet. However, the impact on the income statement generally is not significant. Over the life of a lease, total expenses are equal regardless of the accounting treatment of a lease. If the lease is capitalized, total expenses comprise interest and depreciation. The total of these equals the total amount of rental payments, which would constitute rent expense if not capitalized. There is, however, a timing difference between lease capitalization and operating lease treatment, but the timing difference usually isn't great.

The more significant difference between capital leases and operating leases is the impact on the balance sheet. As mentioned above, a capital lease adds to both the asset and liability side of the balance sheet; operating leases do not affect the balance sheet at all. How can external financial statement users adjust their analysis to incorporate the balance sheet differences between capital and operating leases? A frequently offered suggestion is to capitalize all noncancelable lease commitments, including those related to operating leases. Some financial analysts, in fact, do this on their own to get a better feel for a company's actual debt position.

To illustrate, refer to Illustration 15–18 on the previous page, which reveals the operating lease commitments disclosed by **Walmart**. If these arrangements were considered capital leases, these payments would be capitalized (reported at the present value of all future payments). By making some reasonable assumptions, we can estimate the present value of all future payments to be made on existing operating leases. For example, the interest rates used by Walmart to discount rental payments on capital leases range from 3.0% to 13.6%. If we use the approximate average rate of 10%, and make certain other assumptions, we can determine the debt equivalent of the operating lease commitments as shown in Illustration 15–19.

If capitalized, these operating lease commitments would add **\$7,861** million to Walmart's liabilities and approximately **\$7,861** million to the company's assets.³⁰ Let's look at the

³⁰If these operating leases were capitalized, both assets and liabilities would increase by the same amount at inception of the lease. However, in later years, the leased asset account balance and the lease liability account will, generally, not be equal. The leased asset account is reduced by depreciation and the lease liability account is reduced (amortized) to zero using the effective interest method.

Capitalized Value or Debt Equivalent of Walmart's Operating Leases

(\$ in millions)

Fiscal Years	Operating Leases	PV Factor 10%	Present Value
2012	\$ 1,406	.909	\$1,278
2013	1,336	.826	1,104
2014	1,271	.751	955
2015	1,205	.683	823
2016	1,120	.621	696
Thereafter	7,785	.386*	3,005
Total minimum rentals	<u>\$14,123</u>		<u>\$7,861</u>

*This is the PV factor for $i = 10\%$, $n = 10$, which treats payments after 2016 as occurring in 2021, an assumption due to not knowing precise dates of specific payments after 2016.

Illustration 15–19

Estimating the Debt Equivalent of Operating Lease Commitments; Walmart

Real World Financials

impact this would have on the company's debt to equity ratio and its return on assets ratio using selected financial statement information taken from Walmart's annual report for the fiscal year ending January 31, 2011, shown next:

	(\$ in millions)
Total assets	\$180,663
Total liabilities	109,416
Total shareholders' equity	71,247
Net income	16,993

The debt to equity and return on assets ratios are calculated in Illustration 15–20 without considering the capitalization of operating leases and then again after adding \$7,861 million to both total assets and total liabilities. In the calculation of return on assets, we use only the year-end total assets rather than the average total assets for the year. Also, we assume no impact on income.

	(\$ in millions)	
	Without Capitalization	With Capitalization
Debt to equity ratio	$\frac{\$109,416}{\$71,247} = 1.54$	$\frac{\$117,277}{\$71,247} = 1.65$
Return on assets	$\frac{\$16,993}{\$180,663} = 9.4\%$	$\frac{\$16,993}{\$188,524} = 9.0\%$

Illustration 15–20

Ratios with and without Capitalization of Operating Leases; Walmart

Real World Financials

The debt to equity ratio rises from 1.54 to 1.65, and the return on assets ratio declines from 9.4% to 9.0%.

Statement of Cash Flow Impact

OPERATING LEASES. Remember, lease payments for operating leases represent rent—expense to the lessee, revenue for the lessor. These amounts are included in net income, so both the lessee and lessor report cash payments for operating leases in a statement of cash flows as cash flows from operating activities.

CAPITAL LEASES AND DIRECT FINANCING LEASES. You've learned in this chapter that capital leases are agreements that we identify as being formulated outwardly as leases, but which are in reality installment purchases, so we account for them as such. Each rental payment (except the first if paid at inception) includes both an amount that represents interest and an amount that represents a reduction of principal. In a statement of cash

Operating leases are not reported in a statement of cash flows at the lease's inception.

The interest portion of a capital lease payment is a cash flow from operating activities and the principal portion is a cash flow from financing activities.

flows, then, the lessee reports the interest portion as a cash outflow from operating activities and the principal portion as a cash outflow from financing activities. On the other side of the transaction, the lessor in a direct financing lease reports the interest portion as a cash inflow from operating activities and the principal portion as a cash inflow from investing activities. Both the lessee and lessor report the lease at its inception as a noncash investing/financing activity.

Cash receipts from a sales-type lease are cash flows from operating activities.

SALES-TYPE LEASES. A sales-type lease differs from a direct-financing lease for the lessor in that we assume the lessor is actually selling its product. Consistent with reporting sales of products under installment sales agreements rather than lease agreements, the lessor reports cash receipts from a sales-type lease as cash inflows from operating activities.

Concept Review Exercise

VARIOUS LEASE ACCOUNTING ISSUES

(This is an extension of the previous Concept Review Exercise.)

United Cellular Systems leased a satellite transmission device from Satellite Technology Corporation on January 1, 2014. Satellite Technology paid \$500,000 for the transmission device. Its retail value is \$653,681.

Terms of the Lease Agreement and Related Information:

Lease term	3 years (6 semiannual periods)
Semiannual rental payments	\$123,000 at the beginning of each period
Economic life of asset	4 years
Implicit interest rate	12%
(Also lessee's incremental borrowing rate)	
Unguaranteed residual value	\$40,000
Regulatory fees paid by lessor	\$3,000/twice each year (included in rentals)
Lessor's initial direct costs	\$4,500
Contingent rental payments	Additional \$4,000 if revenues exceed a specified base

Required:

1. Prepare an amortization schedule that describes the pattern of interest expense over the lease term for United Cellular Systems.
2. Prepare an amortization schedule that describes the pattern of interest revenue over the lease term for Satellite Technology.
3. Prepare the appropriate entries for both United Cellular Systems and Satellite Technology on January 1 and June 30, 2014.
4. Prepare the appropriate entries for both United Cellular Systems and Satellite Technology on December 31, 2016 (the end of the lease term), assuming the device is returned to the lessor and its actual residual value is \$14,000 on that date.

Solution:

1. Prepare an amortization schedule that describes the pattern of interest expense over the lease term for United Cellular Systems.

Calculation of the Present Value of Minimum Lease Payments:

Present value of periodic rental payments excluding executory costs of \$3,000:

$$(\$120,000 \times 5.21236^*) = \$625,483$$

*Present value of an annuity due of \$1: $n = 6$, $i = 6\%$.

Note: The *unguaranteed* residual value is excluded from minimum lease payments for both the lessee and lessor.

Date	Payments	Effective Interest	Decrease in Balance	Outstanding Balance
		(6% × Outstanding balance)		
1/1/14				625,483
1/1/14	120,000		120,000	505,483
6/30/14	120,000	.06 (505,483) = 30,329	89,671	415,812
1/1/15	120,000	.06 (415,812) = 24,949	95,051	320,761
6/30/15	120,000	.06 (320,761) = 19,246	100,754	220,007
1/1/16	120,000	.06 (220,007) = 13,200	106,800	113,207
6/30/16	120,000	.06 (113,207) = 6,793*	113,207	0
	<u>720,000</u>	<u>94,517</u>	<u>625,483</u>	

*Adjusted for rounding of other numbers in the schedule.

2. Prepare an amortization schedule that describes the pattern of interest revenue over the lease term for Satellite Technology.

Calculation of the Lessor's Net Investment:

Present value of periodic rental payments excluding executory costs of \$3,000 ($\$120,000 \times 5.21236^*$)	\$625,483
Plus: Present value of the unguaranteed residual value ($\$40,000 \times .70496^\dagger$)	<u>28,198</u>
Lessor's net investment in lease	<u><u>\$653,681</u></u>

*Present value of an annuity due of \$1: $n = 6, i = 6\%$.

†Present value of \$1: $n = 6, i = 6\%$.

Note: The unguaranteed residual value is excluded from minimum lease payments, but is part of the lessor's gross and net investment in the lease.

Date	Payments	Effective Interest	Decrease in Balance	Outstanding Balance
		(6% × Outstanding balance)		
1/1/14				653,681
1/1/14	120,000		120,000	533,681
6/30/14	120,000	.06 (533,681) = 32,021	87,979	445,702
1/1/15	120,000	.06 (445,702) = 26,742	93,258	352,444
6/30/15	120,000	.06 (352,444) = 21,147	98,853	253,591
1/1/16	120,000	.06 (253,591) = 15,215	104,785	148,806
6/30/16	120,000	.06 (148,806) = 8,928	111,072	37,734
12/31/16	40,000	.06 (37,734) = 2,266*	37,734	0
	<u>760,000</u>	<u>106,319</u>	<u>653,681</u>	

*Adjusted for rounding of other numbers in the schedule.

3. Prepare the appropriate entries for both United Cellular Systems and Satellite Technology on January 1 and June 30, 2014.

January 1, 2014		
United Cellular Systems (Lessee)		
Leased equipment (calculated above).....	625,483	
Lease payable (calculated above)		625,483
Lease payable (payment less executory costs)	120,000	
Regulatory fees expense (executory costs)	3,000	
Cash (lease payment)		123,000

Satellite Technology (Lessor)

Lease receivable (PV of lease payments + PV \$40,000 residual value) ^a	653,681	
Cost of goods sold [$\$500,000 - (\$40,000^a \times .70496)$]	471,802	
Sales revenue (present value of minimum lease payments ^b)		625,483
Inventory of equipment (lessor's cost)		500,000
Selling expense	4,500	
Cash (initial direct costs)		4,500
Cash (lease payment)	123,000	
Regulatory fees payable (or cash)		3,000
Lease receivable (payment less executory costs)		120,000

^aThis is the unguaranteed residual value.

^bAlso, $\$653,681 - (\$40,000^a \times .70496)$.

June 30, 2014**United Cellular Systems (Lessee)**

Interest expense [$6\% \times (\$625,483 - 120,000)$]	30,329	
Lease payable (difference)	89,671	
Regulatory fees expense (annual fee)	3,000	
Cash (lease payment)		123,000

Satellite Technology (Lessor)

Cash (lease payment)	123,000	
Regulatory fees payable (or cash)		3,000
Lease receivable (to balance)		87,979
Interest revenue [$6\% \times (\$653,681 - 120,000)$]		32,021

4. Prepare the appropriate entries for both United Cellular Systems and Satellite Technology on December 31, 2016 (the end of the lease term), assuming the device is returned to the lessor and its actual residual value is \$14,000 on that date.

December 31, 2016**United Cellular Systems (Lessee)**

Depreciation expense ($\$625,483 \div 3$ years)	208,494	
Accumulated depreciation		208,494
Accumulated depreciation (account balance)	625,483	
Leased equipment (account balance)		625,483

Satellite Technology (Lessor)

Inventory of equipment (actual residual value)	14,000	
Loss on leased assets ($\$40,000 - 14,000$)	26,000	
Lease receivable (account balance)		37,734
Interest revenue ($6\% \times \$37,734$: from schedule)		2,266

PART D**SPECIAL LEASING ARRANGEMENTS****Sale-Leaseback Arrangements**

In a **sale-leaseback transaction**, the owner of an asset sells it and immediately leases it back from the new owner. Sound strange? Maybe, but this arrangement is common. In a sale-leaseback transaction two things happen:

● LO15-10

1. The seller-lessee receives cash from the sale of the asset.

2. The seller-lessee pays periodic rent payments to the buyer-lessor to retain the use of the asset.

What motivates this kind of arrangement? The two most common reasons are: (1) If the asset had been financed originally with debt and interest rates have fallen, the sale-leaseback transaction can be used to effectively refinance at a lower rate. (2) The most likely motivation for a sale-leaseback transaction is to generate cash.

Capital Leases

Illustration 15–21 demonstrates a sale-leaseback involving a capital lease for warehouses. The sale and simultaneous leaseback of the warehouses should be viewed as a single borrowing transaction. Although there appear to be two separate transactions, look closer at the substance of the agreement. Teledyne still retains the use of the warehouses that it had prior to the sale and leaseback. What is different? Teledyne has \$900,000 cash and a noncancelable obligation to make annual payments of \$133,155. In substance, Teledyne simply has borrowed \$900,000 to be repaid over 10 years along with 10% interest. From the perspective of substance over form, we do not immediately recognize the \$300,000 gain on the sale of the warehouses but defer the gain to be recognized over the term of the lease (or the useful life of the asset if title is expected to transfer outright or by the exercise of a BPO).

Recording a sale-leaseback transaction follows the basic accounting concept of substance over form.

Illustration 15–21

Sale-Leaseback

Teledyne Distribution Center was in need of cash. Its solution: sell its four warehouses for \$900,000, and then lease back the warehouses to obtain their continued use. The warehouses had a carrying value on Teledyne's books of \$600,000 (original cost \$950,000). Other information:

- The sale date is December 31, 2013.
- The noncancelable lease term is 10 years and requires annual payments of \$133,155 beginning December 31, 2013. The estimated remaining useful life of the warehouses is 10 years.
- The annual rental payments (present value \$900,000) provides the lessor with a 10% rate of return on the financing arrangement.* Teledyne's incremental borrowing rate is 10%.
- Teledyne depreciates its warehouses on a straight-line basis.

December 31, 2013

Cash	900,000	
Accumulated depreciation (\$950,000 – 600,000)	350,000	
Warehouses (cost)		950,000
Deferred gain on sale-leaseback (difference)		300,000
Leased warehouses (present value of lease payments)	900,000	
Lease payable (present value of lease payments)		900,000
Lease payable	133,155	
Cash		133,155

December 31, 2014

Interest expense [10% × (\$900,000 – 133,155)]	76,685	
Lease payable (difference)	56,470	
Cash (rental payment)		133,155
Depreciation expense (\$900,000 ÷ 10 years)	90,000	
Accumulated depreciation		90,000
Deferred gain on sale-leaseback (\$300,000 ÷ 10 years)	30,000	
Depreciation expense		30,000

*\$133,155 × 6.75902 = \$900,000 (\$899,997.31 rounded)
 Rent (from Table 6) Present
 payments n = 10, i = 10% value

The gain on sale-leaseback is deferred and recognized over the lease term as a reduction of depreciation expense.

Since the lease term is equal to the expected useful life of the warehouses (>75%), the leaseback must be recorded by the lessee as a capital lease.³¹ There typically is interdependency between the lease terms and the price at which the asset is sold. The earnings process is not complete at the time of sale but is completed over the term of the lease. So, viewing the sale and the leaseback as a single transaction is consistent with the realization principle. Look closely at the 2014 entries to see the net effect of recording the sale-leaseback this way. Amortizing the deferred gain over the lease term as a reduction of depreciation expense decreases depreciation each year to \$60,000.³² Interest expense is \$76,685. If Tele-dyne had *not* sold the warehouses (\$600,000 carrying value) and had borrowed \$900,000 cash by issuing an installment note, the 2014 effect would have been virtually identical:

Depreciating the carrying value of the warehouses over their remaining useful life produces depreciation equal to the net depreciation recorded in a sale-leaseback.

December 31, 2014		
Interest expense [10% × (\$900,000 – 133,155)]	76,685	
Note payable (difference)	56,470	
Cash (installment payment)		133,155
Depreciation expense (\$600,000 ÷ 10 years)	60,000	
Accumulated depreciation		60,000

The deferred gain is reported in the balance sheet as a valuation (contra) account, offsetting the leased asset. The 2014 balance sheet effect of the sale-leaseback transaction and a \$900,000 installment note are compared in Illustration 15–22. Once again, the effect is virtually identical.

Illustration 15–22

Comparison of a Sale-Leaseback and a Purchase

	Sale- Leaseback	Retain Asset; Borrow Cash
Assets		
Leased asset	\$900,000	\$950,000
Less: Accumulated depreciation	(90,000)	(410,000)
Less: Deferred gain (\$300,000 – 30,000)	(270,000)	
	<u>\$540,000</u>	<u>\$540,000</u>
Liabilities		
Lease payable (\$900,000 – 133,155 – 56,470)	\$710,375	
Note payable (\$900,000 – 133,155 – 56,470)		\$710,375

Accounting by the buyer/lessor is no different in a sale-leaseback transaction than another lease transaction. That is, it records a lease in accordance with the usual lease guidelines.

Operating Leases

If the leaseback portion of the previous sale-leaseback transaction were classified as an operating lease, the gain still would be deferred but would be recognized as a reduction of rent expense rather than depreciation. There is no leased asset to depreciate.³³

December 31, 2014		
Deferred gain on sale-leaseback (\$300,000 ÷ 10 years)	30,000	
Rent expense		30,000

Those of you with a healthy sense of skepticism will question whether the leaseback portion of our sale-leaseback situation could qualify as an operating lease. After all, the 10-year lease term is equal to the 10-year remaining useful life. But when you remember that neither the third (75% of economic life) nor the fourth (90% recovery of fair value) capital lease classification criterion applies if the inception of the lease occurs during the last 25% of an asset's

³¹The fourth criterion also is met. The present value of lease payments (\$900,000) is 100% (> 90%) of the fair value of the warehouses (\$900,000). Meeting any one of the four criteria is sufficient.

³²If depreciation is over the useful life of the leased asset rather than the lease term because ownership is expected to transfer to the lessee, amortization of the deferred gain also would be over the useful life. If a leaseback of land is a capital lease, the amortization of the deferred gain is recorded as revenue.

³³The deferred gain would be reported as a liability since it could not be offset against a leased asset.

economic life, you see the possibility of an operating lease. Suppose, for instance, that the original useful life of the warehouses was 40 years. In that case, the current lease term would occur during the last 25% of an asset's economic life and we would have an operating lease.

Losses on Sale-Leasebacks

In a sale-leaseback, any gain on the sale of the asset is deferred and amortized. However, a real loss on the sale of the property is recognized immediately—not deferred. A real loss means the fair value is less than the carrying amount of the asset. On the other hand, if the fair value exceeds the carrying amount, but the asset is sold to the buyer/lessor for less than the carrying amount, an artificial loss is produced that is probably in substance a prepayment of rent and should be deferred and amortized.

International Financial Reporting Standards

Recognizing a Gain on a Sale and Leaseback Transaction.

Operating Lease:

When the leaseback is an operating lease (as long as the lease payments and sales price are at fair value), under *IAS No. 17*, any gain on the sale is recognized immediately but is amortized over the lease term using U.S. GAAP.³⁴

For example, suppose Madison Storage sold its warehouse to an insurance company on January 1, 2013, for \$400,000 and immediately leased the building back. The operating lease calls for annual rental payments of \$25,000 for 12 years of the building's estimated 50-year useful life. The building has a fair value of \$400,000 and a carrying value of \$325,000 (its original cost was \$500,000). The rental payments of \$25,000 are payable to the insurance company each December 31. Here's a comparison:

	U.S. GAAP	IFRS
January 1, 2013		
Cash (given)	400,000	400,000
Accumulated depreciation (cost minus carrying value)	175,000	175,000
Building (original cost)	500,000	500,000
Deferred gain on sale-leaseback	75,000	
Gain on sale-leaseback (difference)		75,000
December 31, 2013		
Rent expense	25,000	25,000
Cash (lease payment)	25,000	25,000
Deferred gain on sale-leaseback	6,250	
Rent expense (\$75,000 ÷ 12 years)	6,250	

Finance (Capital) Lease:

When the leaseback is a finance (capital) lease, under *IAS No. 17*, the gain is recognized over the lease term, but is recognized over the useful life of the asset under U.S. GAAP. When debiting the deferred gain each period, by either set of standards, the credit is to depreciation expense.

● LO15-11

IFRS ILLUSTRATION

Real Estate Leases

Some leases involve land—exclusively or in part. The concepts we discussed in the chapter also relate to **real estate leases**. But the fact that land has an unlimited life causes us to modify how we account for some leases involving real estate.

Only the first (title transfers) and second (BPO) classification criteria apply in a land lease.

³⁴“Leases,” *International Accounting Standard No. 17* (IASCF), as amended effective January 1, 2011.

Leases of Land Only

Because the useful life of land is indefinite, the risks and rewards of ownership cannot be presumed transferred from the lessor to the lessee unless title to the land is expected to transfer—outright or by the expected exercise of a bargain purchase option (criterion 1 or criterion 2). Since the useful life is undefined, the third and fourth criteria are not applicable. Relatedly, because the leased asset is land, depreciation is inappropriate.

Leases of Land and Building

When the leased property includes both land and a building and the lease transfers ownership or is expected to by exercise of a BPO, the lessee should record each leased asset separately. The present value of the minimum lease payments is allocated between the leased land and leased building accounts on the basis of their relative fair values.

When neither of the first two capital lease criteria is met, the question arises as to whether the third and fourth criteria apply. Because they logically should apply to the building (because its life is limited) but not to the land (because its life is unlimited), the profession employs an arbitrary guideline. If the fair value of the land is less than 25% of the combined fair value, it is in effect ignored and both the lessee and the lessor treat the land and building as a single unit. The single leased asset is depreciated as if land were not involved. If the fair value of the land is 25% or more of the combined fair value, both the lessee and the lessor treat the land and building as two separate leases. Thus, the land lease is an operating lease, and the building lease is classified and accounted for in the manner described in the chapter.

When (a) the leased property includes both land and a building, (b) neither of the first two criteria is met, and (c) the fair value of the land is 25% or more of the combined fair value, both the lessee and the lessor treat the land as an operating lease and the building as any other lease.

Usual lease accounting procedures apply to leases that involve only part of a building, although extra effort may be needed to arrive at reasonable estimates of cost and fair value.

Leases of Only Part of a Building

Some of the most common of leases involve leasing only part of a building. For instance, businesses frequently lease space in an office building or individual stores in a shopping mall. Practical difficulties arise when applying lease accounting procedures in these situations. What is the cost of the third shop from the entrance in a \$14 million mall? What is the fair value of a sixth floor office suite in a 40-floor office complex? Despite practical difficulties, usual lease accounting treatment applies. It may, however, be necessary to employ real estate appraisals or replacement cost information to arrive at reasonable estimates of cost or fair value.

● LO15–11

International Financial Reporting Standards

Leases of Land and Buildings. Under *IAS No. 17*, land and building elements are considered separately unless the land element is not material.³⁵ This often results in classification of the land component as an operating lease.

Under U.S. GAAP, land and building elements generally are accounted for as a single unit, unless land represents more than 25% of the total fair value of the leased property.

³⁵“Leases,” *International Accounting Standard No. 17* (IASCF), as amended effective January 1, 2011.

Financial Reporting Case Solution

1. How would HG’s revenues “take a hit” as a result of more customers leasing than buying labeling machines? (p. 866) When HG leases machines under operating leases, it reports revenue as it collects “rent” over the lease term. When HG sells machines, on the other hand, it recognizes revenue “up front” in the year of sales. Actually, total revenues are not necessarily less with a lease, but are spread out over the several years of the lease term. This delays the recognition of revenues, creating the “hit” in the reporting periods in which a shift to leasing occurs.

2. **Under what kind of leasing arrangements would the “hit” not occur?** (p. 874) The hit will not occur when HG leases its machines under sales-type leases. In those cases, despite the fact that the contract specifies a lease, in effect, HG actually sells its machines under the arrangement. Consequently, HG will recognize sales revenue (and cost of goods sold) at the inception of the lease. The amount recognized is roughly the same as if customers actually buy the machines. As a result, the income statement will not receive the hit created by the substitution of operating leases for outright sales. ●

The Bottom Line

- LO15-1 Leasing is used as a means of financing assets as well as achieving operational and tax objectives. (p. 860)
- LO15-2 In keeping with the concept of substance over form, a lease is accounted for as either a rental agreement or a purchase/sale accompanied by debt financing. (p. 861)
- LO15-3 A lessee should classify a lease transaction as a capital lease if it is noncancelable and if one or more of four classification criteria are met. Otherwise, it is an operating lease. A lessor records a lease as a direct financing lease or a sales-type lease only if two conditions relating to revenue realization are met in addition to one of the four classification criteria. (p. 862)
- LO15-4 In an operating lease a sale is not recorded by the lessor; a purchase is not recorded by the lessee. Instead, the periodic rental payments are accounted for as rent revenue by the lessor and rent expense by the lessee. (p. 866)
- LO15-5 In a capital lease the lessee records a leased asset at the present value of the minimum lease payments. A capital lease is recorded by the lessor as a sales-type lease or direct financing lease, depending on whether the lease provides the lessor a dealer’s profit. (p. 868)
- LO15-6 A sales-type lease requires recording sales revenue and cost of goods sold by the lessor at the inception of the lease. All other entries are the same as in a direct financing lease. (p. 873)
- LO15-7 A bargain purchase option is included as a component of minimum lease payments for both the lessor and the lessee. The lease term effectively ends when the BPO is exercisable. (p. 876)
- LO15-8 A lessee-guaranteed residual value is included as a component of minimum lease payments for both the lessor and the lessee. An unguaranteed residual value is not (but is part of the lessor’s gross investment in the lease). (p. 879)
- LO15-9 Executory costs (maintenance, insurance, taxes, and any other costs usually associated with ownership) are expenses of the lessee. Any costs incurred by the lessor that are associated directly with originating a lease and are essential to acquire that lease are called *initial direct costs* and are expensed in accordance with the matching principle. To find the present value of minimum lease payments to capitalize as an asset and liability, the lessee usually uses a discount rate equal to the lower of the rate implicit in the lease agreement and its own incremental borrowing rate. Contingent rentals are *not* included in the minimum lease payments because they are not determinable at the inception of the lease. (p. 883)
- LO15-10 A gain on the sale of an asset in a sale leaseback arrangement is deferred and amortized over the lease term (or asset life if title is expected to transfer to the lessee). The lease portion of the transaction is evaluated and accounted for like any lease. (p. 894)
- LO15-11 In general, IFRS is considered to be more principles-based while U.S. GAAP is more rules-based. This difference is evident in accounting for leases. To distinguish between a capital lease and an operating lease U.S. GAAP uses four specific classification criteria, whereas IFRS uses a variety of “indicators” of a capital (finance) lease. We also often see differences in the discount rate used and how we account for sale-leasebacks and leases of land and buildings. (pp. 865, 875, 886, 897 and 898) ●

Questions For Review of Key Topics

- Q 15-1** The basic concept of “substance over form” influences lease accounting. Explain.
- Q 15-2** How is interest determined in a capital lease transaction? How does the approach compare to other forms of debt (say bonds payable or notes payable)?
- Q 15-3** How are leases and installment notes the same? How do they differ?
- IFRS** **Q 15-4** IASB chairman David Tweedie has noted that current GAAP allows airlines’ balance sheets to appear as if the companies don’t have airplanes. How can this be true?
- Q 15-5** A lessee should classify a lease transaction as a capital lease if it is noncancelable and one or more of four classification criteria are met. Otherwise, it is an operating lease. What are these criteria?
- Q 15-6** What is a bargain purchase option? How does it differ from other purchase options?
- Q 15-7** Lukawitz Industries leased equipment to Seminole Corporation for a four-year period, at which time possession of the leased asset will revert back to Lukawitz. The equipment cost Lukawitz \$4 million and has an expected useful life of six years. Its normal sales price is \$5.6 million. The present value of the minimum lease payments for both the lessor and lessee is \$5.2 million. The first payment was made at the inception of the lease. Collectibility of the remaining lease payments is reasonably assured, and Lukawitz has no material cost uncertainties. How should this lease be classified (a) by Lukawitz Industries (the lessor) and (b) by Seminole Corporation (the lessee)? Why?
- Q 15-8** Can the present value of minimum lease payments differ between the lessor and lessee? If so, how?
- Q 15-9** Compare the way a bargain purchase option and a residual value are treated by the lessee when determining minimum lease payments.
- Q 15-10** What are executory costs? How are they accounted for by the lessee in a capital lease when paid by the lessee? When paid by the lessor? Explain.
- Q 15-11** The discount rate influences virtually every amount reported in connection with a lease by both the lessor and the lessee. What is the lessor’s discount rate when determining the present value of minimum lease payments? What is the lessee’s discount rate?
- Q 15-12** A lease might specify that rental payments may be increased (or decreased) at some future time during the lease term depending on whether or not some specified event occurs such as revenues or profits exceeding some designated level. Under what circumstances are contingent rentals included or excluded from minimum lease payments? If excluded, how are they recognized in income determination?
- Q 15-13** The lessor’s initial direct costs often are substantial. What are initial direct costs?
- Q 15-14** When are initial direct costs recognized in an operating lease? In a direct financing lease? In a sales-type lease? Why?
- Q 15-15** What are the required lease disclosures for the lessor and lessee?
- Q 15-16** In a sale-leaseback transaction the owner of an asset sells it and immediately leases it back from the new owner. This dual transaction should be viewed as a single borrowing transaction. Why?
- Q 15-17** Explain how the general classification criteria are applied to leases that involve land.
- Q 15-18** What are the guidelines for determining when a material amount of land is involved in a lease?
- Q 15-19** How does a leveraged lease differ from a nonleveraged lease?
- IFRS** **Q 15-20** Where can we find authoritative guidance for accounting for leases under IFRS?
- IFRS** **Q 15-21** Could a finance (capital) lease under IFRS be classified as an operating lease under U.S. GAAP? Explain.
- IFRS** **Q 15-22** Describe the primary differences between IFRS and U.S. GAAP in the way leases are classified as either operating or finance (capital) leases.
- IFRS** **Q 15-23** The IASB and FASB are collaborating on a joint project to revise accounting standards for leases. Briefly describe the direction the project is taking.

Brief Exercises

- BE 15-1** Operating lease
 ● LO15-4 At the beginning of its fiscal year, Lakeside Inc. leased office space to LTT Corporation under a seven-year operating lease agreement. The contract calls for quarterly rent payments of \$25,000 each. The office building was acquired by Lakeside at a cost of \$2 million and was expected to have a useful life of 25 years with no residual value. What will be the effect of the lease on LTT’s earnings for the first year (ignore taxes)?
- BE 15-2** Operating lease
 ● LO15-4 In the situation described in BE 15-1, what will be the effect of the lease on Lakeside’s earnings for the first year (ignore taxes)?

- BE 15-3** Operating lease; advance payment
● LO15-4
Ward Products leased office space under a 10-year operating lease agreement. The lease specified 120 monthly rent payments of \$5,000 each, beginning at the inception of the lease. In addition to the first rent payment, Ward also paid a \$100,000 advance payment at the lease's inception. What will be the effect of the lease on Ward's earnings for the first year (ignore taxes)?
- BE 15-4** Lease classification
● LO15-3, LO15-5
Corinth Co. leased equipment to Athens Corporation for an eight-year period, at which time possession of the leased asset will revert back to Corinth. The equipment cost Corinth \$16 million and has an expected useful life of 12 years. Its normal sales price is \$22.4 million. The present value of the minimum lease payments for both the lessor and lessee is \$20.4 million. The first payment was made at the inception of the lease. Collectibility of the remaining lease payments is reasonably assured, and Corinth has no material cost uncertainties. How should Athens classify this lease? Why?
- BE 15-5** Lease classification
● LO15-3, LO15-5
In the situation described in BE 15-4, how should Corinth classify this lease? Why?
- BE 15-6** Net investment in leases; Sonic
● LO15-5
The 2010 annual report of the **Sonic Corporation** reported minimum lease payments receivable of \$1,982,000 and a net investment in direct financing leases of \$1,486,000. What accounts for the difference between these two amounts? Explain.
- Real World Financials**
- BE 15-7** Capital lease; calculate interest
● LO15-5
A lease agreement calls for quarterly lease payments of \$5,376 over a 10-year lease term, with the first payment at July 1, the lease's inception. The interest rate is 8%. Both the fair value and the cost of the asset to the lessor are \$150,000. What would be the amount of interest expense the lessee would record in conjunction with the second quarterly payment at October 1? What would be the amount of interest revenue the lessor would record in conjunction with the second quarterly payment at October 1?
- BE 15-8** Capital lease; lessee; balance sheet effects
● LO15-5
A lease agreement that qualifies as a capital lease calls for annual lease payments of \$26,269 over a six-year lease term, with the first payment at January 1, the lease's inception. The interest rate is 5%. If lessee's fiscal year is the calendar year, what would be the amount of the lease liability that the lessee would report in its balance sheet at the end of the first year? What would be the interest payable?
- BE 15-9** Capital lease; lessee; income statement effects
● LO15-5
In the situation described in BE 15-8, what would be the pretax amounts related to the lease that the lessee would report in its income statement for the year ended December 31?
- BE 15-10** Sales-type lease; lessor; income statement effects
● LO15-6
In the situation described in BE 15-8, assume the asset being leased cost the lessor \$125,000 to produce. Determine the price at which the lessor is "selling" the asset (present value of the lease payments). What would be the pretax amounts related to the lease that the lessor would report in its income statement for the year ended December 31?
- BE 15-11** Sales-type lease; lessor; calculate lease payments
● LO15-6
Manning Imports is contemplating an agreement to lease equipment to a customer for five years. Manning normally sells the asset for a cash price of \$100,000. Assuming that 8% is a reasonable rate of interest, what must be the amount of quarterly lease payments (beginning at the inception of the lease) in order for Manning to recover its normal selling price as well as be compensated for financing the asset over the lease term?
- BE 15-12** Bargain purchase option; lessor; direct financing lease
● LO15-5, LO15-6, LO15-7
Ace Leasing acquires equipment and leases it to customers under long-term direct financing leases. Ace earns interest under these arrangements at a 6% annual rate. Ace leased a machine it purchased for \$600,000 under an arrangement that specified annual payments beginning at the inception of the lease for five years. The lessee had the option to purchase the machine at the end of the lease term for \$100,000 when it was expected to have a residual value of \$160,000. Calculate the amount of the annual lease payments.

BE 15-13

Guaranteed residual value; direct financing lease

- LO15-5 through LO15-6, LO15-8

On January 1, James Industries leased equipment to a customer for a four-year period, at which time possession of the leased asset will revert back to James. The equipment cost James \$700,000 and has an expected useful life of six years. Its normal sales price is \$700,000. The residual value after four years, guaranteed by the lessee, is \$100,000. Lease payments are due on December 31 of each year, beginning with the first payment at the end of the first year. Collectibility of the remaining lease payments is reasonably assured, and there are no material cost uncertainties. The interest rate is 5%. Calculate the amount of the annual lease payments.

BE 15-14

IFRS; lease classification

- LO15-3, LO15-11

Adams Storage and Appraisal leased equipment to OAC Corporation for an eight-year period, at which time possession of the leased asset will revert back to Adams. The equipment cost Adams \$32 million and has an expected useful life of 11 years. Its normal sales price is \$45 million. The present value of the minimum lease payments for both the lessor and lessee is \$40 million. The first payment was made at the inception of the lease. How would OAC classify this lease if it prepares its financial statements using IFRS? Why?

Exercises

An alternate exercise and problem set is available on the text website: www.mhhe.com/spiceland7e

E 15-1

Operating lease

- LO15-4

On January 1, 2013, Nath-Langstrom Services, Inc., a computer software training firm, leased several computers from ComputerWorld Corporation under a two-year operating lease agreement. The contract calls for four rent payments of \$10,000 each, payable semiannually on June 30 and December 31 each year. The computers were acquired by ComputerWorld at a cost of \$90,000 and were expected to have a useful life of six years with no residual value.

Required:

Prepare the appropriate entries for both (a) the lessee and (b) the lessor from the inception of the lease through the end of 2013. (Use straight-line depreciation.)

E 15-2

Operating lease; advance payment; leasehold improvement

- LO15-4

On January 1, 2013, Winn Heat Transfer leased office space under a three-year operating lease agreement. The arrangement specified three annual rent payments of \$80,000 each, beginning January 1, 2013, the inception of the lease, and at each January 1 through 2015. Winn also paid a \$96,000 advance payment at the inception of the lease in addition to the first \$80,000 rent payment. With permission of the owner, Winn made structural modifications to the building before occupying the space at a cost of \$180,000. The useful life of the building and the structural modifications were estimated to be 30 years with no residual value.

Required:

Prepare the appropriate entries for Winn Heat Transfer from the inception of the lease through the end of 2013. Winn's fiscal year is the calendar year. Winn uses straight-line depreciation.

E 15-3

Capital lease; lessee

- LO15-5

(Note: Exercises 15-3, 15-4, and 15-5 are three variations of the same basic situation.)
Manufacturers Southern leased high-tech electronic equipment from Edison Leasing on January 1, 2013. Edison purchased the equipment from International Machines at a cost of \$112,080.

Related Information:

Lease term	2 years (8 quarterly periods)
Quarterly rental payments	\$15,000 at the beginning of each period
Economic life of asset	2 years
Fair value of asset	\$112,080
Implicit interest rate	8%
(Also lessee's incremental borrowing rate)	

Required:

Prepare a lease amortization schedule and appropriate entries for Manufacturers Southern from the inception of the lease through January 1, 2014. Depreciation is recorded at the end of each fiscal year (December 31) on a straight-line basis.

E 15-4

Direct financing lease; lessor

- LO15-5

Edison Leasing leased high-tech electronic equipment to Manufacturers Southern on January 1, 2013. Edison purchased the equipment from International Machines at a cost of \$112,080.

Related Information:

Lease term	2 years (8 quarterly periods)
Quarterly rental payments	\$15,000 at the beginning of each period
Economic life of asset	2 years
Fair value of asset	\$112,080
Implicit interest rate	8%
(Also lessee's incremental borrowing rate)	

Required:

Prepare a lease amortization schedule and appropriate entries for Edison Leasing from the inception of the lease through January 1, 2014. Edison's fiscal year ends December 31.

E 15-5

Sales-type lease;
lessor

● LO15-6

Manufacturers Southern leased high-tech electronic equipment from International Machines on January 1, 2013. International Machines manufactured the equipment at a cost of \$85,000.

Related Information:

Lease term	2 years (8 quarterly periods)
Quarterly rental payments	\$15,000 at the beginning of each period
Economic life of asset	2 years
Fair value of asset	\$112,080
Implicit interest rate	8%
(Also lessee's incremental borrowing rate)	

Required:

1. Show how International Machines determined the \$15,000 quarterly rental payments.
2. Prepare appropriate entries for International Machines to record the lease at its inception, January 1, 2013, and the second rental payment on April 1, 2013.

E 15-6

Lease
classification

● LO15-3

Each of the four independent situations below describes a lease requiring annual lease payments of \$10,000. For each situation, determine the appropriate lease classification by the lessee and indicate why.

	Situation			
	1	2	3	4
Lease term (years)	4	4	4	4
Asset's useful life (years)	6	5	6	6
Asset's fair value	\$44,000	\$43,000	\$41,000	\$39,000
Bargain purchase option?	No	Yes	No	No
Annual lease payments	Beg. of yr.	End of yr.	Beg. of yr.	End of yr.
Lessor's implicit rate (known by lessee)	5%	6%	5%	6%
Lessee's incremental borrowing rate	5%	5%	5%	5%

E 15-7

Capital lease

● LO15-5

American Food Services, Inc., leased a packaging machine from Barton and Barton Corporation. Barton and Barton completed construction of the machine on January 1, 2013. The lease agreement for the \$4 million (fair value and present value of the lease payments) machine specified four equal payments at the end of each year. The useful life of the machine was expected to be four years with no residual value. Barton and Barton's implicit interest rate was 10% (also American Food Services' incremental borrowing rate).

Required:

1. Prepare the journal entry for American Food Services at the inception of the lease on January 1, 2013.
2. Prepare an amortization schedule for the four-year term of the lease.
3. Prepare the journal entry for the first lease payment on December 31, 2013.
4. Prepare the journal entry for the third lease payment on December 31, 2015.

(Note: You may wish to compare your solution to this exercise with that of Exercise 14-18 which deals with a parallel situation in which the packaging machine was acquired with an installment note.)

E 15-8

Capital lease;
lessee; balance
sheet and income
statement effects

● LO15-5

(Note: Exercises 15-8, 15-9, and 15-10 are three variations of the same situation.)

On June 30, 2013, Georgia-Atlantic, Inc., leased a warehouse facility from IC Leasing Corporation. The lease agreement calls for Georgia-Atlantic to make semiannual lease payments of \$562,907 over a three-year lease term, payable each June 30 and December 31, with the first payment at June 30, 2013. Georgia-Atlantic's incremental borrowing rate is 10%, the same rate IC uses to calculate lease payment amounts. Depreciation is recorded on a straight-line basis at the end of each fiscal year. The fair value of the warehouse is \$3 million.

Required:

1. Determine the present value of the lease payments at June 30, 2013 (to the nearest \$000) that Georgia-Atlantic uses to record the leased asset and lease liability.

2. What pretax amounts related to the lease would Georgia-Atlantic report in its balance sheet at December 31, 2013?
3. What pretax amounts related to the lease would Georgia-Atlantic report in its income statement for the year ended December 31, 2013?

E 15-9
 Direct financing lease; lessor; balance sheet and income statement effects
 ● LO15-5

On June 30, 2013, Georgia-Atlantic, Inc., leased a warehouse facility from IC Leasing Corporation. The lease agreement calls for Georgia-Atlantic to make semiannual lease payments of \$562,907 over a three-year lease term, payable each June 30 and December 31, with the first payment at June 30, 2013. Georgia-Atlantic's incremental borrowing rate is 10%, the same rate IC used to calculate lease payment amounts. IC purchased the warehouse from Builders, Inc. at a cost of \$3 million.

Required:

1. What pretax amounts related to the lease would IC report in its balance sheet at December 31, 2013?
2. What pretax amounts related to the lease would IC report in its income statement for the year ended December 31, 2013?

E 15-10
 Sales-type lease; lessor; balance sheet and income statement effects
 ● LO15-6

On June 30, 2013, Georgia-Atlantic, Inc., leased a warehouse facility from Builders, Inc. The lease agreement calls for Georgia-Atlantic to make semiannual lease payments of \$562,907 over a three-year lease term, payable each June 30 and December 31, with the first payment at June 30, 2013. Georgia-Atlantic's incremental borrowing rate is 10%, the same rate Builders used to calculate lease payment amounts. Builders constructed the warehouse at a cost of \$2.5 million.

Required:

1. Determine the price at which Builders is "selling" the warehouse (present value of the lease payments) at June 30, 2013 (to the nearest \$000).
2. What pretax amounts related to the lease would Builders report in its balance sheet at December 31, 2013?
3. What pretax amounts related to the lease would Builders report in its income statement for the year ended December 31, 2013?

E 15-11
 IFRS; lease classification
 ● LO15-3, LO15-11

Airway Leasing entered into an agreement to lease aircraft to Ouachita Airlines. Consider each of the following, *a-e*, to be independent scenarios.

- a. The agreement calls for ownership of the aircraft to be transferred to Ouachita Airlines at the end of the lease term.
- b. The fair value of the aircraft is expected to be \$500,000 at the end of the lease term. Ouachita has the option to purchase the aircraft at the end of the lease term for \$90,000.
- c. The aircraft has a useful life of 20 years, and the term of the lease is 14 years.
- d. The present value of the lease payments is \$8,900,000 and the fair value of the leased aircraft is \$10,000,000.
- e. The aircraft was manufactured to meet specifications provided by Ouachita to optimize the exclusively regional nature of its flights.

Required:

1. In each scenario, indicate whether Ouachita would classify the lease as an operating lease or capital lease under U.S. GAAP. Assume the lease agreement has not met any of the other criteria of a capital lease. Provide brief explanations.
2. In each scenario, indicate whether Ouachita would classify the lease as an operating lease or finance lease under IFRS. Assume the lease agreement has not met any of the other indicators of a finance lease. Provide brief explanations.

E 15-12
 Lessor calculation of annual lease payments; lessee calculation of asset and liability
 ● LO15-5

Each of the three independent situations below describes a capital lease in which annual lease payments are payable at the beginning of each year. The lessee is aware of the lessor's implicit rate of return.

	Situation		
	1	2	3
Lease term (years)	10	20	4
Lessor's rate of return (known by lessee)	11%	9%	12%
Lessee's incremental borrowing rate	12%	10%	11%
Fair value of leased asset	\$600,000	\$980,000	\$185,000

Required:

For each situation, determine:

- a. The amount of the annual lease payments as calculated by the lessor.
- b. The amount the lessee would record as a leased asset and a lease liability.

E 15-13

Lessor calculation of annual lease payments; lessee calculation of asset and liability

● LO15-5

(Note: This is a variation of the Exercise 15-12 modified to assume lease payments are at the end of each period.) Each of the three independent situations below describes a capital lease in which annual lease payments are payable at the *end* of each year. The lessee is aware of the lessor's implicit rate of return.

	Situation		
	1	2	3
Lease term (years)	10	20	4
Lessor's rate of return	11%	9%	12%
Lessee's incremental borrowing rate	12%	10%	11%
Fair value of leased asset	\$600,000	\$980,000	\$185,000

Required:

For each situation, determine:

- The amount of the annual lease payments as calculated by the lessor.
- The amount the lessee would record as a leased asset and a lease liability.

E 15-14

Calculation of annual lease payments; residual value

● LO15-5,
LO15-6,
LO15-8

Each of the four independent situations below describes a capital lease in which annual lease payments are payable at the beginning of each year. Determine the annual lease payments for each:

	Situation			
	1	2	3	4
Lease term (years)	4	7	5	8
Lessor's rate of return	10%	11%	9%	12%
Fair value of leased asset	\$50,000	\$350,000	\$75,000	\$465,000
Lessor's cost of leased asset	\$50,000	\$350,000	\$45,000	\$465,000
Residual value:				
Guaranteed by lessee	0	\$ 50,000	0	\$ 30,000
Unguaranteed	0	0	\$ 7,000	\$ 15,000

E 15-15

Lease concepts; direct financing leases; guaranteed and unguaranteed residual value

● LO15-5,
LO15-6,
LO15-8

Each of the four independent situations below describes a direct financing lease in which annual lease payments of \$100,000 are payable at the beginning of each year. Each is a capital lease for the lessee. Determine the following amounts at the inception of the lease:

- The lessor's:
 - Minimum lease payments
 - Gross investment in the lease
 - Net investment in the lease
- The lessee's:
 - Minimum lease payments
 - Leased asset
 - Lease liability

	Situation			
	1	2	3	4
Lease term (years)	7	7	8	8
Lessor's and lessee's discount rate	9%	11%	10%	12%
Residual value:				
Guaranteed by lessee	0	\$50,000	0	\$40,000
Unguaranteed	0	0	\$50,000	\$60,000

E 15-16

Calculation of annual lease payments; BPO

● LO15-5,
LO15-6,
LO15-7

For each of the three independent situations below determine the amount of the annual lease payments. Each describes a capital lease in which annual lease payments are payable at the beginning of each year. Each lease agreement contains an option that permits the lessee to acquire the leased asset at an option price that is sufficiently lower than the expected fair value that the exercise of the option appears reasonably certain.

	Situation		
	1	2	3
Lease term (years)	5	12	4
Lessor's rate of return	12%	11%	9%
Fair value of leased asset	\$60,000	\$420,000	\$185,000
Lessor's cost of leased asset	\$50,000	\$420,000	\$145,000
Bargain purchase option:			
Option price	\$10,000	\$ 50,000	\$ 22,000
Exercisable at end of year:	5	5	3

E 15-17
 Capital lease;
 bargain purchase
 options; lessee
 ● LO15-5,
 LO15-6,
 LO15-7

Federated Fabrications leased a tooling machine on January 1, 2013, for a three-year period ending December 31, 2015. The lease agreement specified annual payments of \$36,000 beginning with the first payment at the inception of the lease, and each December 31 through 2014. The company had the option to purchase the machine on December 30, 2015, for \$45,000 when its fair value was expected to be \$60,000. The machine's estimated useful life was six years with no salvage value. Federated depreciates assets by the straight-line method. The company was aware that the lessor's implicit rate of return was 12%, which was less than Federated's incremental borrowing rate.

Required:

1. Calculate the amount Federated should record as a leased asset and lease liability for this capital lease.
2. Prepare an amortization schedule that describes the pattern of interest expense for Federated over the lease term.
3. Prepare the appropriate entries for Federated from the inception of the lease through the end of the lease term.

E 15-18
 Bargain purchase
 option; lessor;
 direct financing
 lease
 ● LO15-5,
 LO15-6,
 LO15-7

Universal Leasing leases electronic equipment to a variety of businesses. The company's primary service is providing alternate financing by acquiring equipment and leasing it to customers under long-term direct financing leases. Universal earns interest under these arrangements at a 10% annual rate.

The company leased an electronic typesetting machine it purchased for \$30,900 to a local publisher, Desktop Inc., on December 31, 2012. The lease contract specified annual payments of \$8,000 beginning January 1, 2013, the inception of the lease, and each December 31 through 2014 (three-year lease term). The publisher had the option to purchase the machine on December 30, 2015, the end of the lease term, for \$12,000 when it was expected to have a residual value of \$16,000.

Required:

1. Show how Universal calculated the \$8,000 annual lease payments for this direct financing lease.
2. Prepare an amortization schedule that describes the pattern of interest revenue for Universal Leasing over the lease term.
3. Prepare the appropriate entries for Universal Leasing from the inception of the lease through the end of the lease term.

E 15-19
 Executory costs;
 lessor and lessee
 ● LO15-5,
 LO15-6,
 LO15-8,
 LO15-9

On January 1, 2013, NRC Credit Corporation leased equipment to Brand Services under a direct financing lease designed to earn NRC a 12% rate of return for providing long-term financing. The lease agreement specified:

- a. Ten annual payments of \$55,000 (including executory costs) beginning January 1, 2013, the inception of the lease and each December 31 thereafter through 2021.
- b. The estimated useful life of the leased equipment is 10 years with no residual value. Its cost to NRC was \$316,412.
- c. The lease qualifies as a capital lease to Brand.
- d. A 10-year service agreement with Quality Maintenance Company was negotiated to provide maintenance of the equipment as required. Payments of \$5,000 per year are specified, beginning January 1, 2013. NRC was to pay this executory cost as incurred, but lease payments reflect this expenditure.
- e. A partial amortization schedule, appropriate for both the lessee and lessor, follows:

	Payments	Effective Interest	Decrease in Balance	Outstanding Balance
		(12% × Outstanding balance)		316,412
1/1/13	50,000		50,000	266,412
12/31/13	50,000	.12 (266,412) = 31,969	18,031	248,381
12/31/14	50,000	.12 (248,381) = 29,806	20,194	228,187

Required:

Prepare the appropriate entries for both the lessee and lessor to record:

1. The lease at its inception.
2. The second lease payment and depreciation (straight line) on December 31, 2013.

E 15-20
 Executory costs
 plus management
 fee; lessor and
 lessee
 ● LO15-5,
 LO15-6,
 LO15-8,
 LO15-9

Refer to the lease agreement described in Exercise 15-19. Assume the contract specified that NRC (the lessor) was to pay, not only the \$5,000 maintenance fees, but also insurance of \$700 per year, and was to receive a \$250 management fee for facilitating service and paying executory costs. The lessee's lease payments were increased to include an amount sufficient to reimburse executory costs plus NRC's fee.

Required:

Prepare the appropriate entries for both the lessee and lessor to record the **second** lease payment, executory costs, and depreciation (straight line) on December 31, 2013.

E 15-21

Lessor's initial direct costs; operating, direct financing and sales-type leases

- LO15-4 through LO15-6, LO15-9

Terms of a lease agreement and related facts were:

- a. Leased asset had a retail cash selling price of \$100,000. Its useful life was six years with no residual value (straight-line depreciation).
- b. Annual lease payments at the beginning of each year were \$20,873, beginning January 1.
- c. Lessor's implicit rate when calculating annual rental payments was 10%.
- d. Costs of negotiating and consummating the completed lease transaction incurred by the lessor were \$2,062.
- e. Collectibility of the lease payments by the lessor was reasonably predictable and there were no costs to the lessor that were yet to be incurred.

Required:

Prepare the appropriate entries for the lessor to record the lease, the initial payment at its inception, and at the December 31 fiscal year-end under each of the following three independent assumptions:

1. The lease term is three years and the lessor paid \$100,000 to acquire the asset (operating lease).
2. The lease term is six years and the lessor paid \$100,000 to acquire the asset (direct financing lease). Also assume that adjusting the net investment by initial direct costs reduces the effective rate of interest to 9%.
3. The lease term is six years and the lessor paid \$85,000 to acquire the asset (sales-type lease).

E 15-22

Lessor's initial direct costs; operating lease

- LO15-9

The following relate to an operating lease agreement:

- a. The lease term is 3 years, beginning January 1, 2013.
- b. The leased asset cost the lessor \$800,000 and had a useful life of eight years with no residual value. The lessor uses straight-line depreciation for its depreciable assets.
- c. Annual lease payments at the beginning of each year were \$137,000.
- d. Costs of negotiating and consummating the completed lease transaction incurred by the lessor were \$2,400.

Required:

Prepare the appropriate entries for the lessor from the inception of the lease through the end of the lease term.

E 15-23

Lessor's initial direct costs; direct financing lease

- LO15-9

Terms of a lease agreement and related facts were:

- a. Costs of negotiating and consummating the completed lease transaction incurred by the lessor were \$4,242.
- b. The retail cash selling price of the leased asset was \$500,000. Its useful life was three years with no residual value.
- c. Collectibility of the lease payments by the lessor was reasonably predictable and there were no costs to the lessor that were yet to be incurred.
- d. The lease term is three years and the lessor paid \$500,000 to acquire the asset (direct financing lease).
- e. Annual lease payments at the beginning of each year were \$184,330.
- f. Lessor's implicit rate when calculating annual rental payments was 11%.

Required:

1. Prepare the appropriate entries for the lessor to record the lease and related payments at its inception, January 1, 2013.
2. Calculate the effective rate of interest revenue after adjusting the net investment by initial direct costs.
3. Record any entry(s) necessary at December 31, 2013, the fiscal year-end.

E 15-24

Lessor's initial direct costs; sales-type lease

- LO15-9

The lease agreement and related facts indicate the following:

- a. Leased equipment had a retail cash selling price of \$300,000. Its useful life was five years with no residual value.
- b. Collectibility of the lease payments by the lessor was reasonably predictable and there were no costs to the lessor that were yet to be incurred.
- c. The lease term is five years and the lessor paid \$265,000 to acquire the equipment (sales-type lease).
- d. Lessor's implicit rate when calculating annual lease payments was 8%.
- e. Annual lease payments beginning January 1, 2013, the inception of the lease, were \$69,571.
- f. Costs of negotiating and consummating the completed lease transaction incurred by the lessor were \$7,500.

Required:

Prepare the appropriate entries for the lessor to record:

1. The lease and the initial payment at its inception.
2. Any entry(s) necessary at December 31, 2013, the fiscal year-end.

E 15-25

Concepts; terminology

- LO15-3 through LO15-9

Listed below are several terms and phrases associated with leases. Pair each item from List A with the item from List B (by letter) that is most appropriately associated with it.

List A

List B

List A	List B
_____ 1. Effective rate times balance.	a. PV of BPO price.
_____ 2. Realization principle.	b. Lessor's net investment.
_____ 3. Minimum lease payments plus unguaranteed residual value.	c. Lessor's gross investment.
_____ 4. Periodic lease payments plus lessee-guaranteed residual value.	d. Operating lease.
_____ 5. PV of minimum lease payments plus PV of unguaranteed residual value.	e. Depreciable assets.
_____ 6. Initial direct costs.	f. Loss to lessee.
_____ 7. Rent revenue.	g. Executory costs.
_____ 8. Bargain purchase option.	h. Depreciation longer than lease term.
_____ 9. Leasehold improvements.	i. Disclosure only.
_____ 10. Cash to satisfy residual value guarantee.	j. Interest expense.
_____ 11. Capital lease expense.	k. Additional lessor conditions.
_____ 12. Deducted in lessor's computation of lease payments.	l. Lessee's minimum lease payments.
_____ 13. Title transfers to lessee.	m. Purchase price less than fair value.
_____ 14. Contingent rentals.	n. Sales-type lease selling expense.
_____ 15. Lease payments plus lessee-guaranteed and third-party-guaranteed residual value.	o. Lessor's minimum lease payments.

E 15–26

Sale-leaseback;
capital lease

● LO15–10

To raise operating funds, Signal Aviation sold an airplane on January 1, 2013, to a finance company for \$770,000. Signal immediately leased the plane back for a 13-year period, at which time ownership of the airplane will transfer to Signal. The airplane has a fair value of \$800,000. Its cost and its book value were \$620,000. Its useful life is estimated to be 15 years. The lease requires Signal to make payments of \$102,771 to the finance company each January 1. Signal depreciates assets on a straight-line basis. The lease has an implicit rate of 11%.

Required:

Prepare the appropriate entries for Signal on:

1. January 1, 2013, to record the sale-leaseback.
2. December 31, 2013, to record necessary adjustments.

E 15–27

IFRS; sale
leaseback; capital
lease

● LO15–10,
LO15–11

Refer to the situation described in Exercise 15–26.

Required:

How might your solution differ if Signal Aviation prepares its financial statements according to International Financial Reporting Standards? Include any appropriate journal entries in your response.

 IFRS**E 15–28**

Sale-leaseback;
operating lease

● LO15–10

To raise operating funds, National Distribution Center sold its office building to an insurance company on January 1, 2013, for \$800,000 and immediately leased the building back. The operating lease is for the final 12 years of the building's estimated 50-year useful life. The building has a fair value of \$800,000 and a book value of \$650,000 (its original cost was \$1 million). The rental payments of \$100,000 are payable to the insurance company each December 31. The lease has an implicit rate of 9%.

Required:

Prepare the appropriate entries for National Distribution Center on:

1. January 1, 2013, to record the sale-leaseback.
2. December 31, 2013, to record necessary adjustments.

E 15–29

IFRS; sale
leaseback;
operating lease

● LO15–10,
LO15–11

Refer to the situation described in Exercise 15–28.

Required:

How might your solution differ if National Distribution Center prepares its financial statements according to International Financial Reporting Standards? Include any appropriate journal entries in your response.

 IFRS

E 15-30
FASB codification
research; sale
leaseback

● LO15-10

In a sale-leaseback transaction, the owner of an asset sells it and immediately leases it back from the new owner. The *FASB Accounting Standards Codification* represents the single source of authoritative U.S. generally accepted accounting principles.

Required:

1. Obtain the relevant authoritative literature on disclosure requirements pertaining to a seller-lessee in a sale-leaseback transaction. Use your institution's Academic Accounting Access to the FASB's Codification Research System (www.fasb.org) or through your school library's subscription to a research database that includes the Codification. What is the specific citation that describes the guidelines for determining the disclosure requirements in the notes to the financial statements?
2. List the disclosure requirements.

E 15-31
Real estate lease;
land and building

● LO15-10

On January 1, 2013, Cook Textiles leased a building with two acres of land from Peck Development. The lease is for 10 years at which time Cook has an option to purchase the property for \$100,000. The building has an estimated life of 20 years with a residual value of \$150,000. The lease calls for Cook to assume all costs of ownership and to make annual payments of \$200,000 due at the beginning of each year. On January 1, 2013, the estimated value of the land was \$400,000. Cook uses the straight-line method of depreciation and pays 10% interest on borrowed money. Peck's implicit rate is unknown.

Required:

Prepare Cook Company's journal entries related to the lease in 2013.

E 15-32
FASB codification
research

● LO15-1, LO15-4,
LO15-7

Access the FASB's Codification Research System at the FASB website (www.fasb.org). Determine the specific citation for accounting for each of the following items:

1. Definition of a bargain purchase option.
2. The calculation of the lessor's gross investment in a sales-type lease.
3. The disclosures required in the notes to the financial statements for an operating lease.
4. The additional disclosures necessary in the notes to the financial statements if the operating lease has a lease term greater than one year.

CPA and CMA Review Questions

CPA Exam Questions

● LO15-3

The following questions are adapted from a variety of sources including questions developed by the AICPA Board of Examiners and those used in the Kaplan CPA Review Course used to study lease accounting while preparing for the CPA examination. Determine the response that best completes the statements or questions.

1. A company leases the following asset:
 - Fair value of \$200,000.
 - Useful life of 5 years with no salvage value.
 - Lease term is 4 years.
 - Annual lease payment is \$30,000 and the lease rate is 11%.
 - The company's overall borrowing rate is 9.5%.
 - The firm can purchase the equipment at the end of the lease period for \$45,000.

What type of lease is this?

- a. Operating.
- b. Capital.
- c. Financing.
- d. Long term.

● LO15-5

2. On January 1, 2013, Blaugh Co. signed a long-term lease for an office building. The terms of the lease required Blaugh to pay \$10,000 annually, beginning December 30, 2013, and continuing each year for 30 years. The lease qualifies as a capital lease. On January 1, 2013, the present value of the lease payments is \$112,500 at the 8% interest rate implicit in the lease. In Blaugh's December 31, 2013, balance sheet, the capital lease liability should be

- a. \$102,500
- b. \$111,500
- c. \$112,500
- d. \$290,000

- LO15-5 3. Glade Co. leases computer equipment to customers under direct-financing leases. The equipment has no residual value at the end of the lease and the leases do not contain bargain purchase options. Glade wishes to earn 8% interest on a five-year lease of equipment with a fair value of \$323,400. The present value of an annuity due of \$1 at 8% for five years is 4.312. What is the total amount of interest revenue that Glade will earn over the life of the lease?
 - a. \$ 51,600
 - b. \$ 75,000
 - c. \$129,360
 - d. \$139,450

- LO15-6 4. Peg Co. leased equipment from Howe Corp. on July 1, 2013, for an eight-year period expiring June 30, 2021. Equal payments under the lease are \$600,000 and are due on July 1 of each year. The first payment was made on July 1, 2013. The rate of interest contemplated by Peg and Howe is 10%. The cash selling price of the equipment is \$3,520,000, and the cost of the equipment on Howe's accounting records is \$2,800,000. The lease is appropriately recorded as a sales-type lease. What is the amount of profit on the sale and interest revenue that Howe should record for the year ended December 31, 2013?

	Profit on Sale	Interest Revenue
a.	\$ 45,000	\$146,000
b.	\$ 45,000	\$176,000
c.	\$720,000	\$146,000
d.	\$720,000	\$176,000

- LO15-6 5. On January 2, 2013, Nori Mining Co. (lessee) entered into a 5-year lease for drilling equipment. Nori accounted for the acquisition as a capital lease for \$240,000, which includes a \$10,000 bargain purchase option. At the end of the lease, Nori expects to exercise the bargain purchase option. Nori estimates that the equipment's fair value will be \$20,000 at the end of its 8-year life. Nori regularly uses straight-line depreciation on similar equipment. For the year ended December 31, 2013, what amount should Nori recognize as depreciation expense on the leased asset?
 - a. \$27,500
 - b. \$30,000
 - c. \$48,000
 - d. \$46,000

- LO15-8 6. At the inception of a capital lease, the guaranteed residual value should be
 - a. Included as part of minimum lease payments at present value.
 - b. Included as part of minimum lease payments at future value.
 - c. Included as part of minimum lease payments only to the extent that guaranteed residual value is expected to exceed estimated residual value.
 - d. Excluded from minimum lease payments.

- LO15-9 7. Neal Corp. entered into a nine-year capital lease on a warehouse on December 31, 2013. Lease payments of \$52,000, which includes real estate taxes of \$2,000, are due annually, beginning on December 31, 2014, and every December 31 thereafter. Neal does not know the interest rate implicit in the lease; Neal's incremental borrowing rate is 9%. The rounded present value of an ordinary annuity for nine years at 9% is 6.0. What amount should Neal report as capitalized lease liability at December 31, 2013?
 - a. \$300,000
 - b. \$312,000
 - c. \$450,000
 - d. \$468,000

- LO15-10 8. On December 31, 2013, Bain Corp. sold a machine to Ryan and simultaneously leased it back for one year. Pertinent information at this date follows:

Sales price	\$360,000
Carrying amount	330,000
Present value of lease payments	34,100
(\$3,000 for 12 months at 12%)	
Estimated remaining useful life	12 years

- In Bain's December 31, 2013, balance sheet, the deferred revenue from the sale of this machine should be
- a. \$ 0
 - b. \$ 4,100

- c. \$34,100
- d. \$30,000

Beginning in 2011, International Financial Reporting Standards are tested on the CPA exam along with U.S. GAAP. The following questions deal with the application of IFRS in accounting for leases.

● LO15-11

9. For companies that prepare their financial statements in accordance with both U.S. GAAP and IFRS, a lease is deemed to be a capital lease (usually called a finance lease under IFRS) if substantially all risks and rewards of ownership are transferred. In making this distinction, less judgment, more specificity is applied using
- a. IFRS.
 - b. U.S. GAAP.
 - c. Either U.S. GAAP or IFRS.
 - d. Neither U.S. GAAP nor IFRS.

● LO15-1

10. Blue Company is recording a capital lease (usually called a finance lease under IFRS) and is aware that the implicit interest rate used by the lessor to calculate lease payments is 8%. Blue's incremental borrowing rate is 7%. Blue should record the leased asset and lease liability at the present value of the lease payments discounted at
- a. 7% if using either U.S. GAAP or IFRS.
 - b. 7% if using IFRS.
 - c. 8% if using U.S. GAAP.
 - d. 8% if using IFRS.

● LO15-1

11. When a sale-leaseback transaction occurs, if the leaseback is considered to be an operating lease, and the lease payments and sales price are at fair value, any gain on the sale
- a. Is amortized over the lease term by a company using IFRS.
 - b. Is recognized immediately by a company using IFRS.
 - c. Is amortized over the lease term by a company using either U.S. GAAP or IFRS.
 - d. Is not recorded by a company using IFRS.

The following questions dealing with leases are adapted from questions that previously appeared on Certified Management Accountant (CMA) examinations. The CMA designation sponsored by the Institute of Management Accountants (www.imanet.org) provides members with an objective measure of knowledge and competence in the field of management accounting. Determine the response that best completes the statements or questions.

● LO15-5

1. For a direct-financing lease, the gross investment of the lessor is equal to the
- a. Present value of the minimum lease payments minus the unguaranteed residual value accruing to the lessor at the end of the lease term.
 - b. Lower of 90% of the present value of the minimum lease payments or the fair value of the leased asset.
 - c. Difference between the fair value of the leased asset and the unearned interest revenue.
 - d. Minimum lease payments plus the unguaranteed residual value accruing to the lessor at the end of the lease term.

● LO15-7

2. Howell Corporation, a publicly traded corporation, is the lessee in a leasing agreement with Brandon Inc. to lease land and a building. If the lease contains a bargain purchase option, Howell should record the land and the building as a(n)
- a. Operating lease and capital lease, respectively.
 - b. Capital lease and operating lease, respectively.
 - c. Capital lease but recorded as a single unit.
 - d. Capital lease but separately classified.

● LO15-9

3. Initial direct costs incurred by the lessor under a sales-type lease should be
- a. Deferred and allocated over the economic life of the leased property.
 - b. Expensed in the period incurred.
 - c. Deferred and allocated over the term of the lease in proportion to the recognition of rental income.
 - d. Added to the gross investment in the lease and amortized over the term of the lease as a yield adjustment.

Problems

An alternate exercise and problem set is available on the text website: www.mhhe.com/spiceland7e

P 15-1
Operating lease; scheduled rent increases

● LO15-4

On January 1, 2013, Sweetwater Furniture Company leased office space under a 21-year operating lease agreement. The contract calls for annual rent payments on December 31 of each year. The payments are \$10,000 the first year and increase by \$500 per year. Benefits expected from using the office space are expected to remain constant over the lease term.

Required:

Record Sweetwater’s rent payment at December 31, 2017 (the fifth rent payment) and December 31, 2027 (the 15th rent payment).

P 15-2
Lease amortization schedule

● LO15-5, LO15-8

On January 1, 2013, National Insulation Corporation (NIC) leased office space under a capital lease. Lease payments are made annually. Title does not transfer to the lessee and there is no bargain purchase option. Portions of the lessee’s lease amortization schedule appear below:

Jan. 1	Payments	Effective Interest	Decrease in Balance	Outstanding Balance
2013				192,501
2013	20,000		20,000	172,501
2014	20,000	17,250	2,750	169,751
2015	20,000	16,975	3,025	166,726
2016	20,000	16,673	3,327	163,399
2017	20,000	16,340	3,660	159,739
2018	20,000	15,974	4,026	155,713
—	—	—	—	—
—	—	—	—	—
—	—	—	—	—
2030	20,000	7,364	12,636	61,006
2031	20,000	6,101	13,899	47,107
2032	20,000	4,711	15,289	31,818
2033	35,000	3,182	31,818	0

Required:

1. What is NIC’s lease liability at the inception of the lease (after the first payment)?
2. What amount would NIC record as a leased asset?
3. What is the lease term in years?
4. What is the asset’s residual value expected at the end of the lease term?
5. How much of the residual value is guaranteed by the lessee?
6. What is the effective annual interest rate?
7. What is the total amount of minimum lease payments?
8. What is the total effective interest expense recorded over the term of the lease?

P 15-3
Direct financing and sales-type lease; lessee and lessor

● LO15-3, LO15-5, LO15-6

Rand Medical manufactures lithotripters. Lithotripsy uses shock waves instead of surgery to eliminate kidney stones. Physicians’ Leasing purchased a lithotripter from Rand for \$2,000,000 and leased it to Mid-South Urologists Group, Inc., on January 1, 2013.

Lease Description:

Quarterly lease payments	\$130,516—beginning of each period
Lease term	5 years (20 quarters)
No residual value; no BPO	
Economic life of lithotripter	5 years
Implicit interest rate and lessee’s incremental borrowing rate	12%
Fair value of asset	\$2,000,000

Collectibility of the lease payments is reasonably assured, and there are no lessor costs yet to be incurred.

Required:

1. How should this lease be classified by Mid-South Urologists Group and by Physicians’ Leasing?
2. Prepare appropriate entries for both Mid-South Urologists Group and Physicians’ Leasing from the inception of the lease through the second rental payment on April 1, 2013. Depreciation is recorded at the end of each fiscal year (December 31).
3. Assume Mid-South Urologists Group leased the lithotripter directly from the manufacturer, Rand Medical, which produced the machine at a cost of \$1.7 million. Prepare appropriate entries for Rand Medical from the inception of the lease through the second lease payment on April 1, 2013.

P 15-4
Capital lease
● LO15-5

At the beginning of 2013, VHF Industries acquired a machine with a fair value of \$6,074,700 by signing a four-year lease. The lease is payable in four annual payments of \$2 million at the end of each year.

Required:

1. What is the effective rate of interest implicit in the agreement?
2. Prepare the lessee's journal entry at the inception of the lease.
3. Prepare the journal entry to record the first lease payment at December 31, 2013.
4. Prepare the journal entry to record the second lease payment at December 31, 2014.
5. Suppose the fair value of the machine and the lessor's implicit rate were unknown at the time of the lease, but that the lessee's incremental borrowing rate of interest for notes of similar risk was 11%. Prepare the lessee's entry at the inception of the lease.

(Note: You may wish to compare your solution to Problem 15-4 with that of Problem 14-12, which deals with a parallel situation in which the machine was acquired with an installment note.)

P 15-5
Capital lease;
lessee; financial
statement effects
● LO15-5

(Note: Problems 15-5, 15-6, and 15-7 are three variations of the same basic situation.)

Werner Chemical, Inc., leased a protein analyzer on September 30, 2013. The five-year lease agreement calls for Werner to make quarterly lease payments of \$391,548, payable each September 30, December 31, March 31, June 30, with the first payment at September 30, 2013. Werner's incremental borrowing rate is 12%. Depreciation is recorded on a straight-line basis at the end of each fiscal year. The useful life of the equipment is five years.

Required:

1. Determine the present value of the lease payments at September 30, 2013 (to the nearest \$000).
2. What pretax amounts related to the lease would Werner report in its balance sheet at December 31, 2013?
3. What pretax amounts related to the lease would Werner report in its income statement for the year ended December 31, 2013?
4. What pretax amounts related to the lease would Werner report in its statement of cash flows for the year ended December 31, 2013?

P 15-6
Direct financing
lease; lessor;
financial
statement effects
● LO15-5

Abbott Equipment leased a protein analyzer to Werner Chemical, Inc., on September 30, 2013. Abbott purchased the machine from NutraLabs, Inc., at a cost of \$6 million. The five-year lease agreement calls for Werner to make quarterly lease payments of \$391,548, payable each September 30, December 31, March 31, June 30, with the first payment at September 30, 2013. Abbot's implicit interest rate is 12%.

Required:

1. What pretax amounts related to the lease would Abbott report in its balance sheet at December 31, 2013?
2. What pretax amounts related to the lease would Abbott report in its income statement for the year ended December 31, 2013?
3. What pretax amounts related to the lease would Abbott report in its statement of cash flows for the year ended December 31, 2013?

P 15-7
Sales-type lease;
lessor; financial
statement effects
● LO15-6

NutraLabs, Inc., leased a protein analyzer to Werner Chemical, Inc., on September 30, 2013. NutraLabs manufactured the machine at a cost of \$5 million. The five-year lease agreement calls for Werner to make quarterly lease payments of \$391,548, payable each September 30, December 31, March 31, June 30, with the first payment at September 30, 2013. NutraLabs' implicit interest rate is 12%.

Required:

1. Determine the price at which NutraLabs is "selling" the equipment (present value of the lease payments) at September 30, 2013 (to the nearest \$000).
2. What pretax amounts related to the lease would NutraLabs report in its balance sheet at December 31, 2013?
3. What pretax amounts related to the lease would NutraLabs report in its income statement for the year ended December 31, 2013?
4. What pretax amounts related to the lease would NutraLabs report in its statement of cash flows for the year ended December 31, 2013?

P 15-8
Guaranteed
residual value;
direct financing
lease
● LO15-3,
LO15-5,
LO15-8

(Note: Problems 15-8, 15-9, and 15-10 are three variations of the same basic situation.)

On December 31, 2013, Rhone-Metro Industries leased equipment to Western Soya Co. for a four-year period ending December 31, 2017, at which time possession of the leased asset will revert back to Rhone-Metro. The equipment cost Rhone-Metro \$365,760 and has an expected useful life of six years. Its normal sales price is \$365,760. The lessee-guaranteed residual value at December 31, 2017, is \$25,000. Equal payments under the lease are \$100,000 and are due on December 31 of each year. The first payment was made on December 31, 2013. Collectibility of the remaining lease payments is reasonably assured, and Rhone-Metro has no material

cost uncertainties. Western Soya's incremental borrowing rate is 12%. Western Soya knows the interest rate implicit in the lease payments is 10%. Both companies use straight-line depreciation.

Required:

1. Show how Rhone-Metro calculated the \$100,000 annual lease payments.
2. How should this lease be classified (a) by Western Soya Co. (the lessee) and (b) by Rhone-Metro Industries (the lessor)? Why?
3. Prepare the appropriate entries for both Western Soya Co. and Rhone-Metro on December 31, 2013.
4. Prepare an amortization schedule(s) describing the pattern of interest over the lease term for the lessee and the lessor.
5. Prepare all appropriate entries for both Western Soya and Rhone-Metro on December 31, 2014 (the second lease payment and depreciation).
6. Prepare the appropriate entries for both Western Soya and Rhone-Metro on December 31, 2017 assuming the equipment is returned to Rhone-Metro and the actual residual value on that date is \$1,500.

P 15-9

Unguaranteed residual value; executory costs; sales-type lease

- LO15-6, LO15-8, LO15-9

Rhone-Metro Industries manufactures equipment that is sold or leased. On December 31, 2013, Rhone-Metro leased equipment to Western Soya Co. for a four-year period ending December 31, 2017, at which time possession of the leased asset will revert back to Rhone-Metro. The equipment cost \$300,000 to manufacture and has an expected useful life of six years. Its normal sales price is \$365,760. The expected residual value of \$25,000 at December 31, 2017, is not guaranteed. Equal payments under the lease are \$104,000 (including \$4,000 executory costs) and are due on December 31 of each year. The first payment was made on December 31, 2013. Collectibility of the remaining lease payments is reasonably assured, and Rhone-Metro has no material cost uncertainties. Western Soya's incremental borrowing rate is 12%. Western Soya knows the interest rate implicit in the lease payments is 10%. Both companies use straight-line depreciation.

Required:

1. Show how Rhone-Metro calculated the \$104,000 annual lease payments.
2. How should this lease be classified (a) by Western Soya Co. (the lessee) and (b) by Rhone-Metro Industries (the lessor)? Why?
3. Prepare the appropriate entries for both Western Soya Co. and Rhone-Metro on December 31, 2013.
4. Prepare an amortization schedule(s) describing the pattern of interest over the lease term for the lessee and the lessor.
5. Prepare the appropriate entries for both Western Soya and Rhone-Metro on December 31, 2014 (the second lease payment and depreciation).
6. Prepare the appropriate entries for both Western Soya and Rhone-Metro on December 31, 2017, assuming the equipment is returned to Rhone-Metro and the actual residual value on that date is \$1,500.

P 15-10

Bargain purchase option exercisable before lease term ends; executor costs; sales-type lease

- LO15-3, LO15-6, LO15-7, LO15-9

Rhone-Metro Industries manufactures equipment that is sold or leased. On December 31, 2013, Rhone-Metro leased equipment to Western Soya Co. for a noncancelable stated lease term of four years ending December 31, 2017, at which time possession of the leased asset will revert back to Rhone-Metro. The equipment cost \$300,000 to manufacture and has an expected useful life of six years. Its normal sales price is \$365,760. The expected residual value of \$25,000 at December 31, 2017, is not guaranteed. Western Soya Co. can exercise a bargain purchase option on December 30, 2016, at an option price of \$10,000. Equal payments under the lease are \$134,960 (including \$4,000 annual executory costs) and are due on December 31 of each year. The first payment was made on December 31, 2013. Collectibility of the remaining lease payments is reasonably assured, and Rhone-Metro has no material cost uncertainties. Western Soya's incremental borrowing rate is 12%. Western Soya knows the interest rate implicit in the lease payments is 10%. Both companies use straight-line depreciation.

Hint: A lease term ends for accounting purposes when an option becomes exercisable if it's expected to be exercised (i.e., a BPO).

Required:

1. Show how Rhone-Metro calculated the \$134,960 annual lease payments.
2. How should this lease be classified (a) by Western Soya Co. (the lessee) and (b) by Rhone-Metro Industries (the lessor)? Why?
3. Prepare the appropriate entries for both Western Soya Co. and Rhone-Metro on December 31, 2013.
4. Prepare an amortization schedule(s) describing the pattern of interest over the lease term for the lessee and the lessor.
5. Prepare the appropriate entries for both Western Soya and Rhone-Metro on December 31, 2014 (the second rent payment and depreciation).

- Prepare the appropriate entries for both Western Soya and Rhone-Metro on December 30, 2016, assuming the BPO is exercised on that date.

P 15-11

Operating lease to lessee—capital lease to lessor

- LO15-3, LO15-4, LO15-5, LO15-8

Allied Industries manufactures high-performance conveyers that often are leased to industrial customers. On December 31, 2013, Allied leased a conveyor to Poole Carrier Corporation for a three-year period ending December 31, 2016, at which time possession of the leased asset will revert back to Allied. Equal payments under the lease are \$200,000 and are due on December 31 of each year. The first payment was made on December 31, 2013. Collectibility of the remaining lease payments is reasonably assured, and Allied has no material cost uncertainties. The conveyor cost \$450,000 to manufacture and has an expected useful life of six years. Its normal sales price is \$659,805. The expected residual value of \$150,000 at December 31, 2016, is guaranteed by United Assurance Group. Poole Carrier's incremental borrowing rate and the interest rate implicit in the lease payments are 10%.

Required:

- Show how Allied Industries calculated the \$200,000 annual lease payments.
- How should this lease be classified (a) by Allied (the lessor) and (b) by Poole (the lessee)? Why?
- Prepare the appropriate entries for both Poole and Allied on December 31, 2013.
- Prepare an amortization schedule(s) describing the pattern of interest over the lease term.
- Prepare the appropriate entries for both Poole and Allied on December 31, 2014, 2015, and 2016, assuming the conveyor is returned to Allied at the end of the lease and the actual residual value on that date is \$105,000.

P 15-12

Lease concepts; direct financing leases; guaranteed and unguaranteed residual value

- LO15-3, LO15-5, LO15-8

Each of the four independent situations below describes a direct financing lease in which annual lease payments of \$10,000 are payable at the beginning of each year. Each is a capital lease for the lessee. Determine the following amounts at the inception of the lease:

- The lessor's:
 - Minimum lease payments
 - Gross investment in the lease
 - Net investment in the lease
- The lessee's:
 - Minimum lease payments
 - Leased asset
 - Lease liability

	Situation			
	1	2	3	4
Lease term (years)	4	4	4	4
Asset's useful life (years)	4	5	5	5
Lessor's implicit rate (known by lessee)	11%	11%	11%	11%
Lessee's incremental borrowing rate	11%	12%	11%	12%
Residual value:				
Guaranteed by lessee	0	\$4,000	0	0
Guaranteed by third party	0	0	\$4,000	0
Unguaranteed	0	0	0	\$4,000

P 15-13

Lease concepts

- LO15-3, LO15-5, LO15-8

Four independent situations are described below. For each, annual lease payments of \$100,000 (not including any executory costs paid by lessor) are payable at the beginning of each year. Each is a capital lease for both the lessor and lessee. Determine the following amounts at the inception of the lease:

- The lessor's:
 - Minimum lease payments
 - Gross investment in the lease
 - Net investment in the lease
 - Sales revenue
 - Cost of goods sold
 - Dealer's profit
- The lessee's:
 - Minimum lease payments
 - Leased asset
 - Lease liability

	Situation			
	1	2	3	4
Lease term (years)	4	5	6	4
Lessor's cost	\$369,175	\$449,896	\$500,000	\$400,000
Asset's useful life (years)	6	7	7	5
Lessor's implicit rate (known by lessee)	10%	12%	9%	10%
Lessee's incremental borrowing rate	9%	10%	11%	12%
Residual value:				
Guaranteed by lessee	0	\$ 53,000	\$ 40,000	\$ 60,000
Guaranteed by third party*	0	0	0	\$ 50,000
Unguaranteed	\$ 30,000	0	\$ 35,000	\$ 40,000
Executory costs paid annually by lessor	\$ 1,000	\$ 8,000	\$ 5,000	\$ 10,000

*Over and above any amount guaranteed by the lessee (after a deductible equal to any amount guaranteed by the lessee).

P 15-14

Executory costs; lessor and lessee

- LO15-3,
- LO15-5,
- LO15-9

Branif Leasing leases mechanical equipment to industrial consumers under direct financing leases that earn Branif a 10% rate of return for providing long-term financing. A lease agreement with Branson Construction specified 20 annual payments of \$100,000 beginning December 31, 2013, the inception of the lease. The estimated useful life of the leased equipment is 20 years with no residual value. Its cost to Branif was \$936,500. The lease qualifies as a capital lease to Branson. Maintenance of the equipment was contracted for through a 20-year service agreement with Midway Service Company requiring 20 annual payments of \$3,000 beginning December 31, 2013. Both companies use straight-line depreciation.

Required:

Prepare the appropriate entries for both the lessee and lessor to record the second lease payment and depreciation on December 31, 2014, under each of three independent assumptions:

1. The lessee pays executory costs as incurred.
2. The contract specifies that the lessor pays executory costs as incurred. The lessee's lease payments were increased to \$103,000 to include an amount sufficient to reimburse these costs.
3. The contract specifies that the lessor pays executory costs as incurred. The lessee's lease payments were increased to \$103,300 to include an amount sufficient to reimburse these costs plus a 10% management fee for Branif.

P 15-15

Sales-type lease; bargain purchase option exercisable before lease term ends; lessor and lessee

- LO15-3,
- LO15-5,
- LO15-6,
- LO15-7,
- LO15-8

Mid-South Auto Leasing leases vehicles to consumers. The attraction to customers is that the company can offer competitive prices due to volume buying and requires an interest rate implicit in the lease that is one percent below alternate methods of financing. On September 30, 2013, the company leased a delivery truck to a local florist, Anything Grows.

The lease agreement specified quarterly payments of \$3,000 beginning September 30, 2013, the inception of the lease, and each quarter (December 31, March 31, and June 30) through June 30, 2016 (three-year lease term). The florist had the option to purchase the truck on September 29, 2015, for \$6,000 when it was expected to have a residual value of \$10,000. The estimated useful life of the truck is four years. Mid-South Auto Leasing's quarterly interest rate for determining payments was 3% (approximately 12% annually). Mid-South paid \$25,000 for the truck. Both companies use straight-line depreciation. Anything Grows' incremental interest rate is 12%.

Hint: A lease term ends for accounting purposes when an option becomes exercisable if it's expected to be exercised (i.e., a BPO).

eXcel

Required:

1. Calculate the amount of dealer's profit that Mid-South would recognize in this sales-type lease. (Be careful to note that, although payments occur on the last calendar day of each quarter, since the first payment was at the inception of the lease, payments represent an annuity due.)
2. Prepare the appropriate entries for Anything Grows and Mid-South on September 30, 2013.
3. Prepare an amortization schedule(s) describing the pattern of interest expense for Anything Grows and interest revenue for Mid-South Auto Leasing over the lease term.
4. Prepare the appropriate entries for Anything Grows and Mid-South Auto Leasing on December 31, 2013.
5. Prepare the appropriate entries for Anything Grows and Mid-South on September 29, 2015, assuming the bargain purchase option was exercised on that date.

P 15-16

Lessee-guaranteed residual value; third-party-guaranteed residual value; unguaranteed residual value; executory costs; different interest rates for lessor and lessee

- LO15-3, LO15-5, LO15-8, LO15-9

On December 31, 2013, Yard Art Landscaping leased a delivery truck from Branch Motors. Branch paid \$40,000 for the truck. Its retail value is \$45,114.

The lease agreement specified annual payments of \$11,000 beginning December 31, 2013, the inception of the lease, and at each December 31 through 2016. Branch Motors' interest rate for determining payments was 10%. At the end of the four-year lease term (December 31, 2017) the truck was expected to be worth \$15,000. The estimated useful life of the truck is five years with no salvage value. Both companies use straight-line depreciation.

Yard Art guaranteed a residual value of \$6,000. Guarantor Assurance Corporation was engaged to guarantee a residual value of \$11,000, but with a deductible equal to any amount paid by the lessee (\$11,000 reduced by any amount paid by the lessee). Yard Art's incremental borrowing rate is 9%.

A \$1,000 per year maintenance agreement was arranged for the truck with an outside service firm. As an expediency, Branch Motors agreed to pay this fee. It is, however, reflected in the \$11,000 lease payments.

Collectibility of the lease payments by Yard Art is reasonably predictable and there are no costs to the lessor that are yet to be incurred.

Required:

1. How should this lease be classified by Yard Art Landscaping (the lessee)? Why?
2. Calculate the amount Yard Art Landscaping would record as a leased asset and a lease liability.
3. How should this lease be classified by Branch Motors (the lessor)? Why?
4. Show how Branch Motors calculated the \$11,000 annual lease payments.
5. Calculate the amount Branch Motors would record as sales revenue.
6. Prepare the appropriate entries for both Yard Art and Branch Motors on December 31, 2013.
7. Prepare an amortization schedule that describes the pattern of interest expense over the lease term for Yard Art.
8. Prepare an amortization schedule that describes the pattern of interest revenue over the lease term for Branch Motors.
9. Prepare the appropriate entries for both Yard Art and Branch Motors on December 31, 2014.
10. Prepare the appropriate entries for both Yard Art and Branch Motors on December 31, 2016 (the final lease payment).
11. Prepare the appropriate entries for both Yard Art and Branch Motors on December 31, 2017 (the end of the lease term), assuming the truck is returned to the lessor and the actual residual value of the truck was \$4,000 on that date.

P 15-17

Integrating problem; bonds; note; lease

- LO15-5

You are the new controller for Moonlight Bay Resorts. The company CFO has asked you to determine the company's interest expense for the year ended December 31, 2013. Your accounting group provided you the following information on the company's debt:

1. On July 1, 2013, Moonlight Bay issued bonds with a face amount of \$2,000,000. The bonds mature in 20 years and interest of 9% is payable semiannually on June 30 and December 31. The bonds were issued at a price to yield investors 10%. Moonlight Bay records interest at the effective rate.
2. At December 31, 2012, Moonlight Bay had a 10% installment note payable to Third Mercantile Bank with a balance of \$500,000. The annual payment is \$60,000, payable each June 30.
3. On January 1, 2013, Moonlight Bay leased a building under a capital lease calling for four annual lease payments of \$40,000 beginning January 1, 2013. Moonlight Bay's incremental borrowing rate on the date of the lease was 11% and the lessor's implicit rate, which was known by Moonlight Bay, was 10%.

Required:

Calculate interest expense for the year ended December 31, 2013.

P 15-18

Initial direct costs; direct financing lease

- LO15-3, LO15-5, LO15-9

Bidwell Leasing purchased a single-engine plane for its fair value of \$645,526 and leased it to Red Baron Flying Club on January 1, 2013.

Terms of the lease agreement and related facts were:

- a. Eight annual payments of \$110,000 beginning January 1, 2013, the inception of the lease, and at each December 31 through 2019. Bidwell Leasing's implicit interest rate was 10%. The estimated useful life of the plane is eight years. Payments were calculated as follows:

*Present value of an annuity due of \$1: $n = 8, i = 10\%$.

- b. Red Baron’s incremental borrowing rate is 11%.
- c. Costs of negotiating and consummating the completed lease transaction incurred by Bidwell Leasing were \$18,099.
- d. Collectibility of the lease payments by Bidwell Leasing is reasonably predictable and there are no costs to the lessor that are yet to be incurred.

Required:

1. How should this lease be classified (a) by Bidwell Leasing (the lessor) and (b) by Red Baron (the lessee)?
2. Prepare the appropriate entries for both Red Baron Flying Club and Bidwell Leasing on January 1, 2013.
3. Prepare an amortization schedule that describes the pattern of interest expense over the lease term for Red Baron Flying Club.
4. Determine the effective rate of interest for Bidwell Leasing for the purpose of recognizing interest revenue over the lease term.
5. Prepare an amortization schedule that describes the pattern of interest revenue over the lease term for Bidwell Leasing.
6. Prepare the appropriate entries for both Red Baron and Bidwell Leasing on December 31, 2013 (the second lease payment). Both companies use straight-line depreciation.
7. Prepare the appropriate entries for both Red Baron and Bidwell Leasing on December 31, 2019 (the final lease payment).

P 15–19
Initial direct costs; sales-type lease

- LO15–3, LO15–6, LO15–9

(Note: This problem is a variation of P 15–18 modified to cause the lease to be a sales-type lease.) Bidwell Leasing purchased a single-engine plane for \$400,000 and leased it to Red Baron Flying Club for its fair value of \$645,526 on January 1, 2013.

Terms of the lease agreement and related facts were:

- a. Eight annual payments of \$110,000 beginning January 1, 2013, the inception of the lease, and at each December 31 through 2019. Bidwell Leasing’s implicit interest rate was 10%. The estimated useful life of the plane is eight years. Payments were calculated as follows:

- b. Red Baron’s incremental borrowing rate is 11%.
- c. Costs of negotiating and consummating the completed lease transaction incurred by Bidwell Leasing were \$18,099.
- d. Collectibility of the lease payments by Bidwell Leasing is reasonably predictable and there are no costs to the lessor that are yet to be incurred.

Required:

1. How should this lease be classified (a) by Bidwell Leasing (the lessor) and (b) by Red Baron (the lessee)?
2. Prepare the appropriate entries for both Red Baron Flying Club and Bidwell Leasing on January 1, 2013.
3. Prepare an amortization schedule that describes the pattern of interest expense over the lease term for Red Baron Flying Club.
4. Prepare the appropriate entries for both Red Baron and Bidwell Leasing on December 31, 2013 (the second lease payment). Both companies use straight-line depreciation.
5. Prepare the appropriate entries for both Red Baron and Bidwell Leasing on December 31, 2019 (the final lease payment).

P 15–20
Sale-leaseback

- LO15–5, LO15–10

To raise operating funds, North American Courier Corporation sold its building on January 1, 2013, to an insurance company for \$500,000 and immediately leased the building back. The lease is for a 10-year period ending December 31, 2022, at which time ownership of the building will revert to North American Courier. The building has a carrying amount of \$400,000 (original cost \$1,000,000). The lease requires North American to make payments of \$88,492 to the insurance company each December 31. The building had a total original useful life of 30 years with no residual value and is being depreciated on a straight-line basis. The lease has an implicit rate of 12%.

Required:

1. Prepare the appropriate entries for North American on (a) January 1, 2013, to record the sale-leaseback and (b) December 31, 2013, to record necessary adjustments.
2. Show how North American's December 31, 2013, balance sheet and income statement would reflect the sale-leaseback.

P 15-21

Real estate lease;
land and building

● LO15-10

On January 1, 2013, Cook Textiles leased a building with two acres of land from Peck Development. The lease is for 10 years. No purchase option exists and the property will revert to Peck at the end of the lease. The building and land combined have a fair market value on January 1, 2013, of \$1,450,000 and the building has an estimated life of 20 years with a residual value of \$150,000. The lease calls for Cook to assume all costs of ownership and to make annual payments of \$200,000 due at the beginning of each year. On January 1, 2013, the estimated value of the land was \$400,000. Cook uses the straight-line method of depreciation and pays 10% interest on borrowed money. Peck's implicit rate is unknown.

Required:

1. Prepare journal entries for Cook Textiles for 2013. Assume the land could be leased without the building for \$59,000 each year.
2. Assuming the land had a fair value on January 1, 2013, of \$200,000 and could be leased alone for \$30,000, prepare journal entries for Cook Textiles for 2013.

P 15-22

IFRS; real estate
lease; land and
building

● LO15-10,
LO15-11

Refer to the situation described in Problem 15-21.

Required:

How might your solution differ if Cook Textiles prepares its financial statements according to International Financial Reporting Standards?

IFRS

Broaden Your Perspective

Apply your critical-thinking ability to the knowledge you've gained. These cases will provide you an opportunity to develop your research, analysis, judgment, and communication skills. You also will work with other students, integrate what you've learned, apply it in real world situations, and consider its global and ethical ramifications. This practice will broaden your knowledge and further develop your decision-making abilities.

Analysis Case 15-1

Reporting leases;
operating leases;
Delta

● LO15-1 through
LO15-5

Real World Financials

Refer to the most recent financial statements and related disclosure notes of **Delta Airlines**. You can find these at the Delta website, delta.com, or by using Edgar at www.sec.gov.

Required:

1. See the note on "Lease Obligations" in the disclosure notes. What is Delta's capital lease liability?
2. If the operating leases were capitalized, approximately how much would that increase the capital lease liability?
3. What effect would that have on the company's debt-equity ratio? (Refer to the balance sheet.)

Research Case 15-2

FASB codification;
locate and
extract relevant
information and
authoritative
support for a
financial reporting
issue; capital
lease; sublease of
a leased asset

● LO15-1 through
LO15-5

"I don't see that in my intermediate accounting text I saved from college," you explain to another member of the accounting division of Dowell Chemical Corporation. "This will take some research." Your comments pertain to the appropriate accounting treatment of a proposed sublease of warehouses Dowell has used for product storage.

Dowell leased the warehouses one year ago on December 31. The five-year lease agreement called for Dowell to make quarterly lease payments of \$2,398,303, payable each December 31, March 31, June 30, and September 30, with the first payment at the lease's inception. As a capital lease, Dowell had recorded the leased asset and liability at \$40 million, the present value of the lease payments at 8%. Dowell records depreciation on a straight-line basis at the end of each fiscal year.

Today, Jason True, Dowell's controller, explained a proposal to sublease the underused warehouses to American Tankers, Inc. for the remaining four years of the lease term. American Tankers would be substituted as lessee

under the original lease agreement. As the new lessee, it would become the primary obligor under the agreement, and Dowell would not be secondarily liable for fulfilling the obligations under the lease agreement. “Check on how we would need to account for this and get back to me,” he had said.

Required:

1. After the first full year under the warehouse lease, what is the balance in Dowell’s lease liability? An amortization schedule will be helpful in determining this amount.
2. After the first full year under the warehouse lease, what is the carrying amount (after accumulated depreciation) of Dowell’s leased warehouses?
3. Obtain the relevant authoritative literature on accounting for derecognition of capital leases by lessees using the FASB’s Codification Research System. You might gain access from the FASB website (www.fasb.org), from your school library, or some other source. Determine the appropriate accounting treatment for the proposed sublease. What is the specific Codification citation that Dowell would rely on to determine:
 - a. if the proposal to sublease will qualify as a termination of a capital lease, and
 - b. the appropriate accounting treatment for the sublease?
4. What, if any, journal entry would Dowell record in connection with the sublease?

Communication Case 15–3

Classification issues; lessee accounting; group interaction

- LO15–3, LO15–7, LO15–8

Interstate Automobiles Corporation leased 40 vans to VIP Transport under a four-year noncancelable lease on January 1, 2013. Information concerning the lease and the vans follows:

- a. Equal annual lease payments of \$300,000 are due on January 1, 2013, and thereafter on December 31 each year. The first payment was made January 1, 2013. Interstate’s implicit interest rate is 10% and known by VIP.
- b. VIP has the option to purchase all of the vans at the end of the lease for a total of \$290,000. The vans’ estimated residual value is \$300,000 at the end of the lease term and \$50,000 at the end of 7 years, the estimated life of each van.
- c. VIP estimates the fair value of the vans to be \$1,240,000. Interstate’s cost was \$1,050,000.
- d. VIP’s incremental borrowing rate is 11%.
- e. VIP will pay the executory costs (maintenance, insurance, and other fees not included in the annual lease payments) of \$1,000 per year. The depreciation method is straight-line.
- f. The collectibility of the lease payments is reasonably predictable, and there are no important cost uncertainties.

Your instructor will divide the class into two to six groups depending on the size of the class. The mission of your group is to assess the proper recording and reporting of the lease described.

Required:

1. Each group member should deliberate the situation independently and draft a tentative argument prior to the class session for which the case is assigned.
2. In class, each group will meet for 10 to 15 minutes in different areas of the classroom. During that meeting, group members will take turns sharing their suggestions for the purpose of arriving at a single group treatment.
3. After the allotted time, a spokesperson for each group (selected during the group meetings) will share the group’s solution with the class. The goal of the class is to incorporate the views of each group into a consensus approach to the situation.

Specifically, you should address:

- a. Identify potential advantages to VIP of leasing the vans rather than purchasing them.
- b. How should the lease be classified by VIP? by Interstate?
- c. Regardless of your response to previous requirements, suppose VIP recorded the lease on January 1, 2013, as a capital lease in the amount of \$1,100,000. What would be the appropriate journal entries related to the capital lease for the second lease payment on December 31, 2013?

Ethics Case 15–4

Leasehold improvements

- LO15–3

American Movieplex, a large movie theater chain, leases most of its theater facilities. In conjunction with recent operating leases, the company spent \$28 million for seats and carpeting. The question being discussed over breakfast on Wednesday morning was the length of the depreciation period for these leasehold improvements. The company controller, Sarah Keene, was surprised by the suggestion of Larry Person, her new assistant.

Keene: Why 25 years? We’ve never depreciated leasehold improvements for such a long period.

Person: I noticed that in my review of back records. But during our expansion to the Midwest, we don’t need expenses to be any higher than necessary.

Keene: But isn’t that a pretty rosy estimate of these assets’ actual life? Trade publications show an average depreciation period of 12 years.

Required:

1. How would increasing the depreciation period affect American Movieplex's earnings?
2. Does revising the estimate pose an ethical dilemma?
3. Who would be affected if Person's suggestion is followed?

IFRS Case 15-5

Capitalizing operating leases; financial statement effects

- LO15-5, LO15-11

In concert with the International Accounting Standards Board, the FASB is rethinking accounting for leases. Because obligations to make operating lease payments contribute to a company's riskiness, some accountants speculate that new lease standards might require leases now considered to be operating leases to be capitalized the way we now record capital leases.

Refer to the financial statements and related disclosure notes of **Dell Inc.**, located in the company's 2011 financial statements and related disclosure notes in Appendix B located at the back of the text. You also can locate the 2011 report online at www.dell.com. Find disclosure note 11, "Commitments and Contingencies." Note the discussion of Dell's lease commitments for certain of its property and equipment, manufacturing facilities, and office space.

Required:

1. What is the total of Dell's operating lease commitments?
2. If the operating leases were capitalized, approximately how much would that increase Dell's debt? [Assume a 6% interest rate and state clearly any other assumptions you make in your calculations.]
3. Referring also to Dell's balance sheet, determine the effect that capitalizing the leases would have on the company's debt-equity ratio.

Real World Case 15-6

Lease concepts; Walmart

- LO15-1 through LO15-6

Real World Financials

Wal-Mart Stores, Inc., is the world's largest retailer. A large portion of the premises that the company occupies are leased. Its financial statements and disclosure notes revealed the following information:

	Balance Sheet	
	(\$ in millions)	
	2011	2010
Assets		
Property:		
Property under capital lease	\$5,509	\$5,669
Less: Accumulated amortization	(2,780)	(2,906)
Liabilities		
Current liabilities:		
Obligations under capital leases due within one year	336	346
Long-term debt:		
Long-term obligations under capital leases	3,150	3,170

Required:

1. Discuss some possible reasons why Walmart leases rather than purchases most of its premises.
2. The net asset "property under capital lease" has a 2011 balance of \$2,729 million (\$5,509 - 2,780). Liabilities for capital leases total \$3,486 (\$336 + 3,150). Why do the asset and liability amounts differ?
3. Prepare a 2011 summary entry to record Walmart's lease payments, which were \$600 million.
4. What is the approximate average interest rate on Walmart's capital leases? (Hint: See Req. 3)

Real World Case 15-7

Sale-leaseback; FedEx

- LO15-10

Real World Financials

FedEx Corporation, the world's largest express transportation company, leases much of its aircraft, land, facilities, and equipment. A portion of those leases are part of sale and leaseback arrangements. An excerpt from FedEx's 2011 disclosure notes describes the company's handling of gains from those arrangements:

Deferred Gains

Gains on the sale and leaseback of aircraft and other property and equipment are deferred and amortized ratably over the life of the lease as a reduction of rent expense.

Required:

1. Why should companies defer gains from sale-leaseback arrangements?
2. Based on the information provided in the disclosure note, determine whether the leases in the leaseback portion of the arrangements are considered by FedEx to be capital leases or operating leases. Explain.

Communication**Case 15–8**

Where's the gain?

- LO15–1,
LO15–2,
LO15–3,
LO15–10

General Tools is seeking ways to maintain and improve cash balances. As company controller, you have proposed the sale and leaseback of much of the company's equipment. As seller-lessee, General Tools would retain the right to essentially all of the remaining use of the equipment. The term of the lease would be six years. A gain would result on the sale portion of the transaction. The lease portion would be classified appropriately as a capital lease.

You previously convinced your CFO of the cash flow benefits of the arrangement, but now he doesn't understand the way you will account for the transaction. "I really had counted on that gain to bolster this period's earnings. What gives?" he wondered. "Put it in a memo, will you? I'm having trouble following what you're saying to me."

Required:

Write a memo to your CFO. Include discussion of each of these points:

1. How the sale portion of the sale-leaseback transaction should be accounted for at the lease's inception.
2. How the gain on the sale portion of the sale-leaseback transaction should be accounted for during the lease.
3. How the leaseback portion of the sale-leaseback transaction should be accounted for at the lease's inception.
4. The conceptual basis for capitalizing certain long-term leases.

Trueblood Case 15–9

Lease inception date issues

- LO15–3

The following Trueblood case is recommended for use with this chapter. The case provides an excellent opportunity for class discussion, group projects, and writing assignments. The case, along with Professor's Discussion Material, can be obtained by searching for "Trueblood Cases" on the Deloitte Foundation website: www.deloitte.com.

Case 07-7: Porky's Revenge

This case gives students the opportunity to extend their knowledge beyond chapter coverage by determining the lease commencement date. It focuses on a major issue in accounting for leases, but one which had often not been appropriately applied, resulting in incorrect accounting for many leases. It pertains to the situation described in the chapter in which over 200 companies in early 2005 accounted incorrectly for leases.

IFRS Case 15–10

Lease classification; U.S. GAAP

- LO15–1,
LO15–2,
LO15–3,
LO15–11

Security Devices Inc. (SDI) needs additional office space to accommodate expansion. SDI wants to avoid additional debt in its balance sheet.

Required:

1. What lease classification would management prefer? Explain.
2. If SDI follows U.S. GAAP, how might SDI structure the lease agreement to avoid the additional debt? Explain.
3. Would avoiding the additional debt be more or less difficult under IFRS? Explain.

**Air France—KLM Case****AIRFRANCE**

- LO15–11

Air France—KLM (AF), a French company, prepares its financial statements according to International Financial Reporting Standards. AF's annual report for the year ended March 31, 2011, which includes financial statements and disclosure notes, is provided with all new textbooks. This material also is included in AF's "Registration Document 2010–11," dated June 15, 2011 and is available at www.airfranceklm.com.

Required:

1. In Note 3: Summary of accounting policies, part 3.13.4: Leases, AF states that "leases are classified as finance leases when the lease arrangement transfers substantially all the risks and rewards of ownership to the lessee.." Is this the policy companies using U.S. GAAP follow in accounting for capital leases? Explain.
2. Look at AF's Note 30: Financial debt and Note 33: Lease commitments. Does AF obtain use of its aircraft more using operating leases or finance leases? Do lessees report operating and finance lease commitments the same way? Explain.

CPA Simulation 15–1**GA Company**

Leases

CPA Review

Test your knowledge of the concepts discussed in this chapter, practice critical professional skills necessary for career success, and prepare for the computer-based CPA exam by accessing our CPA simulations at the text website: www.mhhe.com/spiceland7e.

The GA Company simulation tests your knowledge of (a) the way we account for and report leases from the perspective of both the lessor and lessee, (b) how lease accounting is influenced by bargain purchase options and guaranteed residual value, and (c) accounting for sale-leaseback arrangements.

LEASES

Where We're Headed

A Chapter Supplement

The FASB and the IASB are collaborating on several major new standards designed in part to move U.S. GAAP and IFRS closer together (convergence). This Supplement is based on their joint Exposure Draft of the new leases standard update and “tentative decisions” of the Boards after receiving feedback from the Exposure Draft as of the date this text went to press.³⁶

Even after the proposed Accounting Standard Update is issued, previous GAAP will be relevant until the proposed ASU becomes effective (likely not mandatory before 2016) and students taking the CPA or CMA exams will be responsible for the previous GAAP until six months after that effective date. Conversely, prior to the effective date of the proposed Accounting Standard Update it is useful for soon-to-be graduates to have an understanding of the new guidance on the horizon.

Right-of-Use Model

From your own experience of leasing an apartment or a car or knowing someone who has, you know that a lease is a contractual arrangement by which a **lessor** (owner) provides a **lessee** (user) the right to use an asset for a specified period of time. In return for this right, the lessee agrees to make stipulated, periodic cash payments during the term of the lease. In the right-of-use model introduced in the new standards update, all leases are recorded as an asset and liability (with the exception of short-term leases as described later), and the concept of operating leases is eliminated.

The right to use the leased property can be a significant asset. Likewise, the obligation to make the lease payments can be a significant liability. Appropriately, the lessee reports both the right-of-use asset and the corresponding liability in the balance sheet:

Right-of-use asset (present value of lease payments)	xxx	
Lease liability (present value of lease payments)		xxx

On the other side of the transaction, the lessor reports a receivable for the lease payments it will receive and removes from its records (derecognizes) the asset (or portion thereof) for which it has given up the right of use. We no longer employ the concept of direct financing and sales-type leases. If the lease receivable represents only a portion of the total fair value of the asset, the lessor also records a “residual asset” for the portion related to the right of use not transferred to the lessee:

³⁶Because the proposed ASU had not been finalized as of the date this text went to press, it is possible that some aspects of the proposed ASU are different from what we show in this Supplement. Check the FASB Updates page (<http://lsb.scu.edu/jsepe/fasb-update-7e.htm>) to see if any changes have occurred.

PREFACE

The new guidance for lease accounting eliminates the concept of operating leases.

GAAP Change

The lessee records both a right-of-use asset and a liability to pay for that right.

GAAP Change

The proposed ASU eliminates the concept of direct financing and sales-type leases.

The lessor records a receivable for the lease payments it will receive and derecognizes the asset being leased.

If only a portion of the right of use is leased, the lessor also records a residual asset.

Lease receivable (present value of lease payments)	xxx	
Asset (carrying amount of asset being leased)		xxx
OR		
Lease receivable (present value of lease payments)	xxx	
Residual asset (carrying amount of portion retained)	xxx	
Asset (carrying amount of asset being leased)		xxx

Either of these two scenarios is typical for most leases in which the lessor’s primary role is to acquire an asset and then finance it for a lessee during all or a portion of the asset’s useful life. The lessor, in this case, is a financial intermediary that earns interest revenue for providing financing of the asset for the lessee. Look, for example, at Illustration 15–23:

Illustration 15–23
Right of Use Model

LeaseCo buys a machine from its manufacturer at its fair value of \$100,000 and leases it to UserCorp for lease payments whose present value is \$100,000.

UserCorp		
Right-of-use asset (present value of lease payments)	100,000	
Lease liability (present value of lease payments)		100,000
LeaseCo		
Lease receivable (present value of lease payments)	100,000	
Asset (carrying amount of asset being leased)		100,000

Two potential characteristics of a lease arrangement can complicate the lessor’s accounting: (1) retaining a residual asset and (2) earning a profit on the lease. We first discuss each individually and then discuss them in combination.

WHEN THE LESSOR RETAINS A RESIDUAL ASSET

Sometimes the lessee obtains the right to use the asset for only a portion of its useful life or to use only a portion of the asset. In that case, the lessor retains a “residual asset” that represents the carrying amount of the asset not transferred to the lessee. See Illustration 15–24 for an example.

Illustration 15–24
Residual Asset

LeaseCo buys a machine from its manufacturer at its fair value of \$100,000 and leases it to UserCorp for lease payments whose present value is \$40,000.

UserCorp		
Right-of-use asset (present value of lease payments).....	40,000	
Lease liability (present value of lease payments)		40,000

Only a portion of the right to use the asset is being transferred. Accordingly, a portion is being retained. The portion *transferred* is:

$$\frac{\$40,000}{\$100,000} \times \$100,000 = \$40,000$$

So, the portion *retained* (residual asset) is the remainder:

$$\$100,000 - 40,000 = \$60,000$$

LeaseCo		
Lease receivable (present value of lease payments)	40,000	
Residual asset (carrying amount of portion retained)	60,000	
Asset (carrying amount of asset being leased)		100,000

The lessor “derecognizes” the asset under lease and replaces it with two assets—a lease receivable and a residual asset.

WHEN THE LESSOR EARNS A PROFIT FROM THE LEASE

In some scenarios, the lessor earns an immediate profit from the lease transaction in addition to the interest revenue earned over the term of the lease. Often, the lessor in this type of transaction is a manufacturer or a merchandiser that is using the lease as a means of “selling” its product. We account for these situations similar to the way we account for sales-type leases in earlier GAAP. See Illustration 15–25 for an example.

ManuCom manufactures a machine at a cost of \$80,000 with a retail selling price (fair value) of \$100,000. Rather than selling the machine, it leases the machine to UserCorp under an agreement in which the present value of the lease payments is \$100,000. Either way, ManuCom generates a gross profit of \$20,000:

Lease receivable (PV of lease payments)	100,000	
Asset (carrying amount of asset being leased)		80,000
Profit (difference ³⁷ between the PV of lease payments and the carrying amount of asset)		20,000

Illustration 15–25

Profit from the Lease

If the PV of the lease payments exceeds the carrying amount of the asset transferred, the lessor has a profit from the lease.

We can think of (a) the present value of the lease payments to be received as being the “selling price” of the right to use the asset and (b) the carrying amount of the portion related to that right of use, and thus transferred, as the “cost of goods sold,” with the difference being the profit on the “sale.”

WHEN THE LESSOR EARNS A PROFIT AND RETAINS A RESIDUAL ASSET

As we saw earlier, the lessee sometimes obtains the right to use the asset for only a portion of its useful life or to use only a portion of the asset and the lessor retains a “residual asset.” This can happen also in a situation in which the lessor earns a profit on the lease:

Lease receivable (PV of lease payments)	xxx	
Residual asset (carrying amount of portion retained, if any)	xxx	
Asset (carrying amount of asset being leased)		xxx
Profit (difference, if any, between the PV of lease payments and the carrying amount of portion transferred)		xxx

In Illustration 15–26 we modify our previous example to include a residual asset in a lease involving a profit.

ManuCom manufactures a machine at a cost of \$80,000 with a retail selling price (fair value) of \$100,000. Rather than selling the machine, it leases the machine to UserCorp under an agreement in which the present value of the lease payments is \$90,000. Because the lessor is not receiving the full value of the machine, only a portion of the right to use the asset is being transferred. Accordingly, a portion is being retained. The portion transferred is:

$$\frac{\$90,000}{\$100,000} \times \$80,000 = \$72,000$$

So, the portion retained (residual asset) is the remainder:

$$\$80,000 - \$72,000 = \$8,000$$

Lease receivable (PV of lease payments)	90,000	
Residual asset (carrying amount of portion retained)	8,000	
Asset (carrying amount of asset being leased)		80,000
Profit (\$90,000 – \$72,000)		18,000 ³⁸

Illustration 15–26

Profit from the Lease and Residual Asset

The fraction of the \$80,000 carrying amount deemed transferred is:

$$\frac{\text{PV of payments}}{\text{FV of asset}}$$

³⁷In the rare instance that this is a debit difference, we would have a loss rather than profit. Companies might choose to separate this profit into its two components: Sales revenue and cost of goods sold, which is the gross method demonstrated for “sales-type” leases in the main chapter.

³⁸Companies might choose to separate this profit into its two components: Sales revenue (\$90,000) and cost of goods sold (\$72,000), which is the gross method demonstrated for “sales-type” leases in the main chapter.

Application to Chapter Illustrations

Let's look back to the situations we discussed in the main chapter in which we applied current GAAP, but instead now see how the new guidance would compare. We start with a rather straightforward situation and then look at the three variations we just discussed: (1) the lessor retains a residual interest, (2) the lessor recognizes some immediate profit, and (3) the lessor both retains a residual interest and recognizes some immediate profit. In Illustration 15–27 we have the same straightforward lease agreement we saw earlier in Illustration 15–6. Accounting under the new lease guidance is quite similar to what would appear under current GAAP. Conceptually, though, we view the situation differently than we would under current GAAP. Rather than thinking of Sans Serif as having “purchased” the asset from First LeaseCorp, we think of the company as having acquired the right to use the asset, in this case, for its entire useful life. That's why Sans Serif records a right-of-use asset instead of an asset to be depreciated as if it were owned. Otherwise, though, the accounting is much the same. On the other side of the transaction, First LeaseCorp again derecognizes the asset (removes it from the books) as it records a receivable for the lease payments to be received.

GAAP Change

Illustration 15–27

Right-of-Use Model

Using Excel, enter:
= PMT(.10,6,479079,, 1)
Output: 100000

Using a calculator:
enter: **BEG** mode
N 6 **I** 10
PV - 479079 **FV**
Output: **PMT** 100000

Notice that the lessor's entries are the flip side or mirror image of the lessee's entries.

The first lease payment reduces the balances in the lease payable and the lease receivable by \$100,000 to \$379,079.

On January 1, 2013, Sans Serif Publishers, Inc., leased printing equipment from First Lease Corp. First Lease Corp purchased the equipment from CompuDec Corporation at a cost of \$479,079.

The lease agreement specifies annual payments beginning January 1, 2013, the inception of the lease, and at each December 31 thereafter through 2017. The six-year lease term ending December 31, 2018, is equal to the estimated useful life of the equipment.

First Lease Corp routinely acquires electronic equipment for lease to other firms. The interest rate in these financing arrangements is 10%.

To achieve its objectives, First LeaseCorp must (a) recover its \$479,079 investment as well as (b) earn interest revenue at a rate of 10%. So, the lessor determined that annual rental payments would be \$100,000:

$$\frac{\$479,079}{\text{Lessor's cost}} \div 4.79079^* = \$100,000 \text{ Rental payments}$$

*Present value of an annuity due of \$1: $n = 6, i = 10\%$.

Of course, Sans Serif Publishers, Inc., views the transaction from the other side. The price the lessee pays for the equipment is the present value of the rental payments:

$$\$100,000 \times 4.79079^* = \$479,079 \text{ Rental payments Lessor's cost}$$

*Present value of an annuity due of \$1: $n = 6, i = 10\%$.

Commencement of the Lease (January 1, 2013)

Sans Serif Publishers, Inc. (Lessee)

Right-of-use asset (present value of lease payments).....	479,079	
Lease payable (present value of lease payments).....		479,079

First LeaseCorp (Lessor)

Lease receivable (present value of lease payments).....	479,079	
Inventory of equipment (carrying amount of asset being leased).		479,079

First Lease Payment (January 1, 2013)*

Sans Serif Publishers, Inc. (Lessee)

Lease payable	100,000	
Cash		100,000

First LeaseCorp (Lessor)

Cash	100,000	
Lease receivable		100,000

*Of course, the entries to record the lease and the first payment could be combined into a single entry since they occur at the same time.

Notice that as the lessee assumes the obligation to pay for the asset's use (lessee's lease liability), the lessor acquires the right to receive those payments (lease receivable). Recording the first payment above emphasizes that relationship; the \$100,000 reduces both the lessee's lease liability and the lessor's lease receivable.

Unless the lessor is a manufacturer or dealer, the fair value typically will be the lessor's cost (\$479,079 in this case). However, if considerable time has elapsed between the purchase of the property by the lessor and the inception of the lease, the fair value might be different. When the lessor is a manufacturer or dealer, the fair value of the property at the inception of the lease ordinarily will be its normal selling price. More on that later. In unusual cases, market conditions may cause fair value to be less than the normal selling price.³⁹

Be sure to note that the entire \$100,000 first lease payment is applied to principal reduction.⁴⁰ Because it occurred at the commencement of the lease, no interest had yet accrued. Subsequent lease payments include interest on the outstanding balance as well as a portion that reduces that outstanding balance. As of the second rental payment date, one year's interest has accrued on the \$379,079 balance outstanding during 2013, recorded as in Illustration 15–27A. Notice that the outstanding balance is reduced by \$62,092—the portion of the \$100,000 payment remaining after interest is covered. If you compare each of these entries after the lessee's initial recording of the right-of-use asset with the entries we recorded in Illustrations 15–6 and 15–6A, you will notice that they are precisely the same as under prior GAAP.

A leased asset is recorded by the lessee at the present value of the lease payments.

Interest is a function of time. It accrues at the effective rate on the balance outstanding during the period.

Amortization of the Lease Receivable / Lease Payable The amortization schedule (Illustration 15–27B), too, is no different from what we would use under current GAAP (Illustration 15–6B). It shows how the lease balance and the effective interest change over the six-year lease term. Each lease payment after the first includes both an amount that represents interest and an amount that represents a reduction of principal. The periodic reduction of principal is sufficient that, at the end of the lease term, the outstanding balance is zero.

	Payments	Effective Interest	Decrease in Balance	Outstanding Balance
		(10% × Outstanding balance)		
1/1/13				479,079
1/1/13	100,000		100,000	379,079
12/31/13	100,000	.10 (379,079) = 37,908	62,092	316,987
				(continued)

Illustration 15–27B

Lease Amortization Schedule

The first rental payment includes no interest.

³⁹FASB ASC 840–10: Leases–Overall (previously “Accounting for Leases,” *Statement of Financial Accounting Standards No. 13* (Stamford, Conn.: FASB, 1980)).

⁴⁰Another way to view this is to think of the first \$100,000 as a down payment with the remaining \$379,079 financed by 5 (i.e., 6 – 1) year-end lease payments.

The total of the cash payments (\$600,000) provides for:

1. Payment for the equipment (\$479,079).
2. Interest (\$120,921) at an effective rate of 10%.

(concluded)

	Payments	Effective Interest	Decrease in Balance	Outstanding Balance
12/31/14	100,000	.10 (316,987) = 31,699	68,301	248,686
12/31/15	100,000	.10 (248,686) = 24,869	75,131	173,555
12/31/16	100,000	.10 (173,555) = 17,355	82,645	90,910
12/31/17	100,000	.10 (90,910) = 9,090*	90,910	0
	<u>600,000</u>	<u>120,921*</u>	<u>479,079</u>	

*Adjusted for rounding of other numbers in the schedule.

Amortization of the Right-of-Use Asset (Lessee) Like other noncurrent assets, the lessee’s right-of-use asset provides benefits, the right to use a productive asset, over the period covered by the lease term. Consistent with that, the lessee amortizes its right-of-use asset over the lease term (or the useful life of the asset if it’s shorter). This usually is on a straight-line basis unless the lessee’s pattern of using the asset is different.⁴¹ Using the asset results in an *expense* for the lessee.

The lessee incurs an expense as it uses the asset.

December 31, 2013 and End of Next Five Years

Sans Serif Publishers, Inc. (Lessee)

Amortization expense (\$479,079 ÷ 6 years)	79,847	
Right-of-use asset		79,847

GAAP Change

This is similar to the lessee depreciating a leased asset in a capital lease under prior GAAP but, since we no longer have operating leases, amortizing right-of-use assets is much more pervasive.

WHEN THE LESSOR RETAINS A RESIDUAL ASSET

In the situation above, the lessor transferred the right of use for the entire life of the asset and retained no residual asset. Now, in Illustration 15–28, we apply the right-of-use model to a situation similar to the previous Illustration 15–5 in which the lease term is only four years of the asset’s six-year life.

Illustration 15–28

Lessee and Lessor (Residual Asset for the Lessor)

On January 1, 2013, Sans Serif Publishers, a computer services and printing firm, leased printing equipment from First LeaseCorp. Its fair value is \$479,079.

The lease agreement specifies **four** annual payments of \$100,000 beginning January 1, 2013, the commencement of the lease, and at each December 31 thereafter through 2015. As in Illustration 15–5, the present value of those four payments at a discount rate of 10% is \$348,685. The useful life of the equipment is estimated to be six years.

The lessee acquires an asset—the right to use the equipment.

Commencement of the Lease (January 1, 2013)

Sans Serif Publishers, Inc. (Lessee)

Right-of-use asset	348,685	
Lease liability (present value of lease payments)		348,685

The fraction of the \$479,079 carrying amount deemed transferred is the:

First LeaseCorp (Lessor)

Only a portion of the right to use the asset is being transferred. Accordingly, a portion is being retained. The portion *transferred* is:

(continued)

⁴¹Output measures such as units produced or input measures such as hours used might provide a better indication of the reduction in the remaining liability.

(concluded)

$$\frac{\$348,685}{\$479,079} \times \$479,079 = \$348,685.$$

So, the portion retained (residual asset) is the remainder:

$$\$479,079 - 348,685 = \$130,394$$

Lease receivable (present value of lease payments).....	348,685	
Residual asset (carrying amount of portion retained)	130,394	
Inventory of equipment (carrying amount of asset being leased)		479,079

First Lease Payment (January 1, 2013)

Sans Serif Publishers, Inc. (Lessee)		
Lease liability	100,000	
Cash		100,000
First LeaseCorp (Lessor)		
Cash	100,000	
Lease receivable		100,000

$\frac{\text{PV of payments}}{\text{FV of asset}}$

GAAP Change

The lessor derecognizes the asset being leased but records a "residual asset" for the portion retained.

The amount recorded as a lease receivable by the lessor at the commencement of the lease is the present value of the lease payments. If that amount is less than the fair value of the asset, then the entire asset is not transferred to the lessee; the lessor retains a portion of the asset. In that case, the lessor divides the carrying amount of the asset into two parts: (1) the portion transferred and thus derecognized and (2) the portion retained and thus reclassified as what we call a **residual asset**. The allocation is based on the ratio of the present value of the payments to the fair value of the asset. That ratio is multiplied by the asset's carrying value (the amount derecognized) to determine the portion of the carrying value transferred. The remainder is the carrying value retained and recorded as a residual asset. You might have deduced that when the carrying amount of the asset is equal to its fair value, the residual asset is simply the difference between the carrying amount (fair value) and the lease receivable.

Be sure to note that the entire \$100,000 first lease payment is applied to principal (lease payable / lease receivable) reduction.⁴² Because the payment occurred at the commencement of the lease, no interest had yet accrued. Subsequent lease payments, though, include interest on the outstanding balance as well as a portion that reduces that outstanding balance. As of the second lease payment date, one year's interest has accrued on the \$248,685 (\$348,685 – 100,000) balance outstanding during 2013, and is recorded as in Illustration 15–28A. Notice that the outstanding balance is reduced by \$75,131—the portion of the \$100,000 payment remaining after interest is covered.

Interest accrues at the effective rate on the balance outstanding during the period.

Second Lease Payment (December 31, 2013)

Sans Serif Publishers, Inc. (Lessee)

Amortization of the Lease Receivable / Lease Payable The amortization schedule in Illustration 15–28B shows how the lease balance and the effective interest change over the four-year lease term. Each lease payment after the first includes both an amount that represents

⁴²Another way to view this is to think of the first \$100,000 as a down payment with the remaining \$249,685 financed by 3 (i.e., 4–1) year-end lease payments.

interest and an amount that represents a reduction of the outstanding balance. The periodic reduction is sufficient that, at the end of the lease term, the outstanding balance is zero.

Illustration 15–28B

Lease Amortization Schedule

The first lease payment includes no interest.

The total of the cash payments (\$400,000) provides for:

1. Payment for the equipment's use (\$348,685).
2. Interest (\$51,315) at an effective rate of 10%.

The lessee incurs an expense as it uses the asset.

	Payments	Effective Interest	Decrease in Balance	Outstanding Balance
		(10% × Outstanding balance)		
1/1/13				348,685
1/1/13	100,000		100,000	248,685
12/31/13	100,000	.10 (248,685) = 24,869	75,131	173,554
12/31/14	100,000	.10 (173,554) = 17,355	82,645	90,909
12/31/15	100,000	.10 (90,909) = 9,091	90,909	0
	400,000	51,315	348,685	

Amortization of the Right-of-Use Asset (Lessee) In this situation, the lessee amortizes its right-of-use asset over a four-year lease term.

December 31, 2013 and End of Next Three Years

Sans Serif Publishers, Inc. (Lessee)

Amortization expense (\$348,685 ÷ 4 years)	87,171	
Right-of-use asset		87,171

Accretion of the Residual Asset (Lessor) Notice that the lessor has two assets now. First LeaseCorp has a lease receivable (\$348,685) recorded at the commencement of the lease, and it also has a residual asset (\$130,394) representing the portion of the underlying asset not transferred to the lessee. That residual asset is recorded at the *present value* of the lessor's estimate of the asset's fair value when the asset reverts back to the lessor at the end of the lease term. You know from Chapter 6 that an amount's present value is less than its future value, and that the present value increases the closer we get to receiving the amount. Similarly, as the lessor gets closer to receiving the residual asset, the asset's carrying value will increase in the lessor's balance sheet. We refer to the increase in value as **accretion**.

To better understand why we “accrete” the residual asset, let's consider what the residual asset means to the lessor. Recall that we said that the fair value of the printing equipment in our illustration is \$479,079. Therefore, for First LeaseCorp to be willing to lease the asset, it must receive assets in the future that have a present value of \$479,079. And, because the rate of return that First LeaseCorp demands is 10%, the present value is calculated using a 10% discount rate. First LeaseCorp will receive two kinds of future assets: cash (in the form of lease payments) and a residual asset (the printing equipment that is returned to First LeaseCorp at the end of the lease).

Assume that First LeaseCorp anticipates that the fair value of the residual asset will be \$190,911 at the end of the lease term.⁴³ Given that knowledge, and First LeaseCorp's required 10% rate of return, what amount should First LeaseCorp charge for the four lease payments? Remember, the \$479,079 is the fair value *now*, so to determine the amount that needs to be recovered from the four lease payments, First LeaseCorp subtracts from \$479,079 the *present value* of the residual asset's anticipated fair value to be received in four years, and then computes lease payments to provide a return of 10%:

To determine the lease payments, the lessor subtracts from fair value the *present value* of the four-years-away residual value.

Amount to be recovered (fair value)	\$479,079
Less: Present value of the fair value (\$190,911 × .68301*)	(130,394)
To be recovered through periodic lease payments (present value)	\$348,685
	÷ 3.48685**
Lease payments at the beginning of each of the next 4 years	<u>\$100,000</u>

*present value of \$1: $n = 4, i = 10\%$
 **present value of an annuity due of \$1: $n = 4, i = 10\%$

⁴³Although not stated at the time, First LeaseCorp anticipated that the fair value of the equipment in Illustration 15–5 would be \$190,911 at the end of the lease term, which is why the lease payments were \$100,000 then.

So, First LeaseCorp expects to recover its \$479,079 investment as follows:

Present value of periodic lease payments ($\$100,000 \times 3.48685^{**}$)	\$348,685
Plus: Present value of the asset's fair value ($\$190,911 \times .68301^*$)	130,394
Amount to be recovered (fair value)	\$479,079

*present value of \$1: $n = 4, i = 10\%$

**present value of an annuity due of \$1: $n = 4, i = 10\%$

Note that both of these future assets, lease payments and the residual asset, are priced to provide a 10% rate of return. Our focus here is on the residual asset. We include only its present value of \$130,394 when calculating lease payments, such that it provides a return of 10% over the life of the lease when it is returned to the lessor after four years with a fair value of **\$190,911**.

At the end of each of the four years of the lease term, First LeaseCorp will record accretion of the residual asset using the interest rate implicit in the agreement (10%). Because the asset increases with the passage of time, First LeaseCorp records revenue from accretion. The first year, the entry is:

First LeaseCorp (Lessor)

Residual asset	13,039	
Revenue from asset accretion ($\$130,394 \times 10\%$)		13,039

The increase in the residual asset's balance through accretion is shown in Illustration 15–29.

	Revenue from Asset Accretion	Increase in Balance	Outstanding Balance
	(10% \times Outstanding balance)		
1/1/13			130,394
12/31/13	.10 (130,394) = 13,039	13,039	143,433
12/31/14	.10 (143,433) = 14,343	14,343	157,776
12/31/15	.10 (157,386) = 15,778	15,778	173,554
12/31/16	.10 (173,125) = 17,355	17,357*	190,911

*rounded

Illustration 15–29

Residual Asset Accretion

The balance in the residual asset accretes at the 10% discount rate to its anticipated value at the end of the lease term.

The lessor's investment is recovered from two sources: (a) payments for the portion of the carrying value transferred and (b) obtaining the residual asset at the end of the lease term, much like a loan with a balloon payment at the end. Its revenue is (a) the interest revenue from financing the portion transferred and (b) the revenue from accretion of its residual asset not transferred, both at the 10% interest rate implicit in the lease. Thus, First LeaseCorp earns a 10% rate of return on both the portion of its asset transferred and the portion retained as a residual asset.

Ignoring tax effects, the lease's effect on the earnings of the lessee and lessor are depicted in Illustration 15–30.

	Lessee		Lessor	
	Interest Expense	Amortization Expense	Interest Revenue	Accretion Revenue
2013	24,869	87,171	24,869	13,039
2014	17,355	87,171	17,355	14,343
2015	9,091	87,171	9,091	15,788
2016	0*	87,171	0*	17,357

*Recall that since the payments are at the beginning of each period, there is no interest during the last year of the lease.

Illustration 15–30

Earnings Effects of Lease with Residual Asset

In keeping with the lessor recovering its investment from two sources, you should note that the total of the lessor's interest revenue and accretion revenue each year is 10% (the interest

rate) of the total of the lease receivable and residual asset balances at the beginning of that year. For instance, in 2015 the lessor’s revenue is $\$9,091 + 15,788 = \$24,869$. This is 10% of $\$248,686$ ($\$157,776$, the 2014 ending balance of the residual asset [Illustration 15–29] plus $\$90,909$, the 2014 ending balance of the lease receivable [Illustration 15–28B]).

WHEN THE LESSOR EARNS A PROFIT FROM THE LEASE

If the lessor earns an immediate profit from the lease transaction in addition to the interest revenue earned over the term of the lease, the lessor usually is a manufacturer or a merchandiser that is using the lease as a means of “selling” its product.

In addition to interest revenue earned over the lease term, the lessor receives a manufacturer’s or dealer’s *profit* on the “sale” of the asset. This additional profit exists when the present value of the lease payments, or “selling price,” exceeds the cost or carrying value of the asset transferred to the lessee. Accounting for this type of lease is the same as for others except for recognizing the profit at the commencement of the lease.

To illustrate, let’s modify our earlier Illustration 15–27. Assume all facts are the same except Sans Serif Publishers leased the equipment directly from CompuDec Corporation, rather than through the financing intermediary. Also assume CompuDec’s cost of the equipment was $\$300,000$. If you recall that the lease payments (their present value) provide a “selling price” of $\$479,079$, you see that CompuDec earns a profit of $\$479,079 - 300,000 = \$179,079$. This is demonstrated in Illustration 15–31. We don’t revisit lessee accounting here because lessee accounting is not affected by whether the lessor has a profit in the lease or not.

Illustration 15–31

Lessor; Profit on Lease

On January 1, 2013, Sans Serif Publishers leased printing equipment from CompuDec Corporation. The lease agreement specifies six annual payments of $\$100,000$ beginning January 1, 2013, the commencement of the lease, and at each December 31 thereafter through 2017. The **six-year** lease term ending December 31, 2018 (a year after the final payment), is equal to the estimated useful life of the printing equipment.

CompuDec manufactured the printing equipment at a cost of $\$300,000$. The fair value of the equipment is $\$479,079$. CompuDec’s interest rate for financing the transaction is 10%.

$$\begin{matrix} \$100,000 \times 4.79079^* = \$479,079 \\ \text{Lessor's} & \text{Rental} \\ \text{payments} & \text{payments} \end{matrix}$$

*Present value of an annuity due of $\$1$: $n = 6, i = 10\%$.

Commencement of the Lease (January 1, 2013)

CompuDec (Lessor)		
Lease receivable (present value of lease payments)	479,079	
Inventory of equipment (lessor’s cost: carrying amount)		300,000
Profit (difference)		179,079 ⁴⁴

All entries other than the entry at the commencement of the lease, which now includes the profit, are precisely the same as in Illustrations 15–27 and 15–27A on pages 926–927.

Accounting by the lessee is not affected by how the lessor records the lease. All lessee entries are exactly the same as in Illustrations 15–27 and 15–27A.

You might recognize this process as similar to the way sales-type leases are accounted for under prior GAAP.

WHEN THE LESSOR EARNS A PROFIT AND RETAINS A RESIDUAL ASSET

Deferral of Profit Related to Residual Asset. When a lessor earns a profit on a lease *and* at the same time retains a residual asset, then a portion of the profit is recognized as earned at the commencement of the lease, and another portion of the profit is deferred for recognition after the lease has ended. The profit earned at the lease’s commencement relates

⁴⁴Companies might choose to separate this profit into its two components: Sales revenue ($\$479,079$) and cost of goods sold ($\$300,000$), which is the gross method demonstrated for “sales-type” leases in the main chapter.

to the part of the asset transferred (“sold”); the profit that’s deferred relates to the part of the asset retained as a residual asset.

Let’s modify the previous illustration to assume that the equipment’s fair value at the end of the six-year lease term is expected to be \$100,000 rather than zero.

On January 1, 2013, Sans Serif Publishers leased printing equipment from CompuDec Corporation. The lease agreement specifies six annual payments beginning January 1, 2013, the commencement of the lease, and at each December 31 thereafter through 2017. The six-year lease term ending December 31, 2018 (a year after the final payment), after which the equipment is anticipated to have a fair value of \$100,000.

CompuDec manufactured the printing equipment at a cost of \$300,000. The fair value of the equipment is \$479,079. CompuDec’s interest rate for financing the transaction is 10%.

Calculation of Lease Payments

Amount to be recovered (fair value)	\$ 479,079
Less: PV of six-years-away fair value (\$100,000 × .56447*)	(56,447)
To be recovered through periodic lease payments (present value)	<u>\$ 422,632</u>
	÷ 4.79079**
Lease payments in each of the next 6 years	<u>\$ 88,218</u>

* present value of \$1: $n = 6, i = 10\%$
 ** present value of an annuity due of \$1: $n = 6, i = 10\%$

So, CompuDec expects to recover its \$479,079 as follows:

Present value of periodic lease payments (\$88,218 × 4.79079**)	\$ 422,632
Plus: PV of the six-years-away fair value (\$100,000 × .56447*)	56,447
Amount to be recovered (current fair value)	<u>\$ 479,079</u>

Illustration 15–32

Lessor; Profit on Lease; Residual Asset

To determine the lease payments, the lessor subtracts from current fair value the present value of the six-years-away fair value.

As we saw earlier, the lessor should divide the carrying amount of the asset into two parts, (1) the portion transferred and thus derecognized and (2) the portion retained and thus reclassified as a residual asset. The allocation is based on the ratio of the present value of the payments to the fair value of the asset.

Recording the Lease at its Commencement

The portion transferred is:

$$\frac{\$422,632}{\$479,079} \times \$300,000 = \$264,653$$

So, the portion retained (residual asset) is the remainder:

$$\$300,000 - 264,653 = \$35,347.$$

Lease receivable (present value of lease payments).....	422,632	
Residual asset (carrying amount of portion retained)	35,347	
Inventory of equipment (lessor’s cost: carrying amount)		300,000
Profit (\$422,632 – 264,653).....		<u>157,979</u>

The fraction of the \$300,000 carrying amount deemed transferred is the:

$$\frac{\text{PV of payments}}{\text{FV of asset}}$$

A residual asset represents the carrying amount of the anticipated fair value at the end of the lease term.

We should note that the total profit on the equipment is its fair value (\$479,079) less its cost (\$300,000), or \$179,079, but that only \$157,979 is recognized at the commencement of the lease. The remaining \$21,100 will be deferred until the residual asset to which it relates is subsequently sold or leased again by CompuDec after the lease term.

Accretion of the Residual Asset. Deferring part of the profit affects how we accrete the residual asset. Earlier, we discussed the need to record accretion of the residual asset from its current fair value to the fair value anticipated at the end of the lease term. In that earlier illustration (15–29), in which we had no profit in the lease, the current fair value of the residual asset was the same as the carrying amount of the residual asset. Now, though, the carrying amount of the equipment is less than its fair value (which is why there is profit),

When there is profit in a lease, the current fair value of the residual asset is not the same as the carrying amount of the residual asset.

so the carrying amount of the residual asset (the \$35,347 portion of the equipment retained) also is less than the fair value of the residual asset (\$56,447). The difference ($\$56,447 - 35,347 = \$21,100$) is the deferred profit on the portion of the asset not transferred.

In order to record accretion of the residual asset from its current fair value to its anticipated fair value at the end of the lease term, we need to first increase the balance of the residual asset from its carrying amount to its current fair value. We make this entry at the commencement of the lease:

The profit on the portion of the asset not transferred is deferred during the lease term and included in earnings only when the asset is sold or re-leased.

CompuDec (Lessor)		
Residual asset	21,100	
Deferred profit ($\$56,447 - 35,347$) ⁴⁵		21,100

CompuDec will report a “net residual asset” in the balance sheet, which is the “gross residual asset” offset by the deferred profit. So, initially the reportable amount is:

Gross residual asset	\$56,447
Less: Deferred profit	<u>21,100</u>
Net residual asset	\$35,347

But since the gross amount is accreted (increased) over the term of the lease, the reported amount (equal to the gross amount minus deferred profit) increases as well. The increase in the gross residual asset’s balance through accretion is shown in Illustration 15–33.

Illustration 15–33

Residual Asset Accretion

The balance in the gross residual asset accretes at the 10% discount rate to its anticipated value at the end of the lease term.

	Accretion Revenue	Increase in Balance	Gross Residual Asset	Deferred Profit	Net Residual Asset
(10% × Outstanding balance)					
1/1/13			56,447	21,100	35,347
12/31/13	.10 (56,447) = 5,645	5,645	62,092	21,100	40,992
12/31/14	.10 (62,092) = 6,209	6,209	68,301	21,100	47,201
12/31/15	.10 (68,301) = 6,830	6,830	75,131	21,100	54,031
12/31/16	.10 (75,131) = 7,513	7,513	82,644	21,100	61,544
12/31/17	.10 (82,644) = 8,264	8,264	90,908	21,100	69,808
12/31/18	.10 (90,908) = 9,092	9,092*	100,000	21,100	78,900
	<u>43,553</u>	<u>43,553</u>			

*rounded

Remember, in addition to the accretion revenue during the lease term, the lessor’s earnings also will be increased by the profit recorded at the lease’s commencement, the interest revenue earned during the lease term, and the deferred profit when the equipment is sold or leased again after the lease term.

To help visualize the relationship among the different ways to measure the residual asset as of the commencement of the lease, look at Illustration 15–34.

Illustration 15–34

Measuring the Residual Asset

Carrying Amount of Anticipated Fair Value (Net Residual Asset)	\$ 35,347
Deferred Profit	<u>21,100</u>
Present Value of Anticipated Fair Value (Gross Residual Asset)	\$ 56,447
Accretion Revenue	<u>43,553</u>
Anticipated Fair Value*	\$100,000

*As the residual asset is accreted over the lease term, both the gross residual asset and the net residual asset increase, and the gross residual asset eventually equals the anticipated fair value.

⁴⁵We also can view the deferred profit as the portion of the total profit if the equipment were to have been transferred in its entirety minus the profit actually recognized currently:

Total profit (479,079 – 300,000)	\$179,079
Less: Profit recognized at commencement	<u>157,979</u>
Deferred profit	\$ 21,100

INITIAL DIRECT COSTS

The costs that are associated directly with originating a lease and that would not have been incurred had the lease agreement not occurred are referred to as **initial direct costs**. They include legal fees, commissions, evaluating the prospective lessee's financial condition, and preparing and processing lease documents.

Under the proposed ASU, accounting for initial indirect costs is simple. Initial direct costs are added to the carrying amount of the right-of-use asset if incurred by the lessee or to the lease receivable if incurred by the lessor.

Under current GAAP, the method of accounting for initial direct costs depends on the nature of the lease. Accounting differs depending on whether the lease is (1) an operating lease, (2) a direct financing lease, or (3) a sales-type lease.

GAAP Change

Uncertainty in Lease Transactions

WHAT IF THE LEASE TERM IS UNCERTAIN?

Sometimes the actual term of a lease is not obvious. Suppose, for instance, that the lease term is specified as four years, but it can be renewed at the option of the lessee for two additional years. Or, maybe either party can terminate the lease after, say, three years. In such situations, we consider the lease term to be the contractual lease term adjusted for any periods covered by options to extend or terminate the lease for which there is a "significant economic incentive" to exercise the options. Factors that might create an economic incentive for the lessee to exercise an option include bargain renewal rates, penalty payments for cancellation or nonrenewal, and economic penalties such as significant customization or installment costs. This is similar to current GAAP's treatment of renewal options.

You might want to ponder the possibilities if we did not have this requirement to specifically consider renewal options and the economic incentive for exercising them when we determine the lease term. Management might be tempted to structure leases with artificially short initial terms and numerous renewal options as a scheme to be able to use the short-cut method (that we discuss later) or to reduce significantly the amount of the lease liability to be reported (off-balance-sheet financing).

The lease term should be reassessed only when there is a significant indication that the lessee's economic incentive to exercise any options to extend or terminate the lease has changed.

The lease term for both the lessee and the lessor is the contractual lease term modified by any renewal or termination options for which there is a clear economic incentive to exercise the options.

WHAT IF THE LEASE PAYMENTS ARE UNCERTAIN?

Sometimes lease payments are to be increased (or decreased) at some future time during the lease term, depending on whether or not some specified event occurs. Usually the contingency is related to revenues, profitability, or usage above some designated level. For example, a recent annual report of **Walmart** included the note shown in Illustration 15–35.

13 Commitments (in part)

Certain of the Company's leases provide for the payment of contingent rentals based on a percentage of sales. Such contingent rentals were immaterial for fiscal years 2011, 2010, and 2009.

Illustration 15–35

Contingent Lease Payments—Walmart

Real World Financials

Why would a lease include a contingent payment provision? It is a way for lessees and lessors to share the risk associated with the asset's productivity. For example, a shop owner who pays for a premium mall location is doing so anticipating higher revenue. If the mall attracts many shoppers, the lessee pays the lessor part of the resulting higher profits, but if not, the lessee makes only the normal minimum lease payment. This arrangement also provides the lessor incentive to attract shoppers to the mall, which is in the lessee's best interest. If the amounts of future lease payments are uncertain due to contingencies or otherwise, we consider them as part of the lease payments *only if they are "reasonably assured."*

If future lease payments are uncertain, we consider them as part of the lease payments *only if they are "reasonably assured."*

Under current GAAP, contingent payments are included only when they are considered "probable." While there is considerable overlap, fewer contingent payments will be included in lease payments under the new guidance.

GAAP Change

If the amounts of future lease payments vary solely when an index or rate changes, the payments are estimated and included as part of the lease payments. Those payments should be reassessed using the index or rate that exists at the end of each reporting period.

GUARANTEED RESIDUAL VALUE

A cash payment predicted under a lessee-guaranteed residual value is treated the same as a lease payment.

The **residual value** of leased property is an estimate of what its commercial value will be at the end of the lease term. Sometimes a lease agreement includes a guarantee by the lessee that the lessor will recover a specified residual value when custody of the asset reverts back to the lessor at the end of the lease term. This not only reduces the lessor’s risk but also provides incentive for the lessee to exercise a higher degree of care in maintaining the leased asset to preserve the residual value. The lessee promises to return not only the property but also sufficient cash to provide the lessor with a minimum combined value.

If a cash payment under a lessee-guaranteed residual value is predicted, the present value of that payment is added to the present value of the lease payments the lessee records as both a right-of-use asset and a lease liability. Likewise, it also adds to the amount that the lessor records as a lease receivable.

Let’s return to Illustration 15–28, when both the lessee and lessor expect the residual value after the four-year lease term to be \$190,911. Now assume that negotiations led to the lessee *guaranteeing* a \$210,000 residual value. If the property’s value is less than \$210,000 at the end of the lease term, the lessee will make a cash payment for the difference between the \$210,000 and the actual value.

The expected excess guaranteed residual value ($\$210,000 - 190,911 = \$19,089$) is viewed as an additional cash flow and its present value is included in the calculation of the present value of lease payments as shown in Illustration 15–36.

Situations in which the lessee-guaranteed residual value exceeds the estimate of the actual residual value are rare in practice. It makes little economic sense for a lessee to agree to guarantee an amount greater than the estimated residual value, virtually ensuring an additional cash payment at the conclusion of the lease. The requirement to account for it in this

Illustration 15–36

Guaranteed Residual Value

Any expected excess guaranteed residual value is viewed as an additional cash flow and its present value is included in the lessor’s lease receivable.

Present value of periodic lease payments ($\$100,000 \times 3.48685^*$)	\$348,685
Plus: Present value of estimated payment under residual value guarantee ($\$19,089^\dagger \times .68301^{**}$)	13,038
	<u>361,723</u>
Present value of expected lease payments	<u>\$361,723</u>

*Present value of an annuity due of \$1: $n = 4, i = 10\%$.
 **Present value of \$1: $n = 4, i = 10\%$.
 †\$210,000 guaranteed residual value minus \$190,911 expected residual value

Commencement of the Lease (January 1, 2013)

Sans Serif Publishers, Inc. (Lessee)		
Right-of-use asset	361,723	
Lease liability (present value of lease payments)		361,723
First LeaseCorp (Lessor)		

The expected excess guaranteed residual value is viewed as an additional cash flow and its present value is included in the lessor’s lease receivable and influences the portion of the right to use the asset being transferred. The portion *transferred* is:

$$\frac{\$361,723}{\$479,079} \times \$479,079 = \$361,723.$$

So, the portion *retained* (residual asset) is the remainder:

$$\$479,079 - 361,723 = \$117,356.$$

Lease receivable (present value of lease payments)	361,723
Residual asset (carrying amount of portion retained)	117,356
Inventory of equipment (carrying amount of asset being leased)....	479,079

way, though, serves as a deterrent to lessees and lessors who might be inclined to manipulate reported numbers by reducing lease payments while creating an excess *lessee-guaranteed* residual value to compensate for the reduced lease payments.

Notice that this treatment of a guaranteed residual value is quite different from current GAAP. Prior to the proposed ASU, we included the present value of the entire guaranteed residual value, not just its excess over estimated residual value, as an additional cash flow

when calculating the present value of lease payments. We also included residual values guaranteed by third parties.

PURCHASE OPTIONS

A **purchase option** is a provision of some lease contracts that gives the lessee the option of purchasing the leased property during, or at the end of, the lease term at a specified exercise price. We consider the exercise price to be an additional cash payment, which will increase both the lessee's lease payable and the lessor's lease receivable, if the lessee has a "significant economic incentive" to exercise the purchase option. In that case, the right-of-use asset recognized by the lessee should be amortized over the economic life of the underlying asset, rather than over the lease term.

This is similar to accounting for a "bargain purchase option" under prior GAAP. Because we defined a BPO as a purchase option we expected to be exercised, the condition of inclusion in the lease payments resembles the "significant economic incentive" condition under the proposed ASU.

Short-Term Leases—a Short-Cut Method

It's not unusual to simplify accounting for situations in which doing so has no material effect on the results. You might recognize this as the concept of "materiality."⁴⁶ One such situation that permits a simpler application is a short-term lease. A lease that has a maximum possible lease term (including any options to renew or extend) of twelve months or less is considered a "short-term lease." Both the lessee and the lessor have a lease-by-lease option to choose a short-cut approach to accounting for a short-term lease.

The short-cut approach permits the lessee and lessor to choose *not* to record the lease at its commencement. Instead, the lessee can simply record lease payments as rent expense over the lease term, and the lessor can record lease payments as rent revenue over the lease term. Yes, this is the approach used under current GAAP for operating leases.

Let's look at an example that illustrates the relatively straightforward accounting for short-term leases. To do this we modify Illustration 15–28 to assume the lease term is twelve months in Illustration 15–37.

The exercise price of a purchase option is considered to be an additional cash payment if the lessee has a "significant economic incentive" to exercise the option.

In a short-term lease, the lessee and lessor can elect not to record the lease at its commencement and instead simply recording lease payments as expense and revenue.

Illustration 15–37

Short-Term Lease;
Lessee and Lessor

On January 1, 2013, Sans Serif Publishers leased printing equipment from First LeaseCorp. First LeaseCorp purchased the equipment at a cost of \$479,079.

The lease agreement specifies four **quarterly** payments of \$100,000 beginning January 1, 2013, the commencement of the lease, and at the first day of each of the next three quarters. The useful life of the equipment is estimated to be six years.

Before deciding to lease, Sans Serif considered purchasing the equipment for \$479,079. First LeaseCorp's interest rate for financing the transaction is 10%.

Commencement of the Lease (January 1, 2013)

Sans Serif Publishers, Inc. (Lessee)

No entry

First LeaseCorp (Lessor)

No entry

Lease Payments (January 1, April 1, July 1, October 1, 2013)

Sans Serif Publishers, Inc. (Lessee)

Lease expense	100,000	
Cash		100,000

First LeaseCorp (Lessor)

Cash	100,000	
Lease revenue		100,000

If the short-cut option is chosen, the lessee and lessor recognize lease payments as lease expense and lease revenue over the lease term.

⁴⁶Materiality is a qualitative characteristic in "Concepts Statement No. 8: Conceptual Framework for Financial Reporting—Chapter 3," *Qualitative Characteristics of Useful Financial Information*, QC11, FASB, September, 2010.

The interest portion of a lease payment is a cash flow from operating activities and the principal portion is a cash flow from financing activities.

Cash receipts are cash flows from operating activities for the lessor.

STATEMENT OF CASH FLOW IMPACT

Lessee. When a lessee acquires a right-of-use asset and related liability, there is no inflow or outflow of cash. However, because a primary purpose of the statement of cash flows is to report significant operating, investing, and financing activities, the initial transaction is reported in the disclosure notes as a noncash transaction (investing in the right-of-use asset and financing it with debt).

The cash lease payments are divided into the interest portion and the principal portion. The interest portion is reported as cash outflows from operating activities. The principal portion is reported among cash outflows from financing activities.

By the *indirect method* of reporting cash flows from operating activities, the lessee adds back to net income the amortization expense from amortizing its right-of-use asset since it didn't actually reduce cash. The interest expense that reduces net income actually does reduce cash, so for it, no adjustment to net income is necessary.

Lessor. On the other side of the transaction, the lessor classifies its cash receipts from lease payments as *operating activities* in its statement of cash flows after initially reporting its acquisition of a lease receivable and derecognition of the leased asset as a supplemental noncash transaction in its cash flow disclosure note.

By the indirect method of reporting cash flows from operating activities, the interest revenue that increases net income actually does increase cash. The remaining portion of the cash lease payments must be added to net income to cause operating activities to reflect the entire cash flow.

If the lessor records a residual asset, that asset is accreted (increased) from its initial present value to its anticipated fair value at the end of the lease. The corresponding accretion revenue is not reported until the asset is subsequently sold or re-leased. At that point, any cash flow (from a sale) would be reported as an investing activity, but the accretion revenue would not represent a cash flow in addition to the sale price, so it would not be reported using the direct method. By the indirect method of reporting cash flows from operating activities, the accretion revenue that increases net income but not cash must be subtracted from net income to cause operating activities to reflect the cash flow.

If the lessor records a profit at the commencement of the lease, that profit does not represent a cash flow, so it is not reported using the direct method of reporting cash flows from operating activities. By the indirect method, the profit that increases net income but not cash must be subtracted from net income to cause operating activities to reflect the cash flow.

Respond to the questions, brief exercises, exercises, and problems in this Supplement with the presumption that the guidance provided by the proposed Accounting Standards Update is being applied.

Questions For Review of Key Topics

- Q 15–24** Briefly describe the conceptual basis for asset and liability recognition under the right-of-use approach used by the lessee in a lease transaction.
- Q 15–25** Why does a lessor sometimes record a residual asset in a lease transaction? What determines the amount recorded as a residual asset?
- Q 15–26** A lessee's earnings are affected by what two amounts (ignoring taxes) in a lease transaction? On the flip side, what amount or amounts affect the lessor's earnings?
- Q 15–27** What discount rate does the lessor use in determining its lease receivable? How is the rate determined?
- Q 15–28** What discount rate does the lessee use in determining its right-of-use asset and lease liability?
- Q 15–29** When does a lessor record an immediate profit at the commencement of a lease?
- Q 15–30** A six-year lease can be renewed for two additional three-year periods, and it also can be terminated after only three years. How do the lessee and lessor decide the lease term to be used in accounting for the lease?
- Q 15–31** A lease might specify that lease payments may be increased (or decreased) at some future time during the lease term depending on whether or not some specified event occurs such as revenues or profits exceeding some designated level. In such situations, what is the amount a lessee should use to measure its right-of-use asset and lease liability?

- Q 15-32** Occasionally, a lease agreement includes a guarantee by the lessee that the lessor will recover a specified residual value when custody of the asset reverts back to the lessor at the end of the lease term. Under what circumstance can the guaranteed residual value influence the amounts recorded by the lessee and lessor? In that circumstance, how are the amounts affected?
- Q 15-33** What is a purchase option? How is a lease potentially affected by a purchase option?
- Q 15-34** A lease that has a maximum possible lease term (including any options to renew) of twelve months or less is considered a “short-term lease.” Both the lessee and the lessor have a lease-by-lease option to choose a short-cut approach to accounting for a short-term lease. How does a lessee record a lease using the short-cut approach?
- Q 15-35** How does a lessor record a lease using the short-cut approach?

Brief Exercises

- BE 15-15** Lessee; effect on earnings
At the beginning of its fiscal year, Café Med leased restaurant space from Crescent Corporation under a nine-year lease agreement. The contract calls for annual lease payments of \$25,000 each at the end of each year. The building was acquired recently by Crescent at a cost of \$300,000 (its fair value) and was expected to have a useful life of 25 years with no residual value. The company seeks a 10% return on its lease investments. What will be the effect of the lease on Café Med’s earnings for the first year (ignore taxes)?
- BE 15-16** Lessee; effect on balance sheet
In the situation described in BE 15-15, what will be the balances in the balance sheet accounts related to the lease at the end of the first year for Café Med (ignore taxes)?
- BE 15-17** Lessee; accrued interest; balance sheet effects
A lease agreement calls for annual lease payments of \$26,269 over a six-year lease term, with the first payment at January 1, the lease’s commencement, and subsequent payments at January 1 of the following five years. The interest rate is 5%. If the lessee’s fiscal year is the calendar year, what would be the amount of the lease liability that the lessee would report in its balance sheet at the end of the first year? What would be the interest payable?
- BE 15-18** Lessee; accrued interest; income statement effects
In the situation described in BE 15-17, what would be the pretax amounts related to the lease that the lessee would report in its income statement for the first year ended December 31?
- BE 15-19** Lessor; effect on earnings
In the situation described in BE 15-15, what will be the effect of the lease on Crescent’s earnings for the first year (ignore taxes)?
- BE 15-20** Lessor; effect on balance sheet
In the situation described in BE 15-15, what will be the balances in the balance sheet accounts related to the lease at the end of the first year for Crescent (ignore taxes)?
- BE 15-21** Calculate interest
A lease agreement calls for quarterly lease payments of \$5,376 over a 10-year lease term, with the first payment at July 1, the lease’s inception. The interest rate is 8%. Both the fair value and the cost of the asset to the lessor are \$150,000. What would be the amount of interest expense the lessee would record in conjunction with the second quarterly payment at October 1? What would be the amount of interest revenue the lessor would record in conjunction with the second quarterly payment at October 1?
- BE 15-22** Lessor; calculate lease payments
Manning Imports is contemplating an agreement to lease equipment to a customer for five years, the asset’s estimated useful life. Manning normally sells the asset for a cash price of \$100,000. Assuming that 8% is a reasonable rate of interest, what must be the amount of quarterly lease payments (beginning at the commencement of the lease) in order for Manning to recover its normal selling price as well as be compensated for financing the asset over the lease term?
- BE 15-23** Lessor profit; income statement effects
In the situation described in BE 15-17, assume the asset being leased cost the lessor \$125,000 to produce. Determine the price at which the lessor is “selling” the right to use the asset (present value of the lease payments). What would be the pretax amounts related to the lease that the lessor would report in its income statement for the year ended December 31?
- BE 15-24** Lessor profit; residual asset; income statement effects
In the situation described in BE 15-17, assume the asset being leased cost the lessor \$125,000 to produce and its fair value is \$150,000. Determine the price at which the lessor is “selling” the right to use the asset (present value of the lease payments). What would be the pretax amounts related to the lease that the lessor would report in its income statement for the year ended December 31? [Hint: The difference between the \$150,000 fair value

and the present value of the lease payments is the *current* fair value of the anticipated six-years-away fair value of the asset when it reverts to the lessor at the end of the lease term and thus the gross residual asset: net residual asset plus deferred profit.]

BE 15–25

Lessor profit;
residual asset;
balance sheet
effects

In the situation described in BE 15–17, assume the asset being leased cost the lessor \$125,000 to produce and its fair value is \$150,000. Determine the price at which the lessor is “selling” the right to use the asset (present value of the lease payments). What will be the balances in the balance sheet accounts related to the lease at the end of the first year (ignore taxes)? [Hint: The difference between the \$150,000 fair value and the present value of the lease payments is the *current* fair value of the anticipated six-years-away fair value of the asset when it reverts to the lessor at the end of the lease term and thus the gross residual asset: net residual asset plus deferred profit.]

BE 15–26

Residual asset

Corinth Co. leased equipment to Athens Corporation for an eight-year period, at which time possession of the leased asset will revert back to Corinth. The equipment cost Corinth \$16 million to manufacture and has an expected useful life of 12 years. Its normal sales price is \$22.4 million. The present value of the lease payments for both the lessor and lessee is \$21 million. The first payment was made at the commencement of the lease. What will be the amount Corinth will record as a net residual asset (before adding deferred gross profit) at the commencement of the lease? Why?

BE 15–27

Renewal options

Culinary Creations leased kitchen equipment under a five-year lease with an option to renew for three years at the end of five years and an option to renew for an additional three years at the end of eight years. The first three-year renewal option can be exercised for one-half the original and usual rate. What is the length of the lease term that Culinary Creations should assume in recording the transactions related to the lease?

BE 15–28

Uncertain lease
payments

On January 1, Garcia Supply leased a truck for a four-year period, at which time possession of the truck will revert back to the lessor. Annual lease payments are \$10,000 due on December 31 of each year, calculated by the lessor using a 5% discount rate. If Garcia’s revenues exceed a specified amount during the lease term, Garcia will pay an additional \$4,000 lease payment at the end of the lease. Garcia estimates a 10% probability of meeting the target revenue amount. What amount, if any, should be added to the right-of-use asset and lease liability under the contingent rent agreement?

BE 15–29

Guaranteed
residual value

On January 1, Garcia Supply leased a truck for a four-year period, at which time possession of the truck will revert back to the lessor. Annual lease payments are \$10,000 due on December 31 of each year, calculated by the lessor using a 5% discount rate. Negotiations led to Garcia guaranteeing a \$36,000 residual value at the end of the lease term. Garcia estimates that the residual value after four years will be \$35,000. What is the amount to be added to the right-of-use asset and lease liability under the residual value guarantee?

BE 15–30

Short-term lease;
lessee

King Cones leased ice cream-making equipment from Ace Leasing. Ace earns interest under such arrangements at a 6% annual rate. The lease term is eight months with monthly payments of \$10,000 at the end of each month. Ace purchased the equipment having an estimated useful life of four years at a cost of \$300,000. Both the lessee and the lessor elected the short-term lease option. Amortization is recorded at the end of each month on a straight-line basis. Ace depreciates assets monthly on a straight-line basis. What is the effect of the lease on King Cones’ earnings during the eight-month term, ignoring taxes?

BE 15–31

Short-term lease;
lessor

In the situation described in BE 15–30, what is the effect of the lease on Ace Leasing’s earnings during the eight-month term, ignoring taxes?

Exercises

**E 15–33**

Lessee

(Note: Exercises 15–33 through 15–41 are variations of the same basic lease situation.)

Manufacturers Southern leased high-tech electronic equipment from Edison Leasing on January 1, 2013. Edison purchased the equipment from International Machines at a cost of \$112,080.

Related Information:

Lease term	2 years (8 quarterly periods)
Quarterly lease payments	\$15,000 at Jan. 1, 2013, and at Mar. 31, June 30, Sept. 30, and Dec. 31 thereafter.
Economic life of asset	5 years
Interest rate charged by the lessor	8%

Required:

Prepare a lease amortization schedule and appropriate entries for Manufacturers Southern from the commencement of the lease through December 31, 2013. December 31 is the fiscal year end for each company. Appropriate adjusting entries are recorded at the end of each quarter.

E 15-34
Lessor

Refer to the situation described in E15-33.

Required:

Prepare a lease amortization schedule and appropriate entries for Edison Leasing from the commencement of the lease through December 31, 2013. Edison's fiscal year ends December 31.

E 15-35
Residual asset

Manufacturers Southern leased high-tech electronic equipment from Edison Leasing on January 1, 2013. Edison purchased the equipment from International Machines at a cost of \$250,177. Appropriate adjusting entries are recorded at the end of each quarter.

Related Information:

Lease term	2 years (8 quarterly periods)
Quarterly lease payments	\$15,000 at Jan. 1, 2013, and at Mar. 31, June 30, Sept. 30, and Dec. 31 thereafter.
Economic life of asset	2 years
Residual value of asset at end of lease term	\$161,803
Interest rate charged by the lessor	8%

Required:

1. Show how Edison determined the \$15,000 quarterly lease payments.
2. Prepare appropriate entries for Edison to record the lease at its commencement, January 1, 2013, and on March 31, 2013.

E 15-36
Lessor profit;
calculate
payments

Manufacturers Southern leased high-tech electronic equipment from International Machines on January 1, 2013. International Machines manufactured the equipment at a cost of \$80,000 and lists a cash selling price of \$112,080.

Related Information:

Lease term	2 years (20 quarterly periods)
Quarterly lease payments	\$15,000 at Jan. 1, 2013, and at Mar. 31, June 30, Sept. 30, and Dec. 31 thereafter.
Economic life of asset	2 years
Interest rate charged by the lessor	8%

Required:

1. Show how International Machines determined the \$15,000 quarterly lease payments.
2. Prepare appropriate entries for International Machines to record the lease at its commencement, January 1, 2013, and on March 31, 2013.

E 15-37
Lessee and
lessor; lessor
profit

Manufacturers Southern leased high-tech electronic equipment from International Machines on January 1, 2013. International Machines manufactured the equipment at a cost of \$200,000 and lists a cash selling price of \$250,177. Appropriate adjusting entries are made quarterly.

Related Information:

Lease term	5 years (20 quarterly periods)
Quarterly lease payments	\$15,000 at Jan. 1, 2013, and at Mar. 31, June 30, Sept. 30, and Dec. 31 thereafter.
Economic life of asset	5 years
Interest rate charged by the lessor	8%

Required:

1. Prepare appropriate entries for Manufacturers Southern to record the arrangement at its commencement, January 1, 2013, and on March 31, 2013.
2. Prepare appropriate entries for International Machines to record the arrangement at its commencement, January 1, 2013, and on March 31, 2013.

E 15–38
Lessee and lessor; lessor profit; residual asset

Manufacturers Southern leased high-tech electronic equipment from International Machines on January 1, 2013. International Machines manufactured the equipment at a cost of \$200,000. The equipment has a fair value of \$260,000. Appropriate adjusting entries are made quarterly.

Related Information:

Lease term	5 years (20 quarterly periods)
Quarterly lease payments	\$15,000 at Jan. 1, 2013, and at Mar. 31, June 30, Sept. 30, and Dec. 31 thereafter.
Economic life of asset	5 years
Interest rate charged by the lessor	8%
Anticipated fair value of the equipment at end of the lease term	\$14,596

Required:

1. Prepare appropriate entries for Manufacturers Southern to record the arrangement at its commencement, January 1, 2013, and on March 31, 2013.
2. Prepare appropriate entries for International Machines to record the arrangement at its commencement, January 1, 2013, and on March 31, 2013.

E 15–39
Lessee; initial direct costs

Manufacturers Southern leased high-tech electronic equipment from Edison Leasing on January 1, 2013. Costs of negotiating and consummating the completed lease transaction incurred by Manufacturers Southern were \$2,000. Edison purchased the equipment from International Machines at a cost of \$250,177.

Related Information:

Lease term	2 years (8 quarterly periods)
Quarterly lease payments	\$15,000 at Jan. 1, 2013, and at Mar. 31, June 30, Sept. 30, and Dec. 31 thereafter.
Economic life of asset	5 years
Interest rate charged by the lessor	8%

Required:

Prepare appropriate entries for Manufacturers Southern from the commencement of the lease through March 31, 2013. Appropriate adjusting entries are made quarterly.

E 15–40
Lessee; renewal option

Manufacturers Southern leased high-tech electronic equipment from Edison Leasing on January 1, 2013. Manufacturers Southern has the option to renew the lease at the end of two years for an additional three years. Manufacturers Southern is subject to a \$45,000 penalty after two years if it fails to renew the lease. Edison purchased the equipment from International Machines at a cost of \$250,177.

Related Information:

Lease term	2 years (8 quarterly periods)
Lease renewal option for an additional 3 years	
Quarterly lease payments	\$15,000 at Jan. 1, 2013, and at Mar. 31, June 30, Sept. 30, and Dec. 31 thereafter.
Economic life of asset	5 years
Interest rate charged by the lessor	8%

Required:

Prepare appropriate entries for Manufacturers Southern from the commencement of the lease through March 31, 2013. Appropriate adjusting entries are made quarterly.

E 15–41
Lessee and lessor; short-term lease

Manufacturers Southern leased high-tech electronic equipment from Edison Leasing on January 1, 2013. Edison purchased the equipment from International Machines at a cost of \$250,177. Both the lessee and the lessor elected the short-term lease option. Appropriate adjusting entries are made annually.

Related Information:

Lease term	1 years (4 quarterly periods)
Quarterly lease payments	\$15,000 at Jan. 1, 2013, and at Mar. 31, June 30, Sept. 30.
Economic life of asset	5 years
Interest rate charged by the lessor	8%

Required:

1. Prepare appropriate entries for Manufacturers Southern from the commencement of the lease through December 31, 2013.
2. Prepare appropriate entries for Edison Leasing from the commencement of the lease through December 31, 2013.

E 15-42

Lessee; effect on financial statements

At the beginning of its fiscal year, Lakeside Inc. leased office space to LTT Corporation under a ten-year lease agreement. The contract calls for quarterly lease payments of \$25,000 at the end of each quarter. The office building was acquired by Lakeside at a cost of \$1 million and was expected to have a useful life of 25 years with no residual value. Lakeside seeks a 10% return on its lease investments. Appropriate adjusting entries are made quarterly.

Required:

1. What pretax amounts related to the lease would LTT report in its balance sheet at December 31, 2013?
2. What pretax amounts related to the lease would LTT report in its income statement for the year ended December 31, 2013?

E 15-43

Lessor; effect on financial statements

At the beginning of its fiscal year, Lakeside Inc. leased office space to LTT Corporation under a ten-year lease agreement. The contract calls for quarterly lease payments of \$25,000 at the end of each quarter. The office building was acquired by Lakeside at a cost of \$1 million and was expected to have a useful life of 25 years with no residual value. Lakeside seeks a 10% return on its lease investments. Appropriate adjusting entries are made quarterly.

Required:

1. What pretax amounts related to the lease would Lakeside report in its balance sheet at December 31, 2013?
2. What pretax amounts related to the lease would Lakeside report in its income statement for the year ended December 31, 2013?

E 15-44

Lessee

American Food Services, Inc. leased a packaging machine from Barton and Barton Corporation on January 1, 2013. Barton and Barton completed construction of the machine on January 1, 2013. The lease agreement for the \$4 million (fair value and present value of the lease payments) machine specified four equal payments at the end of each year. The useful life of the machine was expected to be four years with no residual value. Barton and Barton's implicit interest rate was 10%.

Required:

1. Prepare the journal entry for American Food Services at the commencement of the lease on January 1, 2013.
2. Prepare an amortization schedule for the four-year term of the lease.
3. Prepare the appropriate journal entry(s) on December 31, 2013.
4. Prepare the appropriate journal entry(s) on December 31, 2015.

E 15-45

Lessee; balance sheet and income statement effects

(Note: Exercises 15-45 through 15-47 are variations of the same lease situation.)

On June 30, 2013, Papa Phil Inc. leased 200 pizza ovens for its chain of restaurants from IC Leasing Corporation. The lease agreement calls for Papa Phil to make semiannual lease payments of \$562,907 over a three-year lease term, payable each June 30 and December 31, with the first payment at June 30, 2013. IC calculated lease payment amounts using a 10% interest rate. IC purchased the pizza ovens from Pizza Inc. at their retail price of \$3 million.

Required:

1. Determine the present value of the lease payments at June 30, 2013 (to the nearest \$000) that Papa Phil uses to record the right-of-use asset and lease liability.
2. What pretax amounts related to the lease would Papa Phil report in its balance sheet at December 31, 2013?
3. What pretax amounts related to the lease would Papa Phil report in its income statement for the year ended December 31, 2013?

E 15-46

Lessor; balance sheet and income statement effects

Refer to the situation described in E15-45.

Required:

1. What pretax amounts related to the lease would IC report in its balance sheet at December 31, 2013?
2. What pretax amounts related to the lease would IC report in its income statement for the year ended December 31, 2013?

E 15-47

Lessor; balance sheet and income statement effects; lessor profit

On June 30, 2013, Papa Phil Inc. leased 200 pizza ovens for its chain of restaurants from Pizza Inc. The lease agreement calls for Papa Phil to make semiannual lease payments of \$562,907 over a three-year lease term, payable each June 30 and December 31, with the first payment at June 30, 2013. Pizza Inc. calculated lease payment amounts using an interest rate of 10%. Pizza Inc. manufactured the ovens at a cost of \$2.5 million. Their fair value is \$3,000,000.

Required:

1. Determine the price at which Pizza Inc. is “selling” the pizza ovens (present value of the lease payments) at June 30, 2013 (to the nearest \$000).
2. What pretax amounts related to the lease would Pizza Inc. report in its balance sheet at December 31, 2013?
3. What pretax amounts related to the lease would Pizza Inc. report in its income statement for the year ended December 31, 2013?

Problems

**P 15-23**

Lessee and lessor

The Antonescu Sporting Goods leased equipment from Chapman Industries on January 1, 2013. Chapman Industries had manufactured the equipment at a cost of \$800,000. Its cash selling price and fair value is \$1,000,000.

Other Information:

Lease term	4 years
Annual payments	\$279,556 beginning Jan. 1, 2013, and at Dec. 31, 2013, 2014, and 2015
Life of asset	4 years
Rate the lessor charges	8%

Required:

1. Prepare the appropriate entries for Antonescu Sporting Goods (Lessee) on January 1, 2013 and December 31, 2013. Round to nearest dollar.
2. Prepare the appropriate entries for Chapman Industries (Lessor) on January 1, 2013 and December 31, 2013. Round to nearest dollar.

P 15-24

Lessor's initial direct costs; lessor profit

Terms of a lease agreement and related facts were:

- a. Leased asset has a retail cash selling price of \$100,000. Its useful life is six years.
- b. Annual lease payments at the beginning of each year are \$20,873, beginning January 1. The lease term is six years.
- c. Lessor's interest rate when calculating annual lease payments was 9%.
- d. Costs of negotiating and consummating the completed lease transaction incurred by the lessor are \$2,062.

Required:

Prepare the appropriate entries for the lessor to record the lease, the initial payment at its commencement, and at the December 31 fiscal year-end under each of the following two independent assumptions:

1. The lessor recently paid \$100,000 to acquire the asset.
2. The lessor recently paid \$85,000 to acquire the asset.

P 15-25

Lessee and lessor; renewal option; residual asset; lessor profit

Rand Medical manufactures lithotripters. Lithotripsy uses shock waves instead of surgery to eliminate kidney stones. Physicians' Leasing purchased a lithotripter for \$3,000,000 and leased it to Mid-South Urologists Group on January 1, 2013. Both companies record appropriate adjusting entries quarterly.

Lease Description:

Quarterly lease payments	\$130,516—beginning of each period
Lease term	5 years (20 quarters), renewable for another 5 years
Economic life of lithotripter	10 years
Implicit interest rate	12%
Fair value of asset	\$3,000,000

Required:

The following two situations are independent of each other.

1. Mid-South Urologists Group considers it unlikely that the lease will be renewed. Prepare appropriate entries for Mid-South Urologists Group and Physicians' Leasing from the commencement of the lease through the second lease payment on April 1, 2013.

- Because of extensive and costly leasehold improvements related to making the lithotripter available to patients, Mid-South Urologists Group feels it will have significant economic incentive to renew the lease. Prepare appropriate entries for Mid-South Urologists Group and Physicians' Leasing from the commencement of the lease through the second lease payment on April 1, 2013.

P 15-26
Change in lease term; lessor

Universal Leasing leases electronic equipment to a variety of businesses. The company's primary service is providing alternate financing by acquiring equipment and leasing it to customers under long-term leases. Universal earns interest under these arrangements at a 10% annual rate.

The company leased an electronic typesetting machine it purchased on December 31, 2012, for \$90,000 to a local publisher, Desktop Inc. The six-year lease term commenced January 1, 2013, and the lease contract specified annual payments of \$8,000 beginning December 31, 2013, and each December 31 through 2018. The machine's estimated useful life is 15 years with no estimated residual value.

The publisher had the option to terminate the lease after four years. At the commencement of the lease, there was no reason to believe the lease would be terminated.

Required:

- Prepare the appropriate entries for Universal Leasing from the commencement of the lease through the end of 2013.
- At the beginning of 2014, there was a significant indication that Desktop's economic incentive to terminate the lease had changed causing both companies to believe the lease will terminate at the end of four years (three years remaining). Prepare the appropriate entries for Universal Leasing at January 1, 2014, to reflect the change in the lease term.
- Prepare the appropriate entries pertaining to the lease for Universal Leasing at December 31, 2014.
- Determine the balances in the following accounts pertaining to the lease at December 31, 2013: Lease receivable, residual asset, and asset for lease.
- Determine the amounts reported in earnings pertaining to the lease during 2013 and during 2014 (ignore taxes).

P 15-27
Lessee; renewal option

Manufacturers Southern leased high-tech electronic equipment from Edison Leasing on January 1, 2013. Manufacturers Southern has the option to renew the lease at the end of two years for an additional three years for \$8,000 per quarter. Edison purchased the equipment from International Machines at a cost of \$198,375.

Related Information:

Lease term	2 years (8 quarterly periods)
Lease renewal option for an additional 3 years at \$8,000 per quarter	
Quarterly lease payments	\$15,000 at Jan. 1, 2013, and at Mar. 31, June 30, Sept. 30, and Dec. 31 thereafter.
Economic life of asset	5 years
Interest rate charged by the lessor	8%

Required:

- Prepare appropriate entries for Manufacturers Southern from the commencement of the lease through March 31, 2013. Appropriate adjusting entries are made quarterly.
- Prepare an amortization schedule for the term of the lease.

P 15-28
Lessee and lessor; lessee guaranteed residual value

On January 1, 2013, Allied Industries leased a high-performance conveyor to Karrier Company for a four-year period ending December 31, 2016, at which time possession of the leased asset will revert back to Allied. The equipment cost Allied \$966,000 and has an expected useful life of six years. Allied expects the residual value at December 31, 2016, will be \$300,000. Negotiations led to the lessee guaranteeing a \$340,000 residual value.

Equal payments under the lease are \$200,000 and are due on December 31 of each year with the first payment being made on December 31, 2013. Karrier is aware that Allied used a 5% interest rate when calculating lease payments.

Required:

- Show the appropriate entries for both Karrier and Allied on January 1, 2013, to record the lease.
- Show all appropriate entries for both Karrier and Allied on December 31, 2013, related to the lease and the leased asset.

16

Accounting for Income Taxes

OVERVIEW

In this chapter we explore the financial accounting and reporting standards for the effects of income taxes. The discussion defines and illustrates temporary differences, which are the basis for recognizing deferred tax assets and deferred tax liabilities, as well as permanent differences, which have no deferred tax consequences. You will learn how to adjust deferred tax assets and deferred tax liabilities when tax laws or rates change. We also discuss accounting for operating loss carrybacks and carryforwards and intraperiod tax allocation.

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- **LO16-1** Describe the types of temporary differences that cause deferred tax liabilities and determine the amounts needed to record periodic income taxes. (p. 949)
- **LO16-2** Identify and describe the types of temporary differences that cause deferred tax assets. (p. 956)
- **LO16-3** Describe when and how a valuation allowance is recorded for deferred tax assets. (p. 959)

FINANCIAL REPORTING CASE

What's the Difference?

The board of directors for Times-Lehrer Industries is meeting for the first time since Laura Lynn was asked to join the board. Laura was the director of the regional office of United Charities. Although she has broad experience with the tax advantages of charitable giving and the vast array of investment vehicles available to donors, her 30 years of experience with not-for-profit organizations has not exposed her to the issues involved with corporate taxation. This gap in her considerable business knowledge causes her to turn to you, Times-Lehrer's CFO and long-time friend, who recommended Laura for appointment to the board.

"I must say," Laura confided, "I've looked long and hard at these statements, and I can't quite grasp why the amount reported for income tax expense is not the same as the amount of income taxes we paid. What's the difference?"

By the time you finish this chapter, you should be able to respond appropriately to the questions posed in this case. Compare your response to the solution provided at the end of the chapter.

1. What's the difference? Explain to Laura how differences between financial reporting standards and income tax rules might cause the income tax expense and the amount of income tax paid to differ. (p. 948)
2. What is the conceptual advantage of determining income tax expense as we do? (p. 948)
3. Are there differences between financial reporting standards and income tax rules that will not cause a difference between income tax expense and the amount of income taxes paid? (p. 960)

QUESTIONS

PART A

FINANCIAL
Reporting Case

Q1, p. 947

DEFERRED TAX ASSETS AND DEFERRED TAX LIABILITIES

A manufacturer of leather accessories in the Midwest is obligated to pay the Internal Revenue Service \$24 million in income taxes as determined by its 2013 income tax return. Another \$9 million in income taxes also is attributable to 2013 activities. Conveniently, though, tax laws permit the company to defer paying the additional \$9 million until subsequent tax years by reporting certain revenues and expenses on the tax return in years other than when reported in the income statement. Does the company have only a current income tax liability of \$24 million? Or does it also have a deferred income tax liability for the other \$9 million? To phrase the question differently: Should the company report a 2013 income tax expense of the \$24 million tax payable for the current year, or \$33 million to include the future tax effects of events already recognized? For perspective on this question, we should look closer at the circumstances that might create the situation. Such circumstances are called *temporary differences*.

Conceptual Underpinning

FINANCIAL
Reporting Case

Q2, p. 947

The goals of financial accounting and tax accounting are not the same.

Accounting for income taxes is consistent with the accrual concept of accounting.

Current GAAP focuses on the balance sheet and the recognition of liabilities and assets.

When a company prepares its tax return for a particular year, the revenues and expenses (and gains and losses) included on the return are, by and large, the same as those reported on the company's income statement for the same year. However, in some instances tax laws and financial accounting standards differ. The reason they differ is that the fundamental objectives of financial reporting and those of taxing authorities are not the same. Financial accounting standards are established to provide useful information to investors and creditors. Congress, through the Internal Revenue Service, on the other hand, is primarily concerned with raising public revenues in a socially acceptable manner and, frequently, with influencing the behavior of taxpayers. In pursuing the latter objective, Congress uses tax laws to encourage activities it deems desirable, such as investment in productive assets, and to discourage activities it deems undesirable, such as violations of law.

A consequence of differences between GAAP and tax rules is that tax payments frequently occur in years different from when the revenues and expenses that cause the taxes are generated. The financial reporting issue is *when* the tax expense should be recognized. In 1967, the profession embraced the concept of reporting income tax expense in the same period as events that give rise to the expense, regardless of when the tax actually is paid.¹ You may recognize this approach as being consistent with the accrual concept of accounting. The primary focus of that pronouncement was the matching principle. Income tax expense was calculated on the basis of pretax income reported in the income statement. Differences between the expense and the tax currently paid were reported on the balance sheet not as deferred tax liabilities (or assets) but as nebulous deferred credits (or debits).²

In 1987 the FASB issued a new standard that reiterated the objective of reporting deferred taxes but redirected the focus to an asset-liability approach.³ This balance sheet focus emphasizes reporting the future tax sacrifice or benefit attributable to temporary differences between the reported amount of an asset or liability in the financial statements and its tax basis.⁴ The objective of accounting for income taxes is to recognize a deferred tax liability or deferred tax asset for the tax consequences of amounts that will become taxable or deductible in future years as a result of transactions or events that already have occurred. Future taxable amounts and future deductible amounts arise as a result of temporary differences. We discuss those now.

¹"Accounting for Income Taxes," Accounting Principles Board Opinion No. 11 (New York: AICPA, 1967). This pronouncement is no longer GAAP but the concept endures.

²Some critics at the time referred to these amounts as "UGOs: Unidentified Growing Objects."

³"Accounting for Income Taxes," Statement of Financial Accounting Standards No. 96 (Stamford, Conn.: FASB, 1987). This pronouncement is no longer GAAP.

⁴Research supports the notion that deferred tax liabilities are, in fact, viewed by investors as real liabilities.

Temporary Differences

The differences in the rules for computing taxable income and those for financial reporting often cause amounts to be included in taxable income in a year later—or earlier—than the year in which they are recognized for financial reporting purposes, or not to be included in taxable income at all. For example, you learned in Chapter 4 that income from selling properties on an installment basis is reported for financial reporting purposes in the year of the sale. But tax laws permit installment income to be reported on the tax return as it actually is received (by the installment method). This means taxable income might be less than accounting income in the year of an installment sale but higher than accounting income in later years when installment income is collected.

The situation just described creates what's referred to as a **temporary difference** between pretax *accounting* income and *taxable* income and, consequently, between the reported amount of an asset or liability in the financial statements and its tax basis. In our example, the asset for which the temporary difference exists is the installment receivable that's recognized for financial reporting purposes, but not for tax purposes.

● LO16-1

Deferred Tax Liabilities

It's important to understand that a temporary difference *originates* in one period and *reverses*, or turns around, in one or more subsequent periods. The temporary difference described above originates in the year the installment sales are made and are reported in the *income statement* and then reverses when the installments are collected and income is reported on the *tax return*. An example is provided in Illustration 16-1.

Kent Land Management reported pretax accounting income in 2013, 2014, and 2015 of \$100 million, plus additional 2013 income of \$40 million from installment sales of property.⁵ However, the installment sales income is reported on the tax return when collected, in 2014 (\$10 million) and 2015 (\$30 million).^{*} The enacted tax rate is 40% each year.[†]

(\$ in millions)	Temporary Difference			Total
	Originates	Reverses		
	2013	2014	2015	
Pretax accounting income	\$140	\$100	\$100	\$340
Installment sale income on the income statement	(40)	0	0	(40)
Installment sale income on the tax return	0	10	30	40
Taxable income (tax return)	<u>\$100</u>	<u>\$110</u>	<u>\$130</u>	<u>\$340</u>

^{*}The installment method is not available to accrual method taxpayers. H.R. 1180, sec. 536, 1999.

[†]The enacted rate refers to the tax rate indicated by currently enacted tax legislation (as distinguished from anticipated legislation). This is discussed later in the chapter.

Notice that pretax accounting income and taxable income total the same amount over the three-year period but are different in each individual year. In 2013, taxable income is \$40 million *less* than accounting income because it does not include income from installment sales. The difference is temporary, though. That situation reverses over the next two years. In 2014 and 2015 taxable income is *more* than accounting income because income from the installment sales, reported in the income statement in 2013, becomes taxable during the next two years as installments are collected.

Because tax laws permit the company to delay reporting this income as part of taxable income, the company is able to defer paying the tax on that income. The tax is not avoided,

Illustration 16-1

Revenue Reported on the Tax Return after the Income Statement

In 2013, taxable income is less than accounting income because income from installment sales is not reported on the tax return until 2014–2015.

The 2013 tax liability is paid in the next two years.

⁵For simplicity, we consider the installment receivable to be the net amount of the installment receivable and the deferred gross profit in each of our illustrations involving installment sales.

just deferred. In the meantime, the company has a liability for the income tax deferred. The liability originates in 2013 and is paid over the next two years as follows:

Deferred Tax Liability		
(\$ in millions)		
	16	2013 (\$40 × 40%)
2014 (\$10 × 40%)	4	
2015 (\$30 × 40%)	12	
	0	Balance after 3 years

At the end of 2013, financial and taxable income for 2014 and 2015 are, of course, not yet known. We assumed knowledge of that information above so we could compare the three-year effect of the temporary difference, but seeing the future is unnecessary to determine amounts needed to record income taxes in 2013. This is demonstrated in Illustration 16-1A.

Illustration 16-1A

Determining and Recording Income Taxes—2013

(\$ in millions)	Current Year 2013	Future Taxable Amounts		Future Taxable Amounts (total)
		2014	2015	
Pretax accounting income	\$140			
Temporary difference:				
Installment income	(40)	\$10	\$30	\$40
Taxable income (tax return)	\$100			
Enacted tax rate	40%			40%
Tax payable currently	\$ 40			\$16
Deferred tax liability				\$16
Deferred Tax Liability				
				\$16
				0
				\$16
Journal Entry at the End of 2013				
			56	
				40
				16

Deferred tax liability	
	0 beg. bal.
	16 change
	16 ending bal.

With **future taxable amounts** of \$40 million, taxable at 40%, a \$16 million **deferred tax liability** is indicated. Since no previous balance exists, we add this amount to the liability.

Each year, income tax expense comprises both the current and the deferred tax consequences of events and transactions already recognized. This means we:

1. Calculate the income tax that is payable currently.
2. Separately calculate the change in the deferred tax liability (or asset).
3. Combine the two to get the income tax expense.

Using the 2014 and 2015 income numbers, the journal entries to record income taxes for those years would be:

Deferred tax liability	
	16 beg. bal.
change 4	
	12 ending bal.

At the end of 2014, the deferred tax liability should have a balance of \$12 million. Because the balance from 2013 is \$16 million, we reduce it by \$4 million.

2014	(\$ in millions)
Income tax expense (to balance)	40
Deferred tax liability [(\$30 million × 40%) – 16 million]	4
Income tax payable (\$110 million × 40%)	44

2015		
Income tax expense (to balance)	40	
Deferred tax liability (\$0 million – 12 million)	12	
Income tax payable (\$130 million × 40%)		52

At the end of 2015, the deferred tax liability should have a balance of zero. So, we eliminate the \$12 million balance.

The FASB’s Balance Sheet Approach

Our perspective in this example so far has centered around the income effects of the installment sales and thus on the changes in the deferred tax liability as the temporary difference reverses. Another perspective is to consider the balance sheet effect. From this viewpoint, we regard a deferred tax liability (or asset) to be the tax effect of the temporary difference between the *financial statement carrying amount* of an asset or liability and its *tax basis*. The tax basis of an asset or liability is its original value for tax purposes reduced by any amounts included to date on tax returns. In our example, a temporary book-tax difference exists for a receivable from installment sales that’s recognized for financial reporting purposes but not for tax purposes. When a company sells something on an installment basis, it reports a receivable. From a tax perspective, though, there is no receivable because a “taxable sale” doesn’t occur until installments are collected. This is shown in Illustration 16–1B.

Current GAAP focuses on the balance sheet and the recognition of liabilities and assets.

An installment receivable has no tax basis.

	December 31 (\$ in millions)					
	2013		2014		2015	
Receivable from installment sales:						
Accounting basis	\$40	\$40	\$(10)	\$30	\$(30)	\$0
Tax basis	(0)	(0)	(0)	(0)	(0)	(0)
Temporary difference	\$40	\$40	\$(10)	\$30	\$(30)	\$0
Tax rate		× 40%		× 40%		× 40%
Deferred tax liability		\$16		\$12		\$0

↑ **Originating Difference**
 ↑ **Reversing Differences**

Illustration 16–1B

Balance Sheet Perspective

The deferred tax liability each year is the tax rate times the temporary difference between the financial statement carrying amount of the receivable and its tax basis.

Of course, the income statement view and the balance sheet view are two different perspectives on the very same event. In this example, we derive the same deferred tax liability whether we view it as a result of a temporary difference (a) between accounting and taxable income or (b) between the financial statement carrying amount of an installment receivable and its tax basis. Conceptually, though, the balance sheet approach strives to establish deferred tax assets and liabilities that meet the definitions of assets and liabilities provided by the FASB’s conceptual framework. As specified by *SFAC 6*, assets represent “probable future economic benefits obtained or controlled by a particular entity as a result of past transactions or events,” and liabilities are “probable future sacrifices of economic benefits as a result of past transactions or events.”⁶ In our example, the probable future sacrifices of economic benefits are the payments of \$4 million in 2014 and \$12 million in 2015. The past transactions or events resulting in the future tax payments are the installment sales in 2013.

This balance sheet approach, sometimes called the “asset/liability approach,” is a perspective that extends beyond accounting for deferred taxes. In fact, the FASB and IASB increasingly appear to be moving to that perspective in their approach to accounting standards. The movement toward fair values we discussed in Chapters 12 (Investments) and 14 (Bonds and Long-term Notes) is consistent with that perspective. Measuring assets and liabilities at their fair values and then reporting changes in those fair values as holding gains and losses in the income statement is a fundamental departure from the “transactions approach,” by which we report in the income statement the effects of external transactions such as gains and losses from the sale of assets and liabilities.

Recent accounting standards provide evidence that U.S. and international standard setters are embracing a “balance sheet approach” to accounting.

⁶“Elements of Financial Statements,” Statement of Financial Accounting Concepts No. 6 (Stamford, Conn.: FASB, 1985), par. 25, 35.

Types of Temporary Differences

Examples of temporary differences are provided in Illustration 16–2.

Illustration 16–2

Types of Temporary Differences

	Revenues (or gains)	Expenses (or losses)
Reported in the income statement now, but on the tax return later	<ul style="list-style-type: none"> • Installment sales of property (installment method for taxes) • Unrealized gain from recording investments at fair value (taxable when asset is sold) 	<ul style="list-style-type: none"> • Estimated expenses and losses (tax-deductible when paid) • Unrealized loss from recording investments at fair value or inventory at LCM (tax-deductible when asset is sold)
Reported on the tax return now, but in the income statement later	<ul style="list-style-type: none"> • Rent collected in advance • Subscriptions collected in advance • Other revenue collected in advance 	<ul style="list-style-type: none"> • Accelerated depreciation on the tax return in excess of straight-line depreciation in the income statement • Prepaid expenses (tax-deductible when paid)

- The temporary differences shown in the diagonal purple areas create *deferred tax liabilities* because they result in *taxable* amounts in some future year(s) when the related assets are recovered or the related liabilities are settled (when the temporary differences reverse).
- The temporary differences in the opposite diagonal blue areas create *deferred tax assets* because they result in *deductible* amounts in some future year(s) when the related assets are recovered or the related liabilities are settled (when the temporary differences reverse).

Additional Consideration

Temporary differences between the reported amount of an asset or liability in the financial statements and its tax basis are primarily caused by revenues, expenses, gains, and losses being included in taxable income in a year other than the year in which they are recognized for financial reporting purposes as illustrated in Illustration 16–2. Other events also can cause temporary differences between the reported amount of an asset or liability in the financial statements and its tax basis. Three other such events that are beyond the scope of this textbook are briefly described in FASB ASC 740–10–25: Income Taxes—Overall—Recognition (previously “Accounting for Income Taxes,” *Statement of Financial Accounting Standards No. 109* (Norwalk, Conn.: FASB, 1992), par. 11 e–h). Our discussions in this chapter focus on temporary differences caused by the timing of revenue and expense recognition, but it’s important to realize that the concept of temporary differences embraces all differences that will result in taxable or deductible amounts in future years.

Be sure to notice that deferred tax liabilities can arise from either (a) a revenue being reported on the tax return after the income statement or (b) an expense being reported on the tax return before the income statement. Illustration 16–1 was of the first type. We look at the second type in Illustration 16–3.

Notice, too, that this temporary difference originates during more than a single year before it begins to reverse. This usually is true when depreciation is the cause of the temporary difference. Tax laws typically permit the cost of a depreciable asset to be deducted on the tax return sooner than it is reported as depreciation in the income statement.⁷ This means

⁷Presently, the accelerated depreciation method prescribed by the tax code is the modified accelerated cost recovery system (MACRS). The method is described in the Chapter 11 appendix.

Courts Temporary Services reported pretax accounting income in 2013, 2014, 2015, and 2016 of \$100 million. In 2013, an asset was acquired for \$100 million. The asset is depreciated for financial reporting purposes over four years on a straight-line basis (no residual value). For tax purposes the asset's cost is deducted (by MACRS) over 2013–2016 as follows: \$33 million, \$44 million, \$15 million, and \$8 million. No other depreciable assets were acquired. The enacted tax rate is 40% each year.

(\$ in millions)

	Temporary Difference				Total
	Originates		Reverses		
	2013	2014	2015	2016	
Pretax accounting income	\$100	\$100	\$100	\$100	\$400
Depreciation on the income statement	25	25	25	25	100
Depreciation on the tax return	(33)	(44)	(15)	(8)	(100)
Taxable income (tax return)	<u>\$ 92</u>	<u>\$ 81</u>	<u>\$110</u>	<u>\$117</u>	<u>\$400</u>

Illustration 16–3

Expense Reported on the Tax Return before the Income Statement

To determine taxable income, we add back to accounting income the actual depreciation taken in the income statement and then subtract the depreciation deduction allowed on the tax return.

taxable income will be less than pretax accounting income in the income statement during the years the tax deduction is higher than income statement depreciation, but higher than pretax accounting income in later years when the situation reverses.

2013 income taxes would be recorded as follows in Illustration 16–3A:

(\$ in millions)

	Current Year 2013	Future Taxable Amounts			Future Taxable Amounts (total)
		2014	2015	2016	
Pretax accounting income	\$ 100				
Temporary difference:					
Depreciation	(8)	\$(19)	\$10	\$17	\$ 8
Taxable income	<u>\$ 92</u>				
Enacted tax rate	40%				40%
Tax payable currently	<u>\$36.8</u>				
Deferred tax liability					\$3.2
					↓
Ending balance needed					\$3.2
Less: Beginning balance					<u>0</u>
Change in balance					<u>\$3.2</u>
Journal Entry at the End of 2013					
Income tax expense (to balance)				40	
Income tax payable (determined above)					36.8
Deferred tax liability (determined above)					<u>3.2</u>

Illustration 16–3A

Determining and Recording Income Taxes—2013

Taxable income is \$8 million less than accounting income because that much more depreciation is deducted on the 2013 tax return (\$33 million) than is reported in the income statement (\$25 million).

Income tax expense is comprised of two components: the amount payable currently and the amount deferred until later.

Let's follow the determination of income taxes for this illustration all the way through the complete reversal of the temporary difference. We assume accounting income is \$100 million each year and that the only difference between pretax accounting income and taxable income is caused by depreciation. 2014 income taxes would be determined as shown in Illustration 16–3B on the next page.

Notice that each year the appropriate balance is determined for the deferred tax liability. That amount is compared with any existing balance to determine whether the account must be either increased or decreased.

Illustration 16-3B

Determining and Recording Income Taxes—2014

The cumulative temporary difference (\$27 million) is both (a) the sum of the amounts originating in 2013 (\$8 million) and in 2014 (\$19 million) and (b) the sum of the amounts reversing in 2015 (\$10 million) and in 2016 (\$17 million).

Since a balance of \$3.2 million already exists, \$7.6 million must be added.

(\$ in millions)

	2013	Current Year 2014	Future Taxable Amounts		Future Taxable Amounts (total)
			2015	2016	
Pretax accounting income		\$ 100			
Temporary difference:					
Depreciation	\$(8)	(19)	\$10	\$17	\$ 27
Taxable income (tax return)		81			
Enacted tax rate		40%			40%
Tax payable currently		\$32.4			
Deferred tax liability					\$10.8
					↓
					\$10.8
					(3.2)
					<u>\$ 7.6</u>

Deferred Tax Liability	
	3.2
Ending balance needed	7.6
Less: Beginning balance	10.8
Change in balance	7.6

Journal Entry at the End of 2014

Income tax expense (to balance)	40	
Income tax payable (determined above)		32.4
Deferred tax liability (determined above)		7.6

Income taxes for 2015 would be recorded as shown in Illustration 16-3C.

Illustration 16-3C

Determining and Recording Income Taxes—2015

A credit balance of \$6.8 million is needed in the deferred tax liability account.

Since a credit balance of \$10.8 million already exists, \$4 million must be deducted (debited).

A portion of the tax deferred from 2013 and 2014 is now being paid in 2015.

(\$ in millions)

	2013	2014	Current Year 2015	Future Taxable Amounts 2016	Future Taxable Amounts (total)
Pretax accounting income			\$100		
Temporary difference:					
Depreciation	\$(8)	\$(19)	10	\$17	\$ 17
Taxable income (tax return)			\$110		
Enacted tax rate			40%		40%
Tax payable currently			\$ 44		
Deferred tax liability					\$ 6.8
					↓
					\$ 6.8
					(10.8)
					<u>\$ (4.0)</u>

Deferred Tax Liability	
	10.8
Ending balance needed	4.0
Less: Beginning balance	6.8
Change in balance	(4.0)

Journal Entry at the End of 2015

Income tax expense (to balance)	40	
Deferred tax liability (determined above)		4
Income tax payable (determined above)		44

Income taxes for 2016 would be recorded as shown in Illustration 16–3D.

(\$ in millions)

	2013	2014	2015	Current Year 2016	Future Taxable Amounts (total)
Pretax accounting income				\$100	
Temporary difference:					
Depreciation	\$(8)	\$(19)	\$10	17	\$ 0
Taxable income (tax return)				\$117	
Enacted tax rate				40%	40%
Tax payable currently				\$ 46.8	
Deferred tax liability					\$ 0.0
					↓
					\$ 0.0
					(6.8)
					<u>\$(6.8)</u>
Deferred Tax Liability					
Ending balance needed					\$ 0.0
Less: Beginning balance					(6.8)
Change in balance					<u>\$(6.8)</u>
Journal Entry at the End of 2016					
Income tax expense (to balance)				40.0	
Deferred tax liability (determined above)				6.8	
Income tax payable (determined above)					46.8

Illustration 16–3D

Determining and Recording Income Taxes—2016

Because the entire temporary difference has now reversed, there is a zero cumulative temporary difference, and the balance in the deferred tax liability should be zero.

Since a credit balance of \$6.8 million exists, that amount must be deducted (debited). The final portion of the tax deferred from 2013 and 2014 is paid in 2016.

Notice there that the deferred tax liability is increased in 2013–2014 and decreased in 2015–2016.

Deferred Tax Liability

(\$ in millions)			
		3.2	2013 (\$ 8 × 40%)
2015 (\$10 × 40%)	4.0	7.6	2014 (\$19 × 40%)
2016 (\$17 × 40%)	6.8		
		0	Balance after 4 years

The deferred tax liability increases the first two years and is paid over the next two years.

We can see this result from the alternate perspective of looking at the temporary book–tax difference that exists for the depreciable asset. Its carrying amount is its cost minus accumulated straight-line depreciation. Its tax basis is cost minus the accumulated cost recovery for tax purposes:

(\$ in millions)

	December 31								
	2013		2014		2015		2016		
Depreciable asset:									
Accounting basis	\$100	\$(25)	\$ 75	\$(25)	\$ 50	\$(25)	\$ 25	\$(25)	\$ 0
Tax basis	100	(33)	67	(44)	23	(15)	8	(8)	0
Temporary difference		\$ 8	\$ 8	\$ 19	\$ 27	\$(10)	\$ 17	\$(17)	\$ 0
Enacted tax rate			40%		40%		40%		40%
Deferred tax liability			\$3.2		\$10.8		\$6.8		\$ 0

↑ Originating Differences
↑ Reversing Differences

A balance sheet perspective focuses on the difference between the carrying amount and the tax basis.

Deferred Tax Assets

● LO16-2

Deferred tax assets are recognized for the future tax benefits of temporary differences that create future deductible amounts.

The temporary differences illustrated to this point produce future taxable amounts when the temporary differences reverse. Future taxable amounts mean taxable income will be increased relative to pretax accounting income in one or more future years. Sometimes, though, the future tax consequence of a temporary difference will be to decrease taxable income relative to accounting income. Such situations produce what's referred to as **future deductible amounts**. These have favorable future tax consequences that are recognized as **deferred tax assets**. Be sure to note, though, that unlike most assets, management views deferred tax assets to be undesirable relative to deferred tax liabilities. The reason is that deferred tax liabilities result from having lower taxable income (and thus lower tax) now. As we see in this section, deferred tax assets result from taxable income (and tax) being higher now than later. It's more desirable to delay paying taxes (any expense for that matter) as long as possible.

Two examples indicated in Illustration 16-2 are (1) estimated expenses that are recognized in income statements when incurred but deducted on tax returns in later years when actually paid and (2) revenues that are taxed when collected but recognized in income statements in later years when actually earned. An example of the first type is provided in Illustration 16-4.

Illustration 16-4

Expense Reported on the Tax Return after the Income Statement

In 2013, taxable income is more than pretax accounting income because the warranty expense is not deducted on the tax return until paid.

	Temporary Difference			
	Originates	Reverses		Total
	2013	2014	2015	
Pretax accounting income	\$ 70	\$100	\$100	\$270
Warranty expense on the income statement	30			30
Warranty expense on the tax return		(15)	(15)	(30)
Taxable income (tax return)	\$100	\$ 85	\$ 85	\$270

(\$ in millions)

*Remember from Chapter 13 that warranty expense is estimated for the period the products are sold even though the actual cost isn't incurred until later periods.

At the end of 2013, the amounts needed to record income tax for 2013 would be determined as shown in Illustration 16-4A.

At the end of 2013 and 2014, the company reports a deferred tax asset for future income tax benefits.

Income taxes payable in 2014 and 2015 are less than otherwise payable because of the taxes prepaid in 2013.

Deferred Tax Asset		(\$ in millions)	
2013 ($\$30 \times 40\%$)	12	6	2014 ($\$15 \times 40\%$)
		6	2015 ($\$15 \times 40\%$)
Balance after 3 years	0		

If we continue the assumption of \$85 million taxable income in each of 2014 and 2015, income tax those years would be recorded this way:

2014			
Income tax expense (to balance)	40	
Deferred tax asset ($\$15 \text{ million} \times 40\%$)		6
Income tax payable ($\$85 \text{ million} \times 40\%$)		34
2015			
Income tax expense (to balance)	40	
Deferred tax asset ($\$15 \text{ million} \times 40\%$)		6
Income tax payable ($\$85 \text{ million} \times 40\%$)		34

Illustration 16-4A

Determining and Recording Income Taxes—2013

(\$ in millions)

	Current Year 2013	Future Deductible Amounts		Future Taxable Amounts (total)
		2014	2015	
Pretax accounting income	\$ 70			
Temporary difference:				
Installment Income	30	\$(15)	\$(15)	\$(30)
Taxable income (tax return)	\$100			
Enacted tax rate	40%			40%
Tax payable currently	\$ 40			
Deferred tax liability				\$(12)
				↓
				\$ 12
				0
				\$ 12
Deferred Tax Asset				
Ending balance needed				\$ 12
Less: Beginning balance				0
Change in balance				\$ 12
Journal Entry at the End of 2013				
Income tax expense (to balance)				28
Deferred tax asset (determined above)				12
Income tax payable (determined above)				40

Because the warranty expense was subtracted in the 2013 income statement but isn't deductible on the 2013 tax return, it is added back to pretax accounting income to find taxable income.

The amounts deductible in 2014 and 2015 will produce tax benefits that are recognized now as a deferred tax asset.

The deferred tax asset represents the future tax benefit from the reversal of a temporary difference between the financial statement carrying amount of the warranty liability and its tax basis.

(\$ in millions)

	December 31					
	2013	2013	2014	2014	2015	2015
Warranty liability:						
Accounting basis	\$30	\$30	\$(15)	\$15	\$(15)	\$0
Tax basis	(0)	(0)	(0)	(0)	(0)	(0)
Temporary difference	\$30	\$30	\$(15)	\$15	\$(15)	\$0
Tax rate		× 40%		× 40%		× 40%
Deferred tax asset		\$12		\$ 6		\$0
		↑		↑		↑
		Originating Difference		Reversing Differences		

A liability is recognized for financial reporting purposes when the guaranteed product is sold:

2013	Warr. exp	30	
	Liability		30
and reduced when the expense is paid:			
2014	Liability	15	
	Cash		15
2015	Liability	15	
	Cash		15

The preceding is an illustration of an estimated expense that is reported in the income statement when incurred but deducted on tax returns in later years when actually paid. A second type of temporary difference that gives rise to a deferred tax asset is a *revenue* that is taxed when collected but recognized on income statements in later years when actually earned. Illustration 16-5 demonstrates this second type.

Tomorrow Publications reported pretax accounting income in 2013, 2014, and 2015 of \$80 million, \$115 million, and \$105 million, respectively. The 2013 income statement does not include \$20 million of magazine subscriptions received that year for one- and two-year subscriptions. The subscription revenue is reported for tax purposes in 2013. The revenue will be earned in 2014 (\$15 million) and 2015 (\$5 million). The income tax rate is 40% each year.

(\$ in millions)

	Temporary Difference			
	Originates	Reverses		Total
		2013	2014	
Pretax accounting income	\$ 80	\$115	\$105	\$300
Subscription revenue on the income statement		(15)	(5)	(20)
Subscription revenue on the tax return	20	0	0	20
Taxable income (tax return)	\$100	\$100	\$100	\$300

Illustration 16-5

Revenue Reported on the Tax Return before the Income Statement

In 2013, taxable income is more than accounting income because subscription revenue is not reported in the income statement until 2014 and 2015.

A deferred tax asset is recognized when an existing temporary difference will produce future deductible amounts.

Notice that this temporary difference produces future *deductible* amounts. In 2013, taxable income is \$20 million *more* than pretax accounting income because it includes the unearned subscriptions revenue not yet reported in the income statement. However, in 2014 and 2015 taxable income is *less* than accounting income because the subscription revenue is earned and reported in the income statements but not on the tax returns of those two years.

In effect, tax laws require the company to prepay the income tax on this revenue, which is a sacrifice now but will benefit the company later when it avoids paying the taxes when the revenue is earned. In the meantime, the company has an asset representing this future income tax benefit.

At the end of 2013, the amounts needed to record income tax for 2013 would be determined as shown in Illustration 16–5A.

Illustration 16–5A

Determining and Recording Income Taxes—2013

	2013	Future Deductible Amounts		Future Deductible Amounts (total)
		2014	2015	
Pretax accounting income	\$ 80			
Temporary difference:				
Subscription revenue	20	\$(15)	\$(5)	\$(20)
Taxable income	\$100			
Enacted tax rate	40%			40%
Tax payable currently	\$ 40			
Deferred tax asset				\$ (8)
		Deferred Tax Asset		
Ending balance needed				\$ 8
Less: Beginning balance				0
Change in balance				<u>\$ 8</u>
Journal Entry at the End of 2013				
Income tax expense (to balance)				32
Deferred tax asset (determined above)				8
Income tax payable (determined above)				40

Deferred Tax Asset	
beg. bal.	0
change	8
end. bal.	8

Income taxes payable in 2014 and 2015 are less than otherwise payable because of the taxes prepaid in 2013.

At the end of 2013 and 2014, the company reports a deferred tax asset for future tax benefits.

Deferred Tax Asset		(\$ in millions)	
2013 (\$20 × 40%)	8	6	2014 (\$15 × 40%)
		2	2015 (\$ 5 × 40%)
Balance after 3 years	0		

Again, we could also determine the deferred tax asset as the future tax benefit from the reversal of a temporary difference between the financial statement carrying amount of the subscription liability (an unearned revenue account) and its tax basis.⁸

⁸It is less intuitive to view an unearned revenue (Illustration 16–5) as producing future deductible amounts when the unearned revenue liability is settled than it is to view the future deductibility of an estimated expense (Illustration 16–4) as a future deductible amount. Nevertheless, the recognition of deferred tax assets for the future tax benefits of unearned revenue liability temporary differences is consistent with the asset/liability approach of current GAAP because these unearned revenue liabilities are reported as if they represent future refundable amounts and therefore future deductible amounts.

(\$ in millions)

	December 31					
	2013		2014		2015	
Liability—subscriptions:						
Accounting basis	\$20	\$20	\$(15)	\$ 5	\$(5)	\$ 0
Tax basis	(0)	(0)	(0)	(0)	(0)	(0)
Temporary difference	\$20	\$20	\$(15)	\$ 5	\$(5)	\$ 0
Tax rate		× 40%		× 40%		× 40%
Deferred tax asset		\$ 8		\$ 2		\$ 0

↑ **Originating Difference**
 ↑ **Reversing Differences** ↑

A liability is recognized for financial reporting purposes when the cash is received:

2013	Cash	20
	Liability	20

and reduced when the revenue is earned:

2014	Liability	15
	Revenue	15

2015	Liability	5
	Revenue	5

From a tax perspective, there is no liability.

Valuation Allowance

We recognize deferred tax assets for all deductible temporary differences.⁹ However, we then reduce a deferred tax asset by a valuation allowance if it is “more likely than not” that some portion or all of the deferred tax asset will not be realized.¹⁰ Remember, a future deductible amount reduces taxable income and saves taxes only if there is taxable income to be reduced when the future deduction is available. So, a **valuation allowance** is needed if taxable income is anticipated to be insufficient to realize the tax benefit.

For example, let’s say that in the previous illustration management determines that it’s more likely than not that \$3 million of the deferred tax asset will not ultimately be realized. The deferred tax asset would be reduced by the creation of a valuation allowance as follows:

	(\$ in millions)
Income tax expense	3
Valuation allowance—deferred tax asset	3

• LO16-3

A valuation allowance is needed if it is more likely than not that some portion or all of a deferred tax asset will not be realized.

The effect is to increase the income tax expense as a result of reduced expectations of future tax savings. In the 2013 balance sheet, the deferred tax asset would be reported at its estimated net realizable value:

Deferred tax asset	\$8
Less: Valuation allowance—deferred tax asset	(3)
	\$5

This is not a new concept for you. You’ve reduced assets before using a valuation allowance. Suppose, for example, that you have accounts receivable of \$8 million but expect that \$3 million of that amount will not ultimately be collected from your customers. You would reduce the asset indirectly using a valuation allowance:

Accounts receivable	\$8
Less: Allowance for uncollectible accounts	(3)
	\$5

Additional Consideration

The decision as to whether a valuation allowance is needed should be based on the weight of all available evidence. The real question is whether or not there will be sufficient taxable income in future years for the anticipated tax benefit to be realized. The benefit of future deductible amounts can be realized only if future income is at least equal to the deferred deductions. After all, a deduction reduces taxes only if it reduces taxable income.

(continued)

⁹Unless the deductibility itself is uncertain. In that case, whether we recognize a deferred tax asset (and if so, its amount) is determined in accordance with FASB ASC 740-10-25: Income Taxes—Overall—Recognition (previously FIN 48) discussed later in the chapter.

¹⁰“More likely than not” means a likelihood of more than 50%, FASB ASC 740-10-30: Income Taxes—Overall—Initial Measurement (previously “Accounting for Income Taxes,” Statement of Financial Accounting Standards No. 109 (Norwalk, Conn.: FASB, 1992), par. 17).

(concluded)

All evidence—both positive and negative—should be considered. For instance, operating losses in recent years or anticipated circumstances that would adversely affect future operations would constitute negative evidence. On the other hand, a strong history of profitable operations or sizable, existing contracts would constitute positive evidence of sufficient taxable income to be able to realize the deferred tax asset.

Managerial actions that could be taken to reduce or eliminate a valuation allowance when deferred tax assets are not otherwise expected to be realized must be considered. These tax-planning strategies include any prudent and feasible actions management might take to realize a tax benefit while it is available.

This having been said, it should be clear that the decision as to whether or not a valuation allowance is used, as well as how large the allowance should be, rests squarely on managerial judgment. Because that decision directly impacts the amount of income tax expense and therefore reported income, it has obvious implications for earnings quality assessment from an analyst’s perspective.

At the end of each reporting period, the valuation allowance is reevaluated. The appropriate balance is decided on and the balance is adjusted—up or down—to create that balance. For instance, let’s say that at the end of the following year, 2014, available evidence indicates that \$500,000 of the deferred tax asset at the end of 2014 will not be realized. We would adjust the valuation allowance to reflect the indicated amount:

	(\$ in millions)
Valuation allowance—deferred tax asset (\$3 million – 0.5 million)	2.5
Income tax expense	2.5

The disclosure note shown in Illustration 16–6 accompanied the 2010 annual report of **Intel Corporation** indicating that some of its deferred tax assets were not expected to be realized:

Illustration 16–6

Valuation Allowance—
Intel Corporation

Real World Financials

The net deferred tax asset valuation allowance was \$358 million as of December 27, 2010 compared to \$133 million as of December 29, 2009. The valuation allowance is based on our assessment that it is more likely than not that certain deferred tax assets will not be realized in the foreseeable future.

Permanent Differences

● LO16–4

FINANCIAL Reporting Case

Q3, p. 947

Permanent differences are disregarded when determining both the tax payable currently and the deferred tax asset or liability.

So far, we’ve dealt with temporary differences between the reported amount of an asset or liability in the financial statements and its tax basis. You learned that temporary differences result in future taxable or deductible amounts when the related asset or liability is recovered or settled. However, some differences are caused by transactions and events that under existing tax law will never affect taxable income or taxes payable. Interest received from investments in bonds issued by state and municipal governments, for instance, is exempt from taxation. Interest revenue of this type is, of course, reported as revenue on the recipient’s income statement but not on its tax return—not now, not later. Pretax accounting income exceeds taxable income. This situation will not reverse in a later year. Taxable income in a later year will not exceed pretax accounting income because the tax-free income will never be reported on the tax return.

These permanent differences are disregarded when determining the tax payable currently, the deferred tax effect, and therefore the income tax expense. This is why we adjust accounting income in the illustrations that follow to eliminate any permanent differences from taxable income. Illustration 16–7 provides examples of differences with no deferred tax consequences.

International Financial Reporting Standards

Non-tax Differences Affect Taxes. Despite the similar approaches for accounting for taxation under IAS No. 12, “Income Tax,”¹¹ and U.S. GAAP, differences in reported amounts for deferred taxes are among the most frequent between the two reporting approaches. The reason is that a great many of the nontax differences between IFRS and U.S. GAAP affect deferred taxes as well.

For example, we noted in Chapter 13 that we accrue a loss contingency under U.S. GAAP if it’s both probable and can be reasonably estimated and that IFRS guidelines are similar, but the threshold is “more likely than not.” This is a lower threshold than “probable.” In this chapter, we noted that accruing a loss contingency (like warranty expense) in the income statement leads to a deferred tax asset if it can’t be deducted on the tax return until a later period. As a result, under the lower threshold of IFRS, we might record a loss contingency and thus a deferred tax asset, but under U.S. GAAP we might record neither. So, even though accounting for deferred taxes is the same, accounting for loss contingencies is different, causing a difference in the reported amounts of deferred taxes under IFRS and U.S. GAAP.

● LO16-11

- Interest received from investments in bonds issued by state and municipal governments (not taxable).
- Investment expenses incurred to obtain tax-exempt income (not tax deductible).
- Life insurance proceeds on the death of an insured executive (not taxable).
- Premiums paid for life insurance policies when the payer is the beneficiary (not tax deductible).
- Compensation expense pertaining to some employee stock option plans (not tax deductible).
- Expenses due to violations of the law (not tax deductible).
- Portion of dividends received from U.S. corporations that is not taxable due to the dividends received deduction.¹²
- Tax deduction for depletion of natural resources (percentage depletion) that permanently exceeds the income statement depletion expense (cost depletion).¹³

Illustration 16–7

Differences without
Deferred Tax
Consequences

Provisions of the tax laws, in some instances, dictate that the amount of a revenue that is taxable or expense that is deductible permanently differs from the amount reported in the income statement.

To compare temporary and **permanent differences**, we can modify Illustration 16–1 to include nontaxable income in Kent Land Management’s 2014 pretax accounting income. We do this in Illustration 16–8 on the next page. Note that the existence of an amount that causes a permanent difference has no effect on income taxes payable, deferred taxes, or income tax expense.

To this point, we’ve seen that our objective in accounting for income taxes is to recognize the tax consequences of amounts that will become taxable or deductible in future years as a result of transactions or events that already have occurred. To achieve the objective, we record a deferred tax liability or deferred tax asset for future taxable amounts or future deductible amounts that arise as a result of temporary differences. Permanent differences, on the other hand, do not create future taxable amounts and future deductible amounts and therefore have no tax consequences.

You might notice here that because of the permanent difference, Kent’s “effective” tax rate is less than its 40% statutory rate. The effective rate is the total tax to be paid

Permanent differences affect a company’s effective tax rate.

¹¹“Income Taxes,” International Accounting Standard No. 12 (IASCF), as amended effective January 1, 2011.

¹²When a corporation owns shares of another U.S. corporation, a percentage of the dividends from those shares is exempt from taxation due to the dividends received deduction. The percentage is 70% if the investor owns less than 20% of the investee’s shares, 80% for 20% to 80% ownership, and 100% for more than 80% ownership.

¹³The cost of natural resources is reported as depletion expense over their extraction period for financial reporting purposes; but tax rules prescribe sometimes different percentages of cost to be deducted for tax purposes. There usually is a difference between the cost depletion and percentage depletion that doesn’t eventually reverse.

Illustration 16–8

Temporary and Permanent Differences

Because interest on municipal bonds is tax exempt, it is reported only in the income statement. This difference between pretax accounting income and taxable income does not reverse later.

Kent Land Management reported pretax accounting income in 2013 of \$100 million except for additional income of \$40 million from installment sales of property and \$5 million interest from investments in municipal bonds in 2013. The installment sales income is reported for tax purposes in 2014 (\$10 million) and 2015 (\$30 million). The enacted tax rate is 40% each year.

(\$ in millions)	Current Year 2013	Future Taxable Amounts		Future Taxable Amounts (total)
		2014	2015	
Pretax accounting income	\$145			
Permanent difference:				
Municipal bond interest	(5)			
Temporary difference:				
Installment income	(40)	\$10	\$30	\$40
Taxable income (tax return)	\$100			
Enacted tax rate	40%			40%
Tax payable currently	<u>\$ 40</u>			
Deferred tax liability				\$16
				↓
				\$16
				0
				<u>\$16</u>
Deferred Tax Liability				
Ending balance				\$16
Less: Beginning balance				0
Change in balance				<u>\$16</u>
Journal Entry at the End of 2013				
Income tax expense (to balance)				56
Income tax payable (determined above)				40
Deferred tax liability (determined above)				16

(eventually), \$56 million, divided by accounting income, \$145 million, or 38.6%. Without the \$5 million municipal bond interest, the effective rate would have been \$56 million divided by \$140 million, or 40%. Nontaxable revenues and gains, as we have for Kent, cause the effective rate to be *lower* than the statutory rate; whereas, nondeductible expenses and losses would cause the effective rate to be *higher* than the statutory rate. Companies report a comparison of their effective and statutory tax rates in disclosure notes, as in Illustration 16–9's example from Walmart's 2011 financial statements.

Illustration 16–9

Effective Tax Rate—Walmart

Real World Financials

Note 10: Taxes (in part)*Effective Tax Rate Reconciliation*

	Fiscal Year Ended January 31,		
	2011	2010	2009
U.S. statutory tax rate	35.0%	35.0%	35.0%
U.S. state income taxes, net of federal income tax benefit	1.9%	2.0%	1.9%
Income taxed outside the U.S.	-2.2%	-1.6%	-1.7%
Net impact of repatriated international earnings	-1.5%	-3.4%	-1.1%
Other, net	-1.0%	0.4%	0.1%
Effective income tax rate	<u>32.2%</u>	<u>32.4%</u>	<u>34.2%</u>

Concept Review Exercise

Mid-South Cellular Systems began operations in 2013. That year the company reported pre-tax accounting income of \$70 million, which included the following amounts:

1. Compensation expense of \$3 million related to employee stock option plans granted to organizers was reported in the 2013 income statement. This expense is not deductible for tax purposes.
2. An asset with a four-year useful life was acquired last year. It is depreciated by the straight-line method in the income statement. MACRS is used on the tax return, causing deductions for depreciation to be more than straight-line depreciation the first two years but less than straight-line depreciation the next two years (\$ in millions):

Depreciation			
	Income Statement	Tax Return	Difference
2013	\$150	\$198	\$ (48)
2014	150	264	(114)
2015	150	90	60
2016	150	48	102
	<u>\$600</u>	<u>\$600</u>	<u>\$ 0</u>

The enacted tax rate is 40%.

Required:

Prepare the journal entry to record Mid-South Cellular's income taxes for 2013.

Solution

(\$ in millions)

	Current Year 2013	Future Taxable Amounts			Future Taxable Amounts (total)
		2014	2015	2016	
Pretax accounting income	\$70				
Permanent difference:					
Compensation expense	3				
Temporary difference:					
Depreciation	(48)	\$(114)	\$60	\$102	\$ 48
Taxable income (tax return)	\$25				
Enacted tax rate	40%				40%
Tax payable currently	<u>\$10</u>				
Deferred tax liability					\$19.2
					↓
Ending balance needed					\$19.2
Less: Beginning balance					<u>0.0</u>
Change in balance					<u>\$19.2</u>

Because the compensation expense is not tax deductible, taxable income does not include the \$3 million deduction and is higher by that amount than accounting income.

Journal Entry at the End of 2013

Income tax expense (to balance)	29.2	
Income tax payable (determined above)		10.0
Deferred tax liability (determined above)		19.2

Income tax expense is composed of: (1) the tax payable currently and (2) the tax deferred until later.

PART B

OTHER TAX ACCOUNTING ISSUES

Tax Rate Considerations

● LO16-5

To measure the deferred tax liability or asset, we multiply the temporary difference by the currently *enacted* tax rate that will be effective in the year(s) the temporary difference reverses.¹⁴ We do not base calculations on *anticipated* legislation that would alter the company's tax rate. A conceptual case can be made that expected rate changes should be anticipated when measuring the deferred tax liability or asset. However, this is one of many examples of the frequent trade-off between relevance and reliability. In this case, the FASB chose to favor reliability by waiting until an anticipated change actually is enacted into law before recognizing its tax consequences.

When Enacted Tax Rates Differ

A deferred tax liability (or asset) is based on enacted tax rates and laws.

Existing tax laws may call for enacted tax rates to be different in two or more future years in which a temporary difference is expected to reverse. When a phased-in change in rates is scheduled to occur, the specific tax rates of each future year are multiplied by the amounts reversing in each of those years. The total is the deferred tax liability or asset.

To illustrate, let's again modify our Kent Land Management illustration, this time to assume a scheduled change in tax rates. See Illustration 16-10.

Illustration 16-10

Scheduled Change in Tax Rates

The tax effects of the future taxable amounts depend on the tax rates at which those amounts will be taxed.

Kent Land Management reported pretax accounting income in 2013 of \$100 million except for additional income of \$40 million from installment sales of property and \$5 million interest from investments in municipal bonds in 2013. The installment sales income is reported for tax purposes in 2014 (\$10 million) and 2015 (\$30 million). The enacted tax rates are 40% for 2013 and 2014, and 35% for 2015.

(\$ in millions)	Current Year 2013	Future Taxable Amounts		(total)
		2014	2015	
Pretax accounting income	\$145			
Permanent difference:				
Municipal bond interest	(5)			
Temporary difference:				
Installment income	(40)	\$10	\$30	
Taxable income (tax return)	\$100			
Enacted tax rate	40%	40%	35%	
Tax payable currently	\$40			
Deferred tax liability		\$4	\$10.5	\$14.5
Deferred Tax Liability				↓
Ending balance needed				\$14.5
Less: Beginning balance				0.0
Change in balance				\$14.5
Journal Entry at the End of 2013				
Income tax expense (to balance)			54.5	
Income tax payable (determined above)				40.0
Deferred tax liability (determined above)				14.5

¹⁴The current U.S. corporate tax rate is 34%, or 35% for corporations with taxable income over \$75,000. Most states tax corporate income at rates less than 10%. We use 40% in most of our illustrations to simplify calculations.

Be sure to note that the 2014 rate (40%) as well as the 2015 rate (35%) already is enacted into law as of 2013 when the deferred tax liability is established. In the next section we discuss how to handle a change resulting from new legislation.

Changes in Tax Laws or Rates

Tax laws sometimes change. If a change in a tax law or rate occurs, any existing tax liability or asset must be adjusted. Remember, the deferred tax liability or asset is meant to reflect the amount to be paid or recovered in the future. When legislation changes that amount, the deferred tax liability or asset also should change. The effect is reflected in operating income in the year of the enactment of the change in the tax law or rate.¹⁵

As a result of a change (in tax law or rate) deferred tax consequences become larger or smaller.

For clarification, reconsider the previous illustration. Without a change in tax rates and assuming that pretax accounting income reported in the income statement in 2014 is \$100 million (with no additional temporary or permanent differences), the 2014 income tax amounts would be determined as shown in Illustration 16–10A.

(\$ in millions)		Current Year 2014	Future Taxable Amount 2015
	2013		
Pretax accounting income		\$100	
Temporary difference:			
Installment income	(40)	10	\$ 30
Taxable income (tax return)		\$110	
Enacted tax rate		40%	35%
Tax payable currently		\$ 44	
Deferred tax liability			\$10.5
		Deferred Tax Liability	\$10.5
Ending balance			\$10.5
Less: Beginning balance			(14.5)
Change in balance			\$ (4.0)
Journal Entry at the End of 2014			
Income tax expense (to balance)			40
Deferred tax liability (determined above).....			4
Income tax payable (determined above)			44

Illustration 16–10A

Reversal of Temporary Difference *without* a Tax Rate Change

The 40% 2014 rate and the 35% 2015 rate are established by previously enacted legislation.

Now assume Congress passed a new tax law in 2014 that will cause the 2015 tax rate to be 30% instead of the previously scheduled 35% rate. Because a deferred tax liability was established in 2013 with the expectation that the 2015 taxable amount would be taxed at 35%, it would now be adjusted to reflect taxation at 30%, instead. This is demonstrated in Illustration 16–10B on the next page.

Notice that the methods used to determine the deferred tax liability and the change in that balance are the same as without the rate change—the calculation merely uses the new rate (30%) rather than the old rate (35%). So recalculating the balance needed in the deferred tax liability each period and comparing that amount with any previously existing balance automatically takes into account tax rate changes.

When a tax rate changes, the deferred tax liability or asset should be adjusted with the effect reflected in operating income in the year of the change.

¹⁵FASB ASC 740–10–35: Income Taxes—Overall—Subsequent Measurement (previously “Accounting for Income Taxes,” Statement of Financial Accounting Standards No. 109 (Norwalk, Conn.: FASB, 1992)).

Illustration 16–10B

Reversal of Temporary Difference with a Tax Rate Change

The deferred tax liability would have been \$10.5 million (30 million × 35%) if the tax rate had not changed.

(\$ in millions)			
	2013	Current Year 2014	Future Taxable Amount 2015
Pretax accounting income		\$100	
Temporary difference:			
Installment income	(40)	10	\$ 30
Taxable income (tax return)		\$110	
Enacted tax rate		40%	30%*
Tax payable currently		\$ 44	
Deferred tax liability			\$ 9 \$ 9.0
*2015 rate enacted into law in 2014.			
Deferred Tax Liability			
Ending balance			\$ 9.0
Less: Beginning balance			(14.5)
Change in balance			\$ (5.5)
Journal Entry at the End of 2014			
Income tax expense (to balance)			38.5
Deferred tax liability (determined above)			5.5
Income tax payable (determined above)			44.0

Also notice that the income tax expense (\$38.5 million) is \$1.5 million less than it would have been without the tax rate change (\$40 million). The effect of the change is included in income tax expense. In fact, this is highlighted if we separate the previous entry into its component parts: (1) record the income tax expense without the tax rate change and (2) separately record the adjustment of the deferred tax liability for the change:

Journal Entry at the End of 2014		(\$ in millions)
Income tax expense	40	
Deferred tax liability	4	
Income tax payable		44
Deferred tax liability [\$30 million × (35% – 30%)]	1.5	
Income tax expense		1.5

The tax consequence of a change in a tax law or rate is recognized in the period the change is enacted. In this case, the consequence of a lower tax rate is a reduced deferred tax liability, recognized as a reduction in income tax expense in 2014 when the change occurs.

Multiple Temporary Differences

● LO16–6

It would be unusual for any but a very small company to have only a single temporary difference in any given year. Having multiple temporary differences, though, doesn't change any of the principles you've learned so far in connection with single differences. All that's necessary is to categorize all temporary differences according to whether they create (a) future taxable amounts or (b) future deductible amounts. The total of the future taxable amounts is multiplied by the future tax rate to determine the appropriate balance for the deferred tax liability, and the total of the future deductible amounts is multiplied by the future tax rate to determine the appropriate balance for the deferred tax asset. This is demonstrated in Illustration 16–11.

2013

During 2013, its first year of operations, Eli-Wallace Distributors reported pretax accounting income of \$200 million which included the following amounts:

- Income (net) from installment sales of warehouses in 2013 of \$9 million to be reported for tax purposes in 2014 (\$5 million) and 2015 (\$4 million).
- Depreciation is reported by the straight-line method on an asset with a four-year useful life. On the tax return, deductions for depreciation will be more than straight-line depreciation the first two years but less than straight-line depreciation the next two years (\$ in millions):

	Income Statement	Tax Return	Difference
2013	\$ 50	\$ 66	\$(16)
2014	50	88	(38)
2015	50	30	20
2016	50	16	34
	<u>\$200</u>	<u>\$200</u>	<u>\$ 0</u>

- Estimated warranty expense that will be deductible on the tax return when actually paid during the next two years. Estimated deductions are as follows (\$ in millions):

	Income Statement	Tax Return	Difference
2013	\$7		\$7
2014		\$4	(4)
2015		3	(3)
	<u>\$7</u>	<u>\$7</u>	<u>\$0</u>

2014

During 2014, pretax accounting income of \$200 million included an estimated loss of \$1 million from having accrued a loss contingency. The loss is expected to be paid in 2016 at which time it will be tax deductible.

The enacted tax rate is 40% each year.

Look at Illustration 16–11A to see how Eli-Wallace determines the income tax amounts for 2013. Then turn to Illustration 16–11B on the next page to see how those amounts are determined for 2014.

Illustration 16–11

Multiple Temporary Differences

(\$ in millions)

	Current Year 2013	Future Taxable (Deductible) Amounts			Future Taxable Amounts (total)	Future Deductible Amounts (total)
		2014	2015	2016		
Pretax accounting income	\$ 200					
Temporary differences:						
Installment sales	(9)	\$ 5	\$ 4		\$ 9	
Depreciation	(16)	(38)	20	\$34	16	
Warranty expense	7	(4)	(3)			\$ (7)
Taxable income (tax return)	<u>\$ 182</u>				<u>\$25</u>	<u>(7)</u>
Enacted tax rate	40%				40%	40%
Tax payable currently	<u>\$72.8</u>					
Deferred tax liability					\$10

Change in balances					<u>\$10</u>	<u>\$ 2.8</u>
Journal Entry at the End of 2013						
Income tax expense (to balance)					80.0	
Deferred tax asset (determined above)					2.8	
Deferred tax liability (determined above)						10.0
Income tax payable (determined above)						72.8

Illustration 16–11A

Multiple Temporary Differences – 2013

Temporary differences are grouped according to whether they create future taxable amounts or future deductible amounts.

The balances needed in the deferred tax liability and the deferred tax asset are separately determined.

Income tax expense is composed of three components: (1) the tax payable currently plus (2) the tax deferred until later, reduced by (3) the deferred tax benefit.

Illustration 16–11B

Multiple Temporary Differences—2014

The future taxable amount of installment sales (\$4 million) is equal to the cumulative temporary difference (\$9 million – 5 million).

Similarly, the total of other future taxable and deductible amounts is equal to the cumulative temporary differences in the related assets and liabilities.

Analysis indicates that the deferred tax liability should be increased further and the deferred tax asset should be reduced.

The deferred tax asset declines and the deferred tax liability increases during 2014.

(\$ in millions)

	2013	Current Year 2014	Future Taxable (Deductible) Amounts		Future Taxable Amounts (total)*	Future Deductible Amounts (total)*
			2015	2016		
Pretax accounting income		\$200				
Temporary differences:						
Installment sales	\$ (9)	\$ 5	\$ 4		\$ 4	
Depreciation	(16)	(38)	20	\$34	54	
Warranty expense	7	(4)	(3)			\$ (3)
Estimated loss		1		(1)		(1)
Taxable income (tax return)		<u>\$164</u>			<u>\$58</u>	<u>\$ (4)</u>
Enacted tax rate		40%			40%	40%
Tax payable currently		<u>\$ 65.6</u>				
Deferred tax liability					\$23.2	
Deferred tax asset						\$(1.6)
					↓	↓
					Deferred Tax Liability	Deferred Tax Asset
Ending balances:					\$23.2	\$ 1.6
Less: Beginning balances:					(10.0)	(2.8)
Change in balances					<u>\$13.2</u>	<u>\$(1.2)</u>
Journal Entry at the End of 2014						
Income tax expense (to balance)					80.0	
Deferred tax asset (determined above)						1.2
Deferred tax liability (determined above)						13.2
Deferred tax payable (determined above)						65.6
*Total future taxable and deductible amounts also are equal to the cumulative temporary differences in the related assets and liabilities.						

After the journal entry at the end of 2014, the balances of both the deferred tax asset and the deferred tax liability reflect the required amounts as follows (\$ in millions):

Deferred Tax Asset		Deferred Tax Liability	
2.8		2013 balance	10.0
	1.2	Adjustment	13.2
1.6		2014 balance	23.2

Of course, if a phased-in change in rates is scheduled to occur, it would be necessary to determine the total of the future taxable amounts and the total of the future deductible amounts for each future year as outlined previously. Then the specific tax rates of each future year would be multiplied by the two totals in each of those years. Those annual tax effects would then be summed to find the balances for the deferred tax liability and the deferred tax asset.

Net Operating Losses

- LO16–7 A **net operating loss** is negative taxable income: tax-deductible expenses exceed taxable revenues. Of course, there is no tax payable for the year an operating loss occurs because there's no taxable income. In addition, tax laws permit the operating loss to be used to reduce taxable income in other, profitable years. Offsetting operating profits with operating losses is achieved by either a carryback of the loss to prior years or a carryforward of the loss to later years, or both. In essence, the tax deductible expenses that can't be deducted

this year because they exceed taxable revenues can be deducted in other years. Specifically, the operating loss can be carried back 2 years and forward for up to 20 years:

Tax laws permit a choice. A company can elect an **operating loss carryback** if taxable income was reported in either of the two previous years.¹⁶ By reducing taxable income of a previous year, the company can receive an immediate refund of taxes paid that year.

If taxable income was not reported in either of the two previous years or higher tax rates are anticipated in the future, a company might elect to forgo the operating loss carryback and carry the loss forward for up to 20 years to offset taxable income of those years. Even if a loss carryback is used, any loss that remains after the two-year carryback can be carried forward. The carryforward election is a choice that must be made in the year of the operating loss and the choice is irrevocable. It usually is advantageous to carry back losses because by filing an amended tax return to get a refund, a company can realize the benefit much sooner than if the loss is carried forward.

The accounting question is: *When* should the tax benefit created by an operating loss be recognized in the income statement? The answer is: In the year the loss occurs.

Operating Loss Carryforward

First consider a loss carryforward. You have learned in this chapter that a deferred tax asset is recognized for the future tax benefit of temporary differences that create future deductible amounts. An operating loss carryforward also creates future deductible amounts. Logically, then, a deferred tax asset is recognized for an operating loss carryforward also. This is demonstrated in Illustration 16–12.

During 2013, its first year of operations, American Laminating Corporation reported an operating loss of \$125 million for financial reporting and tax purposes. The enacted tax rate is 40%.

(\$ in millions)

	Current Year 2013	Future Deductible Amounts (total)
Operating loss	\$(125)	
Loss carryforward	125	\$(125)
	\$ 0	
Enacted tax rate	40%	40%
Tax payable	\$ 0	
Deferred tax asset		\$ (50)
Deferred Tax Asset		
Ending balance		\$50
Less: Beginning balance		0
Change in balance		\$50

Journal Entry at the End of 2013

Deferred tax asset (determined above)	50	
Income tax benefit—operating loss (to balance)		50

Illustration 16–12

Operating Loss Carryforward

An operating loss carryforward can be deducted from taxable income in future years.

The tax benefit of being able to deduct amounts in the future represents a deferred tax asset.

¹⁶Actually, a carryback is automatic unless a company elects to forgo the carryback in favor of a carryforward.

The income tax benefit of an operating loss carryforward is recognized for accounting purposes in the year the operating loss occurs. The net after-tax operating loss reflects the future tax savings that the operating loss is expected to create:

The income tax benefit of an operating loss carryback, like a carryforward, is recognized in the year the operating loss occurs.

Income Statement (partial)		(\$ in millions)
Operating loss before income taxes		\$125
Less: Income tax benefit—operating loss		<u>(50)</u>
Net operating loss		\$ 75

VALUATION ALLOWANCE. Just as for all deductible temporary differences, deferred tax assets are recognized for any operating loss without regard to the likelihood of having taxable income in future years sufficient to absorb future deductible amounts. However, the deferred tax asset is then reduced by a valuation allowance if it is more likely than not that some portion or all of the deferred tax asset will not be realized. Remember, a valuation allowance both reduces the net deferred tax asset and increases the income tax expense just as if that portion of the deferred tax asset had not been recognized.

Operating Loss Carryback

An operating loss must be applied to the earlier year first and then brought forward to the next year.

To compare the treatment of an operating loss carryback, let's modify the illustration to assume that there was taxable income in the two years prior to the operating loss and that American Laminating will utilize the loss carryback (see Illustration 16–13). Note that the operating loss must be applied to the earlier year first and then brought forward to the next

Illustration 16–13

Operating Loss Carryback and Carryforward

An operating loss carryback can be deducted from taxable income in the two prior years, creating a refund of taxes paid for those years.

The portion of an operating loss that remains after a carryback is carried forward.

The income tax benefit of an operating loss carryforward is recognized in the year the operating loss occurs.

During 2013, American Laminating Corporation reported an operating loss of \$125 million for financial reporting and tax purposes. The enacted tax rate is 40% for 2013. Taxable income, tax rates, and income taxes paid in the two previous years were as follows:

	<u>Taxable Income</u>	<u>Taxable Rates</u>	<u>Income Taxes Paid</u>
2011	\$20 million	35%	\$ 7 million
2012	55 million	40%	22 million

Here's how the income tax benefit of the operating loss carryback and the operating loss carryforward is determined:

(\$ in millions)

	<u>Prior Years</u>		<u>Current Year</u>	<u>Future Deductible</u>
	<u>2011</u>	<u>2012</u>	<u>2013</u>	<u>Amounts</u>
				<u>(total)</u>
Operating loss				
Loss carryback	\$(20)	\$(55)	75	
Loss carryforward			<u>50</u>	\$(50)
			\$ 0	
Enacted tax rate	<u>35%</u>	<u>40%</u>	<u>40%</u>	<u>40%</u>
Tax payable (refundable)	<u>\$ (7)</u>	<u>\$(22)</u>	<u>\$ 0</u>	
Deferred tax asset				\$(20)
Deferred Tax Asset				↓
Ending balance				\$ 20
Less: Beginning balance				<u>0</u>
Change in balance				<u>\$ 20</u>

Journal Entry at the End of 2013

Receivable—income tax refund (\$7 + 22)	29
Deferred tax asset (determined above)	20
Income tax benefit—operating loss (to balance)	49

year. If any of the loss remains after reducing taxable income to zero in the two previous years, the remainder is carried forward to future years as an operating loss carryforward.

	(\$ in millions)	
Operating loss before income taxes		\$125
Less: Income tax benefit:		
Tax refund from loss carryback	\$29	
Future tax savings from loss carryforward	<u>20</u>	<u>49</u>
Net operating loss		<u>\$ 76</u>

The income tax benefit of both an operating loss carryback and an operating loss carry forward is recognized for accounting purposes in the year the operating loss occurs. The net after-tax operating loss reflects the reduction of past taxes from the loss carryback and future tax savings that the loss carryforward is expected to create.

Notice that the income tax benefit (\$49 million) is less than it was when we assumed a carryforward only (\$50 million). This is because the tax rate in one of the carryback years (2011) was lower than the carryforward rate (40%).

Let's carry the illustration forward one year (see Illustration 16–13A) and assume a performance turnaround in 2014 resulted in pretax accounting income of \$15 million.

(\$ in millions)	2013	Current Year 2014	Future Deductible Amounts (total)
Pretax accounting income		\$15	
Temporary difference:			
Loss carryforward	\$50	(15)	\$(35)
Taxable income (tax return)		<u>\$ 0</u>	
Enacted tax rate		40%	40%
Tax payable currently		<u>\$ 0</u>	
Deferred tax asset			\$(14)
Deferred Tax Asset			↓
Ending balance			\$ 14.0
Less: Beginning balance			(20.0)
Change in balance			<u>\$ (6.0)</u>
Journal Entry at the End of 2014			
Income tax expense (to balance)			6
Deferred tax asset (determined above)			6

Illustration 16–13A

Determining and Recording Income Taxes—2014

\$15 million of the carryforward can be used to offset 2014 income. The remaining \$35 million is carried forward up to 19 more years.

The \$20 million deferred tax asset is reduced to \$14 million.

Financial Statement Presentation

Balance Sheet Classification

In a classified balance sheet, deferred tax assets and deferred tax liabilities are classified as either current or noncurrent according to how the related assets or liabilities are classified for financial reporting. For instance, a deferred tax liability arising from different depreciation methods being used for tax and book purposes would be classified as noncurrent because depreciable assets are reported as noncurrent. A deferred tax asset or deferred tax liability is considered to be related to an asset or liability if reduction (including amortization) of that asset or liability will cause the temporary difference to reverse.

Most companies will have several different types of temporary differences that give rise to deferred tax amounts. The several deferred tax assets and liabilities should not be reported individually but combined instead into two summary amounts. Current deferred tax assets and liabilities should be offset (netted together). The resulting *net current* amount is then

● LO16–8

A net current amount and a net noncurrent amount are reported as either an asset or a liability.

reported as either a current asset (if deferred tax assets exceed deferred tax liabilities) or current liability (if deferred tax liabilities exceed deferred tax assets). Similarly, a single *net noncurrent* amount should be reported as a net noncurrent asset or a net noncurrent liability. This is demonstrated in Illustration 16–14.

Illustration 16–14

Balance Sheet
Classification and
Presentation

The current or noncurrent classification of deferred tax assets and deferred tax liabilities is the same as that of the related assets or liabilities.

Warren Properties, Inc. had future taxable amounts and future deductible amounts relating to temporary differences between the tax bases of the assets and liabilities indicated below and their financial reporting amounts:

Related Balance Sheet Account	Classification Current—C Noncurrent—N	Future Taxable (Deductible) Amounts	Tax Rate	Deferred Tax (Asset) Liability	
				C	N
Receivable—installment sales of land	C	\$ 10	× 40%	\$ 4	
Receivable—installment sales of land	N	5	× 40%		\$ 2
Depreciable assets	N	105	× 40%		42
Allowance—uncollectible accounts	C	(15)	× 40%	(6)	
Liability—subscriptions received	C	(20)	× 40%	(8)	
Estimated warranty liability	C	(30)	× 40%	(12)	
Net current liability (asset)				\$ (22)	
Net noncurrent liability (asset)					\$ 44
Balance Sheet Presentation					
<i>Current Assets:</i>					
Deferred tax asset				\$ 22	
<i>Long-Term Liabilities:</i>					
Deferred tax liability					\$ 44

Note: Before offsetting assets and liabilities within the current and noncurrent categories, the **total** of deferred tax assets is \$26 (\$6 + 8 + 12) and the **total** of deferred tax liabilities is \$48 (\$4 + 2 + 42).

DEFERRED TAX AMOUNT NOT RELATED TO A SPECIFIC ASSET OR LIABILITY. Sometimes, a deferred tax asset or a deferred tax liability cannot be identified with a specific asset or liability. When that's the case, classification should be according to when the underlying temporary difference is expected to reverse. For instance, some organization costs are recognized as expenses for financial reporting purposes when incurred, but are deducted for tax purposes in later years. When such expenditures are made, an expense is recorded, but no asset or liability is recognized on the balance sheet. The deferred tax asset recognized for the future deductible amounts is classified as a current asset for the tax effect of the deduction expected next year, and as a noncurrent asset for the tax effect of the deductions expected in later years.

Operating loss carryforwards also are unrelated to a specific asset or liability and so are classified as current or noncurrent according to when future income is expected to be sufficient to realize the benefit of the carryforward.

VALUATION ALLOWANCE. Any valuation allowance for deferred tax assets should be allocated between the current and noncurrent amount in proportion to the amounts of deferred tax assets that are classified as current and noncurrent. In our illustration, all three deferred tax assets were classified as current, so any valuation allowance would be reported with the net current deferred tax asset.

Disclosure Notes

DEFERRED TAX ASSETS AND DEFERRED TAX LIABILITIES. Additional disclosures are required pertaining to amounts reported on the balance sheet. Disclosure notes should reveal the:

A deferred tax asset or liability that is not related to a specific asset or liability should be classified according to when the underlying temporary difference is expected to reverse.

A valuation allowance is allocated between current and noncurrent on a pro rata basis.

- Total of all deferred tax liabilities (\$48 million in our Illustration 16–14 Note).
- Total of all deferred tax assets (\$26 million in our Illustration 16–14 Note).
- Total valuation allowance recognized for deferred tax assets.
- Net change in the valuation allowance.
- Approximate tax effect of each type of temporary difference (and carryforward).

In its 2011 balance sheet, **Walmart** reported the composition of its net deferred tax liabilities as shown in Illustration 16–15.

Note 10: Taxes (in part)

The significant components of our deferred tax account balances are as follows:

(Amounts in millions)	January 31,	
	2011	2010
Deferred tax assets:		
Loss and tax credit carryforwards	\$ 2,968	\$2,713
Accrued liabilities	3,532	3,141
Share-based compensation	332	267
Other	708	751
Total deferred tax assets	7,540	6,872
Valuation allowance	(2,899)	(2,167)
Deferred tax assets, net of valuation allowance	\$4,641	\$4,705
Deferred tax liabilities:		
Property and equipment	\$ 4,848	\$4,015
Inventories	1,014	972
Other	474	609
Total deferred tax liabilities	\$6,336	\$5,596
Net deferred tax liabilities	\$1,695	\$ 891

The deferred taxes noted above are classified as follows in the accompanying Consolidated Balance Sheets:

(Amounts in millions)	January 31,	
	2011	2010
Balance Sheet Classification:		
Assets:		
Prepaid expenses and other	\$1,636	\$1,534
Other assets and deferred charges	327	331
Asset subtotals	1,963	1,865
Liabilities:		
Accrued liabilities	17	34
Deferred income taxes and other	3,641	2,722
Liability subtotals	3,658	2,756
Net deferred tax liabilities	\$1,695	\$ 891

Illustration 16–15

Disclosure of Deferred Taxes—Walmart

Real World Financials

OPERATING LOSS CARRYFORWARDS. In addition, the amounts and expiration dates should be revealed for any operating loss carryforwards. Remember, operating losses can be carried forward for reduction of future taxable income for 20 years. This potential tax benefit can foreshadow desirable cash savings for the company if earnings sufficient to absorb the loss carryforwards are anticipated before their expiration date. The presence of large operating loss carryforwards also can make an unprofitable company an attractive target for acquisition by a company that could use those loss carryforwards to shelter its own earnings from taxes with that loss deduction. If the IRS determines that an acquisition is made solely to obtain the tax benefits of operating loss carryforwards, the deductions will not be allowed. However, motivation is difficult to determine, so it is not uncommon for companies to purchase operating loss carryforwards.

INCOME TAX EXPENSE. Disclosures also are required pertaining to the income tax expense reported in the income statement. Disclosure notes should reveal the:

- Current portion of the tax expense (or tax benefit).
- Deferred portion of the tax expense (or tax benefit), with separate disclosure of amounts attributable to:
 - Portions that do not include the effect of separately disclosed amounts.
 - Operating loss carryforwards.
- Adjustments due to changes in tax laws or rates.
- Adjustments to the beginning-of-the-year valuation allowance due to revised estimates.
- Tax credits.

To relate this to the income tax journal entries we've seen in the chapter, remember that the current portion of the tax expense is the credit to the income tax payable; the deferred portion of the tax expense is the credit or debit to deferred tax assets and liabilities (and perhaps valuation allowance).

Coping with Uncertainty in Income Taxes

Few expense items in the income statement rival the size of the income tax expense line, and few are subject to the complexities and differing interpretations inherent in reporting income tax expense. As you might imagine, most companies strive to legitimately reduce their overall tax burden and to reduce or delay cash outflows for taxes.

Even without additional efforts to reduce taxes, most companies' tax returns will include many tax positions that are subject to multiple interpretations. That is, the position management takes with respect to an element of tax expense might differ from the position the IRS or the tax court might take on that same item. Despite good faith positions taken in preparing tax returns, those judgments may not ultimately prevail if challenged by the IRS. Managements' tax positions frequently are subjected to legal scrutiny before the uncertainty ultimately is resolved.

For example, assume that if Derrick Company claims on its tax return a particular deduction it believes is legitimate, that position will save the company \$8 million in 2013 income taxes. Derrick knows that, historically, the IRS has challenged many deductions of this type. Since tax returns usually aren't examined for one, two, or more years, uncertainty exists.

TWO-STEP DECISION PROCESS. To deal with that uncertainty, companies are allowed to recognize in the financial statements the tax benefit of a position it takes, such as the reduction in tax expense from Derrick's decision to take the 2013 deduction, only if it is "more likely than not" (greater than 50% chance) to be sustained if challenged.¹⁷ Guidance also prescribes how to *measure* the amount to be recognized if, in fact, it can be recognized. The decision, then, is a "two-step" process.

- Step 1.** A tax benefit may be reflected in the financial statements only if it is "more likely than not" that the company will be able to sustain the tax return position, based on its technical merits.
- Step 2.** A tax benefit should be measured as the largest amount of benefit that is "cumulatively greater than 50 percent likely to be realized" (demonstrated later).

For the Step 1 decision as to whether the position can be sustained, companies must assume that the position will be reviewed by the IRS or other taxing authority and litigated to the "highest court possible," and that the taxing authority has knowledge of all relevant facts.

NOT "MORE LIKELY THAN NOT." Let's say that in the Step 1 decision, Derrick believes the more-likely-than-not criterion is *not* met. This means that none of the tax

● LO16-9

The IRS frequently disagrees with the position a company takes on its tax return.

The identified tax position must have a "more-likely-than-not" probability—a more than 50 percent chance—of being sustained on examination.

If there's a 50% chance or less of the company's position being sustained on examination, the tax expense can't reflect the tax benefit.

¹⁷FASB ASC 740: Income Taxes—Overall (previously "Accounting for Uncertainty in Income Taxes, an Interpretation of FASB Statement No. 109," FASB Interpretation No. 48 (Norwalk, Conn.: FASB, June 2006)), commonly called FIN 48.

benefit (reduction in tax expense) can be recorded in 2013. The income tax expense must be recorded at the same amount as if the tax deduction is not available.

Suppose, for instance, that Derricks’s current income tax payable is \$24 million after being reduced by the full \$8 million tax benefit.¹⁸ However, if it’s *more likely than not* that the tax benefit isn’t sustainable upon examination, the benefit can’t be recognized as a reduction of tax expense. So, Derrick would record (a) tax expense as if there is no deduction (because that’s the actual position taken), (b) current income tax payable that reflects the entire deduction, and (c) a liability that represents the projected obligation to pay the additional taxes if the deduction is not ultimately upheld:

	(\$ in millions)
Income tax expense (without \$8 tax benefit)	32
Income tax payable (with \$8 tax benefit)	24
Liability—projected additional tax	8

The \$8 million liability can be viewed as a “reserve” to cover the possibility that tax officials might disallow the tax treatment the income tax payable presumes.

The \$8 million difference is the tax not paid because Derrick took the deduction, but potentially due if the deduction is not upheld later. Because the ultimate outcome probably won’t be determined within the upcoming year, the *Liability—projected additional tax* is reported as a long-term liability unless it’s known to be current.

MEASURING THE TAX BENEFIT. Now, let’s say that even though Derrick is aware of the IRS’s tendency to challenge deductions of this sort, management believes the more-likely-than-not criterion *is* met. Since we determine in Step 1 that—yes—a tax benefit can be recognized, we now need to decide how much. That’s Step 2.

Suppose the following table represents management’s estimates of the likelihood of various amounts of tax benefit that would be upheld:

Likelihood Table	(\$ in millions)				
Amount of the tax benefit that management expects to be sustained	\$8	\$7	\$6	\$5	\$4
Percentage likelihood that the tax position will be sustained at this level	10%	20%	25%	25%	20%
Cumulative probability that the tax position will be sustained	10%	30%	55%	80%	100%

The largest amount that has a cumulative greater-than-50%-chance of being realized is \$6 million (10% + 20% + 25% = 55%).

The amount of tax benefit that Derrick can recognize in the financial statements (reduce tax expense) is \$6 million because it represents the largest amount of benefit that is more than 50 percent (55%) likely to be the end result. So, Derrick would record (a) tax expense as if there is a \$6 million benefit, (b) income tax payable that reflects the entire \$8 million benefit of the deduction, and (c) a liability that represents the projected obligation to pay the additional taxes if the deduction is not ultimately upheld:

	(\$ in millions)
Income tax expense (with \$6 tax benefit)	26
Income tax payable (with \$8 tax benefit)	24
Liability—projected additional tax (\$8 – 6)	2

Only \$6 million of the tax benefit is recognized in income tax expense

In summary, the highest amount Derrick might have to pay is the full \$8 million benefit of the 2013 deduction; the least amount, of course, is zero. What’s the most likely amount? We began to answer that question when we calculated the most likely eventual benefit. That’s the largest amount of benefit that is “cumulatively greater than 50 percent likely to be realized,” which is \$6 million.

Because the most likely amount not to be paid is \$6 million, the most likely additional liability is \$2 million (\$8 – 6 = \$2). That’s the amount we record as a *Liability—projected additional tax*, along with the current income tax payable of \$24 million.

¹⁸For illustration, if pretax accounting income is \$80 million, the tax rate is 40%, and the questionable deduction is \$20 million, income tax payable would be [\$80 million – 20 million] × 40% = \$24 million.

RESOLUTION OF THE UNCERTAINTY. Now let's consider alternative possibilities for resolution of the uncertainty associated with the tax position. Note that, in each case, the "Liability—projected additional tax" gets reduced to zero in the period in which the uncertainty is resolved.

1. **Worst case scenario.** The entire position is disallowed, such that Derrick owes \$8 million tax (plus interest and penalties, which we are ignoring).

	(\$ in millions)	
Income tax expense	6	
Liability—projected additional tax	2	
Income tax payable (or cash)		8

2. **Best case scenario.** The entire position is upheld, so Derrick owes no additional tax.

	(\$ in millions)	
Liability—projected additional tax	2	
Income tax expense		2

3. **Expected scenario.** The \$6 million position is allowed as expected, so Derrick owes the expected \$2 million tax (plus interest and penalties, which we are ignoring).

	(\$ in millions)	
Liability—projected additional tax	2	
Income tax payable (or cash)		2

In its annual report for the year ended January 29, 2011, **Staples, Inc.**, provided the disclosures shown in Illustration 16–16 regarding its tax uncertainties.

Illustration 16–16

Disclosure of Deferred Taxes—Staples, Inc.

Real World Financials

NOTE 1 Income Taxes (In part)

Uncertain Tax Positions

At January 29, 2011, the Company had \$254.2 million of gross unrecognized tax benefits, all of which, if recognized, would affect the Company's tax rate. At January 30, 2010, the Company had \$264.3 million of gross unrecognized tax benefits, all of which, if recognized, would affect the Company's tax rate. The Company does not reasonably expect any material changes to the estimated amount of liability associated with its uncertain tax positions through fiscal 2011.

The following summarizes the activity related to our unrecognized tax benefits (in thousands):

	2010	2009	2008
Balance at beginning of fiscal year	\$264,277	\$222,892	\$ 87,688
Additions for tax positions related to current year	25,876	47,354	24,859
(Reductions) additions for tax positions of prior years	(9,983)	15,422	119,973
Reduction for Statute of Limitations Expiration	(19,840)	(20,802)	(7,597)
Settlements	(6,163)	(589)	(2,031)
Balance at end of fiscal year	\$254,167	\$264,277	\$222,892

Intraperiod Tax Allocation

You should recall that an income statement reports certain items separately from income (or loss) from continuing operations when such items are present. Specifically, (a) discontinued operations and (b) extraordinary items are given a place of their own in the income statement to better allow the user of the statement to isolate irregular components of net income

from those that represent ordinary, recurring business operations. Presumably, this permits the user to more accurately project future operations without neglecting events that affect current performance.¹⁹ Following this logic, each component of net income should reflect the income tax effect directly associated with that component.

Consequently, the total income tax expense for a reporting period should be allocated among the income statement items that gave rise to it. Each of the following items should be reported net of its respective income tax effects:

- Income (or loss) from continuing operations.
- Discontinued operations.
- Extraordinary items.

The related tax effect can be either a tax expense or a tax benefit. For example, an extraordinary gain adds to a company's tax expense, while an extraordinary loss produces a tax reduction because it reduces taxable income and therefore reduces income taxes. So a company with a tax rate of 40% would report \$100 million pretax income that includes a \$10 million extraordinary gain this way:

	(\$ in millions)
Income before tax and extraordinary item (\$100 – 10)	\$ 90
Less: Income tax expense (\$90 × 40%)	(36)
Income before extraordinary item	54
Extraordinary gain (net of \$4 income tax expense)	6
Net income	\$ 60

A gain causes an increase in taxes.

If the \$100 million pretax income included a \$10 million extraordinary loss rather than an extraordinary gain, the loss would be reported net of associated tax savings:

	(\$ in millions)
Income before tax and extraordinary item (\$100 + 10)	\$110
Less: Income tax expense (\$110 × 40%)	(44)
Income before extraordinary item	66
Extraordinary loss (net of \$4 income tax benefit)	(6)
Net income	\$ 60

A loss causes a reduction in taxes.

Additional Consideration

If the extraordinary gain in the earlier example had been of a type taxable at a capital gains tax rate of 30%, it would have been reported net of the specific tax associated with that gain:

Extraordinary gain (net of \$3 income tax expense)	\$7
--	-----

Allocating income taxes among financial statement components in this way within a particular reporting period is referred to as *intraproduct tax allocation*. You should recognize the contrast with *interperiod tax allocation*—terminology sometimes used to describe allocating income taxes between two or more reporting periods by recognizing deferred tax assets and liabilities. While interperiod tax allocation is challenging and controversial, intraperiod tax allocation is relatively straightforward and substantially free from controversy.

Allocating income taxes within a particular reporting period is intraperiod tax allocation.

OTHER COMPREHENSIVE INCOME. Allocating income tax expense or benefit also applies to components of comprehensive income reported separately from net income. You should recall from our discussions in Chapters 4 and 12 that “comprehensive income” extends our view of income beyond conventional net income to include four types of gains

¹⁹We discussed this in Chapter 4.

and losses that traditionally haven't been included in income statements. The other comprehensive income (OCI) items relate to investments, postretirement benefit plans, derivatives, and foreign currency translation. When these OCI items are reported in a statement of comprehensive income and then accumulated in shareholders' equity, they are reported net of their respective income tax effects.²⁰

● LO16-11

International Financial Reporting Standards

Extraordinary Items. Recall from Chapter 4 that extraordinary items are not reported separately under IFRS. *IAS No. 1, "Presentation of Financial Statements,"* states that neither the income statement nor any notes may contain any items called "extraordinary."²¹ As a result, according to IFRS the only income statement item reported separately net of tax is discontinued operations.

Decision Makers' Perspective

Income taxes represent one of the largest expenditures that many firms incur. When state, local, and foreign taxes are considered along with federal taxes, the total bite can easily consume 40% of income. A key factor, then, in any decision that managers make should be the impact on taxes. Decision makers must constantly be alert to options that minimize or delay taxes. During the course of this chapter, we encountered situations that avoid taxes (for example, interest on municipal bonds) and those that delay taxes (for example, using accelerated depreciation on the tax return). Astute managers make investment decisions that consider the tax effect of available alternatives. Similarly, outside analysts should consider how effectively management has managed its tax exposure and monitor the current and prospective impact of taxes on their interests in the company.

Consider an example. Large, capital-intensive companies with significant investments in buildings and equipment often have sizable deferred tax liabilities from temporary differences in depreciation. If new investments cause the level of depreciable assets to at least remain the same over time, the deferred tax liability can be effectively delayed indefinitely. Investors and creditors should be watchful for situations that might cause material pay-downs of that deferred tax liability, such as impending plant closings or investment patterns that suggest declining levels of depreciable assets. Unexpected additional tax expenditures can severely diminish an otherwise attractive prospective rate of return.

You also learned in the chapter that deferred tax assets represent future tax benefits. One such deferred tax asset that often reflects sizable future tax deductions is an operating loss carryforward. When a company has a large operating loss carryforward, a large amount of future income can be earned tax-free. This tax shelter can be a huge advantage, not to be overlooked by careful analysts.

Managers and outsiders are aware that increasing debt increases risk. Deferred tax liabilities increase reported debt. As discussed and demonstrated in the previous chapter, financial risk often is measured by the debt to equity ratio, total liabilities divided by shareholders' equity. Other things being equal, the higher the debt to equity ratio, the higher the risk. Should the deferred tax liability be included in the computation of this ratio? Some analysts will argue that it should be excluded, observing that in many cases the deferred tax liability account remains the same or continually grows larger. Their contention is that no future tax payment will be required. Others, though, contend that is no different from the common

Investment patterns and other disclosures can indicate potential tax expenditures.

Operating loss carryforwards can indicate significant future tax savings.

Deferred tax liabilities increase risk as measured by the debt to equity ratio.

²⁰This can be accomplished by (a) presenting components of other comprehensive income net of related income tax effects or (b) presenting a single tax amount for all, and individual components shown before income tax effects with disclosure of the income taxes allocated to each component either in a disclosure note or parenthetically in the statement.

²¹"Presentation of Financial Statements," International Accounting Standard No. 1 (IASCF), as amended effective January 1, 2011.

situation in which long-term borrowings tend to remain the same or continually grow larger. Research supports the notion that deferred tax liabilities are, in fact, viewed by investors as real liabilities and they appear to discount them according to the timing and likelihood of the liabilities' settlement.²²

Anytime managerial discretion can materially impact reported earnings, analysts should be wary of the implications for earnings quality assessment. We indicated earlier that the decision as to whether or not a valuation allowance is used, as well as the size of the allowance, is largely discretionary. Alert investors should not overlook the potential for "earnings management" here. In fact, recent empirical evidence indicates that some companies do use the deferred tax asset valuation allowance account to manage earnings upward to meet analyst forecasts.²³

In short, managers who make decisions based on estimated pretax cash flows and outside investors and creditors who make decisions based on pretax income numbers are perilously ignoring one of the most important aspects of those decisions. Taxes should be a primary consideration in any business decision. ●

Concept Review Exercise

Mid-South Cellular Systems began operations in 2013. That year the company reported taxable income of \$25 million. In 2014, its second year of operations, pretax accounting income was \$88 million, which included the following amounts:

MULTIPLE DIFFERENCES AND OPERATING LOSS

1. Insurance expense of \$14 million, representing one-third of a \$42 million, three-year casualty and liability insurance policy that is deducted for tax purposes entirely in 2014.
2. Insurance expense for a \$1 million premium on a life insurance policy for the company president. This is not deductible for tax purposes.
3. An asset with a four-year useful life was acquired last year. It is depreciated by the straight-line method in the income statement. MACRS is used on the tax return, causing deductions for depreciation to be more than straight-line depreciation the first two years but less than straight-line depreciation the next two years (\$ in millions):

	Income Statement	Tax Return	Difference
2013	\$150	\$198	\$ (48)
2014	150	264	(114)
2015	150	90	60
2016	150	48	102
	<u>\$600</u>	<u>\$600</u>	<u>0</u>

4. Equipment rental revenue of \$80 million, which does not include an additional \$20 million of advance payment for 2015 rent. \$100 million of rental revenue is reported on the 2014 income tax return.

The enacted tax rate is 40%.

Required:

1. Prepare the journal entry to record Mid-South Cellular's income taxes for 2014.
2. What is Mid-South Cellular's 2014 net income?
3. Show how any deferred tax amount(s) should be reported in the 2014 balance sheet. Assume taxable income is expected in 2015 sufficient to absorb any deductible amounts carried forward from 2014.

²²See Dan Givoly and Carla Hayn, "The Valuation of the Deferred Tax Liability: Evidence from the Stock Market," *The Accounting Review*, April 1992, pp. 394-410.

²³Sonia O. Rego and Mary Margaret Frank, "Do Managers Use the Valuation Allowance Account to Manage Earnings Around Certain Earnings Targets?" Darden Business School Working Paper No. 03-09, April 16, 2004.

Solution

1. Prepare the journal entry to record Mid-South Cellular’s income taxes for 2014.

(\$ in millions)

Differences in tax reporting and financial reporting of both the prepaid insurance and the depreciation create future taxable amounts.

Both the advance rent and the operating loss carryforward create future deductible amounts.

	2013	Current Year 2014	Future Taxable (Deductible) Amounts		Future Taxable Amounts (total)	Future Deductible Amounts (total)
			2015	2016		
Pretax accounting income		\$ 88				
Permanent difference:						
Life insurance premium		1				
Temporary differences:						
Prepaid insurance		(28)	\$ 14	\$ 14	\$ 28	
Depreciation	\$(48)	(114)	60	102	162	
Advance rent received		20	(20)			\$ (20)
Operating loss		\$ (33)				
Loss carryback	(25)	← 25				
Loss carryforward		8 →				(8)
		\$ 0			\$190	\$ (28)
Enacted tax rate	40%	40%			40%	40%
Tax payable (refundable)	<u>\$(10)</u>	<u>\$ 0</u>				
Deferred tax liability					\$ 76.0	
Deferred tax asset						↓ \$(11.2)
					Deferred Tax Liability	Deferred Tax Asset
Ending balances:					\$76.0	\$ 11.2
Less: Beginning balance (\$48* × 40%)					(19.2)	(0.0)
Change in balances					<u>\$56.8</u>	<u>\$ 11.2</u>

*2013’s only temporary difference.

Income tax expense is composed of three components: (1) the tax deferred until later, reduced by (2) the deferred tax benefit and (3) the refund receivable of 2013 taxes paid.

Journal Entry at the End of 2014

Income tax expense (to balance)	35.6
Receivable—income tax refund (determined above)	10.0
Deferred tax asset (determined above)	11.2
Deferred tax liability (determined above)	56.8

Note: Adjusting pretax accounting income by the permanent difference and the three temporary differences creates a negative taxable income, which is a net operating loss.

2. What is Mid-South Cellular’s 2014 net income?

Pretax accounting income	\$88.0
Income tax expense	<u>(35.6)</u>
Net income	<u>\$52.4</u>

3. Show how any deferred tax amount(s) should be reported in the 2014 balance sheet. Assume taxable income is expected in 2015 sufficient to absorb any deductible amounts carried forward from 2014.

(\$ in millions)

	Classification Current—C Noncurrent—N	Future Taxable (Deductible) Amounts	Tax Rate	Deferred Tax (Asset) Liability	
				C	N
Related balance sheet account					
Prepaid insurance	C	28	× 40%	11.2	
Depreciable assets	N	162	× 40%		64.8
Liability—rent received in advance	C	(20)	× 40%	(8.0)	
Unrelated to any balance sheet account					
Operating loss carryforward	C*	(8)	× 40%	(3.2)	
Net current liability (asset)				0.0	
Net noncurrent liability (asset)					64.8

*Deferred tax asset classified entirely as current because 2015 income is expected to be sufficient to realize the benefit of the carryforward.

No net current amount

Long-term liabilities:

Deferred tax liability \$64.8

Note: These net amounts (\$0.0 + 64.8 = \$64.8) sum to the net **total** deferred tax liabilities and deferred tax assets from requirement 1 (\$76.0 – 11.2 = \$64.8).

Financial Reporting Case Solution

- 1. What's the difference? Explain to Laura how differences between financial reporting standards and income tax rules might cause the income tax expense and the amount of income tax paid to differ.** (p. 948) The differences in the rules for computing taxable income and those for financial reporting often cause amounts to be included in taxable income in a different year(s) from the year in which they are recognized for financial reporting purposes. Temporary differences result in future taxable or deductible amounts when the temporary differences reverse. As a result, tax payments frequently occur in years different from the years in which the revenues and expenses that cause the taxes are generated.
- 2. What is the conceptual advantage of determining income tax expense as we do?** (p. 948) Income tax expense is the combination of the current tax effect and the deferred tax consequences of the period's activities. Under the asset-liability approach, the objective of accounting for income taxes is to recognize a deferred tax liability or deferred tax asset for the tax consequences of amounts that will become taxable or deductible in future years as a result of transactions or events that already have occurred. A result is to recognize both the current and the deferred tax consequences of the operations of a reporting period.
- 3. Are there differences between financial reporting standards and income tax rules that will not cause a difference between income tax expense and the amount of income taxes paid?** (p. 960) Yes. Some differences between accounting income and taxable income are caused by transactions and events that will never affect taxable income or taxes payable. These differences between accounting income and taxable income do not reverse later. These are permanent differences that are disregarded when determining (a) the tax payable currently, (b) the deferred tax effect, and therefore (c) the income tax expense. ●

The Bottom Line

- **LO16-1** Temporary differences produce future taxable amounts when the taxable income will be increased relative to pretax accounting income in one or more future years. These produce deferred tax liabilities for the taxes to be paid on the future taxable amounts. Income tax expense for the year includes an amount for which payment (or receipt) is deferred in addition to the amount for which payment is due currently. The deferred amount is the change in the tax liability (or asset). (p. 949)
- **LO16-2** When the future tax consequence of a temporary difference will be to decrease taxable income relative to pretax accounting income, future deductible amounts are created. These have favorable tax consequences that are recognized as deferred tax assets. (p. 956)
- **LO16-3** Deferred tax assets are recognized for all deductible temporary differences. However, a deferred tax asset is then reduced by a valuation allowance if it is more likely than not that some portion or all of the deferred tax asset will not be realized. (p. 959)
- **LO16-4** Permanent differences between the reported amount of an asset or liability in the financial statements and its tax basis are those caused by transactions and events that under existing tax law will never affect taxable income or taxes payable. These are disregarded when determining both the tax payable currently and the deferred tax effect. (p. 960)
- **LO16-5** The deferred tax liability (or asset) for which payment (or receipt) is deferred is based on enacted tax rates applied to the taxable or deductible amounts. If a change in a tax law or rate occurs, the deferred tax liability or asset is adjusted to reflect the change in the amount to be paid or recovered. That effect is reflected in operating income in the year of the enactment of the change in the tax law or rate. (p. 964)
- **LO16-6** When multiple temporary differences exist, the total of the future **taxable** amounts is multiplied by the future tax rate to determine the appropriate balance for the deferred tax liability, and the total of the future **deductible** amounts is multiplied by the future tax rate to determine the appropriate balance for the deferred tax asset. (p. 966)
- **LO16-7** Tax laws permit an operating loss to be used to reduce taxable income in other, profitable years by either a carryback of the loss to prior years (2) or a carryforward of the loss to later years (up to 20). The tax benefit of an operating loss carryback or an operating loss carryforward is recognized in the year of the loss. (p. 967)
- **LO16-8** Deferred tax assets and deferred tax liabilities are classified as either current or noncurrent according to how the related assets or liabilities are classified for financial reporting. Disclosure notes should reveal additional relevant information needed for full disclosure pertaining to deferred tax amounts reported on the balance sheet, the components of income tax expense, and available operating loss carryforwards. (p. 971)
- **LO16-9** A tax benefit may be reflected in the financial statements only if it is “more likely than not” that the company will be able to sustain the tax return position, based on its technical merits. It should be measured as the largest amount of benefit that is cumulatively greater than 50 percent likely to be realized. (p. 974)
- **LO16-10** Through intraperiod tax allocation, the total income tax expense for a reporting period is allocated among the financial statement items that gave rise to it; specifically, income (or loss) from continuing operations, discontinued operations, extraordinary items, and prior period adjustments (to the beginning retained earnings balance). (p. 976)
- **LO16-11** Despite the similar approaches for accounting for taxation under IFRS and U.S. GAAP, differences in reported amounts for deferred taxes are among the most frequent between the two approaches because a great many of the *nontax* differences between IFRS and U.S. GAAP affect deferred taxes. (pp. 961 and 978) ●

Questions For Review of Key Topics

- Q 16-1 A member of the board of directors is concerned that the company’s income statement reports income tax expense of \$12.3 million, but the income tax obligation to the government for the year is only \$7.9 million. How might the corporate controller explain this apparent discrepancy?
- Q 16-2 A deferred tax liability (or asset) is described as the tax effect of the temporary difference between the financial statement carrying amount of an asset or liability and its tax basis. Explain this tax effect of the temporary difference. How might it produce a deferred tax liability? A deferred tax asset?

- Q 16-3** Sometimes a temporary difference will produce future deductible amounts. Explain what is meant by future deductible amounts. Describe two general situations that have this effect. How are such situations recognized in the financial statements?
- Q 16-4** The benefit of future deductible amounts can be achieved only if future income is sufficient to take advantage of the deferred deductions. For that reason, not all deferred tax assets will ultimately be realized. How is this possibility reflected in the way we recognize deferred tax assets?
- Q 16-5** Temporary differences result in future taxable or deductible amounts when the related asset or liability is recovered or settled. Some differences, though, are not temporary. What events create permanent differences? What effect do these have on the determination of income taxes payable? Of deferred income taxes?
- Q 16-6** Identify three examples of differences with no deferred tax consequences.
- Q 16-7** The income tax rate for Hudson Refinery has been 35% for each of its 12 years of operation. Company forecasters expect a much-debated tax reform bill to be passed by Congress early next year. The new tax measure would increase Hudson's tax rate to 42%. When measuring this year's deferred tax liability, which rate should Hudson use?
- Q 16-8** Suppose a tax reform bill is enacted that causes the corporate tax rate to change from 34% to 36%. How would this affect an existing deferred tax liability? How would the change be reflected in income?
- Q 16-9** An operating loss occurs when tax-deductible expenses exceed taxable revenues. Tax laws permit the operating loss to be used to reduce taxable income in other, profitable years by either a carryback of the loss to prior years or a carryforward of the loss to later years. How are loss carrybacks and loss carryforwards recognized for financial reporting purposes?
- Q 16-10** How are deferred tax assets and deferred tax liabilities reported in a classified balance sheet?
- Q 16-11** Additional disclosures are required pertaining to deferred tax amounts reported on the balance sheet. What are the needed disclosures?
- Q 16-12** Additional disclosures are required pertaining to the income tax expense reported in the income statement. What are the needed disclosures?
- Q 16-13** The means of dealing with uncertainty in tax positions is prescribed by GAAP in FASB ASC 740-10: Income Taxes—Overall (previously *FASB Interpretation No. 48 (FIN 48)*). Describe the two-step process provided by GAAP.
- Q 16-14** What is intraperiod tax allocation?
- IFRS Q 16-15** IFRS and U.S. GAAP follow similar approaches for accounting for taxation. Nevertheless, differences in reported amounts for deferred taxes are among the most frequent between IFRS and U.S. GAAP. Why?

Brief Exercises

- BE 16-1** Temporary difference
● LO16-1
A company reports *pretax accounting income* of \$10 million, but because of a single temporary difference, *taxable income* is only \$7 million. No temporary differences existed at the beginning of the year, and the tax rate is 40%. Prepare the appropriate journal entry to record income taxes.
- BE 16-2** Temporary difference; determine taxable income; determine prior year deferred tax amount
● LO16-1
Kara Fashions uses straight-line depreciation for financial statement reporting and MACRS for income tax reporting. Three years after its purchase, one of Kara's buildings has a carrying value of \$400,000 and a tax basis of \$300,000. There were no other temporary differences and no permanent differences. Taxable income was \$4 million and Kara's tax rate is 40%. What is the deferred tax liability to be reported in the balance sheet? Assuming that the deferred tax liability balance was \$32,000 the previous year, prepare the appropriate journal entry to record income taxes this year.
- BE 16-3** Temporary difference
● LO16-2
A company reports *pretax accounting income* of \$10 million, but because of a single temporary difference, *taxable income* is \$12 million. No temporary differences existed at the beginning of the year, and the tax rate is 40%. prepare the appropriate journal entry to record income taxes.
- BE 16-4** Temporary difference; income tax payable given
● LO16-2
In 2013, Ryan Management collected rent revenue for 2014 tenant occupancy. For financial reporting, the rent is recognized as income in the period earned, but for income tax reporting it is taxed when collected. The unearned portion of the rent collected in 2013 was \$50 million. Taxable income is \$180 million. No temporary differences existed at the beginning of the year, and the tax rate is 40%. Prepare the appropriate journal entry to record income taxes.

BE 16-5 Temporary difference; income tax payable given
● LO16-2

Refer to the situation described in BE 16-4. Suppose the unearned portion of the rent collected was \$40 million at the end of 2014. Taxable income is \$200 million. Prepare the appropriate journal entry to record income taxes.

BE 16-6 Valuation allowance
● LO16-2, LO16-3

At the end of the year, the deferred tax asset account had a balance of \$12 million attributable to a cumulative temporary difference of \$30 million in a liability for estimated expenses. Taxable income is \$35 million. No temporary differences existed at the beginning of the year, and the tax rate is 40%. Prepare the journal entry(s) to record income taxes assuming it is more likely than not that one-fourth of the deferred tax asset will not ultimately be realized.

BE 16-7 Valuation allowance
● LO16-2, LO16-3

Hypercom Corporation is a provider of electronic card payment terminals, peripherals, network products, and software. In its 2010 annual report, it reported current and long-term deferred tax assets totaling about \$43 million. The company also reported valuation allowances totaling about \$43 million. What would motivate Hypercom to have a valuation allowance almost equal to its deferred tax assets?

Real World Financials

BE 16-8 Differences between financial statement and taxable income were as follows:

	(\$ in millions)
Pretax accounting income	\$300
Permanent difference	(24)
	<u>276</u>
Temporary difference	(18)
Taxable income	<u>\$258</u>

● LO16-1, LO16-4

The cumulative temporary difference to date is \$40 million (also the future taxable amount). The enacted tax rate is 40%. What is deferred tax asset or liability to be reported in the balance sheet?

BE 16-9 Calculate taxable income
● LO16-1, LO16-4

Shannon Polymers uses straight-line depreciation for financial reporting purposes for equipment costing \$800,000 and with an expected useful life of four years and no residual value. For tax purposes, the deduction is 40%, 30%, 20%, and 10% in those years. Pretax accounting income the first year the equipment was used was \$900,000, which includes interest revenue of \$20,000 from municipal bonds. Other than the two described, there are no differences between accounting income and taxable income. The enacted tax rate is 40%. Prepare the journal entry to record income taxes.

BE 16-10 Multiple tax rates
● LO16-5

J-Matt, Inc., had pretax accounting income of \$291,000 and taxable income of \$300,000 in 2013. The only difference between accounting and taxable income is estimated product warranty costs for sales this year. Warranty payments are expected to be in equal amounts over the next three years. Recent tax legislation will change the tax rate from the current 40% to 30% in 2015. Determine the amounts necessary to record J-Matt's income taxes for 2013 and prepare the appropriate journal entry.

BE 16-11 Change in tax rate
● LO16-5

Superior Developers sells lots for residential development. When lots are sold, Superior recognizes income for financial reporting purposes in the year of the sale. For some lots, Superior recognizes income for tax purposes when collected. In the *prior* year, income recognized for financial reporting purposes for lots sold this way was \$20 million, which would be collected equally over the next two years. The enacted tax rate was 40%. This year, a new tax law was enacted, revising the tax rate from 40% to 35% beginning next year. Calculate the amount by which Superior should reduce its deferred tax liability this year.

BE 16-12 Operating loss carryforward
● LO16-7

During its first year of operations, **Nile.com** reported an operating loss of \$15 million for financial reporting and tax purposes. The enacted tax rate is 40%. Prepare the journal entry to recognize the income tax benefit of the operating loss.

BE 16-13 Operating loss carryback
● LO16-7

AirParts Corporation reported an operating loss of \$25 million for financial reporting and tax purposes. Taxable income last year and the previous year, respectively, was \$20 million and \$15 million. The enacted tax rate each year is 40%. Prepare the journal entry to recognize the income tax benefit of the operating loss. AirParts elects the carryback option.

BE 16-14 Tax uncertainty
● LO16-9

First Bank has some question as to the tax-free nature of \$5 million of its municipal bond portfolio. This amount is excluded from First Bank's taxable income of \$55 million. Management has determined that there is a 65% chance that the tax-free status of this interest can't withstand scrutiny of taxing authorities. Assuming a 40% tax rate, what amount of income tax expense should the bank report?

BE 16-15
Intraperiod tax allocation
● LO16-10

Southeast Airlines had pretax earnings of \$65 million, including an extraordinary gain of \$10 million. The company's tax rate is 40%. What is the amount of income tax expense that Southeast should report in its income statement? How should the extraordinary gain be reported?

BE 16-16
IFRS; Intraperiod tax allocation
● LO16-11

Refer to the situation described in BE 16-15. Suppose Southeast Airlines prepares its financial statements according to IFRS. What is the amount of income tax expense that Southeast should report in its income statement?

Exercises

An alternate exercise and problem set is available on the text website: www.mhhe.com/spiceland7e

E 16-1
Temporary difference; taxable income given
● LO16-1

Alvis Corporation reports *pretax accounting income* of \$400,000, but due to a single temporary difference, *taxable income* is only \$250,000. At the beginning of the year, no temporary differences existed.

Required:

1. Assuming a tax rate of 35%, what will be Alvis's net income?
2. What will Alvis report in the balance sheet pertaining to income taxes?

E 16-2
Determine taxable income; determine prior year deferred tax amount
● LO16-1

On January 1, 2010, Ameen Company purchased a building for \$36 million. Ameen uses straight-line depreciation for financial statement reporting and MACRS for income tax reporting. At December 31, 2012, the carrying value of the building was \$30 million and its tax basis was \$20 million. At December 31, 2013, the carrying value of the building was \$28 million and its tax basis was \$13 million. There were no other temporary differences and no permanent differences. Pretax accounting income for 2013 was \$45 million.

Required:

1. Prepare the appropriate journal entry to record Ameen's 2013 income taxes. Assume an income tax rate of 40%.
2. What is Ameen's 2013 net income?

E 16-3
Taxable income given; calculate deferred tax liability
● LO16-1

Ayres Services acquired an asset for \$80 million in 2013. The asset is depreciated for financial reporting purposes over four years on a straight-line basis (no residual value). For tax purposes the asset's cost is depreciated by MACRS. The enacted tax rate is 40%. Amounts for pretax accounting income, depreciation, and taxable income in 2013, 2014, 2015, and 2016 are as follows:

	(\$ in millions)			
	2013	2014	2015	2016
Pretax accounting income	\$330	\$350	\$365	\$400
Depreciation on the income statement	20	20	20	20
Depreciation on the tax return	(25)	(33)	(15)	(7)
Taxable income	<u>\$325</u>	<u>\$337</u>	<u>\$370</u>	<u>\$413</u>

Required:

For December 31 of each year, determine (a) the temporary book-tax difference for the depreciable asset and (b) the balance to be reported in the deferred tax liability account.

E 16-4
Temporary difference; income tax payable given
● LO16-2

In 2013, DFS Medical Supply collected rent revenue for 2014 tenant occupancy. For income tax reporting, the rent is taxed when collected. For financial statement reporting, the rent is recognized as income in the period earned. The unearned portion of the rent collected in 2013 amounted to \$300,000 at December 31, 2013. DFS had no temporary differences at the beginning of the year.

Required:

Assuming an income tax rate of 40% and 2013 income tax payable of \$950,000, prepare the journal entry to record income taxes for 2013.

E 16-5
Temporary difference; future deductible amounts; taxable income given

● LO16-2

Lance Lawn Services reports warranty expense by estimating the amount that eventually will be paid to satisfy warranties on its product sales. For tax purposes, the expense is deducted when the cost is incurred. At December 31, 2013, Lance has a warranty liability of \$1 million and taxable income of \$75 million. At December 31, 2012, Lance reported a deferred tax asset of \$435,000 related to this difference in reporting warranties, its only temporary difference. The enacted tax rate is 40% each year.

Required:

Prepare the appropriate journal entry to record Lance’s income tax provision for 2013.

E 16-6
Identify future taxable amounts and future deductible amounts

● LO16-1, LO16-2

Listed below are 10 causes of temporary differences. For each temporary difference, indicate (by letter) whether it will create future deductible amounts (D) or future taxable amounts (T).

Temporary Difference

- ___ 1. Accrual of loss contingency, tax-deductible when paid.
- ___ 2. Newspaper subscriptions; taxable when received, recognized for financial reporting when earned.
- ___ 3. Prepaid rent, tax-deductible when paid.
- ___ 4. Accrued bond interest expense, tax-deductible when paid.
- ___ 5. Prepaid insurance, tax-deductible when paid.
- ___ 6. Unrealized loss from recording investments at fair value (tax-deductible when investments are sold).
- ___ 7. Warranty expense; estimated for financial reporting when products are sold; deducted for tax purposes when paid.
- ___ 8. Advance rent receipts on an operating lease (as the lessor), taxable when received.
- ___ 9. Straight-line depreciation for financial reporting; accelerated depreciation for tax purposes.
- ___ 10. Accrued expense for employee postretirement benefits, tax-deductible when subsequent payments are made.

E 16-7
Identify future taxable amounts and future deductible amounts

● LO16-1, LO16-2

(This is a variation of E 16-6, modified to focus on the balance sheet accounts related to the deferred tax amounts.)

Listed below are 10 causes of temporary differences. For each temporary difference indicate the balance sheet account for which the situation creates a temporary difference.

Temporary Difference

- ___ 1. Accrual of loss contingency, tax-deductible when paid.
- ___ 2. Newspaper subscriptions; taxable when received, recognized for financial reporting when earned.
- ___ 3. Prepaid rent, tax-deductible when paid.
- ___ 4. Accrued bond interest expense, tax-deductible when paid.
- ___ 5. Prepaid insurance, tax-deductible when paid.
- ___ 6. Unrealized loss from recording investments at fair value (tax-deductible when investments are sold).
- ___ 7. Warranty expense; estimated for financial reporting when products are sold; deducted for tax purposes when paid.
- ___ 8. Advance rent receipts on an operating lease (as the lessor), taxable when received.
- ___ 9. Straight-line depreciation for financial reporting; accelerated depreciation for tax purposes.
- ___ 10. Accrued expense for employee postretirement benefits, tax-deductible when subsequent payments are made.

E 16-8
Calculate income tax amounts under various circumstances

● LO16-1, LO16-2

Four independent situations are described below. Each involves future deductible amounts and/or future taxable amounts produced by temporary differences:

	(\$ in thousands)			
	Situation			
	1	2	3	4
Taxable income	\$85	\$215	\$195	\$260
Future deductible amounts	15		20	20
Future taxable amounts		15	15	30
Balance(s) at beginning of the year:				
Deferred tax asset	2		9	4
Deferred tax liability		2	2	

The enacted tax rate is 40%.

Required:

For each situation, determine the:

- Income tax payable currently.
- Deferred tax asset—balance.
- Deferred tax asset—change (dr) cr.
- Deferred tax liability—balance.
- Deferred tax liability—change (dr) cr.
- Income tax expense.

E 16-9

Determine taxable income

- LO16-1, LO16-2

Eight independent situations are described below. Each involves future deductible amounts and/or future taxable amounts produced by:

(\$ in millions)

Temporary Differences Reported First on:

	The Income Statement		The Tax Return	
	Revenue	Expense	Revenue	Expense
1.		\$20		
2.	\$20			
3.			\$20	
4.				\$20
5.	15	20		
6.		20	15	
7.	15	20		10
8.	15	20	5	10

Required:

For each situation, determine taxable income assuming pretax accounting income is \$100 million.

E 16-10

Deferred tax asset; taxable income given; valuation allowance

- LO16-3

At the end of 2012, Payne Industries had a deferred tax asset account with a balance of \$30 million attributable to a temporary book-tax difference of \$75 million in a liability for estimated expenses. At the end of 2013, the temporary difference is \$70 million. Payne has no other temporary differences and no valuation allowance for the deferred tax asset. Taxable income for 2013 is \$180 million and the tax rate is 40%.

Required:

- Prepare the journal entry(s) to record Payne's income taxes for 2013, assuming it is more likely than not that the deferred tax asset will be realized.
- Prepare the journal entry(s) to record Payne's income taxes for 2013, assuming it is more likely than not that one-half of the deferred tax asset will ultimately be realized.

E 16-11

Deferred tax asset; income tax payable given; previous balance in valuation allowance

- LO16-3

(This is a variation of Exercise 16-10, modified to assume a previous balance in the valuation allowance.)

At the end of 2012, Payne Industries had a deferred tax asset account with a balance of \$30 million attributable to a temporary book-tax difference of \$75 million in a liability for estimated expenses. At the end of 2013, the temporary difference is \$70 million. Payne has no other temporary differences. Taxable income for 2013 is \$180 million and the tax rate is 40%.

Payne has a valuation allowance of \$10 million for the deferred tax asset at the beginning of 2013.

Required:

- Prepare the journal entry(s) to record Payne's income taxes for 2013, assuming it is more likely than not that the deferred tax asset will be realized.
- Prepare the journal entry(s) to record Payne's income taxes for 2013, assuming it is more likely than not that one-half of the deferred tax asset will ultimately be realized.

E 16-12

FASB codification research; valuation allowance

- LO16-3

When a company records a deferred tax asset, it may need to also report a valuation allowance if it is "more likely than not" that some portion or all of the deferred tax asset will not be realized. The *FASB Accounting Standards Codification* represents the single source of authoritative U.S. generally accepted accounting principles.

Required:

- Obtain the relevant authoritative literature on disclosure requirements pertaining to how a firm should determine whether a valuation allowance for deferred tax assets is needed using the FASB's Codification Research System at the FASB website (www.fasb.org). What is the specific citation that describes the guidelines for determining the disclosure requirements?
- What are the guidelines?

E 16-13 Southern Atlantic Distributors began operations in January 2013 and purchased a delivery truck for \$40,000. Multiple differences; Southern Atlantic plans to use straight-line depreciation over a four-year expected useful life for financial differences; reporting purposes. For tax purposes, the deduction is 50% of cost in 2013, 30% in 2014, and 20% in 2015. calculate taxable Pretax accounting income for 2013 was \$300,000, which includes interest revenue of \$40,000 from municipal income bonds. The enacted tax rate is 40%.

● LO16-1, LO16-4

Required:

Assuming no differences between accounting income and taxable income other than those described above:

1. Prepare the journal entry to record income taxes in 2013.
2. What is Southern Atlantic's 2013 net income?

E 16-14 For the year ended December 31, 2013, Fidelity Engineering reported pretax accounting income of \$977,000. Multiple Selected information for 2013 from Fidelity's records follows: differences

● LO16-4, LO16-6

Interest income on municipal bonds	\$32,000
Depreciation claimed on the 2013 tax return in excess of depreciation on the income statement	55,000
Carrying amount of depreciable assets in excess of their tax basis at year-end	85,000
Warranty expense reported on the income statement	26,000
Actual warranty expenditures in 2013	16,000

Fidelity's income tax rate is 40%. At January 1, 2013, Fidelity's records indicated balances of zero and \$12,000 in its deferred tax asset and deferred tax liability accounts, respectively.

Required:

1. Determine the amounts necessary to record income taxes for 2013 and prepare the appropriate journal entry.
2. What is Fidelity's 2013 net income?

E 16-15 Allmond Corporation, organized on January 3, 2013, had pretax accounting income of \$14 million and taxable Multiple tax rates income of \$20 million for the year ended December 31, 2013. The 2013 tax rate is 35%. The only difference between accounting income and taxable income is estimated product warranty costs. Expected payments and scheduled tax rates (based on recent tax legislation) are as follows:

● LO16-2, LO16-5

2014	\$2 million	30%
2015	1 million	30%
2016	1 million	30%
2017	2 million	25%

Required:

1. Determine the amounts necessary to record Allmond's income taxes for 2013 and prepare the appropriate journal entry.
2. What is Allmond's 2013 net income?

E 16-16 Arnold Industries has pretax accounting income of \$33 million for the year ended December 31, 2013. The tax Change in tax rates; calculate taxable income rate is 40%. The only difference between accounting income and taxable income relates to an operating lease in which Arnold is the lessee. The inception of the lease was December 28, 2013. An \$8 million advance rent payment at the inception of the lease is tax-deductible in 2013 but, for financial reporting purposes, represents prepaid rent expense to be recognized equally over the four-year lease term.

● LO16-1, LO16-5

Required:

1. Determine the amounts necessary to record Arnold's income taxes for 2013 and prepare the appropriate journal entry.
2. Determine the amounts necessary to record Arnold's income taxes for 2014 and prepare the appropriate journal entry. Pretax accounting income was \$50 million for the year ended December 31, 2014.
3. Assume a new tax law is enacted in 2014 that causes the tax rate to change from 40% to 30% beginning in 2015. Determine the amounts necessary to record Arnold's income taxes for 2014 and prepare the appropriate journal entry.
4. Why is Arnold's 2014 income tax expense different when the tax rate change occurs from what it would be without the change?

E 16-17 Bronson Industries reported a deferred tax liability of \$8 million for the year ended December 31, 2012, related Deferred taxes; change in tax rates to a temporary difference of \$20 million. The tax rate was 40%. The temporary difference is expected to reverse in 2014 at which time the deferred tax liability will become payable. There are no other temporary differences in 2012-2014. Assume a new tax law is enacted in 2013 that causes the tax rate to change from 40% to 30% beginning in 2014. (The rate remains 40% for 2013 taxes.) Taxable income in 2013 is \$30 million.

● LO16-1, LO16-5

Required:

Determine the effect of the change and prepare the appropriate journal entry to record Bronson's income tax expense in 2013. What adjustment, if any, is needed to revise retained earnings as a result of the change?

E 16-18

Multiple temporary differences; record income taxes

● LO16-6

The information that follows pertains to Esther Food Products:

- a. At December 31, 2013, temporary differences were associated with the following future taxable (deductible) amounts:

Depreciation	\$60,000
Prepaid expenses	17,000
Warranty expenses	(12,000)

- b. No temporary differences existed at the beginning of 2013.
 c. Pretax accounting income was \$80,000 and taxable income was \$15,000 for the year ended December 31, 2013.
 d. The tax rate is 40%.

Required:

Determine the amounts necessary to record income taxes for 2013 and prepare the appropriate journal entry.

E 16-19

Multiple temporary differences; record income taxes

● LO16-6

The information that follows pertains to Richards Refrigeration, Inc.:

- a. At December 31, 2013, temporary differences existed between the financial statement carrying amounts and the tax bases of the following:

	(\$ in millions)		
	Carrying Amount	Tax Basis	Future Taxable (Deductible) Amount
Buildings and equipment (net of accumulated depreciation)	\$120	\$90	\$30
Prepaid insurance	50	0	50
Liability—loss contingency	25	0	(25)

- b. No temporary differences existed at the beginning of 2013.
 c. Pretax accounting income was \$200 million and taxable income was \$145 million for the year ended December 31, 2013. The tax rate is 40%.

Required:

- Determine the amounts necessary to record income taxes for 2013 and prepare the appropriate journal entry.
- What is the 2013 net income?

E 16-20

Operating loss carryforward

● LO16-7

During 2013, its first year of operations, Baginski Steel Corporation reported an operating loss of \$375,000 for financial reporting and tax purposes. The enacted tax rate is 40%.

Required:

- Prepare the journal entry to recognize the income tax benefit of the operating loss. Assume the weight of available evidence suggests future taxable income sufficient to benefit from future deductible amounts from the operating loss carryforward.
- Show the lower portion of the 2013 income statement that reports the income tax benefit of the operating loss.

E 16-21

Operating loss carryback

● LO16-7

Wynn Sheet Metal reported an operating loss of \$100,000 for financial reporting and tax purposes in 2013. The enacted tax rate is 40%. Taxable income, tax rates, and income taxes paid in Wynn's first four years of operation were as follows:

	Taxable Income	Tax Rates	Income Taxes Paid
2009	\$60,000	30%	\$18,000
2010	70,000	30	21,000
2011	80,000	40	32,000
2012	60,000	45	27,000

Required:

- Prepare the journal entry to recognize the income tax benefit of the operating loss. Wynn elects the carryback option.
- Show the lower portion of the 2013 income statement that reports the income tax benefit of the operating loss.

E 16-22
Operating loss
carryback and
carryforward
● LO16-7

(This exercise is based on the situation described in E 16-21, modified to include a carryforward in addition to a carryback.)

Wynn Sheet Metal reported an operating loss of \$160,000 for financial reporting and tax purposes in 2013. The enacted tax rate is 40%. Taxable income, tax rates, and income taxes paid in Wynn’s first four years of operation were as follows:

	Taxable Income	Tax Rates	Income Taxes Paid
2009	\$60,000	30%	\$18,000
2010	70,000	30	21,000
2011	80,000	40	32,000
2012	60,000	45	27,000

Required:

1. Prepare the journal entry to recognize the income tax benefit of the operating loss. Wynn elects the carryback option.
2. Show the lower portion of the 2013 income statement that reports the income tax benefit of the operating loss.

E 16-23
Identifying
income tax
deferrals

Listed below are ten independent situations. For each situation indicate (by letter) whether it will create a deferred tax asset (A), a deferred tax liability (L), or neither (N).

● LO16-1, LO16-2,
LO16-4, LO16-7

Situation

- | | |
|-------|--|
| _____ | 1. Advance payments on insurance deductible when paid. |
| _____ | 2. Estimated warranty costs, tax deductible when paid. |
| _____ | 3. Rent revenue collected in advance; cash basis for tax purposes. |
| _____ | 4. Interest received from investments in municipal bonds. |
| _____ | 5. Prepaid expenses tax deductible when paid. |
| _____ | 6. Operating loss carryforward. |
| _____ | 7. Operating loss carryback. |
| _____ | 8. Straight-line depreciation for financial reporting; MACRS for tax purposes. |
| _____ | 9. Organization costs expensed when incurred, tax deductible over 15 years. |
| _____ | 10. Life insurance proceeds received upon the death of the company president. |

E 16-24
Balance sheet
classification

At December 31, DePaul Corporation had a \$16 million balance in its deferred tax asset account and a \$68 million balance in its deferred tax liability account. The balances were due to the following cumulative temporary differences:

● LO16-4, LO16-5,
LO16-6, LO16-8

1. Estimated warranty expense, \$15 million: expense recorded in the year of the sale; tax-deductible when paid (one-year warranty).
2. Depreciation expense, \$120 million: straight-line in the income statement; MACRS on the tax return.
3. Income from installment sales of properties, \$50 million: income recorded in the year of the sale; taxable when received equally over the next five years.
4. Rent revenue collected in advance, \$25 million; taxable in the year collected; recorded as income when earned the following year.

Required:

Show how any deferred tax amounts should be classified and reported in the December 31 balance sheet. The tax rate is 40%.

E 16-25
Multiple
tax rates;
balance sheet
classification

Case Development began operations in December 2013. When property is sold on an installment basis, Case recognizes installment income for financial reporting purposes in the year of the sale. For tax purposes, installment income is reported by the installment method. 2013 installment income was \$600,000 and will be collected over the next three years. Scheduled collections and enacted tax rates for 2014–2016 are as follows:

● LO16-1, LO16-4,
LO16-5, LO16-8

2014	\$150,000	30%
2015	250,000	40
2016	200,000	40

Pretax accounting income for 2013 was \$810,000, which includes interest revenue of \$10,000 from municipal bonds. The enacted tax rate for 2013 is 30%.

Required:

1. Assuming no differences between accounting income and taxable income other than those described above, prepare the appropriate journal entry to record Case’s 2013 income taxes.
2. What is Case’s 2013 net income?
3. How should the deferred tax amount be classified in a classified balance sheet?

E 16-26

Multiple differences; multiple tax rates; balance sheet classification

- LO16-1, LO16-2, LO16-4, LO16-5, LO16-6, LO16-8

(This exercise is a variation of E 16-25, modified to include a second temporary difference.) Case Development began operations in December 2013. When property is sold on an installment basis, Case recognizes installment income for financial reporting purposes in the year of the sale. For tax purposes, installment income is reported by the installment method. 2013 installment income was \$600,000 and will be collected over the next three years. Scheduled collections and enacted tax rates for 2014–2016 are as follows:

2014	\$150,000	30%
2015	250,000	40
2016	200,000	40

Case also had product warranty costs of \$80,000 expensed for financial reporting purposes in 2013. For tax purposes, only the \$20,000 of warranty costs actually paid in 2013 was deducted. The remaining \$60,000 will be deducted for tax purposes when paid over the next three years as follows:

2014	\$20,000
2015	25,000
2016	15,000

Pretax *accounting* income for 2013 was \$810,000, which includes interest revenue of \$10,000 from municipal bonds. The enacted tax rate for 2013 is 30%.

Required:

- Assuming no differences between accounting income and taxable income other than those described above, prepare the appropriate journal entry to record Case's 2013 income taxes.
- What is Case's 2013 net income?
- How should the deferred tax amounts be classified in a classified balance sheet?

E 16-27

Concepts; terminology

- LO16-1 through LO16-8

Listed below are several terms and phrases associated with accounting for income taxes. Pair each item from List A with the item from List B (by letter) that is most appropriately associated with it.

List A	List B
___ 1. No tax consequences.	a. Deferred tax liability.
___ 2. Originates, then reverses.	b. Deferred tax asset.
___ 3. Revise deferred tax amounts.	c. 2 years.
___ 4. Operating loss.	d. Current and deferred tax consequence combined.
___ 5. Future tax effect of prepaid expenses tax deductible when paid.	e. Temporary difference.
___ 6. Loss carryback.	f. Specific tax rates times amounts reversing each year.
___ 7. Future tax effect of estimated warranty expense.	g. Nontemporary differences.
___ 8. Valuation allowance.	h. When enacted tax rate changes.
___ 9. Phased-in change in rates.	i. Same as related asset or liability.
___ 10. Balance sheet classifications.	j. "More likely than not" test.
___ 11. Individual tax consequences of financial statement components.	k. Intraproduct tax allocation.
___ 12. Income tax expense.	l. Negative taxable income.

E 16-28

Tax credit; uncertainty regarding sustainability

- LO16-9

Delta Catfish Company has taken a position in its tax return to claim a tax credit of \$10 million (direct reduction in taxes payable) and has determined that its sustainability is "more likely than not," based on its technical merits. Delta has developed the probability table shown below of all possible material outcomes:

Probability Table (\$ in millions)

Amount of the tax benefit that management expects to receive	\$10	\$ 8	\$ 6	\$ 4	\$ 2
Percentage likelihood that the tax benefit will be sustained at this level	10%	20%	25%	20%	25%

Delta's taxable income is \$85 million for the year. Its effective tax rate is 40%. The tax credit would be a direct reduction in current taxes payable.

Required:

- At what amount would Delta measure the tax benefit in its income statement?
- Prepare the appropriate journal entry for Delta to record its income taxes for the year.

E 16-29
 Intraperiod tax
 allocation
 ● LO16-10

The following income statement does not reflect intraperiod tax allocation.

Required:

Recast the income statement to reflect intraperiod tax allocation.

INCOME STATEMENT
For the Fiscal Year Ended March 31, 2013
 (\$ in millions)

Revenues	\$830
Cost of goods sold	(350)
Gross profit	480
Operating expenses	(180)
Income tax expense	(86)
Income before discontinued operations and extraordinary item	214
Loss from discontinued operations	(10)
Extraordinary casualty loss	(75)
Net income	\$129

The company's tax rate is 40%.

E 16-30
 FASB codification
 research
 ● LO16-5, LO16-8,
 LO16-10

Access the FASB's Codification Research System at the FASB website (www.fasb.org). Determine the specific citation for accounting for each of the following items:

1. The specific items to which income tax expense is allocated for intraperiod tax allocation.
2. The tax rate used to calculate deferred tax assets and liabilities.
3. The required disclosures in the notes to financial statements for the components of income tax expense.

CPA and CMA Review Questions

**CPA Exam
 Questions**

The following questions are adapted from a variety of sources including questions developed by the AICPA Board of Examiners and those used in the Kaplan CPA Review Course to study accounting for income taxes while preparing for the CPA examination. Determine the response that best completes the statements or questions.

- LO16-1
 1. Scott Corp. received cash of \$20,000 that was included in revenues in its 2013 financial statements, of which \$12,000 will not be taxable until 2014. Scott's enacted tax rate is 30% for 2013, and 25% for 2014. What amount should Scott report in its 2013 balance sheet for deferred income tax liability?
 - a. \$2,000
 - b. \$2,400
 - c. \$3,000
 - d. \$3,600
- LO16-2
 2. West Corp. leased a building and received the \$36,000 annual rental payment on June 15, 2013. The beginning of the lease was July 1, 2013. Rental income is taxable when received. West's tax rates are 30% for 2013 and 40% thereafter. West had no other permanent or temporary differences. West determined that no valuation allowance was needed. What amount of deferred tax asset should West report in its December 31, 2013, balance sheet?
 - a. \$ 5,400
 - b. \$ 7,200
 - c. \$10,800
 - d. \$14,400
- LO16-3
 3. In its December 31, 2013, balance sheet, Shin Co. had income taxes payable of \$13,000 and a current deferred tax asset of \$20,000 before determining the need for a valuation account. Shin had reported a current deferred tax asset of \$15,000 at December 31, 2012. No estimated tax payments were made during 2013.

At December 31, 2013, Shin determined that it was more likely than not that 10% of the deferred tax asset would not be realized. In its 2013 income statement, what amount should Shin report as total income tax expense?

- a. \$ 8,000
- b. \$ 8,500
- c. \$10,000
- d. \$13,000

● LO16-5

4. Stone Co. began operations in 2013 and reported \$225,000 in income before income taxes for the year. Stone's 2013 tax depreciation exceeded its book depreciation by \$25,000. Stone also had nondeductible book expenses of \$10,000 related to permanent differences. Stone's tax rate for 2013 was 40%, and the enacted rate for years after 2013 is 35%. In its December 31, 2013, balance sheet, what amount of deferred income tax liability should Stone report?

- a. \$ 8,750
- b. \$10,000
- c. \$12,250
- d. \$14,000

● LO16-5

5. Black Co. organized on January 2, 2013, had pretax financial statement income of \$500,000 and taxable income of \$800,000 for the year ended December 31, 2013. The only temporary differences are accrued product warranty costs, which Black expects to pay as follows:

2014	\$100,000
2015	\$ 50,000
2016	\$ 50,000
2017	\$100,000

The enacted income tax rates are 25% for 2013, 30% for 2014 through 2016, and 35% for 2017. Black believes that future years' operations will produce profits. In its December 31, 2013, balance sheet, what amount should Black report as deferred tax asset?

- a. \$50,000
- b. \$75,000
- c. \$90,000
- d. \$95,000

● LO16-7

6. Dix, Inc., a calendar-year corporation, reported the following operating income (loss) before income tax for its first three years of operations:

2011	\$100,000
2012	(200,000)
2013	400,000

There are no permanent or temporary differences between operating income (loss) for financial and income tax reporting purposes. When filing its 2012 tax return, Dix did not elect to forego the carryback of its loss for 2012. Assume a 40% tax rate for all years. What amount should Dix report as its income tax liability at December 31, 2013?

- a. \$ 60,000
- b. \$ 80,000
- c. \$120,000
- d. \$160,000

● LO16-10

7. An example of intraperiod income tax allocation is
- a. Reporting an extraordinary item in the income statement, net of direct tax effects.
 - b. Interest income on municipal obligations.
 - c. Estimated expenses for major repairs accrued for financial statement purposes in one year, but deducted for income tax purposes when paid in a subsequent year.
 - d. Rental income included in income for income tax purposes when collected, but deferred for financial statement purposes until earned in a subsequent year.

Beginning in 2011, International Financial Reporting Standards are tested on the CPA exam along with U.S. GAAP. The following question deals with the application of IFRS in accounting for income taxes.

● LO16-10

8. Which of the following items is treated differently under accounting for taxation guidance of U.S. GAAP and IFRS?
- a. Reporting an extraordinary item in the income statement, net of direct tax effects..
 - b. Reporting a deferred tax asset for a future deductible amount.
 - c. Reporting a deferred tax liability for a future taxable amount.
 - d. Reporting a deferred tax asset for a net operating loss.

The following questions dealing with accounting for income taxes are adapted from questions that previously appeared on Certified Management Accountant (CMA) examinations. The CMA designation sponsored by the Institute of Management Accountants (www.imanet.org) provides members with an objective measure of knowledge and competence in the field of management accounting. Determine the response that best completes the statements or questions.

● LO16-2

1. Which one of the following temporary differences will result in a deferred tax asset?
 - a. Use of the straight-line depreciation method for financial statement purposes and the modified Accelerated Cost Recovery System (MACRS) for income tax purposes.
 - b. Installment sale profits accounted for on the accrual basis for financial statement purposes and on a cash basis for income tax purposes.
 - c. Advance rental receipts accounted for on the accrual basis for financial statement purposes and on a cash basis for tax purposes.
 - d. Investment gains accounted for under the equity method for financial statement purposes and under the cost method for income tax purposes.

Questions 2 and 3 are based on the following information. Bearings Manufacturing Company Inc. purchased a new machine on January 1, 2014 for \$100,000. The company uses the straight-line depreciation method with an estimated equipment life of 5 years and a zero salvage value for financial statement purposes, and uses the 3-year Modified Accelerated Cost Recovery System (MACRS) with an estimated equipment life of 3 years for income tax reporting purposes. Bearings is subject to a 35% marginal income tax rate. Assume that the deferred tax liability at the beginning of the year is zero and that Bearings has a positive earnings tax position. The MACRS depreciation rates for 3-year equipment are shown below.

Year	Rate
1	33.33%
2	44.45
3	14.81
4	7.41

● LO16-1

2. What is the deferred tax liability at December 31, 2014 (rounded to the nearest whole dollar)?
 - a. \$ 7,000
 - b. \$33,330
 - c. \$11,667
 - d. \$ 4,667

● LO16-5

3. For Bearings Manufacturing Company Inc., assume that the following new corporate income tax rates will go into effect:

2015–2017	40%
2018	45%

What is the amount of the deferred tax asset/liability at December 31, 2014 (rounded to the nearest whole dollar)?

- a. \$0
- b. \$9,000
- c. \$2,668
- d. \$6,332

Problems

An alternate exercise and problem set is available on the text website: www.mhhe.com/spiceland7e

P 16-1
Single temporary difference originates each year for four years

● LO16-1

Alsop Consulting sometimes performs services for which it receives payment at the conclusion of the engagement, up to six months after services commence. Alsop recognizes service revenue for financial reporting purposes when the services are performed. For tax purposes, revenue is reported when fees are collected. Service revenue, collections, and pretax accounting income for 2012–2015 are as follows:

	Service Revenue	Collections	Pretax Accounting Income
2012	\$650,000	\$620,000	\$186,000
2013	750,000	770,000	250,000
2014	715,000	700,000	220,000
2015	700,000	720,000	200,000

There are no differences between accounting income and taxable income other than the temporary difference described above. The enacted tax rate for each year is 40%.

Required:

1. Prepare the appropriate journal entry to record Alsup's 2013 income taxes.
2. Prepare the appropriate journal entry to record Alsup's 2014 income taxes.
3. Prepare the appropriate journal entry to record Alsup's 2015 income taxes.

(Hint: You may find it helpful to prepare a schedule that shows the balances in service revenue receivable at December 31, 2012–2015.)

P 16-2

Temporary difference; determine deferred tax amount for three years; balance sheet classification

● LO16-2, LO16-8

Times-Roman Publishing Company reports the following amounts in its first three years of operation:

(\$ in 000s)	2013	2014	2015
Pretax accounting income	\$250	\$240	\$230
Taxable income	290	220	260

The difference between pretax accounting income and taxable income is due to subscription revenue for one-year magazine subscriptions being reported for tax purposes in the year received, but reported in the income statement in later years when earned. The income tax rate is 40% each year. Times-Roman anticipates profitable operations in the future.

Required:

1. What is the balance sheet account for which a temporary difference is created by this situation?
2. For each year, indicate the cumulative amount of the temporary difference at year-end.
3. Determine the balance in the related deferred tax account at the end of each year. Is it a deferred tax asset or a deferred tax liability?
4. How should the deferred tax amount be classified and reported in the balance sheet?

P 16-3

Change in tax rate; single temporary difference

● LO16-1, LO16-5

Dixon Development began operations in December 2013. When lots for industrial development are sold, Dixon recognizes income for financial reporting purposes in the year of the sale. For some lots, Dixon recognizes income for tax purposes when collected. Income recognized for financial reporting purposes in 2013 for lots sold this way was \$12 million, which will be collected over the next three years. Scheduled collections for 2014–2016 are as follows:

2014	\$ 4 million
2015	5 million
2016	3 million
	<u>\$12 million</u>

Pretax accounting income for 2013 was \$16 million. The enacted tax rate is 40%.

Required:

1. Assuming no differences between accounting income and taxable income other than those described above, prepare the journal entry to record income taxes in 2013.
2. Suppose a new tax law, revising the tax rate from 40% to 35%, beginning in 2015, is enacted in 2014, when pretax accounting income was \$15 million. Prepare the appropriate journal entry to record income taxes in 2014.
3. If the new tax rate had not been enacted, what would have been the appropriate balance in the deferred tax liability account at the end of 2014? Why?

P 16-4

Change in tax rate; record taxes for four years

● LO16-1, LO16-5

Zekany Corporation would have had identical income before taxes on both its income tax returns and income statements for the years 2013 through 2016 except for differences in depreciation on an operational asset. The asset cost \$120,000 and is depreciated for income tax purposes in the following amounts:

2013	\$39,600
2014	52,800
2015	18,000
2016	9,600

The operational asset has a four-year life and no residual value. The straight-line method is used for financial reporting purposes.

Income amounts before depreciation expense and income taxes for each of the four years were as follows.

	2013	2014	2015	2016
Accounting income before taxes and depreciation	\$60,000	\$80,000	\$70,000	\$70,000

Assume the average and marginal income tax rate for 2013 and 2014 was 30%; however, during 2014 tax legislation was passed to raise the tax rate to 40% beginning in 2015. The 40% rate remained in effect through the years 2015 and 2016. Both the accounting and income tax periods end December 31.

Required:

Prepare the journal entries to record income taxes for the years 2013 through 2016.

P 16-5

Change in tax rate; record taxes for four years

- LO16-1, LO16-4, LO16-5

The DeVille Company reported pretax accounting income on its income statement as follows:

2013	\$350,000
2014	270,000
2015	340,000
2016	380,000

Included in the income of 2013 was an installment sale of property in the amount of \$50,000. However, for tax purposes, DeVille reported the income in the year cash was collected. Cash collected on the installment sale was \$20,000 in 2014, \$25,000 in 2015, and \$5,000 in 2016.

Included in the 2015 income was \$15,000 interest from investments in municipal bonds.

The enacted tax rate for 2013 and 2014 was 30%, but during 2014 new tax legislation was passed reducing the tax rate to 25% for the years 2015 and beyond.

Required:

Prepare the year-end journal entries to record income taxes for the years 2013–2016.

P 16-6

Multiple differences; temporary difference yet to originate; multiple tax rates; classification

- LO16-5, LO16-6, LO16-8

You are the new accounting manager at the Barry Transport Company. Your CFO has asked you to provide input on the company's income tax position based on the following:

1. Pretax accounting income was \$41 million and taxable income was \$8 million for the year ended December 31, 2013.
2. The difference was due to three items:
 - a. Tax depreciation exceeds book depreciation by \$30 million in 2013 for the business complex acquired that year. This amount is scheduled to be \$60 million in 2014 and to reverse as (\$50 million) and (\$40 million) in 2015, and 2016, respectively.
 - b. Insurance of \$9 million was paid in 2013 for 2014 coverage.
 - c. A \$6 million loss contingency was accrued in 2013, to be paid in 2015.
3. No temporary differences existed at the beginning of 2013.
4. The tax rate is 40%.

Required:

1. Determine the amounts necessary to record income taxes for 2013 and prepare the appropriate journal entry.
2. How should the deferred tax amounts be classified in a classified balance sheet?
3. Assume the enacted federal income tax law specifies that the tax rate will change from 40% to 35% in 2015. When scheduling the reversal of the depreciation difference, you were uncertain as to how to deal with the fact that the difference will continue to originate in 2014 before reversing the next two years. Upon consulting **PricewaterhouseCoopers'** *Comperio* database, you found:

.441 Depreciable and amortizable assets

Only the reversals of the temporary difference at the balance sheet date would be scheduled. Future originations are not considered in determining the reversal pattern of temporary differences for depreciable assets. *FAS 109* [FASB ASC 740–Income Taxes] is silent as to how the balance sheet date temporary differences are deemed to reverse, but the FIFO pattern is intended.

You interpret that to mean that, when future taxable amounts are being scheduled, and a portion of a temporary difference has yet to originate, only the reversals of the *temporary difference at the balance sheet date* can be scheduled and multiplied by the tax rate that will be in effect when the difference reverses. Future originations (like the depreciation difference the second year) are not considered when determining the timing of the reversal. For the existing temporary difference, it is assumed that the difference will reverse the first year the difference begins reversing.

Determine the amounts necessary to record income taxes for 2013 and prepare the appropriate journal entry.

P 16-7

Multiple differences; calculate taxable income; balance sheet classification

- LO16-4, LO16-6, LO16-8

Sherrod, Inc., reported pretax accounting income of \$76 million for 2013. The following information relates to differences between pretax accounting income and taxable income:

- a. Income from installment sales of properties included in pretax accounting income in 2013 exceeded that reported for tax purposes by \$3 million. The installment receivable account at year-end had a balance of \$4 million (representing portions of 2012 and 2013 installment sales), expected to be collected equally in 2014 and 2015.
- b. Sherrod was assessed a penalty of \$2 million by the Environmental Protection Agency for violation of a federal law in 2013. The fine is to be paid in equal amounts in 2013 and 2014.
- c. Sherrod rents its operating facilities but owns one asset acquired in 2012 at a cost of \$80 million. Depreciation is reported by the straight-line method assuming a four-year useful life. On the tax return, deductions for

depreciation will be more than straight-line depreciation the first two years but less than straight-line depreciation the next two years (\$ in millions):

	Income Statement	Tax Return	Difference
2012	\$20	\$26	\$ (6)
2013	20	35	(15)
2014	20	12	8
2015	20	7	13
	<u>\$80</u>	<u>\$80</u>	<u>\$ 0</u>

- Warranty expense of \$3 million is reported in 2013. For tax purposes, the expense is deducted when costs are incurred, \$2 million in 2013. At December 31, 2013, the warranty liability was \$2 million (after adjusting entries). The balance was \$1 million at the end of 2012.
- In 2013, Sherrod accrued an expense and related liability for estimated paid future absences of \$7 million relating to the company's new paid vacation program. Future compensation will be deductible on the tax return when actually paid during the next two years (\$4 million in 2014; \$3 million in 2015).
- During 2012, accounting income included an estimated loss of \$2 million from having accrued a loss contingency. The loss is paid in 2013 at which time it is tax deductible.

Balances in the deferred tax asset and deferred tax liability accounts at January 1, 2013, were \$1.2 million and \$2.8 million, respectively. The enacted tax rate is 40% each year.

Required:

- Determine the amounts necessary to record income taxes for 2013 and prepare the appropriate journal entry.
- What is the 2013 net income?
- Show how any deferred tax amounts should be classified and reported in the 2013 balance sheet.

Arndt, Inc., reported the following for 2013 and 2014 (\$ in millions):

	2013	2014
Revenues	\$888	\$983
Expenses	760	800
Pretax accounting income (income statement)	\$128	\$183
Taxable income (tax return)	\$120	\$200
Tax rate: 40%		

P 16-8

Multiple differences; taxable income given; two years; balance sheet classification; change in tax rate

- LO16-4, LO16-6, LO16-8

- Expenses each year include \$30 million from a two-year casualty insurance policy purchased in 2013 for \$60 million. The cost is tax deductible in 2013.
- Expenses include \$2 million insurance premiums each year for life insurance on key executives.
- Arndt sells one-year subscriptions to a weekly journal. Subscription sales collected and taxable in 2013 and 2014 were \$33 million and \$35 million, respectively. Subscriptions included in 2013 and 2014 financial reporting revenues were \$25 million (\$10 million collected in 2012 but not earned until 2013) and \$33 million, respectively. Hint: View this as two temporary differences—one reversing in 2013; one originating in 2013.
- 2013 expenses included a \$17 million unrealized loss from reducing investments (classified as trading securities) to fair value. The investments were sold in 2014.
- During 2012, accounting income included an estimated loss of \$5 million from having accrued a loss contingency. The loss was paid in 2013 at which time it is tax deductible.
- At January 1, 2013, Arndt had a deferred tax asset of \$6 million and no deferred tax liability.

Required:

- Which of the five differences described are temporary and which are permanent differences? Why?
- Prepare a schedule that (a) reconciles the difference between pretax accounting income and taxable income and (b) determines the amounts necessary to record income taxes for 2013. Prepare the appropriate journal entry.
- Show how any 2013 deferred tax amounts should be classified and reported on the 2013 balance sheet.
- Prepare a schedule that (a) reconciles the difference between pretax accounting income and taxable income and (b) determines the amounts necessary to record income taxes for 2014. Prepare the appropriate journal entry.
- Explain how any 2014 deferred tax amounts should be classified and reported on the 2014 balance sheet.
- Suppose that during 2014, tax legislation was passed that will lower Arndt's effective tax rate to 35% beginning in 2015. Repeat requirement 4.

P 16-9
Determine deferred tax assets and liabilities
● LO16-6

Corning-Howell reported taxable income in 2013 of \$120 million. At December 31, 2013, the reported amount of some assets and liabilities in the financial statements differed from their tax bases as indicated below:

	Carrying Amount	Tax Basis
Assets		
Current		
Allowance for uncollectable accounts	\$ 10 million	\$ 12 million
Prepaid insurance	20 million	0
Prepaid advertising	6 million	0
Noncurrent		
Investments at fair value with changes in OCI*	4 million	0
Buildings and equipment (net)	360 million	280 million
Liabilities		
Current		
Liability—subscriptions received	14 million	0
Long-term		
Liability—postretirement benefits	594 million	0

*Gains and losses taxable when investments are sold.

The total deferred tax asset and deferred tax liability amounts at January 1, 2013, were \$250 million and \$40 million, respectively. The enacted tax rate is 40% each year.

Required:

1. Determine the total deferred tax asset and deferred tax liability amounts at December 31, 2013.
2. Determine the increase (decrease) in the deferred tax asset and deferred tax liability accounts at December 31, 2013.
3. Determine the income tax payable currently for the year ended December 31, 2013.
4. Prepare the journal entry to record income taxes for 2013.
5. Show how the deferred tax amounts should be classified and reported in the 2013 balance sheet.

P 16-10
Operating loss carryback and carryforward; multiple differences
● LO16-2, LO16-4, LO16-7

Fores Construction Company reported a pretax operating loss of \$135 million for financial reporting purposes in 2013. Contributing to the loss were (a) a penalty of \$5 million assessed by the Environmental Protection Agency for violation of a federal law and paid in 2013 and (b) an estimated loss of \$10 million from accruing a loss contingency. The loss will be tax deductible when paid in 2014.

The enacted tax rate is 40%. There were no temporary differences at the beginning of the year and none originating in 2013 other than those described above. Taxable income in Fores’s two previous years of operation was as follows:

2011	\$75 million
2012	30 million

Required:

1. Prepare the journal entry to recognize the income tax benefit of the operating loss in 2013. Fores elects the carryback option.
2. Show the lower portion of the 2013 income statement that reports the income tax benefit of the operating loss.
3. Prepare the journal entry to record income taxes in 2014 assuming pretax accounting income is \$60 million. No additional temporary differences originate in 2014.

P 16-11
Valuation allowance; Ford Motor Company
● LO16-3, LO16-8

Ford Motor Company revealed in its 10-K filing that its valuation allowance against deferred tax assets at the end of 2010 was \$15.7 billion, one of the five largest among U.S. public companies. Here’s an excerpt from a press report from *Bloomberg* in March, 2011 regarding this allowance:

Ford Motor Co. (F), after earning \$9.3 billion in the last two years, may . . . eliminate from its balance sheet a valuation allowance held against deferred tax assets, it said in a federal filing this week.

Keith Naughton, “Ford’s Accounting Revision May Add \$13 Billion to Profit, Tax Expert Says,” *Bloomberg*, March 3, 2011.

The following is an excerpt from a disclosure note to Ford's 2010 balance sheet:

NOTE 23. INCOME TAXES (In Part)

Components of Deferred Tax Assets and Liabilities

The components of deferred tax assets and liabilities at December 31 were as follows (in millions):

	March 31,	
	2010	2009
Deferred tax assets:		
Employee benefit plans	\$ 6,332	\$ 8,590
Net operating loss carryforwards	4,124	1,901
Tax credit carryforwards	4,546	2,941
Research expenditures	2,336	2,477
Dealer and customer allowances and claims	1,428	1,960
Other foreign deferred tax assets	1,513	6,441
Allowance for credit losses	252	529
All other	2,839	2,347
Total gross deferred tax assets	23,370	27,186
Less: valuation allowance	(15,664)	(17,396)
Total net deferred tax assets	7,706	9,790
Deferred tax liabilities		
Leasing transactions	928	1,411
Deferred income	2,101	—
Depreciation and amortization (excluding leasing transactions)	1,146	3,080
Finance receivables	716	719
Other foreign deferred tax liabilities	334	1,240
All other	1,613	2,282
Total deferred tax liabilities	6,838	8,732
Net deferred tax assets/(liabilities)	\$ 868	\$ 1,058

Required:

- As indicated in the note, Ford had both deferred tax assets and deferred tax liabilities at the end of 2010. Some of each were current, some noncurrent. The balance sheets that year, though, reported only noncurrent deferred tax assets and current deferred tax liabilities. Explain why Ford's current assets and noncurrent deferred tax liabilities were not explicitly reported. Explain what the current and noncurrent deferred tax assets represent.
- What is a valuation allowance against deferred tax assets? When must such an allowance be recorded? Use Ford's situation to help illustrate your response. Assume an effective tax rate of 35%.
- Is the write-down of deferred tax assets permanent? Explain why Ford is able to consider reclaiming its valuation allowance.

P 16-12
Integrating
problem—bonds,
leases, taxes
● LO16-1, LO16-5,
LO16-8

The long-term liabilities section of CPS Transportation's December 31, 2012, balance sheet included the following:

- A lease liability with 15 remaining lease payments of \$10,000 each, due annually on January 1:

Lease liability	\$76,061
Less: current portion	2,394
	<u>\$73,667</u>

The incremental borrowing rate at the inception of the lease was 11% and the lessor's implicit rate, which was known by CPS Transportation, was 10%.

- A deferred income tax liability due to a single temporary difference. The only difference between CPS Transportation's taxable income and pretax accounting income is depreciation on a machine acquired on January 1, 2012, for \$500,000. The machine's estimated useful life is five years, with no salvage value. Depreciation

is computed using the straight-line method for financial reporting purposes and the MACRS method for tax purposes. Depreciation expense for tax and financial reporting purposes for 2013 through 2016 is as follows:

Year	MACRS Depreciation	Straight-line Depreciation	Difference
2013	\$160,000	\$100,000	\$60,000
2014	80,000	100,000	(20,000)
2015	70,000	100,000	(30,000)
2016	60,000	100,000	(40,000)

The enacted federal income tax rates are 35% for 2012 and 40% for 2013 through 2016. For the year ended December 31, 2013, CPS's income before income taxes was \$900,000.

On July 1, 2013, CPS Transportation issued \$800,000 of 9% bonds. The bonds mature in 20 years and interest is payable each January 1 and July 1. The bonds were issued at a price to yield the investors 10%. CPS records interest at the effective interest rate.

Required:

1. Determine CPS Transportation's income tax expense and net income for the year ended December 31, 2013.
2. Determine CPS Transportation's interest expense for the year ended December 31, 2013.
3. Prepare the long-term liabilities section of CPS Transportation's December 31, 2013, balance sheet.

P 16-13

Multiple differences; uncertain tax position

- LO16-3, LO16-4, LO16-6, LO16-9

Tru Developers, Inc., sells plots of land for industrial development. Tru recognizes income for financial reporting purposes in the year it sells the plots. For some of the plots sold this year, Tru took the position that it could recognize the income for tax purposes when the installments are collected. Income that Tru recognized for financial reporting purposes in 2013 for plots in this category was \$60 million. The company expected to collect 60% of each sale in 2014 and 40% in 2015. This amount over the next two years is as follows:

2014	\$36 million
2015	24 million
	<u>\$60 million</u>

Tru's pretax accounting income for 2013 was \$90 million. In its income statement, Tru reported interest income of \$15 million, unrelated to the land sales, for which the company's position is that the interest is not taxable. Accordingly, the interest was not reported on the tax return. There are no differences between accounting income and taxable income other than those described above. The enacted tax rate is 40 percent.

Management believes the tax position taken on the land sales has a greater than 50% chance of being upheld based on its technical merits, but the position taken on the interest has a less than 50% chance of being upheld. It is further believed that the following likelihood percentages apply to the tax treatment of the land sales (\$ in millions):

Amount Qualifying for Installment Sales Treatment	Percentage Likelihood of Tax Treatment Being Sustained
\$60	20%
50	20%
40	20%
30	20%
20	20%

Required:

1. What portion of the tax benefit of tax-free interest will Tru recognize on its 2013 tax return?
2. What portion of the tax benefit of tax-free interest will Tru recognize on its 2013 financial statements?
3. What portion of the tax on the \$60 million income from the plots sold on an installment basis will Tru defer on its 2013 tax return? What portion of the tax on the \$60 million income from the plots sold on an installment basis will Tru defer in its 2013 financial statements? How is the difference between these two amounts reported?
4. Prepare the journal entry to record income taxes in 2013 assuming full recognition of the tax benefits in the financial statements of both differences between pretax accounting income and taxable income.
5. Prepare the journal entry to record income taxes in 2013 assuming the recognition of the tax benefits in the financial statements you indicated in requirements 1-3.

Broaden Your Perspective

Apply your critical-thinking ability to the knowledge you've gained. These cases will provide you an opportunity to develop your research, analysis, judgment, and communication skills. You also will work with other students, integrate what you've learned, apply it in real world situations, and consider its global and ethical ramifications. This practice will broaden your knowledge and further develop your decision-making abilities.

Analysis

Case 16-1

Basic concepts

- LO16-1 through LO16-8

One of the longest debates in accounting history is the issue of deferred taxes. The controversy began in the 1940s and has continued, even after the FASB issued *Statement of Financial Accounting Standards No. 109* [FASB ASC 740: Income Taxes] in 1992. At issue is the appropriate treatment of tax consequences of economic events that occur in years other than that of the events themselves.

Required:

1. Distinguish between temporary differences and permanent differences. Provide an example of each.
2. Distinguish between *intra*period tax allocation and *inter*period tax allocation (deferred tax accounting). Provide an example of each.
3. How are deferred tax assets and deferred tax liabilities classified and reported in the financial statements?

Integrating

Case 16-2

Postretirement benefits

- LO16-2

FASB ASC 715-60: Compensation-Retirement Benefits-Defined Benefit Plans-Other Postretirement (previously *Statement of Financial Accounting Standards No. 106*) establishes accounting standards for postretirement benefits other than pensions, most notably postretirement health care benefits. Essentially, the standard requires companies to accrue compensation expense each year employees perform services, for the expected cost of providing future postretirement benefits that can be attributed to that service. Typically, companies do not prefund these costs for two reasons: (a) unlike pension liabilities, no federal law requires companies to fund nonpension postretirement benefits and (b) funding contributions, again unlike for pension liabilities, are not tax deductible. (The costs aren't tax deductible until paid to, or on behalf of, employees.)

Required:

1. As a result of being required to record the periodic postretirement expense and related liability, most companies now report lower earnings and higher liabilities. How might many companies also report higher assets as a result of GAAP for postretirement plans?
2. One objection to current GAAP as cited in the chapter is the omission of requirements to discount deferred tax amounts to their present values. This objection is inappropriate in the context of deferred tax amounts necessitated by accounting for postretirement benefits. Why?

Integrating

Case 16-3

Income taxes and investment securities;
Dominion Resources

- LO16-1, LO16-2, LO16-8

Dominion Resources, Inc., is one of the nation's largest producers of energy. Corporate headquarters are in Richmond, VA. The following is an excerpt from a recent annual report.

INVESTMENT SECURITIES (IN PART)

... securities are reported at fair value with realized gains and losses and any other-than-temporary declines in fair value included in other income and unrealized gains and losses reported as a component of AOCI, net of tax.

Dominion's statement of comprehensive income reported an "Unrealized gain on investment securities, net of \$83 million tax expense of \$126 million."

Required:

What would have been Dominion's journal entry to reflect the fair value of the investments?

Integrating

Case 16-4

Tax effects of accounting changes and error correction; six situations

- LO16-1, LO16-2, LO16-8

Williams-Santana Inc. is a manufacturer of high-tech industrial parts that was started in 1999 by two talented engineers with little business training. In 2013, the company was acquired by one of its major customers. As part of an internal audit, the following facts were discovered. The audit occurred during 2013 before any adjusting entries or closing entries were prepared. The income tax rate is 40% for all years.

- a. A five-year casualty insurance policy was purchased at the beginning of 2011 for \$35,000. The full amount was debited to insurance expense at the time.
- b. On December 31, 2012, merchandise inventory was overstated by \$25,000 due to a mistake in the physical inventory count using the periodic inventory system.

Real World Financials

- The company changed inventory cost methods to FIFO from LIFO at the end of 2013 for both financial statement and income tax purposes. The change will cause a \$960,000 increase in the beginning inventory at January 1, 2012.
- At the end of 2012, the company failed to accrue \$15,500 of sales commissions earned by employees during 2012. The expense was recorded when the commissions were paid in early 2013.
- At the beginning of 2011, the company purchased a machine at a cost of \$720,000. Its useful life was estimated to be 10 years with no salvage value. The machine has been depreciated by the double declining-balance method. Its carrying amount on December 31, 2012, was \$460,800. On January 1, 2013, the company changed to the straight-line method.
- Additional industrial robots were acquired at the beginning of 2010 and added to the company's assembly process. The \$1,000,000 cost of the equipment was inadvertently recorded as repair expense. Robots have 10-year useful lives and no material salvage value. This class of equipment is depreciated by the straight-line method for both financial reporting and income tax reporting.

Required:

For each situation:

- Identify whether it represents an accounting change or an error. If an accounting change, identify the type of change.
- Prepare any journal entry necessary as a direct result of the change or error correction as well as any adjusting entry for 2013 related to the situation described. Any tax effects should be adjusted for through the deferred tax liability account.
- Briefly describe any other steps that should be taken to appropriately report the situation.

Communication
Case 16-5

Deferred taxes,
changing rates;
write a memo

- LO16-1, LO16-4,
LO16-5

You are the new controller for Engineered Solutions. The company treasurer, Randy Patey, believes that as a result of pending legislation, the current 40% income tax rate will be decreased for 2014 to 35% and is uncertain which tax rate to apply in determining deferred taxes for 2013. Patey also is uncertain which differences should be included in that determination and has solicited your help. Your accounting group provided you the following information.

Two items are relevant to the decisions. One is the \$50,000 insurance premium the company pays annually for the CEO's life insurance policy for which the company is the beneficiary. The second is that Engineered Solutions purchased a building on January 1, 2012, for \$6,000,000. The building's estimated useful life is 30 years from the date of purchase, with no salvage value. Depreciation is computed using the straight-line method for financial reporting purposes and the MACRS method for tax purposes. As a result, the building's tax basis is \$5,200,000 at December 31, 2013.

Required:

Write a memo to Patey that:

- Identifies the objectives of accounting for income taxes.
- Differentiates temporary differences and permanent differences.
- Explains which tax rate to use.
- Calculates the deferred tax liability at December 31, 2013.

Real World
Case 16-6

Disclosure issues;
balance sheet
classifications;
Walmart

- LO16-1, LO16-2,
LO16-8

The income tax disclosure note accompanying the January 31, 2011, financial statements of **Walmart** is reproduced below:

5 Income Taxes (in part)
Income Tax Provision

(Amounts in millions)	Fiscal Year Ended January 31,		
	2011	2010	2009
Current:			
U.S. federal	\$4,600	\$5,798	\$4,771
U.S. state and local	637	599	564
International	1,466	1,246	1,229
Total current tax provision	6,703	7,643	6,564
Deferred:			
U.S. federal	818	(432)	603
U.S. state and local	39	78	41
International	19	(133)	(75)
Total deferred tax provision	876	(487)	569
Total provision for income taxes	\$7,579	\$7,156	\$7,133

The significance components of our deferred tax account balances are as follows:

(continued)

Real World Financials

(Amounts in millions)	January 31,	
	2011	2010
Deferred tax assets:		
Loss and tax credit carryforwards	\$2,968	\$2,713
Accrued liabilities	3,532	3,141
Share-based compensation	332	267
Other	708	751
Total deferred tax assets	7,540	6,872
Valuation allowance	(2,899)	(2,167)
Deferred tax assets, net of valuation allowance	\$4,641	\$4,705
Deferred tax liabilities:		
Property and equipment	\$4,848	\$4,015
Inventories	1,014	972
Other	474	609
Total deferred tax liabilities	6,336	5,596
Net deferred tax liabilities	\$1,695	\$ 891

Required:

1. In its 2011 balance sheet, Walmart reported as a noncurrent liability, "Deferred income taxes" of \$6,682 million. Why is this different from the \$1,695 million "net deferred tax liability" reported in the disclosure note?
2. Re-create the journal entry that summarizes the entries Walmart used to record its 2011 fiscal year income taxes. (Hint: The income tax payable is an amount to balance the entry.)

**Research
Case 16-7**

Researching the way tax deductions are reported on a corporation tax return; retrieving a tax form from the Internet

- LO16-1, LO16-2, LO16-3, LO16-8

The U.S. Treasury maintains an information site on the Internet. As part of this site the Internal Revenue Service provides tax information and services. Among those services is a server for publications and forms which allows a visitor to download a variety of IRS forms and publications.

Required:

1. Access the Treasury site on the Internet. The web address is www.ustreas.gov. After exploring the information available there, navigate to the IRS server for forms and publications via the IRS home page.
2. Download the corporation tax return, Form 1120.
3. Note the specific deductions listed that are deductible from total income to arrive at taxable income. Are any deductions listed that might not also be included among expenses in the income statement?
4. One of the deductions indicated is "net operating loss deduction." Under what circumstances might a company report an amount for this item?
5. Based on how taxable income is determined, how might temporary differences be created between taxable income and pretax income in the income statement?

**Analysis
Case 16-8**

Reporting deferred taxes

- LO16-1, LO16-2, LO16-3, LO16-7, LO16-8

Access the financial statements and related disclosure notes of **Google Inc.** from its website at investor.google.com. In Google's balance sheet, deferred income taxes in 2010 are reported as both a current asset (\$259 million) and a noncurrent asset (\$265 million) but none among liabilities.

Required:

1. Explain why deferred income taxes can be reported as both an asset and a liability. Is that the case for Google in 2010?
2. Note 15 in the disclosure notes indicates that deferred tax assets are \$1,221 million in 2010 and deferred tax liabilities are \$405 million. How can that be explained in light of the two amounts reported in the balance sheet?
3. Does Google feel the need to record a valuation allowance for its deferred tax assets?

Real World Financials**Analysis
Case 16-9**

Consult financial statements; analyze tax disclosures; recreate journal entry

- LO16-1, LO16-2, LO16-3, LO16-7, LO16-8

Kroger Co. is one of the largest retail food companies in the United States as measured by total annual sales. The Kroger Co. operates supermarkets, convenience stores, and manufactures and processes food that its supermarkets sell. Kroger's stores operate under names such as Dillon Food Stores, City Market, Sav-Mor, Kwik Shop, and Ralph's.

Like most corporations, Kroger has significant deferred tax assets and liabilities. Using Edgar (www.sec.gov) or the company's website check the company's annual report for the year ended January 29, 2011.

Required:

1. From the income statement, determine the income tax expense for the most recent year. What are the current portion and the deferred portion of the expense? (See the "Taxes Based on Income" note in the Notes to Consolidated Financial Statements.) Why is the income tax expense from the income statement different from the "provision for income taxes" in the disclosure note?

Real World Financials

- How are the deferred taxes classified in Kroger's balance sheet? (See the "Taxes Based on Income" note in the Notes to Consolidated Financial Statements.) What amounts are reported among current assets or liabilities and among noncurrent assets or liabilities? Why?

Judgment Case 16-10

Analyzing the effect of deferred tax liabilities on firm risk; Macy's, Inc.

● LO16-8

Real World Financials

The following is a portion of the January 31, 2011 and 2010, balance sheets of **Macy's, Inc.**:

	January 29, 2011	January 30, 2010
LIABILITIES AND SHAREHOLDERS' EQUITY		
Current Liabilities:		
Short-term debt	\$ 454	\$ 242
Merchandise accounts payable	1,421	1,312
Accounts payable and accrued liabilities	2,644	2,626
Income taxes	182	68
Deferred income taxes	364	214
Total Current Liabilities	5,065	4,462
Long-Term Debt	6,971	8,456
Deferred Income Taxes	1,245	1,132
Other Liabilities	1,820	2,597
Shareholders' Equity:		
Common stock (423.3 and 420.8 shares outstanding)	5	5
Additional paid-in capital	5,696	5,689
Accumulated equity	2,990	2,227
Treasury stock	(2,431)	(2,515)
Accumulated other comprehensive loss	(730)	(753)
Total Shareholders' Equity	5,530	4,653
Total Liabilities and Shareholders' Equity	\$ 20,631	\$ 21,300

Macy's debt to equity ratio for the year ended January 31, 2011 was 2.7, calculated as $\$20,631 - 5,530 = \$15,101 \div \$5,530$. Some analysts argue that long-term deferred tax liabilities should be excluded from liabilities when computing the debt to equity ratio.

Required:

- What is the rationale for the argument that long-term deferred tax liabilities should be excluded from liabilities when computing the debt to equity ratio?
- What would be the effect on Macy's debt to equity ratio of excluding deferred tax liabilities from its calculation? What would be the percentage change?
- What might be the rationale for not excluding long-term deferred tax liabilities from liabilities when computing the debt to equity ratio?

Trueblood Accounting Case 16-11

Uncertain tax positions

● LO16-9

The following Trueblood case is recommended for use with this chapter. The case provides an excellent opportunity for class discussion, group projects, and writing assignments. The case, along with Professor's Discussion Material, can be obtained from the Deloitte Foundation at its website: www.deloitte.com/us/truebloodcases.

Case 09-9: Bricks & Mortar

This case gives the students an opportunity to better understand accounting for uncertain tax positions. The case illustrates the judgments involved in applying FASB ASC 740 (formerly FIN 48).

Judgment Case 16-12

Intraperiod tax allocation

● LO16-10

Russell-James Corporation is a diversified consumer products company. During 2013, Russell-James discontinued its line of cosmetics, which constituted discontinued operations for financial reporting purposes. As vice president of the food products division, you are interested in the effect of the discontinuance on the company's profitability. One item of information you requested was an income statement. The income statement you received was labeled *preliminary* and *unaudited*:

RUSSELL-JAMES CORPORATION		
Income Statement		
For the Year Ended December 31, 2013		
(\$ in millions, except per share amounts)		
Revenues		\$ 300
Cost of goods sold		90
Gross profit		<u>210</u>
Selling and administrative expenses		(60)
Income from continuing operations before income taxes		<u>150</u>
Income taxes		<u>(22)</u>
Income from continuing operations		128
Discontinued operations:		
Loss from operations of cosmetics division	\$(100)	
Gain from disposal of cosmetics division	<u>15</u>	<u>(85)</u>
Income before extraordinary item		43
Extraordinary loss from earthquake		<u>(10)</u>
Net income		<u>\$ 33</u>
Per Share of Common Stock (100 million shares):		
Income from continuing operations		\$1.28
Loss from operations of cosmetics division		(1.00)
Gain from disposal of cosmetics division		<u>.15</u>
Income before extraordinary item		.43
Extraordinary loss from earthquake		<u>(.10)</u>
Net income		<u>\$.33</u>

You are somewhat surprised at the magnitude of the loss incurred by the cosmetics division prior to its disposal. Another item that draws your attention is the apparently low tax rate indicated by the statement ($\$22 \div 150 = 15\%$). Upon further investigation you are told the company's tax rate is 40%.

Required:

1. Recast the income statement to reflect intraperiod tax allocation.
2. How would you reconcile the income tax expense shown on the statement above with the amount you recast statement reports?

Air France—KLM Case

AIRFRANCE /

● LO13-8

Air France—KLM (AF), a French company, prepares its financial statements according to International Financial Reporting Standards. AF's annual report for the year ended March 31, 2011, which includes financial statements and disclosure notes, is provided with all new textbooks. This material also is included in AF's "Registration Document 2010–11," dated June 15, 2011 and is available at www.airfranceklm.com.

Required:

1. Where in its March 31, 2011, balance sheet does AF report deferred taxes? How does this approach differ from the way deferred taxes are reported using U.S. GAAP? Using the Internet, determine how deferred taxes would be reported using IFRS at the time of your research. Explain why that approach might differ from the way AF reported deferred taxes at March 31, 2011.
2. Here's an excerpt from one of AF's notes to its financial statements:

Deferred taxes (in part)

The Group records deferred taxes using the balance sheet liability method, providing for any temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for taxation purposes. The tax rates used are those enacted or substantively enacted at the balance sheet date.

Is this policy consistent with U.S. GAAP? Explain.

3. Here's an excerpt from one AF's notes to its financial statements:

Deferred taxes (in part)

Deferred tax assets related to temporary differences and carry forwards are recognized only to the extent it is probable that a future taxable profit will be available against which the asset can be utilized at the tax entity level.

Is this policy consistent with U.S. GAAP? Explain.

CPA Simulation 16—1

ABC, Inc.

Deferred Taxes

CPA Review

Test your knowledge of the concepts discussed in this chapter, practice critical professional skills necessary for career success, and prepare for the computer-based CPA exam by accessing our CPA simulations at the text website: www.mhhe.com/spiceland7e.

The ABC simulation tests your ability to research authoritative accounting literature as to whether changes in tax laws and rates during the current year would affect the computation of ABC's deferred tax liabilities and deferred tax assets.

Specific tasks in the simulation include:

- Demonstrating an understanding of temporary and permanent differences.
- Analyzing transactions for their deferred tax reporting implications.
- Calculating the current and deferred tax components of income tax expense for multiple temporary differences.
- Applying judgment in deciding the deferred tax effects of a variety of transactions.
- Communicating the deferred tax effects of the two deferred tax reporting issues.
- Researching factors that might influence whether a valuation allowance might not be required in spite of evidence to the contrary.

17

Pensions and Other
Postretirement Benefits

OVERVIEW

Employee compensation comes in many forms. Salaries and wages, of course, provide direct and current payment for services provided. However, it's commonplace for compensation also to include benefits payable after retirement. We discuss pension benefits and other postretirement benefits in this chapter. Accounting for pension benefits recognizes that they represent deferred compensation for current service. Accordingly, the cost of these benefits is recognized on an accrual basis during the years that employees earn the benefits.

LEARNING
OBJECTIVES

After studying this chapter, you should be able to:

- **LO17-1** Explain the fundamental differences between a defined contribution pension plan and a defined benefit pension plan. (p. 1011)
- **LO17-2** Distinguish among the vested benefit obligation, the accumulated benefit obligation, and the projected benefit obligation. (p. 1015)
- **LO17-3** Describe the five events that might change the balance of the PBO. (p. 1016)
- **LO17-4** Explain how plan assets accumulate to provide retiree benefits and understand the role of the trustee in administering the fund. (p. 1021)
- **LO17-5** Describe the funded status of pension plans and how that amount is reported. (p. 1023)
- **LO17-6** Describe how pension expense is a composite of periodic changes that occur in both the pension obligation and the plan assets. (p. 1023)
- **LO17-7** Record for pension plans the periodic expense and funding as well as new gains and losses and new prior service cost as they occur. (p. 1029)
- **LO17-8** Understand the interrelationships among the elements that constitute a defined benefit pension plan. (pp. 1030 and 1035)
- **LO17-9** Describe the nature of postretirement benefit plans other than pensions and identify the similarities and differences in accounting for those plans and pensions. (p. 1040)
- **LO17-10** Explain how the obligation for postretirement benefits is measured and how the obligation changes. (p. 1042)
- **LO17-11** Determine the components of postretirement benefit expense. (p. 1043)
- **LO17-12** Discuss the primary differences between U.S. GAAP and IFRS with respect to accounting for postretirement benefit plans. (pp. 1030, 1032, 1036, and 1038)

FINANCIAL REPORTING CASE

United Dynamics

You read yesterday that many companies in the United States have pension plans that are severely underfunded in the wake of the recent economic crisis. This caught your attention in part because you have your office interview tomorrow with United Dynamics. You hadn't really thought that much about the pension plan of your potential future employer, in part because your current employer has a defined contribution 401K plan, for which funding is not a concern. However, United Dynamics is an older firm with a defined benefit plan, for which funding is the employer's responsibility.

To prepare for your interview, you obtained a copy of United Dynamics' financial statements. Unfortunately, the financial statements themselves are of little help. You are unable to find any pension liability in the balance sheet, but the statement does report a relatively small "pension asset." The income statement reports pension expense for each of the years reported. For help, you search the disclosure notes. In part, the pension disclosure note reads as follows:

Note 7: Pension Plan

United Dynamics has a defined benefit pension plan covering substantially all of its employees. Plan benefits are based on years of service and the employee's compensation during the last three years of employment. The company's funding policy is consistent with the funding requirements of federal law and regulations. The net periodic pension expense for the company included the following components. The company's pension expense was as follows (\$ in millions):

	2013	2012	2011
Current service costs	\$ 43	\$ 47	\$ 42
Interest cost on projected benefit obligation	178	164	152
Return on assets	(213)	(194)	(187)
Amortization of prior service cost	43	43	43
Amortization of net gain	(2)	(1)	—
Net pension costs	<u>\$ 49</u>	<u>\$ 59</u>	<u>\$ 50</u>

The following table describes the change in projected benefit obligation for the plan years ended December 31, 2013, and December 31, 2012 (\$ in millions):

	2013	2012
Projected benefit obligation at beginning of year	\$2,194	\$2,121
Service cost	43	47
Interest cost	178	164
Actuarial (gain) loss	319	(40)
Benefits paid	(106)	(98)
Projected benefit obligation at end of year	<u>\$2,628</u>	<u>\$2,194</u>

The weighted-average discount rate and rate of increase in future compensation levels used in determining the actuarial present value of the projected benefit obligations in the above table were 8.1% and 4.3%, respectively, at December 31, 2013, and 7.73% and 4.7%, respectively, at December 31, 2012. The expected long-term rate of return on assets was 9.1% at December 31, 2013 and 2012.

(continued)

(continued)

The following table describes the change in the fair value of plan assets for the plan years ended December 31, 2013 and 2012 (\$ in millions):

	2013	2012
Fair value of plan assets at beginning of year	\$2,340	\$2,133
Actual return on plan assets	215	178
Employer contributions	358	127
Benefits paid	(106)	(98)
Fair value of plan assets at end of year	<u>\$2,807</u>	<u>\$2,340</u>

“Ouch! I can’t believe how much of my accounting I forgot,” you complain to yourself. “I’d better get out my old intermediate accounting book.”

QUESTIONS

By the time you finish this chapter, you should be able to respond appropriately to the questions posed in this case. Compare your response to the solution provided at the end of the chapter.

1. Why is pension plan underfunding not a concern in your present employment? (p. 1013)
2. Were you correct that pension assets are not reported in the balance sheet? What is the liability? (p. 1015)
3. What is the amount of the plan assets available to pay benefits? What are the factors that can cause that amount to change? (p. 1022)
4. What does the “pension asset” represent? Are you interviewing with a company whose pension plan is severely underfunded? (p. 1023)
5. How is the pension expense influenced by changes in the pension liability and plan assets? (p. 1024)

PART A

THE NATURE OF PENSION PLANS

Over 125 million American workers are covered by pension plans. The United States’ pension funds tripled in size during the previous two decades and now are roughly the size of Japan’s gross national product. This powerful investment base now controls a sizable portion of the stock market. At the company level, the enormous size of pension funds is reflected in a periodic pension cost that constitutes one of the largest expenses many companies report. The corporate liability for providing pension benefits is huge. Obviously, then, the financial reporting responsibility for pensions has important social and economic implications.

Pension plans are designed to provide income to individuals during their retirement years. This is accomplished by setting aside funds during an employee’s working years so that at retirement the accumulated funds plus earnings from investing those funds are available to replace wages. Actually, an individual who periodically invests in stocks, bonds, certificates of deposit (CDs), or other investments for the purpose of saving for retirement is establishing a personal pension fund. Often, such individual plans take the form of individual retirement accounts (IRAs) to take advantage of tax breaks offered by that arrangement. In employer plans, some or all of the periodic contributions to the retirement fund often are provided by the employer.

Corporations establish pension plans for a variety of reasons. Sponsorship of pension plans provides employees with a degree of retirement security and fulfills a moral obligation felt by

Pension plans often enhance productivity, reduce turnover, satisfy union demands, and allow employers to compete in the labor market.

many employers. This security also can induce a degree of job satisfaction and perhaps loyalty that might enhance productivity and reduce turnover. Motivation to sponsor a plan sometimes comes from union demands and often relates to being competitive in the labor market.

Additional Consideration

When established according to tight guidelines, a pension plan gains important tax advantages. Such arrangements are called *qualified plans* because they qualify for favorable tax treatment. In a qualified plan, the employer is permitted an immediate tax deduction for amounts paid into the pension fund (within specified limits). The employees, on the other hand, are not taxed at the time employer contributions are made—only when retirement benefits are received. Moreover, earnings on the funds set aside by the employer are not taxed while in the pension fund, so the earnings accumulate tax free. If you are familiar with the tax advantages of IRAs, you probably recognize the similarity between those individual plans and corporate pension arrangements.

For a pension plan to be qualified for special tax treatment it must meet these general requirements.

1. It must cover at least 70% of employees.
2. It cannot discriminate in favor of highly compensated employees.
3. It must be funded in advance of retirement through contributions to an irrevocable trust fund.
4. Benefits must vest after a specified period of service, commonly five years. (We discuss this in more detail later.)
5. It complies with specific restrictions on the timing and amount of contributions and benefits.

Qualified pension plans offer important tax benefits.

Sometimes, employers agree to annually contribute a specific (defined) amount to a pension fund on behalf of employees but make no commitment regarding benefit amounts at retirement. In other arrangements, employers don't specify the amount of annual contributions but promise to provide determinable (defined) amounts at retirement. These two arrangements describe defined contribution pension plans and defined benefit pension plans, respectively:

● LO17-1

- **Defined contribution pension plans** promise fixed annual contributions to a pension fund (say, 5% of the employees' pay). Employees choose (from designated options) where funds are invested—usually stocks or fixed-income securities. Retirement pay depends on the size of the fund at retirement.
- **Defined benefit pension plans** promise fixed retirement benefits defined by a designated formula. Typically, the pension formula bases retirement pay on the employees' (a) years of service, (b) annual compensation (often final pay or an average for the last few years), and sometimes (c) age. Employers are responsible for ensuring that sufficient funds are available to provide promised benefits.

Today, approximately three-fourths of workers covered by pension plans are covered by defined contribution plans, roughly one-fourth by defined benefit plans. This represents a radical shift from previous years when the traditional defined benefit plan was far more common. However, very few new pension plans are of the defined benefit variety. In fact, many companies are terminating long-standing defined benefit plans and substituting defined contribution plans. Why the shift? There are three main reasons:

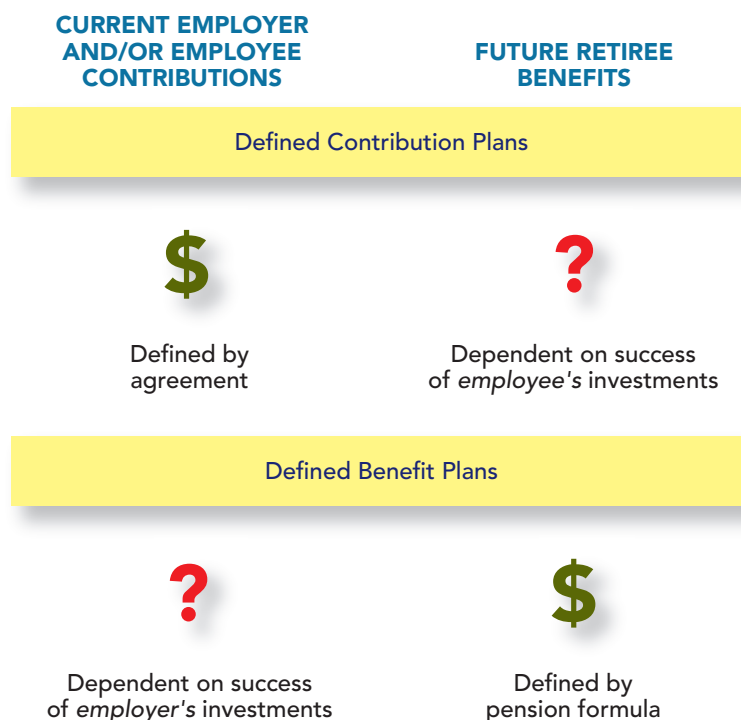

Virtually all new pension plans are defined contribution plans.

1. Government regulations make defined benefit plans cumbersome and costly to administer.
2. Employers are increasingly unwilling to bear the risk of defined benefit plans; with defined contribution plans, the company's obligation ends when contributions are made.
3. There has been a shift among many employers from trying to "buy long-term loyalty" (with defined benefit plans) to trying to attract new talent (with more mobile defined contribution plans).

The two categories of pension plans are depicted in Illustration 17–1.

Illustration 17–1

Defined Contribution and Defined Benefit Pension Plans

Both types of plans have a common goal: to provide income to employees during their retirement years. Still, the two types of plans differ regarding who bears the risk—the employer or the employees—for whether the retirement objectives are achieved. The two types of plans also have entirely different implications for accounting and financial reporting. Our discussion of defined contribution plans will be brief. Although these are now the most popular type of corporate pension plan, their relative simplicity permits a rather straightforward accounting treatment that requires little explanation. On the other hand, defined benefit plans require considerably more complex accounting treatment and constitute the primary focus of this chapter.

Defined Contribution Pension Plans

Defined contribution plans promise defined periodic contributions to a pension fund, without further commitment regarding benefit amounts at retirement.

Defined contribution pension plans are becoming increasingly popular vehicles for employers to provide retirement income without the paperwork, cost, and risk generated by the more traditional defined benefit plans. Defined contribution plans promise fixed periodic contributions to a pension fund. Retirement income depends on the size of the fund at retirement. No further commitment is made by the employer regarding benefit amounts at retirement.

These plans have several variations. In money purchase plans, employers contribute a fixed percentage of employees' salaries. Thrift plans, savings plans, and 401(k) plans (named after the Tax Code section that specifies the conditions for the favorable tax treatment of these plans) permit voluntary contributions by employees. These contributions typically are matched to a specified extent by employers. Most employers match up to 50% of employee contributions up to the first 6% of salary.

Approximately two-thirds of American workers participate in 401(k) plans. More than two trillion dollars are invested in these plans.

When plans link the amount of contributions to company performance, labels include profit-sharing plans, incentive savings plans, 401(k) profit-sharing plans, and similar titles. When employees make contributions to the plan in addition to employer contributions, it's called a *contributory* plan. Sometimes the amount the employer contributes is tied to the

amount of the employee contribution.¹ Variations are seemingly endless. An example from a recent annual report of **Microsoft Corporation** is shown in Illustration 17–2.

**Note 20 (in part)
Savings Plan**

We have a savings plan in the United States that qualifies under Section 401(k) of the Internal Revenue Code, and a number of savings plans in international locations. Participating U.S. employees may contribute up to 50% of their salary, but not more than statutory limits. We contribute fifty cents for each dollar a participant contributes in this plan, with a maximum contribution of 3% of a participant's earnings. Matching contributions for all plans were \$275 million, \$262 million, and \$238 million in fiscal years 2010, 2009, and 2008, respectively, and were expensed as contributed.

Illustration 17–2

Defined Contribution
Plan—Microsoft
Corporation

Real World Financials

Accounting for these plans is quite easy. Each year, the employer simply records pension expense equal to the amount of the annual contribution. Suppose a plan promises an annual contribution equal to 3% of an employee's salary. If an employee's salary is \$110,000 in a particular year, the employer would simply recognize pension expense in the amount of the contribution:

Pension expense	3,300	
Cash (\$110,000 × 3%)		3,300

The employee's retirement benefits are totally dependent upon how well investments perform. Who bears the risk (or reward) of that uncertainty? The employee would bear the risk of uncertain investment returns and, potentially, settle for far less at retirement than at first expected.² On the other hand, the employer would be free of any further obligation. Because the actual investments are held by an independent investment firm, the employer is free of that recordkeeping responsibility as well.

Risk is reversed in a defined benefit plan. Because specific benefits are promised at retirement, the employer would be responsible for making up the difference when investment performance is less than expected. We look at defined benefit plans next.

**FINANCIAL
Reporting Case**

Q1, p. 1010

For defined contribution plans, the employer simply records pension expense equal to the cash contribution.

Defined Benefit Pension Plans

When setting aside cash to fund a pension plan, the uncertainty surrounding the rate of return on plan assets is but one of several uncertainties inherent in a defined benefit plan. Employee turnover affects the number of employees who ultimately will become eligible for retirement benefits. The age at which employees will choose to retire as well as life expectancies will impact both the length of the retirement period and the amount of the benefits. Inflation, future compensation levels, and interest rates also have obvious influence on eventual benefits.

This is particularly true when pension benefits are defined by a pension formula, as usually is the case. A typical formula might specify that a retiree will receive annual retirement benefits based on the employee's years of service and annual pay at retirement (say, pay level in the final year, highest pay achieved, or average pay in the last two or more years). For example, a pension formula might define annual retirement benefits as:

$$1\frac{1}{2}\% \times \text{Years of service} \times \text{Final year's salary}$$

By this formula, the annual benefits to an employee who retires after 30 years of service, with a final salary of \$100,000, would be:

$$1\frac{1}{2}\% \times 30 \text{ years} \times \$100,000 = \$45,000$$

Defined benefit plans promise fixed retirement benefits defined by a designated formula.

Uncertainties complicate determining how much to set aside each year to ensure that sufficient funds are available to provide promised benefits.

¹One popular way for employer companies to provide contributions is with shares of its own common stock. If so, the arrangements usually are designed to comply with government requirements to be designated an employee stock ownership plan (ESOP).

²Of course, this is not entirely unappealing to the employee. Defined contribution plans allow an employee to select investments in line with his or her own risk preferences and often provide greater retirement benefits and flexibility than defined benefit plans.

A pension formula typically defines retirement pay based on the employees' (a) years of service, (b) annual compensation, and sometimes (c) age.

Pension gains and losses occur when the pension obligation is lower or higher than expected.

Pension gains and losses occur when the return on plan assets is higher or lower than expected.

Neither the pension obligation nor the plan assets are reported individually in the balance sheet.

The pension expense is a direct composite of periodic changes that occur in both the pension obligation and the plan assets.

Typically, a firm will hire an **actuary**, a professional trained in a particular branch of statistics and mathematics, to assess the various uncertainties (employee turnover, salary levels, mortality, etc.) and to estimate the company's obligation to employees in connection with its pension plan. Such estimates are inherently subjective, so regardless of the skill of the actuary, estimates invariably deviate from the actual outcome to one degree or another.³ For instance, the return on assets can turn out to be more or less than expected. These deviations are referred to as *gains* and *losses* on pension assets. When it's necessary to revise estimates related to the pension obligation because it's determined to be more or less than previously thought, these revisions are referred to as *losses* and *gains*, respectively, on the pension liability. Later, we will discuss the accounting treatment of gains and losses from either source. The point here is that the risk of the pension obligation changing unexpectedly or the pension funds being inadequate to meet the obligation is borne by the employer with a defined benefit pension plan.

The key elements of a defined benefit pension plan are:

1. The *employer's obligation* to pay retirement benefits in the future.
2. The *plan assets* set aside by the employer from which to pay the retirement benefits in the future.
3. The *periodic expense* of having a pension plan.

As you will learn in this chapter, the first two of these elements are not reported individually in the employer's financial statements. This may seem confusing at first because it is inconsistent with the way you're accustomed to treating assets and liabilities. Even though they are not separately reported, it's critical that you understand the composition of both the pension obligation and the plan assets because (a) they are reported as a net amount in the balance sheet, and (b) their balances are reported in disclosure notes. And, importantly, the pension expense reported in the income statement is a direct composite of periodic changes that occur in both the pension obligation and the plan assets.

For this reason, we will devote a considerable portion of our early discussion to understanding the composition of the pension obligation and the plan assets before focusing on the derivation of pension expense and required financial statement disclosures. We will begin with a quick overview of how periodic changes that occur in both the pension obligation and the plan assets affect pension expense. Next we will explore how those changes occur, beginning with changes in the pension obligation followed by changes in plan assets. We'll then return to pension expense for a closer look at how those changes influence its calculation. After that, we will bring together the separate but related parts by using a simple spreadsheet to demonstrate how each element of the pension plan articulates with the other elements.

Current GAAP retains three fundamental aspects of past pension accounting: *delayed recognition* of certain events, reporting *net cost*, and *offsetting* liabilities and assets. Those three features of practice have shaped financial reporting for many years . . . and they conflict in some respects with accounting principles applied elsewhere.⁴

Pension Expense—An Overview

The annual pension expense reflects changes in both the pension obligation and the plan assets. Illustration 17–3 provides a brief overview of how these changes are included in pension expense. After the overview, we'll look closer at each of the components.

Next we explore each of these pension expense components in the context of its being a part of either (a) the pension obligation or (b) the plan assets. After you learn how the expense components relate to these elements of the pension plan, we'll return to explore further how they are included in the pension expense.

³We discuss changes in more detail in Chapter 20.

⁴FASB ASC 715: Compensation—Retirement Benefits (previously “Employers’ Accounting for Pensions,” *Statement of Financial Accounting Standards No. 87* (Stamford, Conn.: FASB, 1985)).

Components of Pension Expense

+	Service cost ascribed to employee service during the period
+	Interest accrued on the pension liability
–	Return on the plan assets*
	<i>Amortized portion of:</i>
+	Prior service cost attributed to employee service before an amendment to the pension plan
+ or (–)	Losses or (gains) from revisions in the pension liability or from investing plan assets
=	Pension expense

*The actual return is adjusted for any difference between actual and expected return, resulting in the expected return being reflected in pension expense. This loss or gain from investing plan assets is combined with losses and gains from revisions in the pension liability for deferred inclusion in pension expense. (See the last component of pension expense.)

Illustration 17–3

Components of Pension Expense—Overview (More Later)

Interest and investment return are financing aspects of the pension cost.

The recognition of some elements of the pension expense is delayed.

THE PENSION OBLIGATION AND PLAN ASSETS**PART B****The Pension Obligation**

Now we consider more precisely what is meant by the pension obligation. Unfortunately, there's not just one definition, nor is there uniformity concerning which definition is most appropriate for pension accounting. Actually, three different ways to measure the pension obligation have meaning in pension accounting, as shown in Illustration 17–4.

FINANCIAL Reporting Case

Q2, p. 1010

1. **Accumulated benefit obligation (ABO)** The actuary's estimate of the total retirement benefits (at their discounted present value) earned so far by employees, applying the pension formula using **existing** compensation levels.
2. **Vested benefit obligation (VBO)** The portion of the accumulated benefit obligation that plan participants are entitled to receive regardless of their continued employment.
3. **Projected benefit obligation (PBO)** The actuary's estimate of the total retirement benefits (at their discounted present value) earned so far by employees, applying the pension formula using **estimated future** compensation levels. (If the pension formula does not include future compensation levels, the PBO and the ABO are the same.)

Illustration 17–4

Ways to Measure the Pension Obligation

● LO17–2

Later you will learn that the projected benefit obligation is the basis for some elements of the periodic pension expense. Remember, there is but one obligation; these are three ways to measure it. The relationship among the three is depicted in Illustration 17–5 on the next page.

Now let's look closer at how the obligation is measured in each of these three ways. Keep in mind, though, that it's not the accountant's responsibility to actually derive the measurement; a professional actuary provides these numbers. However, for the accountant to effectively use the numbers provided, she or he must understand their derivation.

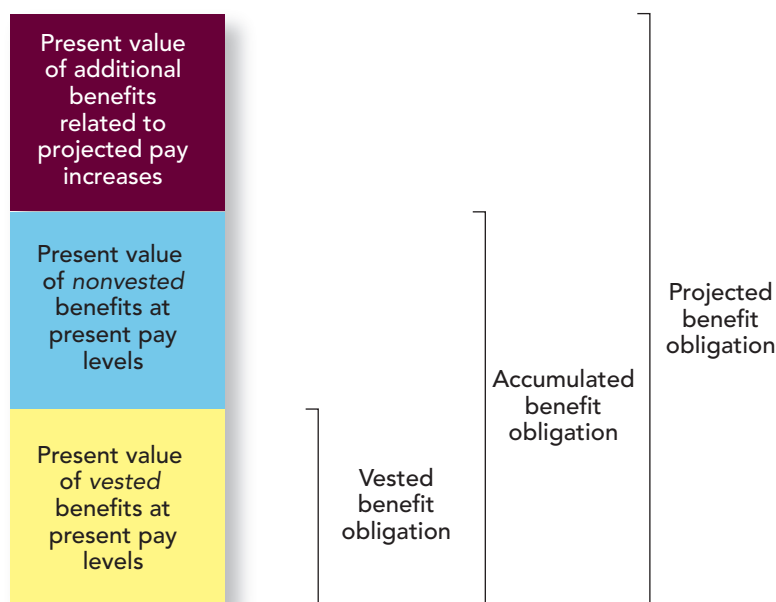

Accumulated Benefit Obligation

The **accumulated benefit obligation (ABO)** is an estimate of the discounted present value of the retirement benefits earned so far by employees, applying the plan's pension formula using existing compensation levels. When we look at a detailed calculation of the projected benefit obligation later, keep in mind that simply substituting the employee's existing compensation in the pension formula for her projected salary at retirement would give us the accumulated benefit obligation.

The accumulated benefit obligation ignores possible pay increases in the future.

Illustration 17–5

Alternative Measures of the Pension Obligation

**Vested Benefit Obligation**

Suppose an employee leaves the company to take another job. Will she still get earned benefits at retirement? The answer depends on whether the benefits are vested under the terms of this particular pension plan. If benefits are fully vested—yes. **Vested benefits** are those that employees have the right to receive even if their employment were to cease today.

Pension plans typically require some minimum period of employment before benefits vest. Before the Employee Retirement Income Security Act (ERISA) was passed in 1974, horror stories relating to lost benefits were commonplace. It was possible, for example, for an employee to be dismissed a week before retirement and be left with no pension benefits. Vesting requirements were tightened drastically to protect employees. These requirements have been changed periodically since then. Today, benefits must vest (a) fully within five years or (b) 20% within three years with another 20% vesting each subsequent year until fully vested after seven years. Five-year vesting is most common. ERISA also established the Pension Benefit Guaranty Corporation (PBGC) to impose liens on corporate assets for unfunded pension liabilities in certain instances and to administer terminated pension plans. The PBGC provides a form of insurance for employees similar to the role of the FDIC for bank accounts and is financed by premiums from employers equal to specified amounts for each covered employee. It makes retirement payments for terminated plans and guarantees basic vested benefits when pension liabilities exceed assets. The vested benefit obligation is actually a subset of the ABO, the portion attributable to benefits that have vested.

The benefits of most pension plans vest after five years.

Projected Benefit Obligation

● LO17–3

As described earlier, when the ABO is estimated, the most recent salary is included in the pension formula to estimate future benefits, even if the pension formula specifies the final year's salary. No attempt is made to forecast what that salary would be the year before retirement. Of course, the most recent salary certainly offers an objective number to measure the obligation, but is it realistic? Since it's unlikely that there will be no salary increases between now and retirement, a more meaningful measurement should include a projection of what the salary might be at retirement.⁵ Measured this way, the liability is referred to as the **projected benefit obligation (PBO)**. Hereafter in the chapter, when we mention the “pension obligation,” we are referring to the PBO. The PBO measurement may be less reliable than the ABO but is more relevant and representationally faithful.

The PBO estimates retirement benefits by applying the pension formula using projected future compensation levels.

⁵To project future salaries for a group of employees, actuaries usually assume some percentage rate of increase in compensation levels in upcoming years. Recent estimates of the rate of compensation increase have ranged from 4.5% to 8% with 4.5% being the most commonly reported expectation (*Accounting Trends and Techniques—2010* (New York: AICPA, 2010), p. 360.).

To understand the concepts involved, it's helpful to look at a numerical example. We'll simplify the example (Illustration 17–6) by looking at how pension amounts would be determined for a single employee. Keep in mind though, that in actuality, calculations would be made (by the actuary) for the entire employee pool rather than on an individual-by-individual basis.

Jessica Farrow was hired by Global Communications in 2002. The company has a defined benefit pension plan that specifies annual retirement benefits equal to:

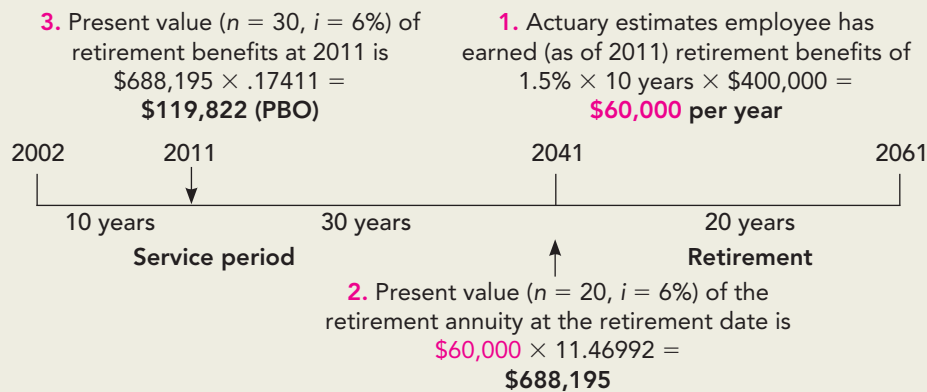

$$1.5\% \times \text{Service years} \times \text{Final year's salary}$$

Farrow is expected to retire in 2041 after 40 years service. Her retirement period is expected to be 20 years. At the end of 2011, 10 years after being hired, her salary is \$100,000. The interest rate is 6%. The company's actuary projects Farrow's salary to be \$400,000 at retirement.*

What is the company's projected benefit obligation with respect to Jessica Farrow?

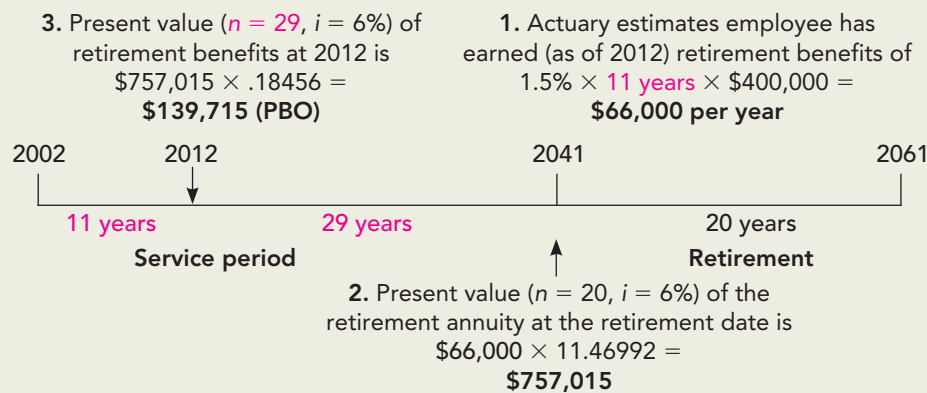

Steps to calculate the projected benefit obligation:

1. Use the pension formula (including a projection of future salary levels) to determine the retirement benefits earned to date.
2. Find the present value of the retirement benefits as of the retirement date.
3. Find the present value of retirement benefits as of the current date.

*This salary reflects an estimated compound rate of increase of about 5% and should take into account expectations concerning inflation, promotions, productivity gains, and other factors that might influence salary levels.

If the actuary's estimate of the final salary hasn't changed, the PBO a year later at the end of 2012 would be \$139,715 as demonstrated in Illustration 17–6A.

CHANGES IN THE PBO. Notice that the PBO increased during 2012 (Illustration 17–6A) from \$119,822 to \$139,715 for two reasons:

1. One more service year is included in the pension formula calculation (service cost).
2. The employee is one year closer to retirement, causing the present value of benefits to increase due to the time value of future benefits (interest cost).

Illustration 17–6

Projected Benefit Obligation

The actual includes projected salaries in the pension formula. The projected benefit obligation is the present value of those benefits.

Using Excel, enter:
 $= PV(.06,20,60000)$
 Output: 688195

Using a calculator:
 enter: 20 6
 - 60000
 Output: 688195

Illustration 17–6A

PBO in 2012

In 2012 the pension formula includes one more service year.

Also, 2012 is one year closer to the retirement date for the purpose of calculating the present value.

These represent two of the events that might possibly cause the balance of the PBO to change. Let's elaborate on these and the three other events that might change the balance of the PBO. The five events are (1) service cost, (2) interest cost, (3) prior service cost, (4) gains and losses, and (5) payments to retired employees.

Each year's service adds to the obligation to pay benefits.

1. Service cost. As we just witnessed in the illustration, the PBO increases each year by the amount of that year's **service cost**. This represents the increase in the projected benefit obligation attributable to employee service performed during the period. As we explain later, it also is the primary component of the annual pension expense.

Interest accrues on the PBO each year.

2. Interest cost. The second reason the PBO increases is called the **interest cost**. Even though the projected benefit obligation is not formally recognized as a liability in the company's balance sheet, it is a liability nevertheless. And, as with other liabilities, interest accrues on its balance as time passes. The amount can be calculated directly as the assumed discount rate multiplied by the projected benefit obligation at the beginning of the year.⁶

Additional Consideration

We can verify the increase in the PBO as being caused by the service cost and interest cost as follows:

PBO at the beginning of 2012 (end of 2011)				\$119,822
Service cost: $(1.5\% \times 1 \text{ yr.} \times \$400,000)$	\times	11.46992*	\times	.18456 [†]
Annual retirement benefits from 2012 service		To discount to 2041		To discount to 2012
				12,701
Interest cost: $\$119,822 \times 6\%$				7,189
PBO at the end of 2012				<u>\$139,712[‡]</u>

*Present value of an ordinary annuity of \$1: $n = 20, i = 6\%$.

[†]Present value of \$1: $n = 29, i = 6\%$.

[‡]Differs from \$139,715 due to rounding.

3. Prior service cost. Another reason the PBO might change is when the pension plan itself is *amended* to revise the way benefits are determined. For example, Global Communications in our illustration might choose to revise the pension formula by which benefits are calculated. Let's back up and assume the formula's salary percentage is increased in 2012 from 1.5% to 1.7%:

$$1.7\% \times \text{Service years} \times \text{Final year's salary} \\ \text{(revised pension formula)}$$

Obviously, the annual service cost from this date forward will be higher than it would have been without the amendment. This will cause a more rapid future expansion of the PBO. But it also might cause an immediate increase in the PBO as well. Here's why.

Suppose the amendment becomes effective for future years' service only, without consideration of employee service to date. As you might imagine, the morale and dedication of long-time employees of the company could be expected to suffer. So, for economic as well as ethical reasons, most companies choose to make amendments retroactive to prior years. In other words, the more beneficial terms of the revised pension formula are not applied just to future service years, but benefits attributable to all prior service years also are recomputed under the more favorable terms. Obviously, this decision is not without cost to the company. Making the amendment retroactive to prior years adds an extra layer of retirement benefits, increasing the company's benefit obligation. The increase in the PBO attributable to making a plan amendment retroactive is referred to as **prior service cost**.⁷ For instance,

When a pension plan is amended, credit often is given for employee service rendered in prior years. The cost of doing so is called **prior service cost**.

⁶Assumed discount rates should reflect rates used currently in annuity contracts. Discount rates recently reported have ranged from 4.5% to 8.5%, with 6% being the most commonly assumed rate (*Accounting Trends and Techniques—2010* (New York: AICPA, 2010), p. 359.)

⁷Prior service cost also is created if a defined benefit pension plan is initially adopted by a company that previously did not have one, and the plan itself is made retroactive to give credit for prior years' service. Prior service cost is created by plan amendments far more often than by plan adoptions because most companies already have pension plans, and new pension plans in recent years have predominantly been defined contribution plans.

Illustration 17–7 presents an excerpt from an annual report of **Ecolab, Inc.** describing the increase in its PBO as a result of making an amendment retroactive:

Note 1: Retirement Plans (in part)

... The Company amended its U.S. pension plan to change the formula for pension benefits and to provide a more rapid vesting schedule. The plan amendments resulted in a \$6 million increase in the projected benefits obligation.

Illustration 17–7

Prior Service Cost—Ecolab, Inc.

Real World Financials

Let’s put prior service cost in the context of our illustration.

At the end of 2011, and therefore the beginning of 2012, the PBO is \$119,822. If the plan is amended on January 3, 2012, the PBO could be recomputed as:

PBO without Amendment		PBO with Amendment	
1.	$1.5\% \times 10 \text{ yrs.} \times \$400,000 = \$ 60,000$	$1.7\% \times 10 \text{ yrs.} \times \$400,000 = \$ 68,000$	
2.	$\$60,000 \times 11.46992 = 688,195$	$\$68,000 \times 11.46992 = 779,955$	
3.	$\$688,195 \times .17411 = \underline{\underline{119,822}}$	$\$779,955 \times .17411 = \underline{\underline{135,798}}$	
		$\underbrace{\hspace{10em}}_{\$15,976}$ Prior service cost	

Retroactive benefits from an amendment add additional costs, increasing the company’s PBO. This increase is the prior service cost.

The \$15,976 increase in the PBO attributable to applying the more generous terms of the amendment to prior service years is the prior service cost. And, because we assumed the amendment occurred at the beginning of 2012, both the 2012 service cost and the 2012 interest cost would change as a result of the prior service cost. This is how:

PBO at the beginning of 2012 (end of 2011)	\$119,822	
Prior service cost (determined above)	<u>15,976</u>	
PBO including prior service cost at the beginning of 2012	135,798	
Service cost: $(1.7\% \times 1 \text{ yr.} \times \$400,000) \times 11.46992^* \times .18456^\dagger$	14,395	
Annual retirement benefits from 2012 service	To discount to 2041	To discount to 2012
Interest cost: $\$135,798^\ddagger \times 6\%$	<u>8,148</u>	
PBO at the end of 2012	<u><u>\$158,341</u></u>	

Prior service cost increased the PBO at the beginning of the year.

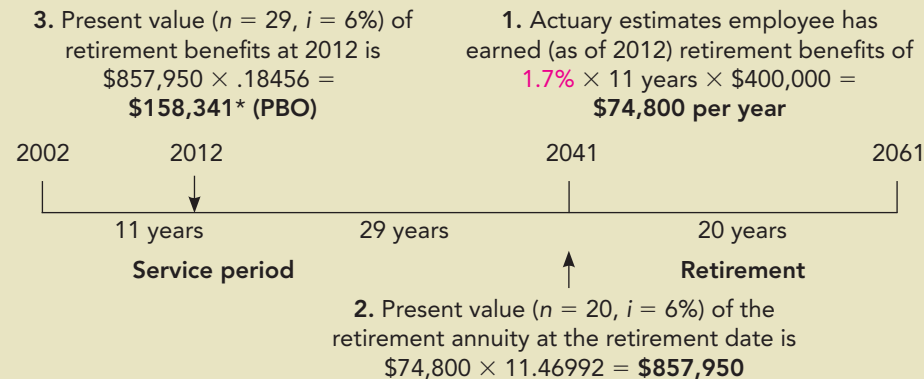

*Present value of an ordinary annuity of \$1: $n = 20, i = 6\%$.

†Present value of \$1: $n = 29, i = 6\%$.

‡Includes the beginning balance plus the prior service cost because the amendment occurred at the beginning of the year.

Additional Consideration

We can verify the PBO balance by calculating it directly:

The pension formula reflects the plan amendment.

*Adjusted by \$2 to compensate for the rounding of present value factors.

The plan amendment would affect not only the year in which it occurs, but also each subsequent year because the revised pension formula determines each year's service cost. Continuing our illustration to 2013 demonstrates this:

PBO at the beginning of 2013 (end of 2012)			\$158,341		
Service cost: $(1.7\% \times 1 \text{ yr.} \times \$400,000)$	\times	11.46992^*	\times	$.19563^\dagger$	15,258
Annual retirement benefits from 2013 service		To discount to 2041		To discount to 2013	
Interest cost: $\$158,341 \times 6\%$					9,500
PBO at the end of 2013					\$183,099

*Present value of an ordinary annuity of \$1: $n = 20, i = 6\%$.
 †Present value of \$1: $n = 28, i = 6\%$.

During 2013, the PBO increased as a result of service cost and interest cost.

Decreases and increases in estimates of the PBO because of periodic re-evaluation of uncertainties are called gains and losses.

4. Gain or loss on the PBO. We mentioned earlier that a number of estimates are necessary to derive the PBO. When one or more of these estimates requires revision, the estimate of the PBO also will require revision. The resulting decrease or increase in the PBO is referred to as a *gain* or *loss*, respectively. Let's modify our illustration to imitate the effect of revising one of the several possible estimates involved. Suppose, for instance, that new information at the end of 2013 about inflation and compensation trends suggests that the estimate of Farrow's final salary should be increased by 5% to **\$420,000**. This would affect the estimate of the PBO as follows:

	PBO without Revised Estimate		PBO with Revised Estimate	
1.	$1.7\% \times 12 \text{ yrs.} \times \$400,000$	= \$ 81,600	$1.7\% \times 12 \text{ yrs.} \times \$420,000$	= \$ 85,680
2.	$\$81,600 \times 11.46992$	= 935,945	$\$85,680 \times 11.46992$	= 982,743
3.	$\$935,945 \times .19563$	= <u>183,099</u>	$\$982,743 \times .19563$	= <u>192,254</u>
			\$9,155	
			Loss on PBO	

Changing the final salary estimate changes the PBO.

The difference of **\$9,155** represents a loss on the PBO because the obligation turned out to be higher than previously expected. Now there would be three elements of the increase in the PBO during 2013.⁸

The revised estimate caused the PBO to increase.

PBO at the beginning of 2013	\$158,341
Service cost (calculated above)	15,258
Interest cost (calculated above)	9,500
Loss on PBO (calculated above)	9,155
PBO at the end of 2013	\$192,254

If a revised estimate causes the PBO to be lower than previously expected, a gain would be indicated. Consider how a few of the other possible estimate changes would affect the PBO:

- A change in life expectancies might cause the retirement period to be estimated as 21 years rather than 20 years. Calculation of the present value of the retirement annuity would use $n = 21$, rather than $n = 20$. The estimate of the PBO would increase.
- The expectation that retirement will occur two years earlier than previously thought would cause the retirement period to be estimated as 22 years rather than 20 years and the service period to be estimated as 28 years rather than 30 years. The new expectation would probably also cause the final salary estimate to change. The net effect on the PBO would depend on the circumstances.
- A change in the assumed discount rate would affect the present value calculations. A lower rate would increase the estimate of the PBO. A higher rate would decrease the estimate of the PBO.

⁸The increase in the PBO due to amending the pension formula (prior service cost) occurred in 2012.

5. Payment of retirement benefits. We've seen how the PBO will change due to the accumulation of service cost from year to year, the accrual of interest as time passes, making plan amendments retroactive to prior years, and periodic adjustments when estimates change. Another change in the PBO occurs when the obligation is reduced as benefits actually are paid to retired employees.

The payment of such benefits is not applicable in our present illustration because we've limited the situation to calculations concerning an individual employee who is several years from retirement. Remember, though, in reality the actuary would make these calculations for the entire pool of employees covered by the pension plan. But the concepts involved would be the same. Illustration 17–8 summarizes the five ways the PBO can change.

Payment of retirement benefits reduces the PBO.

The Projected Benefits Obligation Changes as a Result of:

Cause	Effect	Frequency
Service cost	+	Each period
Interest cost	+	Each period (except the first period of the plan, when no obligation exists to accrue interest)
Prior service cost	+	Only if the plan is amended (or initiated) that period
Loss or gain on PBO	+ or –	Whenever revisions are made in the pension liability estimate
Retiree benefits paid	–	Each period (unless no employees have yet retired under the plan)

Illustration 17–8

Components of Change in the PBO

Illustration Expanded to Consider the Entire Employee Pool

For our single employee, the PBO at the end of 2013 is \$192,254. Let's say now that Global Communications has 2,000 active employees covered by the pension plan and 100 retired employees receiving retirement benefits. Illustration 17–9 expands the numbers to represent all covered employees.

The PBO is not formally recognized in the balance sheet.

The changes in the PBO for Global Communications during 2013 were as follows:

	(\$ in millions)*
PBO at the beginning of 2013 [†] (amount assumed)	\$400
Service cost, 2013 (amount assumed)	41
Interest cost: \$400 × 6%	24
Loss (gain) on PBO (amount assumed)	23
Less: Retiree benefits paid (amount assumed)	(38)
PBO at the end of 2013	<u>\$450</u>

*Of course, these expanded amounts are not simply the amounts for Jessica Farrow multiplied by 2,000 employees because her years of service, expected retirement date, and salary are not necessarily representative of other employees. Also, the expanded amounts take into account expected employee turnover and current retirees.

[†]Includes the prior service cost that increased the PBO when the plan was amended in 2012.

Illustration 17–9

The PBO Expanded to Include All Employees

Pension Plan Assets

So far our focus has been on the employer's obligation to provide retirement benefits in the future. We turn our attention now to the resources with which the company will satisfy that obligation—the **pension plan assets**. Like the PBO, the pension plan assets are not reported separately in the employer's balance sheet but are netted together with the PBO to report either a net pension asset (debit balance) or a net pension liability (credit balance). Its separate balance, too, must be reported in the disclosure notes to the financial statements (as does the separate PBO balance), and as explained below, the return on these assets is included in the calculation of the periodic pension expense.

● LO17-4

FINANCIAL Reporting Case

Q3, p. 1010

A trustee manages pension plan assets.

Illustration 17–10

How Plan Assets Change

A trustee accepts employer contributions, invests the contributions, accumulates the earnings on the investments, and pays benefits from the plan assets.

An underfunded pension plan means the PBO exceeds plan assets.

An overfunded pension plan means plan assets exceed the PBO.

We assumed in the previous section that Global Communications' obligation is \$450 million for service performed to date. When employees retire, will there be sufficient funds to provide the anticipated benefits? To ensure sufficient funding, Global will contribute cash each year to a pension fund.

The assets of a pension fund must be held by a **trustee**. A trustee accepts employer contributions, invests the contributions, accumulates the earnings on the investments, and pays benefits from the plan assets to retired employees or their beneficiaries. The trustee can be an individual, a bank, or a trust company. Plan assets are invested in stocks, bonds, and other income-producing assets. The accumulated balance of the annual employer contributions plus the return on the investments (dividends, interest, market price appreciation) must be sufficient to pay benefits as they come due.

When an employer estimates how much it must set aside each year to accumulate sufficient funds to pay retirement benefits as they come due, it's necessary to estimate the return those investments will produce. This is the **expected return on plan assets**. The higher the return, the less the employer must actually contribute. On the other hand, a relatively low return means the difference must be made up by higher contributions. In practice, recent estimates of the rate of return have ranged from 4.5% to 9.5%, with 8% being the most commonly reported expectation.⁹ In Illustration 17–10, we shift the focus of our numerical illustration to emphasize Global's pension plan assets.

Global Communications funds its defined benefit pension plan by contributing each year the year's service cost plus a portion of the prior service cost. Cash of \$48 million was contributed to the pension fund at the end of 2013.

Plan assets at the beginning of 2013 were valued at \$300 million. The expected rate of return on the investment of those assets was 9%, but the actual return in 2013 was 10%. Retirement benefits of \$38 million were paid at the end of 2013 to retired employees.

What is the value of the company's pension plan assets at the end of 2013?

	(\$ in millions)
Plan assets at the beginning of 2013	\$300
Actual return on plan assets (10% × \$300)	30
Cash contributions	48
Less: Retiree benefits paid	(38)
Plan assets at the end of 2013	<u>\$340</u>

Recall that Global's PBO at the end of 2013 is \$450 million. Because the plan assets are only \$340 million, the pension plan is said to be *underfunded*. One reason is that we assumed Global incurred a \$60 million prior service cost from amending the pension plan at the beginning of 2012, and that cost is being funded over several years. Another factor is the loss from increasing the PBO due to the estimate revision, since funding has been based on the previous estimate. Later, we'll assume earlier revisions also have increased the PBO. Of course, actual performance of the investments also impacts a plan's funded status.

It is not unusual for pension plans today to be underfunded. Historically the funded status of pension plans has varied considerably. Prior to the Employee Retirement Income Security Act (ERISA) in 1974, many plans were grossly underfunded. The law established minimum funding standards among other matters designed to protect plan participants. The new standards brought most plans closer to full funding. Then the stock market boom of the 1980s caused the value of plan assets for many pension funds to swell to well over their projected benefit obligations. More than 80% of pension plans were overfunded. As a result, managers explored ways to divert funds to other areas of operations. Today a majority of plans again are underfunded. The economic crisis has taken its toll. Stock market declines reduced the funded status of pension plans from 108% at the end of 2007 to 79% at the end of 2008.¹⁰ In 2009, pension plans of the country's 500 largest companies were underfunded

⁹Accounting Trends and Techniques—2010 (New York: AICPA, 2010), p. 371.

¹⁰Goldman Sachs, "Global Markets Institute Accounting Policy Update: Pension review 2009—Fallout from funded status decline just beginning," Global Markets Institute, June 4, 2009.

by \$200 billion. Partly in response to the severe underfunding and partly spurred by attractive stock prices, unusually high cash contributions to plan assets reduced the underfunded status during 2009.¹¹ Then, despite positive stock market returns in 2010, the funded status for plans at the 1,500 largest U.S. companies tracked by Standard & Poor's dropped to 81% at the end of 2010, down from 84% in 2009.¹² One culprit was low interest rates. Low interest rates hurt plans' funded status because the pension obligation is a present value calculation that increases with a lower discount rate. Even small interest rate changes have big effects on funded status. Many of the underfunded plans are with troubled companies, placing employees at risk. The PBGC guarantees are limited to about \$3,400 per month, often less than promised pension benefits.

Reporting the Funded Status of the Pension Plan

A company's PBO is not reported separately among liabilities in the balance sheet. Similarly, the plan assets a company sets aside to pay those benefits are not separately reported among assets in the balance sheet. However, firms do report the net difference between those two amounts, referred to as the "funded status" of the plan.¹³ From our previous discussion, we see the funded status for Global to be the following at December 31, 2013, and December 31, 2012:

	(\$ in millions)	
	2013	2012
Projected benefit obligation (PBO)	\$450	\$400
Fair value of plan assets	340	300
Underfunded status	<u>\$110</u>	<u>\$100</u>

Because the plan is underfunded, Global reports a net pension liability of \$110 million in its 2013 balance sheet and \$100 million in 2012. Be sure to note that the "net pension liability" is not an actual account balance. Instead, it's the PBO account balance and the Plan assets account balance simply reported in the balance sheet as a single net amount. If the plan becomes overfunded in the future, Global will report a net pension asset instead.

Now, let's look at all the ways that changes in the PBO and the pension plan assets affect pension expense.

DETERMINING PENSION EXPENSE

The Relationship between Pension Expense and Changes in the PBO and Plan Assets

Like wages, salaries, commissions, and other forms of pay, pension expense is part of a company's compensation for employee services each year. Accordingly, the accounting objective is to achieve a matching of the costs of providing this form of compensation with the benefits of the services performed. However, the fact that this form of compensation actually is paid to employees many years after the service is performed means that other elements in addition to the annual service cost will affect the ultimate pension cost. These other elements are related to changes that occur over time in both the pension obligation and the pension plan assets. Illustration 17-11 provides a summary of how some of these changes influence pension expense.

We've examined each of the components of pension expense from the viewpoint of its effect on the PBO or on plan assets, using the Global Communications illustration to

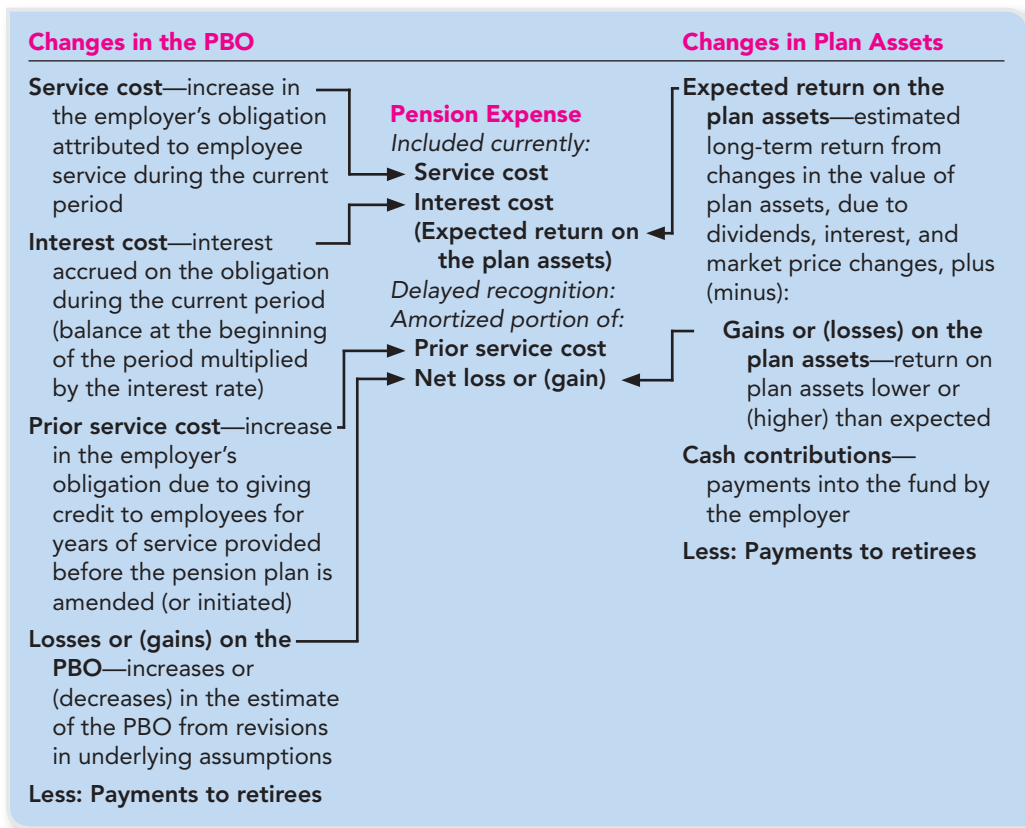

Illustration 17–11

Components of the Periodic Pension Expense

FINANCIAL Reporting Case

Q5, p. 1010

The pension expense reported in the income statement is a composite of periodic changes that occur in both the pension obligation and the plan assets.

demonstrate that effect. Now, let’s expand the same illustration to see how these changes affect *pension expense*. Illustration 17–12 provides this expanded example.

Illustration 17–12

Pension Expense

These are the changes in the PBO and in the plan assets we previously discussed (Illustration 17–9 and Illustration 17–10).

Reports from the actuary and the trustee of plan assets indicate the following changes during 2013 in the PBO and plan assets of Global Communications.

(\$ in millions)	PBO		Plan Assets
Beginning of 2013	\$400	Beginning of 2013	\$300
Service cost	41	Actual return on plan assets,*	30
Interest cost, 6%	24	10% (9% expected)	
Loss (gain) on PBO	23	Cash contributions	48
Less: Retiree benefits	(38)	Less: Retiree benefits	(38)
End of 2013	<u>\$450</u>	End of 2013	<u>\$340</u>

A *prior service cost* of \$60 million was incurred at the beginning of the previous year (2012) due to a plan amendment increasing the PBO. At the beginning of 2013 Global had a *net loss* of \$55 million (previous losses exceeded previous gains). The average remaining service life of employees is estimated at 15 years.

Global’s 2013 Pension Expense Is Determined as Follows: (\$ in millions)

Service cost	\$41
Interest cost	24
Expected return on the plan assets (\$30 actual, less \$3 gain)	(27)
Amortization of prior service cost (calculated later)	4
Amortization of net loss (calculated later)	1
Pension expense	<u>\$43</u>

*Expected rates of return anticipate the performance of various investments of plan assets. This is not necessarily the same as the discount rate used by the actuary to estimate the pension obligation. Assumed rates of return recently reported have ranged from 4.5% to 9.5%, with 8% being the most commonly assumed rate (AICPA, *Accounting Trends and Techniques*, 2010).

2013 Pension Expense

Components of Pension Expense

Illustration 17–12 demonstrates the relationship between some of the changes in the PBO and in plan assets and the components of pension expense: service cost, interest cost, the return on plan assets, prior service cost amortization, and net gain or loss amortization. Let's look at these five components of pension expense one at a time.

1. SERVICE COST. The \$41 million service cost represents the increase in the projected benefit obligation attributable to employee service performed during 2013 (benefits earned by employees during the year). Each year this is the first component of the pension expense.

2. INTEREST COST. The interest cost is calculated as the interest rate (actuary's discount rate) multiplied by the projected benefit obligation at the beginning of the year. In 2013, this is 6% times \$400 million, or \$24 million.

Interest cost is the discount rate times the PBO balance at the beginning of the year.

The PBO balance is not separately reported as a liability in the company's balance sheet,¹⁴ but it is a liability nevertheless. The interest expense that accrues on its balance is not separately reported on the income statement but is instead combined with the service cost (and other amounts) as the second component of the annual pension expense.

3. RETURN ON PLAN ASSETS. Remember, plan assets comprise funds invested in stocks, bonds, and other securities that presumably will generate dividends, interest, and capital gains. Each year these earnings represent the return on plan assets during that year. When accounting for the return, we need to differentiate between its two modes: the *expected* return and the *actual* return.

The return earned on investment securities increases the plan asset balance.

Actual versus expected return. We've assumed Global's expected rate of return is 9%, so its expected return on plan assets in 2013 was 9% times \$300 million, or \$27 million. But, as previously indicated, the actual rate of return in 2013 was 10%, producing an actual return on plan assets of 10% times \$300 million, or \$30 million.

The interest and return-on-assets components are financial items created only because the compensation is delayed and the obligation is funded currently.

Obviously, investing plan assets in income-producing assets lessens the amounts employees must contribute to the fund. So, the return on plan assets reduces the net cost of having a pension plan. Accordingly, the return on plan assets each year *reduces* the amount recorded as pension expense. Just as the interest expense that accrues on the PBO is included as a component of pension expense rather than being separately reported, the investment revenue on plan assets is not separately reported either. In actuality, both the interest and return-on-assets components of pension expense do not directly represent employee compensation. Instead, they are financial items created only because the future obligation to retirees must be funded currently.

Adjustment for loss or gain. A controversial question is *when* differences between the actual and expected return should be recognized in pension expense. It seems logical that since the net cost of having a pension plan is reduced by the actual return on plan assets, the charge to pension expense should be the actual return on plan assets. However, the FASB concluded that the actual return should first be adjusted by any difference between that return and what the return had been expected to be. So, it's actually the *expected* return that is included in the calculation of pension expense. In our illustration, Global's pension expense is reduced by the expected return of \$27 million.

The return on plan assets reduces the net cost of having a pension plan.

The difference between the actual and expected return is considered a loss or gain on plan assets. Although we don't include these losses and gains as part of pension expense when they occur, it's possible they will affect pension expense at a later time. On the next page, we will discuss how that might happen.

Any loss or gain is not included in pension expense right away.

4. AMORTIZATION OF PRIOR SERVICE COST. Recall that the \$60 million increase in Global's PBO due to recalculating benefits employees earned in prior years as a result of a plan amendment is referred to as the prior service cost. Obviously, prior service cost adds to the cost of having a pension plan. But when should this cost be recognized as

¹⁴As we discuss later, the PBO is combined with pension assets with the net difference reported in the balance sheet as either a net pension liability or a net pension asset.

Prior service cost is recognized as pension expense over the future service period of the employees whose benefits are recalculated.

pension expense? An argument can be made that the cost should be recognized as expense in the year of the amendment when the cost increases the company's pension obligation. In fact, some members of the FASB have advocated this approach. At present, though, we amortize the cost gradually to pension expense. Here's the rationalization.

Amending a pension plan, and especially choosing to make that amendment retroactive, typically is done with the idea that future operations will benefit from those choices. For that reason, the cost is not recognized as pension expense in the year the plan is amended. Instead, it is recognized as pension expense over the time that the employees who benefited from the retroactive amendment will work for the company in the future. Presumably, this future service period is when the company will receive the benefits of its actions.

In our illustration, the amendment occurred in 2012, increasing the PBO at that time. For the individual employee, Jessica Farrow, the prior service cost was calculated to be \$15,976. Our illustration assumes that, for *all* plan participants, the prior service cost was \$60 million at the beginning of 2012. The prior service cost at the beginning of 2013 is \$56 million. The following section explains how this amount was computed.

One assumption in our illustration is that the average remaining service life of the active employee group is 15 years. To recognize the \$60 million prior service cost in equal annual amounts over this period, the amount amortized as an increase in pension expense each year is \$4 million.¹⁵

By the straight-line method, prior service cost is recognized over the average remaining service life of the active employee group.

Amortization of Prior Service Cost:	(\$ in millions)
Service cost	\$41
Interest cost	24
Expected return on the plan assets	(27)
Amortization of prior service cost—AOCI	4
Amortization of net loss—AOCI	1
Pension expense	<u>\$43</u>

Be sure to note that, even though we're amortizing it, the prior service cost is not an asset, but instead a part of *accumulated other comprehensive income* (AOCI), a shareholders' equity account. This is a result of the FASB's disinclination to treat the cost as an expense as it is incurred. The Board, instead, prefers to ascribe it the off-the-income-statement designation as *other comprehensive income* (OCI) in the same manner as the handful of losses and gains also categorized the same way and not reported among the gains and losses in the traditional income statement. You first learned about comprehensive income in Chapter 4 and again in Chapter 12. We'll revisit it again later in this chapter.

The prior service cost declines by \$4 million each year:

Prior service cost is not expensed as it is incurred. Instead, it is reported as a component of AOCI to be amortized over time.

Prior Service Cost—AOCI	(\$ in millions)
Prior service cost at the beginning of 2013	\$56
Less: 2013 amortization	<u>(4)</u>
Prior service cost at the end of 2013	<u>\$52</u>

5. AMORTIZATION OF A NET LOSS OR NET GAIN. You learned previously that gains and losses can occur when expectations are revised concerning either the PBO or the return on plan assets. Illustration 17–13 summarizes the possibilities.

Like the prior service cost we just discussed, we don't include these gains and losses as part of pension expense in the income statement, but instead report them as OCI in the statement of comprehensive income as they occur. We then report the gains and losses on a cumulative basis as a net loss—AOCI or a net gain—AOCI, depending on whether we have greater losses or gains over time. We report this amount in the balance sheet as a part of *accumulated other comprehensive income* (AOCI), a shareholders' equity account.

We report gains and losses as OCI in the statement of comprehensive income.

¹⁵An alternative to this straight-line approach, called the *service method*, attempts to allocate the prior service cost to each year in proportion to the fraction of the total remaining service years worked in each of those years. This method is described in the chapter appendix.

	Projected Benefit Obligation	Return on Plan Assets
Higher than expected	Loss	Gain
Lower than expected	Gain	Loss

Illustration 17–13

Gains and Losses

Gains and losses occur when either the PBO or the return on plan assets turns out to be different than expected.

There is no conceptual justification for not including losses and gains in earnings. After all, these increases and decreases in either the PBO or plan assets immediately impact the net cost of providing a pension plan and, conceptually, should be included in pension expense as they occur.

Nevertheless, the FASB requires that income statement recognition of gains and losses from either source be delayed. Why?—for practical reasons.

Income Smoothing

The FASB acknowledged the conceptual shortcoming of delaying the recognition of a gain or a loss while opting for this more politically acceptable approach. Delayed recognition was favored by a dominant segment of corporate America that was concerned with the effect of allowing gains and losses to immediately impact reported earnings. In 2008, the FASB decided to formally reconsider all aspects of accounting for postretirement benefit plans, including this treatment of gains and losses.¹⁷ The project will consider overhauling the entire system for accounting for and reporting on postretirement benefits. This result might include immediately including gains and losses in pension expense, thereby eliminating income smoothing.

The practical justification for delayed recognition is that, over time, gains and losses might cancel one another out. Given this possibility, why create unnecessary fluctuations in reported income by letting temporary gains and losses decrease and increase (respectively) pension expense? Of course, as years pass there may be more gains than losses, or vice versa, preventing their offsetting one another completely. So, if a net gain or a net loss gets “too large,” pension expense must be adjusted.

The FASB defines too large rather arbitrarily as being when a net gain or a net loss at the beginning of a year exceeds an amount equal to 10% of the PBO, or 10% of plan assets, whichever is higher.¹⁹ This threshold amount is referred to as the “corridor.” When the corridor is exceeded, the excess is not charged to pension expense all at once. Instead, as a further concession to income smoothing, only a portion of the excess is included

The Board believes that it would be conceptually appropriate and preferable to [have] . . . no delay in recognition of gains and losses, or perhaps [to have] . . . gains and losses reported currently in comprehensive income but not in earnings. However, it concluded that those approaches would be too great a change from past practice to be adopted at the present time.¹⁶

The Board acknowledges that the delayed recognition included in this Statement results in excluding the most current and most relevant information.¹⁸

A net gain or a net loss affects pension expense only if it exceeds an amount equal to 10% of the PBO, or 10% of plan assets, whichever is higher.

¹⁶FASB, “Employers’ Accounting for Pension and Other Postretirement Benefits,” *Preliminary Views*, November 1982, par. 107.

¹⁷FASB ASC 715: Compensation—Retirement Benefits (previously “Employers’ Accounting for Defined Benefit Pension and Other Postretirement Plans—an amendment of FASB Statements No. 87, 88, 106, and 132(R),” *Statement of Financial Accounting Standards No. 158* (Stamford, Conn.: FASB, 2006), par. B16). This specific paragraph is not codified in the FASB Research System as it is reasoning and is therefore what codifiers consider “nonessential” material.

¹⁸Ibid., par. 88.

¹⁹For this purpose the FASB specifies the market-related value of plan assets. This can be either the fair value or a weighted-average fair value over a period not to exceed five years. We will uniformly assume fair value in this chapter.

in pension expense. The minimum amount that should be included is the excess divided by the average remaining service period of active employees expected to receive benefits under the plan.²⁰

In our illustration, we're assuming a net loss–AOCI of \$55 million at the beginning of 2013. Also recall that the PBO and plan assets are \$400 million and \$300 million, respectively, at that time. The amount amortized to 2013 pension expense is **\$1 million**, calculated as follows:

Because the net loss exceeds an amount equal to the greater of 10% of the PBO or 10% of plan assets, part of the excess is amortized to pension expense.

Determining Net Loss Amortization—2013	(\$ in millions)
Net loss (previous losses exceeded previous gains)	\$55
10% of \$400 (\$400 is greater than \$300): the "corridor"	(40)
Excess at the beginning of the year	\$15
Average remaining service period	÷ 15 years
Amount amortized to 2013 pension expense	\$ 1

The pension expense is increased because a net loss is being amortized. If a net *gain* were being amortized, the amount would be *deducted* from pension expense because a gain would indicate that the net cost of providing the pension plan had decreased.

Amortization of a net gain would decrease pension expense.

Amortization of the Net Loss–AOCI:	(\$ in millions)
Service cost	\$41
Interest cost	24
Expected return on the plan assets	(27)
Amortization of prior service cost–AOCI	4
Amortization of net loss–AOCI	1
Pension expense	\$43

Amortization of a net loss increases pension expense.

This amortization reduces the net loss–AOCI in 2013 by **\$1 million**. Also recall that Global incurred (a) a \$23 million loss in 2013 from revising estimates relating to the PBO and (b) a \$3 million gain when the 2013 return on plan assets was higher than expected. These three changes affected the net loss–AOCI in 2013 as follows:

Net Loss–AOCI	(\$ in millions)
Net loss–AOCI at the beginning of 2013	\$55
Less: 2013 amortization	(1)
Plus: 2013 loss on PBO	23
Less: 2013 gain on plan assets	(3)
Net loss–AOCI at the end of 2013	\$74

New losses add to a net loss; new gains reduce a net loss.

Additional Consideration

The \$74 million balance at the end of 2013 would be the beginning balance in 2014. It would be compared with the 2014 beginning balances in the PBO and plan assets to determine whether amortization would be necessary in 2014. If you were to look back to our analyses of the changes in those two balances, you would see the 2014 beginning balances in the PBO and plan assets to be \$450 million and \$340 million, respectively. The amount amortized to 2014 pension expense will be \$1.93 million, calculated as follows:

(continued)

²⁰Companies are permitted to amortize the entire net loss (or gain) rather than just the excess, but few choose that option. (FASB ASC 715–30–35–25: Compensation–Retirement Benefits–Defined Benefit Plans–Pension–Subsequent Measurement–Gains and Losses (previously “Employers’ Accounting for Pensions,” *Statement of Financial Accounting Standards No. 87* (Stamford, Conn.: FASB, 1985))).

(concluded)

	(\$ in millions)
Net loss (previous losses exceeded previous gains)	\$ 74
10% of \$450 (\$450 is greater than \$340)	(45)
Excess at the beginning of the year	\$ 29
Average remaining service period	÷ 15 years*
Amount amortized to 2014 pension expense	<u>\$1.93</u>

*Assumes the average remaining service period of active employees is still 15 years in 2014 due to new employees joining the firm.

REPORTING ISSUES

PART D

Recording Gains and Losses

As we discussed earlier, gains and losses (either from changing assumptions regarding the PBO or from the return on assets being higher or lower than expected) are deferred and not immediately included in pension expense and net income. Instead, we report them as *other comprehensive income (OCI)* in the statement of comprehensive income. So Global records a *loss-OCI* for the \$23 million loss that occurs in 2013 when it revises its estimate of future salary levels causing its PBO estimate to increase. Global also records a *gain-OCI* that occurred when the \$30 million actual return on plan assets exceeded the \$27 million expected return. Here's the entry:

To Record Gains and Losses	(\$ in millions)	
Loss-OCI (from change in assumption)	23	
PBO		23
Plan assets	3	
Gain-OCI (\$30 actual return on assets – \$27 expected return)		3

● LO17-7

Losses and gains (as well as any new prior service cost should it occur) are reported as OCI.

The loss is an increase in the PBO due to a change in an assumption. In this entry, we are recording that increase in the PBO account balance. If the change in assumption had caused the PBO to be reduced instead, we would debit the PBO here and credit a gain-OCI.

Similarly, the gain due to the actual return on plan assets exceeding the expected return is an increase in plan assets. In the next section, we increase plan assets for the expected return (as a component of pension expense) so the two adjustments together cause the plan assets account balance to reflect the actual return (expected increase plus the additional increase represented by the gain). Of course, if the actual return had been less than expected, we would debit a loss-OCI and credit plan assets here.

Additional Consideration

Just as we record new losses and gains as they occur, we also will record a change in the prior service cost account for any new prior service cost should it occur. For instance, if Global revised its pension formula again and recalculated its PBO using the more generous formula, causing a \$40 million increase in the PBO, the company would record the new prior service cost this way:

To Record New Prior Service Cost	(\$ in millions)	
Prior service cost-OCI (increase in PBO due to plan amendment)	40	
PBO		40

If an amendment *reduces* rather than increases the PBO, the *negative prior service cost* would reduce both the prior service cost and pension liability.

International Financial Reporting Standards

LO17-12

Accounting for Gains and Losses. Accounting for gains and losses in defined benefit plans (called “remeasurement” gains and losses under IFRS) under IAS No. 19 is similar to U.S. GAAP, but there are two important differences.

The first difference relates to the make-up of the gain or loss on plan assets. As we know from the chapter, this amount under U.S. GAAP is the difference between the actual and expected returns, where the expected return is different from company to company and usually different from the interest rate used to determine the interest cost. Not so under IFRS, which requires that we use the same rate (the rate for “high grade corporate bonds”) for both the interest cost on the defined benefit obligation (called projected benefit obligation or PBO under U.S. GAAP) and the interest revenue on the plan assets. In fact, under IFRS, we multiply that rate, say 6%, times the net difference between the defined benefit obligation (DBO) and plan assets and report the **net interest cost/income**:

IFRS ILLUSTRATION

	(\$ in millions)
Net interest cost ($6\% \times [\$400 - 300]$)	6
Plan assets ($6\% \times \$300$: interest income)	18
DBO ($6\% \times \$400$: interest cost)	24

As a result, the remeasurement gain (or loss) under IFRS usually is an amount different from the gain (or loss) on plan assets under GAAP:

To Record Gains and Losses

Under IFRS, we have a **remeasurement gain** when the actual return on plan assets exceeds the “high grade corporate bond rate” we use to determine the net interest cost/income.

U.S. GAAP	
Actual return = 10%	Expected return = 9%
Plan assets	3
Gain-OCI ($(10\% - 9\%) \times \$300$)	3
IFRS	
Plan assets (actual interest income in excess of 6%)	12
Remeasurement gain-OCI ($(10\% - 6\%) \times \$300$)	12
Actual return = 10%	High grade corporate bond rate = 6%

Remeasurement gains and losses under IFRS are reported as OCI but, unlike under U.S. GAAP, are **not subsequently amortized to expense and recycled into net income**.

A second difference relates to the treatment of gains and losses after they are initially recorded in OCI. We’ve seen that U.S. GAAP requires that gains and losses (either from the actual return exceeding an assumed amount [entries above] or from changing assumptions regarding the pension obligation [entries below]) are to be (a) included among OCI items in the statement of comprehensive income when they first arise and then (b) gradually amortized or recycled out of OCI and into expense (when the accumulated net gain or net loss exceeds the 10% threshold). Similar to U.S. GAAP, under IFRS these gains and losses are included in OCI when they first arise, but unlike U.S. GAAP those amounts are *not subsequently amortized out of OCI and into expense*.²¹ Instead, under IFRS those amounts remain in the balance sheet as accumulated other comprehensive income. The initial entries, then, are the same:

U.S. GAAP	
Loss-OCI ^a	23
PBO	23
IFRS	
Remeasurement loss-OCI ^b	23
DBO	23

^asubsequently amortized to expense and recycled from other comprehensive income to net income
^bnot subsequently amortized to expense; remains in accumulated other comprehensive income

²¹“Employee Benefits,” *International Accounting Standard No. 19* (IASCF), June 11, January 1, 2011.

Recording the Pension Expense

Recall from Illustration 17–12 that Global’s 2013 pension expense is \$43 million. The expense includes the \$41 million service cost and the \$24 million interest cost, both of which, as we learned earlier, add to Global’s PBO. Similarly, the expense includes a \$27 million expected return on plan assets, which adds to the plan assets.²² These changes are reflected in the following entry:

Service cost	\$41
Interest cost	24
Expected return on assets	(27)
Amortization of prior service cost	4
Amortization of net loss	1
Pension expense	<u>\$43</u>

To Record Pension Expense		(\$ in millions)
Pension expense (total)		43
Plan assets (\$27 expected return on assets).		27
PBO (\$41 Service Cost + \$24 Interest Cost).		65
Prior service cost— AOCI (2013 amortization)		4
Net loss—AOCI (2013 amortization)		1

Each component of the pension expense is recorded in the journal entry to record pension expense.

Service cost and interest cost increase the PBO. The return on assets increases plan assets.

The pension expense also includes the \$4 million amortization of the prior service cost and the \$1 million amortization of the net loss. As we discussed earlier, we report prior service cost when it arises as well as gains and losses as they occur as *other comprehensive income (OCI)* in the statement of comprehensive income. These OCI items accumulate as Prior service cost—AOCI and Net loss (or gain)—AOCI. So, when we amortize these AOCI accounts, we report the amortization amounts in the statement of comprehensive income as well. These amortized amounts are being “reclassified” from OCI to net income.

Amortization reduces the Prior service cost—AOCI and the Net loss—AOCI. Since these accounts have debit balances, we credit the accounts for the amortization. If we were amortizing a net gain, we would *debit* the account because a net gain has a credit balance.

Remember, we report the funded status of the plan in the balance sheet. That’s the difference between the PBO and plan assets. In this case, it’s a net pension liability since the plan is underfunded; that is, the PBO exceeds plan assets.

The pension expense is, of course, reported in the income statement. In addition, the composition of that amount must be reported in disclosure notes. For instance, **PepsiCo, Inc.**, described the composition of its pension expense in the disclosure note in its 2010 annual report, shown in Illustration 17–14.

New gains and losses and prior service cost are reported as OCI. So is the amortization of their accumulated balances.

Components of Pension Expense	2010	2009	2008
	(millions)		
Service cost	\$299	\$238	\$244
Interest cost	506	373	371
Expected return on assets	(643)	(462)	(416)
Amortization of prior service credit	12	12	19
Amortization of net loss	119	110	55
	<u>\$293</u>	<u>\$271</u>	<u>\$273</u>

Illustration 17–14

Disclosure of Pension Expense—PepsiCo, Inc.

The components of pension expense are itemized in the disclosure note.

Real World Financials

²²The increase in plan assets is the \$30 million *actual* return, but the \$27 million *expected* return is the component of pension expense because the \$3 million gain isn’t included in expense. We saw in the previous section that the \$3 million gain also increases plan assets.

International Financial Reporting Standards

● LO17-12

Prior Service Cost. Under IAS No. 19, prior service cost (called past service cost under IFRS) is combined with the current service cost and reported within the income statement rather than as a component of other comprehensive income as it is under U.S. GAAP.²³ For Global, the service cost would be recorded under IFRS in 2012 when the plan amendment occurred as follows (\$ in millions):

Service cost (service cost-2012 plus \$60)	xxx	
DBO (service cost-2012)		xxx
DBO (past service cost)		60*

* from Illustration 17-12

Recording the Funding of Plan Assets

When Global adds its annual cash investment to its plan assets, the value of those plan assets increases by \$48 million:

To Record Funding		(\$ in millions)
Plan assets		48
Cash (contribution to plan assets)		48

It's not unusual for the cash contribution to differ from that year's pension expense. After all, determining the periodic pension expense and the funding of the pension plan are two separate processes. Pension expense is an accounting decision. How much to contribute each year is a financing decision affected by cash flow and tax considerations, as well as minimum funding requirements. The Pension Protection Act of 2006 and the Employee Retirement Income Security Act of 1974 (ERISA) establish the pension funding requirements. Subject to these considerations, cash contributions are actuarially determined with the objective of accumulating (along with investment returns) sufficient funds to provide promised retirement benefits.

We saw earlier that when pension benefits are paid to retired employees, those payments reduce the plan assets established to pay the benefits and also reduce the obligation to pay the benefits, the PBO:

To Record Payment of Benefits		(\$ in millions)
PBO		38
Plan assets (payments to retired employees).....		38

Now that we've recorded these entries for the funding of the pension plan and payment of benefits, we have recorded all the changes in the PBO and plan assets:

(\$ in millions)	PBO		Plan Assets	
	400 Balance		Balance	300
	23 Loss		Gain	3
	41 Service cost		Expected return	27
	24 Interest cost		Funding	48
Benefits paid	38		38	Benefits paid
	450 Balance		Balance	340

Remember, though, we don't report either of these balances separately in the balance sheet. Instead, we combine the two and report a net pension liability of $\$450 - 340 = \110 million, the funded status of the pension plan.

²³"Employee Benefits," *International Accounting Standard No. 19* (IASCF), June 11, 2011.

Additional Consideration

Rather than recording each of these changes in the PBO and Plan Asset accounts, we could have recorded them in a single Net pension (liability) asset account. For example, we could have recorded the gains and losses, pension expense, and funding as follows:

	(\$ in millions)	
Loss-OCI (from change in assumption)	23	
Net pension (liability) asset		23
Net pension (liability) asset	3	
Gain-OCI (\$30 actual return on assets – \$27 expected return)		3
Pension expense	43	
Net pension (liability) asset		38
Prior service cost-AOCI		4
Net loss-AOCI		1
Net pension (liability) asset	48	
Cash		48

In fact many companies use this abbreviated approach. However, recording the changes in the accounts they affect (PBO and Plan assets) and then combining the two accounts for balance sheet reporting as we do in our illustrations has two advantages. First, we need the separate balances for the required disclosure in the pension disclosure note. Second, it is a more logical approach. It's easier to see that the return on plan assets is an increase in plan assets than it is to see it as a reduction in Net pension (liability) asset.

Comprehensive Income

Comprehensive income, as you may recall from Chapter 4, is a more expansive view of income than traditional net income. In fact, it encompasses all changes in equity other than from transactions with owners.²⁴ So, in addition to net income, comprehensive income includes up to four other changes in equity. A statement of comprehensive income is demonstrated in Illustration 17–15, highlighting the presentation of the components of OCI pertaining to Global's pension plan.

	(\$ in millions)	
Net income		\$xxx
Other comprehensive income:		
Unrealized holding gains (losses) on investments ²⁵	\$ x	
Pension plan:		
Loss—due to revising a PBO estimate*	(23)	
Gain—return on plan assets exceeds expected*	3	
Amortization of net loss	1	
Amortization of prior service cost	4	
Deferred gains (losses) from derivatives	x	
Gains (losses) from foreign currency translation	x	xx
Comprehensive income		\$xxx

*From Illustration 17–12 on p. 1024.

Note: These amounts are shown without considering taxes. Actually each of the elements of comprehensive income should be reported net of tax. For instance, if the tax rate is 40%, the gain would be reported as \$13.8 million: \$23 million less a \$9.2 million tax benefit.

Illustration 17–15

Statement of
Comprehensive Income

Gains and losses, as well as any new prior service cost should it arise, are among the OCI items reported in the period they occur.

²⁴Transactions with owners primarily include dividends and the sale or purchase of shares of the company's stock.

²⁵An unrealized loss also might occur from recording an impairment of a debt security investment. As described in Chapter 12, if the fair value of a debt security investment falls below its amortized cost, and that decline is viewed as other than temporary, the current period credit loss is included in net income, but any amount that exceeds the current period credit loss is recorded as a loss in OCI.

Other comprehensive income (OCI) items are reported both (a) as they occur and then (b) as an accumulated balance within shareholder's equity in the balance sheet as shown in Illustration 17–16.²⁶

Reporting OCI as it occurs and also as an accumulated balance is consistent with the way we report net income and its accumulated counterpart, retained earnings.

In addition to reporting the gains or losses (and other elements of comprehensive income) that occur in the current reporting period, we also report these amounts on a *cumulative* basis in the balance sheet. Comprehensive income includes (a) net income and (b) OCI. Remember that we report net income that occurs in the current reporting period in the income statement and also report accumulated net income (that hasn't been distributed as dividends) in the balance sheet as retained earnings. Similarly, we report OCI as it occurs in the current reporting period (see Illustration 17–15) and also report *accumulated other comprehensive income* in the balance sheet. In its 2013 balance sheet, Global will report the amounts as shown in Illustration 17–16.

Illustration 17–16

Balance Sheet
Presentation of Pension
Amounts

If the plan had been overfunded, Global would have reported a pension asset among its assets rather than this pension liability.

The net loss and prior service cost reduce shareholders' equity.

Global Communication Balance Sheets For Years Ended December 31			
	2013	2012	
Assets			
Current assets	\$xxx	\$xxx	
Property, plant, and equipment	xxx	xxx	
Liabilities			
Current Liabilities	\$xxx	\$xxx	
Net pension liability	110	100	
Other long-term liabilities	xxx	xxx	
Shareholders' Equity			
Common stock	\$xxx	\$xxx	
Retained earnings	xxx	xxx	
Accumulated other comprehensive income:			
Net unrealized holding gains and losses on investments—AOCI	xxx	xxx	
Net loss—AOCI*	(74)	(55)	
Prior service cost—AOCI*	(52)	(56)	

*These are debit balances and therefore negative components of accumulated other comprehensive income; a net gain—AOCI would have a credit balance and be a positive component of accumulated other comprehensive income.

Look back to the schedule on page 1028 to see how the net loss—AOCI increased from \$55 million to \$74 million during 2013 and the schedule on page 1026 to see how the prior service cost—AOCI decreased from \$56 million to \$52 million. The pension liability represents the underfunded status of Global's pension plan on the two dates.

Income Tax Considerations

OCI items are reported net of tax, in both the (a) statement of comprehensive income and (b) AOCI.

We have ignored the income tax effects of the amounts in order to focus on the core issues. Note, though, that as gains and losses occur, they are reported along with their tax effects (tax expense for a gain, tax savings for a loss) in the statement of comprehensive income. This can be accomplished by presenting components of other comprehensive income either net of related income tax effects or *before* income tax effects with disclosure of the income taxes allocated to each component either in a disclosure note or parenthetically in the statement.²⁷ Likewise, AOCI in the balance sheet also is reported net of tax.

²⁶Companies can present net income and other comprehensive income either in a single continuous statement of comprehensive income or in two separate, but consecutive, statements.

²⁷Similarly, if any new prior service cost should arise due to a plan amendment, it too would be reported net of tax or with tax effects shown parenthetically.

Putting the Pieces Together

In preceding sections, we've discussed (1) the projected benefit obligation (including changes due to periodic service cost, accrued interest, revised estimates, plan amendments, and the payment of benefits); (2) the plan assets (including changes due to investment returns, employer contributions, and the payment of benefits); (3) prior service cost; (4) gains and losses; (5) the periodic pension expense (comprising components of each of these); and (6) the funded status of the plan. These elements of a pension plan are interrelated. It's helpful to see how each element relates to the others. One way is to bring each part together in a *pension spreadsheet*. We do this for our 2013 Global Communications Illustration in Illustration 17–17.

● LO17–8

	Recorded in Accounts					Reported Only	
	PBO	Plan Assets	Prior Service Cost –AOCI	Net Loss –AOCI	Pension Expense	Cash	Net Pension (Liability)/Asset
Balance, Jan. 1, 2013	(400)	300	56	55			(100)
Service cost	(41)				41		(41)
Interest cost	(24)				24		(24)
Expected return on assets		27			(27)		27
Adjust for: Gain on assets		3		(3)			3
<i>Amortization of:</i>							
Prior service cost–AOCI			(4)		4		
Net loss–AOCI				(1)	1		
Loss on PBO	(23)			23			(23)
Prior service cost (new)*	0		0				0
Contributions to fund		48				(48)	48
Retiree benefits paid	38	(38)					
Balance, Dec. 31, 2013	(450)	340	52	74	43		(110)

*This amount was \$60 million in the 2012 pension spreadsheet.

Illustration 17–17

Pension Spreadsheet

When the PBO exceeds plan assets, we have a net pension liability. If plan assets exceed the PBO we have a net pension asset.

The net pension liability (or net pension asset) is not recorded in a journal entry but is the amount reported in the balance sheet as the PBO and plan assets combined.

You should spend several minutes studying this spreadsheet, focusing on the relationships among the elements that constitute a pension plan. Notice that the first numerical column simply repeats the actuary's report of how the PBO changed during the year, as explained previously (Illustration 17–9). Likewise, the second column reproduces the changes in plan assets we discussed earlier (Illustration 17–10). We've also previously noted the changes in the prior service cost–AOCI (page 1026) and the net loss–AOCI (page 1028) that are duplicated in the third and fourth columns. The fifth column repeats the calculation of the 2013 pension expense we determined earlier (page 1024), and the cash contribution to the pension fund is the sole item in the next column.

The last column shows the changes in the funded status of the plan. Be sure to notice that the funded status is the difference between the PBO (column 1) and the plan assets (column 2). That means that each of the changes we see in either of the first two columns also is reflected as a change in the funded status in the last column. The net pension liability (or net pension asset) balance is not carried in company records. Instead, we use this label to report the PBO and plan assets in the balance sheet as a single net amount.

Notice that each change in a formal account (light-shaded columns) is reflected in exactly two of those columns with one debit and one credit.

Rather than report the PBO and plan asset balances separately, we combine those balances and report a single net pension liability or net pension asset in the balance sheet.

LO17-12

International Financial Reporting Standards

Reporting Pension Expense. Under IFRS we don't report pension expense as a single net amount. Instead, we separately report (a) the service cost component (including past service cost) and (b) the net interest cost/income component in the *income statement* and (c) rereasurement gains and losses as *other comprehensive income*.

Decision Makers' Perspective

Pension amounts reported in the disclosure notes fill a reporting gap left by the minimal disclosures in the primary financial statements.

Although financial statement items are casualties of the political compromises of GAAP guidance, information provided in the disclosure notes fortunately makes up for some of the deficiencies.²⁸ Foremost among the useful disclosures are changes in the projected benefit obligation, changes in the fair value of plan assets, and a breakdown of the components of the annual pension expense. Other information also is made available to make it possible for interested analysts to reconstruct the financial statements with pension assets and liabilities included. We'll look at specific disclosures after we discuss postretirement benefits other than pensions because the two types of plans are reported together.

Investors and creditors must be cautious of the nontraditional treatment of pension information when developing financial ratios as part of an analysis of financial statements. The various elements of pensions that are not reported separately on the balance sheet and income statement (PBO, plan assets, gains and losses) can be included in ratios such as the debt to equity ratio or return on assets, but only by deliberately obtaining those numbers from the disclosure notes and adjusting the computation of the ratios. Similarly, without adjustment, profitability ratios and the times interest earned ratio will be distorted because pension expense includes the financial components of interest and return on assets.

Earnings quality (as defined in Chapter 4 and discussed in other chapters) also can be influenced by amounts reported in pension disclosures. Companies with relatively sizeable unrecognized pension costs (prior service cost, net gain or loss) can be expected to exhibit a relatively high "transitory" earnings component. Recall that transitory earnings are expected to be less predictive of future earnings than the "permanent" earnings component. ●

Settlement or Curtailment of Pension Plans

Companies sometimes terminate defined benefit plans to reduce costs and lessen risk.

To cut down on cumbersome paperwork and lessen their exposure to the risk posed by defined benefit plans, many companies are providing defined contribution plans instead. When a plan is terminated, GAAP requires a gain or loss to be reported at that time.²⁹ For instance, **Melville Corporation** described the termination of its pension plan in the following disclosure note:

Illustration 17-18

Gain on the Termination of a Defined Benefit Plan—Melville Corporation

Real World Financials

Retirement Plans (in part)

... As a result of the termination of the defined benefit plans, and after the settlement of the liability to plan participants through the purchase of nonparticipating annuity contracts or lump-sum rollovers into the new 401(k) Profit Sharing Plan, the Company recorded a nonrecurring gain of approximately \$4,000,000 which was the amount of plan assets that reverted to the Company. This was accounted for in accordance with Statement of Financial Accounting Standards No. 88, "Employers' Accounting for Settlements and Curtailments of Defined Benefit Pension Plans and for Termination Benefits." [FASB ASC 715-30-35]

²⁸FASB ASC 715-20-50: Compensation—Retirement Benefits—Defined Benefit Plans—General—Disclosure (previously "Employers' Disclosures about Pensions and Other Postretirement Benefits," *Statement of Financial Accounting Standards No. 132* (revised 2003), (Stamford, Conn.: FASB, 2003)).

²⁹FASB ASC 715-30-35: Compensation—Retirement Benefits—Defined Benefit Plans—Pension—Subsequent Measurement (previously "Employers' Accounting for Settlements and Curtailments of Defined Benefit Pension Plans and for Termination Benefits," *Statement of Financial Accounting Standards No. 88* (Stamford, Conn.: FASB, 1985)).

Concept Review Exercise

Allied Services, Inc., has a noncontributory, defined benefit pension plan. Pension plan assets had a fair market value of \$900 million at December 31, 2012.

On January 3, 2013, Allied amended the pension formula to increase benefits for each service year. By making the amendment retroactive to prior years, Allied incurred a prior service cost of \$75 million, adding to the previous projected benefit obligation of \$875 million. The prior service cost is to be amortized (expensed) over 15 years. The service cost is \$31 million for 2013. Both the actuary's discount rate and the expected rate of return on plan assets were 8%. The actual rate of return on plan assets was 10%.

At December 31, 2013, \$16 million was contributed to the pension fund and \$22 million was paid to retired employees. Also, at that time, the actuary revised a previous assumption, increasing the PBO estimate by \$10 million. The net loss AOCI at the beginning of the year was \$13 million.

PENSION PLANS

Required:

Determine each of the following amounts as of December 31, 2013, the fiscal year-end for Allied: (1) projected benefit obligation; (2) plan assets; and (3) pension expense.

Solution:

(\$ in millions)	Projected Benefit Obligation	Plan Assets	Pension Expense
Balances at Jan. 1	\$ 875	\$900	\$ 0
Prior service cost	75		
Service cost	31		31
Interest cost $[(\$875 + 75) \times 8\%]$	76		76
Return on plan assets:			
Actual $(\$900 \times 10\%)$		90	
Expected $(\$900 \times 8\%)$			(72)
Amortization of prior service cost $(\$75 \div 15)$			5
Amortization of net loss			0 [†]
Loss on PBO	10		
Cash contribution		16	
Retirement payments	(22)	(22)	
Balance at Dec. 31	<u>\$1,045</u>	<u>\$984</u>	<u>\$40</u>

Note: The \$18 million gain on plan assets $(\$90 - 72)$ million) is not recognized yet; it is carried forward to be combined with previous and future gains and losses, which will be recognized only if the net gain or net loss exceeds 10% of the higher of the PBO or plan assets.

*Since the plan was amended at the beginning of the year, the prior service cost increased the PBO at that time.

†Since the net loss (\$13) does not exceed 10% of \$900 (higher than \$875), no amortization is required for 2013.

Where We're Headed

We get a glimpse of the future, perhaps, from a recent IASB amendment to its postemployment benefit standard, *IAS No. 19*. The amendment, issued in June 2011, and effective January, 2013, indicates the direction of International Financial Reporting Standards for pensions and other postretirement plans. It incorporates changes that “leapfrog” existing U.S. GAAP, and because the FASB and IASB are working together on convergence of their respective standards, this document may provide an indication of where U.S. GAAP is headed. In fact, the FASB's strategy is to evaluate differences between its own pension standard and the new international standard to determine the benefits of convergence.³⁰

(continued)

The FASB and IASB are working together on a joint postretirement benefit standard.

³⁰According to FASB chairman, Leslie Seidman: [Barry B. Burr](#), “FASB pension accounting project on hiatus,” Pionline.com, January 25, 2011.

● LO17-12

(concluded)

Under the update the changes that constitute the components of the net pension cost are separated into (a) the cost of service, (b) the cost of financing that cost, and (c) gains or losses from occasional remeasurement of the cost:

Components	Include:	Recognized immediately in:
Service cost	<ul style="list-style-type: none"> • Current service costs. • Past service costs (if any). 	<ul style="list-style-type: none"> • the balance sheet • income statement
Net interest cost/income	<ul style="list-style-type: none"> • Net interest cost/income. (Interest rate* times net pension liability/ asset) 	<ul style="list-style-type: none"> • the balance sheet • income statement
Remeasurement cost	<ul style="list-style-type: none"> • Remeasurements of service costs caused by changes in assumptions (i.e., assumptions like salary expectations, length of service, length of retirement, etc.). • Gains and losses arising from experience differing from what was assumed. • Investment gains and losses on plan assets. 	<ul style="list-style-type: none"> • the balance sheet • statement of comprehensive income as OCI

*High-quality corporate bond rate.

Classifying the Components of the Net Pension Cost

Using the amounts from our Global Communications illustration, the changes in 2013 would be classified as follows:

Profit & Loss (Income Statement):

	(\$ in millions)	
Service cost:		
Service cost—2013	\$41	
Past service cost	0*	\$41
	<u> </u>	
Net interest cost/income:		
Net interest cost (6% × [\$400 – 300])		<u>6</u>
		\$47

Other Comprehensive Income (OCI):

Remeasurement cost:		
Loss (gain) on DBO—change in salary estimate	\$23	
Loss (gain) on plan assets: (10% – 6%) × \$300	(12)	11
	<u> </u>	<u> </u>
Net pension cost		\$58

*Last year (2012) this amount was \$60 million.

Notice that there is no separate interest cost and there is no “expected” return on plan assets. Instead, those two are essentially combined into a single measure, net interest cost/income. Because they’re combined, the same rate (6% in this case) is used for both, rather than having one rate for interest cost and another for expected return on assets.

Recording the Components of the Net Pension Cost

We report the (a) service cost and (b) net interest cost/income in *net income* and (c) remeasurement costs in *OCI*, as each of those amounts occurs. By recording each component, we record the total pension expense. Remember, each component is a change in either plan assets (the return on assets) or the defined benefit obligation (all others), so as we record each component we also record its effect on plan assets and the defined benefit obligation, as follows:

To Record Net Pension Cost

	(\$ in millions)
Service cost	41
DBO (service cost-2013)	41
DBO (past service cost: none in 2013)	0
Net interest cost (6% × [\$400 – 300])	6
Plan assets (6% × \$300: interest income)	18
DBO (6% × \$400: interest cost)	24
Plan assets (actual return in excess of 6%)	12
Remeasurement gain on plan assets–OCI ((10% – 6%) × \$300)	12
Remeasurement loss from change in assumption–OCI	23
DBO (change in future salary estimate)	23

When Global adds its annual cash investment to its plan assets, the value of those plan assets increases by \$48 million:

To Record Funding

	(\$ in millions)
Plan assets	48
Cash (contribution to plan assets).....	48

In our illustration, Global's retired employees were paid benefits of \$38 million in 2013. Paying those benefits, of course, reduces the obligation to pay benefits (the DBO), and since the payments are made from the plan assets, that balance is reduced as well:

To Record Payment of Benefits

	(\$ in millions)
DBO	38
Plan assets	38

Reporting the Components of the Net Pension Cost

We report the components of the total pension cost in the **statement of comprehensive income** as follows:

Revenue	\$xxx
Operating expenses (including \$41 pension service cost)	(xx)
Finance costs (including \$6 net interest cost on pensions)	xx
Profit before tax	\$xxx
Tax expense	(xx)
Net income	\$xxx
Other comprehensive income	
Remeasurement loss arising from change in pension assumption	\$ 23
Remeasurement gain from the return on plan assets exceeding the interest rate	(12)
Comprehensive income	\$xxx

Notice in the journal entries that we have no "pension expense" being recorded as we had using U.S. GAAP in the chapter. Instead, individual components of the net pension cost are recorded. The reason is that the amendment calls for components, not the net total, to be reported in the income statement and statement of comprehensive income.

We record (a) individual components of the net pension cost (in net income or OCI) and (b) the balance sheet accounts they affect.

We report separately the three costs of having a defined benefit plan:

In net income:

- service cost
- net interest cost

In OCI:

- remeasurement cost

POSTRETIREMENT BENEFITS OTHER THAN PENSIONS

As we just discussed, most companies have pension plans that provide for the future payments of retirement benefits to compensate employees for their current services. Many companies also furnish *other postretirement benefits* to their retired employees. These may include medical coverage, dental coverage, life insurance, group legal services, and other benefits. By far the most common is health care benefits. One of every three U.S. workers in medium- and large-size companies participates in health care plans that provide for

coverage that continues into retirement. The aggregate impact is considerable; the total obligation for all U.S. corporations is about \$500 billion.

Prior to 1993, employers accounted for postretirement benefit costs on a pay-as-you-go basis, meaning the expense each year was simply the amount of insurance premiums or medical claims paid, depending on the way the company provided health care benefits. The FASB revised GAAP to require a completely different approach. The expected future health care costs for retirees now must be recognized as an expense over the years necessary for employees to become entitled to the benefits.³¹ This is the accrual basis that also is the basis for pension accounting.

● LO17-9

In fact, accounting for postretirement benefits is similar in most respects to accounting for pension benefits. This is because the two forms of benefits are fundamentally similar. Each is a form of deferred compensation earned during the employee's service life and each can be estimated as the present value of the cost of providing the expected future benefits. **General Motors** described its plan as shown in Illustration 17-19.

Illustration 17-19

Disclosures—General Motors

Real World Financials

Note 5: Other Postretirement Benefits (in part)

The Corporation and certain of its domestic subsidiaries maintain hourly and salaried benefit plans that provide postretirement medical, dental, vision, and life insurance to retirees and eligible dependents. . . . [GAAP] requires that the cost of such benefits be recognized in the financial statements during the period employees provide service to the Corporation.

Despite the similarities, though, there are a few differences in the characteristics of the benefits that necessitate differences in accounting treatment. Because accounting for the two types of retiree benefits is so nearly the same, our discussion in this portion of the chapter will emphasize the differences. This will allow you to use what you learned earlier in the chapter regarding pension accounting as a foundation for learning how to account for other postretirement benefits, supplementing that common base only when necessary. Focusing on the differences also will reinforce your understanding of pension accounting.

What Is a Postretirement Benefit Plan?

Before addressing the accounting ramifications, let's look at a typical retiree health care plan.³² First, it's important to distinguish retiree health care benefits from health care benefits provided during an employee's working years. The annual cost of providing *preretirement* benefits is simply part of the annual compensation expense. However, many companies offer coverage that continues into retirement. It is the deferred aspect of these *postretirement* benefits that creates an accounting issue.

Eligibility usually is based on age and/or years of service.

Usually a plan promises benefits in exchange for services performed over a designated number of years, or reaching a particular age, or both. For instance, a plan might specify that employees are eligible for postretirement benefits after both working 20 years and reaching age 62 while in service. Eligibility requirements and the nature of benefits usually are specified by a written plan, or sometimes only by company practice.

Postretirement Health Benefits and Pension Benefits Compared

Keep in mind that retiree health benefits differ fundamentally from pension benefits in some important respects:

1. The amount of *pension* benefits generally is based on the number of years an employee works for the company so that the longer the employee works, the higher are the

³¹FASB ASC 715-60: Compensation—Retirement Benefits—Defined Benefit Plans—Postretirement (previously “Employers’ Accounting for Postretirement Benefits Other Than Pensions,” *Statement of Financial Accounting Standards No. 106* (Norwalk, Conn.: FASB, 1990)). The Standard became effective (with some exceptions) in 1993.

³²For convenience, our discussion focuses on health care benefits because these are by far the most common type of postretirement benefits other than pensions. But the concepts we discuss apply equally to other forms of postretirement benefits.

benefits. On the other hand, the amount of *postretirement health care* benefits typically is unrelated to service. It's usually an all-or-nothing plan in which a certain level of coverage is promised upon retirement, independent of the length of service beyond that necessary for eligibility.

2. Although coverage might be identical, the cost of providing the coverage might vary significantly from retiree to retiree and from year to year because of differing medical needs.
3. Postretirement health care plans often require the retiree to share in the cost of coverage through monthly contribution payments. For instance, a company might pay 80% of insurance premiums, with the retiree paying 20%. The net cost of providing coverage is reduced by these contributions as well as by any portion of the cost paid by Medicare or other insurance.
4. Coverage often is provided to spouses and eligible dependents.

Determining the Net Cost of Benefits

To determine the postretirement benefit obligation and the postretirement benefit expense, the company's actuary first must make estimates of what the postretirement benefit costs will be for current employees. Then, as illustrated in Illustration 17–20, contributions to those costs by employees are deducted, as well as Medicare's share of the costs (for retirement years when the retiree will be 65 or older), to determine the estimated net cost of benefits to the employer:

Illustration 17–20

Estimating the Net Cost of Benefits

Remember, postretirement health care benefits are anticipated actual costs of providing the promised health care, rather than an amount estimated by a defined benefit formula. This makes these estimates inherently more intricate, particularly because health care costs in general are notoriously difficult to forecast. And, since postretirement health care benefits are partially paid by the retiree and by Medicare, these cost-sharing amounts must be estimated as well.

On the other hand, estimating postretirement benefits costs is similar in many ways to estimating pension costs. Both estimates entail a variety of assumptions to be made by the company's actuary. Many of these assumptions are the same; for instance, both require estimates of:

1. A discount rate.
2. Expected return on plan assets (if the plan is funded).
3. Employee turnover.
4. Expected retirement age.
5. Expected compensation increases (if the plan is pay-related).
6. Expected age of death.
7. Number and ages of beneficiaries and dependents.

Of course, the relative importance of some estimates is different from that for pension plans. Dependency status, turnover, and retirement age, for example, take on much greater significance. Also, additional assumptions become necessary as a result of differences between pension plans and other postretirement benefit plans. Specifically, it's necessary to estimate:

1. The current cost of providing health care benefits at each age that participants might receive benefits.
2. Demographic characteristics of plan participants that might affect the amount and timing of benefits.

Many of the assumptions needed to estimate postretirement health care benefits are the same as those needed to estimate pension benefits.

Some additional assumptions are needed to estimate postretirement health care benefits besides those needed to estimate pension benefits.

3. Benefit coverage provided by Medicare, other insurance, or other sources that will reduce the net cost of employer-provided benefits.
4. The expected health care cost trend rate.³³

The postretirement benefit obligation is the discounted present value of the benefits during retirement.

Taking these assumptions into account, the company's actuary estimates what the net cost of postretirement benefits will be for current employees in each year of their expected retirement. The discounted present value of those costs is the expected postretirement benefit obligation.

Postretirement Benefit Obligation

● LO17-10

There are two related obligation amounts. As indicated in Illustration 17-21, one measures the total obligation and the other refers to a specific portion of the total:

Illustration 17-21

Two Views of the Obligation for Postretirement Benefits Other Than Pensions

1. **Expected postretirement benefit obligation (EPBO):** The actuary's estimate of the total postretirement benefits (at their discounted present value) expected to be received by plan participants.
2. **Accumulated postretirement benefit obligation (APBO):** The portion of the EPBO attributed to employee service to date.

The accumulated postretirement benefit obligation (APBO) is analogous to the projected benefit obligation (PBO) for pensions. Like the PBO, the APBO is reported in the balance sheet only to the extent that it exceeds plan assets.

Measuring the Obligation

To illustrate, assume the actuary estimates that the net cost of providing health care benefits to Jessica Farrow (our illustration employee from earlier in the chapter) during her retirement years has a present value of \$10,842 as of the end of 2011. This is the EPBO. If the benefits (and therefore the costs) relate to an estimated 35 years of service³⁴ and 10 of those years have been completed, the APBO would be:

\$3,098 represents the portion of the EPBO related to the first 10 years of the 35-year service period.

$$\begin{array}{rcccl} \$10,842 & \times & \frac{10}{35} & = & \$3,098 \\ \text{EPBO} & & \text{Fraction attributed} & & \text{APBO} \\ & & \text{to service to date} & & \end{array}$$

If the assumed discount rate is 6%, a year later the EPBO will have grown to \$11,493 simply because of a year's interest accruing at that rate ($\$10,842 \times 1.06 = \$11,493$). Notice that there is no increase in the EPBO for service because, unlike the obligation in most pension plans, the total obligation is not increased by an additional year's service.

The APBO, however, is the portion of the EPBO related to service up to a particular date. Consequently, the APBO will have increased both because of interest and because the service fraction will be higher (service cost):

\$3,612 represents the portion of the EPBO related to the first 11 years of the 35-year service period.

$$\begin{array}{rcccl} \$11,493 & \times & \frac{11}{35} & = & \$3,612 \\ \text{EPBO} & & \text{Fraction attributed} & & \text{APBO} \\ & & \text{to service to date} & & \end{array}$$

The two elements of the increase in 2012 can be separated as follows:

The APBO increases each year due to (a) interest accrued on the APBO and (b) the portion of the EPBO attributed to that year.

APBO at the beginning of the year	\$3,098
Interest cost: $\$3,098 \times 6\%$	186
Service cost: $(\$11,493 \times \frac{1}{35})$ portion of EPBO attributed to the year	328
APBO at the end of the year	<u>\$3,612</u>

³³Health care cost trend rates recently reported have ranged from 5.5% to 10.5%, with 8–9.5% being the most commonly assumed rate. *Accounting Trends and Techniques—2010* (New York: AICPA, 2010), p. 360.

³⁴Assigning the costs to particular service years is referred to as the *attribution* of the costs to the years the benefits are assumed earned. We discuss attribution in the next section.

Attribution

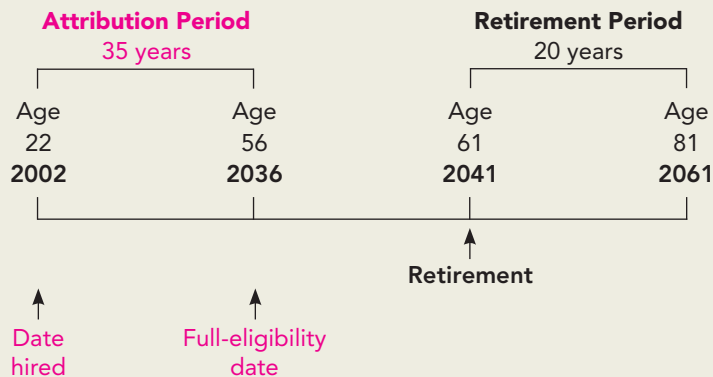

Attribution is the process of assigning the cost of benefits to the years during which those benefits are assumed to be earned by employees. We accomplish this by assigning an equal fraction of the EPBO to each year of service from the employee's date of hire to the employee's full eligibility date.³⁵ This is the date the employee has performed all the service necessary to have earned all the retiree benefits estimated to be received by the employee.³⁶ In our earlier example, we assumed the attribution period was 35 years and accordingly accrued $\frac{1}{35}$ of the EPBO each year. The amount accrued each year increases both the APBO and the postretirement benefit expense. In Illustration 17–22 we see how the 35-year attribution (accrual) period was determined.

The cost of benefits is attributed to the years during which those benefits are assumed to be earned by employees.

Jessica Farrow was hired by Global Communications at age 22 at the beginning of 2002 and is expected to retire at the end of 2041 at age 61. The retirement period is estimated to be 20 years.*

Global's employees are eligible for postretirement health care benefits after both reaching age 56 while in service and having worked 20 years.

Since Farrow becomes fully eligible at age 56 (the end of 2036), retiree benefits are attributed to the 35-year period from her date of hire through that date. Graphically, the situation can be described as follows:

*You probably recognize this as the situation used earlier in the chapter to illustrate pension accounting.

Illustration 17–22

Determining the Attribution Period

The attribution period spans each year of service from the employee's date of hire to the employee's full eligibility date.

Some critics of this approach feel there is a fundamental inconsistency between the way we measure the benefits and the way we assign the benefits to specific service periods. The benefits (EPBO) are measured with the concession that the employee may work beyond the full eligibility date; however, the attribution period does not include years of service after that date. The counterargument is the fact that at the full eligibility date the employee will have earned the right to receive the full benefits expected under the plan and the amount of the benefits will not increase with service beyond that date.³⁷

The attribution period does not include years of service beyond the full eligibility date even if the employee is expected to work after that date.

Accounting for Postretirement Benefit Plans Other Than Pensions

As we just discussed, it's necessary to attribute a portion of the accumulated postretirement benefit obligation to each year as the service cost for that year as opposed to measuring the actual benefits employees earn during the year as we did for pension plans. That's due to the fundamental nature of these other postretirement plans under which employees are

● LO17–11

We account for pensions and for other postretirement benefits essentially the same way.

³⁵If the plan specifically grants credit only for service from a date after employee's date of hire, the beginning of the attribution period is considered to be the beginning of that credited service period, rather than the employee's date of hire.

³⁶Or any beneficiaries and covered dependents.

³⁷FASB ASC 715–60: Compensation—Retirement Benefits—Defined Benefit Plans—Other Postretirement (previously “Employers’ Accounting for Postretirement Benefits Other Than Pensions,” *Statement of Financial Accounting Standards No. 106* (Norwalk, Conn.: FASB, 1990), par. 219–239. These specific paragraphs are not codified in the FASB Research System as they contain bases for conclusions and are therefore what codifiers consider “nonessential” material.

ineligible for benefits until specific eligibility criteria are met, at which time they become 100% eligible. This contrasts with pension plans under which employees earn additional benefits each year until they retire.

Illustration 17–23

Measuring Service Cost

Measuring the service cost differs, though, due to a fundamental difference in the way employees acquire benefits under the two types of plans.

The way we measure service cost is the primary difference between accounting for pensions and for other postretirement benefits. Otherwise, though, accounting for the two is virtually identical. For example, a company with an underfunded postretirement benefit plan with existing prior service cost and net loss–AOCI would record the following journal entries annually:

We record the annual expense and funding for other postretirement benefit plans the same way we do for pensions.

We record losses and gains (as well as any new prior service cost should it occur) the same way we do for pensions.

To Record Postretirement Benefit Expense			
Postretirement benefit expense (total)		XX	
Plan assets (expected return on assets)		XX	
Amortization of net gain–OCI (current amortization)		XX	
APBO (service cost + interest cost)			XX
Net loss–AOCI (current amortization)			XX
Prior service cost–AOCI ³⁸ (current amortization)			XX
To Record Cash Funding of Plan Assets			
Plan assets		XX	
Cash (contribution to plan assets)			XX
To Record Gains and Losses			
Loss–OCI (from change in assumption)		XX	
APBO			XX
or			
APBO		XX	
Gain–OCI (from change in assumption)			XX
Plan assets		XX	
Gain–OCI (actual return on assets – expected return)			XX
or			
Gain–OCI (expected return on assets – actual return)		XX	
Plan assets			XX

³⁸The prior service cost for other postretirement benefits is amortized over the average remaining time until “full eligibility” for employees rather than until retirement as is the case for pension plans. This is consistent with recording “regular” service cost over the time to full eligibility.

Ethical Dilemma

Earlier this year, you were elected to the board of directors of Champion International, Inc. Champion has offered its employees postretirement health care benefits for 35 years. The practice of extending health care benefits to retirees began modestly. Most employees retired after age 65, when most benefits were covered by Medicare. Costs also were lower because life expectancies were shorter and medical care was less expensive. Because costs were so low, little attention was paid to accounting for these benefits. The company simply recorded an expense when benefits were provided to retirees. The FASB changed all that. Now, the obligation for these benefits must be anticipated and reported in the annual report. Worse yet, the magnitude of the obligation has grown enormously, almost unnoticed. Health care costs have soared in recent years. Medical technology and other factors have extended life expectancies. Of course, the value to employees of this benefit has grown parallel to the growth of the burden to the company.

Without being required to anticipate future costs, many within Champion's management were caught by surprise at the enormity of the company's obligation. Equally disconcerting was the fact that such a huge liability now must be exposed to public view. Now you find that several board members are urging the dismantling of the postretirement plan altogether.

A Comprehensive Illustration

We assumed earlier that the EPBO at the end of 2011 was determined by the actuary to be \$10,842. This was the present value on that date of all anticipated future benefits. Then we noted that the EPBO at the end of the next year would have grown by 6% to \$11,493. This amount, too, would represent the present value of the same anticipated future benefits, but as of a year later. The APBO, remember, is the portion of the EPBO attributed to service performed to a particular date. So, we determined the APBO at the end of 2012 to be $\$11,493 \times \frac{1}{35}$, or \$3,612. We determined the \$328 service cost noted earlier for 2012 as the portion of the EPBO attributed to that year: $\$11,493 \times \frac{1}{35}$.

Now, let's review our previous discussion of how the EPBO, the APBO, and the postretirement benefit expense are determined by calculating those amounts a year later, at the end of 2013. Before doing so, however, we can anticipate (a) the EPBO to be $\$11,493 \times 1.06$, or \$12,182, (b) the APBO to be $\frac{1}{35}$ of that amount, or \$4,177, and (c) the 2013 service cost to be $\frac{1}{35}$ of that amount, or \$348. In Illustration 17–24 we see if our expectations are borne out by direct calculation.

Assume the actuary has estimated the net cost of retiree benefits in each year of Jessica Farrow's 20-year expected retirement period to be the amounts shown in the calculation below. She is fully eligible for benefits at the end of 2036 and is expected to retire at the end of 2041.

Calculating the APBO and the postretirement benefit expense at the end of 2013, 12 years after being hired, begins with estimating the EPBO.

Steps to calculate (a) the EPBO, (b) the APBO, and (c) the annual service cost at the end of 2013, 12 years after being hired, are:

- (a). 1. Estimate the cost of retiree benefits in each year of the expected retirement period and deduct anticipated Medicare reimbursements and retiree cost-sharing to derive the net cost to the employer in each year of the expected retirement period.
2. Find the present value of each year's net benefit cost as of the retirement date.
3. Find the present value of the total net benefit cost as of the current date. This is the **EPBO**.
- (b). Multiply the EPBO by the attribution factor, (service to date/total attribution period). This is the **APBO**. The **service cost** in any year is simply one year's worth of the EPBO.
- (c). Multiply the EPBO by $\frac{1}{\text{total attribution period}}$.

Illustration 17–24

Determining the Postretirement Benefit Obligation

The EPBO is the discounted present value of the total benefits expected to be earned.

The fraction of the EPBO considered to be earned this year is the service cost.

The fraction of the EPBO considered to be earned so far is the APBO.

The steps are demonstrated in Illustration 17–24A.

Illustration 17–24A

EPBO, APBO, and Service Cost in 2013

The actuary estimates the net cost to the employer in each year the retiree is expected to receive benefits.

As of the retirement date, the lump-sum equivalent of the expected yearly costs is \$62,269.

The EPBO in 2013 is the present value of those benefits.

The APBO is the portion of the EPBO attributed to service to date.

The service cost is the portion of the EPBO attributed to a particular year's service.

(a.1). Actuary estimates the net cost of benefits paid during retirement years:

Year	Age	Net Benefit	Present Value at 2041
2042	62	5,000	4,717
2043	63	5,600	4,984
2044	64	6,300	5,290
2045	65	3,000	2,376
~	~	~	~
2060	80	9,550	3,156
2061	81	10,300	3,212
			<u>\$62,269</u>

(a.2). Present value [$n = 1, 2, 3, 4, \dots, 19, 20; i = 6\%$] of the net benefits as of the retirement date:

- (a.3). Present value ($n = 28, i = 6\%$) of postretirement benefits at 2013 is
 $\$62,269 \times .19563 = \$12,182$ (EPBO)
 (b). $\$12,182 \times \frac{1}{2}_{35} = \$4,177$ (APBO)
 (c). $\$12,182 \times \frac{1}{35} = \348 (Service Cost)

Decision Makers' Perspective

Postretirement benefit amounts reported in the disclosure notes fill a reporting gap left by the minimal disclosures in the primary financial statements.

When they analyze financial statements, investors and creditors should be wary of the non-standard way companies report pension and other postretirement information. Recall that in the balance sheet, firms do not separately report the benefit obligation and the plan assets. Also, companies have considerable latitude in making the several assumptions needed to estimate the components of postretirement benefit plans. Fortunately, information provided in the disclosure notes makes up for some of the deficiency in balance sheet information and makes it possible for interested analysts to modify their analysis. As for pensions, the choices companies make for the discount rate, expected return on plan assets, and the compensation growth rate can greatly impact postretirement benefit expense and earnings quality. The disclosures required are very similar to pension disclosures. In fact, disclosures for the two types of retiree benefits typically are combined.³⁹ Disclosures include:

- Descriptions of the plans.
- Estimates of the obligations (PBO, ABO, vested benefit obligation, EPBO, and APBO).
- The percentage of total plan assets for each major category of assets (equity securities, debt securities, real estate, other) as well as a description of investment strategies, including any target asset allocations and risk management practices.

³⁹FASB ASC 715–60–50: Compensation—Retirement Benefits—Defined Benefit Plans—Other Postretirement—Disclosure (previously “Employers’ Disclosures about Pensions and Other Postretirement Benefits,” *Statement of Financial Accounting Standards No. 132* (Stamford, Conn.: FASB, 1998))

- A breakdown of the components of the annual pension and postretirement benefit expenses for the years reported.
- The discount rates, the assumed rate of compensation increases used to measure the PBO, the expected long-term rate of return on plan assets, and the expected rate of increase in future medical and dental benefit costs.
- Estimated benefit payments presented separately for the next five years and in the aggregate for years 6–10.
- Estimate of expected contributions to fund the plan for the next year.
- Disclosures also include (a) any changes to the net gain or net loss and prior service cost arising during the period, (b) the accumulated amounts of these components of accumulated other comprehensive income, and (c) the amounts of those balances expected to be amortized in the next year.
- Other information to make it possible for interested analysts to reconstruct the financial statements with plan assets and liabilities included. ●

Concept Review Exercise

Technology Group, Inc., has an unfunded retiree health care plan. The actuary estimates the net cost of providing health care benefits to a particular employee during his retirement years to have a present value of \$24,000 as of the end of 2013 (the EPBO). The benefits and therefore the expected postretirement benefit obligation relate to an estimated 36 years of service and 12 of those years have been completed. The interest rate is 6%.

OTHER POSTRETIREMENT BENEFITS

Required:

Pertaining to the one employee only:

1. What is the accumulated postretirement benefit obligation at the end of 2013?
2. What is the expected postretirement benefit obligation at the end of 2014?
3. What is the service cost to be included in 2014 postretirement benefit expense?
4. What is the interest cost to be included in 2014 postretirement benefit expense?
5. What is the accumulated postretirement benefit obligation at the end of 2014?
6. Show how the APBO changed during 2014 by reconciling the beginning and ending balances.
7. What is the 2014 postretirement benefit expense, assuming no net gains or losses and no prior service cost?

Solution:

1. What is the accumulated postretirement benefit obligation at the end of 2013?

$$\begin{array}{rcccl} \$24,000 & \times & \frac{12}{36} & = & \$8,000 \\ \text{EPBO} & & \text{Fraction} & & \text{APBO} \\ \text{2013} & & \text{earned} & & \text{2013} \end{array}$$

2. What is the expected postretirement benefit obligation at the end of 2014?

$$\begin{array}{rcccl} \$24,000 & \times & 1.06 & = & \$25,440 \\ \text{EPBO} & & \text{To accrue} & & \text{EPBO} \\ \text{2013} & & \text{interest} & & \text{2014} \end{array}$$

3. What is the service cost to be included in 2014 postretirement benefit expense?

$$\begin{array}{rcccl} \$25,440 & \times & \frac{1}{36} & = & \$707 \\ \text{EPBO} & & \text{Attributed to} & & \text{Service} \\ \text{2014} & & \text{2014} & & \text{cost} \end{array}$$

4. What is the interest cost to be included in 2014 postretirement benefit expense?

$$\$8,000 \text{ (beginning APBO)} \times 6\% = \$480$$

5. What is the accumulated postretirement benefit obligation at the end of 2014?

$$\begin{array}{rcccl} \$25,440 & \times & \frac{13}{36} & = & \$9,187 \\ \text{EPBO} & & \text{Fraction attributed} & & \text{APBO} \\ \text{2014} & & \text{to service to date} & & \text{2014} \end{array}$$

6. Show how the APBO changed during 2014 by reconciling the beginning and ending balances.

APBO at the beginning of 2014 (from req. 1)	\$8,000
Service cost: (from req. 3)	707
Interest cost: (from req. 4)	480
APBO at the end of 2014 (from req. 5)	<u>\$9,187</u>

7. What is the 2014 postretirement benefit expense, assuming no net gains or losses and no prior service cost?

Service cost	\$ 707
Interest cost	480
Actual return on the plan assets	(not funded)
Adjusted for: gain or loss on the plan assets	(not funded)
Amortization of prior service cost	none
Amortization of net gain or loss	none
Postretirement benefit expense	<u>\$1,187</u>

Financial Reporting Case Solution

- Why is pension plan underfunding not a concern in your present employment?** (*p. 1013*) In a defined contribution plan, the employer is not obliged to provide benefits beyond the annual contribution to the employees' plan. No liability is created. Unlike retirement benefits paid in a defined benefit plan, the employee's retirement benefits in a defined contribution plan are totally dependent on how well invested assets perform in the marketplace.
- Were you correct that the pension liability is not reported in the balance sheet? What is the liability?** (*p. 1015*) Yes and no. The pension liability is not reported separately in the balance sheet. It is, however, combined with pension assets with the net difference reported in the balance sheet. The separate balance is disclosed, though, in the notes. For United Dynamics, the PBO at the end of 2013 is \$2,628 million.
- What is the amount of the plan assets available to pay benefits? What are the factors that can cause that amount to change?** (*p. 1022*) The plan assets at the end of 2013 total \$2,807 million. A trustee accepts employer contributions, invests the contributions, accumulates the earnings on the investments, and pays benefits from the plan assets. So the amount is increased each year by employer cash contributions and (hopefully) a return on assets invested. It is decreased by amounts paid out to retired employees.
- What does the "pension asset" represent? Are you interviewing with a company whose pension plan is severely underfunded?** (*p. 1023*) The pension asset is not the plan assets available to pay pension benefits. Instead, it's the net difference between those assets and the pension obligation. United Dynamics' plan assets exceed the pension obligation in each year presented and therefore is one of the few companies whose pension plan is overfunded.

- 5. How is the pension expense influenced by changes in the pension liability and plan assets?** (p. 1024) The pension expense reported on the income statement is a composite of periodic changes that occur in both the pension obligation and the plan assets. For United Dynamics in 2013, the pension expense included the service cost and interest cost, which are changes in the PBO, and the return on plan assets. It also included an amortized portion of prior service costs (a previous change in the PBO) and of net gains (gains and losses result from changes in both the PBO and plan assets). ●

The Bottom Line

- **LO17-1** Pension plans are arrangements designed to provide income to individuals during their retirement years. *Defined contribution* plans promise fixed annual contributions to a pension fund, without further commitment regarding benefit amounts at retirement. *Defined benefit* plans promise fixed retirement benefits defined by a designated formula. The employer sets aside cash each year to provide sufficient funds to pay promised benefits. (p. 1011)
- **LO17-2** The *accumulated benefit obligation* is an estimate of the discounted present value of the retirement benefits earned so far by employees, applying the plan's pension formula to *existing* compensation levels. The vested benefit obligation is the portion of the accumulated benefit obligation that plan participants are entitled to receive regardless of their continued employment. The *projected benefit obligation* estimates retirement benefits by applying the pension formula to *projected future* compensation levels. (p. 1015)
- **LO17-3** The PBO can change due to the accumulation of *service cost* from year to year, the accrual of *interest* as time passes, making plan amendments retroactive to prior years (prior service cost), and periodic adjustments when estimates change (gains and losses). The obligation is reduced as benefits actually are paid to retired employees. (p. 1016)
- **LO17-4** The plan assets consist of the accumulated balance of the annual employer contributions plus the return on the investments less benefits paid to retirees. (p. 1021)
- **LO17-5** The difference between an employer's obligation (PBO for pensions, APBO for other postretirement benefit plans) and the resources available to satisfy that obligation (plan assets) is the funded status of the pension plan. The employer must report the "funded status" of the plan in the balance sheet as a net pension liability if the obligation exceeds the plan assets or as a net pension asset if the plan assets exceed the obligation. (p. 1023)
- **LO17-6** The pension expense is a composite of periodic changes in both the projected benefit obligation and the plan assets. Service cost is the increase in the PBO attributable to employee service and is the primary component of pension expense. The interest and return-on-assets components are financial items created only because the pension payment is delayed and the obligation is funded currently. Prior service cost is recognized over employees' future service period. Also, neither a loss (gain) on the PBO nor a loss (gain) on plan assets is immediately recognized in pension expense; they are recognized on a delayed basis to achieve income smoothing. (p. 1023)
- **LO17-7** Recording pension expense causes the net pension liability/asset to change by the service cost, the interest cost, and the expected return on plan assets. Any amortization amounts included in the expense will reduce the *accumulated other comprehensive income* balances being amortized, e.g., net loss—AOCI and prior service cost—AOCI. Similarly, the plan assets are increased by the annual cash investment. New losses and gains (as well as any new prior service cost should it occur) are recognized as other comprehensive income. (p. 1029)
- **LO17-8** The various elements of a pension plan—projected benefit obligation, plan assets, prior service cost, gains and losses, pension expense, and the funded status of the plan—are interrelated. One way to see how each element relates to the other is to bring each part together in a *pension spreadsheet*. (pp. 1030 and 1035)
- **LO17-9** Accounting for postretirement benefits is similar in most respects to accounting for pension benefits. Like pensions, other postretirement benefits are a form of deferred compensation. Unlike pensions, their cost is attributed to the years from the employee's date of hire to the full eligibility date. (p. 1040)
- **LO17-10** The expected postretirement benefit obligation (EPBO) is the actuary's estimate of the total postretirement benefits (at their discounted present value) expected to be received by plan participants. The

accumulated postretirement benefit obligation (APBO) is the portion of the EPBO attributed to employee service to date. (p. 1042)

- **LO17-11** The components of postretirement benefit expense are essentially the same as those for pension expense. (p. 1043)
- **LO17-12** Under both U.S. GAAP and IFRS we report all changes in the obligation and in the value of plan assets as they occur. The ways the changes are determined and reported are different, though, for some of the changes. The changes that constitute the components of the net pension cost are reported separately as (a) the service cost, (b) the net interest cost/income, and (c) rereasurement gains or losses. Under IFRS, *past service cost* is combined with current service cost and reported as service cost within the income statement rather than as a component of other comprehensive income as it is under U.S. GAAP. Under IFRS, gains and losses are not recycled from other comprehensive income as is required under U.S. GAAP (when the accumulated net gain or net loss exceeds the 10% threshold). Also, the interest cost and return on plan assets are replaced by net interest cost/income (interest rate times the difference between the DBO and plan assets). (pp. 1030, 1032, 1036, and 1038) ●

APPENDIX 17

Service Method of Allocating Prior Service Cost

When amortizing prior service cost, our objective is to match the cost with employee service. The straight-line method described in this chapter allocates an equal amount of the prior service cost to each year of the 15-year average service period of affected employees. But consider this: fewer of the affected employees will be working for the company toward the end of that period than at the beginning. Some probably will retire or quit in each year following the amendment.

An allocation approach that reflects the declining service pattern is called the **service method**. This method allocates the prior service cost to each year in proportion to the fraction of the total remaining service years worked in each of those years. To do this, it's necessary to estimate how many of the 2,000 employees working at the beginning of 2012 when the amendment is made will still be employed in each year after the amendment.

Let's suppose, for example, that the actuary estimates that a declining number of these employees still will be employed in each of the next 28 years as indicated in the abbreviated schedule below. The portion of the prior service cost amortized to pension expense each year is \$60 million times a declining fraction. Each year's fraction is that year's service divided by the 28-year total (30,000). This is demonstrated in Illustration 17A-1.

Illustration 17A-1

Service Method of Amortizing Prior Service Cost

By the service method, prior service cost is recognized each year in proportion to the fraction of the total remaining service years worked that year.

Year	Number of Employees Still Employed (assumed for the illustration)	Fraction of Total Service Years		(\$ in millions)	
				Prior Service Cost	Amount Amortized
2012	2,000	$\frac{2,000}{30,000}$	×	\$60	= \$ 4.0
2013	2,000	$\frac{2,000}{30,000}$	×	60	= 4.0
2014	1,850	$\frac{1,850}{30,000}$	×	60	= 3.7
2015	1,700	$\frac{1,700}{30,000}$	×	60	= 3.4
2016	1,550	$\frac{1,550}{30,000}$	×	60	= 3.1
—	—	—	×	—	= —
2037	400	$\frac{400}{30,000}$	×	60	= .8
2038	250	$\frac{250}{30,000}$	×	60	= .5
2039	100	$\frac{100}{30,000}$	×	60	= .2
Totals	30,000	$\frac{30,000}{30,000}$			\$60.0
	Total number of service years				Total amount amortized

Conceptually, the service method achieves a better matching of the cost and benefits. In fact, this is the FASB's recommended approach. However, GAAP permits the consistent use of any method that amortizes the prior service cost at least as quickly.⁴⁰ The straight-line method meets this condition and is the approach most often used in practice. In our illustration, the cost is completely amortized over 15 years rather than the 28 years required by the service method. The 15-year average service life is simply the total estimated service years divided by the total number of employees in the group:

The service method amortized an equal amount *per employee* each year.

$$\begin{array}{rcccl} 30,000 \text{ years} & \div & 2,000 & = & 15 \text{ years} \\ \text{Total number} & & \text{Total number} & & \text{Average} \\ \text{of service years} & & \text{of employees} & & \text{service years} \end{array} \bullet$$

⁴⁰FASB ASC 715-30-35-13: Compensation—Retirement Benefits—Defined Benefit Plans—Pension—Subsequent Measurement—Prior Service Costs (previously “Employers’ Accounting for Pensions,” *Statement of Financial Accounting Standards No. 87* (Stamford, Conn.: FASB, 1985), par. 26).

Questions For Review of Key Topics

- Q 17-1** What is a pension plan? What motivates a corporation to offer a pension plan for its employees?
- Q 17-2** Qualified pension plans offer important tax benefits. What is the special tax treatment and what qualifies a pension plan for these benefits?
- Q 17-3** Lamont Corporation has a pension plan in which the corporation makes all contributions and employees receive benefits at retirement based on the balance in their accumulated pension fund. What type of pension plan does Lamont have?
- Q 17-4** What is the vested benefit obligation?
- Q 17-5** Differentiate between the accumulated benefit obligation and the projected benefit obligation.
- Q 17-6** Name five events that might change the balance of the PBO.
- Q 17-7** Name three events that might change the balance of the plan assets.
- Q 17-8** What are the components that might be included in the calculation of net pension cost recognized for a period by an employer sponsoring a defined benefit pension plan?
- Q 17-9** Define the service cost component of the periodic pension expense.
- Q 17-10** Define the interest cost component of the periodic pension expense.
- Q 17-11** The return on plan assets is the increase in plan assets (at fair value), adjusted for contributions to the plan and benefits paid during the period. How is the return included in the calculation of the periodic pension expense?
- Q 17-12** Define prior service cost. How is it reported in the financial statements? How is it included in pension expense?
- Q 17-13** How should gains or losses related to pension plan assets be recognized? How does this treatment compare to that for gains or losses related to the pension obligation?
- Q 17-14** Is a company's PBO reported in the balance sheet? Its plan assets? Explain.
- Q 17-15** What two components of pension expense may be negative (i.e., reduce pension expense)?
- Q 17-16** Which are the components of pension expense that involve delayed recognition?
- Q 17-17** Evaluate this statement: The excess of the actual return on plan assets over the expected return decreases the employer's pension cost.
- Q 17-18** When accounting for pension costs, how should the payment into the pension fund be recorded? How does it affect the funded status of the plan?
- Q 17-19** TFC Inc. revises its estimate of future salary levels, causing its PBO estimate to increase by \$3 million. How is the \$3 reflected in TFC's financial statements?
- Q 17-20** A pension plan is underfunded when the employer's obligation (PBO) exceeds the resources available to satisfy that obligation (plan assets) and overfunded when the opposite is the case. How is this funded status reported on the balance sheet if plan assets exceed the PBO? If the PBO exceeds plan assets?
- Q 17-21** What are two ways to measure the obligation for postretirement benefits other than pensions? Define these measurement approaches.
- Q 17-22** How are the costs of providing postretirement benefits other than pensions expensed?
- Q 17-23** The components of postretirement benefit expense are similar to the components of pension expense. In what fundamental way does the service cost component differ between these two expenses?

Q 17-24 The EPBO for Branch Industries at the end of 2013 was determined by the actuary to be \$20,000 as it relates to employee Will Lawson. Lawson was hired at the beginning of 1999. He will be fully eligible to retire with health care benefits after 15 more years but is expected to retire in 25 years. What is the APBO as it relates to Will Lawson?

 **IFRS Q 17-25** The income statement of Mid-South Logistics includes \$12 million for amortized prior service cost. Does Mid-South Logistics prepare its financial statements according to U.S. GAAP or IFRS? Explain.

 **IFRS Q 17-26** How do U.S. GAAP and IFRS differ with regard to reporting gains and losses from changing assumptions used to measure the pension obligation?

Brief Exercises

BE 17-1
Changes in the projected benefit obligation

● LO17-3

The projected benefit obligation was \$80 million at the beginning of the year. Service cost for the year was \$10 million. At the end of the year, pension benefits paid by the trustee were \$6 million and there were no pension-related other comprehensive income accounts requiring amortization. The actuary's discount rate was 5%. What was the amount of the projected benefit obligation at year-end?

BE 17-2
Changes in the projected benefit obligation

● LO17-3

The projected benefit obligation was \$80 million at the beginning of the year and \$85 million at the end of the year. At the end of the year, pension benefits paid by the trustee were \$6 million and there were no pension-related other comprehensive income accounts requiring amortization. The actuary's discount rate was 5%. What was the amount of the service cost for the year?

BE 17-3
Changes in the projected benefit obligation

● LO17-3

The projected benefit obligation was \$80 million at the beginning of the year and \$85 million at the end of the year. Service cost for the year was \$10 million. At the end of the year, there was no prior service cost and a negligible net loss-AOCI. The actuary's discount rate was 5%. What was the amount of the retiree benefits paid by the trustee?

BE 17-4
Changes in the projected benefit obligation

● LO17-3

The projected benefit obligation was \$80 million at the beginning of the year and \$85 million at the end of the year. Service cost for the year was \$10 million. At the end of the year, pension benefits paid by the trustee were \$6 million. The actuary's discount rate was 5%. At the end of the year, the actuary revised the estimate of the percentage rate of increase in compensation levels in upcoming years. What was the amount of the gain or loss the estimate change caused?

BE 17-5
Changes in pension plan assets

● LO17-4

Pension plan assets were \$80 million at the beginning of the year. The return on plan assets was 5%. At the end of the year, retiree benefits paid by the trustee were \$6 million and cash invested in the pension fund was \$7 million. What was the amount of the pension plan assets at year-end?

BE 17-6
Changes in pension plan assets

● LO17-4

Pension plan assets were \$80 million at the beginning of the year and \$83 million at the end of the year. The return on plan assets was 5%. At the end of the year, cash invested in the pension fund was \$7 million. What was the amount of the retiree benefits paid by the trustee?

BE 17-7
Changes in pension plan assets

● LO17-4

Pension plan assets were \$100 million at the beginning of the year and \$104 million at the end of the year. At the end of the year, retiree benefits paid by the trustee were \$6 million and cash invested in the pension fund was \$7 million. What was the percentage rate of return on plan assets?

BE 17-8
Reporting the funded status of pension plans

● LO17-5

JDS Foods' projected benefit obligation, accumulated benefit obligation, and plan assets were \$40 million, \$30 million, and \$25 million, respectively, at the end of the year. What, if any, pension liability must be reported in the balance sheet? What would JDS report if the plan assets were \$45 million instead?

BE 17-9
Pension expense

● LO17-6

The projected benefit obligation was \$80 million at the beginning of the year. Service cost for the year was \$10 million. At the end of the year, pension benefits paid by the trustee were \$6 million and there were no pension-related other comprehensive income accounts requiring amortization. The actuary's discount rate was 5%. The actual return on plan assets was \$5 million although it was expected to be only \$4 million. What was the pension expense for the year?

- BE 17-10**
Pension expense; prior service cost
● LO17-6
- The pension plan was amended last year, creating a prior service cost of \$20 million. Service cost and interest cost for the year were \$10 million and \$4 million, respectively. At the end of the year, there was a negligible balance in the net gain–pensions account. The actual return on plan assets was \$4 million although it was expected to be \$6 million. On average, employees' remaining service life with the company is 10 years. What was the pension expense for the year?
- BE 17-11**
Net gain
● LO17-6
- The projected benefit obligation and plan assets were \$80 million and \$100 million, respectively, at the beginning of the year. Due primarily to favorable stock market performance in recent years, there also was a net gain of \$30 million. On average, employees' remaining service life with the company is 10 years. As a result of the net gain, what was the increase or decrease in pension expense for the year?
- BE 17-12**
Recording pension expense
● LO17-7
- The Warren Group's pension expense is \$67 million. This amount includes a \$70 million service cost, a \$50 million interest cost, a \$55 million reduction for the expected return on plan assets, and a \$2 million amortization of a prior service cost. How is the net pension liability affected when the pension expense is recorded?
- BE 17-13**
Recording pension expense
● LO17-7
- Andrews Medical reported a net loss–AOCI in last year's balance sheet. This year, the company revised its estimate of future salary levels causing its PBO estimate to decline by \$4 million. Also, the \$8 million actual return on plan assets fell short of the \$9 million expected return. How does this gain and loss affect Andrews' income statement, statement of comprehensive income, and balance sheet?
- BE 17-14**
Postretirement benefits; determine the APBO and service cost
● LO17-9, LO17-10
- Prince Distribution Inc. has an unfunded postretirement benefit plan. Medical care and life insurance benefits are provided to employees who render 10 years service and attain age 55 while in service. At the end of 2013, Jim Lukawitz is 31. He was hired by Prince at age 25 (6 years ago) and is expected to retire at age 62. The expected postretirement benefit obligation for Lukawitz at the end of 2013 is \$50,000 and \$54,000 at the end of 2014. Calculate the accumulated postretirement benefit obligation at the end of 2013 and 2014 and the service cost for 2013 and 2014 as pertaining to Lukawitz.
- BE 17-15**
Postretirement benefits; changes in the APBO
● LO17-11
- On January 1, 2013, Medical Transport Company's accumulated postretirement benefit obligation was \$25 million. At the end of 2013, retiree benefits paid were \$3 million. Service cost for 2013 is \$7 million. Assumptions regarding the trend of future health care costs were revised at the end of 2013, causing the actuary to revise downward the estimate of the APBO by \$1 million. The actuary's discount rate is 8%. Determine the amount of the accumulated postretirement benefit obligation at December 31, 2013.

Exercises

An alternate exercise and problem set is available on the text website: www.mhhe.com/spiceland7e

- E 17-1**
Changes in the PBO
● LO17-3
- Indicate by letter whether each of the events listed below increases (**I**), decreases (**D**), or has no effect (**N**) on an employer's projected benefit obligation.
- Events**
-
- ___ 1. Interest cost.
 - ___ 2. Amortization of prior service cost.
 - ___ 3. A decrease in the average life expectancy of employees.
 - ___ 4. An increase in the average life expectancy of employees.
 - ___ 5. A plan amendment that increases benefits is made retroactive to prior years.
 - ___ 6. An increase in the actuary's assumed discount rate.
 - ___ 7. Cash contributions to the pension fund by the employer.
 - ___ 8. Benefits are paid to retired employees.
 - ___ 9. Service cost.
 - ___ 10. Return on plan assets during the year are lower than expected.
 - ___ 11. Return on plan assets during the year are higher than expected.
- E 17-2**
Determine the projected benefit obligation
● LO17-3
- On January 1, 2013, Burlson Corporation's projected benefit obligation was \$30 million. During 2013 pension benefits paid by the trustee were \$4 million. Service cost for 2013 is \$12 million. Pension plan assets (at fair value) increased during 2013 by \$6 million as expected. At the end of 2013, there was no prior service cost and a negligible balance in net loss–AOCI. The actuary's discount rate was 10%.
- Required:**
Determine the amount of the projected benefit obligation at December 31, 2013.

E 17-3

Components of pension expense

● LO17-6

Indicate by letter whether each of the events listed below increases (**I**), decreases (**D**), or has no effect (**N**) on an employer's periodic pension expense in the year the event occurs.

Events

-
- ___ 1. Interest cost.
 - ___ 2. Amortization of prior service cost–AOCI.
 - ___ 3. Excess of the expected return on plan assets over the actual return.
 - ___ 4. Expected return on plan assets.
 - ___ 5. A plan amendment that increases benefits is made retroactive to prior years.
 - ___ 6. Actuary's estimate of the PBO is increased.
 - ___ 7. Cash contributions to the pension fund by the employer.
 - ___ 8. Benefits are paid to retired employees.
 - ___ 9. Service cost.
 - ___ 10. Excess of the actual return on plan assets over the expected return.
 - ___ 11. Amortization of net loss–AOCI.
 - ___ 12. Amortization of net gain–AOCI.

E 17-4

Recording pension expense

● LO17-6,
LO17-7

Harrison Forklift's pension expense includes a service cost of \$10 million. Harrison began the year with a pension liability of \$28 million (underfunded pension plan).

Required:

Prepare the appropriate general journal entries to record Harrison's pension expense in each of the following independent situations regarding the other components of pension expense (\$ in millions):

1. Interest cost, \$6; expected return on assets, \$4; amortization of net loss, \$2.
2. Interest cost, \$6; expected return on assets, \$4; amortization of net gain, \$2.
3. Interest cost, \$6; expected return on assets, \$4; amortization of net loss, \$2; amortization of prior service cost, \$3 million.

E 17-5

Determine pension plan assets

● LO17-4

The following data relate to Voltaire Company's defined benefit pension plan:

	(\$ in millions)
Plan assets at fair value, January 1	\$600
Expected return on plan assets	60
Actual return on plan assets	48
Contributions to the pension fund (end of year)	100
Amortization of net loss	10
Pension benefits paid (end of year)	11
Pension expense	72

Required:

Determine the amount of pension plan assets at fair value on December 31.

E 17-6

Changes in the pension obligation; determine service cost

● LO17-3,
LO17-6

Pension data for Millington Enterprises include the following:

	(\$ in millions)
Discount rate, 10%	
Projected benefit obligation, January 1	\$360
Projected benefit obligation, December 31	465
Accumulated benefit obligation, January 1	300
Accumulated benefit obligation, December 31	415
Cash contributions to pension fund, December 31	150
Benefit payments to retirees, December 31	54

Required:

Assuming no change in actuarial assumptions and estimates, determine the service cost component of pension expense for the year ended December 31.

E 17-7

Changes in plan assets; determine cash contributions

● LO17-4

Pension data for Fahy Transportation Inc. include the following:

	(\$ in millions)
Discount rate, 7%	
Expected return on plan assets, 10%	
Actual return on plan assets, 11%	
Projected benefit obligation, January 1	\$730
Plan assets (fair value), January 1	700
Plan assets (fair value), December 31	750
Benefit payments to retirees, December 31	66

Required:

Assuming cash contributions were made at the end of the year, what was the amount of those contributions?

E 17-8

Components of pension expense

● LO17-6

Pension data for Sterling Properties include the following:

	(\$ in 000s)
Service cost, 2013	\$112
Projected benefit obligation, January 1, 2013	850
Plan assets (fair value), January 1, 2013	900
Prior service cost–AOCI (2013 amortization, \$8)	80
Net loss–AOCI (2013 amortization, \$1)	101
Interest rate, 6%	
Expected return on plan assets, 10%	
Actual return on plan assets, 11%	

Required:

Determine pension expense for 2013.

E 17-9

Components of pension expense;
IFRS

● LO17-6,
LO17-12

Refer to the situation described in Exercise 17-8.

Required:

How might your answer differ if we assume Sterling Properties prepares its financial statements according to International Financial Reporting Standards? 6% is the interest rate on high grade corporate bonds.

**E 17-10**

Determine pension expense

● LO17-6,
LO17-7

Abbott and Abbott has a noncontributory, defined benefit pension plan. At December 31, 2013, Abbott and Abbott received the following information:

Projected Benefit Obligation	(\$ in millions)
Balance, January 1	\$120
Service cost	20
Interest cost	12
Benefits paid	(9)
Balance, December 31	<u>\$143</u>
Plan Assets	
Balance, January 1	\$ 80
Actual return on plan assets	9
Contributions 2013	20
Benefits paid	(9)
Balance, December 31	<u>\$100</u>

The expected long-term rate of return on plan assets was 10%. There was no prior service cost and a negligible net loss–AOCI on January 1, 2013.

Required:

1. Determine Abbott and Abbott's pension expense for 2013.
2. Prepare the journal entries to record Abbott and Abbott's pension expense, funding, and payment for 2013.

E 17-11

Components of pension expense;
journal entries

● LO17-6,
LO17-7

Pension data for Barry Financial Services Inc. include the following:

	(\$ in 000s)
Discount rate, 7%	
Expected return on plan assets, 10%	
Actual return on plan assets, 9%	
Service cost, 2013	\$ 310
January 1, 2013:	
Projected benefit obligation	2,300
Accumulated benefit obligation	2,000
Plan assets (fair value)	2,400
Prior service cost–AOCI (2013 amortization, \$25)	325
Net gain–AOCI (2013 amortization, \$6)	330
There were no changes in actuarial assumptions.	

(continued)

(concluded)

December 31, 2013:		
Cash contributions to pension fund, December 31, 2013		245
Benefit payments to retirees, December 31, 2013		270

Required:

1. Determine pension expense for 2013.
2. Prepare the journal entries to record pension expense, gains and losses (if any), funding, and retiree benefits for 2013.

E 17-12

PBO calculations;
ABO calculations;
present value
concepts

- LO17-1,
- LO17-2,
- LO17-3

Clark Industries has a defined benefit pension plan that specifies annual retirement benefits equal to:

$$1.2\% \times \text{Service years} \times \text{Final year's salary}$$

Stanley Mills was hired by Clark at the beginning of 1994. Mills is expected to retire at the end of 2038 after 45 years of service. His retirement is expected to span 15 years. At the end of 2013, 20 years after being hired, his salary is \$80,000. The company's actuary projects Mills's salary to be \$270,000 at retirement. The actuary's discount rate is 7%.

Required:

1. Estimate the amount of Stanley Mills's annual retirement payments for the 15 retirement years earned as of the end of 2013.
2. Suppose Clark's pension plan permits a lump-sum payment at retirement in lieu of annuity payments. Determine the lump-sum equivalent as the present value as of the retirement date of annuity payments during the retirement period.
3. What is the company's projected benefit obligation at the end of 2013 with respect to Stanley Mills?
4. Even though pension accounting centers on the PBO calculation, the ABO still must be disclosed in the pension disclosure note. What is the company's accumulated benefit obligation at the end of 2013 with respect to Stanley Mills?
5. If we assume no estimates change in the meantime, what is the company's projected benefit obligation at the end of 2014 with respect to Stanley Mills?
6. What portion of the 2014 increase in the PBO is attributable to 2014 service (the service cost component of pension expense) and to accrued interest (the interest cost component of pension expense)?

E 17-13

Determining the
amortization of
net loss or net
gain

- LO17-6

Hicks Cable Company has a defined benefit pension plan. Three alternative possibilities for pension-related data at January 1, 2013, are shown below:

	(\$ in 000s)		
	Case 1	Case 2	Case 3
Net loss (gain)-AOCI, Jan. 1	\$ 320	\$ (330)	\$ 260
2013 loss (gain) on plan assets	(11)	(8)	2
2013 loss (gain) on PBO	(23)	16	(265)
Accumulated benefit obligation, Jan. 1	(2,950)	(2,550)	(1,450)
Projected benefit obligation, Jan. 1	(3,310)	(2,670)	(1,700)
Fair value of plan assets, Jan. 1	2,800	2,700	1,550
Average remaining service period of active employees (years)	12	15	10

Required:

1. For each independent case, calculate any amortization of the net loss or gain that should be included as a component of pension expense for 2013.
2. For each independent case, determine the net loss-AOCI or net gain-AOCI as of January 1, 2014.

E 17-14

Effect of
pension expense
components on
balance sheet
accounts

- LO17-7,
- LO17-8

Warrick Boards calculated pension expense for its underfunded pension plan as follows:

	(\$ in millions)
Service cost	\$224
Interest cost	150
Expected return on the plan assets (\$100 actual, less \$10 gain)	(90)
Amortization of prior service cost	8
Amortization of net loss	2
Pension expense	\$294

Required:

Which elements of Warrick's balance sheet are affected by the components of pension expense? What are the specific changes in these accounts?

E 17-15

Pension spreadsheet

● LO17-8

A partially completed pension spreadsheet showing the relationships among the elements that comprise the defined benefit pension plan of Universal Products is given below. The actuary's discount rate is 5%. At the end of 2011, the pension formula was amended, creating a prior service cost of \$120,000. The expected rate of return on assets was 8%, and the average remaining service life of the active employee group is 20 years in the current year as well as the previous two years.

Required:

Copy the incomplete spreadsheet and fill in the missing amounts.

(\$ indicate credits; debits otherwise (\$ in 000s)	PBO	Plan Assets	Prior Service Cost	Net Loss	Pension Expense	Cash	Net Pension (Liability)/ Asset
Balance, Jan. 1, 2013	(800)	600	114	80			(200)
Service cost					84		
Interest cost, 5%	(40)						
Expected return on assets					(48)		
Adjust for:							
Loss on assets				6			
Amortization:							
Prior service cost							
Amortization:							
Net loss							12
Gain on PBO							
Prior service cost	0						
Cash funding						(68)	
Retiree benefits							
Balance, Dec. 31, 2013	(862)		108				

E 17-16

Determine and record pension expense and gains and losses; funding and retiree benefits

● LO17-6,
LO17-7

Actuary and trustee reports indicate the following changes in the PBO and plan assets of Douglas-Roberts Industries during 2013:

Prior service cost at Jan. 1, 2013, from plan amendment at the beginning of 2010 (amortization: \$4 million per year)	\$28 million
Net loss–AOCI at Jan. 1, 2013 (previous losses exceeded previous gains)	\$80 million
Average remaining service life of the active employee group	10 years
Actuary's discount rate	7%
(\$ in millions)	

	PBO		Plan Assets
Beginning of 2013	\$600	Beginning of 2013	\$400
Service cost	80	Return on plan assets,	
Interest cost, 7%	42	8% (10% expected)	32
Loss (gain) on PBO	(14)	Cash contributions	90
Less: Retiree benefits	(38)	Less: Retiree benefits	(38)
End of 2013	<u>\$670</u>	End of 2013	<u>\$484</u>

Required:

- Determine Douglas-Roberts' pension expense for 2013 and prepare the appropriate journal entries to record the expense.
- Prepare the appropriate journal entry(s) to record any 2013 gains and losses.
- Prepare the appropriate journal entry to record the cash contribution to plan assets.
- Prepare the appropriate journal entry to record retiree benefits.

E 17-17

Concepts; terminology

● LO17-2 through
LO17-8

Listed below are several terms and phrases associated with pensions. Pair each item from List A with the item from List B (by letter) that is most appropriately associated with it.

List A

- ___ 1. Future compensation levels estimated.
- ___ 2. All funding provided by the employer.
- ___ 3. Credit to OCI and debit to plan assets.
- ___ 4. Retirement benefits specified by formula.
- ___ 5. Trade-off between relevance and reliability.
- ___ 6. Cumulative gains in excess of losses.
- ___ 7. Current pay levels implicitly assumed.
- ___ 8. Created by the passage of time.
- ___ 9. Not contingent on future employment.
- ___ 10. Risk borne by employee.
- ___ 11. Increased by employer contributions.
- ___ 12. Caused by plan amendment.
- ___ 13. Loss on plan assets.
- ___ 14. Excess over 10% of plan assets or PBO.

List B

- a. Actual return exceeds expected
- b. Net gain–AOCI
- c. Vested benefit obligation
- d. Projected benefit obligation
- e. Choice between PBO and ABO
- f. Noncontributory pension plan
- g. Accumulated benefit obligation
- h. Plan assets
- i. Interest cost
- j. Delayed recognition in earnings
- k. Defined contribution plan
- l. Defined benefit plan
- m. Prior service cost
- n. Amortize net loss–AOCI

E 17–18

IFRS; actuarial gains and losses

- LO17–7, LO17–12

IFRS

Patel Industries has a noncontributory, defined benefit pension plan. Since the inception of the plan, the actuary has used as the discount rate the rate on high quality corporate bonds, which recently has been 7%. During 2013, changing economic conditions caused the rate to change to 6% and the actuary decided that 6% is the appropriate rate.

Required:

- Does the change in discount rate create a gain or does it create a loss for Patel under U.S. GAAP? Why?
- Assume the magnitude of the change is \$13 million. Prepare the appropriate journal entry to record any 2013 gain or loss under U.S. GAAP. If Patel prepares its financial statements according to U.S. GAAP, how will the company report the gain or loss?
- Would your response to requirement 2 differ if Patel prepares its financial statements according to International Financial Reporting Standards?

E 17–19

Record pension expense, funding, and gains and losses; determine account balances

- LO17–6, LO17–7, LO17–8

Beale Management has a noncontributory, defined benefit pension plan. On December 31, 2013 (the end of Beale's fiscal year), the following pension-related data were available:

Projected Benefit Obligation	(\$ in millions)
Balance, January 1, 2013	\$480
Service cost	82
Interest cost, discount rate, 5%	24
Gain due to changes in actuarial assumptions in 2013	(10)
Pension benefits paid	<u>(40)</u>
Balance, December 31, 2013	<u>\$536</u>
Plan Assets	
Balance, January 1, 2013	\$500
Actual return on plan assets	40
(Expected return on plan assets, \$45)	
Cash contributions	70
Pension benefits paid	<u>(40)</u>
Balance, December 31, 2013	<u>\$570</u>
January 1, 2013, balances:	
Pension asset	\$ 20
Prior service cost–AOCI (amortization \$8 per year)	48
Net gain–AOCI (any amortization over 15 years)	80

Required:

- Prepare the 2013 journal entry to record pension expense.
- Prepare the journal entry(s) to record any 2013 gains and losses.
- Prepare the 2013 journal entries to record the contribution to plan assets and benefit payments to retirees.
- Determine the balances at December 31, 2013, in the PBO, plan assets, the net gain–AOCI, and prior service cost–AOCI and show how the balances changed during 2013. [Hint: You might find T-accounts useful.]
- What amount will Beale report in its 2013 balance sheet as a net pension asset or net pension liability for the funded status of the plan?

E 17-20

Pension spreadsheet
● LO17-8

Refer to the data provided in Exercise 17-19.

Required:

Prepare a pension spreadsheet to show the relationship among the PBO, plan assets, prior service cost, the net gain, pension expense, and the net pension asset.

E 17-21

Determine pension expense; prior service cost
● LO17-6, LO17-7

Lacy Construction has a noncontributory, defined benefit pension plan. At December 31, 2013, Lacy received the following information:

Projected Benefit Obligation	(\$ in millions)
Balance, January 1	\$360
Service cost	60
Interest cost (7.5%)	27
Benefits paid	(37)
Balance, December 31	<u>\$410</u>
Plan Assets	
Balance, January 1	\$240
Actual return on plan assets	27
Contributions 2013	60
Benefits paid	(37)
Balance, December 31	<u>\$290</u>

The expected long-term rate of return on plan assets was 10%. There were no AOCI balances related to pensions on January 1, 2013. At the end of 2013, Lacy amended the pension formula creating a prior service cost of \$12 million.

Required:

1. Determine Lacy's pension expense for 2013.
2. Prepare the journal entry(s) to record Lacy's pension expense, gains or losses, prior service cost, funding, and payment of retiree benefits for 2013.

E 17-22

IFRS; prior service cost
● LO17-7, LO17-12

Refer to the situation described in Exercise 17-21.

Required:

How might your solution differ if Lacy Construction prepares its financial statements according to International Financial Reporting Standards? Assume the actuary's discount rate is the rate on high quality corporate bonds. Include any appropriate journal entries in your response.

**E 17-23**

Classifying accounting changes and errors
● LO17-8

Indicate with the appropriate letter the nature of each adjustment described below:

Type of Adjustment

- _____
- A. Change in principle
 - B. Change in estimate
 - C. Correction of an error
 - D. Neither an accounting change nor an error

- _____ 1. Change in actuarial assumptions for a defined benefit pension plan.
- _____ 2. Determination that the projected benefit obligation under a pension plan exceeded the fair value of plan assets at the end of the previous year by \$17,000. The only pension-related amount on the balance sheet was a net pension liability of \$30,000.
- _____ 3. Pension plan assets for a defined benefit pension plan achieving a rate of return in excess of the amount anticipated.
- _____ 4. Instituting a pension plan for the first time and adopting GAAP for employers' accounting for defined benefit pension and other postretirement plans.

E 17-24

Postretirement benefits; determine APBO, EPBO
● LO17-10

Classified Electronics has an unfunded retiree health care plan. Each of the company's three employees has been with the firm since its inception at the beginning of 2012. As of the end of 2013, the actuary estimates the total net cost of providing health care benefits to employees during their retirement years to have a present value of \$72,000. Each of the employees will become fully eligible for benefits after 28 more years of service but aren't expected to retire for 35 more years. The interest rate is 6%.

Required:

1. What is the expected postretirement benefit obligation at the end of 2013?
2. What is the accumulated postretirement benefit obligation at the end of 2013?
3. What is the expected postretirement benefit obligation at the end of 2014?
4. What is the accumulated postretirement benefit obligation at the end of 2014?

E 17-25

Postretirement benefits; determine APBO, service cost, interest cost; prepare journal entry

- LO17-10, LO17-11

The following data are available pertaining to Household Appliance Company's retiree health care plan for 2013:

Number of employees covered	2
Years employed as of January 1, 2013	3 [each]
Attribution period	25 years
Expected postretirement benefit obligation, Jan. 1	\$50,000
Expected postretirement benefit obligation, Dec. 31	\$53,000
Interest rate	6%
Funding	none

Required:

1. What is the accumulated postretirement benefit obligation at the beginning of 2013?
2. What is interest cost to be included in 2013 postretirement benefit expense?
3. What is service cost to be included in 2013 postretirement benefit expense?
4. Prepare the journal entry to record the postretirement benefit expense for 2013.

E 17-26

Postretirement benefits; determine EPBO; attribution period

- LO17-10, LO17-11

Lorin Management Services has an unfunded postretirement benefit plan. On December 31, 2013, the following data were available concerning changes in the plan's accumulated postretirement benefit obligation with respect to one of Lorin's employees:

APBO at the beginning of 2013	\$16,364
Interest cost: $(\$16,364 \times 10\%)$	1,636
Service cost: $(\$44,000 \times \frac{1}{22})$	<u>2,000</u>
Portion of EPBO attributed to 2013	
APBO at the end of 2013	<u>\$20,000</u>

Required:

1. Over how many years is the expected postretirement benefit obligation being expensed (attribution period)?
2. What is the expected postretirement benefit obligation at the *end* of 2013?
3. When was the employee hired by Lorin?
4. What is the expected postretirement benefit obligation at the *beginning* of 2013?

E 17-27

Postretirement benefits; components of postretirement benefit expense

- LO17-11

Data pertaining to the postretirement health care benefit plan of Sterling Properties include the following for 2013:

	(\$ in 000s)
Service cost	\$124
Accumulated postretirement benefit obligation, January 1	700
Plan assets (fair value), January 1	50
Prior service cost-AOCI	none
Net gain-AOCI (2013 amortization, \$1)	91
Retiree benefits paid (end of year)	87
Contribution to health care benefit fund (end of year)	185
Discount rate, 7%	
Return on plan assets (actual and expected), 10%	

Required:

1. Determine the postretirement benefit expense for 2013.
2. Prepare the appropriate journal entries to record the postretirement benefit expense, funding, and retiree benefits for 2013.

E 17-28
Postretirement
benefits;
amortization
of net loss
● LO17-11

Cahal-Michael Company has a postretirement health care benefit plan. On January 1, 2013, the following plan-related data were available:

	(\$ in 000s)
Net loss–AOCI	\$ 336
Accumulated postretirement benefit obligation	2,800
Fair value of plan assets	500
Average remaining service period to retirement	14 years (same in previous 10 yrs.)

The rate of return on plan assets during 2013 was 10%, although it was expected to be 9%. The actuary revised assumptions regarding the APBO at the end of the year, resulting in a \$39,000 increase in the estimate of that obligation.

Required:

1. Calculate any amortization of the net loss that should be included as a component of postretirement benefit expense for 2013.
2. Assume the postretirement benefit expense for 2013, not including the amortization of the net loss component, is \$212,000. What is the expense for the year?
3. Determine the net loss or gain as of December 31, 2013.

E 17-29
Postretirement
benefits;
determine and
record expense
● LO17-11

Gorky-Park Corporation provides postretirement health care benefits to employees who provide at least 12 years of service and reach age 62 while in service. On January 1, 2013, the following plan-related data were available:

	(\$ in millions)
Accumulated postretirement benefit obligation	\$130
Fair value of plan assets	none
Average remaining service period to retirement	25 years (same in previous 10 yrs.)
Average remaining service period to full eligibility	20 years (same in previous 10 yrs.)

On January 1, 2013, Gorky-Park amends the plan to provide certain dental benefits in addition to previously provided medical benefits. The actuary determines that the cost of making the amendment retroactive increases the APBO by \$20 million. Management chooses to amortize the prior service cost on a straight-line basis. The service cost for 2013 is \$34 million. The interest rate is 8%.

Required:

1. Calculate the postretirement benefit expense for 2013.
2. Prepare the journal entry to record the expense.

E 17-30
Postretirement
benefits; negative
plan amendment
● LO17-11

Southeast Technology provides postretirement health care benefits to employees. On January 1, 2013, the following plan-related data were available:

	(\$ in 000s)
Prior service cost—originated in 2008	\$ 50
Accumulated postretirement benefit obligation	530
Fair value of plan assets	none
Average remaining service period to retirement	20 years (same in previous 10 yrs.)
Average remaining service period to full eligibility	15 years (same in previous 10 yrs.)

On January 1, 2013, Southeast amends the plan in response to spiraling health care costs. The amendment establishes an annual maximum of \$3,000 for medical benefits that the plan will provide. The actuary determines that the effect of this amendment is to decrease the APBO by \$80,000. Management amortizes prior service cost on a straight-line basis. The interest rate is 8%. The service cost for 2013 is \$114,000.

Required:

1. Calculate the prior service cost amortization for 2013.
2. Calculate the postretirement benefit expense for 2013.

E 17-31
Prior service cost;
service method;
straight-line
method (Based
on Appendix)

Frazier Refrigeration amended its defined benefit pension plan on December 31, 2013, to increase retirement benefits earned with each service year. The consulting actuary estimated the prior service cost incurred by making the amendment retroactive to prior years to be \$110,000. Frazier's 100 present employees are expected to retire at the rate of approximately 10 each year at the end of each of the next 10 years.

Required:

- Using the service method, calculate the amount of prior service cost to be amortized to pension expense in each of the next 10 years.
- Using the straight-line method, calculate the amount of prior service cost to be amortized to pension expense in each of the next 10 years.

E 17-32

FASB codification research; postretirement benefit plan

● LO17-11

When a company sponsors a postretirement benefit plan other than a pension plan, benefits typically are not earned by employees on the basis of a formula, so assigning the service cost to specific periods is more difficult. The *FASB Accounting Standards Codification* represents the single source of authoritative U.S. generally accepted accounting principles.

Required:

- Obtain the relevant authoritative literature on how a firm should attribute the expected postretirement benefit obligation to years of service using the FASB's Codification Research System at the FASB website (www.fasb.org). Find the specific citations that describe the guidelines for each of the following questions:
 - What is the objective for attributing expected postretirement benefit obligations to years of service?
 - When does the attribution period for expected postretirement benefits begin for an employee?
 - When does the attribution period for expected postretirement benefits end for an employee?
- What are the guidelines for each?

E 17-33

FASB codification research

● LO17-1,
LO17-2,
LO17-5

Access the FASB's Codification Research System at the FASB website (www.fasb.org). Determine the specific citation for accounting for each of the following items:

- The disclosure required in the notes to the financial statements for pension plan assets.
- Recognition of the net pension asset or net pension liability.
- Disclosures required in the notes to the financial statements for pension cost for a defined contribution plan.

CPA and CMA Review Questions

CPA Exam Questions

● LO17-5

The following questions are adapted from a variety of sources including questions developed by the AICPA Board of Examiners and those used in the Kaplan CPA Review Course to study pensions and other postretirement benefits while preparing for the CPA examination. Determine the response that best completes the statements or questions.

- Wolf Inc. began a defined benefit pension plan for its employees on January 1, 2013. The following data are provided for 2013 as of December 31, 2013:

Projected benefit obligation	\$385,000
Accumulated benefit obligation	340,000
Plan assets at fair value	255,000
Pension expense	95,000
Employer's cash contribution (end of year)	255,000

What amount should Wolf report as a net pension liability at December 31, 2013?

- \$ 0
- \$ 45,000
- \$ 85,000
- \$130,000

● LO17-7

- A statement of comprehensive income for a company with a defined benefit pension plan does *not* include
 - net income.
 - the return on plan assets.
 - gains from the return on assets exceeding expectations.
 - losses from changes in estimates regarding the pension obligation.

- LO17-8
 3. JWS Corporation has a defined benefit pension plan. JWS reported a net pension liability in last year's balance sheet. This year, the company revised its estimate of future salary levels causing its projected benefit obligation estimate to decline by \$8. Also, the \$16 million actual return on plan assets was less than the \$18 million expected return. As a result
 - a. the net pension liability will decrease by \$8 million.
 - b. the statement of comprehensive income will report a \$2 million gain and an \$8 million loss.
 - c. the net pension liability will increase by \$6 million.
 - d. accumulated other comprehensive income will increase by \$6 million.
- LO17-8
 4. Amortizing a net gain for pensions and other postretirement benefit plans will
 - a. decrease retained earnings and decrease accumulated other comprehensive income.
 - b. increase retained earnings and increase accumulated other comprehensive income.
 - c. decrease retained earnings and increase accumulated other comprehensive income.
 - d. increase retained earnings and decrease accumulated other comprehensive income.
- LO17-11
 5. At December 31, 2012, Johnston and Johnston reported in its balance sheet as part of accumulated other comprehensive income a net loss of \$37 million related to its postretirement benefit plan. The actuary for J&J increased her estimate of J&J's future health care costs at the end of 2013. J&J's entry to record the effect of this change will include
 - a. a debit to other comprehensive income and a credit to postretirement benefit liability.
 - b. a debit to postretirement benefit liability and a credit to other comprehensive income.
 - c. a debit to pension expense and a credit to postretirement benefit liability.
 - d. a debit to pension expense and a credit to other comprehensive income.

Beginning in 2011, International Financial Reporting Standards are tested on the CPA exam along with U.S. GAAP. The following questions deal with the application of IFRS to pensions.

- LO17-12
 6. Actuarial (Remeasurement) gains and losses are reported as OCI as they occur using
 - a. U.S. GAAP.
 - b. IFRS.
 - c. Both U.S. GAAP and IFRS.
 - d. Neither U.S. GAAP nor IFRS.
- LO17-12
 7. Prior (Past) service cost is included among OCI items in the statement of comprehensive income and thus subsequently becomes part of AOCI where it is amortized over the average remaining service period using
 - a. U.S. GAAP.
 - b. IFRS.
 - c. Both U.S. GAAP and IFRS.
 - d. Neither U.S. GAAP nor IFRS.
- LO17-12
 8. Prior (Past) service cost is expensed immediately using
 - a. U.S. GAAP.
 - b. IFRS.
 - c. Both U.S. GAAP and IFRS.
 - d. Neither U.S. GAAP nor IFRS.

**CMA Exam
Questions**
IMA

- LO17-3
 1. The projected benefit obligation (PBO) is best described as the
 - a. Present value of benefits accrued to date based on future salary levels.
 - b. Present value of benefits accrued to date based on current salary levels.
 - c. Increase in retroactive benefits at the date of the amendment of the plan.
 - d. Amount of the adjustment necessary to reflect the difference between actual and estimated actuarial returns.
- LO17-6
 2. On November 30, the Board of Directors of Baldwin Corporation amended its pension plan giving retroactive benefits to its employees. The information below is provided at November 30.

Accumulated benefit obligation (ABO)	\$825,000
Projected benefit obligation (PBO)	900,000
Plan assets (fair value)	307,500
Market-related asset value	301,150
Prior service cost	190,000
Average remaining service life of employees	10 years
Useful life of pension goodwill	20 years

Using the straight-line method of amortization, the amount of prior service cost charged to expense during the year ended November 30 is

- \$9,500
- \$19,000
- \$30,250
- \$190,000

Problems

An alternate exercise and problem set is available on the text website: www.mhhe.com/spiceland7e

(Note: Problems 1–5 are variations of the same situation, designed to focus on different elements of the pension plan.)

P 17–1

ABO calculations;
present value
concepts

- LO17–2,
LO17–3

Sachs Brands' defined benefit pension plan specifies annual retirement benefits equal to: $1.6\% \times \text{service years} \times \text{final year's salary}$, payable at the end of each year. Angela Davenport was hired by Sachs at the beginning of 1999 and is expected to retire at the end of 2033 after 35 years' service. Her retirement is expected to span 18 years. Davenport's salary is \$90,000 at the end of 2013 and the company's actuary projects her salary to be \$240,000 at retirement. The actuary's discount rate is 7%.

Required:

- Draw a time line that depicts Davenport's expected service period, retirement period, and a 2013 measurement date for the pension obligation.
- Estimate by the accumulated benefits approach the amount of Davenport's annual retirement payments earned as of the end of 2013.
- What is the company's accumulated benefit obligation at the end of 2013 with respect to Davenport?
- If no estimates are changed in the meantime, what will be the accumulated benefit obligation at the end of 2016 (three years later) when Davenport's salary is \$100,000?

P 17–2

PBO calculations;
present value
concepts

- LO17–3

Sachs Brands' defined benefit pension plan specifies annual retirement benefits equal to: $1.6\% \times \text{service years} \times \text{final year's salary}$, payable at the end of each year. Angela Davenport was hired by Sachs at the beginning of 1999 and is expected to retire at the end of 2033 after 35 years' service. Her retirement is expected to span 18 years. Davenport's salary is \$90,000 at the end of 2013 and the company's actuary projects her salary to be \$240,000 at retirement. The actuary's discount rate is 7%.

Required:

- Draw a time line that depicts Davenport's expected service period, retirement period, and a 2013 measurement date for the pension obligation.
- Estimate by the projected benefits approach the amount of Davenport's annual retirement payments earned as of the end of 2013.
- What is the company's projected benefit obligation at the end of 2013 with respect to Davenport?
- If no estimates are changed in the meantime, what will be the company's projected benefit obligation at the end of 2016 (three years later) with respect to Davenport?

P 17–3

Service cost,
interest, and
PBO calculations;
present value
concepts

- LO17–3

Sachs Brands' defined benefit pension plan specifies annual retirement benefits equal to: $1.6\% \times \text{service years} \times \text{final year's salary}$, payable at the end of each year. Angela Davenport was hired by Sachs at the beginning of 1999 and is expected to retire at the end of 2033 after 35 years' service. Her retirement is expected to span 18 years. Davenport's salary is \$90,000 at the end of 2013 and the company's actuary projects her salary to be \$240,000 at retirement. The actuary's discount rate is 7%.

Required:

- What is the company's projected benefit obligation at the beginning of 2013 (after 14 years' service) with respect to Davenport?
- Estimate by the projected benefits approach the portion of Davenport's annual retirement payments attributable to 2013 service.
- What is the company's service cost for 2013 with respect to Davenport?
- What is the company's interest cost for 2013 with respect to Davenport?
- Combine your answers to requirements 1, 3, and 4 to determine the company's projected benefit obligation at the end of 2013 (after 15 years' service) with respect to Davenport.

P 17-4

Prior service cost; components of pension expense; present value concepts

- LO17-3, LO17-6

Sachs Brands' defined benefit pension plan specifies annual retirement benefits equal to: $1.6\% \times$ service years \times final year's salary, payable at the end of each year. Angela Davenport was hired by Sachs at the beginning of 1999 and is expected to retire at the end of 2033 after 35 years' service. Her retirement is expected to span 18 years. Davenport's salary is \$90,000 at the end of 2013 and the company's actuary projects her salary to be \$240,000 at retirement. The actuary's discount rate is 7%.

At the beginning of 2014, the pension formula was amended to:

$$1.75\% \times \text{Service years} \times \text{Final year's salary}$$

The amendment was made retroactive to apply the increased benefits to prior service years.

Required:

1. What is the company's prior service cost at the beginning of 2014 with respect to Davenport after the amendment described above?
2. Since the amendment occurred at the *beginning* of 2014, amortization of the prior service cost begins in 2014. What is the prior service cost amortization that would be included in pension expense?
3. What is the service cost for 2014 with respect to Davenport?
4. What is the interest cost for 2014 with respect to Davenport?
5. Calculate pension expense for 2014 with respect to Davenport, assuming plan assets attributable to her of \$150,000 and a rate of return (actual and expected) of 10%.

P 17-5

Gain on PBO; present value concepts

- LO17-3, LO17-6

Sachs Brands' defined benefit pension plan specifies annual retirement benefits equal to: $1.6\% \times$ service years \times final year's salary, payable at the end of each year. Angela Davenport was hired by Sachs at the beginning of 1999 and is expected to retire at the end of 2033 after 35 years' service. Her retirement is expected to span 18 years. Davenport's salary is \$90,000 at the end of 2013 and the company's actuary projects her salary to be \$240,000 at retirement. The actuary's discount rate is 7%.

At the beginning of 2014, changing economic conditions caused the actuary to reassess the applicable discount rate. It was decided that 8% is the appropriate rate.

Required:

Calculate the effect of the change in the assumed discount rate on the PBO at the beginning of 2014 with respect to Davenport.

P 17-6

Determine the PBO; plan assets; pension expense; two years

- LO17-3, LO17-4, LO17-6

Stanley-Morgan Industries adopted a defined benefit pension plan on April 12, 2013. The provisions of the plan were not made retroactive to prior years. A local bank, engaged as trustee for the plan assets, expects plan assets to earn a 10% rate of return. A consulting firm, engaged as actuary, recommends 6% as the appropriate discount rate. The service cost is \$150,000 for 2013 and \$200,000 for 2014. Year-end funding is \$160,000 for 2013 and \$170,000 for 2014. No assumptions or estimates were revised during 2013.

Required:

Calculate each of the following amounts as of both December 31, 2013, and December 31, 2014:

1. Projected benefit obligation
2. Plan assets
3. Pension expense
4. Net pension asset or net pension liability

P 17-7

Determining the amortization of net gain

- LO17-6

Herring Wholesale Company has a defined benefit pension plan. On January 1, 2013, the following pension-related data were available:

	(\$ in 000s)
Net gain–AOCI	\$ 170
Accumulated benefit obligation	1,170
Projected benefit obligation	1,400
Fair value of plan assets	1,100
Average remaining service period of active employees (expected to remain constant for the next several years)	15 years

The rate of return on plan assets during 2013 was 9%, although it was expected to be 10%. The actuary revised assumptions regarding the PBO at the end of the year, resulting in a \$23,000 decrease in the estimate of that obligation.

Required:

1. Calculate any amortization of the net gain that should be included as a component of net pension expense for 2013.
2. Assume the net pension expense for 2013, not including the amortization of the net gain component, is \$325,000. What is pension expense for the year?
3. Determine the net loss—AOCI or net gain—AOCI as of January 1, 2014.

P 17-8
Pension spreadsheet; record pension expense and funding; new gains and losses

● LO17-7, LO17-8

A partially completed pension spreadsheet showing the relationships among the elements that constitute Carney, Inc.'s defined benefit pension plan follows. Six years earlier, Carney revised its pension formula and recalculated benefits earned by employees in prior years using the more generous formula. The prior service cost created by the recalculation is being amortized at the rate of \$5 million per year. At the end of 2013, the pension formula was amended again, creating an additional prior service cost of \$40 million. The expected rate of return on assets and the actuary's discount rate were 10%, and the average remaining service life of the active employee group is 10 years.

()s indicate credits; debits otherwise (\$ in millions)	PBO	Plan Assets	Prior Service Cost	Net Loss	Pension Expense	Cash	Net Pension (Liability) / Asset
Balance, Jan. 1, 2013	(830)	680	20	93			(150)

Prior service cost	?		?				?
Cash funding						?	84
Retiree benefits	?	?					
Balance, Dec. 31, 2013	?	775	?	?	?		?

Required:

1. Copy the incomplete spreadsheet and fill in the missing amounts.
2. Prepare the 2013 journal entry to record pension expense.
3. Prepare the journal entry(s) to record any 2013 gains and losses and new prior service cost in 2013.
4. Prepare the 2013 journal entries to record the cash contribution to plan assets and payment of retiree benefits.

P 17-9
Determine pension expense; PBO; plan assets; net pension asset or liability; journal entries

● LO17-3 through LO17-8

U.S. Metallurgical Inc. reported the following balances in its financial statements and disclosure notes at December 31, 2012.

Plan assets	\$ 400,000
Projected benefit obligation	320,000

U.S.M.'s actuary determined that 2013 service cost is \$60,000. Both the expected and actual rate of return on plan assets are 9%. The interest (discount) rate is 5%. U.S.M. contributed \$120,000 to the pension fund at the end of 2013, and retirees were paid \$44,000 from plan assets.

Required:

Determine the following amounts at the end of 2013.

1. Pension expense
2. Projected benefit obligation
3. Plan assets
4. Net pension asset or net pension liability
5. Prepare journal entries to record the pension expense, funding of plan assets, and retiree benefit payments.

P 17-10

Prior service cost; calculate pension expense; journal entries; determine net pension asset or liability

- LO17-5 through LO17-7

Electronic Distribution has a defined benefit pension plan. Characteristics of the plan during 2013 are as follows:

	(\$ millions):
PBO balance, January 1	\$480
Plan assets balance, January 1	300
Service cost	75
Interest cost	45
Gain from change in actuarial assumption	22
Benefits paid	(36)
Actual return on plan assets	20
Contributions 2013	60

The expected long-term rate of return on plan assets was 8%. There were no AOCI balances related to pensions on January 1, 2013, but at the end of 2013, the company amended the pension formula creating a prior service cost of \$12 million.

Required:

1. Calculate the pension expense for 2013.
2. Prepare the journal entry to record pension expense, gains or losses, prior service cost, funding, and payment of benefits for 2013.
3. What amount will Electronic Distribution report in its 2013 balance sheet as a net pension asset or net pension liability?

P 17-11

IFRS; calculate pension expense; journal entries; determine net pension asset or liability

- LO17-5 through LO17-7, LO17-12

Refer to the situation described in Problem 17-10. Assume Electronic Distribution prepares its financial statements according to International Financial Reporting Standards. Also assume that 10% is the current interest rate on high-quality corporate bonds.

Required:

1. Calculate the net pension cost for 2013, separating its components into appropriate categories for reporting.
2. Prepare the journal entry to record the components of net pension cost, gains or losses, past service cost, funding, and payment of benefits for 2013.
3. What amount will Electronic Distribution report in its 2013 balance sheet as a net pension asset or net pension liability?

**P 17-12**

Determine pension expense; journal entries; two years

- LO17-3 through LO17-8

The Kollar Company has a defined benefit pension plan. Pension information concerning the fiscal years 2013 and 2014 are presented below (\$ in millions):

Information Provided by Pension Plan Actuary:

- a. Projected benefit obligation as of December 31, 2012 = \$1,800.
- b. Prior service cost from plan amendment on January 2, 2013 = \$400 (straight-line amortization for 10-year average remaining service period).
- c. Service cost for 2013 = \$520.
- d. Service cost for 2014 = \$570.
- e. Discount rate used by actuary on projected benefit obligation for 2013 and 2014 = 10%.
- f. Payments to retirees in 2013 = \$380.
- g. Payments to retirees in 2014 = \$450.
- h. No changes in actuarial assumptions or estimates.
- i. Net gain—AOCI on January 1, 2013 = \$230.
- j. Net gains and losses are amortized for 10 years in 2013 and 2014.

Information Provided by Pension Fund Trustee:

- a. Plan asset balance at fair value on January 1, 2013 = \$1,600.
- b. 2013 contributions = \$540.
- c. 2014 contributions = \$590.
- d. Expected long-term rate of return on plan assets = 12%.
- e. 2013 actual return on plan assets = \$180.
- f. 2014 actual return on plan assets = \$210.

Required:

1. Calculate pension expense for 2013 and 2014.
2. Prepare the journal entries for 2013 and 2014 to record pension expense.
3. Prepare the journal entries for 2013 and 2014 to record any gains and losses and new prior service cost.
4. Prepare the journal entries for 2013 and 2014 to record the cash contribution to plan assets and benefit payments to retirees.

P 17-13

Determine the PBO, plan assets, pension expense; prior service cost

- LO17-3, LO17-4, LO17-6

Lewis Industries adopted a defined benefit pension plan on January 1, 2013. By making the provisions of the plan retroactive to prior years, Lewis incurred a prior service cost of \$2 million. The prior service cost was funded immediately by a \$2 million cash payment to the fund trustee on January 2, 2013. However, the cost is to be amortized (expensed) over 10 years. The service cost—\$250,000 for 2013—is fully funded at the end of each year. Both the actuary’s discount rate and the expected rate of return on plan assets were 9%. The actual rate of return on plan assets was 11%. At December 31, the trustee paid \$16,000 to an employee who retired during 2013.

Required:

Determine each of the following amounts as of December 31, 2013, the fiscal year-end for Lewis:

1. Projected benefit obligation
2. Plan assets
3. Pension expense

P 17-14

Relationship among pension elements

- LO17-3 through LO17-8

The funded status of Hilton Paneling Inc.’s defined benefit pension plan and the balances in prior service cost and the net gain–pensions, are given below.

	(\$ in 000s)	
	2013 Beginning Balances	2013 Ending Balances
Projected benefit obligation	\$2,300	\$2,501
Plan assets	2,400	2,591
Funded status	100	90
Prior service cost–AOCI	325	300
Net gain–AOCI	330	300

Retirees were paid \$270,000 and the employer contribution to the pension fund was \$245,000 at the end of 2013. The expected rate of return on plan assets was 10%, and the actuary’s discount rate is 7%. There were no changes in actuarial estimates and assumptions regarding the PBO.

Required:

Determine the following amounts for 2013:

1. Actual return on plan assets
2. Loss or gain on plan assets
3. Service cost
4. Pension expense
5. Average remaining service life of active employees (used to determine amortization of the net gain)

P 17-15

Comprehensive—pension elements; spreadsheet

- LO17-8

The following pension-related data pertain to Metro Recreation’s noncontributory, defined benefit pension plan for 2013:

	(\$ in 000s)	
	Jan. 1	Dec. 31
Projected benefit obligation	\$4,100	\$4,380
Accumulated benefit obligation	3,715	3,950
Plan assets (fair value)	4,530	4,975
Interest (discount) rate, 7%		
Expected return on plan assets, 10%		
Prior service cost–AOCI		
(from Dec. 31, 2012, amendment)	840	
Net loss–AOCI	477	
Average remaining service life: 12 years		
Gain due to changes in actuarial assumptions		44
Contributions to pension fund (end of year)		340
Pension benefits paid (end of year)		295

Required:

Prepare a pension spreadsheet that shows the relationships among the various pension balances, shows the changes in those balances, and computes pension expense for 2013.

P 17-16

Comprehensive—reporting a pension plan; pension spreadsheet; determine changes in balances; two years

● LO17-3 through LO17-8

Actuary and trustee reports indicate the following changes in the PBO and plan assets of Lakeside Cable during 2013:

(\$ in millions)			
	PBO		Plan Assets
Prior service cost at Jan. 1, 2013, from plan amendment at the beginning of 2011 (amortization: \$4 million per year)			\$32 million
Net loss—pensions at Jan. 1, 2013 (previous losses exceeded previous gains)			\$40 million
Average remaining service life of the active employee group			10 years
Actuary's discount rate			8%
<i>Beginning of 2013</i>	\$300	<i>Beginning of 2013</i>	\$200
Service cost	48	Return on plan assets,	
Interest cost, 8%	24	7.5% (10% expected)	15
Loss (gain) on PBO	(2)	Cash contributions	45
Less: Retiree benefits	(20)	Less: Retiree benefits	(20)
<i>End of 2013</i>	<u>\$350</u>	<i>End of 2013</i>	<u>\$240</u>

Required:

- Determine Lakeside's pension expense for 2013 and prepare the appropriate journal entries to record the expense as well as the cash contribution to plan assets and payment of benefits to retirees.
- Determine the new gains and/or losses in 2013 and prepare the appropriate journal entry(s) to record them.
- Prepare a pension spreadsheet to assist you in determining end of 2013 balances in the PBO, plan assets, prior service cost—AOCI, the net loss—AOCI, and the pension liability.
- Assume the following actuary and trustee reports indicating changes in the PBO and plan assets of Lakeside Cable during 2014:

(\$ in millions)			
	PBO		Plan Assets
<i>Beginning of 2014</i>	\$350	<i>Beginning of 2014</i>	\$240
Service cost	38	Return on plan assets,	
Interest cost at 8%	28	15% (10% expected)	36
Loss (gain) on PBO	5	Cash contributions	30
Less: Retiree benefits	(16)	Less: Retiree benefits	(16)
<i>End of 2014</i>	<u>\$405</u>	<i>End of 2014</i>	<u>\$290</u>

Determine Lakeside's pension expense for 2014 and prepare the appropriate journal entries to record the expense, the cash funding of plan assets, and payment of benefits to retirees.

- Determine the new gains and/or losses in 2014 and prepare the appropriate journal entry(s) to record them.
- Using T-accounts, determine the balances at December 31, 2014, in the net loss—AOCI and prior service cost—AOCI.
- Confirm the balances determined in Requirement 6 by preparing a pension spreadsheet.

P 17-17

Integrating Problem—Deferred tax effects of pension entries; integrate concepts learned in Chapter 16

● LO17-7

To focus on the core issues, we ignored the income tax effects of the pension amounts we recorded in the chapter. Reproduced below are the journal entries from the chapter that Global Communications used to record its pension expense and funding in 2013 and the new gain and loss that occurred that year.

	(\$ in millions)
To Record Pension Expense	
Pension expense (total)	43
Plan assets (expected return on plan assets)	27
PBO (\$41 service cost + \$24 interest cost)	65
Prior service cost—AOCI (2013 amortization)	4
Net loss—AOCI (2013 amortization)	1
To Record Funding	
Plan assets	48
Cash (contribution to plan assets)	48
To Record Payment of Benefits	
PBO	38
Plan assets (retiree benefits)	38
To Record Gains and Losses	
Loss—OCI (from change in assumption)	23
PBO	23
Plan assets	3
Gain—OCI (from actual return exceeding expected return)	3

Required:

- Recast these journal entries to include the income tax effects of the events being recorded. Assume that Global's tax rate is 40%. [Hint: Costs are incurred and recognized for financial reporting purposes now, but the tax impact comes much later—when these amounts are deducted for tax purposes as actual payments for retiree benefits occur in the future. As a result, the tax effects are deferred, creating the need to record deferred tax assets and deferred tax liabilities. So, you may want to refer back to Chapter 16 to refresh your memory on these concepts.]
- Prepare a statement of comprehensive income for 2013 assuming Global's only other sources of comprehensive income were net income of \$300 million and a \$30 million unrealized holding gain on investments in securities available for sale.

P 17-18

Postretirement benefits; EPBO calculations; APBO calculations; components of postretirement benefit expense; present value concepts

- LO17-9, LO17-10

Century-Fox Corporation's employees are eligible for postretirement health care benefits after both being employed at the end of the year in which age 60 is attained and having worked 20 years. Jason Snyder was hired at the end of 1990 by Century-Fox at age 34 and is expected to retire at the end of 2018 (age 62). His retirement is expected to span five years (unrealistically short in order to simplify calculations). The company's actuary has estimated the net cost of retiree benefits in each retirement year as shown below. The discount rate is 6%. The plan is not prefunded. Assume costs are incurred at the end of each year.

Year	Expected Age	Net Cost
2019	63	\$4,000
2020	64	4,400
2021	65	2,300
2022	66	2,500
2023	67	2,800

Required:

- Draw a time line that depicts Snyder's attribution period for retiree benefits and expected retirement period.
- Calculate the present value of the net benefits as of the expected retirement date.
- With respect to Snyder, what is the company's expected postretirement benefit obligation at the end of 2013?
- With respect to Snyder, what is the company's accumulated postretirement benefit obligation at the end of 2013?
- With respect to Snyder, what is the company's accumulated postretirement benefit obligation at the end of 2014?
- What is the service cost to be included in 2014 postretirement benefit expense?
- What is the interest cost to be included in 2014 postretirement benefit expense?
- Show how the APBO changed during 2014 by reconciling the beginning and ending balances.

P 17-19

Postretirement benefits; schedule of postretirement benefit costs

- LO17-9 through LO17-11

Stockton Labeling Company has a retiree health care plan. Employees become fully eligible for benefits after working for the company eight years. Stockton hired Misty Newburn on January 1, 2013. As of the end of 2013, the actuary estimates the total net cost of providing health care benefits to Newburn during her retirement years to have a present value of \$18,000. The actuary's discount rate is 10%.

Required:

Prepare a schedule that shows the EPBO, the APBO, the service cost, the interest cost, and the postretirement benefit expense for each of the years 2013–2020.

P 17-20

Postretirement benefits; relationship among elements of postretirement benefit plan

- LO17-9 through LO17-11

The information below pertains to the retiree health care plan of Thompson Technologies:

	(\$ in 000s)	
	2013 Beginning Balances	2013 Ending Balances
Accumulated postretirement benefit obligation	\$460	\$485
Plan assets	0	75
Funded status	(460)	(410)
Prior service cost–AOCI	120	110
Net gain–AOCI	(50)	(49)

Thompson began funding the plan in 2013 with a contribution of \$127,000 to the benefit fund at the end of the year. Retirees were paid \$52,000. The actuary's discount rate is 5%. There were no changes in actuarial estimates and assumptions.

Required:

Determine the following amounts for 2013:

1. Service cost.
2. Postretirement benefit expense.
3. Net postretirement benefit liability.

P 17–21

Pension disclosure; amortization of actuarial gain or loss; Toys R Us, Inc.

- LO17–3 through LO17–7

Real World Financials

The **Toys R Us, Inc.**, is a leader in the retail toy industry. The following is an excerpt from a disclosure note in the company's annual report for the fiscal year ended January 29, 2011:

Note 13—Defined Benefit Pension Plans(in part)

(\$ in millions):

	Year Ended	
	January 29 2011	January 30 2010
Change in projected benefit obligation:		
Projected benefit obligation at beginning of year	\$108	\$ 84
Service cost	6	6
Interest cost	5	4
Employee contributions	1	1
Benefits, expenses paid	(2)	(2)
Actuarial loss	1	10
Amendment ⁽¹⁾	(11)	-
Foreign currency impact	3	5
Projected benefit obligation at end of year	<u>\$111</u>	<u>\$108</u>
Change in fair value of plan assets:		
Fair value of plan assets at beginning of year	\$ 75	\$ 52
Actual return on plan assets	7	11
Employer contributions	9	9
Employee contributions	1	1
Benefits, expenses paid	(2)	(2)
Foreign currency impact	2	4
Fair value of plan assets at end of year	<u>\$ 92</u>	<u>\$ 75</u>

⁽¹⁾On April 1, 2010, we amended the U.K. defined benefit pension plan. Pursuant to the amendment, we capped our rate of compensation increase. The change in compensation increase assumption resulted in a reduction of the plan's liability by \$11 million in fiscal 2010.

Required:

1. What amount did Toys R Us report in its balance sheet related to the pension plan at January 29, 2011?
2. When calculating pension expense at January 29, 2011, what amount did Toys R Us include as the amortization of unrecognized net actuarial loss (net loss–AOCI), which was \$11 million at the beginning of the year? The average remaining service life of employees was 10 years. (Round the calculated amount up to the nearest \$ million)
3. The expected return on plan assets was \$4 million for the year ending January 29, 2011, and there was no unrecognized prior service cost at the beginning of the year. What was the pension expense?
4. What were the appropriate journal entries to record Toys R Us's pension expense and to record gains and/or losses related to the pension plan?

Broaden Your Perspective

Judgment Case 17–1

Choose your retirement option

- LO17–1, LO17–3, LO17–4, LO17–5

Apply your critical-thinking ability to the knowledge you've gained. These cases will provide you an opportunity to develop your research, analysis, judgment, and communication skills. You also will work with other students, integrate what you've learned, apply it in real world situations, and consider its global and ethical ramifications. This practice will broaden your knowledge and further develop your decision-making abilities.

"I only get one shot at this?" you wonder aloud. Mrs. Montgomery, human resources manager at Covington State University, has just explained that newly hired assistant professors must choose between two retirement plan options. "Yes, I'm afraid so," she concedes. "But you do have a week to decide."

Mrs. Montgomery's explanation was that your two alternatives are: (1) the state's defined benefit plan and (2) a defined contribution plan under which the university will contribute each year an amount equal to 8% of

your salary. The defined benefit plan will provide annual retirement benefits determined by the following formula: $1.5\% \times \text{years of service} \times \text{salary at retirement}$.

“It’s a good thing I studied pensions in my accounting program,” you tell her. “Now let’s see. You say the state is currently assuming our salaries will rise about 3% a year, and the interest rate they use in their calculations is 6%? And, for someone my age, you say they assume I’ll retire after 40 years and draw retirement pay for 20 years. I’ll do some research and get back to you.”

Required:

1. You were hired at the beginning of 2013 at a salary of \$100,000. If you choose the state’s defined benefit plan and projections hold true, what will be your annual retirement pay? What is the present value of your retirement annuity as of the anticipated retirement date (end of 2052)?
2. Suppose instead that you choose the defined contribution plan. Assuming that the rate of increase in salary is the same as the state assumes and that the rate of return on your retirement plan assets will be 6% compounded annually, what will be the future value of your plan assets as of the anticipated retirement date (end of 2052)? What will be your annual retirement pay (assuming continuing investment of remaining assets at 6%)?
3. Based on this numerical comparison, which plan would you choose? What other factors must you also consider in making the choice?

Hint: The calculations are greatly simplified using an electronic spreadsheet such as Excel. There are many ways to set up the spreadsheet. One relatively easy way is to set up the first few rows with the formulas as shown below, then use the “fill down” function to fill in the remaining 38 rows, and use the Insert: Name: Define: function to name column B “n”. Since contributions are assumed made at the end of each year, there are 39 years remaining to maturity at the end of 2013. Note that multiplying each contribution by $(1.06)^n$, where n equals the remaining number of years to retirement, calculates the future value of each contribution invested at 6% until retirement.

	A	B	C	D	E
1	End of	Years to			Future Value
2	Year:	Retirement	Salary	Contribution	at Retirement
3	2013	39	100,000	=C3*0.08	=D3*1.06^n
4	=A3+1	=B3-1	=C3*1.03	=C4*0.08	=D4*1.06^n

Communication Case 17-2

Pension concepts

- LO17-2 through LO17-8

Noel Zoeller is the newly hired assistant controller of Kemp Industries, a regional supplier of hardwood derivative products. The company sponsors a defined benefit pension plan that covers its 420 employees. On reviewing last year’s financial statements, Zoeller was concerned about some items reported in the disclosure notes relating to the pension plan. Portions of the relevant note follow:

Note 8: Pensions

The company has a defined benefit pension plan covering substantially all of its employees. Pension benefits are based on employee service years and the employee’s compensation during the last two years of employment. The company contributes annually the maximum amount permitted by the federal tax code. Plan contributions provide for benefits expected to be earned in the future as well as those earned to date. The following reconciles the plan’s funded status and amount recognized in the balance sheet at December 31, 2013 (\$ in 000s).

Actuarial Present Value Benefit Obligations:

Accumulated benefit obligation (including vested benefits of \$318)	\$(1,305)
Projected benefit obligation	(1,800)
Plan assets at fair value	1,575
Projected benefit obligation in excess of plan assets	<u>\$ (225)</u>

Kemp’s comparative income statements reported net periodic pension expense of \$108,000 in 2013 and \$86,520 in 2012. Since employment has remained fairly constant in recent years, Zoeller expressed concern over the increase in the pension expense. He expressed his concern to you, a three-year senior accountant at Kemp. “I’m also interested in the differences in these liability measurements,” he mentioned.

Required:

Write a memo to Zoeller. In the memo:

1. Explain to Zoeller how the composition of the net periodic pension expense can create the situation he sees. Briefly describe the components of pension expense.

2. Briefly explain how pension gains and losses are recognized in earnings.
3. Describe for him the differences and similarities between the accumulated benefit obligation and the projected benefit obligation.
4. Explain how the “Projected benefit obligation in excess of plan assets” is reported in the financial statements.

Judgment**Case 17–3**

Barlow’s wife;
relationship
among pension
elements

● LO17–8

LGD Consulting is a medium-sized provider of environmental engineering services. The corporation sponsors a noncontributory, defined benefit pension plan. Alan Barlow, a new employee and participant in the pension plan, obtained a copy of the 2013 financial statements, partly to obtain additional information about his new employer’s obligation under the plan. In part, the pension footnote reads as follows:

Note 8: Retirement Benefits

The Company has a defined benefit pension plan covering substantially all of its employees. The benefits are based on years of service and the employee’s compensation during the last two years of employment. The company’s funding policy is consistent with the funding requirements of federal law and regulations. Generally, pension costs accrued are funded. Plan assets consist primarily of stocks, bonds, commingled trust funds, and cash.

The change in projected benefit obligation for the plan years ended December 31, 2013, and December 31, 2012:

(\$ in 000s)	2013	2012
Projected benefit obligation at beginning of year	\$3,786	\$3,715
Service cost	103	94
Interest cost	287	284
Actuarial (gain) loss	302	(23)
Benefits paid	(324)	(284)
Projected benefit obligation at end of year	<u>\$4,154</u>	<u>\$3,786</u>

The weighted average discount rate and rate of increase in future compensation levels used in determining the actuarial present value of the projected benefit obligations in the above table were 7.0% and 4.3%, respectively, at December 31, 2013, and 7.75% and 4.7%, respectively, at December 31, 2012. The expected long-term rate of return on assets was 10.0% at December 31, 2013 and 2012.

The change in the fair value of plan assets for the plan years ended December 31, 2013 and 2012:

(\$ in 000s)	2013	2012
Fair value of plan assets at beginning of year	\$3,756	\$3,616
Actual return on plan assets	1,100	372
Employer contributions	27	52
Benefits paid	(324)	(284)
Fair value of plan assets at end of year	<u>\$4,559</u>	<u>\$3,756</u>

Included in the Consolidated Balance Sheets are the following components of accumulated other comprehensive income:

(\$ in 000s)	2013	2012
Net actuarial gain	\$(620)	\$(165)
Prior service cost	44	46

Net periodic defined benefit pension cost for fiscal 2013, 2012, and 2011 included the following components:

(\$ in 000s)	2013	2012	2011
Service cost	\$ 103	\$ 94	\$ 112
Interest cost	287	284	263
Expected return on plan assets	(342)	(326)	(296)
Amortization of prior service cost	2	2	1
Recognized net actuarial (gain) loss	(2)	2	4
Net periodic pension cost	<u>\$ 48</u>	<u>\$ 56</u>	<u>\$ 84</u>

In attempting to reconcile amounts reported in the footnote with amounts reported in the income statement and balance sheet, Barlow became confused. He was able to find the pension expense on the income statement but was unable to make sense of the balance sheet amounts. Expressing his frustration to his wife, Barlow said, “It appears to me that the company has calculated pension expense as if they have the pension liability and pension assets they include in the footnote, but I can’t seem to find those amounts in the balance sheet. In fact, there are several amounts here I can’t seem to account for. They also say they’ve made some assumptions about interest rates, pay increases, and profits on invested assets. I wonder what difference it would make if they assumed other numbers.”

Barlow’s wife took accounting courses in college and remembers most of what she learned about pension accounting. She attempts to clear up her husband’s confusion.

Required:

Assume the role of Barlow’s wife. Answer the following questions for your husband.

1. Is Barlow’s observation correct that the company has calculated pension expense on the basis of amounts not reported in the balance sheet?
2. What amount would the company report as a pension liability in the balance sheet?
3. What amount would the company report as a pension asset in the balance sheet?
4. Which of the other amounts reported in the disclosure note would the company report in the balance sheet?
5. The disclosure note reports a net actuarial gain as well as an actuarial loss. How are these related? What do the amounts mean?
6. Which components of the pension expense represent deferred recognition? Where are these deferred amounts reported prior to amortization?

Communication

Case 17–4

Barlow’s wife;
relationship
among pension
elements

● LO17–8

The focus of this case is question 1 in the previous case. Your instructor will divide the class into two to six groups, depending on the size of the class. The mission of your group is to assess the correctness of Barlow’s observation and to suggest the appropriate treatment of the pension obligation. The suggested treatment need not be that required by GAAP.

Required:

1. Each group member should deliberate the situation independently and draft a tentative argument prior to the class session for which the case is assigned.
2. In class, each group will meet for 10 to 15 minutes in different areas of the classroom. During that meeting, group members will take turns sharing their suggestions for the purpose of arriving at a single group treatment.
3. After the allotted time, a spokesperson for each group (selected during the group meetings) will share the group’s solution with the class. The goal of the class is to incorporate the views of each group into a consensus approach to the situation.

Real World

Case 17–5

Types of pension
plans; disclosures

● LO17–1

Real World Financials

Refer to the financial statements and related disclosure notes of **Dell Inc.** located in the company’s financial statements and related disclosure notes in Appendix B located at the back of the text. The financial statements also can be found at the company’s website: www.dell.com or via EDGAR at www.sec.gov.

Required:

1. What type of pension plan does Dell sponsor for its employees? Explain.
2. Who bears the “risk” of factors that might reduce retirement benefits in this type of plan? Explain.
3. Suppose a Dell employee contributes \$10,000 to the pension plan during her first year of employment and directs investments to a municipal bond mutual fund. If she leaves Dell early in her second year, after the mutual fund’s value has increased by 2%, how much will she be entitled to roll over into an Individual Retirement Account (IRA)?
4. How did Dell account for its participation in the pension plan in fiscal 2011?

Ethics Case 17–6

401(k) plan
contributions

● LO17–1

You are in your third year as internal auditor with VXI International, manufacturer of parts and supplies for jet aircraft. VXI began a defined contribution pension plan three years ago. The plan is a so-called 401(k) plan (named after the Tax Code section that specifies the conditions for the favorable tax treatment of these plans) that permits voluntary contributions by employees. Employees’ contributions are matched with one dollar of employer contribution for every two dollars of employee contribution. Approximately \$500,000 of contributions is deducted from employee paychecks each month for investment in one of three employer-sponsored mutual funds.

While performing some preliminary audit tests, you happen to notice that employee contributions to these plans usually do not show up on mutual fund statements for up to two months following the end of pay periods from which the deductions are drawn. On further investigation, you discover that when the plan was first begun, contributions were invested within one week of receipt of the funds. When you question the firm’s investment manager about the apparent change in the timing of investments, you are told, “Last year Mr. Maxwell (the CFO)

directed me to initially deposit the contributions in the corporate investment account. At the close of each quarter, we add the employer matching contribution and deposit the combined amount in specific employee mutual funds.”

Required:

1. What is Mr. Maxwell’s apparent motivation for the change in the way contributions are handled?
2. Do you perceive an ethical dilemma?

Real World Financials

All publicly traded domestic companies use EDGAR, the Electronic Data Gathering, Analysis, and Retrieval system, to electronically file annual reports, quarterly reports, and other filings with the SEC. You usually can access these reports on the Internet for a company by visiting the Investor Relations section of the company’s website and clicking on SEC Filings or at www.sec.gov.

Required:

1. Search for a company with which you are familiar and which you believe is likely to have a pension plan. (Older, established firms are good candidates.) Access the company’s most recent 10-K filing (annual report). Search or scroll to find the financial statements and related notes.
2. From the disclosure notes, determine the type of pension plan(s) the company has.
3. For any defined contribution plans, determine the contributions the company made to the plans on behalf of employees during the most recent three years.
4. For any defined benefit plans, what interest (discount) rate was used in estimating the PBO? Access the FASB’s Codification Research System at the FASB website (www.fasb.org). Determine the specific citation for accounting for the requirement to disclose the discount rate used to estimate the PBO.
5. Repeat steps 2 through 4 for a second firm. Compare and contrast the types of pension plans offered. Are actuarial assumptions the same for defined benefit plans?

Refer to the most recent financial statements and related disclosure notes of **FedEx Corporation**. The financial statements can be found at the company’s website: www.fedex.com.

Required:

1. What pension and other postretirement benefit plans do FedEx sponsor for its employees? Explain.
2. What amount does FedEx report in its balance sheet for its pension and other postretirement benefit plans? Explain.
3. FedEx reports three actuarial assumptions used in its pension calculations. Did reported changes in those assumptions from the previous year increase or decrease the projected benefit obligation? Why?

Charles Rubin is a 30-year employee of **General Motors**. Charles was pleased with recent negotiations between his employer and the United Auto Workers. Among other favorable provisions of the new agreement, the pact also includes a 13% increase in pension payments for workers under 62 with 30 years of service who retire during the agreement. Although the elimination of a cap on outside income earned by retirees has been generally viewed as an incentive for older workers to retire, Charles sees promise for his dream of becoming a part-time engineering consultant after retirement. What has caught Charles’s attention is the following excerpt from an article in the financial press:

General Motors Corp. will record a \$170 million charge due to increases in retirement benefits for hourly United Auto Workers employees.

The charge stems from GM’s new tentative labor contract with the UAW. According to a filing with the Securities and Exchange Commission, the charge amounts to 22 cents a share and is tied to the earnings of GM’s Hughes Electronics unit.

The company warned that its “unfunded pension obligation and pension expense are expected to be unfavorably impacted as a result of the recently completed labor negotiations.”

Taking advantage of an employee stock purchase plan, Charles has become an active GM stockholder as well as employee. His stockholder side is moderately concerned by the article’s reference to the unfavorable impact of the recently completed labor negotiations.

Required:

1. When a company modifies its pension benefits the way General Motors did, what name do we give the added cost? How is it accounted for?
2. What does GM mean when it says its “unfunded pension obligation and pension expense are expected to be unfavorably impacted as a result of the recently completed labor negotiations”?

Analysis**Case 17–10**

Effect of pensions on earnings

- LO17–7

While doing some online research concerning a possible investment you come across an article that mentions in passing that a representative of **Morgan Stanley** had indicated that a company's pension plan had benefited its reported earnings. Curiosity piqued, you seek your old Intermediate Accounting text.

Required:

1. Can the net periodic pension "cost" cause a company's reported earnings to increase? Explain.
2. Companies must report the actuarial assumptions used to make estimates concerning pension plans. Which estimate influences the earnings effect in requirement 1? Can any of the other estimates influence earnings? Explain.

Research**Case 17–11**

Researching the way employee benefits are tested on the CPA Exam; retrieving information from the Internet

- LO17–9,
LO17–10,
LO17–11

The board of examiners of the American Institute of Certified Public Accountants (AICPA) is responsible for preparing the CPA examination. The boards of accountancy of all 50 states, the District of Columbia, Guam, Puerto Rico, the U.S. Virgin Islands, and the Mariana Islands use the examination as the primary way to measure the technical competence of CPA candidates. The content for each examination section is specified by the AICPA and described in outline form.

Required:

1. Access the AICPA website on the Internet. The web address is www.aicpa.org.
2. Access the CPA exam section within the site. Locate the exam content portion of the section.
3. In which of the four separately graded sections of the exam are postretirement benefits tested?
4. From the AICPA site, access the Board of Accountancy for your state. What are the education requirements in your state to sit for the CPA exam?

Analysis**Case 17–12**

Pensions and other postretirement benefit plans; analysis of disclosure notes

- LO17–6,

Real World Financials

Macy's, Inc., operates about 810 Macy's department stores and furniture galleries. The Bloomingdale's brand includes 41 stores in 12 states, four Bloomingdale's Outlet stores, and bloomingdales.com. Refer to the 2010 financial statements and related disclosure notes of the company. The financial statements can be found at the company's website: www.macys.com.

Required:

1. From the information provided in various portions of Note 11, reconcile the beginning balance (\$1,186) and ending balances for Net loss–AOCI associated with Macy's pension plan. Clearly label each reconciling amount.
2. Macy's was required to amortize a portion of its Net loss–AOCI associated with its pension plan in 2010. Based on the calculation of that amount, determine the average remaining service life of the company's employees used in that calculation.
3. From the information provided in various portions of Note 12, reconcile the beginning balance (\$38) and ending balances for Net gain–AOCI associated with Macy's Other postretirement employee benefit plan. Clearly label each reconciling amount.
4. Suppose you believe that Macy's should have assumed a 1% lower healthcare cost trend during 2010. What would 2010 net income have been under that assumption? Assume a 35% income tax rate.

Air France—KLM Case

AIRFRANCE

- LO17–12

Air France–KLM (AF), a French company, prepares its financial statements according to International Financial Reporting Standards. AF's annual report for the year ended March 31, 2011, which includes financial statements and disclosure notes, is provided with all new textbooks. This material also is included in AF's "Registration Document 2010–11," dated June 15, 2011 and is available at www.airfranceklm.com.

Required:

1. Air France did not report past service cost (called prior service cost under U.S. GAAP). If AF revised its pension plan and incurred past service cost, how would the company report that amount if it used the new IFRS guidance described in this chapter? Is that reporting method the same or different from the way we report prior service cost under U.S. GAAP?
2. Look at note 29.1, "Retirement Benefits." AF incorporates estimates regarding staff turnover, life expectancy, salary increase, retirement age and discount rates. If AF used the new IFRS guidance described in this chapter, how would the company report a change in one of these assumptions? Is that reporting method the same or different from the way we report changes under U.S. GAAP?
3. In its income statement and notes to the statements, AF does not report a single amount that represents net pension cost. If AF used the new IFRS guidance described in this chapter, would the company report a single amount that represents net pension cost? Is that reporting method the same or different from the way we report pension expense under U.S. GAAP?

18

Shareholders' Equity

OVERVIEW

We turn our attention from liabilities, which represent the creditors' interests in the assets of a corporation, to the shareholders' residual interest in those assets. The discussions distinguish between the two basic sources of shareholders' equity: (1) *invested capital* and (2) *earned capital*. We explore the expansion of corporate capital through the issuance of shares and the contraction caused by the retirement of shares or the purchase of treasury shares. In our discussions of retained earnings, we examine cash dividends, property dividends, stock dividends, and stock splits.

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- **LO18-1** Describe the components of shareholders' equity and explain how they are reported in a statement of shareholders' equity. (p. 1080)
- **LO18-2** Describe comprehensive income and its components. (p. 1082)
- **LO18-3** Understand the corporate form of organization and the nature of stock. (p. 1085)
- **LO18-4** Record the issuance of shares when sold for cash and for noncash consideration. (p. 1091)
- **LO18-5** Distinguish between accounting for retired shares and for treasury shares. (p. 1095)
- **LO18-6** Describe retained earnings and distinguish it from paid-in capital. (p. 1102)
- **LO18-7** Explain the basis of corporate dividends, including the similarities and differences between cash and property dividends. (p. 1102)
- **LO18-8** Explain stock dividends and stock splits and how we account for them. (p. 1104)
- **LO18-9** Discuss the primary differences between U.S. GAAP and IFRS with respect to accounting for shareholders' equity. (pp. 1084, 1090, and 1101)

FINANCIAL REPORTING CASE

Textron Inc.

Finally, you have some uninterrupted time to get back on the net. Earlier today you noticed on the Internet that the market price of Textron Inc.'s common stock was up almost 10%. You've been eager to look into why this happened, but have had one meeting after another all day.

Textron Inc. is a \$14 billion multi-industry company operating in 32 countries known for its Bell Helicopter, Cessna Aircraft, and other brands. You've been a stockholder of Textron since the beginning of the year when your uncle bragged to you about his company's Cessna. The dividends of 19 cents a share that you receive quarterly are nice, but that's not why you bought the stock; you were convinced at the time that the stock price was poised to rise rapidly. A few well-placed clicks of the mouse and you come across the following news article:

Real World Financials PROVIDENCE, RI—July 19—Textron Inc. today reported a 26% increase in earnings per share from continuing operations on a 15% revenue increase. The company also raised earnings and cash flow guidance for the year. "We experienced another strong quarter of solid revenue growth and improved profitability," said Textron Chairman, President and CEO Lewis B. Campbell.

The Board approved a two-for-one split of its Common Stock shares. The stock split will be effected through a 100% stock dividend, payable on August 24 to shareholders of record as of the close of business on August 3. Textron's Common Stock will begin trading at the split-adjusted price on August 27.

In addition, Textron's Board of Directors has approved a 19% increase in the company's annualized Common Stock dividend rate from \$0.775 per share to \$0.92 per share, stated on a post-split basis. Related to this action, Textron's Board of Directors declared a quarterly dividend of \$0.23 per common share to holders of record as of the close of business on September 14.

Furthermore, the Board of Directors has authorized the repurchase of up to 24 million shares of Textron's Common Stock, stated on a post-split basis.

By the time you finish this chapter, you should be able to respond appropriately to the questions posed in this case. Compare your response to the solution provided at the end of the chapter.

1. Do you think the stock price increase is related to Textron's share repurchase plan? (p. 1095)
2. What are Textron's choices in accounting for the share repurchases? (p. 1096)
3. What effect does the quarterly cash dividend of 23 cents a share have on Textron's assets? Its liabilities? Its shareholders' equity? (p. 1103)
4. What effect does the stock split have on Textron's assets? Its liabilities? Its shareholders' equity? (p. 1106)

QUESTIONS

THE NATURE OF SHAREHOLDERS' EQUITY

A corporation raises money to fund its business operations by some mix of debt and equity financing. In earlier chapters, we examined debt financing in the form of notes, bonds, leases, and other liabilities. Amounts representing those liabilities denote *creditors' interest* in the company's assets. Now we focus on various forms of equity financing. Specifically, in this chapter we consider transactions that affect shareholders' equity—those accounts that represent the *ownership interests* of shareholders.

PART A

● LO18-1

In principle, shareholders' equity is a relatively straightforward concept. Shareholders' equity is a residual amount—what's left over after creditor claims have been subtracted from assets (in other words, net assets). You probably recall the residual nature of shareholders' equity from the basic accounting equation:

Net assets equal shareholders' equity.

$$\frac{\text{Assets} - \text{Liabilities}}{\text{Net Assets}} = \text{Shareholders' equity}$$

Shareholders' equity accounts denote the ownership interests of shareholders.

Ownership interests of shareholders arise primarily from two sources: (1) amounts *invested* by shareholders in the corporation and (2) amounts *earned* by the corporation on behalf of its shareholders. These two sources are reported as (1) paid-in capital and (2) retained earnings.

Despite being a seemingly clear-cut concept, shareholders' equity and its component accounts often are misunderstood and misinterpreted. As we explore the transactions that affect shareholders' equity and its component accounts, try not to allow yourself to be overwhelmed by unfamiliar terminology or to be overly concerned with precise account titles. Terminology pertaining to shareholders' equity accounts is notoriously diverse. To give you one example—retained earnings is reported variously as *retained income* (**Smucker**), *reinvested earnings* (**Verizon**), *earnings reinvested* (**ExxonMobil**), *earnings retained in the business* (**Campbell Soup**), *retained earnings reinvested and employed in the business* (**L.S. Starret Company**), *accumulated equity* (**Macy's**), and *accumulated earnings* (**Intel**). Every shareholders' equity account has several aliases. Indeed, shareholders' equity itself is often referred to as *stockholders' equity*, *shareowners' equity*, *shareholders' investment*, and many other similar titles.

Complicating matters, transactions that affect shareholders' equity are influenced by corporation laws of individual states in which companies are located. And, as we see later, generally accepted accounting principles provide companies with considerable latitude when choosing accounting methods in this area.

Keeping this perspective in mind while you study the chapter should aid you in understanding the essential concepts. At a very basic level, each transaction we examine can be viewed simply as an increase or decrease in shareholders' equity, per se, without regard to specific shareholders' equity accounts. In fact, for a business organized as a single proprietorship, all capital changes are recorded in a single owner's equity account. The same concepts apply to a corporation. But for corporations, additional considerations make it desirable to separate owners' equity into several separate shareholders' equity accounts. These additional considerations—legal requirements and disclosure objectives—are discussed in later sections of this chapter. So, as you study the separate effects of transactions on retained earnings and specific paid-in capital accounts, you may find it helpful to ask yourself frequently “What is the net effect of this transaction on shareholders' equity?” or, equivalently, “By how much are net assets (assets minus liabilities) affected by this transaction?”

Legal requirements and disclosure objectives make it preferable to separate a corporation's capital into several separate shareholders' equity accounts.

Financial Reporting Overview

Before we examine the events that underlie specific shareholders' equity accounts, let's overview how individual accounts relate to each other. The condensed balance sheet in Illustration 18-1 of Exposition Corporation, a hypothetical company, provides that perspective.

Illustration 18-1 depicts a rather comprehensive situation. It's unlikely that any one company would have shareholders' equity from all of these sources at any one time. Remember that, at this point, our objective is only to get a general perspective of the items constituting shareholders' equity. You should, however, note a few aspects of the statement shown in Illustration 18-1. First, although company records would include separate accounts for each of these components of shareholders' equity, in the balance sheet, Exposition would report a more condensed version similar to that in Illustration 18-1A on page 1082.

The four classifications within shareholders' equity are paid-in capital, retained earnings, accumulated other comprehensive income, and treasury stock. We discuss these now in the context of Exposition Corporation.

EXPOSITION CORPORATION
Balance Sheet
December 31, 2013

(\$ in millions)

Assets		
	\$3,000	
Liabilities		
	\$1,000	
Shareholders' Equity		
Paid-in capital:		
Capital stock (par):		
Preferred stock, 10%, \$10 par, cumulative, nonparticipating	\$100	
Common stock, \$1 par	55	
Common stock dividends distributable	5	
Additional paid-in capital:		
Paid-in capital—excess of par, preferred	50	
Paid-in capital—excess of par, common	260	
Paid-in capital— reacquired shares	8	
Paid-in capital—conversion of bonds	7	
Paid-in capital—stock options	9	
Paid-in capital—stock award plan	5	
Paid-in capital—lapse of stock options	1	
Total paid-in capital	\$ 500	
Retained earnings	1,670	
Accumulated other comprehensive income:		
Net unrealized holding gains (losses) on investments	(85)	
Net unrecognized gain (loss) on pensions	(75)	
Deferred gains (losses) on derivatives*	(4)	
Gains (losses) from foreign currency rate adjustments**	—0—	(164)
Treasury stock (at cost)		(6)
Total shareholders' equity		\$2,000

*When a derivative designated as a cash flow hedge is adjusted to fair value, the gain or loss is deferred as a component of other comprehensive income and included in earnings later, at the same time as earnings are affected by the hedged transaction (described in Appendix A at the end of the book).

**Gains or losses from changes in foreign currency exchange rates are discussed elsewhere in your accounting curriculum. The amount could be an addition to or reduction in shareholders' equity.

Illustration 18–1

Detailed Shareholders' Equity Presentation

Assets minus Liabilities equals Shareholders' Equity.

The primary source of paid-in capital is the investment made by shareholders when buying preferred and common stock.

Several other events also affect paid-in capital.

Retained earnings represents earned capital.

Paid-in Capital

Paid-in capital consists primarily of amounts invested by shareholders when they purchase shares of stock from the corporation. In addition, amounts sometimes are invested (or disinvested) by others on behalf of the shareholders. For Exposition Corporation, shareholders invested \$470 million (\$100 + 55 + 5 + 50 + 260). An additional \$30 million (\$8 + 7 + 9 + 5 + 1) of paid-in capital arose from financing activities, bringing the total to \$500 million. Later in this chapter, we consider in more detail the events and transactions that affect paid-in capital.

Retained Earnings

Retained earnings is reported as a single amount, \$1,670 million. We discuss retained earnings in Part C of this chapter.

Illustration 18–1A

Typical Shareholders' Equity Presentation

Preferred stock, 10%	\$ 100
Common stock	60

Accumulated other comprehensive income:	
Net unrealized holding losses on investments	(85)
Net unrealized loss on pensions	(75)
Deferred losses on derivatives	(4)
Treasury stock	(6)
Total shareholders' equity	<u>\$2,000</u>

Treasury Stock

We discuss the final component of shareholders' equity—treasury stock—later in the chapter. It indicates that some of the shares previously sold were bought back by the corporation from shareholders.

● LO18-2 **Accumulated Other Comprehensive Income**

Also notice that shareholders' equity of Exposition Corporation is adjusted for three events that are not included in net income and so don't affect retained earnings but are part of "other comprehensive income" and therefore are included as a separate component of shareholders' equity, accumulated comprehensive income.¹ **Comprehensive income** provides a more expansive view of the change in shareholders' equity than does traditional net income. It is the total *nonowner* change in equity for a reporting period. In fact, it encompasses all changes in equity other than those from transactions with *owners*. Transactions between the corporation and its shareholders primarily include dividends and the sale or purchase of shares of the company's stock. Most nonowner changes are reported in the income statement. So, the nonowner changes other than those that are part of traditional net income are the ones reported as "other comprehensive income."

Comprehensive income extends our view of income beyond net income reported in an income statement to include four types of gains and losses not included in income statements:

1. Net holding gains (losses) on investments.
2. Gains (losses) from and amendments to postretirement benefit plans.
3. Deferred gains (losses) on derivatives.
4. Gains (losses) from foreign currency translation.

The first of these are the gains and losses on some securities that occur when the fair values of these investments increase or decrease. As you learned in Chapter 12, some gains and losses aren't included in earnings until they are realized through the sale of the securities but are considered a component of *other comprehensive income* in the meantime. Similarly, as we discussed in Chapter 17, net gains and losses as well as "prior service cost" on pensions sometimes affect other comprehensive income rather than net income as they occur. You have not yet studied the third and fourth potential components of other comprehensive income. As described in Appendix A, "Derivatives" at the back of this textbook, when a derivative designated as a "*cash flow hedge*" is adjusted to fair value, the gain or loss is deferred as a component of other comprehensive income and included in earnings later, at the same time as earnings are affected by the hedged transaction. Gains and losses from changes in foreign currency exchange rates are discussed elsewhere in your accounting curriculum. These, too, are included in other comprehensive income (OCI) but not net income.

Comprehensive income includes net income as well as other gains and losses that change shareholders' equity but are not included in traditional net income.

¹Comprehensive income was introduced in Chapter 4 and revisited in Chapters 12 and 17.

OCI shares another trait with net income. Just as net income is reported periodically in the income statement and also on a *cumulative* basis as part of retained earnings, OCI too, is reported periodically in the statement of comprehensive income and also as **accumulated other comprehensive income (AOCI)** in the balance sheet along with retained earnings. In other words, we report two attributes of OCI: (1) components of comprehensive income *created during the reporting period* and (2) the comprehensive income *accumulated* over the current and prior periods.

The first attribute—components of comprehensive income *created during the reporting period*—can be reported either as (a) an expanded version of the income statement or (b) a separate statement immediately following the income statement. Regardless of the placement a company chooses, the presentation is similar. It will report net income, other components of comprehensive income, and total comprehensive income, similar to the presentation in Illustration 18–2. Note that each component is reported net of its related income tax expense or income tax benefit.²

OCI is reported in the statement of comprehensive income.

AOCI is reported in the balance sheet.

Illustration 18–2

Comprehensive Income

	(\$ in millions)	
Net income		\$xxx
Other comprehensive income:		
Net unrealized holding gains (losses) on investments (net of tax)*	\$ x	
Gains (losses) from and amendments to postretirement benefit plans (net of tax) [†]	(x)	
Deferred gains (losses) on derivatives (net of tax) [‡]	(x)	
Gains (losses) from foreign currency translation (net of tax) [§]	x	xx
Comprehensive income		<u>\$xxx</u>

*Changes in the fair value of some securities (described in Chapter 12). An unrealized loss also might occur from recording an “other than temporary” impairment in excess of a credit loss for a debt security that the company does not intend to sell, and for which it is more likely than not that the company will not be required to sell before the remaining amortized cost is anticipated to be recovered. This topic is discussed in Chapter 12.

[†]Gains and losses due to revising assumptions or market returns differing from expectations and prior service cost from amending the plan (described in Chapter 17).

[‡]When a derivative designated as a cash flow hedge is adjusted to fair value, the gain or loss is deferred as a component of comprehensive income and included in earnings later, at the same time as earnings are affected by the hedged transaction (described in the Derivatives Appendix to the text).

[§]Gains or losses from changes in foreign currency exchange rates. The amount could be an addition to or reduction in shareholders' equity. (This item is discussed elsewhere in your accounting curriculum.)

The second measure—the comprehensive income *accumulated* over the current and prior periods—is reported as a separate component of shareholders' equity following retained earnings, similar to the presentation by Exposition Corporation in Illustration 18–1. Note that amounts reported here—accumulated other comprehensive income (AOCI)—represent the *cumulative* sum of the changes in each component created during each reporting period (Illustration 18–2) throughout all prior years.

Reporting Shareholders' Equity

You seldom, if ever, will see the degree of detail shown in Illustration 18–1 reported in the presentation of paid-in capital. Instead, companies keep track of individual additional paid-in capital accounts in company records but ordinarily report these amounts as a single subtotal—additional paid-in capital. Pertinent rights and privileges of various securities outstanding such as dividend and liquidation preferences, call and conversion information, and voting rights are summarized in disclosure notes.³ The shareholders' equity portion of the balance sheet of **Walmart**, shown in Illustration 18–3, is a typical presentation format.

²This can be accomplished by presenting components of other comprehensive income either net of related income tax effects (as in this presentation) or before income tax effects with disclosure of the income taxes allocated to each component either in a disclosure note or parenthetically in the statement.

³FASB ACS 505–10–50: Equity—Overall—Disclosure (previously “Disclosure of Information about Capital Structure,” *Statement of Financial Accounting Standards No. 129* (Norwalk, Conn.: FASB, 1997)).

● LO18–9

International Financial Reporting Standards

Use of the term “reserves” and other terminology differences. Shareholders' equity is classified under IFRS into two categories: share capital and “reserves.” The term reserves is considered misleading and thus is discouraged under U.S. GAAP. Here are some other differences in equity terminology:

U.S. GAAP	IFRS
Capital stock:	Share capital:
Common stock	Ordinary shares
Preferred stock	Preference shares
Paid-in capital—excess of par, common	Share premium, ordinary shares
Paid-in capital—excess of par, preferred	Share premium, preference shares
Accumulated other comprehensive income:	Reserves:
Net gains (losses) on investments—AOCI	Investment revaluation reserve
Net gains (losses) foreign currency translation—AOCI	Translation reserve
{N/A: adjusting P,P, & E to fair value not permitted}	Revaluation reserve
Retained earnings	Retained earnings
Total shareholders' equity	Total equity
Presented after Liabilities	Often presented before Liabilities

A statement of shareholders' equity reports the transactions that cause changes in its shareholders' equity account balances.

The balance sheet reports annual balances of shareholders' equity accounts. However, companies also should disclose the sources of the changes in those accounts.⁴ This is the purpose of the **statement of shareholders' equity**. To illustrate, Illustration 18–4 on the next page shows how **Walmart** reported the changes in its shareholders' equity balances.

The current year changes that Walmart statements of shareholders' equity reveal are net income, other comprehensive income, the retirement of common stock, and dividends declared.

⁴FASB ASC 505–10–50–2: Equity—Overall—Disclosure (previously “Omnibus Opinion,” *APB Opinion No. 12* (New York: AICPA, 1967)).

The Corporate Organization

A company may be organized in any of three ways: (1) a sole proprietorship, (2) a partnership, or (3) a corporation. In your introductory accounting course, you studied each form. In this course we focus exclusively on the corporate form of organization.

Most well-known companies, such as **Microsoft**, **IBM**, and **General Electric**, are corporations. Also, many smaller companies—even one-owner businesses—are corporations. Although fewer in number than proprietorships and partnerships, in terms of business volume, corporations are the predominant form of business organization.

In most respects, transactions are accounted for in the same way regardless of the form of business organization. Assets and liabilities are unaffected by the way a company is organized. The exception is the method of accounting for capital, the ownership interest in the company. Rather than recording all changes in ownership interests in a single capital account for each owner, as we do for sole proprietorships and partnerships, we use the several capital accounts overviewed in the previous section to record those changes for a corporation. Before discussing how we account for specific ownership changes, let's look at the characteristics of a corporation that make this form of organization distinctive and require special accounting treatment.

● LO18–3

Corporations are the dominant form of business organization.

Accounting for most transactions is the same regardless of the form of business organization.

⁵Excerpted for instructional clarity.

Limited Liability

The owners are not personally liable for debts of a corporation. Unlike a proprietorship or a partnership, a corporation is a separate legal entity, responsible for its own debts. Shareholders' liability is limited to the amounts they invest in the company when they purchase shares (unless the shareholder also is an officer of the corporation). The limited liability of shareholders is perhaps the single most important advantage of corporate organization. In other forms of business, creditors may look to the personal assets of owners for satisfaction of business debt.

Ease of Raising Capital

A corporation is better suited to raising capital than is a proprietorship or a partnership. All companies can raise funds by operating at a profit or by borrowing. However, attracting equity capital is easier for a corporation. Because corporations sell ownership interest in the form of shares of stock, ownership rights are easily transferred. An investor can sell his/her ownership interest at any time and without affecting the corporation or its operations.

From the viewpoint of a potential investor, another favorable aspect of investing in a corporation is the lack of mutual agency. Individual partners in a partnership have the power to bind the business to a contract. Therefore, an investor in a partnership must be careful regarding the character and business savvy of fellow co-owners. On the other hand, shareholders' participation in the affairs of a corporation is limited to voting at shareholders' meetings (unless the shareholder also is a member of management). Consequently, a shareholder needn't exercise the same degree of care that partners must in selecting co-owners.

Obviously, then, a corporation offers advantages over the other forms of organization, particularly in its ability to raise investment capital. As you might guess, though, these benefits do not come without a price.

Disadvantages

Paperwork! To protect the rights of those who buy a corporation's stock or who loan money to a corporation, the state in which the company is incorporated and the federal government impose expensive reporting requirements. Primarily the required paperwork is intended to ensure adequate disclosure of information needed by investors and creditors.

You read earlier that corporations are separate legal entities. As such, they also are separate taxable entities. Often this causes what is referred to as *double taxation*. Corporations first pay income taxes on their earnings. Then, when those earnings are distributed as cash dividends, shareholders pay personal income taxes on the previously taxed earnings. Proprietorships and partnerships are not taxed at the business level; each owner's share of profits is taxed only as personal income.

Types of Corporations

When referring to corporations in this text, we are referring to corporations formed by private individuals for the purpose of generating profits. These corporations raise capital by selling stock. There are, however, other types of corporations.

Some corporations such as churches, hospitals, universities, and charities do not sell stock and are not organized for profit. Also, some not-for-profit corporations are government-owned—the **Federal Deposit Insurance Corporation (FDIC)**, for instance. Accounting for not-for-profit corporations is discussed elsewhere in the accounting curriculum.

Corporations organized for profit may be publicly held or privately (or closely) held. The stock of publicly held corporations is available for purchase by the general public. You can buy shares of **General Electric**, **Ford Motor Company**, or **Walmart** through a stockbroker. These shares are traded on the New York Stock Exchange. Other publicly held stock, like **Intel** and **Microsoft**, are available through Nasdaq (National Association of Securities Dealers Automated Quotations).

On the other hand, shares of privately held companies are owned by only a few individuals (perhaps a family) and are not available to the general public. Corporations whose stock is privately held do not need to register those shares with the Securities and Exchange

A corporation is a separate legal entity—separate and distinct from its owners.

Ownership interest in a corporation is easily transferred.

Shareholders do not have a mutual agency relationship.

Corporations are subject to expensive government regulation.

Corporations create double taxation.

Not-for-profit corporations may be owned:

1. By the public sector.
2. By a governmental unit.

Corporations organized for profit may be:

1. Publicly held and traded:
 - a. On an exchange.
 - b. Over-the-counter.
2. Privately held.

Commission and are spared the voluminous, annual reporting requirements of the SEC. Of course, new sources of equity financing are limited when shares are privately held, as is the market for selling existing shares.

Frequently, companies begin as smaller, privately held corporations. Then as success broadens opportunities for expansion, the corporation goes public. For example, in 2011, the shareholders of the professional-networking site **LinkedIn** decided to take public the privately held company. The result was the largest Internet initial public offering since **Google Inc.**

Privately held companies' shares are held by only a few individuals and are not available to the general public.

Hybrid Organizations

A corporation can elect to comply with a special set of tax rules and be designated an **S corporation**. S corporations have characteristics of both regular corporations and partnerships. Owners have the limited liability protection of a corporation, but income and expenses are passed through to the owners as in a partnership, avoiding double taxation.

Two particular business structures have evolved in response to liability issues and tax treatment—limited liability companies and limited liability partnerships.

A **limited liability company** offers several advantages. Owners are not liable for the debts of the business, except to the extent of their investment. Unlike a limited partnership, all members of a limited liability company can be involved with managing the business without losing liability protection. Like an S corporation, income and expenses are passed through to the owners as in a partnership, avoiding double taxation, but there are no limitations on the number of owners as in an S corporation.

A **limited liability partnership** is similar to a limited liability company, except it doesn't offer all the liability protection available in the limited liability company structure. Partners are liable for their own actions but not entirely liable for the actions of other partners.

The Model Business Corporation Act

Corporations are formed in accordance with the corporation laws of individual states. State laws are not uniform, but share many similarities, thanks to the widespread adoption of the **Model Business Corporation Act**.⁶ This act is designed to serve as a guide to states in the development of their corporation statutes. It presently serves as the model for the majority of states.

The *Model Business Corporation Act* serves as the model for the corporation statutes of most states.

State laws regarding the nature of shares that can be authorized, the issuance and repurchase of those shares, and conditions for distributions to shareholders obviously influence actions of corporations. Naturally, differences among state laws affect how we account for many of the shareholders' equity transactions discussed in this chapter. For that reason, we will focus on the normal case, as described by the Model Business Corporation Act, and note situations where variations in state law might require different accounting. Your goal is not to learn diverse procedures caused by peculiarities of state laws, but to understand the broad concepts of accounting for shareholders' equity that can be applied to any specific circumstance.

Variations among state laws influence GAAP pertaining to shareholders' equity transactions.

The process of incorporating a business is similar in all states. The **articles of incorporation** (sometimes called the *corporate charter*) describe (a) the nature of the firm's business activities, (b) the shares to be issued, and (c) the composition of the initial **board of directors**. The board of directors establishes corporate policies and appoints officers who manage the corporation.

The number of shares authorized is the maximum number of shares that a corporation is legally permitted to issue, as specified in its articles of incorporation. The number of authorized shares is determined at the company's creation and can only be increased by a vote of the shareholders. At least some of the shares authorized by the articles of incorporation are sold (issued) at the inception of the corporation. Frequently, the initial shareholders include members of the board of directors or officers (who may be one and the same). Ultimately, it is the corporation's shareholders that control the company. Shareholders are the owners of the corporation. By voting their shares, it is they who determine the makeup of the board of directors—who in turn appoint officers, who in turn manage the company.

⁶*Model Business Corporation Act*, the American Bar Association, 2011.

Shareholders' investment in a corporation ordinarily is referred to as paid-in capital. In the next section, we examine the methods normally used to maintain records of shareholders' investment and to report such paid-in capital in financial statements.

PART B

PAID-IN CAPITAL

Fundamental Share Rights

In reading the previous paragraphs, you noted that corporations raise equity funds by selling shares of the corporation. Shareholders are the owners of a corporation. If a corporation has only one class of shares, no designation of the shares is necessary, but they typically are labeled *common shares*. Ownership rights held by common shareholders, unless specifically withheld by agreement with the shareholders, are:

- a. The right to vote on matters that come before the shareholders, including the election of corporate directors. Each share represents one vote.
- b. The right to share in profits when dividends are declared. The percentage of shares owned by a shareholder determines his/her share of dividends distributed.
- c. The right to share in the distribution of assets if the company is liquidated. The percentage of shares owned by a shareholder determines his/her share of assets after creditors and preferred shareholders are paid.

Another right sometimes given to common shareholders is the right to maintain one's percentage share of ownership when new shares are issued. This is referred to as a *preemptive right*. Each shareholder is offered the opportunity to buy a percentage of any new shares issued equal to the percentage of shares he/she owns at the time. In most states this right must be specifically granted; in others, it is presumed unless contractually excluded.

However, this right usually is not explicitly stated because of the inconvenience it causes corporations when they issue new shares. The exclusion of the preemptive right ordinarily is inconsequential because few shareholders own enough stock to be concerned about their ownership percentage.

Distinguishing Classes of Shares

It is not uncommon for a firm to have more than one, and perhaps several, classes of shares, each with different rights and limitations. To attract investors, companies have devised quite a variety of ownership securities.

If more than one class of shares is authorized by the articles of incorporation, the specific rights of each (for instance, the right to vote, residual interest in assets, and dividend rights) must be stated. Also, some designation must be given to distinguish each class.

Some of the distinguishing designations often used are:

1. Class A, class B, and so on (**Tyson Foods**).
2. Preferred stock, common stock, and class B stock (**Hershey Foods**).
3. Common and preferred (**Hewlett-Packard**).
4. Capital stock (**Reader's Digest**).
5. Common and serial preferred (**Smucker**).

In your introductory study of accounting, you probably became most familiar with the common stock–preferred stock distinction. That terminology has deep roots in tradition. Early English corporate charters provided for shares that were preferred over others as to dividends and liquidation rights. These provisions were reflected in early American corporation laws. But as our economy developed, corporations increasingly felt the need for innovative ways of attracting investment capital. The result has been a gradual development of a wide range of share classifications that cannot easily be identified by these historical designations.

Terminology varies in the way companies differentiate among share types.

It often is difficult to predict the rights and privileges of shares on the basis of whether they are labeled *common* or *preferred*.

To reflect the flexibility that now exists in the creation of equity shares, the Model Business Corporation Act, and thus many state statutes, no longer mention the words common and preferred. But the influence of tradition lingers. Most corporations still designate shares as common or preferred. For consistency with practice, the illustrations you study in this chapter use those designations. As you consider the examples, keep in mind that the same concepts apply regardless of the language used to distinguish shares.

Typical Rights of Preferred Shares

An issue of shares with certain preferences or features that distinguish it from the class of shares customarily called common shares may be assigned any of the several labels mentioned earlier. Very often the distinguishing designation is **preferred shares**. The special rights of preferred shareholders usually include one or both of the following:

- Preferred shareholders typically have a preference to a specified amount of dividends (stated dollar amount per share or % of par value per share). That is, if the board of directors declares dividends, preferred shareholders will receive the designated dividend before any dividends are paid to common shareholders.
- Preferred shareholders customarily have a preference (over common shareholders) as to the distribution of assets in the event the corporation is dissolved.

Preferred shareholders sometimes have the **right of conversion** which allows them to exchange shares of preferred stock for common stock at a specified conversion ratio. Alternatively, a **redemption privilege** might allow preferred shareholders the option, under specified conditions, to return their shares for a predetermined redemption price. For instance, in 2011, **Xerox Corporation** had outstanding 300,000 shares of convertible preferred stock. Preferred shareholders have preference over common stockholders in dividends and liquidation rights. Each preferred share is convertible into 90 common shares. Similarly, shares may be redeemable at the option of the issuing corporation (sometimes referred to as *callable*).

Preferred shares may be **cumulative** or **noncumulative**. Typically, preferred shares are cumulative, which means that if the specified dividend is not paid in a given year, the unpaid dividends (called *dividends in arrears*) accumulate and must be made up in a later dividend year before any dividends are paid on common shares. Illustration 18–5 provides an example.

Shares may be:

- Convertible into a specified number of another class of shares.**
- Redeemable at the option of:**
 - Shareholders.
 - The corporation.

The shareholders' equity of Corbin Enterprises includes the items shown below. The board of directors declared cash dividends of \$360,000, \$500,000, and \$700,000 in its first three years of operation—2012, 2013, and 2014, respectively.

Common stock	\$3,000,000
Paid-in capital—excess of par, common	9,800,000
Preferred stock, 8%	6,000,000
Paid-in capital—excess of par, preferred	780,000

Determine the amount of dividends to be paid to preferred and common shareholders in each of the three years, assuming that the preferred stock is cumulative and nonparticipating.

	Preferred	Common
2012	\$360,000*	\$0
2013	500,000**	0
2014	580,000***	120,000 (remainder)

* The preferred shareholders are entitled to dividends of \$480,000 (8% × \$6,000,000), but only \$360,000 dividends are declared in 2012 so dividends in arrears are \$120,000.

** \$120,000 dividends in arrears plus \$380,000 of the \$480,000 current preference.

*** \$100,000 dividends in arrears (\$480,000 – 380,000) plus the \$480,000 current preference.

Illustration 18–5

Distribution of Dividends to Preferred Shareholders

If preferred shares are not cumulative, dividends not declared in any given year need never be paid.

Preferred shares may be **participating** or **nonparticipating**. A participating feature allows preferred shareholders to receive additional dividends beyond the stated amount. If the preferred shares are fully participating, the distribution of dividends to common and

preferred shareholders is a pro rata allocation based on the relative par value amounts of common and preferred stock outstanding. Participating preferred stock, previously quite common, is rare today.

Remember that the designations of common and preferred imply no necessary rights, privileges, or limitations of the shares so designated. Such relative rights must be specified by the contract with shareholders. A corporation can create classes of preferred shares that are indistinguishable from common shares in voting rights and/or the right to participate in assets (distributed as dividends or distributed upon liquidation). Likewise, it is possible to devise classes of common shares that possess preferential rights, superior to those of preferred shares.

Is It Equity or Is It Debt?

You probably also can imagine an issue of preferred shares that is almost indistinguishable from a bond issue. Let's say, for instance, that preferred shares call for annual cash dividends of 10% of the par value, dividends are cumulative, and the shares must be redeemed for cash in 10 years. Although the declaration of dividends rests in the discretion of the board of directors, the contract with preferred shareholders can be worded in such a way that directors are compelled to declare dividends each year the company is profitable. For a profitable company, it would be difficult to draw the line between this issue of preferred shares and a 10%, 10-year bond issue. Even in a more typical situation, preferred shares are somewhat hybrid securities—a cross between equity and debt.

The line between debt and equity is hard to draw.

● LO18-9

International Financial Reporting Standards

Distinction between Debt and Equity for Preferred Stock. Differences in the definitions and requirements can result in the same instrument being classified differently between debt and equity under IFRS and U.S. GAAP. Under U.S. GAAP, preferred stock normally is reported as equity, but is reported as debt with the dividends reported in the income statement as interest expense if it is "mandatorily redeemable" preferred stock. Under IFRS, most non-mandatorily redeemable preferred stock (preference shares) also is reported as debt as well as some preference shares that aren't redeemable. Under IFRS (IAS No. 32), the critical feature that distinguishes a liability is if the issuer is or can be required to deliver cash (or another financial instrument) to the holder.⁷ Unilever describes such a difference in a disclosure note:

Additional Information for U.S. Investors [in part]

Preference Shares

Under IAS 32, Unilever recognises preference shares that provide a fixed preference dividend as borrowings with preference dividends recognised in the income statement. Under U.S. GAAP such preference shares are classified in shareholders' equity with dividends treated as a deduction to shareholder's equity.

The FASB and the IASB are cooperating on a project that addresses the distinction between liabilities and equity, which likely will eliminate many existing differences.

Sometimes the similarity to debt is even more obvious. Suppose shares are mandatorily redeemable—the company is obligated to buy back the shares at a specified future date. The fact that the company is obligated to pay cash (or other assets) at a fixed or determinable date in the future makes this financial instrument tantamount to debt. A mandatorily redeemable financial instrument must be reported in the balance sheet as a liability, not as shareholders' equity.⁸ **Goodyear**, for instance, reported its mandatorily redeemable preferred shares as a liability in its 2011 balance sheet.

Mandatorily redeemable shares are classified as liabilities.

⁷"Financial Instruments: Presentation," *International Accounting Standard No. 32* (IASCF), as amended effective January 1, 2011.

⁸"FASB ASC 480-10-25-4: Distinguishing Liabilities from Equity—Overall—Recognition (previously Accounting for Certain Financial Instruments with Characteristics of Both Liabilities and Equity)," *Statement of Financial Accounting Standards No. 150* (Norwalk, Conn.: FASB, 2005).

The Concept of Par Value

Another prevalent practice (besides labeling shares as common and preferred) that has little significance other than historical is assigning a par value to shares. The concept of par value dates back as far as the concept of owning shares of a business. Par value originally indicated the real value of shares. All shares were issued at that price.

During the late 19th and early 20th centuries, many cases of selling shares for less than par value—known as *watered shares*—received a great deal of attention and were the subject of a number of lawsuits. Investors and creditors contended that they relied on the par value as the permanent investment in the corporation and therefore net assets must always be at least that amount. Not only was par value assumed to be the amount invested by shareholders, but it also was defined by early corporation laws as the amount of net assets not available for distribution to shareholders (as dividends or otherwise).

Many companies began turning to par value shares with very low par values—often pennies—to escape the watered shares liability of issuing shares below an arbitrary par value and to limit the restrictions on distributions. This practice is common today.

Accountants and attorneys have been aware for decades that laws pertaining to par value and legal capital not only are bewildering but fail in their intent to safeguard creditors from payments to shareholders. Actually, to the extent that creditors are led to believe that they are afforded protection, they are misled. Like the designations of common and preferred shares, the concepts of par value and legal capital have been eliminated entirely from the Model Business Corporation Act.⁹

Many states already have adopted these provisions of the Model Act. But most established corporations issued shares prior to changes in the state statutes. Consequently, most companies have par value shares outstanding and continue to issue previously authorized par value shares. The evolution will be gradual to the simpler, more meaningful provisions of the Model Act.

In the meantime, accountants must be familiar with the outdated concepts of par value and legal capital in order to properly record and report transactions related to par value shares. For that reason, most of the discussion in this chapter centers on par value shares. Largely, this means only that proceeds from shareholders' investment is allocated between stated capital and additional paid-in capital. Be aware, though, that in the absence of archaic laws that prompted the creation of par value shares, there is no theoretical reason to do so.

We have inherited the archaic concept of par value from early corporate law.

Shares with nominal par value became common to dodge elaborate statutory rules pertaining to par value shares.

Most shares continue to bear arbitrarily designated par values.

Accounting for the Issuance of Shares

Shares Issued For Cash

When shares are sold for cash (see Illustration 18–6), the capital stock account (usually common or preferred) is credited for the amount representing stated capital. When shares have a designated par value, that amount denotes stated capital and is credited to the stock account. Proceeds in excess of this amount are credited to paid-in capital—excess of par (also called additional paid-in capital).

LO18-4

Dow Industrial sells 100,000 of its common shares, \$1 par per share, for \$10 per share:		
		(\$ in 000s)
Cash (100,000 shares at \$10 price per share)	1,000	
Common stock (100,000 shares at \$1 par per share)		100
Paid-in capital—excess of par (remainder)		900
The entire proceeds from the sale of no-par stock are deemed stated capital and recorded in the stock account. If the shares are no-par, the entry is as follows:		
Cash (100,000 shares at \$10 price per share)	1,000	
Common stock		1,000

Illustration 18–6
Shares Sold for Cash

The total amount received from the sale of no-par shares is credited to the stock account.

⁹American Bar Association, official comment to Section 6.21 of the *Model Business Corporation Act*, 2011.

Shares Issued for Noncash Consideration

Occasionally, a company might issue its shares for consideration other than cash. It is not uncommon for a new company, yet to establish a reliable cash flow, to pay for promotional and legal services with shares rather than with cash. Similarly, shares might be given in payment for land, or for equipment, or for some other noncash asset.

Even without a receipt of cash to establish the fair value of the shares at the time of the exchange, the transaction still should be recorded at fair value. Best evidence of fair value might be:

Shares should be issued at fair value.

- A quoted market price for the shares.
- A selling price established in a recent issue of shares for cash.
- The amount of cash that would have been paid in a cash purchase of the asset or service.
- An independent appraisal of the value of the asset received.
- Other available evidence.

Whichever evidence of fair value seems more clearly evident should be used.¹⁰

Illustration 18–7 demonstrates a situation where the quoted market price is the best evidence of fair value.

Illustration 18–7

Shares Sold for Noncash Consideration

The quoted market price for the shares issued might be the best evidence of fair value.

DuMont Chemicals issues 1 million of its common shares, \$1 par per share, in exchange for a custom-built factory for which no cash price is available. Today's issue of *The Wall Street Journal* lists DuMont's stock at **\$10 per share**:

	(\$ in millions)	
Property, plant, and equipment (1 million shares at \$10 per share)	10	
Common stock (1 million shares at \$1 par per share)		1
Paid-in capital—excess of par (remainder)		9

More Than One Security Issued for a Single Price

Although uncommon, a company might sell more than one security—perhaps common shares and preferred shares—for a single price. As you might expect, the cash received usually is the sum of the separate market values of the two securities. Of course, each is then recorded at its market value. However, if only one security's value is known, the second security's market value is inferred from the total selling price as demonstrated in Illustration 18–8.

Illustration 18–8

More than One Security Sold for a Single Price

When only one security's value is known (**\$40 million**), the second security's market value (**\$60 million**) is assumed from the total selling price (**\$100 million**).

AP&P issues 4 million of its common shares, \$1 par per share, and 4 million of its preferred shares, \$10 par, for \$100 million. Today's issue of *The Wall Street Journal* lists AP&P's common at \$10 per share. There is no established market for the preferred shares:

	(\$ in millions)	
Cash	100	
Common stock (4 million shares × \$1 par)		4
Paid-in capital—excess of par, common		36
Preferred stock (4 million shares × \$10 par)		40
Paid-in capital—excess of par, preferred		20

¹⁰Although stock issuances are not specifically mentioned in FASB ASC 845–10–30: Nonmonetary Transactions—Overall—Initial Measurement (previously *APB Opinion No. 29*), this treatment is consistent with the general rule for accounting for noncash transactions as described in that pronouncement, pars. 18 and 25.

Because the shares sell for a total of \$100 million, and the market value of the common shares is known to be \$40 million (4 million × \$10), the preferred shares are inferred to have a market value of \$60 million.

Additional Consideration

In the unlikely event that the total selling price is not equal to the sum of the two market prices (when both market values are known), the total selling price is allocated between the two securities, in proportion to their relative market values. You should note that this is the same approach we use (a) when more than one asset is purchased for a single purchase price to allocate the single price to the various assets acquired, (b) when detachable warrants and bonds are issued for a single price, and (c) in any other situation when more than one item is associated with a single purchase price or selling price.

Share Issue Costs

When a company sells shares, it obtains the legal, promotional, and accounting services necessary to effect the sale. The cost of these services reduces the net proceeds from selling the shares. Since paid-in capital—excess of par is credited for the excess of the proceeds over the par value of the shares sold, the effect of share issue costs is to reduce the amount credited to that account. For example, the Internet search site **Local.com** noted in its financial statements: “On January 20, 2011, we completed an underwritten public offering of 4,600,000 shares of our common stock at \$4.25 per share (the “Offering”), resulting in net proceeds to us of \$18.2 million after deducting underwriting discounts and commissions and other related expenses.” Local.com’s entry to record the sale was:

Share issue costs reduce the net cash proceeds from selling the shares and thus paid-in capital—excess of par.

Real World Financials

	(\$ in millions)	
Cash	18.2	
Common stock (4,600,000 shares at \$.00001 par per share)1
Paid-in capital—excess of par (remainder)		18.1

The cash proceeds is the net amount received after paying share issue costs.

You should notice that not separately reporting share issue costs differs from how *debt* issue costs are recorded. In Chapter 14 you learned that the costs associated with a debt issue are recorded in a separate debt issue costs account and amortized to expense over the life of the debt.

It can be argued that share issue costs and debt issue costs are fundamentally different. That view would argue that a debt issue has a fixed maturity and, like interest expense, debt issue costs are part of the expense of borrowing funds for that period of time (even though it’s reported in a separate expense account—debt issue expense—as it’s amortized). Selling shares, on the other hand, represents a perpetual equity interest. Dividends paid on that capital investment are not an expense; neither are the costs of obtaining that capital investment (share issue costs).

Like dividends, share issue costs are not an expense.

Although expensing debt issue costs presently is required by GAAP, the FASB has suggested in *Concept Statement 6* that those costs should be treated the same way as share issue costs. That is, the recorded amount of the debt would be reduced by the debt issue costs instead of recording the costs separately as an asset. Remember, though, that concept statements do not constitute GAAP, so until a new FASB standard is issued to supersede FASB ASC 835–30–45: Interest–Imputation of Interest–Other Presentation Matters (previously *APB Opinion 21*), the prescribed practice is to record debt issue costs as assets and expense the asset over the maturity of the debt.

Concept Review Exercise

EXPANSION OF CORPORATE CAPITAL

Situation: The shareholders' equity section of the balance sheet of National Foods, Inc., included the following accounts at December 31, 2011:

Shareholders' Equity	(\$ in millions)
Paid-in capital:	
Common stock, 120 million shares at \$1 par	\$ 120
Paid-in capital—excess of par	836
Retained earnings	<u>2,449</u>
Total shareholders' equity	<u><u>\$3,405</u></u>

Required:

- During 2012, several transactions affected the stock of National Foods. Prepare the appropriate entries for these events.
 - On March 11, National Foods issued 10 million of its 9.2% preferred shares, \$1 par per share, for \$44 per share.
 - On November 22, 1 million common shares, \$1 par per share, were issued in exchange for eight labeling machines. Each machine was built to custom specifications so no cash price was available. National Food's stock was listed at \$10 per share.
 - On November 23, 1 million of the common shares and 1 million preferred shares were sold for \$60 million. The preferred shares had not traded since March and their market value was uncertain.
- Prepare the shareholders' equity section of the comparative balance sheets for National Foods at December 31, 2012 and 2011. Assume that net income for 2012 was \$400 million and the only other transaction affecting shareholders' equity was the payment of the 9.2% dividend on the 11 million preferred shares (\$1 million).

Solution:

- During 2012 several transactions affected the stock of National Foods. Prepare the appropriate entries for these events.
 - On March 11, National Foods issued 10 million of its preferred shares, \$1 par per share, for \$44 per share.

	(\$ in millions)
Cash	440
Preferred stock (10 million shares × \$1 par per share)	10
Paid-in capital—excess of par, preferred	430

- On November 22, 1 million common shares, \$1 par per share, were issued in exchange for 8 labeling machines:

Machinery (fair value of shares)	10
Common stock (1 million shares × \$1 par per share)	1
Paid-in capital—excess of par, common (1 million shares × \$9)	9

- On November 23, 1 million of the common shares and 1 million preferred shares were sold for \$60 million:

Cash	60
Common stock (1 million shares × \$1 par per share)	1
Paid-in capital—excess of par, common	9
Preferred stock (1 million shares × \$1 par per share)	1
Paid-in capital—excess of par, preferred (to balance)	49

The transaction was recorded at the fair value of the shares exchanged for the machinery.

Since the value of only the common stock was known, the preferred stock's market value (\$50/share) was inferred from the total selling price.

2. Prepare the shareholders' equity section of the comparative balance sheets for National Foods at December 31, 2012 and 2011.

NATIONAL FOODS, INC.		
Balance Sheet		
[Shareholders' Equity Section]		
	(\$ in millions)	
	2012	2011
Shareholders' Equity		
Preferred stock, 9.2%, \$1 par (2012: \$10 million + 1 million)	\$ 11	\$ —
Common stock, \$1 par (2012: \$120 million + 1 million + 1 million)	122	120
Paid-in capital—excess of par, preferred (2012: \$430 million + 49 million)	479	—
Paid-in capital—excess of par, common (2012: \$836 million + 9 million + 9 million)	854	836
Retained earnings (2011: \$2,449 million + 400 million – 1 million)	2,848	2,449
<i>Total shareholders' equity</i>	<u>\$4,314</u>	<u>\$3,405</u>

Note: This situation is continued in the next Concept Review Exercise on page 1099.

Share Buybacks

In the previous section we examined various ways stock might be issued. In this section, we look at situations in which companies reacquire shares previously sold. Most medium- and large-size companies buy back their own shares. Many have formal share repurchase plans to buy back stock over a series of years.

● LO18-5

Decision Maker's Perspective

When a company's management feels the market price of its stock is undervalued, it may attempt to support the price by decreasing the supply of stock in the marketplace. A **Johnson & Johnson** announcement that it planned to buy back up to \$5 billion of its outstanding shares triggered a buying spree that pushed the stock price up by more than 3 percent.

When announcing plans to repurchase up to \$1 billion of its shares, **Forex International Trading** chief executive officer Darren Dunckel explained, "We have evaluated the recent price levels and we believe that our common stock represents an attractive investment opportunity for our company."¹¹ Although clearly a company may attempt to increase net assets by buying its shares at a low price and selling them back later at a higher price, that investment is not viewed as an asset. Similarly, increases and decreases in net assets from that activity are not reported as gains and losses in the company's income statement. Instead, buying and selling its shares are transactions between the corporation and its owners, analogous to retiring shares and then selling previously unissued shares. You should note the contrast between a company's purchasing of its own shares and its purchasing of shares in another corporation as an investment.

Though not considered an investment, the repurchase of shares often is a judicious use of a company's cash. By increasing per share earnings and supporting share price, shareholders benefit. When **Walmart** announced a \$15 billion buyback of common stock, Neil Currie, an analyst with **UBS** Securities commented, "Walmart has taken a major step in attempting to improve returns on investment."¹²

To the extent this strategy is effective, a share buyback can be viewed as a way to "distribute" company profits without paying dividends. Capital gains from any stock price increase are taxed at lower capital gains tax rates than ordinary income tax rates on dividends.

Decreasing the supply of shares in the marketplace supports the price of remaining shares.

FINANCIAL Reporting Case

Q1, p. 1079

Unlike an investment in another firm's shares, the acquisition of a company's own shares does not create an asset.

Companies buy back shares to offset the increase in shares issued to employees.

¹¹"Forex Investor Services Announces 1M Share Repurchase," *Business Wire*, April 25, 2011.

¹²"Walmart Plans to Buy Back \$15 Billion in Shares," *Bloomberg.com*, June 1, 2009.

Perhaps the primary motivation for most stock repurchases is to offset the increase in shares that routinely are issued to employees under stock award and stock option compensation programs. **Microsoft** reported its stock buyback program designed to offset the effect of its stock option and stock purchase plans as shown in Illustration 18–9.

Illustration 18–9

Disclosure of
Share Repurchase
Program—Microsoft

Real World Financials

Note 11: Stockholders' Equity (in part)

Our board of directors has approved a program to repurchase shares of our common stock to reduce the dilutive effect of our stock option and stock purchase plans.

Similarly, shares might be reacquired to distribute in a stock dividend, a proposed merger, or as a defense against a hostile takeover.¹³

The usual pattern of stock buybacks was interrupted by the recent economic decline. With corporate profits down and cash in short supply, companies drastically reduced their share repurchases. For some companies, the decision was a choice between cutting buybacks or cutting dividends, and dividend reductions are more obvious and less palatable than curtailing a buyback program. Buoyed by higher profits and cash balances, companies reversed that pattern in 2010 and 2011, buying back shares at an unusually high pace.¹⁴

Whatever the reason shares are repurchased, a company has a choice of how to account for the buyback:

1. The shares can be formally retired.
2. The shares can be called treasury stock.

Unfortunately, the choice is not dictated by the nature of the buyback, but by practical motivations of the company. ●

Shares Formally Retired or Viewed as Treasury Stock

When a corporation retires its own shares, those shares assume the same status as authorized but unissued shares, just the same as if they never had been issued. We saw earlier in the chapter that when shares are sold, both cash (usually) and shareholders' equity are increased; the company becomes larger. Conversely, when cash is paid to **retire stock**, the effect is to decrease both cash and shareholders' equity; the size of the company literally is reduced.

Out of tradition and for practical reasons, companies usually reacquire shares of previously issued stock without formally retiring them.¹⁵ Shares repurchased and not retired are referred to as **treasury stock**. Because reacquired shares are essentially the same as shares that never were issued at all, treasury shares have no voting rights nor do they receive cash dividends. As demonstrated in Illustration 18–10 on the next page, when shares are repurchased as treasury stock, we reduce shareholders' equity with a debit to a negative (or contra) shareholders' equity account labeled treasury stock. That entry is reversed later through a credit to treasury stock when the treasury stock is resold. Like the concepts of par value and legal capital, the concept of treasury shares no longer is recognized in most state statutes.¹⁶ Some companies, in fact, are eliminating treasury shares from their financial statements as corporate statutes are modernized. **Microsoft** retires the shares it buys back rather than labeling them treasury stock. Still, you will see treasury shares reported in the balance sheets of many companies.

FINANCIAL Reporting Case

Q2, p. 1079

Reacquired shares are
equivalent to authorized
but unissued shares.

¹³A corporate takeover occurs when an individual or group of individuals acquires a majority of a company's outstanding common stock from present shareholders. Corporations that are the object of a hostile takeover attempt—a public bid for control of a company's stock against the company's wishes—often take evasive action involving the reacquisition of shares.

¹⁴“Over \$40 Billion in Share Buyback Announcements in February,” *24/7 Wall St.*, February 24, 2011.

¹⁵The concept of treasury shares originated long ago when new companies found they could sell shares at an unrealistically low price equal to par value to incorporators, who then donated those shares back to the company. Since these shares already had been issued (though not outstanding), they could be sold at whatever the real market price was without adjusting stated capital. Because treasury shares are already issued, different rules apply to their purchase and resale than to unissued shares. Companies can:

- a. Issue shares without regard to preemptive rights of shareholders.
- b. Distribute shares as a dividend to shareholders even without a balance in retained earnings.

¹⁶The Revised Model Business Corporation Act eliminated the concept of treasury shares in 1984 after 1980 revisions had eliminated the concepts of par value and legal capital. Most state laws have since followed suit.

American Semiconductor's balance sheet included the following:

Shareholders' Equity	(\$ in millions)
Common stock, 100 million shares at \$1 par	\$ 100
Paid-in capital—excess of par	900
Paid-in capital—share repurchase	2
Retained earnings	2,000

Retirement		Treasury Stock	
Reacquired 1 million of its common shares			
Case 1: Shares repurchased at \$7 per share			
Common stock (\$1 par × 1 million shares)	1	Treasury stock (cost)	7
Paid-in capital—excess of par (\$9 per sh.)	9		
Paid-in capital—share repurchase (difference) ...	3		
Cash	7	Cash	7
OR			
Case 2: Shares repurchased at \$13 per share			
Common stock (\$1 par × 1 million shares)	1	Treasury stock (cost)	13
Paid-in capital—excess of par (\$9 per sh.)	9		
Paid-in capital—share repurchase	2*		
Retained earnings (difference)	1		
Cash	13	Cash	13

*Because there is a \$2 million credit balance.

Illustration 18–10

Comparison of Share Retirement and Treasury Stock Accounting—Share Buybacks

Formally retiring shares restores the balances in both the Common stock account and Paid-in capital—excess of par to what those balances would have been if the shares never had been issued.

When we view a buyback as treasury stock the cost of acquiring the shares is debited to the treasury stock account.

Accounting for Retired Shares

When shares are formally retired, we should reduce precisely the same accounts that previously were increased when the shares were sold, namely, common (or preferred) stock and paid-in capital—excess of par. The first column of Illustration 18–10 demonstrates this. The paid-in capital—excess of par account for American Semiconductor shows a balance of \$900 million while the common stock account shows a balance of \$100 million. Thus the 100 million outstanding shares were originally sold for an average of \$9 per share above par, or \$10 per share. Consequently, when 1 million shares are retired (regardless of the retirement price), American Semiconductor should reduce its common stock account by \$1 per share and its paid-in capital—excess of par by \$9 per share. Another way to view the reduction is that because 1% of the shares are retired, both share account balances (common stock and paid-in capital—excess of par) are reduced by 1%.

How we treat the difference between the cash paid to buy the shares and the amount the shares originally sold for (amounts debited to common stock and paid-in capital—excess of par) depends on whether the cash paid is *less* than the original issue price (credit difference) or the cash paid is *more* than the original issue price (debit difference):

1. If a *credit* difference is created (as in Case 1 of Illustration 18–10), we credit paid-in capital—share repurchase.
2. If a *debit* difference is created (as in Case 2 of Illustration 18–10), we debit paid-in capital—share repurchase, but only if that account already has a credit balance. Otherwise, we debit retained earnings. (Reducing the account beyond its previous balance would create a negative balance.)

Why is paid-in capital credited in Case 1 and retained earnings debited in Case 2? The answer lies in the fact that the payments made by a corporation to repurchase its own shares are a distribution of corporate assets to shareholders.

In Case 1, only \$7 million is distributed to shareholders to retire shares that originally provided \$10 million of paid-in capital. Thus, some of the original investment (\$3 million in this case) remains and is labeled *paid-in capital—share repurchase*.

Paid-in capital—share repurchase is debited to the extent of its credit balance before debiting retained earnings.

Payments made by a corporation to retire its own shares are viewed as a distribution of corporate assets to shareholders.

In Case 2, more cash (\$13 million) is distributed to shareholders to retire shares than originally was paid in. The amount paid in comprises the original investment of \$10 million for the shares being retired plus \$2 million of paid-in capital created by previous repurchase transactions—\$12 million total. Thirteen million is returned to shareholders. The additional \$1 million paid is viewed as a dividend on the shareholders' investment, and thus a reduction of retained earnings.¹⁷

Accounting for Treasury Stock

We view the purchase of treasury stock as a temporary reduction of shareholders' equity, to be reversed later when the treasury stock is resold. The cost of acquiring the shares is "temporarily" debited to the treasury stock account (second column of Illustration 18–10). At this point, the shares are considered to be *issued, but not outstanding*.

Recording the effects on specific shareholders' equity accounts is delayed until later when the shares are reissued. In the meantime, the shares assume the fictional status we discussed earlier of being neither unissued nor outstanding. Effectively, we consider the purchase of treasury stock and its subsequent resale to be a "single transaction."

Additional Consideration

The approach to accounting for treasury stock we discuss in this chapter is referred to as the "cost method." Another permissible approach is the "par value method." It is essentially identical to formally retiring shares, which is why it sometimes is referred to as the *retirement method of accounting for treasury stock*. In fact, if we substitute Treasury stock for Common stock in each of the journal entries we used to account for retirement of shares in Illustrations 18–10 and 18–12, we have the par value method. Because the method has virtually disappeared from practice, we do not discuss it further in this chapter.

BALANCE SHEET EFFECT. Formally retiring shares restores the balances in both the Common stock account and Paid-in capital—excess of par to what those balances would have been if the shares never had been issued at all. As discussed above, any net increase in assets resulting from the sale and subsequent repurchase is reflected as Paid-in capital—share repurchase. On the other hand, any net decrease in assets resulting from the sale and subsequent repurchase is reflected as a reduction in retained earnings.

In contrast, when a share repurchase is viewed as treasury stock, the cost of the treasury stock is simply reported as a reduction in total shareholders' equity. Reporting under the two approaches is compared in Illustration 18–11 using the situation described above for American Semiconductor after the purchase of treasury stock in Illustration 18–10 (Case 2) on page 1097. Notice that either way total shareholders' equity is the same.

Illustration 18–11

Reporting Share Buyback
in the Balance Sheet

Retirement reduces
common stock and
associated shareholders'
equity accounts.

	(\$ in millions)	
	Shares Retired	Treasury Stock
Shareholders' Equity		
Paid-in capital:		
Common stock, 100 million shares at \$1 par	\$ 99	\$ 100
Paid-in capital—excess of par	891	900
Paid-in capital—reacquired shares		2
Retained earnings	1,999	2,000
Less: Treasury stock, 1 million shares (at cost)		(13)
Total shareholders' equity	<u>\$2,989</u>	<u>\$2,989</u>

¹⁷In the next section of this chapter, you will be reminded that dividends reduce retained earnings. (You first learned this in your introductory accounting course.)

Resale of Shares

After shares are formally retired, any subsequent sale of shares is simply the sale of new, unissued shares and is accounted for accordingly. This is demonstrated in the first column of Illustration 18–12.

American Semiconductor sold 1 million shares after reacquiring shares at \$13 per share (Case 2 in Illustration 18–10).

Retirement		Treasury Stock	
Sold 1 million shares			
Case A: Shares sold at \$14 per share			
Cash.....	14	Cash	14
Common stock (par)	1	Treasury stock (cost)	13
Paid-in capital—excess of par ...	13	Paid-in capital—share repurchase ...	1
OR			
Case B: Shares sold at \$10 per share			
Cash	10	Cash	10
Common stock (par)	1	Retained earnings (to balance)	1
Paid-in capital—excess of par ...	9	Paid-in capital—share repurchase ...	2*
		Treasury stock (cost)	13

*Because there is a \$2 million credit balance.

Illustration 18–12

Comparison of Share Retirement and Treasury Stock Accounting—Subsequent Sale of Shares

After formally retiring shares, we record a subsequent sale of shares exactly like any sale of shares.

The resale of treasury shares is viewed as the consummation of the “single transaction” begun when the treasury shares were purchased.

The resale of treasury shares is viewed as the consummation of the single transaction begun when the treasury shares were repurchased. The effect of the single transaction of purchasing treasury stock and reselling it for more than cost (Case 2 of Illustration 18–10 and Case A of Illustration 18–12) is to *increase* both cash and shareholders' equity (by \$1 million). The effect of the single transaction of purchasing treasury stock and reselling it for less than cost (Case 2 of Illustration 18–10 and Case B of Illustration 18–12) is to *decrease* both cash and shareholders' equity (by \$3 million).

Allocating the cost of treasury shares occurs when the shares are resold.

Note that retained earnings may be debited in a treasury stock transaction, but not credited. Also notice that transactions involving treasury stock have no impact on the income statement. This follows the reasoning discussed earlier that a corporation's buying and selling of its own shares are transactions between the corporation and its owners and not part of the earnings process.

Additional Consideration

Treasury Shares Acquired at Different Costs

Notice that the treasury stock account always is credited for the cost of the reissued shares (\$13 million in Illustration 18–12). When shares are reissued, if treasury stock on hand has been purchased at different per share prices, the cost of the shares sold must be determined using a cost flow assumption—FIFO, LIFO, or weighted average—similar to determining the cost of goods sold when inventory items are acquired at different unit costs.

Determining the cost of treasury stock sold is similar to determining the cost of goods sold.

Concept Review Exercise

Situation: The shareholders' equity section of the balance sheet of National Foods, Inc. included the following accounts at December 31, 2012.

TREASURY STOCK

Shareholders' Equity	(\$ in millions)
Paid-in capital:	
Preferred stock, 11 million shares at \$1 par	\$ 11
Common stock, 122 million shares at \$1 par	122
Paid-in capital—excess of par, preferred	479
Paid-in capital—excess of par, common	854
Retained earnings	<u>2,848</u>
Total shareholders' equity	<u><u>\$4,314</u></u>

Required:

- National Foods reacquired common shares during 2013 and sold shares in two separate transactions later that year. Prepare the entries for both the purchase and subsequent sale of shares during 2013 assuming that the shares were (a) retired and (b) considered to be treasury stock.
 - National Foods purchased 6 million shares at \$10 per share.
 - National Foods sold 2 million shares at \$12 per share.
 - National Foods sold 2 million shares at \$7 per share.
- Prepare the shareholders' equity section of National Foods' balance sheet at December 31, 2013, assuming the shares were both (a) retired and (b) viewed as treasury stock. Net income for 2013 was \$400 million, and preferred shareholders were paid \$1 million cash dividends.

Solution:

- National Foods reacquired common shares during 2013 and sold shares in two separate transactions later that year. Prepare the entries for both the purchase and subsequent sale of shares during 2013 assuming that the shares were (a) retired and (b) considered to be treasury stock.
 - National Foods **purchased** 6 million shares at **\$10** per share:

Retirement (\$ in millions)		Treasury Stock (\$ in millions)	
Common stock (6 million shares × \$1)	6	Treasury stock	
Paid-in capital—excess of par (6 million		(6 million shares × \$10)	60
shares × \$7*)	42	Cash	60
Retained earnings (to balance)	12		
Cash	60		

*\$854 million ÷ 122 million shares

- National Foods **sold** 2 million shares at **\$12** per share: (\$ in millions)

Cash	24	Cash	24
Common stock (2 million		Treasury stock (2 million shares	
shares × \$1)	2	× \$10)	20
Paid-in capital—excess of par	22	Paid-in capital—share	
		repurchase	4

- National Foods **sold** 2 million shares at **\$7** per share: (\$ in millions)

Cash	14	Cash	14
Common stock (2 million shares		Paid-in capital—share	
× \$1 par)	2	repurchase	4
Paid-in capital—excess of par	12	Retained earnings (to balance)	2
		Treasury stock (2 million shares	
		× \$10)	20

- Prepare the shareholders' equity section of National Foods' balance sheet at December 31, 2013, assuming the shares were both (a) retired and (b) viewed as treasury stock.

NATIONAL FOODS, INC.
Balance Sheet
[Shareholders' Equity Section]
At December 31, 2013

(\$ in millions)

	Shares Retired	Treasury Stock
Shareholders' Equity		
Preferred stock, 11 million shares at \$1 par	\$ 11	\$ 11
Common stock, 122 million shares at \$1 par	120	122
Paid-in capital—excess of par, preferred	479	479
Paid-in capital—excess of par, common	846*	854
Retained earnings	3,235 [†]	3,245 [†]
Treasury stock, at cost; 2 million common shares	—	(20)
Total shareholders' equity	<u><u>\$4,691</u></u>	<u><u>\$4,691</u></u>

*\$854 - 42 + 22 + 12

[†]\$2,848 - 12 + 400 - 1

[‡]\$2,848 - 2 + 400 - 1

Note: This situation is continued in the next Concept Review Exercise on page 1109.

Where We're Headed

The FASB and IASB are working together on a project, Financial Statement Presentation, to establish a common standard for presenting information in the financial statements, including classifying and displaying line items and aggregating line items into subtotals and totals. This standard update will have a dramatic impact on the format of financial statements. An important part of the proposal involves the organization of elements of the balance sheet (statement of financial position), statement of comprehensive income (including the income statement), and statement of cash flows into a common set of classifications.

A key feature of the new format is that each of the financial statements will include classifications by operating, investing, and financing activities (similar to the current statement of cash flows), providing a "cohesive" financial picture that stresses the relationships among the financial statements.

For each statement, though, operating and investing activities will be included within a new category, "business" activities. Each statement also will include three additional groupings: discontinued operations, income taxes, and multi-category transactions (if needed). The multi-category sections primarily encompass the acquisition and sale of other companies since they include assets and liabilities in different categories. The new look for the financials would be:¹⁸

Statement of Financial Position	Statement of Comprehensive Income	Statement of Cash Flows
Business <ul style="list-style-type: none"> • Operating assets and liabilities • Investing assets and liabilities 	Business <ul style="list-style-type: none"> • Operating income and expenses • Investing income and expenses 	Business <ul style="list-style-type: none"> • Operating cash flows • Investing cash flows
Financing <ul style="list-style-type: none"> • Debt • Equity 	Financing <ul style="list-style-type: none"> • Debt expense 	Financing <ul style="list-style-type: none"> • Financing asset cash flows • Financing liability cash flows

(continued)

The FASB and IASB are working together on a standard that would have a dramatic impact on the format of financial statements.

● LO18-9

Demonstrating the cohesiveness among the financial statements is a key objective of the Financial Statement Presentation project.

¹⁸Based on a *staff draft* of an Exposure Draft prepared by the staff of the FASB and the IASB that reflects the cumulative, tentative decisions made by the Boards as of the date this text was published. The proposals are subject to change.

(concluded)

	Multi-category transactions	Multi-category transactions
Income Taxes	Income Taxes	Income Taxes
Discontinued Operations	Discontinued Operations (net of tax)	Discontinued Operations
	Other Comprehensive Income (net of tax)	

Notice that the equity accounts would be included along with debt accounts in a new “Financing” section. The proposal doesn’t change the elements in the equity section of the balance sheet. Changes in equity items would be presented in the equity section of the statement of cash flows (for example cash dividends) and in the statement of changes in equity, which is essentially the same as the current statement of shareholders’ equity described in this chapter. In a sense, the statement of comprehensive income also reports changes in equity because net income increases retained earnings and other comprehensive income changes accumulated OCI, both components of equity.

PART C

RETAINED EARNINGS

Characteristics of Retained Earnings

● LO18-6

Real World Financials

In the previous section we examined *invested* capital. Now we consider *earned* capital, that is, retained earnings. In general, retained earnings represents a corporation’s accumulated, undistributed net income (or net loss). A more descriptive title used by some companies is reinvested earnings. A credit balance in this account indicates a dollar amount of assets previously earned by the firm but not distributed as dividends to shareholders. We refer to a debit balance in retained earnings as a **deficit**. **Microsoft** reported a deficit of \$6.3 billion as of June 30, 2011.

You saw in the previous section that the buyback of shares (as well as the resale of treasury shares in some cases) can decrease retained earnings. We examine in this section the effect on retained earnings of dividends and stock splits.

Dividends

● LO18-7

Shareholders’ initial investments in a corporation are represented by amounts reported as paid-in capital. One way a corporation provides a return to its shareholders on their investments is to pay them a **dividend**, typically cash.¹⁹

Dividends are distributions of assets the company has earned on behalf of its shareholders. If dividends are paid that exceed the amount of assets earned by the company, then management is, in effect, returning to shareholders a portion of their investments, rather than providing them a return on that investment. So most companies view retained earnings as the amount available for dividends.²⁰

Any dividend not representing a distribution of earnings should be debited to paid-in capital.

Liquidating Dividend

In unusual instances in which a dividend exceeds the balance in retained earnings, the excess is referred to as a **liquidating dividend** because some of the invested capital is being liquidated. This might occur when a corporation is being dissolved and assets (not subject to

¹⁹Dividends are not the only return shareholders earn; when market prices of their shares rise, shareholders benefit also. Indeed, many companies have adopted policies of never paying dividends but reinvesting all assets they earn. The motivation is to accommodate more rapid expansion and thus, presumably, increases in the market price of the stock.

²⁰Ordinarily, this is not the legal limitation. Most states permit a company to pay dividends so long as, after the dividend, its assets would not be “less than the sum of its total liabilities plus the amount that would be needed, if the corporation were to be dissolved at the time of the distribution, to satisfy the preferential rights upon dissolution of shareholders whose preferential rights are superior to those receiving the distribution.” (Revised Model Business Corporation Act, American Bar Association, 1994.) Thus, legally, a corporation can distribute amounts equal to total shareholders’ equity less dissolution preferences of senior equity securities (usually preferred stock). Note that Microsoft has recently paid cash dividends despite a deficit (negative retained earnings).

a superior claim by creditors) are distributed to shareholders. Any portion of a dividend not representing a distribution of earnings should be debited to additional paid-in capital rather than retained earnings.

Retained Earnings Restrictions

Sometimes the amount available for dividends purposely is reduced by management. A restriction of retained earnings designates a portion of the balance in retained earnings as being *unavailable for dividends*. A company might restrict retained earnings to indicate management's intention to withhold for some specific purpose the assets represented by that portion of the retained earnings balance. For example, management might anticipate the need for a specific amount of assets in upcoming years to repay a maturing debt, to cover a contingent loss, or to finance expansion of the facilities. Be sure to understand that the restriction itself does not set aside cash for the designated event but merely communicates management's intention not to distribute the stated amount as a dividend.

A restriction of retained earnings normally is indicated by a disclosure note to the financial statements. Although instances are rare, a formal journal entry may be used to reclassify a portion of retained earnings to an "appropriated" retained earnings account.

A restriction of retained earnings communicates management's intention to withhold assets represented by a specified portion of the retained earnings balance.

Normally a restriction of retained earnings is indicated by a disclosure note.

Cash Dividends

You learned in Chapter 14 that paying interest to creditors is a contractual obligation. No such legal obligation exists for paying dividends to shareholders. A liability is not recorded until a company's board of directors votes to declare a dividend. In practice, though, corporations ordinarily try to maintain a stable dividend pattern over time.

Microsoft Corp. today announced that its Board of Directors declared a quarterly dividend of \$0.16 per share. The dividend is payable June 9, 2011, to shareholders of record on May 19, 2011.²¹

When directors declare a cash dividend, we reduce retained earnings and record a liability. Before the payment actually can be made, a listing must be assembled of shareholders entitled to receive the dividend. A specific date is stated as to when the determination will be made of the recipients of the dividend. This date is called the **date of record**. Registered owners of shares of stock on this date are entitled to receive the dividend—even if they

sell those shares prior to the actual cash payment. To be a registered owner of shares on the date of record, an investor must purchase the shares before the **ex-dividend date**. This date usually is two business days before the date of record. Shares purchased on or after that date are purchased ex dividend—without the right to receive the declared dividend. As a result, the market price of a share typically will decline by the amount of the dividend, other things being equal, on the ex-dividend date. Consider Illustration 18–13.

FINANCIAL Reporting Case

Q3, p. 1079

On June 1, the board of directors of Craft Industries declares a cash dividend of \$2 per share on its 100 million shares, payable to shareholders of record June 15, to be paid July 1:

	(\$ in millions)	
June 1—Declaration Date		
Retained earnings	200	
Cash dividends payable (100 million shares at \$2/share)		200
June 13—Ex-Dividend Date		
No entry		
June 15—Date of Record		
No entry		
July 1—Payment Date		
Cash dividends payable	200	
Cash		200

Illustration 18–13

Cash Dividends

At the declaration date, retained earnings is reduced and a liability is recorded.

Registered owners of shares on the date of record are entitled to receive the dividend.

A sufficient balance in retained earnings permits a dividend to be declared. Remember, though, that retained earnings is a shareholders' equity account representing a dollar claim on assets in general, but not on any specific asset in particular. Sufficient retained earnings

²¹Microsoft Declares Quarterly Dividend," PRNewswire, March 15, 2011.

does not ensure sufficient cash to make payment. These are two separate accounts having no necessary connection with one another. When a dividend is “paid from retained earnings,” this simply means that sufficient assets previously have been earned to pay the dividend without returning invested assets to shareholders.

Property Dividends

Because cash is the asset most easily divided and distributed to shareholders, most corporate dividends are cash dividends. In concept, though, any asset can be distributed to shareholders as a dividend. When a noncash asset is distributed, it is referred to as a **property dividend** (often called a *dividend in kind* or a *nonreciprocal transfer to owners*). **Gold Resource Corp.**, a Colorado gold mining company, announced in 2011 that it would make dividend payments in gold bullion instead of cash.

RFM Corporation conferred a property dividend to its shareholders when it distributed shares of **Philipine Townships, Inc.**, stock that RFM was holding as an investment. Securities held as investments are the assets most often distributed in a property dividend due to the relative ease of dividing these assets among shareholders and determining their fair values.

A property dividend should be recorded at the fair value of the assets to be distributed, measured at the date of declaration. This may require revaluing the asset to fair value prior to recording the dividend. If so, a gain or loss is recognized for the difference between book value and fair value. This is demonstrated in Illustration 18–14.

The fair value of the assets to be distributed is the amount recorded for a property dividend.

Real World Financials

Illustration 18–14

Property Dividends

Before recording the property dividend, the asset first must be written up to fair value.

On October 1 the board of directors of Craft Industries declares a property dividend of 2 million shares of Beaman Corporation’s preferred stock that Craft had purchased in March as an investment (book value: \$9 million). The investment shares have a fair value of \$5 per share, \$10 million, and are payable to shareholders of record October 15, to be distributed November 1:

	(\$ in millions)	
October 1—Declaration Date		
Investment in Beaman Corporation preferred stock	1	
Gain on appreciation of investment (\$10 – 9)		1
Retained earnings (2 million shares at \$5 per share)	10	
Property dividends payable		10
October 15—Date of Record		
No entry		
November 1—Payment Date		
Property dividends payable	10	
Investment in Beaman Corporation preferred stock		10

Stock Dividends and Splits

Stock Dividends

● LO18–8

A **stock dividend** is the distribution of additional shares of stock to current shareholders of the corporation. Be sure to note the contrast between a stock dividend and either a cash or property dividend. A stock dividend affects neither the assets nor the liabilities of the firm. Also, because each shareholder receives the same percentage increase in shares, shareholders’ proportional interest in (percentage ownership of) the firm remains unchanged.

The prescribed accounting treatment of a stock dividend requires that shareholders’ equity items be reclassified by reducing one or more shareholders’ equity accounts and simultaneously increasing one or more paid-in capital accounts. The amount reclassified depends on the size of the stock dividend. For a small stock dividend, typically less than 25%, the fair value of the additional shares distributed is transferred from retained earnings to paid-in capital as demonstrated in Illustration 18–15.²²

²²FASB ASC 505–20: Equity—Stock Dividends and Stock Splits (previously “Restatement and Revision of Accounting Research Bulletins,” *Accounting Research Bulletin No. 43* (New York: AICPA, 1961), Chap. 7, sec. B, pars. 10–14). In this pronouncement, a small stock dividend is defined as one 20% to 25% or less. For filings with that agency, the SEC has refined the definition to comprise stock distributions of less than 25%.

Craft declares and distributes a 10% common stock dividend (10 million shares) when the market value of the \$1 par common stock is \$12 per share.

	(\$ in millions)	
Retained earnings (10 million shares at \$12 per share)	120	
Common stock (10 million shares at \$1 par per share)		10
Paid-in capital—excess of par (remainder)		110

Illustration 18–15

Stock Dividend

A small stock dividend requires reclassification to paid-in capital of retained earnings equal to the fair value of the additional shares distributed.

Additional Consideration

The entry above is recorded on the declaration date. Since the additional shares are not yet issued, some accountants would prefer to credit “common stock dividends issuable” at this point, instead of common stock. In that case, when the shares are issued, common stock dividends issuable is debited and common stock credited. The choice really is inconsequential; either way the \$10 million amount would be reported as part of paid-in capital on a balance sheet prepared between the declaration and distribution of the shares.

STOCK MARKET REACTION TO STOCK DISTRIBUTIONS. As a Craft shareholder owning 10 shares at the time of the 10% stock dividend, you would receive an 11th share. Since each is worth \$12, would you benefit by \$12 when you receive the additional share from Craft? Of course not. If the value of each share were to remain \$12 when the 10 million new shares are distributed, the total market value of the company would grow by \$120 million (10 million shares × \$12 per share).

A corporation cannot increase its market value simply by distributing additional stock certificates. Because all shareholders receive the same percentage increase in their respective holdings, you, and all other shareholders, still would own the same percentage of the company as before the distribution. Accordingly, the per share value of your shares should decline from \$12 to \$10.91 so that your 11 shares would be worth \$120—precisely what your 10 shares were worth prior to the stock dividend. Any failure of the stock price to actually adjust in proportion to the additional shares issued probably would be due to information other than the distribution reaching shareholders at the same time.

Then, what justification is there for recording the additional shares at market value? In 1941 (and reaffirmed in 1953), accounting rule-makers felt that many shareholders are deceived by small stock dividends, believing they benefit by the market value of their additional shares. Furthermore they erroneously felt that these individual beliefs are collectively reflected in the stock market by per share prices that remain unchanged by stock dividends. Consequently, their prescribed accounting treatment is to reduce retained earnings by the same amount as if cash dividends were paid equal to the market value of the shares issued.²³

This obsolete reasoning is inconsistent with our earlier conclusion that the market price per share *will* decline in approximate proportion to the increase in the number of shares distributed. Our intuitive conclusion is supported also by formal research.²⁴

Besides being based on fallacious reasoning, accounting for stock dividends by artificially reclassifying “earned” capital as “invested” capital conflicts with the reporting objective of reporting shareholders’ equity by source. Despite these limitations, this outdated accounting standard still applies.

REASONS FOR STOCK DIVIDENDS. Since neither the corporation nor its shareholders apparently benefits from stock dividends, why do companies declare them?²⁵ Occasionally, a company tries to give shareholders the illusion that they are receiving a real dividend.

The market price per share will decline in proportion to the increase in the number of shares distributed in a stock dividend.

Early rule-makers felt that per share market prices do not adjust in response to an increase in the number of shares.

Capitalizing retained earnings for a stock dividend artificially reclassifies earned capital as invested capital.

Companies sometimes declare a stock dividend in lieu of a real dividend.

²³FASB ASC 505–20–30–3: Equity—Stock Dividends and Stock Splits—Initial Measurement (previously “Restatement and Revision of Accounting Research Bulletins,” *Accounting Research Bulletin No. 43* (New York: AICPA, 1961), chap. 7).

²⁴Foster and Vickrey, “The Information Content of Stock Dividend Announcements,” *Accounting Review* (April 1978); and Spiceland and Winters, “The Market Reaction to Stock Distributions: The Effect of Market Anticipation and Cash Returns,” *Accounting and Business Research* (Summer 1986).

²⁵After hitting a high in the 1940s, the number of stock dividends has declined significantly. Currently, about 3% of companies declare stock dividends in any given year.

Companies sometimes declare a stock dividend so they can capitalize retained earnings.

Another reason is merely to enable the corporation to take advantage of the accepted accounting practice of capitalizing retained earnings. Specifically, a company might wish to reduce an existing balance in retained earnings—otherwise available for *cash* dividends—so it can reinvest the earned assets represented by that balance without carrying a large balance in retained earnings.

Stock Splits

A frequent reason for issuing a stock dividend is actually to induce the per share market price decline that follows. For instance, after a company declares a 100% stock dividend on 100 million shares of common stock, with a per share market price of \$12, it then has 200 million shares, each with an approximate market value of \$6. The motivation for reducing the per share market price is to increase the stock's *marketability* by making it attractive to a larger number of potential investors.

FINANCIAL Reporting Case

Q4, p. 1079

Additional Consideration

No cash dividends are paid on treasury shares. Usually stock dividends aren't paid on treasury shares either. Treasury shares are essentially equivalent to shares that never have been issued. In some circumstances, though, the intended use of the repurchased shares will give reason for the treasury shares to participate in a stock dividend. For instance, if the treasury shares have been specifically designated for issuance to executives in a stock option plan or stock award plan it would be appropriate to adjust the number of shares by the stock distribution.

A large stock dividend is known as a *stock split*.

A stock distribution of 25% or higher can be accounted for in one of two ways: (1) as a "large" stock dividend or (2) as a **stock split**.²⁶ Thus, a 100% stock dividend could be labeled a 2-for-1 stock split and accounted for as such. Conceptually, the proper accounting treatment of a stock distribution is to make no journal entry. This, in fact, is the prescribed accounting treatment for a stock split.

Since the same common stock account balance (total par) represents twice as many shares in a 2-for-1 stock split, the par value per share will be reduced by one-half. In the previous example, if the par were \$1 per share before the stock distribution, then after the 2-for-1 stock split, the par would be \$.50 per share.

As you might expect, having the par value per share change in this way is cumbersome and expensive. All records, printed or electronic, that refer to the previous amount must be changed to reflect the new amount. The practical solution is to account for the large stock distribution as a stock dividend rather than a stock split.

Following on the heels of an enormous run up in price in shares, Apple Computer announced Friday a two-for-one stock split. Each share held on Feb. 18 gets an additional share. The company plans to start trading on a split-adjusted basis at the end of February. "It potentially makes it more attractive to individual investors," said Steve Lidberg, an analyst at Pacific Crest Securities, who doesn't own shares of Apple. "Outside of that, it doesn't impact at all the way I think of the company."²⁷

Stock Splits Effected in the Form of Stock Dividends (Large Stock Dividends)

To avoid changing the per share par value of the shares, the stock distribution is referred to as a *stock split effected in the form of a stock dividend*, or simply a *stock dividend*. In that case, a journal entry increases the common stock account by the par value of the additional shares.

²⁶FASB ASC 505-20-25-2: Equity—Stock Dividends and Stock Splits—Recognition (previously "Restatement and Revision of Accounting Research Bulletins," *Accounting Research Bulletin No. 43* (New York: AICPA, 1961), Chap. 7, sec. B, par. 11).

²⁷"Apple's Share Price Surge Results in Stock Split," *CNN Money*, February 11, 2005.

To avoid reducing retained earnings in these instances, most companies reduce (debit) paid-in capital—excess of par to offset the credit to common stock (Illustration 18–16).

Craft declares and distributes a 2-for-1 stock split effected in the form of a 100% stock dividend (100 million shares) when the market value of the \$1 par common stock is \$12 per share:		
		(\$ in millions)
Paid-in capital—excess of par	100	
Common stock (100 million shares at \$1 par per share)		100

Illustration 18–16

Stock Split Effected in the Form of a Stock Dividend

If a *stock split* is effected in the form of a stock dividend, a journal entry prevents the par per share from changing.

Notice that this entry does not reclassify earned capital as invested capital. Some companies, though, choose to debit retained earnings instead.²⁸

		(\$ in millions)
Retained earnings	100	
Common stock (10 million shares × \$1 par per share)		100

Some companies capitalize retained earnings when recording a stock split effected in the form of a stock dividend.

Nike, Inc., described a stock split in its disclosure notes as shown in Illustration 18–17.

Note 1—Summary of Significant Accounting Policies

Stock Split

On February 15 the Board of Directors declared a two-for-one stock split of the Company's Class A and Class B common shares, which was effected in the form of a 100% common stock dividend distributed on April 2. All references to share and per share amounts in the consolidated financial statements and accompanying notes to the consolidated financial statements have been retroactively restated to reflect the two-for-one stock split.

Illustration 18–17

Stock Split Disclosure—Nike, Inc.

Real World Financials

Additional Consideration

A company choosing to capitalize retained earnings when recording a stock split effected in the form of a stock dividend may elect to capitalize an amount other than par value. Accounting guidelines are vague in this regard, stating only that legal amounts are minimum requirements and do not prevent the capitalization of a larger amount per share.

Source: FASB ASC 505–20–30–4: Equity—Stock Dividends and Stock Splits—Initial Measurement (previously "Restatement and Revision of Accounting Research Bulletins," *Accounting Research Bulletin No. 43* (New York: AICPA, 1961), Chap. 7, sec. B, par. 14).

REVERSE STOCK SPLIT. A **reverse stock split** occurs when a company decreases, rather than increases, its outstanding shares. After a 1-for-4 reverse stock split, for example, 100 million shares, \$1 par per share, would become 25 million shares, \$4 par per share. No journal entry is necessary. Of course the market price per share theoretically would quadruple, which usually is the motivation for declaring a reverse stock split. Companies that reverse split their shares frequently are struggling companies trying to accomplish with the split what the market has been unwilling to do—increase the stock price. Often this is to prevent the stock's price from becoming so low that it is delisted from a market exchange. Reverse splits are not unusual occurrences, particularly during stock market downturns. **Citigroup** was one of many in 2011, declaring a 1-for-10 reverse split.

²⁸The 2010 *Accounting Trends & Techniques* (p. 484) reports that 6 of its 500 sample companies reported a stock split. Of those, two debited additional paid-in capital, two debited retained earnings, and two made no entry.

Cash payments usually are made when shareholders are entitled to fractions of whole shares.

FRACTIONAL SHARES. Typically, a stock dividend or stock split results in some shareholders being entitled to fractions of whole shares. For example, if a company declares a 25% stock dividend, or equivalently a 5-for-4 stock split, a shareholder owning 10 shares would be entitled to $2\frac{1}{2}$ shares. Another shareholder with 15 shares would be entitled to $3\frac{3}{4}$ shares.

Cash payments usually are made to shareholders for **fractional** shares and are called “cash in lieu of payments.” In the situation described above, for instance, if the market price at declaration is \$12 per share, the shareholder with 15 shares would receive 3 additional shares and \$9 in cash ($\$12 \times \frac{3}{4}$).

Decision Maker's Perspective

The return on shareholders' equity is a popular measure of profitability.

Book value measures have limited use in financial analysis.

Profitability is the key to a company's long-run survival. A summary measure of profitability often used by investors and potential investors, particularly common shareholders, is the return on shareholders' equity. This ratio measures the ability of company management to generate net income from the resources that owners provide. The ratio is computed by dividing net income by average shareholders' equity. A variation of this ratio often is used when a company has both preferred and common stock outstanding. The return to common shareholders' equity is calculated by subtracting dividends to preferred shareholders from the numerator and using average common shareholders' equity as the denominator. The modified ratio focuses on the profits generated on the assets provided by common shareholders.

Although the ratio is useful when evaluating the effectiveness of management in employing resources provided by owners, analysts must be careful not to view it in isolation or without considering how the ratio is derived. Keep in mind that shareholders' equity is a measure of the book value of equity, equivalent to the book value of net assets. Book value measures quickly become out of line with market values. An asset's book value usually equals its market value on the date it's purchased; the two aren't necessarily the same after that. Equivalently, the market value of a share of stock (or of total shareholders' equity) usually is different from its book value. As a result, to supplement the return on shareholders' equity ratio, analysts often relate earnings to the market value of equity, calculating the earnings-price ratio. This ratio is simply the earnings per share divided by the market price per share.

To better understand the differences between the book value ratio and the market value ratio, let's consider the following condensed information reported by Sharp-Novell Industries for 2013 and 2012:

(\$ in 000s except per share amounts)	2013	2012
Sales	\$3,500	\$3,100
Net income	125	114
Current assets	\$ 750	\$ 720
Property, plant, and equipment (net)	900	850
Total assets	<u>\$1,650</u>	<u>\$1,570</u>
Current liabilities	\$ 550	\$ 530
Long-term liabilities	540	520
Paid-in capital	210	210
Retained earnings	350	310
Liabilities and shareholders' equity	<u>\$1,650</u>	<u>\$1,570</u>
Shares outstanding	50,000	50,000
Stock price (average)	\$42.50	\$42.50

The 2013 return on shareholders' equity is computed by dividing net income by average shareholders' equity:

$$\$125 \div [(\$560 + 520)/2] = \underline{\underline{23.1\%}}$$

The earnings-price ratio is the earnings per share divided by the market price per share:

$$\begin{aligned} \text{Earnings per share (2013)} &= \$125 \div 50 = \$2.50 \\ \text{Earnings-price ratio} &= \$2.50 \div 42.50 = \underline{\underline{5.9\%}} \end{aligned}$$

Obviously, the return on the market value of equity is much lower than on the book value of equity. This points out the importance of looking at more than a single ratio when making decisions. While 23.1% may seem like a desirable return, 5.9% is not nearly so attractive. Companies often emphasize the return on shareholders' equity in their annual reports. Alert investors should not accept this measure of achievement at face value. For some companies this is a meaningful measure of performance; but for others, the market-based ratio means more, particularly for a mature firm whose book value and market value are more divergent.

Decisions managers make with regard to shareholders' equity transactions can significantly impact the return to shareholders. For example, when a company buys back shares of its own stock, the return on shareholders' equity goes up. Net income is divided by a smaller amount of shareholders' equity. On the other hand, the share buyback uses assets, reducing the resources available to earn net income in the future. So, managers as well as outside analysts must carefully consider the decision to reacquire shares in light of the current economic environment, the firm's investment opportunities, and cost of capital to decide whether such a transaction is in the long-term best interests of owners. Investors should be wary of buybacks during down times because the resulting decrease in shares and increase in earnings per share can be used to mask a slowdown in earnings growth.

The decision to pay dividends requires similar considerations. When earnings are high, are shareholders better off receiving substantial cash dividends or having management reinvest those funds to finance future growth (and future dividends)? The answer, of course, depends on the particular circumstances involved. Dividend decisions should reflect managerial strategy concerning the mix of internal versus external financing, alternative investment opportunities, and industry conditions. High dividends often are found in mature industries and low dividends in growth industries. ●

Share retirement and treasury stock transactions can affect the return to owners.

Dividend decisions should be evaluated in light of prevailing circumstances.

Ethical Dilemma

Interworld Distributors has paid quarterly cash dividends since 1980. The dividends have steadily increased from \$.25 per share to the latest dividend declaration of \$2.00 per share. The board of directors is eager to continue this trend despite the fact that revenues fell significantly during recent months as a result of worsening economic conditions and increased competition. The company founder and member of the board proposes a solution. He suggests a 5% stock dividend in lieu of a cash dividend to be accompanied by the following press announcement:

"In lieu of our regular \$2.00 per share cash dividend, Interworld will distribute a 5% stock dividend on its common shares, currently trading at \$40 per share. Changing the form of the dividend will permit the Company to direct available cash resources to the modernization of physical facilities in preparation for competing in the 21st century."

What do you think?

Concept Review Exercise

Situation: The shareholders' equity section of the balance sheet of National Foods, Inc., included the following accounts at December 31, 2013:

CHANGES IN RETAINED EARNINGS

Shareholders' Equity	(\$ in millions)
Paid-in capital	
Preferred stock, 9.09%, 11 million shares at \$1 par	\$ 11
Common stock, 122 million shares at \$1 par	122
Paid-in capital—excess of par, preferred	479
Paid-in capital—excess of par, common	854
Retained earnings	3,245
Treasury stock, at cost, 2 million common shares	(20)
<i>Total shareholders' equity</i>	<u>\$4,691</u>

Required:

1. During 2014, several events and transactions affected the retained earnings of National Foods. Prepare the appropriate entries for these events.
 - a. On March 1, the board of directors declared a cash dividend of \$1 per share on its 120 million outstanding shares (122 million – 2 million treasury shares), payable on April 3 to shareholders of record March 11.
 - b. On March 5, the board of directors declared a property dividend of 120 million shares of **Kroger** common stock that National Foods had purchased in February as an investment (book value: \$900 million). The investment shares had a fair value of \$8 per share and were distributed March 30 to shareholders of record March 15.
 - c. On April 13, a 3-for-2 stock split was declared and distributed. The stock split was effected in the form of a 50% stock dividend. The market value of the \$1 par common stock was \$20 per share.
 - d. On October 13, a 10% common stock dividend was declared and distributed when the market value of the \$1 par common stock was \$12 per share. Cash in lieu of payments was distributed for fractional shares equivalent to 1 million whole shares.
 - e. On December 1, the board of directors declared the 9.09% cash dividend on the 11 million preferred shares, payable on December 23 to shareholders of record December 11.
2. Prepare a statement of shareholders' equity for National Foods reporting the changes in shareholders' equity accounts for 2012, 2013, and 2014. Refer to the previous two Concept Reviews in this chapter for the 2012 and 2013 changes. For 2013, assume that shares were reacquired as treasury stock. Also, look back to the statement of shareholders' equity in Illustration 18–4 on page xxx for the format of the statement. Assume that net income for 2014 is \$225 million.

Solution:

1. During 2014, several events and transactions affected the retained earnings of National Foods. Prepare the appropriate entries for these events.
 - a. Cash dividend of \$1 per share on its 120 million *outstanding* common shares (122 million – 2 million treasury shares), payable on April 3 to shareholders of record March 11 (Note: Dividends aren't paid on treasury shares.):

March 1—Declaration Date		(\$ in millions)
Retained earnings	120	
Cash dividends payable (120 million shares at \$1/share)		120
March 11—Date of Record		
No entry		
April 3—Payment Date		
Cash dividends payable	120	
Cash		120

The declaration of a dividend reduces retained earnings and creates a liability.

- b. Property dividend of 120 million shares of Kroger common stock:

March 5—Declaration Date		(\$ in millions)
Investment in Kroger common stock	60	
Gain on appreciation of investment (\$960 – 900)		60
Retained earnings (fair value of asset to be distributed)	960	
Property dividends payable		960
March 15—Date of Record		
No entry		
March 30—Payment Date		
Property dividends payable	960	
Investment in Kroger common stock		960

The investment first must be written up to the \$960 million fair value (\$8 × 120 million shares).

The liability is satisfied when the Kroger shares are distributed to shareholders.

c. 3-for-2 stock split effected in the form of a 50% stock dividend:

April 13		
Paid-in capital—excess of par*	60	
Common stock (60 million shares at \$1 par per share)		60

*Alternatively, retained earnings may be debited.

120 million shares times 50% equals 60 million new shares—recorded at par.

d. 10% common stock dividend—with cash in lieu of payments for shares equivalent to 1 million whole shares:

October 13		
Retained earnings (18 million shares* at \$12 per share)	216	
Common stock (17 million shares at \$1 par per share)		17
Paid-in capital—excess of par (17 million shares at \$11 per share above par)		187
Cash (1 million equivalent shares at \$12 market price per share)		12

*(120 million + 60 million) × 10% = 18 million shares

The stock dividend occurs after the 3-for-2 stock split; thus 18 million shares are distributed.

The \$12 fair value of the additional shares is capitalized in this small stock dividend.

e. 9.09% cash dividend on the 11 million preferred shares, payable on December 23 to shareholders of record December 11:

	(\$ in millions)	
December 1—Declaration Date		
Retained earnings	1	
Cash dividends payable (\$11 million par × 9.09%)		1
December 11—Date of Record		
No entry		
December 23—Payment Date		
Cash dividends payable	1	
Cash		1

Preferred shareholders annually receive the designated percentage (9.09%) of the preferred's par value (\$1 million), if dividends are declared.

2. Prepare a statement of shareholders' equity for National Foods reporting the changes in shareholders' equity accounts for 2012, 2013, and 2014.

NATIONAL FOODS
Statement of Shareholders' Equity
For the Years Ended December 31, 2014, 2013, and 2012

(\$ in millions)
