Financial Reporting Case Solution

- Do you think the stock price increase is related to Textron's share repurchase plan?** (p. 1095) The stock price increase probably is related to **Textron's** buyback plan. The marketplace realizes that decreasing the supply of shares supports the price of remaining shares. However, the repurchase of shares is not necessarily the best use of a company's cash. Whether it is in the shareholders' best interests depends on what other opportunities the company has for the cash available.
- What are Textron's choices in accounting for the share repurchases?** (p. 1096) When a corporation reacquires its own shares, those shares assume the same status as authorized but unissued shares, just as if they never had been issued. However, for exactly the same transaction, companies can choose between two accounting alternatives: (a) formally retiring them or (b) accounting for the shares repurchased as treasury stock. In actuality, Textron's uses alternative (b).
- What effect does the quarterly cash dividend of 23 cents a share have on Textron's assets? Its liabilities? Its shareholders' equity?** (p. 1103) Each quarter, when directors declare a cash dividend, retained earnings are reduced and a liability is recorded. The liability is paid with cash on the payment date. So, the net effect is a decrease in Textron's assets and its shareholders' equity. The effect on liabilities is temporary.
- What effect does the stock split have on Textron's assets? Its liabilities? Its shareholders' equity?** (p. 1106) Conceptually, the proper accounting treatment of a stock split is to make no journal entry. However, since Textron refers to the stock distribution as a "stock split effected through a 100% stock dividend," a journal entry would increase the common stock account by the par value of the additional shares and would reduce paid-in capital—excess of par. This merely moves an amount from one part of shareholders' equity to another. Regardless of the accounting method, there is no change in Textron's assets, liabilities, or total shareholders' equity. ●

The Bottom Line

- **LO18-1** Shareholders' equity is the owners' residual interest in a corporation's assets. It arises primarily from (1) amounts invested by shareholders and (2) amounts earned by the corporation on behalf of its shareholders. These are reported as (1) paid-in capital and (2) retained earnings in a balance sheet. A statement of shareholders' equity reports the sources of the changes in individual shareholders' equity accounts. (p. 1080)

- **LO18-2** Comprehensive income encompasses all changes in equity except those caused by transactions with owners (like dividends and the sale or purchase of shares). It includes traditional net income as well as “other comprehensive income.” (p. 1082)
- **LO18-3** A corporation is a separate legal entity—separate and distinct from its owners. A corporation is well suited to raising capital and has limited liability. However, it is subject to “double taxation.” Common shareholders usually have voting rights; preferred shareholders usually have a preference to a specified amount of dividends and to assets in the event of liquidation. (p. 1085)
- **LO18-4** Shares sold for consideration other than cash (maybe services or a noncash asset) should be recorded at the fair value of the shares or the noncash consideration, whichever seems more clearly evident. (p. 1091)
- **LO18-5** When a corporation retires previously issued shares, those shares assume the same status as authorized but unissued shares—just the same as if they had never been issued. Payments made to retire shares are viewed as a distribution of corporate assets to shareholders. When reacquired shares are viewed as treasury stock, the cost of acquiring the shares is temporarily debited to the treasury stock account. Recording the effects on specific shareholders' equity accounts is delayed until later when the shares are reissued. (p. 1095)
- **LO18-6** Retained earnings represents, in general, a corporation's accumulated, undistributed or reinvested net income (or net loss). Distributions of earned assets are dividends. (p. 1102)
- **LO18-7** Most corporate dividends are paid in cash. When a noncash asset is distributed, it is referred to as a property dividend. The fair value of the assets to be distributed is the amount recorded for a property dividend. (p. 1102)
- **LO18-8** A stock dividend is the distribution of additional shares of stock to current shareholders. For a small stock dividend (25% or less), the fair value of the additional shares distributed is transferred from retained earnings to paid-in capital. For a stock distribution of 25% or higher, the par value of the additional shares is reclassified within shareholders' equity if referred to as a stock split effected in the form of a stock dividend, but if referred to merely as a stock split, no journal entry is recorded. (p. 1104)
- **LO18-9** U.S. GAAP and IFRS are generally compatible with respect to accounting for shareholders' equity. Some differences exist in presentation format and terminology. (pp. 1084, 1090, and 1101) ●

Quasi Reorganizations

APPENDIX 18

A firm undergoing financial difficulties, but with favorable future prospects, may use a **quasi reorganization** to write down inflated asset values and eliminate an accumulated deficit (debit balance in retained earnings). To effect the reorganization the following procedures are followed:

1. The firm's assets (and perhaps liabilities) are revalued (up or down) to reflect fair values, with corresponding credits or debits to retained earnings. This process typically increases the deficit.
2. The debit balance in retained earnings (deficit) is eliminated against additional paid-in capital. If additional paid-in capital is not sufficient to absorb the entire deficit, a reduction in stock may be necessary (with an appropriate restating of the par amount per share).
3. Retained earnings is dated. That is, disclosure is provided to indicate the date the deficit was eliminated and when the new accumulation of earnings began.

The procedure is demonstrated in Illustration 18A-1. The shareholders approved the quasi reorganization effective January 1, 2013. The plan was to be accomplished by a reduction of inventory by \$75 million, a reduction in property, plant, and equipment (net) of \$175 million, and appropriate adjustments to shareholders' equity.

Illustration 18A–1

Quasi Reorganization

When assets are revalued to reflect fair values, the process often increases the deficit.

The deficit, \$550 (\$300 + 75 + 175), can be only partially absorbed by the balance of additional paid-in capital.

The remaining deficit, \$400 (\$300 + 75 + 175 – 150), must be absorbed by reducing the balance in common stock.

Assets and liabilities reflect current values.

Because a reduced balance represents the same 800 million shares, the par amount per share must be reduced.

The deficit is eliminated.

The Emerson-Walsch Corporation has incurred operating losses for several years. A newly elected board of directors voted to implement a quasi reorganization, subject to shareholder approval. The balance sheet, on December 31, 2012, immediately prior to the restatement, includes the data shown below.

	(\$ in millions)	
Cash	\$	75
Receivables		200
Inventory		375
Property, plant, and equipment (net)		400
		<u>\$1,050</u>
Liabilities	\$	400
Common stock (800 million shares at \$1 par)		800
Additional paid-in capital		150
Retained earnings (deficit)		(300)
		<u>\$1,050</u>
To Revalue Assets:		
Retained earnings	75	
Inventory		75
Retained earnings	175	
Property, plant, and equipment		175
To Eliminate a Portion of the Deficit against Available Additional Paid-In Capital:		
Additional paid-in capital	150	
Retained earnings		150
To Eliminate the Remainder of the Deficit against Common Stock:		
Common stock	400	
Retained earnings		400

The balance sheet immediately after the restatement would include the following:

	(\$ in millions)	
Cash	\$	75
Receivables		200
Inventory		300
Property, plant, and equipment (net)		225
		<u>\$800</u>
Liabilities	\$	400
Common stock (800 million shares at \$.50 par)		400
Additional paid-in capital		0
Retained earnings (deficit)		0
		<u>\$800</u>

Note A: Upon the recommendation of the board of directors and approval by shareholders a quasi reorganization was implemented January 1, 2013. The plan was accomplished by a reduction of inventory by \$75 million, a reduction in property, plant, and equipment (net) of \$175 million, and appropriate adjustments to shareholders' equity. The balance in retained earnings reflects the elimination of a \$300 million deficit on that date. ●

Questions For Review of Key Topics

- Q 18-1** Identify and briefly describe the two primary sources of shareholders' equity.
- Q 18-2** Identify the three common forms of business organization and the primary difference between the way they are accounted for.
- Q 18-3** Corporations offer the advantage of limited liability. Explain what is meant by that statement.
- Q 18-4** Distinguish between not-for-profit and for-profit corporations.
- Q 18-5** Distinguish between publicly held and privately (or closely) held corporations.
- Q 18-6** How does the Model Business Corporation Act affect the way corporations operate?
- Q 18-7** The owners of a corporation are its shareholders. If a corporation has only one class of shares, they typically are labeled common shares. Indicate the ownership rights held by common shareholders, unless specifically withheld by agreement.
- Q 18-8** What is meant by a shareholder's preemptive right?
- Q 18-9** Terminology varies in the way companies differentiate among share types. But many corporations designate shares as common or preferred. What are the two special rights usually given to preferred shareholders?
- Q 18-10** Most preferred shares are cumulative. Explain what this means.
- Q 18-11** The par value of shares historically indicated the real value of shares and all shares were issued at that price. The concept has changed with time. Describe the meaning of par value as it has evolved to today.
- Q 18-12** What is comprehensive income? How does comprehensive income differ from net income? Where do companies report it in a balance sheet?
- Q 18-13** How do we report components of comprehensive income *created during the reporting period*?
- Q 18-14** The balance sheet reports the balances of shareholders' equity accounts. What additional information is provided by the statement of shareholders' equity?
- Q 18-15** At times, companies issue their shares for consideration other than cash. What is the measurement objective in those cases?
- Q 18-16** Companies occasionally sell more than one security for a single price. How is the issue price allocated among the separate securities?
- Q 18-17** The costs of legal, promotional, and accounting services necessary to effect the sale of shares are referred to as share issue costs. How are these costs recorded? Compare this approach to the way debt issue costs are recorded.
- Q 18-18** When a corporation acquires its own shares, those shares assume the same status as authorized but unissued shares, as if they never had been issued. Explain how this is reflected in the accounting records if the shares are formally retired.
- Q 18-19** Discuss the conceptual basis for accounting for a share buyback as treasury stock.
- Q 18-20** The prescribed accounting treatment for stock dividends implicitly assumes that shareholders are fooled by small stock dividends and benefit by the market value of their additional shares. Explain this statement. Is it logical?
- Q 18-21** Brandon Components declares a 2-for-1 stock split. What will be the effects of the split, and how should it be recorded?
- Q 18-22** What is a reverse stock split? What would be the effect of a reverse stock split on one million \$1 par shares? On the accounting records?
- Q 18-23** Suppose you own 80 shares of **IBM** common stock when the company declares a 4% stock dividend. What will you receive as a result?
- Q 18-24** (Based on Appendix 18) A quasi reorganization is sometimes employed by a firm undergoing financial difficulties, but with favorable future prospects. What are two objectives of this procedure? Briefly describe the procedural steps.

Brief Exercises

- BE 18-1** Schaeffer Corporation reports \$50 million accumulated other comprehensive income in its balance sheet as a component of shareholders' equity. In a related statement reporting comprehensive income for the year, the company reveals net income of \$400 million and other comprehensive income of \$15 million. What was the balance in accumulated other comprehensive income in last year's balance sheet?
- **LO18-1**

- BE 18-2** Penne Pharmaceuticals sold 8 million shares of its \$1 par common stock to provide funds for research and development. If the issue price is \$12 per share, what is the journal entry to record the sale of the shares?
 Stock issued
 ● LO18-4
- BE 18-3** Lewelling Company issued 100,000 shares of its \$1 par common stock to the Michael Morgan law firm as compensation for 4,000 hours of legal services performed. Morgan's usual rate is \$240 per hour. By what amount should Lewelling's paid-in capital—excess of par increase as a result of this transaction?
 Stock issued
 ● LO18-4
- BE 18-4** Hamilton Boats issued 175,000 shares of its no par common stock to Sudoku Motors in exchange for 1,000 four-stroke outboard motors that normally sell in quantity for \$3,500 each. By what amount should Hamilton's shareholders' equity increase as a result of this transaction?
 Stock issued
 ● LO18-4
- BE 18-5** The shareholders' equity of MLS Enterprises includes \$200 million of no par common stock and \$400 million of 6% cumulative preferred stock. The board of directors of MLS declared cash dividends of \$50 million in 2013 after paying \$20 million cash dividends in both 2012 and 2011. What is the amount of dividends common shareholders will receive in 2013?
 Effect of preferred stock on dividends
 ● LO18-4
- BE 18-6** Horton Industries' shareholders' equity included 100 million shares of \$1 par common stock and a balance in paid-in capital—excess of par of \$900 million. Assuming that Horton retires shares it reacquires (restores their status to that of authorized but unissued shares), by what amount will Horton's total paid-in capital decline if it reacquires 2 million shares at \$8.50 per share?
 Retirement of shares
 ● LO18-5
- BE 18-7** Agee Storage issued 35 million shares of its \$1 par common stock at \$16 per share several years ago. Last year, for the first time, Agee reacquired 1 million shares at \$14 per share. Assuming that Agee retires shares it reacquires (restores their status to that of authorized but unissued shares), by what amount will Agee's total paid-in capital decline if it now reacquires 1 million shares at \$19 per share?
 Retirement of shares
 ● LO18-5
- BE 18-8** The Jennings Group reacquired 2 million of its shares at \$70 per share as treasury stock. Last year, for the first time, Jennings sold 1 million treasury shares at \$71 per share. By what amount will Jennings' retained earnings decline if it now sells the remaining 1 million treasury shares at \$67 per share?
 Treasury stock
 ● LO18-5
- BE 18-9** In previous years, Cox Transport reacquired 2 million treasury shares at \$20 per share and, later, 1 million treasury shares at \$26 per share. By what amount will Cox's paid-in capital—share repurchase increase if it now sells 1 million treasury shares at \$29 per share and determines cost as the weighted-average cost of treasury shares?
 Treasury stock
 ● LO18-5
- BE 18-10** Refer to the situation described in BE 18-9. By what amount will Cox's paid-in capital—share repurchase increase if it determines the cost of treasury shares by the FIFO method?
 Treasury stock
 ● LO18-5
- BE 18-11** Following is a recent **Microsoft** press release:
 Cash dividend
 ● LO18-8
-
- Real World Financials** **REDMOND, Wash.—March 15, 2011**—Microsoft Corp. today announced that its board of directors declared a quarterly dividend of \$0.16 per share. The dividend is payable June 9, 2011 to shareholders of record on May 19, 2011.
-
- Prepare the journal entries Microsoft used to record the declaration and payment of the cash dividend for its 8,668 million shares.
- BE 18-12** LaRoe Moving and Storage, a family-owned corporation, declared a property dividend of 1,000 shares of **GE** common stock that LaRoe had purchased in February for \$37,000 as an investment. GE's shares had a market value of \$35 per share on the declaration date. Prepare the journal entries to record the property dividend on the declaration and payment dates.
 Property dividend
 ● LO18-7
- BE 18-13** On June 13, the board of directors of Siewert Inc. declared a 5% stock dividend on its 60 million, \$1 par, common shares, to be distributed on July 1. The market price of Siewert common stock was \$25 on June 13. Prepare the journal entry to record the stock dividend.
 Stock dividend
 ● LO18-8
- BE 18-14** Refer to the situation described in BE 18-13, but assume a 2-for-1 stock split instead of the 5% stock dividend. Prepare the journal entry to record the stock split if it is *not* to be effected in the form of a stock dividend. What is the par per share after the split?
 Stock split
 ● LO18-8

BE 18-15
Stock split
● LO18-8

Refer to the situation described in BE 18-13, but assume a 2-for-1 stock split instead of the 5% stock dividend. Prepare the journal entry to record the stock split if it is to be effected in the form of a 100% stock dividend. What is the par per share after the split?

BE 18-16
IFRS; reporting shareholders' equity
● LO18-9

Nestlé S.A., the largest food and beverage company in the world, prepares its financial statements according to International Financial Reporting Standards. Its financial statements include ordinary share capital, translation reserve, and share premium. If Nestlé used U.S. GAAP, what would be the likely account titles for these accounts?

Exercises

An alternate exercise and problem set is available on the text website: www.mhhe.com/spiceland7e

E 18-1
Comprehensive income
● LO18-2

The following is from the 2013 annual report of Kaufman Chemicals, Inc.:

Years Ended December 31	2013	2012	2011
Net income	\$856	\$766	\$594
Other comprehensive income:			
Change in net unrealized gains on investments, net of tax of \$22, (\$14), and \$15 in 2013, 2012, and 2011, respectively	34	(21)	23
Other	(2)	(1)	1
Total comprehensive income	\$888	\$744	\$618

Kaufman reports accumulated other comprehensive income in its balance sheet as a component of shareholders' equity as follows:

	(\$ in millions)	
	2013	2012
Shareholders' equity:		
Common stock	355	355
Additional paid-in capital	8,567	8,567
Retained earnings	6,544	5,988
Accumulated other comprehensive income	107	75
Total shareholders' equity	\$15,573	\$14,985

Required:

1. What is comprehensive income and how does it differ from net income?
2. How is comprehensive income reported in a balance sheet?
3. Why is Kaufman's 2013 balance sheet amount different from the 2013 amount reported in the disclosure note? Explain.
4. From the information provided, determine how Kaufman calculated the \$107 million accumulated other comprehensive income in 2013.

E 18-2
FASB codification research; reporting other comprehensive income in shareholders' equity
● LO18-2

Companies are required to transfer "other comprehensive income" each period to shareholders' equity. The *FASB Accounting Standards Codification* represents the single source of authoritative U.S. generally accepted accounting principles.

Required:

1. Obtain the relevant authoritative literature on reporting other comprehensive income in shareholders' equity using the FASB's Codification Research System at the FASB website (www.fasb.org). What is the specific citation that describes the guidelines for reporting that component of shareholders' equity?

2. What is the specific citation that describes the guidelines for presenting accumulated other comprehensive income on the statement of shareholders' equity?

E 18-3
Earnings or OCI?

● LO18-2

Indicate by letter whether each of the items listed below most likely is reported in the income statement as Net Income (**NI**) or in the statement of comprehensive income as Other Comprehensive Income (**OCI**).

Items

- _____ 1. Increase in the fair value of investments in available-for-sale securities
 _____ 2. Gain on sale of land
 _____ 3. Loss on pension plan assets (actual return less than expected)
 _____ 4. Gain from foreign currency translation
 _____ 5. Increase in the fair value of investments in trading securities
 _____ 6. Loss from revising an assumption related to a pension plan
 _____ 7. Loss on sale of patent
 _____ 8. Prior service cost
 _____ 9. Increase in the fair value of bonds outstanding; fair value option
 _____ 10. Gain on postretirement plan assets (actual return more than expected)

E 18-4
Stock issued for cash; Wright Medical Group

● LO18-4

Real World Financials

The following is a news item reported by Reuters:

WASHINGTON, Jan 29 (Reuters)—**Wright Medical Group**, a maker of reconstructive implants for knees and hips, on Tuesday filed to sell 3 million shares of common stock.

In a filing with the U.S. Securities and Exchange Commission, it said it plans to use the proceeds from the offering for general corporate purposes, working capital, research and development, and acquisitions.

After the sale there will be about 31.5 million shares outstanding in the Arlington, Tennessee-based company, according to the SEC filing.

Wright shares closed at \$17.15 on Nasdaq.

The common stock of Wright Medical Group has a par of \$.01 per share.

Required:

Prepare the journal entry to record the sale of the shares assuming the price existing when the announcement was made and ignoring share issue costs.

E 18-5
Issuance of shares; noncash consideration

● LO18-4

During its first year of operations, Eastern Data Links Corporation entered into the following transactions relating to shareholders' equity. The articles of incorporation authorized the issue of 8 million common shares, \$1 par per share, and 1 million preferred shares, \$50 par per share.

Required:

Prepare the appropriate journal entries to record each transaction.

- Feb. 12 Sold 2 million common shares, for \$9 per share.
 13 Issued 40,000 common shares to attorneys in exchange for legal services.
 13 Sold 80,000 of its common shares and 4,000 preferred shares for a total of \$945,000.
 Nov. 15 Issued 380,000 of its common shares in exchange for equipment for which the cash price was known to be \$3,688,000.

E 18-6
Redeemable shares

● LO18-4

Williams Industries has outstanding 30 million common shares, 20 million Class A shares, and 20 million Class B shares. Williams has the right but not the obligation to repurchase the Class A shares if a change in ownership of the voting common shares causes J. P. Williams, founder and CEO, to have less than 50% ownership. Williams has the unconditional obligation to repurchase the Class B shares upon the death of J. P. Williams.

Required:

Which, if any, of the shares should be reported in Williams' balance sheet as liabilities? Explain.

E 18-7
Share issue costs; issuance

● LO18-4

ICOT Industries issued 15 million of its \$1 par common shares for \$424 million on April 11. Legal, promotional, and accounting services necessary to effect the sale cost \$2 million.

Required:

1. Prepare the journal entry to record the issuance of the shares.
2. Explain how recording the share issue costs differs from the way debt issue costs are recorded.

E 18-8
Reporting preferred shares
● LO18-4

Ozark Distributing Company is primarily engaged in the wholesale distribution of consumer products in the Ozark Mountain regions. The following disclosure note appeared in the company's 2013 annual report:

Note 5. Convertible Preferred Stock (in part):

The Company has the following Convertible Preferred Stock outstanding as of September 2013:

Date of issuance:	June 17, 2010
Optionally redeemable beginning	June 18, 2012
Par value (gross proceeds):	\$2,500,000
Number of shares:	100,000
Liquidation preference per share:	\$25.00
Conversion price per share:	\$30.31
Number of common shares in which to be converted:	82,481
Dividend rate:	6.785%

The Preferred Stock is convertible at any time by the holders into a number of shares of Ozark's common stock equal to the number of preferred shares being converted times a fraction equal to \$25.00 divided by the conversion price. The conversion prices for the Preferred Stock are subject to customary adjustments in the event of stock splits, stock dividends and certain other distributions on the Common Stock. Cumulative dividends for the Preferred Stock are payable in arrears, when, as and if declared by the Board of Directors, on March 31, June 30, September 30, and December 31 of each year.

The Preferred Stock is optionally redeemable by the Company beginning on various dates, as listed above, at redemption prices equal to 112% of the liquidation preference. The redemption prices decrease 1% annually thereafter until the redemption price equals the liquidation preference after which date it remains the liquidation preference.

Required:

1. What amount of dividends is paid annually to a preferred shareholder owning 100 shares of the Series A preferred stock?
2. If dividends are not paid in 2014 and 2015, but are paid in 2016, what amount of dividends will the shareholder receive?
3. If the investor chooses to convert the shares in 2014, how many shares of common stock will the investor receive for his/her 100 shares?
4. If Ozark chooses to redeem the shares on June 18, 2014, what amount will the investor be paid for his/her 100 shares?

E 18-9
New equity issues; offerings announcements
● LO18-4

When companies offer new equity security issues, they publicize the offerings in the financial press and on Internet sites. Assume the following were among the equity offerings reported in December 2013:

New Securities Issues

Equity

American Materials Transfer Corporation (AMTC)—7.5 million common shares, \$.001 par, priced at \$13.546 each through underwriters led by Second Tennessee Bank N.A. and Morgan, Dunavant & Co., according to a syndicate official.

Proactive Solutions Inc. (PSI)—Offering of nine million common shares, \$.01 par, was priced at \$15.20 a share via lead manager Stanley Brothers, Inc., according to a syndicate official.

Required:

Prepare the appropriate journal entries to record the sale of both issues to underwriters. Ignore share issue costs.

E 18-10
Effect of cumulative, nonparticipating preferred stock on dividends—3 years
● LO18-4

The shareholders' equity of WBL Industries includes the items shown below. The board of directors of WBL declared cash dividends of \$8 million, \$20 million, and \$150 million in its first three years of operation—2013, 2014, and 2015, respectively.

	(\$ in millions)
Common stock	\$100
Paid-in capital—excess of par, common	980
Preferred stock, 8%	200
Paid-in capital—excess of par, preferred	555

Required:

Determine the amount of dividends to be paid to preferred and common shareholders in each of the three years, assuming that the preferred stock is cumulative and nonparticipating.

	Preferred	Common
2013		
2014		
2015		

E 18–11

Retirement of shares

● LO18–5

Borner Communications' articles of incorporation authorized the issuance of 130 million common shares. The transactions described below effected changes in Borner's outstanding shares. Prior to the transactions, Borner's shareholders' equity included the following:

	Shareholders' Equity	(\$ in millions)
Common stock, 100 million shares at \$1 par		\$100
Paid-in capital—excess of par		300
Retained earnings		210

Required:

Assuming that Borner Communications retires shares it reacquires (restores their status to that of authorized but unissued shares), record the appropriate journal entry for each of the following transactions:

1. On January 7, 2013, Borner reacquired 2 million shares at \$5.00 per share.
2. On August 23, 2013, Borner reacquired 4 million shares at \$3.50 per share.
3. On July 25, 2014, Borner sold 3 million common shares at \$6 per share.

E 18–12

Retirement of shares

● LO18–5

In 2013, Borland Semiconductors entered into the transactions described below. In 2010, Borland had issued 170 million shares of its \$1 par common stock at \$34 per share.

Required:

Assuming that Borland retires shares it reacquires, record the appropriate journal entry for each of the following transactions:

1. On January 2, 2013, Borland reacquired 10 million shares at \$32.50 per share.
2. On March 3, 2013, Borland reacquired 10 million shares at \$36 per share.
3. On August 13, 2013, Borland sold 1 million shares at \$42 per share.
4. On December 15, 2013, Borland sold 2 million shares at \$36 per share.

E 18–13

Treasury stock

● LO18–5

In 2013, Western Transport Company entered into the treasury stock transactions described below. In 2011, Western Transport had issued 140 million shares of its \$1 par common stock at \$17 per share.

Required:

Prepare the appropriate journal entry for each of the following transactions:

1. On January 23, 2013, Western Transport reacquired 10 million shares at \$20 per share.
2. On September 3, 2013, Western Transport sold 1 million treasury shares at \$21 per share.
3. On November 4, 2013, Western Transport sold 1 million treasury shares at \$18 per share.

E 18–14

Treasury stock; weighted-average and FIFO cost

● LO18–5

At December 31, 2012, the balance sheet of Meca International included the following shareholders' equity accounts:

	Shareholders' Equity	(\$ in millions)
Common stock, 60 million shares at \$1 par		\$ 60
Paid-in capital—excess of par		300
Retained earnings		410

Required:

Assuming that Meca International views its share buybacks as treasury stock, record the appropriate journal entry for each of the following transactions:

1. On February 12, 2013, Meca reacquired 1 million common shares at \$13 per share.

- On June 9, 2014, Meca reacquired 2 million common shares at \$10 per share.
- On May 25, 2015, Meca sold 2 million treasury shares at \$15 per share—determine cost as the weighted-average cost of treasury shares.
- For the previous transaction, assume Meca determines the cost of treasury shares by the FIFO method.

E 18-15
Reporting shareholders' equity after share repurchase
● LO18-5

On two previous occasions, the management of Dennison and Company, Inc., repurchased some of its common shares. Between buyback transactions, the corporation issued common shares under its management incentive plan. Shown below is shareholders' equity following these share transactions, as reported by two different methods of accounting for reacquired shares.

	(\$ in millions)	
	Method A	Method B
Shareholders' equity		
Paid-in capital:		
Preferred stock, \$10 par	\$ 150	\$ 150
Common stock, \$1 par	200	197
Additional paid-in capital	1,204	1,201
Retained earnings	2,994	2,979
Less: Treasury stock	(21)	—
Total shareholders' equity	\$4,527	\$4,527

Required:

- Infer from the presentation which method of accounting for reacquired shares is represented by each of the two columns.
- Explain why presentation formats are different and why some account balances are different for the two methods.

E 18-16
Change from treasury stock to retired stock
● LO18-5

In keeping with a modernization of corporate statutes in its home state, UMC Corporation decided in 2013 to discontinue accounting for reacquired shares as treasury stock. Instead, shares repurchased will be viewed as having been retired, reassuming the status of unissued shares. As part of the change, treasury shares held were reclassified as retired stock. At December 31, 2012, UMC's balance sheet reported the following shareholders' equity:

	(\$ in millions)
Common stock, \$1 par	\$ 200
Paid-in capital—excess of par	800
Retained earnings	956
Treasury stock (4 million shares at cost)	(25)
Total shareholders' equity	\$1,931

Required:

Identify the type of accounting change this decision represents, and prepare the journal entry to effect the reclassification of treasury shares as retired shares.

E 18-17
Stock buyback; press Dupont announcement
● LO18-5

The following excerpt is from an article reported in the April 27, 2011, online issue of *Reuters*.

(Reuters) — **DuPont Co** (DD.N) said its board of directors has authorized a \$2 billion stock repurchase plan to offset dilution from executive compensation.

The par amount per share for DuPont's common stock is \$.30. Paid-in capital—excess of par is \$9.19 per share on average. The market price was \$55 on April 9, 2011.

Real World Financials

Required:

- Suppose DuPont reacquires 36 million shares through repurchase on the open market at \$55 per share. Prepare the appropriate journal entry to record the purchase. DuPont considers the shares it buys back to be treasury stock.
- Suppose DuPont considers the shares it buys back to be retired rather than treated as treasury stock. Prepare the appropriate journal entry to record the purchase.
- What does the company mean by saying that the buyback will serve "to offset dilution from executive compensation"?

E 18-18
Transactions affecting retained earnings

● LO18-6,
LO18-7

Shown below in T-account format are the changes affecting the retained earnings of Brenner-Jude Corporation during 2013. At January 1, 2013, the corporation had outstanding 105 million common shares, \$1 par per share.

Retained Earnings (\$ in millions)		
	90	Beginning balance
Retirement of 5 million common shares for \$22 million	2	
	88	Net income for the year
Declaration and payment of a \$.33 per share cash dividend	33	
Declaration and distribution of a 4% stock dividend	20	
	123	Ending balance

Required:

- From the information provided by the account changes you should be able to recreate the transactions that affected Brenner-Jude's retained earnings during 2013. Prepare the journal entries that Brenner-Jude must have recorded during the year for these transactions.
- Prepare a statement of retained earnings for Brenner-Jude for the year ended 2013.

E 18-19
Stock dividend

● LO18-8

The shareholders' equity of Core Technologies Company on June 30, 2012, included the following:

Common stock, \$1 par; authorized, 8 million shares; issued and outstanding, 3 million shares	\$ 3,000,000
Paid-in capital—excess of par	12,000,000
Retained earnings	14,000,000

On April 1, 2013, the board of directors of Core Technologies declared a 10% stock dividend on common shares, to be distributed on June 1. The market price of Core Technologies' common stock was \$30 on April 1, 2013, and \$40 on June 1, 2013.

Required:

Prepare the journal entry to record the distribution of the stock dividend on the declaration date.

E 18-20
Stock split;
Hanmi Financial Corporation

● LO18-8

Hanmi Financial Corporation is the parent company of Hanmi Bank. The company's stock split was announced in the following Business Wire:

LOS ANGELES (BUSINESS WIRE) Jan. 20—Hanmi Financial Corporation (Nasdaq), announced that the Board of Directors has approved a two-for-one stock split, to be effected in the form of a 100 percent common stock dividend. Hanmi Financial Corporation stockholders of record at the close of business on January 31 will receive one additional share of common stock for every share of common stock then held. Distribution of additional shares issued as a result of the split is expected to occur on or about February 15.

At the time of the stock split, 24.5 million shares of common stock, \$.001 par per share, were outstanding.

Required:

- Prepare the journal entry, if any, that Hanmi recorded at the time of the stock split.
- What is the probable motivation for declaring the 2-for-1 stock split to be effected by a dividend payable in shares of common stock?
- If Hanmi's stock price had been \$36 at the time of the split, what would be its approximate value after the split (other things equal)?

E 18-21
Cash in lieu of fractional share rights

● LO18-8

Douglas McDonald Company's balance sheet included the following shareholders' equity accounts at December 31, 2012:

	(\$ in millions)
Paid-in capital:	
Common stock, 900 million shares at \$1 par	\$ 900
Paid-in capital—excess of par	15,800
Retained earnings	14,888
Total shareholders' equity	<u>\$31,588</u>

On March 16, 2013, a 4% common stock dividend was declared and distributed. The market value of the common stock was \$21 per share. Fractional share rights represented 2 million equivalent whole shares. Cash was paid in lieu of the fractional share rights.

Required:

1. What is a fractional share right?
2. Prepare the appropriate entries for the declaration and distribution of the stock dividend.

E 18-22
FASB codification research

- LO18-1, LO18-5, LO18-8

Access the FASB's Codification Research System at the FASB website (www.fasb.org). Determine the specific citation for accounting for each of the following items:

1. Requirements to disclose within the financial statements the pertinent rights and privileges of the various securities outstanding.
2. Requirement to record a "small" stock dividend at the fair value of the shares issued.
3. Requirement to exclude from the determination of net income gains and losses on transactions in a company's own stock.

E 18-23
Transactions affecting retained earnings

- LO18-6 through LO18-8

The balance sheet of Consolidated Paper, Inc., included the following shareholders' equity accounts at December 31, 2012:

	(\$ in millions)
Paid-in capital:	
Preferred stock, 8.8%, 90,000 shares at \$1 par	\$ 90,000
Common stock, 364,000 shares at \$1 par	364,000
Paid-in capital—excess of par, preferred	1,437,000
Paid-in capital—excess of par, common	2,574,000
Retained earnings	9,735,000
Treasury stock, at cost; 4,000 common shares	(44,000)
Total shareholders' equity	\$14,156,000

During 2013, several events and transactions affected the retained earnings of Consolidated Paper.

Required:

1. Prepare the appropriate entries for these events:
 - a. On March 3 the board of directors declared a property dividend of 240,000 shares of Leasco International common stock that Consolidated Paper had purchased in January as an investment (book value: \$700,000). The investment shares had a fair value of \$3 per share and were distributed March 31 to shareholders of record March 15.
 - b. On May 3 a 5-for-4 stock split was declared and distributed. The stock split was effected in the form of a 25% stock dividend. The market value of the \$1 par common stock was \$11 per share.
 - c. On July 5 a 2% common stock dividend was declared and distributed. The market value of the common stock was \$11 per share.
 - d. On December 1 the board of directors declared the 8.8% cash dividend on the 90,000 preferred shares, payable on December 28 to shareholders of record December 20.
 - e. On December 1 the board of directors declared a cash dividend of \$.50 per share on its common shares, payable on December 28 to shareholders of record December 20.
2. Prepare the shareholders' equity section of the balance sheet for Consolidated Paper, Inc., at December 31, 2013. Net income for the year was \$810,000.

E 18-24
Profitability ratio

- LO18-1

Comparative balance sheets for Softech Canvas Goods for 2013 and 2012 are shown below. Softech pays no dividends, and instead reinvests all earnings for future growth.

Comparative Balance Sheets
(\$ in 000s)

	December 31	
	2013	2012
Assets:		
Cash	\$ 50	\$ 40
Accounts receivable	100	120
Short-term investments	50	40
Inventory	200	140
Property, plant, and equipment (net)	600	550
	<u>\$1,000</u>	<u>\$890</u>

(continued)

(concluded)

Liabilities and Shareholders' Equity:

Current liabilities	\$ 240	\$210
Bonds payable	160	160
Paid-in capital	400	400
Retained earnings	200	120
	<u>\$1,000</u>	<u>\$890</u>

Required:

- Determine the return on shareholders' equity for 2013.
- What does the ratio measure?

E 18–25

IFRS; equity terminology

● LO18–9

Indicate by letter whether each of the terms or phrases listed below is more associated with financial statements prepared in accordance with U.S. GAAP (U) or International Financial Reporting Standards (I).

Terms and phrases

- _____ 1. Common stock
- _____ 2. Preference shares
- _____ 3. Liabilities often listed before equity in the balance sheet (statement of financial position)
- _____ 4. Asset revaluation reserve
- _____ 5. Accumulated other comprehensive income
- _____ 6. Share premium
- _____ 7. Equity often listed before liabilities in the balance sheet (statement of financial position)
- _____ 8. Translation reserve
- _____ 9. Ordinary shares
- _____ 10. Paid-in capital—excess of par
- _____ 11. Net gains (losses) on investments—AOCI
- _____ 12. Investment revaluation reserve
- _____ 13. Preferred stock

CPA and CMA Review Questions

CPA Exam Questions

● LO18–5

The following questions are adapted from a variety of sources including questions developed by the AICPA Board of Examiners and those used in the Kaplan CPA Review Course to study shareholders' equity while preparing for the CPA examination. Determine the response that best completes the statements or questions.

- In 2011, Fogg, Inc., issued \$10 par value common stock for \$25 per share. No other common stock transactions occurred until March 31, 2013, when Fogg acquired some of the issued shares for \$20 per share and retired them. Which of the following statements correctly states an effect of this acquisition and retirement?
 - 2013 net income is decreased.
 - Additional paid-in capital is decreased.
 - 2013 net income is increased.
 - Retained earnings is increased.

● LO18–5

- Copper, Inc., initially issued 100,000 shares of \$1 par value stock for \$500,000 in 2010. In 2012, the company repurchased 10,000 shares for \$100,000. In 2013, 5,000 of the repurchased shares were resold for \$80,000. In its balance sheet dated December 31, 2013, Copper, Inc.'s Treasury Stock account shows a balance of:
 - \$ 0
 - \$ 20,000
 - \$ 50,000
 - \$100,000

● LO18–7

- On June 27, 2013, Brite Co. distributed to its common stockholders 100,000 outstanding common shares of its investment in Quik, Inc., an unrelated party. The carrying amount on Brite's books of Quik's \$1 par common stock was \$2 per share. Immediately after the distribution, the market price of Quik's stock was \$2.50 per share. In its income statement for the year ended June 30, 2013, what amount should Brite report as gain before income taxes on disposal of the stock?
 - \$ 0
 - \$ 50,000
 - \$200,000
 - \$250,000

- LO18-7
4. Whipple Company has 1,000,000 shares of common stock authorized with a par value of \$3 per share, of which 600,000 shares are outstanding. When the market value was \$8 per share, Whipple issued a stock dividend whereby for each six shares held one share was issued as a stock dividend. The par value of the stock was not changed. What entry should Whipple make to record this transaction?
- | | | |
|-------------------------------|-----------|-----------|
| a. Retained earnings | \$300,000 | |
| Common stock | | \$300,000 |
| b. Additional paid-in capital | 300,000 | |
| Common stock | | 300,000 |
| c. Retained earnings | 800,000 | |
| Common stock | | 300,000 |
| Additional paid-in capital | | 500,000 |
| d. Additional paid-in capital | 800,000 | |
| Common stock | | 300,000 |
| Retained earnings | | 500,000 |

- LO18-8
5. When a company issues a stock dividend which of the following would be affected?
- Earnings per share.
 - Total assets.
 - Total liabilities.
 - Total stockholders' equity.

- LO18-8
6. Long Co. had 100,000 shares of common stock issued and outstanding at January 1, 2013. During 2013, Long took the following actions:

March 15	Declared a 2-for-1 stock split, when the fair value of the stock was \$80 per share.
December 15	Declared a \$0.50 per share cash dividend.

In Long's statement of shareholders' equity for 2013, what amount should Long report as dividends?

- \$ 50,000
- \$100,000
- \$850,000
- \$950,000

Beginning in 2011, International Financial Reporting Standards are tested on the CPA exam along with U.S. GAAP. The following questions deal with the application of IFRS in accounting for shareholders' equity.

- LO18-9
7. Mandatorily redeemable preferred stock (preference shares) is reported among liabilities and their dividends are reported in the income statement as interest expense using
- U.S. GAAP.
 - IFRS.
 - Both U.S. GAAP and IFRS.
 - Neither U.S. GAAP nor IFRS.

- LO18-9
8. Revenues, expenses, and components of other comprehensive income can be reported in a single statement of comprehensive income using
- U.S. GAAP.
 - IFRS.
 - Both U.S. GAAP and IFRS.
 - Neither U.S. GAAP nor IFRS.

CMA Exam Questions

The following questions dealing with shareholders' equity are adapted from questions that previously appeared on Certified Management Accountant (CMA) examinations. The CMA designation sponsored by the Institute of Management Accountants (www.imanet.org) provides members with an objective measure of knowledge and competence in the field of management accounting. Determine the response that best completes the statements or questions.

- LO18-1
1. The par value of common stock represents
- the estimated fair value of the stock when it was issued.
 - the liability ceiling of a shareholder when a company undergoes bankruptcy proceedings.
 - the total value of the stock that must be entered in the issuing corporation's records.
 - the amount that must be recorded on the issuing corporation's record as paid-in capital.

- LO18-1 2. The equity section of Smith Corporation’s statement of financial position is presented below.

Preferred stock, \$100 par	\$12,000,000
Common stock, \$5 par	10,000,000
Paid-in capital in excess of par	18,000,000
Retained earnings	9,000,000
Shareholders’ equity	\$49,000,000

The common shareholders of Smith Corporation have preemptive rights. If Smith Corporation issues 400,000 additional shares of common stock at \$6 per share, a current holder of 20,000 shares of Smith Corporation’s common stock must be given the option to buy

- a. 1,000 additional shares.
- b. 3,774 additional shares.
- c. 4,000 additional shares.
- d. 3,333 additional shares.

- LO18-8 3. A stock dividend
 - a. increases the debt to equity ratio of a firm.
 - b. decreases future earnings per share.
 - c. decreases the size of the firm.
 - d. increases shareholders’ wealth.

Problems connect[®] ACCOUNTING

An alternate exercise and problem set is available on the text website: www.mhhe.com/spiceland7e

- P 18-1** Various stock transactions; correction of journal entries
- LO18-4

Part A
During its first year of operations, the McCollum Corporation entered into the following transactions relating to shareholders’ equity. The corporation was authorized to issue 100 million common shares, \$1 par per share.

Required:
Prepare the appropriate journal entries to record each transaction.

- Jan. 9 Issued 40 million common shares for \$20 per share.
- Mar. 11 Issued 5,000 shares in exchange for custom-made equipment. McCollum’s shares have traded recently on the stock exchange at \$20 per share.

Part B
A new staff accountant for the McCollum Corporation recorded the following journal entries during the second year of operations. McCollum retires shares that it reacquires (restores their status to that of authorized but unissued shares).

		(\$ in millions)	
Jan. 12	Land	2	
	Paid-in capital—donation of land		2
Sept. 1	Common stock	2	
	Retained earnings	48	
	Cash		50
Dec. 1	Cash	26	
	Common stock		1
	Gain on sale of previously issued shares		25

Required:
Prepare the journal entries that should have been recorded for each of the transactions.

- P 18-2** Share buyback—comparison of retirement and treasury stock treatment
- LO18-5

The shareholders’ equity section of the balance sheet of TNL Systems Inc. included the following accounts at December 31, 2012:

Shareholders’ Equity	(\$ in millions)
Common stock, 240 million shares at \$1 par	\$ 240
Paid-in capital—excess of par	1,680
Paid-in capital—share repurchase	1
Retained earnings	1,100

- Required:**
1. During 2013, TNL Systems reacquired shares of its common stock and later sold shares in two separate transactions. Prepare the entries for both the purchase and subsequent resale of the shares assuming the shares are (a) retired and (b) viewed as treasury stock.

- a. On February 5, 2013, TNL Systems purchased 6 million shares at \$10 per share.
 - b. On July 9, 2013, the corporation sold 2 million shares at \$12 per share.
 - c. On November 14, 2015, the corporation sold 2 million shares at \$7 per share.
2. Prepare the shareholders' equity section of TNL Systems' balance sheet at December 31, 2015, comparing the two approaches. Assume all net income earned in 2013–2015 was distributed to shareholders as cash dividends.

P 18–3

Reacquired shares—comparison of retired shares and treasury shares

● LO18–5

National Supply's shareholders' equity included the following accounts at December 31, 2012:

Shareholders' Equity	(\$ in millions)
Common stock, 6 million shares at \$1 par	\$ 6,000,000
Paid-in capital—excess of par	30,000,000
Retained earnings	86,500,000

Required:

1. National Supply reacquired shares of its common stock in two separate transactions and later sold shares. Prepare the entries for each of the transactions under each of two separate assumptions: the shares are (a) retired and (b) accounted for as treasury stock.

February 15, 2013	Reacquired 300,000 shares at \$8 per share.
February 17, 2014	Reacquired 300,000 shares at \$5.50 per share.
November 9, 2015	Sold 200,000 shares at \$7 per share (assume FIFO cost).
2. Prepare the shareholders' equity section of National Supply's balance sheet at December 31, 2015, assuming the shares are (a) retired and (b) accounted for as treasury stock. Net income was \$14 million in 2013, \$15 million in 2014, and \$16 million in 2015. No dividends were paid during the three-year period.

P 18–4

Statement of retained earnings

● LO18–5, LO18–7

Comparative statements of retained earnings for Renn-Dever Corporation were reported in its 2013 annual report as follows.

RENN-DEVER CORPORATION			
Statements of Retained Earnings			
For the Years Ended December 31,	2013	2012	2011
Balance at beginning of year	\$6,794,292	\$5,464,052	\$5,624,552
Net income (loss)	3,308,700	2,240,900	(160,500)
Deductions:			
Stock dividend (34,900 shares)	242,000		
Common shares retired (110,000 shares)		212,660	
Common stock cash dividends	889,950	698,000	0
Balance at end of year	\$8,971,042	\$6,794,292	\$5,464,052

At December 31, 2010, common shares consisted of the following:

Common stock, 1,855,000 shares at \$1 par	\$1,855,000
Paid-in capital—excess of par	7,420,000

Required:

Infer from the reports the events and transactions that affected Renn-Dever Corporation's retained earnings during 2011, 2012, and 2013. Prepare the journal entries that reflect those events and transactions.

P 18–5

Shareholders' equity transactions; statement of shareholders' equity

● LO18–6 through LO18–8

Listed below are the transactions that affected the shareholders' equity of Branch-Rickie Corporation during the period 2013–2015. At December 31, 2012, the corporation's accounts included:

	(\$ in 000s)
Common stock, 105 million shares at \$1 par	\$105,000
Paid-in capital—excess of par	630,000
Retained earnings	970,000

- a. November 1, 2013, the board of directors declared a cash dividend of \$.80 per share on its common shares, payable to shareholders of record November 15, to be paid December 1.
- b. On March 1, 2014, the board of directors declared a property dividend consisting of corporate bonds of Warner Corporation that Branch-Rickie was holding as an investment. The bonds had a fair value of \$1.6 million, but were purchased two years previously for \$1.3 million. Because they were intended to be held to maturity, the bonds had not been previously written up. The property dividend was payable to shareholders of record March 13, to be distributed April 5.

- On July 12, 2014, the corporation declared and distributed a 5% common stock dividend (when the market value of the common stock was \$21 per share). Cash was paid in lieu of fractional shares representing 250,000 equivalent whole shares.
- On November 1, 2014, the board of directors declared a cash dividend of \$.80 per share on its common shares, payable to shareholders of record November 15, to be paid December 1.
- On January 15, 2015, the board of directors declared and distributed a 3-for-2 stock split effected in the form of a 50% stock dividend when the market value of the common stock was \$22 per share.
- On November 1, 2015, the board of directors declared a cash dividend of \$.65 per share on its common shares, payable to shareholders of record November 15, to be paid December 1.

Required:

- Prepare the journal entries that Branch-Rickie recorded during the three-year period for these transactions.
- Prepare comparative statements of shareholders' equity for Branch-Rickie for the three-year period (\$ in 000s). Net income was \$330 million, \$395 million, and \$455 million for 2013, 2014, and 2015, respectively.

P 18-6

Statement of shareholders' equity

- LO18-1, LO18-3 through LO18-8

Comparative statements of shareholders' equity for Anaconda International Corporation were reported as follows for the fiscal years ending December 31, 2013, 2014, and 2015.

ANACONDA INTERNATIONAL CORPORATION
Statements of Shareholders' Equity
For the Years Ended Dec. 31, 2013, 2014, and 2015
(\$ in millions)

	Preferred Stock \$10 par	Common Stock \$1 par	Additional Paid-In Capital	Retained Earnings	Total Shareholders' Equity
Balance at January 1, 2013		55	495	1,878	2,428
Sale of preferred shares	10		470		480
Sale of common shares		7	63		70
Cash dividend, preferred				(1)	(1)
Cash dividend, common				(16)	(16)
Net income				290	290
Balance at December 31, 2013	10	62	1,028	2,151	3,251
Retirement of shares		(3)	(27)	(20)	(50)
Cash dividend, preferred				(1)	(1)
Cash dividend, common				(20)	(20)
3-for-2 split effected in the form of a dividend	5		(5)		
Net income				380	380
Balance at December 31, 2014	15	59	996	2,490	3,560
Common stock dividend		6	59	(65)	
Cash dividend, preferred				(1)	(1)
Cash dividend, common				(22)	(22)
Net income				412	412
Balance at December 31, 2015	15	65	1,055	2,814	3,949

Required:

- Infer from the statements the events and transactions that affected Anaconda International Corporation's shareholders' equity during 2013, 2014, and 2015. Prepare the journal entries that reflect those events and transactions.
- Prepare the shareholders' equity section of Anaconda's comparative balance sheets at December 31, 2015 and 2014.

P 18-7

Reporting shareholders' equity; comprehensive income; Cisco Systems

- LO18-1 through LO18-4

The following is the Statement of Shareholders' Equity from **Cisco Systems'** 2011 annual report. Remember that for comparative purposes, three years are reported in these statements. The 2010 and 2009 portions of the statement are not shown here for brevity of presentation.

Real World Financials

CISCO SYSTEMS, INC.
Consolidated Statements of Shareholders' Equity (in part)

(\$ in millions)	Shares of Common Stock	Common Stock and Additional Paid-In Capital	Retained Earnings	Accumulated Other Comprehensive Income	Total Shareholders' Equity
Balance at July 31, 2010	5,655	\$37,793	\$5,851	\$623	\$44,267
Net income			6,490		6,490
Change in:					
Unrealized gains and losses on investments				154	154
Derivative instruments				(21)	(21)
Cumulative translation adjustment and other				538	538
Comprehensive income					7,161
Issuance of common stock	141	1,831			1,831
Repurchase of common stock	(361)	(2,575)	(4,399)		(6,974)
Cash dividends declared			(658)		(658)
Tax effects from employee stock incentive plans		(33)			(33)
Purchase acquisitions		12			12
Share-based compensation expense		1,620			1,620
Balance at July 30, 2011	<u>5,435</u>	<u>\$38,648</u>	<u>\$7,284</u>	<u>\$ 1,294</u>	<u>\$47,226</u>

Required:

1. What is the purpose of the statement of shareholders' equity?
2. How does Cisco account for its share buybacks?
3. For its share buybacks in fiscal year 2011, was the price Cisco paid for the shares repurchased more or less than the average price at which Cisco had sold the shares previously? Reconstruct the journal entry Cisco used to record the buyback.
4. What is comprehensive income? What is other comprehensive income?
5. What caused the change in Cisco's comprehensive income in fiscal year 2011? What was the amount of Accumulated other comprehensive income (loss) that Cisco reported in its July 30, 2011 balance sheet? Be specific.

P 18-8

Share issue costs; issuance; dividends; early retirement

- LO18-3,
- LO18-4,
- LO18-7

During its first year of operations, Cupola Fan Corporation issued 30,000 of \$1 par Class B shares for \$385,000 on June 30, 2013. Share issue costs were \$1,500. One year from the issue date (July 1, 2014), the corporation retired 10% of the shares for \$39,500.

Required:

1. Prepare the journal entry to record the issuance of the shares.
2. Prepare the journal entry to record the declaration of a \$2 per share dividend on December 1, 2013.
3. Prepare the journal entry to record the payment of the dividend on December 31, 2013.
4. Prepare the journal entry to record the retirement of the shares.

(Note: You may wish to compare your solution to this problem with that of Problem 14-16, which deals with parallel issues of debt issue costs and the retirement of debt.)

P 18-9

Effect of preferred stock characteristics on dividends

- LO18-7

The shareholders' equity of Kramer Industries includes the data shown below. During 2014, cash dividends of \$150 million were declared. Dividends were not declared in 2012 or 2013.

	(\$ in millions)
Common stock	\$200
Paid-in capital—excess of par, common	800
Preferred stock, 10%, nonparticipating	100
Paid-in capital—excess of par, preferred	270

Required:

Determine the amount of dividends payable to preferred shareholders and to common shareholders under each of the following two assumptions regarding the characteristics of the preferred stock.

Assumption A—The preferred stock is noncumulative.

Assumption B—The preferred stock is cumulative.

P 18–10

Transactions affecting retained earnings

- LO18–4 through LO18–8

Example

Indicate by letter whether each of the transactions listed below increases (**I**), decreases (**D**), or has no effect (**N**) on retained earnings. Assume the shareholders' equity of the transacting company includes only common stock, paid-in capital—excess of par, and retained earnings at the time of each transaction. (Some transactions have two possible answers. Indicate both.)

Transactions

- | | |
|---|--|
| N | 1. Sale of common stock |
| | 2. Purchase of treasury stock at a cost <i>less</i> than the original issue price |
| | 3. Purchase of treasury stock at a cost <i>greater</i> than the original issue price |
| | 4. Declaration of a property dividend |
| | 5. Sale of treasury stock for <i>more</i> than cost |
| | 6. Sale of treasury stock for <i>less</i> than cost |
| | 7. Net income for the year |
| | 8. Declaration of a cash dividend |
| | 9. Payment of a previously declared cash dividend |
| | 10. Issuance of convertible bonds for cash |
| | 11. Declaration and distribution of a 5% stock dividend |
| | 12. Retirement of common stock at a cost <i>less</i> than the original issue price |
| | 13. Retirement of common stock at a cost <i>greater</i> than the original issue price |
| | 14. A stock split effected in the form of a stock dividend |
| | 15. A stock split in which the par value per share is reduced (not effected in the form of a stock dividend) |
| | 16. A net loss for the year |

P 18–11

Stock dividends received on investments; integrative problem

- LO18–8

Ellis Transport Company acquired 1.2 million shares of stock in L&K Corporation at \$44 per share. They are classified by Ellis as “available for sale.” Ellis sold 200,000 shares at \$46, received a 10% stock dividend, and then later in the year sold another 100,000 shares at \$43.

Hint: There is no entry for the stock dividend, but a new investment per share must be calculated for use later when the shares are sold.

Required:

Prepare journal entries to record these transactions.

P 18–12

Various shareholders' equity topics; comprehensive

- LO18–1, LO18–4 through LO18–8

Part A

In late 2012, the Nicklaus Corporation was formed. The corporate charter authorizes the issuance of 5,000,000 shares of common stock carrying a \$1 par value, and 1,000,000 shares of \$5 par value, noncumulative, nonparticipating preferred stock. On January 2, 2013, 3,000,000 shares of the common stock are issued in exchange for cash at an average price of \$10 per share. Also on January 2, all 1,000,000 shares of preferred stock are issued at \$20 per share.

Required:

1. Prepare journal entries to record these transactions.
2. Prepare the shareholders' equity section of the Nicklaus balance sheet as of March 31, 2013. (Assume net income for the first quarter 2013 was \$1,000,000.)

Part B

During 2013, the Nicklaus Corporation participated in three treasury stock transactions:

- a. On June 30, 2013, the corporation reacquires 200,000 shares for the treasury at a price of \$12 per share.
- b. On July 31, 2013, 50,000 treasury shares are reissued at \$15 per share.
- c. On September 30, 2013, 50,000 treasury shares are reissued at \$10 per share.

Required:

1. Prepare journal entries to record these transactions.
2. Prepare the Nicklaus Corporation shareholders' equity section as it would appear in a balance sheet prepared at September 30, 2013. (Assume net income for the second and third quarter was \$3,000,000.)

Part C

On October 1, 2013, Nicklaus Corporation receives permission to replace its \$1 par value common stock (5,000,000 shares authorized, 3,000,000 shares issued, and 2,900,000 shares outstanding) with a new common stock issue having a \$.50 par value. Since the new par value is one-half the amount of the old, this represents a 2-for-1 stock split. That is, the shareholders will receive two shares of the \$.50 par stock in exchange for each share of the \$1 par stock they own. The \$1 par stock will be collected and destroyed by the issuing corporation.

excel

On November 1, 2013, the Nicklaus Corporation declares a \$.05 per share cash dividend on common stock and a \$.25 per share cash dividend on preferred stock. Payment is scheduled for December 1, 2013, to shareholders of record on November 15, 2013.

On December 2, 2013, the Nicklaus Corporation declares a 1% stock dividend payable on December 28, 2013, to shareholders of record on December 14. At the date of declaration, the common stock was selling in the open market at \$10 per share. The dividend will result in 58,000 (.01 × 5,800,000) additional shares being issued to shareholders.

Required:

1. Prepare journal entries to record the declaration and payment of these stock and cash dividends.
2. Prepare the December 31, 2013, shareholders' equity section of the balance sheet for the Nicklaus Corporation. (Assume net income for the fourth quarter was \$2,500,000.)
3. Prepare a statement of shareholders' equity for Nicklaus Corporation for 2013.

P 18-13
 Quasi reorganization (based on Appendix 18)
 ● Appendix

A new CEO was hired to revive the floundering Champion Chemical Corporation. The company had endured operating losses for several years, but confidence was emerging that better times were ahead. The board of directors and shareholders approved a quasi reorganization for the corporation. The reorganization included devaluing inventory for obsolescence by \$105 million and increasing land by \$5 million. Immediately prior to the restatement, at December 31, 2013, Champion Chemical Corporation's balance sheet appeared as follows (in condensed form):

CHAMPION CHEMICAL CORPORATION
Balance Sheet
At December 31, 2013
 (\$ in millions)

Cash	\$ 20
Receivables	40
Inventory	230
Land	40
Buildings and equipment (net)	90
	<u>\$420</u>
Liabilities	\$240
Common stock (320 million shares at \$1 par)	320
Additional paid-in capital	60
Retained earnings (deficit)	(200)
	<u>\$420</u>

Required:

1. Prepare the journal entries appropriate to record the quasi reorganization on January 1, 2014.
2. Prepare a balance sheet as it would appear immediately after the restatement.

Broaden Your Perspective

Apply your critical-thinking ability to the knowledge you've gained. These cases will provide you an opportunity to develop your research, analysis, judgment, and communication skills. You also will work with other students, integrate what you've learned, apply it in real world situations, and consider its global and ethical ramifications. This practice will broaden your knowledge and further develop your decision-making abilities.

Real World Case 18-1
 Initial public offering of common stock; Dolby Laboratories

● LO18-4

Real World Financials

Ray Dolby started **Dolby Laboratories** and since then has been a leader in the entertainment industry and consumer electronics. Closely held since its founding in 1965, Dolby decided to go public. Here's an AP news report:

DOLBY'S IPO EXPECTED TO PLAY SWEET MUSIC

The initial public offering market is hoping for a big bang this week from Dolby Laboratories Inc. The San Francisco company, whose sound systems and double-D logo are ubiquitous in the movie industry as well as in consumer electronics, plans to sell 27.5 million shares for \$13.50 to \$15.50 each. Founded by Cambridge-trained scientist Ray Dolby 39 years ago, the company started out manufacturing noise-reduction equipment for the music industry that eliminated the background "hiss" on recordings, and has since expanded to encompass everything from digital audio systems to Dolby Surround sound. The company's IPO, which is lead-managed by underwriters Morgan Stanley and Goldman Sachs Group Inc., is expected to do well not only because of its brand recognition, but also because of its strong financials. (AP)

Required:

1. Assuming the shares are issued at the midpoint of the price range indicated, how much capital did the IPO raise for Dolby Laboratories before any underwriting discount and offering expenses?
2. If the par amount is \$.01 per share, what journal entry did Dolby use to record the sale?

Analysis**Case 18–2**

Statement of shareholders' equity

- LO18–1, LO18–3, LO18–6, LO18–7

The shareholders' equity portion of the balance sheet of Sessel's Department Stores, Inc., a large regional specialty retailer, is as follows:

SESSEL'S DEPARTMENT STORES, INC.		
Comparative Balance Sheets		
Shareholders' Equity Section		
(\$ in 000s, except per share amounts)	Dec. 31, 2014	Dec. 31, 2013
Shareholders' Equity		
Preferred stock—\$1 par value; 20,000 total shares authorized,		
Series A—600 shares authorized, issued, and outstanding, \$50 per share liquidation preference	\$ 57,700	\$ —
Series B—33 shares authorized, no shares outstanding		
Common stock—\$.10 par; 200,000 shares authorized, 19,940 and 18,580 shares issued and outstanding at Dec. 31, 2014, and Dec. 31, 2013, respectively		
	1,994	1,858
Additional paid-in capital	227,992	201,430
Retained income	73,666	44,798
Total shareholders' equity	\$361,352	\$248,086

Disclosures elsewhere in Sessel's annual report revealed the following changes in shareholders' equity accounts for 2014, 2013, 2012:

2014:

1. The only changes in retained earnings during 2014 were preferred dividends on preferred stock of \$3,388,000 and net income.
2. The preferred stock is convertible. During the year, 6,592 shares were issued. All shares were converted into 320,000 shares of common stock. No gain or loss was recorded on the conversion.
3. Common shares were issued in a public offering and upon the exercise of stock options. On the statement of shareholders' equity, Sessel's reports these two items on a single line entitled: "Issuance of shares."

2013:

1. Net income: \$12,126,000.
2. Issuance of common stock: 5,580,000 shares at \$112,706,000.

2012:

1. Net income: \$13,494,000.
2. Issuance of common stock: 120,000 shares at \$826,000.

Required:

From these disclosures, prepare comparative statements of shareholders' equity for 2014, 2013, and 2012.

Communication**Case 18–3**

IFRS; Is preferred stock debt or equity? Group interaction

- LO18–1, LO18–9

An unsettled question in accounting for stock is: Should preferred stock be recognized as a liability, or should it be considered equity? Under International Financial Reporting Standards, preferred stock (preference shares) often is reported as debt with the dividends reported in the income statement as interest expense. Under U.S. GAAP, that is the case only for "mandatorily redeemable" preferred stock.

Two opposing viewpoints are:

View 1: Preferred stock should be considered equity.

View 2: Preferred stock should be reported as a liability.

In considering this question, focus on conceptual issues regarding the practicable and theoretically appropriate treatment, unconstrained by GAAP.

Required:

1. Which view do you favor? Develop a list of arguments in support of your view prior to the class session for which the case is assigned.
2. In class, your instructor will pair you (and everyone else) with a classmate (who also has independently developed an argument).

- a. You will be given three minutes to argue your view to your partner. Your partner likewise will be given three minutes to argue his or her view to you. During these three-minute presentations, the listening partner is not permitted to speak.
 - b. Then after each person has had a turn attempting to convince his or her partner, the two partners will have a three-minute discussion in which they will decide which view is more convincing and arguments will be merged into a single view for each pair.
3. After the allotted time, a spokesperson for each of the two views will be selected by the instructor. Each spokesperson will field arguments from the class in support of that view's position and list the arguments on the board. The class then will discuss the merits of the two lists of arguments and attempt to reach a consensus view, though a consensus is not necessary.

Research Case 18-4
 FASB codification; comprehensive income; locate and extract relevant information and authoritative support for a financial reporting issue; integrative; Cisco Systems

● LO18-2

Real World Financials

Titan Networking became a public company through an IPO (initial public offering) two weeks ago. You are looking forward to the challenges of being assistant controller for a publicly owned corporation. One such challenge came in the form of a memo in this morning's in-box. "We need to start reporting comprehensive income in our financials," the message from your boss said. "Do some research on that, will you? That concept didn't exist when I went to school." In response, you sought out the financial statements of **Cisco Systems**, the networking industry leader. The following are excerpts from disclosure notes from Cisco's 2011 annual report:

Comprehensive Income (Loss) (in part)			
The components of comprehensive income (loss), net of tax, are as follows (in millions):			
	Years Ended		
	July 25, 2011	July 26, 2010	July 28, 2009
Net income (loss)	\$6,490	\$7,767	\$6,134
Other comprehensive income (loss):			
Change in unrealized gains and losses on investments net of tax benefit (expense) of \$(83), \$(182), and \$43 in fiscal 2011, 2010, and 2009, respectively	169	(183)	(38)
Change in derivative instruments	(21)	48	(33)
Change in cumulative translation adjustment and other	538	(55)	(192)
Total comprehensive income	\$7,176	\$7,577	\$5,871

Required:

1. Locate the financial statements of Cisco at www.sec.gov or Cisco's website. Search the 2011 annual report for information about how Cisco accounts for comprehensive income. What does Cisco report in its balance sheet regarding comprehensive income?
2. Obtain the relevant authoritative literature on reporting comprehensive income using the FASB's Codification Research System. You might gain access from the FASB website (www.fasb.org), from your school library, or some other source. Identify the specific citation from the authoritative literature that describes the three alternative formats for reporting comprehensive income.
3. What is comprehensive income? How does it differ from net income? Where is it reported in a balance sheet? Why does Cisco's 2011 other comprehensive income not reconcile with the beginning (\$623 million) and ending (\$1,294 million) balances of accumulated OCI? Explain.
4. One component of Other comprehensive income for Cisco is "Change in net unrealized gains on investments." What does this mean? From the information Cisco's financial statements provide, determine how the company calculated the \$1,294 million accumulated other comprehensive income at the end of fiscal 2011.
5. What might be possible causes for the "Other" component of Cisco's Other comprehensive income?

Judgment Case 18-5

Treasury stock; stock split; cash dividends; Alcoa

● LO18-5 through LO18-8

Real World Financials

Alcoa is the world's leading producer of primary aluminum, fabricated aluminum, and alumina. The following is a press release from the company:

ALCOA ANNOUNCES 33% INCREASE IN BASE DIVIDEND, 2-FOR-1 STOCK SPLIT
 PITTSBURGH—Alcoa today announced that its Board of Directors approved a base quarterly dividend increase of 33.3%, to 25 cents per common share from 18.75 cents per share. For a full year, base dividends will now total \$1.00 compared with 75 cents before the increase.

2-FOR-1 STOCK SPLIT

The Board declared a two-for-one split of Alcoa’s common stock. The stock split is subject to approval of Alcoa shareholders who must approve an amendment to the company’s articles to increase the authorized shares of common stock at Alcoa’s annual meeting. Shareholders of record on May 26 will receive an additional common share for each share held, which will be distributed on June 9.

COMMITMENT TO STOCK REPURCHASE PROGRAM

Alcoa restated its commitment to its previously authorized share repurchase program which it announced last year.

Required:

1. What are the two primary reporting alternatives Alcoa has in accounting for the repurchase of its shares? What would be the effect of the optional courses of action on total shareholders’ equity? Explain. What would be the effect of the optional courses of action on how stock would be presented in Alcoa’s balance sheet? If the shares are later resold for an amount greater than cost, how should Alcoa account for the sale?
2. What are the two primary courses of action Alcoa has in accounting for the stock split, and how would the choice affect Alcoa’s shareholders’ equity? Why?
3. How should Alcoa account for the cash dividend, and how would it affect Alcoa’s balance sheet? Why?

Communication Case 18–6

Issuance of shares; share issue costs; prepare a report

● LO18–4

You are the newest member of the staff of Brinks & Company, a medium-size investment management firm. You are supervised by Les Kramer, an employee of two years. Les has a reputation as being technically sound but has a noticeable gap in his accounting education. Knowing you are knowledgeable about accounting issues, he requested you provide him with a synopsis of accounting for share issue costs.

“I thought the cost of issuing securities is recorded separately and expensed over time,” he stated in a handwritten memo. “But I don’t see that for IBR’s underwriting expenses. What gives?”

He apparently was referring to a disclosure note on a page of IBR’s annual report, photocopied and attached to his memo. To raise funds for expansion, the company sold additional shares of its \$.10 par common stock. The following disclosure note appeared in the company’s most recent annual report:

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Note 10—Stock Transactions (in part)

In February and March, the Company sold 2,395,000 shares of Common Stock at \$22.25 per share in a public offering. Net proceeds to the Company were approximately \$50.2 million after the underwriting discount and offering expenses.

Required:

Write a formal memo to your supervisor. Briefly explain how share issue costs are accounted for and how that accounting differs from that of debt issue costs. To make sure your explanation is understood in context of the footnote, include in your memo the following:

- a. At what total amount did the shares sell to the public? How is the difference between this amount and the \$50.2 million net proceeds accounted for?
- b. The appropriate journal entry to record the sale of the shares.

Analysis Case 18–7

Analyzing financial statements; price-earnings ratio; dividend payout ratio

● LO18–1

AGF Foods Company is a large, primarily domestic, consumer foods company involved in the manufacture, distribution, and sale of a variety of food products. Industry averages are derived from Troy’s *The Almanac of Business and Industrial Financial Ratios* and Dun and Bradstreet’s *Industry Norms and Key Business Ratios*. Following are the 2013 and 2012 comparative income statements and balance sheets for AGF. The market price of AGF’s common stock is \$47 during 2013. (The financial data we use are from actual financial statements of a well-known corporation, but the company name used in our illustration is fictitious and the numbers and dates have been modified slightly to disguise the company’s identity.)

Profitability is the key to a company’s long-run survival. Profitability measures focus on a company’s ability to provide an adequate return relative to resources devoted to company operations.

AGF FOODS COMPANY		
Years Ended December 31, 2013 and 2012		
(\$ in millions)	2013	2012
Comparative Income Statements

Total shareholders' equity	<u>2,931</u>	<u>2,671</u>
Total liabilities and shareholders' equity	<u>\$5,345</u>	<u>\$4,684</u>

Required:

1. Calculate the return on shareholders' equity for AGF. The average return for the stocks listed on the New York Stock Exchange in a comparable period was 18.8%. What information does your calculation provide an investor?
2. Calculate AGF's earnings per share and earnings-price ratio. The average return for the stocks listed on the New York Stock Exchange in a comparable time period was 5.4%. What does your calculation indicate about AGF's earnings?

Ethics**Case 18–8**

The Swiss label maker; value of shares issued for equipment

● LO18–4

Bricker Graphics is a privately held company specializing in package labels. Representatives of the firm have just returned from Switzerland, where a Swiss firm is manufacturing a custom-made high speed, color labeling machine. Confidence is high that the new machine will help rescue Bricker from sharply declining profitability. Bricker's chief operating officer, Don Benson, has been under fire for not reaching the company's performance goals of achieving a rate of return on assets of at least 12%.

The afternoon of his return from Switzerland, Benson called Susan Sharp into his office. Susan is Bricker's Controller.

Benson: I wish you had been able to go. We have some accounting issues to consider.

Sharp: I wish I'd been there, too. I understand the food was marvelous. What are the accounting issues?

Benson: They discussed accepting our notes at the going rate for a face amount of \$12.5 million. We also discussed financing with stock.

Sharp: I thought we agreed; debt is the way to go for us now.

Benson: Yes, but I've been thinking. We can issue shares for a total of \$10 million. The labeler is custom-made and doesn't have a quoted selling price, but the domestic labelers we considered went for around \$10 million. It sure would help our rate of return if we keep the asset base as low as possible.

Required:

1. How will Benson's plan affect the return measure? What accounting issue is involved?
2. Is the proposal ethical?
3. Who would be affected if the proposal is implemented?

Research

Case 18-9

Researching the way shareholders' equity transactions are reported; retrieving financial statements from the Internet

- LO18-1, LO18-6

EDGAR, the Electronic Data Gathering, Analysis, and Retrieval system, performs automated collection, validation, indexing, and forwarding of submissions by companies and others who are required by law to file forms with the U.S. Securities and Exchange Commission (SEC). All publicly traded domestic companies use EDGAR to make the majority of their filings. (Filings by foreign companies are not required to be filed on EDGAR, but some of these companies do so voluntarily.) Form 10-K, which includes the annual report, is required to be filed on EDGAR. The SEC makes this information available on the Internet.

Required:

1. Access EDGAR on the Internet at www.sec.gov.
2. Search for a public company with which you are familiar. Access its most recent 10-K filing. Search or scroll to find the statement of shareholders' equity and related note(s). If a statement of shareholders' equity is not provided, try another company.
3. Determine from the statement the transactions that occurred during the most recent three years that affected retained earnings.
4. Determine from the statement the transactions that occurred during the most recent three years that affected common stock. Were any of these transactions identified in requirement 3 also?
5. Cross-reference your findings with amounts reported on the balance sheet. How do these two statements articulate with one another?

Communication

Case 18-10

Should the present two-category distinction between liabilities and equity be retained? Group interaction.

- LO18-1

The current conceptual distinction between liabilities and equity defines liabilities independently of assets and equity, with equity defined as a residual amount. The present proliferation of financial instruments that combine features of both debt and equity and the difficulty of drawing a distinction have led many to conclude that the present two-category distinction between liabilities and equity should be eliminated. Two opposing viewpoints are:

View 1: The distinction should be maintained.

View 2: The distinction should be eliminated and financial instruments should instead be reported in accordance with the priority of their claims to enterprise assets.

One type of security that often is mentioned in the debate is convertible bonds. Although stock in many ways, such a security also obligates the issuer to transfer assets at a specified price and redemption date. Thus it also has features of debt. In considering this question, focus on conceptual issues regarding the practicable and theoretically appropriate treatment, unconstrained by GAAP.

Required:

1. Which view do you favor? Develop a list of arguments in support of your view prior to the class session for which the case is assigned.
2. In class, your instructor will pair you (and everyone else) with a classmate (who also has independently developed an argument).
 - a. You will be given three minutes to argue your view to your partner. Your partner likewise will be given three minutes to argue his or her view to you. During these three-minute presentations, the listening partner is not permitted to speak.
 - b. Then after each person has had a turn attempting to convince his or her partner, the two partners will have a three-minute discussion in which they will decide which view is more convincing and arguments will be merged into a single view for each pair.
3. After the allotted time, a spokesperson for each of the two views will be selected by the instructor. Each spokesperson will field arguments from the class in support of that view's position and list the arguments on the board. The class then will discuss the merits of the two lists of arguments and attempt to reach a consensus view, though a consensus is not necessary.

Air France—KLM Case

AIRFRANCE

● LO18-9

Air France—KLM (AF), a French company, prepares its financial statements according to International Financial Reporting Standards. AF's annual report for the year ended March 31, 2011, which includes financial statements and disclosure notes, is provided with all new textbooks. This material also is included in AF's "Registration Document 2010–11," dated June 15, 2011 and is available at www.airfranceklm.com.

Required:

1. Air France—KLM lists four items in the shareholders' equity section of its balance sheet. If AF used U.S. GAAP, what would be the likely account titles for the first and fourth of those components?
2. Locate Note 27.4 in AF's financial statements. What items comprise "Reserves and retained earnings" as reported in the balance sheet? If Air France—KLM used U.S. GAAP, what would be different for the reporting of these items?
3. Describe the apparent differences in the order of presentation of the components of liabilities and shareholders' equity between IFRS as applied by AF and a typical balance sheet prepared in accordance with U.S. GAAP.

Share-Based Compensation
and Earnings Per Share

OVERVIEW

We've discussed a variety of employee compensation plans in prior chapters, including pension and other postretirement benefits in Chapter 17. In this chapter we look at some common forms of compensation in which the amount of the compensation employees receive is tied to the market price of company stock. We will see that these *share-based* compensation plans—stock awards, stock options, and stock appreciation rights—create shareholders' equity, which was the topic of the previous chapter, and which also often affects the way we calculate earnings per share, the topic of the second part of the current chapter. Specifically, we view these as *potential common shares* along with convertible securities, and we calculate earnings per share as if the securities already had been exercised or converted into additional common shares.

LEARNING
OBJECTIVES

After studying this chapter, you should be able to:

- **LO19-1** Explain and implement the accounting for stock award plans. (p. 1140)
- **LO19-2** Explain and implement the accounting for stock options. (p. 1141)
- **LO19-3** Explain and implement the accounting for employee share purchase plans. (p. 1150)
- **LO19-4** Distinguish between a simple and a complex capital structure. (p. 1153)
- **LO19-5** Describe what is meant by the weighted-average number of common shares. (p. 1153)
- **LO19-6** Differentiate the effect on EPS of the sale of new shares, a stock dividend or stock split, and the reacquisition of shares. (p. 1154)
- **LO19-7** Describe how preferred dividends affect the calculation of EPS. (p. 1156)
- **LO19-8** Describe how options, rights, and warrants are incorporated in the calculation of EPS. (p. 1157)
- **LO19-9** Describe how convertible securities are incorporated in the calculation of EPS. (p. 1159)
- **LO19-10** Determine whether potential common shares are antidilutive. (p. 1162)
- **LO19-11** Determine the three components of the proceeds used in the treasury stock method. (p. 1166)
- **LO19-12** Explain the way contingently issuable shares are incorporated in the calculation of EPS. (p. 1168)
- **LO19-13** Describe the way EPS information should be reported in an income statement. (p. 1170)
- **LO19-14** Discuss the primary differences between U.S. GAAP and IFRS with respect to accounting for share-based compensation and earnings per share. (pp. 1148, 1152, and 1172)

FINANCIAL REPORTING CASE

Proper Motivation?

The coffee room discussion Thursday morning was particularly lively. Yesterday's press release describing National Electronic Ventures' choice of Sandra Veres as its president and chief operating officer was today's hot topic in all the company's departments. The press release noted that Ms. Veres's compensation package includes elements beyond salary that are intended to not only motivate her to accept the offer, but also to remain with the company and work to increase shareholder value. Excerpts from the release follow:

National Electronic Ventures, Inc., today announced it had attracted G. Sandra Veres, respected executive from the wireless communications industry, to succeed chairman Walter Kovac. Veres will assume the new role as CEO on Jan. 1, 2013. Ms. Veres will receive a compensation package at NEV of more than \$1 million in salary, stock options to buy more than 800,000 shares of NEV stock and a grant of restricted stock.

National Electronic Ventures, Inc., today announced it had attracted G. Sandra Veres, respected executive from the wireless communications industry, to succeed chairman Walter Kovac. Veres will assume the new role as CEO on Jan. 1, 2013. Ms. Veres will receive a compensation package at NEV of more than \$1 million in salary, stock options to buy more than 800,000 shares of NEV stock and a grant of restricted stock.

By the time you finish this chapter, you should be able to respond appropriately to the questions posed in this case. Compare your response to the solution provided at the end of the chapter.

1. How can a compensation package such as this serve as an incentive to Ms. Veres? (p. 1139)
2. Ms. Veres received a "grant of restricted stock." How should NEV account for the grant? (p. 1140)
3. Included were stock options to buy more than 800,000 shares of NEV stock. How will the options affect NEV's compensation expense? (p. 1142)
4. How will the presence of these and other similar stock options affect NEV's earnings per share? (p. 1157)

QUESTIONS

SHARE-BASED COMPENSATION

Employee compensation plans frequently include share-based awards. These may be outright awards of shares, stock options, or cash payments tied to the market price of shares. Sometimes only key executives participate in a stock benefit plan. Typically, an executive compensation plan is tied to performance in a strategy that uses compensation to motivate its recipients. Some firms pay their directors entirely in shares. Actual compensation depends on the market value of the shares. Obviously, that's quite an incentive to act in the best interests of shareholders.

Although the variations of share-based compensation plans are seemingly endless, each shares common goals. Whether the plan is a stock award plan, a stock option plan, a stock appreciation rights (SARs) plan, or one of the several similar plans, the goals are to provide compensation to designated employees, while sometimes providing those employees with some sort of performance incentive. Likewise, our goals in accounting for each of these plans are the same for each: (1) to determine the fair value of the compensation and (2) to expense

PART A

FINANCIAL Reporting Case

Q1, p. 1139

The accounting objective is to record compensation expense over the periods in which related services are performed.

Usually, restricted shares are subject to forfeiture if the employee doesn't remain with the company.

● LO19-1

Illustration 19-1

Restricted Stock Award Plan—Sears Holdings

Real World Financials

FINANCIAL Reporting Case

Q2, p. 1139

Illustration 19-2

Restricted Stock Award Plan

The total compensation is the market value of the shares (\$12) times five million shares.

The \$60 million is accrued to compensation expense over the four-year service period.

that compensation over the periods in which participants perform services. The issue is not trivial. Salary often is a minor portion of executive pay relative to stock awards and stock options, which, combined, averaged almost \$9.6 million per chief executive in 2010.¹

Stock Award Plans

Executive compensation sometimes includes a grant of shares of stock. Usually, such shares are restricted in such a way as to provide some incentive to the recipient. Typically, restricted stock award plans are tied to continued employment. In a **restricted stock** plan, shares actually are awarded in the name of the employee, although the company might retain physical possession of the shares. The employee has all rights of a shareholder, subject to certain restrictions or forfeiture. Ordinarily, the shares are subject to forfeiture by the employee if employment is terminated within some specified number of years from the date of grant. The employee usually is not free to sell the shares during the restriction period and a statement to that effect often is inscribed on the stock certificates. These restrictions give the employee incentive to remain with the company until rights to the shares vest. Illustration 19-1 describes the restricted award plan for the **Sears Holdings Corporation**.

Stock-based Compensation (in part)

The Company has granted restricted stock awards to certain associates. These restricted stock awards typically vest in full three years from the date of grant, provided the grantee remains employed by the Company as of the vesting date. The fair value of these awards is equal to the market price of the Company's common stock on the date of grant.

The compensation associated with a share of restricted stock (or nonvested stock) is the market price at the grant date of an unrestricted share of the same stock. This amount is accrued as compensation expense over the service period for which participants receive the shares, usually from the date of grant to when restrictions are lifted (the vesting date).² This is demonstrated in Illustration 19-2.

Once the shares vest and the restrictions are lifted, paid-in capital—restricted stock is replaced by common stock and paid-in capital—excess of par.

The amount of the compensation is measured at the date of grant—at the market price on that date. Any market price changes that might occur after that don't affect the total compensation.

Under its restricted stock award plan, Universal Communications grants five million of its \$1 par common shares to certain key executives at January 1, 2013. The shares are subject to forfeiture if employment is terminated within four years. Shares have a current market price of \$12 per share.

January 1, 2013

No entry

Calculate total compensation expense:

\$12	Fair value per share
× 5 million	Shares awarded
= \$60 million	Total compensation

The total compensation is to be allocated to expense over the four-year service (vesting) period: 2013–2016

$$\$60 \text{ million} \div 4 \text{ years} = \$15 \text{ million per year}$$

(continued)

¹The median pay for top executives at 200 major companies according to a study conducted for *The New York Times* by Equilar, a compensation consulting firm based in Redwood City, CA.

²Restricted stock plans usually are designed to comply with Tax Code Section 83 to allow employee compensation to be nontaxable to the employee until the year the shares become substantially vested, which is when the restrictions are lifted. Likewise, the employer gets no tax deduction until the compensation becomes taxable to the employee.

December 31, 2013, 2014, 2015, 2016		(\$ in millions)
Compensation expense (\$60 million ÷ 4 years)	15	
Paid-in capital—restricted stock		15
December 31, 2016		
Paid-in capital—restricted stock (5 million shares at \$12)	60	
Common stock (5 million shares at \$1 par)		5
Paid-in capital—excess of par (difference)		55

Illustration 19–2

(concluded)

When restrictions are lifted, paid-in capital—restricted stock, is replaced by common stock and paid-in capital—excess of par.

If restricted stock is forfeited because, say, the employee leaves the company, entries previously made related to that specific employee would simply be reversed. This would result in a decrease in compensation expense in the year of forfeiture. The total compensation, adjusted for the forfeited amount, is then allocated over the remaining service period.

Additional Consideration

An alternative way of accomplishing the same result is to debit deferred compensation for the full value of the restricted shares (\$60 million in the illustration) on the date they are granted:

Deferred compensation (5 million shares at \$12)	60	
Common stock (5 million shares at \$1 par)		5
Paid-in capital—excess of par (difference)		55

If so, deferred compensation is reported as a reduction in shareholders' equity, resulting in a zero net effect on shareholders' equity. Then, deferred compensation is credited when compensation expense is debited over the service period. Just as in Illustration 19–2, the result is an increase in both compensation expense and shareholders' equity each year over the vesting period.

Stock Option Plans

More commonly, employees aren't actually awarded shares, but rather are given the option to buy shares in the future. In fact, **stock options** have become an integral part of the total compensation package for key officers of most medium and large companies.³ As with any compensation plan, the accounting objective is to report compensation expense during the period of service for which the compensation is given.

● LO19–2

Expense—The Great Debate

Stock option plans give employees the option to purchase (a) a specified number of shares of the firm's stock, (b) at a specified price, (c) during a specified period of time. One of the most heated controversies in standard-setting history has been the debate over the amount of compensation to be recognized as expense for stock options. At issue is how the value of stock options is measured, which for most options determines whether any expense at all is recognized.

Historically, options have been measured at their **intrinsic values**—the simple difference between the market price of the shares and the option price at which they can be acquired. For instance, an option that permits an employee to buy \$25 stock for \$10 has an intrinsic value of \$15. However, plans in which the exercise price equals the market value of the underlying stock at the date of grant (which describes most executive stock option plans) have no intrinsic value and therefore result in zero compensation when measured this way, even though the fair value of the options can be quite significant. In one year, **eBay** CEO Meg Whitman exercised enough stock options to realize a pretax profit of \$117 million from selling shares. To many, it seems counterintuitive to not recognize compensation expense for plans that routinely provide executives with a substantial part of their total compensation.

³In a recent survey of 500 corporations, 488 companies disclosed the existence of stock option plans (AICPA, *Accounting Trends and Techniques*, 2010, p. 375).

FINANCIAL Reporting Case

Q3, p. 1139

After lengthy debate, the FASB consented to encourage, rather than require, that the fair value of options be recognized as expense.

There were consistent criticisms of the FASB's requirement to expense option compensation.

FAILED ATTEMPT TO REQUIRE EXPENSING. This is where the controversy ensues. In 1993, the FASB issued an Exposure Draft of a new standard that would have required companies to measure options at their *fair values* at the time they are granted and to expense that amount over the appropriate service period. To jump straight to the punch line, the FASB bowed to public pressure and agreed to withdraw the requirement before it became a standard. The FASB consented to encourage, rather than require, that fair value compensation be recognized as expense. Companies were permitted to continue accounting under prior GAAP (the intrinsic value method referred to in the previous paragraph).⁴ Before we discuss the details of accounting for stock options, it's helpful to look back at what led the FASB to first propose fair value accounting and later rescind that proposal.

As the 1990s began, the public was becoming increasingly aware of the enormity of executive compensation in general and compensation in the form of stock options in particular. The lack of accounting for this compensation was apparent, prompting the SEC to encourage the FASB to move forward on its stock option project. Even Congress got into the fray when, in 1992, a bill was introduced that would require firms to report compensation expense based on the fair value of options. Motivated by this encouragement, the FASB issued its exposure draft in 1993. The real disharmony began then. Opposition to the proposed standard was broad and vehement; and that perhaps is an understatement. Critics based their opposition on one or more of three objections:

1. *Options with no intrinsic value at issue have zero fair value and should not give rise to expense recognition.* The FASB, and even some critics of the proposal, were adamant that options provide valuable compensation at the grant date to recipients.
2. *It is impossible to measure the fair value of the compensation on the grant date.* The FASB argued vigorously that value can be approximated using one of several **option pricing models**. These are statistical models that use computers to incorporate information about a company's stock and the terms of the stock option to estimate the options' fair value. We might say the FASB position is that it's better to be approximately right than precisely wrong.
3. *The proposed standard would have unacceptable economic consequences.* Essentially, this argument asserted that requiring this popular means of compensation to be expensed would cause companies to discontinue the use of options.

The opposition included corporate executives, auditors, members of Congress, and the SEC.⁵ Ironically, the very groups that provided the most impetus for the rule change initially—the SEC and Congress—were among the most effective detractors in the end. The only group that offered much support at all was the academic community, and that was by-and-large nonvocal support. In reversing its decision, the FASB was not swayed by any of the specific arguments of any opposition group. Dennis Beresford, chair of the FASB at the time, indicated that it was fear of government control of the standard-setting process that prompted the Board to modify its position. The Board remained steadfast that the proposed change was appropriate.

VOLUNTARY EXPENSING. Prior to 2002, only two companies—**Boeing** and **Winn-Dixie**—reported stock option compensation expense at fair value. However, in 2002 public outrage mounted amid high-profile accounting scandals at **Enron**, **WorldCom**, **Tyco**, and others. Some degree of consensus emerged that greed on the part of some corporate executives contributed to the fraudulent and misleading financial reporting at the time. In fact, many in the media were pointing to the proliferation of stock options as a primary form of compensation

Frank Partnoy—Author, *Infectious Greed*

... the increase in the use of stock options coincided with a massive increase in accounting fraud by corporate executives, who benefited from short-term increases in their stock prices.⁶

⁴"Accounting for Stock Issued to Employees," *Opinions of the Accounting Principles Board No. 25* (New York: AICPA, 1972). This pronouncement is superseded and therefore is not codified in the FASB Accounting Research System.

⁵All of the then "Big Six" CPA firms lobbied against the proposal. Senator Lieberman of Connecticut introduced a bill in Congress that if passed would have forbidden the FASB from passing a requirement to expense stock option compensation.

⁶Frank Partnoy, *Infectious Greed: How Deceit and Risk Corrupted the Financial Markets* (New York: Henry Holt/Times Books, Spring 2003), p. 159.

as a culprit in fueling that greed. An episode of the PBS series *Frontline* argued that not expensing the value of stock options contributed to the collapse of Enron. For these reasons, renewed interest surfaced in requiring stock option compensation to be reported in income statements.

CURRENT REQUIREMENT TO EXPENSE. Emerging from the rekindled debate was a GAAP revision that now requires fair value accounting for employee stock options, eliminating altogether the intrinsic value approach.⁷ As you might expect, the proposal did not come without opposition. Many of the same groups that successfully blocked the FASB from enacting a similar requirement in 1995 led the opposition. Not surprisingly, at the forefront of the resistance were the high-tech companies that extensively use stock options as a primary form of compensating employees and thus are most susceptible to a reduction in reported earnings when that compensation is included in income statements. For example, consider **Apple Inc.**'s earnings for the 12 months ending March 27, 2004. Reported net income of \$179 million would have been only \$56 million, or 69% less, if the GAAP revision had been in effect then.⁸

It's important to note that the way we account for stock options has no effect whatsoever on cash flows, only on whether the value of stock options is included among expenses. This is not to say that companies haven't altered their compensation strategies. Already, we have seen a shift in the way some companies compensate their employees. Partly due to the negative connotation that has become associated with executive stock options, we've seen fewer options and more bonuses and restricted stock awards. Let's examine the way stock options are accounted for now.

Recognizing the Fair Value of Options

Accounting for stock options parallels the accounting for restricted stock we discussed in the first part of this chapter. That is, we measure compensation as the fair value of the stock options at the grant date and then record that amount as compensation expense over the service period for which employees receive the options. Estimating the fair value requires the use of one of several option pricing models. These mathematical models assimilate a variety of information about a company's stock and the terms of the stock option to estimate the option's fair value. The model should take into account the:

- Exercise price of the option.
- Expected term of the option.
- Current market price of the stock.
- Expected dividends.
- Expected risk-free rate of return during the term of the option.
- Expected volatility of the stock.

The current GAAP for accounting for employee stock options modified the way companies actually measure fair value. It calls for using models that permit greater flexibility in modeling the ways employees are expected to exercise options and their expected employment termination patterns after options vest.⁹ Option-pricing theory, on which the pricing models are based, is a topic explored in depth in finance courses and is subject to active empirical investigation and development. A simplified discussion is provided in Appendix 19A.¹⁰

The total compensation as estimated by the options' fair value is reported as compensation expense over the period of service for which the options are given. Recipients normally are not allowed to exercise their options for a specified number of years. This delay provides added incentive to remain with the company. The time between the date options are granted

Current GAAP now requires companies to record the value of options in their income statements.

We've witnessed a discernable shift in the way executives are compensated—fewer options, more stock awards and bonuses.

The fair value of a stock option can be determined by employing a recognized option pricing model.

An option pricing model takes into account several variables.

The techniques for estimating fair value have been among the most controversial issues in the debate.

⁷FASB ASC 718—Compensation (previously “Share-Based Payment,” *Statement of Financial Accounting Standards No. 123 (revised 2004)*, (Norwalk, Conn.: FASB 2004)).

⁸Alex Salkever, “What Could Crunch Apple Shares,” *BusinessWeek*, July 12, 2004, p. 11.

⁹FASB ASC 718—10—55—30 to 32: Compensation—Stock Compensation—Overall—Implementation and Guidance Illustrations—Selecting or Estimating the Expected Term (previously “Share-Based Payment,” *Statement of Financial Accounting Standards No. 123 (revised 2004)*, (Norwalk, Conn.: FASB 2004), par. A27–A29)).

¹⁰An expanded discussion is provided in FASB ASC 718—10—55: Compensation—Stock Compensation—Overall—Implementation and Guidance Illustrations (previously *SFAS No. 123 (revised 2004)*).

and the first date they can be exercised is the vesting period and usually is considered to be the service period over which the compensation expense is reported. The process is demonstrated in Illustration 19–3.

Illustration 19–3

Stock Options

Fair value is estimated at the date of grant.

The value of the award is expensed over the service period for which the compensation is provided.

Option compensation expense is based on the number of options expected to vest.

At January 1, 2013, Universal Communications grants options that permit key executives to acquire 10 million of the company's \$1 par common shares within the next eight years, but not before December 31, 2016 (the vesting date). The exercise price is the market price of the shares on the date of grant, \$35 per share. The fair value of the options, estimated by an appropriate option pricing model, is \$8 per option.

January 1, 2013

No entry

Calculate total compensation expense:

\$ 8	Estimated fair value per option
× 10 million	Options granted
= \$80 million	Total compensation

The total compensation is to be allocated to expense over the four-year service (vesting) period: 2013–2016

$$\$80 \text{ million} \div 4 \text{ years} = \$20 \text{ million per year}$$

December 31, 2013, 2014, 2015, 2016

	(\$ in millions)
Compensation expense (\$80 million ÷ 4 years)	20
Paid-in capital—stock options	20

ESTIMATED FORFEITURES. If previous experience indicates that a material number of the options will be forfeited before they vest (due to employee turnover or violation of other terms of the options), we adjust the fair value estimate made on the grant date to reflect that expectation. For instance, if a forfeiture rate of 5% is expected, Universal's estimated total compensation would be 95% of \$80 million, or \$76 million. In that case, the annual compensation expense in Illustration 19–3 would have been \$19 million (\$76/4) instead of \$20 million. We see the effect of that possibility in Illustration 19–3A.

Illustration 19–3A

Estimates with Revisions

The value of the compensation is originally estimated to be \$76 million, or \$19 million per year.

The expense each year is the current estimate of total compensation that should have been recorded to date less the amount already recorded.

When forfeiture estimates change, the cumulative effect on compensation is reflected in current earnings.

	(\$ in millions)
2013	
Compensation expense (\$80 × 95% ÷ 4)	19
Paid-in capital—stock options	19
2014	
Compensation expense (\$80 × 95% ÷ 4)	19
Paid-in capital—stock options	19
2015	
Compensation expense [(\$80 × 90% × 3/4) – (\$19 + 19)]	16
Paid-in capital—stock options	16
2016	
Compensation expense [(\$80 × 90% × 4/4) – (\$19 + 19 + 16)]	18
Paid-in capital—stock options	18

What if that expectation changes later? Universal should adjust the cumulative amount of compensation expense recorded to date in the year the estimate changes.¹¹ Suppose, for instance, that during 2015, the third year, Universal revises its estimate of forfeitures from 5% to 10%. The new estimate of total compensation would then be \$80 million × 90%, or \$72 million. For the first three years, the portion of the total compensation that should have

¹¹FASB ASC 718–10–35–3: Compensation—Stock Compensation—Overall—Subsequent Measurement (previously “Share-Based Payment,” *Statement of Financial Accounting Standards No. 123 (revised 2004)*, (Norwalk, Conn.: FASB 2004), par. 43).

been reported would be \$72 million $\times \frac{3}{4}$, or \$54 million, and since \$38 million ($\$19 \times 2$) of that was recorded in 2013–2014 before the estimate changed, an additional \$16 million would now be recorded in 2015. Then if the estimate isn't changed again, the remaining \$18 million ($\$72 - 54$) would be recorded in 2016.

Additional Consideration

Notice that the \$18 million in 2016 is the amount that would have been reported in each of the four years if Universal had assumed a 10% forfeiture rate from the beginning. Also be aware that this approach is contrary to the usual way companies account for changes in estimates. For instance, assume a company acquires a four-year depreciable asset having an estimated residual value of 5% of cost. The \$76 million depreciable cost would be depreciated straight line at \$19 million over the four-year useful life. If the estimated residual value changes after two years to 10%, the new estimated depreciable cost of \$72 would be reduced by the \$38 million depreciation recorded the first two years, and the remaining \$34 million would be depreciated equally, \$17 million per year, over the remaining two years.

When Options are Exercised

If half the options in Illustration 19–3 (five million shares) are exercised on July 11, 2019, when the market price is \$50 per share, the following journal entry is recorded:

July 11, 2019	(\$ in millions)
Cash ($\$35$ exercise price \times 5 million shares)	175
Paid-in capital—stock options ($\frac{1}{2}$ account balance)	40
Common stock (5 million shares at \$1 par per share)	5
Paid-in capital—excess of par (to balance)	210

Recording the exercise of options is not affected by the market price on the exercise date.

Notice that the market price at exercise is irrelevant. Changes in the market price of underlying shares do not influence the previously measured fair value of options.

When Unexercised Options Expire

If options that have vested expire without being exercised, the following journal entry is made (assuming the remaining 5 million options in our illustration are allowed to expire):

	(\$ in millions)
Paid-in capital—stock options (account balance)	40
Paid-in capital—expiration of stock options	40

Paid-in capital—stock options becomes paid-in capital—expiration of stock options, when options expire without being exercised.

In effect, we rename the paid-in capital attributable to the stock option plan. Compensation expense for the four years' service, as of the measurement date, is not affected.

Additional Consideration

Tax Consequences of Stock-Based Compensation Plans

In Illustration 19–3 we ignored the tax effect. To illustrate the effect of taxes, let's assume Universal Communications' income tax rate is 40%.

For tax purposes, plans can either qualify as "incentive stock option plans" under the Tax Code or be "nonqualified plans." Among the requirements of a qualified option plan is that the exercise price be equal to the market price at the grant date. Under a qualified incentive plan, the recipient pays no income tax until any shares acquired from exercise of stock options are subsequently sold. On the other hand, the company gets no tax deduction at all. With a nonqualified plan the employee can't delay paying income tax,

(continued)

Tax treatment favors the employer in a nonqualified stock option plan.

Because an incentive plan provides no tax deduction, it has no deferred tax consequences.

A deferred tax asset is recognized now for the future tax savings from the tax deduction when the nonqualified stock options are exercised.

If the eventual tax savings exceed the deferred tax asset, the difference is recognized as equity.

(concluded)

but the employer is permitted to deduct the difference between the exercise price and the market price at the exercise date. Let's consider both.

Case 1. With an incentive plan, the employer receives no tax deduction at all.

If Universal's plan qualifies as an incentive plan, the company will receive no tax deduction upon exercise of the options and thus no tax consequences.

Case 2. On the other hand, if we assume the plan does not qualify as an incentive plan, Universal will deduct from taxable income the difference between the exercise price and the market price at the exercise date. Recall from Chapter 16 that this creates a temporary difference between accounting income (for which compensation expense is recorded currently) and taxable income (for which the tax deduction is taken later upon the exercise of the options). We assume the temporary difference is the cumulative amount expensed for the options. The following entries would be recorded on the dates shown:

December 31, 2013, 2014, 2015, 2016	(\$ in millions)
Compensation expense (\$80 million ÷ 4 years)	20
Paid-in capital—stock options	20
Deferred tax asset (40% × \$20 million)	8
Income tax expense	8

The after-tax effect on earnings is thus \$12 million each year (\$20 – 8).

If all of the options (ten million shares) are exercised on April 4, 2018:

Cash (\$35 exercise price × 10 million shares)	350
Paid-in capital—stock options (account balance)	80
Common stock (10 million shares at \$1 par per share)	10
Paid-in capital—excess of par (to balance)	420

a. Options exercised when the tax benefit exceeds the deferred tax asset:

If the market price on April 4, 2018, is \$50 per share:

Income taxes payable [(\$50 – 35) × 10 million shares × 40%]	60
Deferred tax asset (4 years × \$8 million)	32
Paid-in capital—tax effect of stock options (remainder)*	28

b. Options exercised when the tax benefit is less than the deferred tax asset:

If the market price on April 4, 2018, is \$40 per share:

Income taxes payable [(\$40 – 35) × 10 million shares × 40%]	20
Paid-in capital—tax effect of stock options or retained earnings [†] (remainder)	12
Deferred tax asset (4 years × \$8 million)	32

The tax consequences of all nonqualifying stock options as well as restricted stock plans also are accounted for in the manner demonstrated above.

*This treatment is consistent with a provision of FASB ASC 740–20–45–11d that requires the tax effect of an increase or decrease in equity (paid-in capital—stock options, in this case) be allocated to equity.

[†]Paid-in capital—tax effect of stock options is debited only if that account has a sufficient credit balance from previous transactions in which the tax benefit exceeded the deferred tax asset.

International Financial Reporting Standards

Recognition of Deferred Tax Asset for Stock Options. Under U.S. GAAP, a deferred tax asset (DTA) is created for the cumulative amount of the fair value of the options the company has recorded for compensation expense. The DTA is the tax rate times the amount of compensation.

(continued)

(concluded)

Under IFRS, the deferred tax asset isn't created until the award is "in the money;" that is, it has intrinsic value. When it is in the money, the addition to the DTA is the portion of the intrinsic value earned to date times the tax rate.

For illustration, refer to Case 2 in the Additional Consideration example on the previous page. Now assume the share price, which was equal to the \$35 exercise price on January 1, 2013, was \$35, \$37, \$37, and \$37.50 on December 31, 2013, 2014, 2015, and 2016, respectively. We need this information to determine the intrinsic value for IFRS.

The addition to the DTA and reduction in the tax expense (tax benefit) is calculated in the following table for both U.S. GAAP and IFRS (\$ in millions):

Dec. 31	Compensation expense	Addition to DTA and reduction in tax expense at 40% U.S. GAAP	Cumulative reduction in tax expense	Intrinsic value (price – \$35) × 10M shares	Cumulative percent of services received	Percent × Intrinsic value	Addition to DTA and reduction in tax expense at 40%* IFRS
2013	\$20	\$ 8	\$ 8	\$ 0	25%	\$ 0	\$ 0
2014	20	8	16	20	50%	10	4
2015	20	8	24	20	75%	15	2
2016	20	8	32	25	100%	25	4

December 31, 2013, 2014, 2015, 2016 (\$ in millions)	U.S. GAAP	IFRS
Compensation expense (\$80 million ÷ 4 years)	20	20
Paid-in capital—stock options	20	20
Deferred tax asset	8	0
Income tax expense	8	0
Deferred tax asset	8	4
Income tax expense	8	4
Deferred tax asset	8	2
Income tax expense	8	2
Deferred tax asset	8	4
Income tax expense	8	4

*The tax benefit recorded in earnings (cumulative amount in this column) cannot exceed the cumulative tax effect of the compensation (4th column). Any tax benefit in excess of that amount is recorded in equity. In 2016, \$10 (\$0 + 4 + 2 + 4) does not exceed \$32.

● LO19-14

IFRS ILLUSTRATION

Plans with Graded Vesting

The stock option plans we've discussed so far vest (become exercisable) on one single date (e.g., four years from date of grant). This is referred to as *cliff vesting*. More frequently, though, awards specify that recipients gradually become eligible to exercise their options rather than all at once. This is called *graded vesting*. For instance, a company might award stock options that vest 25% the first year, 25% the second year, and 50% the third year, or maybe 25% each year for four years.

In such a case, the company can choose to account for the options essentially the same as the cliff-vesting plans we've discussed to this point. It can estimate a single fair value for each of the options, even though they vest over different time periods, using a single weighted-average expected life of the options. The company then allocates that total compensation cost (fair value per option times number of options) over the entire vesting period.

Most companies, though, choose a slightly more complex method because it usually results in a lower expense.¹² In this approach, we view each vesting group (or tranche) separately, as if it were a separate award. See Illustration 19-4.

¹²The fair value of the options usually is higher when estimated using a single weighted-average expected life of the options rather than when estimated as the total of fair values of the multiple vesting groups.

Illustration 19–4

Stock Options; Graded Vesting; Separate Valuation Approach

Taggart Mobility issued **10 million** executive stock options permitting executives to buy 10 million shares of stock for \$25. The vesting schedule is 20% the first year, 30% the second year, and 50% the third year (graded vesting). The value of the options that vest over the 3-year period is estimated at January 1, 2013, by separating the total award into three groups (or tranches) according to the year in which they vest (because the expected life for each group differs). The fair value of the options is estimated as follows:

Vesting Date	Amount Vesting	Fair Value per Option
Dec. 31, 2013	20%	\$3.50
Dec. 31, 2014	30%	\$4.00
Dec. 31, 2015	50%	\$6.00

The compensation expense related to the options to be recorded each year 2013–2015 is:

Vesting Date	Number Vesting (shares in millions)	Fair Value per Option	Compensation Cost (\$ in millions)
Dec. 31, 2013	2	\$3.50	\$ 7
Dec. 31, 2014	3	\$4.00	12
Dec. 31, 2015	5	\$6.00	30
Total	10		\$49

We allocate the compensation cost for each of the three groups (tranches) evenly over its individual vesting (service) period:

Shares Vesting at:	Compensation Expense Recorded in: (\$ in millions)			
	2013	2014	2015	Total
Dec. 31, 2013	\$ 7			\$ 7
Dec. 31, 2014	6	\$ 6		12
Dec. 31, 2015	10	10	\$10	30
	\$23	\$16	\$10	= \$49

At any given date, a company must have recognized at least the amount vested by that date. The allocation in this instance meets that constraint:

- The \$23 million recognized in 2013 exceeds the \$7 million vested.
- The \$39 million (\$23 + \$16) recognized by 2014 exceeds the \$19 million (\$7 + \$12) vested by the same time.

Companies also can choose to use the straight-line method, which would allocate the \$49 million total compensation cost equally to 2013, 2014, and 2015 at \$16.333 million per year.

International Financial Reporting Standards

When options have graded vesting, U.S. GAAP permits companies to account for each vesting amount separately, for instance as if there were three separate awards as in the previous illustration, but also allows companies the option to account for the entire award on a straight-line basis over the entire vesting period. Either way, the company must recognize at least the amount of the award that has vested by that date.

Under IFRS, the straight-line choice is not permitted. Also, there's no requirement that the company must recognize at least the amount of the award that has vested by each reporting date.

● LO19–14

Plans with Performance or Market Conditions

Stock option (and other share-based) plans often specify a performance condition or a market condition that must be satisfied before employees are allowed the benefits of the award. The objective is to provide employees with additional incentive for managerial achievement. For instance, an option might not be exercisable until a performance target is met. The target could be divisional revenue, earnings per share, sales growth, or rate of return on assets. The possibilities are limitless. On the other hand, the target might be market-related, perhaps a specified stock price or a stock price change exceeding a particular index. The way we account for such plans depends on whether the condition is performance-based or market-based.

The terms of performance options vary with some measure of performance that ties rewards to productivity.

PLANS WITH PERFORMANCE CONDITIONS. Whether we recognize compensation expense for performance-based options depends (a) initially on whether it's probable¹³ that the performance target will be met and (b) ultimately on whether the performance target actually is met. Accounting is as described earlier for other stock options. Initial estimates of compensation cost as well as subsequent revisions of that estimate take into account the likelihood of both forfeitures and achieving performance targets. For example, in Illustration 19–3, if the options described also had included a condition that the options would become exercisable only if sales increase by 10% after four years, we would estimate the likelihood of that occurring; specifically, is it probable? Let's say we initially estimate that it is probable that sales will increase by 10% after four years. Then, our initial estimate of the total compensation would have been unchanged at:

$$\begin{array}{rcccl}
 \$10 \text{ million} & \times & \$8 & = & \$80 \text{ million} \\
 \text{Options} & & \text{Fair value} & & \text{Estimated} \\
 \text{expected} & & & & \text{total} \\
 \text{to vest} & & & & \text{compensation}
 \end{array}$$

Suppose, though, that after two years, we estimate that it is *not* probable that sales will increase by 10% after four years. Then, our new estimate of the total compensation would change to:

$$\begin{array}{rcccl}
 0 & \times & \$8 & = & 0 \\
 \text{Options} & & \text{Fair value} & & \text{Estimated} \\
 \text{expected} & & & & \text{total} \\
 \text{to vest} & & & & \text{compensation}
 \end{array}$$

In that case, we would reverse the \$40 million expensed in 2013–2014. No compensation can be recognized for options that don't vest due to performance targets not being met, and that's our expectation.

Conversely, assume that our initial expectation is that it is *not* probable that sales will increase by 10% after four years and so we record no annual compensation expense. But then, in the third year, we estimate that it *is* probable that sales will increase by 10% after four years. At that point, our revised estimate of the total compensation would change to \$80 million, and we would reflect the cumulative effect on compensation in 2015 earnings and record compensation thereafter:

If compensation from a stock option depends on meeting a performance target, compensation is recorded only if we feel it's probable the target will be met.

If it later becomes probable that a performance target will not be met, we reverse any compensation expense already recorded.

When we revise our estimate of total compensation because our expectation of probability changes, we record the effect of the change in the current period.

If we had begun with our new estimate of total compensation, \$20 million would have been expensed in each of the first three years.

2015		
Compensation expense [(\$80 × ¾) – \$0]	60	
Paid-in capital—stock options		60
2016		
Compensation expense [(\$80 × ¼) – \$60]	20	
Paid-in capital—stock options		20

¹³“Probable” means the same as it did in Chapter 13 when we were estimating the likelihood that payment would be made for a loss contingency and elsewhere when making accounting estimates. Probable is a matter of professional judgement (often 70–75%).

If the target is based on changes in the market rather than on performance, we record compensation as if there were no target.

PLANS WITH MARKET CONDITIONS. If the award contains a market condition (e.g., a share option with an exercisability requirement based on the stock price reaching a specified level), then no special accounting is required. The fair value estimate of the share option already implicitly reflects market conditions due to the nature of share option pricing models. So, we recognize compensation expense regardless of when, if ever, the market condition is met.

DECLINE IN POPULARITY OF OPTIONS. Recent years have witnessed a steady shift in the way companies compensate their top executives. In the wake of recent accounting scandals, the image of stock options has been tarnished in the view of many who believe that the potential to garner millions in stock option gains created incentives for executives to boost company stock prices through risky or fraudulent behavior. That image has motivated many firms to move away from stock options in favor of other forms of share-based compensation, particularly restricted stock awards. Also contributing to the rise of restricted stock is the feeling by many that it better aligns pay with performance. As of 2011, the value of restricted stock awards given to top executives had surpassed the value of stock options awarded.

In today's world, stock options are still important, but other equity compensation plans are rapidly assuming greater importance. Companies such as Amazon.com and Microsoft are moving from stock options to restricted stock.¹⁴

Employee Share Purchase Plans

● LO19-3

Share purchase plans permit employees to buy shares directly from the corporation.

Employee share purchase plans often permit all employees to buy shares directly from their company at favorable terms. The primary intent of these plans is to encourage employee ownership of the company's shares. Presumably loyalty is enhanced among employee-shareholders. The employee also benefits because, typically, these plans allow employees to buy shares from their employer without brokerage fees and, perhaps, at a slight discount. Some companies even encourage participation by matching or partially matching employee purchases.

As long as (a) substantially all employees can participate, (b) employees have no longer than one month after the price is fixed to decide whether to participate, and (c) the discount is no greater than 5% (or can be justified as reasonable), accounting is straightforward. Simply record the sale of new shares as employees buy shares.

If these criteria for the plan being noncompensatory are not met, say the discount is 15%, accounting is similar to other share-based plans. The 15% discount to employees, then, is considered to be compensation, and that amount is recorded as expense.¹⁵ Compensation expense replaces the cash debit for any employer-provided portion. Say an employee buys shares (no par) under the plan for \$850 rather than the current market price of \$1,000. The \$150 discount is recorded as compensation expense:

Cash (discounted price)	850	
Compensation expense (\$1,000 × 15%)	150	
Common stock (market value)		1,000

¹⁴"Beyond Stock Options," *National Center for Employee Ownership*, 9th ed. (January 2011).

¹⁵FASB ASC 718-50-25-1 and 2: Compensation-Stock Compensation-Employee Share Purchase Plans-Recognition (previously "Share-Based Payment," *Statement of Financial Accounting Standards No. 123 (revised 2004)*, (Norwalk, Conn.: FASB 2004), par. 12-13).

Decision Makers' Perspective

In several previous chapters, we have revisited the concept of “earnings quality” (as first defined in Chapter 4). We also have noted that one rather common practice that negatively influences earnings quality is earnings management, which refers to companies’ use of one or more of several techniques designed to artificially increase (or decrease) earnings. A frequent objective of earnings management is to meet analysts’ expectations regarding projections of income. The share-based compensation plans we discuss in this chapter suggest another motive managers sometimes have to manipulate income. If a manager’s personal compensation includes company stock, stock options, or other compensation based on the value of the firm’s stock, it’s not hard to imagine an increased desire to ensure that market expectations are met and that reported earnings have a positive effect on stock prices. In fact, as we discussed earlier, that is precisely the reaction these incentive compensation plans are designed to elicit. Investors and creditors, though, should be alert to indications of attempts to artificially manipulate income and realize that the likelihood of earnings management is probably higher for companies with generous share-based compensation plans.

One way managers might manipulate numbers is to low-ball the data that go into the option-pricing models. The models used to estimate fair value are built largely around subjective assumptions. That possibility emphasizes the need for investors to look closely at the assumptions used as reported in the stock option disclosure note, and particularly at how those assumptions change from year to year. ●

Analysts should be aware of the possibility of earnings management as a way to increase managers' compensation.

Concept Review Exercise

Listed below are transactions dealing with various stock benefit plans of Fortune-Time Corporation during the period 2013–2015. The market price of the stock is \$45 at January 1, 2013.

- On January 1, 2013, the company issued 10 million common shares to divisional managers under its restricted stock award plan. The shares are subject to forfeiture if employment is terminated within three years.
- On January 1, 2013, the company granted incentive stock options to its senior management exercisable for 1.5 million common shares. The options must be exercised within five years, but not before January 1, 2015. The exercise price of the stock options is equal to the fair value of the common stock on the date the options are granted. An option pricing model estimates the fair value of the options to be \$4 per option. All recipients are expected to remain employed through the vesting date.
- Recorded compensation expense on December 31, 2013.
- A divisional manager holding 1 million of the restricted shares left the company to become CEO of a competitor on September 15, 2014, before the required service period ended.
- Recorded compensation expense on December 31, 2014.

Required:

Prepare the journal entries that Fortune-Time recorded for each of these transactions. (Ignore any tax effects.)

Solution:

January 1, 2013

Restricted Stock Award Plan

No entry.

Total compensation is measured as 10 million shares \times \$45 = \$450 million

Stock Options

No entry.

Total compensation is measured as 1.5 million shares \times \$4 = \$6 million

SHARE-BASED COMPENSATION PLANS

December 31, 2013			
Restricted Stock			(\$ in millions)
Compensation expense (\$450 million ÷ 3 years)		150	
Paid-in capital—restricted stock			150
Stock Options			
Compensation expense (\$6 million ÷ 2 years)		3	
Paid-in capital—stock options			3
September 15, 2014			
Restricted Stock			
Paid-in capital—restricted stock (10% × \$150)		15	
Compensation expense			15
December 31, 2014			
Restricted Stock			
Compensation expense [$\$450 - (.10 \times \$450) - 150 + 15$] ÷ 2 years		135	
Paid-in capital—restricted stock			135
Stock Options			
Compensation expense (\$6 million ÷ 2 years)		3	
Paid-in capital—stock options			3

PART B

EARNINGS PER SHARE

Earnings per share is the single accounting number that receives the most media attention.

Comparability is an enhancing characteristic of relevant accounting information (Conceptual Framework).

A typical corporate annual report contains four comparative financial statements, an extensive list of disclosure notes and schedules, and several pages of charts, tables, and textual descriptions. Of these myriad facts and figures, the single accounting number that is reported most frequently in the media and receives by far the most attention by investors and creditors is **earnings per share** (EPS). The reasons for the considerable attention paid to earnings per share certainly include the desire to find a way to summarize the performance of business enterprises into a single number.

Summarizing performance in a way that permits comparisons is difficult because the companies that report the numbers are different from one another. And yet, the desire to condense performance to a single number has created a demand for EPS information. The profession has responded with rules designed to maximize the comparability of EPS numbers by minimizing the inconsistencies in their calculation from one company to the next.¹⁷

Keep in mind as you study the requirements that a primary goal is comparability. As a result, many of the rules devised to achieve consistency are unavoidably arbitrary, meaning that other choices the FASB might have made in many instances would be equally adequate.

Users' decisions involve choosing between alternatives Consequently, information about a reporting entity is more useful if it can be compared with similar information about other entities and with similar information about the same entity for another period or another date.¹⁶

● LO19-14

International Financial Reporting Standards

Earnings per Share. The earnings per share requirements of U.S. GAAP, FASB ASC 260: *Earnings per Share*, are a result of the FASB's cooperation with the IASB to narrow the differences between IFRS and U.S. GAAP. A few differences remain. The differences that remain are the result of differences in the application of the treasury stock method, the treatment of contracts that may be settled in shares or cash, and contingently issuable shares.

¹⁶SFAC 8, AQC 20. *Conceptual Framework for Financial Reporting: Chapter 1, The Objective of General Purpose Reporting and Chapter 3, Qualitative Characteristics of Useful Financial Information*, (Norwalk, Conn.: FASB, September, 2010).

¹⁷FASB ASC 260: Earnings per Share (previously "Earnings per Share," *Statement of Financial Accounting Standards No. 128* (Norwalk, Conn.: FASB, 1997)).

Basic Earnings Per Share

A firm is said to have a **simple capital structure** if it has no outstanding securities that could potentially dilute earnings per share. In this context, to dilute means to *reduce* earnings per share. For instance, if a firm has convertible bonds outstanding and those bonds are converted, the resulting increase in common shares could decrease (or dilute) earnings per share. That is, the new shares replaced by the converted bonds might participate in future earnings. So convertible bonds are referred to as **potential common shares**. Other potential common shares are convertible preferred stock, stock options, and contingently issuable shares. We will see how the potentially dilutive effects of these securities are included in the calculation of EPS later in this chapter. Now, though, our focus is on the calculation of EPS for a simple capital structure—when no potential common shares are present. In these cases, the calculation is referred to as **basic EPS**, and is simply earnings available to common shareholders divided by the weighted-average number of common shares outstanding.

In the most elemental setting, earnings per share (or net loss per share) is merely a firm's net income (or net loss) divided by the number of shares of common stock outstanding throughout the year. The calculation becomes more demanding (a) when the number of shares has changed during the reporting period, (b) when the earnings available to common shareholders are diminished by dividends to preferred shareholders, or (c) when we attempt to take into account the impending effect of potential common shares (which we do in a later section of the chapter). To illustrate the calculation of EPS in each of its dimensions, we will use only one example in this chapter. We'll start with the most basic situation and then add one new element at a time until we have considered all the principal ways the calculation can be affected. In this way you can see the effect of each component of earnings per share, not just in isolation, but in relation to the effects of other components as well. The basic calculation is shown in Illustration 19–5.

A firm has a simple capital structure if it has no potential common shares.

● LO19–4

Basic EPS reflects no dilution, only shares now outstanding.

EPS expresses a firm's profitability on a per share basis.

Sovran Financial Corporation reported net income of \$154 million in 2013 (tax rate 40%). Its capital structure consisted of:

Common Stock

Jan. 1 60 million common shares were outstanding
(amounts in millions, except per share amount)

Basic EPS:

$$\frac{\text{Net income}}{\text{Shares outstanding}} = \$2.57$$

$$\frac{\$154}{60} = \$2.57$$

Illustration 19–5

Fundamental Calculation

In the most elemental setting, earnings per share is simply a company's earnings divided by the number of shares outstanding.

Issuance of New Shares

Because the shares discussed in Illustration 19–5 remained unchanged throughout the year, the denominator of the EPS calculation is simply the number of shares outstanding. But if the number of shares has changed, it's necessary to find the *weighted average* of the shares outstanding during the period the earnings were generated. For instance, if an additional 12 million shares had been issued on March 1 of the year just ended, we calculate the weighted-average number of shares to be 70 million as demonstrated in Illustration 19–6 on the next page.

Because the new shares were outstanding only 10 months, or $^{10}/_{12}$ of the year, we increase the 60 million shares already outstanding by the additional shares—weighted by the fraction of the year ($^{10}/_{12}$) they were outstanding. The weighted average is $60 + 12(^{10}/_{12}) = 60 + 10 = 70$ million shares. The reason for time-weighting the shares issued is that the resources the stock sale provides the company are available for generating income only after the date the shares are sold. So, weighting is necessary to make the shares in the fraction's denominator consistent with the income in its numerator.

● LO19–5

Illustration 19–6

Weighted Average

Any new shares issued are time-weighted by the fraction of the period they were outstanding and then added to the number of shares outstanding for the entire period.

Sovran Financial Corporation reported net income of \$154 million for 2013 (tax rate 40%). Its capital structure included:

Common Stock

Jan. 1 60 million common shares were outstanding
 Mar. 1 12 million new shares were sold
 (amounts in millions, except per share amount)

Basic EPS:

$$\frac{\text{Net income}}{\text{60 Shares at Jan. 1} + \text{12 (} \frac{10}{12} \text{) New shares}} = \frac{\$154}{70} = \$2.20$$

Stock Dividends and Stock Splits

- LO19–6 Recall that a stock dividend or a stock split is a distribution of additional shares to existing shareholders. But there's an important and fundamental difference between the increase in shares caused by a stock dividend and an increase from selling new shares. When new shares are sold, both assets and shareholders' equity are increased by an additional investment in the firm by shareholders. On the other hand, a stock dividend or stock split merely increases the number of shares without affecting the firm's assets. In effect, the same pie is divided into more pieces. The result is a larger number of less valuable shares. This fundamental change in the nature of the shares is reflected in a calculation of EPS by simply increasing the number of shares.

In Illustration 19–7, notice that the additional shares created by the stock dividend are *not* weighted for the time period they were outstanding. Instead, the increase is treated as if it occurred at the beginning of the year.

Illustration 19–7

Stock Dividends and Stock Splits

Shares outstanding prior to the stock dividend are retroactively restated to reflect the 10% increase in shares—that is, treated as if the distribution occurred at the beginning of the period.

Sovran Financial Corporation reported net income of \$154 million in 2011 (tax rate 40%). Its capital structure included:

Common Stock

Jan. 1 60 million common shares were outstanding
 Mar. 1 12 million new shares were sold
 June 17 A 10% stock dividend was distributed
 (amounts in millions, except per share amount)

Basic EPS:

$$\frac{\text{Net income}}{\text{60 Shares at Jan. 1} + \text{(1.10) Stock dividend adjustment} + \text{12 (} \frac{10}{12} \text{) New shares} + \text{(1.10) Stock dividend adjustment}} = \frac{\$154}{77} = \$2.00$$

The number of shares outstanding after a 10% stock dividend is 1.10 times higher than before. This multiple is applied to both the beginning shares and the new shares sold before the stock distribution. If this had been a 25% stock dividend, the multiple would have been 1.25; a 2-for-1 stock split means a multiple of 2; and so on.

Notice that EPS without the 10% stock dividend (\$2.20) is 10% more than it is with the stock distribution (\$2). This is caused by the increase in the number of shares. But, unlike a sale of new shares, this should not be interpreted as a “dilution” of earnings per share.

Shareholders' interests in their company's earnings have not been diluted. Instead, each shareholder's interest is represented by more—though less valuable—shares.

A simplistic but convenient way to view the effect is to think of the predistribution shares as having been “blue.” After the stock dividend, the more valuable “blue” shares are gone, replaced by a larger number of, let's say, “green” shares. From now on, we compute the earnings per “green” share, whereas we previously calculated earnings per “blue” share. We restate the number of shares retroactively to reflect the stock dividend, as if the shares always had been “green.” After all, our intent is to let the calculation reflect the fundamental change in the nature of the shares.

Additional Consideration

When last year's EPS is reported in the current year's comparative income statements, it too should reflect the increased shares from the stock dividend. For instance, suppose EPS was \$2.09 for 2012: \$115 million net income divided by 55 million weighted-average shares. When reported again for comparison purposes in the 2013 comparative income statements, that figure would be restated to reflect the 10% stock dividend [$\$115 \div (55 \times 1.10) = \1.90]:

Earnings per Share:	2013	2012
	\$2.00	\$1.90

The EPS numbers now are comparable—both reflect the stock dividend. Otherwise we would be comparing earnings per “green” share with earnings per “blue” share; this way both are earnings per “green” share.

Reacquired Shares

If shares were reacquired during the period (either retired or as treasury stock), the weighted-average number of shares is reduced. The number of reacquired shares is time-weighted for the *fraction of the year they were not outstanding*, prior to being *subtracted* from the number of shares outstanding during the period. Let's modify our continuing illustration to assume 8 million shares were reacquired on October 1 as treasury stock (Illustration 19–8).

Sovran Financial Corporation reported net income of \$154 million in 2013 (tax rate 40%). Its capital structure included:

Common Stock

Jan. 1	60 million common shares outstanding
Mar. 1	12 million new shares were sold
June 17	A 10% stock dividend was distributed
Oct. 1	8 million shares were reacquired as treasury stock

(amounts in millions, except per share amounts)

Basic EPS:

$$\frac{\text{Net income } \$154}{\begin{array}{ccccccc} 60 & (1.10) & + & 12 & (1.10) & - & 8 \\ \text{Shares} & \uparrow & & \text{New} & \uparrow & & \text{Treasury} \\ \text{at Jan. 1} & \text{Stock dividend} & & \text{shares} & & & \text{shares} \\ & \text{adjustment*} & & & & & \end{array}} = \frac{\$154}{75} = \$2.05$$

*Not necessary for the treasury shares since they were reacquired after the stock dividend and thus already reflect the adjustment (that is, the shares repurchased are 8 million “new green” shares).

Illustration 19–8

Reacquired Shares

The 8 million shares reacquired as treasury stock are weighted by $(\frac{3}{12})$ to reflect the fact they were not outstanding the last three months of the year.

The adjustment for reacquired shares is the same as for new shares sold except the shares are deducted rather than added.

Any sales or purchases of shares that occur before, but not after, a stock dividend or split are affected by the distribution.

Compare the adjustment for treasury shares with the adjustment for new shares sold. Each is time-weighted for the fraction of the year the shares were or were not outstanding. But also notice two differences. The new shares are added, while the reacquired shares are subtracted. The second difference is that the reacquired shares are not multiplied by 1.10 to adjust for the 10% stock dividend. The reason is the shares were repurchased after the June 17 stock dividend; the reacquired shares are 8 million of the new post-distribution shares. (To use our earlier representation, these are 8 million “green” shares.) To generalize, when a stock distribution occurs during the reporting period, any sales or purchases of shares that occur *before* the distribution are increased by the distribution. But the stock distribution does not increase the number of shares sold or purchased, if any, *after* the distribution.

Earnings Available to Common Shareholders

- LO19-7 The denominator in an EPS calculation is the weighted-average number of common shares outstanding. Logically, the numerator should similarly represent earnings available to common shareholders. This was automatic in our illustrations to this point because the only shares outstanding were common shares. But when a senior class of shareholders (like preferred shareholders) is entitled to a specified allocation of earnings (like preferred dividends), those amounts are subtracted from earnings before calculating earnings per share.¹⁸ This is demonstrated in Illustration 19-9.

Illustration 19-9 Preferred Dividends

Preferred dividends are subtracted from net income so that “earnings available to common shareholders” is divided by the weighted-average number of common shares.

Sovran Financial Corporation reported net income of \$154 million in 2013 (tax rate 40%). Its capital structure included:

Common Stock

January 1	60 million common shares were outstanding
March 1	12 million new shares were sold
June 17	A 10% stock dividend was distributed
October 1	8 million shares were reacquired as treasury stock

Preferred Stock Nonconvertible

January 1–December 31 5 million shares 8%, \$10 par

(amounts in millions, except per share amount)

Basic EPS:

Net income		Preferred dividends				
\$154		-\$4*				= $\frac{\$150}{75} = \2.00
60	(1.10)	+	12 ^(10/12)	(1.10)	-	8 ^(3/12)
Shares at Jan. 1			New shares			Treasury shares
	↑		↑			
			Stock dividend adjustment*			

*8% × \$10 par × 5 million shares.

Preferred dividends reduce earnings available to common shareholders unless the preferred stock is noncumulative and no dividends were declared that year.

Suppose no dividends were declared for the year. Should we adjust for preferred dividends? Yes, if the preferred stock is cumulative—and most preferred stock is. This means that when dividends are not declared, the unpaid dividends accumulate to be paid in a future year when (if) dividends are subsequently declared. Obviously, the presumption is that, although the year’s dividend preference isn’t distributed this year, it eventually will be paid.

¹⁸You learned in Chapter 18 that when dividends are declared, preferred shareholders have a preference (over common shareholders) to a specified amount.

We have encountered no potential common shares to this point in our continuing illustration. As a result, we have what is referred to as a simple capital structure. (Although, at this point, you may question this label.) For a simple capital structure, a single presentation of basic earnings per common share is appropriate. We turn our attention now to situations described as complex capital structures. In these situations, two separate presentations are required: basic EPS and diluted EPS.

Diluted Earnings Per Share

Potential Common Shares

Imagine a situation in which convertible bonds are outstanding that will significantly increase the number of common shares if bondholders exercise their options to exchange their bonds for shares of common stock. Should these potential shares be ignored when earnings per share is calculated? After all, they haven't been converted as yet, so to assume an increase in shares for a conversion that may never occur might mislead investors and creditors. On the other hand, if conversion is imminent, not taking into account the dilutive effect of the share increase might mislead investors and creditors. The profession's solution to the dilemma is to calculate earnings per share twice.

Securities such as these convertible bonds, while not being common stock, may become common stock through their exercise or conversion. Therefore, they may dilute (reduce) earnings per share and are called **potential common shares**. A firm is said to have a **complex capital structure** if potential common shares are outstanding. Besides convertible bonds, other potential common shares are convertible preferred stock, stock options, and contingently issuable securities. (We'll discuss each of these shortly.) A firm with a complex capital structure reports two EPS calculations. **Basic EPS** ignores the dilutive effect of such securities, **diluted EPS** incorporates the dilutive effect of all potential common shares.

In a complex capital structure, a second EPS computation takes into account the assumed effect of potential common shares, essentially a "worst case scenario."

Options, Rights, and Warrants

Stock options, stock rights, and stock warrants are similar. Each gives its holders the right to exercise their option to purchase common stock, usually at a specified exercise price. The dilution that would result from their exercise should be reflected in the calculation of diluted EPS, but not basic EPS.

To include the dilutive effect of a security means to calculate EPS *as if* the potential increase in shares already has occurred (even though it hasn't yet). So, for stock options (or rights, or warrants), we pretend the options have been exercised. In fact, we assume the options were exercised at the beginning of the reporting period, or when the options were issued if that's later. We then assume the cash proceeds from selling the new shares at the exercise price are used to buy back as many shares as possible at the shares' average market price during the year. This is demonstrated in Illustration 19–10 on the next page.

When we simulate the exercise of the stock options, we calculate EPS as if 15 million shares were sold at the beginning of the year. This obviously increases the number of shares in the denominator by 15 million shares. But it is insufficient to simply add the additional shares without considering the accompanying consequences. Remember, if this hypothetical scenario had occurred, the company would have had \$300 million cash proceeds from the exercise of the options (15 million shares \times \$20 exercise price per share). What would have been the effect on earnings per share? This depends on what the company would have done with the \$300 million cash proceeds. Would the proceeds have been used to buy more equipment? Increase the sales force? Expand facilities? Pay dividends?

Obviously, there are literally hundreds of choices, and it's unlikely that any two firms would spend the \$300 million exactly the same way. But remember, our objective is to create some degree of uniformity in the way firms determine earnings per share so the resulting numbers are comparable. So, standard-setters decided on a single assumption for all firms to provide some degree of comparability.

● LO19–8

Stock options are assumed to have been exercised when calculating diluted EPS.

FINANCIAL Reporting Case

Q4, p. 1139

Additional Consideration

In our diluted EPS calculation, we “pretend” the options are exercised at the end of the period or at the time of actual exercise, if earlier, with shares repurchased at the average share price for the period for which the options were still outstanding before actually being exercised. Let’s say the options in our illustration were exercised on October 1 and that the average per-share price of the stock then was \$30. In that case, we assume the proceeds (15 million shares \times \$20 = \$300 million) are used to purchase shares at \$30, or 10 million shares:

$$\begin{array}{r}
 15 \text{ million shares} \\
 \times \$ 20 \text{ (exercise price)} \\
 \hline
 \$300 \text{ million} \\
 \div \$ 30 \text{ (average price during the period Jan. 1 – Sept. 30)} \\
 \hline
 10 \text{ million shares}
 \end{array}$$

The incremental number of shares to be included in the computation of diluted EPS, then, is weighted for the period the options were outstanding, the 9 months from January 1–October 1, or $\frac{9}{12}$ of a year. Thus, we would add to the denominator:

$$\begin{array}{l}
 15 - 10 = 5 \text{ million shares} \\
 5 \text{ million shares} \times \frac{9}{12} = 3.75 \text{ million shares,} \\
 \text{rather than the 3 million shares we used in the illustration. The 15 million} \\
 \text{shares actually sold upon the exercise of the options on Oct. 1 are weighted} \\
 \text{in the denominator of both basic and diluted EPS for the } \frac{9}{12} \text{ of a year they} \\
 \text{are outstanding.}
 \end{array}$$

Convertible Securities

Sometimes corporations include a conversion feature as part of a bond offering, a note payable, or an issue of preferred stock. Convertible securities can be converted into (exchanged for) shares of stock at the option of the holder of the security. For that reason, convertible securities are potentially dilutive. EPS will be affected if and when such securities are converted and new shares of common stock are issued. In the previous section you learned that the potentially dilutive effect of stock options is reflected in diluted EPS calculations by assuming the options were exercised. Similarly, the potentially dilutive effect of convertible securities is reflected in diluted EPS calculations by assuming they were converted.

By the *if converted method* as it’s called, we assume the conversion into common stock occurred at the beginning of the period (or at the time the convertible security is issued, if that’s later). We increase the denominator of the EPS fraction by the additional common shares that would have been issued upon conversion. We increase the numerator by the interest (after-tax) on bonds or other debt or the preferred dividends that would have been avoided if the convertible securities had not been outstanding due to having been converted.

CONVERTIBLE BONDS. Now, let’s return to our continuing illustration and modify it to include the existence of convertible bonds (Illustration 19–11). We increase the denominator by the 12 million shares that would have been issued if the bonds had been converted. However, if that hypothetical conversion had occurred, the bonds would not have been outstanding during the year. What effect would the absence of the bonds have had on income? Obviously, the bond interest expense ($10\% \times \$300 \text{ million} = \30 million) would have been saved, causing income to be higher. But saving the interest paid would also have meant losing a \$30 million tax deduction on the income tax return. With a 40% tax rate that would mean paying \$12 million more income taxes. So, to reflect in earnings the \$18 million after-tax interest that would have been avoided in the event of conversion, we add back the \$30 million of interest expense, but deduct $40\% \times \$30 \text{ million}$ for the higher tax expense.

● LO19–9

When we assume conversion, the denominator of the EPS fraction is increased by the additional common shares that would have been issued upon conversion.

The numerator is increased by the after-tax interest that would have been avoided.

Illustration 19–11
Convertible Bonds

Sovran Financial Corporation reported net income of \$154 million in 2013 (tax rate 40%). Its capital structure included:

Common Stock

- Jan. 1 60 million common shares were outstanding
 - Mar. 1 12 million new shares were sold
 - June 17 A 10% stock dividend was distributed
 - Oct. 1 8 million shares were reacquired as treasury stock
- (The average market price of the common shares during 2013 was \$25 per share.)

Preferred Stock, Nonconvertible

January 1–December 31 5 million shares 8%, \$10 par

Incentive Stock Options

Executive stock options granted in 2008, exercisable after 2012 for 15 million common shares* at an exercise price of \$20 per share

Convertible Bonds

10%, \$300 million face amount issued in 2012, convertible into 12 million common shares

(amounts in millions, except per share amounts)

Basic EPS (unchanged)

$$\frac{\text{Net income } \$154}{\text{Shares at Jan. 1 } 60 + \text{New shares } 12 \text{ (}^{10/12}\text{)} - \text{Treasury shares } 8 \text{ (}^{3/12}\text{)}} - \frac{\text{Preferred dividends } -\$4}{\text{Stock dividend adjustment* } (1.10)} = \frac{\$150}{75} = \$2.00$$

The convertible bonds do not affect the calculation of basic EPS.

If the bonds had been converted, 12 million more common shares would have been issued, and net income would have been higher by the interest saved (after tax) from not having the bonds outstanding.

Diluted EPS

$$\frac{\text{Net income } \$154}{\text{Shares at Jan. 1 } 60 + \text{New shares } 12 \text{ (}^{10/12}\text{)} - \text{Treasury shares } 8 \text{ (}^{3/12}\text{)} + \text{Exercise of options } (15^* - 12)} - \frac{\text{Preferred dividends } -\$4}{\text{Stock dividend adjustment } (1.10)} + \frac{\text{After-tax interest savings } +\$30 - 40\% (30)}{\text{Conversion of bonds } +12^*} = \frac{\$168}{90} = \$1.87$$

*Adjusted for the stock dividend. For example, prior to the stock dividend, the bonds were exercisable for 10¹⁰/₁ million of the "old" shares which became 12 million (10¹⁰/₁ × 1.10) of the "new" shares after the stock dividend.

Additional Consideration

The \$300 million of convertible bonds in our illustration were issued at face value. Suppose the bonds had been issued for \$282 million. In that case, the adjustment to earnings would be modified to include the amortization of the \$18 million bond discount. Assuming straight-line amortization and a 10-year maturity, the adjustment to the diluted EPS calculation would have been:

$$\frac{+ [\$30 + (\$18 \div 10 \text{ years})] \times (1 - 40\%)*}{+ 12}$$

to reflect the fact that the interest expense would include the \$30 million stated interest plus one-tenth of the bond discount.†

*This is an alternative way to represent the after-tax adjustment to interest since subtracting 40% of the interest expense is the same as multiplying interest expense by 60%.

†See Chapter 14 if you need to refresh your memory about bond discount amortization.

Our illustration describes the treatment of convertible bonds. The same treatment pertains to other debt that is convertible into common shares such as convertible notes payable. Remember from our discussion of debt in earlier chapters that all debt is similar whether in the form of bonds, notes, or other configurations.

Additional Consideration

Notice that we assumed the bonds were converted at the beginning of the reporting period since they were outstanding all year. However, if the convertible bonds had been issued during the reporting period, we would assume their conversion occurred on the date of issue. It would be illogical to assume they were converted before they were issued. If the convertible bonds in our illustration had been sold on **September 1**, for instance, the adjustment to the EPS calculation would have been:

$$\frac{+ [\$30 - 40\% (\$30)] (4/12)}{+ 12 (4/12)}$$

to reflect the fact that the net increase in shares would have been effective for only four months of the year.

We assume convertible securities were converted (or options exercised) at the beginning of the reporting period or at the time the securities are issued, if later.

CONVERTIBLE PREFERRED STOCK. The potentially dilutive effect of convertible preferred stock is reflected in EPS calculations in much the same way as convertible debt. That is, we calculate EPS as if conversion already had occurred. Specifically, we add shares to the denominator of the EPS fraction. We do not subtract the preferred dividends in the numerator because those dividends would have been avoided if the preferred stock had been converted. In Illustration 19–12 we assume our preferred stock is convertible into 3 million shares of common stock.

Sovran Financial Corporation reported net income of \$154 million in 2013 (tax rate 40%). Its capital structure included:

Common Stock

Jan. 1 60 million common shares were outstanding
 Mar. 1 12 million new shares were sold
 June 17 A 10% stock dividend was distributed
 Oct. 1 8 million shares were reacquired as treasury stock
 (The average market price of the common shares during 2013 was \$25 per share.)

Preferred Stock, Convertible into 3 million common shares*

January 1–December 31 5 million shares 8%, \$10 par

Incentive Stock Options

Executive stock options granted in 2008, exercisable after 2012 for 15 million common shares* at an exercise price of \$20 per share

Convertible Bonds

10%, \$300 million face amount issued in 2012, convertible into 12 million common shares
 (amounts in millions, except per share amounts)

Basic EPS

$$\frac{\text{Net income } \$154}{\text{Shares at Jan. 1 } 60 \text{ (1.10) + New shares } 12 \text{ (}^{10}/_{12}) \text{ (1.10) - Treasury shares } 8 \text{ (}^{3}/_{12})} - \frac{\text{Preferred dividends } \$4}{75} = \frac{\$150}{75} = \$2.00$$

Stock dividend adjustment*

(continued)

Illustration 19–12

Convertible Preferred Stock

Sovran Financial Corporation reported net income of \$154 million in 2013 (tax rate 40%). Its capital structure included:

Common Stock

Jan. 1 60 million common shares were outstanding
 Mar. 1 12 million new shares were sold
 June 17 A 10% stock dividend was distributed
 Oct. 1 8 million shares were reacquired as treasury stock
 (The average market price of the common shares during 2013 was \$25 per share.)

Preferred Stock, Convertible into 3 million common shares.

January 1–December 31 5 million shares 8%, \$10 par

Incentive Stock Options

Executive stock options granted in 2008, exercisable after 2012 for 15 million common shares at an exercise price of \$20 per share

Convertible Bonds

10%, \$300 million face amount issued in 2012, convertible into 12 million common shares

Stock Warrants

Warrants granted in 2012, exercisable for 4 million common shares* at an exercise price of \$32.50 per share

Calculations:

The calculations of both basic and diluted EPS are unaffected by the warrants because the effect of exercising the warrants would be antidilutive.

*Adjusted for the stock dividend. For example, prior to the stock dividend, the warrants were exercisable for $3\frac{7}{11}$ million of the "old" shares which became 4 million ($3\frac{7}{11} \times 1.10$) of the "new" shares after the stock dividend.

Illustration 19–13

Antidilutive Warrants

The \$32.50 exercise price is higher than the market price, \$25, so to assume shares are sold at the exercise price and repurchased at the market price would mean reacquiring more shares than were sold.

shares by 5 million. If that increase is included in the calculation, the loss per share will be \$1.88 calculated as (\$150 million) ÷ 80 million shares = (\$1.88). The *loss* per share *declines*. This represents an *increase* in performance—not a dilution of performance. The options would be considered antidilutive, then, and not included in the calculation of the net loss per share. Any potential common shares not included in dilutive EPS because they are antidilutive should be revealed in the disclosure notes.

Convertible Securities

For convertible securities, though, it's not immediately obvious whether the effect of their conversion would be dilutive or antidilutive because the assumed conversion would affect both the numerator and the denominator of the EPS fraction. We discovered each was dilutive only after including the effect in the calculation and observing the result—a decline in EPS. But there's an easier way.

To determine whether convertible securities are dilutive and should be included in a diluted EPS calculation, we can compare the "incremental effect" of the conversion (expressed as a fraction) with the EPS fraction before the effect of any convertible security is considered. This, of course is our basic EPS. Recall from Illustration 19–12 that basic EPS is \$2.00.

For comparison, we determine the "earnings per incremental share" of the two convertible securities:

Conversion of bonds.

$$\frac{\begin{array}{l} \text{After-tax} \\ \text{interest savings} \\ +\$30 - 40\% (\$30) \end{array}}{\begin{array}{l} \text{Conversion} \\ \text{of bonds} \\ +12 \end{array}} = \frac{\$18}{12} = \$1.50$$

The incremental effect (of conversion) of the bonds is the after-tax interest saved divided by the additional common shares from conversion.

Conversion of preferred stock.

The incremental effect (of conversion) of the preferred stock is the dividends that wouldn't be paid divided by the additional common shares from conversion.

$$\frac{\text{Preferred dividends} + \$4}{\text{Conversion of preferred shares} + 3} = \$1.33$$

If the incremental effect of a security is *higher* than basic EPS, it is antidilutive. That's not the case in our illustration.

Order of Entry for Multiple Convertible Securities

A convertible security might seem to be dilutive when looked at individually but, in fact, may be antidilutive when included in combination with other convertible securities. This is because the *order of entry* for including their effects in the EPS calculation determines by how much, or even whether, EPS decreases as a result of their assumed conversion. Because our goal is to reveal the maximum potential dilution that might result, theoretically we should calculate diluted EPS using every possible combination of potential common shares to find the combination that yields the lowest EPS. But that's not necessary.

We can use the earnings per incremental share we calculated to determine the sequence of including securities' effects in the calculation. We include the securities in reverse order, beginning with the lowest incremental effect (that is, most dilutive), followed by the next lowest, and so on. This is, in fact, the order in which we included the securities in our continuing illustration.

Additional Consideration

Actually, the order of inclusion made no difference in our example, but would in many instances. For example, suppose the preferred stock had been convertible into 2.1 million shares, rather than 3 million shares. The incremental effect of its conversion would have been:

Conversion of Preferred Stock

$$\frac{\text{Preferred dividends} + \$4}{\text{Conversion of preferred shares} + 2.1} = \$1.90$$

On the surface, the effect would seem to be dilutive because \$1.90 is less than \$2.00, basic EPS. In fact, if this were the only convertible security, it would be dilutive. But, after the convertible bonds are assumed converted first, then the assumed conversion of the preferred stock would be *antidilutive*:

With Conversion of Bonds

Net income	Preferred dividends	After-tax interest savings	
\$154	-\$4	+ \$30 - 40% (\$30)	= \$168
60	+ 12	+ 12	= 90
Shares at Jan. 1	New shares Stock dividend adjustment	Conversion of bonds	
	+ 12 (10/12) (1.10)	+ 12	
	- 8 (3/12)	+ (15 - 12)	
		Exercise of options	

Because the incremental effect of the convertible bonds (\$1.50) is lower than the incremental effect of the convertible preferred stock (\$1.90), it is included first.

(continued)

(concluded)

With Conversion of Preferred Stock

Net income		Preferred dividends		After-tax interest savings					
\$154		-\$4		+ \$30 - 40% (\$30)					
60	(1.10) + 12	(¹⁰ / ₁₂) (1.10)	- 8	(³ / ₁₂)	+ (15 - 12)	+ 12		+ 2.1	= $\frac{\$172}{92.1} = \1.868
Shares at Jan. 1	↑	New shares	↑	Treasury shares	Exercise of options	Conversion of bonds		Conversion of preferred shares	
	Stock dividend adjustment								

Although the incremental effect of the convertible preferred stock (\$1.90) is lower than basic EPS (\$2.00), when included in the calculation after the convertible bonds the effect is antidilutive (EPS increases).

A convertible security might seem to be dilutive when looked at individually but may be antidilutive when included in combination with other convertible securities.

Concept Review Exercise

At December 31, 2013, the financial statements of Clevenger Casting Corporation included the following:

BASIC AND DILUTED EPS

Net income for 2013	\$500 million
Common stock, \$1 par:	
Shares outstanding on January 1	150 million shares
Shares retired for cash on February 1	24 million shares
Shares sold for cash on September 1	18 million shares
2-for-1 split on July 23	
Preferred stock, 10%, \$70 par, cumulative, nonconvertible	\$ 70 million
Preferred stock, 8%, \$50 par, cumulative, convertible into 4 million shares of common stock	\$100 million
Incentive stock options outstanding, fully vested, for 4 million shares of common stock; the exercise price is \$15	
Bonds payable, 12.5%, convertible into 20 million shares of common stock	\$200 million

Additional data:

The market price of the common stock averaged \$20 during 2013. The convertible preferred stock and the bonds payable had been issued at par in 2011. The tax rate for the year was 40%.

Required:

Compute basic and diluted earnings per share for the year ended December 31, 2013.

(amounts in millions, except per share amounts)

Solution:
Basic EPS

Net income		Preferred dividends		Preferred dividends					
\$500		-\$7 ^a		-\$8 ^b					
150	(2.00)	- 24	(¹¹ / ₁₂)	(2.00)	+ 18	(⁴ / ₁₂)		= $\frac{\$485}{262} = \1.85	
Shares at Jan. 1	↑	Retired shares	↑	New shares					
	Stock split adjustment								

Diluted EPS

Net income		Preferred dividends		Preferred dividends		After-tax interest savings		
\$500		-\$7 ^a		-\$8 ^b		+ 25 ^d - 40% (\$25 ^d)		= $\frac{\$500}{283} = \1.77
150	(2.00)	- 24 (^{1 1/2})	(2.00)	+ 18 (^{4/12})	+ (4 - 3) ^c	+ 20		
Shares at Jan. 1		Retired shares		New shares	Exercise of warrants	Conversion of bonds		
	↑		↑					
	Stock split adjustment							

^a10% × \$70 million = \$7 million

^b8% × \$100 million = \$8 million

^cExercise of warrants:

4 million shares
× \$15 (exercise price)
\$60 million
÷ \$20 (average market price)
3 million shares

^d12.5% × \$200 million = \$25 million

Dilution:

<p>Conversion of Bonds</p> <p style="text-align: center;">After-tax interest savings</p> <p style="text-align: center;">+ \$25 - 40% (\$25)</p> <hr style="width: 50%; margin: 0 auto;"/> <p style="text-align: center;">+ 20</p> <p style="text-align: center;">Conversion of bonds</p> <p style="text-align: right;">= \$0.75</p>	<p>Conversion of 8% Preferred Stock</p> <p style="text-align: center;">Preferred dividends</p> <p style="text-align: center;">+ \$8</p> <hr style="width: 50%; margin: 0 auto;"/> <p style="text-align: center;">+ 4</p> <p style="text-align: center;">Conversion of preferred shares</p> <p style="text-align: right;">= \$2.00*</p>
--	---

*Because the incremental effect of conversion of the preferred stock (\$2) is higher than EPS without the conversion of the preferred stock, the conversion would be *antidilutive* and is *not* considered in the calculation of diluted EPS.

Additional EPS Issues

Components of the "Proceeds" in the Treasury Stock Method

● LO19-11

For the treasury stock method, "proceeds" include:

1. The amount, if any, received from the hypothetical exercise of options or vesting of restricted stock.
2. The total compensation from the award that's not yet expensed.

In calculating diluted EPS when stock options are outstanding, we assume the options have been exercised. That is, we pretend the company sold the shares specified by the options at the exercise price and that the "proceeds" were used to buy back (as treasury stock) as many shares as can be purchased at the average market price of the stock during the year. The proceeds for the calculation should include the amount received from the hypothetical exercise of the options (\$300 million in Illustration 19-10 in the chapter). But that's only the first of three possible components.

The second component of the proceeds is the total compensation from the award that's not yet expensed. If the fair value of an option had been \$4 at the grant date, the total compensation would have been 15 million shares times \$4, or \$60 million. In our illustration, though, we assumed the options were fully vested before 2013, so all \$60 million already had been expensed and this second component of the proceeds was zero. If the options had been only half vested, half the compensation would have been unexpensed and \$30 million would have been added to the \$300 million proceeds.

The third component of the proceeds is what's called the *excess tax benefit*. We expense the fair value of stock options at the date of grant. If the options were nonqualified options, rather than incentive stock options, the corporation receives a tax deduction at exercise equal to the difference between the stock's market value and its exercise

price. That amount usually is higher than the fair value of the options at the grant date, and the difference times the tax rate is the excess tax benefit. In our illustration, though, we assumed the options were incentive stock options, hence no tax benefit. Had they been nonqualified options, the proceeds also would have included a \$6 million excess tax benefit:

\$ 25	market price during 2013 (and price at hypothetical exercise)
<u>(20)</u>	exercise price
\$ 5	tax deduction at hypothetical exercise
<u>(4)</u>	fair value at grant date (and amount expensed over the vesting period)
\$ 1	excess tax deduction per option
<u>× 15</u>	million options
\$ 15	million excess tax deduction
<u>× 40%</u>	tax rate
\$ 6	million excess tax benefit ¹⁹

Why do the proceeds include these three components? We might think of it like this. The “proceeds” include everything the firm will receive from the award: (1) cash, if any, at exercise, (2) services from the recipient (value of award given as compensation), and (3) tax savings. The reason we *exclude the expensed portion* is that, when it’s expensed, earnings are reduced, and that dilution is reflected in EPS. Excluding that expensed portion from the proceeds avoids the additional dilution that would occur if more proceeds are available in our hypothetical buyback of shares. Hence, we avoid double-counting the dilutive effect of the compensation.

RESTRICTED STOCK AWARDS IN EPS CALCULATIONS. As we discussed earlier, restricted stock awards are quickly replacing stock options as the share-based compensation plan of choice. Like stock options, they represent potential common shares and their dilutive effect is included in diluted EPS. In fact, they too are included using the treasury stock method. That is, the shares are added to the denominator and then reduced by the number of shares that can be bought back with the “proceeds” at the average market price of the company’s stock during the year. Unlike stock options, though, the first component of the proceeds usually is absent; employees don’t pay to acquire their shares.

Also, only *unvested* restricted stock award shares are included in hypothetical EPS calculations; fully vested shares are actually distributed and thus outstanding. The proceeds for the EPS calculation include the total compensation from the unvested stock award that’s not yet expensed, the second component. For an example, refer back to the restricted stock in Illustration 19–2 on page 1141. The total compensation for the award is \$60 million (\$12 market price per share × 5 million shares). Because the stock award vests over four years, it is expensed as \$15 million each year for four years. At the end of 2013, the first year, \$45 million remains unexpensed, so \$45 million would be the assumed proceeds in an EPS calculation.²⁰ If we assume the market price remains at \$12, the \$45 million will buy back 3.75 million shares and we would add to the denominator of diluted EPS 1.25 million common shares:

$$\begin{array}{r} \text{No adjustment to the numerator} \\ \hline 5 \text{ million} - 3.75^* \text{ million} = \mathbf{1.25 \text{ million}} \end{array}$$

*Assumed purchase of treasury shares

$$\begin{array}{r} \$45 \quad \text{million} \\ \div \$12 \quad \text{average market price} \\ \hline 3.75 \quad \text{million shares} \end{array}$$

¹⁹Journal entries for the tax benefit are described in the Additional Consideration on p. 1146.

²⁰The proceeds also must be increased (or decreased) by any tax benefits that would be added to (or deducted from) paid-in capital when the eventual tax deduction differs from the amount expensed as described for the stock options above and in the Additional Consideration on p. 1146. Because that occurs when the stock price at vesting differs from the stock price at the grant date, our assumption above that the market price remained at \$12 avoided that complexity.

3. The difference between the eventual tax benefit and the amount recognized in expense.

At the end of 2014, the *second* year, \$30 million remains unexpensed, so assuming the average market price again is \$12, we would add to the denominator of diluted EPS 2.5 million common shares:

$$\begin{array}{r} \text{No adjustment to the numerator} \\ \hline 5 \text{ million} - 2.5^* \text{ million} = \mathbf{2.5 \text{ million}} \\ \hline \begin{array}{ll} * \text{Assumed purchase of treasury shares} \\ \$30 & \text{million} \\ \div \$12 & \text{average market price} \\ \hline 2.5 & \text{million shares} \end{array} \end{array}$$

Contingently Issuable Shares

- LO19-12 Sometimes an agreement specifies that additional shares of common stock will be issued, contingent on the occurrence of some future circumstance. For instance, in the disclosure note reproduced in Illustration 19–14, **Hunt Manufacturing Co.** reported contingent shares in connection with its acquisition of **Feeny Manufacturing Company**.

Illustration 19–14

Contingently Issuable Shares—Hunt Manufacturing Company

Real World Financials

Note 12: Acquisitions (in part)

The Company acquired Feeny Manufacturing Company of Muncie, Indiana, for 135,000 shares of restricted common stock with a value of \$7.71 per share. Feeny Manufacturing Company is a manufacturer of kitchen storage products. The purchase agreement calls for the issuance of up to 135,000 additional shares of common stock in the next fiscal year based on the earnings of Feeny Manufacturing Company. . . .

At times, contingent shares are issuable to shareholders of an acquired company, certain key executives, or others in the event a certain level of performance is achieved. Contingent performance may be a desired level of income, a target stock price, or some other measurable activity level.

Contingently issuable shares are considered outstanding in the computation of diluted EPS.

When calculating EPS, **contingently issuable shares** are considered to be outstanding in the computation of diluted EPS if the target performance level already is being met (assumed to remain at existing levels until the end of the contingency period). For example, if shares will be issued at a future date if a certain level of income is achieved and that level of income or more was already earned this year, those additional shares are simply added to the denominator of the diluted EPS fraction.²¹

For clarification, refer to our continuing illustration of diluted EPS and assume 3 million additional shares will become issuable to certain executives in the following year (2014) if net income that year is \$150 million or more. Recall that net income in 2013 was \$154 million, so the additional shares would be considered outstanding in the computation of diluted EPS by simply adding **3 million** additional shares to the denominator of the EPS fraction. Obviously, the 2014 condition (\$150 million net income or more) has not been met yet since it's only year 2013. But because that level of income was achieved in 2013, the presumption is it's likely to be earned in 2014 as well.

If a level of income must be attained before the shares will be issued, and income already is that amount or more, the additional shares are simply added to the denominator.

Assumed Issuance of Contingently Issuable Shares (diluted EPS):

$$\begin{array}{r} \text{No adjustment to the numerator} \\ \hline +3 \\ \hline \mathbf{\text{Additional shares}} \end{array}$$

On the other hand, if the target income next year is \$160 million, the contingent shares would simply be ignored in our calculation.

²¹The shares should be included in both basic and diluted EPS if all conditions have actually been met so that there is no *circumstance* under which those shares would not be issued. In essence, these are *no longer contingent shares*.

Summary of the Effect of Potential Common Shares on Earnings Per Share

You have seen that under certain circumstances, securities that have the potential of reducing earnings per share by becoming common stock are assumed already to have become common stock for the purpose of calculating EPS. The table in Illustration 19–15 summarizes the circumstances under which the dilutive effect of these securities is reflected in the calculation of basic and diluted EPS.

Potential Common Shares	Is the Dilutive Effect Reflected in the Calculation of EPS?*	
	Basic EPS	Diluted EPS
• Stock options (or warrants, rights)	no	yes
• Restricted stock	no	yes
• Convertible securities (bonds, notes, preferred stock)	no	yes
• Contingently issuable shares	no	yes [†]

*The effect is not included for any security if its effect is antidilutive.
[†]Unless shares are contingent upon some level of performance not yet achieved.

Illustration 19–15

When Potential Common Shares Are Reflected in EPS

Illustration 19–16 summarizes the specific effects on the diluted EPS fraction when the dilutive effect of a potentially dilutive security is reflected in the calculation.

Potential Common Shares	Modification to the Diluted EPS Fractions:	
	Numerator	Denominator
• Stock options (or warrants, rights)	None	Add the shares that would be created by their exercise,* reduced by shares repurchased at the average share price.
• Restricted stock	None	Add shares that would be created by their vesting,* reduced by shares repurchased at the average share price.
• Convertible bonds (or notes)	Add the interest (after-tax) that would have been avoided if the debt had been converted.	Add shares that would be created by the conversion* of the bonds (or notes).
• Convertible preferred stock	Do not deduct the dividends that would have been avoided if the preferred stock had been converted.	Add shares that would have been created by the conversion* of the preferred stock.
• Contingently issuable shares: Issuable when specified conditions are met, and those conditions currently are being met	None	Add shares that are issuable.
• Contingently issuable shares: Issuable when specified conditions are met, and those conditions are not currently being met	None	None

*At the beginning of the year or when potential common shares were issued, whichever is later (time-weight the increase in shares if assumed exercised or converted in midyear).

Illustration 19–16

How Potential Common Shares Are Reflected in a Diluted EPS Calculation

Actual Conversions

When calculating EPS in our example, we “pretended” the convertible bonds had been converted at the beginning of the year. What if they actually had been converted, let’s say on November 1? Interestingly, diluted EPS would be precisely the same. Here’s why:

1. The actual conversion would cause an actual increase in shares of 12 million on November 1. These would be time-weighted so the denominator would increase by $12 \left(\frac{2}{12}\right)$. Also, the numerator would be higher because net income actually would be increased by the after-tax interest saved on the bonds for the last two months, $[\$30 - 40\% (\$30)] \times \left(\frac{2}{12}\right)$. Be sure to note that this would not be an adjustment in the EPS calculation. Instead, net income would actually have been higher by $[\$30 - 40\% (\$30)] \times \left(\frac{2}{12}\right) = \3 . That is, reported net income would have been \$157 rather than \$154.
2. We would assume conversion for the period before November 1 because they were potentially dilutive during that period. The 12 million shares assumed outstanding from January 1 to November 1 would be time-weighted for that 10-month period: $12 \left(\frac{10}{12}\right)$. Also, the numerator would be increased by the after-tax interest assumed saved on the bonds for the first 10 months, $[\$30 - 40\% (\$30)] \times \left(\frac{10}{12}\right)$.

Notice that the incremental effect on diluted EPS is the same either way:

Not Actually Converted:	Converted on November 1:		
$\frac{\text{Assumed after-tax interest savings}}{+ \$30 - 40\% (\$30)}$	$\text{Actual after-tax interest savings}$	$\text{Assumed after-tax interest savings}$	
$+ 12$	$+ 12 \left(\frac{2}{12}\right)$	$+ 12 \left(\frac{10}{12}\right)$	
$\text{Assumed conversion of bonds}$	$\text{Actual conversion of bonds}$	$\text{Assumed conversion of bonds}$	
$\$18$	$\$3$	$+ \$15$	
12	2	$+ 10$	

EPS would be precisely the same whether convertible securities were actually converted or not.

Illustration 19–17 shows the disclosure note **Clorox Company** reported after the conversion of convertible notes during the year.

Illustration 19–17

Conversion of Notes—The Clorox Company

Real World Financials

Note 1: Significant Accounting Policies—Earnings Per Common Share (in part)

A \$9,000,000 note payable to Henkel Corporation was converted into 1,200,000 shares of common stock on August 1. . . . Earnings per common share and weighted-average shares outstanding reflect this conversion as if it were effective during all periods presented.

Financial Statement Presentation of Earnings Per Share Data

- LO19-13 Recall from Chapter 4 that the income statement sometimes includes items that require separate presentation within the statement as follows:

- Income from Continuing Operations
- Discontinued operations
- Extraordinary items
- Net income

When the income statement includes one or more of the separately reported items, EPS data (both basic and diluted) must also be reported separately for income from continuing operations and net income. Per share amounts for discontinued operations and extraordinary

items would be disclosed either on the face of the income statement or in the notes to financial statements. Presentation on the face of the income statement is illustrated by the partial income statements of **The Bank of New York Mellon Corporation** from its 2010 annual report and exhibited in Illustration 19–18.

Consolidated Income Statement (partial)			
	(\$ in millions, except per share data)		
	2010	2009	2008
Income from continuing operations	\$2,647	\$ (813)	\$1,455
Income (loss) from discontinued operations, net of tax	(66)	(270)	14
Extraordinary loss on consolidation of CPC, net of tax	—	—	(26)
Net income	\$2,581	\$(1,083)	\$1,443
Earnings per share			
Income from continuing operations	\$ 2.11	\$ (0.93)	\$ 1.21
Income (loss) from discontinued operations, net of tax	(0.05)	(0.23)	0.01
Extraordinary loss, net of tax	—	—	(0.02)
Net income (loss)	\$ 2.05*	\$ (1.16)	\$ 1.20

* doesn't add to \$2.05 due to rounding

Illustration 19–18

EPS Disclosure—Bank of New York Mellon

Real World Financials

Basic and diluted EPS data should be reported on the face of the income statement for all reporting periods presented in the comparative statements. Businesses without potential common shares present basic EPS only. Disclosure notes should provide additional disclosures including:

1. A reconciliation of the numerator and denominator used in the basic EPS computations to the numerator and the denominator used in the diluted EPS computations. An example of this is presented in Illustration 19–19 using the situation described in Illustration 19–12.
2. Any adjustments to the numerator for preferred dividends.
3. Any potential common shares that weren't included because they were antidilutive.
4. Any transactions that occurred after the end of the most recent period that would materially affect earnings per share.

Earnings per Share Reconciliation:			
	Income (Numerator)	Share (Denominator)	Per Share Amount
Net income	\$ 154		
Preferred dividends	(4)		
Basic earnings per share	150	75	\$2.00
Stock options	None	3*	
Convertible debt	18	12	
Convertible preferred stock	4	3	
Diluted earnings per share	\$ 172	93	\$1.85

Note: Stock warrants to purchase an additional 4 million shares at \$32.50 per share were outstanding throughout the year but were not included in diluted EPS because the warrants' exercise price is greater than the average market price of the common shares.
*15 million - [(15 million × \$20) ÷ \$25] = 3 million net additional shares

Illustration 19–19

Reconciliation of Basic EPS Computations to Diluted EPS Computations

Additional Consideration

It is possible that potential common shares would have a dilutive effect on one component of net income but an antidilutive effect on another. When the inclusion of the potential common shares has a dilutive effect on “income from continuing operations,” the effect should be included in all calculations of diluted EPS. In other words, the same number of potential common shares used in computing the diluted per-share amount for income from continuing operations is used in computing all other diluted per-share amounts, even when amounts are antidilutive to the individual per-share amounts.

Where We’re Headed

● LO19-14

In 2008, the FASB issued an exposure draft of a proposed accounting standard on earnings per share. The proposal would amend GAAP for EPS with the intent to clarify and simplify EPS calculations, while at the same time promoting convergence with International Financial Reporting Standards (IFRS).²² The exposure draft was issued concurrently with an International Accounting Standards Board (IASB) amendment to its own *IAS No. 33, Earnings Per Share*.

Among the changes proposed in the Exposure Drafts are:

1. We would *include* in the denominator of the EPS calculation (a) classes of common stock with dividend rates that differ from each other, (b) shares currently issuable for “little or no cost” to the holder (like fully vested restricted stock), (c) instruments currently exercisable for “little or no cost” to the holder, and (d) participating securities (say, an option that’s entitled to receive \$1 of dividends for every \$2 paid to a share of common stock). Each of these inclusions is consistent with the objective of reporting per-share earnings for all financial instruments that have the right at the end of the period to share in current-period earnings.
2. We would *exclude* from the calculation of EPS any instrument that is measured at “fair value with changes in fair value reported in earnings.” This would include, for instance, a convertible bond issue for which the company has elected the fair value option. If its fair value rises, the change in fair value is reported as a loss, decreasing earnings and earnings per share.²³ Reasoning that the dilutive effect of these bonds already is reflected in the EPS numerator, we exclude these and all other instruments measured at fair value with changes in fair value reported in earnings from the calculation of the EPS denominator. In other words, we would ignore the effect on the denominator of the exercise or conversion of these instruments since their dilutive effect already has been reflected in the numerator. The reasoning is that including them in the denominator of diluted EPS would “double-count” their dilutive impact on shareholders. Under current GAAP, we calculate diluted EPS as if convertible bonds such as these had been converted into shares of stock, increasing both the numerator and the denominator as demonstrated in this chapter.
3. When applying the “treasury stock method” to determine the shares that would be reacquired upon the hypothetical exercise of stock options in a diluted EPS calculation, we would assume shares are bought back at the **end-of-the-period** stock price rather than the **average** stock price as we use under current GAAP.

After the comment period for the exposure draft ended in 2009, both the FASB and the IASB decided to defer the project until other joint projects are completed and the underlying differences between U.S. GAAP and IFRS that still preclude comparability of EPS under the two sets of standards are resolved. Because the comments received lacked general consensus on individual changes proposed, it’s likely that the ultimate joint standard will differ from the one described here. Presumably, though, the objectives of clarification and simplification will be achieved.

²²Revised Exposure Draft: *Earnings per Share—an amendment of FASB Statement No. 128*, (Norwalk, Conn.: FASB, 2008).

²³A decrease in fair value would be reported as a gain—increasing earnings and EPS. This is not a dilutive effect, in fact it’s “antidilutive.” Remember, we ignore antidilutive securities, just as we ignore the exercise or conversion of the bonds in this example.

Decision Makers' Perspective

We noted earlier in the chapter that investors and creditors pay a great deal of attention to earnings per share information. Because of the importance analysts attach to earnings announcements, companies are particularly eager to meet earnings expectations. As we first noted in Chapter 4, this desire has contributed to a relatively recent trend, especially among technology firms, to report **pro forma** earnings per share. What exactly are pro forma earnings? Unfortunately there is no answer to that question. Essentially, pro forma earnings are actual (GAAP) earnings reduced by any expenses the reporting company feels are unusual and should be excluded. Always, though, the pro forma results of a company look better than the real results. **Broadcom Corporation**, a provider of broadband and network products, reported pro forma *earnings* of \$0.49 per share. However on a GAAP basis, it actually had a *loss* of \$3.29 per share. This is not an isolated example.

Make sure you pay lots of attention to the man behind the curtain. If any earnings figure says pro forma, you should immediately look for a footnote or explanation telling you just what is and is not included in the calculation.

When companies report pro forma results, they argue they are trying to help investors by giving them numbers that more accurately reflect their normal business activities, because they exclude unusual expenses. Analysts should be skeptical, though. Because of the purely discretionary nature of pro forma reporting and several noted instances of abuse, analysts should, at a minimum, find out precisely what expenses are excluded and what the actual GAAP numbers are.

Another way management might enhance the appearance of EPS numbers is by massaging the denominator of the calculation. Reducing the number of shares increases earnings *per share*. Some companies judiciously use share buyback programs to manipulate the number of shares and therefore EPS. There is nothing inherently wrong with share buybacks and, as we noted in Chapter 18, they can benefit shareholders. The motivation for buybacks, though, can sometimes be detected in the year-to-year pattern of net income and EPS. Companies whose growth rates in earnings per share routinely exceed their growth in net income may be using buybacks to artificially increase EPS. This is one way **IBM** has kept an impressive EPS growth rate through the years. Between 2002 and 2010, IBM spent \$68.5 billion on share repurchases increasing earnings per share almost fivefold as net income rose less than fourfold.²⁴

One way analysts use EPS data is in connection with the price-earnings ratio. This ratio is simply the market price per share divided by the earnings per share. It measures the market's perception of the quality of a company's earnings by indicating the price multiple the capital market is willing to pay for the company's earnings. Presumably, this ratio reflects the information provided by all financial information in that the market price reflects analysts' perceptions of the company's growth potential, stability, and relative risk. The price-earnings ratio relates these performance measures with the external judgment of the marketplace concerning the value of the firm.

The ratio measures the quality of earnings in the sense that it represents the market's expectation of future earnings as indicated by current earnings. Caution is called for in comparing price-earnings ratios. For instance, a ratio might be low, not because earnings expectations are low, but because of abnormally elevated current earnings. On the contrary, the ratio might be high, not because earnings expectations are high, but because the company's current earnings are temporarily depressed. Similarly, an analyst should be alert to differences among accounting methods used to measure earnings from company to company when making comparisons.

Another ratio frequently calculated by shareholders and potential shareholders is the dividend payout ratio. This ratio expresses the percentage of earnings that is distributed to shareholders as dividends. The ratio is calculated by dividing dividends per common share by the earnings per share.

The price-earnings ratio measures the quality of a company's earnings.

The dividend payout ratio indicates the percentage of earnings that is distributed to shareholders as dividends.

²⁴Greg Miles, Serena Saitto, and Katie Hoffmann, "Palmisano Needs Acquisitions Soon to Buoy IBM Profit Growth, Investors Say," *Bloomberg News*, April 5, 2010.

This ratio provides an indication of a firm's reinvestment strategy. A low payout ratio suggests that a company is retaining a large portion of earnings for reinvestment for new facilities and other operating needs. Low payouts often are found in growth industries and high payouts in mature industries. Often, though, the ratio is merely a reflection of managerial strategy concerning the mix of internal versus external financing. The ratio also is considered by investors who, for tax or other reasons, prefer current income over market price appreciation, or vice versa. ●

Concept Review Exercise

ADDITIONAL EPS ISSUES

At December 31, 2013, the financial statements of Bahnson General, Inc., included the following:

Net income for 2013 (including a net-of-tax extraordinary loss of \$10 million) \$180 million
Common stock, \$1 par:
 Shares outstanding on January 1 44 million
 The share price was \$25 and \$28 at the beginning and end of the year, respectively.

Additional data:

- At January 1, 2013, \$200 million of 10% convertible notes were outstanding. The notes were converted on April 1 into 16 million shares of common stock.
- An agreement with company executives calls for the issuance of up to 12 million additional shares of common stock in 2014 and 2015 based on Bahnson's net income in those years. Executives will receive 2 million shares at the end of each of those two years if the company's stock price is at least \$26 and another 4 million shares each year if the stock price is at least \$29.50.

The tax rate is 40%.

Required:

Compute basic and diluted earnings per share for the year ended December 31, 2013.

Solution:

(amounts in millions, except per share amounts)

Basic EPS

$$\frac{\text{Net income}}{\text{44 Shares at Jan. 1} + \text{16 (}\frac{1}{2}\text{) Actual conversion of notes}} = \frac{\$180}{56} = \$3.21$$

Diluted EPS

$$\frac{\text{Net income}}{\text{44 Shares at Jan. 1} + \text{16 (}\frac{1}{2}\text{) Actual conversion of notes} + \text{16 (}\frac{3}{2}\text{) Assumed conversion of notes} + \text{(2 + 2) Contingent shares}} = \frac{\$180 + [\$20 - 40\%(\$20)] \times (\frac{3}{2})}{64} = \$2.86$$

Convertible Notes: Notice that the effect on diluted EPS would be precisely the same whether the convertible notes were actually converted or not.
Converted on April 1:

Converted on April 1:

Net income including actual after-tax interest savings		Assumed after-tax interest savings		
\$180		+ [\$20 - 40% (\$20)] × (3/2)		\$183
44	+	16 (3/2)	+	16 (3/2)
Shares at Jan. 1		Actual conversion of notes		Assumed conversion of notes
				60

Not Actually Converted:

Net income without actual after-tax interest savings		Assumed after-tax interest savings		
\$171*		+ [\$20 - 40% (\$20)]		\$183
44	+	16	+	60
Shares at Jan. 1		Assumed conversion of notes		

*\$180 - {[\$20 - 40% (\$20)] × (3/2)} = \$171
After-tax interest from Apr. 1 to Dec. 31

Contingently Issuable Shares:

Because the conditions are met for issuing 4 million shares (2 million for each of two years), those shares are simply added to the denominator of diluted EPS. The current share price (\$28) is projected to remain the same throughout the contingency period, so the other 8 million shares (4 million for each of two years) are excluded.

Income Statement Presentation:

To determine the per share amounts for income before extraordinary items, we substitute that amount for net income in the numerator (in this case, that means adding back the \$10 million extraordinary loss):

$$\text{Basic: } \frac{\$180 + 10}{56} = \$3.39 \quad \text{Diluted: } \frac{\$183 + 10}{64} = \$3.02$$

Earnings per Share:	Basic*	Diluted
Income before extraordinary items	\$3.39	\$3.02
Extraordinary loss	(.18)	(.16)
Net income	\$3.21	\$2.86

*Only diluted EPS is required on the face of the income statement. Basic EPS is reported in the EPS reconciliation shown in the disclosure note (below).

Disclosure Note:**Earnings per Share Reconciliation:**

	Income (Numerator)	Shares (Denominator)	Per Share Amount
Basic Earnings per Share			
Income before extraordinary items	\$190	56	\$3.39
Extraordinary loss	(10)	56	(.18)
Net income	\$180	56	\$3.21
Convertible debt	3	4	
Contingently issuable shares	—	4	
Diluted Earnings per Share			
Income before extraordinary items	\$193	64	\$3.02
Extraordinary loss	(10)	64	(.16)
Net income	\$183	64	\$2.86

Financial Reporting Case Solution

1. **How can a compensation package such as this serve as an incentive to Ms. Veres?** (p. 1139) Stock-based plans like the restricted stock and stock options that Ms. Veres is receiving are designed to motivate recipients. If the shares awarded are restricted so that Ms. Veres is not free to sell the shares during the restriction period, she has an incentive to remain with the company until rights to the shares vest. Likewise, stock options can be made exercisable only after a specified period of employment. An additional incentive of stock-based plans is that the recipient will be motivated to take actions that will maximize the value of the shares.
2. **Ms. Veres received a “grant of restricted stock.” How should NEV account for the grant?** (p. 1140) The compensation associated with restricted stock is the market price of unrestricted shares of the same stock. NEV will accrue this amount as compensation expense over the service period from the date of grant to when restrictions are lifted.
3. **Included were stock options to buy more than 800,000 shares of NEV stock. How will the options affect NEV’s compensation expense?** (p. 1142) Similar to the method used for restricted stock, the value of the options is recorded as compensation over the service period, usually the vesting period.
4. **How will the presence of these and other similar stock options affect NEV’s earnings per share?** (p. 1157) If outstanding stock options were exercised, the resulting increase in shares would reduce or dilute EPS. If we don’t take into account the dilutive effect of the share increase, we might mislead investors and creditors. So, in addition to basic EPS, we also calculate diluted EPS to include the dilutive effect of options and other potential common shares. This means calculating EPS as if the potential increase in shares already has occurred (even though it hasn’t yet). ●

The Bottom Line

- **LO19-1** We measure the fair value of stock issued in a restricted stock award plan and expense it over the service period, usually from the date of grant to the vesting date. (p. 1140)
- **LO19-2** Similarly, we estimate the fair value of stock options at the grant date and expense it over the service period, usually from the date of grant to the vesting date. Fair value is estimated at the grant date using an option-pricing model that considers the exercise price and expected term of the option, the current market price of the underlying stock and its expected volatility, expected dividends, and the expected risk-free rate of return. (p. 1141)
- **LO19-3** Employee share purchase plans allow employees to buy company stock under convenient or favorable terms. Most such plans are considered compensatory and require any discount to be recorded as compensation expense. (p. 1150)
- **LO19-4** A company has a simple capital structure if it has no outstanding securities that could potentially dilute earnings per share. For such a firm, EPS is simply earnings available to common shareholders divided by the weighted-average number of common shares outstanding. When potential common shares are outstanding, the company is said to have a complex capital structure. In that case, two EPS calculations are reported. Basic EPS assumes no dilution. Diluted EPS assumes maximum potential dilution. (p. 1153)
- **LO19-5** EPS calculations are based on the weighted-average number of shares outstanding during the period. Any new shares issued during the period are time-weighted by the fraction of the period they were outstanding and then added to the number of shares outstanding for the period. (p. 1153)
- **LO19-6** For a stock dividend or stock split, shares outstanding prior to the stock distribution are retroactively restated to reflect the increase in shares. When shares are reacquired, as treasury stock or to be retired, they are time-weighted for the fraction of the period they were not outstanding, prior to being subtracted from the number of shares outstanding during the reporting period. (p. 1154)

- **LO19-7** The numerator in the EPS calculation should reflect earnings available to common shareholders. So, any dividends on preferred stock outstanding should be subtracted from reported net income. This adjustment is made for cumulative preferred stock whether or not dividends are declared that period. (p. 1156)
- **LO19-8** For diluted EPS, it is assumed that stock options, rights, and warrants are exercised at the beginning of the period (or at the time the options are issued, if later) and the cash proceeds received are used to buy back (as treasury stock) as many of those shares as can be acquired at the average market price during the period. (p. 1157)
- **LO19-9** To incorporate convertible securities into the calculation of diluted EPS, the conversion is assumed to have occurred at the beginning of the period (or at the time the convertible security is issued, if later). The denominator of the EPS fraction is adjusted for the additional common shares assumed and the numerator is increased by the interest (after-tax) on bonds and not reduced by the preferred dividends that would have been avoided in the event of conversion. (p. 1159)
- **LO19-10** If including potential common shares in the EPS calculation causes EPS to *increase* rather than decrease, then those potential common shares are considered *antidilutive* and are omitted from the calculation. (p. 1162)
- **LO19-11** For the treasury stock method, “proceeds” include (1) the amount, if any, received from the hypothetical exercise of options or vesting of restricted stock, (2) the total compensation from the award that’s not yet expensed, and (3) the difference between the eventual tax benefit and the amount recognized in expense. (p. 1166)
- **LO19-12** Contingently issuable shares are considered outstanding in the computation of diluted EPS when they will later be issued upon the mere passage of time or because of conditions that currently are met. (p. 1168)
- **LO19-13** EPS data (both basic and diluted) must be reported for (a) income before any separately reported items, (b) the separately reported items (discontinued operations and extraordinary gains and losses), and (c) net income. Disclosures also should include a reconciliation of the numerator and denominator used in the computations. (p. 1170)
- **LO19-14** When options have graded vesting, unlike under U.S. GAAP, IFRS does not permit the straight-line method for allocating compensation or require that the company recognize at least the amount of the award that has vested by each reporting date. The earnings per share requirements of IFRS and U.S. GAAP are similar. The few differences that remain are the result of differences in the application of the treasury stock method, the treatment of contracts that may be settled in shares or cash, and contingently issuable shares. (pp. 1148, 1152, and 1172) ●

Option-Pricing Theory

APPENDIX 19A

Option values have two essential components: (1) intrinsic value and (2) time value.

Intrinsic Value

Intrinsic value is the benefit the holder of an option would realize by exercising the option rather than buying the underlying stock directly. An option that permits an employee to buy \$25 stock for \$10 has an intrinsic value of \$15. An option that has an exercise price equal to or exceeding the market price of the underlying stock has zero intrinsic value.

Time Value

In addition to their intrinsic value, options also have a time value due to the fact that (a) the holder of an option does not have to pay the exercise price until the option is exercised and (b) the market price of the underlying stock may yet rise and create additional intrinsic value. All options have time value so long as time remains before expiration. The longer the time until expiration, other things being equal, the greater the time value. For instance, the option described above with an intrinsic value of \$15, might have a fair value of, say, \$22 if time still remains until the option expires. The \$7 difference represents the time value of the option. Time value can be subdivided into two components: (1) the effects of time value of money and (2) volatility value.

An option's value is enhanced by the delay in paying cash for the shares.

The time value of money component is the difference between the exercise price and its discounted present value minus the present value of expected dividends.

Volatility enhances the likelihood of stock price appreciation.

TIME VALUE OF MONEY

The time value of money component arises because the holder of an option does not have to pay the exercise price until the option is exercised. Instead, the holder can invest funds elsewhere while waiting to exercise the option. For measurement purposes, the time value of money component is assumed to be the rate of return available on risk-free U.S. Treasury Securities. The higher the time value of money, the higher the value of being able to delay payment of the exercise price.

When the underlying stock pays no dividends, the time value of money component is the difference between the exercise price (a future amount) and its discounted present value. Let's say the exercise price is \$30. If the present value (discounted at the risk-free rate) is \$24, the time value of money component is \$6. On the other hand, if the stock pays a dividend (or is expected to during the life of the option), the time value of money component is lower. The value of being able to delay payment of the exercise price would be partially off-set by the cost of forgoing the dividend in the meantime. For instance, if the stock underlying the options just described were expected to pay dividends and the discounted present value of the expected dividends were \$2, the time value of money component in that example would be reduced from \$6 to \$4.

VOLATILITY VALUE

The volatility value represents the possibility that the option holder might profit from market price appreciation of the underlying stock while being exposed to the loss of only the value of the option, rather than the full market value of the stock. For example, fair value of an option to buy a share at an exercise price of \$30 might be measured as \$7. The potential profit from market price appreciation is conceptually unlimited. And yet, the potential loss from the stock's value failing to appreciate is only \$7.

A stock's volatility is the amount by which its price has fluctuated previously or is expected to fluctuate in the future. The greater a stock's volatility, the greater the potential profit. It usually is measured as one standard deviation of a statistical distribution. Statistically, if the expected annualized volatility is 25%, the probability is approximately 67% that the stock's year-end price will fall within roughly plus or minus 25% of its beginning-of-year price. Stated differently, the probability is approximately 33% that the year-end stock price will fall outside that range.

Option-pricing models make assumptions about the likelihood of various future stock prices by making assumptions about the statistical distribution of future stock prices that take into account the expected volatility of the stock price. One popular option pricing model, the Black–Scholes model, for instance, assumes a log-normal distribution. This assumption posits that the stock price is as likely to fall by half as it is to double and that large price movements are less likely than small price movements. The higher a stock's volatility, the higher the probability of large increases or decreases in market price. Because the cost of large decreases is limited to the option's current value, but the profitability from large increases is unlimited, an option on a highly volatile stock has a higher probability of a large profit than does an option on a less volatile stock.

Summary

In summary, the fair value of an option is (a) its intrinsic value plus (b) its time value of money component plus (c) its volatility component. The variables that affect an option's fair value and the effect of each are indicated in Illustration 19A–1.

Illustration 19A–1

Effect of Variables on an Option's Fair Value

All Other Factors Being Equal, If the:	The Option Value Will Be:
Exercise price is higher	Lower
Term of the option is longer	Higher
Market price of the stock is higher	Higher
Dividends are higher	Lower
Risk-free rate of return is higher	Higher
Volatility of the stock is higher	Higher

Stock Appreciation Rights

Stock appreciation rights (SARs) overcome a major disadvantage of stock option plans that require employees to actually buy shares when the options are exercised. Even though the options' exercise price may be significantly lower than the market value of the shares, the employee still must come up with enough cash to take advantage of the bargain. This can be quite a burden if the award is sizable. In a nonqualified stock option plan, income taxes also would have to be paid when the options are exercised.²⁵

SARs offer a solution. Unlike stock options, these awards enable an employee to benefit by the amount that the market price of the company's stock rises without having to buy shares. Instead, the employee is awarded the share appreciation, which is the amount by which the market price on the exercise date exceeds a prespecified price (usually the market price at the date of grant). For instance, if the share price rises from \$35 to \$50, the employee receives \$15 cash for each SAR held. The share appreciation usually is payable in cash or the recipient has the choice between cash and shares. A plan of this type offered by **IBM** is described in Illustration 19B-1.

Long-Term Performance Plan (in part)

SARs offer eligible optionees the alternative of electing not to exercise the related stock option, but to receive payment in cash and/or stock, equivalent to the difference between the option price and the average market price of IBM stock on the date of exercising the right.

IS IT DEBT OR IS IT EQUITY?

In some plans, the employer chooses whether to issue shares or cash at exercise. In other plans, the choice belongs to the employee.²⁶ Who has the choice determines the way it's accounted for. More specifically, the accounting treatment depends on whether the award is considered an equity instrument or a liability. If the employer can elect to settle in shares of stock rather than cash, the award is considered to be equity. On the other hand, if the employee will receive cash or can elect to receive cash, the award is considered to be a liability.

The distinction between share-based awards that are considered equity and those that are considered liabilities is based on whether the employer is obligated to transfer assets to the employee. A cash SAR requires the transfer of assets, and therefore is a liability. A stock option, on the other hand, is an equity instrument if it requires only the issuance of stock. This does not mean that a stock option whose issuer may later choose to settle in cash is not an equity instrument. Instead, cash settlement would be considered equivalent to repurchasing an equity instrument for cash.

SARS PAYABLE IN SHARES (EQUITY)

When a SAR is considered to be equity (because the employer can elect to settle in shares of stock rather than cash), we estimate the fair value of the SARs at the grant date and accrue that compensation to expense over the service period. Normally, the fair value of a SAR is the same as the fair value of a stock option with the same terms. The fair value is determined at the grant date and accrued to compensation expense over the service period the same way as for other share-based compensation plans. The total compensation is not revised for subsequent changes in the price of the underlying stock. This is demonstrated in Case 1 of Illustration 19-B2 on the next page.

SARS PAYABLE IN CASH (LIABILITY)

When a SAR is considered to be a liability (because the employee can elect to receive cash upon settlement), we estimate the fair value of the SARs and recognize that amount as compensation expense over the requisite service period consistent with the way we account for

APPENDIX 19B

In an SAR plan, the employer pays compensation equal to the increase in share price from a specified level.

Illustration 19B-1

Stock Appreciation Rights—IBM Corporation

If an employer can elect to settle in shares of stock rather than cash, the award is considered to be equity.

If an employee can elect to receive cash, the award is considered to be a liability.

The cash settlement of an equity award is considered the repurchase of an equity instrument.

Compensation expense reported to date is the estimated total compensation multiplied by the fraction of the service period that has expired.

²⁵The tax treatment of share-based plans is discussed in an earlier Additional Consideration.

²⁶Many such plans are called tandem plans and award an employee both a cash SAR and an SAR that calls for settlement in an equivalent amount of shares. The exercise of one cancels the other.

options and other share-based compensation. However, because these plans are considered to be liabilities, it's necessary to periodically re-estimate the fair value in order to continually adjust the liability (and corresponding compensation) until it is paid. Be sure to note that this is consistent with the way we account for other liabilities. Recall from our discussions in Chapter 16, for instance, that when a tax rate change causes a change in the eventual liability for deferred income taxes, we adjust that liability.

The periodic expense (and adjustment to the liability) is the fraction of the total compensation earned to date by recipients of the SARs (based on the elapsed fraction of the service period) reduced by any amounts expensed in prior periods. For example, if the fair value of SARs at the end of a period is \$8, the total compensation would be **\$80 million** if 10 million SARs are expected to vest. Let's say two years of a four-year service period have elapsed, and \$21 million was expensed the first year. Then, compensation expense the second year would be \$19 million, calculated as ($\frac{2}{4}$ of **\$80 million**) minus \$21. An example spanning several years is provided in Illustration 19B-2, case 2.

We make up for incorrect previous estimates by adjusting expense in the period the estimate is revised.

Illustration 19B-2

Stock Appreciation Rights

Case 1: Equity

Fair value is estimated at the date of grant.

The value of the award is expensed over the service period for which the compensation is provided.

The value of the compensation is estimated each year at the fair value of the SARs.

The expense each year is the current estimate of total compensation that should have been recorded to date less the amount already recorded.

If the fair value falls below the amount expensed to date, both the liability and expense are reduced.

At January 1, 2013, Universal Communications issued SARs that, upon exercise, entitle key executives to receive compensation equal in value to the excess of the market price at exercise over the share price at the date of grant. The SARs vest at the end of 2016 (cannot be exercised until then) and expire at the end of 2020. The fair value of the SARs, estimated by an appropriate option pricing model, is \$8 per SAR at January 1, 2013. The fair value re-estimated at December 31, 2013, 2014, 2015, 2016, and 2017, is \$8.40, \$8, \$6, \$4.30, and \$5, respectively.

Case 1: SARs considered to be equity because Universal can elect to settle in shares of Universal stock at exercise

January 1, 2013

No entry

Calculate total compensation expense:

\$ 8	Estimated fair value per SAR
× 10 million	SARs granted
= \$80 million	Total compensation

The total compensation is allocated to expense over the four-year service (vesting) period: 2013–2016

$$\text{\$80 million} \div 4 \text{ years} = \text{\$20 million per year}$$

December 31, 2013, 2014, 2015, 2016

	(\$ in millions)
Compensation expense (\\$80 million ÷ 4 years)	20
Paid-in capital—SAR plan	20

Case 2: SARs considered to be a liability because employees can elect to receive cash at exercise

January 1, 2013

No entry

December 31, 2013

	(\$ in millions)
Compensation expense ($\text{\$8.40} \times 10 \text{ million} \times \frac{1}{4}$)	21
Liability—SAR plan	21

December 31, 2014

Compensation expense [$(\text{\$8} \times 10 \text{ million} \times \frac{2}{4}) - 21$]	19
Liability—SAR plan	19

December 31, 2015

Compensation expense [$(\text{\$6} \times 10 \text{ million} \times \frac{3}{4}) - 21 - 19$]	5
Liability—SAR plan	5

December 31, 2016

Liability—SAR plan	2
Compensation expense [$(\text{\$4.30} \times 10 \text{ million} \times \frac{4}{4}) - 21 - 19 - 5$]	2

Note that the way we treat changes in compensation estimates entails a catch-up adjustment in the period of change, *inconsistent* with the usual treatment of a change in estimate.

Remember that for most changes in estimate, revisions are allocated over remaining periods, rather than all at once in the period of change. The treatment is, however, consistent with the way we treat changes in forfeiture rate estimates as we discussed earlier in the chapter.

The liability continues to be adjusted after the service period if the rights haven't been exercised yet.

December 31, 2017	(\$ in millions)
Compensation expense $[(\$5 \times 10 \text{ million} \times \text{all}) - 21 - 19 - 5 + 2]$	7
Liability—SAR plan	7

Compensation expense and the liability continue to be adjusted until the SARs expire or are exercised.

It's necessary to continue to adjust both compensation expense and the liability until the SARs ultimately either are exercised or lapse.²⁷ Assume for example that the SARs are exercised on October 11, 2018, when their fair value is \$4.50, and executives choose to receive the market price appreciation in cash:

October 11, 2018	(\$ in millions)
Liability—SAR plan	5
Compensation expense $[(\$4.50 \times 10 \text{ million} \times \text{all}) - 50]$	5
Liability—SAR plan (balance)	45
Cash	45

Adjustment continues after the service period if the SARs have not yet been exercised.

Let's look at the changes in the liability—SAR plan account during the 2013–2018 period:

Liability—SAR Plan		(\$ in millions)	
	21		2013
	19		2014
	5		2015
2016	2		
	7		2017
2018	5		
2018	45		
	0	Balance after exercise	

The liability is adjusted each period as changes in the fair value estimates cause changes in the liability.

²⁷Except that the cumulative compensation expense cannot be negative; that is, the liability cannot be reduced below zero.

Questions For Review of Key Topics

- Q 19-1** What is restricted stock? Describe how compensation expense is determined and recorded for a restricted stock award plan.
- Q 19-2** Stock option plans provide employees the option to purchase: (a) a specified number of shares of the firm's stock, (b) at a specified price, (c) during a specified period of time. One of the most controversial aspects of accounting for stock-based compensation is how the fair value of stock options should be measured. Describe the general approach to measuring fair value.
- Q 19-3** The Tax Code differentiates between qualified option plans, including incentive plans, and nonqualified plans. What are the major differences in tax treatment between incentive plans and nonqualified plans?
- Q 19-4** Stock option (and other share-based) plans often specify a performance condition or a market condition that must be satisfied before employees are allowed the benefits of the award. Describe the general approach we use to account for performance-based options and options with market-related conditions.
- Q 19-5** What is a simple capital structure? How is EPS determined for a company with a simple capital structure?

- Q 19-6** When calculating the weighted average number of common shares, how are stock dividends and stock splits treated? Compare this treatment with that of additional shares sold for cash in midyear.
- Q 19-7** Blake Distributors had 100,000 common shares outstanding at the beginning of the year, January 1. On May 13, Blake distributed a 5% stock dividend. On August 1, 1,200 shares were retired. What is the weighted average number of shares for calculating EPS?
- Q 19-8** Why are preferred dividends deducted from net income when calculating EPS? Are there circumstances when this deduction is not made?
- Q 19-9** Distinguish between basic and diluted EPS.
- Q 19-10** The treasury stock method is used to incorporate the dilutive effect of stock options, stock warrants, and similar securities. Describe this method as it applies to diluted EPS.
- Q 19-11** The potentially dilutive effect of convertible securities is reflected in EPS calculations by the if-converted method. Describe this method as it relates to convertible bonds.
- Q 19-12** How is the potentially dilutive effect of convertible preferred stock reflected in EPS calculations by the if-converted method? How is this different from the way convertible bonds are considered?
- Q 19-13** A convertible security may appear to be dilutive when looked at individually but might be antidilutive when included in combination with other convertible securities. How should the order be determined for inclusion of convertible securities in an EPS calculation to avoid including an antidilutive security?
- Q 19-14** If stock options and restricted stock are outstanding when calculating diluted EPS, what are the components of the “proceeds” available for the repurchase of shares under the treasury stock method?
- Q 19-15** Wiseman Electronics has an agreement with certain of its division managers that 50,000 contingently issuable shares will be issued next year in the event operating income exceeds \$2.1 million that year. In what way, if any, is the calculation of EPS affected by these contingently issuable shares assuming this year’s operating income was \$2.2 million? \$2.0 million?
- Q 19-16** Diluted EPS would be precisely the same whether convertible securities were actually converted or not. Why?
- Q 19-17** When the income statement includes one or more of the separately reported items, such as discontinued operations or extraordinary items, which amounts require per share presentation?
- Q 19-18** In addition to EPS numbers themselves, what additional disclosures should be provided concerning the EPS information?
- Q 19-19** (Based on Appendix A) The fair value of stock options can be considered to comprise two main components. What are they?
- Q 19-20** (Based on Appendix B) LTV Corporation grants SARs to key executives. Upon exercise, the SARs entitle executives to receive either cash or stock equal in value to the excess of the market price at exercise over the share price at the date of grant. How should LTV account for the awards?

Brief Exercises

- BE 19-1**
Restricted stock award
● LO19-1
First Link Services granted 8 million of its \$1 par common shares to executives, subject to forfeiture if employment is terminated within three years. The common shares have a market price of \$6 per share on the grant date. Ignoring taxes, what is the total compensation cost pertaining to the restricted shares? What is the effect on earnings in the year after the shares are granted to executives?
- BE 19-2**
Stock options
● LO19-2
Under its executive stock option plan, National Corporation granted options on January 1, 2013, that permit executives to purchase 12 million of the company’s \$1 par common shares within the next six years, but not before December 31, 2015 (the vesting date). The exercise price is the market price of the shares on the date of grant, \$17 per share. The fair value of the options, estimated by an appropriate option pricing model, is \$5 per option. No forfeitures are anticipated. Ignoring taxes, what is the total compensation cost pertaining to the stock options? What is the effect on earnings in the year after the options are granted to executives?
- BE 19-3**
Stock options; forfeiture
● LO19-2
Refer to the situation described in BE 19-2. Suppose that unexpected turnover during 2014 caused the forfeiture of 5% of the stock options. Ignoring taxes, what is the effect on earnings in 2014? In 2015?
- BE 19-4**
Stock options; exercise
● LO19-2
Refer to the situation described in BE 19-2. Suppose that the options are exercised on April 3, 2016, when the market price is \$19 per share. Ignoring taxes, what journal entry will National record?

- BE 19-5**
Stock options; expiration
● LO19-2
Refer to the situation described in BE 19-2. Suppose that the options expire without being exercised. Ignoring taxes, what journal entry will National record?
- BE 19-6**
Performance-based options
● LO19-2
On October 1, 2013, Farmer Fabrication issued stock options for 100,000 shares to a division manager. The options have an estimated fair value of \$6 each. To provide additional incentive for managerial achievement, the options are not exercisable unless divisional revenue increases by 5% in three years. Farmer initially estimates that it is probable the goal will be achieved. How much compensation will be recorded in each of the next three years?
- BE 19-7**
Performance-based options
● LO19-2
Refer to the situation described in BE 19-6. Suppose that after one year, Farmer estimates that it is *not* probable that divisional revenue will increase by 5% in three years. What action will be taken to account for the options in 2014?
- BE 19-8**
Performance-based options
● LO19-2
Refer to the situation described in BE 19-6. Suppose that Farmer initially estimates that it is *not* probable the goal will be achieved, but then after one year, Farmer estimates that it *is* probable that divisional revenue will increase by 5% by the end of 2015. What action will be taken to account for the options in 2014 and thereafter?
- BE 19-9**
Options with market-based conditions
● LO19-2
On October 1, 2013, Farmer Fabrication issued stock options for 100,000 shares to a division manager. The options have an estimated fair value of \$6 each. To provide additional incentive for managerial achievement, the options are not exercisable unless Farmer Fabrication's stock price increases by 5% in three years. Farmer initially estimates that it is not probable the goal will be achieved. How much compensation will be recorded in each of the next three years?
- BE 19-10**
EPS; shares issued, shares retired
● LO19-5, LO19-6
McDonnell-Myer Corporation reported net income of \$741 million. The company had 544 million common shares outstanding at January 1 and sold 36 million shares on Feb. 28. As part of an annual share repurchase plan, 6 million shares were retired on April 30 for \$47 per share. Calculate McDonnell-Myer's earnings per share for the year.
- BE 19-11**
EPS; nonconvertible preferred shares
● LO19-7
At December 31, 2012 and 2013, Funk & Noble Corporation had outstanding 820 million shares of common stock and 2 million shares of 8%, \$100 par value cumulative preferred stock. No dividends were declared on either the preferred or common stock in 2012 or 2013. Net income for 2013 was \$426 million. The income tax rate is 40%. Calculate earnings per share for the year ended December 31, 2013.
- BE 19-12**
EPS; stock options
● LO19-8
Fully vested incentive stock options exercisable at \$50 per share to obtain 24,000 shares of common stock were outstanding during a period when the average market price of the common stock was \$60 and the ending market price was \$60. By how many shares will the assumed exercise of these options increase the weighted-average number of shares outstanding when calculating diluted earnings per share?
- BE 19-13**
EPS; convertible preferred shares
● LO19-9
Ahnberg Corporation had 800,000 shares of common stock issued and outstanding at January 1. No common shares were issued during the year, but on January 1 Ahnberg issued 100,000 shares of convertible preferred stock. The preferred shares are convertible into 200,000 shares of common stock. During the year Ahnberg paid \$60,000 cash dividends on the preferred stock. Net income was \$1,500,000. What were Ahnberg's basic and diluted earnings per share for the year?
- BE 19-14**
EPS; restricted stock award
● LO19-11
Niles Company granted 9 million of its no par common shares to executives, subject to forfeiture if employment is terminated within three years. The common shares have a market price of \$5 per share on January 1, 2012, the grant date. When calculating diluted EPS at December 31, 2013, what will be the net increase in the denominator of the EPS fraction if the market price of the common shares averaged \$5 per share during 2013?

Exercises

An alternate exercise and problem set is available on the text website: www.mhhe.com/spiceland7e

- E 19-1**
Restricted stock award plan
● LO19-1
Allied Paper Products, Inc. offers a restricted stock award plan to its vice presidents. On January 1, 2013, the company granted 16 million of its \$1 par common shares, subject to forfeiture if employment is terminated within two years. The common shares have a market price of \$5 per share on the grant date.

Required:

1. Determine the total compensation cost pertaining to the restricted shares.
2. Prepare the appropriate journal entries related to the restricted stock through December 31, 2014.

E 19-2
Restricted stock
award plan

● LO19-1

On January 1, 2013, VKI Corporation awarded 12 million of its \$1 par common shares to key personnel, subject to forfeiture if employment is terminated within three years. On the grant date, the shares have a market price of \$2.50 per share.

Required:

1. Determine the total compensation cost pertaining to the restricted shares.
2. Prepare the appropriate journal entry to record the award of restricted shares on January 1, 2013.
3. Prepare the appropriate journal entry to record compensation expense on December 31, 2013.
4. Prepare the appropriate journal entry to record compensation expense on December 31, 2014.
5. Prepare the appropriate journal entry to record compensation expense on December 31, 2015.
6. Prepare the appropriate journal entry to record the lifting of restrictions on the shares at December 31, 2015.

Kmart Holding Co. included the following disclosure note in an annual report:

RESTRICTED STOCK (in part)

... , we issued 111,540 shares of restricted stock at market prices ranging from \$23.00 to \$29.65. . . . The restricted stock generally vests over three years, during which time we will recognize total compensation expense of approximately \$3 million.

Required:

1. Based on the information provided in the disclosure note, determine the weighted average market price of the restricted stock issued.
2. How much compensation expense did Kmart report for the year following the year in which the restricted stock was issued?

E 19-4
Restricted
stock award
plan; forfeitures
anticipated

● LO19-1

Magnetic-Optical Corporation offers a variety of share-based compensation plans to employees. Under its restricted stock award plan, the company on January 1, 2013, granted 4 million of its \$1 par common shares to various division managers. The shares are subject to forfeiture if employment is terminated within three years. The common shares have a market price of \$22.50 per share on the grant date.

Required:

1. Determine the total compensation cost pertaining to the restricted shares.
2. Prepare the appropriate journal entry to record the award of restricted shares on January 1, 2013.
3. Prepare the appropriate journal entry to record compensation expense on December 31, 2013.
4. Suppose Magnetic-Optical expected a 10% forfeiture rate on the restricted shares prior to vesting. Determine the total compensation cost.

E 19-5
Stock options
● LO19-2

American Optical Corporation provides a variety of share-based compensation plans to its employees. Under its executive stock option plan, the company granted options on January 1, 2013, that permit executives to acquire 4 million of the company's \$1 par common shares within the next five years, but not before December 31, 2014 (the vesting date). The exercise price is the market price of the shares on the date of grant, \$14 per share. The fair value of the 4 million options, estimated by an appropriate option pricing model, is \$3 per option. No forfeitures are anticipated. Ignore taxes.

Required:

1. Determine the total compensation cost pertaining to the options.
2. Prepare the appropriate journal entry to record the award of options on January 1, 2013.
3. Prepare the appropriate journal entry to record compensation expense on December 31, 2013.
4. Prepare the appropriate journal entry to record compensation expense on December 31, 2014.

E 19-6
Stock options;
forfeiture of
options
● LO19-2

On January 1, 2013, Adams-Meneke Corporation granted 25 million incentive stock options to division managers, each permitting holders to purchase one share of the company's \$1 par common shares within the next six years, but not before December 31, 2015 (the vesting date). The exercise price is the market price of the shares on the date of grant, currently \$10 per share. The fair value of the options, estimated by an appropriate option pricing model, is \$3 per option.

Required:

1. Determine the total compensation cost pertaining to the options on January 1, 2013.
2. Prepare the appropriate journal entry to record compensation expense on December 31, 2013.
3. Unexpected turnover during 2014 caused the forfeiture of 6% of the stock options. Determine the adjusted compensation cost, and prepare the appropriate journal entry(s) on December 31, 2014 and 2015.

E 19-7

exercise;
forfeitures

● LO19-2

Walters Audio Visual Inc. offers an incentive stock option plan to its regional managers. On January 1, 2013, options were granted for 40 million \$1 par common shares. The exercise price is the market price on the grant date—\$8 per share. Options cannot be exercised prior to January 1, 2015, and expire December 31, 2019. The fair value of the 40 million options, estimated by an appropriate option pricing model, is \$1 per option.

Required:

1. Determine the total compensation cost pertaining to the incentive stock option plan.
2. Prepare the appropriate journal entry to record compensation expense on December 31, 2013.
3. Prepare the appropriate journal entry to record compensation expense on December 31, 2014.
4. Prepare the appropriate journal entry to record the exercise of 75% of the options on March 12, 2015, when the market price is \$9 per share.
5. Prepare the appropriate journal entry on December 31, 2019, when the remaining options that have vested expire without being exercised.

E 19-8

● LO19-2

SSG Cycles manufactures and distributes motorcycle parts and supplies. Employees are offered a variety of share-based compensation plans. Under its nonqualified stock option plan, SSG granted options to key officers on January 1, 2013. The options permit holders to acquire 12 million of the company's \$1 par common shares for \$11 within the next six years, but not before January 1, 2016 (the vesting date). The market price of the shares on the date of grant is \$13 per share. The fair value of the 12 million options, estimated by an appropriate option pricing model, is \$3 per option.

Required:

1. Determine the total compensation cost pertaining to the incentive stock option plan.
2. Prepare the appropriate journal entries to record compensation expense on December 31, 2013, 2014, and 2015.
3. Record the exercise of the options if all of the options are exercised on May 11, 2017, when the market price is \$14 per share.

E 19-9

Employee share
purchase plan

● LO19-3

In order to encourage employee ownership of the company's \$1 par common shares, Washington Distribution permits any of its employees to buy shares directly from the company through payroll deduction. There are no brokerage fees and shares can be purchased at a 15% discount. During March, employees purchased 50,000 shares at a time when the market price of the shares on the New York Stock Exchange was \$12 per share.

Required:

Prepare the appropriate journal entry to record the March purchases of shares under the employee share purchase plan.

- LO19-5, LO19-6, LO19-7

At December 31, 2012, Albrecht Corporation had outstanding 373,000 shares of common stock and 8,000 shares of 9.5%, \$100 par value cumulative, nonconvertible preferred stock. On May 31, 2013, Albrecht sold for cash 12,000 shares of its common stock. No cash dividends were declared for 2013. For the year ended December 31, 2013, Albrecht reported a net loss of \$114,000.

Required:

Calculate Albrecht's net loss per share for the year ended December 31, 2013.

E 19-14

EPS; stock dividend; nonconvertible preferred stock; treasury shares; shares sold

- LO19-5, LO19-6, LO19-7

On December 31, 2012, Berclair Inc. had 200 million shares of common stock and 3 million shares of 9%, \$100 par value cumulative preferred stock issued and outstanding. On March 1, 2013, Berclair purchased 24 million shares of its common stock as treasury stock. Berclair issued a 5% common stock dividend on July 1, 2013. Four million treasury shares were sold on October 1. Net income for the year ended December 31, 2013, was \$150 million.

Required:

Compute Berclair's earnings per share for the year ended December 31, 2013.

E 19-15

EPS; stock dividend; nonconvertible preferred stock; treasury shares; shares sold; stock options

- LO19-5 through LO19-8

(Note: This is a variation of the previous exercise, modified to include stock options.) On December 31, 2012, Berclair Inc. had 200 million shares of common stock and 3 million shares of 9%, \$100 par value cumulative preferred stock issued and outstanding. On March 1, 2013, Berclair purchased 24 million shares of its common stock as treasury stock. Berclair issued a 5% common stock dividend on July 1, 2013. Four million treasury shares were sold on October 1. Net income for the year ended December 31, 2013, was \$150 million.

Also outstanding at December 31 were incentive stock options granted to key executives on September 13, 2008. The options are exercisable as of September 13, 2012, for 30 million common shares at an exercise price of \$56 per share. During 2013, the market price of the common shares averaged \$70 per share.

Required:

Compute Berclair's basic and diluted earnings per share for the year ended December 31, 2013.

E 19-16

EPS; stock dividend; nonconvertible preferred stock; treasury shares; shares sold; stock options exercised

- LO19-5 through LO19-8

(Note: This is a variation of the previous exercise, modified to include the exercise of stock options.) On December 31, 2012, Berclair Inc. had 200 million shares of common stock and 3 million shares of 9%, \$100 par value cumulative preferred stock issued and outstanding. On March 1, 2013, Berclair purchased 24 million shares of its common stock as treasury stock. Berclair issued a 5% common stock dividend on July 1, 2013. Four million treasury shares were sold on October 1. Net income for the year ended December 31, 2013, was \$150 million.

Also outstanding at December 31 were incentive stock options granted to key executives on September 13, 2008. The options are exercisable as of September 13, 2012, for 30 million common shares at an exercise price of \$56 per share. During 2013, the market price of the common shares averaged \$70 per share.

The options were exercised on September 1, 2013.

Required:

Compute Berclair's basic and diluted earnings per share for the year ended December 31, 2013.

E 19-17

EPS; stock dividend; nonconvertible preferred stock; treasury shares; shares sold; stock options; convertible bonds

● LO19-5 through LO19-9

(Note: This is a variation of E 19-15 modified to include convertible bonds).

On December 31, 2012, Berclair Inc. had 200 million shares of common stock and 3 million shares of 9%, \$100 par value cumulative preferred stock issued and outstanding. On March 1, 2013, Berclair purchased 24 million shares of its common stock as treasury stock. Berclair issued a 5% common stock dividend on July 1, 2013. Four million treasury shares were sold on October 1. Net income for the year ended December 31, 2013, was \$150 million. The income tax rate is 40%.

Also outstanding at December 31 were incentive stock options granted to key executives on September 13, 2008. The options are exercisable as of September 13, 2012, for 30 million common shares at an exercise price of \$56 per share. During 2013, the market price of the common shares averaged \$70 per share.

\$62.5 million of 8% bonds, convertible into 6 million common shares, were issued at face value in 2009.

Required:

Compute Berclair's basic and diluted earnings per share for the year ended December 31, 2013.

E 19-18

EPS; shares issued; stock options

● LO19-6 through LO19-9

Stanley Department Stores reported net income of \$720,000 for the year ended December 31, 2013.

Additional Information:

Common shares outstanding at Jan. 1, 2013 80,000

Incentive stock options (vested in 2012) outstanding throughout 2013 24,000

(Each option is exercisable for one common share at an exercise price of \$37.50)

During the year, the market price of Stanley's common stock averaged \$45 per share.

On Aug. 30 Stanley sold 15,000 common shares.

Stanley's only debt consisted of \$50,000 of 10% short term bank notes.

The company's income tax rate is 40%.

Required:

Compute Stanley's basic and diluted earnings per share for the year ended December 31, 2013.

E 19-19

EPS; convertible preferred stock; convertible bonds; order of entry

● LO19-7, LO19-9

Information from the financial statements of Ames Fabricators, Inc., included the following:

	December 31	
	2013	2012
Common shares	100,000	100,000
Convertible preferred shares (convertible into 32,000 shares of common)	12,000	12,000
10% convertible bonds (convertible into 30,000 shares of common)	\$1,000,000	\$1,000,000

Ames's net income for the year ended December 31, 2013, is \$500,000. The income tax rate is 40%. Ames paid dividends of \$5 per share on its preferred stock during 2013.

Required:

Compute basic and diluted earnings per share for the year ended December 31, 2013.

E 19-20

EPS; restricted stock

● LO19-11

As part of its executive compensation plan, Vertovec Inc. granted 54,000 of its no par common shares to executives, subject to forfeiture if employment is terminated within three years. Vertovec's common shares have a market price of \$5 per share on January 1, 2012, the grant date, as well as on December 31, 2013. 800,000 shares were outstanding at January 1, 2013. Net income for 2013 was \$120,000.

Required:

Compute Vertovec's basic and diluted earnings per share for the year ended December 31, 2013.

Record restricted stock; effect on EPS

● LO19-1, LO19-11

PHN Foods granted 18 million of its no par common shares to executives, subject to forfeiture if employment is terminated within three years. The common shares have a market price of \$5 per share on January 1, 2012, the grant date.

Required:

1. What journal entry will PHN Foods prepare to record executive compensation regarding these shares at December 31, 2012 and December 31, 2013?
2. When calculating diluted EPS at December 31, 2013, what will be the net increase in the denominator of the EPS fraction if the market price of the common shares averages \$5 per share during 2013?

E 19-22

New shares;
contingently
issuable shares

- LO19-6,
LO19-12

During its first year of operations, McCollum Tool Works entered into the following transactions relating to shareholders' equity. The corporation was authorized to issue 100 million common shares, \$1 par per share.

- | | |
|---------|---|
| Jan. 2 | Issued 35 million common shares for cash. |
| 3 | Entered an agreement with the company president to issue up to 2 million additional shares of common stock in 2014 based on the earnings of McCollum in 2014. If net income exceeds \$140 million, the president will receive 1 million shares; 2 million shares if net income exceeds \$150 million. |
| Mar. 31 | Issued 4 million shares in exchange for plant facilities. |

Net income for 2013 was \$148 million.

Required:

Compute basic and diluted earnings per share for the year ended December 31, 2013.

E 19-23

EPS; new shares;
contingent
agreements

- LO19-6,
LO19-12

Anderson Steel Company began 2013 with 600,000 shares of common stock outstanding. On March 31, 2013, 100,000 new shares were sold at a price of \$45 per share. The market price has risen steadily since that time to a high of \$50 per share at December 31. No other changes in shares occurred during 2013, and no securities are outstanding that can become common stock. However, there are two agreements with officers of the company for future issuance of common stock. Both agreements relate to compensation arrangements reached in 2012. The first agreement grants to the company president a right to 10,000 shares of stock each year the closing market price is at least \$48. The agreement begins in 2014 and expires in 2017. The second agreement grants to the controller a right to 15,000 shares of stock if she is still with the firm at the end of 2021. Net income for 2013 was \$2,000,000.

Required:

Compute Anderson Steel Company's basic and diluted EPS for the year ended December 31, 2013.

FASB codification
research

- LO19-2

The *FASB Accounting Standards Codification* represents the single source of authoritative U.S. generally accepted accounting principles.

Required:

1. Obtain the relevant authoritative literature on stock compensation using the FASB's Codification Research System at the FASB website (www.fasb.org). What is the specific citation that describes the information that companies must disclose about the exercise prices for their stock option plans?
2. List the disclosure requirements.

E 19-26

FASB codification
research

- LO19-2,
LO19-3,
LO19-7,
LO19-13

Access the FASB's Codification Research System at the FASB website (www.fasb.org). Determine the specific citation for accounting for each of the following items:

1. Initial measurement of stock options.
2. The measurement date for share-based payments classified as liabilities.
3. The formula to calculate diluted earnings per share.
4. The way stock dividends or stock splits in the current year affect the presentation of EPS in the income statement.

E 19–27

Stock appreciation rights; settlement in shares

● (Appendix B)

As part of its stock-based compensation package, International Electronics granted 24 million stock appreciation rights (SARs) to top officers on January 1, 2013. At exercise, holders of the SARs are entitled to receive stock equal in value to the excess of the market price at exercise over the share price at the date of grant. The SARs cannot be exercised until the end of 2016 (vesting date) and expire at the end of 2018. The \$1 par common shares have a market price of \$46 per share on the grant date. The fair value of the SARs, estimated by an appropriate option pricing model, is \$3 per SAR at January 1, 2013. The fair value reestimated at December 31, 2013, 2014, 2015, 2016, and 2017, is \$4, \$3, \$4, \$2.50, and \$3, respectively. All recipients are expected to remain employed through the vesting date.

Required:

1. Prepare the appropriate journal entry to record the award of SARs on January 1, 2013. Will the SARs be reported as debt or equity?
2. Prepare the appropriate journal entries pertaining to the SARs on December 31, 2013–December 31, 2016.
3. The SARs remain unexercised on December 31, 2017. Prepare the appropriate journal entry on that date.
4. The SARs are exercised on June 6, 2018, when the share price is \$50. Prepare the appropriate journal entry(s) on that date.

E 19–28

Stock appreciation rights; cash settlement

● (Appendix B)

(Note: This is a variation of the previous exercise, modified to allow settlement in cash.)

As part of its stock-based compensation package, International Electronics granted 24 million stock appreciation rights (SARs) to top officers on January 1, 2013. At exercise, holders of the SARs are entitled to receive cash or stock equal in value to the excess of the market price at exercise over the share price at the date of grant. The SARs cannot be exercised until the end of 2016 (vesting date) and expire at the end of 2018. The \$1 par common shares have a market price of \$46 per share on the grant date. The fair value of the SARs, estimated by an appropriate option pricing model, is \$3 per SAR at January 1, 2013. The fair value re-estimated at December 31, 2013, 2014, 2015, 2016, and 2017, is \$4, \$3, \$4, \$2.50, and \$3, respectively. All recipients are expected to remain employed through the vesting date.

Required:

1. Prepare the appropriate journal entry to record the award of SARs on January 1, 2013.
2. Prepare the appropriate journal entries pertaining to the SARs on December 31, 2013–December 31, 2016.
3. The SARs remain unexercised on December 31, 2017. Prepare the appropriate journal entry on that date.
4. The SARs are exercised on June 6, 2018, when the share price is \$50, and executives choose to receive the market price appreciation in cash. Prepare the appropriate journal entry(s) on that date.

CPA and CMA Review Questions

CPA Exam Questions

The following questions are adapted from a variety of sources including questions developed by the AICPA Board of Examiners and those used in the Kaplan CPA Review Course to study accounting for share-based compensation and earnings per share while preparing for the CPA examination. Determine the response that best completes the statements or questions.

● LO19–2

1. On January 1, 2013, Pall Corp. granted stock options to key employees for the purchase of 40,000 shares of the company's common stock at \$25 per share. The options are intended to compensate employees for the next two years. The options are exercisable within a four-year period beginning January 1, 2015, by the grantees still in the employ of the company. No options were terminated during 2013, but the company does have an experience of 4% forfeitures over the life of the stock options. The market price of the common stock was \$32 per share at the date of the grant. Pall Corp. used the binomial pricing model and estimated the fair value of each of the options at \$10. What amount should Pall charge to compensation expense for the year ended December 31, 2013?
 - a. \$153,600
 - b. \$160,000
 - c. \$192,000
 - d. \$200,000

● LO19–2

2. On January 1, 2013, Doro Corp. granted an employee an option to purchase 3,000 shares of Doro's \$5 par value common stock at \$20 per share. The options became exercisable on December 31, 2014, after the employee completed two years of service. The options were exercised on January 10, 2015. The market

prices of Doro's stock were as follows: January 1, 2013, \$30; December 31, 2014, \$50; and January 10, 2015, \$45. The Black-Scholes-Merton option pricing model estimated the value of the options at \$8 each on the grant date. For 2013, Doro should recognize compensation expense of

- \$ 0
- \$12,000
- \$15,000
- \$45,000

- LO19-6 3. The following information pertains to Jet Corp.'s outstanding stock for 2013:

<u>Common stock, \$5 par value</u>	
Shares outstanding, 1/1/2013	20,000
2-for-1 stock split, 4/1/2013	20,000
Shares issued, 7/1/2013	10,000
<u>Preferred stock, \$10 par value, 5% cumulative</u>	
Shares outstanding, 1/1/2013	4,000

What is the number of shares Jet should use to calculate 2013 basic earnings per share?

- 40,000
- 45,000
- 50,000
- 54,000

- LO19-7 4. At December 31, 2013 and 2012, Gow Corp. had 100,000 shares of common stock and 10,000 shares of 5%, \$100 par value cumulative preferred stock outstanding. No dividends were declared on either the preferred or common stock in 2013 or 2012. Net income for 2013 was \$1,000,000. For 2013, basic earnings per common share amounted to
- \$ 5.00
 - \$ 9.50
 - \$ 9.00
 - \$10.00

- LO19-8 5. January 1, 2013, Hage Corporation granted options to purchase 9,000 of its common shares at \$7 each. The market price of common stock was \$9 per share on March 31, 2013, and averaged \$9 per share during the quarter then ended. There was no change in the 50,000 shares of outstanding common stock during the quarter ended March 31, 2013. Net income for the quarter was \$8,268. The number of shares to be used in computing diluted earnings per share for the quarter is
- 50,000
 - 52,000
 - 53,000
 - 59,000

- LO19-9 6. During 2013, Moore Corp. had the following two classes of stock issued and outstanding for the entire year:
- 100,000 shares of common stock, \$1 par.
 - 1,000 shares of 4% preferred stock, \$100 par, convertible share for share into common stock.

Moore's 2013 net income was \$900,000, and its income tax rate for the year was 30%. In the computation of diluted earnings per share for 2013, the amount to be used in the numerator is

- \$896,000
- \$898,800
- \$900,000
- \$901,200

- LO19-9 7. On January 2, 2013, Lang Co. issued at par \$10,000 of 4% bonds convertible in total into 1,000 shares of Lang's common stock. No bonds were converted during 2013.

Throughout 2013, Lang had 1,000 shares of common stock outstanding. Lang's 2013 net income was \$1,000. Lang's income tax rate is 50%.

No potential common shares other than the convertible bonds were outstanding during 2013.

Lang's diluted earnings per share for 2013 would be

- \$.50
- \$.60
- \$.70
- \$1.00

Beginning in 2011, International Financial Reporting Standards are tested on the CPA exam along with U.S. GAAP. The following questions deal with the application of IFRS in accounting for share-based compensation.

● LO19-14

8. M Company prepares its financial statements using IFRS. M will record a deferred tax asset for stock options
- for the cumulative amount of the fair value of the options M has recorded for compensation expense.
 - for the portion of the options' intrinsic value earned to date times the tax rate.
 - for the tax rate times the amount of compensation.
 - unless the award is "in the money;" that is, it has intrinsic value.

● LO19-14

9. N Company had issued 80,000 executive stock options as of January 1, 2013, permitting executives to buy 80,000 shares of stock for \$60 per share. N's vesting schedule is 20% the first year, 30% the second year, and 50% the third year (graded-vesting). The fair value of the options is estimated as follows:

Vesting Date	Amount Vesting	Fair Value per Option
Dec. 31, 2013	20%	\$5
Dec. 31, 2014	30%	\$6
Dec. 31, 2015	50%	\$9

Assuming N prepares its financial statements in accordance with International Financial Reporting Standards, what is the compensation expense related to the options to be recorded in 2014?

- \$ 72,000
- \$144,000
- \$192,000
- \$195,000

The following questions dealing with share-based compensation and earnings per share are adapted from questions that previously appeared on Certified Management Accountant (CMA) examinations. The CMA designation sponsored by the Institute of Management Accountants (www.imanet.org) provides members with an objective measure of knowledge and competence in the field of management accounting. Determine the response that best completes the statements or questions.

● LO19-2

1. Noncompensatory stock option plans have all of the following characteristics except
- participation by substantially all full-time employees who meet limited employment qualifications.
 - equal offers of stock to all eligible employees.
 - a limited amount of time permitted to exercise the option.
 - a provision related to the achievement of certain performance criteria.

● LO19-2

2. A stock option plan may or may not be intended to compensate employees for their work. The compensation expense for compensatory stock option plans should be recognized in the periods the
- employees become eligible to exercise the options.
 - employees perform services.
 - stock is issued.
 - options are granted.

Problems

An alternate exercise and problem set is available on the text website: www.mhhe.com/spiceland7e

P 19-1

Stock options;
forfeiture;
exercise

● LO19-2

On October 15, 2012, the board of directors of Ensor Materials Corporation approved a stock option plan for key executives. On January 1, 2013, 20 million stock options were granted, exercisable for 20 million shares of Ensor's \$1 par common stock. The options are exercisable between January 1, 2016, and December 31, 2018, at 80% of the quoted market price on January 1, 2013, which was \$15. The fair value of the 20 million options, estimated by an appropriate option pricing model, is \$6 per option.

Two million options were forfeited when an executive resigned in 2014. All other options were exercised on July 12, 2017, when the stock's price jumped unexpectedly to \$19 per share.

Required:

- When is Ensor's stock option measurement date?
- Determine the compensation expense for the stock option plan in 2013. (Ignore taxes.)
- What is the effect of forfeiture of the stock options on Ensor's financial statements for 2014 and 2015?
- Is this effect consistent with the general approach for accounting for changes in estimates? Explain.
- How should Ensor account for the exercise of the options in 2017?

P 19-2Stock options;
graded vesting

● LO19-2

Pastner Brands is a calendar-year firm with operations in several countries. As part of its executive compensation plan, at January 1, 2013, the company issued 400,000 executive stock options permitting executives to buy 400,000 shares of Pastner stock for \$34 per share. One-fourth of the options vest in each of the next four years beginning at December 31, 2013 (graded vesting). Pastner elects to separate the total award into four groups (or tranches) according to the year in which they vest and measures the compensation cost for each vesting date as a separate award. The fair value of each tranche is estimated at January 1, 2013, as follows:

Vesting Date	Amount Vesting	Fair Value per Option
Dec. 31, 2013	25%	\$3.50
Dec. 31, 2014	25%	\$4.00
Dec. 31, 2015	25%	\$4.50
Dec. 31, 2016	25%	\$5.00

Required:

1. Determine the compensation expense related to the options to be recorded each year 2013–2016, assuming Pastner allocates the compensation cost for each of the four groups (tranches) separately.
2. Determine the compensation expense related to the options to be recorded each year 2013–2016, assuming Pastner uses the straight-line method to allocate the total compensation cost.

P 19-3Stock options;
graded vesting;
measurement
using a single fair
value per option

● LO19-2

Refer to the situation described in Problem 19-2. Assume Pastner measures the fair value of all options on January 1, 2013, to be \$4.50 per option using a single weighted-average expected life of the options assumption.

Required:

1. Determine the compensation expense related to the options to be recorded each year 2013–2016, assuming Pastner allocates the compensation cost for each of the four groups (tranches) separately.
2. Determine the compensation expense related to the options to be recorded each year 2013–2016, assuming Pastner uses the straight-line method to allocate the total compensation cost.

P 19-4Stock options;
graded vesting;
IFRS● LO19-2,
LO19-14

Refer to the situation described in Problem 19-2. Assume Pastner prepares its financial statements using International Financial Reporting Standards.

Required:

How might your responses to requirement 1 and requirement 2 differ using IFRS? Explain.

IFRS

P 19-5Steve Jobs' restricted stock;
tax effects

● LO19-2

Apple Inc. provides its executives compensation under a variety of share-based compensation plans including restricted stock awards. The following disclosure note from Apple's 2009 annual report describes the plan created for the company's chief executive officer, Steve Jobs:

CEO RESTRICTED STOCK AWARD

On March 19, 2003, the Company's Board of Directors granted 10 million shares of restricted stock to the Company's CEO that vested on March 19, 2006. The amount of the restricted stock award expensed by the Company was based on the closing market price of the Company's common stock on the date of grant and was amortized ratably on a straight-line basis over the three-year requisite service period. Upon vesting during 2006, the 10 million shares of restricted stock had a fair value of \$646.6 million and had grant-date fair value of \$7.48 per share. The restricted stock award was net-share settled such that the Company withheld shares with value equivalent to the CEO's minimum statutory obligation for the applicable income and other employment taxes, and remitted the cash to the appropriate taxing authorities. The total shares withheld of 4.6 million were based on the value of the restricted stock award on the vesting date as determined by the Company's closing stock price of \$64.66. The remaining shares net of those withheld were delivered to the Company's CEO. Total payments for the CEO's tax obligations to the taxing authorities were \$296 million in 2006 and are reflected as a financing activity within the Consolidated Statements of Cash Flows. The net-share settlement had the effect of share repurchases by the Company as it reduced and retired the number of shares outstanding and did not represent an expense to the Company. The Company's CEO has no remaining shares of restricted stock.

Real World Financials

Required:

1. How much compensation did Apple record for its CEO related to the restricted stock in its fiscal year ended September 24, 2005?
2. What was the CEO's combined income tax and employment tax rate that Apple used to determine the shares to be withheld at vesting?
3. From the information provided in the disclosure note, recreate the journal entries Apple used to record compensation expense and its related tax effects on September 24, 2005, the end of the 2005 fiscal year.
4. From the information provided in the disclosure note, recreate the journal entries Apple used to record the vesting of the restricted stock and its related tax effects on March 16, 2006, assuming the remaining compensation expense already has been recorded.

P 19-6

Stock option plan; deferred tax effect recognized

● LO19-2

excel

Walters Audio Visual, Inc., offers a stock option plan to its regional managers. On January 1, 2013, options were granted for 40 million \$1 par common shares. The exercise price is the market price on the grant date, \$8 per share. Options cannot be exercised prior to January 1, 2015, and expire December 31, 2019. The fair value of the options, estimated by an appropriate option pricing model, is \$2 per option. Because the plan does not qualify as an incentive plan, Walters will receive a tax deduction upon exercise of the options equal to the excess of the market price at exercise over the exercise price. The income tax rate is 40%.

Required:

1. Determine the total compensation cost pertaining to the stock option plan.
2. Prepare the appropriate journal entries to record compensation expense and its tax effect on December 31, 2013.
3. Prepare the appropriate journal entries to record compensation expense and its tax effect on December 31, 2014.
4. Record the exercise of the options and their tax effect if *all* of the options are exercised on March 20, 2018, when the market price is \$12 per share.
5. Assume the option plan qualifies as an incentive plan. Prepare the appropriate journal entries to record compensation expense and its tax effect on December 31, 2013.
6. Assuming the option plan qualifies as an incentive plan, record the exercise of the options and their tax effect if *all* of the options are exercised on March 20, 2018, when the market price is \$11 per share.

P 19-7

Stock option plan; deferred tax effect of a nonqualifying plan

● LO19-2

JBL Aircraft manufactures and distributes aircraft parts and supplies. Employees are offered a variety of share-based compensation plans. Under its nonqualified stock option plan, JBL granted options to key officers on January 1, 2013. The options permit holders to acquire six million of the company's \$1 par common shares for \$22 within the next six years, but not before January 1, 2016 (the vesting date). The market price of the shares on the date of grant is \$26 per share. The fair value of the 6 million options, estimated by an appropriate option pricing model, is \$6 per option. Because the plan does not qualify as an incentive plan, JBL will receive a tax deduction upon exercise of the options equal to the excess of the market price at exercise over the exercise price. The tax rate is 40%.

Required:

1. Determine the total compensation cost pertaining to the incentive stock option plan.
2. Prepare the appropriate journal entries to record compensation expense and its tax effect on December 31, 2013, 2014, and 2015.
3. Record the exercise of the options and their tax effect if *all* of the options are exercised on August 21, 2017, when the market price is \$27 per share.

P 19-8

Performance option plan

● LO19-2

LCI Cable Company grants 1 million performance stock options to key executives at January 1, 2013. The options entitle executives to receive 1 million of LCI \$1 par common shares, subject to the achievement of specific financial goals over the next four years. Attainment of these goals is considered probable initially and throughout the service period. The options have a current fair value of \$12 per option.

Required:

1. Prepare the appropriate entry when the options are awarded on January 1, 2013.
2. Prepare the appropriate entries on December 31 of each year 2013–2016.
3. Suppose at the beginning of 2015, LCI decided it is not probable that the performance objectives will be met. Prepare the appropriate entries on December 31 of 2015 and 2016.

P 19-9

Net loss; stock dividend; nonconvertible preferred stock; treasury shares; shares sold; extraordinary loss

- LO19-5 through LO19-7, LO19-13

On December 31, 2012, Ainsworth, Inc., had 600 million shares of common stock outstanding. Twenty million shares of 8%, \$100 par value cumulative, nonconvertible preferred stock were sold on January 2, 2013. On April 30, 2013, Ainsworth purchased 30 million shares of its common stock as treasury stock. Twelve million treasury shares were sold on August 31. Ainsworth issued a 5% common stock dividend on June 12, 2013. No cash dividends were declared in 2013. For the year ended December 31, 2013, Ainsworth reported a net loss of \$140 million, including an after-tax extraordinary loss of \$400 million from a litigation settlement.

Required:

1. Determine Ainsworth's net loss per share for the year ended December 31, 2013.
2. Determine the per share amount of income or loss from continuing operations for the year ended December 31, 2013.
3. Prepare an EPS presentation that would be appropriate to appear on Ainsworth's 2013 and 2012 comparative income statements. Assume EPS was reported in 2012 as \$.75, based on net income (no extraordinary items) of \$450 million and a weighted-average number of common shares of 600 million.

P 19-10

EPS from statement of retained earnings

- LO19-4 through LO19-6

(Note: This problem is based on the same situation described in Problem 18-4 in Chapter 18, modified to focus on EPS rather than recording the events that affected retained earnings.) Comparative Statements of Retained Earnings for Renn-Dever Corporation were reported as follows for the fiscal years ending December 31, 2011, 2012, and 2013.

RENN-DEVER CORPORATION
Statements of Retained Earnings

For the Years Ended December 31	2013	2012	2011
Balance at beginning of year	\$6,794,292	\$5,464,052	\$5,624,552
Net income (loss)	3,308,700	2,240,900	(160,500)
Deductions:			
Stock dividend (34,900 shares)	242,000		
Common shares retired, September 30 (110,000 shares)		212,660	
Common stock cash dividends	889,950	698,000	0
Balance at end of year	<u>\$8,971,042</u>	<u>\$6,794,292</u>	<u>\$5,464,052</u>

At December 31, 2010, paid-in capital consisted of the following:

Common stock, 1,855,000 shares at \$1 par,	\$1,855,000
Paid in capital—excess of par	7,420,000

No preferred stock or potential common shares were outstanding during any of the periods shown.

Required:

Compute Renn-Dever's earnings per share as it would have appeared in income statements for the years ended December 31, 2011, 2012, and 2013.

P 19-11

EPS from statement of shareholders' equity

- LO19-4 through LO19-6

Comparative Statements of Shareholders' Equity for Locke Intertechnology Corporation were reported as follows for the fiscal years ending December 31, 2011, 2012, and 2013.

LOCKE INTERTECHNOLOGY CORPORATION
Statements of Shareholders' Equity
For the Years Ended Dec. 31, 2011, 2012, and 2013

	Balance at December 31, 2013	10	102	1,101	2,779	3,992

Required:

Infer from the statements the events and transactions that affected Locke Intertechnology Corporation's shareholders' equity and compute earnings per share as it would have appeared on the income statements for the years ended December 31, 2011, 2012, and 2013. No potential common shares were outstanding during any of the periods shown.

P 19-12

EPS;
nonconvertible preferred stock;
treasury shares;
shares sold; stock dividend

- LO19-4 through LO19-7

On December 31, 2012, Dow Steel Corporation had 600,000 shares of common stock and 300,000 shares of 8%, noncumulative, nonconvertible preferred stock issued and outstanding. Dow issued a 4% common stock dividend on May 15 and paid cash dividends of \$400,000 and \$75,000 to common and preferred shareholders, respectively, on December 15, 2013.

On February 28, 2013, Dow sold 60,000 common shares. In keeping with its long-term share repurchase plan, 2,000 shares were retired on July 1. Dow's net income for the year ended December 31, 2013, was \$2,100,000. The income tax rate is 40%.

Required:

Compute Dow's earnings per share for the year ended December 31, 2013.

P 19-13

EPS;
nonconvertible preferred stock;
treasury shares;
shares sold; stock dividend; options

- LO19-4 through LO19-8, LO19-10

(Note: This is a variation of the previous problem, modified to include stock options.)

On December 31, 2012, Dow Steel Corporation had 600,000 shares of common stock and 300,000 shares of 8%, noncumulative, nonconvertible preferred stock issued and outstanding. Dow issued a 4% common stock dividend on May 15 and paid cash dividends of \$400,000 and \$75,000 to common and preferred shareholders, respectively, on December 15, 2013.

On February 28, 2013, Dow sold 60,000 common shares. In keeping with its long-term share repurchase plan, 2,000 shares were retired on July 1. Dow's net income for the year ended December 31, 2013, was \$2,100,000. The income tax rate is 40%.

As part of an incentive compensation plan, Dow granted incentive stock options to division managers at December 31 of the current and each of the previous two years. Each option permits its holder to buy one share of common stock at an exercise price equal to market value at the date of grant and can be exercised one year from that date. Information concerning the number of options granted and common share prices follows:

Date Granted	Options Granted	Share Price
	(adjusted for the stock dividend)	
December 31, 2011	8,000	\$24
December 31, 2012	3,000	\$33
December 31, 2013	6,500	\$32

The market price of the common stock averaged \$32 per share during 2013.

Required:

Compute Dow's earnings per share for the year ended December 31, 2013.

P 19-14

EPS;
nonconvertible preferred stock;
treasury shares;
shares sold; stock dividend;
options;
convertible bonds;
contingently issuable shares

- LO19-4 through LO19-11

(Note: This is a variation of the previous problem, modified to include convertible bonds and contingently issuable shares.)

On December 31, 2012, Dow Steel Corporation had 600,000 shares of common stock and 300,000 shares of 8%, noncumulative, nonconvertible preferred stock issued and outstanding. Dow issued a 4% common stock dividend on May 15 and paid cash dividends of \$400,000 and \$75,000 to common and preferred shareholders, respectively, on December 15, 2013.

On February 28, 2013, Dow sold 60,000 common shares. In keeping with its long-term share repurchase plan, 2,000 shares were retired on July 1. Dow's net income for the year ended December 31, 2013, was \$2,100,000. The income tax rate is 40%. Also, as a part of a 2012 agreement for the acquisition of Merrill Cable Company, another 23,000 shares (already adjusted for the stock dividend) are to be issued to former Merrill shareholders on December 31, 2014, if Merrill's 2014 net income is at least \$500,000. In 2013, Merrill's net income was \$630,000.

As part of an incentive compensation plan, Dow granted incentive stock options to division managers at December 31 of the current and each of the previous two years. Each option permits its holder to buy one share

of common stock at an exercise price equal to market value at the date of grant and can be exercised one year from that date. Information concerning the number of options granted and common share prices follows:

Date Granted	Options Granted (adjusted for the stock dividend)	Share Price
December 31, 2011	8,000	\$24
December 31, 2012	3,000	\$33
December 31, 2013	6,500	\$32

The market price of the common stock averaged \$32 per share during 2013.

On July 12, 2011, Dow issued \$800,000 of convertible 10% bonds at face value. Each \$1,000 bond is convertible into 30 common shares (adjusted for the stock dividend).

Required:

Compute Dow's basic and diluted earnings per share for the year ended December 31, 2013.

P 19-15

EPS; convertible preferred stock; convertible bonds; order of entry

● LO19-7, LO19-9, LO19-10

Information from the financial statements of Henderson-Niles Industries included the following at December 31, 2013:

Common shares outstanding throughout the year	100 million
Convertible preferred shares (convertible into 32 million shares of common)	60 million
Convertible 10% bonds (convertible into 13.5 million shares of common)	\$900 million

Henderson-Niles' net income for the year ended December 31, 2013, is \$520 million. The income tax rate is 40%. Henderson-Niles paid dividends of \$2 per share on its preferred stock during 2013.

Required:

Compute basic and diluted earnings per share for the year ended December 31, 2013.

P 19-16

EPS; antidilution

● LO19-4 through LO19-10, LO19-13

Alciatore Company earned a net income of \$150,000 in 2013. The weighted-average number of common shares outstanding for 2013 was 40,000. The average stock price for 2013 was \$33. Assume an income tax rate of 40%.

Required:

For each of the following independent situations, indicate whether the effect of the security is antidilutive for diluted EPS.

- 10,000 shares of 7.7% of \$100 par convertible, cumulative preferred stock. Each share may be converted into two common shares.
- 8% convertible 10-year, \$500,000 of bonds, issued at face value. The bonds are convertible to 5,000 shares of common stock.
- Stock options exercisable at \$30 per share after January 1, 2015.
- Warrants for 1,000 common shares with an exercise price of \$35 per share.
- A contingent agreement to issue 5,000 shares of stock to the company president if net income is at least \$125,000 in 2014.

P 19-17

EPS; convertible bonds; treasury shares

● LO19-4 through LO19-6, LO19-9

At December 31, 2013, the financial statements of Hollingsworth Industries included the following:

Net income for 2013	\$560 million
Bonds payable, 10%, convertible into 36 million shares of common stock	\$300 million
Common stock:	
Shares outstanding on January 1	400 million
Treasury shares purchased for cash on September 1	30 million

Additional data:

The bonds payable were issued at par in 2011. The tax rate for 2013 was 40%.

Required:

Compute basic and diluted EPS for the year ended December 31, 2013.

P 19-18

EPS; options; convertible preferred; additional shares

● LO19-4 through LO19-9

On January 1, 2013, Tonge Industries had outstanding 440,000 common shares (par \$1) that originally sold for \$20 per share, and 4,000 shares of 10% cumulative preferred stock (par \$100), convertible into 40,000 common shares.

On October 1, 2013, Tonge sold and issued an additional 16,000 shares of common stock at \$33. At December 31, 2013, there were incentive stock options outstanding, issued in 2012, and exercisable after one year for 20,000 shares of common stock at an exercise price of \$30. The market price of the common stock at year-end was \$48. During the year the price of the common shares had averaged \$40.

Net income was \$650,000. The tax rate for the year was 40%.

Required:

Compute basic and diluted EPS for the year ended December 31, 2013.

P 19-19

EPS; stock options; nonconvertible preferred; convertible bonds; shares sold

- LO19-4 through LO19-9

At January 1, 2013, Canaday Corporation had outstanding the following securities:

- 600 million common shares
- 20 million 6% cumulative preferred shares, \$50 par
- 8% convertible bonds, \$2,000 million face amount, convertible into 80 million common shares

The following additional information is available:

- On September 1, 2013, Canaday sold 72 million additional shares of common stock.
- Incentive stock options to purchase 60 million shares of common stock after July 1, 2012, at \$12 per share were outstanding at the beginning and end of 2013. The average market price of Canaday's common stock was \$18 per share during 2013.
- Canaday's net income for the year ended December 31, 2013, was \$1,476 million. The effective income tax rate was 40%.

Required:

1. Calculate basic earnings per common share for the year ended December 31, 2013.
2. Calculate the diluted earnings per common share for the year ended December 31, 2013.

P 19-20

EPS; options; restricted stock; additional components for "proceeds" in treasury stock method

- LO19-1, LO19-2, LO19-4, LO19-8, LO19-11

Witter House is a calendar-year firm with 300 million common shares outstanding throughout 2013 and 2014. As part of its executive compensation plan, at January 1, 2012, the company had issued 30 million executive stock options permitting executives to buy 30 million shares of stock for \$10 within the next eight years, but not prior to January 1, 2015. The fair value of the options was estimated on the grant date to be \$3 per option.

In 2013, Witter House began granting employees stock awards rather than stock options as part of its equity compensation plans and granted 15 million restricted common shares to senior executives at January 1, 2013. The shares vest four years later. The fair value of the stock was \$12 per share on the grant date. The average price of the common shares was \$12 and \$15 during 2013 and 2014, respectively.

The stock options qualify for tax purposes as an incentive plan. The restricted stock does not. The company's net income was \$150 million and \$160 million in 2013 and 2014, respectively. Its income tax rate is 40%.

Required:

1. Determine basic and diluted earnings per share for Witter House in 2013.
2. Determine basic and diluted earnings per share for Witter House in 2014.

Broaden Your Perspective

Apply your critical-thinking ability to the knowledge you've gained. These cases will provide you an opportunity to develop your research, analysis, judgment, and communication skills. You also will work with other students, integrate what you've learned, apply it in real world situations, and consider its global and ethical ramifications. This practice will broaden your knowledge and further develop your decision-making abilities.

Real World Case 19-1

Restricted stock plan; Microsoft

- LO19-1

Real World Financials

Microsoft provides compensation to executives in the form of a variety of incentive compensation plans including restricted stock award grants. The following is an excerpt from a disclosure note from Microsoft's 2011 annual report:

Note 20 Employee Stock and Savings Plans (in part)

Stock awards are grants that entitle the holder to shares of common stock as the award vests. Our stock awards generally vest over a five-year period. . . . During fiscal year 2011, the following activity occurred under our plans:

	Shares (in millions)	Weighted Average Grant-Date Fair Value
Stock awards:		
Nonvested balance, beginning of year	223	\$24.76
Granted	114	22.17
Vested	(63)	25.00
Forfeited	(19)	23.97
Nonvested balance, end of year	255	\$23.59

Required:

1. What is the “incentive” provided by Microsoft’s restricted stock grants?
2. If all awards are granted, vested, and forfeited evenly throughout the year, what is the compensation expense in fiscal 2011 pertaining to the previous and current stock awards? Explain. Assume forfeited shares were granted evenly throughout the three previous years.

Communication Case 19–2

Stock options; basic concepts; prepare a memo
● LO19–2

You are Assistant Controller of Stamos & Company, a medium-size manufacturer of machine parts. On October 22, 2012, the board of directors approved a stock option plan for key executives. On January 1, 2013, a specific number of stock options were granted. The options were exercisable between January 1, 2015, and December 31, 2019, at 100% of the quoted market price at the grant date. The service period is for 2013 through 2015.

Your boss, the controller, is one of the executives to receive options. Neither he nor you have had occasion to deal with GAAP on accounting for stock options. He and you are aware of the traditional approach your company used years ago but do not know the newer method. Your boss understands how options might benefit him personally but wants to be aware also of how the options will be reported in the financial statements. He has asked you for a one-page synopsis of accounting for stock options under the fair value approach. He instructed you, “I don’t care about the effect on taxes or earnings per share—just the basics, please.”

Required:

Prepare such a report that includes the following:

1. At what point should the compensation cost be measured? How should it be measured?
2. How should compensation expense be measured for the stock option plan in 2013 and later?
3. If options are forfeited because an executive resigns before vesting, what is the effect of that forfeiture of the stock options on the financial statements?
4. If options are allowed to lapse after vesting, what is the effect on the financial statements?

Ethics Case 19–3

Stock options
● LO19–2

You are in your second year as an auditor with Dantly and Regis, a regional CPA firm. One of the firm’s long-time clients is Mayberry-Cleaver Industries, a national company involved in the manufacturing, marketing, and sales of hydraulic devices used in specialized manufacturing applications. Early in this year’s audit you discover that Mayberry-Cleaver has changed its method of determining inventory from LIFO to FIFO. Your client’s explanation is that FIFO is consistent with the method used by some other companies in the industry. Upon further investigation, you discover an executive stock option plan whose terms call for a significant increase in the shares available to executives if net income this year exceeds \$44 million. Some quick calculations convince you that without the change in inventory methods, the target will not be reached; with the change, it will.

Required:

Do you perceive an ethical dilemma? What would be the likely impact of following the controller’s suggestions? Who would benefit? Who would be injured?

Trueblood Accounting Case 19–4

Performance measures in share-based awards
● LO19–1, LO19–2

The following Trueblood case is recommended for use with this chapter. The case provides an excellent opportunity for class discussion, group projects, and writing assignments. The case, along with Professor’s Discussion Material, can be obtained from the Deloitte Foundation at its website: www.deloitte.com/us/truebloodcases.

Case 08-2: Sooner or Later

This case gives students the opportunity to consider implications of performance measures in the accounting for share-based compensation.

Real World Case 19–5

Share-based plans; Walmart
● LO19–1, LO19–2

Walmart offers its employees a variety of share-based compensation plans including stock options, performance share awards, and restricted stock. The following is an excerpt from a disclosure note from Walmart’s 2011 financial statements:

Note 4. Share-Based Compensation

As of January 31, 2011, the Company has awarded share-based compensation to executives and other associates of the Company through various share-based compensation plans. The compensation cost recognized for all plans was \$371 million, \$335 million and \$302 million for fiscal 2011, 2010 and 2009, respectively. . . . The following table summarizes our share-based compensation expense by award type:

(Amounts in millions)	Fiscal Years Ended January 31,		
	2011	2010	2009
Restricted stock and performance share awards	\$162	\$140	\$134
Restricted stock rights	157	111	74
Stock options	52	84	94
Share-based compensation expense	\$371	\$335	\$302

Real World Financials

Required:

1. Walmart's share-based compensation includes stock options, stock appreciation rights, restricted stock awards, and performance-based awards. What is the general financial reporting objective when recording compensation expense for these forms of compensation?
2. Walmart reported share-based expense of \$371 million in 2011. Without referring to specific numbers and ignoring other forms of share-based compensation, describe how this amount reflects the value of stock options.

Real World**Case 19-6**

Employee stock purchase plan;
Microsoft

● LO19-3

Real World Financials

Microsoft Corporation offers compensation to its employees and executives through a variety of compensation plans. One such plan is its employee stock purchase plan, which is described in the following disclosure note from its fiscal 2011 annual report:

Employee Stock Purchase Plan. We have an employee stock purchase plan for all eligible employees. Shares of our common stock may be purchased by employees at three-month intervals at 90% of the fair market value on the last day of each three-month period. Employees may purchase shares having a value not exceeding 15% of their gross compensation during an offering period. Employees purchased the following shares during the periods presented:

(Shares in millions)	2011	2010	2009
Shares purchased	20	20	24
Average price per share	\$22.98	\$23.73	\$20.13

At June 30, 2011, 43 million shares of our common stock were reserved for future issuance.

Required:

Describe the way "Compensation expense for the employee stock purchase plan is recognized" by Microsoft. Include in your explanation the journal entry that summarizes employee share purchases during 2011.

Ethics Case 19-7

International Network Solutions

● LO19-6

International Network Solutions provides products and services related to remote access networking. The company has grown rapidly during its first 10 years of operations. As its segment of the industry has begun to mature, though, the fast growth of previous years has begun to slow. In fact, this year revenues and profits are roughly the same as last year.

One morning, nine weeks before the close of the fiscal year, Rob Mashburn, CFO, and Jessica Lane, controller, were sharing coffee and ideas in Lane's office.

Lane: About the Board meeting Thursday. You may be right. This may be the time to suggest a share buyback program.

Mashburn: To begin this year, you mean?

Lane: Right! I know Barber will be lobbying to use the funds for our European expansion. She's probably right about the best use of our funds, but we can always issue more notes next year. Right now, we need a quick fix for our EPS numbers.

Mashburn: Our shareholders are accustomed to increases every year.

Required:

1. How will a buyback of shares provide a "quick fix" for EPS?
2. Is the proposal ethical?
3. Who would be affected if the proposal is implemented?

Real World**Case 19-8**

Per share data;
stock options;
antidilutive securities; Sun Microsystems

● LO19-8

Real World Financials

Sun Microsystems, Inc., headquartered in Santa Clara, California, was a prominent provider of products and services for network computing prior to being purchased in 2010 by **Oracle Corporation**. Sun's 2011 annual report included the following disclosure note:

Computation of Net Income (Loss) per Common Share (in part)

Basic net income (loss) per common share is computed using the weighted-average number of common shares outstanding (adjusted for treasury stock and common stock subject to repurchase activity) during the period. Diluted net income (loss) per common share is computed using the weighted-average number of common and dilutive common equivalent shares outstanding during the period. Common equivalent shares are anti-dilutive when their conversion would increase earnings per share. Dilutive common equivalent shares consist primarily of stock options and restricted stock awards (restricted stock and restricted stock units that are settled in stock).

The following table sets forth the computation of basic and diluted income (loss) per share for each of the past three fiscal years (in millions, except per share amounts):

(continued)

(concluded)

	Fiscal Years Ended June 30,		
	2011	2010	2009
Basic earnings per share			
Net income (loss)	\$(2,234)	\$ 403	\$ 473
Basic weighted average shares outstanding	747	809	883
Net income (loss) per common share—basic	\$ (2.99)	\$0.50	\$0.54
Diluted earnings per share			
Net income (loss)	\$(2,234)	\$ 403	\$ 473
Diluted weighted average shares outstanding	747	822	902
Net income (loss) per common share—diluted	\$ (2.99)	\$0.49	\$0.52

As a result of our net loss for the fiscal year ended June 30, 2011, all potentially dilutive shares were anti-dilutive and therefore excluded from the computation of diluted net loss per share.

For the fiscal years ended June 30, 2010 and 2009, we added 13 million and 19 million common equivalent shares, respectively, to our basic weighted-average shares outstanding to compute the diluted weighted-average shares outstanding. We are required to include these dilutive shares in our calculations of net income per share for fiscal 2010 because we earned a profit.

Required:

1. The note indicates that “diluted net income (loss) per common share is computed using the weighted-average number of common and dilutive common equivalent shares outstanding during the period.” What are dilutive common equivalent shares?
2. The note indicates that “For the fiscal years ended June 30, 2010 and 2009, we added 13 million and 19 million common equivalent shares, respectively, to our basic weighted-average shares outstanding to compute the diluted weighted-average shares outstanding.” Does that mean Sun had outstanding a total of 13 million and 19 million stock options and restricted shares in 2010 and 2009? Explain.
3. Sun does not include potentially dilutive shares when calculating EPS for fiscal 2011. Why not? Assume Sun had 20 million common equivalent shares in fiscal 2011 and included them in the calculation, what would have been the amount of diluted loss per share for fiscal 2011?

Analysis
Case 19–9

EPS concepts

- LO19–4 through LO19–8

The shareholders' equity of Proactive Solutions, Inc., included the following at December 31, 2013:

Common stock, \$1 par
Paid-in capital—excess of par on common stock
7% cumulative convertible preferred stock, \$100 par value
Paid-in capital—excess of par on preferred stock
Retained earnings

Additional Information:

- Proactive had 7 million shares of preferred stock authorized of which 2 million were outstanding. All 2 million shares outstanding were issued in 2007 for \$112 a share. The preferred stock is convertible into common stock on a two-for-one basis until December 31, 2015, after which the preferred stock no longer is convertible. None of the preferred stock has been converted into common stock at December 31, 2013. There were no dividends in arrears.
- Of the 13 million common shares authorized, there were 8 million shares outstanding at January 1, 2013. Proactive also sold 3 million shares at the beginning of September 2013 at a price of \$52 a share.
- The company has an employee stock option plan in which certain key employees and officers may purchase shares of common stock at the market price at the date of the option grant. All options are exercisable beginning one year after the date of the grant and expire if not exercised within five years of the grant date. On January 1, 2013, options for 2 million shares were outstanding at prices ranging from \$45 to \$53 a share. Options for 1 million shares were exercised at \$49 a share at the end of June 2013. No options expired during 2013. Additional options for 1.5 million shares were granted at \$55 a share during the year. The 2.5 million options outstanding at December 31, 2013, were exercisable at \$45 to \$55 a share.

The only changes in the shareholders' equity for 2013 were those described above, 2013 net income, and cash dividends paid.

Required:

Explain how each of the following amounts should be determined when computing earnings per share for presentation in the income statements. For each, be specific as to the treatment of each item.

1. Numerator for basic EPS.
2. Denominator for basic EPS.
3. Numerator for diluted EPS.
4. Denominator for diluted EPS.

Analysis**Case 19–10**

EPS; AIG

- LO19–5 through LO19–8

Real World Financials

“I guess I’ll win that bet!” you announced to no one in particular.

“What bet?” Renee asked. Renee Patey was close enough to overhear you.

“When I bought my AIG stock last year Randy insisted it was a mistake, that they were going to collapse. I bet him a Coke he was wrong. This press release says they have positive earnings,” you bragged. Renee was looking over your shoulder now at the article you were pointing at:

August 7, 2011 (Business Wire) American International Group, Inc. (NYSE: AIG) today reported net income attributable to AIG of \$1.8 billion and after-tax operating income of \$1.3 billion for the quarter ended June 30, 2011. . . . The diluted earnings per share were \$1.00 for the second quarter of 2011, representing a return on equity of 8.3 percent, compared with a loss per share of \$19.57 for the second quarter of 2010. . . . “We also achieved a significant recapitalization milestone during the quarter with an \$8.7 billion common stock offering.”

(a) Share and per share amounts prior to the second quarter of 2011 have been restated to reflect the 1-for-20 reverse stock split effective June 30, 2011.

Excerpt from: “AIG Reports Second Quarter 2011 Results,” August 7, 2011.

“A dollar a share, huh?” Renee asked. “How many shares do you have? When do you get the check?”

Required:

1. Renee’s questions imply that she thinks you will get cash dividends of \$1.00 a share. What does earnings per share really tell you?
2. A previous press release indicated that “Share and per share amounts prior to the second quarter of 2009 have been restated to reflect the 1-for-20 reverse stock split effective June 30, 2009.” What does that mean?
3. At May 6, 2011, AIG announced plans to repurchase shares of its own stock. It had board of directors authorization for repurchasing up to \$9 billion of its own stock. Would the reduction in shares from a stock repurchase be taken into account when EPS is calculated? How?
4. You know from statements AIG mailed you that AIG grants stock options to company executives. If those options are exercised, you know the resulting increase in shares might reduce earnings per share. Is that possibility taken into account when EPS is calculated? Explain.

Judgment**Case 19–11**

Where are the profits?

- LO19–4 through LO19–7, LO19–9

Del Conte Construction Company has experienced generally steady growth since its inception in 1953. Management is proud of its record of having maintained or increased its earnings per share in each year of its existence.

The economic downturn has led to disturbing dips in revenues the past two years. Despite concerted cost-cutting efforts, profits have declined in each of the two previous years. Net income in 2011, 2012, and 2013 was as follows:

2011	\$145 million
2012	\$134 million
2013	\$ 95 million

A major shareholder has hired you to provide advice on whether to continue her present investment position or to curtail that position. Of particular concern is the declining profitability, despite the fact that earnings per share has continued a pattern of growth:

	Basic	Diluted
2011	\$2.15	\$1.91
2012	\$2.44	\$2.12
2013	\$2.50	\$2.50

She specifically asks you to explain this apparent paradox. During the course of your investigation you discover the following events:

- For the decade ending December 31, 2010, Del Conte had 60 million common shares and 20 million shares of 8%, \$10 par nonconvertible preferred stock outstanding. Cash dividends have been paid quarterly on both.
- On July 1, 2012, half the preferred shares were retired in the open market. The remaining shares were retired on December 30, 2012.
- \$55 million of 8% nonconvertible bonds were issued at the beginning of 2013 and a portion of the proceeds were used to call and retire \$50 million of 10% debentures (outstanding since 2008) that were convertible into 9 million common shares.

- In 2011 management announced a share repurchase plan by which up to 24 million common shares would be retired. 12 million shares were retired on March 1 of both 2011 and 2012.
- Del Conte's income tax rate is 40% and has been for the last several years.

Required:

Explain the apparent paradox to which your client refers. Include calculations that demonstrate your explanation.

Communication Case 19-12

Dilution

● LO19-9

"I thought I understood earnings per share," lamented Brad Dawson, "but you're telling me we need to pretend our convertible bonds have been converted! Or maybe not?"

Dawson, your boss, is the new manager of the Fabricating division of BVT Corporation. His background is engineering and he has only a basic understanding of earnings per share. Knowing you are an accounting graduate, he asks you to explain the questions he has about the calculation of the company's EPS. His reaction is to your explanation that the company's convertible bonds might be included in this year's calculation.

"Put it in a memo!" he grumbled as he left your office.

Required:

Write a memo to Dawson. Explain the effect on earnings per share of each of the following:

1. Convertible securities.
2. Antidilutive securities.

Real World Case 19-13

Reporting EPS; discontinued operations;

Clorox Company

● LO19-13

Real World Financials

The Clorox Company is a leading manufacturer and marketer of consumer and institutional products with approximately 8,100 employees worldwide and fiscal year 2011 net sales of \$5.2 billion. The following is an excerpt from the comparative income statements (beginning with earnings from continuing operations) from Clorox's 2011 annual report (\$ in thousands):

Earnings from continuing operations	<u>\$287</u>	<u>\$526</u>	<u>\$472</u>
<i>Discontinued operations:</i>			
Earnings from Auto businesses, net of tax	23	77	65
Gain on sale of Auto businesses, net of tax	247	—	—
Earnings from discontinued operations	<u>270</u>	<u>77</u>	<u>65</u>
Net earnings	<u>\$557</u>	<u>\$603</u>	<u>\$537</u>

An income statement sometimes includes items that require separate presentation (net of income taxes) within the statement. The two possible "separately reported items" are discontinued operations and extraordinary items. Clorox reports one of these items.

A disclosure note from Clorox's 2011 annual report is shown below:

NOTE 15. EARNINGS PER SHARE

The following is the reconciliation of net earnings to net earnings applicable to common stock:

	2011	2010	2009
Earnings from continuing operations	\$287	\$526	\$472
Earnings from discontinued operations	<u>270</u>	<u>77</u>	<u>65</u>
Net earnings	557	603	537
Less: Earnings allocated to participating securities	<u>2</u>	<u>3</u>	<u>5</u>
Net earnings applicable to common stock	\$555	\$600	\$532

The following is the reconciliation of the weighted average number of shares outstanding (in thousands) used to calculate basic EPS to those used to calculate diluted EPS:

	2011	2010	2009
Basic	136,699	140,272	139,015
Dilutive effect of stock options and other	<u>1,402</u>	<u>1,262</u>	<u>1,154</u>
Diluted	138,101	141,534	140,169

During fiscal years 2011, 2010 and 2009, the Company did not include stock options to purchase approximately 2.0 million, 4.0 million and 5.1 million shares, respectively, of the Company's common stock in the calculations of diluted EPS because their exercise price was greater than the average market price, making them anti-dilutive.

Required:

1. The disclosure note shows adjustments for "the dilutive effect of stock options and other." What other adjustments might be needed? Explain why and how these adjustments are made to the weighted-average shares outstanding.

- The disclosure note indicates that the effect of some of the stock options were not included because they would be antidilutive. What does that mean? Why not include antidilutive securities?
- Based on the information provided, prepare the presentation of basic and diluted earnings per share for 2011, 2010, and 2009 that Clorox reports in its 2011 annual report.

Analysis**Case 19–14**

Analyzing financial statements; price–earnings ratio; dividend payout ratio

● LO19–13

IGF Foods Company is a large, primarily domestic, consumer foods company involved in the manufacture, distribution and sale of a variety of food products. Industry averages are derived from Troy's *The Almanac of Business and Industrial Financial Ratios* and Dun and Bradstreet's *Industry Norms and Key Business Ratios*. Following are the 2013 and 2012 comparative income statements and balance sheets for IGF. The market price of IGF's common stock is \$47 during 2013. (The financial data we use are from actual financial statements of a well-known corporation, but the company name used in our illustration is fictitious and the numbers and dates have been modified slightly to disguise the company's identity.)

IGF FOODS COMPANY		
Years Ended December 31, 2013 and 2012		
(\$ in millions)	2013	2012

<i>Total liabilities and shareholders' equity</i>	<u>\$5,345</u>	<u>\$4,684</u>

Some ratios express income, dividends, and market prices on a per share basis. As such, these ratios appeal primarily to common shareholders, particularly when weighing investment possibilities. These ratios focus less on the fundamental soundness of a company and more on its investment characteristics.

Required:

- Earnings per share expresses a firm's profitability on a per share basis. Calculate 2013 earnings per share for IGF.
- Calculate IGF's 2013 price–earnings ratio. The average price–earnings ratio for the stocks listed on the New York Stock Exchange in a comparable time period was 18.5. What does your calculation indicate about IGF's earnings?
- Calculate IGF's 2013 dividend payout ratio. What information does the calculation provide an investor?

Research**Case 19–15**

Determining and comparing price-earnings ratios; retrieving stock prices and earnings per share numbers from the Internet

● LO19–13

Many sites on the Internet allow the retrieval of current stock price information. Among those sites are Marketwatch (cbs.marketwatch.com) and Quicken (www.quicken.com).

Required:

1. Access any site on the Internet that permits you to get a current stock quote. Determine the current price of **Microsoft Corporation**'s common stock (MSFT) and that of **Intel Corporation** (INTC).
2. Access EDGAR on the Internet at www.sec.gov. Search for Microsoft and access its most recent 10-K filing. Search or scroll to find the income statement and related note(s). Determine the most recent earnings per share. Repeat this step for Intel.
3. Calculate the price-earnings ratio for each company.
4. Compare the PE ratios of Microsoft and Intel. What information might be gleaned from your comparison?

Analysis**Case 19–16**

Kellogg's EPS; PE ratio; dividend payout

● LO19–13

While eating his **Kellogg**'s Frosted Flakes one January morning, Tony noticed the following article in his local paper:

Kellogg Announces Strong 2010 Performance

Battle Creek, Mich., Feb. 3, 2011 (GLOBE NEWSWIRE)—Kellogg Company (NYSE:K) today announced its full-year 2010 reported earnings of \$1.2 billion, or \$3.30 per diluted share, an increase of 4 percent from full-year 2009 reported earnings of \$3.16 per diluted share.

Real World Financials

As a shareholder, Tony is well aware that Kellogg pays a regular cash dividend of \$0.43 per share quarterly. A quick click on a price quote service indicated that Kellogg's shares closed at \$51.08 on December 31.

Required:

1. Using the numbers provided, determine the price/earnings ratio for Kellogg Company for 2010. What information does this ratio impart?
2. What is the dividend payout ratio for Kellogg? What does it indicate?

Research**Case 19–17**

FASB codification; locate and extract relevant information and cite authoritative support for a financial reporting issue; change in classification of a share-based compensation instrument

● LO19–13

"Now what do I do?" moaned your colleague, Matt. "This is a first for me," he confided. You and Matt are recent hires in the Accounting Division of National Paper. A top executive in the company has been given share-based incentive instruments that permit her to receive shares of National Paper equal in value to the amount the company shares rise above the shares' value two years ago when the instruments were issued to her as compensation. The instruments vest in three years. A clause was included in the compensation agreement that would permit her to receive cash rather than shares upon exercise if sales revenue in her division were to double by that time. Because that contingency was considered unlikely, the instruments have been accounted for as equity, with the grant date fair value being expensed over the five-year vesting period.

Now, though, surging sales of her division indicate that the contingent event has become probable, and the instruments should be accounted for as a liability rather than equity. The fair value of the award was estimated at \$5 million on the grant date, but now is \$8 million. Matt has asked your help in deciding what to recommend to your controller as the appropriate action to take at this point.

Required:

1. Obtain the relevant authoritative literature on accounting for a change in classification due to a change in probable settlement outcome using the FASB's Codification Research System. You might gain access at the FASB website (www.fasb.org). Explain to Matt the basic treatment of the situation described. What is the specific citation that you would rely on in applying that accounting treatment?
2. Prepare the journal entry to record the change in circumstance.

Air France—KLM Case

AIRFRANCE

● LO19–9

Air France—KLM (AF), a French company, prepares its financial statements according to International Financial Reporting Standards. AF's annual report for the year ended March 31, 2011, which includes financial statements and disclosure notes, is provided with all new textbooks. This material also is included in AF's "Registration Document 2010–11," dated June 15, 2011 and is available at www.airfranceklm.com.

Required:

1. What is the amount that AF reports in its income statement for its stock options for the year ended March 31, 2011? [Hint: See Note 28: “Share-Based Compensation.”] Are AF’s share options cliff vesting or graded vesting? How does accounting differ between U.S. GAAP and IFRS for graded-vesting plans?
2. What amount(s) of earnings per share did AF report in its income statement for the year ended March 31, 2011? If AF used U.S. GAAP would it have reported EPS using the same classification?

Accounting Changes
and Error Corrections

OVERVIEW

Chapter 4 provided a brief overview of accounting changes and error correction. Later, we discussed changes encountered in connection with specific assets and liabilities as we dealt with those topics in subsequent chapters.

Here we revisit accounting changes and error correction to synthesize the way these are handled in a variety of situations that might be encountered in practice. We see that most changes in accounting principle are reported retrospectively. Changes in estimates are accounted for prospectively. A change in depreciation methods is considered a change in estimate resulting from a change in principle. Both changes in reporting entities and the correction of errors are reported retrospectively.

LEARNING
OBJECTIVES

After studying this chapter, you should be able to:

- **LO20-1** Differentiate among the three types of accounting changes and distinguish between the retrospective and prospective approaches to accounting for and reporting accounting changes. (p. 1208)
- **LO20-2** Describe how changes in accounting principle typically are reported. (p. 1210)
- **LO20-3** Explain how and why some changes in accounting principle are reported prospectively. (p. 1214)
- **LO20-4** Explain how and why changes in estimates are reported prospectively. (p. 1216)
- **LO20-5** Describe the situations that constitute a change in reporting entity. (p. 1219)
- **LO20-6** Understand and apply the four-step process of correcting and reporting errors, regardless of the type of error or the timing of its discovery. (p. 1222)
- **LO20-7** Discuss the primary differences between U.S. GAAP and IFRS with respect to accounting changes and error corrections. (pp. 1215, 1222, and 1229)

FINANCIAL REPORTING CASE

In a Jam

“What the heck!” Martin yelled as he handed you the annual report of **J.M. Smucker** he’d received in the mail today. “It looks like Smucker found a bunch of lost jelly. It says here that their inventory was \$54 million last year. I distinctly remember them reporting that number last year as \$52 million because

my dad was born in ‘52, and I did a little wordplay in my mind about him ‘taking inventory’ of his life when he bought the red Mustang.” He had circled the number in the comparative balance sheets. “When I bought Smucker shares last year, I promised myself I would monitor things pretty closely, but it’s not as easy as I thought it would be.”

As an accounting graduate, you can understand Martin’s confusion. Flipping to the disclosure note on accounting changes, you proceed to clear things up for him.

By the time you finish this chapter, you should be able to respond appropriately to the questions posed in this case. Compare your response to the solution provided at the end of the chapter.

1. How can an accounting change cause a company to increase a previously reported inventory amount? (p. 1211)
2. Are all accounting changes reported this way? (p. 1217)

QUESTIONS

You learned early in your study of accounting that two of the qualitative characteristics of accounting information that contribute to its relevance and representational faithfulness are *consistency* and *comparability*. Though we strive to achieve and maintain these financial reporting attributes, we cannot ignore the forces of change. Ours is a dynamic business environment. The economy is increasingly a global one. Technological advances constantly transform both day-to-day operations and the flow of information about those operations. The accounting profession’s response to the fluid environment often means issuing new standards that require companies to change accounting methods. Often, developments within an industry or the economy will prompt a company to voluntarily switch methods of accounting or to revise estimates or expectations. In short, change is inevitable. The question then becomes a matter of how best to address change when reporting financial information from year to year.

In the first part of this chapter, we differentiate among the various types of accounting changes that businesses face, with a focus on the most meaningful and least disruptive ways to report those changes. Then, in the second part of the chapter, we direct our attention to a closely related circumstance—the correction of errors.

PART A

ACCOUNTING CHANGES

Accounting changes fall into one of the three categories listed in Illustration 20–1.¹

Illustration 20–1

Types of Accounting Changes

● LO20–1

Type of Change	Description	Examples
Change in accounting principle	Change from one generally accepted accounting principle to another.	<ul style="list-style-type: none"> • Adopt a new Accounting Standard Codification. • Change methods of inventory costing. • Change from cost method to equity method, or vice versa. • Change from completed contract to percentage-of-completion, or vice versa.
Change in accounting estimate	Revision of an estimate because of new information or new experience.	<ul style="list-style-type: none"> • Change depreciation methods.* • Change estimate of useful life of depreciable asset. • Change estimate of residual value of depreciable asset. • Change estimate of periods benefited by intangible assets. • Change actuarial estimates pertaining to a pension plan.
Change in reporting entity	Change from reporting as one type of entity to another type of entity.	<ul style="list-style-type: none"> • Consolidate a subsidiary not previously included in consolidated financial statements. • Report consolidated financial statements in place of individual statements.

*A change in depreciation methods is a change in estimate that is achieved by a change in accounting principle.

The correction of an error is another adjustment sometimes made to financial statements that is not actually an accounting change but is accounted for similarly. Errors occur when transactions are either recorded incorrectly or not recorded at all as shown in Illustration 20–2.

Illustration 20–2

Correction of Errors

Type of Change	Description	Examples
Error correction	Correction of an error caused by a transaction being recorded incorrectly or not at all.	<ul style="list-style-type: none"> • Mathematical mistakes. • Inaccurate physical count of inventory. • Change from the cash basis of accounting to the accrual basis. • Failure to record an adjusting entry. • Recording an asset as an expense, or vice versa. • Fraud or gross negligence.

Two approaches to reporting accounting changes and error corrections are used, depending on the situation.

The retrospective approach offers consistency and comparability.

1. Using the **retrospective approach**, financial statements issued in previous years are revised to reflect the impact of the change whenever those statements are presented again for comparative purposes. An advantage of this approach is that it achieves comparability among financial statements. All financial statements presented are prepared on the same basis. However, some argue that public confidence in the integrity

¹FASB ASC 250: Accounting Changes and Error Corrections (previously “Accounting Changes and Error Corrections—A Replacement of APB Opinion No. 20 and FASB Statement No. 3,” *Statement of Financial Accounting Standards No. 154*, (Norwalk, Conn: FASB, 2005)).

of financial data suffers when numbers previously as correct are later superseded. On the other hand, proponents argue the opposite—that it's impossible to maintain public confidence unless the financial statements are comparable.

For each year reported in the comparative statements reported, the balance of each account affected is revised. In other words, those statements are made to appear as if the newly adopted accounting method had been applied all along or that the error had never occurred. Then, a journal entry is created to adjust all account balances affected to what those amounts would have been. In addition, if retained earnings is one of the accounts that requires adjustment, that adjustment is made to the beginning balance of retained earnings for the earliest period reported in the comparative statements of shareholders' equity.

2. The **prospective approach** requires neither a modification of prior years' financial statements nor a journal entry to adjust account balances. Instead, the change is simply implemented now, and its effects are reflected in the financial statements of the current and future years only.

Now, let's look at each type of accounting change, one at a time, focusing on the selective application of these approaches.

The effects of a change are reflected in the financial statements of only the current and future years under the **prospective approach**.

Change in Accounting Principle

Accounting is not an exact science. Professional judgment is required to apply a set of principles, concepts, and objectives to specific sets of circumstances. This means choices must be made. In your study of accounting to date, you've encountered many areas where choices are necessary. For example, management must choose whether to use accelerated or straight-line depreciation. Is FIFO, LIFO, or average cost most appropriate to measure inventories? Would the completed contract or percentage-of-completion method best reflect the performance of our construction operations? Should we adopt a new Accounting Standard Codification early or wait until it's mandatory? These are but a few of the accounting choices management makes.

You also probably recall that comparability is an enhancing qualitative characteristic of financial reporting. To achieve this attribute of information, accounting choices, once made, should be consistently followed from year to year. This doesn't mean, though, that methods can never be changed. Changing circumstances might make a new method more appropriate. A change in economic conditions, for instance, might prompt a company to change accounting methods. The most extensive voluntary accounting change ever—a switch by hundreds of companies from FIFO to LIFO in the mid-1970s, for example—was a result of heightened inflation. Changes within a specific industry, too, can lead a company to switch methods, often to adapt to new technology or to be consistent with others in the industry. And, of course, a change might be mandated when the FASB codifies a new accounting standard. For these reasons, it's not uncommon for a company to switch from one accounting method to another. This is called a **change in accounting principle**.

Although consistency and comparability are desirable, changing to a new method sometimes is appropriate.

Decision Makers' Perspective—Motivation for Accounting Choices

It would be nice to think that all accounting choices are made by management in the best interest of fair and consistent financial reporting. Unfortunately, other motives influence the choices among accounting methods and whether to change methods. It has been suggested that the effect of choices on management compensation, on existing debt agreements, and on union negotiations each can affect management's selection of accounting methods.² For instance, research has suggested that managers of companies with bonus plans are more likely to choose accounting methods that maximize their bonuses (often those that increase net income).³ Other research has indicated that the existence and nature of debt agreements

²R. L. Watts and J. L. Zimmerman, "Towards a Positive Theory of the Determination of Accounting Standards," *The Accounting Review*, January 1978, and "Positive Accounting Theory: A Ten Year Perspective," *The Accounting Review*, January 1990.

³For example, see P. M. Healy, "The Effect of Bonus Schemes on Accounting Decisions," *Journal of Accounting and Economics*, April 1985; and D. Dhaliwal, G. Salamon, and E. Smith, "The Effect of Owner versus Management Control on the Choice of Accounting Methods," *Journal of Accounting and Economics*, July 1992.

and other aspects of a firm's capital structure can influence accounting choices.⁴ Whether a company is forbidden from paying dividends if retained earnings fall below a certain level, for example, can affect the choice of accounting methods.

A financial analyst must be aware that different accounting methods used by different firms and by the same firm in different years complicate comparisons. Financial ratios, for example, will differ when different accounting methods are used, even when there are no differences in attributes being compared.

Investors and creditors also should be alert to instances in which companies change accounting methods. They must consider not only the effect on comparability but also possible hidden motivations for making the changes. Are managers trying to compensate for a downturn in actual performance with a switch to methods that artificially inflate reported earnings? Is the firm in danger of violating debt covenants or other contractual agreements regarding financial position? Are executive compensation plans tied to reported performance measures? Fortunately, the nature and effect of changes are reported in the financial statements. Although a justification for a change is provided by management, analysts should be wary of accepting the reported justification at face value without considering a possible hidden agenda.

Choices are not always those that tend to increase income. As you learned in Chapter 8, many companies use the LIFO inventory method because it reduces income and therefore reduces the amount of income taxes that must be paid currently. Also, some very large and visible companies might be reluctant to report high income that might render them vulnerable to union demands, government regulations, or higher taxes.⁵

Another reason managers sometimes choose accounting methods that don't necessarily increase earnings was mentioned earlier. Most managers tend to prefer to report earnings that follow a regular, smooth trend from year to year. The desire to "smooth" earnings means that any attempt to manipulate earnings by choosing accounting methods is not always in the direction of higher income. Instead, the choice might be to avoid irregular earnings, particularly those with wide variations from year to year, a pattern that might be interpreted by analysts as denoting a risky situation.

Obviously, any time managers make accounting choices for any of the reasons discussed here, when the motivation is an objective other than to provide useful information, earnings quality suffers. As mentioned frequently throughout this text, earnings quality refers to the ability of reported earnings (income) to predict a company's future earnings.

A notable example of alleged "cooking the books" involved **General Electric**. The company was often suspected of using "cookie jar accounting," the practice of using unrealistic estimates and strategic choices of accounting methods to smooth out its earnings. In 2009 GE appeared to get its hand caught in the cookie jar for going beyond acceptable limits. GE paid a \$50 million civil penalty to settle charges by the Securities and Exchange Commission accusing the company of violating U.S. securities laws four times between 2002 and 2003 to help it maintain a succession of earnings reports that beat Wall Street expectations each quarter from 1995 through 2004.

Let's turn our attention now to situations involving changes in methods and how we account for those changes. ●

The Retrospective Approach: Most Changes in Accounting Principle

- LO20-2 We report most voluntary changes in accounting principles retrospectively.⁶ This means reporting all previous period's financial statements as if the new method had been used in all prior periods. An example is provided in Illustration 20-3.

⁴R. M. Bowen, E. W. Noreen, and J. M. Lacy, "Determinants of the Corporate Decision to Capitalize Interest," *Journal of Accounting and Economics*, August 1981.

⁵This political cost motive is suggested by R. L. Watts and J. L. Zimmerman, "Positive Accounting Theory: A Ten Year Perspective," *The Accounting Review*, January 1990, and M. Zmijewski and R. Hagerman, "An Income Strategy Approach to the Positive Theory of Accounting Standard Setting/Choice," *Journal of Accounting and Economics*, August 1981.

⁶FASB ASC 250-10-45: Accounting Changes and Error Corrections—Overall—Other Presentation Matters (previously "Accounting Changes and Error Corrections—A Replacement of APB Opinion No. 20 and FASB Statement No. 3," *Statement of Financial Accounting Standards No. 154*, (Norwalk, Conn: FASB, 2005)).

Air Parts Corporation used the LIFO inventory costing method. At the beginning of 2013, Air Parts decided to change to the FIFO method. Income components for 2013 and prior years were as follows (\$ in millions):

	2013	2012	2011	Previous Years
Cost of goods sold (LIFO)	\$430	\$420	\$405	\$2,000
Cost of goods sold (FIFO)	370	365	360	1,700
Difference	\$ 60	\$ 55	\$ 45	\$ 300
Revenues	\$950	\$900	\$875	\$4,500
Operating expenses	230	210	205	1,000

Air Parts has paid dividends of \$40 million each year beginning in 2006. Its income tax rate is 40%. Retained earnings on January 1, 2011, was \$700 million; inventory was \$500 million.

Illustration 20–3

Change in Accounting Principle

LIFO usually produces higher cost of goods sold than does FIFO because more recently purchased goods (usually higher priced) are assumed sold first.

1. REVISE COMPARATIVE FINANCIAL STATEMENTS. For each year reported in the comparative statements, Air Parts makes those statements appear as if the newly adopted accounting method (FIFO) had been applied all along. As you learned in Chapter 1, comparability is one of the important qualitative characteristics of accounting information.

When accounting changes occur, the usefulness of the comparative financial statements is enhanced with retrospective application of those changes.

FINANCIAL Reporting Case

Q1, p. 1207

Income statements.

(\$ in millions)	2013	2012	2011
Revenues	\$950	\$900	\$875
Cost of goods sold (FIFO)	(370)	(365)	(360)
Operating expenses	(230)	(210)	(205)
Income before tax	\$350	\$325	\$310
Income tax expense (40%)	(140)	(130)	(124)
Net income	\$210	\$195	\$186

The company recasts the comparative statements to appear as if the accounting method adopted in 2013 (FIFO) had been used in 2012 and 2011 as well.

Earnings per share each year, of course, also will be based on the revised net income numbers.

Balance sheets.

Inventory. In its comparative balance sheets, Air Parts will report 2013 inventory by its newly adopted method, FIFO, and also will revise the amounts it reported last year for its 2012 and 2011 inventory. Each year, inventory will be higher than it would have been by LIFO. Here's why:

Since the cost of goods *available for sale* each period is the sum of the cost of goods *sold* and the cost of goods *unsold* (inventory), a difference in cost of goods sold resulting from having used LIFO rather than FIFO means there also is an opposite difference in inventory. Because cost of goods sold by the FIFO method is *less* than by LIFO, inventory by FIFO is *greater* than by LIFO. The amounts of the differences and also the cumulative differences over the years are calculated in Illustration 20–3A.

FIFO usually produces lower cost of goods sold and thus higher inventory than does LIFO.

Retained earnings. Similarly, Air Parts will report retained earnings by FIFO each year as well. Retained earnings is different because the two inventory methods affect income differently. Because cost of goods sold by FIFO is *less* than by LIFO, income and therefore retained earnings by FIFO are *greater* than by LIFO.

When costs are rising, FIFO produces lower cost of goods sold than does LIFO and thus higher net income and retained earnings.

Comparative balance sheets, then, will report retained earnings for 2013, 2012, and 2011 at amounts \$276, \$240, and \$207 million higher than would have been reported if the switch from LIFO had not occurred. These are the cumulative net income differences shown in Illustration 20–3A.

Retained earnings is revised each year to reflect FIFO.

Illustration 20–3A

Effects of Switch to FIFO

By FIFO, cost of goods sold is lower.

The cumulative income effect increases each year by the annual after-tax difference in COGS.

Inventory, pretax income, income taxes, net income, and retained earnings all are higher.

Because it's the earliest year reported, 2011's beginning retained earnings is increased by the \$180 million cumulative income effect of the difference in inventory methods that occurred before 2011.

Illustration 20–3B

Comparative Statements of Shareholders' Equity

A disclosure note should indicate that the beginning retained earnings balance has been increased by \$180 million from \$700 million to \$880 million.

(\$ in millions)	Years Ending Dec. 31:			Previous Years
	2013	2012	2011	
Cost of goods sold (LIFO)	\$430	\$420	\$405	\$2,000
Cost of goods sold (FIFO)	370	365	360	1,700
Differences	\$ 60	\$ 55	\$ 45	\$ 300
<i>Cumulative differences:</i>				
Cost of goods sold	\$460	\$400	\$345	\$ 300
Income taxes (40%)	184	160	138	120
Net income and retained earnings	\$276	\$240	\$207	\$ 180

Comparative balance sheets, then, will report 2011 inventory \$345 million higher than it was reported in last year's statements. Likewise, 2012 inventory will be increased by \$400 million. Inventory for 2013, being reported for the first time, is \$460 million higher than it would have been if the switch from LIFO had not occurred.

Statements of shareholders' equity. Recall that a statement of shareholders' equity reports changes that occur in each shareholders' equity account starting with the beginning balances in the earliest year reported.

So, if retained earnings is one of the accounts whose balance requires adjustment due to a change in accounting principle (and it usually is), we must adjust the beginning balance of retained earnings for the earliest period reported in the comparative statements of shareholders' equity. The amount of the revision is the cumulative effect of the change on years prior to that date. Air Parts will revise its 2011 beginning retained earnings since that's the earliest year in its comparative statements. That balance had been reported in prior statements as \$700 million. If FIFO had been used for inventory rather than LIFO, that amount would have been higher by \$180 million as calculated in Illustration 20–3A. The disclosure note pertaining to the inventory change should point out the amount of the adjustment. The January 1, 2011, retained earnings balance reported in the comparative statements of shareholders' equity in Illustration 20–3B has been adjusted from \$700 million to \$880 million.

(\$ in millions)	Common Stock	Additional Paid-In Capital	Retained Earnings	Total Shareholders' Equity
Jan. 1, 2011			\$ 880	
Net income (revised to FIFO)			186	
Dividends			(40)	
Dec. 31, 2011			\$1,026	
Net income (revised to FIFO)			195	
Dividends			(40)	
Dec. 31, 2012			\$1,181	
Net income (using FIFO)			210	
Dividends			(40)	
Dec. 31, 2013			\$1,351	

2. ADJUST ACCOUNTS FOR THE CHANGE. Besides reporting revised amounts in the comparative financial statements, Air Parts must also adjust the book balances of affected accounts. It does so by creating a journal entry to change those balances from their current amounts (from using LIFO) to what those balances would have been using the newly adopted method (FIFO). As discussed in the previous section, differences in cost of goods sold and income are reflected in retained earnings, as are the income tax effects of changes in income. So, the journal entry updates inventory, retained earnings, and the income tax liability for revisions resulting from differences in the LIFO and FIFO methods prior to the

switch, pre-2013. Repeating a portion of the calculation we made in Illustration 20–3A, we determine the difference in cost of goods sold and therefore in inventory.

	(\$ in millions)			
	2012	2011	Cumulative Difference pre-2011	Cumulative Difference pre-2013
Cost of goods sold (LIFO)	\$420	\$405	\$1,000	
Cost of goods sold (FIFO)	365	360	700	
Difference	\$ 55	\$ 45	\$ 300	\$400

Cost of goods sold would have been \$400 million less if FIFO rather than LIFO had been used in years before the change.

The \$400 million cumulative difference in cost of goods sold also is the difference between the balance in inventory and what that balance would have been if the FIFO method, rather than LIFO, had been used before 2013. Inventory must be increased by that amount. Retained earnings must be increased also, but by only 60% of that amount because income taxes would have been higher by 40% of the change in pretax income.

Journal entry to record the change in principle.

January 1, 2013

Inventory (additional inventory if FIFO had been used)	400	
Retained earnings (additional net income if FIFO had been used)		240
Income tax payable ($\$400 \times 40\%$)		160

Inventory would have been \$400 million more and cumulative prior earnings \$240 more if FIFO rather than LIFO had been used.

Notice that the income tax effect is reflected in the income tax payable account. The reason is that, unlike for other accounting method changes, the Internal Revenue Code requires that the inventory costing method used for tax purposes must be the same as that used for financial reporting. For that reason, the tax code allows a retrospective change in an inventory method, but then requires that taxes saved previously (\$160 million in this case) from having used another inventory method must now be repaid. However, taxpayers are given up to six years to pay the tax due. As a result, this liability has both current portion (payable within one year) and a noncurrent portion (payable after one year), but is not a deferred tax liability.

Additional Consideration

What if the tax law did not require a recapture of the tax difference? Then there would be a credit to a deferred tax liability. That's because retrospectively increasing accounting income, but not taxable income, creates a temporary difference between the two that will reverse over time as the unsold inventory becomes cost of goods sold. Recall from Chapter 16 that in the meantime, there is a temporary difference, reflected in the deferred tax liability.

If we were switching from FIFO to, say, the average method, we would record a deferred tax asset instead. For financial reporting purposes, but not for tax, we would be retrospectively decreasing accounting income, but not taxable income. This creates a temporary difference between the two that will reverse over time as the unsold inventory becomes cost of goods sold. When that happens, taxable income will be less than accounting income. When taxable income will be less than accounting income as a temporary difference reverses, we have a "future deductible amount" and record a deferred tax asset.

3. DISCLOSURE NOTES. To achieve consistency and comparability, accounting choices once made should be consistently followed from year to year. Any change, then, requires that the new method be justified as clearly more appropriate. In the first set of financial statements after the change, a disclosure note is needed to provide that justification. The note also should point out that comparative information has been revised, or that retrospective revision has not been made because it is impracticable, and report any per share amounts affected for the current period and all prior periods presented. Disclosure of a recent change

Footnote disclosure explains why the change was needed as well as its effects on items not reported on the face of the primary statements.

by **Duckwall-ALCO Stores, Inc.**, a regional chain of retail stores based in Abilene, Kansas, in its 2011 annual report provides us the example shown in Illustration 20–4.

Illustration 20–4

Disclosure of a Change in Inventory Method—Duckwall-ALCO Stores, Inc.

Real World Financials

1 (c). Inventories

Inventories are stated at the lower of cost or net realizable value. Merchandise inventories in our stores are valued by the retail method. In the fourth quarter of fiscal year 2011, the Company elected to change its method of accounting for inventory to the first-in first-out (FIFO) method from the last-in first-out (LIFO) method. The Company believes the FIFO method is preferable to the LIFO method as it better reflects the current value of inventory on the Company's balance sheet and provides better matching of revenues and expenses. The impact of this change in accounting principle on the financial statements for each of the periods is further explained in Note 2.

The Prospective Approach

Although we usually report voluntary changes in accounting principles retrospectively, it's not always practicable or appropriate to do so.

● LO20–3

THE PROSPECTIVE APPROACH: WHEN RETROSPECTIVE APPLICATION IS IMPRACTICABLE.

For some changes in principle, insufficient information is available for retrospective application to be practicable. Revising balances in prior years means knowing what those balances should be. But suppose we're switching from the FIFO method of inventory costing to the LIFO method. Recall from your study of inventory costing methods that LIFO inventory consists of "layers" added in prior years at costs existing in those years. If another method has been used, though, the company likely hasn't kept track of those costs. So, accounting records of prior years usually are inadequate to report the change retrospectively. In that case, a company changing *to* LIFO usually reports the change prospectively, and the beginning inventory in the year the LIFO method is adopted becomes the base year inventory for all future LIFO calculations. A disclosure note should indicate reasons why retrospective application was impracticable. Prospective changes usually are accounted for as of the beginning of the year of change.

When **Books A Million, Inc.**, adopted the LIFO cost flow assumption for valuing its inventories, the change was reported in a disclosure note as shown in Illustration 20–5.

Sometimes a lack of information makes it impracticable to report a change retrospectively so the new method is simply applied prospectively.

Illustration 20–5

Disclosure of a Change to LIFO—Books A Million, Inc.

Real World Financials

Inventories (in part)

. . . the Company changed from the first-in, first-out (FIFO) method of accounting for inventories to the last-in, first-out (LIFO) method. Management believes this change was preferable in that it achieves a more appropriate matching of revenues and expenses. The impact of this accounting change was to increase "Costs of Products Sold" in the consolidated statements of operations by \$0.7 million for the fiscal year. . . . The cumulative effect of a change in accounting principle from the FIFO method to LIFO method is not determinable. Accordingly, such change has been accounted for prospectively.

If it's impracticable to adjust each year reported, the change is applied retrospectively as of the earliest year practicable.

When it is impracticable to determine some period-specific effects. A company may have some, but not all, the information it needs to account for a change retrospectively. For instance, let's say a company changes to the LIFO inventory method effective as of the beginning of 2013. It has information that would allow it to revise all assets and liabilities on the basis of the newly adopted method for 2012 in its comparative statements, but not for 2011. In that case, the company should report 2012 statement amounts (revised) and 2013 statement amounts (reported without restatement for the first time) based on LIFO, but not revise 2011 numbers. Then, account balances should be retrospectively adjusted at the beginning of 2012 since that's the earliest date it's practicable to do so.

When it is impracticable to determine the cumulative effect of prior years. Another possibility is that the company doesn't have the information necessary to retrospectively adjust retained earnings, but does have information that would allow it to revise all assets and liabilities for one or more specific years. Let's say the records of inventory purchases and sales are not available for some previous years, which would have allowed it to determine

the cumulative effect of applying this change to LIFO retrospectively. However, it does have all of the information necessary to apply the LIFO method on a prospective basis beginning in, say, 2011. In that case, the company should report numbers for years beginning in 2011 as if it had carried forward the 2010 ending balance in inventory (measured on the previous inventory costing basis) and then had begun applying LIFO as of January 1, 2011. Of course there would be no adjustment to retained earnings for the cumulative income effect of not using LIFO prior to that.

If full retrospective application isn't possible, the new method is applied prospectively beginning in the earliest year practicable.

THE PROSPECTIVE APPROACH: WHEN MANDATED BY AUTHORITATIVE ACCOUNTING LITERATURE. Another exception to retrospective application of voluntary changes in accounting principle is when authoritative literature requires prospective application for specific changes in accounting methods. For instance, for a change from the equity method to another method of accounting for long-term investments, GAAP requires the prospective application of the new method.⁷ Recall from Chapter 12 that when an investor's level of influence changes, it may be necessary to change from the equity method to another method. This could happen, for instance, if a sale of shares causes the investor's ownership interest to fall from, say, 25% to 15%, resulting in the equity method no longer being appropriate. When this situation happens, no adjustment is made to the remaining carrying amount of the investment. Instead, the equity method is simply discontinued and the new method applied from then on. The balance in the investment account when the equity method is discontinued would serve as the new "cost" basis for writing the investment up or down to fair value on the next set of financial statements.

If a new accounting standards update specifically requires prospective accounting, that requirement is followed.

International Financial Reporting Standards

In previous chapters we discussed the possibility that U.S. companies will be required to or may choose to switch from U.S. GAAP to international financial reporting standards. When a company moves for the first time from U.S. GAAP to IFRS it should follow the requirements of IFRS 1: *First-time Adoption of International Financial Reporting Standards*.

The basic requirement is full retrospective application of IFRS for the company's first IFRS financial statements. A company's first IFRS financial statements must include at least three balance sheets and two of each of the other financial statements. For instance, if the company's first IFRS reporting period is for the year ended December 31, 2015, the first balance sheet will be the opening balance sheet of 2014, which is the ending balance sheet of 2013. The other two balance sheets and each of the other statements—income statement, statement of comprehensive income, statement of cash flows, statements of changes in equity—are for the years ended December 31, 2014, and December 31, 2015. The date of transition to IFRS is the date of the opening balance sheet, January 1, 2014, in this situation.

First-time application of IFRS entails:

- ✓ Recording some assets and liabilities not permitted under U.S. GAAP such as some provisions (contingent liabilities) permitted under IFRS but not U.S. GAAP.
- ✓ Not recording (derecognizing) some assets and liabilities, for example, an intangible asset for research expenditures, permitted under U.S. GAAP but not IFRS.
- ✓ Reclassifying items that are classified differently under the two sets of standards, for instance, reclassifying some preferred shares from shareholder equity classification under U.S. GAAP to liability classification under IFRS.
- ✓ Providing disclosures (in notes to the financial statements) required under IFRS but not U.S. GAAP.
- ✓ Providing extensive disclosures to explain how the transition to IFRS affected the company's financial position, financial performance, and cash flows. These disclosures include (a) providing explanations of material adjustments to the balance sheet,

⁷FASB ACS 323-10-35-35: Investments—Equity Method and Joint Ventures—Overall—Subsequent Measurement—Decrease in Level of Ownership or Degree of Influence (previously "The Equity Method of Accounting for Investments in Common Stock," *Accounting Principles Board Opinion No. 18* (New York: AICPA, 1971)).

(concluded)

income statement, and cash flow statement; and (b) reconciliations of equity and total comprehensive income reported under previous GAAP to equity under IFRS.

Although the basic requirement is full retrospective application of IFRS, there are several optional *exemptions* and five mandatory *exceptions* to the requirement for retrospective application.

The exemptions are designed to allow companies to avoid excessive costs or difficulties expected for retrospective application of certain standards. For example, if an adopter chooses to report assets such as property, plant, and equipment at fair value as permitted by IFRS, it can measure that fair value at the opening IFRS balance sheet date rather than having to do so retrospectively. Fair value becomes the “deemed cost” going forward under IFRS. Also, consistent with the fair value option under IFRS, fair value is permissible for intangible assets only if they are traded in an active market. The optional exemptions relate to:

- a. Business combinations.
- b. Fair value or revaluation as deemed cost for property, plant and equipment and other assets.
- c. Employee benefits.
- d. Cumulative translation differences.
- e. Compound financial instruments.
- f. Assets and liabilities of subsidiaries.
- g. Associates and joint ventures.
- h. Designation of previously recognized financial instruments.
 - i. Share-based payment transactions.
 - j. Insurance contracts.
- k. Decommissioning liabilities.
 - l. Arrangements containing leases.
- m. Fair value measurement of no-active market financial instruments at initial recognition.
- n. Service concession arrangements.
- o. Borrowing costs.

The five exceptions cover areas in which retrospective application of IFRS is considered inappropriate and relate to:

1. Derecognition of financial assets and financial liabilities (mandatory).
2. Hedge accounting (mandatory).
3. Noncontrolling interests (mandatory).
4. Full-cost oil and gas assets (optional).
5. Determining whether an arrangement contains a lease (mandatory).

Almost all adjustments arising from the first-time application of IFRS are against opening retained earnings of the first period that is presented on an IFRS basis.

THE PROSPECTIVE APPROACH: CHANGING DEPRECIATION, AMORTIZATION, AND DEPLETION METHODS. A change in depreciation methods is considered to be a change in accounting estimate that is achieved by a change in accounting principle. As a result, we account for such a change prospectively—precisely the way we account for changes in estimates. We discuss that approach in the next section.

Change in Accounting Estimate

● LO20-4

You’ve encountered many instances during your study of accounting in which it’s necessary to make estimates of uncertain future events. Depreciation, for example, entails estimates not only of the useful lives of depreciable assets, but their anticipated residual values as well. Anticipating uncollectible accounts receivable, predicting warranty expenses, amortizing intangible assets, and making actuarial assumptions for pension benefits are but a few of the accounting tasks that require estimates.

Accordingly, estimates are an inherent aspect of accounting. Unfortunately, though, estimates routinely turn out to be wrong. No matter how carefully known facts are considered and forecasts are prepared, new information and experience frequently force the revision of estimates. Of course, if the original estimate was based on erroneous information or calculations or was not made in good faith, the revision of that estimate constitutes the correction of an error.

Changes in accounting estimates are accounted for prospectively. When a company revises a previous estimate, prior financial statements are *not* revised. Instead, the company merely incorporates the new estimate in any related accounting determinations from then on. So, it usually will affect some aspects of both the balance sheet and the income statement in the current period and future periods. A disclosure note should describe the effect of a change in estimate on income before extraordinary items, net income, and related per share amounts for the current period.

When **Owens-Corning Fiberglass** revised estimates of the useful lives of some of its depreciable assets, the change was disclosed in its annual report as shown in Illustration 20–6.

Revisions are viewed as a natural consequence of making estimates.

A change in estimate is reflected in the financial statements of the current period and future periods.

Note 6: Depreciation of Plant and Equipment (in part)

. . . the Company completed a review of its fixed asset lives. The Company determined that as a result of actions taken to increase its preventative maintenance and programs initiated with its equipment suppliers to increase the quality of their products, actual lives for certain asset categories were generally longer than the useful lives for depreciation purposes. Therefore, the Company extended the estimated useful lives of certain categories of plant and equipment, effective . . . The effect of this change in estimate reduced depreciation expense for the year ended . . . , by \$14 million and increased income before cumulative effect of accounting change by \$8 million (\$.19 per share).

Illustration 20–6

Change in Estimate—Owens-Corning Fiberglass Corporation

Real World Financials

An example of another change in estimate is provided in Illustration 20–7.

Universal Semiconductors estimates warranty expense as 2% of sales. After a review during 2013, Universal determined that 3% of sales is a more realistic estimate of its payment experience. Sales in 2013 are \$300 million. The effective income tax rate is 40%.

No account balances are adjusted. The cumulative effect of the estimate change is not reported in current income. Rather, in 2013 and later years, the adjusting entry to record warranty expense simply will reflect the new percentage. In 2013, the entry would be:

	(\$ in millions)
Warranty expense (3% × \$300 million)	9
Warranty liability	9

Illustration 20–7

Change in Accounting Estimate

The after-tax effect of the change in estimate is **\$1.8 million** [\$300 million × (3% – 2%) = \$3 million, less 40% of \$3 million]. Assuming 100 million outstanding shares of common stock, the effect is described in a disclosure note to the financial statements as follows:

Note A: Warranties

In 2013, the company revised the percentage used to estimate warranty expense. The change provides a better indication of cost experience. The effect of the change was to decrease 2013 net income by **\$1.8 million**, or \$.018 per share.

Changing Depreciation, Amortization, and Depletion Methods

When a company acquires an asset that will provide benefits for several years, it allocates the cost of the asset over the asset’s useful life. If the asset is a building, equipment, or other tangible asset, the allocation process is called *depreciation*. It’s referred to as *amortization* if an intangible asset or *depletion* if a natural resource. In each case, estimates are essential to the allocation process. How long will benefits accrue? What will be the value of the asset

FINANCIAL Reporting Case

when its use is discontinued? Will the benefits be realized evenly over the asset's life or will they be higher in some years than in others?

The choice of depreciation method and application reflects these estimates. Likewise, when a company changes the way it depreciates an asset in midstream, the change would be made to reflect a change in (a) estimated future benefits from the asset, (b) the pattern of receiving those benefits, or (c) the company's knowledge about those benefits. For instance, suppose Universal Semiconductors originally chose an accelerated depreciation method because it expected greater benefits in the earlier years of an asset's life. Then, two years later, when it became apparent that remaining benefits would be realized approximately evenly over the remaining useful life, Universal Semiconductor switched to straight-line depreciation. Even though the company is changing its depreciation method, it is doing so to reflect changes in its estimates of future benefits. As a result, we report a change in depreciation method as a change in estimate, rather than as a change in accounting principle.

For this reason, a company reports a change in depreciation method (say to straight-line) prospectively; previous financial statements are not revised. Instead, the company simply employs the straight-line method from then on. The undepreciated cost remaining at the time of the change would be depreciated straight-line over the remaining useful life. Illustration 20–8 provides an example.

An exception to retrospective application of a change in accounting principle is a change in the method of depreciation (or amortization or depletion).

Companies report a change in depreciation prospectively.

Illustration 20–8

Change in Depreciation Methods

Universal Semiconductors switched from the SYD depreciation method to straight-line depreciation in 2013. The change affects its precision equipment purchased at the beginning of 2011 at a cost of \$63 million. The machinery has an expected useful life of five years and an estimated residual value of \$3 million.

The depreciation prior to the change is as follows (\$ in millions):

Sum-of-the-Years'-Digits Depreciation:

2011 depreciation	\$20 ($\$60 \times \frac{5}{15}$)
2012 depreciation	16 ($\$60 \times \frac{4}{15}$)
Accumulated depreciation	\$36

A change in depreciation method is considered a change in accounting estimate resulting from a change in accounting principle. So, Universal Semiconductors reports the change prospectively; previous financial statements are not revised. Instead, the company simply employs the straight-line method from 2013 on. The undepreciated cost remaining at the time of the change is depreciated straight-line over the remaining useful life.

Calculation of Straight-Line Depreciation:

	(\$ in millions)
Asset's cost	\$63
Accumulated depreciation to date (calculated above)	(36)
Undepreciated cost, Jan. 1, 2013	\$27
Estimated residual value	(3)
To be depreciated over remaining 3 years	\$24
	3 years
Annual straight-line depreciation 2013–2015	\$ 8

Adjusting entry (2013, 2014, and 2015 depreciation):

	(\$ in millions)
Depreciation expense (calculated above)	8
Accumulated depreciation	8

The \$24 million depreciable cost not yet depreciated is spread over the asset's remaining three years.

A company must justify any change in principle as preferable to the previous method.

Is a change in depreciation method a change in accounting principle, or is it a change in estimate? As we've seen, it's both. Even though it's considered to reflect a change in estimate and is accounted for as such, a change to a new depreciation method requires the company to justify the new method as being preferable to the previous method, just as for any other change in principle. A disclosure note should justify that the change is preferable and describe the effect of a change on any financial statement line items and per share amounts affected for all periods reported.

In practice, the situation arises infrequently. Most companies changing depreciation methods do not apply the change to existing assets, but instead to assets placed in service after that date. In those cases, of course, the new method is simply applied prospectively (see Illustration 20–9).

Note 12: Land, Buildings, and Equipment, Net (in part)

. . . the company changed its method of depreciation for newly acquired buildings and equipment to the straight-line method. The change had no cumulative effect on prior years' earnings but did increase [current year] net earnings by \$9 million, or \$.14 per share . . .

Sometimes, it's not easy to distinguish between a change in principle and a change in estimate. For example, if a company begins to capitalize rather than expense the cost of tools because their benefits beyond one year become apparent, the change could be construed as either a change in principle or a change in the estimated life of the asset. When the distinction is not possible, the change should be treated as a change in estimate. This treatment also is appropriate when both a change in principle and a change in estimate occur simultaneously.

Illustration 20–9

Change in Depreciation Method for Newly Acquired Assets—Rohm and Haas Company

Real World Financials

When it's not possible to distinguish between a change in principle and a change in estimate, the change should be treated as a change in estimate.

Change in Reporting Entity

A reporting entity can be a single company, or it can be a group of companies that reports a single set of financial statements. For example, the consolidated financial statements of **PepsiCo Inc.** report the financial position and results of operations not only for the parent company but also for its subsidiaries which include **Frito-Lay** and **Gatorade**. A **change in reporting entity** occurs as a result of (1) presenting consolidated financial statements in place of statements of individual companies or (2) changing specific companies that constitute the group for which consolidated or combined statements are prepared.⁸

Some changes in reporting entity are a result of changes in accounting rules. For example, companies like **Ford**, **General Motors**, and **General Electric** must consolidate their manufacturing operations with their financial subsidiaries, creating a new entity that includes them both.⁹ For those changes in entity, the prior-period financial statements that are presented for comparative purposes must be restated to appear as if the new entity existed in those periods.

However, the more frequent change in entity occurs when one company acquires another one. In those circumstances, the financial statements of the acquirer include the acquiree as of the date of acquisition, and the acquirer's prior-period financial statements that are presented for comparative purposes are not restated. This makes it difficult to make year-to-year comparisons for a company that frequently acquires other companies. Acquiring companies are required to provide a footnote that presents key financial statement information as if the acquisition had occurred before the beginning of the previous year. At a minimum, the supplemental pro forma information should display revenue, income before extraordinary items, net income, and earnings per share.

A change in reporting entity is reported by recasting all previous periods' financial statements as if the new reporting entity existed in those periods.¹⁰ In the first set of financial statements after the change, a disclosure note should describe the nature of the change and the reason it occurred. Also, the effect of the change on net income, income before extraordinary items, and related per share amounts should be indicated for all periods presented. These disclosures aren't necessary in subsequent financial statements. **Hartford Life Insurance Company**, a financial services company, changed the composition of its reporting entity and described it this way:

● LO20-5

A change in reporting entity requires that financial statements of prior periods be retrospectively revised to report the financial information for the new reporting entity in all periods.

⁸FASB ASC 810: Consolidation and 840: Leases (previously "Consolidation of All Majority-Owned Subsidiaries," *Statement of Financial Accounting Standards No. 94* (Stamford, Conn.: FASB, 1987)).

⁹The issuance of *SFAS No. 94*, "Consolidation of All Majority-Owned Subsidiaries," [FASB ASC 810: Consolidation and 840: Leases] resulted in hundreds of entities consolidating previously unconsolidated finance subsidiaries.

¹⁰Any prior periods' statements are recast when those statements are presented again for comparative purposes.

Illustration 20–10

Change in Reporting Entity—Hartford Life Insurance

Real World Financials

1. Basis of Presentation and Accounting Policies (in part)

Hartford Life changed its reporting entity structure to contribute certain wholly owned subsidiaries, including Hartford Life’s European insurance operations, several broker dealer entities and investment advisory and service entities from Hartford Life and Accident to the Company. The contribution of subsidiaries was effected to more closely align servicing entities with the writing company issuing the business they service as well as to more efficiently deploy capital across the organization. The change in reporting entity was retrospectively applied to the financial statements of the Company for all periods presented. The contributed subsidiaries resulted in an increase in stockholder’s equity of approximately \$1.3 billion.

Error Correction

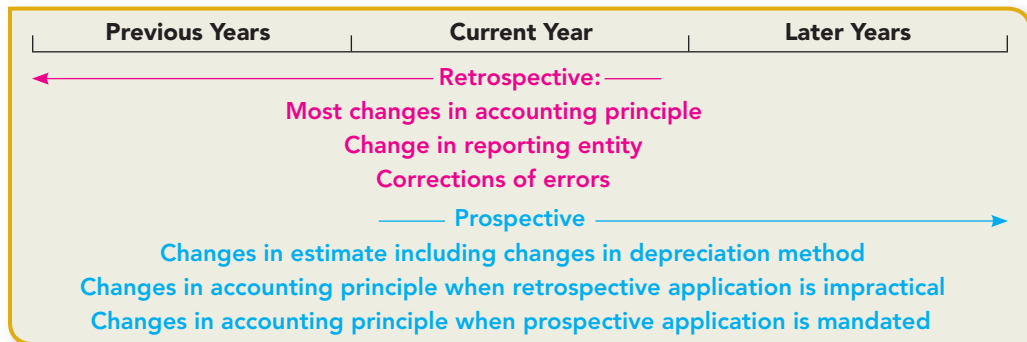

The correction of an error is not actually an accounting change but is accounted for similarly. In fact, it’s accounted for retrospectively like a change in reporting entity and like most changes in accounting principle.

More specifically, previous years’ financial statements that were incorrect as a result of the error are retrospectively restated to reflect the correction. And, of course, any account balances that are incorrect as a result of the error are corrected by a journal entry. If retained earnings is one of the incorrect accounts, the correction is reported as a prior period adjustment to the beginning balance in a statement of shareholders’ equity (or statement of retained earnings if that’s presented instead).¹¹ And, as for accounting changes, a disclosure note is needed to describe the nature of the error and the impact of its correction on operations. We discuss the correction of errors in more detail in Part B of this chapter. But first, let’s compare the two approaches for reporting accounting changes and error corrections (Illustration 20–11).

Previous years’ financial statements are retrospectively restated to reflect the correction of an error.

Illustration 20–11

Approaches to Reporting Accounting Changes and Error Corrections

A comparison of accounting treatments is provided by Illustration 20–12.

Illustration 20–12

Accounting Changes and Errors: A Summary

Method of accounting:	Change in Accounting Principle		Change in Estimate (including depreciation changes)	Change in Reporting Entity	Error
	Most Changes*	Exceptions [†]			
	Retrospective	Prospective	Prospective	Retrospective	Retrospective
• Restate prior years’ statements?	Yes	No	No	Yes	Yes
• Cumulative effect on prior years’ income reported:	As adjustment to retained earnings of earliest year reported. [‡]	Not reported.	Not reported.	Not reported.	As adjustment to retained earnings of earliest year reported. [‡]

(continued)

¹¹FASB ASC 250–10–45: Accounting Changes and Error Corrections—Overall—Other Presentation Matters (previously “Prior Period Adjustments,” *Statement of Financial Accounting Standards No. 16* (Stamford, CT: FASB, 1977)).

Illustration 20–12 (concluded)

• Journal entry:	To adjust affected balances to new method.	None, but subsequent accounting is affected by the change.	None, but subsequent accounting is affected by the new estimate.	Involves consolidated financial statements discussed in other courses.	To correct any balances that are incorrect as a result of the error.
• Disclosure note?	Yes	Yes	Yes	Yes	Yes

*Changes in depreciation, amortization, and depletion methods are considered changes in estimates.

†When retrospective application is impracticable such as most changes to LIFO and certain mandated changes.

‡In the statement of shareholders' equity or statement of retained earnings.

Concept Review Exercise

Modern Business Machines recently conducted an extensive review of its accounting and reporting policies. The following accounting changes are an outgrowth of that review:

ACCOUNTING CHANGES

1. MBM has a patent on a copier design. The patent has been amortized on a straight-line basis since it was acquired at a cost of \$400,000 in 2010. During 2013, MBM decided that the benefits from the patent would be experienced over a total of 13 years rather than the 20-year legal life now being used to amortize its cost.
2. At the beginning of 2013, MBM changed its method of valuing inventory from the FIFO cost method to the average cost method. At December 31, 2012 and 2011, MBM's inventories were \$560 and \$540 million, respectively, on a FIFO cost basis but would have totaled \$500 and \$490 million, respectively, if determined on an average cost basis. MBM's income tax rate is 40%.

Required:

Prepare all journal entries needed in 2013 related to each change. Also, briefly describe any other measures MBM would take in connection with reporting the changes.

Solution:**1. Change in estimate**

	(\$ in 000s)
Patent amortization expense (determined below)	34
Patent	34

Calculation of Annual Amortization after the Estimate Change

\$400,000	Cost
\$20,000	Old annual amortization (\$400,000 ÷ 20 years)
× 3 years	Amortization to date (2010, 2011, 2012)
<u>(60,000)</u>	
340,000	Unamortized cost
÷ 10	Estimated remaining life (13 years – 3 years)
<u>\$ 34,000</u>	New annual amortization

A disclosure note should describe the effect of a change in estimate on income before extraordinary items, net income, and related per-share amounts for the current period.

2. Change in principle

MBM creates a journal entry to bring up to date all account balances affected.

	(\$ in millions)
Retained earnings (The difference in net income before 2010)	36
Deferred tax asset (\$60 million × 40%)	24
Inventory (\$560 million – \$500 million)	60

Prior years' financial statements are revised to reflect the use of the new accounting method.

Since it's the earliest year reported, 2012's beginning retained earnings is adjusted for the portion of the cumulative income effect of the change attributable to prior years.

For financial reporting purposes, but not for tax, MBM is retrospectively *decreasing* accounting income, but not taxable income. This creates a temporary difference between the two that will reverse over time as the unsold inventory becomes cost of goods sold. When that happens, taxable income will be less than accounting income. When taxable income will be less than accounting income as a temporary difference reverses, we have a “future deductible amount” and record a deferred tax asset.

Also, MBM will revise all previous periods' financial statements (in this case 2012) as if the new method (average cost) were used in those periods. In other words, for each year in the comparative statements reported, the balance of each account affected will be revised to appear as if the average method had been applied all along.

Since retained earnings is one of the accounts whose balance requires adjustment (and it usually is), MBM makes an adjustment to the beginning balance of retained earnings for the earliest period (2012) reported in the comparative statements of shareholders' equity. Also, in the first set of financial statements after the change, a *disclosure note* describes the nature of the change, justifies management's decision to make the change, and indicates its effect on each item affected in the financial statements.

● LO20-7

International Financial Reporting Standards

The FASB and the International Accounting Standards Board have a continuing commitment to converge their accounting standards. As part of their short-term convergence effort, they identified how companies report accounting changes as an area in which the FASB could improve its guidance by converging it with the provisions of IAS No. 8, “Accounting Policies, Changes in Accounting Estimates and Errors.”¹² The product of this effort was new FASB guidance issued in 2005.¹³ Few differences remain, so it's unlikely we will see much change in this area.

PART B

CORRECTION OF ACCOUNTING ERRORS

● LO20-6

Nobody's perfect. People make mistakes, even accountants. When errors are discovered, they should be corrected.¹⁴ Illustration 20-13 describes the steps to be taken to correct an error, if the effect of the error is material.¹⁵

Prior Period Adjustments

Before we see these steps applied to the **correction of an error**, one of the steps requires elaboration. As discussed in Chapter 4, the correction of errors is the situation that creates prior period adjustments. A **prior period adjustment** refers to an addition to or reduction in the beginning retained earnings balance in a statement of shareholders' equity (or statement of retained earnings if that's presented instead).

¹²“Accounting Policies, Changes in Accounting Estimates and Errors,” *International Accounting Standard No. 8* (IASCF), as amended effective January 1, 2011.

¹³FASB ASC 250: Accounting Changes and Error Corrections (previously “Accounting Changes and Error Corrections—A Replacement of APB Opinion No. 20 and FASB Statement No. 3,” *Statement of Financial Accounting Standards No. 154*, (Norwalk, Conn: FASB, 2005)).

¹⁴Interestingly, it appears that not all accounting errors are unintentional. Research has shown that firms with errors that overstate income are more likely “to have diffuse ownership, lower growth in earnings and fewer income-increasing GAAP alternatives available, and are less likely to have audit committees,” suggesting that “overstatement errors are the result of managers responding to economic incentives.” M. L. DeFond and J. Jiambalvo, “Incidence and Circumstances of Accounting Errors,” *The Accounting Review*, July 1991.

¹⁵In practice, the vast majority of errors are not material with respect to their effect on the financial statements and are, therefore, simply corrected in the year discovered (step 1 only).

- Step 1.** A journal entry is made to correct any account balances that are incorrect as a result of the error.
- Step 2.** Previous years' financial statements that were incorrect as a result of the error are retrospectively restated to reflect the correction (for all years reported for comparative purposes).
- Step 3.** If retained earnings is one of the accounts incorrect as a result of the error, the correction is reported as a prior period adjustment to the beginning balance in a statement of shareholders' equity (or statement of retained earnings if that's presented instead).
- Step 4.** A disclosure note should describe the nature of the error and the impact of its correction on net income.

Illustration 20–13

Steps to Correct an Error

The retrospective approach is used for the correction of errors.

The correction of an error is treated as a prior period adjustment.

In an earlier chapter we saw that a statement of shareholders' equity is the most commonly used way to report the events that cause components of shareholders' equity to change during a particular reporting period. Some companies, though, choose to report the changes that occur in the balance of retained earnings separately in a statement of retained earnings. When it's discovered that the ending balance of retained earnings in the period prior to the discovery of an error was incorrect as a result of that error, the balance must be corrected when it appears as the beginning balance the following year. However, simply reporting a corrected amount might cause misunderstanding for someone familiar with the previously reported amount. Explicitly reporting a prior period adjustment on the statement itself avoids this confusion. Assume, for example, the following comparative statements of retained earnings:

STATEMENTS OF RETAINED EARNINGS For the Years Ended December 31, 2012 and 2011

	2012	2011
Balance at beginning of year	\$600,000	\$450,000
Net income	400,000	350,000
Less: Dividends	(200,000)	(200,000)
Balance at end of year	\$800,000	\$600,000

A statement of retained earnings reports the events that cause changes in retained earnings.

Now suppose that in 2013 it's discovered that an error in 2011 caused that year's net income to be overstated by \$20,000 (it should have been \$330,000). This means retained earnings in both prior years were overstated. Because comparative financial statements are presented and the current year is the year in which the error was discovered, the prior year would include a prior period adjustment as shown below:

STATEMENTS OF RETAINED EARNINGS For the Years Ended December 31, 2013 and 2012

	2013	2012
Balance at beginning of year	\$ 780,000	\$600,000
Prior period adjustment		(20,000)
Corrected balance		\$580,000
Net Income	500,000	400,000
Less: Dividends	(200,000)	(200,000)
Balance at end of year	\$1,080,000	\$780,000

The incorrect balance as previously reported is corrected by the prior period adjustment.

At least two years' (as in our example) and often three years' statements are reported in comparative financial statements. The prior period adjustment is applied to beginning retained earnings for the year following the error, or for the earliest year being reported in the comparative financial statements when the error occurs prior to the earliest year presented.¹⁶

¹⁶The retained earnings balances in years after the first year also are adjusted to what those balances would be if the error had not occurred, but a company may choose not to explicitly report those adjustments as separate line items.

Error Correction Illustrated

You shouldn't try to memorize how specific errors are corrected; you should learn the process needed to analyze whatever errors you might encounter.

Now, let's discuss these procedures to correct errors in the context of a variety of the most common types of errors. Since there are literally thousands of possibilities, it's not practical to describe every error in every stage of its discovery. However, by applying the process to the situations described below, you should become sufficiently comfortable with the *process* that you could apply it to whatever situation you might encounter.

As you study these examples, be sure to notice that it's significantly more complicated to deal with an error if (a) it affected net income in the reporting period in which it occurred and (b) it is not discovered until a later period.

Error Discovered in the Same Reporting Period That It Occurred

If an accounting error is made and discovered in the same accounting period, the original erroneous entry should simply be reversed and the appropriate entry recorded. The possibilities are limitless. Let's look at the one in Illustration 20–14.

Illustration 20–14

Error Discovered in the Same Reporting Period That It Occurred

G. H. Little, Inc. paid \$3 million for replacement computers and recorded the expenditure as maintenance expense. The error was discovered a week later.

To Reverse Erroneous Entry		(\$ in millions)	
Cash	3		
Maintenance expense			3
To Record Correct Entry			
Equipment		3	
Cash			3

Note: These entries can, of course, be combined.

Error Affecting Previous Financial Statements, but Not Net Income

If an error did *not* affect net income in the year it occurred, it's relatively easy to correct. Examples are incorrectly recording salaries payable as accounts payable, recording a loss as an expense, or classifying a cash flow as an investing activity rather than a financing activity on the statement of cash flows. A 2011 restatement by **Cyclacel Pharmaceuticals, Inc.**, reproduced in Illustration 20–15 provides an example. Illustration 20–16 provides another.

Illustration 20–15

Error Correction; Cyclacel Pharmaceuticals, Inc.

Real World Financials

3. Restatement of Previously Issued Financial Statements (in part)

The Company has restated its consolidated balance sheet as of December 31, 2009, and its statement of stockholder's equity for the year ended December 31, 2009. The Company has also restated its unaudited consolidated balance sheets for each of the first three quarters in 2009 and 2010. . . . During March 2011, the Company became aware of an error with respect to the historical accounting for undeclared dividends associated with the Company's outstanding preferred stock. The Company's management determined that undeclared cumulative preferred stock dividends need only be disclosed in the financial statements or in the notes thereto, and not accrued and included as a current liability in the Company's consolidated balance sheets, as the Company had recorded in prior periods. The effect of correcting the error has been recorded in the applicable restated periods.

MDS Transportation incorrectly recorded a \$2 million note receivable as accounts receivable. The error was discovered a year later.

To Correct Incorrect Accounts		(\$ in millions)
Note receivable		2
Accounts receivable		2

When reported for comparative purposes in the current year’s annual report, last year’s balance sheet would be restated to report the note as it should have been reported last year.

Since last year’s net income was not affected by the error, the balance in retained earnings was not incorrect. So no prior period adjustment to that account is necessary.

A disclosure note would describe the nature of the error, but there would be no impact on net income, income before extraordinary items, and earnings per share to report.

Illustration 20–16

Error Affecting Previous Financial Statements, but Not Net Income

Step 1

Step 2

Step 3

Step 4

Error Affecting a Prior Year’s Net Income

Most errors affect net income in some way. When they do, they affect the balance sheet as well. Both statements must be retrospectively restated; the statement of cash flows sometimes is affected, too. As with any error, all incorrect account balances must be corrected. Because these errors affect income, one of the balances that will require correction is retained earnings. Complicating matters, income taxes often are affected by income errors. In those cases, amended tax returns are prepared either to pay additional taxes or to claim a tax refund for taxes overpaid.

In Illustration 20–17 (except as indicated), we ignore the tax effects of the errors and their correction to allow us to focus on the errors themselves rather than their tax aspects.

In 2013, internal auditors discovered that Seidman Distribution, Inc., had debited an expense account for the \$7 million cost of sorting equipment purchased at the beginning of 2011. The equipment’s useful life was expected to be five years with no residual value. Straight-line depreciation is used by Seidman.

Analysis:

	(\$ in millions)			
	Correct		Incorrect	
	<i>(Should have been recorded)</i>		<i>(As recorded)</i>	
2011	Equipment	7.0	Expense	7.0
	Cash	7.0	Cash	7.0
2011	Expense	1.4	Depreciation entry omitted	
	Accum. deprec.	1.4		
2012	Expense	1.4	Depreciation entry omitted	
	Accum. deprec.	1.4		

During the two-year period, depreciation expense was understated by \$2.8 million, but other expenses were overstated by \$7 million, so net income during the period was understated by \$4.2 million. This means retained earnings is currently understated by that amount.

Accumulated depreciation is understated by \$2.8 million.

To Correct Incorrect Accounts		(\$ in millions)
Equipment		7.0
Accumulated depreciation		2.8
Retained earnings		4.2

The 2011 and 2012 financial statements that were incorrect as a result of the error are retrospectively restated to report the equipment acquired and to reflect the correct amount of depreciation expense and accumulated depreciation, assuming both statements are reported again for comparative purposes in the 2013 annual report.

Because retained earnings is one of the accounts that is incorrect as a result of the error, a correction to that account of \$4.2 million is reported as a prior period adjustment

(continued)

Illustration 20–17

Error Affecting Net Income: Recording an Asset as an Expense

Sometimes, the analysis is easier if you re-create the entries actually recorded incorrectly and those that would have been recorded if the error hadn’t occurred and then compare them.

Step 1

Step 2
Restate previous years’ financial statements.

Illustration 20–17

(concluded)

Step 3**Prior period adjustment****Step 4 Disclosure note**

to the 2013 beginning retained earnings balance in Seidman's comparative statements of shareholders' equity. A correction would be made also to the 2012 beginning retained earnings balance. That prior period adjustment, though, would be for the pre-2012 difference: \$7 million – 1.4 million = \$5.6 million. If 2011 statements also are included in the comparative report, no adjustment would be necessary for that period because the error didn't occur until after the beginning of 2011.

Also, a disclosure note accompanying Seidman's 2013 financial statements should describe the nature of the error and the impact of its correction on each year's net income (understated by \$5.6 million in 2011 and overstated by \$1.4 million in 2012), income before extraordinary items (same as net income), and earnings per share.

The effect of most errors is different, depending on *when* the error is discovered. For example, if the error in Illustration 20–17 is not discovered until 2014, rather than 2013, accumulated depreciation would be understated by another \$1.4 million, or a total of \$4.2 million. If not discovered until 2016 or after, no correcting entry at all would be needed. By then, the sum of the omitted depreciation amounts (\$1.4 million × 5 years) would equal the expense incorrectly recorded in 2011 (\$7 million), so the retained earnings balance would be the same as if the error never had occurred. Also, the asset may have been disposed of—if the useful life estimate was correct—so neither the equipment nor accumulated depreciation would need to be recorded. Of course, any statements of prior years that were affected and are reported again in comparative statements still would be restated, and a disclosure note would describe the error.

Most errors, in fact, eventually self-correct. An example of an uncommon instance in which an error never self-corrects would be an expense account debited for the cost of land. Because land doesn't depreciate, the error would continue until the land is sold.

Some errors correct themselves the following year. For instance, if a company's ending inventory is incorrectly counted or otherwise misstated, the income statement would be in error for the year of the error and the following year, but the balance sheet would be incorrect only for the year the error occurs. After that, all account balances will be correct. This is demonstrated in Illustration 20–18 on the next page.

Even errors that eventually correct themselves cause financial statements to be misstated in the meantime.

Additional Consideration

We ignored the tax impact of the error and its correction in Illustration 20–17. To consider taxes, we need to know whether depreciation was also omitted from the tax return and the depreciation methods used for tax reporting. Let's say that depreciation was omitted from the tax return also, and that straight-line depreciation is used by Seidman for both tax and financial reporting. The tax rate is 40%.

Total operating expenses (nontax) still would have been overstated by \$4.2 million over the two-year period. But that would have caused taxable income to be understated and the tax liability and income tax expense to be understated by 40% of \$4.2 million, or \$1.68 million. So net income and retained earnings would have been understated by only \$2.52 million:

Operating expenses overstated	\$4.20 million
Income tax expense understated	(1.68) million
Net income (and retained earnings) understated	\$2.52 million

To Correct Incorrect Accounts:

	(\$ in millions)	
Equipment	7.00	
Accumulated depreciation		2.80
Income tax payable (40% × \$4.2 million)		1.68
Retained earnings		2.52

If depreciation had been omitted from the income statement but not from the tax return, or if accelerated depreciation was used for tax reporting but straight-line depreciation for financial reporting, the credit to income tax payable in the correcting entry would be replaced by a credit to deferred tax liability.

In early 2013, Overseas Wholesale Supply discovered that \$1 million of inventory had been inadvertently excluded from its 2011 ending inventory count.

Analysis:

U = Understated O = Overstated

2011		2012	
Beginning inventory		Beginning inventory	U
Plus: Net purchases		Plus: Net purchases	
Less: Ending inventory	U	Less: Ending inventory	
Cost of goods sold	O	Cost of goods sold	U
Revenues		Revenues	
Less: Cost of goods sold	O	Less: Cost of goods sold	U
Less: Other expenses		Less: Other expenses	
Net income	U	Net income	O
↓		↓	
Retained earnings	U	Retained earnings	<u>corrected</u>

If Error Is Discovered in 2012 (before closing):

	(\$ in millions)	
Inventory	1	
Retained earnings		1

If Error Discovered in 2013 or Later:

No correcting entry needed

If the error is discovered in 2012, the 2011 financial statements that were incorrect as a result of the error are retrospectively restated to reflect the correct inventory amounts, cost of goods sold, and retained earnings when those statements are reported again for comparative purposes in the 2012 annual report. If the error is discovered in 2013, the 2012 financial statements also are retrospectively restated to reflect the correct inventory amounts and cost of goods sold (retained earnings would not require adjustment), even though no correcting entry would be needed at that point.

Because retained earnings is one of the accounts incorrect if the error is discovered in 2012, the correction to that account is reported as a prior period adjustment to the 2012 beginning retained earnings balance in Overseas' statement of shareholders' equity. Of course, no prior period adjustment is needed if the error isn't discovered until 2013 or later.

Also, a disclosure note in Overseas' annual report should describe the nature of the error and the impact of its correction on each year's net income (understated by \$1 million in 2011, overstated by \$1 million in 2012), income before extraordinary items (same as net income), and earnings per share.

Illustration 20-18

Error Affecting Net Income: Inventory Misstated

When analyzing inventory errors or other errors that affect cost of goods sold, you may find it helpful to visualize the determination of cost of goods sold, net income, and retained earnings.

Step 1

Step 2

Step 3

Step 4

Other error corrections that benefit from a similar analysis are the overstatement of ending inventory, the overstatement or understatement of beginning inventory, and errors in recording merchandise purchases (or returns).

An error also would occur if a revenue or an expense is recorded in the wrong accounting period. Illustration 20-19 offers an example.

In 2013, General Paper Company discovered that \$3,000 of merchandise (credit) sales the last week of 2012 were not recorded until the first week of 2013. The merchandise sold was appropriately excluded from 2012 ending inventory.

Analysis:

		(\$ in 000s)	
		Correct (Should have been recorded)	Incorrect (As recorded)
2012	Accounts receivable	3	No entry
	Sales revenue	3	
2013	No entry		Accounts receivable 3
			Sales revenue 3

(continued)

Illustration 20-19

Error Affecting Net Income: Failure to Record Sales Revenue

Illustration 20–19
(concluded)

Step 1

2012 sales revenue was incorrectly recorded in 2013, so 2012 net income was understated. Retained earnings is currently understated in 2013. 2013 sales revenue is overstated.

To Correct Incorrect Accounts		(\$ in 000s)
Sales revenue		3
Retained earnings		3

Note: If the sales revenue had not been recorded at all, the correcting entry would include a debit to accounts receivable rather than sales revenue.

Step 2

The 2012 financial statements that were incorrect as a result of the error are retroactively restated to reflect the correct amount of sales revenue and accounts receivable when those statements are reported again for comparative purposes in the 2013 annual report.

Step 3

Because retained earnings is one of the accounts incorrect as a result of the error, the correction to that account is reported as a prior period adjustment to the 2012 beginning retained earnings balance in General Paper's comparative statements of shareholders' equity.

Step 4

Also, a disclosure note in General Paper's 2013 annual report should describe the nature of the error and the impact of its correction on each year's net income (\$3,000 in 2012), income before extraordinary items (\$3,000 in 2012), and earnings per share.

Ethical Dilemma

As a second-year accountant for McCormack Chemical Company, you were excited to be named assistant manager of the Agricultural Chemicals Division. After two weeks in your new position, you were supervising the year-end inventory count when the senior manager mentioned that two carloads of herbicides were omitted from the count and should be added. Upon checking, you confirm your understanding that the inventory in question had been deemed to be unsalable. "Yes," your manager agreed, "but we'll write that off next year when our bottom line won't be so critical to the continued existence of the Agricultural Chemicals Division. Jobs and families depend on our division showing well this year."

Illustration 20–20 illustrates how **Benihana, Inc.**, corrected its financial statements for having incorrectly expensed leasehold improvements and assets on leased properties in past years. Benihana was one of hundreds of firms making similar correction in 2007 following a Securities and Exchange Commission letter on February 7, 2007, urging companies to follow long-standing accounting standards in this area. As the note indicates, Benihana's previous earnings had been overstated by \$2.2 million as a result of the error and the balance in retained earnings was accordingly decreased in the correcting journal entry. At about the same time, **McDonald's Corp.** recorded a similar charge of \$139 million.

Illustration 20–20

Error Correction;
Benihana, Inc.

Real World Financials

2. Restatement of Previously Issued Financial Statements (in part)

Following a February 2005 review . . . we have restated our consolidated financial statements for the fiscal years through 2004 and for the third quarter of fiscal 2004 included herein. Previously, when accounting for leases with renewal options, we recorded rent expense on a straight-line basis over the initial noncancelable lease term, with the term commencing when actual rent payments began. We depreciate our buildings, leasehold improvements and other long-lived assets on those properties over a period that includes both the initial noncancelable lease term and all option periods provided for in the lease (or the useful life of the assets if shorter). We previously believed that these long-standing accounting treatments were appropriate under generally accepted accounting principles. We now have restated our financial statements to recognize rent expense on a straight-line basis over the expected lease term, including cancelable option periods where failure to exercise such options would result in an economic penalty and including the period that commences when the underlying property is made available to us for construction.

(continued)

The cumulative effect of the Restatement through fiscal 2004 is an increase in deferred rent liability of \$3.6 million and a decrease in deferred income tax liability of \$1.4 million. As a result, retained earnings at the end of fiscal 2004 decreased by \$2.2 million. Rent expense for fiscal year ended 2004 and for the three and ten periods ended January 4, 2004 increased by \$0.4 million, and \$0.1 million and \$0.3, respectively. The Restatement decreased reported diluted net earnings per share \$0.01 and \$0.03 for the three and ten periods ended January 4, 2004, respectively.

Illustration 20–20

(concluded)

As mentioned at the outset, we've made no attempt to demonstrate the correction process for every kind of error in every stage of its discovery. However, after seeing the process applied to the few situations described, you should feel comfortable that the process is the same regardless of the specific situation you might encounter.

International Financial Reporting Standards

Accounting Changes and Error Corrections. U.S. GAAP and International standards are largely converged regarding accounting changes and error corrections, but one difference concerns error corrections. When correcting errors in previously issued financial statements, IFRS (IAS No. 8¹⁷) permits the effect of the error to be reported in the current period if it's not considered practicable to report it retrospectively as is required by U.S. GAAP.

● LO20-7

Concept Review Exercise

In 2013, the following errors were discovered by the internal auditors of Development Technologies, Inc.

CORRECTION OF ERRORS

- 2012 accrued wages of \$2 million were not recognized until they were paid in 2013.
- A \$3 million purchase of merchandise in 2013 was recorded in 2012 instead. The physical inventory count at the end of 2012 was correct.

Required:

Prepare the journal entries needed in 2013 to correct each error. Also, briefly describe any other measures Development Technologies would take in connection with correcting the errors. (Ignore income taxes.)

Solution:

Step 1:

- To reduce 2013 wages expense and reduce retained earnings to what it would have been if the expense had reduced net income in 2012.

	(\$ in millions)
Retained earnings	2
Wages expense	2

- To include the \$3 million in 2013 purchases and increase retained earnings to what it would have been if 2012 cost of goods sold had not included the \$3 million purchases.

¹⁷"Accounting Policies, Changes in Accounting Estimates and Errors," *International Accounting Standard No. 8* (IASCF), as amended effective January 1, 2011.

Analysis

U = Understated O = Overstated

2012		2013
Beginning inventory		Beginning inventory
Purchases	O	Purchases
Less: Ending inventory		
Cost of goods sold	O	
Revenues	=	
Less: Cost of goods sold	O ←	
Less: Other expenses		
Net income	U	
↓		
Retained earnings	U	

	(\$ in millions)
Purchases	3
Retained earnings	3

Step 2:

The 2012 financial statements that were incorrect as a result of the errors would be *retrospectively restated* to reflect the correct wages expense, cost of goods sold (income tax expense if taxes are considered), net income, and retained earnings when those statements are reported again for comparative purposes in the 2013 annual report.

Step 3:

Because retained earnings is one of the accounts that is incorrect, the correction to that account is reported as a “*prior period adjustment*” to the 2013 beginning retained earnings balance in the comparative Statements of Shareholders’ Equity.

Step 4:

Also, a *disclosure note* should describe the nature of the error and the impact of its correction on each year’s net income, income before extraordinary items, and earnings per share.

Financial Reporting Case Solution

- 1. How can an accounting change cause a company to increase a previously reported inventory amount?** (p. 1211) Smucker didn’t find any lost jelly. The company increased last year’s inventory number by \$2 million to reflect its change from **LIFO** to **FIFO** this year. If it had not revised the number, last year’s inventory would be based on **LIFO** and this year’s inventory on **FIFO**. Analysts would be comparing apples and oranges (or apple jelly and orange jelly). Retrospective application of an accounting change provides better comparability in accounting information.
- 2. Are all accounting changes reported this way?** (p. 1217) Not all accounting changes are reported retrospectively. Besides most changes in accounting principle, changes in reporting entity and the correction of errors are reported that way, but some changes are reported prospectively instead. Changes in depreciation method, changes in accounting estimate, and some changes for which retrospective application is either impracticable or prohibited are reported prospectively in current and future periods only. ●

The Bottom Line

- **LO20-1** Accounting changes are categorized as:
 - a. Changes in *principle*,
 - b. Changes in *estimates*, or
 - c. Changes in *reporting entity*.Accounting changes can be accounted for retrospectively (prior years revised) or prospectively (only current and future years affected). (p. 1208)
- **LO20-2** Most voluntary changes in accounting principles are reported retrospectively. This means revising all previous periods' financial statements to appear as if the newly adopted accounting method had been applied all along. A journal entry is created to adjust all account balances affected as of the date of the change. In the first set of financial statements after the change, a disclosure note describes the change and justifies the new method as preferable. It also describes the effects of the change on all items affected, including the fact that the retained earnings balance was revised in the statement of shareholders' equity. (p. 1210)
- **LO20-3** Some changes are reported prospectively. These include (a) changes in the method of depreciation, amortization, or depletion, (b) some changes in principle for which retrospective application is impracticable, and (c) a few changes for which an authoritative pronouncement requires prospective application. (p. 1214)
- **LO20-4** Changes in estimates are accounted for prospectively. When a company revises a previous estimate, prior financial statements are not revised. Instead, the company merely incorporates the new estimate in any related accounting determinations from then on. (p. 1216)
- **LO20-5** A change in reporting entity requires that financial statements of prior periods be retrospectively revised to report the financial information for the new reporting entity in all periods. (p. 1219)
- **LO20-6** When errors are discovered, they should be corrected and accounted for retrospectively. Previous years' financial statements that were incorrect as a result of an error are retrospectively restated, and any account balances that are incorrect are corrected by a journal entry. If retained earnings is one of the incorrect accounts, the correction is reported as a prior period adjustment to the beginning balance in a statement of shareholders' equity. And, a disclosure note should describe the nature of the error and the impact of its correction on operations. (p. 1222)
- **LO20-7** U.S. GAAP and International standards are largely converged with respect to accounting changes and error corrections. One remaining difference is that when correcting errors in previously issued financial statements, IFRS permits the effect of the error to be reported in the current period if it's not considered practicable to report it retrospectively as is required by U.S. GAAP. (pp. 1215, 1222, and 1229) ●

Questions For Review of Key Topics

- Q 20-1 For accounting purposes, we classify accounting changes into three categories. What are they? Provide a short description of each.
- Q 20-2 There are two basic accounting approaches to reporting accounting changes. What are they?
- Q 20-3 We report most changes in accounting principle retrospectively. Describe this general way of recording and reporting changes in accounting principle.
- Q 20-4 Lynch Corporation changes from the sum-of-the-years'-digits method of depreciation for existing assets to the straight-line method. How should the change be reported? Explain.
- Q 20-5 Sugarbaker Designs, Inc., changed from the FIFO inventory costing method to the average cost method during 2013. Which items from the 2012 financial statements should be restated on the basis of the average cost method when reported in the 2013 comparative financial statements?
- Q 20-6 Most changes in accounting principles are recorded and reported retrospectively. In a few situations, though, the changes should be reported prospectively. When is prospective application appropriate? Provide examples.
- Q 20-7 Southeast Steel, Inc., changed from the FIFO inventory costing method to the LIFO method during 2012. How would this change likely be reported in the 2013 comparative financial statements?
- Q 20-8 Direct Assurance Company revised the estimates of the useful life of a trademark it had acquired three years earlier. How should Direct account for the change?

- Q 20-9** It's not easy sometimes to distinguish between a change in principle and a change in estimate. In these cases, how should the change be accounted for?
- Q 20-10** For financial reporting, a reporting entity can be a single company, or it can be a group of companies that reports a single set of financial statements. When changes occur that cause the financial statements to be those of a different reporting entity, we account for the situation as a change in reporting entity. What are the situations deemed to constitute a change in reporting entity?
- Q 20-11** The issuance of FASB guidance regarding consolidation of all majority-owned subsidiaries required **Ford Motors** to include a previously unconsolidated finance subsidiary as part of the reporting entity. How did Ford report the change?
- Q 20-12** Describe the process of correcting an error when it's discovered in a subsequent reporting period.
- Q 20-13** If merchandise inventory is understated at the end of 2012, and the error is not discovered, how will net income be affected in 2013?
- Q 20-14** If it is discovered that an extraordinary repair in the previous year was incorrectly debited to repair expense, how will retained earnings be reported in the current year's statement of shareholders' equity?
- Q 20-15** What action is required when it is discovered that a five-year insurance premium payment of \$50,000 two years ago was debited to insurance expense? (Ignore taxes.)
- Q 20-16** Suppose the error described in the previous question is not discovered until six years later. What action will the discovery of this error require?
-  **IFRS Q 20-17** With regard to the correction of accounting errors, what is the difference between U.S. GAAP and IFRS?

Brief Exercises

BE 20-1
Change in
inventory
methods
● LO20-2

In 2013, the Barton and Barton Company changed its method of valuing inventory from the FIFO method to the average cost method. At December 31, 2012, B & B's inventories were \$32 million (FIFO). B & B's records indicated that the inventories would have totaled \$23.8 million at December 31, 2012, if determined on an average cost basis. Ignoring income taxes, what journal entry will B & B use to record the adjustment in 2013? Briefly describe other steps B & B should take to report the change.

BE 20-2
Change in
inventory
methods
● LO20-2

In 2013, Adonis Industries changed its method of valuing inventory from the average cost method to the FIFO method. At December 31, 2012, Adonis's inventories were \$47.6 million (average cost). Adonis's records indicated that the inventories would have totaled \$64 million at December 31, 2012, if determined on a FIFO basis. Ignoring income taxes, what journal entry will Adonis use to record the adjustment in 2013?

BE 20-3
Change in
inventory
methods
● LO20-3

In 2013, J J Dishes changed its method of valuing inventory from the FIFO method to the LIFO method. At December 31, 2012, J J's inventories were \$96 million (FIFO). J J's records were insufficient to determine what inventories would have totaled if determined on a LIFO cost basis. Briefly describe the steps J J should take to report the change.

BE 20-4
Change in
depreciation
methods
● LO20-3

Irwin, Inc., constructed a machine at a total cost of \$35 million. Construction was completed at the end of 2009 and the machine was placed in service at the beginning of 2010. The machine was being depreciated over a 10-year life using the sum-of-the-years'-digits method. The residual value is expected to be \$2 million. At the beginning of 2013, Irwin decided to change to the straight-line method. Ignoring income taxes, what journal entry(s) should Irwin record relating to the machine for 2013?

BE 20-5
Change in
depreciation
methods
● LO20-3

Refer to the situation described in BE 20-4. Suppose Irwin has been using the straight-line method and switches to the sum-of-the-years'-digits method. Ignoring income taxes, what journal entry(s) should Irwin record relating to the machine for 2013?

BE 20-6
Book royalties
● LO20-4

Three programmers at Feenix Computer Storage, Inc., write an operating systems control manual for Hill-McGraw Publishing, Inc., for which Feenix receives royalties equal to 12% of net sales. Royalties are payable annually on February 1 for sales the previous year. The editor indicated to Feenix on December 31, 2013, that book sales subject to royalties for the year just ended are expected to be \$300,000. Accordingly, Feenix accrued royalty revenue of \$36,000 at December 31 and received royalties of \$36,500 on February 1, 2014. What adjustments, if any, should be made to retained earnings or to the 2013 financial statements? Explain.

BE 20-7
Warranty
expense
● LO20-4

In 2012, Quapau Products introduced a new line of hot water heaters that carry a one-year warranty against manufacturer's defects. Based on industry experience, warranty costs were expected to approximate 5% of sales revenue. First-year sales of the heaters were \$300,000. An evaluation of the company's claims experience in late 2013 indicated that actual claims were less than expected—4% of sales rather than 5%. Assuming sales of the heaters in 2013 were \$350,000 and warranty expenditures in 2013 totaled \$12,000, what is the 2013 warranty expense?

BE 20-8
Change in
estimate; useful
life of patent
● LO20-4

Van Frank Telecommunications has a patent on a cellular transmission process. The company has amortized the \$18 million cost of the patent on a straight-line basis since it was acquired at the beginning of 2009. Due to rapid technological advances in the industry, management decided that the patent would benefit the company over a total of six years rather than the nine-year life being used to amortize its cost. The decision was made at the end of 2013 (before adjusting and closing entries). What is the appropriate adjusting entry for patent amortization in 2013 to reflect the revised estimate?

BE 20-9
Error correction
● LO20-6

When DeSoto Water Works purchased a machine at the end of 2012 at a cost of \$65,000, the company debited Buildings and credited Cash \$65,000. The error was discovered in 2013. What journal entry will DeSoto use to correct the error? What other step(s) would be taken in connection with the error?

BE 20-10
Error correction
● LO20-6

In 2013, internal auditors discovered that PKE Displays, Inc., had debited an expense account for the \$350,000 cost of a machine purchased on January 1, 2010. The machine's useful life was expected to be five years with no residual value. Straight-line depreciation is used by PKE. Ignoring income taxes, what journal entry will PKE use to correct the error?

BE 20-11
Error correction
● LO20-6

Refer to the situation described in BE 20-10. Assume the error was discovered in 2015 after the 2014 financial statements are issued. Ignoring income taxes, what journal entry will PKE use to correct the error?

BE 20-12
Error correction
● LO20-6

In 2013, the internal auditors of Development Technologies, Inc., discovered that (a) 2012 accrued wages of \$2 million were not recognized until they were paid in 2013 and (b) a \$3 million purchase of merchandise in 2013 was recorded in 2012 instead. The physical inventory count at the end of 2012 was correct. Ignoring income taxes, what journal entries are needed in 2013 to correct each error? Also, briefly describe any other measures Development Technologies would take in connection with correcting the errors.

Change in
principle; change
in inventory
methods
● LO20-2

During 2011 (its first year of operations) and 2012, Batali Foods used the FIFO inventory costing method for both financial reporting and tax purposes. At the beginning of 2013, Batali decided to change to the average method for both financial reporting and tax purposes.

Income components before income tax for 2013, 2012, and 2011 were as follows (\$ in millions):

	2013	2012	2011
Revenues	\$420	\$390	\$380
Cost of goods sold (FIFO)	(46)	(40)	(38)
Cost of goods sold (average)	(62)	(56)	(52)
Operating expenses	(254)	(250)	(242)

Dividends of \$20 million were paid each year. Batali's fiscal year ends December 31.

Required:

1. Prepare the journal entry at the beginning of 2013 to record the change in accounting principle. (Ignore income taxes.)
2. Prepare the 2013–2012 comparative income statements.
3. Determine the balance in retained earnings at January 1, 2012, as Batali reported previously using the FIFO method.
4. Determine the adjustment to the January 1, 2012, balance in retained earnings that Batali would include in the 2013–2012 comparative statements of retained earnings or retained earnings column of the statements of shareholders' equity to revise it to the amount it would have been if Batali had used the average method.

E 20-2
Change in principle; change in inventory methods

● LO20-2

Aquatic Equipment Corporation decided to switch from the LIFO method of costing inventories to the FIFO method at the beginning of 2013. The inventory as reported at the end of 2012 using LIFO would have been \$60,000 higher using FIFO. Retained earnings at the end of 2012 was reported as \$780,000 (reflecting the LIFO method). The tax rate is 40%.

Required:

1. Calculate the balance in retained earnings at the time of the change (beginning of 2013) as it would have been reported if FIFO had been used in prior years.
2. Prepare the journal entry at the beginning of 2013 to record the change in accounting principle.

E 20-3
Change from the treasury stock method to retired stock

● LO20-2

In keeping with a modernization of corporate statutes in its home state, UMC Corporation decided in 2013 to discontinue accounting for reacquired shares as treasury stock. Instead, shares repurchased will be viewed as having been retired, reassuming the status of unissued shares. As part of the change, treasury shares held were reclassified as retired stock. At December 31, 2012, UMC’s balance sheet reported the following shareholders’ equity:

	(\$ in millions)
Common stock, \$1 par	\$ 200
Paid-in capital—excess of par	800
Retained earnings	956
Treasury stock (4 million shares at cost)	(25)
Total shareholders’ equity	\$1,931

Required:

Identify the type of accounting change this decision represents and prepare the journal entry to effect the reclassification of treasury shares as retired shares.

E 20-4
Change in principle; change to the equity method

● LO20-2

The Trump Companies, Inc., has ownership interests in several public companies. At the beginning of 2013, the company’s ownership interest in the common stock of Milken Properties increased to the point that it became appropriate to begin using the equity method of accounting for the investment. The balance in the investment account was \$31 million at the time of the change. Accountants working with company records determined that the balance would have been \$48 million if the account had been adjusted to reflect the equity method.

Required:

1. Prepare the journal entry to record the change in accounting principle. (Ignore income taxes.)
2. Briefly describe other steps Trump should take to report the change.
3. Suppose Trump is changing *from* the equity method rather than *to* the equity method. How would your answers to requirements 1 and 2 differ?

E 20-5
FASB codification research; change in accounting for investments

● LO20-2

Companies often invest in the common stock of other corporations. The way we report these investments depends on the nature of the investment and the investor’s motivation for the investment. The *FASB Accounting Standards Codification* represents the single source of authoritative U.S. generally accepted accounting principles.

Required:

1. Obtain the relevant authoritative literature on accounting for a change from the cost method to the equity method for investments in common stock using the FASB’s Codification Research System at the FASB website (www.fasb.org).
2. What is the specific citation that describes how to account for a change from the cost method to the equity method for investments in common stock?
3. What are the specific requirements?

E 20-6
FASB codification research

● LO20-2

Access the FASB’s Codification Research System at the FASB website (www.fasb.org). Determine the specific citation for accounting for each of the following items:

1. Reporting most changes in accounting principle.
2. Disclosure requirements for a change in accounting principle.
3. Illustration of the application of a retrospective change in the method of accounting for inventory.

E 20-7

Change in principle; change to the percentage-of-completion method

● LO20-2

The Long Island Construction Company has used the completed contract method of accounting for construction contracts. At the beginning of 2013, the company decides to change to the percentage-of-completion method for financial reporting purposes, but will continue to use the completed contract method for tax reporting. The following table presents information concerning the change. The income tax rate for all years is 40%.

	Income before Income Tax		
	Percentage of Completion Method	Completed Contract Method	Difference
Before 2012	\$15 million	\$8 million	\$7 million
2012	8 million	5 million	3 million
2013	10 million	9 million	1 million

Required:

1. Prepare the journal entry to record the change in accounting principle. (All tax effects should be reflected in the deferred tax liability account.)
2. Determine the net income to be reported in the 2013–2012 comparative income statements.
3. Which other 2012 amounts would be reported differently in the 2013–2012 comparative income statements and 2013–2012 comparative balance sheets than they were reported the previous year?
4. How would the change be reflected in the 2013–2012 comparative statements of shareholders' equity? Cash dividends were \$1 million each year.

E 20-8

Change in inventory methods; incomplete information

● LO20-3

Flay Foods has always used the FIFO inventory costing method for both financial reporting and tax purposes. At the beginning of 2013, Flay decided to change to the LIFO method. As a result of the change, net income in 2013 was \$80 million. If the company had used LIFO in 2012, its cost of goods sold would have been higher by \$6 million that year. Flay's records of inventory purchases and sales are not available for 2011 and several previous years. Last year, Flay reported the following net income amounts in its comparative income statements:

(\$ in millions)	2012	2011	2010
Net income	\$84	\$82	\$80

Required:

1. Prepare the journal entry at the beginning of 2013 to record the change in accounting principle. (Ignore income taxes.)
2. Briefly describe other steps Flay will take to report the change.
3. What amounts will Flay report for net income in its 2013–2011 comparative income statements?

E 20-9

Change in inventory methods; incomplete information

● LO20-3

Wolfgang Kitchens has always used the FIFO inventory costing method for both financial reporting and tax purposes. At the beginning of 2013, Wolfgang decided to change to the LIFO method. Net income in 2013 was correctly stated as \$90 million. If the company had used LIFO in 2012, its cost of goods sold would have been higher by \$7 million that year. Company accountants are able to determine that the cumulative net income for all years prior to 2012 would have been lower by \$23 million if LIFO had been used all along, but have insufficient information to determine specific effects of using LIFO in 2011. Last year, Wolfgang reported the following net income amounts in its comparative income statements:

(\$ in millions)	2012	2011	2010
Net income	\$94	\$92	\$90

Required:

1. Prepare the journal entry at the beginning of 2013 to record the change in accounting principle. (Ignore income taxes.)
2. Briefly describe other steps Wolfgang will take to report the change.
3. What amounts will Wolfgang report for net income in its 2013–2011 comparative income statements?

E 20-10

Change in depreciation methods

● LO20-3

For financial reporting, Clinton Poultry Farms has used the declining-balance method of depreciation for conveyor equipment acquired at the beginning of 2010 for \$2,560,000. Its useful life was estimated to be six years with a \$160,000 residual value. At the beginning of 2013, Clinton decides to change to the straight-line method. The effect of this change on depreciation for each year is as follows (\$ in 000s):

Year	Straight-Line	Declining Balance	Difference
2010	\$ 400	\$ 853	\$453
2011	400	569	169
2012	400	379	(21)
	<u>\$1,200</u>	<u>\$1,801</u>	<u>\$601</u>

Required:

- Briefly describe the way Clinton should report this accounting change in the 2012–2013 comparative financial statements.
- Prepare any 2013 journal entry related to the change.

E 20–11

Change in depreciation methods

● LO20–3

The Canliss Milling Company purchased machinery on January 2, 2011, for \$800,000. A five-year life was estimated and no residual value was anticipated. Canliss decided to use the straight-line depreciation method and recorded \$160,000 in depreciation in 2011 and 2012. Early in 2013, the company changed its depreciation method to the sum-of-the-years'-digits (SYD) method.

Required:

- Briefly describe the way Canliss should report this accounting change in the 2012–2013 comparative financial statements.
- Prepare any 2013 journal entry related to the change.

E 20–12

Book royalties

● LO20–4

Dreighton Engineering Group receives royalties on a technical manual written by two of its engineers and sold to William B. Irving Publishing, Inc. Royalties are 10% of net sales, receivable on October 1 for sales in January through June and on April 1 for sales in July through December of the prior year. Sales of the manual began in July 2012, and Dreighton accrued royalty revenue of \$31,000 at December 31, 2012, as follows:

Receivable—royalty revenue	31,000	
Royalty revenue		31,000

Dreighton received royalties of \$36,000 on April 1, 2013, and \$40,000 on October 1, 2013. Irving indicated to Dreighton on December 31 that book sales subject to royalties for the second half of 2013 are expected to be \$500,000.

Required:

- Prepare any journal entries Dreighton should record during 2013 related to the royalty revenue.
- What adjustments, if any, should be made to retained earnings or to the 2012 financial statements? Explain.

E 20–13

Loss contingency

● LO20–4

The Commonwealth of Virginia filed suit in October 2011, against Northern Timber Corporation seeking civil penalties and injunctive relief for violations of environmental laws regulating forest conservation. When the financial statements were issued in 2012, Northern had not reached a settlement with state authorities, but legal counsel advised Northern Timber that it was probable the ultimate settlement would be \$1,000,000 in penalties. The following entry was recorded:

Loss—litigation	1,000,000	
Liability—litigation		1,000,000

Late in 2013, a settlement was reached with state authorities to pay a total of \$600,000 to cover the cost of violations.

Required:

- Prepare any journal entries related to the change.
- Briefly describe other steps Northern should take to report the change.

E 20–14

Warranty expense

● LO20–4

Woodmier Lawn Products introduced a new line of commercial sprinklers in 2012 that carry a one-year warranty against manufacturer's defects. Because this was the first product for which the company offered a warranty, trade publications were consulted to determine the experience of others in the industry. Based on that experience, warranty costs were expected to approximate 2% of sales. Sales of the sprinklers in 2012 were \$2,500,000. Accordingly, the following entries relating to the contingency for warranty costs were recorded during the first year of selling the product:

Accrued liability and expense		
Warranty expense (2% × \$2,500,000)	50,000	
Estimated warranty liability		50,000
Actual expenditures (summary entry)		
Estimated warranty liability	23,000	
Cash, wages payable, parts and supplies, etc		23,000

In late 2013, the company's claims experience was evaluated and it was determined that claims were far more than expected—3% of sales rather than 2%.

Required:

1. Assuming sales of the sprinklers in 2013 were \$3,600,000 and warranty expenditures in 2013 totaled \$88,000, prepare any journal entries related to the warranty.
2. Assuming sales of the sprinklers were discontinued after 2012, prepare any journal entry(s) in 2013 related to the warranty.

E 20-15

Deferred taxes;
change in tax
rates

● LO20-4

Bronson Industries reported a deferred tax liability of \$8 million for the year ended December 31, 2012, related to a temporary difference of \$20 million. The tax rate was 40%. The temporary difference is expected to reverse in 2014 at which time the deferred tax liability will become payable. There are no other temporary differences in 2012–2014. Assume a new tax law is enacted in 2013 that causes the tax rate to change from 40% to 30% beginning in 2014. (The rate remains 40% for 2013 taxes.) Taxable income in 2013 is \$30 million.

Required:

1. Determine the effect of the change and prepare the appropriate journal entry to record Bronson's income tax expense in 2013.
2. What adjustment, if any, is needed to revise retained earnings as a result of the change?

E 20-16

Accounting
change

● LO20-4

The Peridot Company purchased machinery on January 2, 2011, for \$800,000. A five-year life was estimated and no residual value was anticipated. Peridot decided to use the straight-line depreciation method and recorded \$160,000 in depreciation in 2011 and 2012. Early in 2013, the company revised the total estimated life of the machinery to eight years.

Required:

1. What type of change is this?
2. Briefly describe the accounting treatment for this change.
3. Determine depreciation for 2013.

E 20-17

Change in
estimate;
useful life and
residual value of
equipment

● LO20-4

Wardell Company purchased a mini computer on January 1, 2011, at a cost of \$40,000. The computer has been depreciated using the straight-line method over an estimated five-year useful life with an estimated residual value of \$4,000. On January 1, 2013, the estimate of useful life was changed to a total of 10 years, and the estimate of residual value was changed to \$900.

Required:

1. Prepare the appropriate adjusting entry for depreciation in 2013 to reflect the revised estimate.
2. Repeat requirement 1 assuming that the company uses the sum-of-the-years'-digits method instead of the straight-line method.

E 20-18

Classifying
accounting
changes

● LO20-1 through
LO20-5

Indicate with the appropriate letter the nature of each situation described below:

Type of Change

PR	Change in principle reported retrospectively
PP	Change in principle reported prospectively
E	Change in estimate
EP	Change in estimate resulting from a change in principle
R	Change in reporting entity
N	Not an accounting change

- _____ 1. Change from declining balance depreciation to straight-line.
- _____ 2. Change in the estimated useful life of office equipment.
- _____ 3. Technological advance that renders worthless a patent with an unamortized cost of \$45,000.
- _____ 4. Change from determining lower of cost or market for the inventories by the individual item approach to the aggregate approach.
- _____ 5. Change from LIFO inventory costing to the weighted-average inventory costing.
- _____ 6. Settling a lawsuit for less than the amount accrued previously as a loss contingency.
- _____ 7. Including in the consolidated financial statements a subsidiary acquired several years earlier that was appropriately not included in previous years.
- _____ 8. Change by a retail store from reporting warranty expense on a pay-as-you-go basis to estimating the expense in the period of sale.
- _____ 9. A shift of certain manufacturing overhead costs to inventory that previously were expensed as incurred to more accurately measure cost of goods sold. (Either method is generally acceptable.)
- _____ 10. Pension plan assets for a defined benefit pension plan achieving a rate of return in excess of the amount anticipated.

E 20-19
Error correction;
inventory error

During 2013, WMC Corporation discovered that its ending inventories reported on its financial statements were misstated by the following amounts:

● LO20-6	2011	understated by	\$120,000
	2012	overstated by	150,000

WMC uses the periodic inventory system and the FIFO cost method.

Required:

1. Determine the effect of these errors on retained earnings at January 1, 2013, before any adjustments. Explain your answer. (Ignore income taxes.)
2. Prepare a journal entry to correct the error.
3. What other step(s) would be taken in connection with the error?

E 20-20
Error corrections;
investment

On December 12, 2013, an investment costing \$80,000 was sold for \$100,000. The total of the sale proceeds was credited to the investment account.

● LO20-6

Required:

1. Prepare the journal entry to correct the error assuming it is discovered before the books are adjusted or closed in 2013. (Ignore income taxes.)
2. Prepare the journal entry to correct the error assuming it is not discovered until early 2014. (Ignore income taxes.)

E 20-21
Error in
amortization
schedule

Wilkins Food Products Inc. acquired a packaging machine from Lawrence Specialists Corporation. Lawrence completed construction of the machine on January 1, 2011. In payment for the machine Wilkins issued a three-year installment note to be paid in three equal payments at the end of each year. The payments include interest at the rate of 10%. Lawrence made a conceptual error in preparing the amortization schedule which Wilkins failed to discover until 2013. As a result of the error, Wilkins understated interest expense by \$45,000 in 2011 and \$40,000 in 2012.

● LO20-6

Required:

1. Determine which accounts are incorrect as a result of these errors at January 1, 2013, before any adjustments. Explain your answer. (Ignore income taxes.)
2. Prepare a journal entry to correct the error.
3. What other step(s) would be taken in connection with the error?

E 20-22
Error correction;
accrued interest
on bonds

At the end of 2012, Majors Furniture Company failed to accrue \$61,000 of interest expense that accrued during the last five months of 2012 on bonds payable. The bonds mature in 2024. The discount on the bonds is amortized by the straight-line method. The following entry was recorded on February 1, 2013, when the semiannual interest was paid:

● LO20-6

Interest expense	73,200	
Discount on bonds payable		1,200
Cash		72,000

Required:

Prepare any journal entry necessary to correct the error as well as any adjusting entry for 2013 related to the situation described. (Ignore income taxes.)

E 20-23

Error correction; three errors

● LO20-6

Below are three independent and unrelated errors.

- a. On December 31, 2012, Wolfe-Bache Corporation failed to accrue office supplies expense of \$1,800. In January 2013, when it received the bill from its supplier, Wolfe-Bache made the following entry:

Office supplies expense	1,800	
Cash		1,800

- b. On the last day of 2012, Midwest Importers received a \$90,000 prepayment from a tenant for 2013 rent of a building. Midwest recorded the receipt as rent revenue.
- c. At the end of 2012, Dinkins-Lowery Corporation failed to accrue interest of \$8,000 on a note receivable. At the beginning of 2013, when the company received the cash, it was recorded as interest revenue.

Required:

For each error:

- 1. What would be the effect of each error on the income statement and the balance sheet in the 2012 financial statements?
- 2. Prepare any journal entries each company should record in 2013 to correct the errors.

E 20-24

Inventory errors

● LO20-6

For each of the following inventory errors occurring in 2013, determine the effect of the error on 2013's cost of goods sold, net income, and retained earnings. Assume that the error is not discovered until 2014 and that a periodic inventory system is used. Ignore income taxes.

U = Understated O = Overstated NE = No effect

	Cost of Goods Sold	Net Income	Retained Earnings
(Example) 1. Overstatement of ending inventory	U	O	O
2. Overstatement of purchases			
3. Understatement of beginning inventory			
4. Freight-in charges are understated			
5. Understatement of ending inventory			
6. Understatement of purchases			
7. Overstatement of beginning inventory			
8. Understatement of purchases and understatement of ending inventory, by the same amount			

E 20-25

Classifying accounting changes and errors

● LO20-1 through LO20-6

Indicate with the appropriate letter the nature of each adjustment described below:

Type of Adjustment

- A. Change in accounting principle (reported retrospectively)
- B. Change in accounting principle (exception reported prospectively)
- C. Change in estimate
- D. Change in estimate resulting from a change in principle
- E. Change in reporting entity
- F. Correction of an error

- _____ 1. Change from expensing extraordinary repairs to capitalizing the expenditures.
- _____ 2. Change in the residual value of machinery.
- _____ 3. Change from FIFO inventory costing to LIFO inventory costing.
- _____ 4. Change in the percentage used to determine warranty expense.
- _____ 5. Change from LIFO inventory costing to FIFO inventory costing.
- _____ 6. Change from reporting an investment by the equity method due to a reduction in the percentage of shares owned.
- _____ 7. Change in the composition of a group of firms reporting on a consolidated basis.
- _____ 8. Change from sum-of-the-years'-digits depreciation to straight-line.
- _____ 9. Change from the percentage-of-completion method by a company in the long-term construction industry.
- _____ 10. Change in actuarial assumptions for a defined benefit pension plan.

CPA and CMA Review Questions

CPA Exam Questions

The following questions are adapted from a variety of sources including questions developed by the AICPA Board of Examiners and those used in the Kaplan CPA Review Course to study accounting changes and errors while preparing for the CPA examination. Determine the response that best completes the statements or questions.

- LO20-3
 1. Kap Company switched from the sum-of-the-years-digits depreciation method to straight-line depreciation in 2013. The change affects machinery purchased at the beginning of 2011 at a cost of \$36,000. The machinery has an estimated life of five years and an estimated residual value of \$1,800. What is Kap's 2013 depreciation expense?
 - a. \$4,200
 - b. \$4,560
 - c. \$4,800
 - d. \$7,920
- LO20-4
 2. Retrospective restatement usually is appropriate for a change in:

	Accounting Principle	Accounting Estimate
a.	Yes	Yes
b.	Yes	No
c.	No	Yes
d.	No	No

- LO20-4
 3. For 2012, Pac Co. estimated its two-year equipment warranty costs based on \$100 per unit sold in 2012. Experience during 2013 indicated that the estimate should have been based on \$110 per unit. The effect of this \$10 difference from the estimate is reported
 - a. in 2013 income from continuing operations.
 - b. as an accounting change, net of tax, below 2013 income from continuing operations.
 - c. as an accounting change requiring 2012 financial statements to be restated.
 - d. as a correction of an error requiring 2012 financial statements to be restated.
- LO20-5
 4. A company has included in its consolidated financial statements this year a subsidiary acquired several years ago that was appropriately excluded from consolidation last year. This results in
 - a. an accounting change that should be reported prospectively.
 - b. an accounting change that should be reported by restating the financial statements of all prior periods presented.
 - c. a correction of an error.
 - d. neither an accounting change nor a correction of an error.
- LO20-6
 5. Conn Co. reported a retained earnings balance of \$400,000 at December 31, 2012. In August 2013, Conn determined that insurance premiums of \$60,000 for the three-year period beginning January 1, 2012, had been paid and fully expensed in 2012. Conn has a 30% income tax rate. What amount should Conn report as adjusted beginning retained earnings in its 2013 statement of retained earnings?
 - a. \$420,000
 - b. \$428,000
 - c. \$440,000
 - d. \$442,000
- LO20-6
 6. During 2014, Paul Company discovered that the ending inventories reported on its financial statements were incorrect by the following amounts:

2012	\$ 60,000 understated
2013	75,000 overstated

Paul uses the periodic inventory system to ascertain year-end quantities that are converted to dollar amounts using the FIFO cost method. Prior to any adjustments for these errors and ignoring income taxes, Paul's retained earnings at January 1, 2014, would be

- a. correct.
- b. \$15,000 overstated.
- c. \$75,000 overstated.
- d. \$135,000 overstated.

Beginning in 2011, International Financial Reporting Standards are tested on the CPA exam along with U.S. GAAP. The following questions deal with the application of IFRS in accounting for accounting changes and errors.

● LO20-7

IFRS

7. Under IFRS, how should changes in accounting policy be recognized in the financial statements?

- Prospectively.
- Retroactively for all periods presented.
- In the statement of cash flows.
- In the statement of comprehensive income.

● LO20-7

IFRS

8. According to IAS 8, how should prior period errors that are discovered in a subsequent reporting period be recognized in the financial statements?

- As an adjustment to beginning retained earnings for the reporting period in which the error was discovered.
- As a note in the financial statements that the error was previously made but has since been corrected.
- In the statement of comprehensive income.
- Retroactively for all periods presented.

● LO20-7

IFRS

9. Using IFRS, a change in accounting policy for which a standard does not include specific transitional provisions should be applied

- prospectively.
- practicably.
- in accordance with management's judgment.
- retrospectively.

● LO20-7

IFRS

10. Using IFRS, how should prior period errors that are discovered in a subsequent reporting period be recognized in the financial statements?

- As an adjustment to beginning retained earnings for the reporting period in which the error was discovered.
- As a note in the financial statements that the error was previously made but has since been corrected.
- In the current period if it's not considered practicable to report it retrospectively.
- In the statement of comprehensive income.

● LO20-7

IFRS

11. Under IFRS, changes in accounting policies are

- permitted if the change will result in a more reliable and more relevant presentation of the financial statements.
- permitted if the entity encounters new transactions, events, or conditions that are substantively different from existing or previous transactions.
- required on material transactions, if the entity had previously accounted for similar, though immaterial, transactions under an unacceptable accounting method.
- required if an alternate accounting policy gives rise to a material change in assets, liabilities, or the current-year net income.

● LO20-7

IFRS

12. Upon first-time adoption of IFRS, an entity may elect to use fair value as deemed cost for

- biological assets related to agricultural activity for which there is *no* active market.
- intangible assets for which there is *no* active market.
- any individual item of property, plant, and equipment.
- financial liabilities that are *not* held for trading.

● LO20-7

IFRS

13. On July 1, year 2, a company decided to adopt IFRS. The company's first IFRS reporting period is as of and for the year ended December 31, year 2. The company will present one year of comparative information. What is the company's date of transition to IFRS?

- January 1, year 1.
- January 1, year 2.
- July 1, year 2.
- December 31, year 2.

● LO20-7

IFRS

14. Which of the following statements is true regarding correcting errors in previously issued financial statements prepared in accordance with International Financial Reporting Standards?

- The error can be reported in the current period if it's not considered practicable to report it retrospectively.
- The error can be reported in the current period if it's not considered practicable to report it prospectively.
- The error can be reported prospectively if it's not considered practicable to report it retrospectively.
- Retrospective application is required with no exception.

● LO20-7

IFRS

15. Which of the accounting changes listed below is more associated with financial statements prepared in accordance with U.S. GAAP than with International Financial Reporting Standards?

- a. Change in reporting entity.
- b. Change to the LIFO method from the FIFO method.
- c. Change in accounting estimate.
- d. Change in depreciation methods.

The following questions dealing with accounting changes and errors are adapted from questions that previously appeared on Certified Management Accountant (CMA) examinations. The CMA designation sponsored by the Institute of Management Accountants (www.imanet.org) provides members with an objective measure of knowledge and competence in the field of management accounting. Determine the response that best completes the statements or questions.

- LO20-4
 1. A change in the liability for warranty costs requires
 - a. presenting prior-period financial statements as previously reported.
 - b. presenting the effect of pro forma data on income and earnings per share for all prior periods presented.
 - c. reporting an adjustment to the beginning retained earnings balance in the statement of retained earnings.
 - d. reporting current and future financial statements on the new basis.
- LO20-6
 2. In a review of the May 31, 2013, financial statements during the normal year-end closing process, it was discovered that the interest income accrual on Simpson Company's notes receivable was omitted. The amounts omitted were calculated as follows:

May 31, 2012	\$ 91,800
May 31, 2013	100,200

The May 31, 2013, entry to correct for these errors, ignoring the effect of income taxes, includes a

- a. credit to retained earnings for \$91,800.
 - b. credit to interest revenue for \$91,800.
 - c. debit to interest revenue for \$100,200.
 - d. credit to interest receivable for \$100,200.
- LO20-6
 3. An example of an item that should be reported as a prior-period adjustment in a company's annual financial statements is
 - a. a settlement resulting from litigation.
 - b. an adjustment of income taxes.
 - c. a correction of an error that occurred in a prior period.
 - d. an adjustment of utility revenue because of rate revisions ordered by a regulatory commission.

Problems

An alternate exercise and problem set is available on the text website: www.mhhe.com/spiceland7e

P 20-1
Change in inventory costing methods; comparative income statements

The Cecil-Booker Vending Company changed its method of valuing inventory from the average cost method to the FIFO cost method at the beginning of 2013. At December 31, 2012, inventories were \$120,000 (average cost basis) and were \$124,000 a year earlier. Cecil-Booker's accountants determined that the inventories would have totaled \$155,000 at December 31, 2012, and \$160,000 at December 31, 2011, if determined on a FIFO basis. A tax rate of 40% is in effect for all years.

One hundred thousand common shares were outstanding each year. Income from continuing operations was \$400,000 in 2012 and \$525,000 in 2013. There were no extraordinary items either year.

● LO20-2

Required:

1. Prepare the journal entry to record the change in accounting principle. (All tax effects should be reflected in the deferred tax liability account.)
2. Prepare the 2013–2012 comparative income statements beginning with income from continuing operations. Include per share amounts.

P 20-2

Change in principle; change in method of accounting for long-term construction

● LO20-2

The Pyramid Construction Company has used the completed-contract method of accounting for construction contracts during its first two years of operation, 2011 and 2012. At the beginning of 2013, Pyramid decided to change to the percentage-of-completion method for both tax and financial reporting purposes. The following table presents information concerning the change for 2011–2013. The income tax rate for all years is 40%.

	Income before Income Tax			Income Tax Effect	Difference after Tax
	Percentage of Completion Method	Completed Contract Method	Difference		
2011	\$ 90,000	\$60,000	\$30,000	\$12,000	\$18,000
2012	45,000	36,000	9,000	3,600	5,400
Total	<u>\$135,000</u>	<u>\$96,000</u>	<u>\$39,000</u>	<u>\$15,600</u>	<u>\$23,400</u>
2013	\$ 51,000	\$46,000	\$ 5,000	\$ 2,000	\$ 3,000

Pyramid issued 50,000 \$1 par, common shares for \$230,000 when the business began, and there have been no changes in paid-in capital since then. Dividends were not paid the first year, but \$10,000 cash dividends were paid in both 2012 and 2013.

Required:

1. Prepare the journal entry to record the change in accounting principle. (All tax effects except those resulting from inventory method changes should be reflected in the deferred tax liability account.)
2. Prepare the 2013–2012 comparative income statements beginning with income before income taxes.
3. Prepare the 2013–2012 comparative statements of shareholders' equity. (Hint: The 2011 statements reported retained earnings of \$36,000. This is \$60,000 – [\$60,000 × 40%].)

P 20-3

Change in inventory costing methods; comparative income statements

● LO20-2, LO20-3

Shown below are net income amounts as they would be determined by Wehrich Steel Company by each of three different inventory costing methods (\$ in 000s).

	FIFO	Average Cost	LIFO
Pre-2012	\$2,800	\$2,540	\$2,280
2012	<u>750</u>	<u>600</u>	<u>540</u>
	<u>\$3,550</u>	<u>\$3,140</u>	<u>\$2,820</u>

Required:

1. Assume that Wehrich used FIFO before 2013, and then in 2013 decided to switch to average cost. Prepare the journal entry to record the change in accounting principle and briefly describe any other steps Wehrich should take to appropriately report the situation. (Ignore income tax effects.)
2. Assume that Wehrich used FIFO before 2013, and then in 2013 decided to switch to LIFO. Assume accounting records are inadequate to determine LIFO information prior to 2013. Therefore, the 2012 (\$540) and pre-2012 (\$2,280) data are not available. Prepare the journal entry to record the change in accounting principle and briefly describe any other steps Wehrich should take to appropriately report the situation. (Ignore income tax effects.)
3. Assume that Wehrich used FIFO before 2013, and then in 2013 decided to switch to LIFO cost. Wehrich's records of inventory purchases and sales are not available for several previous years. Therefore, the pre-2012 LIFO information (\$2,280) is not available. However, Wehrich does have the information needed to apply LIFO on a prospective basis beginning in 2012. Prepare the journal entry to record the change in accounting principle and briefly describe any other steps Wehrich should take to appropriately report the situation. (Ignore income tax effects.)

P 20-4

Change in inventory methods

● LO20-2

The Rockwell Corporation uses a periodic inventory system and has used the FIFO cost method since inception of the company in 1974. In 2013, the company decided to change to the average cost method. Data for 2013 are as follows:

Beginning inventory, FIFO (5,000 units @ \$30.00)	\$150,000
Purchases:	
5,000 units @ \$36.00	\$180,000
5,000 units @ \$40.00	<u>200,000</u>
Cost of goods available for sale	<u>\$530,000</u>
Sales for 2013 (8,000 units @ \$70.00)	<u>\$560,000</u>

Additional Information:

1. The company's effective income tax rate is 40% for all years.
2. If the company had used the average cost method prior to 2013, ending inventory for 2012 would have been \$130,000.
3. 7,000 units remained in inventory at the end of 2013.

Required:

1. Prepare the journal entry at the beginning of 2013 to record the change in principle.
2. In the 2013–2011 comparative financial statements, what will be the amounts of cost of goods sold and inventory reported for 2013?

P 20–5
Change in
inventory
methods

● LO20–2

Fantasy Fashions had used the LIFO method of costing inventories, but at the beginning of 2013 decided to change to the FIFO method. The inventory as reported at the end of 2012 using LIFO would have been \$20 million higher using FIFO.

Retained earnings reported at the end of 2011 and 2012 was \$240 million and \$260 million, respectively (reflecting the LIFO method). Those amounts reflecting the FIFO method would have been \$250 million and \$272 million, respectively. 2012 net income reported at the end of 2012 was \$28 million (LIFO method) but would have been \$30 million using FIFO. After changing to FIFO, 2013 net income was \$36 million. Dividends of \$8 million were paid each year. The tax rate is 40%.

Required:

1. Prepare the journal entry at the beginning of 2013 to record the change in accounting principle.
2. In the 2013–2012 comparative income statements, what will be the amounts of net income reported for 2012 and 2013?
3. Prepare the 2013–2012 retained earnings column of the comparative statements of shareholders' equity.

P 20–6
Change in
principle; change
in depreciation
methods

● LO20–3

During 2011 and 2012, Faulkner Manufacturing used the sum-of-the-years'-digits (SYD) method of depreciation for its depreciable assets, for both financial reporting and tax purposes. At the beginning of 2013, Faulkner decided to change to the straight-line method for both financial reporting and tax purposes. A tax rate of 40% is in effect for all years.

For an asset that cost \$21,000 with an estimated residual value of \$1,000 and an estimated useful life of 10 years, the depreciation under different methods is as follows:

Year	Straight Line	SYD	Difference
2011	\$2,000	\$3,636	\$1,636
2012	2,000	3,273	1,273
	<u>\$4,000</u>	<u>\$6,909</u>	<u>\$2,909</u>

Required:

1. Describe the way Faulkner should account for the change described. Include in your answer any journal entry Faulkner will record in 2013 related to the change and any required footnote disclosures.
2. Suppose instead that Faulkner previously used straight-line depreciation and changed to sum-of-the-years'-digits in 2013. Describe the way Faulkner should account for the change. Include in your answer any journal entry Faulkner will record in 2013 related to the change and any required footnote disclosures.

P 20–7
Depletion;
change in
estimate

● LO20–4

In 2013, the Marion Company purchased land containing a mineral mine for \$1,600,000. Additional costs of \$600,000 were incurred to develop the mine. Geologists estimated that 400,000 tons of ore would be extracted. After the ore is removed, the land will have a resale value of \$100,000.

To aid in the extraction, Marion built various structures and small storage buildings on the site at a cost of \$150,000. These structures have a useful life of 10 years. The structures cannot be moved after the ore has been removed and will be left at the site. In addition, new equipment costing \$80,000 was purchased and installed at the site. Marion does not plan to move the equipment to another site, but estimates that it can be sold at auction for \$4,000 after the mining project is completed.

In 2013, 50,000 tons of ore were extracted and sold. In 2014, the estimate of total tons of ore in the mine was revised from 400,000 to 487,500. During 2014, 80,000 tons were extracted.

Required:

1. Compute depletion and depreciation of the mine and the mining facilities and equipment for 2013 and 2014. Marion uses the units-of-production method to determine depreciation on mining facilities and equipment.
2. Compute the book value of the mineral mine, structures, and equipment as of December 31, 2014.

P 20-8
Accounting changes; six situations

- LO20-1, LO20-3, LO20-4

Described below are six independent and unrelated situations involving accounting changes. Each change occurs during 2013 before any adjusting entries or closing entries were prepared. Assume the tax rate for each company is 40% in all years. Any tax effects should be adjusted through the deferred tax liability account.

- a. Fleming Home Products introduced a new line of commercial awnings in 2012 that carry a one-year warranty against manufacturer's defects. Based on industry experience, warranty costs were expected to approximate 3% of sales. Sales of the awnings in 2012 were \$3,500,000. Accordingly, warranty expense and a warranty liability of \$105,000 were recorded in 2012. In late 2013, the company's claims experience was evaluated and it was determined that claims were far fewer than expected: 2% of sales rather than 3%. Sales of the awnings in 2013 were \$4,000,000 and warranty expenditures in 2013 totaled \$91,000.
- b. On December 30, 2009, Rival Industries acquired its office building at a cost of \$1,000,000. It was depreciated on a straight-line basis assuming a useful life of 40 years and no salvage value. However, plans were finalized in 2013 to relocate the company headquarters at the end of 2017. The vacated office building will have a salvage value at that time of \$700,000.
- c. Hobbs-Barto Merchandising, Inc., changed inventory cost methods to LIFO from FIFO at the end of 2013 for both financial statement and income tax purposes. Under FIFO, the inventory at January 1, 2014, is \$690,000.
- d. At the beginning of 2010, the Hoffman Group purchased office equipment at a cost of \$330,000. Its useful life was estimated to be 10 years with no salvage value. The equipment was depreciated by the sum-of-the-years'-digits method. On January 1, 2013, the company changed to the straight-line method.
- e. In November 2011, the State of Minnesota filed suit against Huggins Manufacturing Company, seeking penalties for violations of clean air laws. When the financial statements were issued in 2012, Huggins had not reached a settlement with state authorities, but legal counsel advised Huggins that it was probable the company would have to pay \$200,000 in penalties. Accordingly, the following entry was recorded:

Loss—litigation	200,000	
Liability—litigation		200,000

Late in 2013, a settlement was reached with state authorities to pay a total of \$350,000 in penalties.

- f. At the beginning of 2013, Jantzen Specialties, which uses the sum-of-the-years'-digits method, changed to the straight-line method for newly acquired buildings and equipment. The change increased current year net earnings by \$445,000.

Required:

For each situation:

1. Identify the type of change.
2. Prepare any journal entry necessary as a direct result of the change as well as any adjusting entry for 2013 related to the situation described.
3. Briefly describe any other steps that should be taken to appropriately report the situation.

P 20-9
Accounting changes; identify type and reporting approach

- LO20-1 through LO20-4

At the beginning of 2013, Wagner Implements undertook a variety of changes in accounting methods, corrected several errors, and instituted new accounting policies.

Required:

On a sheet of paper numbered from 1 to 10, indicate for each item below the type of change and the reporting approach Wagner would use.

Type of Change (choose one)	Reporting Approach (choose one)
P. Change in accounting principle	R. Retrospective approach
E. Change in accounting estimate	P. Prospective approach
EP. Change in estimate resulting from a change in principle	
X. Correction of an error	
N. Neither an accounting change nor an accounting error.	

Change:

1. By acquiring additional stock, Wagner increased its investment in Wise, Inc., from a 12% interest to 25% and changed its method of accounting for the investment to the equity method.
2. Wagner instituted a postretirement benefit plan for its employees in 2013. Wagner did not previously have such a plan.
3. Wagner changed its method of depreciating computer equipment from the SYD method to the straight-line method.

4. Wagner determined that a liability insurance premium it both paid and expensed in 2012 covered the 2012–2014 period.
5. Wagner custom-manufactures farming equipment on a contract basis. Wagner switched its accounting for these long-term contracts from the completed-contract method to the percentage-of-completion method.
6. Due to an unexpected relocation, Wagner determined that its office building, previously depreciated using a 45-year life, should be depreciated using an 18-year life.
7. Wagner offers a three-year warranty on the farming equipment it sells. Manufacturing efficiencies caused Wagner to reduce its expectation of warranty costs from 2% of sales to 1% of sales.
8. Wagner changed from LIFO to FIFO to account for its materials and work-in-process inventories.
9. Wagner changed from FIFO to average cost to account for its equipment inventory.
10. Wagner sells extended service contracts on some of its equipment sold. Wagner performs services related to these contracts over several years, so in 2013 Wagner changed from recognizing revenue from these service contracts on a cash basis to the accrual basis.

P 20–10
Inventory errors
● LO20–6

You have been hired as the new controller for the Ralston Company. Shortly after joining the company in 2013, you discover the following errors related to the 2011 and 2012 financial statements:

- a. Inventory at 12/31/2011 was understated by \$6,000.
- b. Inventory at 12/31/2012 was overstated by \$9,000.
- c. On 12/31/2012, inventory was purchased for \$3,000. The company did not record the purchase until the inventory was paid for early in 2013. At that time, the purchase was recorded by a debit to purchases and a credit to cash.

The company uses a periodic inventory system.

Required:

1. Assuming that the errors were discovered after the 2012 financial statements were issued, analyze the effect of the errors on 2012 and 2011 cost of goods sold, net income, and retained earnings. (Ignore income taxes.)
2. Prepare a journal entry to correct the errors.
3. What other step(s) would be taken in connection with the error?

P 20–11
Error correction;
change in
depreciation
method
● LO20–6

The Collins Corporation purchased office equipment at the beginning of 2011 and capitalized a cost of \$2,000,000. This cost included the following expenditures:

Purchase price	\$1,850,000
Freight charges	30,000
Installation charges	20,000
Annual maintenance charge	100,000
Total	<u>\$2,000,000</u>

The company estimated an eight-year useful life for the equipment. No residual value is anticipated. The double-declining-balance method was used to determine depreciation expense for 2011 and 2012.

In 2013, after the 2012 financial statements were issued, the company decided to switch to the straight-line depreciation method for this equipment. At that time, the company's controller discovered that the original cost of the equipment incorrectly included one year of annual maintenance charges for the equipment.

Required:

1. Ignoring income taxes, prepare the appropriate correcting entry for the equipment capitalization error discovered in 2013.
2. Ignoring income taxes, prepare any 2013 journal entry(s) related to the change in depreciation methods.

P 20–12
Accounting
changes and
error correction;
eight situations;
tax effects
ignored
● LO20–1 through
LO20–4,
LO20–6

Williams-Santana, Inc., is a manufacturer of high-tech industrial parts that was started in 2001 by two talented engineers with little business training. In 2013, the company was acquired by one of its major customers. As part of an internal audit, the following facts were discovered. The audit occurred during 2013 before any adjusting entries or closing entries were prepared.

- a. A five-year casualty insurance policy was purchased at the beginning of 2011 for \$35,000. The full amount was debited to insurance expense at the time.
- b. Effective January 1, 2013, the company changed the salvage value used in calculating depreciation for its office building. The building cost \$600,000 on December 29, 2002, and has been depreciated on a straight-line basis assuming a useful life of 40 years and a salvage value of \$100,000. Declining real estate values in the area indicate that the salvage value will be no more than \$25,000.

- c. On December 31, 2012, merchandise inventory was overstated by \$25,000 due to a mistake in the physical inventory count using the periodic inventory system.
- d. The company changed inventory cost methods to FIFO from LIFO at the end of 2013 for both financial statement and income tax purposes. The change will cause a \$960,000 increase in the beginning inventory at January 1, 2014.
- e. At the end of 2012, the company failed to accrue \$15,500 of sales commissions earned by employees during 2012. The expense was recorded when the commissions were paid in early 2013.
- f. At the beginning of 2011, the company purchased a machine at a cost of \$720,000. Its useful life was estimated to be 10 years with no salvage value. The machine has been depreciated by the double-declining balance method. Its carrying amount on December 31, 2012, was \$460,800. On January 1, 2013, the company changed to the straight-line method.
- g. Warranty expense is determined each year as 1% of sales. Actual payment experience of recent years indicates that 0.75% is a better indication of the actual cost. Management effects the change in 2013. Credit sales for 2013 are \$4,000,000; in 2012 they were \$3,700,000.

Required:

For each situation:

1. Identify whether it represents an accounting change or an error. If an accounting change, identify the type of change.
2. Prepare any journal entry necessary as a direct result of the change or error correction as well as any adjusting entry for 2013 related to the situation described. (Ignore tax effects.)
3. Briefly describe any other steps that should be taken to appropriately report the situation.

P 20-13

Accounting changes and error correction; eight situations; tax effects considered

- LO20-1 through LO20-4, LO20-6

(Note: This problem is a variation of the previous problem, modified to consider income tax effects.) Williams-Santana, Inc., is a manufacturer of high-tech industrial parts that was started in 2001 by two talented engineers with little business training. In 2013, the company was acquired by one of its major customers. As part of an internal audit, the following facts were discovered. The audit occurred during 2013 before any adjusting entries or closing entries were prepared. The income tax rate is 40% for all years.

- a. A five-year casualty insurance policy was purchased at the beginning of 2011 for \$35,000. The full amount was debited to insurance expense at the time.
- b. Effective January 1, 2013, the company changed the salvage values used in calculating depreciation for its office building. The building cost \$600,000 on December 29, 2002, and has been depreciated on a straight-line basis assuming a useful life of 40 years and a salvage value of \$100,000. Declining real estate values in the area indicate that the salvage value will be no more than \$25,000.
- c. On December 31, 2012, merchandise inventory was overstated by \$25,000 due to a mistake in the physical inventory count using the periodic inventory system.
- d. The company changed inventory cost methods to FIFO from LIFO at the end of 2013 for both financial statement and income tax purposes. The change will cause a \$960,000 increase in the beginning inventory at January 1, 2014.
- e. At the end of 2012, the company failed to accrue \$15,500 of sales commissions earned by employees during 2012. The expense was recorded when the commissions were paid in early 2013.
- f. At the beginning of 2011, the company purchased a machine at a cost of \$720,000. Its useful life was estimated to be ten years with no salvage value. The machine has been depreciated by the double-declining balance method. Its carrying amount on December 31, 2012, was \$460,800. On January 1, 2013, the company changed to the straight-line method.
- g. Warranty expense is determined each year as 1% of sales. Actual payment experience of recent years indicates that 0.75% is a better indication of the actual cost. Management effects the change in 2013. Credit sales for 2013 are \$4,000,000; in 2012 they were \$3,700,000.

Required:

For each situation:

1. Identify whether it represents an accounting change or an error. If an accounting change, identify the type of change.
2. Prepare any journal entry necessary as a direct result of the change or error correction as well as any adjusting entry for 2013 related to the situation described. Any tax effects should be adjusted for through Income tax payable or Refund-income tax.
3. Briefly describe any other steps that should be taken to appropriately report the situation.

P 20-14

Errors; change in estimate; change in principle; restatement of previous financial statements

- LO20-1, LO20-3, LO20-4, LO20-6

Whaley Distributors is a wholesale distributor of electronic components. Financial statements for the years ended December 31, 2011 and 2012, reported the following amounts and subtotals (\$ in millions):

	Assets	Liabilities	Shareholders' Equity	Net Income	Expenses
2011	\$740	\$330	\$410	\$210	\$150
2012	820	400	420	230	175

In 2013 the following situations occurred or came to light:

- a. Internal auditors discovered that ending inventories reported on the financial statements the two previous years were misstated due to faulty internal controls. The errors were in the following amounts:

2011 inventory	Overstated by \$12 million
2012 inventory	Understated by \$10 million

- b. A liability was accrued in 2011 for a probable payment of \$7 million in connection with a lawsuit ultimately settled in December 2013 for \$4 million.
- c. A patent costing \$18 million at the beginning of 2011, expected to benefit operations for a total of six years, has not been amortized since acquired.
- d. Whaley's conveyer equipment was depreciated by the sum-of-the-years'-digits (SYD) basis since it was acquired at the beginning of 2011 at a cost of \$30 million. It has an expected useful life of five years and no expected residual value. At the beginning of 2013, Whaley decided to switch to straight-line depreciation.

Required:

For each situation:

1. Prepare any journal entry necessary as a direct result of the change or error correction as well as any adjusting entry for 2013 related to the situation described. (Ignore tax effects.)
2. Determine the amounts to be reported for each of the five items shown above from the 2011 and 2012 financial statements when those amounts are reported again in the 2011–2013 comparative financial statements.

P 20-15

Correction of errors; six errors

- LO20-6

Conrad Playground Supply underwent a restructuring in 2013. The company conducted a thorough internal audit, during which the following facts were discovered. The audit occurred during 2013 before any adjusting entries or closing entries are prepared.

- a. Additional computers were acquired at the beginning of 2011 and added to the company's office network. The \$45,000 cost of the computers was inadvertently recorded as maintenance expense. Computers have five-year useful lives and no material salvage value. This class of equipment is depreciated by the straight-line method.
- b. Two weeks prior to the audit, the company paid \$17,000 for assembly tools and recorded the expenditure as office supplies. The error was discovered a week later.
- c. On December 31, 2012, merchandise inventory was understated by \$78,000 due to a mistake in the physical inventory count. The company uses the periodic inventory system.
- d. Two years earlier, the company recorded a 4% stock dividend (2,000 common shares, \$1 par) as follows:

Retained earnings	2,000	
Common stock		2,000

The shares had a market price at the time of \$12 per share.

- e. At the end of 2012, the company failed to accrue \$104,000 of interest expense that accrued during the last four months of 2012 on bonds payable. The bonds, which were issued at face value, mature in 2017. The following entry was recorded on March 1, 2013, when the semiannual interest was paid:

Interest expense	156,000	
Cash		156,000

- f. A three-year liability insurance policy was purchased at the beginning of 2012 for \$72,000. The full premium was debited to insurance expense at the time.

Required:

For each error, prepare any journal entry necessary to correct the error as well as any year-end adjusting entry for 2013 related to the situation described. (Ignore income taxes.)

P 20-16

Integrating problem; errors; deferred taxes; contingency; change in tax rates

● LO20-6

You are internal auditor for Shannon Supplies, Inc., and are reviewing the company's preliminary financial statements. The statements, prepared after making the adjusting entries, but before closing entries for the year ended December 31, 2013, are as follows:

SHANNON SUPPLIES, INC.
Balance Sheet
December 31, 2013

Assets	(\$ in 000s)
Cash	\$2,400
Investments	250
Accounts receivable, net	810
Inventory	1,060
Property, plant, and equipment	1,240
Less: Accumulated depreciation	(560)
Total assets	\$5,200
Liabilities and Stockholders' Equity	
Accounts payable and accrued expenses	\$3,320
Income tax payable	220
Common stock, \$1 par	200
Additional paid-in capital	750
Retained earnings	710
Total liabilities and shareholders' equity	\$5,200

SHANNON SUPPLIES, INC.
Income Statement
For the Year Ended December 31, 2013

Sales revenue	\$3,400
Operating expenses:	
Cost of goods sold	\$1,140
Selling and administrative	896
Depreciation	84
	2,120
Income before income tax	\$1,280
Income tax expense	(512)
Net income	\$ 768

Shannon's income tax rate was 40% in 2013 and previous years. During the course of the audit, the following additional information (not considered when the above statements were prepared) was obtained:

- a. Shannon's investment portfolio consists of blue chip stocks held for long-term appreciation. To raise working capital, some of the shares with an original cost of \$180,000 were sold in May 2013. Shannon accountants debited cash and credited investments for the \$220,000 proceeds of the sale.
- b. At December 31, 2013, the fair value of the remaining securities in the portfolio was \$274,000.
- c. The state of Alabama filed suit against Shannon in October 2011 seeking civil penalties and injunctive relief for violations of environmental regulations regulating emissions. Shannon's legal counsel previously believed that an unfavorable outcome was not probable, but based on negotiations with state attorneys in 2013, now believe eventual payment to the state of \$130,000 is probable, most likely to be paid in 2016.
- d. The \$1,060,000 inventory total, which was based on a physical count at December 31, 2013, was priced at cost. Based on your conversations with company accountants, you determined that the inventory cost was overstated by \$132,000.
- e. Electronic counters costing \$80,000 were added to the equipment on December 29, 2012. The cost was charged to repairs.
- f. Shannon's equipment on which the counters were installed had a remaining useful life of four years on December 29, 2012, and is being depreciated by the straight-line method for both financial and tax reporting.
- g. A new tax law was enacted in 2013 which will cause Shannon's income tax rate to change from 40% to 35% beginning in 2014.

Required:

Prepare journal entries to record the effects on Shannon's accounting records at December 31, 2013, for each of the items described above. Show all calculations.

P 20-17

Integrating problem; error; depreciation; deferred taxes

● LO20-6

George Young Industries (GYI) acquired industrial robots at the beginning of 2010 and added them to the company's assembly process. During 2013, management became aware that the \$1 million cost of the machinery was inadvertently recorded as repair expense on GYI's books and on its income tax return. The industrial robots have 10-year useful lives and no material salvage value. This class of equipment is depreciated by the straight-line method for financial reporting purposes and for tax purposes it is considered to be MACRS 7-year property (cost deducted over 7 years by the modified accelerated recovery system as follows):

Year	MACRS Deductions
2010	\$ 142,900
2011	244,900
2012	174,900
2013	124,900
2014	89,300
2015	89,200
2016	89,300
2017	44,600
Totals	\$ 1,000,000

The tax rate is 40% for all years involved.

Required:

1. Prepare any journal entry necessary as a direct result of the error described.
2. Briefly describe any other steps GYI would take to appropriately report the situation.
3. Prepare the adjusting entry for 2013 depreciation.

Broaden Your Perspective

Apply your critical-thinking ability to the knowledge you've gained. These cases will provide you an opportunity to develop your research, analysis, judgment, and communication skills. You also will work with other students, integrate what you've learned, apply it in real world situations, and consider its global and ethical ramifications. This practice will broaden your knowledge and further develop your decision-making abilities.

Integrating**Case 20-1**

Change to dollar-value LIFO

● LO20-3

Webster Products, Inc., adopted the dollar-value LIFO method of determining inventory costs for financial and income tax reporting on January 1, 2013. Webster continues to use the FIFO method for internal decision-making purposes. Webster's FIFO inventories at December 31, 2013, 2014, and 2015, were \$300,000, \$412,500, and \$585,000, respectively. Internally generated cost indexes are used to convert FIFO inventory amounts to dollar-value LIFO amounts. Webster estimated these indexes as follows:

2013	1.00
2014	1.25
2015	1.50

Required:

1. Determine Webster's dollar-value LIFO inventory at December 31, 2014 and 2015.
2. Describe how the change should have been reported in Webster's 2013 financial statements.

Real World**Case 20-2**

Change in inventory method; Virco Manufacturing Corporation

● LO20-2

In its annual report for the year ended January 31, 2011, **Virco Manufacturing Corporation**, a producer of school desks and other furniture, provided the following information regarding a change in inventory method (in part):

2. Change in Accounting Principle

On January 31, 2011, we elected to change our costing method for the material component of raw materials, work in process, and finished goods inventory to the lower of cost or market using the first-in first-out ("FIFO") method, from the lower of cost or market using the last-in first out ("LIFO") method. The labor and overhead components of inventory have historically been valued on a FIFO basis. We believe that the FIFO method for the material component of inventory is preferable as it conforms the inventory costing methods for all components of inventory into a single costing method and better reflects current acquisition costs of those inventories on our consolidated balance sheets. Additionally, presentation of inventory at FIFO aligns the financial reporting with our borrowing base under our line of credit (see Note 3 for further discussion of the line of credit).

Real World Financials

Further, this change will promote greater comparability with companies that have adopted International Financial Reporting Standards. . . . In accordance with FASB ASC Topic 250, *Accounting Changes and Error Corrections*, all prior periods presented have been adjusted to apply the new accounting method retrospectively.

The retroactive effect of the change in our inventory costing method, including the indirect effect of such change, increased the February 1, 2008, opening retained earnings balance by \$4.1 million, and increased our inventory and retained earnings balances by \$8.5 million and \$5.4 million as of January 31, 2009, by \$6.9 million and \$4.3 million as of January 31, 2010, and by \$7.6 million and \$4.7 million as of January 31, 2011, respectively. In addition the change in our inventory costing method, including the indirect effect of such change, increased (decreased) net income by \$1.3, \$(1.0) and \$0.4 million for the years ending January 31, 2009, 2010 and 2011, respectively.

Required:

1. Why does GAAP require Virco to retrospectively adjust prior years' financial statements for this type of accounting change?
2. Assuming that the quantity of inventory remained stable during the previous two years, did the cost of Virco's inventory move up or down during that year?
3. Why does the change "promote greater comparability with companies that have adopted International Financial Reporting Standards"?

Communication Case 20-3

Change in inventory method; disclosure note

● LO20-2

Mayfair Department Stores, Inc., operates over 30 retail stores in the Pacific Northwest. Prior to 2013, the company used the FIFO method to value its inventory. In 2013, Mayfair decided to switch to the dollar-value LIFO retail inventory method. One of your responsibilities as assistant controller is to prepare the disclosure note describing the change in method that will be included in the company's 2013 financial statements. Kenneth Meier, the controller, provided the following information:

- Internally developed retail price indexes are used to adjust for the effects of changing prices.
- If the change had not been made, cost of goods sold for the year would have been \$22 million lower. The company's income tax rate is 40% and there were 100 million shares of common stock outstanding during 2013.
- The cumulative effect of the change on prior years' income is not determinable.
- The reasons for the change were (a) to provide a more consistent matching of merchandise costs with sales revenue, and (b) the new method provides a more comparable basis of accounting with competitors that also use the LIFO method.

Required:

1. Prepare for Kenneth Meier the disclosure note that will be included in the 2013 financial statements.
2. Explain why the "cumulative effect of the change on prior years' income is not determinable."

Trueblood Case 20-4

Preferability of accounting changes

● LO20-2

The following Trueblood case is recommended for use with this chapter. The case provides an excellent opportunity for class discussion, group projects, and writing assignments. The case, along with Professor's Discussion Material, can be obtained from the Deloitte Foundation at its website: www.deloitte.com/us/truebloodcases.

Case 07-2: Western Aluminum

This case gives students the opportunity to consider the treatment of changes in accounting principle. It requires a judgment as to the preferability of one accounting method over another when making a change. Assuming that the change is preferable, it requires calculating the financial statement impact of the change.

Ethics Case 20-5
Softening the blow

● LO20-1,
LO20-2,
LO20-3

Late one Thursday afternoon, Joy Martin, a veteran audit manager with a regional CPA firm, was reviewing documents for a long-time client of the firm, AMT Transport. The year-end audit was scheduled to begin Monday.

For three months, the economy had been in a down cycle and the transportation industry was particularly hard hit. As a result, Joy expected AMT's financial results would not be pleasant news to shareholders. However, what Joy saw in the preliminary statements made her sigh aloud. Results were much worse than she feared.

"Larry (the company president) already is in the doghouse with shareholders," Joy thought to herself. "When they see these numbers, they'll hang him out to dry."

"I wonder if he's considered some strategic accounting changes," she thought, after reflecting on the situation. "The bad news could be softened quite a bit by changing inventory methods from LIFO to FIFO or reconsidering some of the estimates used in other areas."

Required:

1. How would the actions contemplated contribute toward "softening" the bad news?
2. Do you perceive an ethical dilemma? What would be the likely impact of following up on Joy's thoughts? Who would benefit? Who would be injured?

Analysis
Case 20–6
 Change in inventory methods; concepts
 ● LO20–2, LO20–3

Generally accepted accounting principles should be applied consistently from period to period. However, changes within a company, as well as changes in the external economic environment, may force a company to change an accounting method. The specific reporting requirements when a company changes from one generally accepted inventory method to another depend on the methods involved.

Required:

Explain the accounting treatment for a change in inventory method (a) not involving LIFO, (b) from the LIFO method, and (c) to the LIFO method. Explain the logic underlying those treatments. Also, describe how disclosure requirements are designed to address the departure from consistency and comparability of changes in accounting principle.

Communication
Case 20–7
 Change in loss contingency; write a memo
 ● LO20–4

Late in 2013, you and two other officers of Curbo Fabrications Corporation just returned from a meeting with officials of The City of Jackson. The meeting was unexpectedly favorable even though it culminated in a settlement with city authorities that your company pay a total of \$475,000 to cover the cost of violations of city construction codes. Jackson filed suit in November 2011 against Curbo Fabrications Corporation, seeking civil penalties and injunctive relief for violations of city construction codes regulating earthquake damage standards. Alleged violations involved several construction projects completed during the previous three years. When the financial statements were issued in 2012, Curbo had not reached a settlement with state authorities, but legal counsel had advised the company that it was probable the ultimate settlement would be \$750,000 in penalties. The following entry was recorded:

Loss—litigation	750,000	
Liability—litigation		750,000

The final settlement, therefore, was a pleasant surprise. While returning from the meeting, conversation turned to reporting the settlement in the 2013 financial statements. You drew the short straw and were selected to write a memo to Janet Zeno, the financial vice president, advising the proper course of action.

Required:

Write the memo. Include descriptions of any journal entries related to the change in amounts. Briefly describe other steps Curbo should take to report the settlement.

Analysis
Case 20–8
 Two wrongs make a right?
 ● LO20–4

Early one Wednesday afternoon, Ken and Larry studied in the dormitory room they shared at Fogelman College. Ken, an accounting major, was advising Larry, a management major, regarding a project for Larry’s Business Policy class. One aspect of the project involved analyzing the 2012 annual report of Craft Paper Company. Though not central to his business policy case, a footnote had caught Larry’s attention.

Depreciation and Cost of Timber Harvested (in part)			
(\$ in millions)			
	2012	2011	2010
Depreciation of buildings, machinery and equipment	\$260.9	\$329.8	\$322.5
Cost of timber harvested and amortization of logging roads	4.9	4.9	4.9
	<u>\$265.8</u>	<u>\$334.7</u>	<u>\$327.4</u>

Beginning in 2012, the Company revised the estimated average useful lives used to compute depreciation for most of its pulp and paper mill equipment from 16 years to 20 years and for most of its finishing and converting equipment from 12 years to 15 years. These revisions were made to more properly reflect the true economic lives of the assets and to better align the Company’s depreciable lives with the predominant practice in the industry. The change had the effect of increasing net income by approximately \$55 million.

“If I understand this right, Ken, the company is not going back and recalculating a lower depreciation for earlier years. Instead they seem to be leaving depreciation overstated in earlier years and making up for that by understating it in current and future years,” Larry mused. “Is that the way it is in accounting? Two wrongs make a right?”

Required:

What are the two wrongs to which Larry refers? Is he right?

Research**Case 20–9**

FASB

codification;
researching the
way changes in
postretirement
benefit estimates
are reported;
retrieving
disclosures from
the Internet

● LO20–4

It's financial statements preparation time at Center Industries where you have been assistant controller for two months. Ben Huddler, the controller, seems to be pleasant but unpredictable. Today, although your schedule is filled with meetings with internal and outside auditors and two members of the board of directors, Ben made a request. "As you know, we're decreasing the rate at which we assume health care costs will rise when measuring our postretirement benefit obligation. I'd like to know how others have reported similar changes. Can you find me an example?" he asked. "I'd bet you could get one off the Internet." As a matter of fact, you often use EDGAR, the Electronic Data Gathering, Analysis, and Retrieval system (www.sec.gov) to access financial statements filed with the U.S. Securities and Exchange Commission (SEC).

Required:

1. Access EDGAR on the Internet. Access a recent 10-K filing of a firm you think might have a postretirement health care plan. You may need to look up several companies before you find what you're looking for. Older, established companies are most likely to have such benefit plans.
(Note: You may be able to focus your search by searching with key words and phrases in Google on the Internet.)
2. Find the portion of the disclosures that reports the effect of a change in health care cost trends.
3. What information is provided about the effect of the change on the company's estimated benefit obligation?
4. Obtain the relevant authoritative literature on disclosure requirements for health care cost trends using the FASB's Codification Research System. You might gain access from the FASB website (www.fasb.org), from your school library, or some other source. What authoritative literature do companies rely on when disclosing the effect of a change in health care cost trends?

Analysis**Case 20–10**

Various changes

● LO20–1 through
LO20–4

DRS Corporation changed the way it depreciates its computers from the sum-of-the-year's-digits method to the straight-line method beginning January 1, 2013. DRS also changed its estimated residual value used in computing depreciation for its office building. At the end of 2013, DRS changed the specific subsidiaries constituting the group of companies for which its consolidated financial statements are prepared.

Required:

1. For each accounting change DRS undertook, indicate the type of change and how DRS should report the change. Be specific.
2. Why should companies disclose changes in accounting principles?

Analysis**Case 20–11**

Various changes

● LO20–1 through
LO20–4

Ray Solutions decided to make the following changes in its accounting policies on January 1, 2013:

- a. Changed from the cash to the accrual basis of accounting for recognizing revenue on its service contracts.
- b. Adopted straight-line depreciation for all future equipment purchases, but continued to use accelerated depreciation for all equipment acquired before 2013.
- c. Changed from the LIFO inventory method to the FIFO inventory method.

Required:

For each accounting change Ray undertook, indicate the type of change and how Ray should report the change. Be specific.

Judgment**Case 20–12**Accounting
changes;
independent
situations● LO20–1 through
LO20–5

Sometimes a business entity will change its method of accounting for certain items. The change may be classified as a change in accounting principle, a change in accounting estimate, or a change in reporting entity.

Listed below are three independent, unrelated sets of facts relating to accounting changes.

Situation I: A company determined that the depreciable lives of its fixed assets are presently too long to fairly match the cost of the fixed assets with the revenue produced. The company decided at the beginning of the current year to reduce the depreciable lives of all of its existing fixed assets by five years.

Situation II: On December 31, 2012, Gary Company owned 51% of Allen Company, at which time Gary reported its investment on a nonconsolidated basis due to political uncertainties in the country in which Allen was located. On January 2, 2013, the management of Gary Company was satisfied that the political uncertainties were resolved and the assets of the company were in no danger of nationalization. Accordingly, Gary will prepare consolidated financial statements for Gary and Allen for the year ended December 31, 2013.

Situation III: A company decides in January 2013 to adopt the straight-line method of depreciation for plant equipment. The straight-line method will be used for new acquisitions as well as for previously acquired plant equipment for which depreciation had been provided on an accelerated basis.

Required:

For each of the situations described above, provide the information indicated below. Complete your discussion of each situation before going on to the next situation.

1. Type of accounting change.
2. Manner of reporting the change under current generally accepted accounting principles including a discussion, where applicable, of how amounts are computed.
3. Effect of the change on the balance sheet and income statement.
4. Footnote disclosures that would be necessary.

Judgment
Case 20–13

Inventory errors

● LO20–6

Some inventory errors are said to be “self-correcting” in that the error has the opposite financial statement effect in the period following the error, thereby “correcting” the original account balance errors.

Required:

Despite this self-correcting feature, discuss why these errors should not be ignored and describe the steps required to account for the error correction.

Ethics**Case 20–14**

Overstatement of ending inventory

● LO20–6

Danville Bottlers is a wholesale beverage company. Danville uses the FIFO inventory method to determine the cost of its ending inventory. Ending inventory quantities are determined by a physical count. For the fiscal year-end June 30, 2013, ending inventory was originally determined to be \$3,265,000. However, on July 17, 2013, John Howard, the company’s controller, discovered an error in the ending inventory count. He determined that the correct ending inventory amount should be \$2,600,000.

Danville is a privately owned corporation with significant financing provided by a local bank. The bank requires annual audited financial statements as a condition of the loan. By July 17, the auditors had completed their review of the financial statements which are scheduled to be issued on July 25. They did not discover the inventory error.

John’s first reaction was to communicate his finding to the auditors and to revise the financial statements before they are issued. However, he knows that his and his fellow workers’ profit-sharing plans are based on annual pretax earnings and that if he revises the statements, everyone’s profit sharing bonus will be significantly reduced.

Required:

1. Why will bonuses be negatively affected? What is the effect on pretax earnings?
2. If the error is not corrected in the current year and is discovered by the auditors during the following year’s audit, how will the error be reported in the company’s financial statements?
3. Discuss the ethical dilemma Howard faces.

The QuickTab simulation tests your knowledge of appropriate recognition of types of accounting changes and how we should account for them.

21

The Statement of
Cash Flows Revisited

OVERVIEW

The objective of financial reporting is to provide investors and creditors with useful information, primarily in the form of financial statements. The balance sheet and the income statement—the focus of your study in earlier chapters—do not provide all the information needed by these decision makers. Here you will learn how the statement of cash flows fills the information gap left by the other financial statements.

The statement lists all cash inflows and cash outflows, and classifies them as cash flows from (a) operating, (b) investing, or (c) financing activities. Investing and financing activities that do not directly affect cash also are reported.

LEARNING
OBJECTIVES

After studying this chapter, you should be able to:

- **LO21-1** Explain the usefulness of the statement of cash flows. (p. 1258)
- **LO21-2** Define cash equivalents. (p. 1261)
- **LO21-3** Determine cash flows from operating activities by the direct method. (p. 1262)
- **LO21-4** Determine cash flows from operating activities by the indirect method. (p. 1264)
- **LO21-5** Identify transactions that are classified as investing activities. (p. 1266)
- **LO21-6** Identify transactions that are classified as financing activities. (p. 1267)
- **LO21-7** Identify transactions that represent noncash investing and financing activities. (p. 1268)
- **LO21-8** Prepare a statement of cash flows with the aid of a spreadsheet or T-accounts. (p. 1268)
- **LO21-9** Discuss the primary differences between U.S. GAAP and IFRS with respect to the statement of cash flows. (pp. 1265 and 1287)

FINANCIAL REPORTING CASE

Where's the Cash?

"What do you mean you can't afford a wage increase?" union negotiator Vince Barr insisted. "We've all seen your income statement. You had record earnings this year."

This is the first day of company negotiations with union representatives. As company controller, you know it's going to be up to you

to explain the company's position on the financial aspects of the negotiations. In fact, you've known for some time that a critical point of contention would be the moderate increase in this year's profits after three years of level or slightly declining earnings. Not helping the situation is that the company has always used accelerated depreciation on its equipment which it began replacing this year at considerably higher prices than it cost several years back.

By the time you finish this chapter, you should be able to respond appropriately to the questions posed in this case. Compare your response to the solution provided at the end of the chapter.

1. What are the cash flow aspects of the situation that Mr. Barr may be overlooking in making his case for a wage increase? How can a company's operations generate a healthy profit and yet produce meager or even negative cash flows? (p. 1262)
2. What information can a statement of cash flows provide about a company's investing activities that can be useful in decisions such as this? (p. 1266)
3. What information can a statement of cash flows provide about a company's financing activities that can be useful in decisions such as this? (p. 1267)

QUESTIONS

PART A

THE CONTENT AND VALUE OF THE STATEMENT OF CASH FLOWS

Decision Makers' Perspective—Usefulness of Cash Flow Information

● LO21-1

Investors and creditors require cash flows from the corporation.

Cash flows to investors and creditors depend on the corporation generating cash flows to itself.

Many decisions benefit from information about the company's underlying cash flow process.

A fund manager of a major insurance company, considering investing \$8,000,000 in the common stock of **The Coca-Cola Company**, asks herself: “What are the prospects of future dividends and market-price appreciation? Will we get a return commensurate with the cost and risk of our investment?” A bank officer, examining an application for a business loan, asks himself: “If I approve this loan, what is the likelihood of the borrower making interest payments on time and repaying the loan when due?” Investors and creditors continually face these and similar decisions that require projections of the relative ability of a business to generate future cash flows and of the risk associated with those forecasts.

To make these projections, decision makers rely heavily on the information reported in periodic financial statements. In the final analysis, cash flows into and out of a business enterprise are the most fundamental events on which investors and creditors base their decisions. Naturally, these decisions focus on the prospects of the decision makers receiving cash returns from their dealings with the firm. However, it is the ability of the firm to generate cash flows to itself that ultimately determines the potential for cash flows from the firm to investors and creditors.

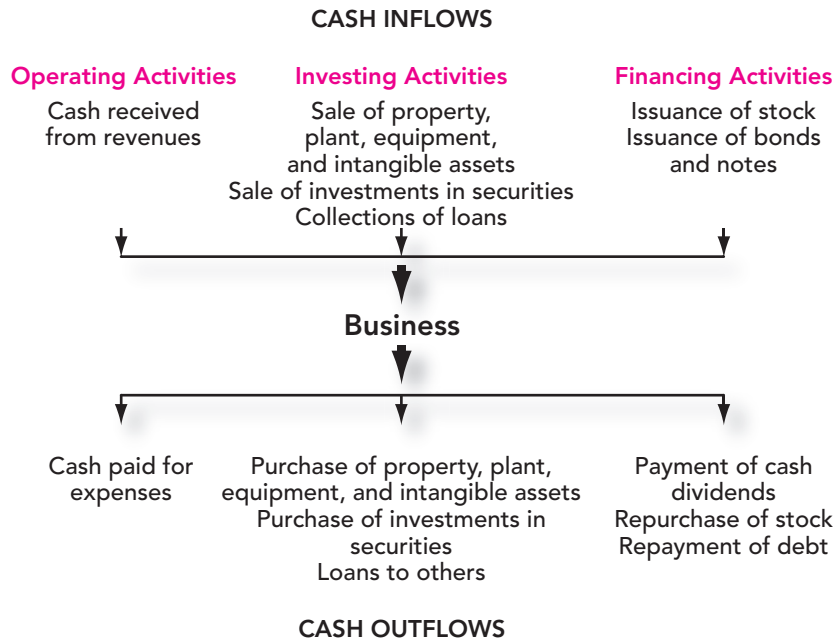

The financial statements that have been the focus of your study in earlier chapters—the income statement and the balance sheet—offer information helpful in forecasting future cash-generating ability. Some important questions, however, are not easily answered from the information these statements provide. For example, meaningful projections of a company's future profitability and risk depend on answers to such questions as:

- In what types of activities is the company investing?
- Are these activities being financed with debt? with equity? by cash generated from operations?
- Are facilities being acquired to accommodate future expansion?
- How does the amount of cash generated from operations compare with net income over time?
- Why isn't the increase in retained earnings reflected as an increase in dividends?
- What happens to the cash received from the sale of assets?
- By what means is debt being retired?

The information needed to answer these and similar questions is found in the continuous series of cash flows that the income statement and the balance sheet describe only indirectly. This underlying cash flow process is considered next. ●

Cash Inflows and Outflows

Cash continually flows into and out of an active business. Businesses disburse cash to acquire property and equipment to maintain or expand productive capacity. When no longer needed, these assets may be sold for cash. Cash is paid to produce or purchase inventory for resale, as well as to pay for the expenses of selling these goods. The ultimate outcome of these selling activities is an inflow of cash. Cash might be invested in securities of other firms. These investments provide cash inflows during the investment period in the form of dividends or interest and at the end of the investment period when the securities are sold. To raise cash to finance their operations, firms sell stock and/or acquire debt. Cash payments are made as dividends to shareholders and interest to creditors. When debt is repaid or stock repurchased, cash flows out of the firm. To help you visualize the continual process of cash receipts and cash payments, that process is diagrammed in Illustration 21-1. The diagram also previews the way we will later classify the cash flows in a statement of cash flows.

**Illustration 21–1**

Cash Inflows and Cash Outflows

Embodied in this assortment of cash flows is a wealth of information that investors and creditors require to make educated decisions. Much of the value of the underlying information provided by the cash flows is lost when reported only indirectly by the balance sheet and the income statement. Each cash flow eventually impacts decision makers by affecting the balances of various accounts in the balance sheet. Also, many of the cash flows—those related to income-producing activities—are represented in the income statement. However, they are not necessarily reported in the period the cash flows occur because the income statement measures activities on an accrual basis. The statement of cash flows fills the information gap by reporting the cash flows directly.

The statement of cash flows provides information about cash flows that is lost when reported only indirectly by the balance sheet and the income statement.

Role of the Statement of Cash Flows

A statement of cash flows is shown in Illustration 21–2 on the next page. The statement lists all cash inflows and cash outflows during the reporting period. To enhance the informational value of the presentation, the cash flows are classified according to the nature of the activities that bring about the cash flows. The three primary categories of cash flows are (1) cash flows from operating activities, (2) cash flows from investing activities, and (3) cash flows from financing activities. Classifying each cash flow by source (operating, investing, or financing activities) is more informative than simply listing the various cash flows. Notice, too, that the noncash investing and financing activities—investing and financing activities that do not directly increase or decrease cash—also are reported. The GAAP requirement for the statement of cash flows was issued in direct response to *FASB Concept Statement 1*, which stated that the primary objective of financial reporting is to “provide information to help investors and creditors, and others assess the amounts, timing, and uncertainty of prospective net cash inflows to the related enterprise.”¹

Many companies suffered bankruptcy because they were unable to generate sufficient cash to satisfy their obligations. Doubtless, many investors in the stock of these firms would have been spared substantial losses if the financial statements had been designed to foresee the cash flow problems the companies were experiencing. A noted illustration is the demise of **W. T. Grant** during the 1970s. Grant, a general retailer in the days before malls, was a blue chip stock of its time. Grant’s statement of changes in financial position (the predecessor of the statement of cash flows) reported working capital from operations of \$46 million in 1972. Yet, if presented, a statement of cash flows would have reported cash flows from

¹FASB Concepts Statement No. 8, Conceptual Framework for Financial Reporting—Chapter 1, *The Objective of General Purpose Financial Reporting*, and Chapter 3, *Qualitative Characteristics of Useful Financial Information* (a replacement of FASB Concepts Statements No. 1 and No. 2), September 2010.

Statement of Cash Flows

UNITED BRANDS CORPORATION	
Statement of Cash Flows	
For Year Ended December 31, 2013	
(\$ in millions)	
Cash Flows from Operating Activities	
Cash inflows:	
From customers	\$98
From investment revenue	3
Cash outflows:	
To suppliers of goods	(50)
To employees	(11)
For interest	(3)
For insurance	(4)
For income taxes	(11)
<i>Net cash flows from operating activities</i>	<u>\$22</u>
Cash Flows from Investing Activities	
Purchase of land	(30)
Purchase of short-term investment	(12)
Sale of land	18
Sale of equipment	5
<i>Net cash flows from investing activities</i>	<u>(19)</u>
Cash Flows from Financing Activities	
Sale of common shares	26
Retirement of bonds payable	(15)
Payment of cash dividends	(5)
<i>Net cash flows from financing activities</i>	<u>6</u>
<i>Net increase in cash</i>	<u>9</u>
Cash balance, January 1	<u>20</u>
Cash balance, December 31	<u><u>\$29</u></u>

Note X:	
Noncash Investing and Financing Activities	
Acquired \$20 million of equipment by issuing a 12%, 5-year note.	<u>\$20</u>
Reconciliation of Net Income to Cash Flows from Operating Activities:	
Net income	\$12
<i>Adjustments for noncash effects:</i>	
Gain on sale of land	(8)
Depreciation expense	3
Loss on sale of equipment	2
<i>Changes in operating assets and liabilities:</i>	
Increase in accounts receivable	(2)
Decrease in inventory	4
Increase in accounts payable	6
Increase in salaries payable	2
Discount on bonds payable	2
Decrease in prepaid insurance	3
Decrease in income tax payable	(2)
<i>Net cash flows from operating activities</i>	<u><u>\$22</u></u>

operating activities of negative \$10 million. In fact, the unreported cash flow deficiency grew to \$114 million in 1973, while working capital from operations was reported as having increased by \$1 million. That year, without the benefit of cash flow information, investors were buying Grant's stock at prices that represented up to 20 times its earnings.²

²Cheryl A. Zega, "The New Statement of Cash Flows," *Management Accounting*, September 1988.

More recently, even with cash flow information available, cash flow problems can go unnoticed. An example is the rapid growth and subsequent bankruptcy of the **Wicks ‘N’ Sticks** franchise. The company’s drive for rapid growth led to a dependence on the sale of new franchises in order to generate cash flow instead of doing so in a more healthy way internally through its operations. As we see shortly, a statement of cash flows can indicate not just the amount of cash flows, but also whether those cash flows are coming from internal operations or from outside sources. Wicks ‘N’ Sticks was able to emerge from bankruptcy through restructuring and a new perspective on cash flow management.

Realize, too, that an unprofitable company with good cash flow can survive. **Amazon.com** provides an excellent example. Founded as an online seller of books in 1995, Amazon.com didn’t actually make a profit for a decade, but it did raise huge amounts of cash by selling stock, so much so that it was able to weather 10 years of sizable losses. The financing cash inflows funded expansion into many new lines of business and made up for the continual losses. Amazon now has positive operating cash flows and is profitable.

The Importance of Cash Flows in an Economic Decline

The near-collapse of **Bear Stearns** in the Spring of 2008 likely will be remembered as the single most dramatic event in exposing the fragility of Wall Street and precipitating the most severe financial crisis since the Great Depression. At the heart of Bear’s calamity and the subsequent worldwide economic decline was a shortage of cash flows. First Bear Stearns; then **Lehman Brothers**; then **AIG**, **Citigroup**, **Fannie Mae**, and **Freddie Mac**. As we know, it didn’t stop there. Each of these meltdowns involved a lack of measuring and monitoring the ebb and flow of cash.

When the financial industry is burdened with enormous amounts of uncollectible debt, as during the recent credit crisis, banks and others are reluctant to lend money. Cash becomes scarce. It’s critical for companies to monitor their cash flows.

Let’s say Lucky Strike Lures, Inc., manufactures fishing lures and sells them to a distributor. The distributor warehouses them before selling them to Bubba’s Bait Shop, where they are put on display awaiting customers to buy them. During an economic downturn, the customers may delay buying the lures or not buy them at all. So, the lures stay in the store gathering dust, and Bubba’s Bait can’t pay for the lures that haven’t sold. The distributor is then slow to pay Lucky Strike. Lucky Strike has bills to pay but no cash. In normal times, the company would go to the bank and borrow money. But in hard times, the bank is reluctant to lend. There is no quick fix as normal financing options are closed. Lucky Strike has cash flowing out, but not flowing in.

The survival and success of every business depends on its ability to create or otherwise attain cash. You can be profitable and still go broke. Companies must closely plan and monitor their cash flows to stay in business. During the recent economic decline, even some of the most well-known companies suffered the consequences of not following this principle.

Cash is king! Especially during an economic downturn.

The statement of cash flows for United Brands Corporation (UBC), shown in Illustration 21–2, is intended at this point in the discussion to illustrate the basic structure and composition of the statement. Later we will see how the statement of cash flows for UBC is prepared from the information typically available for this purpose. We will refer to UBC’s statement of cash flows frequently throughout the chapter as the discussion becomes more specific regarding the criteria for classifying cash flows in the three primary categories and as we identify the specific cash flows to be reported on the statement. We will examine the content of the statement in more detail following a look at how this relatively recent financial statement has evolved to its present form over the course of the last several decades.

Cash and Cash Equivalents

● LO21–2

Skilled cash managers will invest temporarily idle cash in short-term investments to earn interest on those funds, rather than maintain an unnecessarily large balance in a checking account. The FASB views short-term, highly liquid investments that can be readily converted to cash, with little risk of loss, as **cash equivalents**. Amounts held as investments

There is no differentiation between amounts held as cash and amounts held in cash equivalent investments.

Each firm's policy regarding which short-term, highly liquid investments it classifies as cash equivalents should be disclosed in the notes to the financial statements.

Illustration 21–3

Disclosure of Cash Equivalents—
ExxonMobil Corporation

Real World Financials

of this type are essentially equivalent to cash because they are quickly available for use as cash. Therefore, on the statement of cash flows there is no differentiation between amounts held as cash (e.g., currency and checking accounts) and amounts held in cash equivalent investments. So, when we refer in this chapter to cash, we are referring to the total of cash and cash equivalents.

Examples of cash equivalents are money market funds, Treasury bills, and commercial paper. To be classified as cash equivalents, these investments must have a maturity date not longer than three months from the date of purchase. Flexibility is permitted in designating cash equivalents. Each company must establish a policy regarding which short-term, highly liquid investments it classifies as cash equivalents. The policy should be consistent with the company's customary motivation for acquiring various investments and should be disclosed in the notes to the statement.³ A recent annual report of **ExxonMobil Corporation** provides this description of its cash equivalents (Illustration 21–3):

Note 4: Cash Flow Information (in part)

The consolidated statement of cash flows provides information about changes in cash and cash equivalents. Highly liquid investments with maturities of three months or less when acquired are classified as cash equivalents.

Transactions that involve merely transfers from cash to cash equivalents (such as the purchase of a three-month Treasury bill), or from cash equivalents to cash (such as the sale of a Treasury bill), should not be reported on the statement of cash flows. The total of cash and cash equivalents is not altered by such transactions.⁴ The cash balance reported in the balance sheet also represents the total of cash and cash equivalents, which allows us to compare the change in that balance with the net increase or decrease in the cash flows reported on the statement of cash flows.

Primary Elements of the Statement of Cash Flows

This section describes the three primary activity classifications: (1) operating activities, (2) investing activities, and (3) financing activities; and two other requirements of the statement of cash flows: (4) the reconciliation of the net increase or decrease in cash with the change in the balance of the cash account and (5) noncash investing and financing activities.

CASH FLOWS FROM OPERATING ACTIVITIES. The income statement reports the success of a business in generating a profit from its operations. Net income (or loss) is the result of netting together the revenues earned during the reporting period, regardless of when cash is received, and the expenses incurred in generating those revenues, regardless of when cash is paid. This is the accrual concept of accounting that has been emphasized throughout your study of accounting. Information about net income and its components, measured by the accrual concept, generally provides a better indication of current operating performance than does information about current cash receipts and payments.⁵ Nevertheless, as indicated earlier, the cash effects of earning activities also provide useful information that is not directly accessible from the income statement. The first cash flow classification in the statement of cash flows reports that information.

Cash flows from operating activities are both inflows and outflows of cash that result from activities reported in the income statement. In other words, this classification of cash flows includes the elements of net income, but reported on a cash basis. The components of this section of the statement of cash flows, and their relationship with the elements of the income statement, are illustrated in Illustration 21–4.

FINANCIAL Reporting Case

Q1, p. 1257

● LO21–3

The cash effects of the elements of net income are reported as cash flows from operating activities.

³A change in that policy is treated as a change in accounting principle.

⁴An exception is the sale of a cash equivalent at a gain or loss. This exception is described in more detail later in the chapter.

⁵FASB Concepts Statement No. 8, *Conceptual Framework for Financial Reporting*—Chapter 1, *The Objective of General Purpose Financial Reporting*, and Chapter 3, *Qualitative Characteristics of Useful Financial Information* (a replacement of FASB Concepts Statements No. 1 and No. 2), September 2010.

Income Statement	Cash Flows from Operating Activities
Revenues:	Cash inflows:
Sales and service revenue	Cash received from customers
Investment revenue	Cash revenue received (e.g., dividends, interest)
Noncash revenues and gains (e.g., gain on sale of assets)	(Not reported)
Less: Expenses:	Less: Cash outflows:
Cost of goods sold	Cash paid to suppliers of inventory
Salaries expense	Cash paid to employees
Noncash expenses and losses (e.g., depreciation, amortization, loss on sale of assets)	(Not reported)
Interest expense	Cash paid to creditors
Other operating expenses	Cash paid to insurance companies and others
Income tax expense	Cash paid to the government
Net income	Net cash flows from operating activities

Illustration 21–4

Relationship between the Income Statement and Cash Flows from Operating Activities (Direct Method)

To see the concept applied, let's look again at the cash flows from operating activities reported by United Brands Corporation. That section of the statement of cash flows is extracted from Illustration 21–2 and reproduced in Illustration 21–5.

Cash Flows from Operating Activities:	
Cash inflows:	
From customers	\$98
From investment revenue	3
Cash outflows:	
To suppliers of goods	(50)
To employees	(11)
For interest	(3)
For insurance	(4)
For income taxes	(11)
Net cash flows from operating activities	\$22

Illustration 21–5

Cash Flows from Operating Activities; Direct Method

Cash flows from operating activities are the elements of net income, but reported on a cash basis.

Cash inflows from operating activities exceeded cash outflows for expenses by \$22 million. We'll see later (in Illustration 21–9) that UBC's net income from the same operating activities was only \$12 million. Why did operating activities produce net cash inflows greater than net income? The reason will become apparent when we determine, in a later section, the specific amounts of these cash flows.

You also should be aware that the generalization stated earlier that cash flows from operating activities include the elements of net income reported on a cash basis is not strictly true for all elements of the income statement. Notice in Illustration 21–5 that no cash effects are reported for depreciation and amortization of property, plant, and equipment, and intangibles, nor for gains and losses from the sale of those assets. Cash outflows occur when these assets are acquired, and cash inflows occur when the assets are sold. However, as described later, the acquisition and subsequent resale of these assets are classified as investing activities, rather than as operating activities.

Quite the opposite, the purchase and the sale of inventory are considered operating activities. The cash effects of these transactions—namely, (1) cash payments to suppliers and (2) cash receipts from customers—are included in the determination of cash flows from operating activities. Why are inventories treated differently from property, plant, equipment, and intangible assets when classifying their cash effects if they all are acquired for the purpose of producing revenues? The essential difference is that inventory typically is purchased for the purpose of being sold as part of the firm's current operations, while the other assets are purchased as investments to benefit the business over a relatively long period of time.

DIRECT METHOD OR INDIRECT METHOD OF REPORTING CASH FLOWS FROM OPERATING ACTIVITIES.

The presentation by UBC of cash flows from operating activities illustrated in Illustration 21–2 and reproduced in Illustration 21–5 is referred to as the **direct method**. The method is named for the fact that the cash effect of each operating activity (i.e., income statement item) is reported *directly* on the statement of cash flows. For instance, UBC reports “cash received from customers” as the cash effect of sales activities, “cash paid to suppliers” as the cash effect of cost of goods sold, and so on. Then, UBC simply omits from the presentation any income statement items that do not affect cash at all, such as depreciation expense.

● LO21–4

Another way UBC might have reported cash flows from operating activities is by the **indirect method**. By this approach, the net cash increase or decrease from operating activities (\$22 million in our example) would be derived *indirectly* by starting with reported net income and working backwards to convert that amount to a cash basis. As we see later in the chapter, UBC’s net income is **\$12 million**. Using the indirect method, UBC would replace the previous presentation of net cash flows from operating activities with the one shown in Illustration 21–6.

Illustration 21–6

Cash Flows from Operating Activities; Indirect Method

By the indirect method, UBC derives the net cash increase or decrease from operating activities indirectly, by starting with reported net income and working backwards to convert that amount to a cash basis.

Cash Flows from Operating Activities:

Net income	\$12	
<i>Adjustments for noncash effects:</i>		
Gain on sale of land	(8)	
Depreciation expense	3	
Loss on sale of equipment	2	
<i>Changes in operating assets and liabilities:</i>		
Increase in accounts receivable	(2)	
Decrease in inventory	4	
Increase in accounts payable	6	
Increase in salaries payable	2	
Decrease in discount on bonds payable	2	
Decrease in prepaid insurance	3	
Decrease in income tax payable	(2)	
<i>Net cash flows from operating activities</i>	\$22	

Be sure to note that the indirect method generates the same \$22 million net cash flows from operating activities as the direct method. Rather than directly reporting only the components of the income statement that *do* represent increases or decreases in cash, by the indirect method we begin with net income—which includes both cash and noncash components—and back out all amounts that *don’t* reflect increases or decreases in cash. Later in the chapter, we explore the specific adjustments made to net income to achieve this result. At this point it is sufficient to realize that two alternative methods are permitted for reporting net cash flows from operating activities. Either way, we convert accrual-based income to cash flows produced by those same operating activities.

Notice also that the indirect method presentation is identical to what UBC reported earlier as the “Reconciliation of Net Income to Cash Flows from Operating Activities” in Note X of Illustration 21–2. Whether cash flows from operating activities are reported by the direct method or by the indirect method, the financial statements must reconcile the difference between net income and cash flows from operating activities. When a company uses the *direct method*, the company presents the reconciliation in a separate schedule as UBC does. That presentation is precisely the same as the presentation of net cash flows from operating activities by the indirect method. On the other hand, a company choosing to use the indirect method is not required to provide a separate reconciliation schedule because the “cash flows from operating activities” section of the statement of cash flows serves that purpose. Most companies use the indirect method.⁶ This is slated to change.

⁶According to the AICPA, *Accounting Trends and Techniques*, 2011, a recent survey of 600 companies showed that 594 companies chose to use the indirect method, only 6 the direct method.

A joint project of the FASB and IASB is under way that would require the direct method and disallow the indirect method.⁷

Where We're Headed

The FASB and IASB are working together on a project, Financial Statement Presentation, to establish a common standard for presenting information in the financial statements, including disaggregating information by classifying and displaying line items into subtotals and totals. This standard would have a dramatic impact on the format of financial statements. An important part of the proposal involves the organization of elements of the balance sheet (statement of financial position), statement of comprehensive income (including the income statement), and statement of cash flows into a common set of classifications.

The statement of cash flows is slated to change in several ways. First, though, we should note that the three major classifications of cash flows are retained. In fact, each of the other financial statements also will include classifications by operating, investing, and financing activities, providing a “cohesive” financial picture that stresses the relationships among the financial statements.

For each statement, though, operating and investing activities will be included within a new category, “business” activities. Each statement also will include two additional groupings: discontinued operations and income taxes (if needed). The statements of comprehensive income and cash flows also would include a multi-category section. The new look for the financials would be:⁸

Statement of Financial Position	Statement of Comprehensive Income	Statement of Cash Flows
Business <ul style="list-style-type: none"> • Operating assets and liabilities • Investing assets and liabilities 	Business <ul style="list-style-type: none"> • Operating income and expenses • Investing income and expenses 	Business <ul style="list-style-type: none"> • Operating cash flows • Investing cash flows
Financing <ul style="list-style-type: none"> • Debt • Equity 	Financing <ul style="list-style-type: none"> • Debt expense 	Financing <ul style="list-style-type: none"> • Debt cash flows • Equity cash flows
	Multi-category transactions	Multi-category transactions
Income Taxes	Income Taxes	Income Taxes
Discontinued Operations	Discontinued Operations (net of tax)	Discontinued Operations
	Other Comprehensive Income (net of tax)	

One change planned for the statement of cash flows is to no longer permit a choice between the direct method and the indirect method, but to require the direct method, reasoning that it provides more useful information to investors. Also, while we still will have operating, investing, and financing activities, some cash flows will switch categories. Under what's called a “management approach,” cash flows will be classified based on how related assets and liabilities are used by management. For instance, expenditures for property, plant and equipment likely would be classified as operating, because those assets are used in the “core” business. Investing activities would be limited primarily to investments in stock, bonds, and other securities. The multi-category sections primarily encompass the acquisition and sale of other companies since they include assets and liabilities in different categories.

The FASB and IASB are working together on a standard that would have a dramatic impact on the format of financial statements.

● LO21-9

Demonstrating the cohesiveness among the financial statements is a key objective of the Financial Statement Presentation project.

The proposed new Standard would require the direct method.

⁷Financial Statement Presentation, Staff Draft of an Exposure Draft, July 2010, par. S28.

⁸Based on a Staff Draft of an Exposure Draft prepared by the staff of the FASB and the IASB that reflects the cumulative, tentative decisions made by the Boards as of the date this text was published. The proposals are subject to change.

It's important to understand, too, that regardless of which method a company chooses to report *operating* activities, that choice has no effect on the way it identifies and reports cash flows from *investing* and *financing* activities. We turn our attention now to those two sections of the statement of cash flows. Later in Part C, we'll return for a more thorough discussion of the alternative methods of reporting the operating activities section.

FINANCIAL Reporting Case

Q2, p. 1257

● LO21-5

Cash outflows and cash inflows due to the acquisition and disposition of assets (other than inventory and assets classified as cash equivalents) are reported as cash flows from investing activities.

Illustration 21-7

Cash Flows from Investing Activities

Cash flows from investing activities include investments in assets and their subsequent sale.

CASH FLOWS FROM INVESTING ACTIVITIES. Companies periodically invest cash to replace or expand productive facilities such as property, plant, and equipment. Investments might also be made in other assets, such as securities of other firms, with the expectation of a return on those investments. Information concerning these investing activities can provide valuable insight to decision makers regarding the nature and magnitude of assets being acquired for future use, as well as provide clues concerning the company's ambitions for the future.

Cash flows from investing activities are both outflows and inflows of cash caused by the acquisition and disposition of assets. Included in this classification are cash payments to acquire (1) property, plant, and equipment and other productive assets (except inventories), (2) investments in securities (except cash equivalents and trading securities⁹), and (3) nontrade receivables.¹⁰ When these assets later are liquidated, any cash receipts from their disposition also are classified as investing activities. For instance, cash received from the sale of the assets or from the collection of a note receivable (principal amount only) represents cash inflows from investing activities. Be sure to realize that, unlike the label might imply, any investment revenue like interest, dividends, or other cash return from these investments is not an investing activity. The reason, remember, is that investment revenue is an income statement item and therefore is an operating activity.

For illustration, notice the cash flows reported as investing activities by UBC. That section of the statement of cash flows is extracted from the complete statement in Illustration 21-2 and reproduced in Illustration 21-7.

Cash Flows from Investing Activities:

Purchase of land	\$(30)	
Purchase of short-term investment	(12)	
Sale of land	18	
Sale of equipment	5	
<i>Net cash flows from investing activities</i>	\$ (19)	

UBC reports as investing activities the cash paid to purchase both land and a short-term investment. The other two investing activities reported are cash receipts for the sale of assets—equipment and land—that were acquired in earlier years. The specific transactions creating these cash flows are described in a later section of this chapter.

The purchase and sale of inventories are not considered investing activities. Inventories are purchased for the purpose of being sold as part of the firm's primary operations, so their purchase and sale are classified as operating activities.

Also, the purchase and sale of assets classified as cash equivalents are not reported as investing activities. In fact, these activities usually are not reported on the statement of cash flows. For example, when temporarily idle cash is invested in a money market fund considered to be a cash equivalent, the total of cash and cash equivalents does not change. Likewise, when the cash is later withdrawn from the money market fund, the total remains unchanged. The exception is when cash equivalents are sold at a gain or a loss. In that case, the total of cash and cash equivalents actually increases or decreases in the process

⁹Inflows and outflows of cash from buying and selling trading securities typically are considered operating activities because financial institutions that routinely transact in trading securities consider them an appropriate part of their normal operations.

¹⁰A nontrade receivable differs from a trade receivable in that it is not one associated with the company's normal trade; that is, it's not received from a customer. A trade receivable, or accounts receivable, is an *operating asset*. A nontrade receivable, on the other hand, might be a loan to an affiliate company or to an officer of the firm. To understand how the creation of a nontrade receivable is an *investing* activity, you might view such a loan as an investment in the receivable.

of transferring from one cash equivalent account to another cash equivalent account. As a result, the change in cash would be reported as a cash flow from operating activities. This is illustrated later in the chapter.

CASH FLOWS FROM FINANCING ACTIVITIES. Not only is it important for investors and creditors to be informed about how a company is investing its funds, but also how its investing activities are being financed. Hopefully, the primary operations of the firm provide a source of internal financing. Information revealed in the cash flows from operating activities section of the statement of cash flows lets statement users know the extent of available internal financing. However, a major portion of financing for many companies is provided by external sources, specifically by shareholders and creditors.

Cash flows from financing activities are both inflows and outflows of cash resulting from the external financing of a business. We include in this classification cash inflows from (a) the sale of common and preferred stock and (b) the issuance of bonds and other debt securities. Subsequent transactions related to these financing transactions, such as a buyback of stock (to retire the stock or as treasury stock), the repayment of debt, and the payment of cash dividends to shareholders, also are classified as financing activities.

For illustration, refer to Illustration 21–8 excerpted from the complete statement of cash flows of UBC in Illustration 21–2.

Cash Flows from Financing Activities:

Sale of common shares	\$26	
Retirement of bonds payable	(15)	
Payment of cash dividends	(5)	
<i>Net cash flows from financing activities</i>		<u>\$6</u>

The cash received from the sale of common stock is reported as a financing activity. Since the sale of common stock is a financing activity, providing a cash return (dividend) to common shareholders also is a financing activity. Similarly, when the bonds being retired were issued in a prior year, that cash inflow was reported as a financing activity. In the current year, when the bonds are retired, that same amount of the resulting cash outflow is likewise classified as a financing activity.

At first glance, it may appear inconsistent to classify the payment of cash dividends to shareholders as a financing activity when, as stated earlier, paying interest to creditors is classified as an operating activity. But remember, cash flows from operating activities should reflect the cash effects of items that enter into the determination of net income. Interest expense is a determinant of net income. A dividend, on the other hand, is a distribution of net income and not an expense.

RECONCILIATION WITH CHANGE IN CASH BALANCE. One of the first items you may have noticed about UBC's statement of cash flows is that there is a net change in cash of \$9 million. Is this a significant item of information provided by the statement? The primary objective of the statement of cash flows is not to tell us that cash increased by \$9 million. We can readily see the increase or decrease in cash by comparing the beginning and ending balances in the cash account in comparative balance sheets. Instead, the purpose of the statement of cash flows is to explain *why* cash increased by \$9 million.

To reinforce the fact that the net amount of cash inflows and outflows explains the change in the cash balance, the statement of cash flows includes a reconciliation of the net increase (or decrease) in cash with the company's beginning and ending cash balances. Notice, for instance, that on UBC's statement of cash flows, the reconciliation appears as:

Net Increase in Cash	\$ 9
Cash balance, January 1	<u>20</u>
Cash balance, December 31	<u>\$29</u>

FINANCIAL Reporting Case

Q3, p. 1257

● LO21–6

Cash inflows and cash outflows due to the external financing of a business are reported as cash flows from financing activities.

Illustration 21–8

Cash Flows from Financing Activities

Cash flows from financing activities include the sale or repurchase of shares, the issuance or repayment of debt securities, and the payment of cash dividends.

Interest, unlike dividends, is a determinant of net income and therefore an operating activity.

The net amount of cash inflows and outflows reconciles the change in the company's beginning and ending cash balances.

NONCASH INVESTING AND FINANCING ACTIVITIES. Suppose UBC were to borrow \$20 million cash from a bank, issuing a long-term note payable for that amount. This transaction would be reported on a statement of cash flows as a financing activity. Now suppose UBC used that \$20 million cash to purchase new equipment. This second transaction would be reported as an investing activity.

- LO21-7 Instead of two separate transactions, as indicated by Illustration 21-2, UBC acquired \$20 million of new equipment by issuing a \$20 million long-term note payable in a single transaction. Undertaking a significant investing activity and a significant financing activity as two parts of a single transaction does not diminish the value of reporting these activities. For that reason, transactions that do not increase or decrease cash, but which result in significant investing and financing activities, must be reported in related disclosures.

These **noncash investing and financing activities**, such as UBC's acquiring equipment (an investing activity) by issuing a long-term note payable (a financing activity), are reported in a separate disclosure schedule or note. UBC reported this transaction in the following manner:

Noncash Investing and Financing Activities:

Acquired \$20 million of equipment by issuing a 12%, 5-year note.

It's convenient to report noncash investing and financing activities on the same page as the statement of cash flows as did UBC only if there are few such transactions. Otherwise, precisely the same information would be reported in disclosure notes to the financial statements.¹¹

Examples of noncash transactions that would be reported in this manner are:

1. Acquiring an asset by incurring a debt payable to the seller.
2. Acquiring use of an asset by entering into a lease agreement.
3. Converting debt into common stock or other equity securities.
4. Exchanging noncash assets or liabilities for other noncash assets or liabilities.

Noncash transactions that do not affect a company's assets or liabilities, such as the distribution of stock dividends, are not considered investing or financing activities and are not reported. Recall from Chapter 18 that stock dividends merely increase the number of shares of stock owned by existing shareholders. From an accounting standpoint, the stock dividend causes a dollar amount to be transferred from one part of shareholders' equity (retained earnings) to another part of shareholders' equity (paid-in capital). Neither assets nor liabilities are affected; therefore, no investing or financing activity has occurred.

Preparation of the Statement of Cash Flows

- LO21-8 The objective in preparing the statement of cash flows is to identify all transactions and events that represent operating, investing, or financing activities and to list and classify those activities in proper statement format. A difficulty in preparing a statement of cash flows is that typical accounting systems are not designed to produce the specific information we need for the statement. At the end of a reporting cycle, balances exist in accounts reported in the income statement (sales revenue, cost of goods sold, etc.) and the balance sheet (accounts receivable, common stock, etc.). However, the ledger contains no balances for cash paid to acquire equipment, or cash received from sale of land, or any other cash flow needed for the statement. As a result, it's necessary to find a way of using available information to reconstruct the various cash flows that occurred during the reporting period. Typically, the information available to assist the statement preparer includes an income statement for the year and balance sheets for both the current and preceding years (comparative statements). The accounting records also can provide additional information about transactions that caused changes in account balances during the year.

¹¹FASB ASC 230-10-50-6: Statement of Cash Flows—Overall—Disclosure—Noncash Investing and Financing Activities (previously “Statement of Cash Flows,” *Statement of Financial Accounting Standards No. 95* (Stamford, Conn.: FASB, 1987), par. 74).

Significant noncash investing and financing activities are reported also.

Additional Consideration

A transaction involving an investing and financing activity may be part cash and part noncash. For example, a company might pay cash for a part of the purchase price of new equipment and issue a long-term note for the remaining amount. In our previous illustration, UBC issued a note payable for the \$20 million cost of the equipment it acquired. Suppose the equipment were purchased in the following manner:

Equipment	20	
Cash		6
Note payable		14

In that case, \$6 million would be reported under the caption “Cash flows from investing activities,” and the noncash portion of the transaction—issuing a \$14 million note payable for \$14 million of equipment—would be reported as a “noncash investing and financing activity.” UBC’s statement of cash flows, if modified by the assumption of a part cash/part noncash transaction, would report these two elements of the transaction as follows:

Cash Flows from Investing Activities:

Purchase of land	\$(30)	
Purchase of short-term investments	(12)	
Sale of land	18	
Sale of equipment	5	
Purchase of equipment	<u>(6)</u>	
Net cash flows from investing activities		\$(25)

Noncash Investing and Financing Activities:

Acquired \$20 million of equipment by paying cash and issuing a 12%, 5-year note as follows:		
Cost of equipment	\$20 million	
Cash paid	<u>(6 million)</u>	
Note issued		\$14 million

The typical year-end data is provided for UBC in Illustration 21–9 on the next page. We have referred frequently to the statement of cash flows of UBC to illustrate the nature of the activities the statement reports. Now we will see how that statement is developed from the data provided in that illustration.

In situations involving relatively few transactions, it is possible to prepare the statement of cash flows by merely inspecting the available data and logically determining the reportable activities. Few real-life situations are sufficiently simple to be solved this way. Usually, it is more practical to use some systematic method of analyzing the available data to ensure that all operating, investing, and financing activities are detected. A common approach is to use either a manual or electronic spreadsheet to organize and analyze the information used to prepare the statement.¹²

Whether the statement of cash flows is prepared by an unaided inspection and analysis or with the aid of a systematic technique such as spreadsheet analysis, the analytical process is the same. To identify the activities to be reported on the statement, we use available data to reconstruct the events and transactions that involved operating, investing, and financing activities during the year. It is helpful to reproduce the journal entries that were recorded at the time of the transaction. Examining reconstructed journal entries makes it easier to visualize whether a reportable activity is involved and how that activity is to be classified.

Reconstructing the events and transactions that occurred during the period helps identify the operating, investing, and financing activities to be reported.

¹²The T-account method is a second systematic approach to the preparation of the statement of cash flows. This method is identical in concept and similar in application to the spreadsheet method. The T-account method is used to prepare the statement of cash flows for UBC in Appendix 21B.

Net income		<u>\$ 12</u>
Additional Information from the Accounting Records		
a. A portion of company land, purchased in a previous year for \$10 million, was sold for \$18 million.		
b. Equipment that originally cost \$14 million, and which was one-half depreciated, was sold for \$5 million cash.		
c. The common shares of Mazuma Corporation were purchased for \$12 million as a short-term investment.		
d. Property was purchased for \$30 million cash for use as a parking lot.		
e. On December 30, 2013, new equipment was acquired by issuing a 12%, five-year, \$20 million note payable to the seller.		
f. On January 1, 2013, \$15 million of bonds (issued 20 years ago at their face amount) were retired at maturity.		
g. The increase in the common stock account is attributable to the issuance of a 10% stock dividend (1 million shares) and the subsequent sale of 2 million shares of common stock. The market price of the \$10 par value common stock was \$13 per share on the dates of both transactions.		
h. Cash dividends of \$5 million were paid to shareholders.		

Next, in Part B, we see how a spreadsheet simplifies the process of preparing a statement of cash flows. Even if you choose not to use a spreadsheet, the summary entries described can be used to help you find the cash inflows and outflows you need to prepare a statement of cash flows. For this demonstration, we assume the direct method is used to determine and report cash flows from operating activities. Appreciation of the direct method provides the backdrop for a thorough understanding of the indirect method that we explore in Part C.

PREPARING THE SCF: DIRECT METHOD OF REPORTING CASH FLOWS FROM OPERATING ACTIVITIES

PART B

Using a Spreadsheet

An important advantage gained by using a spreadsheet is that it ensures that no reportable activities are inadvertently overlooked. Spreadsheet analysis relies on the fact that, in order for cash to increase or decrease, there must be a corresponding change in an account other than cash. Therefore, if we can identify the events and transactions that caused the change in each noncash account during the year, we will have identified all the operating, investing, and financing activities that are to be included in the statement of cash flows.

The beginning and ending balances of each account are entered on the spreadsheet. Then, as journal entries are reconstructed in our analysis of the data, those entries are recorded on the spreadsheet so that the debits and credits of the spreadsheet entries explain the changes in the account balances. Only after spreadsheet entries have explained the changes in all account balances, can we feel confident that all operating, investing, and financing activities have been identified. The spreadsheet is designed in such a way that, as we record spreadsheet entries that explain account balance changes, we are simultaneously identifying and classifying the activities to be reported on the statement of cash flows.

We begin by transferring the comparative balance sheets and income statement to a blank spreadsheet. For illustration, refer to the 2013 and 2012 balances in the completed spreadsheet for UBC, shown in Illustration 21–9A on the next two pages. Notice that the amounts for elements of the income statement are ending balances resulting from accumulations during the year. Beginning balances in each of these accounts are always zero.

Following the balance sheets and income statement, we allocate space on the spreadsheet for the statement of cash flows. Although at this point we have not yet identified the specific cash flow activities shown in the completed spreadsheet, we can include headings for the major categories of activities: cash flows from operating activities, cash flows from investing activities, and cash flows from financing activities. Leaving several lines between headings allows adequate space to include the specific cash flows identified in subsequent analysis.

The spreadsheet entries shown in the two changes columns, which separate the beginning and ending balances, explain the increase or decrease in each account balance. You will see in the next section how these entries were reconstructed. Although spreadsheet entries are in the form of debits and credits like journal entries, they are entered on the spreadsheet only. They are not recorded in the formal accounting records. In effect, these entries duplicate, frequently in summary form, the actual journal entries used to record the transactions as they occurred during the year.

To reconstruct the journal entries, we analyze each account, one at a time, deciding at each step what transaction or event caused the change in that account. Often, the reason for the change in an account balance is readily apparent from viewing the change in conjunction with that of a related account elsewhere in the financial statements. Sometimes it is necessary to consult the accounting records for additional information to help explain the transaction that resulted in the change.

You may find it helpful to diagram in T-account format the relationship between accounts to better visualize certain changes, particularly in your initial study of the chapter. The analysis that follows is occasionally supplemented with such diagrams to emphasize *why*, rather than merely *how*, specific cash flow amounts emerge from the analysis.

There can be no cash inflow or cash outflow without a corresponding change in a noncash account.

Recording spreadsheet entries that explain account balance changes simultaneously identifies and classifies the activities to be reported on the statement of cash flows.

Spreadsheet entries duplicate the actual journal entries used to record the transactions as they occurred during the year.

X—As explained later, the X's serve as a reminder to report this noncash transaction.

Although there is no mandatory order in which to analyze the accounts, it is convenient to begin with the income statement accounts, followed by the balance sheet accounts. We analyze the accounts of UBC in that order below. Although our analysis of each account culminates in a spreadsheet entry, keep in mind that the analysis described also is appropriate to identify reportable activities when a spreadsheet is not used.¹³

Income Statement Accounts

As described in an earlier section, cash flows from operating activities are inflows and outflows of cash that result from activities reported in the income statement. Thus, to identify those cash inflows and outflows, we begin by analyzing the components of the income statement. It is important to keep in mind that the amounts reported in the income statement usually do not represent the cash effects of the items reported. For example, UBC reports sales revenue of \$100 million. This does not mean, however, that it collected \$100 million cash from customers during the year. In fact, by referring to the beginning and ending balances in accounts receivable, we see that cash received from customers could not have been \$100 million. Since accounts receivable increased during the year, some of the sales revenue earned must not yet have been collected. This is explained further in the next section.

The cash effects of other income statement elements can be similarly discerned by referring to changes in the balances of the balance sheet accounts that are directly related to those elements. So, to identify cash flows from operating activities we examine, one at a time, the elements of the income statement in conjunction with any balance sheet accounts affected by each element.

1. SALES REVENUE. Accounts receivable is the balance sheet account that is affected by sales revenue. Specifically, accounts receivable is increased by credit sales and is decreased as cash is received from customers. We can compare sales and the change in accounts receivable during the year to determine the amount of cash received from customers. This relationship can be viewed in T-account format as follows:

Accounts Receivable			
Beginning balance	30		
Credit sales (increases A/R)	100	?	Cash received (decreases A/R)
Ending balance	32		

Amounts reported in the income statement usually are not the same as the cash effects of the items reported.

¹³The spreadsheet entries also are used to record the same transactions when the T-account method is used. We refer again to these entries when that method is described in Appendix 21B.

We see from this analysis that cash received from customers must have been \$98 million. Note that even if some of the year's sales were cash sales, say \$40 million cash sales and \$60 million credit sales, the result is the same:

Accounts Receivable				
Beginning balance	30		Cash sales	\$40
Credit sales	60	58 →	Received on account	<u>58</u>
Ending balance	32		Cash received	\$98

Thus, cash flows from operating activities should include cash received from customers of **\$98 million**. The net effect of sales revenue activity during the year can be summarized in the following entry.

Relating sales and the change in accounts receivable during the period helps determine the amount of cash received from customers.

	(\$ in millions)	
Entry (1) Cash (received from customers)	98	
Accounts receivable (given)	2	
Sales revenue (\$100 – 0)		100

The entry above appears as entry (1) in the completed spreadsheet for UBC, shown in Illustration 21–9A. The entry explains the changes in two account balances—accounts receivable and sales revenue. Since the entry affects cash, it also identifies a cash flow to be reported on the statement of cash flows. The **\$98 million** debit to cash is therefore entered in the statement of cash flows section of the spreadsheet under the heading of cash flows from operating activities.

Additional Consideration

The preceding discussion describes the most common situation—companies earn revenue by selling goods and services, increase accounts receivable, and then collect the cash and decrease accounts receivable later. Some companies, though, often collect the cash in advance of earning it, record unearned revenue, and then later record revenue and decrease unearned revenue. In those cases, we need to analyze any changes in the unearned revenue account for differences between revenue reported and cash collected. For instance, if UBC also had a \$1 million increase in unearned revenue, the summary entry would be modified as follows:

	(\$ in millions)	
Entry (1) Cash (received from customers)	99	
Accounts receivable (given)	2	
Unearned revenue (given)		1
Sales revenue (\$100 – 0)		100

Notice that we enter the cash portion of entry (1) as one of several cash flows on the statement of cash flows rather than as a debit to the cash account. Only after all cash inflows and outflows have been identified will the net change in cash be entered as a debit to the cash account. In fact, the entry to reconcile the \$9 million increase in the cash account and the \$9 million net increase in cash on the statement of cash flows will serve as a final check of the accuracy of our spreadsheet analysis.

The remaining summary entries are described in subsections 2 through 19. When including the entries on the spreadsheet, it is helpful to number the entries sequentially to provide a means of retracing the steps taken in the analysis if the need arises. You also may find it helpful to put a check mark (✓) to the right of the ending balance when the change in

that balance has been explained. Then, once you have check marks next to every noncash account, you will know you are finished.

2. INVESTMENT REVENUE. The income statement reports investment revenue of \$3 million. Before concluding that this amount was received in cash, we first refer to the balance sheets to see whether a change in an account there indicates otherwise. A change in either of two balance sheet accounts, (a) investment revenue receivable or (b) long-term investments, might indicate that cash received from investment revenue differs from the amount reported in the income statement.

- If we observe either an increase or a decrease in an *investment revenue receivable* account (e.g., interest receivable, dividends receivable), we would conclude that the amount of cash received during the year was less than (if an increase) or more than (if a decrease) the amount of revenue reported. The analysis would be identical to that of sales revenue and accounts receivable.
- Also, an unexplained increase in a *long-term investment* account might indicate that a portion of investment revenue has not yet been received in cash. Recall from Chapter 12 that when using the equity method to account for investments in the stock of another corporation, investment revenue is recognized as the investor's percentage share of the investee's income, whether or not the revenue is received currently as cash dividends. For example, assume the investor owns 25% of the common stock of a corporation that reports net income of \$12 million and pays dividends of \$4 million. This situation would have produced a \$2 million increase in long-term investments, which can be demonstrated by reconstructing the journal entries for the recognition of investment and the receipt of cash dividends:

Changes in related accounts might indicate that investment revenue reported in the income statement is a different amount from cash received from the investment.

	(\$ in millions)	
Long-term investments	3	
Investment revenue ($\$12 \times 25\%$)		3
Cash ($\$4 \times 25\%$)	1	
Long-term investments		1

A combined entry would produce the same results:

Long-term investments	2	
Cash ($\$4 \times 25\%$)	1	
Investment revenue ($\$12 \times 25\%$)		3

The \$2 million net increase in long-term investments would represent the investment revenue not received in cash. This would also explain why there is a \$3 million increase (credit) in investment revenue. If these events had occurred, we would prepare a spreadsheet entry identical to the combined entry above. The spreadsheet entry would (a) explain the \$2 million increase in long-term investments, (b) explain the \$3 million increase in investment revenue, and (c) identify a \$1 million cash inflow from operating activities.

However, because neither an investment revenue receivable account nor a long-term investment account appears on the comparative balance sheets, we can conclude that \$3 million of investment revenue was collected in cash. Entry (2) on the spreadsheet is:

Because no other transactions are apparent that would have caused a change in investment revenue, we can conclude that \$3 million of investment revenue was collected in cash.

	(\$ in millions)	
Entry (2) Cash (received from investment revenue)	3	
Investment revenue ($\$3 - 0$)		3

3. GAIN ON SALE OF LAND. The third item reported in the income statement is an \$8 million gain on the sale of land. Recall that our objective in analyzing each element of the statement is to determine the cash effect of that element. To do so, we need additional

information about the transaction that caused this gain. The accounting records—item (a) in Illustration 21–9—indicate that land that originally cost \$10 million was sold for \$18 million. The entry recorded in the journal when the land was sold also serves as our summary entry:

A gain (or loss) is simply the difference between cash received in the sale of an asset and the book value of the asset—not a cash flow.

	(\$ in millions)
Entry (3) Cash (received from sale of land)	18
Land (given)	10
Gain on sale of land (\$8 – 0)	8

The cash effect of this transaction is a cash increase of \$18 million. We therefore include the debit as a cash inflow in the statement of cash flows section of the spreadsheet. However, unlike the cash effect of the previous two spreadsheet entries, it is not reported as an operating activity. The sale of land is an *investing* activity, so this cash inflow is listed under that heading of the spreadsheet. The entry also accounts for the \$8 million gain on sale of land. The \$10 million credit to land does not, by itself, explain the \$20 million increase in that account. As we will later discover, another transaction also affected the land account.

It is important to understand that the gain is simply the difference between cash received in the sale of land (reported as an investing activity) and the book value of the land. To report the \$8 million gain as a cash flow from operating activities, in addition to reporting \$18 million as a cash flow from investing activities, would be to report the \$8 million twice.

4. COST OF GOODS SOLD. During the year UBC sold goods that had cost \$60 million. This does not necessarily indicate that \$60 million cash was paid to suppliers of those goods. To determine the amount of cash paid to suppliers, we look to the two current accounts affected by merchandise purchases—inventory and accounts payable. The analysis can be viewed as a two-step process.

First, we compare cost of goods sold with the change in inventory to determine the cost of goods *purchased* (not necessarily cash paid) during the year. To facilitate our analysis, we can examine the relationship in T-account format:

Inventory			
Beginning balance	50		
Cost of goods purchased <i>(increases inventory)</i>	?	60	Cost of goods sold <i>(decreases inventory)</i>
Ending balance	46		

Determining the amount of cash paid to suppliers means looking at not only the cost of goods sold, but also the changes in both inventory and accounts payable.

From this analysis, we see that \$56 million of goods were *purchased* during the year. It is not necessarily true, though, that \$56 million cash was paid to suppliers of these goods. By looking in accounts payable, we can determine the cash paid to suppliers:

Accounts Payable			
		20	Beginning balance
Cash paid to suppliers <i>(decreases A/P)</i>	?	56	Cost of goods purchased <i>(increases A/P)</i>
		26	Ending Balance

We now see that cash paid to suppliers was \$50 million. The entry that summarizes merchandise acquisitions is:

Although \$60 million of goods were sold during the year, only \$50 million cash was paid to suppliers of these goods.

	(\$ in millions)
Entry (4) Cost of goods sold (\$60 – 0)	60
Inventory (\$46 – 50)	4
Accounts payable (\$26 – 20)	6
Cash (paid to suppliers of goods)	50

5. SALARIES EXPENSE. The balance sheet account affected by salaries expense is salaries payable. By analyzing salaries expense in relation to the change in salaries payable, we can determine the amount of cash paid to employees:

Salaries Payable	
	1 Beginning balance
Cash paid to employees <i>(decreases salaries payable)</i>	13 Salaries expense <i>(increases salaries payable)</i>
	3 Ending Balance

This analysis indicates that only **\$11 million** cash was paid to employees; the remaining \$2 million of salaries expense is reflected as an increase in salaries payable.

Viewing the relationship in journal entry format provides the same conclusion and also gives us the entry in our spreadsheet analysis:

	(\$ in millions)
Entry (5) Salaries expense (\$13 – 0)	13
Salaries payable (\$3 – 1)	2
Cash (paid to employees)	11

Although salaries expense was \$13 million, only **\$11 million** cash was paid to employees.

6. DEPRECIATION EXPENSE. The income statement reports depreciation expense of \$3 million. The entry used to record depreciation, which also serves as our summary entry, is:

	(\$ in millions)
Entry (6) Depreciation expense (\$3 – 0)	3
Accumulated depreciation	3

Depreciation expense does not require a current cash expenditure.

Depreciation is a noncash expense. It is merely an allocation in the current period of a prior cash expenditure (for the depreciable asset). Therefore, unlike the other entries to this point, the depreciation entry has no effect on the statement of cash flows. However, it does explain the change in the depreciation expense account and a portion of the change in accumulated depreciation.

7. INTEREST EXPENSE. Recall from Chapter 14 that bond interest expense differs from the amount of cash paid to bondholders when bonds are issued at either a premium or a discount. The difference between the two amounts is the reduction of the premium or discount. By referring to the balance sheet, we see that UBC's bonds were issued at a discount. Since we know that bond interest expense is \$5 million and that \$2 million of the discount was reduced in 2013, we can determine that **\$3 million** cash was paid to bondholders by recreating the entry that summarizes the recording of bond interest expense.

	(\$ in millions)
Entry (7) Interest expense (\$5 – 0)	5
Discount on bonds payable (\$1 – 3)	2
Cash (paid to bondholders)	3

Bond interest expense is not the same as the amount of cash paid to bondholders when bonds are issued at either a premium or a discount.

Recording this entry on the spreadsheet explains the change in both the bond interest expense and discount on bonds payable accounts. It also provides us with another cash outflow from operating activities. Of course, if a premium were being reduced, rather than a discount, the cash outflow would be *greater* than the expense.

8. INSURANCE EXPENSE. A decrease of \$3 million in the prepaid insurance account indicates that cash paid for insurance coverage was \$3 million less than the \$7 million insurance expense for the year. Viewing prepaid insurance in T-account format clarifies this point.

Additional Consideration

If the balance sheet had revealed an increase or decrease in an accrued bond interest payable account, the entry calculating cash paid to bondholders would require modification. For example, if UBC had a bond interest payable account, and that account had increased (a credit) by \$1 million, the entry would have been:

		(\$ in millions)
Entry (7)	Interest expense	5
(revised) Discount on bonds payable		2
Interest payable		1
Cash (paid to bondholders)		2

If the amount owed to bondholders increased by \$1 million, they obviously were paid \$1 million less cash than if there had been no change in the amount owed them. Similarly, if bond interest payable decreased by \$1 million, the opposite would be true; that is, cash paid to them would have been \$1 million more.

Prepaid Insurance

Beginning balance	6		
Cash paid for insurance <i>(increases prepaid insurance)</i>	?	7	Insurance expense <i>(decreases prepaid insurance)</i>
Ending balance	3		

From this analysis, we can conclude that **\$4 million** was paid for insurance. We reach the same conclusion by preparing the following spreadsheet entry:

Since \$3 million of prepaid insurance was allocated to insurance expense, only **\$4 million** of the expense was paid in cash during the period.

		(\$ in millions)
Entry (8)	Insurance expense (\$7 – 0)	7
Prepaid insurance (\$3 – 6)		3
Cash (paid for insurance)		4

The entry accounts for the change in both the insurance expense and prepaid insurance accounts and also identifies a cash outflow from operating activities.

9. LOSS ON SALE OF EQUIPMENT. A \$2 million loss on the sale of equipment is the next item reported in the income statement. To determine the cash effect of the sale of equipment, we need additional information about the transaction. The information we need is provided in item (b) of Illustration 21–9. Recreating the journal entry for the transaction described gives us the following entry:

Recreating the journal entry for the sale of equipment reveals a **\$5 million** cash inflow from investing activities.

		(\$ in millions)
Entry (9)	Cash (from the sale of equipment)	5
Loss on sale of equipment (\$2 – 0)		2
Accumulated depreciation (\$14 × 50%)		7
Buildings and equipment (given).....		14

The **\$5 million** cash inflow is entered in the statement of cash flows section of the spreadsheet as an investing activity. The \$2 million debit to the loss on sale of equipment explains the change in that account balance. Referring to the spreadsheet, we see that a portion of the change in accumulated depreciation was accounted for in entry (6). The debit to accumulated depreciation in the entry above completes the explanation for the change in that account. However, the credit to buildings and equipment only partially justifies the change in that account. We must assume that the analysis of a subsequent transaction will account for the unexplained portion of the change.

Recognize too that the loss, like the gain in entry (3), has no cash effect in the current period. Therefore, it is not reported in the statement of cash flows when using the direct method.

10. INCOME TAX EXPENSE. The final expense reported in the income statement is income tax expense. Since income taxes payable is the balance sheet account affected by this expense, we look to the change in that account to help determine the cash paid for income taxes. A T-account analysis can be used to find the cash effect as follows:

Income Tax Payable			
		8	Beginning balance
Cash paid for income tax <i>(decreases the liability)</i>	?	9	Income tax expense
		6	Ending Balance

This analysis reveals that **\$11 million** cash was paid for income taxes, \$2 million more than the year's expense. The overpayment explains why the liability for income taxes decreased by \$2 million.

The same conclusion can be reached from the following summary entry, which represents the net effect of income taxes on UBC's accounts.

	(\$ in millions)	
Entry (10) Income tax expense (\$9 – 0)	9	
Income tax payable (\$6 – 8)	2	
Cash (paid for income taxes)		11

Additional Consideration

Entry (10) would require modification in either of the two independent situations described below.

- Note that UBC does not have a deferred income tax account. Recall from Chapter 16 that temporary differences between taxable income and pretax accounting income give rise to deferred taxes. If temporary differences had been present, which would be evidenced by a change in a deferred income taxes account, the calculation of cash paid for income taxes would require modification. Assume, for example, that a deferred income tax liability account had experienced a credit change of \$1 million for the year. In that case, the previous spreadsheet entry would be revised as follows:

	(\$ in millions)	
Entry (10) Income tax expense	9	
(revised) Income tax payable.....	2	
Deferred income tax liability		1
Cash (paid for income taxes).....		10

As the revised entry indicates, only \$10 million cash would have been paid in this situation, rather than \$11 million. The \$1 million difference represents the portion of the income tax expense whose payment is deferred to a later year.

- The spreadsheet entry also would be affected if the income statement includes either an extraordinary gain or an extraordinary loss. Recall from Chapter 3 and Chapter 16 that the income tax effect of an extraordinary item is not reflected in income tax expense, but instead is separately reported as a reduction in the extraordinary item. For example, if UBC's loss on the sale of equipment had been due to an extraordinary event, the tax savings from that loss would be reported as a reduction in the extraordinary loss rather than as a reduction in income tax expense. (Since the loss reduces taxable income by \$2 million, assuming a marginal tax rate of 50%, taxes would be reduced by **\$1 million**.) The lower portion of the income statement would have appeared as shown below, in comparison with the presentation in Illustration 21–9:

(continued)

(concluded)

Ordinary Loss		Extraordinary Loss	
(from Illustration 21–9)			
		Income tax expense	<u>(10)</u>
		Income before extraordinary items	\$13
Loss on sale of equipment	(2)	Extraordinary loss—sale of equipment	\$2
Income tax expense	<u>(9)</u>	Less: Tax savings	<u>(1)</u>
Net income	<u><u>\$12</u></u>	Net income	<u><u>\$12</u></u>

Without the tax savings produced by the loss, income tax expense would have been **\$10 million**, rather than **\$9 million**. But the tax savings still reduces the amount of cash paid for income taxes, even though it is reported separately from the income tax expense. Therefore, whether the loss is extraordinary or not, the amount of cash paid for income taxes is the same. If the loss is extraordinary, entry (10) would be modified as follows:

	(\$ in millions)
Entry (10) Income tax expense (on ordinary income)	10
(revised) Income tax payable	2
Income tax expense	
(savings from extraordinary loss)	1
Cash (paid for income taxes)	11

Entry (9) would be unaffected. Whether or not the loss is extraordinary, it is not reported in the statement of cash flows, and the cash inflow from the sale is reported as an investing activity.

11. NET INCOME. The balance in the retained earnings account at the end of the year includes an increase due to net income. If we are to account for all changes in each of the accounts, we must include the following entry on the spreadsheet, which represents the closing of net income to retained earnings.

This entry partially explains the change in the retained earnings account.

	(\$ in millions)
Entry (11) Net income	12
Retained earnings	12

This entry does not affect amounts reported on the statement of cash flows. We include the entry in the spreadsheet analysis only to help explain account balance changes.

Balance Sheet Accounts

To identify all the operating, investing, and financing activities when using a spreadsheet, we must account for the changes in each account on both the income statement and the balance sheet. Thus far, we have explained the change in each income statement account. Since the transactions that gave rise to some of those changes involved balance sheet accounts as well, some changes in balance sheet accounts have already been explained. We now reconstruct the transactions that caused changes in the remaining balances.

With the exception of the cash account, the accounts are analyzed in the order of their presentation in the balance sheet. As noted earlier, we save the entry that reconciles the change in the cash account with the net change in cash from the statement of cash flows as a final check on the accuracy of the spreadsheet.

12. SHORT-TERM INVESTMENTS. Since the change in accounts receivable was explained previously [in entry (1)], we proceed to the next asset in the balance sheet. The balance in short-term investments increased from zero to \$12 million. In the absence of evidence to the contrary, we could assume that the increase is due to the purchase of short-term investments during the year. This assumption is confirmed by item (c) of Illustration 21–9.

The entry to record the investment and our summary entry is:

	(\$ in millions)	
Entry (12) Short-term investment (\$12 – 0)	12	
Cash (purchase of short-term investment)		12

The \$12 million increase in the short-term investments account is due to the purchase of short-term investments during the year.

The \$12 million cash outflow is entered in the statement of cash flows section of the spreadsheet as an investing activity. An exception is when an investment is classified as a “trading security,” in which case the cash outflow is reported as an operating activity.

Additional Consideration

Recall that some highly liquid, short-term investments such as money market funds, Treasury bills, or commercial paper might be classified as cash equivalents. If the short-term investment above were classified as a cash equivalent, its purchase would have no effect on the total of cash and cash equivalents. In other words, since cash would include this investment, its purchase would constitute both a debit and a credit to cash. We would neither prepare a spreadsheet entry nor report the transaction on the statement of cash flows.

Likewise, a sale of a cash equivalent would not affect the total of cash and cash equivalents and would not be reported.

An exception would be if the cash equivalent investment were sold for either more or less than its acquisition cost. For example, assume a Treasury bill classified as a cash equivalent was sold for \$1 million more than its \$2 million cost. The sale would constitute both a \$3 million increase and a \$2 million decrease in cash. We see the effect more clearly if we reconstruct the transaction in journal entry format:

	(\$ in millions)	
Cash	3	
Gain on sale of cash equivalent		1
Cash (cash equivalent investment)		2

The spreadsheet entry to reflect the net increase in cash would be:

Entry (X) Cash (from sale of cash equivalents)	1	
Gain on sale of cash equivalent		1

The \$1 million net increase in cash and cash equivalents would be reported as a cash inflow from *operating* activities.

13. LAND. The changes in the balances of both inventory and prepaid insurance were accounted for in previous summary entries: (4) and (8). Land is the next account whose change has yet to be fully explained. We discovered in a previous transaction that a sale of land caused a \$10 million reduction in the account. Yet, the account shows a net *increase* of \$20 million. It would be logical to assume that the unexplained increase of \$30 million was due to a purchase of land. The transaction described in item (d) of Illustration 21–9 supports that assumption and is portrayed in the following summary entry:

	(\$ in millions)	
Entry (13) Land (given)	30	
Cash (purchase of land)		30

A \$30 million purchase of land accounts for the portion of the \$20 million increase in the account that was not previously explained by the sale of land.

The \$30 million payment is reported as a cash outflow from investing activities.

14. BUILDINGS AND EQUIPMENT. When examining a previous transaction [entry (9)], we determined that the buildings and equipment account was reduced by \$14 million from the sale of used equipment. And yet the account shows a net *increase* of \$6 million for the year. The accounting records [item (e) of Illustration 21–9] reveal the remaining unexplained cause of the net increase. New equipment costing \$20 million was purchased by issuing a \$20 million note payable. Recall from the discussion in a previous section of this chapter that, although this is a noncash transaction, it represents both a

significant investing activity (investing in new equipment) and a significant financing activity (financing the acquisition with long-term debt).

The journal entry used to record the transaction when the equipment was acquired also serves as our summary entry:

Investing in new equipment is a significant investing activity and financing the acquisition with long-term debt is a significant financing activity.

	(\$ in millions)
Entry (14) Buildings and equipment (given)	20
Note payable (given)	20

Remember that the statement of cash flows section of the spreadsheet will serve as the basis for our preparation of the formal statement. But the noncash entry above will not affect the cash flows section of the spreadsheet. Because we want to report this noncash investing and financing activity when we prepare the statement of cash flows, it is helpful to “mark” the spreadsheet entry as a reminder not to overlook this transaction when the statement is prepared. Crosses (X) serve this purpose on the spreadsheet in Illustration 21–9A.

Additional Consideration

Leases

When a lessee acquires an asset and related liability as a result of a lease agreement, there is no inflow or outflow of cash. However, because a primary purpose of the statement of cash flows is to report significant operating, investing, and financing activities, the initial transaction is reported in the disclosure notes as a significant noncash investing activity (investing in the asset) and financing activity (financing it with debt). Then the lessee’s cash payments for leases are classified as financing activities in its statement of cash flows and presented separately from other financing cash flows. The lessor classifies its cash receipts from lease payments as operating activities in its statement of cash flows after initially reporting its acquisition of a lease receivable and derecognition of the asset under lease as a significant noncash investing and financing activity in its cash flow disclosure note.

15. BONDS PAYABLE. The balance in the bonds payable account decreased during the year by \$15 million. Illustration 21–9, item (f), reveals the cause. Cash was paid to retire \$15 million face value of bonds. The spreadsheet entry that duplicates the journal entry that was recorded when the bonds were retired is:

	(\$ in millions)
Entry (15) Bonds payable (\$35 – 50)	15
Cash (retirement of bonds payable)	15

The cash outflow is reported as a financing activity.

Additional Consideration

Statement of Cash Flows: Reporting a Bond Discount or Premium

Conceptually, the way we report cash flows for bonds depends on whether the bonds were issued at face amount, at a discount, or at a premium.¹⁴ As we look at these three possibilities, note that in each case:

- ✓ The same total amount that is borrowed (lent) and reported as a financing (investing) activity is the amount that should be reported later as a *financing (investing)* activity as the loan is repaid.
- ✓ All other amounts paid during or at the end of the term to maturity represent interest and should be reported among *operating* activities.

(continued)

¹⁴Source: Lisa Koonce, “SCF Insights,” Financial Accounting Standards Research Initiative, October 6, 2011.

(continued)

Though not codified in the Accounting Standards Codification, this treatment is a preference of the SEC, though anecdotal evidence suggests that many firms do not follow this procedure in practice.

Bonds Issued at Face Amount

If bonds are issued at their face amount, the cash inflow at issuance (\$15 million in the illustration) is a financing activity as is the cash outflow at maturity to repay the amount borrowed (\$15 million in the illustration). The periodic cash interest payments in the meantime are operating activities.

Bonds Issued at a Discount

If bonds are issued at a discount, the cash inflow at issuance is a financing activity, but that discounted price is less than the cash outflow for the face amount at maturity. The portion of the face amount paid at maturity to be reported as a financing activity, then, is limited to the amount borrowed (discounted price at issuance). The remaining portion of the payment (equal to the discount) represents interest and thus should be reported as an operating activity. This "extra" amount paid at maturity, together with the periodic cash interest payments during the term to maturity, comprise the total interest paid to borrow the cash received at issuance. This total amount of interest reported among operating activities is equal to the total interest expense reported during the term to maturity.

In Chapter 14's Illustration 14-3, for instance, \$700,000 of bonds were issued at \$666,633. That discounted price is the amount the issuer borrowed and the amount reported as a financing activity. When the \$700,000 face amount is paid at maturity, \$666,633 of that amount represents repayment of the borrowing and also is reported as a financing activity. The remaining \$33,367 (the discount) represents interest (as do the periodic cash payments) and is reported among operating activities.

We can better visualize this if we look again at the amortization schedule we saw earlier for the bonds issued at a discount:

Date	Cash Interest	Effective Interest	Increase in Balance	Outstanding Balance
	(6% × Face amount)	(7% × Outstanding balance)	(Discount reduction)	
1/1/13				666,633
6/30/13	42,000	.07 (666,633) = 46,664	4,664	671,297
12/31/13	42,000	.07 (671,297) = 46,991	4,991	676,288
6/30/14	42,000	.07 (676,288) = 47,340	5,340	681,628
12/31/14	42,000	.07 (681,628) = 47,714	5,714	687,342
6/30/15	42,000	.07 (687,342) = 48,114	6,114	693,456
12/31/15	42,000	.07 (693,456) = 48,544*	6,544	700,000
	<u>252,000</u>	<u>285,367</u>	<u>33,367</u>	

Operating

\$700,000	Payment
- 33,367	Operating
\$666,633	Financing

You may remember from Chapter 14 that the *total* interest, \$285,367, is the \$252,000 cash interest paid during the term to maturity plus the "extra" amount paid at maturity. The \$33,367 extra amount is necessary for the bonds to pay an effective interest rate equal to what the market demanded when the bonds were purchased (which was higher than the rate at which the bonds made periodic interest payments).

(continued)

(continued)

To summarize, bonds issued at a discount are treated as follows on a statement of cash flows:

	Financing Activities	Operating Activities
INFLOWS: At issuance	Face Amount minus Discount	
OUTFLOWS: During term to maturity At maturity	Face Amount minus Discount	Cash Interest Payments Discount

Bonds Issued at a Premium

If the bonds are issued at a premium, the cash repaid at maturity is less than the cash received at issuance. So, when does the rest of the amount received at issuance get repaid? To see the answer, remember that when bonds are issued at a premium, it's because the stated interest rate at issuance is higher than the market interest rate. That means that the cash interest payments each period are higher than the interest expense amounts reported each period. The remainder of each payment is a repayment of the extra amount received at issuance. Similar to installment payments that include both (a) an amount for interest and (b) an amount that reduces the debt, we can think of these bond interest payments the same way. The cash payments cover the interest expense, and the remainder of each payment (the premium amortization) goes toward paying a portion of the amount borrowed. The interest expense portions of the cash payments are operating activities and the repayment portions are reported as financing activities each period. That means that the total amount of financing *outflows*, including payment of the face amount at maturity and the premium amortization over the life of the bonds, equals the total amount of financing *inflow* received when the bonds are issued.

To see this more clearly, let's look again at the amortization schedule we saw in Chapter 14 for bonds issued at a premium:

Date	Cash Interest (6% × Face amount)	Effective Interest (5% × Outstanding balance)	Decrease in Balance (Premium reduction)	Outstanding Balance
1/1/13				735,533
6/30/13	42,000	.05 (735,533) = 36,777	5,223	730,310
12/31/13	42,000	.05 (730,310) = 36,516	5,484	724,826
6/30/14	42,000	.05 (724,826) = 36,241	5,759	719,067
12/31/14	42,000	.05 (719,067) = 35,953	6,047	713,020
6/30/15	42,000	.05 (713,020) = 35,651	6,349	706,671
12/31/15	42,000	.05 (706,671) = 35,329	6,671	700,000
	<u>252,000</u>	<u>216,467</u>	<u>35,533</u>	

Operating ← \$700,000 + 35,533 \$735,533	Payment Financing Financing
--	-----------------------------------

To summarize, bonds issued at a premium are treated as follows on a statement of cash flows:

	Financing Activities	Operating Activities
INFLOWS: At issuance	Face Amount plus Premium	
OUTFLOWS: During term to maturity At maturity	Premium Amortization Face Amount	Interest Expense

Remember that when using the *indirect method*, we add any discount amortization back to net income each period. That's in order to adjust the interest expense that's subtracted within net income to cash interest paid, which is the amount we want to report as an

(continued)

(concluded)

operating activity. When we have a premium, though, the amount we want to report as an operating activity is interest expense, as we just saw. As a result, we do *not* adjust net income for premium amortization as we do for discount amortization.

Early Extinguishment of Debt

The description of the transaction stipulated that \$15 million of bonds were retired at their maturity on the first day of the year. Thus, any discount or premium on the bonds would have been completely amortized before the start of the year. If bonds are retired prior to their scheduled maturity, any unamortized discount or premium would be removed from the accounts at that time. For instance, assume that the bonds above were callable at \$16 million and that \$1 million of unamortized discount remained when they were retired by a call at that price. The summary entry would be revised as follows:

	(\$ in millions)
Entry (15) Bonds payable	15
(revised) Loss on early extinguishment of bonds	2
Discount on bonds payable	1
Cash (retirement of bonds payable)	16

The loss, of course, would not be reported in the statement of cash flows. The amortization of the discount, however, would affect a previous summary entry. In entry (7) we concluded that the decrease in discount on bonds payable was due to the amortization of \$2 million of the discount when recording bond interest expense. However, if the early retirement assumed above had occurred, that transaction would have accounted for \$1 million of the \$2 million decrease in the discount. Entry (7) would be modified as follows:

	(\$ in millions)
Entry (7) Interest expense.....	5
(revised) Discount on bonds payable	1
Cash (paid to bondholders)	4

16–17. COMMON STOCK. The comparative balance sheets indicate that the common stock account balance increased by \$30 million. We look to the accounting records—Illustration 21–9, item (g)—for an explanation. Two transactions, a stock dividend and a sale of new shares of common stock, combined to cause the increase. To create the summary entries for our analysis, we replicate the journal entries for the two transactions as described below.

Remember from Chapter 18 that to record a small stock dividend, we capitalize retained earnings for the market value of the shares distributed—in this case, 1 million shares times \$13 per share, or \$13 million. The entry is:

	(\$ in millions)
Entry (16) Retained earnings (1 million shares × \$13)	13
Common stock (1 million shares × \$10 par)	10
Paid-in capital—excess of par (difference)	3

Also recall from the discussion of noncash investing and financing activities earlier in the chapter, that stock dividends do not represent a significant investing or financing activity. Therefore, this transaction is not reported in the statement of cash flows. We include the entry in our spreadsheet analysis only to help explain changes in the account balances affected.

The sale of 2 million shares of common stock at \$13 per share is represented by the following spreadsheet entry:

	(\$ in millions)
Entry (17) Cash (from sale of common stock)	26
Common stock ([\$130 – 100] – 10)	20
Paid-in capital—excess of par ([\$29 – 20] – 3)	6

The cash inflow is reported in the statement of cash flows as a financing activity.

Although this transaction does not identify a cash flow, nor does it represent an investing or financing activity, we include the summary entry to help explain changes in the three account balances affected.

The sale of common shares explains the remaining increase in the common stock account and the remaining increase in paid-in capital—excess of par.

Additional Consideration

If cash is paid to retire outstanding shares of stock or to purchase those shares as treasury stock, the cash outflow would be reported in a statement of cash flows as a financing activity.

Together, the two entries above account for both the \$30 million increase in the common stock account and the \$9 million increase in paid-in capital—excess of par.

18. RETAINED EARNINGS. The stock dividend in entry (16) above includes a \$13 million reduction of retained earnings. Previously, we saw in entry (11) that net income increased retained earnings by \$12 million. The net reduction of \$1 million accounted for by these two entries leaves **\$5 million** of the \$6 million net decrease in the account unexplained.

Retained Earnings			
		25	Beginning balance
(16) Stock dividend	13	12	Net income (11)
(18) ?	?		
		19	Ending balance

Without additional information about the **\$5 million** decrease in retained earnings, we might assume it was due to a **\$5 million** cash dividend. This assumption is unnecessary, though, because the cash dividend is described in Illustration 21–9, item (h).

Retained Earnings			
		25	Beginning balance
(16) Stock dividend	13	12	Net income (11)
(18) Cash dividend	5		
		19	Ending balance

The summary entry for the spreadsheet is:

The cash dividend accounts for the previously unexplained change in retained earnings.

		(\$ in millions)
Entry (18)	Retained earnings	5
	Cash (payment of cash dividends)	5

19. COMPLETING THE SPREADSHEET. In preparing the spreadsheet to this point, we have analyzed each noncash account on both the income statement and the balance sheet. Our purpose was to identify the transactions that, during the year, had affected each account. By recreating each transaction in the form of a summary entry—in effect, duplicating the journal entry that had been used to record the transaction—we were able to explain the change in the balance of each account. That is, the debits and credits in the changes columns of the spreadsheet account for the increase or decrease in each noncash account. When a transaction being entered on the spreadsheet included an operating, investing, or financing activity, we entered that portion of the entry under the corresponding heading of the statement of cash flows section of the spreadsheet. Since, as noted earlier, there can be no operating, investing, or financing activity without a corresponding change in one or more of the noncash accounts, we should feel confident at this point that we have identified all of the activities that should be reported on the statement of cash flows.

To check the accuracy of the analysis, we compare the change in the balance of the cash account with the net change in cash flows produced by the activities listed in the statement of cash flows section of the spreadsheet. The net increase or decrease in cash flows from each of the statement of cash flows categories is extended to the extreme right column of the spreadsheet. By reference to Illustration 21–9A, we see that net cash flows from operating, investing, and financing activities are: \$22 million; (\$19 million); and \$6 million, respectively. Together these activities provide a net increase in cash of \$9 million. This amount corresponds to the increase in the balance of the cash account from \$20 million to \$29 million. To complete the spreadsheet, we include the final summary entry:

The cash flows section of the spreadsheet provides the information to be reported in the statement of cash flows.

	(\$ in millions)
Entry (19) Cash	9
Net increase in cash	
(from statement of cash flows activities)	9

As a final check of accuracy, we can confirm that the total of the debits is equal to the total of the credits in the changes columns of the spreadsheet.¹⁵

Ethical Dilemma

“We must get it,” Courtney Lowell, president of Industrial Fasteners, roared. “Without it we’re in big trouble.” The “it” Mr. Lowell referred to is the renewal of a \$14 million loan with Community First Bank. The big trouble he fears is the lack of funds necessary to repay the existing debt and few, if any, prospects for raising the funds elsewhere.

Mr. Lowell had just hung up the phone after a conversation with a bank vice-president in which it was made clear that this year’s statement of cash flows must look better than last year’s. Mr. Lowell knows that improvements are not on course to happen. In fact, cash flow projections were dismal.

Later that day, Tim Cratchet, assistant controller, was summoned to Mr. Lowell’s office. “Cratchet,” Lowell barked, “I’ve looked at our accounts receivable. I think we can generate quite a bit of cash by selling or factoring most of those receivables. I know it will cost us more than if we collect them ourselves, but it sure will make our cash flow picture look better.”

Is there an ethical question facing Cratchet?

International Financial Reporting Standards

Classification of Cash Flows. Like U.S. GAAP, international standards also require a statement of cash flows. Consistent with U.S. GAAP, cash flows are classified as operating, investing, or financing. However, the U.S. standard designates cash outflows for interest payments and cash inflows from interest and dividends received as operating cash flows. Dividends paid to shareholders are classified as financing cash flows.

IAS No. 7, on the other hand, allows more flexibility. Companies can report interest and dividends paid as either operating or financing cash flows and interest and dividends received as either operating or investing cash flows. Interest and dividend payments usually are reported as financing activities. Interest and dividends received normally are classified as investing activities.

(continued)

● LO21–9

¹⁵The mechanical and computational aspects of the spreadsheet analysis are simplified greatly when performed on an electronic spreadsheet such as Microsoft Excel.

(concluded)

IFRS ILLUSTRATION

Typical Classification of Cash Flows from Interest and Dividends

U.S. GAAP	IFRS
Operating Activities	Operating Activities
Dividends received	
Interest received	
Interest paid	
Investing Activities	Investing Activities
	Dividends received
	Interest received
Financing Activities	Financing Activities
Dividends paid	Dividends paid
	Interest paid

The spreadsheet is now complete. The statement of cash flows can now be prepared directly from the spreadsheet simply by presenting the items included in the statement of cash flows section of the spreadsheet in the appropriate format of the statement.

The statements of cash flows from an annual report of **Hooker Furniture Corporation** are shown in Illustration 21–10. Notice that the reconciliation schedule was reported by Hooker Furniture in the statement of cash flows itself. Many companies report the schedule separately in the disclosure notes.

Concept Review Exercise

The comparative balance sheets for 2013 and 2012 and the income statement for 2013 are given below for Beneficial Drill Company. Additional information from Beneficial Drill's accounting records is provided also.

COMPREHENSIVE REVIEW**Required:**

Prepare the statement of cash flows of Beneficial Drill Company for the year ended December 31, 2013. Present cash flows from operating activities by the direct method and use a spreadsheet to assist in your analysis.

BENEFICIAL DRILL COMPANY
Comparative Balance Sheets
December 31, 2013 and 2012
(\$ in millions)

Assets	2013	2012
Cash	\$ 24	\$ 40
Accounts receivable	94	96
Investment revenue receivable	3	2
Inventory	115	110
Prepaid insurance	2	3
Long-term investments	77	60
Land	110	80
Buildings and equipment	220	240
Less: Accumulated depreciation	(35)	(60)

(continued)

(concluded)

Patent	15	16
	<u>\$625</u>	<u>\$587</u>
Liabilities		
Accounts payable	\$ 23	\$ 30
Salaries payable	2	5
Bond interest payable	4	2
Income tax payable	6	7
Deferred income tax liability	5	4
Notes payable	15	0
Bonds payable	150	130
Less: Discount on bonds	(9)	(10)
Shareholders' Equity		
Common stock	210	200
Paid-in capital—excess of par	44	40
Retained earnings	182	179
Less: Treasury stock (at cost)	(7)	0
	<u>\$625</u>	<u>\$587</u>

BENEFICIAL DRILL COMPANY
Income Statement
For Year Ended December 31, 2013
(\$ in millions)

Revenues		
Sales revenue	\$200	
Investment revenue	6	
Investment revenue—sale of treasury bills	1	\$207
Expenses		
Cost of goods sold	110	
Salaries expense	30	
Depreciation expense	5	
Patent amortization expense	1	
Insurance expense	3	
Bond interest expense	14	
Extraordinary loss on destruction of equipment	\$ 10	
Less: Tax savings	(5)	
Income tax expense	12	(180)
Net income		<u>\$ 27</u>

Additional information from the accounting records:

- Investment revenue includes Beneficial Drill Company's \$3 million share of the net income of Hammer Company, an equity method investee.
- Treasury bills were sold during 2013 at a gain of \$1 million. Beneficial Drill Company classifies its investments in Treasury bills as cash equivalents.
- A machine that originally cost \$60 million and was one-half depreciated was rendered unusable by a freak bolt of lightning. Most major components of the machine were unharmed and were sold for \$20 million.
- Temporary differences between pretax accounting income and taxable income caused the deferred income tax liability to increase by \$1 million.
- The common stock of Wrench Corporation was purchased for \$14 million as a long-term investment.
- Land costing \$30 million was acquired by paying \$15 million cash and issuing a 13%, seven-year, \$15 million note payable to the seller.
- New equipment was purchased for \$40 million cash.
- \$20 million of bonds were sold at face value.

- i. On January 19, Beneficial issued a 5% stock dividend (1 million shares). The market price of the \$10 par value common stock was \$14 per share at that time.
- j. Cash dividends of \$10 million were paid to shareholders.
- k. In November, 500,000 common shares were repurchased as treasury stock at a cost of \$7 million.

Note issued	<u>\$ 15</u>

PREPARING THE SCF: INDIRECT METHOD OF REPORTING CASH FLOWS FROM OPERATING ACTIVITIES

PART C

Getting There through the Back Door

The presentation of cash flows from operating activities illustrated in Part B is referred to as the *direct method*. By this method, the cash effect of each operating activity (i.e., income statement item) is reported directly on the statement of cash flows. For instance, cash received from customers is reported as the cash effect of sales activities, and cash paid to suppliers is reported as the cash effect of cost of goods sold. Income statement items that have *no* cash effect, such as depreciation expense, gains, and losses, are simply not reported.

As pointed out previously, a permissible alternative is the *indirect method*, by which the net cash increase or decrease from operating activities is derived indirectly by starting with reported net income and working backwards to convert that amount to a cash basis. The derivation by the indirect method of net cash flows from operating activities for UBC is shown in Illustration 21–9B. For the adjustment amounts, you may wish to refer back to UBC’s balance sheets and income statement presented in Illustration 21–9.

Cash Flows from Operating Activities—Indirect Method and Reconciliation of Net Income to Net Cash Flows from Operating Activities

Net Income	\$12
Adjustments for noncash effects:	
Gain on sale of land	(8)
Depreciation expense	3
Loss on sale of equipment	2
Changes in operating assets and liabilities:	
Increase in accounts receivable	(2)
Decrease in inventory	4
Increase in accounts payable	6
Increase in salaries payable	2
Decrease in discount on bonds payable	2
Decrease in prepaid insurance	3
Decrease in income tax payable	<u>(2)</u>
Net cash flows from operating activities	\$22

Illustration 21–9B

Indirect Method

The indirect method derives the net cash increase or decrease from operating activities indirectly, by starting with reported net income and “working backwards” to convert that amount to a cash basis.

Notice that the indirect method yields the same \$22 million net cash flows from operating activities as does the direct method. This is understandable when you consider that the indirect method simply reverses the differences between the accrual-based income statement and cash flows from operating activities. We accomplish this as described in the next two sections.

Components of Net Income That Do Not Increase or Decrease Cash

Amounts that were subtracted in determining net income but did not reduce cash are *added back* to net income to reverse the effect of their having been subtracted. For example, depreciation expense and the loss on sale of equipment are added back to net income. Other things being equal, this restores net income to what it would have been had depreciation and the loss not been subtracted at all.

Similarly, amounts that were added in determining net income but did not increase cash are subtracted from net income to reverse the effect of their having been added. For example, UBC's gain on sale of land is deducted from net income. Here's why. UBC sold for \$18 million land that originally cost \$10 million. Recording the sale produced a gain of \$8 million, which UBC appropriately included in its income statement. But did this gain increase UBC's cash? No. Certainly selling the land increased cash—by \$18 million. We therefore include the \$18 million as a cash inflow in the statement of cash flows. However, the sale of land is an investing activity. The gain itself, though, is simply the difference between cash received in the sale of land (reported as an investing activity) and the original cost of the land. If UBC also reported the \$8 million gain as a cash flow from operating activities, in addition to reporting \$18 million as a cash flow from investing activities, UBC would report the \$8 million twice. So, because UBC added the gain in determining its net income but the gain had no effect on cash, the gain must now be subtracted from net income to reverse the effect of its having been added.

Components of Net Income That Do Increase or Decrease Cash

For components of net income that increase or decrease cash, but by an amount different from that reported in the income statement, net income is adjusted for changes in the balances of related balance sheet accounts to *convert the effects of those items to a cash basis*. For example, sales of \$100 million are included in the income statement as a component of net income, and yet, since accounts receivable increased by \$2 million, only \$98 million cash was collected from customers during the reporting period. Sales are converted to a cash basis by subtracting the \$2 million increase in accounts receivable. Here's another example:

The income statement reports salaries expense as \$13 million. Just because employees earned \$13 million during the reporting period, though, doesn't necessarily mean UBC paid those employees \$13 million in cash during the same period. In fact, we see in the comparative balance sheets that salaries payable increased from \$1 million to \$3 million; UBC owes its employees \$2 million more than before the year started. The company must not have paid the entire \$13 million expense. By analyzing salaries expense in relation to the change in salaries payable, we can determine the amount of cash paid to employees:

		1	Beginning balance
Cash paid to employees (decreases salaries payable)	?	13	Salaries expense (increases salaries payable)
		3	Ending balance

This inspection indicates that UBC paid only \$11 million cash to its employees; the remaining \$2 million of salaries expense is reflected as an increase in salaries payable. From a cash perspective, then, by subtracting \$13 million for salaries in the income statement, UBC has subtracted \$2 million more than the reduction in cash. Adding back the \$2 million leaves UBC in the same position as if it had deducted only the \$11 million cash paid to employees.

Following a similar analysis of the cash effects of the remaining components of net income, those items are likewise converted to a cash basis by adjusting net income for increases and decreases in related accounts.

For components of net income that increase or decrease cash by an amount exactly the same as that reported in the income statement, no adjustment of net income is required. For example, investment revenue of \$3 million is included in UBC's \$12 million net income amount. Because \$3 million also is the amount of cash received from that activity, this element of net income already represents its cash effect and needs no adjustment.¹⁶

Comparison with the Direct Method

The indirect method is compared with the direct method in Illustration 21–11, using the data of UBC. To better illustrate the relationship between the two methods, the adjustments to net income using the indirect method are presented parallel to the related cash inflows and cash outflows of the direct method. The income statement is included in the graphic to demonstrate that the indirect method also serves to reconcile differences between the elements of that statement and the cash flows reported by the direct method.

Illustration 21–11 Comparison of the Indirect Method and the Direct Method of Determining Cash Flows from Operating Activities

Income Statement	Cash Flows from Operating Activities				
	Indirect Method		Direct Method		
		Net income	\$12		
		Adjustments:			
Sales	\$100	Increase in accounts receivable	(2)	Cash received from customers	\$98
Investment revenue	3	(No adjustment—no investment revenue receivable or long-term investments)		Cash received from investments	3
Gain on sale of land	8	Gain on sale of land	(8)	(Not reported—no cash effect)	
Cost of goods sold	(60)	Decrease in inventory	4	Cash paid to suppliers	(50)
		Increase in accounts payable	6	Cash paid to employees	(11)
Salaries expense	(13)	Increase in salaries payable	2	(Not reported—no cash effect)	
Depreciation expense	(3)	Depreciation expense	3	Cash paid for interest	(3)
Interest expense	(5)	Decrease in bond discount	2	Cash paid for insurance	(4)
Insurance expense	(7)	Decrease in prepaid insurance	3	(Not reported—no cash effect)	
Loss on sale of equipment	(2)	Loss on sale of equipment	2	Cash paid for income taxes	(11)
Income tax expense	(9)	Decrease in income tax payable	(2)		
Net Income	\$ 12	Net cash flows from operating activities	\$22	Net cash flows from operating activities	\$22

As a practical consideration, you might notice that the adjustments to net income using the indirect method follow a convenient pattern. *Increases* in related assets are deducted from net income (i.e., the increase in accounts receivable) when converting to cash from operating activities. Conversely, *decreases* in assets are added (inventory and prepaid insurance in this case). Changes in related liabilities are handled in just the opposite way. Increases in related liabilities are *added* to net income (i.e., the increases in accounts payable and salaries payable) while decreases in liabilities are subtracted (i.e., decrease in income tax payable).¹⁷

Of course, these are adjustments to net income that effectively convert components of income from reported accrual amounts to a cash basis. The other adjustments to net income (gain, depreciation, loss) as pointed out earlier are to remove the three income statement components that have no effect at all on cash. This pattern is summarized in Illustration 21–12 on the next page.

¹⁶We determined in Part B (subsection 2) that there is no evidence that cash received from investments differs from investment revenue.

¹⁷The adjustment for the decrease in bond discount is logically consistent with this pattern as well. Bond discount is a contra liability. It's logical, then, that an adjustment for a decrease in this account be added—the opposite of the way a decrease in a liability is treated.

Illustration 21–12

Adjustments to Convert
Net Income to a Cash
Basis—Indirect Method

Type of Adjustment	To Adjust for Noncash Effect
Adjustments for Noncash Effects:	
Income statement components that have <i>no effect</i> at all on cash but are <i>additions</i> to income	Deduct from net income
Income statement components that have <i>no effect</i> at all on cash but are <i>deductions</i> from income	Add to net income
Changes in Operating Assets and Liabilities:	
<i>Increases in assets</i> related to an income statement component	Deduct from net income
<i>Decreases in assets</i> related to an income statement component	Add to net income
<i>Increases in liabilities</i> related to an income statement component	Add to net income
<i>Decreases in liabilities</i> related to an income statement component	Deduct from net income

Although either the direct method or the indirect method is permitted, the FASB strongly encourages companies to report cash flows from operating activities by the direct method. The obvious appeal of this approach is that it reports specific operating cash receipts and operating cash payments, which is consistent with the primary objective of the statement of cash flows. Investors and creditors gain additional insight into the specific sources of cash receipts and payments from operating activities revealed by this reporting method. Also, statement users can more readily interpret and understand the information presented because the direct method avoids the confusion caused by reporting noncash items and other reconciling adjustments under the caption *cash flows from operating activities*. Nonetheless, the vast majority of companies choose to use the indirect method. Reasons for this choice range from longstanding tradition to the desire to withhold as much information as possible from competitors.¹⁸

Reconciliation of Net Income to Cash Flows from Operating Activities

As we discussed earlier, whether cash flows from operating activities are reported by the direct method or by the indirect method, the financial statements must report a reconciliation of net income to net cash flows from operating activities. When the direct method is used, the reconciliation is presented in a separate schedule and is identical to the presentation of net cash flows from operating activities by the indirect method. In other words, Illustration 21–9B also serves as the reconciliation schedule to accompany a statement of cash flows using the direct method. Obviously, a separate reconciliation schedule is not required when using the indirect method because the cash flows from operating activities section of the statement of cash flows *is* a reconciliation of net income to net cash flows from operating activities.¹⁹

Remember that the direct and indirect methods are alternative approaches to deriving net cash flows from *operating* activities only. The choice of which method is used for that purpose does not affect the way cash flows from *investing* and *financing* activities are identified and reported.

The statements of cash flows from the annual report of **Wal-Mart Stores, Inc.**, which uses the indirect method, are shown in Illustration 21–13 on the next page.

¹⁸As indicated earlier, a recent Staff Draft of an Exposure Draft from the IASB and FASB advocates requiring the direct method and disallowing the indirect method for the proposed new Financial Statement Presentation format.

¹⁹It is permissible to present the reconciliation in a separate schedule and to report the net cash flows from operating activities as a single line item on the statement of cash flows.

Illustration 21–13 Statement of Cash Flows—Indirect Method; Walmart

WAL-MART STORES, INC.			
Consolidated Statements of Cash Flows			
<i>(Amounts in millions)</i>			
	2011	2010	2009
Cash flows from operating activities:

Cash flows from investing activities:			
Payments for property and equipment	(12,699)	(12,184)	(11,499)
Proceeds from disposal of property and equipment	489	1,002	714
Proceeds from disposal of certain international operations, net	—	—	838
Investments and business acquisitions, net of cash acquired	(202)	—	(1,576)
Other investing activities	219	(438)	781
Net cash used in investing activities	(12,193)	(11,620)	(10,742)
Cash flows from financing activities:			
Net change in short-term borrowings	503	(1,033)	(3,745)
Proceeds from issuance of long-term debt	11,396	5,546	6,566
Payments of long-term debt	(4,080)	(6,033)	(5,387)
Dividends paid	(4,437)	(4,217)	(3,746)
Purchase of Company stock	(14,776)	(7,276)	(3,521)
Purchase of redeemable noncontrolling interest	—	(436)	—
Payment of lease obligations	(363)	(346)	(352)
Other financing activities	(271)	(396)	267
Net cash used in financing activities	(12,028)	(14,191)	(9,918)
Effect of exchange rates on cash and cash equivalents	66	194	(781)
Net increase (decrease) in cash and cash equivalents	(512)	632	1,706
Cash and cash equivalents at beginning of year	7,907	7,275	5,569
Cash and cash equivalents at end of year	\$ 7,395	\$ 7,907	\$ 7,275
Supplemental disclosure of cash flow information:			
Income tax paid	\$ 6,984	\$ 7,389	\$ 6,596
Interest paid	2,163	2,141	1,787
Lease obligations incurred	49	61	284

For most companies, expenditures for interest and for taxes are significant. Cash payments for interest and for taxes usually are specifically indicated when the direct method is employed as is the case for **Hooker Furniture Corporation** reported earlier in Illustration 21–10. When the indirect method is used, those amounts aren't readily apparent and must

be *separately reported* either on the face of the statement or in an accompanying disclosure note as Hewlett-Packard does.

We use a spreadsheet to help prepare a statement of cash flows by the indirect method in Appendix 21A.

Decision Makers' Perspective—Cash Flow Ratios

We have emphasized the analysis of financial statements from a decision maker's perspective throughout this text. Often that analysis included the development and comparison of financial ratios. Ratios based on income statement and balance sheet amounts enjoy a long tradition of acceptance from which several standard ratios, including those described in earlier chapters, have evolved. To gain another viewpoint, some analysts supplement their investigation with cash flow ratios. Some cash flow ratios are derived by simply substituting cash flow from operations (CFFO) from the statement of cash flows in place of net income in many ratios, not to replace those ratios but to complement them. For example, the times interest earned ratio can be modified to reflect the number of times the cash outflow for interest is provided by cash inflow from operations and any of the profitability ratios can be modified to determine the cash generated from assets, shareholders' equity, sales, etc. Illustration 21–14 summarizes the calculation and usefulness of several representative cash flow ratios.

Illustration 21–14

Cash Flow Ratios

	Calculation	Measures
Performance Ratios		
Cash flow to sales	$\frac{\text{CFFO}}{\text{Net sales}}$	Cash generated by each sales dollar
Cash return on assets	$\frac{\text{CFFO}}{\text{Average total assets}}$	Cash generated from all resources
Cash return on shareholders' equity	$\frac{\text{CFFO}}{\text{Average shareholders' equity}}$	Cash generated from owner-provided resources
Cash to income	$\frac{\text{CFFO}}{\text{Income from continuing operations}}$	Cash-generating ability of continuing operations
Cash flow per share	$\frac{\text{CFFO} - \text{preferred dividends}}{\text{Weighted-average shares}}$	Operating cash flow on a per share basis
Sufficiency Ratios		
Debt coverage	$\frac{\text{Total liabilities}}{\text{CFFO}}$	Financial risk and financial leverage
Interest coverage	$\frac{\text{CFFO} + \text{interest} + \text{taxes}}{\text{Interest}}$	Ability to satisfy fixed obligations
Reinvestment	$\frac{\text{CFFO}}{\text{Cash outflow for noncurrent assets}}$	Ability to acquire assets with operating cash flows
Debt payment	$\frac{\text{CFFO}}{\text{Cash outflow for LT debt repayment}}$	Ability to pay debts with operating cash flows
Dividend payment	$\frac{\text{CFFO}}{\text{Cash outflow for dividends}}$	Ability to pay dividends with operating cash flows
Investing and financing activity	$\frac{\text{CFFO}}{\text{Cash outflows for investing and financing activities}}$	Ability to acquire assets, pay debts, and make distributions to owners

Cash flow ratios have received limited acceptance to date, due in large part to the long tradition of accrual-based ratios coupled with the relatively brief time that all companies have published statements of cash flows. A lack of consensus on cash flow ratios by which to make comparisons also has slowed their acceptance. In fact, companies are prohibited from reporting cash flow per share in the statement of cash flows. Nevertheless, cash flow ratios offer insight in the evaluation of a company's profitability and financial strength.²⁰ ●

Financial Reporting Case Solution

- 1. What are the cash flow aspects of the situation that Mr. Barr may be overlooking in making his case for a wage increase? How can a company's operations generate a healthy profit and yet produce meager or even negative cash flows? (p. 1262)** Positive net income does not necessarily indicate a healthy cash position. A statement of cash flows provides information about cash flows not seen when looking only at the balance sheet and the income statement. Although cash flows from operating activities result from the same activities that are reported in the income statement, the income statement reports the activities on an accrual basis. That is, revenues reported are those earned during the reporting period, regardless of when cash is received, and the expenses incurred in generating those revenues, regardless of when cash is paid. Thus, the very same operations can generate a healthy profit and yet produce meager or even negative cash flows.
- 2. What information can a statement of cash flows provide about a company's investing activities that can be useful in decisions such as this? (p. 1266)** Cash flows from investing activities result from the acquisition and disposition of assets. Information about investing activities is useful to decision makers regarding the nature and magnitude of productive assets being acquired for future use. In the union negotiations, for instance, Mr. Barr may not be aware of the substantial investments under way to replace and update equipment and the cash requirements of those investments. Relatedly, the relatively low depreciation charges accelerated depreciation provides in the later years of assets' lives may cause profits to seem artificially high given the necessity to replace those assets at higher prices.
- 3. What information can a statement of cash flows provide about a company's financing activities that can be useful in decisions such as this? (p. 1267)** Information about financing activities provides insights into sources of a company's external financing. Recent debt issues, for instance, might indicate a need for higher cash flows to maintain higher interest charges. Similarly, recent external financing activity may suggest that a company might be near its practical limits from external sources and, therefore, may need a greater reliance on internal financing through operations. ●

The Bottom Line

- **LO21-1** Decision makers focus on the prospects of receiving a cash return from their dealings with a firm. But it is the ability of the firm to generate cash flows to itself that ultimately determines the potential for cash flows to investors and creditors. The statement of cash flows fills an information gap left by the balance sheet and the income statement by presenting information about cash flows that the other statements either do not provide or provide only indirectly. (p. 1258)

²⁰Proposals for informative sets of cash flow ratios are offered by Charles Carlsaw and John Mills, "Developing Ratios for Effective Cash Flow Analysis," *Journal of Accountancy*, November 1991; Don Giacomino and David Mielke, "Cash Flows: Another Approach to Ratio Analysis," *Journal of Accountancy*, March 1993; and John Mills and Jeanne Yamamura, "The Power of Cash Flows Ratios," *Journal of Accountancy*, October 1998.

- **LO21-2** Cash includes cash equivalents. These are short-term, highly liquid investments that can readily be converted to cash with little risk of loss. (*p. 1261*)
- **LO21-3** Cash flows from operating activities are both inflows and outflows of cash that result from activities reported in the income statement. (*p. 1262*)
- **LO21-4** Unlike the direct method, which directly lists cash inflows and outflows, the indirect method derives cash flows indirectly, by starting with reported net income and working backwards to convert that amount to a cash basis. (*p. 1264*)
- **LO21-5** Cash flows from investing activities are related to the acquisition and disposition of assets, other than inventory and assets classified as cash equivalents. (*p. 1266*)
- **LO21-6** Cash flows from financing activities result from the external financing of a business. (*p. 1267*)
- **LO21-7** Noncash investing and financing activities, such as acquiring equipment (an investing activity) by issuing a long-term note payable (a financing activity), are reported in a related disclosure schedule or note. (*p. 1268*)
- **LO21-8** A spreadsheet provides a systematic method of preparing a statement of cash flows by analyzing available data to insure that all operating, investing, and financing activities are detected. Recording spreadsheet entries that explain account balance changes simultaneously identifies and classifies the activities to be reported on the statement of cash flows. (*p. 1268*)
- **LO21-9** IFRS allows more flexibility than U.S. GAAP in the classification of cash flows. Companies can report interest and dividends paid as either operating or financing cash flows and interest and dividends received as either operating or investing cash flows. (*pp. 1265 and 1287*) ●

APPENDIX 21A

Spreadsheet for the Indirect Method

A spreadsheet is equally useful in preparing a statement of cash flows whether we use the direct or the indirect method of determining cash flows from operating activities. The format of the spreadsheet differs only with respect to operating activities. The analysis of transactions for the purpose of identifying cash flows to be reported is the same. To illustrate, Illustration 21A-1 on the next page provides a spreadsheet analysis of the data for UBC.

Two differences should be noted between the spreadsheet in Illustration 21A-1 and the spreadsheet we used earlier for the direct method. First, in the statement of cash flows section of the spreadsheet, under the heading of “cash flows from operating activities,” specific cash inflows and cash outflows are replaced by net income and the required adjustments for noncash effects. Second, we do not include an income statement section. This section is unnecessary because, using the indirect method, we are not interested in identifying specific operating activities that cause increases and decreases in cash. Instead, we need from the income statement only the amount of net income, which is converted to a cash basis by adjusting for any noncash amounts included in net income. The spreadsheet entries in journal entry form for the indirect method are illustrated in Illustration 21A-2 on page 1302.

Remember that there is no mandatory order in which the account changes must be analyzed. However, since we determine net cash flows from operating activities by working backwards from net income when using the indirect method, it is convenient to start with the spreadsheet entry that represents the credit to retained earnings due to net income. This entry corresponds to summary entry (11) using the direct method. By entering the debit portion of the entry as the first item under the cash flows from operating activities (CFOA), we establish net income as the initial amount of cash flows from operating activities, which is then adjusted to a cash basis by subsequent entries. Entries (2)–(4) duplicate the transactions that involve noncash components of net income. Changes in current assets and current liabilities that represent differences between revenues and expenses and the cash effects of those revenues and expenses are accounted for by entries (5)–(11). Summary entries (12)–(19) explain the changes in the balance sheet not already accounted for by previous entries, and are identical to entries (12)–(19) recorded using the direct method.

Illustration 21A–2Spreadsheet Entries for
the Indirect Method

Entry (1)	Net income—CFOA	12	
	Retained earnings		12
	<i>Establishes net income as the initial amount of cash flows from operating activities, to be adjusted to a cash basis by subsequent entries.</i>		
Entry (2)	Cash (received from sale of land)	18	
	Land		10
	Gain on sale of land—CFOA		8
	<i>Deducts the noncash gain added in determining net income, explains a portion of the change in land, and identifies a cash inflow from investing activities.</i>		
Entry (3)	Cash (received from sale of equipment)	5	
	Loss on sale of equipment—CFOA	2	
	Accumulated depreciation	7	
	Buildings and equipment		14
	<i>Adds back the noncash loss subtracted in determining net income, explains portions of the changes in accumulated depreciation and buildings and equipment, and identifies a cash inflow from investing activities.</i>		
Entry (4)	Depreciation expense—CFOA	3	
	Accumulated depreciation		3
	<i>Adds back the noncash expense subtracted in determining net income.</i>		
Entry (5)	Accounts receivable	2	
	Increase in accounts receivable—CFOA		2
	<i>Reduces net income to reflect \$98 million cash received from customers rather than \$100 million sales.</i>		
Entry (6)	Decrease in inventory—CFOA	4	
	Inventory		4
	<i>Increases net income to reflect a deduction of \$56 million cost of goods purchased rather than \$60 million cost of goods sold.</i>		
Entry (7)	Increase in accounts payable—CFOA	6	
	Accounts payable		6
	<i>Increases net income to reflect a deduction of \$50 million cash paid to suppliers rather than \$56 million cost of goods purchased.</i>		
Entry (8)	Decrease in prepaid insurance—CFOA	3	
	Prepaid insurance		3
	<i>Increases net income to reflect a deduction of \$4 million cash paid for insurance rather than \$7 million insurance expense.</i>		
Entry (9)	Increase in salaries payable—CFOA	2	
	Salaries payable		2
	<i>Increases net income to reflect a deduction of \$11 million cash paid to employees rather than \$13 million salaries expense.</i>		
Entry (10)	Amortization of discount on bonds—CFOA	2	
	Discount on bonds		2
	<i>Increases net income to reflect a deduction of \$3 million cash paid for bond interest rather than \$5 million bond interest expense.</i>		
Entry (11)	Income taxes payable	2	
	Decrease in income taxes payable—CFOA		2
	<i>Reduces net income to reflect a deduction of \$11 million cash paid for income taxes rather than \$9 million income tax expense.</i>		
Entry (12)	Short-term investment	12	
	Cash (purchase of short-term investment)		12
	<i>Explains the increase in the short-term investment account and identifies a cash outflow from investing activities.</i>		
Entry (13)	Land	30	
	Cash (purchase of land)		30
	<i>Explains a portion of the change in the land account and identifies a cash outflow from investing activities.</i>		

(continued)

Entry (14)	Buildings and equipment	20	
	Note payable		20
	<i>Partially explains the changes in the buildings and equipment and notes payable accounts and identifies a significant noncash investing and financing activity.</i>		
Entry (15)	Bonds payable	15	
	Cash (retirement of bonds payable)		15
	<i>Explains the decrease in the bonds payable account and identifies a cash outflow from financing activities.</i>		
Entry (16)	Retained earnings	13	
	Common stock		10
	Paid-in capital—excess of par		3
	<i>Partially explains the changes in the retained earnings, common stock, and paid-in capital—excess of par accounts.</i>		
Entry (17)	Cash (from sale of common stock)	26	
	Common stock		20
	Paid-in capital—excess of par		6
	<i>Partially explains the changes in the common stock and paid-in capital—excess of par accounts and identifies a cash inflow from financing activities.</i>		
Entry (18)	Retained earnings	5	
	Cash (payment of cash dividends)		5
	<i>Partially explains the change in the retained earnings account and identifies a cash outflow from financing activities.</i>		
Entry (19)	Cash	9	
	Net increase in cash (from statement of cash flows activities)		9
	<i>Reconciles the net increase in cash from operating, investing, and financing activities to the increase in the cash balance.</i>		

Illustration 21A–2

(concluded)

The statement of cash flows presenting net cash flows from operating activities by the indirect method is illustrated in Illustration 21A–3.

UNITED BRANDS CORPORATION		
Statement of Cash Flows		
For Year Ended December 31, 2013		
(\$ in millions)		
Cash Flows from Operating Activities		
Net income	\$12	
Adjustments for noncash effects:

APPENDIX 21B**The T-Account Method of Preparing the Statement of Cash Flows**

The T-account method serves the same purpose as a spreadsheet in assisting in the preparation of a statement of cash flows.

This chapter demonstrates the use of a spreadsheet to prepare the statement of cash flows. A second systematic approach to the preparation of the statement is referred to as the T-account method. The two methods are identical in concept. Both approaches reconstruct the transactions that caused changes in each account balance during the year, simultaneously identifying the operating, investing, and financing activities to be reported on the statement of cash flows. The form of the two methods differs only by whether the entries for those transactions are recorded on a spreadsheet or in T-accounts. In both cases, entries are recorded until the net change in each account balance has been explained.

Some accountants feel that the T-account method is less time-consuming than preparing a spreadsheet but accomplishes precisely the same goal. Since both methods are simply analytical techniques to assist in statement preparation, the choice is a matter of personal preference. The following five steps outline the T-account method:

1. Draw T-accounts for each income statement and balance sheet account.
2. The T-account for cash should be drawn considerably larger than other T-accounts because more space is required to accommodate the numerous debits and credits to cash. Also, the cash T-account will serve the same purpose as the statement of cash flows section of the spreadsheet in that the formal statement of cash flows is developed from the cash flows reported there. Therefore, it is convenient to partition the cash T-account with headings for “Operating Activities,” “Investing Activities,” and “Financing Activities” before entries are recorded.
3. Enter each account’s net change on the appropriate side (debit or credit) of the uppermost portion of each T-account. These changes will serve as individual check figures for determining whether the increase or decrease in each account balance has been explained. These first three steps establish the basic work form for the T-account method.
4. Reconstruct the transactions that caused changes in each account balance during the year and record the entries for those transactions directly in the T-accounts. Again using UBC as an example, the entries we record in the T-accounts are exactly the same as the spreadsheet entries we created in the chapter when using the spreadsheet method. The analysis we used in creating those spreadsheet entries is equally applicable to the T-account method. For that reason, that analysis is not repeated here. The complete T-account work form for UBC is presented below. Account balance changes are provided from balances given in Illustration 21–9.

BALANCE SHEET ACCOUNTS

5. After all account balances have been explained by T-account entries, prepare the statement of cash flows from the cash T-account, being careful also to report noncash investing and financing activities. The statement of cash flows for UBC appears in Illustration 21–2 on page 1260. ●

Questions For Review of Key Topics

- Q 21–1** Effects of all cash flows affect the balances of various accounts reported in the balance sheet. Also, the activities that cause some of these cash flows are reported in the income statement. What, then, is the need for an additional financial statement that reports cash flows?
- Q 21–2** The statement of cash flows provides a list of all the cash inflows and cash outflows during the reporting period. To make the list more informative, the cash flows are classified according to the nature of the activities that create the cash flows. What are the three primary classifications?
- Q 21–3** Is an investment in Treasury bills always classified as a cash equivalent? Explain.
- Q 21–4** Transactions that involve merely purchases or sales of cash equivalents generally are not reported in a statement of cash flows. Describe an exception to this generalization. What is the essential characteristic of the transaction that qualifies as an exception?
- Q 21–5** What are the differences between cash flows from operating activities and the elements of an income statement?
- Q 21–6** Do cash flows from operating activities report all the elements of the income statement on a cash basis? Explain.
- Q 21–7** Investing activities include the acquisition and disposition of assets. Provide four specific examples. Identify two exceptions.
- Q 21–8** The sale of stock and the sale of bonds are reported as financing activities. Are payments of dividends to shareholders and payments of interest to bondholders also reported as financing activities? Explain.
- Q 21–9** Does the statement of cash flows report only transactions that cause an increase or a decrease in cash? Explain.
- Q 21–10** How would the acquisition of a building be reported on a statement of cash flows if purchased by issuing a mortgage note payable in addition to a significant cash down payment?
- Q 21–11** Perhaps the most noteworthy item reported on an income statement is net income—the amount by which revenues exceed expenses. The most noteworthy item reported on a statement of cash flows is *not* the amount of net cash flows. Explain.
- Q 21–12** What is the purpose of the “changes” columns of a spreadsheet to prepare a statement of cash flows?

- Q 21-13** Given sales revenue of \$200,000, how can it be determined whether or not \$200,000 cash was received from customers?
- Q 21-14** When an asset is sold at a gain, why is the gain not reported as a cash inflow from operating activities?
- Q 21-15** Are ordinary losses and extraordinary losses treated alike in preparing a statement of cash flows? Explain.
- Q 21-16** When determining the amount of cash paid for income taxes, what would be indicated by an increase in the deferred income tax liability account?
- Q 21-17** When using the indirect method of determining net cash flows from operating activities, how is warranty expense reported? Why? What other expenses are reported in a like manner?
- Q 21-18** When using the indirect method of determining net cash flows from operating activities, how are revenues and expenses reported on the statement of cash flows if their cash effects are identical to the amounts reported in the income statement?
- Q 21-19** Why does the FASB recommend the direct method over the indirect method?
- Q 21-20** Compare the manner in which investing activities are reported on a statement of cash flows prepared by the direct method and by the indirect method.
-  **IFRS Q 21-21** Where can we find authoritative guidance for the statement of cash flows under IFRS?
-  **IFRS Q 21-22** U.S. GAAP designates cash outflows for interest payments and cash inflows from interest and dividends received as operating cash flows. Dividends paid to shareholders are classified as financing cash flows. How are these cash flows reported under IFRS?

Brief Exercises

- BE 21-1**
Determine cash received from customers
● LO21-3
Horton Housewares' accounts receivable decreased during the year by \$5 million. What is the amount of cash Horton received from customers during the reporting period if its sales were \$33 million? Prepare a summary entry that represents the net effect of the selling and collection activities during the reporting period.
- BE 21-2**
Determine cash received from customers
● LO21-3
April Wood Products' accounts receivable increased during the year by \$4 million. What is the amount of cash April Wood Products received from customers during the reporting period if its sales were \$44 million? Prepare a summary entry that represents the net effect of the selling and collection activities during the reporting period.
- BE 21-3**
Determine cash paid to suppliers
● LO21-3
LaRoe Lawns' inventory increased during the year by \$6 million. Its accounts payable increased by \$5 million during the same period. What is the amount of cash LaRoe paid to suppliers of merchandise during the reporting period if its cost of goods sold was \$25 million? Prepare a summary entry that represents the net effect of merchandise purchases during the reporting period.
- BE 21-4**
Determine cash paid to employees
● LO21-3
Sherriane Baby Products' salaries expense was \$17 million. What is the amount of cash Sherriane paid to employees during the reporting period if its salaries payable increased by \$3 million? Prepare a summary entry that represents the net effect of salaries expense incurred and paid during the reporting period.
- BE 21-5**
Bond interest and discount
● LO21-3, LO21-6
Agee Technology, Inc., issued 9% bonds, dated January 1, with a face amount of \$400 million on July 1, 2013, at a price of \$380 million. For bonds of similar risk and maturity, the market yield is 10%. Interest is paid semi-annually on June 30 and December 31. Prepare the journal entry to record interest at the effective interest rate at December 31. What would be the amount(s) related to the bonds that Agee would report in its statement of cash flows for the year ended December 31, 2013, if it uses the direct method?
- BE 21-6**
Bond interest and discount
● LO21-4, LO21-6
Refer to the situation described in BE 21-5. What would be the amount(s) related to the bonds that Agee would report in its statement of cash flows for the year ended December 31, 2013, if it uses the indirect method?
- BE 21-7**
Installment note
● LO21-3, LO21-6
On January 1, 2013, the Merit Group issued to its bank a \$41 million, five-year installment note to be paid in five equal payments at the end of each year. Installment payments of \$10 million annually include interest at the rate of 7%. What would be the amount(s) related to the note that Merit would report in its statement of cash flows for the year ended December 31, 2013?

BE 21-8
Sale of land

- LO21-3, LO21-4, LO21-5

On July 15, 2013, M.W. Morgan Distribution sold land for \$35 million that it had purchased in 2008 for \$22 million. What would be the amount(s) related to the sale that Morgan would report in its statement of cash flows for the year ended December 31, 2013, using the direct method? The indirect method?

BE 21-9
Investing activities

- LO21-5

Carter Containers sold marketable securities, land, and common stock for \$30 million, \$15 million, and \$40 million, respectively. Carter also purchased treasury stock, equipment, and a patent for \$21 million, \$25 million, and \$12 million, respectively. What amount should Carter report as net cash from investing activities?

BE 21-10
Financing activities

- LO21-6

Refer to the situation described in BE 21-9. What amount should Carter report as net cash from financing activities?

BE 21-11
Indirect method

- LO21-4

Sheen Awnings reported net income of \$90 million. Included in that number were depreciation expense of \$3 million and a loss on the sale of equipment of \$2 million. Records reveal increases in accounts receivable, accounts payable, and inventory of \$1 million, \$4 million, and \$3 million, respectively. What were Sheen's cash flows from operating activities?

BE 21-12
Indirect method

- LO21-4

Sunset Acres reported net income of \$60 million. Included in that number were trademark amortization expense of \$2 million and a gain on the sale of land of \$1 million. Records reveal decreases in accounts receivable, accounts payable, and inventory of \$2 million, \$5 million, and \$4 million, respectively. What were Sunset's cash flows from operating activities?

Exercises

An alternate exercise and problem set is available on the text website: www.mhhe.com/spiceland7e

E 21-1
Classification of cash flows

- LO21-3 through LO21-6

Listed below are several transactions that typically produce either an increase or a decrease in cash. Indicate by letter whether the cash effect of each transaction is reported on a statement of cash flows as an operating (O), investing (I), or financing (F) activity.

	Transactions
<u> </u> F	1. Sale of common stock
<u> </u>	2. Sale of land
<u> </u>	3. Purchase of treasury stock
<u> </u>	4. Merchandise sales
<u> </u>	5. Issuance of a long-term note payable
<u> </u>	6. Purchase of merchandise
<u> </u>	7. Repayment of note payable
<u> </u>	8. Employee salaries
<u> </u>	9. Sale of equipment at a gain
<u> </u>	10. Issuance of bonds
<u> </u>	11. Acquisition of bonds of another corporation
<u> </u>	12. Payment of semiannual interest on bonds payable
<u> </u>	13. Payment of a cash dividend
<u> </u>	14. Purchase of a building
<u> </u>	15. Collection of nontrade note receivable (principal amount)
<u> </u>	16. Loan to another firm
<u> </u>	17. Retirement of common stock
<u> </u>	18. Income taxes
<u> </u>	19. Issuance of a short-term note payable
<u> </u>	20. Sale of a copyright

E 21-2
Determine cash paid to suppliers of merchandise

- LO21-3, LO21-8

Shown below in T-account format are the beginning and ending balances (\$ in millions) of both inventory and accounts payable.

Inventory	
Beginning balance	90
Ending balance	93

Accounts Payable	
	14
	16
Beginning balance	
Ending balance	

Required:

1. Use a T-account analysis to determine the amount of cash paid to suppliers of merchandise during the reporting period if cost of goods sold was \$300 million.
2. Prepare a summary entry that represents the net effect of merchandise purchases during the reporting period.

E 21-3

Determine cash received from customers

● LO21-3

Determine the amount of cash received from customers for each of the three independent situations below. All dollars are in millions.

Situation	Sales Revenue	Accounts Receivable Increase (Decrease)	Cash Received from Customers
1	100	-0-	?
2	100	5	?
3	100	(5)	?

E 21-4

Summary entries for cash received from customers

● LO21-3

For each of the three independent situations below, prepare journal entries that summarize the selling and collection activities for the reporting period in order to determine the amount of cash received from customers and to explain the change in each account shown. All dollars are in millions.

Situation	Sales Revenue	Accounts Receivable Increase (Decrease)	Cash Received from Customers
1	200	-0-	?
2	200	10	?
3	200	(10)	?

E 21-5

Determine cash paid to suppliers of merchandise

● LO21-3

Determine the amount of cash paid to suppliers of merchandise for each of the nine independent situations below. All dollars are in millions.

Situation	Cost of Goods Sold	Inventory Increase (Decrease)	Accounts Payable Increase (Decrease)	Cash Paid to Suppliers
1	100	0	0	?
2	100	3	0	?
3	100	(3)	0	?
4	100	0	7	?
5	100	0	(7)	?
6	100	3	7	?
7	100	3	(7)	?
8	100	(3)	(7)	?
9	100	(3)	7	?

E 21-6

Summary entries for cash paid to suppliers of merchandise

● LO21-3

For each of the five independent situations below, prepare a journal entry that summarizes the purchases, sales, and payments related to inventories in order to determine the amount of cash paid to suppliers and explain the change in each account shown. All dollars are in millions.

Situation	Cost of Goods Sold	Inventory Increase (Decrease)	Accounts Payable Increase (Decrease)	Cash Paid to Suppliers
1	200	0	0	?
2	200	6	0	?

E 21-11

Bonds; statement of cash flow effects

Most Solutions, Inc., issued 10% bonds, dated January 1, with a face amount of \$640 million on January 1, 2013. The bonds mature in 2023 (10 years). For bonds of similar risk and maturity the market yield is 12%. Interest expense is recorded at the effective interest rate. Interest is paid semiannually on June 30 and December 31. Most recorded the sale as follows:

● LO21-3

January 1, 2013			
Cash (price)		566,589,440	
Discount on bonds (difference)		73,410,560	
Bonds payable (face amount)			640,000,000

Required:

What would be the amount(s) related to the bonds that Most would report in its statement of cash flows for the year ended December 31, 2013?

E 21-12

Installment note; statement of cash flow effects

National Food Services, Inc., borrowed \$4 million from its local bank on January 1, 2013, and issued a 4-year installment note to be paid in four equal payments at the end of each year. The payments include interest at the rate of 10%. Installment payments are \$1,261,881 annually.

● LO21-3, LO21-6

Required:

What would be the amount(s) related to the note that National would report in its statement of cash flows for the year ended December 31, 2013?

E 21-13
Identifying cash flows from investing activities and financing activities
● LO21-5, LO21-6

In preparation for developing its statement of cash flows for the year ended December 31, 2013, Rapid Pac, Inc., collected the following information:

	(\$ in millions)
Fair value of shares issued in a stock dividend	\$ 65
Payment for the early extinguishment of long-term bonds (carrying amount: \$97 million)	102
Proceeds from the sale of treasury stock (cost: \$17 million)	22
Gain on sale of land	4
Proceeds from sale of land	12
Purchase of Microsoft common stock	160
Declaration of cash dividends	44
Distribution of cash dividends declared in 2012	40

Required:

1. In Rapid Pac’s statement of cash flows, what were net cash inflows (or outflows) from investing activities for 2013?
2. In Rapid Pac’s statement of cash flows, what were net cash inflows (or outflows) from financing activities for 2013?

E 21-14
Identifying cash flows from investing activities and financing activities
● LO21-5, LO21-6

In preparation for developing its statement of cash flows for the year ended December 31, 2013, Millennium Solutions, Inc., collected the following information (\$ in millions):

Payment for the early extinguishments of long-term notes (book value: \$50 million)	\$ 54
Sale of common shares	176
Retirement of common shares	122
Loss on sale of equipment	2
Proceeds from sale of equipment	8
Issuance of short-term note payable for cash	10
Acquisition of building for cash	7
Purchase of marketable securities (not a cash equivalent)	5
Purchase of marketable securities (considered a cash equivalent)	1
Cash payment for 3-year insurance policy	3
Collection of note receivable with interest (principal amount, \$11)	13
Declaration of cash dividends	33
Distribution of cash dividends declared in 2012	30

Required:

1. In Millennium’s statement of cash flows, what were net cash inflows (or outflows) from investing activities for 2013?
2. In Millennium’s statement of cash flows, what were net cash inflows (or outflows) from financing activities for 2013?

E 21-15
Lease; lessee; statement of cash flows effects
● LO21-3, LO21-5, LO21-6

Wilson Foods Corporation leased a commercial food processor on September 30, 2013. The five-year lease agreement calls for Wilson to make quarterly lease payments of \$195,774, payable each September 30, December 31, March 31, June 30, with the first payment at September 30, 2013. Wilson’s incremental borrowing rate is 12%. Wilson records depreciation on a straight-line basis at the end of each fiscal year. Wilson recorded the lease as follows:

September 30, 2013		
Asset (calculated below)	3,000,000	
Lease payable (calculated below)		3,000,000
Lease payable	195,774	
Cash (first payment)		195,774

Calculation of the present value of lease payments

$$\$195,774 \times 15.32380^* = \$3,000,000$$

(rounded)

*Present value of an annuity due of \$1: $n = 20, i = 3\%$ (from Table 6)

Required:

What would be the pretax amounts related to the lease that Wilson would report in its statement of cash flows for the year ended December 31, 2013?

E 21-16
Equity method investment; statement of cash flow effects

- LO21-3, LO21-5

On January 1, 2013, Beilich Enterprises bought 20% of the outstanding common stock of Wolfe Construction Company for \$600 million cash. Wolfe’s net income for the year ended December 31, 2013, was \$300 million. During 2013, Wolfe declared and paid cash dividends of \$60 million. Beilich recorded the investment as follows:

	(\$ in millions)	
Purchase		
Investment in Wolfe Construction shares	600	
Cash		600
Net income		
Investment in Wolfe Construction shares (20% × \$300 million)	60	
Investment revenue		60
Dividends		
Cash (20% × \$60 million)	12	
Investment in Wolfe Construction shares		12

Required:

What would be the pretax amounts related to the investment that Beilich would report in its statement of cash flows for the year ended December 31, 2013?

E 21-17
Indirect method; reconciliation of net income to net cash flows from operating activities

- LO21-4

The accounting records of EZ Company provided the data below. Prepare a reconciliation of net income to net cash flows from operating activities.

Net income	\$50,000
Depreciation expense	7,000
Increase in inventory	1,500
Decrease in salaries payable	800
Decrease in accounts receivable	2,000
Amortization of patent	500
Amortization of premium on bonds	1,000
Increase in accounts payable	4,000
Cash dividends	12,000

E 21-18
Spreadsheet entries from statement of retained earnings

- LO21-3 through LO21-8

The statement of retained earnings of Gary Larson Publishers is presented below.

GARY LARSON PUBLISHERS		
Statement of Retained Earnings		
For the Year Ended December 31, 2013		
(\$ in millions)		
Retained earnings, January 1		\$200
Add:	Net income	75
Deduct:	Cash dividend	(25)
	Stock dividend (1 million shares of \$1 par common stock)	(16)
	Property dividend (Garfield Company preferred stock held as a short-term investment)	(12)
	Sale of treasury stock (cost \$53 million)	(10)
Retained earnings, December 31		\$212

Required:

For the transactions that affected Larson’s retained earnings, reconstruct the journal entries for the transactions that affected retained earnings and that can be used to determine cash flows to be reported in a statement of cash flows. Also indicate any investing and financing activities you identify from this analysis that should be reported on the statement of cash flows.

E 21-19
Relationship between the income statement and cash flows from operating activities (direct method and indirect method)

- LO21-3, LO21-4

The following schedule relates the income statement with cash flows from operating activities, derived by both the direct and indirect methods, in the format illustrated by Illustration 21-11 in the chapter. The amounts for income statement elements are missing.

Cash Flows from Operating Activities

Income Statement	Indirect Method		Direct Method		
		Net income	\$?		
		Adjustments:			
Sales	\$?	Decrease in accounts receivable	12	Cash received from customers	\$612
Cost of goods sold	?	Increase in inventory	(24)		
		Decrease in accounts payable	(36)	Cash paid to suppliers	(420)
Salaries expense	?	Increase in salaries payable	12	Cash paid to employees	(66)
Depreciation expense	?	Depreciation expense	18	(Not reported—no cash effect)	
Insurance expense	?	Decrease in prepaid insurance	18	Cash paid for insurance	(24)
Loss on sale of land	?	Loss on sale of land	12	(Not reported—no cash effect)	
Income tax expense	?	Increase in income tax payable	<u>12</u>	Cash paid for income taxes	<u>(42)</u>
Net income	\$?	Net cash flows from operating activities	\$60	Net cash flows from operating activities	\$ 60

Required:

Deduce the missing amounts and prepare the income statement.

E 21–20

Reconciliation of net cash flows from operating activities to net income

● LO21–3, LO21–4

The income statement and the cash flows from the operating activities section of the statement of cash flows are provided below for Syntric Company. The merchandise inventory account balance neither increased nor decreased during the reporting period. Syntric had no liability for insurance, deferred income taxes, or interest at any time during the period.

SYNTRIC COMPANY
Income Statement
For the Year Ended December 31, 2013
(\$ in 000s)

Sales		\$312
Cost of goods sold		(188)
Gross margin		<u>124</u>
Salaries expense	\$41	
Insurance expense	22	
Depreciation expense	11	
Depletion expense	5	
Bond interest expense	<u>10</u>	(89)
Gains and losses:		
Gain on sale of equipment		25
Loss on sale of land		<u>(8)</u>
Income before tax		52
Income tax expense		<u>(26)</u>
Net income		<u>\$ 26</u>
Cash Flows from Operating Activities:		
Cash received from customers		\$258
Cash paid to suppliers		(175)
Cash paid to employees		(37)
Cash paid for interest		(9)
Cash paid for insurance		(16)
Cash paid for income taxes		<u>(14)</u>
Net cash flows from operating activities		<u>\$ 7</u>

Required:

Prepare a schedule to reconcile net income to net cash flows from operating activities.

E 21–21

Cash flows from operating activities (direct method) derived from an income statement and cash flows from operating activities indirect method)

● LO21–3, LO21–4

The income statement and a schedule reconciling cash flows from operating activities to net income are provided below (\$ in 000s) for Peach Computers.

PEACH COMPUTERS
Income Statement
For the Year Ended December 31, 2013

Sales		\$305
Cost of goods sold		(185)
Gross margin		120
Salaries expense	\$41	
Insurance expense	19	
Depreciation expense	11	
Loss on sale of land	5	76
Income before tax		44
Income tax expense		(22)
Net income		<u>\$ 22</u>

Reconciliation of Net Income
To Net Cash Flows from Operating Activities

Net income	\$22
Adjustments for Noncash Effects	
Depreciation expense	11
Loss on sale of land	5
Changes in operating assets and liabilities:	
Decrease in accounts receivable	6
Increase in inventory	(13)
Decrease in accounts payable	(8)
Increase in salaries payable	5
Decrease in prepaid insurance	9
Increase in income tax payable	20
Net cash flows from operating activities	<u>\$57</u>

Required:

- Calculate each of the following amounts for Peach Computers:
 - Cash received from customers during the reporting period.
 - Cash paid to suppliers of goods during the reporting period.
 - Cash paid to employees during the reporting period.
 - Cash paid for insurance during the reporting period.
 - Cash paid for income taxes during the reporting period.
- Prepare the cash flows from operating activities section of the statement of cash flows (direct method).

E 21-22

Indirect method; reconciliation of net income to net cash flows from operating activities

● LO21-4

The accounting records of Baddour Company provided the data below. Prepare a reconciliation of net income to net cash flows from operating activities.

Net loss	\$5,000
Depreciation expense	6,000
Increase in salaries payable	500
Decrease in accounts receivable	2,000
Increase in inventory	2,300
Amortization of patent	300
Reduction in discount on bonds	200

E 21-23

Cash flows from operating activities (direct method)—includes extraordinary loss

● LO21-3

Portions of the financial statements for Myriad Products are provided below.

MYRIAD PRODUCTS COMPANY
Income Statement
For the Year Ended December 31, 2013
 (\$ in millions)

Sales		\$ 660
Cost of goods sold		(250)
Gross margin		410
Salaries expense	\$110	
Depreciation expense	90	
Patent amortization expense	5	
Interest expense	20	
Loss on sale of cash equivalents	3	(228)
Income before taxes and extraordinary loss		182
Income tax expense		(91)
Income before extraordinary loss		91
Extraordinary loss (earthquake)	10	
Less: Tax savings	(5)	(5)
Net Income		<u>\$ 86</u>

MYRIAD PRODUCTS COMPANY
Selected Accounts from Comparative Balance Sheets
December 31, 2013 and 2012
(\$ in millions)

	Year		Change
	2013	2012	
Cash	\$102	\$100	\$ 2
Accounts receivable	220	232	(12)
Inventory	440	450	(10)
Accounts payable	140	134	6
Salaries payable	80	86	(6)
Interest payable	25	20	5
Income taxes payable	15	10	5

Required:

Prepare the cash flows from operating activities section of the statement of cash flows for Myriad Products Company using the *direct method*.

E 21–24

Cash flows from operating activities (indirect method)—includes extraordinary loss

● LO21–4

Refer to the data provided in Exercise 21–23 for Myriad Products Company.

Required:

Prepare the cash flows from operating activities section of the statement of cash flows for Myriad Products Company using the *indirect method*.

E 21–25

Cash flows from operating activities (direct method)—includes extraordinary gain

● LO21–3

Portions of the financial statements for Clear Transmissions Company are provided below.

CLEAR TRANSMISSIONS COMPANY
Income Statement
For the Year Ended December 31, 2013 (\$ in 000s)

Sales		\$1,320
Cost of goods sold		(500)
Gross margin		820
Salaries expense	\$220	
Depreciation expense	180	
Patent amortization expense	10	
Interest expense	40	
Loss on sale of cash equivalents	6	(456)
Income before taxes and extraordinary gain		364
Income tax expense		(182)
Income before extraordinary gain		182
Extraordinary gain (sale of subsidiary)	20	
Less: Tax on gain	(10)	10
Net Income		<u>\$ 192</u>

CLEAR TRANSMISSIONS COMPANY
Selected Accounts from Comparative Balance Sheets
December 31, 2013 and 2012 (\$ in 000s)

	Year		Change
	2013	2012	
Cash	\$102	\$100	\$ 2
Accounts receivable	220	232	(12)
Inventory	440	450	(10)
Accounts payable	140	134	6
Salaries payable	80	86	(6)
Interest payable	25	20	5
Income taxes payable	15	10	5

Required:

Prepare the cash flows from operating activities section of the statement of cash flows for Clear Transmissions Company using the *direct method*.

E 21–26

Cash flows from operating activities (indirect method)—includes extraordinary gain

● LO21–4

Refer to the data provided in Exercise 21–25 for Clear Transmissions Company.

Required:

Prepare the cash flows from operating activities section of the statement of cash flows for Clear Transmissions Company using the *indirect method*.

E 21–27

Statement of cash flows; direct method

● LO21–3,
LO21–5,
LO21–6,
LO21–8

Comparative balance sheets for 2013 and 2012, a statement of income for 2013, and additional information from the accounting records of Red, Inc., are provided below.

RED, INC.
Comparative Balance Sheets
December 31, 2013 and 2012 (\$ in millions)

	2013	2012
Assets		
Cash	\$ 24	\$110
Accounts receivable	178	132
Prepaid insurance	7	3
Inventory	285	175
Buildings and equipment	400	350
Less: Accumulated depreciation	(119)	(240)
	<u>\$775</u>	<u>\$530</u>
Liabilities		
Accounts payable	\$ 87	\$100
Accrued expenses payable	6	11
Notes payable	50	0
Bonds payable	160	0
Shareholders' Equity		
Common stock	400	400
Retained earnings	72	19
	<u>\$775</u>	<u>\$530</u>

RED, INC.
Statement of Income
For Year Ended December 31, 2013 (\$ in millions)

Revenues		
Sales revenue		\$2,000
Expenses		
Cost of goods sold	\$1,400	
Depreciation expense	50	
Operating expenses	447	1,897
Net income		<u>\$ 103</u>

Additional information from the accounting records:

- a. During 2013, \$230 million of equipment was purchased to replace \$180 million of equipment (95% depreciated) sold at book value.
- b. In order to maintain the usual policy of paying cash dividends of \$50 million, it was necessary for Red to borrow \$50 million from its bank.

Required:

Prepare the statement of cash flows of Red, Inc., for the year ended December 31, 2013. Present cash flows from operating activities by the direct method. (You may omit the schedule to reconcile net income with cash flows from operating activities.)

E 21–28
Pension plan
funding
● LO21–3

Mayer Corporation has a defined benefit pension plan. Mayer's policy is to fund the plan annually, cash payments being made at the end of each year. Data relating to the pension plan for 2013 are as follows:

	December 31	
	(\$ in millions)	
	2013	2012
Plan assets	\$1,080	\$900
Net Pension Expense for 2013:		
Service cost	\$ 112	
Interest cost (6% × \$850)	51	
Actual return on the plan assets (11% × \$900 = \$99)		
Adjusted for: \$9 gain on the plan assets*	(90)	
Amortization of prior service cost	8	
Amortization of net loss	1	
	\$ 82	

*(11% × \$900) – (10% – \$900)

Required:

Recreate the journal entries used to record Mayer's 2013 pension expense, gain on plan assets, and funding of plan assets in order to determine the cash paid to the pension trustee as reported in the statement of cash flows.

E 21–29
FASB codification
research
● LO21–2

The statement of cash flows (as well as the balance sheet) includes within cash the notion of cash equivalents. The *FASB Accounting Standards Codification* represents the single source of authoritative U.S. generally accepted accounting principles.

Required:

1. Obtain the relevant authoritative literature on cash equivalents using the FASB's Codification Research System at the FASB website (www.fasb.org). What is the specific citation that describes the guidelines for determining what items should be deemed cash equivalents?
2. List the guidelines.

E 21–30
FASB codification
research
● LO21–1,
LO21–4,
LO21–7

Access the FASB's Codification Research System at the FASB website (www.fasb.org). Determine the specific citation for accounting for each of the following items:

1. Disclosure of interest and income taxes paid if the indirect method is used.
2. Primary objectives of a statement of cash flows.
3. Disclosure of noncash investing and financing activities.

E 21–31
Statement of
cash flows;
indirect method
● LO21–4,
LO21–5,
LO21–6,
LO21–8,
Appendix A

Refer to the data provided in Exercise 21–27 for Red, Inc.

Required:

Prepare the statement of cash flows for Red, Inc., using the indirect method to report operating activities.

E 21–32
Statement of
cash flows;
T-account
method
● LO21–8,
Appendix B

Refer to the data provided in Exercise 21–27 for Red, Inc.

Required:

Prepare the statement of cash flows (direct method) for Red, Inc. Use the T-account method to assist in your analysis.

CPA and CMA Review Questions

CPA Exam Questions

The following questions are adapted from a variety of sources including questions developed by the AICPA Board of Examiners and those used in the Kaplan CPA Review Course to study the statement of cash flows while preparing for the CPA examination. Determine the response that best completes the statements or questions.

- LO21-3
- In a statement of cash flows in which operating activities are reported by the direct method, which of the following would increase reported cash flows from operating activities?
 - Gain on sale of land.
 - Interest revenue.
 - Gain on early extinguishment of bonds.
 - Proceeds from sale of equipment.
- LO21-6
- During 2013, TEL Company engaged in the following activities:

Distribution of cash dividends declared in 2012	\$ 24
Fair value of shares issued in a stock dividend	110
Payment to retire bonds	226
Proceeds from the sale of treasury stock (cost: \$26)	30

In TEL's statement of cash flows, what were net cash outflows from financing activities for 2013?

 - \$196
 - \$220
 - \$280
 - \$366
- LO21-4
- SOL Company reported net income for 2013 in the amount of \$200,000. The company's financial statements also included the following:

Increase in accounts receivable	\$ 40,000
Decrease in inventory	30,000
Increase in accounts payable	100,000
Depreciation expense	52,000
Gain on sale of land	74,000

What is net cash provided by operating activities under the indirect method?

 - \$216,000
 - \$268,000
 - \$290,000
 - \$416,000
- LO21-3
- Which of the following does *not* represent a cash flow relating to operating activities?
 - Dividends paid to stockholders.
 - Cash received from customers.
 - Interest paid to bondholders.
 - Cash paid for salaries.
- LO21-5
- Which of the following would *not* be a component of cash flows from investing activities?
 - Sale of land.
 - Purchase of securities.
 - Purchase of equipment.
 - Dividends paid.
- LO21-4
- An analyst compiled the following information for Universe, Inc., for the year ended December 31, 2013:
 - Net income was \$850,000.
 - Depreciation expense was \$200,000.
 - Interest paid was \$100,000.
 - Income taxes paid were \$50,000.
 - Common stock was sold for \$100,000.
 - Preferred stock (8% annual dividend) was sold at par value of \$125,000.
 - Common stock dividends of \$25,000 were paid.
 - Preferred stock dividends of \$10,000 were paid.
 - Equipment with a book value of \$50,000 was sold for \$100,000.

Using the indirect method, what was Universe, Inc.'s net cash flow from operating activities for the year ended December 31, 2013?

- \$1,000,000
- \$1,015,000
- \$1,040,000
- \$1,050,000

Beginning in 2011, International Financial Reporting Standards are tested on the CPA exam along with U.S. GAAP. The following questions deal with the application of IFRS in the statement of cash flows.

● LO21-7

IFRS

7. Consistent with U.S. GAAP, we classify cash flows as operating, investing, or financing activities under IFRS. However, with regard to interest and dividend inflows and outflows, IFRS
- permits companies to report cash outflows from interest payments as either operating *or* investing cash flows.
 - permits companies to report cash inflows from interest and dividends as either operating *or* financing cash flows.
 - permits companies to report dividends paid as either financing *or* operating cash flows.
 - requires companies to report cash outflows for interest payments and cash inflows from interest and dividends received as operating cash flows.

● LO21-7

IFRS

8. Interest received and interest payments must be reported as operating cash flows using
- IFRS.
 - U.S. GAAP.
 - both U.S. GAAP and IFRS.
 - neither U.S. GAAP nor IFRS.

● LO21-7

IFRS

9. Gee Company's accounting records and financial statements reported the following:

Cash paid to acquire machinery	\$70,000
Proceeds from sale of land	80,000
Loss from the sale of land	5,000
Cash paid to acquire a trademark	38,000
Treasury stock purchased for cash	50,000
Dividend revenue received	20,000

Gee prepares its financial statements in accordance with IFRS. In its statement of cash flows, Gee most likely reports net cash outflows from investing activities of:

- \$ 8,000.
- \$11,000.
- \$28,000.
- \$33,000.

CMA Exam
Questions

The following questions dealing with the statement of cash flows are adapted from questions that previously appeared on Certified Management Accountant (CMA) examinations. The CMA designation sponsored by the Institute of Management Accountants (www.imanet.org) provides members with an objective measure of knowledge and competence in the field of management accounting. Determine the response that best completes the statements or questions.

● LO21-3

1. When preparing the statement of cash flows, companies are required to report separately as operating cash flows all of the following except
- interest received on investments in bonds.
 - interest paid on the company's bonds.
 - cash collected from customers.
 - cash dividends paid on the company's stock.

● LO21-5,
LO21-6

2. The following information was taken from the accounting records of Oak Corporation for the year ended December 31:

Proceeds from issuance of preferred stock	\$4,000,000
Dividends paid on preferred stock	400,000
Bonds payable converted to common stock	2,000,000
Payment for purchase of machinery	500,000
Proceeds from sale of plant building	1,200,000
2% stock dividend on common stock	300,000
Gain on sale of plant building	200,000

The net cash flows from investing and financing activities that should be presented on Oak's statement of cash flows for the year ended December 31 are, respectively

- \$700,000 and \$3,600,000.
- \$700,000 and \$3,900,000.
- \$900,000 and \$3,900,000.
- \$900,000 and \$3,600,000.

● LO21-4

3. The net income for Cypress Inc. was \$3,000,000 for the year ended December 31. Additional information is as follows:

Depreciation on fixed assets	\$1,500,000
Gain from cash sale of land	200,000
Increase in accounts payable	300,000
Dividends paid on preferred stock	400,000

The net cash provided by operating activities in the statement of cash flows for the year ended December 31 should be

- \$4,200,000.
- \$4,500,000.
- \$4,600,000.
- \$4,800,000.

Problems

An alternate exercise and problem set is available on the text website: www.mhhe.com/spiceland7e

P 21-1

Classification of cash flows from investing and financing activities

- LO21-2,
LO21-5 through
LO21-7

Listed below are transactions that might be reported as investing and/or financing activities on a statement of cash flows. Possible reporting classifications of those transactions are provided also.

Required:

Indicate the reporting classification of each transaction by entering the appropriate classification code.

Classifications	
+I	Investing activity (cash inflow)
-I	Investing activity (cash outflow)
+F	Financing activity (cash inflow)
-F	Financing activity (cash outflow)
N	Noncash investing and financing activity
X	Not reported as an investing and/or a financing activity

Transactions

Example

- +I 1. Sale of land.
2. Issuance of common stock for cash.
3. Purchase of treasury stock.
4. Conversion of bonds payable to common stock.
5. Lease of equipment.
6. Sale of patent.
7. Acquisition of building for cash.
8. Issuance of common stock for land.
9. Collection of note receivable (principal amount).
10. Issuance of bonds.
11. Issuance of stock dividend.
12. Payment of property dividend.
13. Payment of cash dividends.
14. Issuance of short-term note payable for cash.
15. Issuance of long-term note payable for cash.
16. Purchase of marketable securities ("available for sale").
17. Payment of note payable.
18. Cash payment for 5-year insurance policy.

(continued)

(concluded)

- _____ 19. Sale of equipment.
- _____ 20. Issuance of note payable for equipment.
- _____ 21. Acquisition of common stock of another corporation.
- _____ 22. Repayment of long-term debt by issuing common stock.
- _____ 23. Payment of semiannual interest on bonds payable.
- _____ 24. Retirement of preferred stock.
- _____ 25. Loan to another firm.
- _____ 26. Sale of inventory to customers.
- _____ 27. Purchase of marketable securities (cash equivalents).

P 21-2

Statement of cash flows; direct method

- LO21-3, LO21-8

The comparative balance sheets for 2013 and 2012 and the statement of income for 2013 are given below for Wright Company. Additional information from Wright's accounting records is provided also.

WRIGHT COMPANY
Comparative Balance Sheets
December 31, 2013 and 2012
(\$ in 000s)

	2013	2012
Assets		
Cash	\$ 42	\$ 30
Accounts receivable	73	75
Short-term investment	40	15
Inventory	75	70
Land	50	60
Buildings and equipment	550	400
Less: Accumulated depreciation	(115)	(75)
	<u>\$ 715</u>	<u>\$575</u>
Liabilities		
Accounts payable	\$ 28	\$ 35
Salaries payable	2	5
Interest payable	5	3
Income tax payable	9	12
Notes payable	0	30
Bonds payable	160	100
Shareholders' Equity		
Common stock	250	200
Paid-in capital—excess of par	126	100
Retained earnings	135	90
	<u>\$ 715</u>	<u>\$575</u>

WRIGHT COMPANY
Income Statement
For Year Ended December 31, 2013
(\$ in 000s)

Revenues		
Sales revenue		\$380
Expenses		
Cost of goods sold	\$130	
Salaries expense	45	
Depreciation expense	40	
Interest expense	12	
Loss on sale of land	3	
Income tax expense	70	300
		<u>\$ 80</u>
Net income		<u>\$ 80</u>

Additional information from the accounting records:

- a. Land that originally cost \$10,000 was sold for \$7,000.
- b. The common stock of Microsoft Corporation was purchased for \$25,000 as a short-term investment not classified as a cash equivalent.

- c. New equipment was purchased for \$150,000 cash.
- d. A \$30,000 note was paid at maturity on January 1.
- e. On January 1, 2011, bonds were sold at their \$60,000 face value.
- f. Common stock (\$50,000 par) was sold for \$76,000.
- g. Net income was \$80,000 and cash dividends of \$35,000 were paid to shareholders.

Required:

Prepare the statement of cash flows of Wright Company for the year ended December 31, 2013. Present cash flows from operating activities by the direct method. (You may omit the schedule to reconcile net income with cash flows from operating activities.)

P 21-3
Statement of
cash flows; direct
method

- LO21-3,
LO21-8

The comparative balance sheets for 2013 and 2012 and the statement of income for 2013 are given below for National Intercable Company. Additional information from NIC's accounting records is provided also.

	\$6,900	\$5,850

METAGROBOLIZE INDUSTRIES
Income Statement
For the Year Ended December 31, 2013
(\$ in 000s)

Revenues		
Sales revenue	\$2,645	
Gain on sale of land	90	\$2,735
Expenses		
Cost of goods sold	\$ 600	
Depreciation expense—building	30	
Depreciation expense—equipment	315	
Loss on sale of equipment	15	
Amortization of patent	300	
Operating expenses	500	1,760
Net income		\$ 975

Additional information from the accounting records:

- a. During 2013, equipment with a cost of \$300,000 (90% depreciated) was sold.
- b. The statement of shareholders' equity reveals reductions of \$225,000 and \$450,000 for stock dividends and cash dividends, respectively.

Required:

Prepare the statement of cash flows of Metagrobolize for the year ended December 31, 2013. Present cash flows from operating activities by the direct method. (You may omit the schedule to reconcile net income to cash flows from operating activities.)

P 21–6

Cash flows from operating activities (direct method) derived from an income statement and cash flows from operating activities (indirect method)

- LO21–3, LO21–4

The income statement and a schedule reconciling cash flows from operating activities to net income are provided below (\$ in millions) for Mike Roe Computers.

	MIKE ROE COMPUTERS Income Statement For the Year Ended December 31, 2013	Reconciliation of Net Income to Net Cash Flows from Operating Activities	
		Net income	\$13
		<i>Adjustments for noncash effects:</i>	
Sales	\$150	Decrease in accounts receivable	5
Cost of goods sold	(90)	Gain on sale of equipment	(12)
Gross margin	60	Increase in inventory	(6)
Salaries expense	\$20	Increase in accounts payable	9
Insurance expense	12	Increase in salaries payable	3
Depreciation expense	5	Depreciation expense	5
Interest expense	6	Decrease in bond discount	3
Gains and losses:		Decrease in prepaid insurance	2
Gain on sale of equipment	12	Loss on sale of land	3
Loss on sale of land	(3)	Increase in income tax payable	6
Income before tax	26		
Income tax expense	(13)		
Net income	\$ 13	Net cash flows from operating activities	\$31

Required:

1. Calculate each of the following amounts for Mike Roe Computers:
 - a. Cash received from customers during the reporting period.
 - b. Cash paid to suppliers of goods during the reporting period.
 - c. Cash paid to employees during the reporting period.
 - d. Cash paid for interest during the reporting period.
 - e. Cash paid for insurance during the reporting period.
 - f. Cash paid for income taxes during the reporting period.
2. Prepare the cash flows from operating activities section of the statement of cash flows (direct method).

P 21-7

Cash flows from operating activities (direct method) derived from an income statement and cash flows from operating activities (indirect method)

● LO21-3,
LO21-4

The income statement and a schedule reconciling cash flows from operating activities to net income are provided below for Microsoft Corporation.

MACROSOFT CORPORATION		Reconciliation of Net Income	
Income Statement		to Net Cash Flows

P 21-10

Relationship between the income statement and cash flows from operating activities (direct method and indirect method)

- LO21-3, LO21-4

The following schedule relates the income statement with cash flows from operating activities, derived by both the direct and indirect methods, in the format illustrated by Illustration 21-11 in the chapter. Some elements necessary to complete the schedule are missing.

Cash Flows from Operating Activities

Income Statement		Indirect Method		Direct Method	
		Net income	\$?		
		Adjustments:			
Sales	\$300	Decrease in accounts receivable	6	Cash received from customers	\$?
Gain on sale of equipment	24	Gain on sale of equipment	(24)	(Not reported—no cash effect)	
Cost of goods sold	(?)	Increase in inventory	(12)		
Salaries expense	(42)	Increase in accounts payable	18	Cash paid to suppliers	(174)
Depreciation expense	(9)	? in salaries payable	6	Cash paid to employees	(36)
Interest expense	(?)	Depreciation expense	9	Cash paid for depreciation	?
Insurance expense	(21)	Decrease in bond discount	3	Cash paid for interest	(9)
Loss on sale of land	(6)	Decrease in prepaid insurance	9	Cash paid for insurance	(?)
Income tax expense	(27)	Loss on sale of land	6	(Not reported—no cash effect)	
		Increase in income tax payable	?	Cash paid for income taxes	(21)
Net Income	\$?	Net cash flows from operating activities	\$ 54	Net cash flows from operating activities	\$ 54

Required:

Complete the schedule by determining each of the following missing elements:

- Cash received from customers
- Cost of goods sold
- ? in salaries payable (Increase? or decrease?)
- Cash paid for depreciation
- Interest expense
- Cash paid for insurance
- Increase in income tax payable
- Net income

P 21-11

Prepare a statement of cash flows; direct method

- LO21-3, LO21-8

The comparative balance sheets for 2013 and 2012 and the income statement for 2013 are given below for Arduous Company. Additional information from Arduous's accounting records is provided also.

ARDUOUS COMPANY
Comparative Balance Sheets
December 31, 2013 and 2012
(\$ in millions)

	2013	2012
Assets		
Cash	\$ 116	\$ 81
Accounts receivable	190	194
Investment revenue receivable	6	4
Inventory	205	200
Prepaid insurance	4	8
Long-term investment	156	125
Land	196	150
Buildings and equipment	412	400
Less: Accumulated depreciation	(97)	(120)
Patent	30	32
	<u>\$1,218</u>	<u>\$1,074</u>
Liabilities		
Accounts payable	\$ 50	\$ 65
Salaries payable	6	11
Bond interest payable	8	4
Income tax payable	12	14
Deferred income tax liability	11	8
Notes payable	23	0
Lease liability	82	0
Bonds payable	215	275
Less: Discount on bonds	(22)	(25)
Shareholders' Equity		
Common stock	430	410
Paid-in capital—excess of par	95	85
Preferred stock	75	0
Retained earnings	242	227
Less: Treasury stock	(9)	0
	<u>\$1,218</u>	<u>\$1,074</u>

ARDUOUS COMPANY
Income Statement
For Year Ended December 31, 2013
(\$ in millions)

Revenues		
Sales revenue	\$410	
Investment revenue	11	
Gain on sale of treasury bills	2	\$423
Expenses		
Cost of goods sold	180	
Salaries expense	73	
Depreciation expense	12	
Patent amortization expense	2	
Insurance expense	7	
Bond interest expense	28	
Extraordinary loss (flood damage to inventory)	\$18	
Less: Tax savings	(9)	9
Income tax expense	45	356
Net income		\$ 67

Additional information from the accounting records:

- a. Investment revenue includes Arduous Company's \$6 million share of the net income of Demur Company, an equity method investee.
- b. Treasury bills were sold during 2013 at a gain of \$2 million. Arduous Company classifies its investments in Treasury bills as cash equivalents.
- c. A machine originally costing \$70 million that was one-half depreciated was rendered unusable by a rare flood. Most major components of the machine were unharmed and were sold for \$17 million.
- d. Temporary differences between pretax accounting income and taxable income caused the deferred income tax liability to increase by \$3 million.
- e. The preferred stock of Tory Corporation was purchased for \$25 million as a long-term investment.
- f. Land costing \$46 million was acquired by issuing \$23 million cash and a 15%, four-year, \$23 million note payable to the seller.
- g. The right to use a building was acquired with a 15-year lease agreement; present value of lease payments, \$82 million.
- h. \$60 million of bonds were retired at maturity.
- i. In February, Arduous issued a 4% stock dividend (4 million shares). The market price of the \$5 par value common stock was \$7.50 per share at that time.
- j. In April, 1 million shares of common stock were repurchased as treasury stock at a cost of \$9 million.

Required:

Prepare the statement of cash flows of Arduous Company for the year ended December 31, 2013. Present cash flows from operating activities by the direct method. (A reconciliation schedule is not required.)

P 21-12

Transactions affecting retained earnings

- LO21-5, LO21-6, LO21-8

Shown below in T-account format are the changes affecting the retained earnings of Brenner-Jude Corporation during 2013. At January 1, 2013, the corporation had outstanding 105 million common shares, \$1 par per share.

Retained Earnings (\$ in millions)		
	90	Beginning balance
Retirement of 5 million common shares for \$22 million	2	
	88	Net income for the year
Declaration and payment of a \$.33 per share cash dividend	33	
Declaration and distribution of a 4% stock dividend	20	
	123	Ending balance

Required:

1. From the information provided by the account changes you should be able to re-create the transactions that affected Brenner-Jude's retained earnings during 2013. Reconstruct the journal entries which can be used as spreadsheet entries in the preparation of a statement of cash flows. Also indicate any investing and financing activities you identify from this analysis that should be reported on the statement of cash flows.

- Prepare a statement of retained earnings for Brenner-Jude for the year ended 2013. (You may wish to compare your solution to this problem with the parallel situation described in Exercise 18–18.)

P 21–13

Various cash flows

- LO21–3 through LO21–8

Following are selected balance sheet accounts of Del Conte Corp. at December 31, 2013 and 2012, and the increases or decreases in each account from 2012 to 2013. Also presented is selected income statement information for the year ended December 31, 2013, and additional information.

Selected Balance Sheet Accounts	2013	2012	Increase (Decrease)
Assets			
Accounts receivable	\$ 34,000	\$ 24,000	\$ 10,000
Property, plant, and equipment	277,000	247,000	30,000
Accumulated depreciation	(178,000)	(167,000)	11,000
Liabilities and Stockholders' Equity			
Bonds payable	49,000	46,000	3,000
Dividends payable	8,000	5,000	3,000
Common stock, \$1 par	22,000	19,000	3,000
Additional paid-in capital	9,000	3,000	6,000
Retained earnings	104,000	91,000	13,000
Selected Income Statement Information for the Year Ended December 31, 2013			
Sales revenue	\$ 155,000		
Depreciation	33,000		
Gain on sale of equipment	13,000		
Net income	28,000		

Additional Information:

- Accounts receivable relate to sales of merchandise.
- During 2013, equipment costing \$40,000 was sold for cash.
- During 2013, bonds payable with a face value of \$20,000 were issued in exchange for property, plant, and equipment. There was no amortization of bond discount or premium.

Required:

Items 1 through 5 represent activities that will be reported in Del Conte's statement of cash flows for the year ended December 31, 2013. The following two responses are required for each item:

- Determine the amount that should be reported in Del Conte's 2013 statement of cash flows.
- Using the list below, determine the category in which the amount should be reported in the statement of cash flows.
 - O. Operating activity
 - I. Investing activity
 - F. Financing activity

	Amount	Category
1. Cash collections from customers (direct method).	_____	_____
2. Payments for purchase of property, plant, and equipment.	_____	_____
3. Proceeds from sale of equipment.	_____	_____
4. Cash dividends paid.	_____	_____
5. Redemption of bonds payable.	_____	_____

(AICPA adapted)

P 21–14

Statement of cash flows; indirect method; limited information

- LO21–4, LO21–8

The comparative balance sheets for 2013 and 2012 are given below for Surmise Company. Net income for 2013 was \$50 million.

SURMISE COMPANY
Comparative Balance Sheets
December 31, 2013 and 2012
(\$ in millions)

	2013	2012
Assets		
Cash	\$ 45	\$ 40
Accounts receivable	92	96
Less: Allowance for uncollectible accounts	(12)	(4)
Prepaid expenses	8	5
Inventory	145	130
Long-term investment	80	40
Land	100	100
Buildings and equipment	411	300
Less: Accumulated depreciation	(142)	(120)
Patent	16	17
	<u>\$ 743</u>	<u>\$ 604</u>
Liabilities		
Accounts payable	\$ 17	\$ 32
Accrued liabilities	(2)	10
Notes payable	35	0
Lease liability	111	0
Bonds payable	65	125
Shareholders' Equity		
Common stock	60	50
Paid-in capital—excess of par	245	205
Retained earnings	212	182
	<u>\$ 743</u>	<u>\$ 604</u>

Required:

Prepare the statement of cash flows of Surmise Company for the year ended December 31, 2013. Use the indirect method to present cash flows from operating activities because you do not have sufficient information to use the direct method. You will need to make reasonable assumptions concerning the reasons for changes in some account balances. A spreadsheet or T-account analysis will be helpful.

P 21-15

Integrating problem; bonds; lease transactions; lessee and lessor; statement of cash flow effects

- LO21-3, LO21-5, LO21-6

Digital Telephony issued 10% bonds, dated January 1, with a face amount of \$32 million on January 1, 2013. The bonds mature in 2023 (10 years). For bonds of similar risk and maturity the market yield is 12%. Interest is paid semiannually on June 30 and December 31. Digital recorded the issue as follows:

Cash	28,329,472	
Discount on bonds	3,670,528	
Bonds payable		32,000,000

Digital also leased switching equipment to Midsouth Communications, Inc., on September 30, 2013. Digital purchased the equipment from MDS Corp. at a cost of \$6 million. The five-year lease agreement calls for Midsouth to make quarterly lease payments of \$391,548, payable each September 30, December 31, March 31, and June 30, with the first payment on September 30, 2013. Digital's implicit interest rate is 12%.

Required:**Part A**

Respond to the following questions assuming neither company applies the proposed Accounting Standards Update for lease accounting described in the Chapter 15 Supplement.

1. What would be the amount(s) related to the bonds that Digital would report in its statement of cash flows for the year ended December 31, 2013, if Digital uses the direct method? The indirect method?
2. What would be the amounts related to the lease that *Midsouth* would report in its statement of cash flows for the year ended December 31, 2013?
3. What would be the amounts related to the lease that *Digital* would report in its statement of cash flows for the year ended December 31, 2013?
4. Assume MDS manufactured the equipment at a cost of \$5 million and that Midsouth leased the equipment directly from MDS. What would be the amounts related to the lease that *MDS* would report in its statement of cash flows for the year ended December 31, 2013?

Part B

Respond to the preceding questions assuming both companies use the proposed Accounting Standards Update for lease accounting described in the Chapter 15 Supplement.

P 21-16

Statement of cash flows; indirect method

- LO21-4, LO21-8

Refer to the data provided in the Problem 21-4 for Dux Company.

Required:

Prepare the statement of cash flows for Dux Company using the *indirect method*.

P 21-17

Statement of cash flows; indirect method

- LO21-4, LO21-8

Refer to the data provided in the Problem 21-5 for Metagrobolize Industries.

Required:

Prepare the statement of cash flows for Metagrobolize Industries using the *indirect method*.

**P 21-18**

Statement of cash flows; indirect method

- LO21-4, LO21-8

Refer to the data provided in the Problem 21-11 for Arduous Company.

Required:

Prepare the statement of cash flows for Arduous Company using the *indirect method*.

excel

(Note: The following problems use the technique learned in Appendix 21B.)

P 21-19

Statement of cash flows; T-account method

- LO21-3, LO21-8

Refer to the data provided in the Problem 21-4 for Dux Company.

Required:

Prepare the statement of cash flows for Dux Company. Use the T-account method to assist in your analysis.

**P 21-20**

Statement of cash flows; T-account method

- LO21-3, LO21-8

Refer to the data provided in the Problem 21-5 for Metagrobolize Industries.

Required:

Prepare the statement of cash flows for Metagrobolize Industries. Use the T-account method to assist in your analysis.

**P 21-21**

Statement of cash flows; T-account method

- LO21-3, LO21-8

Refer to the data provided in the Problem 21-11 for Arduous Company.

Required:

Prepare the statement of cash flows for Arduous Company. Use the T-account method to assist in your analysis.

Broaden Your Perspective

Apply your critical-thinking ability to the knowledge you've gained. These cases will provide you an opportunity to develop your research, analysis, judgment, and communication skills. You also will work with other students, integrate what you've learned, apply it in real world situations, and consider its global and ethical ramifications. This practice will broaden your knowledge and further develop your decision-making abilities.

Communication Case 21-1

Distinguish
income and cash
flows

- LO21-1,
LO21-3,
LO21-4

“Why can't we pay our shareholders a dividend?” shouted your new boss. “This income statement you prepared for me says we earned \$5 million in our first half-year!”

You were hired last month as the chief accountant for Enigma Corporation which was organized on July 1 of the year just ended. You recently prepared the financial statements below:

ENIGMA CORPORATION Income Statement For the Six Months Ended December 31, 2013

(\$ in millions)

Sales revenue	\$ 75
Cost of goods sold	(30)
Depreciation expense	(5)
Remaining expenses	<u>(35)</u>
Net income	<u>\$ 5</u>

ENIGMA CORPORATION Balance Sheet December 31, 2013 (\$ in millions)

Cash	\$ 1
Accounts receivable (net)	20
Merchandise inventory	15
Machinery (net)	<u>44</u>
Total	<u>\$80</u>
Accounts payable	\$ 2
Accrued expenses payable	7
Notes payable	36
Common stock	30
Retained earnings	<u>5</u>
Total	<u>\$80</u>

You have just explained to your boss, Robert James, that although net income was \$5 million, operating activities produced a net decrease in cash. Unable to understand your verbal explanation, he has asked you to prepare a written report.

Required:

Prepare a report explaining the apparent discrepancy between Enigma's profitability and its cash flows. To increase the chances of your boss's understanding the situation, include in your report a determination of net cash flows from operating activities by both the direct and indirect methods. Your report should also include a narrative explanation of how it is possible for operating activities to simultaneously produce a positive net income and negative net cash flows.

Judgment Case 21-2

Distinguish
income and cash
flows

- LO21-3,
LO21-8

You are a loan officer for First Benevolent Bank. You have an uneasy feeling as you examine a loan application from Daring Corporation. The application included the following financial statements.

DARING CORPORATION Income Statement For the Year Ended December 31, 2013

Sales revenue	\$100,000
Cost of goods sold	(50,000)
Depreciation expense	(5,000)
Remaining expenses	<u>(25,000)</u>
Net income	<u>\$ 20,000</u>

DARING CORPORATION
Balance Sheet
December 31, 2013

Cash	\$ 5,000
Accounts receivable	25,000
Inventory	20,000
Operational assets	55,000
Accumulated depreciation	(5,000)
Total	\$100,000
Accounts payable	\$ 10,000
Interest payable	5,000
Note payable	45,000
Common stock	20,000
Retained earnings	20,000
Total	\$100,000

It is not Daring's profitability that worries you. The income statement submitted with the application shows net income of \$20,000 in Daring's first year of operations. By referring to the balance sheet, you see that this net income represents a 20% rate of return on assets of \$100,000. Your concern stems from the recollection that the note payable reported on Daring's balance sheet is a two-year loan you approved earlier in the year.

You also recall another promising new company that, just last year, defaulted on another of your bank's loans when it failed due to its inability to generate sufficient cash flows to meet its obligations. Before requesting additional information from Daring, you decide to test your memory of the intermediate accounting class you took in night school by attempting to prepare a statement of cash flows from the information available in the loan application.

Research
Case 21-3

Information from cash flow activities; FedEx

- LO21-3 through LO21-8

Real World Financials

Locate the most recent financial statements and related disclosure notes of **FedEx Corporation**. You can locate the report online at www.fedex.com or by accessing EDGAR at www.sec.gov.

Required:

1. From the information provided in the statement of cash flows, explain what allows FedEx Corporation to expand its business as evidenced by the investing activities, while at the same time not raising as much cash through financing activities.
2. Describe the activities listed under financing activities for the most recent fiscal year. [*Hint:* FedEx's Statement of Changes in Common Stockholders' Investment (statement of shareholders' equity) will help you determine the nature of the stock activity.] What is the most notable financing activity reported?
3. What are the cash payments FedEx made for interest and for income taxes in the three years reported? [*Hint:* See the disclosure notes.]
4. Obtain the relevant authoritative literature on disclosure of interest and income taxes using the FASB's Codification Research System. You might gain access at the FASB website (www.fasb.org). What is the specific citation that specifies the way FedEx reports interest and income taxes separately that enabled you to answer requirement 3?

Research
Case 21-4

Locate and extract relevant information for a financial reporting issue; integrative; Microsoft Corporation

- LO21-4

Real World Financials

A meeting of your accounting department is scheduled for early tomorrow morning. One topic of discussion is certain to be the appropriate adjustments to net income in your company's statement of cash flows using the indirect method of reporting operating activities. Hallway discussions have suggested some degree of uncertainty, particularly regarding unearned revenues, which are substantial for the company. Because your firm went public only seven months ago, this reporting issue is a new one for you and most other members of the department. In preparation for the meeting, you sought out the financial statements of **Microsoft Corporation**, knowing that it too had substantial unearned revenues. The operating activities section of the comparative statements of cash flows for Microsoft is presented below.

Cash Flows Statements (in millions)

	Year Ended June 30,		
	2010	2009	2008
Operations			
Net income	\$ 18,760	\$ 14,569	\$ 17,681
Adjustments to reconcile net income to net cash from operations:			
Depreciation, amortization, and other noncash items	2,673	2,562	2,056
Stock-based compensation	1,891	1,708	1,479
Net recognized losses (gains) on investments and derivatives	(208)	683	(572)
Excess tax benefits from stock-based compensation	(45)	(52)	(120)
Deferred income taxes	(220)	762	935
Deferral of unearned revenue	29,374	24,409	24,532
Recognition of unearned revenue	(28,813)	(25,426)	(21,944)

(continued)

(concluded)

Changes in operating assets and liabilities:			
Accounts receivable	(2,238)	2,215	(1,569)
Other current assets	420	(422)	153
Other long-term assets	(223)	(273)	(98)
Other current liabilities	1,295	(3,371)	(748)
Other long-term liabilities	1,407	1,673	(173)
Net cash from operations	<u>24,073</u>	<u>19,037</u>	<u>21,612</u>

Required:

1. Locate the financial statements of Microsoft Corporation on the Internet. Search the disclosure notes for information about how Microsoft accounts for its unearned revenues. How is the undelivered portion of Microsoft's sales of Windows XP Professional recorded initially?
2. Why does the statement of cash flows include "unearned revenue" as an addition to net income in the operations section? Why is "recognition of unearned revenue" included as a deduction from net income? Why do you think Microsoft reported these two items separately rather than just adjusting net income for the change in the unearned revenue account balance?
3. Why is stock-based compensation added to net income in the operations section?

Analysis**Case 21–5**

Smudged ink;
find missing
amounts

- LO21–3,
LO21–4

"Be careful with that coffee!" Your roommate is staring in disbelief at the papers in front of her. "This was my contribution to our team project," she moaned. "When you spilled your coffee, it splashed on this page. Now I can't recognize some of these numbers, and Craig has my source documents."

Knowing how important this afternoon's presentation is to your roommate, you're eager to see what can be done. "Let me see that," you offer. "I think we can figure this out." The statement of cash flows and income statement are intact. The reconciliation schedule and the comparative balance sheets are coffee casualties.

Required:

- Determine the missing amounts.
- Reconstruct the reconciliation of net income to cash flows from operating activities (operating cash flows using the indirect method).

Real World Case 21-6

Analyze cash flow activities; Staples, Inc.

- LO21-1 through LO21-8

Real World Financials

Staples, Inc., is the world's leading office products company. Locate the statement of cash flows of Staples for the fiscal year ended January 29, 2011 on the Internet.

Required:

- In the three years reported, what were Staples' primary investing activities? How were these activities financed? Be specific.
- During the most recent fiscal year, Staples purchased certificates of deposit. How were these purchases reported in the statement of cash flows? (Note: This is not an investing activity.)
- How are issuances of debt securities and issuances of equity securities classified in a statement of cash flows?
- How are payments to investors in debt securities (interest) and payments to investors in equity securities (dividends) classified in a statement of cash flows? Is this a conceptual inconsistency? Explain.
- Staples' statement of cash flows reports expenditures for acquisition of businesses. It also reports additions to long-term debt. Suppose the businesses had been acquired, not with cash, but by exchange for debt securities. Would such a transaction be reported? Explain.

Ethics Case 21-7

Where's the cash?

- LO21-1, LO21-3

After graduating near the top of his class, Ben Naegle was hired by the local office of a Big 4 CPA firm in his hometown. Two years later, impressed with his technical skills and experience, Park Electronics, a large regional consumer electronics chain, hired Ben as assistant controller. This was last week. Now Ben's initial excitement has turned to distress.

The cause of Ben's distress is the set of financial statements he's stared at for the last four hours. For some time prior to his recruitment, he had been aware of the long trend of moderate profitability of his new employer. The reports on his desk confirm the slight, but steady, improvements in net income in recent years. The trend he was just now becoming aware of, though, was the decline in cash flows from operations.

Ben had sketched out the following comparison (\$ in millions):

	2013	2012	2011	2010
Income from operations	\$140.0	\$132.0	\$127.5	\$127.0
Net income	38.5	35.0	34.5	29.5
Cash flow from operations	1.6	17.0	12.0	15.5

Profits? Yes. Increasing profits? Yes. The cause of his distress? The ominous trend in cash flow which is consistently lower than net income.

Upon closer review, Ben noticed three events in the last two years that, unfortunately, seemed related:

- Park's credit policy had been loosened; credit terms were relaxed and payment periods were lengthened.
- Accounts receivable balances had increased dramatically.
- Several of the company's compensation arrangements, including that of the controller and the company president, were based on reported net income.

Required:

- What is so ominous about the combination of events Ben sees?
- What course of action, if any, should Ben take?

**Real World
Case 21–8**

Cash flow despite losses; Dell Inc.

- LO21–3,
LO21–4

Real World Financials

"I've been reading that the computer industry is having money problems along with the rest of the economy," said Bee Del Conte as you walked with her to the library. "How is it, then, that I hear on the radio this morning that although Dell's cash flows from its operations last year were down significantly from prior years, its net income was not much lower than the year before?" Curious, the two of you stop by a computer terminal on the way to the reference section and do a quick search. A few clicks later you're looking at Dell's income statements and cash flow statements for the fiscal year ended January 28, 2011. These are reproduced in the financial statements and related disclosure notes of Dell in Appendix B located at the back of the text. They also can be found at www.Dell.com.

Required:

- Without regard to Dell specifically, explain to Bee the difference between net income or net loss and the cash flows from operating activities.
- Why did Dell add \$970 million in the determination of cash flows from operating activities for depreciation and amortization?
- The major contributor to Dell's having lower cash flows from operating activities than net income in fiscal 2009 is a sizable reduction in the amount Dell owes its suppliers. If Dell had used the direct rather than the indirect method of reporting operating activities, how would this reduction in accounts payable have affected cash from operating activities?
- Cash provided by financing activities during fiscal 2011 was \$477 million, as compared to \$2.012 billion in fiscal 2010 and minus \$1.4 billion in fiscal 2009. What is the major contributor from year to year in the amount of cash provided by financing activities? What other activity contributed to that increase in cash from financing activities during fiscal 2011?

**Research
Case 21–9**

Researching the way cash flows are reported; retrieving information from the Internet

- LO21–3 through
LO21–8

EDGAR, the Electronic Data Gathering, Analysis, and Retrieval system, performs automated collection, validation, indexing, acceptance, and forwarding of submissions by companies and others who are required by law to file forms with the U.S. Securities and Exchange Commission (SEC). All publicly traded domestic companies use EDGAR to make the majority of their filings. (Filings by foreign companies are not required to be filed on EDGAR, but some of these companies do so voluntarily.) Form 10-K, which includes the annual report, is required to be filed on EDGAR. The SEC makes this information available on the Internet.

Required:

- Access EDGAR on the Internet. The web address is www.sec.gov.
- Search for a public company with which you are familiar. Access its most recent 10-K filing. Search or scroll to find the statement of cash flows and related note(s).
- Is the direct or indirect method used to report operating activities? What is the largest adjustment to net income in reconciling net income and cash flows from operations in the most recent year?
- What are the cash payments for interest and for taxes?
- What has been the most significant investing activity for the company in the most recent three years?
- What has been the most significant financing activity for the company in requirements 2–6 for another company?

**Analysis
Case 21–10**

Information from cash flow activities; Dell

- LO21–3 through
LO21–8

Real World Financials

Refer to the financial statements and related disclosure notes of Dell Inc. located in the company's annual report for the fiscal year ending January 30, 2011, included with all new copies of the text. You also can locate the report online at www.dell.com.

Notice that Dell's net income has increased and decreased over the three years reported. To supplement their analysis of profitability, many analysts like to look at "free cash flow." A popular way to measure this metric is "structural free cash flow" (or as Warren Buffett calls it "owner's earnings"), which is calculated as net income from operations plus depreciation and amortization minus capital expenditures.

Required:

Determine free cash flows for Dell in each of the three years reported. Compare that amount with net income each year. What pattern do you detect?

Research**Case 21–11**

FASB codification; locate and extract relevant information and cite authoritative support for a financial reporting issue; cash flow classification

- LO21–4 through LO21–6

“This one’s got me stumped,” you say to no one in particular. “First day on the job; I’d better get it right.” It’s the classification of notes payable in the statement of cash flows that has you in doubt. Having received an “A” in Intermediate Accounting, you know that a note payable representing a bank loan is a financing activity, but this one is a note payable to your employer’s primary merchandise supplier. “I wonder if the accounting is the same.”

Required:

1. Obtain the relevant authoritative literature on cash flow classification using the FASB’s Codification Research System. You might gain access at the FASB website (www.fasb.org). What is the specific citation that specifies the classification of notes payable to suppliers?
2. Is accounting the same as for notes payable to banks? Explain.
3. Is accounting the same for both short-term and long-term notes payable to suppliers?

IFRS Case 21–12

Statement of cash flows presentation, British Telecommunications

- LO21–3 through LO21–6, LO21–9

**IFRS****Real World Financials**

British Telecommunications Plc (BT), a U.K. company, is the world’s oldest communications company. The company prepares its financial statements in accordance with International Financial Reporting Standards. Below are partial cash flow statements included in a recent annual report:

Group Cash Flow Statement

	2011 £m	2010 £m	2009 £m
Year ended 31 March			
Cash flow from operating activities			
Profit (loss) before taxation	1,717	1,007	(244)
Depreciation and amortisation	2,979	3,039	2,890
(Profit) loss on disposal of associates and businesses	(42)	10	13
Net finance expense	924	1,158	620
Other noncash charges	78	77	596
Share of profits of associates and joint ventures	(21)	(54)	(75)
(Increase) decrease in inventories	(17)	14	11
Decrease in trade and other receivables	408	524	1,063

	Proceeds on issue of treasury shares	8	4	125
	Net cash used in financing activities	(3,499)	(1,714)	(1,865)
	Effect of exchange rate changes on cash and cash equivalents	(3)	(7)	54
	Net (decrease) increase in cash and cash equivalents	(1,119)	329	(59)
	Cash and cash equivalents at the start of the year	1,444	1,115	1,174
	Cash and cash equivalents at the end of the year	325	1,444	1,115

Required:

1. What are the primary classifications into which BT's cash inflows and cash outflows are separated? Is this classification the same as or different from cash flow statements prepared in accordance with U.S. GAAP?
2. How are cash inflows from dividends and interest and cash outflows for dividends and interest classified in BT's cash flow statements? Is this classification the same as or different from cash flow statements prepared in accordance with U.S. GAAP?

Air France—Klm Case

AIRFRANCE

● LO21-9

Air France—KLM (AF), a French company, prepares its financial statements according to International Financial Reporting Standards. AF's annual report for the year ended March 31, 2011, which includes financial statements and disclosure notes, is provided with all new textbooks. This material also is included in AF's "Registration Document 2010–11," dated June 15, 2011 and is available at www.airfranceklm.com.

Required:

1. What are the primary classifications into which AF's cash inflows and cash outflows are separated? Is this classification the same as or different from cash flow statements prepared in accordance with U.S. GAAP?
2. How are cash inflows from dividends and interest and cash outflows for dividends and interest classified in AF's cash flow statements? Is this classification the same as or different from cash flow statements prepared in accordance with U.S. GAAP?

CPA Simulation 21-1

Alpha Company

Classification of
Cash Flows

CPA Review

Test your knowledge of the concepts discussed in this chapter, practice critical professional skills necessary for career success, and prepare for the computer-based CPA exam by accessing our CPA simulations at the text website: www.mhhe.com/spiceland7e.

The Alpha Company simulation tests your ability to select the appropriate classification for a variety of cash flows.

A Derivatives

“... derivatives are financial weapons of mass destruction . . .”

— Warren Buffett, Berkshire Hathaway CEO

“... the growing use of complex financial instruments known as derivatives does not pose a threat to the country’s financial system . . .”

— Alan Greenspan, Federal Reserve Chairman

“Total world derivatives are \$1000 trillion or 19 times the total world GDP of \$54 trillion.”

— Chuck Burr, *Culture Change*

In today’s global economy and evolving financial markets, businesses are increasingly exposed to a variety of risks, which, unmanaged, can have major impacts on earnings or even threaten a company’s very existence. Risk management, then, has become critical. Derivative financial instruments have become the key tools of risk management.¹

Derivatives are financial instruments that “derive” their values or contractually required cash flows from some other security or index. For instance, a contract allowing a company to buy a particular asset (say steel, gold, or flour) at a designated future date at a predetermined price is a financial instrument that derives its value from expected and actual changes in the price of the underlying asset. Financial futures, forward contracts, options, and interest rate swaps are the most frequently used derivatives. Derivatives are valued as tools to manage or hedge companies’ increasing exposures to risk, including interest rate risk, price risk, and foreign exchange risk. The variety, complexity, and magnitude of derivatives have grown rapidly in recent years. Accounting standard-setters have scrambled to keep pace.

A persistent stream of headline stories has alerted us to multimillion-dollar losses by many companies and the financial collapse of Bear Stearns and AIG. Focusing on these headlines, it would be tempting to conclude that derivatives are risky business indeed. Certainly they can be quite risky, if misused, but the fact is, these financial instruments exist to lessen, not increase, risk. Properly used, they serve as a form of “insurance” against risk. In fact, if a company is exposed to a substantial risk and does not hedge that risk, it is taking a gamble. On the other hand, if a derivative is used improperly, it can be a huge gamble itself. Total world derivatives are \$1,000 trillion or 19 times the total world GDP of \$54 trillion.

Derivatives Used to Hedge Risk

Hedging means taking an action that is expected to produce exposure to a particular type of risk that is precisely the *opposite* of an actual risk to which the company already is exposed. For instance, the volatility of interest rates creates exposure to interest-rate risk for companies that issue debt—which, of course, includes most companies. So, a company that frequently arranges short-term loans from its bank under a floating (variable) interest rate agreement is exposed to the risk that interest rates might increase and adversely affect borrowing costs. Similarly, a company that regularly reissues commercial paper as it matures faces the possibility that new rates will be higher and cut into forecasted income. When borrowings are large, the potential cost can be substantial. So, the firm might choose to hedge its position by entering into a transaction that would produce a *gain* of roughly the same amount as the potential loss if interest rates do, in fact, increase.

Hedging is used to deal with three areas of risk exposure: fair value risk, cash flow risk, and foreign currency risk. Let’s look at some of the more common derivatives.

¹Almost all financial institutions and over half of all nonfinancial companies use derivatives.

Derivatives are financial instruments that “derive” their values from some other security or index.

Derivatives serve as a form of “insurance” against risk.

Hedging means taking a risk position that is opposite to an actual position that is exposed to risk.

FINANCIAL FUTURES A futures contract is an agreement between a seller and a buyer that requires the seller to deliver a particular commodity (say corn, gold, or pork bellies) at a designated future date, at a *predetermined* price. These contracts are actively traded on regulated futures exchanges. When the “commodity” is a *financial instrument*, such as a Treasury bond, Treasury bill, commercial paper, or a certificate of deposit, the agreement is referred to as a *financial futures contract*.²

A futures contract allows a firm to sell (or buy) a financial instrument at a designated future date, at today's price.

To appreciate the way these hedges work, you need to remember that when interest rates rise, the market price of interest-bearing securities goes down. For instance, if you have an investment in a 10% bond and market interest rates go up to, say, 12%, your 10% bond is less valuable relative to other bonds paying the higher rate. Conversely, when interest rates decline, the market price of interest-bearing securities goes up. This risk that the investment's value might change is referred to as *fair value risk*. The company that issued the securities is faced with fair value risk also. If interest rates decline, the fair value of that company's debt would rise, a risk the borrower may want to hedge against. Later in this section, we'll look at an illustration of how the borrower would account for and report such a hedge.

Now let's look at the effect on a contract to sell or buy securities (or any asset for that matter) at preset prices. One who is contracted to *sell* securities at a *preset* price after their market price has fallen benefits from the rise in interest rates. Consequently, the value of the *contract* that gives one the right to sell securities at a preset price goes up as the market price declines. The seller in a futures contract derives a gain (loss) when interest rates rise (decline).³ Conversely, the one obligated to *buy* securities at a preset price experiences a loss. This risk of having to pay more cash or receive less cash is referred to as *cash flow risk*.

The seller in a financial futures contract realizes a gain (loss) when interest rates rise (decline).

Another example of cash flow risk would be borrowing money by issuing a variable (floating) rate note. If market interest rates rise, the borrower would have to pay more interest. Similarly, the lender (investor) in the variable (floating) rate note transaction would face cash flow risk that interest rates would decline, resulting in lower cash interest receipts.

Let's look closer at how a futures contract can mitigate cash flow risk. Consider a company in April that will replace its \$10 million of 8.5% bank notes when they mature in June. The company is exposed to the risk that interest rates in June will have risen, increasing borrowing costs. To counteract that possibility, the firm might enter a contract in April to deliver (sell) bonds in June at their *current* price. Since there are no corporate bond futures contracts, the company buys Treasury bond futures, which will accomplish essentially the same purpose. In essence, the firm agrees to sell Treasury bonds in June at a price established now (April). Let's say it's April 6 and the price of Treasury bond futures on the International Monetary Market of the Chicago Mercantile Exchange is quoted as 95.24.⁴ Since the trading unit of Treasury bond futures is a 15-year, \$100,000, 8% Treasury bond, the company might sell 105 Treasury bond futures to hedge the June issuance of debt. This would effectively provide a hedge of $105 \times \$100,000 \times 95.24\% = \$10,000,200$.⁵

Here's what happens then. If interest rates rise, borrowing costs will go up for our example company because it will have to sell debt securities at a higher interest cost (or lower price). But that loss will be offset (approximately) by the gain produced by being in the opposite position on Treasury bond futures. Take note, though, this works both ways. If interest rates go down causing debt security prices to rise, the potential benefit of being able to issue debt at that lower interest rate (higher price) will be offset by a loss on the futures position.

A very important point about futures contracts is that the seller does not need to have actual possession of the commodity (the Treasury bonds, in this case), nor is the purchaser of the contract required to take possession of the commodity. In fact, virtually all financial futures contracts are “netted out” before the actual transaction is to take place. This is

²Note that a financial futures contract meets the definition of a financial instrument because it entails the exchange of financial instruments (cash for Treasury bonds, for instance). But, a futures contract for the sale or purchase of a nonfinancial commodity like corn or gold does not meet the definition because one of the items to be exchanged is not a financial instrument.

³The seller of a futures contract is obligated to sell the bonds at a future date. The buyer of a futures contract is obligated to buy the bonds at a future date. The company in our example, then, is the seller of the futures contract.

⁴Price quotes are expressed as a percentage of par.

⁵This is a simplification of the more sophisticated way financial managers determine the optimal number of futures.

simply a matter of reversing the original position. A seller closes out his transaction with a purchase. Likewise, a purchaser would close out her transaction with a sale. After all, the objective is not to actually buy or sell Treasury bonds (or whatever the commodity might be), but to incur the financial impact of movements in interest rates as reflected in changes in Treasury bond prices. Specifically, it will buy at the lower price (to reverse the original seller position) at the same time it's selling its new bond issue at that same lower price. The financial futures market is an “artificial” exchange in that its reason for existing is to provide a mechanism to transfer risk from those exposed to it to those willing to accept the risk, not to actually buy and sell the underlying financial instruments.

If the impending debt issue being hedged is a short-term issue, the company may attain a more effective hedge by selling Treasury *bill* futures since Treasury bills are 90-day securities, or maybe certificate of deposit (CD) futures that also are traded in futures markets. The object is to get the closest association between the financial effects of interest rate movements on the actual transaction and the effects on the financial instrument used as a hedge.

The effectiveness of a hedge is influenced by the closeness of the match between the item being hedged and the financial instrument chosen as a hedge.

FINANCIAL FORWARD CONTRACTS A **forward contract** is similar to a futures contract but differs in three ways:

1. A forward contract calls for delivery on a specific date, whereas a futures contract permits the seller to decide later which specific day within the specified month will be the delivery date (if it gets as far as actual delivery before it is closed out).
2. Unlike a futures contract, a forward contract usually is not traded on a market exchange.
3. Unlike a futures contract, a forward contract does not call for a daily cash settlement for price changes in the underlying contract. Gains and losses on forward contracts are paid only when they are closed out.

OPTIONS **Options** frequently are purchased to hedge exposure to the effects of changing interest rates. Options serve the same purpose as futures in that respect but are fundamentally different. An option on a financial instrument—say a Treasury bill—gives its holder the right either to buy or to sell the Treasury bill at a specified price and within a given time period. Importantly, though, the option holder has no obligation to exercise the option. On the other hand, the holder of a futures contract must buy or sell within a specified period unless the contract is closed out before delivery comes due.

FOREIGN CURRENCY FUTURES Foreign loans frequently are denominated in the currency of the lender (Japanese yen, Swiss franc, Euro, and so on). When loans must be repaid in foreign currencies, a new element of risk is introduced. This is because if exchange rates change, the dollar equivalent of the foreign currency that must be repaid differs from the dollar equivalent of the foreign currency borrowed.

To hedge against “foreign exchange risk” exposure, some firms buy or sell **foreign currency futures** contracts. These are similar to financial futures except specific foreign currencies are specified in the futures contracts rather than specific debt instruments. They work the same way to protect against foreign exchange risk as financial futures protect against fair value or cash flow risk.

Foreign exchange risk often is hedged in the same manner as interest rate risk.

INTEREST RATE SWAPS Over 65% of derivatives are **interest rate swaps**. These contracts exchange fixed interest payments for floating rate payments, or vice versa, without exchanging the underlying principal amounts. For example, suppose you owe \$100,000 on a 10% fixed rate home loan. You envy your neighbor who also is paying 10% on her \$100,000 mortgage, but hers is a floating rate loan, so if market rates fall, so will her loan rate. To the contrary, she is envious of your fixed rate, fearful that rates will rise, increasing her payments. A solution would be for the two of you to effectively swap interest payments using an interest rate swap agreement. The way a swap works, you both would

Interest rate swaps exchange fixed interest payments for floating rate payments, or vice versa, without exchanging the underlying notional amounts.

continue to actually make your own interest payments, but would exchange the net cash difference between payments at specified intervals. So, in this case, if market rates (and thus floating payments) increase, you would pay your neighbor; if rates fall, she pays you. The net effect is to exchange the consequences of rate changes. In other words, you have effectively converted your fixed-rate debt to floating-rate debt; your neighbor has done the opposite.

Of course, this technique is not dependent on happening into such a fortuitous pairing of two borrowers with opposite philosophies on interest rate risk. Instead, banks or other intermediaries offer, for a fee, one-sided swap agreements to companies desiring to be either fixed-rate payers or variable-rate payers. Intermediaries usually strive to maintain a balanced portfolio of matched, offsetting swap agreements.

Theoretically, the two parties to such a transaction exchange principal amounts, say the \$100,000 amount above, in addition to the interest on those amounts. It makes no practical sense, though, for the companies to send each other \$100,000. So, instead, the principal amount is not actually exchanged, but serves merely as the computational base for interest calculations and is called the *notional amount*. Similarly, the fixed-rate payer doesn't usually send the entire fixed interest amount (say $10\% \times \$100,000 = \$10,000$) and receive the entire variable interest amount (say $9\% \times \$100,000 = \$9,000$). Generally, only the net amount (\$1,000 in this case) is exchanged. This is illustrated in Illustration A-1.

Illustration A-1

Interest Rate Swap—
Shortcut Method

From an accounting standpoint, the central issue is not the operational differences among various hedge instruments, but their similarities in functioning as hedges against risk.

Accounting for Derivatives

A key to accounting for derivatives is knowing the purpose for which a company holds them and whether the company is effective in serving that purpose. Derivatives, for instance, may be held for risk management (hedging activities). The desired effect, and often the real effect, is a reduction in risk. On the other hand, derivatives sometimes are held for speculative position taking, hoping for large profits. The effect of this activity usually is to *increase* risk. Perhaps more important, derivatives acquired as hedges and intended to reduce risk may, in fact, unintentionally increase risk instead.

It's important to understand that, serving as investments rather than as hedges, derivatives are extremely speculative. This is due to the high leverage inherent in derivatives. Here's why. The investment outlay usually is negligible, but, the potential gain or loss on the investment usually is quite high. A small change in interest rates or another underlying event can trigger a large change in the fair value of the derivative. Because the initial investment was minimal, the change in value relative to the investment itself represents a huge percentage gain or loss. Their extraordinarily risky nature prompted Warren Buffett, one of the country's most celebrated financiers, to refer to derivatives as "financial weapons of mass destruction." Accounting for derivatives is designed to treat differently (a) derivatives designated as hedges and those not designated as hedges as well as (b) the effective portion and the ineffective portion of gains and losses from intended hedges.

The basic approach to accounting for derivatives is fairly straightforward, although implementation can be quite cumbersome. All derivatives, no exceptions, are carried on the

Derivatives not serving as hedges are extremely speculative due to the high leverage inherent in such investments.

Each derivative contract has a “fair value,” which is an amount that one side owes the other at a particular moment.

A gain or loss from a fair value hedge is recognized immediately in earnings along with the loss or gain from the item being hedged.

The income effects of the hedge instrument and the income effects of the item being hedged should affect earnings at the same time.

balance sheet as either assets or liabilities at fair (or market) value.⁶ The reasoning is that (a) derivatives create either rights or obligations that meet the definition of assets or liabilities, and (b) fair value is the most meaningful measurement.

Accounting for the gain or loss on a derivative depends on how it is used. Specifically, if the derivative is not designated as a hedging instrument, or doesn’t qualify as one, any gain or loss from fair value changes is recognized immediately in earnings. On the other hand, if a derivative is used to hedge against exposure to risk, any gain or loss from fair value changes is either (a) recognized immediately in earnings along with an offsetting loss or gain on the item being hedged or (b) deferred in comprehensive income until it can be recognized in earnings at the same time as earnings are affected by a hedged transaction. Which way depends on whether the derivative is designated as a (a) fair value hedge, (b) cash flow hedge, or (c) foreign currency hedge. Let’s look now at each of the three hedge designations.

FAIR VALUE HEDGES A company can be adversely affected when a change in either prices or interest rates causes a change in the fair value of one of its assets, its liabilities, or a commitment to buy or sell assets or liabilities. If a derivative is used to hedge against the exposure to changes in the fair value of an asset or liability or a firm commitment, it can be designated as a **fair value hedge**. In that case, when the derivative is adjusted to reflect changes in fair value, the other side of the entry recognizes a gain or loss to be included *currently* in earnings. At the same time, though, the loss or gain from changes in the fair value (due to the risk being hedged)⁷ of the item being hedged also is included currently in earnings. This means that, to the extent the hedge is effective in serving its purpose, the gain or loss on the derivative will be offset by the loss or gain on the item being hedged. In fact, this is precisely the concept behind the procedure.

The reasoning is that as interest rates or other underlying events change, a hedge instrument will produce a gain approximately equal to a loss on the item being hedged (or vice versa). These income effects are interrelated and offsetting, so it would be improper to report the income effects in different periods. More critically, the intent and effect of having the hedge instrument is to *lessen* risk. And yet, recognizing gains in one period and counterbalancing losses in another period would tend to cause fluctuations in income that convey an *increase* in risk. However, to the extent that a hedge is ineffective and produces gains or losses different from the losses or gains being hedged, the ineffective portion is recognized in earnings immediately.

Some of the more common fair value hedges use:

- An interest rate swap to synthetically convert fixed-rate debt (for which interest rate changes could change the fair value of the debt) into floating-rate debt.
- A futures contract to hedge changes in the fair value (due to price changes) of aluminum, sugar, or some other type of inventory.
- A futures contract to hedge the fair value (due to price changes) of a firm commitment to sell natural gas or some other asset.

ILLUSTRATION Because interest rate swaps comprise over 65% of derivatives in use, we will use swaps to illustrate accounting for derivatives. Let’s look at the example in Illustration A–2 on the next page.

When the floating rate declined from 10% to 9%, the fair values of both the derivative (swap) and the note increased. This created an offsetting gain on the derivative and holding loss on the note. Both are recognized in earnings at the same time (at June 30, 2013).

⁶FASB ASC 815–10: Derivatives and Hedging—Overall (previously “Accounting for Derivative Instruments and Hedging Activities,” *Statement of Financial Accounting Standards No. 133* (Norwalk, Conn.: FASB, 1998)).

⁷The fair value of a hedged item might also change for reasons other than from effects of the risk being hedged. For instance, the hedged risk may be that a change in interest rates will cause the fair value of a bond to change. The bond price might also change, though, if the market perceives that the bond’s default risk has changed.

Illustration A–2**Interest Rate Swap—
Shortcut Method**

Wintel Semiconductors issued \$1 million of 18-month, 10% bank notes on January 1, 2013. Wintel is exposed to the risk that general interest rates will decline, causing the fair value of its debt to rise. (If the fair value of Wintel's debt increases, its effective borrowing cost is higher relative to the market.) To hedge against this fair value risk, the firm entered into an 18-month interest rate swap agreement on January 1 and designated the swap as a hedge against changes in the fair value of the note. The swap calls for the company to receive payment based on a 10% fixed interest rate on a notional amount of \$1 million and to make payment based on a floating interest rate tied to changes in general rates.⁸ As the Illustration will show, this effectively converts Wintel's fixed-rate debt to floating-rate debt. Cash settlement of the net interest amount is made semiannually at June 30 and December 31 of each year with the net interest being the difference between the \$50,000 fixed interest [$\$1 \text{ million} \times (10\% \times \frac{1}{2})$] and the floating interest rate times \$1 million at those dates.

Floating (market) settlement rates were 9% at June 30, 2013, 8% at December 31, 2013, and 9% at June 30, 2014. Net interest receipts can be calculated as shown below. Fair values of both the derivative and the note resulting from those market rate changes are assumed to be quotes obtained from securities dealers.

	1/1/13	6/30/13	12/31/13	6/30/14
Fixed rate	10%	10%	10%	10%
Floating rate	10%	9%	8%	9%
Fixed payments (\$1 million \times [10% \times $\frac{1}{2}$])		\$ 50,000	\$ 50,000	\$ 50,000
Floating payments (\$1 million \times $\frac{1}{2}$ floating rate)		45,000	40,000	45,000
Net interest receipts		\$ 5,000	\$ 10,000	\$ 5,000
Fair value of interest rate swap	0	\$ 9,363	\$ 9,615	0
Fair value of note payable	\$1,000,000	\$1,009,363	\$1,009,615	\$1,000,000

January 1, 2013

Cash	1,000,000	
Notes payable		1,000,000
<i>To record the issuance of the note.</i>		

June 30, 2013

Interest expense (10% \times $\frac{1}{2}$ \times \$1 million)	50,000	
Cash		50,000
<i>To record interest.</i>		

Cash (\$50,000 – [9% \times $\frac{1}{2}$ \times \$1 million])	5,000	
Interest expense		5,000
<i>To record the net cash settlement.</i>		

Interest rate swap ⁹ (\$9,363 – 0)	9,363	
Holding gain—interest rate swap		9,363
<i>To record change in fair value of the derivative.</i>		

Holding loss—hedged note	9,363	
Note payable (\$1,009,363 – 1,000,000)		9,363
<i>To record change in fair value of the note due to interest rate changes.</i>		

The interest rate swap is designated as a fair value hedge on this note at issuance.

The swap settlement is the difference between the fixed interest (5%) and variable interest (4.5%).

The fair value of derivatives is recognized in the balance sheet.

The hedged liability (or asset) is adjusted to fair value as well.

The net interest settlement on June 30, 2013, is \$5,000 because the fixed rate is 5% (half of the 10% annual rate) and the floating rate is 4.5% (half of the 9% annual rate).

⁸A common measure for benchmarking variable interest rates is LIBOR, the London Interbank Offered Rate, a base rate at which large international banks lend funds to each other.

⁹This would be a liability rather than an investment (asset) if the fair value had declined.

As with any debt, interest expense is the effective rate times the outstanding balance.

The settlement is the difference between the fixed interest (5%) and variable interest (4%).

The derivative is increased by the change in fair value. The note is increased by the change in fair value.

December 31, 2013		
Interest expense	50,000	
Cash ($10\% \times \frac{1}{2} \times \$1,000,000$)		50,000
<i>To record interest.</i>		
Cash ($\$50,000 - [8\% \times \frac{1}{2} \times \$1 \text{ million}]$)	10,000	
Interest expense		10,000
<i>To record the net cash settlement.</i>		
Interest rate swap ($\$9,615 - 9,363$)	252	
Holding gain—interest rate swap		252
<i>To record the change in fair value of the derivative.</i>		
Holding loss—hedged note	252	
Note payable ($\$1,009,615 - 1,009,363$)		252
<i>To record the change in fair value of the note due to interest rate changes.</i>		

The fair value of the swap increased by \$252 (from \$9,363 to \$9,615). Similarly, we adjust the note's carrying value by the amount necessary to increase it to fair value. This produces a holding loss on the note that exactly offsets the gain on the swap. This result is the hedging effect that motivated Wintel to enter the fair value hedging arrangement in the first place.

At June 30, 2014, Wintel repeats the process of adjusting to fair value both the derivative investment and the note being hedged.

The net interest received is the difference between the fixed interest (5%) and floating interest (4.5%).

The swap's fair value now is zero.

June 30, 2014		
Interest expense	50,000	
Cash ($10\% \times \frac{1}{2} \times \$1,000,000$)		50,000
<i>To record interest.</i>		
Cash [$\$50,000 - (9\% \times \frac{1}{2} \times \$1 \text{ million})$]	5,000	
Interest expense		5,000
<i>To record the net cash settlement.</i>		
Holding loss—interest rate swap	9,615	
Interest rate swap ($\$0 - 9,615$)		9,615
<i>To record the change in fair value of the derivative.</i>		
Note payable ($\$1,000,000 - 1,009,615$)	9,615	
Holding gain—hedged note		9,615
<i>To record the change in fair value of the note due to interest rate changes.</i>		
Note payable	1,000,000	
Cash		1,000,000
<i>To repay the loan.</i>		

The net interest received is the difference between the fixed rate (5%) and floating rate (4.5%) times \$1 million. The fair value of the swap decreased by \$9,615 (from \$9,615 to zero).¹⁰ That decline represents a holding loss that we recognize in earnings. Similarly, we record an offsetting holding gain on the note for the change in its fair value.

Now let's see how the carrying values changed for the swap account and the note:

	Swap		Note	
Jan. 1, 2013				1,000,000
June 30, 2013	9,363			9,363
Dec. 31, 2013	252			252
June 30, 2014		9,615	9,615	
			1,000,000	
	0			0

¹⁰Because there are no future cash receipts from the swap arrangement at this point, the fair value of the swap is zero.

The income statement is affected as follows:

Income Statement + (-)		
June 30, 2013	(50,000)	Interest expense—fixed payment
	5,000	Interest expense—net cash settlement
	9,363	Holding gain—interest rate swap
	(9,363)	Holding loss—hedged note
	(45,000)	Net effect—same as floating interest payment
Dec. 31, 2013	(50,000)	Interest expense—fixed payment
	10,000	Interest expense—net cash settlement
	252	Holding gain—interest rate swap
	(252)	Holding loss—hedged note
	(40,000)	Net effect—same as floating interest payment
June 30, 2014	(50,000)	Interest expense—fixed payment
	5,000	Interest expense—net cash settlement
	9,615	Holding gain—interest rate swap
	(9,615)	Holding loss—hedged note
	(45,000)	Net effect—same as floating interest payment

As this demonstrates, the swap effectively converts fixed-interest debt to floating-interest debt.

Additional Consideration

Fair Value of the Swap

The fair value of a derivative typically is based on a quote obtained from a derivatives dealer. That fair value will approximate the present value of the expected net interest settlement receipts for the remaining term of the swap. In fact, we can actually calculate the fair value of the swap that we accepted as given in our illustration.

Since the June 30, 2013, floating rate of 9% caused the cash settlement on that date to be \$5,000, it's reasonable to look at 9% as the best estimate of future floating rates and therefore assume the remaining two cash settlements also will be \$5,000 each. We can then calculate at June 30, 2013, the present value of those expected net interest settlement receipts for the remaining term of the swap:

Fixed interest	$10\% \times \frac{1}{2} \times \1 million	\$ 50,000
Expected floating interest	$9\% \times \frac{1}{2} \times \1 million	45,000
Expected cash receipts for both Dec. 31, 2013 and June 30, 2014		\$ 5,000
		$\times 1.87267^*$
Present value		<u>\$ 9,363</u>

*Present value of an ordinary annuity of \$1: $n = 2$, $i = 4.5\%$ (1/2 of 9%) (from Table 4)

Fair Value of the Notes

The fair value of the note payable will be the present value of principal and remaining interest payments discounted at the *market rate*. The market rate will vary with the designated floating rate but might differ due to changes in default (credit) risk and the term structure of interest rates. Assuming it's 9% at June 30, 2013, we can calculate the fair value (present value) of the notes:

Interest	$\$50,000^* \times 1.87267^\dagger =$	\$ 93,633
Principal	$\$1,000,000 \times .91573^\ddagger =$	915,730
		<u>\$1,009,363</u>

*1/2 of $10\% \times \$1,000,000$

†Present value of an ordinary annuity of \$1: $n = 2$, $i = 4.5\%$ (from Table 4)

‡Present value of \$1: $n = 2$, $i = 4.5\%$ (from Table 2)

(continued)

(concluded)

Note: Often the cash settlement rate is “reset” as of each cash settlement date (thus the floating rate actually used at the end of each period to determine the payment is the floating market rate as of the *beginning* of the same period). In our illustration, for instance, there would have been no cash settlement at June 30, 2013, since we would use the beginning floating rate of 10% to determine payment. Similarly, we would have used the 9% floating rate at June 30, 2013, to determine the cash settlement six months later at December 31. In effect, each cash settlement would be delayed six months. Had this arrangement been in effect in the current illustration, there would have been one fewer cash settlement payments (two rather than three), but would not have affected the fair value calculations above because, either way, our expectation would be cash receipts of \$5,000 for both Dec. 31, 2013, and June 30, 2014.

A gain or loss from a cash flow hedge is deferred as other comprehensive income until it can be recognized in earnings along with the earnings effect of the item being hedged.

CASH FLOW HEDGES The risk in some transactions or events is the risk of a change in cash flows, rather than a change in fair values. We noted earlier, for instance, that *fixed-rate* debt subjects a company to the risk that interest rate changes could change the fair value of the debt. On the other hand, if the obligation is *floating-rate* debt, the fair value of the debt will not change when interest rates do, but cash flows will. If a derivative is used to hedge against the exposure to changes in cash inflows or cash outflows of an asset or liability or a forecasted transaction (like a future purchase or sale), it can be designated as a **cash flow hedge**. In that case, when the derivative is adjusted to reflect changes in fair value, the other side of the entry is a gain or loss to be deferred as a **component of other comprehensive income** and included in earnings later, at the same time as earnings are affected by the hedged transaction. Once again, the effect is matching the earnings effect of the derivative with the earnings effect of the item being hedged, precisely the concept behind hedge accounting.

To understand the deferral of the gain or loss, we need to revisit the concept of comprehensive income. Comprehensive income, as you may recall from Chapters 4, 12, 17, and 18, is a more expansive view of the change in shareholders’ equity than traditional net income. In fact, it encompasses all changes in equity other than from transactions with owners.¹¹ So, in addition to net income itself, comprehensive income includes up to four other changes in equity that don’t (yet) belong in net income, namely, net holding gains (losses) on investments (Chapter 12), gains (losses) from and amendments to postretirement benefit plans (Chapter 17), gains (losses) from foreign currency translation, and deferred gains (losses) from derivatives designated as cash flow hedges.¹²

Some of the more commonly used cash flow hedges are:

- An interest rate swap to synthetically convert floating rate debt (for which interest rate changes could change the cash interest payments) into fixed rate debt.
- A futures contract to hedge a forecasted sale (for which price changes could change the cash receipts) of natural gas, crude oil, or some other asset.

The possibility that foreign currency exchange rates might change exposes many companies to foreign currency risk.

FOREIGN CURRENCY HEDGES Today’s economy is increasingly a global one. The majority of large “U.S.” companies are, in truth, multinational companies that may receive only a fraction of their revenues from U.S. operations. Many operations of those companies are located abroad. Foreign operations often are denominated in the currency of the foreign country (the Euro, Japanese yen, Russian rubles, and so on). Even companies without foreign operations sometimes hold investments, issue debt, or conduct other transactions denominated in foreign currencies. As exchange rates change, the dollar equivalent of the

¹¹Transactions with owners primarily include dividends and the sale or purchase of shares of the company’s stock.

¹²FASB ASC 220–10–55–2: Comprehensive Income—Overall—Implementation Guidance and Illustrations (previously “Reporting Comprehensive Income,” *Statement of Financial Accounting Standards No. 130* (Norwalk, Conn.: FASB, 1997)).

foreign currency changes. The possibility of currency rate changes exposes these companies to the risk that some transactions require settlement in a currency other than the entities' functional currency or that foreign operations will require translation adjustments to reported amounts.

A **foreign currency hedge** can be a hedge of foreign currency exposure of:

- A firm commitment—treated as a fair value hedge.
- An available-for-sale security—treated as a fair value hedge.
- A forecasted transaction—treated as a cash flow hedge.
- A company's net investment in a foreign operation—the gain or loss is reported in *other comprehensive income* as part of unrealized gains and losses from foreign currency translation.¹³

HEDGE EFFECTIVENESS When a company elects to apply hedge accounting, it must establish at the inception of the hedge the method it will use to assess the effectiveness of the hedging derivative as well as the measurement approach it will use to determine the ineffective portion of the hedge.¹⁴ The key criterion for qualifying as a hedge is that the hedging relationship must be “highly effective” in achieving offsetting changes in fair values or cash flows based on the hedging company's specified risk management objective and strategy.

To qualify as a hedge, the hedging relationship must be highly effective in achieving offsetting changes in fair values or cash flows.

An assessment of this effectiveness must be made at least every three months and whenever financial statements are issued. There are no precise guidelines for assessing effectiveness, but it generally means a high correlation between changes in the fair value or cash flows of the derivative and of the item being hedged, not necessarily a specific reduction in risk. Hedge accounting must be terminated for hedging relationships that no longer are highly effective.

HEDGE INEFFECTIVENESS In Illustration A–2, the loss on the hedged note exactly offset the gain on the swap. This is because the swap in this instance was highly effective in hedging the risk due to interest rate changes. However, the loss and gain would not have exactly offset each other if the hedging arrangement had been ineffective. For instance, suppose the swap's term had been different from that of the note (say a three-year swap term compared with the 18-month term of the note) or if the notional amount of the swap differed from that of the note (say \$500,000 rather than \$1 million). In that case, changes in the fair value of the swap and changes in the fair value of the note would not be the same. The result would be a greater (or lesser) amount recognized in earnings for the swap than for the note. Because there would not be an exact offset, earnings would be affected, an effect resulting from hedge ineffectiveness. That is a desired effect of hedge accounting; to the extent that a hedge is effective, the earnings effect of a derivative cancels out the earnings effect of the item being hedged. However, even if a hedge is highly effective, all ineffectiveness is recognized currently in earnings.

Imperfect hedges result in part of the derivative gain or loss being included in current earnings.

FAIR VALUE CHANGES UNRELATED TO THE RISK BEING HEDGED In Illustration A–2, the fair value of the hedged note and the fair value of the swap changed by the same amounts each year because we assumed the fair values changed only due to interest rate changes. It's also possible, though, that the note's fair value would change by an amount different from that of the swap for reasons unrelated to interest rates. Remember from our earlier discussion that the market's perception of a company's creditworthiness, and thus its ability to pay interest and principal when due, also can affect the value of debt, whether interest rates change or not. In hedge accounting, we ignore those changes. We recognize

¹³This is the same treatment previously prescribed for these translation adjustments by *Statement of Financial Accounting Standards No. 52* [FASB ASC 830: Foreign Currency Matters].

¹⁴Remember, if a derivative is not designated as a hedge, any gains or losses from changes in its fair value are recognized immediately in earnings.

Fair value changes unrelated to the risk being hedged are ignored.

only the fair value changes in the hedged item that we can attribute to the risk being hedged (interest rate risk in this case). For example, if a changing perception of default risk had caused the note's fair value to increase by an additional, say \$5,000, our journal entries in Illustration A-2 would have been unaffected. Notice, then, that although we always mark a *derivative* to fair value, the reported amount of the *item being hedged* may not be its fair value. We mark a hedged item to fair value only to the extent that its fair value changed due to the risk being hedged.

Disclosure of Derivatives and Risk

To be adequately informed about the effectiveness of a company's risk management, investors and creditors need information about strategies for holding derivatives and specific hedging activities. Toward that end, extensive disclosure requirements provide information that includes:

- Objectives and strategies for holding and issuing derivatives.
- A description of the items for which risks are being hedged.
- For forecasted transactions: a description, time before the transaction is expected to occur, the gains and losses accumulated in other comprehensive income, and the events that will trigger their recognition in earnings.
- Beginning balance of, changes in, and ending balance of the derivative component of other comprehensive income.
- The net amount of gain or loss reported in earnings (representing aggregate hedge ineffectiveness).
- Qualitative and quantitative information about failed hedges: canceled commitments or previously hedged forecasted transactions no longer expected to occur.

The intent is to provide information about the company's success in reducing risks and consequently about risks not managed successfully. Remember, too, that when derivatives are employed ineffectively, risks can escalate. Ample disclosures about derivatives are essential to maintain awareness of potential opportunities and problems with risk management.

In addition, newly issued GAAP requires companies to provide enhanced disclosures indicating (a) how and why the company uses derivative instruments, (b) how the company accounts for derivative instruments and related hedged items, and (c) how derivative instruments and related hedged items affect the company's balance sheet, income statement, and cash flows.¹⁵ The required disclosures includes two tables, one that highlights the location and fair values of derivative instruments in the balance sheet, and another that indicates the location and amounts of gains and losses on derivative instruments in the income statement. The two tables distinguish between derivative instruments that are designated as hedging instruments and those that are not. The tables also categorize derivative instruments by each major type—interest rate contracts, foreign exchange contracts, equity contracts, commodity contracts, credit contracts and other types of contracts.

Even for some traditional liabilities, the amounts reported on the face of the financial statements provide inadequate disclosure about the degree to which a company is exposed to risk of loss. To provide adequate disclosure about a company's exposure to risk, additional information must be provided about (a) concentrations of credit risk and (b) the fair value of all financial instruments.¹⁶

¹⁵FASB ASC 815: Derivatives and Hedging (previously "Disclosures about Derivative Instruments and Hedging Activities—an amendment of FASB Statement No. 133," *Statement of Financial Accounting Standards No. 161* (Stamford, Conn.: FASB, 2008)).

¹⁶FASB ASC 825-10-50-1: Financial Instruments—Overall—Disclosure (previously "Disclosures About Fair Values of Financial Instruments," *Statement of Financial Accounting Standards No. 107* (Norwalk, Conn.: FASB, 1991), as amended by *Statement of Financial Accounting Standards No. 133*, "Accounting for Derivative Instruments and Hedging Activities" (Norwalk, Conn.: FASB, 1998)).

Extended Method for Interest Rate Swap Accounting

A shortcut method for accounting for an interest rate swap is permitted when a hedge meets certain criteria. In general, the criteria are designed to see if the hedge supports the assumption of “no ineffectiveness.” Illustration A–2 of a fair value hedge met those criteria, in particular, (a) the swap’s notional amount matches the note’s principal amount, (b) the swap’s expiration date matches the note’s maturity date, (c) the fair value of the swap is zero at inception, and (d) the floating payment is at the market rate.¹⁷ Because Wintel can conclude that the swap will be highly effective in offsetting changes in the fair value of the debt, it can use the changes in the fair value of the swap to measure the offsetting changes in the fair value of the debt. That’s the essence of the shortcut method used in Illustration A–2. The extended method required when the criteria are *not* met for the short-cut method is described in this section (Illustration A–3). It produces the same effect on earnings and in the balance sheet as does the procedure shown in Illustration A–2.

Wintel Semiconductors issued \$1 million of 18-month, 10% bank notes on January 1, 2013. Wintel is exposed to the risk that general interest rates will decline, causing the fair value of its debt to rise. (If the fair value of Wintel’s debt increases, its effective borrowing cost is higher relative to the market.) To hedge against this fair value risk, the firm entered into an 18-month interest rate swap agreement on January 1 and designated the swap as a hedge against changes in the fair value of the note. The swap calls for the company to *receive payment* based on a 10% fixed interest rate on a notional amount of \$1 million and to *make payment* based on a floating interest rate tied to changes in general rates. Cash settlement of the net interest amount is made semiannually at June 30 and December 31 of each year with the net interest being the difference between the \$50,000 fixed interest [$\$1 \text{ million} \times (10\% \times \frac{1}{2})$] and the floating interest rate times \$1 million at those dates.

Floating (market) settlement rates were 9% at June 30, 2013, 8% at December 31, 2013, and 8% at June 30, 2014. Net interest receipts can be calculated as shown below. Fair values of both the derivative and the note resulting from those market rate changes are assumed to be quotes obtained from securities dealers.

	1/1/13	6/30/13	12/31/13	6/30/14
Fixed rate	10%	10%	10%	10%
Floating rate	10%	9%	8%	9%
Fixed payments [\$1 million \times (10% \times $\frac{1}{2}$)]		\$ 50,000	\$ 50,000	\$ 50,000
Floating payments (\$1 million \times $\frac{1}{2}$ floating rate)		45,000	40,000	45,000
Net interest receipts		\$ 5,000	\$ 10,000	\$ 5,000
Fair value of interest rate swap	0	\$ 9,363	\$ 9,615	0
Fair value of note payable	\$1,000,000	\$1,009,363	\$1,009,615	\$1,000,000

When the floating rate declined in Illustration A–3 from 10% to 9%, the fair values of both the derivative (swap) and the note increased. This created an offsetting gain on the derivative and holding loss on the note. Both are recognized in earnings the same period (June 30, 2013).

January 1, 2013

Cash	1,000,000	
Notes payable		1,000,000
<i>To record the issuance of the note.</i>		

Illustration A–3

Interest Rate Swap—Extended Method

The interest rate swap is designated as a fair value hedge on this note at issuance.

¹⁷There is no precise minimum interval, though it generally is three to six months or less. Other criteria are specified by previously FASB ASC 815–20–25–104: Derivatives and Hedging—Hedging—General—Recognition—Shortcut Method, *SFAS No. 133* (para. 68) in addition to the key conditions listed here.

The swap settlement is the difference between the fixed interest (5%) and variable interest (4.5%).

The fair value of derivatives is recognized in the balance sheet.

The hedged liability (or asset) is adjusted to fair value as well.

June 30, 2013		
Interest expense ($10\% \times \frac{1}{2} \times \1 million)	50,000	
Cash		50,000
<i>To record interest.</i>		
Cash ($\$50,000 - [9\% \times \frac{1}{2} \times \1 million])	5,000	
Interest rate swap ($\$9,363 - 0$)	9,363	
Interest revenue ($10\% \times \frac{1}{2} \times \0)		0
Holding gain—interest rate swap (to balance)		14,363
<i>To record the net cash settlement, accrued interest on the swap, and change in the fair value of the derivative.</i>		
Holding loss—hedged note	9,363	
Notes payable ($\$1,009,363 - 1,000,000$)		9,363
<i>To record change in fair value of the note due to interest rate changes.</i>		

The net interest settlement on June 30, 2013, is \$5,000 because the fixed rate is 5% (half of the 10% annual rate) and the floating rate is 4.5% (half of the 9% annual rate). A holding gain (\$14,363) is produced by holding the derivative security during a time when an interest rate decline caused an increase in the value of that asset. A portion (\$5,000) of the gain was received in cash and another portion (\$9,363) is reflected as an increase in the value of the asset.

We also have holding loss of the same amount. This is because we also held a liability during the same time period, and the interest rate change caused its fair value to increase as well.

As with any debt, interest expense is the effective rate times the outstanding balance.

The cash settlement is the difference between the fixed interest (5%) and variable interest (4%).

Interest (\$421) accrues on the asset.

The note is increased by the change in fair value.

December 31, 2013		
Interest expense ($9\% \times \frac{1}{2} \times \$1,009,363$)	45,421	
Notes payable (difference)*	4,579	
Cash ($10\% \times \frac{1}{2} \times \$1,000,000$)		50,000
<i>To record interest.</i>		
Cash [$\$50,000 - (8\% \times \frac{1}{2} \times \1 million)]	10,000	
Interest rate swap ($\$9,615 - 9,363$)	252	
Interest revenue ($9\% \times \frac{1}{2} \times \$9,363$)		421
Holding gain—interest rate swap (to balance)		9,831
<i>To record the net cash settlement, accrued interest on the swap, and change in the fair value of the derivative.</i>		
Holding loss—hedged note	4,831	
Notes payable ($\$1,009,615 - 1,009,363 + 4,579$)		4,831
<i>To record the change in fair value of the note due to interest rate changes.</i>		

*We could use a premium on the note to adjust its carrying amount.

We determine interest on the note the same way we do for any liability, as you learned earlier—at the effective rate ($9\% \times \frac{1}{2}$) times the outstanding balance (\$1,009,363). This results in reducing the note's carrying amount for the cash interest paid in excess of the interest expense.

The fair value of the swap increased due to the interest rate decline by \$252 (from \$9,363 to \$9,615). The holding gain we recognize in earnings consists of that increase (a) plus the \$10,000 cash settlement also created by the interest rate decline and (b) minus the \$421 increase that results not from the interest rate decline, but from interest accruing on the asset.¹⁸ Similarly, we adjust the note's carrying value by the amount necessary to increase it to fair value, allowing for the \$4,579 reduction in the note in the earlier entry to record interest.

At June 30, 2014, Wintel repeats the process of adjusting to fair value both the derivative investment and the note being hedged.

¹⁸The investment in the interest rate swap represents the present value of expected future net interest receipts. As with other such assets, interest accrues at the effective rate times the outstanding balance. You also can think of the accrued interest mathematically as the increase in present value of the future cash flows as we get one period nearer to the dates when the cash will be received.

June 30, 2014		
Interest expense ($8\% \times \frac{1}{2} \times \$1,009,615$)	40,385	
Notes payable (difference)	9,615	
Cash ($10\% \times \frac{1}{2} \times \$1,000,000$)		50,000
<i>To record interest.</i>		
Cash [$\$50,000 - (9\% \times \frac{1}{2} \times \$1 \text{ million})$]	5,000	
Holding loss—interest rate swap (to balance)	5,000	
Interest rate swap ($\$0 - \$9,615$)		9,615
Interest revenue ($8\% \times \frac{1}{2} \times \$9,615$)		385
<i>To record the net cash settlement, accrued interest on the swap, and change in the fair value of the derivative.</i>		
Notes payable ($\$1,000,000 - 1,009,615 + 9,615$)	0	
Holding gain—hedged note		0
<i>To record the change in fair value of the note due to interest rate changes.</i>		
Note payable	1,000,000	
Cash		1,000,000
<i>To repay the loan</i>		

Interest expense is the effective rate times the outstanding balance.

The net interest received is the difference between the fixed interest (5%) and floating interest (4.5%).

The swap's fair value now is zero.

The net interest received is the difference between the fixed rate (5%) and floating rate (4.5%) times \$1 million. The fair value of the swap decreased by \$9,615 (from \$9,615 to zero).¹⁹ The holding loss we recognize in earnings consists of that decline (a) minus the \$5,000 portion of the decline resulting from it being realized in cash settlement and (b) plus the \$385 increase that results not from the interest rate change, but from interest accruing on the asset.

Now let's see how the carrying values changed for the swap account and the note:

	Swap		Note	
Jan. 1, 2013				1,000,000
June 30, 2013	9,363			9,363
Dec. 31, 2013	252		4,579	4,831
June 30, 2014		9,615	9,615	
			1,000,000	
	0			0

The income statement is affected as follows:

Income Statement + (-)		
June 30, 2013	(50,000)	Interest expense
	0	Interest revenue (no time has passed)
	14,363	Holding gain interest rate swap
	<u>(9,363)</u>	Holding loss—hedged note
	(45,000)	Net effect—same as floating interest payment
Dec. 31, 2013	(45,421)	Interest expense
	421	Interest revenue
	9,831	Holding gain—interest rate swap
	<u>(4,831)</u>	Holding loss—hedged note
	(40,000)	Net effect—same as floating interest payment
June 30, 2014	(40,385)	Interest expense
	385	Interest revenue
	(5,000)	Holding gain—interest rate swap
	<u>0</u>	Holding loss—hedged note
	(45,000)	Net effect—same as floating interest payment

¹⁹Because there are no future cash receipts or payments from the swap arrangement at this point, the fair value of the swap is zero.

As this demonstrates, the swap effectively converts Wintel's fixed-interest debt to floating-interest debt.

International Financial Reporting Standards

Accounting for Derivatives.

"With IAS 39, if you understand it, you haven't read it properly," said International Accounting Standards Board Chairman, Sir David Tweedie.²⁰

As with U.S. GAAP, accounting for derivatives under IFRS is quite complex. In fact, IAS No. 39 provides an example of international accounting that defies the usual characterization of IFRS as being "principles-based accounting" in comparison with "rules-based" U.S. GAAP. Like U.S. GAAP, all freestanding derivatives are recognized in the balance sheet and measured at fair value under IFRS. And, unless they qualify as hedging instruments in a cash flow hedge or net investment in a foreign operation, all changes in fair value are recognized immediately in net income, as under U.S. GAAP. Although the hedging models under U.S. GAAP and IFRS are similar, several differences exist. Here are a few significant ones:

- The short-cut method for interest rate swaps described in this Appendix is not permitted under IFRS.
- The key criterion for qualifying as a hedge is that the hedging relationship must be "highly effective" in achieving offsetting changes in fair values or cash flows, which under U.S. GAAP generally means a high correlation between changes in the fair value or cash flows of the derivative and the item being hedged. Highly effective is more precisely defined under IFRS: the hedge must be within the range of 80–120 percent effective.
- U.S. GAAP does not permit a single hedging instrument to hedge more than one risk in two or more hedged items. However, IFRS allows a single hedging instrument to be designated as a hedge of more than one type of risk if the risks being hedged can be clearly identified, the hedge effectiveness can be demonstrated, and specific designation to different risk positions can be ensured.

Where We're Headed

The Financial Accounting Standards Board and the International Accounting Standards Board, after working jointly on new guidance for when companies would be allowed to offset financial assets and financial liabilities in the balance sheet, a practice also known as "netting," issued an Exposure Draft of a new Accounting Standards Update in January 2011. The new ASU would have drawn U.S. GAAP closer to IFRS with regard to presenting a single net amount in the balance sheet only when it (a) has an unconditional and legally enforceable right to set off the financial asset and liability and (b) intends to settle on a net basis (or to realize the financial asset and liability simultaneously). And, because master netting agreements usually include only a conditional right of offset, many more derivatives would have been reported gross (rather than net) in the balance sheet.

In June 2011, the FASB, under pressure from constituents, had a change of mind. The U.S. Board decided to support an approach for derivatives very close to what is permitted currently under U.S. GAAP. Financial institutions in particular lobbied the FASB to continue to allow companies to net derivatives that are subject to master netting agreements, a practice critical to leverage and other key measures that affect debt covenants and other contractual agreements.

The following month, the IASB decided that although they would not be issuing a joint ASU, the two boards agreed to at least fill the gap with additional disclosure requirements to enable users to sort out the differences.

²⁰Michael Cohn, "Tweedie Says FASB Will Always Play a Role," WebCPA, December 11, 2008.

The Bottom Line

- **LOA-1** All derivatives are reported in the balance sheet at fair value.
- **LOA-2** *Hedging* means taking a risk position that is opposite to an actual position that is exposed to risk. For a derivative used to hedge against exposure to risk, treatment of any gain or loss from fair value changes depends on whether the derivative is designated as (a) a fair value hedge, (b) a cash flow hedge, or (c) a foreign currency hedge.
- **LOA-3** We recognize a gain or loss from a *fair value hedge* immediately in earnings along with the loss or gain from the item being hedged. This is so the income effects of the hedge instrument and the income effects of the item being hedged will affect earnings at the same time.
- **LOA-4** We defer a gain or loss from a *cash flow hedge* as part of other comprehensive income until it can be recognized in earnings along with the earnings effect of the item being hedged.
- **LOA-5** Imperfect hedges result in part of the derivative gain or loss being included in current earnings. We ignore market value changes unrelated to the risk being hedged.
- **LOA-6** Extensive disclosure requirements about derivatives are designed to provide investors and creditors information about the adequacy of a company's risk management and the company's success in reducing risks, including risks not managed successfully. ●

Questions For Review of Key Topics

- Q A-1** Some financial instruments are called derivatives. Why?
- Q A-2** Should gains and losses on a fair value hedge be recorded as they occur, or should they be recorded to coincide with losses and gains on the item being hedged?
- Q A-3** Hines Moving Company held a fixed-rate debt of \$2 million. The company wanted to hedge its fair value exposure with an interest rate swap. However, the only notional available at the time, on the type of swap it desired, was \$2.5 million. What will be the effect of any gain or loss on the \$500,000 notional difference?
- Q A-4** What is a futures contract?
- Q A-5** What is the effect on interest of an interest rate swap?
- Q A-6** How are derivatives reported on the balance sheet? Why?
- Q A-7** When is a gain or a loss from a cash flow hedge reported in earnings?

Exercises

E A-1

Derivatives-
hedge
classification

Indicate (by abbreviation) the type of hedge each activity described below would represent.

Hedge Type

- FV Fair value hedge
- CF Cash flow hedge
- FC Foreign currency hedge
- N Would not qualify as a hedge

Activity

- ___ 1. An options contract to hedge possible future price changes of inventory.
- ___ 2. A futures contract to hedge exposure to interest rate changes prior to replacing bank notes when they mature.
- ___ 3. An interest rate swap to synthetically convert floating rate debt into fixed rate debt.
- ___ 4. An interest rate swap to synthetically convert fixed rate debt into floating rate debt.
- ___ 5. A futures contract to hedge possible future price changes of timber covered by a firm commitment to sell.
- ___ 6. A futures contract to hedge possible future price changes of a forecasted sale of tin.
- ___ 7. ExxonMobil's net investment in a Kuwait oil field.
- ___ 8. An interest rate swap to synthetically convert floating rate interest on a stock investment into fixed rate interest.
- ___ 9. An interest rate swap to synthetically convert fixed rate interest on a held-to-maturity debt investment into floating rate interest.
- ___ 10. An interest rate swap to synthetically convert floating rate interest on a held-to-maturity debt investment into fixed rate interest.
- ___ 11. An interest rate swap to synthetically convert fixed rate interest on a stock investment into floating rate interest.

debt

On January 1, 2013, LLB Industries borrowed \$200,000 from Trust Bank by issuing a two-year, 10% note, with interest payable quarterly. LLB entered into a two-year interest rate swap agreement on January 1, 2013, and designated the swap as a fair value hedge. Its intent was to hedge the risk that general interest rates will decline, causing the fair value of its debt to increase. The agreement called for the company to receive payment based on a 10% fixed interest rate on a notional amount of \$200,000 and to pay interest based on a floating interest rate. The contract called for cash settlement of the net interest amount quarterly.

Floating (LIBOR) settlement rates were 10% at January 1, 8% at March 31, and 6% June 30, 2013. The fair values of the swap are quotes obtained from a derivatives dealer. Those quotes and the fair values of the note are as indicated below.

	January 1	March 31	June 30
Fair value of interest rate swap	0	\$ 6,472	\$ 11,394
Fair value of note payable	\$200,000	\$206,472	\$211,394

Required:

1. Calculate the net cash settlement at March 31 and June 30, 2013.
2. Prepare the journal entries through June 30, 2013, to record the issuance of the note, interest, and necessary adjustments for changes in fair value.

E A-3
Derivatives;
interest rate
swap; fixed rate
investment

(This is a variation of Exercise A-2, modified to consider an investment in debt securities.)

On January 1, 2013, S&S Corporation invested in LLB Industries' negotiable two-year, 10% notes, with interest receivable quarterly. The company classified the investment as available-for-sale. S&S entered into a two-year interest rate swap agreement on January 1, 2013, and designated the swap as a fair value hedge. Its intent was to hedge the risk that general interest rates will decline, causing the fair value of its investment to increase. The agreement called for the company to make payment based on a 10% fixed interest rate on a notional amount of \$200,000 and to receive interest based on a floating interest rate. The contract called for cash settlement of the net interest amount quarterly.

Floating (LIBOR) settlement rates were 10% at January 1, 8% at March 31, and 6% June 30, 2013. The fair values of the swap are quotes obtained from a derivatives dealer. Those quotes and the fair values of the investment in notes are as follows:

	January 1	March 31	June 30
Fair value of interest rate swap	0	\$ 6,472	\$ 11,394
Fair value of the investment in notes	\$200,000	\$206,472	\$211,394

Required:

1. Calculate the net cash settlement at March 31 and June 30, 2013.
2. Prepare the journal entries through June 30, 2013, to record the investment in notes, interest, and necessary adjustments for changes in fair value.

E A-4
Derivatives;
interest rate
swap; fixed rate
debt; fair value
change unrelated
to hedged risk

(This is a variation of Exercise A-2, modified to consider fair value change unrelated to hedged risk.)

LLB Industries borrowed \$200,000 from Trust Bank by issuing a two-year, 10% note, with interest payable quarterly. LLB entered into a two-year interest rate swap agreement on January 1, 2013 and designated the swap as a fair value hedge. Its intent was to hedge the risk that general interest rates will decline, causing the fair value of its debt to increase. The agreement called for the company to receive payment based on a 10% fixed interest rate on a notional amount of \$200,000 and to pay interest based on a floating interest rate.

Floating (LIBOR) settlement rates were 10% at January 1, 8% at March 31, and 6% at June 30, 2013. The fair values of the swap are quotes obtained from a derivatives dealer. Those quotes and the fair values of the note are as indicated below. The additional rise in the fair value of the note (higher than that of the swap) on June 30 was due to investors' perceptions that the creditworthiness of LLB was improving.

	January 1	March 31	June 30
Fair value of interest rate swap	0	\$ 6,472	\$ 11,394
Fair value of note payable	\$200,000	\$206,472	\$220,000

Required:

1. Calculate the net cash settlement at June 30, 2013.
2. Prepare the journal entries on June 30, 2013, to record the interest and necessary adjustments for changes in fair value.

E A-5
Derivatives;
interest rate swap;
fixed rate debt;
extended method

(This is a variation of Exercise A-2, modified to consider the extended method.)

On January 1, 2013, LLB Industries borrowed \$200,000 from Trust Bank by issuing a two-year, 10% note, with interest payable quarterly. LLB entered into a two-year interest rate swap agreement on January 1, 2013, and designated the swap as a fair value hedge. Its intent was to hedge the risk that general interest rates will decline,

causing the fair value of its debt to increase. The agreement called for the company to receive payment based on a 10% fixed interest rate on a notional amount of \$200,000 and to pay interest based on a floating interest rate. The contract called for cash settlement of the net interest amount quarterly.

Floating (LIBOR) settlement rates were 10% at January 1, 8% at March 31, and 6% at June 30, 2013. The fair values of the swap are quotes obtained from a derivatives dealer. Those quotes and the fair values of the note are as follows:

	January 1	March 31	June 30
Fair value of interest rate swap	0	\$ 6,472	\$ 11,394
Fair value of note payable	\$200,000	\$206,472	\$211,394

Required:

Prepare the journal entries through June 30, 2013, to record the issuance of the note, interest, and necessary adjustments for changes in fair value. Use the extended method demonstrated in Illustration A-3.

E A-6

Derivatives; interest rate swap; fixed-rate debt; fair value change unrelated to hedged risk; extended method

(Note: This is a variation of Exercise A-5, modified to consider fair value change unrelated to hedged risk.)

On January 1, 2013, LLB Industries borrowed \$200,000 from trust Bank by issuing a two-year, 10% note, with interest payable quarterly. LLB entered into a two-year interest rate swap agreement on January 1, 2013, and designated the swap as a fair value hedge. Its intent was to hedge the risk that general interest rates will decline, causing the fair value of its debt to increase. The agreement called for the company to receive payment based on a 10% fixed interest rate on a notional amount of \$200,000 and to pay interest based on a floating interest rate. The contract called for cash settlement of the net interest amount quarterly.

Floating (LIBOR) settlement rates were 10% at January 1, 8% at March 31, and 6% June 30, 2013. The fair values of the swap are quotes obtained from a derivatives dealer. Those quotes and the fair values of the note are as indicated below. The additional rise in the fair value of the note (higher than that of the swap) on June 30 was due to investors' perceptions that the creditworthiness of LLB was improving.

	January 1	March 31	June 30
Fair value of interest rate swap	0	\$ 6,472	\$ 11,394
Fair value of note payable	\$200,000	206,472	220,000

Required:

1. Calculate the net cash settlement at June 30, 2013.
2. Prepare the journal entries on June 30, 2013, to record the interest and necessary adjustments for changes in fair value. Use the extended method demonstrated in Illustration A-3.

Problems

P A-1

Derivatives—interest rate swap

On January 1, 2013, Labtech Circuits borrowed \$100,000 from First Bank by issuing a three-year, 8% note, payable on December 31, 2015. Labtech wanted to hedge the risk that general interest rates will decline, causing the fair value of its debt to increase. Therefore, Labtech entered into a three-year interest rate swap agreement on January 1, 2013, and designated the swap as a fair value hedge. The agreement called for the company to receive payment based on an 8% fixed interest rate on a notional amount of \$100,000 and to pay interest based on a floating interest rate tied to LIBOR. The contract called for cash settlement of the net interest amount on December 31 of each year.

Floating (LIBOR) settlement rates were 8% at inception and 9%, 7%, and 7% at the end of 2013, 2014, and 2015, respectively. The fair values of the swap are quotes obtained from a derivatives dealer. These quotes and the fair values of the note are as follows:

	January 1		December 31	
	2013	2013	2014	2015
Fair value of interest rate swap	0	\$ (1,759)	\$ 935	0
Fair value of note payable	\$100,000	\$98,241	\$100,935	\$100,000

Required:

1. Calculate the net cash settlement at the end of 2013, 2014, and 2015.
2. Prepare the journal entries during 2013 to record the issuance of the note, interest, and necessary adjustments for changes in fair value.
3. Prepare the journal entries during 2014 to record interest, net cash interest settlement for the interest rate swap, and necessary adjustments for changes in fair value.

4. Prepare the journal entries during 2015 to record interest, net cash interest settlement for the interest rate swap, necessary adjustments for changes in fair value, and repayment of the debt.
5. Calculate the carrying values of both the swap account and the note in each of the three years.
6. Calculate the net effect on earnings of the hedging arrangement in each of the three years. (Ignore income taxes.)
7. Suppose the fair value of the note at December 31, 2013, had been \$97,000 rather than \$98,241 with the additional decline in fair value due to investors' perceptions that the creditworthiness of Labtech was worsening. How would that affect your entries to record changes in the fair values?

P A-2
 Derivatives;
 interest
 rate swap;
 comprehensive

CMOS Chips is hedging a 20-year, \$10 million, 7% bond payable with a 20-year interest rate swap and has designated the swap as a fair value hedge. The agreement called for CMOS to receive payment based on a 7% fixed interest rate on a notional amount of \$10 million and to pay interest based on a floating interest rate tied to LIBOR. The contract calls for cash settlement of the net interest amount on December 31 of each year.

At December 31, 2013, the fair value of the derivative and of the hedged bonds has increased by \$100,000 because interest rates declined during the reporting period.

Required:

1. Does CMOS have an unrealized gain or loss on the derivative for the period? On the bonds? Will earnings increase or decrease due to the hedging arrangement? Why?
2. Suppose interest rates increased, rather than decreased, causing the fair value of both the derivative and of the hedged bonds to decrease by \$100,000. Would CMOS have an unrealized gain or loss on the derivative for the period? On the bonds? Would earnings increase or decrease due to the hedging arrangement? Why?
3. Suppose the fair value of the bonds at December 31, 2013, had increased by \$110,000 rather than \$100,000, with the additional increase in fair value due to investors' perceptions that the creditworthiness of CMOS was improving. Would CMOS have an unrealized gain or loss on the derivative for the period? On the bonds? Would earnings increase or decrease due to the hedging arrangement? Why?
4. Suppose the notional amount of the swap had been \$12 million, rather than the \$10 million principal amount of the bonds. As a result, at December 31, 2013, the swap's fair value had increased by \$120,000 rather than \$100,000. Would CMOS have an unrealized gain or loss on the derivative for the period? On the bonds? Would earnings increase or decrease due to the hedging arrangement? Why?
5. Suppose BIOS Corporation is an investor having purchased all \$10 million of the bonds issued by CMOS as described in the original situation above. BIOS is hedging its investment, classified as available-for-sale, with a 20-year interest rate swap and has designated the swap as a fair value hedge. The agreement called for BIOS to make *payment* based on a 7% fixed interest rate on a notional amount of \$10 million and to *receive* interest based on a floating interest rate tied to LIBOR. Would BIOS have an unrealized gain or loss on the derivative for the period due to interest rates having declined? On the bonds? Would earnings increase or decrease due to the hedging arrangement? Why?

P A-3
 Derivatives;
 interest rate
 swap; fixed rate
 debt; extended
 method

(Note: This is a variation of Problem A-1, modified to consider the extended method demonstrated in Illustration A-3.)

On January 1, 2013, Labtech Circuits borrowed \$100,000 from First Bank by issuing a three-year, 8% note, payable on December 31, 2015. Labtech wanted to hedge the risk that general interest rates will decline, causing the fair value of its debt to increase. Therefore, Labtech entered into a three-year interest rate swap agreement on January 1, 2013, and designated the swap as a fair value hedge. The agreement called for the company to receive payment based on an 8% fixed interest rate on a notional amount of \$100,000 and to pay interest based on a floating interest rate tied to LIBOR. The contract called for cash settlement of the net interest amount on December 31 of each year.

Floating (LIBOR) settlement rates were 8% at inception and 9%, 7%, and 7% at the end of 2013, 2014, and 2015, respectively. The fair values of the swap are quotes obtained from a derivatives dealer. Those quotes and the fair values of the note are as follows:

	January 1		December 31	
	2013	2013	2014	2015
Fair value of interest rate swap	0	\$ (1,759)	\$ 935	0
Fair value of note payable	\$100,000	\$ 98,241	100,935	\$100,000

Required:

Use the extended method demonstrated in Illustration A-3.

1. Calculate the net cash settlement at the end of 2013, 2014, and 2015.
2. Prepare the journal entries during 2013 to record the issuance of the note, interest, and necessary adjustments for changes in fair value.

3. Prepare the journal entries during 2014 to record interest, net cash interest settlement for the interest rate swap, and necessary adjustments for changes in fair value.
4. Prepare the journal entries during 2015 to record interest, net cash interest settlement for the interest rate swap, necessary adjustments for changes in fair value, and repayment of the debt.
5. Calculate the carrying values of both the swap account and the note in each of the three years.
6. Calculate the net effect on earnings of the hedging arrangement in each of the three years. (Ignore income taxes.)
7. Suppose the fair value of the note at December 31, 2013, had been \$97,000 rather than \$98,241 with the additional decline in fair value due to investors' perceptions that the creditworthiness of Labtech was worsening. How would that affect your entries to record changes in the fair values?

Broaden Your Perspective

Real World Case A-1

Derivative losses;
recognition in
earnings

Apply your critical-thinking ability to the knowledge you've gained. These cases will provide you an opportunity to develop your research, analysis, judgment, and communication skills. You also will work with other students, integrate what you've learned, apply it in real world situations, and consider its global and ethical ramifications. This practice will broaden your knowledge and further develop your decision-making abilities.

The following is an excerpt from a disclosure note of **Johnson & Johnson**:

15. Financial Instruments (in part)

As of December 28, 2008, the balance of deferred net gains on derivatives included in accumulated other comprehensive income was \$121 million after-tax. The Company expects that substantially all of this amount will be reclassified into earnings over the next 12 months as a result of transactions that are expected to occur over that period.

Required:

1. Johnson & Johnson indicates that it expects that substantially all of the balance of deferred net gains on derivatives will be reclassified into earnings over the next 12 months as a result of transactions that are expected to occur over that period. What is meant by "reclassified into earnings"?
2. What type(s) of hedging transaction might be accounted for in this way?

Communication Case A-2

Derivatives;
hedge accounting

A conceptual question in accounting for derivatives is: Should gains and losses on a hedge instrument be recorded as they occur, or should they be recorded to coincide (match) with income effects of the item being hedged?

ABI Wholesalers plans to issue long-term notes in May that will replace its \$20 million of 9.5% bonds when they mature in July. ABI is exposed to the risk that interest rates in July will have risen, increasing borrowing costs (reducing the selling price of its notes). To hedge that possibility, ABI entered a (Treasury bond) futures contract in May to deliver (sell) bonds in July at their *current* price.

As a result, if interest rates rise, borrowing costs will go up for ABI because it will sell notes at a higher interest cost (or lower price). But that loss will be offset (approximately) by the gain produced by being in the opposite position on Treasury bond futures.

Two opposing viewpoints are:

View 1: Gains and losses on instruments designed to hedge anticipated transactions should be recorded as they occur.

View 2: Gains and losses on instruments designed to hedge anticipated transactions should be recorded to coincide (match) with income effects of the item being hedged.

In considering this question, focus on conceptual issues regarding the practicable and theoretically appropriate treatment, unconstrained by GAAP. Your instructor will divide the class into two to six groups depending on the size of the class. The mission of your group is to reach consensus on the appropriate accounting for the gains and losses on instruments designed to hedge anticipated transactions.

Required:

1. Each group member should deliberate the situation independently and draft a tentative argument prior to the class session for which the case is assigned.
2. In class, each group will meet for 10 to 15 minutes in different areas of the classroom. During that meeting, group members will take turns sharing their suggestions for the purpose of arriving at a single group treatment.
3. After the allotted time, a spokesperson for each group (selected during the group meetings) will share the group's solution with the class. The goal of the class is to incorporate the views of each group into a consensus approach to the situation.

Real World**Case A-3**

Researching the way interest rate futures prices are quoted on the Chicago Mercantile Exchange; retrieving information from the Internet

The **Chicago Mercantile Exchange**, or Merc, at 30 S. Wacker Drive in Chicago, is the world's largest financial exchange, an international marketplace enabling institutions and businesses to trade futures and options contracts including currencies, interest rates, stock indices, and agricultural commodities.

Required:

1. Access the Merc on the Internet. The web address is www.cme.com.
2. Access the daily settlement prices within the site. Scroll to find "Interest products" and, within that, the 13-week Treasury bill futures.
3. What are the settlement prices for September futures contracts?

Research**Case A-4**

Issue related to the derivatives standard; research an article

In an effort to keep up with the rapidly changing global financial markets, the FASB issued standards on accounting for and disclosure of derivative financial instruments. A *Journal of Accountancy* article that discusses this standard is "The Decision on Derivatives," by Arlette C. Wilson, Gary Waters, and Barry J. Bryan, November 1998.

Required:

On the Internet, go to the AICPA site at www.aicpa.org and find the article mentioned.

1. What are the primary problems or issues the FASB attempts to address regarding accounting for derivative financial instruments?
2. In considering the issues, the FASB made four fundamental decisions that became the cornerstones of the statement issued in 1998. What are those fundamental decisions? Which do you think is most critical to fair financial reporting?

Report of Independent Registered Public Accounting Firm

To the Board of Directors and
Shareholders of Dell Inc.:

In our opinion, the consolidated financial statements listed in the accompanying index present fairly, in all material respects, the financial position of Dell Inc. and its subsidiaries (the "Company") at January 28, 2011 and January 29, 2010, and the results of their operations and their cash flows for each of the three years in the period ended January 28, 2011 in conformity with accounting principles generally accepted in the United States of America. Also, in our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of January 28, 2011, based on criteria established in *Internal Control — Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). The Company's management is responsible for these financial statements, for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in Management's Report on Internal Control Over Financial Reporting appearing under Item 9A. Our responsibility is to express opinions on these financial statements, and on the Company's internal control over financial reporting based on our integrated audits. We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. Our audits of the financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

As described in Note 1, in Fiscal 2011, the Company changed the manner in which it accounts for variable interest entities and transfers of financial assets and extinguishments of liabilities; and, in Fiscal 2010, the Company changed the manner in which it accounts for business combinations.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

DELL INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

NOTE 1 — DESCRIPTION OF BUSINESS AND SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Description of Business — Dell Inc., a Delaware corporation (both individually and together with its consolidated subsidiaries, "Dell"), offers a broad range of technology product categories, including mobility products, desktop PCs, software and peripherals, servers and networking products, storage, and services. Dell sells its products and services directly to customers through dedicated sales representatives, telephone-based sales, and online at www.dell.com, and through a variety of indirect sales channels. Dell's business segments are Large Enterprise, Public, Small and Medium Business and Consumer. References to Commercial business refer to Large Enterprise, Public, and Small and Medium Business.

Fiscal Year — Dell's fiscal year is the 52 or 53 week period ending on the Friday nearest January 31. The fiscal years ended January 28, 2011, January 29, 2010, and January 30, 2009, included 52 weeks.

Principles of Consolidation — The accompanying consolidated financial statements include the accounts of Dell Inc. and its wholly-owned subsidiaries and have been prepared in accordance with accounting principles generally accepted in the United States of America ("GAAP"). All significant intercompany transactions and balances have been eliminated.

Use of Estimates — The preparation of financial statements in accordance with GAAP requires the use of management's estimates. These estimates are subjective in nature and involve judgments that affect the reported amounts of assets and liabilities, the disclosure of contingent assets and liabilities at fiscal year-end, and the reported amounts of revenues and expenses during the fiscal year. Actual results could differ from those estimates.

Cash and Cash Equivalents — All highly liquid investments, including credit card receivables due from banks, with original maturities of three months or less at date of purchase, are reported at fair value and are considered to be cash equivalents. All other investments not considered to be cash equivalents are separately categorized as investments.

Investments — Dell's investments are primarily in debt securities, which are classified as available-for-sale and are reported at fair value (based primarily on quoted prices and market observable inputs) using the specific identification method. Unrealized gains and losses, net of taxes, are reported as a component of stockholders' equity. Realized gains and losses on investments are included in interest and other, net. An impairment loss will be recognized and will reduce an investment's carrying amount to its fair market value when a decline in the fair market value of an individual security below its cost or carrying value is determined to be other than temporary.

Dell reviews its investment portfolio quarterly to determine if any investment is other than temporarily impaired. Dell determines an impairment is other than temporary when there is intent to sell the security, it is more likely than not that the security will be required to be sold before recovery in value or it is not expected to recover its entire amortized cost basis ("credit related loss"). However, if Dell does not expect to sell a debt security, it still evaluates expected cash flows to be received and determines if a credit-related loss exists. In the event of a credit-related loss, only the amount of impairment associated with the credit-related loss is recognized in earnings. Amounts relating to factors other than credit-related losses are recorded in other comprehensive income. See Note 3 of Notes to the Consolidated Financial Statements for additional information.

Financing Receivables — Financing receivables consist of customer receivables, residual interest and retained interest in securitized receivables. Customer receivables include revolving loans and fixed-term leases and loans resulting from the sale of Dell products and services. Based on how Dell assesses risk and determines the appropriate allowance levels, Dell has two portfolio segments, (1) fixed-term leases and loans and (2) revolving loans. Portfolio segments are further segregated into classes based on operating segment and whether the receivable was owned by Dell since its inception or was purchased subsequent to its inception. Financing receivables are presented net of the allowance for losses. See Note 4 of Notes to Consolidated Financial Statements for additional information.

Asset Securitization — Dell enters into securitization transactions to transfer certain financing receivables for fixed-term leases and loans to special purpose entities. During Fiscal 2011, Dell adopted the new accounting guidance that removes the concept of a qualifying special purpose entity and removes the exception from applying variable interest entity accounting. The adoption of the new guidance requires an entity to perform an ongoing analysis to determine whether the entity's variable interest or interests give it a controlling financial interest in a variable interest entity. The adoption of the new guidance resulted in Dell's consolidation of its two qualifying special purpose entities with asset securitizations now being accounted for as secured borrowings. See Note 4 of Notes to Consolidated Financial Statements for additional information on the impact of the consolidation.

Prior to Fiscal 2011, these receivables were removed from the Consolidated Statement of Financial Position at the time they were sold. Receivables were considered sold when the receivables were transferred beyond the reach of Dell's creditors, the transferee had the right to pledge or exchange the assets, and Dell had surrendered control over the rights and obligations of the receivables. Gains and losses from the sale of fixed-term leases and loans were recognized in the period the sale occurred, based upon the relative fair value of the assets sold and the remaining retained interest. Retained interest was recognized at fair value with any changes in fair value recorded in earnings. In estimating the value of retained interest, Dell made a variety of financial assumptions, including pool credit losses, payment rates, and discount rates. These assumptions were supported by both Dell's historical experience and anticipated trends relative to the particular receivable pool.

Allowance for Doubtful Accounts — Dell recognizes an allowance for losses on accounts receivable in an amount equal to the estimated probable losses net of recoveries. The allowance is based on an analysis of historical bad debt experience, current receivables aging, and expected future write-offs, as well as an assessment of specific identifiable customer accounts considered at risk or uncollectible. The expense associated with the allowance for doubtful accounts is recognized as selling, general, and administrative expense.

Allowance for Financing Receivables Losses — Dell recognizes an allowance for losses on financing receivables in an amount equal to the probable losses net of recoveries. The allowance for losses is generally determined at the aggregate portfolio level based on a variety of factors, including historical and anticipated experience, past due receivables, receivable type, and customer risk profile. Customer account principal and interest are charged to the allowance for losses when an account is deemed to be uncollectible or when the account is 180 days delinquent. While Dell does not place financing receivables on non-accrual status during the delinquency period, accrued interest is included in the allowance for loss calculation and Dell is therefore adequately reserved in the event of charge off. Recoveries on receivables previously charged off as uncollectible are recorded to the allowance for financing receivables losses. The expense associated with the allowance for financing receivables losses is recognized as cost of net revenue. Both fixed and revolving receivable loss rates are affected by macro-economic conditions including the level of GDP growth, unemployment rates, the level of commercial capital equipment investment, and the credit quality of the borrower. See Note 4 of Notes to Consolidated Financial Statements for additional information.

Inventories — Inventories are stated at the lower of cost or market with cost being determined on a first-in, first-out basis.

DELL INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

Property, Plant, and Equipment — Property, plant, and equipment are carried at depreciated cost. Depreciation is provided using the straight-line method over the estimated economic lives of the assets, which range from ten to thirty years for buildings and two to five years for all other assets. Leasehold improvements are amortized over the shorter of five years or the lease term. Gains or losses related to retirements or disposition of fixed assets are recognized in the period incurred. Dell capitalizes eligible internal-use software development costs incurred subsequent to the completion of the preliminary project stage. Development costs are amortized over the shorter of the expected useful life of the software or five years.

Impairment of Long-Lived Assets — Dell reviews long-lived assets for impairment when circumstances indicate the carrying amount of an asset may not be recoverable based on the undiscounted future cash flows of the asset. If the carrying amount of the asset is determined not to be recoverable, a write-down to fair value is recorded. Fair values are determined based on quoted market values, discounted cash flows, or external appraisals, as applicable. Dell reviews long-lived assets for impairment at the individual asset or the asset group level for which the lowest level of independent cash flows can be identified.

Business Combinations and Intangible Assets Including Goodwill — During Fiscal 2010, Dell adopted the new guidance from the Financial Accounting Standards Board ("FASB") on business combinations and non-controlling interests. Dell accounts for business combinations using the acquisition method of accounting and accordingly, the assets and liabilities of the acquired business are recorded at their fair values at the date of acquisition. The excess of the purchase price over the estimated fair values is recorded as goodwill. Any changes in the estimated fair values of the net assets recorded for acquisitions prior to the finalization of more detailed analysis, but not to exceed one year from the date of acquisition, will change the amount of the purchase prices allocable to goodwill. All acquisition costs are expensed as incurred and in-process research and development costs are recorded at fair value as an indefinite-lived intangible asset and assessed for impairment thereafter until completion, at which point the asset is amortized over its expected useful life. Any restructuring charges associated with a business combination are expensed subsequent to the acquisition date. The results of operations of acquired businesses are included in the Consolidated Financial Statements from the acquisition date.

Identifiable intangible assets with finite lives are amortized over their estimated useful lives. They are generally amortized on a non-straight line approach based on the associated projected cash flows in order to match the amortization pattern to the pattern in which the economic benefits of the assets are expected to be consumed. Intangible assets are reviewed for impairment if indicators of potential impairment exist. Goodwill and indefinite-lived intangible assets are tested for impairment on an annual basis in the second fiscal quarter, or sooner if an indicator of impairment occurs.

Foreign Currency Translation — The majority of Dell's international sales are made by international subsidiaries, most of which have the U.S. dollar as their functional currency. Dell's subsidiaries that do not have the U.S. dollar as their functional currency translate assets and liabilities at current rates of exchange in effect at the balance sheet date. Revenue and expenses from these international subsidiaries are translated using the monthly average exchange rates in effect for the period in which the items occur.

Local currency transactions of international subsidiaries that have the U.S. dollar as the functional currency are remeasured into U.S. dollars using current rates of exchange for monetary assets and liabilities and historical rates of exchange for non-monetary assets and liabilities. Gains and losses from remeasurement of monetary assets and liabilities are included in interest and other, net. See Note 6 of Notes to Consolidated Financial Statements for additional information.

Hedging Instruments — Dell uses derivative financial instruments, primarily forwards, options, and swaps, to hedge certain foreign currency and interest rate exposures. The relationships between hedging instruments and hedged items are formally documented, as well as the risk management objectives and strategies for undertaking hedge transactions. Dell does not use derivatives for speculative purposes.

All derivative instruments are recognized as either assets or liabilities on the Consolidated Statements of Financial Position and are measured at fair value. Hedge accounting is applied based upon the criteria established by accounting guidance for derivative instruments and hedging activities. Derivatives are assessed for hedge effectiveness both at the onset of the hedge and at regular intervals throughout the life of the derivative. Any hedge ineffectiveness is recognized currently in earnings as a component of interest and other, net. Dell's hedge portfolio includes derivatives designated as both cash flow and fair value hedges.

For derivative instruments that are designated as cash flow hedges, hedge ineffectiveness is measured by comparing the cumulative change in the fair value of the hedge contract with the cumulative change in the fair value of the hedged item, both of which are based on forward rates. Dell records the effective portion of the gain or loss on the derivative instrument in accumulated other comprehensive income (loss) ("OCI"), as a separate component of stockholders' equity and reclassifies the gain or loss into earnings in the period during which the hedged transaction is recognized in earnings.

For derivatives that are designated as fair value hedges, hedge ineffectiveness is measured by calculating the periodic change in the fair value of the hedge contract and the periodic change in the fair value of the hedged item. To the extent that these fair value changes do not fully offset each other, the difference is recorded as ineffectiveness in earnings as a component of interest and other, net.

For derivatives that are not designated as hedges or do not qualify for hedge accounting treatment, Dell recognizes the change in the instrument's fair value currently in earnings as a component of interest and other, net.

Cash flows from derivative instruments are presented in the same category on the Consolidated Statements of Cash Flows as the cash flows from the underlying hedged items. See Note 6 of Notes to Consolidated Financial Statements for a full description of Dell's derivative financial instrument activities.

Treasury Stock — Dell accounts for treasury stock under the cost method and includes treasury stock as a component of stockholders' equity.

Revenue Recognition — Net revenues include sales of hardware, software and peripherals, and services. Dell recognizes revenue for these products when it is realized or realizable and earned. Revenue is considered realized and earned when persuasive evidence of an arrangement exists; delivery has occurred or services have been rendered; Dell's fee to its customer is fixed and determinable; and collection of the resulting receivable is reasonably assured. Dell classifies revenue and cost of revenue related to standalone software sold with Post Contract Support ("PCS") in the same line item as services on the Consolidated Statements of Income. Services revenue and cost of services revenue captions on the Consolidated Statements of Income include Dell's services and software from Dell's software and peripherals product category. This software revenue and related costs include software license fees and related PCS that is sold separately from computer systems through Dell's software and peripherals product category.

DELL INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

Products

Revenue from the sale of products is recognized when title and risk of loss passes to the customer. Delivery is considered complete when products have been shipped to Dell's customer, title and risk of loss has transferred to the customer, and customer acceptance has been satisfied. Customer acceptance is satisfied through obtaining acceptance from the customer, the acceptance provision lapses, or Dell has evidence that the acceptance provisions have been satisfied.

Dell records reductions to revenue for estimated customer sales returns, rebates, and certain other customer incentive programs. These reductions to revenue are made based upon reasonable and reliable estimates that are determined by historical experience, contractual terms, and current conditions. The primary factors affecting Dell's accrual for estimated customer returns include estimated return rates as well as the number of units shipped that have a right of return that has not expired as of the balance sheet date. If returns cannot be reliably estimated, revenue is not recognized until a reliable estimate can be made or the return right lapses.

Dell sells its products directly to customers as well as through indirect channels, including retailers. Sales through Dell's indirect channels are primarily made under agreements allowing for limited rights of return, price protection, rebates, and marketing development funds. Dell has generally limited the return rights through contractual caps. Dell's policy for sales through indirect channels is to defer the full amount of revenue relative to sales for which the rights of return apply unless there is sufficient historical data to establish reasonable and reliable estimates of returns. To the extent price protection or return rights are not limited and a reliable estimate cannot be made, all of the revenue and related costs are deferred until the product has been sold to the end-user or the rights expire. Dell records estimated reductions to revenue or an expense for indirect channel programs at the later of the offer or the time revenue is recognized.

Dell defers the cost of shipped products awaiting revenue recognition until revenue is recognized.

Services

Services include transactional, outsourcing and project-based offerings. Revenue is recognized for services contracts as earned, which is generally on a straight line basis over the term of the contract or on a proportional performance basis as the services are rendered and Dell's obligations are fulfilled. Revenue from time and materials or cost-plus contracts is recognized as the services are performed. Revenue from fixed price contracts is recognized on a straight line basis, unless revenues is earned and obligations are fulfilled in a different pattern. These service contracts may include provisions for cancellation, termination, refunds, or service level adjustments. These contract provisions would not have a significant impact on recognized revenue as Dell generally recognizes revenue for these contracts as the services are performed.

For sales of extended warranties with a separate contract price, Dell defers revenue equal to the separately stated price. Revenue associated with undelivered elements is deferred and recorded when delivery occurs or services are provided. Revenue from extended warranty and service contracts, for which Dell is obligated to perform, is recorded as deferred revenue and subsequently recognized over the term of the contract on a straight-line basis.

Revenue from sales of third-party extended warranty and service contracts or software PCS, for which Dell is not obligated to perform, and for which Dell does not meet the criteria for gross revenue recognition under the guidance of the FASB, is recognized on a net basis. All other revenue is recognized on a gross basis.

Software

The Company recognizes revenue in accordance with industry specific software accounting guidance for all software and PCS that are not essential to the functionality of the hardware. Accounting for software that is essential to the functionality of the hardware is accounted for as specified below in "Multiple Deliverables". Dell has established vendor specific objective evidence ("VSOE") on a limited basis for certain software offerings. When Dell has not established VSOE to support a separation of the software license and PCS elements, the revenue and related costs are generally recognized over the term of the agreement.

As more fully explained in *Recently Issued and Adopted Accounting Pronouncements* below, effective with the first quarter of Fiscal 2011, certain Dell storage products are no longer included in the scope of the software revenue recognition guidance. Prior to the new guidance, Dell established fair value for PCS for these products based on VSOE and used the residual method to allocate revenue to the delivered elements. Under the new guidance, the revenue for what was previously deemed PCS is now considered part of a multiple deliverable arrangement. As such, any discount is allocated to all elements based on the relative selling price of both delivered and undelivered elements. The impact of applying this new guidance was not material to Dell's Consolidated Financial Statements for Fiscal 2011 or 2010.

Multiple Deliverables

Dell's multiple deliverable arrangements generally include hardware products that are sold with essential software or services such as extended warranty, installation, maintenance, and other services contracts. The nature and terms of these multiple deliverable arrangements will vary based on the customized needs of Dell's customers. Each of these deliverables in an arrangement typically represents a separate unit of accounting. Dell's service contracts may include a combination of services arrangements including deployment, asset recovery, recycling, IT outsourcing, consulting, applications development, applications maintenance, and business process services. As more fully explained in *Recently Issued and Adopted Accounting Pronouncements* below, effective with the first quarter of Fiscal 2011, Dell allocated revenue to all deliverables based on their relative selling prices. The new guidance permits a company to make its best estimate of the selling price of deliverables when more objective evidence of selling price is not available. The hierarchy to be used to determine the selling price to be used for allocating revenue to deliverables is: (1) VSOE, (2) third-party evidence of selling price ("TPE"), and (3) best estimate of the selling price ("ESP"). A majority of Dell product and service offerings are sold on a standalone basis. Because selling price is generally available based on standalone sales, Dell has limited application of TPE, as determined by comparison of pricing for products and services to the pricing of similar products and services as offered by Dell or its competitors in standalone sales to similarly situated customers. As new products are introduced in future periods, Dell may be required to use TPE or ESP, depending on the specific facts at the time.

DELL INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

For Fiscal 2010 and Fiscal 2009, pursuant to the previous guidance for *Revenue Arrangements with Multiple Deliverables*, Dell allocated revenue from multiple element arrangements to the elements based on the relative fair value of each element, which was generally based on the relative sales price of each element when sold separately. The adoption of the new guidance in the first quarter of Fiscal 2011 did not change the manner in which Dell accounts for its multiple deliverable arrangements as Dell did not use the residual method for the majority of its offerings and its services offerings are generally sold on a standalone basis where evidence of selling price is available.

Other

Dell records revenue from the sale of equipment under sales-type leases as product revenue at the inception of the lease. Sales-type leases also produce financing income, which is included in net revenue in the Consolidated Statement of Income and is recognized at consistent rates of return over the lease term. Customer revolving loan financing income is also included in net revenue and recognized on an accrual basis.

Dell reports revenue net of any revenue-based taxes assessed by governmental authorities that are imposed on and concurrent with specific revenue-producing transactions.

Warranty Liabilities — Dell records warranty liabilities for its standard limited warranty at the time of sale for the estimated costs that may be incurred under its limited warranty. The specific warranty terms and conditions vary depending upon the product sold and the country in which Dell does business, but generally includes technical support, parts, and labor over a period ranging from one to three years. Factors that affect Dell's warranty liability include the number of installed units currently under warranty, historical and anticipated rates of warranty claims on those units, and cost per claim to satisfy Dell's warranty obligation. The anticipated rate of warranty claims is the primary factor impacting the estimated warranty obligation. The other factors are less significant due to the fact that the average remaining aggregate warranty period of the covered installed base is approximately 15 months, repair parts are generally already in stock or available at pre-determined prices, and labor rates are generally arranged at pre-established amounts with service providers. Warranty claims are relatively predictable based on historical experience of failure rates. If actual results differ from the estimates, Dell revises its estimated warranty liability. Each quarter, Dell reevaluates its estimates to assess the adequacy of its recorded warranty liabilities and adjusts the amounts as necessary.

Vendor Rebates — Dell may receive consideration from vendors in the normal course of business. Certain of these funds are rebates of purchase price paid and others are related to reimbursement of costs incurred by Dell to sell the vendor's products. Dell recognizes a reduction of cost of goods sold and inventory if the funds are a reduction of the price of the vendor's products. If the consideration is a reimbursement of costs incurred by Dell to sell or develop the vendor's products, then the consideration is classified as a reduction of that cost in the Consolidated Statements of Income, most often operating expenses. In order to be recognized as a reduction of operating expenses, the reimbursement must be for a specific, incremental, identifiable cost incurred by Dell in selling the vendor's products or services.

Loss Contingencies — Dell is subject to the possibility of various losses arising in the ordinary course of business. Dell considers the likelihood of loss or impairment of an asset or the incurrence of a liability, as well as Dell's ability to reasonably estimate the amount of loss, in determining loss contingencies. An estimated loss contingency is accrued when it is probable that an asset has been impaired or a liability has been incurred and the amount of loss can be reasonably estimated. Dell regularly evaluates current information available to determine whether such accruals should be adjusted and whether new accruals are required.

Shipping Costs — Dell's shipping and handling costs are included in cost of sales in the Consolidated Statements of Income.

Selling, General, and Administrative — Selling expenses include items such as sales salaries and commissions, marketing and advertising costs, and contractor services. Dell expenses advertising costs as incurred. General and administrative expenses include items for Dell's administrative functions, such as Finance, Legal, Human Resources, and Information Technology support. These functions include costs for items such as salaries, maintenance and supplies, insurance, depreciation expense, and allowance for doubtful accounts.

Research, Development, and Engineering Costs — Research, development, and engineering costs are expensed as incurred. Research, development, and engineering expenses primarily include payroll and headcount related costs, contractor fees, infrastructure costs, and administrative expenses directly related to research and development support.

Website Development Costs — Dell expenses, as incurred, the costs of maintenance and minor enhancements to the features and functionality of its websites.

Income Taxes — Deferred tax assets and liabilities are recorded based on the difference between the financial statement and tax basis of assets and liabilities using enacted tax rates in effect for the year in which the differences are expected to reverse. Dell calculates a provision for income taxes using the asset and liability method, under which deferred tax assets and liabilities are recognized by identifying the temporary differences arising from the different treatment of items for tax and accounting purposes. In determining the future tax consequences of events that have been recognized in the financial statements or tax returns, judgment and interpretation of statutes are required. Additionally, Dell uses tax planning strategies as a part of its global tax compliance program. Judgments and interpretation of statutes are inherent in this process.

The accounting guidance for uncertainties in income tax prescribes a comprehensive model for the financial statement recognition, measurement, presentation, and disclosure of uncertain tax positions taken or expected to be taken in income tax returns. Dell recognizes a tax benefit from an uncertain tax position in the financial statements only when it is more likely than not that the position will be sustained upon examination, including resolution of any related appeals or litigation processes, based on the technical merits and a consideration of the relevant taxing authority's administrative practices and precedents.

Comprehensive Income — Dell's comprehensive income is comprised of net income, unrealized gains and losses on marketable securities classified as available-for-sale, foreign currency translation adjustments, and unrealized gains and losses on derivative financial instruments related to foreign currency hedging.

Earnings Per Share — Basic earnings per share is based on the weighted-average effect of all common shares issued and outstanding, and is calculated by dividing net income by the weighted-average shares outstanding during the period. Diluted earnings per share is calculated by dividing net income by the weighted-average number of common shares used in the basic earnings per share calculation plus the number of common shares that would be issued assuming exercise or conversion of all potentially dilutive common shares outstanding. Dell excludes equity instruments from the calculation of diluted earnings per share if the effect of including such instruments is anti-dilutive. See Note 13 of Notes to Consolidated Financial Statements for further information on earnings per share.

DELL INC.

NOTES TO CONSOLIDATED FINANCIAL
STATEMENTS (Continued)

Stock-Based Compensation — Dell measures stock-based compensation expense for all share-based awards granted based on the estimated fair value of those awards at grant-date. The cost of restricted stock units and performance-based restricted stock units are determined using the fair market value of Dell's common stock on the date of grant. Dell also has a limited number of performance-based units that include a market-based condition. The fair value of the market-condition and performance-condition portion of the award is estimated using the Monte Carlo simulation valuation model. The expense recognized for these market-condition and performance-condition based awards were not material for Fiscal 2011. The fair values of stock option awards are estimated using a Black-Scholes valuation model. The compensation costs of stock options, restricted stock units, and awards with a cliff vesting feature are recognized net of any estimated forfeitures on a straight-line basis over the employee requisite service period. Compensation cost for performance based awards is recognized on a graded accelerated basis net of estimated forfeitures over the requisite service period. Forfeiture rates are estimated at grant date based on historical experience and adjusted in subsequent periods for differences in actual forfeitures from those estimates. See Note 15 of Notes to Consolidated Financial Statements included for further discussion of stock-based compensation.

Recently Issued and Adopted Accounting Pronouncements

Revenue Arrangements with Multiple Elements and Revenue Arrangements with Software Elements — In September 2009, the Emerging Issues Task Force of the FASB reached a consensus on two issues which affects the timing of revenue recognition. The first consensus changes the level of evidence of standalone selling price required to separate deliverables in a multiple deliverable revenue arrangement by allowing a company to make its best estimate of the selling price of deliverables when more objective evidence of selling price is not available and eliminates the residual method. The consensus applies to multiple deliverable revenue arrangements that are not accounted for under other accounting pronouncements and retains the use of VSOE if available and third-party evidence of selling price when VSOE is unavailable. The second consensus excludes sales of tangible products that contain essential software elements, that is, software enabled devices, from the scope of revenue recognition requirements for software arrangements. Dell elected to early adopt this accounting guidance at the beginning of the first quarter of Fiscal 2011 on a prospective basis for applicable transactions originating or materially modified after January 29, 2010. The adoption of this guidance did not have a material impact to Dell's consolidated financial statements.

Variable Interest Entities and Transfers of Financial Assets and Extinguishments of Liabilities — In June 2009, the FASB issued a new pronouncement on transfers of financial assets and extinguishments of liabilities which removes the concept of a qualifying special purpose entity and removes the exception from applying variable interest entity accounting to qualifying special purpose entities. See "Asset Securitization" above for more information.

Credit Quality of Financing Receivables and the Allowance for Credit Losses — In July 2010, FASB issued a new pronouncement that requires enhanced disclosures regarding the nature of credit risk inherent in an entity's portfolio of financing receivables, how that risk is analyzed, and the changes and reasons for those changes in the allowance for credit losses. The new disclosures require information for both the financing receivables and the related allowance for credit losses at more disaggregated levels. Disclosures related to information as of the end of a reporting period became effective for Dell in Fiscal 2011. Specific disclosures regarding activities that occur during a reporting period will be required for Dell beginning in the first quarter of Fiscal 2012. As these changes relate only to disclosures, they will not have an impact on Dell's consolidated financial results.

Notes 2, 3, 4, 5, and 6 are not included in Appendix B, but are available in the 2011 Dell Annual Report at www.dell.com.

NOTE 7 — ACQUISITIONS**Fiscal 2011 Acquisitions**

Dell completed five acquisitions during Fiscal 2011, Kace Networks, Inc. ("KACE"), Ocarina Networks Inc. ("Ocarina"), Scalent Systems Inc. ("Scalent"), Boomi, Inc. ("Boomi"), and InSite One, Inc., ("InSite"), for a total purchase consideration of approximately \$413 million. KACE is a systems management appliance company with solutions tailored to the requirements of mid-sized businesses. KACE is being integrated primarily into Dell's Small and Medium Business and Public segments. Ocarina is a provider of de-duplication solutions and content-aware compression across storage product lines. Scalent is a provider of scalable and efficient data center infrastructure software. Boomi is a provider of on-demand integration technology. Ocarina, Scalent, and Boomi will be integrated into all of Dell's Commercial segments. InSite provides cloud-based medical data archiving, storage, and disaster-recovery solutions to the health care industry. InSite will be integrated into Dell's Public segment.

Dell has recorded these acquisitions using the acquisition method of accounting and recorded their respective assets and liabilities at fair value at the date of acquisition. The excess of the purchase prices over the estimated fair values were recorded as goodwill. Any changes in the estimated fair values of the net assets recorded for these acquisitions prior to the finalization of more detailed analyses, but not to exceed one year from the date of acquisition, will change the amount of the purchase prices allocable to goodwill. Any subsequent changes to the purchase price allocations that are material to Dell's consolidated financial results will be adjusted retroactively. Dell recorded approximately \$284 million in goodwill and \$141 million in intangible assets related to these acquisitions. The goodwill related to these acquisitions is not deductible for tax purposes. In conjunction with these acquisitions, Dell will incur \$56 million in compensation-related expenses that will be expensed over a period of one to three years. There was no contingent consideration related to these acquisitions.

Dell has not presented pro forma results of operations for the Fiscal 2011 acquisitions because these acquisitions are not material to Dell's consolidated results of operations, financial position, or cash flows on either an individual or an aggregate basis.

Fiscal 2010 Acquisitions

On November 3, 2009, Dell completed its acquisition of all the outstanding shares of the Class A common stock of Perot Systems, a worldwide provider of information technology and business solutions, for \$3.9 billion in cash. This acquisition is expected to provide customers a broader range of IT services and solutions and better position Dell for its own immediate and long-term growth and efficiency. Perot Systems was primarily integrated into the Large Enterprise and Public segments for reporting purposes. Perot Systems' results of operations were included in Dell's results beginning November 3, 2009.

DELL INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

The following table summarizes the consideration paid for Perot Systems and the amounts of assets acquired and liabilities assumed recognized at the acquisition date:

	Total	
	(in millions)	
Cash and cash equivalents	\$	266
Accounts receivable, net		410
Other assets		58
Property, plant, and equipment		323
Identifiable intangible assets		1,174
Deferred tax liability, net ^(a)		(424)
Other liabilities		(256)
Total identifiable net assets		1,551
Goodwill		2,327
Total purchase price	\$	<u>3,878</u>

(a) The deferred tax liability, net primarily relates to purchased identifiable intangible assets and property, plant, and equipment and is shown net of associated deferred tax assets.

The goodwill of \$2.3 billion represents the value from combining Perot Systems with Dell to provide customers with a broader range of IT services and solutions as well as optimizing how these solutions are delivered. The acquisition has enabled Dell to supply even more Perot Systems customers with Dell products and extended the reach of Perot Systems' capabilities to Dell customers around the world. Goodwill of \$679 million, \$1,613 million, and \$35 million was assigned to the Large Enterprise, Public, and SMB segments, respectively.

Identifiable intangible assets included customer relationships, internally developed software, non-compete agreements, and trade names and other assets. These intangible assets are being amortized over their estimated useful lives based on the pattern of expected future economic benefit, which is generally on a non-straight-line basis based upon their expected future cash flows.

The following table summarizes the cost of amortizable intangible assets related to the acquisition of Perot Systems:

	Estimated Cost	Weighted- Average Useful Life
	(in millions)	(years)
Customer relationships	\$ 1,081	11.0
Technology	44	3.0
Non-compete agreements	39	5.2
Tradenames	10	1.5
Total amortizable intangible assets	<u>\$ 1,174</u>	10.4

Accounts receivable was comprised primarily of customer trade receivables. As such, the fair value of accounts receivable approximates its carrying value of \$410 million. The gross amount due is \$423 million, of which \$13 million was expected to be uncollectible.

In conjunction with the acquisition, Dell incurred \$93 million in cash compensation payments made to former Perot Systems employees who accepted positions with Dell related to the acceleration of Perot Systems unvested stock options and other cash compensation payments. These cash compensation payments were expensed as incurred and are recorded in selling, general, and administrative expenses in the Consolidated Statements of Income for Fiscal 2010. During Fiscal 2010, Dell incurred \$116 million in acquisition-related costs for Perot Systems, including the payments above, and an additional \$23 million in other acquisition-related costs such as bankers' fees, consulting fees, other employee-related charges, and integration costs.

There was no contingent consideration related to the acquisition.

The following table provides unaudited pro forma results of operations for the fiscal years ended January 29, 2010, and January 30, 2009, as if Perot Systems had been acquired at the beginning of the fiscal year ended January 30, 2009. Due to the different fiscal period ends, the pro forma results for the fiscal years ended January 29, 2010, and January 30, 2009, are combined with the results of Perot Systems for the twelve months ended January 29, 2010, and December 31, 2008, respectively. The pro forma results are adjusted for intercompany charges, but do not include any anticipated cost synergies or other effects of the planned integration of Perot Systems. Accordingly, such pro forma results are not necessarily indicative of the results that actually would have occurred had the acquisition been completed on the dates indicated, nor are they indicative of the future operating results of the combined company.

	Fiscal Year Ended	
	January 29, 2010	January 30, 2009
	(in millions, except per share data, unaudited)	
Pro forma net sales	\$ 54,739	\$ 63,835
Pro forma net income	\$ 1,422	\$ 2,398
Pro forma earnings per share — diluted	\$ 0.72	\$ 1.21

Fiscal 2009 Acquisitions

Dell completed three acquisitions in Fiscal 2009, including The Networked Storage Company, MessageOne, Inc. ("MessageOne"), and Allin Corporation ("Allin"), for approximately \$197 million in cash. Dell recorded approximately \$136 million of goodwill and approximately \$64 million of purchased intangible assets related to these acquisitions. Dell also expensed approximately \$2 million of in-process research and development ("IPR&D") related to these acquisitions in Fiscal 2009. The largest of these transactions was the purchase of MessageOne for approximately \$164 million in cash plus an additional \$10 million to be used for management retention. MessageOne, Allin, and The Networked Storage Company have been integrated into Dell's Commercial segments.

DELL INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

The acquisition of MessageOne was identified and acknowledged by Dell's Board of Directors as a related party transaction because Michael Dell and his family held indirect ownership interests in MessageOne. Consequently, Dell's Board of Directors directed management to implement a series of measures designed to ensure that the transaction was considered, analyzed, negotiated, and approved objectively and independent of any control or influence from the related parties.

Dell has not presented pro forma results of operations for the Fiscal 2009 acquisitions because these acquisitions were not material to Dell's consolidated results of operations, financial position, or cash flows on either an individual or an aggregate basis.

NOTE 8 — GOODWILL AND INTANGIBLE ASSETS*Goodwill*

Goodwill allocated to Dell's business segments as of January 28, 2011, and January 29, 2010, and changes in the carrying amount of goodwill for the respective periods, were as follows:

	Fiscal Year Ended					January 29,
	January 28, 2011					2010
	Large Enterprise	Public	Small and Medium Business	Consumer	Total	Total
	(in millions)					
Balance at beginning of period	\$ 1,361	\$ 2,026	\$ 389	\$ 298	\$ 4,074	\$ 1,737
Goodwill acquired during the period	62	135	87	-	284	2,327
Adjustments	1	3	-	3	7	10
Balance at end of period	<u>\$ 1,424</u>	<u>\$ 2,164</u>	<u>\$ 476</u>	<u>\$ 301</u>	<u>\$ 4,365</u>	<u>\$ 4,074</u>

Goodwill is tested annually during the second fiscal quarter and whenever events or circumstances indicate an impairment may have occurred. If the carrying amount of goodwill exceeds its fair value, estimated based on discounted cash flow analyses, an impairment charge would be recorded. Based on the results of the annual impairment tests, no impairment of goodwill existed at July 30, 2010. Further, no triggering events have transpired since July 30, 2010, that would indicate a potential impairment of goodwill as of January 28, 2011. Dell does not have any accumulated goodwill impairment charges as of January 28, 2011. The goodwill adjustments are primarily the result of contingent purchase price considerations related to prior period acquisitions and the effects of foreign currency fluctuations.

Intangible Assets

Dell's intangible assets associated with completed acquisitions at January 28, 2011 and January 29, 2010, are as follows:

	January 28, 2011			January 29, 2010		
	Gross	Accumulated Amortization	Net	Gross	Accumulated Amortization	Net
	(in millions)					
Customer relationships	\$ 1,363	\$ (309)	\$ 1,054	\$ 1,324	\$ (117)	\$ 1,207
Technology	647	(322)	325	568	(196)	372
Non-compete agreements	68	(26)	42	64	(8)	56
Tradenames	54	(31)	23	51	(17)	34
Amortizable intangible assets	2,132	(688)	1,444	2,007	(338)	1,669
In-process research and development	26	-	26	-	-	-
Indefinite lived intangible assets	25	-	25	25	-	25
Total intangible assets	<u>\$ 2,183</u>	<u>\$ (688)</u>	<u>\$ 1,495</u>	<u>\$ 2,032</u>	<u>\$ (338)</u>	<u>\$ 1,694</u>

During Fiscal 2011, Dell recorded additions to intangible assets and in-process research and development of \$126 million and \$26 million, respectively, which were primarily related to Dell's Fiscal 2011 business acquisitions. During Fiscal 2010, Dell recorded additions to intangible assets of \$1.2 billion, which were related to Dell's acquisition of Perot Systems.

Amortization expense related to finite-lived intangible assets was approximately \$350 million and \$205 million in Fiscal 2011 and Fiscal 2010, respectively. During the fiscal years ended January 28, 2011, and January 29, 2010, Dell did not record any impairment charges as a result of its analysis of its intangible assets.

Estimated future annual pre-tax amortization expense of finite-lived intangible assets as of January 28, 2011, over the next five fiscal years and thereafter is as follows:

Fiscal Years	(in millions)
2012	\$ 313
2013	279
2014	240
2015	147
2016	117
Thereafter	348
Total	<u>\$ 1,444</u>

DELL INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

The following is a discussion of Dell's significant on-going legal matters and other proceedings:

SEC Investigation and Related Settlements — In August 2005, the SEC initiated an inquiry into certain of Dell's accounting and financial reporting matters and requested that Dell provide certain documents. The SEC expanded that inquiry in June 2006 and entered a formal order of investigation in October 2006. In August 2006, because of potential issues identified in the course of responding to the SEC's requests for information, Dell's Audit Committee, on the recommendation of management and in consultation with PricewaterhouseCoopers LLP, Dell's independent registered public accounting firm, initiated an independent investigation into certain accounting and financial reporting matters, which was completed in the third quarter of Fiscal 2008. Dell subsequently restated its annual and interim financial statements for Fiscal 2003, Fiscal 2004, Fiscal 2005, Fiscal 2006, and the first quarter of Fiscal 2007.

On July 22, 2010, Dell reached a settlement with the SEC resolving the SEC's investigation into Dell's disclosures and alleged omissions prior to Fiscal 2008 regarding certain aspects of its commercial relationship with Intel Corporation ("Intel") and into separate accounting and financial reporting matters. The SEC agreed to settlements with both the company and Michael Dell, who serves as the company's Chairman and Chief Executive Officer. The company and Mr. Dell entered into the settlements without admitting or denying the allegations in the SEC's complaint, as is consistent with common SEC practice.

Under its settlement, the company consented to a permanent injunction against future violations of antifraud provisions, non-scienter (negligence) based fraud provisions and other non-fraud based provisions related to reporting, the maintenance of accurate books and records, and internal accounting controls under Section 17(a) of the Securities Act of 1933 (the "Securities Act"), Sections 10(b), 13(a), 13(b)(2)(A) and 13(b)(2)(B) of the Securities Exchange Act of 1934 (the "Exchange Act") and Rules 10b-5, 12b-20, 13a-1 and 13a-13 under the Exchange Act. The company also agreed to perform, and has initiated, certain undertakings, including retaining and working with an independent consultant, to enhance its disclosure processes, practices and controls. Pursuant to the settlement terms, the company expects to have completed or implemented these undertakings within 36 months after court approval of the settlement on October 13, 2010. In addition, the company paid into an escrow account a civil monetary penalty of \$100 million and discharged the liability during the second quarter of Fiscal 2011.

The SEC's allegations with respect to Mr. Dell and his settlement were limited to the alleged failure to provide adequate disclosures with respect to the company's commercial relationship with Intel prior to Fiscal 2008. Mr. Dell's settlement did not involve any of the separate accounting fraud charges that were settled by the company. Moreover, Mr. Dell's settlement was limited to claims in which only negligence, and not fraudulent intent, is required to establish liability, as well as secondary liability claims for other non-fraud charges. Under his settlement, Mr. Dell consented to a permanent injunction against future violations of these negligence-based provisions and other non-fraud based provisions related to periodic reporting. Specifically, Mr. Dell consented to be enjoined from violating Sections 17(a)(2) and (3) of the Securities Act and Rule 13a-14 under the Exchange Act and from aiding and abetting violations of Section 13(a) of the Exchange Act and Rules 12b-20, 13a-1 and 13a-13 under the Exchange Act. In addition, Mr. Dell agreed to a civil monetary penalty of \$4 million. The settlement does not include any restrictions on Mr. Dell's continued service as an officer or director of the company.

The independent directors of the Board of Directors unanimously determined that it is in the best interests of Dell and its stockholders that Mr. Dell continue to serve as the Chairman and Chief Executive Officer of the company.

The settlements with the company and Mr. Dell were approved by the U.S. District Court for the District of Columbia on October 13, 2010.

Securities Litigation — Four putative securities class actions filed between September 13, 2006, and January 31, 2007, in the U.S. District Court for the Western District of Texas, Austin Division, against Dell and certain of its current and former directors and officers were consolidated as *In re Dell Securities Litigation*, and a lead plaintiff was appointed by the court. The lead plaintiff asserted claims under Sections 10(b), 20(a), and 20A of the Exchange Act based on alleged false and misleading disclosures or omissions regarding Dell's financial statements, governmental investigations, internal controls, known battery problems and business model, and based on insiders' sales of Dell securities. This action also included Dell's independent registered public accounting firm, PricewaterhouseCoopers LLP, as a defendant. On October 6, 2008, the court dismissed all of the plaintiffs claims with prejudice and without leave to amend. On November 3, 2008, the plaintiff appealed the dismissal of Dell and the officer defendants to the Fifth Circuit Court of Appeals. The appeal was fully briefed, and oral argument on the appeal was heard by the Fifth Circuit Court of Appeals on September 1, 2009. On November 20, 2009, the parties to the appeal entered into a written settlement agreement whereby Dell would pay \$40 million to the proposed class and the plaintiff would dismiss the pending litigation. The settlement was preliminarily approved by the District Court on December 21, 2009. The settlement was subject to certain conditions, including opt-outs from the proposed class not exceeding a specified percentage and final approval by the District Court. During the first quarter of Fiscal 2011, the original opt-out period in the notice approved by the District Court expired without the specified percentage being exceeded. The District Court subsequently granted final approval for the settlement and entered a final judgment on July 20, 2010. Dell paid \$40 million into an escrow account to satisfy this settlement and discharged the liability during the second quarter of Fiscal 2011. Certain objectors to the settlement have filed notices of appeal to the Fifth Circuit Court of Appeals with regard to approval of the settlement. While there can be no assurances with respect to litigation, we believe it is unlikely that the settlement will be overturned on appeal.

Copyright Levies — In many European Union ("EU") member countries, there are requirements to collect and remit levies to collecting societies based on sales of certain devices. These levies apply to Dell and others in the industry. The amount of levies is generally based upon the number of products sold and the per-product amounts of the levies. Levies are intended to compensate copyright holders for "fair use" copying of copyrighted materials. The collecting societies then distribute the levies to copyright holders. Some EU member countries that do not yet have levies on digital devices are expected to implement similar legislation to enable them to extend existing levy schemes, while some other EU member countries are expected to limit the scope of levy schemes and their applicability in the digital hardware environment. Dell, other companies and various industry associations have opposed the extension of levies to the digital environment and have advocated alternative models of compensation to rights holders. As described below, there are multiple proceedings involving Dell or its competitors in certain EU member countries, where plaintiffs are seeking to impose or modify levies upon equipment (such as multifunction devices, phones, personal computers ("PCs") and printers), alleging that these devices enable copying of copyrighted materials. Even if Dell is not a party to all these proceedings, however, the decisions could impact Dell's business and the amount of copyright levies Dell may be required to collect. These various proceeding also challenge whether the levy schemes in those countries comply with EU law.

DELL INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

There are multiple proceedings in Germany that could impact Dell's obligation to collect and remit levies in Germany. In July 2004, VG Wort, a German collecting society, filed a lawsuit against Hewlett-Packard Company ("HP") in the Stuttgart Civil Court seeking copyright levies on printers. On December 22, 2004, the court held that HP was liable for payments regarding all printers using ASCII code sold in Germany. HP appealed the decision and after an intermediary ruling upholding the trial court's decision, the German Federal Supreme Court ("GFSC") in December 2007 issued a judgment that printers are not subject to levies under the German copyright law that was in effect until December 31, 2007. Based upon the GFSC's ruling, Dell concluded there was no obligation for Dell to collect or accrue levies for printers sold by it prior to December 31, 2007. VG Wort filed a claim with the German Constitutional Court ("GCC") challenging the GFSC's ruling that printers are not subject to levies. On September 21, 2010, the GCC revoked the GFSC decision and referred the case back to the GFSC to determine if the ruling gave due credit to the copyright owner's property rights under the German Constitution and whether the GFSC should have referred the case to the European Court of Justice ("ECJ"). The GFSC has set a hearing date of March 24, 2011. Dell believes that the GFSC can decide to refer the case to the ECJ, confirm its prior decision, or conclude that printers are subject to levies under German law. Dell has not accrued any liability in this matter, as Dell does not believe there is a probable and estimable claim.

In a separate matter, on December 29, 2005, Zentralstelle Für private Überspielungrechte ("ZPÜ"), a joint association of various German collecting societies, instituted arbitration proceedings against Dell's German subsidiary before the Board of Arbitration at the German Patent and Trademark Office ("Arbitration Body") in Munich. ZPÜ claimed an audio-video levy of €18.42 for each PC sold by Dell in Germany from January 1, 2002, through December 31, 2005. On July 31, 2007, the Arbitration Body recommended a levy of €15 on each PC sold by Dell during that period for audio and visual copying capabilities. Dell and ZPÜ rejected the recommendation, and on February 21, 2008, ZPÜ filed a lawsuit in the German Regional Court in Munich with respect to levies to be paid through the end of calendar year 2007. On December 23, 2009, ZPÜ and the German industry association, BCH, reached a settlement regarding audio-video copyright levy litigation. The settlement provided for payment of levies in the amount of €3.15 for calendar years 2002 and 2003, €6.30 for calendar years 2004 through 2007, and €12.15 (for units excluding a burner) and €13.65 (for units including a burner) for calendar years 2008 through 2010. Dell joined this settlement on February 23, 2010 and has paid the amounts due thereunder. Because the settlement agreement expired on December 31, 2010, the amount of levies payable after calendar year 2010, as well as Dell's ability to recover such amounts through increased prices, remains uncertain.

Additionally, there are proceedings in Spain to which Dell is not a party, but that could impact Dell's obligation to collect and remit levies across the EU. In March 2006, Sociedad General de Autores y Editores de Espana ("SGAE"), a Spanish collecting society, sued Padawan SL, a company unaffiliated with Dell, in the Commercial Court number four of Barcelona in Spain claiming that Padawan owed levies on the CD-Rs, CD-RWs, DVD-Rs, and MP3 players sold by Padawan. In June 2007, the trial court upheld SGAE's claim and ordered Padawan to pay specified levies. Padawan appealed the decision to the Audiencia Provincial de Barcelona, which stayed the proceedings in order to refer the case to the ECJ. The ECJ considered the interpretation of the term "fair compensation" under the European Copyright Directive ("Directive"). On October 21, 2010, the ECJ issued its decision and outlined how fair compensation should be considered under the Directive by the EU member states. The ECJ stated that fair compensation must be calculated based on the harm caused to the authors of protected works by private copying. The ECJ also stated that the indiscriminate application of the private copying levy to devices not made available to private users and clearly reserved for uses other than private copying is incompatible with the Directive. The matter has been referred back to the Spanish court to determine whether the Spanish copyright levy scheme is compatible with the Directive based on the guidance provided by the ECJ. It is unclear at this time what the effect of this decision will be on copyright levies in Spain and the other EU member states. Dell continues to collect and remit levies in Spain and other EU countries where it has determined that based on local law it is probable that Dell has an obligation.

The ultimate resolution of these matters and the associated financial impact to Dell, if any, including the number of units potentially affected, the amount of levies imposed, and the ability of Dell to recover such amounts remains uncertain at this time. Should the courts determine there is liability for previous units shipped beyond what Dell has collected or accrued, Dell would be liable for such incremental amounts. Recovery would only be possible on future collections related to future shipments.

Sharp Corporation v Dell Inc. — Sharp Corporation ("Sharp") filed a suit against Dell in October 2008 for trademark infringement, unfair competition and dilution in the U.S. District Court in the State of New Jersey. Sharp alleges that it is the owner of the "SHARP" mark and that this mark and related marks are used in connection with Sharp's sale of a wide variety of electrical and consumer electronic products. Sharp alleges that Dell has infringed the "SHARP" mark by using the "UltraSharp" and "Dell UltraSharp" marks to promote, advertise and sell computer monitors and notebook computers, from 2002 to the present. Sharp alleges that Dell's use of "UltraSharp" has and will continue to cause actual consumer confusion regarding the source of "UltraSharp". In addition, Sharp has asserted a claim for dilution of its SHARP marks on the alleged ground that Dell's use of DELL UltraSharp and UltraSharp has weakened the distinctive value of its marks. Sharp seeks damages measured by Dell's profits made from the sale of DELL UltraSharp products, treble damages, punitive damages, costs and attorneys' fees. Sharp also seeks a permanent injunction precluding the use of Dell's allegedly infringing "UltraSharp" mark. Dell disputes the claims and is vigorously defending the case. Trial in this matter is currently scheduled for June 2011. The ultimate resolution of this matter and the associated financial impact to Dell, if any, remains uncertain at this time.

Chad Brazil and Steven Seick v Dell Inc. — Chad Brazil and Steven Seick filed a class action suit against Dell in March 2007 in the U.S. District Court for the Northern District of California. The plaintiffs allege that Dell advertised discounts on its products from false "regular" prices, in violation of California law. The plaintiffs seek compensatory damages, disgorgement of profits from the alleged false advertising, injunctive relief, punitive damages and attorneys' fees. In December 2010, the District Court certified a class consisting of all California residents who had purchased certain products advertised with a former sales price on the consumer segment of Dell's website during an approximately four year period between March 2003 and June 2007. The Court of Appeals is currently considering Dell's request for an interlocutory appeal of the certification order. Dell disputes the claims and is vigorously defending the case. The ultimate resolution of this matter and the associated financial impact to Dell, if any, remain uncertain at this time.

Other Litigation — The various legal proceedings in which Dell is involved include commercial litigation and a variety of patent suits. In some of these cases, Dell is the sole defendant. More often, particularly in the patent suits, Dell is one of a number of defendants in the electronics and technology industries. Dell is actively defending a number of patent infringement suits, and several pending claims are in various stages of evaluations. While the number of patent cases has grown over time, Dell does not currently anticipate that any of these matters will have a material impact on Dell's financial condition, results of operations, or cash flows.

Other Matters — In the second quarter of Fiscal 2011, Dell became aware of instances in which certain peripheral product sales made to U.S. federal government customers under Dell's General Services Administration ("GSA") Schedule 70 Contract were not compliant with contract requirements implementing the Trade Agreements Act. Dell self-reported the discovery to the GSA's Office of the Inspector General and has presented a report of its findings which conclude that less than \$1 million of non-compliant products may have been sold. Dell continues to work with the GSA's Office of the Inspector General to reach final resolution of this matter with that office.

DELL INC.

NOTES TO CONSOLIDATED FINANCIAL
STATEMENTS (Continued)

While Dell does not expect that the ultimate outcomes in these proceedings or matters, individually or collectively, will have a material adverse effect on its business, financial position, results of operations, or cash flows, the results and timing of the ultimate resolutions of these various proceedings and matters are inherently unpredictable. Whether the outcome of any claim, suit, assessment, investigation, or legal proceeding, individually or collectively, could have a material effect on Dell's business, financial condition, results of operations, or cash flows will depend on a number of variables, including the nature, timing, and amount of any associated expenses, amounts paid in settlement, damages or other remedies or consequences. Dell accrues a liability when it believes that it is both probable that a liability has been incurred and that it can reasonably estimate the amount of the loss. Dell reviews these accruals at least quarterly and adjusts them to reflect ongoing negotiations, settlements, rulings, advice of legal counsel, and other relevant information. To the extent new information is obtained and Dell's views on the probable outcomes of claims, suits, assessments, investigations, or legal proceedings change, changes in Dell's accrued liabilities would be recorded in the period in which such determination is made.

Certain Concentrations — Dell's counterparties to its financial instruments consist of a number of major financial institutions with credit ratings of AA and A by major credit rating agencies. In addition to limiting the amount of agreements and contracts it enters into with any one party, Dell monitors its positions with, and the credit quality of the counterparties to, these financial instruments. Dell does not anticipate nonperformance by any of the counterparties.

Dell's investments in debt securities are in high quality financial institutions and companies. As part of its cash and risk management processes, Dell performs periodic evaluations of the credit standing of the institutions in accordance with its investment policy. Dell's investments in debt securities have effective maturities of less than five years. Management believes that no significant concentration of credit risk for investments exists for Dell. As of January 28, 2011, Dell does not have significant concentrations of cash and cash equivalent deposits with its financial institutions.

Dell markets and sells its products and services to large corporate clients, governments, health care and education accounts, as well as small and medium-sized businesses and individuals. No single customer accounted for more than 10% of Dell's consolidated net revenue during Fiscal 2011, Fiscal 2010, or Fiscal 2009.

Dell purchases a number of components from single or limited sources. In some cases, alternative sources of supply are not available. In other cases, Dell may establish a working relationship with a single source or a limited number of sources if Dell believes it is advantageous to do so based on performance, quality, support, delivery, capacity, or price considerations.

Dell also sells components to certain contract manufacturers who assemble final products for Dell. Dell does not recognize the sale of these components in net sales and does not recognize the related profits until the final products are sold by Dell to end users. Profits from the sale of these parts are recognized as a reduction of cost of sales at the time of sale. Dell has net settlement agreements with the majority of these contract manufacturers that allow Dell to offset the accounts payable to the contract manufacturers from the amounts receivable from them. The net balances that are receivables for Dell are included in other current assets or accounts payable if Dell is in a net payable position. Non-trade receivables from four of these contract manufacturers accounted for the majority of gross non-trade receivables of \$2.7 billion and \$2.5 billion as of January 28, 2011 and January 29, 2010, respectively. As of January 28, 2011, and January 29, 2010, these four contract manufacturers were in net payable positions.

Notes 12, 13, and 14 are not included in Appendix B, but are available in the 2011 Dell Annual Report at www.dell.com.

NOTE 15 — STOCK-BASED COMPENSATION AND BENEFIT PLANS**Stock-based Compensation***Description of the Plans*

Employee Stock Plans — Dell is currently issuing stock grants under the Dell Amended and Restated 2002 Long-Term Incentive Plan (the "2002 Incentive Plan"), which was approved by shareholders on December 4, 2007. There are previous plans that have been terminated, except for options previously granted under those plans which remain outstanding. The 2002 Incentive Plan and the previous plans are all collectively referred to as the "Stock Plans."

The 2002 Incentive Plan provides for the granting of stock-based incentive awards to Dell's employees and non-employee directors. Awards may be incentive stock options within the meaning of Section 422 of the Internal Revenue Code, non-qualified stock options, restricted stock, or restricted stock units. There were approximately 344 million, 320 million, and 313 million shares of Dell's common stock available for future grants under the Stock Plans at January 28, 2011, January 29, 2010, and January 30, 2009, respectively. To satisfy stock option exercises and vested restricted stock awards, Dell has a policy of issuing new shares as opposed to repurchasing shares on the open market.

Stock Option Agreements — The right to purchase shares pursuant to existing stock option agreements typically vests pro-rata at each option anniversary date over a three- to five-year period. The options, which are granted with option exercise prices equal to the fair market value of Dell's common stock on the date of grant, generally expire within ten to twelve years from the date of grant. Compensation expense for stock options is recognized on a straight-line basis over the requisite services period.

Restricted Stock Awards — Awards of restricted stock may be either grants of restricted stock, restricted stock units, or performance-based stock units that are issued at no cost to the recipient. For restricted stock grants, at the date of grant, the recipient has all rights of a stockholder, subject to certain restrictions on transferability and a risk of forfeiture. Restricted stock grants typically vest over a three- to seven-year period beginning on the date of the grant. For restricted stock units, legal ownership of the shares is not transferred to the employee until the unit vests, which is generally over a three- to five-year period. Dell also grants performance-based restricted stock units as a long-term incentive in which an award recipient receives shares contingent upon Dell achieving performance objectives and the employee's continuing employment through the vesting period, which is generally over a three- to five-year period. Compensation costs recorded in connection with these performance-based restricted stock units are based on Dell's best estimate of the number of shares that will eventually be issued upon achievement of the specified performance criteria and when it becomes probable that certain performance goals will be achieved. The cost of these awards is determined using the fair market value of Dell's common stock on the date of the grant.

Compensation costs for restricted stock awards with a service condition is recognized on a straight-line basis over the requisite service period. Compensation costs for performance-based restricted stock awards is recognized on an accelerated multiple-award approach based on the most probable outcome of the performance condition.

DELL INC.

NOTES TO CONSOLIDATED FINANCIAL
STATEMENTS (Continued)

Acceleration of Vesting of Options — On January 23, 2009, Dell's Board of Directors approved the acceleration of the vesting of unvested "out-of-the-money" stock options (options that have an exercise price greater than the current market stock price) with exercise prices equal to or greater than \$10.14 per share for approximately 2,800 employees holding options to purchase approximately 21 million shares of common stock. Dell concluded the modification to the stated vesting provisions was substantive after Dell considered the volatility of its share price and the exercise price of the amended options in relation to recent share values. Because the modification was considered substantive, the remaining unearned compensation expense of \$104 million was recorded as an expense in Fiscal 2009. The weighted-average exercise price of the options that were accelerated was \$21.90.

Stock Option Activity

The following table summarizes stock option activity for the Stock Plans during Fiscal 2011:

	Number of Options	Weighted- Average Exercise Price	Weighted- Average Remaining Contractual Term	Aggregate Intrinsic Value
	(in millions)	(per share)	(in years)	(in millions)
Options outstanding — January 29, 2010	205	\$ 30.00		
Granted	17	14.82		
Exercised	(1)	9.18		
Forfeited	(2)	13.85		
Cancelled/expired	(58)	36.44		
Options outstanding — January 28, 2011	<u>161</u>	<u>\$ 26.49</u>		
Vested and expected to vest (net of estimated forfeitures) — January 28, 2011 ^(a)	158	\$ 26.73	3.7	\$ 33
Exercisable — January 28, 2011 ^(a)	139	\$ 28.61	3.0	\$ 10

(a) For options vested and expected to vest and options exercisable, the aggregate intrinsic value in the table above represents the total pre-tax intrinsic value (the difference between Dell's closing stock price on January 28, 2011, and the exercise price multiplied by the number of in-the-money options) that would have been received by the option holders had the holders exercised their options on January 28, 2011. The intrinsic value changes based on changes in the fair market value of Dell's common stock.

The following table summarizes stock option activity for the Stock Plans during Fiscal 2010:

	Number of Options	Weighted- Average Exercise Price	Weighted- Average Remaining Contractual Term	Aggregate Intrinsic Value
	(in millions)	(per share)	(in years)	(in millions)
Options outstanding — January 30, 2009	230	\$ 31.85		
Granted	11	9.83		
Exercised	-	12.05		
Forfeited	-	14.73		
Cancelled/expired	(36)	35.59		
Options outstanding — January 29, 2010	<u>205</u>	<u>\$ 30.00</u>		
Vested and expected to vest (net of estimated forfeitures) — January 29, 2010 ^(a)	204	\$ 30.15	3.5	\$ 35
Exercisable — January 29, 2010 ^(a)	194	\$ 31.16	3.1	\$ 1

(a) For options vested and expected to vest and options exercisable, the aggregate intrinsic value in the table above represents the total pre-tax intrinsic value (the difference between Dell's closing stock price on January 29, 2010, and the exercise price multiplied by the number of in-the-money options) that would have been received by the option holders had the holders exercised their options on January 29, 2010. The intrinsic value changes based on changes in the fair market value of Dell's common stock.

The following table summarizes stock option activity for the Stock Plans during Fiscal 2009:

	Number of Options	Weighted- Average Exercise Price	Weighted- Average Remaining Contractual Term	Aggregate Intrinsic Value
	(in millions)	(per share)	(in years)	(in millions)
Options outstanding — February 1, 2008	264	\$ 32.30		
Granted	13	19.71		
Exercised	(4)	19.08		
Forfeited	(4)	23.97		
Cancelled/expired	(39)	33.14		
Options outstanding — January 30, 2009	<u>230</u>	<u>\$ 31.85</u>		
Vested and expected to vest (net of estimated forfeitures) — January 30, 2009 ^{(a)(b)}	230	\$ 31.86	3.9	\$ -
Exercisable — January 30, 2009 ^{(a)(b)}	230	\$ 31.86	3.9	\$ -

(a) For options vested and expected to vest and options exercisable, the aggregate intrinsic value in the table above represents the total pre-tax intrinsic value (the difference between Dell's closing stock price on January 30, 2009, and the exercise price multiplied by the number of in-the-money options) that would have been received by the option holders had the holders exercised their options on January 30, 2009. The intrinsic value changes based on changes in the fair market value of Dell's common stock.

(b) No options were in-the-money at January 30, 2009.

DELL INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

Other information pertaining to stock options for the Stock Plans is as follows:

	Fiscal Year Ended		
	January 28, 2011	January 29, 2010	January 30, 2009
	(in millions, except per option data)		
Weighted-average grant date fair value of stock options granted per option	\$ 5.01	\$ 3.71	\$ 5.87
Total fair value of options vested ^(a)	\$ 13	\$ -	\$ 187
Total intrinsic value of options exercised ^(b)	\$ 7	\$ -	\$ 15

(a) Includes the \$104 million of charges for accelerated options in Fiscal 2009.

(b) The total intrinsic value of options exercised represents the total pre-tax intrinsic value (the difference between the stock price at exercise and the exercise price multiplied by the number of options exercised) that was received by the option holders who exercised their options during the fiscal year.

At January 28, 2011, January 29, 2010, and January 30, 2009, there was \$65 million, \$28 million, and \$1 million of total unrecognized stock-based compensation expense related to stock options expected to be recognized over a weighted-average period of 2.0 years, 2.2 years, and 2.3 years, respectively.

Valuation of Stock Options

Dell uses the Black-Scholes option pricing model to estimate the fair value of stock options at grant date. The estimated fair values incorporate various assumptions, including volatility, expected term, and risk-free interest rates. Expected volatility is based on a blend of implied and historical volatility of Dell's common stock over the most recent period commensurate with the estimated expected term of Dell's stock options. Dell uses this blend of implied and historical volatility, as well as other economic data, because management believes such volatility is more representative of prospective trends. The expected term of an award is based on historical experience and on the terms and conditions of the stock awards granted to employees. The dividend yield of zero is based on the fact that Dell has never paid cash dividends and has no present intention to pay cash dividends.

The weighted-average fair value of stock options was determined based on the Black-Scholes option pricing model weighted for all grants utilizing the assumptions in the following table:

	Fiscal Year Ended		
	January 28, 2011	January 29, 2010	January 30, 2009
Expected term (in years)	4.5	4.5	3.6
Risk-free interest rate (U.S. Government Treasury Note)	2.2%	1.8%	2.3%
Volatility	37%	44%	37%
Dividends	-%	-%	-%

Restricted Stock Awards

Non-vested restricted stock awards and activities were as follows:

	Fiscal 2011		Fiscal 2010		Fiscal 2009	
	Number of Shares (in millions)	Weighted-Average Grant Date Fair Value (per share)	Number of Shares (in millions)	Weighted-Average Grant Date Fair Value (per share)	Number of Shares (in millions)	Weighted-Average Grant Date Fair Value (per share)
<i>Non-vested restricted stock:</i>						
Beginning balance	40	\$ 16.84	36	\$ 22.45	36	\$ 24.90
Granted	26	14.53	22	11.39	18	19.11
Vested ^(a)	(17)	19.10	(13)	22.78	(10)	24.64
Forfeited	(7)	15.21	(5)	18.23	(8)	23.15
Non-vested restricted stock ending balance	42	\$ 14.71	40	\$ 16.84	36	\$ 22.45

(a) Upon vesting, restricted stock units are generally sold to cover the required withholding taxes. However, select participants may choose the net shares settlement method to cover withholding tax requirements. Total shares withheld were approximately 354,000, 157,000, and 48,000 for Fiscal 2011, Fiscal 2010, and Fiscal 2009, respectively. Total payments for the employee's tax obligations to the taxing authorities were \$5 million, \$2 million, and \$1 million in Fiscal 2011, Fiscal 2010, and Fiscal 2009, respectively, and are reflected as a financing activity within the Consolidated Statements of Cash Flows.

For the Fiscal 2011, Fiscal 2010, and Fiscal 2009, total estimated vest date fair value of restricted stock awards was \$250 million, \$134 million, and \$197 million.

At January 28, 2011, January 29, 2010, and January 30, 2009, there was \$341 million, \$393 million, and \$507 million, respectively, of unrecognized stock-based compensation expense, net of estimated forfeitures, related to non-vested restricted stock awards. These awards are expected to be recognized over a weighted-average period of approximately 1.9, 1.8, and 2.0 years, respectively.

DELL INC.

NOTES TO CONSOLIDATED FINANCIAL
STATEMENTS (Continued)*Stock-based Compensation Expense*

Stock-based compensation expense was allocated as follows:

	Fiscal Year Ended		
	January 28, 2011	January 29, 2010	January 30, 2009
	(in millions)		
<i>Stock-based compensation expense:</i>			
Cost of net revenue	\$ 57	\$ 47	\$ 62
Operating expenses	275	265	356
Stock-based compensation expense before taxes	332	312	418
Income tax benefit	(97)	(91)	(131)
Stock-based compensation expense, net of income taxes	<u>\$ 235</u>	<u>\$ 221</u>	<u>\$ 287</u>

Stock-based compensation in the table above includes \$104 million of expense for accelerated options and a reduction of \$1 million for the release of the accrual for expired stock options in Fiscal 2009, as previously discussed.

Employee Benefit Plans

401(k) Plan — Dell has a defined contribution retirement plan (the "401(k) Plan") that complies with Section 401(k) of the Internal Revenue Code. Substantially all employees in the U.S. are eligible to participate in the 401(k) Plan. Effective January 1, 2008, Dell matches 100% of each participant's voluntary contributions, subject to a maximum contribution of 5% of the participant's compensation, and participants vest immediately in all Dell contributions to the 401(k) Plan. Dell's contributions during Fiscal 2011, Fiscal 2010, and Fiscal 2009 were \$132 million, \$91 million, and \$93 million, respectively. Dell's contributions are invested according to each participant's elections in the investment options provided under the Plan. Investment options include Dell common stock, but neither participant nor Dell contributions are required to be invested in Dell common stock. During Fiscal 2010, Dell also contributed \$4.2 million to Perot Systems' 401(k) Plan (the "Perot Plan") after the acquisition of the company on November 3, 2009. The Perot Plan was merged into the 401(k) Plan during Fiscal 2011.

Deferred Compensation Plan — Dell has a non-qualified deferred compensation plan (the "Deferred Compensation Plan") for the benefit of certain management employees and non-employee directors. The Deferred Compensation Plan permits the deferral of base salary and annual incentive bonus. The deferrals are held in a separate trust, which has been established by Dell to administer the Plan. The assets of the trust are subject to the claims of Dell's creditors in the event that Dell becomes insolvent. Consequently, the trust qualifies as a grantor trust for income tax purposes (known as a "Rabbi Trust"). In accordance with the accounting provisions for deferred compensation arrangements where amounts earned are held in a Rabbi Trust and invested, the assets and liabilities of the Deferred Compensation Plan are presented in long-term investments and accrued and other liabilities in the Consolidated Statements of Financial Position, respectively. The assets held by the trust are classified as trading securities with changes recorded to interest and other, net. These assets were valued at \$99 million at January 28, 2011, and are disclosed in Note 3 of Notes to Consolidated Financial Statements. Changes in the deferred compensation liability are recorded to compensation expense.

NOTE 16 — SEGMENT INFORMATION

Dell's four global business segments are Large Enterprise, Public, Small and Medium Business ("SMB"), and Consumer. Large Enterprise includes sales of IT infrastructure and service solutions to large global and national corporate customers. Public includes sales to educational institutions, governments, health care organizations, and law enforcement agencies, among others. SMB includes sales of complete IT solutions to small and medium-sized businesses. Consumer includes sales to individual consumers and retailers around the world.

The business segments disclosed in the accompanying Consolidated Financial Statements are based on this organizational structure and information reviewed by Dell's management to evaluate the business segment results. Dell's measure of segment operating income for management reporting purposes excludes severance and facility closure expenses, broad based long-term incentives, acquisition-related charges, and amortization of intangibles.

DELL INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

The following table presents net revenue by Dell's reportable global segments as well as a reconciliation of consolidated segment operating income to Dell's consolidated operating income:

	Fiscal Year Ended		
	January 28, 2011	January 29, 2010	January 30, 2009
	(in millions)		
<i>Net revenue:</i>			
Large Enterprise	\$ 17,813	\$ 14,285	\$ 18,011
Public	16,851	14,484	15,338
Small and Medium Business	14,473	12,079	14,892
Consumer	12,357	12,054	12,860
Total	<u>\$ 61,494</u>	<u>\$ 52,902</u>	<u>\$ 61,101</u>
<i>Consolidated operating income:</i>			
Large Enterprise	\$ 1,473	\$ 819	\$ 1,158
Public	1,484	1,361	1,258
Small and Medium Business	1,477	1,040	1,273
Consumer	65	107	306
Consolidated segment operating income	4,499	3,327	3,995
Severance and facility actions	(129)	(481)	(282)
Broad based long-term incentives ^(a)	(350)	(353)	(418)
In-process research and development	-	-	(2)
Amortization of intangible assets	(349)	(205)	(103)
Acquisition-related costs ^{(a)(b)}	(98)	(116)	-
Other ^(c)	(140)	-	-
Total	<u>\$ 3,433</u>	<u>\$ 2,172</u>	<u>\$ 3,190</u>

- (a) Broad based long-term incentives includes stock-based compensation, but excludes stock-based compensation related to acquisitions, which are included in acquisition-related costs. Stock-based expense for Fiscal 2009 also includes \$104 million of expense for accelerated options. See Note 15 of Notes to Consolidated Financial Statements for additional information.
- (b) Acquisition-related costs consist primarily of retention payments, integration costs, and consulting fees.
- (c) Other includes the \$100 million settlement for the SEC investigation and a \$40 million settlement for a securities litigation lawsuit that were both incurred in the first quarter of Fiscal 2011.

The following table presents assets by Dell's reportable global segments. Segment assets primarily consist of accounts receivable and inventories.

	January 28, 2011	January 29, 2010
		(in millions)
<i>Total assets:</i>		
Corporate	\$ 30,264	\$ 26,240
Large Enterprise	2,934	2,604
Public	2,545	2,464
Small and Medium Business	1,398	1,051
Consumer	1,458	1,293
Total	<u>\$ 38,599</u>	<u>\$ 33,652</u>

The following table presents depreciation expense by Dell's reportable business segments:

	Fiscal Year Ended		
	January 28, 2011	January 29, 2010	January 30, 2009
	(in millions)		
<i>Depreciation expense:</i>			
Large Enterprise	\$ 180	\$ 175	\$ 180
Public	170	177	174
Small and Medium Business	146	148	151
Consumer	125	147	161
Total	<u>\$ 621</u>	<u>\$ 647</u>	<u>\$ 666</u>

DELL INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

The following tables present net revenue and long-lived asset information allocated between the U.S. and foreign countries:

	Fiscal Year Ended		
	January 28, 2011	January 29, 2010	January 30, 2009
	(in millions)		
<i>Net revenue:</i>			
United States	\$ 31,912	\$ 28,053	\$ 31,569
Foreign countries	29,582	24,849	29,532
Total	<u>\$ 61,494</u>	<u>\$ 52,902</u>	<u>\$ 61,101</u>

	January 28, 2011	January 29, 2010
		(in millions)
<i>Long-lived assets:</i>		
United States	\$ 1,419	\$ 1,536
Foreign countries	534	645
Total	<u>\$ 1,953</u>	<u>\$ 2,181</u>

The allocation between domestic and foreign net revenue is based on the location of the customers. Net revenue and long-lived assets from any single foreign country did not constitute more than 10% of Dell's consolidated net revenues or long-lived assets during Fiscal 2011, Fiscal 2010, or Fiscal 2009. No single customer accounted for more than 10% of Dell's consolidated net revenue during Fiscal 2011, Fiscal 2010, or Fiscal 2009.

The following table presents net revenue by product and services categories:

	Fiscal Year Ended		
	January 28, 2011	January 29, 2010	January 30, 2009
	(in millions)		
<i>Net revenue:</i>			
Enterprise Solutions and Services:			
Enterprise Solutions:			
Servers and networking	\$ 7,609	\$ 6,032	\$ 6,512
Storage	2,295	2,192	2,667
Services	7,673	5,622	5,351
Software and peripherals	10,261	9,499	10,603

STATEMENTS (Continued)

Supplemental Consolidated Statements of Financial Position Information (cont.)

	January 28, 2011	January 29, 2010
	(in millions)	
<i>Accrued and other current liabilities:</i>		
Compensation	\$ 1,550	\$ 1,112
Warranty liability	575	593
Income and other taxes	529	426
Other	1,527	1,753
Total	<u>\$ 4,181</u>	<u>\$ 3,884</u>
<i>Other non-current liabilities:</i>		
Warranty liability	\$ 320	\$ 319
Income and other taxes	2,293	2,085
Other	73	201
Total	<u>\$ 2,686</u>	<u>\$ 2,605</u>

Supplemental Consolidated Statements of Income

The table below provides advertising costs for Fiscal 2011, Fiscal 2010, and Fiscal 2009. Advertising costs are included in selling, general, and administrative in the Consolidated Statements of Income.

	January 28, 2011	Fiscal Year Ended January 29, 2010	January 30, 2009
	(in millions)		
Advertising costs	<u>\$ 730</u>	<u>\$ 619</u>	<u>\$ 811</u>

The table below provides details of interest and other, net for Fiscal 2011, Fiscal 2010, and Fiscal 2009:

	January 28, 2011	Fiscal Year Ended January 29, 2010	January 30, 2009
	(in millions)		
<i>Interest and other, net:</i>			
Investment income, primarily interest	\$ 47	\$ 57	\$ 180
Gains (losses) on investments, net	6	2	(10)
Interest expense	(199)	(160)	(93)
Foreign exchange	4	(59)	115
Other	59	12	(58)
Interest and other, net	<u>\$ (83)</u>	<u>\$ (148)</u>	<u>\$ 134</u>

Supplemental Statement of Stockholders' Equity

The table below provides the cumulative balance for foreign currency translation adjustments as of January 28, 2011, January 29, 2010, and January 30, 2009. Cumulative foreign currency translation adjustments are included as a component of accumulated other comprehensive income (loss) in stockholders' equity.

	January 28, 2011	January 29, 2010	January 30, 2009
	(in millions)		
Cumulative income (loss) for foreign currency translation adjustments	<u>\$ 39</u>	<u>\$ (40)</u>	<u>\$ (11)</u>

(a) Charge-offs to the allowance for financing receivable losses for customer financing receivables includes principal and interest.

NOTE 18 — UNAUDITED QUARTERLY RESULTS

The following tables present selected unaudited Consolidated Statements of Income for each quarter of Fiscal 2011 and Fiscal 2010:

	Fiscal Year 2011			
	First Quarter	Second Quarter	Third Quarter	Fourth Quarter
	(in millions, except per share data)			
Net revenue	\$ 14,874	\$ 15,534	\$ 15,394	\$ 15,692
Gross margin	\$ 2,516	\$ 2,586	\$ 3,003	\$ 3,291
Net income	\$ 341	\$ 545	\$ 822	\$ 927
Earnings per share:				
Basic	\$ 0.17	\$ 0.28	\$ 0.42	\$ 0.48
Diluted	\$ 0.17	\$ 0.28	\$ 0.42	\$ 0.48
Weighted-average shares outstanding:				
Basic	1,961	1,952	1,939	1,924
Diluted	1,973	1,960	1,949	1,938
	Fiscal Year 2010			
	First Quarter	Second Quarter	Third Quarter	Fourth Quarter
	(in millions, except per share data)			
Net revenue	\$ 12,342	\$ 12,764	\$ 12,896	\$ 14,900
Gross margin	\$ 2,168	\$ 2,391	\$ 2,233	\$ 2,469
Net income	\$ 290	\$ 472	\$ 337	\$ 334
Earnings per share:				
Basic	\$ 0.15	\$ 0.24	\$ 0.17	\$ 0.17
Diluted	\$ 0.15	\$ 0.24	\$ 0.17	\$ 0.17
Weighted-average shares outstanding:				
Basic	1,949	1,955	1,956	1,957
Diluted	1,952	1,960	1,966	1,971

NOTE 19 — SUBSEQUENT EVENTS

In February, 2011, Dell completed its acquisitions of Compellent Technologies, Inc. ("Compellent"), a provider of virtual storage solutions for enterprise and cloud computing environments, and SecureWorks Inc. ("SecureWorks"), a global provider of information security service, for approximately \$938 million and \$612 million, respectively. Both Compellent and SecureWorks will be integrated into Dell's Commercial segments. Because the acquisitions have recently closed, Dell has not completed the purchase accounting and initial purchase price allocation for these acquisitions. Dell expects to complete the purchase accounting and initial purchase price allocations in the first quarter of Fiscal 2012.

IFRS Comprehensive Case

Air France–KLM (AF), a French company, prepares its financial statements according to International Financial Reporting Standards. AF's annual report for the year ended March 31, 2011, which includes financial statements and disclosure notes, is provided with all new textbooks. This material also is included in AF's "Registration Document 2010-11," dated June 15, 2011 and is available at www.airfranceklm.com. This case addresses a variety of characteristics of financial statements prepared using IFRS often comparing and contrasting those attributes of statements prepared under U.S. GAAP. Questions are grouped in parts according to various sections of the textbook.

Part A: Financial Statements, Income Measurement, and Current Assets

- A1. What amounts did AF report for the following items for the 2011 fiscal year ended March 31, 2011?
 - a. Total revenues
 - b. Income from current operations
 - c. Net income (AF equity holders)
 - d. Total assets
 - e. Total equity
- A2. What was AF's basic earnings per share for the 2011 fiscal year?
- A3. Examine Note 3.1.1 of AF's annual report. What accounting principles were used to prepare AF's financial statements? Under those accounting principles, could AF's financial information differ from that of a company that exactly followed IFRS as published by the IASB? Explain.
- A4. Describe the apparent differences in the order of presentation of the components of the balance sheet between IFRS as applied by Air France–KLM (AF) and a typical balance sheet prepared in accordance with U.S. GAAP.
- A5. How does AF classify operating expenses in its income statement? How are these expenses typically classified in a U.S. company income statement?
- A6. How does AF classify interest paid, interest received, and dividends received in its statement of cash flows? What other alternatives, if any, does the company have for the classification of these items? How are these items classified under U.S. GAAP?
- A7. In note 3.6, AF indicates that "Upon issuance, both passenger and cargo tickets are recorded as "Deferred revenue on ticket sales" and that "Sales related to air transportation are recognized when the transportation service is provided."
 - a. Examine AF's balance sheet. What is the total amount of deferred revenue on ticket sales as of March 31, 2011?
 - b. When transportation services are provided with respect to the deferred revenue on ticket sales, what journal entry would AF make to reduce deferred revenue?
 - c. Does AF's treatment of deferred revenue under IFRS appear consistent with how these transactions would be handled under U.S. GAAP? Explain.
- A8. AF has a frequent flyer program, "Flying Blue," which allows members to acquire "miles" as they fly on Air France or partner airlines that are redeemable for free flights or other benefits.

- a. How does AF account for these miles?
 - b. Does AF report any liability associated with these miles as of March 31, 2011?
 - c. Is AF's accounting approach under IFRS consistent with how U.S. GAAP accounts for multiple deliverable contracts? Explain.
- A9. In note 3.10.1, AF describes how it values trade receivables. How does the approach used by AF compare to U.S. GAAP?
- A10. In note 24, AF reconciles the beginning and ending balances of its valuation allowance for trade accounts receivable. Prepare a T-account for the valuation allowance and include entries for the beginning and ending balances and any reconciling items that affected the account during 2011.
- A11. Examine note 26. Does AF have any bank overdrafts? If so, are the overdrafts shown in the balance sheet the same way they would be shown under U.S. GAAP?
- A12. What method does the company use to value its inventory? What other alternatives are available under IFRS? Under U.S. GAAP?
- A13. AF's inventories are valued at the lower of cost and net realizable value. How does this approach differ from U.S. GAAP?

Part B: Property, Plant, and Equipment and Intangible Assets

- B1. What method does AF use to amortize the cost of computer software development costs? How does this approach differ from U.S. GAAP?
- B2. AF does not report any research and development expenditures. If it did, its approach to accounting for research and development would be significantly different from U.S. GAAP. Describe the differences between IFRS and U.S. GAAP in accounting for research and development expenditures.
- B3. AF does not report the receipt of any governments grants. If it did, its approach to accounting for government grants would be significantly different from U.S. GAAP. Describe the differences between IFRS and U.S. GAAP in accounting for government grants. If AF received a grant for the purchase of assets, what alternative accounting treatments are available under IFRS?
- B4. AF's property, plant, and equipment is reported at cost. The company has a policy of not revaluing property, plant, and equipment. Suppose AF decided to revalue its flight equipment on March 31, 2011, and that the fair value of the equipment on that date was €12,000 million. Prepare the journal entry to record the revaluation assuming that the journal entry to record annual depreciation had already been recorded. (Hint: you will need to locate the original cost and accumulated depreciation of the equipment at the end of the year in the appropriate disclosure note.)
- B5. Under U.S. GAAP, what alternatives do companies have to value their property, plant, and equipment?
- B6. AF calculates depreciation of plant and equipment on a straight-line basis, over the useful life of the asset. Describe any differences between IFRS and U.S. GAAP in the calculation of depreciation.
- B7. When does AF test for the possible impairment of fixed assets? How does this approach differ from U.S. GAAP?
- B8. Describe the approach AF uses to determine fixed asset impairment losses. (Hint: see Note 3.14) How does this approach differ from U.S. GAAP?
- B9. The following is included in AF's disclosure note 3.12: "Intangible assets are held at initial cost less accumulated amortization and any accumulated impairment losses." Assume that on March 31, 2011, AF decided to revalue its Other intangible assets (see Note 16) and that the fair value on that date was determined to be €360 million. Amortization expense for the year already has been recorded. Prepare the journal entry to record the revaluation.

Part C: Investments

- C1. Read Notes 3.10.2, 3.10.5, 22, 32.3 and 32.4. Focusing on investments accounted for at fair value through profit and loss (FVTPL):
- a. As of March 31, 2011, what is the balance of those investments in the balance sheet? Be specific regarding which line of the balance sheet includes the balance.

- b. How much of that balance is classified as current and how much as noncurrent?
 - c. Is that balance stated at fair value? How do you know?
 - d. How much of the fair value of those investments is accounted for using level 1, level 2, and level 3 inputs of the fair value hierarchy? Given that information, assess the reliability (representational faithfulness) of this fair value estimate.
- C2. Complete Requirement 1 again, but for investments accounted for as available for sale.
- C3. Read Notes 3.3.2, 10, and 20.
- a. When AF can exercise significant influence over an investee, what accounting approach do they use to account for the investment? How does AF determine if it can exercise significant influence?
 - b. If AF exercises joint control over an investee by virtue of a contractual agreement, what accounting method does it use? Is there an alternative?
 - c. Why did AF change how it accounts for its investment in WAM (Amadeus)? What was the initial approach that AF used, and what approach did it change to using for this investment?
 - d. What is the carrying value of AF's equity-method investments in its March 31, 2011 balance sheet?
 - e. How did AF's equity-method investments affect AF's 2011 net income from continuing operations?

Part D: Liabilities

- D1. Read Notes 3.6 and 31. What do you think gave rise to total deferred income of €121 as of the end of fiscal 2011? Would transactions of this type be handled similarly under U.S. GAAP?
- D2. Is the threshold for recognizing a provision under IFRS different than it is under U.S. GAAP? Explain.
- D3. Note 29 lists "provisions and retirement benefits."
- a. Do the beginning and ending balances of total provisions and retirement benefits shown in Note 29 for fiscal 2011 tie to the balance sheet? By how much has the total amount of the AF's "provisions and retirement benefits" increased or decreased during fiscal 2011?
 - b. Write journal entries for the following changes in the litigation provision that occurred during fiscal 2011, assuming any amounts recorded on the income statement are recorded as "provision expense", and any use of provisions is paid for in cash. In each case, provide a brief explanation of the event your journal entry is capturing.
 - i. New provision.
 - ii. Use of provision.
 - iii. Reversal of unnecessary provisions.
 - c. Is AF's treatment of litigation provision under IFRS similar to how it would be treated under U.S. GAAP?
- D4. Note 29.3 lists a number of contingent liabilities. Are amounts for those items recognized as a liability on AF's balance sheet? Explain.
- D5. **Sealy Corporation** reported the following line items in its statement of cash flows for the nine months ended February 27, 2011:

Amortization of discount on secured notes	382,000
Amortization of debt issuance costs and other	1,175,000

In AF's financial statements, Note 30: "Financial Debt" describes the company's long-term debt. Neither of the two items above is reported in the financial statements of Air France, and neither is likely to appear there in the future. Why?

- D6. Examine the long-term borrowings in AF's balance sheet and the related note. Note that AF has convertible bonds outstanding that it issued in 2005. Prepare the journal entry AF would use to record the issue of convertible bonds. Prepare the journal entry AF would use to record the issue of the convertible bonds if AF used U.S. GAAP.
- D7. AF does not elect the fair value option (FVO) to report its financial liabilities. Examine Note 32.3. "Market value of financial instruments." If the company had

- elected the FVO for all of its debt measured at amortized cost, what would be the balance at March 31, 2011, in the fair value adjustment account?
- D8. Is IFRS or U.S. GAAP more restrictive for determining when firms are allowed to elect the fair value option for financial assets and liabilities? Explain.

Part E: Leases, Income Taxes, and Pensions

- E1. In Note 3: Summary of accounting policies, part 3.13.4: Leases, AF states that “leases are classified as finance leases when the lease arrangement transfers substantially all the risks and rewards of ownership to the lessee.” Is this the policy companies using U.S. GAAP follow in accounting for capital leases? Explain.
- E2. Look at AF’s Note 30: Financial debt and Note 33: Lease commitments. Does AF obtain use of its aircraft more using operating leases or finance leases? Do lessees report operating and finance lease commitments the same way? Explain.
- E3. Where in its March 31, 2011, balance sheet does AF report deferred taxes? How does this approach differ from the way deferred taxes are reported using U.S. GAAP? Using the Internet, determine how deferred taxes would be reported using IFRS at the time of your research. Explain why that approach might differ from the way AF reported deferred taxes at March 31, 2011.
- E4. Here’s an excerpt from one of AF’s notes to its financial statements:

Deferred taxes (in part)

The Group records deferred taxes using the balance sheet liability method, providing for any temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for taxation purposes. The tax rates used are those enacted or substantively enacted at the balance sheet date.

Is this policy consistent with U.S. GAAP? Explain.

- E5. Here’s an excerpt from one AF’s notes to its financial statements:

Deferred taxes (in part)

Deferred tax assets related to temporary differences and carry forwards are recognized only to the extent it is probable that a future taxable profit will be available against which the asset can be utilized at the tax entity level.

Is this policy consistent with U.S. GAAP? Explain.

- E6. Air France did not report past service cost (called prior service cost under U.S. GAAP). If AF revised its pension plan and incurred past service cost, how would the company report that amount if it used the new IFRS guidance described in this chapter, how would the company report a change in one of these assumptions? Is that reporting method the same or different from the way we report prior service cost under U.S. GAAP?
- E7. Look at note 29.1, “Retirement Benefits.” AF incorporates estimates regarding staff turnover, life expectancy, salary increase, retirement age and discount rates. If AF used the new IFRS guidance described in this chapter, how would the company report a change in one of these assumptions? Is that reporting method the same or different from the way we report changes under U.S. GAAP?
- E8. In its income statement and notes to the statements, AF does not report a single amount that represents net pension cost. If AF used the new IFRS guidance described in Chapter 17, would the company report a single amount that represents net pension cost? Is that reporting method the same or different from the way we report pension expense under U.S. GAAP?

Part F: Shareholders' Equity and Additional Financial Reporting Issues

- F1. Air France-KLM lists four items in the shareholders' equity section of its balance sheet. If AF used U.S. GAAP, what would be the likely account titles for the first and fourth of those components?
- F2. Locate Note 27.4 in AF's financial statements. What items comprise "Reserves and retained earnings" as reported in the balance sheet? If Air France-KLM used U.S. GAAP, what would be different for the reporting of these items?
- F3. Describe the apparent differences in the order of presentation of the components of liabilities and shareholders' equity between IFRS as applied by AF and a typical balance sheet prepared in accordance with U.S. GAAP.
- F4. What is the amount that AF reports in its income statement for its stock options for the year ended March 31, 2011? [*Hint:* See Note 28: "Share-Based Compensation."] Are AF's share options cliff vesting or graded vesting? How does accounting differ between U.S. GAAP and IFRS for graded-vesting plans?
- F5. What amount(s) of earnings per share did AF report in its income statement for the year ended March 31, 2011? If AF used U.S. GAAP would it have reported EPS using the same classification?
- F6. What are the primary classifications into which AF's cash inflows and cash outflows are separated? Is this classification the same as or different from cash flow statements prepared in accordance with U.S. GAAP?
- F7. How are cash inflows from dividends and interest and cash outflows for dividends and interest classified in AF's cash flow statements? Is this classification the same as or different from cash flow statements prepared in accordance with U.S. GAAP?

Glossary

Accounting equation the process used to capture the effect of economic events; $\text{Assets} = \text{Liabilities} + \text{Owner's Equity}$.

Accounting Principles Board (APB) the second private sector body delegated the task of setting accounting standards.

Accounts storage areas to keep track of the increases and decreases in financial position elements.

Accounts payable obligations to suppliers of merchandise or of services purchased on open account.

Accounts receivable receivables resulting from the sale of goods or services on account.

Accounts receivable aging schedule applying different percentages to accounts receivable balances depending on the length of time outstanding.

Accretion increase in the carrying value of an asset or liability.

Accretion expense the increase in an asset retirement obligation that accrues as an operating expense.

Accretion revenue the increase in a lessor's residual asset that accrues as revenue.

Accruals when the cash flow comes after either expense or revenue recognition.

Accrual accounting measurement of the entity's accomplishments and resource sacrifices during the period, regardless of when cash is received or paid.

Accrued interest interest that has accrued since the last interest date.

Accrued liabilities expenses already incurred but not yet paid (accrued expenses).

Accrued receivables the recognition of revenue earned before cash is received.

Accumulated benefit obligation (ABO) the discounted present value of estimated retirement benefits earned so far by employees, applying the plan's pension formula using existing compensation levels.

Accumulated other comprehensive income amount of other comprehensive income (nonowner changes in equity other than net income) accumulated over the current and prior periods.

Accumulated postretirement benefit obligation (APBO) portion of the EPBO attributed to employee service up to a particular date.

Acid-test ratio current assets, excluding inventories and prepaid items, divided by current liabilities.

Acquisition costs the amounts paid to acquire the rights to explore for undiscovered natural resources or to extract proven natural resources.

Activity-based method allocation of an asset's cost base using a measure of the asset's input or output.

Actuary a professional trained in a particular branch of statistics and mathematics to assess the various uncertainties and to estimate the company's obligation to employees in connection with its pension plan.

Additions the adding of a new major component to an existing asset.

Adjusted trial balance trial balance after adjusting entries have been recorded.

Adjusting entries internal transactions recorded at the end of any period when financial statements are prepared.

Allocation base the value of the usefulness that is expected to be consumed.

Allocation method the pattern in which the usefulness is expected to be consumed.

Allowance method recording bad debt expense and reducing accounts receivable indirectly by crediting a contra account (allowance for

uncollectible accounts) to accounts receivable for an estimate of the amount that eventually will prove uncollectible.

American Institute of Accountants (AIA)/American Institute of Certified Public Accountants (AICPA) national organization of professional public accountants.

Amortization cost allocation for intangibles.

Amortization schedule schedule that reflects the changes in the debt over its term to maturity.

Annuity cash flows received or paid in the same amount each period.

Annuity due cash flows occurring at the beginning of each period.

Antidilutive securities the effect of the conversion or exercise of potential common shares would be to increase rather than decrease, EPS.

Articles of incorporation statement of the nature of the firm's business activities, the shares to be issued, and the composition of the initial board of directors.

Asset retirement obligations (AROs) obligations associated with the disposition of an operational asset.

Assets probable future economic benefits obtained or controlled by a particular entity as a result of past transactions or events.

Asset turnover ratio measure of a company's efficiency in using assets to generate revenue.

Assigning using receivables as collateral for loans; nonpayment of a debt will require the proceeds from collecting the assigned receivables to go directly toward repayment of the debt.

Attribution process of assigning the cost of benefits to the years during which those benefits are assumed to be earned by employees.

Auditors independent intermediaries who help ensure that management has appropriately applied GAAP in preparing the company's financial statements.

Auditor's report report issued by CPAs who audit the financial statements that informs users of the audit findings.

Average collection period indication of the average age of accounts receivable.

Average cost method assumes cost of goods sold and ending inventory consist of a mixture of all the goods available for sale.

Average days in inventory indicates the average number of days it normally takes to sell inventory.

Bad debt expense an operating expense incurred to boost sales; inherent cost of granting credit.

Balance sheet a position statement that presents an organized list of assets, liabilities, and equity at a particular point in time.

Balance sheet approach determination of bad debt expense by estimating the net realizable value of accounts receivable to be reported in the balance sheet.

Bank reconciliation comparison of the bank balance with the balance in the company's own records.

Bargain purchase option (BPO) provision in the lease contract that gives the lessee the option of purchasing the leased property at a bargain price.

Bargain renewal option gives the lessee the option to renew the lease at a bargain rate.

Basic EPS computed by dividing income available to common stockholders (net income less any preferred stock dividends) by the weighted-average number of common shares outstanding for the period.

Billings of construction contract contra account to the asset construction in progress; subtracted from construction in progress to determine balance sheet presentation.

- Board of directors** establishes corporate policies and appoints officers who manage the corporation.
- Bond indenture** document that describes specific promises made to bondholders.
- Bonds** A form of debt consisting of separable units (bonds) that obligates the issuing corporation to repay a stated amount at a specified maturity date and to pay interest to bondholders between the issue date and maturity.
- Book value** assets minus liabilities as shown in the balance sheet.
- Callable** allows the issuing company to buy back, or call, outstanding bonds from the bondholders before their scheduled maturity date.
- Capital budgeting** The process of evaluating the purchase of operational assets.
- Capital leases** installment purchases/sales that are formulated outwardly as leases.
- Capital markets** mechanisms that foster the allocation of resources efficiently.
- Cash** currency and coins, balances in checking accounts, and items acceptable for deposit in these accounts, such as checks and money orders received from customers.
- Cash basis accounting/net operating cash flow** difference between cash receipts and cash disbursements during a reporting period from transactions related to providing goods and services to customers.
- Cash disbursements journal** record of cash disbursements.
- Cash discounts** sales discounts; represent reductions not in the selling price of a good or service but in the amount to be paid by a credit customer if paid within a specific period of time.
- Cash equivalents** certain negotiable items such as commercial paper, money market funds, and U.S. Treasury bills that are highly liquid investments quickly convertible to cash.
- Cash equivalents** short-term, highly liquid investments that can be readily converted to cash with little risk of loss.
- Cash flow hedge** a derivative used to hedge against the exposure to changes in cash inflows or cash outflows of an asset or liability or a forecasted transaction (like a future purchase or sale).
- Cash flows from financing activities** both inflows and outflows of cash resulting from the external financing of a business.
- Cash flows from investing activities** both outflows and inflows of cash caused by the acquisition and disposition of assets.
- Cash flows from operating activities** both inflows and outflows of cash that result from activities reported on the income statement.
- Cash receipts journal** record of cash receipts.
- Certified Public Accountants (CPAs)** licensed individuals who can represent that the financial statements have been audited in accordance with generally accepted auditing standards.
- Change in accounting estimate** a change in an estimate when new information comes to light.
- Change in accounting principle** switch by a company from one accounting method to another.
- Change in reporting entity** presentation of consolidated financial statements in place of statements of individual companies, or a change in the specific companies that constitute the group for which consolidated or combined statements are prepared.
- Closing process** the temporary accounts are reduced to zero balances, and these temporary account balances are closed (transferred) to retained earnings to reflect the changes that have occurred in that account during the period.
- Commercial paper** unsecured notes sold in minimum denominations of \$25,000 with maturities ranging from 30 to 270 days.
- Committee on Accounting Procedure (CAP)** the first private sector body that was delegated the task of setting accounting standards.
- Comparability** the ability to help users see similarities and differences among events and conditions.
- Comparative financial statements** corresponding financial statements from the previous years accompanying the issued financial statements.
- Compensating balance** a specified balance (usually some percentage of the committee amount) a borrower of a loan is asked to maintain in a low-interest or noninterest-bearing account at the bank.
- Completed contract method** recognition of revenue for a long-term contract when the project is complete.
- Complex capital structure** potential common shares are outstanding.
- Complex debt** debt that lacks one or more of the characteristics of simple debt.
- Composite depreciation method** physically dissimilar assets are aggregated to gain the convenience of group depreciation.
- Compound interest** interest computed not only on the initial investment but also on the accumulated interest in previous periods.
- Comprehensive income** traditional net income plus other nonowner changes in equity.
- Conceptual framework** deals with theoretical and conceptual issues and provides an underlying structure for current and future accounting and reporting standards.
- Conservatism** practice followed in an attempt to ensure that uncertainties and risks inherent in business situations are adequately considered.
- Consignment** the consignor physically transfers the goods to the other company (the consignee), but the consignor retains legal title.
- Consistency** permits valid comparisons between different periods.
- Consolidated financial statements** combination of the separate financial statements of the parent and subsidiary each period into a single aggregate set of financial statements as if there were only one company.
- Construction in progress** asset account equivalent to the asset work-in-progress inventory in a manufacturing company.
- Contingently issuable shares** additional shares of common stock to be issued, contingent on the occurrence of some future circumstance.
- Conventional retail method** applying the retail inventory method in such a way that LCM is approximated.
- Convertible bonds** bonds for which bondholders have the option to convert the bonds into shares of stock.
- Copyright** exclusive right of protection given to a creator of a published work, such as a song, painting, photograph, or book.
- Corporation** the dominant form of business organization that acquires capital from investors in exchange for ownership interest and from creditors by borrowing.
- Correction of an error** an adjustment a company makes due to an error made.
- Cost effectiveness** the perceived benefit of increased decision usefulness exceeds the anticipated cost of providing that information.
- Cost of goods sold** cost of the inventory sold during the period.
- Cost recovery method** deferral of all gross profit recognition until the cost of the item sold has been recovered.
- Cost-to-cost ratio** ratio found by calculating the percentage of estimated total cost that has been incurred to date.
- Cost-to-retail percentage** ratio found by dividing goods available for sale at cost by goods available for sale at retail.
- Coupons bonds** name of the owner was not registered; the holder actually clipped an attached coupon and redeemed it in accordance with instructions on the indenture.
- Credits** represent the right side of the account.
- Cumulative** if the specified dividend is not paid in a given year, the unpaid dividends accumulate and must be made up in a later dividend year before any dividends are paid on common shares.

Current assets includes assets that are cash, will be converted into cash, or will be used up within one year or the operating cycle, whichever is longer.

Current liabilities expected to require current assets and usually are payable within one year.

Current maturities of long-term debt the current installment due on long-term debt, reported as a current liability.

Current ratio current assets divided by current liabilities.

Date of record specific date stated as to when the determination will be made of the recipient of the dividend.

Debenture bond secured only by the “full faith and credit” of the issuing corporation.

Debits represent the left side of the account.

Debt issue cost with either publicly or privately sold debt, the issuing company will incur costs in connection with issuing bonds or notes, such as legal and accounting fees and printing costs, in addition to registration and underwriting fees.

Debt to equity ratio compares resources provided by creditors with resources provided by owners.

Decision usefulness the quality of being useful to decision making.

Default risk a company’s ability to pay its obligations when they come due.

Deferred annuity the first cash flow occurs more than the one period after the date the agreement begins.

Deferred tax asset taxes to be saved in the future when future deductible amounts reduce taxable income (when the temporary differences reverse).

Deferred tax liability taxes to be paid in the future when future taxable amounts become taxable (when the temporary differences reverse).

Deficit debit balance in retained earnings.

Defined benefit pension plans fixed retirement benefits defined by a designated formula, based on employees’ years of service and annual compensation.

Defined contribution pension plans fixed annual contributions to a pension fund; employees choose where funds are invested—usually stocks or fixed-income securities.

Depletion allocation of the cost of natural resources.

Depreciation cost allocation for plant and equipment.

Derivatives financial instruments usually created to hedge against risks created by other financial instruments or by transactions that have yet to occur but are anticipated and that “derive” their values or contractually required cash flows from some other security or index.

Detachable stock purchase warrants the investor has the option to purchase a stated number of shares of common stock at a specified option price, within a given period of time.

Development costs for natural resources, costs incurred after the resource has been discovered but before production begins.

Diluted EPS incorporates the dilutive effect of all potential common shares.

Direct financing lease lease in which the lessor finances the asset for the lessee and earns interest revenue over the lease term.

Direct method the cash effect of each operating activity (i.e., income statement item) is reported directly on the statement of cash flows.

Direct write-off method an allowance for uncollectible accounts is not used; instead bad debts that do arise are written off as bad debt expense.

Disclosure notes additional insights about company operations, accounting principles, contractual agreements, and pending litigation.

Discontinued operations the discontinuance of a component of an entity whose operations and cash flows can be clearly distinguished from the rest of the entity.

Discount arises when bonds are sold for less than face amount.

Discounting the transfer of a note receivable to a financial institution.

Distributions to owners decreases in equity resulting from transfers to owners.

Dividend distribution to shareholders of a portion of assets earned.

Dollar-value LIFO (DVL) Inventory is viewed as a quantity of value instead of a physical quantity of goods. Instead of layers of units from different purchases, the DVL inventory pool is viewed as comprising layers of dollar value from different years.

Dollar-value LIFO retail method LIFO retail method combined with dollar-value LIFO.

Double-declining-balance (DDB) method 200% of the straight-line rate is multiplied by book value.

Double-entry system dual effect that each transaction has on the accounting equation when recorded.

DuPont framework depict return on equity as determined by profit margin (representing profitability), asset turnover (representing efficiency), and the equity multiplier (representing leverage).

Early extinguishment of debt debt is retired prior to its scheduled maturity date.

Earnings per share (EPS) the amount of income earned by a company expressed on a per share basis.

Earnings quality refers to the ability of reported earnings (income) to predict a company’s future earnings.

Economic events any event that directly affects the financial position of the company.

Effective interest method recording interest each period as the effective rate of interest multiplied by the outstanding balance of the debt.

Effective rate the actual rate at which money grows per year.

Emerging Issues Task Force (EITF) responsible for providing more timely responses to emerging financial reporting issues.

Employee share purchase plans permit all employees to buy shares directly from their company, often at favorable terms.

Equity method used when an investor can’t control, but can significantly influence, the investee.

Equity multiplier depicts leverage as total assets divided by total equity.

Equity/net assets called shareholders’ equity or stockholders’ equity for a corporation; the residual interest in the assets of an entity that remains after deducting liabilities.

Estimates prediction of future events.

Ethics a code or moral system that provides criteria for evaluating right and wrong.

Ex-dividend date date usually two business days before the date of the record and is the first day the stock trades without the right to receive the declared dividend.

Executory costs maintenance, insurance, taxes, and any other costs usually associated with ownership.

Expected cash flow approach adjusts the cash flows, not the discount rate, for the uncertainty or risk of those cash flows.

Expected economic life useful life of an asset.

Expected postretirement benefit obligation (EPBO) discounted present value of the total net cost to the employer of postretirement benefits.

Expected return on plan assets estimated long-term return on invested assets.

Expenses outflows or other using up of assets or incurrences of liabilities during a period from delivering or producing good, rendering services, or other activities that constitute the entity’s ongoing major, or central, operations.

Exploration costs for natural resources, expenditures such as drilling a well, or excavating a mine, or any other costs of searching for natural resources.

Extended warranties an additional, extended service that covers new problems arising after the buyer takes control of the product.

External events exchange between the company and a separate economic entity.

Extraordinary items material events and transactions that are both unusual in nature and infrequent in occurrence.

F.O.B. (free on board) shipping point legal title to the goods changes hands at the point of shipment when the seller delivers the goods to the common carrier, and the purchaser is responsible for shipping costs and transit insurance.

F.O.B. destination the seller is responsible for shipping and the legal title does not pass until the goods arrive at their destination.

Factor financial institution that buys receivables for cash, handles the billing and collection of the receivables, and charges a fee for this service.

Fair value hedge a derivative is used to hedge against the exposure to changes in the fair value of an asset or liability or a firm commitment.

Fair value hierarchy prioritizes the inputs companies should use when determining fair value.

Fair value option allows companies to report their financial assets and liabilities at fair value.

Faithful representation exists when there is agreement between a measure or description and the phenomenon it purports to represent.

Financial accounting provides relevant financial information to various external users.

Financial Accounting Foundation (FAF) responsible for selecting the members of the FASB and its Advisory Council, ensuring adequate funding of FASB activities, and exercising general oversight of the FASB's activities.

Financial Accounting Standards Board (FASB) the current private sector body that has been delegated the task of setting accounting standards.

Financial activities cash inflows and outflows from transactions with creditors and owners.

Financial instrument cash; evidence of an ownership interest in an entity; a contract that imposes on one entity an obligation to deliver cash or another financial instrument, and conveys to the second entity a right to receive cash or another financial instrument; and a contract that imposes on one entity an obligation to exchange financial instruments on potentially unfavorable terms and conveys to a second entity a right to exchange other financial instruments on potentially favorable terms.

Financial leverage by earning a return on borrowed funds that exceeds the cost of borrowing the funds, a company can provide its shareholders with a total return higher than it could achieve by employing equity funds alone.

Financial reporting process of providing financial statement information to external users.

Financial statements primary means of communicating financial information to external parties.

Finished goods costs that have accumulated in work-in-process are transferred to finished goods once the manufacturing process is completed.

First-in, first-out (FIFO) method assumes that items sold are those that were acquired first.

Fiscal year the annual time period used to report to external users.

Fixed-asset turnover ratio used to measure how effectively managers used PP&E.

$$\text{Fixed-asset turnover ratio} = \frac{\text{Net sales}}{\text{Average-fixed assets}}$$

Foreign currency futures contract agreement that requires the seller to deliver a specific foreign currency at a designated future date at a specific price.

Foreign currency hedge if a derivative is used to hedge the risk that some transactions require settlement in a currency other than the entities' functional currency or that foreign operations will require translation adjustments to reported amounts.

Forward contract calls for delivery on a specific date; is not traded on a market exchange; does not call for a daily cash settlement for price changes in the underlying contract.

Fractional shares a stock dividend or stock split results in some shareholders being entitled to fractions of whole shares.

Franchise contractual arrangement under which the franchisor grants the franchisee the exclusive right to use the franchisor's trademark or trade-name within a geographical area, usually for specified period of time.

Franchisee individual or corporation given the right to sell the franchisor's products and use its name for a specified period of time.

Franchisor grants to the franchisee the right to sell the franchisor's products and use its name for a specific period of time.

Freight-in transportation-in; in a periodic system, freight costs generally are added to this temporary account, which is added to purchases in determining net purchases.

Full-cost method allows costs incurred in searching for oil and gas within a large geographical area to be capitalized as assets and expensed in the future as oil and gas from the successful wells are removed from that area.

Full-disclosure principle the financial reports should include any information that could affect the decisions made by external users.

Funded status difference between the employer's obligation (PBO) and the resources available to satisfy that obligation (plan assets).

Future deductible amounts the future tax consequence of a temporary difference will be to decrease taxable income relative to accounting income.

Futures contract agreement that requires the seller to deliver a particular commodity at a designated future date at a specified price.

Future taxable amounts the future tax consequence of temporary difference will be to increase taxable income relative to accounting income.

Future value amount of money that a dollar will grow to at some point in the future.

Gain or loss on the PBO the decrease or increase in the PBO when one or more estimates used in determining the PBO require revision.

Gains increases in equity from peripheral, or incidental, transactions of an entity.

General journal used to record any type of transaction.

General ledger collection of accounts.

Generally Accepted Accounting Principles (GAAP) set of both broad and specific guidelines that companies should follow when measuring and reporting the information in their financial statements and related notes.

Going concern assumption in the absence of information to the contrary, it is anticipated that a business entity will continue to operate indefinitely.

Goodwill unique intangible asset in that its cost can't be directly associated with any specifically identifiable right and it is not separable from the company itself.

Government Accounting Standards Board (GASB) responsible for developing accounting standards for governmental units such as states and cities.

Gross investment in the lease total of periodic rental payments and residual value.

Gross method For the buyer, views a discount not taken as part of the cost of inventory. For the seller, views a discount not taken by the customer as part of sales of revenue.

Gross profit method (gross margin method) estimates cost of goods sold which is then subtracted from cost of goods available for sale to estimate ending inventory.

Gross profit/ratio highlights the important relationship between net sales revenue and cost of goods sold.

$$\text{Gross profit ratio} = \frac{\text{Gross profit}}{\text{Net sales}}$$

Group depreciation method collection of assets defined as depreciable assets that share similar service lives and other attributes.

Half-year convention record one-half of a full year's depreciation in the year of acquisition and another half year in the year of disposal.

Hedging taking an action that is expected to produce exposure to a particular type of risk that is precisely the opposite of an actual risk to which the company already is exposed.

Historical costs original transaction value.

Horizontal analysis comparison by expressing each item as a percentage of that same item in the financial statements of another year (base amount) in order to more easily see year-to-year changes.

Illegal acts violations of the law, such as bribes, kickbacks, and illegal contributions to political candidates.

Impairment of value operational assets should be written down if there has been a significant impairment (fair value less than book value) of value.

Implicit rate of interest rate implicit in the agreement.

Improvements replacement of a major component of an operational asset.

Income from continuing operations revenues, expenses (including income taxes), gain, and losses, excluding those related to discontinued operations and extraordinary items.

Income statement statement of operations or statement of earnings is used to summarize the profit-generating activities that occurred during a particular reporting period.

Income statement approach estimating bad debt expense as a percentage of each period's net credit sales; usually determined by reviewing the company's recent history of the relationship between credit sales and actual bad debts.

Income summary account that is a bookkeeping convenience used in the closing process that provides a check that all temporary accounts have been properly closed.

Income tax expense provision for income taxes; reported as a separate expense in corporate income statements.

Indirect method the net cash increase or decrease from operating activities is derived indirectly by starting with reported net income and working backwards to convert that amount to a cash basis.

Initial direct costs costs incurred by the lessor that are associated directly with originating a lease and are essential to acquire the lease.

Initial market transactions provide for new cash by the issuance of stocks and bonds by the corporation.

In-process research and development the amount of the purchase price in a business acquisition that is allocated to projects that have not yet reached technological feasibility.

Installment notes notes payable for which equal installment payments include both an amount that represents interest and an amount that represents a reduction of the outstanding balance so that at maturity the note is completely paid.

Installment sales method recognizes revenue and costs only when cash payments are received.

Institute of Internal Auditors national organization of accountants providing internal auditing services for their own organizations.

Institute of Management Accountants (IMA) primary national organization of accountants working in industry and government.

Intangible assets operational assets that lack physical substance; examples include patents, copyrights, franchises, and goodwill.

Interest "rent" paid for the use of money for some period of time.

Interest cost interest accrued on the projected benefit obligation calculated as the discount rate multiplied by the projected benefit obligation at the beginning of the year.

Interest rate swap agreement to exchange fixed interest payments for floating rate payments, or vice versa, without exchanging the underlying principal amounts.

Internal control a company's plan to encourage adherence to company policies and procedures, promote operational efficiency, minimize errors and theft, and enhance the reliability and accuracy of accounting data.

Internal events events that directly affect the financial position of the company but don't involve an exchange transaction with another entity.

International Accounting Standards Board (IASB) objectives are to develop a single set of high-quality, understandable global accounting standards, to promote the use of those standards, and to bring about the convergence of national accounting standards and International Accounting Standards.

International Accounting Standards Committee (IASC) umbrella organization formed to develop global accounting standards.

International Financial Reporting Standards (IFRS) developed by the IASB and used by more than 100 countries.

Intraperiod tax allocation associates (allocates) income tax expense (or income tax gross profit net sales benefit if there is a loss) with each major component of income that causes it.

Intrinsic value the difference between the market price of the shares and the option price at which they can be acquired.

Inventories goods awaiting sale (finished goods), goods in the course of production (work in process), and goods to be consumed directly or indirectly in production (raw materials).

Inventory goods acquired, manufactured, or in the process of being manufactured for sale.

Inventory turnover ratio measures a company's efficiency in managing its investment in inventory.

Investing activities involve the acquisition and sale of long-term assets used in the business and non-operating investment assets.

Investments by owners increases in equity resulting from transfers of resources (usually cash) to a company in exchange for ownership interest.

Irregularities intentional distortions of financial statements.

Journal a chronological record of all economic events affecting financial position.

Journal entry captures the effect of a transaction on financial position in debit/credit form.

Just-in-time (JIT) system a system used by a manufacturer to coordinate production with suppliers so that raw materials or components arrive just as they are needed in the production process.

Land improvements the cost of parking lots, driveways, and private roads and the costs of fences and lawn and garden sprinkler systems.

Last-in, first-out (LIFO) method assumes units sold are the most recent units purchased.

Leasehold improvements account title when a lessee makes improvements to leased property that reverts back to the lessor at the end of the lease.

Lessee user of a leased asset.

Lessor owner of a leased asset.

Leveraged lease a third-party, long-term creditor provides nonrecourse financing for a lease agreement between a lessor and a lessee.

Liabilities probable future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or provide services to other entities in the future as a result of past transactions or events.

LIFO conformity rule if a company uses LIFO to measure taxable income, the company also must use LIFO for external financial reporting.

LIFO inventory pools simplifies recordkeeping and reduces the risk of LIFO liquidation by grouping inventory units into pools based on physical similarities of the individual units.

LIFO liquidation the decline in inventory quantity during the period.

LIFO reserve contra account to inventory used to record the difference between the internal method and LIFO.

Limited liability company owners are not liable for the debts of the business, except to the extent of their investment; all members can be involved with managing the business without losing liability protection; no limitations on the number of owners.

Limited liability partnership similar to a limited liability company, except it doesn't offer all the liability protection available in the limited liability company structure.

- Line of credit** allows a company to borrow cash without having to follow formal loan procedures and paperwork.
- Liquidating dividend** when a dividend exceeds the balance in retained earnings.
- Liquidity** period of time before an asset is converted to cash or until a liability is paid.
- Long-term solvency** the riskiness of a company with regard to the amount of liabilities in its capital structure.
- Loss contingency** existing, uncertain situation involving potential loss depending on whether some future event occurs.
- Losses** decreases in equity arising from peripheral, or incidental, transactions of the entity.
- Lower-of-cost-or-market (LCM)** recognizes losses in the period that the value of inventory declines below its cost.
- Management discussion and analysis (MDA)** provides a biased but informed perspective of a company's operations, liquidity, and capital resources.
- Managerial accounting** deals with the concepts and methods used to provide information to an organization's internal users (i.e., its managers).
- Matching principle** expenses are recognized in the same period as the related revenues.
- Materiality** if a more costly way of providing information is not expected to have a material effect on decisions made by those using the information, the less costly method may be acceptable.
- Measurement** process of associating numerical amounts to the elements.
- Minimum lease payments** payments the lessee is required to make in connection with the lease.
- Minimum pension liability** an employer must report a pension liability at least equal to the amount by which its ABO exceeds its plan assets.
- Model Business Corporation Act** designed to serve as a guide to states in the development of their corporation statutes.
- Modified accelerated cost recovery system (MACRS)** The federal income tax code allows taxpayers to compute depreciation for their tax returns using this method.
- Monetary assets** money and claims to receive money, the amount of which is fixed or determinable.
- Monetary liabilities** obligations to pay amounts of cash, the amount of which is fixed or determinable.
- Mortgage bond** backed by a lien on specified real estate owned by the issuer.
- Multiple-deliverable arrangements** require allocation of revenue to multiple elements that qualify for separate revenue recognition.
- Multiple-step** income statement format that includes a number of intermediate subtotals before arriving at income from continuing operations.
- Natural resources** oil and gas deposits, timber tracts, and mineral deposits.
- Net income/net loss revenue + gains – (expenses and losses for a period)** income statement bottom line.
- Net interest cost/income** interest rate times the net difference between the defined benefit obligation (DBO) and plan assets using IFRS.
- Net markdown** net effect of the change in selling price (increase, decrease, increase).
- Net markup** net effect of the change in selling price (increase, increase, decrease).
- Net method** For the buyer, considers the cost of inventory to include the net, after-discount amount, and any discounts not taken are reported as interest expense. For the seller, considers sales revenue to be the net amount, after discount, and any discounts not taken by the customer as interest revenue.
- Net operating loss** negative taxable income because tax-deductible expenses exceed taxable revenues.
- Net realizable less a normal profit margin (NRV – NP)** lower limit of market.
- Net realizable value** the amount of cash the company expects to actually collect from customers.
- Net realizable value (NRV)** upper limit of market.
- Neutrality** neutral with respect to parties potentially affected.
- Noncash investing and financing activities** transactions that do not increase or decrease cash but that result in significant investing and financing activities.
- Noninterest-bearing note** notes that bear interest, but the interest is deducted (or discounted) from the face amount to determine the cash proceeds made available to the borrower at the outset.
- Nonoperating income** includes gains and losses and revenues and expenses related to peripheral or incidental activities of the company.
- Note payable** promissory note (essentially an IOU) that obligates the issuing corporation to repay a stated amount at or by a specified maturity date and to pay interest to the lender between the issue date and maturity.
- Notes receivable** receivables supported by a formal agreement or note that specifies payment terms.
- Objectives-oriented/principles-based accounting standards** approach to standard setting stresses professional judgment, as opposed to following a list of rules.
- Onerous performance obligation** The proposed ASU on revenue recognition may require the seller to recognize a liability and expense for an unprofitable performance obligation satisfied over a period of time greater than one year.
- Operating activities** inflows and outflows of cash related to transactions entering into the determination of net income.
- Operating cycle** period of time necessary to convert cash to raw materials, raw materials to finished product, the finished product to receivables, and then finally receivables back to cash.
- Operating income** includes revenues and expenses directly related to the principal revenue-generating activities of the company.
- Operating leases** fundamental rights and responsibilities of ownership are retained by the lessor and that the lessee merely is using the asset temporarily.
- Operating loss carryback** reduction of prior (up to two) years' taxable income by a current net operating loss.
- Operating loss forward** reduction of future (up to 20) years' taxable income by a current net operating loss.
- Operating segment** a component of an enterprise that engages in business activities from which it may earn revenues and incur expenses (including revenues and expenses relating to transactions with other companies of the same enterprise); whose operating results are regularly reviewed by the enterprise's chief operating decision maker to make decisions about resources to be allocated to the segment and assess its performance; for which discrete financial information is available.
- Operational assets** property, plant, and equipment, along with intangible assets.
- Operational risk** how adept a company is at withstanding various events and circumstances that might impair its ability to earn profits.
- Option** gives the holder the right either to buy or sell a financial instrument at a specified price.
- Option pricing models** statistical models that incorporate information about a company's stock and the terms of the stock option to estimate the option's fair value.
- Ordinary annuity** cash flows occur at the end of each period.
- Other comprehensive income** certain gains and losses that are excluded from the calculation of net income, but included in the calculation of comprehensive income.
- Paid-in capital** invested capital consisting primarily of amounts invested by shareholders when they purchase shares of stock from the corporation.
- Parenthetical comments/modifying comments** supplemental information disclosed on the face of financial statements.

Participating preferred shareholders are allowed to receive additional dividends beyond the stated amount.

Patent exclusive right to manufacture a product or to use a process.

Pension plan assets employer contributions and accumulated earnings on the investment of those contributions to be used to pay retirement benefits to retired employees.

Percentage-of-completion method allocation of a share of a project's revenues and expenses to each reporting period during the contract period.

Performance obligations promises to transfer goods and services to buyer.

Periodic inventory system the merchandise inventory account balance is not adjusted as purchases and sales are made but only periodically at the end of a reporting period when a physical count of the period's ending inventory is made and costs are assigned to the quantities determined.

Periodicity assumption allows the life of a company to be divided into artificial time periods to provide timely information.

Permanent accounts represent assets, liabilities, and shareholders' equity at a point in time.

Permanent difference difference between pretax accounting income and taxable income and, consequently, between the reported amount of an asset or liability in the financial statements and its tax basis that will not "reverse" resulting from transactions and events that under existing tax law will never affect taxable income or taxes payable.

Perpetual inventory system account inventory is continually adjusted for each change in inventory, whether it's caused by a purchase, a sale, or a return of merchandise by the company to its supplier.

Pledging trade receivables in general rather than specific receivables are pledged as collateral; the responsibility for collection of the receivables remains solely with the company.

Point-of-sale the goods or services sold to the buyer are delivered (the title is transferred).

Post-closing trial balance verifies that the closing entries were prepared and posted correctly and that the accounts are now ready for next year's transactions.

Posting transferring debits and credits recorded in individual journal entries to the specific accounts affected.

Postretirement benefits all types of retiree benefits; may include medical coverage, dental coverage, life insurance, group legal services, and other benefits.

Potential common shares Securities that, while not being common stock may become common stock through their exercise, conversion, or issuance and therefore dilute (reduce) earnings per share.

Predictive value/confirmatory value confirmation of investor expectations about future cash-generating ability.

Preferred stock typically has a preference (a) to a specified amount of dividends (stated dollar amount per share or percentage of par value per share) and (b) to distribution of assets in the event the corporation is dissolved.

Premium arises when bonds are sold for more than face amount.

Prepaid expense represents an asset recorded when an expense is paid in advance, creating benefits beyond the current period.

Prepayments/deferrals the cash flow precedes either expense or revenue recognition.

Present value today's equivalent to a particular amount in the future.

Prior period adjustment addition to or reduction in the beginning retained earnings balance in a statement of shareholders' equity due to a correction of an error.

Prior service cost the cost of credit given for an amendment to a pension plan to employee service rendered in prior years.

Product costs costs associated with products and expensed as cost of goods sold only when the related products are sold.

Profit margin on sales net income divided by net sales; measures the amount of net income achieved per sales dollar.

Pro forma earnings actual (GAAP) earnings reduced by any expenses the reporting company feels are unusual and should be excluded.

Projected benefit obligation (PBO) the discounted present value of estimated retirement benefits earned so far by employees, applying the plan's pension formula using projected future compensation levels.

Property dividend when a noncash asset is distributed.

Property, plant, and equipment land, buildings, equipment, machinery, autos, and trucks.

Prospective approach the accounting change is implemented in the present, and its effects are reflected in the financial statements of the current and future years only.

Proxy statement contains disclosures on compensation to directors and executives; sent to all shareholders each year.

Purchase commitments contracts that obligate a company to purchase a specified amount of merchandise or raw materials at specified prices on or before specified dates.

Purchase discounts reductions in the amount to be paid if remittance is made within a designated period of time.

Purchase option a provision of some lease contracts that gives the lessee the option of purchasing the leased property during, or at the end of, the lease term at a specified price.

Purchase return a reduction in both inventory and accounts payable (if the account has not yet been paid) at the time of the return.

Purchases journal records the purchase of merchandise on account.

Quality assurance warranty obligation by the seller to make repairs or replace products that are later demonstrated to be defective for some period of time after the sale.

Quasi reorganization a firm undergoing financial difficulties, but with favorable future prospects, may use a quasi reorganization to write down inflated asset values and eliminate an accumulated deficit.

Rate of return on stock investment

$$\frac{\text{Dividends} + \text{Share price appreciation}}{\text{Initial investment}}$$

Ratio analysis comparison of accounting numbers to evaluate the performance and risk of a firm.

Raw materials cost of components purchased from other manufacturers that will become part of the finished product.

Real estate lease involves land—exclusively or in part.

Realization principle requires that the earnings process is judged to be complete or virtually complete, and there is reasonable certainty as to the collectibility of the asset to be received (usually cash) before revenue can be recognized.

Rearrangements expenditures made to restructure an asset without addition, replacement, or improvement.

Reasonably assured to be entitled seller's experience indicates that it will be entitled to receive an amount of uncertain consideration.

Receivables a company's claims to the future collection of cash, other assets, or services.

Receivables turnover ratio indicates how quickly a company is able to collect its accounts receivable.

Recognition process of admitting information into the basic financial statements.

Redemption privilege might allow preferred shareholders the option, under specified conditions, to return their shares for a predetermined redemption price.

Related-party transactions transactions with owners, management, families of owners or management, affiliated companies, and other parties that can significantly influence or be influenced by the company.

- Relevance** one of the primary decision-specific qualities that make accounting information useful; made up of predictive value and/or feedback value, and timeliness.
- Reliability** the extent to which information is verifiable, representationally faithful, and neutral.
- Remeasurement gains** gains from changes in pension assumptions or actual return on plan assets exceeding the interest rate.
- Remeasurement losses** losses from changes in pension assumptions or actual return on plan assets being less than the interest rate.
- Rent abatement** lease agreements may call for uneven rent payments during the term of the lease, e.g., when the initial payment (or maybe several payments) is waived.
- Replacement cost (RC)** the cost to replace the item by purchase or manufacture.
- Replacement depreciation method** depreciation is recorded when assets are replaced.
- Representational faithfulness** agreement between a measure or description and the phenomenon it purports to represent.
- Residual asset** the carrying amount of a leased asset not transferred to the lessee.
- Residual value** or salvage value, the amount the company expects to receive for the asset at the end of its service life less any anticipated disposal costs.
- Restoration costs** costs to restore land or other property to its original condition after extraction of the natural resource ends.
- Restricted stock** shares subject to forfeiture by the employee if employment is terminated within some specified number of years from the date of grant.
- Retail inventory method** relies on the relationship between cost and selling price to estimate ending inventory and cost of goods sold; provides a more accurate estimate than the gross profit method.
- Retained earnings** amounts earned by the corporation on behalf of its shareholders and not (yet) distributed to them as dividends.
- Retired stock** shares repurchased and not designated as treasury stock.
- Retirement depreciation method** records depreciation when assets are disposed of and measures depreciation as the difference between the proceeds received and cost.
- Retrospective approach** financial statements issued in previous years are revised to reflect the impact of an accounting change whenever those statements are presented again for comparative purpose.
- Return on assets (ROA)** indicates a company's overall profitability.
- Return on shareholders' equity (ROE)** amount of profit management can generate from the assets that owners provide.
- Revenues** inflows or other enhancements of assets or settlements of liabilities from delivering or producing goods, rendering services, or other activities that constitute the entity's ongoing major, or central, operations.
- Reverse stock split** when a company decreases, rather than increases, its outstanding shares.
- Reversing entries** optional entries that remove the effects of some of the adjusting entries made at the end of the previous reporting period for the sole purpose of simplifying journal entries made during the new period.
- Right of conversion** shareholders' right to exchange shares of preferred stock for common stock at specified conversion ratio.
- Right of return** customers' right to return merchandise to retailers if they are not satisfied.
- Right-of-use asset** the right to use an asset for a specified period of time.
- Rules-based accounting standards** a list of rules for choosing the appropriate accounting treatment for a transaction.
- S corporation** characteristics of both regular corporations and partnerships.
- SAB No. 101 Staff Accounting Bulletin 101** summarizes the SEC's views on revenue recognition.
- Sale-leaseback transaction** the owner of an asset sells it and immediately leases it back from the new owner.
- Sales journal** records credit sales.
- Sales return** the return of merchandise for a refund or for credit to be applied to other purchases.
- Sales-type lease** in addition to interest revenue earned over the lease term, the lessor receives a manufacturer's or dealer's profit on the sale of the asset.
- Sarbanes-Oxley Act** law provides for the regulation of the key players in the financial reporting process.
- Secondary market transactions** provide for the transfer of stocks and bonds among individuals and institutions.
- Securities and Exchange Commission (SEC)** responsible for setting accounting and reporting standards for companies whose securities are publicly traded.
- Securities available-for-sale** equity or debt securities the investor acquires, not for an active trading account or to be held to maturity.
- Securities to be held-to-maturity** debt securities for which the investor has the "positive intent and ability" to hold the securities to maturity.
- Securitization** the company creates a special purpose entity (SPE), usually a trust or a subsidiary; the SPE buys a pool of trade receivables, credit card receivables, or loans from the company and then sells related securities.
- Separation of duties** an internal control technique in which various functions are distributed amongst employees to provide cross-checking that encourages accuracy and discourages fraud.
- Serial bonds** more structured (and less popular) way to retire bonds on a piecemeal basis.
- Service cost** increase in the projected benefit obligation attributable to employee service performed during the period.
- Service life (useful life)** the estimated use that the company expects to receive from the asset.
- Service method** allocation approach that reflects the declining service pattern of the prior service cost.
- Share purchase contract** shares ordinarily are sold in exchange for a promissory note from the subscriber—in essence, shares are sold on credit.
- Short-term investments** investments not classified as cash equivalents that will be liquidated in the coming year or operating cycle, whichever is longer.
- Significant influence** effective control is absent but the investor is able to exercise significant influence over the operating and financial policies of the investee (usually between 20% and 50% of the investee's voting shares are held).
- Simple capital structure** a firm that has no potential common shares (outstanding securities that could potentially dilute earnings per share).
- Simple debt** (1) involves a lender providing an amount up front that eventually must be repaid, (2) doesn't permit the borrower to prepay or settle the debt unless the lender allows it, and (3) is not a derivative.
- Simple interest** computed by multiplying an initial investment times both the applicable interest rate and the period of time for which the money is used.
- Single-step** income statement format that groups all revenues and gains together and all expenses and losses together.
- Sinking fund debentures** bonds that must be redeemed on a prespecified year-by-year basis; administered by a trustee who repurchases bonds in the open market.
- Source documents** relay essential information about each transaction to the accountant, e.g., sales invoices, bills from suppliers, cash register tapes.
- Special journal** record of a repetitive type of transaction, e.g., a sales journal.

Specific identification method each unit sold during the period or each unit on hand at the end of the period to be matched with its actual cost.

Specific interest method for interest capitalization, rates from specific construction loans to the extent of specific borrowings are used before using the average rate of other debt.

Start-up costs whenever a company introduces a new product or service, or commences business in a new territory or with a new customer, it incurs one-time costs that are expensed in the period incurred.

Statement of cash flows change statement summarizing the transactions that caused cash to change during the period.

Statement of shareholders' equity statement disclosing the source of changes in the shareholders' equity accounts.

Stock appreciation rights (SARs) awards that enable an employee to benefit by the amount that the market price of the company's stock rises above a specified amount without having to buy shares.

Stock dividend distribution of additional shares of stock to current shareholders of the corporation.

Stock options employees aren't actually awarded shares, but rather are given the option to buy shares at a specified exercise price within some specified number of years from the date of grant.

Stock split stock distribution of 25% or higher, sometimes called a *large* stock dividend.

Straight line an equal amount of depreciable base is allocated to each year of the asset's service life.

Straight-line method recording interest each period at the same dollar amount.

Subordinated debenture the holder is not entitled to receive any liquidation payments until the claims of other specified debt issues are satisfied.

Subsequent event a significant development that takes place after the company's fiscal year-end but before the financial statements are issued.

Subsidiary ledger record of a group of subsidiary accounts associated with a particular general ledger control account.

Successful efforts method requires that exploration costs that are known not to have resulted in the discovery of oil or gas be included as expense in the period the expenditures are made.

Sum-of-the-years'-digits (SYD) method systematic acceleration of depreciation by multiplying the depreciable base by a fraction that declines each year.

Supplemental financial statements reports containing more detailed information than is shown in the primary financial statements.

T-account account with space at the top for the account title and two sides for recording increases and decreases.

Taxable income comprises revenues, expenses, gains, and losses as measured according to the regulations of the appropriate taxing authority.

Technological feasibility established when the enterprise has completed all planning, designing, coding, and testing activities that are necessary to establish that the product can be produced to meet its design specifications including functions, features, and technical performance requirements.

Temporary accounts represent changes in the retained earnings component of shareholders' equity for a corporation caused by revenue, expense, gain, and loss transactions.

Temporary difference difference between pretax accounting income and taxable income and, consequently, between the reported amount of an asset or liability in the financial statements and its tax basis which will "reverse" in later years.

Time-based methods allocates the cost base according to the passage of time.

Timeliness information that is available to users early enough to allow its use in the decision process.

Times interest earned ratio a way to gauge the ability of a company to satisfy its fixed debt obligations by comparing interest charges with the income available to pay those charges.

Time value of money money can be invested today to earn interest and grow to a larger dollar amount in the future.

Trade discounts percentage reduction from the list price.

Trademark (tradename) exclusive right to display a word, a slogan, a symbol, or an emblem that distinctively identifies a company, a product, or a service.

Trade notes payable formally recognized by a written promissory note.

Trading securities equity or debt securities the investor (usually a financial institution) acquires principally for the purpose of selling in the near term.

Transaction analysis process of reviewing the source documents to determine the dual effect on the accounting equation and the specific elements involved.

Transaction obligation the unfunded accumulated postretirement benefit obligation existing when *SFAS 106* was adopted.

Transaction price the amount the seller expects to be entitled to receive from the buyer in exchange for providing goods and services.

Transactions economic events.

Treasury stock shares repurchased and not retired.

Troubled debt restructuring the original terms of a debt agreement are changed as a result of financial difficulties experienced by the debtor (borrower).

Trustee person who accepts employer contributions, invests the contributions, accumulates the earnings on the investments, and pays benefits from the plan assets to retired employees or their beneficiaries.

Unadjusted trial balance a list of the general ledger accounts and their balances at a particular date.

Understandability users must understand the information within the context of the decision being made.

Unearned revenues cash received from a customer in one period for goods or services that are to be provided in a future period.

Units-of-production method computes a depreciation rate per measure of activity and then multiplies this rate by actual activity to determine periodic depreciation.

Unqualified opinion auditors are satisfied that the financial statements present fairly the company's financial position, results of operations, and cash flows and are in conformity with generally accepted accounting principles.

Variable consideration transaction price is uncertain because some of the price is to be paid to the seller depending on future events.

Valuation allowance indirect reduction (contra account) in a deferred tax asset when it is more likely than not that some portion or all of the deferred tax asset will not be realized.

Verifiability implies a consensus among different measurers.

Vertical analysis expression of each item in the financial statements as a percentage of an appropriate corresponding total, or base amount, but within the same year.

Vested benefits benefits that employees have the right to receive even if their employment were to cease today.

Weighted-average interest method for interest capitalization, weighted-average rate on all interest-bearing debt, including all construction loans, is used.

Without recourse the buyer assumes the risk of bad debts.

With recourse the seller retains the risk of uncollectibility.

Working capital differences between current assets and current liabilities.

Work-in-process inventory products that are not yet complete.

Worksheet used to organize the accounting information needed to prepare adjusting and closing entries and the financial statements.

STUDENTS...

Want to get **better grades?** *(Who doesn't?)*

Prefer to do your **homework online?** *(After all, you are online anyway.)*

Need a **better way to study** before the big test?

(A little peace of mind is a good thing...)

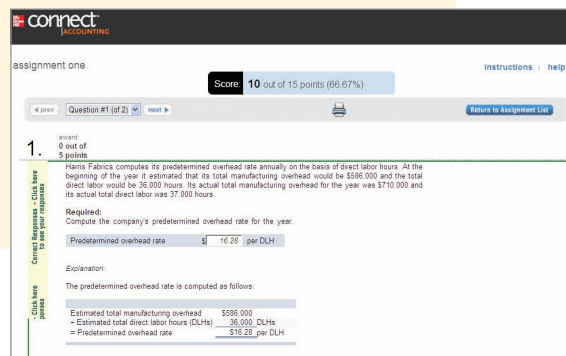

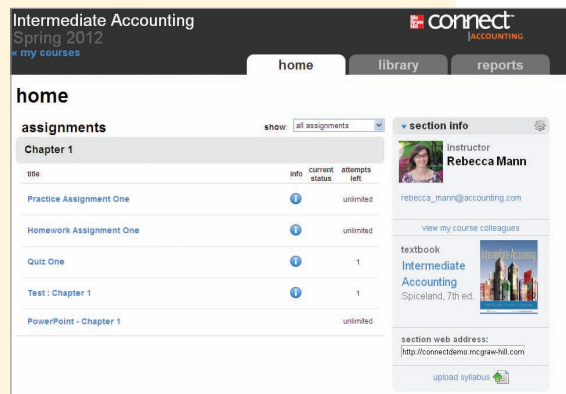

With McGraw-Hill's *Connect[®] Plus Accounting*,

STUDENTS GET:

- **Easy online access** to homework, tests, and quizzes assigned by your instructor.
- **Immediate feedback** on how you're doing. (No more wishing you could call your instructor at 1 a.m.)
- **Quick access** to lectures, practice materials, eBook, and more. (All the material you need to be successful is right at your fingertips.)
- A Self-Quiz and Study tool that **assesses your knowledge** and **recommends** specific readings, supplemental study materials, and additional practice work.*
- **LearnSmart** – intelligent flash cards that adapt to your specific needs and provide you with **24 x 7 personalized study**.*

*Available with select McGraw-Hill titles.

Less managing. More teaching. Greater learning.

Q: INSTRUCTORS...

Would you like your **students** to show up for class **more prepared**?

(Let's face it, class is much more fun if everyone is engaged and prepared...)

Want an **easy way to assign** homework online and track student **progress**?

(Less time grading means more time teaching...)

Want an **instant view** of student or class performance relative to learning objectives? *(No more wondering if students understand...)*

Need to **collect data and generate reports** required for administration or accreditation? *(Say goodbye to manually tracking student learning outcomes...)*

Want to **record and post your lectures** for students to view online?

A: With McGraw-Hill's **Connect® Plus Accounting**,

INSTRUCTORS GET:

- Simple **assignment management**, allowing you to spend more time teaching.
- **Auto-graded** assignments, quizzes, and tests.
- **Detailed Visual Reporting** where student and section results can be viewed and analyzed.
- Sophisticated **online testing** capability.
- A **filtering and reporting** function that allows you to easily assign and report on materials that are correlated to accreditation standards, learning outcomes, and Bloom's taxonomy.
- An easy-to-use **lecture capture** tool.
- The option to **upload course documents** for student access.

Want an online, **searchable version** of your textbook?

Wish your textbook could be **available online** while you're doing your assignments?

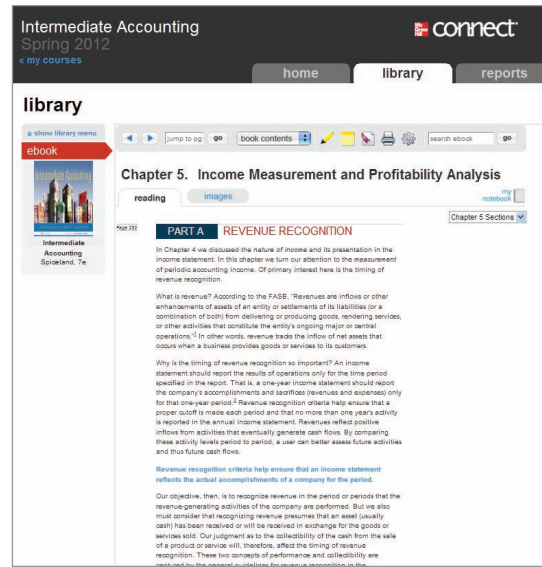

Connect® Plus Accounting eBook

If you choose to use *Connect® Plus Accounting*, you have an affordable and searchable online version of your book integrated with your other online tools.

Connect® Plus Accounting eBook offers features like:

- Topic search
- Direct links from assignments
- Adjustable text size
- Jump to page number
- Print by section

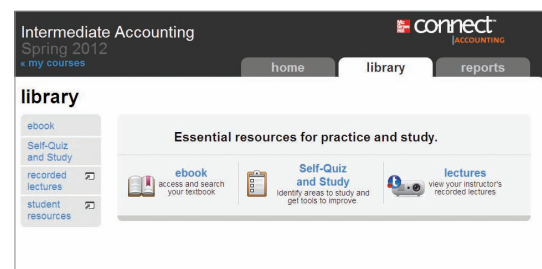

Want to get more **value** from your textbook purchase?

Think learning accounting should be a bit more **interesting**?

Check out the STUDENT RESOURCES section under the Connect® Library tab.

Here you'll find a wealth of resources designed to help you achieve your goals in the course. You'll find things like **quizzes, PowerPoints, and Internet activities** to help you study. Every student has different needs, so explore the **STUDENT RESOURCES** to find the materials best suited to you.
