

## Getting Ready

Are you frustrated when you know you learned a math concept in the past, but you can't quite remember the skill when it's time to use it? Don't worry!

The authors have included Getting Ready material so you can brush up on forgotten
 material efficiently by taking a quick skill review quiz to pinpoint the areas where you need help.

Then, a personalized homework assignment provides additional practice on those forgotten concepts, right when you need it.

## Retain Your Knowledge

As you work through your math course, these MyMathLab ${ }^{\circledR}$ exercises support ongoing review to help you maintain essential skills.

The ability to recall important math concepts as you continually acquire new mathematical skills will help you be successful in this math course and in your future math courses.

Scan the code or visit www.mymathlab.com/success-stories to learn how students across the country have used MyMathLab to achieve their potential and be successful in their math courses.

## Achieve Your Potential

The authors, Michael Sullivan and Michael Sullivan, III, have developed specific content in MyMathLab ${ }^{\circledR}$ to ensure you have many resources to help you achieve success in mathematics - and beyond!
The MyMathLab features described here will help you:

- Brush up on math skills and concepts you may have forgotten
- Retain new concepts as you move through your math course
- Develop skills that will help with your transition to college to your profession

## Adaptive Study Plan

The Study Plan will help you study more efficiently and effectively.
Your performance and activity are assessed continually in real time, providing a personalized experience based on your individual needs.

| Study Plan |  |  |  |
| :---: | :---: | :---: | :---: |
| Study Plan $\square_{\text {a }}$ |  |  |  |
| You have eamed 0 of 687 mastery points (MP). <br> Practice these objectives and then take a Quiz Me to prove mastery and earn more points. |  |  |  |
|  |  |  |  |
| What to work on next |  |  |  |
| GR. 1 Real Number System |  |  |  |
| * Identify types of numbers. | Precice | Quiz $\mathrm{Me}^{\text {e }}$ | 0 of 1 MP |
| - More objectives to practice and master |  |  | Yiem all chaoters |
| Gr. 1 Real Number System |  |  |  |
| * Graoh numbers on a number line. | Practice | Ouiz Me | 0 of 1 MP |
| * Find absolute volves. | Practice | Quiz Me | 0 of 1 MP |
| - Calculite mith real numbers. | Pracice | Ouiz Me | 0 of 1 Mp |
| - Use the properies of real numbers. | Practice | Quiz Me | 0 of 1 MP |

## Skills for Success

The Skills for Success Module supports your continued success in college.

This module provides tutorials and guidance on a variety of topics, including transitioning to college, online learning, time management and more.

Additional content is provided to help with the development of professional skills such as resume writing or creation and interview preparation.

## Contents

To the Student ..... xv
Three Distinct Series ..... xvi
Preface to the Instructor ..... xvii
Prepare for Class "Read the Book" ..... xxi
Practice "Work the Problems" ..... xxii
Review "Study for Quizzes and Tests" ..... xxiii
Resources for Success ..... xxiv
Applications Index ..... xxvi
F Foundations: A Prelude to Functions ..... 1
F. 1 The Distance and Midpoint Formulas ..... 2
Use the Distance Formula • Use the Midpoint Formula
F. 2 Graphs of Equations in Two Variables; Intercepts; Symmetry Graph Equations by Plotting Points • Find Intercepts from a Graph • Find Intercepts from an Equation • Test an Equation for Symmetry • Know How to Graph Key Equations
F. 3 Lines ..... 19
Calculate and Interpret the Slope of a Line • Graph Lines Given a Point and the Slope • Find the Equation of a Vertical Line • Use the Point-Slope Form of a Line; Identify Horizontal Lines • Find the Equation of a Line Given Two Points • Write the Equation of a Line in Slope-Intercept Form - Identify the Slope and $y$-Intercept of a Line from Its Equation • Graph Lines Written in General Form Using Intercepts • Find Equations of Parallel Lines • Find Equations of Perpendicular Lines
F. 4 Circles ..... 34
Write the Standard Form of the Equation of a Circle • Graph a Circle

- Work with the General Form of the Equation of a CircleChapter Project41
1 Functions and Their Graphs ..... 42
1.1 Functions ..... 43
Determine Whether a Relation Represents a Function • Find the Value of a Function • Find the Domain of a Function Defined by an Equation • Form the Sum, Difference, Product, and Quotient of Two Functions
1.2 The Graph of a Function Identify the Graph of a Function - Obtain Information from or about the Graph of a Function
1.3 Properties of Functions66Determine Even and Odd Functions from a Graph • Identify Even andOdd Functions from the Equation • Use a Graph to Determine Where aFunction is Increasing, Decreasing, or Constant • Use a Graph to LocateLocal Maxima and Local Minima • Use a Graph to Locate the AbsoluteMaximum and the Absolute Minimum • Use a Graphing Utility to ApproximateLocal Maxima and Local Minima and to Determine Where a Function isIncreasing or Decreasing • Find the Average Rate of Change of a Function
1.4 Library of Functions; Piecewise-defined Functions ..... 78
Graph the Functions Listed in the Library of Functions • Graph Piecewise-defined Functions
1.5 Graphing Techniques: Transformations ..... 89
Graph Functions Using Vertical and Horizontal Shifts • Graph Functions Using Compressions and Stretches • Graph Functions Using Reflections about the $x$-Axis and the $y$-Axis
1.6 Mathematical Models: Building Functions ..... 101
Build and Analyze Functions
1.7 Building Mathematical Models Using Variation ..... 106
Construct a Model Using Direct Variation • Construct a Model Using Inverse Variation • Construct a Model Using Joint or Combined Variation
Chapter Review ..... 111
Chapter Test ..... 115
Chapter Projects ..... 116
2 Linear and Quadratic Functions ..... 118
2.1 Properties of Linear Functions and Linear Models ..... 119
Graph Linear Functions • Use Average Rate of Change to Identify Linear Functions • Determine Whether a Linear Function Is Increasing, Decreasing or Constant $\bullet$ Find the Zero of a Linear Function • Build Linear Models from Verbal Descriptions
2.2 Building Linear Models from Data ..... 130
Draw and Interpret Scatter Diagrams • Distinguish between Linear and Nonlinear Relations • Use a Graphing Utility to Find the Line of Best Fit
2.3 Quadratic Functions and Their Zeros ..... 137
Find the Zeros of a Quadratic Function by Factoring • Find the Zeros of a Quadratic Function Using the Square Root Method • Find the Zeros of a Quadratic Function by Completing the Square • Find the Zeros of a Quadratic Function Using the Quadratic Formula • Find the Point of Intersection of Two Functions • Solve Equations That Are Quadratic in Form
2.4 Properties of Quadratic Functions ..... 148
Graph a Quadratic Function Using Transformations • Identify the Vertex and Axis of Symmetry of a Quadratic Function - Graph a Quadratic Function Using Its Vertex, Axis, and Intercepts • Find a Quadratic Function Given Its Vertex and One Other Point • Find the Maximum or Minimum Value of a Quadratic Function
2.5 Inequalities Involving Quadratic Functions ..... 160
Solve Inequalities Involving a Quadratic Function
2.6 Building Quadratic Models from Verbal Descriptions and from Data ..... 164
Build Quadratic Models from Verbal Descriptions • Build Quadratic Models from Data
2.7 Complex Zeros of a Quadratic Function ..... 175
Find the Complex Zeros of a Quadratic Function
2.8 Equations and Inequalities Involving the Absolute Value Function ..... 178Solve Absolute Value Equations • Solve Absolute Value InequalitiesChapter Review184
Chapter Test ..... 187
Cumulative Review ..... 188
Chapter Projects ..... 189
3 Polynomial and Rational Functions ..... 191
3.1 Polynomial Functions and Models ..... 192
Identify Polynomial Functions and Their Degree • Graph Polynomial Functions Using Transformations • Identify the Real Zeros of a Polynomial Function and Their Multiplicity • Analyze the Graph of a Polynomial Function • Build Cubic Models from Data
3.2 The Real Zeros of a Polynomial Function ..... 212
Use the Remainder and Factor Theorems • Use Descartes' Rule of Signs to Determine the Number of Positive and the Number of Negative Real Zeros of a Polynomial Function • Use the Rational Zeros Theorem to List the Potential Rational Zeros of a Polynomial Function • Find the Real Zeros of a Polynomial Function • Solve Polynomial Equations • Use the Theorem for Bounds on Zeros • Use the Intermediate Value Theorem
3.3 Complex Zeros; Fundamental Theorem of Algebra ..... 226
Use the Conjugate Pairs Theorem • Find a Polynomial Function with Specified Zeros • Find the Complex Zeros of a Polynomial Function
3.4 Properties of Rational Functions ..... 232
Find the Domain of a Rational Function • Find the Vertical Asymptotes of a Rational Function • Find the Horizontal or Oblique Asymptote of a Rational Function
3.5 The Graph of a Rational Function ..... 243
Analyze the Graph of a Rational Function • Solve Applied Problems Involving Rational Functions
3.6 Polynomial and Rational Inequalities ..... 258
Solve Polynomial Inequalities • Solve Rational Inequalities
Chapter Review ..... 266
Chapter Test ..... 270
Cumulative Review ..... 270
Chapter Projects ..... 271
4 Exponential and Logarithmic Functions ..... 273
4.1 Composite Functions ..... 274
Form a Composite Function • Find the Domain of a Composite Function
4.2 One-to-One Functions; Inverse Functions ..... 282
Determine Whether a Function Is One-to-One • Determine the Inverse of a Function Defined by a Map or a Set of Ordered Pairs • Obtain the Graph of the Inverse Function from the Graph of the Function • Find the Inverse of a Function Defined by an Equation
4.3 Exponential Functions ..... 294
Evaluate Exponential Functions • Graph Exponential Functions • Define the Number $e \bullet$ Solve Exponential Equations
4.4 Logarithmic Functions ..... 311
Change Exponential Statements to Logarithmic Statements and Logarithmic Statements to Exponential Statements • Evaluate Logarithmic Expressions
- Determine the Domain of a Logarithmic Function - Graph Logarithmic Functions • Solve Logarithmic Equations
4.5 Properties of Logarithms
Work with Properties of Logarithms • Write a Logarithmic Expression as a Sum or Difference of Logarithms • Write a Logarithmic Expression as a Single Logarithm • Evaluate a Logarithm Whose Base Is Neither 10 Nor $e$ - Graph a Logarithmic Function Whose Base Is Neither 10 Nor $e$324
4.6 Logarithmic and Exponential Equations ..... 333
Solve Logarithmic Equations • Solve Exponential Equations • Solve Logarithmic and Exponential Equations Using a Graphing Utility
4.7 Financial Models ..... 339
Determine the Future Value of a Lump Sum of Money •Calculate Effective Rates of Return • Determine the Present Value of a Lump Sum of Money - Determine the Rate of Interest or the Time Required to Double a Lump Sum of Money
4.8 Exponential Growth and Decay Models; Newton's Law; Logistic Growth and Decay Models ..... 349
Find Equations of Populations That Obey the Law of Uninhibited Growth
- Find Equations of Populations That Obey the Law of Decay • Use Newton's Law of Cooling • Use Logistic Models
4.9 Building Exponential, Logarithmic, and Logistic Models from Data ..... 359
Build an Exponential Model from Data • Build a Logarithmic Model from Data • Build a Logistic Model from Data
Chapter Review ..... 367
Chapter Test ..... 372
Cumulative Review ..... 373
Chapter Projects ..... 374
5 Trigonometric Functions ..... 375
5.1 Angles and Their Measures ..... 376
Convert between Decimals and Degrees, Minutes, Seconds Measures for Angles • Find the Length if an Arc of a Circle • Convert from Degrees to Radians and from Radians to Degrees • Find the Area of a Sector of a Circle •Find the Linear Speed of an Object Traveling in Circular Motion
5.2 Trigonometric Functions: Unit Circle Approach ..... 390
Find the Exact Values of the Trigonometric Functions Using a Point on the Unit Circle • Find the Exact Values of the Trigonometric Functions of Quadrantal Angles • Find the Exact Values of the Trigonometric Functions of $\pi / 4=45^{\circ} \bullet$ Find the Exact Values of the Trigonometric Functions of $\pi / 6=30^{\circ}$ and $\pi / 3=60^{\circ} \bullet$ Find the Exact Values of the Trigonometric Functions for Integer Multiples of $\pi / 6=30^{\circ}, \pi / 4=45^{\circ}$, and $\pi / 3=60^{\circ} \bullet$ Use a Calculator to Approximate the Value of a Trigonometric Function • Use a Circle of Radius $r$ to Evaluate the Trigonometric Functions
5.3 Properties of the Trigonometric Functions ..... 407
Determine the Domain and the Range of the Trigonometric Functions
- Determine the Period of the Trigonometric Functions • Determine the Signs of the Trigonometric Functions in a Given Quadrant • Find the Values of the Trigonometric Functions Using Fundamental Identities • Find the Exact Values of the Trigonometric Functions of an Angle Given One of the Functions and the Quadrant of the Angle • Use Even-Odd Properties to Find the Exact Values of the Trigonometric Functions
5.4 Graphs of the Sine and Cosine Functions
Graph Functions of the Form $y=A \sin (\omega x)$ Using Transformations
- Graph Functions of the Form $y=A \cos (\omega x)$ Using Transformations420
- Determine the Amplitude and Period of Sinusoidal Functions - Graph Sinusoidal Functions Using Key Points • Find an Equation for a Sinusoidal Graph
5.5 Graphs of the Tangent, Cotangent, Cosecant, and Secant Functions ..... 435
Graph Functions of the Form $y=A \tan (\omega x)+B$ and $y=A \cot (\omega x)+B$
- Graph Functions of the Form $y=A \csc (\omega x)+B$ and $y=A \sec (\omega x)+B$
5.6 Phase Shift; Sinusoidal Curve Fitting ..... 443
Graph Sinusoidal Functions of the Form $y=A \sin (\omega x-\phi)+B$
- Build Sinusoidal Models from Data
Chapter Review ..... 454
Chapter Test ..... 460
Cumulative Review ..... 460
Chapter Projects ..... 461
6 Analytic Trigonometry ..... 463
6.1 The Inverse Sine, Cosine, and Tangent Functions ..... 464
Find the Exact Value of an Inverse Sine Function • Find an Approximate Value of an Inverse Sine Function - Use Properties of Inverse Functions to Find Exact Values of Certain Composite Functions • Find the Inverse Function of a Trigonometric Function • Solve Equations Involving Inverse Trigonometric Functions
6.2 The Inverse Trigonometric Functions (Continued) ..... 476
Find the Exact Value of Expressions Involving the Inverse Sine, Cosine, and Tangent Functions $\bullet$ Define the Inverse Secant, Cosecant, and Cotangent Functions • Use a Calculator to Evaluate $\sec ^{-1} x, \csc ^{-1} x$, and $\cot ^{-1} x \bullet$ Write a Trigonometric Expression as an Algebraic Expression
6.3 Trigonometric Equations ..... 482
Solve Equations Involving a Single Trigonometric Function • Solve Trigonometric Equations Using a Calculator • Solve Trigonometric Equations Quadratic in Form • Solve Trigonometric Equations Using Fundamental Identities • Solve Trigonometric Equations Using a Graphing Utility
6.4 Trigonometric Identities ..... 491
Use Algebra to Simplify Trigonometric Expressions • Establish Identities
6.5 Sum and Difference Formulas ..... 499
Use Sum and Difference Formulas to Find Exact Values • Use Sum and Difference Formulas to Establish Identities • Use Sum and Difference Formulas Involving Inverse Trigonometric Functions • Solve Trigonometric Equations Linear in Sine and Cosine
6.6 Double-angle and Half-angle Formulas ..... 511
Use Double-angle Formulas to Find Exact Values • Use Double-angle Formulas to Establish Identities • Use Half-angle Formulas to Find Exact Values
6.7 Product-to-Sum and Sum-to-Product Formulas ..... 521
Express Products as Sums • Express Sums as Products
Chapter Review ..... 525
Chapter Test ..... 529
Cumulative Review ..... 529
Chapter Projects ..... 530
7 Applications of Trigonometric Functions ..... 531
7.1 Right Triangle Trigonometry; Applications ..... 532
Find the Value of Trigonometric Functions of Acute Angles Using Right Triangles • Use the Complementary Angle Theorem • Solve Right Triangles
- Solve Applied Problems
7.2 The Law of Sines ..... 544
Solve SAA or ASA Triangles • Solve SSA Triangles • Solve Applied Problems
7.3 The Law of Cosines ..... 555
Solve SAS Triangles • Solve SSS Triangles • Solve Applied Problems
7.4 Area of a Triangle ..... 561
Find the Area of SAS Triangles • Find the Area of SSS Triangles
7.5 Simple Harmonic Motion; Damped Motion; Combining Waves ..... 568
Build a Model for an Object in Simple Harmonic Motion • Analyze Simple Harmonic Motion • Analyze an Object in Damped Motion • Graph the Sum of Two Functions
Chapter Review ..... 577
Chapter Test ..... 580
Cumulative Review ..... 581
Chapter Projects ..... 581
8 Polar Coordinates; Vectors ..... 583
8.1 Polar Coordinates ..... 584
Plot Points Using Polar Coordinates • Convert from Polar Coordinates to Rectangular Coordinates $\bullet$ Convert from Rectangular Coordinates to Polar Coordinates • Transform Equations between Polar and Rectangular Forms
8.2 Polar Equations and Graphs ..... 593
Identify and Graph Polar Equations by Converting to Rectangular Equations • Test Polar Equations for Symmetry • Graph Polar Equations by Plotting Points
8.3 The Complex Plane; De Moivre's Theorem ..... 608
Plot Points in the Complex Plane • Convert a Complex Number between Rectangular Form and Polar Form • Find Products and Quotients of Complex Numbers in Polar Form • Use De Moivre's Theorem • Find Complex Roots
8.4 Vectors ..... 616
Graph Vectors • Find a Position Vector • Add and Subtract Vectors Algebraically • Find a Scalar Multiple and the Magnitude of a Vector • Find a Unit Vector •Find a Vector from Its Direction and Magnitude • Model with Vectors
8.5 The Dot Product ..... 630
Find the Dot Product of Two Vectors • Find the Angle between Two Vectors • Determine Whether Two Vectors Are Parallel • Determine Whether Two Vectors Are Orthogonal • Decompose a Vector into Two Orthogonal Vectors • Compute Work
8.6 Vectors in Space ..... 638
Find the Distance between Two Points in Space • Find Position Vectors in Space • Perform Operations on Vectors • Find the Dot Product • Find the Angle between Two Vectors • Find the Direction Angles of a Vector
8.7 The Cross Product ..... 647Find the Cross Product of Two Vectors • Know Algebraic Properties of theCross Product • Know Geometric Properties of the Cross Product • Find aVector Orthogonal to Two Given Vectors • Find the Area of aParallelogram
Chapter Review ..... 653
Chapter Test ..... 656
Cumulative Review ..... 657
Chapter Projects ..... 657
9 Analytic Geometry ..... 659
9.1 Conics ..... 660
Know the Names of the Conics
9.2 The Parabola ..... 661
Analyze Parabolas with Vertex at the Origin • Analyze Parabolas with Vertex at $(h, k) \bullet$ Solve Applied Problems Involving Parabolas
9.3 The Ellipse ..... 669
Analyze Ellipses with Center at the Origin • Analyze Ellipses with Center at $(h, k) \bullet$ Solve Applied Problems Involving Ellipses
9.4 The Hyperbola ..... 679
Analyze Hyperbolas with Center at the Origin • Find Asymptotes of Hyperbola • Analyze Hyperbolas with Center at $(h, k) \bullet$ Solve Applied Problems Involving Hyperbolas
9.5 Rotation of Axes; General Form of a Conic ..... 692 Identify a Conic • Use a Rotation of Axes to Transform Equations
- Analyze an Equation Using Rotation of Axes • Identify Conics without a Rotation of Axes
9.6 Polar Equations of Conics ..... 699
Analyze and Graph Polar Equations of Conics • Convert the Polar Equation of a Conic to a Rectangular Equation
9.7 Plane Curves and Parametric Equations ..... 705
Graph Parametric Equations • Find a Rectangular Equation for a Curve Defined Parametrically • Use Time as a Parameter in Parametric Equations • Find Parametric Equations for Curves Defined by Rectangular Equations
Chapter Review ..... 717
Chapter Test ..... 720
Cumulative Review ..... 720
Chapter Projects ..... 721
10 Systems of Equations and Inequalities ..... 722
10.1 Systems of Linear Equations: Substitution and Elimination ..... 723
Solve Systems of Equations by Substitution • Solve Systems of Equations by Elimination • Identify Inconsistent Systems of Equations Containing Two Variables • Express the Solution of a System of Dependent Equations Containing Two Variables • Solve Systems of Three Equations Containing Three Variables • Identify Inconsistent Systems of Equations Containing Three Variables • Express the Solution of a System of Dependent Equations Containing Three Variables
10.2 Systems of Linear Equations: Matrices ..... 738
Write the Augmented Matrix of a System of Linear Equations • Write the System of Equations from the Augmented Matrix • Perform Row Operations on a Matrix • Solve a System of Linear Equations Using Matrices
10.3 Systems of Linear Equations: Determinants ..... 752
Evaluate 2 by 2 Determinants • Use Cramer's Rule to Solve a System of Two Equations Containing Two Variables • Evaluate 3 by 3 Determinants - Use Cramer's Rule to Solve a System of Three Equations Containing Three Variables • Know Properties of Determinants
10.4 Matrix Algebra ..... 762
Find the Sum and Difference of Two Matrices • Find Scalar Multiples of a Matrix • Find the Product of Two Matrices • Find the Inverse of a Matrix - Solve a System of Linear Equations Using an Inverse Matrix
10.5 Partial Fraction Decomposition ..... 781
Decompose $P / Q$, Where $Q$ Has Only Nonrepeated Linear Factors
- Decompose $P / Q$, Where $Q$ Has Repeated Linear Factors • Decompose $P / Q$, Where $Q$ Has a Nonrepeated Irreducible Quadratic Factor - Decompose $P / Q$, Where $Q$ Has a Repeated Irreducible Quadratic Factor
10.6 Systems of Nonlinear Equations ..... 789
Solve a System of Nonlinear Equations Using Substitution • Solve a System of Nonlinear Equations Using Elimination
10.7 Systems of Inequalities ..... 798
Graph an Inequality • Graph a System of Inequalities
10.8 Linear Programming ..... 806
Set up a Linear Programming Problem • Solve a Linear Programming Problem
Chapter Review ..... 813
Chapter Test ..... 816
Cumulative Review ..... 817
Chapter Projects ..... 818
Sequences; Induction; the Binomial Theorem ..... 819
11.1 Sequences ..... 820
Write the First Several Terms of a Sequence • Write the Terms of a Sequence Defined by a Recursive Formula • Use Summation Notation - Find the Sum of a Sequence
11.2 Arithmetic Sequences ..... 830
Determine Whether a Sequence Is Arithmetic • Find a Formula for an Arithmetic Sequence • Find the Sum of an Arithmetic Sequence
11.3 Geometric Sequences; Geometric Series ..... 836
Determine Whether a Sequence Is Geometric • Find a Formula for a Geometric Sequence • Find the Sum of a Geometric Sequence • Determine Whether a Geometric Series Converges or Diverges • Solve Annuity Problems
11.4 Mathematical Induction ..... 847
Prove Statements Using Mathematical Induction
11.5 The Binomial Theorem851Evaluate $\binom{n}{j}$ • Use the Binomial Theorem
Chapter Review ..... 858
Chapter Test ..... 860
Cumulative Review ..... 860
Chapter Projects ..... 861
12 Counting and Probability ..... 862
12.1 Counting ..... 863
Find All the Subsets of a Set • Count the Number of Elements in a Set
- Solve Counting Problems Using the Multiplication Principle
12.2 Permutations and Combinations ..... 868
Solve Counting Problems Using Permutations Involving $n$ Distinct Objects
- Solve Counting Problems Using Combinations • Solve Counting Problems Using Permutations Involving $n$ Nondistinct Objects
12.3 Probability ..... 877
Construct Probability Models • Compute Probabilities of Equally Likely Outcomes • Find Probabilities of the Union of Two Events • Use the Complement Rule to Find Probabilities
Chapter Review ..... 887
Chapter Test ..... 889
Cumulative Review ..... 890
Chapter Projects ..... 890
13 A Preview of Calculus: The Limit, Derivative, and Integral of a Function ..... 891
13.1 Finding Limits Using Tables and Graphs ..... 892
Find a Limit Using a Table • Find a Limit Using a Graph
13.2 Algebra Techniques for Finding Limits ..... 897
Find the Limit of a Sum, a Difference, and a Product • Find the Limit of a Polynomial •Find the Limit of a Power or a Root •Find the Limit of a Quotient • Find the Limit of an Average Rate of Change
13.3 One-sided Limits; Continuous Functions ..... 904
Find the One-sided Limits of a Function • Determine Whether a Function Is Continuous
13.4 The Tangent Problem; The Derivative ..... 911
Find an Equation of the Tangent Line to Graph a Function • Find the Derivative of a Function • Find Instantaneous Rates of Change • Find the Instantaneous Speed of a Particle
13.5 The Area Problem; The Integral ..... 918
Approximate the Area Under the Graph of a Function - Approximate Integrals Using a Graphing Utility
Chapter Review ..... 924
Chapter Test ..... 927
Chapter Projects ..... 928
A Review ..... A1
A. 1 Algebra Essentials
Work with Sets • Graph Inequalities • Find Distance on the Real Number Line • Evaluate Algebraic Expressions • Determine the Domain of a Variable • Use the Laws of Exponents • Evaluate Square Roots • Use a Calculator to Evaluate ExponentsA1
A. 2 Geometry Essentials ..... A13
Use the Pythagorean Theorem and Its Converse • Know Geometry
Formulas • Understand Congruent Triangles and Similar Triangles
A. 3 Polynomials ..... A22
Recognize Monomials • Recognize Polynomials • Add and Subtract Polynomials • Multiply Polynomials • Know Formulas for Special Products
- Divide Polynomials Using Long Division • Work with Polynomials in Two Variables
A. 4 Factoring Polynomials ..... A32
Factoring the Difference of Two Squares and the Sum and Difference of
Two Cubes • Factor Perfect Squares • Factor a Second-Degree Polynomial: $x^{2}+B x+C \bullet$ Factor by Grouping $\bullet$ Factor a Second-Degree Polynomial: $A x^{2}+B x+C, A \neq 1 \cdot$ Complete the Square
A. 5 Synthetic Division ..... A41
Divide Polynomials Using Synthetic Division
A. 6 Rational Expressions ..... A45
Reduce a Rational Expression to Lowest Terms • Multiply and Divide Rational Expressions • Add and Subtract Rational Expressions • Use the Least Common Multiple Method • Simplify Complex Rational Expressions
A. 7 nth Roots; Rational Exponents ..... A55
Work with $n$th Roots • Simplify Radicals • Rationalize Denominators
- Simplify Expressions with Rational Exponents
A. 8 Solving Equations ..... A63
Solve Linear Equations • Solve Rational Equations • Solve Equations by Factoring • Solve Radical Equations
A. 9 Problem Solving: Interest, Mixture, Uniform Motion, Constant Rate Job Applications ..... A72
Translate Verbal Descriptions into Mathematical Expressions • Solve Interest Problems • Solve Mixture Problems • Solve Uniform Motion Problems
- Solve Constant Rate Job Problems
A. 10 Interval Notation; Solving Inequalities ..... A81
Use Interval Notation • Use Properties of Inequalities • Solve Inequalities
- Solve Combined Inequalities
A. 11 Complex Numbers ..... A89
Add, Subtract, Multiply, and Divide Complex Numbers
B Graphing Utilities ..... B1
B. 1 The Viewing Rectangle ..... B1
B. 2 Using a Graphing Utility to Graph Equations ..... B3
B. 3 Using a Graphing Utility to Locate Intercepts and Check for Symmetry ..... B5
B. 4 Using a Graphing Utility to Solve Equations ..... B6
B. 5 Square Screens ..... B8
B. 6 Using a Graphing Utility to Graph Inequalities ..... B9
B. 7 Using a Graphing Utility to Solve Systems of Linear Equations ..... B9
B. 8 Using a Graphing Utility to Graph a Polar Equation ..... B11
B. 9 Using a Graphing Utility to Graph Parametric Equations ..... B11
Answers ..... AN1

## To the Student

As you begin, you may feel anxious about the number of theorems, definitions, procedures, and equations. You may wonder if you can learn it all in time. Don't worry, your concerns are normal. This textbook was written with you in mind. If you attend class, work hard, and read and study this book, you will build the knowledge and skills you need to be successful. Here's how you can use the book to your benefit.

## Read Carefully

When you get busy, it's easy to skip reading and go right to the problems. Don't . . . the book has a large number of examples and clear explanations to help you break down the mathematics into easy-to-understand steps. Reading will provide you with a clearer understanding, beyond simple memorization. Read before class (not after) so you can ask questions about anything you didn't understand. You'll be amazed at how much more you'll get out of class if you do this.

## Use the Features

We use many different methods in the classroom to communicate. Those methods, when incorporated into the book, are called "features." The features serve many purposes, from providing timely review of material you learned before (just when you need it), to providing organized review sessions to help you prepare for quizzes and tests. Take advantage of the features and you will master the material.

To make this easier, we've provided a brief guide to getting the most from this book. Refer to the "Prepare for Class," "Practice," and "Review" on pages xxi-xxiii. Spend fifteen minutes reviewing the guide and familiarizing yourself with the features by flipping to the page numbers provided. Then, as you read, use them. This is the best way to make the most of your textbook.

Please do not hesitate to contact us, through Pearson Education, with any questions, suggestions, or comments that would improve this text. We look forward to hearing from you, and good luck with all of your studies.

## Best Wishes!

Michael Sullivan
Michael Sullivan, III

Students have different goals, learning styles, and levels of preparation. Instructors have different teaching philosophies, styles, and techniques. Rather than write one series to fit all, the Sullivans have written three distinct series. All share the same goal-to develop a high level of mathematical understanding and an appreciation for the way mathematics can describe the world around us. The manner of reaching that goal, however, differs from series to series.

## Concepts through Functions Series, Third Edition

This series differs from the others, utilizing a functions approach that serves as the organizing principle tying concepts together. Functions are introduced early in various formats. This approach supports the Rule of Four, which states that functions are represented symbolically, numerically, graphically, and verbally. Each chapter introduces a new type of function and then develops all concepts pertaining to that particular function. The solutions of equations and inequalities, instead of being developed as stand-alone topics, are developed in the context of the underlying functions. Graphing utility coverage is optional and can be included or excluded at the discretion of the instructor: College Algebra; Precalculus, with a Unit Circle Approach to Trigonometry; Precalculus, with a Right Triangle Approach to Trigonometry.

## Contemporary Series, Ninth Edition

The Contemporary Series is the most traditional in approach yet modern in its treatment of precalculus mathematics. Graphing utility coverage is optional and can be included or excluded at the discretion of the instructor: College Algebra, Algebra \& Trigonometry, Trigonometry, Precalculus.

## Enhanced with Graphing Utilities Series, Sixth Edition

This series provides a thorough integration of graphing utilities into topics, allowing students to explore mathematical concepts and foreshadow ideas usually studied in later courses. Using technology, the approach to solving certain problems differs from the Concepts or Contemporary Series, while the emphasis on understanding concepts and building strong skills does not: College Algebra, Algebra \& Trigonometry, Precalculus.

# Preface to the Instructor 

As professors at both an urban university and a community college, Michael Sullivan and Michael Sullivan, III, are aware of the varied needs of Precalculus students, ranging from those who have little mathematical background and a fear of mathematics courses, to those having a strong mathematical education and a high level of motivation. For some of your students, this will be their last course in mathematics, whereas others will further their mathematical education. This text is written for both groups.

As a teacher, and as an author of precalculus, engineering calculus, finite mathematics, and business calculus texts, Michael Sullivan understands what students must know if they are to be focused and successful in upperlevel math courses. However, as a father of four, he also understands the realities of college life. As an author of a developmental mathematics series, Michael's co-author and son, Michael Sullivan, III, understands the trepidations and skills students bring to the Precalculus course. Michael, III also believes in the value of technology as a tool for learning that enhances understanding without sacrificing math skills. Together, both authors have taken great pains to ensure that the text contains solid, studentfriendly examples and problems, as well as a clear and seamless writing style.

A tremendous benefit of authoring a successful series is the broad-based feedback we receive from teachers and students. We are sincerely grateful for their support. Virtually every change in this edition is the result of their thoughtful comments and suggestions. We are sincerely grateful for this support and hope that we have been able to take these ideas and, building upon a successful first edition, make this series an even better tool for learning and teaching. We continue to encourage you to share with us your experiences teaching from this text.

## About This Book

This book utilizes a functions approach to Precalculus. Functions are introduced early (Chapter 1) in various formats: maps, tables, sets of ordered pairs, equations, and graphs. Our approach to functions illustrates the symbolic, numeric, graphic, and verbal representations of functions. This allows students to make connections between the visual representation of a function and its algebraic representation.

It is our belief that students need to "hit the ground running" so that they do not become complacent in their studies. After all, it is highly likely that students have been exposed to solving equations and inequalities prior to entering this class. By spending precious time reviewing these concepts, students are likely to think of the course as a rehash of material learned in other courses and say to themselves, "I know this material, so I don't have to study." This may result in the students developing poor study habits for
this course. By introducing functions early in the course, students are less likely to develop bad habits.

Another advantage of the early introduction of functions is that the discussion of equations and inequalities can focus around the concept of a function. For example, rather than asking students to solve an equation such as $2 x^{2}+5 x+2=0$, we ask students to find the zeros of $f(x)=2 x^{2}+5 x+2$ or solve $f(x)=0$ when $f(x)=$ $2 x^{2}+5 x+2$. While the technique used to solve this type of problem is the same, the fact that the problem looks different to the student means the student is less apt to say, "Oh, I already have seen this problem before, and I know how to solve it." In addition, in Calculus students are going to be asked to solve equations such as $f^{\prime}(x)=0$, so solving $f(x)=0$ is a logical prerequisite skill to practice in Precalculus. Another advantage to solving equations through the eyes of a function is that the properties of functions can be included in the solution. For example, the linear function $f(x)=2 x-3$ has one real zero because the function $f$ is increasing on its domain.

## Features in the Third Edition

Rather than provide a list of new features here, that information can be found on pages xxi-xxiii.

This places the new features in their proper context, as building blocks of an overall learning system that has been carefully crafted over the years to help students get the most out of the time they put into studying. Please take the time to review the features listed on pages xxi-xxiii and to discuss them with your students at the beginning of your course. Our experience has been that when students utilize these features, they are more successful in the course.

## New to the Third Edition

- Retain Your Knowledge This new category of problems in the exercise set are based on the article "To Retain New Learning, Do the Math" published in the Edurati Review in which author Kevin Washburn suggests that "the more students are required to recall new content or skills, the better their memory will be." It is frustrating when students cannot recall skills learned earlier in the course. To alleviate this recall problem, we have created "Retain Your Knowledge" problems. These are problems considered to be "final exam material" that students must complete to maintain their skills. All the answers to these problems appear in the back of the book and all are programmed in MyMathLab.
- Guided Lecture Notes Ideal for online, emporium/redesign courses, inverted classrooms or traditional lecture classrooms. These lecture notes assist students in taking thorough, organized, and understandable notes as they watch the Author in Action videos by asking students to complete definitions, procedures, and examples based
on the content of the videos and book. In addition, experience suggests that students learn by doing and understanding the why/how of the concept or property. Therefore, many sections will have an exploration activity to motivate student learning. These explorations will introduce the topic and/or connect it somehow to either a real world application or previous section. For example, when teaching about the vertical line test in Section 1.2, after the theorem statement, the notes ask the students to explain why the vertical line test works by using the definition of a function. This helps students process the information at a higher level of understanding.
- Chapter Projects, which apply the concepts of each chapter to a real-world situation, have been enhanced to give students an up-to-the-minute experience. Many projects are new and Internet-based, requiring the student to research information online in order to solve problems.
- Author Solves It MathXL Video Clips—author Michael Sullivan, III solves MathXL exercises typically requested by his students for more explanation or tutoring. These videos are a result of Sullivan's experiences in the classroom and experiences in teaching online.
- Exercise Sets at the end of each section remain classified according to purpose. The "Are You Prepared?" exercises have been expanded to better serve the student who needs a just-in-time review of concepts utilized in the section. The Concepts and Vocabulary exercises have been updated. These fill-in-the-blank and True/False problems have been written to serve as reading quizzes. Skill Building exercises develop the student's computational skills and are often grouped by objective. Mixed Practice exercises have been added where appropriate. These problems offer a comprehensive assessment of the skills learned in the section by asking problems that relate to more than one objective. Sometimes these require information from previous sections so students must utilize skills learned throughout the course. Applications and Extension problems have been updated and many new problems involving sourced information and data have been added to bring relevance and timeliness to the exercises. The Explaining Concepts: Discussion and Writing exercises have been updated and reworded to stimulate discussion of concepts in online discussion forums. These can also be used to spark classroom discussion. Finally, in the Annotated Instructor's Edition, we have preselected problems that can serve as sample homework assignments. These are indicated by a blue underline, and they are assignable in MyMathLab ${ }^{\circledR}$ as part of a "Ready-to-Go" course, if desired.
- The Chapter Review now includes answers to all the problems. We have created a separate review worksheet for each chapter to help students review and practice key skills to prepare for exams. The worksheets can be found within MyMathLab ${ }^{\circledR}$ or downloaded from the Instructor's Resource Center.

## Changes in the Third Edition

## - CONTENT

- Chapter 2, Section 4 A new objective "Find a quadratic function given its vertex and one point" has been added.
- Chapter 2, Section 5 A new example was added to illustrate that quadratic inequalities may have the empty set or all real numbers as a solution.
- Chapter 3, Sections 1 and 4 The content related to describing the behavior of the graph of a polynomial or rational function near a zero has been removed.
- Chapter 3, Section 4 Content has been added that discusses the role of multiplicity and behavior of the graph of rational function as the graph approaches a vertical asymptote.

## - ORGANIZATION

- Chapter 3, Sections 5 and 6 Section 5, The Real Zeros of a Polynomial Function and Section 6, Complex Zeros, Fundamental Theorem of Algebra have been moved to Sections 2 and 3, respectively. This was done in response to reviewer requests that "everything involving polynomials" be located sequentially. Skipping the new Sections 2 and 3 and proceeding to Section 4 Properties of Rational Functions can be done without loss of continuity.

## Using this Book Effectively and Efficiently with Your Syllabus

To meet the varied needs of diverse syllabi, this book contains more content than is likely to be covered in a typical Precalculus course. As the chart illustrates, this book has been organized with flexibility of use in mind. Even within a given chapter, certain sections are optional and can be omitted without loss of continuity. See the detail following the flow chart.

## Foundations A Prelude to Functions

Quick coverage of this chapter, which is mainly review material, will enable you to get to Chapter 1, Functions and Their Graphs, earlier.

## Chapter 1 Functions and Their Graphs

Perhaps the most important chapter. Sections 1.6 and 1.7 are optional.

## Chapter 2 Linear and Quadratic Functions

Topic selection depends on your syllabus. Sections 2.2, 2.6, and 2.7 may be omitted without a loss of continuity.

## Chapter 3 Polynomial and Rational Functions

Topic selection depends on your syllabus. Section 3.6 is optional.

## Chapter 4 Exponential and Logarithmic Functions

Sections 4.1-4.6 follow in sequence. Sections 4.7-4.9 are optional.

## Chapter 5 Trigonometric Functions

The sections follow in sequence. Section 5.6 is optional.

## Chapter 6 Analytic Trigonometry

Sections 6.2 and 6.7 may be omitted in a brief course.

## Chapter 7 Applications of Trigonometric Functions

Sections 7.4 and 7.5 may be omitted in a brief course.

## Chapter 8 Polar Coordinates; Vectors

Sections 8.1-8.3 and Sections 8.4-8.7 are independent and may be covered separately.

## Chapter 9 Analytic Geometry

Sections 9.1-9.4 follow in sequence. Sections 9.5, 9.6, and 9.7, are independent of each other, but each requires Sections 9.1-9.4.

## Chapter 10 Systems of Equations and Inequalities

Sections 10.2-10.7 may be covered in any order. Section 10.8 requires Section 10.7.

## Chapter 11 Sequences; Induction; the Binomial Theorem

There are three independent parts: Sections 11.1-11.3, Section 11.4, and Section 11.5.

## Chapter 12 Counting and Probability

The sections follow in sequence.

## Chapter 13 A Preview of Calculus: The Limit, Derivative, and Integral of a Function

If time permits, coverage of this chapter will provide your students with a beneficial head-start in calculus. The sections follow in sequence.

## Appendix A Review

This review material may be covered at the start of a course or used as a just-in-time review. Specific references to this material occur throughout the text to assist in the review process.

## Appendix B Graphing Utilities

Reference is made to these sections at the appropriate place in the text.

## Acknowledgments

Textbooks are written by authors, but evolve from an idea to final form through the efforts of many people. It was Don Dellen who first suggested this book and series. Don is remembered for his extensive contributions to publishing and mathematics.

Thanks are due to the following people for their assistance and encouragement to the preparation of this edition:

- From Pearson Education: Anne Kelly for her substantial contributions, ideas, and enthusiasm; Peggy Lucas, who is a huge fan and works tirelessly to get the word out; Dawn Murrin, for her unmatched talent at getting the details right; Peggy McMahon for her organizational skills and leadership in overseeing production; Chris Hoag for her continued support and genuine interest; Greg Tobin for his leadership and commitment to excellence; and the Pearson Math and Science Sales team, for their continued confidence and personal support of our books.
- Bob Walters, Production Manager, who passed away after a long and valiant battle fighting lung disease. He was an old and dear friend - a true professional in every sense of the word.
- Accuracy checkers: C. Brad Davis, who read the entire manuscript and accuracy checked answers. His attention to detail is amazing; Timothy Britt, for creating the Solutions Manuals and accuracy checking answers.
- Michael Sullivan, III would like to thank his colleagues at Joliet Junior College for their support and feedback.

Finally, we offer our grateful thanks to the dedicated users and reviewers of our books, whose collective insights form the backbone of each textbook revision.

Our list of indebtedness just grows and grows. And, if we've forgotten anyone, please accept our apology. Thank you all.

Answers <br> are given at the end of the section exercises. <br> This feature is related to the Preparing for <br> This Section feature. | Do you always remember what you've <br> tearned? Working these problems is <br> wrong, you'll to fnow out. If you get one <br> to review and where to revie what you need | 294, 305 |

# Review "Study for Quizzes and Tests" 

## Resources for Success

## MyMathLab ${ }^{\circ}$ Online Course acceses sode equiried

MyMathLab delivers proven results in helping individual students succeed. It provides engaging experiences that personalize, stimulate, and measure learning for each student. And, it comes from an experienced partner with educational expertise and an eye on the future. MyMathLab helps prepare students and gets them thinking more conceptually and visually through the following features:

## EXAMPLE

Solving an Exponential Equation
Solve: $2^{x-1}=5^{2 x+3}$
Algebraic Solution
Graphing Solution
$\log ^{2 x-1}=\log 5^{2 x+3}$
$(x-1) \log 2=(2 x+3) \log 5$
$x \log 2-\log 2=(2 \log 5) x+3 \log 5$
$\frac{-(2 \ln 5) x+\log 2(-2 \log 5) x+\log 2}{(\log 2) x-(2 \log 5) x=3 \log 5+\log 2}$

-     - 17.56120.53

4

## Video Assessment

Video assessment is tied to key Author in Action videos to check student's conceptual understanding of important math concepts.

## Enhanced Graphing Functionality

New functionality within the graphing utility allows graphing of 3 -point quadratic functions, 4-point cubic graphs, and transformations in exercises.

Skills for Success Modules are integrated within MyMathLab course to help students succeed in collegiate courses and prepare for future professions.

Retain Your Knowledge These new exercises support ongoing review at the
 course level and help students maintain essential skills.

## Instructor Resources

Additional resources can be downloaded from www.pearsonhighered.com or hardcopy resources can be ordered from your sales representative.

## Ready to Go MyMathLab ${ }^{\oplus}$ Course

Now it is even easier to get started with MyMathLab. The Ready to Go MyMathLab course option includes author-chosen preassigned homework, integrated review, and more.

## TestGen ${ }^{\circledR}$

TestGen ${ }^{\circledR}$ (www.pearsoned.com/testgen) enables instructors to build, edit, print, and administer tests using a computerized bank of questions developed to cover all the objectives of the text.

## PowerPoint ${ }^{\oplus}$ Lecture Slides

Fully editable slides that correlate to the textbook.

## Annotated Instructor's Editon

Shorter answers are on the page beside the exercises. Longer answers are in the back of the book.

## Instructor Solutions Manual

Includes fully worked solutions to all textbook exercises.

## Mini Lecture Notes

Includes additional examples and helpful teaching tips, by section.

## Online Chapter Projects

Additional projects that let students apply what was learned in the chapter.

## Student Resources

Additional resources to help student success:

## Lecture Video

Author in Action videos are actual classroom lectures with fully worked out examples presented by Michael Sullivan, III. All video is assignable within MyMathlab.

## Chapter Test Prep Videos

Students can watch instructors work through step-by-step solutions to all chapter test exercises from the textbook. These are available in MyMathlab and on YouTube.

## Student Solutions Manual

Provides detailed worked-out solutions to oddnumbered exercises.

## Guided Lecture Notes

These lecture notes assist students in taking thorough, organized, and understandable notes while watching Author in Action videos. Students actively participate in learning the how/why of important concepts through explorations and activities. The Guided Lecture Notes are available as PDF's and customizable Word files in MyMathLab. They can also be packaged with the textbook and MyMathLab access code.

## Algebra Review

Four Chapters of Intermediate Algebra review. Perfect for a slower-paced course or for individual review.

## Foundations: A Prelude to Functions

## How to Value a House

Two things to consider in valuing a home are, first, how does it compare to similar homes that have sold recently? Is the asking price fair? And second, what value do you place on the advertised features and amenities? Yes, other people might value them highly, but do you?

Zestimate home valuation, RealEstateABC.com, and Reply.com are among the many algorithmic (generated by a computer model) starting points in figuring out the value of a home. They show you how the home is priced relative to other homes in the area, but you need to add in all the things that only someone who has seen the house knows. You can do that using My Estimator, and then you create your own estimate and see how it stacks up against the asking price.

## Looking at "Comps"

Knowing whether an asking price is fair will be important when you're ready to make an offer on a house. It will be even more important when your mortgage lender hires an appraiser to determine whether the house is worth the loan you're after.

Check with your agent, Zillow.com, propertyshark.com, or other websites to see recent sales of homes in the area that are similar, or comparable, to what you're looking for. Print them out and keep these "comps" in a three-ring binder; you'll be referring to them quite a bit.

Note that "recent sales" usually means within the last six months. A sales price from a year ago may bear little or no relation to what is going on in your area right now. In fact, some lenders will not accept comps older than three months.

Market activity also determines how easy or difficult it is to find accurate comps. In a "hot" or busy market, with sales happening all the time, you're likely to have lots of comps to choose from. In a less active market, finding reasonable comps becomes harder. And if the home you're looking at has special design features, finding a comparable property is harder still. It's also necessary to know what's going on in a given sub-segment. Maybe large, high-end homes are selling like hotcakes, but owners of smaller houses are staying put, or vice versa.

## <A Look Back

Appendix A reviews skills from Intermediate Algebra.

## A Look Ahead>

Here we connect algebra and geometry using the rectangular coordinate system. In the 1600s, algebra had developed to the point that René Descartes (1596-1650) and Pierre de Fermat (1601-1665) were able to use rectangular coordinates to translate geometry problems into algebra problems, and vice versa. This allowed both geometers and algebraists to gain new insights into their subjects, which had been thought to be separate but now were seen as connected.

F. 2 Graphs of Equations in Two Variables; Intercepts; Symmetry
F. 3 Lines
F. 4 Circles

Chapter Project

## F. 1 The Distance and Midpoint Formulas

PREPARING FOR THIS SECTION Before getting started, review the following:

- Algebra Essentials (Appendix A, Section A.1, pp. A1-A10)

Now Work the 'Are You Prepared?' problems on page 6.

- Geometry Essentials (Appendix A, Section A.2, pp.A13-A19)

OBJECTIVES 1 Use the Distance Formula (p. 3)
2 Use the Midpoint Formula (p. 5)

Figure 1

Figure 2

Figure 3

| $\substack{\text { Quadrant III } \\ x<0, y>0}$ |

| Quadrant IV <br> $x>0, y<0$ |

## Rectangular Coordinates

A point on the real number line is located by a single real number called the coordinate of the point. For work in a two-dimensional plane, points are located by using two numbers.

Begin with two real number lines located in the same plane: one horizontal and the other vertical. The horizontal line is called the $\boldsymbol{x}$-axis, the vertical line the $\boldsymbol{y}$-axis, and the point of intersection the origin $\boldsymbol{O}$. See Figure 1. Assign coordinates to every point on these number lines using a convenient scale. Recall that the scale of a number line is the distance between 0 and 1 . In mathematics, we usually use the same scale on each axis, but in applications, a different scale is often used.

The origin $O$ has a value of 0 on both the $x$-axis and the $y$-axis. Points on the $x$-axis to the right of $O$ are associated with positive real numbers, and those to the left of $O$ are associated with negative real numbers. Points on the $y$-axis above $O$ are associated with positive real numbers, and those below $O$ are associated with negative real numbers. In Figure 1, the $x$-axis and $y$-axis are labeled as $x$ and $y$, respectively, and an arrow at the end of each axis is used to denote the positive direction.

The coordinate system described here is called a rectangular or Cartesian* coordinate system. The plane formed by the $x$-axis and $y$-axis is sometimes called the $\boldsymbol{x} \boldsymbol{y}$-plane, and the $x$-axis and $y$-axis are referred to as the coordinate axes.

Any point $P$ in the $x y$-plane can be located by using an ordered pair $(x, y)$ of real numbers. Let $x$ denote the signed distance of $P$ from the $y$-axis (signed means that, if $P$ is to the right of the $y$-axis, then $x>0$, and if $P$ is to the left of the $y$-axis, then $x<0$ ); and let $y$ denote the signed distance of $P$ from the $x$-axis. The ordered pair $(x, y)$, also called the coordinates of $P$, then gives us enough information to locate the point $P$ in the plane.

For example, to locate the point whose coordinates are $(-3,1)$, go 3 units along the $x$-axis to the left of $O$ and then go straight up 1 unit. We plot this point by placing a dot at this location. See Figure 2, in which the points with coordinates $(-3,1)$, $(-2,-3),(3,-2)$, and $(3,2)$ are plotted.

The origin has coordinates $(0,0)$. Any point on the $x$-axis has coordinates of the form $(x, 0)$, and any point on the $y$-axis has coordinates of the form $(0, y)$.

If $(x, y)$ are the coordinates of a point $P$, then $x$ is called the $\boldsymbol{x}$-coordinate, or abscissa, of $P$ and $y$ is the $\boldsymbol{y}$-coordinate, or ordinate, of $P$. We identify the point $P$ by its coordinates $(x, y)$ by writing $P=(x, y)$. Usually, we will simply say, "the point $(x, y)$ " rather than "the point whose coordinates are $(x, y)$."

The coordinate axes divide the $x y$-plane into four sections called quadrants, as shown in Figure 3. In quadrant I, both the $x$-coordinate and the $y$-coordinate of all points are positive; in quadrant II, $x$ is negative and $y$ is positive; in quadrant III, both $x$ and $y$ are negative; and in quadrant IV, $x$ is positive and $y$ is negative. Points on the coordinate axes belong to no quadrant.
nom Now Work prem 11

Figure 4

COMIMENT On a graphing calculator, you can set the scale on each axis. Once this has been done, you obtain the viewing rectangle. See Figure 4 for a typical viewing rectangle. You should now read Section B.1, The Viewing Rectangle, in Appendix B.

## 1 Use the Distance Formula

If the same units of measurement (such as inches, centimeters, and so on) are used for both the $x$-axis and $y$-axis, then all distances in the $x y$-plane can be measured using this unit of measurement.

## EXAMPLE I

Solution

Figure 5

## THEOREM

## In Words

To compute the distance between two points, find the difference of the $x$-coordinates, square it, and
add this to the square of the
$\int$ difference of the $y$-coordinates.
© The square root of this sum is
f the distance.

## Finding the Distance between Two Points

Find the distance $d$ between the points $(1,3)$ and $(5,6)$.
First plot the points $(1,3)$ and $(5,6)$ and connect them with a straight line. See Figure 5(a). To find the length $d$, begin by drawing a horizontal line from $(1,3)$ to $(5,3)$ and a vertical line from $(5,3)$ to $(5,6)$, forming a right triangle, as shown in Figure 5(b). One leg of the triangle is of length 4 (since $|5-1|=4$ ), and the other is of length 3 (since $|6-3|=3$ ). By the Pythagorean Theorem, the square of the distance $d$ that we seek is

$$
\begin{aligned}
d^{2}=4^{2}+3^{2} & =16+9 \\
d & =25 \\
d \sqrt{25} & =5
\end{aligned}
$$

The distance formula provides a straightforward method for computing the distance between two points.

## Distance Formula

The distance between two points $P_{1}=\left(x_{1}, y_{1}\right)$ and $P_{2}=\left(x_{2}, y_{2}\right)$, denoted by $d\left(P_{1}, P_{2}\right)$, is

$$
\begin{equation*}
d\left(P_{1}, P_{2}\right)=\sqrt{\left(x_{2}-x_{1}\right)^{2}+\left(y_{2}-y_{1}\right)^{2}} \tag{1}
\end{equation*}
$$

Proof of the Distance Formula Let $\left(x_{1}, y_{1}\right)$ denote the coordinates of point $P_{1}$ and let $\left(x_{2}, y_{2}\right)$ denote the coordinates of point $P_{2}$. Assume that the line joining $P_{1}$ and $P_{2}$ is neither horizontal nor vertical. Refer to Figure 6(a). The coordinates of $P_{3}$ are $\left(x_{2}, y_{1}\right)$. The horizontal distance from $P_{1}$ to $P_{3}$ is the absolute value of the difference of the $x$-coordinates, $\left|x_{2}-x_{1}\right|$.The vertical distance from $P_{3}$ to $P_{2}$ is the

Figure 6

(a)

(b)
absolute value of the difference of the $y$-coordinates, $\left|y_{2}-y_{1}\right|$. See Figure 6(b). The distance $d\left(P_{1}, P_{2}\right)$ that we seek is the length of the hypotenuse of the right triangle, so, by the Pythagorean Theorem, it follows that

$$
\begin{aligned}
{\left[d\left(P_{1}, P_{2}\right)\right]^{2} } & =\left|x_{2}-x_{1}\right|^{2}+\left|y_{2}-y_{1}\right|^{2} \\
& =\left(x_{2}-x_{1}\right)^{2}+\left(y_{2}-y_{1}\right)^{2} \\
d\left(P_{1}, P_{2}\right) & =\sqrt{\left(x_{2}-x_{1}\right)^{2}+\left(y_{2}-y_{1}\right)^{2}}
\end{aligned}
$$

Now, if the line joining $P_{1}$ and $P_{2}$ is horizontal, then the $y$-coordinate of $P_{1}$ equals the $y$-coordinate of $P_{2}$; that is, $y_{1}=y_{2}$. Refer to Figure 7(a). In this case, the distance formula (1) still works, because, for $y_{1}=y_{2}$, it reduces to

$$
d\left(P_{1}, P_{2}\right)=\sqrt{\left(x_{2}-x_{1}\right)^{2}+0^{2}}=\sqrt{\left(x_{2}-x_{1}\right)^{2}}=\left|x_{2}-x_{1}\right|
$$

Figure 7

A similar argument holds if the line joining $P_{1}$ and $P_{2}$ is vertical. See Figure 7(b).

## EXAMPLE 2 Using the Distance Formula

Find the distance $d$ between the points $(-3,5)$ and $(3,2)$.
Solution Use the distance formula, equation (1), with $P_{1}=\left(x_{1}, y_{1}\right)=(-3,5)$ and $P_{2}=\left(x_{2}, y_{2}\right)=(3,2)$. Then

$$
\begin{aligned}
d=\sqrt{[3-(-3)]^{2}+(2-5)^{2}} & =\sqrt{6^{2}+(-3)^{2}} \\
& =\sqrt{36+9} \\
& =\sqrt{45} \\
& =3 \sqrt{5} \approx 6.71
\end{aligned}
$$

## am Now Work problems 15 and 19

The distance between two points $P_{1}=\left(x_{1}, y_{1}\right)$ and $P_{2}=\left(x_{2}, y_{2}\right)$ is never a negative number. Furthermore, the distance between two points is 0 only when the points are identical-that is, when $x_{1}=x_{2}$ and $y_{1}=y_{2}$. Also, because $\left(x_{2}-x_{1}\right)^{2}=\left(x_{1}-x_{2}\right)^{2}$ and $\left(y_{2}-y_{1}\right)^{2}=\left(y_{1}-y_{2}\right)^{2}$, it makes no difference whether the distance is computed from $P_{1}$ to $P_{2}$ or from $P_{2}$ to $P_{1}$; that is, $d\left(P_{1}, P_{2}\right)=d\left(P_{2}, P_{1}\right)$.

The introduction to this chapter mentioned that rectangular coordinates enable us to translate geometry problems into algebra problems, and vice versa. The next example shows how algebra (the distance formula) can be used to solve geometry problems.

## EXAMPLE 3 Using Algebra to Solve Geometry Problems

Consider the three points $A=(-2,1), B=(2,3)$, and $C=(3,1)$.
(a) Plot each point and form the triangle $A B C$.
(b) Find the length of each side of the triangle.
(c) Verify that the triangle is a right triangle.
(d) Find the area of the triangle.

Solution

Figure 8

(a) Figure 8 shows the points $A, B, C$ and the triangle $A B C$.
(b) To find the length of each side of the triangle, use the distance formula, equation (1).
$d(A, B)=\sqrt{[2-(-2)]^{2}+(3-1)^{2}}=\sqrt{16+4}=\sqrt{20}=2 \sqrt{5}$
$d(B, C)=\sqrt{(3-2)^{2}+(1-3)^{2}}=\sqrt{1+4}=\sqrt{5}$
$d(A, C)=\sqrt{[3-(-2)]^{2}+(1-1)^{2}}=\sqrt{25+0}=5$
(c) If the triangle is a right triangle, then the sum of the squares of the lengths of two of the sides will equal the square of the length of the third side. (Why is this sufficient?) Looking at Figure 8, it seems reasonable to conjecture that the right angle is at vertex $B$. We shall check to see whether

$$
[d(A, B)]^{2}+[d(B, C)]^{2}=[d(A, C)]^{2}
$$

Using the results from part (b) yields

$$
\begin{aligned}
{[d(A, B)]^{2}+[d(B, C)]^{2} } & =(2 \sqrt{5})^{2}+(\sqrt{5})^{2} \\
& =20+5=25=[d(A, C)]^{2}
\end{aligned}
$$

It follows from the converse of the Pythagorean Theorem that triangle $A B C$ is a right triangle.
(d) Because the right angle is at vertex $B$, the sides $A B$ and $B C$ form the base and height of the triangle. Its area is

$$
\text { Area }=\frac{1}{2}(\text { Base })(\text { Height })=\frac{1}{2}(2 \sqrt{5})(\sqrt{5})=5 \text { square units }
$$

## Now Work problem 29

## 2 Use the Midpoint Formula

We now derive a formula for the coordinates of the midpoint of a line segment. Let $P_{1}=\left(x_{1}, y_{1}\right)$ and $P_{2}=\left(x_{2}, y_{2}\right)$ be the endpoints of a line segment, and let $M=(x, y)$ be the point on the line segment that is the same distance from $P_{1}$ as it is from $P_{2}$. See Figure 9. The triangles $P_{1} A M$ and $M B P_{2}$ are congruent. [Do you see why? Angle $A P_{1} M=$ angle $B M P_{2}$,* angle $P_{1} M A=$ angle $M P_{2} B$, and $d\left(P_{1}, M\right)=$ $d\left(M, P_{2}\right)$ is given. Thus we have angle-side-angle.] Hence, corresponding sides are equal in length. That is,

$$
\begin{aligned}
x-x_{1} & =x_{2}-x & \text { and } & y-y_{1}
\end{aligned}=y_{2}-y{ }_{2}=x_{1}+x_{2} \begin{array}{lrl}
2 y & =y_{1}+y_{2} \\
x & =\frac{x_{1}+x_{2}}{2} &
\end{array}
$$

## THEOREM

## In Words

To find the midpoint of a line segment, average the $x$-coordinates of the endpoints, and average the $y$-coordinates of the endpoints.

## Midpoint Formula

The midpoint $M=(x, y)$ of the line segment from $P_{1}=\left(x_{1}, y_{1}\right)$ to $P_{2}=\left(x_{2}, y_{2}\right)$ is

$$
\begin{equation*}
M=(x, y)=\left(\frac{x_{1}+x_{2}}{2}, \frac{y_{1}+y_{2}}{2}\right) \tag{2}
\end{equation*}
$$

[^0]
## EXAMPLE 4 Finding the Midpoint of a Line Segment

Find the midpoint of the line segment from $P_{1}=(-5,5)$ to $P_{2}=(3,1)$. Plot the points $P_{1}$ and $P_{2}$ and the midpoint.
Figure 10
Solution

Apply the midpoint formula (2) using $x_{1}=-5, y_{1}=5, x_{2}=3$, and $y_{2}=1$. Then the coordinates $(x, y)$ of the midpoint $M$ are

$$
x=\frac{x_{1}+x_{2}}{2}=\frac{-5+3}{2}=-1 \quad \text { and } \quad y=\frac{y_{1}+y_{2}}{2}=\frac{5+1}{2}=3
$$

That is, $M=(-1,3)$. See Figure 10.
Now Work problem 35

## F. 1 Assess Your Understanding

'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.

1. On the real number line the origin is assigned the number
$\qquad$ . (p. A4)
2. If -3 and 5 are the coordinates of two points on the real number line, the distance between these points is -. (p. A6)
3. If 3 and 4 are the legs of a right triangle, the hypotenuse is
$\qquad$ . (pp. A13-A14)
4. Use the converse of the Pythagorean Theorem to show that a triangle whose sides are of lengths 11,60 , and 61 is a right triangle. (p. A14)
5. State the formula for the area $A$ of a triangle whose base is $b$ and whose altitude is $h$. (p. A15)
6. State the three cases for which two triangles are congruent. (p. A16)

## Concepts and Vocabulary

7. If $(x, y)$ are the coordinates of a point $P$ in the $x y$-plane, then $x$ is called the $\qquad$ of $P$, and $y$ is the $\qquad$ of $P$.
8. The coordinate axes divide the $x y$-plane into four sections called $\qquad$ -.
9. The distance $d$ between two points $P_{1}=\left(x_{1}, y_{1}\right)$ and $P_{2}=\left(x_{2}, y_{2}\right)$ is $d=$ $\qquad$ .
10. If three distinct points $P, Q$, and $R$ all lie on a line, and if $d(P, Q)=d(Q, R)$, then $Q$ is called the of the line segment from $P$ to $R$.

## Skill Building

In Problems 11 and 12, plot each point in the xy-plane. Tell in which quadrant or on what coordinate axis each point lies.
11. (a) $A=(-3,2)$
(d) $D=(6,5)$
(b) $B=(6,0)$
(e) $E=(0,-3)$
(c) $C=(-2,-2)$
(f) $F=(6,-3)$
12. (a) $A=(1,4)$
(d) $D=(4,1)$
(b) $B=(-3,-4)$
(e) $E=(0,1)$
(c) $C=(-3,4)$
(f) $F=(-3,0)$
13. Plot the points $(2,0),(2,-3),(2,4),(2,1)$, and $(2,-1)$. Describe the set of all points of the form $(2, y)$, where $y$ is a real number.
14. Plot the points $(0,3),(1,3),(-2,3),(5,3)$, and $(-4,3)$. Describe the set of all points of the form $(x, 3)$, where $x$ is a real number.

In Problems 15-28, find the distance d $\left(P_{1}, P_{2}\right)$ between the points $P_{1}$ and $P_{2}$.
15.

16.

17.

18.

19. $P_{1}=(3,-4) ; \quad P_{2}=(5,4)$
20. $P_{1}=(-1,0) ; \quad P_{2}=(2,4)$
21. $P_{1}=(-3,2) ; \quad P_{2}=(6,0)$
22. $P_{1}=(2,-3) ; \quad P_{2}=(4,2)$
23. $P_{1}=(4,-2) ; \quad P_{2}=(-2,-5)$
24. $P_{1}=(-4,-3) ; \quad P_{2}=(6,2)$
25. $P_{1}=(-0.2,0.3) ; \quad P_{2}=(2.3,1.1)$
27. $P_{1}=(a, b) ; \quad P_{2}=(0,0)$
26. $P_{1}=(1.2,2.3) ; \quad P_{2}=(-0.3,1.1)$
28. $P_{1}=(a, a) ; \quad P_{2}=(0,0)$

In Problems 29-34, plot each point and form the triangle ABC. Verify that the triangle is a right triangle. Find its area.
29. $A=(-2,5) ; \quad B=(1,3) ; \quad C=(-1,0)$
30. $A=(-2,5) ; \quad B=(12,3) ; \quad C=(10,-11)$
31. $A=(-5,3) ; \quad B=(6,0) ; \quad C=(5,5)$
32. $A=(-6,3) ; \quad B=(3,-5) ; \quad C=(-1,5)$
33. $A=(4,-3) ; \quad B=(0,-3) ; \quad C=(4,2)$
34. $A=(4,-3) ; \quad B=(4,1) ; \quad C=(2,1)$

In Problems 35-44, find the midpoint of the line segment joining the points $P_{1}$ and $P_{2}$.
35. $P_{1}=(3,-4) ; \quad P_{2}=(5,4)$
37. $P_{1}=(-3,2) ; \quad P_{2}=(6,0)$
39. $P_{1}=(4,-2) ; \quad P_{2}=(-2,-5)$
41. $P_{1}=(-0.2,0.3) ; \quad P_{2}=(2.3,1.1)$
43. $P_{1}=(a, b) ; \quad P_{2}=(0,0)$
36. $P_{1}=(-2,0) ; \quad P_{2}=(2,4)$
38. $P_{1}=(2,-3) ; \quad P_{2}=(4,2)$
40. $P_{1}=(-4,-3) ; \quad P_{2}=(2,2)$
42. $P_{1}=(1.2,2.3) ; \quad P_{2}=(-0.3,1.1)$
44. $P_{1}=(a, a) ; \quad P_{2}=(0,0)$

## Applications and Extensions

45. Find all points having an $x$-coordinate of 2 whose distance from the point $(-2,-1)$ is 5 .
46. Find all points having a $y$-coordinate of -3 whose distance from the point $(1,2)$ is 13 .
47. Find all points on the $x$-axis that are 5 units from the point $(4,-3)$.
48. Find all points on the $y$-axis that are 5 units from the point $(4,4)$.
49. Geometry The medians of a triangle are the line segments from each vertex to the midpoint of the opposite side (see the figure). Find the lengths of the medians of the triangle with vertices at $A=(0,0), B=(6,0)$, and $C=(4,4)$.

50. Geometry An equilateral triangle is one in which all three sides are of equal length. If two vertices of an equilateral triangle are $(0,4)$ and $(0,0)$, find the third vertex. How many of these triangles are possible?

51. Geometry Find the midpoint of each diagonal of a square with side of length $s$. Draw the conclusion that the diagonals of a square intersect at their midpoints. [Hint: Use ( 0,0 ), $(0, s),(s, 0)$, and $(s, s)$ as the vertices of the square.]
52. Geometry Verify that the points $(0,0),(a, 0)$, and $\left(\frac{a}{2}, \frac{\sqrt{3} a}{2}\right)$ are the vertices of an equilateral triangle. Then show that the midpoints of the three sides are the vertices of a second equilateral triangle (refer to Problem 50).

In Problems 53-56, find the length of each side of the triangle determined by the three points $P_{1}, P_{2}$, and $P_{3}$. State whether the triangle is an isosceles triangle, a right triangle, neither of these, or both. (An isosceles triangle is one in which at least two of the sides are of equal length.)
53. $P_{1}=(2,1) ; \quad P_{2}=(-4,1) ; \quad P_{3}=(-4,-3)$

56. $P_{1}=(7,2) ; \quad P_{2}=(-4,0) ; \quad P_{3}=(4,6)$
57. Baseball A major league baseball "diamond" is actually a square 90 feet on a side (see the figure). What is the distance directly from home plate to second base (the diagonal of the square)?

58. Little League Baseball The layout of a Little League playing field is a square 60 feet on a side. How far is it directly from home plate to second base (the diagonal of the square)?
Source: Little League Baseball, Official Regulations and Playing Rules, 2012.
59. Baseball Refer to Problem 57. Overlay a rectangular coordinate system on a major league baseball diamond so that the origin is at home plate, the positive $x$-axis lies in the direction from home plate to first base, and the positive $y$-axis lies in the direction from home plate to third base.
(a) What are the coordinates of first base, second base, and third base? Use feet as the unit of measurement.
(b) If the right fielder is located at $(310,15)$, how far is it from there to second base?
(c) If the center fielder is located at $(300,300)$, how far is it from there to third base?
60. Little League Baseball Refer to Problem 58. Overlay a rectangular coordinate system on a Little League baseball diamond so that the origin is at home plate, the positive $x$-axis lies in the direction from home plate to first base, and the positive $y$-axis lies in the direction from home plate to third base.
(a) What are the coordinates of first base, second base, and third base? Use feet as the unit of measurement.
(b) If the right fielder is located at $(180,20)$, how far is it from there to second base?
(c) If the center fielder is located at $(220,220)$, how far is it from there to third base?
61. Distance between Moving Objects A Ford Focus and a Mack truck leave an intersection at the same time. The Focus heads east at an average speed of 30 miles per hour, while the truck heads south at an average speed of 40 miles per hour. Find an expression for their distance apart $d$ (in miles) at the end of $t$ hours.
62. Distance of a Moving Object from a Fixed Point A hot-air balloon, headed due east at an average speed of 15 miles per hour and at a constant altitude of 100 feet, passes over an intersection (see the figure). Find an expression for the distance $d$ (measured in feet) from the balloon to the intersection $t$ seconds later.

63. Drafting Error When a draftsman draws three lines that are to intersect at one point, the lines may not intersect as intended and subsequently will form an error triangle. If this error triangle is long and thin, one estimate for the location of the desired point is the midpoint of the shortest side. The figure shows one such error triangle.
(a) Find an estimate for the desired intersection point.
(b) Find the length of the median for the midpoint found in part (a). See Problem 49.
Source: www.uwgb.edu/DutchS/structge/s100.htm

64. Net Sales The figure illustrates how net sales of Wal-Mart Stores, Inc., grew from 2008 through 2012. Use the midpoint formula to estimate the net sales of Wal-Mart Stores, Inc., in 2010. How does your result compare to the reported value of $\$ 405$ billion?
Source: Wal-Mart Stores, Inc., 2012 Annual Report

65. Poverty Threshold Poverty thresholds are determined by the U.S. Census Bureau. A poverty threshold represents the minimum annual household income for a family not to be considered poor. In 2004, the poverty threshold for a family of four with two children under the age of 18 years was $\$ 19,157$. In 2012, the poverty threshold for a family of four with two children under the age of 18 years was $\$ 23,283$. Assuming poverty thresholds increase in a straight-line fashion, use the midpoint formula to estimate the poverty threshold of a family of four with two children under the age of 18 in 2008. How does your result compare to the actual poverty threshold in 2008 of $\$ 21,834$ ?

## F. 2 Graphs of Equations in Two Variables; Intercepts; Symmetry

PREPARING FOR THIS SECTION Before getting started, review the following:

- Solving Equations (Appendix A, Section A.8, pp. A63-A69)

Now Work the 'Are You Prepared?' problems on page 16.
OBJECTIVES 1 Graph Equations by Plotting Points (p. 9)
2 Find Intercepts from a Graph (p. 11)
3 Find Intercepts from an Equation (p.12)
4 Test an Equation for Symmetry (p. 12)
5 Know How to Graph Key Equations (p. 14)

## 1 Graph Equations by Plotting Points

An equation in two variables, say $x$ and $y$, is a statement in which two expressions involving $x$ and $y$ are equal. The expressions are called the sides of the equation. Since an equation is a statement, it may be true or false, depending on the value of the variables. Any values of $x$ and $y$ that result in a true statement are said to satisfy the equation.

For example, the following are all equations in two variables $x$ and $y$ :

$$
x^{2}+y^{2}=5 \quad 2 x-y=6 \quad y=2 x+5 \quad x^{2}=y
$$

The first of these, $x^{2}+y^{2}=5$, is satisfied for $x=1, y=2$, since $1^{2}+2^{2}=$ $1+4=5$. Other choices of $x$ and $y$, such as $x=-1, y=-2$, also satisfy this equation. It is not satisfied for $x=2$ and $y=3$, since $2^{2}+3^{2}=4+9=13 \neq 5$.

The graph of an equation in two variables $x$ and $y$ consists of the set of points in the $x y$-plane whose coordinates $(x, y)$ satisfy the equation.

## EXAMPLE I <br> Determining Whether a Point Is on the Graph of an Equation

Determine if the following points are on the graph of the equation $2 x-y=6$.
(a) $(2,3)$
(b) $(2,-2)$

Solution (a) For the point $(2,3)$, check to see whether $x=2, y=3$ satisfies the equation $2 x-y=6$

$$
2 x-y=2(2)-3=4-3=1 \neq 6
$$

The equation is not satisfied, so the point $(2,3)$ is not on the graph.
(b) For the point $(2,-2)$,

$$
2 x-y=2(2)-(-2)=4+2=6
$$

The equation is satisfied, so the point $(2,-2)$ is on the graph.

```
mmonWork problem 9
```

## EXAMPLE 2 How to Graph an Equation by Plotting Points

Graph the equation: $y=-2 x+3$

## Step-by-Step Solution

Step 1: Find points $(x, y)$ that satisfy the equation. To determine these points, choose values of $x$ and use the equation to find the corresponding values for y. See Table 1.

Table 1 |  | $\boldsymbol{y}$ | $\boldsymbol{y}=-\mathbf{2 x}+\mathbf{3}$ |
| ---: | :--- | :--- |
|  | $(\boldsymbol{x}, \boldsymbol{y})$ |  |
| -2 | $-2(-2)+3=7$ | $(-2,7)$ |
| 0 | $-2(-1)+3=5$ | $(-1,5)$ |
| 1 | $-2(1)+3=3$ | $(0,3)$ |
| 2 | $-2(2)+3=-1$ | $(1,1)$ |
|  |  |  |

Step 2: Plot the points found in the table as shown in Figure 11 (a). Now connect the points to obtain the graph of the equation (a line), as shown in Figure 11 (b).

Figure 11

(a)

(b)

## EXAMPLE 3 Graphing an Equation by Plotting Points

Graph the equation: $y=x^{2}$
Solution Table 2 provides several points on the graph. Plotting these points and connecting them with a smooth curve gives the graph (a parabola) shown in Figure 12.

Table 2 | $\boldsymbol{x}$ | $\boldsymbol{y}=\boldsymbol{x}^{\mathbf{2}}$ | $(\boldsymbol{x}, \boldsymbol{y})$ |
| :---: | :---: | :---: |
|  | -4 | 16 |
| $-4,16)$ |  |  |
| -3 | 9 | $(-3,9)$ |
| -2 | 4 | $(-2,4)$ |
| -1 | 1 | $(-1,1)$ |
| 0 | 0 | $(0,0)$ |
| 1 | 1 | $(1,1)$ |
| 2 | 4 | $(2,4)$ |
| 3 | 9 | $(3,9)$ |
| 4 | 16 | $(4,16)$ |

Figure 12

The graphs of the equations shown in Figures 11 and 12 do not show all the points that are on the graph. For example, in Figure 11 the point $(20,-37)$ is a part of the graph of $y=-2 x+3$, but it is not shown. Since the graph of $y=-2 x+3$ could be extended out as far as we please, we use arrows to indicate that the pattern shown continues. It is important when illustrating a graph to present enough of the graph so that any viewer of the illustration will "see" the rest of it as an obvious continuation of what is actually there. This is referred to as a complete graph.

One way to obtain a complete graph of an equation is to plot a sufficient number of points on the graph for a pattern to become evident. Then these points are connected with a smooth curve following the suggested pattern. But how many points are sufficient? Sometimes knowledge about the equation tells us. For example, we will learn in the next section that if an equation is of the form $y=m x+b$, then its graph is a line. In this case, only two points are needed to obtain the graph.

One purpose of this book is to investigate the properties of equations in order to decide whether a graph is complete. Sometimes we shall graph equations by plotting points. Shortly, we shall investigate various techniques that will enable us to graph an equation without plotting so many points.

Figure 13

COMMENT Another way to obtain the graph of an equation is to use a graphing utility. Read Section B.2, Using a Graphing Utility to Graph Equations, in Appendix B.

Two techniques that sometimes reduce the number of points required to graph an equation involve finding intercepts and checking for symmetry.

## 2 Find Intercepts from a Graph

The points, if any, at which a graph crosses or touches the coordinate axes are called the intercepts. See Figure 13. The $x$-coordinate of a point at which the graph crosses or touches the $x$-axis is an $\boldsymbol{x}$-intercept, and the $y$-coordinate of a point at which the graph crosses or touches the $y$-axis is a $y$-intercept. For a graph to be complete, all its intercepts must be displayed.

## EXAMPLE 4

## Solution

Figure 14

## Finding Intercepts from a Graph

Find the intercepts of the graph in Figure 14. What are its $x$-intercepts? What are its $y$-intercepts?
The intercepts of the graph are the points

$$
\begin{equation*}
(-3,0), \quad(0,3), \quad\left(\frac{3}{2}, 0\right), \quad\left(0,-\frac{4}{3}\right), \quad(0,-3.5) \tag{4.5,0}
\end{equation*}
$$

The $x$-intercepts are $-3, \frac{3}{2}$, and 4.5 ; the $y$-intercepts are $-3.5,-\frac{4}{3}$, and 3 .
In Example 4, note the following usage: If the type of intercept ( $x$ - versus $y$-) is not specified, then report the intercept as an ordered pair. However, if the type of intercept is specified, then report only the coordinate of the specified intercept. For $x$-intercepts, report the $x$-coordinate of the intercept; for $y$-intercepts, report the $y$-coordinate of the intercept.

## 3 Find Intercepts from an Equation

The intercepts of a graph can be found from its equation by using the fact that points on the $x$-axis have $y$-coordinates equal to 0 and points on the $y$-axis have $x$-coordinates equal to 0 .

## Procedure for Finding Intercepts

1. To find the $x$-intercept(s), if any, of the graph of an equation, let $y=0$ in the equation and solve for $x$.
2. To find the $y$-intercept(s), if any, of the graph of an equation, let $x=0$ in the equation and solve for $y$.

Because the $x$-intercepts of the graph of an equation are those $x$-values for which $y=0$, they are also called the zeros (or roots) of the equation.

## EXAMPLE 5

Solution

DEFINITION

## Finding Intercepts from an Equation

Find the $x$-intercept(s) and the $y$-intercept(s) of the graph of $y=x^{2}-4$.
To find the $x$-intercept(s), let $y=0$ and obtain the equation

$$
\begin{array}{rlrlrl} 
& x^{2}-4 & =0 \\
& (x+2)(x-2) & =0 & & \\
x+2=0 & \text { or } & x-2 & =0 & & \text { Zero-Product Property } \\
x=-2 & \text { or } & x & =2 & & \text { Solve. }
\end{array}
$$

The equation has two solutions, -2 and 2. The $x$-intercepts (the zeros) are -2 and 2 .
To find the $y$-intercept(s), let $x=0$ in the equation.

$$
\begin{aligned}
y & =x^{2}-4 \\
& =0^{2}-4 \\
& =-4
\end{aligned}
$$

The $y$-intercept is -4 .
am Now Work problem 19
COMMENT For many equations, finding intercepts may not be so easy. In such cases, a graphing utility can be used. Read the first part of Section B.3, Using a Graphing Utility to Locate Intercepts and Check for Symmetry, in Appendix B to find out how a graphing utility locates intercepts.

## 4 Test an Equation for Symmetry

Another helpful tool for graphing equations by hand involves symmetry, particularly symmetry with respect to the $x$-axis, the $y$-axis, and the origin.

Symmetry often occurs in nature. Consider the picture of the butterfly. Do you see the symmetry?

A graph is said to be symmetric with respect to the $\boldsymbol{x}$-axis if, for every point $(x, y)$ on the graph, the point $(x,-y)$ is also on the graph.
A graph is said to be symmetric with respect to the $\boldsymbol{y}$-axis if, for every point $(x, y)$ on the graph, the point $(-x, y)$ is also on the graph.
A graph is said to be symmetric with respect to the origin if, for every point $(x, y)$ on the graph, the point $(-x,-y)$ is also on the graph.

Figure 15 illustrates the definition. Note that when a graph is symmetric with respect to the $x$-axis, the part of the graph above the $x$-axis is a reflection or mirror image of the part below it, and vice versa. When a graph is symmetric with respect to the $y$-axis, the part of the graph to the right of the $y$-axis is a reflection of the part to the left of it, and vice versa. Symmetry with respect to the origin may be viewed in two ways:

1. As a reflection about the $y$-axis, followed by a reflection about the $x$-axis
2. As a projection along a line through the origin so that the distances from the origin are equal

Figure 15

Symmetry with respect to the $x$-axis

Symmetry with respect to the $y$-axis

Symmetry with respect to the origin

## EXAMPLE 6

## Symmetric Points

(a) If a graph is symmetric with respect to the $x$-axis, and the point $(4,2)$ is on the graph, then the point $(4,-2)$ is also on the graph.
(b) If a graph is symmetric with respect to the $y$-axis, and the point $(4,2)$ is on the graph, then the point $(-4,2)$ is also on the graph.
(c) If a graph is symmetric with respect to the origin, and the point $(4,2)$ is on the graph, then the point $(-4,-2)$ is also on the graph.
am Now Work problem 27
When the graph of an equation is symmetric with respect to the $x$-axis, the $y$-axis, or the origin, the number of required points to plot in order to see the pattern is reduced. For example, if the graph of an equation is symmetric with respect to the $y$-axis, then once points to the right of the $y$-axis are plotted, an equal number of points on the graph can be obtained by reflecting them about the $y$-axis. Because of this, before graphing an equation, it is wise to determine whether any symmetry exists. The following tests are used for this purpose.

## Tests for Symmetry

To test the graph of an equation for symmetry with respect to the
$x$-Axis Replace $y$ by $-y$ in the equation. If an equivalent equation results, the graph of the equation is symmetric with respect to the $x$-axis.
$y$-Axis Replace $x$ by $-x$ in the equation. If an equivalent equation results, the graph of the equation is symmetric with respect to the $y$-axis.
Origin Replace $x$ by $-x$ and $y$ by $-y$ in the equation. If an equivalent equation results, the graph of the equation is symmetric with respect to the origin.

## EXAMPLE 7

Solution

Figure 16

## Testing an Equation for Symmetry

Test $y=\frac{4 x^{2}}{x^{2}+1}$ for symmetry.
$x$-Axis: To test for symmetry with respect to the $x$-axis, replace $y$ by $-y$. Since $-y=\frac{4 x^{2}}{x^{2}+1}$ is not equivalent to $y=\frac{4 x^{2}}{x^{2}+1}$, the graph of the equation is not symmetric with respect to the $x$-axis.
$y$-Axis: To test for symmetry with respect to the $y$-axis, replace $x$ by $-x$. Since $y=\frac{4(-x)^{2}}{(-x)^{2}+1}=\frac{4 x^{2}}{x^{2}+1}$ is equivalent to $y=\frac{4 x^{2}}{x^{2}+1}$, the graph of the equation is symmetric with respect to the $y$-axis.
Origin: To test for symmetry with respect to the origin, replace $x$ by $-x$ and $y$ by $-y$.

$$
\begin{aligned}
-y & =\frac{4(-x)^{2}}{(-x)^{2}+1} & & \text { Replace } x \text { by }-x \text { and } y \text { by }-y . \\
-y & =\frac{4 x^{2}}{x^{2}+1} & & \text { Simplify. } \\
y & =-\frac{4 x^{2}}{x^{2}+1} & & \text { Multiply both sides by }-1 .
\end{aligned}
$$

Since the result is not equivalent to the original equation, the graph of the equation $y=\frac{4 x^{2}}{x^{2}+1}$ is not symmetric with respect to the origin.

## Seeing the Concept

Figure 16 shows the graph of $y=\frac{4 x^{2}}{x^{2}+1}$ using a graphing utility. Do you see the symmetry with respect to the $y$-axis?

## Now Work problem 57

## 5 Know How to Graph Key Equations

The next three examples use intercepts, symmetry, and point plotting to obtain the graphs of key equations. It is important to know the graphs of these key equations because they will be used later. The first of these is $y=x^{3}$.

## EXAMPLE 8 Graphing the Equation $y=x^{3}$ by Finding Intercepts

## and Checking for Symmetry

Graph the equation $y=x^{3}$ by plotting points. Find any intercepts and check for symmetry first.
Solution First, find the intercepts. When $x=0$, then $y=0$; and when $y=0$, then $x=0$. The origin $(0,0)$ is the only intercept. Now test for symmetry.
$x$-Axis: Replace $y$ by $-y$. Since $-y=x^{3}$ is not equivalent to $y=x^{3}$, the graph is not symmetric with respect to the $x$-axis.
$y$-Axis: Replace $x$ by $-x$. Since $y=(-x)^{3}=-x^{3}$ is not equivalent to $y=x^{3}$, the graph is not symmetric with respect to the $y$-axis.
Origin: Replace $x$ by $-x$ and $y$ by $-y$. Since $-y=(-x)^{3}=-x^{3}$ is equivalent to $y=x^{3}$ (multiply both sides by -1 ), the graph is symmetric with respect to the origin.
To graph $y=x^{3}$, use the equation to obtain several points on the graph. Because of the symmetry, we only need to locate points on the graph for which $x \geq 0$.

See Table 3. Since $(1,1)$ is on the graph, and the graph is symmetric with respect to the origin, the point $(-1,-1)$ is also on the graph. Figure 17 shows the graph.

Table 3

| $\boldsymbol{x}$ | $\boldsymbol{y}=\boldsymbol{x}^{\mathbf{3}}$ | $(\boldsymbol{x}, \boldsymbol{y})$ |
| :---: | :---: | :--- |
| 0 | 0 | $(0,0)$ |
| 1 | 1 | $(1,1)$ |
| 2 | 8 | $(2,8)$ |
| 3 | 27 | $(3,27)$ |

Figure 17

## EXAMPLE 9 Graphing the Equation $x=y^{2}$

(a) Graph the equation $x=y^{2}$. Find any intercepts and check for symmetry first.
(b) Graph $x=y^{2}, y \geq 0$.

## Solution

## Table 4

| $y$ | $x=\boldsymbol{y}^{\mathbf{2}}$ | $(\boldsymbol{x}, \boldsymbol{y})$ |
| :---: | :---: | :---: |
| 0 | 0 | $(0,0)$ |
| 1 | 1 | $(1,1)$ |
| 2 | 4 | $(4,2)$ |
| 3 | 9 | $(9,3)$ |

Figure 20

(a) The lone intercept is $(0,0)$. The graph is symmetric with respect to the $x$-axis since $x=(-y)^{2}$ is equivalent to $x=y^{2}$. The graph is not symmetric with respect to the $y$-axis or the origin.

To graph $x=y^{2}$, use the equation to obtain several points on the graph. Because the equation is solved for $x$, it is easier to assign values to $y$ and use the equation to determine the corresponding values of $x$. Because of the symmetry, start by finding points whose $y$-coordinates are non-negative. Then use the symmetry to find additional points on the graph. See Table 4. For example, since $(1,1)$ is on the graph, so is $(1,-1)$. Since $(4,2)$ is on the graph, so is $(4,-2)$, and so on. Plot these points and connect them with a smooth curve to obtain Figure 18.
(b) If we restrict $y$ so that $y \geq 0$, the equation $x=y^{2}, y \geq 0$, may be written equivalently as $y=\sqrt{x}$. The portion of the graph of $x=y^{2}$ in quadrant I is therefore the graph of $y=\sqrt{x}$. See Figure 19.

Figure 18

Figure 19

COMMENT To see the graph of the equation $x=y^{2}$ on a graphing calculator, graph two equations: $Y_{1}=\sqrt{x}$ and $Y_{2}=-\sqrt{x}$. See Figure 20. We discuss why in Chapter 1.

## EXAMPLE IO

Solution Check for intercepts first. If we let $x=0$, we obtain 0 in the denominator, which makes $y$ undefined. We conclude that there is no $y$-intercept. If we let $y=0$, we get the equation $\frac{1}{x}=0$, which has no solution. We conclude that there is no $x$-intercept. The graph of $y=\frac{1}{x}$ does not cross or touch the coordinate axes.

Table 5

| $x$ | $y=\frac{\mathbf{1}}{x}$ | $(x, y)$ |
| :---: | :---: | :---: |
| $\frac{1}{10}$ | 10 | $\left(\frac{1}{10}, 10\right)$ |
| $\frac{1}{3}$ | 3 | $\left(\frac{1}{3}, 3\right)$ |
| $\frac{1}{2}$ | 2 | $\left(\frac{1}{2}, 2\right)$ |
| 1 | $\frac{1}{2}$ | $\left(1, \frac{1}{2}\right)$ |
| 2 | $\frac{1}{3}$ | $\left(3, \frac{1}{3}\right)$ |
| 10 | $\frac{1}{10}$ | $\left(10, \frac{1}{10}\right)$ |

Figure 21

Next check for symmetry:
$x$-Axis: Replacing $y$ by $-y$ yields $-y=\frac{1}{x}$, which is not equivalent to $y=\frac{1}{x}$.
$y$-Axis: Replacing $x$ by $-x$ yields $y=\frac{1}{-x}=-\frac{1}{x}$, which is not equivalent to $y=\frac{1}{x}$.
Origin: Replacing $x$ by $-x$ and $y$ by $-y$ yields $-y=-\frac{1}{x}$, which is equivalent to $y=\frac{1}{x}$. The graph is symmetric with respect to the origin.

Use the equation to form Table 5, and obtain some points on the graph. Because of the symmetry, we only find points $(x, y)$ for which $x$ is positive. From Table 5 we infer that if $x$ is a large and positive number, then $y=\frac{1}{x}$ is a positive number close to 0 . We also infer that if $x$ is a positive number close to 0 , then $y=\frac{1}{x}$ is a large and positive number. Armed with this information, we can graph the equation.

Figure 21 illustrates some of these points and the graph of $y=\frac{1}{x}$. Observe how the absence of intercepts and the existence of symmetry with respect to the origin are utilized.

COMMENT Refer to Example 2 in Appendix B, Section B.3, for the graph of $y=\frac{1}{x}$ found using a graphing utility.

## F. 2 Assess Your Understanding

'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.

1. Solve the equation $2(x+3)-1=-7$. (pp.A64-A66)
2. Solve the equation $x^{2}-4 x-12=0$.(pp. A67-A68)

## Concepts and Vocabulary

3. The points, if any, at which a graph crosses or touches the coordinate axes are called $\qquad$ _.
4. Because the $x$-intercepts of the graph of an equation are those $x$-values for which $y=0$, they are also called
$\qquad$ or $\qquad$
5. If, for every point $(x, y)$ on the graph of an equation, the point $(-x, y)$ is also on the graph, then the graph is symmetric with respect to the $\qquad$ -.
6. True or False To find the $y$-intercept(s) of the graph of an equation, let $x=0$ and solve for $y$.
7. True or False The graph of an equation in two variables $x$ and $y$ consists of the set of points in the $x y$-plane whose coordinates $(x, y)$ satisfy the equation.
8. True or False If a graph is symmetric with respect to the $x$-axis, then it cannot be symmetric with respect to the $y$-axis.

## Skill Building

In Problems 9-14, tell whether the given points are on the graph of the equation.
9. Equation: $y=x^{4}-\sqrt{x}$
Points: $(0,0) ;(1,1) ;(-1,0)$
10. Equation: $y=x^{3}-2 \sqrt{x}$
Points: $(0,0) ;(1,1) ;(1,-1)$
12. Equation: $y^{3}=x+1$
Points: $(1,2) ;(0,1) ;(-1,0)$
13. Equation: $x^{2}+y^{2}=4$
Points: $(0,2) ;(-2,2) ;(\sqrt{2}, \sqrt{2})$
11. Equation: $y^{2}=x^{2}+9$

Points: $(0,3) ;(3,0) ;(-3,0)$
14. Equation: $x^{2}+4 y^{2}=4$

Points: $(0,1) ;(2,0) ;\left(2, \frac{1}{2}\right)$

In Problems 15-26, find the intercepts and graph each equation by plotting points. Be sure to label the intercepts.
15. $y=x+2$
16. $y=x-6$
17. $y=2 x+8$
18. $y=3 x-9$
19. $y=x^{2}-1$
20. $y=x^{2}-9$
21. $y=-x^{2}+4$
22. $y=-x^{2}+1$
23. $2 x+3 y=6$
24. $5 x+2 y=10$
25. $9 x^{2}+4 y=36$
26. $4 x^{2}+y=4$

In Problems 27-36, plot each point. Then plot the point that is symmetric to it with respect to (a) the $x$-axis; (b) the $y$-axis; (c) the origin.
27. $(3,4)$
28. $(5,3)$
29. $(-2,1)$
30. $(4,-2)$

62. $y=x^{3}+2 x^{2}-4 x-8$
63. $y=|x|-4$
64. $y=|x|-2$
65. $y=\frac{3 x}{x^{2}+9}$
66. $y=\frac{x^{2}-4}{2 x}$
67. $y=\frac{-x^{3}}{x^{2}-9}$
68. $y=\frac{x^{4}+1}{2 x^{5}}$

In Problems 69-72, draw a quick sketch of each equation.
69. $y=x^{3}$
70. $x=y^{2}$
71. $y=\sqrt{x}$
72. $y=\frac{1}{x}$
73. If $(3, b)$ is a point on the graph of $y=4 x+1$, what is $b$ ?
75. If $(a, 4)$ is a point on the graph of $y=x^{2}+3 x$, what is $a$ ?
74. If $(-2, b)$ is a point on the graph of $2 x+3 y=2$, what is $b$ ?
76. If $(a,-5)$ is a point on the graph of $y=x^{2}+6 x$, what is $a$ ?

## Mixed Practice

In Problems 77-84, (a) find the intercepts of the graph of each equation, (b) test each equation for symmetry with respect to the $x$-axis, the $y$-axis, and the origin, and (c) graph each equation by plotting points. Be sure to label the intercepts on the graph and use any symmetry to assist in drawing the graph.
77. $y=x^{2}-5$
78. $y=x^{2}-8$
79. $x-y^{2}=-9$
80. $x+y^{2}=4$
81. $x^{2}+y^{2}=9$
82. $x^{2}+y^{2}=16$
83. $y=x^{3}-4 x$
84. $y=x^{3}-x$

## Applications and Extensions

85. Given that the point $(1,2)$ is on the graph of an equation that is symmetric with respect to the origin, what other point is on the graph?
86. If the graph of an equation is symmetric with respect to the $y$-axis, and 6 is an $x$-intercept of this graph, name another $x$-intercept.
87. If the graph of an equation is symmetric with respect to the origin, and -4 is an $x$-intercept of this graph, name another $x$-intercept.
88. If the graph of an equation is symmetric with respect to the $x$-axis, and 2 is a $y$-intercept, name another $y$-intercept.
89. Microphones In studios and on stages, cardioid microphones are often preferred for the richness they add to voices and for their ability to reduce the level of sound from the sides and rear of the microphone. Suppose one such cardioid pattern is given by the equation $\left(x^{2}+y^{2}-x\right)^{2}=x^{2}+y^{2}$.
(a) Find the intercepts of the graph of the equation.
(b) Test for symmetry with respect to the $x$-axis, the $y$-axis, and the origin.
90. Solar Energy The solar electric generating systems at Kramer Junction, California, use parabolic troughs to heat a heat-transfer fluid to a high temperature. This fluid is used to generate steam that drives a power conversion system to produce electricity. For troughs 7.5 feet wide, an equation for the cross section is $16 y^{2}=120 x-225$.

(a) Find the intercepts of the graph of the equation.
(b) Test for symmetry with respect to the $x$-axis, the $y$-axis, and the origin.

## Discussion and Writing

In Problem 91, use a graphing utility.
91. (a) Graph $y=\sqrt{x^{2}}, y=x, y=|x|$, and $y=(\sqrt{x})^{2}$, noting which graphs are the same.
(b) Explain why the graphs of $y=\sqrt{x^{2}}$ and $y=|x|$ are the same.
(c) Explain why the graphs of $y=x$ and $y=(\sqrt{x})^{2}$ are not the same.
(d) Explain why the graphs of $y=\sqrt{x^{2}}$ and $y=x$ are not the same.
92. Explain what is meant by a complete graph.
93. Draw a graph of an equation that contains two $x$-intercepts; at one the graph crosses the $x$-axis, and at the other the graph touches the $x$-axis.
94. Make up an equation with the intercepts $(2,0),(4,0)$, and $(0,1)$. Compare your equation with a friend's equation. Comment on any similarities.
95. Draw a graph that contains the points $(-2,-1),(0,1)$, $(1,3)$, and $(3,5)$. Compare your graph with those of other students. Are most of the graphs almost straight lines? How many are "curved"? Discuss the various ways that these points might be connected.
96. An equation is being tested for symmetry with respect to the $x$-axis, the $y$-axis, and the origin. Explain why, if two of these symmetries are present, the remaining one must also be present.
97. Draw a graph that contains the points $(-2,5),(-1,3)$, and $(0,2)$ that is symmetric with respect to the $y$-axis. Compare your graph with those of other students; comment on any similarities. Can a graph contain these points and be symmetric with respect to the $x$-axis? the origin? Why or why not?

9 Find Equations of Parallel Lines (p. 27)
10 Find Equations of Perpendicular Lines (p. 28)

Figure 22

DEFINITION

In this section we study a certain type of equation that contains two variables, called a linear equation, and its graph, a line.

## 1 Calculate and Interpret the Slope of a Line

Consider the staircase illustrated in Figure 22. Each step contains exactly the same horizontal run and the same vertical rise. The ratio of the rise to the run, called the slope, is a numerical measure of the steepness of the staircase. For example, if the run is increased and the rise remains the same, the staircase becomes less steep. If the run is kept the same but the rise is increased, the staircase becomes more steep. This important characteristic of a line is best defined using rectangular coordinates.

Let $P=\left(x_{1}, y_{1}\right)$ and $Q=\left(x_{2}, y_{2}\right)$ be two distinct points. If $x_{1} \neq x_{2}$, the slope $\boldsymbol{m}$ of the nonvertical line $L$ containing $P$ and $Q$ is defined by the formula

$$
\begin{equation*}
m=\frac{y_{2}-y_{1}}{x_{2}-x_{1}} \quad x_{1} \neq x_{2} \tag{1}
\end{equation*}
$$

If $x_{1}=x_{2}, L$ is a vertical line and the slope $m$ of $L$ is undefined (since this results in division by 0 ).

Figure 23(a) provides an illustration of the slope of a nonvertical line; Figure 23(b) illustrates a vertical line.

Figure 23

(a) Slope of $L$ is $m=\frac{y_{2}-y_{1}}{x_{2}-x_{1}}$

(b) Slope is undefined; $L$ is vertical

## In Words

The symbol $\Delta$ is the Greek letter delta. In mathematics, $\Delta$ is read "change in," so $\frac{\Delta y}{\Delta x}$ is read "change $\int$ in $y$ divided by change in $x$."

As Figure 23(a) illustrates, the slope $m$ of a nonvertical line may be viewed as

$$
m=\frac{y_{2}-y_{1}}{x_{2}-x_{1}}=\frac{\text { Rise }}{\text { Run }} \quad \text { or as } \quad m=\frac{y_{2}-y_{1}}{x_{2}-x_{1}}=\frac{\text { Change in } y}{\text { Change in } x}=\frac{\Delta y}{\Delta x}
$$

That is, the slope $m$ of a nonvertical line measures the amount $y$ changes when $x$ changes from $x_{1}$ to $x_{2}$. The expression $\frac{\Delta y}{\Delta x}$ is called the average rate of change of $y$ with respect to $x$.

Two comments about computing the slope of a nonvertical line may prove helpful:

1. Any two distinct points on the line can be used to compute the slope of the line. (See Figure 24 for justification.)

## Figure 24

Triangles $A B C$ and $P Q R$ are similar (equal angles), so ratios of corresponding sides are equal. Then
Slope using $P$ and $Q=\frac{y_{2}-y_{1}}{x_{2}-x_{1}}=$
$d(B, C)$
$\frac{d(B, C)}{d(A, C)}=$ Slope using $A$ and $B$

Since any two distinct points can be used to compute the slope of a line, the average rate of change of a line is always the same number.
2. The slope of a line may be computed from $P=\left(x_{1}, y_{1}\right)$ to $Q=\left(x_{2}, y_{2}\right)$ or from $Q$ to $P$ because

$$
\frac{y_{2}-y_{1}}{x_{2}-x_{1}}=\frac{y_{1}-y_{2}}{x_{1}-x_{2}}
$$

## EXAMPLE I

Finding and Interpreting the Slope of a Line Given Two Points
The slope $m$ of the line containing the points $(1,2)$ and $(5,-3)$ may be computed as

$$
m=\frac{-3-2}{5-1}=\frac{-5}{4}=-\frac{5}{4} \quad \text { or as } \quad m=\frac{2-(-3)}{1-5}=\frac{5}{-4}=-\frac{5}{4}
$$

For every 4-unit change in $x, y$ will change by -5 units. That is, if $x$ increases by 4 units, then $y$ will decrease by 5 units. The average rate of change of $y$ with respect to $x$ is $-\frac{5}{4}$.
an Now Work problems 11 and 17
To get a better idea of the meaning of the slope $m$ of a line $L$, consider the following example.

## EXAMPLE 2 Finding the Slopes of Various Lines

## Containing the Same Point $(2,3)$

Compute the slopes of the lines $L_{1}, L_{2}, L_{3}$, and $L_{4}$ containing the following pairs of points. Graph all four lines on the same set of coordinate axes.

$$
\begin{aligned}
& L_{1}: \quad P=(2,3) \quad Q_{1}=(-1,-2) \\
& L_{2}: \quad P=(2,3) \quad Q_{2}=(3,-1) \\
& L_{3}: \quad P=(2,3) \quad Q_{3}=(5,3) \\
& L_{4}: \quad P=(2,3) \quad Q_{4}=(2,5)
\end{aligned}
$$

## Solution

Let $m_{1}, m_{2}, m_{3}$, and $m_{4}$ denote the slopes of the lines $L_{1}, L_{2}, L_{3}$, and $L_{4}$, respectively. Then

Figure 25

$$
\begin{aligned}
& m_{1}=\frac{-2-3}{-1-2}=\frac{-5}{-3}=\frac{5}{3} \quad \text { A rise of } 5 \text { divided by a run of } 3 \\
& m_{2}=\frac{-1-3}{3-2}=\frac{-4}{1}=-4 \\
& m_{3}=\frac{3-3}{5-2}=\frac{0}{3}=0 \\
& m_{4} \text { is undefined because } x_{1}=x_{2}=2
\end{aligned}
$$

The graphs of these lines are given in Figure 25.
Figure 25 illustrates the following facts:

1. When the slope of a line is positive, the line slants upward from left to right $\left(L_{1}\right)$.
2. When the slope of a line is negative, the line slants downward from left to right $\left(L_{2}\right)$.
3. When the slope is 0 , the line is horizontal $\left(L_{3}\right)$.
4. When the slope is undefined, the line is vertical $\left(L_{4}\right)$.

## Seeing the Concept

On the same screen, graph the following equations:

$$
\begin{array}{ll}
Y_{1}=0 & \text { Slope of line is } 0 \\
Y_{2} & =\frac{1}{4} x \\
Y_{3} & =\frac{1}{2} x \\
& \text { Slope of line is } \frac{1}{4} \\
Y_{4} & =x \\
Y_{5} & =2 x \\
\text { Slope of line is } \frac{1}{2} \\
Y_{6} & =6 x
\end{array} \quad \text { Slope of line is } 1
$$

See Figure 26.

## Seeing the Concept

On the same screen, graph the following equations:

$$
\begin{array}{ll}
Y_{1}=0 & \text { Slope of line is } 0 \\
Y_{2}=-\frac{1}{4} x & \text { Slope of line is }-\frac{1}{4} \\
Y_{3}=-\frac{1}{2} x & \text { Slope of line is }-\frac{1}{2} \\
Y_{4}=-x & \text { Slope of line is }-1 \\
Y_{5}=-2 x & \text { Slope of line is }-2 \\
Y_{6}=-6 x & \text { Slope of line is }-6
\end{array}
$$

See Figure 27.

Figures 26 and 27 illustrate that the closer the line is to the vertical position, the greater the absolute value of the slope.

## 2 Graph Lines Given a Point and the Slope

## EXAMPLE 3

## Graphing a Line Given a Point and the Slope

Draw a graph of the line that contains the point $(3,2)$ and has a slope of:
(a) $\frac{3}{4}$
(b) $-\frac{4}{5}$

Solution
Figure 28

Figure 29

(a) Slope $=\frac{\text { Rise }}{\text { Run }}$. The slope $\frac{3}{4}$ means that for every horizontal movement (run) of 4 units to the right, there will be a vertical movement (rise) of 3 units. Start at the given point, $(3,2)$ and move 4 units to the right and 3 units up arriving at the point $(7,5)$. Drawing the line through this point and the point $(3,2)$ gives the graph. See Figure 28.
(b) The fact that the slope is

$$
-\frac{4}{5}=\frac{-4}{5}=\frac{\text { Rise }}{\text { Run }}
$$

means that for every horizontal movement of 5 units to the right, there will be a corresponding vertical movement of -4 units (a downward movement). Start at the given point $(3,2)$ and move 5 units to the right and then 4 units down, arriving at the point $(8,-2)$. Drawing the line through these points gives the graph. See Figure 29.

Alternatively, consider

$$
-\frac{4}{5}=\frac{4}{-5}=\frac{\text { Rise }}{\text { Run }}
$$

so that for every horizontal movement of -5 units (a movement to the left), there will be a corresponding vertical movement of 4 units (upward). This approach leads to the point $(-2,6)$, which is also on the graph of the line in Figure 29.

Now Work problem 23

## 3 Find the Equation of a Vertical Line

## EXAMPLE 4

## Solution

Figure 30

Graphing a Line
Graph the equation: $x=3$
To graph $x=3$, find all points $(x, y)$ in the plane for which $x=3$. No matter what $y$-coordinate is used, the corresponding $x$-coordinate always equals 3 . Consequently, the graph of the equation $x=3$ is a vertical line with $x$-intercept 3 and undefined slope. See Figure 30.

Example 4 suggests the following result:

## THEOREM

Equation of a Vertical Line
A vertical line is given by an equation of the form

$$
x=a
$$

where $a$ is the $x$-intercept.

COMMENT In order for an equation to be graphed using a graphing utility, the equation must be expressed in the form $y=\{$ expression in $x\}$. But $x=3$ cannot be put in this form. To overcome this, most graphing utilities have special commands for drawing vertical lines. LINE, PLOT, and VERT are among the more common ones. Consult your manual to determine the correct methodology for your graphing utility.

Figure 31

THEOREM

## 4 Use the Point-Slope Form of a Line; Identify Horizontal Lines

Now let $L$ be a nonvertical line with slope $m$ that contains the point $\left(x_{1}, y_{1}\right)$. See Figure 31. Any other point $(x, y)$ on $L$ gives

$$
m=\frac{y-y_{1}}{x-x_{1}} \quad \text { or } \quad y-y_{1}=m\left(x-x_{1}\right)
$$

Point-Slope Form of an Equation of a Line
An equation of a nonvertical line with slope $m$ that contains the point $\left(x_{1}, y_{1}\right)$ is

$$
\begin{equation*}
y-y_{1}=m\left(x-x_{1}\right) \tag{2}
\end{equation*}
$$

## EXAMPLE 5 Using the Point-Slope Form of a Line

Figure 32

## Solution

## Figure 33

## EXAMPLE 6 Finding the Equation of a Horizontal Line

Find an equation of the horizontal line containing the point $(3,2)$.
An equation of the line with slope 4 that contains the point $(1,2)$ can be found by using the point-slope form with $m=4, x_{1}=1$, and $y_{1}=2$.

$$
\begin{array}{rlrl}
y-y_{1} & =m\left(x-x_{1}\right) & & \\
y-2 & =4(x-1) \quad m=4, x_{1}=1, y_{1}=2 \\
y & =4 x-2 \quad & & \text { Solve for } y .
\end{array}
$$

See Figure 32 for the graph.

Because all the $y$-values are equal on a horizontal line, the slope of a horizontal line is 0 . To get an equation, use the point-slope form with $m=0, x_{1}=3$, and $y_{1}=2$.

$$
\begin{aligned}
y-y_{1} & =m\left(x-x_{1}\right) \\
y-2 & =0 \cdot(x-3) \quad m=0, x_{1}=3 \text {, and } y_{1}=2 \\
y-2 & =0 \\
y & =2
\end{aligned}
$$

See Figure 33 for the graph.

Example 6 suggests the following result:

## THEOREM <br> Equation of a Horizontal Line

A horizontal line is given by an equation of the form

$$
y=b
$$

where $b$ is the $y$-intercept.

## 5 Find the Equation of a Line Given Two Points

Given two points, we use the slope formula and the point-slope form of a line to find the equation.

## EXAMPLE 7 <br> Finding an Equation of a Line Given Two Points

Figure 34

## Solution

Find an equation of the line containing the points $(2,3)$ and $(-4,5)$. Graph the line.
First compute the slope of the line with $\left(x_{1}, y_{1}\right)=(2,3)$ and $\left(x_{2}, y_{2}\right)=(-4,5)$.

$$
m=\frac{5-3}{-4-2}=\frac{2}{-6}=-\frac{1}{3} \quad m=\frac{y_{2}-y_{1}}{x_{2}-x_{1}}
$$

Use the point $\left(x_{1}, y_{1}\right)=(2,3)$ and the slope $m=-\frac{1}{3}$ to get the point-slope form of the equation of the line.

$$
y-3=-\frac{1}{3}(x-2) \quad y-y_{1}=m\left(x-x_{1}\right)
$$

See Figure 34 for the graph.
In the solution to Example 7, we could have used the other point, $(-4,5)$, instead of the point $(2,3)$. The equation that results, although it looks different, is equivalent to the equation that we obtained in the example. (Try it for yourself.)
amen Now Problem 37

## 6 Write the Equation of a Line in Slope-Intercept Form

Another useful equation of a line is obtained when the slope $m$ and $y$-intercept $b$ are known. In this event, both the slope $m$ of the line and a point $(0, b)$ on the line are known; then use the point-slope form, equation (2), to obtain the following equation:

$$
y-b=m(x-0) \quad \text { or } \quad y=m x+b
$$

## THEOREM

## Slope-Intercept Form of an Equation of a Line

An equation of a line with slope $m$ and $y$-intercept $b$ is

$$
y=m x+b
$$

Figure $35 y=m x+2$

## Seeing the Concept

To see the role that the slope $m$ plays, graph the following lines on the same square screen.

$$
\begin{array}{ll}
Y_{1}=2 & m=0 \\
Y_{2}=x+2 & m=1 \\
Y_{3}=-x+2 & m=-1 \\
Y_{4}=3 x+2 & m=3 \\
Y_{5}=-3 x+2 & m=-3
\end{array}
$$

See Figure 35. What do you conclude about the lines $y=m x+2$ ?

## Seeing the Concept

To see the role of the $y$-intercept $b$, graph the following lines on the same square screen.

$$
\begin{array}{ll}
Y_{1}=2 x & b=0 \\
Y_{2}=2 x+1 & b=1 \\
Y_{3}=2 x-1 & b=-1 \\
Y_{4}=2 x+4 & b=4 \\
Y_{5}=2 x-4 & b=-4
\end{array}
$$

See Figure 36. What do you conclude about the lines $y=2 x+b$ ?

## 7 Identify the Slope and $y$-Intercept of a Line from Its Equation

When the equation of a line is written in slope-intercept form, it is easy to find the slope $m$ and $y$-intercept $b$ of the line. For example, suppose that the equation of a line is

$$
y=-2 x+3
$$

Compare this equation to $y=m x+b$.

The slope of this line is -2 and its $y$-intercept is 3 .
an Now Work problem 71

## EXAMPLE 8

## Finding the Slope and $y$-Intercept

Find the slope $m$ and $y$-intercept $b$ of the equation $2 x+4 y=8$. Graph the equation.
Solution To obtain the slope and $y$-intercept, write the equation in slope-intercept form by solving for $y$.

$$
\begin{aligned}
2 x+4 y & =8 \\
4 y & =-2 x+8 \\
y & =-\frac{1}{2} x+2 \quad y=m x+b
\end{aligned}
$$

The coefficient of $x,-\frac{1}{2}$, is the slope, and the constant, 2 , is the $y$-intercept. Graph the line with the $y$-intercept 2 and the slope $-\frac{1}{2}$. Starting at the point $(0,2)$, go to the right 2 units and then down 1 unit to the point $(2,1)$. Draw the line through these points. See Figure 37.

Figure 37
$2 x+4 y=8$

am Now Work problem 77

## 8 Graph Lines Written in General Form Using Intercepts

Refer to Example 8. The form of the equation of the line $2 x+4 y=8$ is called the general form.

## DEFINITION

The equation of a line is in general form* when it is written as

$$
A x+B y=C
$$

where $A, B$, and $C$ are real numbers and $A$ and $B$ are not both 0 .

If $B=0$ in equation (4), then $A \neq 0$ and the graph of the equation is a vertical line: $x=\frac{C}{A}$. If $B \neq 0$ in equation (4), then we can solve the equation for $y$ and write the equation in slope-intercept form as we did in Example 8.

Another approach to graphing equation (4) would be to find its intercepts. Remember, the intercepts of the graph of an equation are the points where the graph crosses or touches a coordinate axis.

## EXAMPLE 9 Graphing an Equation in General Form Using Its Intercepts

Graph the equation $2 x+4 y=8$ by finding its intercepts.
Solution To obtain the $x$-intercept, let $y=0$ in the equation and solve for $x$.

$$
\begin{aligned}
2 x+4 y & =8 \\
2 x+4(0) & =8 \quad \text { Let } y=0 . \\
2 x & =8 \\
x & =4 \quad \text { Divide both sides by } 2 .
\end{aligned}
$$

The $x$-intercept is 4 and the point $(4,0)$ is on the graph of the equation.
To obtain the $y$-intercept, let $x=0$ in the equation and solve for $y$.

Figure 38

$$
\begin{aligned}
2 x+4 y & =8 \\
2(0)+4 y & =8 \quad \text { Let } x=0 \\
4 y & =8 \\
y & =2 \quad \text { Divide both sides by } 4 .
\end{aligned}
$$

The $y$-intercept is 2 and the point $(0,2)$ is on the graph of the equation.
Plot the points $(4,0)$ and $(0,2)$ and draw the line through the points. See Figure 38.

## Now Work problem 91

Every line has an equation that is equivalent to an equation written in general form. For example, a vertical line whose equation is

$$
x=a
$$

can be written in the general form

$$
1 \cdot x+0 \cdot y=a \quad A=1, B=O, C=a
$$

A horizontal line whose equation is

$$
y=b
$$

can be written in the general form

$$
0 \cdot x+1 \cdot y=b \quad A=0, B=1, C=b
$$

Figure 39

THEOREM

Lines that are neither vertical nor horizontal have general equations of the form

$$
A x+B y=C \quad A \neq O \text { and } B \neq 0
$$

Because the equation of every line can be written in general form, any equation equivalent to equation (4) is called a linear equation.

## 9 Find Equations of Parallel Lines

When two lines (in the same plane) do not intersect (that is, they have no points in common), they are parallel. Look at Figure 39. There we have drawn two lines and have constructed two right triangles by drawing sides parallel to the coordinate axes. These lines are parallel if and only if the right triangles are similar. (Do you see why? Two angles are equal.) And the triangles are similar if and only if the ratios of corresponding sides are equal.

## Criteria for Parallel Lines

Two nonvertical lines are parallel if and only if their slopes are equal and they have different $y$-intercepts.

The use of the words "if and only if" in the preceding theorem means that actually two statements are being made, one the converse of the other.

If two nonvertical lines are parallel, then their slopes are equal and they have different $y$-intercepts.
If two nonvertical lines have equal slopes and they have different $y$-intercepts, then they are parallel.

## EXAMPLE 10 Showing That Two Lines Are Parallel

Show that the lines given by the following equations are parallel.

$$
L_{1}: \quad 2 x+3 y=6, \quad L_{2}: \quad 4 x+6 y=0
$$

Solution To determine whether these lines have equal slopes and different $y$-intercepts, write each equation in slope-intercept form.

$$
\begin{aligned}
& L_{1}: 2 x+3 y=6 \quad L_{2}: 4 x+6 y=0 \\
& 3 y=-2 x+6 \quad 6 y=-4 x \\
& y=-\frac{2}{3} x+2 \quad y=-\frac{2}{3} x \\
& \text { Slope }=-\frac{2}{3} ; y \text {-intercept }=2 \quad \text { Slope }=-\frac{2}{3} ; y \text {-intercept }=0
\end{aligned}
$$

Because these lines have the same slope, $-\frac{2}{3}$, but different $y$-intercepts, the lines are
parallel. See Figure 40 . parallel. See Figure 40.

## EXAMPLE II Finding a Line That Is Parallel to a Given Line

Find an equation for the line that contains the point $(2,-3)$ and is parallel to the line $2 x+y=6$.

Solution Since the two lines are to be parallel, the slope of the line being sought equals the slope of the line $2 x+y=6$. Begin by writing the equation of the line $2 x+y=6$ in slope-intercept form.

$$
\begin{aligned}
2 x+y & =6 \\
y & =-2 x+6
\end{aligned}
$$

Figure 41

The slope is -2 . Since the line being sought contains the point $(2,-3)$, use the point-slope form to obtain

$$
\begin{aligned}
y-y_{1} & =m\left(x-x_{1}\right) & & \text { Point-slope form } \\
y-(-3) & =-2(x-2) & & m=-2, x_{1}=2, y_{1}=-3 \\
y+3 & =-2 x+4 & & \text { Simplify. } \\
y & =-2 x+1 & & \text { Slope-intercept form } \\
2 x+y & =1 & & \text { General form }
\end{aligned}
$$

This line is parallel to the line $2 x+y=6$ and contains the point $(2,-3)$. See Figure 41.
am Now Work problem 59

## 10 Find Equations of Perpendicular Lines

When two lines intersect at a right angle $\left(90^{\circ}\right)$, they are perpendicular. See Figure 42.

## THEOREM

Figure 42

Figure 43

Criterion for Perpendicular Lines
Two nonvertical lines are perpendicular if and only if the product of their slopes is -1 .

Here we shall prove the "only if" part of the statement:

If two nonvertical lines are perpendicular, then the product of their slopes is -1 .
In Problem 128, you are asked to prove the "if" part of the theorem:

If two nonvertical lines have slopes whose product is -1 , then the lines are perpendicular.

Proof Let $m_{1}$ and $m_{2}$ denote the slopes of the two lines. There is no loss in generality (that is, neither the angle nor the slopes are affected) if we situate the lines so that they meet at the origin. See Figure 43 . The point $A=\left(1, m_{2}\right)$ is on the line having slope $m_{2}$, and the point $B=\left(1, m_{1}\right)$ is on the line having slope $m_{1}$. (Do you see why this must be true?)

Suppose that the lines are perpendicular. Then triangle $O A B$ is a right triangle. As a result of the Pythagorean Theorem, it follows that

$$
\begin{equation*}
[d(O, A)]^{2}+[d(O, B)]^{2}=[d(A, B)]^{2} \tag{5}
\end{equation*}
$$

By the distance formula, we can write the squares of these distances as

$$
\begin{aligned}
& {[d(O, A)]^{2}=(1-0)^{2}+\left(m_{2}-0\right)^{2}=1+m_{2}^{2}} \\
& {[d(O, B)]^{2}=(1-0)^{2}+\left(m_{1}-0\right)^{2}=1+m_{1}^{2}} \\
& {[d(A, B)]^{2}=(1-1)^{2}+\left(m_{2}-m_{1}\right)^{2}=m_{2}^{2}-2 m_{1} m_{2}+m_{1}^{2}}
\end{aligned}
$$

Using these facts in equation (5), we get

$$
\left(1+m_{2}^{2}\right)+\left(1+m_{1}^{2}\right)=m_{2}^{2}-2 m_{1} m_{2}+m_{1}^{2}
$$

which, upon simplification, can be written as

$$
m_{1} m_{2}=-1
$$

If the lines are perpendicular, the product of their slopes is -1 .
You may find it easier to remember the condition for two nonvertical lines to be perpendicular by observing that the equality $m_{1} m_{2}=-1$ means that $m_{1}$ and $m_{2}$ are negative reciprocals of each other; that is, either $m_{1}=-\frac{1}{m_{2}}$ or $m_{2}=-\frac{1}{m_{1}}$.

## EXAMPLE 12 Finding the Slope of a Line Perpendicular to Another Line

If a line has slope $\frac{3}{2}$, any line having slope $-\frac{2}{3}$ is perpendicular to it.

## EXAMPLE I3 Finding the Equation of a Line Perpendicular to a Given Line

Find an equation of the line that contains the point $(1,-2)$ and is perpendicular to the line $x+3 y=6$. Graph the two lines.
Solution First write the equation of the given line in slope-intercept form to find its slope.

$$
\begin{aligned}
x+3 y & =6 & & \\
3 y & =-x+6 & & \text { Proceed to solve for } y \\
y & =-\frac{1}{3} x+2 & & \text { Place in the form } y=m x+b
\end{aligned}
$$

The given line has slope $-\frac{1}{3}$. Any line perpendicular to this line will have slope 3 .
Because the point $(1,-2)$ is on this line with slope 3 , use the point-slope form of the equation of a line.

$$
\begin{array}{rlrl}
y-y_{1} & =m\left(x-x_{1}\right) & & \text { Point-slope form } \\
y-(-2) & =3(x-1) & m=3, x_{1}=1, y_{1}=-2
\end{array}
$$

To obtain other forms of the equation, proceed as follows:

$$
\begin{aligned}
y+2 & =3(x-1) & & \\
y+2 & =3 x-3 & & \text { Simplify. } \\
y & =3 x-5 & & \text { Slope-intercept form } \\
3 x-y & =5 & & \text { General form }
\end{aligned}
$$

Figure 44 shows the graphs.

## Now Work problem 65

## F. 3 Assess Your Understanding

## Concepts and Vocabulary

1. The slope of a vertical line is $\qquad$ ; the slope of a horizontal line is $\qquad$ -.
2. For the line $2 x+3 y=6$, the $x$-intercept is $\qquad$ and the $y$-intercept is $\qquad$ —.
3. A horizontal line is given by an equation of the form
$\qquad$ , where $b$ is the $\qquad$ -.
4. True or False Vertical lines have an undefined slope.
5. True or False The slope of the line $2 y=3 x+5$ is 3 .
6. True or False The point $(1,2)$ is on the line $2 x+y=4$.
7. Two nonvertical lines have slopes $m_{1}$ and $m_{2}$, respectively. The lines are parallel if $\qquad$ and the $\qquad$ are unequal; the lines are perpendicular if $\qquad$ _.
8. The lines $y=2 x+3$ and $y=a x+5$ are parallel if $a=$ $\qquad$ —.
9. The lines $y=2 x-1$ and $y=a x+2$ are perpendicular if $a=$ $\qquad$ -.
10. True or False Perpendicular lines have slopes that are reciprocals of one another.

## Skill Building

In Problems 11-14, (a) find the slope of the line and (b) interpret the slope.
11.

12.

13.

14.

In Problems 15-22, plot each pair of points and determine the slope of the line containing them. Graph the line.
15. $(2,3) ;(4,0)$
16. $(4,2) ;(3,4)$
17. $(-2,3) ;(2,1)$
18. $(-1,1)$; $(2,3)$
19. $(-3,-1) ;(2,-1)$
20. $(4,2)$; $(-5,2)$
21. $(-1,2) ;(-1,-2)$
22. $(2,0)$; $(2,2)$

In Problems 23-30, graph the line containing the point P and having slope $m$.
23. $P=(1,2) ; m=3$
24. $P=(2,1) ; m=4$
25. $P=(2,4) ; m=-\frac{3}{4}$
26. $P=(1,3) ; m=-\frac{2}{5}$
27. $P=(-1,3) ; m=0$
28. $P=(2,-4) ; m=0$
29. $P=(0,3)$; slope undefined
30. $P=(-2,0)$; slope undefined

In Problems 31-36, the slope and a point on a line are given. Use this information to locate three additional points on the line. Answers may vary.
[Hint: It is not necessary to find the equation of the line. See Example 2.]
31. Slope 4 ; point $(1,2)$
32. Slope 2; point $(-2,3)$
34. Slope $\frac{4}{3}$; point $(-3,2)$
35. Slope -2 ; point $(-2,-3)$
33. Slope $-\frac{3}{2}$; point $(2,-4)$
36. Slope -1 ; point $(4,1)$

In Problems 37-44, find an equation of the line $L$.
37.

38.

39.

40.

41.

$L$ is parallel to $y=2 x$
42.

$L$ is parallel to $y=-x$
43.

$L$ is perpendicular
to $y=2 x$
44.

$L$ is perpendicular
to $y=-x$

In Problems 45-70, find an equation for the line with the given properties. Express your answer using either the general form or the slope-intercept form of the equation of a line, whichever you prefer.
45. Slope $=3$; containing the point $(-2,3)$
47. Slope $=-\frac{2}{3}$; containing the point $(1,-1)$
49. Containing the points $(1,3)$ and $(-1,2)$
51. Slope $=-3 ; y$-intercept $=3$
53. $x$-intercept $=2 ; y$-intercept $=-1$
55. Slope undefined; containing the point $(2,4)$
57. Horizontal; containing the point $(-3,2)$
59. Parallel to the line $y=2 x$; containing the point $(-1,2)$
61. Parallel to the line $2 x-y=-2$; containing the point $(0,0)$
63. Parallel to the line $x=5$; containing the point $(4,2)$
65. Perpendicular to the line $y=\frac{1}{2} x+4$; containing the point
$(1,-2)$
67. Perpendicular to the line $2 x+y=2$; containing the point $(-3,0)$
69. Perpendicular to the line $x=8$; containing the point $(3,4)$
46. Slope $=2$; containing the point $(4,-3)$
48. Slope $=\frac{1}{2}$; containing the point $(3,1)$
50. Containing the points $(-3,4)$ and $(2,5)$
52. Slope $=-2 ; y$-intercept $=-2$
54. $x$-intercept $=-4 ; y$-intercept $=4$
56. Slope undefined; containing the point $(3,8)$
58. Vertical; containing the point $(4,-5)$
60. Parallel to the line $y=-3 x$; containing the point $(-1,2)$
62. Parallel to the line $x-2 y=-5$; containing the point $(0,0)$
64. Parallel to the line $y=5$; containing the point $(4,2)$
66. Perpendicular to the line $y=2 x-3$; containing the point $(1,-2)$
68. Perpendicular to the line $x-2 y=-5$; containing the point $(0,4)$
70. Perpendicular to the line $y=8$; containing the point $(3,4)$

In Problems 71-90, find the slope and y-intercept of each line. Graph the line.
71. $y=2 x+3$
72. $y=-3 x+4$
73. $\frac{1}{2} y=x-1$
74. $\frac{1}{3} x+y=2$
75. $y=\frac{1}{2} x+2$
76. $y=2 x+\frac{1}{2}$
77. $x+2 y=4$
78. $-x+3 y=6$
79. $2 x-3 y=6$
80. $3 x+2 y=6$
81. $x+y=1$
82. $x-y=2$
83. $x=-4$
84. $y=-1$
85. $y=5$
86. $x=2$
87. $y-x=0$
88. $x+y=0$
89. $2 y-3 x=0$
90. $3 x+2 y=0$

In Problems 91-100, (a) find the intercepts of the graph of each equation and (b) graph the equation.
91. $2 x+3 y=6$
92. $3 x-2 y=6$
93. $-4 x+5 y=40$
94. $6 x-4 y=24$
95. $7 x+2 y=21$
96. $5 x+3 y=18$
97. $\frac{1}{2} x+\frac{1}{3} y=1$
98. $x-\frac{2}{3} y=4$
99. $0.2 x-0.5 y=1$
101. Find an equation of the $x$-axis.
100. $-0.3 x+0.4 y=1.2$
102. Find an equation of the $y$-axis.

In Problems 103-106, the equations of two lines are given. Determine whether the lines are parallel, perpendicular, or neither.
103. $y=2 x-3$
$y=2 x+4$
104. $y=\frac{1}{2} x-3$
$y=-2 x+4$
105. $y=4 x+5$
$y=-4 x+2$
106. $y=-2 x+3$
$y=-\frac{1}{2} x+2$

In Problems 107-110, match each graph with the correct equation:
(a) $y=x$
(b) $y=2 x$
(c) $y=\frac{x}{2}$
(d) $y=4 x$
107.

108.

109.

110.

## Applications and Extensions

111. Geometry Use slopes to show that the triangle whose vertices are $(-2,5),(1,3)$, and $(-1,0)$ is a right triangle.
112. Geometry Use slopes to show that the quadrilateral whose vertices are $(1,-1),(4,1),(2,2)$, and $(5,4)$ is a parallelogram.
113. Geometry Use slopes to show that the quadrilateral whose vertices are $(-1,0),(2,3),(1,-2)$, and $(4,1)$ is a rectangle.
114. Geometry Use slopes and the distance formula to show that the quadrilateral whose vertices are $(0,0),(1,3)$, $(4,2)$, and $(3,-1)$ is a square.
115. Truck Rentals A truck rental company rents a moving
116. truck for one day by charging $\$ 39$ plus $\$ 0.60$ per mile. Write a linear equation that relates the cost $C$, in dollars, of renting the truck to the number $x$ of miles driven. What is the cost of renting the truck if the truck is driven 110 miles? 230 miles?
117. Cost Equation The fixed costs of operating a business are the costs incurred regardless of the level of production. Fixed costs include rent, fixed salaries, and costs of leasing machinery. The variable costs of operating a business are the costs that change with the level of output. Variable costs include raw materials, hourly wages, and
electricity. Suppose that a manufacturer of jeans has fixed daily costs of $\$ 500$ and variable costs of $\$ 8$ for each pair of jeans manufactured. Write a linear equation that relates the daily cost $C$, in dollars, of manufacturing the jeans to the number $x$ of jeans manufactured. What is the cost of manufacturing 400 pairs of jeans? 740 pairs?
118. Cost of Driving a Car The annual fixed costs for owning a small sedan are $\$ 6735$, assuming the car is completely paid for. The cost to drive the car is approximately $\$ 0.45$ per mile. Write a linear equation that relates the $\operatorname{cost} C$ and the number $x$ of miles driven annually.
Source: AAA, April 2012
119. Wages of a Car Salesperson Dan receives $\$ 375$ per week for selling new and used cars at a car dealership in Oak Lawn, Illinois. In addition, he receives $5 \%$ of the profit on any sales that he generates. Write a linear equation that represents Dan's weekly salary $S$ when he has sales that generate a profit of $x$ dollars.
120. Electricity Rates in Illinois Commonwealth Edison Company supplies electricity to residential customers for a monthly customer charge of $\$ 13.04$ plus 10.62 cents per kilowatt-hour for up to 800 kilowatt-hours (kw-hr).

(a) Write a linear equation that relates the monthly charge $C$, in dollars, to the number $x$ of kilowatt-hours used in a month, $0 \leq x \leq 800$.
(b) Graph this equation.
(c) What is the monthly charge for using 200 kilowatthours?
(d) What is the monthly charge for using 500 kilowatthours?
(e) Interpret the slope of the line.

Source: Commonwealth Edison Company, January 2013.
120. Electricity Rates in Florida Florida Power \& Light
 Company supplies electricity to residential customers for a monthly customer charge of $\$ 7.00$ plus 8.55 cents per kilowatt-hour for up to 1000 kilowatt-hours (kw-hr).
(a) Write a linear equation that relates the monthly charge $C$, in dollars, to the number $x$ of kilowatt-hours used in a month, $0 \leq x \leq 1000$.
(b) Graph this equation.
(c) What is the monthly charge for using 200 kilowatthours?
(d) What is the monthly charge for using 500 kilowatthours?
(e) Interpret the slope of the line.

Source: Florida Power \& Light Company, January 2013.
121. Measuring Temperature The relationship between Celsius $\left({ }^{\circ} \mathrm{C}\right)$ and Fahrenheit $\left({ }^{\circ} \mathrm{F}\right)$ degrees of measuring temperature is linear. Find a linear equation relating ${ }^{\circ} \mathrm{C}$ and ${ }^{\circ} \mathrm{F}$ if $0^{\circ} \mathrm{C}$ corresponds to $32^{\circ} \mathrm{F}$ and $100^{\circ} \mathrm{C}$ corresponds to $212^{\circ} \mathrm{F}$. Use the equation to find the Celsius measure of $70^{\circ} \mathrm{F}$.
122. Measuring Temperature The Kelvin (K) scale for measuring temperature is obtained by adding 273 to the Celsius temperature.
(a) Write a linear equation relating K and ${ }^{\circ} \mathrm{C}$.
(b) Write a linear equation relating K and ${ }^{\circ} \mathrm{F}$ (see Problem 121).
123. Access Ramp A wooden access ramp is being built to reach a platform that sits 30 inches above the floor. The ramp drops 2 inches for every 25 -inch run.

(a) Write a linear equation that relates the height $y$ of the ramp above the floor to the horizontal distance $x$ from the platform.
(b) Find and interpret the $x$-intercept of the graph of your equation.
(c) Design requirements stipulate that the maximum run be 30 feet and that the maximum slope be a drop of 1 inch for every 12 inches of run. Will this ramp meet the requirements? Explain.
(d) What slopes could be used to obtain the 30 -inch rise and still meet design requirements?
Source: www.adaptiveaccess.com/wood_ramps.php
124. Cigarette Use $A$ report in the Child Trends DataBase indicated that in 2000, $20.6 \%$ of twelfth grade students reported daily use of cigarettes. In 2011, 10.3\% of twelfth grade students reported daily use of cigarettes.
(a) Write a linear equation that relates the percent $y$ of twelfth grade students who smoke cigarettes daily to the number $x$ of years after 2000 .
(b) Find the intercepts of the graph of your equation.
(c) Do these intercepts have any meaningful interpretation?
(d) Use your equation to predict the percent for the year 2025. Is this result reasonable?

## Source: www.childtrends.org/databank

125. Product Promotion A cereal company finds that the number of people who will buy one of its products in the first month that the product is introduced is linearly related to the amount of money it spends on advertising. If it spends $\$ 40,000$ on advertising, then 100,000 boxes of cereal will be sold, and if it spends $\$ 60,000$, then 200,000 boxes will be sold.
(a) Write a linear equation that relates the amount $A$ spent on advertising to the number $x$ of boxes the company aims to sell.
(b) How much expenditure on advertising is needed to sell 300,000 boxes of cereal?
(c) Interpret the slope.
126. Show that the line containing the points $(a, b)$ and $(b, a)$, $a \neq b$, is perpendicular to the line $y=x$. Also show that the midpoint of $(a, b)$ and $(b, a)$ lies on the line $y=x$.
127. The equation $2 x-y=C$ defines a family of lines, one line for each value of $C$. On one set of coordinate axes, graph the members of the family when $C=-4, C=0$, and $C=2$. Can you draw a conclusion from the graph about each member of the family?
128. Prove that if two nonvertical lines have slopes whose product is -1 , then the lines are perpendicular. [Hint: Refer to Figure 43 and use the converse of the Pythagorean Theorem.]

## Discussion and Writing

129. Which of the following equations might have the graph shown?
(a) $2 x+3 y=6$
(b) $-2 x+3 y=6$
(c) $3 x-4 y=-12$
(d) $x-y=1$
(e) $x-y=-1$
(f) $y=3 x-5$
(g) $y=2 x+3$

(h) $y=-3 x+3$
130. Which of the following equations might have the graph shown?
(a) $2 x+3 y=6$
(b) $2 x-3 y=6$
(c) $3 x+4 y=12$
(d) $x-y=1$
(e) $x-y=-1$
(f) $y=-2 x-1$
(g) $y=-\frac{1}{2} x+10$
(h) $y=x+4$
131. The figure shows the graph of two parallel lines. Which of the following pairs of equations might have such a graph?
(a) $x-2 y=3$

$$
x+2 y=7
$$

(b) $x+y=2$
$x+y=-1$
(c) $x-y=-2$
$x-y=1$

(d) $x-y=-2$ $2 x-2 y=-4$
(e) $x+2 y=2$ $x+2 y=-1$
132. The figure shows the graph of two perpendicular lines. Which of the following pairs of equations might have such a graph?
(a) $y-2 x=2$
$y+2 x=-1$
(b) $y-2 x=0$
$2 y+x=0$
(c) $2 y-x=2$
$2 y+x=-2$
(d) $y-2 x=2$
$x+2 y=-1$
(e) $2 x+y=-2$
$2 y+x=-2$
133. $\boldsymbol{m}$ Is for Slope The accepted symbol used to denote the slope of a line is the letter $m$. Investigate the origin of this symbolism. Begin by consulting a French dictionary and looking up the French word monter. Write a brief essay on your findings.
134. Grade of a Road The term grade is used to describe the inclination of a road. How is this term related to the notion of slope of a line? Is a $4 \%$ grade very steep? Investigate the grades of some mountainous roads and determine their slopes. Write a brief essay on your findings.

135. Carpentry Carpenters use the term pitch to describe the steepness of staircases and roofs. How is pitch related to slope? Investigate typical pitches used for stairs and for roofs. Write a brief essay on your findings.
136. Can the equation of every line be written in slope-intercept form? Why?
137. Does every line have exactly one $x$-intercept and one $y$-intercept? Are there any lines that have no intercepts?
138. What can you say about two lines that have equal slopes and equal $y$-intercepts?
139. What can you say about two lines with the same $x$-intercept and the same $y$-intercept? Assume that the $x$-intercept is not 0 .
140. If two distinct lines have the same slope but different $x$-intercepts, can they have the same $y$-intercept?
141. If two distinct lines have the same $y$-intercept but different slopes, can they have the same $x$-intercept?
142. Which form of the equation of a line do you prefer to use? Justify your position with an example that shows that your choice is better than another. Have reasons.
143. What Went Wrong? A student is asked to find the slope of the line joining $(-3,2)$ and $(1,-4)$. He states that the slope is $\frac{3}{2}$. Is he correct? If not, what went wrong?

## F. 4 Circles

PREPARING FOR THIS SECTION Before getting started, review the following:

- Completing the Square (Appendix A, Section A.4, pp.A38-A39)
- Solving Equations (Appendix A, Section A.8, pp. A63-A69)

Now Work the 'Are You Prepared?' problems on page 38.
OBJECTIVES 1 Write the Standard Form of the Equation of a Circle (p.34)
2 Graph a Circle (p. 35)
3 Work with the General Form of the Equation of a Circle (p. 36)

## 1 Write the Standard Form of the Equation of a Circle

One advantage of a coordinate system is that it enables us to translate a geometric statement into an algebraic statement, and vice versa. Consider, for example, the following geometric statement that defines a circle.

A circle is a set of points in the $x y$-plane that are a fixed distance $r$ from a fixed point $(h, k)$. The fixed distance $r$ is called the radius, and the fixed point $(h, k)$ is called the center of the circle.

Figure 45 shows the graph of a circle. To find the equation, let $(x, y)$ represent the coordinates of any point on a circle with radius $r$ and center $(h, k)$. Then the distance between the points $(x, y)$ and $(h, k)$ must always equal $r$. That is, by the distance formula,

$$
\sqrt{(x-h)^{2}+(y-k)^{2}}=r
$$

or, equivalently,

$$
(x-h)^{2}+(y-k)^{2}=r^{2}
$$

The standard form of an equation of a circle with radius $r$ and center $(h, k)$ is

$$
\begin{equation*}
(x-h)^{2}+(y-k)^{2}=r^{2} \tag{1}
\end{equation*}
$$

The standard form of an equation of a circle of radius $r$ with center at the origin $(0,0)$ is

$$
x^{2}+y^{2}=r^{2}
$$

If the radius $r=1$, the circle whose center is at the origin is called the unit circle and has the equation

$$
x^{2}+y^{2}=1
$$

See Figure 46. Note that the graph of the unit circle is symmetric with respect to the $x$-axis, the $y$-axis, and the origin.

Figure 46
Unit circle $x^{2}+y^{2}=1$

## EXAMPLE I Writing the Standard Form of the Equation of a Circle

Write the standard form of the equation of the circle with radius 5 and center $(-3,6)$.
Solution Substitute the values $r=5, h=-3$, and $k=6$, into equation (1).

$$
\begin{aligned}
(x-h)^{2}+(y-k)^{2} & =r^{2} \\
(x-(-3))^{2}+(y-6)^{2} & =5^{2} \\
(x+3)^{2}+(y-6)^{2} & =25
\end{aligned}
$$

## Now Work problem 7

## 2 Graph a Circle

The graph of any equation of the form $(x-h)^{2}+(y-k)^{2}=r^{2}$ is that of a circle with radius $r$ and center $(h, k)$.

## EXAMPLE 2 Graphing a Circle

Graph the equation: $(x+3)^{2}+(y-2)^{2}=16$
Solution Since the equation is in the form of equation (1), its graph is a circle. To graph the equation, compare the given equation to the standard form of the equation of a circle. The comparison yields information about the circle.

$$
\begin{aligned}
(x+3)^{2}+(y-2)^{2} & =16 \\
(x-(-3))^{2}+(y-2)^{2} & =4^{2} \\
\uparrow & \uparrow \\
(x-h)^{2}+(y-k)^{2} & =r^{2}
\end{aligned}
$$

We see that $h=-3, k=2$, and $r=4$. The circle has center $(-3,2)$ and a radius of 4 units. To graph this circle, first plot the center $(-3,2)$. Since the radius is 4 , locate four points on the circle by plotting points 4 units to the left, to the right, and up and down from the center. Then use these four points as guides to obtain the graph. See Figure 47.

Now Work problems 23 (a) and (b)

## EXAMPLE 3 Finding the Intercepts of a Circle

For the circle $(x+3)^{2}+(y-2)^{2}=16$, find the intercepts, if any, of its graph.
Solution This is the equation discussed and graphed in Example 2. To find the $x$-intercepts, if any, let $y=0$ and solve for $x$. Then

$$
\begin{aligned}
(x+3)^{2}+(y-2)^{2} & =16 & & \\
(x+3)^{2}+(0-2)^{2} & =16 & & y=0 \\
(x+3)^{2}+4 & =16 & & \text { Simplify. } \\
(x+3)^{2} & =12 & & \text { Subtract } 4 \text { from both sides. } \\
x+3 & = \pm \sqrt{12} & & \text { Solve for } x+3 \\
x & =-3 \pm 2 \sqrt{3} & & \text { Solve for } x
\end{aligned}
$$

The $x$-intercepts are $-3-2 \sqrt{3} \approx-6.46$ and $-3+2 \sqrt{3} \approx 0.46$.

To find the $y$-intercepts, if any, let $x=0$ and solve for $y$. Then

$$
\begin{aligned}
(x+3)^{2}+(y-2)^{2} & =16 & & \\
(0+3)^{2}+(y-2)^{2} & =16 & & x=0 \\
9+(y-2)^{2} & =16 & & \\
(y-2)^{2} & =7 & & \\
y-2 & = \pm \sqrt{7} & & \text { Solve for } y-2 . \\
y & =2 \pm \sqrt{7} & & \text { Solve for } y .
\end{aligned}
$$

The $y$-intercepts are $2-\sqrt{7} \approx-0.65$ and $2+\sqrt{7} \approx 4.65$.
Look back at Figure 47 to verify the approximate locations of the intercepts.
Now Nork problem 23 (c)

## 3 Work with the General Form of the Equation of a Circle

Eliminate the parentheses from the standard form of the equation of the circle given in Example 3 to obtain

$$
\begin{aligned}
(x+3)^{2}+(y-2)^{2} & =16 \\
x^{2}+6 x+9+y^{2}-4 y+4 & =16
\end{aligned}
$$

which simplifies to

$$
x^{2}+y^{2}+6 x-4 y-3=0
$$

It can be shown that any equation of the form

$$
x^{2}+y^{2}+a x+b y+c=0
$$

has a graph that is a circle, or has a graph that is a point, or has no graph at all. For example, the graph of the equation $x^{2}+y^{2}=0$ is the single point $(0,0)$. The equation $x^{2}+y^{2}+5=0$, or $x^{2}+y^{2}=-5$, has no graph, because sums of squares of real numbers are never negative.

DEFINITION
When its graph is a circle, the equation

$$
x^{2}+y^{2}+a x+b y+c=0
$$

is the general form of the equation of a circle.

If an equation of a circle is in the general form, the method of completing the square can be used to put the equation in standard form so that its center and radius can be identified.

## EXAMPLE 4

Graphing a Circle Whose Equation Is in General Form
Graph the equation: $x^{2}+y^{2}+4 x-6 y+12=0$
Solution Group the terms involving $x$, group the terms involving $y$, and put the constant on the right side of the equation. The result is

$$
\left(x^{2}+4 x\right)+\left(y^{2}-6 y\right)=-12
$$

Next, complete the square of each expression in parentheses. Remember that any number added on the left side of the equation must be added on the right.

Figure 48

This equation is the standard form of the equation of a circle with radius 1 and center $(-2,3)$. To graph the equation, use the center $(-2,3)$ and the radius 1 . See Figure 48.

Now Work problem 27

## EXAMPLE 5 Finding the General Equation of a Circle

Find the general equation of the circle whose center is $(1,-2)$ and whose graph contains the point $(4,-2)$.

## Solution

Figure 49

$$
\begin{gathered}
\left(x^{2}+4 x+4\right)+\left(y^{2}-6 y+9\right)=-12+4+9 \\
\frac{\uparrow}{\left(\frac{4}{2}\right)^{2}}=4 \quad \overbrace{\left(\frac{-6}{2}\right)^{2}}=9 \\
(x+2)^{2}+(y-3)^{2}=1 \quad \text { Factor }
\end{gathered}
$$

ex ex.

To find the equation of a circle, we need to know its center and its radius. Here, the center is $(1,-2)$. Since the point $(4,-2)$ is on the graph, the radius $r$ will equal the distance from $(4,-2)$ to the center $(1,-2)$. See Figure 49. Thus,

$$
\begin{aligned}
r & =\sqrt{(4-1)^{2}+[-2-(-2)]^{2}} \\
& =\sqrt{9}=3
\end{aligned}
$$

The standard form of the equation of the circle is

$$
(x-1)^{2}+(y+2)^{2}=9
$$

Eliminate the parentheses and rearrange the terms to get the general equation

$$
x^{2}+y^{2}-2 x+4 y-4=0
$$

## Now Work <br> Problem 13

COMMENT Example 6 requires information from Section B.5, Square Screens, in Appendix B.

## EXAMPLE 6 <br> Using a Graphing Utility to Graph a Circle

Graph the equation: $x^{2}+y^{2}=4$

## Solution

Figure 50

This is the equation of a circle with center at the origin and radius 2. To graph this equation, first solve for $y$.

$$
\begin{aligned}
x^{2}+y^{2} & =4 & & \\
y^{2} & =4-x^{2} & & \text { Subtract } x^{2} \text { from each side. } \\
y & = \pm \sqrt{4-x^{2}} & & \text { Solve for } y .
\end{aligned}
$$

There are two equations to graph on the same square screen: $Y_{1}=\sqrt{4-x^{2}}$ and $Y_{2}=-\sqrt{4-x^{2}}$. (Your circle will appear oval if you do not use a square screen.) See Figure 50. The graph is "disconnected" because of the resolution of the calculator.

## Overview

The discussion in Sections F. 3 and F. 4 about lines and circles dealt with two main types of problems that can be generalized as follows:

1. Given an equation, classify it and graph it.
2. Given a graph, or information about a graph, find its equation.

This text deals with both types of problems. We shall study various equations, classify them, and graph them. The second type of problem is usually more difficult to solve than the first.

## F. 4 Assess Your Understanding

'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.

1. To complete the square of $x^{2}+10 x$, you would (add/ subtract) the number $\qquad$ (pp. A38-A39)
2. Solve the equation $(x-2)^{2}=9$. (pp.A63-A69)

## Concepts and Vocabulary

3. True or False Every equation of the form

$$
x^{2}+y^{2}+a x+b y+c=0
$$

has a circle as its graph.
4. For a circle, the $\qquad$ is the distance from the center to any point on the circle.
5. The standard form of an equation of a circle with radius $r$ and center $(h, k)$ is $\qquad$
6. The circle whose equation is given by $x^{2}+y^{2}=1$ is called the $\qquad$ circle.

## Skill Building

In Problems 7-10, find the center and radius of each circle. Write the standard form of the equation.
7. $y_{c}^{\text {(0,1) }}$ (2,
8.

9.

10.

In Problems 11-20, write the standard form of the equation and the general form of the equation of each circle of radius $r$ and center $(h, k)$. Graph each circle.
11. $r=2 ; \quad(h, k)=(0,0)$
12. $r=3 ; \quad(h, k)=(0,0)$
13. $r=2 ; \quad(h, k)=(0,2)$
14. $r=3 ; \quad(h, k)=(1,0)$
15. $r=5 ; \quad(h, k)=(4,-3)$
16. $r=4 ; \quad(h, k)=(2,-3)$
17. $r=4 ; \quad(h, k)=(-2,1)$
18. $r=7 ; \quad(h, k)=(-5,-2)$
19. $r=\frac{1}{2} ; \quad(h, k)=\left(\frac{1}{2}, 0\right)$
20. $r=\frac{1}{2} ; \quad(h, k)=\left(0,-\frac{1}{2}\right)$

In Problems 21-34, (a) find the center ( $h, k$ ) and radius $r$ of each circle; (b) graph each circle; (c) find the intercepts, if any.
21. $x^{2}+y^{2}=4$
22. $x^{2}+(y-1)^{2}=1$
23. $2(x-3)^{2}+2 y^{2}=8$
24. $3(x+1)^{2}+3(y-1)^{2}=6$
25. $x^{2}+y^{2}-2 x-4 y-4=0$
26. $x^{2}+y^{2}+4 x+2 y-20=0$
27. $x^{2}+y^{2}+4 x-4 y-1=0$
28. $x^{2}+y^{2}-6 x+2 y+9=0$
29. $x^{2}+y^{2}-x+2 y+1=0$
30. $x^{2}+y^{2}+x+y-\frac{1}{2}=0$
31. $2 x^{2}+2 y^{2}-12 x+8 y-24=0$
32. $2 x^{2}+2 y^{2}+8 x+7=0$
33. $2 x^{2}+8 x+2 y^{2}=0$
34. $3 x^{2}+3 y^{2}-12 y=0$

In Problems 35-42, find the standard form of the equation of each circle.
35. Center at the origin and containing the point $(-2,3)$
37. Center $(2,3)$ and tangent to the $x$-axis
39. With endpoints of a diameter at $(1,4)$ and $(-3,2)$
41. Center $(-1,3)$ and tangent to the line $y=2$
36. Center $(1,0)$ and containing the point $(-3,2)$
38. Center $(-3,1)$ and tangent to the $y$-axis
40. With endpoints of a diameter at $(4,3)$ and $(0,1)$
42. Center $(4,-2)$ and tangent to the line $x=1$

In Problems 43-46, match each graph with the correct equation.
(a) $(x-3)^{2}+(y+3)^{2}=9$
(b) $(x+1)^{2}+(y-2)^{2}=4$
44.

(c) $(x-1)^{2}+(y+2)^{2}=4$
(d) $(x+3)^{2}+(y-3)^{2}=9$

## Applications and Extensions

47. Find the area of the square in the figure.

48. Find the area of the blue shaded region in the figure, assuming the quadrilateral inside the circle is a square.

49. Ferris Wheel The original Ferris wheel was built in 1893 by Pittsburgh, Pennsylvania, bridge-builder George W. Ferris. The Ferris wheel was originally built for the 1893 World's Fair in Chicago, and it was later reconstructed for the 1904 World's Fair in St. Louis. It had a maximum height of 264 feet and a wheel diameter of 250 feet. Find an equation for the wheel if the center of the wheel is on the $y$-axis.
Source: inventors.about.com
50. Ferris Wheel Opening in 2014 in Las Vegas, The High Roller observation wheel has a maximum height of 550 feet

and a diameter of 520 feet, with one full rotation taking approximately 30 minutes. Find an equation for the wheel if the center of the wheel is on the $y$-axis.
Source:LasVegas ReviewJournal
51. Weather Satellites Earth is represented on a map of a portion of the solar system so that its surface is the circle with equation $x^{2}+y^{2}+2 x+4 y-4091=0$. A weather satellite circles 0.6 unit above Earth with the center of its circular orbit at the center of Earth. Find the equation for the orbit of the satellite on this map.

52. The tangent line to a circle may be defined as the line that intersects the circle in a single point called the point of tangency. See the figure.

If the equation of the circle is $x^{2}+y^{2}=r^{2}$ and the equation of the tangent line is $y=m x+b$, show that:
(a) $r^{2}\left(1+m^{2}\right)=b^{2}$
[Hint: The quadratic equation $x^{2}+(m x+b)^{2}=r^{2}$ has exactly one solution.]
(b) The point of tangency is $\left(\frac{-r^{2} m}{b}, \frac{r^{2}}{b}\right)$.
(c) The tangent line is perpendicular to the line containing the center of the circle and the point of tangency.
53. The Greek Method The Greek method for finding the equation of the tangent line to a circle uses the fact that at any point on a circle, the lines containing the center and the tangent line are perpendicular (see Problem 52). Use this method to find an equation of the tangent line to the circle $x^{2}+y^{2}=9$ at the point $(1,2 \sqrt{2})$.
54. Use the Greek method described in Problem 53 to find an equation of the tangent line to the circle $x^{2}+y^{2}-4 x+6 y+4=0$ at the point $(3,2 \sqrt{2}-3)$.
55. Refer to Problem 52. The line $x-2 y+4=0$ is tangent to a circle at $(0,2)$. The line $y=2 x-7$ is tangent to the same circle at $(3,-1)$. Find the center of the circle.
56. Find an equation of the line containing the centers of the two circles

$$
x^{2}+y^{2}-4 x+6 y+4=0
$$

and

$$
x^{2}+y^{2}+6 x+4 y+9=0
$$

57. If a circle of radius 2 is made to roll along the $x$-axis, what is an equation for the path of the center of the circle?
58. If the circumference of a circle is $6 \pi$, what is its radius?

## Discussion and Writing

59. Which of the following equations might have the graph shown? (More than one answer is possible.)
(a) $(x-2)^{2}+(y+3)^{2}=13$
(b) $(x-2)^{2}+(y-2)^{2}=8$
(c) $(x-2)^{2}+(y-3)^{2}=13$
(d) $(x+2)^{2}+(y-2)^{2}=8$
(e) $x^{2}+y^{2}-4 x-9 y=0$
(f) $x^{2}+y^{2}+4 x-2 y=0$
(g) $x^{2}+y^{2}-9 x-4 y=0$
(h) $x^{2}+y^{2}-4 x-4 y=4$
60. Which of the following equations might have the graph shown? (More than one answer is possible.)
(a) $(x-2)^{2}+y^{2}=3$
(b) $(x+2)^{2}+y^{2}=3$
(c) $x^{2}+(y-2)^{2}=3$
(d) $(x+2)^{2}+y^{2}=4$
(e) $x^{2}+y^{2}+10 x+16=0$
(f) $x^{2}+y^{2}+10 x-2 y=1$
(g) $x^{2}+y^{2}+9 x+10=0$
(h) $x^{2}+y^{2}-9 x-10=0$

61. Explain how the center and radius of a circle can be used to graph a circle.
62. What Went Wrong? A student stated that the center and radius of the graph whose equation is $(x+3)^{2}+(y-2)^{2}=16$ are $(3,-2)$ and 4 , respectively. Why is this incorrect?

2. $\{-1,5\}$

## Chapter Project

## Internet-based Project

Determining the Selling Price of a Home Determining how much to pay for a home is one of the more difficult decisions that must be made when purchasing a home. There are many factors that play a role in a home's value. Location, size, number of bedrooms, number of bathrooms, lot size, and building materials are just a few. Fortunately, the website Zillow.com has developed its own formula for predicting the selling price of a home. This information is a great tool for predicting the actual sale price. For example, the data below show the "zestimate"-the selling price of a home as predicted by the folks at Zillow and the actual selling price of the home, for homes, in Oak Park, Illinois.

| Zestimate <br> (\$ thousands) | Sale Price <br> (\$ thousands) |
| :---: | :---: |
| 291.5 | 268 |
| 320 | 305 |
| 371.5 | 375 |
| 303.5 | 283 |
| 351.5 | 350 |
| 314 | 275 |
| 332.5 | 356 |
| 295 | 300 |
| 313 | 285 |
| 368 | 385 |

The graph below, called a scatter diagram, shows the points $(291.5,268),(320,305), \ldots,(368,385)$ in a Cartesian plane. From the graph, it appears that the data follow a linear relation.

Zestimate vs. Sale Price
in Oak Park, IL in Oak Park, IL

1. Imagine drawing a line through the data that appears to fit the data well. Do you believe the slope of the line would be positive, negative, or close to zero? Why?
2. Pick two points from the scatter diagram. Treat the zestimate as the value of $x$ and treat the sale price as the corresponding value of $y$. Find the equation of the line through the two points you selected.
3. Interpret the slope of the line.
4. Use your equation to predict the selling price of a home whose zestimate is $\$ 335,000$.
5. Do you believe it would be a good idea to use the equation you found in part 2 if the zestimate were $\$ 950,000$ ? Why or why not?
6. Choose a location in which you would like to live. Go to www.zillow.com and randomly select at least ten homes that have recently sold.
(a) Draw a scatter diagram of your data.
(b) Select two points from the scatter diagram and find the equation of the line through the points.
(c) Interpret the slope.
(d) Find a home from the Zillow website that interests you under the "Make Me Move" option for which a zestimate is available. Use your equation to predict the sale price based on the zestimate.

# Functions and Their Graphs 

## Choosing a Cellular Telephone Plan

Most consumers choose a cellular telephone provider first and then select an appropriate plan from that provider. What type of plan to select depends on your use of the phone. For example, is text messaging important? How many minutes do you plan to use the phone? Do you desire a data plan to browse the Web? The mathematics learned in this chapter can help you decide which plan is best suited for your particular needs.

## <A Look Back

So far, our discussion has focused on techniques for graphing equations containing two variables.

## A Look Ahead>

In this chapter, we look at a special type of equation involving two variables called a function. This chapter deals with what a function is, how to graph functions, properties of functions, and how functions are used in applications. The word function apparently was introduced by René Descartes in 1637. For him, a function was simply any positive integral power of a variable $x$. Gottfried Wilhelm Leibniz (1646-1716), who always emphasized the geometric side of mathematics, used the word function to denote any quantity associated with a curve, such as the coordinates of a point on the curve. Leonhard Euler (1707-1783) employed the word to mean any equation or formula involving variables and constants. His idea of a function is similar to the one most often seen in courses that precede calculus. Later, the use of functions in investigating heat flow equations led to a very broad definition that originated with Lejeune Dirichlet (1805-1859), which describes a function as a correspondence between two sets. That is the definition used in this text.

### 1.1 Functions

PREPARING FOR THIS SECTION Before getting started, review the following:

- Intervals (Appendix A, Section A.10, pp. A81-A82)
- Solving Inequalities (Appendix A, Section A.10, pp. A84-A86)

Now Work the 'Are You Prepared?' problems on page 53.

Figure 1

- Evaluating Algebraic Expressions, Domain of a Variable (Appendix A, Section A.1, pp. A6-A7)

## 1 Determine Whether a Relation Represents a Function

Often there are situations where the value of one variable is somehow linked to the value of another variable. For example, an individual's level of education is linked to annual income. Engine size is linked to gas mileage. When the value of one variable is related to the value of a second variable, we have a relation. A relation is a correspondence between two sets. If $x$ and $y$ are two elements in these sets, and if a relation exists between $x$ and $y$, then we say that $x$ corresponds to $y$ or that $y$ depends on $x$, and we write $x \rightarrow y$.

There are a number of ways to express relations between two sets. For example, the equation $y=3 x-1$ shows a relation between $x$ and $y$. It says that if we take some number $x$, multiply it by 3 , and then subtract 1 , we obtain the corresponding value of $y$. In this sense, $x$ serves as the input to the relation and $y$ is the output of the relation. This relation, expressed as a graph is shown in Figure 1.

In addition to being expressed in equations and graphs, relations can be expressed through a technique called mapping. A map illustrates a relation as a set of inputs with an arrow drawn from each element in the set of inputs to the corresponding element in the set of outputs. Ordered pairs can be used to represent $x \rightarrow y$ as $(x, y)$.

## EXAMPLE I

## Maps and Ordered Pairs as Relations

Figure 2 shows a relation between states and the number of representatives each state has in the House of Representatives (Source: www.house.gov). The relation might be named "number of representatives."

Figure 2

In this relation, Alaska corresponds to 1 , Arizona corresponds to 9 , and so on. Using ordered pairs, this relation would be expressed as
$\{($ Alaska, 1), (Arizona, 9), (California, 53), (Colorado, 7), (Florida, 27), (North Dakota, 1) \}

One of the most important concepts in algebra is the function. A function is a special type of relation. To understand the idea behind a function, let's revisit the relation presented in Example 1. If we were to ask, "How many representatives does

Figure 3

Alaska have?," you would respond "1." In fact, each input state corresponds to a single output number of representatives.

Let's consider a second relation, one that involves a correspondence between four people and their phone numbers. See Figure 3. Notice that Colleen has two telephone numbers. There is no single answer to the question "What is Colleen's phone number?"

Let's look at one more relation. Figure 4 is a relation that shows a correspondence between type of animal and life expectancy. If asked to determine the life expectancy of a dog, we would all respond "11 years." If asked to determine the life expectancy of a rabbit, we would all respond "7 years."

Figure 4

Notice that the relations presented in Figures 2 and 4 have something in common. What is it? In both of these relations, each input corresponds to exactly one output. This leads to the definition of a function.

## DEFINITION

Figure 5

Let $X$ and $Y$ be two nonempty sets.* A function from $X$ into $Y$ is a relation that associates with each element of $X$ exactly one element of $Y$.

The set $X$ is called the domain of the function. For each element $x$ in $X$, the corresponding element $y$ in $Y$ is called the value of the function at $x$, or the image of $x$. The set of all images of the elements in the domain is called the range of the function. See Figure 5.

Since there may be some elements in $Y$ that are not the image of some $x$ in $X$, it follows that the range of a function may be a subset of $Y$, as shown in Figure 5. For example, consider the function $y=x^{2}$. Since $x^{2} \geq 0$ for all real numbers $x$, the range of $y=x^{2}$ is $\{y \mid y \geq 0\}$, which is a subset of the set of all real numbers, $Y$.

Not all relations between two sets are functions. The next example shows how to determine whether a relation is a function.

## EXAMPLE 2

## Determining Whether a Relation Represents a Function

Determine which of the following relations represent a function. If the relation is a function, then state its domain and range.
(a) See Figure 6. For this relation, the domain represents the number of calories in a fast-food sandwich, and the range represents the fat content (in grams).

Figure 6
Source: Each company's Web site.

| Calories | Fat |
| :---: | :---: |
| (Wendy's 1/4-lb Single) 600 | $\rightarrow 34$ |
| (Burger King Whopper) 653 | $\longrightarrow 35$ |
| (Culvers, Deluxe Single) 711 | $\rightarrow 46$ |
| (McDonald's Big Mac) 550 | $\longrightarrow 29$ |
| (Five Guys Hamburger) 700 | $\rightarrow 43$ |

[^1](b) See Figure 7. For this relation, the domain represents gasoline stations in Harris County, Texas and the range represents the price per gallon of regular unleaded gasoline in February 2013.
(c) See Figure 8. For this relation, the domain represents the weight (in carats) of pear-cut diamonds, and the range represents the price (in dollars).

Figure 8
Figure 7

Source: Used with permission of Diamonds.com

| Carats | Price |
| :--- | :--- |
| 0.70 |  |
| 0.7 |  |
| 0.71 |  |
| 0.75 |  |
| 0.78 |  |
|  |  | than one output. The domain of a function is the set of all inputs; the range is the set of all outputs.

(a) The relation in Figure 6 is a function because each element in the domain corresponds to exactly one element in the range. The domain of the function is $\{550,600,653,700,711\}$, and the range of the function is $\{29,34,35,43,46\}$.
(b) The relation in Figure 7 is a function because each element in the domain corresponds to exactly one element in the range. The domain of the function is $\{$ Mobil, Shell, Texaco, Citgo $\}$. The range of the function is $\{3.69,3.71,3.76\}$. Notice that it is okay for more than one element in the domain to correspond to the same element in the range (Shell and Citgo both sell gas for $\$ 3.69$ a gallon).
(c) The relation in Figure 8 is not a function because each element in the domain does not correspond to exactly one element in the range. If a 0.71 -carat diamond is chosen from the domain, a single price cannot be assigned to it.

```
Now Work problem 15
```

The idea behind a function is its predictability. If the input is known, we can use the function to determine the output. With "nonfunctions," we don't have this predictability. Look back at Figure 6. If asked, "How many grams of fat are in a 600 -calorie sandwich?" we could use the correspondence to answer " 34 ." Now consider Figure 8. If asked, "What is the price of a 0.71 -carat diamond?" we could not give a single response because two outputs result from the single input " 0.71 ." For this reason, the relation in Figure 8 is not a function.

We may also think of a function as a set of ordered pairs $(x, y)$ in which no ordered pairs have the same first element and different second elements. The set of all first elements $x$ is the domain of the function, and the set of all second elements $y$ is its range. Each element $x$ in the domain corresponds to exactly one element $y$ in the range.

## EXAMPLE 3

## Determining Whether a Relation Represents a Function

Determine whether each relation represents a function. If it is a function, state the domain and range.
(a) $\{(1,4),(2,5),(3,6),(4,7)\}$
(b) $\{(1,4),(2,4),(3,5),(6,10)\}$
(c) $\{(-3,9),(-2,4),(0,0),(1,1),(-3,8)\}$

Solution (a) This relation is a function because there are no ordered pairs with the same first element and different second elements. The domain of this function is $\{1,2,3,4\}$, and its range is $\{4,5,6,7\}$.
(b) This relation is a function because there are no ordered pairs with the same first element and different second elements. The domain of this function is $\{1,2,3,6\}$, and its range is $\{4,5,10\}$.
(c) This relation is not a function because there are two ordered pairs, $(-3,9)$ and $(-3,8)$, that have the same first element and different second elements.

In Example 3(b), notice that 1 and 2 in the domain both have the same image in the range. This does not violate the definition of a function; two different first elements can have the same second element. A violation of the definition occurs when two ordered pairs have the same first element and different second elements, as in Example 3(c).
am Now Work problem 19
Up to now we have shown how to identify when a relation is a function for relations defined by mappings (Example 2) and ordered pairs (Example 3). But relations can also be expressed as equations. The circumstances under which equations are functions are discussed next.

To determine whether an equation, where $y$ depends on $x$, is a function, it is often easiest to solve the equation for $y$. If any value of $x$ in the domain corresponds to more than one $y$, the equation does not define a function; otherwise, it does define a function.

## EXAMPLE 4 Determining Whether an Equation Is a Function

Determine whether the equation $y=2 x-5$ defines $y$ as a function of $x$.
Solution The equation tells us to take an input $x$, multiply it by 2 , and then subtract 5 . For any input $x$, these operations yield only one output $y$. For example, if $x=1$, then $y=2(1)-5=-3$. If $x=3$, then $y=2(3)-5=1$. For this reason, the equation is a function.

## EXAMPLE 5 Determining Whether an Equation Is a Function

Determine whether the equation $x^{2}+y^{2}=1$ defines $y$ as a function of $x$.
Solution To determine whether the equation $x^{2}+y^{2}=1$, which defines the unit circle, is a function, solve the equation for $y$.

$$
\begin{aligned}
x^{2}+y^{2} & =1 \\
y^{2} & =1-x^{2} \\
y & = \pm \sqrt{1-x^{2}}
\end{aligned}
$$

For values of $x$ between -1 and 1 , two values of $y$ result. For example, if $x=0$, then $y= \pm 1$, so two different outputs result from the same input. This means that the equation $x^{2}+y^{2}=1$ does not define a function.

Now Work problem 33

## 2 Find the Value of a Function

Functions are often denoted by letters such, as $f, F, g, G$, and others. If $f$ is a function, then for each number $x$ in its domain, the corresponding image in the range is designated by the symbol $f(x)$, read as " $f$ of $x$ " or as " $f$ at $x$." We refer to $f(x)$ as the value of $\boldsymbol{f}$ at the number $\boldsymbol{x} ; f(x)$ is the number that results when $x$ is given and the function $f$ is applied; $f(x)$ is the output corresponding to $x$ or the image of $x ; f(x)$ does not mean " $f$ times $x$." For example, the function given in Example 4 may be written as $y=f(x)=2 x-5$. Then $f(1)=-3$ and $f(3)=1$.

Figure 9

Figure 10

Figure 9 illustrates some other functions. Notice that, in every function, for each $x$ in the domain there is one value in the range.

Sometimes it is helpful to think of a function $f$ as a machine that receives as input a number from the domain, manipulates it, and outputs a value. See Figure 10. The restrictions on this input/output machine are as follows:

1. It accepts only numbers from the domain of the function.
2. For each input, there is exactly one output (which may be repeated for different inputs).

For a function $y=f(x)$, the variable $x$ is called the independent variable, because it can be assigned any of the permissible numbers from the domain. The variable $y$ is called the dependent variable, because its value depends on $x$.

Any symbols can be used to represent the independent and dependent variables. For example, if $f$ is the cube function, then $f$ can be given by $f(x)=x^{3}$ or $f(t)=t^{3}$ or $f(z)=z^{3}$. All three functions are the same. Each says to cube the independent variable to get the output. In practice, the symbols used for the independent and dependent variables are based on common usage, such as using $C$ for cost in business.

The independent variable is also called the argument of the function. Thinking of the independent variable as an argument can sometimes make it easier to find the value of a function. For example, if $f$ is the function defined by $f(x)=x^{3}$, then $f$ tells us to cube the argument. Thus, $f(2)$ means to cube $2, f(a)$ means to cube the number $a$, and $f(x+h)$ means to cube the quantity $x+h$.

## EXAMPLE 6

## Finding Values of a Function

For the function $f$ defined by $f(x)=2 x^{2}-3 x$, evaluate
(a) $f(3)$
(b) $f(x)+f(3)$
(c) $3 f(x)$
(d) $f(-x)$
(e) $-f(x)$
(f) $f(3 x)$
(g) $f(x+3)$
(h) $\frac{f(x+h)-f(x)}{h} \quad h \neq 0$

Solution (a) Substitute 3 for $x$ in the equation for $f, f(x)=2 x^{2}-3 x$, to get

$$
f(3)=2(3)^{2}-3(3)=18-9=9
$$

The image of 3 is 9 .
(b) $f(x)+f(3)=\left(2 x^{2}-3 x\right)+(9)=2 x^{2}-3 x+9$
(c) Multiply the equation for $f$ by 3 .

$$
3 f(x)=3\left(2 x^{2}-3 x\right)=6 x^{2}-9 x
$$

(d) Substitute $-x$ for $x$ in the equation for $f$ and simplify.

$$
f(-x)=2(-x)^{2}-3(-x)=2 x^{2}+3 x \text { Notice the use of parentheses here. }
$$

(e) $-f(x)=-\left(2 x^{2}-3 x\right)=-2 x^{2}+3 x$
(f) Substitute $3 x$ for $x$ in the equation for $f$ and simplify.

$$
f(3 x)=2(3 x)^{2}-3(3 x)=2\left(9 x^{2}\right)-9 x=18 x^{2}-9 x
$$

(g) Substitute $x+3$ for $x$ in the equation for $f$ and simplify.

$$
\begin{aligned}
f(x+3) & =2(x+3)^{2}-3(x+3) \\
& =2\left(x^{2}+6 x+9\right)-3 x-9 \\
& =2 x^{2}+12 x+18-3 x-9 \\
& =2 x^{2}+9 x+9
\end{aligned}
$$

$\Delta(\mathrm{h}) \frac{f(x+h)-f(x)}{h}=\frac{\left[2(x+h)^{2}-3(x+h)\right]-\left[2 x^{2}-3 x\right]}{h}$ $f(x+h)=2(x+h)^{2}-3(x+h)$ $=\frac{2\left(x^{2}+2 x h+h^{2}\right)-3 x-3 h-2 x^{2}+3 x}{h}$ Simplify. $=\frac{2 x^{2}+4 x h+2 h^{2}-3 h-2 x^{2}}{h} \quad \begin{aligned} & \text { Distribute and combine } \\ & \text { like terms. }\end{aligned}$ $=\frac{4 x h+2 h^{2}-3 h}{h}$ Combine like terms.
$=\frac{h(4 x+2 h-3)}{h} \quad$ Factor out $h$.
$=4 x+2 h-3$ Divide out the tis.
Notice in this example that $f(x+3) \neq f(x)+f(3), f(-x) \neq-f(x)$, and $3 f(x) \neq f(3 x)$.

The expression in part (h) is called the difference quotient of $f$, an important expression in calculus.

Most calculators have special keys that allow you to find the value of certain commonly used functions. For example, you should be able to find the square function $f(x)=x^{2}$, the square root function $f(x)=\sqrt{x}$, the reciprocal function $f(x)=\frac{1}{x}=x^{-1}$, and many others that will be discussed later in this text (such as $\ln x$ and $\log x)$. Verify the results of Example 7, which follows, on your calculator.

## EXAMPLE 7 Finding Values of a Function on a Calculator

(a) $f(x)=x^{2} \quad f(1.234)=1.234^{2}=1.522756$
(b) $F(x)=\frac{1}{x} \quad F(1.234)=\frac{1}{1.234} \approx 0.8103727715$
(c) $g(x)=\sqrt{x} \quad g(1.234)=\sqrt{1.234} \approx 1.110855526$

COMMENT Graphing calculators can be used to evaluate any function. Figure 11 shows the result obtained in Example 6(a) on a TI-84 Plus graphing calculator with the function to be evaluated, $f(x)=2 x^{2}-3 x$, in $Y_{1}$.

Figure 11

COMMENT The explicit form of a function is the form required by a graphing calculator.

## Implicit Form of a Function

In general, when a function $f$ is defined by an equation in $x$ and $y$, we say that the function $f$ is given implicitly. If it is possible to solve the equation for $y$ in terms of $x$, then we write $y=f(x)$ and say that the function is given explicitly. For example,

## Implicit Form

$3 x+y=5$
$x^{2}-y=6$
$x y=4$

## Explicit Form

$y=f(x)=-3 x+5$
$y=f(x)=x^{2}-6$
$y=f(x)=\frac{4}{x}$

## SUMMARY

## Important Facts about Functions

(a) For each $x$ in the domain of a function $f$, there is exactly one image $f(x)$ in the range; however, an element in the range can result from more than one $x$ in the domain.
(b) $f$ is the symbol that we use to denote the function. It is symbolic of the equation (rule) that we use to get from an $x$ in the domain to $f(x)$ in the range.
(c) If $y=f(x)$, then $x$ is called the independent variable or argument of $f$, and $y$ is called the dependent variable or the value of $f$ at $x$.

## 3 Find the Domain of a Function Defined by an Equation

Often the domain of a function $f$ is not specified; instead, only the equation defining the function is given. In such cases, we agree that the domain of $\boldsymbol{f}$ is the largest set of real numbers for which the value $f(x)$ is a real number. The domain of a function $f$ is the same as the domain of the variable $x$ in the expression $f(x)$.

## EXAMPLE 8 Finding the Domain of a Function

Find the domain of each of the following functions.
(a) $f(x)=x^{2}+5 x$
(b) $g(x)=\frac{3 x}{x^{2}-4}$
(c) $h(t)=\sqrt{4-3 t}$
(d) $F(x)=\frac{\sqrt{3 x+12}}{x-5}$

Solution (a) The function says to square a number and then add five times the number. Since these operations can be performed on any real number, the domain of $f$ is the set of all real numbers.
(b) The function $g$ says to divide $3 x$ by $x^{2}-4$. Since division by 0 is not defined, the denominator $x^{2}-4$ can never be 0 , so $x$ can never equal -2 or 2 . The domain of the function $g$ is $\{x \mid x \neq-2, x \neq 2\}$.

## In Words

The domain of g found in Example $8(b)$ is $\{x \mid x \neq-2, x \neq 2\}$. This notation is read, "The domain of the function $g$ is the set of all real C numbers $x$ such that $x$ does not C equal -2 and $x$ does not equal 2 ."
(c) The function $h$ says to take the square root of $4-3 t$. But only nonnegative numbers have real square roots, so the expression under the square root (the radicand) must be nonnegative (greater than or equal to zero). This requires that

$$
\begin{aligned}
4-3 t & \geq 0 \\
-3 t & \geq-4 \\
t & \leq \frac{4}{3}
\end{aligned}
$$

The domain of $h$ is $\left\{t \left\lvert\, t \leq \frac{4}{3}\right.\right\}$ or the interval $\left(-\infty, \frac{4}{3}\right]$.
(d) The function $F$ says to take the square root of $3 x+12$ and divide this result by $x-5$. This requires that $3 x+12 \geq 0$, so $x \geq-4$, and that $x-5 \neq 0$, so $x \neq 5$. Combining these two restrictions, the domain of $F$ is $\{x \mid x \geq-4, x \neq 5\}$.
The following steps may prove helpful for finding the domain of a function that is defined by an equation and whose domain is a subset of the real numbers.

## Finding the Domain of a Function Defined by an Equation

1. Start with the domain as the set of real numbers.
2. If the equation has a denominator, exclude any numbers that give a zero denominator.
3. If the equation has a radical of even index, exclude any numbers that cause the expression inside the radical (the radicand) to be negative. That is, solve radicand $\geq 0$.
an Now Work problem 51
If $x$ is in the domain of a function $f$, we shall say that $\boldsymbol{f}$ is defined at $\boldsymbol{x}$, or $\boldsymbol{f}(\boldsymbol{x})$ exists. If $x$ is not in the domain of $f$, we say that $\boldsymbol{f}$ is not defined at $\boldsymbol{x}$, or $\boldsymbol{f}(\boldsymbol{x})$ does not exist. For example, if $f(x)=\frac{x}{x^{2}-1}$, then $f(0)$ exists, but $f(1)$ and $f(-1)$ do not exist. (Do you see why?)

We will say more about finding the range when we look at the graph of a function in the next section. When a function is defined by an equation, it can be difficult to find the range. Therefore, we shall usually be content to find just the domain of a function when the function is defined by an equation. We shall express the domain of a function using inequalities, interval notation, set notation, or words, whichever is most convenient.

When functions are used in applications, the domain may be restricted by physical or geometric considerations. For example, the domain of the function $f$ defined by $f(x)=x^{2}$ is the set of all real numbers. However, if $f$ is used to obtain the area of a square when the length $x$ of a side is known, then we must restrict the domain of $f$ to the positive real numbers, since the length of a side can never be 0 or negative.

## EXAMPLE 9

## Solution

Figure 12

## Finding the Domain in an Application

Express the area of a circle as a function of its radius. Find the domain.
See Figure 12. The formula for the area $A$ of a circle of radius $r$ is $A=\pi r^{2}$. Using $r$ to represent the independent variable and $A$ to represent the dependent variable, the function expressing this relationship is

$$
A(r)=\pi r^{2}
$$

In this setting, the domain is $\{r \mid r>0\}$. (Do you see why?)

Observe, in the solution to Example 9, that the symbol $A$ is used in two ways: It is used to name the function, and it is used to symbolize the dependent variable. This double use is common in applications and should not cause any difficulty.
an Now Work problem 89

## 4 Form the Sum, Difference, Product, and Quotient of Two Functions

Next we introduce some operations on functions. Functions, like numbers, can be added, subtracted, multiplied, and divided. For example, if $f(x)=x^{2}+9$ and $g(x)=3 x+5$, then

$$
f(x)+g(x)=\left(x^{2}+9\right)+(3 x+5)=x^{2}+3 x+14
$$

The new function $y=x^{2}+3 x+14$ is called the sum function $f+g$. Similarly,

$$
f(x) \cdot g(x)=\left(x^{2}+9\right)(3 x+5)=3 x^{3}+5 x^{2}+27 x+45
$$

The new function $y=3 x^{3}+5 x^{2}+27 x+45$ is called the product function $f \cdot g$.
The general definitions are given next.

DEFINITION

## In Words

Remember, the symbol $\bigcap$
stands for intersection. It means you should find the elements that are common to two sets.

## DEFINITION

## DEFINITION

If $f$ and $g$ are functions:
The $\operatorname{sum} f+g$ is the function defined by

$$
(f+g)(x)=f(x)+g(x)
$$

The domain of $f+g$ consists of the numbers $x$ that are in the domains of both $f$ and $g$. That is, domain of $f+g=$ domain of $f \cap$ domain of $g$.

The difference $\boldsymbol{f}-\boldsymbol{g}$ is the function defined by

$$
(f-g)(x)=f(x)-g(x)
$$

The domain of $f-g$ consists of the numbers $x$ that are in the domains of both $f$ and $g$. That is, domain of $f-g=$ domain of $f \cap$ domain of $g$.

The product $\boldsymbol{f} \cdot \boldsymbol{g}$ is the function defined by

$$
(f \cdot g)(x)=f(x) \cdot g(x)
$$

The domain of $f \cdot g$ consists of the numbers $x$ that are in the domains of both $f$ and $g$. That is, domain of $f \cdot g=$ domain of $f \cap$ domain of $g$.

The quotient $\frac{f}{g}$ is the function defined by

$$
\left(\frac{f}{g}\right)(x)=\frac{f(x)}{g(x)} \quad g(x) \neq 0
$$

The domain of $\frac{f}{g}$ consists of the numbers $x$ for which $g(x) \neq 0$ and that are in the domains of both $f$ and $g$. That is,

$$
\text { domain of } \frac{f}{g}=\{x \mid g(x) \neq 0\} \cap \text { domain of } f \cap \text { domain of } g
$$

## EXAMPLE IO Operations on Functions

Let $f$ and $g$ be two functions defined as

$$
f(x)=\frac{1}{x+2} \text { and } g(x)=\frac{x}{x-1}
$$

Find the following, and determine the domain in each case.
(a) $(f+g)(x)$
(b) $(f-g)(x)$
(c) $(f \cdot g)(x)$
(d) $\left(\frac{f}{g}\right)(x)$

Solution The domain of $f$ is $\{x \mid x \neq-2\}$ and the domain of $g$ is $\{x \mid x \neq 1\}$.
(a) $(f+g)(x)=f(x)+g(x)=\frac{1}{x+2}+\frac{x}{x-1}$

$$
=\frac{x-1}{(x+2)(x-1)}+\frac{x(x+2)}{(x+2)(x-1)}=\frac{x^{2}+3 x-1}{(x+2)(x-1)}
$$

The domain of $f+g$ consists of those numbers $x$ that are in the domains of both $f$ and $g$. Therefore, the domain of $f+g$ is $\{x \mid x \neq-2, x \neq 1\}$.
(b) $(f-g)(x)=f(x)-g(x)=\frac{1}{x+2}-\frac{x}{x-1}$

$$
=\frac{x-1}{(x+2)(x-1)}-\frac{x(x+2)}{(x+2)(x-1)}=\frac{-\left(x^{2}+x+1\right)}{(x+2)(x-1)}
$$

The domain of $f-g$ consists of those numbers $x$ that are in the domains of both $f$ and $g$. Therefore, the domain of $f-g$ is $\{x \mid x \neq-2, x \neq 1\}$.
(c) $(f \cdot g)(x)=f(x) \cdot g(x)=\frac{1}{x+2} \cdot \frac{x}{x-1}=\frac{x}{(x+2)(x-1)}$

The domain of $f \cdot g$ consists of those numbers $x$ that are in the domains of both $f$ and $g$. Therefore, the domain of $f \cdot g$ is $\{x \mid x \neq-2, x \neq 1\}$.
(d) $\left(\frac{f}{g}\right)(x)=\frac{f(x)}{g(x)}=\frac{\frac{1}{x+2}}{\frac{x}{x-1}}=\frac{1}{x+2} \cdot \frac{x-1}{x}=\frac{x-1}{x(x+2)}$

The domain of $\frac{f}{g}$ consists of the numbers $x$ for which $g(x) \neq 0$ and that are in the domains of both $f$ and $g$. Since $g(x)=0$ when $x=0$, we exclude 0 as well as -2 and 1 from the domain. The domain of $\frac{f}{g}$ is $\{x \mid x \neq-2, x \neq 0, x \neq 1\}$.

## Now Work problem 63

In calculus, it is sometimes helpful to view a complicated function as the sum, difference, product, or quotient of simpler functions. For example,

$$
\begin{aligned}
& F(x)=x^{2}+\sqrt{x} \text { is the sum of } f(x)=x^{2} \text { and } g(x)=\sqrt{x} \\
& H(x)=\frac{x^{2}-1}{x^{2}+1} \text { is the quotient of } f(x)=x^{2}-1 \text { and } g(x)=x^{2}+1 .
\end{aligned}
$$

## SUMMARY

Function

Unspecified domain

Function notation

A relation between two sets of real numbers so that each number $x$ in the first set, the domain, has corresponding to it exactly one number $y$ in the second set.
A set of ordered pairs $(x, y)$ or $(x, f(x))$ in which no first element is paired with two different second elements.
The range is the set of $y$-values of the function that are the images of the $x$-values in the domain.
A function $f$ may be defined implicitly by an equation involving $x$ and $y$ or explicitly by writing $y=f(x)$.
If a function $f$ is defined by an equation and no domain is specified, then the domain will be taken to be the largest set of real numbers for which the equation defines a real number.
$y=f(x)$
$f$ is a symbol for the function.
$x$ is the independent variable or argument.
$y$ is the dependent variable.
$f(x)$ is the value of the function at $x$, or the image of $x$.

### 1.1 Assess Your Understanding

'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.

1. The inequality $-1<x<3$ can be written in interval notation as $\qquad$ (pp.A81-A82)
2. If $x=-2$, the value of the expression $3 x^{2}-5 x+\frac{1}{x}$ is
$\qquad$ . (pp. A6-A7)
3. The domain of the variable in the expression $\frac{x-3}{x+4}$ is $\qquad$ . (p. A7)
4. Solve the inequality $3-2 x>5$. Graph the solution set. (pp. A84-A86)

## Concepts and Vocabulary

5. If $f$ is a function defined by the equation $y=f(x)$, then $x$ is called the $\qquad$ variable and $y$ is the $\qquad$ variable.
6. The set of all images of the elements in the domain of a function is called the $\qquad$ -
7. If the domain of $f$ is all real numbers in the interval $[0,7]$ and the domain of $g$ is all real numbers in the interval $[-2,5]$, then the domain of $f+g$ is all real numbers in the interval $\qquad$ .
8. The domain of $\frac{f}{g}$ consists of numbers $x$ for which $g(x)$ $\qquad$ 0 that are in the domains of both $\qquad$ and $\qquad$
9. If $f(x)=x+1$ and $g(x)=x^{3}$, then $=x^{3}-(x+1)$.
10. True or False Every relation is a function.
11. True or False The domain of $(f \cdot g)(x)$ consists of the numbers $x$ that are in the domains of both $f$ and $g$.
12. True or False The independent variable is sometimes referred to as the argument of the function.
13. True or False If no domain is specified for a function $f$, then the domain of $f$ is taken to be the set of real numbers.
14. True or False The domain of the function $f(x)=\frac{x^{2}-4}{x}$ is $\{x \mid x \neq \pm 2\}$.

## Skill Building

In Problems 15-26, determine whether each relation represents a function. For each function, state the domain and range.
15.

In Problems 27-38, determine whether the equation defines $y$ as a function of $x$.
27. $y=x^{2}$
28. $y=x^{3}$
29. $y=\frac{1}{x}$
30. $y=|x|$
31. $y^{2}=4-x^{2}$
32. $y= \pm \sqrt{1-2 x}$
33. $x=y^{2}$
34. $x+y^{2}=1$
35. $y=2 x^{2}-3 x+4$
36. $y=\frac{3 x-1}{x+2}$
37. $2 x^{2}+3 y^{2}=1$
38. $x^{2}-4 y^{2}=1$

In Problems 39-46, find the following for each function:
(a) $f(0)$
(b) $f(1)$
(c) $f(-1)$
(d) $f(-x)$
(e) $-f(x)$
(f) $f(x+1)$
(g) $f(2 x)$
(h) $f(x+h)$
39. $f(x)=3 x^{2}+2 x-4$
40. $f(x)=-2 x^{2}+x-1$
41. $f(x)=\frac{x}{x^{2}+1}$
42. $f(x)=\frac{x^{2}-1}{x+4}$
43. $f(x)=|x|+4$
44. $f(x)=\sqrt{x^{2}+x}$
45. $f(x)=\frac{2 x+1}{3 x-5}$
46. $f(x)=1-\frac{1}{(x+2)^{2}}$

In Problems 47-62, find the domain of each function.
47. $f(x)=-5 x+4$
48. $f(x)=x^{2}+2$
49. $f(x)=\frac{x}{x^{2}+1}$
50. $f(x)=\frac{x^{2}}{x^{2}+1}$
51. $g(x)=\frac{x}{x^{2}-16}$
52. $h(x)=\frac{2 x}{x^{2}-4}$
53. $F(x)=\frac{x-2}{x^{3}+x}$
54. $G(x)=\frac{x+4}{x^{3}-4 x}$
55. $h(x)=\sqrt{3 x-12}$
56. $G(x)=\sqrt{1-x}$
57. $f(x)=\frac{4}{\sqrt{x-9}}$
58. $f(x)=\frac{x}{\sqrt{x-4}}$
59. $p(x)=\sqrt{\frac{2}{x-1}}$
60. $q(x)=\sqrt{-x-2}$
61. $P(t)=\frac{\sqrt{t-4}}{3 t-21}$
62. $h(z)=\frac{\sqrt{z+3}}{z-2}$

In Problems 63-72, for the given functions $f$ and $g$, find the following. For parts (a)-(d), also find the domain.
(a) $(f+g)(x)$
(b) $(f-g)(x)$
(c) $(f \cdot g)(x)$
(d) $\left(\frac{f}{g}\right)(x)$
(e) $(f+g)(3)$
(f) $(f-g)(4)$
(g) $(f \cdot g)(2)$
(h) $\left(\frac{f}{g}\right)(1)$
63. $f(x)=3 x+4 ; \quad g(x)=2 x-3$
64. $f(x)=2 x+1 ; \quad g(x)=3 x-2$
65. $f(x)=x-1 ; \quad g(x)=2 x^{2}$
66. $f(x)=2 x^{2}+3 ; \quad g(x)=4 x^{3}+1$
67. $f(x)=\sqrt{x} ; \quad g(x)=3 x-5$
68. $f(x)=|x| ; \quad g(x)=x$
69. $f(x)=1+\frac{1}{x} ; \quad g(x)=\frac{1}{x}$
70. $f(x)=\sqrt{x-1} ; \quad g(x)=\sqrt{4-x}$
71. $f(x)=\frac{2 x+3}{3 x-2} ; \quad g(x)=\frac{4 x}{3 x-2}$
72. $f(x)=\sqrt{x+1} ; \quad g(x)=\frac{2}{x}$
73. Given $f(x)=3 x+1$ and $(f+g)(x)=6-\frac{1}{2} x$, find the function $g$.
74. Given $f(x)=\frac{1}{x}$ and $\left(\frac{f}{g}\right)(x)=\frac{x+1}{x^{2}-x}$, find the function $g$.
$\forall$ In Problems 75-82, find the difference quotient of $f$; that is, find $\frac{f(x+h)-f(x)}{h}, h \neq 0$, for each function. Be sure to simplify.
75. $f(x)=4 x+3$
76. $f(x)=-3 x+1$
79. $f(x)=\frac{1}{x^{2}}$
80. $f(x)=\frac{1}{x+3}$
77. $f(x)=x^{2}-x+4$
78. $f(x)=3 x^{2}-2 x+6$
81. $f(x)=\sqrt{x}$
82. $f(x)=\sqrt{x+1}$
[Hint: Rationalize the numerator.]

## Applications and Extensions

83. If $f(x)=2 x^{3}+A x^{2}+4 x-5$ and $f(2)=5$, what is the value of $A$ ?
84. If $f(x)=3 x^{2}-B x+4$ and $f(-1)=12$, what is the value of $B$ ?
85. If $f(x)=\frac{3 x+8}{2 x-A}$ and $f(0)=2$, what is the value of $A$ ?
86. If $f(x)=\frac{2 x-B}{3 x+4}$ and $f(2)=\frac{1}{2}$, what is the value of $B$ ?
87. If $f(x)=\frac{2 x-A}{x-3}$ and $f(4)=0$, what is the value of $A$ ? Where is $f$ not defined?
88. If $f(x)=\frac{x-B}{x-A}, f(2)=0$, and $f(1)$ is undefined, what are the values of $A$ and $B$ ?
89. Geometry Express the area $A$ of a rectangle as a function of the length $x$ if the length of the rectangle is twice its width.
90. Geometry Express the area $A$ of an isosceles right triangle as a function of the length $x$ of one of the two equal sides.
91. Constructing Functions Express the gross salary $G$ of a person who earns $\$ 10$ per hour as a function of the number $x$ of hours worked.
92. Constructing Functions Tiffany, a commissioned sales person, earns $\$ 100$ base pay plus $\$ 10$ per item sold. Express her gross salary $G$ as a function of the number $x$ of items sold.
93. Population as a Function of Age The function

$$
P(a)=0.004 a^{2}-3.792 a+317.946
$$

represents the population $P$ (in millions) of Americans that were $a$ years of age or older in 2011.

## Source: U.S. Census Bureau

(a) Identify the dependent and independent variables.
(b) Evaluate $P(20)$. Provide a verbal explanation of the meaning of $P(20)$.
(c) Evaluate $P(0)$. Provide a verbal explanation of the meaning of $P(0)$.
94. Number of Rooms The function

$$
N(r)=-2.08 r^{2}+22.901 r-36.06
$$

represents the number $N$ of housing units (in millions) in 2011 that had $r$ rooms, where $r$ is an integer and $2 \leq r \leq 9$.
Source: U.S. Census Bureau
(a) Identify the dependent and independent variables.
(b) Evaluate $N(3)$. Provide a verbal explanation of the meaning of $N(3)$.
95. Effect of Gravity on Earth If a rock falls from a height of 20 meters on Earth, the height $H$ (in meters) after $x$ seconds is approximately

$$
H(x)=20-4.9 x^{2}
$$

(a) What is the height of the rock when $x=1$ second? $x=1.1$ seconds? $x=1.2$ seconds? $x=1.3$ seconds?
(b) When is the height of the rock 15 meters? When is it 10 meters? When is it 5 meters?
(c) When does the rock strike the ground?
96. Effect of Gravity on Jupiter If a rock falls from a height of 20 meters on the planet Jupiter, its height $H$ (in meters) after $x$ seconds is approximately

$$
H(x)=20-13 x^{2}
$$

(a) What is the height of the rock when $x=1$ second? $x=1.1$ seconds? $x=1.2$ seconds?
(b) When is the height of the rock 15 meters? When is it 10 meters? When is it 5 meters?
(c) When does the rock strike the ground?

97. Cost of Trans-Atlantic Travel A Boeing 747 crosses the Atlantic Ocean ( 3000 miles) with an airspeed of 500 miles per hour. The cost $C$ (in dollars) per passenger is given by

$$
C(x)=100+\frac{x}{10}+\frac{36,000}{x}
$$

where $x$ is the ground speed (airspeed $\pm$ wind).
(a) What is the cost per passenger for quiescent (no wind) conditions?
(b) What is the cost per passenger with a head wind of 50 miles per hour?
(c) What is the cost per passenger with a tail wind of 100 miles per hour?
(d) What is the cost per passenger with a head wind of 100 miles per hour?
98. Cross-sectional Area The cross-sectional area of a beam cut from a $\log$ with radius 1 foot is given by the function $A(x)=4 x \sqrt{1-x^{2}}$, where $x$ represents the length, in feet, of half the base of the beam. See the figure on the next page. Determine the cross-sectional area of the beam if the length of half the base of the beam is as follows:
(a) One-third of a foot
(b) One-half of a foot
(c) Two-thirds of a foot

99. Economics The participation rate is the number of people in the labor force divided by the civilian population (excludes military). Let $L(x)$ represent the size of the labor force in year $x$ and $P(x)$ represent the civilian population in year $x$. Determine a function that represents the participation rate $R$ as a function of $x$.
100. Crimes Suppose that $V(x)$ represents the number of violent crimes committed in year $x$ and $P(x)$ represents the number of property crimes committed in year $x$. Determine a function $T$ that represents the combined total of violent crimes and property crimes in year $x$.
101. Health Care Suppose that $P(x)$ represents the percentage of income spent on health care in year $x$ and $I(x)$ represents income in year $x$. Determine a function $H$ that represents total health care expenditures in year $x$.
102. Income Tax Suppose that $I(x)$ represents the income of an individual in year $x$ before taxes and $T(x)$ represents the individual's tax bill in year $x$. Determine a function $N$ that represents the individual's net income (income after taxes) in year $x$.
103. Profit Function Suppose that the revenue $R$, in dollars, from selling $x$ cell phones, in hundreds, is $R(x)=-1.2 x^{2}+220 x$.

The cost $C$, in dollars, of selling $x$ cell phones, in hundreds, is $C(x)=0.05 x^{3}-2 x^{2}+65 x+500$.
(a) Find the profit function, $P(x)=R(x)-C(x)$.
(b) Find the profit if $x=15$ hundred cell phones are sold.
(c) Interpret $P(15)$.
104. Profit Function Suppose that the revenue $R$, in dollars, from selling $x$ clocks is $R(x)=30 x$. The cost $C$, in dollars, of selling $x$ clocks is $C(x)=0.1 x^{2}+7 x+400$.
(a) Find the profit function, $P(x)=R(x)-C(x)$.
(b) Find the profit if $x=30$ clocks are sold.
(c) Interpret $P(30)$.
105. Stopping Distance When the driver of a vehicle observes an impediment, the total stopping distance involves both the reaction distance (the distance the vehicle travels while the driver moves his or her foot to the brake pedal) and the braking distance (the distance the vehicle travels once the brakes are applied). For a car traveling at a speed of $v$ miles per hour, the reaction distance $R$, in feet, can be estimated by $R(v)=2.2 v$. Suppose that the braking distance $B$, in feet, for a car is given by $B(v)=0.05 v^{2}+0.4 v-15$.
(a) Find the stopping distance function $D(v)=R(v)+B(v)$.
(b) Find the stopping distance if the car is traveling at a speed of 60 mph .
(c) Interpret $D(60)$.
106. Some functions $f$ have the property that $f(a+b)=$ $f(a)+f(b)$ for all real numbers $a$ and $b$. Which of the following functions have this property?
(a) $h(x)=2 x$
(b) $g(x)=x^{2}$
(c) $F(x)=5 x-2$
(d) $G(x)=\frac{1}{x}$

## Discussion and Writing

107. Are the functions $f(x)=x-1$ and $g(x)=\frac{x^{2}-1}{x+1}$ the same? Explain.
108. Investigate when, historically, the use of the function notation $y=f(x)$ first appeared.
109. Find a function $H$ that multiplies a number $x$ by 3 and then subtracts the cube of $x$ and divides the result by your age.

### 1.2 The Graph of a Function

PREPARING FOR THIS SECTION Before getting started, review the following:

- Graphs of Equations (Foundations Section 2, pp. 9-11)
- Intercepts (Foundations Section 2, pp. 11-12)

Now Work the 'Are You Prepared?' problems on page 61.
OBJECTIVES 1 Identify the Graph of a Function (p. 57)
2 Obtain Information from or about the Graph of a Function (p. 58)

In applications, a graph often demonstrates more clearly the relationship between two variables than, say, an equation or table would. For example, Table 1 on the next page shows the average price of gasoline at a particular gas station in Texas (for the years 1983-2012 adjusted for inflation, based on 2012 dollars). If we plot these data and then connect the points, we obtain Figure 13 (also on the next page).

| Table 1 | Year | Price | Year | Price | Year | Price |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1983 | 3.10 | 1993 | 1.93 | 2003 | 2.13 |
|  | 2.79 | 1994 | 1.94 | 2004 | 2.36 |  |
|  | 2.64 | 1995 | 1.98 | 2005 | 2.92 |  |
|  | 2.00 | 1996 | 2.02 | 2006 | 3.13 |  |
|  | 2.12 | 1997 | 1.94 | 2007 | 3.31 |  |
|  | 2.00 | 1998 | 1.70 | 2008 | 3.61 |  |
| 1989 | 2.01 | 1999 | 1.83 | 2009 | 2.70 |  |
| 1990 | 2.25 | 2000 | 2.19 | 2010 | 3.08 |  |
| 1991 | 2.07 | 2001 | 2.02 | 2011 | 3.78 |  |
| 1992 | 2.02 | 2002 | 1.99 | 2012 | 3.84 |  |

Source: http://www.randomuseless.info/gasprice/gasprice.html

Figure 13 Average retail price of gasoline (2012 dollars)

Source: http://www.randomuseless.info/gasprice/gasprice.html

We can see from the graph that the price of gasoline (adjusted for inflation) fell from 1983 to 1986, stayed roughly the same from 1986 to 2002, and rose rapidly from 2002 to 2008. The graph also shows that the lowest price occurred in 1998. To learn information such as this from an equation requires that some calculations be made.

Look again at Figure 13. The graph shows that for each date on the horizontal axis there is only one price on the vertical axis. The graph represents a function, although the exact rule for getting from date to price is not given.

When a function is defined by an equation in $x$ and $y$, the graph of the function is the graph of the equation; that is, it is the set of points $(x, y)$ in the $x y$-plane that satisfy the equation.

## 1 Identify the Graph of a Function

## In Words

If any vertical line intersects a graph at more than one point, the graph is not the graph of a function.

Not every collection of points in the $x y$-plane represents the graph of a function. Remember, for a function, each number $x$ in the domain has exactly one image $y$ in the range. This means that the graph of a function cannot contain two points with the same $x$-coordinate and different $y$-coordinates. Therefore, the graph of a function must satisfy the following vertical-line test.

## THEOREM

## Vertical-Line Test

A set of points in the $x y$-plane is the graph of a function if and only if every vertical line intersects the graph in at most one point.

## EXAMPLE I

## Identifying the Graph of a Function

Which of the graphs in Figure 14 on the next page are graphs of functions?

Figure 14

(a) $y=x^{2}$

(b) $y=x^{3}$

(c) $x=y^{2}$

(d) $x^{2}+y^{2}=1$

Solution The graphs in Figures 14(a) and 14(b) are graphs of functions, because every vertical line intersects each graph in at most one point. The graphs in Figures 14(c) and 14(d) are not graphs of functions, because there is a vertical line that intersects each graph in more than one point. Notice in Figure 14(c) that the input 1 corresponds to two outputs, -1 and 1 . This is why the graph does not represent a function.
am Now Work problem 15

## 2 Obtain Information from or about the Graph of a Function

If $(x, y)$ is a point on the graph of a function $f$, then $y$ is the value of $f$ at $x$; that is, $y=f(x)$. Also if $y=f(x)$, then $(x, y)$ is a point on the graph of $f$. For example, if $(-2,7)$ is on the graph of $f$, then $f(-2)=7$, and if $f(5)=8$, then the point $(5,8)$ is on the graph of $y=f(x)$. The next example illustrates how to obtain information about a function if its graph is given.

## EXAMPLE 2 <br> Obtaining Information from the Graph of a Function

Figure 15

Let $f$ be the function whose graph is given in Figure 15. (The graph of $f$ might represent the distance $y$ that the bob of a pendulum is from its at-rest position at time $x$. Negative values of $y$ mean that the pendulum is to the left of the at-rest position, and positive values of $y$ mean that the pendulum is to the right of the at-rest position.)
(a) What are $f(0), f\left(\frac{3 \pi}{2}\right)$, and $f(3 \pi)$ ?
(b) What is the domain of $f$ ?
(c) What is the range of $f$ ?
(d) List the intercepts. (Recall that these are the points, if any, where the graph crosses or touches the coordinate axes.)
(e) How many times does the line $y=2$ intersect the graph?
(f) For what values of $x$ does $f(x)=-4$ ?
(g) For what values of $x$ is $f(x)>0$ ?

Solution (a) Since $(0,4)$ is on the graph of $f$, the $y$-coordinate 4 is the value of $f$ at the $x$-coordinate 0 ; that is, $f(0)=4$. In a similar way, when $x=\frac{3 \pi}{2}$, then $y=0$, so $f\left(\frac{3 \pi}{2}\right)=0$. When $x=3 \pi$, then $y=-4$, so $f(3 \pi)=-4$.
(b) To determine the domain of $f$, notice that the points on the graph of $f$ have $x$-coordinates between 0 and $4 \pi$, inclusive; and for each number $x$ between 0 and $4 \pi$, there is a point $(x, f(x))$ on the graph. The domain of $f$ is $\{x \mid 0 \leq x \leq 4 \pi\}$ or the interval $[0,4 \pi]$.
(c) The points on the graph all have $y$-coordinates between -4 and 4 , inclusive; and for each such number $y$, there is at least one corresponding number $x$ in the domain. The range of $f$ is $\{y \mid-4 \leq y \leq 4\}$ or the interval $[-4,4]$.
(d) The intercepts are the points

$$
(0,4),\left(\frac{\pi}{2}, 0\right),\left(\frac{3 \pi}{2}, 0\right),\left(\frac{5 \pi}{2}, 0\right), \quad \text { and } \quad\left(\frac{7 \pi}{2}, 0\right)
$$

(e) Draw the horizontal line $y=2$ on the graph in Figure 15. Notice that the line intersects the graph four times.
(f) Since $(\pi,-4)$ and $(3 \pi,-4)$ are the only points on the graph for which $y=f(x)=-4$, we have $f(x)=-4$ when $x=\pi$ and $x=3 \pi$.
(g) To determine where $f(x)>0$, look at Figure 15 and determine the $x$-values from 0 to $4 \pi$ for which the $y$-coordinate is positive. This occurs on $\left[0, \frac{\pi}{2}\right) \cup\left(\frac{3 \pi}{2}, \frac{5 \pi}{2}\right) \cup\left(\frac{7 \pi}{2}, 4 \pi\right]$. Using inequality notation, $f(x)>0$ for $0 \leq x<\frac{\pi}{2} \quad$ or $\quad \frac{3 \pi}{2}<x<\frac{5 \pi}{2} \quad$ or $\quad \frac{7 \pi}{2}<x \leq 4 \pi$.
When the graph of a function is given, its domain may be viewed as the shadow created by the graph on the $x$-axis by vertical beams of light. Its range can be viewed as the shadow created by the graph on the $y$-axis by horizontal beams of light. Try this technique with the graph given in Figure 15.

## The Zeros of a Function

If $f(r)=0$ for a real number $r$, then $r$ is called a real zero of $f$. For example, the zeros of the function $f(x)=x^{2}-4$ are -2 and 2 since $f(-2)=0$ and $f(2)=0$. We can identify the zeros of a function from its graph. To see how, we must remember that $y=f(x)$ means that the point $(x, y)$ is on the graph of $f$. So, if $r$ is a zero of $f$, then $f(r)=0$, which means the point $(r, 0)$ is on the graph of $f$. That is, $r$ is an $x$-intercept. We conclude that the $x$-intercepts of the graph of a function are also the zeros of the function.

## EXAMPLE 3 Finding the Zeros of a Function from Its Graph

Find the zeros of the function $f$ whose graph is shown in Figure 15.
Solution The zeros of a function are the $x$-intercepts of the graph of the function. Because the $x$-intercepts of the function shown in Figure 15 are $\frac{\pi}{2}, \frac{3 \pi}{2}, \frac{5 \pi}{2}$, and $\frac{7 \pi}{2}$, the zeros of $f$ are $\frac{\pi}{2}, \frac{3 \pi}{2}, \frac{5 \pi}{2}$, and $\frac{7 \pi}{2}$.
Now Work problems 9 and 13

## EXAMPLE 4 <br> Obtaining Information about the Graph of a Function

Consider the function: $f(x)=\frac{x+1}{x+2}$
(a) Find the domain of $f$.
(b) Is the point $\left(1, \frac{1}{2}\right)$ on the graph of $f$ ?
(c) If $x=2$, what is $f(x)$ ? What point is on the graph of $f$ ?
(d) If $f(x)=2$, what is $x$ ? What point is on the graph of $f$ ?
(e) What are the $x$-intercepts of the graph of $f$ (if any)? What point(s) are on the graph of $f$ ?
Solution (a) The domain of $f$ is $\{x \mid x \neq-2\}$, since $x=-2$ results in division by 0 .
(b) When $x=1$,

$$
f(1)=\frac{1+1}{1+2}=\frac{2}{3}
$$

The point $\left(1, \frac{2}{3}\right)$ is on the graph of $f$; the point $\left(1, \frac{1}{2}\right)$ is not.
(c) If $x=2$, then

$$
f(2)=\frac{2+1}{2+2}=\frac{3}{4}
$$

The point $\left(2, \frac{3}{4}\right)$ is on the graph of $f$.
(d) If $f(x)=2$, then

$$
\begin{aligned}
\frac{x+1}{x+2} & =2 & & \\
x+1 & =2(x+2) & & \text { Multiply both sides by } x+2 . \\
x+1 & =2 x+4 & & \text { Distribute. } \\
x & =-3 & & \text { Solve for } x .
\end{aligned}
$$

If $f(x)=2$, then $x=-3$. The point $(-3,2)$ is on the graph of $f$.
(e) The $x$-intercepts of the graph of $f$ are the real solutions of the equation $f(x)=0$ that are in the domain of $f$.

$$
\begin{array}{rlrl}
\frac{x+1}{x+2} & =0 \\
x+1 & =0 & & \\
x & =-1 & & \text { Multiply bothe for } x .
\end{array}
$$

The only real solution of the equation $f(x)=\frac{x+1}{x+2}=0$ is $x=-1$, so -1 is the only $x$-intercept. Since $f(-1)=0$, the point $(-1,0)$ is on the graph of $f$.
$\qquad$ - Now Work
problem 25

## EXAMPLE 5 Average Cost Function

The average cost $\bar{C}$ (per computer) of manufacturing $x$ computers per day is given by the function

$$
\bar{C}(x)=0.56 x^{2}-34.39 x+1212.57+\frac{20,000}{x}
$$

Determine the average cost of manufacturing:
(a) 30 computers in a day
(b) 40 computers in a day
(c) 50 computers in a day
(d) Graph the function $\bar{C}=\bar{C}(x), 0<x \leq 80$.
(e) Create a TABLE with TblStart $=1$ and $\Delta \mathrm{Tbl}=1$. Which value of $x$ minimizes the average cost?
Solution (a) The average cost of manufacturing $x=30$ computers is

$$
\bar{C}(30)=0.56(30)^{2}-34.39(30)+1212.57+\frac{20,000}{30}=\$ 1351.54
$$

(b) The average cost of manufacturing $x=40$ computers is

$$
\bar{C}(40)=0.56(40)^{2}-34.39(40)+1212.57+\frac{20,000}{40}=\$ 1232.97
$$

(c) The average cost of manufacturing $x=50$ computers is

$$
\bar{C}(50)=0.56(50)^{2}-34.39(50)+1212.57+\frac{20,000}{50}=\$ 1293.07
$$

(d) See Figure 16 for the graph of $\bar{C}=\bar{C}(x)$.
(e) With the function $\bar{C}=\bar{C}(x)$ in $Y_{1}$, we create Table 2 . We scroll down until we find a value of $x$ for which $Y_{1}$ is smallest. Table 3 shows that manufacturing $x=41$ computers minimizes the average cost at $\$ 1231.74$ per computer.

Figure 16

Table 3

Graph of a Function Vertical-Line Test

The collection of points $(x, y)$ that satisfies the equation $y=f(x)$.
A collection of points is the graph of a function provided that every vertical line intersects the graph in at most one point.

### 1.2 Assess Your Understanding

'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.

1. The intercepts of the equation $x^{2}+4 y^{2}=16$ are .(p. 12)
2. True or False The point $(-2,-6)$ is on the graph of the equation $x=2 y-2$. (pp. 9-10)

## Concepts and Vocabulary

3. A set of points in the $x y$-plane is the graph of a function if and only if every $\qquad$ line intersects the graph in at most one point.
4. If the point $(5,-3)$ is a point on the graph of $f$, then f( $\qquad$ ) $=$ $\qquad$ .
5. Find $a$ such that the point $(-1,2)$ is on the graph of $f(x)=a x^{2}+4$.
6. True or False A function can have more than one $y$ intercept.
7. True or False The graph of a function $y=f(x)$ always crosses the $y$-axis.
8. True or False The $y$-intercept of the graph of the function $y=f(x)$, whose domain is all real numbers, is $f(0)$.

## Skill Building

9. Use the given graph of the function $f$ to answer parts (a) - (o).

(a) Find $f(0)$ and $f(-6)$.
(b) Find $f(6)$ and $f(11)$.
(c) Is $f(3)$ positive or negative?
(d) Is $f(-4)$ positive or negative?
(e) For what values of $x$ is $f(x)=0$ ?
(f) For what values of $x$ is $f(x)>0$ ?
(g) What is the domain of $f$ ?
(h) What is the range of $f$ ?
(i) What are the $x$-intercepts?
(j) What is the $y$-intercept?
(k) How many times does the line $y=\frac{1}{2}$ intersect the graph?
(1) How many times does the line $x=5$ intersect the graph?
(m) For what values of $x$ does $f(x)=3$ ?
(n) For what values of $x$ does $f(x)=-2$ ?
(o) What are the zeros of $f$ ?
10. Use the given graph of the function $f$ to answer parts (a) - (o).

(a) Find $f(0)$ and $f(6)$.
(b) Find $f(2)$ and $f(-2)$.
(c) Is $f(3)$ positive or negative?
(d) Is $f(-1)$ positive or negative?
(e) For what values of $x$ is $f(x)=0$ ?
(f) For what values of $x$ is $f(x)<0$ ?
(g) What is the domain of $f$ ?
(h) What is the range of $f$ ?
(i) What are the $x$-intercepts?
(j) What is the $y$-intercept?
(k) How many times does the line $y=-1$ intersect the graph?
(l) How many times does the line $x=1$ intersect the graph?
(m) For what value of $x$ does $f(x)=3$ ?
(n) For what value of $x$ does $f(x)=-2$ ?
(o) What are the zeros of $f$ ?

In Problems 11-22, determine whether the graph is that of a function by using the vertical-line test. If it is, use the graph to find:
(a) The domain and range
(b) The intercepts, if any
(c) Any symmetry with respect to the $x$-axis, the $y$-axis, or the origin
11.

12.

16.

20.

13.

14.

18.

22.

In Problems 23-28, answer the questions about the given function.
23. $f(x)=2 x^{2}-x-1$
(a) Is the point $(-1,2)$ on the graph of $f$ ?
(b) If $x=-2$, what is $f(x)$ ? What point is on the graph of $f$ ?
(c) If $f(x)=-1$, what is $x$ ? What point(s) is (are) on the graph of $f$ ?
(d) What is the domain of $f$ ?
(e) List the $x$-intercepts, if any, of the graph of $f$.
(f) List the $y$-intercept, if there is one, of the graph of $f$.
(g) What are the zeros of $f$ ?
24. $f(x)=-3 x^{2}+5 x$
(a) Is the point $(-1,2)$ on the graph of $f$ ?
(b) If $x=-2$, what is $f(x)$ ? What point is on the graph of $f$ ?
(c) If $f(x)=-2$, what is $x$ ? What point(s) is (are) on the graph of $f$ ?
(d) What is the domain of $f$ ?
(e) List the $x$-intercepts, if any, of the graph of $f$.
(f) List the $y$-intercept, if there is one, of the graph of $f$.
(g) What are the zeros of $f$ ?
25. $f(x)=\frac{x+2}{x-6}$
(a) Is the point $(3,14)$ on the graph of $f$ ?
(b) If $x=4$, what is $f(x)$ ? What point is on the graph of $f$ ?
(c) If $f(x)=2$, what is $x$ ? What point(s) is (are) on the graph of $f$ ?
(d) What is the domain of $f$ ?
(e) List the $x$-intercepts, if any, of the graph of $f$.
(f) List the $y$-intercept, if there is one, of the graph of $f$.
(g) What are the zeros of $f$ ?
26. $f(x)=\frac{x^{2}+2}{x+4}$
(a) Is the point $\left(1, \frac{3}{5}\right)$ on the graph of $f$ ?
(b) If $x=0$, what is $f(x)$ ? What point is on the graph of $f$ ?
(c) If $f(x)=\frac{1}{2}$, what is $x$ ? What point(s) is (are) on the graph of $f$ ? ${ }^{2}$
(d) What is the domain of $f$ ?
(e) List the $x$-intercepts, if any, of the graph of $f$.
(f) List the $y$-intercept, if there is one, of the graph of $f$.
(g) What are the zeros of $f$ ?
27. $f(x)=\frac{2 x^{2}}{x^{4}+1}$
(a) Is the point $(-1,1)$ on the graph of $f$ ?
(b) If $x=2$, what is $f(x)$ ? What point is on the graph of $f$ ?
(c) If $f(x)=1$, what is $x$ ? What point(s) is (are) on the graph of $f$ ?
(d) What is the domain of $f$ ?
(e) List the $x$-intercepts, if any, of the graph of $f$.
(f) List the $y$-intercept, if there is one, of the graph of $f$.
(g) What are the zeros of $f$ ?
28. $f(x)=\frac{2 x}{x-2}$
(a) Is the point $\left(\frac{1}{2},-\frac{2}{3}\right)$ on the graph of $f$ ?
(b) If $x=4$, what is $f(x)$ ? What point is on the graph of $f$ ?
(c) If $f(x)=1$, what is $x$ ? What point(s) is (are) on the graph of $f$ ?
(d) What is the domain of $f$ ?
(e) List the $x$-intercepts, if any, of the graph of $f$.
(f) List the $y$-intercept, if there is one, of the graph of $f$.
(g) What are the zeros of $f$ ?

## Applications and Extensions

29. Free-throw Shots According to physicist Peter Brancazio, the key to a successful foul shot in basketball lies in the arc of the shot. Brancazio determined the optimal angle of the arc from the free-throw line to be 45 degrees. The arc also depends on the velocity with which the ball is shot. If a player shoots a foul shot, releasing the ball at a 45-degree angle from a position 6 feet above the floor, then the path of the ball can be modeled by the function

$$
h(x)=-\frac{44 x^{2}}{v^{2}}+x+6
$$

where $h$ is the height of the ball above the floor, $x$ is the forward distance of the ball in front of the foul line, and $v$ is the initial velocity with which the ball is shot in feet per second. Suppose a player shoots a ball with an initial velocity of 28 feet per second.
(a) Determine the height of the ball after it has traveled 8 feet in front of the foul line.
(b) Determine $h(12)$. What does this value represent?
(c) Find additional points, and graph the path of the basketball.
(d) The center of the hoop is 10 feet above the floor and 15 feet in front of the foul line. Will the ball go through the hoop? Why or why not? If not, with what initial velocity must the ball be shot in order for the ball to go through the hoop?
Source: The Physics of Foul Shots, Discover, Vol. 21, No. 10, October 2000
30. Granny Shots The last player in the NBA to use an underhand foul shot (a "granny" shot) was Hall of Fame forward Rick Barry, who retired in 1980. Barry believes that current NBA players could increase their free-throw percentage if they were to use an underhand shot. Since underhand shots are released from a lower position, the angle of the shot must be increased. If a player shoots an underhand foul shot, releasing the ball at a 70-degree angle from a position 3.5 feet above the floor, then the path of the ball can be modeled by the function $h(x)=-\frac{136 x^{2}}{v^{2}}+2.7 x+3.5$, where $h$ is the height of the ball above the floor, $x$ is the forward distance of the ball in front of the foul line, and $v$ is the initial velocity with which the ball is shot in feet per second.
(a) The center of the hoop is 10 feet above the floor and 15 feet in front of the foul line. Determine the initial velocity with which the ball must be shot in order for the ball to go through the hoop.
(b) Write the function for the path of the ball using the velocity found in part (a).
(c) Determine $h(9)$. What does this value represent?
(d) Find additional points, and graph the path of the basketball.
Source: The Physics of Foul Shots, Discover, Vol. 21, No. 10, October 2000
31. Motion of a Golf Ball A golf ball is hit with an initial velocity of 130 feet per second at an inclination of $45^{\circ}$ to the horizontal. In physics, it is established that the height $h$ of the golf ball is given by the function

$$
h(x)=\frac{-32 x^{2}}{130^{2}}+x
$$

where $x$ is the horizontal distance that the golf ball has traveled.

(a) Determine the height of the golf ball after it has traveled 100 feet.
(b) What is the height after it has traveled 300 feet?
(c) What is $h(500)$ ? Interpret this value.
(d) How far was the golf ball hit?
(e) Use a graphing utility to graph the function $h=h(x)$.
(f) Use a graphing utility to determine the distance that the ball has traveled when the height of the ball is 90 feet.
(g) Create a TABLE with TblStart $=0$ and $\Delta \mathrm{Tbl}=25$. To the nearest 25 feet, how far does the ball travel before it reaches a maximum height? What is the maximum height?
(h) Adjust the value of $\Delta \mathrm{Tbl}$ until you determine the distance, to within 1 foot, that the ball travels before it reaches the maximum height.
32. Cross-sectional Area The cross-sectional area of a beam cut from a $\log$ with radius 1 foot is given by the function $A(x)=4 x \sqrt{1-x^{2}}$, where $x$ represents the length, in feet, of half the base of the beam. See the figure.

(a) Find the domain of $A$.
(b) Use a graphing utility to graph the function $A=A(x)$.
(c) Create a TABLE with TblStart $=0$ and $\Delta \mathrm{Tbl}=0.1$. Which value of $x$ in the domain found in part (a) maximizes the cross-sectional area? What should be the length of the base of the beam to maximize the crosssectional area?
33. Cost of Trans-Atlantic Travel A Boeing 747 crosses the Atlantic Ocean ( 3000 miles) with an airspeed of 500 miles per hour. The cost $C$ (in dollars) per passenger is given by

$$
C(x)=100+\frac{x}{10}+\frac{36,000}{x}
$$

where $x$ is the ground speed (airspeed $\pm$ wind).
(a) What is the cost when the ground speed is 480 miles per hour; 600 miles per hour?
(b) Find the domain of $C$.
(c) Use a graphing utility to graph the function $C=C(x)$.
(d) Create a TABLE with TbIStart $=0$ and $\Delta \mathrm{Tbl}=50$.
(e) To the nearest 50 miles per hour, what ground speed minimizes the cost per passenger?
34. Effect of Elevation on Weight If an object weighs $m$ pounds at sea level, then its weight $W$ (in pounds) at a height of $h$ miles above sea level is given approximately by

$$
W(h)=m\left(\frac{4000}{4000+h}\right)^{2}
$$

(a) If Amy weighs 120 pounds at sea level, how much will she weigh on Pike's Peak, which is 14,110 feet above sea level?
(b) Use a graphing utility to graph the function $W=W(h)$. Use $m=120$ pounds.
(c) Create a TABLE with TblStart $=0$ and $\Delta \mathrm{Tbl}=0.5$ to see how the weight $W$ varies as $h$ changes from 0 to 5 miles.
(d) At what height will Amy weigh 119.95 pounds?
(e) Does your answer to part (d) seem reasonable? Explain.
35. The graph of two functions, $f$ and $g$, is illustrated. Use the graph to answer parts (a) - (f).

(a) $(f+g)(2)$
(b) $(f+g)(4)$
(c) $(f-g)(6)$
(d) $(g-f)(6)$
(e) $(f \cdot g)(2)$
(f) $\left(\frac{f}{g}\right)(4)$
36. Reading and Interpreting Graphs Let $C$ be the function whose graph is given in the next column. This graph represents the cost $C$ of manufacturing $q$ computers in a day.
(a) Determine $C(0)$. Interpret this value.
(b) Determine $C(10)$. Interpret this value.
(c) Determine $C(50)$. Interpret this value.
(d) What is the domain of $C$ ? What does this domain imply in terms of daily production?
(e) Describe the shape of the graph.
$\forall$ (f) The point $(30,32000)$ is called an inflection point. Describe the behavior of the graph around the inflection point.

37. Reading and Interpreting Graphs Let $C$ be the function whose graph is given below. This graph represents the cost $C$ of using $m$ anytime cell phone minutes in a month for a five-person family plan.

(a) Determine $C(0)$. Interpret this value.
(b) Determine $C(1000)$. Interpret this value.
(c) Determine $C(2000)$. Interpret this value.
(d) What is the domain of $C$ ? What does this domain imply in terms of the number of anytime minutes?
(e) Describe the shape of the graph.

## Discussion and Writing

38. Describe how you would proceed to find the domain and range of a function if you were given its graph. How would your strategy change if you were given the equation defining the function instead of its graph?
39. How many $x$-intercepts can the graph of a function have? How many $y$-intercepts can the graph of a function have?
40. Is a graph that consists of a single point the graph of a function? Can you write the equation of such a function?
41. Match each of the following functions with the graph on the next page that best describes the situation.
(a) The cost of building a house as a function of its square footage
(b) The height of an egg dropped from a 300 -foot building as a function of time
(c) The height of a human as a function of time
(d) The demand for Big Macs as a function of price
(e) The height of a child on a swing as a function of time?

(I)

(II)

(III)

(IV)

(V)
42. Match each of the following functions with the graph that best describes the situation.
(a) The temperature of a bowl of soup as a function of time
(b) The number of hours of daylight per day over a 2 -year period
(c) The population of Texas as a function of time
(d) The distance traveled by a car going at a constant velocity as a function of time
(e) The height of a golf ball hit with a 7-iron as a function of time

(I)

(II)

(III)

(IV)

(V)
43. Consider the following scenario: Barbara decides to take a walk. She leaves home, walks 2 blocks in 5 minutes at a constant speed, and realizes that she forgot to lock the door. So Barbara runs home in 1 minute. While at her doorstep, it takes her 1 minute to find her keys and lock the door. Barbara walks 5 blocks in 15 minutes and then decides to jog home. It takes her 7 minutes to get home. Draw a graph of Barbara's distance from home (in blocks) as a function of time.
44. Consider the following scenario: Jayne enjoys riding her bicycle through the woods. At the forest preserve, she gets on her bicycle and rides up a 2000 -foot incline in 10 minutes. She then travels down the incline in 3 minutes. The next 5000 feet is level terrain and she covers the distance in 20 minutes. She rests for 15 minutes. Jayne then travels 10,000 feet in 30 minutes. Draw a graph of Jayne's distance traveled (in feet) as a function of time.
45. The following sketch represents the distance $d$ (in miles) that Kevin was from home as a function of time $t$ (in hours). Answer the questions by referring to the graph. In parts (a) - (g), how many hours elapsed and how far was Kevin from home during this time?

(a) From $t=0$ to $t=2$
(b) From $t=2$ to $t=2.5$
(c) From $t=2.5$ to $t=2.8$
(d) From $t=2.8$ to $t=3$
(e) From $t=3$ to $t=3.9$
(f) From $t=3.9$ to $t=4.2$
(g) From $t=4.2$ to $t=5.3$
(h) What is the farthest distance that Kevin was from home?
(i) How many times did Kevin return home?
46. The following sketch represents the speed $v$ (in miles per hour) of Michael's car as a function of time $t$ (in minutes).

(a) Over what interval of time was Michael traveling fastest?
(b) Over what interval(s) of time was Michael's speed zero?
(c) What was Michael's speed between 0 and 2 minutes?
(d) What was Michael's speed between 4.2 and 6 minutes?
(e) What was Michael's speed between 7 and 7.4 minutes?
(f) When was Michael's speed constant?
47. Draw the graph of a function whose domain is $\{x \mid-3 \leq x \leq 8, x \neq 5\}$ and whose range is $\{y \mid-1 \leq y \leq 2, y \neq 0\}$. What point(s) in the rectangle $-3 \leq x \leq 8,-1 \leq y \leq 2$ cannot be on the graph? Compare your graph with those of other students. What differences do you see?
48. Is there a function whose graph is symmetric with respect to the $x$-axis? Explain.
49. Explain why the vertical-line test works.

## 'Are You Prepared?' Answers

1. $(-4,0),(4,0),(0,-2),(0,2)$

### 1.3 Properties of Functions

PREPARING FOR THIS SECTION Before getting started, review the following:

- Intervals (Appendix A, Section A.10, pp. A81-A82)
- Intercepts (Foundations, Section 2, pp. 11-12)
- Slope of a Line (Foundations, Section 3, pp. 19-21)
- Point-Slope Form of a Line (Foundations, Section 3, p. 23)
- Symmetry (Foundations, Section 2, pp. 12-14)

Now Work the 'Are You Prepared?' problems on page 74.
OBJECTIVES 1 Determine Even and Odd Functions from a Graph (p. 66)
2 Identify Even and Odd Functions from the Equation (p. 67)
3 Use a Graph to Determine Where a Function is Increasing, Decreasing, or Constant (p. 68)
4 Use a Graph to Locate Local Maxima and Local Minima (p. 69)
5 Use a Graph to Locate the Absolute Maximum and the Absolute Minimum (p. 70)

6 Use a Graphing Utility to Approximate Local Maxima and Local Minima and to Determine Where a Function is Increasing or Decreasing (p.71)
7 Find the Average Rate of Change of a Function (p.72)

To obtain the graph of a function $y=f(x)$, it is often helpful to know certain properties that the function has and the impact of these properties on the way that the graph will look.

## 1 Determine Even and Odd Functions from a Graph

The words even and odd, when applied to a function $f$, describe the symmetry that exists for the graph of the function.

A function $f$ is even if and only if, whenever the point $(x, y)$ is on the graph of $f$, the point $(-x, y)$ is also on the graph. Using function notation, we define an even function as follows:

A function $f$ is even if, for every number $x$ in its domain, the number $-x$ is also in the domain and

$$
f(-x)=f(x)
$$

A function $f$ is odd if and only if, whenever the point $(x, y)$ is on the graph of $f$, the point $(-x,-y)$ is also on the graph. Using function notation, we define an odd function as follows:

A function $f$ is odd if, for every number $x$ in its domain, the number $-x$ is also in the domain and

$$
f(-x)=-f(x)
$$

Refer to page 13, where the tests for symmetry are listed. The following results are then evident.

A function is even if and only if its graph is symmetric with respect to the $y$-axis. A function is odd if and only if its graph is symmetric with respect to the origin.

## EXAMPLE I Determining Even and Odd Functions from the Graph

Determine whether each graph given in Figure 17 is the graph of an even function, an odd function, or a function that is neither even nor odd.

Figure 17

(a)

(b)

(c)

Solution (a) The graph in Figure 17(a) is that of an even function, because the graph is symmetric with respect to the $y$-axis.
(b) The function whose graph is given in Figure 17(b) is neither even nor odd, because the graph is neither symmetric with respect to the $y$-axis nor symmetric with respect to the origin.
(c) The function whose graph is given in Figure 17(c) is odd, because its graph is symmetric with respect to the origin.

Now Work problems $21(\mathrm{a})$, (b), and (d)

## 2 Identify Even and Odd Functions from the Equation

In the next example, we use algebraic techniques to verify whether a given function is even, odd, or neither.

## EXAMPLE 2

## Identifying Even and Odd Functions Algebraically

Determine whether each of the following functions is even, odd, or neither. Then determine whether the graph is symmetric with respect to the $y$-axis, with respect to the origin, or neither.
(a) $f(x)=x^{2}-5$
(b) $g(x)=x^{3}-1$
(c) $h(x)=5 x^{3}-x$
(d) $F(x)=|x|$

Solution
(a) To determine whether $f$ is even, odd, or neither, replace $x$ by $-x$ in $f(x)=x^{2}-5$. Then

$$
f(-x)=(-x)^{2}-5=x^{2}-5=f(x)
$$

Since $f(-x)=f(x)$, the function is even, and the graph of $f$ is symmetric with respect to the $y$-axis.
(b) Replace $x$ by $-x$ in $g(x)=x^{3}-1$.

$$
g(-x)=(-x)^{3}-1=-x^{3}-1
$$

Since $g(-x) \neq g(x)$ and $g(-x) \neq-g(x)=-\left(x^{3}-1\right)=-x^{3}+1$, the function is neither even nor odd. The graph of $g$ is not symmetric with respect to the $y$-axis, nor is it symmetric with respect to the origin.
(c) Replace $x$ by $-x$ in $h(x)=5 x^{3}-x$.

$$
h(-x)=5(-x)^{3}-(-x)=-5 x^{3}+x=-\left(5 x^{3}-x\right)=-h(x)
$$

Since $h(-x)=-h(x), h$ is an odd function, and the graph of $h$ is symmetric with respect to the origin.

Figure 18

(d) Replace $x$ by $-x$ in $F(x)=|x|$. Then

$$
F(-x)=|-x|=|-1| \cdot|x|=|x|=F(x)
$$

Since $F(-x)=F(x), F$ is an even function, and the graph of $F$ is symmetric with respect to the $y$-axis.
am Now Work problem 33

## 3 Use a Graph to Determine Where a Function Is Increasing, Decreasing, or Constant

Consider the graph given in Figure 18. Look from left to right along the graph of the function, and note that parts of the graph are going up, parts are going down, and parts are horizontal. In such cases, the function is described as increasing, decreasing, or constant, respectively.

## EXAMPLE 3 Determining Where a Function Is Increasing, Decreasing, or Constant from Its Graph

Determine the values of $x$ for which the function in Figure 18 is increasing. Where is it decreasing? Where is it constant?

Solution To determine where a function is increasing, where it is decreasing, and where it

WARNING Describe the behavior of a graph in terms of its $x$-values. Do not say the graph in Figure 18 is increasing from the point $(-4,-2)$ to the point $(0,4)$. Rather, say it is increasing on the interval $(-4,0)$. is constant, we use strict inequalities involving the independent variable $x$, or we use open intervals* of $x$-coordinates. The function whose graph is given in Figure 18 is increasing on the open interval $(-4,0)$, or for $-4<x<0$. The function is decreasing on the open intervals $(-6,-4)$ and $(3,6)$, or for $-6<x<-4$ and $3<x<6$. The function is constant on the open interval $(0,3)$, or for $0<x<3$.

More precise definitions follow:

## DEFINITIONS

## In Words

If a function is decreasing, then, as the values of $x$ get bigger, the values of the function get smaller. If a function is increasing, then, as $\int$ the values of $\times$ get bigger, the values
of the function also get bigger. If a
f function is constant, then, as the
( values of $x$ get bigger, the values of the function remain unchanged.

A function $f$ is increasing on an open interval $I$ if, for any choice of $x_{1}$ and $x_{2}$ in $I$, with $x_{1}<x_{2}$, we have $f\left(x_{1}\right)<f\left(x_{2}\right)$.
A function $f$ is decreasing on an open interval $I$ if, for any choice of $x_{1}$ and $x_{2}$ in $I$, with $x_{1}<x_{2}$, we have $f\left(x_{1}\right)>f\left(x_{2}\right)$.
A function $f$ is constant on an open interval $I$ if, for all choices of $x$ in $I$, the values of $f(x)$ are equal.

Figure 19 illustrates the definitions. Graphs are read like a book - from left to right. Thus, the graph of an increasing function goes up from left to right, the graph of a decreasing function goes down from left to right, and the graph of a constant function remains at a fixed height.

Figure 19

(a) For $x_{1}<x_{2}$ in 1 , $f\left(x_{1}\right)<f\left(x_{2}\right)$; $f$ is increasing on $I$.

(b) For $x_{1}<x_{2}$ in $I$, $f\left(x_{1}\right)>f\left(x_{2}\right)$;
$f$ is decreasing on $I$.

(c) For all $x$ in $I$, the values of $f$ are equal; $f$ is constant on $/$.

## 4 Use a Graph to Locate Local Maxima and Local Minima

Suppose $f$ is a function defined on an open interval $I$ containing $c$. If the value of $f$ at $c$ is greater than or equal to the values of $f$ on $I$, then $f$ has a local maximum at $c$.* See Figure 20(a).

If the value of $f$ at $c$ is less than or equal to the values of $f$ on $I$, then $f$ has a local minimum at $c$. See Figure 20(b).

Figure 20

(a)

(b)

## DEFINITIONS

A function $f$ has a local maximum at $c$ if there is an open interval $I$ containing $c$ so that, for all $x$ in $I, f(x) \leq f(c)$. We call $f(c)$ a local maximum value of $\boldsymbol{f}$.

A function $f$ has a local minimum at $c$ if there is an open interval $I$ containing $c$ so that, for all $x$ in $I, f(x) \geq f(c)$. We call $f(c)$ a local minimum value of $f$.

If $f$ has a local maximum at $c$, then the value of $f$ at $c$ is greater than or equal to the values of $f$ near $c$. If $f$ has a local minimum at $c$, then the value of $f$ at $c$ is less than or equal to the values of $f$ near $c$. The word local is used to suggest that it is only near $c$, not necessarily over the entire domain, that the value $f(c)$ has these properties.

## EXAMPLE 4

Figure 21

Solution

WARNING The $y$-value is the local maximum value or local minimum value, and it occurs at some $x$-value. For example, in Figure 21, we say $f$ has a local maximum at 1 and the local maximum value is 2 .

## Finding Local Maxima and Local Minima from the Graph of a Function and Determining Where the Function Is Increasing, Decreasing, or Constant

Figure 21 shows the graph of a function $f$.
(a) At what value(s) of $x$, if any, does $f$ have a local maximum? List the local maximum values.
(b) At what value(s) of $x$, if any, does $f$ have a local minimum? List the local minimum values.
(c) Find the intervals on which $f$ is increasing. Find the intervals on which $f$ is decreasing.

The domain of $f$ is the set of real numbers.
(a) $f$ has a local maximum at 1 , since for all $x$ close to 1 , we have $f(x) \leq f(1)$. The local maximum value is $f(1)=2$.
(b) $f$ has local minima at -1 and at 3 . The local minimum values are $f(-1)=1$ and $f(3)=0$.
(c) The function whose graph is given in Figure 21 is increasing for all values of $x$ between -1 and 1 and for all values of $x$ greater than 3 . That is, the function is increasing on the intervals $(-1,1)$ and $(3, \infty)$, or for $-1<x<1$ and $x>3$. The function is decreasing for all values of $x$ less than -1 and for all values of $x$

Figure 22

domain: $[a, b]$
for all $x$ in $[a, b], f(x) \leq f(u)$
for all $x$ in $[a, b], f(x) \geq f(v)$
absolute maximum: $f(u)$
absolute minimum: $f(v)$
between 1 and 3. That is, the function is decreasing on the intervals $(-\infty,-1)$ and $(1,3)$, or for $x<-1$ and $1<x<3$.

an Now Work problems 17 and 19

## 5 Use a Graph to Locate the Absolute Maximum and the Absolute Minimum

Look at the graph of the function $f$ given in Figure 22. The domain of $f$ is the closed interval $[a, b]$. Also, the largest value of $f$ is $f(u)$ and the smallest value of $f$ is $f(v)$. These are called, respectively, the absolute maximum and the absolute minimum of $f$ on $[a, b]$.

DEFINITION Let $f$ denote a function defined on some interval $I$. If there is a number $u$ in $I$ for which $f(x) \leq f(u)$ for all $x$ in $I$, then $f(u)$ is the absolute maximum of $f$ on $I$, and we say the absolute maximum of $\boldsymbol{f}$ occurs at $u$.
If there is a number $v$ in $I$ for which $f(x) \geq f(v)$ for all $x$ in $I$, then $f(v)$ is the absolute minimum of $\boldsymbol{f}$ on $I$, and we say the absolute minimum of $\boldsymbol{f}$ occurs at $v$.

The absolute maximum and absolute minimum of a function $f$ are sometimes called the extreme values of $f$ on $I$.

The absolute maximum or absolute minimum of a function $f$ may not exist. Let's look at some examples.

## EXAMPLE 5 Finding the Absolute Maximum and the Absolute Minimum

 from the Graph of a FunctionFor each graph of a function $y=f(x)$ in Figure 23, find the absolute maximum and the absolute minimum, if they exist. Also, find any local maxima or local minima.

Figure 23

Solution

WARNING A function may have an absolute maximum or an absolute minimum at an endpoint, but not a local maximum or a local minimum. Why? Local maxima and local minima are found over some open interval $I$, and this interval cannot be created around an endpoint.
(a) The function $f$ whose graph is given in Figure 23(a) has the closed interval $[0,5]$ as its domain. The largest value of $f$ is $f(3)=6$, the absolute maximum. The smallest value of $f$ is $f(0)=1$, the absolute minimum. The function has a local maximum of 6 at $x=3$ and a local minimum of 4 at $x=4$.
(b) The function $f$ whose graph is given in Figure $23(\mathrm{~b})$ has the domain $\{x \mid 1 \leq x \leq 5, x \neq 3\}$. Note that we exclude 3 from the domain because of the "hole" at $(3,1)$. The largest value of $f$ on its domain is $f(5)=3$, the absolute maximum. There is no absolute minimum. Do you see why? As you trace the graph, getting closer to the point $(3,1)$, there is no single smallest value. [As soon as you claim a smallest value, we can trace closer to $(3,1)$ and get a smaller value!] The function has no local maxima or minima.
(c) The function $f$ whose graph is given in Figure 23(c) has the interval [0,5] as its domain. The absolute maximum of $f$ is $f(5)=4$. The absolute minimum is 1 . Notice that the absolute minimum 1 occurs at any number in the interval [1,2]. The function has a local minimum of 1 at every $x$ in the interval [1,2], but it has no local maxima.
(d) The graph of the function $f$ given in Figure $23(\mathrm{~d})$ has the interval $[0, \infty)$ as its domain. The function has no absolute maximum; the absolute minimum is $f(0)=0$. The function has no local maxima or local minima.
(e) The graph of the functionfinFigure23(e)has the domain $\{x \mid 1<x<5, x \neq 2\}$. The function $f$ has no absolute maximum and no absolute minimum. Do you see why? The function has a local maximum of 3 at $x=4$, but no local minima.

In calculus, there is a theorem with conditions that guarantee a function will have an absolute maximum and an absolute minimum.

## THEOREM

## Extreme Value Theorem

If $f$ is a continuous function* whose domain is a closed interval $[a, b]$, then $f$ has an absolute maximum and an absolute minimum on $[a, b]$.

The absolute maximum (minimum) can be found by selecting the largest (smallest) value of $f$ from the following list:

1. The value of $f$ at any local maxima and local minima of $f$ in $(a, b)$.
2. The value of $f$ at each endpoint of $[a, b]$-that is, $f(a)$ and $f(b)$.
3. The value of $f$ on any interval in $[a, b]$ on which $f$ is constant.

For example, the graph of the function $f$ given in Figure 23(a) is continuous on the closed interval $[0,5]$. The Extreme Value Theorem guarantees that $f$ has extreme values on $[0,5]$. To find them, we list

1. The value of $f$ at the local extrema: $f(3)=6, f(4)=4$
2. The value of $f$ at the endpoints: $f(0)=1, f(5)=5$

The largest of these, 6 , is the absolute maximum; the smallest of these, 1 , is the absolute minimum.

Now Work problem 45

## 6 Use a Graphing Utility to Approximate Local Maxima and Local Minima and to Determine Where a Function Is Increasing or Decreasing

To locate the exact value at which a function $f$ has a local maximum or a local minimum usually requires calculus. However, a graphing utility may be used to approximate these values by using the MAXIMUM and MINIMUM features.

## EXAMPLE 6

Using a Graphing Utility to Approximate Local Maxima and Minima and to Determine Where a Function Is Increasing or Decreasing
(a) Use a graphing utility to graph $f(x)=6 x^{3}-12 x+5$ for $-2<x<2$. Approximate where $f$ has a local maximum and where $f$ has a local minimum.
(b) Determine where $f$ is increasing and where it is decreasing.

[^2]Solution (a) Graphing utilities have a feature that finds the maximum or minimum point of a graph within a given interval. Graph the function $f$ for $-2<x<2$. The MAXIMUM and MINIMUM commands require us to first determine the open interval $I$. The graphing utility will then approximate the maximum or minimum value in the interval. Using MAXIMUM, we find that the local maximum is 11.53 and that it occurs at $x=-0.82$, rounded to two decimal places. See Figure 24(a). Using MINIMUM, we find that the local minimum is -1.53 and that it occurs at $x=0.82$, rounded to two decimal places. See Figure 24(b).
Figure 24

(a)

(b)
(b) Looking at Figures 24(a) and (b), we see that the graph of $f$ is increasing from $x=-2$ to $x=-0.82$ and from $x=0.82$ to $x=2$, so $f$ is increasing on the intervals $(-2,-0.82)$ and $(0.82,2)$, or for $-2<x<-0.82$ and $0.82<x<2$. The graph is decreasing from $x=-0.82$ to $x=0.82$, so $f$ is decreasing on the interval ( $-0.82,0.82$ ), or for $-0.82<x<0.82$.

## Now Work problem 53

## 7 Find the Average Rate of Change of a Function

In Foundations, Section 3, we said that the slope of a line could be interpreted as the average rate of change. To find the average rate of change of a function between any two points on its graph, calculate the slope of the line containing the two points.

## DEFINITION

## In Words

The symbol $\Delta$ is the Greek capital letter delta and is read "change in."

If $a$ and $b, a \neq b$, are in the domain of a function $y=f(x)$, the average rate of change of $f$ from $a$ to $b$ is defined as

$$
\begin{equation*}
\text { Average rate of change }=\frac{\Delta y}{\Delta x}=\frac{f(b)-f(a)}{b-a} \quad a \neq b \tag{1}
\end{equation*}
$$

The symbol $\Delta y$ in equation (1) is the "change in $y$," and $\Delta x$ is the "change in $x$." The average rate of change of $f$ is the change in $y$ divided by the change in $x$.

## EXAMPLE 7

## Finding the Average Rate of Change

Find the average rate of change of $f(x)=3 x^{2}$ :
(a) From 1 to 3
(b) From 1 to 5
(c) From 1 to 7

Solution (a) The average rate of change of $f(x)=3 x^{2}$ from 1 to 3 is

$$
\frac{\Delta y}{\Delta x}=\frac{f(3)-f(1)}{3-1}=\frac{27-3}{3-1}=\frac{24}{2}=12
$$

(b) The average rate of change of $f(x)=3 x^{2}$ from 1 to 5 is

$$
\frac{\Delta y}{\Delta x}=\frac{f(5)-f(1)}{5-1}=\frac{75-3}{5-1}=\frac{72}{4}=18
$$

(c) The average rate of change of $f(x)=3 x^{2}$ from 1 to 7 is

$$
\frac{\Delta y}{\Delta x}=\frac{f(7)-f(1)}{7-1}=\frac{147-3}{7-1}=\frac{144}{6}=24
$$

See Figure 25 for a graph of $f(x)=3 x^{2}$. The function $f$ is increasing for $x>0$. The fact that the average rate of change is positive for any $x_{1}, x_{2}, x_{1} \neq x_{2}$, in the interval (1,7) indicates that the graph is increasing on $1<x<7$. Further, the

Figure 25
 average rate of change is consistently getting larger for $1<x<7$, which indicates that the graph is increasing at an increasing rate.
am Now Work problem 61

## The Secant Line

The average rate of change of a function has an important geometric interpretation. Look at the graph of $y=f(x)$ in Figure 26. Two points are labeled on the graph: $(a, f(a))$ and $(b, f(b))$. The line containing these two points is called the secant line; its slope is

$$
m_{\mathrm{sec}}=\frac{f(b)-f(a)}{b-a}=\frac{f(a+h)-f(a)}{h}
$$

Figure 26

## THEOREM Slope of the Secant Line

The average rate of change of a function $f$ from $a$ to $b$ equals the slope of the secant line containing the two points $(a, f(a))$ and $(b, f(b))$ on its graph.

## EXAMPLE 8 Finding the Equation of a Secant Line

Suppose that $g(x)=3 x^{2}-2 x+3$.
(a) Find the average rate of change of $g$ from -2 to 1 .
(b) Find an equation of the secant line containing $(-2, g(-2))$ and $(1, g(1))$.
(c) Using a graphing utility, draw the graph of $g$ and the secant line obtained in part (b) on the same screen.

Solution (a) The average rate of change of $g(x)=3 x^{2}-2 x+3$ from -2 to 1 is

$$
\begin{aligned}
\text { Average rate of change } & =\frac{g(1)-g(-2)}{1-(-2)} & & \\
& =\frac{4-19}{3} & & g(1)=3(1)^{2}-2(1)+3=4 \\
& =-\frac{15}{3}=-5 & &
\end{aligned}
$$

(b) The slope of the secant line containing $(-2, g(-2))=(-2,19)$ and $(1, g(1))=(1,4)$ is $m_{\text {sec }}=-5$. Use the point-slope form to find an equation of the secant line.

Figure 27

$$
\begin{aligned}
y-y_{1} & =m_{\sec }\left(x-x_{1}\right) & & \text { Point-slope form of the secant line } \\
y-19 & =-5(x-(-2)) & & x_{1}=-2, y_{1}=g(-2)=19, m_{\sec }=-5 \\
y-19 & =-5 x-10 & & \text { Distribute. } \\
y & =-5 x+9 & & \text { Slope-intercept form of the secant line }
\end{aligned}
$$

(c) Figure 27 shows the graph of $g$ along with the secant line $y=-5 x+9$.

Now Work problem 67

### 1.3 Assess Your Understanding

'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.

1. The interval $(2,5)$ can be written as the inequality
$\qquad$ . (pp. A81-A82)
2. The slope of the line containing the points $(-2,3)$ and $(3,8)$ is $\qquad$ . (pp. 19-21)
3. Test the equation $y=5 x^{2}-1$ for symmetry with respect to the $x$-axis, the $y$-axis, and the origin. (pp. 12-14)

## Concepts and Vocabulary

6. A function $f$ is $\qquad$ on an open interval $I$ if, for any choice of $x_{1}$ and $x_{2}$ in $I$, with $x_{1}<x_{2}$, we have $f\left(x_{1}\right)<f\left(x_{2}\right)$.
7. A(n) $\qquad$ function $f$ is one for which $f(-x)=f(x)$ for every $x$ in the domain of $f ; \mathrm{a}(\mathrm{n})$ $\qquad$ function $f$ is one for which $f(-x)=-f(x)$ for every $x$ in the domain of $f$.
8. True or False A function $f$ is decreasing on an open interval $I$ if, for any choice of $x_{1}$ and $x_{2}$ in $I$, with $x_{1}<x_{2}$, we have $f\left(x_{1}\right)>f\left(x_{2}\right)$.
9. True or False A function $f$ has a local maximum at $c$ if there is an open interval $I$ containing $c$ so that for all $x$ in $I$, $f(x) \leq f(c)$.
10. True or False Even functions have graphs that are symmetric with respect to the origin.

## Skill Building

In Problems 11-20, use the graph of the function $f$ given.
11. Is $f$ increasing on the interval $(-8,-2)$ ?
12. Is $f$ decreasing on the interval $(-8,-4)$ ?
13. Is $f$ increasing on the interval $(2,10)$ ?
14. Is $f$ decreasing on the interval $(2,5)$ ?
15. List the interval(s) on which $f$ is increasing.
16. List the interval(s) on which $f$ is decreasing.
17. Is there a local maximum value at 2 ? If yes, what is it?

18. Is there a local maximum value at 5 ? If yes, what is it?
19. List the number(s) at which $f$ has a local maximum. What are the local maximum values?
20. List the number(s) at which $f$ has a local minimum. What are the local minimum values?

In Problems 21-28, the graph of a function is given. Use the graph to find:
(a) The intercepts, if any
(b) The domain and range
(c) The intervals on which the function is increasing, decreasing, or constant
(d) Whether the function is even, odd, or neither
21.

22.

23.

24.

25.

26.

27.

28.

In Problems 29-32, the graph of a function $f$ is given. Use the graph to find:
(a) The numbers, if any, at which $f$ has a local maximum value. What are the local maximum values?
(b) The numbers, if any, at which $f$ has a local minimum value. What are the local minimum values?
29.

30.

31.

32.

In Problems 33-44, determine algebraically whether each function is even, odd, or neither.
33. $f(x)=4 x^{3}$
34. $f(x)=2 x^{4}-x^{2}$
35. $g(x)=-3 x^{2}-5$
36. $h(x)=3 x^{3}+5$
37. $F(x)=\sqrt[3]{x}$
38. $G(x)=\sqrt{x}$
39. $f(x)=x+|x|$
40. $f(x)=\sqrt[3]{2 x^{2}+1}$
41. $g(x)=\frac{x^{2}+3}{x^{2}-1}$
42. $h(x)=\frac{x}{x^{2}-1}$
43. $h(x)=\frac{-x^{3}}{3 x^{2}-9}$

In Problems 45-52, for each graph
any local maxima or local minima.

46.

47.

48.

49.

50.

51.

52.

In Problems 53-60, use a graphing utility to graph each function over the indicated interval and approximate any local maximum values and local minimum values. Determine where the function is increasing and where it is decreasing. Round answers to two decimal places.
53. $f(x)=x^{3}-3 x+2 \quad(-2,2)$
55. $f(x)=x^{5}-x^{3} \quad(-2,2)$
57. $f(x)=-0.2 x^{3}-0.6 x^{2}+4 x-6 \quad(-6,4)$
59. $f(x)=0.25 x^{4}+0.3 x^{3}-0.9 x^{2}+3 \quad(-3,2)$
61. Find the average rate of change of $f(x)=-2 x^{2}+4$.
(a) From 0 to 2
(b) From 1 to 3
(c) From 1 to 4
54. $f(x)=x^{3}-3 x^{2}+5 \quad(-1,3)$
56. $f(x)=x^{4}-x^{2} \quad(-2,2)$
58. $f(x)=-0.4 x^{3}+0.6 x^{2}+3 x-2 \quad(-4,5)$
60. $f(x)=-0.4 x^{4}-0.5 x^{3}+0.8 x^{2}-2 \quad(-3,2)$
62. Find the average rate of change of $f(x)=-x^{3}+1$.
(a) From 0 to 2
(b) From 1 to 3
(c) From -1 to 1
63. Find the average rate of change of $g(x)=x^{3}-2 x+1$.
(a) From -3 to -2
(b) From -1 to 1
(c) From 1 to 3
64. Find the average rate of change of $h(x)=x^{2}-2 x+3$.
(a) From -1 to 1
(b) From 0 to 2
(c) From 2 to 5
65. $f(x)=5 x-2$
(a) Find the average rate of change from 1 to 3.
(b) Find an equation of the secant line containing $(1, f(1))$ and $(3, f(3))$.
66. $f(x)=-4 x+1$
(a) Find the average rate of change from 2 to 5 .
(b) Find an equation of the secant line containing ( $2, f(2)$ ) and $(5, f(5))$.
67. $g(x)=x^{2}-2$
(a) Find the average rate of change from -2 to 1 .
(b) Find an equation of the secant line containing $(-2, g(-2))$ and $(1, g(1))$.
68. $g(x)=x^{2}+1$
(a) Find the average rate of change from -1 to 2 .
(b) Find an equation of the secant line containing $(-1, g(-1)$ and $(2, g(2))$.
69. $h(x)=x^{2}-2 x$
(a) Find the average rate of change from 2 to 4 .
(b) Find an equation of the secant line containing ( $2, h(2)$ ) and (4, $h(4)$ ).
70. $h(x)=-2 x^{2}+x$
(a) Find the average rate of change from 0 to 3 .
(b) Find an equation of the secant line containing $(0, h(0))$ and $(3, h(3))$.

## - Mixed Practice

71. $g(x)=x^{3}-27 x$
(a) Determine whether $g$ is even, odd, or neither.
(b) There is a local minimum value of -54 at 3 . Determine a local maximum value.
72. $f(x)=-x^{3}+12 x$
(a) Determine whether $f$ is even, odd, or neither.
(b) There is a local maximum value of 16 at 2 . Determine a local minimum value.
73. $F(x)=-x^{4}+8 x^{2}+8$
(a) Determine whether $F$ is even, odd, or neither.
(b) There is a local maximum value of 24 at $x=2$. Determine a second local maximum value.
$\forall$ (c) Suppose the area under the graph of $F$ between $x=0$ and $x=3$ that is bounded below by the $x$-axis is 47.4 square units. Using the result from part (a), determine the area under the graph of $F$ between $x=-3$ and $x=0$ bounded below by the $x$-axis.
74. $G(x)=-x^{4}+32 x^{2}+144$
(a) Determine whether $G$ is even, odd, or neither.
(b) There is a local maximum value of 400 at $x=4$. Determine a second local maximum value.
(c) Suppose the area under the graph of $G$ between $x=0$ and $x=6$ that is bounded below by the $x$-axis is 1612.8 square units. Using the result from part (a), determine the area under the graph of $G$ between $x=-6$ and $x=0$ bounded below by the $x$-axis.

## Applications and Extensions

75. Minimum Average Cost The average cost per hour in dollars, $\bar{C}$, of producing $x$ riding lawn mowers can be modeled by the function

$$
\bar{C}(x)=0.3 x^{2}+21 x-251+\frac{2500}{x}
$$

(a) Use a graphing utility to graph $\bar{C}=\bar{C}(x)$.
(b) Determine the number of riding lawn mowers to produce in order to minimize average cost.
(c) What is the minimum average cost?
76. Medicine Concentration The concentration $C$ of a medication in the bloodstream $t$ hours after being administered is modeled by the function
$C(t)=-0.002 t^{4}+0.039 t^{3}-0.285 t^{2}+0.766 t+0.085$
(a) After how many hours will the concentration be highest?
(b) A woman nursing a child must wait until the concentration is below 0.5 before she can feed her or him. After taking the medication, how long must she wait before feeding her child?
77. National Debt The size of the total debt owed by the United States federal government continues to grow. In fact, according to the Department of the Treasury, the debt per person living in the United States is approximately $\$ 45,000$ (or over $\$ 300,000$ per U.S. household). The following data
represent the U.S. debt for the years 2001-2012. Since the debt $D$ depends on the year $y$, and each input corresponds to exactly one output, the debt is a function of the year. Thus $D(y)$, represents the debt for each year $y$.

| Year | Debt (billions <br> of dollars) | Year | Debt (billions <br> of dollars) |
| :---: | :---: | :---: | :---: |
| 2001 | 5807 | 2007 | 9008 |
| 2002 | 6228 | 2008 | 10,025 |
| 2003 | 6783 | 2009 | 11,910 |
| 2004 | 7379 | 2010 | 13,562 |
| 2005 | 7933 | 2011 | 14,790 |
| 2006 | 8507 | 2012 | 16,066 |

Source: www.treasurydirect.gov
(a) Plot the points $(2001,5807),(2002,6228)$, and so on in a Cartesian plane.
(b) Draw a line segment from the point $(2001,5807)$ to (2006, 8507). What does the slope of this line segment represent?
(c) Find the average rate of change of the debt from 2002 to 2004.
(d) Find the average rate of change of the debt from 2006 to 2008.
(e) Find the average rate of change of the debt from 2010 to 2012.
(f) What is happening to the average rate of change as time passes?
78. E.coli Growth A strain of E.coli Beu 397-recA441 is placed into a nutrient broth at $30^{\circ}$ Celsius and allowed to grow. The data shown in the table are collected. The population is measured in grams and the time in hours. Since population $P$ depends on time $t$, and each input corresponds to exactly one output, we can say that population is a function of time. Thus $P(t)$ represents the population at time $t$.

| Time <br> (hours), $\boldsymbol{t}$ | Population <br> (grams), $\boldsymbol{P}$ |
| :---: | :---: |
| 0 | 0.09 |
| 2.5 | 0.18 |
| 3.5 | 0.26 |
| 4.5 | 0.35 |
| 6 | 0.50 |

(a) Plot the points $(0,0.09),(2.5,0.18)$, and so on in a Cartesian plane.
(b) Draw a line segment from the point $(0,0.09)$ to $(2.5,0.18)$. What does the slope of this line segment represent?
(c) Find the average rate of change of the population from 0 to 2.5 hours.
(d) Find the average rate of change of the population from 4.5 to 6 hours.
(e) What is happening to the average rate of change as time passes?
79. For the function $f(x)=x^{2}$, compute each average rate of change:
(a) From 0 to 1
(b) From 0 to 0.5
(c) From 0 to 0.1
(d) From 0 to 0.01
(e) From 0 to 0.001
(f) Use a graphing utility to graph each of the secant lines along with $f$.
(g) What do you think is happening to the secant lines?
(h) What is happening to the slopes of the secant lines? Is there some number that they are getting closer to? What is that number?
80. For the function $f(x)=x^{2}$, compute each average rate of change:
(a) From 1 to 2
(b) From 1 to 1.5
(c) From 1 to 1.1
(d) From 1 to 1.01
(e) From 1 to 1.001
(f) Use a graphing utility to graph each of the secant lines along with $f$.
(g) What do you think is happening to the secant lines?
(h) What is happening to the slopes of the secant lines? Is there some number that they are getting closer to? What is that number?

Problems 81-88 require the following discussion of a secant line. The slope of the secant line containing the two points $(x, f(x))$ and $(x+h, f(x+h))$ on the graph of a function $y=f(x)$ may be given as

$$
m_{\mathrm{sec}}=\frac{f(x+h)-f(x)}{(x+h)-x}=\frac{f(x+h)-f(x)}{h} \quad h \neq 0
$$

In calculus, this expression is called the difference quotient of $f$.
(a) Express the slope of the secant line of each function in terms of $x$ and $h$. Be sure to simplify your answer.
(b) Find $m_{\text {sec }}$ for $h=0.5,0.1$, and 0.01 at $x=1$. What value does $m_{\text {sec }}$ approach as $h$ approaches 0 ?
(c) Find the equation for the secant line at $x=1$ with $h=0.01$.
(d) Use a graphing utility to graph $f$ and the secant line found in part (c) on the same viewing window.
81. $f(x)=2 x+5$
82. $f(x)=-3 x+2$
83. $f(x)=x^{2}+2 x$
84. $f(x)=2 x^{2}+x$
85. $f(x)=2 x^{2}-3 x+1$
86. $f(x)=-x^{2}+3 x-2$
87. $f(x)=\frac{1}{x}$
88. $f(x)=\frac{1}{x^{2}}$

## Discussion and Writing

89. Draw the graph of a function that has the following properties: domain: all real numbers; range: all real numbers; intercepts: $(0,-3)$ and $(3,0)$; a local maximum value of -2 is at -1 ; a local minimum value of -6 is at 2 . Compare your graph with those of others. Comment on any differences.
90. Redo Problem 89 with the following additional information: increasing on $(-\infty,-1),(2, \infty)$; decreasing on $(-1,2)$. Again compare your graph with others and comment on any differences.
91. How many $x$-intercepts can a function defined on an interval have if it is increasing on that interval? Explain.
92. Suppose that a friend of yours does not understand the idea of increasing and decreasing functions. Provide an explanation, complete with graphs, that clarifies the idea.
93. Can a function be both even and odd? Explain.
94. Using a graphing utility, graph $y=5$ on the interval $(-3,3)$. Use MAXIMUM to find the local maximum values on $(-3,3)$. Comment on the result provided by the calculator.
95. A function $f$ has a positive average rate of change on the interval $[2,5]$. Is $f$ increasing on [2,5] ? Explain.
96. Show that a constant function $f(x)=b$ has an average rate of change of 0 . Compute the average rate of change of $y=\sqrt{4-x^{2}}$ on the interval $[-2,2]$. Explain how this can happen.
97. $2<x<5$
98. 1
99. symmetric with respect to the $y$-axis
100. $y+2=5(x-3)$
101. $(-3,0),(3,0),(0,-9)$

### 1.4 Library of Functions; Piecewise-defined Functions

PREPARING FOR THIS SECTION Before getting started, review the following:

- Intercepts (Foundations, Section 2, pp. 11-12)
- Graphs of Key Equations (Foundations, Section 2: Example 3, p. 10; Example 8, p. 14 Example 9, p. 15, Example 10, p. 15)

Now Work the 'Are You Prepared?' problems on page 85.
OBJECTIVES 1 Graph the Functions Listed in the Library of Functions (p. 78)
2 Graph Piecewise-defined Functions (p. 83)

## 1 Graph the Functions Listed in the Library of Functions

Figure 28

First we introduce a few more functions, beginning with the square root function.
On page 15 , we graphed the equation $y=\sqrt{x}$. Figure 28 shows a graph of the function $f(x)=\sqrt{x}$. Based on the graph, we have the following properties:

Properties of $f(x)=\sqrt{x}$

1. The domain and the range are the set of nonnegative real numbers.
2. The $x$-intercept of the graph of $f(x)=\sqrt{x}$ is 0 . The $y$-intercept of the graph of $f(x)=\sqrt{x}$ is also 0 .
3. The function is neither even nor odd.
4. The function is increasing on the interval $(0, \infty)$.
5. The function has an absolute minimum of 0 at $x=0$.

## EXAMPLE I Graphing the Cube Root Function

(a) Determine whether $f(x)=\sqrt[3]{x}$ is even, odd, or neither. State whether the graph of $f$ is symmetric with respect to the $y$-axis or symmetric with respect to the origin.
(b) Determine the intercepts, if any, of the graph of $f(x)=\sqrt[3]{x}$.
(c) Graph $f(x)=\sqrt[3]{x}$.

Solution (a) Because

$$
f(-x)=\sqrt[3]{-x}=-\sqrt[3]{x}=-f(x)
$$

the function is odd. The graph of $f$ is symmetric with respect to the origin.
(b) The $y$-intercept is $f(0)=\sqrt[3]{0}=0$. The $x$-intercept is found by solving the equation $f(x)=0$.

$$
\begin{array}{rlrl}
f(x) & =0 \\
\sqrt[3]{x} & =0 & & f(x)=\sqrt[3]{x} \\
x & =0 & & \text { Cube both sides of the equation. }
\end{array}
$$

The $x$-intercept is also 0 .
(c) Use the function to form Table 4 and obtain some points on the graph. Because of the symmetry with respect to the origin, we find only points $(x, y)$ for which $x \geq 0$. Figure 29 shows the graph of $f(x)=\sqrt[3]{x}$.

Figure 29

From the results of Example 1 and Figure 29, we have the following properties of the cube root function.

Properties of $f(x)=\sqrt[3]{x}$

1. The domain and the range are the set of all real numbers.
2. The $x$-intercept of the graph of $f(x)=\sqrt[3]{x}$ is 0 . The $y$-intercept of the graph of $f(x)=\sqrt[3]{x}$ is also 0 .
3. The graph is symmetric with respect to the origin. The function is odd.
4. The function is increasing on the interval $(-\infty, \infty)$.
5. The function does not have any local minima or any local maxima.

## EXAMPLE 2 Graphing the Absolute Value Function

(a) Determine whether $f(x)=|x|$ is even, odd, or neither. State whether the graph of $f$ is symmetric with respect to the $y$-axis or symmetric with respect to the origin.
(b) Determine the intercepts, if any, of the graph of $f(x)=|x|$.
(c) Graph $f(x)=|x|$.

Solution (a) Because

$$
\begin{aligned}
f(-x) & =|-x| \\
& =|x|=f(x)
\end{aligned}
$$

the function is even. The graph of $f$ is symmetric with respect to the $y$-axis.
(b) The $y$-intercept is $f(0)=|0|=0$. The $x$-intercept is found by solving the equation $f(x)=0$ or $|x|=0$. So the $x$-intercept is 0 .
(c) Use the function to form Table 5 and obtain some points on the graph. Because of the symmetry with respect to the $y$-axis, we need to find only points $(x, y)$ for which $x \geq 0$. Figure 30 shows the graph of $f(x)=|x|$.

Figure 30

Table 5

| $x$ | $y=\boldsymbol{f}(\boldsymbol{x})=\|\boldsymbol{x}\|$ | $(x, y)$ |
| :---: | :---: | :---: |
| 0 | 0 | $(0,0)$ |
| 1 | 1 | $(1,1)$ |
| 2 | 2 | $(2,2)$ |
| 3 | 3 | $(3,3)$ |

From the results of Example 2 and Figure 30, we have the following properties of the absolute value function.

Properties of $f(x)=|x|$

1. The domain is the set of all real numbers. The range of $f$ is $\{y \mid y \geq 0\}$.
2. The $x$-intercept of the graph of $f(x)=|x|$ is 0 . The $y$-intercept of the graph of $f(x)=|x|$ is also 0 .
3. The graph is symmetric with respect to the $y$-axis. The function is even.
4. The function is decreasing on the interval $(-\infty, 0)$. It is increasing on the interval $(0, \infty)$.
5. The function has an absolute minimum of 0 at $x=0$.

## Seeing the Concept

Graph $y=|x|$ on a square screen and compare what you see with Figure 30. Note that some graphing calculators use abs ( $x$ ) for absolute value.

Below is a list of the key functions that we have discussed. In going through this list, pay special attention to the properties of each function, particularly to the shape of each graph. Knowing these graphs, along with key points on each graph, will lay the foundation for further graphing techniques.

## Constant Function

$$
f(x)=b \quad b \text { is a real number }
$$

See Figure 31.
The domain of a constant function is the set of all real numbers; its range is the set consisting of a single number $b$. Its graph is a horizontal line whose $y$-intercept is $b$. The constant function is an even function.

## Identity Function

$$
f(x)=x
$$

See Figure 32.
The domain and the range of the identity function are the set of all real numbers. Its graph is a line whose slope is 1 and whose $y$-intercept is 0 . The line consists of all points for which the $x$-coordinate equals the $y$-coordinate. The identity function is an odd function that is increasing over its domain. Note that the graph bisects quadrants I and III.

## Square Function

$$
f(x)=x^{2}
$$

Figure 33 Square Function

Figure 34 Cube Function

Figure 35 Square Root Function

## See Figure 33.

The domain of the square function is the set of all real numbers; its range is the set of nonnegative real numbers. The graph of this function is a parabola whose vertex is at $(0,0)$, which is also the only intercept. The square function is an even function that is decreasing on the interval $(-\infty, 0)$ and increasing on the interval $(0, \infty)$.

## Cube Function

$$
f(x)=x^{3}
$$

See Figure 34.
The domain and the range of the cube function are the set of all real numbers. The intercept of the graph is at $(0,0)$. The cube function is odd and is increasing on the interval $(-\infty, \infty)$.

Square Root Function

$$
f(x)=\sqrt{x}
$$

## See Figure 35.

The domain and the range of the square root function are the set of nonnegative real numbers. The intercept of the graph is at $(0,0)$. The square root function is neither even nor odd and is increasing on the interval $(0, \infty)$.

## Cube Root Function

$$
f(x)=\sqrt[3]{x}
$$

See Figure 36.
The domain and the range of the cube root function are the set of all real numbers. The intercept of the graph is at $(0,0)$. The cube root function is an odd function that is increasing on the interval $(-\infty, \infty)$.

## Reciprocal Function

$$
f(x)=\frac{1}{x}
$$

Refer to Example 10, page 15, for a discussion of the equation $y=\frac{1}{x}$. See Figure 37.

The domain and the range of the reciprocal function are the set of all nonzero real numbers. The graph has no intercepts. The reciprocal function is decreasing on the intervals $(-\infty, 0)$ and $(0, \infty)$ and is an odd function.

Figure 38 Absolute Value Function

## Absolute Value Function

$$
f(x)=|x|
$$

See Figure 38.
The domain of the absolute value function is the set of all real numbers; its range is the set of nonnegative real numbers. The intercept of the graph is at $(0,0)$. If $x \geq 0$, then $f(x)=x$, and this part of the graph of $f$ is the line $y=x$; if $x<0$, then $f(x)=-x$, and this part of the graph of $f$ is the line $y=-x$. The absolute value function is an even function; it is decreasing on the interval $(-\infty, 0)$ and increasing on the interval $(0, \infty)$.

The notation $\operatorname{int}(x)$ stands for the largest integer less than or equal to $x$. For example,

$$
\operatorname{int}(1)=1, \quad \operatorname{int}(2.5)=2, \quad \operatorname{int}\left(\frac{1}{2}\right)=0, \quad \operatorname{int}\left(-\frac{3}{4}\right)=-1, \quad \operatorname{int}(\pi)=3
$$

This type of correspondence occurs frequently enough in mathematics that we give it a name.

## Greatest Integer Function

$$
f(x)=\operatorname{int}(x)^{*}=\text { greatest integer less than or equal to } x
$$

We obtain the graph of $f(x)=\operatorname{int}(x)$ by plotting several points. See Table 6. For values of $x,-1 \leq x<0$, the value of $f(x)=\operatorname{int}(x)$ is -1 ; for values of $x$, $0 \leq x<1$, the value of $f$ is 0 . See Figure 39 for the graph.

Figure 39 Greatest Integer Function

The domain of the greatest integer function is the set of all real numbers; its range is the set of integers. The $y$-intercept of the graph is 0 . The $x$-intercepts lie in the interval $[0,1)$. The greatest integer function is neither even nor odd. It is constant on every interval of the form $[k, k+1$ ), for $k$ an integer. In Figure 39, a solid dot is used to indicate, for example, that at $x=1$ the value of $f$ is $f(1)=1$; an open circle is used to illustrate that the function does not assume the value of 0 at $x=1$.

Although a precise definition requires the idea of a limit, discussed in calculus, in a rough sense, a function is said to be continuous if its graph has no gaps or holes and can be drawn without lifting a pencil from the paper on which the graph is drawn. We contrast this with a discontinuous function. A function is discontinuous if its graph has gaps or holes so that its graph cannot be drawn without lifting a pencil from the paper.

Figure $40 f(x)=\operatorname{int}(x)$

(a) Connected mode

(b) Dot mode

From the graph of the greatest integer function, we can see why it is also called a step function. At $x=0, x= \pm 1, x= \pm 2$, and so on, this function is discontinuous because, at integer values, the graph suddenly "steps" from one value to another without taking on any of the intermediate values. For example, to the immediate left of $x=3$, the $y$-coordinates of the points on the graph are 2 , and at $x=3$ and to the immediate right of $x=3$, the $y$-coordinates of the points on the graph are 3 . Consequently, the graph has gaps in it.
COMMENT When graphing a function using a graphing utility, you can choose either the connected mode, in which points plotted on the screen are connected, making the graph appear without any breaks, or the dot mode, in which only the points plotted appear. When graphing the greatest integer function with a graphing utility, it may be necessary to be in the dot mode. This is to prevent the utility from "connecting the dots" when $f(x)$ changes from one integer value to the next. See Figure 40. Note that some graphing utilities will display the gaps even when in "connected" mode.

The functions discussed so far are basic. Whenever you encounter one of them, you should see a mental picture of its graph. For example, if you encounter the function $f(x)=x^{2}$, you should see in your mind's eye a picture like Figure 33.

Now Work problems 9 through 16

## 2 Graph Piecewise-defined Functions

Sometimes a function is defined using different equations on different parts of its domain. For example, the absolute value function $f(x)=|x|$ is defined by two equations: $f(x)=x$ if $x \geq 0$ and $f(x)=-x$ if $x<0$. For convenience, these equations are generally combined into one expression as

$$
f(x)=|x|=\left\{\begin{aligned}
x & \text { if } x \geq 0 \\
-x & \text { if } x<0
\end{aligned}\right.
$$

When a function is defined by different equations on different parts of its domain, it is called a piecewise-defined function.

## EXAMPLE 3

## Analyzing a Piecewise-defined Function

The function $f$ is defined as

$$
f(x)= \begin{cases}-2 x+1 & \text { if }-3 \leq x<1 \\ 2 & \text { if } x=1 \\ x^{2} & \text { if } x>1\end{cases}
$$

(a) Find $f(-2), f(1)$, and $f(2)$.
(b) Determine the domain of $f$.
(c) Locate any intercepts.
(d) Graph $f$.
(e) Use the graph to find the range of $f$.
(f) Is $f$ continuous on its domain?

Solution
(a) To find $f(-2)$, observe that when $x=-2$, the equation for $f$ is given by $f(x)=-2 x+1$, so

$$
f(-2)=-2(-2)+1=5
$$

When $x=1$, the equation for $f$ is $f(x)=2$. That is,

$$
f(1)=2
$$

When $x=2$, the equation for $f$ is $f(x)=x^{2}$, so

$$
f(2)=2^{2}=4
$$

(b) To find the domain of $f$, look at its definition. Since $f$ is defined for all $x$ greater than or equal to -3 , the domain of $f$ is $\{x \mid x \geq-3\}$, or the interval $[-3, \infty)$.
(c) The $y$-intercept of the graph of the function is $f(0)$. Because the equation for $f$ when $x=0$ is $f(x)=-2 x+1$, the $y$-intercept is $f(0)=-2(0)+1=1$.

Figure 41

The $x$-intercepts of the graph of a function $f$ are the real solutions to the equation $f(x)=0$. To find the $x$-intercepts of $f$, solve $f(x)=0$ for each "piece" of the function, and then determine whether the values of $x$, if any, satisfy the condition that defines the piece.

$$
\begin{array}{rlrlrl}
f(x) & =0 & f(x) & =0 & f(x) & =0 \\
-2 x+1 & =0 & -3 \leq x<1 & 2 & =0 & x=1 \\
-2 x & =-1 & & x^{2} & =0 & x>1 \\
x & =\frac{1}{2} & & x & =0
\end{array}
$$

The first potential $x$-intercept, $x=\frac{1}{2}$, satisfies the condition $-3 \leq x<1$, so $x=\frac{1}{2}$ is an $x$-intercept. The second potential $x$-intercept, $x=0$, does not satisfy the condition $x>1$, so $x=0$ is not an $x$-intercept. The only $x$-intercept is $\frac{1}{2}$. The intercepts are $(0,1)$ and $\left(\frac{1}{2}, 0\right)$.
(d) To graph $f$, graph each "piece." First graph the line $y=-2 x+1$ and keep only the part for which $-3 \leq x<1$. Then plot the point $(1,2)$ because, when $x=1, f(x)=2$. Finally, graph the parabola $y=x^{2}$ and keep only the part for which $x>1$. See Figure 41.
(e) From the graph, we conclude that the range of $f$ is $\{y \mid y>-1\}$, or the interval $(-1, \infty)$.
(f) The function $f$ is not continuous because there is a "jump" in the graph at $x=1$.

Now Work problem 29

## EXAMPLE 4 Cost of Electricity

In the spring of 2013, Duke Energy Progress supplied electricity to residences in South Carolina for a monthly customer charge of $\$ 6.50$ plus $9.560 \notin$ per kilowatthour ( kWhr ) for the first 800 kWhr supplied in the month and $8.560 \notin$ per kWhr for all usage over 800 kWhr in the month.
(a) What is the charge for using 300 kWhr in a month?
(b) What is the charge for using 1500 kWhr in a month?
(c) If $C$ is the monthly charge for $x \mathrm{kWhr}$, develop a model relating the monthly charge and kilowatt-hours used. That is, express $C$ as a function of $x$.
Source: Duke Energy Progress, 2013
Solution (a) For 300 kWhr , the charge is $\$ 6.50$ plus $9.560 \varnothing=\$ 0.0956$ per kWhr . That is,

$$
\text { Charge }=\$ 6.50+\$ 0.0956(300)=\$ 35.18
$$

(b) For 1500 kWhr , the charge is $\$ 6.50$ plus $9.560 \notin$ per kWhr for the first 800 kWhr plus $8.560 \notin$ per kWhr for the 700 in excess of 800 . That is,

$$
\text { Charge }=\$ 6.50+\$ 0.0956(800)+\$ 0.0856(700)=\$ 142.90
$$

(c) Let $x$ represent the number of kilowatt-hours used. If $0 \leq x \leq 800$, then the monthly charge $C$ (in dollars) can be found by multiplying $x$ times $\$ 0.0956$ and adding the monthly customer charge of $\$ 6.50$. Thus, if $0 \leq x \leq 800$, then $C(x)=0.0956 x+6.50$.

For $x>800$, the charge is $0.0956(800)+6.50+0.0856(x-800)$, since $(x-800)$ equals the usage in excess of 800 kWhr , which costs $\$ 0.0856$ per kWhr. That is, if $x>800$, then

$$
\begin{aligned}
C(x) & =0.0956(800)+6.50+0.0856(x-800) \\
& =76.48+6.50+0.0856 x-68.48 \\
& =0.0856 x+14.50
\end{aligned}
$$

Figure 42

The rule for computing $C$ follows two equations:

$$
C(x)=\left\{\begin{array}{ll}
0.0956 x+6.50 & \text { if } 0 \leq x \leq 800 \\
0.0856 x+14.50 & \text { if } x>800
\end{array}\right. \text { The Model }
$$

See Figure 42 for the graph.

### 1.4 Assess Your Understanding

'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.

1. Sketch the graph of $y=\sqrt{x}$. (p. 15)
2. List the intercepts of the equation $y=x^{3}-8$. (p.12)
3. Sketch the graph of $y=\frac{1}{x}$. (pp. 15-16)

## Concepts and Vocabulary

4. The function $f(x)=x^{2}$ is decreasing on the interval
5. When functions are defined by more than one equation, they are called $\qquad$ functions.
6. True or False The cube function is odd and is increasing on the interval $(-\infty, \infty)$.
7. True or False The cube root function is odd and is decreasing on the interval $(-\infty, \infty)$.
8. True or False The domain and the range of the reciprocal function are the set of all real numbers.

## Skill Building

In Problems 9-16, match each graph to its function.
A. Constant function
B. Identity function
F. Reciprocal function
C. Square function
G. Absolute value function
D. Cube function H. Cube root function

10.

11.

13.

15.

12.

16.

In Problems 17-24, sketch the graph of each function. Be sure to label three points on the graph.
17. $f(x)=x$
18. $f(x)=x^{2}$
19. $f(x)=x^{3}$
20. $f(x)=\sqrt{x}$
21. $f(x)=\frac{1}{x}$
22. $f(x)=|x|$
23. $f(x)=\sqrt[3]{x}$
24. $f(x)=3$
25. If $f(x)= \begin{cases}x^{2} & \text { if } x<0 \\ 2 & \text { if } x=0 \\ 2 x+1 & \text { if } x>0\end{cases}$
find: (a) $f(-2)$
(b) $f(0)$
(c) $f(2)$
27. If $f(x)= \begin{cases}2 x-4 & \text { if }-1 \leq x \leq 2 \\ x^{3}-2 & \text { if } 2<x \leq 3\end{cases}$
26. If $f(x)= \begin{cases}-3 x & \text { if } x<-1 \\ 0 & \text { if } x=-1 \\ 2 x^{2}+1 & \text { if } x>-1\end{cases}$
find: (a) $f(-2)$
(b) $f(-1)$
(c) $f(0)$
find: (a) $f(0)$
(b) $f(1)$
(c) $f(2)$
(d) $f(3)$
28. If $f(x)= \begin{cases}x^{3} & \text { if }-2 \leq x<1 \\ 3 x+2 & \text { if } 1 \leq x \leq 4\end{cases}$
find: (a) $f(-1) \quad$ (b) $f(0) \quad$ (c) $f(1)$
(d) $f(3)$

In Problems 29-40:
(a) Find the domain of each function.
(b) Locate any intercepts.
(c) Graph each function.
(d) Based on the graph, find the range.
(e) Is $f$ continuous on its domain?
29. $f(x)= \begin{cases}2 x & \text { if } x \neq 0 \\ 1 & \text { if } x=0\end{cases}$
30. $f(x)= \begin{cases}3 x & \text { if } x \neq 0 \\ 4 & \text { if } x=0\end{cases}$
31. $f(x)= \begin{cases}-2 x+3 & \text { if } x<1 \\ 3 x-2 & \text { if } x \geq 1\end{cases}$
32. $f(x)= \begin{cases}x+3 & \text { if } x<-2 \\ -2 x-3 & \text { if } x \geq-2\end{cases}$
33. $f(x)= \begin{cases}x+3 & \text { if }-2 \leq x<1 \\ 5 & \text { if } x=1 \\ -x+2 & \text { if } x>1\end{cases}$
34. $f(x)= \begin{cases}2 x+5 & \text { if }-3 \leq x<0 \\ -3 & \text { if } x=0 \\ -5 x & \text { if } x>0\end{cases}$
35. $f(x)= \begin{cases}1+x & \text { if } x<0 \\ x^{2} & \text { if } x \geq 0\end{cases}$
36. $f(x)= \begin{cases}\frac{1}{x} & \text { if } x<0 \\ \sqrt[3]{x} & \text { if } x \geq 0\end{cases}$
37. $f(x)= \begin{cases}|x| & \text { if }-2 \leq x<0 \\ x^{3} & \text { if } x \geq 0\end{cases}$
38. $f(x)= \begin{cases}2-x & \text { if }-3 \leq x<1 \\ \sqrt{x} & \text { if } x \geq 1\end{cases}$
39. $f(x)=2 \operatorname{int}(x)$
40. $f(x)=\operatorname{int}(2 x)$

In Problems 41-44, the graph of a piecewise-defined function is given. Write a definition for each function.
41.

42.

43.

44.

45. If $f(x)=\operatorname{int}(2 x)$, find
(a) $f(1.2)$
(b) $f(1.6)$
(c) $f(-1.8)$
46. If $f(x)=\operatorname{int}\left(\frac{x}{2}\right)$, find
(a) $f(1.2)$
(b) $f(1.6)$
(c) $f(-1.8)$

## Applications and Extensions

47. Cell Phone Service Sprint PCS offers a monthly cellular phone plan for $\$ 39.99$. It includes 450 anytime minutes and charges $\$ 0.45$ per minute for additional minutes. The following function is used to compute the monthly cost for a subscriber:

$$
C(x)= \begin{cases}39.99 & \text { if } 0 \leq x \leq 450 \\ 0.45 x-162.51 & \text { if } x>450\end{cases}
$$

where $x$ is the number of anytime minutes used. Compute the monthly cost of the cellular phone for use of the following numbers of anytime minutes:
(a) 200
(b) 465
(c) 451

Source: Sprint PCS
48. Parking at O'Hare International Airport The short-term (no more than 24 hours) parking fee $F$ (in dollars) for parking $x$ hours on a weekday at O'Hare International Airport's main parking garage can be modeled by the function

$$
F(x)= \begin{cases}2 & \text { if } 0<x \leq 1 \\ 4 & \text { if } 1<x \leq 3 \\ 10 & \text { if } 3<x \leq 4 \\ 5 \operatorname{int}(x+1)+2 & \text { if } 4<x<9 \\ 51 & \text { if } 9 \leq x \leq 24\end{cases}
$$

Determine the fee for parking in the short-term parking garage for
(a) 2 hours
(b) 7 hours
(c) 15 hours
(d) 8 hours and 24 minutes

## Source: O'Hare International Airport

49. Cost of Natural Gas In March 2013, Peoples Energy had the following rate schedule for natural gas usage in single-family residences:

| Monthly service charge <br> Per therm service charge | $\$ 22.25$ |
| :--- | :--- |
| First 50 therms |  |
| Over 50 therms | $\$ 0.25963 /$ therm |
| Gas charge | $\$ 0.11806 /$ therm |
|  | $\$ 0.3922 /$ therm |

(a) What is the charge for using 50 therms in a month?
(b) What is the charge for using 500 therms in a month?
(c) Develop a function that models the monthly charge $C$ for $x$ therms of gas.
(d) Graph the function found in part (c).

Source: Peoples Energy, Chicago, Illinois, 2013
50. Cost of Natural Gas In February 2013, Laclede Gas had the following rate schedule for natural gas usage in single-family residences:
Monthly customer charge
$\$ 19.50$
Distribution charge
First 30 therms
Over 30 therms
Gas supply charge
\$0.65403/therm
\$0.04235/therm \$0.53668/therm
(a) What is the charge for using 20 therms in a month?
(b) What is the charge for using 150 therms in a month?
(c) Develop a model that gives the monthly charge $C$ for $x$ therms of gas.
(d) Graph the function found in part (c).

Source: Laclede Gas, 2013
51. Federal Income Tax Refer to the 2013 Tax Rate Schedules. If $x$ equals taxable income and $y$ equals the tax due, construct a function $y=f(x)$ for Schedule X.
52. Federal Income Tax Refer to the 2013 tax rate schedules. If $x$ equals taxable income and $y$ equals the tax due, construct a function $y=f(x)$ for Schedule Y-1.

53. Cost of Transporting Goods A trucking company transports goods between Chicago and New York, a distance of 960 miles. The company's policy is to charge, for each pound, $\$ 0.50$ per mile for the first 100 miles, $\$ 0.40$ per mile for the next 300 miles, $\$ 0.25$ per mile for the next 400 miles, and no charge for the remaining 160 miles.
(a) Graph the relationship between the cost of transportation in dollars and mileage over the entire 960 -mile route.
(b) Find the cost as a function of mileage for hauls between 100 and 400 miles from Chicago.
(c) Find the cost as a function of mileage for hauls between 400 and 800 miles from Chicago.
54. Car Rental Costs An economy car rented in Florida from Enterprise ${ }^{\circledR}$ on a weekly basis costs $\$ 185$ per week. Extra days cost $\$ 37$ per day until the day rate exceeds the weekly rate, in which case the weekly rate applies. Also, any part of a day used counts as a full day. Find the cost $C$ of renting an economy car as a function of the number $x$ of days used, where $7 \leq x \leq 14$. Graph this function.

## Source: enterprise.com

55. Mortgage Fees Fannie Mae charges a loan-level price adjustment (LLPA) on all mortgages, which represents a fee homebuyers seeking a loan must pay. The rate paid depends on the credit score of the borrower, the amount borrowed, and the loan-to-value (LTV) ratio. The LTV ratio is the ratio of amount borrowed to appraised value of the home. For example, a homebuyer who wishes to borrow $\$ 250,000$ with a credit score of 730 and an LTV ratio of $80 \%$ will pay $0.5 \%$
( 0.005 ) of $\$ 250,000$, or $\$ 1250$. The table shows the LLPA for various credit scores and an LTV ratio of $80 \%$.

| Credit Score | Loan-Level <br> Price Adjustment Rate |
| :---: | :--- |
| $\leq 659$ | $3.00 \%$ |
| $660-679$ | $2.50 \%$ |
| $680-699$ | $1.75 \%$ |
| $700-719$ | $1 \%$ |
| $720-739$ | $0.5 \%$ |
| $\geq 740$ | $0.25 \%$ |

Source: Fannie Mae.
(a) Construct a function $C=C(s)$, where $C$ is the loan-level price adjustment (LLPA) and $s$ is the credit score of an individual who wishes to borrow $\$ 300,000$ with an $80 \%$ LTV ratio.
(b) What is the LLPA on a $\$ 300,000$ loan with an $80 \%$ LTV ratio for a borrower whose credit score is 725 ?
(c) What is the LLPA on a $\$ 300,000$ loan with an $80 \%$ LTV ratio for a borrower whose credit score is 670?
56. Minimum Payments for Credit Cards Holders of credit cards issued by banks, department stores, oil companies, and so on receive bills each month that state minimum amounts that must be paid by a certain due date. The minimum due depends on the total amount owed. One such credit card
company uses the following rules: For a bill of less than $\$ 10$, the entire amount is due. For a bill of at least $\$ 10$ but less than $\$ 500$, the minimum due is $\$ 10$. A minimum of $\$ 30$ is due on a bill of at least $\$ 500$ but less than $\$ 1000$, a minimum of $\$ 50$ is due on a bill of at least $\$ 1000$ but less than $\$ 1500$, and a minimum of $\$ 70$ is due on bills of $\$ 1500$ or more. Find the function $f$ that describes the minimum payment due on a bill of $x$ dollars. Graph $f$.
57. Wind Chill The wind chill factor represents the equivalent air temperature at a standard wind speed that would produce the same heat loss as the given temperature and wind speed. One formula for computing the equivalent temperature is
$W= \begin{cases}t & 0 \leq v<1.79 \\ 33-\frac{(10.45+10 \sqrt{v}-v)(33-t)}{22.04} & 1.79 \leq v \leq 20 \\ 33-1.5958(33-t) & v>20\end{cases}$
where $v$ represents the wind speed (in meters per second) and $t$ represents the air temperature $\left({ }^{\circ} \mathrm{C}\right)$. Compute the wind chill for the following:
(a) An air temperature of $10^{\circ} \mathrm{C}$ and a wind speed of 1 meter per second ( $\mathrm{m} / \mathrm{sec}$ )
(b) An air temperature of $10^{\circ} \mathrm{C}$ and a wind speed of $5 \mathrm{~m} / \mathrm{sec}$
(c) An air temperature of $10^{\circ} \mathrm{C}$ and a wind speed of $15 \mathrm{~m} / \mathrm{sec}$
(d) An air temperature of $10^{\circ} \mathrm{C}$ and a wind speed of $25 \mathrm{~m} / \mathrm{sec}$
(e) Explain the physical meaning of the equation corresponding to $0 \leq v<1.79$.
(f) Explain the physical meaning of the equation corresponding to $v>20$.
58. Wind Chill Redo Problem 57(a) - (d) for an air temperature of $-10^{\circ} \mathrm{C}$.
59. First-class Mail In 2013 the U.S. Postal Service charged $\$ 0.92$ postage for first-class mail retail flats (such as an $8.5^{\prime \prime}$ by 11 " envelope) weighing up to 1 ounce, plus $\$ 0.20$ for each additional ounce up to 13 ounces. First-class rates do not apply to flats weighing more than 13 ounces. Develop a model that relates $C$, the first-class postage charged, for a flat weighing $x$ ounces. Graph the function.

## Discussion and Writing

## In Problems 60-67, use a graphing utility.

60. Exploration Graph $y=x^{2}$. Then on the same screen graph $y=x^{2}+2$, followed by $y=x^{2}+4$, followed by $y=x^{2}-2$. What pattern do you observe? Can you predict the graph of $y=x^{2}-4$ ? Of $y=x^{2}+5$ ?
61. Exploration Graph $y=x^{2}$. Then on the same screen graph $y=(x-2)^{2}$, followed by $y=(x-4)^{2}$, followed by $y=(x+2)^{2}$. What pattern do you observe? Can you predict the graph of $y=(x+4)^{2}$ ? Of $y=(x-5)^{2}$ ?
62. Exploration Graph $y=|x|$. Then on the same screen graph $y=2|x|$, followed by $y=4|x|$, followed by $y=\frac{1}{2}|x|$. What pattern do you observe? Can you predict the graph of $y=\frac{1}{4}|x|$ ? Of $y=5|x|$ ?
63. Exploration Graph $y=x^{2}$. Then on the same screen graph $y=-x^{2}$. What pattern do you observe? Now try $y=|x|$ and $y=-|x|$. What do you conclude?
64. Exploration Graph $y=\sqrt{x}$. Then on the same screen graph $y=\sqrt{-x}$. What pattern do you observe? Now try $y=2 x+1$ and $y=2(-x)+1$. What do you conclude?
65. Exploration Graph $y=x^{3}$. Then on the same screen graph $y=(x-1)^{3}+2$. Could you have predicted the result?
66. Exploration Graph $y=x^{2}, y=x^{4}$, and $y=x^{6}$ on the same screen. What do you notice is the same about each graph? What do you notice is different?
67. Exploration Graph $y=x^{3}, y=x^{5}$, and $y=x^{7}$ on the same screen. What do you notice is the same about each graph? What do you notice is different?
68. Consider the equation

$$
y= \begin{cases}1 & \text { if } x \text { is rational } \\ 0 & \text { if } x \text { is irrational }\end{cases}
$$

Is this a function? What is its domain? What is its range? What is its $y$-intercept, if any? What are its $x$-intercepts, if any? Is it even, odd, or neither? How would you describe its graph?
69. Define some functions that pass through $(0,0)$ and $(1,1)$ and are increasing for $x \geq 0$. Begin your list with $y=\sqrt{x}, y=x$, and $y=x^{2}$. Can you propose a general result about such functions?

### 1.5 Graphing Techniques: Transformations

## OBJECTIVES 1 Graph Functions Using Vertical and Horizontal Shifts (p. 89) <br> 2 Graph Functions Using Compressions and Stretches (p. 92) <br> 3 Graph Functions Using Reflections about the $x$-Axis and the $y$-Axis (p. 94)

At this stage, if you were asked to graph any of the functions defined by $y=x, y=x^{2}, y=x^{3}, y=\sqrt{x}, y=\sqrt[3]{x}, y=\frac{1}{x}$, or $y=|x|$, your response should be "Yes, I recognize these functions and know the general shapes of their graphs." (If this is not your answer, review the previous section, Figures 32 through 38.)

Sometimes we are asked to graph a function that is "almost" like one that we already know how to graph. In this section, we develop techniques for graphing such functions. Collectively, these techniques are referred to as transformations.

## 1 Graph Functions Using Vertical and Horizontal Shifts

## EXAMPLE I Vertical Shift Up

Use the graph of $f(x)=x^{2}$ to obtain the graph of $g(x)=x^{2}+3$. Find the domain and range of $g$.
Solution Begin by obtaining some points on the graphs of $f$ and $g$. For example, when $x=0$, then $y=f(0)=0$ and $y=g(0)=3$. When $x=1$, then $y=f(1)=1$ and $y=g(1)=4$. Table 7 lists these and a few other points on each graph. Notice that each $y$-coordinate of a point on the graph of $g$ is 3 units larger than the $y$-coordinate of the corresponding point on the graph of $f$. We conclude that the graph of $g$ is identical to that of $f$, except that it is shifted vertically up 3 units. See Figure 43.

Table 7 \begin{tabular}{cccc|}

\cline { 2 - 3 } \& | $y=f(x)$ |
| :---: |
| $=\boldsymbol{x}^{2}$ | \& | $y=\boldsymbol{g}(\boldsymbol{x})$ |
| :--- |
| $=\boldsymbol{x}^{2}+\mathbf{3}$ | <br>

\hline-2 \& 4 \& 7 <br>
-1 \& 1 \& 4 <br>
0 \& 0 \& 3 <br>
1 \& 1 \& 4 <br>
2 \& 4 \& 7 <br>
\hline
\end{tabular}

Figure 43

The domain of $g$ is all real numbers, or $(-\infty, \infty)$. The range of $g$ is $[3, \infty)$.

## EXAMPLE 2 Vertical Shift Down

Use the graph of $f(x)=x^{2}$ to obtain the graph of $g(x)=x^{2}-4$. Find the domain and range of $g$.
Solution Table 8 on the next page lists some points on the graphs of $f$ and $g$. Notice that each $y$-coordinate of $g$ is 4 units less than the corresponding $y$-coordinate of $f$.

To obtain the graph of $g$ from the graph of $f$, subtract 4 from each $y$-coordinate on the graph of $f$. The graph of $g$ is identical to that of $f$, except that it is shifted down 4 units. See Figure 44 on the next page.

Table 8

| $\boldsymbol{x}$ | $\boldsymbol{y}=\boldsymbol{f}(\boldsymbol{x})$ <br> $=\boldsymbol{x}^{2}$ | $\boldsymbol{y}=\boldsymbol{g}(\boldsymbol{x})$ <br> $=\boldsymbol{x}^{2}-\mathbf{4}$ |
| :---: | :---: | :---: |
| -2 | 4 | 0 |
| -1 | 1 | -3 |
| 0 | 0 | -4 |
| 1 | 1 | -3 |
| 2 | 4 | 0 |

Figure 44

The domain of $g$ is all real numbers, or $(-\infty, \infty)$. The range of $g$ is $[-4, \infty)$.
Note that a vertical shift affects only the range of a function, not the domain. For example, the range of $f(x)=x^{2}$ is $[0, \infty)$. In Example 1 the range of $g$ is $[3, \infty)$, whereas in Example 2 the range of $g$ is $[-4, \infty)$. The domain for all three functions is all real numbers.

We are led to the following conclusions:
If a positive real number $k$ is added to the output of a function $y=f(x)$, the graph of the new function $y=f(x)+k$ is the graph of $f$ shifted vertically up $k$ units.

If a positive real number $k$ is subtracted from the output of a function $y=f(x)$, the graph of the new function $y=f(x)-k$ is the graph of $f$ shifted vertically down $k$ units.
am Now Work problem 39

## EXAMPLE 3 Horizontal Shift to the Right

Use the graph of $f(x)=\sqrt{x}$ to obtain the graph of $g(x)=\sqrt{x-2}$. Find the domain and range of $g$.
Solution The function $g(x)=\sqrt{x-2}$ is basically a square root function. Table 9 lists some points on the graphs of $f$ and $g$. Note that when $f(x)=0$ then $x=0$, and when $g(x)=0$, then $x=2$. Also, when $f(x)=2$, then $x=4$, and when $g(x)=2$, then $x=6$. Notice that the $x$-coordinates on the graph of $g$ are 2 units larger than the corresponding $x$-coordinates on the graph of $f$ for any given $y$-coordinate. We conclude that the graph of $g$ is identical to that of $f$, except that it is shifted horizontally 2 units to the right. See Figure 45.

Table 9

| $\boldsymbol{x}$ | $\boldsymbol{y}=\boldsymbol{f}(\boldsymbol{x})$ <br> $=\sqrt{\boldsymbol{x}}$ | $\boldsymbol{x}$ | $\boldsymbol{y}=\boldsymbol{g}(\boldsymbol{x})$ <br> $\mathbf{=} \sqrt{\boldsymbol{x}-\mathbf{2}}$ |
| :---: | :---: | :---: | :---: |
| 0 | 0 | 2 | 0 |
| 1 | 1 | 3 | 1 |
| 4 | 2 | 6 | 2 |
| 9 | 3 | 11 | 3 |

Figure 45

The domain of $g$ is $[2, \infty)$ and the range is $[0, \infty)$.

## EXAMPLE 4

## Horizontal Shift to the Left

Use the graph of $f(x)=\sqrt{x}$ to obtain the graph of $g(x)=\sqrt{x+4}$. Find the domain and range of $g$.
Solution Again, the function $g(x)=\sqrt{x+4}$ is basically a square root function. Its graph is the same as that of $f$, except that it is shifted horizontally 4 units to the left. See Figure 46.

Figure 46

The domain of $g$ is $[-4, \infty)$ and the range is $[0, \infty)$.

## Now Work problem 43

Note that a horizontal shift affects only the domain of a function, not the range. For example, the domain of $f(x)=\sqrt{x}$ is $[0, \infty)$. In Example 3 the domain of $g$ is $[2, \infty)$, whereas in Example 4 the domain of $g$ is $[-4, \infty)$. The range for all three functions is $[0, \infty)$.

We are led to the following conclusion.

```
In Words
For y = f(x-h), add hto each
x-coordinate on the graph of
y=f(x). For y = f(x+h),
subtract h from each x-coordinate
on the graph of }y=f(x)\mathrm{ .
```

If the argument $x$ of a function $f$ is replaced by $x-h, h>0$, the graph of the new function $y=f(x-h)$ is the graph of $f$ shifted horizontally right $h$ units.

If the argument $x$ of a function $f$ is replaced by $x+h, h>0$, the graph of the new function $y=f(x+h)$ is the graph of $f$ shifted horizontally left $h$ units.

Observe the distinction between vertical and horizontal shifts. The graph of $f(x)=x^{3}+2$ is obtained by shifting the graph of $y=x^{3}$ up 2 units, because we evaluate the cube function first and then add 2. The graph of $g(x)=(x+2)^{3}$ is obtained by shifting the graph of $y=x^{3}$ left 2 units, because we add 2 to $x$ before we evaluate the cube function.

Vertical and horizontal shifts are sometimes combined.

## EXAMPLE 5 Combining Vertical and Horizontal Shifts

Graph the function $f(x)=|x+3|-5$. Find the domain and range of $f$.
Solution We graph $f$ in steps. First, note that the rule for $f$ is basically an absolute value function, so begin with the graph of $y=|x|$ as shown in Figure 47(a). Next, to get the graph of $y=|x+3|$, shift the graph of $y=|x|$ horizontally 3 units to the left. See Figure 47(b). Finally, to get the graph of $y=|x+3|-5$, shift the graph of $y=|x+3|$ vertically down 5 units. See Figure 47(c). Note the points plotted on each graph. Using key points can be helpful in keeping track of the transformation that has taken place.

Figure 47

The domain of $f$ is all real numbers, or $(-\infty, \infty)$. The range of $f$ is $[-5, \infty)$. Check: Graph $Y_{1}=f(x)=|x+3|-5$ and compare the graph to Figure 47(c).

In Example 5, if the vertical shift had been done first, followed by the horizontal shift, the final graph would have been the same. Try it for yourself.
an Now Work problems 45 and 75

## 2 Graph Functions Using Compressions and Stretches

## EXAMPLE 6

## Vertical Stretch

Use the graph of $f(x)=\sqrt{x}$ to obtain the graph of $g(x)=2 \sqrt{x}$.
Solution To see the relationship between the graphs of $f$ and $g$, we form Table 10, listing points on each graph. For each $x$, the $y$-coordinate of a point on the graph of $g$ is 2 times as large as the corresponding $y$-coordinate on the graph of $f$. The graph of $f(x)=\sqrt{x}$ is vertically stretched by a factor of 2 to obtain the graph of $g(x)=2 \sqrt{x}$ [for example, $(1,1)$ is on the graph of $f$, but $(1,2)$ is on the graph of $g$ ]. See Figure 48.

Table 10

| $\boldsymbol{x}$ | $y=\boldsymbol{f}(\boldsymbol{x})$ <br> $=\sqrt{x}$ | $y=\boldsymbol{g}(\boldsymbol{x})$ <br> $=\mathbf{2} \sqrt{\boldsymbol{x}}$ |
| :---: | :---: | :---: |
| 0 | 0 | 0 |
| 1 | 1 | 2 |
| 4 | 2 | 4 |
| 9 | 3 | 6 |

Figure 48

## EXAMPLE 7 Vertical Compression

Use the graph of $f(x)=|x|$ to obtain the graph of $g(x)=\frac{1}{2}|x|$.
Solution For each $x$, the $y$-coordinate of a point on the graph of $g$ is $\frac{1}{2}$ as large as the corresponding $y$-coordinate on the graph of $f$. The graph of $f(x)=|x|$ is vertically compressed by a factor of $\frac{1}{2}$ to obtain the graph of $g(x)=\frac{1}{2}|x|$. For example, $(2,2)$ is on the graph of $f$, but $(2,1)$ is on the graph of $g$. See Table 11 and Figure 49.

| $\boldsymbol{x}$ | $\boldsymbol{y}=\boldsymbol{f}(\boldsymbol{x})$ <br> $=\|\boldsymbol{x}\|$ | $\boldsymbol{y}=\boldsymbol{g}(\boldsymbol{x})$ <br> $=\frac{\mathbf{1}}{\mathbf{2}}\|\boldsymbol{x}\|$ |
| :---: | :---: | :---: |
| -2 | 2 | 1 |
| -1 | 1 | $\frac{1}{2}$ |
| 0 | 0 | 0 |
| 1 | 1 | $\frac{1}{2}$ |
| 2 | 2 | 1 |

Figure 49

In Words
For $y=a f(x)$, the factor $a$ is "outside" the function, so it affects the $y$-coordinates. Multiply each $y$-coordinate on the graph of $y=f(x)$ by a.

When the right side of a function $y=f(x)$ is multiplied by a positive number $a$, the graph of the new function $y=a f(x)$ is obtained by multiplying each $y$-coordinate on the graph of $y=f(x)$ by $a$. The new graph is a vertically compressed (if $0<a<1$ ) or a vertically stretched (if $a>1$ ) version of the graph of $y=f(x)$.

## Now Work problem 47

What happens if the argument $x$ of a function $y=f(x)$ is multiplied by a positive number $a$, creating a new function $y=f(a x)$ ? To find the answer, look at the following Exploration.

## Figure 50

Exploration On the same screen, graph each of the following functions:

$$
Y_{1}=f(x)=\sqrt{x} \quad Y_{2}=f(2 x)=\sqrt{2 x} \quad Y_{3}=f\left(\frac{1}{2} x\right)=\sqrt{\frac{1}{2} x}=\sqrt{\frac{x}{2}}
$$

Create a table of values to explore the relation between the $x$ - and $y$-coordinates of each function.
Result You should have obtained the graphs in Figure 50. Look at Table 12(a). Notice that (1, 1), (4, 2), and $(9,3)$ are points on the graph of $Y_{1}=\sqrt{x}$. Also, $(0.5,1),(2,2)$, and $(4.5,3)$ are points on the graph of $Y_{2}=\sqrt{2 x}$. For a given $y$-coordinate, the $x$-coordinate on the graph of $Y_{2}$ is $\frac{1}{2}$ of the $x$-coordinate on $Y_{1}$.

Table 12

| X | Y 1 | Y2 |
| :---: | :---: | :---: |
| 0 | ${ }^{0}$ | $\stackrel{1}{4}$ |
| 1 | $1{ }^{70711}$ | ${ }_{1}^{1.4142}$ |
| 4 | $1.414 \overline{2}$ | 2. ${ }^{2}$ 284 |
| $\underline{4.5}$ | $\frac{1}{2} 1213$ |  |
| Y2日 $\sqrt{\text { (2) }}$ |  |  |

| $X$ | $\mathrm{Y}_{1}$ | TS |
| :---: | :---: | :---: |
| 0 | 1 | ${ }^{0} 0711$ |
| $\frac{1}{4}$ | 1.4142 | $1{ }_{1}$ |
| 㫛 | $\frac{2}{2} .8284$ | $\frac{1}{2} 4142$ |
| 18 | 4.2426 | $\frac{3}{3}$ |

We conclude that the graph of $Y_{2}=\sqrt{2 x}$ is obtained by multiplying the $x$-coordinate of each point on the graph of $Y_{1}=\sqrt{x}$ by $\frac{1}{2}$. The graph of $Y_{2}=\sqrt{2 x}$ is the graph of $Y_{1}=\sqrt{x}$ compressed horizontally.

Look at Table 12(b). Notice that $(1,1),(4,2)$, and $(9,3)$ are points on the graph of $Y_{1}=\sqrt{x}$. Also notice that $(2,1),(8,2)$, and $(18,3)$ are points on the graph of $Y_{3}=\sqrt{\frac{x}{2}}$. For a given $y$-coordinate, the $x$-coordinate on the graph of $Y_{3}$ is 2 times the $x$-coordinate on $Y_{1}$. We conclude that the graph of $Y_{3}=\sqrt{\frac{x}{2}}$ is obtained by multiplying the $x$-coordinate of each point on the graph of $Y_{1}=\sqrt{x}$ by 2 . The graph of $Y_{3}=\sqrt{\frac{x}{2}}$ is the graph of $Y_{1}=\sqrt{x}$ stretched horizontally.

Based on the Exploration, we have the following result:

If the argument $x$ of a function $y=f(x)$ is multiplied by a positive number $a$, then the graph of the new function $y=f(a x)$ is obtained by multiplying each $x$-coordinate of $y=f(x)$ by $\frac{1}{a}$. A horizontal compression results if $a>1$, and a horizontal stretch results if $0<a<1$.

Let's look at an example.

## EXAMPLE 8 Graphing Using Stretches and Compressions

The graph of $y=f(x)$ is given in Figure 51. Use this graph to find the graphs of
(a) $y=2 f(x)$
(b) $y=f(3 x)$

Solution (a) The graph of $y=2 f(x)$ is obtained by multiplying each $y$-coordinate of $y=f(x)$ by 2 . See Figure 52.
(b) The graph of $y=f(3 x)$ is obtained from the graph of $y=f(x)$ by multiplying each $x$-coordinate of $y=f(x)$ by $\frac{1}{3}$. See Figure 53.

#### Abstract

When the right side of the function $y=f(x)$ is multiplied by -1 , the graph of the new function $y=-f(x)$ is the reflection about the $\boldsymbol{x}$-axis of the graph of the function $y=f(x)$.

Solution To get the graph of $f(x)=\sqrt{-x}$, begin with the graph of $y=\sqrt{x}$, as shown in
To get the graph of $f(x)=\sqrt{-x}$, begin with the graph of $y=\sqrt{x}$, as shown in
Figure 55. For each point $(x, y)$ on the graph of $y=\sqrt{x}$, the point $(-x, y)$ is on
the graph of $y=\sqrt{-x}$. Obtain the graph of $y=\sqrt{-x}$ by reflecting the graph of
To get the graph of $f(x)=\sqrt{-x}$, begin with the graph of $y=\sqrt{x}$, as shown in
Figure 55. For each point $(x, y)$ on the graph of $y=\sqrt{x}$, the point $(-x, y)$ is on
the graph of $y=\sqrt{-x}$. Obtain the graph of $y=\sqrt{-x}$ by reflecting the graph of $y=\sqrt{x}$ about the $y$-axis. See Figure 55.
Reflection about the $y$-Axis
Graph the function $f(x)=\sqrt{-x}$. Find the domain and range of $f$.

Figure 55

The domain of $f$ is $(-\infty, 0]$. The range of $f$ is $[0, \infty)$.

```
In Words
For y = -f(x), multiply each
y-coordinate on the graph of
y=f(x) by -1.
For y = f(-x), multiply each
f-coordinate by -1.
``` -

When the graph of the function \(y=f(x)\) is known, the graph of the new function \(y=f(-x)\) is the reflection about the \(\boldsymbol{y}\)-axis of the graph of the function \(y=f(x)\).

\section*{SUMMARY OF GRAPHING TECHNIQUES}

Vertical shifts
\(y=f(x)+k, \quad k>0\)
\(y=f(x)-k, \quad k>0\)

\section*{Horizontal shifts}
\(y=f(x+h), \quad h>0\)
\(y=f(x-h), \quad h>0\)
Compressing or stretching
\(y=a f(x), \quad a>0\)
\(y=f(a x), \quad a>0\)

\section*{Reflection about the \(\boldsymbol{x}\)-axis}
\(y=-f(x)\)
Reflection about the \(\boldsymbol{y}\)-axis
\(y=f(-x)\)

\section*{To Graph: \\ Functional Change to \(f(x)\) \\ Draw the Graph of \(f\) and:}

Raise the graph of \(f\) by \(k\) units.
Lower the graph of \(f\) by \(k\) units.
Add \(k\) to \(f(x)\).

Shift the graph of \(f\) to the left \(h\) units.
Shift the graph of \(f\) to the right \(h\) units.

Multiply each \(y\)-coordinate of \(y=f(x)\) by \(a\).
Multiply \(f(x)\) by \(a\).
Stretch the graph of \(f\) vertically if \(a>1\).
Compress the graph of \(f\) vertically if \(0<a<1\).
Multiply each \(x\)-coordinate of \(y=f(x)\) by \(\frac{1}{a}\). Replace \(x\) by \(a x\).
Stretch the graph of \(f\) horizontally if \(0<a<1\).
Compress the graph of \(f\) horizontally if \(a>1\).
Replace \(x\) by \(x+h\).
Replace \(x\) by \(x-h\).

Reflect the graph of \(f\) about the \(x\)-axis.
Multiply \(f(x)\) by -1 .
Subtract \(k\) from \(f(x)\).

Multiply \(f(x)\) by -1

Reflect the graph of \(f\) about the \(y\)-axis.

Replace \(x\) by \(-x\).

\section*{EXAMPLE II Determining the Function Obtained from a Series} of Transformations

Find the function that is finally graphed after the following three transformations are applied to the graph of \(y=|x|\).
1. Shift left 2 units
2. Shift up 3 units
3. Reflect about the \(y\)-axis

Solution
1. Shift left 2 units: \(\quad\) Replace \(x\) by \(x+2 . \quad y=|x+2|\)
2. Shift up 3 units: \(\quad\) Add 3. \(y=|x+2|+3\)
3. Reflect about the \(y\)-axis: Replace \(x\) by \(-x . \quad y=|-x+2|+3\)

\section*{Now Work problem 27}

The examples that follow combine some of the procedures outlined in this section to get the required graph.

\section*{EXAMPLE I 2 Combining Graphing Procedures}

Graph the function \(f(x)=\frac{3}{x-2}+1\). Find the domain and range of \(f\).

Solution \(\begin{aligned} & \text { It is helpful to write } f \text { as } f(x)=3\left(\frac{1}{x-2}\right)+1 \text {. Now use the following steps to } \\ & \text { obtain the graph of } f:\end{aligned}\)
STEP 1: \(y=\frac{1}{x}\)
STEP 2: \(y=3 \cdot\left(\frac{1}{x}\right)=\frac{3}{x} \quad \begin{aligned} & \text { Multiply by 3; vertical stretch of the graph of } y=\frac{1}{x} \text { by } \\ & \text { a factor of } 3 \text {. }\end{aligned}\)
STEP 3: \(y=\frac{3}{x-2} \quad\) Replace \(\times\) by \(x-2\); horizontal shift to the right 2 units.
STEP 4: \(y=\frac{3}{x-2}+1 \quad\) Add 1; vertical shift up 1 unit.
See Figure 56.

Figure 56

The domain of \(y=\frac{1}{x}\) is \(\{x \mid x \neq 0\}\) and its range is \(\{y \mid y \neq 0\}\). Because we shifted right 2 units and up 1 unit to obtain \(f\), the domain of \(f\) is \(\{x \mid x \neq 2\}\) and its range is \(\{y \mid y \neq 1\}\).

Other orderings of the steps shown in Example 12 would also result in the graph

Hint: Although the order in which transformations are performed can be altered, you may consider using the following order for consistency:
1. Reflections
2. Compressions and stretches
3. Shifts
of \(f\). For example, try this one:

STEP 1: \(y=\frac{1}{x} \quad\) Reciprocal function
STEP 2: \(y=\frac{1}{x-2} \quad\) Replace \(\times\) by \(\times-2\); horizontal shift to the right 2 units.
STEP 3: \(y=\frac{3}{x-2} \quad \begin{aligned} & \text { Multiply by } 3 \text {; vertical stretch of the graph of } y=\frac{1}{x-2} \\ & \text { by a factor of } 3 \text {. }\end{aligned}\)
STEP 4: \(y=\frac{3}{x-2}+1 \quad\) Add 1; vertical shift up 1 unit.

\section*{EXAMPLE I 3 Combining Graphing Procedures}

Graph the function \(f(x)=\sqrt{1-x}+2\). Find the domain and range of \(f\).
Solution Because horizontal shifts require the form \(x-h\), begin by rewriting \(f(x)\) as \(f(x)=\sqrt{1-x}+2=\sqrt{-(x-1)}+2\). Now use the following steps:

STEP 1: \(y=\sqrt{x}\)
STEP 2: \(y=\sqrt{-x}\)
STEP 3: \(y=\sqrt{-(x-1)}=\sqrt{1-x}\)
STEP 4: \(y=\sqrt{1-x}+2\)

Square root function
Replace \(x\) by \(-x\); reflect about the \(y\)-axis

Replace xby \(x-1\); horizontal shift to the right 1 unit.
Add 2; vertical shift up 2 units.

See Figure 57.
Figure 57

The domain of \(f\) is \((-\infty, 1]\) and the range is \([2, \infty)\).

\subsection*{1.5 Assess Your Understanding}

\section*{Concepts and Vocabulary}
1. Suppose that the graph of a function \(f\) is known. Then the graph of \(y=f(x-2)\) may be obtained by a(n)
\(\qquad\) shift of the graph of \(f\) to the \(\qquad\) a distance of 2 units.
2. Suppose that the graph of a function \(f\) is known. Then the graph of \(y=f(-x)\) may be obtained by a reflection about the \(\qquad\) -axis of the graph of the function \(y=f(x)\).
3. Suppose that the graph of a function \(g\) is known. The graph of \(y=g(x)+2\) may be obtained by a \(\qquad\) shift of the graph of \(g\) \(\qquad\) a distance of 2 units.
4. True or False The graph of \(y=-f(x)\) is the reflection about the \(x\)-axis of the graph of \(y=f(x)\).
5. True or False To obtain the graph of \(f(x)=\sqrt{x+2}\), shift the graph of \(y=\sqrt{x}\) horizontally to the right 2 units.
6. True or False To obtain the graph of \(f(x)=x^{3}+5\), shift the graph of \(y=x^{3}\) vertically up 5 units.

\section*{Skill Building}

In Problems 7-18, match each graph to one of the following functions:
A. \(y=x^{2}+2\)
B. \(y=-x^{2}+2\)
C. \(y=|x|+2\)
D. \(y=-|x|+2\)
E. \(y=(x-2)^{2}\)
F. \(y=-(x+2)^{2}\)
G. \(y=|x-2|\)
H. \(y=-|x+2|\)
I. \(y=2 x^{2}\)
J. \(y=-2 x^{2}\)
K. \(y=2|x|\)
L. \(y=-2|x|\)
7.

17.

18.

In Problems 19-26, write the function whose graph is the graph of \(y=x^{3}\), but is:
19. Shifted to the right 4 units
20. Shifted to the left 4 units
21. Shifted up 4 units
22. Shifted down 4 units
23. Reflected about the \(y\)-axis
24. Reflected about the \(x\)-axis
25. Vertically stretched by a factor of 4
26. Horizontally stretched by a factor of 4

In Problems 27-30, find the function that is finally graphed after each of the following transformations is applied to the graph of \(y=\sqrt{x}\) in the order stated.
27. (1) Shift up 2 units
(2) Reflect about the \(x\)-axis
(3) Reflect about the \(y\)-axis
29. (1) Reflect about the \(x\)-axis
(2) Shift up 2 units
(3) Shift left 3 units
31. If \((3,6)\) is a point on the graph of \(y=f(x)\), which of the following points must be on the graph of \(y=-f(x)\) ?
(a) \((6,3)\)
(b) \((6,-3)\)
(c) \((3,-6)\)
(d) \((-3,6)\)
33. If \((1,3)\) is a point on the graph of \(y=f(x)\), which of the following points must be on the graph of \(y=2 f(x)\) ?
(a) \((1,3)\)
(b) \((2,3)\)
(c) \((1,6)\)
(d) \(\left(\frac{1}{2}, 3\right)\)
35. Suppose that the \(x\)-intercepts of the graph of \(y=f(x)\) are -5 and 3 .
(a) What are the \(x\)-intercepts of the graph of \(y=f(x+2)\) ?
(b) What are the \(x\)-intercepts of the graph of \(y=f(x-2)\) ?
(c) What are the \(x\)-intercepts of the graph of \(y=4 f(x)\) ?
(d) What are the \(x\)-intercepts of the graph of \(y=f(-x)\) ?
37. Suppose that the function \(y=f(x)\) is increasing on the interval \((-1,5)\).
(a) Over what interval is the graph of \(y=f(x+2)\) increasing?
(b) Over what interval is the graph of \(y=f(x-5)\) increasing?
(c) What can be said about the graph of \(y=-f(x)\) ?
(d) What can be said about the graph of \(y=f(-x)\) ?
28. (1) Reflect about the \(x\)-axis
(2) Shift right 3 units
(3) Shift down 2 units
30. (1) Shift up 2 units
(2) Reflect about the \(y\)-axis
(3) Shift left 3 units
32. If \((3,6)\) is a point on the graph of \(y=f(x)\), which of the following points must be on the graph of \(y=f(-x)\) ?
(a) \((6,3)\)
(b) \((6,-3)\)
(c) \((3,-6)\)
(d) \((-3,6)\)
34. If \((4,2)\) is a point on the graph of \(y=f(x)\), which of the following points must be on the graph of \(y=f(2 x)\) ?
(a) \((4,1)\)
(b) \((8,2)\)
(c) \((2,-2)\)
(d) \((4,4)\)
36. Suppose that the \(x\)-intercepts of the graph of \(y=f(x)\) are -8 and 1 .
(a) What are the \(x\)-intercepts of the graph of \(y=f(x+4)\) ?
(b) What are the \(x\)-intercepts of the graph of \(y=f(x-3)\) ?
(c) What are the \(x\)-intercepts of the graph of \(y=2 f(x)\) ?
(d) What are the \(x\)-intercepts of the graph of \(y=f(-x)\) ?
38. Suppose that the function \(y=f(x)\) is decreasing on the interval \((-2,7)\).
(a) Over what interval is the graph of \(y=f(x+2)\) decreasing?
(b) Over what interval is the graph of \(y=f(x-5)\) decreasing?
(c) What can be said about the graph of \(y=-f(x)\) ?
(d) What can be said about the graph of \(y=f(-x)\) ?

In Problems 39-68, graph each function using the techniques of shifting, compressing, stretching, and/or reflecting. Start with the graph of the basic function (for example, \(y=x^{2}\) ) and show all stages. Be sure to show at least three key points. Find the domain and the range of each function.
39. \(f(x)=x^{2}-1\)
40. \(f(x)=x^{2}+4\)
41. \(g(x)=x^{3}+1\)
42. \(g(x)=x^{3}-1\)
43. \(h(x)=\sqrt{x+2}\)
44. \(h(x)=\sqrt{x+1}\)
45. \(f(x)=(x-1)^{3}+2\)
46. \(f(x)=(x+2)^{3}-3\)
47. \(g(x)=4 \sqrt{x}\)
48. \(g(x)=\frac{1}{2} \sqrt{x}\)
49. \(h(x)=\frac{1}{2 x}\)
50. \(h(x)=\sqrt[3]{2 x}\)
51. \(f(x)=-\sqrt[3]{x}\)
52. \(f(x)=-\sqrt{x}\)
53. \(g(x)=\sqrt[3]{-x}\)
54. \(g(x)=\frac{1}{-x}\)
55. \(h(x)=-x^{3}+2\)
56. \(h(x)=\frac{1}{-x}+2\)
57. \(f(x)=2(x+1)^{2}-3\)
58. \(f(x)=3(x-2)^{2}+1\)
59. \(g(x)=2 \sqrt{x-2}+1\)
60. \(g(x)=3|x+1|-3\)
61. \(h(x)=\sqrt{-x}-2\)
62. \(h(x)=\frac{4}{x}+2\)
63. \(f(x)=-(x+1)^{3}-1\)
64. \(f(x)=-4 \sqrt{x-1}\)
65. \(g(x)=2|1-x|\)
66. \(g(x)=4 \sqrt{2-x}\)
67. \(h(x)=2 \operatorname{int}(x-1)\)
68. \(h(x)=\operatorname{int}(-x)\)

In Problems 69-72, the graph of a function \(f\) is illustrated. Use the graph of \(f\) as the first step toward graphing each of the following functions:
(a) \(F(x)=f(x)+3\)
(b) \(G(x)=f(x+2)\)
(c) \(P(x)=-f(x)\)
(d) \(H(x)=f(x+1)-2\)
(e) \(Q(x)=\frac{1}{2} f(x)\)
(f) \(g(x)=f(-x)\)
(g) \(h(x)=f(2 x)\)
69.

70.

71.

72.

\section*{Mixed Practice}

In Problems 73-82, complete the square of each quadratic expression. Then graph each function using the technique of shifting. (If necessary, refer to Appendix A, Section A. 4 to review completing the square.)
73. \(f(x)=x^{2}+2 x\)
74. \(f(x)=x^{2}-6 x\)
75. \(f(x)=x^{2}-8 x+1\)
76. \(f(x)=x^{2}+4 x+2\)
77. \(f(x)=x^{2}+x+1\)
78. \(f(x)=x^{2}-x+1\)
79. \(f(x)=2 x^{2}-12 x+19\)
80. \(f(x)=3 x^{2}+6 x+1\)
81. \(f(x)=-3 x^{2}-12 x-17\)
82. \(f(x)=-2 x^{2}-12 x-13\)
83. (a) Graph \(f(x)=|x-3|-3\) using transformations.
(b) Find the area of the region bounded by \(f\) and the \(x\)-axis that lies below the \(x\)-axis.
84. (a) Graph \(f(x)=-2|x-4|+4\) using transformations.
(b) Find the area of the region bounded by \(f\) and the \(x\)-axis that lies above the \(x\)-axis.

\section*{Applications and Extensions}
85. The equation \(y=(x-c)^{2}\) defines a family of parabolas, one parabola for each value of \(c\). On one set of coordinate axes, graph the members of the family for \(c=0, c=3\), and \(c=-2\).
86. Repeat Problem 85 for the family of parabolas \(y=x^{2}+c\).
87. Thermostat Control Energy conservation experts estimate that homeowners can save \(5 \%\) to \(10 \%\) on winter heating bills by programming their thermostats 5 to 10 degrees lower while sleeping. In the given graph, the temperature \(T\) (in degrees Fahrenheit) of a home is given as a function of time \(t\) (in hours after midnight) over a 24 -hour period.

(a) At what temperature is the thermostat set during daytime hours? At what temperature is the thermostat set overnight?
(b) The homeowner reprograms the thermostat to \(y=T(t)-2\). Explain how this affects the temperature in the house. Graph this new function.
(c) The homeowner reprograms the thermostat to \(y=T(t+1)\). Explain how this affects the temperature in the house. Graph this new function.
Source: Roger Albright, 547 Ways to Be Fuel Smart, 2000
88. Digital Music Revenues The total projected worldwide digital music revenues \(R\), in millions of dollars, for the years 2012 through 2017 can be estimated by the function
\[
R(x)=28.6 x^{2}+300 x+4843
\]
where \(x\) is the number of years after 2012.
(a) Find \(R(0), R(3)\), and \(R(5)\) and explain what each value represents.
(b) Find \(r=R(x-2)\).
(c) Find \(r(2), r(5)\), and \(r(7)\) and explain what each value represents.
(d) In the model \(r\), what does \(x\) represent?
(e) Would there be an advantage in using the model \(r\) when estimating the projected revenues for a given year instead of the model \(R\) ?
Source: IFPI Digital Music Report, 2013
89. Temperature Measurements The relationship between the Celsius \(\left({ }^{\circ} \mathrm{C}\right)\) and Fahrenheit \(\left({ }^{\circ} \mathrm{F}\right)\) scales for measuring temperature is given by the equation
\[
F=\frac{9}{5} C+32
\]

The relationship between the Celsius \(\left({ }^{\circ} \mathrm{C}\right)\) and Kelvin (K) scales is \(K=C+273\). Graph the equation \(F=\frac{9}{5} C+32\) using degrees Fahrenheit on the \(y\)-axis and degrees Celsius on the \(x\)-axis. Use the techniques introduced in this section to obtain the graph showing the relationship between Kelvin and Fahrenheit temperatures.
90. Period of a Pendulum The period \(T\) (in seconds) of a simple pendulum is a function of its length \(l\) (in feet) defined by the equation
\[
T=2 \pi \sqrt{\frac{l}{g}}
\]
where \(g \approx 32.2\) feet per second per second is the acceleration of gravity.

(a) Use a graphing utility to graph the function \(T=T(l)\).
(b) Now graph the functions \(T=T(l+1), T=T(l+2)\), and \(T=T(l+3)\).
(c) Discuss how adding to the length \(l\) changes the period \(T\).
(d) Now graph the functions \(T=T(2 l), T=T(3 l)\), and \(T=T(4 l)\).
(e) Discuss how multiplying the length \(l\) by factors of 2,3 , and 4 changes the period \(T\).
91. Cigar Company Profits The daily profits of a cigar company from selling \(x\) cigars are given by
\[
p(x)=-0.05 x^{2}+100 x-2000
\]

The government wishes to impose a tax on cigars (sometimes called a \(\sin \operatorname{tax}\) ) that gives the company the option of either paying a flat tax of \(\$ 10,000\) per day or a tax of \(10 \%\) on profits. As chief financial officer (CFO) of the company, you need to decide which tax is the better option for the company.
(a) On the same screen, graph \(Y_{1}=p(x)-10,000\) and \(Y_{2}=(1-0.10) p(x)\).
(b) Based on the graph, which option would you select? Why?
(c) Using the terminology learned in this section, describe each graph in terms of the graph of \(p(x)\).
(d) Suppose that the government offered the options of a flat tax of \(\$ 4800\) or a tax of \(10 \%\) on profits. Which would you select? Why?
92. The graph of a function \(f\) is illustrated in the figure.
(a) Draw the graph of \(y=|f(x)|\).
(b) Draw the graph of \(y=f(|x|)\).

93. The graph of a function \(f\) is illustrated in the figure.
(a) Draw the graph of \(y=|f(x)|\).
(b) Draw the graph of \(y=f(|x|)\).

94. Suppose \((1,3)\) is a point on the graph of \(y=f(x)\).
(a) What point is on the graph of \(y=f(x+3)-5\) ?
(b) What point is on the graph of \(y=-2 f(x-2)+1\) ?
(c) What point is on the graph of \(y=f(2 x+3)\) ?
95. Suppose \((-3,5)\) is a point on the graph of \(y=g(x)\).
(a) What point is on the graph of \(y=g(x+1)-3\) ?
(b) What point is on the graph of \(y=-3 g(x-4)+3\) ?
(c) What point is on the graph of \(y=g(3 x+9)\) ?

\section*{Discussion and Writing}
96. Suppose that the graph of a function \(f\) is known. Explain how the graph of \(y=4 f(x)\) differs from the graph of \(y=f(4 x)\).
97. Suppose that the graph of a function \(f\) is known. Explain how the graph of \(y=f(x)-2\) differs from the graph of \(y=f(x-2)\).
\(\Varangle\) 98. The area under the curve \(y=\sqrt{x}\) bounded below by the \(x\)-axis and on the right by \(x=4\) is \(\frac{16}{3}\) square units. Using the
ideas presented in this section, what do you think is the area under the curve of \(y=\sqrt{-x}\) bounded below by the \(x\)-axis and on the left by \(x=-4\) ? Justify your answer.
99. Explain how the range of the function \(f(x)=x^{2}\) compares to the range of \(g(x)=f(x)+k\).
100. Explain how the domain of \(g(x)=\sqrt{x}\) compares to the domain of \(g(x-k)\), where \(k \geq 0\).

\subsection*{1.6 Mathematical Models: Building Functions}

OBJECTIVE 1 Build and Analyze Functions (p. 101)

\section*{1 Build and Analyze Functions}

Real-world problems often result in mathematical models that involve functions. These functions need to be constructed or built based on the information given. In building functions, we must be able to translate the verbal description into the language of mathematics. This is done by assigning symbols to represent the independent and dependent variables and then finding the function or rule that relates these variables.

\section*{EXAMPLE I}

\section*{Finding the Distance from the Origin to a Point on a Graph}

Let \(P=(x, y)\) be a point on the graph of \(y=x^{2}-1\).
(a) Express the distance \(d\) from \(P\) to the origin \(O\) as a function of \(x\).
(b) What is \(d\) if \(x=0\) ?
(c) What is \(d\) if \(x=1\) ?
(d) What is \(d\) if \(x=\frac{\sqrt{2}}{2}\) ?
(e) Use a graphing utility to graph the function \(d=d(x), x \geq 0\). Rounded to two decimal places, find the value(s) of \(x\) at which \(d\) has a local minimum. [This gives the point(s) on the graph of \(y=x^{2}-1\) closest to the origin.]

Figure 58 Solution

(a) Figure 58 illustrates the graph of \(y=x^{2}-1\). The distance \(d\) from \(P\) to \(O\) is
\[
d=\sqrt{(x-0)^{2}+(y-0)^{2}}=\sqrt{x^{2}+y^{2}}
\]

Since \(P\) is a point on the graph of \(y=x^{2}-1\), substitute \(x^{2}-1\) for \(y\). Then
\[
d(x)=\sqrt{x^{2}+\left(x^{2}-1\right)^{2}}=\sqrt{x^{4}-x^{2}+1}
\]

The distance \(d\) is expressed as a function of \(x\).
(b) If \(x=0\), the distance \(d\) is
\[
d(0)=\sqrt{0^{4}-0^{2}+1}=\sqrt{1}=1
\]
(c) If \(x=1\), the distance \(d\) is
\[
d(1)=\sqrt{1^{4}-1^{2}+1}=1
\]
(d) If \(x=\frac{\sqrt{2}}{2}\), the distance \(d\) is
\[
d\left(\frac{\sqrt{2}}{2}\right)=\sqrt{\left(\frac{\sqrt{2}}{2}\right)^{4}-\left(\frac{\sqrt{2}}{2}\right)^{2}+1}=\sqrt{\frac{1}{4}-\frac{1}{2}+1}=\frac{\sqrt{3}}{2}
\]
(e) Figure 59 shows the graph of \(Y_{1}=\sqrt{x^{4}-x^{2}+1}\). Using the MINIMUM feature on a graphing utility, we find that when \(x \approx 0.71\), the value of \(d\) is
smallest. The local minimum is \(d \approx 0.87\) rounded to two decimal places. Since \(d(x)\) is even, it follows by symmetry that when \(x \approx-0.71\), the value of \(d\) is also a local minimum. Since \(( \pm 0.71)^{2}-1 \approx-0.50\), the points \((-0.71,-0.50)\) and \((0.71,-0.50)\) on the graph of \(y=x^{2}-1\) are closest to the origin.

\section*{EXAMPLE 2 Area of a Rectangle}

A rectangle has one corner in quadrant I on the graph of \(y=25-x^{2}\), another at the origin, a third on the positive \(y\)-axis, and the fourth on the positive \(x\)-axis. See Figure 60.
(a) Express the area \(A\) of the rectangle as a function of \(x\).
(b) What is the domain of \(A\) ?
(c) Graph \(A=A(x)\).
(d) For what value of \(x\) is the area largest?

Figure 60
Solution

(a) The area \(A\) of the rectangle is \(A=x y\), where \(y=25-x^{2}\). Substituting this expression for \(y\), we obtain \(A(x)=x\left(25-x^{2}\right)=25 x-x^{3}\).
(b) Since \((x, y)\) is in quadrant I , we have \(x>0\). Also, \(y=25-x^{2}>0\), which implies that \(x^{2}<25\), so \(-5<x<5\). Combining these restrictions, we have the domain of \(A\) as \(\{x \mid 0<x<5\}\), or \((0,5)\) using interval notation.
(c) See Figure 61 for the graph of \(A=A(x)\).
(d) Using MAXIMUM, we find that the maximum area is 48.11 square units at \(x=2.89\) units, each rounded to two decimal places. See Figure 62.

Figure 61

Figure 62

\section*{EXAMPLE 3}

\section*{Close Call?}

Suppose two planes flying at the same altitude are headed toward each other. One plane is flying due south at a groundspeed of 400 miles per hour and is 600 miles from the potential intersection point of the planes. The other plane is flying due west with a groundspeed of 250 miles per hour and is 400 miles from the potential intersection point of the planes. See Figure 63.
(a) Build a model that expresses the distance \(d\) between the planes as a function of time \(t\).
(b) Use a graphing utility to graph \(d=d(t)\).How close do the planes come to each other? At what time are the planes closest?

\section*{Solution}
(a) Refer to Figure 63.The distance \(d\) between the two planes is the hypotenuse of a right triangle. At any time \(t\) the length of the north/south leg of the triangle is \(600-400 t\). At any time \(t\), the length of the east/west leg of the triangle is \(400-250 t\). Using the Pythagorean Theorem, the square of the distance between the two planes is
\[
d^{2}=(600-400 t)^{2}+(400-250 t)^{2}
\]

Therefore, the distance between the two planes as a function of time is given by the model
\[
d(t)=\sqrt{(600-400 t)^{2}+(400-250 t)^{2}}
\]

Figure 63

(b) Figure 64(a) shows the graph of \(d=d(t)\). Using MINIMUM, the minimum distance between the planes is 21.20 miles, and the time at which the planes are closest is after 1.53 hours, each rounded to two decimal places. See Figure 64(b).

Figure 64

(a)

Now Work problem 19

\subsection*{1.6 Assess Your Understanding}

\section*{Applications and Extensions}
1. Let \(P=(x, y)\) be a point on the graph of \(y=x^{2}-8\).
(1.)
(a) Express the distance \(d\) from \(P\) to the origin as a function of \(x\).
(b) What is \(d\) if \(x=0\) ?
(c) What is \(d\) if \(x=1\) ?
(d) Use a graphing utility to graph \(d=d(x)\).
(e) For what values of \(x\) is \(d\) smallest?
2. Let \(P=(x, y)\) be a point on the graph of \(y=x^{2}-8\).
(a) Express the distance \(d\) from \(P\) to the point \((0,-1)\) as a function of \(x\).
(b) What is \(d\) if \(x=0\) ?
(c) What is \(d\) if \(x=-1\) ?
(d) Use a graphing utility to graph \(d=d(x)\).
(e) For what values of \(x\) is \(d\) smallest?
3. Let \(P=(x, y)\) be a point on the graph of \(y=\sqrt{x}\).
(a) Express the distance \(d\) from \(P\) to the point \((1,0)\) as a function of \(x\).
(b) Use a graphing utility to graph \(d=d(x)\).
(c) For what values of \(x\) is \(d\) smallest?
4. Let \(P=(x, y)\) be a point on the graph of \(y=\frac{1}{x}\).
(a) Express the distance \(d\) from \(P\) to the origin as a function of \(x\).
(b) Use a graphing utility to graph \(d=d(x)\).
(c) For what values of \(x\) is \(d\) smallest?
5. A right triangle has one vertex on the graph of \(y=x^{3}, x>0\), at \((x, y)\), another at the origin, and the third on the positive \(y\)-axis at \((0, y)\), as shown in the figure. Express the area \(A\) of the triangle as a function of \(x\).

6. A right triangle has one vertex on the graph of \(y=9-x^{2}, x>0\), at \((x, y)\), another at the origin, and the third on the positive \(x\)-axis at \((x, 0)\). Express the area \(A\) of the triangle as a function of \(x\).
7. A rectangle has one corner in quadrant \(I\) on the graph of \(y=16-x^{2}\), another at the origin, a third on the positive \(y\)-axis, and the fourth on the positive \(x\)-axis. See the figure.
(a) Express the area \(A\) of the rectangle as a function of \(x\).
(b) What is the domain of \(A\) ?
(c) Graph \(A=A(x)\). For what value of \(x\) is \(A\) largest?

8. A rectangle is inscribed in a semicircle of radius 2 . See the figure. Let \(P=(x, y)\) be the point in quadrant I that is a vertex of the rectangle and is on the circle.

(a) Express the area \(A\) of the rectangle as a function of \(x\).
(b) Express the perimeter \(p\) of the rectangle as a function of \(x\).
(c) Graph \(A=A(x)\). For what value of \(x\) is \(A\) largest?
(d) Graph \(p=p(x)\). For what value of \(x\) is \(p\) largest?
9. A rectangle is inscribed in a circle of radius 2 . See the figure on the next page. Let \(P=(x, y)\) be the point in quadrant I that is a vertex of the rectangle and is on the circle.
(a) Express the area \(A\) of the rectangle as a function of \(x\).

(b) Express the perimeter \(p\) of the rectangle as a function of \(x\).
(c) Graph \(A=A(x)\). For what value of \(x\) is \(A\) largest?
(d) Graph \(p=p(x)\). For what value of \(x\) is \(p\) largest?
10. A circle of radius \(r\) is inscribed in a square. See the figure.

(a) Express the area \(A\) of the square as a function of the radius \(r\) of the circle.
(b) Express the perimeter \(p\) of the square as a function of \(r\).
11. Geometry A wire 10 meters long is to be cut into two pieces. One piece will be shaped as a square, and the other piece will be shaped as a circle. See the figure.

(a) Express the total area \(A\) enclosed by the pieces of wire as a function of the length \(x\) of a side of the square.
(b) What is the domain of \(A\) ?
(c) Graph \(A=A(x)\). For what value of \(x\) is \(A\) smallest?
12. Geometry A wire 10 meters long is to be cut into two pieces. One piece will be shaped as an equilateral triangle, and the other piece will be shaped as a circle.
(a) Express the total area \(A\) enclosed by the pieces of wire as a function of the length \(x\) of a side of the equilateral triangle.
(b) What is the domain of \(A\) ?
(c) Graph \(A=A(x)\). For what value of \(x\) is \(A\) smallest?
13. A wire of length \(x\) is bent into the shape of a circle.
(a) Express the circumference \(C\) of the circle as a function of \(x\).
(b) Express the area \(A\) of the circle as a function of \(x\).
14. A wire of length \(x\) is bent into the shape of a square.
(a) Express the perimeter \(p\) of the square as a function of \(x\).
(b) Express the area \(A\) of the square as a function of \(x\).
15. Geometry A semicircle of radius \(r\) is inscribed in a rectangle so that the diameter of the semicircle is the length of the rectangle. See the figure.

(a) Express the area \(A\) of the rectangle as a function of the radius \(r\) of the semicircle.
(b) Express the perimeter \(p\) of the rectangle as a function of \(r\).
16. Geometry An equilateral triangle is inscribed in a circle of radius \(r\). See the figure. Express the circumference \(C\) of the circle as a function of the length \(x\) of a side of the triangle. [Hint: First show that \(r^{2}=\frac{x^{2}}{3}\).]

17. Geometry An equilateral triangle is inscribed in a circle of radius \(r\). See the figure in Problem 16. Express the area \(A\) within the circle, but outside the triangle, as a function of the length \(x\) of a side of the triangle.
18. Uniform Motion Two cars leave an intersection at the same time. One is headed south at a constant speed of 30 miles per hour, and the other is headed west at a constant speed of 40 miles per hour (see the figure). Build a model that expresses the distance \(d\) between the cars as a function of the time \(t\).
[Hint: At \(t=0\), the cars leave the intersection.]

19. Uniform Motion Two cars are approaching an intersection. One is 2 miles south of the intersection and is moving at a constant speed of 30 miles per hour. At the same time, the other car is 3 miles east of the intersection and is moving at a constant speed of 40 miles per hour.
(a) Build a model that expresses the distance \(d\) between the cars as a function of time \(t\).
[Hint: At \(t=0\), the cars are 2 miles south and 3 miles east of the intersection, respectively.]
(b) Use a graphing utility to graph \(d=d(t)\). For what value of \(t\) is \(d\) smallest?
20. Inscribing a Cylinder in a Sphere Inscribe a right circular cylinder of height \(h\) and radius \(r\) in a sphere of fixed radius \(R\). See the illustration. Express the volume \(V\) of the cylinder as a function of \(h\).
[Hint: \(V=\pi r^{2} h\). Note also the right triangle.]

21. Inscribing a Cylinder in a Cone Inscribe a right circular cylinder of height \(h\) and radius \(r\) in a cone of fixed radius \(R\) and fixed height \(H\). See the illustration. Express the volume \(V\) of the cylinder as a function of \(r\).
[Hint: \(V=\pi r^{2} h\). Note also the similar triangles.]

22. Installing Cable TV MetroMedia Cable is asked to provide service to a customer whose house is located 2 miles from the road along which the cable is buried. The nearest connection box for the cable is located 5 miles down the road. See the figure.

(a) If the installation cost is \(\$ 500\) per mile along the road and \(\$ 700\) per mile off the road, build a model that expresses the total cost \(C\) of installation as a function of the distance \(x\) (in miles) from the connection box to the point where the cable installation turns off the road. Give the domain.
(b) Compute the cost if \(x=1\) mile.
(c) Compute the cost if \(x=3\) miles.
(d) Graph the function \(C=C(x)\). Use TRACE to see how the cost \(C\) varies as \(x\) changes from 0 to 5 .
(e) What value of \(x\) results in the least cost?
23. Time Required to Go from an Island to a Town An island is 2 miles from the nearest point \(P\) on a straight shoreline. A town is 12 miles down the shore from \(P\). See the illustration.

(a) If a person can row a boat at an average speed of 3 miles per hour and the same person can walk 5 miles per hour, build a model that expresses the time \(T\) that it takes to go from the island to town as a function of the distance \(x\) from \(P\) to where the person lands the boat.
(b) What is the domain of \(T\) ?
(c) How long will it take to travel from the island to town if the person lands the boat 4 miles from \(P\) ?
(d) How long will it take if the person lands the boat 8 miles from \(P\) ?
24. Filling a Conical Tank Water is poured into a container in the shape of a right circular cone with radius 4 feet and height 16 feet. See the figure. Express the volume \(V\) of the water in the cone as a function of the height \(h\) of the water.
[Hint: The volume \(V\) of a cone of radius \(r\) and height \(h\) is \(V=\frac{1}{3} \pi r^{2} h\).]

25. Constructing an Open Box An open box with a square base is to be made from a square piece of cardboard 24 inches on a side by cutting out a square from each corner and turning up the sides. See the figure.

(a) Express the volume \(V\) of the box as a function of the length \(x\) of the side of the square cut from each corner.
(b) What is the volume if a 3-inch square is cut out?
(c) What is the volume if a 10 -inch square is cut out?
(d) Graph \(V=V(x)\). For what value of \(x\) is \(V\) largest?
26. Constructing an Open Box An open box with a square base is required to have a volume of 10 cubic feet.
(a) Express the amount \(A\) of material used to make such a box as a function of the length \(x\) of a side of the square base.
(b) How much material is required for a base 1 foot by 1 foot?
(c) How much material is required for a base 2 feet by 2 feet?
(d) Use a graphing utility to graph \(A=A(x)\). For what value of \(x\) is \(A\) smallest?

\subsection*{1.7 Building Mathematical Models Using Variation}

OBJECTIVES 1 Construct a Model Using Direct Variation (p. 106)
2 Construct a Model Using Inverse Variation (p. 107)
3 Construct a Model Using Joint or Combined Variation (p. 107)

When a mathematical model is developed for a real-world problem, it often involves relationships between quantities that are expressed in terms of proportionality:

Force is proportional to acceleration.
When an ideal gas is held at a constant temperature, pressure and volume are inversely proportional.
The force of attraction between two objects is inversely proportional to the square of the distance between them.
Revenue is directly proportional to sales.
Each of these statements illustrates the idea of variation, or how one quantity varies in relation to another quantity. Quantities may vary directly, inversely, or jointly.

\section*{1 Construct a Model Using Direct Variation}

\section*{DEFINITION}

Figure 65

Let \(x\) and \(y\) denote two quantities. Then \(y\) varies directly with \(x\), or \(y\) is directly
proportional to \(x\), if there is a nonzero number \(k\) such that
\[
y=k x
\]

The number \(k\) is called the constant of proportionality.

The graph in Figure 65 illustrates the relationship between \(y\) and \(x\) if \(y\) varies directly with \(x\) and \(k>0, x \geq 0\). Note that the constant of proportionality is, in fact, the slope of the line.

If two quantities vary directly, then knowing the value of each quantity in one instance enables us to write a model that is true in all cases.

\section*{EXAMPLE I Mortgage Payments}

The monthly payment \(p\) on a mortgage varies directly with the amount \(B\) borrowed. If the monthly payment on a 30 -year mortgage is \(\$ 6.65\) for every \(\$ 1000\) borrowed, find a model that relates the monthly payment \(p\) to the amount \(B\) borrowed for a mortgage with these terms. Then find the monthly payment \(p\) when the amount \(B\) borrowed is \(\$ 120,000\).
Solution Because \(p\) varies directly with \(B\), we know that
\[
p=k B
\]
for some constant \(k\). Because \(p=6.65\) when \(B=1000\), it follows that
\[
\begin{aligned}
6.65 & =k(1000) \\
k & =0.00665 \quad \text { Solve for } k
\end{aligned}
\]

Since \(p=k B\), we have
\[
p=0.00665 B \quad \text { The model }
\]

In particular, when \(B=\$ 120,000\), we find that
\[
p=0.00665(\$ 120,000)=\$ 798
\]

Figure 66 illustrates the relationship between the monthly payment \(p\) and the amount \(B\) borrowed.
Now Work problems 3 and 21

\section*{2 Construct a Model Using Inverse Variation}

\section*{DEFINITION}

Figure 67

Let \(x\) and \(y\) denote two quantities. Then \(y\) varies inversely with \(x\), or \(y\) is inversely proportional to \(x\), if there is a nonzero constant \(k\) such that
\[
y=\frac{k}{x}
\]

The graph in Figure 67 illustrates the relationship between \(y\) and \(x\) if \(y\) varies inversely with \(x\) and \(k>0, x>0\).

\section*{EXAMPLE 2 Maximum Weight That Can Be Supported by a Piece of Pine}

See Figure 68. The maximum weight \(W\) that can be safely supported by a 2 -inch by 4 -inch piece of pine varies inversely with its length \(l\). Experiments indicate that the maximum weight that a 10 -foot-long 2-by-4 piece of pine can support is 500 pounds. Write a model relating the maximum weight \(W\) (in pounds) to length \(l\) (in feet). Find the maximum weight \(W\) that can be safely supported by a length of 25 feet.

Figure 68

Figure 69

Because \(W\) varies inversely with \(l\), we know that
\[
W=\frac{k}{l}
\]
for some constant \(k\). Because \(W=500\) when \(l=10\), we have
\[
\begin{aligned}
500 & =\frac{k}{10} \\
k & =5000
\end{aligned}
\]

Since \(W=\frac{k}{l}\), we have
\[
W=\frac{5000}{l} \text { The Model }
\]

In particular, the maximum weight \(W\) that can be safely supported by a piece of pine 25 feet in length is
\[
W=\frac{5000}{25}=200 \text { pounds }
\]

Figure 69 illustrates the relationship between the weight \(W\) and the length \(l\).
```

Now Work problem 31

```

\section*{3 Construct a Model Using Joint or Combined Variation}

When a variable quantity \(Q\) is proportional to the product of two or more other variables, we say that \(Q\) varies jointly with these quantities. Combinations of direct and/or inverse variation may also occur. This is usually referred to as combined variation.

Let's look at an example.

\section*{EXAMPLE 3 Loss of Heat through a Wall}

The loss of heat through a wall varies jointly with the area of the wall and the difference between the inside and outside temperatures, and inversely with the thickness of the wall. Write an equation that relates these quantities.
Solution Begin by assigning symbols to represent the quantities:
\[
\begin{array}{ll}
L=\text { Heat loss } & T=\text { Temperature difference } \\
A=\text { Area of wall } & d=\text { Thickness of wall }
\end{array}
\]

Then
\[
L=k \frac{A T}{d}
\]
where \(k\) is the constant of proportionality.
In direct or inverse variation, the quantities that vary may be raised to powers. For example, in the early seventeenth century, Johannes Kepler (1571-1630) discovered that the square of the period of revolution \(T\) of a planet around the Sun varies directly with the cube of its mean distance \(a\) from the Sun. That is, \(T^{2}=k a^{3}\), where \(k\) is the constant of proportionality.

\section*{EXAMPLE 4 Force of the Wind on a Window}

The force \(F\) of the wind on a flat surface positioned at a right angle to the direction of the wind varies jointly with the area \(A\) of the surface and the square of the speed \(v\) of the wind. A wind of 30 miles per hour blowing on a window measuring 4 feet by 5 feet has a force of 150 pounds. See Figure 70. What force does a wind of 50 miles per hour cause on a window measuring 3 feet by 4 feet?
Solution Since \(F\) varies jointly with \(A\) and \(v^{2}\), we have
Figure 70

\[
F=k A v^{2}
\]
where \(k\) is the constant of proportionality. We are told that \(F=150\) pounds when \(A=4 \cdot 5=20\) feet \(^{2}\) and \(v=30\) miles per hour. This gives
\[
\begin{aligned}
150 & =k(20)(900) \quad F=k A v^{2}, F=150, A=20, v=30 \\
k & =\frac{1}{120}
\end{aligned}
\]

Since \(F=k A v^{2}\), we have
\[
F=\frac{1}{120} A v^{2}
\]

For a wind of 50 miles per hour blowing on a window whose area is \(A=3 \cdot 4=12\) square feet, the force \(F\) is
\[
F=\frac{1}{120}(12)(2500)=250 \text { pounds }
\]

\subsection*{1.7 Assess Your Understanding}

\section*{Concepts and Vocabulary}
1. If \(x\) and \(y\) are two quantities, then \(y\) is directly proportional to \(x\) if there is a nonzero number \(k\) such that \(\qquad\) - is a constant.

\section*{Skill Building}

In Problems 3-14, write a general formula to describe each variation.
3. \(y\) varies directly with \(x ; y=2\) when \(x=10\)
4. \(v\) varies directly with \(t ; v=16\) when \(t=2\)
5. \(A\) varies directly with \(x^{2} ; A=4 \pi\) when \(x=2\)
6. \(V\) varies directly with \(x^{3} ; V=36 \pi\) when \(x=3\)
7. \(F\) varies inversely with \(d^{2} ; F=10\) when \(d=5\)
8. \(y\) varies inversely with \(\sqrt{x} ; y=4\) when \(x=9\)
9. \(z\) varies directly with the sum of the squares of \(x\) and \(y ; z=5\) when \(x=3\) and \(y=4\)
10. \(T\) varies jointly with the cube root of \(x\) and the square of \(d ; T=18\) when \(x=8\) and \(d=3\)
11. \(M\) varies directly with the square of \(d\) and inversely with the square root of \(x ; M=24\) when \(x=9\) and \(d=4\)
12. \(z\) varies directly with the sum of the cube of \(x\) and the square of \(y ; z=1\) when \(x=2\) and \(y=3\)
13. The square of \(T\) varies directly with the cube of \(a\) and inversely with the square of \(d ; T=2\) when \(a=2\) and \(d=4\)
14. The cube of \(z\) varies directly with the sum of the squares of \(x\) and \(y ; z=2\) when \(x=9\) and \(y=4\)

\section*{Applications and Extensions}

In Problems 15-20, write an equation that relates the quantities.
15. Geometry The volume \(V\) of a sphere varies directly with the cube of its radius \(r\). The constant of proportionality is \(\frac{4 \pi}{3}\).
16. Geometry The square of the length of the hypotenuse \(c\) of a right triangle varies jointly with the sum of the squares of the lengths of its legs \(a\) and \(b\). The constant of proportionality is 1 .
17. Geometry The area \(A\) of a triangle varies jointly with the lengths of the base \(b\) and the height \(h\). The constant of proportionality is \(\frac{1}{2}\).
18. Geometry The perimeter \(p\) of a rectangle varies jointly with the sum of the lengths of its sides \(l\) and \(w\). The constant of proportionality is 2 .
19. Physics: Newton's Law The force \(F\) (in newtons) of attraction between two objects varies jointly with their masses \(m\) and \(M\) (in kilograms) and inversely with the square of the distance \(d\) (in meters) between them. The constant of proportionality is \(G=6.67 \times 10^{-11}\).
20. Physics: Simple Pendulum The period of a pendulum is the time required for one oscillation; the pendulum is usually referred to as simple when the angle made to the vertical is less than \(5^{\circ}\). The period \(T\) of a simple pendulum (in seconds) varies directly with the square root of its length \(l\) (in feet). The constant of proportionality is \(\frac{2 \pi}{\sqrt{32}}\).
21. Mortgage Payments The monthly payment \(p\) on a mortgage varies directly with the amount \(B\) borrowed. If the monthly payment on a 30 -year mortgage is \(\$ 6.49\) for every \(\$ 1000\) borrowed, find a model that relates the monthly payment \(p\) to the amount \(B\) borrowed for a mortgage with the same terms. Then find the monthly payment \(p\) when the amount \(B\) borrowed is \(\$ 145,000\).
22. Mortgage Payments The monthly payment \(p\) on a mortgage varies directly with the amount \(B\) borrowed. If the monthly payment on a 15 -year mortgage is \(\$ 8.99\) for every \(\$ 1000\) borrowed, find a model that relates the monthly payment \(p\) to the amount \(B\) borrowed for a mortgage with the same terms. Then find the monthly payment \(p\) when the amount \(B\) borrowed is \(\$ 175,000\).
23. Physics: Falling Objects The distance \(s\) that an object falls is directly proportional to the square of the time \(t\) of the fall. If an object falls 16 feet in 1 second, how far will it fall in 3 seconds? How long will it take an object to fall 64 feet?
24. Physics: Falling Objects The velocity \(v\) of a falling object is directly proportional to the time \(t\) of the fall. If, after 2 seconds, the velocity of the object is 64 feet per second, what will its velocity be after 3 seconds?
25. Physics: Stretching a Spring The elongation \(E\) of a spring balance varies directly with the applied weight \(W\) (see the figure). If \(E=3\) when \(W=20\), find \(E\) when \(W=15\).

26. Physics: Vibrating String The rate of vibration of a string under constant tension varies inversely with the length of the string. If a string is 48 inches long and vibrates 256 times per second, what is the length of a string that vibrates 576 times per second?
27. Revenue Equation At the corner Shell station, the revenue \(R\) varies directly with the number \(g\) of gallons of gasoline sold. If the revenue is \(\$ 47.40\) when the number of gallons sold is 12 , find a model that relates revenue \(R\) to the number \(g\) of gallons of gasoline sold. Then find the revenue \(R\) when the number of gallons of gasoline sold is 10.5 .
28. Cost Equation The cost \(C\) of chocolate-covered almonds varies directly with the number \(A\) of pounds of almonds purchased. If the cost is \(\$ 23.75\) when the number of pounds of chocolate-covered almonds purchased is 5, find a model that relates the cost \(C\) to the number \(A\) of pounds of almonds purchased. Then find the cost \(C\) when the number of pounds of almonds purchased is 3.5 .
29. Demand Suppose that the demand \(D\) for candy at the movie theater is inversely related to the price \(p\).
(a) When the price of candy is \(\$ 2.75\) per bag, the theater sells 156 bags of candy. Express the demand for candy in terms of its price.
(b) Determine the number of bags of candy that will be sold if the price is raised to \(\$ 3\) a bag.
30. Driving to School The time \(t\) that it takes to get to school varies inversely with your average speed \(s\).
(a) Suppose that it takes you 40 minutes to get to school when your average speed is 30 miles per hour. Express the driving time to school in terms of average speed.
(b) Suppose that your average speed to school is 40 miles per hour. How long will it take you to get to school?
31. Pressure The volume \(V\) of a gas held at a constant temperature in a closed container varies inversely with its pressure \(P\). If the volume of a gas is 600 cubic centimeters \(\left(\mathrm{cm}^{3}\right)\) when the pressure is 150 millimeters of mercury ( mm Hg ), find the volume when the pressure is 200 mm Hg .
32. Resistance The current \(I\) in a circuit is inversely proportional to its resistance \(Z\) measured in ohms. Suppose that when the current in a circuit is 30 amperes, the resistance is 8 ohms. Find the current in the same circuit when the resistance is 10 ohms.
33. Weight The weight of an object above the surface of Earth varies inversely with the square of the distance from the center of Earth. If Maria weighs 125 pounds when she is on the surface of Earth ( 3960 miles from the center), determine Maria's weight when she is at the top of Mount McKinley (3.8 miles from the surface of Earth).
34. Intensity of Light The intensity \(I\) of light (measured in footcandles) varies inversely with the square of the distance from the bulb. Suppose that the intensity of a 100-watt light bulb at a distance of 2 meters is 0.075 foot-candle. Determine the intensity of the bulb at a distance of 5 meters.
35. Geometry The volume \(V\) of a right circular cylinder varies jointly with the square of its radius \(r\) and its height \(h\). The constant of proportionality is \(\pi\). See the figure. Write an equation for \(V\).

36. Geometry The volume \(V\) of a right circular cone varies jointly with the square of its radius \(r\) and its height \(h\). The constant of proportionality is \(\frac{\pi}{3}\). See the figure. Write an equation for \(V\).

37. Weight of a Body The weight of a body above the surface of Earth varies inversely with the square of the distance from the center of Earth. If a certain body weighs 55 pounds when it is 3960 miles from the center of Earth, how much will it weigh when it is 3965 miles from the center?
38. Force of the Wind on a Window The force exerted by the wind on a plane surface varies jointly with the area of the surface and the square of the velocity of the wind. If the force on an area of 20 square feet is 11 pounds when the wind velocity is 22 miles per hour, find the force on a surface area of 47.125 square feet when the wind velocity is 36.5 miles per hour.
39. Horsepower The horsepower (hp) that a shaft can safely transmit varies jointly with its speed (in revolutions per minute, rpm) and the cube of its diameter. If a shaft of a certain material 2 inches in diameter can transmit 36 hp at 75 rpm , what diameter must the shaft have in order to transmit 45 hp at 125 rpm ?
40. Chemistry: Gas Laws The volume \(V\) of an ideal gas varies directly with the temperature \(T\) and inversely with the pressure \(P\). Write a model relating \(V, T\), and \(P\) using \(k\) as the constant of proportionality. If a cylinder contains oxygen at a temperature of 300 K and a pressure of 15 atmospheres in a volume of 100 liters, what is the constant of proportionality \(k\) ? If a piston is lowered into the cylinder, decreasing the volume occupied by the gas to 80 liters and raising the temperature to 310 K , what is the gas pressure?
41. Physics: Kinetic Energy The kinetic energy \(K\) of a moving object varies jointly with its mass \(m\) and the square of its velocity \(v\). If an object weighing 25 kilograms and moving with a velocity of 10 meters per second has a kinetic energy of 1250 joules, find its kinetic energy when the velocity is 15 meters per second.
42. Electrical Resistance of a Wire The electrical resistance of a wire varies directly with the length of the wire and inversely with the square of the diameter of the wire. If a wire 432 feet long and 4 millimeters in diameter has a resistance of 1.24 ohms, find the length of a wire of the same material whose resistance is 1.44 ohms and whose diameter is 3 millimeters.
43. Measuring the Stress of Materials The stress in the material of a pipe subject to internal pressure varies jointly with the
internal pressure and the internal diameter of the pipe and inversely with the thickness of the pipe. The stress is 100 pounds per square inch \((\psi)\) when the diameter is 5 inches, the thickness is 0.75 inch, and the internal pressure is 25 pounds per square inch. Find the stress when the internal pressure is 40 pounds per square inch if the diameter is 8 inches and the thickness is 0.50 inch.
44. Safe Load for a Beam The maximum safe load for a horizontal rectangular beam varies jointly with the width of the beam and the square of the thickness of the beam and inversely with its length. If an 8 -foot beam will support up to 750 pounds when the beam is 4 inches wide and 2 inches thick, what is the maximum safe load in a similar beam 10 feet long, 6 inches wide, and 2 inches thick?

\section*{Discussion and Writing}
45. In the early seventeenth century, Johannes Kepler discovered that the square of the period \(T\) for a planet to orbit the Sun varies directly with the cube of its mean distance \(a\) from the Sun. Go to the library and research this law and Kepler's other two laws. Write a brief paper about these laws and Kepler's place in history.
46. Using a situation that has not been discussed in the text, write a real-world problem that you think involves two variables that vary directly. Exchange your problem with another student to solve and critique.
47. Using a situation that has not been discussed in the text, write a real-world problem that you think involves two variables that vary inversely. Exchange your problem with another student to solve and critique.
48. Using a situation that has not been discussed in the text, write a real-world problem that you think involves three variables that vary jointly. Exchange your problem with another student to solve and critique.

\section*{Chapter Review}

\section*{Library of Functions}

\section*{Constant function (p. 80)}
\(f(x)=b\)
The graph is a horizontal line with \(y\)-intercept \(b\).

Cube function (p. 81)
\(f(x)=x^{3}\)

Identity function (p. 80)
\(f(x)=x\)
The graph is a line with slope 1 and \(y\)-intercept 0 .

Square root function (pp. 78 and 81)
\(f(x)=\sqrt{x}\)

\section*{Square function (pp. 80-81)}
\(f(x)=x^{2}\)
The graph is a parabola with intercept at \((0,0)\).

Cube root function (pp. 79 and 81)
\(f(x)=\sqrt[3]{x}\)

Reciprocal function (p. 81)
\[
f(x)=\frac{1}{x}
\]

\section*{Things to Know}

Function (pp. 43-46)

Function notation (pp. 46-49)

Difference quotient of \(f\) (pp. 48 and 77)
Domain (pp. 49-51)

\section*{Vertical-line test (p. 57)}

\section*{Even function \(f\) (p. 66)}

Odd function \(f\) (p. 66)
Increasing function (p. 68)

Decreasing function (p. 68)

\section*{Constant function (p. 68)}

Local maximum (p. 69)

Local minimum (p. 69)

\section*{Absolute maximum and}

Absolute minimum (p. 70)

\section*{Average rate of change of a function (p. 72)}

\section*{Direct variation (p. 106)}

Inverse variation (p. 107)

Absolute value function (pp. 80 and 82)
\(f(x)=|x|\)

Greatest integer function (p.82)
\(f(x)=\operatorname{int}(x)\)

A relation between two sets such that each element \(x\) in the first set, the domain, has corresponding to it exactly one element \(y\) in the second set. The range is the set of \(y\)-values of the function for the \(x\)-values in the domain.
A function can also be characterized as a set of ordered pairs \((x, y)\) in which no first element is paired with two different second elements.
\(y=f(x)\)
\(f\) is a symbol for the function.
\(x\) is the argument, or independent variable.
\(y\) is the dependent variable.
\(f(x)\) is the value of the function at \(x\), or the image of \(x\).
A function \(f\) may be defined implicitly by an equation involving \(x\) and \(y\) or explicitly by writing \(y=f(x)\).
\(\frac{f(x+h)-f(x)}{h} \quad h \neq 0\)
If unspecified, the domain of a function \(f\) defined by an equation is the largest set of real numbers for which \(f(x)\) is a real number.
A set of points in the plane is the graph of a function if and only if every vertical line intersects the graph in at most one point.
\(f(-x)=f(x)\) for every \(x\) in the domain ( \(-x\) must also be in the domain).
\(f(-x)=-f(x)\) for every \(x\) in the domain ( \(-x\) must also be in the domain).
A function \(f\) is increasing on an open interval \(I\) if, for any choice of \(x_{1}\) and \(x_{2}\) in \(I\), with \(x_{1}<x_{2}\), we have \(f\left(x_{1}\right)<f\left(x_{2}\right)\).
A function \(f\) is decreasing on an open interval \(I\) if, for any choice of \(x_{1}\) and \(x_{2}\) in \(I\), with \(x_{1}<x_{2}\), we have \(f\left(x_{1}\right)>f\left(x_{2}\right)\).
A function \(f\) is constant on an open interval \(I\) if, for all choices of \(x\) in \(I\), the values of \(f(x)\) are equal.
A function \(f\) has a local maximum at \(c\) if there is an open interval \(I\) containing \(c\) so that, for all \(x\) in \(I, f(x) \leq f(c)\).
A function \(f\) has a local minimum at \(c\) if there is an open interval \(I\) containing \(c\) so that, for all \(x\) in \(I, f(x) \geq f(c)\).
Let \(f\) denote a function defined on some interval \(I\).
If there is a number \(u\) in \(I\) for which \(f(x) \leq f(u)\) for all \(x\) in \(I\), then \(f(u)\) is the absolute maximum of \(f\) on \(I\) and we say the absolute maximum of \(f\) occurs at \(u\).
If there is a number \(v\) in \(I\) for which \(f(x) \geq f(v)\), for all \(x\) in \(I\), then \(f(v)\) is the absolute minimum of \(f\) on \(I\) and we say the absolute minimum of \(f\) occurs at \(v\).
The average rate of change of \(f\) from \(a\) to \(b\) is
\(\frac{\Delta y}{\Delta x}=\frac{f(b)-f(a)}{b-a} \quad a \neq b\)
\(y=k x, k \neq 0\)
\(y=\frac{k}{x}, k \neq 0\)

\section*{Objectives}

Section
\(1.1 \quad 1\) Determine whether a relation represents a function (p. 43)
2 Find the value of a function (p. 46)
3 Find the domain of a function defined by an equation (p. 49)
4 Form the sum, difference, product, and quotient of two functions (p. 51)
1.2
1.3

Determine even and odd functions from a graph (p. 66)
Identify even and odd functions from the equation (p. 67)
3 Use a graph to determine where a function is increasing, decreasing, or constant (p. 68)
4 Use a graph to locate local maxima and local minima (p. 69)
5 Use a graph to locate the absolute maximum and the absolute minimum (p. 70)
6 Use a graphing utility to approximate local maxima and local minima and to determine where a function is increasing or decreasing ( p .71 )
7 Find the average rate of change of a function (p.72)
1.4 1 Graph the functions listed in the library of functions (p. 78)

2 Graph piecewise-defined functions (p. 83)
1.51 Graph functions using vertical and horizontal shifts (p. 89)

2 Graph functions using compressions and stretches (p. 92)
3 Graph functions using reflections about the \(x\)-axis or \(y\)-axis (p. 94)
\(1.6 \quad 1\) Build and analyze functions (p. 101)
\(1.7 \quad 1\) Construct a model using direct variation (p. 106)
2 Construct a model using inverse variation (p. 107)
3 Construct a model using joint or combined variation (p. 107)

\section*{Review Exercises}

In Problems 1 and 2, determine whether each relation represents a function. For each function, state the domain and range.
1. \(\{(-1,0),(2,3),(4,0)\}\)
2. \(\{(4,-1),(2,1),(4,2)\}\)

In Problems 3-5, find the following for each function:
(a) \(f(2)\)
(b) \(f(-2)\)
(c) \(f(-x)\)
(d) \(-f(x)\)
(e) \(f(x-2)\)
(f) \(f(2 x)\)
3. \(f(x)=\frac{3 x}{x^{2}-1}\)
4. \(f(x)=\sqrt{x^{2}-4}\)
5. \(f(x)=\frac{x^{2}-4}{x^{2}}\)

In Problems 6-11, find the domain of each function.
6. \(f(x)=\frac{x}{x^{2}-9}\)
7. \(f(x)=\sqrt{2-x}\)
8. \(g(x)=\frac{|x|}{x}\)
9. \(f(x)=\frac{x}{x^{2}+2 x-3}\)
10. \(f(x)=\frac{\sqrt{x+1}}{x^{2}-4}\)
11. \(g(x)=\frac{x}{\sqrt{x+8}}\)

In Problems 12-14, find \(f+g, f-g, f \cdot g\), and \(\frac{f}{g}\) for each pair of functions. State the domain of each of these functions.
12. \(f(x)=2-x ; \quad g(x)=3 x+1\)
13. \(f(x)=3 x^{2}+x+1 ; g(x)=3 x\)
14. \(f(x)=\frac{x+1}{x-1} ; \quad g(x)=\frac{1}{x}\)
15. Find the difference quotient of \(f(x)=-2 x^{2}+x+1\); that is, find \(\frac{f(x+h)-f(x)}{h}, \quad h \neq 0\).
16. Use the graph of the function \(f\) shown to:
(a) Find the domain and the range of \(f\).
(b) List the intercepts.
(c) Find \(f(-2)\).
(d) Find the value(s) of \(x\) for which \(f(x)=-3\).
(e) Solve \(f(x)>0\).
(f) Graph \(y=f(x-3)\).
(g) Graph \(y=f\left(\frac{1}{2} x\right)\).
(h) Graph \(y=-f(x)\).

17. Use the graph of the function \(f\) shown to find:
(a) The domain and the range of \(f\).
(b) The intervals on which \(f\) is increasing, decreasing, or constant.
(c) The local minimum values and local maximum values.
(d) The absolute maximum and absolute minimum.
(e) Whether the graph is symmetric with respect to the \(x\)-axis, the \(y\)-axis, or the origin.
(f) Whether the function is even, odd, or neither.
(g) The intercepts, if any.

In Problems 18-21, determine (algebraically) whether the given function is even, odd, or neither.
18. \(f(x)=x^{3}-4 x\)
19. \(g(x)=\frac{4+x^{2}}{1+x^{4}}\)
20. \(G(x)=1-x+x^{3}\)
21. \(f(x)=\frac{x}{1+x^{2}}\)

In Problems 22 and 23, use a graphing utility to graph each function over the indicated interval. Approximate any local maximum values and local minimum values. Determine where the function is increasing and where it is decreasing.
22. \(f(x)=2 x^{3}-5 x+1 \quad(-3,3)\)
23. \(f(x)=2 x^{4}-5 x^{3}+2 x+1 \quad(-2,3)\)
24. Find the average rate of change of \(f(x)=8 x^{2}-x\).
(a) From 1 to 2
(b) From 0 to 1
(c) From 2 to 4

In Problems 25 and 26, find the average rate of change from 2 to 3 for each function \(f\). Be sure to simplify.
25. \(f(x)=2-5 x\)
26. \(f(x)=3 x-4 x^{2}\)

In Problems 27 and 28, is the graph shown the graph of a function?
27.

28.

In Problems 29 and 30, sketch the graph of each function. Be sure to label at least three points.
29. \(f(x)=|x|\)
30. \(f(x)=\sqrt{x}\)

In Problems 31-36, graph each function using the techniques of shifting, compressing or stretching, and reflections. Identify any intercepts on the graph. State the domain and, based on the graph, find the range.
31. \(F(x)=|x|-4\)
32. \(g(x)=-2|x|\)
33. \(h(x)=\sqrt{x-1}\)
34. \(f(x)=\sqrt{1-x}\)
35. \(h(x)=(x-1)^{2}+2\)
36. \(g(x)=-2(x+2)^{3}-8\)

In Problems 37 and 38,
(a) Find the domain of each function.
(d) Based on the graph, find the range.
(b) Locate any intercepts.
(e) Is \(f\) continuous on its domain?
(c) Graph each function.
37. \(f(x)= \begin{cases}3 x & \text { if }-2<x \leq 1 \\ x+1 & \text { if } x>1\end{cases}\)
39. A function \(f\) is defined by
\[
f(x)=\frac{A x+5}{6 x-2}
\]
38. \(f(x)= \begin{cases}x & \text { if }-4 \leq x<0 \\ 1 & \text { if } x=0 \\ 3 x & \text { if } x>0\end{cases}\) If \(f(1)=4\), find \(A\).
40. Constructing a Closed Box A closed box with a square base is required to have a volume of 10 cubic feet.
(a) Build a model that expresses the amount \(A\) of material used to make such a box as a function of the length \(x\) of a side of the square base.
(b) How much material is required for a base 1 foot by 1 foot?
(c) How much material is required for a base 2 feet by 2 feet?
(d) Graph \(A=A(x)\). For what value of \(x\) is \(A\) smallest?
41. Area of a Rectangle A rectangle has one vertex in quadrant I on the graph of \(y=10-x^{2}\), another at the origin, one on the positive \(x\)-axis, and one on the positive \(y\)-axis.
(a) Express the area \(A\) of the rectangle as a function of \(x\).
(b) Find the largest area \(A\) that can be enclosed by the rectangle.
42. Mortgage Payments The monthly payment \(p\) on a mortgage varies directly with the amount \(B\) borrowed. If the monthly payment on a 30 -year mortgage is \(\$ 854.00\) when \(\$ 130,000\) is borrowed, find a model that relates the monthly payment \(p\) to the amount \(B\) borrowed for a mortgage with the same
terms. Then find the monthly payment \(p\) when the amount borrowed is \(\$ 165,000\)
43. Weight of a Body The weight of a body varies inversely with the square of its distance from the center of Earth. Assuming that the radius of Earth is 3960 miles, how much would a man weigh at an altitude of 1 mile above Earth's surface if he weighs 200 pounds on Earth's surface?
44. Heat Loss The amount of heat transferred per hour through a glass window varies jointly with the surface area of the window and the difference in temperature between the areas separated by the glass. A window with a surface area of 7.5 square feet loses 135 BTU per hour when the temperature difference is \(40^{\circ} \mathrm{F}\). How much heat is lost per hour for a similar window with a surface area of 12 square feet when the temperature difference is \(35^{\circ} \mathrm{F}\) ?

\section*{Chapter Test}
1. Determine whether each relation represents a function. For each function, state the domain and the range.
(a) \(\{(2,5),(4,6),(6,7),(8,8)\}\)
(b) \(\{(1,3),(4,-2),(-3,5),(1,7)\}\)
(c)

(d)

In Problems 2- 4, find the domain of each function and evaluate each function at \(x=-1\).
2. \(f(x)=\sqrt{4-5 x}\)
3. \(g(x)=\frac{x+2}{|x+2|}\)
4. \(h(x)=\frac{x-4}{x^{2}+5 x-36}\)
5. Using the graph of the function \(f\) :

(a) Find the domain and the range of \(f\).
(b) List the intercepts.
(c) Find \(f(1)\).
(d) For what value(s) of \(x\) does \(f(x)=-3\) ?
(e) Solve \(f(x)<0\).
6. Use a graphing utility to graph the function \(f(x)=-x^{4}+\) \(2 x^{3}+4 x^{2}-2\) on the interval \((-5,5)\). Approximate any local maximum values and local minimum values rounded to two decimal places. Determine where the function is increasing and where it is decreasing.
7. Consider the function \(g(x)= \begin{cases}2 x+1 & \text { if } x<-1 \\ x-4 & \text { if } x \geq-1\end{cases}\)
(a) Graph the function.
(b) List the intercepts.
(c) Find \(g(-5)\).
(d) Find \(g(2)\).
8. For the function \(f(x)=3 x^{2}-2 x+4\), find the average rate of change of \(f\) from 3 to 4 .
9. For the functions \(f(x)=2 x^{2}+1\) and \(g(x)=3 x-2\), find the following and simplify:
(a) \(f-g\)
(b) \(f \cdot g\)
(c) \(f(x+h)-f(x)\)
10. Graph each function using the techniques of shifting, compressing or stretching, and reflections. Start with the graph of the basic function and show all stages.
(a) \(h(x)=-2(x+1)^{3}+3\)
(b) \(g(x)=|x+4|+2\)
11. The variable interest rate on a student loan changes each July 1 based on the bank prime loan rate. For the years 1992-2007, this rate can be approximated by the model \(r(x)=-0.115 x^{2}+1.183 x+5.623\), where \(x\) is the number of years since 1992 and \(r\) is the interest rate as a percent.
(a) Use a graphing utility to estimate the highest rate during this time period. During which year was the interest rate the highest?
(b) Use the model to estimate the rate in 2010. Does this value seem reasonable?
Source: U.S. Federal Reserve
12. A community skating rink is in the shape of a rectangle with semicircles attached at the ends. The length of the rectangle is 20 feet less than twice the width. The thickness of the ice is 0.75 inch.
(a) Build a model that expresses the ice volume, \(V\), as a function of the width, \(x\).
(b) How much ice is in the rink if the width is 90 feet?

13. The resistance (in ohms) of a circular conductor varies directly with the length of the conductor and inversely with the square of the radius of the conductor. If 50 feet of wire with a radius of \(6 \times 10^{-3}\) inch has a resistance of 10 ohms, what would be the resistance of 100 feet of the same wire if the radius were increased to \(7 \times 10^{-3}\) inch?

\section*{Chapter Projects}

\section*{(ค) Internet-based Project}
I. Choosing a Cellular Telephone Plan Collect information from your family, friends, or consumer agencies such as Consumer Reports. Then decide on a cellular telephone provider, choosing the company that you feel offers the best service. Once you have selected a service provider, research the various types of individual plans offered by the company by visiting the provider's website.
1. Suppose you expect to use 400 anytime minutes without a texting or data plan. What would be the monthly cost of each plan you are considering?
2. Suppose you expect to use 600 anytime minutes with unlimited texting, but no data plan. What would be the monthly cost of each plan you are considering?
3. Suppose you expect to use 500 anytime minutes with unlimited texting and an unlimited data plan. What would be the monthly cost of each plan you are considering?
4. Suppose you expect to use 500 anytime minutes with unlimited texting and 20 MB of data. What would be the monthly cost of each plan you are considering?
5. Build a model that describes the monthly cost \(C\) as a function of the number of anytime minutes used \(m\), assuming unlimited texting and 20 MB of data each month for each plan you are considering.
6. Graph each function from Problem 5.
7. Based on your particular usage, which plan is best for you?
8. Now, develop an Excel spreadsheet to analyze the various plans you are considering. Suppose you want a plan that offers 700 anytime minutes with additional minutes costing \(\$ 0.40\) per minute that costs \(\$ 39.99\) per month. In addition, you want unlimited texting, which costs an additional \(\$ 20\) per month, and a data plan that offers up to 25 MB of data each month, with each additional MB costing \(\$ 0.20\). Because cellular telephone plans' cost structure is based on piecewise-defined functions, we need "if-then" statements within Excel to analyze the cost of the plan. Use the Excel spreadsheet on the next page as a guide in developing your worksheet. Enter into your spreadsheet a variety of possible minutes and data used to help arrive at a decision regarding which plan is best for you.
9. Write a paragraph supporting the choice in plans that best meets your needs.
10. How are "if/then" loops similar to a piecewise-defined function?

II. Project at Motorola: Wireless Internet Service Use functions and their graphs to analyze the total cost of various wireless Internet service plans.
III. Cost of Cable When government regulations and customer preference influence the path of a new cable line, the Pythagorean Theorem can be used to assess the cost of installation.
IV. Oil Spill Functions are used to analyze the size and spread of an oil spill from a leaking tanker.

\title{
Linear and Quadratic Functions
}

\section*{The Beta of a Stock}

Investing in the stock market can be rewarding and fun, but how does one go about selecting which stocks to purchase? Financial investment firms hire thousands of analysts who track individual stocks (equities) and assess the value of the underlying company. One measure the analysts consider is the beta of the stock. Beta measures the relative risk of an individual company's equity to that of a market basket of stocks, such as the Standard \& Poor's 500. But how is beta computed?
(ค) - See the Internet-based Chapter Project I-

\section*{<A Look Back}

Up to now, our discussion has focused on graphs of equations and functions. We learned how to graph equations using the point-plotting method, intercepts, and the tests for symmetry. In addition, we learned what a function is and how to identify whether a relation represents a function. We also discussed properties of functions, such as domain/range, increasing/decreasing, even/odd, and average rate of change.

\section*{A Look Ahead>}

Going forward, we will look at classes of functions. This chapter focuses on linear and quadratic functions, their properties, and applications.

Cumulative Review
Chapter Projects

\subsection*{2.1 Properties of Linear Functions and Linear Models}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Lines (Foundations, Section 3, pp. 19-29)
- Solve Linear Equations (Appendix A, Section A.8, pp. A64-A66)
- Interval Notation; Solving Inequalities (Appendix A, Section A.10, pp. A81-A86)

Now Work the ‘Are You Prepared?' problems on page 126.
OBJECTIVES 1 Graph Linear Functions (p.119)
2 Use Average Rate of Change to Identify Linear Functions (p. 119)
3 Determine Whether a Linear Function Is Increasing, Decreasing, or Constant (p. 122)
4 Find the Zero of a Linear Function (p. 123)
5 Build Linear Models from Verbal Descriptions (p. 124)
- Functions (Section 1.1, pp. 43-53)
- The Graph of a Function (Section 1.2, pp. 56-61)
- Properties of Functions (Section 1.3, pp. 66-74)

\section*{1 Graph Linear Functions}

In Foundations, Section 3, we discussed lines. In particular, for nonvertical lines we developed the slope-intercept form of the equation of a line \(y=m x+b\). When the slope-intercept form of a line is written using function notation, the result is a linear function.

\section*{DEFINITION}

A linear function is a function of the form
\[
f(x)=m x+b
\]

The graph of a linear function is a line with slope \(m\) and \(y\)-intercept \(b\). Its domain is the set of all real numbers.

Functions that are not linear are said to be nonlinear.

\section*{EXAMPLE I}

\section*{Graphing a Linear Function}

Graph the linear function \(f(x)=-3 x+7\). What are the domain and the range of \(f\) ?
Solution This is a linear function with slope \(m=-3\) and \(y\)-intercept \(b=7\). To graph this
Figure 1
 function, we plot the point \((0,7)\), the \(y\)-intercept, and use the slope to find an additional point by moving right 1 unit and down 3 units. See Figure 1. The domain and the range of \(f\) are each the set of all real numbers.

Alternatively, an additional point could have been found by evaluating the function at some \(x \neq 0\). For \(x=1, f(1)=-3(1)+7=4\) and the point \((1,4)\) lies on the graph.

Now Work problems 13 (a) and (b)

\section*{2 Use Average Rate of Change to Identify Linear Functions}

Look at Table 1 on the next page, which shows certain values of the independent variable \(x\) and corresponding values of the dependent variable \(y\) for the function \(f(x)=-3 x+7\). Notice that as the value of the independent variable, \(x\), increases by 1 , the value of the dependent variable \(y\) decreases by 3 . That is, the average rate of change of \(y\) with respect to \(x\) is a constant, -3 .

It is not a coincidence that the average rate of change of the linear function \(f(x)=-3 x+7\) is the slope of the linear function. That is, \(\frac{\Delta y}{\Delta x}=m=-3\). The following theorem states this fact.

\section*{Average Rate of Change of a Linear Function}

Linear functions have a constant average rate of change. That is, the average rate of change of a linear function \(f(x)=m x+b\) is
\[
\frac{\Delta y}{\Delta x}=m
\]

Proof The average rate of change of \(f(x)=m x+b\) from \(x_{1}\) to \(x_{2}, x_{1} \neq x_{2}\), is
\[
\begin{aligned}
\frac{\Delta y}{\Delta x} & =\frac{f\left(x_{2}\right)-f\left(x_{1}\right)}{x_{2}-x_{1}}=\frac{\left(m x_{2}+b\right)-\left(m x_{1}+b\right)}{x_{2}-x_{1}} \\
& =\frac{m x_{2}-m x_{1}}{x_{2}-x_{1}}=\frac{m\left(x_{2}-x_{1}\right)}{x_{2}-x_{1}}=m
\end{aligned}
\]

Based on the theorem just proved, the average rate of change of the function \(g(x)=-\frac{2}{5} x+5\) is \(-\frac{2}{5}\).

\section*{Now Work problem 13 (c)}

As it turns out, only linear functions have a constant average rate of change. Because of this, the average rate of change can be used to determine whether a function is linear. This is especially useful if the function is defined by a data set.

\section*{EXAMPLE 2}

\section*{Using the Average Rate of Change to Identify Linear Functions}
(a) A strain of E. coli known as Beu 397-recA441 is placed into a Petri dish at \(30^{\circ}\) Celsius and allowed to grow. The data shown in Table 2 are collected. The population is measured in grams and the time in hours. Plot the ordered pairs \((x, y)\) in the Cartesian plane, and use the average rate of change to determine whether the function is linear.
(b) The data in Table 3 represent the maximum number of heartbeats that a healthy individual of different ages should have during a 15 -second interval of time while exercising. Plot the ordered pairs \((x, y)\) in the Cartesian plane, and use the average rate of change to determine whether the function is linear.
\begin{tabular}{llll|} 
& & \\
& \begin{tabular}{l} 
Time \\
(hours), \(\boldsymbol{x}\)
\end{tabular} & \begin{tabular}{l} 
Population \\
(grams), \(\boldsymbol{y}\)
\end{tabular} & \((\boldsymbol{x}, \boldsymbol{y})\) \\
\hline 0 & 0.09 & \((0,0.09)\) \\
1 & 0.12 & \((1,0.12)\) \\
2 & 0.16 & \((2,0.16)\) \\
3 & 0.22 & \((3,0.22)\) \\
4 & 0.29 & \((4,0.29)\) \\
& 0.39 & \((5,0.39)\) \\
\hline
\end{tabular}

Table 3
\begin{tabular}{lll} 
& \begin{tabular}{l} 
Maximum Number of \\
Heartbeats, \(\boldsymbol{y}\)
\end{tabular} & \((\boldsymbol{x}, \boldsymbol{y})\) \\
\hline 20 & 50 & \((20,50)\) \\
30 & 47.5 & \((30,47.5)\) \\
40 & 45 & \((40,45)\) \\
50 & 42.5 & \((50,42.5)\) \\
60 & 40 & \((60,40)\) \\
70 & 37.5 & \((70,37.5)\) \\
\hline
\end{tabular}

Source: American Heart Association

Solution Compute the average rate of change of each function. If the average rate of change is constant, the function is linear. If the average rate of change is not constant, the function is nonlinear.
(a) Figure 2 shows the points listed in Table 2 plotted in the Cartesian plane. Note that it is impossible to draw a straight line that contains all the points. Table 4 displays the average rate of change of the population.

Table 4
\begin{tabular}{|ccc|}
\hline Time (hours), \(\boldsymbol{x}\) & Population (grams), \(\boldsymbol{y}\) & Average Rate of Change \(=\frac{\Delta \boldsymbol{y}}{\boldsymbol{\Delta x}}\) \\
\hline 0 & 0.09 & \(\frac{0.12-0.09}{1-0}=0.03\) \\
1 & 0.12 & 0.04 \\
2 & 0.16 & 0.06 \\
3 & 0.29 & 0.10 \\
\hline 5 & 0.39 \\
\hline
\end{tabular}

Because the average rate of change is not constant, the function is not linear. In fact, because the average rate of change is increasing as the value of the independent variable increases, the function is increasing at an increasing rate. So not only is the population increasing over time, but it is also growing more rapidly as time passes.
(b) Figure 3 on the next page shows the points listed in Table 3 plotted in the Cartesian plane. Note that the data in Figure 3 lie on a straight line. Table 5 contains the average rate of change of the maximum number of heartbeats. The average rate of change of the heartbeat data is constant, -0.25 beat per year,
so the function is linear. To find the linear function, use the point-slope formula with \(x_{1}=20, y_{1}=50\), and \(m=-0.25\).
\[
\begin{aligned}
y-50 & =-0.25(x-20) \quad y-y_{1}=m\left(x-x_{1}\right) \\
y-50 & =-0.25 x+5 \\
y & =-0.25 x+55
\end{aligned}
\]

am Now Work problem 27

\section*{3 Determine Whether a Linear Function Is Increasing, Decreasing, or Constant}

Look back at the Seeing the Concept on page 25. When the slope \(m\) of a linear function is positive \((m>0)\), the line slants upward from left to right. When the slope \(m\) of a linear function is negative \((m<0)\), the line slants downward from left to right. When the slope \(m\) of a linear function is zero \((m=0)\), the line is horizontal.

\section*{THEOREM}

\section*{Increasing, Decreasing, and Constant Linear Functions}

A linear function \(f(x)=m x+b\) is increasing over its domain if its slope, \(m\), is positive. It is decreasing over its domain if its slope, \(m\), is negative. It is constant over its domain if its slope, \(m\), is zero.

\section*{EXAMPLE 3 \\ Determining Whether a Linear Function Is Increasing,} Decreasing, or Constant
Determine whether the following linear functions are increasing, decreasing, or constant.
(a) \(f(x)=5 x-2\)
(b) \(g(x)=-2 x+8\)
(c) \(s(t)=\frac{3}{4} t-4\)
(d) \(h(z)=7\)

Solution (a) For the linear function \(f(x)=5 x-2\), the slope is 5 , which is positive. The function \(f\) is increasing on the interval \((-\infty, \infty)\).
(b) For the linear function \(g(x)=-2 x+8\), the slope is -2 , which is negative. The function \(g\) is decreasing on the interval \((-\infty, \infty)\).
(c) For the linear function \(s(t)=\frac{3}{4} t-4\), the slope is \(\frac{3}{4}\), which is positive. The function \(s\) is increasing on the interval \((-\infty, \infty)\).
(d) The linear function \(h\) can be written as \(h(z)=0 z+7\). Because the slope is 0 , the function \(h\) is constant on the interval \((-\infty, \infty)\).
am Now Work problem 13 (d)

\section*{4 Find the Zero of a Linear Function}

Recall from Section 1.2 that a real number \(r\) is a zero of a function \(f\) if \(f(r)=0\). So, to find the zeros of a function \(y=f(x)\), solve the equation \(f(x)=0\). The solution(s) represent the zero(s) of \(f\). Any linear function \(f(x)=m x+b\) has exactly one zero provided that \(m \neq 0\), since, if \(m \neq 0\), the equation \(m x+b=0\) has exactly one solution. In other words, a linear function has exactly one zero if it is increasing or decreasing.

\section*{EXAMPLE 4 Finding the Zero of a Linear Function}
(a) Does \(f(x)=-\frac{1}{2} x+2\) have a zero?
(b) If it does, find the zero.
(c) Use the zero along with the \(y\)-intercept to graph \(f\).
(d) Solve \(f(x)>0\).

Solution (a) The linear function \(f\) is decreasing (do you see why?), so it has one zero.
(b) Solve the equation \(f(x)=0\) to find the zero.
\[
\begin{array}{rlrl}
f(x) & =0 \\
-\frac{1}{2} x+2 & =0 & & \\
-\frac{1}{2} x & =-2 & & \text { Subtract } 2 \text { from each side of the equation. } \\
x & =4 \quad & & \text { Multiply both sides of the equation by }-2 .
\end{array}
\]

Figure 4

The zero of \(f\) is 4 .
(c) The \(y\)-intercept is 2 , so the point \((0,2)\) is on the graph of the function. The zero of \(f\) is 4 , so the \(x\)-intercept is 4 and the point \((4,0)\) is on the graph. See Figure 4 for the graph of \(f\).
(d) From Figure 4, notice that \(f(x)>0\) (above the \(x\)-axis) when \(x<4\). Alternatively, solve the inequality.
\[
\begin{array}{rlrl}
-\frac{1}{2} x+2 & >0 & & f(x)>0, \text { where } f(x)=-\frac{1}{2} x+2 \\
-\frac{1}{2} x & >-2 & & \text { Add - } 2 \text { to both sides. } \\
-2\left(-\frac{1}{2} x\right) & <-2 \cdot(-2) & \begin{array}{l}
\text { Multiply both sides by }-2 . \text { Change the } \\
\text { direction of the inequality. }
\end{array} \\
x & <4 & & \text { Simplify. }
\end{array}
\]

\section*{4. 5 Build Linear Models from Verbal Descriptions}

When the average rate of change of a function is constant, a linear function can model the relation between the two variables. For example, if a recycling company pays \(\$ 0.52\) per pound for aluminum cans, then the relation between the price paid \(p\) and the pounds recycled \(x\) can be modeled as the linear function \(p(x)=0.52 x\), with slope \(m=\frac{0.52 \text { dollar }}{1 \text { pound }}\).

\section*{Modeling with a Linear Function}

If the average rate of change of a function is a constant \(m\), a linear function \(f\) can be used to model the relation between the two variables as follows:
\[
f(x)=m x+b
\]
where \(b\) is the value of \(f\) at \(0-\) that is, \(b=f(0)\).

\section*{EXAMPLE 5 Straight-line Depreciation}

Book value is the value of an asset that a company uses to create its balance sheet. Some companies depreciate assets using straight-line depreciation so that the value of the asset declines by a fixed amount each year. The amount of the decline depends on the useful life that the company assigns to the asset. Suppose that a company just purchased a fleet of new cars for its sales force at a cost of \(\$ 31,500\) per car. The company chooses to depreciate each vehicle using the straight-line method over 7 years. This means that each car will depreciate by \(\frac{\$ 31,500}{7}=\$ 4500\) per year.
(a) Write a linear function that expresses the book value \(V\) of each car as a function of its age, \(x\).
(b) Graph the linear function.
(c) What is the book value of each car after 3 years?
(d) Interpret the slope.
(e) When will the book value of each car be \(\$ 9000\) ?
[Hint: Solve the equation \(V(x)=9000\).]
(a) If we let \(V(x)\) represent the value of each car after \(x\) years, then \(V(0)\) represents the original value of each car, so \(V(0)=\$ 31,500\). The \(y\)-intercept of the linear function is \(\$ 31,500\). Because each car depreciates by \(\$ 4500\) per year, the slope of the linear function is -4500 . The linear function that represents the book value \(V\) of each car after \(x\) years is
\[
V(x)=-4500 x+31,500
\]
(b) Figure 5 shows the graph of \(V\).
(c) The book value of each car after 3 years is
\[
\begin{aligned}
V(3) & =-4500(3)+31,500 \\
& =\$ 18,000
\end{aligned}
\]
(d) Since the slope of \(V(x)=-4500 x+31,500\) is -4500 , the average rate of change of book value is \(-\$ 4500 /\) year. So for each additional year that passes, the book value of the car decreases by \(\$ 4500\).
(e) To find when the book value will be \(\$ 9000\), solve the equation
\[
\begin{aligned}
V(x) & =9000 & & \\
-4500 x+31,500 & =9000 & & \\
-4500 x & =-22,500 & & \text { Subtract } 31,500 \text { from each side. } \\
x & =\frac{-22,500}{-4500}=5 & & \text { Divide by }-4500 .
\end{aligned}
\]

The car will have a book value of \(\$ 9000\) when it is 5 years old.
```

Now Work problem 51

```

\section*{EXAMPLE 6}

\section*{Supply and Demand}

The quantity supplied of a good is the amount of a product that a company is willing to make available for sale at a given price. The quantity demanded of a good is the amount of a product that consumers are willing to purchase at a given price. Suppose that the quantity supplied, \(S\), and quantity demanded, \(D\), of cellular telephones each month are given by the following functions:
\[
\begin{aligned}
S(p) & =60 p-900 \\
D(p) & =-15 p+2850
\end{aligned}
\]
where \(p\) is the price (in dollars) of the telephone.
(a) The equilibrium price of a product is defined as the price at which quantity supplied equals quantity demanded. That is, the equilibrium price is the price at which \(S(p)=D(p)\). Find the equilibrium price of cellular telephones. What is the equilibrium quantity, the amount demanded (or supplied) at the equilibrium price?
(b) Determine the prices for which quantity supplied is greater than quantity demanded. That is, solve the inequality \(S(p)>D(p)\).
(c) Graph \(S=S(p), D=D(p)\) and label the equilibrium point.

Solution (a) To find the equilibrium price, solve the equation \(S(p)=D(p)\).
\[
\begin{array}{rlrl}
60 p-900 & =-15 p+2850 & & S(p)=60 p-900 \\
& & D(p)=-15 p+2850 \\
60 p & =-15 p+3750 & & \text { Add } 900 \text { to each side } \\
75 p & =3750 & & \text { Add } 15 p \text { to each side } \\
p & =50 & & \text { Divide each side by } 75 .
\end{array}
\]

The equilibrium price is \(\$ 50\) per cellular phone. To find the equilibrium quantity, evaluate either \(S(p)\) or \(D(p)\) at \(p=50\).
\[
S(50)=60(50)-900=2100
\]

The equilibrium quantity is 2100 cellular phones. At a price of \(\$ 50\) per phone, the company will produce and sell 2100 phones each month and have no shortages or excess inventory.
(b) The inequality \(S(p)>D(p)\) is
\[
\begin{aligned}
60 p-900 & >-15 p+2850 & & S(p)>D(p) \\
60 p & >-15 p+3750 & & \text { Add } 900 \text { to each side. } \\
75 p & >3750 & & \text { Add } 15 p \text { to each side. } \\
p & >50 & & \text { Divide each side by } 75 .
\end{aligned}
\]

If the company charges more than \(\$ 50\) per phone, quantity supplied will exceed quantity demanded. In this case the company will have excess phones in inventory.
(c) Figure 6 on the following page shows the graphs of \(S=S(p)\) and \(D=D(p)\) with the equilibrium point labeled.

Figure 6

Now Work problem 45

\subsection*{2.1 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. Graph \(y=2 x-3\). (pp. 22-27)
2. Find the slope of the line joining the points \((2,5)\) and \((-1,3)\). pp. 19-20)
3. Find the average rate of change of \(f(x)=3 x^{2}-2\), from 2 to 4. (pp. 72-73)
4. Solve: \(60 x-900=-15 x+2850\). (pp. A64-A66)
5. If \(f(x)=x^{2}-4\), find \(f(-2)\). (pp. 46-49)
6. True or False The graph of the function \(f(x)=x^{2}\) is increasing on the interval \((0, \infty)(\mathrm{pp}\). 68-72)

\section*{Concepts and Vocabulary}
7. For the graph of the linear function \(f(x)=m x+b, m\) is the \(\qquad\) and \(b\) is the \(\qquad\) .
8. For the graph of the linear function \(H(z)=-4 z+3\), the slope is \(\qquad\) and the \(y\)-intercept is \(\qquad\) .
9. If the slope \(m\) of the graph of a linear function is \(\qquad\) , the function is increasing over its domain.
10. True or False The slope of a nonvertical line is the average rate of change of the linear function.
11. True or False If the average rate of change of a linear function is \(\frac{2}{3}\), then if \(y\) increases by \(3, x\) will increase by 2 .
12. True or False The average rate of change of \(f(x)=2 x+8\) is 8 .

\section*{Skill Building}

In Problems 13-20, a linear function is given.
(a) Determine the slope and \(y\)-intercept of each function.
(b) Use the slope and y-intercept to graph the linear function.
(c) Determine the average rate of change of each function.
(d) Determine whether the linear function is increasing, decreasing, or constant.
13. \(f(x)=2 x+3\)
14. \(g(x)=5 x-4\)

\section*{Applications and Extensions}
35. Suppose that \(f(x)=4 x-1\) and \(g(x)=-2 x+5\).
(a) Solve \(f(x)=0\).
(b) Solve \(f(x)>0\).
(c) Solve \(f(x)=g(x)\).
(d) Solve \(f(x) \leq g(x)\).
(e) Graph \(y=f(x)\) and \(y=g(x)\) and label the point that represents the solution to the equation \(f(x)=g(x)\).
36. Suppose that \(f(x)=3 x+5\) and \(g(x)=-2 x+15\).
(a) Solve \(f(x)=0\).
(b) Solve \(f(x)<0\).
(c) Solve \(f(x)=g(x)\).
(d) Solve \(f(x) \geq g(x)\).
(e) Graph \(y=f(x)\) and \(y=g(x)\) and label the point that represents the solution to the equation \(f(x)=g(x)\).
37. In parts (a)-(f), use the following figure.

(a) Solve \(f(x)=50\).
(b) Solve \(f(x)=80\).
(c) Solve \(f(x)=0\).
(d) Solve \(f(x)>50\).
(e) Solve \(f(x) \leq 80\).
(f) Solve \(0<f(x)<80\).
38. In parts (a)-(f), use the following figure.

(a) Solve \(g(x)=20\).
(b) Solve \(g(x)=60\).
(c) Solve \(g(x)=0\).
(d) Solve \(g(x)>20\).
(e) Solve \(g(x) \leq 60\).
(f) Solve \(0<g(x)<60\).
39. In parts (a) and (b), use the following figure.

(a) Solve the equation: \(f(x)=g(x)\).
(b) Solve the inequality: \(f(x)>g(x)\).
40. In parts (a) and (b), use the following figure.

(a) Solve the equation: \(f(x)=g(x)\).
(b) Solve the inequality: \(f(x) \leq g(x)\).
41. In parts (a) and (b), use the following figure.

(a) Solve the equation: \(f(x)=g(x)\).
(b) Solve the inequality: \(g(x) \leq f(x)<h(x)\).
42. In parts (a) and (b), use the following figure.

(a) Solve the equation: \(f(x)=g(x)\).
(b) Solve the inequality: \(g(x)<f(x) \leq h(x)\).
43. Car Rentals The cost \(C\), in dollars, of a one-day car rental is modeled by the function \(C(x)=0.35 x+45\), where \(x\) is the number of miles driven.
(a) What is the cost if you drive \(x=40\) miles?
(b) If the cost of renting the moving truck is \(\$ 108\), how many miles did you drive?
(c) Suppose that you want the cost to be no more than \(\$ 150\). What is the maximum number of miles that you can drive?
(d) What is the implied domain of \(C\) ?
(e) Interpret the slope.
(f) Interpret the \(y\)-intercept.
44. Phone Charges The monthly cost \(C\), in dollars, for calls from the United States to Spain on a certain phone plan is modeled by the function \(C(x)=2.06 x+1.39\), where \(x\) is the number of minutes used.
(a) What is the cost if you talk on the phone for \(x=50\) minutes?
(b) Suppose that your monthly bill is \(\$ 133.23\). How many minutes did you use the phone?
(c) Suppose that you budget yourself \(\$ 100\) per month for the phone. What is the maximum number of minutes that you can talk?
(d) What is the implied domain of \(C\) if there are 30 days in the month?
(e) Interpret the slope. (f) Interpret the \(y\)-intercept.
45. Supply and Demand Suppose that the quantity supplied \(S\) and the quantity demanded \(D\) of T-shirts at a concert are given by the following functions:
\[
\begin{aligned}
S(p) & =-600+50 p \\
D(p) & =1200-25 p
\end{aligned}
\]
where \(p\) is the price of a T -shirt.
(a) Find the equilibrium price for T-shirts at this concert. What is the equilibrium quantity?
(b) Determine the prices for which quantity demanded is greater than quantity supplied.
(c) What do you think will eventually happen to the price of T-shirts if quantity demanded is greater than quantity supplied?
46. Supply and Demand Suppose that the quantity supplied \(S\) and the quantity demanded \(D\) of hot dogs at a baseball game are given by the following functions:
\[
\begin{aligned}
S(p) & =-2000+3000 p \\
D(p) & =10,000-1000 p
\end{aligned}
\]
where \(p\) is the price of a hot dog.
(a) Find the equilibrium price for hot dogs at the baseball game. What is the equilibrium quantity?
(b) Determine the prices for which quantity demanded is less than quantity supplied.
(c) What do you think will eventually happen to the price of hot dogs if quantity demanded is less than quantity supplied?
47. Taxes The function \(T(x)=0.15(x-8925)+892.5\) represents the tax bill \(T\) of a single person whose adjusted gross income is \(x\) dollars for income between \(\$ 8925\) and \$36,250, inclusive, in 2013.
Source: Internal Revenue Service
(a) What is the domain of this linear function?
(b) What is a single filer's tax bill if adjusted gross income is \(\$ 20,000\) ?
(c) Which variable is independent and which is dependent?
(d) Graph the linear function over the domain specified in part (a).
(e) What is a single filer's adjusted gross income if the tax bill is \(\$ 3693.75\) ?
(f) Interpret the slope.
48. Luxury Tax In 2011, major league baseball signed a labor agreement with the players. In this agreement, any team whose payroll exceeded \(\$ 178\) million in 2012 had to pay a luxury tax of \(42.5 \%\) (for four or more consecutive offenses). The linear function \(T(p)=0.425(p-178)\) describes the luxury \(\operatorname{tax} T\) of a team whose payroll was \(p\) (in millions of dollars).

\section*{Source: Major League Baseball}
(a) What is the implied domain of this linear function?
(b) What was the luxury tax for the New York Yankees, whose 2012 payroll was \(\$ 222.5\) million?
(c) Graph the linear function.
(d) What is the payroll of a team that pays a luxury tax of \(\$ 27.2\) million?
(e) Interpret the slope.

The point at which a company's profits equal zero is called the company's break-even point. For Problems 49 and 50, let R represent a company's revenue, let \(C\) represent the company's costs, and let \(x\) represent the number of units produced and sold each day.
(a) Find the firm's break-even point; that is, find \(x\) such that \(R=C\).
(b) Find the values of \(x\) such that \(R(x)>C(x)\). This represents the number of units that the company must sell to earn a profit.
49. \(R(x)=8 x\)
\(C(x)=4.5 x+17,500\)
50. \(R(x)=12 x\)
\(C(x)=10 x+15,000\)
51. Straight-line Depreciation Suppose that a company has just purchased a new computer for \(\$ 3000\). The company chooses to depreciate the computer using the straight-line method over 3 years.
(a) Write a linear model that expresses the book value \(V\) of the computer as a function of its age \(x\).
(b) What is the implied domain of the function found in part (a)?
(c) Graph the linear function.
(d) What is the book value of the computer after 2 years?
(e) When will the computer have a book value of \(\$ 2000\) ?
52. Straight-line Depreciation Suppose that a company has just purchased a new machine for its manufacturing facility for \(\$ 120,000\). The company chooses to depreciate the machine using the straight-line method over 10 years.
(a) Write a linear model that expresses the book value \(V\) of the machine as a function of its age \(x\).
(b) What is the implied domain of the function found in part (a)?
(c) Graph the linear function.
(d) What is the book value of the machine after 4 years?
(e) When will the machine have a book value of \(\$ 72,000\) ?
53. Cost Function The simplest cost function is the linear cost function, \(C(x)=m x+b\), where the \(y\)-intercept \(b\) represents the fixed costs of operating a business and the slope \(m\) represents the cost of each item produced. Suppose that a small bicycle manufacturer has daily fixed costs of \(\$ 1800\), and each bicycle costs \(\$ 90\) to manufacture.
(a) Write a linear model that expresses the cost \(C\) of manufacturing \(x\) bicycles in a day.
(b) Graph the model.
(c) What is the cost of manufacturing 14 bicycles in a day?
(d) How many bicycles could be manufactured for \(\$ 3780\) ?
54. Cost Function Refer to Problem 53. Suppose that the landlord of the building increases the bicycle manufacturer's rent by \(\$ 100\) per month.
(a) Assuming that the manufacturer is open for business 20 days per month, what are the new daily fixed costs?
(b) Write a linear model that expresses the cost \(C\) of manufacturing \(x\) bicycles in a day with the higher rent.
(c) Graph the model.
(d) What is the cost of manufacturing 14 bicycles in a day?
(e) How many bicycles can be manufactured for \(\$ 3780\) ?
55. Truck Rentals A truck rental company rents a truck for one day by charging \(\$ 31.95\) plus \(\$ 0.89\) per mile.
(a) Write a linear model that relates the cost \(C\), in dollars, of renting the truck to the number \(x\) of miles driven.
(b) What is the cost of renting the truck if the truck is driven 110 miles? 230 miles?
56. International Call Plan A cell phone company offers an international plan by charging \(\$ 30\) for the first 80 minutes, plus \(\$ 0.50\) for each minute over 80.
(a) Write a linear model that relates the cost \(C\), in dollars, of talking \(x\) minutes, assuming \(\geq 80\).
(b) What is the cost of talking 105 minutes? 120 minutes?

\section*{Mixed Practice}
57. Developing a Linear Model from Data How many songs can an iPod hold? The following data represent the memory \(m\) and number of songs \(n\).
\begin{tabular}{|cc|}
\hline Memory, \(\boldsymbol{m}\) (gigabytes) & Number of Songs, \(\boldsymbol{n}\) \\
\hline 8 & 1750 \\
16 & 3500 \\
32 & 7000 \\
64 & 14,000 \\
\hline
\end{tabular}
(a) Plot the ordered pairs \((m, n)\) in a Cartesian plane.
(b) Show that number of songs \(n\) is a linear function of the memory \(m\).
(c) Determine the linear function that describes the relation between \(m\) and \(n\).
(d) What is the implied domain of the linear function?
(e) Graph the linear function in the Cartesian plane drawn in part (a).
(f) Interpret the slope.
58. Developing a Linear Model from Data The following data represent the various combinations of soda and hot dogs that Yolanda can buy at a baseball game with \(\$ 60\).
\begin{tabular}{|cc|}
\hline Soda, \(\boldsymbol{s}\) & Hot Dogs, \(\boldsymbol{h}\) \\
\hline 20 & 0 \\
15 & 3 \\
10 & 6 \\
5 & 9 \\
\hline
\end{tabular}
(a) Plot the ordered pairs \((s, h)\) in a Cartesian plane.
(b) Show that the number of hot dogs purchased \(h\) is a linear function of the number of sodas purchased \(s\).
(c) Determine the linear function that describes the relation between \(s\) and \(h\).
(d) What is the implied domain of the linear function?
(e) Graph the linear function in the Cartesian plane drawn in part (a).
(f) Interpret the slope.
(g) Interpret the values of the intercepts.

\section*{Discussion and Writing}
59. Which of the following functions might have the graph shown? (More than one answer is possible.)
(a) \(f(x)=2 x-7\)
(b) \(g(x)=-3 x+4\)
(c) \(H(x)=5\)
(d) \(F(x)=3 x+4\)
(e) \(G(x)=\frac{1}{2} x+2\)

60. Which of the following functions might have the graph shown? (More than one answer is possible.)
(a) \(f(x)=3 x+1\)
(b) \(g(x)=-2 x+3\)
(c) \(H(x)=3\)
(d) \(F(x)=-4 x-1\)
(e) \(G(x)=-\frac{2}{3} x+3\)

61. Under what circumstances is a linear function \(f(x)=m x+b\) odd? Can a linear function ever be even?
62. Explain how the graph of \(f(x)=m x+b\) can be used to solve \(m x+b>0\).

\section*{Retain Your Knowledge}

Problems 63-66 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
63. Graph the circle whose equation is \(x^{2}-4 x+y^{2}+10 y-7=0\).
64. If \(f(x)=\frac{2 x+B}{x-3}\) and \(f(5)=8\), what is the value of \(B\) ?
65. Find the average rate of change of \(f(x)=3 x^{2}-5 x\) from 1 to 3 .
66. Graph \(g(x)= \begin{cases}x^{2} & x \leq 0 \\ \sqrt{x}+1 & x>0\end{cases}\)
1.

2. \(\frac{2}{3}\)
3. 18
4. \(\{50\}\)
5. 0
6. True

\subsection*{2.2 Building Linear Models from Data}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Rectangular Coordinates (Foundations, Section 1, pp. 2-6)
- Functions (Section 1.1, pp. 43-53)

Now Work the 'Are You Prepared?' problems on page 133.
OBJECTIVES 1 Draw and Interpret Scatter Diagrams (p. 130)
2 Distinguish between Linear and Nonlinear Relations (p. 131)
3 Use a Graphing Utility to Find the Line of Best Fit (p. 132)

\section*{1 Draw and Interpret Scatter Diagrams}

In Section 2.1, we built linear models from verbal descriptions. Linear models can also be constructed by fitting a linear function to data. The first step is to plot the ordered pairs using rectangular coordinates. The resulting graph is a scatter diagram.

\section*{EXAMPLE I Drawing and Interpreting a Scatter Diagram}

In baseball, the on-base percentage for a team represents the percentage of time that the players safely reach base. The data given in Table 6 represent the number of runs scored \(y\) and the on-base percentage \(x\) for teams in the National League during the 2012 baseball season.

Table 6
\begin{tabular}{|lccc|}
\hline Team & On-base Percentage, \(\boldsymbol{x}\) & Runs Scored, \(\boldsymbol{y}\) & \((\boldsymbol{x}, \boldsymbol{y})\) \\
Arizona & 32.8 & 734 & \((32.8,734)\) \\
Atlanta & 32.0 & 700 & \((32.0,700)\) \\
Chicago Cubs & 30.2 & 613 & \((30.2,613)\) \\
Cincinnati & 31.5 & 669 & \((31.5,669)\) \\
Colorado & 33.0 & 758 & \((33.0,758)\) \\
Houston & 30.2 & 583 & \((30.2,583)\) \\
LA Dodgers & 31.7 & 637 & \((31.7,637)\) \\
Miami & 30.8 & 609 & \((30.8,609)\) \\
Milwaukee & 32.5 & 776 & \((32.5,776)\) \\
NY Mets & 31.6 & 650 & \((31.6,650)\) \\
Philadelphia & 31.7 & 684 & \((31.7,684)\) \\
Pittsburgh & 30.4 & 651 & \((30.4,651)\) \\
San Diego & 31.9 & 651 & \((31.9,651)\) \\
San Francisco & 32.7 & 718 & \((32.7,718)\) \\
\hline St. Louis & 33.8 & 765 & \((33.8,765)\) \\
Washington & 32.2 & 731 & \((32.2,731)\) \\
\hline
\end{tabular}

Source: espn.com
(a) Draw a scatter diagram of the data, treating on-base percentage as the independent variable.
(b) Use a graphing utility to draw a scatter diagram.
(c) Describe what happens to runs scored as the on-base percentage increases.

Solution (a) To draw a scatter diagram, plot the ordered pairs listed in Table 6, with the on-base percentage as the \(x\)-coordinate and the runs scored as the \(y\)-coordinate. See Figure 7(a). Notice that the points in the scatter diagram are not connected.
(b) Figure 7(b) shows a scatter diagram using a TI-84 Plus graphing calculator.
(c) The scatter diagrams show that as the on-base percentage increases, the trend is that the number of runs scored also increases.
Figure 7
Runs Scored versus On-Base Percentage

(a)

(b)
menow Work problem 11 (a)

\section*{2 Distinguish between Linear and Nonlinear Relations}

Notice that the points in Figure 7 do not follow a perfect linear relation (as they do in Figure 3 in Section 2.1). However, the data do exhibit a linear pattern. There are numerous explanations why the data are not perfectly linear, but one easy explanation is the fact that other variables besides on-base percentage play a role in determining runs scored, such as number of home runs hit.

Scatter diagrams are used to help us see the type of relation that exists between two variables. In this text, we will discuss a variety of different relations that may exist between two variables. For now, we concentrate on distinguishing between linear and nonlinear relations. See Figure 8.

Figure 8

\section*{EXAMPLE 2 Distinguishing between Linear and Nonlinear Relations}

Determine whether the relation between the two variables in each scatter diagram in Figure 9 is linear or nonlinear.
Figure 9

(a)

(b)

(c)
Solution
(a) Linear
(b) Nonlinear
(c) Nonlinear
(d) Nonlinear

Now Work problem 5
This section considers data whose scatter diagrams imply that a linear relation exists between the two variables.

Suppose that the scatter diagram of a set of data appears to indicate a linear relationship as in Figure 8(a) or (b). We might want to model the data by finding an equation of a line that relates the two variables. One way to obtain a model for such data is to draw a line through two points on the scatter diagram and determine the equation of the line.

\section*{EXAMPLE 3 Finding a Model for Linearly Related Data}

Use the data in Table 6 from Example 1 to:
(a) Select two points and find an equation of the line containing the points.
(b) Graph the line on the scatter diagram obtained in Example 1(a).

Solution (a) Select two points, say \((31.5,669)\) and \((32.8,734)\). The slope of the line joining the points \((31.5,669)\) and \((32.8,734)\) is
\[
m=\frac{734-669}{32.8-31.5}=\frac{65}{1.3}=50
\]

The equation of the line with slope 50 and passing through \((31.5,669)\) is found using the point-slope form with \(m=50, x_{1}=31.5\), and \(y_{1}=669\).
\[
\begin{aligned}
y-y_{1} & =m\left(x-x_{1}\right) & & \text { Point-slope form of a line } \\
y-669 & =50(x-31.5) & & x_{1}=31.5, y_{1}=669, m=50 \\
y-669 & =50 x-1575 & & \\
y & =50 x-906 & & \text { The model }
\end{aligned}
\]
(b) Figure 10 shows the scatter diagram with the graph of the line found in part (a).

Figure 10

Select two other points and complete the solution. Graph the line on the scatter diagram obtained in Figure 7.
```

Now Work problems 11(b) and (c)

```

\section*{3 Use a Graphing Utility to Find the Line of Best Fit}

The model obtained in Example 3 depends on the selection of points, which will vary from person to person. So the model that we found might be different from the model you found. Although the model in Example 3 appears to fit the data well, there may be a model that "fits it better." Do you think your model fits the data better? As it turns out, there is a method for finding a model that best fits linearly related data (such a model is called the line of best fit)."
*We shall not discuss the underlying mathematics of lines of best fit in this text.

\section*{EXAMPLE 4 Finding a Model for Linearly Related Data}

Use the data in Table 6 from Example 1.
(a) Use a graphing utility to find the line of best fit that models the relation between on-base percentage and runs scored.
(b) Graph the line of best fit on the scatter diagram obtained in Example 1(b).
(c) Interpret the slope.
(d) Use the line of best fit to predict the number of runs a team will score if its on-base percentage is 34.1.

\section*{Solution}

Figure 11

Figure 12

(a) Graphing utilities contain built-in programs that find the line of best fit for a collection of points in a scatter diagram. Executing the LINear REGression program provides the results shown in Figure 11. This output shows the equation \(y=a x+b\), where \(a\) is the slope of the line and \(b\) is the \(y\)-intercept. The line of best fit that relates on-base percentage to runs scored may be expressed as the line
\[
y=51.13 x-943.38 \quad \text { The Model }
\]
(b) Figure 12 shows the graph of the line of best fit, along with the scatter diagram.
(c) The slope of the line of best fit is 51.13 , which means that for every 1 percent increase in the on-base percentage, runs scored increase 51.13, on average.
(d) Letting \(x=34.1\) in the equation of the line of best fit, we obtain \(y=51.13(34.1)-943.38 \approx 800\) runs.
am Now Work problems \(11(\mathrm{~d})\) and (e)
Does the line of best fit appear to be a good fit? In other words, does the line appear to accurately describe the relation between on-base percentage and runs scored?

And just how "good" is this line of best fit? Look again at Figure 11. The last line of output is \(r \approx 0.891\). This number, called the correlation coefficient, \(r,-1 \leq r \leq 1\), is a measure of the strength of the linear relation that exists between two variables. The closer \(|r|\) is to 1 , the more nearly perfect the linear relationship is. If \(r\) is close to 0 , there is little or no linear relationship between the variables. A negative value of \(r, r<0\), indicates that as \(x\) increases, \(y\) decreases; a positive value of \(r, r>0\), indicates that as \(x\) increases, \(y\) does also. The data given in Table 6, having a correlation coefficient of 0.891 , are indicative of a linear relationship with positive slope.

\subsection*{2.2 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. Plot the points \((1,5),(2,6),(3,9),(1,12)\) in the Cartesian plane. Is the relation \(\{(1,5),(2,6),(3,9),(1,12)\}\) a function? Why? (pp. 2 and 43-46)
2. Find an equation of the line containing the points \((1,4)\) and \((3,8)\). (p. 24)

\section*{Concepts and Vocabulary}
3. A \(\qquad\) is used to help us to see what type of relation, if any, may exist between two variables.
4. If the independent variable in a line of best fit \(y=-0.008 x+14\) is credit score, and the dependent
variable is the interest rate on a used-car loan, then the slope is interpreted as follows: "If credit score increases by 1 point, the interest rate will percent, on average." (increase/decrease) by \(\qquad\)
\(\qquad\) -五

\section*{Skill Building}

In Problems 5-10, examine the scatter diagram and determine whether the type of relation is linear or nonlinear. If it is linear, determine if the slope is positive or negative.
5.

6.

7.

8.

9.

10.

In Problems 11-16:
(a) Draw a scatter diagram.
(b) Select two points from the scatter diagram, and find the equation of the line containing the points selected.
(c) Graph the line found in part (b) on the scatter diagram.
(d) Use a graphing utility to find the line of best fit.
(e) Use a graphing utility to draw the scatter diagram and graph the line of best fit on it.
11.

\section*{Retain Your Knowledge}

Problems 28-31 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
28. Find an equation for the line containing the points \((-1,5)\) and \((3,-3)\). Express your answer using either the general form or the slope-intercept form of the equation of a line, whichever you prefer.
29. Find the domain of \(f(x)=\frac{x+1}{x^{2}-25}\).
30. For \(f(x)=5 x-8\) and \(g(x)=x^{2}-3 x+4\), find \((g-f)(x)\).
31. Write the function whose graph is the graph of \(y=x^{2}\), but shifted to the left 3 units and shifted down 4 units.

\section*{'Are You Prepared?' Answers}

\subsection*{2.3 Quadratic Functions and Their Zeros}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Zero-Product Property (Appendix A, Section A.1, p. A4)
- Factoring Polynomials (Appendix A, Section A.4, pp. A32-A38)
- Square Roots (Appendix A, Section A.7,pp. A55-A56)
- Completing the Square (Appendix A, Section A.4, p. A39)
- The Graph of a Function (Section 1.2, pp. 56-59)
- Zeros of a Function (Section 1.2, pp. 59-60)

Now work the ‘Are You Prepared?’ problems on page 145.
OBJECTIVES 1 Find the Zeros of a Quadratic Function by Factoring (p.138)
2 Find the Zeros of a Quadratic Function Using the Square Root Method (p. 138)
3 Find the Zeros of a Quadratic Function by Completing the Square ( \(p\). 140)
4 Find the Zeros of a Quadratic Function Using the Quadratic Formula (p. 141)
5 Find the Point of Intersection of Two Functions (p. 143)
6 Solve Equations That Are Quadratic in Form (p. 144)

A quadratic function is a function of the form
\[
f(x)=a x^{2}+b x+c
\]
where \(a, b\), and \(c\) are real numbers and \(a \neq 0\). The domain of a quadratic function consists of all real numbers.

In other words, a quadratic function is a function defined by a second-degree polynomial in one variable.

Some examples of quadratic functions are
\[
F(x)=3 x^{2}-5 x+1 \quad g(x)=-6 x^{2}+1 \quad H(x)=\frac{1}{2} x^{2}+\frac{2}{3} x
\]

Recall that solving the equation \(f(x)=0\) is equivalent to finding the zeros of \(f\) and is also equivalent to finding the \(x\)-intercepts of the graph of \(y=f(x)\). So, finding the zeros, or \(x\)-intercepts of the graph, of a quadratic function \(f(x)=a x^{2}+b x+c\) requires solving the equation \(a x^{2}+b x+c=0\). These types of equations are called quadratic equations.

A quadratic equation is an equation equivalent to one of the form
\[
a x^{2}+b x+c=0
\]
where \(a, b\), and \(c\) are real numbers and \(a \neq 0\).

Examples of quadratic equations are
\[
3 x^{2}-5 x+1=0 \quad-6 x^{2}+1=0 \quad \frac{1}{2} x^{2}+\frac{2}{3} x=0
\]

A quadratic equation written in the form \(a x^{2}+b x+c=0\) is in standard form.
Sometimes a quadratic equation is called a second-degree equation because, when it is in standard form, the left side is a polynomial of degree 2. Four methods of solving quadratic equations are presented: factoring, the square root method, completing the square, and the quadratic formula.

\section*{1 Find the Zeros of a Quadratic Function by Factoring}

When a quadratic equation is written in standard form, \(a x^{2}+b x+c=0\), it may be possible to factor the expression on the left side as the product of two first-degree polynomials. Then the Zero-Product Property may be used to set each factor equal to 0 , and the resulting linear equations may be solved to obtain the exact solutions of the quadratic equation.

\section*{EXAMPLE I Finding the Zeros of a Quadratic Function by Factoring}

Find the zeros of \(f(x)=6 x^{2}+13 x-5\). List any \(x\)-intercepts of the graph of \(f\).
Solution To find the zeros of a function \(f\), solve the equation \(f(x)=0\).
\[
\begin{array}{rlrlrl}
f(x) & =0 & & & \\
6 x^{2}+13 x-5 & =0 & & & & \\
(2 x+5)(3 x-1) & =0 & & & 6 x^{2}+13 x-5 \\
2 x+5 & =0 & \text { or } & 3 x-1 & =0 & \\
\text { Factoro-Product Property } \\
2 x & =-5 & \text { or } & 3 x & =1 & \\
x & =-\frac{5}{2} & \text { or } & x & =\frac{1}{3} &
\end{array}
\]

Check: \(f(x)=6 x^{2}+13 x-5\)
\[
\begin{array}{rlrl}
x=-\frac{5}{2}: f\left(-\frac{5}{2}\right) & =6\left(-\frac{5}{2}\right)^{2}+13\left(-\frac{5}{2}\right)-5 \quad x=\frac{1}{3}: f\left(\frac{1}{3}\right) & =6\left(\frac{1}{3}\right)^{2}+13\left(\frac{1}{3}\right)-5 \\
& =\frac{75}{2}-\frac{65}{2}-5 & & =\frac{2}{3}+\frac{13}{3}-5 \\
& =0 & & =0
\end{array}
\]

The zeros of \(f(x)=6 x^{2}+13 x-5\) are \(-\frac{5}{2}\) and \(\frac{1}{3}\). The \(x\)-intercepts of the graph of \(f(x)=6 x^{2}+13 x-5\) are \(-\frac{5}{2}\) and \(\frac{1}{3}\).
am Now Work problems 11 and 17
Sometimes, the quadratic expression factors into two linear equations with the same solution. When this happens, the quadratic equation is said to have a repeated solution. This solution is called a root of multiplicity 2 , or a double root.

\section*{EXAMPLE 2 Finding the Zeros of a Quadratic Function by Factoring}

Find the zeros of \(f(x)=x^{2}-6 x+9\). List any \(x\)-intercepts of the graph of \(f\).
Solution To find the zeros of a function \(f\), solve the equation \(f(x)=0\).
\[
\begin{array}{rlrl}
f(x) & =0 & & \\
x^{2}-6 x+9 & =0 & f(x)=x^{2}-6 x+9 \\
(x-3)(x-3) & =0 & & \text { Factor. } \\
x-3=0 \quad \text { or } x-3 & =0 & & \text { Zero-Product Property } \\
x=3 \quad \text { or } \quad x & =3 &
\end{array}
\]

The check is left to you. The only zero of \(f(x)=x^{2}-6 x+9\) is 3 . The only \(x\)-intercept of the graph of \(f(x)=x^{2}-6 x+9\) is 3 .
an Now Work problem 23

\section*{2 Find the Zeros of a Quadratic Function Using the Square Root Method}

To solve the quadratic equation
\[
\begin{equation*}
x^{2}=p \tag{2}
\end{equation*}
\]
where \(p\) is a nonnegative number \((p \geq 0)\), proceed as in the earlier examples:
\[
\begin{array}{rlrlrl}
x^{2}-p & =0 & & \text { Put in standard form. } \\
(x-\sqrt{p})(x+\sqrt{p}) & =0 & & \text { Factor (over the real numbers). } \\
x=\sqrt{p} & \text { or } \quad x & =-\sqrt{p} & & \text { Solve. }
\end{array}
\]

The result follows:
\[
\text { If } x^{2}=p \text { and } p \geq 0 \text {, then } x=\sqrt{p} \text { or } x=-\sqrt{p}
\]

Using statement (3) to solve a quadratic equation is called the Square Root Method. Note that if \(p>0\), the equation \(x^{2}=p\) has two solutions, \(x=\sqrt{p}\) and \(x=-\sqrt{p}\). Usually these solutions are abbreviated as \(x= \pm \sqrt{p}\), which is read as " \(x\) equals plus or minus the square root of \(p\)." For example, the two solutions of the equation
\[
x^{2}=4
\]
are
\[
x= \pm \sqrt{4}
\]
or, since \(\sqrt{4}=2\),
\[
x= \pm 2
\]

\section*{EXAMPLE 3 Finding the Zeros of a Quadratic Function Using} the Square Root Method
Find the zeros of each function.
(a) \(f(x)=x^{2}-12\)
(b) \(g(x)=(x-2)^{2}-16\)

List any \(x\)-intercepts of the graph.
Solution (a) To find the zeros of a function \(f\), solve the equation \(f(x)=0\).
\[
\begin{aligned}
f(x) & =0 & & \\
x^{2}-12 & =0 & & f(x)=x^{2}-12 \\
x^{2} & =12 & & \text { Add 12 to both sides. } \\
x & = \pm \sqrt{12} & & \text { Use the Square Root Method. } \\
x & = \pm 2 \sqrt{3} & & \sqrt{12}=\sqrt{4 \cdot 3}=\sqrt{4} \cdot \sqrt{3}=2 \sqrt{3} \\
x & =2 \sqrt{3} \text { or } x=-2 \sqrt{3} & &
\end{aligned}
\]

The zeros of \(f(x)=x^{2}-12\) are \(-2 \sqrt{3}\) and \(2 \sqrt{3}\). The \(x\)-intercepts of the graph of \(f(x)=x^{2}-12\) are \(-2 \sqrt{3}\) and \(2 \sqrt{3}\).
(b) To find the zeros of a function \(g\), solve the equation \(g(x)=0\).
\[
\begin{array}{rlrlrl}
g(x) & =0 & & \\
(x-2)^{2}-16 & =0 & & g(x)=(x-2)^{2}-16 \\
(x-2)^{2} & =16 & & & \text { Add 16 to both sides. } \\
x-2 & = \pm \sqrt{16} & & & \\
x-2 & = \pm 4 & & & \\
x-2 & =4 \quad \text { or } \quad x-2 & =-4 & & \\
x & =6 \quad \text { or } \quad & x & =-2 & &
\end{array}
\]

The zeros of \(g(x)=(x-2)^{2}-16\) are -2 and 6. The \(x\)-intercepts of the graph of \(g(x)=(x-2)^{2}-16\) are -2 and 6 .

\section*{3 Find the Zeros of a Quadratic Function by Completing the Square}

The next example illustrates how the procedure of completing the square can be used to find the zeros of a quadratic function.

\section*{EXAMPLE 4}

\section*{Finding the Zeros of a Quadratic Function} by Completing the Square
Find the zeros of \(f(x)=x^{2}+5 x+4\) by completing the square. List any \(x\)-intercepts of the graph of \(f\).
Solution To find the zeros of a function \(f\), solve the equation \(f(x)=0\).
\[
\begin{aligned}
f(x) & =0 \\
x^{2}+5 x+4 & =0 \quad f(x)=x^{2}+5 x+4
\end{aligned}
\]

Begin this procedure by rearranging the equation so that the constant is on the right side.
\[
\begin{aligned}
x^{2}+5 x+4 & =0 \\
x^{2}+5 x & =-4
\end{aligned}
\]

Since the coefficient of \(x^{2}\) is 1 , complete the square on the left side by adding \(\left(\frac{1}{2} \cdot 5\right)^{2}=\frac{25}{4}\). Of course, in an equation, whatever is added to the left side must also be added to the right side. Therefore, add \(\frac{25}{4}\) to both sides.
\[
\begin{array}{rlrl}
x^{2}+5 x+\frac{25}{4} & =-4+\frac{25}{4} \quad & \text { Add } \frac{25}{4} \text { to both sides. } \\
\left(x+\frac{5}{2}\right)^{2} & =\frac{9}{4} & & \text { Factor; simplify. } \\
x+\frac{5}{2} & = \pm \sqrt{\frac{9}{4}} \quad & \text { Use the Square Root Method. } \\
x+\frac{5}{2} & = \pm \frac{3}{2} & \\
x & =-\frac{5}{2} \pm \frac{3}{2} \\
x=-\frac{5}{2}+\frac{3}{2} & =-1 \quad \text { or } \quad x=-\frac{5}{2}-\frac{3}{2}=-4
\end{array}
\]

The check is left to you. The zeros of \(f(x)=x^{2}+5 x+4\) are -4 and -1 . The \(x\)-intercepts of the graph of \(f(x)=x^{2}+5 x+4\) are -4 and -1 .

The zeros of the function in Example 4 can also be obtained by factoring. Rework Example 4 using factoring.

NOTE If the coefficient of the square term is not 1, divide through by the coefficient of the square term before attempting to complete the square. For example, to find the zeros of \(f(x)=2 x^{2}-8 x-5\) by completing the square, solve \(2 x^{2}-8 x-5=0\). Start by dividing both sides of the equation by 2 and obtain
\[
x^{2}-4 x-\frac{5}{2}=0
\]

\section*{4 Find the Zeros of a Quadratic Function Using the Quadratic Formula}

The method of completing the square can be used to obtain a general formula for solving the quadratic equation
\[
a x^{2}+b x+c=0, \quad a \neq 0
\]

As in Example 4, begin by rearranging the terms as
\[
a x^{2}+b x=-c, \quad a>0
\]

Since \(a>0\), divide both sides by \(a\) to get
\[
x^{2}+\frac{b}{a} x=-\frac{c}{a}
\]

Now the coefficient of \(x^{2}\) is 1 . To complete the square on the left side, add the square of \(\frac{1}{2}\) the coefficient of \(x\); that is, add
\[
\left(\frac{1}{2} \cdot \frac{b}{a}\right)^{2}=\frac{b^{2}}{4 a^{2}}
\]
to each side. Then
\[
\begin{align*}
x^{2}+\frac{b}{a} x+\frac{b^{2}}{4 a^{2}} & =\frac{b^{2}}{4 a^{2}}-\frac{c}{a} \\
\left(x+\frac{b}{2 a}\right)^{2} & =\frac{b^{2}-4 a c}{4 a^{2}} \quad \frac{b^{2}}{4 a^{2}}-\frac{c}{a}=\frac{b^{2}}{4 a^{2}}-\frac{4 a c}{4 a^{2}}=\frac{b^{2}-4 a c}{4 a^{2}} \tag{4}
\end{align*}
\]

Provided that \(b^{2}-4 a c \geq 0\), the Square Root Method can be used to get
\[
\left.\begin{array}{rlrl}
x+\frac{b}{2 a} & = \pm \sqrt{\frac{b^{2}-4 a c}{4 a^{2}}} & & \begin{array}{l}
\text { The square root of a quotient equals } \\
\text { the quotient of the square roots. }
\end{array} \\
x+\frac{b}{2 a} & =\frac{ \pm \sqrt{b^{2}-4 a c}}{2 a} & & \text { Also, } \sqrt{4 a^{2}}=2 \text { a since } a>0
\end{array}\right) .
\]

What if \(b^{2}-4 a c\) is negative? Then equation (4) states that the left expression (a real number squared) equals the right expression (a negative number). Since this occurrence is impossible for real numbers, the quadratic equation has no real solution if \(b^{2}-4 a c<0\).*

\section*{Quadratic Formula}

Consider the quadratic equation
\[
a x^{2}+b x+c=0, \quad a \neq 0
\]

If \(b^{2}-4 a c<0\), this equation has no real solution.
If \(b^{2}-4 a c \geq 0\), the real solution(s) of this equation is (are) given by the quadratic formula:
\[
x=\frac{-b \pm \sqrt{b^{2}-4 a c}}{2 a}
\]
*If \(b^{2}-4 a c<0\), the quadratic function will have complex zeros. The complex zeros of a quadratic function will be discussed in Section 2.7.

The quantity \(b^{2}-4 a c\) is called the discriminant of the quadratic equation because its value tells whether the equation has real solutions and how many solutions to expect. The discriminant also tells how many real zeros, or \(x\)-intercepts, the quadratic function \(f(x)=a x^{2}+b x+c\) will have.

\section*{Discriminant of a Quadratic Equation}

For a quadratic equation \(a x^{2}+b x+c=0\) :
1. If \(b^{2}-4 a c>0\), there are two unequal real solutions. Therefore, the graph of \(f(x)=a x^{2}+b x+c\) will have two distinct \(x\)-intercepts.
2. If \(b^{2}-4 a c=0\), there is a repeated real solution, a root of multiplicity 2 . Therefore, the graph of \(f(x)=a x^{2}+b x+c\) will have one \(x\)-intercept, at which the graph touches the \(x\)-axis.
3. If \(b^{2}-4 a c<0\), there is no real solution. Therefore, the graph of \(f(x)=a x^{2}+b x+c\) will have no \(x\)-intercept.

To find the number and nature of the zeros of a quadratic function, evaluate the discriminant first.

\section*{EXAMPLE 5 Finding the Zeros of a Quadratic Function Using} the Quadratic Formula
Find the real zeros, if any, of the function \(f(x)=3 x^{2}-5 x+1\). List any \(x\)-intercepts of the graph of \(f\).

Solution To find the real zeros, solve the equation \(f(x)=0\).
\[
\begin{aligned}
f(x) & =0 \\
3 x^{2}-5 x+1 & =0 \quad f(x)=3 x^{2}-5 x+1
\end{aligned}
\]

Compare \(3 x^{2}-5 x+1=0\) to \(a x^{2}+b x+c=0\) to find \(a, b\), and \(c\).
\[
\begin{aligned}
& 3 x^{2}-5 x+1=0 \\
& a x^{2}+b x+c=0, \quad a=3, b=-5, c=1
\end{aligned}
\]

With \(a=3, b=-5\), and \(c=1\), evaluate the discriminant \(b^{2}-4 a c\).
\[
b^{2}-4 a c=(-5)^{2}-4(3)(1)=25-12=13
\]

Since \(b^{2}-4 a c>0\), there are two unequal real solutions.
Use the quadratic formula with \(a=3, b=-5, c=1\), and \(b^{2}-4 a c=13\).
\[
x=\frac{-b \pm \sqrt{b^{2}-4 a c}}{2 a}=\frac{-(-5) \pm \sqrt{13}}{2(3)}=\frac{5 \pm \sqrt{13}}{6}
\]

The real zeros of \(f(x)=3 x^{2}-5 x+1\) are \(\frac{5-\sqrt{13}}{6}\) and \(\frac{5+\sqrt{13}}{6}\). The \(x\)-intercepts of the graph of \(f(x)=3 x^{2}-5 x+1\) are \(\frac{5-\sqrt{13}}{6}\) and \(\frac{5+\sqrt{13}}{6}\).

\section*{EXAMPLE 6}

\section*{Finding the Zeros of a Quadratic Function Using} the Quadratic Formula
Find the real zeros, if any, of the function \(f(x)=3 x^{2}-4 x+2\). List any \(x\)-intercepts of the graph.

Solution To find the real zeros, solve the equation \(f(x)=0\).
\[
\begin{array}{rl}
f(x)=0 \\
3 x^{2}-4 x+2=0 & f(x)=3 x^{2}-4 x+2 \\
a x^{2}+b x+c=0 & \text { Compare to standard form. }
\end{array}
\]

Because \(a=3, b=-4\), and \(c=2\), the discriminant is
\[
b^{2}-4 a c=(-4)^{2}-4(3)(2)=16-24=-8
\]

Since \(b^{2}-4 a c<0\), the equation has no real solution. Therefore, the function \(f(x)=3 x^{2}-4 x+2\) has no real zeros. The graph of \(f(x)=3 x^{2}-4 x+2\) has no \(x\)-intercept.
amen Now Work problems 41 and 43

\section*{SUMMARY}

Finding the Zeros, or \(\boldsymbol{x}\)-intercepts of the Graph, of a Quadratic Function
STEP 1: Given that \(f(x)=a x^{2}+b x+c\), write the equation \(a x^{2}+b x+c=0\).
Step 2: Identify \(a, b\), and \(c\).
Step 3: Evaluate the discriminant, \(b^{2}-4 a c\).
STEP 4: (a) If the discriminant is negative, the equation has no real solution, so the function has no real zeros. The graph of the function has no \(x\)-intercepts.
(b) If the discriminant is nonnegative (greater than or equal to zero), determine whether the left side can be factored. If you can easily spot factors, use the factoring method to solve the equation. Otherwise, use the quadratic formula or the method of completing the square. The solution(s) to the equation is(are) the real zero(s) of the function. The solution(s) also represent(s) the \(x\)-intercept(s) of the graph of the function.

\section*{5 Find the Point of Intersection of Two Functions}

Often, knowing where two functions are equal to each other will be of interest. For example, if \(R=R(x)\) represents the revenue for selling \(x\) units of a good, and \(C=C(x)\) represents the cost of manufacturing \(x\) units of a good, then knowing the number of goods for which revenue equals cost might be important. Finding this requires solving the equation \(R(x)=C(x)\).

If \(f\) and \(g\) are two functions, each solution to the equation \(f(x)=g(x)\) has a geometric interpretation-it represents the \(x\)-coordinate of each point where the graphs of \(y=f(x)\) and \(y=g(x)\) intersect.

\section*{EXAMPLE 7}

\section*{Solution}

\section*{Finding the Points of Intersection of the Graphs of Two Functions}

If \(f(x)=x^{2}+5 x-3\) and \(g(x)=2 x+1\), solve \(f(x)=g(x)\). At what point(s) do the graphs of the two functions intersect?
\[
\begin{aligned}
f(x) & =g(x) & & \\
x^{2}+5 x-3 & =2 x+1 & & f(x)=x^{2}+5 x-3 ; g(x)=2 x+1 \\
x^{2}+3 x-4 & =0 & & \text { Put in standard form. } \\
(x+4)(x-1) & =0 & & \text { Factor. } \\
x+4=0 \text { or } x-1 & =0 & & \text { Zero-Product Property } \\
x=-4 \text { or } \quad x & =1 & &
\end{aligned}
\]

The \(x\)-coordinates of the points of intersection are -4 and 1 . To find the \(y\)-coordinates of the points of intersection, evaluate either \(f\) or \(g\) at \(x=-4\) and \(x=1\). It is easier to evaluate \(g\).
\[
\begin{aligned}
g(x) & =2 x+1 \\
x=-4: & g(-4)
\end{aligned}=2(-4)+1 \quad x=1: \quad \begin{aligned}
g(x) & =2 x+1 \\
& =-7
\end{aligned}
\]

The graphs of the two functions intersect at the points \((-4,-7)\) and \((1,3)\).

Check: Figure 13(a) shows the graphs of \(f\) and \(g\) on a graphing utility. In Figures 13(b) and 13(c), each intersection point has been found using the INTERSECT program, verifying the points \((-4,-7)\) and \((1,3)\).

Figure 13

am Now Work problem 53

\section*{6 Solve Equations That Are Quadratic in Form}

So far, this section has been dedicated to finding zeros of a quadratic function \(f(x)=a x^{2}+b x+c\) by solving the equation \(a x^{2}+b x+c=0\). This same approach often can be used to find the zeros of a function that can be transformed into a quadratic equation with an appropriate substitution.

For example, the function \(f(x)=x^{4}+x^{2}-12\) is not a quadratic function. However, letting \(u=x^{2}\) in the equation \(x^{4}+x^{2}-12=0\) gives the quadratic equation \(u^{2}+u-12=0\), which can be solved for \(u\). Then, in turn, use \(u=x^{2}\) to find \(x\).

In general, if an appropriate substitution \(u\) transforms an equation into one of the form
\[
a u^{2}+b u+c=0, \quad a \neq 0
\]
the original equation is called an equation of the quadratic type or an equation quadratic in form.

The difficulty of solving such an equation lies in the determination that the equation is, in fact, quadratic in form. After being told an equation is quadratic in form, it is easy enough to see it, but some practice is needed to be able to recognize these equations on your own.

\section*{EXAMPLE 8}

\section*{Finding the Real Zeros of a Function}

Find the real zeros of the function \(f(x)=(x+2)^{2}+11(x+2)-12\). Find any \(x\)-intercepts of the graph of \(f\).

Solution To find the real zeros, solve the equation \(f(x)=0\).
\[
\begin{aligned}
f(x) & =0 \\
(x+2)^{2}+11(x+2)-12 & =0 \quad f(x)=(x+2)^{2}+11(x+2)-12
\end{aligned}
\]

For this equation, let \(u=x+2\). Then \(u^{2}=(x+2)^{2}\), and the original equation
\[
(x+2)^{2}+11(x+2)-12=0
\]
becomes
\[
\begin{array}{rll}
u^{2}+11 u-12 & =0 & \\
\text { Let } u=x+2 . \\
(u+12)(u-1) & =0 & \text { Factor. } \\
u=-12 & \text { or } u & =1
\end{array}
\]

To solve for \(x\), use \(u=x+2\), to obtain
\[
\begin{array}{rlrlrl}
x+2 & =-12 & \text { or } & & x+2 & =1 \\
x & =-14 & & x & =-1
\end{array}
\]

The real zeros of \(f\) are -14 and -1 . The \(x\)-intercepts of the graph of \(f\) are -14 and -1 .

\section*{EXAMPLE 9 Finding the Real Zeros of a Function}

Find the real zeros of \(g(x)=x+2 \sqrt{x}-3\). Find any \(x\)-intercepts of the graph of \(g\).
Solution To find the real zeros, solve the equation \(g(x)=0\).
\[
\begin{aligned}
g(x) & =0 \\
x+2 \sqrt{x}-3 & =0 \quad g(x)=x+2 \sqrt{x}-3
\end{aligned}
\]

For the equation \(x+2 \sqrt{x}-3=0\), let \(u=\sqrt{x}\). Then \(u^{2}=x\), and the original equation
\[
x+2 \sqrt{x}-3=0
\]
becomes
\[
\begin{array}{rlrl}
u^{2}+2 u-3 & =0 & \text { Let } u=\sqrt{x} . \\
(u+3)(u-1) & =0 & \text { Factor. } \\
u=-3 & \text { or } \quad u & =1 & \text { Solve. }
\end{array}
\]

To solve for \(x\), use \(u=\sqrt{x}\) to obtain \(\sqrt{x}=-3\) or \(\sqrt{x}=1\). The first of these, \(\sqrt{x}=-3\), has no real solution, since the square root of a real number is never negative. The second one, \(\sqrt{x}=1\), has the solution \(x=1\).

Check: \(g(x)=x+2 \sqrt{x}-3\)
\[
g(1)=1+2 \sqrt{1}-3=1+2-3=0
\]

The only real zero of the function is 1 . The only \(x\)-intercept of the graph of the function is 1 .
am Now Work problems 57 and 69

\subsection*{2.3 Assess Your Understanding}

\section*{'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.}
1. (a) Factor: \(x^{2}-5 x-6\) (pp. A34-A36)
(b) Factor: \(2 x^{2}-x-3\) (pp.A37-A38)
2. Simplify: \(\sqrt{8^{2}-4 \cdot 2 \cdot 3}\) (pp.A55-A56)
3. Solve: \((x-3)(3 x+5)=0\) (p. A4)
4. To complete the square of \(x^{2}+6 x\), \(\qquad\) (add/subtract)
\(\qquad\) . (pp.A38-A39)
5. If \(f(4)=10\), what point is on the graph of \(f\) ? (pp. 58-59)
6. Is -3 a zero of \(f(x)=x^{2}+4 x+3\) ? (pp. 59-60)

\section*{Concepts and Vocabulary}
7. When a quadratic equation has a repeated solution, it is called a(n) \(\qquad\) root or a root of \(\qquad\)
\(\qquad\) .
8. The quantity \(b^{2}-4 a c\) is called the \(\qquad\) of a quadratic equation. If it is \(\qquad\) , the equation has no real solution.
9. How many real zeros can a quadratic function have?
10. State the quadratic formula.

\section*{Skill Building}

In Problems 11-24, find the zeros of each quadratic function by factoring. What are the \(x\)-intercepts of the graph of the function?
11. \(f(x)=x^{2}-9 x\)
12. \(f(x)=x^{2}+4 x\)
13. \(g(x)=x^{2}-25\)
14. \(G(x)=x^{2}-9\)
15. \(F(x)=x^{2}+x-6\)
16. \(H(x)=x^{2}+7 x+6\)
17. \(g(x)=2 x^{2}-5 x-3\)
18. \(f(x)=3 x^{2}+5 x+2\)
19. \(P(x)=3 x^{2}-48\)
20. \(H(x)=2 x^{2}-50\)
21. \(g(x)=x(x+8)+12\)
22. \(f(x)=x(x-4)-12\)
23. \(G(x)=4 x^{2}+9-12 x\)
24. \(F(x)=25 x^{2}+16-40 x\)

In Problems 25-30, find the zeros of each quadratic function using the Square Root Method. What are the x-intercepts of the graph of the function?
25. \(f(x)=x^{2}-8\)
26. \(g(x)=x^{2}-18\)
27. \(g(x)=(x-1)^{2}-4\)
28. \(G(x)=(x+2)^{2}-1\)
29. \(F(x)=(2 x+3)^{2}-32\)
30. \(g(x)=(3 x-2)^{2}-75\)

In Problems 31-36, find the zeros of each quadratic function by completing the square. What are the \(x\)-intercepts of the graph of the function?
31. \(f(x)=x^{2}+4 x-8\)
32. \(f(x)=x^{2}-6 x-9\)
33. \(g(x)=x^{2}-\frac{1}{2} x-\frac{3}{16}\)
34. \(g(x)=x^{2}+\frac{2}{3} x-\frac{1}{3}\)
35. \(F(x)=3 x^{2}+x-\frac{1}{2}\)
36. \(G(x)=2 x^{2}-3 x-1\)

In Problems 37-50, find the real zeros, if any, of each quadratic function using the quadratic formula. What are the x-intercepts, if any, of the graph of the function?
37. \(f(x)=x^{2}-4 x+2\)
38. \(f(x)=x^{2}+4 x+2\)
39. \(g(x)=x^{2}-4 x-1\)
40. \(g(x)=x^{2}+6 x+1\)
41. \(F(x)=2 x^{2}-5 x+3\)
42. \(g(x)=2 x^{2}+5 x+3\)
43. \(P(x)=4 x^{2}-x+2\)
44. \(H(x)=4 x^{2}+x+1\)
45. \(f(x)=4 x^{2}-1+2 x\)
46. \(f(x)=2 x^{2}-1+2 x\)
47. \(G(x)=2 x(x+2)-3\)
48. \(F(x)=3 x(x+2)-1\)
49. \(P(x)=9 x^{2}-6 x+1\)
50. \(g(x)=4 x^{2}+20 x+25\)

In Problems 51-56, solve \(f(x)=g(x)\). What are the points of intersection of the graphs of the two functions?
51. \(f(x)=x^{2}+6 x+3\) \(g(x)=3\)
52. \(f(x)=x^{2}-4 x+3\)
\(g(x)=3\)
53. \(f(x)=-2 x^{2}+1\)
55. \(f(x)=x^{2}-x+1\) \(g(x)=2 x^{2}-3 x-14\)
\(g(x)=3 x+2\)
54. \(f(x)=3 x^{2}-7\) \(g(x)=10 x+1\)
56. \(f(x)=x^{2}+5 x-3\) \(g(x)=2 x^{2}+7 x-27\)

In Problems 57-74, find the real zeros of each function. What are the \(x\)-intercepts of the graph of the function?
57. \(P(x)=x^{4}-6 x^{2}-16\)
58. \(H(x)=x^{4}-3 x^{2}-4\)
59. \(f(x)=x^{4}-5 x^{2}+4\)
60. \(f(x)=x^{4}-10 x^{2}+24\)
61. \(G(x)=3 x^{4}-2 x^{2}-1\)
62. \(F(x)=2 x^{4}-5 x^{2}-12\)
63. \(g(x)=x^{6}+7 x^{3}-8\)
64. \(g(x)=x^{6}-7 x^{3}-8\)
65. \(G(x)=(x+2)^{2}+7(x+2)+12\)
66. \(f(x)=(2 x+5)^{2}-(2 x+5)-6\)
67. \(f(x)=(3 x+4)^{2}-6(3 x+4)+9\)
68. \(H(x)=(2-x)^{2}+(2-x)-20\)
69. \(P(x)=2(x+1)^{2}-5(x+1)-3\)
70. \(H(x)=3(1-x)^{2}+5(1-x)+2\)
71. \(G(x)=x-4 \sqrt{x}\)
72. \(f(x)=x+8 \sqrt{x}\)
73. \(g(x)=x+\sqrt{x}-20\)
74. \(f(x)=x+\sqrt{x}-2\)

\section*{Mixed Practice}

In Problems 75-86, find the real zeros of each quadratic function using any method you wish. What are the x-intercepts, if any, of the graph of the function?
75. \(f(x)=x^{2}-50\)
76. \(f(x)=x^{2}-20\)
77. \(g(x)=16 x^{2}-8 x+1\)
78. \(F(x)=4 x^{2}-12 x+9\)
79. \(G(x)=10 x^{2}-19 x-15\)
80. \(f(x)=6 x^{2}+7 x-20\)
81. \(P(x)=6 x^{2}-x-2\)
82. \(H(x)=6 x^{2}+x-2\)
83. \(G(x)=x^{2}+\sqrt{2} x-\frac{1}{2}\)
84. \(F(x)=\frac{1}{2} x^{2}-\sqrt{2} x-1\)
85. \(f(x)=x^{2}+x-4\)
86. \(g(x)=x^{2}+x-1\)

In Problems 87-92, (a) graph each function using transformations, (b) find the real zeros of each function, and (c) label the \(x\)-intercepts on the graph of the function.
87. \(g(x)=(x-1)^{2}-4\)
88. \(F(x)=(x+3)^{2}-9\)
89. \(f(x)=2(x+4)^{2}-8\)
90. \(h(x)=3(x-2)^{2}-12\)
91. \(H(x)=-3(x-3)^{2}+6\)
92. \(f(x)=-2(x+1)^{2}+12\)

In Problems 93-98, solve \(f(x)=g(x)\). What are the points of intersection of the graphs of the two functions?
93. \(f(x)=5 x(x-1)\)
\(g(x)=-7 x^{2}+2\)
94. \(f(x)=10 x(x+2)\)
\(g(x)=-3 x+5\)
96. \(f(x)=4\left(x^{2}+1\right)\)
\(g(x)=4 x^{2}-3 x-8\)
97. \(f(x)=\frac{3 x}{x+2}-\frac{5}{x+1}\)
\(g(x)=\frac{-5}{x^{2}+3 x+2}\)
95. \(f(x)=3\left(x^{2}-4\right)\)
\(g(x)=3 x^{2}+2 x+4\)
98. \(f(x)=\frac{2 x}{x-3}-\frac{3}{x+1}\)
\(g(x)=\frac{2 x+18}{x^{2}-2 x-3}\)
99. Suppose that \(f(x)=x^{2}+5 x-14\) and \(g(x)=x^{2}+3 x-4\).
(a) Find the zeros of \((f+g)(x)\).
(b) Find the zeros of \((f-g)(x)\).
(c) Find the zeros of \((f \cdot g)(x)\).
100. Suppose that \(f(x)=x^{2}-3 x-18\) and \(g(x)=x^{2}+2 x-3\).
(a) Find the zeros of \((f+g)(x)\).
(b) Find the zeros of \((f-g)(x)\)
(c) Find the zeros of \((f \cdot g)(x)\).

\section*{Applications and Extensions}
101. Dimensions of a Window The function \(A(x)=x(x+2)\) describes the area \(A\) of the opening of a rectangular window in which the length is 2 feet more than the width, \(x\). Find the dimensions of the window if the area of the opening is to be 143 square feet by solving \(A(x)=143\).
102. Dimensions of a Window The function \(A(x)=x(x+1)\) describes the area \(A\) of the opening of a rectangular window in which the length is 1 centimeter more than the width, \(x\). Find the dimensions of the window if the area of the opening is to be 306 square centimeters by solving \(A(x)=306\).
103. Constructing a Box An open box is to be constructed from a square sheet of sheet metal with dimensions \(x\) feet by \(x\) feet by removing a square of side 1 foot from each corner and turning up the edges. The volume \(V\) of the box is \(V(x)=(x-2)^{2}\). Find the dimensions of the sheet metal needed to make a box that will hold 4 cubic feet by solving the equation \(V(x)=4\).
104. Constructing a Box Rework Problem 103 if the box needs to hold 16 cubic feet.
105. Physics A ball is thrown vertically upward from the top of a building 96 feet tall with an initial velocity of 80 feet per second. The distance \(s\) (in feet) of the ball from the ground after \(t\) seconds is \(s(t)=96+80 t-16 t^{2}\).
(a) After how many seconds does the ball strike the ground?
(b) After how many seconds will the ball pass the top of the building on its way down?
106. Physics An object is propelled vertically upward with an initial velocity of 20 meters per second. The distance \(s\) (in meters) of the object from the ground after \(t\) seconds is \(s(t)=-4.9 t^{2}+20 t\).
(a) When will the object be 15 meters above the ground?
(b) When will it strike the ground?
(c) Will the object reach a height of 100 meters?
107. Consecutive Integers The sum \(S\) of the consecutive integers \(1,2,3, \ldots, n\) is given by the function \(S(n)=\frac{1}{2} n(n+1)\). Determine the number of consecutive integers, starting with 1 , that must be added to get a sum of 210 .
108. Geometry The number of diagonals \(D\) of a polygon with \(n\) sides is given by the function \(D(n)=\frac{1}{2} n(n-3)\). Determine the number of sides a polygon with 65 diagonals will have. Is there a polygon with 80 diagonals?
109. Show that the sum of the roots of a quadratic equation is \(-\frac{b}{a}\).
110. Show that the product of the roots of a quadratic equation is \(\frac{c}{a}\).
111. Find \(k\) such that the function \(f(x)=k x^{2}+x+k=0\) has a repeated real zero.
112. Find \(k\) such that the function \(f(x)=x^{2}-k x+4=0\) has a repeated real zero.
113. Show that the real zeros of the function \(f(x)=a x^{2}+b x+c\) are the negatives of the real zeros of the function \(g(x)=a x^{2}-b x+c\). Assume that \(b^{2}-4 a c \geq 0\).
114. Show that the realzeros of the function \(f(x)=a x^{2}+b x+c\) are the reciprocals of the real zeros of the function \(g(x)=c x^{2}+b x+a\). Assume that \(b^{2}-4 a c \geq 0\).

\section*{Discussion and Writing}
115. Which of the following pairs of equations are equivalent? Explain.
(a) \(x^{2}=9 ; \quad x=3\)
(b) \(x=\sqrt{9} ; \quad x=3\)
(c) \((x-1)(x-2)=(x-1)^{2} ; x-2=x-1\)
116. Describe four methods you might use to find the zeros of a quadratic function. State your preferred method. Explain why you chose it.
117. Explain the benefits of evaluating the discriminant of a quadratic equation before attempting to solve it.
118. Create three quadratic functions, one having two distinct zeros, one having no real zeros, and one having exactly one real zero.
119. The word quadratic seems to imply four (quad), yet a quadratic equation is an equation that involves a polynomial of degree 2. Investigate the origin of the term quadratic as it is used in the expression quadratic equation. Write a brief essay on your findings.
120. How many times can the graphs of two different quadratic functions intersect?

\section*{-Retain Your Knowledge}

Problems 121-124 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
121. Use transformations to graph \(f(x)=-|x|+4\).
122. State the domain and range of the relation that follows, and then determine whether the relation represents a function.
\[
\{(-3,2),(-1,4),(1,4),(3,2)\}
\]
123. Find the midpoint of the line segment joining the points \(P_{1}=(-10,4)\) and \(P_{2}=(2,-1)\).
124. If a graph is symmetric with respect to the \(y\)-axis, and if the point \((-1,4)\) is on the graph of \(f\), then the point \(\qquad\) is also on the graph.

\section*{‘Are You Prepared?’ Answers}
1. (a) \((x-6)(x+1)\)
(b) \((2 x-3)(x+1)\)
2. \(2 \sqrt{10}\)
3. \(\left\{-\frac{5}{3}, 3\right\}\)
4. add; 9
5. \((4,10)\)
6. Yes

\subsection*{2.4 Properties of Quadratic Functions}

\section*{PREPARING FOR THIS SECTION Before getting started, review the following:}
- Intercepts (Foundations, Section 2, pp. 11-12)
- Graphing Techniques: Transformations (Section 1.5, pp. 89-97)
- Completing the Square (Appendix A, Section A.4, p. A39)
- Solving Equations (Appendix A, Section A.8, pp. A63-A69)

Now Work the 'Are You Prepared?' problems on page 161.
OBJECTIVES 1 Graph a Quadratic Function Using Transformations (p. 149)
2 Identify the Vertex and Axis of Symmetry of a Quadratic Function (p. 151)
3 Graph a Quadratic Function Using Its Vertex, Axis, and Intercepts (p. 152)
4 Find a Quadratic Function Given Its Vertex and One Other Point (p. 155)
5 Find the Maximum or Minimum Value of a Quadratic Function (p.156)

\section*{In Words}

A quadratic function is a function defined by a second-degree polynomial in one variable.

Many applications require a knowledge of quadratic functions. For example, suppose that Texas Instruments collects the data shown in Table 7, which relate the number of calculators sold to the price \(p\) (in dollars) per calculator. Since the price of a product determines the quantity that will be purchased, price is treated as the independent variable. The relationship between the number \(x\) of calculators sold and the price \(p\) per calculator may be approximated by the linear equation
\[
x=21,000-150 p
\]

Table 7
\begin{tabular}{|cll|}
\hline 20 & \begin{tabular}{l} 
Price per \\
Calculator (dollars), \(\boldsymbol{p}\)
\end{tabular} & \begin{tabular}{l} 
Number of \\
Calculators, \(\boldsymbol{x}\)
\end{tabular} \\
\hline 60 & 11,100 \\
\hline 65 & 10,115 \\
& 70 & 9,652 \\
& 75 & 8,731 \\
& 80 & 8,087 \\
& 85 & 7,205 \\
& 90 & 6,439 \\
\hline
\end{tabular}

Then the revenue \(R\) derived from selling \(x\) calculators at the price \(p\) per calculator is equal to the unit selling price \(p\) times the number \(x\) of units actually sold. That is,
\[
\begin{aligned}
R & =x p \\
R(p) & =(21,000-150 p) p \\
& =-150 p^{2}+21,000 p
\end{aligned}
\]

Thus the revenue \(R\) is a quadratic function of the price \(p\). Figure 14 illustrates the graph of this revenue function, whose domain is \(0 \leq p \leq 140\), since both \(x\) and \(p\) must be nonnegative.

Figure 14

Figure 15 Path of a cannonball

A second situation in which a quadratic function appears involves the motion of a projectile. Based on Newton's second law of motion (force equals mass times acceleration, \(F=m a\) ), it can be shown that, ignoring air resistance, the path of a projectile propelled upward at an inclination to the horizontal is the graph of a quadratic function. See Figure 15 for an illustration.

\section*{1 Graph a Quadratic Function Using Transformations}

We know how to graph the square function \(f(x)=x^{2}\). Figure 16 shows the graph of three functions of the form \(f(x)=a x^{2}, a>0\), for \(a=1, a=\frac{1}{2}\), and \(a=3\). Notice that the larger the value of \(a\), the "narrower" the graph is, and the smaller the value of \(a\), the "wider" the graph is.

Figure 17 shows graphs of \(f(x)=a x^{2}\) for \(a<0\). Notice that these graphs are reflections about the \(x\)-axis of the graphs in Figure 16. Based on the results of these

Figure 16

Figure 17

Figure 18
Graphs of a quadratic function, \(f(x)=a x^{2}+b x+c, a \neq 0\)

Axis of symmetry

Vertex is lowest point
(a) Opens up \(a>0\)

Vertex is highest point

Axis of symmetry
(b) Opens down \(a<0\)
two figures, general conclusions can be drawn about the graph of \(f(x)=a x^{2}\). First, as \(|a|\) increases, the graph becomes "taller" (a vertical stretch), and as \(|a|\) gets closer to zero, the graph gets "shorter" (a vertical compression). Second, if \(a\) is positive, the graph opens "up," and if \(a\) is negative, the graph opens "down."

The graphs in Figures 16 and 17 are typical of the graphs of all quadratic functions, which are called parabolas.* Refer to Figure 18, where two parabolas are pictured. The one on the left opens up and has a lowest point; the one on the right opens down and has a highest point. The lowest or highest point of a parabola is called the vertex. The vertical line passing through the vertex in each parabola in Figure 18 is called the axis of symmetry (usually abbreviated to axis) of the parabola. Because the parabola is symmetric about its axis, the axis of symmetry of a parabola can be used to find additional points on the parabola.

The parabolas shown in Figure 18 are the graphs of a quadratic function \(f(x)=a x^{2}+b x+c, a \neq 0\). Notice that the coordinate axes are not included in the figure. Depending on the values of \(a, b\), and \(c\), the axes could be placed anywhere. The important fact is that the shape of the graph of a quadratic function will look like one of the parabolas in Figure 18.

In the following example, techniques from Section 1.5 are used to graph a quadratic function \(f(x)=a x^{2}+b x+c, a \neq 0\). The method of completing the square is used to write the function \(f\) in the form \(f(x)=a(x-h)^{2}+k\).

\section*{EXAMPLE I Graphing a Quadratic Function Using} Transformations

Graph the function \(f(x)=2 x^{2}+8 x+5\). Find the vertex and axis of symmetry.
Solution Begin by completing the square on the right side.
\[
\begin{array}{rlrl}
f(x) & =2 x^{2}+8 x+5 & & \\
& =2\left(x^{2}+4 x\right)+5 & & \text { Factor out the } 2 \text { from } 2 x^{2}+8 x . \\
& =2\left(x^{2}+4 x+4\right)+5-8 & & \text { Complete the square of } x^{2}+4 \times \text { by adding } 4 . \\
& =2(x+2)^{2}-3 & & \text { Notice that the factor of } 2 \text { requires } \\
& \text { that 8 be added and subtracted. }
\end{array}
\]

The graph of \(f\) can be obtained in three stages, as shown in Figure 19. Now compare this graph to the graph in Figure 18(a). The graph of \(f(x)=2 x^{2}+8 x+5\) is a parabola that opens up and has its vertex (lowest point) at \((-2,-3)\). Its axis of symmetry is the line \(x=-2\).

Figure 19

The method used in Example 1 can be used to graph any quadratic function \(f(x)=a x^{2}+b x+c, a \neq 0\), as follows:
\[
\begin{aligned}
f(x) & =a x^{2}+b x+c \\
& =a\left(x^{2}+\frac{b}{a} x\right)+c \quad \text { Factor out a from } a x^{2}+b x . \\
& =a\left(x^{2}+\frac{b}{a} x+\frac{b^{2}}{4 a^{2}}\right)+c-a\left(\frac{b^{2}}{4 a^{2}}\right) \quad \begin{array}{l}
\text { Complete the square by adding } \frac{b^{2}}{4 a^{2}} \\
\text { Look closely at this step! }
\end{array} \\
& =a\left(x+\frac{b}{2 a}\right)^{2}+c-\frac{b^{2}}{4 a} \quad \text { Factor; simplify. } \\
& =a\left(x+\frac{b}{2 a}\right)^{2}+\frac{4 a c-b^{2}}{4 a} c-\frac{b^{2}}{4 a}=c \cdot \frac{4 a}{4 a}-\frac{b^{2}}{4 a}=\frac{4 a c-b^{2}}{4 a} \\
& =a\left(x-\left(-\frac{b}{2 a}\right)\right)^{2}+\frac{4 a c-b^{2}}{4 a}
\end{aligned}
\]

These results lead to the following conclusion:
If \(h=-\frac{b}{2 a}\) and \(k=\frac{4 a c-b^{2}}{4 a}\), then
\[
\begin{equation*}
f(x)=a x^{2}+b x+c=a(x-h)^{2}+k \tag{1}
\end{equation*}
\]

The graph of \(f(x)=a(x-h)^{2}+k\) is the parabola \(y=a x^{2}\) shifted horizontally \(h\) units (replace \(x\) by \(x-h\) ) and vertically \(k\) units (add \(k\) ). As a result, the vertex is at \((h, k)\), and the graph opens up if \(a>0\) and down if \(a<0\). The axis of symmetry is the vertical line \(x=h\).

For example, compare equation (1) with the solution given in Example 1.
\[
\begin{aligned}
f(x) & =2(x+2)^{2}-3 \\
& =\underset{\uparrow}{2(x-(-2))^{2}+(-3)} \\
& =a(x-h)^{2}+\quad k
\end{aligned}
\]

Because \(a=2\), the graph opens up. Also, because \(h=-2\) and \(k=-3\), its vertex is at \((-2,-3)\).

\section*{2 Identify the Vertex and Axis of Symmetry of a Quadratic Function}

It is not necessary to complete the square to obtain the vertex. In almost every case, it is easier to obtain the vertex of a quadratic function \(f\) by remembering that its \(x\)-coordinate is \(h=-\frac{b}{2 a}\). The \(y\)-coordinate \(k\) can then be found by evaluating \(f\) at \(-\frac{b}{2 a}\). That is, \(k=f\left(-\frac{b}{2 a}\right)\).

These properties of quadratic functions are summarized below.

\section*{Properties of the Graph of a Quadratic Function}
\[
\begin{gather*}
\qquad f(x)=a x^{2}+b x+c \quad a \neq 0 \\
\text { Vertex }=\left(-\frac{b}{2 a}, f\left(-\frac{b}{2 a}\right)\right) \text { Axis of symmetry: the line } x=-\frac{b}{2 a} \tag{2}
\end{gather*}
\]

Parabola opens up if \(a>0\); the vertex is a minimum point.
Parabola opens down if \(a<0\); the vertex is a maximum point.

\section*{EXAMPLE 2}

\section*{Locating the Vertex without Graphing}

Without graphing, locate the vertex and axis of symmetry of the parabola defined by \(f(x)=-3 x^{2}+6 x+1\). Does it open up or down?
Solution For this quadratic function, \(a=-3, b=6\), and \(c=1\). The \(x\)-coordinate of the vertex is
\[
h=-\frac{b}{2 a}=-\frac{6}{2(-3)}=1
\]

The \(y\)-coordinate of the vertex is
\[
k=f\left(-\frac{b}{2 a}\right)=f(1)=-3(1)^{2}+6(1)+1=4
\]

The vertex is located at the point \((1,4)\). The axis of symmetry is the line \(x=1\). Because \(a=-3<0\), the parabola opens down.

\section*{3 Graph a Quadratic Function Using Its Vertex, Axis, and Intercepts}

The location of the vertex and the location of the intercepts, along with knowledge of whether the graph of the quadratic function opens up or down, usually provide enough information to graph \(f(x)=a x^{2}+b x+c, a \neq 0\).

The \(y\)-intercept is the value of \(f\) at \(x=0\); that is, the \(y\)-intercept is \(f(0)=c\).
The \(x\)-intercepts, if there are any, are found by solving the quadratic equation
\[
a x^{2}+b x+c=0
\]

This equation has two, one, or no real solutions, depending on whether the discriminant \(b^{2}-4 a c\) is positive, 0 , or negative. Depending on the value of the discriminant, the graph of \(f\) has \(x\)-intercepts, as follows:

\section*{The \(\boldsymbol{x}\)-Intercepts of a Quadratic Function}
1. If the discriminant \(b^{2}-4 a c>0\), the graph of \(f(x)=a x^{2}+b x+c\) has two distinct \(x\)-intercepts, so it crosses the \(x\)-axis in two places.
2. If the discriminant \(b^{2}-4 a c=0\), the graph of \(f(x)=a x^{2}+b x+c\) has one \(x\)-intercept, so it touches the \(x\)-axis at its vertex.
3. If the discriminant \(b^{2}-4 a c<0\), the graph of \(f(x)=a x^{2}+b x+c\) has no \(x\)-intercept, so it does not cross or touch the \(x\)-axis.

Figure 20 illustrates these possibilities for parabolas that open up.

Figure 20
\(f(x)=a x^{2}+b x+c, a>0\)
\(\begin{array}{ll}\text { (a) } b^{2}-4 a c>0 & \text { (b) } b^{2}-4 a c=0\end{array}\)

Two \(x\)-intercepts

Axis of symmetry
\(x=-\frac{b}{2 a}\)

One \(x\)-intercept

(c) \(b^{2}-4 a c<0\)

\section*{EXAMPLE 3 How to Graph a Quadratic Function Using Its Properties}

Graph \(f(x)=-3 x^{2}+6 x+1\) using its properties. Determine the domain and the range of \(f\). Determine where \(f\) is increasing and where it is decreasing.

\section*{Step-by-Step Solution}

Step 1: Determine whether the graph of fopens up or down.

In Example 2, it was determined that the graph of \(f(x)=-3 x^{2}+6 x+1\) opens down because \(a=-3<0\).

Step 2: Determine the vertex and axis of symmetry of the graph of \(f\).

In Example 2, the vertex was found to be at the point whose coordinates are \((1,4)\). The axis of symmetry is the line \(x=1\).

Step 3: Determine the intercepts of the graph of \(f\).

The \(y\)-intercept is found by letting \(x=0\). The \(y\)-intercept is \(f(0)=1\). The \(x\)-intercepts are found by solving the equation \(f(x)=0\).
\[
\begin{aligned}
f(x) & =0 \\
-3 x^{2}+6 x+1 & =0 \quad a=-3, b=6, c=1
\end{aligned}
\]

The discriminant \(b^{2}-4 a c=6^{2}-4(-3)(1)=36+12=48>0\), so the equation has two real solutions and the graph has two \(x\)-intercepts. Use the quadratic formula to find that
\[
x=\frac{-b+\sqrt{b^{2}-4 a c}}{2 a}=\frac{-6+\sqrt{48}}{2(-3)}=\frac{-6+4 \sqrt{3}}{-6} \approx-0.15
\]
and
\[
x=\frac{-b-\sqrt{b^{2}-4 a c}}{2 a}=\frac{-6-\sqrt{48}}{2(-3)}=\frac{-6-4 \sqrt{3}}{-6} \approx 2.15
\]

The \(x\)-intercepts are approximately -0.15 and 2.15.

Step 4: Use the information in Steps 1 through 3 to graph \(f\).

The graph is illustrated in Figure 21. Note how the \(y\)-intercept and the axis of symmetry, \(x=1\), are used to obtain the additional point \((2,1)\) on the graph.

Figure 21

The domain of \(f\) is the set of all real numbers. Based on the graph, the range of \(f\) is the interval \((-\infty, 4]\). The function \(f\) is increasing on the interval \((-\infty, 1)\) and decreasing on the interval \((1, \infty)\).

Graph the function in Example 3 by completing the square and using transformations. Which method do you prefer?
```

Now Work problem 31

```

If the graph of a quadratic function has only one \(x\)-intercept or no \(x\)-intercepts, it is usually necessary to plot an additional point to obtain the graph.

\section*{EXAMPLE 4}

Figure 22

\section*{Graphing a Quadratic Function Using Its Vertex, Axis, and Intercepts}
(a) Graph \(f(x)=x^{2}-6 x+9\) by determining whether the graph opens up or down and by finding its vertex, axis of symmetry, \(y\)-intercept, and \(x\)-intercepts, if any.
(b) Determine the domain and the range of \(f\).
(c) Determine where \(f\) is increasing and where it is decreasing.

\section*{Solution}
(a) STEP 1: For \(f(x)=x^{2}-6 x+9\), note that \(a=1, b=-6\), and \(c=9\). Because \(a=1>0\), the parabola opens up.
STEP 2: The \(x\)-coordinate of the vertex is
\[
h=-\frac{b}{2 a}=-\frac{-6}{2(1)}=3
\]

The \(y\)-coordinate of the vertex is
\[
k=f(3)=(3)^{2}-6(3)+9=0
\]

The vertex is at \((3,0)\). The axis of symmetry is the line \(x=3\).
Step 3: The \(y\)-intercept is \(f(0)=9\). Since the vertex \((3,0)\) lies on the \(x\)-axis, the graph touches the \(x\)-axis at the \(x\)-intercept.
Step 4: By using the axis of symmetry and the \(y\)-intercept at ( 0,9 ), we can locate the additional point \((6,9)\) on the graph. See Figure 22.
(b) The domain of \(f\) is the set of all real numbers. Based on the graph, the range of \(f\) is the interval \([0, \infty)\).
(c) The function \(f\) is decreasing on the interval \((-\infty, 3)\) and increasing on the interval \((3, \infty)\).

\section*{EXAMPLE 5}

Solution

\section*{Graphing a Quadratic Function Using Its Vertex,} Axis, and Intercepts
(a) Graph \(f(x)=2 x^{2}+x+1\) by determining whether the graph opens up or down and by finding its vertex, axis of symmetry, \(y\)-intercept, and \(x\)-intercepts, if any.
(b) Determine the domain and the range of \(f\).
(c) Determine where \(f\) is increasing and where it is decreasing.

NOTE In Example 5, the vertex is above the \(x\)-axis and the parabola opens up. Therefore, the graph of the quadratic function has no \(x\)-intercepts.

Figure 23

STEP 3: The \(y\)-intercept is \(f(0)=1\). The \(x\)-intercept(s), if any, obey the equation \(2 x^{2}+x+1=0\). The discriminant is \(b^{2}-4 a c=(1)^{2}-4(2)(1)=\) \(-7<0\). This equation has no real solution, which means the graph has no \(x\)-intercepts.
STEP 4: Use the point \((0,1)\) and the axis of symmetry \(x=-\frac{1}{4}\) to locate the additional point \(\left(-\frac{1}{2}, 1\right)\) on the graph. See Figure 23.
(b) The domain of \(f\) is the set of all real numbers. Based on the graph, the range of \(f\) is the interval \(\left[\frac{7}{8}, \infty\right)\).
(c) The function \(f\) is decreasing on the interval \(\left(-\infty,-\frac{1}{4}\right)\) and is increasing on the interval \(\left(-\frac{1}{4}, \infty\right)\).

Now Work problem 41

\section*{SUMMARY}

Steps for Graphing a Quadratic Function \(f(x)=a x^{2}+b x+c, a \neq 0\)
Option 1
STEP 1: Complete the square in \(x\) to write the quadratic function in the form \(f(x)=a(x-h)^{2}+k\).
STEP 2: Graph the function in stages using transformations.
Option 2
STEP 1: Determine whether the graph of \(f\) opens up or down.
STEP 2: Determine the vertex \(\left(-\frac{b}{2 a}, f\left(-\frac{b}{2 a}\right)\right)\) and the axis of symmetry, \(x=-\frac{b}{2 a}\).
STEP 3: Determine the \(y\)-intercept, \(f(0)\). Determine the \(x\)-intercept(s), if any.
(a) If \(b^{2}-4 a c>0\), then the graph of the quadratic function has two \(x\)-intercepts, which are found by solving the equation \(a x^{2}+b x+c=0\).
(b) If \(b^{2}-4 a c=0\), the vertex is the \(x\)-intercept.
(c) If \(b^{2}-4 a c<0\), there are no \(x\)-intercepts.

STEP 4: Determine an additional point by using the \(y\)-intercept and the axis of symmetry. Plot the points and draw the graph.

\section*{4 Find a Quadratic Function Given Its Vertex and One Other Point}

If the vertex \((h, k)\) and one additional point on the graph of a quadratic function \(f(x)=a x^{2}+b x+c, a \neq 0\), are known, then
\[
f(x)=a(x-h)^{2}+k
\]
can be used to obtain the quadratic function.

\section*{EXAMPLE 6}

\section*{Finding a Quadratic Function Given Its Vertex} and One Other Point

Determine the quadratic function whose vertex is \((1,-5)\) and whose \(y\)-intercept is -3 . The graph of the parabola is shown in Figure 24 on the following page.

Solution The vertex is \((1,-5)\), so \(h=1\) and \(k=-5\). Substitute these values into equation (3).

Figure 24

\[
\begin{array}{ll}
f(x)=a(x-h)^{2}+k & \text { Equation (3) } \\
f(x)=a(x-1)^{2}-5 & h=1, k=-5
\end{array}
\]

To determine the value of \(a\), use the fact that \(f(0)=-3\) (the \(y\)-intercept).
\[
\begin{aligned}
f(x) & =a(x-1)^{2}-5 \\
-3 & =a(0-1)^{2}-5 \quad x=0, y=f(0)=-3 \\
-3 & =a-5 \\
a & =2
\end{aligned}
\]

The quadratic function whose graph is shown in Figure 24 is
\[
\begin{aligned}
f(x)=a(x-h)^{2}+k & =2(x-1)^{2}-5 \\
& =2 x^{2}-4 x-3
\end{aligned}
\]
am Now Work problem 45

\section*{5 Find the Maximum or Minimum Value of a Quadratic Function}

The graph of a quadratic function
\[
f(x)=a x^{2}+b x+c, \quad a \neq 0
\]
is a parabola with vertex at \(\left(-\frac{b}{2 a}, f\left(-\frac{b}{2 a}\right)\right)\). This vertex is the highest point on the graph if \(a<0\) and the lowest point on the graph if \(a>0\). If the vertex is the highest point \((a<0)\), then \(f\left(-\frac{b}{2 a}\right)\) is the maximum value of \(f\). If the vertex is the lowest point \((a>0)\), then \(f\left(-\frac{b}{2 a}\right)\) is the minimum value of \(f\).

\section*{EXAMPLE 7}

Finding the Maximum or Minimum Value
of a Quadratic Function
Determine whether the quadratic function
\[
f(x)=x^{2}-4 x-5
\]
has a maximum or a minimum value. Then find the maximum or minimum value.
Solution Comparing \(f(x)=x^{2}-4 x-5\) to \(f(x)=a x^{2}+b x+c\), note that \(a=1, b=-4\), and \(c=-5\). Because \(a>0\), the graph of \(f\) opens up, which means the vertex is a minimum point. The minimum value occurs at
\[
\begin{gathered}
x=-\frac{b}{2 a}=-\frac{-4}{2(1)}=\frac{4}{2}=2 \\
a=1, b=-4
\end{gathered}
\]

The minimum value is
\[
f\left(-\frac{b}{2 a}\right)=f(2)=2^{2}-4(2)-5=4-8-5=-9
\]

\subsection*{2.4 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. List the intercepts of the graph of \(y=x^{2}-9\). (p.12)
2. Find the real solutions of the equation \(2 x^{2}+7 x-4=0\). (pp. A67-A68)
3. To complete the square of \(x^{2}-5 x\), you add the number —. (p.A38-A39)
4. To graph \(y=(x-4)^{2}\), you shift the graph of \(y=x^{2}\) to the
\(\qquad\) a distance of \(\qquad\) units. (pp. 89-92)

\section*{Concepts and Vocabulary}
5. The graph of a quadratic function is called \(a(n)\) \(\qquad\)
6. The vertical line passing through the vertex of a parabola is called the \(\qquad\)
7. The \(x\)-coordinate of the vertex of \(f(x)=a x^{2}+b x+c\), \(a \neq 0\), is \(\qquad\)
8. True or False The graph of \(f(x)=2 x^{2}+3 x-4\) opens up.
9. True or False The \(y\)-coordinate of the vertex of \(f(x)=-x^{2}+4 x+5\) is \(f(2)\).
10. True or False If the discriminant \(b^{2}-4 a c=0\), the graph of \(f(x)=a x^{2}+b x+c, a \neq 0\), will touch the \(x\)-axis at its vertex.

\section*{Skill Building}

In Problems 11-18, match graphs \(A-H\) to one of the following functions.
11. \(f(x)=x^{2}-1\)
12. \(f(x)=-x^{2}-1\)
13. \(f(x)=x^{2}-2 x+1\)
14. \(f(x)=x^{2}+2 x+1\)
15. \(f(x)=x^{2}-2 x+2\)
16. \(f(x)=x^{2}+2 x\)
17. \(f(x)=(x-1)^{2}-1\)
18. \(f(x)=(x+1)^{2}+1\)
A.

B.

C.

D.

E.

F.

G.

H.

In Problems 19-30, graph the function f by starting with the graph of \(y=x^{2}\) and using transformations (shifting, compressing, stretching, and/or reflection).
[Hint: If necessary, write \(f\) in the form \(f(x)=a(x-h)^{2}+k\).]
19. \(f(x)=\frac{1}{4} x^{2}-2\)
20. \(f(x)=2 x^{2}+4\)
21. \(f(x)=(x+2)^{2}-2\)
22. \(f(x)=(x-3)^{2}-10\)
23. \(f(x)=2(x-1)^{2}-1\)
24. \(f(x)=3(x+1)^{2}-3\)
25. \(f(x)=x^{2}+4 x+2\)
26. \(f(x)=x^{2}-6 x-1\)
27. \(f(x)=-x^{2}-2 x\)
28. \(f(x)=-2 x^{2}+6 x+2\)
29. \(f(x)=2 x^{2}+4 x-2\)
30. \(f(x)=3 x^{2}+12 x+5\)

In Problems 31-44, (a) graph each quadratic function by determining whether its graph opens up or down and by finding its vertex, axis of symmetry, y-intercept, and x-intercepts, if any. (b) Determine the domain and the range of the function. (c) Determine where the function is increasing and where it is decreasing.
31. \(f(x)=x^{2}+2 x\)
32. \(f(x)=x^{2}-4 x\)
33. \(f(x)=-x^{2}-6 x\)
34. \(f(x)=-x^{2}+4 x\)
35. \(f(x)=x^{2}+2 x-8\)
36. \(f(x)=x^{2}-2 x-3\)
37. \(f(x)=x^{2}+2 x+1\)
38. \(f(x)=x^{2}+6 x+9\)
39. \(f(x)=2 x^{2}-x+2\)
40. \(f(x)=4 x^{2}-2 x+1\)
41. \(f(x)=-2 x^{2}+2 x-3\)
42. \(f(x)=-3 x^{2}+3 x-2\)
43. \(f(x)=-4 x^{2}-6 x+2\)
44. \(f(x)=3 x^{2}-8 x+2\)

In Problems 45-50, determine the quadratic function whose graph is given.
45.

46.

47.

48.

49.

50.

In Problems 51-58, determine, without graphing, whether the given quadratic function has a maximum value or a minimum value, and then find the value.
51. \(f(x)=2 x^{2}+12 x\)
52. \(f(x)=-2 x^{2}+12 x\)
53. \(f(x)=2 x^{2}+12 x-3\)
54. \(f(x)=4 x^{2}-8 x+3\)
55. \(f(x)=-x^{2}+10 x-4\)
56. \(f(x)=-2 x^{2}+8 x+3\)
57. \(f(x)=-3 x^{2}+12 x+1\)
58. \(f(x)=4 x^{2}-4 x\)

\section*{Mixed Practice}

In Problems 59-70, (a) graph each function. (b) Determine the domain and the range of the function. (c) Determine where the function is increasing and where it is decreasing.
59. \(f(x)=x^{2}-2 x-15\)
60. \(g(x)=x^{2}-2 x-8\)
61. \(F(x)=2 x-5\)
62. \(f(x)=\frac{3}{2} x-2\)
63. \(g(x)=-2(x-3)^{2}+2\)
64. \(h(x)=-3(x+1)^{2}+4\)
65. \(f(x)=2 x^{2}+x+1\)
66. \(G(x)=3 x^{2}+2 x+5\)
67. \(h(x)=-\frac{2}{5} x+4\)
68. \(f(x)=-3 x+2\)
69. \(H(x)=-4 x^{2}-4 x-1\)
70. \(F(x)=-4 x^{2}+20 x-25\)

\section*{Applications and Extensions}
71. The graph of the function \(f(x)=a x^{2}+b x+c\) has vertex at \((0,2)\) and passes through the point \((1,8)\). Find \(a, b\), and \(c\).
72. The graph of the function \(f(x)=a x^{2}+b x+c\) has vertex at \((1,4)\) and passes through the point \((-1,-8)\). Find \(a, b\), and \(c\).

In Problems 73-78, for the given functions \(f\) and \(g\) :
(a) Graph fand \(g\) on the same Cartesian plane. (b) Solve \(f(x)=g(x)\). (c) Use the result of part (b) to label the points of intersection of the graphs of \(f\) and \(g\). (d) Shade the region between the points of intersection.
73. \(f(x)=2 x-1 ; \quad g(x)=x^{2}-4\)
74. \(f(x)=-2 x-1 ; \quad g(x)=x^{2}-9\)
75. \(f(x)=-x^{2}+4 ; \quad g(x)=-2 x+1\)
76. \(f(x)=-x^{2}+9 ; \quad g(x)=2 x+1\)
77. \(f(x)=-x^{2}+5 x ; \quad g(x)=x^{2}+3 x-4\)
78. \(f(x)=-x^{2}+7 x-6 ; \quad g(x)=x^{2}+x-6\)

Answer Problems 79 and 80 using the following: A quadratic function of the form \(f(x)=a x^{2}+b x+c\) with \(b^{2}-4 a c>0\) may also be written in the form \(f(x)=a\left(x-r_{1}\right)\left(x-r_{2}\right)\), where \(r_{1}\) and \(r_{2}\) are the \(x\)-intercepts of the graph of the quadratic function.
79. (a) Find a quadratic function whose \(x\)-intercepts are -3 and 1 with \(a=1 ; a=2 ; a=-2 ; a=5\).
(b) How does the value of \(a\) affect the intercepts?
(c) How does the value of \(a\) affect the axis of symmetry?
(d) How does the value of \(a\) affect the vertex?
(e) Compare the \(x\)-coordinate of the vertex with the midpoint of the \(x\)-intercepts. What might you conclude?
80. (a) Find a quadratic function whose \(x\)-intercepts are -5 and 3 with \(a=1 ; a=2 ; a=-2 ; a=5\).
(b) How does the value of \(a\) affect the intercepts?
(c) How does the value of \(a\) affect the axis of symmetry?
(d) How does the value of \(a\) affect the vertex?
(e) Compare the \(x\)-coordinate of the vertex with the midpoint of the \(x\)-intercepts. What might you conclude?
81. Suppose that \(f(x)=x^{2}+4 x-21\).
(a) What is the vertex of \(f\) ?
(b) What are the \(x\)-intercepts of the graph of \(f\) ?
(c) Solve \(f(x)=-21\) for \(x\). What points are on the graph of \(f\) ?
(d) Use the information obtained in parts (a)-(c) to graph \(f(x)=x^{2}+4 x-21\).
82. Suppose that \(f(x)=x^{2}+2 x-8\).
(a) What is the vertex of \(f\) ?
(b) What are the \(x\)-intercepts of the graph of \(f\) ?
(c) Solve \(f(x)=-8\) for \(x\). What points are on the graph of \(f\) ?
(d) Use the information obtained in parts (a)-(c) to graph \(f(x)=x^{2}+2 x-8\).
83. Maximizing Revenue Suppose that the manufacturer of a gas clothes dryer has found that when the unit price is \(p\) dollars, the revenue \(R\) (in dollars) is
\[
R(p)=-4 p^{2}+4000 p
\]

What unit price should be established for the dryer to maximize revenue? What is the maximum revenue?
84. Maximizing Revenue The John Deere company has found that the revenue, in dollars, from sales of heavy-duty tractors is a function of the unit price \(p\), in dollars, that it charges. If the revenue \(R\) is
\[
R(p)=-\frac{1}{2} p^{2}+1900 p
\]
what unit price \(p\) should be charged to maximize revenue? What is the maximum revenue?
85. Minimizing Marginal Cost The marginal cost of a product can be thought of as the cost of producing one additional unit of output. For example, if the marginal cost of producing the 50 th product is \(\$ 6.20\), it cost \(\$ 6.20\) to increase production from 49 to 50 units of output. Suppose the marginal cost \(C\) (in dollars) to produce \(x\) thousand digital music players is given by the function
\[
C(x)=x^{2}-140 x+7400
\]
(a) How many players should be produced to minimize the marginal cost?
(b) What is the minimum marginal cost?
86. Minimizing Marginal Cost (See Problem 85.) The marginal cost \(C\) (in dollars) of manufacturing \(x\) cell phones (in thousands) is given by
\[
C(x)=5 x^{2}-200 x+4000
\]
(a) How many cell phones should be manufactured to minimize the marginal cost?
(b) What is the minimum marginal cost?
87. Stopping Distance An accepted relationship between stopping distance, \(d\) (in feet), and the speed of a car, \(v\) (in mph ), is \(d=1.1 v+0.06 v^{2}\) on dry, level concrete.
(a) How many feet will it take a car traveling 45 mph to stop on dry, level concrete?
(b) If an accident occurs 200 feet ahead of you, what is the maximum speed you can be traveling to avoid being involved?
(c) What might the term \(1.1 v\) represent?

Source: www2.nsta.org/Energy/fn_braking.html
88. Birthrate for Unmarried Women In the United States, the birthrate \(B\) for unmarried women (births per 1000 unmarried women) whose age is \(a\) is modeled by the function \(B(a)=-0.31 x^{2}+16.54 x-151.04\).
(a) What is the age of unmarried women with the highest birthrate?
(b) What is the highest birthrate of unmarried women?
(c) Evaluate and interpret \(B(40)\).

Source: United States Statistical Abstract, 2012
89. Business The monthly revenue \(R\) achieved by selling \(x\) wristwatches is modeled by \(R(x)=75 x-0.2 x^{2}\). The monthly cost \(C\) of selling \(x\) wristwatches is \(C(x)=32 x+1750\).
(a) How many wristwatches must the firm sell to maximize revenue? What is the maximum revenue?
(b) Profit is given as \(P(x)=R(x)-C(x)\). What is the profit function?
(c) How many wristwatches must the firm sell to maximize profit? What is the maximum profit?
(d) Provide a reasonable explanation why the answers found in parts (a) and (c) differ. Explain why a quadratic function is a reasonable model for revenue.
90. Business The daily revenue \(R\) achieved by selling \(x\) boxes of candy is modeled by \(R(x)=9.5 x-0.04 x^{2}\). The daily cost \(C\) of selling \(x\) boxes of candy is \(C(x)=1.25 x+250\).
(a) How many boxes of candy must the firm sell to maximize revenue? What is the maximum revenue?
(b) Profit is given as \(P(x)=R(x)-C(x)\). What is the profit function?
(c) How many boxes of candy must the firm sell to maximize profit? What is the maximum profit?
(d) Provide a reasonable explanation why the answers found in parts (a) and (c) differ. Explain why a quadratic function is a reasonable model for revenue.
91. See Problems 79 and 80 . Find a quadratic function whose \(x\)-intercepts are -4 and 2 and whose range is \([-18, \infty)\).
92. See Problems 79 and 80 . Find a quadratic function whose \(x\)-intercepts are -1 and 5 and whose range is \((-\infty, 9]\).
93. Let \(f(x)=a x^{2}+b x+c\), where \(a, b\), and \(c\) are odd integers. If \(x\) is an integer, show that \(f(x)\) must be an odd integer.
[Hint: \(x\) is either an even integer or an odd integer.]

\section*{Discussion and Writing}
94. Make up a quadratic function that opens down and has only one \(x\)-intercept. Compare yours with others in the class. What are the similarities? What are the differences?
95. On one set of coordinate axes, graph the family of parabolas \(f(x)=x^{2}+2 x+c\) for \(c=-3, c=0\), and \(c=1\). Describe the characteristics of a member of this family.
96. On one set of coordinate axes, graph the family of parabolas \(f(x)=x^{2}+b x+1\) for \(b=-4, b=0\), and \(b=4\). Describe the general characteristics of this family.
97. State the circumstances that cause the graph of a quadratic function \(f(x)=a x^{2}+b x+c\) to have no \(x\)-intercepts.
98. Why does the graph of a quadratic function open up if \(a>0\) and down if \(a<0\) ?
99. Can a quadratic function have a range of \((-\infty, \infty)\) ? Justify your answer.
100. What are the possibilities for the number of times the graphs of two different quadratic functions intersect? Justify your answer.

\section*{Retain Your Knowledge}

Problems 101-104 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
101. Determine whether \(x^{2}+4 y^{2}=16\) is symmetric respect to the \(x\)-axis, the \(y\)-axis, and/or the origin.
102. Solve the inequality \(27-x \geq 5 x+3\). Write the solution in both set notation and interval notation.
103. Find the center and radius of the circle \(x^{2}+y^{2}-10 x+4 y+20=0\).
104. Find the real zeros, if any, of the function \(f(x)=x^{2}-6 x+4\). What are the \(x\)-intercepts, if any, of the graph of \(f\) ?
‘Are You Prepared?' Answers
1. \((0,-9),(-3,0),(3,0)\)
2. \(\left\{-4, \frac{1}{2}\right\}\)
3. \(\frac{25}{4}\)
4. right; 4

\subsection*{2.5 Inequalities Involving Quadratic Functions}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Solve Inequalities (Appendix A, Section A.10, pp. A84-A86)
- Use Interval Notation (Appendix A, Section A.10, pp. A81-A82)

Now Work the 'Are You Prepared?' problems on page 162.
OBJECTIVE 1 Solve Inequalities Involving a Quadratic Function (p. 160)

\section*{1 Solve Inequalities Involving a Quadratic Function}

In this section we solve inequalities that involve quadratic functions. We will accomplish this by using their graphs. For example, the inequality
\[
a x^{2}+b x+c>0, \quad a \neq 0
\]
will be solved by graphing the function \(f(x)=a x^{2}+b x+c\) and finding where the graph is above the \(x\)-axis- that is, where \(f(x)>0\). The inequality \(a x^{2}+b x+c<0\), \(a \neq 0\), will be solved by graphing the function \(f(x)=a x^{2}+b x+c\) and finding where the graph is below the \(x\)-axis. If the inequality is not strict, then the \(x\)-intercepts are included in the solution.

Let's look at an example.

\section*{EXAMPLE I}

\section*{Solution}

Figure 25

Figure 26
Figure 25

\section*{Solving an Inequality}

Solve the inequality \(x^{2}-4 x-12 \leq 0\) and graph the solution set.
Graph the function \(f(x)=x^{2}-4 x-12\) and find where the graph is below the \(x\)-axis
\(y\)-intercept:
\(f(0)=-12\) Evaluate fat 0 .
\(x\)-intercepts (if any): \(\quad x^{2}-4 x-12=0 \quad\) Solve \(f(x)=0\).
\[
\begin{array}{rlrlrl}
(x-6)(x+2) & =0 & & \text { Factor. } \\
x-6=0 & \text { or } & x+2 & =0 & & \text { Apply the Zero-Product Property. } \\
x=6 & \text { or } \quad x & =-2 & &
\end{array}
\]

The \(y\)-intercept is -12 ; the \(x\)-intercepts are -2 and 6 .
The vertex is at \(x=-\frac{b}{2 a}=-\frac{-4}{2(1)}=2\). Because \(f(2)=-16\), the vertex is \((2,-16)\). See Figure 25 for the graph.

The graph is below the \(x\)-axis for \(-2<x<6\). Because the original inequality is not strict, the \(x\)-intercepts are included. The solution set is \(\{x \mid-2 \leq x \leq 6\}\) or, using interval notation, \([-2,6]\).

See Figure 26 for the graph of the solution set.
- Now Work problem 9

\section*{EXAMPLE 2}

\section*{Solution}

Figure 27

\section*{Solving an Inequality}

Solve the inequality \(2 x^{2}<x+10\) and graph the solution set.
Option 1 Rearrange the inequality so that 0 is on the right side.
\[
\begin{aligned}
2 x^{2} & <x+10 \\
2 x^{2}-x-10 & <0 \quad \text { Subtract } x+10 \text { from both sides. }
\end{aligned}
\]

This inequality is equivalent to the original inequality.
Next graph the function \(f(x)=2 x^{2}-x-10\), and determine where the graph is below the \(x\)-axis.
\[
\begin{array}{rlrlrl}
y \text {-intercept: } & f(0) & =-10 & & \text { Evaluate fat } 0 . \\
x \text {-intercepts (if any): } & & 2 x^{2}-x-10 & =0 & & \text { Solve } f(x)=0 . \\
(2 x-5)(x+2) & =0 & & \text { Factor. } \\
2 x-5=0 & \text { or } x+2 & =0 & & \text { Apply the Zero-Product Property. } \\
x=\frac{5}{2} & \text { or } \quad x & =-2 & &
\end{array}
\]

The \(y\)-intercept is -10 ; the \(x\)-intercepts are -2 and \(\frac{5}{2}\).
The vertex is at \(x=-\frac{b}{2 a}=-\frac{-1}{2(2)}=\frac{1}{4}\). Since \(f\left(\frac{1}{4}\right)=-10.125\), the vertex is \(\left(\frac{1}{4},-10.125\right)\). See Figure 27 for the graph.

The graph is below the \(x\)-axis between \(x=-2\) and \(x=\frac{5}{2}\). Because the inequality is strict, the solution set is \(\left\{x \left\lvert\,-2<x<\frac{5}{2}\right.\right\}\) or, using interval notation, \(\left(-2, \frac{5}{2}\right)\).

Figure 28

Figure 29

Option 2 If \(f(x)=2 x^{2}\) and \(g(x)=x+10\), then the inequality to be solved is \(f(x)<g(x)\). Graph the functions \(f(x)=2 x^{2}\) and \(g(x)=x+10\), and find where the graph of \(f\) is below the graph of \(g\). See Figure 28. The graphs intersect where \(f(x)=g(x)\). Then
\[
\begin{array}{rlrlrl}
2 x^{2} & =x+10 & & f(x)=g(x) \\
2 x^{2}-x-10 & =0 & & \\
(2 x-5)(x+2) & =0 & & & \text { Factor. } \\
2 x-5 & =0 & \text { or } & x+2=0 & & \text { Apply the Zero-Product Property. } \\
x & =\frac{5}{2} & \text { or } & x=-2
\end{array}
\]

The graphs intersect at the points \((-2,8)\) and \(\left(\frac{5}{2}, \frac{25}{2}\right)\). The graph of \(f\) is below that of \(g\) between these points of intersection. Since the inequality is strict, the solution set is \(\left\{x \left\lvert\,-2<x<\frac{5}{2}\right.\right\}\) or, using interval notation, \(\left(-2, \frac{5}{2}\right)\).

See Figure 29 for the graph of the solution set.
Now Work problems 5 and 11
Some quadratic inequalities have no solution or all real numbers as solutions.

\section*{EXAMPLE 3 Solving an Inequality}

Solve the inequality \(3 x^{2}+12 x+14>0\).
Figure 30

Solution Graph of function \(f(x)=3 x^{2}+12 x+14\), and find where the graph is above the \(x\)-axis. For this function, \(a=3, b=12\), and \(c=14\). Because \(a=3>0\), the parabola opens up.
The \(x\)-coordinate of the vertex is
\[
h=-\frac{b}{2 a}=-\frac{12}{2(3)}=-2
\]

The \(y\)-coordinate of the vertex is
\[
k=f\left(-\frac{b}{2 a}\right)=f(-2)=3(-2)^{2}+12(-2)+14=2
\]

The vertex is located at the point \((-2,2)\).
Note that the vertex is located above the \(x\)-axis. Therefore, because the parabola opens up, the graph of \(f\) has no \(x\)-intercepts. Figure 30 shows the graph.

The graph is above the \(x\)-axis for all values of \(x\), so the solution is the set of all real numbers or \((-\infty, \infty)\).

\subsection*{2.5 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. Solve the inequality \(-3 x-2<7\). (pp.A84-A85)
2. Write ( \(-2,7\) ] using inequality notation and graph the inequality. (pp. A81-A82)

\section*{Skill Building}

In Problems 3-6, use the figure to solve each inequality.

4.

5.

(a) \(g(x) \geq f(x)\)
(b) \(f(x)>g(x)\)
6.

(a) \(f(x)<g(x)\)
(b) \(f(x) \geq g(x)\)

In Problems 7-22, solve each inequality.
7. \(x^{2}-3 x-10 \leq 0\)
8. \(x^{2}+3 x-10>0\)
9. \(x^{2}-4 x>0\)
10. \(x^{2}+8 x \leq 0\)
11. \(x^{2}+x>12\)
12. \(x^{2}+7 x<-12\)
13. \(x^{2}+6 x+9 \leq 0\)
14. \(x^{2}-4 x+4 \leq 0\)
15. \(2 x^{2} \leq 5 x+3\)
16. \(6 x^{2} \leq 6+5 x\)
17. \(x(x-7)>8\)
18. \(x(x+1)>20\)
19. \(4 x^{2}+9<6 x\)
20. \(25 x^{2}+16<40 x\)
21. \(6\left(x^{2}+1\right) \geq 5 x\)
22. \(2\left(2 x^{2}-3 x\right) \geq-9\)

\section*{Mixed Practice}
23. What is the domain of the function \(f(x)=\sqrt{x^{2}-16}\) ?
24. What is the domain of the function \(f(x)=\sqrt{x-3 x^{2}}\) ?

In Problems 25-32, use the given functions \(f\) and \(g\).
(a) Solve \(f(x)=0\).
(b) Solve \(g(x)=0\).
(c) Solve \(f(x)=g(x)\).
(d) Solve \(f(x)>0\).
(e) Solve \(g(x) \leq 0\).
(f) Solve \(f(x)>g(x)\).
(g) Solve \(f(x) \geq 1\).
25. \(\begin{aligned} f(x) & =x^{2}-1 \\ g(x) & =3 x+3\end{aligned}\)
w 26. \(f(x)=-x^{2}+3\)
\(g(x)=-3 x+3\)
27. \(\begin{aligned} f(x) & =-x^{2}+1 \\ g(x) & =4 x+1\end{aligned}\)
28. \(f(x)=-x^{2}+4\)
\[
g(x)=-x-2
\]
29. \(f(x)=x^{2}-4\)
\(g(x)=-x^{2}+4\)
30. \(f(x)=x^{2}-2 x+1\)
\(g(x)=-x^{2}+1\)
31. \(f(x)=x^{2}-x-2\) \(g(x)=x^{2}+x-2\)
32. \(f(x)=-x^{2}-x+1\) \(g(x)=-x^{2}+x+6\)

\section*{Applications and Extensions}
33. Physics A ball is thrown vertically upward with an initial velocity of 80 feet per second. The distance \(s\) (in feet) of the ball from the ground after \(t\) seconds is \(s(t)=80 t-16 t^{2}\).

(a) At what time \(t\) will the ball strike the ground?
(b) For what time \(t\) is the ball more than 96 feet above the ground?
34. Physics A ball is thrown vertically upward with an initial velocity of 96 feet per second. The distance \(s\) (in feet) of the ball from the ground after \(t\) seconds is \(s(t)=96 t-16 t^{2}\).
(a) At what time \(t\) will the ball strike the ground?
(b) For what time \(t\) is the ball more than 128 feet above the ground?
35. Revenue Suppose that the manufacturer of a gas clothes dryer has found that when the unit price is \(p\) dollars, the revenue \(R\) (in dollars) is
\[
R(p)=-4 p^{2}+4000 p
\]
(a) At what prices \(p\) is revenue zero?
(b) For what range of prices will revenue exceed \(\$ 800,000\) ?
36. Revenue The John Deere company has found that the revenue from sales of heavy-duty tractors is a function of the unit price \(p\), in dollars, that it charges. The revenue \(R\), in dollars, is
\[
R(p)=-\frac{1}{2} p^{2}+1900 p
\]
(a) At what prices \(p\) is revenue zero?
(b) For what range of prices will revenue exceed \(\$ 1,200,000\) ?

\section*{Discussion and Writing}
37. Explain why the inequality \((x-4)^{2} \leq 0\) has exactly one solution.
38. Explain why the inequality \((x-2)^{2}>0\) has one real number that is not a solution.
39. Explain why the inequality \(x^{2}+x+1>0\) has all real numbers as the solution set.
40. Explain why the inequality \(x^{2}-x+1<0\) has the empty set as the solution set.
41. Explain the circumstances under which the \(x\)-intercepts of the graph of a quadratic function are included in the solution set of a quadratic inequality.

\section*{Retain Your Knowledge}

Problems 42-45 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
42. Determine the domain of \(f(x)=\sqrt{10-2 x}\).
43. Determine algebraically whether \(f(x)=\frac{-x}{x^{2}+9}\) is even, odd, or neither.
44. Consider the linear function \(f(x)=\frac{2}{3} x-6\).
(a) Find the zero of \(f\).
(b) Graph \(f\) using the zero and the \(y\)-intercept.
45. Height versus Head Circumference A pediatrician wanted to find a linear model that relates a child's height, \(H\), to head circumference, \(C\). She randomly selects nine children from her practice, measures their height and head circumference, and obtains the data shown. Let \(H\) represent the independent variable and \(C\) the dependent variable.
(a) Use a graphing utility to draw a scatter diagram.
(b) Use a graphing utility to find the line of best fit that models the relation between height and head circumference. Express the model using function notation
(c) Interpret the slope.
(d) Predict the head circumference of a child who is 26 inches tall.
(e) What is the height of a child whose head circumference is 17.4 inches?
\begin{tabular}{ll}
\begin{tabular}{l} 
Height \\
(inches); \(\boldsymbol{H}\)
\end{tabular} & \begin{tabular}{l}

\section*{'Are You Prepared?' Answers}
1. \(\{x \mid x>-3\}\) or \((-3, \infty)\)

\subsection*{2.6 Building Quadratic Models from Verbal Descriptions and from Data}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Problem Solving (Appendix A, Section A.9, pp. A72-A77)
- Building Linear Models from Data (Section 2.2, pp. 130-133)

Now Work the 'Are You Prepared?' problems on page 170.

In this section we will first discuss models in the form of a quadratic function when a verbal description of the problem is given. We end the section by fitting a quadratic function to data, which is another form of modeling.

When a mathematical model is in the form of a quadratic function, the properties of the graph of the function can provide important information about the model. In particular, the quadratic function can be used to determine the maximum or minimum value of the function. Because the graph of a quadratic function has a maximum or minimum value, answers can be found to questions involving optimization - that is, finding the maximum or minimum value in a model.

\section*{1 Build Quadratic Models from Verbal Descriptions}

In economics, revenue \(R\), in dollars, is defined as the amount of money received from the sale of an item and is equal to the unit selling price \(p\), in dollars, of the item times the number \(x\) of units actually sold. That is,
\[
R=x p
\]

In economics, the Law of Demand states that \(p\) and \(x\) are related: As one increases, the other decreases. The equation that relates \(p\) and \(x\) is called the demand equation. When the demand equation is linear, the revenue model is a quadratic function.

\section*{EXAMPLE I}

Solution (a) The revenue is \(R=x p\), where \(x=21,000-150 p\).
\[
R=x p=(21,000-150 p) p=-150 p^{2}+21,000 p \quad \text { The Model }
\]
(b) Because \(x\) represents the number of calculators sold, this means \(x \geq 0\). Thus \(21,000-150 p \geq 0\). Solving this linear inequality gives \(p \leq 140\). In addition, Texas Instruments will charge only a positive price for the calculator, so \(p>0\). Combining these inequalities provides the domain of \(R\), which is \(\{p \mid 0<p \leq 140\}\).
(c) The function \(R\) is a quadratic function with \(a=-150, b=21,000\), and \(c=0\). Because \(a<0\), the vertex is the highest point on the parabola. The revenue \(R\) is therefore a maximum when the price \(p\) is
\[
\begin{aligned}
& p=-\frac{b}{2 a}=-\frac{21,000}{2(-150)}=\$ 70.00 \\
& \uparrow
\end{aligned} \begin{aligned}
& =-150, b=21,000
\end{aligned}
\]
(d) The maximum revenue \(R\) is
\[
R(70)=-150(70)^{2}+21,000(70)=\$ 735,000
\]
(e) The number of calculators sold is given by the demand equation \(x=21,000-150 p\). At a price of \(p=\$ 70\),
\[
x=21,000-150(70)=10,500
\]
calculators are sold.
(f) Plot the intercepts, \((0,0)\) and \((140,0)\), and the vertex \((70,735,000)\). See Figure 31 for the graph of \(R\).

Figure 31

(g) Graph \(R=675,000\) and \(R(p)=-150 p^{2}+21,000 p\) in the same Cartesian plane. See Figure 32. Next find where the graphs intersect by solving
\[
\begin{array}{rlrl}
675,000 & =-150 p^{2}+21,000 p \\
150 p^{2}-21,000 p+675,000 & =0 \quad & \text { Add 150 p } 21,000 p \text { to both sides. } \\
p^{2}-140 p+4500 & =0 \quad & \text { Divide both sides by } 150 . \\
(p-50)(p-90) & =0 \quad & \text { Factor. } \\
p=50 \text { or } p & =90 & & \text { Use the Zero-Product Property. }
\end{array}
\]

Figure 32

The graphs intersect at \((50,675,000)\) and \((90,675,000)\). Based on the graph in Figure 32, Texas Instruments should charge between \(\$ 50\) and \(\$ 90\) to earn at least \$675,000 in revenue.
```

mm}\mathrm{ Now Work problem 3

```

\section*{EXAMPLE 2}

\section*{Figure 33}

\section*{Maximizing the Area Enclosed by a Fence}

A farmer has 2000 yards of fence to enclose a rectangular field. What are the dimensions of the rectangle that encloses the most area?
Solution Figure 33 illustrates the situation. The available fence represents the perimeter of the rectangle. If \(x\) is the length and \(w\) is the width, then
\[
\begin{equation*}
2 x+2 w=2000 \tag{1}
\end{equation*}
\]

The area \(A\) of the rectangle is
\[
A=x w
\]

To express \(A\) in terms of a single variable, solve equation (1) for \(w\) and substitute the result in \(A=x w\). Then \(A\) involves only the variable \(x\). [Equation (1) could also be solved for \(x\), and \(A\) could be expressed in terms of \(w\) alone. Try it!]
\[
\begin{aligned}
2 x+2 w & =2000 \\
2 w & =2000-2 x \\
w & =\frac{2000-2 x}{2}=1000-x
\end{aligned}
\]

Then the area \(A\) is
\[
A=x w=x(1000-x)=-x^{2}+1000 x
\]

Now, \(A\) is a quadratic function of \(x\).
\[
A(x)=-x^{2}+1000 x \quad a=-1, b=1000, c=0
\]

Figure 34 shows a graph of \(A(x)=-x^{2}+1000 x\). Because \(a<0\), the vertex is a maximum point on the graph of \(A\). The maximum value occurs at
\[
x=-\frac{b}{2 a}=-\frac{1000}{2(-1)}=500
\]

The maximum value of \(A\) is
\[
A\left(-\frac{b}{2 a}\right)=A(500)=-500^{2}+1000(500)=-250,000+500,000=250,000
\]

The largest rectangle that can be enclosed by 2000 yards of fence has an area of 250,000 square yards. Its dimensions are 500 yards by 500 yards.

\section*{Now Work problem 7}

\section*{EXAMPLE 3 Analyzing the Motion of a Projectile}

A projectile is fired from a cliff 500 feet above the water at an inclination of \(45^{\circ}\) to the horizontal, with a muzzle velocity of 400 feet per second. From physics, the height \(h\) of the projectile above the water can be modeled by
\[
h(x)=\frac{-32 x^{2}}{(400)^{2}}+x+500
\]
where \(x\) is the horizontal distance of the projectile from the base of the cliff. See Figure 35.

Figure 35

(a) Find the maximum height of the projectile.
(b) How far from the base of the cliff will the projectile strike the water?

Solution (a) The height of the projectile is given by a quadratic function.
\[
h(x)=\frac{-32 x^{2}}{(400)^{2}}+x+500=\frac{-1}{5000} x^{2}+x+500
\]

\section*{Seeing the Concept}

Graph
\[
\begin{aligned}
h(x) & =\frac{-1}{5000} x^{2}+x+500 \\
0 & \leq x \leq 5500
\end{aligned}
\]

Use MAXIMUM to find the maximum height of the projectile, and use ROOT or ZERO to find the distance from the base of the cliff to where it strikes the water. Compare your results with those obtained in Example 3.

Because \(a<0\), the maximum value of \(h\) occurs at the vertex, which is where
\[
x=-\frac{b}{2 a}=-\frac{1}{2\left(-\frac{1}{5000}\right)}=\frac{5000}{2}=2500
\]

The maximum height of the projectile is
\[
h(2500)=\frac{-1}{5000}(2500)^{2}+2500+500=-1250+2500+500=1750 \mathrm{ft}
\]
(b) The projectile will strike the water when the height is zero. To find the distance \(x\) traveled, solve the equation
\[
h(x)=\frac{-1}{5000} x^{2}+x+500=0
\]

The discriminant of this quadratic equation is
\[
b^{2}-4 a c=1^{2}-4\left(\frac{-1}{5000}\right)(500)=1.4
\]

Then
\[
x=\frac{-b \pm \sqrt{b^{2}-4 a c}}{2 a}=\frac{-1 \pm \sqrt{1.4}}{2\left(-\frac{1}{5000}\right)} \approx\left\{\begin{array}{c}
-458 \\
5458
\end{array}\right.
\]

Discard the negative solution. The projectile will strike the water at a distance of about 5458 feet from the base of the cliff.

Now Work problem 11

\section*{The Golden Gate Bridge}

The Golden Gate Bridge, a suspension bridge, spans the entrance to San Francisco Bay. Its 746 -foot-tall towers are 4200 feet apart. The bridge is suspended from two huge cables more than 3 feet in diameter; the 90 -foot-wide roadway is 220 feet above the water. The cables are parabolic in shape* and touch the road surface at the center of the bridge. Find the height of the cable above the road at a distance of 1000 feet from the center.

Solution See Figure 36. Begin by choosing the placement of the coordinate axes such that the \(x\)-axis coincides with the road surface and the origin coincides with the center of the bridge. As a result, the twin towers will be vertical (height 746-220 = 526 feet above the road) and located 2100 feet from the center. Also, the cable, which has the shape of a parabola, will extend from the towers, open up, and have its vertex at \((0,0)\). This choice of placement of the axes enables the equation of the parabola to have the form \(y=a x^{2}, a>0\). Also, note that the points \((-2100,526)\) and \((2100,526)\) are on the graph.

Figure 36

\footnotetext{
*A cable suspended from two towers is in the shape of a catenary, but when a horizontal roadway is suspended from the cable, the cable takes the shape of a parabola.
}

Use these facts to find the value of \(a\) in \(y=a x^{2}\).
\[
\begin{aligned}
y & =a x^{2} \\
526 & =a(2100)^{2} \quad x=2100, y=526 \\
a & =\frac{526}{(2100)^{2}}
\end{aligned}
\]

The equation of the parabola is
\[
y=\frac{526}{(2100)^{2}} x^{2}
\]

When \(x=1000\), the height of the cable is
\[
y=\frac{526}{(2100)^{2}}(1000)^{2} \approx 119.3 \text { feet }
\]

The cable is 119.3 feet above the road at a distance of 1000 feet from the center of the bridge.
```

Now Work problem 13

```

\section*{2 Build Quadratic Models from Data}

In Section 2.2, we found the line of best fit for data that appeared to be linearly related. It was noted that data may also follow a nonlinear relation. Figures 37(a) and (b) show scatter diagrams of data that follow a quadratic relation.

Figure 37

(a)

(b)

\section*{EXAMPLE 5 Fitting a Quadratic Function to Data}

The data in Table 8 on the next page represent the percentage \(D\) of the population that is divorced for various ages \(a\) in 2010 .
(a) Draw a scatter diagram of the data, treating age as the independent variable. Comment on the type of relation that may exist between age and percentage of the population divorced.
(b) Use a graphing utility to find the quadratic function of best fit that models the relation between age and percentage of the population divorced.
(c) Use the model found in part (b) to approximate the age at which the percentage of the population divorced is greatest.
(d) Use the model found in part (b) to approximate the highest percentage of the population that is divorced.
(e) Use a graphing utility to draw the quadratic function of best fit on the scatter diagram.

Table 8

\section*{Solution}

Figure 38

Figure 39

Figure 40

(a) Figure 38 shows the scatter diagram, from which it appears that the data follow a quadratic relation, with \(a<0\).
(b) Execute the QUADratic REGression program to obtain the results shown in Figure 39. The output shows the equation \(y=a x^{2}+b x+c\). The quadratic function of best fit that models the relation between age and percentage divorced is
\[
D(a)=-0.0143 a^{2}+1.5861 a-28.1886 \text { The Model }
\]
where \(a\) represents age and \(D\) represents the percentage divorced.
(c) Based on the quadratic function of best fit, the age with the greatest percentage divorced is
\[
a=-\frac{b}{2 a}=-\frac{1.5861}{2(-0.0143)} \approx 55 \text { years }
\]
(d) We evaluate the function \(D(a)\) at \(a=55\).
\[
D(55)=-0.0143(55)^{2}+1.5861(55)-28.1886 \approx 15.8 \text { percent }
\]

According to the model, 55-year-olds have the highest percentage divorced at 15.8 percent.
(e) Figure 40 shows the graph of the quadratic function found in part (b) drawn on the scatter diagram.

Look again at Figure 39. Notice that the output given by the graphing calculator does not include \(r\), the correlation coefficient. Recall that the correlation coefficient is a measure of the strength of a linear relation that exists between two variables. The graphing calculator does not provide an indication of how well the function fits the data in terms of \(r\), since a quadratic function cannot be expressed as a linear function.
am Now Work problem 25

\subsection*{2.6 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. Translate the following sentence to a mathematical equation: The total revenue \(R\) from selling \(x\) hot dogs is \(\$ 3\) times the number of hot dogs sold. (pp. A72-A73)
2. Use a graphing utility to find the line of best fit for the following data: (pp. 130-133)
\begin{tabular}{l|rrrrrr}
\(x\) & 3 & 5 & 5 & 6 & 7 & 8 \\
\hline\(y\) & 10 & 13 & 12 & 15 & 16 & 19
\end{tabular}

\section*{Applications and Extensions}
3. Maximizing Revenue The price \(p\) (in dollars) and the quantity \(x\) sold of a certain product obey the demand equation
\[
p=-\frac{1}{6} x+100
\]
(a) Find a model that expresses the revenue \(R\) as a function of \(x\). (Remember, \(R=x p\).)
(b) What is the domain of \(R\) ?
(c) What is the revenue if 200 units are sold?
(d) What quantity \(x\) maximizes revenue? What is the maximum revenue?
(e) What price should the company charge to maximize revenue?
4. Maximizing Revenue The price \(p\) (in dollars) and the quantity \(x\) sold of a certain product obey the demand equation
\[
p=-\frac{1}{3} x+100
\]
(a) Find a model that expresses the revenue \(R\) as a function of \(x\).
(b) What is the domain of \(R\) ?
(c) What is the revenue if 100 units are sold?
(d) What quantity \(x\) maximizes revenue? What is the maximum revenue?
(e) What price should the company charge to maximize revenue?
5. Maximizing Revenue The price \(p\) (in dollars) and the quantity \(x\) sold of a certain product obey the demand equation
\[
x=-5 p+100 \quad 0<p \leq 20
\]
(a) Express the revenue \(R\) as a function of \(x\).
(b) What is the revenue if 15 units are sold?
(c) What quantity \(x\) maximizes revenue? What is the maximum revenue?
(d) What price should the company charge to maximize revenue?
(e) What price should the company charge to earn at least \(\$ 480\) in revenue?
6. Maximizing Revenue The price \(p\) (in dollars) and the quantity \(x\) sold of a certain product obey the demand equation
\[
x=-20 p+500 \quad 0<p \leq 25
\]
(a) Express the revenue \(R\) as a function of \(x\).
(b) What is the revenue if 20 units are sold?
(c) What quantity \(x\) maximizes revenue? What is the maximum revenue?
(d) What price should the company charge to maximize revenue?
(e) What price should the company charge to earn at least \(\$ 3000\) in revenue?
7. Enclosing a Rectangular Field David has 400 yards of fencing and wishes to enclose a rectangular area.
(a) Express the area \(A\) of the rectangle as a function of the width \(w\) of the rectangle.
(b) For what value of \(w\) is the area largest?
(c) What is the maximum area?
8. Enclosing a Rectangular Field Beth has 3000 feet of fencing available to enclose a rectangular field.
(a) Express the area \(A\) of the rectangle as a function of \(x\), where \(x\) is the length of the rectangle.
(b) For what value of \(x\) is the area largest?
(c) What is the maximum area?
9. Enclosing the Most Area with a Fence A farmer with 4000 meters of fencing wants to enclose a rectangular plot that borders on a river. If the farmer does not fence the side along the river, what is the largest area that can be enclosed? (See the figure.)

10. Enclosing the Most Area with a Fence A farmer with 2000 meters of fencing wants to enclose a rectangular plot that borders on a straight highway. If the farmer does not fence the side along the highway, what is the largest area that can be enclosed?
11. Analyzing the Motion of a Projectile A projectile is fired from a cliff 200 feet above the water at an inclination of \(45^{\circ}\) to the horizontal, with a muzzle velocity of 50 feet per second. The height \(h\) of the projectile above the water is modeled by
\[
h(x)=\frac{-32 x^{2}}{(50)^{2}}+x+200
\]
where \(x\) is the horizontal distance of the projectile from the face of the cliff.
(a) At what horizontal distance from the face of the cliff is the height of the projectile a maximum?
(b) Find the maximum height of the projectile.
(c) At what horizontal distance from the face of the cliff will the projectile strike the water?
(d) Using a graphing utility, graph the function \(h\), \(0 \leq x \leq 200\).
(e) Use a graphing utility to verify the solutions found in parts (b) and (c).
(f) When the height of the projectile is 100 feet above the water, how far is it from the cliff?
12. Analyzing the Motion of a Projectile A projectile is fired at an inclination of \(45^{\circ}\) to the horizontal, with a muzzle velocity of 100 feet per second. The height \(h\) of the projectile is modeled by
\[
h(x)=\frac{-32 x^{2}}{(100)^{2}}+x
\]
where \(x\) is the horizontal distance of the projectile from the firing point.
(a) At what horizontal distance from the firing point is the height of the projectile a maximum?
(b) Find the maximum height of the projectile.
(c) At what horizontal distance from the firing point will the projectile strike the ground?
(d) Using a graphing utility, graph the function \(h\), \(0 \leq x \leq 350\).
(e) Use a graphing utility to verify the results obtained in parts (b) and (c).
(f) When the height of the projectile is 50 feet above the ground, how far has it traveled horizontally?
13. Suspension Bridge A suspension bridge with weight uniformly distributed along its length has twin towers that extend 75 meters above the road surface and are 400 meters apart. The cables are parabolic in shape and are suspended from the tops of the towers. The cables touch the road surface at the center of the bridge. Find the height of the cables at a point 100 meters from the center. (Assume that the road is level.)
14. Architecture A parabolic arch has a span of 120 feet and a maximum height of 25 feet. Choose suitable rectangular coordinate axes and find the equation of the parabola. Then calculate the height of the arch at points 10 feet, 20 feet, and 40 feet from the center.
15. Constructing Rain Gutters A rain gutter is to be made of aluminum sheets that are 12 inches wide by turning up the edges \(90^{\circ}\). See the illustration.
(a) What depth will provide maximum cross-sectional area and hence allow the most water to flow?
(b) What depths will allow at least 16 square inches of water to flow?

16. Norman Windows A Norman window has the shape of a rectangle surmounted by a semicircle of diameter equal to the width of the rectangle. See the figure. If the perimeter of the window is 20 feet, what dimensions will admit the most light (maximize the area)?
[Hint: Circumference of a circle \(=2 \pi r\); area of a circle \(=\pi r^{2}\), where \(r\) is the radius of the circle.]
17. Constructing a Stadium A track and field playing area is in the shape of a rectangle with semicircles at each end. See the figure. The inside perimeter of the track is to be 1500 meters. What should the dimensions of the rectangle be so that the area of the rectangle is a maximum?

18. Architecture A special window has the shape of a rectangle surmounted by an equilateral triangle. See the figure. If the perimeter of the window is 16 feet, what dimensions will admit the most light?
[Hint: Area of an equilateral triangle \(=\left(\frac{\sqrt{3}}{4}\right) x^{2}\), where \(x\) is the length of a side of the triangle.]

19. Chemical Reactions A self-catalytic chemical reaction results in the formation of a compound that causes the formation ratio to increase. If the reaction rate \(V\) is modeled by
\[
V(x)=k x(a-x), \quad 0 \leq x \leq a
\]
where \(k\) is a positive constant, \(a\) is the initial amount of the compound, and \(x\) is the variable amount of the compound, for what value of \(x\) is the reaction rate a maximum?
20. Calculus: Simpson's Rule The figure shows the graph of \(y=a x^{2}+b x+c\). Suppose that the points \(\left(-h, y_{0}\right)\), \(\left(0, y_{1}\right)\), and ( \(h, y_{2}\) ) are on the graph. It can be shown that the area enclosed by the parabola, the \(x\)-axis, and the lines \(x=-h\) and \(x=h\) is
\[
\text { Area }=\frac{h}{3}\left(2 a h^{2}+6 c\right)
\]

Show that this area may also be given by
\[
\text { Area }=\frac{h}{3}\left(y_{0}+4 y_{1}+y_{2}\right)
\]

\(\measuredangle\) 21. Use the result obtained in Problem 20 to find the area enclosed by \(f(x)=-5 x^{2}+8\), the \(x\)-axis, and the lines \(x=-1\) and \(x=1\).
\(\measuredangle\) 22. Use the result obtained in Problem 20 to find the area enclosed by \(f(x)=2 x^{2}+8\), the \(x\)-axis, and the lines \(x=-2\) and \(x=2\).
\(\$\) 23. Use the result obtained in Problem 20 to find the area enclosed by \(f(x)=x^{2}+3 x+5\), the \(x\)-axis, and the lines \(x=-4\) and \(x=4\).
\(\triangle\) 24. Use the result obtained in Problem 20 to find the area enclosed by \(f(x)=-x^{2}+x+4\), the \(x\)-axis, and the lines \(x=-1\) and \(x=1\).
25. Life Cycle Hypothesis An individual's income varies with his or her age. The following table shows the median income \(I\) of males of different age groups within the United States for 2011. For each age group, let the class midpoint represent the independent variable, \(x\). For the class " 65 years and older," we will assume that the class midpoint is 69.5 .
\begin{tabular}{|lll|}
\hline Age & \begin{tabular}{l} 
Class \\
Midpoint, \(\boldsymbol{x}\)
\end{tabular} & \begin{tabular}{l} 
Median \\
Income, \(I\)
\end{tabular} \\
\hline \(15-24\) years & 19.5 & \(\$ 10,518\) \\
\hline \(25-34\) years & 29.5 & \(\$ 32,581\) \\
\hline \(35-44\) years & 39.5 & \(\$ 43,967\) \\
\(45-54\) years & 49.5 & \(\$ 45,950\) \\
\hline \(55-64\) years & 59.5 & \(\$ 41,550\) \\
\hline 65 years and older & 69.5 & \(\$ 27,707\) \\
\hline
\end{tabular}

Source: U.S. Census Bureau
(a) Use a graphing utility to draw a scatter diagram of the data. Comment on the type of relation that may exist between the two variables.
(b) Use a graphing utility to find the quadratic function of best fit that models the relation between age and median income.
(c) Use the function found in part (b) to determine the age at which an individual can expect to earn the most income.
(d) Use the function found in part (b) to predict the peak income earned.
(e) With a graphing utility, graph the quadratic function of best fit on the scatter diagram.
26. Height of a Ball A shot-putter throws a ball at an inclination of \(45^{\circ}\) to the horizontal. The following data represent the height of the ball \(h\), in feet, at the instant that it has traveled \(x\) feet horizontally.

(a) Use a graphing utility to draw a scatter diagram of the data. Comment on the type of relation that may exist between the two variables.
(b) Use a graphing utility to find the quadratic function of best fit that models the relation between distance and height.
(c) Use the function found in part (b) to determine how far the ball will travel before it reaches its maximum height.
(d) Use the function found in part (b) to find the maximum height of the ball.
(e) With a graphing utility, graph the quadratic function of best fit on the scatter diagram.

\section*{Mixed Practice}
27. Which Model? The following data represent the square footage and rents (dollars per month) for apartments in the Del Mar area of San Diego, California.

Source: apartments.com, 2013
(a) Using a graphing utility, draw a scatter diagram of the data treating square footage as the independent variable. What type of relation appears to exist between square footage and rent?
(b) Based on your response to part (a), find either a linear or a quadratic model that describes the relation between square footage and rent.
(c) Use your model to predict the rent of an apartment in San Diego that is 850 square feet.
28. Which Model? An engineer collects the data on the next page showing the speed \(s\) of a Toyota Camry and its average miles per gallon, \(M\).
(a) Using a graphing utility, draw a scatter diagram of the data, treating speed as the independent variable. What type of relation appears to exist between speed and miles per gallon?
\begin{tabular}{ll} 
Speed, \(\boldsymbol{s}\) & Miles per Gallon, \(\boldsymbol{M}\) \\
\hline 30 & 18 \\
35 & 20 \\
40 & 23 \\
40 & 25 \\
45 & 25 \\
50 & 28 \\
55 & 30 \\
60 & 29 \\
65 & 26 \\
65 & 25 \\
70 & 25 \\
\hline
\end{tabular}
(b) Based on your response to part (a), find either a linear or a quadratic model that describes the relation between speed and miles per gallon.
(c) Use your model to predict the miles per gallon for a Camry that is traveling 63 miles per hour.
29. Which Model? The following data represent the birth rate (births per 1000 population) for women whose age is \(a\), in 2008.

Source: Statistical Abstract, 2012
(a) Using a graphing utility, draw a scatter diagram of the data, treating age as the independent variable. What type of relation appears to exist between age and birth rate?
(b) Based on your response to part (a), find either a linear or a quadratic model that describes the relation between age and birth rate.
(c) Use your model to predict the birth rate for 35-year-old women.
30. Which Model? A cricket makes a chirping noise by sliding its wings together rapidly. Perhaps you have noticed that the number of chirps seems to increase with the temperature. The following data list the temperature (in degrees Fahrenheit) and the number of chirps per second for the striped ground cricket.
\begin{tabular}{ll} 
Temperature \(\left({ }^{\circ} \mathrm{F}\right), \boldsymbol{x}\) & Chirps per Second, \(\boldsymbol{C}\) \\
\hline 88.6 & 20.0 \\
93.3 & 19.8 \\
80.6 & 17.1 \\
69.7 & 14.7 \\
69.4 & 15.4 \\
79.6 & 15.0 \\
80.6 & 16.0 \\
76.3 & 14.4 \\
75.2 & 15.5 \\
\hline
\end{tabular}

Source: Pierce, George W. The Songs of Insects. Cambridge, MA: Harvard University Press, 1949, pp. 12-21
(a) Using a graphing utility, draw a scatter diagram of the data, treating temperature as the independent variable. What type of relation appears to exist between temperature and chirps per second?
(b) Based on your response to part (a), find either a linear or a quadratic model that best describes the relation between temperature and chirps per second.
(c) Use your model to predict the chirps per second if the temperature is \(80^{\circ} \mathrm{F}\).

\section*{Discussion and Writing}
31. Refer to Example 1 on page 165 . Notice that if the price charged for the calculators is \(\$ 0\) or \(\$ 140\), then the revenue is \(\$ 0\). It is easy to explain why revenue would be \(\$ 0\) if the
price charged were \(\$ 0\), but how can revenue be \(\$ 0\) if the price charged is \(\$ 140\) ?

\section*{Retain Your Knowledge}

Problems 32-35 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
32. Evaluate \(\sqrt{-225}\).
33. Find the distance between the points \(P_{1}=(4,-7)\) and \(P_{2}=(-1,5)\).
34. Find the equation of the circle with center \((-6,0)\) and radius \(r=\sqrt{7}\).
35. Find the real zeros, if any, of the function \(f(x)=5 x^{2}+8 x-3\).

\section*{'Are You Prepared?' Answers}
1. \(R=3 x\)
2. \(y=1.7826 x+4.0652\)

\subsection*{2.7 Complex Zeros of a Quadratic Function*}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Real numbers (Appendix A, Section A.1, pp. A3-A4)
- Complex numbers (Appendix A, Section A.11, pp. A89-A94)

Now Work the 'Are You Prepared?' problems on page 177.
OBJECTIVE 1 Find the Complex Zeros of a Quadratic Function (p.175)

\section*{1 Find the Complex Zeros of a Quadratic Function}

For a function \(f\), the solutions of the equation \(f(x)=0\) are called the zeros of \(f\). When we are working in the real number system, these zeros are called real zeros of \(f\). When we are working in the complex number system, these zeros are called complex zeros of \(f\).

\section*{EXAMPLE I Finding Complex Zeros of a Quadratic Function}

Find the complex zeros of each of the following quadratic functions. Graph each function and label the intercepts.
(a) \(f(x)=x^{2}-4\)
(b) \(g(x)=x^{2}+9\)

Solution (a) To find the complex zeros of \(f(x)=x^{2}-4\), solve the equation \(f(x)=0\).

Figure 41

Figure 42

\[
\begin{aligned}
f(x) & =0 & & \\
x^{2}-4 & =0 & & f(x)=x^{2}-4 \\
x^{2} & =4 & & \text { Add } 4 \text { to both sides. } \\
x & = \pm \sqrt{4} & & \text { Use the Square Root Method. } \\
x & = \pm 2 & &
\end{aligned}
\]

The complex zeros of \(f\) are -2 and 2 . Because the zeros are real numbers, the \(x\)-intercepts of the graph of \(f\) are -2 and 2 . Figure 41 shows the graph of \(f(x)=x^{2}-4\) with the intercepts labeled.
(b) To find the complex zeros of \(g(x)=x^{2}+9\), solve the equation \(g(x)=0\).
\[
\begin{aligned}
g(x) & =0 & & \\
x^{2}+9 & =0 & & g(x)=x^{2}+9 \\
x^{2} & =-9 & & \text { Subtract 9 from both sides. } \\
x & = \pm \sqrt{-9} & & \text { Use the Square Root Method. } \\
x & = \pm 3 i & &
\end{aligned}
\]

The complex zeros of \(g\) are \(-3 i\) and \(3 i\). Because neither of the zeros is a real number, there are no \(x\)-intercepts for the graph of \(g\). Figure 42 shows the graph of \(g(x)=x^{2}+9\).

Next, the quadratic formula is restated for use in the complex number system.

\footnotetext{
*This section is optional and may be omitted without loss of continuity.
}

\section*{THEOREM}

\section*{EXAMPLE 2}

Figure 43

Figure 44

Solution

In the complex number system, the solutions of the quadratic equation \(a x^{2}+b x+c=0\), where \(a, b\), and \(c\) are real numbers and \(a \neq 0\), are given by the formula
\[
\begin{equation*}
x=\frac{-b \pm \sqrt{b^{2}-4 a c}}{2 a} \tag{1}
\end{equation*}
\]

In the complex number system, a quadratic equation has either one solution or two solutions.

\section*{Finding Complex Zeros of a Quadratic Function}

Find the complex zeros of each of the following quadratic functions. Graph each function and label the intercepts.
(a) \(f(x)=x^{2}+6 x+2\)
(b) \(g(x)=x^{2}-4 x+8\)
(a) To find the complex zeros of \(f(x)=x^{2}+6 x+2\), solve the equation \(f(x)=0\).
\[
\begin{aligned}
& f(x)=0 \\
& x^{2}+6 x+2=0 \quad f(x)=x^{2}+6 x+2
\end{aligned}
\]

Here \(a=1, b=6, c=2\), and \(b^{2}-4 a c=6^{2}-4(1)(2)=28\). Using equation (1),
\[
x=\frac{-6 \pm \sqrt{28}}{2(1)}=\frac{-6 \pm 2 \sqrt{7}}{2}=-3 \pm \sqrt{7}
\]

The complex zeros of \(f\) are \(-3-\sqrt{7} \approx-5.65\) and \(-3+\sqrt{7} \approx-0.35\). Because the zeros are real numbers, the \(x\)-intercepts of the graph of \(f\) are also \(-3-\sqrt{7} \approx-5.65\) and \(-3+\sqrt{7} \approx-0.35\). Figure 43 shows the graph of \(f(x)=x^{2}+6 x+2\) with the \(x\)-intercepts labeled.
(b) To find the complex zeros of \(g(x)=x^{2}-4 x+8\), solve the equation \(g(x)=0\).
\[
\begin{aligned}
g(x) & =0 \\
x^{2}-4 x+8 & =0 \quad g(x)=x^{2}-4 x+8
\end{aligned}
\]

Here \(a=1, b=-4, c=8\), and \(b^{2}-4 a c=(-4)^{2}-4(1)(8)=-16\). Using equation (1),
\[
x=\frac{-(-4) \pm \sqrt{-16}}{2(1)}=\frac{4 \pm 4 i}{2}=2 \pm 2 i
\]

\section*{Check:}
\[
\begin{aligned}
2+2 i: g(2+2 i)=(2+2 i)^{2}-4(2+2 i)+8 & =4+8 i+4 i^{2}-8-8 i+8 \\
& =4-4=0 \\
2-2 i: g(2-2 i)=(2-2 i)^{2}-4(2-2 i)+8 & =4-8 i+4 i^{2}-8+8 i+8 \\
& =4-4=0
\end{aligned}
\]

The complex zeros of \(f\) are \(2-2 i\) and \(2+2 i\). Because neither of the zeros is a real number, the graph of \(g\) has no \(x\)-intercepts. Figure 44 shows the graph of \(g(x)=x^{2}-4 x+8\).

The discriminant \(b^{2}-4 a c\) still serves as a way to determine the character of the solutions of a quadratic equation.

\section*{Character of the Solutions of a Quadratic Equation}

In the complex number system, consider a quadratic equation \(a x^{2}+b x+c=0\) with real coefficients.
1. If \(b^{2}-4 a c>0\), the equation has two unequal real solutions.
2. If \(b^{2}-4 a c=0\), the equation has a repeated real solution, a double root.
3. If \(b^{2}-4 a c<0\), the equation has two complex solutions that are not real. The complex solutions are conjugates of each other.

The third conclusion in the display is a consequence of the fact that if \(b^{2}-4 a c=-N<0\), then the solutions are
\[
x=\frac{-b+\sqrt{b^{2}-4 a c}}{2 a}=\frac{-b+\sqrt{-N}}{2 a}=\frac{-b+\sqrt{N} i}{2 a}=\frac{-b}{2 a}+\frac{\sqrt{N}}{2 a} i
\]
and
\[
x=\frac{-b-\sqrt{b^{2}-4 a c}}{2 a}=\frac{-b-\sqrt{-N}}{2 a}=\frac{-b-\sqrt{N} i}{2 a}=\frac{-b}{2 a}-\frac{\sqrt{N}}{2 a} i
\]
which are conjugates of each other.
Therefore, when \(b^{2}-4 a c<0\), the zeros of the quadratic function \(f(x)=a x^{2}+b x+c\) will be conjugates of each other.

\section*{EXAMPLE 3 Determining the Character of the Solutions of a Quadratic Equation}

Without solving, determine the character of the solutions of each equation.
(a) \(3 x^{2}+4 x+5=0\)
(b) \(2 x^{2}+4 x+1=0\)
(c) \(9 x^{2}-6 x+1=0\)

\section*{Solution (a) Here \(a=3, b=4\), and \(c=5\), so \(b^{2}-4 a c=16-4(3)(5)=-44\). The} solutions are two complex numbers that are not real and are conjugates of each other.
(b) Here \(a=2, b=4\), and \(c=1\), so \(b^{2}-4 a c=16-8=8\). The solutions are two unequal real numbers.
(c) Here \(a=9, b=-6\), and \(c=1\), so \(b^{2}-4 a c=36-4(9)(1)=0\). The solution is a repeated real number - that is, a double root.

Now Work problem 25

\subsection*{2.7 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. Name the integers and the rational numbers in the set \(\left\{-3,0, \sqrt{2}, \frac{6}{5}, \pi\right\} .(\) pp. A3-A4 \()\)
2. True or False Rational numbers and irrational numbers are in the set of real numbers. (pp. A3-A4)
3. \((2+i)(3-4 i)=\) \(\qquad\) (pp. A89-A94)
4. The conjugate of \(2+5 i\) is \(\qquad\) . (pp. A89-A94)
5. True or False All real numbers are complex numbers. (pp. A89-A94)
6. \(\sqrt{-81}=\) \(\qquad\) (pp. A89-A94)

\section*{Concepts and Vocabulary}
7. If \(2-3 i\) is a zero of a quadratic function with real coefficients, then \(\qquad\) is also a zero.
8. True or False Consider the quadratic function \(f(x)=\) \(a x^{2}+b x+c\). If \(b^{2}-4 a c>0\), then the graph of \(f\) will have two unequal \(x\)-intercepts.

\section*{Skill Building}

In Problems 9-24, find the complex zeros of each quadratic function. Graph each function and label the intercepts.
9. \(f(x)=x^{2}+4\)
10. \(f(x)=x^{2}-9\)
11. \(f(x)=x^{2}-16\)
12. \(f(x)=x^{2}+25\)
13. \(f(x)=x^{2}-6 x+13\)
14. \(f(x)=x^{2}+4 x+8\)
15. \(f(x)=x^{2}-6 x+10\)
16. \(f(x)=x^{2}-2 x+5\)
17. \(f(x)=x^{2}-4 x+1\)
18. \(f(x)=x^{2}+6 x+1\)
19. \(f(x)=2 x^{2}+2 x+1\)
20. \(f(x)=3 x^{2}+6 x+4\)
21. \(f(x)=x^{2}+x+1\)
22. \(f(x)=x^{2}-x+1\)
23. \(f(x)=-2 x^{2}+8 x+1\)
24. \(f(x)=-3 x^{2}+6 x+1\)

In Problems 25-30, without solving, determine the character of the solutions of each equation in the complex number system.
25. \(3 x^{2}-3 x+4=0\)
26. \(2 x^{2}-4 x+1=0\)
27. \(2 x^{2}+3 x-4=0\)
28. \(x^{2}+2 x+6=0\)
29. \(9 x^{2}-12 x+4=0\)
30. \(4 x^{2}+12 x+9=0\)

\section*{- Mixed Practice}

In Problems 31-34, find all complex zeros of each function.
31. \(f(t)=t^{4}-16\)
32. \(G(y)=y^{4}-81\)
33. \(F(x)=x^{6}-9 x^{3}+8\)
34. \(P(z)=z^{6}+28 z^{3}+27\)

\section*{Retain Your Knowledge}

Problems 35-38 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
35. Let \(f(x)=\frac{x}{x+1}\) and \(g(x)=\frac{x+2}{x}\). Find \((g-f)(x)\), and determine its domain.
36. Use the relation whose graph is shown to answer the following questions.
(a) Find the domain and the range.
(b) Find the intercepts, if any.
(c) Find any symmetry with respect to the \(x\)-axis, the \(y\)-axis, or the origin.
(d) Determine whether the relation is a function.
37. Use a graphing utility to graph \(f(x)=x^{4}-9 x^{2}\) over the interval \((-4,4)\). Approximate any local maximum values and any local minimum values. Determine where \(f\) is increasing and where it is decreasing. Round answers to two decimal places.
38. \(y\) varies inversely with \(x^{2}\). If \(y=24\) when \(x=5\), write the general formula to describe the variation.

\section*{‘Are You Prepared?’ Answers}
1. Integers: \(\{-3,0\}\); rational numbers: \(\left\{-3,0, \frac{6}{5}\right\}\)
2. True
3. \(10-5 i\)
4. \(2-5 i\)
5. True
6. \(9 i\)

\subsection*{2.8 Equations and Inequalities Involving the Absolute Value Function}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Graph Inequalities (Appendix A, Section A.1, pp. A4-A6)
- Solving Equations (Appendix A, Section A.8, pp. A63-A69)
- Interval Notation; Solving Inequalities (Appendix A, Section A.10, pp. A81-A86)
- Absolute Value Function (Section 1.4, pp. 79-82)
- Graphing Techniques: Transformations (Section 1.5, pp. 89-97)

Now Work the 'Are You Prepared?' problems on page 181.
OBJECTIVES 1 Solve Absolute Value Equations (p.179)
2 Solve Absolute Value Inequalities (p. 179)

\section*{1 Solve Absolute Value Equations}

Recall that on the real number line, the absolute value of \(a\) equals the distance from the origin to the point whose coordinate is \(a\). For example, there are two points whose distance from the origin is 5 units, -5 and 5 . See Figure 45. Thus the equation \(|x|=5\) will have the solution set \(\{-5,5\}\).

Figure 45

The equation \(|u|=a\) leads to two equations depending on whether \(u\) is nonnegative (greater than or equal to zero) or negative.
\[
\begin{aligned}
\text { If } \boldsymbol{u} & <\mathbf{0} & & \\
|u| & =a & & \\
-u & =a & & |u|=-u \text { when } u<0 \\
u & =-a & & \text { Multiply both sides by }-1 .
\end{aligned}
\]
\[
\text { If } u \geq 0
\]
\[
|u|=a
\]
\[
u=a \quad|u|=u \text { when } u \geq 0
\]

This leads to the following result.

\section*{Equations Involving Absolute Value}

If \(a\) is a positive real number and if \(u\) is any algebraic expression, then
\[
\begin{equation*}
|u|=a \text { is equivalent to } u=a \text { or } u=-a \tag{1}
\end{equation*}
\]

\section*{EXAMPLE I}

\section*{Solving an Equation That Involves Absolute Value}

Solve the equation: \(|x+2|=5\)

\section*{Solution}

Figure 46

Figure 47

The equation follows the form of equation (1), where \(u=x+2\). There are two possibilities:
\[
\begin{array}{rlrlrl}
x+2 & =5 & \text { or } & & x+2 & =-5 \\
x & =3 & & x & =-7
\end{array}
\]

The solution set is \(\{-7,3\}\).
To visualize the solution, graph \(f(x)=|x+2|\) and \(g(x)=5\). See Figure 46. The \(x\)-coordinates of the points of intersection are -7 and 3 , the solutions of the equation \(f(x)=g(x)\).
am Now Work problems 13 (a) and 19
Equation (1) requires that \(a\) be a positive number. If \(a=0\), equation (1) becomes \(|u|=0\), which is equivalent to \(u=0\). If \(a\) is less than zero, the equation has no real solution. To see why, consider the equation \(|x|=-2\). Figure 47 shows the graphs of \(f(x)=|x|\) and \(g(x)=-2\). Notice that the graphs do not intersect, which implies that the equation \(|x|=-2\) has no solution. The solution set is the empty set, \(\varnothing\) or \(\{\quad\}\).

\section*{2 Solve Absolute Value Inequalities}

Let's look at an inequality involving absolute value. Once again, the graph of the absolute value function makes it easier to visualize the results of the algebra.

\section*{EXAMPLE 2}

\section*{Solving an Inequality That Involves Absolute Value}

Solve the inequality: \(|x|<4\)

Figure 48

Figure 49

The solution is the set of all points whose coordinate \(x\) is a distance less than 4 units from the origin. See Figure 48 for an illustration.

Because any \(x\) between -4 and 4 satisfies the condition \(|x|<4\), the solution set consists of all numbers \(x\) for which \(-4<x<4\)-that is, all \(x\) in the interval \((-4,4)\).

To visualize the results of Example 2, graph \(f(x)=|x|\) and \(g(x)=4\). See Figure 49. When solving \(f(x)<g(x)\), look for all \(x\)-coordinates such that the graph of \(f(x)\) is below the graph of \(g(x)\). From the graph, notice that the graph of \(f(x)=|x|\) is below the graph of \(g(x)=4\) for all \(x\) between -4 and 4 . Therefore, the solution set consists of all \(x\) for which \(-4<x<4\)-that is, all \(x\) in the interval (-4, 4).

The results of Example 2 lead to the following:

\section*{Inequalities Involving Absolute Value}

If \(a\) is any positive number and if \(u\) is any algebraic expression, then
\[
\begin{align*}
& |u|<a \quad \text { is equivalent to } \quad-a<u<a  \tag{2}\\
& |u| \leq a \quad \text { is equivalent to } \quad-a \leq u \leq a \tag{3}
\end{align*}
\]

In other words, \(|u|<a\) is equivalent to \(-a<u\) and \(u<a\).

\section*{Solving an Inequality Involving Absolute Value}

Solve the inequality \(|2 x+4| \leq 3\), and graph the solution set.

Solution

Figure 50

\[
\begin{array}{rlrl}
|2 x+4| & \leq 3 & & \begin{array}{l}
\text { This follows the form of statement (3); } \\
\\
\text { the expression } u=2 x+4 \text { is inside }
\end{array} \\
-3 & \leq 2 x+4 & \leq 3 & \\
\text { the absolute value bars. } \\
-3-4 & \leq 2 x+4-4 & \leq 3-4 & \\
\text { Apply statement (3). } \\
-7 & \leq 2 x & & \text { Subtract 4 from each part. } \\
\frac{-7}{2} & \leq-1 & & \text { Simplify. } \\
-\frac{2 x}{2} & \leq \frac{-1}{2} & & \text { Divide each part by 2. } \\
x & & \leq-\frac{1}{2} & \\
\text { Simplify. }
\end{array}
\]

The solution set is \(\left\{x \left\lvert\,-\frac{7}{2} \leq x \leq-\frac{1}{2}\right.\right\}\)-that is, all \(x\) in the interval \(\left[-\frac{7}{2},-\frac{1}{2}\right]\).
See Figure 50 for a graph of the solution set.

Now Work problems \(13(b)\) and 47

\section*{EXAMPLE 4 Solving an Inequality Involving Absolute Value}

Solve the inequality: \(|x|>3\)
Solution The solution is the set of all points whose coordinate \(x\) is a distance greater than 3 units from the origin. Figure 51 illustrates the situation.

Any \(x\) less than -3 or greater than 3 satisfies the condition \(|x|>3\). Consequently, the solution set consists of all numbers \(x\) for which \(x<-3\) or \(x>3\)-that is, all \(x\) in the intervals \((-\infty,-3) \cup(3, \infty)\).

To visualize these results, graph \(f(x)=|x|\) and \(g(x)=3\). See Figure 52. When solving \(f(x)>g(x)\), look for all \(x\)-coordinates such that the graph of \(f(x)\) is above

Figure 52

the graph of \(g(x)\). From the graph, notice that the graph of \(f(x)=|x|\) is above the graph of \(g(x)=3\) for all \(x\) less than -3 or all \(x\) greater than 3. Therefore, the solution set consists of all \(x\) for which \(x<-3\) or \(x>3\). Using interval notation, the solution is \((-\infty,-3) \cup(3, \infty)\).

The results of Example 4 lead to the following:

\section*{Inequalities Involving Absolute Value}

If \(a\) is any positive number and \(u\) is any algebraic expression, then
\[
\begin{align*}
& |u|>a \quad \text { is equivalent to } \quad u<-a \quad \text { or } \quad u>a  \tag{4}\\
& |u| \geq a \quad \text { is equivalent to } \quad u \leq-a \quad \text { or } \quad u \geq a \tag{5}
\end{align*}
\]

Solution

Figure 53

\section*{Solving an Inequality Involving Absolute Value}

Solve the inequality \(|2 x-5|>3\), and graph the solution set.
\[
\begin{aligned}
& |2 x-5|>3 \\
& \text { This follows the form of statement (4); the expression } \\
& u=2 x-5 \text { is inside the absolute value bars. } \\
& 2 x-5<-3 \quad \text { or } \quad 2 x-5>3 \quad \text { Apply statement (4) } \\
& 2 x-5+5<-3+5 \text { or } 2 x-5+5>3+5 \text { Add } 5 \text { to each part. } \\
& 2 x<2 \quad \text { or } \quad 2 x>8 \quad \text { Simplify. } \\
& \frac{2 x}{2}<\frac{2}{2} \quad \text { or } \quad \frac{2 x}{2}>\frac{8}{2} \quad \text { Divide each part by } 2 \text {. } \\
& x<1 \quad \text { or } \quad x>4 \quad \text { Simplify. }
\end{aligned}
\]

The solution set is \(\{x \mid x<1\) or \(x>4\}\). Using interval notation, the solution is \((-\infty, 1) \cup(4, \infty)\).

See Figure 53 for a graph of the solution set.
WARNING A common error to be avoided is to attempt to write the solution \(x<1\) or \(x>4\) as \(1>x>4\), which is incorrect, since there are no numbers \(x\) for which \(1>x\) and \(x>4\). Another common error is to "mix" the symbols and write \(1<x>4\), which makes no sense.

Now Work problems 13 (c) and 51

\subsection*{2.8 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. Graph the inequality \(x \geq-2\). (pp. A4-A6)
5. Solve \(-1<2 x+5<13\). (pp. A85-A86)
2. Use a real number line to define \(|a|\). (p. A5)
6. Use transformations to graph the function \(f(x)=|x-3|\).
3. Solve \(4 x-3=9\). (pp.A64-A66) (pp. 89-92)
4. Solve \(3 x-2>7\). (pp.A84-A85)

\section*{Concepts and Vocabulary}
7. \(|u|=a\) is equivalent to \(u=\) \(\qquad\) or \(u=\) \(\qquad\) 10. True or False \(|x|=-4\) has no real solution.
8. \(|u|<a\) is equivalent to \(\qquad\) —.
11. True or False \(|x|>-2\) has no real solution.
9. \(|u|<a\) will have no solution if \(a\) \(\qquad\) 0.
12. True or False \(|u|>a\) is equivalent to \(-a<u<a\).

\section*{Skill Building}

In Problems 13-16, use the graphs of the functions given to solve each problem.
13. \(f(x)=|x+3| ; g(x)=6\)
(a) \(f(x)=g(x)\)
(b) \(f(x) \leq g(x)\)
(c) \(f(x)>g(x)\)

14. \(f(x)=|x-2| ; g(x)=2\)
(a) \(f(x)=g(x)\)
(b) \(f(x) \leq g(x)\)
(c) \(f(x)>g(x)\)

16. \(f(x)=|2 x+1| ; g(x)=7\)
(a) \(f(x)=g(x)\)
(b) \(f(x) \geq g(x)\)
(c) \(f(x)<g(x)\)

In Problems 17-38, solve each equation.
17. \(|x|=6\)
18. \(|x|=12\)
19. \(|2 x+3|=5\)
20. \(|3 x-1|=2\)
21. \(|1-4 t|+8=13\)
22. \(|1-2 z|+6=9\)
23. \(|-2 x|=8\)
24. \(|-x|=1\)
25. \(4-|2 x|=3\)
26. \(5-\left|\frac{1}{2} x\right|=3\)
27. \(\frac{2}{3}|x|=9\)
28. \(\frac{3}{4}|x|=9\)
29. \(\left|\frac{x}{3}+\frac{2}{5}\right|=2\)
30. \(\left|\frac{x}{2}-\frac{1}{3}\right|=1\)
31. \(|u-2|=-\frac{1}{2}\)
32. \(|2-v|=-1\)
33. \(\left|x^{2}-9\right|=0\)
34. \(\left|x^{2}-16\right|=0\)
35. \(\left|x^{2}-2 x\right|=3\)
36. \(\left|x^{2}+x\right|=12\)
37. \(\left|x^{2}+x-1\right|=1\)
38. \(\left|x^{2}+3 x-2\right|=2\)

In Problems 39-62, solve each absolute value inequality. Express your answer using set-builder or interval notation. Graph the solution set.
39. \(|x|<6\)
40. \(|x|<9\)
41. \(|x|>4\)
42. \(|x|>1\)
43. \(|2 x|<8\)
44. \(|3 x|<15\)
45. \(|3 x|>12\)
46. \(|2 x|>6\)
47. \(|x-2|+2<3\)
48. \(|x+4|+3<5\)
49. \(|3 t-2| \leq 4\)
50. \(|2 u+5| \leq 7\)
51. \(|x-3| \geq 2\)
52. \(|x+4| \geq 2\)
53. \(|1-4 x|-7<-2\)
54. \(|1-2 x|-4<-1\)
55. \(|1-2 x|>|-3|\)
56. \(|2-3 x|>|-1|\)
57. \(|2 x+1|<-1\)
58. \(|3 x-4| \geq 0\)
59. \(|(3 x-2)-7|<\frac{1}{2}\)
60. \(|(4 x-1)-11|<\frac{1}{4}\)
61. \(5-|x-1|>2\)
62. \(6-|x+3| \geq 2\)

\section*{Mixed Practice}
63. If \(f(x)=-3|5 x-2|\) and \(g(x)=-9\), solve:
(a) \(f(x)=g(x)\)
(b) \(f(x)>g(x)\)
(c) \(f(x) \leq g(x)\)
65. If \(f(x)=|-3 x+2|\) and \(g(x)=x+10\), solve:
(a) \(f(x)=g(x)\)
(b) \(f(x) \geq g(x)\)
(c) \(f(x)<g(x)\)
64. If \(f(x)=-2|2 x-3|\) and \(g(x)=-12\), solve:
(a) \(f(x)=g(x)\)
(b) \(f(x) \geq g(x)\)
(c) \(f(x)<g(x)\)
66. If \(f(x)=|4 x-3|\) and \(g(x)=x+2\), solve:
(a) \(f(x)=g(x)\)
(b) \(f(x)>g(x)\)
(c) \(f(x) \leq g(x)\)

\section*{Applications and Extensions}
67. Express the fact that \(x\) differs from 10 by less than 2 as an inequality involving absolute value. Solve for \(x\).
68. Express the fact that \(x\) differs from -6 by less than 3 as an inequality involving absolute value. Solve for \(x\).
69. Express the fact that twice \(x\) differs from -1 by more than 5 as an inequality involving absolute value. Solve for \(x\).
70. Express the fact that twice \(x\) differs from 3 by more than 1 as an inequality involving absolute value. Solve for \(x\).
71. Tolerance A certain rod in an internal combustion engine is supposed to be 5.7 inches long. The tolerance on the rod is 0.0005 inch. If \(x\) represents the length of the rod, the acceptable lengths can be expressed as \(|x-5.7| \leq 0.0005\). Determine the acceptable lengths of the rod.
Source: Wiseco Piston
72. Tolerance A certain rod in an internal combustion engine is supposed to be 6.125 inches long. The tolerance on the
rod is 0.0005 inch. If \(x\) represents the length of the rod, the acceptable lengths can be expressed as \(|x-6.125| \leq 0.0005\). Determine the acceptable lengths of the rod.
73. IQ Scores According to the Stanford-Binet IQ test, a normal IQ score is 100 . It can be shown that anyone with an IQ \(x\) that satisfies the inequality \(\left|\frac{x-100}{15}\right|>1.96\) has an unusual IQ score. Determine the IQ scores that would be considered unusual.
74. Gestation Period The length of human pregnancy is about 266 days. It can be shown that a mother whose gestation period \(x\) satisfies the inequality \(\left|\frac{x-266}{16}\right|>1.96\) has an unusual length of pregnancy. Determine the lengths of pregnancy that would be considered unusual.

\section*{Discussion and Writing}
75. The equation \(|5 x+1|+7=5\) has no real solution. Explain why.
76. The inequality \(|2 x+5|+3>1\) has all real numbers as the solution set. Explain why.
77. The inequality \(|2 x-1| \leq 0\) has \(\left\{\frac{1}{2}\right\}\) as the solution set. Explain why.

\section*{Retain Your Knowledge}

Problems 78-81 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
78. Let \(f(x)=|2 x-7|\). Evaluate \(f(-4)\).
79. Solve the inequality \(2(x+4)+x<4(x+2)\).

Express the solution using interval notation. Graph the solution set.
80. Multiply \((5-i)(3+2 i)\). Write the answer in the form \(a+b i\).
81. Use the graph of the function to the right to find:
(a) The intercepts, if any.
(b) The domain and range.
(c) The intervals on which the function is increasing, decreasing, or constant.
(d) Whether the function is even, odd, or neither.

\section*{'Are You Prepared?' Answers}

2. The distance from the origin to \(a\) is \(|a|\) for any real number \(a\).
5. \(-3<x<4\)
6.

\section*{Chapter Review}

\section*{Things to Know}

\section*{Linear function (p. 119)}
\(f(x)=m x+b\)

Quadratic function (pp. 137, 151-152)
\(f(x)=a x^{2}+b x+c, a \neq 0\)

Average rate of change \(=m\)
Graph is a line with slope \(m\) and \(y\)-intercept \(b\).

Graph is a parabola that opens up if \(a>0\) and opens down if \(a<0\).
Vertex: \(\left(-\frac{b}{2 a}, f\left(-\frac{b}{2 a}\right)\right)\)
Axis of symmetry: \(x=-\frac{b}{2 a}\)
\(y\)-intercept: \(f(0)\)
\(x\)-intercept(s): If any, found by finding the real solutions of the equation \(a x^{2}+b x+c=0\)

\section*{Quadratic equation and quadratic formula}

The real solutions of the equation \(a x^{2}+b x+c=0, a \neq 0\), are given by \(x=\frac{-b \pm \sqrt{b^{2}-4 a c}}{2 a}\), provided \(b^{2}-4 a c \geq 0\). If \(b^{2}-4 a c<0\), there are no real solutions. (p. 141)
In the complex number system, the solutions of the equation \(a x^{2}+b x+c=0, a \neq 0\), are given by \(x=\frac{-b \pm \sqrt{b^{2}-4 a c}}{2 a}\). (p. 176)

\section*{Discriminant (pp. 142 and 177)}

If \(b^{2}-4 a c>0\), there are two distinct real solutions.
If \(b^{2}-4 a c=0\), there is one repeated real solution.
If \(b^{2}-4 a c<0\), there are no real solutions, but there are two distinct complex solutions that are not real; the complex solutions are conjugates of each other.

\section*{Absolute value}

If \(|u|=a, a>0\), then \(u=-a\) or \(u=a\). (p. 179)
If \(|u| \leq a, a>0\), then \(-a \leq u \leq a\). (p. 180)
If \(|u| \geq a, a>0\), then \(u \leq-a\) or \(u \geq a\). (p. 181)

\section*{Objectives}

\section*{Section You should be able to...}
2.11 Graph linear functions (p. 119)

2 Use average rate of change to identify linear functions (p. 119)
3 Determine whether a linear function is increasing, decreasing, or constant (p. 122)
4 Find the zero of a linear function (p. 123)
5 Build linear models from verbal descriptions (p. 124)
2.21 Draw and interpret scatter diagrams (p.130)

2 Distinguish between linear and nonlinear relations (p. 131)
© 3 Use a graphing utility to find the line of best fit (p. 132)
\(2.3 \quad 1\) Find the zeros of a quadratic function by factoring (p. 138)
2 Find the zeros of a quadratic function using the Square Root Method (p. 138)

3 Find the zeros of a quadratic function by completing the square (p. 140)
4 Find the zeros of a quadratic function using the quadratic formula (p. 141)

5 Find the point of intersection of two functions (p. 143)
6 Solve equations that are quadratic in form (p. 144)

In Problems 1-3:
(a) Determine the slope and y-intercept of each linear function.
(b) Graph each function. Label the intercepts.
(c) Determine the domain and the range of each function.
(d) Determine the average rate of change of each function.
(e) Determine whether the function is increasing, decreasing, or constant.
1. \(f(x)=2 x-5\)
2. \(h(x)=\frac{4}{5} x-6\)
3. \(G(x)=4\)
4. Find the zero and \(y\)-intercept of \(f(x)=2 x+14\).

Use the zero and \(y\)-intercept to graph \(f\).

In Problems 5 and 6, determine whether the function is linear or nonlinear. If the function is linear, determine the equation that defines \(y=f(x)\).
5.
\begin{tabular}{|cc|}
\hline \(\boldsymbol{x}\) & \(\boldsymbol{y}=\boldsymbol{f}(\boldsymbol{x})\) \\
\hline-2 & -7 \\
0 & 3 \\
1 & 8 \\
3 & 18 \\
6 & 33 \\
\hline
\end{tabular}
6.
\begin{tabular}{|cc|}
\hline\(x\) & \(y=g(x)\) \\
\hline-1 & -3 \\
0 & 4 \\
1 & 7 \\
2 & 6 \\
3 & 1 \\
\hline
\end{tabular}

In Problems 7-12, find the zeros of each quadratic function. What are the \(x\)-intercepts of the graph of the function?
7. \(f(x)=x^{2}+x-72\)
8. \(P(x)=6 x^{2}-13 x-5\)
9. \(g(x)=(x-3)^{2}-4\)
10. \(h(x)=9 x^{2}+6 x+1\)
11. \(G(x)=2 x^{2}-4 x-1\)
12. \(f(x)=-2 x^{2}+x+1\)

In Problems 13 and 14, solve \(f(x)=g(x)\). Graph each function and label the intersection points.
13. \(f(x)=(x-3)^{2} ; \quad g(x)=16\)
14. \(f(x)=x^{2}+4 x-5 ; \quad g(x)=4 x-1\)

In Problems 15-18, find the real zeros of each function. What are the \(x\)-intercepts of the graph of the function?
15. \(f(x)=x^{4}-5 x^{2}+4\)
16. \(F(x)=(x-3)^{2}-2(x-3)-48\)
17. \(h(x)=3 x-13 \sqrt{x}-10\)
18. \(f(x)=\left(\frac{1}{x}\right)^{2}-4\left(\frac{1}{x}\right)-12\)

In Problems 19-21, graph each function using transformations (shifting, compressing, stretching, and reflection).
19. \(f(x)=(x-2)^{2}+2\)
20. \(f(x)=-(x-4)^{2}\)
21. \(f(x)=2(x+1)^{2}+4\)

In Problems 22-26, (a) graph each quadratic function by determining whether its graph opens up or down and by finding its vertex, axis of symmetry, \(y\)-intercept, and x-intercepts, if any. (b) Determine the domain and the range of the function. (c) Determine where the function is increasing and where it is decreasing.
22. \(f(x)=(x-2)^{2}+2\)
23. \(f(x)=\frac{1}{4} x^{2}-16\)
24. \(f(x)=-4 x^{2}+4 x\)
25. \(f(x)=\frac{9}{2} x^{2}+3 x+1\)
26. \(f(x)=3 x^{2}+4 x-1\)

In Problems 27-29, determine whether the given quadratic function has a maximum value or a minimum value, and then find the value.
27. \(f(x)=3 x^{2}-6 x+4\)
28. \(f(x)=-x^{2}+8 x-4\)
29. \(f(x)=-3 x^{2}+12 x+4\)

\section*{In Problems 30 and 31, determine the quadratic function for which:}
30. Vertex is \((2,-4)\); \(y\)-intercept is -16
31. Vertex is \((-1,2)\); contains the point \((1,6)\)

In Problems 32 and 33, solve each quadratic inequality.
32. \(x^{2}+6 x-16<0\)
33. \(3 x^{2} \geq 14 x+5\)

In Problems 34-37, find the complex zeros of each quadratic function. Graph each function and label the intercepts.
34. \(f(x)=x^{2}+8\)
35. \(g(x)=x^{2}+2 x-4\)
36. \(p(x)=-2 x^{2}+4 x-3\)
37. \(f(x)=4 x^{2}+4 x+3\)

In Problems 38 and 39, solve each absolute value equation.
38. \(|2 x+3|=7\)
39. \(|2-3 x|+2=9\)

In Problems 40-43, solve each absolute value inequality. Express your answer using set-builder notation or interval notation. Graph the solution set.
40. \(|3 x+4|<\frac{1}{2}\)
41. \(|2 x-5| \geq 9\)
42. \(2+|2-3 x| \leq 4\)
43. \(1-|2-3 x|<-4\)
44. Comparing Phone Companies Marissa must decide between two companies as her long-distance phone provider. Company A charges a monthly fee of \(\$ 7.00\) plus \(\$ 0.06\) per minute, while Company B does not have a monthly fee but charges \(\$ 0.08\) per minute.
(a) Find a linear model that relates cost, \(C\), to total minutes on the phone, \(x\), for each company.
(b) Determine the number of minutes \(x\) for which the bill from Company A will equal the bill from Company B.
(c) For how many minutes \(x\) will the bill from Company B be less than the bill from Company A?
45. Demand Equation The price \(p\) (in dollars) and the quantity \(x\) sold of a certain product obey the demand equation
\[
x=1500-10 p
\]
(a) Find a model that expresses the revenue \(R\) as a function of the price \(p\).
(b) What is the domain of \(R\) ?
(c) What unit price should be used to maximize revenue?
(d) If this price is charged, what is the maximum revenue?
(e) How many units are sold at this price?
(f) What price should be charged to collect at least \(\$ 56,000\) in revenue?
46. Geometry The diagonal of a rectangle measures 10 inches. If the length is 2 inches more than the width, find the dimensions of the rectangle.
47. Minimizing Marginal Cost Callaway Golf Company has determined that the marginal cost \(C\) of manufacturing \(x\) Big Bertha golf clubs may be expressed by the quadratic function
\[
C(x)=4.9 x^{2}-617.4 x+19,600
\]
(a) How many clubs should be manufactured to minimize the marginal cost?
(b) At this level of production, what is the marginal cost?
48. Landscaping A landscape engineer has 200 feet of border to enclose a rectangular pond. What dimensions will result in the largest pond?
49. Geometry A rectangle has one vertex on the line \(y=10-x, x>0\), another at the origin, one on the positive \(x\)-axis, and one on the positive \(y\)-axis. Find the largest area \(A\) that can be enclosed by the rectangle.
50. Parabolic Arch Bridge A horizontal bridge is in the shape of a parabolic arch. Given the information shown in the figure, what is the height \(h\) of the arch 2 feet from shore?

51. Developing a Linear Model from Data The following data represent the price \(p\) and quantity demanded per day \(q\) of 24-in. LCD monitors.
\begin{tabular}{|cc|}
\hline Price (dollars), \(\boldsymbol{p}\) & Quantity Demanded, \(\boldsymbol{q}\) \\
\hline 150 & 100 \\
200 & 80 \\
250 & 60 \\
300 & 40 \\
\hline
\end{tabular}
(a) Plot the ordered pairs \((p, q)\) in a Cartesian plane.
(b) Show that quantity demanded \(q\) is a linear function of price \(p\).
(c) Determine the linear function that describes the relation between \(p\) and \(q\).
(d) What is the implied domain of the linear function?
(e) Graph the linear function in the Cartesian plane drawn in part (a).
(f) Interpret the slope.
(g) Interpret the values of the intercepts.
52. Bone Length Research performed at NASA, led by Dr. Emily R. Morey-Holton, measured the lengths of the right humerus and right tibia in 11 rats that were sent to space on Spacelab Life Sciences 2. The data below were collected.
\begin{tabular}{ll} 
& \begin{tabular}{l} 
Right Humerus \\
\((\mathbf{m m}), \boldsymbol{x}\)
\end{tabular} \\
\hline 24.80 & \begin{tabular}{l} 
Right Tibia \\
\((\mathbf{m m}), \boldsymbol{y}\)
\end{tabular} \\
\hline 24.59 & 36.05 \\
24.59 & 35.57 \\
24.29 & 34.57 \\
23.81 & 34.20 \\
24.87 & 37.73 \\
25.90 & 37.96 \\
26.11 & 37.46 \\
26.63 & 37.75 \\
26.31 & 38.50 \\
\hline 26.84 & \\
\hline
\end{tabular}

Source: NASA Life Sciences Data Archive
(a) Draw a scatter diagram of the data, treating length of the right humerus as the independent variable.
(b) Based on the scatter diagram, do you think that there is a linear relation between the length of the right humerus and the length of the right tibia?
(c) If the two variables appear to be linearly related, use a graphing utility to find the line of best fit that models the relation between length of the right humerus and length of the right tibia.
(d) Predict the length of the right tibia on a rat whose right humerus is 26.5 mm .
53. Advertising A small manufacturing firm collected the following data on advertising expenditures \(A\) (in thousands of dollars) and total revenue \(R\) (in thousands of dollars).
\begin{tabular}{|c|c|c|}
\hline  & Advertising Expenditures (\$1000s) & Total Revenue (\$1000s) \\
\hline & 20 & 6101 \\
\hline & 22 & 6222 \\
\hline & 25 & 6350 \\
\hline & 25 & 6378 \\
\hline & 27 & 6453 \\
\hline & 28 & 6423 \\
\hline & 29 & 6360 \\
\hline & 31 & 6231 \\
\hline
\end{tabular}
(a) Draw a scatter diagram of the data. Comment on the type of relation that may exist between the two variables.
(b) Use a graphing utility to find the quadratic function of best fit that models the relation between advertising expenditures and total revenue. Use this model to determine the optimal level of advertising.
(c) Use the model to predict the total revenue when the optimal level of advertising is spent.
(d) Use a graphing utility to draw a scatter diagram of the data, and then graph the quadratic function of best fit on the scatter diagram.

\section*{Chapter Test}

Chapter Test Prep Videos include step-by-step solutions to all chapter test exercises and can be found in MyMathLabl or on this text's You Tube" Channel. (search "SullivanPrecalcUC3e")
1. For the linear function \(f(x)=-4 x+3\) :
(a) Find the slope and \(y\)-intercept.
(b) Determine whether \(f\) is increasing, decreasing, or constant.
(c) Graph \(f\).
2. Determine whether the given function is linear or nonlinear If it is linear, determine the equation that defines \(y=f(x)\).
\begin{tabular}{|rr|}
\hline\(x\) & \(y\) \\
\hline-2 & 12 \\
-1 & 7 \\
0 & 2 \\
1 & -3 \\
2 & -8 \\
\hline
\end{tabular}

In Problems 3 and 4, find the zeros of each quadratic function.
3. \(f(x)=3 x^{2}-2 x-8\)
4. \(G(x)=-2 x^{2}+4 x+1\)
5. Given that \(f(x)=x^{2}+3 x\) and \(g(x)=5 x+3\), solve \(f(x)=g(x)\). Graph each function and label the points of intersection.
6. Find the real zeros of \(f(x)=(x-1)^{2}+5(x-1)+4\).
7. Graph \(f(x)=(x-3)^{2}-2\) using transformations.

\section*{In Problems 8 and 9:}
(a) Determine whether the graph opens up or down.
(b) Determine the vertex of the graph of the quadratic function.
(c) Determine the axis of symmetry of the graph of the quadratic function.
(d) Determine the intercepts of the graph of the quadratic function.
(e) Use the information in parts (a)-(d) to graph the quadratic function.
(f) Based on the graph, determine the domain and the range of the quadratic function.
(g) Based on the graph, determine where the function is increasing and where it is decreasing.
8. \(f(x)=3 x^{2}-12 x+4 \quad\) 9. \(g(x)=-2 x^{2}+4 x-5\)
10. Determine the quadratic function for the given graph.

11. Determine whether \(f(x)=-2 x^{2}+12 x+3\) has a maximum or a minimum value. Then find the maximum or minimum value.
12. Solve: \(x^{2}-10 x+24 \geq 0\)
13. Find the complex zeros of \(f(x)=2 x^{2}+4 x+5\).
14. Solve: \(|3 x+1|=8\)

In Problems 15 and 16, solve each absolute value inequality. Express your answer using set-builder notation or interval notation. Graph the solution set.
15. \(\left|\frac{x+3}{4}\right|<2\)
16. \(|2 x+3|-4 \geq 3\)

\section*{Cumulative Review}
1. Find the distance between the points \(P=(-1,3)\) and \(Q=(4,-2)\). Find the midpoint of the line segment \(P\) to \(Q\).
2. Which of the following points are on the graph of \(y=x^{3}-3 x+1\) ?
(a) \((-2,-1)\)
(b) \((2,3)\)
(c) \((3,1)\)
3. Solve the inequality \(5 x+3 \geq 0\) and graph the solution set.
4. Find the equation of the line containing the points \((-1,4)\) and \((2,-2)\). Express your answer in slope-intercept form, and graph the line.
5. Find the equation of the line perpendicular to the line \(y=2 x+1\) and containing the point \((3,5)\). Express your answer in slope-intercept form, and graph the line.
6. Graph the equation \(x^{2}+y^{2}-4 x+8 y-5=0\).
7. Determine whether the following relation represents a function: \(\{(-3,8),(1,3),(2,5),(3,8)\}\).
17. RV Rental The weekly rental cost of a 20 -foot recreational vehicle is \(\$ 129.50\) plus \(\$ 0.15\) per mile.
Source: westernrv.com
(a) Find a linear model that expresses the cost \(C\) as a function of miles driven \(m\).
(b) What is the rental cost if 860 miles are driven?
(c) How many miles were driven if the rental cost is \(\$ 213.80\) ?
18. The price \(p\) (in dollars) and the quantity \(x\) sold of a certain product obey the demand equation \(p=-\frac{1}{10} x+1000\).
(a) Find a model that expresses the revenue \(R\) as a function of \(x\).
(b) What is the revenue if 400 units are sold?
(c) What quantity \(x\) maximizes revenue? What is the maximum revenue?
(d) What price should the company charge to maximize revenue?
19. Consider these two data sets:

Set A
\begin{tabular}{|r|rrrrrrr|}
\hline \(\boldsymbol{x}\) & -2 & -1 & 0 & 0 & 1 & 2 & 2 \\
\cline { 1 - 1 } \(\boldsymbol{y}\) & 5 & 2 & 1 & -3 & -8 & -12 & -10 \\
\hline
\end{tabular}

Set B
\begin{tabular}{|r|rrrrrrr|}
\hline \(\boldsymbol{x}\) & -2 & -1 & 0 & 0 & 1 & 2 & 2 \\
\cline { 1 - 6 } \(\boldsymbol{y}\) & 10 & 4 & 2 & 3 & 5 & 10 & 12 \\
\hline
\end{tabular}

One data set follows a linear pattern, and one data set follows a quadratic relation.
(a) Draw a scatter diagram of each data set. Determine which is linear and which is quadratic. For the linear data, indicate whether the relation shows a positive or a negative slope. For the quadratic relation, indicate whether the quadratic function of best fit will open up or down.
(b) For the linear data set, find the line of best fit.
(c) For the quadratic data set, find the quadratic function of best fit.
11. Consider the function \(f(x)=\frac{x}{x+4}\).
(a) Is the point \(\left(1, \frac{1}{4}\right)\) on the graph of \(f\) ?
(b) If \(x=-2\), what is \(f(x)\) ? What point is on the graph of \(f\) ?
(c) If \(f(x)=2\), what is \(x\) ? What point is on the graph of \(f\) ?
12. Is the function \(f(x)=\frac{x^{2}}{2 x+1}\) even, odd, or neither?
13. Approximate the local maxima and the local minima of \(f(x)=x^{3}-5 x+1\) on \((-4,4)\). Determine where the function is increasing and where it is decreasing.
14. If \(f(x)=3 x+5\) and \(g(x)=2 x+1\),
(a) Solve \(f(x)=g(x)\).
(b) Solve \(f(x)>g(x)\).
15. For the graph of the function \(f\),

(a) Find the domain and the range of \(f\).
(b) Find the intercepts.
(c) Is the graph of \(f\) symmetric with respect to the \(x\)-axis, the \(y\)-axis, or the origin?
(d) Find \(f(2)\).
(e) For what value(s) of \(x\) is \(f(x)=3\) ?
(f) Solve \(f(x)<0\).
(g) Graph \(y=f(x)+2\)
(h) Graph \(y=f(-x)\).
(i) Graph \(y=2 f(x)\).
(j) Is \(f\) even, odd, or neither?
(k) Find the interval(s) on which \(f\) is increasing.

\section*{Chapter Projects}

\section*{(ค) Internet-based Project}
I. The Beta of a Stock You want to invest in the stock market but are not sure which stock to purchase. Information is the key to making an informed investment decision. One piece of information that many stock analysts use is the beta of the stock. Go to Wikipedia (http://en.wikipedia.org/wiki/ Beta_\%28finance\%29) and research what beta measures and what it represents.
1. Approximating the beta of a stock. Choose a well-known company such as Google or Coca-Cola. Go to a website such as Yahoo! Finance (http:///finance.yahoo.com/) and find the weekly closing price of the company's stock for the past year. Then find the closing price of the Standard \& Poor's 500 (S\&P500) for the same time period. To get the historical prices in Yahoo! Finance, click the price graph, choose Basic Chart, then scroll down and select Historical Prices. Choose the appropriate time
period and select Weekly. Finally, select Download to Spreadsheet. Repeat this for the S\&P500, and copy the data into the same spreadsheet. Finally, rearrange the data in chronological order. Be sure to expand the selection to sort all the data. Now, using the adjusted close price, compute the percentage change in price for each week using the formula \(\%\) change \(=\frac{P_{1}-P_{o}}{P_{o}}\). For example, if week 1 price is in cell D1 and week 2 price is in cell D 2 , then \% change \(=\frac{D 2-D 1}{D 1}\). Repeat this for the S\&P500 data.
2. Using Excel to draw a scatter diagram. Treat the percentage change in the S\&P500 as the independent variable and the percentage change in the stock you chose as the dependent variable. The easiest way to draw a scatter diagram in Excel is to place the two columns of data next to each other (for example, have the percentage change in the S\&P500 in column F and the percentage change in the stock you chose in column G). Then highlight the data and select the Scatter Diagram icon under Insert. Comment on the type of relation that appears to exist between the two variables.
3. Finding beta. To find beta requires that we find the line of best fit using least-squares regression. The easiest approach is to click inside the scatter diagram. Across the top of the screen you will see an option entitled "Chart Layouts." Select the option with a line drawn on the scatter diagram and \(f x\) labeled on the graph. The line of best fit appears on the scatter diagram. See an example on the next page.

The line of best fit for this data is \(y=0.9046 x+0.0024\). You may click on Chart Title or either axis title and insert the appropriate names. The beta is the slope of the line of best fit, 0.9046 . We interpret this by saying, "If the S\&P500 increases by \(1 \%\), then this stock will increase by \(0.9 \%\), on average." Find the beta of your stock and provide an interpretation. NOTE: Another way to use Excel to find the line of best fit requires using the Data Analysis Tool Pack under add-ins.

The following projects are available on the Instructor's Resource Center (IRC):
II. Cannons A battery commander uses the weight of a missile, its initial velocity, and the position of its gun to determine where the missile will travel.
III. First and Second Differences Finite differences provide a numerical method that is used to estimate the graph of an unknown function.
IV. CBL Experiment Computer simulation is used to study the physical properties of a bouncing ball.

\section*{Polynomial and Rational Functions}

\section*{Day Length}

Day length refers to the time each day from the moment the upper limb of the sun's disk appears above the horizon during sunrise to the moment when the upper limb disappears below the horizon during sunset. The length of a day depends upon the day of the year as well as the latitude of the location. Latitude gives the location of a point on Earth north or south of the equator. In the Internet Project at the end of this chapter, we use information from the chapter to investigate the relation between the length of day and latitude for a specific day of the year.

> (ค) - See the Internet-based Chapter Project I-

\section*{<A Look Back}

In Chapter 1, we began our discussion of functions. We defined domain, range, and independent and dependent variables, found the value of a function, and graphed functions. We continued our study of functions by listing the properties that a function might have, such as being even or odd, and created a library of functions, naming key functions and listing their properties, including their graphs.

In Chapter 2, we discussed linear functions and quadratic functions, which belong to the class of polynomial functions.

\section*{A Look Ahead>}

In this chapter, we look at two general classes of functions, polynomial functions and rational functions, and examine their properties. Polynomial functions are arguably the simplest expressions in algebra. For this reason, they are often used to approximate other, more complicated functions. Rational functions are ratios of polynomial functions.

\subsection*{3.1 Polynomial Functions and Models}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Polynomials (Appendix A, Section A.3, pp. A22-A30)
- Using a Graphing Utility to Approximate Local Maxima and Local Minima (Section 1.3, pp. 71-72)
- Graphing Techniques: Transformations (Section 1.5, pp. 89-97)
- Intercepts (Foundations, Section 2, pp. 11-12)
- Real Zeros of a Function (Section 1.2, pp. 59-60)

Now Work the 'Are You Prepared?' problems on page 207.
OBJECTIVES 1 Identify Polynomial Functions and Their Degree (p. 192)
2 Graph Polynomial Functions Using Transformations (p. 196)
3 Identify the Real Zeros of a Polynomial Function and Their Multiplicity (p. 197)
4 Analyze the Graph of a Polynomial Function (p. 204)
5 Build Cubic Models from Data (p. 206)

\section*{1 Identify Polynomial Functions and Their Degree}

In Chapter 2 we studied the linear function \(f(x)=m x+b\), which can be written as
\[
f(x)=a_{1} x+a_{0}
\]
and the quadratic function \(f(x)=a x^{2}+b x+c, a \neq 0\), which can be written as
\[
f(x)=a_{2} x^{2}+a_{1} x+a_{0} \quad a_{2} \neq 0
\]

Each of these functions is an example of a polynomial function.

DEFINITION

In Words
A polynomial function is the sum of monomials.

A polynomial function is a function of the form
\[
\begin{equation*}
f(x)=a_{n} x^{n}+a_{n-1} x^{n-1}+\cdots+a_{1} x+a_{0}, a_{n} \neq 0 \tag{1}
\end{equation*}
\]
where \(a_{n}, a_{n-1}, \ldots, a_{1}, a_{0}\) are real numbers and \(n\) is a nonnegative integer. The domain of a polynomial function is the set of all real numbers.
- The coefficients, \(a_{n}, a_{n-1}, \ldots, a_{1}, a_{0}\), are real numbers.
- The leading term is \(a_{n} x^{n} ; a_{n}\) is called the leading coefficient.
- The term \(a_{0}\) is called the constant term.
- The degree of a polynomial function is the largest power of \(x\) that appears.

A polynomial function is in standard form if the polynomial that defines the function is written in descending order of degree. A nonzero constant polynomial function, such as \(f(x)=3\), has degree 0 . However, the zero polynomial function \(f(x)=0\) is not assigned a degree.

Polynomial functions are among the simplest expressions in algebra. They are easy to evaluate: only addition and repeated multiplication are required. Because of this, they are often used to approximate other, more complicated functions. In this section, we investigate properties of this important class of functions.

\section*{EXAMPLE I Identifying Polynomial Functions}

Determine which of the following are polynomial functions. For those that are, state the degree; for those that are not, tell why not. Write each polynomial in standard form, and then identify the leading term and the constant term.
(a) \(p(x)=5 x^{3}-\frac{1}{4} x^{2}+7 x-9\)
(b) \(f(x)=x+2-3 x^{4}\)
(c) \(g(x)=\sqrt{x}\)
(d) \(h(x)=\frac{x^{2}-2}{x^{3}-1}\)
(e) \(G(x)=8\)
(f) \(H(x)=-2 x^{3}(x-1)^{2}\)

Solution (a) \(p\) is a polynomial function of degree 3, and it is already in standard form. The leading term is \(5 x^{3}\), and the constant term is -9 .
(b) \(f\) is a polynomial function of degree 4. Its standard form is \(f(x)=-3 x^{4}+x+2\). The leading term is \(-3 x^{4}\), and the constant term is 2 .
(c) \(g\) is not a polynomial function because \(g(x)=\sqrt{x}=x^{\frac{1}{2}}\), so the variable \(x\) is raised to the \(\frac{1}{2}\) power, which is not a nonnegative integer.
(d) \(h\) is not a polynomial function. It is the ratio of two distinct polynomials, and the polynomial in the denominator is of positive degree.
(e) \(G\) is a nonzero constant polynomial function so it is of degree 0 . The polynomial is in standard form. The leading term and the constant term are both 8.
(f) \(H(x)=-2 x^{3}(x-1)^{2}=-2 x^{3}\left(x^{2}-2 x+1\right)=-2 x^{5}+4 x^{4}-2 x^{3}\). Therefore, \(H\) is a polynomial function of degree 5 . The standard form is \(H(x)=-2 x^{5}+\)
\(4 x^{4}-2 x^{3}\), and the leading term is \(-2 x^{5}\). Since no constant term is shown, the constant term is 0 . Do you see a way to find the degree of \(H\) without multiplying it out?
-Now Work problems 15 and 19
We have already discussed in detail polynomial functions of degrees 0,1 , and 2 . See Table 1 for a summary of the properties of the graphs of these polynomial functions.

Table 1
\begin{tabular}{|llll|}
\hline Degree & Form & Name & Graph \\
\hline No degree & \(f(x)=0\) & Zero function & The \(x\)-axis \\
0 & \(f(x)=a_{0}, \quad a_{0} \neq 0\) & Constant function & Horizontal line with \(y\)-intercept \(a_{0}\) \\
1 & \(f(x)=a_{1} x+a_{0}, \quad a_{1} \neq 0\) & Linear function & \begin{tabular}{l} 
Nonvertical, nonhorizontal line \\

\end{tabular}

One objective of this section is to analyze the graph of a polynomial function. If you take a course in calculus, you will learn that the graph of every polynomial function is both smooth and continuous. By smooth, we mean that the graph contains no sharp corners or cusps; by continuous, we mean that the graph has no gaps or holes and can be drawn without lifting your pencil from the paper. See Figures 1(a) and (b).

Figure 1

(a) Graph of a polynomial function: smooth, continuous

(b) Cannot be the graph of a polynomial function

\section*{Power Functions}

We begin the analysis of the graph of a polynomial function by discussing power functions, a special kind of polynomial function.

DEFINITION

\section*{In Words}

A power function is defined by a single monomial.

A power function of degree \(\boldsymbol{n}\) is a monomial function of the form
\[
\begin{equation*}
f(x)=a x^{n} \tag{2}
\end{equation*}
\]
where \(a\) is a real number, \(a \neq 0\), and \(n>0\) is an integer.

Examples of power functions are
\[
\begin{array}{cccc}
f(x)=3 x & f(x)=-5 x^{2} & f(x)=8 x^{3} & f(x)=-5 x^{4} \\
\text { degree } 1 & \text { degree } 2 & \text { degree } 3 & \text { degree } 4
\end{array}
\]

The graph of a power function of degree \(1, f(x)=a x\), is a straight line, with slope \(a\), that passes through the origin. The graph of a power function of degree 2 , \(f(x)=a x^{2}\), is a parabola, with vertex at the origin, that opens up if \(a>0\) and down if \(a<0\).

If we know how to graph a power function of the form \(f(x)=x^{n}\), a compression or stretch and, perhaps, a reflection about the \(x\)-axis will enable us to obtain the graph of \(g(x)=a x^{n}\). Consequently, we shall concentrate on graphing power functions of the form \(f(x)=x^{n}\).

We begin with power functions of even degree of the form \(f(x)=x^{n}, n \geq 2\) and \(n\) even. The domain of \(f\) is the set of all real numbers, and the range is the set of nonnegative real numbers. Such a power function is an even function (do you see why?), so its graph is symmetric with respect to the \(y\)-axis. Its graph always contains the origin and the points \((-1,1)\) and \((1,1)\).

If \(n=2\), the graph is the familiar parabola \(y=x^{2}\) that opens up, with vertex at the origin. If \(n \geq 4\), the graph of \(f(x)=x^{n}, n\) even, will be closer to the \(x\)-axis than the parabola \(y=x^{2}\) if \(-1<x<1, x \neq 0\), and farther from the \(x\)-axis than the parabola \(y=x^{2}\) if \(x<-1\) or if \(x>1\). Figure 2(a) illustrates this conclusion. Figure 2(b) shows the graphs of \(y=x^{4}\) and \(y=x^{8}\) for comparison.

\section*{Figure 2}

Figure 2 shows that as \(n\) increases, the graph of \(f(x)=x^{n}, n \geq 2\) and \(n\) even, tends to flatten out near the origin and is steeper when \(x\) is far from 0 . For large \(n\), it may appear that the graph coincides with the \(x\)-axis near the origin, but it does not; the graph actually touches the \(x\)-axis only at the origin (see Table 2). Also, for large \(n\), it may appear that for \(x<-1\) or for \(x>1\) the graph is vertical, but it is not; it is only increasing very rapidly in these intervals. If the graphs were enlarged many times, these distinctions would be clear.
Table 2 \begin{tabular}{lllll|}
\cline { 2 - 4 } & \(\boldsymbol{x}=\mathbf{0 . 1}\) & \(\boldsymbol{x}=\mathbf{0 . 3}\) & \(\boldsymbol{x}=\mathbf{0 . 5}\) \\
\cline { 2 - 5 } & \(f(x)=x^{8}\) & \(10^{-8}\) & 0.0000656 & 0.0039063 \\
\(f(x)=x^{20}\) & \(10^{-20}\) & \(3.487 \cdot 10^{-11}\) & 0.000001 \\
\(f(x)=x^{40}\) & \(10^{-40}\) & \(1.216 \cdot 10^{-21}\) & \(9.095 \cdot 10^{-13}\) \\
\hline
\end{tabular}

\section*{Seeing the Concept}

Graph \(Y_{1}=x^{4}, Y_{2}=x^{8}\), and \(Y_{3}=x^{12}\) using the viewing rectangle \(-2 \leq x \leq 2,-4 \leq y \leq 16\). Then graph each again using the viewing rectangle \(-1 \leq x \leq 1,0 \leq y \leq 1\). See Figure 3.TRACE along one of the graphs to confirm that for \(x\) close to 0 , the graph is above the \(x\)-axis and that for \(x>0\), the graph is increasing.

Figure 3

\section*{Properties of Power Functions, \(f(x)=x^{n}, n\) Is a Positive Even Integer}
1. \(f\) is an even function, so its graph is symmetric with respect to the \(y\)-axis.
2. The domain is the set of all real numbers. The range is the set of nonnegative real numbers.
3. The graph always contains the points \((-1,1),(0,0)\), and \((1,1)\).
4. As the exponent \(n\) increases in magnitude, the graph is steeper when \(x<-1\) or \(x>1\); but for \(x\) near the origin, the graph tends to flatten out and lie closer to the \(x\)-axis.

Now we consider power functions of odd degree of the form \(f(x)=x^{n}, n \geq 3\) and \(n\) odd. The domain and the range of \(f\) are the set of real numbers. Such a power function is an odd function (do you see why?), so its graph is symmetric with respect to the origin. Its graph always contains the origin and the points \((-1,-1)\) and \((1,1)\).

The graph of \(f(x)=x^{n}\) when \(n=3\) has been shown several times and is repeated in Figure 4. If \(n \geq 5\), the graph of \(f(x)=x^{n}, n\) odd, will be closer to the \(x\)-axis than that of \(y=x^{3}\) if \(-1<x<1\) and farther from the \(x\)-axis than that of \(y=x^{3}\) if \(x<-1\) or if \(x>1\). Figure 4 illustrates this conclusion. Figure 5 shows the graph, of \(y=x^{5}\) and \(y=x^{9}\) for further comparison.

It appears that each graph coincides with the \(x\)-axis near the origin, but it does not; each graph actually crosses the \(x\)-axis at the origin. Also, it appears that as \(x\) increases, the graph becomes vertical, but it does not; each graph is just increasing very rapidly.

\section*{Seeing the Concept}

Graph \(Y_{1}=x^{3}, Y_{2}=x^{7}\), and \(Y_{3}=x^{11}\) using the viewing rectangle \(-2 \leq x \leq 2,-16 \leq y \leq 16\). Then graph each again using the viewing rectangle \(-1 \leq x \leq 1,-1 \leq y \leq 1\). See Figure 6. TRACE along one of the graphs to confirm that the graph is increasing and crosses the \(x\)-axis at the origin.

Figure 6

(a)

(b)

To summarize:

\section*{Properties of Power Functions, \(f(x)=x^{n}, n\) Is a Positive Odd Integer}
1. \(f\) is an odd function, so its graph is symmetric with respect to the origin.
2. The domain and the range are the set of all real numbers.
3. The graph always contains the points \((-1,-1),(0,0)\), and \((1,1)\).
4. As the exponent \(n\) increases in magnitude, the graph is steeper for \(x<-1\) or \(x>1\); but for \(x\) near the origin, the graph tends to flatten out and lie closer to the \(x\)-axis.

\section*{2 Graph Polynomial Functions Using Transformations}

The methods of shifting, compression, stretching, and reflection studied in Section 1.5, when used with the facts just presented, will enable us to graph polynomial functions that are transformations of power functions.

\section*{EXAMPLE 2 \\ Graphing a Polynomial Function Using Transformations}

Graph: \(f(x)=1-x^{5}\)
Solution It is helpful to rewrite \(f\) as \(f(x)=-x^{5}+1\). Figure 7 shows the required stages.
Figure 7

(a) \(y=x^{5}\)
(b) \(y=-x^{5}\)

\(\xrightarrow[\substack{\text { Add 1; } \\ \text { shift up } \\ \text { up }}]{ }\)
1 unit
(c) \(y=-x^{5}+1=1-x^{5}\)

\section*{EXAMPLE 3}

Graphing a Polynomial Function Using Transformations
Graph: \(f(x)=\frac{1}{2}(x-1)^{4}\)
Solution Figure 8 shows the required stages.

Figure 8

\section*{3 Identify the Real Zeros of a Polynomial Function and Their Multiplicity}

Figure 9 shows the graph of a polynomial function with four \(x\)-intercepts. Notice that at the \(x\)-intercepts, the graph must either cross the \(x\)-axis or touch the \(x\)-axis. Consequently, between consecutive \(x\)-intercepts the graph is either above the \(x\)-axis or below the \(x\)-axis.

Figure 9

If a polynomial function \(f\) is factored completely, it is easy to locate the \(x\)-intercepts of the graph by solving the equation \(f(x)=0\) using the Zero-Product Property. For example, if \(f(x)=(x-1)^{2}(x+3)\), then the solutions of the equation
\[
f(x)=(x-1)^{2}(x+3)=0
\]
are identified as 1 and -3 . That is, \(f(1)=0\) and \(f(-3)=0\).
Recall that if \(f\) is a function and \(r\) is a real number for which \(f(r)=0\), then \(r\) is called a real zero of \(f\). As a consequence of this definition, the following statements are equivalent.
1. \(r\) is a real zero of a polynomial function \(f\).
2. \(r\) is an \(x\)-intercept of the graph of \(f\).
3. \(x-r\) is a factor of \(f\).
4. \(r\) is a solution to the equation \(f(x)=0\).

Thus the real zeros of a polynomial function are the \(x\)-intercepts of its graph, and they are found by solving the equation \(f(x)=0\).

\section*{EXAMPLE 4 Finding a Polynomial Function from Its Zeros}
(a) Find a polynomial function of degree 3 whose zeros are \(-3,2\), and 5 .

\section*{Solution}

Figure 10

(b) Use a graphing utility to graph the polynomial found in part (a) to verify your result.
(a) If \(r\) is a real zero of a polynomial function \(f\), then \(x-r\) is a factor of \(f\). This means that \(x-(-3)=x+3, x-2\), and \(x-5\) are factors of \(f\). As a result, any polynomial function of the form
\[
f(x)=a(x+3)(x-2)(x-5)
\]
where \(a\) is a nonzero real number, qualifies. The value of \(a\) causes a stretch, compression, or reflection, but it does not affect the \(x\)-intercepts of the graph. Do you know why?
(b) We choose to graph \(f\) with \(a=1\). Then
\[
f(x)=(x+3)(x-2)(x-5)=x^{3}-4 x^{2}-11 x+30
\]

Figure 10 shows the graph of \(f\). Notice that the \(x\)-intercepts are \(-3,2\), and 5 .

\section*{Seeing the Concept}

Graph the function found in Example 4 for \(a=2\) and \(a=-1\). Does the value of \(a\) affect the zeros of \(f\) ? How does the value of \(a\) affect the graph of \(f\) ?
am Now Work problem 41
If the same factor \(x-r\) occurs more than once, \(r\) is called a repeated, or multiple, zero of \(f\). More precisely, we have the following definition.

\section*{DEFINITION}

If \((x-r)^{m}\) is a factor of a polynomial \(f\), and \((x-r)^{m+1}\) is not a factor of \(f\), then \(r\) is called a zero of multiplicity \(\boldsymbol{m}\) of \(\boldsymbol{f} .^{*}\)

\section*{EXAMPLE 5 Identifying Zeros and Their Multiplicities}

For the polynomial
\[
f(x)=5 x^{2}(x+2)\left(x-\frac{1}{2}\right)^{4}
\]
-2 is a zero of multiplicity 1 because the exponent on the factor \(x+2\) is 1 . 0 is a zero of multiplicity 2 because the exponent on the factor \(x\) is 2 .
\(\frac{1}{2}\) is a zero of multiplicity 4 because the exponent on the factor \(x-\frac{1}{2}\) is 4 .
am Now Work problem 49(a)
Suppose that it is possible to factor completely a polynomial function and, as a result, locate all the \(x\)-intercepts of its graph (the real zeros of the function). These \(x\)-intercepts then divide the \(x\)-axis into open intervals, and on each such interval, the graph of the polynomial will be either above or below the \(x\)-axis over the entire interval. Let's look at an example.

\section*{EXAMPLE 6 Graphing a Polynomial Using Its x-Intercepts}

Consider the following polynomial: \(f(x)=(x+1)^{2}(x-2)\)
(a) Find the \(x\) - and \(y\)-intercepts of the graph of \(f\).
(b) Use the \(x\)-intercepts to find the intervals on which the graph of \(f\) is above the \(x\)-axis and the intervals on which the graph of \(f\) is below the \(x\)-axis.
(c) Locate other points on the graph, and connect all the points plotted with a smooth, continuous curve.

Solution (a) The \(y\)-intercept is \(f(0)=(0+1)^{2}(0-2)=-2\). The \(x\)-intercepts satisfy the equation
\[
f(x)=(x+1)^{2}(x-2)=0
\]
from which we find
\[
\begin{aligned}
(x+1)^{2} & =0 \quad \text { or } \quad x-2=0 \\
x & =-1 \quad \text { or } \quad x=2
\end{aligned}
\]

The \(x\)-intercepts are -1 and 2 .
(b) The two \(x\)-intercepts divide the \(x\)-axis into three intervals:
\[
(-\infty,-1) \quad(-1,2) \quad(2, \infty)
\]

Since the graph of \(f\) crosses or touches the \(x\)-axis only at \(x=-1\) and \(x=2\), it follows that the graph of \(f\) is either above the \(x\)-axis \([f(x)>0]\) or below the \(x\)-axis \([f(x)<0]\) on each of these three intervals. To see where the graph lies, we need only pick a number in each interval, evaluate \(f\) there, and see whether the value is positive (above the \(x\)-axis) or negative (below the \(x\)-axis). See Table 3 .
(c) In constructing Table 3, we obtained three additional points on the graph: \((-2,-4),(1,-4)\), and \((3,16)\). Figure 11 illustrates these points, the intercepts, and a smooth, continuous curve (the graph of \(f\) ) connecting them.

\section*{Table 3}
\begin{tabular}{|llll|}
\hline & \multicolumn{2}{c|}{-1} & \multicolumn{2}{c|}{ ? } \\
\cline { 2 - 4 } & \multicolumn{2}{c|}{\(x\)} \\
\hline Interval & \((-\infty,-1)\) & \((-1,2)\) & \((2, \infty)\) \\
Number chosen & -2 & 1 & 3 \\
Value of \(\boldsymbol{f}\) & \(f(-2)=-4\) & \(f(1)=-4\) & \(f(3)=16\) \\
Location of graph & Below \(x\)-axis & Below \(x\)-axis & Above \(x\)-axis \\
Point on graph & \((-2,-4)\) & \((1,-4)\) & \((3,16)\) \\
\hline
\end{tabular}

Figure 11

Look again at Table 3. Since the graph of \(f(x)=(x+1)^{2}(x-2)\) is below the \(x\)-axis on both sides of -1 , the graph of \(f\) touches the \(x\)-axis at \(x=-1\), a zero of multiplicity 2 . Since the graph of \(f\) is below the \(x\)-axis to the left of 2 and above the \(x\)-axis to the right of 2 , the graph of \(f\) crosses the \(x\)-axis at \(x=2\), a zero of multiplicity 1 .

This suggests the following results:

\section*{If \(\boldsymbol{r}\) is a Zero of Even Multiplicity}

Numerically: The sign of \(f(x)\) does not change from one side to the other side of \(r\).
Graphically: The graph of \(f\) touches the \(x\)-axis at \(r\).

\section*{If \(r\) is a Zero of Odd Multiplicity}

Numerically: The sign of \(f(x)\) changes from one side to the other side of \(r\).
Graphically: The graph of \(f\) crosses the \(x\)-axis at \(r\).
```

Now Work problem 49(b)

```

\section*{Turning Points}

Look again at Figure 11. We cannot be sure just how low the graph actually goes between \(x=-1\) and \(x=2\). But we do know that somewhere in the interval \((-1,2)\) the graph of \(f\) must change direction (from decreasing to increasing). The points at which a graph changes direction are called turning points.* Each turning point yields a local maximum or local minimum (see Section 1.3). The following result from calculus tells us the maximum number of turning points that the graph of a polynomial function can have.
*Graphing utilities can be used to approximate turning points. For most polynomials, calculus is needed to find the exact turning points.

\section*{THEOREM}

\section*{Turning Points}

If \(f\) is a polynomial function of degree \(n\), then the graph of \(f\) has at most \(n-1\) turning points.
If the graph of a polynomial function \(f\) has \(n-1\) turning points, then the degree of \(f\) is at least \(n\).

Based on the first part of the theorem, a polynomial function of degree 5 will have at most \(5-1=4\) turning points. Based on the second part of the theorem, if the graph of a polynomial function has three turning points, then its degree must be at least 4 .

\section*{Exploration}

A graphing utility can be used to locate the turning points of a graph. Graph \(Y_{1}=(x+1)^{2}(x-2)\). Use MINIMUM to find the location of the turning point for \(0<x<2\). See Figure 12.

Figure 12

am Now Work problem 49(c)

\section*{EXAMPLE 7 Identifying the Graph of a Polynomial Function}

Which of the graphs in Figure 13 could be the graph of a polynomial function? For those that could, list the real zeros and state the least degree the polynomial can have. For those that could not, say why not.

Figure 13

(a)

(b)

(c)

(d)

Solution (a) The graph in Figure 13(a) cannot be the graph of a polynomial function because of the gap that occurs at \(x=-1\). Remember, the graph of a polynomial function is continuous-no gaps or holes. See Figure 1 on page 193.
(b) The graph in Figure 13(b) could be the graph of a polynomial function because the graph is smooth and continuous. It has three real zeros: \(-2,1\), and 2 . Since the graph has two turning points, the degree of the polynomial function must be at least 3 .
(c) The graph in Figure 13(c) cannot be the graph of a polynomial function because of the cusp at \(x=1\). Remember, the graph of a polynomial function is smooth.
(d) The graph in Figure 13(d) could be the graph of a polynomial function. It has two real zeros: -2 and 1 . Since the graph has three turning points, the degree of the polynomial function is at least 4.

\section*{End Behavior}

One last remark about Figure 11 on page 199. For very large values of \(x\), either positive or negative, the graph of \(f(x)=(x+1)^{2}(x-2)\) looks like the graph of \(y=x^{3}\). To see why, we write \(f\) in the form
\[
f(x)=(x+1)^{2}(x-2)=x^{3}-3 x-2=x^{3}\left(1-\frac{3}{x^{2}}-\frac{2}{x^{3}}\right)
\]

Now, for large values of \(x\), either positive or negative, the terms \(\frac{3}{x^{2}}\) and \(\frac{2}{x^{3}}\) are close to 0 , so for large values of \(x\),
\[
f(x)=x^{3}-3 x-2=x^{3}\left(1-\frac{3}{x^{2}}-\frac{2}{x^{3}}\right) \approx x^{3}
\]

The behavior of the graph of a function for large values of \(x\), either positive or negative, is referred to as its end behavior.

\section*{THEOREM}

\section*{In Words}

The end behavior of a polynomial function resembles that of its leading term.

\section*{End Behavior}

For large values of \(x\), either positive or negative, the graph of the polynomial function
\[
f(x)=a_{n} x^{n}+a_{n-1} x^{n-1}+\cdots+a_{1} x+a_{0}
\]
resembles the graph of the power function
\[
y=a_{n} x^{n}
\]

For example, if \(f(x)=-2 x^{3}+5 x^{2}+x-4\), then the graph of \(f\) will behave like the graph of \(y=-2 x^{3}\) for very large values of \(x\), either positive or negative. We can see that the graphs of \(f\) and \(y=-2 x^{3}\) "behave" the same by considering Table 4 and Figure 14.
Table 4 \begin{tabular}{c|rrr|}
\cline { 2 - 4 } & \multicolumn{1}{|c|}{\(\boldsymbol{x}\)} & \(\boldsymbol{f}(\boldsymbol{x})\) & \(\boldsymbol{y}=-\mathbf{2 x ^ { 3 }}\) \\
\cline { 2 - 4 } & 10 & \(-1,494\) & \(-2,000\) \\
100 & \(-1,949,904\) & \(-2,000,000\) \\
500 & \(-248,749,504\) & \(-250,000,000\) \\
1,000 & \(-1,994,999,004\) & \(-2,000,000,000\) \\
\hline
\end{tabular}

Figure 14

Notice that as \(x\) becomes a larger and larger positive number, the values of \(f\) become larger and larger negative numbers. When this happens, we say that \(f\) is unbounded in the negative direction. Rather than using words to describe the behavior of the graph of the function, we explain its behavior using notation. We can symbolize "the value of \(f\) becomes a larger and larger negative number as \(x\) becomes a larger and larger positive number" by writing \(f(x) \rightarrow-\infty\) as \(x \rightarrow \infty\) (read "the values of \(f\) approach negative infinity as \(x\) approaches infinity"). In calculus, limits are used to convey these ideas. There we use the symbolism \(\lim _{x \rightarrow \infty} f(x)=-\infty\), read "the limit of \(f(x)\) as \(x\) approaches infinity equals negative infinity", to mean that \(f(x) \rightarrow-\infty\) as \(x \rightarrow \infty\).
\(\int \ln\) Words Infinity \((\infty)\) or negative infinity \((-\infty)\) are not numbers. They are symbols that represent unbounded behavior.

When we say the value of a limit equals infinity (or negative infinity), we mean that the values of the function are unbounded in the positive (or negative) direction and call the limit an infinite limit. Also based on Figure 14, we see that \(\lim _{x \rightarrow-\infty} f(x)=\infty\). (What does this mean in words?) When we discuss limits as \(x\) becomes unbounded in the negative direction or unbounded in the positive direction, we are discussing limits at infinity.

Look back at Figures 2 and 4. Based on the preceding theorem and the previous discussion on power functions, the end behavior of a polynomial function can be of only four types. See Figure 15.

Figure 15
\[
\text { End behavior of } f(x)=a_{n} x^{n}+a_{n-1} x^{n-1}+\cdots+a_{1} x+a_{0}
\]

For example, if \(f(x)=-2 x^{4}+x^{3}+4 x^{2}-7 x+1\), the graph of \(f\) will resemble the graph of the power function \(y=-2 x^{4}\) for large \(|x|\). The graph of \(f\) will behave like Figure 15(b) for large \(|x|\).
-Now Work problem 49(d)

\section*{EXAMPLE 8 Identifying the Graph of a Polynomial Function}

Which of the graphs in Figure 16 could be the graph of
\[
f(x)=x^{4}+a x^{3}+b x^{2}-5 x-6
\]
where \(a>0, b>0\) ?

Figure 16

(a)

(b)

(c)

(d)

Solution The \(y\)-intercept of \(f\) is \(f(0)=-6\). We can eliminate the graph in Figure 16(a), whose \(y\)-intercept is positive.

We are not able to solve \(f(x)=0\) to find the \(x\)-intercepts of \(f\), so we move on to investigate the turning points of each graph. Since \(f\) is of degree 4 , the graph of \(f\) has at most 3 turning points. We eliminate the graph in Figure 16(c) because that graph has 5 turning points.

Now we look at end behavior. For large values of \(x\), the graph of \(f\) will behave like the graph of \(y=x^{4}\). This eliminates the graph in Figure 16(d), whose end behavior is like the graph of \(y=-x^{4}\).

Only the graph in Figure 16(b) could be the graph of
\[
f(x)=x^{4}+a x^{3}+b x^{2}-5 x-6
\]
where \(a>0, b>0\).

\section*{EXAMPLE 9 Writing a Polynomial Function from Its Graph}

Write a polynomial function whose graph is shown in Figure 17 (use the smallest degree possible).

Figure 17

Solution The \(x\)-intercepts are \(-2,0\), and 2 . Therefore, the polynomial must have factors of \((x+2), x\), and \((x-2)\), respectively. There are three turning points, so the degree of the polynomial must be at least 4 . The graph touches the \(x\)-axis at \(x=-2\), so -2 must have an even multiplicity. The graph crosses the \(x\)-axis at \(x=0\) and \(x=2\), so 0 and 2 must have odd multiplicities. Using the smallest degree possible ( 1 for odd multiplicity and 2 for even multiplicity), we can write
\[
f(x)=a x(x+2)^{2}(x-2)
\]

All that remains is to find the leading coefficient, \(a\). From Figure 17 , the point \((-1,6)\) must lie on the graph. Thus,
\[
\begin{aligned}
& 6=a(-1)(-1+2)^{2}(-1-2) \\
& 6=3 a \\
& 2=a
\end{aligned}
\]

The polynomial function \(f(x)=2 x(x+2)^{2}(x-2)\) would have the graph in Figure 17.
Check: Graph \(Y_{1}=2 x(x+2)^{2}(x-2)\) using a graphing utility to verify this result.

\section*{SUMMARY}

Graph of a Polynomial Function \(f(x)=a_{n} x^{n}+a_{n-1} x^{n-1}+\cdots+a_{1} x+a_{0} \quad a_{n} \neq 0\)
Degree of the polynomial function \(f: n\)
Graph is smooth and continuous.
Maximum number of turning points: \(n-1\)
At a zero of even multiplicity: The graph of \(f\) touches the \(x\)-axis.
At a zero of odd multiplicity: The graph of \(f\) crosses the \(x\)-axis.
Between zeros, the graph of \(f\) is either above or below the \(x\)-axis.
End behavior: For large \(|x|\), the graph of \(f\) behaves like the graph of \(y=a_{n} x^{n}\).
\(y\)-intercept: \(f(0)=a_{0}\).

\section*{4 Analyze the Graph of a Polynomial Function}

\section*{EXAMPLE 10 How to Analyze the Graph of a Polynomial Function}

Analyze the graph of the polynomial function \(f(x)=(2 x+1)(x-3)^{2}\).

\section*{Step-by-Step Solution}

Step 1: Determine the end behavior of the graph of the function.

Expand the polynomial to write it in the form
\[
\begin{array}{rlrl}
f(x) & =a_{n} x^{n}+a_{n-1} x^{n-1}+\cdots+a_{1} x+a_{0} \\
f(x) & =(2 x+1)(x-3)^{2} & & \\
& =(2 x+1)\left(x^{2}-6 x+9\right) & & \\
& =2 x^{3}-12 x^{2}+18 x+x^{2}-6 x+9 & & \text { Multiply. } \\
& =2 x^{3}-11 x^{2}+12 x+9 & & \text { Combine like terms. }
\end{array}
\]

The polynomial function \(f\) is of degree 3 . The graph of \(f\) behaves like \(y=2 x^{3}\) for large values of \(|x|\).

Step 2: Find the \(x\) - and \(y\)-intercepts of the graph of the function.

The \(y\)-intercept is \(f(0)=9\). To find the \(x\)-intercepts, solve \(f(x)=0\).
\[
\begin{array}{rlrlrl}
f(x) & =0 & & & \\
(2 x+1)(x-3)^{2} & =0 & & & \\
2 x+1 & =0 & \text { or } & (x-3)^{2} & =0 \\
x & =-\frac{1}{2} & \text { or } & x-3 & =0 \\
x & =3
\end{array}
\]

The \(x\)-intercepts are \(-\frac{1}{2}\) and 3 .

Step 3: Determine the zeros of the function and their multiplicity. Use this information to determine whether the graph crosses or touches the \(x\)-axis at each \(x\)-intercept.

The zeros of \(f\) are \(-\frac{1}{2}\) and 3. The zero \(-\frac{1}{2}\) is a zero of multiplicity 1 , so the graph of \(f\) crosses the \(x\)-axis at \(x=-\frac{1}{2}\). The zero 3 is a zero of multiplicity 2 , so the graph of \(f\) touches the \(x\)-axis at \(x=3\).

Step 4: Determine the maximum number of turning points on the graph of the function.

Because the polynomial function is of degree 3 (Step 1), the graph of the function will have at most \(3-1=2\) turning points.

Step 5: Put all the information from Steps 1 through 4 together to obtain the graph of \(f\).

Figure 18(a) illustrates the information obtained from Steps 1 through 4. We evaluate \(f\) at \(-1,1\), and 4 to help establish the scale on the \(y\)-axis. The graph of \(f\) is given in Figure 18(b).

Figure 18

(a)

(b)

\section*{SUMMARY}

\section*{Analyzing the Graph of a Polynomial Function}

STEP 1: Determine the end behavior of the graph of the function.
STEP 2: Find the \(x\) - and \(y\)-intercepts of the graph of the function.
STEP 3: Determine the zeros of the function and their multiplicity. Use this information to determine whether the graph crosses or touches the \(x\)-axis at each \(x\)-intercept.
STEP 4: Determine the maximum number of turning points on the graph of the function.
STEP 5: Use the information in Steps 1 through 4 to draw a complete graph of the function.
an Now Work problem 73

For polynomial functions that have noninteger coefficients and for polynomials that are not easily factored, we utilize the graphing utility early in the analysis. This is because the amount of information that can be obtained from algebraic analysis is limited.

\section*{EXAMPLE II How to Use a Graphing Utility to Analyze the Graph} of a Polynomial Function

Analyze the graph of the polynomial function
\[
f(x)=x^{3}+2.48 x^{2}-4.3155 x+2.484406
\]

The polynomial function \(f\) is of degree 3. The graph of \(f\) behaves like \(y=x^{3}\) for large values of \(|x|\).

Step 2: Graph the function using a graphing utility.

See Figure 19 for the graph of \(f\).
Figure 19

Step 3: Use a graphing utility to approximate the \(x\)-and \(y\)-intercepts of the graph.

The \(y\)-intercept is \(f(0)=2.484406\). In Example 10, the polynomial function was factored, so it was easy to find the \(x\)-intercepts algebraically. However, it is not readily apparent how to factor \(f\) in this example. Therefore, we use a graphing utility's ZERO ( or ROOT or SOLVE) feature and find the lone \(x\)-intercept to be -3.79 , rounded to two decimal places.

Step 4: Use a graphing utility to create a TABLE to find points on the graph around each x-intercept.

Table 5 shows values of \(x\) on each side of the \(x\)-intercept. The points \((-4,-4.57)\) and \((-2,13.04)\) are on the graph.

Table 5
\begin{tabular}{|c|c|c|}
\hline \(X\) & W1 & \\
\hline -4 & 4.574
13.055 & \\
\hline \multicolumn{3}{|l|}{\(\cdots+8 \times 2+482-4 . \ldots\)} \\
\hline
\end{tabular}

Step 5: Approximate the turning points of the graph.

From the graph of \(f\) shown in Figure 19, we can see that \(f\) has two turning points. Using MAXIMUM one turning point is at \((-2.28,13.36)\), rounded to two decimal places. Using MINIMUM the other turning point is at \((0.63,1)\), rounded to two decimal places.

Step 6: Use the information in Steps 1 through 5 to draw a complete graph of the function by hand.

Figure 20 shows a graph of \(f\) using the information in Steps 1 through 5.
Figure 20

Step 7: Find the domain and the range of the function.

The domain and the range of \(f\) are the set of all real numbers.

Step 8: Use the graph to determine where the function is increasing and where it is decreasing.

Based on the graph, \(f\) is increasing on the intervals \((-\infty,-2.28)\) and \((0.63, \infty)\). Also, \(f\) is decreasing on the interval \((-2.28,0.63)\).

\section*{SUMMARY}

\section*{Using a Graphing Utility to Analyze the Graph of a Polynomial Function}

STEP 1: Determine the end behavior of the graph of the function.
STEP 2: Graph the function using a graphing utility.
STEP 3: Use a graphing utility to approximate the \(x\) - and \(y\)-intercepts of the graph.
STEP 4: Use a graphing utility to create a TABLE to find points on the graph around each \(x\)-intercept.
STEP 5: Approximate the turning points of the graph.
STEP 6: Use the information in Steps 1 through 5 to draw a complete graph of the function by hand.
Step 7: Find the domain and the range of the function.
STEP 8: Use the graph to determine where the function is increasing and where it is decreasing.
m Now Work problem 97

\section*{5 Build Cubic Models from Data}

In Section 2.2 we found the line of best fit from data, and in Section 2.6 we found the quadratic function of best fit. It is also possible to find polynomial functions of best fit. However, most statisticians do not recommend finding polynomials of best fit of degree higher than 3.

Data that follow a cubic relation should look like Figure 21(a) or (b).
Figure 21

(a)

\section*{EXAMPLE 12 A Cubic Function of Best Fit}

The data in Table 6 represent the weekly cost \(C\) (in thousands of dollars) of printing \(x\) thousand textbooks.
(a) Draw a scatter diagram of the data using \(x\) as the independent variable and \(C\) as the dependent variable. Comment on the type of relation that may exist between the variables \(x\) and \(C\).
(b) Using a graphing utility, find the cubic function of best fit \(C=C(x)\) that models the relation between number of texts and cost.
(c) Graph the cubic function of best fit on your scatter diagram.
(d) Use the function found in part (b) to predict the cost of printing 22 thousand texts per week.

\section*{Solution}
(a) Figure 22 shows the scatter diagram. A cubic relation may exist between the two variables.
(b) Upon executing the CUBIC REGression program, we obtain the results shown in Figure 23. The output that the utility provides shows us the equation \(y=a x^{3}+b x^{2}+c x+d\). The cubic function of best fit to the data is \(C(x)=0.0155 x^{3}-0.5951 x^{2}+9.1502 x+98.4327\).
(c) Figure 24 shows the graph of the cubic function of best fit on the scatter diagram. The function fits the data reasonably well.

Figure 22

Figure 23

Figure 24

(d) We evaluate the function \(C(x)\) at \(x=22\).
\[
C(22)=0.0155(22)^{3}-0.5951(22)^{2}+9.1502(22)+98.4327 \approx 176.8
\]

The model predicts that the cost of printing 22 thousand textbooks in a week will be 176.8 thousand dollars - that is \(\$ 176,800\).

\subsection*{3.1 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. The intercepts of the equation \(9 x^{2}+4 y=36\) are \(\qquad\) . (pp. 11-12)
2. Is the expression \(4 x^{3}-3.6 x^{2}-\sqrt{2}\) a polynomial? If so, what is its degree? (pp. A22-A24)
3. To graph \(y=x^{2}-4\), you would shift the graph of \(y=x^{2}\) \(\qquad\) a distance of \(\qquad\) units. (pp. 89-90)
4. Use a graphing utility to approximate (rounded to two decimal places) the local maxima and the local minima of \(f(x)=x^{3}-2 x^{2}-4 x+5\), for \(-3<x<3\). (pp. 71-72)
5. True or False The \(y\)-intercepts of the graph of a function are also the zeros of the function. (pp. 59-60)
6. If \(g(5)=0\), what point is on the graph of \(g\) ? What is the \(x\)-intercept of the graph of \(g\) ? (pp. 59-60)

\section*{Concepts and Vocabulary}
7. The graph of every polynomial function is both and \(\qquad\) .
8. If \(r\) is a real zero of even multiplicity of a function \(f\), then the graph of \(f\) \(\qquad\) (crosses/touches) the \(x\)-axis at \(r\).
9. The graphs of power functions of the form \(f(x)=x^{n}\), where \(n\) is an even integer, always contain the points
\(\qquad\) , \(\qquad\) , and \(\qquad\) -
10. If \(r\) is a solution to the equation \(f(x)=0\), name three additional statements that can be made about \(f\) and \(r\), assuming \(f\) is a polynomial function.
11. The points at which a graph changes direction (from increasing to decreasing or decreasing to increasing) are called \(\qquad\) .
12. The graph of the function \(f(x)=3 x^{4}-x^{3}+5 x^{2}-2 x-7\) will behave like the graph of \(\qquad\) for large values of \(|x|\).
13. If \(f(x)=-2 x^{5}+x^{3}-5 x^{2}+7\), then \(\lim _{x \rightarrow-\infty} f(x)=\) \(\qquad\) and \(\lim _{x \rightarrow \infty} f(x)=\) \(\qquad\) \(-\)
14. Explain what the notation \(\lim _{x \rightarrow \infty} f(x)=-\infty\) means.

\section*{Skill Building}

In Problems 15-26, determine which functions are polynomial functions. For those that are, state the degree. For those that are not, tell why not. Write each polynomial in standard form. Then identify the leading term and the constant term.
15. \(f(x)=4 x+x^{3}\)
16. \(f(x)=5 x^{2}+4 x^{4}\)
17. \(g(x)=\frac{1-x^{2}}{2}\)
18. \(h(x)=3-\frac{1}{2} x\)
19. \(f(x)=1-\frac{1}{x}\)
20. \(f(x)=x(x-1)\)
21. \(g(x)=x^{3 / 2}-x^{2}+2\)
22. \(h(x)=\sqrt{x}(\sqrt{x}-1)\)
23. \(f(x)=5 x^{4}-\pi x^{3}+\frac{1}{2}\)
24. \(f(x)=\frac{x^{2}-5}{x^{3}}\)
25. \(G(x)=2(x-1)^{2}\left(x^{2}+1\right)\)
26. \(G(x)=-3 x^{2}(x+2)^{3}\)

In Problems 27-40, use transformations of the graph of \(y=x^{4}\) or \(y=x^{5}\) to graph each function.
27. \(f(x)=(x+1)^{4}\)
28. \(f(x)=(x-2)^{5}\)
29. \(f(x)=x^{5}-3\)
30. \(f(x)=x^{4}+2\)
31. \(f(x)=\frac{1}{2} x^{4}\)
32. \(f(x)=3 x^{5}\)
33. \(f(x)=-x^{5}\)
34. \(f(x)=-x^{4}\)
35. \(f(x)=(x-1)^{5}+2\)
36. \(f(x)=(x+2)^{4}-3\)
37. \(f(x)=2(x+1)^{4}+1\)
38. \(f(x)=\frac{1}{2}(x-1)^{5}-2\)
39. \(f(x)=4-(x-2)^{5}\)
40. \(f(x)=3-(x+2)^{4}\)

In Problems 41-48, form a polynomial function whose real zeros and degree are given. Answers will vary depending on the choice of a leading coefficient.
41. Zeros: \(-1,1,3\); degree 3
42. Zeros: -2, 2, 3; degree 3
43. Zeros: \(-3,0,4\); degree 3
44. Zeros: \(-4,0,2\); degree 3
45. Zeros: \(-4,-1,2,3\); degree 4
46. Zeros: \(-3,-1,2,5\); degree 4
47. Zeros: -1 , multiplicity \(1 ; 3\), multiplicity 2 ; degree 3
48. Zeros: -2 , multiplicity \(2 ; 4\), multiplicity 1 ; degree 3

In Problems 49-60, for each polynomial function:
(a) List each real zero and its multiplicity.
(b) Determine whether the graph crosses or touches the \(x\)-axis at each \(x\)-intercept.
(c) Determine the maximum number of turning points on the graph.
(d) Determine the end behavior; that is, find the power function that the graph of f resembles for large values of \(|x|\).
49. \(f(x)=3(x-7)(x+3)^{2}\)
50. \(f(x)=4(x+4)(x+3)^{3}\)
51. \(f(x)=4\left(x^{2}+1\right)(x-2)^{3}\)
52. \(f(x)=2(x-3)\left(x^{2}+4\right)^{3}\)
53. \(f(x)=-2\left(x+\frac{1}{2}\right)^{2}(x+4)^{3}\)
54. \(f(x)=\left(x-\frac{1}{3}\right)^{2}(x-1)^{3}\)
55. \(f(x)=(x-5)^{3}(x+4)^{2}\)
56. \(f(x)=(x+\sqrt{3})^{2}(x-2)^{4}\)
57. \(f(x)=3\left(x^{2}+8\right)\left(x^{2}+9\right)^{2}\)
58. \(f(x)=-2\left(x^{2}+3\right)^{3}\)
59. \(f(x)=-2 x^{2}\left(x^{2}-2\right)\)
60. \(f(x)=4 x\left(x^{2}-3\right)\)

In Problems 61-64, identify which of the graphs could be the graph of a polynomial function. For those that could, list the real zeros and state the least degree the polynomial can have. For those that could not, say why not.
61.

62.

63.

64.

In Problems 65-68, construct a polynomial function that might have the given graph. (More than one answer may be possible.)
65.

66.

67.

68.

In Problems 69-72, write a polynomial function whose graph is shown (use the smallest degree possible).
69.

71.

70.

72.

In Problems 73-96, analyze each polynomial function by following Steps 1 through 5 on page 205.
73. \(f(x)=x^{2}(x-3)\)
74. \(f(x)=x(x+2)^{2}\)
75. \(f(x)=(x+4)(x-2)^{2}\)
76. \(f(x)=(x-1)(x+3)^{2}\)
77. \(f(x)=-2(x+2)(x-2)^{3}\)
78. \(f(x)=-\frac{1}{2}(x+4)(x-1)^{3}\)
79. \(f(x)=(x+4)^{2}(1-x)\)
80. \(f(x)=(3-x)(2+x)(x+1)\)
81. \(f(x)=(x+1)(x-2)(x+4)\)
82. \(f(x)=(x-1)(x+4)(x-3)\)
83. \(f(x)=x^{2}(x-2)(x+2)\)
84. \(f(x)=x^{2}(x-3)(x+4)\)
85. \(f(x)=(x+1)^{2}(x-2)^{2}\)
86. \(f(x)=(x+2)^{2}(x-4)^{2}\)
87. \(f(x)=x(1-x)(2-x)\)
88. \(f(x)=x(3-x)^{2}\)
89. \(f(x)=x^{2}(x+3)(x+1)\)
90. \(f(x)=x^{2}(x-3)(x-1)\)
91. \(f(x)=(x-2)^{2}(x+2)(x+4)\)
92. \(f(x)=(x+1)^{3}(x-3)\)
93. \(f(x)=5 x\left(x^{2}-4\right)(x+3)\)
94. \(f(x)=-2(x-1)^{2}\left(x^{2}-16\right)\)
95. \(f(x)=x^{2}(x-2)\left(x^{2}+3\right)\)
96. \(f(x)=x^{2}\left(x^{2}+1\right)(x+4)\)

In Problems 97-104, analyze each polynomial function f by following Steps 1 through 8 on page 206.
97. \(f(x)=x^{3}+0.2 x^{2}-1.5876 x-0.31752\)
98. \(f(x)=x^{3}-0.8 x^{2}-4.6656 x+3.73248\)
99. \(f(x)=x^{3}+2.56 x^{2}-3.31 x+0.89\)
100. \(f(x)=x^{3}-2.91 x^{2}-7.668 x-3.8151\)
101. \(f(x)=x^{4}-2.5 x^{2}+0.5625\)
102. \(f(x)=x^{4}-18.5 x^{2}+50.2619\)
103. \(f(x)=2 x^{4}-\pi x^{3}+\sqrt{5} x-4\)
104. \(f(x)=-1.2 x^{4}+0.5 x^{2}-\sqrt{3} x+2\)

\section*{-Mixed Practice}

In Problems 105-112, analyze each polynomial function by following Steps 1 through 5 on page 205.
[Hint: You will need to first factor the polynomial].
105. \(f(x)=4 x-x^{3}\)
106. \(f(x)=x-x^{3}\)
107. \(f(x)=x^{3}+x^{2}-12 x\)
108. \(f(x)=x^{3}+2 x^{2}-8 x\)
109. \(f(x)=2 x^{4}+12 x^{3}-8 x^{2}-48 x\)
110. \(f(x)=4 x^{3}+10 x^{2}-4 x-10\)
111. \(f(x)=-x^{5}-x^{4}+x^{3}+x^{2}\)
112. \(f(x)=-x^{5}+5 x^{4}+4 x^{3}-20 x^{2}\)

In Problems 113-116, construct a polynomial function \(f\) with the given characteristics.
113. Zeros: \(-3,1,4\); degree 3 ; \(y\)-intercept: 36
114. Zeros: \(-4,-1,2\); degree \(3 ; y\)-intercept: 16
115. Zeros: - 5 (multiplicity 2 ); 2(multiplicity 1 ); 4 (multiplicity 1 ); degree 4 ; contains the point \((3,128)\)
117. \(G(x)=(x+3)^{2}(x-2)\)
(a) Identify the \(x\)-intercepts of the graph of \(G\).
(b) What are the \(x\)-intercepts of the graph of \(y=G(x+3)\) ?
116. Zeros: - 4 (multiplicity 1 ); 0 (multiplicity 3 ); 2 (multiplicity 1 ); degree 5 ; contains the point \((-2,64)\)
118. \(h(x)=(x+2)(x-4)^{3}\)
(a) Identify the \(x\)-intercepts of the graph of \(h\).
(b) What are the \(x\)-intercepts of the graph of \(y=h(x-2)\) ?

\section*{Applications and Extensions}
119. Hurricanes In 2012, Hurricane Sandy struck the East Coast of the United States, killing 147 people and causing an estimated \(\$ 75\) billion in damage. With a gale diameter of about 1000 miles, it was the largest ever to form over the

\end{tabular}

Source: The Weather Underground
\(\triangle\) 122. A Geometric Series In calculus, you will learn that certain functions can be approximated by polynomial functions. We will explore one such function now.
(a) Using a graphing utility, create a table of values with \(Y_{1}=f(x)=\frac{1}{1-x}\) and \(Y_{2}=g_{2}(x)=1+x+\) \(x^{2}+x^{3}\) for \(-1<x<1\) with \(\Delta \mathrm{Tbl}=0.1\).
(b) Using a graphing utility, create a table of values with \(Y_{1}=f(x)=\frac{1}{1-x}\) and \(Y_{2}=g_{3}(x)=1+x+x^{2}+\) \(x^{3}+x^{4}\) for \(-1<x<1\) with \(\Delta \mathrm{Tbl}=0.1\).
(c) Using a graphing utility, create a table of values with \(Y_{1}=f(x)=\frac{1}{1-x}\) and \(Y_{2}=g_{4}(x)=1+x+x^{2}+\) \(x^{3}+x^{4}+x^{5}\) for \(-1<x<1\) with \(\Delta \mathrm{Tbl}=0.1\).
(d) What do you notice about the values of the function as more terms are added to the polynomial? Are there some values of \(x\) for which the approximations are better?
123. Future Value of Money Suppose that you make a deposit of \(\$ 500\) at the beginning of every year into an Individual Retirement Account (IRA) earning interest \(r\). At the beginning of the first year, the value of the account will be \(\$ 500\); at the beginning of the second year, the value of the account, will be
\[
\underbrace{\$ 500+\$ 500} r+\underbrace{\$ 500}=\$ 500(1+r)+\$ 500=\$ 500 r+\$ 1000
\]

Value of 1st deposit Value of 2nd deposit
(a) Verify that the value of the account at the beginning of the third year is \(T(r)=500 r^{2}+1500 r+1500\).
(b) The account value at the beginning of the fourth year is \(F(r)=500 r^{3}+2000 r^{2}+3000 r+2000\). If the annual rate of interest is \(5 \%=0.05\), what will be the value of the account at the beginning of the fourth year?

\section*{Discussion and Writing}
124. Can the graph of a polynomial function have no \(y\)-intercept? Can it have no \(x\)-intercepts? Explain.
125. Write a few paragraphs that provide a general strategy for graphing a polynomial function. Be sure to mention the following: degree, intercepts, end behavior, and turning points.
126. Make up a polynomial that has the following characteristics: crosses the \(x\)-axis at -1 and 4 , touches the \(x\)-axis at 0 and 2 , and is above the \(x\)-axis between 0 and 2. Give your polynomial to a fellow classmate and ask for a written critique.
127. Make up two polynomials, not of the same degree, with the following characteristics: crosses the \(x\)-axis at -2 , touches the \(x\)-axis at 1 , and is above the \(x\)-axis between -2 and 1 . Give your polynomials to a fellow classmate and ask for a written critique.
128. The graph of a polynomial function is always smooth and continuous. Name a function studied earlier that is smooth but not continuous. Name one that is continuous, but not smooth.
129. Which of the following statements are true regarding the graph of the cubic polynomial \(f(x)=x^{3}+b x^{2}+c x+d\) ? (Give reasons for your conclusions.)
(a) It intersects the \(y\)-axis in one and only one point.
(b) It intersects the \(x\)-axis in at most three points.
(c) It intersects the \(x\)-axis at least once.
(d) For \(|x|\) very large, it behaves like the graph of \(y=x^{3}\).
(e) It is symmetric with respect to the origin.
(f) It passes through the origin.
130. The illustration shows the graph of a polynomial function.

(a) Is the degree of the polynomial even or odd?
(b) Is the leading coefficient positive or negative?
(c) Is the function even, odd, or neither?
(d) Why is \(x^{2}\) necessarily a factor of the polynomial?
(e) What is the minimum degree of the polynomial?
(f) Formulate five different polynomials whose graphs could look like the one shown. Compare yours to those of other students. What similarities do you see? What differences?
131. Design a polynomial function with the following characteristics: degree 6 ; four distinct real zeros, one of multiplicity 3; \(y\)-intercept 3 ; behaves like \(y=-5 x^{6}\) for large values of \(|x|\). Is this polynomial unique? Compare your polynomial with those of other students. What terms will be the same as everyone else's? Add some more characteristics, such as symmetry or naming the real zeros. How does this modify the polynomial?

\section*{Retain Your Knowledge}

Problems 132-135 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
132. Find the equation of the line that contains the point \((2,-3)\) and is perpendicular to the line \(5 x-2 y=6\).
133. Find the domain of the function \(h(x)=\frac{x-3}{x+5}\).
134. Use the quadratic formula to find the zeros of the function \(f(x)=4 x^{2}+8 x-3\).
135. Solve: \(|5 x-3|=7\)

\subsection*{3.2 The Real Zeros of a Polynomial Function}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Evaluating Functions (Section 1.1, pp. 46-48)
- Factoring Polynomials (Appendix A, Section A.4, pp. A32-A38)
- Synthetic Division (Appendix A, Section A.5, pp. A41-A44)
- Polynomial Division (Appendix A, Section A.3, pp. A27-A30)
- Zeros of a Quadratic Function (Section 2.3, pp. 138-143)

Now Work the 'Are You Prepared?' problems on page 223.
OBJECTIVES 1 Use the Remainder and Factor Theorems (p. 213)
2 Use Descartes' Rule of Signs to Determine the Number of Positive and the Number of Negative Real Zeros of a Polynomial Function (p. 215)
3 Use the Rational Zeros Theorem to List the Potential Rational Zeros of a Polynomial Function (p. 216)
4 Find the Real Zeros of a Polynomial Function (p.217)
5 Solve Polynomial Equations (p. 219)
6 Use the Theorem for Bounds on Zeros (p. 220)
7 Use the Intermediate Value Theorem (p. 221)

In Section 3.1, the real zeros of a polynomial function could be found because either the polynomial function was in factored form or it could be easily factored. But how can the real zeros of a polynomial function be found if it is not factored or cannot be easily factored?

Recall that if \(r\) is a real zero of a polynomial function \(f\), then \(f(r)=0, r\) is an \(x\)-intercept of the graph of \(f, x-r\) is a factor of \(f\), and \(r\) is a solution of the equation \(f(x)=0\). For example, if \(x-4\) is a factor of \(f\), then 4 is a real zero of \(f\) and 4 is a solution to the equation \(f(x)=0\). For polynomial functions, we have seen the importance of the real zeros for graphing. In most cases, however, the real zeros of a polynomial function are difficult to find using algebraic methods. No nice formulas like the quadratic formula are available to help us find zeros for polynomials of degree 3 or higher. Formulas do exist for solving any third- or fourth-degree polynomial equation, but they are somewhat complicated. No general formulas exist for polynomial equations of degree 5 or higher. Refer to the Historical Feature at the end of this section for more information.

\section*{1 Use the Remainder and Factor Theorems}

When one polynomial (the dividend) is divided by another (the divisor), a quotient polynomial and a remainder are obtained, the remainder being either the zero polynomial or a polynomial whose degree is less than the degree of the divisor. To check, verify that
\[
(\text { Quotient })(\text { Divisor })+\text { Remainder }=\text { Dividend }
\]

This checking routine is the basis for a famous theorem called the division algorithm* for polynomials, which we now state without proof.

\section*{THEOREM}

\section*{REMAINDER THEOREM}

\section*{Division Algorithm for Polynomials}

If \(f(x)\) and \(g(x)\) denote polynomial functions and if \(g(x)\) is a polynomial whose degree is greater than zero, then there are unique polynomial functions \(q(x)\) and \(r(x)\) such that
where \(r(x)\) is either the zero polynomial or a polynomial of degree less than that of \(g(x)\).

In equation (1), \(f(x)\) is the dividend, \(g(x)\) is the divisor, \(q(x)\) is the quotient, and \(r(x)\) is the remainder.

If the divisor \(g(x)\) is a first-degree polynomial of the form
\[
g(x)=x-c \quad c \text { a real number }
\]
then the remainder \(r(x)\) is either the zero polynomial or a polynomial of degree 0 . As a result, for such divisors, the remainder is some number, say \(R\), and we may write
\[
\begin{equation*}
f(x)=(x-c) q(x)+R \tag{2}
\end{equation*}
\]

This equation is an identity in \(x\) and is true for all real numbers \(x\). Suppose that \(x=c\). Then equation (2) becomes
\[
\begin{aligned}
& f(c)=(c-c) q(c)+R \\
& f(c)=R
\end{aligned}
\]

Substitute \(f(c)\) for \(R\) in equation (2) to obtain
\[
\begin{equation*}
f(x)=(x-c) q(x)+f(c) \tag{3}
\end{equation*}
\]
which proves the Remainder Theorem.
Let \(f\) be a polynomial function. If \(f(x)\) is divided by \(x-c\), then the remainder is \(f(c)\).

\footnotetext{
*A systematic process in which certain steps are repeated a finite number of times is called an algorithm. For example, long division is an algorithm.
}

\section*{EXAMPLE I \\ Using the Remainder Theorem}

Find the remainder if \(f(x)=x^{3}-4 x^{2}-5\) is divided by
(a) \(x-3\)
(b) \(x+2\)

Solution
(a) Either long division or synthetic division could be used, but it is easier to use the Remainder Theorem, which says that the remainder is \(f(3)\).
\[
f(3)=(3)^{3}-4(3)^{2}-5=27-36-5=-14
\]

The remainder is -14 .
(b) To find the remainder when \(f(x)\) is divided by \(x+2=x-(-2)\), evaluate \(f(-2)\).
\[
f(-2)=(-2)^{3}-4(-2)^{2}-5=-8-16-5=-29
\]

The remainder is -29 .

Compare the method used in Example 1(a) with the method used in Example 1 of Appendix A, Section A.5. Which method do you prefer? Give reasons.

COMMENT A graphing utility provides another way to find the value of a function using the eVALUEate feature. Consult your manual for details. Then check the results of Example 1.

An important and useful consequence of the Remainder Theorem is the Factor Theorem.

Let \(f\) be a polynomial function. Then \(x-c\) is a factor of \(f(x)\) if and only if \(f(c)=0\).

The Factor Theorem actually consists of two separate statements:
1. If \(f(c)=0\), then \(x-c\) is a factor of \(f(x)\).
2. If \(x-c\) is a factor of \(f(x)\), then \(f(c)=0\).

The proof requires two parts.

\section*{Proof}
1. Suppose that \(f(c)=0\). Then, by equation (3), we have
\[
f(x)=(x-c) q(x)
\]
for some polynomial \(q(x)\). That is, \(x-c\) is a factor of \(f(x)\).
2. Suppose that \(x-c\) is a factor of \(f(x)\). Then there is a polynomial function \(q\) such that
\[
f(x)=(x-c) q(x)
\]

Replacing \(x\) by \(c\), we find that
\[
f(c)=(c-c) q(c)=0 \cdot q(c)=0
\]

This completes the proof.
One use of the Factor Theorem is to determine whether a polynomial has a particular factor.

\section*{EXAMPLE 2}

\section*{Using the Factor Theorem}

Use the Factor Theorem to determine whether the function
\[
f(x)=2 x^{3}-x^{2}+2 x-3
\]
has the factor
(a) \(x-1\)
(b) \(x+2\)

Solution The Factor Theorem states that if \(f(c)=0\), then \(x-c\) is a factor.
(a) Because \(x-1\) is of the form \(x-c\) with \(c=1\), find the value of \(f(1)\). We choose to use substitution.
\[
f(1)=2(1)^{3}-(1)^{2}+2(1)-3=2-1+2-3=0
\]

By the Factor Theorem, \(x-1\) is a factor of \(f(x)\).
(b) To test the factor \(x+2\), first write it in the form \(x-c\). Since \(x+2=x-(-2)\), find the value of \(f(-2)\). We choose to use synthetic division.
\[
\begin{array}{rrrr}
- 2 \longdiv { 2 } & -1 & 2 & -3 \\
& -4 & 10 & -24 \\
\hline 2 & -5 & 12 & -27
\end{array}
\]

Because \(f(-2)=-27 \neq 0\), conclude from the Factor Theorem that \(x-(-2)=x+2\) is not a factor of \(f(x)\).

\section*{monow Work problem 11}

In Example 2(a), \(x-1\) was found to be a factor of \(f\). To write \(f\) in factored form, use long division or synthetic division.
\[
\begin{array}{rrrr}
1 \lcm{2} & -1 & 2 & -3 \\
& 2 & 1 & 3 \\
\hline 2 & 1 & 3 & 0
\end{array}
\]

The quotient is \(q(x)=2 x^{2}+x+3\) with a remainder of 0 , as expected. Write \(f\) in factored form as
\[
f(x)=2 x^{3}-x^{2}+2 x-3=(x-1)\left(2 x^{2}+x+3\right)
\]

The next theorem concerns the number of real zeros that a polynomial function may have. In counting the zeros of a polynomial, count each zero as many times as its multiplicity.

\section*{THEOREM}

\section*{Number of Real Zeros}

A polynomial function cannot have more real zeros than its degree.

Proof The proof is based on the Factor Theorem. If \(r\) is a real zero of a polynomial function \(f\), then \(f(r)=0\), and hence, \(x-r\) is a factor of \(f(x)\). Each real zero corresponds to a factor of degree 1 . Because \(f\) cannot have more first-degree factors than its degree, the result follows.

\section*{2 Use Descartes' Rule of Signs to Determine the Number of Positive and the Number of Negative Real Zeros of a Polynomial Function}

Descartes' Rule of Signs provides information about the number and location of the real zeros of a polynomial function written in standard form (omitting terms with a 0 coefficient). It utilizes the number of variations in the sign of the coefficients of \(f(x)\) and \(f(-x)\).

For example, the following polynomial function has two variations in the signs of the coefficients.
\[
\begin{aligned}
f(x)= & -\underbrace{-3 x^{7}}+4 x^{4}+\underbrace{3 x^{2}-2 x-1}-2+\text { to }+
\end{aligned}
\]

Replacing \(x\) by \(-x\) gives
\[
\begin{aligned}
f(-x) & =-3(-x)^{7}+4(-x)^{4}+3(-x)^{2}-2(-x)-1 \\
& =3 x^{7}+4 x^{4}+3 x^{2}+\underbrace{2 x}_{\text {to }}-1
\end{aligned}
\]
which has one variation in sign.

\section*{THEOREM}

\section*{Descartes' Rule of Signs}

Let \(f\) denote a polynomial function written in standard form.
The number of positive real zeros of \(f\) either equals the number of variations in the sign of the nonzero coefficients of \(f(x)\) or else equals that number less an even integer.
The number of negative real zeros of \(f\) either equals the number of variations in the sign of the nonzero coefficients of \(f(-x)\) or else equals that number less an even integer.

We shall not prove Descartes' Rule of Signs. Let's see how it is used.

\section*{EXAMPLE 3}

\section*{Using the Number of Real Zeros Theorem and Descartes' Rule of Signs}

Discuss the real zeros of \(f(x)=3 x^{7}-4 x^{4}+3 x^{3}+2 x^{2}-x-3\).
Solution Because the polynomial is of degree 7, by the Number of Real Zeros Theorem there are at most seven real zeros. Since there are three variations in the sign of the nonzero coefficients of \(f(x)\), by Descartes' Rule of Signs we expect either three positive real zeros or one positive real zero. To continue, look at \(f(-x)\).
\[
f(-x)=-3 x^{7}-4 x^{4}-3 x^{3}+2 x^{2}+x-3
\]

There are two variations in sign, so we expect either two negative real zeros or no negative real zeros. Equivalently, we now know that the graph of \(f\) has either three positive \(x\)-intercepts or one positive \(x\)-intercept and two negative \(x\)-intercepts or no negative \(x\)-intercepts.

\section*{an Now Work problem 21}

\section*{3 Use the Rational Zeros Theorem to List the Potential Rational Zeros of a Polynomial Function}

The next result, called the Rational Zeros Theorem, provides information about the rational zeros of a polynomial with integer coefficients.

\section*{THEOREM \\ Rational Zeros Theorem}

Let \(f\) be a polynomial function of degree 1 or higher of the form
\[
f(x)=a_{n} x^{n}+a_{n-1} x^{n-1}+\cdots+a_{1} x+a_{0} \quad a_{n} \neq 0, \quad a_{0} \neq 0
\]
where each coefficient is an integer. If \(\frac{p}{q}\), in lowest terms, is a rational zero of \(f\), then \(p\) must be a factor of \(a_{0}\), and \(q\) must be a factor of \(a_{n}\).

\section*{EXAMPLE 4}

\section*{Listing Potential Rational Zeros}

List the potential rational zeros of
\[
f(x)=2 x^{3}+11 x^{2}-7 x-6
\]

Solution Because \(f\) has integer coefficients, the Rational Zeros Theorem may be used. First, list all the integers \(p\) that are factors of the constant term \(a_{0}=-6\) and all the integers \(q\) that are factors of the leading coefficient \(a_{3}=2\).
\[
\begin{array}{cll}
p: & \pm 1, \pm 2, \pm 3, \pm 6 & \text { Factors of }-6 \\
q: & \pm 1, \pm 2 & \text { Factors of } 2
\end{array}
\]

Now form all possible ratios \(\frac{p}{q}\).
\[
\frac{p}{q}: \pm \frac{1}{1}, \pm \frac{2}{1}, \pm \frac{3}{1}, \pm \frac{6}{1}, \pm \frac{1}{2}, \pm \frac{2}{2}, \pm \frac{3}{2}, \pm \frac{6}{2}
\]

\section*{In Words}

For the polynomial function \(f(x)=x^{3}+11 x^{2}-7 x-6\), we know 5 is not a zero, because 5 is not in the list of potential rational zeros. However, -1 may or may not be a zero.
which simplifies to
\[
\frac{p}{q}: \pm 1, \pm 2, \pm 3, \pm 6, \pm \frac{1}{2}, \pm \frac{3}{2}
\]

If \(f\) has a rational zero, it will be found in this list, which contains 12 possibilities.
all Now Work problem 33
Be sure that you understand what the Rational Zeros Theorem says: For a polynomial with integer coefficients, if there is a rational zero, it is one of those listed. It may be the case that the function does not have any rational zeros.

Long division, synthetic division, or substitution can be used to test each potential rational zero to determine whether it is indeed a zero. To make the work easier, integers are usually tested first.

\section*{4 Find the Real Zeros of a Polynomial Function}

\section*{EXAMPLE 5 How to Find the Real Zeros of a Polynomial Function}

Find the real zeros of the polynomial function \(f(x)=2 x^{3}+11 x^{2}-7 x-6\). Write \(f\) in factored form.

Since \(f\) is a polynomial of degree 3 , there are at most three real zeros.

By Descartes' Rule of Signs, there is one positive real zero. Also, because
\[
f(-x)=-2 x^{3}+11 x^{2}+7 x-6
\]
there are either two negative zeros or no negative zeros.

Step 3: If the polynomial has integer coefficients, use the Rational Zeros Theorem to identify those rational numbers that potentially can be zeros. Use the Factor Theorem to determine whether each potential rational zero is a zero. If it is, use synthetic division or long division to factor the polynomial function. Repeat Step 3 until all the rational zeros of the polynomial function have been identified and the polynomial function is completely factored.

List the potential rational zeros obtained in Example 4:
\[
\pm 1, \pm 2, \pm 3, \pm 6, \pm \frac{1}{2}, \pm \frac{3}{2}
\]

From our list of potential rational zeros, we will test 6 to determine whether it is a zero of \(f\). Because \(f(6)=780 \neq 0\), we know that 6 is not a zero of \(f\). Now, let's test whether -6 is a zero. Because \(f(-6)=0\), we know that -6 is a zero and \(x-(-6)=x+6\) is a factor of \(f\). Use long division or synthetic division to factor \(f\). (We will not show the division here, but you are encouraged to verify the results shown.) After dividing \(f\) by \(x+6\), the quotient is \(2 x^{2}-x-1\), so
\[
\begin{aligned}
f(x) & =2 x^{3}+11 x^{2}-7 x-6 \\
& =(x+6)\left(2 x^{2}-x-1\right)
\end{aligned}
\]

Now any solution of the equation \(2 x^{2}-x-1=0\) will be a zero of \(f\). The equation \(2 x^{2}-x-1=0\) is called a depressed equation of \(f\). Because any solution to the
equation \(2 x^{2}-x-1=0\) is a zero of \(f\), work with the depressed equation to find the remaining zeros of \(f\).

The depressed equation \(2 x^{2}-x-1=0\) is a quadratic equation with discriminant \(b^{2}-4 a c=(-1)^{2}-4(2)(-1)=9>0\). The equation has two real solutions, which can be found by factoring.
\[
\begin{array}{rlrl}
2 x^{2}-x-1 & =(2 x+1)(x-1) & =0 \\
2 x+1 & =0 & \text { or } & x-1
\end{array}=0
\]

The zeros of \(f\) are \(-6,-\frac{1}{2}\), and 1 .
Factor \(f\) completely as follows:
\[
\begin{aligned}
f(x)=2 x^{3}+11 x^{2}-7 x-6 & =(x+6)\left(2 x^{2}-x-1\right) \\
& =(x+6)(2 x+1)(x-1)
\end{aligned}
\]

Notice that the three zeros of \(f\) are in the list of potential rational zeros.

\section*{SUMMARY}

Steps for Finding the Real Zeros of a Polynomial Function
STEP 1: Use the degree of the polynomial to determine the maximum number of real zeros.
STEP 2: Use Descartes' Rule of Signs to determine the possible number of positive zeros and negative zeros.
Step 3: (a) If the polynomial has integer coefficients, use the Rational Zeros Theorem to identify those rational numbers that potentially could be zeros.
(b) Use the Factor Theorem, synthetic division, or long division to test each potential rational zero. Each time that a zero (and thus a factor) is found, repeat Step 3 on the depressed equation.
In attempting to find the zeros, remember to use (if possible) the factoring techniques that you already know (special products, factoring by grouping, and so on).

\section*{EXAMPLE 6}

\section*{Finding the Real Zeros of a Polynomial Function}

Find the real zeros of \(f(x)=x^{5}-7 x^{4}+19 x^{3}-37 x^{2}+60 x-36\). Write \(f\) in factored form.
Solution Step 1: There are at most five real zeros.
Step 2: By Descartes' Rule of Signs, there are five, three, or one positive zeros. There are no negative zeros because
\[
f(-x)=-x^{5}-7 x^{4}-19 x^{3}-37 x^{2}-60 x-36
\]
has no sign variation.
Step 3: Because the leading coefficient \(a_{5}=1\) and there are no negative zeros, the potential rational zeros are limited to the positive integers \(1,2,3,4,6,9,12,18\), and 36 (the positive factors of the constant term, 36). Test the potential rational zero 1 first, using synthetic division.
\begin{tabular}{rrrrrr}
\(1 \lcm{1}\) & -7 & 19 & -37 & 60 & -36 \\
& 1 & -6 & 13 & -24 & 36 \\
\hline 1 & -6 & 13 & -24 & 36 & 0
\end{tabular}

The remainder is \(f(1)=0\), so 1 is a zero and \(x-1\) is a factor of \(f\). Use the entries in the bottom row of the synthetic division to begin factoring \(f\).
\[
\begin{aligned}
f(x) & =x^{5}-7 x^{4}+19 x^{3}-37 x^{2}+60 x-36 \\
& =(x-1)\left(x^{4}-6 x^{3}+13 x^{2}-24 x+36\right)
\end{aligned}
\]

Continue the process using the first depressed equation:
\[
q_{1}(x)=x^{4}-6 x^{3}+13 x^{2}-24 x+36=0
\]

Repeat Step 3: The potential rational zeros of \(q_{1}\) are still \(1,2,3,4,6,9,12,18\), and 36. Test 1 again, since it may be a repeated zero of \(f\).
\[
\begin{array}{rrrrr}
1 & -6 & 13 & -24 & 36 \\
& 1 & -5 & 8 & -16 \\
\hline 1 & -5 & 8 & -16 & 20
\end{array}
\]

Since the remainder is 20,1 is not a repeated zero. Try 2 next.
\[
\begin{array}{rrrrr}
2 & -6 & 13 & -24 & 36 \\
& 2 & -8 & 10 & -28 \\
\hline 1 & -4 & 5 & -14 & 8
\end{array}
\]

Since the remainder is 8,2 is not a zero. Try 3 next.
\[
\begin{array}{rrrrr}
3 \longdiv { 1 } & -6 & 13 & -24 & 36 \\
& 3 & -9 & 12 & -36 \\
\hline 1 & -3 & 4 & -12 & 0
\end{array}
\]

The remainder is \(f(3)=0\), so 3 is a zero and \(x-3\) is a factor of \(f\). Use the bottom row of the synthetic division to continue the factoring of \(f\).
\[
\begin{aligned}
f(x) & =x^{5}-7 x^{4}+19 x^{3}-37 x^{2}+60 x-36 \\
& =(x-1)(x-3)\left(x^{3}-3 x^{2}+4 x-12\right)
\end{aligned}
\]

The remaining zeros satisfy the new depressed equation
\[
q_{2}(x)=x^{3}-3 x^{2}+4 x-12=0
\]

Notice that \(q_{2}(x)\) can be factored by grouping. (Alternatively, Step 3 could be repeated to again check the potential rational zero 3. The potential rational zeros 1 and 2 would no longer be checked, because they have already been eliminated from further consideration.) Then
\[
\begin{aligned}
x^{3}-3 x^{2}+4 x-12 & =0 \\
x^{2}(x-3)+4(x-3) & =0 \\
\left(x^{2}+4\right)(x-3) & =0 \\
x^{2}+4=0 \text { or } x-3 & =0 \\
x & =3
\end{aligned}
\]

Since \(x^{2}+4=0\) has no real solutions, the real zeros of \(f\) are 1 and 3 , with 3 being a repeated zero of multiplicity 2 . The factored form of \(f\) is
\[
\begin{aligned}
f(x) & =x^{5}-7 x^{4}+19 x^{3}-37 x^{2}+60 x-36 \\
& =(x-1)(x-3)^{2}\left(x^{2}+4\right)
\end{aligned}
\]
an Now Work problem 45

\section*{5 Solve Polynomial Equations}

\section*{EXAMPLE 7}

\section*{Solving a Polynomial Equation}

Find the real solutions of the equation: \(x^{5}-7 x^{4}+19 x^{3}-37 x^{2}+60 x-36=0\)

\section*{Solution The real solutions of this equation are the real zeros of the polynomial function}
\[
f(x)=x^{5}-7 x^{4}+19 x^{3}-37 x^{2}+60 x-36
\]

Using the result of Example 6, the real zeros of \(f\) are 1 and 3. The real solutions of the equation \(x^{5}-7 x^{4}+19 x^{3}-37 x^{2}+60 x-36=0\) are 1 and 3 .

THEOREM

\section*{THEOREM}

COMMENT The bounds on the zeros of a polynomial provide good choices for setting \(X\) min and \(X\) max of the viewing rectangle. With these choices, all the \(x\)-intercepts of the graph can be seen.

In Example 6, the quadratic factor \(x^{2}+4\) that appears in the factored form of \(f\) is called irreducible, because the polynomial \(x^{2}+4\) cannot be factored over the real numbers. In general, a quadratic factor \(a x^{2}+b x+c\) is irreducible if it cannot be factored over the real numbers - that is, if it is prime over the real numbers.

Refer to Examples 5 and 6. The polynomial function of Example 5 has three real zeros, and its factored form contains three linear factors. The polynomial function of Example 6 has two distinct real zeros, and its factored form contains two distinct linear factors and one irreducible quadratic factor.

Every polynomial function (with real coefficients) can be uniquely factored into a product of linear factors and/or irreducible quadratic factors.

We prove this result in Section 3.3, and, in fact, shall draw several additional conclusions about the zeros of a polynomial function. One conclusion is worth noting now. If a polynomial with real coefficients is of odd degree, it must contain at least one linear factor. (Do you see why? Consider the end behavior of polynomial functions of odd degree.) This means that it must have at least one real zero.

A polynomial function (with real coefficients) of odd degree has at least one real zero.

\section*{6 Use the Theorem for Bounds on Zeros}

The work involved in finding the zeros of a polynomial function can be reduced somewhat if upper and lower bounds to the zeros can be found. A number \(M\) is an upper bound to the zeros of a polynomial \(f\) if no zero of \(f\) is greater than \(M\). The number \(m\) is a lower bound if no zero of \(f\) is less than \(m\). Accordingly, if \(m\) is a lower bound and \(M\) is an upper bound to the zeros of a polynomial function \(f\), then
\[
m \leq \text { any zero of } f \leq M
\]

For polynomials with integer coefficients, knowing the values of a lower bound \(m\) and an upper bound \(M\) may enable you to eliminate some potential rational zeros-that is, any zeros outside of the interval \([m, M]\).

\section*{Bounds on Zeros}

Let \(f\) denote a polynomial function whose leading coefficient is positive.
- If \(M>0\) is a real number and if the third row in the process of synthetic division of \(f\) by \(x-M\) contains only numbers that are positive or zero, then \(M\) is an upper bound to the zeros of \(f\).
- If \(m<0\) is a real number and if the third row in the process of synthetic division of \(f\) by \(x-m\) contains numbers that alternate positive (or 0 ) and negative (or 0 ), then \(m\) is a lower bound to the zeros of \(f\).

Proof (Outline) We give only an outline of the proof of the first part of the theorem. Suppose that \(M\) is a positive real number, and the third row in the process of synthetic division of the polynomial \(f\) by \(x-M\) contains only numbers that are positive or 0 . Then there is a quotient \(q\) and a remainder \(R\) such that
\[
f(x)=(x-M) q(x)+R
\]
where the coefficients of \(q(x)\) are positive or 0 and the remainder \(R \geq 0\). Then, for any \(x>M\), we must have \(x-M>0, q(x)>0\) and \(R \geq 0\), so that \(f(x)>0\). That is, there is no zero of \(f\) larger than \(M\). The proof of the second part follows similar reasoning.

In finding bounds, it is preferable to find the smallest upper bound and the largest lower bound. This will require repeated synthetic division until a desired pattern is observed. For simplicity, we will consider only potential rational zeros that are
integers. If a bound is not found using these values, continue checking positive and/or negative integers until both an upper and a lower bound are found.

\section*{EXAMPLE 8 Finding Upper and Lower Bounds of Zeros}

Use the Bounds on Zeros Theorem on the polynomial function \(f(x)=2 x^{3}+\) \(11 x^{2}-7 x-6\) to find integer upper and lower bounds to the zeros of \(f\).

Solution
From Example 4, the potential rational zeros of \(f\) are \(\pm 1, \pm 2, \pm 3, \pm 6, \pm \frac{1}{2}, \pm \frac{3}{2}\).
To find an upper bound, start with the smallest positive integer that is a potential rational zero, which is 1 . Continue checking 2,3 , and 6 (and then subsequent positive integers), if necessary, until an upper bound is found. To find a lower bound, start with the largest negative integer that is a potential rational zero, which is -1 . Continue checking \(-2,-3\), and -6 (and then subsequent negative integers), if necessary, until a lower bound is found. Table 7 summarizes the results of doing repeated synthetic divisions by showing only the third row of each division. For example, the first row of the table shows the result of dividing \(f(x)\) by \(x-1\).
\[
\text { 1) } \begin{array}{rrrr}
2 & 11 & -7 & -6 \\
& 2 & 13 & 6 \\
\hline 2 & 13 & 6 & 0
\end{array}
\]

Table 7 Synthetic Division Summary

For \(r=1\), the last row of synthetic division contains only numbers that are positive or 0 , so we know there are no zeros greater than 1 . Since the last row of synthetic division for \(r=-7\) results in alternating positive (or 0 ) and negative (or 0 ) values, we know that -7 is a lower bound. There are no zeros less than -7 . Notice that in looking for bounds, two zeros were discovered. These zeros are 1 and -6 .
am Now Work problem 69
If the leading coefficient of \(f\) is negative, the upper and lower bounds can still be found by first multiplying the polynomial by -1 . After all, the zeros of \(-f\) are the same as the zeros of \(f\), since this just results in a reflection about the \(x\)-axis.

\section*{7 Use the Intermediate Value Theorem}

The next result, called the Intermediate Value Theorem, is based on the fact that the graph of a polynomial function is continuous; that is, it contains no "holes" or "gaps."

\section*{THEOREM}

\section*{Intermediate Value Theorem}

Let \(f\) denote a polynomial function. If \(a<b\) and if \(f(a)\) and \(f(b)\) are of opposite sign, there is at least one real zero of \(f\) between \(a\) and \(b\).

Although the proof of this result requires advanced methods in calculus, it is easy to "see" why the result is true. Look at Figure 25.

\section*{EXAMPLE 9}

\section*{Solution}

Using the Intermediate Value Theorem to Locate a Real Zero
Show that \(f(x)=x^{5}-x^{3}-1\) has a zero between 1 and 2 .
Evaluate \(f\) at 1 and at 2 .
\[
f(1)=-1 \quad \text { and } \quad f(2)=23
\]

Because \(f(1)<0\) and \(f(2)>0\), it follows from the Intermediate Value Theorem that the polynomial function \(f\) has at least one zero between 1 and 2 .

\section*{Now Work problem 79}

Let's look at the polynomial \(f\) of Example 9 more closely. Based on Descartes' Rule of Signs, \(f\) has exactly one positive real zero. Based on the Rational Zeros Theorem, 1 is the only potential positive rational zero. Since \(f(1) \neq 0\), the zero between 1 and 2 is irrational. The Intermediate Value Theorem can be used to approximate it.

\section*{Approximating the Real Zeros of a Polynomial Function}

STEP 1: Find two consecutive integers \(a\) and \(a+1\) such that \(f\) has a zero between them.

STEP 2: Divide the interval \([a, a+1]\) into 10 equal subintervals.
Step 3: Evaluate \(f\) at each endpoint of the subintervals until the Intermediate Value Theorem applies; this interval then contains a zero.
Step 4: Repeat the process starting at Step 2 until the desired accuracy is achieved.

\section*{EXAMPLE 10 Approximating a Real Zero of a Polynomial Function}

Find the positive zero of \(f(x)=x^{5}-x^{3}-1\) correct to two decimal places.

\section*{Solution}

\section*{Exploration}

We examine the polynomial \(f\) given in Example 10. The Theorem on Bounds of Zeros tells us that every zero is between -1 and 2 . If we graph \(f\) using \(-1 \leq x \leq 2\) (see Figure 26), we see that \(f\) has exactly one \(x\)-intercept. Using ZERO or ROOT, we find this zero to be 1.24 rounded to two decimal places. Correct to two decimal places, the zero is 1.23 .

Figure 26

comment The TABLE feature of a graphing calculator makes the computations in the solution to Example 10 a lot easier.

From Example 9 we know that the positive zero is between 1 and 2. Divide the interval \([1,2]\) into 10 equal subintervals: \([1,1.1],[1.1,1.2],[1.2,1.3],[1.3,1.4]\), \([1.4,1.5],[1.5,1.6],[1.6,1.7],[1.7,1.8],[1.8,1.9],[1.9,2]\). Now find the value of \(f\) at each endpoint until the Intermediate Value Theorem applies.
\[
\begin{array}{rlrl}
f(x) & =x^{5}-x^{3}-1 & & \\
f(1.0) & =-1 & f(1.2) & =-0.23968 \\
f(1.1) & =-0.72049 & f(1.3) & =0.51593
\end{array}
\]

We can stop here and conclude that the zero is between 1.2 and 1.3. Now divide the interval \([1.2,1.3]\) into 10 equal subintervals and proceed to evaluate \(f\) at each endpoint.
\[
\begin{array}{ll}
f(1.20)=-0.23968 & f(1.23) \approx-0.0455613 \\
f(1.21) \approx-0.1778185 & f(1.24) \approx 0.025001 \\
f(1.22) \approx-0.1131398 &
\end{array}
\]

The zero lies between 1.23 and 1.24 , and so, correct to two decimal places, the zero is 1.23 .

\section*{-Now Work problem 91}

There are many other numerical techniques for approximating the zeros of a polynomial. The one outlined in Example 10 (a variation of the bisection method) has the advantages that it will always work, it can be programmed rather easily on a computer, and each time it is used another decimal place of accuracy is achieved. See Problem 119 for the bisection method, which places the zero in a succession of intervals, with each new interval being half the length of the preceding one.

\section*{Historical Feature}

FTormulas for the solution of third- and fourth-degree polynomial equations exist, and although they are not very practical, they do have an interesting history.
In the 1500s in Italy, mathematical contests were a popular pastime, and people who possessed methods for solving problems kept them secret. (Solutions that were published were already common knowledge.) Niccolo of Brescia (1499-1557), commonly referred to as Tartaglia ("the stammerer"), had the secret for solving cubic (thirddegree) equations, which gave him a decided advantage in the contests. Girolamo Cardano (1501-1576) found out that Tartaglia had the secret, and, being interested in cubics, he requested it from Tartaglia. The reluctant Tartaglia hesitated for some time, but finally, swearing Cardano to secrecy with midnight oaths by candlelight, told him the secret. Cardano

\section*{Historical Problems}

Problems 1-8 develop the Tartaglia-Cardano solution of the cubic equation and show why it is not altogether practical.
1. Show that the general cubic equation \(y^{3}+b y^{2}+c y+d=0\) can be transformed into an equation of the form \(x^{3}+p x+q=0\) by using the substitution \(y=x-\frac{b}{3}\).
2. In the equation \(x^{3}+p x+q=0\), replace \(x\) by \(H+K\). Let \(3 H K=-p\), and show that \(H^{3}+K^{3}=-q\).
3. Based on Problem 2, we have the two equations
\[
3 H K=-p \text { and } H^{3}+K^{3}=-q
\]

Solve for \(K\) in \(3 H K=-p\) and substitute into \(H^{3}+K^{3}=-q\). Then show that
\[
H=\sqrt[3]{\frac{-q}{2}+\sqrt{\frac{q^{2}}{4}+\frac{p^{3}}{27}}}
\]
[Hint: Look for an equation that is quadratic in form.]
then published the solution in his book Ars Magna (1545), giving Tartaglia the credit but rather compromising the secrecy. Tartaglia exploded into bitter recriminations, and each wrote pamphlets that reflected on the other's mathematics, moral character, and ancestry.

The quartic (fourth-degree) equation was solved by Cardano's student Lodovico Ferrari, and this solution also was included, with credit and this time with permission, in the Ars Magna.

Attempts were made to solve the fifth-degree equation in similar ways, all of which failed. In the early 1800s, P. Ruffini, Niels Abel, and Evariste Galois all found ways to show that it is not possible to solve fifthdegree equations by formula, but the proofs required the introduction of new methods. Galois's methods eventually developed into a large part of modern algebra.
4. Use the solution for \(H\) from Problem 3 and the equation \(H^{3}+K^{3}=-q\) to show that
\[
K=\sqrt[3]{\frac{-q}{2}-\sqrt{\frac{q^{2}}{4}+\frac{p^{3}}{27}}}
\]
5. Use the results from Problems 2 to 4 to show that the solution of \(x^{3}+p x+q=0\) is
\[
x=\sqrt[3]{\frac{-q}{2}+\sqrt{\frac{q^{2}}{4}+\frac{p^{3}}{27}}}+\sqrt[3]{\frac{-q}{2}-\sqrt{\frac{q^{2}}{4}+\frac{p^{3}}{27}}}
\]
6. Use the result of Problem 5 to solve the equation \(x^{3}-6 x-9=0\).
7. Use a calculator and the result of Problem 5 to solve the equation \(x^{3}+3 x-14=0\).
8. Use the methods of this section to solve the equation \(x^{3}+3 x-14=0\).

\subsection*{3.2 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. Find \(f(-1)\) if \(f(x)=2 x^{2}-x\). (pp. 46-48)
2. Factor the expression \(6 x^{2}+x-2\). (pp.A37-A38)
3. Find the quotient and remainder if \(3 x^{4}-5 x^{3}+7 x-4\) is divided by \(x\) - 3. (pp. A27-A29 or A41-A44)
4. Find the zeros of \(f(x)=x^{2}+x-3\). (pp. 141-143)

\section*{Concepts and Vocabulary}
5. In the process of polynomial division, (Divisor)(Quotient) + \(\qquad\) \(=\) \(\qquad\) -
6. When a polynomial function \(f\) is divided by \(x-c\), the remainder is \(\qquad\) -.
7. If a function \(f\), whose domain is all real numbers, is even and if 4 is a zero of \(f\), then \(\qquad\) is also a zero.
8. True or False Every polynomial function of degree 3 with real coefficients has exactly three real zeros.
9. If \(f\) is a polynomial function and \(x-4\) is a factor of \(f\), then \(f(4)=\) \(\qquad\) -.
10. True or False If \(f\) is a polynomial function of degree 4 and if \(f(2)=5\), then
\[
\frac{f(x)}{x-2}=p(x)+\frac{5}{x-2}
\]
where \(p(x)\) is a polynomial of degree 3 .

\section*{Skill Building}

In Problems 11-20, use the Remainder Theorem to find the remainder when \(f(x)\) is divided by \(x-c\). Then use the Factor Theorem to determine whether \(x-c\) is a factor of \(f(x)\).
11. \(f(x)=4 x^{3}-3 x^{2}-8 x+4 ; x-2\)
12. \(f(x)=-4 x^{3}+5 x^{2}+8 ; x+3\)
13. \(f(x)=3 x^{4}-6 x^{3}-5 x+10 ; x-2\)
14. \(f(x)=4 x^{4}-15 x^{2}-4 ; x-2\)
15. \(f(x)=3 x^{6}+82 x^{3}+27 ; x+3\)
16. \(f(x)=2 x^{6}-18 x^{4}+x^{2}-9 ; x+3\)
17. \(f(x)=4 x^{6}-64 x^{4}+x^{2}-15 ; x+4\)
18. \(f(x)=x^{6}-16 x^{4}+x^{2}-16 ; x+4\)
19. \(f(x)=2 x^{4}-x^{3}+2 x-1 ; x-\frac{1}{2}\)
20. \(f(x)=3 x^{4}+x^{3}-3 x+1 ; x+\frac{1}{3}\)

In Problems 21-32, tell the maximum number of real zeros that each polynomial function may have. Then use Descartes' Rule of Signs to determine how many positive and how many negative zeros each polynomial function may have. Do not attempt to find the zeros.
21. \(f(x)=-4 x^{7}+x^{3}-x^{2}+2\)
22. \(f(x)=5 x^{4}+2 x^{2}-6 x-5\)
23. \(f(x)=2 x^{6}-3 x^{2}-x+1\)
24. \(f(x)=-3 x^{5}+4 x^{4}+2\)
25. \(f(x)=3 x^{3}-2 x^{2}+x+2\)
26. \(f(x)=-x^{3}-x^{2}+x+1\)
27. \(f(x)=-x^{4}+x^{2}-1\)
28. \(f(x)=x^{4}+5 x^{3}-2\)
29. \(f(x)=x^{5}+x^{4}+x^{2}+x+1\)
30. \(f(x)=x^{5}-x^{4}+x^{3}-x^{2}+x-1\)
31. \(f(x)=x^{6}-1\)
32. \(f(x)=x^{6}+1\)

In Problems 33-44, list the potential rational zeros of each polynomial function. Do not attempt to find the zeros.
33. \(f(x)=3 x^{4}-3 x^{3}+x^{2}-x+1\)
34. \(f(x)=x^{5}-x^{4}+2 x^{2}+3\)
35. \(f(x)=x^{5}-6 x^{2}+9 x-3\)
36. \(f(x)=2 x^{5}-x^{4}-x^{2}+1\)
37. \(f(x)=-4 x^{3}-x^{2}+x+2\)
38. \(f(x)=6 x^{4}-x^{2}+2\)
39. \(f(x)=6 x^{4}-x^{2}+9\)
40. \(f(x)=-4 x^{3}+x^{2}+x+6\)
41. \(f(x)=2 x^{5}-x^{3}+2 x^{2}+12\)
42. \(f(x)=3 x^{5}-x^{2}+2 x+18\)
43. \(f(x)=6 x^{4}+2 x^{3}-x^{2}+20\)
44. \(f(x)=-6 x^{3}-x^{2}+x+10\)

In Problems 45-56, use the Rational Zeros Theorem to find all the real zeros of each polynomial function. Use the zeros to factor fover the real numbers.
45. \(f(x)=x^{3}+2 x^{2}-5 x-6\)
46. \(f(x)=x^{3}+8 x^{2}+11 x-20\)
47. \(f(x)=2 x^{3}-x^{2}+2 x-1\)
48. \(f(x)=2 x^{3}+x^{2}+2 x+1\)
49. \(f(x)=2 x^{3}-4 x^{2}-10 x+20\)
50. \(f(x)=3 x^{3}+6 x^{2}-15 x-30\)
51. \(f(x)=2 x^{4}+x^{3}-7 x^{2}-3 x+3\)
52. \(f(x)=2 x^{4}-x^{3}-5 x^{2}+2 x+2\)
53. \(f(x)=x^{4}+x^{3}-3 x^{2}-x+2\)
54. \(f(x)=x^{4}-x^{3}-6 x^{2}+4 x+8\)
55. \(f(x)=4 x^{4}+5 x^{3}+9 x^{2}+10 x+2\)
56. \(f(x)=3 x^{4}+4 x^{3}+7 x^{2}+8 x+2\)

In Problems 57-68, solve each equation in the real number system.
57. \(x^{4}-x^{3}+2 x^{2}-4 x-8=0\)
59. \(3 x^{3}+4 x^{2}-7 x+2=0\)
61. \(3 x^{3}-x^{2}-15 x+5=0\)
63. \(x^{4}+4 x^{3}+2 x^{2}-x+6=0\)
65. \(x^{3}-\frac{2}{3} x^{2}+\frac{8}{3} x+1=0\)
67. \(2 x^{4}-19 x^{3}+57 x^{2}-64 x+20=0\)
58. \(2 x^{3}+3 x^{2}+2 x+3=0\)
60. \(2 x^{3}-3 x^{2}-3 x-5=0\)
62. \(2 x^{3}-11 x^{2}+10 x+8=0\)
64. \(x^{4}-2 x^{3}+10 x^{2}-18 x+9=0\)
66. \(x^{3}+\frac{3}{2} x^{2}+3 x-2=0\)
68. \(2 x^{4}+x^{3}-24 x^{2}+20 x+16=0\)

In Problems 69-78, find bounds on the real zeros of each polynomial function.
69. \(f(x)=x^{4}-3 x^{2}-4\)
70. \(f(x)=x^{4}-5 x^{2}-36\)
71. \(f(x)=x^{4}+x^{3}-x-1\)
72. \(f(x)=x^{4}-x^{3}+x-1\)
73. \(f(x)=3 x^{4}+3 x^{3}-x^{2}-12 x-12\)
74. \(f(x)=3 x^{4}-3 x^{3}-5 x^{2}+27 x-36\)
75. \(f(x)=4 x^{5}-x^{4}+2 x^{3}-2 x^{2}+x-1\)
76. \(f(x)=4 x^{5}+x^{4}+x^{3}+x^{2}-2 x-2\)
77. \(f(x)=-x^{4}+3 x^{3}-4 x^{2}-2 x+9\)
78. \(f(x)=-4 x^{5}+5 x^{3}+9 x^{2}+3 x-12\)

In Problems 79-84, use the Intermediate Value Theorem to show that each polynomial function has a zero in the given interval.
79. \(f(x)=8 x^{4}-2 x^{2}+5 x-1 ;[0,1]\)
80. \(f(x)=x^{4}+8 x^{3}-x^{2}+2 ;[-1,0]\)
81. \(f(x)=2 x^{3}+6 x^{2}-8 x+2 ;[-5,-4]\)
82. \(f(x)=3 x^{3}-10 x+9\); \([-3,-2]\)
83. \(f(x)=x^{5}-x^{4}+7 x^{3}-7 x^{2}-18 x+18\); \([1.4,1.5]\)
84. \(f(x)=x^{5}-3 x^{4}-2 x^{3}+6 x^{2}+x+2 ;[1.7,1.8]\)

In Problems 85-88, each equation has a solution \(r\) in the interval indicated. Use the method of Example 10 to approximate this solution correct to two decimal places.
85. \(8 x^{4}-2 x^{2}+5 x-1=0 ; 0 \leq r \leq 1\)
86. \(x^{4}+8 x^{3}-x^{2}+2=0 ;-1 \leq r \leq 0\)
87. \(2 x^{3}+6 x^{2}-8 x+2=0 ;-5 \leq r \leq-4\)
88. \(3 x^{3}-10 x+9=0 ;-3 \leq r \leq-2\)

In Problems 89-92, each polynomial function has exactly one positive zero. Use the method of Example 10 to approximate the zero correct to two decimal places.
89. \(f(x)=x^{3}+x^{2}+x-4\)
90. \(f(x)=2 x^{4}+x^{2}-1\)
91. \(f(x)=2 x^{4}-3 x^{3}-4 x^{2}-8\)
92. \(f(x)=3 x^{3}-2 x^{2}-20\)

\section*{Mixed Practice}

In Problems 93-104, graph each polynomial function.
93. \(f(x)=x^{3}+2 x^{2}-5 x-6\)
94. \(f(x)=x^{3}+8 x^{2}+11 x-20\)
95. \(f(x)=2 x^{3}-x^{2}+2 x-1\)
96. \(f(x)=2 x^{3}+x^{2}+2 x+1\)
97. \(f(x)=x^{4}+x^{2}-2\)
98. \(f(x)=x^{4}-3 x^{2}-4\)
99. \(f(x)=4 x^{4}+7 x^{2}-2\)
100. \(f(x)=4 x^{4}+15 x^{2}-4\)
101. \(f(x)=x^{4}+x^{3}-3 x^{2}-x+2\)
102. \(f(x)=x^{4}-x^{3}-6 x^{2}+4 x+8\)
103. \(f(x)=4 x^{5}-8 x^{4}-x+2\)
104. \(f(x)=4 x^{5}+12 x^{4}-x-3\)
105. Suppose that \(f(x)=3 x^{3}+16 x^{2}+3 x-10\). Find the zeros of \(f(x+3)\).
106. Suppose that \(f(x)=4 x^{3}-11 x^{2}-26 x+24\). Find the zeros of \(f(x-2)\).

\section*{Applications and Extensions}
107. Find \(k\) such that \(f(x)=x^{3}-k x^{2}+k x+2\) has the factor \(x-2\).
108. Find \(k\) such that \(f(x)=x^{4}-k x^{3}+k x^{2}+1\) has the factor \(x+2\).
109. What is the remainder when \(f(x)=2 x^{20}-8 x^{10}+x-2\) is divided by \(x-1\) ?
110. What is the remainder when \(f(x)=-3 x^{17}+x^{9}-x^{5}+2 x\) is divided by \(x+1\) ?
111. Use the Factor Theorem to prove that \(x-c\) is a factor of \(x^{n}-c^{n}\) for any positive integer \(n\).
112. Use the Factor Theorem to prove that \(x+c\) is a factor of \(x^{n}+c^{n}\) if \(n \geq 1\) is an odd integer.
113. One solution of the equation \(x^{3}-8 x^{2}+16 x-3=0\) is 3 . Find the sum of the remaining solutions.
114. One solution of the equation \(x^{3}+5 x^{2}+5 x-2=0\) is -2 . Find the sum of the remaining solutions.
115. Geometry What is the length of the edge of a cube if, after a slice 1 inch thick is cut from one side, the volume remaining is 294 cubic inches?
116. Geometry What is the length of the edge of a cube if its volume could be doubled by an increase of 6 centimeters in one edge, an increase of 12 centimeters in a second edge, and a decrease of 4 centimeters in the third edge?
117. Let \(f(x)\) be a polynomial function whose coefficients are integers. Suppose that \(r\) is a real zero of \(f\) and that the leading coefficient of \(f\) is 1 . Use the Rational Zeros Theorem to show that \(r\) is either an integer or an irrational number.
118. Prove the Rational Zeros Theorem.
[Hint: Let \(\frac{p}{q}\), where \(p\) and \(q\) have no common factors except 1 and -1 , be a zero of the polynomial function
\[
f(x)=a_{n} x^{n}+a_{n-1} x^{n-1}+\cdots+a_{1} x+a_{0}
\]
whose coefficients are all integers. Show that
\[
a_{n} p^{n}+a_{n-1} p^{n-1} q+\cdots+a_{1} p q^{n-1}+a_{0} q^{n}=0
\]

Now, because \(p\) is a factor of the first \(n\) terms of this equation, \(p\) must also be a factor of the term \(a_{0} q^{n}\). Since \(p\) is not a factor of \(q\) (why?), \(p\) must be a factor of \(a_{0}\). Similarly, \(q\) must be a factor of \(a_{n}\).]
119. Bisection Method for Approximating Zeros of a Function \(f\) We begin with two consecutive integers, \(a\) and \(a+1\), such that \(f(a)\) and \(f(a+1)\) are of opposite sign. Evaluate \(f\) at the midpoint \(m_{1}\) of \(a\) and \(a+1\). If \(f\left(m_{1}\right)=0\), then \(m_{1}\) is the zero of \(f\), and we are finished. Otherwise, \(f\left(m_{1}\right)\) is of opposite sign to either \(f(a)\) or \(f(a+1)\). Suppose that it is \(f(a)\) and \(f\left(m_{1}\right)\) that are of opposite sign. Now evaluate \(f\) at the midpoint \(m_{2}\) of \(a\) and \(m_{1}\). Repeat this process until the desired degree
of accuracy is obtained. Note that each iteration places the zero in an interval whose length is half that of the previous interval. Use the bisection method to approximate the zero of \(f(x)=8 x^{4}-2 x^{2}+5 x-1\) in the interval \([0,1]\) correct to three decimal places.
[Hint: The process ends when both endpoints agree to the desired number of decimal places.]

\section*{Discussion and Writing}
120. Is \(\frac{1}{3}\) a zero of \(f(x)=2 x^{3}+3 x^{2}-6 x+7\) ? Explain.
122. Is \(\frac{3}{5}\) a zero of \(f(x)=2 x^{6}-5 x^{4}+x^{3}-x+1\) ? Explain.
121. Is \(\frac{1}{3}\) a zero of \(f(x)=4 x^{3}-5 x^{2}-3 x+1\) ? Explain.
123. Is \(\frac{2}{3}\) a zero of \(f(x)=x^{7}+6 x^{5}-x^{4}+x+2\) ? Explain.

\section*{Retain Your Knowledge}

Problems 124-127 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
124. Solve \(2 x-5 y=3\) for \(y\).
125. Express the inequality \(3 \leq x<8\) using interval notation.
126. Find the intercepts to the graph of the equation \(3 x+y^{2}=12\).
127. Use the figure to determine the interval (s) on which the function is increasing.

\subsection*{3.3 Complex Zeros; Fundamental Theorem of Algebra}

\section*{PREPARING FOR THIS SECTION Before getting started, review the following:}
- Complex Numbers (Appendix A, Section A.11, pp. A89-A94)
- Complex Zeros of a Quadratic Function (Section 2.7, pp. 175-177)

Now Work the 'Are You Prepared?' problems on page 230.
OBJECTIVES 1 Use the Conjugate Pairs Theorem (p. 227)
2 Find a Polynomial Function with Specified Zeros (p. 228)
3 Find the Complex Zeros of a Polynomial Function (p. 229)

In Section 2.3, we found the real zeros of a quadratic function. That is, we found the real zeros of a polynomial function of degree 2. Then, in Section 2.7, we found the complex zeros of a quadratic function. That is, we found the complex zeros of a polynomial function of degree 2.

In Section 3.2, we found the real zeros of polynomial functions of degree 3 or higher. In this section we will find the complex zeros of polynomial functions of degree 3 or higher.

\section*{DEFINITION}

FUNDAMENTAL THEOREM OF ALGEBRA

A variable in the complex number system is referred to as a complex variable. A complex polynomial function \(f\) of degree \(n\) is a function of the form
\[
\begin{equation*}
f(x)=a_{n} x^{n}+a_{n-1} x^{n-1}+\cdots+a_{1} x+a_{0} \tag{1}
\end{equation*}
\]
where \(a_{n}, a_{n-1}, \ldots, a_{1}, a_{0}\) are complex numbers, \(a_{n} \neq 0, n\) is a nonnegative integer, and \(x\) is a complex variable. As before, \(a_{n}\) is called the leading coefficient of \(f\). A complex number \(r\) is called a complex zero of \(f\) if \(f(r)=0\).

In most of our work the coefficients in (1) will be real numbers.
We have learned that some quadratic equations have no real solutions, but that in the complex number system every quadratic equation has a solution, either real or complex. The next result, proved by Karl Friedrich Gauss (1777-1855) when he was 22 years old,* gives an extension to complex polynomials. In fact, this result is so important and useful that it has become known as the Fundamental Theorem of Algebra.

Every complex polynomial function \(f(x)\) of degree \(n \geq 1\) has at least one complex zero.

We shall not prove this result, as the proof is beyond the scope of this text. However, using the Fundamental Theorem of Algebra and the Factor Theorem, we can prove the following result:

Every complex polynomial function \(f(x)\) of degree \(n \geq 1\) can be factored into \(n\) linear factors (not necessarily distinct) of the form
\[
\begin{equation*}
f(x)=a_{n}\left(x-r_{1}\right)\left(x-r_{2}\right) \cdot \cdots \cdot\left(x-r_{n}\right) \tag{2}
\end{equation*}
\]
where \(a_{n}, r_{1}, r_{2}, \ldots, r_{n}\) are complex numbers. That is, every complex polynomial function of degree \(n \geq 1\) has exactly \(n\) complex zeros, some of which may repeat.

Proof Let
\[
f(x)=a_{n} x^{n}+a_{n-1} x^{n-1}+\cdots+a_{1} x+a_{0}
\]

By the Fundamental Theorem of Algebra, \(f\) has at least one zero, say \(r_{1}\). Then, by the Factor Theorem, \(x-r_{1}\) is a factor, and
\[
f(x)=\left(x-r_{1}\right) q_{1}(x)
\]
where \(q_{1}(x)\) is a complex polynomial of degree \(n-1\) whose leading coefficient is \(a_{n}\). Repeating this argument \(n\) times, we arrive at
\[
f(x)=\left(x-r_{1}\right)\left(x-r_{2}\right) \cdots \cdot\left(x-r_{n}\right) q_{n}(x)
\]
where \(q_{n}(x)\) is a complex polynomial of degree \(n-n=0\) whose leading coefficient is \(a_{n}\). That is, \(q_{n}(x)=a_{n} x^{0}=a_{n}\), and so
\[
f(x)=a_{n}\left(x-r_{1}\right)\left(x-r_{2}\right) \cdots \cdot\left(x-r_{n}\right)
\]

We conclude that every complex polynomial function \(f(x)\) of degree \(n \geq 1\) has exactly \(n\) (not necessarily distinct) zeros.

\section*{1 Use the Conjugate Pairs Theorem}

The Fundamental Theorem of Algebra can be used to obtain valuable information about the complex zeros of polynomial functions whose coefficients are real numbers.

\footnotetext{
*In all, Gauss gave four different proofs of this theorem, the first one in 1799 being the subject of his doctoral dissertation.
}

\section*{CONJUGATE PAIRS THEOREM}

\section*{COROLLARY}

Let \(f(x)\) be a polynomial function whose coefficients are real numbers. If \(r=a+b i\) is a zero of \(f\), the complex conjugate \(\bar{r}=a-b i\) is also a zero of \(f\).

In other words, for polynomial functions whose coefficients are real numbers, the complex zeros occur in conjugate pairs. This result should not be all that surprising since the complex zeros of a quadratic function occurred in conjugate pairs.

Proof Let
\[
f(x)=a_{n} x^{n}+a_{n-1} x^{n-1}+\cdots+a_{1} x+a_{0}
\]
where \(a_{n}, a_{n-1}, \ldots, a_{1}, a_{0}\) are real numbers and \(a_{n} \neq 0\). If \(r=a+b i\) is a zero of \(f\), then \(f(r)=f(a+b i)=0\), so
\[
a_{n} r^{n}+a_{n-1} r^{n-1}+\cdots+a_{1} r+a_{0}=0
\]

Take the conjugate of both sides to get
\[
\begin{aligned}
& \overline{a_{n} r^{n}+a_{n-1} r^{n-1}+\cdots+a_{1} r+a_{0}}=\overline{0} \\
& \overline{a_{n} r^{n}}+\overline{a_{n-1} r^{n-1}}+\cdots+\overline{a_{1} r}+\overline{a_{0}}=\overline{0} \\
& \overline{a_{n}}(\bar{r})^{n}+\overline{a_{n-1}}(\bar{r})^{n-1}+\cdots+\bar{a}_{1} \bar{r}+\bar{a}_{0}=\overline{0} \\
& a_{n}(\bar{r})^{n}+a_{n-1}(\bar{r})^{n-1}+\cdots+a_{1} \bar{r}+a_{0}=0
\end{aligned}
\]

The conjugate of a sum equals the sum
of the conjugates (see Section A. 11).
The conjugate of a product equals the product of the conjugates.
The conjugate of a real number equals the real number.

This last equation states that \(f(\bar{r})=0\); that is, \(\bar{r}=a-b i\) is a zero of \(f\).
The importance of this result should be clear. Once we know that, say, \(3+4 i\) is a zero of a polynomial function with real coefficients, then we know that \(3-4 i\) is also a zero. This result has an important corollary.

A polynomial function \(f\) of odd degree with real coefficients has at least one real zero.

Proof Because complex zeros occur as conjugate pairs in a polynomial function with real coefficients, there will always be an even number of zeros that are not real numbers. Consequently, since \(f\) is of odd degree, one of its zeros has to be a real number.

For example, the polynomial function \(f(x)=x^{5}-3 x^{4}+4 x^{3}-5\) has at least one zero that is a real number, since \(f\) is of degree 5 (odd) and has real coefficients.

\section*{EXAMPLE I Using the Conjugate Pairs Theorem}

A polynomial function \(f\) of degree 5 whose coefficients are real numbers has the zeros \(1,5 i\), and \(1+i\). Find the remaining two zeros.
Solution Since \(f\) has coefficients that are real numbers, complex zeros appear as conjugate pairs. It follows that \(-5 i\), the conjugate of \(5 i\), and \(1-i\), the conjugate of \(1+i\), are the two remaining zeros.
an Now Work problem 7

\section*{2 Find a Polynomial Function with Specified Zeros}

\section*{EXAMPLE 2}

Finding a Polynomial Function Whose Zeros Are Given
Find a polynomial function \(f\) of degree 4 whose coefficients are real numbers that has the zeros 1,1 , and \(-4+i\).

\section*{Solution}

Figure 27

Since \(-4+i\) is a zero, by the Conjugate Pairs Theorem, \(-4-i\) must also be a zero of \(f\). Because of the Factor Theorem, if \(f(c)=0\), then \(x-c\) is a factor of \(f(x)\). So \(f\) can now be written as
\[
f(x)=a(x-1)(x-1)[x-(-4+i)][x-(-4-i)]
\]
where \(a\) is any real number. Then
\[
\begin{aligned}
f(x) & =a(x-1)(x-1)[x-(-4+i)][x-(-4-i)] \\
& =a\left(x^{2}-2 x+1\right)[(x+4)-i][(x+4)+i] \\
& =a\left(x^{2}-2 x+1\right)\left((x+4)^{2}-i^{2}\right) \\
& =a\left(x^{2}-2 x+1\right)\left(x^{2}+8 x+16-(-1)\right) \\
& =a\left(x^{2}-2 x+1\right)\left(x^{2}+8 x+17\right) \\
& =a\left(x^{4}+8 x^{3}+17 x^{2}-2 x^{3}-16 x^{2}-34 x+x^{2}+8 x+17\right) \\
& =a\left(x^{4}+6 x^{3}+2 x^{2}-26 x+17\right)
\end{aligned}
\]

\section*{Exploration}

Graph the function \(f\) found in Example 2 for \(a=1\). Does the value of \(a\) affect the zeros of \(f\) ? How does the value of \(a\) affect the graph of \(f\) ? What information about \(f\) is sufficient to uniquely determine \(a\) ?
Result A quick analysis of the polynomial function \(f\) tells us what to expect:
At most three turning points.
For large \(|x|\), the graph will behave like \(y=x^{4}\).
A repeated real zero at 1 , so the graph will touch the \(x\)-axis at 1 .
The only \(x\)-intercept is 1 ; the \(y\)-intercept is 17 .
Figure 27 shows the complete graph. (Do you see why? The graph has exactly three turning points.) The value of \(a\) causes a stretch or compression; a reflection also occurs if \(a<0\). The zeros are not affected.

If any point other than an \(x\)-intercept on the graph of \(f\) is known, then \(a\) can be determined. For example, if \((2,3)\) is on the graph, then \(f(2)=3=a(37)\), so \(a=3 / 37\). Why won't an \(x\)-intercept work?

Now we can prove the theorem we conjectured in Section 3.2.

Every polynomial function with real coefficients can be uniquely factored over the real numbers into a product of linear factors and/or irreducible quadratic factors.

Proof Every complex polynomial function \(f\) of degree \(n\) has exactly \(n\) zeros and can be factored into a product of \(n\) linear factors. If its coefficients are real, those zeros that are complex numbers will always occur as conjugate pairs. As a result, if \(r=a+b i\) is a complex zero, then so is \(\bar{r}=a-b i\). Consequently, when the linear factors \(x-r\) and \(x-\bar{r}\) of \(f\) are multiplied, we have
\[
(x-r)(x-\bar{r})=x^{2}-(r+\bar{r}) x+r \bar{r}=x^{2}-2 a x+a^{2}+b^{2}
\]

This second-degree polynomial has real coefficients and is irreducible (over the real numbers). Thus, the factors of \(f\) are either linear or irreducible quadratic factors.
all Now Work problem 17

\section*{3 Find the Complex Zeros of a Polynomial Function}

The steps for finding the complex zeros of a polynomial function are the same as those for finding the real zeros.

\section*{EXAMPLE 3 \\ Finding the Complex Zeros of a Polynomial Function}

Find the complex zeros of the polynomial function
\[
f(x)=3 x^{4}+5 x^{3}+25 x^{2}+45 x-18
\]

Write \(f\) in factored form.

Solution STEP 1: The degree of \(f\) is 4 , so \(f\) will have four complex zeros.
STEP 2: Descartes' Rule of Signs provides information about the real zeros. For this polynomial function, there is one positive real zero. There are three negative real zeros or one negative real zero, because
\[
f(-x)=3 x^{4}-5 x^{3}+25 x^{2}-45 x-18
\]
has three variations in sign.
Step 3: The Rational Zeros Theorem provides information about the potential rational zeros of polynomial functions with integer coefficients. For this polynomial function (which has integer coefficients), the potential rational zeros are
\[
\pm \frac{1}{3}, \pm \frac{2}{3}, \pm 1, \pm 2, \pm 3, \pm 6, \pm 9, \pm 18
\]

Table 8 summarizes some results of synthetic division.
Table 8
\begin{tabular}{|c|c|c|c|c|c|c|c|}
\hline \(r\) & \multicolumn{4}{|c|}{Coefficients of \(\boldsymbol{q}(\boldsymbol{x})\)} & & Remainder & \multirow[b]{2}{*}{1 is not a zero.} \\
\hline 1 & 3 & 8 & 33 & 78 & 1 & 60 & \\
\hline -1 & 3 & 2 & 23 & 22 & 1 & -40 & -1 is not a zero. \\
\hline 2 & 3 & 11 & 47 & 139 & 1 & 260 & 2 is not a zero. \\
\hline -2 & 3 & -1 & 27 & -9 & 1 & (0) & -2 is a zero. \\
\hline
\end{tabular}

Since \(f(-2)=0\), then -2 is a zero and \(x+2\) is a factor of \(f\). The depressed equation is
\[
3 x^{3}-x^{2}+27 x-9=0
\]

Repeat Step 3: We factor the depressed equation by grouping.
\[
\begin{array}{rlrl}
3 x^{3}-x^{2}+27 x-9 & =0 & \\
x^{2}(3 x-1)+9(3 x-1) & =0 & \text { Factor } x^{2} \text { from } 3 x^{3}-x^{2} \text { and } 9 \text { from } 27 x-9 . \\
\left(x^{2}+9\right)(3 x-1) & =0 & & \text { Factor out the common factor } 3 x-1 . \\
x^{2}+9=0 & \text { or } & 3 x-1 & =0 \\
& \text { Apply the Zero-Product Property. } \\
x^{2}=-9 & \text { or } & x & =\frac{1}{3} \\
x=-3 i, x=3 i & \text { or } & x & =\frac{1}{3}
\end{array}
\]

The four complex zeros of \(f\) are \(\left\{-3 i, 3 i,-2, \frac{1}{3}\right\}\).
The factored form of \(f\) is
\[
\begin{aligned}
f(x) & =3 x^{4}+5 x^{3}+25 x^{2}+45 x-18 \\
& =3(x+3 i)(x-3 i)(x+2)\left(x-\frac{1}{3}\right)
\end{aligned}
\]
-Now Work problem 3

\subsection*{3.3 Assess Your Understanding}

\section*{'Are You Prepared?' Answers are given at the end of these exercises. If you get the wrong answer, read the pages listed in red.}
1. Find the sum and the product of the complex numbers \(3-2 i\) and \(-3+5 i\). (pp. A90-A91)
2. In the complex number system, find the complex zeros of \(f(x)=x^{2}+2 x+2\). pp. 175-177)

\section*{Concepts and Vocabulary}
3. Every polynomial function of odd degree with real coefficients will have at least \(\qquad\) real zero(s).
4. If \(3+4 i\) is a zero of a polynomial function of degree 5 with real coefficients, then so is \(\qquad\) -.
5. True or False A polynomial function of degree \(n\) with real coefficients has exactly \(n\) complex zeros. At most \(n\) of them are real zeros.
6. True or False A polynomial function of degree 4 with real coefficients could have \(-3,2+i, 2-i\), and \(-3+5 i\) as its zeros.

\section*{Skill Building}

In Problems 7-16, information is given about a polynomial function \(f(x)\) whose coefficients are real numbers. Find the remaining zeros off.
7. Degree 3; zeros: 3, \(4-i\)
8. Degree 3; zeros: \(4,3+i\)
9. Degree 4; zeros: \(i, 1+i\)
10. Degree 4 ; zeros: \(1,2,2+i\)
11. Degree 5; zeros: \(1, i, 2 i\)
12. Degree 5; zeros: \(0,1,2, i\)
13. Degree 4 ; zeros: \(i, 2,-2\)
14. Degree 4; zeros: \(2-i,-i\)
15. Degree 6 ; zeros: \(2,2+i,-3-i, 0\)
16. Degree 6; zeros: \(i, 3-2 i,-2+i\)

In Problems 17-22, form a polynomial function \(f(x)\) with real coefficients having the given degree and zeros. Answers will vary depending on the choice of leading coefficient.
17. Degree 4 ; zeros: \(3+2 i ; 4\), multiplicity 2
18. Degree 4; zeros: \(i, 1+2 i\)
19. Degree 5; zeros: \(2 ;-i ; 1+i\)
20. Degree 6; zeros: \(i, 4-i ; 2+i\)
21. Degree 4; zeros: 3 , multiplicity \(2 ;-i\)
22. Degree 5; zeros: 1 , multiplicity \(3 ; 1+i\)

In Problems 23-30, use the given zero to find the remaining zeros of each function.
23. \(f(x)=x^{3}-4 x^{2}+4 x-16\); zero: \(2 i\)
24. \(g(x)=x^{3}+3 x^{2}+25 x+75\); zero: \(-5 i\)
25. \(f(x)=2 x^{4}+5 x^{3}+5 x^{2}+20 x-12\); zero: \(-2 i\)
26. \(h(x)=3 x^{4}+5 x^{3}+25 x^{2}+45 x-18\); zero: \(3 i\)
27. \(h(x)=x^{4}-9 x^{3}+21 x^{2}+21 x-130\); zero: \(3-2 i\)
28. \(f(x)=x^{4}-7 x^{3}+14 x^{2}-38 x-60\); zero: \(1+3 i\)
29. \(h(x)=3 x^{5}+2 x^{4}+15 x^{3}+10 x^{2}-528 x-352\); zero: \(-4 i\)
30. \(g(x)=2 x^{5}-3 x^{4}-5 x^{3}-15 x^{2}-207 x+108\); zero: \(3 i\)

In Problems 31-40, find the complex zeros of each polynomial function. Write f in factored form.
31. \(f(x)=x^{3}-1\)
32. \(f(x)=x^{4}-1\)
33. \(f(x)=x^{3}-8 x^{2}+25 x-26\)
34. \(f(x)=x^{3}+13 x^{2}+57 x+85\)
35. \(f(x)=x^{4}+5 x^{2}+4\)
36. \(f(x)=x^{4}+13 x^{2}+36\)
37. \(f(x)=x^{4}+2 x^{3}+22 x^{2}+50 x-75\)
38. \(f(x)=x^{4}+3 x^{3}-19 x^{2}+27 x-252\)
39. \(f(x)=3 x^{4}-x^{3}-9 x^{2}+159 x-52\)
40. \(f(x)=2 x^{4}+x^{3}-35 x^{2}-113 x+65\)

\section*{- Mixed Practice}
41. Given that \(f(x)=2 x^{3}-14 x^{2}+b x-3\) has zero \(x=2\), and that \(g(x)=x^{3}+c x^{2}-8 x+30\), with \(c\) a real number, has zero \(x=3-i\), find \((f \cdot g)(1) .{ }^{+}\)
42. Let \(f(x)\) be the polynomial of degree 4 with real coefficients, leading coefficient 1 , and zeros \(x=3+i, 2\), -2 . Let \(g(x)\) be the polynomial of degree 4 with \(y\)-intercept \((0,-4)\) and zeros \(x=i, 2 i\). Find \((f+g)(1){ }^{\dagger}\)
43. The complex Zeros of \(\boldsymbol{f}(\boldsymbol{x})=\boldsymbol{x}^{4}+\mathbf{1}\) For the function \(f(x)=x^{4}+1\) :
(a) Factor \(f\) into the product of two irreducible quadratics. (Hint: Complete the square by adding and subtracting \(2 x^{2}\).)
(b) Find the zeros of \(f\) by finding the zeros of each irreducible quadratic.

}

\section*{Discussion and Writing}

In Problems 44 and 45 , explain why the facts given are contradictory.
44. \(f(x)\) is a polynomial function of degree 3 whose coefficients are real numbers; its zeros are \(2, i\), and \(3+i\).
45. \(f(x)\) is a polynomial function of degree 3 whose coefficients are real numbers; its zeros are \(4+i, 4-i\), and \(2+i\).
46. \(f(x)\) is a polynomial function of degree 4 whose coefficients are real numbers; two of its zeros are -3 and \(4-i\). Explain why one of the remaining zeros must be a real number. Write down one of the missing zeros.
47. \(f(x)\) is a polynomial function of degree 4 whose coefficients are real numbers; three of its zeros are \(2,1+2 i\), and \(1-2 i\). Explain why the remaining zero must be a real number.
48. For the polynomial function \(f(x)=x^{2}+2 x i-10\) :
(a) Verify that \(3-i\) is a zero of \(f\).
(b) Verify that \(3+i\) is not a zero of \(f\).
(c) Explain why these results do not contradict the Conjugate Pairs Theorem.

\section*{Retain Your Knowledge}

Problems 49-52 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
49. Draw a scatter diagram for the given data.
\begin{tabular}{|c|cccccc|}
\hline \(\boldsymbol{x}\) & -1 & 1 & 2 & 5 & 8 & 10 \\
\(y\) & -4 & 0 & 3 & 1 & 5 & 7 \\
\hline
\end{tabular}
50. Solve: \(\sqrt{3-x}=5\)
51. Multiply: \((2 x-5)\left(3 x^{2}+x-4\right)\)
52. Find the area and circumference of a circle with a diameter of 6 feet.

\subsection*{3.4 Properties of Rational Functions}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Rational Expressions (Appendix A, Section A.6, pp. A45-A46)
- Polynomial Division (Appendix A, Section A.3, pp. A17-A30)
- Graph of \(f(x)=\frac{1}{x}\) (Foundations, Section 2, Example 10, p. 15)
- Graphing Techniques: Transformations (Section 1.5, pp. 89-97)

Now Work the 'Are You Prepared?' problems on page 240.
OBJECTIVES 1 Find the Domain of a Rational Function (p. 233)
2 Find the Vertical Asymptotes of a Rational Function (p. 236)
3 Find the Horizontal or Oblique Asymptote of a Rational Function (p. 237)

Ratios of integers are called rational numbers. Similarly, ratios of polynomial functions are called rational functions. Examples of rational functions are
\[
R(x)=\frac{x^{2}-4}{x^{2}+x+1} \quad F(x)=\frac{x^{3}}{x^{2}-4} \quad G(x)=\frac{3 x^{2}}{x^{4}-1}
\]

\section*{DEFINITION}

A rational function is a function of the form
\[
R(x)=\frac{p(x)}{q(x)}
\]
where \(p\) and \(q\) are polynomial functions and \(q\) is not the zero polynomial. The domain of a rational function is the set of all real numbers except those for which the denominator \(q\) is 0 .

\section*{1 Find the Domain of a Rational Function}

\section*{EXAMPLE I}

WARNING The domain of a rational function must be found before writing the function in lowest terms.

\section*{Finding the Domain of a Rational Function}
(a) The domain of \(R(x)=\frac{2 x^{2}-4}{x+5}\) is the set of all real numbers \(x\) except -5 ; that is, the domain is \(\{x \mid x \neq-5\}\).
(b) The domain of \(R(x)=\frac{1}{x^{2}-4}=\frac{1}{(x+2)(x-2)}\) is the set of all real numbers \(x\) except -2 and 2 ; that is, the domain is \(\{x \mid x \neq-2, x \neq 2\}\).
(c) The domain of \(R(x)=\frac{x^{3}}{x^{2}+1}\) is the set of all real numbers.
(d) The domain of \(R(x)=\frac{x^{2}-1}{x-1}\) is the set of all real numbers \(x\) except 1 ; that is, the domain is \(\{x \mid x \neq 1\}\).

It is important to observe that the functions
\[
R(x)=\frac{x^{2}-1}{x-1} \text { and } f(x)=x+1
\]
are not equal, since the domain of \(R\) is \(\{x \mid x \neq 1\}\) and the domain of \(f\) is the set of all real numbers.

\section*{Now Work problem 1}

If \(R(x)=\frac{p(x)}{q(x)}\) is a rational function and if \(p\) and \(q\) have no common factors, then the rational function \(R\) is said to be in lowest terms. For a rational function \(R(x)=\frac{p(x)}{q(x)}\) in lowest terms, the real zeros, if any, of the numerator are the \(x\)-intercepts of the graph of \(R\) and so will play a major role in the graph of \(R\). The real zeros of the denominator of \(R\) [that is, the numbers \(x\), if any, for which \(q(x)=0\) ], although not in the domain of \(R\), also play a major role in the graph of \(R\). We will discuss this role shortly.

We have already discussed the properties of the rational function \(y=\frac{1}{x}\). (Refer to Example 10, page 15). The next rational function that we take up is \(H(x)=\frac{1}{x^{2}}\).

\section*{EXAMPLE 2}

Graphing \(y=\frac{I}{x^{2}}\)

\section*{Table 9}
\begin{tabular}{|c|c|}
\hline \(\boldsymbol{x}\) & \(\boldsymbol{H}(\boldsymbol{x})=\frac{1}{\boldsymbol{x}^{2}}\) \\
\hline\(\frac{1}{2}\) & 4 \\
\(\frac{1}{100}\) & 10,000 \\
\(\frac{1}{10,000}\) & \(\frac{100,000,000}{1}\) \\
2 & \(\frac{1}{10,000}\) \\
100 & \(\frac{1}{100,000,000}\) \\
\hline
\end{tabular}

Analyze the graph of \(H(x)=\frac{1}{x^{2}}\).
Solution The domain of \(H(x)=\frac{1}{x^{2}}\) is the set of all real numbers \(x\) except 0 . The graph has no \(y\)-intercept, because \(x\) can never equal 0 . The graph has no \(x\)-intercept because the equation \(H(x)=0\) has no solution. Therefore, the graph of \(H\) will not cross or touch either of the coordinate axes. Because
\[
H(-x)=\frac{1}{(-x)^{2}}=\frac{1}{x^{2}}=H(x)
\]
\(H\) is an even function, so its graph is symmetric with respect to the \(y\)-axis.
Table 9 shows the behavior of \(H(x)=\frac{1}{x^{2}}\) for selected positive numbers \(x\). (We will use symmetry to obtain the graph of \(H\) when \(x<0\).) From the first three rows of Table 9 , we see that as the values of \(x\) approach (get closer to) 0 , the values of \(H(x)\) become larger and larger positive numbers, so \(H\) is unbounded in the positive direction. In calculus we use the limit notation \(\lim _{x \rightarrow 0} H(x)=\infty\), which is read "the limit of \(H(x)\) as \(x\) approaches zero equals infinity," to mean that \(H(x) \rightarrow \infty\) as \(x \rightarrow 0\).

Look at the last four rows of Table 9. As \(x \rightarrow \infty\), the values of \(H(x)\) approach 0 (the end behavior of the graph). In calculus, this is expressed by writing \(\lim _{x \rightarrow \infty} H(x)=0\). Figure 28 shows the graph. Notice the use of red dashed lines to convey the ideas discussed above.

Figure 28
\(H(x)=\frac{1}{x^{2}}\)

\section*{EXAMPLE 3 Using Transformations to Graph a Rational Function}

Graph the rational function: \(R(x)=\frac{1}{(x-2)^{2}}+1\)
Solution The domain of \(R\) is the set of all real numbers except \(x=2\). To graph \(R\), start with the graph of \(y=\frac{1}{x^{2}}\). See Figure 29 for the steps.

Figure 29

\section*{Asymptotes}

Let's investigate the roles of the vertical line \(x=2\) and the horizontal line \(y=1\) in Figure 29(c).

First, consider the end behavior of \(R(x)=\frac{1}{(x-2)^{2}}+1\). Table 10(a) shows the values of \(R\) at \(x=10,100,1000,10,000\). Notice that as \(x\) becomes unbounded in the positive direction, the values of \(R\) approach 1 , so \(\lim _{x \rightarrow \infty} R(x)=1\). From Table 10(b) we see that as \(x\) becomes unbounded in the negative direction, the values of \(R\) also approach 1 , so \(\lim _{x \rightarrow-\infty} R(x)=1\).

Notice that \(x=2\) is not in the domain of \(R\). However, we want to know the behavior of the graph of \(R\) near \(x=2\). Table 10 (c) shows the values of \(R\) at \(x=1.5,1.9,1.99,1.999\), and 1.9999 . We see that as \(x\) approaches 2 for \(x<2\), denoted \(x \rightarrow 2^{-}\), the values of \(R\) are increasing without bound, so \(\lim _{x \rightarrow 2^{-}} R(x)=\infty\). From Table \(10(\mathrm{~d})\), we see that as \(x\) approaches 2 for \(x>2\), denoted \(x \rightarrow 2^{+}\), the values of \(R\) are also increasing without bound, so \(\lim _{x \rightarrow 2^{+}} R(x)=\infty\).

(d)

The vertical line \(x=2\) and the horizontal line \(y=1\) are called asymptotes of the graph of \(R\).

\section*{DEFINITION}

Let \(R\) denote a function.
If, as \(x \rightarrow-\infty\) or as \(x \rightarrow \infty\), the values of \(R(x)\) approach some fixed number \(L\), then the line \(y=L\) is a horizontal asymptote of the graph of \(R\). [Refer to Figures 30(a) and (b).]
If, as \(x\) approaches some number \(c\), the values \(|R(x)| \rightarrow \infty[R(x) \rightarrow-\infty\) or \(R(x) \rightarrow \infty\) ], then the line \(x=c\) is a vertical asymptote of the graph of \(R\). The graph of \(R\) never intersects a vertical asymptote. [Refer to Figures 30(c) and (d).]

Figure 30

(a) End behavior:

As \(x \rightarrow \infty\), the values of \(R(x)\) approach \(L\left[\lim _{x \rightarrow \infty} R(x)=L\right]\). That is, the points on the graph of \(R\) are getting closer to the line \(y=L ; y=L\) is a horizontal asymptote.

(b) End behavior:

As \(x \rightarrow-\infty\), the values of \(R(x)\) approach \(L\) \(\left[\lim _{x \rightarrow-\infty} R(x)=L\right]\). That is, the points on the graph of \(R\) are getting closer to the line \(y=L ; y=L\) is a horizontal asymptote.

(c) As \(x\) approaches \(c\), the values of \(|R(x)| \rightarrow \infty\) \(\left[\lim _{x \rightarrow c} R(x)=\infty\right.\); \(\left.\lim _{x \rightarrow c^{+}} R(x)=\infty\right]\). That is, the points on the graph of \(R\) are getting closer to the line \(x=c ; x=c\) is a vertical asymptote.

(d) As \(x\) approaches \(c\), the values of \(|R(x)| \rightarrow \infty\) \(\left[\lim _{x \rightarrow c^{-}} R(x)=-\infty ;\right.\) \(\left.\lim _{x \rightarrow c^{+}} R(x)=\infty\right]\). That is, the points on the graph of \(R\) are getting closer to the line \(x=c ; x=c\) is a vertical asymptote.

Figure 31

A horizontal asymptote, when it occurs, describes the end behavior of the graph as \(x \rightarrow \infty\) or as \(x \rightarrow-\infty\). The graph of a function may intersect a horizontal asymptote.

A vertical asymptote, when it occurs, describes the behavior of the graph when \(x\) is close to some number \(c\). The graph of a function will never intersect a vertical asymptote.

There is a third possibility. If, as \(x \rightarrow-\infty\) or as \(x \rightarrow \infty\), the value of a rational function \(R(x)\) approaches a linear expression \(a x+b, a \neq 0\), then the line \(y=a x+b, a \neq 0\), is an oblique (or slant) asymptote of \(R\). Figure 31 shows an oblique asymptote. An oblique asymptote, when it occurs, describes the end behavior of the graph. The graph of a function may intersect an oblique asymptote.

\section*{2 Find the Vertical Asymptotes of a Rational Function}

The vertical asymptotes of a rational function \(R(x)=\frac{p(x)}{q(x)}\), in lowest terms, are located at the real zeros of the denominator of \(q(x)\). Suppose that \(r\) is a real zero of \(q\), so \(x-r\) is a factor of \(q\). As \(x\) approaches \(r\), symbolized as \(x \rightarrow r\), the values of \(x-r\) approach 0 , causing the ratio to become unbounded; that is, \(|R(x)| \rightarrow \infty\). Based on the definition, we conclude that the line \(x=r\) is a vertical asymptote.

\section*{Locating Vertical Asymptotes}

A rational function \(R(x)=\frac{p(x)}{q(x)}\), in lowest terms, will have a vertical asymptote \(x=r\) if \(r\) is a real zero of the denominator \(q\). That is, if \(x-r\) is a factor of the denominator \(q\) of a rational function \(R(x)=\frac{p(x)}{q(x)}\), in lowest terms, \(R\) will have
the vertical asymptote \(x=r\).

\section*{Finding Vertical Asymptotes}

Find the vertical asymptotes, if any, of the graph of each rational function.
(a) \(F(x)=\frac{x+3}{x-1}\)
(b) \(R(x)=\frac{x}{x^{2}-4}\)
(c) \(H(x)=\frac{x^{2}}{x^{2}+1}\)
(d) \(G(x)=\frac{x^{2}-9}{x^{2}+4 x-21}\)

Solution

WARNING In Example 4(a), the vertical asymptote is \(x=1\). Do not say that the vertical asymptote is 1 .
(a) \(F\) is in lowest terms, and the only zero of the denominator is 1 . The line \(x=1\) is the vertical asymptote of the graph of \(F\).
(b) \(R\) is in lowest terms, and the zeros of the denominator \(x^{2}-4\) are -2 and 2 . The lines \(x=-2\) and \(x=2\) are the vertical asymptotes of the graph of \(R\).
(c) \(H\) is in lowest terms and the denominator has no real zeros, because the equation \(x^{2}+1=0\) has no real solutions. The graph of \(H\) has no vertical asymptotes.
(d) Factor \(G(x)\) to determine whether it is in lowest terms.
\[
G(x)=\frac{x^{2}-9}{x^{2}+4 x-21}=\frac{(x+3)(x-3)}{(x+7)(x-3)}=\frac{x+3}{x+7} \quad x \neq 3
\]

The only zero of the denominator of \(G(x)\) in lowest terms is -7 . The line \(x=-7\) is the only vertical asymptote of the graph of \(G\).

As Example 4 points out, rational functions can have no vertical asymptotes, one vertical asymptote, or more than one vertical asymptote.
am Now Work problem 47 (find the vertical asymptotes, if any.)
Multiplicity and Vertical Asymptotes Recall from Figure 15 in Section 3.1 that the end behavior of a polynomial function is always one of four types. For polynomials of odd degree, the ends of the graph go in opposite directions (one up and one down), whereas for polynomials of even degree, the ends go in the same direction (both up or both down). For a rational function in lowest terms, the multiplicities of the zeros in the denominator can be used in a similar fashion to determine the behavior of the graph around each vertical asymptote. Consider the following four functions, each with a single vertical asymptote, \(x=2\).
\[
R_{1}(x)=\frac{1}{x-2} \quad R_{2}(x)=-\frac{1}{x-2} \quad R_{3}(x)=\frac{1}{(x-2)^{2}} \quad R_{4}(x)=-\frac{1}{(x-2)^{2}}
\]

Table 11 shows values of each function around the vertical asymptote, and Figure 32 shows the corresponding graphs. Notice that if the multiplicity of the zero that gives rise to the vertical asymptote is odd, as for \(R_{1}\) and \(R_{2}\), the graph approaches \(\infty\) on one side of the vertical asymptote, and \(-\infty\) on the other side. If the multiplicity of the zero that gives rise to the vertical asymptote is even, as for \(R_{3}\) and \(R_{4}\), the graph approaches either \(\infty\) or \(-\infty\) on both sides of the vertical asymptote.

Table 11

Figure 32

(a) Odd multiplicity
\[
\begin{aligned}
\lim _{x \rightarrow 2^{-}} R_{1}(x) & =-\infty \\
\lim _{x \rightarrow 2^{+}} R_{1}(x) & =\infty
\end{aligned}
\]

(b) Odd multiplicity
\[
\begin{aligned}
\lim _{x \rightarrow 2^{-}} R_{2}(x) & =\infty \\
\lim _{x \rightarrow 2^{+}} R_{2}(x) & =-\infty
\end{aligned}
\]

(c) Even multiplicity
\[
\begin{aligned}
\lim _{x \rightarrow 2^{-}} R_{3}(x) & =\infty \\
\lim _{x \rightarrow 2^{+}} R_{3}(x) & =\infty
\end{aligned}
\]

(d) Even multiplicity
\[
\begin{aligned}
\lim _{x \rightarrow 2^{-}} R_{4}(x) & =-\infty \\
\lim _{x \rightarrow 2^{+}} R_{4}(x) & =-\infty
\end{aligned}
\]

These results are true in general and will be helpful when graphing rational functions in the next section.

\section*{3 Find the Horizontal or Oblique Asymptote of a Rational Function}

To find horizontal and oblique asymptotes, we need to know how the value of the function behaves as \(x \rightarrow-\infty\) or as \(x \rightarrow \infty\). That is, we need to determine the end behavior of the function. This can be done by examining the degrees of the numerator and denominator, and the respective power functions that each resembles. For example, consider the rational function
\[
R(x)=\frac{3 x-2}{5 x^{2}-7 x+1}
\]

The degree of the numerator, 1 , is less than the degree of the denominator, 2 . When \(|x|\) is very large, the numerator of \(R\) can be approximated by the power function \(y=3 x\) and the denominator can be approximated by the power function \(y=5 x^{2}\). This means
\[
\begin{aligned}
& R(x)=\frac{3 x-2}{5 x^{2}-7 x+1} \approx \frac{3 x}{5 x^{2}}=\frac{3}{5 x} \rightarrow 0 \\
& \text { For }|x| \text { very large }
\end{aligned} \quad \text { As } x \rightarrow-\infty \text { or } x \rightarrow \infty
\]
which shows that the line \(y=0\) is a horizontal asymptote. This result is true for all rational functions that are proper, that is, the degree of the numerator is less than the degree of the denominator. If a rational function is improper, that is, if the degree of the numerator is greater than or equal to the degree of the denominator, there could be a horizontal asymptote, an oblique asymptote, or neither. The following summary details how to find horizontal and oblique asymptotes.

Finding a Horizontal or Oblique Asymptote of a Rational Function
Consider the rational function
\[
R(x)=\frac{p(x)}{q(x)}=\frac{a_{n} x^{n}+a_{n-1} x^{n-1}+\cdots+a_{1} x+a_{0}}{b_{m} x^{m}+b_{m-1} x^{m-1}+\cdots+b_{1} x+b_{0}}
\]
in which the degree of the numerator is \(n\) and the degree of the denominator is \(m\).
1. If \(n<m\) (the degree of the numerator is less than the degree of the denominator), the line \(y=0\) is a horizontal asymptote.
2. If \(n=m\) (the degree of the numerator equals the degree of the denominator), the line \(y=\frac{a_{n}}{b_{m}}\) is a horizontal asymptote. (That is, the horizontal asymptote equals the ratio of the leading coefficients.)
3. If \(n=m+1\) (the degree of the numerator is one more than the degree of the denominator), the line \(y=a x+b\) is an oblique asymptote, which is the quotient found using long division.
4. If \(n \geq m+2\) (the degree of the numerator is two or more greater than the degree of the denominator), there are no horizontal or oblique asymptotes. The end behavior of the graph will resemble the power function \(y=\frac{a_{n}}{b_{m}} x^{n-m}\).

Note: A rational function will never have both a horizontal asymptote and an oblique asymptote. A rational function may have neither a horizontal nor oblique asymptote.

We illustrate each of the possibilities in Examples 5 through 8.

\section*{EXAMPLE 5 Finding a Horizontal Asymptote}

Find the horizontal asymptote, if one exists, of the graph of
\[
R(x)=\frac{4 x^{3}-5 x+2}{7 x^{5}+2 x^{4}-3 x}
\]

Solution Since the degree of the numerator, 3, is less than the degree of the denominator, 5, the rational function \(R\) is proper. The line \(y=0\) is a horizontal asymptote of the graph of \(R\).

\section*{EXAMPLE 6 Finding a Horizontal or Oblique Asymptote}

Find the horizontal or oblique asymptote, if one exists, of the graph of
\[
H(x)=\frac{3 x^{4}-x^{2}}{x^{3}-x^{2}+1}
\]

Solution Since the degree of the numerator, 4, is exactly one greater than the degree of the denominator, 3, the rational function \(H\) has an oblique asymptote. We find the asymptote by using long division.
\[
\begin{array}{r}
x ^ { 3 } - x ^ { 2 } + 1 \longdiv { 3 x + 3 } \begin{array} { r } 
{ \frac { 3 x ^ { 4 } - 3 x ^ { 3 } - x ^ { 2 } } { 3 x ^ { 3 } - x ^ { 2 } - 3 x } } \\
{ \frac { 3 x ^ { 3 } - 3 x ^ { 2 } + 3 } { 2 x ^ { 2 } - 3 x - 3 } }
\end{array}
\end{array}
\]

As a result,
\[
H(x)=\frac{3 x^{4}-x^{2}}{x^{3}-x^{2}+1}=3 x+3+\frac{2 x^{2}-3 x-3}{x^{3}-x^{2}+1}
\]

As \(x \rightarrow-\infty\) or as \(x \rightarrow \infty\),
\[
\frac{2 x^{2}-3 x-3}{x^{3}-x^{2}+1} \approx \frac{2 x^{2}}{x^{3}}=\frac{2}{x} \rightarrow 0
\]

As \(x \rightarrow-\infty\) or as \(x \rightarrow \infty\), we have \(H(x) \rightarrow 3 x+3\). The graph of the rational function \(H\) has an oblique asymptote \(y=3 x+3\). Put another way, as \(x \rightarrow \pm \infty\), the graph of \(H\) will behave like the graph of \(y=3 x+3\).

\section*{EXAMPLE 7 Finding a Horizontal or Oblique Asymptote}

Find the horizontal or oblique asymptote, if one exists, of the graph of
\[
R(x)=\frac{8 x^{2}-x+2}{4 x^{2}-1}
\]

Solution Since the degree of the numerator, 2, equals the degree of the denominator, 2 , the rational function \(R\) has a horizontal asymptote equal to the ratio of the leading coefficients.
\[
y=\frac{a_{n}}{b_{m}}=\frac{8}{4}=2
\]

To see why the horizontal asymptote equals the ratio of the leading coefficients, investigate the behavior of \(R\) as \(x \rightarrow-\infty\) or as \(x \rightarrow \infty\). When \(|x|\) is very large, the numerator of \(R\) can be approximated by the power function \(y=8 x^{2}\), and the denominator can be approximated by the power function \(y=4 x^{2}\). This means that as \(x \rightarrow-\infty\) or as \(x \rightarrow \infty\),
\[
R(x)=\frac{8 x^{2}-x+2}{4 x^{2}-1} \approx \frac{8 x^{2}}{4 x^{2}}=\frac{8}{4}=2
\]

The graph of the rational function \(R\) has a horizontal asymptote \(y=2\). The graph of \(R\) will behave like \(y=2\) as \(x \rightarrow \pm \infty\).

\section*{EXAMPLE 8 Finding a Horizontal or Oblique Asymptote}

Find the horizontal or oblique asymptote, if one exists, of the graph of
\[
G(x)=\frac{2 x^{5}-x^{3}+2}{x^{3}-1}
\]

\section*{Solution}

Since the degree of the numerator, 5 , is greater than the degree of the denominator, 3 , by more than one, the rational function \(G\) has no horizontal or oblique asymptote. The end behavior of the graph will resemble the power function \(y=2 x^{5-3}=2 x^{2}\).

To see why this is the case, investigate the behavior of \(G\) as \(x \rightarrow-\infty\) or as \(x \rightarrow \infty\). When \(|x|\) is very large, the numerator of \(G\) can be approximated by the
power function \(y=2 x^{5}\), and the denominator can be approximated by the power function \(y=x^{3}\). This means that as \(x \rightarrow-\infty\) or as \(x \rightarrow \infty\),
\[
G(x)=\frac{2 x^{5}-x^{3}+2}{x^{3}-1} \approx \frac{2 x^{5}}{x^{3}}=2 x^{5-3}=2 x^{2}
\]

Since this is not linear, the graph of \(G\) has no horizontal or oblique asymptote. The graph of \(G\) will behave like \(y=2 x^{2}\) as \(x \rightarrow \pm \infty\).

\subsection*{3.4 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. True or False The quotient of two polynomial expressions is a rational expression. (p. A45)
2. What is the quotient and remainder when \(3 x^{4}-x^{2}\) is divided by \(x^{3}-x^{2}+1\). (pp. A28-A29)
3. Graph \(y=\frac{1}{x}\). (pp. 15-16)
4. Graph \(y=2(x+1)^{2}-3\) using transformations. (pp. 89-93)

\section*{Concepts and Vocabulary}
5. True or False The domain of every rational function is the set of all real numbers.
6. If, as \(x \rightarrow-\infty\) or as \(x \rightarrow \infty\), the values of \(R(x)\) approach some fixed number \(L\), then the line \(y=L\) is a \(\qquad\) of the graph of \(R\).
7. If, as \(x\) approaches some number \(c\), the values of \(|R(x)| \rightarrow \infty\), then the line \(x=c\) is a \(\qquad\) of the graph of \(R\).
8. For a rational function \(R\), if the degree of the numerator is less than the degree of the denominator, then \(R\) is \(\qquad\) .
9. True or False The graph of a rational function may intersect a horizontal asymptote.
10. True or False The graph of a rational function may intersect a vertical asymptote.
11. If a rational function is proper, then \(\qquad\) is a horizontal asymptote.
12. True or False If the degree of the numerator of a rational function equals the degree of the denominator, then the ratio of the leading coefficients gives rise to the horizontal asymptote.

\section*{Skill Building}

In Problems 13-24, find the domain of each rational function.
13. \(R(x)=\frac{4 x}{x-3}\)
14. \(R(x)=\frac{5 x^{2}}{3+x}\)
15. \(H(x)=\frac{-4 x^{2}}{(x-2)(x+4)}\)
16. \(G(x)=\frac{6}{(x+3)(4-x)}\)
17. \(F(x)=\frac{3 x(x-1)}{2 x^{2}-5 x-3}\)
18. \(Q(x)=\frac{-x(1-x)}{3 x^{2}+5 x-2}\)
19. \(R(x)=\frac{x}{x^{3}-8}\)
20. \(R(x)=\frac{x}{x^{4}-1}\)
21. \(H(x)=\frac{3 x^{2}+x}{x^{2}+4}\)
22. \(G(x)=\frac{x-3}{x^{4}+1}\)
23. \(R(x)=\frac{3\left(x^{2}-x-6\right)}{4\left(x^{2}-9\right)}\)
24. \(F(x)=\frac{-2\left(x^{2}-4\right)}{3\left(x^{2}+4 x+4\right)}\)

In Problems 25-30, use the graph shown to find:
(a) The domain and range of each function
(d) Vertical asymptotes, if any
(b) The intercepts, if any
(e) Oblique asymptotes, if any

26.

27.

30.

In Problems 31-42, graph each rational function using transformations.
31. \(F(x)=2+\frac{1}{x}\)
32. \(Q(x)=3+\frac{1}{x^{2}}\)
33. \(R(x)=\frac{1}{(x-1)^{2}}\)
34. \(R(x)=\frac{3}{x}\)
35. \(H(x)=\frac{-2}{x+1}\)
36. \(G(x)=\frac{2}{(x+2)^{2}}\)
37. \(R(x)=\frac{-1}{x^{2}+4 x+4}\)
38. \(R(x)=\frac{1}{x-1}+1\)
39. \(G(x)=1+\frac{2}{(x-3)^{2}}\)
40. \(F(x)=2-\frac{1}{x+1}\)
41. \(R(x)=\frac{x^{2}-4}{x^{2}}\)
42. \(R(x)=\frac{x-4}{x}\)

In Problems 43-54, find the vertical, horizontal, and oblique asymptotes, if any, of each rational function.
43. \(R(x)=\frac{3 x}{x+4}\)
44. \(R(x)=\frac{3 x+5}{x-6}\)
45. \(H(x)=\frac{x^{3}-8}{x^{2}-5 x+6}\)
46. \(G(x)=\frac{x^{3}+1}{x^{2}-5 x-14}\)
47. \(T(x)=\frac{x^{3}}{x^{4}-1}\)
48. \(P(x)=\frac{4 x^{2}}{x^{3}-1}\)
49. \(Q(x)=\frac{2 x^{2}-5 x-12}{3 x^{2}-11 x-4}\)
50. \(F(x)=\frac{x^{2}+6 x+5}{2 x^{2}+7 x+5}\)
51. \(R(x)=\frac{6 x^{2}+7 x-5}{3 x+5}\)
52. \(R(x)=\frac{8 x^{2}+26 x-7}{4 x-1}\)
53. \(G(x)=\frac{x^{4}-1}{x^{2}-x}\)
54. \(F(x)=\frac{x^{4}-16}{x^{2}-2 x}\)

\section*{Mixed Practice}

In Problems 55-60, for each rational function:
(a) Graph the rational function using transformations.
(b) State the domain and the range.
(c) State the vertical asymptote and the horizontal asymptote.
55. \(R(x)=\frac{1}{x+3}-2\)
56. \(R(x)=\frac{1}{x-1}+5\)
57. \(R(x)=\frac{-2}{(x-1)^{2}}+3\)
58. \(R(x)=\frac{3}{(x+2)^{2}}-1\)
59. \(R(x)=1+\frac{4}{x^{2}-2 x+1}\)
60. \(R(x)=2-\frac{2}{x^{2}+6 x+9}\)

\section*{Applications and Extensions}
61. Gravity In physics, it is established that the acceleration due to gravity, \(g\) (in meters \(/ \mathrm{sec}^{2}\) ), at a height \(h\) meters above sea level is given by
\[
g(h)=\frac{3.99 \times 10^{14}}{\left(6.374 \times 10^{6}+h\right)^{2}}
\]
where \(6.374 \times 10^{6}\) is the radius of Earth in meters.
(a) What is the acceleration due to gravity at sea level?
(b) The Willis Tower in Chicago, Illinois, is 443 meters tall. What is the acceleration due to gravity at the top of the Willis Tower?
(c) The peak of Mount Everest is 8848 meters above sea level. What is the acceleration due to gravity on the peak of Mount Everest?
(d) Find the horizontal asymptote of \(g(h)\).
(e) Solve \(g(h)=0\). How do you interpret your answer?
62. Population Model A rare species of insect was discovered in the Amazon Rain Forest. Environmentalists protect the species by declaring the insect endangered and transplant the insect into a protected area. The population \(P\) of the insect \(t\) months after being transplanted is
\[
P(t)=\frac{50(1+0.5 t)}{(2+0.01 t)}
\]
(a) How many insects were discovered? In other words, what was the population when \(t=0\) ?
(b) What will the population be after 5 years?
(c) Determine the horizontal asymptote of \(P(t)\). What is the largest population that the protected area can sustain?
63. Resistance in Parallel Circuits From Ohm's law for circuits, it follows that the total resistance \(R_{\text {tot }}\) of two components hooked in parallel is given by the equation
\[
R_{\mathrm{tot}}=\frac{R_{1} R_{2}}{R_{1}+R_{2}}
\]
where \(R_{1}\) and \(R_{2}\) are the individual resistances.
(a) Let \(R_{1}=10 \mathrm{ohms}\), and graph \(R_{\text {tot }}\) as a function of \(R_{2}\).
(b) Find and interpret any asymptotes of the graph obtained in part (a).
(c) If \(R_{2}=2 \sqrt{R_{1}}\), what value of \(R_{1}\) will yield an \(R_{\mathrm{tot}}\) of 17 ohms?
Source: en.wikipedia.org/wiki/Series_and_parallel_circuits
\(\Varangle\) 64. Newton's Method In calculus, you will learn that if
\[
p(x)=a_{n} x^{n}+a_{n-1} x^{n-1}+\cdots+a_{1} x+a_{0}
\]
is a polynomial function, then the derivative of \(p(x)\) is
\[
p^{\prime}(x)=n a_{n} x^{n-1}+(n-1) a_{n-1} x^{n-2}+\cdots+2 a_{2} x+a_{1}
\]

Newton's Method is an efficient method for finding the \(x\)-intercepts (or real zeros) of a function, such as \(p(x)\). The following steps outline Newton's Method.
STEP 1: Select an initial value \(x_{0}\) that is somewhat close to the \(x\)-intercept being sought.
STEP 2: Find values for \(x\) using the relation
\[
x_{n+1}=x_{n}-\frac{p\left(x_{n}\right)}{p^{\prime}\left(x_{n}\right)} \quad n=0,1,2, \ldots
\]
until you get two consecutive values \(x_{n}\) and \(x_{n+1}\) that agree to whatever decimal place accuracy you desire.
Step 3: The approximate zero will be \(x_{n+1}\).
Consider the polynomial \(p(x)=x^{3}-7 x-40\).
(a) Evaluate \(p(5)\) and \(p(-3)\).
(b) What might we conclude about a zero of \(p\) ? Explain.
(c) Use Newton's Method to approximate an \(x\)-intercept, \(r\), \(-3<r<5\), of \(p(x)\) to four decimal places.
(d) Use a graphing utility to graph \(p(x)\) and verify your answer in part (c).
(e) Using a graphing utility, evaluate \(p(r)\) to verify your result.
65. Exploration The standard form of the rational function \(R(x)=\frac{m x+b}{c x+d}\) where \(c \neq 0\), is \(R(x)=a \cdot\left(\frac{1}{x-h}\right)+k\). To write a rational function in standard form requires long
division.
(a) Write the rational function \(R(x)=\frac{2 x+3}{x-1}\) in standard
form by writing \(R\) in the form form by writing \(R\) in the form
\[
\text { Quotient }+\frac{\text { remainder }}{\text { divisor }}
\]
(b) Graph \(R\) using transformations.
(c) Determine the vertical asymptote and the horizontal asymptote of \(R\).
66. Exploration See problem 65.
(a) Write the rational function \(R(x)=\frac{-6 x+16}{2 x-7}\) in the form Quotient \(+\frac{\text { remainder }}{\text { divisor }}\).
(b) Factor out the coefficient on \(x\) in the divisor to write \(R\) in the form \(R(x)=\frac{\text { remainder }}{m(x-h)}+k\).
(c) Write the function found in part (b) in the standard form \(R(x)=a \cdot\left(\frac{1}{x-h}\right)+k\).
(d) Graph the function found in part (c) using transformations.
(e) Determine the vertical asymptote and the horizontal asymptote of \(R\).

\section*{Discussion and Writing}
67. If the graph of a rational function \(R\) has the vertical asymptote \(x=4\), the factor \(x-4\) must be present in the denominator of \(R\). Explain why.
68. If the graph of a rational function \(R\) has the horizontal asymptote \(y=2\), the degree of the numerator of \(R\) equals the degree of the denominator of \(R\). Explain why.
69. Can the graph of a rational function have both a horizontal and an oblique asymptote? Explain.
70. Make up a rational function that has \(y=2 x+1\) as an oblique asymptote. Explain the methodology that you used.

\section*{Retain Your Knowledge}

Problems 71-74 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
71. Find the equations of a vertical line passing through the point \((5,-3)\).
72. Solve: \(\frac{2}{5}(3 x-7)+1=\frac{x}{4}-2\)
73. Determine whether the graph of the equation \(2 x^{3}-x y^{2}=4\) is symmetric with respect to the \(x\)-axis, the \(y\)-axis, the origin, or none of these.
74. What are the points of intersection of the graphs of the functions \(f(x)=-3 x+2\) and \(g(x)=x^{2}-2 x-4\) ?

\section*{'Are You Prepared?' Answers}
1. True
2. Quotient: \(3 x+3\); remainder: \(2 x^{2}-3 x-3\)
3.

\subsection*{3.5 The Graph of a Rational Function}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Intercepts (Foundations, Section 2, pp. 11-12)
- Solving Rational Equations (Appendix A, Section A.8, pp. A66-A67)

Now Work the 'Are You Prepared?' problems on page 255.
OBJECTIVES 1 Analyze the Graph of a Rational Function (p. 243)
2 Solve Applied Problems Involving Rational Functions (p. 254)

\section*{1 Analyze the Graph of a Rational Function}

We commented earlier that calculus provides the tools required to graph a polynomial function accurately. The same holds true for rational functions. However, we can gather together quite a bit of information about their graphs to get an idea of the general shape and position of the graph.

\section*{EXAMPLE I How to Analyze the Graph of a Rational Function}

Analyze the graph of the rational function: \(R(x)=\frac{x-1}{x^{2}-4}\)

\section*{Step-by-Step Solution}

Step 1: Factor the numerator and denominator of \(R\). Find the domain of the rational function.
\[
R(x)=\frac{x-1}{x^{2}-4}=\frac{x-1}{(x+2)(x-2)}
\]

The domain of \(R\) is \(\{x \mid x \neq-2, x \neq 2\}\).
Step 2: Write Rin lowest terms.

Because there are no common factors between the numerator and denominator, \(R\) is in lowest terms.

Step 3: Locate and plot the intercepts of the graph. Use multiplicity to determine the behavior of the graph of Rat each \(x\)-intercept.

Step 4: Locate the vertical asymptotes. Graph each vertical asymptote using a dashed line. Determine the behavior of the graph on either side of each vertical asymptote.

Since 0 is in the domain of \(R\), the \(y\)-intercept is \(R(0)=\frac{1}{4}\). Plot the point \(\left(0, \frac{1}{4}\right)\). The \(x\)-intercepts are found by determining the real zeros of the numerator of \(R\) written in lowest terms. By solving \(x-1=0\), we find that the only real zero of the numerator is 1 , so the only \(x\)-intercept of the graph of \(R\) is 1 . Plot the point \((1,0)\). The multiplicity of 1 is odd, so the graph will cross the \(x\)-axis at \(x=1\).

The vertical asymptotes are the zeros of the denominator with the rational function in lowest terms. With \(R\) written in lowest terms, we find that the graph of \(R\) has two vertical asymptotes: the lines \(x=-2\) and \(x=2\). See Figure 33(a). The multiplicities of the zeros that give rise to the vertical asymptotes are both odd. Therefore, the graph will approach \(\infty\) on one side of each vertical asymptote, and will approach \(-\infty\) on the other side.

Step 5: Locate the horizontal or oblique asymptote, if one exists. Determine points, if any, at which the graph of Rintersects this asymptote. Graph the asymptote using a dashed line. Plot any points at which the graph of Rintersects the asymptote.

Because the degree of the numerator is less than the degree of the denominator, \(R\) is proper and the line \(y=0\) (the \(x\)-axis) is a horizontal asymptote of the graph. To determine whether the graph of \(R\) intersects the horizontal asymptote, solve the equation \(R(x)=0\) :
\[
\begin{aligned}
\frac{x-1}{x^{2}-4} & =0 \\
x-1 & =0 \\
x & =1
\end{aligned}
\]

The only solution is \(x=1\), so the graph of \(R\) intersects the horizontal asymptote at \((1,0)\).

Step 6: Use the zeros of the numerator and denominator of \(R\) to divide the \(x\)-axis into intervals. Determine where the graph of \(R\) is above or below the \(x\)-axis by choosing a number in each interval and evaluating R there. Plot the points found.

The zero of the numerator, 1 , and the zeros of the denominator, -2 and 2 , divide the \(x\)-axis into four intervals:
\[
(-\infty,-2) \quad(-2,1) \quad(1,2) \quad(2, \infty)
\]

Now construct Table 12.
Table 12
\begin{tabular}{|c|c|c|c|c|}
\hline & \multicolumn{2}{|c|}{-2} & \multicolumn{2}{|c|}{\(?\)} \\
\hline Interval & \((-\infty,-2)\) & \((-2,1)\) & \((1,2)\) & \((2, \infty)\) \\
\hline Number chosen & -3 & -1 & \(\frac{3}{2}\) & 3 \\
\hline Value of \(R\) & \(R(-3)=-0.8\) & \(R(-1)=\frac{2}{3}\) & \(R\left(\frac{3}{2}\right)=-\frac{2}{7}\) & \(R(3)=0.4\) \\
\hline Location of graph & Below \(x\)-axis & Above \(x\)-axis & Below \(x\)-axis & Above \(x\)-axis \\
\hline Point on graph & \((-3,-0.8)\) & \(\left(-1, \frac{2}{3}\right)\) & \(\left(\frac{3}{2},-\frac{2}{7}\right)\) & \((3,0.4)\) \\
\hline
\end{tabular}

Figure 33(a) shows the asymptotes, the points from Table 12, the \(y\)-intercept, and the \(x\)-intercept.

Step 7: Use the results obtained in Steps 1 through 6 to graph \(R\).
- The graph crosses the \(x\)-axis at \(x=1\), changing from being above the \(x\)-axis to being below it. Sketch a portion of the graph by drawing a line segment with negative slope through the point \((1,0)\).
- Since \(y=0\) (the \(x\)-axis) is a horizontal asymptote and the graph lies below the \(x\)-axis for \(x<-2\), we can sketch a portion of the graph by placing a small arrow to the far left and under the \(x\)-axis.
- Since the line \(x=-2\) is a vertical asymptote and the graph lies below the \(x\)-axis for \(x<-2\), we place an arrow well below the \(x\)-axis and approaching the line \(x=-2\) from the left \(\left(\lim _{x \rightarrow-2^{-}} R(x)=-\infty\right)\).
- Since the graph approaches \(-\infty\) on one side of \(x=-2\), and -2 is a zero of odd multiplicity, the graph will approach \(\infty\) on the other side of \(x=-2\). That is, \(\lim _{x \rightarrow-2^{+}} R(x)=\infty\). Similar analysis leads to \(\lim _{x \rightarrow 2^{-}} R(x)=-\infty\) and \(\lim _{x \rightarrow 2^{+}} R(x)=\infty\). See Figure 33 (b). Figure 33(c) shows the graph of \(R\).

\section*{Figure 33}

(a)

(b)

(c)

\section*{Exploration}

Graph \(R(x)=\frac{x-1}{x^{2}-4}\)
Result The analysis just completed in Example 1 helps us to set the viewing rectangle to obtain a complete graph. Figure 34(a) shows the graph of \(R(x)=\frac{x-1}{x^{2}-4}\) in connected mode, and Figure 34(b) shows it in dot mode. Notice in Figure 34(a) that the graph has vertical lines at \(x=-2\) and \(x=2\). This is due to the fact that when a graphing utility is in connected mode, some will connect the dots between consecutive pixels and vertical lines may occur. We know that the graph of \(R\) does not cross the lines \(x=-2\) and \(x=2\), since \(R\) is not defined at \(x=-2\) or \(x=2\). So, when graphing rational functions, dot mode should be used if extraneous vertical lines are present in connected mode. See Figure 34(b). Newer graphing utilities may not have extraneous vertical lines in connected mode. See Figure 34(c).

Connected mode without extraneous vertical lines
(c)

\section*{SUMMARY}

\section*{Analyzing the Graph of a Rational Function \(\boldsymbol{R}\)}

STEP 1: Factor the numerator and denominator of \(R\). Find the domain of the rational function.
Step 2: Write \(R\) in lowest terms.
STEP 3: Locate the intercepts of the graph. Determine the behavior of the graph of \(R\) at each \(x\)-intercept.
STEP 4: Determine the vertical asymptotes. Graph each vertical asymptote using a dashed line. Determine the behavior of the graph of \(R\) on either side of each vertical asymptote.

STEP 5: Determine the horizontal or oblique asymptote, if one exists. Determine points, if any, at which the graph of \(R\) intersects this asymptote. Graph the asymptote using a dashed line. Plot any points at which the graph of \(R\) intersects the asymptote.
Step 6: Use the zeros of the numerator and denominator of \(R\) to divide the \(x\)-axis into intervals. Determine where the graph of \(R\) is above or below the \(x\)-axis by choosing a number in each interval and evaluating \(R\) there. Plot the points found.
STEP 7: Use the results obtained in Steps 1 through 6 to graph \(R\).

\section*{EXAMPLE 2 Analyzing the Graph of a Rational Function}

Analyze the graph of the rational function: \(R(x)=\frac{x^{2}-1}{x}\)

Solution

NOTE Because the denominator of the rational function is a monomial, we can also find the oblique asymptote as follows:
\[
\frac{x^{2}-1}{x}=\frac{x^{2}}{x}-\frac{1}{x}=x-\frac{1}{x}
\]

Since \(\frac{1}{x} \rightarrow 0\) as \(x \rightarrow \infty, y=x\) is the oblique asymptote.

STEP 1: \(R(x)=\frac{(x+1)(x-1)}{x}\). The domain of \(R\) is \(\{x \mid x \neq 0\}\).
Step 2: \(R\) is in lowest terms.
STEP 3: Because \(x\) cannot equal 0, there is no \(y\)-intercept. The graph has two \(x\)-intercepts, -1 and 1 , each with odd multiplicity. Plot the points \((-1,0)\) and \((1,0)\). The graph will cross the \(x\)-axis at both points.
Step 4: The real zero of the denominator with \(R\) in lowest terms is 0 , so the graph of \(R\) has the line \(x=0\) (the \(y\)-axis) as a vertical asymptote. Graph \(x=0\) using a dashed line. The multiplicity of 0 is odd, so the graph will approach \(\infty\) on one side of the asymptote \(x=0\), and \(-\infty\) on the other.
STEP 5: Since the degree of the numerator, 2, is one greater than the degree of the denominator, 1 , the rational function will have an oblique asymptote. To find the oblique asymptote, use long division.
\[
\begin{aligned}
& x \\
& x \longdiv { x ^ { 2 } - 1 } \\
& \frac{x^{2}}{-1}
\end{aligned}
\]

The quotient is \(x\), so the line \(y=x\) is an oblique asymptote of the graph. Graph \(y=x\) using a dashed line.

To determine whether the graph of \(R\) intersects the asymptote \(y=x\), solve the equation \(R(x)=x\).
\[
\begin{aligned}
R(x)=\frac{x^{2}-1}{x} & =x \\
x^{2}-1 & =x^{2} \\
-1 & =0 \quad \text { impossible }
\end{aligned}
\]

The equation \(\frac{x^{2}-1}{x}=x\) has no solution, so the graph of \(R\) does not intersect the line \(y=x\).

STEP 6: The zeros of the numerator are -1 and 1 ; the zero of the denominator is 0 . Use these values to divide the \(x\)-axis into four intervals:
\[
(-\infty,-1) \quad(-1,0) \quad(0,1) \quad(1, \infty)
\]

Now construct Table 13. Plot the points from Table 13. You should now have Figure 35(a).

\section*{Table 13}
\begin{tabular}{|c|c|c|c|c|}
\hline & \multicolumn{2}{|c|}{-1} & 0 - & \\
\hline Interval & \((-\infty,-1)\) & \((-1,0)\) & \((0,1)\) & \((1, \infty)\) \\
\hline Number chosen & -2 & \(-\frac{1}{2}\) & \[
\frac{1}{2}
\] & 2 \\
\hline Value of \(R\) & \(R(-2)=-\frac{3}{2}\) & \(R\left(-\frac{1}{2}\right)=\frac{3}{2}\) & \(R\left(\frac{1}{2}\right)=-\frac{3}{2}\) & \(R(2)=\frac{3}{2}\) \\
\hline Location of graph & Below \(x\)-axis & Above \(x\)-axis & Below \(x\)-axis & Above \(x\)-axis \\
\hline Point on graph & \(\left(-2,-\frac{3}{2}\right)\) & \(\left(-\frac{1}{2}, \frac{3}{2}\right)\) & \(\left(\frac{1}{2},-\frac{3}{2}\right)\) & ( \(2, \frac{3}{2}\) ) \\
\hline
\end{tabular}

NOTE Notice that \(R\) in Example 2 is an odd function. Do you see the symmetry about the origin in the graph of \(R\) in Figure 35(c)?

STEP 7: The graph crosses the \(x\)-axis at \(x=-1\) and \(x=1\), changing from being below the \(x\)-axis to being above it in both cases.

Since the graph of \(R\) is below the \(x\)-axis for \(x<-1\) and is above the \(x\)-axis for \(x>1\), and since the graph of \(R\) does not intersect the oblique asymptote \(y=x\), the graph of \(R\) will approach the line \(y=x\) as shown in Figure 35(b).
Since the graph of \(R\) is above the \(x\)-axis for \(-1<x<0\), the graph of \(R\) will approach the vertical asymptote \(x=0\) at the top to the left of \(x=0\) \(\left[\lim _{x \rightarrow 0^{-}} R(x)=\infty\right]\); since the graph of \(R\) approaches \(\infty\) on one side of the asymptote and \(-\infty\) on the other, the graph of \(R\) will approach the vertical asymptote \(x=0\) at the bottom to the right of \(x=0\left[\lim _{x \rightarrow 0^{+}} R(x)=-\infty\right]\). See Figure 35(b).

The complete graph is given in Figure 35(c).

\section*{Seeing the Concept}

Graph \(R(x)=\frac{x^{2}-1}{x}\) and compare what you see with Figure 35(c). Could you have predicted from the graph that \(y=x\) is an oblique asymptote? Graph \(y=x\) and ZOOM-OUT. What do you observe?
amen Wow problem 15

\section*{EXAMPLE 3}

Solution

Figure 36

(a)

(b)

NOTE Notice that \(R\) in Example 3 is an even function. Do you see the symmetry about the \(y\)-axis in the graph of \(R\) ?

Analyzing the Graph of a Rational Function
Analyze the graph of the rational function: \(R(x)=\frac{x^{4}+1}{x^{2}}\)
STEP 1: \(R\) is completely factored. The domain of \(R\) is \(\{x \mid x \neq 0\}\).
STEP 2: \(R\) is in lowest terms.
STEP 3: There is no \(y\)-intercept. Since \(x^{4}+1=0\) has no real solutions, there are no \(x\)-intercepts.
STEP 4: \(R\) is in lowest terms, so \(x=0\) (the \(y\)-axis) is a vertical asymptote of \(R\). Graph the line \(x=0\) using dashes. The multiplicity of 0 is even, so the graph will approach either \(\infty\) or \(-\infty\) on both sides of the asymptote.
STEP 5: Since the degree of the numerator, 4 , is two more than the degree of the denominator, 2, the rational function will not have a horizontal or oblique asymptote. Find the end behavior of \(R\). As \(|x| \rightarrow \infty\),
\[
R(x)=\frac{x^{4}+1}{x^{2}} \approx \frac{x^{4}}{x^{2}}=x^{2}
\]

The graph of \(R\) will approach the graph of \(y=x^{2}\) as \(x \rightarrow-\infty\) and as \(x \rightarrow \infty\). The graph of \(R\) does not intersect \(y=x^{2}\). Do you know why? Graph \(y=x^{2}\) using dashes.
STEP 6: The numerator has no real zeros, and the denominator has one real zero at 0 . Divide the \(x\)-axis into the two intervals
\[
(-\infty, 0) \quad(0, \infty)
\]
and construct Table 14.

Table 14
\begin{tabular}{|lll|}
\hline & \multicolumn{2}{c|}{0} \\
\cline { 2 - 3 } & \multicolumn{2}{c|}{\(x\)} \\
\hline Interval & \((-\infty, 0)\) & \((0, \infty)\) \\
Number chosen & -1 & 1 \\
Value of \(\boldsymbol{R}\) & \(R(-1)=2\) & \(R(1)=2\) \\
Location of graph & Above \(x\)-axis & Above \(x\)-axis \\
Point on graph & \((-1,2)\) & \((1,2)\) \\
\hline
\end{tabular}

STEP 7: Since the graph of \(R\) is above the \(x\)-axis and does not intersect \(y=x^{2}\), place arrows above \(y=x^{2}\) as shown in Figure 36(a). Also, since the graph of \(R\) is above the \(x\)-axis, and the multiplicity of the zero that gives rise to the vertical asymptote, \(x=0\), is even, it will approach the vertical asymptote \(x=0\) at the top to the left of \(x=0\) and at the top to the right of \(x=0\). See Figure 36(a).

Figure 36(b) shows the complete graph.

\section*{Seeing the Concept}

Graph \(R(x)=\frac{x^{4}+1}{x^{2}}\) and compare what you see with Figure 36(b). Use MINIMUM to find the two turning points. Enter \(Y_{2}=x^{2}\) and ZOOM-OUT. What do you see?
am Now Work problem 13

\section*{EXAMPLE 4 Analyzing the Graph of a Rational Function}

Analyze the graph of the rational function: \(R(x)=\frac{3 x^{2}-3 x}{x^{2}+x-12}\)

\section*{Solution Step 1: Factor \(R\) to get}
\[
R(x)=\frac{3 x(x-1)}{(x+4)(x-3)}
\]

The domain of \(R\) is \(\{x \mid x \neq-4, x \neq 3\}\).
STEP 2: \(R\) is in lowest terms.
STEP 3: The \(y\)-intercept is \(R(0)=0\). Plot the point \((0,0)\). Since the real solutions of the equation \(3 x(x-1)=0\) are \(x=0\) and \(x=1\), the graph has two \(x\)-intercepts, 0 and 1 , each with odd multiplicity. Plot the points \((0,0)\) and \((1,0)\). The graph will cross the \(x\)-axis at both points.
STEP 4: \(R\) is in lowest terms. The real solutions of the equation \((x+4)(x-3)=0\) are \(x=-4\) and \(x=3\), so the graph of \(R\) has two vertical asymptotes, the lines \(x=-4\) and \(x=3\). Graph these lines using dashes. The multiplicities that give rise to the vertical asymptotes are both odd, so the graph will approach \(\infty\) on one side of each vertical asymptote and \(-\infty\) on the other side.
STEP 5: Since the degree of the numerator equals the degree of the denominator, the graph has a horizontal asymptote. To find it, form the quotient of the leading coefficient of the numerator, 3 , and the leading coefficient of the denominator, 1 . The graph of \(R\) has the horizontal asymptote \(y=3\).

To find out whether the graph of \(R\) intersects the asymptote, solve the equation \(R(x)=3\).
\[
\begin{aligned}
R(x)=\frac{3 x^{2}-3 x}{x^{2}+x-12} & =3 \\
3 x^{2}-3 x & =3 x^{2}+3 x-36 \\
-6 x & =-36 \\
x & =6
\end{aligned}
\]

The graph intersects the line \(y=3\) at \(x=6\), and \((6,3)\) is a point on the graph of \(R\). Plot the point \((6,3)\) and graph the line \(y=3\) using dashes.
STEP 6: The real zeros of the numerator, 0 and 1 , and the real zeros of the denominator, -4 and 3 , divide the \(x\)-axis into five intervals:
\[
(-\infty,-4) \quad(-4,0) \quad(0,1) \quad(1,3) \quad(3, \infty)
\]

Construct Table 15. See page 250. Plot the points from Table 15. Figure 37(a) shows the graph so far.
STEP 7: Since the graph of \(R\) is above the \(x\)-axis for \(x<-4\) and only crosses the line \(y=3\) at \((6,3)\), as \(x\) approaches \(-\infty\) the graph of \(R\) will approach the horizontal asymptote \(y=3\) from above \(\left(\lim _{x \rightarrow-\infty} R(x)=3\right)\). The graph of \(R\) will approach the vertical asymptote \(x=-4\) at the top to the left of \(x=-4\left(\lim _{x \rightarrow-4^{-}} R(x)=\infty\right)\) and at the bottom to the right of \(x=-4\) \(\left(\lim _{x \rightarrow-4^{+}} R(x)=-\infty\right)\). The graph of \(R\) will approach the vertical asymptote

Table 15
\begin{tabular}{|llllll|}
\hline & \multicolumn{3}{c|}{-4} & 0 & 0 \\
\hline Interval & \((-\infty,-4)\) & \((-4,0)\) & \((0,1)\) & \((1,3)\) & \((3, \infty)\) \\
Number chosen & -5 & -2 & \(\frac{1}{2}\) & 2 & 4 \\
Value of \(\boldsymbol{R}\) & \(R(-5)=11.25\) & \(R(-2)=-1.8\) & \(R\left(\frac{1}{2}\right)=\frac{1}{15}\) & \(R(2)=-1\) & \(R(4)=4.5\) \\
Location of graph & Above \(x\)-axis & Below \(x\)-axis & Above \(x\)-axis & Below \(x\)-axis & Above \(x\)-axis \\
Point on graph & \((-5,11.25)\) & \((-2,-1.8)\) & \(\left(\frac{1}{2}, \frac{1}{15}\right)\) & \((2,-1)\) & \((4,4.5)\) \\
\hline
\end{tabular}
\(x=3\) at the bottom to the left of \(x=3\left(\lim _{x \rightarrow 3^{-}} R(x)=-\infty\right)\) and at the top to the right of \(x=3\left(\lim _{R} R(x)=\infty\right)\).

We do not know whether the graph of \(R\) crosses or touches the line \(y=3\) at \((6,3)\). To see whether the graph, in fact, crosses or touches the line \(y=3\), plot an additional point to the right of \((6,3)\). We use \(x=7\) to find \(R(7)=\frac{63}{22}<3\). The graph crosses \(y=3\) at \(x=6\). Because \((6,3)\) is the only point where the graph of \(R\) intersects the asymptote \(y=3\), the graph must approach the line \(y=3\) from below as \(x \rightarrow \infty\left(\lim _{x \rightarrow \infty} R(x)=3\right)\). The graph crosses the \(x\)-axis at \(x=0\), changing from being below the \(x\)-axis to being above. The graph also crosses the \(x\)-axis at \(x=1\), changing from being above the \(x\)-axis to being below. See Figure 37(b). The complete graph is shown in Figure 37(c).

\section*{Exploration}

Graph \(R(x)=\frac{3 x^{2}-3 x}{x^{2}+x-12}\)
Result Figure 38 shows the graph in connected mode, and Figure 39(a) shows it in dot mode. Neither graph displays clearly the behavior of the function between the two \(x\)-intercepts, 0 and 1 . Nor do they clearly display the fact that the graph crosses the horizontal asymptote at ( 6,3 ). To see these parts better, graph \(R\) for \(-1 \leq x \leq 2\) [Figure 39(b)] and for \(4 \leq x \leq 60\) [Figure 40(b)].

Figure 39

Figure 40

The new graphs reflect the behavior produced by the analysis. Furthermore, we observe two turning points, one between 0 and 1 and the other to the right of 6 . Rounded to two decimal places, these turning points are \((0.52,0.07)\) and ( \(11.48,2.75\) ).

\section*{EXAMPLE 5 Analyzing the Graph of a Rational Function with a Hole}

Analyze the graph of the rational function: \(R(x)=\frac{2 x^{2}-5 x+2}{x^{2}-4}\)
Solution \(\quad\) STEP 1: Factor \(R\) and obtain
\[
R(x)=\frac{(2 x-1)(x-2)}{(x+2)(x-2)}
\]

The domain of \(R\) is \(\{x \mid x \neq-2, x \neq 2\}\).
STEP 2: In lowest terms,
\[
R(x)=\frac{2 x-1}{x+2} \quad x \neq-2, x \neq 2
\]

STEP 3: The \(y\)-intercept is \(R(0)=-\frac{1}{2}\). Plot the point \(\left(0,-\frac{1}{2}\right)\). The graph has one \(x\)-intercept, \(\frac{1}{2}\), with odd multiplicity. Plot the point \(\left(\frac{1}{2}, 0\right)\). The graph will cross the \(x\)-axis at \(x=\frac{1}{2}\).

STEP 4: Since \(x+2\) is the only factor of the denominator of \(R(x)\) in lowest terms, the graph has one vertical asymptote, \(x=-2\). However, the rational function is undefined at both \(x=2\) and \(x=-2\). Graph the line \(x=-2\) using dashes. The multiplicity of -2 is odd, so the graph will approach \(\infty\) on one side of the vertical asymptote and \(-\infty\) on the other side.
STEP 5: Since the degree of the numerator equals the degree of the denominator, the graph has a horizontal asymptote. To find it, form the quotient of the leading coefficient of the numerator, 2 , and the leading coefficient of the denominator, 1 . The graph of \(R\) has the horizontal asymptote \(y=2\). Graph the line \(y=2\) using dashes.

To find out whether the graph of \(R\) intersects the horizontal asymptote \(y=2\), solve the equation \(R(x)=2\).
\[
\begin{aligned}
R(x)=\frac{2 x-1}{x+2} & =2 \\
2 x-1 & =2(x+2) \\
2 x-1 & =2 x+4
\end{aligned}
\]
\[
-1=4 \quad \text { Impossible }
\]

The graph does not intersect the line \(y=2\).

STEP 6: Look at the factored expression for \(R\) in Step 1. The real zeros of the numerator and denominator, \(-2, \frac{1}{2}\), and 2 , divide the \(x\)-axis into four intervals:
\[
(-\infty,-2) \quad\left(-2, \frac{1}{2}\right) \quad\left(\frac{1}{2}, 2\right) \quad(2, \infty)
\]

Construct Table 16. Plot the points in Table 16.
Table 16
\begin{tabular}{|c|c|c|c|c|}
\hline & \multicolumn{2}{|c|}{-2} & 1/2 & \\
\hline Interval & \((-\infty,-2)\) & \(\left(-2, \frac{1}{2}\right)\) & \(\left(\frac{1}{2}, 2\right)\) & \((2, \infty)\) \\
\hline Number chosen & -3 & -1 & 1 & 3 \\
\hline Value of \(R\) & \(R(-3)=7\) & \(R(-1)=-3\) & \(R(1)=\frac{1}{3}\) & \(R(3)=1\) \\
\hline Location of graph & Above \(x\)-axis & Below \(x\)-axis & Above \(x\)-axis & Above \(x\)-axis \\
\hline Point on graph & \((-3,7)\) & \((-1,-3)\) & \(\left(1, \frac{1}{3}\right)\) & \((3,1)\) \\
\hline
\end{tabular}

STEP 7: From Table 16 we know that the graph of \(R\) is above the \(x\)-axis for \(x<-2\). From Step 5 we know that the graph of \(R\) does not intersect the asymptote \(y=2\). Therefore, the graph of \(R\) will approach \(y=2\) from above as \(x \rightarrow-\infty\) and will approach the vertical asymptote \(x=-2\) at the top from the left.

Since the graph of \(R\) is below the \(x\)-axis for \(-2<x<\frac{1}{2}\), the graph will approach \(x=-2\) at the bottom from the right. Finally, since the graph of \(R\) is above the \(x\)-axis for \(x>\frac{1}{2}\) and does not intersect the horizontal asymptote \(y=2\), the graph of \(R\) will approach \(y=2\) from below as \(x \rightarrow \infty\). The graph crosses the \(x\)-axis at \(x=\frac{1}{2}\), changing from being below the \(x\)-axis to being above. See Figure 41(a).

Figure 38

\section*{Exploration}

Graph \(R(x)=\frac{3 x^{2}-3 x}{x^{2}+x-12}\)
Result Figure 38 shows the graph in connected mode, and Figure 39(a) shows it in dot mode. Neither graph displays clearly the behavior of the function between the two \(x\)-intercepts, 0 and 1 . Nor do they clearly display the fact that the graph crosses the horizontal asymptote at ( 6,3 ). To see these parts better, graph \(R\) for \(-1 \leq x \leq 2\) [Figure 39(b)] and for \(4 \leq x \leq 60\) [Figure 40(b)].

Figure 39

Figure 40

The new graphs reflect the behavior produced by the analysis. Furthermore, we observe two turning points, one between 0 and 1 and the other to the right of 6 . Rounded to two decimal places, these turning points are \((0.52,0.07)\) and ( \(11.48,2.75\) ).

\section*{EXAMPLE 5 Analyzing the Graph of a Rational Function with a Hole}

Analyze the graph of the rational function: \(R(x)=\frac{2 x^{2}-5 x+2}{x^{2}-4}\)
Solution \(\quad\) STEP 1: Factor \(R\) and obtain
\[
R(x)=\frac{(2 x-1)(x-2)}{(x+2)(x-2)}
\]

The domain of \(R\) is \(\{x \mid x \neq-2, x \neq 2\}\).
STEP 2: In lowest terms,
\[
R(x)=\frac{2 x-1}{x+2} \quad x \neq-2, x \neq 2
\]

STEP 3: The \(y\)-intercept is \(R(0)=-\frac{1}{2}\). Plot the point \(\left(0,-\frac{1}{2}\right)\). The graph has one \(x\)-intercept, \(\frac{1}{2}\), with odd multiplicity. Plot the point \(\left(\frac{1}{2}, 0\right)\). The graph will cross the \(x\)-axis at \(x=\frac{1}{2}\).

Solution The numerator of a rational function \(R(x)=\frac{p(x)}{q(x)}\) in lowest terms determines the \(x\)-intercepts of its graph. The graph shown in Figure 42 has \(x\)-intercepts -2 (even multiplicity; graph touches the \(x\)-axis) and 5 (odd multiplicity; graph crosses the \(x\)-axis). So one possibility for the numerator is \(p(x)=(x+2)^{2}(x-5)\).

The denominator of a rational function in lowest terms determines the vertical asymptotes of its graph. The vertical asymptotes of the graph are \(x=-5\) and \(x=2\). Since \(R(x)\) approaches \(\infty\) to the left of \(x=-5\) and \(R(x)\) approaches \(-\infty\) to the right of \(x=-5\), we know that \((x+5)\) is a factor of odd multiplicity in \(q(x)\). Also, \(R(x)\) approaches \(-\infty\) on both sides of \(x=2\), so \((x-2)\) is a factor of even multiplicity in \(q(x)\). A possibility for the denominator is \(q(x)=(x+5)(x-2)^{2}\). So far we have \(R(x)=\frac{(x+2)^{2}(x-5)}{(x+5)(x-2)^{2}}\).

However, the horizontal asymptote of the graph given in Figure 42 is \(y=2\), so we know that the degree of the numerator must equal the degree of the denominator and that the quotient of leading coefficients must be \(\frac{2}{1}\). This leads to
\[
R(x)=\frac{2(x+2)^{2}(x-5)}{(x+5)(x-2)^{2}}
\]

Check: Figure 43 shows the graph of \(R\) on a graphing utility. Since Figure 43 looks similar to Figure 42, we have found a rational function \(R\) for the graph in Figure 42.
am Now Work problem 57
2 Solve Applied Problems Involving Rational Functions

\section*{EXAMPLE 7 Finding the Least Cost of a Can}

Reynolds Metal Company manufactures aluminum cans in the shape of a cylinder with a capacity of 500 cubic centimeters \(\left(\frac{1}{2}\right.\) liter \()\). The top and bottom of the can are made of a special aluminum alloy that costs \(0.05 \not \subset\) per square centimeter. The sides of the can are made of material that costs \(0.02 \phi\) per square centimeter.
(a) Express the cost of material for the can as a function of the radius \(r\) of the can.
(b) Use a graphing utility to graph the function \(C=C(r)\).
(c) What value of \(r\) will result in the least cost?
(d) What is this least cost?

\section*{Solution}

Figure 44

(a) Figure 44 illustrates the components of a can in the shape of a right circular cylinder. Notice that the material required to produce a cylindrical can of height \(h\) and radius \(r\) consists of a rectangle of area \(2 \pi r h\) and two circles, each of area \(\pi r^{2}\). The total cost \(C\) (in cents) of manufacturing the can is therefore
\[
\begin{aligned}
C & =\text { Cost of the top and bottom }+ \text { Cost of the side } \\
& \underbrace{}_{\begin{array}{l}
\text { Total area } \\
\text { of top and } \\
\text { bottom area }
\end{array}} 2\left(\pi r^{2}\right)
\end{aligned} \underbrace{(0.05)}_{\text {Cost/unit }}+\underbrace{(2 \pi r h)}_{\begin{array}{l}
\text { Total } \\
\text { area of } \\
\text { side }
\end{array}} \cdot \underbrace{(0.02)}_{\begin{array}{c}
\text { Cost/unit } \\
\text { area }
\end{array}}
\]

There is an additional restriction that the height \(h\) and radius \(r\) must be chosen so that the volume \(V\) of the can is 500 cubic centimeters. Since \(V=\pi r^{2} h\), we have
\[
500=\pi r^{2} h \quad \text { so } \quad h=\frac{500}{\pi r^{2}}
\]

Figure 45

Substituting this expression for \(h\), the cost \(C\), in cents, as a function of the radius \(r\) is
\[
C(r)=0.10 \pi r^{2}+0.04 \pi r \cdot \frac{500}{\pi r^{2}}=0.10 \pi r^{2}+\frac{20}{r}=\frac{0.10 \pi r^{3}+20}{r}
\]
(b) See Figure 45 for the graph of \(C=C(r)\).
(c) Using the MINIMUM command, the cost is least for a radius of about 3.17 centimeters.
(d) The least cost is \(C(3.17) \approx 9.47 \phi\).

\subsection*{3.5 Assess Your Understanding}
'Are You Prepared?' The answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. Find the intercepts of the graph of the equation \(y=\frac{x^{2}-1}{x^{2}-4} .(\) pp. 11-12 \()\)
2. Solve \(\frac{x-3}{x^{2}+1}=-2\). (pp. A66-A67)

\section*{Concepts and Vocabulary}
3. If the numerator and the denominator of a rational function have no common factors, the rational function is
4. The graph of a rational function never intersects a asymptote.
5. True or False The graph of a rational function sometimes intersects an oblique asymptote.
6. True or False The graph of a rational function sometimes has a hole.

\section*{Skill Building}

In Problems 7-50, follow Steps 1 through 7 on page 246 to analyze the graph of each function.
7. \(R(x)=\frac{x+1}{x(x+4)}\)
8. \(R(x)=\frac{x}{(x-1)(x+2)}\)
9. \(R(x)=\frac{3 x+3}{2 x+4}\)
10. \(R(x)=\frac{2 x+4}{x-1}\)
11. \(R(x)=\frac{3}{x^{2}-4}\)
12. \(R(x)=\frac{6}{x^{2}-x-6}\)
13. \(P(x)=\frac{x^{4}+x^{2}+1}{x^{2}-1}\)
14. \(Q(x)=\frac{x^{4}-1}{x^{2}-4}\)
15. \(H(x)=\frac{x^{3}-1}{x^{2}-9}\)
16. \(G(x)=\frac{x^{3}+1}{x^{2}+2 x}\)
17. \(R(x)=\frac{x^{2}}{x^{2}+x-6}\)
18. \(R(x)=\frac{x^{2}+x-12}{x^{2}-4}\)
19. \(G(x)=\frac{x}{x^{2}-4}\)
20. \(G(x)=\frac{3 x}{x^{2}-1}\)
21. \(R(x)=\frac{3}{(x-1)\left(x^{2}-4\right)}\)
22. \(R(x)=\frac{-4}{(x+1)\left(x^{2}-9\right)}\)
23. \(H(x)=\frac{x^{2}-1}{x^{4}-16}\)
24. \(H(x)=\frac{x^{2}+4}{x^{4}-1}\)
25. \(F(x)=\frac{x^{2}-3 x-4}{x+2}\)
26. \(F(x)=\frac{x^{2}+3 x+2}{x-1}\)
27. \(R(x)=\frac{x^{2}+x-12}{x-4}\)
28. \(R(x)=\frac{x^{2}-x-12}{x+5}\)
29. \(F(x)=\frac{x^{2}+x-12}{x+2}\)
30. \(G(x)=\frac{x^{2}-x-12}{x+1}\)
31. \(R(x)=\frac{x(x-1)^{2}}{(x+3)^{3}}\)
32. \(R(x)=\frac{(x-1)(x+2)(x-3)}{x(x-4)^{2}}\)
33. \(R(x)=\frac{x^{2}+x-12}{x^{2}-x-6}\)
34. \(R(x)=\frac{x^{2}+3 x-10}{x^{2}+8 x+15}\)
35. \(R(x)=\frac{6 x^{2}-7 x-3}{2 x^{2}-7 x+6}\)
36. \(R(x)=\frac{8 x^{2}+26 x+15}{2 x^{2}-x-15}\)
37. \(R(x)=\frac{x^{2}+5 x+6}{x+3}\)
38. \(R(x)=\frac{x^{2}+x-30}{x+6}\)
39. \(H(x)=\frac{3 x-6}{4-x^{2}}\)
40. \(H(x)=\frac{2-2 x}{x^{2}-1}\)
41. \(F(x)=\frac{x^{2}-5 x+4}{x^{2}-2 x+1}\)
42. \(F(x)=\frac{x^{2}-2 x-15}{x^{2}+6 x+9}\)
43. \(G(x)=\frac{x}{(x+2)^{2}}\)
44. \(G(x)=\frac{2-x}{(x-1)^{2}}\)
45. \(f(x)=x+\frac{1}{x}\)
46. \(f(x)=2 x+\frac{9}{x}\)
47. \(f(x)=x^{2}+\frac{1}{x}\)
48. \(f(x)=2 x^{2}+\frac{16}{x}\)
49. \(f(x)=x+\frac{1}{x^{3}}\)
50. \(f(x)=2 x+\frac{9}{x^{3}}\)

In Problems 51-56, graph each function using a graphing utility; then use MINIMUM to obtain the minimum value, rounded to two decimal places.
51. \(f(x)=x+\frac{1}{x}, \quad x>0\)
52. \(f(x)=2 x+\frac{9}{x}, \quad x>0\)
53. \(f(x)=x^{2}+\frac{1}{x}, \quad x>0\)
54. \(f(x)=2 x^{2}+\frac{9}{x}, \quad x>0\)
55. \(f(x)=x+\frac{1}{x^{3}}, \quad x>0\)
56. \(f(x)=2 x+\frac{9}{x^{3}}, \quad x>0\)

In Problems 57-60, find a rational function that might have the given graph. (More than one answer might be possible.)

\section*{Applications and Extensions}
61. Drug Concentration The concentration \(C\) of a certain drug in a patient's bloodstream \(t\) hours after injection is given by
\[
C(t)=\frac{t}{2 t^{2}+1}
\]
(a) Find the horizontal asymptote of \(C(t)\). What happens to the concentration of the drug as \(t\) increases?
(b) Using your graphing utility, graph \(C=C(t)\).
(c) Determine the time at which the concentration is highest.
62. Drug Concentration The concentration \(C\) of a certain drug in a patient's bloodstream \(t\) minutes after injection is given by
\[
C(t)=\frac{50 t}{t^{2}+25}
\]
(a) Find the horizontal asymptote of \(C(t)\). What happens to the concentration of the drug as \(t\) increases?
(b) Using your graphing utility, graph \(C=C(t)\).
(c) Determine the time at which the concentration is highest.
63. Minimum Cost A rectangular area adjacent to a river is to be fenced in; no fence is needed on the river side. The enclosed area is to be 1000 square feet. Fencing for the side parallel to the river is \(\$ 5\) per linear foot, and fencing for the other two sides is \(\$ 8\) per linear foot; the four corner posts are \(\$ 25\) apiece. Let \(x\) be the length of one of the sides perpendicular to the river.
(a) Write a function \(C(x)\) that describes the cost of the project.
(b) What is the domain of \(C\) ?
(c) Use a graphing utility to graph \(C=C(x)\).
(d) Find the dimensions of the cheapest enclosure.

Source: http://dl.uncw.edu/digilib/mathematics/algebra/ mat111hb/pandr/rational/rational.html
64. Doppler Effect The Doppler effect (named after Christian Doppler) is the change in the pitch (frequency) of the sound from a source \((s)\) as heard by an observer \((o)\) when one or both are in motion. If we assume both the source and the observer are moving in the same direction, the relationship is
\[
f^{\prime}=f_{a}\left(\frac{v-v_{o}}{v-v_{s}}\right)
\]
where
\[
\begin{aligned}
& f^{\prime}=\text { perceived pitch by the observer } \\
& f_{a}=\text { actual pitch of the source } \\
& v=\text { speed of sound in air (assume } 772.4 \mathrm{mph}) \\
& v_{o}=\text { speed of the observer } \\
& v_{s}=\text { speed of the source }
\end{aligned}
\]

Suppose that you are traveling down the road at 45 mph and you hear an ambulance (with siren) coming toward you from the rear. The actual pitch of the siren is 600 hertz \((\mathrm{Hz})\).
(a) Write a function \(f^{\prime}\left(v_{s}\right)\) that describes this scenario.
(b) If \(f^{\prime}=620 \mathrm{~Hz}\), find the speed of the ambulance.
(c) Use a graphing utility to graph the function.
(d) Verify your answer from part (b).

Source: www.kettering.edu/~drussell/
65. Minimizing Surface Area United Parcel Service has contracted you to design a closed box with a square base that has a volume of 10,000 cubic inches. See the illustration.
(a) Express the surface area \(S\) of the box as
 a function of \(x\).
(b) Using a graphing utility, graph the function found in part (a).
(c) What is the minimum amount of cardboard that can be used to construct the box?
(d) What are the dimensions of the box that minimize the surface area?
(e) Why might UPS be interested in designing a box that minimizes the surface area?
66. Minimizing Surface Area United Parcel Service has contracted you to design an open box with a square base that has a volume of 5000 cubic inches. See the illustration.

(a) Express the surface area \(S\) of the box as a function of \(x\).
(b) Using a graphing utility, graph the function found in part (a).
(c) What is the minimum amount of cardboard that can be used to construct the box?
(d) What are the dimensions of the box that minimize the surface area?
(e) Why might UPS be interested in designing a box that minimizes the surface area?
67. Cost of a Can A can in the shape of a right circular cylinder is required to have a volume of 500 cubic centimeters. The top and bottom are made of material that costs \(6 \not \subset\) per square centimeter, while the sides are made of material that costs \(4 \phi\) per square centimeter.
(a) Express the total cost \(C\) of the material as a function of the radius \(r\) of the cylinder. (Refer to Figure 44.)
(b) Graph \(C=C(r)\). For what value of \(r\) is the cost \(C\) a minimum?
68. Material Needed to Make a Drum A steel drum in the shape of a right circular cylinder is required to have a volume of 100 cubic feet.

(a) Express the amount \(A\) of material required to make the drum as a function of the radius \(r\) of the cylinder.
(b) How much material is required if the drum's radius is 3 feet?
(c) How much material is required if the drum's radius is 4 feet?
(d) How much material is required if the drum's radius is 5 feet?
(e) Graph \(A=A(r)\). For what value of \(r\) is \(A\) smallest?
69. Removing a Discontinuity In Example 5, we analyzed the rational function \(R(x)=\frac{2 x^{2}-5 x+2}{x^{2}-4}\). We found that the graph of the rational function has a hole at the point \(\left(2, \frac{3}{4}\right)\). Therefore, the graph of \(R\) is discontinuous at \(\left(2, \frac{3}{4}\right)\). We could remove this discontinuity by defining the rational function \(R\) using the following piecewisedefined function:
\[
R(x)=\left\{\begin{array}{cc}
\frac{2 x^{2}-5 x+2}{x^{2}-4} & \text { if } x \neq 2 \\
\frac{3}{4} & \text { if } x=2
\end{array}\right.
\]
(a) Redefine \(R\) from Problem 33 so that the discontinuity is removed.
(b) Redefine \(R\) from Problem 35 so that the discontinuity is removed.

\section*{Discussion and Writing}
71. Graph each of the following functions:
\[
\begin{array}{ll}
y=\frac{x^{2}-1}{x-1} & y=\frac{x^{3}-1}{x-1} \\
y=\frac{x^{4}-1}{x-1} & y=\frac{x^{5}-1}{x-1}
\end{array}
\]

Is \(x=1\) a vertical asymptote? Why not? What is happening for \(x=1\) ? What do you conjecture about \(y=\frac{x^{n}-1}{x-1}\), \(n \geq 1\) an integer, for \(x=1\) ?
72. Graph each of the following functions:
\[
y=\frac{x^{2}}{x-1} \quad y=\frac{x^{4}}{x-1} \quad y=\frac{x^{6}}{x-1} \quad y=\frac{x^{8}}{x-1}
\]

What similarities do you see? What differences?
73. Write a few paragraphs that provide a general strategy for graphing a rational function. Be sure to mention the following: proper, improper, intercepts, and asymptotes.
70. Removing a Discontinuity See Problem 69.
(a) Redefine \(R\) from Problem 34 so that the discontinuity is removed.
(b) Redefine \(R\) from Problem 36 so that the discontinuity is removed.
74. Create a rational function that has the following characteristics: crosses the \(x\)-axis at 2 ; touches the \(x\)-axis at -1 ; one vertical asymptote at \(x=-5\) and another at \(x=6\); and one horizontal asymptote, \(y=3\). Compare your function to a fellow classmate's. How do they differ? What are their similarities?
75. Create a rational function that has the following characteristics: crosses the \(x\)-axis at 3 ; touches the \(x\)-axis at -2 ; one vertical asymptote, \(x=1\); and one horizontal asymptote, \(y=2\). Give your rational function to a fellow classmate and ask for a written critique of your rational function.
76. Create a rational function with the following characteristics: three real zeros, one of multiplicity \(2 ; y\)-intercept, 1 ; vertical asymptotes, \(x=-2\) and \(x=3\); oblique asymptote, \(y=2 x+1\). Is this rational function unique? Compare your function with those of other students. What will be the same as everyone else's? Add some more characteristics, such as symmetry or naming the real zeros. How does this modify the rational function?
77. Explain the circumstances under which the graph of a rational function will have a hole.

\section*{-Retain Your Knowledge}

Problems 78-81 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
78. Subtract: \(\left(4 x^{3}-7 x+1\right)-\left(5 x^{2}-9 x+3\right)\)
79. Solve: \(\frac{3 x}{3 x+1}=\frac{x-2}{x+5}\)
80. Find the maximum value of \(f(x)=-\frac{2}{3} x^{2}+6 x-5\).
81. Approximate \(\frac{\sqrt{5}-3}{\sqrt{7}+2}\). Round your answer to three decimal places.

\section*{‘Are You Prepared?' Answers}

2. \(\left\{-1, \frac{1}{2}\right\}\)

\subsection*{3.6 Polynomial and Rational Inequalities}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Solving Linear Inequalities (Appendix A, Section A.10, pp. A84-A86)
- Solving Quadratic Inequalities (Section 2.5, pp. 160-162)

Now Work the ‘Are You Prepared?' problems on page 263.
OBJECTIVES 1 Solve Polynomial Inequalities (p. 259)
2 Solve Rational Inequalities (p. 260)

\section*{1 Solve Polynomial Inequalities}

In this section we solve inequalities that involve polynomials of degree 3 and higher, along with inequalities that involve rational functions. To help understand the algebraic procedure for solving such inequalities, we use the information obtained in Sections 3.1, 3.2, and 3.5 about the graphs of polynomial and rational functions. The approach follows the same logic used to solve inequalities involving quadratic functions.

\section*{EXAMPLE I Solving a Polynomial Inequality Using Its Graph}

Solve \((x+3)(x-1)^{2}>0\) by graphing \(f(x)=(x+3)(x-1)^{2}\).
Solution Graph \(f(x)=(x+3)(x-1)^{2}\) and determine the intervals of \(x\) for which the graph is above the \(x\)-axis. Do you see why? These values of \(x\) result in \(f(x)\) being positive. Using Steps 1 through 5 on page 205, we obtain the graph shown in Figure 46.

Figure 46

From the graph, we can see that \(f(x)>0\) for \(-3<x<1\) or \(x>1\). The solution set is \(\{x \mid-3<x<1\) or \(x>1\}\) or, using interval notation, \((-3,1) \cup(1, \infty)\).
am Now Work problem 9
The results of Example 1 lead to the following approach to solving polynomial inequalities algebraically. Suppose that the polynomial inequality is in one of the forms
\[
f(x)<0 \quad f(x)>0 \quad f(x) \leq 0 \quad f(x) \geq 0
\]

Locate the zeros ( \(x\)-intercepts of the graph) of the polynomial function \(f\). Because the sign of \(f\) can change on either side of an \(x\)-intercept, use these zeros to divide the real number line into intervals. On each interval, the graph of \(f\) is either above \([f(x)>0]\) or below \([f(x)<0]\) the \(x\)-axis.

\section*{EXAMPLE 2 How to Solve a Polynomial Inequality Algebraically}

Solve the inequality \(x^{4}>x\) algebraically, and graph the solution set.

\section*{Step-by-Step Solution}

Step 1: Write the inequality so that a polynomial expression \(f\) is on the left side and zero is on the right side.

Rearrange the inequality so that 0 is on the right side.
\[
\begin{aligned}
x^{4} & >x \\
x^{4}-x & >0 \quad \text { Subtract } x \text { from both sides of the inequality. }
\end{aligned}
\]

This inequality is equivalent to the one we wish to solve.

Step 2: Determine the real zeros ( \(x\)-intercepts of the graph) of \(f\).

Find the real zeros of \(f(x)=x^{4}-x\) by solving \(x^{4}-x=0\).
\[
\begin{array}{rlrl}
x^{4}-x & =0 & \\
x\left(x^{3}-1\right) & =0 & \text { Factor out } x . \\
& x(x-1)\left(x^{2}+x+1\right) & =0 & \text { Factor the difference of two cubes. } \\
x=0 & \text { or } & x-1=0 & \text { or } \\
x^{2}+x+1 & =0 & \text { Set each factor to zero and solve. } \\
x=0 & \text { or } \quad x=1
\end{array}
\]

The equation \(x^{2}+x+1=0\) has no real solutions. Do you see why?

Step 3: Use the zeros found in Step 2 to divide the real number line into intervals.
\[
(-\infty, 0) \quad(0,1) \quad(1, \infty)
\]

Use the real zeros to separate the real number line into three intervals:

Select a test number in each interval found in Step 3 and evaluate \(f(x)=x^{4}-x\) at each number to determine whether \(f(x)\) is positive or negative. See Table 17.
Table 17 \begin{tabular}{lllll|}
\hline & \multicolumn{3}{c|}{0} & \\
\cline { 2 - 4 } & \multicolumn{4}{c|}{} \\
\cline { 2 - 4 } & Interval & \((-\infty, 0)\) & \((0,1)\) & \((1, \infty)\) \\
Number chosen & -1 & \(\frac{1}{2}\) & 2 \\
Value of \(\boldsymbol{f}\) & \(f(-1)=2\) & \(f\left(\frac{1}{2}\right)=-\frac{7}{16}\) & \(f(2)=14\) \\
Conclusion & Positive & Negative & Positive \\
\hline
\end{tabular}

Since we want to know where \(f(x)\) is positive, conclude that \(f(x)>0\) for all numbers \(x\) for which \(x<0\) or \(x>1\). Because the original inequality is strict, numbers \(x\) that satisfy the equation \(x^{4}=x\) are not solutions. The solution set of the inequality \(x^{4}>x\) is \(\{x \mid x<0\) or \(x>1\}\) or, using interval notation, \((-\infty, 0) \cup(1, \infty)\).

Figure 47 shows the graph of the solution set.

\section*{The Role of Multiplicity in Solving Polynomial Inequalities}

In Example 2, we used the test point -1 to determine that \(f\) is positive for all \(x<0\). Because the "cut-point" of 0 is the result of a zero of odd multiplicity \((x\) is a factor to the first power), we know that the sign of \(f\) will change on either side of 0 , so for \(0<x<1\), \(f\) will be negative. Similarly, we know \(f\) will be positive for \(x>1\) since the multiplicity of the zero 1 is odd. Therefore, the solution set of \(x^{4}>x\) is \(\{x \mid x<0\) or \(x>1\}\) or, using interval notation, \((-\infty, 0) \cup(1, \infty)\).
am Now Work problem 21

\section*{2 Solve Rational Inequalities}

Just as we presented a graphical approach to help us understand the algebraic procedure for solving inequalities involving polynomials, we present a graphical approach to help us understand the algebraic procedure for solving inequalities involving rational expressions.

\section*{EXAMPLE 3 Solving a Rational Inequality Using Its Graph}

Solve \(\frac{x-1}{x^{2}-4} \geq 0\) by graphing \(R(x)=\frac{x-1}{x^{2}-4}\).

Solution Graph \(R(x)=\frac{x-1}{x^{2}-4}\) and determine the intervals of \(x\) such that the graph is above or on the \(x\)-axis. Do you see why? These values of \(x\) result in \(R(x)\) being positive or zero. We graphed \(R(x)=\frac{x-1}{x^{2}-4}\) in Example 1 from Section 3.5 (p.243). We reproduce the graph in Figure 48.

Figure 48

From the graph, we can see that \(R(x) \geq 0\) for \(-2<x \leq 1\) or \(x>2\). The solution set is \(\{x \mid-2<x \leq 1\) or \(x>2\}\) or, using interval notation, \((-2,1] \cup(2, \infty)\).
an Now Work problem 15
To solve a rational inequality algebraically, we follow the same approach that we used to solve a polynomial inequality algebraically. However, we must also identify the zeros of the denominator of the rational function, because the sign of a rational function may change on either side of a vertical asymptote. Convince yourself of this by looking at Figure 48. Notice that the function values are negative for \(x<-2\) and are positive for \(x>-2\) (but less than 1 ).

\section*{EXAMPLE 4 How to Solve a Rational Inequality Algebraically}

\section*{Step-by-Step Solution}

Step 1: Write the inequality so that a rational expression fis on the left side and zero is on the right side.

Solve the inequality \(\frac{3 x^{2}+13 x+9}{(x+2)^{2}} \leq 3\) algebraically, and graph the solution set.
Rearrange the inequality so that 0 is on the right side.
\[
\begin{aligned}
\frac{3 x^{2}+13 x+9}{(x+2)^{2}} & \leq 3 \\
\frac{3 x^{2}+13 x+9}{x^{2}+4 x+4} & \leq 3 \quad \text { Expand the denominator. } \\
\frac{3 x^{2}+13 x+9}{x^{2}+4 x+4}-3 \leq 0 & \text { Subtract } 3 \text { from both sides of the inequality. } \\
\frac{3 x^{2}+13 x+9}{x^{2}+4 x+4}-3 \cdot \frac{x^{2}+4 x+4}{x^{2}+4 x+4} & \leq 0 \quad \text { Multiply } 3 \text { by } \frac{x^{2}+4 x+4}{x^{2}+4 x+4} \\
\frac{3 x^{2}+13 x+9-3 x^{2}-12 x-12}{x^{2}+4 x+4} & \leq 0 \quad \text { Write as a single quotient. } \\
\frac{x-3}{(x+2)^{2}} & \leq 0 \quad \text { Combine like terms. }
\end{aligned}
\]

Step 2: Determine the real zeros (x-intercepts of the graph) of fand the real numbers for which fis undefined.

The zero of \(f(x)=\frac{x-3}{(x+2)^{2}}\) is 3. Also, \(f\) is undefined for \(x=-2\).

Step 3: Use the zeros and undefined values found in Step 2 to divide the real number line into intervals.

Step 4: Select a number in each interval, evaluate fat the number, and determine whether fis positive or negative. If \(f\) is positive, all values of \(f\) in the interval are positive. If \(f\) is negative, all values of fin the interval are negative.

NOTE If the inequality is not strict ( \(\leq\) or \(\geq)\), include the solutions of \(f(x)=O\) in the solution set.

Figure 49

Use the zero and the undefined value to separate the real number line into three intervals:
\[
(-\infty,-2) \quad(-2,3) \quad(3, \infty)
\]

Select a test number in each interval from Step 3, and evaluate \(f(x)\) at each number to determine whether \(f(x)\) is positive or negative. See Table 18.

Table 18
\begin{tabular}{|llll|}
\hline & \multicolumn{2}{c}{-2} & \\
\cline { 2 - 4 } & \multicolumn{2}{c|}{} & \((-2,3)\) \\
\((3,-2)\) & 0 & 4 \\
Interval & -3 & \(f(0)=-\frac{3}{4}\) & \(f(4)=\frac{1}{36}\) \\
Number chosen & \(f(-3)=-6\) & Negative & Positive \\
\hline Conclusion \(\boldsymbol{f}\) & Negative & & \\
\hline
\end{tabular}

Since we want to know where \(f(x)\) is negative or zero, we conclude that \(f(x) \leq 0\) for all numbers for which \(x<-2\) or \(-2<x \leq 3\). Notice that we do not include -2 in the solution because -2 is not in the domain of \(f\). The solution set of the inequality \(\frac{3 x^{2}+13 x+9}{(x+2)^{2}} \leq 3\) is \(\{x \mid x<-2\) or \(-2<x \leq 3\}\) or, using interval notation, \((-\infty,-2) \cup(-2,3]\). Figure 49 shows the graph of the solution set.

\section*{The Role of Multiplicity in Solving Rational Inequalities}

In Example 4, we used the test point -3 to determine that \(R\) is negative for all \(x<-2\). Because the "cut-point" of -2 is the result of a zero of even multiplicity, we know that the sign of \(R\) will not change on either side of 0 , so for \(-2<x<3, R\) will also be negative. Because the "cut-point" of 3 is the result of a zero of odd multiplicity, the sign of \(R\) will change on either side of 3 , so for \(x>3, R\) will be positive. Therefore, the solution set of \(\frac{3 x^{2}+13 x+9}{(x+2)^{2}} \leq 3\) is \(\{x \mid x<-2\) or \(-2<x \leq 3\}\) or, using interval notation, \((-\infty,-2) \cup(-2,3]\).

\section*{SUMMARY}

\section*{Steps for Solving Polynomial and Rational Inequalities Algebraically}

STEP 1: Write the inequality so that a polynomial or rational expression \(f\) is on the left side and zero is on the right side in one of the following forms:
\[
f(x)>0 \quad f(x) \geq 0 \quad f(x)<0 \quad f(x) \leq 0
\]

For rational expressions, be sure that the left side is written as a single quotient, and find the domain of \(f\).
STEP 2: Determine the real numbers at which the expression \(f\) equals zero and, if the expression is rational, the real numbers at which the expression \(f\) is undefined.
STEP 3: Use the numbers found in Step 2 to separate the real number line into intervals.
STEP 4: Select a number in each interval and evaluate \(f\) at the number.
(a) If the value of \(f\) is positive, then \(f(x)>0\) for all numbers \(x\) in the interval.
(b) If the value of \(f\) is negative, then \(f(x)<0\) for all numbers \(x\) in the interval.

If the inequality is not strict ( \(\geq\) or \(\leq\) ), include the solutions of \(f(x)=0\) in the solution set. Be careful to exclude values of \(x\) where \(f\) is undefined.

\subsection*{3.6 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. Solve the inequality \(3-4 x>5\). Graph the solution set. (pp. A84-A86)
2. Solve the inequality \(x^{2}-5 x \leq 24\). Graph the solution set. (pp. 160-162)

\section*{Concepts and Vocabulary}
3. True or False A test number for the interval \(-2<x<5\) could be 4 .
4. True or False The graph of \(f(x)=\frac{x}{x-3}\) is above the \(x\)-axis for \(x<0\) or \(x>3\), so the solution set of the inequality \(\frac{x}{x-3} \geq 0\) is \(\{x \mid x \leq 0\) or \(x \geq 3\}\).

\section*{Skill Building}

In Problems 5-8, use the graph of the function fo solve the inequality.
5. (a) \(f(x)>0\)
6. (a) \(f(x)<0\)
(b) \(f(x) \leq 0\)
(b) \(f(x) \geq 0\)

7. (a) \(f(x)<0\)
(b) \(f(x) \geq 0\)

8. (a) \(f(x)>0\)
(b) \(f(x) \leq 0\)

In Problems 9-14, solve the inequality by using the graph of the function.
[Hint: The graphs were drawn in Problems 73-78 of Section 3.1.]
9. Solve \(f(x)<0\), where \(f(x)=x^{2}(x-3)\).
10. Solve \(f(x) \leq 0\), where \(f(x)=x(x+2)^{2}\).
11. Solve \(f(x) \geq 0\), where \(f(x)=(x+4)(x-2)^{2}\).
12. Solve \(f(x)>0\), where \(f(x)=(x-1)(x+3)^{2}\).
13. Solve \(f(x) \leq 0\), where \(f(x)=-2(x+2)(x-2)^{3}\).
14. Solve \(f(x)<0\), where \(f(x)=-\frac{1}{2}(x+4)(x-1)^{3}\).

In Problems 15-18, solve the inequality by using the graph of the function.
[Hint: The graphs were drawn in Problems 7-10 of Section 3.5.]
15. Solve \(R(x)>0\), where \(R(x)=\frac{x+1}{x(x+4)}\).
16. Solve \(R(x)<0\), where \(R(x)=\frac{x}{(x-1)(x+2)}\).
17. Solve \(R(x) \leq 0\), where \(R(x)=\frac{3 x+3}{2 x+4}\).
18. Solve \(R(x) \geq 0\), where \(R(x)=\frac{2 x+4}{x-1}\).

In Problems 19-48, solve each inequality algebraically.
19. \((x-5)^{2}(x+2)<0\)
20. \((x-5)(x+2)^{2}>0\)
21. \(x^{3}-4 x^{2}>0\)
22. \(x^{3}+8 x^{2}<0\)
23. \(2 x^{3}>-8 x^{2}\)
24. \(3 x^{3}<-15 x^{2}\)
25. \((x-1)(x-2)(x-3) \leq 0\)
26. \((x+1)(x+2)(x+3) \leq 0\)
27. \(x^{3}-2 x^{2}-3 x>0\)
28. \(x^{3}+2 x^{2}-3 x>0\)
29. \(x^{4}>x^{2}\)
30. \(x^{4}<9 x^{2}\)
31. \(x^{4}>1\)
32. \(x^{3}>1\)
33. \(\frac{x+1}{x-1}>0\)
34. \(\frac{x-3}{x+1}>0\)
35. \(\frac{(x-1)(x+1)}{x} \leq 0\)
36. \(\frac{(x-3)(x+2)}{x-1} \leq 0\)
37. \(\frac{(x-2)^{2}}{x^{2}-1} \geq 0\)
38. \(\frac{(x+5)^{2}}{x^{2}-4} \geq 0\)
39. \(\frac{x+4}{x-2} \leq 1\)
40. \(\frac{x+2}{x-4} \geq 1\)
41. \(\frac{3 x-5}{x+2} \leq 2\)
42. \(\frac{x-4}{2 x+4} \geq 1\)
43. \(\frac{1}{x-2}<\frac{2}{3 x-9}\)
44. \(\frac{5}{x-3}>\frac{3}{x+1}\)
45. \(\frac{x^{2}(3+x)(x+4)}{(x+5)(x-1)} \geq 0\)
46. \(\frac{x\left(x^{2}+1\right)(x-2)}{(x-1)(x+1)} \geq 0\)
47. \(\frac{(3-x)^{3}(2 x+1)}{x^{3}-1}<0\)
48. \(\frac{(2-x)^{3}(3 x-2)}{x^{3}+1}<0\)

\section*{-Mixed Practice}

In Problems 49-60, solve each inequality algebraically.
49. \((x+1)(x-3)(x-5)>0\)
50. \((2 x-1)(x+2)(x+5)<0\)
51. \(7 x-4 \geq-2 x^{2}\)
52. \(x^{2}+3 x \geq 10\)
53. \(\frac{x+1}{x-3} \leq 2\)
54. \(\frac{x-1}{x+2} \geq-2\)
55. \(3\left(x^{2}-2\right)<2(x-1)^{2}+x^{2}\)
56. \((x-3)(x+2)<x^{2}+3 x+5\)
57. \(6 x-5<\frac{6}{x}\)
58. \(x+\frac{12}{x}<7\)
59. \(x^{3}-9 x \leq 0\)
60. \(x^{3}-x \geq 0\)

In Problems 61 and 62, (a) find the zeros of each function,(b) factor each function over the real numbers, (c) graph each function, and (d) solve \(f(x)<0\).
61. \(f(x)=2 x^{4}+11 x^{3}-11 x^{2}-104 x-48\)
62. \(f(x)=4 x^{5}-19 x^{4}+32 x^{3}-31 x^{2}+28 x-12\)

In Problems 63-66, (a) graph each function by hand, and (b) solve \(f(x) \geq 0\).
63. \(f(x)=\frac{x^{2}+5 x-6}{x^{2}-4 x+4}\)
64. \(f(x)=\frac{2 x^{2}+9 x+9}{x^{2}-4}\)
65. \(f(x)=\frac{x^{3}+2 x^{2}-11 x-12}{x^{2}-x-6}\)
66. \(f(x)=\frac{x^{3}-6 x^{2}+9 x-4}{x^{2}+x-20}\)
67. Find the interval for which the graph of \(R(x)=\frac{x^{4}-16}{x^{2}-9}\) is below its end behavior.
68. Find the interval for which the graph of \(R(x)=\frac{x^{2}-4}{x^{2}-25}\) is above its end behavior.

\section*{Applications and Extensions}
69. For what positive numbers will the cube of a number exceed four times its square?
70. For what positive numbers will the cube of a number be less than the number?
71. What is the domain of the function \(f(x)=\sqrt{x^{4}-16}\) ?
72. What is the domain of the function \(f(x)=\sqrt{x^{3}-3 x^{2}}\) ?
73. What is the domain of the function \(f(x)=\sqrt{\frac{x-2}{x+4}}\) ?
74. What is the domain of the function \(f(x)=\sqrt{\frac{x-1}{x+4}}\) ?

In Problems 75-78, determine where the graph of \(f\) is at or below the graph of \(g\) by solving the inequality \(f(x) \leq g(x)\). Graph \(f\) and \(g\) together.
75. \(f(x)=x^{4}-1\) \(g(x)=-2 x^{2}+2\)
77. \(f(x)=x^{4}-4\) \(g(x)=3 x^{2}\)
76. \(f(x)=x^{4}-1\) \(g(x)=x-1\)
78. \(f(x)=x^{4}\) \(g(x)=2-x^{2}\)
79. Average Cost Suppose that the daily \(\operatorname{cost} C\) of manufacturing bicycles is given by \(C(x)=80 x+5000\). Then the average daily cost \(\bar{C}\) is given by \(\bar{C}(x)=\frac{80 x+5000}{x}\). How many bicycles must be produced each day for the average daily cost to be no more than \(\$ 100\) ?
80. Average Cost See Problem 79. Suppose that the government imposes a \(\$ 1000\)-per-day tax on the bicycle manufacturer so that the daily cost \(C\) of manufacturing \(x\) bicycles is now given by \(C(x)=80 x+6000\). Now the average daily \(\operatorname{cost} \bar{C}\) is given by \(\bar{C}(x)=\frac{80 x+6000}{x}\). How many bicycles must be produced each day for the daily average cost to be no more than \(\$ 100\) ?
81. Bungee Jumping Originating on Pentecost Island in the Pacific, the practice of a person jumping from a high place harnessed to a flexible attachment was introduced to Western culture in 1979 by the Oxford University Dangerous Sport Club. One important parameter to know before attempting a bungee jump is the amount the cord will stretch at the bottom of the fall. The stiffness of the cord is related to the amount of stretch by the equation
\[
K=\frac{2 W(S+L)}{S^{2}}
\]
where \(W=\) weight of the jumper (pounds)
\(K=\) cord's stiffness (pounds per foot)
\(L=\) free length of the cord (feet)
\(S=\) stretch (feet)
(a) A 150-pound person plans to jump off a ledge attached to a cord of length 42 feet. If the stiffness of the cord is
no less than 16 pounds per foot, how much will the cord stretch?
(b) If safety requirements will not permit the jumper to get any closer than 3 feet to the ground, what is the minimum height required for the ledge in part (a)?
Source: American Institute of Physics, Physics News Update, No. 150, November 5, 1993.
82. Gravitational Force According to Newton's Law of universal gravitation, the attractive force \(F\) between two bodies is given by
\[
F=G \frac{m_{1} m_{2}}{r^{2}}
\]
where \(m_{1}, m_{2}=\) the masses of the two bodies
\(r=\) distance between the two bodies
\(G=\) gravitational constant \(=6.6742 \times 10^{-11}\) newtons meter \({ }^{2}\) kilogram \({ }^{-2}\)

Suppose an object is traveling directly from Earth to the moon. The mass of Earth is \(5.9742 \times 10^{24}\) kilograms, the mass of the moon is \(7.349 \times 10^{22}\) kilograms, and the mean distance from Earth to the moon is 384,400 kilometers. For an object between Earth and the moon, how far from Earth is the force on the object due to the moon greater than the force on the object due to Earth?

83. Field Trip Mrs. West has decided to take her fifth grade class to a play. The manager of the theater agreed to discount the regular \(\$ 40\) price of the ticket by \(\$ 0.20\) for each ticket sold. The cost of the bus, \(\$ 500\), will be split equally among the students. How many students must attend to keep the cost per student at or below \(\$ 40\) ?

\section*{Discussion and Writing}
84. Make up an inequality that has no solution. Make up one that has exactly one solution.
85. The inequality \(x^{4}+1<-5\) has no solution. Explain why.
86. A student attempted to solve the inequality \(\frac{x+4}{x-3} \leq 0\) by multiplying both sides of the inequality by \(x-3\) to get
\(x+4 \leq 0\). This led to a solution of \(\{x \mid x \leq-4\}\). Is the student correct? Explain.
87. Write a rational inequality whose solution set is \(\{x \mid-3<x \leq 5\}\).

\section*{-Retain Your Knowledge}

Problems 88-91 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
88. Solve: \(9-2 x \leq 4 x+1\)
89. Suppose \(y\) varies directly with \(\sqrt{x}\). Write a general formula to describe the variation if \(y=2\) when \(x=9\).
90. Given \(f(x)=x^{2}+3 x-2\), find \(f(x-2)\).
91. Factor completely: \(6 x^{4} y^{4}+3 x^{3} y^{5}-18 x^{2} y^{6}\)

End behavior: Behaves like \(y=a_{n} x^{n}\) for large \(|x|\)
Real numbers for which \(f(x)=0\); the real zeros of \(f\) are the \(x\)-intercepts of the graph of \(f\).

If a polynomial function \(f(x)\) is divided by \(x-c\), then the remainder is \(f(c)\). \(x-c\) is a factor of a polynomial function \(f(x)\) if and only if \(f(c)=0\).

Let \(f\) denote a polynomial function written in standard form. The number of positive zeros of \(f\) either equals the number of variations in sign of the nonzero coefficients of \(f(x)\) or else equals that number less some even integer. The number of negative zeros of \(f\) either equals the number of variations in sign of the nonzero coefficients of \(f(-x)\) or else equals that number less some even integer.

Let \(f\) be a polynomial function of degree 1 or higher of the form
\[
f(x)=a_{n} x^{n}+a_{n-1} x^{n-1}+\cdots+a_{1} x+a_{0} \quad a_{n} \neq 0, a_{0} \neq 0
\]
where each coefficient is an integer. If \(\frac{p}{q}\), in lowest terms, is a rational zero of \(f\), then \(p\) must be a factor of \(a_{0}\), and \(q\) must be a factor of \(a_{n}\).

Let \(f\) be a polynomial function. If \(a<b\) and \(f(a)\) and \(f(b)\) are of opposite sign, then there is at least one real zero of \(f\) between \(a\) and \(b\).

Every complex polynomial function \(f(x)\) of degree \(n \geq 1\) has at least one complex zero.

Let \(f(x)\) be a polynomial whose coefficients are real numbers. If \(r=a+b i\) is a zero of \(f\), then its complex conjugate \(\bar{r}=a-b i\) is also a zero of \(f\).

Domain: \(\{x \mid q(x) \neq 0\}\)
Vertical asymptotes: With \(R(x)\) in lowest terms, if \(q(r)=0\) for some real number, then \(x=r\) is a vertical asymptote.
Horizontal or oblique asymptote: See the summary on page 238.

\section*{Objectives}

\section*{Section}

\section*{You should be able to . . .}
3.11 Identify polynomial functions and their degree (p. 192)

2 Graph polynomial functions using transformations (p. 196)
Identify the real zeros of a polynomial function and their multiplicity (p. 197)
Analyze the graph of a polynomial function (p. 204)
5 Build cubic models from data (p. 206)
1 Use the Remainder and Factor Theorems (p. 213)
2 Use Descartes' Rule of Signs to determine the number of positive and the number of negative real zeros of a polynomial function (p. 215)
3 Use the Rational Zeros Theorem to list the potential rational 4

\section*{Review Exercises}

In Problems 1-4, determine whether the function is a polynomial function, a rational function, or neither. For those that are polynomial functions, state the degree. For those that are not polynomial functions, tell why not.
1. \(f(x)=4 x^{5}-3 x^{2}+5 x-2\)
2. \(f(x)=\frac{3 x^{5}}{2 x+1}\)
3. \(f(x)=3 x^{2}+5 x^{1 / 2}-1\)
4. \(f(x)=3\)

In Problems 5-7, graph each function using transformations (shifting, compressing, stretching, and reflection). Show all the stages.
5. \(f(x)=(x+2)^{3}\)
6. \(f(x)=-(x-1)^{4}\)
7. \(f(x)=(x-1)^{4}+2\)

In Problems 8-11, analyze each polynomial function by following Steps 1 through 5 on page 205.
8. \(f(x)=x(x+2)(x+4)\)
9. \(f(x)=(x-2)^{2}(x+4)\)
10. \(f(x)=-2 x^{3}+4 x^{2}\)
11. \(f(x)=(x-1)^{2}(x+3)(x+1)\)

In Problems 12 and 13, find the remainder \(R\) when \(f(x)\) is divided by \(g(x)\). Is \(g\) a factor of \(f\) ?
12. \(f(x)=8 x^{3}-3 x^{2}+x+4 ; \quad g(x)=x-1\)
13. \(f(x)=x^{4}-2 x^{3}+15 x-2 ; \quad g(x)=x+2\)
14. Find the value of \(f(x)=12 x^{6}-8 x^{4}+1\) at \(x=4\).

In Problems 15 and 16, use Descartes' Rule of Signs to determine how many positive and negative zeros each polynomial function may have. Do not attempt to find the zeros.
15. \(f(x)=12 x^{8}-x^{7}+8 x^{4}-2 x^{3}+x+3\)
16. \(f(x)=-6 x^{5}+x^{4}+5 x^{3}+x+1\)
17. List all the potential rational zeros of \(f(x)=12 x^{8}-x^{7}+6 x^{4}-x^{3}+x-3\).

In Problems 18-20, use the Rational Zeros Theorem to find all the real zeros of each polynomial function. Use the zeros to factor fover the real numbers.
18. \(f(x)=x^{3}-3 x^{2}-6 x+8\)
19. \(f(x)=4 x^{3}+4 x^{2}-7 x+2\)
20. \(f(x)=x^{4}-4 x^{3}+9 x^{2}-20 x+20\)

In Problems 21 and 22, solve each equation in the real number system.
21. \(2 x^{4}+2 x^{3}-11 x^{2}+x-6=0\)
22. \(2 x^{4}+7 x^{3}+x^{2}-7 x-3=0\)

In Problems 23 and 24, find bounds to the real zeros of each polynomial function.
23. \(f(x)=x^{3}-x^{2}-4 x+2\)
24. \(f(x)=2 x^{3}-7 x^{2}-10 x+35\)

In Problems 25 and 26, use the Intermediate Value Theorem to show that each polynomial function has a zero in the given interval.
25. \(f(x)=3 x^{3}-x-1 ;[0,1]\)
26. \(f(x)=8 x^{4}-4 x^{3}-2 x-1 ;[0,1]\)

In Problems 27 and 28, information is given about a complex polynomial \(f(x)\) whose coefficients are real numbers. Find the remaining zeros of \(f\). Then find a polynomial function with real coefficients that has the zeros.
27. Degree 3; zeros: \(4+i, 6\)
28. Degree 4; zeros: \(i, 1+i\)

In Problems 29-32, find the complex zeros of each polynomial function \(f(x)\). Write f in factored form.
29. \(f(x)=x^{3}-3 x^{2}-6 x+8\)
30. \(f(x)=4 x^{3}+4 x^{2}-7 x+2\)
31. \(f(x)=x^{4}-4 x^{3}+9 x^{2}-20 x+20\)
32. \(f(x)=2 x^{4}+2 x^{3}-11 x^{2}+x-6\)

In Problems 33-35, find the domain of each rational function. Find any horizontal, vertical, or oblique asymptotes.
33. \(R(x)=\frac{x+2}{x^{2}-9}\)
34. \(R(x)=\frac{x^{2}+4}{x-2}\)
35. \(R(x)=\frac{x^{2}+3 x+2}{(x+2)^{2}}\)

In Problems 36-41, discuss each rational function following the seven steps given on page 246.
36. \(R(x)=\frac{2 x-6}{x}\)
37. \(H(x)=\frac{x+2}{x(x-2)}\)
38. \(R(x)=\frac{x^{2}+x-6}{x^{2}-x-6}\)
39. \(F(x)=\frac{x^{3}}{x^{2}-4}\)
40. \(R(x)=\frac{2 x^{4}}{(x-1)^{2}}\)
41. \(G(x)=\frac{x^{2}-4}{x^{2}-x-2}\)
42. Use the graph below of a polynomial function \(y=f(x)\) to (a) solve \(f(x)=0\), (b) solve \(f(x)>0\), (c) solve \(f(x) \leq 0\), and (d) determine \(f\).

43. Use the graph below of a rational function \(y=R(x)\) to (a) identify the horizontal asymptote of \(R\), (b) identify the vertical asymptotes of \(R\), (c) solve \(R(x)<0\), (d) solve \(R(x) \geq 0\), and (e) determine \(R\).

In Problems 44-48, solve each inequality. Graph the solution set.
44. \(x^{3}+x^{2}<4 x+4\)
45. \(\frac{6}{x+3} \geq 1\)
46. \(\frac{2 x-6}{1-x}<2\)
47. \(\frac{(x-2)(x-1)}{x-3} \geq 0\)
48. \(\frac{x^{2}-8 x+12}{x^{2}-16}>0\)
49. Making a Can A can in the shape of a right circular cylinder is required to have a volume of 250 cubic centimeters.
(a) Express the amount \(A\) of material to make the can as a function of the radius \(r\) of the cylinder.
(b) How much material is required if the can is of radius 3 centimeters?
(c) How much material is required if the can is of radius 5 centimeters?
(d) Graph \(A=A(r)\). For what value of \(r\) is \(A\) smallest?
50. Model It: Poverty Rates The following data represent the percentage of families in the United States whose income is below the poverty level.
\begin{tabular}{|lc|}
\hline Year, \(\boldsymbol{t}\) & \begin{tabular}{c} 
Percent below \\
Poverty Level, \(\boldsymbol{p}\)
\end{tabular} \\
\hline 1990,1 & 13.5 \\
1991,2 & 14.2 \\
\hline 1992,3 & 14.8 \\
1993,4 & 15.1 \\
\hline 1994,5 & 14.5 \\

\hline
\end{tabular}

Source: U.S. Census Bureau
(a) With a graphing utility, draw a scatter diagram of the data. Comment on the type of relation that appears to exist between the two variables.
(b) Decide on a function of best fit to these data (linear, quadratic, or cubic), and use this function to predict the percentage of U.S. families that were below the poverty level in \(2012(t=23)\)
(c) Draw the function of best fit on the scatter diagram drawn in part (a).
51. Design a polynomial function with the following characteristics: degree 6 ; four real zeros, one of multiplicity 3 ; \(y\)-intercept 3 ; behaves like \(y=-5 x^{6}\) for large values of \(|x|\). Is this polynomial unique? Compare your polynomial with those of other students. What terms will be the same as everyone else's? Add some more characteristics, such as symmetry or naming the real zeros. How does this modify the polynomial?
52. Design a rational function with the following characteristics: three real zeros, one of multiplicity 2 ; \(y\)-intercept 1 ; vertical asymptotes \(x=-2\) and \(x=3\); oblique asymptote \(y=2 x+1\). Is this rational function unique? Compare yours with those of other students. What will be the same as everyone else's? Add some more characteristics, such as symmetry or naming the real zeros. How does this modify the rational function?
53. The illustration shows the graph of a polynomial function.
(a) Is the degree of the polynomial even or odd?
(b) Is the leading coefficient positive or negative?
(c) Is the function even, odd, or neither?
(d) Why is \(x^{2}\) necessarily a factor of the polynomial?
(e) What is the minimum degree of the polynomial?
(f) Formulate five different polynomials whose graphs could look like the one shown. Compare yours to those of other students. What similarities do you see? What differences?

\section*{Chapter Test}
1. Graph \(f(x)=(x-3)^{4}-2\) using transformations.
2. For the polynomial function \(g(x)=2 x^{3}+5 x^{2}-28 x-15\),
(a) Determine the maximum number of real zeros that the function may have.
(b) List the potential rational zeros.
(c) Determine the real zeros of \(g\). Factor \(g\) over the reals.
(d) Find the \(x\) - and \(y\)-intercepts of the graph of \(g\).
(e) Determine whether the graph crosses or touches the \(x\)-axis at each \(x\)-intercept.
(f) Find the power function that the graph of \(g\) resembles for large values of \(|x|\).
(g) Put all the information together to obtain the graph of \(g\).
3. Find the complex zeros of \(f(x)=x^{3}-4 x^{2}+25 x-100\).
4. Solve \(3 x^{3}+2 x-1=8 x^{2}-4\) in the complex number system.

In Problems 5 and 6, find the domain of each function. Find any horizontal, vertical, or oblique asymptotes.
5. \(g(x)=\frac{2 x^{2}-14 x+24}{x^{2}+6 x-40}\)
6. \(r(x)=\frac{x^{2}+2 x-3}{x+1}\)
7. Sketch the graph of the function in Problem 6. Label all intercepts, vertical asymptotes, horizontal asymptotes, and oblique asymptotes.
In Problems 8 and 9 , write a function that meets the given conditions.
8. Fourth-degree polynomial with real coefficients; zeros: \(-2,0,3+i\)
9. Rational function; asymptotes: \(y=2, x=4\); domain: \(\{x \mid x \neq 4, x \neq 9\}\)
10. Use the Intermediate Value Theorem to show that the function \(f(x)=-2 x^{2}-3 x+8\) has at least one real zero on the interval \([0,4]\).
11. Solve: \(\frac{x+2}{x-3}<2\)

\section*{Cumulative Review}
1. Find the distance between the points \(P=(1,3)\) and \(Q=(-4,2)\).
2. Solve the inequality \(x^{2} \geq x\) and graph the solution set.
3. Solve the inequality \(x^{2}-3 x<4\) and graph the solution set.
4. Find a linear function with slope -3 that contains the point \((-1,4)\). Graph the function.
5. Find the equation of the line parallel to the line \(y=2 x+1\) and containing the point \((3,5)\). Express your answer in slope-intercept form and graph the line.
6. Graph the equation \(y=x^{3}\).
7. Does the relation \(\{(3,6),(1,3),(2,5),(3,8)\}\) represent a function? Why or why not?
8. Solve the equation \(x^{3}-6 x^{2}+8 x=0\).
9. Solve the inequality \(3 x+2 \leq 5 x-1\) and graph the solution set.
10. Find the center and the radius of the circle \(x^{2}+4 x+\) \(y^{2}-2 y-4=0\). Graph the circle.
11. For the equation \(y=x^{3}-9 x\), determine the intercepts and test for symmetry.
12. Find an equation of the line perpendicular to \(3 x-2 y=7\) that contains the point \((1,5)\).
13. Is the following the graph of a function? Why or why not?

14. For the function \(f(x)=x^{2}+5 x-2\), find
(a) \(f(3)\)
(b) \(f(-x)\)
(c) \(-f(x)\)
(d) \(f(3 x)\)
(e) \(\frac{f(x+h)-f(x)}{h} h \neq 0\)
15. Answer the following questions regarding the function
\[
f(x)=\frac{x+5}{x-1}
\]
(a) What is the domain of \(f\) ?
(b) Is the point \((2,6)\) on the graph of \(f\) ?
(c) If \(x=3\), what is \(f(x)\) ? What point is on the graph of \(f\) ?
(d) If \(f(x)=9\), what is \(x\) ? What point is on the graph of \(f\) ?
(e) Is \(f\) a polynomial or rational function?
16. Graph the function \(f(x)=-3 x+7\).
17. Graph \(f(x)=2 x^{2}-4 x+1\) by determining whether its graph opens up or down and by finding its vertex, axis of symmetry, \(y\)-intercept, and \(x\)-intercepts, if any.
18. Find the average rate of change of \(f(x)=x^{2}+3 x+1\) from 1 to 2 . Use this result to find the equation of the secant line containing \((1, f(1))\) and \((2, f(2))\).
19. In parts (a) to (f), use the following graph.

(a) Determine the intercepts.
(b) Based on the graph, tell whether the graph is symmetric with respect to the \(x\)-axis, the \(y\)-axis, and/or the origin.
(c) Based on the graph, tell whether the function is even, odd, or neither.
(d) List the intervals on which \(f\) is increasing. List the intervals on which \(f\) is decreasing.
(e) List the numbers, if any, at which \(f\) has a local maximum. What are these local maxima?
(f) List the numbers, if any, at which \(f\) has a local minimum. What are these local minima?
20. Determine algebraically whether the function
\[
f(x)=\frac{5 x}{x^{2}-9}
\]
is even, odd, or neither.
21. For the function \(f(x)=\left\{\begin{array}{r}2 x+1 \text { if }-3<x<2 \\ -3 x+4 \text { if } x \geq 2\end{array}\right.\)
(a) Find the domain of \(f\).
(b) Locate any intercepts.
(c) Graph the function.
(d) Based on the graph, find the range.
22. Graph the function \(f(x)=-3(x+1)^{2}+5\) using transformations.
23. Suppose that \(f(x)=x^{2}-5 x+1\) and \(g(x)=-4 x-7\).
(a) Find \(f+g\) and state its domain.
(b) Find \(\frac{f}{g}\) and state its domain.
24. Demand Equation The price \(p\) (in dollars) and the quantity \(x\) sold of a certain product obey the demand equation
\[
p=-\frac{1}{10} x+150,
\]
(a) Express the revenue \(R\) as a function of \(x\).
(b) What is the revenue if 100 units are sold?
(c) What quantity \(x\) maximizes revenue? What is the maximum revenue?
(d) What price should the company charge to maximize revenue?

\section*{Chapter Projects}

\section*{Internet-based Project}
I. Length of Day Go to http://en.wikipedia.org/wiki/Latitude and read about latitude. Now go to http://www.orchidculture. com/COD/daylength.html.
1. For a particular day of the year, record in a table the length of day for the equator \(\left(0^{\circ} \mathrm{N}\right), 5^{\circ} \mathrm{N}, 10^{\circ} \mathrm{N}, \ldots, 60^{\circ} \mathrm{N}\). Enter the data into an Excel spreadsheet, TI graphing calculator, or some other spreadsheet capable of finding linear, quadratic, and cubic functions of best fit.
2. Draw a scatter diagram of the data with latitude as the independent variable and length of day as the dependent variable using Excel, a TI graphing calculator, or some other spreadsheet. The Chapter 2 project describes how to draw a scatter diagram in Excel.
3. Determine the linear function of best fit. Graph the linear function of best fit on the scatter diagram. To do this in Excel, click on any data point in the scatter diagram. Now click the Layout menu, select Trendline within the Analysis region, select More Trendline Options. Select the Linear radio button and select Display Equation on Chart. See Figure 50. Move the Trendline Options window off to the side and you will see the linear function of best fit displayed on the scatter diagram. Do you think the function accurately describes the relation between latitude and length of the day?

Figure 50
Format Trendline
|8| 231

4. Determine the quadratic function of best fit. Graph the quadratic function of best fit on the scatter diagram. To do this in Excel, click on any data point in the scatter diagram. Now click the Layout menu, select Trendline within the Analysis region, select More Trendline Options. Select the Polynomial radio button with Order set to 2. Select Display Equation on Chart. Move the Trendline Options window off to the side, and you will see the quadratic function of best fit displayed on the scatter diagram. Do you think the function accurately describes the relation between latitude and length of the day?
5. Determine the cubic function of best fit. Graph the cubic function of best fit on the scatter diagram. To do this in Excel, click on any data point in the scatter diagram. Now click the Layout menu, select Trendline within the Analysis region, select More Trendline Options. Select
the Polynomial radio button with Order set to 3. Select Display Equation on Chart. Move the Trendline Options window off to the side and you will see the cubic function of best fit displayed on the scatter diagram. Do you think the function accurately describes the relation between latitude and length of the day?
6. Which of the three models seems to fit the data best? Explain your reasoning.
7. Use your model to predict the hours of daylight on the day you selected for Chicago (41.85 degrees north latitude). Go to the Old Farmer's Almanac or other website (such as http://astro.unl.edu/classaction/ animations/coordsmotion/daylighthoursexplorer.html) to determine the hours of daylight in Chicago for the day you selected. How do the two compare?

The following project is available at the Instructor's Resource Center (IRC):
II. Theory of Equations The coefficients of a polynomial function can be found if its zeros are known, an advantage of using polynomials in modeling.

\title{
Exponential and Logarithmic Functions
}

\section*{Depreciation of Cars}

You are ready to buy that first new car. You know that cars lose value over time due to depreciation and that different cars have different rates of depreciation. So you will research the depreciation rates for the cars you are thinking of buying. After all, for cars that sell for about the same price, the lower the depreciation rate is, the more the car will be worth each year.
(P) - See the Internet-based Chapter Project I-

\section*{<A Look Back}

Until now, our study of functions has concentrated on polynomial and rational functions. These functions belong to the class of algebraic functions-that is, functions that can be expressed in terms of sums, differences, products, quotients, powers, or roots of polynomials. Functions that are not algebraic are called transcendental (they transcend, or go beyond, algebraic functions).

\section*{A Look Ahead>}

In this chapter, we study two transcendental functions: the exponential function and the logarithmic function. These functions occur frequently in a wide variety of applications, such as biology, chemistry, economics, and psychology.

The chapter begins with a discussion of composite, one-to-one, and inverse functions, concepts that are needed to explain the relationship between exponential and logarithmic functions.

\section*{Outline}
4.1 Composite Functions
4.2 One-to-One Functions; Inverse Functions
4.3 Exponential Functions
4.4 Logarithmic Functions
4.5 Properties of Logarithms
4.6 Logarithmic and Exponential Equations
4.7 Financial Models
4.8 Exponential Growth and Decay Models; Newton's Law; Logistic Growth and Decay Models
4.9 Building Exponential, Logarithmic, and Logistic Models from Data

Chapter Projects

\subsection*{4.1 Composite Functions}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Find the Value of a Function (Section 1.1, pp. 46-49) - Domain of a Function (Section 1.1, pp. 49-51)

Now Work the 'Are You Prepared?’ problems on page 279.
OBJECTIVES 1 Form a Composite Function (p. 274)
2 Find the Domain of a Composite Function (p. 275)

\section*{1 Form a Composite Function}

Suppose that an oil tanker is leaking oil and you want to determine the area of the circular oil patch around the ship. See Figure 1. It is determined that the oil is leaking from the tanker in such a way that the radius of the circular patch of oil around the ship is increasing at a rate of 3 feet per minute. Therefore, the radius \(r\) of the oil patch at any time \(t\), in minutes, is given by \(r(t)=3 t\). So after 20 minutes, the radius of the oil patch is \(r(20)=3(20)=60\) feet.

The area \(A\) of a circle as a function of the radius \(r\) is given by \(A(r)=\pi r^{2}\). The area of the circular patch of oil after 20 minutes is \(A(60)=\pi(60)^{2}=3600 \pi\) square feet. Note that \(60=r(20)\), so \(A(60)=A(r(20))\). The argument of the function \(A\) is the output of the function \(r\).

In general, the area of the oil patch can be expressed as a function of time \(t\) by evaluating \(A(r(t))\) and obtaining \(A(r(t))=A(3 t)=\pi(3 t)^{2}=9 \pi t^{2}\). The function \(A(r(t))\) is a special type of function called a composite function.

As another example, consider the function \(y=(2 x+3)^{2}\). Let \(y=f(u)=u^{2}\) and \(u=g(x)=2 x+3\). Then by a substitution process, the original function is obtained as follows: \(y=f(u)=f(g(x))=(2 x+3)^{2}\).

In general, suppose that \(f\) and \(g\) are two functions and that \(x\) is a number in the domain of \(g\). Evaluating \(g\) at \(x\) yields \(g(x)\). If \(g(x)\) is in the domain of \(f\), then evaluating \(f\) at \(g(x)\) yields the expression \(f(g(x))\). The correspondence from \(x\) to \(f(g(x))\) is called a composite function \(f \circ g\).

DEFINITION
Given two functions \(f\) and \(g\), the composite function, denoted by \(f \circ g\) (read as " \(f\) composed with \(g\) "), is defined by
\[
(f \circ g)(x)=f(g(x))
\]

The domain of \(f \circ g\) is the set of all numbers \(x\) in the domain of \(g\) such that \(g(x)\) is in the domain of \(f\).

Look carefully at Figure 2. Only those values of \(x\) in the domain of \(g\) for which \(g(x)\) is in the domain of \(f\) can be in the domain of \(f \circ g\). The reason is that if \(g(x)\) is not in the domain of \(f\), then \(f(g(x))\) is not defined. Because of this, the domain of \(f \circ g\) is a subset of the domain of \(g\); the range of \(f \circ g\) is a subset of the range of \(f\).

Figure 2

Figure 3 provides a second illustration of the definition. Here \(x\) is the input to the function \(g\), yielding \(g(x)\). Then \(g(x)\) is the input to the function \(f\), yielding \(f(g(x))\). Note that the "inside" function \(g\) in \(f(g(x))\) is "processed" first.

Figure 3

\section*{EXAMPLE I Evaluating a Composite Function}

Suppose that \(f(x)=2 x^{2}-3\) and \(g(x)=4 x\). Find:
(a) \((f \circ g)(1)\)
(b) \((g \circ f)(1)\)
(c) \((f \circ f)(-2)\)
(d) \((g \circ g)(-1)\)

Solution
(a) \((f \circ g)(1)=f(g(1))=f(4)=2 \cdot 4^{2}-3=29\)
\[
\begin{aligned}
& g(x)=4 x f(x)=2 x^{2}-3 \\
& g(1)=4
\end{aligned}
\]
(b) \((g \circ f)(1)=g(f(1))=g(-1)=4 \cdot(-1)=-4\)
\[
\begin{array}{ll}
f(x)=2 x^{2}-3 & g(x)=4 x \\
f(1) & =-1
\end{array}
\]
(c) \((f \circ f)(-2)=f(f(-2))=f(5)=2 \cdot 5^{2}-3=47\)
\[
f(-2) \stackrel{\uparrow}{=} 2(-2)^{2}-3=5
\]
(d) \((g \circ g)(-1)=g(g(-1))=g(-4)=4 \cdot(-4)=-16\)
\[
g(-1) \stackrel{\uparrow}{=}-4
\]

COMMENT Graphing calculators can be used to evaluate composite functions.* Let \(Y_{1}=f(x)=2 x^{2}-3\) and \(Y_{2}=g(x)=4 x\). Then, using a TI-84 Plus graphing calculator, \((f \circ g)(1)\) is found as shown in Figure 4. Notice that this is the result obtained in Example 1(a).

\section*{2 Find the Domain of a Composite Function}

\section*{EXAMPLE 2 Finding a Composite Function and Its Domain}

Suppose that \(f(x)=x^{2}+3 x-1\) and \(g(x)=2 x+3\).
Find:
(a) \(f \circ g\)
(b) \(g \circ f\)

Then find the domain of each composite function.
Solution The domain of \(f\) and the domain of \(g\) are the set of all real numbers.
(a) \((f \circ g)(x)=f(g(x))=f(2 x+3)=(2 x+3)^{2}+3(2 x+3)-1\)
\[
\begin{gathered}
f(x)=x^{2}+3 x-1 \\
=4 x^{2}+12 x+9+6 x+9-1=4 x^{2}+18 x+17
\end{gathered}
\]

Because the domains of both \(f\) and \(g\) are the set of all real numbers, the domain of \(f \circ g\) is the set of all real numbers.
*Consult your owner's manual for the appropriate keystrokes.
(b) \((g \circ f)(x)=g(f(x))=g\left(x^{2}+3 x-1\right)=2\left(x^{2}+3 x-1\right)+3\)
\[
=2 x^{2}+6 x-2+3=2 x^{2}+6 x+1
\]

Because the domains of both \(f\) and \(g\) are the set of all real numbers, the domain of \(g \circ f\) is the set of all real numbers

Look back at Figure 2 on page 274. In determining the domain of the composite function \((f \circ g)(x)=f(g(x))\), keep the following two thoughts in mind about the input \(x\).
1. Any \(x\) not in the domain of \(g\) must be excluded.
2. Any \(x\) for which \(g(x)\) is not in the domain of \(f\) must be excluded.

\section*{EXAMPLE 3 Finding the Domain of \(f \circ g\)}

Find the domain of \(f \circ g\) if \(f(x)=\frac{1}{x+2}\) and \(g(x)=\frac{4}{x-1}\).
Solution For \((f \circ g)(x)=f(g(x))\), first note that the domain of \(g\) is \(\{x \mid x \neq 1\}\), so exclude 1 from the domain of \(f \circ g\). Next note that the domain of \(f\) is \(\{x \mid x \neq-2\}\), which means that \(g(x)\) cannot equal -2 . Solve the equation \(g(x)=-2\) to determine what additional value(s) of \(x\) to exclude.
\[
\begin{aligned}
\frac{4}{x-1} & =-2 & & g(x)=-2 \\
4 & =-2(x-1) & & \text { Multiply both sides by } x-1 . \\
4 & =-2 x+2 & & \text { Apply the Distributive Property. } \\
2 x & =-2 & & \text { Add } 2 \times \text { to both sides. Subtract } 4 \text { from both sides. } \\
x & =-1 & & \text { Divide both sides by } 2 .
\end{aligned}
\]

Also exclude -1 from the domain of \(f \circ g\). The domain of \(f \circ g\) is \(\{x \mid x \neq-1, x \neq 1\}\). Check: For \(x=1, g(x)=\frac{4}{x-1}\) is not defined, so \((f \circ g)(x)=f(g(x))\) is not defined.

For \(x=-1, g(-1)=\frac{4}{-2}=-2\), and \((f \circ g)(-1)=f(g(-1))=f(-2)\) is not defined.
am Now Work problem 21

\section*{EXAMPLE 4}

\section*{Finding a Composite Function and Its Domain}

Suppose that \(f(x)=\frac{1}{x+2}\) and \(g(x)=\frac{4}{x-1}\).
Find: (a) \(f \circ g\)
(b) \(f \circ f\)

Then find the domain of each composite function.

Solution The domain of \(f\) is \(\{x \mid x \neq-2\}\) and the domain of \(g\) is \(\{x \mid x \neq 1\}\).
(a) \((f \circ g)(x)=f(g(x))=f\left(\frac{4}{x-1}\right)=\frac{1}{\frac{4}{x-1}+2 \uparrow \uparrow}=\frac{x-1}{4+2(x-1)}=\frac{x-1}{2 x+2}=\frac{x-1}{2(x+1)}\)
\[
f(x)=\frac{1}{x+2} \quad \text { Multiply by } \frac{x-1}{x-1}
\]

In Example 3, the domain of \(f \circ g\) was found to be \(\{x \mid x \neq-1, x \neq 1\}\).

The domain of \(f \circ g\) also can be found by first looking at the domain of \(g:\{x \mid x \neq 1\}\). Exclude 1 from the domain of \(f \circ g\) as a result. Then look at \(f \circ g\) and note that \(x\) cannot equal -1 because \(x=-1\) results in division by 0 . Therefore, exclude -1 from the domain of \(f \circ g\). Hence the domain of \(f \circ g\) is \(\{x \mid x \neq-1, x \neq 1\}\).
\(\begin{aligned} & \text { (b) }(f \circ f)(x)=f(f(x))=f\left(\frac{1}{x+2}\right)=\frac{1}{\uparrow \frac{1}{x+2}+2 \uparrow}=\frac{x+2}{1+2(x+2)}=\frac{x+2}{2 x+5} \\ & f(x)=\frac{1}{x+2} \quad \text { Multiply by } \frac{x+2}{x+2} .\end{aligned}\)
The domain of \(f \circ f\) consists of all values of \(x\) in the domain of \(f,\{x \mid x \neq-2\}\), for which
\[
\begin{aligned}
f(x)=\frac{1}{x+2} \neq-2 \quad \frac{1}{x+2} & =-2 \\
1 & =-2(x+2) \\
1 & =-2 x-4 \\
2 x & =-5 \\
x & =-\frac{5}{2}
\end{aligned}
\]
or, equivalently,
\[
x \neq-\frac{5}{2}
\]

The domain of \(f \circ f\) is \(\left\{x \left\lvert\, x \neq-\frac{5}{2}\right., x \neq-2\right\}\).
The domain of \(f \circ f\) also can be found by recognizing that -2 is not in the domain of \(f\) and thus should be excluded from the domain of \(f \circ f\). Then, looking at \(f \circ f\), note that \(x\) cannot equal \(-\frac{5}{2}\). Do you see why? Therefore, the domain of \(f \circ f\) is \(\left\{x \left\lvert\, x \neq-\frac{5}{2}\right., x \neq-2\right\}\).

\section*{Now Work problems 35 and 37}

Look back at Example 2, which illustrates that, in general, \(f \circ g \neq g \circ f\). Sometimes \(f \circ g\) does equal \(g \circ f\), as shown in the next example.

\section*{EXAMPLE 5 Showing That Two Composite Functions Are Equal}

If \(f(x)=3 x-4\) and \(g(x)=\frac{1}{3}(x+4)\), show that
\[
(f \circ g)(x)=(g \circ f)(x)=x
\]
for every \(x\) in the domain of \(f \circ g\) and \(g \circ f\).
Solution \(\quad(f \circ g)(x)=f(g(x))\)
\[
\begin{aligned}
& =f\left(\frac{x+4}{3}\right) \quad g(x)=\frac{1}{3}(x+4)=\frac{x+4}{3} \\
& =3\left(\frac{x+4}{3}\right)-4 \quad \text { Substitute } g(x) \text { into the rule for } f, f(x)=3 x-4 . \\
& =x+4-4=x
\end{aligned}
\]

\section*{Seeing the Concept}

Using a graphing calculator, let
\[
\begin{aligned}
& Y_{1}=f(x)=3 x-4 \\
& Y_{2}=g(x)=\frac{1}{3}(x+4) \\
& Y_{3}=f \circ g, Y_{4}=g \circ f
\end{aligned}
\]

Using the viewing window \(-3 \leq x \leq 3\), \(-2 \leq y \leq 2\), graph only \(Y_{3}\) and \(Y_{4}\). What do you see? TRACE to verify that \(Y_{3}=Y_{4}\).
\[
\begin{array}{rlrl}
(g \circ f)(x) & =g(f(x)) & & \\
& =g(3 x-4) & f(x)=3 x-4 \\
& =\frac{1}{3}[(3 x-4)+4] & & \text { Substitute } f(x) \text { into the rule for } g, g(x)=\frac{1}{3}(x+4) . \\
& =\frac{1}{3}(3 x)=x &
\end{array}
\]

Thus, \((f \circ g)(x)=(g \circ f)(x)=x\).

In Section 4.2, we shall see that there is an important relationship between functions \(f\) and \(g\) for which \((f \circ g)(x)=(g \circ f)(x)=x\).

Now Work problems 47 and 51

\section*{Calculus Application}

Some techniques in calculus require the ability to determine the components of a composite function. For example, the function \(H(x)=\sqrt{x+1}\) is the composition of the functions \(f\) and \(g\), where \(f(x)=\sqrt{x}\) and \(g(x)=x+1\), because \(H(x)=(f \circ g)(x)=f(g(x))=f(x+1)=\sqrt{x+1}\).

\section*{EXAMPLE 6 Finding the Components of a Composite Function}

Find functions \(f\) and \(g\) such that \(f \circ g=H\) if \(H(x)=\left(x^{2}+1\right)^{50}\).
Solution The function \(H\) takes \(x^{2}+1\) and raises it to the power 50. A natural way to decompose \(H\) is to raise the function \(g(x)=x^{2}+1\) to the power 50 . Let \(f(x)=x^{50}\) and \(g(x)=x^{2}+1\). Then

Figure 5

\[
\begin{aligned}
(f \circ g)(x) & =f(g(x)) \\
& =f\left(x^{2}+1\right) \\
& =\left(x^{2}+1\right)^{50}=H(x)
\end{aligned}
\]

See Figure 5.
Other functions \(f\) and \(g\) may be found for which \(f \circ g=H\) in Example 6. For example, if \(f(x)=x^{2}\) and \(g(x)=\left(x^{2}+1\right)^{25}\), then
\[
(f \circ g)(x)=f(g(x))=f\left(\left(x^{2}+1\right)^{25}\right)=\left[\left(x^{2}+1\right)^{25}\right]^{2}=\left(x^{2}+1\right)^{50}
\]

Although the functions \(f\) and \(g\) found as a solution to Example 6 are not unique, there is usually a "natural" selection for \(f\) and \(g\) that comes to mind first.

\section*{EXAMPLE 7 Finding the Components of a Composite Function}

Find functions \(f\) and \(g\) such that \(f \circ g=H\) if \(H(x)=\frac{1}{x+1}\).
Solution Here \(H\) is the reciprocal of \(g(x)=x+1\). Let \(f(x)=\frac{1}{x}\) and \(g(x)=x+1\). Then
\[
(f \circ g)(x)=f(g(x))=f(x+1)=\frac{1}{x+1}=H(x)
\]

\subsection*{4.1 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. Find \(f(3)\) if \(f(x)=-4 x^{2}+5 x\). (pp. 46-49)
2. Find \(f(3 x)\) if \(f(x)=4-2 x^{2}\). (pp. 46-49)
3. Find the domain of the function \(f(x)=\frac{x^{2}-1}{x^{2}-25}\). (pp. 49-51)

\section*{Concepts and Vocabulary}
4. Given two functions \(f\) and \(g\), the \(\qquad\) , denoted \(f \circ g\), is defined by \((f \circ g)(x)=\) \(\qquad\) -
5. True or False \(f(g(x))=f(x) \cdot g(x)\).
6. True or False The domain of the composite function \((f \circ g)(x)\) is the same as the domain of \(g(x)\).

\section*{Skill Building}

In Problems 7 and 8, evaluate each expression using the values given in the table.
7. \begin{tabular}{|l|rrrrrrr|}
\hline \(\boldsymbol{x}\) & -3 & -2 & -1 & 0 & 1 & 2 & 3 \\
\(\boldsymbol{f}(\boldsymbol{x})\) & -7 & -5 & -3 & -1 & 3 & 5 & 7 \\
\(\boldsymbol{g}(\boldsymbol{x})\) & 8 & 3 & 0 & -1 & 0 & 3 & 8 \\
\hline
\end{tabular}
(a) \((f \circ g)(1)\)
(b) \((f \circ g)(-1)\)
(c) \((g \circ f)(-1)\)
(d) \((g \circ f)(0)\)
(e) \((g \circ g)(-2)\)
(f) \((f \circ f)(-1)\)
8.
\begin{tabular}{|l|rrrrrrr|}
\hline \(\boldsymbol{x}\) & -3 & -2 & -1 & 0 & 1 & 2 & 3 \\
\(\boldsymbol{f}(\boldsymbol{x})\) & 11 & 9 & 7 & 5 & 3 & 1 & -1 \\
\(\boldsymbol{g}(\boldsymbol{x})\) & -8 & -3 & 0 & 1 & 0 & -3 & -8 \\
\hline
\end{tabular}
(a) \((f \circ g)(1)\)
(b) \((f \circ g)(2)\)
(c) \((g \circ f)(2)\)
(d) \((g \circ f)(3)\)
(e) \((g \circ g)(1)\)
(f) \((f \circ f)(3)\)

In Problems 9 and 10, evaluate each expression using the graphs of \(y=f(x)\) and \(y=g(x)\) shown in the figure.
9. (a) \((g \circ f)(-1)\)
(b) \((g \circ f)(0)\)
(c) \((f \circ g)(-1)\)
(d) \((f \circ g)(4)\)
10. (a) \((g \circ f)(1)\)
(b) \((g \circ f)(5)\)
(c) \((f \circ g)(0)\)
(d) \((f \circ g)(2)\)

In Problems 11-20, for the given functions \(f\) and \(g\), find:
(a) \((f \circ g)(4)\)
(b) \((g \circ f)(2)\)
(c) \((f \circ f)(1)\)
(d) \((g \circ g)(0)\)
11. \(f(x)=2 x ; \quad g(x)=3 x^{2}+1\)
13. \(f(x)=4 x^{2}-3 ; \quad g(x)=3-\frac{1}{2} x^{2}\)
12. \(f(x)=3 x+2 ; \quad g(x)=2 x^{2}-1\)
15. \(f(x)=\sqrt{x} ; \quad g(x)=2 x\)
14. \(f(x)=2 x^{2} ; \quad g(x)=1-3 x^{2}\)
16. \(f(x)=\sqrt{x+1} ; \quad g(x)=3 x\)
17. \(f(x)=|x| ; \quad g(x)=\frac{1}{x^{2}+1}\)
18. \(f(x)=|x-2| ; \quad g(x)=\frac{3}{x^{2}+2}\)
19. \(f(x)=\frac{3}{x+1} ; \quad g(x)=\sqrt[3]{x}\)
20. \(f(x)=x^{3 / 2} ; \quad g(x)=\frac{2}{x+1}\)

In Problems 21-30, find the domain of the composite function \(f \circ g\).
21. \(f(x)=\frac{3}{x-1} ; \quad g(x)=\frac{2}{x}\)
22. \(f(x)=\frac{1}{x+3} ; \quad g(x)=-\frac{2}{x}\)
23. \(f(x)=\frac{x}{x-1} ; \quad g(x)=-\frac{4}{x}\)
25. \(f(x)=\sqrt{x} ; \quad g(x)=2 x+3\)
27. \(f(x)=x^{2}+1 ; \quad g(x)=\sqrt{x-1}\)
29. \(f(x)=\frac{x-6}{x-2} ; \quad g(x)=\sqrt{x}\)

In Problems 31-46, for the given functions \(f\) and \(g\), find:
(a) \(f \circ g\)
(b) \(g \circ f\)
(c) \(f \circ f\)
(d) \(g \circ g\)

State the domain of each composite function.
31. \(f(x)=2 x+3 ; \quad g(x)=3 x\)
33. \(f(x)=3 x+1 ; \quad g(x)=x^{2}\)
35. \(f(x)=x^{2} ; \quad g(x)=x^{2}+4\)
37. \(f(x)=\frac{3}{x-1} ; \quad g(x)=\frac{2}{x}\)
39. \(f(x)=\frac{x}{x-1} ; \quad g(x)=-\frac{4}{x}\)
41. \(f(x)=\sqrt{x} ; \quad g(x)=2 x+3\)
43. \(f(x)=x^{2}+1 ; \quad g(x)=\sqrt{x-1}\)
45. \(f(x)=\frac{x-5}{x+1} ; \quad g(x)=\frac{x+2}{x-3}\)

In Problems 47-54, show that \((f \circ g)(x)=(g \circ f)(x)=x\).
47. \(f(x)=2 x ; \quad g(x)=\frac{1}{2} x\)
49. \(f(x)=x^{3} ; \quad g(x)=\sqrt[3]{x}\)
51. \(f(x)=2 x-6 ; \quad g(x)=\frac{1}{2}(x+6)\)
53. \(f(x)=a x+b ; \quad g(x)=\frac{1}{a}(x-b) \quad a \neq 0\)

In Problems 55-60, find functions \(f\) and \(g\) so that \(f \circ g=H\).
55. \(H(x)=(2 x+3)^{4}\)
57. \(H(x)=\sqrt{x^{2}+1}\)
59. \(H(x)=|2 x+1|\)
24. \(f(x)=\frac{x}{x+3} ; \quad g(x)=\frac{2}{x}\)
26. \(f(x)=x-2 ; \quad g(x)=\sqrt{1-x}\)
28. \(f(x)=x^{2}+4 ; \quad g(x)=\sqrt{x-2}\)
30. \(f(x)=\sqrt{x} ; \quad g(x)=\frac{x}{x-3}\)
32. \(f(x)=-x ; \quad g(x)=2 x-4\)
34. \(f(x)=x+1 ; \quad g(x)=x^{2}+4\)
36. \(f(x)=x^{2}+1 ; \quad g(x)=2 x^{2}+3\)
38. \(f(x)=\frac{1}{x+3} ; \quad g(x)=-\frac{2}{x}\)
40. \(f(x)=\frac{x}{x+3} ; \quad g(x)=\frac{2}{x}\)
42. \(f(x)=\sqrt{x-2} ; \quad g(x)=1-2 x\)
44. \(f(x)=x^{2}+4 ; \quad g(x)=\sqrt{x-2}\)
46. \(f(x)=\frac{2 x-1}{x-2} ; \quad g(x)=\frac{x+4}{2 x-5}\)
48. \(f(x)=4 x ; \quad g(x)=\frac{1}{4} x\)
50. \(f(x)=x+5 ; \quad g(x)=x-5\)
52. \(f(x)=4-3 x ; \quad g(x)=\frac{1}{3}(4-x)\)
54. \(f(x)=\frac{1}{x} ; \quad g(x)=\frac{1}{x}\)
56. \(H(x)=\left(1+x^{2}\right)^{3}\)
58. \(H(x)=\sqrt{1-x^{2}}\)
60. \(H(x)=\left|2 x^{2}+3\right|\)

\section*{Applications and Extensions}
61. If \(f(x)=2 x^{3}-3 x^{2}+4 x-1\) and \(g(x)=2\), find \((f \circ g)(x)\) and \((g \circ f)(x)\).
62. If \(f(x)=\frac{x+1}{x-1}\), find \((f \circ f)(x)\).
63. If \(f(x)=2 x^{2}+5\) and \(g(x)=3 x+a\), find \(a\) so that the graph of \(f \circ g\) crosses the \(y\)-axis at 23 .
64. If \(f(x)=3 x^{2}-7\) and \(g(x)=2 x+a\), find \(a\) so that the graph of \(f \circ g\) crosses the \(y\)-axis at 68 .
In Problems 65 and 66, use the functions \(f\) and \(g\) to find:
(a) \(f \circ g\)
(b) \(g \circ f\)
(c) the domain of \(f \circ g\) and of \(g \circ f\)
(d) the conditions for which \(f \circ g=g \circ f\)
65. \(f(x)=a x+b ; g(x)=c x+d\)
66. \(f(x)=\frac{a x+b}{c x+d} ; g(x)=m x\)
67. Surface Area of a Balloon The surface area \(S\) (in square meters) of a hot-air balloon is given by
\[
S(r)=4 \pi r^{2}
\]
where \(r\) is the radius of the balloon (in meters). If the radius \(r\) is increasing with time \(t\) (in seconds) according to the formula \(r(t)=\frac{2}{3} t^{3}, t \geq 0\), find the surface area \(S\) of the balloon as a function of the time \(t\).
68. Volume of a Balloon The volume \(V\) (in cubic meters) of the hot-air balloon described in Problem 67 is given by \(V(r)=\frac{4}{3} \pi r^{3}\). If the radius \(r\) is the same function of \(t\) as in Problem 67 , find the volume \(V\) as a function of the time \(t\).
69. Automobile Production The number \(N\) of cars produced at a certain factory in one day after \(t\) hours of operation is given by \(N(t)=100 t-5 t^{2}, 0 \leq t \leq 10\). If the cost \(C\) (in dollars) of producing \(N\) cars is \(C(N)=15,000+8000 N\), find the cost \(C\) as a function of the time \(t\) of operation of the factory.
70. Environmental Concerns The spread of oil leaking from a tanker is in the shape of a circle. If the radius \(r\) (in feet) of the spread after \(t\) hours is \(r(t)=200 \sqrt{t}\), find the area \(A\) of the oil slick as a function of the time \(t\).
71. Production Cost The price \(p\), in dollars, of a certain product and the quantity \(x\) sold obey the demand equation
\[
p=-\frac{1}{4} x+100 \quad 0 \leq x \leq 400
\]

Suppose that the cost \(C\), in dollars, of producing \(x\) units is
\[
C=\frac{\sqrt{x}}{25}+600
\]

Assuming that all items produced are sold, find the \(\operatorname{cost} C\) as a function of the price \(p\).
[Hint: Solve for \(x\) in the demand equation and then form the composite.]
72. Cost of a Commodity The price \(p\), in dollars, of a certain commodity and the quantity \(x\) sold obey the demand equation
\[
p=-\frac{1}{5} x+200 \quad 0 \leq x \leq 1000
\]

Suppose that the cost \(C\), in dollars, of producing \(x\) units is
\[
C=\frac{\sqrt{x}}{10}+400
\]

Assuming that all items produced are sold, find the \(\operatorname{cost} C\) as a function of the price \(p\).
73. Volume of a Cylinder The volume \(V\) of a right circular cylinder of height \(h\) and radius \(r\) is \(V=\pi r^{2} h\). If the height is twice the radius, express the volume \(V\) as a function of \(r\).
74. Volume of a Cone The volume \(V\) of a right circular cone is \(V=\frac{1}{3} \pi r^{2} h\). If the height is twice the radius, express the volume \(V\) as a function of \(r\).
75. Foreign Exchange Traders often buy foreign currency in the hope of making money when the currency's value changes. For example, on April 18, 2013, one U.S. dollar could purchase 0.7643 euros, and one euro could purchase 128.4594 yen. Let \(f(x)\) represent the number of euros you can buy with \(x\) dollars, and let \(g(x)\) represent the number of yen you can buy with \(x\) euros.
(a) Find a function that relates dollars to euros.
(b) Find a function that relates euros to yen.
(c) Use the results of parts (a) and (b) to find a function that relates dollars to yen. That is, find \((g \circ f)(x)=g(f(x))\).
(d) What is \(g(f(1000))\) ? Interpret this result.
76. Temperature Conversion The function \(C(F)=\frac{5}{9}(F-32)\) converts a temperature in degrees Fahrenheit, \(F\), to a temperature in degrees Celsius, \(C\). The function \(K(C)=C+273\) converts a temperature in degrees Celsius to a temperature in kelvins, \(K\).
(a) Find a function that converts a temperature in degrees Fahrenheit to a temperature in kelvins.
(b) Determine 80 degrees Fahrenheit in kelvins.
77. Discounts The manufacturer of a computer is offering two discounts on last year's model computer. The first discount is a \(\$ 200\) rebate and the second discount is \(20 \%\) off the regular price, \(p\).
(a) Write a function \(f\) that represents the sale price if only the rebate applies.
(b) Write a function \(g\) that represents the sale price if only the \(20 \%\) discount applies.
(c) Find \(f \circ g\) and \(g \circ f\). What does each of these functions represent? Which combination of discounts represents a better deal for the consumer? Why?
78. Taxes Suppose that you work for \(\$ 15\) per hour. Write a function that represents gross salary \(G\) as a function of hours worked \(h\). Your employer is required to withhold taxes (federal income tax, Social Security, Medicare) from your paycheck. Suppose your employer withholds \(20 \%\) of your income for taxes. Write a function that represents net salary \(N\) as a function of gross salary \(G\). Find and interpret \(N \circ G\).
79. Suppose that \(f(x)=x^{3}+x^{2}-16 x-16\) and \(g(x)=x^{2}-4\). Find the zeros of \((f \circ g)(x)\).
80. Suppose that \(f(x)=2 x^{3}-3 x^{2}-8 x+12\) and \(g(x)=x+5\). Find the zeros of \((f \circ g)(x)\).
81. If \(f\) and \(g\) are odd functions, show that the composite function \(f \circ g\) is also odd.
82. If \(f\) is an odd function and \(g\) is an even function, show that the composite functions \(f \circ g\) and \(g \circ f\) are both even.
83. Let \(f(x)=a x+b\) and \(g(x)=b x+a\), where \(a\) and \(b\) are integers. If \(f(1)=8\) and \(f(g(20))-g(f(20))=-14\), find the product of \(a\) and \(b\).*

\section*{Retain Your Knowledge}

Problems 84-87 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
84. Given \(f(x)=3 x+8\) and \(g(x)=x-5\), find \((f+g)(x)\), \((f-g)(x),(f \cdot g)(x)\), and \(\left(\frac{f}{g}\right)(x)\). State the domain of each.
85. Find the real zeros of \(f(x)=2 x-5 \sqrt{x}+2\).
86. Use a graphing utility to graph \(f(x)=-x^{3}+4 x-2\) over the interval (-3, 3). Approximate any local maxima and local minima. Determine where the function is increasing and where it is decreasing.
87. Find the domain of \(R(x)=\frac{x^{2}+6 x+5}{x-3}\). Find any horizontal, vertical, or oblique asymptotes.

\section*{'Are You Prepared?' Answers}

\subsection*{4.2 One-to-One Functions; Inverse Functions}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Functions (Section 1.1, pp. 43-51)
- Increasing/Decreasing Functions (Section 1.3, pp. 68-70)
- Rational Expressions (Appendix A, Section A.6, pp. A45-A52)

Now Work the 'Are You Prepared?' problems on page 290.
OBJECTIVES 1 Determine Whether a Function Is One-to-One (p. 282)
2 Determine the Inverse of a Function Defined by a Map or a Set of Ordered Pairs (p. 284)
3 Obtain the Graph of the Inverse Function from the Graph of the Function (p. 286)
4 Find the Inverse of a Function Defined by an Equation (p. 287)

\section*{1 Determine Whether a Function Is One-to-One}

Section 1.1 presented four different ways to represent a function: (1) a map, (2) a set of ordered pairs, (3) a graph, and (4) an equation. For example, Figures 6 and 7 illustrate two different functions represented as mappings. The function in Figure 6 shows the correspondence between states and their populations (in millions). The function in Figure 7 shows a correspondence between animals and life expectancies (in years).

Figure 6

Figure 7

Suppose several people are asked to name a state that has a population of 0.8 million based on the function in Figure 6. Everyone will respond "South Dakota." Now, if the same people are asked to name an animal whose life expectancy is 11 years based on the function in Figure 7, some may respond "dog", while others may respond "cat." What is the difference between the functions in Figures 6 and 7? In Figure 6, no two elements in the domain correspond to the same element in the range. In Figure 7, this is not the case: Different elements in the domain correspond to the same element in the range. Functions such as the one in Figure 6 are given a special name.

A function is one-to-one if any two different inputs in the domain correspond to two different outputs in the range. That is, if \(x_{1}\) and \(x_{2}\) are any two different inputs of a function \(f\), then \(f\) is one-to-one if \(f\left(x_{1}\right) \neq f\left(x_{2}\right)\).

Put another way, a function \(f\) is one-to-one if no \(y\) in the range is the image of more than one \(x\) in the domain. A function is not one-to-one if two different elements in the domain correspond to the same element in the range. So the function in Figure 7 is not one-to-one because two different elements in the domain, \(d o g\) and cat, both correspond to 11 . Figure 8 illustrates the distinction among one-to-one functions, functions that are not one-to-one, and relations that are not functions.

Figure 8

\section*{EXAMPLE I Determining Whether a Function Is One-to-One}

Determine whether the following functions are one-to-one.
(a) For the following function, the domain represents the age of five males, and the range represents their HDL (good) cholesterol scores (mg/dL).

(b) \(\{(-2,6),(-1,3),(0,2),(1,5),(2,8)\}\)

Solution (a) The function is not one-to-one because there are two different inputs, 55 and 61 , that correspond to the same output, 38 .
(b) The function is one-to-one because there are no two distinct inputs that correspond to the same output.
```

Now Work problems 11 and 15

```

For functions defined by an equation \(y=f(x)\) and for which the graph of \(f\) is known, there is a simple test, called the horizontal-line test, to determine whether \(f\) is one-to-one.

Figure 9
THEOREM
\(f\left(x_{1}\right)=f\left(x_{2}\right)=h\) and \(x_{1} \neq x_{2} ; f\) is not a one-to-one function.

\section*{Horizontal-line Test}

If every horizontal line intersects the graph of a function \(f\) in at most one point, then \(f\) is one-to-one.

The reason why this test works can be seen in Figure 9, where the horizontal line \(y=h\) intersects the graph at two distinct points, \(\left(x_{1}, h\right)\) and \(\left(x_{2}, h\right)\). Since \(h\) is the image of both \(x_{1}\), and \(x_{2}\), and \(x_{1} \neq x_{2}, f\) is not one-to-one. Based on Figure 9, the horizontal-line test can be stated in another way: If the graph of any horizontal line intersects the graph of a function \(f\) at more than one point, then \(f\) is not one-to-one.

\section*{EXAMPLE 2 \\ Using the Horizontal-line Test}

For each function, use its graph to determine whether the function is one-to-one.
(a) \(f(x)=x^{2}\)
(b) \(g(x)=x^{3}\)

Solution (a) Figure 10(a) on the next page illustrates the horizontal-line test for \(f(x)=x^{2}\). The horizontal line \(y=1\) intersects the graph of \(f\) twice, at \((1,1)\) and at \((-1,1)\), so \(f\) is not one-to-one.

\section*{DEFINITION}

\section*{In Words}

Suppose that fis a one-to-one
function such that the input 5
corresponds to the output 10. In the inverse function \(f^{-1}\), the input 10 will correspond to the output 5.
(b) Figure \(10(b)\) illustrates the horizontal-line test for \(g(x)=x^{3}\). Because every horizontal line intersects the graph of \(g\) exactly once, it follows that \(g\) is one-to-one.

Figure 10

THEOREM A function that is increasing on an interval \(I\) is a one-to-one function on \(I\). A function that is decreasing on an interval \(I\) is a one-to-one function on \(I\).

\section*{2 Determine the Inverse of a Function Defined by a Map or a Set of Ordered Pairs}

(a) A horizontal line intersects the graph twice; \(f\) is not one-to-one.

(b) Every horizontal line intersects the graph exactly once; \(g\) is one-to-one.

\section*{Now Work problem 19}

Look more closely at the one-to-one function \(g(x)=x^{3}\). This function is an increasing function. Because an increasing (or decreasing) function will always have different \(y\)-values for unequal \(x\)-values, it follows that a function that is increasing (or decreasing) over its domain is also a one-to-one function.

Suppose that \(f\) is a one-to-one function. Then, corresponding to each \(x\) in the domain of \(f\), there is exactly one \(y\) in the range (because \(f\) is a function); and corresponding to each \(y\) in the range of \(f\), there is exactly one \(x\) in the domain (because \(f\) is one-to-one). The correspondence from the range of \(f\) back to the domain of \(f\) is called the inverse function of \(f\). The symbol \(f^{-1}\) is used to denote the inverse of \(f\).

We will discuss how to find inverses for all four representations of functions: (1) maps, (2) sets of ordered pairs, (3) graphs, and (4) equations. We begin with finding inverses of functions represented by maps or sets of ordered pairs.

\section*{Finding the Inverse of a Function Defined by a Map}

Find the inverse of the following function. Let the domain of the function represent certain states, and let the range represent the states' populations (in millions). Find the domain and the range of the inverse function.

\section*{Solution}

The function is one-to-one. To find the inverse function, interchange the elements in the domain with the elements in the range. For example, the function receives as input Indiana and outputs 6.5 million. So the inverse receives as input 6.5 million and outputs Indiana. The inverse function is shown next.

The domain of the inverse function is \(\{3.8,6.5,6.9,0.8,9.8\}\). The range of the inverse function is \{Oklahoma, Indiana, Washington, South Dakota, North Carolina\}.

If the function \(f\) is a set of ordered pairs \((x, y)\), then the inverse of \(f\), denoted \(f^{-1}\), is the set of ordered pairs \((y, x)\).

\section*{EXAMPLE 4}

Solution

Figure 11

WARNING Be careful! \(f^{-1}\) is a symbol for the inverse function of \(f\). The -1 used in \(f^{-1}\) is not an exponent. That is, \(f^{-1}\) does not mean the reciprocal of \(f ; f^{-1}(x)\) is not equal to \(\frac{1}{f(x)}\).

\section*{Finding the Inverse of a Function Defined by a Set of Ordered Pairs}

Find the inverse of the following one-to-one function:
\[
\{(-3,-27),(-2,-8),(-1,-1),(0,0),(1,1),(2,8),(3,27)\}
\]

State the domain and the range of the function and its inverse.
The inverse of the given function is found by interchanging the entries in each ordered pair and so is given by
\[
\{(-27,-3),(-8,-2),(-1,-1),(0,0),(1,1),(8,2),(27,3)\}
\]

The domain of the function is \(\{-3,-2,-1,0,1,2,3\}\). The range of the function is \(\{-27,-8,-1,0,1,8,27\}\). The domain of the inverse function is \(\{-27,-8,-1,0\), \(1,8,27\}\). The range of the inverse function is \(\{-3,-2,-1,0,1,2,3\}\).

Now Work problems 25 and 29
Remember, if \(f\) is a one-to-one function, it has an inverse function, \(f^{-1}\). See Figure 11.

The results of Example 4 and Figure 11 suggest two facts about a one-to-one function \(f\) and its inverse \(f^{-1}\).
\[
\text { Domain of } f=\text { Range of } f^{-1} \quad \text { Range of } f=\text { Domain of } f^{-1}
\]

Look again at Figure 11 to visualize the relationship. Starting with \(x\), applying \(f\), and then applying \(f^{-1}\) gets \(x\) back again. Starting with \(x\), applying \(f^{-1}\), and then applying \(f\), gets \(x\) back again. To put it simply, what \(f\) does, \(f^{-1}\) undoes, and vice versa. See the illustration that follows.
\[
\begin{array}{ll}
\text { Input } x \text { from domain of } f & \xrightarrow{\text { Applyf }} f^{f(x)} \xrightarrow{\text { Applyf } f^{-1}} f^{-1}(f(x))=x \\
\text { Input } x \text { from domain of } f^{-1} & \xrightarrow{\text { Applyf }}{ }^{-1} f^{-1}(x) \\
\end{array}
\]

In other words,
\[
\begin{aligned}
& f^{-1}(f(x))=x, \text { where } x \text { is in the domain of } f \\
& f\left(f^{-1}(x)\right)=x, \text { where } x \text { is in the domain of } f^{-1}
\end{aligned}
\]

Consider the function \(f(x)=2 x\), which multiplies the argument \(x\) by 2 . The inverse function \(f^{-1}\) undoes whatever \(f\) does. So the inverse function of \(f\) is \(f^{-1}(x)=\frac{1}{2} x\), which divides the argument by 2 . For example, \(f(3)=2(3)=6\) and \(f^{-1}(6)=\frac{1}{2}(6)=3\), so \(f^{-1}\) undoes what \(f\) did. This is verified by showing that \(f^{-1}(f(x))=f^{-1}(2 x)=\frac{1}{2}(2 x)=x\) and \(f\left(f^{-1}(x)\right)=f\left(\frac{1}{2} x\right)=2\left(\frac{1}{2} x\right)=x\)

See Figure 12.

\section*{EXAMPLE 5 Verifying Inverse Functions}
(a) Verify that the inverse of \(g(x)=x^{3}\) is \(g^{-1}(x)=\sqrt[3]{x}\).
(b) Verify that the inverse of \(f(x)=2 x+3\) is \(f^{-1}(x)=\frac{1}{2}(x-3)\).

Solution (a) \(g^{-1}(g(x))=g^{-1}\left(x^{3}\right)=\sqrt[3]{x^{3}}=x \quad\) for all \(x\) in the domain of \(g\) \(g\left(g^{-1}(x)\right)=g(\sqrt[3]{x})=(\sqrt[3]{x})^{3}=x \quad\) for all \(x\) in the domain of \(g^{-1}\)
(b) \(f^{-1}(f(x))=f^{-1}(2 x+3)=\frac{1}{2}[(2 x+3)-3]=\frac{1}{2}(2 x)=x \begin{aligned} & \text { for all } x \text { in the } \\ & \text { domain of } f\end{aligned}\) \(f\left(f^{-1}(x)\right)=f\left(\frac{1}{2}(x-3)\right)=2\left[\frac{1}{2}(x-3)\right]+3=(x-3)+3=x \begin{aligned} & \text { for all } x \text { in the } \\ & \text { domain of } f^{-1}\end{aligned}\)

\section*{EXAMPLE 6}

\section*{Verifying Inverse Functions}

Verify that the inverse of \(f(x)=\frac{1}{x-1}\) is \(f^{-1}(x)=\frac{1}{x}+1\). For what values of \(x\) is \(f^{-1}(f(x))=x\) ? For what values of \(x\) is \(f\left(f^{-1}(x)\right)=x\) ?

Solution The domain of \(f\) is \(\{x \mid x \neq 1\}\) and the domain of \(f^{-1}\) is \(\{x \mid x \neq 0\}\). Now
\[
\begin{aligned}
& f^{-1}(f(x))=f^{-1}\left(\frac{1}{x-1}\right)=\frac{1}{\frac{1}{x-1}}+1=(x-1)+1=x \quad \text { provided } x \neq 1 \\
& f\left(f^{-1}(x)\right)=f\left(\frac{1}{x}+1\right)=\frac{1}{\left(\frac{1}{x}+1\right)-1}=\frac{1}{\frac{1}{x}}=x \quad \text { provided } x \neq 0
\end{aligned}
\]

\section*{3 Obtain the Graph of the Inverse Function} from the Graph of the Function
Suppose that \((a, b)\) is a point on the graph of a one-to-one function \(f\) defined by \(y=f(x)\). Then \(b=f(a)\). This means that \(a=f^{-1}(b)\), so \((b, a)\) is a point on the graph of the inverse function \(f^{-1}\). The relationship between the point \((a, b)\) on \(f\) and the point \((b, a)\) on \(f^{-1}\) is shown in Figure 13. The line segment with endpoints \((a, b)\) and \((b, a)\) is perpendicular to the line \(y=x\) and is bisected by the line \(y=x\). (Do you see why?) It follows that the point \((b, a)\) on \(f^{-1}\) is the reflection about the line \(y=x\) of the point \((a, b)\) on \(f\).

THEOREM The graph of a one-to-one function \(f\) and the graph of its inverse \(f^{-1}\) are symmetric with respect to the line \(y=x\).

Figure 14 illustrates this result. Once the graph of \(f\) is known, the graph of \(f^{-1}\) may be obtained by reflecting the graph of \(f\) about the line \(y=x\).

Figure 14

\section*{EXAMPLE 7}

\section*{Solution}

Figure 15

\section*{Exploration}

Simultaneously graph \(Y_{1}=x, Y_{2}=x^{3}\), and \(Y_{3}=\sqrt[3]{x}\) on a square screen with \(-3 \leq x \leq 3\). What do you observe about the graphs of \(Y_{2}=x^{3}\), its inverse \(Y_{3}=\sqrt[3]{x}\), and the line \(Y_{1}=x\) ?

Repeat this experiment by simultaneously graphing \(\quad Y_{1}=x\), \(Y_{2}=2 x+3\), and \(Y_{3}=\frac{1}{2}(x-3)\) on a square screen with \(-6 \leq x \leq 3\). Do you see the symmetry of the graph of \(Y_{2}\) and its inverse \(Y_{3}\) with respect to the line \(Y_{1}=x\) ?

\section*{Graphing the Inverse Function}

The graph in Figure 15(a) is that of a one-to-one function \(y=f(x)\). Draw the graph of its inverse.

Begin by adding the graph of \(y=x\) to Figure 15(a). Since the points \((-2,-1)\), \((-1,0)\), and \((2,1)\) are on the graph of \(f\), the points \((-1,-2),(0,-1)\), and \((1,2)\) must be on the graph of \(f^{-1}\). Keeping in mind that the graph of \(f^{-1}\) is the reflection about the line \(y=x\) of the graph of \(f\), draw \(f^{-1}\). See Figure 15(b).

an Now Work problem 43

\section*{4 Find the Inverse of a Function Defined by an Equation}

The fact that the graphs of a one-to-one function \(f\) and its inverse function \(f^{-1}\) are symmetric with respect to the line \(y=x\) tells us more. It says that we can obtain \(f^{-1}\) by interchanging the roles of \(x\) and \(y\) in \(f\). Look again at Figure 14. If \(f\) is defined by the equation
\[
y=f(x)
\]
then \(f^{-1}\) is defined by the equation
\[
x=f(y)
\]

The equation \(x=f(y)\) defines \(f^{-1}\) implicitly. Solving this equation for \(y\) yields the explicit form of \(f^{-1}\), that is,
\[
y=f^{-1}(x)
\]

Let's use this procedure to find the inverse of \(f(x)=2 x+3\). (Because \(f\) is a linear function and is increasing, \(f\) is one-to-one and thus has an inverse function.)

\section*{EXAMPLE 8 How to Find the Inverse Function}

\section*{Step-by-Step Solution}

Step 1 Replace \(f(x)\) with \(y\). In \(y=f(x)\), interchange the variables \(x\) and \(y\) to obtain \(x=f(y)\). This equation defines the inverse function \(f^{-1}\) implicitly.

Find the inverse of \(f(x)=2 x+3\). Graph \(f\) and \(f^{-1}\) on the same coordinate axes.
Replace \(f(x)\) with \(y\) in \(f(x)=2 x+3\) and obtain \(y=2 x+3\). Now interchange the variables \(x\) and \(y\) to obtain
\[
x=2 y+3
\]

This equation defines the inverse \(f^{-1}\) implicitly.

To find the explicit form of the inverse, solve \(x=2 y+3\) for \(y\).
\[
\begin{aligned}
x & =2 y+3 & & \\
2 y+3 & =x & & \text { Reflexive Property; if } a=b, \text { then } b=a . \\
2 y & =x-3 & & \text { Subtract } 3 \text { from both sides. } \\
y & =\frac{1}{2}(x-3) & & \text { Multiply both sides by } \frac{1}{2} .
\end{aligned}
\]

The explicit form of the inverse \(f^{-1}\) is
\[
f^{-1}(x)=\frac{1}{2}(x-3)
\]

Step 3 Check the result by showing that \(f^{-1}(f(x))=x\) and \(f\left(f^{-1}(x)\right)=x\).

See Example 5(b) for verification that \(f\) and \(f^{-1}\) are inverses.
The graphs of \(f(x)=2 x+3\) and its inverse \(f^{-1}(x)=\frac{1}{2}(x-3)\) are shown in Figure 16. Note the symmetry of the graphs with respect to the line \(y=x\).

\section*{Figure 16}

\section*{Procedure for Finding the Inverse of a One-to-One Function}

STEP 1: In \(y=f(x)\), interchange the variables \(x\) and \(y\) to obtain
\[
x=f(y)
\]

This equation defines the inverse function \(f^{-1}\) implicitly.
STEP 2: If possible, solve the implicit equation for \(y\) in terms of \(x\) to obtain the explicit form of \(f^{-1}\) :
\[
y=f^{-1}(x)
\]

STEP 3: Check the result by showing that
\[
f^{-1}(f(x))=x \quad \text { and } \quad f\left(f^{-1}(x)\right)=x
\]

\section*{EXAMPLE 9 Finding the Inverse Function}

The function
\[
f(x)=\frac{2 x+1}{x-1} \quad x \neq 1
\]
is one-to-one. Find its inverse and check the result.

Solution Step 1: Replace \(f(x)\) with \(y\) and interchange the variables \(x\) and \(y\) in
\[
y=\frac{2 x+1}{x-1}
\]
to obtain
\[
x=\frac{2 y+1}{y-1}
\]

STEP 2: Solve for \(y\).
\[
\begin{aligned}
x & =\frac{2 y+1}{y-1} & & \\
x(y-1) & =2 y+1 & & \text { Multiply both sides by } y-1 . \\
x y-x & =2 y+1 & & \text { Apply the Distributive Property. } \\
x y-2 y & =x+1 & & \text { Subtract } 2 y \text { from both sides; add } x \text { to both sides. } \\
(x-2) y & =x+1 & & \text { Factor. } \\
y & =\frac{x+1}{x-2} & & \text { Divide by } x-2 .
\end{aligned}
\]

The inverse is
\[
f^{-1}(x)=\frac{x+1}{x-2}, \quad x \neq 2 \quad \text { Replace y by } f^{-1}(x) .
\]

\section*{STEP 3: Check:}
\(f^{-1}(f(x))=f^{-1}\left(\frac{2 x+1}{x-1}\right)=\frac{\frac{2 x+1}{x-1}+1}{\frac{2 x+1}{x-1}-2}=\frac{2 x+1+x-1}{2 x+1-2(x-1)}=\frac{3 x}{3}=x, x \neq 1\)
\(f\left(f^{-1}(x)\right)=f\left(\frac{x+1}{x-2}\right)=\frac{2\left(\frac{x+1}{x-2}\right)+1}{\frac{x+1}{x-2}-1}=\frac{2(x+1)+x-2}{x+1-(x-2)}=\frac{3 x}{3}=x, x \neq 2\)

\section*{Exploration}

In Example 9, it was found that, if \(f(x)=\frac{2 x+1}{x-1}\), then \(f^{-1}(x)=\frac{x+1}{x-2}\). Compare the vertical and
horizontal asymptotes of \(f\) and \(f^{-1}\). horizontal asymptotes of \(f\) and \(f^{-1}\).

Result The vertical asymptote of \(f\) is \(x=1\), and the horizontal asymptote is \(y=2\). The vertical asymptote of \(f^{-1}\) is \(x=2\), and the horizontal asymptote is \(y=1\).

Now Work problems 51 and 65
If a function is not one-to-one, it has no inverse function. Sometimes, though, an appropriate restriction on the domain of such a function will yield a new function that is one-to-one. Then the function defined on the restricted domain has an inverse function. Let's look at an example of this common practice.

\section*{EXAMPLE IO Finding the Inverse of a Domain-restricted Function}

Find the inverse of \(y=f(x)=x^{2}\) if \(x \geq 0\). Graph \(f\) and \(f^{-1}\).
Solution The function \(y=x^{2}\) is not one-to-one. [Refer to Example 2(a).] However, restricting the domain of this function to \(x \geq 0\), as indicated, yields a new function that is increasing and, therefore, is one-to-one. As a result, the function defined by \(y=f(x)=x^{2}, x \geq 0\), has an inverse function, \(f^{-1}\).

Follow the steps given previously to find \(f^{-1}\).

Figure 17

STEP 1: In the equation \(y=x^{2}, x \geq 0\), interchange the variables \(x\) and \(y\). The result is
\[
x=y^{2} \quad y \geq 0
\]

This equation defines (implicitly) the inverse function.
STEP 2: Solve for \(y\) to get the explicit form of the inverse. Since \(y \geq 0\), only one solution for \(y\) is obtained: \(y=\sqrt{x}\). So \(f^{-1}(x)=\sqrt{x}\).
Step 3: Check: \(f^{-1}(f(x))=f^{-1}\left(x^{2}\right)=\sqrt{x^{2}}=|x|=x\) since \(x \geq 0\)
\[
f\left(f^{-1}(x)\right)=f(\sqrt{x})=(\sqrt{x})^{2}=x
\]

Figure 17 illustrates the graphs of \(f(x)=x^{2}, x \geq 0\), and \(f^{-1}(x)=\sqrt{x}\). Note that the domain of \(f=\) range of \(f^{-1}=[0, \infty)\) and the domain of \(f^{-1}=\) range of \(f=[0, \infty)\).

\section*{SUMMARY}
1. If a function \(f\) is one-to-one, then it has an inverse function \(f^{-1}\).
2. Domain of \(f=\) Range of \(f^{-1}\); Range of \(f=\) Domain of \(f^{-1}\).
3. To verify that \(f^{-1}\) is the inverse of \(f\), show that \(f^{-1}(f(x))=x\) for every \(x\) in the domain of \(f\) and that \(f\left(f^{-1}(x)\right)=x\) for every \(x\) in the domain of \(f^{-1}\).
4. The graphs of \(f\) and \(f^{-1}\) are symmetric with respect to the line \(y=x\).

\subsection*{4.2 Assess Your Understanding}

\section*{"Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.}
1. Is the set of ordered pairs \(\{(1,3),(2,3),(-1,2)\}\) a function? Why or why not? (pp. 45-46)
2. Where is the function \(f(x)=x^{2}\) increasing? Where is it decreasing? (p. 68)
4. Simplify: \(\frac{\frac{1}{x}+1}{\frac{1}{x^{2}}-1}(\) pp. A50-A52)
3. What is the domain of \(f(x)=\frac{x+5}{x^{2}+3 x-18}\) ? (pp. 49-51)

\section*{Concepts and Vocabulary}
5. If \(x_{1}\) and \(x_{2}\) are any two different inputs of a function \(f\), then \(f\) is one-to-one if \(\qquad\) -.
6. If every horizontal line intersects the graph of a function \(f\) at no more than one point, \(f\) is a(n) \(\qquad\) function.
7. If \(f\) is a one-to-one function and \(f(3)=8\), then \(f^{-1}(8)=\) \(\qquad\) .
8. If \(f^{-1}\) denotes the inverse of a function \(f\), then the graphs of \(f\) and \(f^{-1}\) are symmetric with respect to the line \(\qquad\) .
9. If the domain of a one-to-one function \(f\) is \([4, \infty)\), then the range of its inverse, \(f^{-1}\), is \(\qquad\) .
10. True or False If \(f\) and \(g\) are inverse functions, the domain of \(f\) is the same as the range of \(g\).

\section*{Skill Building}

In Problems 11-18, determine whether the function is one-to-one.
11.

12.

13.

15. \(\{(2,6),(-3,6),(4,9),(1,10)\}\)
17. \(\{(0,0),(1,1),(2,16),(3,81)\}\)
16. \(\{(-2,5),(-1,3),(3,7),(4,12)\}\)
14.

18. \(\{(1,2),(2,8),(3,18),(4,32)\}\)

In Problems 19-24, the graph of a function \(f\) is given. Use the horizontal-line test to determine whether \(f\) is one-to-one.
19.

20.

21.

22.

23.

24.

In Problems 25-32, find the inverse of each one-to-one function. State the domain and the range of each inverse function.
25.

44.

45.

46.

47.

48.

In Problems 49-60, the function \(f\) is one-to-one. Find its inverse and check your answer. Graph \(f, f^{-1}\), and \(y=x\) on the same coordinate axes.
49. \(f(x)=3 x\)
50. \(f(x)=-4 x\)
51. \(f(x)=4 x+2\)
52. \(f(x)=1-3 x\)
53. \(f(x)=x^{3}-1\)
54. \(f(x)=x^{3}+1\)
55. \(f(x)=x^{2}+4, \quad x \geq 0\)
56. \(f(x)=x^{2}+9, \quad x \geq 0\)
57. \(f(x)=\frac{4}{x}\)
58. \(f(x)=-\frac{3}{x}\)
59. \(f(x)=\frac{1}{x-2}\)
60. \(f(x)=\frac{4}{x+2}\)

In Problems 61-72, the function \(f\) is one-to-one. Find its inverse and check your answer.
61. \(f(x)=\frac{2}{3+x}\)
62. \(f(x)=\frac{4}{2-x}\)
63. \(f(x)=\frac{3 x}{x+2}\)
64. \(f(x)=-\frac{2 x}{x-1}\)
65. \(f(x)=\frac{2 x}{3 x-1}\)
66. \(f(x)=-\frac{3 x+1}{x}\)
67. \(f(x)=\frac{3 x+4}{2 x-3}\)
68. \(f(x)=\frac{2 x-3}{x+4}\)
69. \(f(x)=\frac{2 x+3}{x+2}\)
70. \(f(x)=\frac{-3 x-4}{x-2}\)
71. \(f(x)=\frac{x^{2}-4}{2 x^{2}}, \quad x>0\)
72. \(f(x)=\frac{x^{2}+3}{3 x^{2}}, \quad x>0\)

\section*{Applications and Extensions}
73. Use the graph of \(y=f(x)\) given in Problem 43 to evaluate the following:
(a) \(f(-1)\)
(b) \(f(1)\)
(c) \(f^{-1}(1)\)
(d) \(f^{-1}(2)\)
74. Use the graph of \(y=f(x)\) given in Problem 44 to evaluate the following:
(a) \(f(2)\)
(b) \(f(1)\)
(c) \(f^{-1}(0)\)
(d) \(f^{-1}(-1)\)
75. If \(f(7)=13\) and \(f\) is one-to-one, what is \(f^{-1}(13)\) ?
76. If \(g(-5)=3\) and \(g\) is one-to-one, what is \(g^{-1}(3)\) ?
77. The domain of a one-to-one function \(f\) is \([5, \infty)\), and its range is \([-2, \infty)\). State the domain and the range of \(f^{-1}\).
78. The domain of a one-to-one function \(f\) is \([0, \infty)\), and its range is \([5, \infty)\). State the domain and the range of \(f^{-1}\).
79. The domain of a one-to-one function \(g\) is \((-\infty, 0]\), and its range is \([0, \infty)\). State the domain and the range of \(g^{-1}\).
80. The domain of a one-to-one function \(g\) is \([0,15]\), and its range is \((0,8)\). State the domain and the range of \(g^{-1}\).
81. A function \(y=f(x)\) is increasing on the interval \((0,5)\). What conclusions can you draw about the graph of \(y=f^{-1}(x)\) ?
82. A function \(y=f(x)\) is decreasing on the interval \((0,5)\). What conclusions can you draw about the graph of \(y=f^{-1}(x)\) ?
83. Find the inverse of the linear function
\[
f(x)=m x+b, \quad m \neq 0
\]
84. Find the inverse of the function
\[
f(x)=\sqrt{r^{2}-x^{2}}, \quad 0 \leq x \leq r
\]
85. A function \(f\) has an inverse function. If the graph of \(f\) lies in quadrant I , in which quadrant does the graph of \(f^{-1}\) lie?
86. A function \(f\) has an inverse function. If the graph of \(f\) lies in quadrant II, in which quadrant does the graph of \(f^{-1}\) lie?
87. The function \(f(x)=|x|\) is not one-to-one. Find a suitable restriction on the domain of \(f\) so that the new function that results is one-to-one. Then find the inverse of \(f\).
88. The function \(f(x)=x^{4}\) is not one-to-one. Find a suitable restriction on the domain of \(f\) so that the new function that results is one-to-one. Then find the inverse of \(f\).

In applications, the symbols used for the independent and dependent variables are often based on common usage. So, rather than using \(y=f(x)\) to represent a function, an applied problem might use \(C=C(q)\) to represent the cost \(C\) of manufacturing \(q\) units of a good since, in economics, \(q\) is used for output. Because of this, the inverse notation \(f^{-1}\) used in a pure mathematics problem is not used when finding inverses of applied problems. Rather, the inverse of a function such as \(C=C(q)\) will be \(q=q(C)\). So \(C=C(q)\) is a function that represents the cost \(C\) as a function of the output \(q\), and \(q=q(C)\) is a function that represents the output \(q\) as a function of the cost C. Problems 89-92 illustrate this idea.
89. Vehicle Stopping Distance Taking into account reaction time, the distance \(d\) (in feet) that a car requires to come to a complete stop while traveling \(r\) miles per hour is given by the function
\[
d(r)=6.97 r-90.39
\]
(a) Express the speed \(r\) at which the car is traveling as a function of the distance \(d\) required to come to a complete stop.
(b) Verify that \(r=r(d)\) is the inverse of \(d=d(r)\) by showing that \(r(d(r))=r\) and \(d(r(d))=d\).
(c) Predict the speed that a car was traveling if the distance required to stop was 300 feet.
90. Height and Head Circumference The head circumference \(C\) of a child is related to the height \(H\) of the child (both in inches) through the function
\[
H(C)=2.15 C-10.53
\]
(a) Express the head circumference \(C\) as a function of height \(H\).
(b) Verify that \(C=C(H)\) is the inverse of \(H=H(C)\) by showing that \(H(C(H))=H\) and \(C(H(C))=C\).
(c) Predict the head circumference of a child who is 26 inches tall.
91. Ideal Body Weight One model for the ideal body weight \(W\) for men (in kilograms) as a function of height \(h\) (in inches) is given by the function
\[
W(h)=50+2.3(h-60)
\]
(a) What is the ideal weight of a 6 -foot male?
(b) Express the height \(h\) as a function of weight \(W\).
(c) Verify that \(h=h(W)\) is the inverse of \(W=W(h)\) by showing that \(h(W(h))=h\) and \(W(h(W))=W\).
(d) What is the height of a male who is at his ideal weight of 80 kilograms?
[Note: The ideal body weight \(W\) for women (in kilograms) as a function of height \(h\) (in inches) is given by \(W(h)=45.5+2.3(h-60)\).]
92. Temperature Conversion The function \(F(C)=\frac{9}{5} C+32\) converts a temperature from \(C\) degrees Celsius to \(F\) degrees Fahrenheit.
(a) Express the temperature in degrees Celsius \(C\) as a function of the temperature in degrees Fahrenheit \(F\).
(b) Verify that \(C=C(F)\) is the inverse of \(F=F(C)\) by showing that \(C(F(C))=C\) and \(F(C(F))=F\).
(c) What is the temperature in degrees Celsius if it is 70 degrees Fahrenheit?
93. Income Taxes The function
\[
T(g)=4991.25+0.25(g-36,250)
\]
represents the 2013 federal income tax \(T\) (in dollars) due for a "single" filer whose modified adjusted gross income is \(g\) dollars, where \(36,250 \leq g \leq 87,850\).
(a) What is the domain of the function \(T\) ?
(b) Given that the tax due \(T\) is an increasing linear function of modified adjusted gross income \(g\), find the range of the function \(T\).
(c) Find adjusted gross income \(g\) as a function of federal income tax \(T\). What are the domain and the range of this function?
94. Income Taxes The function
\[
T(g)=1785+0.15(g-17,850)
\]
represents the 2013 federal income \(\operatorname{tax} T\) (in dollars) due for a "married filing jointly" filer whose modified adjusted gross income is \(g\) dollars, where \(17,850 \leq g \leq 72,500\).
(a) What is the domain of the function \(T\) ?
(b) Given that the tax due \(T\) is an increasing linear function of modified adjusted gross income \(g\), find the range of the function \(T\).
(c) Find adjusted gross income \(g\) as a function of federal income \(\operatorname{tax} T\). What are the domain and the range of this function?
95. Gravity on Earth If a rock falls from a height of 100 meters on Earth, the height \(H\) (in meters) after \(t\) seconds is approximately
\[
H(t)=100-4.9 t^{2}
\]
(a) In general, quadratic functions are not one-to-one. However, the function \(H\) is one-to-one. Why?
(b) Find the inverse of \(H\) and verify your result.
(c) How long will it take a rock to fall 80 meters?
96. Period of a Pendulum The period \(T\) (in seconds) of a simple pendulum as a function of its length \(l\) (in feet) is given by
\[
T(l)=2 \pi \sqrt{\frac{l}{32.2}}
\]
(a) Express the length \(l\) as a function of the period \(T\).
(b) How long is a pendulum whose period is 3 seconds?
97. Given
\[
f(x)=\frac{a x+b}{c x+d}
\]
find \(f^{-1}(x)\). If \(c \neq 0\), under what conditions on \(a, b, c\), and \(d\) is \(f=f^{-1}\) ?

\section*{Discussion and Writing}
98. Can a one-to-one function and its inverse be equal? What must be true about the graph of \(f\) for this to happen? Give some examples to support your conclusion.
99. Draw the graph of a one-to-one function that contains the points \((-2,-3),(0,0)\), and \((1,5)\). Now draw the graph of its inverse. Compare your graph to those of other students. Discuss any similarities. What differences do you see?
100. Give an example of a function whose domain is the set of real numbers and that is neither increasing nor decreasing on its domain, but is one-to-one.
[Hint: Use a piecewise-defined function.]
101. Is every odd function one-to-one? Explain.
102. Suppose that \(C(g)\) represents the cost \(C\), in dollars, of manufacturing \(g\) cars. Explain what \(C^{-1}(800,000)\) represents.
103. Explain why the horizontal-line test can be used to identify one-to-one functions from a graph.
104. Explain why a function must be one-to-one in order to have an inverse that is a function. Use the function \(y=x^{2}\) to support your explanation.

\section*{Retain Your Knowledge}

Problems 105-108 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
105. If \(f(x)=3 x^{2}-7 x\), find \(f(x+h)-f(x)\)
106. Use the techniques of shifting, compressing or stretching, and reflections to graph \(f(x)=-|x+2|+3\).
107. Find the zeros of the quadratic function \(f(x)=3 x^{2}+5 x+1\). What are the \(x\)-intercepts, if any, of the graph of the function?
108. Find the domain of \(R(x)=\frac{6 x^{2}-11 x-2}{2 x^{2}-x-6}\). Find any horizontal, vertical, or oblique asymptotes.

\section*{'Are You Prepared?' Answers}
1. Yes; for each input \(x\) there is one output \(y\).
3. \(\{x \mid x \neq-6, x \neq 3\}\)
2. Increasing on \((0, \infty)\); decreasing on \((-\infty, 0)\)
4. \(\frac{x}{1-x}, x \neq 0, x \neq-1, x \neq 1\)

\subsection*{4.3 Exponential Functions}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Exponents (Appendix A, Section A.1, pp. A7-A9, and Section A.7, pp. A58-A60)
- Graphing Techniques: Transformations (Section 1.5, pp. 89-97)
- Linear Equations (Appendix A, Section A.8, pp. A63-A69)

Now Work the 'Are You Prepared?' problems on page 305.
OBJECTIVES 1 Evaluate Exponential Functions (p. 294)
2 Graph Exponential Functions (p. 298)
3 Define the Number e (p.301)
4 Solve Exponential Equations (p. 303)

\section*{1 Evaluate Exponential Functions}

Appendix A, Section A. 7 gives a definition for raising a real number \(a\) to a rational power. That discussion provides meaning to expressions of the form

\section*{\(a^{r}\)}
where the base \(a\) is a positive real number and the exponent \(r\) is a rational number.
But what is the meaning of \(a^{x}\), where the base \(a\) is a positive real number and the exponent \(x\) is an irrational number? Although a rigorous definition requires methods discussed in calculus, the basis for the definition is easy to follow: Select a rational number \(r\) that is formed by truncating (removing) all but a finite number of digits from the irrational number \(x\). Then it is reasonable to expect that
\[
a^{x} \approx a^{r}
\]

For example, take the irrational number \(\pi=3.14159 \ldots\). Then an approximation to \(a^{\pi}\) is
\[
a^{\pi} \approx a^{3.14}
\]
where the digits after the hundredths position have been removed from the value for \(\pi\). A better approximation would be
\[
a^{\pi} \approx a^{3.14159}
\]
where the digits after the hundred-thousandths position have been removed. Continuing in this way, approximations to \(a^{\pi}\) can be obtained to any desired degree of accuracy.

Most calculators have an \(x^{y}\) key or a caret key \(\wedge\) for working with exponents. To evaluate expressions of the form \(a^{x}\), enter the base \(a\), then press the \(x^{y}\) key (or the \(\wedge\) key), enter the exponent \(x\), and press \(\equiv\) (or ENTER).

\section*{EXAMPLE I}

\section*{Using a Calculator to Evaluate Powers of 2}

Using a calculator, evaluate:
(a) \(2^{1.4}\)
(b) \(2^{1.41}\)
(c) \(2^{1.414}\)
(d) \(2^{1.4142}\)
(e) \(2^{\sqrt{2}}\)

\section*{Solution}

Figure 18

THEOREM
Figure 18 shows the solutions to parts (a) and (e) using a TI-84 Plus graphing calculator.
(a) \(2^{1.4} \approx 2.639015822\)
(b) \(2^{1.41} \approx 2.657371628\)
(c) \(2^{1.414} \approx 2.66474965\)
(d) \(2^{1.4142} \approx 2.665119089\)
(e) \(2^{\sqrt{2}} \approx 2.665144143\)

Now Work problem 15
It can be shown that the familiar laws for rational exponents hold for real exponents.

\section*{Laws of Exponents}

If \(s, t, a\), and \(b\) are real numbers with \(a>0\) and \(b>0\), then
\[
\begin{align*}
a^{s} \cdot a^{t} & =a^{s+t} & \left(a^{s}\right)^{t} & =a^{s t} \\
1^{s} & =1 & a^{-s} & =\frac{1}{a^{s}}=\left(\frac{1}{a}\right)^{s}
\end{align*} a^{0}=1
\]

\section*{Introduction to Exponential Growth}

Suppose a function \(f\) has the following two properties:
1. The value of \(f\) doubles with every 1 -unit increase in the independent variable \(x\).
2. The value of \(f\) at \(x=0\) is 5 , so \(f(0)=5\).

Table 1 shows values of the function \(f\) for \(x=0,1,2,3\), and 4 .
Let's find an equation \(y=f(x)\) that describes this function \(f\). The key fact is that the value of \(f\) doubles for every 1-unit increase in \(x\).
\[
\begin{array}{ll}
f(0)=5 & \\
f(1)=2 f(0)=2 \cdot 5=5 \cdot 2^{1} & \text { Double the value of } f \text { at } 0 \text { to get the value at } 1 . \\
f(2)=2 f(1)=2(5 \cdot 2)=5 \cdot 2^{2} & \text { Double the value of f at } 1 \text { to get the value at } 2 .
\end{array}
\]
\[
\begin{aligned}
& f(3)=2 f(2)=2\left(5 \cdot 2^{2}\right)=5 \cdot 2^{3} \\
& f(4)=2 f(3)=2\left(5 \cdot 2^{3}\right)=5 \cdot 2^{4}
\end{aligned}
\]

The pattern leads to
\[
f(x)=2 f(x-1)=2\left(5 \cdot 2^{x-1}\right)=5 \cdot 2^{x}
\]

\section*{DEFINITION}

WARNING It is important to distinguish a power function, \(g(x)=a x^{n}, n \geq 2, \quad\) an integer, from an exponential function, \(f(x)=C \cdot a^{x}, a \neq 1, a>0\). In a power function, the base is a variable and the exponent is a constant. In an exponential function, the base is a constant and the exponent is a variable.

\section*{THEOREM}

\section*{In Words}

For 1-unit changes in the input x of an exponential function \(f(x)=C \cdot a^{x}\), the ratio of consecutive outputs is the constant \(a\).

An exponential function is a function of the form
\[
f(x)=C a^{x}
\]
where \(a\) is a positive real number \((a>0), a \neq 1\), and \(C \neq 0\) is a real number. The domain of \(f\) is the set of all real numbers. The base \(a\) is the growth factor, and because \(f(0)=C a^{0}=C, C\) is called the initial value.

In the definition of an exponential function, the base \(a=1\) is excluded because this function is simply the constant function \(f(x)=C \cdot 1^{x}=C\). Bases that are negative also are excluded; otherwise, many values of \(x\) would have to be excluded from the domain, such as \(x=\frac{1}{2}\) and \(x=\frac{3}{4}\). [Recall that \((-2)^{1 / 2}=\sqrt{-2}\), \((-3)^{3 / 4}=\sqrt[4]{(-3)^{3}}=\sqrt[4]{-27}\), and so on, are not defined in the set of real numbers.] Finally, transformations (vertical shifts, horizontal shifts, reflections, and so on) of a function of the form \(f(x)=C a^{x}\) also represent exponential functions.

Some examples of exponential functions are
\[
f(x)=2^{x} \quad F(x)=\left(\frac{1}{3}\right)^{x}+5 \quad G(x)=2 \cdot 3^{x-3}
\]

For each function, note that the base of the exponential expression is a constant and the exponent contains a variable.

In the function, \(f(x)=5 \cdot 2^{x}\), notice that the ratio of consecutive outputs is constant for 1 -unit increases in the input. This ratio equals the constant 2 , the base of the exponential function. In other words,
\[
\frac{f(1)}{f(0)}=\frac{5 \cdot 2^{1}}{5}=2 \quad \frac{f(2)}{f(1)}=\frac{5 \cdot 2^{2}}{5 \cdot 2^{1}}=2 \quad \frac{f(3)}{f(2)}=\frac{5 \cdot 2^{3}}{5 \cdot 2^{2}}=2 \quad \text { and so on }
\]

This leads to the following result.

For an exponential function \(f(x)=C a^{x}\), where \(a>0\) and \(a \neq 1\), if \(x\) is any real number, then
\[
\frac{f(x+1)}{f(x)}=a \quad \text { or } \quad f(x+1)=a f(x)
\]

\section*{Proof}
\[
\frac{f(x+1)}{f(x)}=\frac{C a^{x+1}}{C a^{x}}=a^{x+1-x}=a^{1}=a
\]

\section*{Identifying Linear or Exponential Functions}

Determine whether the given function is linear, exponential, or neither. For those that are linear, find a linear function that models the data. For those that are exponential, find an exponential function that models the data.
(a)
\begin{tabular}{|rr|}
\hline\(x\) & \(y\) \\
\hline-1 & 5 \\
0 & 2 \\
1 & -1 \\
2 & -4 \\
3 & -7 \\
\hline
\end{tabular}
(b)
\begin{tabular}{|rr|}
\hline\(x\) & \(y\) \\
\hline-1 & 32 \\
0 & 16 \\
1 & 8 \\
2 & 4 \\
3 & 2 \\
\hline
\end{tabular}
(c)
\begin{tabular}{|rr|}
\hline\(x\) & \(y\) \\
\hline-1 & 2 \\
0 & 4 \\
1 & 7 \\
2 & 11 \\
3 & 16 \\
\hline
\end{tabular}

Solution
For each function, compute the average rate of change of \(y\) with respect to \(x\) and the ratio of consecutive outputs. If the average rate of change is constant, then the function is linear. If the ratio of consecutive outputs is constant, then the function is exponential.
Table 2 (a)
\begin{tabular}{|c|c|c|c|}
\hline \(x\) & \(y\) & Average Rate of Change & Ratio of Consecutive Outputs \\
\hline -1 & \multicolumn{2}{|r|}{\multirow[t]{2}{*}{\[
\begin{aligned}
& \frac{\Delta y}{\Delta x}=\frac{2-5}{0-(-1)}=-3 \\
& \frac{-1-2}{1-0}=-3
\end{aligned}
\]}} & \\
\hline 0 & & & \[
\frac{-1}{2}=-\frac{1}{2}
\] \\
\hline 1 & \multicolumn{2}{|l|}{\[
-1<\frac{-4-(-1)}{2-1}=-3
\]} & \[
\frac{-4}{-1}=4
\] \\
\hline 2 & \multicolumn{2}{|l|}{\[
-4<\frac{-7-(-4)}{3-2}=-3
\]} & \[
\frac{-7}{-4}=\frac{7}{4}
\] \\
\hline 3 & \multicolumn{2}{|l|}{\[
-7
\]} & \\
\hline
\end{tabular}
(b)
\begin{tabular}{|cll|}

\hline-1 & 32 & Ratio of Consecutive Outputs \\
\hline 0 & \(\frac{\Delta y}{\Delta x}=\frac{16-32}{0-(-1)}=-16\) & \(\frac{16}{32}=\frac{1}{2}\) \\
1 & \(\frac{8}{16}=\frac{1}{2}\) \\
2 & 2 & \(\frac{4}{8}=\frac{1}{2}\) \\
3 & & \(\frac{2}{4}=\frac{1}{2}\) \\
\hline
\end{tabular}
(c)
\begin{tabular}{|ccll|}
\hline \(\boldsymbol{x}\) & \(\boldsymbol{y}\) & Average Rate of Change & Ratio of Consecutive Outputs \\
\hline-1 & 2 & \(\frac{\Delta y}{\Delta x}=\frac{4-2}{0-(-1)}=2\) & 2 \\
0 & 4 & \(\frac{7}{4}\) \\
1 & 7 & \(\frac{11}{7}\) \\
2 & 16 & \(\frac{16}{11}\) \\
\hline
\end{tabular}
(a) See Table 2(a). The average rate of change for every 1-unit increase in \(x\) is -3 . Therefore, the function is a linear function. In a linear function the average rate of change is the slope \(m\), so \(m=-3\). The \(y\)-intercept \(b\) is the value of the function at \(x=0\), so \(b=2\). The linear function that models the data is \(f(x)=m x+b=-3 x+2\).
(b) See Table 2(b). For this function, the average rate of change from -1 to 0 is -16 , and the average rate of change from 0 to 1 is -8 . Because the average rate of change is not constant, the function is not a linear function. The ratio of consecutive outputs for a 1-unit increase in the inputs is a constant, \(\frac{1}{2}\). Because the ratio of consecutive outputs is constant, the function is an exponential function with growth factor \(a=\frac{1}{2}\). The initial value of the exponential function is \(C=16\). Therefore, the exponential function that models the data is \(g(x)=C a^{x}=16 \cdot\left(\frac{1}{2}\right)^{x}\).
(c) See Table 2(c). For this function, the average rate of change from -1 to 0 is 2 , and the average rate of change from 0 to 1 is 3 . Because the average rate of change is not constant, the function is not a linear function. The ratio of consecutive outputs from -1 to 0 is 2 , and the ratio of consecutive outputs from 0 to 1 is \(\frac{7}{4}\). Because the ratio of consecutive outputs is not a constant, the function is not an exponential function.

\section*{Now Work problem 25}

\section*{2 Graph Exponential Functions}

If we know how to graph an exponential function of the form \(f(x)=a^{x}\), then we can use transformations (shifting, stretching, and so on) to obtain the graph of any exponential function.

First, let's graph the exponential function \(f(x)=2^{x}\).

\section*{EXAMPLE 3}

\section*{Solution}

Table 3
\begin{tabular}{|cc|}
\hline \(\boldsymbol{x}\) & \(\boldsymbol{f}(\boldsymbol{x})=\mathbf{2}^{\boldsymbol{x}}\) \\
\hline-10 & \(2^{-10} \approx 0.00098\) \\
-3 & \(2^{-3}=\frac{1}{8}\) \\
-2 & \(2^{-2}=\frac{1}{4}\) \\
-1 & \(2^{-1}=\frac{1}{2}\) \\
0 & \(2^{0}=1\) \\
1 & \(2^{1}=2\) \\
2 & \(2^{2}=4\) \\
3 & \(2^{3}=8\) \\
10 & \(2^{10}=1024\) \\
\hline
\end{tabular}

\section*{Graphing an Exponential Function}

Graph the exponential function: \(f(x)=2^{x}\)
The domain of \(f(x)=2^{x}\) is the set of all real numbers. Begin by locating some points on the graph of \(f(x)=2^{x}\), as listed in Table 3 .

Because \(2^{x}>0\) for all \(x\), the range of \(f\) is \((0, \infty)\). Therefore, the graph has no \(x\)-intercepts, and in fact, the graph will lie above the \(x\)-axis for all \(x\). As Table 3 indicates, the \(y\)-intercept is 1 . Table 3 also indicates that as \(x \rightarrow-\infty\), the value of \(f(x)=2^{x}\) gets closer and closer to 0 . Thus, the \(x\)-axis \((y=0)\) is a horizontal asymptote to the graph as \(x \rightarrow-\infty\). This provides the end behavior for \(x\) large and negative.

To determine the end behavior for \(x\) large and positive, look again at Table 3. As \(x \rightarrow \infty, f(x)=2^{x}\) grows very quickly, causing the graph of \(f(x)=2^{x}\) to rise very rapidly. It is apparent that \(f\) is an increasing function and, hence, is one-to-one.

Using all this information, plot some of the points from Table 3 and connect them with a smooth, continuous curve, as shown in Figure 19.

Figure 19

Figure 21

Figure 22

Graphs that look like the one in Figure 19 occur very frequently in a variety of situations. For example, the graph in Figure 20 illustrates the number of Facebook subscribers by year from 2004 to 2012. One might conclude from this graph that the number of Facebook subscribers is growing exponentially.

\section*{Seeing the Concept}

Graph \(Y_{1}=2^{x}\) and compare what you see to Figure 19. Clear the screen, graph \(Y_{1}=3^{x}\) and \(Y_{2}=6^{x}\), and compare what you see to Figure 21. Clear the screen and graph \(Y_{1}=10^{x}\) and \(Y_{2}=100^{x}\).

The following display summarizes information about \(f(x)=a^{x}, a>1\).
Figure 20

Later in this chapter, more will be said about situations that lead to exponential growth. For now, let's continue to explore properties of exponential functions.

The graph of \(f(x)=2^{x}\) in Figure 19 is typical of all exponential functions of the form \(f(x)=a^{x}\) with \(a>1\). Such functions are increasing functions and hence are one-to-one. Their graphs lie above the \(x\)-axis, pass through the point \((0,1)\), and thereafter rise rapidly as \(x \rightarrow \infty\). As \(x \rightarrow-\infty\), the \(x\)-axis \((y=0)\) is a horizontal asymptote. There are no vertical asymptotes. Finally, the graphs are smooth and continuous with no corners or gaps.

Figure 21 illustrates the graphs of two more exponential functions whose bases are larger than 1 . Notice that the larger the base, the steeper the graph is when \(x>0\), and when \(x<0\), the larger the base, the closer the graph of the equation is to the \(x\)-axis.

\section*{Properties of the Exponential Function \(f(x)=a^{x}, a>1\)}
1. The domain is the set of all real numbers, or \((-\infty, \infty)\) using interval notation; the range is the set of positive real numbers, or \((0, \infty)\) using interval notation.
2. There are no \(x\)-intercepts; the \(y\)-intercept is 1 .
3. The \(x\)-axis \((y=0)\) is a horizontal asymptote as \(x \rightarrow-\infty\left[\lim _{x \rightarrow-\infty} a^{x}=0\right]\).
4. \(f(x)=a^{x}, a>1\), is an increasing function and is one-to-one.
5. The graph of \(f\) contains the points \((0,1),(1, a)\), and \(\left(-1, \frac{1}{a}\right)\).
6. The graph of \(f\) is smooth and continuous, with no corners or gaps. See Figure 22.

Now consider \(f(x)=a^{x}\) when \(0<a<1\).

\section*{EXAMPLE 4}

\section*{Graphing an Exponential Function}

Graph the exponential function: \(f(x)=\left(\frac{1}{2}\right)^{x}\)

Solution
Table 4
\begin{tabular}{|c|c|}
\hline \(\boldsymbol{X}\) & \(f(x)=\left(\frac{1}{2}\right)^{x}\) \\
\hline -10 & \(\left(\frac{1}{2}\right)^{-10}=1024\) \\
\hline -3 & \(\left(\frac{1}{2}\right)^{-3}=8\) \\
\hline -2 & \(\left(\frac{1}{2}\right)^{-2}=4\) \\
\hline -1 & \(\left(\frac{1}{2}\right)^{-1}=2\) \\
\hline 0 & \(\left(\frac{1}{2}\right)^{0}=1\) \\
\hline 1 & \(\left(\frac{1}{2}\right)^{1}=\frac{1}{2}\) \\
\hline 2 & \(\left(\frac{1}{2}\right)^{2}=\frac{1}{4}\) \\
\hline 3 & \(\left(\frac{1}{2}\right)^{3}=\frac{1}{8}\) \\
\hline 10 & \(\left(\frac{1}{2}\right)^{10} \approx 0.00098\) \\
\hline
\end{tabular}

Figure 24

\section*{Seeing the Concept}

Using a graphing utility, simultaneously graph:
(a) \(Y_{1}=3^{x}, Y_{2}=\left(\frac{1}{3}\right)^{x}\)
(b) \(Y_{1}=6^{x}, Y_{2}=\left(\frac{1}{6}\right)^{x}\)

Conclude that the graph of \(Y_{2}=\left(\frac{1}{a}\right)^{x}\), for \(a>0\), is the reflection about the \(y\)-axis of the graph of \(Y_{1}=a^{x}\).

The domain of \(f(x)=\left(\frac{1}{2}\right)^{x}\) consists of all real numbers. As before, locate some points on the graph as shown in Table 4. Because, \(\left(\frac{1}{2}\right)^{x}>0\) for all \(x\), the range of \(f\) is the interval \((0, \infty)\). The graph lies above the \(x\)-axis and has no \(x\)-intercepts. The \(y\)-intercept is 1 . As \(x \rightarrow-\infty, f(x)=\left(\frac{1}{2}\right)^{x}\) grows very quickly. As \(x \rightarrow \infty\), the values of \(f(x)\) approach 0 . The \(x\)-axis \((y=0)\) is a horizontal asymptote as \(x \rightarrow \infty\). It is apparent that \(f\) is a decreasing function and hence is one-to-one. Figure 23 illustrates the graph.

Figure 23

The graph of \(y=\left(\frac{1}{2}\right)^{x}\) also can be obtained from the graph of \(y=2^{x}\) using transformations. The graph of \(y=\left(\frac{1}{2}\right)^{x}=2^{-x}\) is a reflection about the \(y\)-axis of the graph of \(y=2^{x}\) (replace \(x\) by \(-x\) ). See Figures 24(a) and (b).

The graph of \(f(x)=\left(\frac{1}{2}\right)^{x}\) in Figure 23 is typical of all exponential functions of the form \(f(x)=a^{x}\) with \(0<a<1\). Such functions are decreasing and one-to-one. Their graphs lie above the \(x\)-axis and pass through the point \((0,1)\). The graphs rise rapidly as \(x \rightarrow-\infty\). As \(x \rightarrow \infty\), the \(x\)-axis \((y=0)\) is a horizontal asymptote. There are no vertical asymptotes. Finally, the graphs are smooth and continuous, with no corners or gaps.

Figure 25

Figure 26

Figure 25 illustrates the graphs of two more exponential functions whose bases are between 0 and 1 . Notice that the smaller base results in a graph that is steeper when \(x<0\). When \(x>0\), the graph of the equation with the smaller base is closer to the \(x\)-axis.

The following display summarizes information about the function \(f(x)=a^{x}\), \(0<a<1\).

Properties of the Exponential Function \(f(x)=a^{x}, 0<a<1\)
1. The domain is the set of all real numbers, or \((-\infty, \infty)\) using interval notation; the range is the set of positive real numbers, or \((0, \infty)\) using interval notation.
2. There are no \(x\)-intercepts; the \(y\)-intercept is 1 .
3. The \(x\)-axis \((y=0)\) is a horizontal asymptote as \(x \rightarrow \infty\left[\lim _{x \rightarrow \infty} a^{x}=0\right]\).
4. \(f(x)=a^{x}, 0<a<1\), is a decreasing function and is one-to-one.
5. The graph of \(f\) contains the points \(\left(-1, \frac{1}{a}\right),(0,1)\), and \((1, a)\).
6. The graph of \(f\) is smooth and continuous, with no corners or gaps. See Figure 26.

\section*{EXAMPLE 5}

\section*{Solution}

As Figure 27(c) illustrates, the domain of \(f(x)=2^{-x}-3\) is the interval \((-\infty, \infty)\) and the range is the interval \((-3, \infty)\). The horizontal asymptote of \(f\) is the line \(y=-3\).

\section*{3 Define the Number e}

Many problems that occur in nature require the use of an exponential function whose base is a certain irrational number, symbolized by the letter \(e\).

One way of arriving at this important number \(e\) is given next.
The number \(\boldsymbol{e}\) is defined as the number that the expression
\[
\begin{equation*}
\left(1+\frac{1}{n}\right)^{n} \tag{2}
\end{equation*}
\]
approaches as \(n \rightarrow \infty\). In calculus, this is expressed, using limit notation, as
\[
e=\lim _{n \rightarrow \infty}\left(1+\frac{1}{n}\right)^{n}
\]

Table 5 illustrates what happens to the defining expression (2) as \(n\) takes on increasingly large values. The last number in the right column in the table is correct to nine decimal places. Therefore, \(e=2.718281827\). . . . Remember, the three dots indicate that the decimal places continue. Because these decimal places continue but do not repeat, \(e\) is an irrational number. The number \(e\) is often expressed as a decimal rounded to a specific number of places. For example, \(e \approx 2.71828\) is rounded to five decimal places.

The exponential function \(f(x)=e^{x}\), whose base is the number \(e\), occurs with such frequency in applications that it is usually referred to as the exponential function. Indeed, most calculators have the key \(e^{x}\) or \(\exp (x)\), which may be used to evaluate the exponential function for a given value of \(x\).*

Table 5

EXAMPLE 6

Now use your calculator to approximate \(e^{x}\) for \(x=-2, x=-1, x=0, x=1\), and \(x=2\). See Table 6. The graph of the exponential function \(f(x)=e^{x}\) is given in Figure 28. Since \(2<e<3\), the graph of \(y=e^{x}\) lies between the graphs of \(y=2^{x}\) and \(y=3^{x}\). Do you see why? (Refer to Figures 19 and 21.)

\section*{Seeing the Concept}

Graph \(Y_{1}=e^{x}\) and compare what you see to Figure 28. Use eVALUEate or TABLE to verify the points on the graph shown in Figure 28. Now graph \(Y_{2}=2^{x}\) and \(Y_{3}=3^{x}\) on the same screen as \(Y_{1}=e^{x}\). Notice that the graph of \(Y_{1}=e^{x}\) lies between these two graphs.

\section*{Graphing Exponential Functions Using Transformations}

Graph \(f(x)=-e^{x-3}\) and determine the domain, range, and horizontal asymptote of \(f\).
Solution Begin with the graph of \(y=e^{x}\). Figure 29 shows the stages.
*If your calculator does not have one of these keys, refer to your owner's manual.

As Figure 29(c) illustrates, the domain of \(f(x)=-e^{x-3}\) is the interval \((-\infty, \infty)\), and the range is the interval \((-\infty, 0)\). The horizontal asymptote is the line \(y=0\).

\section*{Now Work problem 5}

\section*{4 Solve Exponential Equations}

Equations that involve terms of the form \(a^{x}, a>0, a \neq 1\), are referred to as exponential equations. Such equations can sometimes be solved by appropriately applying the Laws of Exponents and property (3):

\section*{In Words}

When two exponential expressions with the same base are equal, then their exponents are equal.
\[
\begin{equation*}
\text { If } a^{u}=a^{v}, \quad \text { then } \quad u=v \tag{3}
\end{equation*}
\]

Property (3) is a consequence of the fact that exponential functions are one-to-one. To use property (3), each side of the equality must be written with the same base.

\section*{EXAMPLE 7 Solving Exponential Equations}

Solve each exponential equation.
(a) \(3^{x+1}=81\)
(b) \(4^{2 x-1}=8^{x+3}\)

\section*{Solution}
(a) Because \(81=3^{4}\), write the equation as
\[
3^{x+1}=81=3^{4}
\]

Now the expressions on each side of the equation have the same base, 3. Set the exponents equal to each other to obtain
\[
\begin{array}{r}
x+1=4 \\
x=3
\end{array}
\]

The solution set is \(\{3\}\).
(b) \(\quad 4^{2 x-1}=8^{x+3}\)
\[
\begin{array}{rlrl}
\left(2^{2}\right)^{(2 x-1)} & =\left(2^{3}\right)^{(x+3)} & & 4=2^{2} ; 8=2^{3} \\
2^{2(2 x-1)} & =2^{3(x+3)} & & \left(a^{r}\right)^{5}=a^{r s} \\
2(2 x-1) & =3(x+3) & & \text { If } a^{u}=a^{v}, \text { then } u=v . \\
4 x-2 & =3 x+9 & & \\
x & =11
\end{array}
\]

The solution set is \(\{11\}\).

\section*{EXAMPLE 8 Solving an Exponential Equation}

Solve: \(\quad e^{-x^{2}}=\left(e^{x}\right)^{2} \cdot \frac{1}{e^{3}}\)
Solution Use the Laws of Exponents first to get a single expression with the base \(e\) on the right side.
\[
\left(e^{x}\right)^{2} \cdot \frac{1}{e^{3}}=e^{2 x} \cdot e^{-3}=e^{2 x-3}
\]

As a result,
\[
\begin{aligned}
e^{-x^{2}} & =e^{2 x-3} & & \\
-x^{2} & =2 x-3 & & \text { Apply property (3). } \\
x^{2}+2 x-3 & =0 & & \text { Place the quadratic equation in standard form. } \\
(x+3)(x-1) & =0 & & \text { Factor. } \\
x=-3 \text { or } x & =1 & & \text { Use the Zero-Product Property. }
\end{aligned}
\]

The solution set is \(\{-3,1\}\).
an Now Work problem 79

\section*{EXAMPLE 9 Exponential Probability}

Between 9:00 Pm and 10:00 pm cars arrive at Burger King's drive-thru at the rate of 12 cars per hour ( 0.2 car per minute). The following formula from statistics can be used to determine the probability that a car will arrive within \(t\) minutes of 9:00 PM.
\[
F(t)=1-e^{-0.2 t}
\]
(a) Determine the probability that a car will arrive within 5 minutes of 9 PM (that is, before 9:05 Рм).
(b) Determine the probability that a car will arrive within 30 minutes of 9 PM (before 9:30 Рм).
(c) Graph \(F\) using your graphing utility.
(d) What value does \(F\) approach as \(t\) increases without bound in the positive direction?

Solution

Figure 30

Figure 31

(a) The probability that a car will arrive within 5 minutes is found by evaluating \(F(t)\) at \(t=5\).

Figure 30 shows this calculation on a TI-84 Plus graphing calculator. There is a \(63 \%\) probability that a car will arrive within 5 minutes.
(b) The probability that a car will arrive within 30 minutes is found by evaluating \(F(t)\) at \(t=30\).

There is a \(99.75 \%\) probability that a car will arrive within 30 minutes.
(c) See Figure 31 for the graph of \(F\).
(d) As time passes, the probability that a car will arrive increases. The value that \(F\) approaches can be found by letting \(t \rightarrow \infty\). Since \(e^{-0.2 t}=\frac{1}{e^{0.2 t}}\), it follows that \(e^{-0.2 t} \rightarrow 0\) as \(t \rightarrow \infty\). Therefore, \(F\) approaches 1 as \(t\) gets large. The algebraic analysis is confirmed by Figure 31.

Now Work problem 109

\section*{SUMMARY}

\section*{Properties of the Exponential Function}
\(f(x)=a^{x}, \quad a>1\)
\(f(x)=a^{x}, \quad 0<a<1\)

Domain: the interval \((-\infty, \infty)\); range: the interval \((0, \infty)\) \(x\)-intercepts: none; \(y\)-intercept: 1
Horizontal asymptote: \(x\)-axis \((y=0)\) as \(x \rightarrow-\infty\)
Increasing; one-to-one; smooth; continuous
See Figure 22 for a typical graph.
Domain: the interval \((-\infty, \infty)\); range: the interval \((0, \infty)\) \(x\)-intercepts: none; \(y\)-intercept: 1
Horizontal asymptote: \(x\)-axis \((y=0)\) as \(x \rightarrow \infty\)
Decreasing; one-to-one; smooth; continuous
See Figure 26 for a typical graph.

If \(a^{u}=a^{v}\), then \(u=v\).

45. \(f(x)=3 \cdot\left(\frac{1}{2}\right)^{x}\)
46. \(f(x)=4 \cdot\left(\frac{1}{3}\right)^{x}\)
47. \(f(x)=3^{-x}-2\)
48. \(f(x)=-3^{x}+1\)
49. \(f(x)=2+4^{x-1}\)
50. \(f(x)=1-2^{x+3}\)
51. \(f(x)=2+3^{x / 2}\)
52. \(f(x)=1-2^{-x / 3}\)

In Problems 53-60, begin with the graph of \(y=e^{x}\) [Figure 28] and use transformations to graph each function. Determine the domain, range, and horizontal asymptote of each function.
53. \(f(x)=e^{-x}\)
54. \(f(x)=-e^{x}\)
55. \(f(x)=e^{x+2}\)
56. \(f(x)=e^{x}-1\)
57. \(f(x)=5-e^{-x}\)
58. \(f(x)=9-3 e^{-x}\)
59. \(f(x)=2-e^{-x / 2}\)
60. \(f(x)=7-3 e^{2 x}\)

In Problems 61-80, solve each equation.
61. \(7^{x}=7^{3}\)
62. \(5^{x}=5^{-6}\)
65. \(\left(\frac{1}{5}\right)^{x}=\frac{1}{25}\)
66. \(\left(\frac{1}{4}\right)^{x}=\frac{1}{64}\)
63. \(2^{-x}=16\)
64. \(3^{-x}=81\)
69. \(3^{x^{3}}=9^{x}\)
70. \(4^{x^{2}}=2^{x}\)
67. \(2^{2 x-1}=4\)
68. \(5^{x+3}=\frac{1}{5}\)
73. \(3^{x^{2}-7}=27^{2 x}\)
74. \(5^{x^{2}+8}=125^{2 x}\)
71. \(8^{-x+14}=16^{x}\)
72. \(9^{-x+15}=27^{x}\)
78. \(e^{3 x}=e^{2-x}\)
75. \(4^{x} \cdot 2^{x^{2}}=16^{2}\)
76. \(9^{2 x} \cdot 27^{x^{2}}=3^{-1}\)
77. \(e^{x}=e^{3 x+8}\)
81. If \(4^{x}=7\), what does \(4^{-2 x}\) equal?
79. \(e^{x^{2}}=e^{3 x} \cdot \frac{1}{e^{2}}\)
80. \(\left(e^{4}\right)^{x} \cdot e^{x^{2}}=e^{12}\)
83. If \(3^{-x}=2\), what does \(3^{2 x}\) equal?
82. If \(2^{x}=3\), what does \(4^{-x}\) equal?

In Problems 85-88, determine the exponential function whose graph is given.
85.

86.

87.

88.

89. Find an exponential function with horizontal asymptote \(y=2\) whose graph contains the points \((0,3)\) and \((1,5)\).
90. Find an exponential function with horizontal asymptote \(y=-3\) whose graph contains the points \((0,-2)\) and \((-2,1)\).

\section*{Mixed Practice}
91. Suppose that \(f(x)=2^{x}\).
(a) What is \(f(4)\) ? What point is on the graph of \(f\) ?
(b) If \(f(x)=\frac{1}{16}\), what is \(x\) ? What point is on the graph of \(f\) ?
93. Suppose that \(g(x)=4^{x}+2\).
(a) What is \(g(-1)\) ? What point is on the graph of \(g\) ?
(b) If \(g(x)=66\), what is \(x\) ? What point is on the graph of \(g\) ?
95. Suppose that \(H(x)=\left(\frac{1}{2}\right)^{x}-4\).
(a) What is \(H(-6)\) ? What point is on the graph of \(H\) ?
(b) If \(H(x)=12\), what is \(x\) ? What point is on the graph of \(H\) ?
(c) Find the zero of \(H\).
92. Suppose that \(f(x)=3^{x}\).
(a) What is \(f(4)\) ? What point is on the graph of \(f\) ?
(b) If \(f(x)=\frac{1}{9}\), what is \(x\) ? What point is on the graph
of \(f\) ? of \(f\) ?
94. Suppose that \(g(x)=5^{x}-3\).
(a) What is \(g(-1)\) ? What point is on the graph of \(g\) ?
(b) If \(g(x)=122\), what is \(x\) ? What point is on the graph of \(g\) ?
96. Suppose that \(F(x)=\left(\frac{1}{3}\right)^{x}-3\).
(a) What is \(F(-5)\) ? What point is on the graph of \(F\) ?
(b) If \(F(x)=24\), what is \(x\) ? What point is on the graph of \(F\) ?
(c) Find the zero of \(F\).

In Problems 97-100, graph each function. Based on the graph, state the domain and the range, and find any intercepts.
97. \(f(x)= \begin{cases}e^{-x} & \text { if } x<0 \\ e^{x} & \text { if } x \geq 0\end{cases}\)
99. \(f(x)= \begin{cases}-e^{x} & \text { if } x<0 \\ -e^{-x} & \text { if } x \geq 0\end{cases}\)
98. \(f(x)= \begin{cases}e^{x} & \text { if } x<0 \\ e^{-x} & \text { if } x \geq 0\end{cases}\)
100. \(f(x)= \begin{cases}-e^{-x} & \text { if } x<0 \\ -e^{x} & \text { if } x \geq 0\end{cases}\)

\section*{Applications and Extensions}
101. Optics If a single pane of glass obliterates \(3 \%\) of the light passing through it, the percent \(p\) of light that passes through \(n\) successive panes is given approximately by the function
\[
p(n)=100(0.97)^{n}
\]
(a) What percent of light will pass through 10 panes?
(b) What percent of light will pass through 25 panes?
(c) Explain the meaning of the base 0.97 in this problem.
102. Atmospheric Pressure The atmospheric pressure \(p\) on a balloon or plane decreases with increasing height. This pressure, measured in millimeters of mercury, is related to the height \(h\) (in kilometers) above sea level by the function
\[
p(h)=760 e^{-0.145 h}
\]
(a) Find the atmospheric pressure at a height of 2 kilometers (over a mile).
(b) What is it at a height of 10 kilometers (over 30,000 feet)?
103. Depreciation The price \(p\), in dollars, of a Honda Civic EX-L Sedan that is \(x\) years old is modeled by
\[
p(x)=22,265(0.90)^{x}
\]
(a) How much should a 3-year-old Civic EX-L Sedan cost?
(b) How much should a 9 -year-old Civic EX-L Sedan cost?
(c) Explain the meaning of the base 0.90 in this problem.
104. Healing of Wounds The normal healing of wounds can be modeled by an exponential function. If \(A_{0}\) represents the original area of the wound and if \(A\) equals the area of the wound, then the function
\[
A(n)=A_{0} e^{-0.35 n}
\]
describes the area of a wound after \(n\) days following an injury when no infection is present to retard the healing. Suppose that a wound initially had an area of 100 square millimeters.
(a) If healing is taking place, how large will the area of the wound be after 3 days?
(b) How large will it be after 10 days?
105. Advanced-Stage Pancreatic Cancer The percentage of patients \(P\) who have survived \(t\) years after initial diagnosis of advanced-stage pancreatic cancer is modeled by the function
\[
P(t)=100(0.3)^{t}
\]

Source: Cancer Treatment Centers of America
(a) According to the model, what percent of patients survive 1 year after initial diagnosis?
(b) What percent of patients survive 2 years after initial diagnosis?
(c) Explain the meaning of the base, 0.3 , in the context of this problem.
106. Endangered Species In a protected environment, the population \(P\) of an endangered species recovers over time \(t\) according to the model
\[
P(t)=30(1.149)^{t}
\]
(a) What is the size of the initial population of the species?
(b) According to the model, what will be the population of the species in 5 years?
(c) According to the model, what will be the population of the species in 10 years?
(d) According to the model, what will be the population of the species in 15 years?
(e) What is happening to the population every 5 years?
107. Drug Medication The function
\[
D(h)=5 e^{-0.4 h}
\]
can be used to find the number of milligrams \(D\) of a certain drug that is in a patient's bloodstream \(h\) hours after the drug has been administered. How many milligrams will be present after 1 hour? After 6 hours?
108. Spreading of Rumors A model for the number \(N\) of people in a college community who have heard a certain rumor is
\[
N=P\left(1-e^{-0.15 d}\right)
\]
where \(P\) is the total population of the community and \(d\) is the number of days that have elapsed since the rumor began. In a community of 1000 students, how many students will have heard the rumor after 3 days?
109. Exponential Probability Between 12:00 PM and 1:00 PM, cars arrive at Citibank's drive-thru at the rate of 6 cars per hour ( 0.1 car per minute). The following formula from probability can be used to determine the probability that a car will arrive within \(t\) minutes of 12:00 PM:
\[
F(t)=1-e^{-0.1 t}
\]
(a) Determine the probability that a car will arrive within 10 minutes of 12:00 PM (that is, before 12:10 PM).
(b) Determine the probability that a car will arrive within 40 minutes of 12:00 рм (before 12:40 PM).
(c) What value does \(F\) approach as \(t\) becomes unbounded in the positive direction?
(d) Graph \(F\) using a graphing utility.
(e) Using INTERSECT, determine how many minutes are needed for the probability to reach \(50 \%\).
110. Exponential Probability Between \(5: 00\) PM and 6:00 pm, cars arrive at Jiffy Lube at the rate of 9 cars per hour ( 0.15 car per minute). The following formula from probability can be used to determine the probability that a car will arrive within \(t\) minutes of 5:00 PM:
\[
F(t)=1-e^{-0.15 t}
\]
(a) Determine the probability that a car will arrive within 15 minutes of 5:00 рм (that is, before 5:15 рм).
(b) Determine the probability that a car will arrive within 30 minutes of 5:00 pm (before 5:30 pm).
(c) What value does \(F\) approach as \(t\) becomes unbounded in the positive direction?
(d) Graph \(F\) using a graphing utility.
(e) Using INTERSECT, determine how many minutes are needed for the probability to reach \(60 \%\).
111. Poisson Probability Between 5:00 PM and 6:00 PM, cars arrive at McDonald's drive-thru at the rate of 20 cars per hour. The following formula from probability can be used to determine the probability that \(x\) cars will arrive between 5:00 PM and 6:00 PM.
\[
P(x)=\frac{20^{x} e^{-20}}{x!}
\]
where
\[
x!=x \cdot(x-1) \cdot(x-2) \cdot \cdots \cdot 3 \cdot 2 \cdot 1
\]
(a) Determine the probability that \(x=15\) cars will arrive between 5:00 PM and 6:00 pm.
(b) Determine the probability that \(x=20\) cars will arrive between 5:00 pm and 6:00 pm.
112. Poisson Probability People enter a line for the Demon Roller Coaster at the rate of 4 per minute. The following formula from probability can be used to determine the probability that \(x\) people will arrive within the next minute.
\[
P(x)=\frac{4^{x} e^{-4}}{x!}
\]
where
\[
x!=x \cdot(x-1) \cdot(x-2) \cdots \cdot 3 \cdot 2 \cdot 1
\]
(a) Determine the probability that \(x=5\) people will arrive within the next minute.
(b) Determine the probability that \(x=8\) people will arrive within the next minute.
113. Relative Humidity The relative humidity is the ratio (expressed as a percent) of the amount of water vapor in the air to the maximum amount that it can hold at a specific temperature. The relative humidity, \(R\), is found using the following formula:
\[
R=10^{\frac{4221}{T+459.4}-\frac{4221}{D+459.4}+2}
\]
where \(T\) is the air temperature (in \({ }^{\circ} \mathrm{F}\) ) and \(D\) is the dew point temperature (in \({ }^{\circ} \mathrm{F}\) ).
(a) Determine the relative humidity if the air temperature is \(50^{\circ}\) Fahrenheit and the dew point temperature is \(41^{\circ}\) Fahrenheit.
(b) Determine the relative humidity if the air temperature is \(68^{\circ}\) Fahrenheit and the dew point temperature is \(59^{\circ}\) Fahrenheit.
(c) What is the relative humidity if the air temperature and the dew point temperature are the same?
114. Learning Curve Suppose that a student has 500 vocabulary words to learn. If the student learns 15 words after 5 minutes, the function
\[
L(t)=500\left(1-e^{-0.0061 t}\right)
\]
approximates the number of words \(L\) that the student will have learned after \(t\) minutes.
(a) How many words will the student have learned after 30 minutes?
(b) How many words will the student have learned after 60 minutes?
115. Current in a \(\boldsymbol{R L}\) Circuit The equation governing the amount of current \(I\) (in amperes) after time \(t\) (in seconds) in a single \(R L\) circuit consisting of a resistance \(R\) (in ohms), an inductance \(L\) (in henrys), and an electromotive force \(E\) (in volts) is
\[
I=\frac{E}{R}\left[1-e^{-(R / L) t}\right]
\]

(a) If \(E=120\) volts, \(R=10\) ohms, and \(L=5\) henrys, how much current \(I_{1}\) is flowing after 0.3 second? After 0.5 second? After 1 second?
(b) What is the maximum current?
(c) Graph this function \(I=I_{1}(t)\), measuring \(I\) along the \(y\)-axis and \(t\) along the \(x\)-axis.
(d) If \(E=120\) volts, \(R=5\) ohms, and \(L=10\) henrys, how much current \(I_{2}\) is flowing after 0.3 second? After 0.5 second? After 1 second?
(e) What is the maximum current?
(f) Graph the function \(I=I_{2}(t)\) on the same coordinate axes as \(I_{1}(t)\).
116. Current in a \(\boldsymbol{R} \boldsymbol{C}\) Circuit The equation governing the amount of current \(I\) (in amperes) after time \(t\) (in microseconds) in a single \(R C\) circuit consisting of a resistance \(R\) (in ohms), a capacitance \(C\) (in microfarads), and an electromotive force \(E\) (in volts) is
\[
I=\frac{E}{R} e^{-t /(R C)}
\]

(a) If \(E=120\) volts, \(R=2000\) ohms, and \(C=1.0\) microfarad, how much current \(I_{1}\) is flowing initially \((t=0) ?\) After 1000 microseconds? After 3000 microseconds?
(b) What is the maximum current?
(c) Graph the function \(I=I_{1}(t)\), measuring \(I\) along the \(y\)-axis and \(t\) along the \(x\)-axis.
(d) If \(E=120\) volts, \(R=1000\) ohms, and \(C=2.0\) microfarads, how much current \(I_{2}\) is flowing initially? After 1000 microseconds? After 3000 microseconds?
(e) What is the maximum current?
(f) Graph the function \(I=I_{2}(t)\) on the same coordinate axes as \(I_{1}(t)\).
117. If \(f\) is an exponential function of the form \(f(x)=C \cdot a^{x}\) with growth factor 3 and \(f(6)=12\), what is \(f(7)\) ?
118. Another Formula for \(\boldsymbol{e}\) Use a calculator to compute the values of
\[
2+\frac{1}{2!}+\frac{1}{3!}+\cdots+\frac{1}{n!}
\]
for \(n=4,6,8\), and 10. Compare each result with \(e\).
[Hint: \(1!=1,2!=2 \cdot 1,3!=3 \cdot 2 \cdot 1\),
\[
n!=n(n-1) \cdot \cdots \cdot(3)(2)(1) .]
\]
119. Another Formula for \(\boldsymbol{e}\) Use a calculator to compute the various values of the expression. Compare the values to \(e\).
\[
2+\frac{1}{1+\frac{1}{2+\frac{2}{3+\frac{3}{4+\frac{4}{\text { etc. }}}}}}
\]
120. Difference Quotient If \(f(x)=a^{x}\), show that
\[
\frac{f(x+h)-f(x)}{h}=a^{x} \cdot \frac{a^{h}-1}{h} \quad h \neq 0
\]
121. If \(f(x)=a^{x}\), show that \(f(A+B)=f(A) \cdot f(B)\).
122. If \(f(x)=a^{x}\), show that \(f(-x)=\frac{1}{f(x)}\).
123. If \(f(x)=a^{x}\), show that \(f(\alpha x)=[f(x)]^{\alpha}\).

Problems 124 and 125 provide definitions for two other transcendental functions.
124. The hyperbolic sine function, designated by \(\sinh x\), is defined as
\[
\sinh x=\frac{1}{2}\left(e^{x}-e^{-x}\right)
\]
(a) Show that \(f(x)=\sinh x\) is an odd function.
(b) Graph \(f(x)=\sinh x\) using a graphing utility.
125. The hyperbolic cosine function, designated by \(\cosh x\), is defined as
\[
\cosh x=\frac{1}{2}\left(e^{x}+e^{-x}\right)
\]
(a) Show that \(f(x)=\cosh x\) is an even function.
(b) Graph \(f(x)=\cosh x\) using a graphing utility.
(c) Refer to Problem 124. Show that, for every \(x\),
\[
(\cosh x)^{2}-(\sinh x)^{2}=1
\]
126. Historical Problem Pierre de Fermat (1601-1665) conjectured that the function
\[
f(x)=2^{\left(2^{x}\right)}+1
\]
for \(x=1,2,3, \ldots\), would always have a value equal to a prime number. But Leonhard Euler (1707-1783) showed that this formula fails for \(x=5\). Use a calculator to determine the prime numbers produced by \(f\) for \(x=1,2,3,4\). Then show that \(f(5)=641 \times 6,700,417\), which is not prime.

\section*{Discussion and Writing}
127. The bacteria in a 4 -liter container double every minute. After 60 minutes the container is full. How long did it take to fill half the container?
128. Explain in your own words what the number \(e\) is. Provide at least two applications that use this number.
129. Do you think that there is a power function that increases more rapidly than an exponential function whose base is greater than 1? Explain.
130. As the base \(a\) of an exponential function \(f(x)=a^{x}\), where \(a>1\), increases, what happens to the behavior of its graph for \(x>0\) ? What happens to the behavior of its graph for \(x<0\) ?
131. The graphs of \(y=a^{-x}\) and \(y=\left(\frac{1}{a}\right)^{x}\) are identical. Why?

\section*{Retain Your Knowledge}

Problems 132-135 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
132. Solve the inequality: \(x^{3}+5 x^{2} \leq 4 x+20\)
133. Solve the inequality: \(\frac{x+1}{x-2} \geq 1\)
134. Determine whether the function is linear or nonlinear. If linear, determine the equation that defines \(y=f(x)\).
\begin{tabular}{|cc|}
\hline \(\boldsymbol{x}\) & \(\boldsymbol{y}=\boldsymbol{f}(\boldsymbol{x})\) \\
\hline-6 & -3 \\
-3 & -4 \\
0 & -5 \\
3 & -6 \\
6 & -7 \\
\hline
\end{tabular}
135. Consider the quadratic function \(f(x)=x^{2}+2 x-3\).
(a) Graph \(f\) by determining whether its graph opens up or down and by finding its vertex, axis of symmetry, \(y\)-intercept, and \(x\)-intercepts, if any.
(b) Determine the domain and the range of \(f\).
(c) Determine where \(f\) is increasing and where it is decreasing.

\section*{'Are You Prepared?' Answers}
1. \(64 ; 4 ; \frac{1}{9}\)
2. \(\{-4,1\}\)
3. False
4. 3
5. True

\subsection*{4.4 Logarithmic Functions}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Solve Linear Inequalities (Appendix A, Section A.10, pp. A84-A85)
- Solve Quadratic Inequalities (Section 2.5, pp. 160-162)
- Polynomial and Rational Inequalities (Section 3.6, pp. 259-262)
- Solve Linear Equations (Appendix A, Section A.8, pp. A64-A66)

Now Work the ‘Are You Prepared?’ problems on page 320.

> OBJECTIVES \(1 \begin{aligned} & \text { Change Exponential Statements to Logarithmic Statements } \\ & \text { and Logarithmic Statements to Exponential Statements (p. 312) }\end{aligned}\) 2 Evaluate Logarithmic Expressions (p. 312) 3 Determine the Domain of a Logarithmic Function (p. 313) 4 Graph Logarithmic Functions (p. 313) 5 Solve Logarithmic Equations (p. 318)

Recall that a one-to-one function \(y=f(x)\) has an inverse function that is defined (implicitly) by the equation \(x=f(y)\). In particular, the exponential function \(y=f(x)=a^{x}\), where \(a>0\) and \(a \neq 1\), is one-to-one and, hence, has an inverse function that is defined implicitly by the equation
\[
x=a^{y}, \quad a>0, \quad a \neq 1
\]

This inverse function is so important that it is given a name, the logarithmic function.

\section*{DEFINITION}

In Words
When you read \(\log _{a} x\), think to yourself "a raised to what power gives mex?"

The logarithmic function to the base \(\boldsymbol{a}\), where \(a>0\) and \(a \neq 1\), is denoted by \(y=\log _{a} x\) (read as " \(y\) is the logarithm to the base \(a\) of \(x\) ") and is defined by
\[
y=\log _{a} x \quad \text { if and only if } x=a^{y}
\]

The domain of the logarithmic function \(y=\log _{a} x\) is \(x>0\).

As this definition illustrates, a logarithm is a name for a certain exponent. So \(\log _{a} x\) represents the exponent to which \(a\) must be raised to obtain \(x\).

\section*{EXAMPLE I Relating Logarithms to Exponents}
(a) If \(y=\log _{3} x\), then \(x=3^{y}\). For example, the logarithmic statement \(4=\log _{3} 81\) is equivalent to the exponential statement \(81=3^{4}\).
(b) If \(y=\log _{5} x\), then \(x=5^{y}\). For example, \(-1=\log _{5}\left(\frac{1}{5}\right)\) is equivalent to \(\frac{1}{5}=5^{-1}\).

\section*{1 Change Exponential Statements to Logarithmic Statements and Logarithmic Statements to Exponential Statements}

The definition of a logarithm can be used to convert from exponential form to logarithmic form, and vice versa, as the following two examples illustrate.

\section*{EXAMPLE 2 Changing Exponential Statements to Logarithmic Statements}

Change each exponential statement to an equivalent statement involving a logarithm.
(a) \(1.2^{3}=m\)
(b) \(e^{b}=9\)
(c) \(a^{4}=24\)

Solution Use the fact that \(y=\log _{a} x\) and \(x=a^{y}\), where \(a>0\) and \(a \neq 1\), are equivalent.
(a) If \(1.2^{3}=m\), then \(3=\log _{1.2} m\).
(b) If \(e^{b}=9\), then \(b=\log _{e} 9\).
(c) If \(a^{4}=24\), then \(4=\log _{a} 24\).
am Now Work problem 9

\section*{EXAMPLE 3 Changing Logarithmic Statements to Exponential Statements}

Change each logarithmic statement to an equivalent statement involving an exponent.
(a) \(\log _{a} 4=5\)
(b) \(\log _{e} b=-3\)
(c) \(\log _{3} 5=c\)

Solution (a) If \(\log _{a} 4=5\), then \(a^{5}=4\).
(b) If \(\log _{e} b=-3\), then \(e^{-3}=b\).
(c) If \(\log _{3} 5=c\), then \(3^{c}=5\).

Now Work problem 17

\section*{2 Evaluate Logarithmic Expressions}

To find the exact value of a logarithm, write the logarithm in exponential notation using the fact that \(y=\log _{a} x\) is equivalent to \(a^{y}=x\), and use the fact that if \(a^{u}=a^{v}\), then \(u=v\).

\section*{EXAMPLE 4}

Finding the Exact Value of a Logarithmic Expression
Find the exact value of:
(a) \(\log _{2} 16\)
(b) \(\log _{3} \frac{1}{27}\)

Solution
(a) To evaluate \(\log _{2} 16\), think "2
raised to what power yields \(16 ?\) "
\(y=\log _{2} 16\) \(\begin{array}{ll}2^{y}=16 & \text { Change to exponential } \\ 2^{y}=2^{4} \quad \text { form. } \\ y=4 \quad \text { Equate exponents. }\end{array}\)

Therefore, \(\log _{2} 16=4\).
(b) To evaluate \(\log _{3} \frac{1}{27}\), think " 3 raised to what power yields \(\frac{1}{27}\) ?"
\[
\begin{aligned}
y & =\log _{3} \frac{1}{27} & & \\
3^{y} & =\frac{1}{27} & & \begin{array}{l}
\text { Change to exponential } \\
\text { form. }
\end{array} \\
3^{y} & =3^{-3} & & \frac{1}{27}=\frac{1}{3^{3}}=3^{-3} \\
y & =-3 & & \text { Equate exponents. }
\end{aligned}
\]

Therefore, \(\log _{3} \frac{1}{27}=-3\).

\section*{3 Determine the Domain of a Logarithmic Function}

The logarithmic function \(y=\log _{a} x\) has been defined as the inverse of the exponential function \(y=a^{x}\). That is, if \(f(x)=a^{x}\), then \(f^{-1}(x)=\log _{a} x\). Based on the discussion given in Section 4.2 on inverse functions, for a function \(f\) and its inverse \(f^{-1}\),
\[
\text { Domain of } f^{-1}=\text { Range of } f \quad \text { and } \quad \text { Range of } f^{-1}=\text { Domain of } f
\]

Consequently, it follows that

Domain of the logarithmic function \(=\) Range of the exponential function \(=(0, \infty)\)
Range of the logarithmic function \(=\) Domain of the exponential function \(=(-\infty, \infty)\)

The next box summarizes some properties of the logarithmic function:
\[
\begin{aligned}
& y=\log _{a} x \quad\left(\text { defining equation: } \quad x=a^{y}\right) \\
& \text { Domain: } \quad(0, \infty) \quad \text { Range: } \quad(-\infty, \infty)
\end{aligned}
\]

The domain of a logarithmic function consists of the positive real numbers, so the argument of a logarithmic function must be greater than zero.

\section*{EXAMPLE 5 Finding the Domain of a Logarithmic Function}

Find the domain of each logarithmic function.
(a) \(F(x)=\log _{2}(x+3)\)
(b) \(g(x)=\log _{5}\left(\frac{1+x}{1-x}\right)\)
(c) \(h(x)=\log _{1 / 2}|x|\)

Solution (a) The domain of \(F\) consists of all \(x\) for which \(x+3>0\), that is, \(x>-3\). Using interval notation, the domain of \(F\) is \((-3, \infty)\).
(b) The domain of \(g\) is restricted to
\[
\frac{1+x}{1-x}>0
\]

Solve this inequality to find that the domain of \(g\) consists of all \(x\) between -1 and 1 , that is, \(-1<x<1\) or, using interval notation, \((-1,1)\).
(c) Since \(|x|>0\), provided that \(x \neq 0\), the domain of \(h\) consists of all real numbers except zero or, using interval notation, \((-\infty, 0) \cup(0, \infty)\).

\section*{4 Graph Logarithmic Functions}

Because exponential functions and logarithmic functions are inverses of each other, the graph of the logarithmic function \(y=\log _{a} x\) is the reflection about the line \(y=x\) of the graph of the exponential function \(y=a^{x}\), as shown in Figure 32 on the following page.

Figure 32

For example, to graph \(y=\log _{2} x\), graph \(y=2^{x}\) and reflect it about the line \(y=x\). See Figure 33. To graph \(y=\log _{1 / 3} x\), graph \(y=\left(\frac{1}{3}\right)^{x}\) and reflect it about the line \(y=x\). See Figure 34.

Figure 33

Figure 34

Now Work problem 59
The graphs of \(y=\log _{a} x\) in Figures 32(a) and (b) lead to the following properties.

\section*{Properties of the Logarithmic Function \(f(x)=\log _{a} x\)}
1. The domain is the set of positive real numbers, or \((0, \infty)\) using interval notation; the range is the set of all real numbers, or \((-\infty, \infty)\) using interval notation.
2. The \(x\)-intercept of the graph is 1 . There is no \(y\)-intercept.
3. The \(y\)-axis \((x=0)\) is a vertical asymptote of the graph.
4. A logarithmic function is decreasing if \(0<a<1\) and is increasing if \(a>1\).
5. The graph of \(f\) contains the points \((1,0),(a, 1)\), and \(\left(\frac{1}{a},-1\right)\).
6. The graph is smooth and continuous, with no corners or gaps.

\section*{In Words}
\(y=\log _{e} x\) is written \(y=\ln x\).

If the base of a logarithmic function is the number \(e\), the result is the natural logarithm function. This function occurs so frequently in applications that it is given a special symbol, In (from the Latin, logarithmus naturalis). That is,
\[
y=\ln x \quad \text { if and only if } \quad x=e^{y}
\] \(y=x\) ?

\section*{Seeing the Concept}

Graph \(Y_{1}=e^{x}\) and \(Y_{2}=\ln x\) on the same square screen. Use eVALUEate to verify the points on the graph given in Figure 35 . Do you see the symmetry of the two graphs with respect to the line

Because \(y=\ln x\) and the exponential function \(y=e^{x}\) are inverse functions, the graph of \(y=\ln x\) can be obtained by reflecting the graph of \(y=e^{x}\) about the line \(y=x\). See Figure 35.

Other points on the graph of \(f(x)=\ln x\) can be found by using a calculator with an \(\ln\) key. See Table 7.

Figure 35

Table 7
\begin{tabular}{|cr|}
\hline\(x\) & \(\ln x\) \\
\hline\(\frac{1}{2}\) & -0.69 \\
2 & 0.69 \\
3 & 1.10 \\
\hline
\end{tabular}

\section*{EXAMPLE 6 Graphing a Logarithmic Function and Its Inverse}
(a) Find the domain of the logarithmic function \(f(x)=-\ln (x-2)\).
(b) Graph \(f\).
(c) From the graph, determine the range and vertical asymptote of \(f\).
(d) Find \(f^{-1}\), the inverse of \(f\).
(e) Use \(f^{-1}\) to confirm the range of \(f\) found in part (c). From the domain of \(f\), find the range of \(f^{-1}\).
(f) Graph \(f^{-1}\).

Sollution (a) The domain of \(f\) consists of all \(x\) for which \(x-2>0\), or, equivalently, \(x>2\). The domain of \(f\) is \(\{x \mid x>2\}\) or \((2, \infty)\) in interval notation.
(b) To obtain the graph of \(y=-\ln (x-2)\), begin with the graph of \(y=\ln x\) and use transformations. See Figure 36.

Figure 36

\(\overrightarrow{\text { Multiply by }-1 \text {; }}\) reflect about (a) \(y=\ln x\)

Replace \(x\) by \(x-2\); shift right 2 units.

(c) \(y=-\ln (x-2)\)
(c) The range of \(f(x)=-\ln (x-2)\) is the set of all real numbers. The vertical asymptote is \(x=2\). [Do you see why? The original asymptote \((x=0)\) is shifted to the right 2 units.]
(d) To find \(f^{-1}\), begin with \(y=-\ln (x-2)\). The inverse function is defined (implicitly) by the equation
\[
x=-\ln (y-2)
\]

Proceed to solve for \(y\).
\[
\begin{aligned}
-x & =\ln (y-2) & & \text { Isolate the logarithm. } \\
e^{-x} & =y-2 & & \text { Change to an exponential statement. } \\
y & =e^{-x}+2 & & \text { Solve for } y .
\end{aligned}
\]

The inverse of \(f\) is \(f^{-1}(x)=e^{-x}+2\).
(e) The domain of \(f^{-1}\) equals the range of \(f\), which is the set of all real numbers, from part (c). The range of \(f^{-1}\) is the domain of \(f\), which is \((2, \infty)\) in interval notation.
(f) To graph \(f^{-1}\), use the graph of \(f\) in Figure 36(c) and reflect it about the line \(y=x\). See Figure 37. The graph of \(f^{-1}(x)=e^{-x}+2\) also could be obtained by using transformations.

Figure 37

Figure 38

If the base of a logarithmic function is the number 10 , the result is the common logarithm function. If the base \(a\) of the logarithmic function is not indicated, it is understood to be 10. That is,
\[
y=\log x \quad \text { if and only if } \quad x=10^{y}
\]

Because \(y=\log x\) and the exponential function \(y=10^{x}\) are inverse functions, the graph of \(y=\log x\) can be obtained by reflecting the graph of \(y=10^{x}\) about the line \(y=x\). See Figure 38 .

\section*{EXAMPLE 7 Graphing a Logarithmic Function and Its Inverse}
(a) Find the domain of the logarithmic function \(f(x)=3 \log (x-1)\).
(b) Graph \(f\).
(c) From the graph, determine the range and vertical asymptote of \(f\).
(d) Find \(f^{-1}\), the inverse of \(f\).
(e) Find the domain and the range of \(f^{-1}\).
(f) Graph \(f^{-1}\).

Solution (a) The domain of \(f\) consists of all \(x\) for which \(x-1>0\), or, equivalently, \(x>1\). The domain of \(f\) is \(\{x \mid x>1\}\), or \((1, \infty)\) in interval notation.
(b) To obtain the graph of \(y=3 \log (x-1)\), begin with the graph of \(y=\log x\) and use transformations. See Figure 39 on the next page.

\section*{Figure 39}

(a) \(y=\log x\)
(b) \(y=\log (x-1)\)
(c) \(y=3 \log (x-1)\)
(c) The range of \(f(x)=3 \log (x-1)\) is the set of all real numbers. The vertical asymptote is \(x=1\).
(d) Begin with \(y=3 \log (x-1)\). The inverse function is defined (implicitly) by the equation
\[
x=3 \log (y-1)
\]

Proceed to solve for \(y\).
\[
\begin{array}{rlrl}
\frac{x}{3} & =\log (y-1) \\
10^{x / 3} & =y-1 & & \text { Isolate the logarithm. } \\
y & =10^{x / 3}+1 & & \text { Change to an exponen. } y .
\end{array}
\]

The inverse of \(f\) is \(f^{-1}(x)=10^{x / 3}+1\).
(e) The domain of \(f^{-1}\) is the range of \(f\), which is the set of all real numbers, from part (c). The range of \(f^{-1}\) is the domain of \(f\), which is \((1, \infty)\) in interval notation.
(f) To graph \(f^{-1}\), use the graph of \(f\) in Figure 39(c) and reflect it about the line \(y=x\). See Figure 40 . The graph of \(f^{-1}(x)=10^{x / 3}+1\) also could be obtained by using transformations.

Figure 40

\section*{5 Solve Logarithmic Equations}

Equations that contain logarithms are called logarithmic equations. Care must be taken when solving logarithmic equations algebraically. In the expression \(\log _{a} M\), remember that \(a\) and \(M\) are positive and \(a \neq 1\). Be sure to check each apparent solution in the original equation and discard any that are extraneous.

Some logarithmic equations can be solved by changing the logarithmic equation to exponential form using the fact that \(y=\log _{a} x\) means \(a^{y}=x\).

\section*{EXAMPLE 8 Solving Logarithmic Equations}

Solve:
(a) \(\log _{3}(4 x-7)=2\)
(b) \(\log _{x} 64=2\)

Solution (a) To solve, change the logarithmic equation to exponential form.
\[
\begin{aligned}
\log _{3}(4 x-7) & =2 \quad \text { Change to exponential form using the fact that } \\
4 x-7 & =3^{2} \quad y=\log _{2} \times \text { means } a^{y}=x . \\
4 x-7 & =9 \\
4 x & =16 \\
x & =4 \\
\text { Check: } \log _{3}(4 x-7) & =\log _{3}(4 \cdot 4-7)=\log _{3} 9=2 \quad 3^{2}=9
\end{aligned}
\]

The solution set is \(\{4\}\).
(b) To solve, change the logarithmic equation to exponential form.
\[
\begin{aligned}
\log _{x} 64 & =2 & & \\
x^{2} & =64 & & \text { Change to exponential form. } \\
x & = \pm \sqrt{64}= \pm 8 & & \text { Square Root Method }
\end{aligned}
\]

Because the base of a logarithm must be positive, discard -8 . Check the potential solution 8.
Check: \(\log _{8} 64=2 \quad 8^{2}=64\)
The solution set is \(\{8\}\).

\section*{EXAMPLE 9 Using Logarithms to Solve an Exponential Equation}

Solve: \(e^{2 x}=5\)
Solution To solve, change the exponential equation to logarithmic form.
\[
\begin{aligned}
e^{2 x} & =5 & & \\
2 x & =\ln 5 & & \text { Change to a logarithmic equation using } \\
x & =\frac{\ln 5}{2} & & \text { Exact solution } \\
& \approx 0.805 & & \text { Approximate solution }
\end{aligned}
\]

The solution set is \(\left\{\frac{\ln 5}{2}\right\}\).

\section*{EXAMPLE IO Alcohol and Driving}

Blood alcohol concentration (BAC) is a measure of the amount of alcohol in a person's bloodstream. A BAC of \(0.04 \%\) means that a person has 4 parts alcohol per 10,000 parts blood in the body. Relative risk is defined as the likelihood of one event occurring divided by the likelihood of a second event occurring. For example, if an individual with a BAC of \(0.02 \%\) is 1.4 times as likely to have a car accident as an individual who has not been drinking, the relative risk of an accident with a BAC of \(0.02 \%\) is 1.4 . Recent medical research suggests that the relative risk \(R\) of having an accident while driving a car can be modeled by an equation of the form
\[
R=e^{k x}
\]
where \(x\) is the percent of concentration of alcohol in the bloodstream and \(k\) is a constant.
(a) Research indicates that the relative risk of a person having an accident with a BAC of \(0.02 \%\) is 1.4 . Find the constant \(k\) in the equation.
(b) Using this value of \(k\), what is the relative risk if the concentration is \(0.17 \%\) ?
(c) Using this same value of \(k\), what BAC corresponds to a relative risk of 100?
(d) If the law asserts that anyone with a relative risk of 4 or more should not have driving privileges, at what concentration of alcohol in the bloodstream should a driver be arrested and charged with a DUI (driving under the influence)?

\section*{Solution}

NOTE A BAC of \(0.30 \%\) results in a loss of consciousness in most people.
(a) For a concentration of alcohol in the blood of \(0.02 \%\) and a relative risk of 1.4 , let \(x=0.02\) and \(R=1.4\) in the equation and solve for \(k\).
\[
\begin{aligned}
R & =e^{k x} & & \\
1.4 & =e^{k(0.02)} & & R=1.4 ; x=0.02 \\
0.02 k & =\ln 1.4 & & \text { Change to a logarithmic statement. } \\
k & =\frac{\ln 1.4}{0.02} \approx 16.82 & & \text { Solve for } k .
\end{aligned}
\]
(b) A concentration of \(0.17 \%\) means \(x=0.17\). Use \(k=16.82\) in the equation to find the relative risk \(R\) :
\[
R=e^{k x}=e^{(16.82)(0.17)} \approx 17.5
\]

For a concentration of alcohol in the blood of \(0.17 \%\), the relative risk of an accident is about 17.5 . That is, a person with a BAC of \(0.17 \%\) is 17.5 times as likely to have a car accident as a person with no alcohol in the bloodstream.
(c) A relative risk of 100 means \(R=100\). Use \(k=16.82\) in the equation \(R=e^{k x}\). The concentration \(x\) of alcohol in the blood obeys
\[
\begin{aligned}
100 & =e^{16.82 x} & & R=e^{k x} ; R=100 ; k=16.82 \\
16.82 x & =\ln 100 & & \text { Change to a logarithmic statement. } \\
x & =\frac{\ln 100}{16.82} \approx 0.27 & & \text { Solve for } x .
\end{aligned}
\]

For a concentration of alcohol in the blood of \(0.27 \%\), the relative risk of an accident is 100 .
(d) A relative risk of 4 means \(R=4\). Use \(k=16.82\) in the equation \(R=e^{k x}\). The concentration \(x\) of alcohol in the bloodstream obeys
\[
\begin{aligned}
4 & =e^{16.82 x} \\
16.82 x & =\ln 4 \\
x & =\frac{\ln 4}{16.82} \approx 0.082
\end{aligned}
\]

A driver with a BAC of \(0.082 \%\) or more should be arrested and charged with DUI.

\section*{SUMMARY}

\section*{Properties of the Logarithmic Function}
\(f(x)=\log _{a} x, \quad a>1\)
\(\left(y=\log _{a} x\right.\) means \(\left.x=a^{y}\right)\)
\(f(x)=\log _{a} x, \quad 0<a<1\)
\(\left(y=\log _{a} x\right.\) means \(\left.x=a^{y}\right)\)

Domain: the interval \((0, \infty)\); Range: the interval \((-\infty, \infty)\)
\(x\)-intercept: \(1 ; y\)-intercept: none; vertical asymptote: \(x=0\) ( \(y\)-axis); increasing; one-to-one
See Figure 41(a) for a typical graph.
Domain: the interval \((0, \infty)\); Range: the interval \((-\infty, \infty)\) \(x\)-intercept: \(1 ; y\)-intercept: none; vertical asymptote: \(x=0\) ( \(y\)-axis); decreasing; one-to-one

See Figure 41(b) for a typical graph.

\subsection*{4.4 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. Solve each inequality:
(a) \(3 x-7 \leq 8-2 x(\mathrm{pp} . \mathrm{A} 84-\mathrm{A} 85)\)
(b) \(x^{2}-x-6>0(\) pp. 160-162)
2. Solve the inequality: \(\frac{x-1}{x+4}>0\) (pp. 260-262)
3. Solve: \(2 x+3=9\) (pp. A64-A66)

\section*{Concepts and Vocabulary}
4. The domain of the logarithmic function \(f(x)=\log _{a} x\) is
\(\qquad\)
5. The graph of every logarithmic function \(f(x)=\log _{a} x\), where \(a>0\), and \(a \neq 1\), passes through three points:
\(\qquad\) and \(\qquad\) .
6. If the graph of a logarithmic function \(f(x)=\log _{a} x\), where \(a>0\) and \(a \neq 1\), is increasing, then its base must be larger than \(\qquad\) -.
7. True or False If \(y=\log _{a} x\), then \(y=a^{x}\).
8. True or False The graph of \(f(x)=\log _{a} x\), where \(a>0\) and \(a \neq 1\), has an \(x\)-intercept equal to 1 and no \(y\)-intercept.

\section*{Skill Building}

In Problems 9-16, change each exponential statement to an equivalent statement involving a logarithm.
9. \(9=3^{2}\)
10. \(16=4^{2}\)
11. \(a^{2}=1.6\)
12. \(a^{3}=2.1\)
13. \(2^{x}=7.2\)
14. \(3^{x}=4.6\)
15. \(e^{x}=8\)
16. \(e^{2.2}=M\)

In Problems 17-24, change each logarithmic statement to an equivalent statement involving an exponent.
17. \(\log _{2} 8=3\)
18. \(\log _{3}\left(\frac{1}{9}\right)=-2\)
19. \(\log _{a} 3=6\)
20. \(\log _{b} 4=2\)
21. \(\log _{3} 2=x\)
22. \(\log _{2} 6=x\)
23. \(\ln 4=x\)
24. \(\ln x=4\)

In Problems 25-36, find the exact value of each logarithm without using a calculator.
25. \(\log _{2} 1\)
26. \(\log _{8} 8\)
27. \(\log _{5} 25\)
28. \(\log _{3}\left(\frac{1}{9}\right)\)
29. \(\log _{1 / 2} 16\)
30. \(\log _{1 / 3} 9\)
31. \(\log _{10} \sqrt{10}\)
32. \(\log _{5} \sqrt[3]{25}\)
33. \(\log _{\sqrt{2}} 4\)
34. \(\log _{\sqrt{3}} 9\)
35. \(\ln \sqrt{e}\)
36. \(\ln e^{3}\)

In Problems 37-48, find the domain of each function.
37. \(f(x)=\ln (x-3)\)
38. \(g(x)=\ln (x-1)\)
39. \(F(x)=\log _{2} x^{2}\)
40. \(H(x)=\log _{5} x^{3}\)
41. \(f(x)=3-2 \log _{4}\left[\frac{x}{2}-5\right]\)
42. \(g(x)=8+5 \ln (2 x+3)\)
43. \(f(x)=\ln \left(\frac{1}{x+1}\right)\)
44. \(g(x)=\ln \left(\frac{1}{x-5}\right)\)
45. \(g(x)=\log _{5}\left(\frac{x+1}{x}\right)\)
46. \(h(x)=\log _{3}\left(\frac{x}{x-1}\right)\)
47. \(f(x)=\sqrt{\ln x}\)
48. \(g(x)=\frac{1}{\ln x}\)

In Problems 49-56, use a calculator to evaluate each expression. Round your answer to three decimal places.
49. \(\ln \frac{5}{3}\)
50. \(\frac{\ln 5}{3}\)
51. \(\frac{\ln \frac{10}{3}}{0.04}\)
52. \(\frac{\ln \frac{2}{3}}{-0.1}\)
53. \(\frac{\ln 4+\ln 2}{\log 4+\log 2}\)
54. \(\frac{\log 15+\log 20}{\ln 15+\ln 20}\)
55. \(\frac{2 \ln 5+\log 50}{\log 4-\ln 2}\)
56. \(\frac{3 \log 80-\ln 5}{\log 5+\ln 20}\)
57. Find \(a\) so that the graph of \(f(x)=\log _{a} x\) contains the point \((2,2)\).
58. Find \(a\) so that the graph of \(f(x)=\log _{a} x\) contains the point \(\left(\frac{1}{2},-4\right)\).

In Problems 59-62, graph each function and its inverse on the same Cartesian plane.
59. \(f(x)=3^{x} ; f^{-1}(x)=\log _{3} x\)
60. \(f(x)=4^{x} ; f^{-1}(x)=\log _{4} x\)
61. \(f(x)=\left(\frac{1}{2}\right)^{x} ; f^{-1}(x)=\log _{\frac{1}{2}} x\)
62. \(f(x)=\left(\frac{1}{3}\right)^{x} ; f^{-1}(x)=\log _{\frac{1}{3}} x\)

In Problems 63-70, the graph of a logarithmic function is given. Match each graph to one of the following functions.
(A) \(y=\log _{3} x\)
(B) \(y=\log _{3}(-x)\)
(C) \(y=-\log _{3} x\)
(D) \(y=-\log _{3}(-x)\)
(E) \(y=\log _{3} x-1\)
(F) \(y=\log _{3}(x-1)\)
(G) \(y=\log _{3}(1-x)\)
(H) \(y=1-\log _{3} x\)
63.

64.

65.

66.

67.

68.

69.

70.

In Problems 71-86, use the given function \(f\) to:
(a) Find the domain of \(f\).
(b) Graph \(f\).
(c) From the graph, determine the range and any asymptotes of \(f\).
(d) Find \(f^{-1}\), the inverse of \(f\).
(e) Find the domain and the range of \(f^{-1}\).
(f) Graph \(f^{-1}\).
71. \(f(x)=\ln (x+4)\)
72. \(f(x)=\ln (x-3)\)
73. \(f(x)=2+\ln x\)
74. \(f(x)=-\ln (-x)\)
75. \(f(x)=\ln (2 x)-3\)
76. \(f(x)=-2 \ln (x+1)\)
77. \(f(x)=\log (x-4)+2\)
78. \(f(x)=\frac{1}{2} \log x-5\)
79. \(f(x)=\frac{1}{2} \log (2 x)\)
80. \(f(x)=\log (-2 x)\)
81. \(f(x)=3+\log _{3}(x+2)\)
82. \(f(x)=2-\log _{3}(x+1)\)
83. \(f(x)=e^{x+2}-3\)
84. \(f(x)=3 e^{x}+2\)
85. \(f(x)=2^{x / 3}+4\)
86. \(f(x)=-3^{x+1}\)

In Problems 87-110, solve each equation.
87. \(\log _{3} x=2\)
88. \(\log _{5} x=3\)
89. \(\log _{2}(2 x+1)=3\)
90. \(\log _{3}(3 x-2)=2\)
91. \(\log _{x} 4=2\)
92. \(\log _{x}\left(\frac{1}{8}\right)=3\)
93. \(\ln e^{x}=5\)
94. \(\ln e^{-2 x}=8\)
95. \(\log _{4} 64=x\)
96. \(\log _{5} 625=x\)
97. \(\log _{3} 243=2 x+1\)
98. \(\log _{6} 36=5 x+3\)
99. \(e^{3 x}=10\)
100. \(e^{-2 x}=\frac{1}{3}\)
101. \(e^{2 x+5}=8\)
102. \(e^{-2 x+1}=13\)
103. \(\log _{3}\left(x^{2}+1\right)=2\)
104. \(\log _{5}\left(x^{2}+x+4\right)=2\)
105. \(\log _{2} 8^{x}=-3\)
106. \(\log _{3} 3^{x}=-1\)
107. \(5 e^{0.2 x}=7\)
108. \(8 \cdot 10^{2 x-7}=3\)
109. \(2 \cdot 10^{2-x}=5\)
110. \(4 e^{x+1}=5\)

\section*{Mixed Practice}
111. Suppose that \(G(x)=\log _{3}(2 x+1)-2\).
(a) What is the domain of \(G\) ?
112. Suppose that \(F(x)=\log _{2}(x+1)-3\).
(b) What is \(G(40)\) ? What point is on the graph of \(G\) ?
(a) What is the domain of \(F\) ?
(b) What is \(F(7)\) ? What point is on the graph of \(F\) ?
(c) If \(G(x)=3\), what is \(x\) ? What point is on the graph of \(G\) ?
(d) What is the zero of \(G\) ?
(c) If \(F(x)=-1\), what is \(x\) ? What point is on the graph of \(F\) ?
(d) What is the zero of \(F\) ?

In Problems 113-116, graph each function. Based on the graph, state the domain and the range, and find any intercepts.
113. \(f(x)= \begin{cases}\ln (-x) & \text { if } x<0 \\ \ln x & \text { if } x>0\end{cases}\)
114. \(f(x)= \begin{cases}\ln (-x) & \text { if } x \leq-1 \\ -\ln (-x) & \text { if }-1<x<0\end{cases}\)
115. \(f(x)= \begin{cases}-\ln x & \text { if } 0<x<1 \\ \ln x & \text { if } x \geq 1\end{cases}\)
116. \(f(x)= \begin{cases}\ln x & \text { if } 0<x<1 \\ -\ln x & \text { if } x \geq 1\end{cases}\)

\section*{Applications and Extensions}
117. Chemistry The pH of a chemical solution is given by the formula
\[
\mathrm{pH}=-\log _{10}\left[\mathrm{H}^{+}\right]
\]
where \(\left[\mathrm{H}^{+}\right]\)is the concentration of hydrogen ions in moles per liter. Values of pH range from 0 (acidic) to 14 (alkaline).
(a) What is the pH of a solution for which \(\left[\mathrm{H}^{+}\right]\)is 0.1 ?
(b) What is the pH of a solution for which \(\left[\mathrm{H}^{+}\right]\)is 0.01 ?
(c) What is the pH of a solution for which \(\left[\mathrm{H}^{+}\right]\)is 0.001 ?
(d) What happens to pH as the hydrogen ion concentration decreases?
(e) Determine the hydrogen ion concentration of an orange ( \(\mathrm{pH}=3.5\) ).
(f) Determine the hydrogen ion concentration of human blood ( \(\mathrm{pH}=7.4\) ).
118. Diversity Index Shannon's diversity index is a measure of the diversity of a population. The diversity index is given by the formula
\[
H=-\left(p_{1} \log p_{1}+p_{2} \log p_{2}+\cdots+p_{n} \log p_{n}\right)
\]
where \(p_{1}\) is the proportion of the population that is species \(1, p_{2}\) is the proportion of the population that is species 2 , and so on.
(a) According to the U.S. Census Bureau, the distribution of race in the United States in 2010 was as follows:
\begin{tabular}{|lc|}
\hline Race & Proportion \\
\hline White & 0.724 \\
Black or African American & 0.126 \\
American Indian and Alaska Native & 0.009 \\
Asian & 0.048 \\
Native Hawaiian and Other Pacific Islander & 0.002 \\
Some Other Race & 0.062 \\
Two or More Races & 0.029 \\
\hline
\end{tabular}

Source: U.S. Census Bureau
Compute the diversity index of the United States in 2010.
(b) The largest value of the diversity index is given by \(H_{\text {max }}=\log (S)\), where \(S\) is the number of categories of race. Compute \(H_{\text {max }}\).
(c) The evenness ratio is given by \(E_{H}=\frac{H}{H_{\text {max }}}\), where \(0 \leq E_{H} \leq 1\). If \(E_{H}=1\), there is complete evenness. Compute the evenness ratio for the United States.
(d) Obtain the distribution of race for the United States in 2000 from the Census Bureau. Compute Shannon's diversity index. Is the United States becoming more diverse? Why?
119. Atmospheric Pressure The atmospheric pressure \(p\) on an object decreases with increasing height. This pressure, measured in millimeters of mercury, is related to the height \(h\) (in kilometers) above sea level by the function
\[
p(h)=760 e^{-0.145 h}
\]
(a) Find the height of an aircraft if the atmospheric pressure is 320 millimeters of mercury.
(b) Find the height of a mountain if the atmospheric pressure is 667 millimeters of mercury.
120. Healing of Wounds The normal healing of wounds can be modeled by an exponential function. If \(A_{0}\) represents the original area of the wound, and if \(A\) equals the area of the wound, then the function
\[
A(n)=A_{0} e^{-0.35 n}
\]
describes the area of a wound after \(n\) days following an injury when no infection is present to retard the healing. Suppose that a wound initially had an area of 100 square millimeters.
(a) If healing is taking place, after how many days will the wound be one-half its original size?
(b) How long before the wound is \(10 \%\) of its original size?
121. Exponential Probability Between \(12: 00\) pm and \(1: 00\) PM, cars arrive at Citibank's drive-thru at the rate of 6 cars per hour ( 0.1 car per minute). The following formula from statistics can be used to determine the probability that a car will arrive within \(t\) minutes of 12:00 PM.
\[
F(t)=1-e^{-0.1 t}
\]
(a) Determine how many minutes are needed for the probability to reach \(50 \%\).
(b) Determine how many minutes are needed for the probability to reach \(80 \%\).
(c) Is it possible for the probability to equal \(100 \%\) ? Explain.
122. Exponential Probability Between 5:00 PM and 6:00 pm, cars arrive at Jiffy Lube at the rate of 9 cars per hour ( 0.15 car per minute). The following formula from statistics can be used to determine the probability that a car will arrive within \(t\) minutes of 5:00 PM.
\[
F(t)=1-e^{-0.15 t}
\]
(a) Determine how many minutes are needed for the probability to reach \(50 \%\).
(b) Determine how many minutes are needed for the probability to reach \(80 \%\).
123. Drug Medication The formula
\[
D=5 e^{-0.4 h}
\]
can be used to find the number of milligrams \(D\) of a certain drug that is in a patient's bloodstream \(h\) hours after the drug was administered. When the number of milligrams reaches 2 , the drug is to be administered again. What is the time between injections?
124. Spreading of Rumors A model for the number \(N\) of people in a college community who have heard a certain rumor is
\[
N=P\left(1-e^{-0.15 d}\right)
\]
where \(P\) is the total population of the community and \(d\) is the number of days that have elapsed since the rumor began. In a community of 1000 students, how many days will elapse before 450 students have heard the rumor?
125. Current in a RL Circuit The equation governing the amount of current \(I\) (in amperes) after time \(t\) (in seconds) in a simple \(R L\) circuit consisting of a resistance \(R\) (in ohms), an inductance \(L\) (in henrys), and an electromotive force \(E\) (in volts) is
\[
I=\frac{E}{R}\left[1-e^{-(R / L) t}\right]
\]

If \(E=12\) volts, \(R=10 \mathrm{ohms}\), and \(L=5\) henrys, how long does it take to obtain a current of 0.5 ampere? Of 1.0 ampere? Graph the equation.
126. Learning Curve Psychologists sometimes use the function
\[
L(t)=A\left(1-e^{-k t}\right)
\]
to measure the amount \(L\) learned at time \(t\). The number \(A\) represents the amount to be learned, and the number \(k\) measures the rate of learning. Suppose that a student has an amount \(A\) of 200 vocabulary words to learn. A psychologist determines that the student had learned 20 vocabulary words after 5 minutes.
(a) Determine the rate of learning \(k\).
(b) Approximately how many words will the student have learned after 10 minutes?
(c) After 15 minutes?
(d) How long does it take for the student to learn 180 words?

Loudness of Sound Problems 127-130 use the following discussion: The loudness L(x), measured in decibels (dB), of a sound of intensity \(x\), measured in watts per square meter, is defined as \(L(x)=10 \log \frac{x}{I_{0}}\), where \(I_{0}=10^{-12}\) watt per square meter is the least intense sound that a human ear can detect. Determine the loudness, in decibels, of each of the following sounds.
127. Normal conversation: intensity of \(x=10^{-7}\) watt per square meter.
128. Amplified rock music: intensity of \(10^{-1}\) watt per square meter.
129. Heavy city traffic: intensity of \(x=10^{-3}\) watt per square meter.
130. Diesel truck traveling 40 miles per hour 50 feet away: intensity 10 times that of a passenger car traveling 50 miles per hour 50 feet away whose loudness is 70 decibels.

The Richter Scale Problems 131 and 132 use the following discussion: The Richter scale is one way of converting seismographic readings into numbers that provide an easy reference for measuring the magnitude \(M\) of an earthquake. All earthquakes are compared to a zero-level earthquake whose seismographic reading measures 0.001 millimeter at a distance of 100 kilometers from the epicenter. An earthquake whose seismographic reading measures \(x\) millimeters has magnitude \(M(x)\), given by
\[
M(x)=\log \left(\frac{x}{x_{0}}\right)
\]
where \(x_{0}=10^{-3}\) is the reading of a zero-level earthquake the same distance from its epicenter. In Problems 131 and 132, determine the magnitude of each earthquake.
131. Magnitude of an Earthquake Mexico City in 1985: seismographic reading of 125,892 millimeters 100 kilometers from the center
132. Magnitude of an Earthquake San Francisco in 1906: seismographic reading of 50,119 millimeters 100 kilometers from the center
133. Alcohol and Driving The concentration of alcohol in a
 person's bloodstream is measurable. Suppose that the relative risk \(R\) of having an accident while driving a car can be modeled by an equation of the form
\[
R=e^{k x}
\]
where \(x\) is the percent of concentration of alcohol in the bloodstream and \(k\) is a constant.
(a) Suppose that a concentration of alcohol in the bloodstream of 0.03 percent results in a relative risk of an accident of 1.4. Find the constant \(k\) in the equation.
(b) Using this value of \(k\), what is the relative risk if the concentration is 0.17 percent?
(c) Using the same value of \(k\), what concentration of alcohol corresponds to a relative risk of 100 ?
(d) If the law asserts that anyone with a relative risk of having an accident of 5 or more should not have driving privileges, at what concentration of alcohol in the bloodstream should a driver be arrested and charged with DUI?
(e) Compare this situation with that of Example 10. If you were a lawmaker, which situation would you support? Give your reasons.

\section*{Discussion and Writing}
134. Is there any function of the form \(y=x^{\alpha}, 0<\alpha<1\), that increases more slowly than a logarithmic function whose base is greater than 1? Explain.
135. In the definition of the logarithmic function, the base \(a\) is not allowed to equal 1 . Why?
136. Critical Thinking In buying a new car, one consideration might be how well the price of the car holds up over time. Different makes of cars have different depreciation rates One way to compute a depreciation rate for a car is given here. Suppose that the current prices of a certain automobile are as shown in the table.
\begin{tabular}{|cccccc|}
\hline \multicolumn{6}{c|}{ Age in Years } \\
\hline New & \(\mathbf{1}\) & \(\mathbf{2}\) & \(\mathbf{3}\) & \(\mathbf{4}\) & \(\mathbf{5}\) \\
\hline\(\$ 38,000\) & \(\$ 36,600\) & \(\$ 32,400\) & \(\$ 28,750\) & \(\$ 25,400\) & \(\$ 21,200\) \\
\hline
\end{tabular}

Use the formula New \(=\operatorname{Old}\left(e^{R t}\right)\) to find \(R\), the annual depreciation rate, for a specific time \(t\). When might be the best time to trade in the car? Consult the NADA ("blue") book and compare two like models that you are interested in. Which has the better depreciation rate?

\section*{-Retain Your Knowledge}

Problems 137-140 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
137. Find the real zeros of \(g(x)=4 x^{4}-37 x^{2}+9\). What are the \(x\)-intercepts of the graph of \(g\) ?
138. Find the average rate of change of \(f(x)=9^{x}\) from \(\frac{1}{2}\) to 1 .
139. Use the Intermediate Value Theorem to show that the function \(f(x)=4 x^{3}-2 x^{2}-7\) has a real zero in the interval [1, 2].
140. A complex polynomial function \(f\) of degree 4 has the zeros \(-1,2\), and \(3-i\). Find the remaining zero(s) of \(f\). Then find a polynomial function with real coefficients that has the zeros.

\section*{'Are You Prepared?' Answers}
1. (a) \(\{x \mid x \leq 3\}\)
(b) \(\{x \mid x<-2\) or \(x>3\}\)
2. \(\{x \mid x<-4\) or \(x>1\}\)
3. \(\{3\}\)

\subsection*{4.5 Properties of Logarithms}

OBJECTIVES 1 Work with the Properties of Logarithms (p. 324)
2 Write a Logarithmic Expression as a Sum or Difference of Logarithms (p. 327)
3 Write a Logarithmic Expression as a Single Logarithm (p. 327)
4 Evaluate a Logarithm Whose Base Is Neither 10 Nore (p. 328)
5 Graph a Logarithmic Function Whose Base Is Neither 10 Nor e (p. 330)

\section*{1 Work with the Properties of Logarithms}

Logarithms have some very useful properties that can be derived directly from the definition and the laws of exponents.

\section*{EXAMPLE I}

\section*{Solution}

\section*{THEOREM}

\section*{Properties of Logarithms}

In the properties given next, \(M\) and \(a\) are positive real numbers, \(a \neq 1\), and \(r\) is any real number.

The number \(\log _{a} M\) is the exponent to which \(a\) must be raised to obtain \(M\). That is,
\[
a^{\log _{a} M}=M
\]

The logarithm to the base \(a\) of \(a\) raised to a power equals that power. That is,
\[
\log _{a} a^{r}=r
\]

The proofs use the fact that \(y=a^{x}\) and \(y=\log _{a} x\) are inverses.
Proof of Property (1) For inverse functions,
\[
f\left(f^{-1}(x)\right)=x \text { for all } x \text { in the domain of } f^{-1}
\]

Use \(f(x)=a^{x}\) and \(f^{-1}(x)=\log _{a} x\) to find
\[
f\left(f^{-1}(x)\right)=a^{\log _{a} x}=x \text { for } x>0
\]

Now let \(x=M\) to obtain \(a^{\log _{a} M}=M\), where \(M>0\).
Proof of Property (2) For inverse functions,
\[
f^{-1}(f(x))=x \text { for all } x \text { in the domain of } f
\]

Use \(f(x)=a^{x}\) and \(f^{-1}(x)=\log _{a} x\) to find
\[
f^{-1}(f(x))=\log _{a} a^{x}=x \text { for all real numbers } x
\]

Now let \(x=r\) to obtain \(\log _{a} a^{r}=r\), where \(r\) is any real number.

\section*{EXAMPLE 2 Using Properties (I) and (2)}
(a) \(2^{\log _{2} \pi}=\pi\)
(b) \(\log _{0.2} 0.2^{-\sqrt{2}}=-\sqrt{2}\)
(c) \(\ln e^{k t}=k t\)

\section*{amenow Work problem 15}

Other useful properties of logarithms are given next.

\section*{THEOREM}

\section*{Properties of Logarithms}

In the following properties, \(M, N\), and \(a\) are positive real numbers, \(a \neq 1\), and \(r\) is any real number.

The Log of a Product Equals the Sum of the Logs
\[
\begin{equation*}
\log _{a}(M N)=\log _{a} M+\log _{a} N \tag{3}
\end{equation*}
\]

The Log of a Quotient Equals the Difference of the Logs
\[
\begin{equation*}
\log _{a}\left(\frac{M}{N}\right)=\log _{a} M-\log _{a} N \tag{4}
\end{equation*}
\]

\section*{The Log of a Power Equals the Product of the Power and the Log}
\[
\begin{equation*}
\log _{a} M^{r}=r \log _{a} M \tag{5}
\end{equation*}
\]
\[
a^{x}=e^{x \ln a}
\]

We shall derive properties (3), (5), and (6) and leave the derivation of property (4) as an exercise (see Problem 109).

Proof of Property (3) Let \(A=\log _{a} M\) and let \(B=\log _{a} N\). These expressions are equivalent to the exponential expressions
\[
a^{A}=M \quad \text { and } \quad a^{B}=N
\]

Now
\[
\begin{array}{rlrl}
\log _{a}(M N)=\log _{a}\left(a^{A} a^{B}\right) & =\log _{a} a^{A+B} & & \text { Law of Exponents } \\
& =A+B & & \text { Property (2) of logarithms } \\
& =\log _{a} M+\log _{a} N &
\end{array}
\]

Proof of Property (5) Let \(A=\log _{a} M\). This expression is equivalent to
\[
a^{A}=M
\]

Now
\[
\begin{array}{rlrl}
\log _{a} M^{r}=\log _{a}\left(a^{A}\right)^{r} & =\log _{a} a^{r A} & & \text { Law of Exponents } \\
& =r A & & \text { Property (2) of logarithms } \\
& =r \log _{a} M &
\end{array}
\]

Proof of Property (6) Property (1), with \(a=e\), yields
\[
e^{\ln M}=M
\]

Now let \(M=a^{x}\) and apply property (5).
\[
e^{\ln a^{x}}=e^{x \ln a}=\left(e^{\ln a}\right)^{x}=a^{x}
\]

\section*{2 Write a Logarithmic Expression as a Sum or Difference of Logarithms}

\(\mathcal{A}\)Logarithms can be used to transform products into sums, quotients into differences, and powers into factors. Such transformations prove useful in certain types of calculus problems.

\section*{EXAMPLE 3 Writing a Logarithmic Expression as a Sum of Logarithms}

Write \(\log _{a}\left(x \sqrt{x^{2}+1}\right), x>0\), as a sum of logarithms. Express all powers as factors.
Solution
\[
\begin{aligned}
\log _{a}\left(x \sqrt{x^{2}+1}\right) & =\log _{a} x+\log _{a} \sqrt{x^{2}+1} \quad \log _{a}(M \cdot N)=\log _{a} M+\log _{a} N \\
& =\log _{a} x+\log _{a}\left(x^{2}+1\right)^{1 / 2} \\
& =\log _{a} x+\frac{1}{2} \log _{a}\left(x^{2}+1\right) \quad \log _{a} M^{r}=r \log _{a} M
\end{aligned}
\]

\section*{EXAMPLE 4}

Writing a Logarithmic Expression as a Difference of Logarithms
Write
\[
\ln \frac{x^{2}}{(x-1)^{3}}, \quad x>1
\]
as a difference of logarithms. Express all powers as factors.
Solution
\[
\begin{gathered}
\ln \frac{x^{2}}{(x-1)^{3}}=\ln x^{2}-\ln (x-1)^{3}=\underset{\uparrow}{=} \ln x-3 \ln (x-1) \\
\log _{a}\left(\frac{M}{N}\right)=\log _{a} M-\log _{a} N \quad \log _{A} M^{r}=r \log _{a} M
\end{gathered}
\]

\section*{EXAMPLE 5}

Solution
WARNING In using properties (3) through (5), be careful about the values that the variable may assume. For example, the domain of the variable for \(\log _{a} x\) is \(x>0\) and for \(\log _{a}(x-1)\) is \(x>1\). If these functions are added, the domain is \(x>1\). That is, the equality \(\log _{a} x+\log _{a}(x-1)=\log _{a}[x(x-1)]\) is true only for \(x>1\).

Writing a Logarithmic Expression as a Sum and Difference of Logarithms
Write
\[
\log _{a} \frac{\sqrt{x^{2}+1}}{x^{3}(x+1)^{4}}, \quad x>0
\]
as a sum and difference of logarithms. Express all powers as factors.
\[
\begin{array}{rlrl}
\log _{a} \frac{\sqrt{x^{2}+1}}{x^{3}(x+1)^{4}} & =\log _{a} \sqrt{x^{2}+1}-\log _{a}\left[x^{3}(x+1)^{4}\right] & & \text { Property (4) } \\
& =\log _{a} \sqrt{x^{2}+1}-\left[\log _{a} x^{3}+\log _{a}(x+1)^{4}\right] & \text { Property (3) } \\
& =\log _{a}\left(x^{2}+1\right)^{1 / 2}-\log _{a} x^{3}-\log _{a}(x+1)^{4} & \\
& =\frac{1}{2} \log _{a}\left(x^{2}+1\right)-3 \log _{a} x-4 \log _{a}(x+1) & \text { Property (5) }
\end{array}
\]

\section*{-Now Work problem 51}

\section*{3 Write a Logarithmic Expression as a Single Logarithm}

Another use of properties (3) through (5) is to write sums and/or differences of logarithms with the same base as a single logarithm. This skill will be needed to solve certain logarithmic equations discussed in the next section.

\section*{EXAMPLE 6 \\ Writing Expressions as a Single Logarithm}

Write each of the following as a single logarithm.
(a) \(\log _{a} 7+4 \log _{a} 3\)
(b) \(\frac{2}{3} \ln 8-\ln \left(5^{2}-1\right)\)
(c) \(\log _{a} x+\log _{a} 9+\log _{a}\left(x^{2}+1\right)-\log _{a} 5\)

Solution
(a) \(\log _{a} 7+4 \log _{a} 3=\log _{a} 7+\log _{a} 3^{4} \quad r \log _{a} M=\log _{a} M^{r}\)
\(=\log _{a} 7+\log _{a} 81\)
\(=\log _{a}(7 \cdot 81) \quad \log _{a} M+\log _{a} N=\log _{a}(M \cdot N)\)
\(=\log _{a} 567\)
(b) \(\frac{2}{3} \ln 8-\ln \left(5^{2}-1\right)=\ln 8^{2 / 3}-\ln (25-1) \quad r \log _{a} M=\log _{a} M^{r}\)
\[
\begin{array}{ll}
=\ln 4-\ln 24 & 8^{2 / 3}=(\sqrt[3]{8})^{2}=2^{2}=4 \\
=\ln \left(\frac{4}{24}\right) & \log _{a} M-\log _{a} N=\log _{a}\left(\frac{M}{N}\right) \\
=\ln \left(\frac{1}{6}\right) & \\
=\ln 1-\ln 6 & \ln 1=0
\end{array}
\]
(c) \(\log _{a} x+\log _{a} 9+\log _{a}\left(x^{2}+1\right)-\log _{a} 5=\log _{a}(9 x)+\log _{a}\left(x^{2}+1\right)-\log _{a} 5\)
\[
\begin{aligned}
& =\log _{a}\left[9 x\left(x^{2}+1\right)\right]-\log _{a} 5 \\
& =\log _{a}\left[\frac{9 x\left(x^{2}+1\right)}{5}\right]
\end{aligned}
\]

WARNING A common error made by some students is to express the logarithm of a sum as the sum of logarithms.
\[
\begin{array}{ll} 
& \log _{a}(M+N) \text { is not equal to } \\
\log _{a} M+\log _{a} N \\
\text { Correct statement } & \log _{a}(M N)=\log _{a} M+\log _{a} N \quad \text { Property (3) }
\end{array}
\]

Another common error is to express the difference of logarithms as the quotient of logarithms.

Correctstatement
\[
\begin{array}{ll}
\log _{a} M-\log _{a} N & \text { is not equal to } \\
\frac{\log _{a} M}{\log _{a} N} \\
\log _{a} M-\log _{a} N=\log _{a}\left(\frac{M}{N}\right) & \text { Property (4) }
\end{array}
\]

A third common error is to express a logarithm raised to a power as the product of the power times the logarithm.
\[
\begin{array}{llc} 
& \left(\log _{a} M\right)^{r} & \text { is not equal to } \\
\text { Correctstatement } & \log _{a} \log _{a} M \\
& M \log _{a} M & \text { Property (5) }
\end{array}
\]
am Now Work problems 57 and 63
Two other important properties of logarithms are consequences of the fact that the logarithmic function \(y=\log _{a} x\) is a one-to-one function.

\section*{THEOREM \\ Properties of Logarithms}

In the following properties, \(M, N\), and \(a\) are positive real numbers, \(a \neq 1\).
\[
\begin{align*}
& \text { If } M=N, \text { then } \log _{a} M=\log _{a} N  \tag{7}\\
& \text { If } \log _{a} M=\log _{a} N, \text { then } M=N \tag{8}
\end{align*}
\]

Property (7) is used as follows: Starting with the equation \(M=N\), "take the logarithm of both sides" to obtain \(\log _{a} M=\log _{a} N\).

Properties (7) and (8) are useful for solving exponential and logarithmic equations, a topic discussed in the next section.

\section*{4 Evaluate a Logarithm Whose Base Is Neither 10 Nor e}

Logarithms to the base 10 , common logarithms, were used to facilitate arithmetic computations before the widespread use of calculators. (See the Historical Feature at the end of this section.) Natural logarithms - that is, logarithms whose base is
the number \(e\) remain very important because they arise frequently in the study of natural phenomena.

Common logarithms are usually abbreviated by writing log, with the base understood to be 10 , just as natural logarithms are abbreviated by \(\mathbf{l n}\), with the base understood to be \(e\).

Most calculators have both \(\log\) and \(\ln\) keys to calculate the common logarithm and the natural logarithm of a number, respectively. Let's look at an example to see how to approximate logarithms having a base other than 10 or \(e\).

\section*{EXAMPLE 7}

\section*{Approximating a Logarithm Whose Base Is Neither IO Nor e}

Approximate \(\log _{2} 7\). Round the answer to four decimal places.
Solution Remember, \(\log _{2} 7\) means " 2 raised to what exponent equals 7 ?" Let \(y=\log _{2} 7\). Then \(2^{y}=7\). Because \(2^{2}=4\) and \(2^{3}=8\), the value of \(\log _{2} 7\) is between 2 and 3 .
\[
\begin{aligned}
2^{y} & =7 & & \\
\ln 2^{y} & =\ln 7 & & \text { Property (7) } \\
y \ln 2 & =\ln 7 & & \text { Property (5) } \\
y & =\frac{\ln 7}{\ln 2} & & \text { Exact value } \\
y & \approx 2.8074 & & \text { Approximate value rounded to four decimal places }
\end{aligned}
\]

Example 7 shows how to approximate a logarithm whose base is 2 by changing to logarithms involving the base \(e\). In general, the Change-of-Base Formula is used.

\section*{THEOREM}

\section*{Change-of-Base Formula}

If \(a \neq 1, b \neq 1\), and \(M\) are positive real numbers, then
\[
\begin{equation*}
\log _{a} M=\frac{\log _{b} M}{\log _{b} a} \tag{9}
\end{equation*}
\]

Proof Let \(y=\log _{a} M\). Then
\[
\begin{aligned}
a^{y} & =M \\
\log _{b} a^{y} & =\log _{b} M \quad \text { Property (7) } \\
y \log _{b} a & =\log _{b} M \quad \text { Property (5) } \\
y & =\frac{\log _{b} M}{\log _{b} a} \quad \text { Solve for } y \\
\log _{a} M & =\frac{\log _{b} M}{\log _{b} a} \quad y=\log _{a} M
\end{aligned}
\]

Because calculators have keys only for \(\log\) and \(\ln\), in practice, the Change-of-Base Formula uses either \(b=10\) or \(b=e\). That is,
\[
\begin{equation*}
\log _{a} M=\frac{\log M}{\log a} \quad \text { and } \quad \log _{a} M=\frac{\ln M}{\ln a} \tag{10}
\end{equation*}
\]

\section*{EXAMPLE 8 \\ Using the Change-of-Base Formula}

Approximate:
(a) \(\log _{5} 89\)
(b) \(\log _{\sqrt{2}} \sqrt{5}\)

Round answers to four decimal places.

Solution
or
(b) \(\log _{\sqrt{2}} \sqrt{5}=\frac{\log \sqrt{5}}{\log \sqrt{2}}=\frac{\frac{1}{2} \log 5}{\frac{1}{2} \log 2}\)
\(=\frac{\log 5}{\log 2} \approx 2.3219\)
\[
\begin{aligned}
\log _{5} 89=\frac{\ln 89}{\ln 5} & \approx \frac{4.48863637}{1.609437912} \\
& \approx 2.7889
\end{aligned}
\]
or
\[
\begin{aligned}
\log _{\sqrt{2}} \sqrt{5}=\frac{\ln \sqrt{5}}{\ln \sqrt{2}} & =\frac{\frac{1}{2} \ln 5}{\frac{1}{2} \ln 2} \\
& =\frac{\ln 5}{\ln 2} \approx 2.3219
\end{aligned}
\]

\section*{Now Work problems 23 and 71}

\section*{5 Graph a Logarithmic Function Whose Base Is Neither 10 Nor e}

The Change-of-Base Formula also can be used to graph logarithmic functions whose base is neither 10 nor \(e\).

\section*{EXAMPLE 9}

\section*{Graphing a Logarithmic Function Whose Base}

\section*{Is Neither IO Nor e}

Use a graphing utility to graph \(y=\log _{2} x\).
Solution Because graphing utilities have only logarithms with the base 10 or the base \(e\), use

Figure 42

the Change-of-Base Formula to express \(y=\log _{2} x\) in terms of logarithms with base 10 or base \(e\). Graph either \(y=\frac{\ln x}{\ln 2}\) or \(y=\frac{\log x}{\log 2}\) to obtain the graph of \(y=\log _{2} x\). See Figure 42.
Check: Verify that \(y=\frac{\ln x}{\ln 2}\) and \(y=\frac{\log x}{\log 2}\) result in the same graph by graphing each on the same screen.
am Now Work problem 79

\section*{SUMMARY}

\section*{Properties of Logarithms}

In the list that follows, \(a, b, M, N\), and \(r\) are real numbers. Also, \(a>0, a \neq 1, b>0, b \neq 1, M>0\), and \(N>0\).

\section*{Definition}

Properties of logarithms

Change-of-Base Formula
\[
\begin{array}{ll}
y=\log _{a} x \text { means } x=a^{y} & \\
\log _{a} 1=0 ; \log _{a} a=1 & \log _{a} M^{r}=r \log _{a} M \\
a^{\log _{a} M}=M ; \log _{a} a^{r}=r & a^{x}=e^{x \ln a} \\
\log _{a}(M N)=\log _{a} M+\log _{a} N & \text { If } M=N, \text { then } \log _{a} M=\log _{a} N . \\
\log _{a}\left(\frac{M}{N}\right)=\log _{a} M-\log _{a} N & \text { If } \log _{a} M=\log _{a} N, \text { then } M=N . \\
\log _{a} M=\frac{\log _{b} M}{\log _{b} a} &
\end{array}
\]

\section*{Historical Feature}

John Napier (1550-1617) (1550-1617) of logarit
ogarithms were invented about 1590 by John Napier (1550-1617) and Joost Bürgi (1552-1632), working independently Napier, whose work had the greater influence, was a Scottish lord, a secretive man whose neighbors were inclined to believe him to be in league with the devil. His approach to logarithms was very different from ours; it was based on the relationship between arithmetic and geometric sequences,
tables, published in 1614, listed what would now be called natural logarithms of sines and were rather difficult to use. A London professor, Henry Briggs, became interested in the tables and visited Napier. In their conversations, they developed the idea of common logarithms, which were published in 1617. Their importance for calculation was immediately recognized, and by 1650 they were being printed as far away as China. They remained an important calculation tool until the advent of the inexpensive handheld calculator about 1972, which has decreased their calculational, but not their theoretical, importance.

A side effect of the invention of logarithms was the popularization of the decimal system of notation for real numbers.

\subsection*{4.5 Assess Your Understanding}

\section*{Concepts and Vocabulary}
1. \(\log _{a} 1=\) \(\qquad\) 2. \(\log _{a} a=\) \(\qquad\) 3. \(a^{\log _{a} M}=\)
4. \(\log _{a} a^{r}=\) \(\qquad\)
5. \(\log _{a}(M N)=\) \(\qquad\) \(+\) \(\qquad\)
7. \(\log _{a} M^{r}=\) \(\qquad\)
9. If \(\log _{8} M=\frac{\log _{5} 7}{\log _{5} 8}\), then \(M=\) \(\qquad\) .
6. \(\log _{a}\left(\frac{M}{N}\right)=\) \(\qquad\) \(-\) \(\qquad\)
8. If \(\log _{a} x=\log _{a} 6\), then \(x=\) \(\qquad\) .
10. True or False \(\ln (x+3)-\ln (2 x)=\frac{\ln (x+3)}{\ln (2 x)}\)
11. True or False \(\log _{2}\left(3 x^{4}\right)=4 \log _{2}(3 x)\)
12. True or False \(\frac{\ln 8}{\ln 4}=2\)

\section*{Skill Building}

In Problems 13-28, use properties of logarithms to find the exact value of each expression. Do not use a calculator.
13. \(\log _{3} 3^{71}\)
14. \(\log _{2} 2^{-13}\)
15. \(\ln e^{-4}\)
16. \(\ln e^{\sqrt{2}}\)
17. \(2^{\log _{2} 7}\)
18. \(e^{\ln 8}\)
19. \(\log _{8} 2+\log _{8} 4\)
20. \(\log _{6} 9+\log _{6} 4\)
21. \(\log _{6} 18-\log _{6} 3\)
22. \(\log _{8} 16-\log _{8} 2\)
23. \(\log _{2} 6 \cdot \log _{6} 8\)
24. \(\log _{3} 8 \cdot \log _{8} 9\)
25. \(3^{\log _{3} 5-\log _{3} 4}\)
26. \(5^{\log _{5} 6+\log _{5} 7}\)
27. \(e^{\log _{e} 16}\)
28. \(e^{\log _{e} 9}\)

In Problems 29-36, suppose that \(\ln 2=a\) and \(\ln 3=b\). Use properties of logarithms to write each logarithm in terms of a and \(b\).
29. \(\ln 6\)
30. \(\ln \frac{2}{3}\)
31. \(\ln 1.5\)
32. \(\ln 0.5\)
33. \(\ln 8\)
34. \(\ln 27\)
35. \(\ln \sqrt[5]{6}\)
36. \(\ln \sqrt[4]{\frac{2}{3}}\)

In Problems 37-56, write each expression as a sum and/or difference of logarithms. Express powers as factors.
37. \(\log _{5}(25 x)\)
38. \(\log _{3} \frac{x}{9}\)
39. \(\log _{2} z^{3}\)
40. \(\log _{7} x^{5}\)
41. \(\ln (e x)\)
42. \(\ln \frac{e}{x}\)
43. \(\ln \frac{x}{e^{x}}\)
44. \(\ln \left(x e^{x}\right)\)
45. \(\log _{a}\left(u^{2} v^{3}\right) \quad u>0, v>0\)
46. \(\log _{2}\left(\frac{a}{b^{2}}\right) \quad a>0, b>0\)
47. \(\ln \left(x^{2} \sqrt{1-x}\right) \quad 0<x<1\)
48. \(\ln \left(x \sqrt{1+x^{2}}\right) \quad x>0\)
49. \(\log _{2}\left(\frac{x^{3}}{x-3}\right) \quad x>3\)
50. \(\log _{5}\left(\frac{\sqrt[3]{x^{2}+1}}{x^{2}-1}\right) \quad x>1\)
51. \(\log \left[\frac{x(x+2)}{(x+3)^{2}}\right] \quad x>0\)
52. \(\log \left[\frac{x^{3} \sqrt{x+1}}{(x-2)^{2}}\right] \quad x>2\)
53. \(\ln \left[\frac{x^{2}-x-2}{(x+4)^{2}}\right]^{1 / 3} \quad x>2\)
54. \(\ln \left[\frac{(x-4)^{2}}{x^{2}-1}\right]^{2 / 3} \quad x>4\)
55. \(\ln \frac{5 x \sqrt{1+3 x}}{(x-4)^{3}} \quad x>4\)
56. \(\ln \left[\frac{5 x^{2} \sqrt[3]{1-x}}{4(x+1)^{2}}\right] \quad 0<x<1\)

In Problems 57-70, write each expression as a single logarithm.
57. \(3 \log _{5} u+4 \log _{5} v\)
58. \(2 \log _{3} u-\log _{3} v\)
59. \(\log _{3} \sqrt{x}-\log _{3} x^{3}\)
60. \(\log _{2}\left(\frac{1}{x}\right)+\log _{2}\left(\frac{1}{x^{2}}\right)\)
61. \(\log _{4}\left(x^{2}-1\right)-5 \log _{4}(x+1)\)
63. \(\ln \left(\frac{x}{x-1}\right)+\ln \left(\frac{x+1}{x}\right)-\ln \left(x^{2}-1\right)\)
64. \(\log \left(\frac{x^{2}+2 x-3}{x^{2}-4}\right)-\log \left(\frac{x^{2}+7 x+6}{x+2}\right)\)
65. \(8 \log _{2} \sqrt{3 x-2}-\log _{2}\left(\frac{4}{x}\right)+\log _{2} 4\)
66. \(21 \log _{3} \sqrt[3]{x}+\log _{3}\left(9 x^{2}\right)-\log _{3} 9\)
67. \(2 \log _{a}\left(5 x^{3}\right)-\frac{1}{2} \log _{a}(2 x+3)\)
68. \(\frac{1}{3} \log \left(x^{3}+1\right)+\frac{1}{2} \log \left(x^{2}+1\right)\)
69. \(2 \log _{2}(x+1)-\log _{2}(x+3)-\log _{2}(x-1)\)
70. \(3 \log _{5}(3 x+1)-2 \log _{5}(2 x-1)-\log _{5} x\)

In Problems 71-78, use the Change-of-Base Formula and a calculator to evaluate each logarithm. Round your answer to three decimal places.
71. \(\log _{3} 21\)
72. \(\log _{5} 18\)
73. \(\log _{1 / 3} 71\)
74. \(\log _{1 / 2} 15\)
75. \(\log _{\sqrt{2}} 7\)
76. \(\log _{\sqrt{5}} 8\)
77. \(\log _{\pi} e\)
78. \(\log _{\pi} \sqrt{2}\)

In Problems 79-84, graph each function using a graphing utility and the Change-of-Base Formula.
79. \(y=\log _{4} x\)
80. \(y=\log _{5} x\)
81. \(y=\log _{2}(x+2)\)
82. \(y=\log _{4}(x-3)\)
83. \(y=\log _{x-1}(x+1)\)
84. \(y=\log _{x+2}(x-2)\)

\section*{Mixed Practice}
85. If \(f(x)=\ln x, g(x)=e^{x}\), and \(h(x)=x^{2}\), find:
(a) \((f \circ g)(x)\). What is the domain of \(f \circ g\) ?
86. If \(f(x)=\log _{2} x, g(x)=2^{x}\), and \(h(x)=4 x\), find:
(b) \((g \circ f)(x)\). What is the domain of \(g \circ f\) ?
(a) \((f \circ g)(x)\). What is the domain of \(f \circ g\) ?
(b) \((g \circ f)(x)\). What is the domain of \(g \circ f\) ?
(c) \((f \circ g)(5)\)
(d) \((f \circ h)(x)\). What is the domain of \(f \circ h\) ?
(e) \((f \circ h)(e)\)
(c) \((f \circ g)(3)\)
(d) \((f \circ h)(x)\). What is the domain of \(f \circ h\) ?
(e) \((f \circ h)(8)\)

\section*{Applications and Extensions}

In Problems 87-96, express \(y\) as a function of \(x\). The constant \(C\) is a positive number.
87. \(\ln y=\ln x+\ln C\)
89. \(\ln y=\ln x+\ln (x+1)+\ln C\)
91. \(\ln y=3 x+\ln C\)
93. \(\ln (y-3)=-4 x+\ln C\)
95. \(3 \ln y=\frac{1}{2} \ln (2 x+1)-\frac{1}{3} \ln (x+4)+\ln C\)
97. Find the value of \(\log _{2} 3 \cdot \log _{3} 4 \cdot \log _{4} 5 \cdot \log _{5} 6 \cdot \log _{6} 7 \cdot \log _{7} 8\).
99. Find the value of \(\log _{2} 3 \cdot \log _{3} 4 \cdot \cdots \cdot \log _{n}(n+1) \cdot \log _{n+1} 2\).
101. Show that \(\log _{a}\left(x+\sqrt{x^{2}-1}\right)+\log _{a}\left(x-\sqrt{x^{2}-1}\right)=0\).
102. Show that \(\log _{a}(\sqrt{x}+\sqrt{x-1})+\log _{a}(\sqrt{x}-\sqrt{x-1})=0\).
88. \(\ln y=\ln (x+C)\)
90. \(\ln y=2 \ln x-\ln (x+1)+\ln C\)
92. \(\ln y=-2 x+\ln C\)
94. \(\ln (y+4)=5 x+\ln C\)
96. \(2 \ln y=-\frac{1}{2} \ln x+\frac{1}{3} \ln \left(x^{2}+1\right)+\ln C\)
98. Find the value of \(\log _{2} 4 \cdot \log _{4} 6 \cdot \log _{6} 8\).
100. Find the value of \(\log _{2} 2 \cdot \log _{2} 4 \cdot \cdots \cdot \log _{2} 2^{n}\).
103. Show that \(\ln \left(1+e^{2 x}\right)=2 x+\ln \left(1+e^{-2 x}\right)\).
104. Difference Quotient If \(f(x)=\log _{a} x\), show that \(\frac{f(x+h)-f(x)}{h}=\log _{a}\left(1+\frac{h}{x}\right)^{1 / h}, \quad h \neq 0\).
105. If \(f(x)=\log _{a} x\), show that \(-f(x)=\log _{1 / a} x\).
106. If \(f(x)=\log _{a} x\), show that \(f(A B)=f(A)+f(B)\).
107. If \(f(x)=\log _{a} x\), show that \(f\left(\frac{1}{x}\right)=-f(x)\).
108. If \(f(x)=\log _{a} x\), show that \(f\left(x^{\alpha}\right)=\alpha f(x)\).
109. Show that \(\log _{a}\left(\frac{M}{N}\right)=\log _{a} M-\log _{a} N\), where \(a, M\), and \(N\) are positive real numbers and \(a \neq 1\).
110. Show that \(\log _{a}\left(\frac{1}{N}\right)=-\log _{a} N\), where \(a\) and \(N\) are positive real numbers and \(a \neq 1\).

\section*{Discussion and Writing}
111. Graph \(Y_{1}=\log \left(x^{2}\right)\) and \(Y_{2}=2 \log (x)\) using a graphing utility. Are they equivalent? What might account for any differences in the two functions?
112. Write an example that illustrates why \(\left(\log _{a} x\right)^{r} \neq r \log _{a} x\).
113. Write an example that illustrates why \(\log _{2}(x+y) \neq \log _{2} x+\log _{2} y\).
114. Does \(3^{\log _{3}(-5)}=-5\) ? Why or why not?

\section*{Retain Your Knowledge}

Problems 115-118 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
115. Use a graphing utility to solve \(x^{3}-3 x^{2}-4 x+8=0\). Round answers to two decimal places.
116. Find the real zeros of \(f(x)=5 x^{5}+44 x^{4}+116 x^{3}+\) \(95 x^{2}-4 x-4\)
117. Without solving, determine the character of the solution of the quadratic equation \(4 x^{2}-28 x+49=0\) in the complex system.
118. Graph \(f(x)=\sqrt{2-x}\) using the techniques of shifting, compressing or stretching, and reflections. State the domain and the range of \(f\).

\subsection*{4.6 Logarithmic and Exponential Equations}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Solving Equations Using a Graphing Utility (Appendix B, Section B.4, pp. B6-B7)
- Solving Quadratic Equations (Section 2.3, pp. 137-143)
- Solving Equations Quadratic in Form (Section 2.3, pp. 144-145)

Now Work the 'Are You Prepared?' problems on page 337.

\section*{OBJECTIVES 1 Solve Logarithmic Equations (p.333)}

2 Solve Exponential Equations (p. 335)
3 Solve Logarithmic and Exponential Equations Using a Graphing Utility (p. 336)

\section*{1 Solve Logarithmic Equations}

In Section 4.4 logarithmic equations were solved by changing a logarithmic expression to an exponential expression. That is, they were solved by using the definition of a logarithm:
\[
y=\log _{a} x \quad \text { is equivalent to } \quad x=a^{y} \quad a>0, a \neq 1
\]

For example, to solve the equation \(\log _{2}(1-2 x)=3\), write the logarithmic equation as an equivalent exponential equation \(1-2 x=2^{3}\) and solve for \(x\).
\[
\begin{aligned}
\log _{2}(1-2 x) & =3 & & \\
1-2 x & =2^{3} & & \text { Change to an exponential equation. } \\
-2 x & =7 & & \text { Simplify. } \\
x & =-\frac{7}{2} & & \text { Solve. }
\end{aligned}
\]

Check: \(\log _{2}(1-2 x)=\log _{2}\left(1-2\left(-\frac{7}{2}\right)\right)=\log _{2}(1+7)=\log _{2} 8=3 \quad 2^{3}=8\)
For most logarithmic equations, some manipulation of the equation (usually using properties of logarithms) is required to obtain a solution. Also, to avoid extraneous solutions with logarithmic equations, it is wise to determine the domain of the variable first.

Let's begin with an example of a logarithmic equation that requires using the fact that a logarithmic function is a one-to-one function.
\[
\text { If } \log _{a} M=\log _{a} N, \text { then } M=N \quad M, N, \text { and } a \text { are positive and } a \neq 1
\]

\section*{EXAMPLE I}

\section*{Solving a Logarithmic Equation}

Solve: \(2 \log _{5} x=\log _{5} 9\)
Solution The domain of the variable in this equation is \(x>0\). Note that each logarithm is to the same base, 5 . Then find the exact solution as follows:
\[
\begin{aligned}
2 \log _{5} x & =\log _{5} 9 & & \\
\log _{5} x^{2} & =\log _{5} 9 & & \log _{a} M^{r}=r \log _{a} M \\
x^{2} & =9 & & \text { If } \log _{a} M=\log _{a} N, \text { then } M=N . \\
x & =3 \text { or } x=-3 & &
\end{aligned}
\]

Recall that the domain of the variable is \(x>0\). Therefore, -3 is extraneous and must be discarded.

WARNING A negative solution is not automatically extraneous. Check whether the potential solution causes the argument of any logarithmic expression in the equation to be negative.

Check: \(2 \log _{5} 3 \stackrel{?}{=} \log _{5} 9\)
\[
\begin{aligned}
\log _{5} 3^{2} & \stackrel{?}{=} \log _{5} 9 \quad r \log _{a} M=\log _{a} M^{r} \\
\log _{5} 9 & =\log _{5} 9
\end{aligned}
\]

The solution set is \(\{3\}\).
an Now Work problem 13
Often one or more properties of logarithms are needed to rewrite the equation as a single logarithm. In the next example, the log of a product property is used.

\section*{EXAMPLE 2 Solving a Logarithmic Equation}

Solve: \(\log _{5}(x+6)+\log _{5}(x+2)=1\)
Solution The domain of the variable requires that \(x+6>0\) and \(x+2>0\), so \(x>-6\) and \(x>-2\). This means any solution must satisfy \(x>-2\). To obtain an exact solution, express the left side as a single logarithm. Then change the equation to an equivalent exponential equation.
\[
\begin{array}{rlrl}
\log _{5}(x+6)+\log _{5}(x+2) & =1 & & \\
\log _{5}[(x+6)(x+2)] & =1 & & \log _{a} M+\log _{a} N=\log _{a}(M N) \\
(x+6)(x+2) & =5^{1} & & \text { Change to an exponential equation. } \\
x^{2}+8 x+12 & =5 & & \text { Simplify. } \\
x^{2}+8 x+7 & =0 & & \text { Place the quadratic equation in standard form. } \\
(x+7)(x+1) & =0 & & \text { Factor. } \\
x=-7 & \text { or } x & =-1 & \\
\text { Zero-Product Property }
\end{array}
\]

Only \(x=-1\) satisfies the restriction that \(x>-2\), so \(x=-7\) is extraneous. The solution set is \(\{-1\}\), which you should check.
am Now Work problem 21

\section*{EXAMPLE 3 Solving a Logarithmic Equation}

Solve: \(\ln x=\ln (x+6)-\ln (x-4)\)
Solution The domain of the variable requires that \(x>0, x+6>0\), and \(x-4>0\). As a result, the domain of the variable here is \(x>4\). Begin the solution using the \(\log\) of a difference property.
\[
\begin{aligned}
\ln x & =\ln (x+6)-\ln (x-4) & & \\
\ln x & =\ln \left(\frac{x+6}{x-4}\right) & & \ln M-\ln N=\ln \left(\frac{M}{N}\right) \\
x & =\frac{x+6}{x-4} & & \text { If } \ln M=\ln N, \text { then } M=N . \\
x(x-4) & =x+6 & & \text { Multiply both sides by } x-4 . \\
x^{2}-4 x & =x+6 & & \text { Simplify. } \\
x^{2}-5 x-6 & =0 & & \text { Place the quadratic equation in standard form. } \\
(x-6)(x+1) & =0 & & \text { Factor. } \\
x=6 \text { or } x & =-1 & & \text { Zero-Product Property }
\end{aligned}
\]

Because the domain of the variable is \(x>4\), discard -1 as extraneous. The solution set is \(\{6\}\), which you should check.

\section*{2 Solve Exponential Equations}

In Sections 4.3 and 4.4, exponential equations were solved algebraically by expressing each side of the equation using the same base. That is, they were solved by using the one-to-one property of the exponential function:
\[
\text { If } a^{u}=a^{v}, \text { then } u=v \quad a>0, a \neq 1
\]

For example, to solve the exponential equation \(4^{2 x+1}=16\), notice that \(16=4^{2}\) and apply the property above to obtain the equation \(2 x+1=2\), and the solution is \(x=\frac{1}{2}\).

Not all exponential equations can be readily expressed so that each side of the equation has the same base. For such equations, algebraic techniques often can be used to obtain exact solutions.

In the next example two exponential equations are solved by changing the exponential expression to a logarithmic expression.

\section*{EXAMPLE 4}

\section*{Solution}

\section*{Solving Exponential Equations}
Solve:
(a) \(2^{x}=5\)
(b) \(8 \cdot 3^{x}=5\)
(a) Because 5 cannot be written as an integer power of \(2\left(2^{2}=4\right.\) and \(\left.2^{3}=8\right)\), write the exponential equation as the equivalent logarithmic equation.
\[
\begin{aligned}
& \qquad \begin{array}{c}
2^{x}=5 \\
\qquad x=\log _{2} 5=\frac{\ln 5}{\ln 2} \\
\text { Change-of-Base Formula }(9) \text {, Section } 4.5
\end{array}
\end{aligned}
\]

Alternatively, the equation \(2^{x}=5\) can be solved by taking the natural logarithm (or common logarithm) of each side. Taking the natural logarithm yields
\[
\begin{aligned}
2^{x} & =5 & & \\
\ln 2^{x} & =\ln 5 & & \operatorname{lf} M=N, \text { then } \ln M=\ln N . \\
x \ln 2 & =\ln 5 & & \ln M^{r}=r \ln M \\
x & =\frac{\ln 5}{\ln 2} & & \text { Exact solution } \\
& \approx 2.322 & & \text { Approximate solution }
\end{aligned}
\]

The solution set is \(\left\{\frac{\ln 5}{\ln 2}\right\}\).
(b) \(8 \cdot 3^{x}=5\)
\[
3^{x}=\frac{5}{8}
\]
\[
\text { Solve for } 3^{x}
\]
\[
x=\log _{3}\left(\frac{5}{8}\right)=\frac{\ln \left(\frac{5}{8}\right)}{\ln 3} \quad \text { Exact solution }
\]
\[
\approx-0.428 \quad \text { Approximate solution }
\]

The solution set is \(\left\{\frac{\ln \left(\frac{5}{8}\right)}{\ln 3}\right\}\).

\section*{EXAMPLE 5 Solving an Exponential Equation}

\section*{Solution}

NOTE: Because of the properties of logarithms, exact solutions involving logarithms often can be expressed in multiple ways. For example, the solution to \(5^{x-2}=3^{3 x+2}\) from Example 5 can be expressed equivalently as \(\frac{2 \ln 15}{\ln 5-\ln 27}\) or \(\frac{\ln 225}{\ln (5 / 27)}\) amongothers. Do you see why?

Solve: \(\quad 5^{x-2}=3^{3 x+2}\)
Because the bases are different, first apply property (7), Section 4.5 (take the natural logarithm of each side), and then use a property of logarithms. The result is an equation in \(x\) that can be solved.
\[
\begin{array}{rlrl}
5^{x-2} & =3^{3 x+2} & & \\
\ln 5^{x-2} & =\ln 3^{3 x+2} & & \text { If } M=N, \ln M=\ln N . \\
(x-2) \ln 5 & =(3 x+2) \ln 3 & & \ln M^{r}=r \ln M \\
(\ln 5) x-2 \ln 5 & =(3 \ln 3) x+2 \ln 3 \\
(\ln 5) x-(3 \ln 3) x & =2 \ln 3+2 \ln 5 & & \text { Distribute. } \\
(\ln 5-3 \ln 3) x & =2(\ln 3+\ln 5) & & \text { Factor. } \\
x & =\frac{2(\ln 3+\ln 5)}{\ln 5-3 \ln 3} & & \text { Exact solution } \\
& \approx-3.212 & & \text { Approximate soluing xon the left. } \\
& \approx & \\
\text { The solution set is }\left\{\frac{2(\ln 3+\ln 5)}{\ln 5-3 \ln 3}\right\} . & &
\end{array}
\]

\section*{Now Work problem 53}

The next example deals with an exponential equation that is quadratic in form.

\section*{EXAMPLE 6}

Solution

\section*{Solving an Exponential Equation That Is Quadratic in Form}

Solve: \(4^{x}-2^{x}-12=0\)
Note that \(4^{x}=\left(2^{2}\right)^{x}=2^{(2 x)}=\left(2^{x}\right)^{2}\), so the equation is quadratic in form and can be written as
\[
\left(2^{x}\right)^{2}-2^{x}-12=0 \quad \text { Let } u=2^{x} ; \text { then } u^{2}-u-12=0 .
\]

Now factor as usual.
\[
\begin{array}{rlrlrlrl}
\left(2^{x}-4\right) & \left(2^{x}+3\right) & =0 & & (u-4)(u+3)=0 \\
2^{x}-4=0 & \text { or } & 2^{x}+3 & =0 & & u-4=0 & \text { or } & u+3=0 \\
2^{x}=4 & & 2^{x} & =-3 & & u=2^{x}=4 & u=2^{x}=-3
\end{array}
\]

The equation on the left has the solution \(x=2\), since \(2^{x}=4=2^{2}\); the equation on the right has no solution, since \(2^{x}>0\) for all \(x\). The only solution is 2 . The solution set is \(\{2\}\).
ammow Work problem 61

\section*{3 Solve Logarithmic and Exponential Equations} Using a Graphing Utility
The algebraic techniques introduced in this section to obtain exact solutions apply only to certain types of logarithmic and exponential equations. Solutions for other types are usually studied in calculus, using numerical methods. For such types, a graphing utility can be used to approximate the solution.

\section*{EXAMPLE 7 Solving Equations Using a Graphing Utility}

Solve: \(x+e^{x}=2\)
Express the solution(s) rounded to two decimal places.

Figure 43

The solution is found by graphing \(Y_{1}=x+e^{x}\) and \(Y_{2}=2\). Since \(Y_{1}\) is an increasing function (do you know why?), there is only one point of intersection for \(Y_{1}\) and \(Y_{2}\). Figure 43 shows the graphs of \(Y_{1}\) and \(Y_{2}\). Using the INTERSECT command reveals that the solution is 0.44 , rounded to two decimal places.

Now Work problem 71

\subsection*{4.6 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. Solve \(x^{2}-7 x-30=0\). (pp. 137-143)
2. Solve \((x+3)^{2}-4(x+3)+3=0\). (pp.144-145)
3. Approximate the solution(s) to \(x^{3}=x^{2}-5\) using a graphing utility. (pp. B6-B7)
4. Approximate the solution(s) to \(x^{3}-2 x+2=0\) using a graphing utility. (pp. B6-B7)

\section*{Skill Building}

In Problems 5-40, solve each logarithmic equation. Express any irrational solution in exact form and as a decimal rounded to three decimal places.
5. \(\log _{4} x=2\)
6. \(\log (x+6)=1\)
7. \(\log _{2}(5 x)=4\)
8. \(\log _{3}(3 x-1)=2\)
9. \(\log _{4}(x+2)=\log _{4} 8\)
12. \(-2 \log _{4} x=\log _{4} 9\)
15. \(3 \log _{2}(x-1)+\log _{2} 4=5\)
18. \(\log x+\log (x-21)=2\)
10. \(\log _{5}(2 x+3)=\log _{5} 3\)
11. \(\frac{1}{2} \log _{3} x=2 \log _{3} 2\)
14. \(2 \log _{5} x=3 \log _{5} 4\)
17. \(\log x+\log (x+15)=2\)
21. \(\log _{2}(x+7)+\log _{2}(x+8)=1\)
20. \(\log (2 x)-\log (x-3)=1\)
23. \(\log _{8}(x+6)=1-\log _{8}(x+4)\)
26. \(\ln (x+1)-\ln x=2\)
24. \(\log _{5}(x+3)=1-\log _{5}(x-1)\)
27. \(\log _{3}(x+1)+\log _{3}(x+4)=2\)
19. \(\log (2 x+1)=1+\log (x-2)\)
13. \(3 \log _{2} x=-\log _{2} 27\)
16. \(2 \log _{3}(x+4)-\log _{3} 9=2\)
22. \(\log _{6}(x+4)+\log _{6}(x+3)=1\)
25. \(\ln x+\ln (x+2)=4\)
28. \(\log _{2}(x+1)+\log _{2}(x+7)=3\)
29. \(\log _{1 / 3}\left(x^{2}+x\right)-\log _{1 / 3}\left(x^{2}-x\right)=-1\)
31. \(\log _{a}(x-1)-\log _{a}(x+6)=\log _{a}(x-2)-\log _{a}(x+3)\)
33. \(2 \log _{5}(x-3)-\log _{5} 8=\log _{5} 2\)
35. \(2 \log _{6}(x+2)=3 \log _{6} 2+\log _{6} 4\)
37. \(2 \log _{13}(x+2)=\log _{13}(4 x+7)\)
39. \(\left(\log _{3} x\right)^{2}-5\left(\log _{3} x\right)=6\)
30. \(\log _{4}\left(x^{2}-9\right)-\log _{4}(x+3)=3\)
32. \(\log _{a} x+\log _{a}(x-2)=\log _{a}(x+4)\)
34. \(\log _{3}(x)-2 \log _{3} 5=\log _{3}(x+1)-2 \log _{3} 10\)
36. \(3\left(\log _{7} x-\log _{7} 2\right)=2 \log _{7} 4\)
38. \(\log (x-1)=\frac{1}{3} \log 2\)
40. \(\ln x-3 \sqrt{\ln x}+2=0\)

In Problems 41-68, solve each exponential equation. Express any irrational solution in exact form and as a decimal rounded to three decimal places.
41. \(2^{x-5}=8\)
42. \(5^{-x}=25\)
43. \(2^{x}=10\)
44. \(3^{x}=14\)
45. \(8^{-x}=1.2\)
46. \(2^{-x}=1.5\)
47. \(5\left(2^{3 x}\right)=8\)
48. \(0.3\left(4^{0.2 x}\right)=0.2\)
49. \(3^{1-2 x}=4^{x}\)
50. \(2^{x+1}=5^{1-2 x}\)
51. \(\left(\frac{3}{5}\right)^{x}=7^{1-x}\)
52. \(\left(\frac{4}{3}\right)^{1-x}=5^{x}\)
53. \(1.2^{x}=(0.5)^{-x}\)
54. \(0.3^{1+x}=1.7^{2 x-1}\)
55. \(\pi^{1-x}=e^{x}\)
56. \(e^{x+3}=\pi^{x}\)
57. \(2^{2 x}+2^{x}-12=0\)
58. \(3^{2 x}+3^{x}-2=0\)
59. \(3^{2 x}+3^{x+1}-4=0\)
60. \(2^{2 x}+2^{x+2}-12=0\)
61. \(16^{x}+4^{x+1}-3=0\)
62. \(9^{x}-3^{x+1}+1=0\)
63. \(25^{x}-8 \cdot 5^{x}=-16\)
64. \(36^{x}-6 \cdot 6^{x}=-9\)
65. \(3 \cdot 4^{x}+4 \cdot 2^{x}+8=0\)
66. \(2 \cdot 49^{x}+11 \cdot 7^{x}+5=0\)
67. \(4^{x}-10 \cdot 4^{-x}=3\)
68. \(3^{x}-14 \cdot 3^{-x}=5\)

In Problems 69-82, use a graphing utility to solve each equation. Express your answer rounded to two decimal places.
69. \(\log _{5}(x+1)-\log _{4}(x-2)=1\)
70. \(\log _{2}(x-1)-\log _{6}(x+2)=2\)
71. \(e^{x}=-x \quad\) 72. \(e^{2 x}=x+2\)
73. \(e^{x}=x^{2}\)
74. \(e^{x}=x^{3}\)
75. \(\ln x=-x\)
76. \(\ln (2 x)=-x+2\)
77. \(\ln x=x^{3}-1\)
78. \(\ln x=-x^{2}\)
79. \(e^{x}+\ln x=4\)
80. \(e^{x}-\ln x=4\)
81. \(e^{-x}=\ln x\)
82. \(e^{-x}=-\ln x\)

\section*{- Mixed Practice}

In Problems 83-96, solve each equation. Express irrational solutions in exact form and as a decimal rounded to three decimal places.
83. \(\log _{9}(7 x-5)=\log _{3}(x+1)\)
84. \(\log _{2}(x+1)-\log _{4} x=1\)
85. \(\log _{2}(3 x+2)-\log _{4} x=3\)
[Hint: Change \(\log _{9}(7 x-5)\) to base 3.]
86. \(\log _{16} x+\log _{4} x+\log _{2} x=7\)
89. \((\sqrt[3]{2})^{2-x}=2^{x^{2}}\)
92. \(\frac{e^{x}+e^{-x}}{2}=3\)
95. \(\log _{5} x+\log _{3} x=1\)
[Hint: Use the Change-of-Base Formula.]
97. \(f(x)=\log _{2}(x+3)\) and \(g(x)=\log _{2}(3 x+1)\).
(a) Solve \(f(x)=3\). What point is on the graph of \(f\)
(b) Solve \(g(x)=4\). What point is on the graph of \(g\)
(c) Solve \(f(x)=g(x)\). Do the graphs of \(f\) and \(g\) intersect? If so, where?
(d) Solve \((f+g)(x)=7\).
(e) Solve \((f-g)(x)=2\).
98. \(f(x)=\log _{3}(x+5)\) and \(g(x)=\log _{3}(x-1)\).
(a) Solve \(f(x)=2\). What point is on the graph of \(f\) ?
(b) Solve \(g(x)=3\). What point is on the graph of \(g\) ?
(c) Solve \(f(x)=g(x)\). Do the graphs of \(f\) and \(g\) intersect? If so, where?
(d) Solve \((f+g)(x)=3\).
(e) Solve \((f-g)(x)=2\).
99. (a) Graph \(f(x)=3^{x+1}\) and \(g(x)=2^{x+2}\), on the same Cartesian plane.
(b) Find the point(s) of intersection of the graphs of \(f\) and \(g\) by solving \(f(x)=g(x)\). Round answers to three decimal places. Label any intersection points on the graph drawn in part (a).
(c) Based on the graph, solve \(f(x)>g(x)\).
100. (a) Graph \(f(x)=5^{x-1}\) and \(g(x)=2^{x+1}\), on the same Cartesian plane.
(b) Find the point(s) of intersection of the graphs of \(f\) and \(g\) by solving \(f(x)=g(x)\). Label any intersection points on the graph drawn in part (a).
(c) Based on the graph, solve \(f(x)>g(x)\).
101. (a) Graph \(f(x)=3^{x}\) and \(g(x)=10\) on the same Cartesian plane.
(b) Shade the region bounded by the \(y\)-axis, \(f(x)=3^{x}\), and \(g(x)=10\) on the graph drawn in part (a).
(c) Solve \(f(x)=g(x)\) and label the point of intersection on the graph drawn in part (a).
102. (a) Graph \(f(x)=2^{x}\) and \(g(x)=12\) on the same Cartesian plane.
(b) Shade the region bounded by the \(y\)-axis, \(f(x)=2^{x}\), and \(g(x)=12\) on the graph drawn in part (a).
(c) Solve \(f(x)=g(x)\) and label the point of intersection on the graph drawn in part (a).
103. (a) Graph \(f(x)=2^{x+1}\) and \(g(x)=2^{-x+2}\) on the same Cartesian plane.
(b) Shade the region bounded by the \(y\)-axis, \(f(x)=2^{x+1}\), and \(g(x)=2^{-x+2}\) on the graph drawn in part (a).
(c) Solve \(f(x)=g(x)\) and label the point of intersection on the graph drawn in part (a).
104. (a) Graph \(f(x)=3^{-x+1}\) and \(g(x)=3^{x-2}\) on the same Cartesian plane.
(b) Shade the region bounded by the \(y\)-axis, \(f(x)=3^{-x+1}\), and \(g(x)=3^{x-2}\) on the graph draw in part (a).
(c) Solve \(f(x)=g(x)\) and label the point of intersection on the graph drawn in part (a).
105. (a) Graph \(f(x)=2^{x}-4\).
(b) Find the zero of \(f\).
(c) Based on the graph, solve \(f(x)<0\).
106. (a) Graph \(g(x)=3^{x}-9\).
(b) Find the zero of \(g\).
(c) Based on the graph, solve \(g(x)>0\).

\section*{Applications and Extensions}
107. A Population Model The resident population of the United States in 2013 was 316 million people and was growing at a rate of \(0.8 \%\) per year. Assuming that this growth rate continues, the model \(P(t)=316(1.008)^{t-2013}\) represents the population \(P\) (in millions of people) in year \(t\).
(a) According to this model, when will the population of the United States be 419 million people?
(b) According to this model, when will the population of the United States be 490 million people?

\section*{Source: U.S. Census Bureau}

108. A Population Model The population of the world in 2013 was 7.13 billion people and was growing at a rate of \(1.1 \%\) per year. Assuming that this growth rate continues, the model \(P(t)=7.13(1.011)^{t-2013}\) represents the population \(P\) (in billions of people) in year \(t\).
(a) According to this model, when will the population of the world be 10 billion people?
(b) According to this model, when will the population of the world be 12.2 billion people?
Source: U.S. Census Bureau
109. Depreciation The value \(V\) of a Chevy Cruze LT that is \(t\) years old can be modeled by \(V(t)=18,700(0.84)^{t}\).
(a) According to the model, when will the car be worth \(\$ 9000\) ?
(b) According to the model, when will the car be worth \(\$ 6000\) ?
(c) According to the model, when will the car be worth \(\$ 2000\) ?

\section*{Discussion and Writing}
111. Fill in a reason for each step in the following two solutions.

Solve: \(\log _{3}(x-1)^{2}=2\)

\section*{Solution A}
\(\log _{3}(x-1)^{2}=2\)
\((x-1)^{2}=3^{2}=9\)
\((x-1)= \pm 3\)
\(x-1=-3\) or \(x-1=3\)
\(x=-2\) or \(x=4\)
\(\qquad\)
\(\qquad\)
\[
x=201 n=4
\]

Both solutions given in Solution A check. Explain

\section*{Solution B}
\(\log _{3}(x-1)^{2}=2\)
\(2 \log _{3}(x-1)=2\) \(\qquad\)
\(\log _{3}(x-1)=1\) \(\qquad\)
\(x-1=3^{1}=3\) \(\qquad\)
\(x=4\) \(\qquad\)
Retain Your Knowledge
Problems 112-115 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
112. Solve: \(4 x^{3}+3 x^{2}-25 x+6=0\).
113. Find the domain of
\(f(x)=\sqrt{x+3}+\sqrt{x-1}\).
114. For \(f(x)=\frac{x}{x-2}\) and \(g(x)=\frac{x+5}{x-3}\), find \(f \circ g\). Then find the domain of \(f \circ g\).
115. Determine whether the function \(\{(0,-4),(2,-2)\), \((4,0),(6,2)\}\) is one-to-one.

1. \(\{-3,10\}\)
2. \(\{-2,0\}\)
3. \(\{-1.43\}\)
4. \(\{-1.77\}\)

\subsection*{4.7 Financial Models}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Simple Interest (Appendix A, Section A.9, pp. A73-A74)

Now Work the 'Are You Prepared?' problems on page 349.
OBJECTIVES 1 Determine the Future Value of a Lump Sum of Money (p. 340)
2 Calculate Effective Rates of Return (p. 343)
3 Determine the Present Value of a Lump Sum of Money (p. 344)
4 Determine the Rate of Interest or the Time Required to Double a Lump Sum of Money (p. 345)

\section*{1 Determine the Future Value of a Lump Sum of Money}

Interest is money paid for the use of money. The total amount borrowed (whether by an individual from a bank in the form of a loan or by a bank from an individual in the form of a savings account) is called the principal. The rate of interest, expressed as a percent, is the amount charged for the use of the principal for a given period of time, usually on a yearly (that is, per annum) basis.

\section*{THEOREM \\ Simple Interest Formula}

If a principal of \(P\) dollars is borrowed for a period of \(t\) years at a per annum interest rate \(r\), expressed as a decimal, the interest \(I\) charged is
\[
I=P r t
\]

Interest charged according to formula (1) is called simple interest.
In problems involving interest, the term payment period is defined as follows:
\begin{tabular}{llll} 
Annually: & Once per year & Monthly: 12 times per year \\
Semiannually: & Twice per year & Daily: & 365 times per year* \\
Quarterly: & Four times per year & &
\end{tabular}

When the interest due at the end of a payment period is added to the principal so that the interest computed at the end of the next payment period is based on this new principal amount (old principal + interest), the interest is said to have been compounded. Compound interest is interest paid on the principal and on previously earned interest.

\section*{EXAMPLE I Computing Compound Interest}

A credit union pays interest of \(2 \%\) per annum compounded quarterly on a certain savings plan. If \(\$ 1000\) is deposited in such a plan and the interest is left to accumulate, how much is in the account after 1 year?

Solution Use the simple interest formula, \(I=\) Prt. The principal \(P\) is \(\$ 1000\) and the rate of interest is \(2 \%=0.02\). After the first quarter of a year, the time \(t\) is \(\frac{1}{4}\) year, so the interest earned is
\[
I=P r t=(\$ 1000)(0.02)\left(\frac{1}{4}\right)=\$ 5
\]

The new principal is \(P+I=\$ 1000+\$ 5=\$ 1005\). At the end of the second quarter, the interest on this principal is
\[
I=(\$ 1005)(0.02)\left(\frac{1}{4}\right)=\$ 5.03
\]

At the end of the third quarter, the interest on the new principal of \(\$ 1005+\$ 5.03=\$ 1010.03\) is
\[
I=(\$ 1010.03)(0.02)\left(\frac{1}{4}\right)=\$ 5.05
\]

Finally, after the fourth quarter, the interest is
\[
I=(\$ 1015.08)(0.02)\left(\frac{1}{4}\right)=\$ 5.08
\]

After 1 year the account contains \(\$ 1015.08+\$ 5.08=\$ 1020.16\).
The pattern of the calculations performed in Example 1 leads to a general formula for compound interest. For this purpose, let \(P\) represent the principal to be invested at a per annum interest rate \(r\) that is compounded \(n\) times per year, so the time of each compounding period is \(\frac{1}{n}\) years. (For computing purposes, \(r\) is expressed as a decimal.) The interest earned after each compounding period is given by formula (1).
\[
\text { Interest }=\text { principal } \times \text { rate } \times \text { time }=P \cdot r \cdot \frac{1}{n}=P \cdot\left(\frac{r}{n}\right)
\]

The amount \(A\) after one compounding period is
\[
A=P+P \cdot\left(\frac{r}{n}\right)=P \cdot\left(1+\frac{r}{n}\right)
\]

After two compounding periods, the amount \(A\), based on the new principal \(P \cdot\left(1+\frac{r}{n}\right)\), is

After three compounding periods, the amount \(A\) is
\[
A=P \cdot\left(1+\frac{r}{n}\right)^{2}+P \cdot\left(1+\frac{r}{n}\right)^{2}\left(\frac{r}{n}\right)=P \cdot\left(1+\frac{r}{n}\right)^{2} \cdot\left(1+\frac{r}{n}\right)=P \cdot\left(1+\frac{r}{n}\right)^{3}
\]

Continuing this way, after \(n\) compounding periods (1 year), the amount \(A\) is
\[
A=P \cdot\left(1+\frac{r}{n}\right)^{n}
\]

Because \(t\) years will contain \(n \cdot t\) compounding periods, the amount after \(t\) years is
\[
A=P \cdot\left(1+\frac{r}{n}\right)^{n t}
\]

\section*{THEOREM}

\section*{Exploration}

To see the effects of compounding interest monthly on an initial deposit of \(\$ 1\), graph \(Y_{1}=\left(1+\frac{r}{12}\right)^{12 x}\) with \(r=0.06\) and \(r=0.12\) for \(0 \leq x \leq 30\). What is the future value of \(\$ 1\) in 30 years when the interest rate per annum is \(r=0.06(6 \%)\) ? What is the future value of \(\$ 1\) in 30 years when the interest rate per annum is \(r=0.12\) (12\%)? Does doubling the interest rate double the future value?

NOTE The results shown here differ from those in Example 1 due to rounding.

\section*{Compound Interest Formula}

The amount \(A\) after \(t\) years due to a principal \(P\) invested at an annual interest rate \(r\) compounded \(n\) times per year is
\[
\begin{equation*}
A=P \cdot\left(1+\frac{r}{n}\right)^{n t} \tag{2}
\end{equation*}
\]

For example, to rework Example 1, use \(P=\$ 1000, r=0.02, n=4\) (quarterly compounding), and \(t=1\) year to obtain
\[
A=P \cdot\left(1+\frac{r}{n}\right)^{n t}=1000\left(1+\frac{0.02}{4}\right)^{4 \cdot 1}=\$ 1020.15
\]

In equation (2), the amount \(A\) is typically referred to as the future value of the account, and \(P\) is called the present value.

\section*{Now Work problem 7}

\section*{EXAMPLE 2}

\section*{Comparing Investments Using Different Compounding Periods}

Investing \$1000 at an annual rate of \(10 \%\) compounded annually, semiannually, quarterly, monthly, and daily will yield the following amounts after 1 year:
Annual compounding \((n=1)\) :
\[
\begin{aligned}
A & =P \cdot(1+r) \\
& =(\$ 1000)(1+0.10)=\$ 1100.00
\end{aligned}
\]

Semiannual compounding \((n=2)\) :
\[
\begin{aligned}
A & =P \cdot\left(1+\frac{r}{2}\right)^{2} \\
& =(\$ 1000)(1+0.05)^{2}=\$ 1102.50
\end{aligned}
\]

Quarterly compounding \((n=4)\) :
\[
\begin{aligned}
A & =P \cdot\left(1+\frac{r}{4}\right)^{4} \\
& =(\$ 1000)(1+0.025)^{4}=\$ 1103.81
\end{aligned}
\]

Monthly compounding \((n=12): \quad A=P \cdot\left(1+\frac{r}{12}\right)^{12}\)
\[
\text { Daily compounding }(n=365): \quad \begin{aligned}
A & =P \cdot\left(1+\frac{r}{365}\right)^{365} \\
& =(\$ 1000)\left(1+\frac{0.10}{365}\right)^{365}=\$ 1105.16
\end{aligned}
\]
\[
=(\$ 1000)\left(1+\frac{0.10}{12}\right)^{12}=\$ 1104.71
\]

From Example 2, note that the effect of compounding more frequently is that the amount after 1 year is higher: \(\$ 1000\) compounded 4 times a year at \(10 \%\) results in \(\$ 1103.81, \$ 1000\) compounded 12 times a year at \(10 \%\) results in \(\$ 1104.71\), and \(\$ 1000\) compounded 365 times a year at \(10 \%\) results in \(\$ 1105.16\). This leads to the following question: What would happen to the amount after 1 year if the number of times that the interest is compounded were increased without bound?

Let's find the answer. Suppose that \(P\) is the principal, \(r\) is the per annum interest rate, and \(n\) is the number of times that the interest is compounded each year. The amount after 1 year is
\[
A=P \cdot\left(1+\frac{r}{n}\right)^{n}
\]

Rewrite this expression as follows:
\(A=P \cdot\left(1+\frac{r}{n}\right)^{n}=P \cdot\left(1+\frac{1}{\frac{n}{r}}\right)^{n}=P \cdot\left[\left(1+\frac{1}{\frac{n}{r}}\right)^{n / r}\right]_{h=\frac{n}{r}}^{r} \underset{\uparrow}{=} P \cdot\left[\left(1+\frac{1}{h}\right)^{h}\right]^{r}\)
Now suppose that the number \(n\) of times that the interest is compounded per year gets larger and larger; that is, suppose that \(n \rightarrow \infty\). Then \(h=\frac{n}{r} \rightarrow \infty\), and the expression in brackets in equation (3) equals \(e\). That is, \(A \rightarrow P e^{r}\).

Table 8 compares \(\left(1+\frac{r}{n}\right)^{n}\), for large values of \(n\), to \(e^{r}\) for \(r=0.05, r=0.10\), \(r=0.15\), and \(r=1\). The larger that \(n\) gets, the closer \(\left(1+\frac{r}{n}\right)^{n}\) gets to \(e^{r}\). No matter how frequent the compounding, the amount after 1 year has the definite ceiling \(P e^{r}\).

Table 8
\begin{tabular}{|lllll|}
\hline & \multicolumn{4}{c|}{\(\left(\mathbf{1}+\frac{r}{n}\right)^{n}\)} \\
\(n=100\) & \(n=1000\) & \(n=10,000\) & \(e^{r}\) \\
\hline\(r=0.05\) & 1.0512580 & 1.0512698 & 1.0512710 & 1.0512711 \\
\(r=0.10\) & 1.1051157 & 1.1051654 & 1.1051704 & 1.1051709 \\
\(r=0.15\) & 1.1617037 & 1.1618212 & 1.1618329 & 1.1618342 \\
\(r=1\) & 2.7048138 & 2.7169239 & 2.7181459 & 2.7182818 \\
\hline
\end{tabular}

When interest is compounded so that the amount after 1 year is \(P e^{r}\), the interest is said to be compounded continuously.

\section*{THEOREM}

\section*{Continuous Compounding}

The amount \(A\) after \(t\) years due to a principal \(P\) invested at an annual interest rate \(r\) compounded continuously is
\[
A=P e^{r t}
\]

\section*{EXAMPLE 3 Using Continuous Compounding}

The amount \(A\) that results from investing a principal \(P\) of \(\$ 1000\) at an annual rate \(r\) of \(10 \%\) compounded continuously for a time \(t\) of 1 year is
\[
A=\$ 1000 e^{0.10}=(\$ 1000)(1.10517)=\$ 1105.17
\]
```

Now Work problem 1

```

\section*{2 Calculate Effective Rates of Return}

Suppose that you have \(\$ 1000\) and a bank offers to pay \(3 \%\) annual interest on a savings account with interest compounded monthly. What annual interest rate must be earned for you to have the same amount at the end of the year as if the interest had been compounded annually (once per year)? To answer this question, first determine the value of the \(\$ 1000\) in the account that earns \(3 \%\) compounded monthly.
\[
\begin{aligned}
A & =\$ 1000\left(1+\frac{0.03}{12}\right)^{12} \quad \text { Use } A=p\left(1+\frac{r}{n}\right)^{n} \text { with } P=\$ 1000, r=0.03, n=12 \\
& =\$ 1030.42
\end{aligned}
\]

So the interest earned is \(\$ 30.42\). Using \(I=\operatorname{Prt}\) with \(t=1, I=\$ 30.42\), and \(P=\$ 1000\), the annual simple interest rate is \(0.03042=3.042 \%\). This interest rate is known as the effective rate of interest.

The effective rate of interest is the equivalent annual simple interest rate that would yield the same amount as compounding \(n\) times per year, or continuously, after 1 year.

\section*{THEOREM}

\section*{Effective Rate of Interest}

The effective rate of interest \(r_{e}\) of an investment earning an annual interest rate \(r\) is given by
\[
\begin{array}{ll}
\text { Compounding } n \text { times per year: } & r_{e}=\left(1+\frac{r}{n}\right)^{n}-1 \\
\text { Continuous compounding: } & r_{e}=e^{r}-1
\end{array}
\]

\section*{EXAMPLE 4 Computing the Effective Rate of Interest-Which Is the Best Deal?}

Suppose you want to buy a 5-year certificate of deposit (CD). You visit three banks to determine their CD rates. American Express offers you \(2.15 \%\) annual interest compounded monthly, and First Internet Bank offers you \(2.20 \%\) compounded quarterly. Discover offers \(2.12 \%\) compounded daily. Determine which bank is offering the best deal.
Solution The bank that offers the best deal is the one with the highest effective interest rate.
\[
\begin{aligned}
& \text { American Express } \\
& r_{e}=\left(1+\frac{0.0215}{12}\right)^{12}-1 \\
& \approx 1.02171-1 \\
& =0.02171 \\
& =2.171 \% \\
& r_{e}=\left(1+\frac{0.022}{4}\right)^{4}-1 \\
& \approx 1.02218-1 \\
& =0.02218 \\
& =2.218 \% \\
& r_{e}=\left(1+\frac{0.0212}{365}\right)^{365}-1 \\
& \approx 1.02143-1 \\
& =0.02143 \\
& =2.143 \%
\end{aligned}
\]

The effective rate of interest is highest for First Internet Bank, so First Internet Bank is offering the best deal.

\section*{3 Determine the Present Value of a Lump Sum of Money}

When people in finance speak of the "time value of money," they are usually referring to the present value of money. The present value of \(A\) dollars to be received at a future date is the principal that you would need to invest now so that it will grow to \(A\) dollars in the specified time period. The present value of money to be received at a future date is always less than the amount to be received, since the amount to be received will equal the present value (money invested now) plus the interest accrued over the time period.

The compound interest formula (2) is used to develop a formula for present value. If \(P\) is the present value of \(A\) dollars to be received after \(t\) years at a per annum interest rate \(r\) compounded \(n\) times per year, then, by formula (2),
\[
A=P \cdot\left(1+\frac{r}{n}\right)^{n t}
\]

To solve for \(P\), divide both sides by \(\left(1+\frac{r}{n}\right)^{n t}\). The result is
\[
\frac{A}{\left(1+\frac{r}{n}\right)^{n t}}=P \quad \text { or } \quad P=A \cdot\left(1+\frac{r}{n}\right)^{-n t}
\]

\section*{THEOREM Present Value Formulas}

The present value \(P\) of \(A\) dollars to be received after \(t\) years, assuming a per annum interest rate \(r\) compounded \(n\) times per year, is
\[
\begin{equation*}
P=A \cdot\left(1+\frac{r}{n}\right)^{-n t} \tag{5}
\end{equation*}
\]

If the interest is compounded continuously, then
\[
\begin{equation*}
P=A e^{-r t} \tag{6}
\end{equation*}
\]

To derive formula (6), solve formula (4) for \(P\).

\section*{EXAMPLE 5 Computing the Value of a Zero-Coupon Bond}

A zero-coupon (noninterest-bearing) bond can be redeemed in 10 years for \(\$ 1000\). How much should you be willing to pay for it now if you want a return of
(a) \(8 \%\) compounded monthly?
(b) \(7 \%\) compounded continuously?

Solution (a) To find the present value of \(\$ 1000\), use formula (5) with \(A=\$ 1000\), \(n=12, r=0.08\), and \(t=10\).
\[
P=A \cdot\left(1+\frac{r}{n}\right)^{-n t}=\$ 1000\left(1+\frac{0.08}{12}\right)^{-12(10)}=\$ 450.52
\]

For a return of \(8 \%\) compounded monthly, pay \(\$ 450.52\) for the bond.
(b) Here use formula (6) with \(A=\$ 1000, r=0.07\), and \(t=10\).
\[
P=A e^{-r t}=\$ 1000 e^{-(0.07)(10)}=\$ 496.59
\]

For a return of \(7 \%\) compounded continuously, pay \(\$ 496.59\) for the bond.

\section*{4 Determine the Rate of Interest or the Time Required to Double a Lump Sum of Money}

\section*{EXAMPLE 6 Rate of Interest Required to Double an Investment}

What annual rate of interest compounded annually is needed in order to double an investment in 5 years?

Solution If \(P\) is the principal and \(P\) is to double, the amount \(A\) will be \(2 P\). Use the compound interest formula with \(n=1\) and \(t=5\) to find \(r\).
\[
\begin{array}{rlrl}
A & =P \cdot\left(1+\frac{r}{n}\right)^{n t} & & \\
2 P & =P \cdot(1+r)^{5} & & A=2 P, n=1, t=5 \\
2 & =(1+r)^{5} & & \text { Divide both sides by } P . \\
1+r & =\sqrt[5]{2} & & \text { Take the fifth root of each side. } \\
r & =\sqrt[5]{2}-1 \approx 1.148698-1=0.148698
\end{array}
\]

The annual rate of interest needed to double the principal in 5 years is \(14.87 \%\).
all Now Work problem 31

\section*{EXAMPLE 7 Time Required to Double or Triple an Investment}
(a) How long will it take for an investment to double in value if it earns \(5 \%\) compounded continuously?
(b) How long will it take to triple at this rate?

Solution (a) If \(P\) is the initial investment and \(P\) is to double, the amount \(A\) will be \(2 P\). Use formula (4) for continuously compounded interest with \(r=0.05\). Then
\[
\begin{aligned}
A & =P e^{r t} & & \\
2 P & =P e^{0.05 t} & & A=2 P, r=0.05 \\
2 & =e^{0.05 t} & & \text { Divide out the P's. } \\
0.05 t & =\ln 2 & & \text { Rewrite as a logarithm. } \\
t & =\frac{\ln 2}{0.05} \approx 13.86 & & \text { Solve for t. }
\end{aligned}
\]

It will take about 14 years to double the investment.
(b) To triple the investment, let \(A=3 P\) in formula (4).
\[
\begin{aligned}
A & =P e^{r t} & & \\
3 P & =P e^{0.05 t} & & A=3 P, r=0.05 \\
3 & =e^{0.05 t} & & \text { Divide out the P's. } \\
0.05 t & =\ln 3 & & \text { Rewrite as a logarithm. } \\
t & =\frac{\ln 3}{0.05} \approx 21.97 & & \text { Solve for t. }
\end{aligned}
\]

It will take about 22 years to triple the investment.

\subsection*{4.7 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the page listed in red.
1. What is the interest due if \(\$ 500\) is borrowed for 6 months at a simple interest rate of \(6 \%\) per annum? (pp.A73-A74)
2. If you borrow \(\$ 5000\) and, after 9 months, pay off the loan in the amount of \(\$ 5500\), what per annum rate of interest was charged? (pp. A73-A74)

\section*{Concepts and Vocabulary}
3. The total amount borrowed (whether by an individual from a bank in the form of a loan or by a bank from an individual in the form of a savings account) is called the \(\qquad\) -
4. If a principal of \(P\) dollars is borrowed for a period of \(t\) years at a per annum interest rate \(r\), expressed as a decimal, the interest \(I\) charged is \(\qquad\) \(=\) \(\qquad\) . Interest charged according to this formula is called \(\qquad\) .
5. In working problems involving interest, if the payment period of the interest is quarterly, then interest is paid times per year.
6. The \(\qquad\) is the equivalent annual simple interest rate that would yield the same amount as compounding \(n\) times per year, or continuously, after 1 year.

\section*{Skill Building}

In Problems 7-14, find the amount that results from each investment.
7. \(\$ 100\) invested at \(4 \%\) compounded quarterly after a period of 2 years
8. \(\$ 50\) invested at \(6 \%\) compounded monthly after a period of 3 years
9. \(\$ 500\) invested at \(8 \%\) compounded quarterly after a period of \(2 \frac{1}{2}\) years
10. \(\$ 300\) invested at \(12 \%\) compounded monthly after a period of \(1 \frac{1}{2}\) years
11. \(\$ 600\) invested at \(5 \%\) compounded daily after a period of 3 years
12. \(\$ 700\) invested at \(6 \%\) compounded daily after a period of 2 years
13. \(\$ 1000\) invested at \(11 \%\) compounded continuously after a period of 2 years
14. \(\$ 400\) invested at \(7 \%\) compounded continuously after a period of 3 years

In Problems 15-22, find the principal needed now to get each amount; that is, find the present value.
15. To get \(\$ 100\) after 2 years at \(6 \%\) compounded monthly
16. To get \(\$ 75\) after 3 years at \(8 \%\) compounded quarterly?
17. To get \(\$ 1000\) after \(2 \frac{1}{2}\) years at \(6 \%\) compounded daily
18. To get \(\$ 800\) after \(3 \frac{1}{2}\) years at \(7 \%\) compounded monthly

\section*{In Problems 23-26, find the effective rate of interest.}
23. For \(5 \%\) compounded quarterly
24. For \(6 \%\) compounded monthly

In Problems 27-30, determine the rate that represents the better deal.
27. \(6 \%\) compounded quarterly or \(6 \frac{1}{4} \%\) compounded annually
28. \(9 \%\) compounded quarterly or \(9 \frac{1}{4} \%\) compounded annually
29. \(9 \%\) compounded monthly or \(8.8 \%\) compounded daily
30. \(8 \%\) compounded semiannually or \(7.9 \%\) compounded daily
31. What rate of interest compounded annually is required to double an investment in 3 years?
32. What rate of interest compounded annually is required to double an investment in 6 years?
33. What rate of interest compounded annually is required to triple an investment in 5 years?
34. What rate of interest compounded annually is required to triple an investment in 10 years?
19. To get \(\$ 600\) after 2 years at \(4 \%\) compounded quarterly
20. To get \(\$ 300\) after 4 years at \(3 \%\) compounded daily
21. To get \(\$ 80\) after \(3 \frac{1}{4}\) years at \(9 \%\) compounded continuously
22. To get \(\$ 800\) after \(2 \frac{1}{2}\) years at \(8 \%\) compounded continuously
25. For 5\% compounded continuously
26. For \(6 \%\) compounded continuously
35. (a) How long does it take for an investment to double in value if it is invested at \(8 \%\) compounded monthly?
(b) How long does it take if the interest is compounded continuously?
36. (a) How long does it take for an investment to triple in value if it is invested at \(6 \%\) compounded monthly?
(b) How long does it take if the interest is compounded continuously?
37. What rate of interest compounded quarterly will yield an effective interest rate of \(7 \%\) ?
38. What rate of interest compounded continuously will yield an effective interest rate of \(6 \%\) ?

\section*{Applications and Extensions}
39. Time Required to Reach a Goal If Tanisha has \(\$ 100\) to invest at \(8 \%\) per annum compounded monthly, how long will it be before she has \(\$ 150\) ? If the compounding is continuous, how long will it be?
40. Time Required to Reach a Goal If Angela has \(\$ 100\) to invest at \(10 \%\) per annum compounded monthly, how long will it be before she has \(\$ 175\) ? If the compounding is continuous, how long will it be?
41. Time Required to Reach a Goal How many years will it take for an initial investment of \(\$ 10,000\) to grow to \(\$ 25,000\) ? Assume a rate of interest of \(6 \%\) compounded continuously.
42. Time Required to Reach a Goal How many years will it take for an initial investment of \(\$ 25,000\) to grow to \(\$ 80,000\) ? Assume a rate of interest of \(7 \%\) compounded continuously.
43. Price Appreciation of Homes What will a \(\$ 90,000\) condominium cost 5 years from now if the price appreciation for condos over that period averages \(3 \%\) compounded annually?
44. Credit Card Interest A department store charges \(1.25 \%\) per month on the unpaid balance for customers with charge accounts (interest is compounded monthly). A customer charges \(\$ 200\) and does not pay her bill for 6 months. What is the bill at that time?
45. Saving for a Car Jerome will be buying a used car for \(\$ 15,000\) in 3 years. How much money should he ask his parents for now so that, if he invests it at \(5 \%\) compounded continuously, he will have enough to buy the car?
46. Paying off a Loan John requires \(\$ 3000\) in 6 months to pay off a loan that has no prepayment privileges. If he has the \(\$ 3000\) now, how much of it should he save in an account paying \(3 \%\) compounded monthly so that in 6 months he will have exactly \(\$ 3000\) ?
47. Return on a Stock George contemplates the purchase of 100 shares of a stock selling for \(\$ 15\) per share. The stock pays no dividends. The history of the stock indicates that it should grow at an annual rate of \(15 \%\) per year. How much should the 100 shares of stock be worth in 5 years?
48. Return on an Investment A business purchased for \(\$ 650,000\) in 2005 is sold in 2008 for \(\$ 850,000\). What is the annual rate of return for this investment?
49. Comparing Savings Plans Jim places \(\$ 1000\) in a bank account that pays \(5.6 \%\) compounded continuously. After 1 year, will he have enough money to buy a computer system that costs \(\$ 1060\) ? If another bank will pay Jim \(5.9 \%\) compounded monthly, is this a better deal?
50. Savings Plans On January 1, Kim places \(\$ 1000\) in a certificate of deposit that pays \(6.8 \%\) compounded continuously and matures in 3 months. Then Kim places the \(\$ 1000\) and the interest in a passbook account that pays \(5.25 \%\) compounded monthly. How much does Kim have in the passbook account on May 1?
51. Comparing IRA Investments Will invests \(\$ 2000\) in his IRA in a bond trust that pays \(9 \%\) interest compounded semiannually. His friend Henry invests \(\$ 2000\) in his IRA in a certificate of deposit that pays \(8 \frac{1}{2} \%\) compounded continuously. Who has more money after 20 years, Will or Henry?
52. Comparing Two Alternatives Suppose that April has access to an investment that will pay \(10 \%\) interest compounded continuously. Which is better: to be given \(\$ 1000\) now so that she can take advantage of this investment opportunity or to be given \(\$ 1325\) after 3 years?
53. College Costs The average annual cost of college at 4 -year private colleges was \(\$ 29,056\) in the 2012-2013 academic year. This was a \(4.2 \%\) increase from the previous year.
Source: The College Board
(a) If the cost of college increases by \(4.2 \%\) each year, what will be the average cost of college at a 4 -year private college for the 2030-2031 academic year?
(b) College savings plans, such as a 529 plan, allow individuals to put money aside now to help pay for college later. If one such plan offers a rate of \(4 \%\) compounded continuously, how much should be put in a college savings plan in 2015 to pay for 1 year of the cost of college at a 4 -year private college for an incoming freshman in 2030?
54. Analyzing Interest Rates on a Mortgage Colleen and Bill have just purchased a house for \(\$ 650,000\), with the seller holding a second mortgage of \(\$ 100,000\). They promise to pay the seller \(\$ 100,000\) plus all accrued interest 5 years from now. The seller offers them three interest options on the second mortgage:
(a) Simple interest at \(12 \%\) per annum
(b) \(11 \frac{1}{2} \%\) interest compounded monthly
(c) \(11 \frac{1}{4} \%\) interest compounded continuously

Which option is best? That is, which results in paying the least interest on the loan?
55. 2009 Federal Stimulus Package In February 2009, President Obama signed intolaw a \(\$ 787\) billionfederal stimulus package. At that time, 20-year Series EE bonds had a fixed rate of \(1.3 \%\) compounded semiannually. If the federal government financed the stimulus through EE bonds, how much would it have to pay back in 2029? How much interest was paid to finance the stimulus?

\section*{Source: U.S. Treasury Department}
56. Per Capita Federal Debt In 2013, the federal debt was about \(\$ 17\) trillion. In 2013, the U.S. population was about 316 million. Assuming that the federal debt is increasing about \(8.6 \%\) per year and the U.S. population is increasing about \(0.8 \%\) per year, determine the per capita debt (total debt divided by population) in 2020 rounded to the nearest dollar.

Inflation Problems 57-62 require the following discussion. Inflation is a term used to describe the erosion of the purchasing power of money. For example, if the annual inflation rate is \(3 \%\), then \(\$ 1000\) worth of purchasing power now will have only \(\$ 970\) worth of purchasing power in 1 year because \(3 \%\) of the original \(\$ 1000(0.03 \times 1000=30)\) has been eroded due to inflation. In general, if the rate of inflation averages \(r\) per annum over \(n\) years, the amount \(A\) that \(\$ P\) will purchase after \(n\) years is
\[
A=P \cdot(1-r)^{n}
\]
where \(r\) is expressed as a decimal.
57. Inflation If the inflation rate averages 3\%, how much will \(\$ 1000\) purchase in 2 years?
58. Inflation If the inflation rate averages \(2 \%\), how much will \(\$ 1000\) purchase in 3 years?
59. Inflation If the amount that \(\$ 1000\) will purchase is only \(\$ 950\) after 2 years, what was the average inflation rate?
60. Inflation If the amount that \(\$ 1000\) will purchase is only \(\$ 930\) after 2 years, what was the average inflation rate?
61. Inflation If the average inflation rate is \(2 \%\), how long is it until purchasing power is cut in half?
62. Inflation If the average inflation rate is \(4 \%\), how long is it until purchasing power is cut in half?

Problems 63-66 involve zero-coupon bonds. A zero-coupon bond is a bond that is sold now at a discount and will pay its face value at the time when it matures; no interest payments are made.
63. Zero-Coupon Bonds A zero-coupon bond can be redeemed in 20 years for \(\$ 10,000\). How much should you be willing to pay for it now if you want a return of:
(a) \(10 \%\) compounded monthly?
(b) \(10 \%\) compounded continuously?
64. Zero-Coupon Bonds A child's grandparents are considering buying a \(\$ 40,000\) face-value, zero-coupon bond at her birth so that she will have money for her college education 17 years later. If they want a rate of return of \(8 \%\) compounded annually, what should they pay for the bond?
65. Zero-Coupon Bonds How much should a \(\$ 10,000\) facevalue, zero-coupon bond, maturing in 10 years, be sold for now if its rate of return is to be \(8 \%\) compounded annually?
66. Zero-Coupon Bonds If Pat pays \(\$ 12,485.52\) for a \(\$ 25,000\) face-value, zero-coupon bond that matures in 8 years, what is his annual rate of return?
67. Time to Double or Triple an Investment The formula
\[
t=\frac{\ln m}{n \ln \left(1+\frac{r}{n}\right)}
\]
can be used to find the number of years \(t\) required to multiply an investment \(m\) times when \(r\) is the per annum interest rate compounded \(n\) times a year.
(a) How many years will it take to double the value of an IRA that compounds annually at the rate of \(12 \%\) ?
(b) How many years will it take to triple the value of a savings account that compounds quarterly at an annual rate of \(6 \%\) ?
(c) Give a derivation of this formula.
68. Time to Reach an Investment Goal The formula
\[
t=\frac{\ln A-\ln P}{r}
\]
can be used to find the number of years \(t\) required for an investment \(P\) to grow to a value \(A\) when compounded continuously at an annual rate \(r\).
(a) How long will it take to increase an initial investment of \(\$ 1000\) to \(\$ 8000\) at an annual rate of \(10 \%\) ?
(b) What annual rate is required to increase the value of a \(\$ 2000\) IRA to \(\$ 30,000\) in 35 years?
(c) Give a derivation of this formula.

Problems 69-72 require the following discussion. The Consumer Price Index (CPI) indicates the relative change in price over time for a fixed basket of goods and services. It is a cost-of-living index that helps measure the effect of inflation on the cost of goods and services. The CPI uses the base period 1982-1984 for comparison (the CPI for this period is 100). The CPI for January 2013 was 230.28. This means that \(\$ 100\) in the period 1982-1984 had the same purchasing power as \(\$ 230.28\) in January 2013. In general, if the rate of inflation averages \(r\) percent per annum over \(n\) years, then the CPI index after \(n\) years is
\[
\mathrm{CPI}=\mathrm{CPI}_{0}\left(1+\frac{r}{100}\right)^{n}
\]
where \(C P I_{0}\) is the CPI index at the beginning of the \(n\)-year period. Source: U.S. Bureau of Labor Statistics

\section*{69. Consumer Price Index}
(a) The CPI was 179.9 for 2002 and 229.6 for 2012. Assuming that annual inflation remained constant for this time period, determine the average annual inflation rate.
(b) Using the inflation rate from part (a), in what year will the CPI reach 300?
70. Consumer Price Index If the current CPI is 234.2 and the average annual inflation rate is \(2.8 \%\), what will be the CPI in 5 years?
71. Consumer Price Index If the average annual inflation rate is \(3.1 \%\), how long will it take for the CPI index to double? (A doubling of the CPI index means purchasing power is cut in half.)
72. Consumer Price Index The base period for the CPI changed in 1998. Under the previous weight and item structure, the CPI for 1995 was 456.5 . If the average annual inflation rate was \(5.57 \%\), what year was used as the base period for the CPI?

\section*{Discussion and Writing}
73. Explain in your own words what the term compound interest means. What does continuous compounding mean?
74. Explain in your own words the meaning of present value.
75. Critical Thinking You have just contracted to buy a house and will seek financing in the amount of \(\$ 100,000\). You go to several banks. Bank 1 will lend you \(\$ 100,000\)
at the rate of \(8.75 \%\) amortized over 30 years with a loan origination fee of \(1.75 \%\). Bank 2 will lend you \(\$ 100,000\) at the rate of \(8.375 \%\) amortized over 15 years with a loan origination fee of \(1.5 \%\). Bank 3 will lend you \(\$ 100,000\) at the rate of \(9.125 \%\) amortized over 30 years with no loan origination fee. Bank 4 will lend you \(\$ 100,000\) at the rate of \(8.625 \%\) amortized over 15 years with no loan origination
fee. Which loan would you take? Why? Be sure to have sound reasons for your choice. Use the information in the table to assist you. If the amount of the monthly payment did not matter to you, which loan would you take? Again, have sound reasons for your choice. Compare your final decision with others in the class. Discuss.
\begin{tabular}{|cll|}

\section*{- Retain Your Knowledge}

Problems 76-79 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
76. Find the remainder \(R\) when \(f(x)=6 x^{3}+3 x^{2}+2 x-11\) is divided by \(g(x)=x-1\). Is \(g\) a factor of \(f\) ?
77. Find the real zeros of
\[
f(x)=x^{5}-x^{4}-15 x^{3}-21 x^{2}-16 x-20
\]

Then write \(f\) in factored form.
78. The function \(f(x)=\frac{x}{x-2}\) is one-to-one. Find \(f^{-1}\).
79. Solve: \(\log _{2}(x+3)=2 \log _{2}(x-3)\)

\subsection*{4.8 Exponential Growth and Decay Models; Newton's Law; Logistic Growth and Decay Models}

OBJECTIVES 1 Find Equations of Populations That Obey the Law of Uninhibited Growth (p. 349)
2 Find Equations of Populations That Obey the Law of Decay (p. 351)
3 Use Newton's Law of Cooling (p. 352)
4 Use Logistic Models (p. 354)

\section*{1 Find Equations of Populations That Obey the Law of Uninhibited Growth}

Many natural phenomena have been found to follow the law that an amount \(A\) varies with time \(t\) according to the function
\[
\begin{equation*}
A(t)=A_{0} e^{k t} \tag{1}
\end{equation*}
\]

Here \(A_{0}\) is the original amount \((t=0)\) and \(k \neq 0\) is a constant.
If \(k>0\), then equation (1) states that the amount \(A\) is increasing over time; if \(k<0\), the amount \(A\) is decreasing over time. In either case, when an amount \(A\) varies over time according to equation (1), it is said to follow the exponential law, or the law of uninhibited growth \((k>0)\) or decay \((k<0)\). See Figure 44.

For example, as seen in Section 4.7, continuously compounded interest was shown to follow the law of uninhibited growth. In this section, additional phenomena that follow the exponential law will be studied.

Cell division is the growth process of many living organisms, such as amoebas, plants, and human skin cells. Based on an ideal situation in which no cells die and no by-products are produced, the number of cells present at a given time follows the law of uninhibited growth. Actually, however, after enough time has passed, growth at an exponential rate will cease due to the influence of factors such as lack of living space and dwindling food supply. The law of uninhibited growth accurately models only the early stages of the cell division process.

The cell division process begins with a culture containing \(N_{0}\) cells. Each cell in the culture grows for a certain period of time and then divides into two identical
cells. Assume that the time needed for each cell to divide in two is constant and does not change as the number of cells increases. These new cells then grow, and eventually each divides in two, and so on.

Uninhibited Growth of Cells
A model that gives the number \(N\) of cells in a culture after a time \(t\) has passed (in the early stages of growth) is
\[
N(t)=N_{0} e^{k t} \quad k>0
\]
where \(N_{0}\) is the initial number of cells and \(k\) is a positive constant that represents the growth rate of the cells.

Using formula (2) to model the growth of cells employs a function that yields positive real numbers, even though the number of cells being counted must be an integer. This is a common practice in many applications.

\section*{EXAMPLE I Bacterial Growth}

A colony of bacteria grows according to the law of uninhibited growth according to the function \(N(t)=100 e^{0.045 t}\), where \(N\) is measured in grams and \(t\) is measured in days.
(a) Determine the initial amount of bacteria.
(b) What is the growth rate of the bacteria?
(c) What is the population after 5 days?
(d) How long will it take for the population to reach 140 grams?
(e) What is the doubling time for the population?

Solution (a) The initial amount of bacteria, \(N_{0}\), is obtained when \(t=0\), so
\[
N_{0}=N(0)=100 e^{0.045(0)}=100 \text { grams }
\]
(b) Compare \(N(t)=100 e^{0.045 t}\) to \(N(t)=N_{0} e^{k t}\). The value of \(k, 0.045\), indicates a growth rate of \(4.5 \%\).
(c) The population after 5 days is \(N(5)=100 e^{0.045(5)} \approx 125.2\) grams.
(d) To find how long it takes for the population to reach 140 grams, solve the equation \(N(t)=140\).
\[
\begin{aligned}
100 e^{0.045 t} & =140 & & \\
e^{0.045 t} & =1.4 & & \text { Divide both sides of the equation by } 100 . \\
0.045 t & =\ln 1.4 & & \text { Rewrite as a logarithm. } \\
t & =\frac{\ln 1.4}{0.045} & & \text { Divide both sides of the equation by } 0.04 \\
& \approx 7.5 \text { days } & &
\end{aligned}
\]

The population reaches 140 grams in about 7.5 days.
(e) The population doubles when \(N(t)=200\) grams, so the doubling time can be found by solving the equation \(200=100 e^{0.045 t}\) for \(t\).
\[
\begin{aligned}
200 & =100 e^{0.045 t} & & \\
2 & =e^{0.045 t} & & \text { Divide both sides of the equation by } 100 . \\
\ln 2 & =0.045 t & & \text { Rewrite as a logarithm. } \\
t & =\frac{\ln 2}{0.045} & & \text { Divide both sides of the equation by } 0.045 . \\
& \approx 15.4 \text { days } & &
\end{aligned}
\]

The population doubles approximately every 15.4 days.

\section*{EXAMPLE 2 \\ Bacterial Growth}

Solution
A colony of bacteria increases according to the law of uninhibited growth.
(a) If \(N\) is the number of cells and \(t\) is the time in hours, express \(N\) as a function of \(t\).
(b) If the number of bacteria doubles in 3 hours, find the function that gives the number of cells in the culture.
(c) How long will it take for the size of the colony to triple?
(d) How long will it take for the population to double a second time (that is, increase four times)?
(a) Using formula (2), the number \(N\) of cells at time \(t\) is
\[
N(t)=N_{0} e^{k t}
\]
where \(N_{0}\) is the initial number of bacteria present and \(k\) is a positive number.
(b) To find the growth rate \(k\), note that the number of cells doubles in 3 hours. Hence
\[
N(3)=2 N_{0}
\]

But \(N(3)=N_{0} e^{k(3)}\), so
\[
\begin{aligned}
N_{0} e^{k(3)} & =2 N_{0} \\
e^{3 k} & =2 \quad \text { Divide both sides by } N_{0} \\
3 k & =\ln 2 \quad \text { Write the exponential equation as a logarithm. } \\
k & =\frac{1}{3} \ln 2 \approx 0.23105
\end{aligned}
\]

The function that models this growth process is therefore
\[
N(t)=N_{0} e^{0.23105 t}
\]
(c) The time \(t\) needed for the size of the colony to triple requires that \(N=3 N_{0}\). Substitute \(3 N_{0}\) for \(N\) to get
\[
\begin{aligned}
3 N_{0} & =N_{0} e^{0.23105 t} & & \\
3 & =e^{0.23105 t} & & \text { Divide both sides by } N_{0} \\
0.23105 t & =\ln 3 & & \text { Write the exponential equation as a logarithm. } \\
t & =\frac{\ln 3}{0.23105} \approx 4.755 \text { hours } & &
\end{aligned}
\]

It will take about 4.755 hours or 4 hours, 45 minutes for the size of the colony to triple.
(d) If a population doubles in 3 hours, it will double a second time in 3 more hours, for a total time of 6 hours.

\section*{2 Find Equations of Populations That Obey the Law of Decay}

Radioactive materials follow the law of uninhibited decay.

\section*{Uninhibited Radioactive Decay}

The amount \(A\) of a radioactive material present at time \(t\) is given by
\[
A(t)=A_{0} e^{k t} \quad k<0
\]
where \(A_{0}\) is the original amount of radioactive material and \(k\) is a negative number that represents the rate of decay.

All radioactive substances have a specific half-life, which is the time required for half of the radioactive substance to decay. Carbon dating uses the fact that all living organisms contain two kinds of carbon, carbon 12 (a stable carbon) and carbon 14
(a radioactive carbon with a half-life of 5730 years). While an organism is living, the ratio of carbon 12 to carbon 14 is constant. But when an organism dies, the original amount of carbon 12 present remains unchanged, whereas the amount of carbon 14 begins to decrease. This change in the amount of carbon 14 present relative to the amount of carbon 12 present makes it possible to calculate when the organism died.

\section*{EXAMPLE 3 Estimating the Age of Ancient Tools}

Traces of burned wood along with ancient stone tools in an archeological dig in Chile were found to contain approximately \(1.67 \%\) of the original amount of carbon 14 . If the half-life of carbon 14 is 5730 years, approximately when was the tree cut and burned?
Sollution Using formula (3), the amount \(A\) of carbon 14 present at time \(t\) is
\[
A(t)=A_{0} e^{k t}
\]
where \(A_{0}\) is the original amount of carbon 14 present and \(k\) is a negative number. We first seek the number \(k\). To find it, we use the fact that after 5700 years, half of the original amount of carbon 14 remains, so \(A(5730)=\frac{1}{2} A_{0}\). Then
\[
\begin{aligned}
\frac{1}{2} A_{0} & =A_{0} e^{k(5730)} & & \\
\frac{1}{2} & =e^{5730 k} & & \text { Divide both sides of the equation by } A_{0} . \\
5730 k & =\ln \frac{1}{2} & & \text { Rewrite as a logarithm. } \\
k & =\frac{1}{5730} \ln \frac{1}{2} \approx-0.000120968 & &
\end{aligned}
\]

Formula (3), therefore, becomes
\[
A(t)=A_{0} e^{-0.000120968 t}
\]

If the amount \(A\) of carbon 14 now present is \(1.67 \%\) of the original amount, it follows that
\[
\begin{aligned}
0.0167 A_{0} & =A_{0} e^{-0.000120968 t} \\
0.0167 & =e^{-0.000120968 t} \quad \text { Divide both sides of the equation by } A_{0} . \\
-0.000120968 t & =\ln 0.0167 \quad \text { Rewrite as a logarithm. } \\
t & =\frac{\ln 0.0167}{-0.000120968} \approx 33,830 \text { years }
\end{aligned}
\]

The tree was cut and burned about 33,830 years ago. Some archeologists use this conclusion to argue that humans lived in the Americas nearly 34,000 years ago, much earlier than is generally accepted.
am Now Work problem 3

\section*{3 Use Newton's Law of Cooling}

Newton's Law of Cooling* states that the temperature of a heated object decreases exponentially over time toward the temperature of the surrounding medium.

\section*{Newton's Law of Cooling}

The temperature \(u\) of a heated object at a given time \(t\) can be modeled by the following function:
\[
\begin{equation*}
u(t)=T+\left(u_{0}-T\right) e^{k t} \quad k<0 \tag{4}
\end{equation*}
\]
where \(T\) is the constant temperature of the surrounding medium, \(u_{0}\) is the initial temperature of the heated object, and \(k\) is a negative constant.

\section*{EXAMPLE 4 Using Newton's Law of Cooling}

An object is heated to \(100^{\circ} \mathrm{C}\) (degrees Celsius) and is then allowed to cool in a room whose air temperature is \(30^{\circ} \mathrm{C}\).
(a) If the temperature of the object is \(80^{\circ} \mathrm{C}\) after 5 minutes, when will its temperature be \(50^{\circ} \mathrm{C}\) ?
(b) Determine the elapsed time before the temperature of the object is \(35^{\circ} \mathrm{C}\).
(c) What do you notice about the temperature as time passes?

\section*{Solution}
(a) Using formula (4) with \(T=30\) and \(u_{0}=100\), the temperature \(u(t)\) (in degrees Celsius) of the object at time \(t\) (in minutes) is
\[
u(t)=30+(100-30) e^{k t}=30+70 e^{k t}
\]
where \(k\) is a negative constant. To find \(k\), use the fact that \(u=80\) when \(t=5\). Then
\[
\begin{aligned}
u(t) & =30+70 e^{k t} & & \\
80 & =30+70 e^{k(5)} & & u(5)=80 \\
50 & =70 e^{5 k} & & \text { Simplify. } \\
e^{5 k} & =\frac{50}{70} & & \text { Solve for } e^{5 k} . \\
5 k & =\ln \frac{5}{7} & & \text { Take In of both sides. } \\
k & =\frac{1}{5} \ln \frac{5}{7} \approx-0.0673 & & \text { Solve for } k .
\end{aligned}
\]

Formula (4), therefore, becomes
\[
\begin{equation*}
u(t)=30+70 e^{-0.0673 t} \tag{5}
\end{equation*}
\]

Find \(t\) when \(u=50^{\circ} \mathrm{C}\).
\[
\begin{array}{rlrl}
50 & =30+70 e^{-0.0673 t} & & \\
20 & =70 e^{-0.0673 t} & & \text { Simplify. } \\
e^{-0.0673 t} & =\frac{20}{70} & & \text { Take ln of both sides. } \\
-0.0673 t & =\ln \frac{2}{7} & & \\
t & =\frac{\ln \frac{2}{7}}{-0.0673} \approx 18.6 \text { minutes } & \text { Solve for } t .
\end{array}
\]

The temperature of the object will be \(50^{\circ} \mathrm{C}\) after about 18.6 minutes, or 18 minutes, 36 seconds.
(b) Use equation (5) to find \(t\) when \(u=35^{\circ} \mathrm{C}\).
\[
\begin{array}{rlrl}
35 & =30+70 e^{-0.0673 t} & & \\
5 & =70 e^{-0.0673 t} & & \text { Simplify. } \\
e^{-0.0673 t} & =\frac{5}{70} & & \\
-0.0673 t & =\ln \frac{5}{70} & & \text { Take In of both sides. } \\
t & =\frac{\ln \frac{5}{70}}{-0.0673} \approx 39.2 \text { minutes } \quad & \text { Solve for } t .
\end{array}
\]

The object will reach a temperature of \(35^{\circ} \mathrm{C}\) after about 39.2 minutes.
(c) Look at equation (5). As \(t\) increases, the exponent \(-0.0673 t\) becomes unbounded in the negative direction. As a result, the value of \(e^{-0.0673 t}\) approaches zero, so the
value of \(u\), the temperature of the object, approaches \(30^{\circ} \mathrm{C}\), the air temperature of the room.
```

Nmow Work problem 13

```

\section*{4 Use Logistic Models}

The exponential growth model \(A(t)=A_{0} e^{k t}, k>0\), assumes uninhibited growth, meaning that the value of the function grows without limit. Recall that cell division could be modeled using this function, assuming that no cells die and no by-products are produced. However, cell division eventually is limited by factors such as living space and food supply. The logistic model, given next, can describe situations where the growth or decay of the dependent variable is limited.

\section*{Logistic Model}

In a logistic model, the population \(P\) after time \(t\) is given by the function
\[
\begin{equation*}
P(t)=\frac{c}{1+a e^{-b t}} \tag{6}
\end{equation*}
\]
where \(a, b\), and \(c\) are constants with \(a>0\) and \(c>0\). The model is a growth model if \(b>0\); the model is a decay model if \(b<0\).

The number \(c\) is called the carrying capacity (for growth models) because the value \(P(t)\) approaches \(c\) as \(t\) approaches infinity; that is, \(\lim _{t \rightarrow \infty} P(t)=c\). The number \(|b|\) is the growth rate for \(b>0\) and the decay rate for \(\stackrel{t \rightarrow \infty}{b}<0\). Figure 45(a) shows the graph of a typical logistic growth function, and Figure 45(b) shows the graph of a typical logistic decay function.

Figure 45

From the figures, the following properties of logistic growth functions emerge.

\section*{Properties of the Logistic Model, Equation (6)}
1. The domain is the set of all real numbers. The range is the interval \((0, c)\), where \(c\) is the carrying capacity.
2. There are no \(x\)-intercepts; the \(y\)-intercept is \(P(0)\).
3. There are two horizontal asymptotes: \(y=0\) and \(y=c\).
4. \(P(t)\) is an increasing function if \(b>0\) and a decreasing function if \(b<0\).
5. There is an inflection point where \(P(t)\) equals \(\frac{1}{2}\) of the carrying capacity. The inflection point is the point on the graph where the graph changes from being curved upward to being curved downward for growth functions, and the point where the graph changes from being curved downward to being curved upward for decay functions.
6. The graph is smooth and continuous, with no corners or gaps.

\section*{EXAMPLE 5 Fruit Fly Population}

Fruit flies are placed in a half-pint milk bottle with a banana (for food) and yeast plants (for food and to provide a stimulus to lay eggs). Suppose that the fruit fly population after \(t\) days is given by
\[
P(t)=\frac{230}{1+56.5 e^{-0.37 t}}
\]
(a) State the carrying capacity and the growth rate.
(b) Determine the initial population.
(c) What is the population after 5 days?
(d) How long does it take for the population to reach 180 ?
(e) Use a graphing utility to determine how long it takes for the population to reach one-half of the carrying capacity.
Solution (a) As \(t \rightarrow \infty, e^{-0.37 t} \rightarrow 0\) and \(P(t) \rightarrow \frac{230}{1}\). The carrying capacity of the half-pint bottle is 230 fruit flies. The growth rate is \(|b|=|0.37|=37 \%\) per day.
(b) To find the initial number of fruit flies in the half-pint bottle, evaluate \(P(0)\).
\[
\begin{aligned}
P(0) & =\frac{230}{1+56.5 e^{-0.37(0)}} \\
& =\frac{230}{1+56.5} \\
& =4
\end{aligned}
\]

Thus, initially, there were 4 fruit flies in the half-pint bottle.
(c) To find the number of fruit flies in the half-pint bottle after 5 days, evaluate \(P(5)\).
\[
P(5)=\frac{230}{1+56.5 e^{-0.37(5)}} \approx 23 \text { fruit flies }
\]

After 5 days, there are approximately 23 fruit flies in the bottle.
(d) To determine when the population of fruit flies will be 180 , solve the equation \(P(t)=180\).
\(\frac{230}{1+56.5 e^{-0.37 t}}=180\)
\(230=180\left(1+56.5 e^{-0.37 t}\right)\)
\(1.2778=1+56.5 e^{-0.37 t} \quad\) Divide both sides by 180 .
\(0.2778=56.5 e^{-0.37 t} \quad\) Subtract 1 from both sides.
\(0.0049=e^{-0.37 t} \quad\) Divide both sides by 56.5.
\(\ln (0.0049)=-0.37 t \quad\) Rewrite as a logarithmic expression.
\(t \approx 14.4\) days
Divide both sides by -0.37 .
It will take approximately 14.4 days ( 14 days, 10 hours) for the population to reach 180 fruit flies.
(e) One-half of the carrying capacity is 115 fruit flies. Solve \(P(t)=115\) by graphing \(Y_{1}=\frac{230}{1+56.5 e^{-0.37 x}}\) and \(Y_{2}=115\) and using INTERSECT. See Figure 46. The population will reach one-half of the carrying capacity in about 10.9 days (10 days, 22 hours).

Look back at Figure 46. Notice the point where the graph reaches 115 fruit flies (one-half of the carrying capacity): The graph changes from being curved upward to being curved downward. Using the language of calculus, the graph changes from increasing at an increasing rate to increasing at a decreasing rate. For any logistic growth function, when the population reaches one-half the carrying capacity, the population growth starts to slow down.

\section*{EXAMPLE 6 Wood Products}

The EFISCEN wood product model classifies wood products according to their life-span. There are four classifications: short (1 year), medium short (4 years), medium long (16 years), and long (50 years). Based on data obtained from the European Forest Institute, the percentage of remaining wood products after \(t\) years for wood products with long life-spans (such as those used in the building industry) is given by
\[
P(t)=\frac{100.3952}{1+0.0316 e^{0.0581 t}}
\]
(a) What is the decay rate?
(b) What is the percentage of remaining wood products after 10 years?
(c) How long does it take for the percentage of remaining wood products to reach \(50 \%\) ?
(d) Explain why the numerator given in the model is reasonable.

Solution (a) The decay rate is \(|b|=|-0.0581|=5.81 \%\).
(b) Evaluate \(P(10)\).
\[
P(10)=\frac{100.3952}{1+0.0316 e^{0.0581(10)}} \approx 95.0
\]

So \(95 \%\) of long-life-span wood products remain after 10 years.
(c) Solve the equation \(P(t)=50\).
\[
\begin{aligned}
\frac{100.3952}{1+0.0316 e^{0.0581 t}} & =50 & & \\
100.3952 & =50\left(1+0.0316 e^{0.0581 t}\right) & & \\
2.0079 & =1+0.0316 e^{0.0581 t} & & \text { Divide both sides by } 50 . \\
1.0079 & =0.0316 e^{0.0581 t} & & \text { Subtract } 1 \text { from both sides. } \\
31.8956 & =e^{0.0581 t} & & \text { Divide both sides by } 0.0316 .
\end{aligned}
\]
\[
\ln (31.8956)=0.0581 t \quad \text { Rewrite as a logarithmic expression. }
\]
\[
t \approx 59.6 \text { years }
\]

Divide both sides by 0.0581
It will take approximately 59.6 years for the percentage of long-life-span wood products remaining to reach \(50 \%\).
(d) The numerator of 100.3952 is reasonable because the maximum percentage of wood products remaining that is possible is \(100 \%\).
am Now Work problem 27

\subsection*{4.8 Assess Your Understanding}

\section*{Applications and Extensions}
1. Growth of an Insect Population The size \(P\) of a certain insect population at time \(t\) (in days) obeys the model \(P(t)=500 e^{0.02 t}\).
(a) Determine the number of insects at \(t=0\) days.
(b) What is the growth rate of the insect population?
(c) What is the population after 10 days?
(d) When will the insect population reach 800 ?
(e) When will the insect population double?
2. Growth of Bacteria The number \(N\) of bacteria present in a culture at time \(t\) (in hours) obeys the model \(N(t)=1000 e^{0.01 t}\).
(a) Determine the number of bacteria at \(t=0\) hours.
(b) What is the growth rate of the bacteria?
(c) What is the population after 4 hours?
(d) When will the number of bacteria reach
(e) When will the number of bacteria double?
3. Radioactive Decay Strontium-90 is a radioactive material that decays according to the function \(A(t)=A_{0} e^{-0.0244 t}\), where \(A_{0}\) is the initial amount present and \(A\) is the amount
present at time \(t\) (in years). Assume that a scientist has a sample of 500 grams of strontium- 90 .
(a) What is the decay rate of strontium-90?
(b) How much strontium- 90 is left after 10 years?
(c) When will 400 grams of strontium- 90 be left?
(d) What is the half-life of strontium-90?
4. Radioactive Decay Iodine-131 is a radioactive material that decays according to the function \(A(t)=A_{0} e^{-0.087 t}\), where \(A_{0}\) is the initial amount present and \(A\) is the amount present at time \(t\) (in days). Assume that a scientist has a sample of 100 grams of iodine-131.
(a) What is the decay rate of iodine-131?
(b) How much iodine- 131 is left after 9 days?
(c) When will 70 grams of iodine- 131 be left?
(d) What is the half-life of iodine-131?
5. Growth of a Colony of Mosquitoes The population of a colony of mosquitoes obeys the law of uninhibited growth.
(a) If \(N\) is the population of the colony and \(t\) is the time in days, express \(N\) as a function of \(t\).
(b) If there are 1000 mosquitoes initially and there are 1800 after 1 day, what is the size of the colony after 3 days?
(c) How long is it until there are 10,000 mosquitoes?
6. Bacterial Growth A culture of bacteria obeys the law of uninhibited growth.
(a) If \(N\) is the number of bacteria in the culture and \(t\) is the time in hours, express \(N\) as a function of \(t\).
(b) If 500 bacteria are present initially and there are 800 after 1 hour, how many will be present in the culture after 5 hours?
(c) How long is it until there are 20,000 bacteria?
7. Population Growth The population of a southern city follows the exponential law.
(a) If \(N\) is the population of the city and \(t\) is the time in years, express \(N\) as a function of \(t\).
(b) If the population doubled in size over an 18 -month period and the current population is 10,000 , what will the population be 2 years from now?
8. Population Decline The population of a midwestern city follows the exponential law.
(a) If \(N\) is the population of the city and \(t\) is the time in years, express \(N\) as a function of \(t\).
(b) If the population decreased from 900,000 to 800,000 from 2005 to 2007 , what was the population in 2009?
9. Radioactive Decay The half-life of radium is 1690 years. If 10 grams is present now, how much will be present in 50 years?
10. Radioactive Decay The half-life of radioactive potassium is 1.3 billion years. If 10 grams is present now, how much will be present in 100 years? In 1000 years?
11. Estimating the Age of a Tree A piece of charcoal is found to contain \(30 \%\) of the carbon- 14 that it originally had. When did the tree from which the charcoal came die? Use 5730 years as the half-life of carbon-14.
12. Estimating the Age of a Fossil A fossilized leaf contains 70\% of its normal amount of carbon-14. How old is the fossil? Use 5730 years as the half-life of carbon-14.
13. Cooling Time of a Pizza A pizza baked at \(450^{\circ} \mathrm{F}\) is removed from the oven at 5:00 PM and placed in a room that is a constant \(70^{\circ} \mathrm{F}\). After 5 minutes, the pizza is at \(300^{\circ} \mathrm{F}\).
(a) At what time can you begin eating the pizza if you want its temperature to be \(135^{\circ} \mathrm{F}\) ?
(b) Determine the time that needs to elapse before the pizza is \(160^{\circ} \mathrm{F}\).
(c) What do you notice about the temperature as time passes?

14. Newton's Law of Cooling A thermometer reading \(72^{\circ} \mathrm{F}\) is placed in a refrigerator where the temperature is a constant \(38^{\circ} \mathrm{F}\).
(a) If the thermometer reads \(60^{\circ} \mathrm{F}\) after 2 minutes, what will it read after 7 minutes?
(b) How long will it take before the thermometer reads \(39^{\circ} \mathrm{F}\) ?
(c) Determine the time that must elapse before the thermometer reads \(45^{\circ} \mathrm{F}\).
(d) What do you notice about the temperature as time pass?
15. Newton's Law of Heating A thermometer reading \(8^{\circ} \mathrm{C}\) is brought into a room with a constant temperature of \(35^{\circ} \mathrm{C}\). If the thermometer reads \(15^{\circ} \mathrm{C}\) after 3 minutes, what will it read after being in the room for 5 minutes? For 10 minutes?
[Hint: You need to construct a formula similar to equation (4).]
16. Warming Time of a Beer Stein \(A\) beer stein has a temperature of \(28^{\circ} \mathrm{F}\). It is placed in a room with a constant temperature of \(70^{\circ} \mathrm{F}\). After 10 minutes, the temperature of the stein has risen to \(35^{\circ} \mathrm{F}\). What will the temperature of the stein be after 30 minutes? How long will it take the stein to reach a temperature of \(45^{\circ} \mathrm{F}\) ? (See the hint given for Problem 15.)
17. Decomposition of Chlorine in a Pool Under certain water conditions, the free chlorine (hypochlorous acid, HOCl ) in a swimming pool decomposes according to the law of uninhibited decay. After shocking his pool, Ben tested the water and found the amount of free chlorine to be 2.5 parts per million (ppm). Twenty-four hours later, Ben tested the water again and found the amount of free chlorine to be 2.2 ppm . What will be the reading after 3 days (that is, 72 hours)? When the chlorine level reaches 1.0 ppm , Ben must shock the pool again. How long can Ben go before he must shock the pool again?
18. Decomposition of Dinitrogen Pentoxide \(\operatorname{At} 45^{\circ} \mathrm{C}\), dinitrogen pentoxide \(\left(\mathrm{N}_{2} \mathrm{O}_{5}\right)\) decomposes into nitrous dioxide \(\left(\mathrm{NO}_{2}\right)\) and oxygen \(\left(\mathrm{O}_{2}\right)\) according to the law of uninhibited decay. An initial amount of 0.25 mole of dinitrogen pentoxide decomposes to 0.15 mole in 17 minutes. How much dinitrogen pentoxide will remain after 30 minutes? How long will it take until 0.01 mole of dinitrogen pentoxide remains?
19. Decomposition of Sucrose Reacting with water in an acidic solution at \(35^{\circ} \mathrm{C}\), sucrose \(\left(\mathrm{C}_{12} \mathrm{H}_{22} \mathrm{O}_{11}\right)\) decomposes into glucose \(\left(\mathrm{C}_{6} \mathrm{H}_{12} \mathrm{O}_{6}\right)\) and fructose \(\left(\mathrm{C}_{6} \mathrm{H}_{12} \mathrm{O}_{6}\right) *\) according to the law of uninhibited decay. An initial amount of 0.40 mole of sucrose decomposes to 0.36 mole in 30 minutes. How much sucrose will remain after 2 hours? How long will it take until 0.10 mole of sucrose remains?
20. Decomposition of Salt in Water Salt \((\mathrm{NaCl})\) decomposes in water into sodium \(\left(\mathrm{Na}^{+}\right)\)and chloride \(\left(\mathrm{Cl}^{-}\right)\)ions according to the law of uninhibited decay. If the initial amount of salt is 25 kilograms and, after 10 hours, 15 kilograms of salt is left, how much salt is left after 1 day? How long does it take until \(\frac{1}{2}\) kilogram of salt is left?
21. Radioactivity from Chernobyl After the release of radioactive material into the atmosphere from a nuclear power plant at Chernobyl (Ukraine) in 1986, the hay in Austria was contaminated by iodine-131 (half-life 8 days). If it is safe to feed the hay to cows when \(10 \%\) of the iodine- 131 remains, how long did the farmers need to wait to use this hay?
*Author's Note: Surprisingly, the chemical formulas for glucose and fructose are the same: This is not a typo.
22. Pig Roasts The hotel Bora-Bora is having a pig roast. At noon, the chef put the pig in a large earthen oven. The pig's original temperature was \(75^{\circ} \mathrm{F}\). At 2:00 PM the chef checked the pig's temperature and was upset because it had reached only \(100^{\circ} \mathrm{F}\). If the oven's temperature remains a constant \(325^{\circ} \mathrm{F}\), at what time may the hotel serve its guests, assuming that pork is done when it reaches \(175^{\circ} \mathrm{F}\) ?

23. Population of a Bacteria Culture The logistic growth model
\[
P(t)=\frac{1000}{1+32.33 e^{-0.439 t}}
\]
represents the population (in grams) of a bacterium after \(t\) hours.
(a) Determine the carrying capacity of the environment.
(b) What is the growth rate of the bacteria?
(c) Determine the initial population size.
(d) What is the population after 9 hours?
(e) When will the population be 700 grams?
(f) How long does it take for the population to reach one-half the carrying capacity?
24. Population of an Endangered Species Often environmentalists capture an endangered species and transport the species to a controlled environment where the species can produce offspring and regenerate its population. Suppose that six American bald eagles are captured, transported to Montana, and set free. Based on experience, the environmentalists expect the population to grow according to the model
\[
P(t)=\frac{500}{1+82.33 e^{-0.162 t}}
\]
where \(t\) is measured in years.

(a) Determine the carrying capacity of the environment.
(b) What is the growth rate of the bald eagle?
(c) What is the population after 3 years?
(d) When will the population be 300 eagles?
(e) How long does it take for the population to reach one-half of the carrying capacity?
25. The Challenger Disaster After the Challenger disaster in 1986, a study was made of the 23 launches that preceded the fatal flight. A mathematical model was developed involving the relationship between the Fahrenheit temperature \(x\) around the O-rings and the number \(y\) of eroded or leaky primary O-rings. The model stated that
\[
y=\frac{6}{1+e^{-(5.085-0.1156 x)}}
\]
where the number 6 indicates the 6 primary O-rings on the spacecraft.
(a) What is the predicted number of eroded or leaky primary O-rings at a temperature of \(100^{\circ} \mathrm{F}\) ?
(b) What is the predicted number of eroded or leaky primary O -rings at a temperature of \(60^{\circ} \mathrm{F}\) ?
(c) What is the predicted number of eroded or leaky primary O-rings at a temperature of \(30^{\circ} \mathrm{F}\) ?
(d) Graph the equation. At what temperature is the predicted number of eroded or leaky O-rings 1? 3? 5?
Source: Linda Tappin, "Analyzing Data Relating to the Challenger Disaster," Mathematics Teacher, Vol. 87, No. 6, September 1994, pp. 423-426.

26. Word Users According to a survey by Olsten Staffing Services, the percentage of companies reporting usage of Microsoft Word \(t\) years since 1984 is given by
\[
P(t)=\frac{99.744}{1+3.014 e^{-0.799 t}}
\]
(a) What is the growth rate in the percentage of Microsoft Word users?
(b) Use a graphing utility to graph \(P=P(t)\).
(c) What was the percentage of Microsoft Word users in 1990?
(d) During what year did the percentage of Microsoft Word users reach \(90 \%\) ?
(e) Explain why the numerator given in the model is reasonable. What does it imply?
27. Home Computers The logistic model
\[
P(t)=\frac{95.4993}{1+0.0405 e^{0.1968 t}}
\]
represents the percentage of households that do not own a personal computer \(t\) years since 1984.
(a) Evaluate and interpret \(P(0)\).
(b) Use a graphing utility to graph \(P=P(t)\).
(c) What percentage of households did not own a personal computer in \(1995 ?\)
(d) In what year did the percentage of households that do not own a personal computer reach \(10 \%\) ?
Source: U.S. Department of Commerce
28. Farmers The logistic model
\[
W(t)=\frac{14,656,248}{1+0.059 e^{0.057 t}}
\]
represents the number of farm workers in the United States \(t\) years after 1910.
(a) Evaluate and interpret \(W(0)\).
(b) Use a graphing utility to graph \(W=W(t)\).
(c) How many farm workers were there in the United States in 2010?
(d) When did the number of farm workers in the United States reach \(10,000,000\) ?
(e) According to this model, what happens to the number of farm workers in the United States as \(t\) approaches \(\infty\) ? Based on this result, do you think that it is reasonable to use this model to predict the number of farm workers in the United States in 2060? Why?
Source: U.S. Department of Agriculture
29. Birthdays The logistic model
\[
P(n)=\frac{113.3198}{1+0.115 e^{0.0912 n}}
\]
models the probability that in a room of \(n\) people, no two people share the same birthday.
(a) Use a graphing utility to graph \(P=P(n)\).
(b) In a room of \(n=15\) people, what is the probability that no two share the same birthday?
(c) How many people must be in a room before the probability that no two people share the same birthday falls below \(10 \%\) ?
(d) What happens to the probability as \(n\) increases? Explain what this result means.

\section*{Retain Your Knowledge}

Problems 30-33 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
30. Find the equation of the linear function \(f\) that passes through the points \((4,1)\) and \((8,-5)\).
31. Determine whether the graphs of the linear functions \(f(x)=5 x-1 \quad\) and \(\quad g(x)=\frac{1}{5} x+1 \quad\) are parallel, perpendicular, or neither.
32. Write the logarithmic expression \(\ln \left(\frac{x^{2} \sqrt{y}}{z}\right)\) as the sum and/or difference of logarithms. Express powers as factors.
33. Rationalize the denominator of \(\frac{10}{\sqrt[3]{25}}\).

\subsection*{4.9 Building Exponential, Logarithmic, and Logistic Models from Data}

\section*{PREPARING FOR THIS SECTION Before getting started, review the following:}
- Building Linear Models from Data (Section 2.2, pp. 130-133)
- Building Cubic Models from Data (Section 3.1, pp. 206-207)
- Building Quadratic Models from Data (Section 2.6, pp. 169-170)

OBJECTIVES
1 Build an Exponential Model from Data (p. 360)
2 Build a Logarithmic Model from Data (p. 361)
3 Build a Logistic Model from Data (p. 362)

Finding the linear function of best fit \((y=a x+b)\) for a set of data was discussed in Section 2.2. Likewise, finding the quadratic function of best fit \(\left(y=a x^{2}+b x+c\right)\) and finding the cubic function of best fit \(\left(y=a x^{3}+b x^{2}+c x+d\right)\) were discussed in Sections 2.6 and 3.1, respectively.

In this section we discuss how to use a graphing utility to find equations of best fit that describe the relation between two variables when the relation is thought to be exponential \(\left(y=a b^{x}\right)\), logarithmic \((y=a+b \ln x)\), or logistic \(\left(y=\frac{c}{1+a e^{-b x}}\right)\). As before, a scatter diagram of the data is drawn to help determine the appropriate model to use.

Figure 47 shows scatter diagrams that will typically be observed for the three
Figure 47 models. Below each scatter diagram are any restrictions on the values of the parameters.

Most graphing utilities have REGression options that fit data to a specific type of curve. Once the data have been entered and a scatter diagram obtained, the type of curve that you want to fit to the data is selected. Then that REGression option is used to obtain the curve of best fit of the type selected.

The correlation coefficient \(r\) will appear only if the model can be written as a linear expression. As it turns out, \(r\) will appear for the linear, power, exponential, and logarithmic models, since these models can be written as a linear expression. Remember, the closer \(|r|\) is to 1 , the better the fit.

\section*{(n) 1 Build an Exponential Model from Data}

We saw in Section 4.7 that the future value of money behaves exponentially, and we saw in Section 4.8 that growth and decay models also behave exponentially. The next example shows how data can lead to an exponential model.

Table 9

\section*{EXAMPLE I}
\begin{tabular}{|cc|}
\hline Year, \(\boldsymbol{x}\) & Account Value, \(\boldsymbol{y}\) \\
\hline 0 & 20,000 \\
1 & 21,516 \\
2 & 23,355 \\
3 & 24,885 \\
4 & 27,484 \\
5 & 30,053 \\
6 & 32,622 \\
\hline
\end{tabular}

\section*{Solution}

\section*{Fitting an Exponential Function to Data}

Mariah deposited \(\$ 20,000\) into a well-diversified mutual fund 6 years ago. The data in Table 9 represent the value of the account each year for the last 7 years.
(a) Using a graphing utility, draw a scatter diagram with year as the independent variable.
(b) Using a graphing utility, build an exponential model from the data.
(c) Express the function found in part (b) in the form \(A=A_{0} e^{k t}\).
(d) Graph the exponential function found in part (b) or (c) on the scatter diagram.
(e) Using the solution to part (b) or (c), predict the value of the account after 10 years.
(f) Interpret the value of \(k\) found in part (c).
(a) Enter the data into the graphing utility and draw the scatter diagram as shown in Figure 48.
(b) A graphing utility fits the data in Table 9 to an exponential model of the form \(y=a b^{x}\) using the EXPonential REGression option. Figure 49 shows that \(y=a b^{x}=19,820.43(1.085568)^{x}\). Notice that \(|r|=0.999\), which is close to 1 , indicating a good fit.

Figure 48

Figure 49

(c) To express \(y=a b^{x}\) in the form \(A=A_{0} e^{k t}\), where \(x=t\) and \(y=A\), proceed as follows:
\[
a b^{x}=A_{0} e^{k t}, \quad x=t
\]

If \(x=t=0\), then \(a=A_{0}\). This leads to
\[
\begin{array}{rlrl}
a=A_{0}, & b^{x} & =e^{k t} & \\
b^{x} & =\left(e^{k}\right)^{t} & \\
b & =e^{k} \quad x=t
\end{array}
\]

Because \(y=a b^{x}=19,820.43(1.085568)^{x}\), this means that \(a=19,820.43\) and \(b=1.085568\).
\[
a=A_{0}=19,820.43 \quad \text { and } \quad b=e^{k}=1.085568
\]

To find \(k\), rewrite \(e^{k}=1.085568\) as a logarithm to obtain
\[
k=\ln (1.085568) \approx 0.08210
\]

As a result, \(A=A_{0} e^{k t}=19,820.43 e^{0.08210 t}\).
(d) See Figure 50 for the graph of the exponential function of best fit.

Figure 50

(e) Let \(t=10\) in the function found in part (c). The predicted value of the account after 10 years is
\[
A=A_{0} e^{k t}=19,820.43 e^{0.08210(10)} \approx \$ 45,047
\]
(f) The value of \(k=0.08210=8.210 \%\) represents the growth rate of the account. It represents the rate of interest earned, assuming the account is growing continuously.

\section*{Now Work problem 1}

\section*{2 Build a Logarithmic Model from Data}

Many relations between variables do not follow an exponential model; instead, the independent variable is related to the dependent variable using a logarithmic model.
\begin{tabular}{|ll|}
\hline & \multicolumn{1}{l}{ Table 10} \\
\hline \begin{tabular}{ll} 
EXAMPLE 2 \\
Atmospheric \\
Pressure, \(\boldsymbol{p}\)
\end{tabular} & Height, \(\boldsymbol{h}\) \\
\hline 760 & 0 \\
740 & 0.184 \\
725 & 0.328 \\
700 & 0.565 \\
650 & 1.079 \\
630 & 1.291 \\
600 & 1.634 \\
580 & 1.862 \\
550 & 2.235 \\
\hline
\end{tabular}

Solution

Figure 51

\section*{Fitting a Logarithmic Function to Data}

Jodi, a meteorologist, is interested in finding a function that explains the relation between the height of a weather balloon (in kilometers) and the atmospheric pressure (measured in millimeters of mercury) on the balloon. She collects the data shown in Table 10.
(a) Using a graphing utility, draw a scatter diagram of the data with atmospheric pressure as the independent variable.
(b) It is known that the relation between atmospheric pressure and height follows a logarithmic model. Using a graphing utility, build a logarithmic model from the data.
(c) Draw the logarithmic function found in part (b) on the scatter diagram.
(d) Use the function found in part (b) to predict the height of the weather balloon if the atmospheric pressure is 560 millimeters of mercury.
(a) Enter the data into the graphing utility and draw the scatter diagram. See Figure 51.
(b) A graphing utility fits the data in Table 10 to a logarithmic function of the form \(y=a+b \ln x\) by using the LOGarithm REGression option. See Figure 52 on the next page. The logarithmic model from the data is
\[
h(p)=45.7863-6.9025 \ln p
\]
where \(h\) is the height of the weather balloon and \(p\) is the atmospheric pressure. Notice that \(|r|\) is close to 1 , indicating a good fit.
(c) Figure 53 shows the graph of \(h(p)=45.7863-6.9025 \ln p\) on the scatter diagram.

Figure 52

Figure 53

(d) Using the function found in part (b), Jodi predicts the height of the weather balloon when the atmospheric pressure is 560 to be
\[
\begin{aligned}
h(560) & =45.7863-6.9025 \ln 560 \\
& \approx 2.108 \text { kilometers }
\end{aligned}
\]
```

Now Work problem 5

```

\section*{3 Build a Logistic Model from Data}

Logistic growth models can be used to model situations for which the value of the dependent variable is limited. Many real-world situations conform to this scenario. For example, the population of the human race is limited by the availability of natural resources such as food and shelter. When the value of the dependent variable is limited, a logistic growth model is often appropriate.

\section*{EXAMPLE 3}

\section*{Fitting a Logistic Function to Data}

The data in Table 11 represent the amount of yeast biomass in a culture after \(t\) hours.

\section*{Table 11}

Figure 54

Figure 55
Solution

\begin{tabular}{|cccc|}
\hline \begin{tabular}{l} 
Time \\
(hours)
\end{tabular} & \begin{tabular}{l} 
Yeast \\
Biomass
\end{tabular} & \begin{tabular}{l} 
Time \\
(hours)
\end{tabular} & \begin{tabular}{l} 
Yeast \\
Biomass
\end{tabular} \\
\hline 0 & 9.6 & 10 & 513.3 \\
1 & 18.3 & 11 & 559.7 \\
2 & 29.0 & 12 & 594.8 \\
3 & 47.2 & 13 & 629.4 \\
4 & 71.1 & 14 & 640.8 \\
5 & 119.1 & 15 & 651.1 \\
\hline 6 & 174.6 & 16 & 655.9 \\
7 & 257.3 & 17 & 659.6 \\

\hline 9 & 441.0 & & \\
\hline
\end{tabular}

Source: Tor Carlson (Über Geschwindigkeit und Grösse der Hefevermehrung in Würze, Biochemische Zeitschrift, Bd. 57, pp. 313-334, 1913)
(a) Using a graphing utility, draw a scatter diagram of the data with time as the independent variable.
(b) Using a graphing utility, build a logistic model from the data.
(c) Using a graphing utility, graph the function found in part (b) on the scatter diagram.
(d) What is the predicted carrying capacity of the culture?
(e) Use the function found in part (b) to predict the population of the culture at \(t=19\) hours.
(a) See Figure 54 for a scatter diagram of the data.
(b) A graphing utility fits a logistic growth model of the form \(y=\frac{c}{1+a e^{-b x}}\) by using the LOGISTIC regression option. See Figure 55. The logistic model from the data is
\[
y=\frac{663.0}{1+71.6 e^{-0.5470 x}}
\]
where \(y\) is the amount of yeast biomass in the culture and \(x\) is the time.
(c) See Figure 56 for the graph of the logistic model.

Figure 56

(d) Based on the logistic growth model found in part (b), the carrying capacity of the culture is 663 .
(e) Using the logistic growth model found in part (b), the predicted amount of yeast biomass at \(t=19\) hours is
\[
y=\frac{663.0}{1+71.6 e^{-0.5470(19)}} \approx 661.5
\]

\subsection*{4.9 Assess Your Understanding}

\section*{Applications and Extensions}
1. Biology A strain of E. coli Beu 397-recA441 is placed into a nutrient broth at \(30^{\circ}\) Celsius and allowed to grow. The following data are collected. Theory states that the number of bacteria in the petri dish will initially grow according to the law of uninhibited growth. The population is measured using an optical device in which the amount of light that passes through the petri dish is measured.
\begin{tabular}{|cc|}
\hline Time (hours), \(\boldsymbol{x}\) & Population, \(\boldsymbol{y}\) \\
\hline 0 & 0.09 \\
2.5 & 0.18 \\
3.5 & 0.26 \\
4.5 & 0.35 \\
6 & 0.50 \\
\hline
\end{tabular}

Source: Dr. Polly Lavery, Joliet Junior College
(a) Draw a scatter diagram treating time as the independent variable.
(b) Using a graphing utility, build an exponential model from the data.
(c) Express the function found in part (b) in the form \(N(t)=N_{0} e^{k t}\).
(d) Graph the exponential function found in part (b) or (c) on the scatter diagram.
(e) Use the exponential function from part (b) or (c) to predict the population at \(x=7\) hours.
(f) Use the exponential function from part (b) or (c) to predict when the population will reach 0.75 .
2. Ethanol Production The data in the table below represent ethanol production (in billions of gallons) in the United States from 2000 to 2012.
\begin{tabular}{|cccc|}
\hline & \begin{tabular}{c} 
Ethanol \\
Produced \\
Year

(a) Using a graphing utility, draw a scatter diagram of the data using 0 for 2000, 1 for 2001, and so on as the independent variable.
(b) Using a graphing utility, build an exponential model from the data.
(c) Express the function found in part (b) in the form \(A(t)=A_{0} e^{k t}\).
(d) Graph the exponential function found in part (b) or (c) on the scatter diagram
(e) Use the model to predict the amount of ethanol that will be produced in 2015.
(f) Interpret the meaning of \(k\) in the function found in part (c).
3. Advanced-Stage Breast Cancer The data in the table below represent the percentage of patients who have survived after diagnosis of advanced-stage breast cancer at 6-month intervals of time.
\begin{tabular}{|cc|}
\hline Time after Diagnosis (years) & Percentage Surviving \\
\hline 0.5 & 95.7 \\
1 & 83.6 \\
1.5 & 74.0 \\
2 & 58.6 \\
2.5 & 47.4 \\
3 & 41.9 \\
3.5 & 33.6 \\
\hline

(a) Using a graphing utility, draw a scatter diagram of the data, with time after diagnosis as the independent variable.
(b) Using a graphing utility, build an exponential model from the data.
(c) Express the function found in part (b) in the form \(A(t)=A_{0} e^{k t}\).
(d) Graph the exponential function found in part (b) or (c) on the scatter diagram.
(e) What percentage of patients diagnosed with advancedstage cancer are expected to survive for 4 years after initial diagnosis?
(f) Interpret the meaning of \(k\) in the function found in part (c).
4. Chemistry A chemist has a 100-gram sample of a radioactive material. He records the amount of radioactive material every week for 7 weeks and obtains the following data:

(a) Using a graphing utility, draw a scatter diagram with week as the independent variable.
(b) Using a graphing utility, build an exponential model from the data.
(c) Express the function found in part (b) in the form \(A(t)=A_{0} e^{k t}\).
(d) Graph the exponential function found in part (b) or (c) on the scatter diagram.
(e) From the result found in part (b), determine the half-life of the radioactive material.
(f) How much radioactive material will be left after 50 weeks?
(g) When will there be 20 grams of radioactive material?
5. Millk Production The data in the table below represent the number of dairy farms (in thousands) and the amount of milk produced (in billions of pounds) in the United States for various years.
\begin{tabular}{|ccc|}
\hline Year & \begin{tabular}{c} 
Dairy Farms \\

(a) Using a graphing utility, draw a scatter diagram of the data with the number of dairy farms as the independent variable.
(b). Using a graphing utility, build a logarithmic model from the data.
(c) Graph the logarithmic function found in part (b) on the scatter diagram.
(d) In 2008, there were 67 thousand dairy farms in the United States. Use the function in part (b) to predict the amount of milk produced in 2008.
(e) The actual amount of milk produced in 2008 was 190 billion pounds. How does your prediction in part (d) compare to this?
6. Economics and Marketing The following data represent the price and quantity demanded for Dell personal computers in a recent year.

(a) Using a graphing utility, draw a scatter diagram of the data with price as the dependent variable.
(b) Using a graphing utility, build a logarithmic model from the data.
(c) Using a graphing utility, draw the logarithmic function found in part (b) on the scatter diagram.
(d) Use the function found in part (b) to predict the number of Dell personal computers that will be demanded if the price is \(\$ 1650\).
7. Population Model The following data represent the population of the United States. An ecologist is interested in building a model that describes the population of the United States.
\begin{tabular}{rrr|}
\hline 1900 & Population \\
\(196,212,168\) \\
1920 & \(92,228,496\) \\
1930 & \(106,021,537\) \\
1940 & \(132,164,569\) \\
1950 & \(151,325,798\) \\
1960 & \(179,323,175\) \\
1970 & \(203,302,031\) \\
1980 & \(226,542,203\) \\
1990 & \(248,709,873\) \\
2000 & \(281,421,906\) \\
2010 & \(308,745,538\) \\
\hline
\end{tabular}

Source: U.S. Census Bureau
(a) Using a graphing utility, draw a scatter diagram of the data using years since 1900 as the independent variable and population as the dependent variable.
(b) Using a graphing utility, build a logistic model from the data.
(c) Using a graphing utility, draw the function found in part (b) on the scatter diagram.
(d) Based on the function found in part (b), what is the carrying capacity of the United States?
(e) Use the function found in part (b) to predict the population of the United States in 2012.
(f) When will the United States population be \(350,000,000\) ?
(g) Compare actual U.S. Census figures to the predictions found in parts (e) and (f). Discuss any differences.
8. Population Model The following data represent the world population. An ecologist is interested in building a model that describes the world population.
\begin{tabular}{|c|c|c|}
\hline \multirow[t]{13}{*}{} & Year & Population (billions) \\
\hline & 2001 & 6.17 \\
\hline & 2002 & 6.24 \\
\hline & 2003 & 6.32 \\
\hline & 2004 & 6.40 \\
\hline & 2005 & 6.47 \\
\hline & 2006 & 6.55 \\
\hline & 2007 & 6.63 \\
\hline & 2008 & 6.71 \\
\hline & 2009 & 6.79 \\
\hline & 2010 & 6.86 \\
\hline & 2011 & 6.94 \\
\hline & 2012 & 7.02 \\
\hline
\end{tabular}

Source: U.S. Census Bureau
(a) Using a graphing utility, draw a scatter diagram of the data using years since 2000 as the independent variable and population as the dependent variable.
(b) Using a graphing utility, build a logistic model from the data.
(c) Using a graphing utility, draw the function found in part (b) on the scatter diagram.
(d) Based on the function found in part (b), what is the carrying capacity of the world?
(e) Use the function found in part (b) to predict the population of the world in 2020.
(f) When will world population be 10 billion?
9. Cell Phone Towers The following data represent the number of cell sites in service in the United States from 1985 to 2012 at the end of June each year.
\begin{tabular}{|cccc|}
\hline Year & \begin{tabular}{c} 
Cell Sites \\
(thousands)
\end{tabular} & Year & \begin{tabular}{c} 
Cell Sites \\
(thousands)
\end{tabular} \\
\hline \(1985(x=1)\) & 0.6 & \(1999(x=15)\) & 74.2 \\
\(1986(x=2)\) & 1.2 & \(2000(x=16)\) & 95.7 \\
\(1987(x=3)\) & 1.7 & \(2001(x=17)\) & 114.1 \\
\(1988(x=4)\) & 2.8 & \(2002(x=18)\) & 131.4 \\
\(1989(x=5)\) & 3.6 & \(2003(x=19)\) & 147.7 \\
\(1990(x=6)\) & 4.8 & \(2004(x=20)\) & 174.4 \\
\(1991(x=7)\) & 6.7 & \(2005(x=21)\) & 178.0 \\
\(1992(x=8)\) & 8.9 & \(2006(x=22)\) & 197.6 \\
\(1993(x=9)\) & 11.6 & \(2007(x=23)\) & 210.4 \\
\(1994(x=10)\) & 14.7 & \(2008(x=24)\) & 220.5 \\
\(1995(x=11)\) & 19.8 & \(2009(x=25)\) & 245.9 \\
\(1996(x=12)\) & 24.8 & \(2010(x=26)\) & 251.6 \\
\(1997(x=13)\) & 38.7 & \(2011(x=27)\) & 256.9 \\
\(1998(x=14)\) & 57.7 & \(2012(x=28)\) & 285.6 \\
\hline
\end{tabular}

(a) Using a graphing utility, draw a scatter diagram of the data using 1 for 1985, 2 for 1986, and so on as the independent variable and number of cell sites as the dependent variable.
(b) Using a graphing utility, build a logistic model from the data.
(c) Graph the logistic function found in part (b) on the scatter diagram.
(d) What is the predicted carrying capacity for cell sites in the United States?
(e) Use the model to predict the number of cell sites in the United States at the end of June 2017.
10. Cable Rates The following date represents the average monthly rate charged for a basic cable television subscription in the United States from 1980 to 2010. A market researcher believes that external factors, such as the growth of satellite television Internet programming, have affected the cost of basic cable. She is interested in building a model that will describe the average monthly cost of basic cable.
(a) Using a graphing utility, draw a scatter diagram of the data using 0 for 1980, 5 for 1985, and so on as the independent variable and average monthly rate as the dependent variable.
(b) Using a graphing utility, build a logistic model from the data.
(c) Graph the logistic function found in part (b) on the scatter diagram.
(d) Based on the model found in part (b) what is the maximum possible average monthly rate for basic cable?
(e) Use the model to predict the average rate for basic cable in 2017.
\begin{tabular}{|cc|}
\hline Year & \begin{tabular}{c} 
Average Monthly Rate \\
(dollars)
\end{tabular} \\

\section*{Mixed Practice}
11. Age versus Total Cholesterol The following data represent the age and average total cholesterol for adult males at various ages.
\begin{tabular}{|cl|}
\hline Age & \begin{tabular}{l} 
Total \\
Cholesterol
\end{tabular} \\
\hline 27 & 189 \\
40 & 205 \\
50 & 215 \\
60 & 210 \\
70 & 210 \\
80 & 194 \\
\hline
\end{tabular}
(a) Using a graphing utility, draw a scatter diagram of the data using age, \(x\), as the independent variable and total cholesterol, \(y\), as the dependent variable.
(b) Based on the scatter diagram drawn in part (a), decide on a model (linear, quadratic, cubic, exponential, logarithmic, or logistic) that you think best describes the relation between age and total cholesterol. Be sure to justify your choice of model.
(c) Using a graphing utility, find the model of best fit.
(d) Using a graphing utility, draw the model of best fit on the scatter diagram drawn in part (a).
(e) Use your model to predict the total cholesterol of a 35-year-old male.
12. Income versus Crime Rate The following data represent property crime rate against individuals (crimes per 1000 households) and their household income (in dollars) in the United States in 2009.
(a) Using a graphing utility, draw a scatter diagram of the data using income, \(x\), as the independent variable and crime rate, \(y\), as the dependent variable.
(b) Based on the scatter diagram drawn in part (a), decide on a model (linear, quadratic, cubic, exponential, logarithmic, or logistic) that you think best describes the relation between income and crime rate. Be sure to justify your choice of model.
(c) Using a graphing utility, find the model of best fit.
(d) Using a graphing utility, draw the model of best fit on the scatter diagram drawn in part (a).
(e) Use your model to predict the crime rate of a household whose income is \(\$ 55,000\).

Source: Statistical Abstract of the United States, 2012
13. Golfing The data on the following page represent the expected percentage of putts that will be made by professional golfers on the PGA Tour depending on distance. For example, it is expected that \(99.3 \%\) of 2 -foot putts will be made.
(a) Using a graphing utility, draw a scatter diagram of the data with distance as the independent variable.
(b) Based on the scatter diagram drawn in part (a), decide on a model (linear, quadratic, cubic, exponential, logarithmic, or logistic) that you think best describes the relation between distance and expected percentage. Be sure to justify your choice of model.
\begin{tabular}{|cccc|}
\hline \begin{tabular}{c} 
Distance \\

11 & 34.2 & 23 & 11.0 \\
12 & 30.1 & 24 & 11.0 \\
13 & 27.0 & 25 & 10.0 \\
\hline
\end{tabular}

Source: TheSandTrap.com
(c) Using a graphing utility, find the model of best fit.
(d) Graph the function found in part (c) on the scatter diagram.
(e) Use the function found in part (c) to predict what percentage of 30 -foot putts will be made.
14. Depreciation of a Chevrolet Impala The following data represent the asking price and age of a Chevrolet Impala SS.
\begin{tabular}{|ll|}
\hline Age & Asking Price \\
\hline 1 & \(\$ 27,417\) \\
1 & \(\$ 26,750\) \\
2 & \(\$ 22,995\) \\
2 & \(\$ 23,195\) \\
3 & \(\$ 17,999\) \\
4 & \(\$ 16,995\) \\
4 & \(\$ 16,490\) \\
\hline
\end{tabular}
(a) Using a graphing utility, draw a scatter diagram of the data using age as the independent variable and asking price as the dependent variable.
(b) Based on the scatter diagram drawn in part (a), decide on a model (linear, quadratic, cubic, exponential, logarithmic, or logistic) that you think best describes the relation between age and asking price. Be sure to justify your choice of model.
(c) Using a graphing utility, find the model of best fit.
(d) Using a graphing utility, draw the model of best fit on the scatter diagram drawn in part (a).
(e) Use your model to predict the asking price of a Chevrolet Impala SS that is 5 years old.

\section*{Retain Your Knowledge}

Problems 15-18 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
15. Construct a polynomial function that might have the graph shown. (More than one answer is possible.)

16. Rationalize the denominator of \(\frac{3}{\sqrt{2}}\).
17. Use the Pythagorean Theorem to find the exact length of the unlabeled side in the given right triangle.

18. Graph the equation \((x-3)^{2}+y^{2}=25\).

\section*{Chapter Review}

\section*{Things to Know}

Composite function (p. 274)

One-to-one function \(f\) (p. 282)

Horizontal-line test (p. 283)
\((f \circ g)(x)=f(g(x))\); The domain of \(f \circ g\) is the set of all numbers \(x\) in the domain of \(g\) for which \(g(x)\) is in the domain of \(f\).
A function for which any two different inputs in the domain correspond to two different outputs in the range
For any choice of elements \(x_{1}, x_{2}\) in the domain of \(f\), if \(x_{1} \neq x_{2}\), then \(f\left(x_{1}\right) \neq f\left(x_{2}\right)\).
If every horizontal line intersects the graph of a function \(f\) in at most one point, \(f\) is one-to-one.

Inverse function \(f^{-1}\) of \(f\) (pp. 284-287)

Properties of the exponential function (pp. 296, 299, 301)

Number \(e\) (p. 302)
Property of exponents (p. 303)
Properties of the logarithmic
function (pp. 311, 313, 314)

Natural logarithm (p. 315)
Properties of logarithms (pp. 325, 326, 328)

\section*{Formulas}

Change-of-Base Formula (p. 329)
Compound Interest Formula (p. 341)
Continuous compounding (p. 342)
Effective rate of interest (p. 343)

Present Value Formulas (p. 344)
Growth and decay (p. 350, 351)
Newton's Law of Cooling (p. 352)
Logistic model (p. 354)

Domain of \(f=\) range of \(f^{-1}\); range of \(f=\) domain of \(f^{-1}\)
\(f^{-1}(f(x))=x\) for all \(x\) in the domain of \(f\)
\(f\left(f^{-1}(x)\right)=x\) for all \(x\) in the domain of \(f^{-1}\)
The graphs of \(f\) and \(f^{-1}\) are symmetric with respect to the line \(y=x\).
\(f(x)=C a^{x}, \quad a>1, C>0 \quad\) Domain: the interval \((-\infty, \infty)\)
Range: the interval \((0, \infty)\) \(x\)-intercepts: none; \(y\)-intercept: \(C\) Horizontal asymptote: \(x\)-axis \((y=0)\) as \(x \rightarrow-\infty\) Increasing; one-to-one; smooth; continuous See Figure 22 for a typical graph.
\(f(x)=C a^{x}, \quad 0<a<1, C>0\) Domain: the interval \((-\infty, \infty)\) Range: the interval \((0, \infty)\) \(x\)-intercepts: none; \(y\)-intercept: \(C\) Horizontal asymptote: \(x\)-axis \((y=0)\) as \(x \rightarrow \infty\) Decreasing; one-to-one; smooth; continuous See Figure 26 for a typical graph.
Value approached by the expression \(\left(1+\frac{1}{n}\right)^{n}\) as \(n \rightarrow \infty\); that is, \(\lim _{n \rightarrow \infty}\left(1+\frac{1}{n}\right)^{n}=e\). If \(a^{u}=a^{v}\), then \(u=v\).
\(f(x)=\log _{a} x, \quad a>1 \quad\) Domain: the interval \((0, \infty)\)
\(\left(y=\log _{a} x\right.\) means \(\left.x=a^{y}\right)\)
Range: the interval \((-\infty, \infty)\) \(x\)-intercept: \(1 ; y\)-intercept: none Vertical asymptote: \(x=0\) ( \(y\)-axis)
Increasing; one-to-one; smooth; continuous
See Figure 32(b) for a typical graph.
\(f(x)=\log _{a} x, \quad 0<a<1 \quad\) Domain: the interval \((0, \infty)\)
\(\left(y=\log _{a} x\right.\) means \(\left.x=a^{y}\right) \quad\) Range: the interval \((-\infty, \infty)\)
\(x\)-intercept: \(1 ; y\)-intercept: none
Vertical asymptote: \(x=0\) ( \(y\)-axis)
Decreasing; one-to-one; smooth; continuous
See Figure 32(a) for a typical graph.
\(y=\ln x\) means \(x=e^{y}\).
\(\log _{a} 1=0 \quad \log _{a} a=1 a^{\log _{a} M}=M \quad \log _{a} a^{r}=r\)
\(\log _{a}(M N)=\log _{a} M+\log _{a} N \quad \log _{a}\left(\frac{M}{N}\right)=\log _{a} M-\log _{a} N\)
\(\log _{a} M^{r}=r \log _{a} M\)
\(\log _{a} M^{r}=r \log _{a} M\)
If \(M=N\), then \(\log _{a} M=\log _{a} N \quad a^{x}=e^{x \ln a}\)
If \(\log _{a} M=\log _{a} N\), then \(M=N\)
\(\log _{a} M=\frac{\log _{b} M}{\log _{b} a}\)
\(A=P \cdot\left(1+\frac{r}{n}\right)^{n t}\)
\(A=P e^{r t}\)
Compounding \(n\) times per year: \(r_{e}=\left(1+\frac{r}{n}\right)^{n}-1\)
Continuous compounding: \(r_{e}=e^{r}-1\)
\(P=A \cdot\left(1+\frac{r}{n}\right)^{-n t}\) or \(P=A e^{-r t}\)
\(A(t)=A_{0} e^{k t}\)
\(u(t)=T+\left(u_{0}-T\right) e^{k t} \quad k<0\)
\(P(t)=\frac{c}{1+a e^{-b t}}\)

\section*{Objectives}

\section*{Review Exercises}
1. Evaluate each expression using the graphs of \(y=f(x)\) and \(y=g(x)\) shown in the figure.

(a) \((g \circ f)(-8)\)
(b) \((f \circ g)(-8)\)
(c) \((g \circ g)(7)\)
(d) \((g \circ f)(-5)\)

In Problems 2-4, for the given functions \(f\) and \(g\) find:
(a) \((f \circ g)(2)\)
(b) \((g \circ f)(-2)\)
(c) \((f \circ f)(4)\)
(d) \((g \circ g)(-1)\)
2. \(f(x)=3 x-5 ; \quad g(x)=1-2 x^{2}\)
3. \(f(x)=\sqrt{x+2}: \quad g(x)=2 x^{2}+1\)
4. \(f(x)=e^{x} ; \quad g(x)=3 x-2\)

In Problems 5-8, find \(f \circ g, g \circ f, f \circ f\), and \(g \circ g\) for each pair of functions. State the domain of each composite function.
5. \(f(x)=2-x ; \quad g(x)=3 x+1\)
6. \(f(x)=\sqrt{3 x} ; \quad g(x)=1+x+x^{2}\)
7. \(f(x)=\frac{x+1}{x-1} ; \quad g(x)=\frac{1}{x}\)
8. For the function \(\{(1,2),(3,5),(5,8),(6,10)\}\)
(a) Verify that the function is one-to-one.
(b) Find the inverse of the given function.
9. State why the graph of the function is one-to-one. Then draw the graph of the inverse function \(f^{-1}\). For convenience (and as a hint), the graph of \(y=x\) is also given.

In Problems 10-13, the function \(f\) is one-to-one. Find the inverse of each function and check your answer. State the domain and the range off and \(f^{-1}\).
10. \(f(x)=\frac{2 x+3}{5 x-2}\)
11. \(f(x)=\frac{1}{x-1}\)
12. \(f(x)=\sqrt{x-2}\)
13. \(f(x)=x^{1 / 3}+1\)
14. If \(f(x)=3^{x}\) and \(g(x)=\log _{3} x\), evaluate each of the following.
(a) \(f(4)\)
(b) \(g(9)\)
(c) \(f(-2)\)
(d) \(g\left(\frac{1}{27}\right)\)
15. Convert \(5^{2}=z\) to an equivalent statement involving a logarithm.
16. Convert \(\log _{5} u=13\) to an equivalent statement involving an exponent.

In Problems 17 and 18, find the domain of each logarithmic function.
17. \(f(x)=\log (3 x-2)\)
18. \(H(x)=\log _{2}\left(x^{2}-3 x+2\right)\)

In Problems 19-21, evaluate each expression. Do not use a calculator.
19. \(\log _{2}\left(\frac{1}{8}\right)\)
20. \(\ln e^{\sqrt{2}}\)
21. \(2^{\log _{2} 0.4}\)

In Problems 22-25, write each expression as the sum and/or difference of logarithms. Express powers as factors.
22. \(\log _{3}\left(\frac{u v^{2}}{w}\right), u>0, v>0, w>0\)
23. \(\log _{2}\left(a^{2} \sqrt{b}\right)^{4}, \quad a>0, b>0\)
24. \(\log \left(x^{2} \sqrt{x^{3}+1}\right), \quad x>0\)
25. \(\ln \left(\frac{2 x+3}{x^{2}-3 x+2}\right)^{2}, x>2\)

In Problems 26-28, write each expression as a single logarithm.
26. \(3 \log _{4} x^{2}+\frac{1}{2} \log _{4} \sqrt{x}\)
27. \(\ln \left(\frac{x-1}{x}\right)+\ln \left(\frac{x}{x+1}\right)-\ln \left(x^{2}-1\right)\)
28. \(\frac{1}{2} \ln \left(x^{2}+1\right)-4 \ln \frac{1}{2}-\frac{1}{2}[\ln (x-4)+\ln x]\)
29. Use the Change-of-Base Formula and a calculator to evaluate \(\log _{4} 19\). Round your answer to three decimal places.
30. Graph \(y=\log _{3} x\) using a graphing utility and the Change-of-Base Formula.

In Problems 31-34, use the given function \(f\) to:
(a) Find the domain of \(f\).
(b) Graph f.
(c) From the graph, determine the range and any asymptotes of \(f\).
(d) Find \(f^{-1}\).
(e) Find the domain and the range of \(f^{-1}\).
(f) Graph \(f^{-1}\).
31. \(f(x)=2^{x-3}\)
32. \(f(x)=1+3^{-x}\)
33. \(f(x)=3 e^{x-2}\)
34. \(f(x)=\frac{1}{2} \ln (x+3)\)

In Problems 35-45, solve each equation. Express any irrational solution in exact form and as a decimal rounded to 3 decimal places.
35. \(8^{6+3 x}=4\)
36. \(3^{x^{2}+x}=\sqrt{3}\)
37. \(\log _{x} 64=-3\)
38. \(5^{x}=3^{x+2}\)
39. \(25^{2 x}=5^{x^{2}-12}\)
40. \(\log _{3} \sqrt{x-2}=2\)
41. \(8=4^{x^{2}} \cdot 2^{5 x}\)
42. \(2^{x} \cdot 5=10^{x}\)
43. \(\log _{6}(x+3)+\log _{6}(x+4)=1\)
44. \(e^{1-x}=5\)
45. \(9^{x}+4 \cdot 3^{x}-3=0\)
46. Suppose that \(f(x)=\log _{2}(x-2)+1\).
(a) Graph \(f\).
(b) What is \(f(6)\) ? What point is on the graph of \(f\) ?
(c) Solve \(f(x)=4\). What point is on the graph of \(f\) ?
(d) Based on the graph drawn in part (a), solve \(f(x)>0\).
(e) Find \(f^{-1}(x)\). Graph \(f^{-1}\) on the same Cartesian plane as \(f\).
47. Amplifying Sound An amplifier's power output \(P\) (in watts) is related to its decibel voltage gain \(d\) by the formula

(a) Find the power output for a decibel voltage gain of 4 decibels.
(b) For a power output of 50 watts, what is the decibel voltage gain?
48. Limiting Magnitude of a Telescope A telescope is limited in its usefulness by the brightness of the star that it is aimed at and by the diameter of its lens. One measure of a star's brightness is its magnitude; the dimmer the star, the larger its magnitude. A formula for the limiting magnitude \(L\) of a telescope - that is, the magnitude of the dimmest star that it can be used to view - is given by
\[
L=9+5.1 \log d
\]
where \(d\) is the diameter (in inches) of the lens.
(a) What is the limiting magnitude of a 3.5 -inch telescope?
(b) What diameter is required to view a star of magnitude 14 ?
49. Salvage Value The number of years \(n\) for a piece of machinery to depreciate to a known salvage value can be found using the formula
\[
n=\frac{\log s-\log i}{\log (1-d)}
\]
where \(s\) is the salvage value of the machinery, \(i\) is its initial value, and \(d\) is the annual rate of depreciation.
(a) How many years will it take for a piece of machinery to decline in value from \(\$ 90,000\) to \(\$ 10,000\) if the annual rate of depreciation is \(0.20(20 \%)\) ?
(b) How many years will it take for a piece of machinery to lose half of its value if the annual rate of depreciation is \(15 \%\) ?
50. Funding a College Education A child's grandparents purchase a \(\$ 10,000\) bond fund that matures in 18 years to be used for her college education. The bond fund pays \(4 \%\) interest compounded semiannually. How much will the bond fund be worth at maturity? What is the effective rate of interest? How long will it take the bond to double in value under these terms?
51. Funding a College Education A child's grandparents wish to purchase a bond that matures in 18 years to be used for her college education. The bond pays \(4 \%\) interest compounded semiannually. How much should they pay so that the bond will be worth \(\$ 85,000\) at maturity?
52. When Did a Prehistoric Man Die? The bones of a prehistoric man found in the desert of New Mexico contain approximately \(5 \%\) of the original amount of carbon-14. If the half-life of carbon-14 is 5730 years, approximately how long ago did the man die?
53. Temperature of a Skillet A skillet is removed from an oven where the temperature is \(450^{\circ} \mathrm{F}\) and placed in a room whose temperature is \(70^{\circ} \mathrm{F}\). After 5 minutes, the temperature of the skillet is \(400^{\circ} \mathrm{F}\). How long will it be until its temperature is \(150^{\circ} \mathrm{F}\) ?
54. World Population The annual growth rate of the world's population in 2012 was \(1.1 \%=0.011\). The population of the world in 2012 was 7,017,543,964. Letting \(t=0\) represent 2012, predict the world's population in the year 2017.

\section*{Source: U.S. Census Bureau}
55. Federal Deficit In fiscal year 2012, the federal deficit was \(\$ 1.1\) trillion. At that time, 10-year Treasury notes were paying \(1.81 \%\) interest per annum. If the federal government financed this deficit through 10-year notes, how much would it have to pay back in 2022? How much was the interest?

\section*{Source: U.S. Treasury Department}
56. Logistic Growth The logistic growth model
\[
P(t)=\frac{0.8}{1+1.67 e^{-0.16 t}}
\]
represents the proportion of new cars with a global positioning system (GPS). Let \(t=0\) represent 2006, \(t=1\) represent 2007, and so on.
(a) What proportion of new cars in 2006 had a GPS?
(b) Determine the maximum proportion of new cars that have a GPS.
(c) Using a graphing utility, graph \(P=P(t)\).
(d) When will \(75 \%\) of new cars have a GPS?
57. CBL Experiment The following data were collected by placing a temperature probe in a portable heater, removing the probe, and then recording the temperature of the probe over time.
\begin{tabular}{|c|c|c|}
\hline + & Time (s) & Temperature ( \({ }^{\circ} \mathrm{F}\) ) \\
\hline & 0 & 165.07 \\
\hline & 1 & 164.77 \\
\hline & 2 & 163.99 \\
\hline & 3 & 163.22 \\
\hline & 4 & 162.82 \\
\hline & 5 & 161.96 \\
\hline & 6 & 161.20 \\
\hline & 7 & 160.45 \\
\hline & 8 & 159.35 \\
\hline & 9 & 158.61 \\
\hline & 10 & 157.89 \\
\hline & 11 & 156.83 \\
\hline & 12 & 156.11 \\
\hline & 13 & 155.08 \\
\hline & 14 & 154.40 \\
\hline & 15 & 153.72 \\
\hline
\end{tabular}

According to Newton's Law of Cooling, these data should follow an exponential model.
(a) Using a graphing utility, draw a scatter diagram for the data.
(b) Using a graphing utility, build an exponential model from the data.
(c) Graph the exponential function found in part (b) on the scatter diagram.
(d) Predict how long it will take for the probe to reach a temperature of \(110^{\circ} \mathrm{F}\).
58. Wind Chill Factor The data below represent the wind speed \((\mathrm{mph})\) and wind chill factor at an air temperature of \(15^{\circ} \mathrm{F}\).
\begin{tabular}{|cc|}
\hline 5 & \begin{tabular}{l} 
Wind Speed \\
(mph)
\end{tabular} \\
\hline 5 & Wind Chill Factor ( \({ }^{\circ}\) F) \\
10 & 7 \\
15 & 0 \\
20 & -2 \\
25 & -4 \\
30 & -5 \\
35 & -7 \\
\hline
\end{tabular}

Source: U.S. National Weather Service
(a) Using a graphing utility, draw a scatter diagram with wind speed as the independent variable.
(b) Using a graphing utility, build a logarithmic model from the data.
(c) Using a graphing utility, draw the logarithmic function found in part (b) on the scatter diagram.
(d) Use the function found in part (b) to predict the wind chill factor if the air temperature is \(15^{\circ} \mathrm{F}\) and the wind speed is 23 mph .
59. Spreading of a Disease Jack and Diane live in a small town of 50 people. Unfortunately, both Jack and Diane have a
cold. Those who come in contact with someone who has this cold will themselves catch the cold. The following data represent the number of people in the small town who have caught the cold after \(t\) days.
\begin{tabular}{|cc|}
\hline & \\
\hline & Days, \(\boldsymbol{t}\) \\
\hline 0 & Number of People with Cold, \(\boldsymbol{C}\) \\
\hline 1 & 2 \\
2 & 4 \\
3 & 8 \\
4 & 14 \\
5 & 22 \\
6 & 30 \\
7 & 42 \\
8 & 44 \\
\hline
\end{tabular}
(a) Using a graphing utility, draw a scatter diagram of the data. Comment on the type of relation that appears to exist between the day and the number of people with a cold.
(b) Using a graphing utility, build a logistic model from the data.
(c) Graph the function found in part (b) on the scatter diagram.
(d) According to the function found in part (b), what is the maximum number of people who will catch the cold? In reality, what is the maximum number of people who could catch the cold?
(e) Sometime between the second and third day, 10 people in the town had a cold. According to the model found in part (b), when did 10 people have a cold?
(f) How long will it take for 46 people to catch the cold?
23. The decibel level, \(D\), of sound is given by the equation \(D=10 \log \left(\frac{I}{I_{0}}\right)\), where \(I\) is the intensity of the sound and \(I_{0}=10^{-12}\) watt per square meter.
(a) If the shout of a single person measures 80 decibels, how loud will the sound be if two people shout at the same time? That is, how loud would the sound be if the intensity doubled?
(b) The pain threshold for sound is 125 decibels. If the Athens Olympic Stadium 2004 (Olympiako Stadio Athinas 'Spyros Louis') can seat 74,400 people, how many people in the crowd need to shout at the same time for the resulting sound level to meet or exceed the pain threshold? (Ignore any possible sound dampening.)

\section*{Cumulative Review}
1. (a) Is the following graph the graph of a function? If it is, is the function one-to-one?

(b) Assuming the graph is a function, what type of function might it be (polynomial, exponential, and so on)? Why?
2. For the function \(f(x)=2 x^{2}-3 x+1\), find the following:
(a) \(f(3)\)
(b) \(f(-x)\)
(c) \(f(x+h)\)
3. Determine which of the following points is or are on the graph of \(x^{2}+y^{2}=1\).
(a) \(\left(\frac{1}{2}, \frac{1}{2}\right)\)
(b) \(\left(\frac{1}{2}, \frac{\sqrt{3}}{2}\right)\)
4. Solve the equation \(3(x-2)=4(x+5)\).
5. Graph the line \(2 x-4 y=16\).
6. (a) Graph the quadratic function \(f(x)=-x^{2}+2 x-3\) by determining whether its graph opens up or down and by finding its vertex, axis of symmetry, \(y\)-intercept, and \(x\)-intercept(s), if any.
(b) Solve \(f(x) \leq 0\).
7. Determine the quadratic function whose graph is given in the figure.

8. Is the graph that of a polynomial, exponential, or logarithmic function? Determine the function whose graph is given.

9. Graph \(f(x)=3(x+1)^{3}-2\) using transformations.
10. (a) Given that \(f(x)=x^{2}+2\) and \(g(x)=\frac{2}{x-3}\) find \(f(g(x))\) and state its domain. What is \(f(g(5))\) ?
(b) If \(f(x)=x+2\) and \(g(x)=\log _{2} x\), find \((f(g(x))\) and state its domain. What is \(f(g(14))\) ?
11. For the polynomial function \(f(x)=4 x^{3}+9 x^{2}-30 x-8\) :
(a) Find the real zeros of \(f\).
(b) Determine the intercepts of the graph of \(f\).
(c) Use a graphing utility to approximate the local maxima and local minima.
(d) Draw a complete graph of \(f\). Be sure to label the intercepts and turning points.
12. For the function \(g(x)=3^{x}+2\) :
(a) Graph \(g\) using transformations. State the domain, range, and horizontal asymptote of \(g\).
(b) Determine the inverse of \(g\). State the domain, range, and vertical asymptote of \(g^{-1}\).
(c) On the same graph as \(g\), graph \(g^{-1}\).
13. Solve the equation: \(4^{x-3}=8^{2 x}\)
14. Solve the equation: \(\log _{3}(x+1)+\log _{3}(2 x-3)=\log _{9} 9\)
15. Suppose that \(f(x)=\log _{3}(x+2)\). Solve:
(a) \(f(x)=0\)
(b) \(f(x)>0\)
(c) \(f(x)=3\)
16. Data Analysis The following data represent the percent of all drivers by age who have been stopped by the police for any reason within the past year. The median age represents the midpoint of the upper and lower limit for the age range.
\begin{tabular}{|lcc|}
\hline Age Range & Median Age, \(\boldsymbol{x}\) & \begin{tabular}{c} 
Percent \\
Stopped, \(\boldsymbol{y}\)
\end{tabular} \\
\hline \(16-19\) & 17.5 & 18.2 \\
\(20-29\) & 24.5 & 16.8 \\
\(30-39\) & 34.5 & 11.3 \\
\(40-49\) & 44.5 & 9.4 \\
\(50-59\) & 54.5 & 7.7 \\
\(\geq 60\) & 69.5 & 3.8 \\
\hline
\end{tabular}
(a) Using your graphing utility, draw a scatter diagram of the data treating median age, \(x\), as the independent variable.
(b) Determine a model that you feel best describes the relation between median age and percent stopped. You may choose from among linear, quadratic, cubic, exponential, logarithmic, and logistic models.
(c) Provide a justification for the model that you selected in part (b).

\section*{Chapter Projects}

\section*{(ค) Internet-based Project}
I. Depreciation of Cars Kelley Blue Book is an official guide that provides the current retail price of cars. You can access the Kelley Blue Book at your library or online at www.kbb.com.
1. Identify three cars that you are considering purchasing, and find the Kelley Blue Book value of the cars for 0 (brand new), 1, 2, 3, 4, and 5 years of age. Online, the value of the car can be found by selecting Used Cars, then Used Car Values. Enter the year, make, and model of the car you are selecting. To be consistent, we will assume the cars will be driven 12,000 miles per year, so a 1 -year-old car will have 12,000 miles, a 2 -year-old car will have 24,000 miles, and so on. Choose the same options for each year, and finally determine the suggested retail price for cars that are in Excellent, Good, and Fair shape. You should have a total of 16 observations (one for a brand new car, 3 for a 1 -year-old car, 3 for a 2 -year-old car, and so on).
2. Draw a scatter diagram of the data with age as the independent variable and value as the dependent variable using Excel, a TI-graphing calculator, or some other spreadsheet. The Chapter 2 project describes how to draw a scatter diagram in Excel.
3. Determine the exponential function of best fit. Graph the exponential function of best fit on the scatter
diagram. To do this in Excel, click on any data point in the scatter diagram. Now click the Layout menu, select Trendline within the Analysis region, select More Trendline Options. Select the Exponential radio button and select Display Equation on Chart. See Figure 57. Move the Trendline Options window off to the side, and you will see the exponential function of best fit displayed on the scatter diagram. Do you think the function accurately describes the relation between age of the car and suggested retail price?

Figure 57

4. The exponential function of best fit is of the form \(y=C e^{r x}\), where \(y\) is the suggested retail value of the car and \(x\) is the age of the car (in years). What does the value of \(C\) represent? What does the value of \(r\) represent? What is the depreciation rate for each car that you are considering?
5. Write a report detailing which car you would purchase based on the depreciation rate you found for each car.

The following projects are available on the Instructor's Resource Center (IRC):
II. Hot Coffee A fast-food restaurant wants a special container to hold coffee. The restaurant wishes the container to quickly cool the coffee from \(200^{\circ}\) to \(130^{\circ} \mathrm{F}\) and keep the liquid between \(110^{\circ}\) and \(130^{\circ} \mathrm{F}\) as long as possible. The restaurant has three containers to select from. Which one should be purchased?
III. Project at Motorola Thermal Fatigue of Solder Connections Product reliability is a major concern of a manufacturer. Here a logarithmic transformation is used to simplify the analysis of a cell phone's ability to withstand temperature change.

\section*{Trigonometric Functions}

\section*{Length of Day Revisited}

The length of a day depends on the day of the year as well as on the latitude of the location. Latitude gives the location of a point on Earth north or south of the equator. In Chapter 3 we found a model that describes the relation between the length of day and latitude for a specific day of the year. In the Internet Project at the end of this chapter, we will find a model that describes the relation between the length of day and day of the year for a specific latitude.
(ค) - See the Internet-based Chapter Project I-

\section*{<A Look Back}

In Chapter 1, we began our discussion of functions. We defined domain and range and independent and dependent variables; we found the value of a function and graphed functions. We continued our study of functions by listing properties that a function might have, such as being even or odd, and we created a library of functions, naming key functions and listing their properties, including their graphs.

\section*{A Look Ahead>}

In this chapter we define the trigonometric functions, six functions that have wide application. We shall talk about their domain and range, see how to find values for them, graph them, and develop a list of their properties.

There are two widely accepted approaches to the development of the trigonometric functions: one uses right triangles; the other uses circles, especially the unit circle. In this book, we develop the trigonometric functions using the unit circle. In Section 7.1, we present right triangle trigonometry.

\section*{Outline}
5.1 Angles and Their Measure
5.2 Trigonometric Functions: Unit Circle Approach
5.3 Properties of the Trigonometric Functions
5.4 Graphs of the Sine and Cosine Functions
5.5 Graphs of the Tangent, Cotangent, Cosecant, and Secant Functions
5.6 Phase Shift; Sinusoidal Curve Fitting Chapter Review Chapter Test Cumulative Review Chapter Projects

\subsection*{5.1 Angles and Their Measure}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Circumference and Area of a Circle (Appendix A, Section A.2, p. A15)
- Uniform Motion (Appendix A, Section A.9, pp. A75-A77)

Now Work the 'Are You Prepared?' problems on page 385.

\section*{OBJECTIVES 1 Convert between Decimals and Degrees, Minutes, Seconds Measures for Angles ( p .378 )}

2 Find the Length of an Arc of a Circle (p. 379)
3 Convert from Degrees to Radians and from Radians to Degrees (p. 380)
4 Find the Area of a Sector of a Circle (p. 383)
5 Find the Linear Speed of an Object Traveling in Circular Motion (p. 384)

Figure 1

Figure 2

Counterclockwise
rotation Positive angle
(a)

A ray, or half-line, is that portion of a line that starts at a point \(V\) on the line and extends indefinitely in one direction. The starting point \(V\) of a ray is called its vertex. See Figure 1.

If two rays are drawn with a common vertex, they form an angle. We call one ray of an angle the initial side and the other the terminal side. The angle formed is identified by showing the direction and amount of rotation from the initial side to the terminal side. If the rotation is in the counterclockwise direction, the angle is positive; if the rotation is clockwise, the angle is negative. See Figure 2.

Clockwise rotation Negative angle
(b)

Counterclockwise rotation Positive angle
(c)

Lowercase Greek letters, such as \(\alpha\) (alpha), \(\beta\) (beta), \(\gamma\) (gamma), and \(\theta\) (theta), are often used to denote angles. Notice in Figure 2(a) that the angle \(\alpha\) is positive because the direction of the rotation from the initial side to the terminal side is counterclockwise. The angle \(\beta\) in Figure 2(b) is negative because the rotation is clockwise. The angle \(\gamma\) in Figure 2(c) is positive. Notice that the angle \(\alpha\) in Figure 2(a) and the angle \(\gamma\) in Figure 2(c) have the same initial side and the same terminal side. However, the measures of \(\alpha\) and \(\gamma\) are unequal, because the amount of rotation required to go from the initial side to the terminal side is greater for angle \(\gamma\) than for angle \(\alpha\).

An angle \(\theta\) is said to be in standard position if its vertex is at the origin of a rectangular coordinate system and its initial side coincides with the positive \(x\)-axis. See Figure 3.

Figure 3

(a) \(\theta\) is in standard position; \(\theta\) is positive

(b) \(\theta\) is in standard position; \(\theta\) is negative

HISTORICAL NOTE One counterclockwise rotation is \(360^{\circ}\) due to the Babylonian year, which had 360 days.

When an angle \(\theta\) is in standard position, the terminal side will lie either in a quadrant, in which case we say that \(\theta\) lies in that quadrant, or the terminal side will lie on the \(x\)-axis or the \(y\)-axis, in which case we say that \(\theta\) is a quadrantal angle. For example, the angle \(\theta\) in Figure 4(a) lies in quadrant II, the angle \(\theta\) in Figure 4(b) lies in quadrant IV, and the angle \(\theta\) in Figure 4(c) is a quadrantal angle.

Figure 4

(a) \(\theta\) lies in quadrant II

(b) \(\theta\) lies in quadrant IV

(c) \(\theta\) is a quadrantal angle

Angles are measured by determining the amount of rotation needed for the initial side to become coincident with the terminal side. The two commonly used measures for angles are degrees and radians.

\section*{Degrees}

The angle formed by rotating the initial side exactly once in the counterclockwise direction until it coincides with itself ( 1 revolution) is said to measure 360 degrees, abbreviated \(360^{\circ}\). One degree, \(\mathbf{1}^{\circ}\), is \(\frac{1}{360}\) revolution. A right angle is an angle that measures \(90^{\circ}\), or \(\frac{1}{4}\) revolution; a straight angle is an angle that measures \(180^{\circ}\), or \(\frac{1}{2}\) revolution. See Figure 5. As Figure 5(b) shows, it is customary to indicate a right angle by using the symbol \(\square\) \(\qquad\) .

Figure 5

(a) 1 revolution counterclockwise, \(360^{\circ}\)

(b) right angle, \(\frac{1}{4}\) revolution counterclockwise, \(90^{\circ}\)

(c) straight angle, \(\frac{1}{2}\) revolution counterclockwise, \(180^{\circ}\)

It is also customary to refer to an angle that measures \(\theta\) degrees as an angle of \(\theta\) degrees.

\section*{EXAMPLE I \\ Drawing an Angle}

Draw each angle in standard position.
(a) \(45^{\circ}\)
(b) \(-90^{\circ}\)
(c) \(225^{\circ}\)
(d) \(405^{\circ}\)

\section*{Solution}
(a) An angle of \(45^{\circ}\) is \(\frac{1}{2}\) of a right angle. See Figure 6.
(b) An angle of \(-90^{\circ}\) is \(\frac{1}{4}\) revolution in the clockwise direction. See Figure 7.

Figure 6

Figure 7

(c) An angle of \(225^{\circ}\) consists of a rotation through \(180^{\circ}\) followed by a rotation through \(45^{\circ}\). See Figure 8.

Figure 8

(d) An angle of \(405^{\circ}\) consists of 1 revolution \(\left(360^{\circ}\right)\) followed by a rotation through \(45^{\circ}\). See Figure 9.

Figure 9

am Now Work problem 1

\section*{1 Convert between Decimals and Degrees, Minutes, Seconds Measures for Angles}

Although subdivisions of a degree may be expressed using decimals, the notion of minutes and seconds may also be used. One minute, denoted by \(\mathbf{1}^{\prime}\), is defined as \(\frac{1}{60}\) degree. One second, denoted by \(\mathbf{1}^{\prime \prime}\), is defined as \(\frac{1}{60}\) minute, or, equivalently, \(\frac{1}{3600}\) degree. An angle of, say, 30 degrees, 40 minutes, 10 seconds is written compactly as \(30^{\circ} 40^{\prime} 10^{\prime \prime}\). To summarize:
\[
\begin{gather*}
1 \text { counterclockwise revolution }=360^{\circ} \\
1^{\circ}=60^{\prime} \quad 1^{\prime}=60^{\prime \prime} \tag{1}
\end{gather*}
\]

It is sometimes necessary to convert from the degree, minute, second notation ( \(\mathrm{D}^{\circ} \mathrm{M}^{\prime} \mathrm{S}^{\prime \prime}\) ) to a decimal form, and vice versa.

\section*{EXAMPLE 2}

COMMENT Graphing calculators (and some scientific calculators) have the ability to convert from degrees, minutes, seconds to decimal form, and vice versa. Consult your owner's manual.

\section*{Converting between Degrees, Minutes, Seconds, and Decimal Forms}
(a) Convert \(50^{\circ} 6^{\prime} 21^{\prime \prime}\) to a decimal in degrees. Round the answer to four decimal places.
(b) Convert \(21.256^{\circ}\) to the degree, minute, second ( \(\mathrm{D}^{\circ} \mathrm{M}^{\prime} \mathrm{S}^{\prime \prime}\) ) notation. Round the answer to the nearest second.
(a) Because \(1^{\prime}=\left(\frac{1}{60}\right)^{\circ}\) and \(1^{\prime \prime}=\left(\frac{1}{60}\right)^{\prime}=\left(\frac{1}{60} \cdot \frac{1}{60}\right)^{\circ}\), convert as follows:
\[
\begin{aligned}
50^{\circ} 6^{\prime} 21^{\prime \prime} & =50^{\circ}+6^{\prime}+21^{\prime \prime} \\
& =50^{\circ}+6 \cdot 1^{\prime}+21 \cdot 1^{\prime \prime}
\end{aligned}
\]
\[
=50^{\circ}+6 \cdot\left(\frac{1}{60}\right)^{\circ}+21 \cdot\left(\frac{1}{60} \cdot \frac{1}{60}\right)^{\circ} \quad \begin{aligned}
& \text { Convert minutes and } \\
& \text { seconds to degrees. }
\end{aligned}
\]
\[
\approx 50^{\circ}+0.1^{\circ}+0.0058^{\circ}
\]
\[
=50.1058^{\circ}
\]
(b) Because \(1^{\circ}=60^{\prime}\) and \(1^{\prime}=60^{\prime \prime}\), proceed as follows:
\[
\begin{aligned}
21.256^{\circ} & =21^{\circ}+0.256^{\circ} & & \\
& =21^{\circ}+0.256 \cdot 1^{\circ} & & \\
& =21^{\circ}+(0.256)\left(60^{\prime}\right) & & \text { Convert fraction of degree to } \\
& =21^{\circ}+15.36^{\prime} & & \text { minutes; } 1^{\circ}=60^{\prime} . \\
& =21^{\circ}+15^{\prime}+0.36^{\prime} & & \\
& =21^{\circ}+15^{\prime}+0.36 \cdot 1^{\prime} & & \\
& =21^{\circ}+15^{\prime}+(0.36)\left(60^{\prime \prime}\right) & & \text { Convert fraction of minute } \\
& =21^{\circ}+15^{\prime}+21.6^{\prime \prime} & & \text { to seconds; } 1^{\prime}=60^{\prime \prime} . \\
& \approx 21^{\circ} 15^{\prime} 22^{\prime \prime} & & \text { Round to the nearest second. }
\end{aligned}
\]

\section*{Now Work problems 23 and 29}

In many applications, such as describing the exact location of a star or the precise position of a ship at sea, angles measured in degrees, minutes, and even seconds are used. For calculation purposes, these are transformed to decimal form. In other applications, especially those in calculus, angles are measured using radians.

\section*{Radians}

A central angle is a positive angle whose vertex is at the center of a circle. The rays of a central angle subtend (intersect) an arc on the circle. If the radius of the circle is \(r\) and the length of the arc subtended by the central angle is also \(r\), then the measure of the angle is \(\mathbf{1}\) radian. See Figure 10(a).

Figure 10

(a)

(b)

For a circle of radius 1 , the rays of a central angle with measure 1 radian subtend an arc of length 1 . For a circle of radius 3 , the rays of a central angle with measure 1 radian subtend an arc of length 3 . See Figure 10(b).
Figure 11 \(\frac{\theta}{\theta_{1}}=\frac{s}{s_{1}}\)

\section*{2 Find the Length of an Arc of a Circle}

Now consider a circle of radius \(r\) and two central angles, \(\theta\) and \(\theta_{1}\), measured in radians. Suppose that these central angles subtend arcs of lengths \(s\) and \(s_{1}\), respectively, as shown in Figure 11. From geometry, the ratio of the measures of the angles equals the ratio of the corresponding lengths of the arcs subtended by these angles; that is,
\[
\begin{equation*}
\frac{\theta}{\theta_{1}}=\frac{s}{s_{1}} \tag{2}
\end{equation*}
\]

Suppose that \(\theta_{1}=1\) radian. Refer again to Figure 10(a). The length \(s_{1}\) of the arc subtended by the central angle \(\theta_{1}=1\) radian equals the radius \(r\) of the circle. Then \(s_{1}=r\), so equation (2) reduces to
\[
\begin{equation*}
\frac{\theta}{1}=\frac{s}{r} \quad \text { or } \quad s=r \theta \tag{3}
\end{equation*}
\]

\section*{THEOREM}

\section*{Arc Length}

For a circle of radius \(r\), a central angle of \(\theta\) radians subtends an arc whose length \(s\) is
\[
\begin{equation*}
s=r \theta \tag{4}
\end{equation*}
\]

NOTE Formulas must be consistent with regard to the units used. In equation (4), we write
\[
s=r \theta
\]

To see the units, however, go back to equation (3) and write
\[
\begin{aligned}
\frac{\theta \text { radians }}{1 \text { radian }} & =\frac{\text { slength units }}{\text { rlength units }} \\
\text { slength units } & =\text { rlength units } \frac{\theta \text { radians }}{1 \text { radian }}
\end{aligned}
\]

The radians divide out, leaving
\[
\text { slength units }=(\text { rlength units }) \theta \quad s=r \theta
\]
where \(\theta\) appears to be "dimensionless" but, in fact, is measured in radians. So, in using the formula \(s=r \theta\), the dimension for \(\theta\) is radians, and any convenient unit of length (such as inches or meters) may be used for \(s\) and \(r\).

\section*{EXAMPLE 3 Finding the Length of an Arc of a Circle}

Find the length of the arc of a circle of radius 2 meters subtended by a central angle of 0.25 radian.
Solution Use equation (4) with \(r=2\) meters and \(\theta=0.25\). The length \(s\) of the arc is
\[
s=r \theta=2(0.25)=0.5 \text { meter }
\]
am-Now Work problem 71

\section*{3 Convert from Degrees to Radians and from Radians to Degrees}

With two ways to measure angles, it is important to be able to convert from one to the other. Consider a circle of radius \(r\). A central angle of 1 revolution will subtend an arc equal to the circumference of the circle (Figure 12). Because the circumference of a circle of radius \(r\) equals \(2 \pi r\), we substitute \(2 \pi r\) for \(s\) in equation (4) to find that, for an angle \(\theta\) of 1 revolution,
\[
\begin{aligned}
s & =r \theta & & \\
2 \pi r & =r \theta & & \theta=1 \text { revolution; } s=2 \pi r \\
\theta & =2 \pi \text { radians } & & \text { Solve for } \theta .
\end{aligned}
\]

From this, we have

Since 1 revolution \(=360^{\circ}\), we have
\[
360^{\circ}=2 \pi \text { radians }
\]

Dividing both sides by 2 yields
\[
180^{\circ}=\pi \text { radians }
\]

Divide both sides of equation (6) by 180. Then
\[
1 \text { degree }=\frac{\pi}{180} \text { radian }
\]

Divide both sides of (6) by \(\pi\). Then
\[
\frac{180}{\pi} \text { degrees }=1 \text { radian }
\]

We have the following two conversion formulas:*
\[
1 \text { degree }=\frac{\pi}{180} \text { radian } \quad 1 \text { radian }=\frac{180}{\pi} \text { degrees }
\]

\section*{EXAMPLE 4 Converting from Degrees to Radians}

Convert each angle in degrees to radians.
(a) \(60^{\circ}\)
(b) \(150^{\circ}\)
(c) \(-45^{\circ}\)
(d) \(90^{\circ}\)
(e) \(107^{\circ}\)

Solution (a) \(60^{\circ}=60 \cdot 1\) degree \(=60 \cdot \frac{\pi}{180}\) radian \(=\frac{\pi}{3}\) radians
(b) \(150^{\circ}=150 \cdot 1^{\circ}=150 \cdot \frac{\pi}{180}\) radian \(=\frac{5 \pi}{6}\) radians
(c) \(-45^{\circ}=-45 \cdot \frac{\pi}{180}\) radian \(=-\frac{\pi}{4}\) radian
(d) \(90^{\circ}=90 \cdot \frac{\pi}{180}\) radian \(=\frac{\pi}{2}\) radians
(e) \(107^{\circ}=107 \cdot \frac{\pi}{180}\) radian \(\approx 1.868\) radians

Example 4, parts (a)-(d), illustrates that angles that are "nice" fractions of a revolution are expressed in radian measure as fractional multiples of \(\pi\), rather than as decimals. For example, a right angle, as in Example 4(d), is left in the form \(\frac{\pi}{2}\) radians, which is exact, rather than using the approximation \(\frac{\pi}{2} \approx \frac{3.1416}{2}=1.5708\) radians. When the fractions are not "nice," use the decimal approximation of the angle, as in Example 4(e).
am Now Work problems 35 and 61

\section*{EXAMPLE 5 Converting Radians to Degrees}

Convert each angle in radians to degrees.
(a) \(\frac{\pi}{6}\) radian
(b) \(\frac{3 \pi}{2}\) radians
(c) \(-\frac{3 \pi}{4}\) radians
(d) \(\frac{7 \pi}{3}\) radians
(e) 4 radians
*Some students prefer instead to use the proportion \(\frac{\text { Degree }}{180^{\circ}}=\frac{\text { Radian }}{\pi}\). Then substitute for what is given and solve for the measurement sought.

Solution
(a) \(\frac{\pi}{6}\) radian \(=\frac{\pi}{6} \cdot 1\) radian \(=\frac{\pi}{6} \cdot \frac{180}{\pi}\) degrees \(=30^{\circ}\)
(b) \(\frac{3 \pi}{2}\) radians \(=\frac{3 \pi}{2} \cdot \frac{180}{\pi}\) degrees \(=270^{\circ}\)
(c) \(-\frac{3 \pi}{4}\) radians \(=-\frac{3 \pi}{4} \cdot \frac{180}{\pi}\) degrees \(=-135^{\circ}\)
(d) \(\frac{7 \pi}{3}\) radians \(=\frac{7 \pi}{3} \cdot \frac{180}{\pi}\) degrees \(=420^{\circ}\)
(e) 4 radians \(=4 \cdot \frac{180}{\pi}\) degrees \(\approx 229.18^{\circ}\)

Table 1 lists the degree and radian measures of some commonly encountered angles. You should learn to feel equally comfortable using degree or radian measure for these angles.

Table 1
\begin{tabular}{|l|lllllllll|}
\hline Degrees & \(0^{\circ}\) & \(30^{\circ}\) & \(45^{\circ}\) & \(60^{\circ}\) & \(90^{\circ}\) & \(120^{\circ}\) & \(135^{\circ}\) & \(150^{\circ}\) & \(180^{\circ}\) \\
Radians & 0 & \(\frac{\pi}{6}\) & \(\frac{\pi}{4}\) & \(\frac{\pi}{3}\) & \(\frac{\pi}{2}\) & \(\frac{2 \pi}{3}\) & \(\frac{3 \pi}{4}\) & \(\frac{5 \pi}{6}\) & \(\pi\) \\
\cline { 1 - 1 } & & & \(210^{\circ}\) & \(225^{\circ}\) & \(240^{\circ}\) & \(270^{\circ}\) & \(300^{\circ}\) & \(315^{\circ}\) & \(330^{\circ}\) \\
Degrees & & \(\frac{7 \pi}{6}\) & \(\frac{5 \pi}{4}\) & \(\frac{4 \pi}{3}\) & \(\frac{3 \pi}{2}\) & \(\frac{5 \pi}{3}\) & \(\frac{7 \pi}{4}\) & \(\frac{11 \pi}{6}\) & \(2 \pi\) \\
\hline Radians & & & & & & \\
\hline
\end{tabular}

\section*{EXAMPLE 6 Finding the Distance between Two Cities}

The latitude of a location \(L\) is the measure of the angle formed by a ray drawn from the center of Earth to the equator and a ray drawn from the center of Earth to L. See Figure 13(a). Sioux Falls, South Dakota, is due north of Dallas, Texas. Find the distance between Sioux Falls ( \(43^{\circ} 33^{\prime}\) north latitude) and Dallas ( \(32^{\circ} 46^{\prime}\) north latitude). See Figure 13(b). Assume that the radius of Earth is 3960 miles.

Figure 13

Solution The measure of the central angle between the two cities is \(43^{\circ} 33^{\prime}-32^{\circ} 46^{\prime}=10^{\circ} 47^{\prime}\). Use equation (4), \(s=r \theta\). But remember to first convert the angle of \(10^{\circ} 47^{\prime}\) to radians.
\[
\begin{aligned}
\theta=10^{\circ} 47^{\prime} & \approx 10.7833^{\circ}=10.7833 \cdot \frac{\pi}{180} \text { radian } \approx 0.188 \text { radian } \\
& \uparrow \\
47^{\prime} & =47\left(\frac{1}{60}\right)^{\circ}
\end{aligned}
\]

NOTE If the measure of an angle is given as 5 , it is understood to mean 5 radians; if the measure of an angle is given as \(5^{\circ}\), it means 5 degrees.

Figure 14

Figure 15
\(\frac{\theta}{\theta_{1}}=\frac{A}{A_{1}}\)

THEOREM

Use \(\theta=0.188\) radian and \(r=3960\) miles in equation (4). The distance between the two cities is
\[
s=r \theta=3960 \cdot 0.188 \approx 744 \text { miles }
\]

When an angle is measured in degrees, the degree symbol will always be shown. However, when an angle is measured in radians, the usual practice is to omit the word radians. Thus, if the measure of an angle is given as \(\frac{\pi}{6}\), it is understood to mean \(\frac{\pi}{6}\) radian.
```

                                    Now Work problem 107
    ```

\section*{4 Find the Area of a Sector of a Circle}

Consider a circle of radius \(r\). Suppose that \(\theta\), measured in radians, is a central angle of this circle. See Figure 14. We seek a formula for the area \(A\) of the sector (shown in blue) formed by the angle \(\theta\).

Now consider a circle of radius \(r\) and two central angles \(\theta\) and \(\theta_{1}\), both measured in radians. See Figure 15 . From geometry, the ratio of the measures of the angles equals the ratio of the corresponding areas of the sectors formed by these angles. That is,
\[
\frac{\theta}{\theta_{1}}=\frac{A}{A_{1}}
\]

Suppose that \(\theta_{1}=2 \pi\) radians. Then \(A_{1}=\) area of the circle \(=\pi r^{2}\). Solving for \(A\), we find
\[
\begin{aligned}
A=A_{1} \frac{\theta}{\theta_{1}} & =\pi r^{2} \frac{\theta}{2 \pi}=\frac{1}{2} r^{2} \theta \\
& \uparrow \\
A_{1} & =\pi r^{2} \\
\theta_{1} & =2 \pi
\end{aligned}
\]

\section*{Area of a Sector}

The area \(A\) of the sector of a circle of radius \(r\) formed by a central angle of \(\theta\) radians is
\[
\begin{equation*}
A=\frac{1}{2} r^{2} \theta \tag{8}
\end{equation*}
\]

\section*{Finding the Area of a Sector of a Circle}

Find the area of the sector of a circle of radius 2 feet formed by an angle of \(30^{\circ}\). Round the answer to two decimal places.

Solution
Use equation (8) with \(r=2\) feet and \(\theta=30^{\circ}=\frac{\pi}{6}\) radian. [Remember, in equation (8), \(\theta\) must be in radians.]
\[
A=\frac{1}{2} r^{2} \theta=\frac{1}{2}(2)^{2} \frac{\pi}{6}=\frac{\pi}{3} \approx 1.05
\]

The area \(A\) of the sector is 1.05 square feet, rounded to two decimal places.

\section*{DEFINITION}

Figure 16

DEFINITION

5 Find the Linear Speed of an Object Traveling in Circular Motion
In the Appendix, Section A.9, we defined the average speed of an object as the distance traveled divided by the elapsed time. For motion along a circle, we distinguish between linear speed and angular speed.

Suppose that an object moves around a circle of radius \(r\) at a constant speed. If \(s\) is the distance traveled in time \(t\) around this circle, then the linear speed \(v\) of the object is defined as
\[
\begin{equation*}
v=\frac{s}{t} \tag{9}
\end{equation*}
\]

As this object travels around the circle, suppose that \(\theta\) (measured in radians) is the central angle swept out in time \(t\). See Figure 16.

The angular speed \(\omega\) (the Greek letter omega) of this object is the angle \(\theta\) swept out (measured in radians), divided by the elapsed time \(t\); that is,
\[
\begin{equation*}
\omega=\frac{\theta}{t} \tag{10}
\end{equation*}
\]

Angular speed is the way the turning rate of an engine is described. For example, an engine idling at 900 rpm (revolutions per minute) is one that rotates at an angular speed of
\[
900 \frac{\text { revolutions }}{\text { minute }}=900 \frac{\text { revolutions }}{\text { minute }} \cdot 2 \pi \frac{\text { radians }}{\text { revolution }}=1800 \pi \frac{\text { radians }}{\text { minute }}
\]

There is an important relationship between linear speed and angular speed:

So,
\[
\begin{array}{r}
\text { linear speed }=v \\
\uparrow \underset{\uparrow}{v}=\frac{s}{t}=r\left(\frac{\theta}{t}\right)=r \cdot \omega \\
(9) \quad s=r \theta
\end{array}
\]
\[
\begin{equation*}
v=r \omega \tag{11}
\end{equation*}
\]
where \(\omega\) is measured in radians per unit time.
When using equation (11), remember that \(v=\frac{s}{t}\) (the linear speed) has the dimensions of length per unit of time (such as feet per second or miles per hour), \(r\) (the radius of the circular motion) has the same length dimension as \(s\), and \(\omega\) (the angular speed) has the dimensions of radians per unit of time. If the angular speed is given in terms of revolutions per unit of time (as is often the case), be sure to convert it to radians per unit of time, using the fact that 1 revolution \(=2 \pi\) radians, before attempting to use equation (11).

\section*{EXAMPLE 8}

\section*{Finding Linear Speed}

A child is spinning a rock at the end of a 2-foot rope at the rate of 180 revolutions per minute (rpm). Find the linear speed of the rock when it is released.

Solution
Look at Figure 17 on the next page. The rock is moving around a circle of radius \(r=2\) feet. The angular speed \(\omega\) of the rock is
\[
\omega=180 \frac{\text { revolutions }}{\text { minute }}=180 \frac{\text { revolutions }}{\text { minute }} \cdot 2 \pi \frac{\text { radians }}{\text { revolution }}=360 \pi \frac{\text { radians }}{\text { minute }}
\]

Figure 17

From equation (11), the linear speed \(v\) of the rock is
\[
v=r \omega=2 \text { feet } \cdot 360 \pi \frac{\text { radians }}{\text { minute }}=720 \pi \frac{\text { feet }}{\text { minute }} \approx 2262 \frac{\text { feet }}{\text { minute }}
\]

The linear speed of the rock when it is released is \(2262 \mathrm{ft} / \mathrm{min} \approx 25.7 \mathrm{mi} / \mathrm{hr}\).
wn Now Work problem 99

\section*{Historical Feature}

Trigonometry was developed by Greek astronomers, who regarded the sky as the inside of a sphere, so it was natural that triangles on a sphere were investigated early (by Menelaus of Alexandria about AD 100) and that triangles in the plane were studied much later The first book containing a systematic treatment of plane and spherical trigonometry was written by the Persian astronomer Nasir Eddin (about AD 1250).

Regiomontanus (1436-1476) is the person most responsible for moving trigonometry from astronomy into mathematics. His work was improved by Copernicus (1473-1543) and Copernicus's student

Rhaeticus (1514-1576). Rhaeticus's book was the first to define the six trigonometric functions as ratios of sides of triangles, although he did not give the functions their present names. Credit for this is due to Thomas Finck (1583), but Finck's notation was by no means universally accepted at the time. The notation was finally stabilized by the textbooks of Leonhard Euler (1707-1783).

Trigonometry has since evolved from its use by surveyors, navigators, and engineers to present applications involving ocean tides, the rise and fall of food supplies in certain ecologies, brain wave patterns, and many other phenomena.

\subsection*{5.1 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. What is the formula for the circumference \(C\) of a circle of radius \(r\) ? What is the formula for the area \(A\) of a circle of radius \(r\) ? (p. A15)
2. If a particle has a speed of \(r\) feet per second and travels a distance \(d\) (in feet) in time \(t\) (in seconds), then \(d=\) \(\qquad\) . (pp.A75-A77)

\section*{Concepts and Vocabulary}
3. An angle \(\theta\) is in \(\qquad\) if its vertex is at the origin of a rectangular coordinate system and its initial side coincides with the positive \(x\)-axis.
4. A \(\qquad\) is a positive angle whose vertex is at the center of a circle.
5. If the radius of a circle is \(r\) and the length of the arc subtended by a central angle is also \(r\), then the measure of the angle is 1 \(\qquad\) -
6. On a circle of radius \(r\), a central angle of \(\theta\) radians subtends an arc of length \(s=\) \(\qquad\) ; the area of the sector formed
by this angle \(\theta\) is \(A=\) \(\qquad\)
7. \(180^{\circ}=\) \(\qquad\) radians
8. An object travels around a circle of radius \(r\) with constant speed. If \(s\) is the distance traveled in time \(t\) around the circle and \(\theta\) is the central angle (in radians) swept out in time \(t\), then the linear speed of the object is \(v=\) \(\qquad\) and the angular speed of the object is \(\omega=\) \(\qquad\)
9. True or False The angular speed \(\omega\) of an object traveling around a circle of radius \(r\) is the angle \(\theta\) (measured in radians) swept out, divided by the elapsed time \(t\).
10. True or False For circular motion on a circle of radius \(r\), linear speed equals angular speed divided by \(r\).

70. \(\sqrt{2}\)

In Problems 71-78, s denotes the length of the arc of a circle of radius \(r\) subtended by the central angle \(\theta\). Find the missing quantity. Round answers to three decimal places.
71. \(r=10\) meters, \(\quad \theta=\frac{1}{2}\) radian, \(s=\) ?
72. \(r=6\) feet, \(\quad \theta=2\) radians, \(s=\) ?
73. \(\theta=\frac{1}{3}\) radian, \(s=2\) feet, \(r=\) ?
74. \(\theta=\frac{1}{4}\) radian, \(s=6\) centimeters, \(r=\) ?
75. \(r=5\) miles, \(s=3\) miles, \(\theta=\) ?
76. \(r=6\) meters, \(s=8\) meters, \(\theta=\) ?
77. \(r=2\) inches, \(\quad \theta=30^{\circ}, \quad s=\) ?
78. \(r=3\) meters, \(\quad \theta=120^{\circ}, \quad s=\) ?

In Problems 79-86, A denotes the area of the sector of a circle of radius \(r\) formed by the central angle \(\theta\). Find the missing quantity. Round answers to three decimal places.
79. \(r=10\) meters, \(\quad \theta=\frac{1}{2}\) radian, \(\quad A=\) ?
80. \(r=6\) feet, \(\quad \theta=2\) radians, \(\quad A=\) ?
81. \(\theta=\frac{1}{3}\) radian, \(\quad A=2\) square feet, \(r=\) ?
82. \(\theta=\frac{1}{4}\) radian, \(A=6\) square centimeters, \(r=\) ?
83. \(r=5\) miles, \(A=3\) square miles, \(\theta=\) ?
84. \(r=6\) meters, \(A=8\) square meters, \(\theta=\) ?
85. \(r=2\) inches, \(\theta=30^{\circ}, \quad A=\) ?
86. \(r=3\) meters, \(\quad \theta=120^{\circ}, \quad A=\) ?

In Problems 87-90, find the length s and area A. Round answers to three decimal places.

\section*{Applications and Extensions}
91. Movement of a Minute Hand The minute hand of a clock is 6 inches long. How far does the tip of the minute hand move in 15 minutes? How far does it move in 25 minutes? Round answers to two decimal places.

92. Movement of a Pendulum A pendulum swings through an angle of \(20^{\circ}\) each second. If the pendulum is 40 inches long, how far does its tip move each second? Round answers to two decimal places.
93. Area of a Sector Find the area of the sector of a circle of radius 4 meters formed by an angle of \(45^{\circ}\). Round the answer to two decimal places.
94. Area of a Sector Find the area of the sector of a circle of radius 3 centimeters formed by an angle of \(60^{\circ}\). Round the answer to two decimal places.
95. Watering a Lawn A water sprinkler sprays water over a distance of 30 feet while rotating through an angle of \(135^{\circ}\). What area of lawn receives water?

96. Designing a Water Sprinkler An engineer is asked to design a water sprinkler that will cover a field of 100 square yards that is in the shape of a sector of a circle of radius 15 yards. Through what angle should the sprinkler rotate?
97. Windshield Wiper The arm and blade of a windshield wiper have a total length of 34 inches. If the blade is 25 inches long and the wiper sweeps out an angle of \(120^{\circ}\), how much window area can the blade clean?
98. Windshield Wiper The arm and blade of a windshield wiper has a length of 30 inches. If the blade is 24 inches long and the wiper sweeps out an angle of \(125^{\circ}\), how much window area can the blade clean?
99. Motion on a Circle An object is traveling around a circle with a radius of 5 centimeters. If in 20 seconds a central angle of \(\frac{1}{3}\) radian is swept out, what is the angular speed of the object? What is its linear speed?
100. Motion on a Circle An object is traveling around a circle with a radius of 2 meters. If in 20 seconds the object travels 5 meters, what is its angular speed? What is its linear speed?
101. Amusement Park Ride A gondola on an amusement park ride, similar to the Spin Cycle at Silverwood Theme Park, spins at a speed of 13 revolutions per minute. If the gondola is 25 feet from the ride's center, what is the linear speed of the gondola in miles per hour?
102. Amusement Park Ride A centrifugal force ride, similar to the Gravitron, spins at a speed of 22 revolutions per minute. If the diameter of the ride is 13 meters, what is the linear speed of the passengers in kilometers per hour?
103. Blu-Ray Drive A Blu-ray drive has a maximum speed of 10,000 revolutions per minute. If a Blu-ray disc has a diameter of 12 cm , what is the linear speed, in \(\mathrm{km} / \mathrm{hr}\), of a point 4 cm from the center if the disc is spinning at a rate of 8000 revolutions per minute?
104. DVD Drive A DVD drive has a maximum speed of 7200 revolutions per minute. If a DVD has a diameter of 12 cm ,
what is the linear speed, in \(\mathrm{km} / \mathrm{hr}\), of a point 5 cm from the disc's center if it is spinning at a rate of 5400 revolutions per minute?
105. Bicycle Wheels The diameter of each wheel of a bicycle is 26 inches. If you are traveling at a speed of 35 miles per hour on this bicycle, through how many revolutions per minute are the wheels turning?

106. Car Wheels The radius of each wheel of a car is 15 inches. If the wheels are turning at the rate of 3 revolutions per second, how fast is the car moving? Express your answer in inches per second and in miles per hour.
In Problems 107-110, the latitude of a location \(L\) is the angle formed by a ray drawn from the center of Earth to the equator and a ray drawn from the center of Earth to L. See the figure.

107. Distance between Cities Memphis, Tennessee, is due north of New Orleans, Louisiana. Find the distance between Memphis ( \(35^{\circ} 9^{\prime}\) north latitude) and New Orleans ( \(29^{\circ} 57^{\prime}\) north latitude). Assume that the radius of Earth is 3960 miles.
108. Distance between Cities Charleston, West Virginia, is due north of Jacksonville, Florida. Find the distance between Charleston ( \(38^{\circ} 21^{\prime}\) north latitude) and Jacksonville ( \(30^{\circ} 20^{\prime}\) north latitude). Assume that the radius of Earth is 3960 miles.
109. Linear Speed on Earth Earth rotates on an axis through its poles. The distance from the axis to a location on Earth \(30^{\circ}\) north latitude is about 3429.5 miles. Therefore, a location on Earth at \(30^{\circ}\) north latitude is spinning on a circle of radius 3429.5 miles. Compute the linear speed on the surface of Earth at \(30^{\circ}\) north latitude.
110. Linear Speed on Earth Earth rotates on an axis through its poles. The distance from the axis to a location on Earth \(40^{\circ}\) north latitude is about 3033.5 miles. Therefore, a location on Earth at \(40^{\circ}\) north latitude is spinning on a circle of radius 3033.5 miles. Compute the linear speed on the surface of Earth at \(40^{\circ}\) north latitude.
111. Speed of the Moon The mean distance of the moon from Earth is \(2.39 \times 10^{5}\) miles. Assuming that the orbit of the moon around Earth is circular and that 1 revolution takes 27.3 days, find the linear speed of the moon. Express your answer in miles per hour.
112. Speed of Earth The mean distance of Earth from the Sun is \(9.29 \times 10^{7}\) miles. Assuming that the orbit of Earth around the Sun is circular and that 1 revolution takes 365 days, find the linear speed of Earth. Express your answer in miles per hour.
113. Pulleys Two pulleys, one with radius 2 inches and the other with radius 8 inches, are connected by a belt. (See the figure.) If the 2 -inch pulley is caused to rotate at 3 revolutions per minute, determine the revolutions per minute of the 8 -inch pulley.
[Hint: The linear speeds of the pulleys are the same; both equal the speed of the belt.]

114. Ferris Wheels A neighborhood carnival has a Ferris wheel whose radius is 30 feet. You measure the time it takes for one revolution to be 70 seconds. What is the linear speed (in feet per second) of this Ferris wheel? What is the angular speed in radians per second?
115. Computing the Speed of a River Current To approximate the speed of the current of a river, a circular paddle wheel with radius 4 feet is lowered into the water. If the current causes the wheel to rotate at a speed of 10 revolutions per minute, what is the speed of the current? Express your answer in miles per hour.

116. Spin Balancing Tires A spin balancer rotates the wheel of a car at 480 revolutions per minute. If the diameter of the wheel is 26 inches, what road speed is being tested? Express your answer in miles per hour. At how many revolutions per minute should the balancer be set to test a road speed of 80 miles per hour?
117. The Cable Cars of San Francisco At the Cable Car Museum you can see the four cable lines that are used to pull cable cars up and down the hills of San Francisco. Each cable travels at a speed of 9.55 miles per hour, caused by a rotating wheel whose diameter is 8.5 feet. How fast is the wheel rotating? Express your answer in revolutions per minute.
118. Difference in Time of Sunrise Naples, Florida is approximately 90 miles due west of Ft . Lauderdale. How much sooner would a person in Ft. Lauderdale first see the rising Sun than a person in Naples? See the hint.

\footnotetext{
*Courtesy of the Joliet Junior College Mathematics Department
}
[Hint: Consult the figure. When a person at \(Q\) sees the first rays of the Sun, a person at \(P\) is still in the dark. The person at \(P\) sees the first rays after Earth has rotated until \(P\) is at the location \(Q\). Now use the fact that at the latitude of Ft. Lauderdale, in 24 hours an arc of length \(2 \pi\) (3559) miles is subtended.]

119. Let the Dog Roam A dog is attached to a 9-foot rope fastened to the outside corner of a fenced-in garden that measures 6 feet by 10 feet.Assuming that the dog cannot enter the garden, compute the exact area that the dog can wander. Write the exact area in square feet.*
120. Area of a Region The measure of \(\operatorname{arc} \widehat{B E}\) is \(2 \pi\). Find the exact area of the portion of the rectangle \(A B C D\) that falls outside of circle \(A\).*

121. Keeping Up with the Sun How fast would you have to travel on the surface of Earth at the equator to keep up with the Sun (that is, so that the Sun would appear to remain in the same position in the sky)?
122. Nautical Miles A nautical mile equals the length of arc subtended by a central angle of 1 minute on a great circle \({ }^{\dagger}\) on the surface of Earth. See the figure. If the radius of Earth is taken as 3960 miles, express 1 nautical mile in terms of ordinary, or statute, miles.

\footnotetext{
\({ }^{\dagger}\) Any circle drawn on the surface of Earth that divides Earth into two equal hemispheres.
}
123. Approximating the Circumference of Earth Eratosthenes of Cyrene (276-195 BC) was a Greek scholar who lived and worked in Cyrene and Alexandria. One day, while visiting in Syene, he noticed that the Sun's rays shone directly down a well. On this date 1 year later, in Alexandria, which is 500 miles due north of Syene, he measured the angle of the Sun to be about 7.2 degrees. See the figure. Use this information to approximate the radius and circumference of Earth.

124. Designing a Little League Field For a 60 -foot Little League Baseball field, the distance from home base to the nearest fence (or other obstruction) in fair territory should be a minimum of 200 feet. The commissioner of parks and recreation is making plans for a new 60 -foot field. Because of limited ground availability, he will use the minimum required distance to the outfield fence. To increase safety,
however, he plans to include a 10 -foot wide warning track on the inside of the fence. To further increase safety, the fence and warning track will extend both directions into foul territory. In total, the arc formed by the outfield fence (including the extensions into the foul territories) will be subtended by a central angle at home plate measuring \(96^{\circ}\), as illustrated.
(a) Determine the length of the outfield fence.
(b) Determine the area of the warning track.

Source: www.littleleague.org
125. Pulleys Two pulleys, one with radius \(r_{1}\) and the other with radius \(r_{2}\), are connected by a belt. The pulley with radius \(r_{1}\) rotates at \(\omega_{1}\) revolutions per minute, whereas the pulley with radius \(r_{2}\) rotates at \(\omega_{2}\) revolutions per minute. Show that \(\frac{r_{1}}{r_{2}}=\frac{\omega_{2}}{\omega_{1}}\).

\section*{Discussion and Writing}
126. Do you prefer to measure angles using degrees or radians? Provide justification and a rationale for your choice.
127. What is 1 radian? What is 1 degree?
128. Which angle has the larger measure: 1 degree or 1 radian? Or are they equal?
129. Explain the difference between linear speed and angular speed.
130. For a circle of radius \(r\), a central angle of \(\theta\) degrees subtends an arc whose length \(s\) is \(s=\frac{\pi}{180} r \theta\). Discuss whether this statement is true or false. Defend your position.
131. Discuss why ships and airplanes use nautical miles to measure distance. Explain the difference between a nautical mile and a statute mile.
132. Investigate the way that speed bicycles work. In particular, explain the differences and similarities between 5 -speed and 9 -speed derailleurs. Be sure to include a discussion of linear speed and angular speed.
133. In Example 6, we found that the distance between Dallas, Texas, and Sioux Falls, South Dakota, is approximately 744 miles. According to mapquest.com, the distance is approximately 850 miles. What might account for the difference?

\section*{Retain Your Knowledge}

Problems 134-137 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
134. Find the zero of \(f(x)=3 x+7\).
135. Solve: \(5 x^{2}+2=5-14 x\)
136. Write the function that is finally graphed if all of the following transformations are applied to the graph of \(y=|x|\).
(a) Shift left 3 units.
(b) Reflect about the \(x\)-axis.
(c) Shift down 4 units.
137. Find the horizontal and vertical asymptotes of \(R(x)=\frac{3 x^{2}-12}{x^{2}-5 x-14}\).

\section*{'Are You Prepared?' Answers}
1. \(C=2 \pi r ; A=\pi r^{2}\)
2. \(r \cdot t\)

\subsection*{5.2 Trigonometric Functions: Unit Circle Approach}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Geometry Essentials (Appendix A, Section A.2, pp. A13-A19)
- Symmetry (Foundations, Section 2 pp. 12-14)
- Functions (Section 1.1, pp. 43-52)
- Unit Circle (Foundations, Section 4, p. 34)

Now Work the 'Are You Prepared?' problems on page 402.

\section*{OBJECTIVES}

1 Find the Exact Values of the Trigonometric Functions Using a Point on the Unit Circle (p. 392)
2 Find the Exact Values of the Trigonometric Functions of Quadrantal Angles (p. 393)
3 Find the Exact Values of the Trigonometric Functions of \(\frac{\pi}{4}=45^{\circ}\) (p. 395)
4 Find the Exact Values of the Trigonometric Functions of \(\frac{\pi}{6}=30^{\circ}\) and \(\frac{\pi}{3}=60^{\circ}\) (p. 396)

5 Find the Exact Values of the Trigonometric Functions for Integer Multiples of \(\frac{\pi}{6}=30^{\circ}, \frac{\pi}{4}=45^{\circ}\), and \(\frac{\pi}{3}=60^{\circ}\) (p. 398)
6 Use a Calculator to Approximate the Value of a Trigonometric Function (p. 400)

7 Use a Circle of Radius \(r\) to Evaluate the Trigonometric Functions (p. 400)

We now introduce the trigonometric functions using the unit circle.

\section*{The Unit Circle}

Recall that the unit circle is a circle whose radius is 1 and whose center is at the origin of a rectangular coordinate system. Also recall that any circle of radius \(r\) has circumference of length \(2 \pi r\). Therefore, the unit circle (radius \(=1\) ) has a circumference of length \(2 \pi\). In other words, for 1 revolution around the unit circle, the length of the arc is \(2 \pi\) units.

The following discussion sets the stage for defining the trigonometric functions using the unit circle.

Let \(t\) be any real number. Position the \(t\)-axis so that it is vertical with the positive direction up. Place this \(t\)-axis in the \(x y\)-plane so that \(t=0\) is located at the point \((1,0)\) in the \(x y\)-plane.

If \(t \geq 0\), let \(s\) be the distance from the origin to \(t\) on the \(t\)-axis. See the red portion of Figure 18(a).

Figure 18

(b)

\section*{DEFINITION}

\section*{In Words}

The point \(P=(x, y)\) on the unit circle corresponding to a real number \(t\) is represented by \((\cos t, \sin t)\).

Now look at the unit circle in Figure 18(a). Beginning at the point \((1,0)\) on the unit circle, travel \(s=t\) units in the counterclockwise direction along the circle, to arrive at the point \(P=(x, y)\). In this sense, the length \(s=t\) units is being wrapped around the unit circle.

If \(t<0\), begin at the point \((1,0)\) on the unit circle and travel \(s=|t|\) units in the clockwise direction to arrive at the point \(P=(x, y)\). See Figure 18(b).

If \(t>2 \pi\) or if \(t<-2 \pi\), it will be necessary to travel around the unit circle more than once before arriving at the point \(P\). Do you see why?

Let's describe this process another way. Picture a string of length \(s=|t|\) units being wrapped around a circle of radius 1 unit. Start wrapping the string around the circle at the point \((1,0)\). If \(t \geq 0\), wrap the string in the counterclockwise direction; if \(t<0\), wrap the string in the clockwise direction. The point \(P=(x, y)\) is the point where the string ends.

This discussion tells us that for any real number \(t\), we can locate a unique point \(P=(x, y)\) on the unit circle. We call \(P\) the point on the unit circle that corresponds to \(t\). This is the important idea here. No matter what real number \(t\) is chosen, there is a unique point \(P\) on the unit circle corresponding to it. The coordinates of the point \(P=(x, y)\) on the unit circle corresponding to the real number \(t\) are used to define the six trigonometric functions of \(\boldsymbol{t}\).

Let \(t\) be a real number and let \(P=(x, y)\) be the point on the unit circle that corresponds to \(t\).

The sine function associates with \(t\) the \(y\)-coordinate of \(P\) and is denoted by
\[
\sin t=y
\]

The cosine function associates with \(t\) the \(x\)-coordinate of \(P\) and is denoted by
\[
\cos t=x
\]

If \(x \neq 0\), the tangent function associates with \(t\) the ratio of the \(y\)-coordinate to the \(x\)-coordinate of \(P\) and is denoted by
\[
\tan t=\frac{y}{x}
\]

If \(y \neq 0\), the cosecant function is defined as
\[
\csc t=\frac{1}{y}
\]

If \(x \neq 0\), the secant function is defined as
\[
\sec t=\frac{1}{x}
\]

If \(y \neq 0\), the cotangent function is defined as
\[
\cot t=\frac{x}{y}
\]

Notice in these definitions that if \(x=0\), that is, if the point \(P\) is on the \(y\)-axis, then the tangent function and the secant function are undefined. Also, if \(y=0\), that is, if the point \(P\) is on the \(x\)-axis, then the cosecant function and the cotangent function are undefined.

Because the unit circle is used in these definitions of the trigonometric functions, they are sometimes referred to as circular functions.

\section*{1 Find the Exact Values of the Trigonometric Functions Using a Point on the Unit Circle}

\section*{EXAMPLE I}

Solution
Figure 19

WARNING When writing the values of the trigonometric functions, do not forget the argument of the function.
\[
\begin{aligned}
& \sin t=\frac{\sqrt{3}}{2} \text { correct } \\
& \sin =\frac{\sqrt{3}}{2} \quad \text { incorrect }
\end{aligned}
\]

\section*{Finding the Values of the Six Trigonometric Functions Using a Point on the Unit Circle}

Let \(t\) be a real number and let \(P=\left(-\frac{1}{2}, \frac{\sqrt{3}}{2}\right)\) be the point on the unit circle that corresponds to \(t\). Find the values of \(\sin t, \cos t, \tan t, \csc t, \sec t\), and \(\cot t\).

See Figure 19. Follow the definition of the six trigonometric functions, using \(P=\left(-\frac{1}{2}, \frac{\sqrt{3}}{2}\right)=(x, y)\). Then, with \(x=-\frac{1}{2}\) and \(y=\frac{\sqrt{3}}{2}\), we have
\[
\sin t=y=\frac{\sqrt{3}}{2} \quad \cos t=x=-\frac{1}{2} \quad \tan t=\frac{y}{x}=\frac{\frac{\sqrt{3}}{2}}{-\frac{1}{2}}=-\sqrt{3}
\]
\(\csc t=\frac{1}{y}=\frac{1}{\frac{\sqrt{3}}{2}}=\frac{2 \sqrt{3}}{3} \quad \sec t=\frac{1}{x}=\frac{1}{-\frac{1}{2}}=-2 \quad \cot t=\frac{x}{y}=\frac{-\frac{1}{2}}{\frac{\sqrt{3}}{2}}=-\frac{\sqrt{3}}{3}\)
-Now Work problem 13

\section*{Trigonometric Functions of Angles}

Let \(P=(x, y)\) be the point on the unit circle corresponding to the real number \(t\). See Figure 20(a). Let \(\theta\) be the angle in standard position, measured in radians, whose terminal side is the ray from the origin through \(P\) and whose arc length is \(|t|\). See Figure 20(b). Since the unit circle has radius 1 unit, if \(s=|t|\) units, then from the arc length formula \(s=r \theta\), we have \(\theta=t\) radians. See Figures 20(c) and (d).

Figure 20

(a)

(b)

(c)

(d)

The point \(P=(x, y)\) on the unit circle that corresponds to the real number \(t\) is also the point \(P\) on the terminal side of the angle \(\theta=t\) radians. As a result, we can say that

and so on. We can now define the trigonometric functions of the angle \(\theta\).

DEF\|NITION If \(\theta=t\) radians, the six trigonometric functions of the angle \(\boldsymbol{\theta}\) are defined as
\[
\begin{array}{lll}
\sin \theta=\sin t & \cos \theta=\cos t & \tan \theta=\tan t \\
\csc \theta=\csc t & \sec \theta=\sec t & \cot \theta=\cot t
\end{array}
\]

Even though the trigonometric functions can be viewed both as functions of real numbers and as functions of angles, it is customary to refer to trigonometric functions of real numbers and trigonometric functions of angles collectively as the trigonometric functions. We shall follow this practice from now on.

If an angle \(\theta\) is measured in degrees, we shall use the degree symbol when writing a trigonometric function of \(\theta\), as, for example, in \(\sin 30^{\circ}\) and \(\tan 45^{\circ}\). If an angle \(\theta\) is measured in radians, then no symbol is used when writing a trigonometric function of \(\theta\), as, for example, in \(\cos \pi, \sec \frac{\pi}{3}\), and \(\tan 4\).

Finally, since the values of the trigonometric functions of an angle \(\theta\) are determined by the coordinates of the point \(P=(x, y)\) on the unit circle corresponding to \(\theta\), the units used to measure the angle \(\theta\) are irrelevant. For example, it does not matter whether we write \(\theta=\frac{\pi}{2}\) radians or \(\theta=90^{\circ}\). The point on the unit circle corresponding to this angle is \(P=(0,1)\). As a result,
\[
\sin \frac{\pi}{2}=\sin 90^{\circ}=1 \quad \text { and } \quad \cos \frac{\pi}{2}=\cos 90^{\circ}=0
\]

\section*{2 Find the Exact Values of the Trigonometric Functions of Quadrantal Angles}

To find the exact value of a trigonometric function of an angle \(\theta\) or a real number \(t\) requires that we locate the point \(P=(x, y)\) on the unit circle that corresponds to \(t\). This is not always easy to do. In the examples that follow, we will evaluate the trigonometric functions of certain angles or real numbers for which this process is relatively easy. A calculator will be used to evaluate the trigonometric functions of most other angles.

\section*{EXAMPLE 2 Finding the Exact Values of the Six Trigonometric}

\section*{Functions of Quadrantal Angles}

Find the exact values of the six trigonometric functions of:
(a) \(\theta=0=0^{\circ}\)
(b) \(\theta=\frac{\pi}{2}=90^{\circ}\)
(c) \(\theta=\pi=180^{\circ}\)
(d) \(\theta=\frac{3 \pi}{2}=270^{\circ}\)

Solution (a) The point on the unit circle that corresponds to \(\theta=0=0^{\circ}\) is \(P=(1,0)\). See

Figure 21

(a) Figure 21(a). Then
\[
\begin{array}{ll}
\sin 0=\sin 0^{\circ}=y=0 & \cos 0=\cos 0^{\circ}=x=1 \\
\tan 0=\tan 0^{\circ}=\frac{y}{x}=0 & \sec 0=\sec 0^{\circ}=\frac{1}{x}=1
\end{array}
\]

Since the \(y\)-coordinate of \(P\) is \(0, \csc 0\) and cot 0 are not defined.

Continued

\section*{Figure 21}

(b)

(c)

(d)
(b) The point on the unit circle that corresponds to \(\theta=\frac{\pi}{2}=90^{\circ}\) is \(P=(0,1)\).

See Figure 21(b). Then
\[
\begin{array}{ll}
\sin \frac{\pi}{2}=\sin 90^{\circ}=y=1 & \cos \frac{\pi}{2}=\cos 90^{\circ}=x=0 \\
\csc \frac{\pi}{2}=\csc 90^{\circ}=\frac{1}{y}=1 & \cot \frac{\pi}{2}=\cot 90^{\circ}=\frac{x}{y}=0
\end{array}
\]

Since the \(x\)-coordinate of \(P\) is \(0, \tan \frac{\pi}{2}\) and \(\sec \frac{\pi}{2}\) are not defined.
(c) The point on the unit circle that corresponds to \(\theta=\pi=180^{\circ}\) is \(P=(-1,0)\).

See Figure 21(c). Then
\[
\begin{array}{ll}
\sin \pi=\sin 180^{\circ}=y=0 & \cos \pi=\cos 180^{\circ}=x=-1 \\
\tan \pi=\tan 180^{\circ}=\frac{y}{x}=0 & \sec \pi=\sec 180^{\circ}=\frac{1}{x}=-1
\end{array}
\]

Since the \(y\)-coordinate of \(P\) is \(0, \csc \pi\) and \(\cot \pi\) are not defined.
(d) The point on the unit circle that corresponds to \(\theta=\frac{3 \pi}{2}=270^{\circ}\) is \(P=(0,-1)\).
See Figure \(21(\mathrm{~d})\). Then

See Figure 21(d). Then
\[
\begin{array}{ll}
\sin \frac{3 \pi}{2}=\sin 270^{\circ}=y=-1 & \cos \frac{3 \pi}{2}=\cos 270^{\circ}=x=0 \\
\csc \frac{3 \pi}{2}=\csc 270^{\circ}=\frac{1}{y}=-1 & \cot \frac{3 \pi}{2}=\cot 270^{\circ}=\frac{x}{y}=0
\end{array}
\]

Since the \(x\)-coordinate of \(P\) is \(0, \tan \frac{3 \pi}{2}\) and \(\sec \frac{3 \pi}{2}\) are not defined.
Table 2 summarizes the values of the trigonometric functions found in Example 2.

Table 2
\begin{tabular}{|cccclllll|}
\hline \multicolumn{8}{c|}{ Quadrantal Angles } \\
\hline \(\boldsymbol{\theta}\) (Radians) & \(\boldsymbol{\theta}\) (Degrees) & \(\boldsymbol{\operatorname { s i n } \boldsymbol { \theta }}\) & \(\boldsymbol{\operatorname { c o s } \boldsymbol { \theta }}\) & \(\boldsymbol{\operatorname { t a n } \boldsymbol { \theta }}\) & \(\boldsymbol{\operatorname { c s c } \boldsymbol { \theta }}\) & \(\boldsymbol{\operatorname { s e c } \boldsymbol { \theta }}\) & \(\boldsymbol{\operatorname { c o t } \boldsymbol { \theta }}\) \\
\hline 0 & \(0^{\circ}\) & 0 & 1 & 0 & Not defined & 1 & Not defined \\
\(\frac{\pi}{2}\) & \(90^{\circ}\) & 1 & 0 & Not defined & 1 & Not defined & 0 \\
\(\pi\) & \(180^{\circ}\) & 0 & -1 & 0 & Not defined & -1 & Not defined \\
\(\frac{3 \pi}{2}\) & \(270^{\circ}\) & -1 & 0 & Not defined & -1 & Not defined & 0 \\
\hline
\end{tabular}

There is no need to memorize Table 2. To find the value of a trigonometric function of a quadrantal angle, draw the angle and apply the definition, as we did in Example 2.

\section*{EXAMPLE 3 Finding Exact Values of the Trigonometric Functions} of Angles That Are Integer Multiples of Quadrantal Angles
Find the exact value of:
(a) \(\sin (3 \pi)\)
(b) \(\cos \left(-270^{\circ}\right)\)

Solution (a) See Figure 22(a). The point \(P\) on the unit circle that corresponds to \(\theta=3 \pi\) is \(P=(-1,0)\), so \(\sin (3 \pi)=y=0\).
(b) See Figure 22(b). The point \(P\) on the unit circle that corresponds to \(\theta=-270^{\circ}\) is \(P=(0,1)\), so \(\cos \left(-270^{\circ}\right)=x=0\).

Figure 22

(a)

(b)

3 Find the Exact Values of the Trigonometric
Functions of \(\frac{\pi}{4}=45^{\circ}\)

\section*{EXAMPLE 4}

Finding the Exact Values of the Trigonometric Functions
of \(\frac{\pi}{4}=45^{\circ}\)
Find the exact values of the six trigonometric functions of \(\frac{\pi}{4}=45^{\circ}\).
Solution We seek the coordinates of the point \(P=(x, y)\) on the unit circle that corresponds

Figure 23

to \(\theta=\frac{\pi}{4}=45^{\circ}\). See Figure 23. First, observe that \(P\) lies on the line \(y=x\). (Do you see why? Since \(\theta=45^{\circ}=\frac{1}{2} \cdot 90^{\circ}, P\) must lie on the line that bisects quadrant I.) Since \(P=(x, y)\) also lies on the unit circle, \(x^{2}+y^{2}=1\), it follows that
\[
\begin{aligned}
x^{2}+y^{2} & =1 \\
x^{2}+x^{2} & =1 \quad y=x, x>0, y>0 \\
2 x^{2} & =1 \\
x & =\frac{1}{\sqrt{2}}=\frac{\sqrt{2}}{2} \quad y=\frac{\sqrt{2}}{2}
\end{aligned}
\]

Then
\[
\begin{array}{ll}
\sin \frac{\pi}{4}=\sin 45^{\circ}=\frac{\sqrt{2}}{2} & \cos \frac{\pi}{4}=\cos 45^{\circ}=\frac{\sqrt{2}}{2}
\end{array} \tan \frac{\pi}{4}=\tan 45^{\circ}=\frac{\frac{\sqrt{2}}{2}}{\frac{\sqrt{2}}{2}}=1
\]

\section*{EXAMPLE 5}

Solution

Figure 24

\section*{4 Find the Exact Values of the Trigonometric Functions}
of \(\frac{\pi}{6}=30^{\circ}\) and \(\frac{\pi}{3}=60^{\circ}\)
Consider a right triangle in which one of the angles is \(\frac{\pi}{6}=30^{\circ}\). It then follows that the third angle is \(\frac{\pi}{3}=60^{\circ}\). Figure 24(a) illustrates such a triangle with hypotenuse of length 1 . Our problem is to determine \(a\) and \(b\).

(a)

(b)

(c)

Begin by placing next to this triangle another triangle congruent to the first, as shown in Figure 24(b). Notice that we now have a triangle whose three angles each equal \(60^{\circ}\). This triangle is therefore equilateral, so each side is of length 1.

This means the base is \(2 a=1\), and so \(a=\frac{1}{2}\). By the Pythagorean Theorem, \(b\) satisfies the equation \(a^{2}+b^{2}=c^{2}\), so we have
\[
\begin{array}{rlrl}
a^{2}+b^{2} & =c^{2} & \\
\frac{1}{4}+b^{2} & =1 & & a=\frac{1}{2}, c=1 \\
b^{2} & =1-\frac{1}{4}=\frac{3}{4} & & \\
b & =\frac{\sqrt{3}}{2} & & \begin{array}{l}
b>\text { O because } b \text { is } \\
\text { the length of the side } \\
\text { of a triangle. }
\end{array}
\end{array}
\]

This results in Figure 24(c).

\section*{EXAMPLE 6 Finding the Exact Values of the Trigonometric}

Functions of \(\frac{\boldsymbol{\pi}}{3}=60^{\circ}\)
Find the exact values of the six trigonometric functions of \(\frac{\pi}{3}=60^{\circ}\).

\section*{Solution Position the triangle in Figure 24(c) so that the \(60^{\circ}\) angle is in standard position.} See Figure 25. The point on the unit circle that corresponds to \(\theta=\frac{\pi}{3}=60^{\circ}\) is

Figure 25

\(P=\left(\frac{1}{2}, \frac{\sqrt{3}}{2}\right)\). Then
\[
\begin{array}{ll}
\sin \frac{\pi}{3}=\sin 60^{\circ}=\frac{\sqrt{3}}{2} & \cos \frac{\pi}{3}=\cos 60^{\circ}=\frac{1}{2} \\
\csc \frac{\pi}{3}=\csc 60^{\circ}=\frac{1}{\frac{\sqrt{3}}{2}}=\frac{2}{\sqrt{3}}=\frac{2 \sqrt{3}}{3} & \sec \frac{\pi}{3}=\sec 60^{\circ}=\frac{1}{\frac{1}{2}}=2
\end{array}
\]
\[
\tan \frac{\pi}{3}=\tan 60^{\circ}=\frac{\frac{\sqrt{3}}{2}}{\frac{1}{2}}=\sqrt{3} \quad \cot \frac{\pi}{3}=\cot 60^{\circ}=\frac{\frac{1}{2}}{\frac{\sqrt{3}}{2}}=\frac{1}{\sqrt{3}}=\frac{\sqrt{3}}{3}
\]

\section*{EXAMPLE 7 Finding the Exact Values of the Trigonometric}

Functions of \(\frac{\pi}{6}=30^{\circ}\)
Find the exact values of the trigonometric functions of \(\frac{\pi}{6}=30^{\circ}\).
Solution Position the triangle in Figure 24(c) so that the \(30^{\circ}\) angle is in standard position.

Figure 26

See Figure 26. The point on the unit circle that corresponds to \(\theta=\frac{\pi}{6}=30^{\circ}\) is \(P=\left(\frac{\sqrt{3}}{2}, \frac{1}{2}\right)\). Then
\[
\sin \frac{\pi}{6}=\sin 30^{\circ}=\frac{1}{2}
\]
\[
\cos \frac{\pi}{6}=\cos 30^{\circ}=\frac{\sqrt{3}}{2}
\]
\(\csc \frac{\pi}{6}=\csc 30^{\circ}=\frac{1}{\frac{1}{2}}=2\)
\(\sec \frac{\pi}{6}=\sec 30^{\circ}=\frac{1}{\frac{\sqrt{3}}{2}}=\frac{2}{\sqrt{3}}=\frac{2 \sqrt{3}}{3}\)
\(\tan \frac{\pi}{6}=\tan 30^{\circ}=\frac{\frac{1}{2}}{\frac{\sqrt{3}}{2}}=\frac{1}{\sqrt{3}}=\frac{\sqrt{3}}{3}\)
\(\cot \frac{\pi}{6}=\cot 30^{\circ}=\frac{\frac{\sqrt{3}}{2}}{\frac{1}{2}}=\sqrt{3}\)
Table 3 on the next page summarizes the information just derived for \(\frac{\pi}{6}=30^{\circ}, \frac{\pi}{4}=45^{\circ}\), and \(\frac{\pi}{3}=60^{\circ}\). Until you memorize the entries in Table 3, you should draw an appropriate diagram to determine the values given in the table.

Table 3
\begin{tabular}{|cccccccc|}
\hline \(\boldsymbol{\theta}\) (Radians) & \(\boldsymbol{\theta}\) (Degrees) & \(\boldsymbol{\operatorname { s i n }} \boldsymbol{\theta}\) & \(\boldsymbol{\operatorname { c o s }} \boldsymbol{\theta}\) & \(\boldsymbol{\operatorname { t a n } \theta}\) & \(\boldsymbol{\operatorname { c s c }} \boldsymbol{\theta}\) & \(\boldsymbol{\operatorname { s e c }} \boldsymbol{\theta}\) & \(\boldsymbol{\operatorname { c o t }} \boldsymbol{\theta}\) \\
\hline\(\frac{\pi}{6}\) & \(30^{\circ}\) & \(\frac{1}{2}\) & \(\frac{\sqrt{3}}{2}\) & \(\frac{\sqrt{3}}{3}\) & 2 & \(\frac{2 \sqrt{3}}{3}\) & \(\sqrt{3}\) \\
\(\frac{\pi}{4}\) & \(45^{\circ}\) & \(\frac{\sqrt{2}}{2}\) & \(\frac{\sqrt{2}}{2}\) & 1 & \(\sqrt{2}\) & \(\sqrt{2}\) & 1 \\
\(\frac{\pi}{3}\) & \(60^{\circ}\) & \(\frac{\sqrt{3}}{2}\) & \(\frac{1}{2}\) & \(\sqrt{3}\) & \(\frac{2 \sqrt{3}}{3}\) & 2 & \(\frac{\sqrt{3}}{3}\) \\

\end{tabular}
-Now Work problem 41

\section*{EXAMPLE 8}

Figure 27

\section*{Constructing a Rain Gutter}

A rain gutter is to be constructed of aluminum sheets 12 inches wide. After marking off a length of 4 inches from each edge, this length is bent up at an angle \(\theta\). See Figure 27. The area \(A\) of the opening may be expressed as a function of \(\theta\) as
\[
A(\theta)=16 \sin \theta(\cos \theta+1)
\]

Find the area \(A\) of the opening for \(\theta=30^{\circ}, \theta=45^{\circ}\), and \(\theta=60^{\circ}\).
Solution For \(\theta=30^{\circ}: \quad A\left(30^{\circ}\right)=16 \sin 30^{\circ}\left(\cos 30^{\circ}+1\right)\)
\[
=16\left(\frac{1}{2}\right)\left(\frac{\sqrt{3}}{2}+1\right)=4 \sqrt{3}+8 \approx 14.9
\]

The area of the opening for \(\theta=30^{\circ}\) is about 14.9 square inches.
\[
\text { For } \theta=45^{\circ}: \quad A\left(45^{\circ}\right)=16 \sin 45^{\circ}\left(\cos 45^{\circ}+1\right)
\]
\[
=16\left(\frac{\sqrt{2}}{2}\right)\left(\frac{\sqrt{2}}{2}+1\right)=8+8 \sqrt{2} \approx 19.3
\]

The area of the opening for \(\theta=45^{\circ}\) is about 19.3 square inches.
\[
\text { For } \begin{aligned}
\theta=60^{\circ}: \quad A\left(60^{\circ}\right) & =16 \sin 60^{\circ}\left(\cos 60^{\circ}+1\right) \\
& =16\left(\frac{\sqrt{3}}{2}\right)\left(\frac{1}{2}+1\right)=12 \sqrt{3} \approx 20.8
\end{aligned}
\]

The area of the opening for \(\theta=60^{\circ}\) is about 20.8 square inches.

\section*{5 Find the Exact Values of the Trigonometric Functions for}

Integer Multiples of \(\frac{\pi}{6}=30^{\circ}, \frac{\pi}{4}=45^{\circ}\), and \(\frac{\pi}{3}=60^{\circ}\)
We know the exact values of the trigonometric functions of \(\frac{\pi}{4}=45^{\circ}\). Using symmetry, we can find the exact values of the trigonometric functions of \(\frac{3 \pi}{4}=135^{\circ}, \frac{5 \pi}{4}=225^{\circ}\), and \(\frac{7 \pi}{4}=315^{\circ}\).

See Figure 28. Using symmetry with respect to the \(y\)-axis, the point \(\left(-\frac{\sqrt{2}}{2}, \frac{\sqrt{2}}{2}\right)\) is the point on the unit circle that corresponds to the angle \(\frac{3 \pi}{4}=135^{\circ}\).

Similarly, using symmetry with respect to the origin, the point \(\left(-\frac{\sqrt{2}}{2},-\frac{\sqrt{2}}{2}\right)\) is the point on the unit circle that corresponds to the angle \(\frac{5 \pi}{4}=225^{\circ}\). Finally, using symmetry with respect to the \(x\)-axis, the point \(\left(\frac{\sqrt{2}}{2},-\frac{\sqrt{2}}{2}\right)\) is the point on the unit circle that corresponds to the angle \(\frac{7 \pi}{4}=315^{\circ}\).

\section*{EXAMPLE 9 Finding Exact Values for Multiples of \(\frac{\pi}{4}=45^{\circ}\)}

Find the exact value of each expression.
(a) \(\cos \frac{5 \pi}{4}\)
(b) \(\sin 135^{\circ}\)
(c) \(\tan 315^{\circ}\)
(d) \(\sin \left(-\frac{\pi}{4}\right)\)
(e) \(\cos \frac{11 \pi}{4}\)

Solution (a) From Figure 28, the point \(\left(-\frac{\sqrt{2}}{2},-\frac{\sqrt{2}}{2}\right)\) corresponds to \(\frac{5 \pi}{4}\), so \(\cos \frac{5 \pi}{4}=x=-\frac{\sqrt{2}}{2}\).
(b) Since \(135^{\circ}=\frac{3 \pi}{4}\), the point \(\left(-\frac{\sqrt{2}}{2}, \frac{\sqrt{2}}{2}\right)\) corresponds to \(135^{\circ}, \operatorname{sos} \sin 135^{\circ}=\frac{\sqrt{2}}{2}\).
(c) Since \(315^{\circ}=\frac{7 \pi}{4}\), the point \(\left(\frac{\sqrt{2}}{2},-\frac{\sqrt{2}}{2}\right)\) corresponds to \(315^{\circ}\), so \(\tan 315^{\circ}=\frac{-\frac{\sqrt{2}}{2}}{\frac{\sqrt{2}}{2}}=-1\).
(d) The point \(\left(\frac{\sqrt{2}}{2},-\frac{\sqrt{2}}{2}\right)\) corresponds to \(-\frac{\pi}{4}\), \(\operatorname{so} \sin \left(-\frac{\pi}{4}\right)=-\frac{\sqrt{2}}{2}\).
(e) The point \(\left(-\frac{\sqrt{2}}{2}, \frac{\sqrt{2}}{2}\right)\) corresponds to \(\frac{11 \pi}{4}\), so \(\cos \frac{11 \pi}{4}=-\frac{\sqrt{2}}{2}\).

Now Work problems 51 and 55
The use of symmetry also provides information about certain integer multiples of the angles \(\frac{\pi}{6}=30^{\circ}\) and \(\frac{\pi}{3}=60^{\circ}\). See Figures 29 and 30 .

Figure 29

Figure 30

\section*{EXAMPLE IO}

Finding Exact Values for Multiples of \(\frac{\pi}{6}=30^{\circ}\) or \(\frac{\pi}{3}=60^{\circ}\)
Based on Figures 29 and 30, we see that
(a) \(\cos 210^{\circ}=\cos \frac{7 \pi}{6}=-\frac{\sqrt{3}}{2}\)
(b) \(\sin \left(-60^{\circ}\right)=\sin \left(-\frac{\pi}{3}\right)=-\frac{\sqrt{3}}{2}\)
(c) \(\tan \frac{5 \pi}{3}=\frac{-\frac{\sqrt{3}}{2}}{\frac{1}{2}}=-\sqrt{3}\)
\[
\frac{8 \pi}{3}=2 \pi+\frac{2 \pi}{3}
\]
(d) \(\cos \frac{8 \pi}{3} \stackrel{\downarrow}{=} \cos \frac{2 \pi}{3}=-\frac{1}{2}\)

WARNING On your calculator the second functions \(\sin ^{-1}, \cos ^{-1}\), and \(\tan ^{-1}\) do not represent the reciprocal of \(\sin , \cos\), and \(\tan\).

\section*{6 Use a Calculator to Approximate the Value of a Trigonometric Function}

Before getting started, you must first decide whether to enter the angle in the calculator using radians or degrees and then set the calculator to the correct MODE. Check your instruction manual to find out how your calculator handles degrees and radians. Your calculator has keys marked sin, cos, and tan. To find the values of the remaining three trigonometric functions (secant, cosecant, and cotangent), use the fact that if \(P=(x, y)\) is a point on the unit circle on the terminal side of \(\theta\), then
\[
\sec \theta=\frac{1}{x}=\frac{1}{\cos \theta} \quad \csc \theta=\frac{1}{y}=\frac{1}{\sin \theta} \quad \cot \theta=\frac{x}{y}=\frac{1}{\frac{y}{x}}=\frac{1}{\tan \theta}
\]

\section*{EXAMPLE II}

Figure 31

Use Radian mode

\section*{Using a Calculator to Approximate the Value} of a Trigonometric Function

Use a calculator to find the approximate value of:
(a) \(\cos 48^{\circ}\)
(b) \(\csc 21^{\circ}\)
(c) \(\tan \frac{\pi}{12}\)

Express your answer rounded to two decimal places.
Solution (a) First, we set the MODE to receive degrees. Rounded to two decimal places,
\[
\cos 48^{\circ} \approx 0.6691306 \approx 0.67
\]
(b) Most calculators do not have a csc key. The manufacturers assume that the user knows some trigonometry. To find the value of \(\csc 21^{\circ}\), use the fact that \(\csc 21^{\circ}=\frac{1}{\sin 21^{\circ}}\). Rounded to two decimal places,
\[
\csc 21^{\circ} \approx 2.79
\]
(c) Set the MODE to receive radians. Figure 31 shows the solution using a TI-84 Plus graphing calculator. Rounded to two decimal places,
\[
\tan \frac{\pi}{12} \approx 0.27
\]
-Now Work problem 65

7 Use a Circle of Radius \(r\) to Evaluate the Trigonometric Functions
Until now, finding the exact value of a trigonometric function of an angle \(\theta\) required that we locate the corresponding point \(P=(x, y)\) on the unit circle. In fact, though, any circle whose center is at the origin can be used.

Figure 32

THEOREM

Let \(\theta\) be any nonquadrantal angle placed in standard position. Let \(P=(x, y)\) be the point on the circle \(x^{2}+y^{2}=r^{2}\) that corresponds to \(\theta\), and let \(P^{*}=\left(x^{*}, y^{*}\right)\) be the point on the unit circle that corresponds to \(\theta\). See Figure 32, where \(\theta\) is shown in quadrant II.

Notice that the triangles \(O A^{*} P^{*}\) and \(O A P\) are similar; as a result, the ratios of corresponding sides are equal.
\[
\begin{aligned}
\frac{y^{*}}{1} & =\frac{y}{r} & \frac{x^{*}}{1}=\frac{x}{r} & \frac{y^{*}}{x^{*}}=\frac{y}{x} \\
\frac{1}{y^{*}} & =\frac{r}{y} & \frac{1}{x^{*}}=\frac{r}{x} & \frac{x^{*}}{y^{*}}=\frac{x}{y}
\end{aligned}
\]

These results lead us to formulate the following theorem:
For an angle \(\theta\) in standard position, let \(P=(x, y)\) be the point on the terminal side of \(\theta\) that is also on the circle \(x^{2}+y^{2}=r^{2}\). Then
\[
\begin{array}{lll}
\sin \theta=\frac{y}{r} & \cos \theta=\frac{x}{r} & \tan \theta=\frac{y}{x} \quad x \neq 0 \\
\csc \theta=\frac{r}{y} \quad y \neq 0 & \sec \theta=\frac{r}{x} \quad x \neq 0 & \cot \theta=\frac{x}{y} \quad y \neq 0
\end{array}
\]

\section*{EXAMPLE 12}

Figure 33

Solution

\section*{Finding the Exact Values of the Six Trigonometric Functions}

Find the exact values of each of the six trigonometric functions of angle \(\theta\) if \((4,-3)\) is a point on its terminal side in standard position.

See Figure 33. The point \((4,-3)\) is on a circle of radius \(r=\sqrt{4^{2}+(-3)^{2}}\) \(=\sqrt{16+9}=\sqrt{25}=5\) with the center at the origin.

For the point \((x, y)=(4,-3)\), we have \(x=4\) and \(y=-3\). Since \(r=5\), we find
\[
\begin{array}{lll}
\sin \theta=\frac{y}{r}=-\frac{3}{5} & \cos \theta=\frac{x}{r}=\frac{4}{5} & \tan \theta=\frac{y}{x}=-\frac{3}{4} \\
\csc \theta=\frac{r}{y}=-\frac{5}{3} & \sec \theta=\frac{r}{x}=\frac{5}{4} & \cot \theta=\frac{x}{y}=-\frac{4}{3}
\end{array}
\]
am Now Work problem 77

\section*{Historical Feature}

The name sine for the sine function arose from a medieval confusion. The name comes from the Sanskrit word jiva (meaning chord), first used in India by Araybhatta the Elder (AD 510). He really meant half-chord but abbreviated it. This was brought into Arabic as jïba, which was meaningless. Because the proper Arabic word jaib would be written the same way (short vowels are not written out in Arabic), jiba was pronounced as jaib, which meant bosom or hollow, and jiba remains as the Arabic word for sine to this day. Scholars translating the Arabic works into Latin found that the word sinus also meant bosom or hollow, and from sinus we get the word sine.

The name tangent, due to Thomas Finck (1583), can be understood by looking at Figure 34 . The line segment \(\overline{D C}\) is tangent to the circle at C. If \(d(O, B)=d(O, C)=1\), then the length of the line segment \(\overline{D C}\) is
\[
d(D, C)=\frac{d(D, C)}{1}=\frac{d(D, C)}{d(O, C)}=\tan \alpha
\]

The old name for the tangent is umbra versa (meaning turned shadow), which refers to the use of the tangent in solving height problems with shadows.

The names of the remaining functions came about as follows: If \(\alpha\) and \(\beta\) are complementary angles, then \(\cos \alpha=\sin \beta\). Because \(\beta\) is the complement of \(\alpha\), it was natural to write the cosine of \(\alpha\) as \(\sin \operatorname{co} \alpha\). Probably for reasons involving ease of pronunciation, the co migrated to the front, and then cosine received a three-letter abbreviation to match sin, sec, and tan. The two other cofunctions were similarly treated, except that the long forms cotan and cosec survive to this day in some countries.

Figure 34

\subsection*{5.2 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. In a right triangle, with legs \(a\) and \(b\) and hypotenuse \(c\), the Pythagorean Theorem states that \(\qquad\) . (p. A14)
2. The value of the function \(f(x)=3 x-7\) at 5 is \(\qquad\) .(pp.46-49)
3. True or False For a function \(y=f(x)\), for each \(x\) in the domain, there is exactly one element \(y\) in the range. (pp. 43-46)
4. If two triangles are similar, then corresponding angles are \(\qquad\) and the lengths of corresponding sides are
\(\qquad\) . (p. A17)
5. What point is symmetric with respect to the \(y\)-axis to the point \(\left(\frac{1}{2}, \frac{\sqrt{3}}{2}\right)\) ? (pp. 12-14)
6. If \((x, y)\) is a point on the unit circle in quadrant IV and if \(x=\frac{\sqrt{3}}{2}\), what is \(y ?(\) p. 34)

\section*{Concepts and Vocabulary}
7. The \(\qquad\) function takes as input a real number \(t\) that corresponds to a point \(P=(x, y)\) on the unit circle and outputs the \(x\)-coordinate.
8. The point on the unit circle that corresponds to \(\theta=\frac{\pi}{2}\) is \(P=\) \(\qquad\) .
9. The point on the unit circle that corresponds to \(\theta=\frac{\pi}{4}\) is \(P=\) \(\qquad\) .
10. The point on the unit circle that corresponds to \(\theta=\frac{\pi}{3}\) is \(P=\) \(\qquad\)
11. For any angle \(\theta\) in standard position, let \(P=(x, y)\) be the point on the terminal side of \(\theta\) that is also on the circle \(x^{2}+y^{2}=r^{2}\). Then, \(\sin \theta=\) \(\qquad\) and \(\cos \theta=\) \(\qquad\)
12. True or False Exact values can be found for the sine of any angle.

\section*{Skill Building}

In Problems 13-20, \(P=(x, y)\) is the point on the unit circle that corresponds to a real number t. Find the exact values of the six trigonometric functions of \(t\).
13. \(\left(\frac{\sqrt{3}}{2}, \frac{1}{2}\right)\)
14. \(\left(\frac{1}{2},-\frac{\sqrt{3}}{2}\right)\)

71. \(\cot \frac{\pi}{12}\)
72. \(\csc \frac{5 \pi}{13}\)
73. \(\sin 1\)
74. \(\tan 1\)
75. \(\sin 1^{\circ}\)
76. \(\tan 1^{\circ}\)

In Problems 77-84, a point on the terminal side of an angle \(\theta\) in standard position is given. Find the exact value of each of the six trigonometric functions of \(\theta\).
77. \((-3,4)\)
78. \((5,-12)\)
79. \((2,-3)\)
80. \((-1,-2)\)
81. \((-2,-2)\)
82. \((-1,1)\)
83. \(\left(\frac{1}{3}, \frac{1}{4}\right)\)
84. \((0.3,0.4)\)
85. Find the exact value of:
\[
\sin 45^{\circ}+\sin 135^{\circ}+\sin 225^{\circ}+\sin 315^{\circ}
\]
86. Find the exact value of:
\[
\tan 60^{\circ}+\tan 150^{\circ}
\]
87. Find the exact value of:
\[
\sin 40^{\circ}+\sin 130^{\circ}+\sin 220^{\circ}+\sin 310^{\circ}
\]
88. Find the exact value of:
89. If \(f(\theta)=\sin \theta=0.1\), find \(f(\theta+\pi)\).
90. If \(f(\theta)=\cos \theta=0.3\), find \(f(\theta+\pi)\).
91. If \(f(\theta)=\tan \theta=3\), find \(f(\theta+\pi)\).
92. If \(f(\theta)=\cot \theta=-2\), find \(f(\theta+\pi)\).
93. If \(\sin \theta=\frac{1}{5}\), find \(\csc \theta\).
94. If \(\cos \theta=\frac{2}{3}\), find \(\sec \theta\).
\[
\tan 40^{\circ}+\tan 140^{\circ}
\]

In Problems 95-106, \(f(\theta)=\sin \theta\) and \(g(\theta)=\cos \theta\). Find the exact value of each function below if \(\theta=60^{\circ}\). Do not use a calculator.
95. \(f(\theta)\)
96. \(g(\theta)\)
97. \(f\left(\frac{\theta}{2}\right)\)
98. \(g\left(\frac{\theta}{2}\right)\)
99. \([f(\theta)]^{2}\)
100. \([g(\theta)]^{2}\)
101. \(f(2 \theta)\)
102. \(g(2 \theta)\)
103. \(2 f(\theta)\)
104. \(2 g(\theta)\)
105. \(f(-\theta)\)
106. \(g(-\theta)\)

\section*{- Mixed Practice}

In Problems 107-116, \(f(x)=\sin x, g(x)=\cos x, h(x)=2 x\), and \(p(x)=\frac{x}{2}\). Find the value of each of the following:
107. \((f+g)\left(30^{\circ}\right)\)
108. \((f-g)\left(60^{\circ}\right)\)
109. \((f \cdot g)\left(\frac{3 \pi}{4}\right)\)
110. \((f \cdot g)\left(\frac{4 \pi}{3}\right)\)
111. \((f \circ h)\left(\frac{\pi}{6}\right)\)
112. \((g \circ p)\left(60^{\circ}\right)\)
113. \((p \circ g)\left(315^{\circ}\right)\)
114. \((h \circ f)\left(\frac{5 \pi}{6}\right)\)
115. (a) Find \(f\left(\frac{\pi}{4}\right)\). What point is on the graph of \(f\) ?
(b) Assuming \(f\) is one-to-one*, use the result of part (a) to find a point on the graph of \(f^{-1}\).
(c) What point is on the graph of \(y=f\left(x+\frac{\pi}{4}\right)-3\) if \(x=\frac{\pi}{4}\) ?
116. (a) Find \(g\left(\frac{\pi}{6}\right)\). What point is on the graph of \(g\) ?
(b) Assuming \(g\) is one-to-one *, use the result of part (a) to find a point on the graph of \(g^{-1}\).
(c) What point is on the graph of \(y=2 g\left(x-\frac{\pi}{6}\right)\) if \(x=\frac{\pi}{6}\) ?

\section*{Applications and Extensions}
117. Find two negative and three positive angles, expressed in radians, for which the point on the unit circle that corresponds to each angle is \(\left(\frac{1}{2}, \frac{\sqrt{3}}{2}\right)\).
118. Find two negative and three positive angles, expressed in radians, for which the point on the unit circle that corresponds to each angle is \(\left(-\frac{\sqrt{2}}{2}, \frac{\sqrt{2}}{2}\right)\).
119. Use a calculator in radian mode to complete the following table.

What can you conclude about the value of \(f(\theta)=\frac{\sin \theta}{\theta}\) as \(\theta\) approaches 0 ?
\begin{tabular}{|lllllllll|}
\hline \(\boldsymbol{\theta}\) & \(\mathbf{0 . 5}\) & \(\mathbf{0 . 4}\) & \(\mathbf{0 . 2}\) & \(\mathbf{0 . 1}\) & \(\mathbf{0 . 0 1}\) & \(\mathbf{0 . 0 0 1}\) & \(\mathbf{0 . 0 0 0 1}\) & \(\mathbf{0 . 0 0 0 0 1}\) \\
\hline \(\sin \theta\) & & & & & & & & \\
\(f(\theta)=\frac{\sin \theta}{\theta}\) & & & & & & & & \\
\hline
\end{tabular}
120. Use a calculator in radian mode to complete the following table.

What can you conclude about the value of \(g(\theta)=\frac{\cos \theta-1}{\theta}\) as \(\theta\) approaches 0 ?
\begin{tabular}{|lllllllll|}
\hline \(\boldsymbol{\theta}\) & \(\mathbf{0 . 5}\) & \(\mathbf{0 . 4}\) & \(\mathbf{0 . 2}\) & \(\mathbf{0 . 1}\) & \(\mathbf{0 . 0 1}\) & \(\mathbf{0 . 0 0 1}\) & \(\mathbf{0 . 0 0 0 1}\) & \(\mathbf{0 . 0 0 0 0 1}\) \\
\hline \(\cos \theta-1\) & & & & & & & & \\
\(g(\theta)=\frac{\cos \theta-1}{\theta}\) & & & & & & & & \\
\hline
\end{tabular}

\section*{For Problems 121-124, use the following discussion.}

Projectile Motion The path of a projectile fired at an inclination \(\theta\) to the horizontal with initial speed \(v_{0}\) is a parabola (see the figure).
\[
v_{0}=\text { Initial speed }
\]

The range \(R\) of the projectile-that is, the horizontal distance that the projectile travels-is found by using the function
\[
R(\theta)=\frac{v_{0}^{2} \sin (2 \theta)}{g}
\]
where \(g \approx 32.2\) feet per second per second \(\approx 9.8\) meters per second per second is the acceleration due to gravity. The maximum height \(H\) of the projectile is given by the function
\[
H(\theta)=\frac{v_{0}^{2}(\sin \theta)^{2}}{2 g}
\]

\section*{In Problems 121-124, find the range \(R\) and maximum height \(H\).}
121. The projectile is fired at an angle of \(45^{\circ}\) to the horizontal with an initial speed of 100 feet per second.
122. The projectile is fired at an angle of \(30^{\circ}\) to the horizontal with an initial speed of 150 meters per second.
123. The projectile is fired at an angle of \(25^{\circ}\) to the horizontal with an initial speed of 500 meters per second.
124. The projectile is fired at an angle of \(50^{\circ}\) to the horizontal with an initial speed of 200 feet per second.
125. Inclined Plane See the figure.

If friction is ignored, the time \(t\) (in seconds) required for a block to slide down an inclined plane is given by the function
\[
t(\theta)=\sqrt{\frac{2 a}{g \sin \theta \cos \theta}}
\]
where \(a\) is the length (in feet) of the base and \(g \approx 32\) feet per second per second is the acceleration due to gravity. How long does it take a block to slide down an inclined plane with base \(a=10\) feet when:
(a) \(\theta=30^{\circ}\) ?
(b) \(\theta=45^{\circ}\) ?
(c) \(\theta=60^{\circ}\) ?
126. Piston Engines In a certain piston engine, the distance \(x\) (in centimeters) from the center of the drive shaft to the head of the piston is given by the function
\[
x(\theta)=\cos \theta+\sqrt{16+0.5 \cos (2 \theta)}
\]
where \(\theta\) is the angle between the crank and the path of the piston head. See the figure. Find \(x\) when \(\theta=30^{\circ}\) and when \(\theta=45^{\circ}\).

127. Calculating the Time of a Trip Two oceanfront homes are located 8 miles apart on a straight stretch of beach, each a distance of 1 mile from a paved road that parallels the ocean. See the figure.

Sally can jog 8 miles per hour along the paved road, but only 3 miles per hour in the sand on the beach. Because of a river directly between the two houses, it is necessary to jog in the sand to the road, continue on the road, and then jog directly back in the sand to get from one house to the other. The time \(T\) to get from one house to the other as a function of the angle \(\theta\) shown in the illustration is
\[
T(\theta)=1+\frac{2}{3 \sin \theta}-\frac{1}{4 \tan \theta}, \quad 0^{\circ}<\theta<90^{\circ}
\]
(a) Calculate the time \(T\) for \(\theta=30^{\circ}\). How long is Sally on the paved road?
(b) Calculate the time \(T\) for \(\theta=45^{\circ}\). How long is Sally on the paved road?
(c) Calculate the time \(T\) for \(\theta=60^{\circ}\). How long is Sally on the paved road?
(d) Calculate the time \(T\) for \(\theta=90^{\circ}\). Describe the path taken. Why can't the formula for \(T\) be used?
128. Designing Fine Decorative Pieces \(A\) designer of decorative art plans to market solid gold spheres encased in clear crystal cones. Each sphere is of fixed radius \(R\) and will be enclosed in a cone of height \(h\) and radius \(r\). See the illustration. Many cones can be used to enclose the sphere, each having a different slant angle \(\theta\). The volume \(V\) of the cone can be expressed as a function of the slant angle \(\theta\) of the cone as
\[
V(\theta)=\frac{1}{3} \pi R^{3} \frac{(1+\sec \theta)^{3}}{(\tan \theta)^{2}}, \quad 0^{\circ}<\theta<90^{\circ}
\]

What volume \(V\) is required to enclose a sphere of radius 2 centimeters in a cone whose slant angle \(\theta\) is \(30^{\circ} ? 45^{\circ} ? 60^{\circ}\) ?

Use the following to answer Problems 129-132. The viewing angle, \(\theta\), of an object is the angle the object forms at the lens of the viewer's eye. This is also known as the perceived or angular size of the object. The viewing angle is related to the object's height, \(H\), and distance from the viewer, \(D\), through the formula \(\tan \frac{\theta}{2}=\frac{H}{2 D}\).
129. Tailgating While driving, Arletha observes the car in front of her with a viewing angle of \(22^{\circ}\). If the car is 6 feet wide, how close is Arletha to the car in front of her? Round your answer to one decimal place.
130. Viewing Distance The Washington Monument in Washington, D.C. is 555 feet tall. If a tourist sees the monument with a viewing angle of \(8^{\circ}\), how far away, to the nearest foot, is she from the monument?
131. Tree Height A forest ranger views a tree that is 200 feet away with a viewing angle of \(20^{\circ}\). How tall is the tree to the nearest foot?
132. Radius of the Moon An astronomer observes the moon with a viewing angle of \(0.52^{\circ}\). If the moon's average distance from Earth is \(384,400 \mathrm{~km}\), what is its radius to the nearest kilometer?
133. Let \(\theta\) be the measure of an angle, in radians, in standard position with \(\pi<\theta<\frac{3 \pi}{2}\). Find the exact \(y\)-coordinate of the intersection of the terminal side of \(\theta\) with the unit circle, given \(\cos \theta+\sin ^{2} \theta=\frac{41}{49}\). State the answer as a single fraction, completely simplified, with rationalized denominator. \({ }^{\dagger}\)
134. Let \(\theta\) be the measure of an angle, in radians, in standard position with \(\frac{\pi}{2}<\theta<\pi\). Find the exact \(x\)-coordinate of the intersection of the terminal side of \(\theta\) with the unit circle, given \(\cos ^{2} \theta-\sin \theta=-\frac{1}{9}\). State the answer as a single fraction, completely simplified, with rationalized denominator.
135. Projectile Motion An object is propelled upward at an angle \(\theta, 45^{\circ}<\theta<90^{\circ}\), to the horizontal with an initial velocity of \(v_{0}\) feet per second from the base of an inclined plane that makes an angle of \(45^{\circ}\) with the horizontal. See the illustration. If air resistance is ignored, the distance \(R\) that it travels up the inclined plane as a function of \(\theta\) is given by
\[
R(\theta)=\frac{v_{0}^{2} \sqrt{2}}{32}[\sin (2 \theta)-\cos (2 \theta)-1]
\]
(a) Find the distance \(R\) that the object travels along the inclined plane if the initial velocity is 32 feet per second and \(\theta=60^{\circ}\).

\footnotetext{
\({ }^{\dagger}\) Courtesy of the Joliet Junior College Mathematics Department
}
(b) Graph \(R=R(\theta)\) if the initial velocity is 32 feet per second.
(c) What value of \(\theta\) makes \(R\) largest?

136. If \(\theta, 0<\theta<\pi\), is the angle between the positive \(x\)-axis and a nonhorizontal, nonvertical line \(L\), show that the slope \(m\) of \(L\) equals \(\tan \theta\). The angle \(\theta\) is called the inclination of \(L\).
[Hint: See the illustration, where we have drawn the line \(M\) parallel to \(L\) and passing through the origin. Use the fact that \(M\) intersects the unit circle at the point \((\cos \theta, \sin \theta)\).]

In Problems 137 and 138, use the figure to approximate the value of the six trigonometric functions at to the nearest tenth. Then use a calculator to approximate each of the six trigonometric functions at \(t\).

137. (a) \(t=1\)
(b) \(t=5.1\)
138. (a) \(t=2\)
(b) \(t=4\)

\section*{Discussion and Writing}
139. Write a brief paragraph that explains how to quickly compute the trigonometric functions of \(30^{\circ}, 45^{\circ}\), and \(60^{\circ}\).
140. Write a brief paragraph that explains how to quickly compute the trigonometric functions of \(0^{\circ}, 90^{\circ}, 180^{\circ}\), and \(270^{\circ}\).
141. How would you explain the meaning of the sine function to a fellow student who has just completed college algebra?
142. Draw a unit circle. Label the angles \(0, \frac{\pi}{6}, \frac{\pi}{4}, \frac{\pi}{3}, \ldots, \frac{7 \pi}{4}\), \(\frac{11 \pi}{6}, 2 \pi\) and the coordinates of the points on the unit circle that correspond to each of these angles. Explain how symmetry can be used to find the coordinates of points on the unit circle for angles whose terminal sides are in quadrants II, III, and IV.

\section*{Retain Your Knowledge}

Problems 143-146 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
143. State the domain of \(f(x)=\ln (5 x+2)\).
144. Given that the polynomial function \(P(x)=x^{4}-5 x^{3}-9 x^{2}+155 x-250\) has zeros of \(4+3 i\) and 2 , find the remaining zeros of the function.
145. Find the remainder when \(P(x)=8 x^{4}-2 x^{3}+x-8\) is divided by \(x+2\).
146. Sidewalk Area A sidewalk with a uniform width of 3 feet is to be placed around a circular garden with a diameter of 24 feet. Find the exact area of the sidewalk.

\section*{‘Are You Prepared?’ Answers}
1. \(c^{2}=a^{2}+b^{2}\)
2. 8
3. True
4. equal; proportional
5. \(\left(-\frac{1}{2}, \frac{\sqrt{3}}{2}\right)\)
6. \(-\frac{1}{2}\)

\subsection*{5.3 Properties of the Trigonometric Functions}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Functions (Section 1.1, pp. 43-52)
- Even and Odd Functions (Section 1.3, pp. 66-68)
- Identity (Appendix A, Section A.8, p. A63)

Now Work the 'Are You Prepared?' problems on page 417.
OBJECTIVES 1 Determine the Domain and the Range of the Trigonometric Functions (p. 407)

2 Determine the Period of the Trigonometric Functions (p. 409)
3 Determine the Signs of the Trigonometric Functions in a Given Quadrant (p. 411)
4 Find the Values of the Trigonometric Functions Using Fundamental Identities (p. 411)

5 Find the Exact Values of the Trigonometric Functions of an Angle Given One of the Functions and the Quadrant of the Angle (p.413)
6 Use Even-Odd Properties to Find the Exact Values of the Trigonometric Functions (p. 416)

\section*{1 Determine the Domain and the Range of the Trigonometric Functions}

Figure 35

Let \(\theta\) be an angle in standard position, and let \(P=(x, y)\) be the point on the unit circle that corresponds to \(\theta\). See Figure 35. Then, by the definition given earlier,
\[
\begin{array}{lll}
\sin \theta=y & \cos \theta=x & \tan \theta=\frac{y}{x} \quad x \neq 0 \\
\csc \theta=\frac{1}{y} \quad y \neq 0 & \sec \theta=\frac{1}{x} \quad x \neq 0 & \cot \theta=\frac{x}{y} \quad y \neq 0
\end{array}
\]

For \(\sin \theta\) and \(\cos \theta\), there is no concern about dividing by 0 , so \(\theta\) can be any angle. It follows that the domain of the sine function and cosine function is the set of all real numbers.

The domain of the sine function is the set of all real numbers.
The domain of the cosine function is the set of all real numbers.

For the tangent function and secant function, the \(x\)-coordinate of \(P=(x, y)\) cannot be 0 since this results in division by 0 . See Figure 35. On the unit circle, there are two such points, \((0,1)\) and \((0,-1)\). These two points correspond to the angles \(\frac{\pi}{2}\left(90^{\circ}\right)\) and \(\frac{3 \pi}{2}\left(270^{\circ}\right)\) or, more generally, to any angle that is an odd integer multiple of \(\frac{\pi}{2}\left(90^{\circ}\right)\), such as \(\pm \frac{\pi}{2}\left( \pm 90^{\circ}\right), \pm \frac{3 \pi}{2}\left( \pm 270^{\circ}\right), \pm \frac{5 \pi}{2}\left( \pm 450^{\circ}\right)\), and so on. Such angles must therefore be excluded from the domain of the tangent function and the domain of the secant function.

The domain of the tangent function is the set of all real numbers, except odd integer multiples of \(\frac{\pi}{2}\left(90^{\circ}\right)\).
The domain of the secant function is the set of all real numbers, except odd integer multiples of \(\frac{\pi}{2}\left(90^{\circ}\right)\).

For the cotangent function and cosecant function, the \(y\)-coordinate of \(P=(x, y)\) cannot be 0 since this results in division by 0 . See Figure 35. On the unit circle, there are two such points, \((1,0)\) and \((-1,0)\). These two points correspond to the angles \(0\left(0^{\circ}\right)\) and \(\pi\left(180^{\circ}\right)\) or, more generally, to any angle that is an integer multiple of \(\pi\left(180^{\circ}\right)\), such as \(0\left(0^{\circ}\right), \pm \pi\left( \pm 180^{\circ}\right), \pm 2 \pi\left( \pm 360^{\circ}\right), \pm 3 \pi\left( \pm 540^{\circ}\right)\), and so on. Such angles must therefore be excluded from the domain of the cotangent function and the domain of the cosecant function.

The domain of the cotangent function is the set of all real numbers, except integer multiples of \(\pi\left(180^{\circ}\right)\).
The domain of the cosecant function is the set of all real numbers, except integer multiples of \(\pi\left(180^{\circ}\right)\).

Next we determine the range of each of the six trigonometric functions. Refer again to Figure 35. Let \(P=(x, y)\) be the point on the unit circle that corresponds to the angle \(\theta\). It follows that \(-1 \leq x \leq 1\) and \(-1 \leq y \leq 1\). Since \(\sin \theta=y\) and \(\cos \theta=x\), we have
\[
-1 \leq \sin \theta \leq 1 \quad-1 \leq \cos \theta \leq 1
\]

The range of both the sine function and the cosine function consists of all real numbers between -1 and 1, inclusive. Using absolute value notation, we have \(|\sin \theta| \leq 1\) and \(|\cos \theta| \leq 1\).

If \(\theta\) is not an integer multiple of \(\pi\left(180^{\circ}\right)\), then \(\csc \theta=\frac{1}{y}\). Since \(y=\sin \theta\) and \(|y|=|\sin \theta| \leq 1\), it follows that \(|\csc \theta|=\frac{1}{|\sin \theta|}=\frac{1}{|y|} \geq 1\left(\frac{1}{y} \leq-1\right.\) or \(\left.\frac{1}{y} \geq 1\right)\).
Since \(\csc \theta=\frac{1}{y}\), the range of the cosecant function consists of all real numbers less than or equal to -1 or greater than or equal to 1 . That is,
\[
\csc \theta \leq-1 \quad \text { or } \quad \csc \theta \geq 1
\]

If \(\theta\) is not an odd integer multiple of \(\frac{\pi}{2}\left(90^{\circ}\right)\), then \(\sec \theta=\frac{1}{x}\). Since \(x=\cos \theta\) and \(|x|=|\cos \theta| \leq 1\), it follows that \(|\sec \theta|=\frac{1}{|\cos \theta|}=\frac{1}{|x|} \geq 1\left(\frac{1}{x} \leq-1\right.\) or \(\left.\frac{1}{x} \geq 1\right)\).
Since \(\sec \theta=\frac{1}{x}\), the range of the secant function consists of all real numbers less than or equal to -1 or greater than or equal to 1 . That is,
\[
\sec \theta \leq-1 \quad \text { or } \quad \sec \theta \geq 1
\]

The range of both the tangent function and the cotangent function is the set of all real numbers.
\[
-\infty<\tan \theta<\infty \quad-\infty<\cot \theta<\infty
\]

You are asked to prove this in Problems 121 and 122.

Table 4 summarizes these results.
Table 4
\begin{tabular}{|llll|}
\hline Function & Symbol & Domain & Range \\
\hline sine & \(f(\theta)=\sin \theta\) & All real numbers & All real numbers from -1 to 1 , inclusive \\
cosine & \(f(\theta)=\cos \theta\) & All real numbers & All real numbers from -1 to 1 , inclusive \\
tangent & \(f(\theta)=\tan \theta\) & All real numbers, except odd integer multiples of \(\frac{\pi}{2}\left(90^{\circ}\right)\) & All real numbers \\
cosecant & \(f(\theta)=\csc \theta\) & All real numbers, except integer multiples of \(\pi\left(180^{\circ}\right)\) & All real numbers greater than or equal to 1 or \\
secant & \(f(\theta)=\sec \theta\) & All real numbers, except odd integer multiples of \(\frac{\pi}{2}\left(90^{\circ}\right)\) & \begin{tabular}{l} 
All real numbers greater than or equal to 1 or \\
less than or equal to -1
\end{tabular} \\
cotangent & \(f(\theta)=\cot \theta\) & All real numbers, except integer multiples of \(\pi\left(180^{\circ}\right)\) & All real numbers \\
\hline
\end{tabular}

\section*{Now Work problem}

2 Determine the Period of the Trigonometric Functions

Figure 36

Figure 37

Look at Figure 36. This figure shows that for an angle of \(\frac{\pi}{3}\) radians the corresponding point \(P\) on the unit circle is \(\left(\frac{1}{2}, \frac{\sqrt{3}}{2}\right)\). Notice that for an angle of \(\frac{\pi}{3}+2 \pi\) radians, the corresponding point \(P\) on the unit circle is also \(\left(\frac{1}{2}, \frac{\sqrt{3}}{2}\right)\). Then
\[
\begin{array}{lll}
\sin \frac{\pi}{3}=\frac{\sqrt{3}}{2} & \text { and } & \sin \left(\frac{\pi}{3}+2 \pi\right)=\frac{\sqrt{3}}{2} \\
\cos \frac{\pi}{3}=\frac{1}{2} & \text { and } & \cos \left(\frac{\pi}{3}+2 \pi\right)=\frac{1}{2}
\end{array}
\]

This example illustrates a more general situation. For a given angle \(\theta\), measured in radians, suppose that we know the corresponding point \(P=(x, y)\) on the unit circle. Now add \(2 \pi\) to \(\theta\). The point on the unit circle corresponding to \(\theta+2 \pi\) is identical to the point \(P\) on the unit circle corresponding to \(\theta\). See Figure 37. The values of the trigonometric functions of \(\theta+2 \pi\) are equal to the values of the corresponding trigonometric functions of \(\theta\).

If we add (or subtract) integer multiples of \(2 \pi\) to \(\theta\), the values of the sine and cosine function remain unchanged. That is, for all \(\theta\),
\[
\sin (\theta+2 \pi k)=\sin \theta \quad \cos (\theta+2 \pi k)=\cos \theta
\]
where \(k\) is any integer.

\section*{(1)}

Functions that exhibit this kind of behavior are called periodic functions.

A function \(f\) is called periodic if there is a positive number \(p\) such that whenever \(\theta\) is in the domain of \(f\), so is \(\theta+p\), and
\[
f(\theta+p)=f(\theta)
\]

If there is a smallest such number \(p\), this smallest value is called the (fundamental) period of \(f\).

In Words
Tangent and cotangent have period \(\pi\); the others have period \(2 \pi\).

Based on equation (1), the sine and cosine functions are periodic. In fact, the sine and cosine functions have period \(2 \pi\). You are asked to prove this fact in Problems 123 and 124. The secant and cosecant functions are also periodic with period \(2 \pi\), and the tangent and cotangent functions are periodic with period \(\pi\). You are asked to prove these statements in Problems 125 through 128.

These facts are summarized as follows:

\section*{Periodic Properties}
\[
\begin{array}{lll}
\sin (\theta+2 \pi)=\sin \theta & \cos (\theta+2 \pi)=\cos \theta & \tan (\theta+\pi)=\tan \theta \\
\csc (\theta+2 \pi)=\csc \theta & \sec (\theta+2 \pi)=\sec \theta & \cot (\theta+\pi)=\cot \theta
\end{array}
\]

Because the sine, cosine, secant, and cosecant functions have period \(2 \pi\), once their values over an interval of length \(2 \pi\) are known, all their values are known. Similarly, since the tangent and cotangent functions have period \(\pi\), once their values over an interval of length \(\pi\) are known, all their values are known.

\section*{EXAMPLE I Finding Exact Values Using Periodic Properties}

Find the exact value of:
(a) \(\sin \frac{17 \pi}{4}\)
(b) \(\cos (5 \pi)\)
(c) \(\tan \frac{5 \pi}{4}\)

Solution
(a) It is best to sketch the angle first, as shown in Figure 38(a). Since the period of the sine function is \(2 \pi\), each full revolution can be ignored. This leaves the angle \(\frac{\pi}{4}\). Then
\[
\sin \frac{17 \pi}{4}=\sin \left(\frac{\pi}{4}+4 \pi\right)=\sin \frac{\pi}{4}=\frac{\sqrt{2}}{2}
\]
(b) See Figure 38(b). Since the period of the cosine function is \(2 \pi\), each full revolution can be ignored. This leaves the angle \(\pi\). Then
\[
\cos (5 \pi)=\cos (\pi+4 \pi)=\cos \pi=-1
\]
(c) See Figure 38(c). Since the period of the tangent function is \(\pi\), each halfrevolution can be ignored. This leaves the angle \(\frac{\pi}{4}\). Then
\[
\tan \frac{5 \pi}{4}=\tan \left(\frac{\pi}{4}+\pi\right)=\tan \frac{\pi}{4}=1
\]

Figure 38

The periodic properties of the trigonometric functions will be very helpful in the study of their graphs later in this chapter.

\section*{3 Determine the Signs of the Trigonometric Functions in a Given Quadrant}

Figure 39

Let \(P=(x, y)\) be the point on the unit circle that corresponds to the angle \(\theta\). Knowing in which quadrant the point \(P\) lies enables us to determine the signs of the trigonometric functions of \(\theta\). For example, if \(P=(x, y)\) lies in quadrant IV, as shown in Figure 39, then \(x>0\) and \(y<0\). Consequently,
\[
\begin{array}{lll}
\sin \theta=y<0 & \cos \theta=x>0 & \tan \theta=\frac{y}{x}<0 \\
\csc \theta=\frac{1}{y}<0 & \sec \theta=\frac{1}{x}>0 & \cot \theta=\frac{x}{y}<0
\end{array}
\]

Table 5 lists the signs of the six trigonometric functions for each quadrant. See also Figure 40.

Table 5
\begin{tabular}{|lccl|}
\hline Quadrant of \(\boldsymbol{P}\) & \(\boldsymbol{\operatorname { s i n }} \boldsymbol{\theta}, \boldsymbol{\operatorname { c s c } \boldsymbol { \theta }}\) & \(\boldsymbol{\operatorname { c o s } \boldsymbol { \theta } , \boldsymbol { \operatorname { s e c } \boldsymbol { \theta } }}\) & \(\boldsymbol{\operatorname { t a n } \boldsymbol { \theta } , \boldsymbol { \operatorname { c o t } \boldsymbol { \theta } }}\) \\
\hline I & Positive & Positive & Positive \\
II & Positive & Negative & Negative \\
III & Negative & Negative & Positive \\
IV & Negative & Positive & Negative \\
\hline
\end{tabular}

Figure 40

\section*{EXAMPLE 2 Finding the Quadrant in Which an Angle \(\boldsymbol{\theta}\) Lies}

If \(\sin \theta<0\) and \(\cos \theta<0\), name the quadrant in which the angle \(\theta\) lies.
Solution Let \(P=(x, y)\) be the point on the unit circle corresponding to \(\theta\). Then \(\sin \theta=y<0\) and \(\cos \theta=x<0\). Because points in quadrant III have \(x<0\) and \(y<0, \theta\) lies in quadrant III.
```

Now Work problem 27

```

\section*{4 Find the Values of the Trigonometric Functions Using Fundamental Identities}

If \(P=(x, y)\) is the point on the unit circle corresponding to \(\theta\), then
\[
\begin{array}{lll}
\sin \theta=y & \cos \theta=x & \tan \theta=\frac{y}{x}
\end{array} \text { if } x \neq 0
\]

Based on these definitions, we have the reciprocal identities:

\section*{Reciprocal Identities}
\[
\begin{equation*}
\csc \theta=\frac{1}{\sin \theta} \quad \sec \theta=\frac{1}{\cos \theta} \quad \cot \theta=\frac{1}{\tan \theta} \tag{2}
\end{equation*}
\]

Two other fundamental identities are the quotient identities.

\section*{Quotient Identities}
\[
\begin{equation*}
\tan \theta=\frac{\sin \theta}{\cos \theta} \quad \cot \theta=\frac{\cos \theta}{\sin \theta} \tag{3}
\end{equation*}
\]

The proofs of identities (2) and (3) follow from the definitions of the trigonometric functions. (See Problems 129 and 130.)

If \(\sin \theta\) and \(\cos \theta\) are known, identities (2) and (3) make it easy to find the values of the remaining trigonometric functions.

\section*{EXAMPLE 3 Finding Exact Values Using Identities When Sine} and Cosine Are Given
Given \(\sin \theta=\frac{\sqrt{5}}{5}\) and \(\cos \theta=\frac{2 \sqrt{5}}{5}\), find the exact values of the four remaining trigonometric functions of \(\theta\) using identities.

Solution Use a quotient identity from (3) to obtain
\[
\tan \theta=\frac{\sin \theta}{\cos \theta}=\frac{\frac{\sqrt{5}}{5}}{\frac{2 \sqrt{5}}{5}}=\frac{1}{2}
\]

Next use the reciprocal identities from (2) to get
\(\csc \theta=\frac{1}{\sin \theta}=\frac{1}{\frac{\sqrt{5}}{5}}=\frac{5}{\sqrt{5}}=\sqrt{5} \quad \sec \theta=\frac{1}{\cos \theta}=\frac{1}{\frac{2 \sqrt{5}}{5}}=\frac{5}{2 \sqrt{5}}=\frac{\sqrt{5}}{2} \quad \cot \theta=\frac{1}{\tan \theta}=\frac{1}{\frac{1}{2}}=2\)
am Now Work problem 35
The equation of the unit circle is \(x^{2}+y^{2}=1\) or, equivalently,
\[
y^{2}+x^{2}=1
\]

If \(P=(x, y)\) is the point on the unit circle that corresponds to the angle \(\theta\), then \(y=\sin \theta\) and \(x=\cos \theta\), so we have
\[
\begin{equation*}
(\sin \theta)^{2}+(\cos \theta)^{2}=1 \tag{4}
\end{equation*}
\]

It is customary to write \(\sin ^{2} \theta\) instead of \((\sin \theta)^{2}, \cos ^{2} \theta\) instead of \((\cos \theta)^{2}\), and so on. With this notation, equation (4) can be rewritten as
\[
\begin{equation*}
\sin ^{2} \theta+\cos ^{2} \theta=1 \tag{5}
\end{equation*}
\]

If \(\cos \theta \neq 0\), each side of equation (5) can be divided by \(\cos ^{2} \theta\).
\[
\begin{aligned}
\frac{\sin ^{2} \theta}{\cos ^{2} \theta}+\frac{\cos ^{2} \theta}{\cos ^{2} \theta} & =\frac{1}{\cos ^{2} \theta} \\
\left(\frac{\sin \theta}{\cos \theta}\right)^{2}+1 & =\left(\frac{1}{\cos \theta}\right)^{2}
\end{aligned}
\]

Now use identities (2) and (3) to get
\[
\begin{equation*}
\tan ^{2} \theta+1=\sec ^{2} \theta \tag{6}
\end{equation*}
\]

Similarly, if \(\sin \theta \neq 0\), divide equation (5) by \(\sin ^{2} \theta\) and use identities (2) and (3) to get \(1+\cot ^{2} \theta=\csc ^{2} \theta\), which is written as
\[
\begin{equation*}
\cot ^{2} \theta+1=\csc ^{2} \theta \tag{7}
\end{equation*}
\]

Collectively, the identities in (5), (6), and (7) are referred to as the Pythagorean identities.

Let's pause here to summarize the fundamental identities.

\section*{Fundamental Identities}
\[
\begin{aligned}
& \tan \theta=\frac{\sin \theta}{\cos \theta} \quad \cot \theta=\frac{\cos \theta}{\sin \theta} \\
& \csc \theta=\frac{1}{\sin \theta} \quad \sec \theta=\frac{1}{\cos \theta} \quad \cot \theta=\frac{1}{\tan \theta} \\
& \sin ^{2} \theta+\cos ^{2} \theta=1 \quad \tan ^{2} \theta+1=\sec ^{2} \theta \quad \cot ^{2} \theta+1=\csc ^{2} \theta
\end{aligned}
\]

\section*{EXAMPLE 4 Finding the Exact Value of a Trigonometric Expression Using Identities}

Find the exact value of each expression. Do not use a calculator.
(a) \(\tan 20^{\circ}-\frac{\sin 20^{\circ}}{\cos 20^{\circ}}\)
(b) \(\sin ^{2} \frac{\pi}{12}+\frac{1}{\sec ^{2} \frac{\pi}{12}}\)

Solution
(a) \(\begin{aligned} \tan 20^{\circ}-\frac{\sin 20^{\circ}}{\cos 20^{\circ}} & =\tan 20^{\circ}-\tan 20^{\circ}=0 \\ \frac{\sin \theta}{\cos \theta} & =\tan \theta\end{aligned}\)
(b) \(\begin{aligned} \sin ^{2} \frac{\pi}{12}+\frac{1}{\sec ^{2} \frac{\pi}{12}} & \xlongequal{ }\end{aligned} \begin{aligned} \sin ^{2} \frac{\pi}{12}+\cos ^{2} \frac{\pi}{12} & =1 \\ & \uparrow \\ \cos \theta & =\frac{1}{\sec \theta} \quad \sin ^{2} \theta+\cos ^{2} \theta=1\end{aligned}\)
-Now Work problem 79

\section*{5 Find the Exact Values of the Trigonometric Functions of an Angle Given One of the Functions and the Quadrant of the Angle}

Many problems require finding the exact values of the remaining trigonometric functions when the value of one of them is known and the quadrant in which \(\theta\) lies can be found. There are two approaches to solving such problems. One approach uses a circle of radius \(r\); the other uses identities.

When using identities, sometimes a rearrangement is required. For example, the Pythagorean identity
\[
\sin ^{2} \theta+\cos ^{2} \theta=1
\]
can be solved for \(\sin \theta\) in terms of \(\cos \theta\) (or vice versa) as follows:
\[
\begin{aligned}
\sin ^{2} \theta & =1-\cos ^{2} \theta \\
\sin \theta & = \pm \sqrt{1-\cos ^{2} \theta}
\end{aligned}
\]
where the \(+\operatorname{sign}\) is used if \(\sin \theta>0\) and the \(-\operatorname{sign}\) is used if \(\sin \theta<0\). Similarly, in \(\tan ^{2} \theta+1=\sec ^{2} \theta\), we can solve for \(\tan \theta(\) or \(\sec \theta)\), and in \(\cot ^{2} \theta+1=\csc ^{2} \theta\), we can solve for \(\cot \theta(\) or \(\csc \theta)\).

\section*{EXAMPLE 5 Finding Exact Values Given One Value and the Sign of Another}

Given that \(\sin \theta=\frac{1}{3}\) and \(\cos \theta<0\), find the exact value of each of the remaining five trigonometric functions.

Solution I Using a Circle

\section*{Figure 41}

Suppose that \(P=(x, y)\) is the point on a circle that corresponds to \(\theta\). Since \(\sin \theta=\frac{1}{3}>0\) and \(\cos \theta<0\), the point \(P=(x, y)\) is in quadrant II. Because \(\sin \theta=\frac{1}{3}=\frac{y}{r}\), let \(y=1\) and \(r=3\). The point \(P=(x, y)=(x, 1)\) that corresponds to \(\theta\) lies on the circle of radius 3 centered at the origin: \(x^{2}+y^{2}=9\). See Figure 41 .

To find \(x\), use the fact that \(x^{2}+y^{2}=9, y=1\), and \(P\) is in quadrant II ( so \(x<0\) ).
\[
\begin{array}{rlrl}
x^{2}+y^{2} & =9 & \\
x^{2}+1^{2} & =9 & y=1 \\
x^{2} & =8 & & \\
x & =-2 \sqrt{2} & & x<0
\end{array}
\]

Since \(x=-2 \sqrt{2}, y=1\), and \(r=3\), we find that
\[
\left.\begin{array}{ll}
\cos \theta=\frac{x}{r}=-\frac{2 \sqrt{2}}{3} & \tan \theta=\frac{y}{x}=\frac{1}{-2 \sqrt{2}}=-\frac{\sqrt{2}}{4} \\
\csc \theta=\frac{r}{y}=\frac{3}{1}=3 & \sec \theta=\frac{r}{x}=\frac{3}{-2 \sqrt{2}}=-\frac{3 \sqrt{2}}{4}
\end{array} \quad \cot \theta=\frac{x}{y}=\frac{-2 \sqrt{2}}{1}=-2 \sqrt{2}\right)
\]

Solution 2 First, solve the identity \(\sin ^{2} \theta+\cos ^{2} \theta=1\) for \(\cos \theta\).

\section*{Using Identities}
\[
\begin{aligned}
\sin ^{2} \theta+\cos ^{2} \theta & =1 \\
\cos ^{2} \theta & =1-\sin ^{2} \theta \\
\cos \theta & = \pm \sqrt{1-\sin ^{2} \theta}
\end{aligned}
\]

Because \(\cos \theta<0\), choose the minus \(\operatorname{sign}\) and use the fact that \(\sin \theta=\frac{1}{3}\).
\[
\begin{gathered}
\cos \theta=-\sqrt{1-\sin ^{2} \theta}=-\sqrt{1-\frac{1}{9}}=-\sqrt{\frac{8}{9}}=-\frac{2 \sqrt{2}}{3} \\
\sin \theta=\frac{1}{3}
\end{gathered}
\]

Now, with the values of \(\sin \theta\) and \(\cos \theta\), use quotient and reciprocal identities to get
\[
\begin{aligned}
& \tan \theta=\frac{\sin \theta}{\cos \theta}=\frac{\frac{1}{3}}{\frac{-2 \sqrt{2}}{3}}=\frac{1}{-2 \sqrt{2}}=-\frac{\sqrt{2}}{4} \quad \cot \theta=\frac{1}{\tan \theta}=-2 \sqrt{2} \\
& \sec \theta=\frac{1}{\cos \theta}=\frac{1}{\frac{-2 \sqrt{2}}{3}}=\frac{-3}{2 \sqrt{2}}=-\frac{3 \sqrt{2}}{4} \quad \csc \theta=\frac{1}{\sin \theta}=\frac{1}{\frac{1}{3}}=3
\end{aligned}
\]

\section*{Finding the Values of the Trigonometric Functions of \(\boldsymbol{\theta}\) When the Value of One Function Is Known and the Quadrant of \(\boldsymbol{\theta}\) Is Known}

Given the value of one trigonometric function and the quadrant in which \(\theta\) lies, the exact value of each of the remaining five trigonometric functions can be found in either of two ways.

\section*{Method 1 Using a Circle of Radius \(r\)}

STEP 1: Draw a circle centered at the origin showing the location of the angle \(\theta\) and the point \(P=(x, y)\) that corresponds to \(\theta\). The radius of the circle that contains \(P=(x, y)\) is \(r=\sqrt{x^{2}+y^{2}}\).

STEP 2: Assign a value to two of the three variables \(x, y, r\) based on the value of the given trigonometric function and the location of \(P\).
Step 3: Use the fact that \(P\) lies on the circle \(x^{2}+y^{2}=r^{2}\) to find the value of the missing variable.
STEP 4: Apply the theorem on page 401 to find the values of the remaining trigonometric functions.

\section*{Method 2 Using Identities}

Use appropriately selected identities to find the value of each remaining trigonometric function.

\section*{EXAMPLE 6}

Solution I Using a Circle

Figure 42

\section*{Given the Value of One Trigonometric Function and the Sign} of Another, Find the Values of the Remaining Ones
Given that \(\tan \theta=\frac{1}{2}\) and \(\sin \theta<0\), find the exact value of each of the remaining five trigonometric functions of \(\theta\).
STEP 1: Since \(\tan \theta=\frac{1}{2}>0\) and \(\sin \theta<0\), the point \(P=(x, y)\) that corresponds to \(\theta\) lies in quadrant III. See Figure 42.
STEP 2: Since \(\tan \theta=\frac{1}{2}=\frac{y}{x}\) and \(\theta\) lies in quadrant III, let \(x=-2\) and \(y=-1\).
STEP 3: With \(x=-2\) and \(y=-1\), then \(r=\sqrt{x^{2}+y^{2}}=\sqrt{(-2)^{2}+(-1)^{2}}\) \(=\sqrt{5}\) and \(P\) lies on the circle \(x^{2}+y^{2}=5\).
STEP 4: Apply the theorem on page 401 using \(x=-2, y=-1\), and \(r=\sqrt{5}\).
\(\sin \theta=\frac{y}{r}=\frac{-1}{\sqrt{5}}=-\frac{\sqrt{5}}{5} \quad \cos \theta=\frac{x}{r}=\frac{-2}{\sqrt{5}}=-\frac{2 \sqrt{5}}{5}\)
\(\csc \theta=\frac{r}{y}=\frac{\sqrt{5}}{-1}=-\sqrt{5} \quad \sec \theta=\frac{r}{x}=\frac{\sqrt{5}}{-2}=-\frac{\sqrt{5}}{2} \quad \cot \theta=\frac{x}{y}=\frac{-2}{-1}=2\)

Solution 2 Using Identities

In Words
Cosine and secant are even
functions; the others are odd
functions.

Figure 43

Because the value of \(\tan \theta\) is given, use the Pythagorean identity that involves \(\tan \theta\) - that is, \(\tan ^{2} \theta+1=\sec ^{2} \theta\). Since \(\tan \theta=\frac{1}{2}>0\) and \(\sin \theta<0\), then \(\theta\) lies in quadrant III, where \(\sec \theta<0\).
\[
\begin{array}{rlrl}
\tan ^{2} \theta+1 & =\sec ^{2} \theta & & \text { Pythagorean identity } \\
\left(\frac{1}{2}\right)^{2}+1 & =\sec ^{2} \theta & \tan \theta=\frac{1}{2} \\
\sec ^{2} \theta & =\frac{1}{4}+1=\frac{5}{4} & \\
\sec \theta & =-\frac{\sqrt{5}}{2} & \sec \theta<0
\end{array}
\]

Because \(\tan \theta=\frac{1}{2}\) and \(\sec \theta=-\frac{\sqrt{5}}{2}\), use reciprocal identities to find
\[
\begin{aligned}
& \cos \theta=\frac{1}{\sec \theta}=\frac{1}{-\frac{\sqrt{5}}{2}}=-\frac{2}{\sqrt{5}}=-\frac{2 \sqrt{5}}{5} \\
& \cot \theta=\frac{1}{\tan \theta}=\frac{1}{\frac{1}{2}}=2
\end{aligned}
\]

To find \(\sin \theta\), use the following reasoning:
\[
\begin{aligned}
& \tan \theta=\frac{\sin \theta}{\cos \theta} \text { so } \sin \theta=\tan \theta \cdot \cos \theta=\left(\frac{1}{2}\right) \cdot\left(-\frac{2 \sqrt{5}}{5}\right)=-\frac{\sqrt{5}}{5} \\
& \csc \theta=\frac{1}{\sin \theta}=\frac{1}{-\frac{\sqrt{5}}{5}}=-\frac{5}{\sqrt{5}}=-\sqrt{5}
\end{aligned}
\]
-Now Work problem 43

\section*{6 Use Even-Odd Properties to Find the Exact Values of the Trigonometric Functions}

Recall that a function \(f\) is even if \(f(-\theta)=f(\theta)\) for all \(\theta\) in the domain of \(f\); a function \(f\) is odd if \(f(-\theta)=-f(\theta)\) for all \(\theta\) in the domain of \(f\). We will now show that the trigonometric functions sine, tangent, cotangent, and cosecant are odd functions and that the functions cosine and secant are even functions.

\section*{Even-Odd Properties}
\[
\begin{array}{lll}
\sin (-\theta)=-\sin \theta & \cos (-\theta)=\cos \theta & \tan (-\theta)=-\tan \theta \\
\csc (-\theta)=-\csc \theta & \sec (-\theta)=\sec \theta & \cot (-\theta)=-\cot \theta
\end{array}
\]

Proof Let \(P=(x, y)\) be the point on the unit circle that corresponds to the angle \(\theta\). See Figure 43 . Using symmetry, the point \(Q\) on the unit circle that corresponds to the angle \(-\theta\) will have coordinates \((x,-y)\). Using the definition of the trigonometric functions, we have
\[
\sin \theta=y \quad \sin (-\theta)=-y \quad \cos \theta=x \quad \cos (-\theta)=x
\]
so
\[
\sin (-\theta)=-y=-\sin \theta \quad \cos (-\theta)=x=\cos \theta
\]

Now, using these results and some of the fundamental identities, we have
\[
\begin{aligned}
& \tan (-\theta)=\frac{\sin (-\theta)}{\cos (-\theta)}=\frac{-\sin \theta}{\cos \theta}=-\tan \theta \quad \cot (-\theta)=\frac{1}{\tan (-\theta)}=\frac{1}{-\tan \theta}=-\cot \theta \\
& \sec (-\theta)=\frac{1}{\cos (-\theta)}=\frac{1}{\cos \theta}=\sec \theta \quad \csc (-\theta)=\frac{1}{\sin (-\theta)}=\frac{1}{-\sin \theta}=-\csc \theta
\end{aligned}
\]

\section*{EXAMPLE 7 Finding ExactValues Using Even-Odd Properties}

Find the exact value of:
(a) \(\sin \left(-45^{\circ}\right)\)
(b) \(\cos (-\pi)\)
(c) \(\cot \left(-\frac{3 \pi}{2}\right)\)
(d) \(\tan \left(-\frac{37 \pi}{4}\right)\)

Solution
(a) \(\begin{gathered}\sin \left(-45^{\circ}\right) \underset{\uparrow}{\uparrow}-\sin 45^{\circ}=-\frac{\sqrt{2}}{2} \\ \text { Odd function }\end{gathered}\)
(b) \(\cos (-\pi) \underset{\uparrow}{=} \cos \pi=-1\) Even function
(c) \(\cot \left(-\frac{3 \pi}{2}\right)=-\cot \frac{3 \pi}{2}=0\)
Odd function
(d) \(\tan \left(-\frac{37 \pi}{4}\right) \underset{\uparrow}{=}-\tan \frac{37 \pi}{4}=-\tan \left(\frac{\pi}{4}+9 \pi\right) \underset{\uparrow}{=}-\tan \frac{\pi}{4}=-1\)

\subsection*{5.3 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. The domain of the function \(f(x)=\frac{x+1}{2 x+1}\) is
(pp. 49-51)
2. A function for which \(f(x)=f(-x)\) for all \(x\) in the domain of \(f\) is called a(n) \(\qquad\) function. (pp. 66-68)
3. True or False The function \(f(x)=\sqrt{x}\) is even. (pp. 66-68)
4. True or False The equation \(x^{2}+2 x=(x+1)^{2}-1\) is an identity. (p. A63)

\section*{Concepts and Vocabulary}
5. The sine, cosine, cosecant, and secant functions have period
\(\qquad\) ; the tangent and cotangent functions have period
\(\qquad\)
6. The domain of the tangent function is \(\qquad\) -.
7. The range of the sine function is \(\qquad\) .
8. True or False The only even trigonometric functions are the cosine and secant functions.
9. \(\sin ^{2} \theta+\cos ^{2} \theta=\) \(\qquad\)
10. True or False \(\sec \theta=\frac{1}{\sin \theta}\)

\section*{Skill Building}

In Problems 11-26, use the fact that the trigonometric functions are periodic to find the exact value of each expression. Do not use a calculator.
11. \(\sin 405^{\circ}\)
12. \(\cos 420^{\circ}\)
13. \(\tan 405^{\circ}\)
14. \(\sin 390^{\circ}\)
15. \(\csc 450^{\circ}\)
16. \(\sec 540^{\circ}\)
17. \(\cot 390^{\circ}\)
18. \(\sec 420^{\circ}\)
19. \(\cos \frac{33 \pi}{4}\)
20. \(\sin \frac{9 \pi}{4}\)
21. \(\tan (21 \pi)\)
22. \(\csc \frac{9 \pi}{2}\)
23. \(\sec \frac{17 \pi}{4}\)
24. \(\cot \frac{17 \pi}{4}\)
25. \(\tan \frac{19 \pi}{6}\)
26. \(\sec \frac{25 \pi}{6}\)

In Problems 27-34, name the quadrant in which the angle \(\theta\) lies.
27. \(\sin \theta>0, \quad \cos \theta<0\)
28. \(\sin \theta<0, \quad \cos \theta>0\)
29. \(\sin \theta<0, \quad \tan \theta<0\)
30. \(\cos \theta>0, \quad \tan \theta>0\)
31. \(\cos \theta>0, \quad \tan \theta<0\)
32. \(\cos \theta<0, \quad \tan \theta>0\)
33. \(\sec \theta<0, \quad \sin \theta>0\)
34. \(\csc \theta>0, \quad \cos \theta<0\)

In Problems 35-42, \(\sin \theta\) and \(\cos \theta\) are given. Find the exact value of each of the four remaining trigonometric functions.
35. \(\sin \theta=-\frac{3}{5}, \quad \cos \theta=\frac{4}{5}\)
36. \(\sin \theta=\frac{4}{5}, \quad \cos \theta=-\frac{3}{5}\)
37. \(\sin \theta=\frac{2 \sqrt{5}}{5}, \quad \cos \theta=\frac{\sqrt{5}}{5}\)
38. \(\sin \theta=-\frac{\sqrt{5}}{5}, \quad \cos \theta=-\frac{2 \sqrt{5}}{5}\)
39. \(\sin \theta=\frac{1}{2}, \quad \cos \theta=\frac{\sqrt{3}}{2}\)
40. \(\sin \theta=\frac{\sqrt{3}}{2}, \quad \cos \theta=\frac{1}{2}\)
41. \(\sin \theta=-\frac{1}{3}, \quad \cos \theta=\frac{2 \sqrt{2}}{3}\)
42. \(\sin \theta=\frac{2 \sqrt{2}}{3}, \quad \cos \theta=-\frac{1}{3}\)

In Problems 43-58, find the exact value of each of the remaining trigonometric functions of \(\theta\).
43. \(\sin \theta=\frac{12}{13}, \quad \theta\) in quadrant II
44. \(\cos \theta=\frac{3}{5}, \quad \theta\) in quadrant IV
45. \(\cos \theta=-\frac{4}{5}, \quad \theta\) in quadrant III
46. \(\sin \theta=-\frac{5}{13}, \quad \theta\) in quadrant III
47. \(\sin \theta=\frac{5}{13}, \quad 90^{\circ}<\theta<180^{\circ}\)
48. \(\cos \theta=\frac{4}{5}, \quad 270^{\circ}<\theta<360^{\circ}\)
49. \(\cos \theta=-\frac{1}{3}, \quad \frac{\pi}{2}<\theta<\pi\)
50. \(\sin \theta=-\frac{2}{3}, \quad \pi<\theta<\frac{3 \pi}{2}\)
51. \(\sin \theta=\frac{2}{3}, \quad \tan \theta<0\)
52. \(\cos \theta=-\frac{1}{4}, \quad \tan \theta>0\)
53. \(\sec \theta=2, \quad \sin \theta<0\)
54. \(\csc \theta=3, \quad \cot \theta<0\)
55. \(\tan \theta=\frac{3}{4}, \quad \sin \theta<0\)
56. \(\cot \theta=\frac{4}{3}, \quad \cos \theta<0\)
57. \(\tan \theta=-\frac{1}{3}, \quad \sin \theta>0\)
58. \(\sec \theta=-2, \quad \tan \theta>0\)

In Problems 59-76, use the even-odd properties to find the exact value of each expression. Do not use a calculator.
59. \(\sin \left(-60^{\circ}\right)\)
60. \(\cos \left(-30^{\circ}\right)\)
61. \(\tan \left(-30^{\circ}\right)\)
62. \(\sin \left(-135^{\circ}\right)\)
63. \(\sec \left(-60^{\circ}\right)\)
64. \(\csc \left(-30^{\circ}\right)\)
65. \(\sin \left(-90^{\circ}\right)\)
66. \(\cos \left(-270^{\circ}\right)\)
67. \(\tan \left(-\frac{\pi}{4}\right)\)
68. \(\sin (-\pi)\)
69. \(\cos \left(-\frac{\pi}{4}\right)\)
70. \(\sin \left(-\frac{\pi}{3}\right)\)
71. \(\tan (-\pi)\)
72. \(\sin \left(-\frac{3 \pi}{2}\right)\)
73. \(\csc \left(-\frac{\pi}{4}\right)\)
74. \(\sec (-\pi)\)
75. \(\sec \left(-\frac{\pi}{6}\right)\)
76. \(\csc \left(-\frac{\pi}{3}\right)\)

In Problems 77-88, use properties of the trigonometric functions to find the exact value of each expression. Do not use a calculator.

\[
\sin \theta+\sin (\theta+2 \pi)+\sin (\theta+4 \pi)
\]
90. If \(\cos \theta=0.2\), find the value of:
\[
\cos \theta+\cos (\theta+2 \pi)+\cos (\theta+4 \pi)
\]
91. If \(\tan \theta=3\), find the value of:
\[
\tan \theta+\tan (\theta+\pi)+\tan (\theta+2 \pi)
\]
92. If \(\cot \theta=-2\), find the value of:
\[
\cot \theta+\cot (\theta-\pi)+\cot (\theta-2 \pi)
\]
93. Find the exact value of:
\[
\sin 1^{\circ}+\sin 2^{\circ}+\sin 3^{\circ}+\cdots+\sin 358^{\circ}+\sin 359^{\circ}
\]
94. Find the exact value of:
\(\cos 1^{\circ}+\cos 2^{\circ}+\cos 3^{\circ}+\cdots+\cos 358^{\circ}+\cos 359^{\circ}\)
95. What is the domain of the sine function?
96. What is the domain of the cosine function?
97. For what numbers \(\theta\) is \(f(\theta)=\tan \theta\) not defined?
98. For what numbers \(\theta\) is \(f(\theta)=\cot \theta\) not defined?
99. For what numbers \(\theta\) is \(f(\theta)=\sec \theta\) not defined?
100. For what numbers \(\theta\) is \(f(\theta)=\csc \theta\) not defined?
101. What is the range of the sine function?
102. What is the range of the cosine function?
103. What is the range of the tangent function?
104. What is the range of the cotangent function?
105. What is the range of the secant function?
106. What is the range of the cosecant function?
107. Is the sine function even, odd, or neither? Is its graph symmetric? If so, with respect to what?
108. Is the cosine function even, odd, or neither? Is its graph symmetric? If so, with respect to what?
109. Is the tangent function even, odd, or neither? Is its graph symmetric? If so, with respect to what?
110. Is the cotangent function even, odd, or neither? Is its graph symmetric? If so, with respect to what?
111. Is the secant function even, odd, or neither? Is its graph symmetric? If so, with respect to what?
112. Is the cosecant function even, odd, or neither? Is its graph symmetric? If so, with respect to what?

\section*{Applications and Extensions}

In Problems 113-118, use the periodic and even-odd properties.
113. If \(f(\theta)=\sin \theta\) and \(f(a)=\frac{1}{3}\), find the exact value of:
(a) \(f(-a)\)
(b) \(f(a)+f(a+2 \pi)+f(a+4 \pi)\)
114. If \(f(\theta)=\cos \theta\) and \(f(a)=\frac{1}{4}\), find the exact value of:
(a) \(f(-a)\)
(b) \(f(a)+f(a+2 \pi)+f(a-2 \pi)\)
115. If \(f(\theta)=\tan \theta\) and \(f(a)=2\), find the exact value of:
(a) \(f(-a)\)
(b) \(f(a)+f(a+\pi)+f(a+2 \pi)\)
116. If \(f(\theta)=\cot \theta\) and \(f(a)=-3\), find the exact value of:
(a) \(f(-a)\)
(b) \(f(a)+f(a+\pi)+f(a+4 \pi)\)
117. If \(f(\theta)=\sec \theta\) and \(f(a)=-4\), find the exact value of:
(a) \(f(-a)\)
(b) \(f(a)+f(a+2 \pi)+f(a+4 \pi)\)
118. If \(f(\theta)=\csc \theta\) and \(f(a)=2\), find the exact value of:
(a) \(f(-a)\)
(b) \(f(a)+f(a+2 \pi)+f(a+4 \pi)\)
119. Calculating the Time of a Trip From a parking lot, you want to walk to a house on the beach. The house is located 1500 feet down a paved path that parallels the ocean, which is 500 feet away. See the illustration. Along the path you can walk 300 feet per minute, but in the sand on the beach you can only walk 100 feet per minute.

The time \(T\) to get from the parking lot to the beach house can be expressed as a function of the angle \(\theta\) shown in the illustration and is
\[
T(\theta)=5-\frac{5}{3 \tan \theta}+\frac{5}{\sin \theta}, \quad 0<\theta<\frac{\pi}{2}
\]

Calculate the time \(T\) if you walk directly from the parking lot to the house.
[Hint: \(\tan \theta=\frac{500}{1500}\).]

120. Calculating the Time of a Trip Two oceanfront homes are located 8 miles apart on a straight stretch of beach, each a distance of 1 mile from a paved path that parallels the ocean. Sally can jog 8 miles per hour on the paved path, but only 3 miles per hour in the sand on the beach. Because a river flows directly between the two houses, it is necessary to jog in the sand to the road, continue on the path, and then jog directly back in the sand to get from one house to the other. See the illustration. The time \(T\) to get from one house to the other as a function of the angle \(\theta\) shown in the illustration is
\[
T(\theta)=1+\frac{2}{3 \sin \theta}-\frac{1}{4 \tan \theta} \quad 0<\theta<\frac{\pi}{2}
\]
(a) Calculate the time \(T\) for \(\tan \theta=\frac{1}{4}\).
(b) Describe the path taken.
(c) Explain why \(\theta\) must be larger than \(14^{\circ}\).

121. Show that the range of the tangent function is the set of all real numbers.
122. Show that the range of the cotangent function is the set of all real numbers.
123. Show that the period of \(f(\theta)=\sin \theta\) is \(2 \pi\).
[Hint: Assume that \(0<p<2 \pi\) exists so that \(\sin (\theta+p)=\sin \theta\) for all \(\theta\). Let \(\theta=0\) to find \(p\). Then let \(\theta=\frac{\pi}{2}\) to obtain a contradiction.]
124. Show that the period of \(f(\theta)=\cos \theta\) is \(2 \pi\).
125. Show that the period of \(f(\theta)=\sec \theta\) is \(2 \pi\).
126. Show that the period of \(f(\theta)=\csc \theta\) is \(2 \pi\).
127. Show that the period of \(f(\theta)=\tan \theta\) is \(\pi\).
128. Show that the period of \(f(\theta)=\cot \theta\) is \(\pi\).
129. Prove the reciprocal identities given in formula (2).
130. Prove the quotient identities given in formula (3).
131. Establish the identity:
\[
(\sin \theta \cos \phi)^{2}+(\sin \theta \sin \phi)^{2}+\cos ^{2} \theta=1
\]

\section*{Discussion and Writing}
132. Write down five properties of the tangent function. Explain the meaning of each.
133. Describe your understanding of the meaning of a periodic function.
134. Explain how to find the value of \(\sin 390^{\circ}\) using periodic properties.
135. Explain how to find the value of \(\cos \left(-45^{\circ}\right)\) using evenodd properties.
136. Explain how to find the value of \(\sin 390^{\circ}\) and \(\cos \left(-45^{\circ}\right)\) using the unit circle.

\section*{Retain Your Knowledge}

Problems 137-140 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
137. Solve: \(x^{2}-5=(x+3)(x-3)+4\)
138. Graph \(f(x)=-2 x^{2}+12 x-13\) using transformations. Find the vertex and the axis of symmetry.
139. Solve exactly: \(e^{x-4}=6\)
140. Find the real zeros of \(f(x)=x^{3}-9 x^{2}+3 x-27\).

\section*{'Are You Prepared?' Answers}
1. \(\left\{x \left\lvert\, x \neq-\frac{1}{2}\right.\right\}\)
2. even
3. False
4. True

\subsection*{5.4 Graphs of the Sine and Cosine Functions*}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Graphing Techniques: Transformations (Section 1.5, pp. 89-97)

Now Work the 'Are You Prepared?' problems on page 431.
OBJECTIVES 1 Graph Functions of the Form \(y=A \sin (\omega x)\) Using Transformations (p. 422)

2 Graph Functions of the Form \(y=A \cos (\omega x)\) Using Transformations (p. 423)

3 Determine the Amplitude and Period of Sinusoidal Functions (p. 424)
4 Graph Sinusoidal Functions Using Key Points (p. 426)
5 Find an Equation for a Sinusoidal Graph (p. 430)

Since we want to graph the trigonometric functions in the \(x y\)-plane, we shall use the traditional symbols \(x\) for the independent variable (or argument) and \(y\) for the dependent variable (or value at \(x\) ) for each function. So the six trigonometric functions can be written as
\[
\begin{array}{lll}
y=f(x)=\sin x & y=f(x)=\cos x & y=f(x)=\tan x \\
y=f(x)=\csc x & y=f(x)=\sec x & y=f(x)=\cot x
\end{array}
\]

\footnotetext{
*For those who wish to include phase shifts here, Section 5.6 can be covered immediately after Section 5.4 without loss of continuity.
}

Here the independent variable \(x\) represents an angle, measured in radians. In calculus, \(x\) is usually treated as a real number. As noted earlier, these are equivalent ways of viewing \(x\).

Table 6
\begin{tabular}{|lcc|}
\hline\(x\) & \(y=\sin x\) & \((x, y)\) \\
\hline 0 & 0 & \((0,0)\) \\
\(\frac{\pi}{6}\) & \(\frac{1}{2}\) & \(\left(\frac{\pi}{6}, \frac{1}{2}\right)\) \\
\(\frac{\pi}{2}\) & 1 & \(\left(\frac{\pi}{2}, 1\right)\) \\
\(\frac{5 \pi}{6}\) & \(\frac{1}{2}\) & \(\left(\frac{5 \pi}{6}, \frac{1}{2}\right)\) \\
\(\pi\) & 0 & \((\pi, 0)\) \\
\(\frac{7 \pi}{6}\) & \(-\frac{1}{2}\) & \(\left(\frac{7 \pi}{6},-\frac{1}{2}\right)\) \\
\(\frac{3 \pi}{2}\) & -1 & \(\left(\frac{3 \pi}{2},-1\right)\) \\
\(\frac{11 \pi}{6}\) & \(-\frac{1}{2}\) & \(\left(\frac{11 \pi}{6},-\frac{1}{2}\right)\) \\
\(2 \pi\) & 0 & \((2 \pi, 0)\) \\
\hline
\end{tabular}

Figure 45
\(y=\sin x,-\infty<x<\infty\)

\section*{The Graph of the Sine Function \(y=\sin x\)}

Since the sine function has period \(2 \pi\), it is only necessary to graph \(y=\sin x\) on the interval \([0,2 \pi]\). The remainder of the graph consists of repetitions of this portion of the graph.

To begin, consider Table 6 , which lists some points on the graph of \(y=\sin x\), \(0 \leq x \leq 2 \pi\). As the table shows, the graph of \(y=\sin x, 0 \leq x \leq 2 \pi\), begins at the origin. As \(x\) increases from 0 to \(\frac{\pi}{2}\), the value of \(y=\sin x\) increases from 0 to 1 ; as \(x\) increases from \(\frac{\pi}{2}\) to \(\pi\) to \(\frac{3 \pi}{2}\), the value of \(y\) decreases from 1 to 0 to -1 ; as \(x\) increases from \(\frac{3 \pi}{2}\) to \(2 \pi\), the value of \(y\) increases from -1 to 0 . Plotting the points listed in Table 6 and connecting them with a smooth curve yields the graph shown in Figure 44.
Figure 44
\(y=\sin x, 0 \leq x \leq 2 \pi\)

The graph in Figure 44 is one period, or cycle, of the graph of \(y=\sin x\). To obtain a more complete graph of \(y=\sin x\), continue the graph in each direction, as shown in Figure 45.

The graph of \(y=\sin x\) illustrates some of the facts already discussed about the sine function.

\section*{Properties of the Sine Function \(y=\boldsymbol{\operatorname { s i n }} x\)}
1. The domain is the set of all real numbers.
2. The range consists of all real numbers from -1 to 1 , inclusive.
3. The sine function is an odd function, as the symmetry of the graph with respect to the origin indicates.
4. The sine function is periodic, with period \(2 \pi\).
5. The \(x\)-intercepts are \(\ldots,-2 \pi,-\pi, 0, \pi, 2 \pi, 3 \pi, \ldots\); the \(y\)-intercept is 0 .
6. The maximum value is 1 and occurs at \(x=\ldots,-\frac{3 \pi}{2}, \frac{\pi}{2}, \frac{5 \pi}{2}, \frac{9 \pi}{2}, \ldots\); the minimum value is -1 and occurs at \(x=\ldots,-\frac{\pi}{2}, \frac{3 \pi}{2}, \frac{7 \pi}{2}, \frac{11 \pi}{2}, \ldots\).

\title{
1 Graph Functions of the Form \(y=A \sin (\omega x)\) \\ Using Transformations
}

\section*{EXAMPLE I Graphing a Function of the Form \(y=A \sin (\omega x)\)}

Using Transformations
Graph \(y=3 \sin x\) using transformations. Use the graph to determine the domain and the range of \(y=3 \sin x\).
Solution Figure 46 illustrates the steps.
Figure 46

The domain of \(y=3 \sin x\) is the set of all real numbers or \((-\infty, \infty)\). The range of \(y=3 \sin x\) is \(\{y \mid-3 \leq y \leq 3\}\) or \([-3,3]\).
Check: Graph \(Y_{1}=3 \sin x\) to verify the graph shown in Figure 46(b).

\section*{EXAMPLE 2 Graphing a Function of the Form \(y=A \sin (\omega x)\)}

\section*{Using Transformations}

Graph \(y=-\sin (2 x)\) using transformations. Use the graph to determine the domain and the range of \(y=-\sin (2 x)\).
Solution Figure 47 illustrates the steps.
Figure 47

The domain of \(y=-\sin (2 x)\) is the set of all real numbers or \((-\infty, \infty)\). The range of \(y=-\sin (2 x)\) is \(\{y \mid-1 \leq y \leq 1\}\) or \([-1,1]\).

Check: Graph \(Y_{1}=-\sin (2 x)\) to verify the graph shown in Figure 47(c).
Note in Figure 47(c) that the period of the function \(y=-\sin (2 x)\) is \(\pi\) because of the horizontal compression of the original period \(2 \pi\) by a factor of \(\frac{1}{2}\).

\section*{Table 7}
\begin{tabular}{|ccc|}
\hline\(x\) & \(y=\cos x\) & \((x, y)\) \\
\hline 0 & 1 & \((0,1)\) \\
\(\frac{\pi}{3}\) & \(\frac{1}{2}\) & \(\left(\frac{\pi}{3}, \frac{1}{2}\right)\) \\
\(\frac{\pi}{2}\) & 0 & \(\left(\frac{\pi}{2}, 0\right)\) \\
\(\frac{2 \pi}{3}\) & \(-\frac{1}{2}\) & \(\left(\frac{2 \pi}{3},-\frac{1}{2}\right)\) \\
\(\pi\) & \(-\frac{1}{4}\) & \((\pi,-1)\) \\
\(\frac{4 \pi}{3}\) & \(-\frac{1}{2}\) & \(\left(\frac{4 \pi}{3},-\frac{1}{2}\right)\) \\
\(\frac{3 \pi}{2}\) & 0 & \(\left(\frac{3 \pi}{2}, 0\right)\) \\
\(\frac{5 \pi}{3}\) & \(\frac{1}{2}\) & \(\left(\frac{5 \pi}{3}, \frac{1}{2}\right)\) \\
\(\frac{2 \pi}{2}\) & 1 & \((2 \pi, 1)\) \\
\hline
\end{tabular}

\section*{The Graph of the Cosine Function}

The cosine function also has period \(2 \pi\). Proceed as with the sine function by constructing Table 7, which lists some points on the graph of \(y=\cos x, 0 \leq x \leq 2 \pi\). As the table shows, the graph of \(y=\cos x, 0 \leq x \leq 2 \pi\), begins at the point \((0,1)\). As \(x\) increases from 0 to \(\frac{\pi}{2}\) to \(\pi\), the value of \(y\) decreases from 1 to 0 to -1 ; as \(x\) increases from \(\pi\) to \(\frac{3 \pi}{2}\) to \(2 \pi\), the value of \(y\) increases from -1 to 0 to 1 . As before, plot the points in Table 7 to get one period or cycle of the graph. See Figure 48.

\section*{Figure 48}
\(y=\cos x, 0 \leq x \leq 2 \pi\)

A more complete graph of \(y=\cos x\) is obtained by continuing the graph in each direction, as shown in Figure 49.

Figure 49
\(y=\cos x,-\infty<x<\infty\)

The graph of \(y=\cos x\) illustrates some of the facts already discussed about the cosine function.

\section*{Properties of the Cosine Function}
1. The domain is the set of all real numbers.
2. The range consists of all real numbers from -1 to 1 , inclusive.
3. The cosine function is an even function, as the symmetry of the graph with respect to the \(y\)-axis indicates.
4. The cosine function is periodic, with period \(2 \pi\).
5. The \(x\)-intercepts are \(\ldots,-\frac{3 \pi}{2},-\frac{\pi}{2}, \frac{\pi}{2}, \frac{3 \pi}{2}, \frac{5 \pi}{2}, \ldots\); the \(y\)-intercept is 1 .
6. The maximum value is 1 and occurs at \(x=\ldots,-2 \pi, 0,2 \pi, 4 \pi, 6 \pi, \ldots\); the minimum value is -1 and occurs at \(x=\ldots,-\pi, \pi, 3 \pi, 5 \pi, \ldots\).

\section*{2 Graph Functions of the Form \(y=A \cos (\omega x)\) Using Transformations}

\section*{EXAMPLE 3}

\section*{Graphing a Function of the Form \(y=A \cos (\omega x)\) Using Transformations}

Graph \(y=2 \cos (3 x)\) using transformations. Use the graph to determine the domain and the range of \(y=2 \cos (3 x)\).
Figure 50 on the next page shows the steps.

\section*{Figure 50}

The domain of \(y=2 \cos (3 x)\) is the set of all real numbers or \((-\infty, \infty)\). The range of \(y=2 \cos (3 x)\) is \(\{y \mid-2 \leq y \leq 2\}\) or \([-2,2]\).
Check: Graph \(Y_{1}=2 \cos (3 x)\) to verify the graph shown in Figure 50(c).
Notice in Figure 50(c) that the period of the function \(y=2 \cos (3 x)\) is \(\frac{2 \pi}{3}\) due to the compression of the original period \(2 \pi\) by a factor of \(\frac{1}{3}\).
Now Work problem 45 using transformations

\section*{Sinusoidal Graphs}

Shift the graph of \(y=\cos x\) to the right \(\frac{\pi}{2}\) units to obtain the graph of \(y=\) \(\cos \left(x-\frac{\pi}{2}\right)\). See Figure 51(a). Now look at the graph of \(y=\sin x\) in Figure 51(b). Notice that the graph of \(y=\sin x\) is the same as the graph of \(y=\cos \left(x-\frac{\pi}{2}\right)\).

\section*{Figure 51}

Based on Figure 51, we conjecture that
\[
\sin x=\cos \left(x-\frac{\pi}{2}\right)
\]
(We shall prove this fact in Chapter 6.) Because of this relationship, the graphs of functions of the form \(y=A \sin (\omega x)\) or \(y=A \cos (\omega x)\) are referred to as sinusoidal graphs.

\section*{3 Determine the Amplitude and Period of Sinusoidal Functions}

Figure 52(b) shows the graph of \(y=2 \cos x\). Note that the values of \(y=2 \cos x\) lie

Figure 52

\section*{Seeing the Concept} Graph \(Y_{1}=\sin x\) and \(Y_{2}=\cos \left(x-\frac{\pi}{2}\right)\). How many graphs do you see?

Based
between -2 and 2, inclusive.

(a) \(y=\cos x\)

(b) \(y=2 \cos x\)

\section*{In Words}

The amplitude determines
the vertical stretch or
compression of the graph of \(y=\sin x\) or \(y=\cos x\)

In general, the values of the functions \(y=A \sin x\) and \(y=A \cos x\), where \(A \neq 0\), always satisfy the inequalities
\[
-|A| \leq A \sin x \leq|A| \quad \text { and } \quad-|A| \leq A \cos x \leq|A|
\]
respectively. The number \(|A|\) is called the amplitude of \(y=A \sin x\) or \(y=A \cos x\). See Figure 53.

Figure 53

Figure 54(b) shows the graph of \(y=\cos (3 x)\). Notice that the period of this function is \(\frac{2 \pi}{3}\) because of the horizontal compression of the original period \(2 \pi\) by a factor of \(\frac{1}{3}\).

\section*{Figure 54}

If \(\omega>0\), the functions \(y=\sin (\omega x)\) and \(y=\cos (\omega x)\) have period \(T=\frac{2 \pi}{\omega}\). To see why, recall that the graph of \(y=\sin (\omega x)\) is obtained from the graph of \(y=\sin x\) by performing a horizontal compression or stretch by a factor \(\frac{1}{\omega}\). This horizontal compression replaces the interval \([0,2 \pi]\), which contains one period of the graph of \(y=\sin x\), by the interval \(\left[0, \frac{2 \pi}{\omega}\right]\), which contains one period of the graph of \(y=\sin (\omega x)\). Therefore, the function \(y=\cos (3 x)\), graphed in Figure 54(b), with \(\omega=3\), has period \(\frac{2 \pi}{\omega}=\frac{2 \pi}{3}\).

One period of the graph of \(y=\sin (\omega x)\) or \(y=\cos (\omega x)\) is called a cycle. Figure 55 illustrates the general situation. The blue portion of the graph is one cycle.

Figure 55

When graphing \(y=\sin (\omega x)\) or \(y=\cos (\omega x)\), we want \(\omega\) to be positive. To graph \(y=\sin (-\omega x), \omega>0\), or \(y=\cos (-\omega x), \omega>0\), use the even-odd properties of the sine and cosine functions as follows:
\[
\sin (-\omega x)=-\sin (\omega x) \quad \text { and } \quad \cos (-\omega x)=\cos (\omega x)
\]

This provides an equivalent form in which the coefficient of \(x\) in the argument is positive. For example,
\[
\sin (-2 x)=-\sin (2 x) \text { and } \quad \cos (-\pi x)=\cos (\pi x)
\]

Because of this, we can assume that \(\omega>0\).
THEOREM
If \(\omega>0\), the amplitude and period of \(y=A \sin (\omega x)\) and \(y=A \cos (\omega x)\) are given by
\[
\begin{equation*}
\text { Amplitude }=|A| \quad \text { Period }=T=\frac{2 \pi}{\omega} \tag{1}
\end{equation*}
\]

\section*{EXAMPLE 4}

Finding the Amplitude and Period of a Sinusoidal Function
Determine the amplitude and period of \(y=3 \sin (4 x)\).
Solution Comparing \(y=3 \sin (4 x)\) to \(y=A \sin (\omega x)\), note that \(A=3\) and \(\omega=4\). From equation (1),
\[
\text { Amplitude }=|A|=3 \quad \text { Period }=T=\frac{2 \pi}{\omega}=\frac{2 \pi}{4}=\frac{\pi}{2}
\]
-Now Work problem 15

\section*{4 Graph Sinusoidal Functions Using Key Points}

So far, we have graphed functions of the form \(y=A \sin (\omega x)\) or \(y=A \cos (\omega x)\) using transformations. We now introduce another method that can be used to graph these functions.

Figure 56 shows one cycle of the graphs of \(y=\sin x\) and \(y=\cos x\) on the interval \([0,2 \pi]\). Notice that each graph consists of four parts corresponding to the four subintervals:
\[
\left[0, \frac{\pi}{2}\right],\left[\frac{\pi}{2}, \pi\right],\left[\pi, \frac{3 \pi}{2}\right],\left[\frac{3 \pi}{2}, 2 \pi\right]
\]

Each subinterval is of length \(\frac{\pi}{2}\) (the period \(2 \pi\) divided by 4 , the number of parts), and the endpoints of these intervals \(x=0, x=\frac{\pi}{2}, x=\pi, x=\frac{3 \pi}{2}, x=2 \pi\) give rise to five key points on each graph:
\[
\begin{aligned}
& \text { For } y=\sin x: \quad(0,0),\left(\frac{\pi}{2}, 1\right),(\pi, 0),\left(\frac{3 \pi}{2},-1\right),(2 \pi, 0) \\
& \text { For } y=\cos x: \quad(0,1),\left(\frac{\pi}{2}, 0\right),(\pi,-1),\left(\frac{3 \pi}{2}, 0\right),(2 \pi, 1)
\end{aligned}
\]

Look again at Figure 56.
Figure 56

(a) \(y=\sin x\)

(b) \(y=\cos x\)

\section*{EXAMPLE 5 How to Graph a Sinusoidal Function Using Key Points}

Graph \(y=3 \sin (4 x)\) using key points.

\section*{Step-by-Step Solution}

Step 1: Determine the amplitude and period of the sinusoidal function.

Comparing \(y=3 \sin (4 x)\) to \(y=A \sin (\omega x)\), note that \(A=3\) and \(\omega=4\), so the amplitude is \(|A|=3\) and the period is \(\frac{2 \pi}{\omega}=\frac{2 \pi}{4}=\frac{\pi}{2}\). Because the amplitude is 3 , the graph of \(y=3 \sin (4 x)\) lies between -3 and 3 on the \(y\)-axis. Because the period is \(\frac{\pi}{2}\), one cycle begins at \(x=0\) and ends at \(x=\frac{\pi}{2}\).

Step 2: Divide the interval [0, \(\left.\frac{2 \pi}{\omega}\right]\) into four subintervals of the same length.

Divide the interval \(\left[0, \frac{\pi}{2}\right]\) into four subintervals, each of length \(\frac{\pi}{2} \div 4=\frac{\pi}{8}\), as follows:
\(\left[0, \frac{\pi}{8}\right]\left[\frac{\pi}{8}, \frac{\pi}{8}+\frac{\pi}{8}\right]=\left[\frac{\pi}{8}, \frac{\pi}{4}\right]\left[\frac{\pi}{4}, \frac{\pi}{4}+\frac{\pi}{8}\right]=\left[\frac{\pi}{4}, \frac{3 \pi}{8}\right]\left[\frac{3 \pi}{8}, \frac{3 \pi}{8}+\frac{\pi}{8}\right]=\left[\frac{3 \pi}{8}, \frac{\pi}{2}\right]\)

The endpoints of the subintervals are \(0, \frac{\pi}{8}, \frac{\pi}{4}, \frac{3 \pi}{8}, \frac{\pi}{2}\). These values represent the \(x\)-coordinates of the five key points on the graph.

Step 3: Use the endpoints of these subintervals to obtain five key points on the graph.
NOTE The five key points could also be obtained by evaluating \(y=3 \sin (4 x)\) at each value of \(x\).

To obtain the \(y\)-coordinates of the five key points of \(y=3 \sin (4 x)\), multiply the \(y\)-coordinates of the five key points for \(y=\sin x\) in Figure 56(a) by \(A=3\). The five key points are
\[
(0,0) \quad\left(\frac{\pi}{8}, 3\right) \quad\left(\frac{\pi}{4}, 0\right) \quad\left(\frac{3 \pi}{8},-3\right) \quad\left(\frac{\pi}{2}, 0\right)
\]

Plot the five key points obtained in Step 3, and fill in the graph of the sine curve as shown in Figure 57(a). Extend the graph in each direction to obtain the complete graph shown in Figure 57 (b). Notice that additional key points appear every \(\frac{\pi}{8}\) radian.

Check: Graph \(y=3 \sin (4 x)\) using transformations. Which graphing method do you prefer?

\section*{SUMMARY}

Steps for Graphing a Sinusoidal Function of the Form \(y=A \sin (\omega x)\) or \(y=A \cos (\omega x)\) Using Key Points
STEP 1: Determine the amplitude and period of the sinusoidal function.
STEP 2: Divide the interval \(\left[0, \frac{2 \pi}{\omega}\right]\) into four subintervals of the same length.
STEP 3: Use the endpoints of these subintervals to obtain five key points on the graph.
STEP 4: Plot the five key points and draw a sinusoidal graph to obtain the graph of one cycle. Extend the graph in each direction to make it complete.

COMMENT To graph a sinusoidal function of the form \(y=A \sin (\omega x)\) or \(y=A \cos (\omega x)\) using a graphing utility, use the amplitude to set \(Y_{\text {min }}\) and \(Y_{\text {max }}\) and use the period to set \(X_{\text {min }}\) and \(X_{\text {max }}\).

\section*{EXAMPLE 6 \\ Graphing a Sinusoidal Function Using Key Points}

Solution
Graph \(y=2 \sin \left(-\frac{\pi}{2} x\right)\) using key points.
Since the sine function is odd, use the equivalent form:
\[
y=-2 \sin \left(\frac{\pi}{2} x\right)
\]

STEP 1: Comparing \(y=-2 \sin \left(\frac{\pi}{2} x\right)\) to \(y=A \sin (\omega x)\), note that \(A=-2\) and \(\omega=\frac{\pi}{2}\). The amplitude is \(|A|=|-2|=2\), and the period is \(T=\frac{2 \pi}{\omega}=\frac{2 \pi}{\frac{\pi}{2}}=4\). The graph of \(y=-2 \sin \left(\frac{\pi}{2} x\right)\) lies between -2 and 2 on the \(y\)-axis. One cycle begins at \(x=0\) and ends at \(x=4\).

STEP 2: Divide the interval [ 0,4 ] into four subintervals, each of length \(4 \div 4=1\). The \(x\)-coordinates of the five key points are
\[
\begin{array}{ccccc}
0 & 0+1=1 & 1+1=2 & 2+1=3 & 3+1=4 \\
\text { 1st } x \text {-coordinate } & \text { 2nd } x \text {-coordinate } & \text { 3rd } x \text {-coordinate } & \text { 4th } x \text {-coordinate } & \text { 5th } x \text {-coordinate }
\end{array}
\]

STEP 3: Since \(y=-2 \sin \left(\frac{\pi}{2} x\right)\), multiply the \(y\)-coordinates of the five key points in
Figure 56(a) by \(A=-2\). The five key points on the graph are
\[
(0,0) \quad(1,-2) \quad(2,0) \quad(3,2) \quad(4,0)
\]

Step 4: Plot these five points and fill in the graph of the sine function as shown in Figure 58(a). Extend the graph in each direction, to obtain Figure 58(b).

Figure 58

(a)

(b) \(y=2 \sin \left(-\frac{\pi}{2} x\right)\)

Check: Graph \(y=2 \sin \left(-\frac{\pi}{2} x\right)\) using transformations. Which graphing method do you prefer?

If the function to be graphed is of the form \(y=A \sin (\omega x)+B\) [or \(y=A \cos (\omega x)+B]\), first graph \(y=A \sin (\omega x)[\) or \(y=A \cos (\omega x)]\) and then use a vertical shift.

\section*{EXAMPLE 7 \\ Graphing a Sinusoidal Function Using Key Points}

\section*{Solution \\ Solution}

Graph \(y=-4 \cos (\pi x)-2\) using key points. Use the graph to determine the domain and the range of \(y=-4 \cos (\pi x)-2\).

Begin by graphing the function \(y=-4 \cos (\pi x)\). Comparing \(y=-4 \cos (\pi x)\) with \(y=A \cos (\omega x)\), note that \(A=-4\) and \(\omega=\pi\). The amplitude is \(|A|=|-4|=4\), and the period is \(T=\frac{2 \pi}{\omega}=\frac{2 \pi}{\pi}=2\).

The graph of \(y=-4 \cos (\pi x)\) lies between -4 and 4 on the \(y\)-axis. One cycle begins at \(x=0\) and ends at \(x=2\).

Divide the interval \([0,2]\) into four subintervals, each of length \(2 \div 4=\frac{1}{2}\). The \(x\)-coordinates of the five key points are
\begin{tabular}{cllcc}
0 & \(0+\frac{1}{2}=\frac{1}{2}\) & \(\frac{1}{2}+\frac{1}{2}=1\) & \(1+\frac{1}{2}=\frac{3}{2}\) & \(\frac{3}{2}+\frac{1}{2}=2\) \\
1st \(x\)-coordinate & 2nd \(x\)-coordinate & 3rd \(x\)-coordinate & 4th \(x\)-coordinate & 5th \(x\)-coordinate
\end{tabular}

Since \(y=-4 \cos (\pi x)\), multiply the \(y\)-coordinates of the five key points of \(y=\cos x\) shown in Figure 56(b) by \(A=-4\) to obtain the five key points on the graph of \(y=-4 \cos (\pi x)\) :
\[
(0,-4) \quad\left(\frac{1}{2}, 0\right) \quad(1,4) \quad\left(\frac{3}{2}, 0\right) \quad(2,-4)
\]

Plot these five points and fill in the graph of the cosine function as shown in Figure 59(a). Extend the graph in each direction to obtain Figure 59(b), the graph of \(y=-4 \cos (\pi x)\).

A vertical shift down 2 units gives the graph of \(y=-4 \cos (\pi x)-2\), as shown in Figure 59(c).

Figure 59

(a)

\(\xrightarrow[\text { Subtract 2; }]{ }\)
Vertical shift down 2 units

(c) \(y=-4 \cos (\pi x)-2\)

The domain of \(y=-4 \cos (\pi x)-2\) is the set of all real numbers or \((-\infty, \infty)\). The range of \(y=-4 \cos (\pi x)-2\) is \(\{y \mid-6 \leq y \leq 2\}\) or \([-6,2]\).

\section*{5 Find an Equation for a Sinusoidal Graph}

\section*{EXAMPLE 8 Finding an Equation for a Sinusoidal Graph}

Find an equation for the graph shown in Figure 60.

Figure 60

Solution The graph has the characteristics of a cosine function. Do you see why? The maximum value, 3 , occurs at \(x=0\). So the equation can be viewed as a cosine function
\(y=A \cos (\omega x)\) with \(A=3\) and period \(T=1\).Then \(\frac{2 \pi}{\omega}=1\), so \(\omega=2 \pi\). The cosine function whose graph is given in Figure 60 is
\[
y=A \cos (\omega x)=3 \cos (2 \pi x)
\]

Check: Graph \(Y_{1}=3 \cos (2 \pi x)\) and compare the result with Figure 60.

\section*{EXAMPLE 9 Finding an Equation for a Sinusoidal Graph}

Find an equation for the graph shown in Figure 61.

Figure 61

Solution The graph is sinusoidal, with amplitude \(|A|=2\). The period is 4 , so \(\frac{2 \pi}{\omega}=4\) or \(\omega=\frac{\pi}{2}\). Since the graph passes through the origin, it is easier to view the equation as a sine function, \({ }^{\dagger}\) but notice that the graph is actually the reflection of a sine function about the \(x\)-axis (since the graph is decreasing near the origin). This requires that \(A=-2\). The sine function whose graph is given in Figure 61 is
\[
y=A \sin (\omega x)=-2 \sin \left(\frac{\pi}{2} x\right)
\]

Check: Graph \(Y_{1}=-2 \sin \left(\frac{\pi}{2} x\right)\) and compare the result with Figure 61.

\footnotetext{
Now Work problems 59 and 63
}

\footnotetext{
\({ }^{\dagger}\) The equation could also be viewed as a cosine function with a horizontal shift, but viewing it as a sine function is easier.
}

\subsection*{5.4 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. Use transformations to graph \(y=3 x^{2}\). (pp. 92-93)

\section*{Concepts and Vocabulary}
3. The maximum value of \(y=\sin x, 0 \leq x \leq 2 \pi\), is \(\qquad\) and occurs at \(x=\) \(\qquad\) -.
4. The function \(y=A \sin (\omega x), A>0\), has amplitude 3 and period 2; then \(A=\) \(\qquad\) and \(\omega=\) \(\qquad\) —.
5. The function \(y=3 \cos (6 x)\) has amplitude \(\qquad\) and period
6. True or False The graphs of \(y=\sin x\) and \(y=\cos x\) are identical except for a horizontal shift.
7. True or False For \(y=2 \sin (\pi x)\), the amplitude is 2 and the period is \(\frac{\pi}{2}\).
8. True or False The graph of the sine function has infinitely many \(x\)-intercepts.

\section*{Skill Building}

\section*{9. \(f(x)=\sin x\)}
(a) What is the \(y\)-intercept of the graph of \(f\) ?
(b) For what numbers \(x,-\pi \leq x \leq \pi\), is the graph of \(f\) increasing?
(c) What is the absolute maximum of \(f\) ?
(d) For what numbers \(x, 0 \leq x \leq 2 \pi\), does \(f(x)=0\) ?
(e) For what numbers \(x,-2 \pi \leq x \leq 2 \pi\), does \(f(x)=1\) ? Where does \(f(x)=-1\) ?
(f) For what numbers \(x,-2 \pi \leq x \leq 2 \pi\), does \(f(x)=-\frac{1}{2}\) ?
(g) Whatarethe \(x\)-interceptsof \(f\) ?
10. \(g(x)=\cos x\)
(a) What is the \(y\)-intercept of the graph of \(g\) ?
(b) For what numbers \(x,-\pi \leq x \leq \pi\), is the graph of \(g\) decreasing?
(c) What is the absolute minimum of \(g\) ?
(d) For what numbers \(x, 0 \leq x \leq 2 \pi\), does \(g(x)=0\) ?
(e) For what numbers \(x,-2 \pi \leq x \leq 2 \pi\), does \(g(x)=1\) ? Where does \(g(x)=-1\) ?
(f) For what numbers \(x,-2 \pi \leq x \leq 2 \pi\), does \(g(x)=\frac{\sqrt{3}}{2}\) ?
(g) What are the \(x\)-intercepts of \(g\) ?

In Problems 11-20, determine the amplitude and period of each function without graphing.
11. \(y=2 \sin x\)
12. \(y=3 \cos x\)
13. \(y=-4 \cos (2 x)\)
14. \(y=-\sin \left(\frac{1}{2} x\right)\)
15. \(y=6 \sin (\pi x)\)
16. \(y=-3 \cos (3 x)\)
17. \(y=-\frac{1}{2} \cos \left(\frac{3}{2} x\right)\)
18. \(y=\frac{4}{3} \sin \left(\frac{2}{3} x\right)\)
19. \(y=\frac{5}{3} \sin \left(-\frac{2 \pi}{3} x\right)\)
20. \(y=\frac{9}{5} \cos \left(-\frac{3 \pi}{2} x\right)\)

In Problems 21-30, match the given function to one of the graphs \((A)-(J)\).

(A)

\section*{Mixed Practice}

In Problems 77-80, find the average rate of change of from 0 to \(\frac{\pi}{2}\).
77. \(f(x)=\sin x\)
78. \(f(x)=\cos x\)
79. \(f(x)=\sin \left(\frac{x}{2}\right)\)
80. \(f(x)=\cos (2 x)\)

In Problems 81-84, find \((f \circ g)(x)\) and \((g \circ f)(x)\), and graph each of these functions.
81. \(\begin{aligned} f(x) & =\sin x \\ g(x) & =4 x\end{aligned}\)
82. \(f(x)=\cos x\)
\(g(x)=\frac{1}{2} x\)
83. \(\begin{aligned} f(x) & =-2 x \\ g(x) & =\cos x\end{aligned}\)
84. \(f(x)=-3 x\)
\(g(x)=\sin x\)

In Problems 85 and 86, graph each function.
85. \(f(x)= \begin{cases}\sin x & 0 \leq x<\frac{5 \pi}{4} \\ \cos x & \frac{5 \pi}{4} \leq x \leq 2 \pi\end{cases}\)
86. \(g(x)= \begin{cases}2 \sin x & 0 \leq x \leq \pi \\ \cos x+1 & \pi<x \leq 2 \pi\end{cases}\)

\section*{Applications and Extensions}
87. Alternating Current (ac) Circuits The current \(I\), in amperes, flowing through an ac (alternating current) circuit at time \(t\), in seconds, is
\[
I(t)=220 \sin (60 \pi t) \quad t \geq 0
\]

What is the period? What is the amplitude? Graph this function over two periods.
88. Alternating Current (ac) Circuits The current \(I\), in amperes, flowing through an ac (alternating current) circuit at time \(t\), in seconds, is
\[
I(t)=120 \sin (30 \pi t) \quad t \geq 0
\]

What is the period? What is the amplitude? Graph this function over two periods.
89. Alternating Current (ac) Generators The voltage \(V\), in volts, produced by an ac generator at time \(t\), in seconds, is
\[
V(t)=220 \sin (120 \pi t)
\]
(a) What is the amplitude? What is the period?
(b) Graph \(V\) over two periods, beginning at \(t=0\).
(c) If a resistance of \(R=10 \mathrm{ohms}\) is present, what is the current \(I\) ?
[Hint: Use Ohm's Law, \(V=I R\).]
(d) What are the amplitude and period of the current \(I\) ?
(e) Graph \(I\) over two periods, beginning at \(t=0\).
90. Alternating Current (ac) Generators The voltage \(V\), in volts, produced by an ac generator at time \(t\), in seconds, is
\[
V(t)=120 \sin (120 \pi t)
\]
(a) What is the amplitude? What is the period?
(b) Graph \(V\) over two periods, beginning at \(t=0\).
(c) If a resistance of \(R=20\) ohms is present, what is the current \(I\) ?
[Hint: Use Ohm's Law, \(V=I R\).]
(d) What are the amplitude and period of the current \(I\) ?
(e) Graph \(I\) over two periods, beginning at \(t=0\).
91. Alternating Current (ac) Generators The voltage \(V\) produced by an ac generator is sinusoidal. As a function of time, the voltage \(V\) is
\[
V(t)=V_{0} \sin (2 \pi f t)
\]
where \(f\) is the frequency, the number of complete oscillations (cycles) per second, and \(V_{0}\) is the initial voltage. [In the United States and Canada, \(f\) is 60 hertz (Hz).] The power \(P\) delivered to a resistance \(R\) at any time \(t\) is defined as
\[
P(t)=\frac{[V(t)]^{2}}{R}
\]
(a) Show that \(P(t)=\frac{V_{0}^{2}}{R} \sin ^{2}(2 \pi f t)\).
(b) The graph of \(P\) is shown in the figure. Express \(P\) as a sinusoidal function.

Power in an ac generator
(c) Deduce that
\[
\sin ^{2}(2 \pi f t)=\frac{1}{2}[1-\cos (4 \pi f t)]
\]
92. Bridge Clearance A one-lane highway runs through a tunnel in the shape of one-half a sine curve cycle. The opening is 28 feet wide at road level and is 15 feet tall at its highest point.

(a) Find an equation for the sine curve that fits the opening. Place the origin at the left end of the sine curve.
(b) If the road is 14 feet wide with 7 -foot shoulders on each side, what is the height of the tunnel at the edge of the road?
Source: en.wikipedia.org/wiki/Interstate_Highway_standards and Ohio Revised Code
93. Biorhythms In the theory of biorhythms, a sine function of the form
\[
P(t)=50 \sin (\omega t)+50
\]
is used to measure the percent \(P\) of a person's potential at time \(t\), where \(t\) is measured in days and \(t=0\) is the person's birthday. Three characteristics are commonly measured:

Physical potential: period of 23 days Emotional potential: period of 28 days Intellectual potential: period of 33 days
(a) Find \(\omega\) for each characteristic.
(b) Using a graphing utility, graph all three functions on the same screen.
(c) Is there a time \(t\) when all three characteristics have \(100 \%\) potential? When is it?
(d) Suppose that you are 20 years old today ( \(t=7305\) days) Describe your physical, emotional, and intellectual potential for the next 30 days.

94. Graph \(y=|\cos x|,-2 \pi \leq x \leq 2 \pi\).
95. Graph \(y=|\sin x|,-2 \pi \leq x \leq 2 \pi\).

In Problems 96-99, the graphs of the given pairs of functions intersect infinitely many times. Find four of these points of intersection.
[Hint: Refer to the unit circles on pages 398 and 399, and use their periodic properties.]
96. \(y=\sin x\)
\(y=\frac{1}{2}\)
97. \(y=\cos x\)
\(y=\frac{1}{2}\)
98. \(y=2 \sin x\)
\(y=-2\)
99. \(y=\tan x\)
\(y=1\)

\section*{Discussion and Writing}
100. Explain how you would scale the \(x\)-axis and \(y\)-axis before graphing \(y=3 \cos (\pi x)\).
101. Explain the term amplitude as it relates to the graph of a sinusoidal function.
102. Explain the term period as it relates to the graph of a sinusoidal function.
103. Explain how the amplitude and period of a sinusoidal graph are used to establish the scale on each coordinate axis.
104. Find an application in your major field that leads to a sinusoidal graph. Write an account of your findings.

\section*{Retain Your Knowledge}

Problems 105-108 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
105. If \(f(x)=x^{2}-5 x+1\), find \(\frac{f(x+h)-f(x)}{h}\).
106. Find the vertex of the graph of \(g(x)=-3 x^{2}+12 x-7\).
107. Find the intercepts of the graph of \(h(x)=3|x+2|-1\).
108. Solve: \(3 x-2(5 x+16)=-3 x+4(8-x)\)

\section*{'Are You Prepared?' Answers}
1. Vertical stretch by a factor of 3

2. Horizontal compression by a factor of \(\frac{1}{2}\)

\subsection*{5.5 Graphs of the Tangent, Cotangent, Cosecant, and Secant Functions}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Vertical Asymptotes (Section 3.4, pp. 234-237)

Now Work the 'Are You Prepared?' problems on page 441.
OBJECTIVES 1 Graph Functions of the Form \(y=A \tan (\omega x)+B\) and \(y=A \cot (\omega x)+B(\) p.437)
2 Graph Functions of the Form \(y=A \csc (\omega x)+B\) and \(y=A \sec (\omega x)+B(p .440)\)

\section*{The Graph of the Tangent Function}

Because the tangent function has period \(\pi\), it is only necessary to determine the graph over some interval of length \(\pi\). The rest of the graph consists of repetitions of that graph. Because the tangent function is not defined at \(\ldots,-\frac{3 \pi}{2},-\frac{\pi}{2}, \frac{\pi}{2}, \frac{3 \pi}{2}, \ldots\), we concentrate on the interval \(\left(-\frac{\pi}{2}, \frac{\pi}{2}\right)\), of length \(\pi\), and construct Table 8 , which lists some points on the graph of \(y=\tan x,-\frac{\pi}{2}<x<\frac{\pi}{2}\). Plot the points in the table and connect them with a smooth curve. See Figure 62 for a partial graph of \(y=\tan x\), where \(-\frac{\pi}{3} \leq x \leq \frac{\pi}{3}\).
Table 8
\begin{tabular}{|cll|}
\hline\(x\) & \(y=\tan x\) & \((x, y)\) \\
\(-\frac{\pi}{3}\) & \(-\sqrt{3} \approx-1.73\) & \(\left(-\frac{\pi}{3},-\sqrt{3}\right)\) \\
\(-\frac{\pi}{4}\) & -1 & \(\left(-\frac{\pi}{4},-1\right)\) \\
\(-\frac{\pi}{6}\) & \(-\frac{\sqrt{3}}{3} \approx-0.58\) & \(\left(-\frac{\pi}{6},-\frac{\sqrt{3}}{3}\right)\) \\
0 & 0 & \((0,0)\) \\
\(\frac{\pi}{6}\) & \(\frac{\sqrt{3}}{3} \approx 0.58\) & \(\left(\frac{\pi}{6}, \frac{\sqrt{3}}{3}\right)\) \\
\(\frac{\pi}{4}\) & 1 & \(\left(\frac{\pi}{4}, 1\right)\) \\
\(\frac{\pi}{3}\) & \(\sqrt{3} \approx 1.73\) & \(\left(\frac{\pi}{3}, \sqrt{3}\right)\) \\
\hline
\end{tabular}

Figure 62
\[
y=\tan x,-\frac{\pi}{3} \leq x \leq \frac{\pi}{3}
\]

To complete one period of the graph of \(y=\tan x\), investigate the behavior of the function as \(x\) approaches \(-\frac{\pi}{2}\) and \(\frac{\pi}{2}\). Be careful, though, because \(y=\tan x\) is not defined at these numbers. To determine this behavior, use the identity
\[
\tan x=\frac{\sin x}{\cos x}
\]

See Table 9. If \(x\) is close to \(\frac{\pi}{2} \approx 1.5708\) but remains less than \(\frac{\pi}{2}\), then \(\sin x\) is close to 1 , and \(\cos x\) is positive and close to 0 . (To see this, refer to the graphs of the sine function and the cosine function.) So the ratio \(\frac{\sin x}{\cos x}\) is positive and large. In fact, the closer \(x\) gets to \(\frac{\pi}{2}\), the closer \(\sin x\) gets to 1 and \(\cos x\) gets to 0 , so \(\tan x\) approaches \(\infty\left(\lim _{x \rightarrow \frac{\pi^{2}}{}} \tan x=\infty\right)\). In other words, the vertical line \(x=\frac{\pi}{2}\) is a vertical asymptote to the graph of \(y=\tan x\).
\begin{tabular}{l|llll|}
\cline { 2 - 5 } & \(\boldsymbol{x}\) & \(\boldsymbol{\operatorname { s i n }} \boldsymbol{x}\) & \(\boldsymbol{\operatorname { c o s }} \boldsymbol{x}\) & \(\boldsymbol{y}=\boldsymbol{\operatorname { t a n }} \boldsymbol{x}\) \\
\cline { 2 - 5 } & \(\frac{\pi}{3} \approx 1.05\) & \(\frac{\sqrt{3}}{2}\) & \(\frac{1}{2}\) & \(\sqrt{3} \approx 1.73\) \\
1.5 & 0.9975 & 0.0707 & 14.1 \\
1.57 & 0.9999 & \(7.96 \times 10^{-4}\) & 1255.8 \\
1.5707 & 0.9999 & \(9.6 \times 10^{-5}\) & 10,381 \\
\(\frac{\pi}{2} \approx 1.5708\) & 1 & 0 & Undefined \\
\hline
\end{tabular}

If \(x\) is close to \(-\frac{\pi}{2}\) but remains greater than \(-\frac{\pi}{2}\), then \(\sin x\) is close to -1 , and \(\cos x\) is positive and close to 0 . The ratio \(\frac{\sin x}{\cos x}\) approaches \(-\infty\left(\lim _{x \rightarrow-\pi^{+}} \tan x=-\infty\right)\). In other words, the vertical line \(x=-\frac{\pi}{2}\) is also a vertical asymptote to the graph.

With these observations, one period of the graph can be completed. Obtain the complete graph of \(y=\tan x\) by repeating this period, as shown in Figure 63.

Figure 63
\(y=\tan x,-\infty<x<\infty, x\) not equal to odd multiples of \(\frac{\pi}{2}\)

Check: Graph \(Y_{1}=\tan x\) and compare the result with Figure 63. Use TRACE to see what happens as \(x\) gets close to \(\frac{\pi}{2}\) but remains less than \(\frac{\pi}{2}\).

The graph of \(y=\tan x\) in Figure 63 illustrates the following properties.

\section*{Properties of the Tangent Function}
1. The domain is the set of all real numbers, except odd multiples of \(\frac{\pi}{2}\).
2. The range is the set of all real numbers.
3. The tangent function is an odd function, as the symmetry of the graph with respect to the origin indicates.
4. The tangent function is periodic, with period \(\pi\).
5. The \(x\)-intercepts are \(\ldots,-2 \pi,-\pi, 0, \pi, 2 \pi, 3 \pi, \ldots\); the \(y\)-intercept is 0 .
6. Vertical asymptotes occur at \(x=\ldots,-\frac{3 \pi}{2},-\frac{\pi}{2}, \frac{\pi}{2}, \frac{3 \pi}{2}, \ldots\).

Now Work problems 7 and 15
1 Graph Functions of the Form \(y=A \tan (\omega x)+B\) and \(y=A \cot (\omega x)+B\)
For tangent functions, there is no concept of amplitude since the range of the tangent function is \((-\infty, \infty)\). The role of \(A\) in \(y=A \tan (\omega x)+B\) is to provide the magnitude of the vertical stretch. The period of \(y=\tan x\) is \(\pi\), so the period of \(y=A \tan (\omega x)+B\) is \(\frac{\pi}{\omega}\), caused by the horizontal compression of the graph by a factor of \(\frac{1}{\omega}\). Finally, the presence of \(B\) indicates that a vertical shift is required.

\section*{EXAMPLE I}

\section*{Graphing a Function of the Form \(y=A \tan (\omega x)+B\)}

Graph: \(y=2 \tan x-1\). Use the graph to determine the domain and the range of \(y=2 \tan x-1\).

Solution Figure 64 shows the steps using transformations.
Figure 64

The domain of \(y=2 \tan x-1\) is \(\left\{x \left\lvert\, x \neq \frac{k \pi}{2}\right., k\right.\) is an odd integer \(\}\), and the range
is the set of all real numbers, or \((-\infty, \infty)\). is the set of all real numbers, or \((-\infty, \infty)\).
気 Check: Graph \(Y_{1}=2 \tan x-1\) to verify the graph shown in Figure 64(c).

\section*{EXAMPLE 2 Graphing a Function of the Form \(y=A \tan (\omega x)+B\)}

Graph \(y=3 \tan (2 x)\). Use the graph to determine the domain and the range of \(y=3 \tan (2 x)\).
Solution Figure 65 shows the steps using transformations.
Figure 65

(b) \(y=3 \tan x\)
(a) \(y=\tan x\)

Multiply by 3 ;
Vertical stretch
Vertical stretch by a factor of 3

Replace \(x\) by \(2 x\) Horizontal compression by a factor of \(\frac{1}{2}\)

The domain of \(y=3 \tan (2 x)\) is \(\left\{x \left\lvert\, x \neq \frac{k \pi}{4}\right., k\right.\) is an odd integer \(\}\), and the range is the set of all real numbers or \((-\infty, \infty)\).
( Check: Graph \(Y_{1}=3 \tan (2 x)\) to verify the graph in Figure 65(c).
Note in Figure 65(c) that the period of \(y=3 \tan (2 x)\) is \(\frac{\pi}{2}\) because of the compression of the original period \(\pi\) by a factor of \(\frac{1}{2}\). Note that the asymptotes are \(x=-\frac{\pi}{4}, x=\frac{\pi}{4}, x=\frac{3 \pi}{4}\), and so on, also because of the compression.

\section*{-Now Work problem 21}

\section*{The Graph of the Cotangent Function}

The graph of \(y=\cot x\) can be obtained in the same manner as the graph of \(y=\tan x\). The period of \(y=\cot x\) is \(\pi\). Because the cotangent function is not

Table 10
\begin{tabular}{|ccl|}
\hline\(x\) & \(y=\cot x\) & \((x, y)\) \\
\hline\(\frac{\pi}{6}\) & \(\sqrt{3}\) & \(\left(\frac{\pi}{6}, \sqrt{3}\right)\) \\
\(\frac{\pi}{4}\) & 1 & \(\left(\frac{\pi}{4}, 1\right)\) \\
\(\frac{\pi}{3}\) & \(\frac{\sqrt{3}}{3}\) & \(\left(\frac{\pi}{3}, \frac{\sqrt{3}}{3}\right)\) \\
\(\frac{\pi}{2}\) & 0 & \(\left(\frac{\pi}{2}, 0\right)\) \\
\(\frac{2 \pi}{3}\) & \(-\frac{\sqrt{3}}{3}\) & \(\left(\frac{2 \pi}{3},-\frac{\sqrt{3}}{3}\right)\) \\
\(\frac{3 \pi}{4}\) & -1 & \(\left(\frac{3 \pi}{4},-1\right)\) \\
\(\frac{5 \pi}{6}\) & \(-\sqrt{3}\) & \(\left(\frac{5 \pi}{6},-\sqrt{3}\right)\) \\
\hline
\end{tabular}
defined for integer multiples of \(\pi\), concentrate on the interval \((0, \pi)\). Table 10 lists some points on the graph of \(y=\cot x, 0<x<\pi\). As \(x\) approaches 0 but remains greater than 0 , the value of \(\cos x\) is close to 1 , and the value of \(\sin x\) is positive and close to 0 . Hence, the ratio \(\frac{\cos x}{\sin x}=\cot x\) is positive and large; so as \(x\) approaches 0 , with \(x>0, \cot x\) approaches \(\infty\left(\lim _{x \rightarrow 0^{+}} \cot x=\infty\right)\). Similarly, as \(x\) approaches \(\pi\) but remains less than \(\pi\), the value of \(\cos x\) is close to -1 , and the value of \(\sin x\) is positive and close to 0 . So the ratio \(\frac{\cos x}{\sin x}=\cot x\) is negative and approaches \(-\infty\) as \(x\) approaches \(\pi\left(\lim _{x \rightarrow \pi^{-}} \cot x=-\infty\right)\). Figure 66 shows the graph.

Figure 66
\(y=\cot x,-\infty<x<\infty, x\) not equal to integer multiples of \(\pi\)

The graph of \(y=A \cot (\omega x)+B\) has characteristics similar to those of the tangent function. The cotangent function \(y=A \cot (\omega x)+B\) has period \(\frac{\pi}{\omega}\). The cotangent function has no amplitude. \(A\) provides the magnitude of the vertical stretch; the presence of \(B\) indicates that a vertical shift is required.
an Now Worlk problem 23

\section*{The Graphs of the Cosecant Function and the Secant Function}

The cosecant and secant functions, sometimes referred to as reciprocal functions, are graphed by making use of the reciprocal identities
\[
\csc x=\frac{1}{\sin x} \quad \text { and } \quad \sec x=\frac{1}{\cos x}
\]

For example, the value of the cosecant function \(y=\csc x\) at a given number \(x\) equals the reciprocal of the corresponding value of the sine function, provided that the value of the sine function is not 0 . If the value of \(\sin x\) is 0 , then \(x\) is an integer multiple of \(\pi\). At such numbers, the cosecant function is not defined. In fact, the graph of the cosecant function has vertical asymptotes at integer multiples of \(\pi\). Figure 67 shows the graph.

Using the idea of reciprocals, the graph of \(y=\sec x\) can be obtained in a similar manner. See Figure 68.

Figure 68
\(y=\sec x,-\infty<x<\infty, x\) not equal to odd multiples of \(\frac{\pi}{2},|y| \geq 1\)

2 Graph Functions of the Form \(y=A \csc (\omega x)+B\) and \(y=A \sec (\omega x)+B\)
The role of \(A\) in these functions is to set the range. The range of \(y=\csc x\) is \(\{y \mid y \leq-1\) or \(y \geq 1\}\) or \(\{y||y| \geq 1\}\); the range of \(y=A \csc x\) is \(\{y||y| \geq|A|\}\) due to the vertical stretch of the graph by a factor of \(|A|\). Just as with the sine and cosine functions, the period of \(y=\csc (\omega x)\), and \(y=\sec (\omega x)\) becomes \(\frac{2 \pi}{\omega}\) due to the horizontal compression of the graph by a factor of \(\frac{1}{\omega}\). The presence of \(B\) indicates that a vertical shift is required.

Example 3 shows these functions graphed in two ways: using transformations and using the reciprocal function.

\section*{EXAMPLE 3 Graphing a Function of the Form \(y=A \csc (\omega x)+B\)}

Graph \(y=2 \csc x-1\). Use the graph to determine the domain and the range of \(y=2 \csc x-1\).

\section*{Solution}

\section*{Using Transformations}

Figure 69 shows the required steps.

(b) \(y=2 \csc x-1\)

The domain of \(y=2 \csc x-1\) is \(\{x \mid x \neq k \pi, k\) is an integer \(\}\), and the range is \(\{y \mid y \leq-3\) or \(y \geq 1\}\) or, using interval notation, \((-\infty,-3] \cup[1, \infty)\).

Check: Graph \(Y_{1}=2 \csc x-1\) to verify the graph shown in Figure 69 or 70.
Now Work problem

\subsection*{5.5 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. The graph of \(y=\frac{3 x-6}{x-4}\) has a vertical asymptote. What is it? (pp. 234-237)
2. True or False If \(x=3\) is a vertical asymptote of a rational function \(R\), then \(\lim _{x \rightarrow 3}|R(x)|=\infty\). (pp. 234-237)

\section*{Concepts and Vocabulary}
3. The graph of \(y=\tan x\) is symmetric with respect to the and has vertical asymptotes at
4. The graph of \(y=\sec x\) is symmetric with respect to the
\(\qquad\) and has vertical asymptotes at \(\qquad\) \(-\)
5. It is easiest to graph \(y=\sec x\) by first sketching the graph of
\(\qquad\)
6. True or False The graphs of \(y=\tan x, y=\cot x, y=\sec x\), and \(y=\csc x\) have infinitely many vertical asymptotes.

\section*{Skill Building}

In Problems 7-16, if necessary, refer to the graphs to answer each question.
7. What is the \(y\)-intercept of \(y=\tan x\) ?
8. What is the \(y\)-intercept of \(y=\cot x\) ?
9. What is the \(y\)-intercept of \(y=\sec x\) ?
10. What is the \(y\)-intercept of \(y=\csc x\) ?
11. For what numbers \(x,-2 \pi \leq x \leq 2 \pi\), does \(\sec x=1\) ? For what numbers \(x\) does \(\sec x=-1\) ?
12. For what numbers \(x,-2 \pi \leq x \leq 2 \pi\), does \(\csc x=1\) ? For what numbers \(x\) does \(\csc x=-1\) ?
13. For what numbers \(x,-2 \pi \leq x \leq 2 \pi\), does the graph of \(y=\sec x\) have vertical asymptotes?
14. For what numbers \(x,-2 \pi \leq x \leq 2 \pi\), does the graph of \(y=\csc x\) have vertical asymptotes?
15. For what numbers \(x,-2 \pi \leq x \leq 2 \pi\), does the graph of \(y=\tan x\) have vertical asymptotes?
16. For what numbers \(x,-2 \pi \leq x \leq 2 \pi\), does the graph of \(y=\cot x\) have vertical asymptotes?

In Problems 17-40, graph each function. Be sure to label key points and show at least two cycles. Use the graph to determine the domain and the range of each function.
17. \(y=3 \tan x\)
18. \(y=-2 \tan x\)
19. \(y=4 \cot x\)
20. \(y=-3 \cot x\)

30. \(y=\frac{1}{2} \csc (2 x)\)
31. \(y=-2 \csc (\pi x)\)
32. \(y=-3 \sec \left(\frac{\pi}{2} x\right)\)
33. \(y=\tan \left(\frac{1}{4} x\right)+1\)
34. \(y=2 \cot x-1\)
35. \(y=\sec \left(\frac{2 \pi}{3} x\right)+2\)
36. \(y=\csc \left(\frac{3 \pi}{2} x\right)\)
37. \(y=\frac{1}{2} \tan \left(\frac{1}{4} x\right)-2\)
38. \(y=3 \cot \left(\frac{1}{2} x\right)-2\)
39. \(y=2 \csc \left(\frac{1}{3} x\right)-1\)
40. \(y=3 \sec \left(\frac{1}{4} x\right)+1\)

\section*{Mixed Practice}

In Problems 41-44, find the average rate of change of from 0 to \(\frac{\pi}{6}\).
41. \(f(x)=\tan x\)
42. \(f(x)=\sec x\)
43. \(f(x)=\tan (2 x)\)
44. \(f(x)=\sec (2 x)\)

In Problems 45-48, find \((f \circ g)(x)\) and \((g \circ f)(x)\), and graph each of these functions.
45. \(f(x)=\tan x\)
46. \(\begin{aligned} f(x) & =2 \sec x \\ g(x) & =\frac{1}{2} x\end{aligned}\)
47. \(f(x)=-2 x\)
48. \(f(x)=\frac{1}{2} x\)
\(g(x)=2 \csc x\)

In Problems 49 and 50, graph each function.
49. \(f(x)= \begin{cases}\tan x & 0 \leq x<\frac{\pi}{2} \\ 0 & x=\frac{\pi}{2} \\ \sec x & \frac{\pi}{2}<x \leq \pi\end{cases}\)
50. \(g(x)= \begin{cases}\csc x & 0<x<\pi \\ 0 & x=\pi \\ \cot x & \pi<x<2 \pi\end{cases}\)

\section*{Applications and Extensions}
51. Carrying a Ladder around a Corner Two hallways, one of width 3 feet, the other of width 4 feet, meet at a right angle. See the illustration.

(a) Show that the length \(L\) of the line segment shown, as a function of the angle \(\theta\), is
\[
L(\theta)=3 \sec \theta+4 \csc \theta
\]
(b) Graph \(L=L(\theta), 0<\theta<\frac{\pi}{2}\).
(c) For what value of \(\theta\) is \(L\) the least?
(d) What is the length of the longest ladder that can be carried around the corner? Why is this also the least value of \(L\) ?
52. A Rotating Beacon Suppose that a fire truck is parked in front of a building as shown in the figure.

The beacon light on top of the fire truck is located 10 feet from the wall and has a light on each side. If the beacon light rotates 1 revolution every 2 seconds, then a model for determining the distance \(d\), in feet, that the beacon of light is from point \(A\) on the wall after \(t\) seconds is given by
\[
d(t)=|10 \tan (\pi t)|
\]
(a) Graph \(d(t)=|10 \tan (\pi t)|\) for \(0 \leq t \leq 2\).
(b) For what values of \(t\) is the function undefined? Explain what this means in terms of the beam of light on the wall.
(c) Fill in the following table.
\begin{tabular}{|l|l|l|l|l|l|}
\hline\(t\) & 0 & 0.1 & 0.2 & 0.3 & 0.4 \\
\hline\(d(t)=|10 \tan (\pi t)|\) & & & & & \\
\hline
\end{tabular}
(d) Compute \(\frac{d(0.1)-d(0)}{0.1-0}, \frac{d(0.2)-d(0.1)}{0.2-0.1}\), and so on, for each consecutive value of \(t\). These are called first differences.
(e) Interpret the first differences found in part (d). What is happening to the speed of the beam of light as \(d\) increases?
53. Exploration Graph
\[
y=\tan x \quad \text { and } \quad y=-\cot \left(x+\frac{\pi}{2}\right)
\]

Do you think that \(\tan x=-\cot \left(x+\frac{\pi}{2}\right)\) ?

\section*{Retain Your Knowledge}

Problems 54-57 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
54. Factor: \(125 p^{3}-8 q^{6}\)
55. Painting a Room Hazel can paint a room in 2 hours less time than her friend Gwyneth. Working together, they can paint the room 2.4 hours. How long does it take each friend to paint the room by herself?
56. Solve: \(9^{x-1}=3^{x^{2}-5}\)
57. Use the slope and the \(y\)-intercept to graph the linear function \(f(x)=\frac{1}{4} x-3\).

\section*{'Are You Prepared?' Answers}

2. True

\subsection*{5.6 Phase Shift; Sinusoidal Curve Fitting}

OBJECTIVES 1 Graph Sinusoidal Functions of the Form \(y=A \sin (\omega x-\phi)+B(p .443)\)
2 Build Sinusoidal Models from Data (p.447)

\section*{1 Graph Sinusoidal Functions of the Form \(y=A \sin (\omega x-\phi)+B\)}

We have seen that the graph of \(y=A \sin (\omega x), \omega>0\), has amplitude \(|A|\) and period \(T=\frac{2 \pi}{\omega}\). One cycle can be drawn as \(x\) varies from 0 to \(\frac{2 \pi}{\omega}\) or, equivalently, as \(\omega x\) varies from 0 to \(2 \pi\). See Figure 71.

Now consider the graph of
\[
y=A \sin (\omega x-\phi)
\]
which may also be written as
\[
y=A \sin \left[\omega\left(x-\frac{\phi}{\omega}\right)\right]
\]
where \(\omega>0\) and \(\phi\) (the Greek letter phi) are real numbers. The graph is a sine curve with amplitude \(|A|\). As \(\omega x-\phi\) varies from 0 to \(2 \pi\), one period is traced out. This period begins when
\[
\omega x-\phi=0 \quad \text { or } \quad x=\frac{\phi}{\omega}
\]

Figure 72
One cycle of
\(y=A \sin (\omega x-\phi), A>0\),
\(\omega>0, \phi>0\)

and will end when
\[
\omega x-\phi=2 \pi \quad \text { or } \quad x=\frac{\phi}{\omega}+\frac{2 \pi}{\omega}
\]

See Figure 72.
Notice that the graph of \(y=A \sin (\omega x-\phi)=A \sin \left[\omega\left(x-\frac{\phi}{\omega}\right)\right]\) is the same as the graph of \(y=A \sin (\omega x)\), except that it has been shifted \(\left|\frac{\phi}{\omega}\right|\) units (to the right if \(\phi>0\) and to the left if \(\phi<0\) ). This number \(\frac{\phi}{\omega}\) is called the phase shift of the graph of \(y=A \sin (\omega x-\phi)\).

For the graphs of \(y=A \sin (\omega x-\phi)\) or \(y=A \cos (\omega x-\phi), \omega>0\),
\[
\text { Amplitude }=|A| \quad \text { Period }=T=\frac{2 \pi}{\omega} \quad \text { Phase shift }=\frac{\phi}{\omega}
\]

The phase shift is to the left if \(\phi<0\) and to the right if \(\phi>0\).

\section*{EXAMPLE I}

NOTE The interval defining one cycle can also be found by solving the inequality
\[
0 \leq 2 x-\pi \leq 2 \pi
\]

Then
\[
\begin{aligned}
\pi \leq 2 x & \leq 3 \pi \\
\frac{\pi}{2} \leq x & \leq \frac{3 \pi}{2}
\end{aligned}
\]

Finding the Amplitude, Period, and Phase Shift of a Sinusoidal Function and Graphing It
Find the amplitude, period, and phase shift of \(y=3 \sin (2 x-\pi)\), and graph the function.

Solution Use the same four steps used to graph sinusoidal functions of the form \(y=A \sin (\omega x)\) or \(y=A \cos (\omega x)\) given on page 428.

\section*{STEP 1: Comparing}
\[
y=3 \sin (2 x-\pi)=3 \sin \left[2\left(x-\frac{\pi}{2}\right)\right]
\]
to
\[
y=A \sin (\omega x-\phi)=A \sin \left[\omega\left(x-\frac{\phi}{\omega}\right)\right]
\]
note that \(A=3, \omega=2\), and \(\phi=\pi\). The graph is a sine curve with amplitude \(|A|=3\), period \(T=\frac{2 \pi}{\omega}=\frac{2 \pi}{2}=\pi\), and phase shift \(=\frac{\phi}{\omega}=\frac{\pi}{2}\).

STEP 2: The graph of \(y=3 \sin (2 x-\pi)\) lies between -3 and 3 on the \(y\)-axis. One cycle begins at \(x=\frac{\phi}{\omega}=\frac{\pi}{2}\) and ends at \(x=\frac{\phi}{\omega}+\frac{2 \pi}{\omega}=\frac{\pi}{2}+\pi=\frac{3 \pi}{2}\). To find the five key points, divide the interval \(\left[\frac{\pi}{2}, \frac{3 \pi}{2}\right]\) into four subintervals, each of length \(\pi \div 4=\frac{\pi}{4}\), by finding the following values of \(x\) :
\[
\begin{array}{cllll}
\frac{\pi}{2} & \frac{\pi}{2}+\frac{\pi}{4}=\frac{3 \pi}{4} & \frac{3 \pi}{4}+\frac{\pi}{4}=\pi & \pi+\frac{\pi}{4}=\frac{5 \pi}{4} & \frac{5 \pi}{4}+\frac{\pi}{4}=\frac{3 \pi}{2} \\
\text { 1stx-coordinate } & \text { 2ndx-coordinate } & \text { 3rdx-coordinate } & \text { 4thx-coordinate } & \text { 5thx-coordinate }
\end{array}
\]

STEP 3: Use these values of \(x\) to determine the five key points on the graph:
\[
\left(\frac{\pi}{2}, 0\right) \quad\left(\frac{3 \pi}{4}, 3\right) \quad(\pi, 0) \quad\left(\frac{5 \pi}{4},-3\right) \quad\left(\frac{3 \pi}{2}, 0\right)
\]

STEP 4: Plot these five points, and fill in the graph of the sine function as shown in Figure 73(a). Extend the graph in each direction, obtaining Figure 73(b).

Figure 73

(a)

(b)

The graph of \(y=3 \sin (2 x-\pi)=3 \sin \left[2\left(x-\frac{\pi}{2}\right)\right]\) may also be obtained using transformations. See Figure 74.

Figure 74

Replace \(x\) by \(2 x\); Horizontal compression by a factor of \(\frac{1}{2}\)

Replace \(x\) by \(x-\frac{\pi}{2}\);
Shift right \(\frac{\pi}{2}\) units
(a) \(y=\sin x\)
(b) \(y=3 \sin x\)
(c) \(y=3 \sin (2 x)\)
(d) \(y=3 \sin \left[2\left(x-\frac{\pi}{2}\right)\right]\)
\[
=3 \sin (2 x-\pi)
\]

Check: Graph \(Y_{1}=3 \sin (2 x-\pi)\) using a graphing utility to verify the graph shown in Figure 73 or 74.

To graph a sinusoidal function of the form \(y=A \sin (\omega x-\phi)+B\), first graph the function \(y=A \sin (\omega x-\phi)\) and then apply a vertical shift.

\section*{EXAMPLE 2 Finding the Amplitude, Period, and Phase Shift} of a Sinusoidal Function and Graphing It

Find the amplitude, period, and phase shift of \(y=2 \cos (4 x+3 \pi)+1\), and graph the function.

Solution STEP 1: Begin by graphing \(y=2 \cos (4 x+3 \pi)\). Comparing
\[
y=2 \cos (4 x+3 \pi)=2 \cos \left[4\left(x+\frac{3 \pi}{4}\right)\right]
\]
to
\[
y=A \cos (\omega x-\phi)=A \cos \left[\omega\left(x-\frac{\phi}{\omega}\right)\right]
\]
note that \(A=2, \omega=4\), and \(\phi=-3 \pi\). The graph is a cosine curve with amplitude \(|A|=2\), period \(T=\frac{2 \pi}{\omega}=\frac{2 \pi}{4}=\frac{\pi}{2}\), and phase shift \(=\frac{\phi}{\omega}=-\frac{3 \pi}{4}\).

STEP 2: The graph of \(y=2 \cos (4 x+3 \pi)\) lies between -2 and 2 on the \(y\)-axis. One cycle begins at \(x=\frac{\phi}{\omega}=-\frac{3 \pi}{4}\) and ends at \(x=\frac{\phi}{\omega}+\frac{2 \pi}{\omega}=-\frac{3 \pi}{4}+\frac{\pi}{2}=-\frac{\pi}{4}\).
\[
\begin{aligned}
& \text { To find the five key points, divide the interval }\left[-\frac{3 \pi}{4},-\frac{\pi}{4}\right] \text { into four } \\
& \text { subintervals, each of length } \frac{\pi}{2} \div 4=\frac{\pi}{8} \text {, by finding the following values: } \\
& -\frac{3 \pi}{4} ;-\frac{3 \pi}{4}+\frac{\pi}{8}=-\frac{5 \pi}{8} ; \quad-\frac{5 \pi}{8}+\frac{\pi}{8}=-\frac{\pi}{2} ; \quad-\frac{\pi}{2}+\frac{\pi}{8}=-\frac{3 \pi}{8} ;-\frac{3 \pi}{8}+\frac{\pi}{8}=-\frac{\pi}{4} \\
& \text { 1st } x \text {-coordinate 2nd } x \text {-coordinate } \quad \text { 3rd } x \text {-coordinate } \quad \text { 4th } x \text {-coordinate } \quad \text { 5th } x \text {-coordinate }
\end{aligned}
\]

NOTE The interval defining one cycle can also be found by solving the inequality
\[
0 \leq 4 x+3 \pi \leq 2 \pi
\]

Then
\[
\begin{aligned}
& -3 \pi \leq 4 x \leq-\pi \\
& -\frac{3 \pi}{4} \leq x \leq-\frac{\pi}{4}
\end{aligned}
\]

Figure 75

STEP 3: The five key points on the graph of \(y=2 \cos (4 x+3 \pi)\) are
\[
\left(-\frac{3 \pi}{4}, 2\right)\left(-\frac{5 \pi}{8}, 0\right)\left(-\frac{\pi}{2},-2\right)\left(-\frac{3 \pi}{8}, 0\right)\left(-\frac{\pi}{4}, 2\right)
\]

STEP 4: Plot these five points and fill in the graph of the cosine function as shown in Figure 75(a). Extend the graph in each direction to obtain Figure 75(b), the graph of \(y=2 \cos (4 x+3 \pi)\).
STEP 5: A vertical shift up 1 unit gives the final graph. See Figure 75(c).

The graph of \(y=2 \cos (4 x+3 \pi)+1=2 \cos \left[4\left(x+\frac{3 \pi}{4}\right)\right]+1\) may also be obtained using transformations. See Figure 76.
Figure 76

(a) \(y=2 \cos x\)
\(\xrightarrow[\text { Replace } x \text { by } 4 x \text {; }]{\text {; }}\) Horizontal compression by a factor of \(\frac{1}{4}\)

(b) \(y=2 \cos (4 x)\)

Replace \(x\) by \(x+\frac{3 \pi}{4}\);
Shift left \(\frac{3 \pi}{4}\) units

(c) \(\begin{aligned} y & =2 \cos \left[4\left(x+\frac{3 \pi}{4}\right)\right] \\ & =2 \cos (4 x+3 \pi)\end{aligned}\)

Add 1;
Vertical shift
up 1 unit

(d) \(y=2 \cos (4 x+3 \pi)+1\)

\section*{SUMMARY}

Steps for Graphing Sinusoidal Functions \(y=A \sin (\omega x-\phi)+B\) or \(y=A \cos (\omega x-\phi)+B\)
STEP 1: Determine the amplitude \(|A|\), period \(T=\frac{2 \pi}{\omega}\), and phase shift \(\frac{\phi}{\omega}\).
STEP 2: Determine the starting point of one cycle of the graph, \(\frac{\phi}{\omega}\). Determine the ending point of one cycle of the graph, \(\frac{\phi}{\omega}+\frac{2 \pi}{\omega}\). Divide the interval \(\left[\frac{\phi}{\omega}, \frac{\phi}{\omega}+\frac{2 \pi}{\omega}\right]\) into four subintervals, each of length \(\frac{2 \pi}{\omega} \div 4\).

STEP 3: Use the endpoints of the subintervals to find the five key points on the graph.
STEP 4: Plot the five key points and connect them with a sinusoidal graph to obtain one cycle of the graph. Extend the graph in each direction to make it complete.
STEP 5: If \(B \neq 0\), apply a vertical shift.

\section*{2 Build Sinusoidal Models from Data}

Scatter diagrams of data sometimes take the form of a sinusoidal function. Let's look at an example.

The data given in Table 11 represent the average monthly temperatures in Denver, Colorado. Since the data represent average monthly temperatures collected over many years, the data will not vary much from year to year and so will essentially repeat each year. In other words, the data are periodic. Figure 77 shows the scatter diagram of these data repeated over 2 years, where \(x=1\) represents January, \(x=2\) represents February, and so on.

Notice that the scatter diagram looks like the graph of a sinusoidal function. We choose to fit the data to a sine function of the form
\[
y=A \sin (\omega x-\phi)+B
\]
where \(A, B, \omega\), and \(\phi\) are constants.

Table 11

Source: U.S. National Oceanic and Atmospheric Administration

Figure 77

\section*{EXAMPLE 3}

Solution

Figure 78

Figure 79

Figure 80

\section*{Finding a Sinusoidal Function from Temperature Data}

Fit a sine function to the data in Table 11.
Begin with a scatter diagram of the data for one year. See Figure 78. The data will be fitted to a sine function of the form
\[
y=A \sin (\omega x-\phi)+B
\]

STEP 1: To find the amplitude \(A\), compute
\[
\begin{aligned}
\text { Amplitude } & =\frac{\text { largest data value }- \text { smallest data value }}{2} \\
& =\frac{74.2-30.0}{2}=22.1
\end{aligned}
\]

To see the remaining steps in this process, superimpose the graph of the function \(y=22.1 \sin x\), where \(x\) represents months, on the scatter diagram.

Figure 79 shows the two graphs. To fit the data, the graph needs to be shifted vertically, shifted horizontally, and stretched horizontally.

STEP 2: Determine the vertical shift by finding the average of the highest and lowest data values.
\[
\text { Vertical shift }=\frac{74.2+30.0}{2}=52.1
\]

Now superimpose the graph of \(y=22.1 \sin x+52.1\) on the scatter diagram. See Figure 80.

We see that the graph needs to be shifted horizontally and stretched horizontally.
STEP 3: It is easier to find the horizontal stretch factor first. Since the temperatures repeat every 12 months, the period of the function is \(T=12\). Because \(T=\frac{2 \pi}{\omega}=12\), find
\[
\omega=\frac{2 \pi}{12}=\frac{\pi}{6}
\]

Now superimpose the graph of \(y=22.1 \sin \left(\frac{\pi}{6} x\right)+52.1\) on the scatter diagram. See Figure 81, where it is clear that the graph still needs to be shifted horizontally.

Figure 81

Step 4: To determine the horizontal shift, use the period \(T=12\) and divide the interval [ 0,12 ] into four subintervals of length \(12 \div 4=3\) :
\[
[0,3], \quad[3,6], \quad[6,9], \quad[9,12]
\]

Figure 82

The sine curve is increasing on the interval \((0,3)\) and is decreasing on the interval \((3,9)\), so a local maximum occurs at \(x=3\). The data indicate that a maximum occurs at \(x=7\) (corresponding to July's temperature), so the graph of the function must be shifted 4 units to the right by replacing \(x\) by \(x-4\). Doing this yields
\[
y=22.1 \sin \left(\frac{\pi}{6}(x-4)\right)+52.1
\]

Multiplying out reveals that a sine function of the form \(y=A \sin (\omega x-\phi)+B\) that fits the data is
\[
y=22.1 \sin \left(\frac{\pi}{6} x-\frac{2 \pi}{3}\right)+52.1
\]

The graph of \(y=22.1 \sin \left(\frac{\pi}{6} x-\frac{2 \pi}{3}\right)+52.1\) and the scatter diagram of the data are shown in Figure 82.

The steps to fit a sine function
\[
y=A \sin (\omega x-\phi)+B
\]
to sinusoidal data follow.

\section*{Steps for Fitting a Sine Function \(y=A \sin (\omega x-\phi)+B\) to Data}

Step 1: Determine \(A\), the amplitude of the function.
\[
\text { Amplitude }=\frac{\text { largest data value }- \text { smallest data value }}{2}
\]

STEP 2: Determine \(B\), the vertical shift of the function.
\[
\text { Vertical shift }=\frac{\text { largest data value }+ \text { smallest data value }}{2}
\]

Step 3: Determine \(\omega\). Since the period \(T\), the time it takes for the data to repeat, is \(T=\frac{2 \pi}{\omega}\), we have
\[
\omega=\frac{2 \pi}{T}
\]

STEP 4: Determine the horizontal shift of the function by using the period of the data. Divide the period into four subintervals of equal length. Determine the \(x\)-coordinate for the maximum of the sine function and the \(x\)-coordinate for the maximum value of the data. Use this information to determine the value of the phase shift, \(\frac{\phi}{\omega}\).
- Now Work problems 29(a)-(c)

Let's look at another example. Since the number of hours of sunlight in a day cycles annually, the number of hours of sunlight in a day for a given location can be modeled by a sinusoidal function.

The longest day of the year (in terms of hours of sunlight) occurs on the day of the summer solstice. For locations in the Northern Hemisphere, the summer solstice is the time when the Sun is farthest north. In 2013, the summer solstice occurred on June 21 (the 172nd day of the year) at 1:04 Am EDT. The shortest day of the year occurs on the day of the winter solstice. The winter solstice is the time when the Sun
is farthest south (again, for locations in the Northern Hemisphere). In 2013, the winter solstice occurred on December 21 (the 355th day of the year) at 12:11 pm (EST).

\section*{EXAMPLE 4 Finding a Sinusoidal Function for Hours of Daylight}

According to the Old Farmer's Almanac, the number of hours of sunlight in Boston on the day of the summer solstice is 15.30 , and the number of hours of sunlight on the day of the winter solstice is 9.08 .
(a) Find a sinusoidal function of the form \(y=A \sin (\omega x-\phi)+B\) that fits the data.
(b) Use the function found in part (a) to predict the number of hours of sunlight on April 1, the 91st day of the year.
(c) Draw a graph of the function found in part (a).
(d) Look up the number of hours of sunlight for April 1 in the Old Farmer's Almanac and compare it to the results found in part (b).

Source: The Old Farmer's Almanac, www.almanac.com/rise

Solution
(a) STEP 1: Amplitude \(=\frac{\text { largest data value }- \text { smallest data value }}{2}\)
\[
=\frac{15.30-9.08}{2}=3.11
\]

STEP 2: Vertical shift \(=\frac{\text { largest data value }+ \text { smallest data value }}{2}\)
\[
=\frac{15.30+9.08}{2}=12.19
\]

STEP 3: The data repeat every 365 days. Since \(T=\frac{2 \pi}{\omega}=365\), we find
\[
\omega=\frac{2 \pi}{365}
\]

So far, we have \(y=3.11 \sin \left(\frac{2 \pi}{365} x-\phi\right)+12.19\).

Step 4: To determine the horizontal shift, use the period \(T=365\) and divide the interval \([0,365]\) into four subintervals of length \(365 \div 4=91.25\) :
\[
[0,91.25], \quad[91.25,182.5], \quad[182.5,273.75], \quad[273.75,365]
\]

The sine curve is increasing on the interval \((0,91.25)\) and is decreasing on the interval \((91.25,273.75)\) so a local maximum occurs at \(x=91.25\). Since the maximum occurs on the summer solstice at \(x=172\), we must shift the graph of the function \(172-91.25=80.75\) units to the right by replacing \(x\) by \(x-80.75\). Doing this yields
\[
y=3.11 \sin \left(\frac{2 \pi}{365}(x-80.75)\right)+12.19
\]

Multiply out to obtain a sine function of the form \(y=A \sin (\omega x-\phi)+B\) that fits the data.
\[
y=3.11 \sin \left(\frac{2 \pi}{365} x-\frac{323 \pi}{730}\right)+12.19
\]

Figure 83

(b) To predict the number of hours of daylight on April 1, let \(x=91\) in the function found in part (a) and obtain
\[
\begin{aligned}
y & =3.11 \sin \left(\frac{2 \pi}{365} \cdot 91-\frac{323}{730} \pi\right)+12.19 \\
& \approx 12.74
\end{aligned}
\]

The prediction is that there will be about 12.74 hours \(=12\) hours, 44 minutes of sunlight on April 1 in Boston.
(c) The graph of the function found in part (a) is given in Figure 83.
(d) According to the Old Farmer's Almanac, there will be 12 hours 45 minutes of sunlight on April 1 in Boston.
-Now Work problem 35
Certain graphing utilities (such as a TI-83, TI-84 Plus, and TI-86) have the capability of finding the sine function of best fit for sinusoidal data. At least four data points are required for this process.

\section*{EXAMPLE 5 Finding the Sine Function of Best Fit}

Use a graphing utility to find the sine function of best fit for the data in Table 11. Graph this function with the scatter diagram of the data.
Solution Enter the data from Table 11 and execute the SINe REGression program. The result is shown in Figure 84.
The output that the utility provides shows the equation
\[
y=a \sin (b x+c)+d
\]

The sinusoidal function of best fit is
\[
y=21.43 \sin (0.56 x-2.44)+51.71
\]
where \(x\) represents the month and \(y\) represents the average temperature.
Figure 85 shows the graph of the sinusoidal function of best fit on the scatter diagram.

Figure 84

Figure 85

wn Now Work problems \(29(\mathrm{~d})\) and (e)

\subsection*{5.6 Assess Your Understanding}

\section*{Concepts and Vocabulary}
1. For the graph of \(y=A \sin (\omega x-\phi)\), the number \(\frac{\phi}{\omega}\) is
2. True or False A graphing utility requires only two data points to find the sine function of best fit. called the \(\qquad\) \(-\)

\section*{Skill Building}

In Problems 3-14, find the amplitude, period, and phase shift of each function. Graph each function. Be sure to label key points. Show at least two periods.
3. \(y=4 \sin (2 x-\pi)\)
4. \(y=3 \sin (3 x-\pi)\)
5. \(y=2 \cos \left(3 x+\frac{\pi}{2}\right)\)
6. \(y=3 \cos (2 x+\pi)\)
7. \(y=-3 \sin \left(2 x+\frac{\pi}{2}\right)\)
8. \(y=-2 \cos \left(2 x-\frac{\pi}{2}\right)\)
9. \(y=4 \sin (\pi x+2)-5\)
10. \(y=2 \cos (2 \pi x+4)+4\)
11. \(y=3 \cos (\pi x-2)+5\)
12. \(y=2 \cos (2 \pi x-4)-1\)
13. \(y=-3 \sin \left(-2 x+\frac{\pi}{2}\right)\)
14. \(y=-3 \cos \left(-2 x+\frac{\pi}{2}\right)\)

In Problems 15-18, write the equation of a sine function that has the given characteristics.
15. Amplitude: 2

Period: \(\pi\)
Phase shift: \(\frac{1}{2}\)
16. Amplitude: 3

Period: \(\frac{\pi}{2}\)
Phase shift: 2
17. Amplitude: 3

Period: \(3 \pi\)
Phase shift: \(-\frac{1}{3}\)
18. Amplitude: 2

Period: \(\pi\) Phase shift: - 2

\section*{- Mixed Practice}

In Problems 19-26, apply the methods of this and the previous section to graph each function. Be sure to label key points and show at least two periods.
19. \(y=2 \tan (4 x-\pi)\)
20. \(y=\frac{1}{2} \cot (2 x-\pi)\)
21. \(y=3 \csc \left(2 x-\frac{\pi}{4}\right)\)
22. \(y=\frac{1}{2} \sec (3 x-\pi)\)
23. \(y=-\cot \left(2 x+\frac{\pi}{2}\right)\)
24. \(y=-\tan \left(3 x+\frac{\pi}{2}\right)\)
25. \(y=-\sec (2 \pi x+\pi)\)
26. \(y=-\csc \left(-\frac{1}{2} \pi x+\frac{\pi}{4}\right)\)

\section*{Applications and Extensions}
27. Alternating Current (ac) Circuits The current \(I\), in amperes, flowing through an ac (alternating current) circuit at time \(t\), in seconds, is
\[
I(t)=120 \sin \left(30 \pi t-\frac{\pi}{3}\right) \quad t \geq 0
\]

What is the period? What is the amplitude? What is the phase shift? Graph this function over two periods.
28. Alternating Current (ac) Circuits The current \(I\), in amperes, flowing through an ac (alternating current) circuit at time \(t\), in seconds, is
\[
I(t)=220 \sin \left(60 \pi t-\frac{\pi}{6}\right) \quad t \geq 0
\]

What is the period? What is the amplitude? What is the phase shift? Graph this function over two periods.
29. Hurricanes Hurricanes are categorized using the SaffirSimpson Hurricane Scale, with winds 111-130 miles per hour (mph) corresponding to a category 3 hurricane, winds \(131-155 \mathrm{mph}\) corresponding to a category 4 hurricane, and winds in excess of 155 mph corresponding to a category 5 hurricane. The following data represent the number of major hurricanes in the Atlantic Basin (category 3, 4, or 5) each decade from 1921 to 2010.
(a) Draw a scatter diagram of the data.
(b) Find a sinusoidal function of the form \(y=A \sin (\omega x-\phi)+B\) that models the data.
(c) Draw the sinusoidal function found in part (b) on the scatter diagram.
(d) Use a graphing utility to find the sinusoidal function of best fit.
(e) Draw the sinusoidal function of best fit on a scatter diagram of the data.
\begin{tabular}{|lc|}
\hline Decade, \(\boldsymbol{x}\) & Major Hurricanes, \(\boldsymbol{H}\) \\
\hline \(1921-1930,1\) & 17 \\
\(1931-1940,2\) & 16 \\

33. Tides The length of time between consecutive high tides is 12 hours and 25 minutes. According to the National Oceanic and Atmospheric Administration, on Saturday, July 21, 2012, in Charleston, South Carolina, high tide occurred at 11:30 AM (11.5 hours) and low tide occurred at 5:31 pm (17.5167 hours). Water heights are measured as the amounts above or below the mean lower low water. The height of the water at high tide was 5.84 feet, and the height of the water at low tide was -0.37 foot.
(a) Approximately when will the next high tide occur?
(b) Find a sinusoidal function of the form \(y=A \sin (\omega x-\phi)+B\) that models the data.
(c) Use the function found in part (b) to predict the height of the water at 3 PM on July 21, 2012.
34. Tides The length of time between consecutive high tides is 12 hours and 25 minutes. According to the National Oceanic and Atmospheric Administration, on Saturday, July 21, 2012, in Sitka Sound, Alaska, high tide occurred at 2:37 am (2.6167 hours) and low tide occurred at 9:12 pm (9.2 hours). Water heights are measured as the amounts above or below the mean lower low water. The height of the water at high tide was 11.09 feet, and the height of the water at low tide was -2.49 feet.
(a) Approximately when will the next high tide occur?
(b) Find a sinusoidal function of the form \(y=A \sin (\omega x-\phi)+B\) that models the data.
(c) Use the function found in part (b) to predict the height of the water at 6 Pm.
35. Hours of Daylight According to the Old Farmer's Almanac, in Miami, Florida, the number of hours of sunlight on the summer solstice of 2013 was 13.75, and the number of hours of sunlight on the winter solstice was 10.52 .
(a) Find a sinusoidal function of the form \(y=A \sin (\omega x-\phi)+B\) that models the data.
(b) Use the function found in part (a) to predict the number of hours of sunlight on April 1, the 91st day of the year.
(c) Draw a graph of the function found in part (a).
(d) Look up the number of hours of sunlight for April 1 in the Old Farmer's Almanac, and compare the actual hours of daylight to the results found in part (b).
36. Hours of Daylight According to the Old Farmer's Almanac, in Detroit, Michigan, the number of hours of sunlight on the summer solstice of 2013 was 15.27 , and the number of hours of sunlight on the winter solstice was 9.07 .
(a) Find a sinusoidal function of the form \(y=A \sin (\omega x-\phi)+B\) that models the data.
(b) Use the function found in part (a) to predict the number of hours of sunlight on April 1, the 91st day of the year.
(c) Draw a graph of the function found in part (a).
(d) Look up the number of hours of sunlight for April 1 in the Old Farmer's Almanac, and compare the actual hours of daylight to the results found in part (b).
37. Hours of Daylight According to the Old Farmer's Almanac, in Anchorage, Alaska, the number of hours of sunlight on the summer solstice of 2013 was 19.37 , and the number of hours of sunlight on the winter solstice was 5.45.
(a) Find a sinusoidal function of the form \(y=A \sin (\omega x-\phi)+B\) that models the data.
(b) Use the function found in part (a) to predict the number of hours of sunlight on April 1, the 91st day of the year.
(c) Draw a graph of the function found in part (a).
(d) Look up the number of hours of sunlight for April 1 in the Old Farmer's Almanac, and compare the actual hours of daylight to the results found in part (b).
38. Hours of Daylight According to the Old Farmer's Almanac, in Honolulu, Hawaii, the number of hours of sunlight on the summer solstice of 2013 was 13.42 , and the number of hours of sunlight on the winter solstice was 10.83 .
(a) Find a sinusoidal function of the form \(y=A \sin (\omega x-\phi)+B\) that models the data.
(b) Use the function found in part (a) to predict the number of hours of sunlight on April 1, the 91st day of the year.
(c) Draw a graph of the function found in part (a).
(d) Look up the number of hours of sunlight for April 1 in the Old Farmer's Almanac, and compare the actual hours of daylight to the results found in part (b).

\section*{Discussion and Writing}
39. Explain how the amplitude and period of a sinusoidal graph are used to establish the scale on each coordinate axis.
40. Find an application in your major field that leads to a sinusoidal graph. Write an account of your findings.

\section*{-Retain Your Knowledge}

Problems 41-44 are based on material learned earlier in the course. The purpose of these problems to keep the material fresh in your mind so that you are better prepared for the final exam.
41. Given \(f(x)=\frac{4 x+9}{2}\), find \(f^{-1}(x)\).
42. Solve: \(0.25(0.4 x+0.8)=3.7-1.4 x\)
43. Multiply: \((8 x+15 y)^{2}\)
44. Find the exact distance between the points \((4,-1)\) and \((10,3)\).

\sin \theta=\frac{y}{r} & \cos \theta=\frac{x}{r} & \tan \theta=\frac{y}{x} \quad x \neq 0 \\
\csc \theta=\frac{r}{y} \quad y \neq 0 & \sec \theta=\frac{r}{x} \quad x \neq 0 & \cot \theta=\frac{x}{y} \quad y \neq 0
\end{array}
\]
\(f(\theta+p)=f(\theta)\), for all \(\theta, p>0\), where the smallest such \(p\) is the fundamental period.

\section*{Formulas}
\[
\begin{aligned}
1 \text { revolution } & =360^{\circ}(\mathrm{p} .377) \\
& =2 \pi \text { radians }(\mathrm{p} .380)
\end{aligned}
\]
\(1^{\circ}=\frac{\pi}{180} \operatorname{radian}(\mathrm{p} .381) 1\) radian \(=\frac{180}{\pi}\) degrees (p.381)
\(s=r \theta(\mathrm{p} .380)\)
\(A=\frac{1}{2} r^{2} \theta(\mathrm{p} .383)\)
\(\theta\) is measured in radians; \(s\) is the length of the arc subtended by the central angle \(\theta\) of the circle of radius \(r\).
\(A\) is the area of the sector of a circle of radius \(r\) formed by a central angle of \(\theta\) radians.
\(v\) is the linear speed along the circle of radius \(r ; \omega\) is the angular speed (measured in radians per unit time).

Table of Values (pp. 394 and 398)
\begin{tabular}{|c|c|c|c|c|c|c|c|}
\hline \(\theta\) (Radians) & \(\theta\) (Degrees) & \(\boldsymbol{\operatorname { s i n }} \boldsymbol{\theta}\) & \(\boldsymbol{\operatorname { c o s }} \boldsymbol{\theta}\) & \(\boldsymbol{\operatorname { t a n }} \boldsymbol{\theta}\) & \(\boldsymbol{c s c} \boldsymbol{\theta}\) & \(\boldsymbol{\operatorname { s e c }} \boldsymbol{\theta}\) & \(\boldsymbol{\operatorname { c o t }} \boldsymbol{\theta}\) \\
\hline 0 & \(0^{\circ}\) & 0 & , & 0 & Not defined & 1 & Not defined \\
\hline \(\frac{\pi}{6}\) & \(30^{\circ}\) & \(\frac{1}{2}\) & \(\frac{\sqrt{3}}{2}\) & \(\frac{\sqrt{3}}{3}\) & 2 & \(\frac{2 \sqrt{3}}{3}\) & \(\sqrt{3}\) \\
\hline \(\frac{\pi}{4}\) & \(45^{\circ}\) & \(\frac{\sqrt{2}}{2}\) & \(\frac{\sqrt{2}}{2}\) & 1 & \(\sqrt{2}\) & \(\sqrt{2}\) & 1 \\
\hline \(\frac{\pi}{3}\) & \(60^{\circ}\) & \(\frac{\sqrt{3}}{2}\) & \(\frac{1}{2}\) & \(\sqrt{3}\) & \(\frac{2 \sqrt{3}}{3}\) & 2 & \(\frac{\sqrt{3}}{3}\) \\
\hline \[
\frac{\pi}{2}
\] & \(90^{\circ}\) & 1 & 0 & Not defined & 1 & Not defined & 0 \\
\hline \(\pi\) & \(180^{\circ}\) & 0 & -1 & 0 & Not defined & -1 & Not defined \\
\hline \(\frac{3 \pi}{2}\) & \(270^{\circ}\) & -1 & 0 & Not defined & -1 & Not defined & 0 \\
\hline
\end{tabular}

\section*{The Unit Circle (pp. 398-400)}

\section*{Fundamental Identities (p. 413)}
\[
\begin{aligned}
& \tan \theta=\frac{\sin \theta}{\cos \theta} \quad \cot \theta=\frac{\cos \theta}{\sin \theta} \\
& \csc \theta=\frac{1}{\sin \theta} \quad \sec \theta=\frac{1}{\cos \theta} \quad \cot \theta=\frac{1}{\tan \theta} \\
& \sin ^{2} \theta+\cos ^{2} \theta=1 \quad \tan ^{2} \theta+1=\sec ^{2} \theta \quad \cot ^{2} \theta+1=\csc ^{2} \theta
\end{aligned}
\]

\section*{Properties of the Trigonometric Functions}

\[
\begin{array}{ll}
y=A \sin (\omega x)+B, \quad \omega>0 & \text { Period }=\frac{2 \pi}{\omega}(\mathrm{pp} \cdot 426,444) \\
y=A \cos (\omega x)+B, \quad \omega>0 & \text { Amplitude }=|A|(\mathrm{pp} .426,444) \\
y=A \sin (\omega x-\phi)+B=A \sin \left[\omega\left(x-\frac{\phi}{\omega}\right)\right]+B & \text { Phase shift }=\frac{\phi}{\omega}(\mathrm{p} \cdot 444) \\
y=A \cos (\omega x-\phi)+B=A \cos \left[\omega\left(x-\frac{\phi}{\omega}\right)\right]+B &
\end{array}
\]

\section*{Objectives}

\section*{Section}
5.1
5.2

1 Graph functions of the form \(y=A \sin (\omega x)\) using transformations (p. 422)

2 Graph functions of the form \(y=A \cos (\omega x)\) using transformations (p. 423)

3 Determine the amplitude and period of sinusoidal functions (p. 424)
4 Graph sinusoidal functions using key points (p. 426)
5 Find an equation for a sinusoidal graph (p. 430)
5.5 1 Graph functions of the form \(y=A \tan (\omega x)+B\) and \(y=A \cot (\omega x)+B(\mathrm{p} .437)\)
2 Graph functions of the form \(y=A \csc (\omega x)+B\) and \(y=A \sec (\omega x)+B(\) p. 440)
5.6

\section*{You should be able to...}

1 Convert between decimals and degrees, minutes, seconds measures for angles (p. 378)
2 Find the length of an arc of a circle (p.379)
3 Convert from degrees to radians and from radians to degrees (p.380)
4 Find the area of a sector of a circle (p.383)
5 Find the linear speed of an object traveling in circular motion (p. 384)
1 Find the exact values of the trigonometric functions using a point on the unit circle (p. 392)
2 Find the exact values of the trigonometric functions of quadrantal angles (p. 393)
3 Find the exact values of the trigonometric functions of \(\frac{\pi}{4}=45^{\circ}\) (p. 395)
4 Find the exact values of the trigonometric functions of \(\frac{\pi}{6}=30^{\circ}\) and \(\frac{\pi}{3}=60^{\circ}\) (p.396)
5 Find the exact values of the trigonometric functions for integer multiples of \(\frac{\pi}{6}=30^{\circ}, \frac{\pi}{4}=45^{\circ}\), and \(\frac{\pi}{3}=60^{\circ}\) (p.398)
6 Use a calculator to approximate the value of a trigonometric function (p. 400)
7 Use a circle of radius \(r\) to evaluate the trigonometric functions (p. 400)
1 Determine the domain and the range of the trigonometric functions (p. 407)
2 Determine the period of the trigonometric functions (p. 409)
3 Determine the signs of the trigonometric functions in a given quadrant (p. 411)
4 Find the values of the trigonometric functions using fundamental identities (p. 411)
5 Find the exact values of the trigonometric functions of an angle given one of the functions and the quadrant of the angle (p. 413)
6 Use even-odd properties to find the exact values of the trigonometric functions (p. 416)

Graph sinusoidal functions of the form \(y=A \sin (\omega x-\phi)+B\) (p. 443)

2 Build sinusoidal models from data (p. 447)

\section*{Review Exercises}

In Problems 1 and 2, convert each angle in degrees to radians. Express your answer as a multiple of \(\pi\).
1. \(135^{\circ}\)
2. \(18^{\circ}\)

In Problems 3 and 4, convert each angle in radians to degrees.
3. \(\frac{3 \pi}{4}\)
4. \(-\frac{5 \pi}{2}\)

In Problems 5-15, find the exact value of each expression. Do not use a calculator.
5. \(\tan \frac{\pi}{4}-\sin \frac{\pi}{6}\)
6. \(3 \sin 45^{\circ}-4 \tan \frac{\pi}{6}\)
7. \(6 \cos \frac{3 \pi}{4}+2 \tan \left(-\frac{\pi}{3}\right)\)
8. \(\sec \left(-\frac{\pi}{3}\right)-\cot \left(-\frac{5 \pi}{4}\right)\)
9. \(\tan \pi+\sin \pi\)
10. \(\cos 540^{\circ}-\tan \left(-405^{\circ}\right)\)
11. \(\sin ^{2} 20^{\circ}+\frac{1}{\sec ^{2} 20^{\circ}}\)
12. \(\sec 50^{\circ} \cos 50^{\circ}\)
13. \(\frac{\cos \left(-40^{\circ}\right)}{\cos 40^{\circ}}\)
14. \(\frac{\sin \left(-40^{\circ}\right)}{\sin 40^{\circ}}\)
15. \(\sin 310^{\circ} \csc \left(-50^{\circ}\right)\)

In Problems 16-23, find the exact value of each of the remaining trigonometric functions.
16. \(\sin \theta=\frac{4}{5}, \quad \theta\) is acute
17. \(\tan \theta=\frac{12}{5}, \quad \sin \theta<0\)
18. \(\sec \theta=-\frac{5}{4}, \quad \tan \theta<0\)
19. \(\sin \theta=\frac{12}{13}, \quad \theta\) in quadrant II
20. \(\sin \theta=-\frac{5}{13}, \quad \frac{3 \pi}{2}<\theta<2 \pi\)
21. \(\tan \theta=\frac{1}{3}, \quad 180^{\circ}<\theta<270^{\circ}\)
22. \(\sec \theta=3, \quad \frac{3 \pi}{2}<\theta<2 \pi\)
23. \(\cot \theta=-2, \quad \frac{\pi}{2}<\theta<\pi\)

In Problems 24-32, graph each function. Each graph should contain at least two periods. Use the graph to determine the domain and the range of each function.
24. \(y=2 \sin (4 x)\)
25. \(y=-3 \cos (2 x)\)
26. \(y=\tan (x+\pi)\)
27. \(y=-2 \tan (3 x)\)
28. \(y=\cot \left(x+\frac{\pi}{4}\right)\)
29. \(y=4 \sec (2 x)\)
30. \(y=\csc \left(x+\frac{\pi}{4}\right)\)
31. \(y=4 \sin (2 x+4)-2\)
32. \(y=5 \cot \left(\frac{x}{3}-\frac{\pi}{4}\right)\)

In Problems 33 and 34, determine the amplitude and period of each function without graphing.
33. \(y=\sin (2 x)\)
34. \(y=-2 \cos (3 \pi x)\)

In Problems 35-38, find the amplitude, period, and phase shift of each function. Graph each function. Show at least two periods.
35. \(y=4 \sin (3 x)\)
36. \(y=-\cos \left(\frac{1}{2} x+\frac{\pi}{2}\right)\)
37. \(y=\frac{1}{2} \sin \left(\frac{3}{2} x-\pi\right)\)
38. \(y=-\frac{2}{3} \cos (\pi x-6)\)

In Problems 39 and 40, find a function whose graph is given.
39.

40.

41. Use a calculator to approximate \(\sin \frac{\pi}{8}\). Round the answer to two decimal places.
42. Use a calculator to approximate \(\sec 10^{\circ}\). Round the answer to two decimal places.
43. Determine the signs of the six trigonometric functions of an angle \(\theta\) whose terminal side is in quadrant III.
44. Name the quadrant \(\theta\) lies in if \(\cos \theta>0\) and \(\tan \theta<0\).
45. Find the exact values of the six trigonometric functions of \(t\) if \(P=\left(-\frac{1}{3}, \frac{2 \sqrt{2}}{3}\right)\) is the point on the unit circle that corresponds to \(t\).
46. Find the exact value of \(\sin t, \cos t\), and \(\tan t\) if \(P=(-2,5)\) is the point on the circle that corresponds to \(t\).
47. What are the domain and the range of the secant function? What is the period?
48. (a) Convert the angle \(32^{\circ} 20^{\prime} 35^{\prime \prime}\) to a decimal in degrees. Round the answer to two decimal places.
(b) Convert the angle \(63.18^{\circ}\) to \(\mathrm{D}^{\circ} \mathrm{M}^{\prime} \mathrm{S}^{\prime \prime}\) form. Express the answer to the nearest second.
49. Find the length of the arc subtended by a central angle of \(30^{\circ}\) on a circle of radius 2 feet. What is the area of the sector?
50. The minute hand of a clock is 8 inches long. How far does the tip of the minute hand move in 30 minutes? How far does it move in 20 minutes?
51. Angular Speed of a Race Car A race car is driven around a circular track at a constant speed of 180 miles per hour. If the diameter of the track is \(\frac{1}{2}\) mile, what is the angular speed of the car? Express your answer in revolutions per hour (which is equivalent to laps per hour).
52. Lighthouse Beacons The Montauk Point Lighthouse on Long Island has dual beams (two light sources opposite each other). Ships at sea observe a blinking light every 5 seconds. What rotation speed is required to achieve this?
53. Alternating Current The current \(I\), in amperes, flowing through an ac (alternating current) circuit at time \(t\) is
\[
I(t)=220 \sin \left(30 \pi t+\frac{\pi}{6}\right), \quad t \geq 0
\]
(a) What is the period?
(b) What is the amplitude?
(c) What is the phase shift?
(d) Graph this function over two periods.
54. Monthly Temperature The following data represent the average monthly temperatures for Phoenix, Arizona.
(a) Draw a scatter diagram of the data for one period.
(b) Find a sinusoidal function of the form \(y=A \sin (\omega x-\phi)+B\) that fits the data.
(c) Draw the sinusoidal function found in part (b) on the scatter diagram.
(d) Use a graphing utility to find the sinusoidal function of best fit.
(e) Graph the sinusoidal function of best fit on the scatter diagram.
\begin{tabular}{ll}
\begin{tabular}{ll} 
Month, \(\boldsymbol{m}\)
\end{tabular} & \begin{tabular}{l} 
Average Monthly \\
Temperature, \(\boldsymbol{T}\)
\end{tabular} \\
\hline January, 1 & 56 \\
February, 2 & 60 \\
March, 3 & 65 \\
April, 4 & 73 \\
May, 5 & 82 \\
June, 6 & 91 \\
July, 7 & 95 \\
August, 8 & 94 \\
September, 9 & 88 \\
October, 10 & 77 \\
November, 11 & 64 \\
December, 12 & 55 \\
\hline
\end{tabular}

55. Unit Circle On the given unit circle, fill in the missing angles (in radians) and the corresponding points \(P\).

\section*{Chapter Test}

In Problems 1-3, convert each angle in degrees to radians. Express your answer as a multiple of \(\pi\).
1. \(260^{\circ}\)
2. \(-400^{\circ}\)
3. \(13^{\circ}\)

In Problems 4-6 convert each angle in radians to degrees.
4. \(-\frac{\pi}{8}\)
5. \(\frac{9 \pi}{2}\)
6. \(\frac{3 \pi}{4}\)

In Problems 7-12, find the exact value of each expression.
7. \(\sin \frac{\pi}{6}\)
8. \(\cos \left(-\frac{5 \pi}{4}\right)-\cos \frac{3 \pi}{4}\)
9. \(\cos \left(-120^{\circ}\right)\)
10. \(\tan 330^{\circ}\)
11. \(\sin \frac{\pi}{2}-\tan \frac{19 \pi}{4}\)
12. \(2 \sin ^{2} 60^{\circ}-3 \cos 45^{\circ}\)

In Problems 13-16, use a calculator to evaluate each expression. Round your answer to three decimal places.
13. \(\sin 17^{\circ}\)
14. \(\cos \frac{2 \pi}{5}\)
15. \(\sec 229^{\circ}\)
16. \(\cot \frac{28 \pi}{9}\)
17. Fill in each table entry with the sign of each function.
\begin{tabular}{|l|l|l|l|l|l|l|}
\hline & \(\sin \theta\) & \(\cos \theta\) & \(\tan \theta\) & \(\sec \boldsymbol{\theta}\) & \(\csc \boldsymbol{\theta}\) & \(\cot \boldsymbol{\theta}\) \\
\hline \(\boldsymbol{\theta}\) in QI & & & & & & \\
\(\boldsymbol{\theta}\) in QII & & & & & & \\
\(\boldsymbol{\theta}\) in QIII & & & & & & \\
\(\boldsymbol{\theta}\) in QIV & & & & & & \\
\hline
\end{tabular}
18. If \(f(x)=\sin x\) and \(f(a)=\frac{3}{5}\), find \(f(-a)\).

In Problems 19-21, find the value of the remaining five trigonometric functions of \(\theta\).
19. \(\sin \theta=\frac{5}{7}, \theta\) in quadrant II
20. \(\cos \theta=\frac{2}{3}, \frac{3 \pi}{2}<\theta<2 \pi\)
21. \(\tan \theta=-\frac{12}{5}, \frac{\pi}{2}<\theta<\pi\)

In Problems 22-24, the point \((x, y)\) is on the terminal side of angle \(\theta\) in standard position. Find the exact value of the given trigonometric function.
22. \((2,7), \sin \theta\)
23. \((-5,11), \cos \theta\)
24. \((6,-3), \tan \theta\)

In Problems 25 and 26, graph the function.
25. \(y=2 \sin \left(\frac{x}{3}-\frac{\pi}{6}\right)\)
26. \(y=\tan \left(-x+\frac{\pi}{4}\right)+2\)
27. Write an equation for a sinusoidal graph with the following properties:
\[
A=-3 \quad \text { period }=\frac{2 \pi}{3} \quad \text { phase shift }=-\frac{\pi}{4}
\]
28. Logan has a garden in the shape of a sector of a circle; the outer rim of the garden is 25 feet long and the central angle of the sector is \(50^{\circ}\). She wants to add a 3 -foot-wide walk to the outer rim. How many square feet of paving blocks will she need to build the walk?
29. Hungarian Adrian Annus won the gold medal for the hammer throw at the 2004 Olympics in Athens with a winning distance of 83.19 meters.* The event consists of swinging a 16-pound weight attached to a wire 190 centimeters long in a circle and then releasing it. Assuming his release is at a \(45^{\circ}\) angle to the ground, the hammer will travel a distance of \(\frac{v_{0}^{2}}{g}\) meters, where \(g=9.8\) meters \(/\) second \({ }^{2}\) and \(v_{0}\) is the linear speed of the hammer when released. At what rate (rpm) was he swinging the hammer upon release?
*Annus was stripped of his medal after refusing to cooperate with postmedal drug testing.

\section*{Cumulative Review}
1. Find the real solutions, if any, of the equation \(2 x^{2}+x-1=0\).
2. Find an equation for the line with slope -3 that contains the point \((-2,5)\).
3. Find an equation for a circle of radius 4 and center at the point \((0,-2)\).
4. Discuss the equation \(2 x-3 y=12\). Graph it.
5. Discuss the equation \(x^{2}+y^{2}-2 x+4 y-4=0\). Graph it.
6. Use transformations to graph the function \(y=(x-3)^{2}+2\).
7. Sketch a graph of each of the following functions. Label at least three points on each graph.
(a) \(y=x^{2}\)
(b) \(y=x^{3}\)
(c) \(y=e^{x}\)
(d) \(y=\ln x\)
(e) \(y=\sin x\)
(f) \(y=\tan x\)
8. Find the inverse function of \(f(x)=3 x-2\).
9. Find the exact value of \(\left(\sin 14^{\circ}\right)^{2}+\left(\cos 14^{\circ}\right)^{2}-3\).
10. Graph \(y=3 \sin (2 x)\).
11. Find the exact value of \(\tan \frac{\pi}{4}-3 \cos \frac{\pi}{6}+\csc \frac{\pi}{6}\).
12. Find an exponential function for the following graph. Express your answer in the form \(y=A b^{x}\).

13. Find a sinusoidal function for the following graph.

\section*{Chapter Projects}

Internet-based Project
I. Length of Day Revisited Go to http://en.wikipedia.org/ wiki/latitude and read about latitude. Now go to http:// www.orchidculture.com/COD/daylength.html
1. For a particular latitude, record in a table the length of day for the various days of the year. For January 1, use 1 day for the various days of the year. For January 1, use 1
as the day, for January 16, use 16 as the day,for February 1, use 32 as the day, and so on. Enter the data into an Excel spreadsheet using column B for the day of the year and column C for the length of day.
14. (a) Find a linear function that contains the points \((-2,3)\) and \((1,-6)\). What is the slope? What are the intercepts of the function? Graph the function. Be sure to label the intercepts.
(b) Find a quadratic function that contains the point \((-2,3)\) with vertex \((1,-6)\). What are the intercepts of the function? Graph the function.
(c) Show that there is no exponential function of the form \(f(x)=a e^{x}\) that contains the points \((-2,3)\) and \((1,-6)\).
15. (a) Find a polynomial function of degree 3 whose \(y\)-intercept is 5 and whose \(x\)-intercepts are \(-2,3\), and 5 . Graph the function.
(b) Find a rational function whose \(y\)-intercept is 5 and whose \(x\)-intercepts are \(-2,3\), and 5 that has the line \(x=2\) as a vertical asymptote. Graph the function.
2. Draw a scatter diagram of the data with day of the year as the independent variable and length of day as the dependent variable using Excel. The Chapter 2 project describes how to draw a scatter diagram in Excel.
3. Determine the sinusoidal function of best fit, \(y=A \sin (B x+C)+D\), as follows:
(a) Enter initial guesses as to the values of \(A, B, C\), and \(D\) into column A with the value of \(A\) in cell A1, \(B\) in cell A2, \(C\) in cell A3, and \(D\) in cell A4.
(b) Enter " \(=\mathrm{A} \$ 1 * \sin (\mathrm{~A} \$ 2 * \mathrm{~B} 1+\mathrm{A} \$ 3)+\mathrm{A} \$ 4\) " into cell D1. Copy this cell entry into the cells below D1 to as many rows as there are data. For example, if column C goes to row 23, then column D should also go to row 23.
(c) Enter " \(=(\mathrm{D} 1-\mathrm{C} 1)^{\wedge} 2^{2}\) " into cell E1. Copy this entry below as described in part 3b.
(d) The idea behind curve fitting is to make the sum of the squared differences between what is predicted and actual observations as small as possible. Enter "=sum(E1..E\#)" into cell A6, where \# represents the row number of the last data point. For example, if you have 23 rows of data, enter "=sum(E1..E23)" in cell A6.
(e) Now, we need to install the Solver feature of Excel. To do this, click the Office Button (top-left portion of screen), and then select Excel Options. Select Add-Ins. In the drop-down menu entitled "Manage," choose Excel Add-ins, then click Go... . Check the box entitled "Solver Add-in" and click OK. The Solver add-in is now available in the Data tab. Choose Solver. Fill in the screen as shown below:

The values for \(A, B, C\), and \(D\) are located in cells A1-A4. What is the sinusoidal function of best fit?
4. Determine the longest day of the year according to your model. What is the day length on the longest day of the year? Determine the shortest day of the year according to your model. What is the day length on the shortest day of the year?
5. On which days is the day length exactly 12 hours according to your model?
6. Look up the day on which the vernal equinox and autumnal equinox occur. How do they match up with the results obtained in part 5?
7. Do you think your model accurately describes the relation between day of the year and length of the day?
8. Use your model to predict the hours of daylight for the latitude you selected for various days of the year. Go to the Old Farmer's Almanac or other website (such as http://astro.unl.edu/classaction/animations/ coordsmotion/daylighthoursexplorer.html) to determine the hours of daylight for the latitude you selected. How do the two compare?

The following projects are available on the Instructor's Resource Center (IRC):
II. Tides Data from a tide table are used to build a sine function that models tides.
III. Project at Motorola Digital Transmission over the Air Learn how Motorola Corporation transmits digital sequences by modulating the phase of the carrier waves.
IV. Identifying Mountain Peaks in Hawaii? The visibility of a mountain is affected by its altitude, its distance from the viewer, and the curvature of Earth's surface. Trigonometry can be used to determine whether a distant object can be seen.
V. CBL Experiment Technology is used to model and study the effects of damping on sound waves.

\section*{Analytic Trigonometry}

\section*{Mapping Your Mind}

The ability to organize material in your mind is key to understanding. You have been exposed to a lot of concepts at this point in the course, and it is a worthwhile exercise to organize the material. In the past, we might organize material using index cards or an outline. But in today's digital world, we can use interesting software that enables us to digitally organize the material that is in our mind and share it with anyone on the Web.

> (ค) - See the Internet-based Chapter Project I-

\section*{<A Look Back}

Chapter 4 defined inverse functions and developed their properties, particularly the relationship between the domain and range of a function and those of its inverse. We learned that the graphs of a function and its inverse are symmetric with respect to the line \(y=x\).

Chapter 4 continued by defining the exponential function and the inverse of the exponential function, the logarithmic function. Chapter 5 defined the six trigonometric functions and looked at their properties.

\section*{A Look Ahead>}

The first two sections of this chapter define the six inverse trigonometric functions and investigate their properties. Section 6.3 discusses equations that contain trigonometric functions. Sections 6.4 through 6.7 continue the derivation of identities. These identities play an important role in calculus, the physical and life sciences, and economics, where they are used to simplify complicated expressions.

\subsection*{6.1 The Inverse Sine, Cosine, and Tangent Functions}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Inverse Functions (Section 4.2, pp. 282-290)
- Values of the Trigonometric Functions (Section 5.2, pp. 392-400)

Now Work the 'Are You Prepared?' problems on page 473.
OBJECTIVES 1 Find the Exact Value of an Inverse Sine Function (p. 465)
2 Find an Approximate Value of an Inverse Sine Function (p. 466)
3 Use Properties of Inverse Functions to Find Exact Values of Certain Composite Functions (p. 467)
4 Find the Inverse Function of a Trigonometric Function (p. 472)
5 Solve Equations Involving Inverse Trigonometric Functions (p. 473)

In Section 4.2 we discussed inverse functions, and we concluded that if a function is one-to-one, it has an inverse function. We also observed that if a function is not one-to-one, it may be possible to restrict its domain in some suitable manner so that the restricted function is one-to-one. For example, the function \(y=x^{2}\) is not one-to-one; however, if the domain is restricted to \(x \geq 0\), the function is one-to-one.

Other properties of a one-to-one function \(f\) and its inverse function \(f^{-1}\) that were discussed in Section 4.2 are summarized next.
1. \(f^{-1}(f(x))=x\) for every \(x\) in the domain of \(f\), and \(f\left(f^{-1}(x)\right)=x\) for every \(x\) in the domain of \(f^{-1}\).
2. Domain of \(f=\) range of \(f^{-1}\), and range of \(f=\) domain of \(f^{-1}\).
3. The graph of \(f\) and the graph of \(f^{-1}\) are reflections of one another about the line \(y=x\).
4. If a function \(y=f(x)\) has an inverse function, the implicit equation of the inverse function is \(x=f(y)\). If we solve this equation for \(y\), we obtain the explicit equation \(y=f^{-1}(x)\).

\section*{The Inverse Sine Function}

Figure 1 shows the graph of \(y=\sin x\). Because every horizontal line \(y=b\), where \(b\) is between -1 and 1 , inclusive, intersects the graph of \(y=\sin x\) infinitely many times, it follows from the horizontal-line test that the function \(y=\sin x\) is not one-to-one.

Figure 1
\(y=\sin x,-\infty<x<\infty\), \(-1 \leq y \leq 1\)

However, if the domain of \(y=\sin x\) is restricted to the interval \(\left[-\frac{\pi}{2}, \frac{\pi}{2}\right]\), the restricted function
\[
y=\sin x \quad-\frac{\pi}{2} \leq x \leq \frac{\pi}{2}
\]
is one-to-one and has an inverse function.* See Figure 2.

\footnotetext{
*Although there are many other ways to restrict the domain and obtain a one-to-one function, mathematicians have agreed to use the interval \(\left[-\frac{\pi}{2}, \frac{\pi}{2}\right]\) to define the inverse of \(y=\sin x\).
}

NOTE Remember, the domain of a function \(f\) equals the range of its inverse, \(f^{-1}\), and the range of a function \(f\) equals the domain of its inverse, \(f^{-1}\). Because the restricted domain of the sine function is \(\left[-\frac{\pi}{2}, \frac{\pi}{2}\right]\), the range of the inverse sine function is \(\left[-\frac{\pi}{2}, \frac{\pi}{2}\right]\)
and because the range of the sine function is \([-1,1]\), the domain of the inverse sine function is \([-1,1]\).

An equation for the inverse of \(y=f(x)=\sin x\) is obtained by interchanging \(x\) and \(y\). The implicit form of the inverse function is \(x=\sin y,-\frac{\pi}{2} \leq y \leq \frac{\pi}{2}\). The explicit form is called the inverse sine of \(x\) and is symbolized by \(y=f^{-1}(x)=\sin ^{-1} x\).
\[
\begin{align*}
& y=\sin ^{-1} x \quad \text { means } \quad x=\sin y \\
\text { where } & -1 \leq x \leq 1 \quad \text { and } \quad-\frac{\pi}{2} \leq y \leq \frac{\pi}{2} \tag{1}
\end{align*}
\]

Because \(y=\sin ^{-1} x\) means \(x=\sin y, y=\sin ^{-1} x\) is read as " \(y\) is the angle or real number whose sine equals \(x\)," or, alternatively, " \(y\) is the inverse sine of \(x\)." Be careful about the notation used. The superscript -1 that appears in \(y=\sin ^{-1} x\) is not an exponent but is used to denote the inverse function \(f^{-1}\) of \(f\). (To avoid confusion, some texts use the notation \(y=\operatorname{Arcsin} x\) instead of \(y=\sin ^{-1} x\).)

The inverse of a function \(f\) receives as input an element from the range of \(f\) and returns as output an element in the domain of \(f\). The restricted sine function, \(y=f(x)=\sin x\), receives as input an angle or real number \(x\) in the interval \(\left[-\frac{\pi}{2}, \frac{\pi}{2}\right]\) and outputs a real number in the interval \([-1,1]\). Therefore, the inverse sine function, \(y=\sin ^{-1} x\), receives as input a real number in the interval \([-1,1]\) or \(-1 \leq x \leq 1\), its domain, and outputs an angle or real number in the interval \(\left[-\frac{\pi}{2}, \frac{\pi}{2}\right]\) or \(-\frac{\pi}{2} \leq y \leq \frac{\pi}{2}\), its range.

The graph of the inverse sine function can be obtained by reflecting the restricted portion of the graph of \(y=f(x)=\sin x\) about the line \(y=x\), as shown in Figure 3.

Figure 3
\(y=\sin ^{-1} x,-1 \leq x \leq 1\),
\(-\frac{\pi}{2} \leq y \leq \frac{\pi}{2}\)

Check: Graph \(Y_{1}=\sin x\) and \(Y_{2}=\sin ^{-1} x\). Compare the result with Figure 3.

\section*{1 Find the Exact Value of an Inverse Sine Function}

For some numbers \(x\), it is possible to find the exact value of \(y=\sin ^{-1} x\).

\section*{EXAMPLE I}

Solution

Finding the Exact Value of an Inverse Sine Function
Find the exact value of: \(\sin ^{-1} 1\)
Let \(\theta=\sin ^{-1} 1\). Then \(\theta\) is the angle, \(-\frac{\pi}{2} \leq \theta \leq \frac{\pi}{2}\), whose sine equals 1 .
\[
\begin{aligned}
\theta & =\sin ^{-1} 1 & -\frac{\pi}{2} \leq \theta \leq \frac{\pi}{2} \\
\sin \theta & =1 & -\frac{\pi}{2} \leq \theta \leq \frac{\pi}{2} \quad \text { By definition of } y=\sin ^{-1} x
\end{aligned}
\]

Now look at Table 1 and Figure 4.
Table 1 \begin{tabular}{|c|ccccccccc|}
\hline \(\boldsymbol{\theta}\) & \(-\frac{\pi}{2}\) & \(-\frac{\pi}{3}\) & \(-\frac{\pi}{4}\) & \(-\frac{\pi}{6}\) & 0 & \(\frac{\pi}{6}\) & \(\frac{\pi}{4}\) & \(\frac{\pi}{3}\) & \(\frac{\pi}{2}\) \\
\(\sin \theta\) & -1 & \(-\frac{\sqrt{3}}{2}\) & \(-\frac{\sqrt{2}}{2}\) & \(-\frac{1}{2}\) & 0 & \(\frac{1}{2}\) & \(\frac{\sqrt{2}}{2}\) & \(\frac{\sqrt{3}}{2}\) & 1 \\
\hline
\end{tabular}

The only angle \(\theta\) within the interval \(\left[-\frac{\pi}{2}, \frac{\pi}{2}\right]\) whose sine is 1 is \(\frac{\pi}{2}\). (Note that \(\sin \frac{5 \pi}{2}\) also equals 1 , but \(\frac{5 \pi}{2}\) lies outside the interval \(\left[-\frac{\pi}{2}, \frac{\pi}{2}\right]\), so this value is not allowed.) Therefore,
\[
\sin ^{-1} 1=\frac{\pi}{2}
\]

Figure 4

an Now Work problem 13

\section*{EXAMPLE 2 \\ Finding the Exact Value of an Inverse Sine Function}

Find the exact value of: \(\sin ^{-1}\left(-\frac{1}{2}\right)\)
Solution Let \(\theta=\sin ^{-1}\left(-\frac{1}{2}\right)\). Then \(\theta\) is the angle, \(-\frac{\pi}{2} \leq \theta \leq \frac{\pi}{2}\), whose sine equals \(-\frac{1}{2}\).
\[
\begin{aligned}
\theta & =\sin ^{-1}\left(-\frac{1}{2}\right) & & -\frac{\pi}{2} \leq \theta \leq \frac{\pi}{2} \\
\sin \theta & =-\frac{1}{2} & & -\frac{\pi}{2} \leq \theta \leq \frac{\pi}{2}
\end{aligned}
\]
(Refer to Table 1 and Figure 4, if necessary.) The only angle within the interval \(\left[-\frac{\pi}{2}, \frac{\pi}{2}\right]\) whose sine is \(-\frac{1}{2}\) is \(-\frac{\pi}{6}\), so
\[
\sin ^{-1}\left(-\frac{1}{2}\right)=-\frac{\pi}{6}
\]

Now Work problem 19

\section*{2 Find an Approximate Value of an Inverse Sine Function}

For most numbers \(x\), the value \(y=\sin ^{-1} x\) must be approximated.

\section*{EXAMPLE 3}

Finding an Approximate Value of an Inverse Sine Function
Find an approximate value of:
(a) \(\sin ^{-1} \frac{1}{3}\)
(b) \(\sin ^{-1}\left(-\frac{1}{4}\right)\)

Express the answer in radians rounded to two decimal places.

\section*{Solution}

\section*{Figure 5}

(a) Because the angle is to be measured in radians, first set the mode of the calculator to radians.* Rounded to two decimal places,
\[
\sin ^{-1} \frac{1}{3}=0.34
\]
(b) Figure 5 shows the solution using a TI-84 Plus graphing calculator in radian mode. Rounded to two decimal places, \(\sin ^{-1}\left(-\frac{1}{4}\right)=-0.25\).

Now Work problem 25

\section*{3 Use Properties of Inverse Functions to Find Exact Values of Certain Composite Functions}

Recall from the discussion of functions and their inverses in Section 4.2, that \(f^{-1}(f(x))=x\) for all \(x\) in the domain of \(f\) and that \(f\left(f^{-1}(x)\right)=x\) for all \(x\) in the domain of \(f^{-1}\). In terms of the sine function and its inverse, these properties are of the form
\[
\begin{array}{ll}
f^{-1}(f(x))=\sin ^{-1}(\sin x)=x & \text { where }-\frac{\pi}{2} \leq x \leq \frac{\pi}{2} \\
f\left(f^{-1}(x)\right)=\sin \left(\sin ^{-1} x\right)=x & \text { where }-1 \leq x \leq 1 \tag{2b}
\end{array}
\]

\section*{EXAMPLE 4}

Figure 6

Solution

\section*{Finding the Exact Value of Certain Composite Functions}

Find the exact value of each of the following composite functions.
(a) \(\sin ^{-1}\left(\sin \frac{\pi}{8}\right)\)
(b) \(\sin ^{-1}\left(\sin \frac{5 \pi}{8}\right)\)
(a) The composite function \(\sin ^{-1}\left(\sin \frac{\pi}{8}\right)\) follows the form of equation (2a). Because \(\frac{\pi}{8}\) is in the interval \(\left[-\frac{\pi}{2}, \frac{\pi}{2}\right]\), (2a) can be used. Then
\[
\sin ^{-1}\left(\sin \frac{\pi}{8}\right)=\frac{\pi}{8}
\]
(b) The composite function \(\sin ^{-1}\left(\sin \frac{5 \pi}{8}\right)\) follows the form of equation (2a), but \(\frac{5 \pi}{8}\) is not in the interval \(\left[-\frac{\pi}{2}, \frac{\pi}{2}\right]\). To use (2a) first find an angle \(\theta\) in the interval \(\left[-\frac{\pi}{2}, \frac{\pi}{2}\right]\) for which \(\sin \theta=\sin \frac{5 \pi}{8}\). Then, using (2a), \(\sin ^{-1}\left(\sin \frac{5 \pi}{8}\right)=\sin ^{-1}(\sin \theta)=\theta\).

Figure 6 illustrates that \(\sin \frac{5 \pi}{8}=y=\sin \frac{3 \pi}{8}\). Since \(\frac{3 \pi}{8}\) is in the interval \(\left[-\frac{\pi}{2}, \frac{\pi}{2}\right]\), this means
\[
\begin{aligned}
& \sin ^{-1}\left(\sin \frac{5 \pi}{8}\right)=\sin ^{-1}\left(\sin \frac{3 \pi}{8}\right) \underset{\uparrow}{\text { Apply (2a). }}=\frac{3 \pi}{8} \\
& \text { PROBLEM } 41
\end{aligned}
\]

\section*{-Now Work problem 41}
*On most calculators, the inverse sine is obtained by pressing SHIFT or \(2^{\text {nd }}\), followed by \(\sin\). On some calculators, \(\sin ^{-1}\) is pressed first, then \(1 / 3\) is entered; on others, this sequence is reversed. Consult your owner's manual for the correct sequence.

\section*{EXAMPLE 5}

Solution

Figure 7
\(y=\cos x,-\infty<x<\infty\), \(-1 \leq y \leq 1\)

Figure 8
\(y=\cos x, 0 \leq x \leq \pi,-1 \leq y \leq 1\)

\section*{Finding the ExactValue of Certain Composite Functions}

Find the exact value, if any, of each composite function.
(a) \(\sin \left(\sin ^{-1} 0.8\right)\)
(b) \(\sin \left(\sin ^{-1} 1.8\right)\)
(a) The composite function \(\sin \left(\sin ^{-1} 0.8\right)\) follows the form of equation (2b), and 0.8 is in the interval \([-1,1]\). Using (2b) reveals that
\[
\sin \left(\sin ^{-1} 0.8\right)=0.8
\]
(b) The composite function \(\sin \left(\sin ^{-1} 1.8\right)\) follows the form of equation (2b), but 1.8 is not in the domain of the inverse sine function. This composite function is not defined.

\section*{-Now Work problem 45}

\section*{The Inverse Cosine Function}

Figure 7 shows the graph of \(y=\cos x\). Because every horizontal line \(y=b\), where \(b\) is between -1 and 1 , inclusive, intersects the graph of \(y=\cos x\) infinitely many times, it follows that the cosine function is not one-to-one.

However, if the domain of \(y=\cos x\) is restricted to the interval \([0, \pi]\), the restricted function
\[
y=\cos x \quad 0 \leq x \leq \pi
\]
is one-to-one and, hence, has an inverse function.* See Figure 8.
An equation for the inverse of \(y=f(x)=\cos x\) is obtained by interchanging \(x\) and \(y\). The implicit form of the inverse function is \(x=\cos y, 0 \leq y \leq \pi\). The explicit form is called the inverse cosine of \(x\) and is symbolized by \(y=f^{-1}(x)=\cos ^{-1} x\) (or by \(y=\operatorname{Arccos} x\) ).
\[
\begin{align*}
& y=\cos ^{-1} x \text { means } x=\cos y  \tag{3}\\
& \text { where }-1 \leq x \leq 1 \text { and } 0 \leq y \leq \pi
\end{align*}
\]

Here \(y\) is the angle whose cosine is \(x\). Because the range of the cosine function, \(y=\cos x\), is \(-1 \leq y \leq 1\), the domain of the inverse function \(y=\cos ^{-1} x\) is \(-1 \leq x \leq 1\). Because the restricted domain of the cosine function, \(y=\cos x\), is \(0 \leq x \leq \pi\), the range of the inverse function \(y=\cos ^{-1} x\) is \(0 \leq y \leq \pi\).

The graph of \(y=\cos ^{-1} x\) can be obtained by reflecting the restricted portion of the graph of \(y=\cos x\) about the line \(y=x\), as shown in Figure 9.

Check: Graph \(Y_{1}=\cos x\) and \(Y_{2}=\cos ^{-1} x\). Compare the result with Figure 9.

Figure 9
\(y=\cos ^{-1} x,-1 \leq x \leq 1,0 \leq y \leq \pi\)

\section*{EXAMPLE 6 Finding the Exact Value of an Inverse Cosine Function}

Find the exact value of: \(\cos ^{-1} 0\)

Table 2
\begin{tabular}{|cc|}
\hline \(\boldsymbol{\theta}\) & \(\boldsymbol{\operatorname { c o s } \boldsymbol { \theta }}\) \\
\hline 0 & 1 \\
\(\frac{\pi}{6}\) & \(\frac{\sqrt{3}}{2}\) \\
\(\frac{\pi}{4}\) & \(\frac{\sqrt{2}}{2}\) \\
\(\frac{\pi}{3}\) & \(\frac{1}{2}\) \\
\(\frac{\pi}{2}\) & 0 \\
\(\frac{2 \pi}{3}\) & \(-\frac{1}{2}\) \\
\(\frac{3 \pi}{4}\) & \(-\frac{\sqrt{2}}{2}\) \\
\(\frac{5 \pi}{6}\) & \(-\frac{\sqrt{3}}{2}\) \\
\(\pi\) & -1 \\
\hline
\end{tabular}

Solution Let \(\theta=\cos ^{-1} 0\). Then \(\theta\) is the angle, \(0 \leq \theta \leq \pi\), whose cosine equals 0 .
\[
\begin{aligned}
\theta & =\cos ^{-1} 0 & & 0 \leq \theta \leq \pi \\
\cos \theta & =0 & & 0 \leq \theta \leq \pi
\end{aligned}
\]

Look at Table 2 and Figure 10.
Figure 10

The only angle \(\theta\) within the interval \([0, \pi]\) whose cosine is 0 is \(\frac{\pi}{2}\).
[Note that \(\cos \frac{3 \pi}{2}\) and \(\cos \left(-\frac{\pi}{2}\right)\) also equal 0 , but they lie outside the interval \([0, \pi]\) so these values are not allowed.] Therefore,
\[
\cos ^{-1} 0=\frac{\pi}{2}
\]

Finding the Exact Value of an Inverse Cosine Function
Find the exact value of: \(\cos ^{-1}\left(-\frac{\sqrt{2}}{2}\right)\)
Solution

Let \(\theta=\cos ^{-1}\left(-\frac{\sqrt{2}}{2}\right)\). Then \(\theta\) is the angle, \(0 \leq \theta \leq \pi\), whose cosine equals \(-\frac{\sqrt{2}}{2}\).
\[
\begin{aligned}
\theta & =\cos ^{-1}\left(-\frac{\sqrt{2}}{2}\right) & & 0 \leq \theta \leq \pi \\
\cos \theta & =-\frac{\sqrt{2}}{2} & & 0 \leq \theta \leq \pi
\end{aligned}
\]

Look at Table 2 and Figure 11.

The only angle \(\theta\) within the interval \([0, \pi]\) whose cosine is \(-\frac{\sqrt{2}}{2}\) is \(\frac{3 \pi}{4}\), so
\[
\cos ^{-1}\left(-\frac{\sqrt{2}}{2}\right)=\frac{3 \pi}{4}
\]
an Now Work problem 23
For the cosine function and its inverse, the following properties hold.
\[
\begin{array}{ll}
f^{-1}(f(x))=\cos ^{-1}(\cos x)=x & \text { where } 0 \leq x \leq \pi \\
f\left(f^{-1}(x)\right)=\cos \left(\cos ^{-1} x\right)=x & \text { where }-1 \leq x \leq 1 \tag{4b}
\end{array}
\]

\section*{EXAMPLE 8}

\section*{Using Properties of Inverse Functions to Find the Exact Value of Certain Composite Functions}

Find the exact value of:
(a) \(\cos ^{-1}\left(\cos \frac{\pi}{12}\right)\)
(b) \(\cos \left[\cos ^{-1}(-0.4)\right]\)
(c) \(\cos ^{-1}\left[\cos \left(-\frac{2 \pi}{3}\right)\right]\)
(d) \(\cos \left(\cos ^{-1} \pi\right)\)

Solution
(a) \(\cos ^{-1}\left(\cos \frac{\pi}{12}\right)=\frac{\pi}{12} \quad \frac{\pi}{12}\) is in the interval [0, \(\left.\pi\right]\); use Property (4a).
(b) \(\cos \left[\cos ^{-1}(-0.4)\right]=-0.4 \quad-0.4\) is in the interval \([-1,1]\); use Property (4b).
(c) The angle \(-\frac{2 \pi}{3}\) is not in the interval \([0, \pi]\) so Property (4a) cannot be used. However, because the cosine function is even, \(\cos \left(-\frac{2 \pi}{3}\right)=\cos \frac{2 \pi}{3}\). Because \(\frac{2 \pi}{3}\) is in the interval \([0, \pi]\), Property (4a) can be used, and
\[
\cos ^{-1}\left[\cos \left(-\frac{2 \pi}{3}\right)\right]=\cos ^{-1}\left(\cos \frac{2 \pi}{3}\right)=\frac{2 \pi}{3}
\]
(d) Because \(\pi\) is not in the interval \([-1,1]\), the domain of the inverse cosine function, \(\cos ^{-1} \pi\), is not defined. This means the composite function \(\cos \left(\cos ^{-1} \pi\right)\) is also not defined.

\section*{-Now Work problems 37 and 49}

\section*{The Inverse Tangent Function}

Figure 12 shows the graph of \(y=\tan x\). Because every horizontal line intersects the graph infinitely many times, it follows that the tangent function is not one-to-one.

However, if the domain of \(y=\tan x\) is restricted to the interval \(\left(-\frac{\pi}{2}, \frac{\pi}{2}\right)\), the restricted function
\[
y=\tan x \quad-\frac{\pi}{2}<x<\frac{\pi}{2}
\]
is one-to-one and, hence, has an inverse function.* See Figure 13.

Figure \(12 y=\tan x,-\infty<x<\infty, x\) not equal to odd multiples of \(\frac{\pi}{2},-\infty<y<\infty\)

*This is the generally accepted restriction.

Figure \(13 y=\tan x,-\frac{\pi}{2}<x<\frac{\pi}{2}\),
\[
-\infty<y<\infty
\]

An equation for the inverse of \(y=f(x)=\tan x\) is obtained by interchanging \(x\) and \(y\). The implicit form of the inverse function is \(x=\tan y,-\frac{\pi}{2}<y<\frac{\pi}{2}\). The explicit form is called the inverse tangent of \(x\) and is symbolized by \(y=f^{-1}(x)=\tan ^{-1} x(\) or by \(y=\operatorname{Arctan} x)\).

\section*{DEFINITION}
\[
\begin{array}{rl}
y & y=\tan ^{-1} x \text { means } x=\tan y \\
\text { where }-\infty<x<\infty \quad \text { and } \quad-\frac{\pi}{2}<y<\frac{\pi}{2}
\end{array}
\]

Here \(y\) is the angle whose tangent is \(x\). The domain of the function \(y=\tan ^{-1} x\) is \(-\infty<x<\infty\), and its range is \(-\frac{\pi}{2}<y<\frac{\pi}{2}\). The graph of \(y=\tan ^{-1} x\) can be obtained by reflecting the restricted portion of the graph of \(y=\tan x\) about the line \(y=x\), as shown in Figure 14.

\section*{Figure 14}
\(y=\tan ^{-1} x,-\infty<x<\infty\), \(-\frac{\pi}{2}<y<\frac{\pi}{2}\)

Check: Graph \(Y_{1}=\tan x\) and \(Y_{2}=\tan ^{-1} x\). Compare the result with Figure 14.

\section*{EXAMPLE 9}

Finding the Exact Value of an Inverse Tangent Function
Find the exact value of:
(a) \(\tan ^{-1} 1\)
(b) \(\tan ^{-1}(-\sqrt{3})\)

Solution
(a) Let \(\theta=\tan ^{-1} 1\). Then \(\theta\) is the angle, \(-\frac{\pi}{2}<\theta<\frac{\pi}{2}\), whose tangent equals 1 .
\[
\begin{aligned}
\theta & =\tan ^{-1} 1 & & -\frac{\pi}{2}<\theta<\frac{\pi}{2} \\
\tan \theta & =1 & & -\frac{\pi}{2}<\theta<\frac{\pi}{2}
\end{aligned}
\]

Look at Table 3 on the next page. The only angle \(\theta\) within the interval \(\left(-\frac{\pi}{2}, \frac{\pi}{2}\right)\) whose tangent is 1 is \(\frac{\pi}{4}\), so
\[
\tan ^{-1} 1=\frac{\pi}{4}
\]
(b) Let \(\theta=\tan ^{-1}(-\sqrt{3})\). Then \(\theta\) is the angle, \(-\frac{\pi}{2}<\theta<\frac{\pi}{2}\), whose tangent equals \(-\sqrt{3}\).
\[
\begin{aligned}
\theta & =\tan ^{-1}(-\sqrt{3}) & & -\frac{\pi}{2}<\theta<\frac{\pi}{2} \\
\tan \theta & =-\sqrt{3} & & -\frac{\pi}{2}<\theta<\frac{\pi}{2}
\end{aligned}
\]

Table 3
\begin{tabular}{|cc|}
\hline \(\boldsymbol{\theta}\) & \(\boldsymbol{\operatorname { t a n } \boldsymbol { \theta }}\) \\
\hline\(-\frac{\pi}{2}\) & Undefined \\
\(-\frac{\pi}{3}\) & \(-\sqrt{3}\) \\
\(-\frac{\pi}{4}\) & -1 \\
\(-\frac{\pi}{6}\) & \(\frac{\sqrt{3}}{3}\) \\
0 & \(\frac{\sqrt{3}}{3}\) \\
\(\frac{\pi}{6}\) & 1 \\
\(\frac{\pi}{4}\) & \(\sqrt{3}\) \\
\(\frac{\pi}{3}\) & Undefined \\
\hline
\end{tabular}

\section*{EXAMPLE IO}

NOTE The range of \(f\) also can be found from its graph. The range of \(y=\sin x\) is \([-1,1]\). The range of \(y=2 \sin x\) is \([-2,2]\) due to the vertical stretch by a factor of 2 . The range of \(f(x)=2 \sin x-1\) is \([-3,1]\) due to the shift down of 1 unit.

Solution

■

Look at Table 3. The only angle \(\theta\) within the interval \(\left(-\frac{\pi}{2}, \frac{\pi}{2}\right)\) whose tangent is \(-\sqrt{3}\) is \(-\frac{\pi}{3}\), so
\[
\tan ^{-1}(-\sqrt{3})=-\frac{\pi}{3}
\]

Now Work problem 17
For the tangent function and its inverse, the following properties hold.
\[
\begin{array}{ll}
f^{-1}(f(x))=\tan ^{-1}(\tan x)=x & \text { where }-\frac{\pi}{2}<x<\frac{\pi}{2} \\
f\left(f^{-1}(x)\right)=\tan \left(\tan ^{-1} x\right)=x & \text { where }-\infty<x<\infty
\end{array}
\]

4 Find the Inverse Function of a Trigonometric Function

\section*{Finding the Inverse Function of a Trigonometric Function}

Find the inverse function \(f^{-1}\) of \(f(x)=2 \sin x-1,-\frac{\pi}{2} \leq x \leq \frac{\pi}{2}\). Find the range of \(f\) and the domain and range of \(f^{-1}\).
The function \(f\) is one-to-one and so has an inverse function. Follow the steps on page 288 for finding the inverse function.
\[
\begin{array}{rlrl}
y & =2 \sin x-1 \\
x & =2 \sin y-1 \\
x & +1=2 \sin y & & \\
\sin y & =\frac{x+1}{2} & & \\
& & \text { Interchange } x \text { and } y . \\
y & =\sin ^{-1}\left(\frac{x+1}{2}\right) \quad \text { Apply the definition (1). }
\end{array}
\]

The inverse function is \(f^{-1}(x)=\sin ^{-1}\left(\frac{x+1}{2}\right)\).
To find the range of \(f\), solve \(y=2 \sin x-1\) for \(\sin x\), and use the fact that \(-1 \leq \sin x \leq 1\).
\[
\begin{aligned}
y & =2 \sin x-1 \\
\sin x & =\frac{y+1}{2} \\
-1 & \leq \frac{y+1}{2} \leq 1 \\
-2 & \leq y+1 \leq 2 \\
-3 & \leq y \leq 1
\end{aligned}
\]

The range of \(f\) is \(\{y \mid-3 \leq y \leq 1\}\), or [ \(-3,1]\) using interval notation.
The domain of \(f^{-1}\) equals the range of \(f,[-3,1]\).
The range of \(f^{-1}\) equals the domain of \(f,\left[-\frac{\pi}{2}, \frac{\pi}{2}\right]\).

5 Solve Equations Involving Inverse Trigonometric Functions
Equations that contain inverse trigonometric functions are called inverse trigonometric equations.

\section*{EXAMPLE II Solving an Equation Involving an Inverse Trigonometric Function}

Solve the equation: \(3 \sin ^{-1} x=\pi\)
Solution To solve an equation involving a single inverse trigonometric function, first isolate the inverse trigonometric function.
\[
\begin{aligned}
3 \sin ^{-1} x & =\pi \\
\sin ^{-1} x & =\frac{\pi}{3} \quad \text { Divide both sides by } 3 \\
x & =\sin \frac{\pi}{3} \quad y=\sin ^{-1} x \text { means } x=\sin y \\
x & =\frac{\sqrt{3}}{2}
\end{aligned}
\]

The solution set is \(\left\{\frac{\sqrt{3}}{2}\right\}\).
an Now Work problem 61

\subsection*{6.1 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. What are the domain and the range of \(y=\sin x\) ? (p. 409)
2. A suitable restriction on the domain of the function \(f(x)=(x-1)^{2}\) to make it one-to-one would be \(\qquad\) . (pp. 289-290)
3. If the domain of a one-to-one function is [ \(3, \infty\) ), the range of its inverse is \(\qquad\) . (pp. 285-286)
4. True or False The graph of \(y=\cos x\) is decreasing on the interval \((0, \pi)\). (p. 423)
5. \(\tan \frac{\pi}{4}=\) \(\qquad\) ; \(\sin \frac{\pi}{3}=\) \(\qquad\) (pp. 395-398)
6. \(\sin \left(-\frac{\pi}{6}\right)=\) \(\qquad\) ; \(\cos \pi=\) \(\qquad\) . (pp. 398-400)

\section*{Concepts and Vocabulary}
7. \(y=\sin ^{-1} x\) means \(\qquad\) , where \(-1 \leq x \leq 1\) and \(-\frac{\pi}{2} \leq y \leq \frac{\pi}{2}\).
8. \(\cos ^{-1}(\cos x)=x\), where \(\qquad\) -
9. \(\tan \left(\tan ^{-1} x\right)=x\), where \(\qquad\) .
10. True or False The domain of \(y=\sin ^{-1} x\) is \(-\frac{\pi}{2} \leq x \leq \frac{\pi}{2}\).
11. True or False \(\sin \left(\sin ^{-1} 0\right)=0\) and \(\cos \left(\cos ^{-1} 0\right)=0\).
12. True or False \(y=\tan ^{-1} x\) means \(x=\tan y\), where \(-\infty<x<\infty\) and \(-\frac{\pi}{2}<y<\frac{\pi}{2}\).

\section*{Skill Building}

In Problems 13-24, find the exact value of each expression.
13. \(\sin ^{-1} 0\)
14. \(\cos ^{-1} 1\)
15. \(\sin ^{-1}(-1)\)
16. \(\cos ^{-1}(-1)\)
17. \(\tan ^{-1} 0\)
18. \(\tan ^{-1}(-1)\)
19. \(\sin ^{-1} \frac{\sqrt{2}}{2}\)
20. \(\tan ^{-1} \frac{\sqrt{3}}{3}\)
21. \(\tan ^{-1} \sqrt{3}\)
22. \(\sin ^{-1}\left(-\frac{\sqrt{3}}{2}\right)\)
23. \(\cos ^{-1}\left(-\frac{\sqrt{3}}{2}\right)\)
24. \(\sin ^{-1}\left(-\frac{\sqrt{2}}{2}\right)\)

In Problems 25-36, use a calculator to find the value of each expression rounded to two decimal places.
25. \(\sin ^{-1} 0.1\)
26. \(\cos ^{-1} 0.6\)
27. \(\tan ^{-1} 5\)
28. \(\tan ^{-1} 0.2\)
29. \(\cos ^{-1} \frac{7}{8}\)
30. \(\sin ^{-1} \frac{1}{8}\)
31. \(\tan ^{-1}(-0.4)\)
32. \(\tan ^{-1}(-3)\)
33. \(\sin ^{-1}(-0.12)\)
34. \(\cos ^{-1}(-0.44)\)
35. \(\cos ^{-1} \frac{\sqrt{2}}{3}\)
36. \(\sin ^{-1} \frac{\sqrt{3}}{5}\)

In Problems 37-44, find the exact value of each expression. Do not use a calculator.
37. \(\cos ^{-1}\left(\cos \frac{4 \pi}{5}\right)\)
38. \(\sin ^{-1}\left[\sin \left(-\frac{\pi}{10}\right)\right]\)
39. \(\tan ^{-1}\left[\tan \left(-\frac{3 \pi}{8}\right)\right]\)
40. \(\sin ^{-1}\left[\sin \left(-\frac{3 \pi}{7}\right)\right]\)
41. \(\sin ^{-1}\left(\sin \frac{9 \pi}{8}\right)\)
42. \(\cos ^{-1}\left[\cos \left(-\frac{5 \pi}{3}\right)\right]\)
43. \(\tan ^{-1}\left(\tan \frac{4 \pi}{5}\right)\)
44. \(\tan ^{-1}\left[\tan \left(-\frac{2 \pi}{3}\right)\right]\)

In Problems 45-52, find the exact value, if any, of each composite function. If there is no value, say it is "not defined." Do not use a calculator.
45. \(\sin \left(\sin ^{-1} \frac{1}{4}\right)\)
46. \(\cos \left[\cos ^{-1}\left(-\frac{2}{3}\right)\right]\)
47. \(\tan \left(\tan ^{-1} 4\right)\)
48. \(\tan \left[\tan ^{-1}(-2)\right]\)
49. \(\cos \left(\cos ^{-1} 1.2\right)\)
50. \(\sin \left[\sin ^{-1}(-2)\right]\)
51. \(\tan \left(\tan ^{-1} \pi\right)\)
52. \(\sin \left[\sin ^{-1}(-1.5)\right]\)

In Problems 53-60, find the inverse function \(f^{-1}\) of each function \(f\). Find the range off and the domain and range of \(f^{-1}\).
53. \(f(x)=5 \sin x+2 ;-\frac{\pi}{2} \leq x \leq \frac{\pi}{2}\)
55. \(f(x)=-2 \cos (3 x) ; 0 \leq x \leq \frac{\pi}{3}\)
57. \(f(x)=-\tan (x+1)-3 ;-1-\frac{\pi}{2}<x<\frac{\pi}{2}-1\)
59. \(f(x)=3 \sin (2 x+1) ;-\frac{1}{2}-\frac{\pi}{4} \leq x \leq-\frac{1}{2}+\frac{\pi}{4}\)

In Problems 61-68, find the exact solution of each equation.
61. \(4 \sin ^{-1} x=\pi\)
62. \(2 \cos ^{-1} x=\pi\)
63. \(3 \cos ^{-1}(2 x)=2 \pi\)
64. \(-6 \sin ^{-1}(3 x)=\pi\)
65. \(3 \tan ^{-1} x=\pi\)
66. \(-4 \tan ^{-1} x=\pi\)
67. \(4 \cos ^{-1} x-2 \pi=2 \cos ^{-1} x\)
68. \(5 \sin ^{-1} x-2 \pi=2 \sin ^{-1} x-3 \pi\)
54. \(f(x)=2 \tan x-3 ;-\frac{\pi}{2}<x<\frac{\pi}{2}\)
56. \(f(x)=3 \sin (2 x) ;-\frac{\pi}{4} \leq x \leq \frac{\pi}{4}\)
58. \(f(x)=\cos (x+2)+1 ;-2 \leq x \leq \pi-2\)
60. \(f(x)=2 \cos (3 x+2) ;-\frac{2}{3} \leq x \leq-\frac{2}{3}+\frac{\pi}{3}\)

\section*{Applications and Extensions}

In Problems 69-74, use the following discussion. The formula
\[
D=24\left[1-\frac{\cos ^{-1}(\tan i \tan \theta)}{\pi}\right]
\]
can be used to approximate the number of hours of daylight \(D\) when the declination of the Sun is \(i^{\circ}\) at a location \(\theta^{\circ}\) north latitude for any date between the vernal equinox and autumnal equinox. The declination of the Sun is defined as the angle \(i\) between the equatorial plane and any ray of light from the Sun. The latitude of a location is the angle \(\theta\) between the Equator and the location on the surface of Earth, with the vertex of the angle located at the center of Earth. See the figure. To use the formula, \(\cos ^{-1}(\tan i \tan \theta)\) must be expressed in radians.
69. Approximate the number of hours of daylight in Houston, Texas ( \(29^{\circ} 45^{\prime}\) north latitude), for the following dates:
(a) Summer solstice \(\left(i=23.5^{\circ}\right)\)
(b) Vernal equinox \(\left(i=0^{\circ}\right)\)
(c) July \(4\left(i=22^{\circ} 48^{\prime}\right)\)
70. Approximate the number of hours of daylight in New York, New York ( \(40^{\circ} 45^{\prime}\) north latitude), for the following dates:
(a) Summer solstice \(\left(i=23.5^{\circ}\right)\)
(b) Vernal equinox \(\left(i=0^{\circ}\right)\)
(c) July \(4\left(i=22^{\circ} 48^{\prime}\right)\)
71. Approximate the number of hours of daylight in Honolulu, Hawaii ( \(21^{\circ} 18^{\prime}\) north latitude), for the following dates:
(a) Summer solstice \(\left(i=23.5^{\circ}\right)\)
(b) Vernal equinox \(\left(i=0^{\circ}\right)\)
(c) July \(4\left(i=22^{\circ} 48^{\prime}\right)\)
72. Approximate the number of hours of daylight in Anchorage, Alaska ( \(61^{\circ} 10^{\prime}\) north latitude), for the following dates:

(a) Summer solstice \(\left(i=23.5^{\circ}\right)\)
(b) Vernal equinox \(\left(i=0^{\circ}\right)\)
(c) July \(4\left(i=22^{\circ} 48^{\prime}\right)\)
73. Approximate the number of hours of daylight at the Equator ( \(0^{\circ}\) north latitude) for the following dates:
(a) Summer solstice \(\left(i=23.5^{\circ}\right)\)
(b) Vernal equinox \(\left(i=0^{\circ}\right)\)
(c) July \(4\left(i=22^{\circ} 48^{\prime}\right)\)
(d) What do you conclude about the number of hours of daylight throughout the year for a location at the Equator?
74. Approximate the number of hours of daylight for any location that is \(66^{\circ} 30^{\prime}\) north latitude for the following dates:
(a) Summer solstice \(\left(i=23.5^{\circ}\right)\)
(b) Vernal equinox \(\left(i=0^{\circ}\right)\)
(c) July \(4\left(i=22^{\circ} 48^{\prime}\right)\)
(d) Thanks to the symmetry of the orbital path of Earth around the Sun, the number of hours of daylight on the winter solstice may be found by computing the number of hours of daylight on the summer solstice and subtracting this result from 24 hours. Compute the number of hours of daylight for this location on the winter solstice. What do you conclude about daylight for a location at \(66^{\circ} 30^{\prime}\) north latitude?
75. Being the First to See the Rising Sun Cadillac Mountain, elevation 1530 feet, is located in Acadia National Park, Maine, and is the highest peak on the east coast of the United States. It is said that a person standing on the summit will be the first person in the United States to see the rays of the rising Sun. How much sooner would a person atop Cadillac Mountain see the first rays than a person standing below, at sea level?

Hint: Consult the figure. When the person at \(D\) sees the first rays of the Sun, the person at \(P\) does not. The person at \(P\) sees the first rays of the Sun only after Earth has rotated so that \(P\) is at location \(Q\). Compute the length of the arc subtended by the central angle \(\theta\). Then use the fact that at the latitude of Cadillac Mountain, in 24 hours a length of \(2 \pi(2710) \approx 17,027.4\) miles is subtended, and find the time that it takes to subtend this length.
76. Movie Theater Screens Suppose that a movie theater has a screen that is 28 feet tall. When you sit down, the bottom of the screen is 6 feet above your eye level. The angle formed by drawing a line from your eye to the bottom of the screen and another line from your eye to the top of the screen is called the viewing angle. In the figure, \(\theta\) is the viewing angle. Suppose that you sit \(x\) feet from the screen. The viewing angle \(\theta\) is given by the function
\[
\theta(x)=\tan ^{-1}\left(\frac{34}{x}\right)-\tan ^{-1}\left(\frac{6}{x}\right)
\]

(a) What is your viewing angle if you sit 10 feet from the screen? 15 feet? 20 feet?
(b) If there is 5 feet between the screen and the first row of seats and there is 3 feet between each row and the row behind it, which row results in the largest viewing angle?
(c) Using a graphing utility, graph
\[
\theta(x)=\tan ^{-1}\left(\frac{34}{x}\right)-\tan ^{-1}\left(\frac{6}{x}\right)
\]

What value of \(x\) results in the largest viewing angle?
77. Area under a Curve The area under the graph of \(y=\frac{1}{1+x^{2}}\) and above the \(x\)-axis between \(x=a\) and \(x=b\) is given by
\[
\tan ^{-1} b-\tan ^{-1} a
\]

See the figure.

(a) Find the exact area under the graph of \(y=\frac{1}{1+x^{2}}\) and above the \(x\)-axis between \(x=0\) and \(x=\sqrt{3}\).
(b) Find the exact area under the graph of \(y=\frac{1}{1+x^{2}}\) and above the \(x\)-axis between \(x=-\frac{\sqrt{3}}{3}\) and \(x=1\).
78. Area under a Curve The area under the graph of \(y=\frac{1}{\sqrt{1-x^{2}}}\) and above the \(x\)-axis between \(x=a\) and \(x=b\) is given by
\[
\sin ^{-1} b-\sin ^{-1} a
\]

See the figure.

(a) Find the exact area under the graph of \(y=\frac{1}{\sqrt{1-x^{2}}}\) and above the \(x\)-axis between \(x=0\) and \(x=\frac{\sqrt{3}}{2}\).
(b) Find the exact area under the graph of \(y=\frac{1}{\sqrt{1-x^{2}}}\) and above the \(x\)-axis between \(x=-\frac{1}{2}\) and \(x=\frac{1}{2}\).

Problems 79 and 80 require the following discussion:
The shortest distance between two points on Earth's surface can be determined from the latitude and longitude of the two locations. For example, if location 1 has (lat, lon \()=\left(\alpha_{1}, \beta_{1}\right)\) and location 2 has (lat, lon) \(=\left(\alpha_{2}, \beta_{2}\right)\), the shortest distance between the two locations is approximately \(d=r \cos ^{-1}\left[\left(\cos \alpha_{1} \cos \beta_{1} \cos \alpha_{2} \cos \beta_{2}\right)+\left(\cos \alpha_{1} \sin \beta_{1} \cos \alpha_{2} \sin \beta_{2}\right)+\left(\sin \alpha_{1} \sin \alpha_{2}\right)\right]\), where \(r=\) radius of Earth \(\approx 3960\) miles and the inverse cosine function is expressed in radians. Also, \(N\) latitude and E longitude are positive angles, and \(S\) latitude and \(W\) longitude are negative angles.
\begin{tabular}{|lll|}
\hline City & Latitude & Longitude \\
\hline Chicago, IL & \(41^{\circ} 50^{\prime} \mathrm{N}\) & \(87^{\circ} 37^{\prime} \mathrm{W}\) \\
\begin{tabular}{lll} 
Honolulu, HI & \(21^{\circ} 18^{\prime} \mathrm{N}\) & \(157^{\circ} 50^{\prime} \mathrm{W}\) \\
\begin{tabular}{l} 
Melbourne, \\
Australia
\end{tabular} & \(37^{\circ} 47^{\prime} \mathrm{S}\) & \(144^{\circ} 58^{\prime} \mathrm{E}\) \\
\hline
\end{tabular} \\
\hline
\end{tabular}

Source: www.infoplease.com
79. Shortest Distance from Chicago to Honolulu Find the shortest distance from Chicago, latitude \(41^{\circ} 50^{\prime} \mathrm{N}\), longitude \(87^{\circ} 37^{\prime} \mathrm{W}\) to Honolulu, latitude \(21^{\circ} 18^{\prime} \mathrm{N}\), longitude \(157^{\circ} 50^{\prime} \mathrm{W}\). Round your answer to the nearest mile.
80. Shortest Distance from Honolulu to Melbourne, Australia Find the shortest distance from Honolulu to Melbourne, Australia, latitude \(37^{\circ} 47^{\prime} \mathrm{S}\), longitude \(144^{\circ} 58^{\prime} \mathrm{E}\). Round your answer to the nearest mile.

\section*{-Retain Your Knowledge}

Problems 81-84 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
81. Solve: \(|3 x-2|+5 \leq 9\)
82. State why the graph of the function shown to the right is one-to-one.

Then draw the graph of the inverse function \(f^{-1}\).
Hint: The graph of \(y=x\) is given.
83. The exponential function \(f(x)=1+2^{x}\) is one-to-one. Find \(f^{-1}\).
84. Factor: \((2 x+1)^{-\frac{1}{2}}\left(x^{2}+3\right)^{-\frac{1}{2}}-\left(x^{2}+3\right)^{-\frac{3}{2}} x(2 x+1)^{\frac{1}{2}}\)

\section*{'Are You Prepared?' Answers}
1. Domain: the set of all real numbers; Range: \(\{y \mid-1 \leq y \leq 1\}\)
2. Two answers are possible: \(x \leq 1\) or \(x \geq 1\)
3. \([3, \infty)\)
4. True
5. \(1 ; \frac{\sqrt{3}}{2}\)
6. \(-\frac{1}{2} ;-1\)

\subsection*{6.2 The Inverse Trigonometric Functions (Continued)}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Finding Exact Values Given the Value of a Trigonometric Function and the Quadrant of the Angle (Section 5.3, pp. 413-416)
- Graphs of the Secant, Cosecant, and Cotangent Functions (Section 5.5, pp. 438-441)
- Domain and Range of the Secant, Cosecant, and Cotangent Functions (Section 5.3, pp. 407-409)
- Use a Circle of Radius \(r\) to Evaluate Trigonometric Functions (pp. 400-401)

Now Work the 'Are You Prepared?' problems on page 480.
OBJECTIVES 1 Find the Exact Value of Expressions Involving the Inverse Sine, Cosine, and Tangent Functions (p.477)
2 Define the Inverse Secant, Cosecant, and Cotangent Functions (p. 478)
3 Use a Calculator to Evaluate \(\sec ^{-1} x, \csc ^{-1} x\), and \(\cot ^{-1} x\) ( \(p\). 479)
4 Write a Trigonometric Expression as an Algebraic Expression (p. 479)

\section*{1 Find the Exact Value of Expressions Involving the Inverse Sine, Cosine, and Tangent Functions}

\section*{EXAMPLE I}

Finding the Exact Value of an Expression Involving Inverse Trigonometric Functions
Find the exact value of: \(\sin \left(\tan ^{-1} \frac{1}{2}\right)\)

Figure 15
\(\tan \theta=\frac{1}{2} \quad\) Solution

\section*{EXAMPLE 2}

Finding the Exact Value of an Expression Involving Inverse Trigonometric Functions
Find the exact value of: \(\cos \left[\sin ^{-1}\left(-\frac{1}{3}\right)\right]\)
Solution
Figure 16
\(\sin \theta=-\frac{1}{3}\)

Let \(\theta=\tan ^{-1} \frac{1}{2}\). Then \(\tan \theta=\frac{1}{2}\), where \(-\frac{\pi}{2}<\theta<\frac{\pi}{2}\). We seek \(\sin \theta\). Because \(\tan \theta>0\), it follows that \(0<\theta<\frac{\pi}{2}\), so \(\theta\) lies in quadrant I. Because \(\tan \theta=\frac{1}{2}=\frac{y}{x}\), let \(x=2\) and \(y=1\). Since \(r=d(O, P)=\sqrt{2^{2}+1^{2}}=\sqrt{5}\), the point \(P=(x, y)=(2,1)\) is on the circle \(x^{2}+y^{2}=5\). See Figure 15. Finally, with \(x=2, y=1\), and \(r=\sqrt{5}\), it follows that
\[
\begin{aligned}
\sin \left(\tan ^{-1} \frac{1}{2}\right)=\sin \theta & =\frac{1}{\sqrt{5}}=\frac{\sqrt{5}}{5} \\
& \begin{array}{l}
\sin \theta=\frac{y}{r}
\end{array}
\end{aligned}
\]

Let \(\theta=\sin ^{-1}\left(-\frac{1}{3}\right)\). Then \(\sin \theta=-\frac{1}{3}\) such that \(-\frac{\pi}{2} \leq \theta \leq \frac{\pi}{2}\). We seek \(\cos \theta\). Because \(\sin \theta<0\), it follows that \(-\frac{\pi}{2} \leq \theta<0\), so \(\theta\) lies in quadrant IV. Since \(\sin \theta=\frac{-1}{3}=\frac{y}{r}\), let \(y=-1\) and \(r=3\). Then point \(P=(x, y)=(x,-1), x>0\), is on a circle of radius \(3, x^{2}+y^{2}=9\). See Figure 16. Then
\[
\begin{aligned}
x^{2}+y^{2} & =9 \\
x^{2}+(-1)^{2} & =9 \quad y=-1 \\
x^{2} & =8 \\
x & =2 \sqrt{2} \quad x>0
\end{aligned}
\]

Using \(x=2 \sqrt{2}, y=-1\), and \(r=3\) gives the result
\[
\cos \left[\sin ^{-1}\left(-\frac{1}{3}\right)\right]=\cos \theta=\frac{2 \sqrt{2}}{3}{ }^{\cos \theta=\frac{x}{r}}
\]

\section*{EXAMPLE 3}

Finding the Exact Value of an Expression Involving Inverse Trigonometric Functions
Find the exact value of: \(\tan \left[\cos ^{-1}\left(-\frac{1}{3}\right)\right]\)
Solution Let \(\theta=\cos ^{-1}\left(-\frac{1}{3}\right)\). Then \(\cos \theta=-\frac{1}{3}\), where \(0 \leq \theta \leq \pi\). We seek tan \(\theta\). Because \(\cos \theta<0\), it follows that \(\frac{\pi}{2}<\theta \leq \pi\), so \(\theta\) lies in quadrant II. Since \(\cos \theta=\frac{-1}{3}=\frac{x}{r}\),

Figure 17
\(\cos \theta=-\frac{1}{3}\)

let \(x=-1\) and \(r=3\). The point \(P=(x, y)=(-1, y), y>0\), is on a circle of radius \(r=3, x^{2}+y^{2}=9\). See Figure 17. Then
\[
\begin{array}{rlr}
x^{2}+y^{2} & =9 & \\
(-1)^{2}+y^{2} & =9 & x=-1 \\
y^{2} & =8 & \\
y & =2 \sqrt{2} \quad y>0
\end{array}
\]

Then \(x=-1, y=2 \sqrt{2}\), and \(r=3\), which means
\[
\tan \left[\cos ^{-1}\left(-\frac{1}{3}\right)\right]=\tan \theta \underset{\uparrow}{ } \frac{2 \sqrt{2}}{-1}=-2 \sqrt{2}
\]
-Now Work problems 9 and 27

\section*{2 Define the Inverse Secant, Cosecant, and Cotangent Functions}

The inverse secant, inverse cosecant, and inverse cotangent functions are defined as follows:
\[
\begin{align*}
& \qquad y=\sec ^{-1} x \text { means } x=\sec y  \tag{1}\\
& \text { where } \quad|x| \geq 1 \quad \text { and } 0 \leq y \leq \pi, \quad y \neq \frac{\pi}{2} * \\
& \qquad y=\csc ^{-1} x \text { means } x=\csc y  \tag{2}\\
& \text { where } \quad|x| \geq 1 \quad \text { and } \quad-\frac{\pi}{2} \leq y \leq \frac{\pi}{2}, \quad y \neq 0^{\dagger} \\
& y=\cot ^{-1} x \quad \text { means } \quad x=\cot y  \tag{3}\\
& \text { where }-\infty<x<\infty \quad \text { and } 0<y<\pi
\end{align*}
\]

Take time to review the graphs of the cotangent, cosecant, and secant functions in Figures 66, 67, and 68 in Section 5.5 to see the basis for these definitions.

\section*{EXAMPLE 4}

Finding the Exact Value of an Inverse Cosecant Function
Find the exact value of: \(\csc ^{-1} 2\)
Solution Let \(\theta=\csc ^{-1} 2\). Then \(\theta\) is the angle, \(-\frac{\pi}{2} \leq \theta \leq \frac{\pi}{2}, \theta \neq 0\), whose cosecant equals 2 (or, equivalently, whose sine equals \(\frac{1}{2}\) ).
\[
\begin{aligned}
\theta & =\csc ^{-1} 2 & & -\frac{\pi}{2} \leq \theta \leq \frac{\pi}{2}, \quad \theta \neq 0 \\
\csc \theta & =2 & & -\frac{\pi}{2} \leq \theta \leq \frac{\pi}{2}, \quad \theta \neq 0 \quad \sin \theta=\frac{1}{2}
\end{aligned}
\]

The only angle \(\theta\) in the interval \(-\frac{\pi}{2} \leq \theta \leq \frac{\pi}{2}, \theta \neq 0\), whose cosecant is 2

amow Work problem 39
"Most books use this definition. A few use the restriction \(0 \leq y<\frac{\pi}{2}, \pi \leq y<\frac{3 \pi}{2}\).
\({ }^{\dagger}\) Most books use this definition. A few use the restriction \(-\pi<y \leq-\frac{\pi}{2}, 0<y \leq \frac{\pi}{2}\).

\section*{3 Use a Calculator to Evaluate \(\sec ^{-1} x, \csc ^{-1} x\), and \(\cot ^{-1} x\)}

Most calculators do not have keys for evaluating the inverse cotangent, cosecant, and secant functions. The easiest way to evaluate them is to convert each to an

Figure 18
\(\cot \theta=\frac{1}{2}, 0<\theta<\pi\)

Figure 19
\(\cot \theta=-2,0<\theta<\pi\)

inverse trigonometric function whose range is the same as the one to be evaluated. In this regard, notice that \(y=\cot ^{-1} x\) and \(y=\sec ^{-1} x\), except where undefined, have the same range as \(y=\cos ^{-1} x\) and that \(y=\csc ^{-1} x\), except where undefined, has the same range as \(y=\sin ^{-1} x\).

\section*{EXAMPLE 5}

\section*{Approximating the Value of Inverse Trigonometric Functions}

Use a calculator to approximate each expression in radians rounded to two decimal places.
(a) \(\sec ^{-1} 3\)
(b) \(\csc ^{-1}(-4)\)
(c) \(\cot ^{-1} \frac{1}{2}\)
(d) \(\cot ^{-1}(-2)\)

\section*{Solution}

NOTE Remember that the range of \(y=\sin ^{-1} x\) is \(\left[-\frac{\pi}{2}, \frac{\pi}{2}\right]\) and that the range of \(y=\cos ^{-1} x\) is \([0, \pi]\).

First, set your calculator to radian mode.
(a) Let \(\theta=\sec ^{-1} 3\). Then \(\sec \theta=3\) and \(0 \leq \theta \leq \pi, \theta \neq \frac{\pi}{2}\). Now find \(\cos \theta\) because \(y=\cos ^{-1} x\) has the same range as \(y=\sec ^{-1} x\), except where undefined. Because \(\sec \theta=\frac{1}{\cos \theta}=3\), this means \(\cos \theta=\frac{1}{3}\). Then \(\theta=\cos ^{-1} \frac{1}{3}\), and
\[
\sec ^{-1} 3=\theta=\cos ^{-1} \frac{1}{3} \approx 1.23
\]

Use a calculator.
(b) Let \(\theta=\csc ^{-1}(-4)\). Then \(\csc \theta=-4,-\frac{\pi}{2} \leq \theta \leq \frac{\pi}{2}, \theta \neq 0\). Now find \(\sin \theta\) because \(y=\sin ^{-1} x\) has the same range as \(y=\csc ^{-1} x\), except where undefined. Because \(\csc \theta=\frac{1}{\sin \theta}=-4\), this means \(\sin \theta=-\frac{1}{4}\). Then \(\theta=\sin ^{-1}\left(-\frac{1}{4}\right)\), and
\[
\csc ^{-1}(-4)=\theta=\sin ^{-1}\left(-\frac{1}{4}\right) \approx-0.25
\]
(c) Proceed as before. Let \(\theta=\cot ^{-1} \frac{1}{2}\). Then \(\cot \theta=\frac{1}{2}, 0<\theta<\pi\). These facts indicate that \(\theta\) lies in quadrant I . Now find \(\cos \theta\) because \(y=\cos ^{-1} x\) has the same range as \(y=\cot ^{-1} x\), except where undefined. Use Figure 18 to find that \(\cos \theta=\frac{1}{\sqrt{5}}, 0<\theta<\frac{\pi}{2}\). Thus, \(\theta=\cos ^{-1}\left(\frac{1}{\sqrt{5}}\right)\), and
\[
\cot ^{-1} \frac{1}{2}=\theta=\cos ^{-1}\left(\frac{1}{\sqrt{5}}\right) \approx 1.11
\]
(d) Let \(\theta=\cot ^{-1}(-2)\). Then \(\cot \theta=-2,0<\theta<\pi\). These facts indicate that \(\theta\) lies in quadrant II. Now find \(\cos \theta\). Use Figure 19 to find that \(\cos \theta=-\frac{2}{\sqrt{5}}, \frac{\pi}{2}<\theta<\pi\). This means \(\theta=\cos ^{-1}\left(-\frac{2}{\sqrt{5}}\right)\), and
\[
\cot ^{-1}(-2)=\theta=\cos ^{-1}\left(-\frac{2}{\sqrt{5}}\right) \approx 2.68
\]

\section*{4 Write a Trigonometric Expression as an Algebraic Expression}

\section*{EXAMPLE 6}

Solution Let \(\theta=\tan ^{-1} u\) so that \(\tan \theta=u,-\frac{\pi}{2}<\theta<\frac{\pi}{2},-\infty<u<\infty\). This means that \(\sec \theta>0\). Then
\[
\begin{aligned}
\sin \left(\tan ^{-1} u\right)= & \sin \theta=\sin \theta \cdot \frac{\cos \theta}{\cos \theta}=\tan \theta \cos \theta=\frac{\tan \theta}{\sec \theta}=\frac{\tan \theta}{\sqrt{1+\tan ^{2} \theta}}=\frac{u}{\sqrt{1+u^{2}}} \\
\text { Multiply by } 1: \frac{\cos \theta}{\cos \theta} \quad & \left.\frac{\sin \theta}{\cos \theta}=\tan \theta \quad \begin{array}{c}
\sec 2 \\
\sec \theta>0
\end{array}\right)
\end{aligned}
\]

\subsection*{6.2 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. What are the domain and the range of \(y=\sec x\) ? (pp. 407-409)
2. True or False The graph of \(y=\sec x\) is one-to-one on the interval \(\left[0, \frac{\pi}{2}\right)\) and on the interval \(\left(\frac{\pi}{2}, \pi\right]\). (pp. 439-440)
3. If \(\tan \theta=\frac{1}{2},-\frac{\pi}{2}<\theta<\frac{\pi}{2}\), then \(\sin \theta=\) \(\qquad\) -
(pp. 413-416)

\section*{Concepts and Vocabulary}
4. \(y=\sec ^{-1} x\) means \(\qquad\) , where \(|x|\) \(\qquad\) and
\[
\leq y \leq, y \neq \frac{\pi}{2}
\]
5. To find the inverse secant of a real number \(x\) such that
\(|x| \geq 1\), convert the inverse secant to an inverse \(\qquad\) .
6. True or False It is impossible to obtain exact values for the inverse secant function.
7. True or False \(\csc ^{-1} 0.5\) is not defined.
8. True or False The domain of the inverse cotangent function is the set of real numbers.

\section*{Skill Building}

In Problems 9-36, find the exact value of each expression.
9. \(\cos \left(\sin ^{-1} \frac{\sqrt{2}}{2}\right)\)
10. \(\sin \left(\cos ^{-1} \frac{1}{2}\right)\)
11. \(\tan \left[\cos ^{-1}\left(-\frac{\sqrt{3}}{2}\right)\right]\)
12. \(\tan \left[\sin ^{-1}\left(-\frac{1}{2}\right)\right]\)
13. \(\sec \left(\cos ^{-1} \frac{1}{2}\right)\)

65. \(\tan \left(\cot ^{-1} u\right)\)
66. \(\tan \left(\sec ^{-1} u\right)\)

\section*{Mixed Practice}

In Problems 67-78, \(f(x)=\sin x,-\frac{\pi}{2} \leq x \leq \frac{\pi}{2} ; g(x)=\cos x, 0 \leq x \leq \pi ;\) and \(h(x)=\tan x,-\frac{\pi}{2}<x<\frac{\pi}{2}\). Find the exact value
of each composite function.
67. \(g\left(f^{-1}\left(\frac{12}{13}\right)\right)\)
68. \(f\left(g^{-1}\left(\frac{5}{13}\right)\right)\)
69. \(g^{-1}\left(f\left(\frac{7 \pi}{4}\right)\right)\)
70. \(f^{-1}\left(g\left(\frac{5 \pi}{6}\right)\right)\)
71. \(h\left(f^{-1}\left(-\frac{3}{5}\right)\right)\)
72. \(h\left(g^{-1}\left(-\frac{4}{5}\right)\right)\)
73. \(g\left(h^{-1}\left(\frac{12}{5}\right)\right)\)
74. \(f\left(h^{-1}\left(\frac{5}{12}\right)\right)\)
75. \(g^{-1}\left(f\left(-\frac{4 \pi}{3}\right)\right)\)
76. \(g^{-1}\left(f\left(-\frac{5 \pi}{6}\right)\right)\)
77. \(h\left(g^{-1}\left(-\frac{1}{4}\right)\right)\)
78. \(h\left(f^{-1}\left(-\frac{2}{5}\right)\right)\)

\section*{Applications and Extensions}

Problems 79 and 80 require the following discussion: When granular materials are allowed to fall freely, they form conical (cone-shaped) piles. The naturally occurring angle of slope, measured from the horizontal, at which the loose material comes to rest is called the angle of repose and varies for different materials. The angle of repose \(\theta\) is related to the height \(h\) and base radius \(r\) of the conical pile by the equation \(\theta=\cot ^{-1} \frac{r}{h}\). See the illustration.
79. Angle of Repose: De-icing Salt Due to potential transportation issues (for example, frozen waterways), de-icing salt used by highway departments in the Midwest must be ordered early and stored for future use. When de-icing salt is stored in a pile 14 feet high, the diameter of the base of the pile is 45 feet.
(a) Find the angle of repose for de-icing salt.

(b) What is the base diameter of a pile that is 17 feet high?
(c) What is the height of a pile that has a base diameter of approximately 122 feet?

Source: Salt Institute, The Salt Storage Handbook, 2006
80. Angle of Repose: Bunker Sand The steepness of sand bunkers on a golf course is affected by the angle of repose of the sand (a larger angle of repose allows for steeper bunkers). A freestanding pile of loose sand from a United States Golf Association (USGA) bunker had a height of 4 feet and a base diameter of approximately 6.68 feet.
(a) Find the angle of repose for USGA bunker sand.
(b) What is the height of such a pile if the diameter of the base is 8 feet?
(c) A 6-foot-high pile of loose Tour Grade 50/50 sand has a base diameter of approximately 8.44 feet. Which type of sand (USGA or Tour Grade 50/50) would be better suited for steep bunkers?
Source: 2004 Annual Report, Purdue University Turfgrass Science Program
81. Artillery A projectile fired into the first quadrant from the origin of a coordinate system will pass through the point \((x, y)\) at time \(t\) according to the relationship \(\cot \theta=\frac{2 x}{2 y+g t^{2}}\), where \(\theta=\) the angle of elevation of the launcher and \(g=\) the acceleration due to gravity \(=32.2\) feet \(/\) second \(^{2}\). An artilleryman is firing at an enemy bunker located 2450 feet up the side of a hill that is 6175 feet away. He fires a round, and exactly 2.27 seconds later he scores a direct hit.
(a) What angle of elevation did he use?
(b) If the angle of elevation is also given by \(\sec \theta=\frac{v_{0} t}{x}\), where \(v_{0}\) is the muzzle velocity of the weapon, find the muzzle velocity of the artillery piece he used.
Source: www.egwald.com/geometry/projectile3d.php
82. Using a graphing utility, graph \(y=\cot ^{-1} x\).
83. Using a graphing utility, graph \(y=\sec ^{-1} x\).
84. Using a graphing utility, graph \(y=\csc ^{-1} x\).

\section*{Discussion and Writing}
85. Explain in your own words how you would use your calculator to find the value of \(\cot ^{-1} 10\).
86. Consult three books on calculus, and then write down the definition in each of \(y=\sec ^{-1} x\) and \(y=\csc ^{-1} x\). Compare these with the definitions given in this text.

\section*{-Retain Your Knowledge}

Problems 87-90 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
87. Find the complex zeros of \(f(x)=x^{4}+21 x^{2}-100\).
88. Determine algebraically whether \(f(x)=x^{3}+x^{2}-x\) is even, odd, or neither.
89. Convert \(315^{\circ}\) to radians.
90. Find the length of the arc subtended by a central angle of \(75^{\circ}\) on a circle of radius 6 inches. Give both the exact length and an approximation rounded to two decimal places.

\section*{'Are You Prepared?' Answers}
1. Domain: \(\left\{x \mid x \neq\right.\) odd integer multiples of \(\left.\frac{\pi}{2}\right\}\); range: \(\{y \mid y \leq-1\) or \(y \geq 1\}\)
2. True
3. \(\frac{\sqrt{5}}{5}\)

\subsection*{6.3 Trigonometric Equations}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Solving Equations (Appendix A, Section A.8, pp. A63-A66)
- Values of the Trigonometric Functions (Section 5.2, pp. 392-400)
- Solving Quadratic Equations (Section 2.3, pp. 137-144)
- Equations Quadratic in Form (Section 2.3, pp. 144-145)
- Using a Graphing Utility to Solve Equations (Appendix B, Section B.4, pp. B6-B7)

Now Work the 'Are You Prepared?' problems on page 496.
OBJECTIVES 1 Solve Equations Involving a Single Trigonometric Function (p.482)
2 Solve Trigonometric Equations Using a Calculator (p. 485)
3 Solve Trigonometric Equations Quadratic in Form (p. 485)
4 Solve Trigonometric Equations Using Fundamental Identities (p. 486)
5 Solve Trigonometric Equations Using a Graphing Utility (p. 487)

\section*{1 Solve Equations Involving a Single Trigonometric Function}

In this section, we discuss trigonometric equations - that is, equations involving trigonometric functions that are satisfied only by some values of the variable (or, possibly, are not satisfied by any values of the variable). The values that satisfy the equation are called solutions of the equation.

\section*{EXAMPLE I}

\section*{Checking Whether a Given Number Is a Solution}

\section*{of a Trigonometric Equation}

Determine whether \(\theta=\frac{\pi}{4}\) is a solution of the equation \(2 \sin \theta-1=0\). Is \(\theta=\frac{\pi}{6}\)
a solution? a solution?
Solution Replace \(\theta\) by \(\frac{\pi}{4}\) in the given equation. The result is
\[
2 \sin \frac{\pi}{4}-1=2 \cdot \frac{\sqrt{2}}{2}-1=\sqrt{2}-1 \neq 0
\]

Therefore, \(\frac{\pi}{4}\) is not a solution.
Next replace \(\theta\) by \(\frac{\pi}{6}\) in the equation. The result is
\[
2 \sin \frac{\pi}{6}-1=2 \cdot \frac{1}{2}-1=0
\]

Therefore, \(\frac{\pi}{6}\) is a solution of the given equation.

The equation given in Example 1 has other solutions besides \(\theta=\frac{\pi}{6}\). For example, \(\theta=\frac{5 \pi}{6}\) is also a solution, as is \(\theta=\frac{13 \pi}{6}\). (Check this for yourself.) In fact, the equation has an infinite number of solutions because of the periodicity of the sine function, as can be seen in Figure 20 where the graph \(y=2 \sin x-1\) is shown. Each \(x\)-intercept of the graph represents a solution to the equation \(2 \sin x-1=0\).

Figure 20

Unless the domain of the variable is restricted, we need to find all the solutions of a trigonometric equation. As the next example illustrates, finding all the solutions can be accomplished by first finding solutions over an interval whose length equals the period of the function and then adding multiples of that period to the solutions found.

\section*{EXAMPLE 2 Finding All the Solutions of a Trigonometric Equation}

Solve the equation: \(\cos \theta=\frac{1}{2}\)
Give a general formula for all the solutions. List eight of the solutions.
Solution The period of the cosine function is \(2 \pi\). In the interval [ \(0,2 \pi\) ), there are two angles \(\theta\) for which \(\cos \theta=\frac{1}{2}: \theta=\frac{\pi}{3}\) and \(\theta=\frac{5 \pi}{3}\). See Figure 21. Because the cosine function has period \(2 \pi\), all the solutions of \(\cos \theta=\frac{1}{2}\) may be given by the general formula
\[
\theta=\frac{\pi}{3}+2 k \pi \quad \text { or } \quad \theta=\frac{5 \pi}{3}+2 k \pi \quad \text { kany integer }
\]

Eight of the solutions are
\[
\underbrace{-\frac{5 \pi}{3},-\frac{\pi}{3}}_{k=-1}, \underbrace{\frac{\pi}{3}, \frac{5 \pi}{3}}_{k=0}, \underbrace{\frac{7 \pi}{3}, \frac{11 \pi}{3}}_{k=1}, \underbrace{\frac{13 \pi}{3}, \frac{17 \pi}{3}}_{k=2}
\]

Check: To verify the solutions, graph \(Y_{1}=\cos x\) and \(Y_{2}=\frac{1}{2}\) and determine where the graphs intersect. (Be sure to graph in radian mode.) See Figure 22. The graph of \(Y_{1}\) intersects the graph of \(Y_{2}\) at \(x=1.05\left(\approx \frac{\pi}{3}\right), 5.24\left(\approx \frac{5 \pi}{3}\right), 7.33\left(\approx \frac{7 \pi}{3}\right)\), and \(11.52\left(\approx \frac{11 \pi}{3}\right)\), rounded to two decimal places.
am Now Work problem 35
In most of our work, we shall be interested only in finding solutions of trigonometric equations for \(0 \leq \theta<2 \pi\).

\section*{EXAMPLE 3 Solving a Linear Trigonometric Equation}

Solve the equation: \(2 \sin \theta+\sqrt{3}=0, \quad 0 \leq \theta<2 \pi\)

Solution First solve the equation for \(\sin \theta\).
\[
\begin{aligned}
2 \sin \theta+\sqrt{3} & =0 \\
2 \sin \theta & =-\sqrt{3} \quad \text { Subtract } \sqrt{3} \text { from both sides. } \\
\sin \theta & =-\frac{\sqrt{3}}{2} \quad \text { Divide both sides by } 2
\end{aligned}
\]

In the interval \([0,2 \pi)\), there are two angles \(\theta\) for which \(\sin \theta=-\frac{\sqrt{3}}{2}: \theta=\frac{4 \pi}{3}\) and \(\theta=\frac{5 \pi}{3}\). The solution set is \(\left\{\frac{4 \pi}{3}, \frac{5 \pi}{3}\right\}\).

\section*{Now Work problem 11}

When the argument of the trigonometric function in an equation is a multiple of \(\theta\), the general formula must be used to solve the equation.

\section*{EXAMPLE 4}

Figure 23
Solution

(a)

(b)

WARNING In solving a trigonometric equation for \(\theta, 0 \leq \theta<2 \pi\), in which the argument is not \(\theta\) (as in Example 4), you must write down all the solutions first and then list those that are in the interval \([0,2 \pi)\). Otherwise, solutions may be lost. For example, in solving \(\sin (2 \theta)=\frac{1}{2}\), if you write only the solutions \(2 \theta \stackrel{2}{5 \pi}\) and \(2 \theta=\frac{5 \pi}{6}\), you will find only \(\theta=\frac{\pi}{12}\) and \(\theta=\frac{5 \pi}{12}\) and miss the other solutions.

\section*{Solving a Trigonometric Equation}

Solve the equation: \(\sin (2 \theta)=\frac{1}{2}, \quad 0 \leq \theta<2 \pi\)
In the interval \([0,2 \pi)\), the sine function equals \(\frac{1}{2}\) at \(\frac{\pi}{6}\) and \(\frac{5 \pi}{6}\). See Figure 23(a). Therefore, \(2 \theta\) must equal \(\frac{\pi}{6}\) and \(\frac{5 \pi}{6}\). Here's the problem, however. The period of \(y=\sin (2 \theta)\) is \(\frac{2 \pi}{2}=\pi\). So in the interval \([0,2 \pi)\), the graph of \(y=\sin (2 \theta)\) completes two cycles, and the graph of \(y=\sin (2 \theta)\) intersects the graph of \(y=\frac{1}{2}\) four times. See Figure 23(b). For this reason, there are four solutions to the equation \(\sin (2 \theta)=\frac{1}{2}\) in \([0,2 \pi)\). To find these solutions, write the general formula that gives all the solutions.
\[
\begin{aligned}
2 \theta & =\frac{\pi}{6}+2 k \pi & \text { or } & 2 \theta=\frac{5 \pi}{6}+2 k \pi & & \text { kany integer } \\
\theta & =\frac{\pi}{12}+k \pi & \text { or } & \theta=\frac{5 \pi}{12}+k \pi & & \text { Divide by } 2 .
\end{aligned}
\]

Then
\[
\begin{aligned}
& \theta=\frac{\pi}{12}+(-1) \pi=\frac{-11 \pi}{12} \quad k=-1 \quad \theta=\frac{5 \pi}{12}+(-1) \pi=\frac{-7 \pi}{12} \\
& \theta=\frac{\pi}{12}+(0) \pi=\frac{\pi}{12} \quad k=0 \quad \theta=\frac{5 \pi}{12}+(0) \pi=\frac{5 \pi}{12} \\
& \theta=\frac{\pi}{12}+(1) \pi=\frac{13 \pi}{12} \quad k=1 \quad \theta=\frac{5 \pi}{12}+(1) \pi=\frac{17 \pi}{12} \\
& \theta=\frac{\pi}{12}+(2) \pi=\frac{25 \pi}{12} \quad k=2 \quad \theta=\frac{5 \pi}{12}+(2) \pi=\frac{29 \pi}{12}
\end{aligned}
\]

In the interval \([0,2 \pi)\), the solutions of \(\sin (2 \theta)=\frac{1}{2}\) are \(\theta=\frac{\pi}{12}, \theta=\frac{5 \pi}{12}, \theta=\frac{13 \pi}{12}\), and \(\theta=\frac{17 \pi}{12}\). The solution set is \(\left\{\frac{\pi}{12}, \frac{5 \pi}{12}, \frac{13 \pi}{12}, \frac{17 \pi}{12}\right\}\). This means the graph of \(y=\sin (2 \theta)\) intersects \(y=\frac{1}{2}\) at \(\left(\frac{\pi}{12}, \frac{1}{2}\right),\left(\frac{5 \pi}{12}, \frac{1}{2}\right),\left(\frac{13 \pi}{12}, \frac{1}{2}\right)\), and \(\left(\frac{17 \pi}{12}, \frac{1}{2}\right)\) in the interval \([0,2 \pi)\).
Check: Verify these solutions by graphing \(Y_{1}=\sin (2 x)\) and \(Y_{2}=\frac{1}{2}\) for \(0 \leq x \leq 2 \pi\).

\section*{EXAMPLE 5 Solving a Trigonometric Equation}

Solve the equation: \(\tan \left(\theta-\frac{\pi}{2}\right)=1, \quad 0 \leq \theta<2 \pi\)
Solution The period of the tangent function is \(\pi\). In the interval \([0, \pi)\), the tangent function has the value 1 when the argument is \(\frac{\pi}{4}\). Because the argument is \(\theta-\frac{\pi}{2}\) in the given equation, write the general formula that gives all the solutions.
\[
\begin{aligned}
\theta-\frac{\pi}{2} & =\frac{\pi}{4}+k \pi \quad \text { kany integer } \\
\theta & =\frac{3 \pi}{4}+k \pi
\end{aligned}
\]

In the interval \([0,2 \pi), \theta=\frac{3 \pi}{4}\) and \(\theta=\frac{3 \pi}{4}+\pi=\frac{7 \pi}{4}\) are the only solutions.
The solution set is \(\left\{\frac{3 \pi}{4}, \frac{7 \pi}{4}\right\}\).
an Now Work problem 17

\section*{2 Solve Trigonometric Equations Using a Calculator}

The next example illustrates how to solve trigonometric equations using a calculator. Remember that the function keys on a calculator only give values consistent with the definition of the function.

\section*{EXAMPLE 6}

\section*{Solution}

Figure 24

\section*{Solving a Trigonometric Equation with a Calculator}

Use a calculator to solve the equation \(\tan \theta=-2,0 \leq \theta<2 \pi\). Express any solutions in radians, rounded to two decimal places.
To solve \(\tan \theta=-2\) on a calculator, first set the mode to radians. Then use the \(\tan ^{-1}\) key to obtain
\[
\theta=\tan ^{-1}(-2) \approx-1.1071487
\]

Rounded to two decimal places, \(\theta=\tan ^{-1}(-2)=-1.11\) radians. Because of the definition of \(y=\tan ^{-1} x\), the angle \(\theta\) that is obtained is the angle \(-\frac{\pi}{2}<\theta<\frac{\pi}{2}\) for which \(\tan \theta=-2\). Because we seek solutions for which \(0 \leq \theta<2 \pi\), we express the angle as \(2 \pi-1.11\).

Another angle for which \(\tan \theta=-2\) is \(\pi-1.11\). See Figure 24. The angle \(\pi-1.11\) is the angle in quadrant II, where \(\tan \theta=-2\). The solutions for \(\tan \theta=-2,0 \leq \theta<2 \pi\), are
\[
\theta=2 \pi-1.11 \approx 5.17 \text { radians and } \theta=\pi-1.11 \approx 2.03 \text { radians }
\]

The solution set is \(\{5.17,2.03\}\).
WARNING Example 6 illustrates that caution must be exercised when solving trigonometric equations on a calculator. Remember that the calculator supplies an angle only within the restrictions of the definition of the inverse trigonometric function. To find the remaining solutions, you must identify other quadrants, if any, in which a solution may be located.

\section*{Now Work problem 45}

\section*{3 Solve Trigonometric Equations Quadratic in Form}

Many trigonometric equations can be solved by applying techniques that we already know, such as applying the quadratic formula (if the equation is a second-degree polynomial) or factoring.

\section*{EXAMPLE 7 Solving a Trigonometric Equation Quadratic in Form}

Solve the equation: \(2 \sin ^{2} \theta-3 \sin \theta+1=0, \quad 0 \leq \theta<2 \pi\)
Solution This equation is a quadratic equation (in \(\sin \theta\) ) that can be factored.
\[
\begin{array}{rl}
2 \sin ^{2} \theta-3 \sin \theta+1=0 & 2 x^{2}-3 x+1=0, \quad x=\sin \theta \\
(2 \sin \theta-1)(\sin \theta-1)=0 & (2 x-1)(x-1)=0 \\
2 \sin \theta-1=0 \quad \text { or } \sin \theta-1=0 & \text { Use the Zero-Product Property. } \\
\sin \theta=\frac{1}{2} \quad \text { or } \quad \sin \theta=1 &
\end{array}
\]

Solving each equation in the interval [ \(0,2 \pi\) ) yields
\[
\theta=\frac{\pi}{6}, \quad \theta=\frac{5 \pi}{6}, \quad \theta=\frac{\pi}{2}
\]

The solution set is \(\left\{\frac{\pi}{6}, \frac{5 \pi}{6}, \frac{\pi}{2}\right\}\).
-Now Work problem 59

\section*{4 Solve Trigonometric Equations Using Fundamental Identities}

When a trigonometric equation contains more than one trigonometric function, identities sometimes can be used to obtain an equivalent equation that contains only one trigonometric function.

\section*{EXAMPLE 8 Solving a Trigonometric Equation Using Identities}

Solve the equation: \(3 \cos \theta+3=2 \sin ^{2} \theta, \quad 0 \leq \theta<2 \pi\)
Solution The equation in its present form contains a sine and a cosine. However, a form of the Pythagorean Identity, \(\sin ^{2} \theta+\cos ^{2} \theta=1\), can be used to transform the equation into an equivalent one containing only cosines.
\[
\begin{array}{ccl}
3 \cos \theta+3=2 \sin ^{2} \theta & \\
3 \cos \theta+3=2\left(1-\cos ^{2} \theta\right) & \sin ^{2} \theta=1-\cos ^{2} \theta \\
3 \cos \theta+3=2-2 \cos ^{2} \theta & \\
2 \cos ^{2} \theta+3 \cos \theta+1=0 & \text { Quadratic in } \cos \theta \\
(2 \cos \theta+1)(\cos \theta+1)=0 & \text { Factor. } \\
2 \cos \theta+1=0 \quad \text { or } \quad \cos \theta+1=0 & \text { Use the Zero-Product Property. } \\
\cos \theta=-\frac{1}{2} \quad \text { or } \quad \cos \theta=-1 &
\end{array}
\]

Solving each equation in the interval [ \(0,2 \pi\) ) yields
\[
\theta=\frac{2 \pi}{3}, \quad \theta=\frac{4 \pi}{3}, \quad \theta=\pi
\]

The solution set is \(\left\{\frac{2 \pi}{3}, \pi, \frac{4 \pi}{3}\right\}\).

Check: Graph \(Y_{1}=3 \cos x+3\) and \(Y_{2}=2 \sin ^{2} x, 0 \leq x \leq 2 \pi\), and find the points of intersection. How close are your approximate solutions to the exact solutions?

\section*{EXAMPLE 9 Solving a Trigonometric Equation Using Identities}

Solve the equation: \(\cos ^{2} \theta+\sin \theta=2, \quad 0 \leq \theta<2 \pi\)
Solution This equation involves two trigonometric functions, sine and cosine. Using a form of the Pythagorean Identity, \(\sin ^{2} \theta+\cos ^{2} \theta=1\), rewrite the equation in terms of \(\sin \theta\).
\[
\begin{aligned}
\cos ^{2} \theta+\sin \theta & =2 \\
\left(1-\sin ^{2} \theta\right)+\sin \theta & =2 \quad \cos ^{2} \theta=1-\sin ^{2} \theta \\
\sin ^{2} \theta-\sin \theta+1 & =0
\end{aligned}
\]

This is a quadratic equation in \(\sin \theta\). The discriminant is \(b^{2}-4 a c=1-4=-3<0\). Therefore, the equation has no real solution. The solution set is the empty set, \(\varnothing\).
Check: Graph \(Y_{1}=\cos ^{2} x+\sin x\) and \(Y_{2}=2\) to see that the two graphs never intersect, so the equation \(Y_{1}=Y_{2}\) has no real solution.

\section*{5 Solve Trigonometric Equations Using a Graphing Utility}

The techniques introduced in this section apply only to certain types of trigonometric equations. Solutions for other types are usually studied in calculus, using numerical methods.

\section*{EXAMPLE IO Solving a Trigonometric Equation Using a Graphing Utility}

Solve: \(5 \sin x+x=3\)
Express the solution(s) rounded to two decimal places.
Solution This type of trigonometric equation cannot be solved by previous methods. A graphing
Figure 25
 utility, though, can be used here. Each solution of this equation is the \(x\)-coordinate of a point of intersection of the graphs of \(Y_{1}=5 \sin x+x\) and \(Y_{2}=3\). See Figure 25.

There are three points of intersection; the \(x\)-coordinates provide the solutions. Use INTERSECT to find
\[
x=0.52, \quad x=3.18, \quad x=5.71
\]

The solution set is \(\{0.52,3.18,5.71\}\).
am Now Work problem 81

\subsection*{6.3 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. Solve: \(3 x-5=-x+1\) (pp.A63-A65)
4. Find the real solutions of \(x^{2}-x-1=0\). (pp. 140-143)
2. \(\sin \left(\frac{\pi}{4}\right)=\) \(\qquad\) \(; \cos \left(\frac{8 \pi}{3}\right)=\) \(\qquad\) . (pp. 395-400)
3. Find the real solutions of \(4 x^{2}-x-5=0\). (pp.A67-A68)
5. Find the real solutions of \((2 x-1)^{2}-3(2 x-1)-4=0\). (pp. 144-145)
6. Use a graphing utility to solve \(5 x^{3}-2=x-x^{2}\). Round answers to two decimal places. (pp. B6-B7)

\section*{Concepts and Vocabulary}
7. Two solutions of the equation \(\sin \theta=\frac{1}{2}\) are \(\quad\) and \(\quad\) _.
8. All the solutions of the equation \(\sin \theta=\frac{1}{2}\) are \(\qquad\) -

\section*{Skill Building}

In Problems 11-34, solve each equation on the interval \(0 \leq \theta<2 \pi\).
11. \(2 \sin \theta+3=2\)
12. \(1-\cos \theta=\frac{1}{2}\)
13. \(4 \cos ^{2} \theta=1\)
14. \(\tan ^{2} \theta=\frac{1}{3}\)
15. \(2 \sin ^{2} \theta-1=0\)
16. \(4 \cos ^{2} \theta-3=0\)
17. \(\sin (3 \theta)=-1\)
18. \(\tan \frac{\theta}{2}=\sqrt{3}\)
19. \(\cos (2 \theta)=-\frac{1}{2}\)
20. \(\tan (2 \theta)=-1\)
21. \(\sec \frac{3 \theta}{2}=-2\)
22. \(\cot \frac{2 \theta}{3}=-\sqrt{3}\)
23. \(2 \sin \theta+1=0\)
24. \(\cos \theta+1=0\)
25. \(\tan \theta+1=0\)
26. \(\sqrt{3} \cot \theta+1=0\)
27. \(4 \sec \theta+6=-2\)
28. \(5 \csc \theta-3=2\)
29. \(3 \sqrt{2} \cos \theta+2=-1\)
30. \(4 \sin \theta+3 \sqrt{3}=\sqrt{3}\)
31. \(\cos \left(2 \theta-\frac{\pi}{2}\right)=-1\)
32. \(\sin \left(3 \theta+\frac{\pi}{18}\right)=1\)
33. \(\tan \left(\frac{\theta}{2}+\frac{\pi}{3}\right)=1\)
34. \(\cos \left(\frac{\theta}{3}-\frac{\pi}{4}\right)=\frac{1}{2}\)

In Problems 35-44, solve each equation. Give a general formula for all the solutions. List six solutions.
35. \(\sin \theta=\frac{1}{2}\)
\(36 \tan \theta=1\)
37. \(\tan \theta=-\frac{\sqrt{3}}{3}\)
38. \(\cos \theta=-\frac{\sqrt{3}}{2}\)
39. \(\cos \theta=0\)
40. \(\sin \theta=\frac{\sqrt{2}}{2}\)
41. \(\cos (2 \theta)=-\frac{1}{2}\)
42. \(\sin (2 \theta)=-1\)
43. \(\sin \frac{\theta}{2}=-\frac{\sqrt{3}}{2}\)
44. \(\tan \frac{\theta}{2}=-1\)

In Problems 45-56, use a calculator to solve each equation on the interval \(0 \leq \theta<2 \pi\). Round answers to two decimal places.
45. \(\sin \theta=0.4\)
46. \(\cos \theta=0.6\)
47. \(\tan \theta=5\)
48. \(\cot \theta=2\)
49. \(\cos \theta=-0.9\)
50. \(\sin \theta=-0.2\)
51. \(\sec \theta=-4\)
52. \(\csc \theta=-3\)
53. \(5 \tan \theta+9=0\)
54. \(4 \cot \theta=-5\)
55. \(3 \sin \theta-2=0\)
56. \(4 \cos \theta+3=0\)

In Problems 57-80, solve each equation on the interval \(0 \leq \theta<2 \pi\).
57. \(2 \cos ^{2} \theta+\cos \theta=0\)
58. \(\sin ^{2} \theta-1=0\)
59. \(2 \sin ^{2} \theta-\sin \theta-1=0\)
60. \(2 \cos ^{2} \theta+\cos \theta-1=0\)
61. \((\tan \theta-1)(\sec \theta-1)=0\)
62. \((\cot \theta+1)\left(\csc \theta-\frac{1}{2}\right)=0\)
63. \(\sin ^{2} \theta-\cos ^{2} \theta=1+\cos \theta\)
64. \(\cos ^{2} \theta-\sin ^{2} \theta+\sin \theta=0\)
65. \(\sin ^{2} \theta=6(\cos (-\theta)+1)\)
66. \(2 \sin ^{2} \theta=3(1-\cos (-\theta))\)
67. \(\cos \theta=-\sin (-\theta)\)
68. \(\cos \theta-\sin (-\theta)=0\)
69. \(\tan \theta=2 \sin \theta\)
70. \(\tan \theta=\cot \theta\)
71. \(1+\sin \theta=2 \cos ^{2} \theta\)
72. \(\sin ^{2} \theta=2 \cos \theta+2\)
73. \(2 \sin ^{2} \theta-5 \sin \theta+3=0\)
74. \(2 \cos ^{2} \theta-7 \cos \theta-4=0\)
75. \(3(1-\cos \theta)=\sin ^{2} \theta\)
76. \(4(1+\sin \theta)=\cos ^{2} \theta\)
77. \(\tan ^{2} \theta=\frac{3}{2} \sec \theta\)
78. \(\csc ^{2} \theta=\cot \theta+1\)
79. \(\sec ^{2} \theta+\tan \theta=0\)
78. \(\mathrm{cs}^{2} \theta=-10+1\)

In Problems 81-92, use a graphing utility to solve each equation. Express the solution(s) rounded to two decimal places.
81. \(x+5 \cos x=0\)
82. \(x-4 \sin x=0\)
83. \(22 x-17 \sin x=3\)
84. \(19 x+8 \cos x=2\)
85. \(\sin x+\cos x=x\)
86. \(\sin x-\cos x=x\)
87. \(x^{2}-2 \cos x=0\)
88. \(x^{2}+3 \sin x=0\)
89. \(x^{2}-2 \sin (2 x)=3 x\)
90. \(x^{2}=x+3 \cos (2 x)\)
91. \(6 \sin x-e^{x}=2, \quad x>0\)
92. \(4 \cos (3 x)-e^{x}=1, \quad x>0\)

\section*{- Mixed Practice}
93. What are the zeros of \(f(x)=4 \sin ^{2} x-3\) on the interval \([0,2 \pi]\) ?
94. What are the zeros of \(f(x)=2 \cos (3 x)+1\) on the interval \([0, \pi] ?\)
95. \(f(x)=3 \sin x\)
(a) Find the zeros of \(f\) on the interval \([-2 \pi, 4 \pi]\).
(b) Graph \(f(x)=3 \sin x\) on the interval \([-2 \pi, 4 \pi]\).
(c) Solve \(f(x)=\frac{3}{2}\) on the interval \([-2 \pi, 4 \pi]\). What points are on the graph of \(f\) ? Label these points on the graph drawn in part (b).
(d) Use the graph drawn in part (b) along with the results of part (c) to determine the values of \(x\) such that \(f(x)>\frac{3}{2}\) on the interval \([-2 \pi, 4 \pi]\).
96. \(f(x)=2 \cos x\)
(a) Find the zeros of \(f\) on the interval \([-2 \pi, 4 \pi]\).
(b) Graph \(f(x)=2 \cos x\) on the interval \([-2 \pi, 4 \pi]\).
(c) Solve \(f(x)=-\sqrt{3}\) on the interval \([-2 \pi, 4 \pi]\). What points are on the graph of \(f\) ? Label these points on the graph drawn in part (b).
(d) Use the graph drawn in part (b) along with the results of part (c) to determine the values of \(x\) such that \(f(x)<-\sqrt{3}\) on the interval \([-2 \pi, 4 \pi]\).
97. \(f(x)=4 \tan x\)
(a) \(\operatorname{Solve} f(x)=-4\).
(b) For what values of \(x\) is \(f(x)<-4\) on the interval \(\left(-\frac{\pi}{2}, \frac{\pi}{2}\right) ?\)
98. \(f(x)=\cot x\)
(a) Solve \(f(x)=-\sqrt{3}\).
(b) For what values of \(x\) is \(f(x)>-\sqrt{3}\) on the interval \((0, \pi)\) ?
99. (a) Graph \(f(x)=3 \sin (2 x)+2\) and \(g(x)=\frac{7}{2}\) on the same Cartesian plane for the interval \([0, \pi]\).
(b) Solve \(f(x)=g(x)\) on the interval \([0, \pi]\), and label the points of intersection on the graph drawn in part (a).
(c) Solve \(f(x)>g(x)\) on the interval \([0, \pi]\).
(d) Shade the region bounded by \(f(x)=3 \sin (2 x)+2\) and \(g(x)=\frac{7}{2}\) between the two points found in part (b) on the graph drawn in part (a).
100. (a) Graph \(f(x)=2 \cos \frac{x}{2}+3\) and \(g(x)=4\) on the same Cartesian plane for the interval \([0,4 \pi]\).
(b) Solve \(f(x)=g(x)\) on the interval [ \(0,4 \pi]\), and label the points of intersection on the graph drawn in part (a).
(c) Solve \(f(x)<g(x)\) on the interval [ \(0,4 \pi]\).
(d) Shade the region bounded by \(f(x)=2 \cos \frac{x}{2}+3\) and \(g(x)=4\) between the two points found in part (b) on the graph drawn in part (a).
101. (a) Graph \(f(x)=-4 \cos x\) and \(g(x)=2 \cos x+3\) on the
\(\checkmark\) same Cartesian plane for the interval \([0,2 \pi]\).
(b) Solve \(f(x)=g(x)\) on the interval [ \(0,2 \pi\) ], and label the points of intersection on the graph drawn in part (a).
(c) Solve \(f(x)>g(x)\) on the interval \([0,2 \pi]\).
(d) Shade the region bounded by \(f(x)=-4 \cos x\) and \(g(x)=2 \cos x+3\) between the two points found in part (b) on the graph drawn in part (a).
102. (a) Graph \(f(x)=2 \sin x\) and \(g(x)=-2 \sin x+2\) on the \(\star\) same Cartesian plane for the interval \([0,2 \pi]\).
(b) Solve \(f(x)=g(x)\) on the interval [ \(0,2 \pi\) ], and label the points of intersection on the graph drawn in part (a).
(c) Solve \(f(x)>g(x)\) on the interval \([0,2 \pi]\).
(d) Shade the region bounded by \(f(x)=2 \sin x\) and \(g(x)=-2 \sin x+2\) between the two points found in part (b) on the graph drawn in part (a).

\section*{Applications and Extensions}
103. Blood Pressure Blood pressure is a way of measuring the amount of force exerted on the walls of blood vessels. It is measured using two numbers: systolic (as the heart beats) blood pressure and diastolic (as the heart rests) blood pressure. Blood pressures vary substantially from person to person, but a typical blood pressure is \(120 / 80\), which means the systolic blood pressure is 120 mmHg and the diastolic blood pressure is 80 mmHg . Assuming that a person's heart beats 70 times per minute, the blood pressure \(P\) of an individual after \(t\) seconds can be modeled by the function
\[
P(t)=100+20 \sin \left(\frac{7 \pi}{3} t\right)
\]
(a) In the interval \([0,1]\), determine the times at which the blood pressure is 100 mmHg .
(b) In the interval \([0,1]\), determine the times at which the blood pressure is 120 mmHg .
(c) In the interval \([0,1]\), determine the times at which the blood pressure is between 100 and 105 mmHg .
104. The Ferris Wheel In 1893, George Ferris engineered the Ferris wheel. It was 250 feet in diameter. If a Ferris wheel makes 1 revolution every 40 seconds, then the function
\[
h(t)=125 \sin \left(0.157 t-\frac{\pi}{2}\right)+125
\]
represents the height \(h\), in feet, of a seat on the wheel as a function of time \(t\), where \(t\) is measured in seconds. The ride begins when \(t=0\).
(a) During the first 40 seconds of the ride, at what time \(t\) is an individual on the Ferris wheel exactly 125 feet above the ground?
(b) During the first 80 seconds of the ride, at what time \(t\) is an individual on the Ferris wheel exactly 250 feet above the ground?
(c) During the first 40 seconds of the ride, over what interval of time \(t\) is an individual on the Ferris wheel more than 125 feet above the ground?
105. Holding Pattern An airplane is asked to stay within a holding pattern near Chicago's O'Hare International Airport. The function \(d(x)=70 \sin (0.65 x)+150\) represents the distance \(d\), in miles, of the airplane from the airport at time \(x\), in minutes.
(a) When the plane enters the holding pattern, \(x=0\), how far is it from O'Hare?
(b) During the first 20 minutes after the plane enters the holding pattern, at what time \(x\) is the plane exactly 100 miles from the airport?
(c) During the first 20 minutes after the plane enters the holding pattern, at what time \(x\) is the plane more than 100 miles from the airport?
(d) While the plane is in the holding pattern, will it ever be within 70 miles of the airport? Why?
106. Projectile Motion A golfer hits a golf ball with an initial velocity of 100 miles per hour. The range \(R\) of the ball as a function of the angle \(\theta\) to the horizontal is given by \(R(\theta)=672 \sin (2 \theta)\), where \(R\) is measured in feet.
(a) At what angle \(\theta\) should the ball be hit if the golfer wants the ball to travel 450 feet ( 150 yards)?
(b) At what angle \(\theta\) should the ball be hit if the golfer wants the ball to travel 540 feet ( 180 yards)?
(c) At what angle \(\theta\) should the ball be hit if the golfer wants the ball to travel at least 480 feet ( 160 yards)?
(d) Can the golfer hit the ball 720 feet ( 240 yards)?
107. Heat Transfer In the study of heat transfer, the equation \(x+\tan x=0\) occurs. Graph \(Y_{1}=-x\) and \(Y_{2}=\tan x\) for \(x \geq 0\). Conclude that there are an infinite number of points of intersection of these two graphs. Now find the first two positive solutions of \(x+\tan x=0\) rounded to two decimal places.
108. Carrying a Ladder around a Corner Two hallways, one of width 3 feet, the other of width 4 feet, meet at a right angle. See the illustration. It can be shown that the length \(L\) of the ladder as a function of \(\theta\) is \(L(\theta)=4 \csc \theta+3 \sec \theta\).
\(\nless\) (a) In calculus, you are asked to find the length of the longest ladder that can turn the corner by solving the equation
\[
3 \sec \theta \tan \theta-4 \csc \theta \cot \theta=0, \quad 0^{\circ}<\theta<90^{\circ}
\]

Solve this equation for \(\theta\).

The following discussion of Snell's Law of Refraction* (named after Willebrord Snell, 1580-1626) is needed for Problems 111-118. Light, sound, and other waves travel at different speeds, depending on the medium (air, water, wood, and so on) through which they pass. Suppose that light travels from a point \(A\) in one medium, where its speed is \(v_{1}\), to a point \(B\) in another medium, where its speed is \(v_{2}\). Refer to the figure, where the angle \(\theta_{1}\) is called the angle

(b) What is the length of the longest ladder that can be carried around the corner?
雷
(c) Graph \(L=L(\theta), 0^{\circ} \leq \theta \leq 90^{\circ}\), and find the angle \(\theta\) that minimizes the length \(L\).
(d) Compare the result with the one found in part (b). Explain why the two answers are the same.
109. Projectile Motion The horizontal distance that a projectile will travel in the air (ignoring air resistance) is given by the equation
\[
R(\theta)=\frac{v_{0}^{2} \sin (2 \theta)}{g}
\]
where \(v_{0}\) is the initial velocity of the projectile, \(\theta\) is the angle of elevation, and \(g\) is acceleration due to gravity ( 9.8 meters per second squared).
(a) If you can throw a baseball with an initial speed of 34.8 meters per second, at what angle of elevation \(\theta\) should you direct the throw so that the ball travels a distance of 107 meters before striking the ground?
(b) Determine the maximum distance that you can throw the ball.
(c) Graph \(R=R(\theta)\), with \(v_{0}=34.8\) meters per second.
(d) Verify the results obtained in parts (a) and (b) using a graphing utility.
110. Projectile Motion Refer to Problem 109.
(a) If you can throw a baseball with an initial speed of 40 meters per second, at what angle of elevation \(\theta\) should you direct the throw so that the ball travels a distance of 110 meters before striking the ground?
(b) Determine the maximum distance that you can throw the ball.
(c) Graph \(R=R(\theta)\), with \(v_{0}=40\) meters per second.
(d) Verify the results obtained in parts (a) and (b) using a graphing utility.
of incidence and the angle \(\theta_{2}\) is the angle of refraction. Snell's Law, which can be proved using calculus, states that
\[
\frac{\sin \theta_{1}}{\sin \theta_{2}}=\frac{v_{1}}{v_{2}}
\]

The ratio \(\frac{v_{1}}{v_{2}}\) is called the index of refraction. Some values are given in the table.
\begin{tabular}{|lc|}
\hline \multicolumn{2}{|c|}{ Some Indexes of Refraction } \\
\hline Medium & Index of Refraction \(\dagger\) \\
\hline Water & 1.33 \\
Ethyl alcohol \(\left(20^{\circ} \mathrm{C}\right)\) & 1.36 \\
Carbon disulfide & 1.63 \\
Air \(\left(1\right.\) atm and \(\left.0^{\circ} \mathrm{C}\right)\) & 1.00029 \\
Diamond & 2.42 \\
Fused quartz & 1.46 \\
Glass, crown & 1.52 \\
Glass, dense flint & 1.66 \\
Sodium chloride & 1.54 \\
\hline
\end{tabular}

\footnotetext{
*Because this law was also deduced by René Descartes in France, it is also known as Descartes' Law.
}
111. The index of refraction of light in passing from a vacuum into water is 1.33 . If the angle of incidence is \(40^{\circ}\), determine the angle of refraction.
112. The index of refraction of light in passing from a vacuum into dense flint glass is 1.66 . If the angle of incidence is \(50^{\circ}\), determine the angle of refraction.
113. Ptolemy, who lived in the city of Alexandria in Egypt during the second century AD, gave the measured values in the following table for the angle of incidence \(\theta_{1}\) and the angle of refraction \(\theta_{2}\) for a light beam passing from air into water. Do these values agree with Snell's Law? If so, what index of refraction results? (These data are of interest as the oldest recorded physical measurements.)
\begin{tabular}{|l|c|c|c|}
\hline \(\boldsymbol{\theta}_{\mathbf{1}}\) & \(\boldsymbol{\theta}_{\mathbf{2}}\) & \(\boldsymbol{\theta}_{\mathbf{1}}\) & \(\boldsymbol{\theta}_{\mathbf{2}}\) \\
\hline \(10^{\circ}\) & \(8^{\circ}\) & \(50^{\circ}\) & \(35^{\circ} 0^{\prime}\) \\
\hline \(20^{\circ}\) & \(15^{\circ} 30^{\prime}\) & \(60^{\circ}\) & \(40^{\circ} 30^{\prime}\) \\
\hline \(30^{\circ}\) & \(22^{\circ} 30^{\prime}\) & \(70^{\circ}\) & \(45^{\circ} 30^{\prime}\) \\
\hline \(40^{\circ}\) & \(29^{\circ} 0^{\prime}\) & \(80^{\circ}\) & \(50^{\circ} 0^{\prime}\) \\
\hline
\end{tabular}
114. Bending Light The speed of yellow sodium light (wavelength 589 nanometers) in a certain liquid is measured to be \(1.92 \times 10^{8}\) meters per second. What is the index of refraction of this liquid, with respect to air, for sodium light?*
[Hint: The speed of light in air is approximately \(2.998 \times 10^{8}\) meters per second.]
115. Bending Light A beam of light with a wavelength of 589 nanometers traveling in air makes an angle of incidence of \(40^{\circ}\) on a slab of transparent material, and the refracted beam makes an angle of refraction of \(26^{\circ}\). Find the index of refraction of the material.*
116. Bending Light A light ray with a wavelength of 589 nanometers (produced by a sodium lamp) traveling through air makes an angle of incidence of \(30^{\circ}\) on a smooth, flat slab of crown glass. Find the angle of refraction.*
117. A light beam passes through a thick slab of material whose index of refraction is \(n_{2}\). Show that the emerging beam is parallel to the incident beam. \(\dagger\)
118. Brewster's Law If the angle of incidence and the angle of refraction are complementary angles, the angle of incidence is referred to as the Brewster angle \(\theta_{B}\). The Brewster angle is related to the index of refractions of the two media, \(n_{1}\) and \(n_{2}\), by the equation \(n_{1} \sin \theta_{B}=n_{2} \cos \theta_{B}\), where \(n_{1}\) is the index of refraction of the incident medium and \(n_{2}\) is the index of refraction of the refractive medium. Determine the Brewster angle for a light beam traveling through water (at \(20^{\circ} \mathrm{C}\) ) that makes an angle of incidence with a smooth, flat slab of crown glass.
*For light of wavelength 589 nanometers, measured with respect to a vacuum. The index with respect to air is negligibly different in most cases.
\(\dagger\) Adapted from Halliday and Resnick, Fundamentals of Physics, 7th ed., 2005, John Wiley \& Sons.

\section*{Discussion and Writing}
119. Explain in your own words how you would use your calculator to solve the equation \(\cos x=-0.6,0 \leq x<2 \pi\). How would you modify your approach to solve the equation \(\cot x=5,0<x<2 \pi\) ?
120. Explain why no further points of intersection (and therefore no further solutions) exist in Figure 25 for \(x<-\pi\) or \(x>4 \pi\).

\section*{Retain Your Knowledge}

Problems 121-124 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
121. Convert \(6^{x}=y\) to an equivalent statement involving a logarithm.
122. Find the complex zeros of \(f(x)=2 x^{2}-9 x+8\).
123. Given \(\sin \theta=-\frac{\sqrt{10}}{10}\) and \(\cos \theta=\frac{3 \sqrt{10}}{10}\), find the exact value of each of the four remaining trigonometric functions.
124. Determine the amplitude, period, and phase shift of the function \(y=2 \sin (2 x-\pi)\). Graph the function. Show at least two periods.

\section*{'Are You Prepared?' Answers}
1. \(\left\{\frac{3}{2}\right\}\)
2. \(\frac{\sqrt{2}}{2} ;-\frac{1}{2}\)
3. \(\left\{-1, \frac{5}{4}\right\}\)
4. \(\left\{\frac{1-\sqrt{5}}{2}, \frac{1+\sqrt{5}}{2}\right\}\)
5. \(\left\{0, \frac{5}{2}\right\}\)
6. \(\{0.76\}\)

\subsection*{6.4 Trigonometric Identities}

\section*{PREPARING FOR THIS SECTION Before getting started, review the following:}
- Fundamental Identities (Section 5.3, pp. 411-413)

Now Work the 'Are You Prepared?' problems on page 496.
OBJECTIVES 1 Use Algebra to Simplify Trigonometric Expressions (p. 493)
2 Establish Identities (p. 493)

This section establishes some additional identities involving trigonometric functions. First, let's review the definition of an identity.

\section*{DEFINITION Two functions \(f\) and \(g\) are identically equal if}
\[
f(x)=g(x)
\]
for every value of \(x\) for which both functions are defined. Such an equation is referred to as an identity. An equation that is not an identity is called a conditional equation.

For example, the following are identities:
\[
(x+1)^{2}=x^{2}+2 x+1 \quad \sin ^{2} x+\cos ^{2} x=1 \quad \csc x=\frac{1}{\sin x}
\]

The following are conditional equations:
\[
\begin{aligned}
2 x+5 & =0 & & \text { True only if } x=-\frac{5}{2} \\
\sin x & =0 & & \text { True only if } x=k \pi, k \text { an integer } \\
\sin x & =\cos x & & \text { True only if } x=\frac{\pi}{4}+2 k \pi \text { or } x=\frac{5 \pi}{4}+2 k \pi, k \text { an integer }
\end{aligned}
\]

The following summarizes the trigonometric identities that have been established thus far.

Quotient Identities
\[
\tan \theta=\frac{\sin \theta}{\cos \theta} \quad \cot \theta=\frac{\cos \theta}{\sin \theta}
\]

\section*{Reciprocal Identities}
\[
\csc \theta=\frac{1}{\sin \theta} \quad \sec \theta=\frac{1}{\cos \theta} \quad \cot \theta=\frac{1}{\tan \theta}
\]

\section*{Pythagorean Identities}
\[
\begin{gathered}
\sin ^{2} \theta+\cos ^{2} \theta=1 \quad \tan ^{2} \theta+1=\sec ^{2} \theta \\
\cot ^{2} \theta+1=\csc ^{2} \theta
\end{gathered}
\]

\section*{Even-Odd Identities}
\[
\begin{array}{lll}
\sin (-\theta)=-\sin \theta & \cos (-\theta)=\cos \theta & \tan (-\theta)=-\tan \theta \\
\csc (-\theta)=-\csc \theta & \sec (-\theta)=\sec \theta & \cot (-\theta)=-\cot \theta
\end{array}
\]

This list comprises what shall be referred to as the basic trigonometric identities. These identities should not merely be memorized but should be known (just as you know your name rather than have it memorized). In fact, minor variations of a basic identity are often used. For example,
\[
\sin ^{2} \theta=1-\cos ^{2} \theta \quad \text { or } \quad \cos ^{2} \theta=1-\sin ^{2} \theta
\]
might be used instead of \(\sin ^{2} \theta+\cos ^{2} \theta=1\). For this reason, among others, it is very important to know these relationships and be comfortable with variations of them.

\section*{1 Use Algebra to Simplify Trigonometric Expressions}

The ability to use algebra to manipulate trigonometric expressions is a key skill that one must have to establish identities. Some of the techniques that are used in establishing identities are multiplying by a "well-chosen 1 ," writing a trigonometric expression over a common denominator, rewriting a trigonometric expression in terms of sine and cosine only, and factoring.

Solution

\section*{\section*{EXAMPLE I \\ \\ Using Algebraic Techniques to Simplify \\ \\ Using Algebraic Techniques to Simplify \\ Trigonometric Expressions}
(a) Simplify \(\frac{\cot \theta}{\csc \theta}\) by rewriting each trigonometric function in terms of sine and cosine functions.
(b) Show that \(\frac{\cos \theta}{1+\sin \theta}=\frac{1-\sin \theta}{\cos \theta}\) by multiplying the numerator and denominator by \(1-\sin \theta\).
(c) Simplify \(\frac{1+\sin u}{\sin u}+\frac{\cot u-\cos u}{\cos u}\) by rewriting the expression over a common denominator.
(d) Simplify \(\frac{\sin ^{2} v-1}{\tan v \sin v-\tan v}\) by factoring.
(a) \(\frac{\cot \theta}{\csc \theta}=\frac{\frac{\cos \theta}{\sin \theta}}{\frac{1}{\sin \theta}}=\frac{\cos \theta}{\sin \theta} \cdot \frac{\sin \theta}{1}=\cos \theta\)
(b) \(\frac{\cos \theta}{1+\sin \theta}=\frac{\cos \theta}{1+\sin \theta} \cdot \frac{1-\sin \theta}{1-\sin \theta}=\frac{\cos \theta(1-\sin \theta)}{1-\sin ^{2} \theta}\)
\(\uparrow\) Multiply by a well-chosen \(1: \frac{1-\sin \theta}{1-\sin \theta}\)
\[
=\frac{\cos \theta(1-\sin \theta)}{\cos ^{2} \theta}=\frac{1-\sin \theta}{\cos \theta}
\]
(c) \(\frac{1+\sin u}{\sin u}+\frac{\cot u-\cos u}{\cos u}=\frac{1+\sin u}{\sin u} \cdot \frac{\cos u}{\cos u}+\frac{\cot u-\cos u}{\cos u} \cdot \frac{\sin u}{\sin u}\)
\[
=\frac{\cos u+\sin u \cos u+\cot u \sin u-\cos u \sin u}{\sin u \cos u}=\frac{\cos u+\cot u \sin u}{\sin u \cos u}
\]
\[
=\frac{\cos u+\frac{\cos u}{\sin u} \cdot \sin u}{\sin u \cos u}=\frac{\cos u+\cos u}{\sin u \cos u}=\frac{2 \cos \bar{u}}{\sin u \cos \bar{u}}=\frac{2}{\sin u}
\]
\[
\uparrow \cot u=\frac{\cos u}{\sin u}
\]
(d) \(\frac{\sin ^{2} v-1}{\tan v \sin v-\tan v}=\frac{(\sin v+1)(\sin v-1)}{\tan v(\sin v-1)}=\frac{\sin v+1}{\tan v}\)

Now Work problems 9, 11, And 13

\section*{2 Establish Identities}

In the examples that follow, the directions read "Establish the identity...." This is accomplished by starting with one side of the given equation (usually the side containing the more complicated expression) and, using appropriate basic identities and algebraic manipulations, arriving at the other side. The selection of appropriate basic identities to obtain the desired result is learned only through experience and lots of practice.

\section*{EXAMPLE 2 Establishing an Identity}

Establish the identity: \(\csc \theta \cdot \tan \theta=\sec \theta\)

\section*{Solution}

NOTE A graphing utility can be used to provide evidence of an identity. For example, if we graph \(Y_{1}=\csc \theta \cdot \tan \theta\) and \(Y_{2}=\sec \theta\), the graphs appear to be the same. This provides evidence that \(Y_{1}=Y_{2}\). However, it does not prove their equality. A graphing utility cannot be used to establish an identity -identities must be established algebraically.

\section*{EXAMPLE 3 Establishing an Identity}

Establish the identity: \(\sin ^{2}(-\theta)+\cos ^{2}(-\theta)=1\)
Solution Begin with the left side and, because the arguments are \(-\theta\), apply Even-Odd Identities.
\[
\begin{array}{rlr}
\sin ^{2}(-\theta)+\cos ^{2}(-\theta) & =[\sin (-\theta)]^{2}+[\cos (-\theta)]^{2} & \\
& =(-\sin \theta)^{2}+(\cos \theta)^{2} & \\
& =(\sin \theta)^{2}+(\cos \theta)^{2} & \\
& =1 &
\end{array}
\]

\section*{EXAMPLE 4 Establishing an Identity}

Establish the identity: \(\frac{\sin ^{2}(-\theta)-\cos ^{2}(-\theta)}{\sin (-\theta)-\cos (-\theta)}=\cos \theta-\sin \theta\)
Solution Observe that the left side contains the more complicated expression. Also, the left side contains expressions with the argument \(-\theta\), whereas the right side contains expressions with the argument \(\theta\). Therefore, start with the left side and apply EvenOdd Identities.
\[
\begin{array}{rlrl}
\frac{\sin ^{2}(-\theta)-\cos ^{2}(-\theta)}{\sin (-\theta)-\cos (-\theta)} & =\frac{[\sin (-\theta)]^{2}-[\cos (-\theta)]^{2}}{\sin (-\theta)-\cos (-\theta)} & \\
& =\frac{(-\sin \theta)^{2}-(\cos \theta)^{2}}{-\sin \theta-\cos \theta} & & \\
& =\frac{(\sin \theta)^{2}-(\cos \theta)^{2}}{-\sin \theta-\cos \theta} & \text { Even-Odd Identities } \\
& =\frac{(\sin \theta-\cos \theta)(\sin \theta+\cos \theta)}{-(\sin \theta+\cos \theta)} & \text { Factor. } \\
& =\cos \theta-\sin \theta & \text { Divide out and simplify. }
\end{array}
\]

\section*{EXAMPLE 5 Establishing an Identity}

Establish the identity: \(\frac{1+\tan u}{1+\cot u}=\tan u\)
Solution \(\frac{1+\tan u}{1+\cot u}=\frac{1+\tan u}{1+\frac{1}{\tan u}}=\frac{1+\tan u}{\frac{\tan u+1}{\tan u}}\)
\[
=\frac{\tan u(1+\tan u)}{\tan u+1}=\tan u
\]

When sums or differences of quotients appear, it is usually best to rewrite them as a single quotient, especially if the other side of the identity consists of only one term.

\section*{EXAMPLE 6 Establishing an Identity}

Establish the identity: \(\frac{\sin \theta}{1+\cos \theta}+\frac{1+\cos \theta}{\sin \theta}=2 \csc \theta\)
Solution The left side is more complicated. Start with it and proceed to add.
\[
\begin{aligned}
\frac{\sin \theta}{1+\cos \theta}+\frac{1+\cos \theta}{\sin \theta} & =\frac{\sin ^{2} \theta+(1+\cos \theta)^{2}}{(1+\cos \theta)(\sin \theta)} & & \text { Add the quotients. } \\
& =\frac{\sin ^{2} \theta+1+2 \cos \theta+\cos ^{2} \theta}{(1+\cos \theta)(\sin \theta)} & & \begin{array}{l}
\text { Remove parentheses in } \\
\text { the numerator. }
\end{array} \\
& =\frac{\left(\sin ^{2} \theta+\cos ^{2} \theta\right)+1+2 \cos \theta}{(1+\cos \theta)(\sin \theta)} & & \text { Regroup. } \\
& =\frac{2+2 \cos \theta}{(1+\cos \theta)(\sin \theta)} & & \text { Pythagorean Identity } \\
& =\frac{2(1+\cos \theta)}{(1+\cos \theta)(\sin \theta)} & & \text { Factor and divide out. } \\
& =\frac{2}{\sin \theta} & & \text { Reciprocal Identity }
\end{aligned}
\]
am Now Work problem 51
Sometimes it helps to write one side in terms of sine and cosine functions only.

\section*{EXAMPLE 7 Establishing an Identity}
\[
\begin{aligned}
& \text { Establish the identity: } \frac{\tan v+\cot v}{\sec v \csc v}=1 \\
& \text { Solution } \frac{\tan v+\cot v}{\sec v \csc v}=\frac{\frac{\sin v}{\cos v}+\frac{\cos v}{\sin v}}{\uparrow \frac{1}{\cos v} \cdot \frac{1}{\sin v}} \uparrow=\frac{\frac{\sin ^{2} v+\cos ^{2} v}{\cos v \sin v}}{\frac{1}{\cos v \sin v}} \\
& \text { Change to sines Add the quotients } \\
& \text { and cosines. in the numerator. } \\
& =\frac{1}{\cos v \sin v} \cdot \frac{\cos v \sin v}{1}=1 \\
& \text { Divide the quotients; } \\
& \sin ^{2} v+\cos ^{2} v=1 \text {. }
\end{aligned}
\]
-Now Work problem 71
Sometimes, multiplying the numerator and the denominator by an appropriate factor results in a simplification.

\section*{EXAMPLE 8 Establishing an Identity}

Establish the identity: \(\frac{1-\sin \theta}{\cos \theta}=\frac{\cos \theta}{1+\sin \theta}\)

Solution Start with the left side and multiply the numerator and the denominator by \(1+\sin \theta\). (Alternatively, we could multiply the numerator and the denominator of the right side by \(1-\sin \theta\).)
\[
\begin{array}{rlrl}
\frac{1-\sin \theta}{\cos \theta} & =\frac{1-\sin \theta}{\cos \theta} \cdot \frac{1+\sin \theta}{1+\sin \theta} & \quad \begin{array}{l}
\text { Multiply the numerator and } \\
\text { the denominator by }
\end{array} \\
& =\frac{1-\sin ^{2} \theta}{\cos \theta(1+\sin \theta)} & \\
& =\frac{\cos ^{2} \theta}{\cos \theta(1+\sin \theta)} & & \\
& =\frac{\cos \theta}{1+\sin \theta} & \text { Divide out }
\end{array}
\]

\section*{Now Work problem 55}

Although a lot of practice is the only real way to learn how to establish identities, the following guidelines should prove helpful.

WARNING Be careful not to handle identities to be established as if they were conditional equations. You cannot establish an identity by such methods as adding the same expression to each side and obtaining a true statement. This practice is not allowed, because the original statement is precisely the one that you are trying to establish. You do not know until it has been established that it is, in fact, true.

\section*{Guidelines for Establishing Identities}
1. It is almost always preferable to start with the side containing the more complicated expression.
2. Rewrite sums or differences of quotients as a single quotient.
3. Sometimes rewriting one side in terms of sine and cosine functions only will help.
4. Always keep the goal in mind. While manipulating one side of the expression, keep in mind the form of the expression on the other side.

\subsection*{6.4 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. True or False \(\sin ^{2} \theta=1-\cos ^{2} \theta\). (p. 412)
2. True or False \(\sin (-\theta)+\cos (-\theta)=\cos \theta-\sin \theta\). (p. 416)

\section*{Concepts and Vocabulary}
3. Suppose that \(f\) and \(g\) are two functions with the same domain. If \(f(x)=g(x)\) for every \(x\) in the domain, the equation is called \(\mathrm{a}(\mathrm{n})\) \(\qquad\) . Otherwise, it is called a(n) equation.
4. \(\tan ^{2} \theta-\sec ^{2} \theta=\) \(\qquad\) .
5. \(\cos (-\theta)-\cos \theta=\) \(\qquad\) .
6. True or False \(\sin (-\theta)+\sin \theta=0\) for any value of \(\theta\).
7. True or False In establishing an identity, it is often easiest to just multiply both sides by a well-chosen nonzero expression involving the variable.
8. True or False \(\tan \theta \cdot \cos \theta=\sin \theta\) for any \(\theta \neq(2 k+1) \frac{\pi}{2}\).

\section*{Skill Building}

In Problems 9-18, simplify each trigonometric expression by following the indicated direction.
9. Rewrite in terms of sine and cosine functions:
\[
\tan \theta \cdot \csc \theta
\]
10. Rewrite in terms of sine and cosine functions:
\[
\cot \theta \cdot \sec \theta
\]
11. Multiply \(\frac{\cos \theta}{1-\sin \theta}\) by \(\frac{1+\sin \theta}{1+\sin \theta}\).
12. Multiply \(\frac{\sin \theta}{1+\cos \theta}\) by \(\frac{1-\cos \theta}{1-\cos \theta}\).
13. Rewrite over a common denominator:
\[
\frac{\sin \theta+\cos \theta}{\cos \theta}+\frac{\cos \theta-\sin \theta}{\sin \theta}
\]
14. Rewrite over a common denominator:
\[
\frac{1}{1-\cos v}+\frac{1}{1+\cos v}
\]
15. Multiply and simplify: \(\frac{(\sin \theta+\cos \theta)(\sin \theta+\cos \theta)-1}{\sin \theta \cos \theta}\)
16. Multiply and simplify: \(\frac{(\tan \theta+1)(\tan \theta+1)-\sec ^{2} \theta}{\tan \theta}\)
17. Factor and simplify: \(\frac{3 \sin ^{2} \theta+4 \sin \theta+1}{\sin ^{2} \theta+2 \sin \theta+1}\)
18. Factor and simplify: \(\frac{\cos ^{2} \theta-1}{\cos ^{2} \theta-\cos \theta}\)

In Problems 19-100, establish each identity.
19. \(\csc \theta \cdot \cos \theta=\cot \theta\)
22. \(1+\cot ^{2}(-\theta)=\csc ^{2} \theta\)
25. \(\tan u \cot u-\cos ^{2} u=\sin ^{2} u\)
28. \((\csc \theta-1)(\csc \theta+1)=\cot ^{2} \theta\)
31. \(\cos ^{2} \theta\left(1+\tan ^{2} \theta\right)=1\)
34. \(\tan ^{2} \theta \cos ^{2} \theta+\cot ^{2} \theta \sin ^{2} \theta=1\)
37. \(\cos ^{3} x=\cos x-\sin ^{2} x \cos x\)
40. \(\csc u-\cot u=\frac{\sin u}{1+\cos u}\)
43. \(1-\frac{\cos ^{2} \theta}{1+\sin \theta}=\sin \theta\)
46. \(\frac{\csc v-1}{\csc v+1}=\frac{1-\sin v}{1+\sin v}\)
49. \(\frac{1+\sin \theta}{1-\sin \theta}=\frac{\csc \theta+1}{\csc \theta-1}\)
52. \(\frac{\cos v}{1+\sin v}+\frac{1+\sin v}{\cos v}=2 \sec v\)
55. \(\frac{1-\sin \theta}{1+\sin \theta}=(\sec \theta-\tan \theta)^{2}\)
58. \(\frac{\cot \theta}{1-\tan \theta}+\frac{\tan \theta}{1-\cot \theta}=1+\tan \theta+\cot \theta\)
60. \(\frac{\sin \theta \cos \theta}{\cos ^{2} \theta-\sin ^{2} \theta}=\frac{\tan \theta}{1-\tan ^{2} \theta}\)
63. \(\frac{\tan \theta-\cot \theta}{\tan \theta+\cot \theta}=\sin ^{2} \theta-\cos ^{2} \theta\)
66. \(\frac{\tan u-\cot u}{\tan u+\cot u}+2 \cos ^{2} u=1\)
69. \(\frac{1-\tan ^{2} \theta}{1+\tan ^{2} \theta}+1=2 \cos ^{2} \theta\)
72. \(\frac{\sin ^{2} \theta-\tan \theta}{\cos ^{2} \theta-\cot \theta}=\tan ^{2} \theta\)
75. \(\frac{1}{1-\sin \theta}+\frac{1}{1+\sin \theta}=2 \sec ^{2} \theta\)
78. \(\frac{1+\sin \theta}{1-\sin \theta}=(\sec \theta+\tan \theta)^{2}\)
61. \(\frac{\tan \theta+\sec \theta-1}{\tan \theta-\sec \theta+1}=\tan \theta+\sec \theta\)
62. \(\frac{\sin \theta-\cos \theta+1}{\sin \theta+\cos \theta-1}=\frac{\sin \theta+1}{\cos \theta}\)
64. \(\frac{\sec \theta-\cos \theta}{\sec \theta+\cos \theta}=\frac{\sin ^{2} \theta}{1+\cos ^{2} \theta}\)
67. \(\frac{\sec \theta+\tan \theta}{\cot \theta+\cos \theta}=\tan \theta \sec \theta\)
70. \(\frac{1-\cot ^{2} \theta}{1+\cot ^{2} \theta}+2 \cos ^{2} \theta=1\)
73. \(\sec \theta-\cos \theta=\sin \theta \tan \theta\)
76. \(\frac{1+\sin \theta}{1-\sin \theta}-\frac{1-\sin \theta}{1+\sin \theta}=4 \tan \theta \sec \theta\)
77. \(\frac{\sec \theta}{1-\sin \theta}=\frac{1+\sin \theta}{\cos ^{3} \theta}\)
79. \(\frac{(\sec v-\tan v)^{2}+1}{\csc v(\sec v-\tan v)}=2 \tan v\)
80. \(\frac{\sec ^{2} v-\tan ^{2} v+\tan v}{\sec v}=\sin v+\cos v\)
81. \(\frac{\sin \theta+\cos \theta}{\cos \theta}-\frac{\sin \theta-\cos \theta}{\sin \theta}=\sec \theta \csc \theta\)
82. \(\frac{\sin \theta+\cos \theta}{\sin \theta}-\frac{\cos \theta-\sin \theta}{\cos \theta}=\sec \theta \csc \theta\)
83. \(\frac{\sin ^{3} \theta+\cos ^{3} \theta}{\sin \theta+\cos \theta}=1-\sin \theta \cos \theta\)
85. \(\frac{\cos ^{2} \theta-\sin ^{2} \theta}{1-\tan ^{2} \theta}=\cos ^{2} \theta\)
88. \(\frac{1-2 \cos ^{2} \theta}{\sin \theta \cos \theta}=\tan \theta-\cot \theta\)
20. \(\sec \theta \cdot \sin \theta=\tan \theta\)
23. \(\cos \theta(\tan \theta+\cot \theta)=\csc \theta\)
26. \(\sin u \csc u-\cos ^{2} u=\sin ^{2} u\)
29. \((\sec \theta+\tan \theta)(\sec \theta-\tan \theta)=1\)
32. \(\left(1-\cos ^{2} \theta\right)\left(1+\cot ^{2} \theta\right)=1\)
35. \(\sec ^{4} \theta-\sec ^{2} \theta=\tan ^{4} \theta+\tan ^{2} \theta\)
38. \(\tan ^{3} x+\tan x=\sec ^{2} x \tan x\)
41. \(3 \sin ^{2} \theta+4 \cos ^{2} \theta=3+\cos ^{2} \theta\)
44. \(1-\frac{\sin ^{2} \theta}{1-\cos \theta}=-\cos \theta\)
47. \(\frac{\sec \theta}{\csc \theta}+\frac{\sin \theta}{\cos \theta}=2 \tan \theta\)
50. \(\frac{\cos \theta+1}{\cos \theta-1}=\frac{1+\sec \theta}{1-\sec \theta}\)
53. \(\frac{\sin \theta}{\sin \theta-\cos \theta}=\frac{1}{1-\cot \theta}\)
56. \(\frac{1-\cos \theta}{1+\cos \theta}=(\csc \theta-\cot \theta)^{2}\)
21. \(1+\tan ^{2}(-\theta)=\sec ^{2} \theta\)
24. \(\sin \theta(\cot \theta+\tan \theta)=\sec \theta\)
27. \((\sec \theta-1)(\sec \theta+1)=\tan ^{2} \theta\)
30. \((\csc \theta+\cot \theta)(\csc \theta-\cot \theta)=1\)
33. \((\sin \theta+\cos \theta)^{2}+(\sin \theta-\cos \theta)^{2}=2\)
36. \(\csc ^{4} \theta-\csc ^{2} \theta=\cot ^{4} \theta+\cot ^{2} \theta\)
39. \(\sec u-\tan u=\frac{\cos u}{1+\sin u}\)
42. \(9 \sec ^{2} \theta-5 \tan ^{2} \theta=5+4 \sec ^{2} \theta\)
45. \(\frac{1+\tan v}{1-\tan v}=\frac{\cot v+1}{\cot v-1}\)
48. \(\frac{\csc \theta-1}{\cot \theta}=\frac{\cot \theta}{\csc \theta+1}\)
51. \(\frac{1-\sin v}{\cos v}+\frac{\cos v}{1-\sin v}=2 \sec v\)
54. \(1-\frac{\sin ^{2} \theta}{1+\cos \theta}=\cos \theta\)
57. \(\frac{\cos \theta}{1-\tan \theta}+\frac{\sin \theta}{1-\cot \theta}=\sin \theta+\cos \theta\)
91. \((a \sin \theta+b \cos \theta)^{2}+(a \cos \theta-b \sin \theta)^{2}=a^{2}+b^{2}\)
93. \(\frac{\tan \alpha+\tan \beta}{\cot \alpha+\cot \beta}=\tan \alpha \tan \beta\)
94. \((\tan \alpha+\tan \beta)(1-\cot \alpha \cot \beta)+(\cot \alpha+\cot \beta)(1-\tan \alpha \tan \beta)=0\)
95. \((\sin \alpha+\cos \beta)^{2}+(\cos \beta+\sin \alpha)(\cos \beta-\sin \alpha)=2 \cos \beta(\sin \alpha+\cos \beta)\)
96. \((\sin \alpha-\cos \beta)^{2}+(\cos \beta+\sin \alpha)(\cos \beta-\sin \alpha)=-2 \cos \beta(\sin \alpha-\cos \beta)\)
97. \(\ln |\sec \theta|=-\ln |\cos \theta|\)
98. \(\ln |\tan \theta|=\ln |\sin \theta|-\ln |\cos \theta|\)
99. \(\ln |1+\cos \theta|+\ln |1-\cos \theta|=2 \ln |\sin \theta|\)
100. \(\ln |\sec \theta+\tan \theta|+\ln |\sec \theta-\tan \theta|=0\)

In Problems 101-104, show that the functions \(f\) and \(g\) are identically equal.
101. \(f(x)=\sin x \cdot \tan x \quad g(x)=\sec x-\cos x\)
103. \(f(\theta)=\frac{1-\sin \theta}{\cos \theta}-\frac{\cos \theta}{1+\sin \theta} \quad g(\theta)=0\)
105. Show \(\sqrt{16+16 \tan ^{2} \theta}=4 \sec \theta\) if \(-\frac{\pi}{2}<\theta<\frac{\pi}{2}\)
102. \(f(x)=\cos x \cdot \cot x \quad g(x)=\csc x-\sin x\)
104. \(f(\theta)=\tan \theta+\sec \theta \quad g(\theta)=\frac{\cos \theta}{1-\sin \theta}\)
106. Show \(\sqrt{9 \sec ^{2} \theta-9}=3 \tan \theta\) if \(\pi \leq \theta<\frac{3 \pi}{2}\).

\section*{Applications and Extensions}
107. Searchlights A searchlight at the grand opening of a new car dealership casts a spot of light on a wall located 75 meters from the searchlight. The acceleration \(\ddot{r}\) of the spot of light is found to be \(\ddot{r}=1200 \sec \theta\left(2 \sec ^{2} \theta-1\right)\). Show that this is equivalent to \(\ddot{r}=1200\left(\frac{1+\sin ^{2} \theta}{\cos ^{3} \theta}\right)\).
Source: Adapted from Hibbeler, Engineering Mechanics: Dynamics, 10th ed., Prentice Hall © 2004.
108. Optical Measurement Optical methods of measurement often rely on the interference of two light waves. If two light waves, identical except for a phase lag, are mixed together, the resulting intensity, or irradiance, is given by \(I_{t}=4 A^{2} \frac{(\csc \theta-1)(\sec \theta+\tan \theta)}{\csc \theta \sec \theta}\). Show that this is equivalent to \(I_{t}=(2 A \cos \theta)^{2}\).

\section*{Discussion and Writing}
109. Write a few paragraphs outlining your strategy for establishing identities.
110. Write down the three Pythagorean Identities.
111. Why do you think it is usually preferable to start with the side containing the more complicated expression when establishing an identity?
112. Make up an identity that is not a Fundamental Identity.

\section*{Retain Your Knowledge}

Problems 113-116 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
113. Determine whether \(f(x)=-3 x^{2}+120 x+50\) has a maximum or a minimum value, and then find the value.
114. Given \(f(x)=\frac{x+1}{x-2}\) and \(g(x)=3 x-4\), find \(f \circ g\).
115. Find the exact values of the six trigonometric functions of an angle \(\theta\) if \((-12,5)\) is a point on its terminal side in standard position.
116. Find the average rate of change of \(f(x)=\cos x\) from 0 to \(\frac{\pi}{2}\).

\section*{'Are You Prepared?' Answers}

2. True

\subsection*{6.5 Sum and Difference Formulas}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Distance Formula (Foundations, Section F.1, pp. 3-4)
- Values of the Trigonometric Functions (Section 5.2, pp. 392-400)
- Finding Exact Values Given the Value of a Trigonometric Function and the Quadrant of the Angle (Section 5.3, pp. 413-416)
- Use a Circle of Radius \(r\) to Evaluate Trigonometric Functions (Section 5.2, pp. 400-401)

Now Work the 'Are You Prepared?' problems on page 508.
OBJECTIVES 1 Use Sum and Difference Formulas to Find Exact Values (p. 500)
2 Use Sum and Difference Formulas to Establish Identities (p. 501)
3 Use Sum and Difference Formulas Involving Inverse Trigonometric Functions (p. 505)
4 Solve Trigonometric Equations Linear in Sine and Cosine (p. 506)

\section*{THEOREM}

\section*{In Words}

Formula (1) states that the cosine of the sum of two angles equals the cosine of the first angle times the cosine of the second angle minus the sine of the
f first angle times the sine of the second angle.

This section continues the derivation of trigonometric identities by obtaining formulas that involve the sum or difference of two angles, such as \(\cos (\alpha+\beta), \cos (\alpha-\beta)\), and \(\sin (\alpha+\beta)\). These formulas are referred to as the sum and difference formulas. We begin with the formulas for \(\cos (\alpha+\beta)\) and \(\cos (\alpha-\beta)\).

Sum and Difference Formulas for the Cosine Function
\[
\begin{align*}
& \cos (\alpha+\beta)=\cos \alpha \cos \beta-\sin \alpha \sin \beta  \tag{1}\\
& \cos (\alpha-\beta)=\cos \alpha \cos \beta+\sin \alpha \sin \beta \tag{2}
\end{align*}
\]

Proof We will prove formula (2) first. Although this formula is true for all numbers \(\alpha\) and \(\beta\), we shall assume in our proof that \(0<\beta<\alpha<2 \pi\). We begin with the unit circle and place the angles \(\alpha\) and \(\beta\) in standard position, as shown in Figure 26(a). The point \(P_{1}\) lies on the terminal side of \(\beta\), so its coordinates are \((\cos \beta, \sin \beta)\); and the point \(P_{2}\) lies on the terminal side of \(\alpha\), so its coordinates are \((\cos \alpha, \sin \alpha)\).

Figure 26

(a)

(b)

Now place the angle \(\alpha-\beta\) in standard position, as shown in Figure 26(b). The point \(A\) has coordinates \((1,0)\), and the point \(P_{3}\) is on the terminal side of the angle \(\alpha-\beta\), so its coordinates are \((\cos (\alpha-\beta), \sin (\alpha-\beta))\).

Looking at triangle \(O P_{1} P_{2}\) in Figure 26(a) and triangle \(O A P_{3}\) in Figure 26(b), note that these triangles are congruent. (Do you see why? SAS: two sides and the
included angle, \(\alpha-\beta\), are equal.) As a result, the unknown side of triangle \(O P_{1} P_{2}\) and the unknown side of triangle \(O A P_{3}\) must be equal; that is,
\[
d\left(A, P_{3}\right)=d\left(P_{1}, P_{2}\right)
\]

Now use the distance formula to obtain
\[
\begin{array}{rlrl}
\sqrt{[\cos (\alpha-\beta)-1]^{2}+[\sin (\alpha-\beta)-0]^{2}} & =\sqrt{(\cos \alpha-\cos \beta)^{2}+(\sin \alpha-\sin \beta)^{2}} & d\left(A, P_{3}\right)=d\left(P_{1}, P_{2}\right) \\
{[\cos (\alpha-\beta)-1]^{2}+\sin ^{2}(\alpha-\beta)} & =(\cos \alpha-\cos \beta)^{2}+(\sin \alpha-\sin \beta)^{2} & & \text { Square both sides. } \\
\cos ^{2}(\alpha-\beta)-2 \cos (\alpha-\beta)+1+\sin ^{2}(\alpha-\beta) & =\cos ^{2} \alpha-2 \cos \alpha \cos \beta+\cos ^{2} \beta & & \text { Multiply out the squared terms. } \\
& +\sin ^{2} \alpha-2 \sin \alpha \sin \beta+\sin ^{2} \beta & & \\
2-2 \cos (\alpha-\beta) & =2-2 \cos \alpha \cos \beta-2 \sin \alpha \sin \beta & & \text { Apply a Pythagorean Identity (3 times). } \\
-2 \cos (\alpha-\beta) & =-2 \cos \alpha \cos \beta-2 \sin \alpha \sin \beta & & \text { Subtract 2 from each side. } \\
\cos (\alpha-\beta) & =\cos \alpha \cos \beta+\sin \alpha \sin \beta & & \text { Divide each side by -2. }
\end{array}
\]

This is formula (2).
The proof of formula (1) follows from formula (2) and the Even-Odd Identities. Because \(\alpha+\beta=\alpha-(-\beta)\), it follows that
\[
\begin{array}{rlrl}
\cos (\alpha+\beta) & =\cos [\alpha-(-\beta)] & \\
& =\cos \alpha \cos (-\beta)+\sin \alpha \sin (-\beta) & & \text { Use formula (2) } \\
& =\cos \alpha \cos \beta-\sin \alpha \sin \beta & & \text { Even-Odd Identities }
\end{array}
\]

\section*{1 Use Sum and Difference Formulas to Find Exact Values}

One use of formulas (1) and (2) is to obtain the exact value of the cosine of an angle that can be expressed as the sum or difference of angles whose sine and cosine are known exactly.

\section*{EXAMPLE I Using the Sum Formula to Find an ExactValue}

Find the exact value of \(\cos 75^{\circ}\).
Solution Because \(75^{\circ}=45^{\circ}+30^{\circ}\), use formula (1) to obtain
\[
\begin{aligned}
\cos 75^{\circ} & =\cos \left(45^{\circ}+30^{\circ}\right) \underset{\uparrow}{\text { Formula (1) }} \cos 45^{\circ} \cos 30^{\circ}-\sin 45^{\circ} \sin 30^{\circ} \\
& =\frac{\sqrt{2}}{2} \cdot \frac{\sqrt{3}}{2}-\frac{\sqrt{2}}{2} \cdot \frac{1}{2}=\frac{1}{4}(\sqrt{6}-\sqrt{2})
\end{aligned}
\]

\section*{EXAMPLE 2 \\ Using the Difference Formula to Find an Exact Value}

Find the exact value of \(\cos \frac{\pi}{12}\).

Solution
\[
\begin{aligned}
\cos \frac{\pi}{12} & =\cos \left(\frac{3 \pi}{12}-\frac{2 \pi}{12}\right)=\cos \left(\frac{\pi}{4}-\frac{\pi}{6}\right) \\
& =\cos \frac{\pi}{4} \cos \frac{\pi}{6}+\sin \frac{\pi}{4} \sin \frac{\pi}{6} \\
& =\frac{\sqrt{2}}{2} \cdot \frac{\sqrt{3}}{2}+\frac{\sqrt{2}}{2} \cdot \frac{1}{2}=\frac{1}{4}(\sqrt{6}+\sqrt{2})
\end{aligned} \quad \text { Use formula (2) }
\]

\section*{2 Use Sum and Difference Formulas to Establish Identities}

Another use of formulas (1) and (2) is to establish other identities.

\section*{Seeing the Concept}

Graph \(Y_{1}=\cos \left(\frac{\pi}{2}-x\right)\) and \(Y_{2}=\sin x\) on the same screen. Does this demonstrate result 3(a)? How would you demonstrate result 3(b)?
\[
\begin{align*}
& \cos \left(\frac{\pi}{2}-\theta\right)=\sin \theta  \tag{3a}\\
& \sin \left(\frac{\pi}{2}-\theta\right)=\cos \theta \tag{3b}
\end{align*}
\]

Proof To prove formula (3a), use the formula for \(\cos (\alpha-\beta)\) with \(\alpha=\frac{\pi}{2}\) and \(\beta=\theta\).
\[
\begin{aligned}
\cos \left(\frac{\pi}{2}-\theta\right) & =\cos \frac{\pi}{2} \cos \theta+\sin \frac{\pi}{2} \sin \theta \\
& =0 \cdot \cos \theta+1 \cdot \sin \theta \\
& =\sin \theta
\end{aligned}
\]

To prove formula (3b), make use of the identity (3a) just established.
\[
\sin \left(\frac{\pi}{2}-\theta\right) \underset{\uparrow_{\text {Use (3a) }}}{ }=\cos \left[\frac{\pi}{2}-\left(\frac{\pi}{2}-\theta\right)\right]=\cos \theta
\]

Also, because
\[
\cos \left(\frac{\pi}{2}-\theta\right)=\cos \left[-\left(\theta-\frac{\pi}{2}\right)\right]=\underset{\text { Even Property of Cosine }}{ }=\cos \left(\theta-\frac{\pi}{2}\right)
\]
and because
\[
\cos \left(\frac{\pi}{2}-\theta\right)=\sin \theta
\]
it follows that \(\cos \left(\theta-\frac{\pi}{2}\right)=\sin \theta\). The graphs of \(y=\cos \left(\theta-\frac{\pi}{2}\right)\) and \(y=\sin \theta\) are identical.

Having established the identities in formulas (3a) and (3b), we now can derive the sum and difference formulas for \(\sin (\alpha+\beta)\) and \(\sin (\alpha-\beta)\).
\[
\text { Proof } \begin{aligned}
\sin (\alpha+\beta) & =\cos \left[\frac{\pi}{2}-(\alpha+\beta)\right] & & \text { Formula (3a) } \\
& =\cos \left[\left(\frac{\pi}{2}-\alpha\right)-\beta\right] & & \\
& =\cos \left(\frac{\pi}{2}-\alpha\right) \cos \beta+\sin \left(\frac{\pi}{2}-\alpha\right) \sin \beta & & \text { Formula (2) } \\
& =\sin \alpha \cos \beta+\cos \alpha \sin \beta & & \text { Formulas (3a) and (3b) } \\
\sin (\alpha-\beta) & =\sin [\alpha+(-\beta)] & & \text { Use the sum formula } \\
& =\sin \alpha \cos (-\beta)+\cos \alpha \sin (-\beta) & & \text { for sine just obtained. } \\
& =\sin \alpha \cos \beta+\cos \alpha(-\sin \beta) & & \text { Even-Odd Identities } \\
& =\sin \alpha \cos \beta-\cos \alpha \sin \beta & &
\end{aligned}
\]

\section*{In Words}

Formula (4) states that the sine of the sum of two angles equals the sine of the first angle times the cosine of the second angle plus the cosine of the first angle
(times the sine of the second
r angle.

\section*{THEOREM}

Sum and Difference Formulas for the Sine Function
\[
\begin{align*}
& \sin (\alpha+\beta)=\sin \alpha \cos \beta+\cos \alpha \sin \beta  \tag{4}\\
& \sin (\alpha-\beta)=\sin \alpha \cos \beta-\cos \alpha \sin \beta \tag{5}
\end{align*}
\]

\section*{EXAMPLE 3 \\ Using the Sum Formula to Find an Exact Value}

Find the exact value of \(\sin \frac{7 \pi}{12}\).
Solution
\[
\begin{aligned}
\sin \frac{7 \pi}{12} & =\sin \left(\frac{3 \pi}{12}+\frac{4 \pi}{12}\right)=\sin \left(\frac{\pi}{4}+\frac{\pi}{3}\right) \\
& =\sin \frac{\pi}{4} \cos \frac{\pi}{3}+\cos \frac{\pi}{4} \sin \frac{\pi}{3} \\
& =\frac{\sqrt{2}}{2} \cdot \frac{1}{2}+\frac{\sqrt{2}}{2} \cdot \frac{\sqrt{3}}{2}=\frac{1}{4}(\sqrt{2}+\sqrt{6})
\end{aligned}
\]

Formula (4)

Now Work problem 19

\section*{EXAMPLE 4 Using the Difference Formula to Find an Exact Value}

Find the exact value of \(\sin 80^{\circ} \cos 20^{\circ}-\cos 80^{\circ} \sin 20^{\circ}\).
Solution The form of the expression \(\sin 80^{\circ} \cos 20^{\circ}-\cos 80^{\circ} \sin 20^{\circ}\) is that of the right side of formula (5) for \(\sin (\alpha-\beta)\) with \(\alpha=80^{\circ}\) and \(\beta=20^{\circ}\). That is,
\[
\sin 80^{\circ} \cos 20^{\circ}-\cos 80^{\circ} \sin 20^{\circ}=\sin \left(80^{\circ}-20^{\circ}\right)=\sin 60^{\circ}=\frac{\sqrt{3}}{2}
\]

Now Work problems 25 and 29

\section*{EXAMPLE 5}

Figure 27
\(\sin \alpha=\frac{4}{5}, \frac{\pi}{2}<\alpha<\pi\)
Solution

\section*{Finding Exact Values}

If it is known that \(\sin \alpha=\frac{4}{5}, \frac{\pi}{2}<\alpha<\pi\), and that \(\sin \beta=-\frac{2}{\sqrt{5}}=-\frac{2 \sqrt{5}}{5}\), \(\pi<\beta<\frac{3 \pi}{2}\), find the exact value of
(a) \(\cos \alpha\)
(b) \(\cos \beta\)
(c) \(\cos (\alpha+\beta)\)
(d) \(\sin (\alpha+\beta)\)
(a) Because \(\sin \alpha=\frac{4}{5}=\frac{y}{r}\) and \(\frac{\pi}{2}<\alpha<\pi\), let \(y=4\) and \(r=5\) and place \(\alpha\) in quadrant II. The point \(P=(x, y)=(x, 4), x<0\), is on a circle of radius \(5-\) that is, \(x^{2}+y^{2}=25\). See Figure 27. Then
\[
\begin{array}{rlr}
x^{2}+y^{2} & =25 & \\
x^{2}+16 & =25 & y=4 \\
x^{2} & =25-16=9 \\
x & =-3 & \\
x & x<0
\end{array}
\]

Then
\[
\cos \alpha=\frac{x}{r}=-\frac{3}{5}
\]

Alternatively, \(\cos \alpha\) can be found using identities, as follows:
\[
\begin{aligned}
& \cos \alpha=-\sqrt{1-\sin ^{2} \alpha}=-\sqrt{1-\frac{16}{25}}=-\sqrt{\frac{9}{25}}=-\frac{3}{5} \\
& \uparrow \alpha \text { in quadrant II, } \\
& \quad \cos \alpha<0
\end{aligned}
\]

Figure 28
\(\sin \beta=\frac{-2}{\sqrt{5}}, \pi<\beta<\frac{3 \pi}{2}\)

(b) Because \(\sin \beta=\frac{-2}{\sqrt{5}}=\frac{y}{r}\) and \(\pi<\beta<\frac{3 \pi}{2}\), let \(y=-2\) and \(r=\sqrt{5}\) and place \(\beta\) in quadrant III. The point \(P=(x, y)=(x,-2), x<0\), is on a circle of radius \(\sqrt{5}\)-that is, \(x^{2}+y^{2}=5\). See Figure 28. Then
\[
\begin{aligned}
x^{2}+y^{2} & =5 \\
x^{2}+4 & =5 \quad y=-2 \\
x^{2} & =1 \\
x & =-1 \quad x<0
\end{aligned}
\]

Then
\[
\cos \beta=\frac{x}{r}=\frac{-1}{\sqrt{5}}=-\frac{\sqrt{5}}{5}
\]

Alternatively, \(\cos \beta\) can be found using identities, as follows:
\[
\cos \beta=-\sqrt{1-\sin ^{2} \beta}=-\sqrt{1-\frac{4}{5}}=-\sqrt{\frac{1}{5}}=-\frac{\sqrt{5}}{5}
\]
(c) Use the results found in parts (a) and (b) and formula (1) to obtain
\[
\begin{aligned}
\cos (\alpha+\beta) & =\cos \alpha \cos \beta-\sin \alpha \sin \beta \\
& =-\frac{3}{5}\left(-\frac{\sqrt{5}}{5}\right)-\frac{4}{5}\left(-\frac{2 \sqrt{5}}{5}\right)=\frac{11 \sqrt{5}}{25}
\end{aligned}
\]
(d) \(\sin (\alpha+\beta)=\sin \alpha \cos \beta+\cos \alpha \sin \beta\)
\[
=\frac{4}{5}\left(-\frac{\sqrt{5}}{5}\right)+\left(-\frac{3}{5}\right)\left(-\frac{2 \sqrt{5}}{5}\right)=\frac{2 \sqrt{5}}{25}
\]

Now Work problem 33(a), (b), And (c)

\section*{EXAMPLE 6 Establishing an Identity}

Establish the identity: \(\frac{\cos (\alpha-\beta)}{\sin \alpha \sin \beta}=\cot \alpha \cot \beta+1\)
Solution
\[
\begin{aligned}
\frac{\cos (\alpha-\beta)}{\sin \alpha \sin \beta} & =\frac{\cos \alpha \cos \beta+\sin \alpha \sin \beta}{\sin \alpha \sin \beta} \\
& =\frac{\cos \alpha \cos \beta}{\sin \alpha \sin \beta}+\frac{\sin \alpha \sin \beta}{\sin \alpha \sin \beta} \\
& =\frac{\cos \alpha}{\sin \alpha} \cdot \frac{\cos \beta}{\sin \beta}+1 \\
& =\cot \alpha \cot \beta+1
\end{aligned}
\]

\section*{THEOREM}

\section*{In Words}

Formula (6) states that the tangent of the sum of two angles equals the tangent of the first angle plus the tangent of the second angle, all divided by 1
minus their product.

Use the identity \(\tan \theta=\frac{\sin \theta}{\cos \theta}\) and the sum formulas for \(\sin (\alpha+\beta)\) and \(\cos (\alpha+\beta)\) to derive a formula for \(\tan (\alpha+\beta)\).

Proof \(\tan (\alpha+\beta)=\frac{\sin (\alpha+\beta)}{\cos (\alpha+\beta)}=\frac{\sin \alpha \cos \beta+\cos \alpha \sin \beta}{\cos \alpha \cos \beta-\sin \alpha \sin \beta}\)
Now divide the numerator and the denominator by \(\cos \alpha \cos \beta\).
\[
\begin{aligned}
\tan (\alpha+\beta)= & \frac{\frac{\sin \alpha \cos \beta+\cos \alpha \sin \beta}{\cos \alpha \cos \beta}}{\frac{\cos \alpha \cos \beta-\sin \alpha \sin \beta}{\cos \alpha \cos \beta}}=\frac{\frac{\sin \alpha \cos \beta}{\cos \alpha \cos \beta}+\frac{\cos \alpha \sin \beta}{\cos \alpha \cos \beta}}{\frac{\cos \alpha \cos \beta}{\cos \alpha \cos \beta}-\frac{\sin \alpha \sin \beta}{\cos \alpha \cos \beta}} \\
= & \frac{\frac{\sin \alpha}{\cos \alpha}+\frac{\sin \beta}{\cos \beta}}{1-\frac{\sin \alpha}{\cos \alpha} \cdot \frac{\sin \beta}{\cos \beta}}=\frac{\tan \alpha+\tan \beta}{1-\tan \alpha \tan \beta}
\end{aligned}
\]

Proof Use the sum formula for \(\tan (\alpha+\beta)\) and Even-Odd Properties to get the difference formula.
\[
\tan (\alpha-\beta)=\tan [\alpha+(-\beta)]=\frac{\tan \alpha+\tan (-\beta)}{1-\tan \alpha \tan (-\beta)}=\frac{\tan \alpha-\tan \beta}{1+\tan \alpha \tan \beta}
\]

Sum and Difference Formulas for the Tangent Function
\[
\begin{align*}
& \tan (\alpha+\beta)=\frac{\tan \alpha+\tan \beta}{1-\tan \alpha \tan \beta}  \tag{6}\\
& \tan (\alpha-\beta)=\frac{\tan \alpha-\tan \beta}{1+\tan \alpha \tan \beta} \tag{7}
\end{align*}
\]

Now Work problem 33(d)

\section*{EXAMPLE 7 Establishing an Identity}

Prove the identity: \(\tan (\theta+\pi)=\tan \theta\)
Solution
\(\tan (\theta+\pi)=\frac{\tan \theta+\tan \pi}{1-\tan \theta \tan \pi}=\frac{\tan \theta+0}{1-\tan \theta \cdot 0}=\tan \theta\)
Example 7 verifies that the tangent function is periodic with period \(\pi\), a fact that was discussed earlier.

\section*{EXAMPLE 8}

Solution

WARNING Be careful when using formulas (6) and (7). These formulas can be used only for angles \(\alpha\) and \(\beta\) for which \(\tan \alpha\) and \(\tan \beta\) are defined. That is, they can be used for all angles except odd integer multiples of \(\frac{\pi}{2}\).

Establishing an Identity
Prove the identity: \(\tan \left(\theta+\frac{\pi}{2}\right)=-\cot \theta\)
Formula (6) cannot be used because \(\tan \frac{\pi}{2}\) is not defined. Instead, proceed as follows:
\[
\begin{aligned}
\tan \left(\theta+\frac{\pi}{2}\right) & =\frac{\sin \left(\theta+\frac{\pi}{2}\right)}{\cos \left(\theta+\frac{\pi}{2}\right)}=\frac{\sin \theta \cos \frac{\pi}{2}+\cos \theta \sin \frac{\pi}{2}}{\cos \theta \cos \frac{\pi}{2}-\sin \theta \sin \frac{\pi}{2}} \\
& =\frac{(\sin \theta)(0)+(\cos \theta)(1)}{(\cos \theta)(0)-(\sin \theta)(1)}=\frac{\cos \theta}{-\sin \theta}=-\cot \theta
\end{aligned}
\]

\section*{3 Use Sum and Difference Formulas Involving Inverse Trigonometric Functions}

NOTE In Example 9, \(\sin \alpha\) also can be found by using \(\cos \alpha=\frac{1}{2}=\frac{x}{r}\), so \(\sin \alpha=\frac{y}{r}=\frac{\sqrt{3}}{2}\). Also, \(\cos \beta\) can be found in a similar fashion.

\section*{EXAMPLE 9} \(x=1\) and \(r=2\). Then \(y=\sqrt{3}\) and

Finding the Exact Value of an Expression Involving Inverse Trigonometric Functions
Find the exact value of: \(\sin \left(\cos ^{-1} \frac{1}{2}+\sin ^{-1} \frac{3}{5}\right)\)
We seek the sine of the sum of two angles, \(\alpha=\cos ^{-1} \frac{1}{2}\) and \(\beta=\sin ^{-1} \frac{3}{5}\). Then
\[
\cos \alpha=\frac{1}{2} \quad 0 \leq \alpha \leq \pi \quad \text { and } \quad \sin \beta=\frac{3}{5} \quad-\frac{\pi}{2} \leq \beta \leq \frac{\pi}{2}
\]

Use Pythagorean Identities to obtain \(\sin \alpha\) and \(\cos \beta\). Because \(\sin \alpha \geq 0\) (because \(0 \leq \alpha \leq \pi\) ) and \(\cos \beta \geq 0\) (because \(-\frac{\pi}{2} \leq \beta \leq \frac{\pi}{2}\) ), this means that
\[
\begin{aligned}
& \sin \alpha=\sqrt{1-\cos ^{2} \alpha}=\sqrt{1-\frac{1}{4}}=\sqrt{\frac{3}{4}}=\frac{\sqrt{3}}{2} \\
& \cos \beta=\sqrt{1-\sin ^{2} \beta}=\sqrt{1-\frac{9}{25}}=\sqrt{\frac{16}{25}}=\frac{4}{5}
\end{aligned}
\]

As a result,
\[
\begin{aligned}
\sin \left(\cos ^{-1} \frac{1}{2}+\sin ^{-1} \frac{3}{5}\right) & =\sin (\alpha+\beta)=\sin \alpha \cos \beta+\cos \alpha \sin \beta \\
& =\frac{\sqrt{3}}{2} \cdot \frac{4}{5}+\frac{1}{2} \cdot \frac{3}{5}=\frac{4 \sqrt{3}+3}{10}
\end{aligned}
\]

\section*{EXAMPLE 10}

Solution

Writing a Trigonometric Expression as an Algebraic Expression
Write \(\sin \left(\sin ^{-1} u+\cos ^{-1} v\right)\) as an algebraic expression containing \(u\) and \(v\) (that is, without any trigonometric functions). Give the restrictions on \(u\) and \(v\).
First, for \(\sin ^{-1} u\), the restriction on \(u\) is \(-1 \leq u \leq 1\), and for \(\cos ^{-1} v\), the restriction on \(v\) is \(-1 \leq v \leq 1\). Now let \(\alpha=\sin ^{-1} u\) and \(\beta=\cos ^{-1} v\). Then
\[
\begin{array}{lrl}
\sin \alpha=u & -\frac{\pi}{2} \leq \alpha \leq \frac{\pi}{2} & -1 \leq u \leq 1 \\
\cos \beta=v & 0 \leq \beta \leq \pi & -1 \leq v \leq 1
\end{array}
\]

Because \(-\frac{\pi}{2} \leq \alpha \leq \frac{\pi}{2}\), this means that \(\cos \alpha \geq 0\). As a result,
\[
\cos \alpha=\sqrt{1-\sin ^{2} \alpha}=\sqrt{1-u^{2}}
\]

Similarly, because \(0 \leq \beta \leq \pi\), this means that \(\sin \beta \geq 0\). Then
\[
\sin \beta=\sqrt{1-\cos ^{2} \beta}=\sqrt{1-v^{2}}
\]

As a result,
\[
\begin{aligned}
\sin \left(\sin ^{-1} u+\cos ^{-1} v\right) & =\sin (\alpha+\beta)=\sin \alpha \cos \beta+\cos \alpha \sin \beta \\
& =u v+\sqrt{1-u^{2}} \sqrt{1-v^{2}}
\end{aligned}
\]

\section*{4 Solve Trigonometric Equations Linear in Sine and Cosine}

Sometimes it is necessary to square both sides of an equation to obtain expressions that allow the use of identities. Remember, squaring both sides of an equation may introduce extraneous solutions. As a result, apparent solutions must be checked.

\section*{EXAMPLE II Solving a Trigonometric Equation Linear in Sine and Cosine}

Solve the equation: \(\sin \theta+\cos \theta=1, \quad 0 \leq \theta<2 \pi\)
Solution A Attempts to use available identities do not lead to equations that are easy to solve. (Try it yourself.) Therefore, given the form of this equation, square each side.
\[
\begin{array}{rlrl}
\sin \theta+\cos \theta & =1 & \\
(\sin \theta+\cos \theta)^{2} & =1 & \text { Square each side. } \\
\sin ^{2} \theta+2 \sin \theta \cos \theta+\cos ^{2} \theta & =1 & & \text { Remove parentheses. } \\
2 \sin \theta \cos \theta & =0 & & \sin ^{2} \theta+\cos ^{2} \theta=1 \\
\sin \theta \cos \theta & =0 & &
\end{array}
\]

Setting each factor equal to zero leads to
\[
\sin \theta=0 \quad \text { or } \quad \cos \theta=0
\]

The apparent solutions are
\[
\theta=0, \quad \theta=\pi, \quad \theta=\frac{\pi}{2}, \quad \theta=\frac{3 \pi}{2}
\]

Because both sides of the original equation were squared, these apparent solutions must be checked to see whether any are extraneous.
\[
\begin{array}{llrl}
\theta=0: & \sin 0+\cos 0=0+1=1 & & \text { A solution } \\
\theta=\pi: & \sin \pi+\cos \pi=0+(-1)=-1 & & \text { Not a solution } \\
\theta=\frac{\pi}{2}: & \sin \frac{\pi}{2}+\cos \frac{\pi}{2}=1+0=1 & & \text { A solution } \\
\theta=\frac{3 \pi}{2}: & \sin \frac{3 \pi}{2}+\cos \frac{3 \pi}{2}=-1+0=-1 & & \text { Not a solution }
\end{array}
\]

The values \(\theta=\pi\) and \(\theta=\frac{3 \pi}{2}\) are extraneous. The solution set is \(\left\{0, \frac{\pi}{2}\right\}\).
Solution B Start with the equation
\[
\sin \theta+\cos \theta=1
\]
and divide each side by \(\sqrt{2}\). (The reason for this choice will become apparent shortly.) Then
\[
\frac{1}{\sqrt{2}} \sin \theta+\frac{1}{\sqrt{2}} \cos \theta=\frac{1}{\sqrt{2}}
\]

The left side now resembles the formula for the sine of the sum of two angles, one of which is \(\theta\). The other angle is unknown (call it \(\phi\).) Then
\[
\begin{equation*}
\sin (\theta+\phi)=\sin \theta \cos \phi+\cos \theta \sin \phi=\frac{1}{\sqrt{2}}=\frac{\sqrt{2}}{2} \tag{8}
\end{equation*}
\]
where
\[
\cos \phi=\frac{1}{\sqrt{2}}=\frac{\sqrt{2}}{2} \quad \sin \phi=\frac{1}{\sqrt{2}}=\frac{\sqrt{2}}{2} \quad 0 \leq \phi<2 \pi
\]

Figure 29

The angle \(\phi\) is therefore \(\frac{\pi}{4}\). As a result, equation (8) becomes
\[
\sin \left(\theta+\frac{\pi}{4}\right)=\frac{\sqrt{2}}{2}
\]

In the interval \([0,2 \pi)\), there are two angles whose sine is \(\frac{\sqrt{2}}{2}: \frac{\pi}{4}\) and \(\frac{3 \pi}{4}\). See
Figure 29 As a result, Figure 29. As a result,
\[
\begin{array}{rlrlrl}
\theta+\frac{\pi}{4} & =\frac{\pi}{4} & \text { or } & \theta+\frac{\pi}{4} & =\frac{3 \pi}{4} \\
\theta & =0 & \text { or } & & \theta & =\frac{\pi}{2}
\end{array}
\]

The solution set is \(\left\{0, \frac{\pi}{2}\right\}\).
This second method of solution can be used to solve any linear equation in the variables \(\sin \theta\) and \(\cos \theta\).

\section*{EXAMPLE 12 Solving a Trigonometric Equation Linear in \(\sin \theta\) and \(\cos \theta\)}

Solve:
\[
\begin{equation*}
a \sin \theta+b \cos \theta=c \tag{9}
\end{equation*}
\]
where \(a, b\), and \(c\) are constants and either \(a \neq 0\) or \(b \neq 0\).
Solution Divide each side of equation (9) by \(\sqrt{a^{2}+b^{2}}\). Then
\[
\begin{equation*}
\frac{a}{\sqrt{a^{2}+b^{2}}} \sin \theta+\frac{b}{\sqrt{a^{2}+b^{2}}} \cos \theta=\frac{c}{\sqrt{a^{2}+b^{2}}} \tag{10}
\end{equation*}
\]

There is a unique angle \(\phi, 0 \leq \phi<2 \pi\), for which
\[
\begin{equation*}
\cos \phi=\frac{a}{\sqrt{a^{2}+b^{2}}} \text { and } \sin \phi=\frac{b}{\sqrt{a^{2}+b^{2}}} \tag{11}
\end{equation*}
\]

Figure 30

Figure 30 shows the situation for \(a>0\) and \(b>0\). Equation (10) may be written as
\[
\sin \theta \cos \phi+\cos \theta \sin \phi=\frac{c}{\sqrt{a^{2}+b^{2}}}
\]
or, equivalently,
\[
\begin{equation*}
\sin (\theta+\phi)=\frac{c}{\sqrt{a^{2}+b^{2}}} \tag{12}
\end{equation*}
\]
where \(\phi\) satisfies equation (11).
If \(|c|>\sqrt{a^{2}+b^{2}}\), then \(\sin (\theta+\phi)>1\) or \(\sin (\theta+\phi)<-1\), and equation (12) has no solution.

If \(|c| \leq \sqrt{a^{2}+b^{2}}\), then the solutions of equation (12) are
\[
\theta+\phi=\sin ^{-1} \frac{c}{\sqrt{a^{2}+b^{2}}} \text { or } \theta+\phi=\pi-\sin ^{-1} \frac{c}{\sqrt{a^{2}+b^{2}}}
\]

Because the angle \(\phi\) is determined by equations (11), these give the solutions to equation (9).

\section*{Sum and Difference Formulas}
\[
\begin{aligned}
\cos (\alpha+\beta) & =\cos \alpha \cos \beta-\sin \alpha \sin \beta & \cos (\alpha-\beta) & =\cos \alpha \cos \beta+\sin \alpha \sin \beta \\
\sin (\alpha+\beta) & =\sin \alpha \cos \beta+\cos \alpha \sin \beta & \sin (\alpha-\beta) & =\sin \alpha \cos \beta-\cos \alpha \sin \beta \\
\tan (\alpha+\beta) & =\frac{\tan \alpha+\tan \beta}{1-\tan \alpha \tan \beta} & \tan (\alpha-\beta) & =\frac{\tan \alpha-\tan \beta}{1+\tan \alpha \tan \beta}
\end{aligned}
\]

\subsection*{6.5 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. The distance \(d\) from the point \((2,-3)\) to the point \((5,1)\) is
\(\qquad\) . (pp. 3-5)
(b) \(\tan \frac{\pi}{4}-\sin \frac{\pi}{6}=\) \(\qquad\) . (pp. 395-398)
2. If \(\sin \theta=\frac{4}{5}\) and \(\theta\) is in quadrant II, then \(\cos \theta=\) \(\qquad\) . (pp. 413-416)
3. (a) \(\sin \frac{\pi}{4} \cdot \cos \frac{\pi}{3}=\) \(\qquad\) (pp. 395-398)
4. If \(\sin \alpha=-\frac{4}{5}, \pi<\alpha<\frac{3 \pi}{2}\), then \(\cos \alpha=\) \(\qquad\) .
(pp. 413-416)

\section*{Concepts and Vocabulary}
5. \(\cos (\alpha+\beta)=\cos \alpha \cos \beta\) \(\qquad\) \(\sin \alpha \sin \beta\)
9. True or False \(\cos \left(\frac{\pi}{2}-\theta\right)=\cos \theta\)
6. \(\sin (\alpha-\beta)=\sin \alpha \cos \beta\) \(\qquad\) \(\cos \alpha \sin \beta\)
7. True or False \(\sin (\alpha+\beta)=\sin \alpha+\sin \beta+2 \sin \alpha \sin \beta\)
10. True or False If \(f(x)=\sin x\) and \(g(x)=\cos x\), then \(g(\alpha+\beta)=g(\alpha) g(\beta)-f(\alpha) f(\beta)\)
8. True or False \(\tan 75^{\circ}=\tan 30^{\circ}+\tan 45^{\circ}\)

\section*{Skill Building}

In Problems 11-22, find the exact value of each expression.
11. \(\sin \frac{5 \pi}{12}\)
12. \(\sin \frac{\pi}{12}\)
13. \(\cos \frac{7 \pi}{12}\)
14. \(\tan \frac{7 \pi}{12}\)
15. \(\cos 165^{\circ}\)
16. \(\sin 105^{\circ}\)
17. \(\tan 15^{\circ}\)
18. \(\tan 195^{\circ}\)
19. \(\sin \frac{17 \pi}{12}\)
20. \(\tan \frac{19 \pi}{12}\)
21. \(\sec \left(-\frac{\pi}{12}\right)\)
22. \(\cot \left(-\frac{5 \pi}{12}\right)\)

In Problems 23-32, find the exact value of each expression.
23. \(\sin 20^{\circ} \cos 10^{\circ}+\cos 20^{\circ} \sin 10^{\circ}\)
24. \(\sin 20^{\circ} \cos 80^{\circ}-\cos 20^{\circ} \sin 80^{\circ}\)
25. \(\cos 70^{\circ} \cos 20^{\circ}-\sin 70^{\circ} \sin 20^{\circ}\)
26. \(\cos 40^{\circ} \cos 10^{\circ}+\sin 40^{\circ} \sin 10^{\circ}\)
27. \(\frac{\tan 20^{\circ}+\tan 25^{\circ}}{1-\tan 20^{\circ} \tan 25^{\circ}}\)
28. \(\frac{\tan 40^{\circ}-\tan 10^{\circ}}{1+\tan 40^{\circ} \tan 10^{\circ}}\)
29. \(\sin \frac{\pi}{12} \cos \frac{7 \pi}{12}-\cos \frac{\pi}{12} \sin \frac{7 \pi}{12}\)
30. \(\cos \frac{5 \pi}{12} \cos \frac{7 \pi}{12}-\sin \frac{5 \pi}{12} \sin \frac{7 \pi}{12}\)
31. \(\cos \frac{\pi}{12} \cos \frac{5 \pi}{12}+\sin \frac{5 \pi}{12} \sin \frac{\pi}{12}\)
32. \(\sin \frac{\pi}{18} \cos \frac{5 \pi}{18}+\cos \frac{\pi}{18} \sin \frac{5 \pi}{18}\)

In Problems 33-38 find the exact value of each of the following under the given conditions:
(a) \(\sin (\alpha+\beta)\)
(b) \(\cos (\alpha+\beta)\)
(c) \(\sin (\alpha-\beta)\)
(d) \(\tan (\alpha-\beta)\)
33. \(\sin \alpha=\frac{3}{5}, 0<\alpha<\frac{\pi}{2} ; \quad \cos \beta=\frac{2 \sqrt{5}}{5},-\frac{\pi}{2}<\beta<0\)
35. \(\tan \alpha=-\frac{4}{3}, \frac{\pi}{2}<\alpha<\pi ; \quad \cos \beta=\frac{1}{2}, 0<\beta<\frac{\pi}{2}\)
34. \(\cos \alpha=\frac{\sqrt{5}}{5}, 0<\alpha<\frac{\pi}{2} ; \quad \sin \beta=-\frac{4}{5},-\frac{\pi}{2}<\beta<0\)
37. \(\sin \alpha=\frac{5}{13},-\frac{3 \pi}{2}<\alpha<-\pi ; \quad \tan \beta=-\sqrt{3}, \frac{\pi}{2}<\beta<\pi\)
36. \(\tan \alpha=\frac{5}{12}, \pi<\alpha<\frac{3 \pi}{2} ; \quad \sin \beta=-\frac{1}{2}, \pi<\beta<\frac{3 \pi}{2}\)
38. \(\cos \alpha=\frac{1}{2},-\frac{\pi}{2}<\alpha<0 ; \quad \sin \beta=\frac{1}{3}, 0<\beta<\frac{\pi}{2}\)
39. If \(\sin \theta=\frac{1}{3}, \theta\) in quadrant II, find the exact value of:
(a) \(\cos \theta\)
(b) \(\sin \left(\theta+\frac{\pi}{6}\right)\)
(c) \(\cos \left(\theta-\frac{\pi}{3}\right)\)
(d) \(\tan \left(\theta+\frac{\pi}{4}\right)\)
40. If \(\cos \theta=\frac{1}{4}, \theta\) in quadrant IV, find the exact value of:
(a) \(\sin \theta\)
(b) \(\sin \left(\theta-\frac{\pi}{6}\right)\)
(c) \(\cos \left(\theta+\frac{\pi}{3}\right)\)
(d) \(\tan \left(\theta-\frac{\pi}{4}\right)\)

In Problems 41-46, use the figures to evaluate each function if \(f(x)=\sin x, g(x)=\cos x\), and \(h(x)=\tan x\).
41. \(f(\alpha+\beta)\)
42. \(g(\alpha+\beta)\)
43. \(g(\alpha-\beta)\)
44. \(f(\alpha-\beta)\)
45. \(h(\alpha+\beta)\)
46. \(h(\alpha-\beta)\)

In Problems 47-72, establish each identity.
47. \(\sin \left(\frac{\pi}{2}+\theta\right)=\cos \theta\)
48. \(\cos \left(\frac{\pi}{2}+\theta\right)=-\sin \theta\)

72. \(\cos (\theta+k \pi)=(-1)^{k} \cos \theta, k\) any integer
57. \(\sin (\alpha+\beta)+\sin (\alpha-\beta)=2 \sin \alpha \cos \beta\)
59. \(\frac{\sin (\alpha+\beta)}{\sin \alpha \cos \beta}=1+\cot \alpha \tan \beta\)
61. \(\frac{\cos (\alpha+\beta)}{\cos \alpha \cos \beta}=1-\tan \alpha \tan \beta\)
63. \(\frac{\sin (\alpha+\beta)}{\sin (\alpha-\beta)}=\frac{\tan \alpha+\tan \beta}{\tan \alpha-\tan \beta}\)
65. \(\cot (\alpha+\beta)=\frac{\cot \alpha \cot \beta-1}{\cot \beta+\cot \alpha}\)
67. \(\sec (\alpha+\beta)=\frac{\csc \alpha \csc \beta}{\cot \alpha \cot \beta-1}\)
69. \(\sin (\alpha-\beta) \sin (\alpha+\beta)=\sin ^{2} \alpha-\sin ^{2} \beta\)
71. \(\sin (\theta+k \pi)=(-1)^{k} \sin \theta, k\) any integer

In Problems 73-84, find the exact value of each expression.
73. \(\sin \left(\sin ^{-1} \frac{1}{2}+\cos ^{-1} 0\right)\)
74. \(\sin \left(\sin ^{-1} \frac{\sqrt{3}}{2}+\cos ^{-1} 1\right)\)
75. \(\sin \left[\sin ^{-1} \frac{3}{5}-\cos ^{-1}\left(-\frac{4}{5}\right)\right]\)
76. \(\sin \left[\sin ^{-1}\left(-\frac{4}{5}\right)-\tan ^{-1} \frac{3}{4}\right]\)
77. \(\cos \left(\tan ^{-1} \frac{4}{3}+\cos ^{-1} \frac{5}{13}\right)\)
78. \(\cos \left[\tan ^{-1} \frac{5}{12}-\sin ^{-1}\left(-\frac{3}{5}\right)\right]\)
79. \(\cos \left(\sin ^{-1} \frac{5}{13}-\tan ^{-1} \frac{3}{4}\right)\)
80. \(\cos \left(\tan ^{-1} \frac{4}{3}+\cos ^{-1} \frac{12}{13}\right)\)
81. \(\tan \left(\sin ^{-1} \frac{3}{5}+\frac{\pi}{6}\right)\)
82. \(\tan \left(\frac{\pi}{4}-\cos ^{-1} \frac{3}{5}\right)\)
83. \(\tan \left(\sin ^{-1} \frac{4}{5}+\cos ^{-1} 1\right)\)
84. \(\tan \left(\cos ^{-1} \frac{4}{5}+\sin ^{-1} 1\right)\)

In Problems 85-90, write each trigonometric expression as an algebraic expression containing \(u\) and \(v\). Give the restrictions required on \(u\) and \(v\).
85. \(\cos \left(\cos ^{-1} u+\sin ^{-1} v\right)\)
86. \(\sin \left(\sin ^{-1} u-\cos ^{-1} v\right)\)
87. \(\sin \left(\tan ^{-1} u-\sin ^{-1} v\right)\)
88. \(\cos \left(\tan ^{-1} u+\tan ^{-1} v\right)\)
89. \(\tan \left(\sin ^{-1} u-\cos ^{-1} v\right)\)
90. \(\sec \left(\tan ^{-1} u+\cos ^{-1} v\right)\)

In Problems 91-96, solve each equation on the interval \(0 \leq \theta<2 \pi\).
91. \(\sin \theta-\sqrt{3} \cos \theta=1\)
92. \(\sqrt{3} \sin \theta+\cos \theta=1\)
93. \(\sin \theta+\cos \theta=\sqrt{2}\)
94. \(\sin \theta-\cos \theta=-\sqrt{2}\)
95. \(\tan \theta+\sqrt{3}=\sec \theta\)
96. \(\cot \theta+\csc \theta=-\sqrt{3}\)

\section*{Applications and Extensions}
97. Show that \(\sin ^{-1} v+\cos ^{-1} v=\frac{\pi}{2}\).
99. Show that \(\tan ^{-1}\left(\frac{1}{v}\right)=\frac{\pi}{2}-\tan ^{-1} v\), if \(v>0\).
101. Show that \(\sin \left(\sin ^{-1} v+\cos ^{-1} v\right)=1\).
103. Calculus Show that the difference quotient for \(f(x)=\sin x\) is given by
\[
\begin{aligned}
\frac{f(x+h)-f(x)}{h} & =\frac{\sin (x+h)-\sin x}{h} \\
& =\cos x \cdot \frac{\sin h}{h}-\sin x \cdot \frac{1-\cos h}{h}
\end{aligned}
\]
98. Show that \(\tan ^{-1} v+\cot ^{-1} v=\frac{\pi}{2}\).
100. Show that \(\cot ^{-1} e^{v}=\tan ^{-1} e^{-v}\).
102. Show that \(\cos \left(\sin ^{-1} v+\cos ^{-1} v\right)=0\).
104. Calculus Show that the difference quotient for \(f(x)=\cos x\) is given by
\[
\begin{aligned}
\frac{f(x+h)-f(x)}{h} & =\frac{\cos (x+h)-\cos x}{h} \\
& =-\sin x \cdot \frac{\sin h}{h}-\cos x \cdot \frac{1-\cos h}{h}
\end{aligned}
\]
105. One, Two, Three
(a) Show that \(\tan \left(\tan ^{-1} 1+\tan ^{-1} 2+\tan ^{-1} 3\right)=0\).
(b) Conclude from part (a) that
\[
\tan ^{-1} 1+\tan ^{-1} 2+\tan ^{-1} 3=\pi
\]

107. Geometry: Angle between Two Lines Let \(L_{1}\) and \(L_{2}\) denote two nonvertical intersecting lines, and let \(\theta\) denote the acute angle between \(L_{1}\) and \(L_{2}\) (see the figure). Show that
\[
\tan \theta=\frac{m_{2}-m_{1}}{1+m_{1} m_{2}}
\]
where \(m_{1}\) and \(m_{2}\) are the slopes of \(L_{1}\) and \(L_{2}\), respectively.
[Hint: Use the facts that \(\tan \theta_{1}=m_{1}\) and \(\tan \theta_{2}=m_{2}\).]

108. If \(\alpha+\beta+\gamma=180^{\circ}\) and
\[
\cot \theta=\cot \alpha+\cot \beta+\cot \gamma, \quad 0<\theta<90^{\circ}
\]
show that
\[
\sin ^{3} \theta=\sin (\alpha-\theta) \sin (\beta-\theta) \sin (\gamma-\theta)
\]
109. If \(\tan \alpha=x+1\) and \(\tan \beta=x-1\), show that
\[
2 \cot (\alpha-\beta)=x^{2}
\]

\section*{Discussion and Writing}
110. Discuss the following derivation:
\[
\tan \left(\theta+\frac{\pi}{2}\right)=\frac{\tan \theta+\tan \frac{\pi}{2}}{1-\tan \theta \tan \frac{\pi}{2}}=\frac{\frac{\tan \theta}{\tan \frac{\pi}{2}}+1}{\frac{1}{\tan \frac{\pi}{2}}-\tan \theta}=\frac{0+1}{0-\tan \theta}=\frac{1}{-\tan \theta}=-\cot \theta
\]

Can you justify each step?
111. Explain why formula (7) cannot be used to show that
\[
\tan \left(\frac{\pi}{2}-\theta\right)=\cot \theta
\]

Establish this identity by using formulas (3a) and (3b).

\section*{Retain Your Knowledge}

Problems 112-115 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
112. Determine the points of intersection of the graphs of \(f(x)=x^{2}+5 x+1\) and \(g(x)=-2 x^{2}-11 x-4\) by solving \(f(x)=g(x)\).
113. Convert \(\frac{17 \pi}{6}\) to degrees.
114. Find the area of the sector of a circle of radius 6 centimeters formed by an angle of \(45^{\circ}\). Give both the exact area and an approximation rounded to two decimal places.
115. Given \(\tan \theta=-2,270^{\circ}<\theta<360^{\circ}\), find the exact value of the remaining five trigonometric functions.

\section*{'Are You Prepared?' Answers}
1. 5

3. (a) \(\frac{\sqrt{2}}{4}\)
(b) \(\frac{1}{2}\)
4. \(-\frac{3}{5}\)

\subsection*{6.6 Double-angle and Half-angle Formulas}

OBJECTIVES 1 Use Double-angle Formulas to Find Exact Values (p. 512)
2 Use Double-angle Formulas to Establish Identities (p. 512)
3 Use Half-angle Formulas to Find Exact Values (p. 515)

In this section, formulas for \(\sin (2 \theta), \cos (2 \theta), \sin \left(\frac{1}{2} \theta\right)\), and \(\cos \left(\frac{1}{2} \theta\right)\) are established in terms of \(\sin \theta\) and \(\cos \theta\). They are derived using the sum formulas.
\[
\begin{aligned}
\sin (\alpha+\beta) & =\sin \alpha \cos \beta+\cos \alpha \sin \beta \\
\sin (\theta+\theta) & =\sin \theta \cos \theta+\cos \theta \sin \theta \quad \text { Let } \alpha=\beta=\theta \\
\sin (2 \theta) & =2 \sin \theta \cos \theta
\end{aligned}
\]
and
\[
\begin{aligned}
\cos (\alpha+\beta) & =\cos \alpha \cos \beta-\sin \alpha \sin \beta \\
\cos (\theta+\theta) & =\cos \theta \cos \theta-\sin \theta \sin \theta \quad \text { Let } \alpha=\beta=\theta \\
\cos (2 \theta) & =\cos ^{2} \theta-\sin ^{2} \theta
\end{aligned}
\]

An application of the Pythagorean Identity \(\sin ^{2} \theta+\cos ^{2} \theta=1\) results in two other ways to express \(\cos (2 \theta)\).
\[
\cos (2 \theta)=\cos ^{2} \theta-\sin ^{2} \theta=\left(1-\sin ^{2} \theta\right)-\sin ^{2} \theta=1-2 \sin ^{2} \theta
\]
and
\[
\cos (2 \theta)=\cos ^{2} \theta-\sin ^{2} \theta=\cos ^{2} \theta-\left(1-\cos ^{2} \theta\right)=2 \cos ^{2} \theta-1
\]

The following theorem summarizes the Double-angle Formulas.

\section*{THEOREM}

Double-angle Formulas
\[
\begin{align*}
\sin (2 \theta) & =2 \sin \theta \cos \theta  \tag{1}\\
\cos (2 \theta) & =\cos ^{2} \theta-\sin ^{2} \theta  \tag{2}\\
\cos (2 \theta) & =1-2 \sin ^{2} \theta  \tag{3}\\
\cos (2 \theta) & =2 \cos ^{2} \theta-1 \tag{4}
\end{align*}
\]

\section*{1 Use Double-angle Formulas to Find Exact Values}

\section*{EXAMPLE I}

Finding Exact Values Using the Double-angle Formulas
If \(\sin \theta=\frac{3}{5}, \frac{\pi}{2}<\theta<\pi\), find the exact value of:
(a) \(\sin (2 \theta)\)
(b) \(\cos (2 \theta)\)

Solution
Figure 31
 finding \(\cos \theta\). Because \(\sin \theta=\frac{3}{5}=\frac{y}{r}, \frac{\pi}{2}<\theta<\pi\), let \(y=3\) and \(r=5\), and place \(\theta\) in quadrant II. The point \(P=(x, y)=(x, 3), x<0\), is on a circle of radius 5 -that is, \(x^{2}+y^{2}=25\). See Figure 31. Then
\[
\begin{array}{rlrl}
x^{2}+y^{2} & =25 & \\
x^{2}+9 & =25 & y=3 \\
x^{2} & =25-9=16 & \\
x & =-4 & & x<0
\end{array}
\]

Therefore, \(\cos \theta=\frac{x}{r}=\frac{-4}{5}\). Now use formula (1) to obtain
\[
\sin (2 \theta)=2 \sin \theta \cos \theta=2\left(\frac{3}{5}\right)\left(-\frac{4}{5}\right)=-\frac{24}{25}
\]
(b) Because \(\sin \theta=\frac{3}{5}\) is given, it is easiest to use formula (3) to get \(\cos (2 \theta)\).
\[
\cos (2 \theta)=1-2 \sin ^{2} \theta=1-2\left(\frac{9}{25}\right)=1-\frac{18}{25}=\frac{7}{25}
\]

WARNING In finding \(\cos (2 \theta)\) in Example 1(b), a version of the Double-angle Formula, formula (3), was used. Note that it is not possible to use the Pythagorean Identity \(\cos (2 \theta)= \pm \sqrt{1-\sin ^{2}(2 \theta)}\), with \(\sin (2 \theta)=-\frac{24}{25}\), because there is no way of knowing
which sign to choose. which sign to choose.

\section*{-Now Work problem 7(a) and (b)}

\section*{2 Use Double-angle Formulas to Establish Identities}

\section*{EXAMPLE 2}

\section*{Establishing Identities}
(a) Develop a formula for \(\tan (2 \theta)\) in terms of \(\tan \theta\).
(b) Develop a formula for \(\sin (3 \theta)\) in terms of \(\sin \theta\) and \(\cos \theta\).

Solution
(a) In the sum formula for \(\tan (\alpha+\beta)\), let \(\alpha=\beta=\theta\). Then
\[
\begin{aligned}
\tan (\alpha+\beta) & =\frac{\tan \alpha+\tan \beta}{1-\tan \alpha \tan \beta} \\
\tan (\theta+\theta) & =\frac{\tan \theta+\tan \theta}{1-\tan \theta \tan \theta}
\end{aligned}
\]
\[
\begin{equation*}
\tan (2 \theta)=\frac{2 \tan \theta}{1-\tan ^{2} \theta} \tag{5}
\end{equation*}
\]
(b) To get a formula for \(\sin (3 \theta)\), write \(3 \theta\) as \(2 \theta+\theta\), and use the sum formula.
\[
\sin (3 \theta)=\sin (2 \theta+\theta)=\sin (2 \theta) \cos \theta+\cos (2 \theta) \sin \theta
\]

Now use the Double-angle Formulas to get
\[
\begin{aligned}
\sin (3 \theta) & =(2 \sin \theta \cos \theta)(\cos \theta)+\left(\cos ^{2} \theta-\sin ^{2} \theta\right)(\sin \theta) \\
& =2 \sin \theta \cos ^{2} \theta+\sin \theta \cos ^{2} \theta-\sin ^{3} \theta \\
& =3 \sin \theta \cos ^{2} \theta-\sin ^{3} \theta
\end{aligned}
\]

The formula obtained in Example 2(b) can also be written as
\[
\begin{aligned}
\sin (3 \theta)=3 \sin \theta \cos ^{2} \theta-\sin ^{3} \theta & =3 \sin \theta\left(1-\sin ^{2} \theta\right)-\sin ^{3} \theta \\
& =3 \sin \theta-4 \sin ^{3} \theta
\end{aligned}
\]

That is, \(\sin (3 \theta)\) is a third-degree polynomial in the variable \(\sin \theta\). In fact, \(\sin (n \theta)\), \(n\) a positive odd integer, can always be written as a polynomial of degree \(n\) in the variable \(\sin \theta\).*
an Now Work problems 7(e) and 65
Rearranging the Double-angle Formulas (3) and (4) leads to additional formulas that will be used later in this section.

Begin with formula (3) and proceed to solve for \(\sin ^{2} \theta\).
\[
\begin{aligned}
\cos (2 \theta) & =1-2 \sin ^{2} \theta \\
2 \sin ^{2} \theta & =1-\cos (2 \theta)
\end{aligned}
\]
\[
\begin{equation*}
\sin ^{2} \theta=\frac{1-\cos (2 \theta)}{2} \tag{6}
\end{equation*}
\]

Similarly, using formula (4), proceed to solve for \(\cos ^{2} \theta\).
\[
\begin{aligned}
& \cos (2 \theta)=2 \cos ^{2} \theta-1 \\
& 2 \cos ^{2} \theta=1+\cos (2 \theta)
\end{aligned}
\]
\[
\begin{equation*}
\cos ^{2} \theta=\frac{1+\cos (2 \theta)}{2} \tag{7}
\end{equation*}
\]

Formulas (6) and (7) can be used to develop a formula for \(\tan ^{2} \theta\).
\[
\tan ^{2} \theta=\frac{\sin ^{2} \theta}{\cos ^{2} \theta}=\frac{\frac{1-\cos (2 \theta)}{2}}{\frac{1+\cos (2 \theta)}{2}}
\]
\[
\begin{equation*}
\tan ^{2} \theta=\frac{1-\cos (2 \theta)}{1+\cos (2 \theta)} \tag{8}
\end{equation*}
\]

\footnotetext{
*Because of the work done by P. L. Chebyshëv, these polynomials are sometimes called Chebyshëv polynomials.
}

Formulas (6) through (8) do not have to be memorized since their derivations are so straightforward.

Formulas (6) and (7) are important in calculus. The next example illustrates a problem that arises in calculus requiring the use of formula (7).

\section*{EXAMPLE 3 Establishing an Identity}

Write an equivalent expression for \(\cos ^{4} \theta\) that does not involve any powers of sine or cosine greater than 1.

Solution The idea here is to apply formula (7) twice.
\[
\begin{aligned}
& \cos ^{4} \theta=\left(\cos ^{2} \theta\right)^{2}=\left(\frac{1+\cos (2 \theta)}{2}\right)^{2} \\
&=\frac{1}{4}\left[1+2 \cos (2 \theta)+\cos ^{2}(2 \theta)\right] \\
&=\frac{1}{4}+\frac{1}{2} \cos (2 \theta)+\frac{1}{4} \cos ^{2}(2 \theta) \\
&=\frac{1}{4}+\frac{1}{2} \cos (2 \theta)+\frac{1}{4}\left\{\frac{1+\cos [2(2 \theta)]}{2}\right\} \quad \text { Formula }(7) \\
&=\frac{1}{4}+\frac{1}{2} \cos (2 \theta)+\frac{1}{8}[1+\cos (4 \theta)] \\
&=\frac{3}{8}+\frac{1}{2} \cos (2 \theta)+\frac{1}{8} \cos (4 \theta) \\
& \text {-Now Work PROBLEM } 41
\end{aligned}
\]

\section*{EXAMPLE 4 Solving a Trigonometric Equation Using Identities}

Solve the equation: \(\sin \theta \cos \theta=-\frac{1}{2}, \quad 0 \leq \theta<2 \pi\)
Solution The left side of the given equation is in the form of the Double-angle Formula \(2 \sin \theta \cos \theta=\sin (2 \theta)\), except for a factor of 2 . Multiply each side by 2 .
\[
\begin{aligned}
\sin \theta \cos \theta & =-\frac{1}{2} \\
2 \sin \theta \cos \theta & =-1 \quad \text { Multiply each side by } 2 . \\
\sin (2 \theta) & =-1 \quad \text { Double-angle Formula }
\end{aligned}
\]

The argument here is \(2 \theta\). Write the general formula that gives all the solutions of this equation, and then list those that are in the interval \([0,2 \pi)\). Because \(\sin \left(\frac{3 \pi}{2}+2 \pi k\right)=-1\), for any integer \(k\), this means that
\[
\begin{aligned}
2 \theta & =\frac{3 \pi}{2}+2 k \pi \quad \text { kany integer } \\
\theta & =\frac{3 \pi}{4}+k \pi
\end{aligned}
\]
\[
\begin{array}{lll}
\theta=\frac{3 \pi}{4}+(-1) \pi=-\frac{\pi}{4}, & \theta=\frac{3 \pi}{4}+(0) \pi=\frac{3 \pi}{4}, & \theta \underset{\uparrow}{\uparrow}=\frac{3 \pi}{4}+(1) \pi=\frac{7 \pi}{4}, \\
k=-1 & \theta=\frac{3 \pi}{4}+(2) \pi=\frac{11 \pi}{4} \\
k=0
\end{array}
\]

The solutions in the interval \([0,2 \pi)\) are
\[
\theta=\frac{3 \pi}{4}, \quad \theta=\frac{7 \pi}{4}
\]

The solution set is \(\left\{\frac{3 \pi}{4}, \frac{7 \pi}{4}\right\}\).
Now Work problem 69

\section*{EXAMPLE 5}

Figure 32

\section*{Projectile Motion}

An object is propelled upward at an angle \(\theta\) to the horizontal with an initial velocity of \(v_{0}\) feet per second. See Figure 32. If air resistance is ignored, the range \(R\), the horizontal distance that the object travels, is given by the function
\[
R(\theta)=\frac{1}{16} v_{0}^{2} \sin \theta \cos \theta
\]
(a) Show that \(R(\theta)=\frac{1}{32} v_{0}^{2} \sin (2 \theta)\).
(b) Find the angle \(\theta\) for which \(R\) is a maximum.

Solution (a) Rewrite the given expression for the range using the Double-angle Formula \(\sin (2 \theta)=2 \sin \theta \cos \theta\). Then
\[
R(\theta)=\frac{1}{16} v_{0}^{2} \sin \theta \cos \theta=\frac{1}{16} v_{0}^{2} \frac{2 \sin \theta \cos \theta}{2}=\frac{1}{32} v_{0}^{2} \sin (2 \theta)
\]
(b) In this form, the largest value for the range \(R\) can be found. For a fixed initial speed \(v_{0}\), the angle \(\theta\) of inclination to the horizontal determines the value of \(R\). The largest value of a sine function is 1 , occurring when the argument \(2 \theta\) is \(90^{\circ}\). Thus, for maximum \(R\), it follows that
\[
\begin{aligned}
2 \theta & =90^{\circ} \\
\theta & =45^{\circ}
\end{aligned}
\]

An inclination to the horizontal of \(45^{\circ}\) results in the maximum range.

\section*{3 Use Half-angle Formulas to Find Exact Values}

Another important use of formulas (6) through (8) is to prove the Half-angle Formulas. In formulas (6) through (8), let \(\theta=\frac{\alpha}{2}\). Then
\[
\begin{equation*}
\sin ^{2} \frac{\alpha}{2}=\frac{1-\cos \alpha}{2} \cos ^{2} \frac{\alpha}{2}=\frac{1+\cos \alpha}{2} \tan ^{2} \frac{\alpha}{2}=\frac{1-\cos \alpha}{1+\cos \alpha} \tag{9}
\end{equation*}
\]

The identities in box (9) will prove useful in integral calculus.
Solving for the trigonometric functions on the left sides of equations (9) gives the Half-angle Formulas.

Half-angle Formulas
\[
\begin{align*}
& \sin \frac{\alpha}{2}= \pm \sqrt{\frac{1-\cos \alpha}{2}}  \tag{10a}\\
& \cos \frac{\alpha}{2}= \pm \sqrt{\frac{1+\cos \alpha}{2}}  \tag{10b}\\
& \tan \frac{\alpha}{2}= \pm \sqrt{\frac{1-\cos \alpha}{1+\cos \alpha}} \tag{10c}
\end{align*}
\]
where the + or \(-\operatorname{sign}\) is determined by the quadrant of the angle \(\frac{\alpha}{2}\).

\section*{EXAMPLE 6 Finding Exact Values Using Half-angle Formulas}

Use a Half-angle Formula to find the exact value of:
(a) \(\cos 15^{\circ}\)
(b) \(\sin \left(-15^{\circ}\right)\)

Solution (a) Because \(15^{\circ}=\frac{30^{\circ}}{2}\), use the Half-angle Formula for \(\cos \frac{\alpha}{2}\) with \(\alpha=30^{\circ}\). Also, because \(15^{\circ}\) is in quadrant \(\mathrm{I}, \cos 15^{\circ}>0\), choose the \(+\operatorname{sign}\) in using formula (10b):
\[
\begin{aligned}
\cos 15^{\circ} & =\cos \frac{30^{\circ}}{2}=\sqrt{\frac{1+\cos 30^{\circ}}{2}} \\
& =\sqrt{\frac{1+\sqrt{3} / 2}{2}}=\sqrt{\frac{2+\sqrt{3}}{4}}=\frac{\sqrt{2+\sqrt{3}}}{2}
\end{aligned}
\]
(b) Use the fact that \(\sin \left(-15^{\circ}\right)=-\sin 15^{\circ}\), and then apply formula (10a).
\[
\begin{aligned}
\sin \left(-15^{\circ}\right) & =-\sin \frac{30^{\circ}}{2}=-\sqrt{\frac{1-\cos 30^{\circ}}{2}} \\
& =-\sqrt{\frac{1-\sqrt{3} / 2}{2}}=-\sqrt{\frac{2-\sqrt{3}}{4}}=-\frac{\sqrt{2-\sqrt{3}}}{2}
\end{aligned}
\]

It is interesting to compare the answer found in Example 6(a) with the answer to Example 2 of Section 6.5. There it was found that
\[
\cos \frac{\pi}{12}=\cos 15^{\circ}=\frac{1}{4}(\sqrt{6}+\sqrt{2})
\]

Based on this and the result of Example 6(a), this means that
\[
\frac{1}{4}(\sqrt{6}+\sqrt{2}) \text { and } \frac{\sqrt{2+\sqrt{3}}}{2}
\]
are equal. (Since each expression is positive, you can verify this equality by squaring each expression.) Two very different-looking, yet correct, answers can be obtained, depending on the approach taken to solve a problem.
em Now Work problem 19

\section*{EXAMPLE 7 Finding ExactValues Using Half-angle Formulas}

If \(\cos \alpha=-\frac{3}{5}, \pi<\alpha<\frac{3 \pi}{2}\), find the exact value of:
(a) \(\sin \frac{\alpha}{2}\)
(b) \(\cos \frac{\alpha}{2}\)
(c) \(\tan \frac{\alpha}{2}\)

Solution First, observe that if \(\pi<\alpha<\frac{3 \pi}{2}\), then \(\frac{\pi}{2}<\frac{\alpha}{2}<\frac{3 \pi}{4}\). As a result, \(\frac{\alpha}{2}\) lies in quadrant II.
(a) Because \(\frac{\alpha}{2}\) lies in quadrant II, \(\sin \frac{\alpha}{2}>0\), so use the \(+\operatorname{sign}\) in formula (10a) to get
\[
\begin{aligned}
\sin \frac{\alpha}{2} & =\sqrt{\frac{1-\cos \alpha}{2}}=\sqrt{\frac{1-\left(-\frac{3}{5}\right)}{2}} \\
& =\sqrt{\frac{\frac{8}{5}}{2}}=\sqrt{\frac{4}{5}}=\frac{2}{\sqrt{5}}=\frac{2 \sqrt{5}}{5}
\end{aligned}
\]
(b) Because \(\frac{\alpha}{2}\) lies in quadrant II, \(\cos \frac{\alpha}{2}<0\), so use the \(-\operatorname{sign}\) in formula (10b) to get
\[
\begin{aligned}
\cos \frac{\alpha}{2} & =-\sqrt{\frac{1+\cos \alpha}{2}}=-\sqrt{\frac{1+\left(-\frac{3}{5}\right)}{2}} \\
& =-\sqrt{\frac{\frac{2}{5}}{2}}=-\frac{1}{\sqrt{5}}=-\frac{\sqrt{5}}{5}
\end{aligned}
\]
(c) Because \(\frac{\alpha}{2}\) lies in quadrant II, \(\tan \frac{\alpha}{2}<0\), so use the \(-\operatorname{sign}\) in formula (10c) to get
\[
\tan \frac{\alpha}{2}=-\sqrt{\frac{1-\cos \alpha}{1+\cos \alpha}}=-\sqrt{\frac{1-\left(-\frac{3}{5}\right)}{1+\left(-\frac{3}{5}\right)}}=-\sqrt{\frac{\frac{8}{5}}{\frac{2}{5}}}=-2
\]

Another way to solve Example 7(c) is to use the results of parts (a) and (b).
\[
\tan \frac{\alpha}{2}=\frac{\sin \frac{\alpha}{2}}{\cos \frac{\alpha}{2}}=\frac{\frac{2 \sqrt{5}}{5}}{-\frac{\sqrt{5}}{5}}=-2
\]
am Now Work problem 7(C), (D), and (f)
There is a formula for \(\tan \frac{\alpha}{2}\) that does not contain + and - signs, making it more useful than formula 10 (c). To derive it, use the formulas
\[
1-\cos \alpha=2 \sin ^{2} \frac{\alpha}{2} \quad \text { Formula (9) }
\]
and
\[
\sin \alpha=\sin \left[2\left(\frac{\alpha}{2}\right)\right]=2 \sin \frac{\alpha}{2} \cos \frac{\alpha}{2} \quad \text { Double-angle Formula }
\]

Then
\[
\frac{1-\cos \alpha}{\sin \alpha}=\frac{2 \sin ^{2} \frac{\alpha}{2}}{2 \sin \frac{\alpha}{2} \cos \frac{\alpha}{2}}=\frac{\sin \frac{\alpha}{2}}{\cos \frac{\alpha}{2}}=\tan \frac{\alpha}{2}
\]

Because it also can be shown that
\[
\frac{1-\cos \alpha}{\sin \alpha}=\frac{\sin \alpha}{1+\cos \alpha}
\]
this results in the following two Half-angle Formulas:

\section*{Half-angle Formulas for \(\tan \frac{\alpha}{2}\)}
\[
\begin{equation*}
\tan \frac{\alpha}{2}=\frac{1-\cos \alpha}{\sin \alpha}=\frac{\sin \alpha}{1+\cos \alpha} \tag{11}
\end{equation*}
\]

With this formula, the solution to Example 7(c) can be obtained as follows:
\[
\begin{aligned}
& \cos \alpha=-\frac{3}{5} \quad \pi<\alpha<\frac{3 \pi}{2} \\
& \sin \alpha=-\sqrt{1-\cos ^{2} \alpha}=-\sqrt{1-\frac{9}{25}}=-\sqrt{\frac{16}{25}}=-\frac{4}{5}
\end{aligned}
\]

Then, by equation (11),
\[
\tan \frac{\alpha}{2}=\frac{1-\cos \alpha}{\sin \alpha}=\frac{1-\left(-\frac{3}{5}\right)}{-\frac{4}{5}}=\frac{\frac{8}{5}}{-\frac{4}{5}}=-2
\]

\subsection*{6.6 Assess Your Understanding}

\section*{Concepts and Vocabulary}
1. \(\cos (2 \theta)=\cos ^{2} \theta-\) \(\qquad\) \(=\) \(\qquad\) \(-1=1-\) \(\qquad\) .
4. True or False \(\tan (2 \theta)=\frac{2 \tan \theta}{1-\tan ^{2} \theta}\)
2. \(\sin ^{2} \frac{\theta}{2}=\frac{2}{2}\)
3. \(\tan \frac{\theta}{2}=\frac{1-\cos \theta}{-}\)
5. True or False \(\sin (2 \theta)\) has two equivalent forms:
\[
2 \sin \theta \cos \theta \quad \text { and } \quad \sin ^{2} \theta-\cos ^{2} \theta
\]
6. True or False \(\tan (2 \theta)+\tan (2 \theta)=\tan (4 \theta)\)

\section*{Skill Building}

In Problems 7-18, use the information given about the angle \(\theta, 0 \leq \theta<2 \pi\), to find the exact value of:
(a) \(\sin (2 \theta)\)
(b) \(\cos (2 \theta)\)
(c) \(\sin \frac{\theta}{2}\)
(d) \(\cos \frac{\theta}{2}\)
(e) \(\tan (2 \theta)\)
(f) \(\tan \frac{\theta}{2}\)
7. \(\sin \theta=\frac{3}{5}, \quad 0<\theta<\frac{\pi}{2}\)

90. \(\csc \left[2 \sin ^{-1}\left(-\frac{3}{5}\right)\right]\)

In Problems 91-93, find the real zeros of each trigonometric function on the interval \(0 \leq \theta<2 \pi\).
91. \(f(x)=\sin (2 x)-\sin x\)
92. \(f(x)=\cos (2 x)+\cos x\)
93. \(f(x)=\cos (2 x)+\sin ^{2} x\)

\section*{Applications and Extensions}
94. Constructing a Rain Gutter A rain gutter is to be constructed of aluminum sheets 12 inches wide. After marking off a length of 4 inches from each edge, the builder bends this length up at an angle \(\theta\). See the illustration. The area \(A\) of the opening as a function of \(\theta\) is given by
\[
A(\theta)=16 \sin \theta(\cos \theta+1) \quad 0^{\circ}<\theta<90^{\circ}
\]

\(\phi\) (a) In calculus, you will be asked to find the angle \(\theta\) that maximizes \(A\) by solving the equation
\[
\cos (2 \theta)+\cos \theta=0, \quad 0^{\circ}<\theta<90^{\circ}
\]

Solve this equation for \(\theta\).
(b) What is the maximum area \(A\) of the opening?
(c) Graph \(A=A(\theta), 0^{\circ} \leq \theta \leq 90^{\circ}\), and find the angle \(\theta\) that maximizes the area \(A\). Also find the maximum area. Compare the results to the answer found earlier.
95. Laser Projection In a laser projection system, the optical angle or scanning angle \(\theta\) is related to the throw distance \(D\) from the scanner to the screen and the projected image width \(W\) by the equation
\[
D=\frac{\frac{1}{2} W}{\csc \theta-\cot \theta}
\]
(a) Show that the projected image width is given by
\[
W=2 D \tan \frac{\theta}{2}
\]
(b) Find the optical angle if the throw distance is 15 feet and the projected image width is 6.5 feet.
Source: Pangolin Laser Systems, Inc.
96. Product of Inertia The product of inertia for an area about inclined axes is given by the formula
\[
I_{u v}=I_{x} \sin \theta \cos \theta-I_{y} \sin \theta \cos \theta+I_{x y}\left(\cos ^{2} \theta-\sin ^{2} \theta\right)
\]

Show that this is equivalent to
\[
I_{u v}=\frac{I_{x}-I_{y}}{2} \sin (2 \theta)+I_{x y} \cos (2 \theta)
\]

97. Projectile Motion An object is propelled upward at an angle \(\theta, 45^{\circ}<\theta<90^{\circ}\), to the horizontal with an initial velocity of \(v_{0}\) feet per second from the base of a plane that makes an angle of \(45^{\circ}\) with the horizontal. See the illustration. If air resistance is ignored, the distance \(R\) that it travels up the inclined plane is given by the function
\[
R(\theta)=\frac{v_{0}^{2} \sqrt{2}}{16} \cos \theta(\sin \theta-\cos \theta)
\]

(a) Show that
\[
R(\theta)=\frac{v_{0}^{2} \sqrt{2}}{32}[\sin (2 \theta)-\cos (2 \theta)-1]
\]
\(\forall\) (b) In calculus, you will be asked to find the angle \(\theta\) that maximizes \(R\) by solving the equation
\[
\sin (2 \theta)+\cos (2 \theta)=0
\]

Solve this equation for \(\theta\).
(c) What is the maximum distance \(R\) if \(v_{0}=32\) feet per second?
(d) Graph \(R=R(\theta), 45^{\circ} \leq \theta \leq 90^{\circ}\), and find the angle \(\theta\) that maximizes the distance \(R\). Also find the maximum distance. Use \(v_{0}=32\) feet per second. Compare the results with the answers found earlier.
98. Sawtooth Curve An oscilloscope often displays a sawtooth curve. This curve can be approximated by sinusoidal curves of varying periods and amplitudes. A first approximation to the sawtooth curve is given by
\[
y=\frac{1}{2} \sin (2 \pi x)+\frac{1}{4} \sin (4 \pi x)
\]

Show that \(y=\sin (2 \pi x) \cos ^{2}(\pi x)\).

99. Area of an Isosceles Triangle Show that the area \(A\) of an isosceles triangle whose equal sides are of length \(s\), and where \(\theta\) is the angle between them, is
\[
A=\frac{1}{2} s^{2} \sin \theta
\]
[Hint: See the illustration. The height \(h\) bisects the angle \(\theta\) and is the perpendicular bisector of the base.]

100. Geometry A rectangle is inscribed in a semicircle of radius \(1 . \psi\) 106. If \(z=\tan \frac{\alpha}{2}\), show that \(\cos \alpha=\frac{1-z^{2}}{1+z^{2}}\).
See the illustration.

(a) Express the area \(A\) of the rectangle as a function of the angle \(\theta\) shown in the illustration.
(b) Show that \(A(\theta)=\sin (2 \theta)\).
(c) Find the angle \(\theta\) that results in the largest area \(A\).
(d) Find the dimensions of this largest rectangle.
101. If \(x=2 \tan \theta\), express \(\sin (2 \theta)\) as a function of \(x\).
102. If \(x=2 \tan \theta\), express \(\cos (2 \theta)\) as a function of \(x\).
103. Find the value of the number \(C\) :
\[
\frac{1}{2} \sin ^{2} x+C=-\frac{1}{4} \cos (2 x)
\]
104. Find the value of the number \(C\) :
\[
\frac{1}{2} \cos ^{2} x+C=\frac{1}{4} \cos (2 x)
\]
105. If \(z=\tan \frac{\alpha}{2}\), show that \(\sin \alpha=\frac{2 z}{1+z^{2}}\).
107. Graph \(f(x)=\sin ^{2} x=\frac{1-\cos (2 x)}{2}\) for \(0 \leq x \leq 2 \pi\) by hand using transformations.
108. Repeat Problem 107 for \(g(x)=\cos ^{2} x\).
109. Use the fact that
\[
\cos \frac{\pi}{12}=\frac{1}{4}(\sqrt{6}+\sqrt{2})
\]
to find \(\sin \frac{\pi}{24}\) and \(\cos \frac{\pi}{24}\).
110. Show that
\[
\cos \frac{\pi}{8}=\frac{\sqrt{2+\sqrt{2}}}{2}
\]
and use it to find \(\sin \frac{\pi}{16}\) and \(\cos \frac{\pi}{16}\).
111. Show that
\[
\sin ^{3} \theta+\sin ^{3}\left(\theta+120^{\circ}\right)+\sin ^{3}\left(\theta+240^{\circ}\right)=-\frac{3}{4} \sin (3 \theta)
\]
112. If \(\tan \theta=a \tan \frac{\theta}{3}\), express \(\tan \frac{\theta}{3}\) in terms of \(a\).
113. For \(\cos (2 x)+(2 m-1) \sin x+m-1=0\), find \(m\) such that there is exactly one real solution for \(x,-\frac{\pi}{2} \leq x \leq \frac{\pi}{2} . \dagger\)

\section*{Discussion and Writing}
114. Go to the library and research Chebyshëv polynomials. Write a report on your findings.

\section*{-Retain Your Knowledge}

Problems 115-118 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
115. Find the equation of the line that contains the point \((2,-3)\) and is perpendicular to the graph of \(y=-2 x+9\).
116. Graph \(f(x)=-x^{2}+6 x+7\). Label the vertex and any intercepts.
117. Find the exact value of \(\sin \left(\frac{2 \pi}{3}\right)-\cos \left(\frac{4 \pi}{3}\right)\).
118. Graph \(y=-2 \cos \left(\frac{\pi}{2} x\right)\). Show at least two periods.

\subsection*{6.7 Product-to-Sum and Sum-to-Product Formulas}

\section*{OBJECTIVES 1 Express Products as Sums (p.521) \\ 2 Express Sums as Products (p. 523)}

\section*{1 Express Products as Sums}

Sum and difference formulas can be used to derive formulas for writing the products of sines and/or cosines as sums or differences. These identities are usually called the Product-to-Sum Formulas.
\[
\begin{aligned}
\sin \alpha \sin \beta & =\frac{1}{2}[\cos (\alpha-\beta)-\cos (\alpha+\beta)] \\
\cos \alpha \cos \beta & =\frac{1}{2}[\cos (\alpha-\beta)+\cos (\alpha+\beta)] \\
\sin \alpha \cos \beta & =\frac{1}{2}[\sin (\alpha+\beta)+\sin (\alpha-\beta)]
\end{aligned}
\]

These formulas do not have to be memorized. Instead, remember how they are derived. Then, when you want to use them, either look them up or derive them, as needed.

To derive formulas (1) and (2), write down the sum and difference formulas for the cosine:
\[
\begin{align*}
& \cos (\alpha-\beta)=\cos \alpha \cos \beta+\sin \alpha \sin \beta  \tag{4}\\
& \cos (\alpha+\beta)=\cos \alpha \cos \beta-\sin \alpha \sin \beta \tag{5}
\end{align*}
\]

Subtract equation (5) from equation (4) to get
\[
\cos (\alpha-\beta)-\cos (\alpha+\beta)=2 \sin \alpha \sin \beta
\]
from which
\[
\sin \alpha \sin \beta=\frac{1}{2}[\cos (\alpha-\beta)-\cos (\alpha+\beta)]
\]

Now add equations (4) and (5) to get
\[
\cos (\alpha-\beta)+\cos (\alpha+\beta)=2 \cos \alpha \cos \beta
\]
from which
\[
\cos \alpha \cos \beta=\frac{1}{2}[\cos (\alpha-\beta)+\cos (\alpha+\beta)]
\]

To derive Product-to-Sum Formula (3), use the sum and difference formulas for sine in a similar way. (You are asked to do this in Problem 53.)

\section*{EXAMPLE I \\ Expressing Products as Sums}

Express each of the following products as a sum containing only sines or only cosines.
(a) \(\sin (6 \theta) \sin (4 \theta)\)
(b) \(\cos (3 \theta) \cos \theta\)
(c) \(\sin (3 \theta) \cos (5 \theta)\)

Solution (a) Use formula (1) to get
\[
\begin{aligned}
\sin (6 \theta) \sin (4 \theta) & =\frac{1}{2}[\cos (6 \theta-4 \theta)-\cos (6 \theta+4 \theta)] \\
& =\frac{1}{2}[\cos (2 \theta)-\cos (10 \theta)]
\end{aligned}
\]
(b) Use formula (2) to get
\[
\begin{aligned}
\cos (3 \theta) \cos \theta & =\frac{1}{2}[\cos (3 \theta-\theta)+\cos (3 \theta+\theta)] \\
& =\frac{1}{2}[\cos (2 \theta)+\cos (4 \theta)]
\end{aligned}
\]
(c) Use formula (3) to get
\[
\begin{aligned}
\sin (3 \theta) \cos (5 \theta) & =\frac{1}{2}[\sin (3 \theta+5 \theta)+\sin (3 \theta-5 \theta)] \\
& =\frac{1}{2}[\sin (8 \theta)+\sin (-2 \theta)]=\frac{1}{2}[\sin (8 \theta)-\sin (2 \theta)]
\end{aligned}
\]
am-Now Work problem 7

\section*{2 Express Sums as Products}

The Sum-to-Product Formulas are given next.

\section*{THEOREM}

Sum-to-Product Formulas
\[
\begin{align*}
\sin \alpha+\sin \beta & =2 \sin \frac{\alpha+\beta}{2} \cos \frac{\alpha-\beta}{2}  \tag{6}\\
\sin \alpha-\sin \beta & =2 \sin \frac{\alpha-\beta}{2} \cos \frac{\alpha+\beta}{2}  \tag{7}\\
\cos \alpha+\cos \beta & =2 \cos \frac{\alpha+\beta}{2} \cos \frac{\alpha-\beta}{2}  \tag{8}\\
\cos \alpha-\cos \beta & =-2 \sin \frac{\alpha+\beta}{2} \sin \frac{\alpha-\beta}{2} \tag{9}
\end{align*}
\]

Formula (6) is derived here. The derivations of formulas (7) through (9) are left as exercises (see Problems 54 through 56).

Proof
\[
\begin{aligned}
2 \sin \frac{\alpha+\beta}{2} \cos \frac{\alpha-\beta}{2} & =2 \cdot \frac{1}{2}\left[\sin \left(\frac{\alpha+\beta}{2}+\frac{\alpha-\beta}{2}\right)+\sin \left(\frac{\alpha+\beta}{2}-\frac{\alpha-\beta}{2}\right)\right] \\
& \text { Product-to-Sum Formula (3) } \\
& =\sin \frac{2 \alpha}{2}+\sin \frac{2 \beta}{2}=\sin \alpha+\sin \beta
\end{aligned}
\]

\section*{EXAMPLE 2 Expressing Sums (or Differences) as Products}

Express each sum or difference as a product of sines and/or cosines.
(a) \(\sin (5 \theta)-\sin (3 \theta)\)
(b) \(\cos (3 \theta)+\cos (2 \theta)\)

Solution (a) Use formula (7) to get
\[
\begin{aligned}
\sin (5 \theta)-\sin (3 \theta) & =2 \sin \frac{5 \theta-3 \theta}{2} \cos \frac{5 \theta+3 \theta}{2} \\
& =2 \sin \theta \cos (4 \theta)
\end{aligned}
\]
(b) \(\cos (3 \theta)+\cos (2 \theta)=2 \cos \frac{3 \theta+2 \theta}{2} \cos \frac{3 \theta-2 \theta}{2} \quad\) Formula (8)
\[
=2 \cos \frac{5 \theta}{2} \cos \frac{\theta}{2}
\]

\subsection*{6.7 Assess Your Understanding}

\section*{Skill Building}

In Problems 1-6, find the exact value of each expression.
1. \(\sin 195^{\circ} \cdot \cos 75^{\circ}\)
2. \(\cos 285^{\circ} \cdot \cos 195^{\circ}\)
3. \(\sin 285^{\circ} \cdot \sin 75^{\circ}\)
4. \(\sin 75^{\circ}+\sin 15^{\circ}\)
5. \(\cos 255^{\circ}-\cos 195^{\circ}\)
6. \(\sin 255^{\circ}-\sin 15^{\circ}\)

In Problems 7-16, express each product as a sum containing only sines or only cosines.
7. \(\sin (4 \theta) \sin (2 \theta)\)
8. \(\cos (4 \theta) \cos (2 \theta)\)
9. \(\sin (4 \theta) \cos (2 \theta)\)
10. \(\sin (3 \theta) \sin (5 \theta)\)
11. \(\cos (3 \theta) \cos (5 \theta)\)
12. \(\sin (4 \theta) \cos (6 \theta)\)
13. \(\sin \theta \sin (2 \theta)\)
14. \(\cos (3 \theta) \cos (4 \theta)\)
15. \(\sin \frac{3 \theta}{2} \cos \frac{\theta}{2}\)
16. \(\sin \frac{\theta}{2} \cos \frac{5 \theta}{2}\)

In Problems 17-24, express each sum or difference as a product of sines and/or cosines.
17. \(\sin (4 \theta)-\sin (2 \theta)\)
18. \(\sin (4 \theta)+\sin (2 \theta)\)
19. \(\cos (2 \theta)+\cos (4 \theta)\)
20. \(\cos (5 \theta)-\cos (3 \theta)\)
21. \(\sin \theta+\sin (3 \theta)\)
22. \(\cos \theta+\cos (3 \theta)\)
23. \(\cos \frac{\theta}{2}-\cos \frac{3 \theta}{2}\)
24. \(\sin \frac{\theta}{2}-\sin \frac{3 \theta}{2}\)

In Problems 25-42, establish each identity.
25. \(\frac{\sin \theta+\sin (3 \theta)}{2 \sin (2 \theta)}=\cos \theta\)
26. \(\frac{\cos \theta+\cos (3 \theta)}{2 \cos (2 \theta)}=\cos \theta\)
27. \(\frac{\sin (4 \theta)+\sin (2 \theta)}{\cos (4 \theta)+\cos (2 \theta)}=\tan (3 \theta)\)
28. \(\frac{\cos \theta-\cos (3 \theta)}{\sin (3 \theta)-\sin \theta}=\tan (2 \theta)\)
29. \(\frac{\cos \theta-\cos (3 \theta)}{\sin \theta+\sin (3 \theta)}=\tan \theta\)
30. \(\frac{\cos \theta-\cos (5 \theta)}{\sin \theta+\sin (5 \theta)}=\tan (2 \theta)\)
31. \(\sin \theta[\sin \theta+\sin (3 \theta)]=\cos \theta[\cos \theta-\cos (3 \theta)]\)
33. \(\frac{\sin (4 \theta)+\sin (8 \theta)}{\cos (4 \theta)+\cos (8 \theta)}=\tan (6 \theta)\)
35. \(\frac{\sin (4 \theta)+\sin (8 \theta)}{\sin (4 \theta)-\sin (8 \theta)}=-\frac{\tan (6 \theta)}{\tan (2 \theta)}\)
37. \(\frac{\sin \alpha+\sin \beta}{\sin \alpha-\sin \beta}=\tan \frac{\alpha+\beta}{2} \cot \frac{\alpha-\beta}{2}\)
39. \(\frac{\sin \alpha+\sin \beta}{\cos \alpha+\cos \beta}=\tan \frac{\alpha+\beta}{2}\)
41. \(1+\cos (2 \theta)+\cos (4 \theta)+\cos (6 \theta)=4 \cos \theta \cos (2 \theta) \cos (3 \theta)\)
42. \(1-\cos (2 \theta)+\cos (4 \theta)-\cos (6 \theta)=4 \sin \theta \cos (2 \theta) \sin (3 \theta)\)

In Problems 43-46, solve each equation on the interval \(0 \leq \theta<2 \pi\).
43. \(\sin (2 \theta)+\sin (4 \theta)=0\)
44. \(\cos (2 \theta)+\cos (4 \theta)=0\)
45. \(\cos (4 \theta)-\cos (6 \theta)=0\)
46. \(\sin (4 \theta)-\sin (6 \theta)=0\)

\section*{Applications and Extensions}
47. Touch-Tone Phones On a Touch-Tone phone, each button produces a unique sound. The sound produced is the sum of two tones, given by
\[
y=\sin (2 \pi l t) \quad \text { and } \quad y=\sin (2 \pi h t)
\]
where \(l\) and \(h\) are the low and high frequencies (cycles per second) shown on the illustration. For example, if you touch 1 , the low frequency is \(l=697\) cycles per second and the high frequency is \(h=1209\) cycles per second. The sound emitted by touching 1 is
\[
y=\sin [2 \pi(697) t]+\sin [2 \pi(1209) t]
\]
(a) Write this sound as a product of sines and/or cosines.
(b) Determine the maximum value of \(y\).
(c) Graph the sound emitted by touching 1.

\section*{48. Touch-Tone Phones}
(a) Write the sound emitted by touching the \# key as a product of sines and/or cosines.
(b) Determine the maximum value of \(y\).
(c) Graph the sound emitted by touching the \# key.
49. Moment of Inertia The moment of inertia \(I\) of an object is a measure of how easy it is to rotate the object about some fixed point. In engineering mechanics, it is sometimes necessary to compute moments of inertia with respect to a set of rotated axes. These moments are given by the equations
\[
\begin{aligned}
& I_{u}=I_{x} \cos ^{2} \theta+I_{y} \sin ^{2} \theta-2 I_{x y} \sin \theta \cos \theta \\
& I_{v}=I_{x} \sin ^{2} \theta+I_{y} \cos ^{2} \theta+2 I_{x y} \sin \theta \cos \theta
\end{aligned}
\]

Use Product-to-Sum Formulas to show that
\[
I_{u}=\frac{I_{x}+I_{y}}{2}+\frac{I_{x}-I_{y}}{2} \cos (2 \theta)-I_{x y} \sin (2 \theta)
\]
and
\[
I_{v}=\frac{I_{x}+I_{y}}{2}-\frac{I_{x}-I_{y}}{2} \cos (2 \theta)+I_{x y} \sin (2 \theta)
\]

50. Projectile Motion The range \(R\) of a projectile propelled downward from the top of an inclined plane at an angle \(\theta\) to the inclined plane is given by
\[
R(\theta)=\frac{2 v_{0}^{2} \sin \theta \cos (\theta-\phi)}{g \cos ^{2} \phi}
\]
where \(v_{0}\) is the initial velocity of the projectile, \(\phi\) is the angle the plane makes with respect to the horizontal, and \(g\) is acceleration due to gravity.
(a) Show that for fixed \(v_{0}\) and \(\phi\), the maximum range down the incline is given by \(R_{\max }=\frac{v_{0}^{2}}{g(1-\sin \phi)}\).
(b) Determine the maximum range if the projectile has an initial velocity of 50 meters/second, the angle of the plane is \(\phi=35^{\circ}\), and \(g=9.8\) meters \(/\) second \({ }^{2}\).
51. If \(\alpha+\beta+\gamma=\pi\), show that
\[
\sin (2 \alpha)+\sin (2 \beta)+\sin (2 \gamma)=4 \sin \alpha \sin \beta \sin \gamma
\]
52. If \(\alpha+\beta+\gamma=\pi\), show that
\[
\tan \alpha+\tan \beta+\tan \gamma=\tan \alpha \tan \beta \tan \gamma
\]

\section*{Review Exercises}

In Problems 1-8, find the exact value of each expression. Do not use a calculator.
1. \(\sin ^{-1} 1\)
2. \(\cos ^{-1} 0\)
3. \(\tan ^{-1} 1\)
4. \(\sin ^{-1}\left(-\frac{1}{2}\right)\)
5. \(\cos ^{-1}\left(-\frac{\sqrt{3}}{2}\right)\)
6. \(\tan ^{-1}(-\sqrt{3})\)
7. \(\sec ^{-1} \sqrt{2}\)
8. \(\cot ^{-1}(-1)\)

In Problems 9-23, find the exact value, if any, of each composite function. If there is no value, say it is "not defined." Do not use a calculator.
9. \(\sin ^{-1}\left(\sin \frac{3 \pi}{8}\right)\)
10. \(\cos ^{-1}\left(\cos \frac{3 \pi}{4}\right)\)
11. \(\tan ^{-1}\left(\tan \frac{2 \pi}{3}\right)\)
12. \(\cos ^{-1}\left(\cos \frac{15 \pi}{7}\right)\)
13. \(\sin ^{-1}\left[\sin \left(-\frac{8 \pi}{9}\right)\right]\)
14. \(\sin \left(\sin ^{-1} 0.9\right)\)
15. \(\cos \left(\cos ^{-1} 0.6\right)\)
16. \(\tan \left[\tan ^{-1} 5\right]\)
17. \(\cos \left[\cos ^{-1}(-1.6)\right]\)
18. \(\sin ^{-1}\left(\cos \frac{2 \pi}{3}\right)\)
19. \(\cos ^{-1}\left(\tan \frac{3 \pi}{4}\right)\)
20. \(\tan \left[\sin ^{-1}\left(-\frac{\sqrt{3}}{2}\right)\right]\)
21. \(\sec \left(\tan ^{-1} \frac{\sqrt{3}}{3}\right)\)
22. \(\sin \left(\cot ^{-1} \frac{3}{4}\right)\)
23. \(\tan \left[\sin ^{-1}\left(-\frac{4}{5}\right)\right]\)

In Problems 24 and 25, find the inverse function \(f^{-1}\) of each function \(f\). Find the range of \(f\) and the domain and range of \(f^{-1}\).
24. \(f(x)=2 \sin (3 x)\)
25. \(f(x)=-\cos x+3\)
\(-\frac{\pi}{6} \leq x \leq \frac{\pi}{6}\)
\(0 \leq x \leq \pi\)

In Problems 26 and 27, write each trigonometric expression as an algebraic expression in \(u\).
26. \(\cos \left(\sin ^{-1} u\right)\)
27. \(\tan \left(\csc ^{-1} u\right)\)

In Problems 28-44, establish each identity.
28. \(\tan \theta \cot \theta-\sin ^{2} \theta=\cos ^{2} \theta\)
31. \(\frac{1-\cos \theta}{\sin \theta}+\frac{\sin \theta}{1-\cos \theta}=2 \csc \theta\)
29. \(\sin ^{2} \theta\left(1+\cot ^{2} \theta\right)=1\)
32. \(\frac{\cos \theta}{\cos \theta-\sin \theta}=\frac{1}{1-\tan \theta}\)
35. \(\frac{1-\sin \theta}{\sec \theta}=\frac{\cos ^{3} \theta}{1+\sin \theta}\)
38. \(\frac{\cos (\alpha-\beta)}{\cos \alpha \cos \beta}=1+\tan \alpha \tan \beta\)
41. \(1-8 \sin ^{2} \theta \cos ^{2} \theta=\cos (4 \theta)\)
44. \(\frac{\cos (2 \theta)-\cos (4 \theta)}{\cos (2 \theta)+\cos (4 \theta)}-\tan \theta \tan (3 \theta)=0\)
30. \(5 \cos ^{2} \theta+3 \sin ^{2} \theta=3+2 \cos ^{2} \theta\)
33. \(\frac{\csc \theta}{1+\csc \theta}=\frac{1-\sin \theta}{\cos ^{2} \theta}\)
36. \(\frac{1-2 \sin ^{2} \theta}{\sin \theta \cos \theta}=\cot \theta-\tan \theta\)
39. \((1+\cos \theta) \tan \frac{\theta}{2}=\sin \theta\)
42. \(\frac{\sin (3 \theta) \cos \theta-\sin \theta \cos (3 \theta)}{\sin (2 \theta)}=1\)
43. \(\frac{\sin (2 \theta)+\sin (4 \theta)}{\cos (2 \theta)+\cos (4 \theta)}=\tan (3 \theta)\)

In Problems 45-52, find the exact value of each expression.
45. \(\sin 165^{\circ}\)
46. \(\tan 105^{\circ}\)
47. \(\cos \frac{5 \pi}{12}\)
48. \(\sin \left(-\frac{\pi}{12}\right)\)
49. \(\cos 80^{\circ} \cos 20^{\circ}+\sin 80^{\circ} \sin 20^{\circ}\)
50. \(\sin 70^{\circ} \cos 40^{\circ}-\cos 70^{\circ} \sin 40^{\circ}\)
51. \(\tan \frac{\pi}{8}\)
52. \(\sin \frac{5 \pi}{8}\)

In Problems 53-57, use the information given about the angles \(\alpha\) and \(\beta\) to find the exact value of:
(a) \(\sin (\alpha+\beta)\)
(b) \(\cos (\alpha+\beta)\)
(c) \(\sin (\alpha-\beta)\)
(d) \(\tan (\alpha+\beta)\)
(e) \(\sin (2 \alpha)\)
(f) \(\cos (2 \beta)\)
(g) \(\sin \frac{\beta}{2}\)
(h) \(\cos \frac{\alpha}{2}\)
53. \(\sin \alpha=\frac{4}{5}, 0<\alpha<\frac{\pi}{2} ; \sin \beta=\frac{5}{13}, \frac{\pi}{2}<\beta<\pi\)
54. \(\sin \alpha=-\frac{3}{5}, \pi<\alpha<\frac{3 \pi}{2} ; \cos \beta=\frac{12}{13}, \frac{3 \pi}{2}<\beta<2 \pi\)
55. \(\tan \alpha=\frac{3}{4}, \pi<\alpha<\frac{3 \pi}{2} ; \tan \beta=\frac{12}{5}, 0<\beta<\frac{\pi}{2}\)
56. \(\sec \alpha=2,-\frac{\pi}{2}<\alpha<0 ; \sec \beta=3, \frac{3 \pi}{2}<\beta<2 \pi\)
57. \(\sin \alpha=-\frac{2}{3}, \pi<\alpha<\frac{3 \pi}{2} ; \cos \beta=-\frac{2}{3}, \pi<\beta<\frac{3 \pi}{2}\)

In Problems 58-63, find the exact value of each expression.
58. \(\cos \left(\sin ^{-1} \frac{3}{5}-\cos ^{-1} \frac{1}{2}\right)\)
59. \(\sin \left(\cos ^{-1} \frac{5}{13}-\cos ^{-1} \frac{4}{5}\right)\)
60. \(\tan \left[\sin ^{-1}\left(-\frac{1}{2}\right)-\tan ^{-1} \frac{3}{4}\right]\)
61. \(\cos \left[\tan ^{-1}(-1)+\cos ^{-1}\left(-\frac{4}{5}\right)\right]\)
62. \(\sin \left[2 \cos ^{-1}\left(-\frac{3}{5}\right)\right]\)
63. \(\cos \left(2 \tan ^{-1} \frac{4}{3}\right)\)

In Problems 64-75, solve each equation on the interval \(0 \leq \theta<2 \pi\).
64. \(\cos \theta=\frac{1}{2}\)
65. \(\tan \theta+\sqrt{3}=0\)
66. \(\sin (2 \theta)+1=0\)
67. \(\tan (2 \theta)=0\)
68. \(\sec ^{2} \theta=4\)
69. \(0.2 \sin \theta=0.05\)
70. \(\sin \theta+\sin (2 \theta)=0\)
71. \(\sin (2 \theta)-\cos \theta-2 \sin \theta+1=0\)
72. \(2 \sin ^{2} \theta-3 \sin \theta+1=0\)
73. \(4 \sin ^{2} \theta=1+4 \cos \theta\)
74. \(\sin (2 \theta)=\sqrt{2} \cos \theta\)
75. \(\sin \theta-\cos \theta=1\)

In Problems 76-80, use a calculator to find an approximate value for each expression, rounded to two decimal places.
76. \(\sin ^{-1} 0.7\)
77. \(\tan ^{-1}(-2)\)
78. \(\cos ^{-1}(-0.2)\)
79. \(\sec ^{-1} 3\)
80. \(\cot ^{-1}(-4)\)

In Problems 81-83, use a graphing utility to solve each equation on the interval \(0 \leq x \leq 2 \pi\). Approximate any solutions rounded to two decimal places.
81. \(2 x=5 \cos x\)
82. \(2 \sin x+3 \cos x=4 x\)
83. \(\sin x=\ln x\)

In Problems 84 and 85, find the exact solution of each equation.
84. \(-3 \sin ^{-1} x=\pi\)
85. \(2 \cos ^{-1} x+\pi=4 \cos ^{-1} x\)
86. Use a half-angle formula to find the exact value of \(\sin 15^{\circ}\). Then use a difference formula to find the exact value of \(\sin 15^{\circ}\). Show that the answers you found are the same.
87. If you are given the value of \(\cos \theta\) and want the exact value of \(\cos (2 \theta)\), what form of the double-angle formula for \(\cos (2 \theta)\) is most efficient to use?

\section*{Chapter Test}

Chapter Test Prep Videos include step-by-step solutions to all chapter test exercises and can be found in MyMathLabll or on this text's You Tube" Channel. (search "SullivanPrecalcUC3e")

In Problems 1-6, find the exact value of each expression. Express angles in radians.
1. \(\sec ^{-1}\left(\frac{2}{\sqrt{3}}\right)\)
2. \(\sin ^{-1}\left(-\frac{\sqrt{2}}{2}\right)\)
3. \(\sin ^{-1}\left(\sin \frac{11 \pi}{5}\right)\)
4. \(\tan \left(\tan ^{-1} \frac{7}{3}\right)\)
5. \(\cot \left(\csc ^{-1} \sqrt{10}\right)\)
6. \(\sec \left(\cos ^{-1}\left(-\frac{3}{4}\right)\right)\)

In Problems 7-10, use a calculator to evaluate each expression. Express angles in radians rounded to two decimal places.
7. \(\sin ^{-1} 0.382\)
8. \(\sec ^{-1} 1.4\)
9. \(\tan ^{-1} 3\)
10. \(\cot ^{-1} 5\)

In Problems 11-16 establish each identity.
11. \(\frac{\csc \theta+\cot \theta}{\sec \theta+\tan \theta}=\frac{\sec \theta-\tan \theta}{\csc \theta-\cot \theta}\)
12. \(\sin \theta \tan \theta+\cos \theta=\sec \theta\)
13. \(\tan \theta+\cot \theta=2 \csc (2 \theta)\)
14. \(\frac{\sin (\alpha+\beta)}{\tan \alpha+\tan \beta}=\cos \alpha \cos \beta\)
15. \(\sin (3 \theta)=3 \sin \theta-4 \sin ^{3} \theta\)
16. \(\frac{\tan \theta-\cot \theta}{\tan \theta+\cot \theta}=1-2 \cos ^{2} \theta\)

In Problems 17-24 use sum, difference, product, or half-angle formulas to find the exact value of each expression.
17. \(\cos 15^{\circ}\)
18. \(\tan 75^{\circ}\)
19. \(\sin \left(\frac{1}{2} \cos ^{-1} \frac{3}{5}\right)\)
20. \(\tan \left(2 \sin ^{-1} \frac{6}{11}\right)\)
21. \(\cos \left(\sin ^{-1} \frac{2}{3}+\tan ^{-1} \frac{3}{2}\right)\)
22. \(\sin 75^{\circ} \cos 15^{\circ}\)
23. \(\sin 75^{\circ}+\sin 15^{\circ}\)
24. \(\cos 65^{\circ} \cos 20^{\circ}+\sin 65^{\circ} \sin 20^{\circ}\)

In Problems 25-29, solve each equation on \(0 \leq \theta<2 \pi\).
25. \(4 \sin ^{2} \theta-3=0\)
26. \(-3 \cos \left(\frac{\pi}{2}-\theta\right)=\tan \theta\)
27. \(\cos ^{2} \theta+2 \sin \theta \cos \theta-\sin ^{2} \theta=0\)
28. \(\sin (\theta+1)=\cos \theta\)
29. \(4 \sin ^{2} \theta+7 \sin \theta=2\)

\section*{Cumulative Review}
1. Find the real solutions, if any, of the equation \(3 x^{2}+x-1=0\).
2. Find an equation for the line containing the points \((-2,5)\) and \((4,-1)\). What is the distance between these points? What is their midpoint?
3. Test the equation \(3 x+y^{2}=9\) for symmetry with respect to the \(x\)-axis, \(y\)-axis, and origin. List the intercepts.
4. Use transformations to graph the equation \(y=|x-3|+2\).
5. Use transformations to graph the equation \(y=3 e^{x}-2\).
6. Use transformations to graph the equation
\[
y=\cos \left(x-\frac{\pi}{2}\right)-1
\]
7. Sketch a graph of each of the following functions. Label at least three points on each graph. Name the inverse function of each and show its graph.
(a) \(y=x^{3}\)
(b) \(y=e^{x}\)
(c) \(y=\sin x,-\frac{\pi}{2} \leq x \leq \frac{\pi}{2}\)
(d) \(y=\cos x, \quad 0 \leq x \leq \pi\)
8. If \(\sin \theta=-\frac{1}{3}\) and \(\pi<\theta<\frac{3 \pi}{2}\), find the exact value of:
(a) \(\cos \theta\)
(b) \(\tan \theta\)
(c) \(\sin (2 \theta)\)
(d) \(\cos (2 \theta)\)
(e) \(\sin \left(\frac{1}{2} \theta\right)\)
(f) \(\cos \left(\frac{1}{2} \theta\right)\)
9. Find the exact value of \(\cos \left(\tan ^{-1} 2\right)\).
10. If \(\sin \alpha=\frac{1}{3}, \frac{\pi}{2}<\alpha<\pi\), and \(\cos \beta=-\frac{1}{3}, \pi<\beta<\frac{3 \pi}{2}\), find the exact value of:
(a) \(\cos \alpha\)
(b) \(\sin \beta\)
(c) \(\cos (2 \alpha)\)
(d) \(\cos (\alpha+\beta)\)
(e) \(\sin \frac{\beta}{2}\)
11. Consider the function
\[
f(x)=2 x^{5}-x^{4}-4 x^{3}+2 x^{2}+2 x-1
\]
(a) Find the real zeros and their multiplicity.
(b) Find the intercepts.
(c) Find the power function that the graph of \(f\) resembles for large \(|x|\).
(d) Graph \(f\) using a graphing utility.
(e) Approximate the turning points, if any exist.
(f) Use the information obtained in parts (a)-(e) to sketch a graph of \(f\) by hand.
(g) Identify the intervals on which \(f\) is increasing, decreasing, or constant.
12. If \(f(x)=2 x^{2}+3 x+1\) and \(g(x)=x^{2}+3 x+2\), solve:
(a) \(f(x)=0\)
(b) \(f(x)=g(x)\)
(c) \(f(x)>0\)
(d) \(f(x) \geq g(x)\)

\section*{Chapter Projects}

\section*{(ค) Internet-based Project}
I. Mapping Your Mind The goal of this project is to organize the material learned in Chapters 5 and 6 in our minds. To do this, we will use mind-mapping software called Mindomo. Mindomo is free software that allows you to organize your thoughts digitally and share these thoughts with anyone on the Web. By organizing your thoughts, you are able to see the big picture and then communicate this big picture to others. You are also able to see how various concepts are related to each other.
1. Go to http://www.mindomo.com and register. Learn how to use Mindomo. A great video on using Mindomo can be found at http://www.screencast.com/users/Rose_ Jenkins/folders/Default/media/edd9bd1b-62a7-45b3-9dd2-fa467d2e8eb3.
2. Use an Internet search engine to research Mind Mapping. Write a few paragraphs that explain the history and benefit of mind mapping.
3. Create a MindMap that explains the following:
(a) The six trigonometric functions and their properties (including the inverses of these functions)
(b) The fundamental trigonometric identities

When creating your map, be creative. Perhaps you can share ideas about when a particular identity might be used or when a particular identity cannot be used.
4. Share the MindMap so that students in your class can view it.

The following projects are available on the Instructor's Resource Center (IRC):
II. Waves Wave motion is described by a sinusoidal equation. The Principle of Superposition of two waves is discussed.
III. Project at Motorola Sending Pictures Wirelessly The electronic transmission of pictures is made practical by image compression, mathematical methods that greatly reduce the number of bits of data used to compose the picture.
IV. Calculus of Differences Finding consecutive difference quotients is called finding finite differences and is used to analyze the graph of an unknown function.

\title{
Applications of Trigonometric Functions
}

\section*{The Lewis and Clark Expedition}

In today's world of GPS and smart phone apps that can precisely track one's whereabouts, it is difficult to fathom the magnitude of the challenge that confronted Meriwether Lewis and William Clark in 1804.

But Lewis and Clark managed. Commissioned by President Thomas Jefferson to explore the newly purchased Louisiana Territory, the co-captains led their expedition the Corps of Discovery - on a journey that took nearly two and a half years and carried them more than 7000 miles. Starting at St. Louis, Missouri, they traveled up the Missouri River, across the Great Plains, over the Rocky Mountains, down the Columbia River to the Pacific Ocean, and then back. Along the way, using limited tools such as a compass and octant, they created more than 130 maps of the area with remarkable detail and accuracy.
(ค) - See Chapter Project II-

\section*{<A Look Back}

In Chapter 5, we defined the six trigonometric functions for any angle using the unit circle. In particular, we learned to evaluate the trigonometric functions. We also learned how to graph sinusoidal functions. In Chapter 6, we defined the inverse trigonometric functions and solved equations involving the trigonometric functions.

\section*{A Look Ahead>}

In this chapter, we define the trigonometric functions using right triangles and then use the trigonometric functions to solve applied problems. The first four sections deal with applications involving right triangles and oblique triangles, triangles that do not have a right angle. To solve problems involving oblique triangles, we will develop the Law of Sines and the Law of Cosines. We will also develop formulas for finding the area of a triangle.

The final section deals with applications of sinusoidal functions involving simple harmonic motion and damped motion.

\section*{Outline}
7.1 Right Triangle Trigonometry; Applications
7.2 The Law of Sines
7.3 The Law of Cosines
7.4 Area of a Triangle
7.5 Simple Harmonic Motion; Damped Motion; Combining Waves

\subsection*{7.1 Right Triangle Trigonometry; Applications}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Pythagorean Theorem (Appendix A, Section A.2, pp. A13-A15)
- Trigonometric Equations (Section 6.3, pp. 482-485)

Now Work the 'Are You Prepared?' problems on page 539.
\[
\begin{array}{ll}
\text { OBJECTIVES } 1 \begin{array}{l}
\text { Find the Value of Trigonometric Functions of Acute Angles Using Right } \\
\text { Triangles (p. 532) }
\end{array} \\
2 \text { Use the Complementary Angle Theorem (p. 534) } \\
3 & \text { Solve Right Triangles (p. 534) } \\
4 \text { Solve Applied Problems (p. 535) }
\end{array}
\]

\section*{1 Find the Value of Trigonometric Functions of Acute Angles Using Right Triangles}

A triangle in which one angle is a right angle \(\left(90^{\circ}\right)\) is called a right triangle. Recall that the side opposite the right angle is called the hypotenuse, and the remaining two sides are called the legs of the triangle. In Figure 1(a), the hypotenuse is labeled as \(c\) to indicate that its length is \(c\) units, and in a like manner, the legs are labeled as \(a\) and \(b\). Because the triangle is a right triangle, the Pythagorean Theorem tells us that
\[
a^{2}+b^{2}=c^{2}
\]

Figure 1 (a) also shows the angle \(\theta\). The angle \(\theta\) is an acute angle; that is, \(0^{\circ}<\theta<90^{\circ}\) for \(\theta\) measured in degrees and \(0<\theta<\frac{\pi}{2}\) for \(\theta\) measured in radians. Place \(\theta\) in standard position, as shown in Figure 1(b). Then the coordinates of the point \(P\) are \((a, b)\). Also, \(P\) is a point on the terminal side of \(\theta\) that is on the circle \(x^{2}+y^{2}=c^{2}\). (Do you see why?)

Figure 1

Now apply the theorem on page 401 for using circles to evaluate trigonometric functions with a circle of radius \(c, x^{2}+y^{2}=c^{2}\). By referring to the lengths of the sides of the triangle as hypotenuse \((c)\), opposite \((b)\), and adjacent \((a)\), as indicated in Figure 2, the trigonometric functions of \(\theta\) can be expressed as ratios of the sides of a right triangle.

Figure 2

\[
\begin{array}{ll}
\sin \theta=\frac{\text { Opposite }}{\text { Hypotenuse }}=\frac{b}{c} & \csc \theta=\frac{\text { Hypotenuse }}{\text { Opposite }}=\frac{c}{b} \\
\cos \theta=\frac{\text { Adjacent }}{\text { Hypotenuse }}=\frac{a}{c} & \sec \theta=\frac{\text { Hypotenuse }}{\text { Adjacent }}=\frac{c}{a} \\
\tan \theta=\frac{\text { Opposite }}{\text { Adjacent }}=\frac{b}{a} & \cot \theta=\frac{\text { Adjacent }}{\text { Opposite }}=\frac{a}{b}
\end{array}
\]

Note that each trigonometric function of the acute angle \(\theta\) is positive.

\section*{EXAMPLE I Finding the Value of Trigonometric Functions from a Right Triangle}

Find the exact value of the six trigonometric functions of the angle \(\theta\) in Figure 3.

\section*{Solution}

Figure 3

In Figure 3 the two given sides of the triangle are
\[
c=\text { Hypotenuse }=5, \quad a=\text { Adjacent }=3
\]

To find the length of the opposite side, use the Pythagorean Theorem.
\[
\begin{aligned}
(\text { Adjacent })^{2}+(\text { Opposite })^{2} & =(\text { Hypotenuse })^{2} \\
3^{2}+(\text { Opposite })^{2} & =5^{2} \\
(\text { Opposite })^{2} & =25-9=16 \\
\text { Opposite } & =4
\end{aligned}
\]

Now that the lengths of the three sides are known, use the ratios in equations (1) to find the value of each of the six trigonometric functions.
\[
\begin{array}{lll}
\sin \theta=\frac{\text { Opposite }}{\text { Hypotenuse }}=\frac{4}{5} & \cos \theta=\frac{\text { Adjacent }}{\text { Hypotenuse }}=\frac{3}{5} & \tan \theta=\frac{\text { Opposite }}{\text { Adjacent }}=\frac{4}{3} \\
\csc \theta=\frac{\text { Hypotenuse }}{\text { Opposite }}=\frac{5}{4} & \sec \theta=\frac{\text { Hypotenuse }}{\text { Adjacent }}=\frac{5}{3} & \cot \theta=\frac{\text { Adjacent }}{\text { Opposite }}=\frac{3}{4}
\end{array}
\]

\section*{Now Work problem 9}

The values of the trigonometric functions of an acute angle are ratios of the lengths of the sides of a right triangle. This way of viewing the trigonometric functions leads to many applications and, in fact, was the point of view used by early mathematicians (before calculus) in studying the subject of trigonometry.

\section*{EXAMPLE 2 Constructing a Rain Gutter}

A rain gutter is to be constructed of aluminum sheets 12 inches wide. See Figure 4(a). After marking off a length of 4 inches from each edge, the sides are bent up at an angle \(\theta\). See Figure 4(b).
(a) Express the area \(A\) of the opening as a function of \(\theta\).
[Hint: Let \(b\) denote the vertical height of the bend.]
(b) Graph \(A=A(\theta)\). Find the angle \(\theta\) that makes \(A\) largest. (This bend will allow the most water to flow through the gutter.)

\section*{Figure 4}

Solution

4 in \(\quad 4\) in \(\quad 4\) in
(a)

(b)

(c)
(a) Look again at Figure 4(b). The area \(A\) of the opening is the sum of the areas of two congruent right triangles and one rectangle. Look at Figure 4(c), which shows the triangle on the right in Figure 4(b) redrawn. Note that
\[
\cos \theta=\frac{a}{4} \quad \text { so } \quad a=4 \cos \theta \quad \sin \theta=\frac{b}{4} \quad \text { so } \quad b=4 \sin \theta
\]

The area of the triangle is
\[
\text { area }=\frac{1}{2}(\text { base })(\text { height })=\frac{1}{2} a b=\frac{1}{2}(4 \cos \theta)(4 \sin \theta)=8 \sin \theta \cos \theta
\]

Thus the area of the two congruent triangles together is \(16 \sin \theta \cos \theta\).
The rectangle has length 4 and height \(b\), so its area is
\[
4 b=4(4 \sin \theta)=16 \sin \theta
\]

Figure 5

Figure 6

Adjacent to \(B\) opposite \(A\)

The area \(A\) of the opening is
\[
\begin{aligned}
A & =\text { area of the two triangles }+ \text { area of the rectangle } \\
A(\theta) & =16 \sin \theta \cos \theta+16 \sin \theta=16 \sin \theta(\cos \theta+1)
\end{aligned}
\]
(b) Figure 5 shows the graph of \(A=A(\theta)\). Using MAXIMUM, the angle \(\theta\) that makes \(A\) largest is \(60^{\circ}\).

\section*{2 Use the Complementary Angle Theorem}

Two acute angles are called complementary if their sum is a right angle. Because the sum of the angles of any triangle is \(180^{\circ}\), it follows that for a right triangle, the two acute angles are complementary.

Refer now to Figure 6, which labels the angle opposite side \(b\) as \(B\) and the angle opposite side \(a\) as \(A\). Notice that side \(b\) is adjacent to angle \(A\) and that side \(a\) is adjacent to angle \(B\). As a result,
\[
\begin{array}{lll}
\sin B=\frac{b}{c}=\cos A & \cos B=\frac{a}{c}=\sin A & \tan B=\frac{b}{a}=\cot A \\
\csc B=\frac{c}{b}=\sec A & \sec B=\frac{c}{a}=\csc A & \cot B=\frac{a}{b}=\tan A \tag{2}
\end{array}
\]

Because of these relationships, the functions sine and cosine, tangent and cotangent, and secant and cosecant are called cofunctions of each other. The identities (2) may be expressed in words as follows:

\section*{Complementary Angle Theorem}

Cofunctions of complementary angles are equal.

Here are some examples of this theorem:

\section*{EXAMPLE 3 Using the Complementary Angle Theorem}
(a) \(\sin 62^{\circ}=\cos \left(90^{\circ}-62^{\circ}\right)=\cos 28^{\circ}\)
(b) \(\tan \frac{\pi}{12}=\cot \left(\frac{\pi}{2}-\frac{\pi}{12}\right)=\cot \frac{5 \pi}{12}\)
(c) \(\begin{aligned} \sin ^{2} 40^{\circ}+\sin ^{2} 50^{\circ} & =\sin ^{2} 40^{\circ}+\cos ^{2} 40^{\circ}=1 \\ & \sin 50^{\circ}=\cos 40^{\circ}\end{aligned}\)

Now Work problem 19

\section*{3 Solve Right Triangles}

Figure 7

In the discussion that follows, a right triangle is always labeled so that side \(a\) is opposite angle \(A\), side \(b\) is opposite angle \(B\), and side \(c\) is the hypotenuse, as shown in Figure 7. To solve a right triangle means to find the missing lengths of its sides and the measurements of its angles. We shall follow the practice of expressing the lengths of the sides rounded to two decimal places and expressing angles in degrees rounded to one decimal place. (Be sure that your calculator is in degree mode.)

Solving a right triangle requires knowing one of the acute angles \(A\) or \(B\) and a side, or else two sides. Then the Pythagorean Theorem and the fact that the sum of the angles of a triangle is \(180^{\circ}\) can be used. The sum of the angles \(A\) and \(B\) in a right triangle is therefore \(90^{\circ}\).

THEOREM For the right triangle shown in Figure 7, we have
\[
c^{2}=a^{2}+b^{2} \quad A+B=90^{\circ}
\]

\section*{EXAMPLE 4}

\section*{Solving a Right Triangle}

Use Figure 8. If \(b=2\) and \(A=40^{\circ}\), find \(a, c\), and \(B\).
Solution Because \(A=40^{\circ}\) and \(A+B=90^{\circ}\), it follows that \(B=50^{\circ}\). To find sides \(a\) and \(c\),

Figure 8

use the facts that
\[
\tan 40^{\circ}=\frac{a}{2} \quad \text { and } \cos 40^{\circ}=\frac{2}{c}
\]

Now solve for \(a\) and \(c\).
\[
a=2 \tan 40^{\circ} \approx 1.68 \quad \text { and } \quad c=\frac{2}{\cos 40^{\circ}} \approx 2.61
\]
an Now Work problem 29

\section*{EXAMPLE 5 Solving a Right Triangle}

\section*{Solution}

Figure 9

NOTE To avoid round-off errors when using a calculator, store unrounded values in memory for use in subsequent calculations.

Use Figure 9. If \(a=3\) and \(b=2\), find \(c, A\), and \(B\).
Because \(a=3\) and \(b=2\), then, by the Pythagorean Theorem, this means
\[
\begin{aligned}
c^{2} & =a^{2}+b^{2}=3^{2}+2^{2}=9+4=13 \\
c & =\sqrt{13} \approx 3.61
\end{aligned}
\]

To find angle \(A\), use the fact that
\[
\tan A=\frac{3}{2} \quad \text { so } \quad A=\tan ^{-1} \frac{3}{2}
\]

Use a calculator with the mode set to degrees to find that \(A=56.3^{\circ}\) rounded to one decimal place. Because \(A+B=90^{\circ}\), this means \(B=33.7^{\circ}\).

Now Work problem 39

\section*{4 Solve Applied Problems*}

In addition to developing models using right triangles, right triangle trigonometry can be used to measure heights and distances that are either awkward or impossible to measure by ordinary means. When using right triangles to solve these problems, pay attention to the known measures. This will indicate what trigonometric function to use. For example, if you know the measure of an angle and the length of the side adjacent to the angle, and wish to find the length of the opposite side, you would use the tangent function. Can you explain why?

\footnotetext{
*In applied problems, it is important that answers be reported with both justifiable accuracy and appropriate significant figures. In this chapter we assume that the problem data are accurate to the number of significant digits resulting in sides being rounded to two decimal places and angles being rounded to one decimal place.
}

\section*{EXAMPLE 6 Finding the Width of a River}

A surveyor can measure the width of a river by setting up a transit* at a point \(C\) on one side of the river and taking a sighting of a point \(A\) on the other side. Refer to Figure 10. After turning through an angle of \(90^{\circ}\) at \(C\), the surveyor walks a distance of 200 meters to point \(B\). Using the transit at \(B\), the angle \(\theta\) is measured and found to be \(20^{\circ}\). What is the width of the river rounded to the nearest meter?

Solution As seen in Figure 10, the width of the river is the length of side \(b\), and \(a\) and \(\theta\) are known. Use the facts that \(b\) is opposite \(\theta\) and that \(a\) is adjacent to \(\theta\) to write
\[
\tan \theta=\frac{b}{a}
\]
which leads to
\[
\begin{aligned}
\tan 20^{\circ} & =\frac{b}{200} \\
b & =200 \tan 20^{\circ} \approx 72.79 \text { meters }
\end{aligned}
\]

The width of the river is 73 meters, rounded to the nearest meter.
```

Nm-Now Work problem 49

```

\section*{EXAMPLE 7}

\section*{Solution}

Figure 11

\section*{Finding the Inclination of a Mountain Trail}

A straight trail leads from the Alpine Hotel, elevation 8000 feet, to a scenic overlook, elevation 11,100 feet. The length of the trail is 14,100 feet. What is the inclination (grade) of the trail? That is, what is the angle \(B\) in Figure 11?

Figure 11 shows that the length of the side opposite angle \(B\) is \(11,100-8000\) \(=3100\) feet and the length of the hypotenuse is 14,100 feet. Then angle \(B\) obeys the equation
\[
\sin B=\frac{3100}{14,100}
\]

Using a calculator reveals that
\[
B=\sin ^{-1} \frac{3100}{14,100} \approx 12.7^{\circ}
\]

The inclination (grade) of the trail is approximately \(12.7^{\circ}\).

\section*{Now Work problem 55}

Vertical heights can sometimes be measured using either the angle of elevation or the angle of depression. If a person is looking up at an object, the acute angle measured from the horizontal to a line of sight to the object is called the angle of elevation. See Figure 12(a).

Figure 12

If a person is standing on a cliff looking down at an object, the acute angle made by the line of sight to the object and the horizontal is called the angle of depression. See Figure 12(b).

\section*{EXAMPLE 8 Finding the Height of a Cloud}

Meteorologists find the height of a cloud using an instrument called a ceilometer. A ceilometer consists of a light projector that directs a vertical light beam up to the cloud base and a light detector that scans the cloud to detect the light beam. See Figure 13(a). On May 3, 2013, at Midway Airport in Chicago, a ceilometer was employed to find the height of the cloud cover. It was set up with its light detector 300 feet from its light projector. If the angle of elevation from the light detector to the base of the cloud was \(75^{\circ}\), what was the height of the cloud cover?

Figure 13

Solution Figure 13(b) illustrates the situation. To find the height \(h\), use the fact that \(\tan 75^{\circ}=\frac{h}{300}\), so
\[
h=300 \tan 75^{\circ} \approx 1120 \text { feet }
\]

The ceiling (height to the base of the cloud cover) was approximately 1120 feet.
am Now Work problem 51
The idea behind Example 8 can also be used to find the height of an object with a base that is not accessible to the horizontal.

\section*{EXAMPLE 9 Finding the Height of a Statue on a Building}

Adorning the top of the Board of Trade building in Chicago is a statue of Ceres, the Roman goddess of wheat. From street level, two observations are taken 400 feet from the center of the building. The angle of elevation to the base of the statue is
found to be \(55.1^{\circ}\) and the angle of elevation to the top of the statue is \(56.5^{\circ}\). See Figure 14(a). What is the height of the statue?

Figure 14

Solution Figure 14(b) shows two triangles that replicate Figure 14(a). The height of the statue of Ceres will be \(b^{\prime}-b\). To find \(b\) and \(b^{\prime}\), refer to Figure 14(b).
\[
\begin{aligned}
\tan 55.1^{\circ} & =\frac{b}{400} & \tan 56.5^{\circ} & =\frac{b^{\prime}}{400} \\
b & =400 \tan 55.1^{\circ} \approx 573.39 & b^{\prime} & =400 \tan 56.5^{\circ} \approx 604.33
\end{aligned}
\]

The height of the statue is approximately \(604.33-573.39=30.94\) feet \(\approx 31\) feet.
amen Now Work problem 71

\section*{EXAMPLE IO The Gibb's Hill Lighthouse, Southampton, Bermuda}

In operation since 1846, the Gibb's Hill Lighthouse stands 117 feet high on a hill 245 feet high, so its beam of light is 362 feet above sea level. A brochure states that the light can be seen on the horizon about 26 miles from the lighthouse. Verify the accuracy of this statement.

Solution Figure 15 illustrates the situation. The central angle \(\theta\), positioned at the center of Earth, radius 3960 miles, obeys the equation
\[
\cos \theta=\frac{3960}{3960+\frac{362}{5280}} \approx 0.999982687 \quad 1 \text { mile }=5280 \text { feet }
\]

Solving for \(\theta\) yields
\[
\theta \approx \cos ^{-1}(0.999982687) \approx 0.33715^{\circ} \approx 20.23^{\prime}
\]

The brochure does not indicate whether the distance is measured in nautical miles or statute miles. Let's calculate both distances.

The distance \(s\) in nautical miles (refer to Problem 122, p. 388) is the measure of the angle \(\theta\) in minutes, so \(s \approx 20.23\) nautical miles.

The distance \(s\) in statute miles is given by the formula \(s=r \theta\), where \(\theta\) is measured in radians. Then, because
\[
\begin{aligned}
\theta \approx 20.23^{\prime} & \approx 0.33715^{\circ} \approx 0.00588 \text { radian } \\
& \uparrow \frac{1^{\circ}}{1^{\prime}}=\frac{1^{\circ}}{60} \quad 1^{\circ}=\frac{\pi}{180} \text { radian }
\end{aligned}
\]

Figure 16

this means that
\[
s=r \theta \approx(3960)(0.00588) \approx 23.3 \text { miles }
\]

In either case, it would seem that the brochure overstated the distance somewhat.
In navigation and surveying, the direction or bearing from a point \(O\) to a point \(P\) equals the acute angle \(\theta\) between the ray \(O P\) and the vertical line through \(O\), the north-south line.

Figure 16 illustrates some bearings. Notice that the bearing from \(O\) to \(P_{1}\) is denoted by \(\mathrm{N} 30^{\circ} \mathrm{E}\), indicating that the bearing is \(30^{\circ}\) east of north. In writing the bearing from \(O\) to \(P\), the direction north or south always appears first, followed by an acute angle, followed by east or west. In Figure 16, the bearing from \(O\) to \(P_{2}\) is \(\mathrm{S} 50^{\circ} \mathrm{W}\), and the bearing from \(O\) to \(P_{3}\) is \(\mathrm{N} 70^{\circ} \mathrm{W}\).

\section*{EXAMPLE II Finding the Bearing of an Object}

In Figure 16, what is the bearing from \(O\) to an object at \(P_{4}\) ?
Solution The acute angle between the ray \(\mathrm{OP}_{4}\) and the north-south line through \(O\) is given as \(20^{\circ}\). The bearing from \(O\) to \(P_{4}\) is \(\mathrm{S} 20^{\circ} \mathrm{E}\).

\section*{EXAMPLE 12 Finding the Bearing of an Airplane}

A Boeing 777 aircraft takes off from O'Hare Airport on runway 2 LEFT, which has a bearing of \(\mathrm{N} 20^{\circ} \mathrm{E}\).* After flying for 1 mile, the pilot of the aircraft requests permission to turn \(90^{\circ}\) and head toward the northwest. The request is granted. After the plane goes 2 miles in this direction, what bearing should the control tower use to locate the aircraft?

Solution Figure 17 illustrates the situation. After flying 1 mile from the airport \(O\) (the

Figure 17
 control tower), the aircraft is at \(P\). After turning \(90^{\circ}\) toward the northwest and flying 2 miles, the aircraft is at the point \(Q\). In triangle \(O P Q\), the angle \(\theta\) obeys the equation
\[
\tan \theta=\frac{2}{1}=2 \quad \text { so } \quad \theta=\tan ^{-1} 2 \approx 63.4^{\circ}
\]

The acute angle between north and the ray \(O Q\) is \(63.4^{\circ}-20^{\circ}=43.4^{\circ}\). The bearing of the aircraft from \(O\) to \(Q\) is \(\mathrm{N} 43.4^{\circ} \mathrm{W}\).

Now Work problem 63

\subsection*{7.1 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. In a right triangle, if the length of the hypotenuse is 5 and the length of one of the other sides is 3 , what is the length of the third side? (pp. A13-A15)
2. If \(\theta\) is an acute angle, solve the equation \(\tan \theta=\frac{1}{2}\). Express your answer in degrees, rounded to one decimal place. (pp.482-485)
3. If \(\theta\) is an acute angle, solve the equation \(\sin \theta=\frac{1}{2}\). (pp.482-485)

\footnotetext{
*In air navigation, the term azimuth denotes the positive angle measured clockwise from the north ( N ) to a ray \(O P\). In Figure 16, the azimuth from \(O\) to \(P_{1}\) is \(30^{\circ}\); the azimuth from \(O\) to \(P_{2}\) is \(230^{\circ}\); and the azimuth from \(O\) to \(P_{3}\) is \(290^{\circ}\). In naming runways, the units digit is left off the azimuth. Runway 2 LEFT means the left runway with a direction of azimuth \(20^{\circ}\) (bearing \(\mathrm{N} 20^{\circ} \mathrm{E}\) ). Runway 23 is the runway with azimuth \(230^{\circ}\) and bearing \(\mathrm{S} 50^{\circ} \mathrm{W}\).
}

\section*{Concepts and Vocabulary}
4. True or False \(\sin 52^{\circ}=\cos 48^{\circ}\).
5. True or False In a right triangle, one of the angles is \(90^{\circ}\) and the sum of the other two angles is \(90^{\circ}\).
6. When you look up at an object, the acute angle measured from the horizontal to a line-of-sight observation of the object is called the \(\qquad\)
7. True or False In a right triangle, if two sides are known, then the triangle can be solved.
8. True or False In a right triangle, if the two acute angles are known, then the triangle can be solved.

\section*{Skill Building}

In Problems 9-18, find the exact value of the six trigonometric functions of the angle \(\theta\) in each figure.
9.

10.

11.

12.

13.

14.

15.

38. \(c=10, \quad A=40^{\circ}\); find \(b, a\), and \(B\)
39. \(a=5, \quad b=3\); find \(c, A\), and \(B\)
40. \(a=2, \quad b=8\); find \(c, A\), and \(B\)
41. \(a=2, \quad c=5 ; \quad\) find \(b, A\), and \(B\)
42. \(b=4, \quad c=6\); find \(a, A\), and \(B\)

\section*{Applications and Extensions}
43. Geometry The hypotenuse of a right triangle is 5 inches. If one leg is 2 inches, find the degree measure of each angle.
44. Geometry The hypotenuse of a right triangle is 3 feet. If one leg is 1 foot, find the degree measure of each angle.
45. Geometry A right triangle has a hypotenuse of length 8 inches. If one angle is \(35^{\circ}\), find the length of each leg.
46. Geometry A right triangle has a hypotenuse of length 10 centimeters. If one angle is \(40^{\circ}\), find the length of each leg.
47. Geometry A right triangle contains a \(25^{\circ}\) angle.
(a) If one leg is of length 5 inches, what is the length of the hypotenuse?
(b) There are two answers. How is this possible?
48. Geometry A right triangle contains an angle of \(\frac{\pi}{8}\) radian.
(a) If one leg is of length 3 meters, what is the length of the hypotenuse?
(b) There are two answers. How is this possible?
49. Finding the Width of a Gorge Find the distance from \(A\) to \(C\)
(.) across the gorge illustrated in the figure.

50. Finding the Distance across a Pond Find the distance from \(A\) to \(C\) across the pond illustrated in the figure.

51. The Eiffel Tower The tallest tower built before the era of television masts, the Eiffel Tower was completed on March 31, 1889. Find the height of the Eiffel Tower (before a television mast was added to the top) using the information given in the illustration.

52. Finding the Distance of a Ship from Shore A person in a small boat, offshore from a vertical cliff known to be 100 feet in height, takes a sighting of the top of the cliff. If the angle of elevation is found to be \(25^{\circ}\), how far offshore is the boat?
53. Finding the Distance to a Plateau Suppose that you are headed toward a plateau 50 meters high. If the angle of elevation to the top of the plateau is \(20^{\circ}\), how far are you from the base of the plateau?
54. Finding the Reach of a Ladder A 22-foot extension ladder leaning against a building makes a \(70^{\circ}\) angle with the ground. How far up the building does the ladder touch?
55. Finding the Angle of Elevation of the Sun At 10 AM on May 21, 2013 a building 300 feet high cast a shadow 182 feet long. What was the angle of elevation of the Sun?
56. Directing a Laser Beam A laser beam is to be directed through a small hole in the center of a circle of radius 10 feet. The origin of the beam is 35 feet from the circle (see the figure). At what angle of elevation should the beam be aimed to ensure that it goes through the hole?

57. Finding the Speed of a Truck A state trooper is hidden 30 feet from a highway. One second after a truck passes, the angle \(\theta\) between the highway and the line of observation from the patrol car to the truck is measured. See the illustration.

(a) If the angle measures \(15^{\circ}\), how fast is the truck traveling? Express the answer in feet per second and in miles per hour.
(b) If the angle measures \(20^{\circ}\), how fast is the truck traveling? Express the answer in feet per second and in miles per hour.
(c) If the speed limit is 55 miles per hour and a speeding ticket is issued for speeds of 5 miles per hour or more over the limit, for what angles should the trooper issue a ticket?
58. Security A security camera in a neighborhood bank is mounted on a wall 9 feet above the floor. What angle of depression should be used if the camera is to be directed to a spot 6 feet above the floor and 12 feet from the wall?
59. Parallax One method of measuring the distance from Earth to a star is the parallax method. The idea behind computing this distance is to measure the angle formed between Earth and the star at two different points in time. Typically, the measurements are taken so that the side opposite the angle is as large as possible. Therefore, the optimal approach is to measure the angle when Earth is on opposite sides of the Sun, as shown in the figure.

(a) Proxima Centauri is 4.22 light-years from Earth. If 1 light-year is about 5.9 trillion miles, how many miles is Proxima Centauri from Earth?
(b) The mean distance from Earth to the Sun is \(93,000,000\) miles. What is the parallax of Proxima Centauri?
60. Parallax See Problem 59. 61 Cygni, sometimes called Bessel's Star (after Friedrich Bessel, who measured the distance from Earth to the star in 1838), is a star in the constellation Cygnus.
(a) 61 Cygni is 11.14 light-years from Earth. If 1 light-year is about 5.9 trillion miles, how many miles is 61 Cygni from Earth?
(b) The mean distance from Earth to the Sun is \(93,000,000\) miles. What is the parallax of 61 Cygni?
61. Washington Monument The angle of elevation of the Sun is \(35.1^{\circ}\) at the instant the shadow cast by the Washington Monument is 789 feet long. Use this information to calculate the height of the monument.
62. Finding the Length of a Mountain Trail A straight trail with an inclination of \(17^{\circ}\) leads from a hotel at an elevation of 9000 feet to a mountain lake at an elevation of 11,200 feet. What is the length of the trail?
63. Finding the Bearing of an Aircraft A DC-9 aircraft leaves Midway Airport from runway 4 RIGHT, whose bearing is \(\mathrm{N} 40^{\circ} \mathrm{E}\). After flying for \(\frac{1}{2}\) mile, the pilot requests permission to turn \(90^{\circ}\) and head toward the southeast. The permission is granted. After the airplane goes 1 mile in this direction, what bearing should the control tower use to locate the aircraft?
64. Finding the Bearing of a Ship A ship leaves the port of Miami with a bearing of \(\mathrm{S} 80^{\circ} \mathrm{E}\) and a speed of 15 knots. After 1 hour, the ship turns \(90^{\circ}\) toward the south. After 2 hours, maintaining the same speed, what is the bearing to the ship from port?
65. Niagara Falls Incline Railway Situated between Portage Road and the Niagara Parkway directly across from the Canadian Horseshoe Falls, the Falls Incline Railway is a funicular that carries passengers up an embankment to Table Rock Observation Point. If the length of the track is 51.8 meters and the angle of inclination is \(36^{\circ} 2^{\prime}\), determine the height of the embankment.
Source: www.niagaraparks.com
66. Willis Tower Willis Tower in Chicago is the tenth tallest building in the world and is topped by a high antenna. A surveyor on the ground makes the following measurement:
1. The angle of elevation from his position to the top of the building is \(34^{\circ}\).
2. The distance from his position to the top of the building is 2593 feet.
3. The distance from his position to the top of the antenna is 2743 feet.
(a) How far away from the (base of the) building is the surveyor located?
(b) How tall is the building?
(c) What is the angle of elevation from the surveyor to the top of the antenna?
(d) How tall is the antenna?

Source: www.emporis.com
67. Constructing a Highway \(A\) highway whose primary directions are north-south is being constructed along the west coast of Florida. Near Naples, a bay obstructs the straight path of the road. Since the cost of a bridge is prohibitive, engineers decide to go around the bay. The illustration shows the path that they decide on and the measurements taken. What is the length of highway needed to go around the bay?

68. Photography A camera is mounted on a tripod 4 feet high at a distance of 10 feet from George, who is 6 feet tall. See the illustration. If the camera lens has angles of depression and elevation of \(20^{\circ}\), will George's feet and head be seen by the lens? If not, how far back will the camera need to be moved to include George's feet and head?

69. Finding the Distance between Two Objects A blimp, suspended in the air at a height of 500 feet, lies directly over a line from Soldier Field to the Adler Planetarium on Lake Michigan (see the figure). If the angle of depression from the blimp to the stadium is \(32^{\circ}\) and that from the blimp to the planetarium is \(23^{\circ}\), find the distance between Soldier Field and the Adler Planetarium.

70. Hot-Air Balloon While taking a ride in a hot-air balloon in Napa Valley, Francisco wonders how high he is. To find out, he chooses a landmark that is to the east of the balloon and measures the angle of depression to be \(54^{\circ}\). A few minutes later, after traveling 100 feet east, the angle of depression to the same landmark is determined to be \(61^{\circ}\). Use this information to determine the height of the balloon.
71. Mit. Rushmore To measure the height of Lincoln's caricature on Mt. Rushmore, two sightings 800 feet from the base of the mountain are taken. If the angle of elevation to the bottom of Lincoln's face is \(32^{\circ}\) and the angle of elevation to the top is \(35^{\circ}\), what is the height of Lincoln's face?
72. The CN Tower The CN Tower, located in Toronto, Canada, is the tallest structure in the Americas. While visiting Toronto, a tourist wondered what the height of the tower above the top of the Sky Pod is. While standing 4000 feet from the tower, she measured the angle to the top of the Sky Pod to be \(20.1^{\circ}\). At this same distance, the angle of elevation to the top of the tower was found to be \(24.4^{\circ}\). Use this information to determine the height of the tower above the Sky Pod.

73. Chicago Skyscrapers The angle of inclination from the base of the John Hancock Center to the top of the main structure of the Willis Tower is approximately \(10.3^{\circ}\). If the main structure of the Willis Tower is 1450 feet tall, how far apart are the two skyscrapers? Assume the bases of the two buildings are at the same elevation.
Source: www.emporis.com
74. Estimating the Width of the Mississippi River A tourist at the top of the Gateway Arch (height, 630 feet) in St. Louis, Missouri, observes a boat moored on the Illinois side of the Mississippi River 2070 feet directly across from the Arch. She also observes a boat moored on the Missouri side directly across from the first boat (see diagram). Given that \(B=\cot ^{-1} \frac{67}{55}\), estimate the width of the Mississippi River at the St. Louis riverfront.
Source: U.S. Army Corps of Engineers

75. Finding the Pitch of a Roof A carpenter is preparing to put a roof on a garage that is 20 feet by 40 feet by 20 feet. A steel support beam 46 feet in length is positioned in the center of the garage. To support the roof, another beam will be attached to the top of the center beam (see the figure).

At what angle of elevation is the new beam? In other words, what is the pitch of the roof?

76. Shooting Free Throws in Basketball The eyes of a basketball player are 6 feet above the floor. The player is at the freethrow line, which is 15 feet from the center of the basket rim (see the figure). What is the angle of elevation from the player's eyes to the center of the rim?
[Hint: The rim is 10 feet above the floor.]

77. Geometry Find the value of the angle \(\theta\) in degrees rounded to the nearest tenth of a degree.

78. Surveillance Satellites A surveillance satellite circles Earth at a height of \(h\) miles above the surface. Suppose that \(d\) is the distance, in miles, on the surface of Earth that can be observed from the satellite. See the illustration on the following page.
(a) Find an equation that relates the central angle \(\theta\) to the height \(h\).
(b) Find an equation that relates the observable distance \(d\) and \(\theta\).
(c) Find an equation that relates \(d\) and \(h\).
(d) If \(d\) is to be 2500 miles, how high must the satellite orbit above Earth?
(e) If the satellite orbits at a height of 300 miles, what distance \(d\) on the surface can be observed?

79. Calculating Pool Shots A pool player located at \(\mathbf{X}\) wants to shoot the white ball off the top cushion and hit the red ball

dead center. He knows from physics that the white ball will come off a cushion at the same angle as it hits a cushion. Where on the top cushion should he hit the white ball?
80. One World Trade Center One World Trade Center (1WTC) is the centerpiece of the rebuilding of the World Trade Center in New York City. The tower is 1368 feet tall (not including a broadcast antenna). The angle of elevation from the base of an office building to the top of the tower is \(34^{\circ}\). The angle of elevation from the helipad on the roof of the office building to the top of the tower is \(20^{\circ}\).

(a) How far away is the office building from 1WTC? Assume the side of the tower is vertical. Round to the nearest foot.
(b) How tall is the office building? Round to the nearest foot.

\section*{Discussion and Writing}
81. Explain how you would measure the width of the Grand Canyon from a point on its ridge.
82. Explain how you would measure the height of a TV tower that is on the roof of a tall building.
83. The Gibb's Hill Lighthouse. Southampton, Bermuda In operation since 1846, the Gibb's Hill Lighthouse stands 117 feet high on a hill 245 feet high, so its beam of light is 362 feet above sea level. A brochure states that ships 40 miles away can see the light and planes flying at 10,000 feet can see it 120 miles away. Verify the accuracy of these statements. What assumption did the brochure make about the height of the ship?

\section*{-Retain Your Knowledge}

Problems 84-87 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
84. Determine whether \(x-3\) is a factor of \(x^{4}+2 x^{3}-21 x^{2}+19 x-3\).
85. Find the exact value of \(\sin 15^{\circ}\).

Hint: \(15^{\circ}=45^{\circ}-30^{\circ}\)
86. Evaluate \(\frac{f(x)-f(4)}{x-4}\), where \(f(x)=\sqrt{x}\) for \(x=5,4.5\), and 4.1. Round results to three decimal places.
87. Solve \(2 \sin ^{2} \theta-\sin \theta-1=0\) for \(0 \leq \theta<2 \pi\).

\subsection*{7.2 The Law of Sines}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Trigonometric Equations (Section 6.3, pp. 482-485)
- Difference Formula for the Sine Function (Section 6.5, p. 502)

Now Work the 'Are You Prepared?' problems on page 551.
OBJECTIVES 1 Solve SAA or ASA Triangles (p. 546)
2 Solve SSA Triangles (p. 546)
3 Solve Applied Problems (p. 549)

If none of the angles of a triangle is a right angle, the triangle is called oblique. An oblique triangle has either three acute angles or two acute angles and one obtuse angle (an angle between \(90^{\circ}\) and \(180^{\circ}\) ). See Figure 18.

Figure 18

Figure 19

(a) All angles are acute

(b) Two acute angles and one obtuse angle

In the discussion that follows, an oblique triangle is always labeled so that side \(a\) is opposite angle \(A\), side \(b\) is opposite angle \(B\), and side \(c\) is opposite angle \(C\), as shown in Figure 19.

To solve an oblique triangle means to find the lengths of its sides and the measurements of its angles. To do this requires knowing the length of one side* along with (i) two angles; (ii) one angle and one other side; or (iii) the other two sides. There are four possibilities to consider:

Case 1: One side and two angles are known (ASA or SAA).
Case 2: Two sides and the angle opposite one of them are known (SSA).
Case 3: Two sides and the included angle are known (SAS).
Case 4: Three sides are known (SSS).
Figure 20, where the known measurements are shown in blue, illustrates the four cases.

Figure 20

Case 1: ASA

Case 1: SAA

Case 2: SSA

Case 3: SAS

Case 4: SSS

WARNING Oblique triangles cannot be solved using the methods of Section 7.1. Do you know why?

The Law of Sines is used to solve triangles for which Case 1 or 2 holds. Cases 3 and 4 are considered when we study the Law of Cosines in the next section.

\section*{Law of Sines}

For a triangle with sides \(a, b, c\) and opposite angles \(A, B, C\), respectively,
\[
\begin{equation*}
\frac{\sin A}{a}=\frac{\sin B}{b}=\frac{\sin C}{c} \tag{1}
\end{equation*}
\]

A proof of the Law of Sines is given at the end of this section.The Law of Sines actually consists of three equalities:
\[
\frac{\sin A}{a}=\frac{\sin B}{b} \quad \frac{\sin A}{a}=\frac{\sin C}{c} \quad \frac{\sin B}{b}=\frac{\sin C}{c}
\]

Formula (1) is a compact way to write these three equations.
Typically, applying the Law of Sines to solve triangles uses the fact that the sum of the angles of any triangle equals \(180^{\circ}\); that is,
\[
A+B+C=180^{\circ}
\]

\footnotetext{
*The length of one side must be known because knowing only the angles will result in a family of
} similar triangles.

\section*{1 Solve SAA or ASA Triangles}

The first two examples show how to solve a triangle when one side and two angles are known (Case 1: SAA or ASA).

\section*{EXAMPLE I Using the Law of Sines to Solve an SAA Triangle}

Solve the triangle: \(A=40^{\circ}, B=60^{\circ}, a=4\)

\section*{Solution}

Figure 21

NOTE Although it is not a check, the reasonableness of answers can be verified by determining whether the longest side is opposite the largest angle and the shortest side is opposite the smallest angle.

Figure 21 shows the triangle to be solved. The third angle \(C\) is found using equation (2).
\[
\begin{aligned}
A+B+C & =180^{\circ} \\
40^{\circ}+60^{\circ}+C & =180^{\circ} \\
C & =80^{\circ}
\end{aligned}
\]

Now use the Law of Sines (twice) to find the unknown sides \(b\) and \(c\).
\[
\frac{\sin A}{a}=\frac{\sin B}{b} \quad \frac{\sin A}{a}=\frac{\sin C}{c}
\]

Because \(a=4, A=40^{\circ}, B=60^{\circ}\), and \(C=80^{\circ}\), this gives
\[
\frac{\sin 40^{\circ}}{4}=\frac{\sin 60^{\circ}}{b} \quad \frac{\sin 40^{\circ}}{4}=\frac{\sin 80^{\circ}}{c}
\]

Solving for \(b\) and \(c\) yields
\[
b=\frac{4 \sin 60^{\circ}}{\sin 40^{\circ}} \approx 5.39 \quad c=\frac{4 \sin 80^{\circ}}{\sin 40^{\circ}} \approx 6.13
\]

Notice in Example 1 that \(b\) and \(c\) are found by working with the given side \(a\). This is better than finding \(b\) first and working with a rounded value of \(b\) to find \(c\).
am Now Work problem 9

\section*{EXAMPLE 2}

\section*{Solution}

Figure 22

\section*{Using the Law of Sines to Solve an ASA Triangle}

Solve the triangle: \(A=35^{\circ}, B=15^{\circ}, c=5\)
Figure 22 illustrates the triangle to be solved. Two angles are known \(\left(A=35^{\circ}\right.\) and \(B=15^{\circ}\) ). Find the third angle using equation (2):
\[
\begin{aligned}
A+B+C & =180^{\circ} \\
35^{\circ}+15^{\circ}+C & =180^{\circ} \\
C & =130^{\circ}
\end{aligned}
\]

Now the three angles and one side \((c=5)\) of the triangle are known. To find the remaining two sides \(a\) and \(b\), use the Law of Sines (twice).
\[
\begin{array}{rlrl}
\frac{\sin A}{a} & =\frac{\sin C}{c} & \frac{\sin B}{b} & =\frac{\sin C}{c} \\
\frac{\sin 35^{\circ}}{a} & =\frac{\sin 130^{\circ}}{5} & \frac{\sin 15^{\circ}}{b} & =\frac{\sin 130^{\circ}}{5} \\
a & =\frac{5 \sin 35^{\circ}}{\sin 130^{\circ}} \approx 3.74 & b & =\frac{5 \sin 15^{\circ}}{\sin 130^{\circ}} \approx 1.69
\end{array}
\]

Figure 23

Now Work problem 23

\section*{2 Solve SSA Triangles}

Case 2 (SSA), which applies to triangles for which two sides and the angle opposite one of them are known, is referred to as the ambiguous case, because the known information may result in one triangle, two triangles, or no triangle at all. Suppose that sides \(a\) and \(b\) and angle \(A\) are given, as illustrated in Figure 23. The key to
determining how many triangles, if any, may be formed from the given information lies primarily with the relative size of side \(a\), the height \(h\), and the fact that \(h=b \sin A\).

No Triangle If \(a<h=b \sin A\), then side \(a\) is not sufficiently long to form a triangle. See Figure 24.

Figure 24
\(a<h=b \sin A\)

Two Triangles If \(h=b \sin A<a\) and \(a<b\), then two distinct triangles can be formed from the given information. See Figure 26.

One Right Triangle If \(a=h=b \sin A\), then side \(a\) is just long enough to form a right triangle. See Figure 25.

Figure 25
\(a=h=b \sin A\)

One Triangle If \(a \geq b\), only one triangle can be formed. See Figure 27.

Figure 26
Figure \(27 a \geq b\)
\(b \sin A<a\) and \(a<b\)

Fortunately, it is not necessary to rely on an illustration or on complicated relationships to draw the correct conclusion in the ambiguous case. The Law of Sines will lead us to the correct determination. Let's see how.

\section*{EXAMPLE 3}

Solution

Figure 28(a)

NOTE Here \(B_{1}\) was found by determining the value of \(\sin ^{-1}\left(\frac{2 \sin 40^{\circ}}{3}\right)\). Using the rounded value and evaluating \(\sin ^{-1}(0.43)\) will yield a slightly differentresult.

Using the Law of Sines to Solve an SSA Triangle (One Solution)
Solve the triangle: \(a=3, b=2, A=40^{\circ}\)
See Figure 28(a). Because an angle \(\left(A=40^{\circ}\right)\), the side opposite the known angle \((a=3)\), and the side opposite angle \(B(b=2)\) are known, use the Law of Sines to find the angle \(B\).
\[
\frac{\sin A}{a}=\frac{\sin B}{b}
\]

Then
\[
\begin{aligned}
\frac{\sin 40^{\circ}}{3} & =\frac{\sin B}{2} \\
\sin B & =\frac{2 \sin 40^{\circ}}{3} \approx 0.43
\end{aligned}
\]

There are two angles \(B, 0^{\circ}<B<180^{\circ}\), for which \(\sin B \approx 0.43\).
\[
B_{1} \approx 25.4^{\circ} \quad \text { and } \quad B_{2} \approx 180^{\circ}-25.4^{\circ}=154.6^{\circ}
\]

The second possibility, \(B_{2} \approx 154.6^{\circ}\), is ruled out, because \(A=40^{\circ}\) makes \(A+B_{2} \approx 194.6^{\circ}>180^{\circ}\). Now, use \(B_{1} \approx 25.4^{\circ}\) to find that
\[
C=180^{\circ}-A-B_{1} \approx 180^{\circ}-40^{\circ}-25.4^{\circ}=114.6^{\circ}
\]

Figure 28(b)

The third side \(c\) may now be determined using the Law of Sines.
\[
\begin{aligned}
\frac{\sin A}{a} & =\frac{\sin C}{c} \\
\frac{\sin 40^{\circ}}{3} & =\frac{\sin 114.6^{\circ}}{c} \\
c & =\frac{3 \sin 114.6^{\circ}}{\sin 40^{\circ}} \approx 4.24
\end{aligned}
\]

Figure 28(b) illustrates the solved triangle.

\section*{EXAMPLE 4 Using the Law of Sines to Solve an SSA Triangle (Two Solutions)}

Solve the triangle: \(a=6, b=8, A=35^{\circ}\)
Solution See Figure 29(a). Because \(a=6, b=8\), and \(A=35^{\circ}\) are known, use the Law of Sines to find the angle \(B\).
\[
\frac{\sin A}{a}=\frac{\sin B}{b}
\]

Figure 29(a)

Figure 29(b)

Then
\[
\begin{gathered}
\frac{\sin 35^{\circ}}{6}=\frac{\sin B}{8} \\
\sin B=\frac{8 \sin 35^{\circ}}{6} \approx 0.76 \\
B_{1} \approx 49.9^{\circ} \quad \text { or } B_{2} \approx 180^{\circ}-49.9^{\circ}=130.1^{\circ}
\end{gathered}
\]

Both choices of \(B\) result in \(A+B<180^{\circ}\). There are two triangles, one containing the angle \(B_{1} \approx 49.9^{\circ}\) and the other containing the angle \(B_{2} \approx 130.1^{\circ}\). The third angle \(C\) is either
\[
\begin{array}{cc}
C_{1}=180^{\circ}-A-B_{1} \approx 95.1^{\circ} \quad \text { or } \quad C_{2}=180^{\circ}-A-B_{2} \approx 14.9^{\circ} \\
A=35^{\circ} & A=35^{\circ} \\
B_{1}=49.9^{\circ} & B_{2}=130.1^{\circ}
\end{array}
\]

The third side \(c\) obeys the Law of Sines, so we have
\[
\begin{aligned}
\frac{\sin A}{a} & =\frac{\sin C_{1}}{c_{1}} & \frac{\sin A}{a} & =\frac{\sin C_{2}}{c_{2}} \\
\frac{\sin 35^{\circ}}{6} & =\frac{\sin 95.1^{\circ}}{c_{1}} & \frac{\sin 35^{\circ}}{6} & =\frac{\sin 14.9^{\circ}}{c_{2}} \\
c_{1} & =\frac{6 \sin 95.1^{\circ}}{\sin 35^{\circ}} \approx 10.42 & c_{2} & =\frac{6 \sin 14.9^{\circ}}{\sin 35^{\circ}} \approx 2.69
\end{aligned}
\]

The two solved triangles are illustrated in Figure 29(b).

\section*{EXAMPLE 5 Using the Law of Sines to Solve an SSA Triangle (No Solution)}

Solve the triangle: \(a=2, c=1, C=50^{\circ}\)
Solution Because \(a=2, c=1\), and \(C=50^{\circ}\) are known, use the Law of Sines to find the angle \(A\).
\[
\begin{aligned}
\frac{\sin A}{a} & =\frac{\sin C}{c} \\
\frac{\sin A}{2} & =\frac{\sin 50^{\circ}}{1} \\
\sin A & =2 \sin 50^{\circ} \approx 1.53
\end{aligned}
\]

Since there is no angle \(A\) for which \(\sin A>1\), there can be no triangle with the given measurements. Figure 30 illustrates the measurements given. Note that no matter how side \(c\) is positioned, it will never touch side \(b\) to form a triangle.

Now Norl problems 25 and 31

\section*{3 Solve Applied Problems}

\section*{EXAMPLE 6 Finding the Height of a Mountain}

To measure the height of a mountain, a surveyor takes two sightings of the peak at a distance 900 meters apart on a direct line to the mountain.* See Figure 31(a). The first observation results in an angle of elevation of \(47^{\circ}\), and the second results in an angle of elevation of \(35^{\circ}\). If the transit is 2 meters high, what is the height \(h\) of the mountain?

Figure 31

(a)

(b)

Solution
Figure 31(b) shows the triangles that replicate the illustration in Figure 31(a). Because \(C+47^{\circ}=180^{\circ}\), this means that \(C=133^{\circ}\). Also, because \(A+C+35^{\circ}=180^{\circ}\), this means that \(A=180^{\circ}-35^{\circ}-C=145^{\circ}-133^{\circ}=12^{\circ}\). Use the Law of Sines to find \(c\).
\[
\begin{aligned}
\frac{\sin A}{a} & =\frac{\sin C}{c} \quad A=12^{\circ}, C=133^{\circ}, a=900 \\
c & =\frac{900 \sin 133^{\circ}}{\sin 12^{\circ}} \approx 3165.86
\end{aligned}
\]

Using the larger right triangle gives
\[
\begin{aligned}
\sin 35^{\circ} & =\frac{b}{c} \quad c=3165.86 \\
b & =3165.86 \sin 35^{\circ} \approx 1815.86 \approx 1816 \text { meters }
\end{aligned}
\]

The height of the peak from ground level is approximately \(1816+2=1818\) meters.
am Now Work problem 39

\section*{EXAMPLE 7 Rescue at Sea}

Coast Guard Station Zulu is located 120 miles due west of Station X-ray. A ship at sea sends an SOS call that is received by each station. The call to Station Zulu indicates that the bearing of the ship from Zulu is \(\mathrm{N} 40^{\circ} \mathrm{E}\) ( \(40^{\circ}\) east of north). The call to Station X-ray indicates that the bearing of the ship from X-ray is \(\mathrm{N} 30^{\circ} \mathrm{W}\left(30^{\circ}\right.\) west of north).
(a) How far is each station from the ship?
(b) If a helicopter capable of flying 200 miles per hour is dispatched from the nearer station to the ship, how long will it take to reach the ship?
*For simplicity, assume that these sightings are at the same level.

\section*{Solution}

Figure 32

Figure 33

(a)

(b)
(a) Figure 32 illustrates the situation. The angle \(C\) is found to be
\[
C=180^{\circ}-50^{\circ}-60^{\circ}=70^{\circ}
\]

The Law of Sines can now be used to find the two distances \(a\) and \(b\) that are needed.
\[
\begin{aligned}
\frac{\sin 50^{\circ}}{a} & =\frac{\sin 70^{\circ}}{120} \\
a & =\frac{120 \sin 50^{\circ}}{\sin 70^{\circ}} \approx 97.82 \mathrm{miles} \\
\frac{\sin 60^{\circ}}{b} & =\frac{\sin 70^{\circ}}{120} \\
b & =\frac{120 \sin 60^{\circ}}{\sin 70^{\circ}} \approx 110.59 \text { miles }
\end{aligned}
\]

Station Zulu is about 111 miles from the ship, and Station X-ray is about 98 miles from the ship.
(b) The time \(t\) needed for the helicopter to reach the ship from Station X-ray is found by using the formula
\[
(\text { Rate }, r)(\text { Time }, t)=\text { Distance, } a
\]

Then
\[
t=\frac{a}{r}=\frac{97.82}{200} \approx 0.49 \text { hour } \approx 29 \text { minutes }
\]

It will take about 29 minutes for the helicopter to reach the ship.
am Now Work problem 37
Proof of the Law of Sines To prove the Law of Sines, construct an altitude of length \(h\) from one of the vertices of a triangle. Figure 33(a) shows \(h\) for a triangle with three acute angles, and Figure 33(b) shows \(h\) for a triangle with an obtuse angle. In each case, the altitude is drawn from the vertex at \(B\). Using either illustration,
\[
\sin C=\frac{h}{a}
\]
from which
\[
\begin{equation*}
h=a \sin C \tag{3}
\end{equation*}
\]

From Figure 33(a), it also follows that
\[
\sin A=\frac{h}{c}
\]
from which
\[
\begin{equation*}
h=c \sin A \tag{4}
\end{equation*}
\]

From Figure 33(b), it follows that
\[
\begin{gathered}
\sin \left(180^{\circ}-A\right)=\sin A=\frac{h}{c} \\
\uparrow \\
\sin \left(180^{\circ}-A\right)=\sin 180^{\circ} \cos A-\cos 180^{\circ} \sin A=\sin A
\end{gathered}
\]
which again gives
\[
h=c \sin A
\]

Thus, whether the triangle has three acute angles or has two acute angles and one obtuse angle, equations (3) and (4) hold. As a result, the expressions for \(h\) in equations (3) and (4) are equal. That is,
\[
a \sin C=c \sin A
\]

Figure 34

(a)

(b)
from which
\[
\begin{equation*}
\frac{\sin A}{a}=\frac{\sin C}{c} \tag{5}
\end{equation*}
\]

In a similar manner, by constructing the altitude \(h^{\prime}\) from the vertex of angle \(A\) as shown in Figure 34, it follows that
\[
\sin B=\frac{h^{\prime}}{c} \quad \text { and } \quad \sin C=\frac{h^{\prime}}{b}
\]

Equating the expressions for \(h^{\prime}\) gives
\[
h^{\prime}=c \sin B=b \sin C
\]
from which
\[
\begin{equation*}
\frac{\sin B}{b}=\frac{\sin C}{c} \tag{6}
\end{equation*}
\]

When equations (5) and (6) are combined, the result is equation (1), the Law of Sines.

\subsection*{7.2 Assess Your Understanding}

\section*{"Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.}
1. The difference formula for the sine function is \(\sin (A-B)=\) \(\qquad\) (p. 502)
2. If \(\theta\) is an acute angle, solve the equation \(\cos \theta=\frac{\sqrt{3}}{2}\). (pp.482-485)

\section*{Concepts and Vocabulary}
4. If none of the angles of a triangle is a right angle, the triangle is called \(\qquad\) -
5. For a triangle with sides \(a, b, c\) and opposite angles \(A, B, C\), the Law of Sines states that \(\qquad\) .
6. True or False An oblique triangle in which two sides and an angle are given always results in at least one triangle.
3. The two triangles shown are similar. Find the missing length. (pp. A17-A18)

7. True or False The Law of Sines can be used to solve triangles where three sides are known.
8. Triangles for which two sides and the angle opposite one of them are known (SSA) are referred to as the

38. Distance to the Moon At exactly the same time, Tom and Alice measured the angle of elevation to the moon while standing exactly 300 km apart. The angle of elevation to the moon for Tom was \(49.8974^{\circ}\) and the angle of elevation to the moon for Alice was \(49.9312^{\circ}\). See the figure. To the nearest 1000 km , how far was the moon from Earth when the measurement was obtained?

39. Finding the Length of a Ski Lift Consult the figure. To find the length of the span of a proposed ski lift from \(P\) to \(Q\), a surveyor measures \(\angle D P Q\) to be \(25^{\circ}\) and then walks off a distance of 1000 feet to \(R\) and measures \(\angle P R Q\) to be \(15^{\circ}\). What is the distance from \(P\) to \(Q\) ?

40. Finding the Height of a Mountain Use the illustration in Problem 39 to find the height \(Q D\) of the mountain.
41. Finding the Height of an Airplane An aircraft is spotted by two observers who are 1000 feet apart. As the airplane passes over the line joining them, each observer takes a sighting of the angle of elevation to the plane, as indicated in the figure. How high is the airplane?

42. Finding the Height of the Bridge over the Royal Gorge The highest bridge in the world is the bridge over the Royal Gorge of the Arkansas River in Colorado. Sightings to the same point at water level directly under the bridge are taken from each side of the 880 -foot-long bridge, as indicated in the figure. How high is the bridge?
Source: Guinness Book of World Records

43. Landscaping Pat needs to determine the height of a tree before cutting it down to be sure that it will not fall on a nearby fence. The angle of elevation of the tree from one position on a flat path from the tree is \(30^{\circ}\), and from a second position 40 feet farther along this path it is \(20^{\circ}\). What is the height of the tree?
44. Construction A loading ramp 10 feet long that makes an angle of \(18^{\circ}\) with the horizontal is to be replaced by a ramp that makes an angle of \(12^{\circ}\) with the horizontal. How long is the new ramp?
45. Commercial Navigation Adam must fly home to St. Louis from a business meeting in Oklahoma City. One flight option flies directly to St. Louis, a distance of about 461.1 miles. A second flight option first flies to Kansas City and then connects to St. Louis. The bearing from Oklahoma City to Kansas City is \(\mathrm{N} 29.6^{\circ} \mathrm{E}\), and the bearing from Oklahoma City to St. Louis is \(\mathrm{N} 57.7^{\circ} \mathrm{E}\). The bearing from St. Louis to

Oklahoma City is \(\mathrm{S} 57.7^{\circ} \mathrm{W}\), and the bearing from St. Louis to Kansas City is \(\mathrm{N} 79.4^{\circ} \mathrm{W}\). How many more frequent flyer miles will Adam receive if he takes the connecting flight rather than the direct flight?
Source: www.landings.com
46. Time Lost due to a Navigation Error In attempting to fly from city \(P\) to city \(Q\), an aircraft followed a course that was \(10^{\circ}\) in error, as indicated in the figure. After flying a distance of 50 miles, the pilot corrected the course by turning at point \(R\) and flying 70 miles farther. If the constant speed of the aircraft was 250 miles per hour, how much time was lost due to the error?

47. Finding the Lean of the Leaning Tower of Pisa The famous Leaning Tower of Pisa was originally 184.5 feet high.* At a distance of 123 feet from the base of the tower, the angle of elevation to the top of the tower is found to be \(60^{\circ}\). Find \(\angle R P Q\) indicated in the figure. Also, find the perpendicular distance from \(R\) to \(P Q\).

48. Crankshafts on Cars On a certain automobile, the crankshaft is 3 inches long and the connecting rod is 9 inches long (see the figure). At the time when \(\angle O P Q\) is \(15^{\circ}\), how far is the piston \((P)\) from the center \((O)\) of the crankshaft?

49. Constructing a Highway U.S. 41, a highway whose primary directions are north-south, is being constructed along the west coast of Florida. Near Naples, a bay obstructs the straight path of the road. Since the cost of a bridge is prohibitive, engineers decide to go around the bay. The illustration shows the path that they decide on and the measurements taken. What is the length of highway needed to go around the bay?

50. Calculating Distances at Sea The navigator of a ship at sea spots two lighthouses that she knows to be 3 miles apart along a straight seashore. She determines that the angles formed between two line-of-sight observations of the lighthouses and the line from the ship directly to shore are \(15^{\circ}\) and \(35^{\circ}\). See the illustration.
(a) How far is the ship from lighthouse \(P\) ?
(b) How far is the ship from lighthouse \(Q\) ?
(c) How far is the ship from shore?

51. Designing an Awning An awning that covers a sliding glass door that is 88 inches tall forms an angle of \(50^{\circ}\) with the wall. The purpose of the awning is to prevent sunlight from

\footnotetext{
*On February 27, 1964, the government of Italy requested aid in preventing the tower from toppling. A multinational task force of engineers, mathematicians, and historians was assigned and met on the Azores islands to discuss stabilization methods. After over two decades of work on the subject, the tower was closed to the public in January 1990. During the time that the tower was closed, the bells were removed to relieve it of some weight, and cables were cinched around the third level and anchored several hundred meters away. Apartments and houses in the path of the tower were vacated for safety concerns. After a decade of corrective reconstruction and stabilization efforts, the tower was reopened to the public on December 15, 2001. Many methods were proposed to stabilize the tower, including the addition of 800 metric tons of lead counterweights to the raised end of the base. The final solution was to remove 38 cubic meters of soil from underneath the raised end. The tower has been declared stable for at least another 300 years.
}

entering the house when the angle of elevation of the Sun is more than \(65^{\circ}\). See the figure. Find the length \(L\) of the awning.

52. Finding Distances \(A\) forest ranger is walking on a path inclined at \(5^{\circ}\) to the horizontal directly toward a 100 -foottall fire observation tower. The angle of elevation from the path to the top of the tower is \(40^{\circ}\). How far is the ranger from the tower at this time?

53. Great Pyramid of Cheops One of the original Seven Wonders of the World, the Great Pyramid of Cheops was built about 2580 вс. Its original height was 480 feet 11 inches, but owing to the loss of its topmost stones, it is now shorter. Find the current height of the Great Pyramid using the information given in the illustration.
Source: Guinness Book of World Records

54. Determining the Height of an Aircraft Two sensors are spaced 700 feet apart along the approach to a small airport. When an aircraft is nearing the airport, the angle of elevation from the first sensor to the aircraft is \(20^{\circ}\), and that from the second sensor to the aircraft it is \(15^{\circ}\). Determine how high the aircraft is at this time.
55. Mercury The distance from the Sun to Earth is approximately \(149,600,000\) kilometers (km). The distance
from the Sun to Mercury is approximately \(57,910,000 \mathrm{~km}\). The elongation angle \(\alpha\) is the angle formed between the line of sight from Earth to the Sun and the line of sight from Earth to Mercury. See the figure. Suppose that the elongation angle for Mercury is \(15^{\circ}\). Use this information to find the possible distances between Earth and Mercury.

56. Venus The distance from the Sun to Earth is approximately \(149,600,000 \mathrm{~km}\). The distance from the Sun to Venus is approximately \(108,200,000 \mathrm{~km}\). The elongation angle \(\alpha\) is the angle formed between the line of sight from Earth to the Sun and the line of sight from Earth to Venus. Suppose that the elongation angle for Venus is \(10^{\circ}\). Use this information to find the possible distances between Earth and Venus.
57. The Original Ferris Wheel George Washington Gale Ferris, Jr., designed the original Ferris wheel for the 1893 World's Columbian Exposition in Chicago, Illinois. The wheel had 36 equally spaced cars each the size of a school bus. The distance between adjacent cars was approximately 22 feet. Determine the diameter of the wheel to the nearest foot.
Source: Carnegie Library of Pittsburgh, www.clpgh.org
58. Mollweide's Formula For any triangle, Mollweide's Formula (named after Karl Mollweide, 1774-1825) states that
\[
\frac{a+b}{c}=\frac{\cos \left[\frac{1}{2}(A-B)\right]}{\sin \left(\frac{1}{2} C\right)}
\]

Derive it.
[Hint: Use the Law of Sines and then a Sum-to-Product Formula. Notice that this formula involves all six parts of a triangle. As a result, it is sometimes used to check the solution of a triangle.]
59. Mollweide's Formula Another form of Mollweide's Formula is
\[
\frac{a-b}{c}=\frac{\sin \left[\frac{1}{2}(A-B)\right]}{\cos \left(\frac{1}{2} C\right)}
\]

Derive it.
60. For any triangle, derive the formula
\[
a=b \cos C+c \cos B
\]
[Hint: Use the fact that \(\sin A=\sin \left(180^{\circ}-B-C\right)\).]
61. Law of Tangents: For any triangle, derive the Law of Tangents:
\[
\frac{a-b}{a+b}=\frac{\tan \left[\frac{1}{2}(A-B)\right]}{\tan \left[\frac{1}{2}(A+B)\right]}
\]
[Hint: Use Mollweide's Formula.]
62. Circumscribing a Triangle Show that
\[
\frac{\sin A}{a}=\frac{\sin B}{b}=\frac{\sin C}{c}=\frac{1}{2 r}
\]
where \(r\) is the radius of the circle circumscribing the triangle \(P Q R\) whose sides are \(a, b\), and \(c\), as shown in the figure.
[Hint: Draw the diameter \(P P^{\prime}\). Then
\(B=\angle P Q R=\angle P P^{\prime} R\), and angle \(\angle P R P^{\prime}=90^{\circ}\).]

\section*{Discussion and Writing}
63. Make up three problems involving oblique triangles. One should result in one triangle, the second in two triangles, and the third in no triangle.
64. What do you do first if you are asked to solve a triangle and are given one side and two angles?
65. What do you do first if you are asked to solve a triangle and are given two sides and the angle opposite one of them?

\section*{Retain Your Knowledge}

Problems 66-69 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
66. Solve: \(3 x^{3}+4 x^{2}-27 x-36=0\)
67. Find the exact distance between \(P_{1}=(-1,-7)\) and \(P_{2}=(2,-1)\). Then approximate the distance to two decimal places.
68. Find the exact value of \(\tan \left[\cos ^{-1}\left(-\frac{7}{8}\right)\right]\).
69. Graph \(y=4 \sin \left(\frac{1}{2} x\right)\). Show at least two periods.

\section*{'Are You Prepared?' Answers}
1. \(\sin A \cos B-\cos A \sin B\)
2. \(30^{\circ}\) or \(\frac{\pi}{6}\)
3. \(\frac{15}{2}\)

\subsection*{7.3 The Law of Cosines}

\section*{PREPARING FOR THIS SECTION Before getting started, review the following:}
- Trigonometric Equations (Section 6.3, pp. 482-485)
- Distance Formula (Foundations, Section 1, pp. 3-4)

Now Work the 'Are You Prepared?' problems on page 558.
OBJECTIVES 1 Solve SAS Triangles (p.556)
2 Solve SSS Triangles (p. 557)
3 Solve Applied Problems (p. 557)

In the previous section, the Law of Sines was used to solve Case 1 (SAA or ASA) and Case 2 (SSA) of an oblique triangle. In this section, the Law of Cosines is derived and used to solve Cases 3 and 4.

Case 3: Two sides and the included angle are known (SAS).
Case 4: Three sides are known (SSS).

THEOREM

\section*{Law of Cosines}

For a triangle with sides \(a, b, c\) and opposite angles \(A, B, C\), respectively,
\[
\begin{align*}
& c^{2}=a^{2}+b^{2}-2 a b \cos C  \tag{1}\\
& b^{2}=a^{2}+c^{2}-2 a c \cos B  \tag{2}\\
& a^{2}=b^{2}+c^{2}-2 b c \cos A
\end{align*}
\]

Figure 35

(a) Angle \(C\) is acute

(b) Angle \(C\) is obtuse

THEOREM

Proof Only formula (1) is proved here. Formulas (2) and (3) may be proved using the same argument.

Begin by strategically placing a triangle on a rectangular coordinate system so that the vertex of angle \(C\) is at the origin and side \(b\) lies along the positive \(x\)-axis. Regardless of whether \(C\) is acute, as in Figure 35(a), or obtuse, as in Figure 35(b), the vertex of angle \(B\) has coordinates \((a \cos C, a \sin C)\). The vertex of angle \(A\) has coordinates \((b, 0)\).

Use the distance formula to compute \(c^{2}\).
\[
\begin{aligned}
c^{2} & =(b-a \cos C)^{2}+(0-a \sin C)^{2} \\
& =b^{2}-2 a b \cos C+a^{2} \cos ^{2} C+a^{2} \sin ^{2} C \\
& =b^{2}-2 a b \cos C+a^{2}\left(\cos ^{2} C+\sin ^{2} C\right) \\
& =a^{2}+b^{2}-2 a b \cos C
\end{aligned}
\]

Each of formulas (1), (2), and (3) may be stated in words as follows:

\section*{Law of Cosines}

The square of one side of a triangle equals the sum of the squares of the other two sides, minus twice their product times the cosine of their included angle.

Observe that if the triangle is a right triangle (so that, say, \(C=90^{\circ}\) ), formula (1) becomes the familiar Pythagorean Theorem: \(c^{2}=a^{2}+b^{2}\). The Pythagorean Theorem is a special case of the Law of Cosines!

\section*{1 Solve SAS Triangles}

The Law of Cosines is used to solve Case 3 (SAS), which applies to triangles for which two sides and the included angle are known.

\section*{EXAMPLE I}

\section*{Solution}

Figure 36

\section*{Using the Law of Cosines to Solve an SAS Triangle}

Solve the triangle: \(a=2, \quad b=3, \quad C=60^{\circ}\)
See Figure 36. Because two sides, \(a\) and \(b\), and the included angle, \(C\), are known, the Law of Cosines makes it easy to find the third side, \(c\).
\[
\begin{aligned}
c^{2} & =a^{2}+b^{2}-2 a b \cos C \\
& =2^{2}+3^{2}-2 \cdot 2 \cdot 3 \cdot \cos 60^{\circ} \quad a=2, b=3, C=60^{\circ} \\
& =13-\left(12 \cdot \frac{1}{2}\right)=7 \\
c & =\sqrt{7}
\end{aligned}
\]

Side \(c\) is of length \(\sqrt{7}\). To find the angles \(A\) and \(B\), either the Law of Sines or the Law of Cosines may be used. It is preferable to use the Law of Cosines, because it leads to an equation with one solution. Using the Law of Sines would lead to an equation with two solutions that would need to be checked to determine which solution fits the given data.* We choose to use formulas (2) and (3) of the Law of Cosines to find \(A\) and \(B\).

For \(A\) :
\[
\begin{aligned}
a^{2} & =b^{2}+c^{2}-2 b c \cos A \\
2 b c \cos A & =b^{2}+c^{2}-a^{2} \\
\cos A & =\frac{b^{2}+c^{2}-a^{2}}{2 b c}=\frac{9+7-4}{2 \cdot 3 \sqrt{7}}=\frac{12}{6 \sqrt{7}}=\frac{2 \sqrt{7}}{7} \\
A & =\cos ^{-1} \frac{2 \sqrt{7}}{7} \approx 40.9^{\circ}
\end{aligned}
\]

\footnotetext{
*The Law of Sines can be used if the angle sought is opposite the smaller side, thus ensuring that it is acute. (In Figure 36, use the Law of Sines to find \(A\), the angle opposite the smaller side.)
}

NOTE \(B\) could also be found by using the fact that the sum \(A+B+C\) \(=180^{\circ}\), so \(B=180^{\circ}-40.9^{\circ}-60^{\circ}\) \(=79.1^{\circ}\). However, using the Law of Cosines twice allows for a check.

For \(B\) :
\[
\begin{aligned}
b^{2} & =a^{2}+c^{2}-2 a c \cos B \\
\cos B & =\frac{a^{2}+c^{2}-b^{2}}{2 a c}=\frac{4+7-9}{4 \sqrt{7}}=\frac{2}{4 \sqrt{7}}=\frac{\sqrt{7}}{14} \\
B & =\cos ^{-1} \frac{\sqrt{7}}{14} \approx 79.1^{\circ}
\end{aligned}
\]

Note that \(A+B+C=40.9^{\circ}+79.1^{\circ}+60^{\circ}=180^{\circ}\), as required.
an Now Work problem 9

\section*{2 Solve SSS Triangles}

The next example illustrates how the Law of Cosines is used when three sides of a triangle are known, Case 4 (SSS).

\section*{EXAMPLE 2 Using the Law of Cosines to Solve an SSS Triangle}

Solve the triangle: \(a=4, b=3, c=6\)
Solution See Figure 37. To find the angles \(A, B\), and \(C\), proceed as in finding the angles in the

Figure 37

solution to Example 1.

For \(A\) :
\[
\begin{aligned}
\cos A & =\frac{b^{2}+c^{2}-a^{2}}{2 b c}=\frac{9+36-16}{2 \cdot 3 \cdot 6}=\frac{29}{36} \\
A & =\cos ^{-1} \frac{29}{36} \approx 36.3^{\circ}
\end{aligned}
\]

For B:
\[
\begin{aligned}
\cos B & =\frac{a^{2}+c^{2}-b^{2}}{2 a c}=\frac{16+36-9}{2 \cdot 4 \cdot 6}=\frac{43}{48} \\
B & =\cos ^{-1} \frac{43}{48} \approx 26.4^{\circ}
\end{aligned}
\]

Now use \(A\) and \(B\) to find \(C\) :
\[
C=180^{\circ}-A-B \approx 180^{\circ}-36.3^{\circ}-26.4^{\circ}=117.3^{\circ}
\]

Now Now Problem 15

\section*{3 Solve Applied Problems}

\section*{EXAMPLE 3}

\section*{Correcting a Navigational Error}

A motorized sailboat leaves Naples, Florida, bound for Key West, 150 miles away. Maintaining a constant speed of 15 miles per hour, but encountering heavy crosswinds and strong currents, the crew finds, after 4 hours, that the sailboat is off course by \(20^{\circ}\).
(a) How far is the sailboat from Key West at this time?
(b) Through what angle should the sailboat turn to correct its course?
(c) How much time has been added to the trip because of this? (Assume that the speed remains at 15 miles per hour.)

Solution See Figure 38. With a speed of 15 miles per hour, the sailboat has gone 60 miles after 4 hours. The distance \(x\) of the sailboat from Key West is to be found, along with the angle \(\theta\) that the sailboat should turn through to correct its course.
(a) To find \(x\), use the Law of Cosines, since two sides and the included angle are known.
\[
\begin{aligned}
x^{2} & =150^{2}+60^{2}-2(150)(60) \cos 20^{\circ} \approx 9185.53 \\
x & \approx 95.8
\end{aligned}
\]

The sailboat is about 96 miles from Key West.
(b) With all three sides of the triangle now known, use the Law of Cosines again to find the angle \(A\) opposite the side of length 150 miles.
\[
\begin{aligned}
150^{2} & =96^{2}+60^{2}-2(96)(60) \cos A \\
9684 & =-11,520 \cos A \\
\cos A & \approx-0.8406 \\
A & \approx 147.2^{\circ}
\end{aligned}
\]

Hence
\[
\theta=180^{\circ}-A \approx 180^{\circ}-147.2^{\circ}=32.8^{\circ}
\]

The sailboat should turn through an angle of about \(33^{\circ}\) to correct its course.
(c) The total length of the trip is now \(60+96=156\) miles. The extra 6 miles only requires about 0.4 hour, or 24 minutes, more if the speed of 15 miles per hour is maintained.

\section*{Historical Feature}

TThe Law of Sines was known vaguely long before it was explicitly stated by Nasir Eddin (about AD 1250). Ptolemy (about AD 150) was aware of it in a form using a chord function instead of the sine function. But it was first clearly stated in Europe by Regiomontanus, writing in 1464.

The Law of Cosines appears first in Euclid's Elements (Book II), but in a well-disguised form in which squares built on the sides of triangles are added and a rectangle representing the cosine term is subtracted. It was thus known to all mathematicians because of their familiarity
with Euclid's work. An early modern form of the Law of Cosines, that for finding the angle when the sides are known, was stated by François Viète (in 1593).

The Law of Tangents (see Problem 61 of Section 7.2) has become obsolete. In the past it was used in place of the Law of Cosines, because the Law of Cosines was very inconvenient for calculation with logarithms or slide rules. Mixing addition and multiplication is now very easy on a calculator, however, and the Law of Tangents has been shelved along with the slide rule.

\subsection*{7.3 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. Write the formula for the distance \(d\) from \(P_{1}=\left(x_{1}, y_{1}\right)\) to \(P_{2}=\left(x_{2}, y_{2}\right) \cdot(\) p. 3)
2. If \(\theta\) is an acute angle, solve the equation \(\cos \theta=\frac{\sqrt{2}}{2}\). (pp. 482-485)

\section*{Concepts and Vocabulary}
3. If three sides of a triangle are given, the Law of \(\qquad\) is used to solve the triangle.
4. If one side and two angles of a triangle are given, the Law of
\(\qquad\) is used to solve the triangle.
5. If two sides and the included angle of a triangle are given, the Law of \(\qquad\) is used to solve the triangle.
6. True or False Given only the three sides of a triangle, there is insufficient information to solve the triangle.
7. True or False Given two sides and the included angle, the first thing to do to solve the triangle is to use the Law of Sines.
8. True or False A special case of the Law of Cosines is the Pythagorean Theorem.

\section*{Skill Building}

In Problems 9-16, solve each triangle.

10.

11.

12.

13.

14.

15.

In Problems 17-32, solve each triangle.
17. \(a=3, \quad b=4, \quad C=40^{\circ}\)
19. \(b=1, \quad c=3, \quad A=80^{\circ}\)
20. \(a=6, \quad b=4, \quad C=60^{\circ}\)
22. \(b=4, \quad c=1, \quad A=120^{\circ}\)
23. \(a=2, \quad b=2, \quad C=50^{\circ}\)
25. \(a=12, b=13, c=5\)
26. \(a=4, \quad b=5, \quad c=3\)
28. \(a=3, \quad b=3, \quad c=2\)
29. \(a=5, \quad b=8, \quad c=9\)
32. \(a=9, \quad b=7, \quad c=10\)
18. \(a=2, \quad c=1, \quad B=10^{\circ}\)
21. \(a=3, \quad c=2, \quad B=110^{\circ}\)
24. \(a=3, \quad c=2, \quad B=90^{\circ}\)
27. \(a=2, \quad b=2, \quad c=2\)

30. \(a=4, \quad b=3, \quad c=6\)
31. \(a=10, \quad b=8, \quad c=5\)

\section*{Mixed Practice}

In Problems 33-42, solve each triangle using either the Law of Sines or the Law of Cosines.
33. \(B=20^{\circ}, C=75^{\circ}, b=5\)
34. \(A=50^{\circ}, B=55^{\circ}, c=9\)
35. \(a=6, b=8, c=9\)
36. \(a=14, b=7, A=85^{\circ}\)
37. \(B=35^{\circ}, C=65^{\circ}, a=15\)
38. \(a=4, c=5, B=55^{\circ}\)
39. \(A=10^{\circ}, a=3, b=10\)
40. \(A=65^{\circ}, B=72^{\circ}, b=7\)
41. \(b=5, c=12, A=60^{\circ}\)
42. \(a=10, b=10, c=15\)

\section*{Applications and Extensions}
43. Distance to the Green A golfer hits an errant tee shot that lands in the rough. A marker in the center of the fairway is 150 yards from the center of the green. While standing on the marker and facing the green, the golfer turns \(110^{\circ}\) toward his ball. He then paces off 35 yards to his ball. See the figure. How far is the ball from the center of the green?

44. Navigation An airplane flies due north from Ft. Myers to Sarasota, a distance of 150 miles, and then turns through an angle of \(50^{\circ}\) and flies to Orlando, a distance of 100 miles. See the figure.
(a) How far is it directly from Ft. Myers to Orlando?
(b) What bearing should the pilot use to fly directly from Ft. Myers to Orlando?

45. Avoiding a Tropical Storm A cruise ship maintains an (1) average speed of 15 knots in going from San Juan, Puerto Rico, to Barbados, West Indies, a distance of 600 nautical miles. To avoid a tropical storm, the captain heads out of San Juan in a direction of \(20^{\circ}\) off a direct heading to Barbados. The captain maintains the 15 -knot speed for 10 hours, after which time the path to Barbados becomes clear of storms.
(a) Through what angle should the captain turn to head directly to Barbados?
(b) Once the turn is made, how long will it be before the ship reaches Barbados if the same 15 -knot speed is maintained?

46. Revising a Flight Plan In attempting to fly from Chicago to Louisville, a distance of 330 miles, a pilot inadvertently took a course that was \(10^{\circ}\) in error, as indicated in the figure.
(a) If the aircraft maintains an average speed of 220 miles per hour, and if the error in direction is discovered after 15 minutes, through what angle should the pilot turn to head toward Louisville?
(b) What new average speed should the pilot maintain so that the total time of the trip is 90 minutes?

47. Major League Baseball Field A major league baseball diamond is actually a square 90 feet on a side. The pitching rubber is located 60.5 feet from home plate on a line joining home plate and second base.
(a) How far is it from the pitching rubber to first base?
(b) How far is it from the pitching rubber to second base?
(c) If a pitcher faces home plate, through what angle does he need to turn to face first base?
48. Little League Baseball Field According to Little League baseball official regulations, the diamond is a square 60 feet on a side. The pitching rubber is located 46 feet from home plate on a line joining home plate and second base.
(a) How far is it from the pitching rubber to first base?
(b) How far is it from the pitching rubber to second base?
(c) If a pitcher faces home plate, through what angle does he need to turn to face first base?
49. Finding the Length of a Guy Wire The height of a radio tower is 500 feet, and the ground on one side of the tower slopes upward at an angle of \(10^{\circ}\) (see the figure).
(a) How long should a guy wire be if it is to connect to the top of the tower and be secured at a point on the sloped side 100 feet from the base of the tower?
(b) How long should a second guy wire be if it is to connect to the middle of the tower and be secured at a point 100 feet from the base on the flat side?

50. Finding the Length of a Guy Wire A radio tower 500 feet high is located on the side of a hill with an inclination to the horizontal of \(5^{\circ}\). See the figure. How long should two guy wires be if they are to connect to the top of the tower and be secured at two points 100 feet directly above and directly below the base of the tower?

51. Wrigley Field, Home of the Chicago Cubs The distance from home plate to the fence in dead center in Wrigley Field is 400 feet (see the figure). How far is it from the fence in dead center to third base?

52. Little League Baseball The distance from home plate to the fence in dead center at the Oak Lawn Little League field is 280 feet. How far is it from the fence in dead center to third base?
[Hint: The distance between the bases in Little League is 60 feet.]
53. Building a Swing Set Clint is building a wooden swing set for his children. Each supporting end of the swing set is to be an A-frame constructed with two 10 -foot-long 4-by-4s joined at a \(45^{\circ}\) angle. To prevent the swing set from tipping over, Clint wants to secure the base of each A-frame to concrete footings. How far apart should the footings for each A-frame be?
54. Rods and Pistons Rod \(O A\) rotates about the fixed point \(O\) so that point \(A\) travels on a circle of radius \(r\). Connected to point \(A\) is another \(\operatorname{rod} A B\) of length \(L>2 r\), and point \(B\) is connected to a piston. See the figure. Show that the distance \(x\) between point \(O\) and point \(B\) is given by
\[
x=r \cos \theta+\sqrt{r^{2} \cos ^{2} \theta+L^{2}-r^{2}}
\]
where \(\theta\) is the angle of rotation of \(\operatorname{rod} O A\).

55. Geometry Show that the length \(d\) of a chord of a circle of radius \(r\) is given by the formula
\[
d=2 r \sin \frac{\theta}{2}
\]

\section*{Discussion and Writing}
59. What do you do first if you are asked to solve a triangle and are given two sides and the included angle?
60. What do you do first if you are asked to solve a triangle and are given three sides?
where \(\theta\) is the central angle formed by the radii to the ends of the chord. See the figure. Use this result to derive the fact that \(\sin \theta<\theta\), where \(\theta>0\) is measured in radians.

56. For any triangle, show that
\[
\cos \frac{C}{2}=\sqrt{\frac{s(s-c)}{a b}}
\]
where \(s=\frac{1}{2}(a+b+c)\).
[Hint: Use a Half-angle Formula and the Law of Cosines.]
57. For any triangle, show that
\[
\sin \frac{C}{2}=\sqrt{\frac{(s-a)(s-b)}{a b}}
\]
where \(s=\frac{1}{2}(a+b+c)\).
58. Use the Law of Cosines to prove the identity
\[
\frac{\cos A}{a}+\frac{\cos B}{b}+\frac{\cos C}{c}=\frac{a^{2}+b^{2}+c^{2}}{2 a b c}
\]
61. Make up an applied problem that requires using the Law of Cosines.
62. Write down your strategy for solving an oblique triangle.
63. State the Law of Cosines in words.

\section*{Retain Your Knowledge}

Problems 64-67 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
64. Graph: \(R(x)=\frac{2 x+1}{x-3}\)
65. Solve \(4^{x}=3^{x+1}\). If the solution is irrational, express it both in exact form and as a decimal rounded to three places.
66. Given \(\tan \theta=-\frac{2 \sqrt{6}}{5}\) and \(\cos \theta=-\frac{5}{7}\), find the exact value of each of the four remaining trigonometric functions.
67. Find an equation for the graph.

'Are You Prepared?' Answers
1. \(d=\sqrt{\left(x_{2}-x_{1}\right)^{2}+\left(y_{2}-y_{1}\right)^{2}}\)
2. \(\theta=45^{\circ}\) or \(\frac{\pi}{4}\)

\subsection*{7.4 Area of a Triangle}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Geometry Essentials (Appendix A, Section A.2, pp. A15-A16)

Now Work the 'Are You Prepared?' problem on page 564.
OBJECTIVES 1 Find the Area of SAS Triangles (p. 562)
2 Find the Area of SSS Triangles (p. 563)

THEOREM

NOTE Typically, \(A\) is used for area. However, because \(A\) is also used as the measure of an angle, \(K\) is used here for area to avoid confusion.

Figure 41

In this section, several formulas for calculating the area of a triangle are derived. The most familiar of these is the following:

The area \(K\) of a triangle is
\[
\begin{equation*}
K=\frac{1}{2} b h \tag{1}
\end{equation*}
\]
where \(b\) is the base and \(h\) is an altitude drawn to that base.
Proof Construct a rectangle of base \(b\) and height \(h\) around the triangle. See Figures 39 and 40.

Triangles 1 and 2 in Figure 40 are equal in area, as are triangles 3 and 4. Consequently, the area of the triangle with base \(b\) and altitude \(h\) is exactly half the area of the rectangle, which is \(b h\).

Figure 39

Figure 40

\section*{1 Find the Area of SAS Triangles}

If the base \(b\) and the altitude \(h\) to that base are known, then the area of a triangle can be found using formula (1). Usually, though, the information required to use formula (1) is not given. Suppose, for example, that two sides \(a\) and \(b\) and the included angle \(C\) are known. See Figure 41. Then the altitude \(h\) can be found by noting that
\[
\frac{h}{a}=\sin C
\]
so that
\[
h=a \sin C
\]

Using this fact in formula (1) produces
\[
K=\frac{1}{2} b h=\frac{1}{2} b(a \sin C)=\frac{1}{2} a b \sin C
\]

Hence the area \(K\) of the triangle is given by the formula
\[
\begin{equation*}
K=\frac{1}{2} a b \sin C \tag{2}
\end{equation*}
\]

Dropping altitudes from the other two vertices of the triangle leads to the following corresponding formulas:
\[
\begin{align*}
& K=\frac{1}{2} b c \sin A  \tag{3}\\
& K=\frac{1}{2} a c \sin B \tag{4}
\end{align*}
\]

It is easiest to remember these formulas by using the following wording:
THEOREM The area \(K\) of a triangle equals one-half the product of two of its sides times the sine of their included angle.

Find the area \(K\) of the triangle for which \(a=8, b=6\), and \(C=30^{\circ}\).

Figure 42 Solution See Figure 42. Use formula (2) to get

\[
K=\frac{1}{2} a b \sin C=\frac{1}{2} \cdot 8 \cdot 6 \cdot \sin 30^{\circ}=12 \text { square units }
\]

Now Work problem 5

\section*{2 Find the Area of SSS Triangles}

If the three sides of a triangle are known, another formula, called Heron's Formula (named after Heron of Alexandria), can be used to find the area of a triangle.

\section*{THEOREM}

\section*{Heron's Formula}

The area \(K\) of a triangle with sides \(a, b\), and \(c\) is
\[
\begin{equation*}
K=\sqrt{s(s-a)(s-b)(s-c)} \tag{5}
\end{equation*}
\]
where \(s=\frac{1}{2}(a+b+c)\).

\section*{EXAMPLE 2 Finding the Area of an SSS Triangle}

Find the area of a triangle whose sides are 4,5 , and 7 .
Solution Let \(a=4, b=5\), and \(c=7\). Then
\[
s=\frac{1}{2}(a+b+c)=\frac{1}{2}(4+5+7)=8
\]

Heron's Formula gives the area \(K\) as
\[
K=\sqrt{s(s-a)(s-b)(s-c)}=\sqrt{8 \cdot 4 \cdot 3 \cdot 1}=\sqrt{96}=4 \sqrt{6} \text { square units }
\]

Now Work problem 11
Proof of Heron's Formula The proof given here uses the Law of Cosines and is quite different from the proof given by Heron.

From the Law of Cosines,
\[
c^{2}=a^{2}+b^{2}-2 a b \cos C
\]
and the Half-angle Formula,
\[
\cos ^{2} \frac{C}{2}=\frac{1+\cos C}{2}
\]
it follows that
\[
\begin{align*}
& \cos ^{2} \frac{C}{2}=\frac{1+\cos C}{2}=\frac{1+\frac{a^{2}+b^{2}-c^{2}}{2 a b}}{2} \\
&=\frac{a^{2}+2 a b+b^{2}-c^{2}}{4 a b}=\frac{(a+b)^{2}-c^{2}}{4 a b} \\
&=\frac{(a+b-c)(a+b+c)}{4 a b}=\frac{2(s-c) \cdot 2 s}{4 a b}=\frac{s(s-c)}{a b}  \tag{6}\\
& \quad \begin{aligned}
\uparrow \\
\text { Factor. }
\end{aligned} \\
& \begin{aligned}
\text { a }+b-c & =a+b+c-2 c \\
& =2 s-2 c=2(s-c)
\end{aligned}
\end{align*}
\]
\[
\begin{align*}
& \text { Similarly, using } \sin ^{2} \frac{C}{2}=\frac{1-\cos C}{2} \text {, it follows that } \\
& \qquad \sin ^{2} \frac{C}{2}=\frac{(s-a)(s-b)}{a b} \tag{7}
\end{align*}
\]

Now use formula (2) for the area.
\[
\begin{align*}
K & =\frac{1}{2} a b \sin C \\
& =\frac{1}{2} a b \cdot 2 \sin \frac{C}{2} \cos \frac{C}{2} \\
& =a b \sqrt{\frac{(s-a)(s-b)}{a b}} \sqrt{\frac{s(s-c)}{a b}} \quad \sin C=\sin \left[2\left(\frac{C}{2}\right)\right]=2 \sin \frac{C}{2} \cos \frac{C}{2} \\
& =\sqrt{s(s-a)(s-b)(s-c)} \quad \text { Use equations (6) and (7). }
\end{align*}
\]

\section*{Historical Feature}

Heron's Formula (also known as Hero's Formula) was first expressed by Heron of Alexandria (first century AD), who had, besides his mathematical talents, a good deal of engineering skills. In various temples his mechanical devices produced effects that seemed supernatural, and visitors presumably were thus influenced to generosity. Heron's book Metrica, on making such
devices, has survived and was discovered in 1896 in the city of Constantinople.

Heron's Formulas for the area of a triangle caused some mild discomfort in Greek mathematics, because a product with two factors was an area, a product with three factors was a volume, but four factors seemed contradictory in Heron's time.

\subsection*{7.4 Assess Your Understanding}
"Are You Prepared?' The answer is given at the end of these exercises. If you get the wrong answer, read the page listed in red.
1. The area \(K\) of a triangle whose base is \(b\) and whose height is \(h\) is \(\qquad\) (p. A15)

\section*{Concepts and Vocabulary}
2. If two sides \(a\) and \(b\) and the included angle \(C\) are known in a triangle, then the area \(K\) is found using the formula
4. True or False Heron's Formula is used to find the area of SSS triangles.
\(K=\) \(\qquad\)
3. The area \(K\) of a triangle with sides \(a, b\), and \(c\) is
\(K=\) \(\qquad\) where \(s=\) \(\qquad\) .

\section*{Skill Building}

In Problems 5-12, find the area of each triangle. Round answers to two decimal places.

8.

11.

6.

9.

12.

7.

10.

In Problems 13-24, find the area of each triangle. Round answers to two decimal places.
13. \(a=3, \quad b=4, \quad C=40^{\circ}\)
14. \(a=2, \quad c=1, \quad B=10^{\circ}\)
15. \(b=1, \quad c=3, \quad A=80^{\circ}\)
16. \(a=6, \quad b=4, \quad C=60^{\circ}\)
17. \(a=3, \quad c=2, \quad B=110^{\circ}\)

22. \(a=3, \quad b=3, \quad c=2\)
23. \(a=5, b=8, c=9\)
24. \(a=4, \quad b=3, \quad c=6\)

\section*{Applications and Extensions}
25. Area of an ASA Triangle If two angles and the included side are given, the third angle is easy to find. Use the Law of Sines to show that the area \(K\) of a triangle with side \(a\) and angles \(A, B\), and \(C\) is
\[
K=\frac{a^{2} \sin B \sin C}{2 \sin A}
\]
26. Area of a Triangle Prove the two other forms of the formula given in Problem 25.
\[
K=\frac{b^{2} \sin A \sin C}{2 \sin B} \quad \text { and } \quad K=\frac{c^{2} \sin A \sin B}{2 \sin C}
\]

In Problems 27-32, use the results of Problem 25 or 26 to find the area of each triangle. Round answers to two decimal places.
27. \(A=40^{\circ}, \quad B=20^{\circ}, \quad a=2\)
28. \(A=50^{\circ}, \quad C=20^{\circ}, \quad a=3\)
29. \(B=70^{\circ}, \quad C=10^{\circ}, \quad b=5\)
30. \(A=70^{\circ}, \quad B=60^{\circ}, \quad c=4\)
31. \(A=110^{\circ}, \quad C=30^{\circ}, \quad c=3\)
32. \(B=10^{\circ}, \quad C=100^{\circ}, \quad b=2\)
33. Area of a Segment Find the area of the segment (shaded in blue in the figure) of a circle whose radius is 8 feet, formed by a central angle of \(70^{\circ}\).
[Hint: Subtract the area of the triangle from the area of the sector to obtain the area of the segment.]

34. Area of a Segment Find the area of the segment of a circle whose radius is 5 inches, formed by a central angle of \(40^{\circ}\).
35. Cost of a Triangular Lot The dimensions of a triangular lot are 100 feet by 50 feet by 75 feet. If the price of such land is \(\$ 3\) per square foot, how much does the lot cost?
36. Amount of Material to Make a Tent A cone-shaped tent is made from a circular piece of canvas 24 feet in diameter by removing a sector with central angle \(100^{\circ}\) and connecting the ends. What is the surface area of the tent?
37. Dimensions of Home Plate The dimensions of home plate at any major league baseball stadium are shown. Find the area of home plate.

38. Computing Areas See the following figure. Find the area of the shaded region enclosed in a semicircle of diameter 10 inches. The length of the chord \(P Q\) is 8 inches.
[Hint: Triangle \(P Q R\) is a right triangle.]

39. Geometry Consult the figure, which shows a circle of radius \(r\) with center at \(O\). Find the area \(K\) of the shaded region as a function of the central angle \(\theta\).

40. Approximating the Area of a Lake To approximate the area of a lake, a surveyor walks around the perimeter of the lake, taking the measurements shown in the illustration. Using this technique, what is the approximate area of the lake?
[Hint: Use the Law of Cosines on the three triangles shown, and then find the sum of their areas.]

41. The Flatiron Building Completed in 1902 in New York City, the Flatiron Building is triangle-shaped and bounded by 22nd Street, Broadway, and 5th Avenue. The building
measures approximately 87 feet on the 22 nd Street side, 190 feet on the Broadway side, and 173 feet on the 5th Avenue side. Approximate the ground area covered by the building.

42. Bermuda Triangle The Bermuda Triangle is roughly defined by Hamilton, Bermuda; San Juan, Puerto Rico; and Fort Lauderdale, Florida. The distances from Hamilton to Fort Lauderdale, Fort Lauderdale to San Juan, and San Juan to Hamilton are approximately 1028, 1046, and 965 miles, respectively. Ignoring the curvature of Earth, approximate the area of the Bermuda Triangle.
Source: www.worldatlas.com
43. Geometry Refer to the figure. If \(|O A|=1\), show that:
(a) Area \(\triangle O A C=\frac{1}{2} \sin \alpha \cos \alpha\)
(b) Area \(\triangle O C B=\frac{1}{2}|O B|^{2} \sin \beta \cos \beta\)
(c) Area \(\triangle O A B=\frac{1}{2}|O B| \sin (\alpha+\beta)\)
(d) \(|O B|=\frac{\cos \alpha}{\cos \beta}\)
(e) \(\sin (\alpha+\beta)=\sin \alpha \cos \beta+\cos \alpha \sin \beta\)
\([\) Hint: Area \(\triangle O A B=\) Area \(\triangle O A C+\) Area \(\triangle O C B]\)

44. Geometry Refer to the figure, in which a unit circle is drawn.

The line segment \(D B\) is tangent to the circle, and \(\theta\) is acute.
(a) Express the area of \(\triangle O B C\) in terms of \(\sin \theta\) and \(\cos \theta\).
(b) Express the area of \(\triangle O B D\) in terms of \(\sin \theta\) and \(\cos \theta\).
(c) The area of the sector \(\overparen{O B C}\) of the circle is \(\frac{1}{2} \theta\), where \(\theta\) is measured in radians. Use the results of parts (a) and (b) and the fact that
\[
\text { Area } \triangle O B C<\text { Area } \overparen{O B C}<\text { Area } \triangle O B D
\]
to show that
\[
1<\frac{\theta}{\sin \theta}<\frac{1}{\cos \theta}
\]

45. The Cow Problem* A cow is tethered to one corner of a square barn, 10 feet by 10 feet, with a rope 100 feet long. What is the maximum grazing area for the cow?
[See the illustration.]

46. Another Cow Problem If the barn in Problem 45 is rectangular, 10 feet by 20 feet, what is the maximum grazing area for the cow?
47. Perfect Triangles A perfect triangle is one having natural number sides for which the area is numerically equal to the perimeter. Show that the triangles with the given side lengths are perfect.

\footnotetext{
*Suggested by Professor Teddy Koukounas of Suffolk Community College, who learned of it from an old farmer in Virginia. Solution provided by Professor Kathleen Miranda of SUNY at Old Westbury.
}
48. A triangle has vertices \(A(0,0), B(1,0)\), and \(C\), where \(C\) is the point on the unit circle corresponding to an angle of \(105^{\circ}\) when it is drawn in standard position. Find the area of the triangle. State the answer in completely simplified form with a rationalized denominator.
49. Show that a formula for the altitude \(h\) from a vertex to the opposite side \(a\) of a triangle is
\[
h=\frac{a \sin B \sin C}{\sin A}
\]
50. If \(h_{1}, h_{2}\), and \(h_{3}\) are the altitudes dropped from \(P, Q\), and \(R\), respectively, in a triangle (see the figure shown to the right), show that
\[
\frac{1}{h_{1}}+\frac{1}{h_{2}}+\frac{1}{h_{3}}=\frac{s}{K}
\]
where \(K\) is the area of the triangle and \(s=\frac{1}{2}(a+b+c)\).
[Hint: \(h_{1}=\frac{2 K}{a}\).]

Inscribed Circle For Problems 51-54, the lines that bisect each angle of a triangle meet in a single point \(O\), and the perpendicular distance \(r\) from \(O\) to each side of the triangle is the same. The circle with center at \(O\) and radius \(r\) is called the inscribed circle of the triangle (see the figure).

51. Apply the formula from Problem 49 to triangle \(O P Q\) to show that
\[
r=\frac{c \sin \frac{A}{2} \sin \frac{B}{2}}{\cos \frac{C}{2}}
\]
52. Use the result of Problem 51 and the results of Problems 56 and 57 in Section 7.3 to show that
\[
\cot \frac{C}{2}=\frac{s-c}{r}
\]
where \(s=\frac{1}{2}(a+b+c)\).
53. Show that
\[
\cot \frac{A}{2}+\cot \frac{B}{2}+\cot \frac{C}{2}=\frac{s}{r}
\]
54. Show that the area \(K\) of triangle \(P Q R\) is \(K=r s\), where \(s=\frac{1}{2}(a+b+c)\). Then show that
\[
r=\sqrt{\frac{(s-a)(s-b)(s-c)}{s}}
\]

\section*{Discussion and Writing}
55. What do you do first if you are asked to find the area of a triangle and are given two sides and the included angle?
56. What do you do first if you are asked to find the area of a triangle and are given three sides?
57. State the formula for the area of an SAS triangle in words.

\section*{-Retain Your Knowledge}

Problems 58-61 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
58. Without graphing, determine whether the quadratic function \(f(x)=-3 x^{2}+12 x+5\) has a maximum value or a minimum value, and then find the value.
59. Solve the inequality: \(\frac{x+1}{x^{2}-9} \leq 0\)
60. \(P=\left(-\frac{\sqrt{7}}{3}, \frac{\sqrt{2}}{3}\right)\) is the point on the unit circle that corresponds to a real number \(t\). Find the exact values of the six trigonometric functions of \(t\).
61. Establish the identity: \(\csc \theta-\sin \theta=\cos \theta \cot \theta\)

\section*{'Are You Prepared?' Answer}
1. \(K=\frac{1}{2} b h\)

\subsection*{7.5 Simple Harmonic Motion; Damped Motion; Combining Waves}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Sinusoidal Graphs (Section 5.4, pp. 420-430)

Now Work the 'Are You Prepared?' problem on page 574.
OBJECTIVES 1 Build a Model for an Object in Simple Harmonic Motion (p. 568)
2 Analyze Simple Harmonic Motion (p. 570)
3 Analyze an Object in Damped Motion (p. 571)
4 Graph the Sum of Two Functions (p. 572)

\section*{1 Build a Model for an Object in Simple Harmonic Motion}

Vibrating tuning fork

Figure 43

Coiled spring

Many physical phenomena can be described as simple harmonic motion. Radio and television waves, light waves, sound waves, and water waves exhibit motion that is simple harmonic.

The swinging of a pendulum, the vibrations of a tuning fork, and the bobbing of a weight attached to a coiled spring are examples of vibrational motion. In this type of motion, an object swings back and forth over the same path. In Figure 43, the point \(B\) is the equilibrium (rest) position of the vibrating object. The amplitude is the distance from the object's rest position to its point of greatest displacement (either point \(A\) or point \(C\) in Figure 43). The period is the time required to complete one vibrationthat is, the time it takes to go from, say, point \(A\) through \(B\) to \(C\) and back to \(A\).

Simple harmonic motion is a special kind of vibrational motion in which the acceleration \(a\) of the object is directly proportional to the negative of its displacement \(d\) from its rest position. That is, \(a=-k d, k>0\).

For example, when the mass hanging from the spring in Figure 43 is pulled down from its rest position \(B\) to the point \(C\), the force of the spring tries to restore the mass to its rest position. Assuming that there is no frictional force* to retard the motion, the amplitude remains constant. The force increases in direct proportion to the distance that the mass is pulled from its rest position. Since the force increases directly, the acceleration of the mass of the object must do likewise, because (by Newton's Second Law of Motion) force is directly proportional to acceleration. As a result, the acceleration of the object varies directly with its displacement, and the motion is an example of simple harmonic motion.

Simple harmonic motion is related to circular motion. To see this relationship, consider a circle of radius \(a\), with center at \((0,0)\). See Figure 44. Suppose that
Figure 44

*If friction is present, the amplitude decreases with time to 0 . This type of motion is an example of damped motion, which is discussed later in this section.
an object initially placed at \((a, 0)\) moves counterclockwise around the circle at a constant angular speed \(\omega\). Suppose further that after time \(t\) has elapsed, the object is at the point \(P=(x, y)\) on the circle. The angle \(\theta\), in radians, swept out by the ray \(\overrightarrow{O P}\) in this time \(t\) is
\[
\theta=\omega t
\]

The coordinates of the point \(P\) at time \(t\) are
\[
\begin{aligned}
& x=a \cos \theta=a \cos (\omega t) \\
& y=a \sin \theta=a \sin (\omega t)
\end{aligned}
\]

Corresponding to each position \(P=(x, y)\) of the object moving about the circle, there is the point \(Q=(x, 0)\), called the projection of \(\boldsymbol{P}\) on the \(\boldsymbol{x}\)-axis. As \(P\) moves around the circle at a constant rate, the point \(Q\) moves back and forth between the points \((a, 0)\) and \((-a, 0)\) along the \(x\)-axis with a motion that is simple harmonic. Similarly, for each point \(P\) there is a point \(Q^{\prime}=(0, y)\), called the projection of \(\boldsymbol{P}\) on the \(\boldsymbol{y}\)-axis. As \(P\) moves around the circle, the point \(Q^{\prime}\) moves back and forth between the points \((0, a)\) and \((0,-a)\) on the \(y\)-axis with a motion that is simple harmonic. Simple harmonic motion can be described as the projection of constant circular motion on a coordinate axis.

To put it another way, again consider a mass hanging from a spring where the mass is pulled down from its rest position to the point \(C\) and then released. See Figure 45(a). The graph shown in Figure 45(b) describes the displacement \(d\) of the object from its rest position as a function of time \(t\), assuming that no frictional force is present.

Figure 45

\section*{THEOREM}

\section*{Simple Harmonic Motion}

An object that moves on a coordinate axis so that the displacement \(d\) from its rest position at time \(t\) is given by either
\[
d=a \cos (\omega t) \quad \text { or } \quad d=a \sin (\omega t)
\]
where \(a\) and \(\omega>0\) are constants, moves with simple harmonic motion. The motion has amplitude \(|a|\) and period \(\frac{2 \pi}{\omega}\).

The frequency \(f\) of an object in simple harmonic motion is the number of oscillations per unit time. Since the period is the time required for one oscillation, it follows that the frequency is the reciprocal of the period; that is,
\[
f=\frac{\omega}{2 \pi} \quad \omega>0
\]

\section*{EXAMPLE I Build a Model for an Object in Harmonic Motion}

Suppose that an object attached to a coiled spring is pulled down a distance of 5 inches from its rest position and then released. If the time for one oscillation is 3 seconds, develop a model that relates the displacement \(d\) of the object from its rest position after time \(t\) (in seconds). Assume no friction.
Solution The motion of the object is simple harmonic. See Figure 46. When the object is released \((t=0)\), the displacement of the object from the rest position is -5 units (since the object was pulled down). Because \(d=-5\) when \(t=0\), it is easier to use the cosine function*
\[
d=a \cos (\omega t)
\]
to describe the motion. Now the amplitude is \(|-5|=5\) and the period is 3 , so
\[
a=-5 \text { and } \frac{2 \pi}{\omega}=\text { period }=3 \text {, so } \omega=\frac{2 \pi}{3}
\]

An equation that models the motion of the object is
\[
d=-5 \cos \left[\frac{2 \pi}{3} t\right]
\]

NOTE In the solution to Example 1, \(a=-5\) because the object initially is pulled down. If the initial direction were up, then use \(a=5\).

Now Work problem 5
2 Analyze Simple Harmonic Motion

\section*{EXAMPLE 2}

\section*{Analyzing the Motion of an Object}

Suppose that the displacement \(d\) (in meters) of an object at time \(t\) (in seconds) satisfies the equation
\[
d=10 \sin (5 t)
\]
(a) Describe the motion of the object.
(b) What is the maximum displacement from its resting position?
(c) What is the time required for one oscillation?
(d) What is the frequency?

Solution Observe that the given equation is of the form
\[
d=a \sin (\omega t) \quad d=10 \sin (5 t)
\]
where \(a=10\) and \(\omega=5\).
(a) The motion is simple harmonic.
(b) The maximum displacement of the object from its resting position is the amplitude: \(|a|=10\) meters.
(c) The time required for one oscillation is the period:
\[
\text { Period }=\frac{2 \pi}{\omega}=\frac{2 \pi}{5} \text { seconds }
\]
(d) The frequency is the reciprocal of the period. Thus,
\[
\text { Frequency }=f=\frac{5}{2 \pi} \text { oscillation per second }
\]
am Now Work problem 13

\section*{3 Analyze an Object in Damped Motion}

Most physical phenomena are affected by friction or other resistive forces. These forces remove energy from a moving system and thereby damp its motion. For example, when a mass hanging from a spring is pulled down a distance \(a\) and released, the friction in the spring causes the distance that the mass moves from its at-rest position to decrease over time. As a result, the amplitude of any real oscillating spring or swinging pendulum decreases with time due to air resistance, friction, and so forth. See Figure 47.

Figure 47

A model that describes this phenomenon maintains a sinusoidal component, but the amplitude of this component decreases with time to account for the damping effect. In addition, the period of the oscillating component is affected by the damping. The next result, from physics, describes damped motion.

\section*{THEOREM}

\section*{Damped Motion}

The displacement \(d\) of an oscillating object from its at-rest position at time \(t\) is given by
\[
d(t)=a e^{-b t /(2 m)} \cos \left(\sqrt{\omega^{2}-\frac{b^{2}}{4 m^{2}}} t\right)
\]
where \(b\) is the damping factor or damping coefficient and \(m\) is the mass of the oscillating object. Here \(|a|\) is the displacement at \(t=0\), and \(\frac{2 \pi}{\omega}\) is the period under simple harmonic motion (no damping).

Notice that for \(b=0\) (zero damping), we have the formula for simple harmonic motion with amplitude \(|a|\) and period \(\frac{2 \pi}{\omega}\).

\section*{EXAMPLE 3 Analyzing a Damped Vibration Curve}

Analyze the damped vibration curve
\[
d(t)=e^{-t / \pi} \cos t, \quad t \geq 0
\]

Solution
The displacement \(d\) is the product of \(y=e^{-t / \pi}\) and \(y=\cos t\). Using properties of absolute value and the fact that \(|\cos t| \leq 1\), it follows that
\[
\begin{array}{r}
|d(t)|=\left|e^{-t / \pi} \cos t\right|=\left|e^{-t / \pi}\right||\cos t| \leq\left|e^{-t / \pi}\right| \underset{\uparrow}{=} e^{-t / \pi} \\
e^{-t / \pi}>0
\end{array}
\]

As a result,
\[
-e^{-t / \pi} \leq d(t) \leq e^{-t / \pi}
\]

This means that the graph of \(d\) will lie between the graphs of \(y=e^{-t / \pi}\) and \(y=-e^{-t / \pi}\), the bounding curves of \(d\).

Also, the graph of \(d\) will touch these graphs when \(|\cos t|=1\), that is, when \(t=0, \pi, 2 \pi\), and so on. The \(x\)-intercepts of the graph of \(d\) occur when \(\cos t=0\), that is, at \(\frac{\pi}{2}, \frac{3 \pi}{2}, \frac{5 \pi}{2}\), and so on. See Table 1.
Table 1 \begin{tabular}{llccccc|}
\cline { 2 - 6 } & \(\boldsymbol{t}\) & \(\mathbf{0}\) & \(\frac{\boldsymbol{\pi}}{\mathbf{2}}\) & \(\boldsymbol{\pi}\) & \(\frac{\mathbf{3} \boldsymbol{\pi}}{\mathbf{2}}\) & \(\mathbf{2 \pi}\) \\
\cline { 2 - 6 } & \(e^{-t / \pi}\) & 1 & \(e^{-1 / 2}\) & \(e^{-1}\) & \(e^{-3 / 2}\) & \(e^{-2}\) \\
\(\cos t\) & 1 & 0 & -1 & 0 & 1 \\
\(d(t)=e^{-t / \pi} \cos t\) & 1 & 0 & \(-e^{-1}\) & 0 & \(e^{-2}\) \\
Point on graph of \(d\) & \((0,1)\) & \(\left(\frac{\pi}{2}, 0\right)\) & \(\left(\pi,-e^{-1}\right)\) & \(\left(\frac{3 \pi}{2}, 0\right)\) & \(\left(2 \pi, e^{-2}\right)\) \\
\hline
\end{tabular}

The graphs of \(y=\cos t, y=e^{-t / \pi}, y=-e^{-t / \pi}\), and \(d(t)=e^{-t / \pi} \cos t\) are shown in Figure 48.

Figure 49

\section*{Exploration}

Graph \(Y_{1}=e^{-x / \pi} \cos x\), along with \(Y_{2}=e^{-x / \pi}\) and \(Y_{3}=-e^{-x / \pi}\), for \(0 \leq x \leq 2 \pi\). Determine where \(Y_{1}\) has its first turning point (local minimum). Compare this to where \(Y_{1}\) intersects \(Y_{3}\).

Result Figure 49 shows the graphs of \(Y_{1}=e^{-x / \pi} \cos x, Y_{2}=e^{-x / \pi}\), and \(Y_{3}=-e^{-x / \pi}\). Using MINIMUM, the first turning point occurs at \(x \approx 2.83 ; Y_{1}\) INTERSECTS \(Y_{3}\) at \(x=\pi \approx 3.14\).

\section*{Now Work problem 21}

\section*{4 Graph the Sum of Two Functions}

Many physical and biological applications require the graph of the sum of two functions, such as
\[
f(x)=x+\sin x \text { or } g(x)=\sin x+\cos (2 x)
\]

For example, if two tones are emitted, the sound produced is the sum of the waves produced by the two tones. See Problem 57 for an explanation of Touch-Tone phones.

The sum of two (or more) functions can be graphed using the method of adding \(y\)-coordinates described next.

\section*{EXAMPLE 4 Graphing the Sum of Two Functions}

Use the method of adding \(y\)-coordinates to graph \(f(x)=x+\sin x\).
Solution First, graph the component functions,
\[
y=f_{1}(x)=x \quad y=f_{2}(x)=\sin x
\]
on the same coordinate system. See Figure 50(a). Now, select several values of \(x\), say, \(x=0, x=\frac{\pi}{2}, x=\pi, x=\frac{3 \pi}{2}\), and \(x=2 \pi\), for which to compute
\(f(x)=f_{1}(x)+f_{2}(x)\). Table 2 shows the computations. Plot these points and connect them to get the graph, as shown in Figure 50(b).
\begin{tabular}{l|llcccc|}
\cline { 2 - 6 } & Table 2 & \(\mathbf{0}\) & \(\frac{\boldsymbol{\pi}}{\mathbf{2}}\) & \(\boldsymbol{\pi}\) & \(\frac{\mathbf{3 \pi}}{\mathbf{2}}\) & \(\mathbf{2 \pi}\) \\
\cline { 2 - 6 } & \(y=f_{1}(x)=x\) & 0 & \(\frac{\pi}{2}\) & \(\pi\) & \(\frac{3 \pi}{2}\) & \(2 \pi\) \\
\(y=f_{2}(x)=\sin x\) & 0 & 1 & 0 & -1 & 0 \\
\(f(x)=x+\sin x\) & 0 & \(\frac{\pi}{2}+1 \approx 2.57\) & \(\pi\) & \(\frac{3 \pi}{2}-1 \approx 3.71\) & \(2 \pi\) \\
Point on graph of \(f\) & \((0,0)\) & \(\left(\frac{\pi}{2}, 2.57\right)\) & \((\pi, \pi)\) & \(\left(\frac{3 \pi}{2}, 3.71\right)\) & \((2 \pi, 2 \pi)\) \\
\hline
\end{tabular}

Figure 50

In Figure \(50(\mathrm{~b})\), notice that the graph of \(f(x)=x+\sin x\) intersects the line \(y=x\) whenever \(\sin x=0\). Also, notice that the graph of \(f\) is not periodic.
Check: Graph \(Y_{1}=x, Y_{2}=\sin x\), and \(Y_{3}=x+\sin x\) and compare the result with Figure 50(b). Use INTERSECT to verify that the graphs of \(Y_{1}\) and \(Y_{3}\) intersect when \(\sin x=0\).

The next example shows a periodic graph.

\section*{EXAMPLE 5 Graphing the Sum of Two Sinusoidal Functions}

Use the method of adding \(y\)-coordinates to graph
\[
f(x)=\sin x+\cos (2 x)
\]

Solution Table 3 shows the steps for computing several points on the graph of \(f\). Figure 51 on the next page illustrates the graphs of the component functions, \(y=f_{1}(x)=\sin x \quad\) and \(\quad y=f_{2}(x)=\cos (2 x)\), and the graph of \(f(x)=\sin x+\cos (2 x)\), which is shown in red.

Table 3
\begin{tabular}{|lccccc|}
\hline \(\boldsymbol{x}\) & \(-\frac{\boldsymbol{\pi}}{\mathbf{2}}\) & \(\mathbf{0}\) & \(\frac{\boldsymbol{\pi}}{\mathbf{2}}\) & \(\boldsymbol{\pi}\) & \(\frac{\mathbf{3 \pi}}{\mathbf{2}}\) \\
\hline\(y=f_{1}(x)=\sin x\) & -1 & 0 & 1 & 0 & -1 \\
\(y=f_{2}(x)=\cos (2 x)\) & -1 & 1 & -1 & 1 & -1 \\
\(f(x)=\sin x+\cos (2 x)\) & -2 & 1 & 0 & 1 & -2 \\
Point on graph of \(f\) & \(\left(-\frac{\pi}{2},-2\right)\) & \((0,1)\) & \(\left(\frac{\pi}{2}, 0\right)\) & \((\pi, 1)\) & \(\left(\frac{3 \pi}{2},-2\right)\) \\
\hline
\end{tabular}

Figure 51

Notice that \(f\) is periodic, with period \(2 \pi\).
Check: Graph \(Y_{1}=\sin x, Y_{2}=\cos (2 x)\), and \(Y_{3}=\sin x+\cos (2 x)\), and compare the result with Figure 51.

Now Work problem 25

\subsection*{7.5 Assess Your Understanding}
'Are You Prepared?' The answer is given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. The amplitude \(A\) and period \(T\) of \(f(x)=5 \sin (4 x)\) are _ and _ . (pp. 424-426)

\section*{Concepts and Vocabulary}
2. The motion of an object obeys the equation \(d=4 \cos (6 t)\). Such motion is described as \(\qquad\) .The number 4 is called the \(\qquad\) .
3. When a mass hanging from a spring is pulled down and then released, the motion is called \(\qquad\) if there is no
frictional force to retard the motion, and the motion is called if there is such friction.
4. True or False If the displacement \(d\) of an object from its rest position at time \(t\) is given by a sinusoidal graph, the motion of the object is simple harmonic motion.

\section*{Skill Building}

In Problems 5-8, an object attached to a coiled spring is pulled down a distance a from its rest position and then released. Assuming that the motion is simple harmonic with period \(T\), write an equation that relates the displacement \(d\) of the object from its rest position after \(t\) seconds. Also assume that the positive direction of the motion is up.
5. \(a=5 ; \quad T=2\) seconds
7. \(a=6 ; \quad T=\pi\) seconds
9. Rework Problem 5 under the same conditions, except that at time \(t=0\), the object is at its resting position and moving down.
11. Rework Problem 7 under the same conditions, except that at time \(t=0\), the object is at its resting position and moving down.
6. \(a=10 ; \quad T=3\) seconds
8. \(a=4 ; \quad T=\frac{\pi}{2}\) seconds
10. Rework Problem 6 under the same conditions except, that at time \(t=0\), the object is at its resting position and moving down.
12. Rework Problem 8 under the same conditions, except that at time \(t=0\), the object is at its resting position and moving down.

In Problems 13-20, the displacement d (in meters) of an object at time \(t\) (in seconds) is given.
(a) Describe the motion of the object.
(b) What is the maximum displacement from its resting position?
(c) What is the time required for one oscillation?
(d) What is the frequency?
13. \(d=5 \sin (3 t)\)
14. \(d=4 \sin (2 t)\)
15. \(d=6 \cos (\pi t)\)
16. \(d=5 \cos \left(\frac{\pi}{2} t\right)\)
17. \(d=-3 \sin \left(\frac{1}{2} t\right)\)
18. \(d=-2 \cos (2 t)\)
19. \(d=6+2 \cos (2 \pi t)\)
20. \(d=4+3 \sin (\pi t)\)

In Problems 21-24, graph each damped vibration curve for \(0 \leq t \leq 2 \pi\).
21. \(d(t)=e^{-t / \pi} \cos (2 t)\)
22. \(d(t)=e^{-t / 2 \pi} \cos (2 t)\)
23. \(d(t)=e^{-t / 2 \pi} \cos t\)
24. \(d(t)=e^{-t / 4 \pi} \cos t\)

In Problems 25-32, use the method of adding \(y\)-coordinates to graph each function.
25. \(f(x)=x+\cos x\)
26. \(f(x)=x+\cos (2 x)\)
27. \(f(x)=x-\sin x\)
28. \(f(x)=x-\cos x\)
29. \(f(x)=\sin x+\cos x\)
30. \(f(x)=\sin (2 x)+\cos x\)
31. \(g(x)=\sin x+\sin (2 x)\)
32. \(g(x)=\cos (2 x)+\cos x\)

\section*{- Mixed Practice}

In Problems 33-38, (a) use the Product-to-Sum Formulas to express each product as a sum, and (b) use the method of adding \(y\)-coordinates to graph each function on the interval \([0,2 \pi]\).
33. \(f(x)=\sin (2 x) \sin x\)
34. \(F(x)=\sin (3 x) \sin x\)
35. \(G(x)=\cos (4 x) \cos (2 x)\)
36. \(h(x)=\cos (2 x) \cos (x)\)
37. \(H(x)=2 \sin (3 x) \cos (x)\)
38. \(g(x)=2 \sin x \cos (3 x)\)

\section*{Applications and Extensions}

In Problems 39-44, an object of mass \(m\) (in grams) attached to a coiled spring with damping factor \(b\) (in grams per second) is pulled down a distance a (in centimeters) from its rest position and then released. Assume that the positive direction of the motion is up and the period is \(T\) (in seconds) under simple harmonic motion.
(a) Develop a model that relates the displacement d of the object from its rest position after \(t\) seconds.
(b) Graph the equation found in part (a) for 5 oscillations using a graphing utility.
39. \(m=25, \quad a=10, \quad b=0.7, \quad T=5\)
40. \(m=20, \quad a=15, \quad b=0.75, \quad T=6\)
41. \(m=30, \quad a=18, \quad b=0.6, \quad T=4\)
42. \(m=15, \quad a=16, \quad b=0.65, \quad T=5\)
43. \(m=10, \quad a=5, \quad b=0.8, \quad T=3\)
44. \(m=10, \quad a=5, \quad b=0.7, \quad T=3\)

In Problems 45-50, the displacement d (in meters) of the bob of a pendulum of mass \(m\) (in kilograms) from its rest position at time \(t\) (in seconds) is given. The bob is released from the left of its rest position, which represents a negative direction.
(a) Describe the motion of the object. Be sure to give the mass and damping factor.
(b) What is the initial displacement of the bob? That is, what is the displacement at \(t=0\) ?
(c) Graph the motion using a graphing utility.
(d) What is the displacement of the bob at the start of the second oscillation?
(e) What happens to the displacement of the bob as time increases without bound?
45. \(d=-20 e^{-0.7 t / 40} \cos \left(\sqrt{\left(\frac{2 \pi}{5}\right)^{2}-\frac{0.49}{1600}} t\right)\)
47. \(d=-30 e^{-0.6 t / 80} \cos \left(\sqrt{\left(\frac{2 \pi}{7}\right)^{2}-\frac{0.36}{6400}} t\right)\)
49. \(d=-15 e^{-0.9 t / 30} \cos \left(\sqrt{\left(\frac{\pi}{3}\right)^{2}-\frac{0.81}{900}} t\right)\)
51. Loudspeaker A loudspeaker diaphragm is oscillating in simple harmonic motion described by the equation \(d=a \cos (\omega t)\) with a frequency of 520 hertz (cycles per second) and a maximum displacement of 0.80 millimeter. Find \(\omega\) and then determine the equation that describes the movement of the diaphragm.
52. Colossus Added to Six Flags St. Louis in 1986, the Colossus is a giant Ferris wheel. Its diameter is 165 feet, it rotates at a rate of about 1.6 revolutions per minute, and the bottom of the wheel is 15 feet above the ground. Determine an equation that relates a rider's height above the ground at time \(t\). Assume the passenger begins the ride at the bottom of the wheel.
Source: Six Flags Theme Parks, Inc.
53. Tuning Fork The end of a tuning fork moves in simple harmonic motion described by the equation \(d=a \sin (\omega t)\). If a tuning fork for the note A above middle C on an eventempered scale \(\left(\mathrm{A}_{4}\right.\), the tone by which an orchestra tunes
46. \(d=-20 e^{-0.8 t / 40} \cos \left(\sqrt{\left(\frac{2 \pi}{5}\right)^{2}-\frac{0.64}{1600} t}\right)\)
48. \(d=-30 e^{-0.5 t / 70} \cos \left(\sqrt{\left(\frac{\pi}{2}\right)^{2}-\frac{0.25}{4900}} t\right)\)
50. \(d=-10 e^{-0.8 t / 50} \cos \left(\sqrt{\left(\frac{2 \pi}{3}\right)^{2}-\frac{0.64}{2500}} t\right)\)
itself) has a frequency of 440 hertz (cycles per second), find \(\omega\). If the maximum displacement of the end of the tuning fork is 0.01 millimeter, determine the equation that describes the movement of the tuning fork.
Source: David Lapp. Physics of Music and Musical Instruments. Medford, MA: Tufts University, 2003
54. Tuning Fork The end of a tuning fork moves in simple harmonic motion described by the equation \(d=a \sin (\omega t)\). If a tuning fork for the note E above middle C on an eventempered scale \(\left(\mathrm{E}_{4}\right)\) has a frequency of approximately 329.63 hertz (cycles per second), find \(\omega\). If the maximum displacement of the end of the tuning fork is 0.025 millimeter, determine the equation that describes the movement of the tuning fork.
Source: David Lapp. Physics of Music and Musical Instruments. Medford, MA:Tufts University, 2003
55. Charging a Capacitor See the illustration. If a charged capacitor is connected to a coil by closing a switch, energy is transferred to the coil and then back to the capacitor in an oscillatory motion. The voltage \(V\) (in volts) across the capacitor gradually diminishes to 0 with time \(t\) (in seconds).

(a) Graph the function relating \(V\) and \(t\) :
\[
V(t)=e^{-t / 3} \cos (\pi t), \quad 0 \leq t \leq 3
\]
(b) At what times \(t\) does the graph of \(V\) touch the graph of \(y=e^{-t / 3}\) ? When does the graph of \(V\) touch the graph of \(y=-e^{-t / 3}\) ?
(c) When is the voltage \(V\) between -0.4 and 0.4 volt?
56. The Sawtooth Curve An oscilloscope often displays a sawtooth curve. This curve can be approximated by sinusoidal curves of varying periods and amplitudes.
(a) Use a graphing utility to graph the following function, which can be used to approximate the sawtooth curve.
\[
f(x)=\frac{1}{2} \sin (2 \pi x)+\frac{1}{4} \sin (4 \pi x), \quad 0 \leq x \leq 4
\]
(b) A better approximation to the sawtooth curve is given by
\[
f(x)=\frac{1}{2} \sin (2 \pi x)+\frac{1}{4} \sin (4 \pi x)+\frac{1}{8} \sin (8 \pi x)
\]

Use a graphing utility to graph this function for \(0 \leq x \leq 4\) and compare the result to the graph obtained in part (a).
(c) A third and even better approximation to the sawtooth curve is given by
\(f(x)=\frac{1}{2} \sin (2 \pi x)+\frac{1}{4} \sin (4 \pi x)+\frac{1}{8} \sin (8 \pi x)+\frac{1}{16} \sin (16 \pi x)\)

Use a graphing utility to graph this function for \(0 \leq x \leq 4\) and compare the result to the graphs obtained in parts (a) and (b).
(d) What do you think the next approximation to the sawtooth curve is?
57. Touch-Tone Phones On a Touch-Tone phone, each button produces a unique sound. The sound produced is the sum of two tones, given by
\[
y=\sin (2 \pi l t) \quad \text { and } \quad y=\sin (2 \pi h t)
\]
where \(l\) and \(h\) are the low and high frequencies (cycles per second) shown in the illustration. For example, if you touch 7 , the low frequency is \(l=852\) cycles per second and the high frequency is \(h=1209\) cycles per second. The sound emitted by touching 7 is
\[
y=\sin [2 \pi(852) t]+\sin [2 \pi(1209) t]
\]

Use a graphing utility to graph the sound emitted by touching 7.

Touch-Tone phone

58. Use a graphing utility to graph the sound emitted by the * key on a Touch-Tone phone. See Problem 57.
59. CBL Experiment Pendulum motion is analyzed to estimate simple harmonic motion. A plot is generated with the position of the pendulum over time. The graph is used to find a sinusoidal curve of the form \(y=A \cos [B(x-C)]+D\). Determine the amplitude, period, and frequency. (Activity 16, Real-World Math with the CBL System.)
60. CBL Experiment The sound from a tuning fork is collected over time. Determine the amplitude, frequency, and period of the graph. A model of the form \(y=A \cos [B(x-C)]\) is fitted to the data. (Activity 23, Real-World Math with the CBL System.)

\section*{Discussion and Writing}
61. Use a graphing utility to graph the function \(f(x)=\frac{\sin x}{x}, x>0\). Based on the graph, what do you conjecture about the value of \(\frac{\sin x}{x}\) for \(x\) close to 0 ?
62. Use a graphing utility to graph \(y=x \sin x, y=x^{2} \sin x\), and \(y=x^{3} \sin x\) for \(x>0\). What patterns do you observe?

\section*{Retain Your Knowledge}

Problems 65-68 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
65. The function \(f(x)=\frac{x-3}{x-4}, x \neq 4\), is one-to-one. Find its inverse function.
66. Write as a single \(\log\) arithm: \(\log _{7} x+3 \log _{7} y-\log _{7}(x+y)\)
67. Solve: \(\log (x+1)+\log (x-2)=1\)
68. Given \(\cos \alpha=\frac{4}{5}, 0<\alpha<\frac{\pi}{2}\), find the exact value of:
(a) \(\cos \frac{\alpha}{2}\)
(b) \(\sin \frac{\alpha}{2}\)
(c) \(\tan \frac{\alpha}{2}\)

\section*{Review Exercises}

In Problems 1 and 2, find the exact value of the six trigonometric functions of the angle \(\theta\) in each figure.
1.

2.

In Problems 3-5, find the exact value of each expression. Do not use a calculator.
3. \(\cos 62^{\circ}-\sin 28^{\circ}\)
4. \(\frac{\sec 55^{\circ}}{\csc 35^{\circ}}\)
5. \(\cos ^{2} 40^{\circ}+\cos ^{2} 50^{\circ}\)

In Problems 6 and 7, solve each triangle.
6.

7.

In Problems 8-20, find the remaining angle(s) and side(s) of each triangle, if it (they) exists. If no triangle exists, say "No triangle."
8. \(A=50^{\circ}, \quad B=30^{\circ}, \quad a=1\)
9. \(A=100^{\circ}, \quad a=5, \quad c=2\)
10. \(a=3, \quad c=1, \quad C=110^{\circ}\)
11. \(a=3, \quad c=1, \quad B=100^{\circ}\)
12. \(a=3, \quad b=5, \quad B=80^{\circ}\)
13. \(a=2, \quad b=3, \quad c=1\)
14. \(a=10, \quad b=7, \quad c=8\)
15. \(a=1, \quad b=3, \quad C=40^{\circ}\)
16. \(a=5, \quad b=3, \quad A=80^{\circ}\)
17. \(a=1, \quad b=\frac{1}{2}, \quad c=\frac{4}{3}\)
18. \(a=3, \quad A=10^{\circ}, \quad b=4\)
19. \(a=4, \quad A=20^{\circ}, \quad B=100^{\circ}\)
20. \(c=5, \quad b=4, \quad A=70^{\circ}\)

In Problems 21-25, find the area of each triangle.
21. \(a=2, \quad b=3, \quad C=40^{\circ}\)
22. \(b=4, \quad c=10, \quad A=70^{\circ}\)
23. \(a=4, \quad b=3, \quad c=5\)
24. \(a=4, \quad b=2, \quad c=5\)
25. \(A=50^{\circ}, \quad B=30^{\circ}, \quad a=1\)
26. Area of a Segment Find the area of the segment of a circle whose radius is 6 inches formed by a central angle of \(50^{\circ}\).
27. Geometry The hypotenuse of a right triangle is 12 feet. If one leg is 8 feet, find the degree measure of each angle.
28. Finding the Width of a River Find the distance from \(A\) to \(C\) across the river illustrated in the figure.

29. Finding the Distance to Shore The Willis Tower in Chicago is 1454 feet tall and is situated about 1 mile inland from the shore of Lake Michigan, as indicated in the figure on the top right. An observer in a pleasure boat on the lake directly in front of the Willis Tower looks at the top of the tower and measures the angle of elevation as \(5^{\circ}\). How far offshore is the boat?

30. Finding the Speed of a Glider From a glider 200 feet above the ground, two sightings of a stationary object directly in front are taken 1 minute apart (see the figure). What is the speed of the glider?

31. Finding the Grade of a Mountain Trail A straight trail with a uniform inclination leads from a hotel, elevation 5000 feet, to a lake in a valley, elevation 4100 feet. The length of the trail is 4100 feet. What is the inclination (grade) of the trail?
32. Finding the Height of a Helicopter Two observers simultaneously measure the angle of elevation of a helicopter. One angle is measured as \(25^{\circ}\), the other as \(40^{\circ}\) (see the figure). If the observers are 100 feet apart and the helicopter lies over the line joining them, how high is the helicopter?

33. Constructing a Highway \(A\) highway whose primary directions are north-south is being constructed along the west coast of Florida. Near Naples, a bay obstructs the straight path of the road. Since the cost of a bridge is prohibitive, engineers decide to go around the bay. The illustration shows the path that they decide on and the measurements taken. What is the length of highway needed to go around the bay?

34. Correcting a Navigational Error A sailboat leaves St. Thomas bound for an island in the British West Indies, 200 miles away. Maintaining a constant speed of 18 miles per hour, but encountering heavy crosswinds and strong currents, the crew finds, after 4 hours, that the sailboat is off course by \(15^{\circ}\).
(a) How far is the sailboat from the island at this time?
(b) Through what angle should the sailboat turn to correct its course?
(c) How much time has been added to the trip because of this? (Assume that the speed remains at 18 miles per hour.)

35. Approximating the Area of a Lake To approximate the area of a lake, Cindy walks around the perimeter of the lake, taking the measurements shown in the illustration. Using this technique, what is the approximate area of the lake?
[Hint: Use the Law of Cosines on the three triangles shown and then find the sum of their areas.]

36. Finding the Bearing of a Ship The Majesty leaves the Port at Boston for Bermuda with a bearing of \(\mathrm{S} 80^{\circ} \mathrm{E}\) at an average speed of 10 knots. After 1 hour, the ship turns \(90^{\circ}\) toward the southwest. After 2 hours at an average speed of 20 knots, what is the bearing of the ship from Boston?
37. Drive Wheels of an Engine The drive wheel of an engine is 13 inches in diameter, and the pulley on the rotary pump is 5 inches in diameter. If the shafts of the drive wheel and the pulley are 2 feet apart, what length of belt is required to join them as shown in the figure?

38. Rework Problem 37 if the belt is crossed, as shown in the figure.

39. An object attached to a coiled spring is pulled down a distance \(a=3\) units from its rest position and then released. Assuming that the motion is simple harmonic with period \(T=4\) seconds, develop a model that relates the displacement \(d\) of the object from its rest position after \(t\) seconds. Also assume that the positive direction of the motion is up.

In Problems 40 and 41, the displacement d (in feet) that an object travels in time \(t\) (in seconds) is given.
(a) Describe the motion of the object.
(b) What is the maximum displacement from its rest position?
(c) What is the time required for one oscillation?
(d) What is the frequency?
40. \(d=6 \sin (2 t)\)
41. \(d=-2 \cos (\pi t)\)
42. An object of mass \(m=40\) grams attached to a coiled spring with damping factor \(b=0.75\) gram/second is pulled down a distance \(a=15\) centimeters from its rest position and then released. Assume that the positive direction of the motion is up and the period is \(T=5\) seconds under simple harmonic motion.
(a) Develop a model that relates the displacement \(d\) of the object from its rest position after \(t\) seconds.
(b) Graph the equation found in part (a) for 5 oscillations.
43. The displacement \(d\) (in meters) of the bob of a pendulum of mass \(m\) (in kilograms) from its rest position at time \(t\) (in seconds) is given as \(d=-15 e^{-0.6 t / 40} \cos \left(\sqrt{\left(\frac{2 \pi}{5}\right)^{2}-\frac{0.36}{1600}} t\right)\)
(a) Describe the motion of the object.
(b) What is the initial displacement of the bob? That is, what is the displacement at \(t=0\) ?
(c) Graph the motion using a graphing utility.
(d) What is the displacement of the bob at the start of the second oscillation?
(e) What happens to the displacement of the bob as time increases without bound?
44. Use the method of adding \(y\)-coordinates to graph \(y=2 \sin x+\cos (2 x)\).

\section*{Chapter Test \\ Test Prep \\ Chapter Test Prep Videos include step-by-step solutions to all chapter test exercises and can be found in MyMathLabll or on this text's YouTube" Channel. (search "SullivanPrecalcUC3e")}
1. Find the exact value of the six trigonometric functions of the angle \(\theta\) in the figure.

In Problems 3-5, use the given information to determine the three remaining parts of each triangle.
3.

4.

5.

In Problems 6-8, solve each triangle.
6. \(A=55^{\circ}, \quad C=20^{\circ}, \quad a=4\)
7. \(a=3, \quad b=7, \quad A=40^{\circ}\)
8. \(a=8, \quad b=4, \quad C=70^{\circ}\)
9. Find the area of the triangle described in Problem 8.
10. Find the area of the triangle described in Problem 5.
11. A 12 -foot ladder leans against a building. The top of the ladder leans against the wall 10.5 feet from the ground. What is the angle formed by the ground and the ladder?
12. A hot-air balloon is flying at a height of 600 feet and is directly above the Marshall Space Flight Center in Huntsville, Alabama. The pilot of the balloon looks down at the airport that is known to be 5 miles from the Marshall Space Flight Center. What is the angle of depression from the balloon to the airport?
13. Find the area of the shaded region enclosed in a semicircle of diameter 8 centimeters. The length of the chord \(A B\) is 6 centimeters.
[Hint: Triangle \(A B C\) is a right triangle.]

14. Find the area of the quadrilateral shown.

15. Madison wants to swim across Lake William from the fishing lodge \((A)\) to the boat ramp \((B)\), but she wants to know the distance first. Highway 20 goes right past the boat ramp and County Road 3 goes to the lodge. The two roads intersect at point ( \(C\) ), 4.2 miles from the ramp and 3.5 miles from the lodge. Madison uses a transit to measure the angle of intersection of the two roads to be \(32^{\circ}\). How far will she need to swim?

16. Given that \(\triangle O A B\) is an isosceles triangle and the shaded sector is a semicircle, find the area of the entire region. Express your answer as a decimal rounded to two places.

17. The area of the triangle shown below is \(54 \sqrt{6}\) square units; find the lengths of the sides.

18. Logan is playing on her swing. One full swing (front to back to front) takes 6 seconds and at the peak of her swing she is at an angle of \(42^{\circ}\) with the vertical. If her swing is 5 feet long, and we ignore all resistive forces, build a model that relates her horizontal displacement (from the rest position) after time \(t\).

\section*{Cumulative Review}
1. Find the real solutions, if any, of the equation \(3 x^{2}+1=4 x\).
2. Find an equation for the circle with center at the point \((-5,1)\) and radius 3 . Graph this circle.
3. Determine the domain of the function
\[
f(x)=\sqrt{x^{2}-3 x-4}
\]
4. Graph the function \(y=3 \sin (\pi x)\).
5. Graph the function \(y=-2 \cos (2 x-\pi)\).
6. If \(\tan \theta=-2\) and \(\frac{3 \pi}{2}<\theta<2 \pi\), find the exact value of:
(a) \(\sin \theta\)
(b) \(\cos \theta\)

(c) Solve \(f(x)=g(x)\).
(d) Solve \(f(x)>0\).
(e) Solve \(g(x) \leq 0\).
(f) Graph \(y=f(x)\).
(g) Graph \(y=g(x)\).

\section*{Chapter Projects}
I. Spherical Trigonometry When the distance between two locations on the surface of Earth is small, the distance can be computed in statutory miles. Using this assumption, the Law of Sines and the Law of Cosines can be used to approximate distances and angles. However, Earth is a sphere, so as the distance between two points on its surface increases, the linear distance gets less accurate because of curvature. Under
this circumstance, the curvature of Earth must be considered when using the Law of Sines and the Law of Cosines.
1. Draw a spherical triangle and label the vertices \(A, B\), and \(C\). Then connect each vertex by a radius to the center \(O\) of the sphere. Now draw tangent lines to the sides \(a\) and \(b\) of the triangle that go through \(C\). Extend the lines \(O A\) and
\(O B\) to intersect the tangent lines at \(P\) and \(Q\), respectively. See the figure. List the plane right triangles. Determine the measures of the central angles.

2. Apply the Law of Cosines to triangles \(O P Q\) and \(C P Q\) to find two expressions for the length of \(P Q\).
3. Subtract the expressions in part (2) from each other. Solve for the term containing \(\cos c\).
4. Use the Pythagorean Theorem to find another value for \(O Q^{2}-C Q^{2}\) and \(O P^{2}-C P^{2}\). Now solve for \(\cos c\).
5. Replacing the ratios in part (4) by the cosines of the sides of the spherical triangle, you should now have the Law of Cosines for spherical triangles:
\[
\cos c=\cos a \cos b+\sin a \sin b \cos C
\]

Source: For the spherical Law of Cosines; see Mathematics from the Birth of Numbers by Jan Gullberg. W. W. Norton \&Co., Publishers, 1996, pp. 491-494.
II. The Lewis and Clark Expedition Lewis and Clark followed several rivers in their trek from what is now Great Falls, Montana, to the Pacific coast. First, they went down the Missouri and Jefferson rivers from Great Falls to Lemhi, Idaho. Because the two cities are at different longitudes and different latitudes, the curvature of Earth must be accounted for when computing the distance that they traveled. Assume that the radius of Earth is 3960 miles.

1. Great Falls is at approximately \(47.5^{\circ} \mathrm{N}\) and \(111.3^{\circ} \mathrm{W}\). Lemhi is at approximately \(45.5^{\circ} \mathrm{N}\) and \(113.5^{\circ} \mathrm{W}\). (Assume that the rivers flow straight from Great Falls to Lemhi on the surface of Earth.) This line is called a geodesic line. Apply the Law of Cosines for a spherical triangle to find the angle between Great Falls and Lemhi. (The central

angles are found by using the differences in the latitudes and longitudes of the towns. See the diagram.) Then find the length of the arc joining the two towns. (Recall \(s=r \theta\).)
2. From Lemhi, they went up the Bitteroot River and the Snake River to what is now Lewiston and Clarkston on the border of Idaho and Washington. Although this is not really a side to a triangle, make a side that goes from Lemhi to Lewiston and Clarkston. If Lewiston and Clarkston are at about \(46.5^{\circ} \mathrm{N} 117.0^{\circ} \mathrm{W}\), find the distance from Lemhi using the Law of Cosines for a spherical triangle and the arc length.
3. How far did the explorers travel just to get that far?
4. Draw a plane triangle connecting the three towns. If the distance from Lewiston to Great Falls is 282 miles, and if the angle at Great Falls is \(42^{\circ}\) and the angle at Lewiston is \(48.5^{\circ}\), find the distance from Great Falls to Lemhi and from Lemhi to Lewiston. How do these distances compare with the ones computed in parts (1) and (2)?

IV. Leaning Tower of Pisa Trigonometry is used to analyze the apparent height and tilt of the Leaning Tower of Pisa.
V. Locating Lost Treasure Clever treasure seekers who know the Law of Sines are able to find a buried treasure efficiently.
VI. Jacob's Field Angles of elevation and the Law of Sines are used to determine the height of the stadium wall and the distance from home plate to the top of the wall.

\section*{Polar Coordinates; Vectors}

\section*{How Airplanes Fly}

Essentially there are 4 aerodynamic forces that act on an airplane in flight; these are lift, drag, thrust and weight (i.e. gravity).

In simple terms, drag is the resistance of air molecules hitting the airplane (the backward force), thrust is the power of the airplane's engine (the forward force), lift is the upward force and weight is the downward force. So for airplanes
to fly and stay airborne, the thrust must be greater than the drag and the lift must be greater than the weight (so as you can see, drag opposes thrust and lift opposes weight).

This is certainly the case when an airplane takes off or climbs. However, when it is in straight and level flight the opposing forces of lift and weight are balanced. During a descent, weight exceeds lift and to slow an airplane drag has to overcome thrust.

Thrust is generated by the airplane's engine (propeller or jet), weight is created by the natural force of gravity acting upon the airplane and drag comes from friction as the plane moves through air molecules. Drag is also a reaction to lift, and this lift must be generated by the airplane flight. This is done by the wings of the airplane...

The generation of lift is a widely discussed and sometimes disputed theory, but there are some key factors that nobody argues.

A cross section of a typical airplane wing will show the top surface to be more curved than the bottom surface. This shaped profile is called an 'airfoil' (or 'aerofoil') and the shape exists because it's long been proven (since the dawn of flight) that an airfoil generates significantly more lift than opposing drag i.e. it's very efficient at generating lift.

During flight air naturally flows over and beneath the wing and is deflected upwards over the top surface and downwards beneath the lower surface. Any difference in deflection causes a difference in air pressure ('pressure gradient') and because of the airfoil shape the pressure of the deflected air is lower above the airfoil than below it. As a result the wing is 'pushed' upwards by the higher pressure beneath or, you can argue, it is 'sucked' upwards by the lower pressure above.

\section*{<A Look Back, A Look Ahead>}

This chapter is in two parts: Polar Coordinates, Sections 8.1-8.3, and Vectors, Sections 8.4-8.7. They are independent of each other and may be covered in either order.

Sections 8.1-8.3: In Foundations we introduced rectangular coordinates \(x\) and \(y\) and discussed the graph of an equation in two variables involving \(x\) and \(y\). In Sections 8.1 and 8.2, we introduce polar coordinates, an alternative to rectangular coordinates, and discuss graphing equations that involve polar coordinates. In Section 4.3, we discussed raising a real number to a real power. In Section 8.3, we extend this idea by raising a complex number to a real power. As it turns out, polar coordinates are useful for the discussion.

Sections 8.4-8.7: We have seen in many chapters that we are often required to solve an equation to obtain a solution to applied problems. In the last four sections of this chapter, we develop the notion of a vector and show how it can be used to model applied problems in physics and engineering.

\subsection*{8.1 Polar Coordinates}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Rectangular Coordinates (Foundations, Section 1, pp. 2-3)
- Definition of the Trigonometric Functions (Section 5.2, pp. 390-401)
- Inverse Tangent Function (Section 6.1, pp. 470-472)
- Completing the Square (Appendix A, Section A.4, pp.A38-A39)

Now Work the ‘Are You Prepared?’ problems on page 591.
OBJECTIVES 1 Plot Points Using Polar Coordinates (p.584)
2 Convert from Polar Coordinates to Rectangular Coordinates (p. 586)
3 Convert from Rectangular Coordinates to Polar Coordinates (p. 588)
4 Transform Equations between Polar and Rectangular Forms (p. 590)

Figure 1

So far, we have always used a system of rectangular coordinates to plot points in the plane. Now we are ready to describe another system, called polar coordinates. In many instances, polar coordinates offer certain advantages over rectangular coordinates.

In a rectangular coordinate system, you will recall, a point in the plane is represented by an ordered pair of numbers \((x, y)\), where \(x\) and \(y\) equal the signed distances of the point from the \(y\)-axis and from the \(x\)-axis, respectively. In a polar coordinate system, we select a point, called the pole, and then a ray with vertex at the pole, called the polar axis. See Figure 1. Comparing the rectangular and polar coordinate systems, notice that the origin in rectangular coordinates coincides with the pole in polar coordinates, and the positive \(x\)-axis in rectangular coordinates coincides with the polar axis in polar coordinates.

\section*{1 Plot Points Using Polar Coordinates}

A point \(P\) in a polar coordinate system is represented by an ordered pair of numbers \((r, \theta)\). If \(r>0\), then \(r\) is the distance of the point from the pole; \(\theta\) is an angle (in degrees or radians) formed by the polar axis and a ray from the pole through the point. We call the ordered pair \((r, \theta)\) the polar coordinates of the point. See Figure 2.

As an example, suppose that a point \(P\) has polar coordinates \(\left(2, \frac{\pi}{4}\right)\). Locate \(P\) by first drawing an angle of \(\frac{\pi}{4}\) radian, placing its vertex at the pole and its initial side along the polar axis. Then go out a distance of 2 units along the terminal side of the angle to reach the point \(P\). See Figure 3.

Figure 2

Figure 3

In using polar coordinates \((r, \theta)\), it is possible for \(r\) to be negative. When this happens, instead of the point being on the terminal side of \(\theta\), it is on the ray from the pole extending in the direction opposite the terminal side of \(\theta\) at a distance \(|r|\) units from the pole. See Figure 4 for an illustration.

For example, to plot the point \(\left(-3, \frac{2 \pi}{3}\right)\), use the ray in the opposite direction of \(\frac{2 \pi}{3}\) and go out \(|-3|=3\) units along that ray. See Figure 5.

Figure 4

Figure 5

\section*{EXAMPLE I Plotting Points Using Polar Coordinates}

Plot the points with the following polar coordinates:
(a) \(\left(3, \frac{5 \pi}{3}\right)\)
(b) \(\left(2,-\frac{\pi}{4}\right)\)
(c) \((3,0)\)
(d) \(\left(-2, \frac{\pi}{4}\right)\)

Solution Figure 6 shows the points.
Figure 6

(a)

(b)

(c)

(d)

Now Work problems 9, 17, And 27
Recall that an angle measured counterclockwise is positive and an angle measured clockwise is negative. This convention has some interesting consequences related to polar coordinates.

\section*{EXAMPLE 2 Finding Several Polar Coordinates of a Single Point}

Consider again the point \(P\) with polar coordinates \(\left(2, \frac{\pi}{4}\right)\), as shown in Figure 7(a). Because \(\frac{\pi}{4}, \frac{9 \pi}{4}\), and \(-\frac{7 \pi}{4}\) all have the same terminal side, this point \(P\) could also have been located by using the polar coordinates \(\left(2, \frac{9 \pi}{4}\right)\) or \(\left(2,-\frac{7 \pi}{4}\right)\), as shown in Figures \(7(\mathrm{~b})\) and \((\mathrm{c})\). The point \(\left(2, \frac{\pi}{4}\right)\) can also be represented by the polar coordinates \(\left(-2, \frac{5 \pi}{4}\right)\). See Figure 7(d).
Figure 7

(a)

(b)

(c)

(d)

\section*{EXAMPLE 3 Finding Other Polar Coordinates of a Given Point}

Plot the point \(P\) with polar coordinates \(\left(3, \frac{\pi}{6}\right)\), and find other polar coordinates \((r, \theta)\) of this same point for which:
(a) \(r>0, \quad 2 \pi \leq \theta<4 \pi\)
(b) \(r<0, \quad 0 \leq \theta<2 \pi\)
(c) \(r>0, \quad-2 \pi \leq \theta<0\)

Solution The point \(\left(3, \frac{\pi}{6}\right)\) is plotted in Figure 8.

Figure 8

(a) Add 1 revolution ( \(2 \pi\) radians) to the angle \(\frac{\pi}{6}\) to get \(P=\left(3, \frac{\pi}{6}+2 \pi\right)=\) \(\left(3, \frac{13 \pi}{6}\right)\). See Figure 9.
(b) Add \(\frac{1}{2}\) revolution ( \(\pi\) radians) to the angle \(\frac{\pi}{6}\) and replace 3 by -3 to get \(P=\left(-3, \frac{\pi}{6}+\pi\right)=\left(-3, \frac{7 \pi}{6}\right)\). See Figure 10.
(c) Subtract \(2 \pi\) from the angle \(\frac{\pi}{6}\) to get \(P=\left(3, \frac{\pi}{6}-2 \pi\right)=\left(3,-\frac{11 \pi}{6}\right)\). See Figure 11.

Figure 9

Figure 10

Figure 11

These examples show a major difference between rectangular coordinates and polar coordinates. A point has exactly one pair of rectangular coordinates; however, a point has infinitely many pairs of polar coordinates.

\section*{SUMMARY}

A point with polar coordinates \((r, \theta), \theta\) in radians, can also be represented by either of the following:
\[
(r, \theta+2 \pi k) \quad \text { or } \quad(-r, \theta+\pi+2 \pi k) \quad k \text { any integer }
\]

The polar coordinates of the pole are \((0, \theta)\), where \(\theta\) can be any angle.
am Now Work problem 31

\section*{2 Convert from Polar Coordinates to Rectangular Coordinates}

Sometimes it is necessary to convert coordinates or equations in rectangular form to polar form, and vice versa. To do this, recall that the origin in rectangular coordinates is the pole in polar coordinates and that the positive \(x\)-axis in rectangular coordinates is the polar axis in polar coordinates.

\section*{Conversion from Polar Coordinates to Rectangular Coordinates}

If \(P\) is a point with polar coordinates \((r, \theta)\), the rectangular coordinates \((x, y)\) of \(P\) are given by
\[
x=r \cos \theta \quad y=r \sin \theta
\]

Figure 12

Proof Suppose that \(P\) has the polar coordinates \((r, \theta)\). We seek the rectangular coordinates \((x, y)\) of \(P\). Refer to Figure 12.

If \(r=0\), then, regardless of \(\theta\), the point \(P\) is the pole, for which the rectangular coordinates are \((0,0)\). Formula (1) is valid for \(r=0\).

If \(r>0\), the point \(P\) is on the terminal side of \(\theta\), and \(r=d(O, P)=\sqrt{x^{2}+y^{2}}\). Since
\[
\cos \theta=\frac{x}{r} \quad \sin \theta=\frac{y}{r}
\]
we have
\[
x=r \cos \theta \quad y=r \sin \theta
\]

If \(r<0\) and \(\theta\) is in radians, then the point \(P=(r, \theta)\) can be represented as \((-r, \pi+\theta)\), where \(-r>0\). Since
\[
\cos (\pi+\theta)=-\cos \theta=\frac{x}{-r} \quad \sin (\pi+\theta)=-\sin \theta=\frac{y}{-r}
\]
we have
\[
x=r \cos \theta \quad y=r \sin \theta
\]

\section*{EXAMPLE 4}

Figure 13

(a)

(b)

COMMENT Most calculators have the capability of converting from polar coordinates to rectangular coordinates. Consult your owner's manual for the proper keystrokes. Since in most cases this procedure is tedious, you will find that using formula (1) is faster.

\section*{Solution}
,

\section*{Converting from Polar Coordinates to Rectangular Coordinates}

Find the rectangular coordinates of the points with the following polar coordinates:
(a) \(\left(6, \frac{\pi}{6}\right)\)
(b) \(\left(-4,-\frac{\pi}{4}\right)\)

Use formula (1): \(x=r \cos \theta\) and \(y=r \sin \theta\).
(a) Figure \(13(\mathrm{a})\) shows \(\left(6, \frac{\pi}{6}\right)\) plotted. Notice that \(\left(6, \frac{\pi}{6}\right)\) lies in quadrant \(I\) of the rectangular coordinate system. So the \(x\)-coordinate and the \(y\)-coordinate should both be positive. With \(r=6\) and \(\theta=\frac{\pi}{6}\), we have
\[
\begin{aligned}
& x=r \cos \theta=6 \cos \frac{\pi}{6}=6 \cdot \frac{\sqrt{3}}{2}=3 \sqrt{3} \\
& y=r \sin \theta=6 \sin \frac{\pi}{6}=6 \cdot \frac{1}{2}=3
\end{aligned}
\]

The rectangular coordinates of the point \(\left(6, \frac{\pi}{6}\right)\) are \((3 \sqrt{3}, 3)\), which lies in quadrant I, as expected.
(b) Figure 13(b) shows \(\left(-4,-\frac{\pi}{4}\right)\) plotted. Notice that \(\left(-4,-\frac{\pi}{4}\right)\) lies in quadrant II of the rectangular coordinate system. With \(r=-4\) and \(\theta=-\frac{\pi}{4}\), we have
\[
\begin{aligned}
& x=r \cos \theta=-4 \cos \left(-\frac{\pi}{4}\right)=-4 \cdot \frac{\sqrt{2}}{2}=-2 \sqrt{2} \\
& y=r \sin \theta=-4 \sin \left(-\frac{\pi}{4}\right)=-4\left(-\frac{\sqrt{2}}{2}\right)=2 \sqrt{2}
\end{aligned}
\]

The rectangular coordinates of the point \(\left(-4,-\frac{\pi}{4}\right)\) are \((-2 \sqrt{2}, 2 \sqrt{2})\), which lies in quadrant II, as expected.

\section*{3 Convert from Rectangular Coordinates to Polar Coordinates}

Converting from rectangular coordinates \((x, y)\) to polar coordinates \((r, \theta)\) is a little more complicated. Notice that each solution begins by plotting the given rectangular coordinates.

\section*{EXAMPLE 5}

\section*{Step-by-Step Solution}

Step 1 Plot the point \((x, y)\) and note the quadrant the point lies in or the coordinate axis the point lies on.

\section*{How to Convert from Rectangular Coordinates to Polar Coordinates with the Point on a Coordinate Axis}

Find polar coordinates of a point whose rectangular coordinates are \((0,3)\).
Figure 14

Plot the point \((0,3)\) in a rectangular coordinate system. See Figure 14. The point lies on the positive \(y\)-axis.

Step 2 Determine the distance r from the origin to the point.

The point \((0,3)\) lies on the \(y\)-axis a distance of 3 units from the origin (pole), so \(r=3\).

Step 3 Determine \(\theta\).
COMIMENT Most graphing calculators have the capability of converting from rectangular coordinates to polar coordinates. Consult your owner's manual for the proper keystrokes.

A ray with vertex at the pole through \((0,3)\) forms an angle \(\theta=\frac{\pi}{2}\) with the polar axis. Polar coordinates for this point can be given by \(\left(3, \frac{\pi}{2}\right)\). Other possible representations include \(\left(-3,-\frac{\pi}{2}\right)\) and \(\left(3, \frac{5 \pi}{2}\right)\).

Figure 15 shows polar coordinates of points that lie on either the \(x\)-axis or the \(y\)-axis. In each illustration, \(a>0\).

Figure 15

(a) \((x, y)=(a, 0), a>0\)

(b) \((x, y)=(0, a), a>0\)

(c) \((x, y)=(-a, 0), a>0\)

(d) \((x, y)=(0,-a), a>0\)
am Now Work problem 55

\section*{EXAMPLE 6}

\section*{Step-by-Step Solution}

Step 1 Plot the point \((x, y)\) and note the quadrant the point lies in or the coordinate axis the point lies on.

\section*{How to Convert from Rectangular Coordinates to Polar} Coordinates with the Point in a Quadrant
Find the polar coordinates of a point whose rectangular coordinates are \((2,-2)\).
Plot the point \((2,-2)\) in a rectangular coordinate system. See Figure 16. The point lies in quadrant IV.

Figure 16

Step 2 Determine the distancer from the origin to the point using \(r=\sqrt{x^{2}+y^{2}}\).
\[
r=\sqrt{x^{2}+y^{2}}=\sqrt{(2)^{2}+(-2)^{2}}=\sqrt{8}=2 \sqrt{2}
\]

\section*{Step 3 Determine \(\theta\).}

Find \(\theta\) by recalling that \(\tan \theta=\frac{y}{x}\), so \(\theta=\tan ^{-1} \frac{y}{x},-\frac{\pi}{2}<\theta<\frac{\pi}{2}\). Since \((2,-2)\) lies in quadrant IV, we know that \(-\frac{\pi}{2}<\theta<0\). As a result,
\[
\theta=\tan ^{-1} \frac{y}{x}=\tan ^{-1}\left(\frac{-2}{2}\right)=\tan ^{-1}(-1)=-\frac{\pi}{4}
\]

A set of polar coordinates for the point \((2,-2)\) is \(\left(2 \sqrt{2},-\frac{\pi}{4}\right)\). Other possible representations include \(\left(2 \sqrt{2}, \frac{7 \pi}{4}\right)\) and \(\left(-2 \sqrt{2}, \frac{3 \pi}{4}\right)\).

\section*{EXAMPLE 7}

\section*{Solution}

Figure 17

\((x, y)=(-1,-\sqrt{3})\)

Figure 18

(a) \(\begin{aligned} r & =\sqrt{x^{2}+y^{2}} \\ \theta & =\tan ^{-1} \frac{y}{\bar{x}}\end{aligned}\)

\section*{Converting from Rectangular Coordinates to Polar Coordinates}

Find polar coordinates of a point whose rectangular coordinates are \((-1,-\sqrt{3})\).
Step 1: See Figure 17. The point lies in quadrant III.
STEP 2: The distance \(r\) from the origin to the point \((-1,-\sqrt{3})\) is
\[
r=\sqrt{(-1)^{2}+(-\sqrt{3})^{2}}=\sqrt{4}=2
\]

STEP 3: To find \(\theta\), use \(\alpha=\tan ^{-1} \frac{y}{x}=\tan ^{-1} \frac{-\sqrt{3}}{-1}=\tan ^{-1} \sqrt{3},-\frac{\pi}{2}<\alpha<\frac{\pi}{2}\). Since the point \((-1,-\sqrt{3})\) lies in quadrant III, and the inverse tangent function gives an angle in quadrant I , add \(\pi\) to the result to obtain an angle in quadrant III.
\[
\theta=\pi+\tan ^{-1}\left(\frac{-\sqrt{3}}{-1}\right)=\pi+\tan ^{-1} \sqrt{3}=\pi+\frac{\pi}{3}=\frac{4 \pi}{3}
\]

A set of polar coordinates for this point is \(\left(2, \frac{4 \pi}{3}\right)\). Other possible representations include \(\left(-2, \frac{\pi}{3}\right)\) and \(\left(2,-\frac{2 \pi}{3}\right)\).

Figure 18 shows how to find polar coordinates of a point that lies in a quadrant when its rectangular coordinates \((x, y)\) are given.

(b) \(\begin{aligned} & r=\sqrt{x^{2}+y^{2}} \\ & \theta=\pi+\tan ^{-1} \frac{y}{\bar{x}}\end{aligned}\)
(c) \(\begin{aligned} r & =\sqrt{x^{2}+y^{2}} \\ \theta & =\pi+\tan ^{-1} \frac{y}{x}\end{aligned}\)
(d) \(\begin{aligned} r & =\sqrt{x^{2}+y^{2}} \\ \theta & =\tan ^{-1} \frac{y}{x}\end{aligned}\)

Based on the preceding discussion, we have the formulas
\[
\begin{equation*}
r^{2}=x^{2}+y^{2} \quad \tan \theta=\frac{y}{x} \quad \text { if } x \neq 0 \tag{2}
\end{equation*}
\]

To use formula (2) effectively, follow these steps:

\section*{Steps for Converting from Rectangular to Polar Coordinates}

Step 1: Always plot the point \((x, y)\) first, as shown in Examples 5, 6, and 7. Note the quadrant the point lies in or the coordinate axis the point lies on.
STEP 2: If \(x=0\) or \(y=0\), use your illustration to find \(r\). If \(x \neq 0\) and \(y \neq 0\), then \(r=\sqrt{x^{2}+y^{2}}\).
STEP 3: Find \(\theta\). If \(x=0\) or \(y=0\), use your illustration to find \(\theta\). If \(x \neq 0\) and \(y \neq 0\), note the quadrant in which the point lies.
\[
\begin{aligned}
& \text { Quadrant I or IV: } \quad \theta=\tan ^{-1} \frac{y}{x} \\
& \text { Quadrant II or III: } \quad \theta=\pi+\tan ^{-1} \frac{y}{x}
\end{aligned}
\]
am Now Work problem 59

\section*{4 Transform Equations between Polar and Rectangular Forms}

Formulas (1) and (2) may also be used to transform equations from polar form to rectangular form, and vice versa. Two common techniques for transforming an equation from polar form to rectangular form are
1. Multiplying both sides of the equation by \(r\)
2. Squaring both sides of the equation

\section*{EXAMPLE 8 Transforming an Equation from Polar to Rectangular Form}

Transform the equation \(r=6 \cos \theta\) from polar coordinates to rectangular coordinates, and identify the graph.

Solution Multiplying each side by \(r\) makes it easier to apply formulas (1) and (2).
\[
\begin{aligned}
r & =6 \cos \theta & & \\
r^{2} & =6 r \cos \theta & & \text { Multiply each side by } r . \\
x^{2}+y^{2} & =6 x & & r^{2}=x^{2}+y^{2} ; x=r \cos \theta
\end{aligned}
\]

This is the equation of a circle. Proceed to complete the square to obtain the standard form of the equation.
\[
\begin{aligned}
x^{2}+y^{2} & =6 x & & \\
\left(x^{2}-6 x\right)+y^{2} & =0 & & \text { General form } \\
\left(x^{2}-6 x+9\right)+y^{2} & =9 & & \text { Complete the square in } x . \\
(x-3)^{2}+y^{2} & =9 & & \text { Factor. }
\end{aligned}
\]

This is the standard form of the equation of a circle with center \((3,0)\) and radius 3 .
an Now Work problem 75

\section*{EXAMPLE 9 Transforming an Equation from Rectangular to Polar Form}

Transform the equation \(4 x y=9\) from rectangular coordinates to polar coordinates.
Solution Use formula (1): \(x=r \cos \theta\) and \(y=r \sin \theta\).
\[
\begin{aligned}
4 x y & =9 \\
4(r \cos \theta)(r \sin \theta) & =9 \quad x=r \cos \theta, y=r \sin \theta \\
4 r^{2} \cos \theta \sin \theta & =9
\end{aligned}
\]

This is the polar form of the equation. It can be simplified as follows:
\[
\begin{aligned}
2 r^{2}(2 \sin \theta \cos \theta) & =9 & & \text { Factor out } 2 r^{2} \\
2 r^{2} \sin (2 \theta) & =9 & & \text { Double-angle Formula }
\end{aligned}
\]

\subsection*{8.1 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. Plot the point whose rectangular coordinates are \((3,-1)\). What quadrant does the point lie in? (pp. 2-3)
2. To complete the square of \(x^{2}+6 x\), add \(\qquad\) . (pp. A38-A39)
3. If \(P=(a, b)\) is a point on the terminal side of the angle \(\theta\) at a distance \(r\) from the origin, then \(\tan \theta=\) \(\qquad\) . (p. 401)
4. \(\tan ^{-1}(-1)=\) \(\qquad\) . (pp. 470-472)

\section*{Concepts and Vocabulary}
5. The origin in rectangular coordinates coincides with the in polar coordinates; the positive \(x\)-axis in rectangular coordinates coincides with the \(\qquad\) in polar coordinates.
6. True or False In the polar coordinates \((r, \theta), r\) can be negative.
7. True or False The polar coordinates of a point are unique.
8. If \(P\) is a point with polar coordinates \((r, \theta)\), the rectangular coordinates \((x, y)\) of \(P\) are given by \(x=\) \(\qquad\) and \(y=\) \(\qquad\) -

\section*{Skill Building}

In Problems 9-16, match each point in polar coordinates with either \(A, B, C\), or \(D\) on the graph.
9. \(\left(2,-\frac{11 \pi}{6}\right)\)
10. \(\left(-2,-\frac{\pi}{6}\right)\)
11. \(\left(-2, \frac{\pi}{6}\right)\)

In Problems 67-74, the letters \(x\) and y represent rectangular coordinates. Write each equation using polar coordinates \((r, \theta)\).
67. \(2 x^{2}+2 y^{2}=3\)
68. \(x^{2}+y^{2}=x\)
69. \(x^{2}=4 y\)
70. \(y^{2}=2 x\)
71. \(2 x y=1\)
72. \(4 x^{2} y=1\)
73. \(x=4\)
74. \(y=-3\)

In Problems 75-82, the letters \(r\) and \(\theta\) represent polar coordinates. Write each equation using rectangular coordinates \((x, y)\).
75. \(r=\cos \theta\)
76. \(r=\sin \theta+1\)
77. \(r^{2}=\cos \theta\)
78. \(r=\sin \theta-\cos \theta\)
79. \(r=2\)
80. \(r=4\)
81. \(r=\frac{4}{1-\cos \theta}\)
82. \(r=\frac{3}{3-\cos \theta}\)

\section*{Applications and Extensions}
83. Chicago In Chicago, the road system is set up like a Cartesian plane, where streets are indicated by the number of blocks they are from Madison Street and State Street. For example, Wrigley Field in Chicago is located at 1060 West Addison, which is 10 blocks west of State Street and 36 blocks north of Madison Street. Treat the intersection of Madison Street and State Street as the origin of a coordinate system, with east being the positive \(x\)-axis.
(a) Write the location of Wrigley Field using rectangular coordinates.
(b) Write the location of Wrigley Field using polar coordinates. Use the east direction for the polar axis. Express \(\theta\) in degrees.
(c) U.S. Cellular Field, home of the White Sox, is located at 35th and Princeton, which is 3 blocks west of State Street and 35 blocks south of Madison. Write the location of U.S. Cellular Field using rectangular coordinates.
(d) Write the location of U.S. Cellular Field using polar coordinates. Use the east direction for the polar axis. Express \(\theta\) in degrees.
84. Show that the formula for the distance \(d\) between two points \(P_{1}=\left(r_{1}, \theta_{1}\right)\) and \(P_{2}=\left(r_{2}, \theta_{2}\right)\) is
\[
d=\sqrt{r_{1}^{2}+r_{2}^{2}-2 r_{1} r_{2} \cos \left(\theta_{2}-\theta_{1}\right)}
\]

\section*{Explaining Concepts: Discussion and Writing}
85. In converting from polar coordinates to rectangular coordinates, what formulas will you use?
86. Explain how you proceed to convert from rectangular coordinates to polar coordinates.
87. Is the street system in your town based on a rectangular coordinate system, a polar coordinate system, or some other system? Explain.

\section*{Retain Your Knowledge}

Problems 88-91 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
88. Solve: \(\log _{4}(x+3)-\log _{4}(x-1)=2\)
89. Use Descartes' Rule of Signs to determine the possible number of positive or negative real zeros for the function \(f(x)=-2 x^{3}+6 x^{2}-7 x-8\).
90. Find the midpoint of the line segment connecting the points \((-3,7)\) and \(\left(\frac{1}{2}, 2\right)\).
91. Given that the point \((3,8)\) is on the graph of \(y=f(x)\), what is the corresponding point on the graph of \(y=-2 f(x+3)+5\) ?

\section*{‘Are You Prepared?’ Answers}

\subsection*{8.2 Polar Equations and Graphs}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Symmetry (Foundations, Section 2, pp. 12-14)
- Circles (Foundations, Section 4, pp. 34-37)
- Even-Odd Properties of Trigonometric Functions (Section 5.3, pp. 416-417)
- Difference Formulas for Sine and Cosine (Section 6.5, pp. 499 and 502)
- Value of the Sine and Cosine Functions at Certain Angles (Section 5.2, pp. 393-400)

Now Work the 'Are You Prepared?' problems on page 605.
OBJECTIVES 1 Identify and Graph Polar Equations by Converting to Rectangular Equations (p. 594)
2 Test Polar Equations for Symmetry (p. 597)
3 Graph Polar Equations by Plotting Points (p. 598)

Just as a rectangular grid may be used to plot points given by rectangular coordinates, as in Figure 19(a), a grid consisting of concentric circles (with centers at the pole) and rays (with vertices at the pole) can be used to plot points given by polar coordinates, as shown in Figure 19(b). We shall use such polar grids to graph polar equations.

Figure 19

(a) Rectangular grid

(b) Polar grid

\section*{DEFINITION}

An equation whose variables are polar coordinates is called a polar equation. The graph of a polar equation consists of all points whose polar coordinates satisfy the equation.

\section*{1 Identify and Graph Polar Equations by Converting to Rectangular Equations}

One method that can be used to graph a polar equation is to convert the equation to rectangular coordinates. In the following discussion, \((x, y)\) represents the rectangular coordinates of a point \(P\), and \((r, \theta)\) represents the polar coordinates of the point \(P\).

\section*{EXAMPLE I Identifying and Graphing a Polar Equation (Circle)}

Identify and graph the equation: \(r=3\)

\section*{Solution Convert the polar equation to a rectangular equation.}
\[
\begin{aligned}
r & =3 \\
r^{2} & =9 \\
& \text { square both sides. } \\
x^{2}+y^{2} & =9 \quad r^{2}=x^{2}+y^{2}
\end{aligned}
\]

The graph of \(r=3\) is a circle, with center at the pole and radius 3. See Figure 20.
Figure 20
\[
r=3 \text { or } x^{2}+y^{2}=9
\]

-Now Work problem 13

\section*{EXAMPLE 2 Identifying and Graphing a Polar Equation (Line)}

Identify and graph the equation: \(\theta=\frac{\pi}{4}\)

\section*{Figure 21}
\(\theta=\frac{\pi}{4}\) or \(y=x\)

Solution

Convert the polar equation to a rectangular equation.
\[
\begin{array}{rlrl}
\theta & =\frac{\pi}{4} & \\
\tan \theta & =\tan \frac{\pi}{4} & & \text { Take the tangent of both sides. } \\
\frac{y}{x} & =1 & & \tan \theta=\frac{y}{x} ; \tan \frac{\pi}{4}=1 \\
y & =x & &
\end{array}
\]

The graph of \(\theta=\frac{\pi}{4}\) is a line passing through the pole making an angle of \(\frac{\pi}{4}\) with the polar axis. See Figure 21.

\section*{EXAMPLE 3 Identifying and Graphing a Polar Equation (Horizontal Line)}

Identify and graph the equation: \(r \sin \theta=2\)

Figure 22
Since \(y=r \sin \theta\), we can write the equation as
\[
y=2
\]

Thus, the graph of \(r \sin \theta=2\) is a horizontal line 2 units above the pole. See Figure 22.

COMMENT A graphing utility can be used to graph polar equations. Read Using a Graphing Utility to Graph a Polar Equation, Appendix B, Section B.8.
\(r \sin \theta=2\) or \(y=2\)

\section*{EXAMPLE 4 Identifying and Graphing a Polar Equation (Vertical Line)}

Identify and graph the equation: \(r \cos \theta=-3\)

Solution Since \(x=r \cos \theta\), we can write the equation as
\[
x=-3
\]

Thus, the graph of \(r \cos \theta=-3\) is a vertical line 3 units to the left of the pole. See Figure 23.

Figure 23
\(r \cos \theta=-3\) or \(x=-3\)

Based on Examples 3 and 4, we are led to the following results. (The proofs are left as exercises. See Problems 81 and 82.)

THEOREM
Let \(a\) be a nonzero real number. Then the graph of the equation
\[
r \sin \theta=a
\]
is a horizontal line \(a\) units above the pole if \(a>0\) and \(|a|\) units below the pole if \(a<0\).

The graph of the equation
\[
r \cos \theta=a
\]
is a vertical line \(a\) units to the right of the pole if \(a>0\) and \(|a|\) units to the left of the pole if \(a<0\).

\section*{EXAMPLE 5 Identifying and Graphing a Polar Equation (Circle)}

Identify and graph the equation: \(r=4 \sin \theta\)

\section*{Solution}

Figure 24
\(r=4 \sin \theta\) or \(x^{2}+(y-2)^{2}=4\)

Now use the facts that \(r^{2}=x^{2}+y^{2}\) and \(y=r \sin \theta\). Then
\[
\begin{aligned}
x^{2}+y^{2} & =4 y \\
x^{2}+\left(y^{2}-4 y\right) & =0 \\
x^{2}+\left(y^{2}-4 y+4\right) & =4 \quad \text { Complete the square in } y . \\
x^{2}+(y-2)^{2} & =4 \quad \text { Factor. }
\end{aligned}
\]

This is the standard equation of a circle with center at \((0,2)\) in rectangular coordinates and radius 2. See Figure 24.

\section*{EXAMPLE 6}

\section*{Identifying and Graphing a Polar Equation (Circle)}

Identify and graph the equation: \(r=-2 \cos \theta\)

Figure 25
Solution
\(r=-2 \cos \theta\) or \((x+1)^{2}+y^{2}=1\)

Proceed as in Example 5.
\[
\begin{aligned}
r^{2} & =-2 r \cos \theta & & \text { Multiply both sides by } r . \\
x^{2}+y^{2} & =-2 x & & r^{2}=x^{2}+y^{2} ; \quad x=r \cos \theta \\
x^{2}+2 x+y^{2} & =0 & & \\
\left(x^{2}+2 x+1\right)+y^{2} & =1 & & \text { Complete the square in } x \\
(x+1)^{2}+y^{2} & =1 & & \text { Factor. }
\end{aligned}
\]

This is the standard equation of a circle with center at \((-1,0)\) in rectangular coordinates and radius 1. See Figure 25.

\section*{Exploration}

Using a square screen, graph \(r_{1}=\sin \theta, r_{2}=2 \sin \theta\), and \(r_{3}=3 \sin \theta\). Do you see the pattern? Clear the screen and graph \(r_{1}=-\sin \theta, r_{2}=-2 \sin \theta\), and \(r_{3}=-3 \sin \theta\). Do you see the pattern? Clear the screen and graph \(r_{1}=\cos \theta, r_{2}=2 \cos \theta\), and \(r_{3}=3 \cos \theta\). Do you see the pattern? Clear the screen and graph \(r_{1}=-\cos \theta, r_{2}=-2 \cos \theta\), and \(r_{3}=-3 \cos \theta\). Do you see the pattern?

Based on Examples 5 and 6 and the preceding Exploration, we are led to the following results. (The proofs are left as exercises. See Problems 83-86.)

Let \(a\) be a positive real number. Then

\section*{Equation}
(a) \(r=2 a \sin \theta\)
(b) \(r=-2 a \sin \theta\)
(c) \(r=2 a \cos \theta\)
(d) \(r=-2 a \cos \theta\)

\section*{Description}

Circle: radius \(a\); center at \((0, a)\) in rectangular coordinates Circle: radius \(a\); center at \((0,-a)\) in rectangular coordinates Circle: radius \(a\); center at \((a, 0)\) in rectangular coordinates Circle: radius \(a\); center at \((-a, 0)\) in rectangular coordinates
Each circle passes through the pole.

The method of converting a polar equation to an identifiable rectangular equation to obtain the graph is not always helpful, nor is it always necessary. Usually, a table is created that lists several points on the graph. By checking for symmetry, it may be possible to reduce the number of points needed to draw the graph.

\section*{2 Test Polar Equations for Symmetry}

In polar coordinates, the points \((r, \theta)\) and \((r,-\theta)\) are symmetric with respect to the polar axis (the \(x\)-axis). See Figure 26(a). The points \((r, \theta)\) and \((r, \pi-\theta)\) are symmetric with respect to the line \(\theta=\frac{\pi}{2}\) (the \(y\)-axis). See Figure \(26(\mathrm{~b})\). The points \((r, \theta)\) and \((-r, \theta)\) are symmetric with respect to the pole (the origin). See Figure 26(c).

Figure 26

The following tests are a consequence of these observations.

\section*{THEOREM}

Tests for Symmetry
Symmetry with Respect to the Polar Axis ( \(\boldsymbol{x}\)-Axis)
In a polar equation, replace \(\theta\) by \(-\theta\). If an equivalent equation results, the graph is symmetric with respect to the polar axis.
Symmetry with Respect to the Line \(\theta=\frac{\boldsymbol{\pi}}{2}\) ( \(\boldsymbol{y}\)-Axis)
In a polar equation, replace \(\theta\) by \(\pi-\theta\). If an equivalent equation results, the graph is symmetric with respect to the line \(\theta=\frac{\pi}{2}\).

\section*{Symmetry with Respect to the Pole (Origin)}

In a polar equation, replace \(r\) by \(-r\). If an equivalent equation results, the graph is symmetric with respect to the pole.

The three tests for symmetry given here are sufficient conditions for symmetry, but they are not necessary conditions. That is, an equation may fail these tests and still have a graph that is symmetric with respect to the polar axis, the line \(\theta=\frac{\pi}{2}\), or the pole. For example, the graph of \(r=\sin (2 \theta)\) turns out to be symmetric with respect to the polar axis, the line \(\theta=\frac{\pi}{2}\), and the pole, but all three tests given here fail. See also Problems 87-89.

\section*{3 Graph Polar Equations by Plotting Points}

\section*{EXAMPLE 7 \\ Graphing a Polar Equation (Cardioid)}

Solution
Table 1
\begin{tabular}{|cl|}
\hline \(\boldsymbol{\theta}\) & \(\boldsymbol{r}=\mathbf{1}-\boldsymbol{\operatorname { s i n }} \boldsymbol{\theta}\) \\
\hline\(-\frac{\pi}{2}\) & \(1-(-1)=2\) \\
\(-\frac{\pi}{3}\) & \(1-\left(-\frac{\sqrt{3}}{2}\right) \approx 1.87\) \\
\(-\frac{\pi}{6}\) & \(1-\left(-\frac{1}{2}\right)=\frac{3}{2}\) \\
0 & \(1-0=1\) \\
\(\frac{\pi}{6}\) & \(1-\frac{1}{2}=\frac{1}{2}\) \\
\(\frac{\pi}{3}\) & \(1-\frac{\sqrt{3}}{2} \approx 0.13\) \\
\(\frac{\pi}{2}\) & \(1-1=0\) \\
\hline
\end{tabular}

Figure 27
\(r=1-\sin \theta\)

\section*{Exploration}

Graph \(r_{1}=1+\sin \theta\). Clear the screen and graph \(r_{1}=1-\cos \theta\). Clear the screen and graph \(r_{1}=1+\cos \theta\). Do you see a pattern?

Graph the equation: \(r=1-\sin \theta\)
Check for symmetry first.
Polar Axis: Replace \(\theta\) by \(-\theta\). The result is
\[
r=1-\sin (-\theta)=1+\sin \theta \quad \sin (-\theta)=-\sin \theta
\]

The test fails, so the graph may or may not be symmetric with respect to the polar axis.

The Line \(\boldsymbol{\theta}=\frac{\boldsymbol{\pi}}{\mathbf{2}}\) : Replace \(\theta\) by \(\pi-\theta\). The result is
\[
\begin{aligned}
r=1-\sin (\pi-\theta) & =1-(\sin \pi \cos \theta-\cos \pi \sin \theta) \\
& =1-[0 \cdot \cos \theta-(-1) \sin \theta]=1-\sin \theta
\end{aligned}
\]

The test is satisfied, so the graph is symmetric with respect to the line \(\theta=\frac{\pi}{2}\).
The Pole: Replace \(r\) by \(-r\). Then the result is \(-r=1-\sin \theta\), so \(r=-1+\sin \theta\). The test fails, so the graph may or may not be symmetric with respect to the pole.

Next, identify points on the graph by assigning values to the angle \(\theta\) and calculating the corresponding values of \(r\). Due to the symmetry with respect to the line \(\theta=\frac{\pi}{2}\), just assign values to \(\theta\) from \(-\frac{\pi}{2}\) to \(\frac{\pi}{2}\), as given in Table 1.

Now plot the points \((r, \theta)\) from Table 1 and trace out the graph, beginning at the point \(\left(2,-\frac{\pi}{2}\right)\) and ending at the point \(\left(0, \frac{\pi}{2}\right)\). Then reflect this portion of the graph about the line \(\theta=\frac{\pi}{2}\) (the \(y\)-axis) to obtain the complete graph. See Figure 27.

The curve in Figure 27 is an example of a cardioid (a heart-shaped curve).

Cardioids are characterized by equations of the form
\[
\begin{array}{ll}
r=a(1+\cos \theta) & r=a(1+\sin \theta) \\
r=a(1-\cos \theta) & r=a(1-\sin \theta)
\end{array}
\]
where \(a>0\). The graph of a cardioid passes through the pole.

Solution

Table 2
\begin{tabular}{|ll|}
\hline \(\boldsymbol{\theta}\) & \(\boldsymbol{r}=\mathbf{3}+\mathbf{2} \boldsymbol{\operatorname { c o s } \boldsymbol { \theta }}\) \\
\hline 0 & \(3+2(1)=5\) \\
\(\frac{\pi}{6}\) & \(3+2\left(\frac{\sqrt{3}}{2}\right) \approx 4.73\) \\
\(\frac{\pi}{3}\) & \(3+2\left(\frac{1}{2}\right)=4\) \\
\(\frac{\pi}{2}\) & \(3+2(0)=3\) \\
\(\frac{2 \pi}{3}\) & \(3+2\left(-\frac{1}{2}\right)=2\) \\
\(\frac{5 \pi}{6}\) & \(3+2\left(-\frac{\sqrt{3}}{2}\right) \approx 1.27\) \\
\(\pi\) & \(3+2(-1)=1\) \\
\hline
\end{tabular}

\section*{Exploration}

Graph \(r_{1}=3-2 \cos \theta\). Clear the screen and graph \(r_{1}=3+2 \sin \theta\). Clear the screen and graph \(r_{1}=3-2 \sin \theta\). Do you see a pattern?

\section*{EXAMPLE 8 \\ Graphing a Polar Equation (Limaçon without an Inner Loop)}

Graph the equation: \(r=3+2 \cos \theta\)
Check for symmetry first.
Polar Axis: Replace \(\theta\) by \(-\theta\). The result is
\[
r=3+2 \cos (-\theta)=3+2 \cos \theta \quad \cos (-\theta)=\cos \theta
\]

The test is satisfied, so the graph is symmetric with respect to the polar axis.
The Line \(\boldsymbol{\theta}=\frac{\boldsymbol{\pi}}{\mathbf{2}}\) : Replace \(\theta\) by \(\pi-\theta\). The result is
\[
\begin{aligned}
r=3+2 \cos (\pi-\theta) & =3+2(\cos \pi \cos \theta+\sin \pi \sin \theta) \\
& =3-2 \cos \theta
\end{aligned}
\]

The test fails, so the graph may or may not be symmetric with respect to the line \(\theta=\frac{\pi}{2}\).
The Pole: Replace \(r\) by \(-r\). The test fails, so the graph may or may not be symmetric with respect to the pole.

Next, identify points on the graph by assigning values to the angle \(\theta\) and calculating the corresponding values of \(r\). Due to the symmetry with respect to the polar axis, just assign values to \(\theta\) from 0 to \(\pi\), as given in Table 2 .

Now plot the points \((r, \theta)\) from Table 2 and trace out the graph, beginning at the point \((5,0)\) and ending at the point \((1, \pi)\). Then reflect this portion of the graph about the polar axis (the \(x\)-axis) to obtain the complete graph. See Figure 28.

The curve in Figure 28 is an example of a limaçon (a French word for snail) without an inner loop.

Limaçons without an inner loop are characterized by equations of the form
\[
\begin{array}{ll}
r=a+b \cos \theta & r=a+b \sin \theta \\
r=a-b \cos \theta & r=a-b \sin \theta
\end{array}
\]
where \(a>0, b>0\), and \(a>b\). The graph of a limaçon without an inner loop does not pass through the pole.

\section*{EXAMPLE 9 \\ Graphing a Polar Equation (Limaçon with an Inner Loop)}

Solution

Table 3
\begin{tabular}{|ll|}
\hline \(\boldsymbol{\theta}\) & \(\boldsymbol{r}=\mathbf{1}+\mathbf{2} \boldsymbol{\operatorname { c o s } \boldsymbol { \theta }}\) \\
\hline 0 & \(1+2(1)=3\) \\
\(\frac{\pi}{6}\) & \(1+2\left(\frac{\sqrt{3}}{2}\right) \approx 2.73\) \\
\(\frac{\pi}{3}\) & \(1+2\left(\frac{1}{2}\right)=2\) \\
\(\frac{\pi}{2}\) & \(1+2(0)=1\) \\
\(\frac{2 \pi}{3}\) & \(1+2\left(-\frac{1}{2}\right)=0\) \\
\(\frac{5 \pi}{6}\) & \(1+2\left(-\frac{\sqrt{3}}{2}\right) \approx-0.73\) \\
\(\pi\) & \(1+2(-1)=-1\) \\
\hline
\end{tabular}

\section*{Exploration}

Graph \(r_{1}=1-2 \cos \theta\). Clear the screen and graph \(r_{1}=1+2 \sin \theta\). Clear the screen and graph \(r_{1}=1-2 \sin \theta\). Do you see a pattern?

Figure 29

DEFINITION

Graph the equation: \(r=1+2 \cos \theta\)
First, check for symmetry.
Polar Axis: Replace \(\theta\) by \(-\theta\). The result is
\[
r=1+2 \cos (-\theta)=1+2 \cos \theta
\]

The test is satisfied, so the graph is symmetric with respect to the polar axis.
The Line \(\boldsymbol{\theta}=\frac{\boldsymbol{\pi}}{\mathbf{2}}\) : Replace \(\theta\) by \(\pi-\theta\). The result is
\[
\begin{aligned}
r=1+2 \cos (\pi-\theta) & =1+2(\cos \pi \cos \theta+\sin \pi \sin \theta) \\
& =1-2 \cos \theta
\end{aligned}
\]

The test fails, so the graph may or may not be symmetric with respect to the line \(\theta=\frac{\pi}{2}\).

The Pole: Replace \(r\) by -r. The test fails, so the graph may or may not be symmetric with respect to the pole.

Next, identify points on the graph of \(r=1+2 \cos \theta\) by assigning values to the angle \(\theta\) and calculating the corresponding values of \(r\). Due to the symmetry with respect to the polar axis just assign values to \(\theta\) from 0 to \(\pi\), as given in Table 3 .

Now plot the points \((r, \theta)\) from Table 3, beginning at \((3,0)\) and ending at \((-1, \pi)\). See Figure 29(a). Finally, reflect this portion of the graph about the polar axis (the \(x\)-axis) to obtain the complete graph. See Figure 29(b).

The curve in Figure 29(b) is an example of a limaçon with an inner loop.

Limaçons with an inner loop are characterized by equations of the form
\[
\begin{array}{ll}
r=a+b \cos \theta & r=a+b \sin \theta \\
r=a-b \cos \theta & r=a-b \sin \theta
\end{array}
\]
where \(a>0, b>0\), and \(a<b\). The graph of a limaçon with an inner loop will pass through the pole twice.

\section*{EXAMPLE IO}

\section*{Solution}

Table 4
\begin{tabular}{|ll|}
\hline \(\boldsymbol{\theta}\) & \(\boldsymbol{r}=\mathbf{2} \boldsymbol{\operatorname { c o s } ( \mathbf { 2 \theta } )}\) \\
\hline 0 & \(2(1)=2\) \\
\(\frac{\pi}{6}\) & \(2\left(\frac{1}{2}\right)=1\) \\
\(\frac{\pi}{4}\) & \(2(0)=0\) \\
\(\frac{\pi}{3}\) & \(2\left(-\frac{1}{2}\right)=-1\) \\
\(\frac{\pi}{2}\) & \(2(-1)=-2\) \\
\hline
\end{tabular}

\section*{Graphing a Polar Equation (Rose)}

Graph the equation: \(r=2 \cos (2 \theta)\)
Check for symmetry.
Polar Axis: Replace \(\theta\) by \(-\theta\). The result is
\[
r=2 \cos [2(-\theta)]=2 \cos (2 \theta)
\]

The test is satisfied, so the graph is symmetric with respect to the polar axis.
The Line \(\boldsymbol{\theta}=\frac{\boldsymbol{\pi}}{\mathbf{2}}\) : Replace \(\theta\) by \(\pi-\theta\). The result is
\[
r=2 \cos [2(\pi-\theta)]=2 \cos (2 \pi-2 \theta)=2 \cos (2 \theta)
\]

The test is satisfied, so the graph is symmetric with respect to the line \(\theta=\frac{\pi}{2}\).
The Pole: Since the graph is symmetric with respect to both the polar axis and the line \(\theta=\frac{\pi}{2}\), it must be symmetric with respect to the pole.

Next, construct Table 4. Due to the symmetry with respect to the polar axis, the line \(\theta=\frac{\pi}{2}\), and the pole, just consider values of \(\theta\) from 0 to \(\frac{\pi}{2}\).

Plot and connect these points as shown in Figure 30(a). Finally, because of symmetry, reflect this portion of the graph first about the polar axis (the \(x\)-axis) and then about the line \(\theta=\frac{\pi}{2}\) (the \(y\)-axis) to obtain the complete graph. See Figure 30(b).

Figure 30

\section*{Exploration}

Graph \(r_{1}=2 \cos (4 \theta)\); clear the screen and graph \(r_{1}=2 \cos (6 \theta)\). How many petals did each of these graphs have?

Clear the screen and graph, in order, each on a clear screen, \(r_{1}=2 \cos (3 \theta)\), \(r_{1}=2 \cos (5 \theta)\), and \(r_{1}=2 \cos (7 \theta)\). What do you notice about the number of petals?

The curve in Figure 30(b) is called a rose with four petals.

Rose curves are characterized by equations of the form
\[
r=a \cos (n \theta), \quad r=a \sin (n \theta), \quad a \neq 0
\]
and have graphs that are rose shaped. If \(n \neq 0\) is even, the rose has \(2 n\) petals; if \(n \neq \pm 1\) is odd, the rose has \(n\) petals.

\section*{EXAMPLE II Graphing a Polar Equation (Lemniscate)}

Graph the equation: \(r^{2}=4 \sin (2 \theta)\)
Solution We leave it to you to verify that the graph is symmetric with respect to the pole. Because of the symmetry with respect to the pole, consider only those values of \(\theta\) between \(\theta=0\) and \(\theta=\pi\). Note that there are no points on the graph for \(\frac{\pi}{2}<\theta<\pi\) (quadrant II), since \(\sin (2 \theta)<0\) for such values. Table 5 lists points on the graph for values of \(\theta=0\) through \(\theta=\frac{\pi}{2}\). The points from Table 5 where \(r \geq 0\) are plotted in Figure 31(a). The remaining points on the graph may be obtained by using symmetry. Figure 31(b) shows the final graph drawn.

Figure 31

(a)

(b) \(r^{2}=4 \sin (2 \theta)\)

The curve in Figure 31(b) is an example of a lemniscate (from the Greek word ribbon).

DEFINITION

Lemniscates are characterized by equations of the form
\[
r^{2}=a^{2} \sin (2 \theta) \quad r^{2}=a^{2} \cos (2 \theta)
\]
where \(a \neq 0\), and have graphs that are propeller shaped.

Now Work problem 53

\section*{EXAMPLE I2 Graphing a Polar Equation (Spiral)}

Graph the equation: \(r=e^{\theta / 5}\)
Solution The tests for symmetry with respect to the pole, the polar axis, and the line \(\theta=\frac{\pi}{2}\) fail. Furthermore, there is no number \(\theta\) for which \(r=0\), so the graph does not pass through the pole. Observe that \(r\) is positive for all \(\theta, r\) increases as \(\theta\) increases, \(r \rightarrow 0\) as \(\theta \rightarrow-\infty\), and \(r \rightarrow \infty\) as \(\theta \rightarrow \infty\). With the help of a calculator, the values in Table 6 can be obtained. See Figure 32.

Table 6
\begin{tabular}{|cl|}
\hline \(\boldsymbol{\theta}\) & \(\boldsymbol{r}=\boldsymbol{e}^{\boldsymbol{\theta} / \mathbf{5}}\) \\
\hline\(-\frac{3 \pi}{2}\) & 0.39 \\
\(-\pi\) & 0.53 \\
\(-\frac{\pi}{2}\) & 0.73 \\
\(-\frac{\pi}{4}\) & 0.85 \\
0 & 1 \\
\(\frac{\pi}{4}\) & 1.17 \\
\(\frac{\pi}{2}\) & 1.37 \\
\(\pi\) & 1.87 \\
\(\frac{3 \pi}{2}\) & 2.57 \\
\(2 \pi\) & 3.51 \\
\hline
\end{tabular}

Figure 32
\(r=e^{\theta / 5}\)

The curve in Figure 32 is called a logarithmic spiral, since its equation may be written as \(\theta=5 \ln r\) and it spirals infinitely both toward the pole and away from it.

\section*{Classification of Polar Equations}

The equations of some lines and circles in polar coordinates and their corresponding equations in rectangular coordinates are given in Table 7. Also included are the names and graphs of a few of the more frequently encountered polar equations.

Table 7
\begin{tabular}{|c|c|c|c|}

\hline
\end{tabular}

\section*{Sketching Quickly}

If a polar equation involves only a sine (or cosine) function, you can quickly obtain a sketch of its graph by making use of Table 7, periodicity, and a short table.

\section*{EXAMPLE I 3 Sketching the Graph of a Polar Equation Quickly}

Graph the equation: \(r=2+2 \sin \theta\)
Solution You should recognize the polar equation: Its graph is a cardioid. The period of \(\sin \theta\) is \(2 \pi\), so form a table using \(0 \leq \theta \leq 2 \pi\), compute \(r\), plot the points \((r, \theta)\), and sketch the graph of a cardioid as \(\theta\) varies from 0 to \(2 \pi\). See Table 8 and Figure 33.

Table 8
\begin{tabular}{|ll|}
\hline \(\boldsymbol{\theta}\) & \(\boldsymbol{r}=\mathbf{2}+\mathbf{2} \boldsymbol{\operatorname { s i n }} \boldsymbol{\theta}\) \\
\hline 0 & \(2+2(0)=2\) \\
\(\frac{\pi}{2}\) & \(2+2(1)=4\) \\
\(\pi\) & \(2+2(0)=2\) \\
\(\frac{3 \pi}{2}\) & \(2+2(-1)=0\) \\
\(2 \pi\) & \(2+2(0)=2\) \\
\hline
\end{tabular}

Figure 33
\(r=2+2 \sin \theta\)

Calculus Comment For those of you who are planning to study calculus, a comment about one important role of polar equations is in order.

In rectangular coordinates, the equation \(x^{2}+y^{2}=1\), whose graph is the unit circle, is not the graph of a function. In fact, it requires two functions to obtain the graph of the unit circle:
\[
y_{1}=\sqrt{1-x^{2}} \quad \text { Upper semicircle } \quad y_{2}=-\sqrt{1-x^{2}} \quad \text { Lower semicircle }
\]

In polar coordinates, the equation \(r=1\), whose graph is also the unit circle, does define a function. For each choice of \(\theta\), there is only one corresponding value of \(r\)-that is, \(r=1\). Since many problems in calculus require the use of functions, the opportunity to express relations that are nonfunctions in rectangular coordinates as functions in polar coordinates becomes extremely useful.

Note also that the vertical-line test for functions is valid only for equations in rectangular coordinates.

\section*{Historical Feature}

Jakob Bernoulli (1654-1705)

Polar coordinates seem to have been invented by Jakob Bernoulli (1654-1705) in about 1691, although, as with most such ideas, earlier traces of the notion exist. Early users of calculus remained committed to rectangular coordinates, and polar coordinates did not become widely used until the early

1800s. Even then, it was mostly geometers who used them for describing odd curves. Finally, about the mid-1800s, applied mathematicians realized the tremendous simplification that polar coordinates make possible in the description of objects with circular or cylindrical symmetry. From then on, their use became widespread.

\subsection*{8.2 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. If the rectangular coordinates of a point are \((4,-6)\), the point symmetric to it with respect to the origin is \(\qquad\) -. (pp. 12-14)
2. The difference formula for cosine is \(\cos (A-B)=\) \(\qquad\) . (p. 499)
3. The standard equation of a circle with center at \((-2,5)\) and radius 3 is \(\qquad\) . (pp. 34-35)
4. Is the sine function even, odd, or neither? (p. 394)
5. \(\sin \frac{5 \pi}{4}=\) \(\qquad\) . (pp. 398-400)
6. \(\cos \frac{2 \pi}{3}=\) \(\qquad\) . (pp. 398-400)

\section*{Concepts and Vocabulary}
7. An equation whose variables are polar coordinates is called \(a(n)\) \(\qquad\) .
8. True or False The tests for symmetry in polar coordinates are necessary but not sufficient.
9. To test whether the graph of a polar equation may be symmetric with respect to the polar axis, replace \(\theta\) by \(\qquad\) .
10. To test whether the graph of a polar equation may be symmetric with respect to the line \(\theta=\frac{\pi}{2}\), replace \(\theta\) by \(\qquad\) .
11. True or False A cardioid passes through the pole.
12. Rose curves are characterized by equations of the form \(r=a \cos (n \theta)\) or \(r=a \sin (n \theta), a \neq 0\). If \(n \neq 0\) is even, the rose has \(\qquad\) petals; if \(n \neq \pm 1\) is odd, the rose has petals.

\section*{Skill Building}

In Problems 13-28, transform each polar equation to an equation in rectangular coordinates. Then identify and graph the equation.
13. \(r=4\)
14. \(r=2\)
15. \(\theta=\frac{\pi}{3}\)
16. \(\theta=-\frac{\pi}{4}\)
17. \(r \sin \theta=4\)
18. \(r \cos \theta=4\)
19. \(r \cos \theta=-2\)
20. \(r \sin \theta=-2\)
21. \(r=2 \cos \theta\)
22. \(r=2 \sin \theta\)
23. \(r=-4 \sin \theta\)
24. \(r=-4 \cos \theta\)
25. \(r \sec \theta=4\)
26. \(r \csc \theta=8\)
27. \(r \csc \theta=-2\)
28. \(r \sec \theta=-4\)

In Problems 29-36, match each of the graphs \((A)\) through \((H)\) to one of the following polar equations.
29. \(r=2\)
30. \(\theta=\frac{\pi}{4}\)
31. \(r=2 \cos \theta\)
32. \(r \cos \theta=2\)
33. \(r=1+\cos \theta\)
34. \(r=2 \sin \theta\)
35. \(\theta=\frac{3 \pi}{4}\)
36. \(r \sin \theta=2\)

(A)

(E)

(B)

(F)

(C)

(G)

(D)

(H)

In Problems 37-60, identify and graph each polar equation.
37. \(r=2+2 \cos \theta\)
38. \(r=1+\sin \theta\)
39. \(r=3-3 \sin \theta\)
40. \(r=2-2 \cos \theta\)
41. \(r=2+\sin \theta\)
42. \(r=2-\cos \theta\)
43. \(r=4-2 \cos \theta\)
44. \(r=4+2 \sin \theta\)
45. \(r=1+2 \sin \theta\)
46. \(r=1-2 \sin \theta\)
47. \(r=2-3 \cos \theta\)
48. \(r=2+4 \cos \theta\)
49. \(r=3 \cos (2 \theta)\)
50. \(r=2 \sin (3 \theta)\)
51. \(r=4 \sin (5 \theta)\)
52. \(r=3 \cos (4 \theta)\)
53. \(r^{2}=9 \cos (2 \theta)\)
54. \(r^{2}=\sin (2 \theta)\)
55. \(r=2^{\theta}\)
56. \(r=3^{\theta}\)
57. \(r=1-\cos \theta\)
58. \(r=3+\cos \theta\)
59. \(r=1-3 \cos \theta\)
60. \(r=4 \cos (3 \theta)\)

\section*{- Mixed Practice}

In Problems 61-66, graph each pair of polar equations on the same polar grid. Find the polar coordinates of the point(s) of intersection.
61. \(r=8 \cos \theta ; r=2 \sec \theta\)
62. \(r=8 \sin \theta ; r=4 \csc \theta\)
63. \(r=\sin \theta ; r=1+\cos \theta\)
64. \(r=3 ; r=2+2 \cos \theta\)
65. \(r=1+\sin \theta ; r=1+\cos \theta\)
66. \(r=1+\cos \theta ; r=3 \cos \theta\)

\section*{Applications and Extensions}

In Problems 67-70, the polar equation for each graph is either \(r=a+b \cos \theta\) or \(r=a+b \sin \theta, a>0\). Select the correct equation and find the values of \(a\) and \(b\).

69.

In Problems 71-80, graph each polar equation.
71. \(r=\frac{2}{1-\cos \theta}\) (parabola)
73. \(r=\frac{1}{3-2 \cos \theta}\) (ellipse)
75. \(r=\theta, \quad \theta \geq 0\) (spiral of Archimedes)
77. \(r=\csc \theta-2, \quad 0<\theta<\pi\) (conchoid)
79. \(r=\tan \theta, \quad-\frac{\pi}{2}<\theta<\frac{\pi}{2}\) (kappa curve)
81. Show that the graph of the equation \(r \sin \theta=a\) is a horizontal line \(a\) units above the pole if \(a \geq 0\) and \(|a|\) units below the pole if \(a<0\).
83. Show that the graph of the equation \(r=2 a \sin \theta, a>0\), is a circle of radius \(a\) with center at \((0, a)\) in rectangular coordinates.
85. Show that the graph of the equation \(r=2 a \cos \theta, a>0\), is a circle of radius \(a\) with center at \((a, 0)\) in rectangular coordinates.
68.

70.

72. \(r=\frac{2}{1-2 \cos \theta}\) (hyperbola)
74. \(r=\frac{1}{1-\cos \theta}\) (parabola)
76. \(r=\frac{3}{\theta}\) (reciprocal spiral)
78. \(r=\sin \theta \tan \theta\) (cissoid)
80. \(r=\cos \frac{\theta}{2}\)
82. Show that the graph of the equation \(r \cos \theta=a\) is a vertical line \(a\) units to the right of the pole if \(a \geq 0\) and \(|a|\) units to the left of the pole if \(a<0\).
84. Show that the graph of the equation \(r=-2 a \sin \theta, a>0\), is a circle of radius \(a\) with center at \((0,-a)\) in rectangular coordinates.
86. Show that the graph of the equation \(r=-2 a \cos \theta, a>0\), is a circle of radius \(a\) with center at \((-a, 0)\) in rectangular coordinates.

\section*{Discussion and Writing}
87. Explain why the following test for symmetry is valid: Replace \(r\) by \(-r\) and \(\theta\) by \(-\theta\) in a polar equation. If an equivalent equation results, the graph is symmetric with respect to the line \(\theta=\frac{\pi}{2}\) ( \(y\)-axis).
(a) Show that the test on page 597 fails for \(r^{2}=\cos \theta\), yet this new test works.
(b) Show that the test on page 597 works for \(r^{2}=\sin \theta\), yet this new test fails.
88. Write down two different tests for symmetry with respect to the polar axis. Find examples in which one test works and the other fails. Which test do you prefer to use? Justify your answer.
89. The tests for symmetry given on page 597 are sufficient, but not necessary. Explain what this means.
90. Explain why the vertical-line test used to identify functions in rectangular coordinates does not work for equations expressed in polar coordinates.

\section*{Retain Your Knowledge}

Problems 91-94 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
91. Using the given graph of \(y=f(x)\), find the absolute maximum and the absolute minimum, if it exists.

92. Convert \(\frac{7 \pi}{3}\) radians to degrees.
93. Determine the amplitude and period of \(y=-2 \sin (5 x)\) without graphing.
94. Find any asymptotes for the graph of \(R(x)=\frac{x+3}{x^{2}-x-12}\).

\subsection*{8.3 The Complex Plane; De Moivre's Theorem}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Complex Numbers (Appendix A, Section A.11, pp. A89-A94)
- Value of the Sine and Cosine Functions at Certain Angles (Section 5.2, pp. 393-400)

Now Work the 'Are You Prepared?' problems on page 614.

\section*{OBJECTIVES 1 Plot Points in the Complex Plane (p. 608)}

2 Convert a Complex Number between Rectangular Form and Polar Form (p. 609)
3 Find Products and Quotients of Complex Numbers in Polar Form (p. 610)
4 Use De Moivre's Theorem (p. 611)
5 Find Complex Roots (p. 612)

\section*{1 Plot Points in the Complex Plane}

Figure 34

Complex numbers are discussed in Appendix A, Section A.11. In that discussion, we were not prepared to give a geometric interpretation of a complex number. Now we are ready.

A complex number \(z=x+y i\) can be interpreted geometrically as the point \((x, y)\) in the \(x y\)-plane. Each point in the plane corresponds to a complex number, and conversely, each complex number corresponds to a point in the plane. The collection of such points is referred to as the complex plane. The \(x\)-axis is referred to as the real axis, because any point that lies on the real axis is of the form \(z=x+0 i=x\), a real number. The \(y\)-axis is called the imaginary axis, because any point that lies on it is of the form \(z=0+y i=y i\), a pure imaginary number. See Figure 34 .

\section*{EXAMPLE I}

\author{
Solution
}

\section*{DEFINITION}

Figure 36

\section*{Plotting a Point in the Complex Plane}

Plot the point corresponding to \(z=\sqrt{3}-i\) in the complex plane.
The point corresponding to \(z=\sqrt{3}-i\) has the rectangular coordinates \((\sqrt{3},-1)\). This point, located in quadrant IV, is plotted in Figure 35.

Figure 35

Let \(z=x+y i\) be a complex number. The magnitude or modulus of \(z\), denoted by \(|z|\), is defined as the distance from the origin to the point \((x, y)\). That is,
\[
\begin{equation*}
|z|=\sqrt{x^{2}+y^{2}} \tag{1}
\end{equation*}
\]

See Figure 36 for an illustration.
This definition for \(|z|\) is consistent with the definition for the absolute value of a real number: If \(z=x+y i\) is real, then \(z=x+0 i\) and
\[
|z|=\sqrt{x^{2}+0^{2}}=\sqrt{x^{2}}=|x|
\]

For this reason, the magnitude of \(z\) is sometimes called the absolute value of \(z\).
Recall that if \(z=x+y i\), then its conjugate, denoted by \(\bar{z}\), is \(\bar{z}=x-y i\). Since \(z \bar{z}=x^{2}+y^{2}\), which is a nonnegative real number, it follows from equation (1) that the magnitude of \(z\) can be written as
\[
\begin{equation*}
|z|=\sqrt{z \bar{z}} \tag{2}
\end{equation*}
\]

\section*{2 Convert a Complex Number between Rectangular Form and Polar Form}

When a complex number is written in the standard form \(z=x+y i\), we say that it is in rectangular, or Cartesian, form, because \((x, y)\) are the rectangular coordinates of the corresponding point in the complex plane. Suppose that \((r, \theta)\) are the polar coordinates of this point. Then
\[
\begin{equation*}
x=r \cos \theta, \quad y=r \sin \theta \tag{3}
\end{equation*}
\]

If \(r \geq 0\) and \(0 \leq \theta<2 \pi\), the complex number \(z=x+y i\) may be written in polar form as
\[
\begin{equation*}
z=x+y i=(r \cos \theta)+(r \sin \theta) i=r(\cos \theta+i \sin \theta) \tag{4}
\end{equation*}
\]

See Figure 37.
If \(z=r(\cos \theta+i \sin \theta)\) is the polar form of a complex number,* the angle \(\theta\), \(0 \leq \theta<2 \pi\), is called the argument of \(z\).

Also, because \(r \geq 0\), we have \(r=\sqrt{x^{2}+y^{2}}\). From equation (1), it follows that the magnitude of \(z=r(\cos \theta+i \sin \theta)\) is
\[
|z|=r
\]

\footnotetext{
*Some texts abbreviate the polar form using \(z=r(\cos \theta+i \sin \theta)=r \operatorname{cis} \theta\).
}

\section*{EXAMPLE 2}

Solution The point, located in quadrant IV, is plotted in Figure 35. Because \(x=\sqrt{3}\) and \(y=-1\), it follows that
\[
r=\sqrt{x^{2}+y^{2}}=\sqrt{(\sqrt{3})^{2}+(-1)^{2}}=\sqrt{4}=2
\]
so
\[
\sin \theta=\frac{y}{r}=\frac{-1}{2}, \quad \cos \theta=\frac{x}{r}=\frac{\sqrt{3}}{2}, \quad 0 \leq \theta<2 \pi
\]

The angle \(\theta, 0 \leq \theta<2 \pi\), that satisfies both equations is \(\theta=\frac{11 \pi}{6}\). With \(\theta=\frac{11 \pi}{6}\) and \(r=2\), the polar form of \(z=\sqrt{3}-i\) is
\[
z=r(\cos \theta+i \sin \theta)=2\left(\cos \frac{11 \pi}{6}+i \sin \frac{11 \pi}{6}\right)
\]
am Now Work problem 11

\section*{EXAMPLE 3}

Solution

Figure 38
Imaginary
axis

THEOREM

\section*{In Words}

The magnitude of a complex number \(z\) is \(r\) and its argument is \(\theta\), so when
\[
z=r(\cos \theta+i \sin \theta)
\]
\(\bigcirc\) the magnitude of the product
( (quotient) of two complex
( numbers equals the product
( (quotient) of their magnitudes;
() the argument of the product
( (quotient) of two complex
n numbers is determined by the sum (difference) of their arguments.

\section*{Plotting a Point in the Complex Plane and Converting from Polar to Rectangular Form}

Plot the point corresponding to \(z=2\left(\cos 30^{\circ}+i \sin 30^{\circ}\right)\) in the complex plane, and write an expression for \(z\) in rectangular form.
To plot the complex number \(z=2\left(\cos 30^{\circ}+i \sin 30^{\circ}\right)\), plot the point whose polar coordinates are \((r, \theta)=\left(2,30^{\circ}\right)\), as shown in Figure 38. In rectangular form,
\[
z=2\left(\cos 30^{\circ}+i \sin 30^{\circ}\right)=2\left(\frac{\sqrt{3}}{2}+\frac{1}{2} i\right)=\sqrt{3}+i
\]

\section*{Now Work problem 23}

\section*{3 Find Products and Quotients of Complex Numbers in Polar Form}

The polar form of a complex number provides an alternative method for finding products and quotients of complex numbers.

Let \(z_{1}=r_{1}\left(\cos \theta_{1}+i \sin \theta_{1}\right)\) and \(z_{2}=r_{2}\left(\cos \theta_{2}+i \sin \theta_{2}\right)\) be two complex numbers. Then
\[
\begin{equation*}
z_{1} z_{2}=r_{1} r_{2}\left[\cos \left(\theta_{1}+\theta_{2}\right)+i \sin \left(\theta_{1}+\theta_{2}\right)\right] \tag{5}
\end{equation*}
\]

If \(z_{2} \neq 0\), then
\[
\begin{equation*}
\frac{z_{1}}{z_{2}}=\frac{r_{1}}{r_{2}}\left[\cos \left(\theta_{1}-\theta_{2}\right)+i \sin \left(\theta_{1}-\theta_{2}\right)\right] \tag{6}
\end{equation*}
\]

Proof We will prove formula (5). The proof of formula (6) is left as an exercise (see Problem 66).
\[
\begin{aligned}
z_{1} z_{2} & =\left[r_{1}\left(\cos \theta_{1}+i \sin \theta_{1}\right)\right]\left[r_{2}\left(\cos \theta_{2}+i \sin \theta_{2}\right)\right] \\
& =r_{1} r_{2}\left[\left(\cos \theta_{1}+i \sin \theta_{1}\right)\left(\cos \theta_{2}+i \sin \theta_{2}\right)\right] \\
& =r_{1} r_{2}\left[\left(\cos \theta_{1} \cos \theta_{2}-\sin \theta_{1} \sin \theta_{2}\right)+i\left(\sin \theta_{1} \cos \theta_{2}+\cos \theta_{1} \sin \theta_{2}\right)\right] \\
& =r_{1} r_{2}\left[\cos \left(\theta_{1}+\theta_{2}\right)+i \sin \left(\theta_{1}+\theta_{2}\right)\right]
\end{aligned}
\]

Let's look at an example of how this theorem can be used.

\section*{EXAMPLE 4}

Solution

\section*{4 Use De Moivre's Theorem}

De Moivre's Theorem, stated by Abraham De Moivre (1667-1754) in 1730, but already known to many people by 1710 , is important for the following reason: The fundamental processes of algebra are the four operations of addition, subtraction, multiplication, and division, together with powers and the extraction of roots. De Moivre's Theorem allows these latter fundamental algebraic operations to be applied to complex numbers.

De Moivre's Theorem, in its most basic form, is a formula for raising a complex number \(z\) to the power \(n\), where \(n \geq 1\) is a positive integer. Let's try to conjecture the form of the result.

Let \(z=r(\cos \theta+i \sin \theta)\) be a complex number. Then, based on equation (5), we have
\[
\begin{aligned}
n=2: \quad z^{2} & =r^{2}[\cos (2 \theta)+i \sin (2 \theta)] \\
n=3: \quad z^{3} & =z^{2} \cdot z \\
& =\left\{r^{2}[\cos (2 \theta)+i \sin (2 \theta)]\right\}[r(\cos \theta+i \sin \theta)] \\
& =r^{3}[\cos (3 \theta)+i \sin (3 \theta)] \\
n=4: \quad z^{4} & =z^{3} \cdot z \\
& =\left\{r^{3}[\cos (3 \theta)+i \sin (3 \theta)]\right\}[r(\cos \theta+i \sin \theta)] \\
& =r^{4}[\cos (4 \theta)+i \sin (4 \theta)]
\end{aligned}
\]

Do you see the pattern?

\section*{De Moivre's Theorem}

If \(z=r(\cos \theta+i \sin \theta)\) is a complex number, then
\[
z^{n}=r^{n}[\cos (n \theta)+i \sin (n \theta)]
\]
where \(n \geq 1\) is a positive integer.

The proof of De Moivre's Theorem requires mathematical induction (which is not discussed until Section 11.4), so it is omitted here. The theorem is actually true for all integers, \(n\). You are asked to prove this in Problem 67.

\section*{EXAMPLE 5 Using De Moivre's Theorem}

Write \(\left[2\left(\cos 20^{\circ}+i \sin 20^{\circ}\right)\right]^{3}\) in the standard form \(a+b i\).
Solution \(\quad\left[2\left(\cos 20^{\circ}+i \sin 20^{\circ}\right)\right]^{3}=2^{3}\left[\cos \left(3 \cdot 20^{\circ}\right)+i \sin \left(3 \cdot 20^{\circ}\right)\right]\) Apply De Moivre's Theorem.
\[
\begin{aligned}
& =8\left(\cos 60^{\circ}+i \sin 60^{\circ}\right) \\
& =8\left(\frac{1}{2}+\frac{\sqrt{3}}{2} i\right)=4+4 \sqrt{3} i
\end{aligned}
\]

NOTE In the solution of Example 6, the approach used in Example 2 could also be used to write \(1+i\) in polar form.

\section*{Using De Moivre's Theorem}

Write \((1+i)^{5}\) in the standard form \(a+b i\).
Solution To apply De Moivre's Theorem, first write the complex number in polar form. Since the magnitude of \(1+i\) is \(\sqrt{1^{2}+1^{2}}=\sqrt{2}\), begin by writing
\[
1+i=\sqrt{2}\left(\frac{1}{\sqrt{2}}+\frac{1}{\sqrt{2}} i\right)=\sqrt{2}\left(\cos \frac{\pi}{4}+i \sin \frac{\pi}{4}\right)
\]

Now
\[
\begin{aligned}
(1+i)^{5} & =\left[\sqrt{2}\left(\cos \frac{\pi}{4}+i \sin \frac{\pi}{4}\right)\right]^{5} \\
& =(\sqrt{2})^{5}\left[\cos \left(5 \cdot \frac{\pi}{4}\right)+i \sin \left(5 \cdot \frac{\pi}{4}\right)\right] \\
& =4 \sqrt{2}\left(\cos \frac{5 \pi}{4}+i \sin \frac{5 \pi}{4}\right) \\
& =4 \sqrt{2}\left[-\frac{1}{\sqrt{2}}+\left(-\frac{1}{\sqrt{2}}\right) i\right]=-4-4 i
\end{aligned}
\]

\section*{5 Find Complex Roots}

Let \(w\) be a given complex number, and let \(n \geq 2\) denote a positive integer. Any complex number \(z\) that satisfies the equation
\[
z^{n}=w
\]
is called a complex \(n\)th root of \(w\). In keeping with previous usage, if \(n=2\), the solutions of the equation \(z^{2}=w\) are called complex square roots of \(w\), and if \(n=3\), the solutions of the equation \(z^{3}=w\) are called complex cube roots of \(w\).

\section*{Finding Complex Roots}

Let \(w=r\left(\cos \theta_{0}+i \sin \theta_{0}\right)\) be a complex number, and let \(n \geq 2\) be an integer. If \(w \neq 0\), there are \(n\) distinct complex \(n\)th roots of \(w\), given by the formula
\[
\begin{equation*}
z_{k}=\sqrt[n]{r}\left[\cos \left(\frac{\theta_{0}}{n}+\frac{2 k \pi}{n}\right)+i \sin \left(\frac{\theta_{0}}{n}+\frac{2 k \pi}{n}\right)\right] \tag{8}
\end{equation*}
\]
where \(k=0,1,2, \ldots, n-1\).

Proof (Outline) We will not prove this result in its entirety. Instead, we shall show only that each \(z_{k}\) in equation (8) satisfies the equation \(z_{k}^{n}=w\), proving that each \(z_{k}\) is a complex \(n\)th root of \(w\).
\[
\begin{array}{rlrl}
z_{k}^{n} & =\left\{\sqrt[n]{r}\left[\cos \left(\frac{\theta_{0}}{n}+\frac{2 k \pi}{n}\right)+i \sin \left(\frac{\theta_{0}}{n}+\frac{2 k \pi}{n}\right)\right]\right\}^{n} \\
& =(\sqrt[n]{r})^{n}\left\{\cos \left[n\left(\frac{\theta_{0}}{n}+\frac{2 k \pi}{n}\right)\right]+i \sin \left[n\left(\frac{\theta_{0}}{n}+\frac{2 k \pi}{n}\right)\right]\right\} & \text { Apply De Moivre's Theorem. } \\
& =r\left[\cos \left(\theta_{0}+2 k \pi\right)+i \sin \left(\theta_{0}+2 k \pi\right)\right] & & \text { Simplify. } \\
& =r\left(\cos \theta_{0}+i \sin \theta_{0}\right)=w & \text { The Periodic Property }
\end{array}
\]

Thus each \(z_{k}, k=0,1, \ldots, n-1\), is a complex \(n\)th root of \(w\). To complete the proof, we would need to show that each \(z_{k}, k=0,1, \ldots, n-1\), is, in fact, distinct and that there are no complex \(n\)th roots of \(w\) other than those given by equation (8).

\section*{EXAMPLE 7 Finding Complex Cube Roots}

Find the complex cube roots of \(-1+\sqrt{3} i\). Leave your answers in polar form, with the argument in degrees.

Solution First, express \(-1+\sqrt{3} i\) in polar form using degrees.
\[
-1+\sqrt{3} i=2\left(-\frac{1}{2}+\frac{\sqrt{3}}{2} i\right)=2\left(\cos 120^{\circ}+i \sin 120^{\circ}\right)
\]

The three complex cube roots of \(-1+\sqrt{3} i=2\left(\cos 120^{\circ}+i \sin 120^{\circ}\right)\) are
\[
\begin{aligned}
z_{k} & =\sqrt[3]{2}\left[\cos \left(\frac{120^{\circ}}{3}+\frac{360^{\circ} k}{3}\right)+i \sin \left(\frac{120^{\circ}}{3}+\frac{360^{\circ} k}{3}\right)\right] \\
& =\sqrt[3]{2}\left[\cos \left(40^{\circ}+120^{\circ} k\right)+i \sin \left(40^{\circ}+120^{\circ} k\right)\right] \quad k=0,1,2
\end{aligned}
\]

Therefore,
\(z_{0}=\sqrt[3]{2}\left[\cos \left(40^{\circ}+120^{\circ} \cdot 0\right)+i \sin \left(40^{\circ}+120^{\circ} \cdot 0\right)\right]=\sqrt[3]{2}\left(\cos 40^{\circ}+i \sin 40^{\circ}\right)\)
\(z_{1}=\sqrt[3]{2}\left[\cos \left(40^{\circ}+120^{\circ} \cdot 1\right)+i \sin \left(40^{\circ}+120^{\circ} \cdot 1\right)\right]=\sqrt[3]{2}\left(\cos 160^{\circ}+i \sin 160^{\circ}\right)\)
\(z_{2}=\sqrt[3]{2}\left[\cos \left(40^{\circ}+120^{\circ} \cdot 2\right)+i \sin \left(40^{\circ}+120^{\circ} \cdot 2\right)\right]=\sqrt[3]{2}\left(\cos 280^{\circ}+i \sin 280^{\circ}\right)\)

Notice that each of the three complex roots of \(-1+\sqrt{3} i\) has the same magnitude, \(\sqrt[3]{2}\). This means that the points corresponding to each cube root lie the same distance from the origin; that is, the three points lie on a circle with center at the origin and radius \(\sqrt[3]{2}\). Furthermore, the arguments of these cube roots are \(40^{\circ}\), \(160^{\circ}\), and \(280^{\circ}\), the difference of consecutive pairs being \(120^{\circ}=\frac{360^{\circ}}{3}\). This means that the three points are equally spaced on the circle, as shown in Figure 39 on the next page. These results are not coincidental. In fact, you are asked to show that these results hold for complex \(n\)th roots in Problems 63 through 65.

Figure 39

\section*{Historical Feature}

John Wallis

The Babylonians, Greeks, and Arabs considered square roots of negative quantities to be impossible and equations with complex solutions to be unsolvable. The first hint that there was some connection between real solutions of equations and complex numbers came when Girolamo Cardano (1501-1576) and Tartaglia (1499-1557) found real roots of cubic equations by taking cube roots of complex quantities. For centuries
thereafter, mathematicians worked with complex numbers without much belief in their actual existence. In 1673, John Wallis appears to have been the first to suggest the graphical representation of complex numbers, a truly significant idea that was not pursued further until about 1800. Several people, including Karl Friedrich Gauss (1777-1855), then rediscovered the idea, and the graphical representation helped to establish complex numbers as equal members of the number family. In practical applications, complex numbers have found their greatest uses in the study of alternating current, where they are a commonplace tool, and in the field of subatomic physics.

\section*{Historical Problems}
1. The quadratic formula works perfectly well if the coefficients of a quadratic equation are complex numbers. Solve the following. [Hint: The answers are "nice."]
(a) \(z^{2}-(2+5 i) z-3+5 i=0\)
(b) \(z^{2}-(1+i) z-2-i=0\)

\subsection*{8.3 Assess Your Understanding}
'Are You Prepared!' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. The conjugate of \(-4-3 i\) is \(\qquad\) . (p. A91)
2. The sum formula for the sine function is \(\sin (A+B)=\)
\(\qquad\) . (p. 502)

\section*{Concepts and Vocabulary}
\(\qquad\) axis )].
5. In the complex plane, the \(x\)-axis is referred to as the and the \(y\)-axis is called the \(\qquad\) axis.
6. When a complex number \(z\) is written in the polar form \(z=r(\cos \theta+i \sin \theta)\), the nonnegative number \(r\) is the \(\overline{\text { is the }}\) or \(\quad\) of \(z\), and the angle \(\theta, 0 \leq \theta<2 \pi\), is the \(\qquad\) of \(z\).
7. Let \(z_{1}=r_{1}\left(\cos \theta_{1}+i \sin \theta_{1}\right)\) and \(z_{2}=r_{2}\left(\cos \theta_{2}+i \sin \theta_{2}\right)\) be two complex numbers. Then \(z_{1} z_{2}=\) \(\qquad\) \([\cos (\) \(\qquad\) ) \(+i \sin (\) \(\qquad\)

49. \((1-i)^{5}\)
50. \((\sqrt{3}-i)^{6}\)
51. \((\sqrt{2}-i)^{6}\)
52. \((1-\sqrt{5} i)^{8}\)

In Problems 53-60, find all the complex roots. Leave your answers in polar form with the argument in degrees.
53. The complex cube roots of \(1+i\)
54. The complex fourth roots of \(\sqrt{3}-i\)
55. The complex fourth roots of \(4-4 \sqrt{3} i\)
56. The complex cube roots of \(-8-8 i\)
57. The complex fourth roots of \(-16 i\)
59. The complex fifth roots of \(i\)
60. The complex fifth roots of \(-i\)

\section*{Applications and Extensions}
61. Find the four complex fourth roots of unity (1) and plot them.
62. Find the six complex sixth roots of unity (1) and plot them.
63. Show that each complex \(n\)th root of a nonzero complex number \(w\) has the same magnitude.
64. Use the result of Problem 63 to draw the conclusion that each complex \(n\)th root lies on a circle with center at the origin. What is the radius of this circle?
65. Refer to Problem 64. Show that the complex \(n\)th roots of a nonzero complex number \(w\) are equally spaced on the circle.
66. Prove formula (6).
67. Prove that De Moivre's Theorem is true for all integers, \(n\), by assuming it is true for integers \(n \geq 1\) and then showing it is true for 0 and for negative integers.
Hint: Multiply the numerator and the denominator by the conjugate of the denominator and use even-odd properties.
68. Mandelbrot Sets
(a) Consider the expression \(a_{n}=\left(a_{n-1}\right)^{2}+z\), where \(z\) is some complex number (called the seed) and \(a_{0}=z\). Compute \(a_{1}\left(=a_{0}^{2}+z\right), a_{2}\left(=a_{1}^{2}+z\right), a_{3}\left(=a_{2}^{2}+z\right), a_{4}, a_{5}\), and \(a_{6}\) for the following seeds: \(z_{1}=0.1-0.4 i\), \(z_{2}=0.5+0.8 i, \quad z_{3}=-0.9+0.7 i, \quad z_{4}=-1.1+0.1 i\), \(z_{5}=0-1.3 i\), and \(z_{6}=1+1 i\).
(b) The dark portion of the graph represents the set of all values \(z=x+y i\) that are in the Mandelbrot set. Determine which complex numbers in part (a) are in this set by plotting them on the graph. Do the complex numbers that are not in the Mandelbrot set have any common characteristics regarding the values of \(a_{6}\) found in part (a)?
(c) Compute \(|z|=\sqrt{x^{2}+y^{2}}\) for each of the complex numbers in part (a). Now compute \(\left|a_{6}\right|\) for each of the complex numbers in part (a). For which complex numbers is \(\left|a_{6}\right| \leq|z|\) and \(|z| \leq 2\) ? Conclude that the criterion for a complex number to be in the Mandelbrot set is that \(\left|a_{n}\right| \leq|z|\) and \(|z| \leq 2\).

\section*{-Retain Your Knowledge}

Problems 69-72 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
69. Find the area of the triangle with \(a=8, b=11\), and \(C=113^{\circ}\).
70. Determine whether \(f(x)=5 x^{2}-12 x+4\) has a maximum value or a minimum value, and then find the value.
71. Convert \(240^{\circ}\) to radians. Express your answer as a multiple of \(\pi\).
72. Simplify: \(\sqrt[3]{24 x^{2} y^{5}}\)

\section*{‘Are You Prepared?’ Answers}

\subsection*{8.4 Vectors}

OBJECTIVES 1 Graph Vectors (p.618)
2 Find a Position Vector (p. 619)
3 Add and Subtract Vectors Algebraically (p. 620)
4 Find a Scalar Multiple and the Magnitude of a Vector (p. 621)
5 Find a Unit Vector (p. 622)
6 Find a Vector from Its Direction and Magnitude (p. 622)
7 Model with Vectors (p.623)

Figure 40

In simple terms, a vector (derived from the Latin vehere, meaning "to carry") is a quantity that has both magnitude and direction. It is customary to represent a vector by using an arrow. The length of the arrow represents the magnitude of the vector, and the arrowhead indicates the direction of the vector.

Many quantities in physics can be represented by vectors. For example, the velocity of an aircraft can be represented by an arrow that points in the direction of movement; the length of the arrow represents speed. If the aircraft speeds up, we lengthen the arrow; if the aircraft changes direction, we introduce an arrow in the new direction. See Figure 40. Based on this representation, it is not surprising that vectors and directed line segments are somehow related.

\section*{Geometric Vectors}

If \(P\) and \(Q\) are two distinct points in the \(x y\)-plane, there is exactly one line containing both \(P\) and \(Q\) [Figure 41(a)]. The points on that part of the line that joins \(P\) to \(Q\), including \(P\) and \(Q\), form what is called the line segment \(\overline{P Q}\) [Figure 41(b)]. Ordering the points so that they proceed from \(P\) to \(Q\), we have a directed line segment from \(P\) to \(Q\), or a geometric vector, which we denote by \(\overrightarrow{P Q}\). In a directed line segment \(\overrightarrow{P Q}, P\) is called the initial point and \(Q\) the terminal point, as indicated in Figure 41(c).

Figure 41

(a) Line containing \(P\) and \(Q\)

(b) Line segment \(\overline{P Q}\)

(c) Directed line segment \(\overrightarrow{P Q}\)

Figure 42

Figure 43

Figure 44

Figure 45

Figure 46

Figure 47

The magnitude of the directed line segment \(\overrightarrow{P Q}\) is the distance from the point \(P\) to the point \(Q\); that is, it is the length of the line segment. The direction of \(\overrightarrow{P Q}\) is from \(P\) to \(Q\). If a vector \(\mathbf{v}^{*}\) has the same magnitude and the same direction as the directed line segment \(\overrightarrow{P Q}\), we write
\[
\mathbf{v}=\overrightarrow{P Q}
\]

The vector \(\mathbf{v}\) whose magnitude is 0 is called the zero vector, \(\mathbf{0}\). The zero vector is assigned no direction.

Two vectors \(\mathbf{v}\) and \(\mathbf{w}\) are equal, written
\[
\mathbf{v}=\mathbf{w}
\]
if they have the same magnitude and the same direction.
For example, the three vectors shown in Figure 42 have the same magnitude and the same direction, so they are equal, even though they have different initial points and different terminal points. As a result, it is useful to think of a vector simply as an arrow, keeping in mind that two arrows (vectors) are equal if they have the same direction and the same magnitude (length).

\section*{Adding Vectors Geometrically}

The \(\operatorname{sum} \mathbf{v}+\mathbf{w}\) of two vectors is defined as follows: Position the vectors \(\mathbf{v}\) and \(\mathbf{w}\) so that the terminal point of \(\mathbf{v}\) coincides with the initial point of \(\mathbf{w}\), as shown in Figure 43. The vector \(\mathbf{v}+\mathbf{w}\) is then the unique vector whose initial point coincides with the initial point of \(\mathbf{v}\) and whose terminal point coincides with the terminal point of \(\mathbf{w}\).

Vector addition is commutative. That is, if \(\mathbf{v}\) and \(\mathbf{w}\) are any two vectors, then
\[
\mathbf{v}+\mathbf{w}=\mathbf{w}+\mathbf{v}
\]

Figure 44 illustrates this fact. (The commutative property is another way of saying that opposite sides of a parallelogram are equal and parallel.)

Vector addition is also associative. That is, if \(\mathbf{u}, \mathbf{v}\), and \(\mathbf{w}\) are vectors, then
\[
\mathbf{u}+(\mathbf{v}+\mathbf{w})=(\mathbf{u}+\mathbf{v})+\mathbf{w}
\]

Figure 45 illustrates the associative property for vectors.
\[
(\mathbf{u}+\mathbf{v})+\mathbf{w}=\mathbf{u}+(\mathbf{v}+\mathbf{w})
\]

The zero vector \(\mathbf{0}\) has the property that
\[
\mathbf{v}+\mathbf{0}=\mathbf{0}+\mathbf{v}=\mathbf{v}
\]
for any vector \(\mathbf{v}\).
If \(\mathbf{v}\) is a vector, then \(-\mathbf{v}\) is the vector that has the same magnitude as \(\mathbf{v}\) but whose direction is opposite to \(\mathbf{v}\), as shown in Figure 46.

Furthermore,
\[
\mathbf{v}+(-\mathbf{v})=\mathbf{0}
\]

If \(\mathbf{v}\) and \(\mathbf{w}\) are two vectors, then the difference \(\mathbf{v}-\mathbf{w}\) is defined as
\[
\mathbf{v}-\mathbf{w}=\mathbf{v}+(-\mathbf{w})
\]

Figure 47 illustrates the relationships among \(\mathbf{v}, \mathbf{w}, \mathbf{v}+\mathbf{w}\), and \(\mathbf{v}-\mathbf{w}\).

\section*{Multiplying Vectors by Numbers Geometrically}

When dealing with vectors, real numbers are referred to as scalars. Scalars are quantities that have only magnitude. Examples of scalar quantities from physics are temperature, speed, and time. We now define how to multiply a vector by a scalar.

\footnotetext{
*Boldface letters are used to denote vectors, to distinguish them from numbers. For handwritten work, an arrow is placed over the letter to signify a vector. For example, a vector is written by hand as \(\overrightarrow{\mathbf{v}}\).
}

\section*{DEFINITION}

Figure 48

If \(\alpha\) is a scalar and \(\mathbf{v}\) is a vector, the scalar multiple \(\alpha \mathbf{v}\) is defined as follows:
1. If \(\alpha>0, \alpha \mathbf{v}\) is the vector whose magnitude is \(\alpha\) times the magnitude of \(\mathbf{v}\) and whose direction is the same as \(\mathbf{v}\).
2. If \(\alpha<0, \alpha \mathbf{v}\) is the vector whose magnitude is \(|\alpha|\) times the magnitude of \(\mathbf{v}\) and whose direction is opposite that of \(\mathbf{v}\).
3. If \(\alpha=0\) or if \(\mathbf{v}=\mathbf{0}\), then \(\alpha \mathbf{v}=\mathbf{0}\).

See Figure 48 for some illustrations.
For example, if a is the acceleration of an object of mass \(m\) due to a force \(\mathbf{F}\) being exerted on it, then, by Newton's second law of motion, \(\mathbf{F}=m \mathbf{a}\). Here, \(m \mathbf{a}\) is the product of the scalar \(m\) and the vector a.

Scalar multiples have the following properties:
\[
\begin{gathered}
0 \mathbf{v}=\mathbf{0} \quad 1 \mathbf{v}=\mathbf{v} \quad-1 \mathbf{v}=-\mathbf{v} \\
(\alpha+\beta) \mathbf{v}=\alpha \mathbf{v}+\beta \mathbf{v} \quad \alpha(\mathbf{v}+\mathbf{w})=\alpha \mathbf{v}+\alpha \mathbf{w} \\
\alpha(\beta \mathbf{v})=(\alpha \beta) \mathbf{v}
\end{gathered}
\]

\section*{1 Graph Vectors}

\section*{EXAMPLE I Graphing Vectors}

Use the vectors illustrated in Figure 49 to graph each of the following vectors:
(a) \(\mathbf{v}-\mathbf{w}\)
(b) \(2 \mathbf{v}+3 \mathbf{w}\)
(c) \(2 \mathbf{v}-\mathbf{w}+\mathbf{u}\)

Solution

Figure 49

Figure 50 shows each graph.

Problems 9 and 11

\section*{Magnitude of Vectors}

The symbol \(\|\mathbf{v}\|\) is used to represent the magnitude of a vector \(\mathbf{v}\). Since \(\|\mathbf{v}\|\) equals the length of a directed line segment, it follows that \(\|\mathbf{v}\|\) has the following properties:

\section*{Properties of \(\|\mathbf{v}\|\)}

If \(\mathbf{v}\) is a vector and if \(\alpha\) is a scalar, then
(a) \(\|\mathbf{v}\| \geq 0\)
(b) \(\|\mathbf{v}\|=0\) if and only if \(\mathbf{v}=\mathbf{0}\)
(c) \(\|-\mathbf{v}\|=\|\mathbf{v}\|\)
(d) \(\|\alpha \mathbf{v}\|=|\alpha|\|\mathbf{v}\|\)

Property (a) is a consequence of the fact that distance is a nonnegative number. Property (b) follows because the length of the directed line segment \(\overrightarrow{P Q}\) is

\section*{DEFINITION}

\section*{DEFINITION}

Figure 51

THEOREM

\section*{In Words}

An algebraic vector represents "driving directions" to get from the \(\int\) initial point to the terminal point S of a vector. So if \(v=\langle 5,4\rangle\),
(f travel 5 units right and 4 units up
© from the initial point to arrive at
© the terminal point.
positive unless \(P\) and \(Q\) are the same point, in which case the length is 0 . Property (c) follows because the length of the line segment \(\overline{P Q}\) equals the length of the line segment \(\overline{Q P}\). Property ( d ) is a direct consequence of the definition of a scalar multiple.

A vector \(\mathbf{u}\) for which \(\|\mathbf{u}\|=1\) is called a unit vector.

\section*{2 Find a Position Vector}

To compute the magnitude and direction of a vector, an algebraic way of representing vectors is needed.

An algebraic vector \(\mathbf{v}\) is represented as
\[
\mathbf{v}=\langle a, b\rangle
\]
where \(a\) and \(b\) are real numbers (scalars) called the components of the vector \(\mathbf{v}\).

A rectangular coordinate system is used to represent algebraic vectors in the plane. If \(\mathbf{v}=\langle a, b\rangle\) is an algebraic vector whose initial point is at the origin, then \(\mathbf{v}\) is called a position vector. See Figure 51. Notice that the terminal point of the position vector \(\mathbf{v}=\langle a, b\rangle\) is \(P=(a, b)\).

The next result states that any vector whose initial point is not at the origin is equal to a unique position vector.

Suppose that \(\mathbf{v}\) is a vector with initial point \(P_{1}=\left(x_{1}, y_{1}\right)\), not necessarily the origin, and terminal point \(P_{2}=\left(x_{2}, y_{2}\right)\). If \(\mathbf{v}=\overrightarrow{P_{1} P_{2}}\), then \(\mathbf{v}\) is equal to the position vector
\[
\begin{equation*}
\mathbf{v}=\left\langle x_{2}-x_{1}, y_{2}-y_{1}\right\rangle \tag{1}
\end{equation*}
\]

To see why this is true, look at Figure 52.

Figure 52
\(\mathbf{v}=\langle a, b\rangle=\left\langle x_{2}-x_{1}, y_{2}-y_{1}\right\rangle\)

Triangle \(O P A\) and triangle \(P_{1} P_{2} Q\) are congruent. [Do you see why? The line segments have the same magnitude, so \(d(O, P)=d\left(P_{1}, P_{2}\right)\); and they have the same direction, so \(\angle P O A=\angle P_{2} P_{1} Q\). Since the triangles are right triangles, we have angle-side-angle.] It follows that corresponding sides are equal. As a result, \(x_{2}-x_{1}=a\) and \(y_{2}-y_{1}=b\), so \(\mathbf{v}\) may be written as
\[
\mathbf{v}=\langle a, b\rangle=\left\langle x_{2}-x_{1}, y_{2}-y_{1}\right\rangle
\]

Because of this result, any algebraic vector can be replaced by a unique position vector, and vice versa. This flexibility is one of the main reasons for the wide use of vectors.

\section*{EXAMPLE 2}

Solution

Figure 53

Figure 54

Finding a Position Vector
Find the position vector of the vector \(\mathbf{v}=\overrightarrow{P_{1} P_{2}}\), if \(P_{1}=(-1,2)\) and \(P_{2}=(4,6)\).
By equation (1), the position vector equal to \(\mathbf{v}\) is
\[
\mathbf{v}=\langle 4-(-1), 6-2\rangle=\langle 5,4\rangle
\]

See Figure 53.
Two position vectors \(\mathbf{v}\) and \(\mathbf{w}\) are equal if and only if the terminal point of \(\mathbf{v}\) is the same as the terminal point of \(\mathbf{w}\). This leads to the following result:

\section*{THEOREM}

\section*{Equality of Vectors}

Two vectors \(\mathbf{v}\) and \(\mathbf{w}\) are equal if and only if their corresponding components are equal. That is,
\[
\begin{gathered}
\text { If } \mathbf{v}=\left\langle a_{1}, b_{1}\right\rangle \text { and } \mathbf{w}=\left\langle a_{2}, b_{2}\right\rangle \\
\text { then } \quad \mathbf{v}=\mathbf{w} \quad \text { if and only if } a_{1}=a_{2} \quad \text { and } \quad b_{1}=b_{2} .
\end{gathered}
\]

We now present an alternative representation of a vector in the plane that is common in the physical sciences. Let \(\mathbf{i}\) denote the unit vector whose direction is along the positive \(x\)-axis; let \(\mathbf{j}\) denote the unit vector whose direction is along the positive \(y\)-axis. Then \(\mathbf{i}=\langle 1,0\rangle\) and \(\mathbf{j}=\langle 0,1\rangle\), as shown in Figure 54. Any vector \(\mathbf{v}=\langle a, b\rangle\) can be written using the unit vectors \(\mathbf{i}\) and \(\mathbf{j}\) as follows:
\[
\mathbf{v}=\langle a, b\rangle=a\langle 1,0\rangle+b\langle 0,1\rangle=a \mathbf{i}+b \mathbf{j}
\]

The quantities \(a\) and \(b\) are called the horizontal and vertical components of \(\mathbf{v}\), respectively. For example, if \(\mathbf{v}=\langle 5,4\rangle=5 \mathbf{i}+4 \mathbf{j}\), then 5 is the horizontal component and 4 is the vertical component.
an Now Work problem 29

\section*{3 Add and Subtract Vectors Algebraically}

The sum, difference, scalar multiple, and magnitude of algebraic vectors are defined in terms of their components.

Let \(\mathbf{v}=a_{1} \mathbf{i}+b_{1} \mathbf{j}=\left\langle a_{1}, b_{1}\right\rangle\) and \(\mathbf{w}=a_{2} \mathbf{i}+b_{2} \mathbf{j}=\left\langle a_{2}, b_{2}\right\rangle\) be two vectors, and let \(\alpha\) be a scalar. Then
\[
\begin{align*}
\mathbf{v}+\mathbf{w} & =\left(a_{1}+a_{2}\right) \mathbf{i}+\left(b_{1}+b_{2}\right) \mathbf{j}=\left\langle a_{1}+a_{2}, b_{1}+b_{2}\right\rangle  \tag{2}\\
\mathbf{v}-\mathbf{w} & =\left(a_{1}-a_{2}\right) \mathbf{i}+\left(b_{1}-b_{2}\right) \mathbf{j}=\left\langle a_{1}-a_{2}, b_{1}-b_{2}\right\rangle  \tag{3}\\
\alpha \mathbf{v} & =\left(\alpha a_{1}\right) \mathbf{i}+\left(\alpha b_{1}\right) \mathbf{j}=\left\langle\alpha a_{1}, \alpha b_{1}\right\rangle  \tag{4}\\
\|\mathbf{v}\| & =\sqrt{a_{1}^{2}+b_{1}^{2}} \tag{5}
\end{align*}
\]

These definitions are compatible with the geometric definitions given earlier in this section. See Figure 55.

Figure 55

(a) Illustration of property (2)

(b) Illustration of property (4), \(\alpha>0\)

(c) Illustration of property (5): \(\|\mathbf{v}\|=\) Distance from 0 to \(P_{1}\)
\(\|\mathbf{v}\|=\sqrt{a_{1}^{2}+b_{1}^{2}}\)

\section*{EXAMPLE 3 Adding and Subtracting Vectors}

If \(\mathbf{v}=2 \mathbf{i}+3 \mathbf{j}=\langle 2,3\rangle\) and \(\mathbf{w}=3 \mathbf{i}-4 \mathbf{j}=\langle 3,-4\rangle\), find:
(a) \(\mathbf{v}+\mathbf{w}\)
(b) \(\mathbf{v}-\mathbf{w}\)

Solution \(\quad(\mathrm{a}) \mathbf{v}+\mathbf{w}=(2 \mathbf{i}+3 \mathbf{j})+(3 \mathbf{i}-4 \mathbf{j})=(2+3) \mathbf{i}+(3-4) \mathbf{j}=5 \mathbf{i}-\mathbf{j}\)
or
\[
\mathbf{v}+\mathbf{w}=\langle 2,3\rangle+\langle 3,-4\rangle=\langle 2+3,3+(-4)\rangle=\langle 5,-1\rangle
\]
(b) \(\mathbf{v}-\mathbf{w}=(2 \mathbf{i}+3 \mathbf{j})-(3 \mathbf{i}-4 \mathbf{j})=(2-3) \mathbf{i}+[3-(-4)] \mathbf{j}=-\mathbf{i}+7 \mathbf{j}\) or
\[
\mathbf{v}-\mathbf{w}=\langle 2,3\rangle-\langle 3,-4\rangle=\langle 2-3,3-(-4)\rangle=\langle-1,7\rangle
\]

\section*{4 Find a Scalar Multiple and the Magnitude of a Vector}

\section*{EXAMPLE 4 Finding Scalar Multiples and Magnitudes of Vectors}

If \(\mathbf{v}=2 \mathbf{i}+3 \mathbf{j}=\langle 2,3\rangle\) and \(\mathbf{w}=3 \mathbf{i}-4 \mathbf{j}=\langle 3,-4\rangle\), find:
(a) \(3 \mathbf{v}\)
(b) \(2 \mathbf{v}-3 \mathbf{w}\)
(c) \(\|\mathbf{v}\|\)

Solution
(a) \(3 \mathbf{v}=3(2 \mathbf{i}+3 \mathbf{j})=6 \mathbf{i}+9 \mathbf{j}\)
or
\(3 \mathbf{v}=3\langle 2,3\rangle=\langle 6,9\rangle\)
(b) \(2 \mathbf{v}-3 \mathbf{w}=2(2 \mathbf{i}+3 \mathbf{j})-3(3 \mathbf{i}-4 \mathbf{j})=4 \mathbf{i}+6 \mathbf{j}-9 \mathbf{i}+12 \mathbf{j}=-5 \mathbf{i}+18 \mathbf{j}\) or
\(2 \mathbf{v}-3 \mathbf{w}=2\langle 2,3\rangle-3\langle 3,-4\rangle=\langle 4,6\rangle-\langle 9,-12\rangle\)
\(=\langle 4-9,6-(-12)\rangle=\langle-5,18\rangle\)
(c) \(\|\mathbf{v}\|=\|2 \mathbf{i}+3 \mathbf{j}\|=\sqrt{2^{2}+3^{2}}=\sqrt{13}\)

For the remainder of the section, we will express a vector \(\mathbf{v}\) in the form \(a \mathbf{i}+b \mathbf{j}\).

\section*{5 Find a Unit Vector}

Recall that a unit vector \(\mathbf{u}\) is a vector for which \(\|\mathbf{u}\|=1\). In many applications, it is useful to be able to find a unit vector \(\mathbf{u}\) that has the same direction as a given vector \(\mathbf{v}\).

Unit Vector in the Direction of \(\mathbf{v}\)
For any nonzero vector \(\mathbf{v}\), the vector
\[
\begin{equation*}
\mathbf{u}=\frac{\mathbf{v}}{\|\mathbf{v}\|} \tag{6}
\end{equation*}
\]
is a unit vector that has the same direction as \(\mathbf{v}\).

Proof Let \(\mathbf{v}=a \mathbf{i}+b \mathbf{j}\). Then \(\|\mathbf{v}\|=\sqrt{a^{2}+b^{2}}\) and
\[
\mathbf{u}=\frac{\mathbf{v}}{\|\mathbf{v}\|}=\frac{a \mathbf{i}+b \mathbf{j}}{\sqrt{a^{2}+b^{2}}}=\frac{a}{\sqrt{a^{2}+b^{2}}} \mathbf{i}+\frac{b}{\sqrt{a^{2}+b^{2}}} \mathbf{j}
\]

The vector \(\mathbf{u}\) is in the same direction as \(\mathbf{v}\), since \(\|\mathbf{v}\|>0\). Furthermore,
\[
\|\mathbf{u}\|=\sqrt{\frac{a^{2}}{a^{2}+b^{2}}+\frac{b^{2}}{a^{2}+b^{2}}}=\sqrt{\frac{a^{2}+b^{2}}{a^{2}+b^{2}}}=1
\]

That is, \(\mathbf{u}\) is a unit vector in the direction of \(\mathbf{v}\).
As a consequence of this theorem, if \(\mathbf{u}\) is a unit vector in the same direction as a vector \(\mathbf{v}\), then \(\mathbf{v}\) may be expressed as
\[
\mathbf{v}=\|\mathbf{v}\|_{\mathbf{u}}
\]

This way of expressing a vector is useful in many applications.

\section*{EXAMPLE 5}

Solution

\section*{Finding a Unit Vector}

Find a unit vector in the same direction as \(\mathbf{v}=4 \mathbf{i}-3 \mathbf{j}\).
Find \(\|\mathbf{v}\|\) first.
\[
\|\mathbf{v}\|=\|4 \mathbf{i}-3 \mathbf{j}\|=\sqrt{16+9}=5
\]

Now multiply \(\mathbf{v}\) by the scalar \(\frac{1}{\|\mathbf{v}\|}=\frac{1}{5}\). A unit vector in the same direction as \(\mathbf{v}\) is
\[
\frac{\mathbf{v}}{\|\mathbf{v}\|}=\frac{4 \mathbf{i}-3 \mathbf{j}}{5}=\frac{4}{5} \mathbf{i}-\frac{3}{5} \mathbf{j}
\]

Check: This vector is indeed a unit vector, because
\[
\left(\frac{4}{5}\right)^{2}+\left(-\frac{3}{5}\right)^{2}=\frac{16}{25}+\frac{9}{25}=\frac{25}{25}=1
\]

\section*{6 Find a Vector from Its Direction and Magnitude}

If a vector represents the speed and direction of an object, it is called a velocity vector. If a vector represents the direction and amount of a force acting on an object, it is called a force vector. In many applications, a vector is described in terms of its

Figure 56

magnitude and direction, rather than in terms of its components. For example, a ball thrown with an initial speed of 25 miles per hour at an angle of \(30^{\circ}\) to the horizontal is a velocity vector.

Suppose that we are given the magnitude \(\|\mathbf{v}\|\) of a nonzero vector \(\mathbf{v}\) and the direction angle \(\alpha, 0^{\circ} \leq \alpha<360^{\circ}\), between \(\mathbf{v}\) and \(\mathbf{i}\). To express \(\mathbf{v}\) in terms of \(\|\mathbf{v}\|\) and \(\alpha\), first find the unit vector \(\mathbf{u}\) having the same direction as \(\mathbf{v}\).

Look at Figure 56. The coordinates of the terminal point of \(\mathbf{u}\) are \((\cos \alpha, \sin \alpha)\). Then \(\mathbf{u}=\cos \alpha \mathbf{i}+\sin \alpha \mathbf{j}\) and, from (7),
\[
\begin{equation*}
\mathbf{v}=\|\mathbf{v}\|(\cos \alpha \mathbf{i}+\sin \alpha \mathbf{j}) \tag{8}
\end{equation*}
\]
where \(\alpha\) is the direction angle between \(\mathbf{v}\) and \(\mathbf{i}\).

\section*{EXAMPLE 6 Writing a Vector When Its Magnitude and Direction Are Given}

A ball is thrown with an initial speed of 25 miles per hour in a direction that makes an angle of \(30^{\circ}\) with the positive \(x\)-axis. Express the velocity vector \(\mathbf{v}\) in terms of \(\mathbf{i}\) and \(\mathbf{j}\). What is the initial speed in the horizontal direction? What is the initial speed in the vertical direction?
Solution The magnitude of \(\mathbf{v}\) is \(\|\mathbf{v}\|=25\) miles per hour, and the angle between the direction of \(\mathbf{v}\) and \(\mathbf{i}\), the positive \(x\)-axis, is \(\alpha=30^{\circ}\). By equation (8),

Figure 57
\[
\mathbf{v}=\|\mathbf{v}\|(\cos \alpha \mathbf{i}+\sin \alpha \mathbf{j})=25\left(\cos 30^{\circ} \mathbf{i}+\sin 30^{\circ} \mathbf{j}\right)=25\left(\frac{\sqrt{3}}{2} \mathbf{i}+\frac{1}{2} \mathbf{j}\right)=\frac{25 \sqrt{3}}{2} \mathbf{i}+\frac{25}{2} \mathbf{j}
\]

The initial speed of the ball in the horizontal direction is the horizontal component of \(\mathbf{v}, \frac{25 \sqrt{3}}{2} \approx 21.65\) miles per hour. The initial speed in the vertical direction is the vertical component of \(\mathbf{v}, \frac{25}{2}=12.5\) miles per hour. See Figure 57.
am Now Work problem 57

\section*{EXAMPLE 7 Finding the Direction Angle of a Vector}

Find the direction angle \(\alpha\) of \(\mathbf{v}=4 \mathbf{i}-4 \mathbf{j}\).

\section*{Solution See Figure 58. The direction angle \(\alpha\) of \(\mathbf{v}=4 \mathbf{i}-4 \mathbf{j}\) can be found by solving}

Figure 58

\[
\tan \alpha=\frac{-4}{4}=-1
\]

Because \(0^{\circ} \leq \alpha<360^{\circ}\), the direction angle is \(\alpha=315^{\circ}\).

Now Work Problem 63

\section*{7 Model with Vectors}

Figure 59

Because forces can be represented by vectors, two forces "combine" the way that vectors "add." If \(\mathbf{F}_{1}\) and \(\mathbf{F}_{2}\) are two forces simultaneously acting on an object, the vector sum \(\mathbf{F}_{1}+\mathbf{F}_{2}\) is the resultant force. The resultant force produces the same effect on the object as that obtained when the two forces \(\mathbf{F}_{1}\) and \(\mathbf{F}_{2}\) act on the object. See Figure 59.

Figure 60

\section*{Finding the Actual Speed and Direction of an Aircraft}

A Boeing 737 aircraft maintains a constant airspeed of 500 miles per hour headed due south. The jet stream is 80 miles per hour in the northeasterly direction.
(a) Express the velocity \(\mathbf{v}_{\mathrm{a}}\) of the 737 relative to the air and the velocity \(\mathbf{v}_{\mathrm{w}}\) of the jet stream in terms of \(\mathbf{i}\) and \(\mathbf{j}\).
(b) Find the velocity of the 737 relative to the ground.
(c) Find the actual speed and direction of the 737 relative to the ground.
(a) Set up a coordinate system in which north \((\mathrm{N})\) is along the positive \(y\)-axis. See Figure 60. The velocity of the 737 relative to the air is \(\mathbf{v}_{\mathrm{a}}=-500 \mathbf{j}\). The velocity of the jet stream \(\mathbf{v}_{\mathbf{w}}\) has magnitude 80 and direction NE (northeast), so the angle between \(\mathbf{v}_{\mathbf{w}}\) and \(\mathbf{i}\) is \(45^{\circ}\). Express \(\mathbf{v}_{\mathbf{w}}\) in terms of \(\mathbf{i}\) and \(\mathbf{j}\) as
\[
\mathbf{v}_{\mathrm{w}}=80\left(\cos 45^{\circ} \mathbf{i}+\sin 45^{\circ} \mathbf{j}\right)=80\left(\frac{\sqrt{2}}{2} \mathbf{i}+\frac{\sqrt{2}}{2} \mathbf{j}\right)=40 \sqrt{2}(\mathbf{i}+\mathbf{j})
\]
(b) The velocity of the 737 relative to the ground \(\mathbf{v}_{\mathrm{g}}\) is
\[
\mathbf{v}_{\mathrm{g}}=\mathbf{v}_{\mathrm{a}}+\mathbf{v}_{\mathrm{w}}=-500 \mathbf{j}+40 \sqrt{2}(\mathbf{i}+\mathbf{j})=40 \sqrt{2} \mathbf{i}+(40 \sqrt{2}-500) \mathbf{j}
\]
(c) The actual speed of the 737 is
\[
\left\|\mathbf{v}_{\mathrm{g}}\right\|=\sqrt{(40 \sqrt{2})^{2}+(40 \sqrt{2}-500)^{2}} \approx 447 \text { miles per hour }
\]

To find the actual direction of the 737 relative to the ground. Determine the direction angle of \(\mathbf{v}_{\mathrm{g}}\). The direction angle is found by solving
\[
\tan \alpha=\frac{40 \sqrt{2}-500}{40 \sqrt{2}}
\]

Then \(\alpha \approx 277.3^{\circ}\). The 737 is traveling \(\mathrm{S} 7.3^{\circ} \mathrm{E}\).

\section*{EXAMPLE 9 \\ Finding the Weight of a Piano}

Solution

Figure 61

Two movers require a magnitude of force of 300 pounds to push a piano up a ramp inclined at an angle \(20^{\circ}\) from the horizontal. How much does the piano weigh?

Let \(\mathbf{F}_{1}\) represent the force of gravity, \(\mathbf{F}_{2}\) represent the force required to move the piano up the ramp, and \(\mathbf{F}_{3}\) represent the force of the piano against the ramp. See Figure 61.The angle between the ground and the ramp is the same as the angle between \(\mathbf{F}_{1}\) and \(\mathbf{F}_{3}\) because triangles \(A B C\) and \(B D E\) are similar, so \(\angle B A C=\angle D B E=20^{\circ}\). To find the magnitude of \(\mathbf{F}_{1}\), calculate
\[
\begin{aligned}
\sin 20^{\circ} & =\frac{\left\|\mathbf{F}_{2}\right\|}{\left\|\mathbf{F}_{1}\right\|}=\frac{300}{\left\|\mathbf{F}_{1}\right\|} \\
\left\|\mathbf{F}_{1}\right\| & =\frac{300 \mathrm{lb}}{\sin 20^{\circ}} \approx 877 \mathrm{lb}
\end{aligned}
\]

The piano weighs approximately 877 pounds.
An object is said to be in static equilibrium if (1) the object is at rest and (2) the sum of all forces acting on the object is zero-that is, if the resultant force is 0 .

\section*{EXAMPLE IO \\ An Object in Static Equilibrium}

\section*{Solution}

Figure 62

Figure 63

A box of supplies that weighs 1200 pounds is suspended by two cables attached to the ceiling, as shown in Figure 62. What are the tensions in the two cables?
Draw a force diagram using the vectors as shown in Figure 63. The tensions in the cables are the magnitudes \(\left\|\mathbf{F}_{1}\right\|\) and \(\left\|\mathbf{F}_{2}\right\|\) of the force vectors \(\mathbf{F}_{1}\) and \(\mathbf{F}_{2}\). The magnitude of the force vector \(\mathbf{F}_{3}\) equals 1200 pounds, the weight of the box. Now write each force vector in terms of the unit vectors \(\mathbf{i}\) and \(\mathbf{j}\). For \(\mathbf{F}_{1}\) and \(\mathbf{F}_{2}\), use equation (8). Remember that \(\alpha\) is the angle between the vector and the positive \(x\)-axis.
\(\mathbf{F}_{1}=\left\|\mathbf{F}_{1}\right\|\left(\cos 150^{\circ} \mathbf{i}+\sin 150^{\circ} \mathbf{j}\right)=\left\|\mathbf{F}_{1}\right\|\left(-\frac{\sqrt{3}}{2} \mathbf{i}+\frac{1}{2} \mathbf{j}\right)=-\frac{\sqrt{3}}{2}\left\|\mathbf{F}_{1}\right\| \mathbf{i}+\frac{1}{2}\left\|\mathbf{F}_{1}\right\| \mathbf{j}\)
\(\mathbf{F}_{2}=\left\|\mathbf{F}_{2}\right\|\left(\cos 45^{\circ} \mathbf{i}+\sin 45^{\circ} \mathbf{j}\right)=\left\|\mathbf{F}_{2}\right\|\left(\frac{\sqrt{2}}{2} \mathbf{i}+\frac{\sqrt{2}}{2} \mathbf{j}\right)=\frac{\sqrt{2}}{2}\left\|\mathbf{F}_{2}\right\| \mathbf{i}+\frac{\sqrt{2}}{2}\left\|\mathbf{F}_{2}\right\| \mathbf{j}\)
\(\mathbf{F}_{3}=-1200 \mathbf{j}\)
For static equilibrium, the sum of the force vectors must equal zero.
\[
\mathbf{F}_{1}+\mathbf{F}_{2}+\mathbf{F}_{3}=-\frac{\sqrt{3}}{2}\left\|\mathbf{F}_{1}\right\| \mathbf{i}+\frac{1}{2}\left\|\mathbf{F}_{1}\right\| \mathbf{j}+\frac{\sqrt{2}}{2}\left\|\mathbf{F}_{2}\right\| \mathbf{i}+\frac{\sqrt{2}}{2}\left\|\mathbf{F}_{2}\right\| \mathbf{j}-1200 \mathbf{j}=\mathbf{0}
\]

The \(\mathbf{i}\) component and \(\mathbf{j}\) component must each equal zero. This results in the two equations
\[
\begin{align*}
-\frac{\sqrt{3}}{2}\left\|\mathbf{F}_{1}\right\|+\frac{\sqrt{2}}{2}\left\|\mathbf{F}_{2}\right\| & =0  \tag{9}\\
\frac{1}{2}\left\|\mathbf{F}_{1}\right\|+\frac{\sqrt{2}}{2}\left\|\mathbf{F}_{2}\right\|-1200 & =0 \tag{10}
\end{align*}
\]

Solve equation (9) for \(\left\|\mathbf{F}_{2}\right\|\) to obtain
\[
\begin{equation*}
\left\|\mathbf{F}_{2}\right\|=\frac{\sqrt{3}}{\sqrt{2}}\left\|\mathbf{F}_{1}\right\| \tag{11}
\end{equation*}
\]

Substituting into equation (10) and solving for \(\left\|\mathbf{F}_{1}\right\|\) yields
\[
\begin{aligned}
\frac{1}{2}\left\|\mathbf{F}_{1}\right\|+\frac{\sqrt{2}}{2}\left(\frac{\sqrt{3}}{\sqrt{2}}\left\|\mathbf{F}_{1}\right\|\right)-1200 & =0 \\
\frac{1}{2}\left\|\mathbf{F}_{1}\right\|+\frac{\sqrt{3}}{2}\left\|\mathbf{F}_{1}\right\|-1200 & =0 \\
\frac{1+\sqrt{3}}{2}\left\|\mathbf{F}_{1}\right\| & =1200 \\
\left\|\mathbf{F}_{1}\right\| & =\frac{2400}{1+\sqrt{3}} \approx 878.5 \text { pounds }
\end{aligned}
\]

Substituting this value into equation (11) gives \(\left\|\mathbf{F}_{2}\right\|\).
\[
\left\|\mathbf{F}_{2}\right\|=\frac{\sqrt{3}}{\sqrt{2}}\left\|\mathbf{F}_{1}\right\|=\frac{\sqrt{3}}{\sqrt{2}} \cdot \frac{2400}{1+\sqrt{3}} \approx 1075.9 \text { pounds }
\]

The left cable has tension of approximately 878.5 pounds, and the right cable has tension of approximately 1075.9 pounds.

\section*{Historical Feature}

Josiah Gibbs
(1839-1903)

The history of vectors is surprisingly complicated for such a natural concept. In the xy-plane, complex numbers do a good job of imitating vectors. About 1840, mathematicians became interested in finding a system that would do for three dimensions what the complex numbers do for two dimensions. Hermann Grassmann (1809-1877), in Germany, and William Rowan Hamilton (1805-1865), in Ireland, both attempted to find solutions.

Hamilton's system was the quaternions, which are best thought of as a real number plus a vector, and do for four dimensions what complex numbers do for two dimensions. In this system the order of multiplication matters; that is, \(\mathbf{a b} \neq \mathbf{b a}\). Also, two
products of vectors emerged, the scalar product (or dot product) and the vector product (or cross product).

Grassmann's abstract style, although easily read today, was almost impenetrable during the nineteenth century, and only a few of his ideas were appreciated. Among those few were the same scalar and vector products that Hamilton had found.

About 1880, the American physicist Josiah Willard Gibbs (1839-1903) worked out an algebra involving only the simplest concepts: the vectors and the two products. He then added some calculus, and the resulting system was simple, flexible, and well adapted to expressing a large number of physical laws. This system remains in use essentially unchanged. Hamilton's and Grassmann's more extensive systems each gave birth to much interesting mathematics, but little of this mathematics is seen at elementary levels.

\subsection*{8.4 Assess Your Understanding}

\section*{Concepts and Vocabulary}
1. A \(\qquad\) is a quantity that has both magnitude and direction.
2. If \(\mathbf{v}\) is a vector, then \(\mathbf{v}+(-\mathbf{v})=\) \(\qquad\) .
3. A vector \(\mathbf{u}\) for which \(\|\mathbf{u}\|=1\) is called \(\mathrm{a}(\mathrm{n})\) \(\qquad\) vector.
4. If \(\mathbf{v}=\langle a, b\rangle\) is an algebraic vector whose initial point is the origin, then \(\mathbf{v}\) is called \(a(n)\) \(\qquad\) vector.
5. If \(\mathbf{v}=a \mathbf{i}+b \mathbf{j}\), then \(a\) is called the \(\qquad\) component of \(\mathbf{v}\) and \(b\) is called the \(\qquad\) component of \(\mathbf{v}\).
6. If \(\mathbf{F}_{1}\) and \(\mathbf{F}_{2}\) are two forces simultaneously acting on an object, the vector sum \(\mathbf{F}_{1}+\mathbf{F}_{2}\) is called the \(\qquad\) force.
7. True or False Force is an example of a vector.
8. True or False Mass is an example of a vector.

\section*{Skill Building}

In Problems 9-16, use the vectors in the figure at the right to graph each of the following vectors.
9. \(\mathbf{v}+\mathbf{w}\)
10. \(\mathbf{u}+\mathrm{v}\)
11. \(3 v\)
12. \(4 w\)
13. \(v-w\)
14. \(u-v\)
15. \(3 \mathbf{v}+\mathbf{u}-2 \mathbf{w}\)
16. \(2 \mathbf{u}-3 \mathbf{v}+\mathbf{w}\)

In Problems 17-24, use the figure at the right. Determine whether each statement given is true or false.
17. \(\mathbf{A}+\mathbf{B}=\mathbf{F}\)
18. \(\mathbf{K}+\mathbf{G}=\mathbf{F}\)
19. \(\mathbf{C}=\mathbf{D}-\mathbf{E}+\mathbf{F}\)
20. \(\mathbf{G}+\mathbf{H}+\mathbf{E}=\mathbf{D}\)
21. \(\mathbf{E}+\mathbf{D}=\mathbf{G}+\mathbf{H}\)
22. \(\mathbf{H}-\mathbf{C}=\mathbf{G}-\mathbf{F}\)
23. \(\mathbf{A}+\mathbf{B}+\mathbf{K}+\mathbf{G}=\mathbf{0}\)
24. \(\mathbf{A}+\mathbf{B}+\mathbf{C}+\mathbf{H}+\mathbf{G}=\mathbf{0}\)
25. If \(\|\mathbf{v}\|=4\), what is \(\|3 \mathbf{v}\|\) ?
26. If \(\|\mathbf{v}\|=2\), what is \(\|-4 \mathbf{v}\|\) ?

In Problems 27-34, the vector \(\mathbf{v}\) has initial point \(P\) and terminal point \(Q\). Write \(\mathbf{v}\) in the
form \(a \mathbf{i}+b \mathbf{j}\); that is, find its position vector.
28. \(P=(0,0) ; \quad Q=(-3,-5)\)
27. \(P=(0,0) ; \quad Q=(3,4)\)
30. \(P=(-3,2) ; \quad Q=(6,5)\)
31. \(P=(-2,-1) ; \quad Q=(6,-2)\)
32. \(P=(-1,4) ; \quad Q=(6,2)\)
33. \(P=(1,0) ; \quad Q=(0,1)\)
34. \(P=(1,1) ; \quad Q=(2,2)\)

In Problems 35-40, find \(\|\mathbf{v}\|\).
35. \(\mathbf{v}=3 \mathbf{i}-4 \mathbf{j}\)
36. \(\mathbf{v}=-5 \mathbf{i}+12 \mathbf{j}\)
37. \(\mathbf{v}=\mathbf{i}-\mathbf{j}\)
38. \(\mathbf{v}=-\mathbf{i}-\mathbf{j}\)
39. \(\mathbf{v}=-2 \mathbf{i}+3 \mathbf{j}\)
40. \(\mathbf{v}=6 \mathbf{i}+2 \mathbf{j}\)

In Problems 41-46, find each quantity if \(\mathbf{v}=3 \mathbf{i}-5 \mathbf{j}\) and \(\mathbf{w}=-2 \mathbf{i}+3 \mathbf{j}\).
41. \(2 \mathbf{v}+3 \mathbf{w}\)
42. \(3 \mathbf{v}-2 \mathbf{w}\)
43. \(\|\mathbf{v}-\mathbf{w}\|\)
44. \(\|\mathbf{v}+\mathbf{w}\|\)
45. \(\|\mathbf{v}\|-\|\mathbf{w}\|\)
46. \(\|\mathbf{v}\|+\|\mathbf{w}\|\)

In Problems 47-52, find the unit vector in the same direction as \(\mathbf{v}\).
47. \(\mathbf{v}=5 \mathbf{i}\)
48. \(\mathbf{v}=-3 \mathbf{j}\)
49. \(\mathbf{v}=3 \mathbf{i}-4 \mathbf{j}\)
50. \(\mathbf{v}=-5 \mathbf{i}+12 \mathbf{j}\)
51. \(\mathbf{v}=\mathbf{i}-\mathbf{j}\)
52. \(\mathbf{v}=2 \mathbf{i}-\mathbf{j}\)
53. Find a vector \(\mathbf{v}\) whose magnitude is 4 and whose component in the \(\mathbf{i}\) direction is twice the component in the \(\mathbf{j}\) direction.
55. If \(\mathbf{v}=2 \mathbf{i}-\mathbf{j}\) and \(\mathbf{w}=x \mathbf{i}+3 \mathbf{j}\), find all numbers \(x\) for which \(\|\mathbf{v}+\mathbf{w}\|=5\).
54. Find a vector \(\mathbf{v}\) whose magnitude is 3 and whose component in the \(\mathbf{i}\) direction is equal to the component in the \(\mathbf{j}\) direction.
56. If \(P=(-3,1)\) and \(Q=(x, 4)\), find all numbers \(x\) such that the vector represented by \(\overrightarrow{P Q}\) has length 5 .

In Problems 57-62, write the vector \(\mathbf{v}\) in the form \(a \mathbf{i}+b \mathbf{j}\), given its magnitude \(\|\mathbf{v}\|\) and the angle \(\alpha\) it makes with the positive \(x\)-axis.
57. \(\|\mathbf{v}\|=5, \quad \alpha=60^{\circ}\)
58. \(\|\mathbf{v}\|=8, \quad \alpha=45^{\circ}\)
59. \(\|v\|=14, \quad \alpha=120^{\circ}\)
60. \(\|\mathbf{v}\|=3, \quad \alpha=240^{\circ}\)
61. \(\|\mathbf{v}\|=25, \quad \alpha=330^{\circ}\)
62. \(\|\mathbf{v}\|=15, \quad \alpha=315^{\circ}\)

In Problems 63-70, find the direction angle of \(\mathbf{v}\) for each vector.
63. \(\mathbf{v}=3 \mathbf{i}+3 \mathbf{j}\)
64. \(\mathbf{v}=\mathbf{i}+\sqrt{3} \mathbf{j}\)
65. \(\mathbf{v}=-3 \sqrt{3} \mathbf{i}+3 \mathbf{j}\)
66. \(\mathbf{v}=-5 \mathbf{i}-5 \mathbf{j}\)
67. \(\mathbf{v}=4 \mathbf{i}-2 \mathbf{j}\)
68. \(\mathbf{v}=6 \mathbf{i}-4 \mathbf{j}\)
69. \(\mathbf{v}=-\mathbf{i}-5 \mathbf{j}\)
70. \(\mathbf{v}=-\mathbf{i}+3 \mathbf{j}\)

\section*{Applications and Extensions}
71. Computer Graphics The field of computer graphics utilizes vectors to compute translations of points. For example, if the point \((-3,2)\) is to be translated by \(\mathbf{v}=\langle 5,2\rangle\), then the new location will be \(\mathbf{u}^{\prime}=\mathbf{u}+\mathbf{v}=\langle-3,2\rangle+\langle 5,2\rangle=\langle 2,4\rangle\). As illustrated in the figure, the point \((-3,2)\) is translated to \((2,4)\) by \(\mathbf{v}\).
Source: Phil Dadd. Vectors and Matrices: A Primer. www.gamedev.net/reference/articles/article1832.asp
(a) Determine the new coordinates of \((3,-1)\) if it is translated by \(\mathbf{v}=\langle-4,5\rangle\).
(b) Illustrate this translation graphically.

72. Computer Graphics Refer to Problem 71. The points \((-3,0),(-1,-2),(3,1)\), and \((1,3)\) are the vertices of a parallelogram \(A B C D\).
(a) Find the new vertices of a parallelogram \(A^{\prime} B^{\prime} C^{\prime} D^{\prime}\) if it is translated by \(\mathbf{v}=\langle 3,-2\rangle\).
(b) Find the new vertices of a parallelogram \(A^{\prime} B^{\prime} C^{\prime} D^{\prime}\) if it is translated by \(-\frac{1}{2} \mathbf{v}\).
73. Force Vectors A child pulls a wagon with a force of 40 pounds. The handle of the wagon makes an angle of \(30^{\circ}\) with the ground. Express the force vector \(\mathbf{F}\) in terms of \(\mathbf{i}\) and \(\mathbf{j}\).
74. Force Vectors A man pushes a wheelbarrow up an incline of \(20^{\circ}\) with a force of 100 pounds. Express the force vector \(\mathbf{F}\) in terms of \(\mathbf{i}\) and \(\mathbf{j}\).
75. Resultant Force Two forces of magnitude 40 newtons (N) and 60 N act on an object at angles of \(30^{\circ}\) and \(-45^{\circ}\) with the positive \(x\)-axis, as shown in the figure. Find the direction and magnitude of the resultant force; that is, find \(\mathbf{F}_{1}+\mathbf{F}_{2}\).

76. Resultant Force Two forces of magnitude 30 newtons (N) and 70 N act on an object at angles of \(45^{\circ}\) and \(120^{\circ}\) with the positive \(x\)-axis, as shown in the figure. Find the direction and magnitude of the resultant force; that is, find \(\mathbf{F}_{1}+\mathbf{F}_{2}\).

77. Finding the Actual Speed and Direction of an Aircraft A Boeing 747 jumbo jet maintains a constant airspeed of 550 miles per hour ( mph ) headed due north. The jet stream is 100 mph in the northeasterly direction.
(a) Express the velocity \(\mathbf{v}_{\mathrm{a}}\) of the 747 relative to the air and the velocity \(\mathbf{v}_{\mathbf{w}}\) of the jet stream in terms of \(\mathbf{i}\) and \(\mathbf{j}\).
(b) Find the velocity of the 747 relative to the ground.
(c) Find the actual speed and direction of the 747 relative to the ground.
78. Finding the Actual Speed and Direction of an Aircraft An Airbus A320 jet maintains a constant airspeed of 500 mph headed due west. The jet stream is 100 mph in the southeasterly direction.
(a) Express the velocity \(\mathbf{v}_{\mathrm{a}}\) of the A320 relative to the air and the velocity \(\mathbf{v}_{w}\) of the jet stream in terms of \(\mathbf{i}\) and \(\mathbf{j}\).
(b) Find the velocity of the A320 relative to the ground.
(c) Find the actual speed and direction of the A320 relative to the ground.
79. Ground Speed and Direction of an Airplane An airplane has an airspeed of 500 kilometers per hour ( \(\mathrm{km} / \mathrm{h}\) ) bearing \(\mathrm{N} 45^{\circ} \mathrm{E}\). The wind velocity is \(60 \mathrm{~km} / \mathrm{h}\) in the direction \(\mathrm{N} 30^{\circ} \mathrm{W}\). Find the resultant vector representing the path of the plane relative to the ground. What is the ground speed of the plane? What is its direction?
80. Ground Speed and Direction of an Airplane An airplane has an airspeed of \(600 \mathrm{~km} / \mathrm{h}\) bearing S30 \({ }^{\circ} \mathrm{E}\). The wind velocity is \(40 \mathrm{~km} / \mathrm{h}\) in the direction \(\mathrm{S} 45^{\circ} \mathrm{E}\). Find the resultant vector representing the path of the plane relative to the ground. What is the ground speed of the plane? What is its direction?
81. Weight of a Boat A magnitude of 700 pounds of force is required to hold a boat and its trailer in place on a ramp whose incline is \(10^{\circ}\) to the horizontal. What is the combined weight of the boat and its trailer?
82. Weight of a Car A magnitude of 1200 pounds of force is required to prevent a car from rolling down a hill whose incline is \(15^{\circ}\) to the horizontal. What is the weight of the car?
83. Correct Direction for Crossing a River A river has a constant current of \(3 \mathrm{~km} / \mathrm{h}\). At what angle to a boat dock should a motorboat capable of maintaining a constant speed of \(20 \mathrm{~km} / \mathrm{h}\) be headed in order to reach a point directly opposite the dock? If the river is \(\frac{1}{2}\) kilometer wide, how long will it take to cross?

84. Finding the Correct Compass Heading The pilot of an aircraft wishes to head directly east but is faced with a wind speed of 40 mph from the northwest. If the pilot maintains an airspeed of 250 mph , what compass heading should be maintained to head directly east? What is the actual speed of the aircraft?
85. Static Equilibrium A weight of 1000 pounds is suspended from two cables as shown in the figure. What are the tensions in the two cables?

86. Static Equilibrium A weight of 800 pounds is suspended from two cables, as shown in the figure. What are the tensions in the two cables?

87. Static Equilibrium A tightrope walker located at a certain point deflects the rope as indicated in the figure. If the weight of the tightrope walker is 150 pounds, how much tension is in each part of the rope?

88. Static Equilibrium Repeat Problem 87 if the angle on the left is \(3.8^{\circ}\), the angle on the right is \(2.6^{\circ}\), and the weight of the tightrope walker is 135 pounds.
89. Truck Pull At a county fair truck pull, two pickup trucks are attached to the back end of a monster truck as illustrated in the figure. One of the pickups pulls with a force of 2000 pounds, and the other pulls with a force of 3000 pounds. There is an angle of \(45^{\circ}\) between them. With how much force must the monster truck pull in order to remain unmoved?
[Hint: Find the resultant force of the two trucks.]

90. Removing a Stump A farmer wishes to remove a stump from a field by pulling it out with his tractor. Having removed many stumps before, he estimates that he will need 6 tons ( 12,000 pounds) of force to remove the stump. However, his tractor is only capable of pulling with a force of 7000 pounds, so he asks his neighbor to help. His neighbor's tractor can pull with a force of 5500 pounds. They attach the two tractors to the stump with a \(40^{\circ}\) angle between the forces as shown in the figure.
(a) Assuming the farmer's estimate of a needed 6-ton force is correct, will the farmer be successful in removing the stump? Explain.
(b) Had the farmer arranged the tractors with a \(25^{\circ}\) angle between the forces, would he have been successful in removing the stump? Explain.

91. Charting a Course A helicopter pilot needs to travel to a regional airport 25 miles away. She flies at an actual heading of \(\mathrm{N} 16.26^{\circ} \mathrm{E}\) with an airspeed of 120 mph , and there is a wind blowing directly east at 20 mph .
(a) Determine the compass heading that the pilot needs to reach her destination.
(b) How long will it take her to reach her destination? Round to the nearest minute.
92. Crossing a River A captain needs to pilot a boat across a river that is 2 km wide. The current in the river is \(2 \mathrm{~km} / \mathrm{h}\) and the speed of the boat in still water is \(10 \mathrm{~km} / \mathrm{h}\). The desired landing point on the other side is 1 km upstream.
(a) Determine the direction in which the captain should aim the boat.
(b) How long will the trip take?
93. Static Friction A 20 -pound box sits at rest on a horizontal surface, and there is friction between the box and the surface. One side of the surface is raised slowly to create a ramp. The friction force \(\mathbf{f}\) opposes the direction of motion and is proportional to the normal force \(\mathbf{F}_{\mathbf{N}}\) exerted by the surface on the box. The proportionality constant is called the coefficient of friction, \(\mu\). When the angle of the ramp, \(\theta\), reaches \(20^{\circ}\), the box begins to slide. Find the value of \(\mu\) to two decimal places.

94. Inclined Ramp A 2-pound weight is attached to a 3-pound weight by a rope that passes over an ideal pulley. The smaller weight hangs vertically, while the larger weight sits on a frictionless inclined ramp with angle \(\theta\). The rope exerts a tension force \(\mathbf{T}\) on both weights along the direction of the rope. Find the angle measure for \(\theta\) that is needed to keep the larger weight from sliding down the ramp. Round your answer to the nearest tenth of a degree.

95. Inclined Ramp A box sitting on a horizontal surface is attached to a second box sitting on an inclined ramp by a rope that passes over an ideal pulley. The rope exerts a tension force \(\mathbf{T}\) on both weights along the direction of the rope, and the coefficient of friction between the surface and boxes is 0.6 (See Problems 95 and 96). If the box on the right weighs 100 pounds and the angle of the ramp is \(35^{\circ}\), how much must the box on the left weigh for the system to be in static equilibrium? Round your answer to two decimal places.

96. Muscle Force Two muscles exert force on a bone at the same point. The first muscle exerts a force of 800 N at a \(10^{\circ}\) angle with the bone. The second muscle exerts a force of 710 N at a \(35^{\circ}\) angle with the bone. What are the direction and magnitude of the resulting force on the bone?
97. Static Equilibrium Show on the following graph the force needed for the object at \(P\) to be in static equilibrium.

\section*{Explaining Concepts: Discussion and Writing}
98. Explain in your own words what a vector is. Give an example of a vector.
99. Write a brief paragraph comparing the algebra of complex numbers and the algebra of vectors.
100. Explain the difference between an algebraic vector and a position vector.

\section*{Retain Your Knowledge}

Problems 101-104 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
101. Solve: \(\sqrt[3]{x-2}=3\).
102. Factor \(-3 x^{3}+12 x^{2}+36 x\) completely.
103. Find the amplitude, period, and phase shift of \(y=\frac{3}{2} \cos (6 x+3 \pi)\). Graph the function, showing at least two periods.
104. Find the exact value of \(\tan \left[\cos ^{-1}\left(\frac{1}{2}\right)\right]\).

\subsection*{8.5 The Dot Product}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Law of Cosines (Section 7.3, p. 555)

Now Work the 'Are You Prepared?' problem on page 636.
OBJECTIVES 1 Find the Dot Product of Two Vectors (p. 630)
2 Find the Angle between Two Vectors (p. 631)
3 Determine Whether Two Vectors Are Parallel (p. 632)
4 Determine Whether Two Vectors Are Orthogonal (p.632)
5 Decompose a Vector into Two Orthogonal Vectors (p. 633)
6 Compute Work (p. 635)

\section*{1 Find the Dot Product of Two Vectors}

The definition for a product of two vectors is somewhat unexpected. However, such a product has meaning in many geometric and physical applications.

DEFINITION
If \(\mathbf{v}=a_{1} \mathbf{i}+b_{1} \mathbf{j}\) and \(\mathbf{w}=a_{2} \mathbf{i}+b_{2} \mathbf{j}\) are two vectors, the dot product \(\mathbf{v} \cdot \mathbf{w}\) is defined as
\[
\begin{equation*}
\mathbf{v} \cdot \mathbf{w}=a_{1} a_{2}+b_{1} b_{2} \tag{1}
\end{equation*}
\]

\section*{EXAMPLE I Finding Dot Products}

If \(\mathbf{v}=2 \mathbf{i}-3 \mathbf{j}\) and \(\mathbf{w}=5 \mathbf{i}+3 \mathbf{j}\), find:
(a) \(\mathbf{v} \cdot \mathbf{w}\)
(b) \(\mathbf{w} \cdot \mathbf{v}\)
(c) \(\mathbf{v} \cdot \mathbf{v}\)
(d) \(\mathbf{w} \cdot \mathbf{w}\)
(e) \(\|\mathbf{v}\|\)
(f) \(\|\mathbf{w}\|\)

Solution
(a) \(\mathbf{v} \cdot \mathbf{w}=2(5)+(-3) 3=1\)
(b) \(\mathbf{w} \cdot \mathbf{v}=5(2)+3(-3)=1\)
(c) \(\mathbf{v} \cdot \mathbf{v}=2(2)+(-3)(-3)=13\)
(d) \(\mathbf{w} \cdot \mathbf{w}=5(5)+3(3)=34\)
(e) \(\|\mathbf{v}\|=\sqrt{2^{2}+(-3)^{2}}=\sqrt{13}\)
(f) \(\|\mathbf{w}\|=\sqrt{5^{2}+3^{2}}=\sqrt{34}\)

COMment A scalar multiple \(\alpha \mathbf{v}\) is a vector. A dot product \(\mathbf{u} \cdot \mathbf{v}\) is a scalar (real number).

\section*{THEOREM}

Since the dot product \(\mathbf{v} \cdot \mathbf{w}\) of two vectors \(\mathbf{v}\) and \(\mathbf{w}\) is a real number (scalar), it is sometimes referred to as the scalar product.

The results obtained in Example 1 suggest some general properties.

\section*{Properties of the Dot Product}

If \(\mathbf{u}, \mathbf{v}\), and \(\mathbf{w}\) are vectors, then
Commutative Property
\[
\mathbf{u} \cdot \mathbf{v}=\mathbf{v} \cdot \mathbf{u}
\]

Distributive Property
\[
\begin{equation*}
\mathbf{u} \cdot(\mathbf{v}+\mathbf{w})=\mathbf{u} \cdot \mathbf{v}+\mathbf{u} \cdot \mathbf{w} \tag{3}
\end{equation*}
\]
\[
\begin{align*}
& \mathbf{v} \cdot \mathbf{v}=\|\mathbf{v}\|^{2}  \tag{4}\\
& \mathbf{0} \cdot \mathbf{v}=0 \tag{5}
\end{align*}
\]

Proof We prove properties (2) and (4) here and leave properties (3) and (5) as exercises (see Problems 36 and 37).

To prove property (2), let \(\mathbf{u}=a_{1} \mathbf{i}+b_{1} \mathbf{j}\) and \(\mathbf{v}=a_{2} \mathbf{i}+b_{2} \mathbf{j}\). Then
\[
\mathbf{u} \cdot \mathbf{v}=a_{1} a_{2}+b_{1} b_{2}=a_{2} a_{1}+b_{2} b_{1}=\mathbf{v} \cdot \mathbf{u}
\]

To prove property (4), let \(\mathbf{v}=a \mathbf{i}+b \mathbf{j}\). Then
\[
\mathbf{v} \cdot \mathbf{v}=a^{2}+b^{2}=\|\mathbf{v}\|^{2}
\]

Figure 64

\section*{2 Find the Angle between Two Vectors}

One use of the dot product is to calculate the angle between two vectors.
Let \(\mathbf{u}\) and \(\mathbf{v}\) be two vectors with the same initial point \(A\). Then the vectors \(\mathbf{u}\), \(\mathbf{v}\), and \(\mathbf{u}-\mathbf{v}\) form a triangle. The angle \(\theta\) at vertex \(A\) of the triangle is the angle between the vectors \(\mathbf{u}\) and \(\mathbf{v}\). See Figure 64. We wish to find a formula for calculating the angle \(\theta\).

The sides of the triangle have lengths \(\|\mathbf{v}\|,\|\mathbf{u}\|\), and \(\|\mathbf{u}-\mathbf{v}\|\), and \(\theta\) is the included angle between the sides of length \(\|\mathbf{v}\|\) and \(\|\mathbf{u}\|\). The Law of Cosines (Section 7.3) can be used to find the cosine of the included angle.
\[
\|\mathbf{u}-\mathbf{v}\|^{2}=\|\mathbf{u}\|^{2}+\|\mathbf{v}\|^{2}-2\|\mathbf{u}\|\|\mathbf{v}\| \cos \theta
\]

Now use property (4) to rewrite this equation in terms of dot products.
\[
\begin{equation*}
(\mathbf{u}-\mathbf{v}) \cdot(\mathbf{u}-\mathbf{v})=\mathbf{u} \cdot \mathbf{u}+\mathbf{v} \cdot \mathbf{v}-2\|\mathbf{u}\|\|\mathbf{v}\| \cos \theta \tag{6}
\end{equation*}
\]

Then apply the distributive property (3) twice on the left side of (6) to obtain
\[
\begin{aligned}
(\mathbf{u}-\mathbf{v}) \cdot(\mathbf{u}-\mathbf{v}) & =\mathbf{u} \cdot(\mathbf{u}-\mathbf{v})-\mathbf{v} \cdot(\mathbf{u}-\mathbf{v}) \\
& =\mathbf{u} \cdot \mathbf{u}-\mathbf{u} \cdot \mathbf{v}-\mathbf{v} \cdot \mathbf{u}+\mathbf{v} \cdot \mathbf{v} \\
& =\mathbf{u} \cdot \mathbf{u}+\mathbf{v} \cdot \mathbf{v}-2 \mathbf{u} \cdot \mathbf{v} \\
& \uparrow
\end{aligned}
\]

Combining equations (6) and (7) gives
\[
\begin{aligned}
\mathbf{u} \cdot \mathbf{u}+\mathbf{v} \cdot \mathbf{v}-2\|\mathbf{u}\|\|\mathbf{v}\| \cos \theta & =\mathbf{u} \cdot \mathbf{u}+\mathbf{v} \cdot \mathbf{v}-2 \mathbf{u} \cdot \mathbf{v} \\
\|\mathbf{u}\|\|\mathbf{v}\| \cos \theta & =\mathbf{u} \cdot \mathbf{v} \\
\cos \theta & =\frac{\mathbf{u} \cdot \mathbf{v}}{\|\mathbf{u}\|\|\mathbf{v}\|}
\end{aligned}
\]

\section*{THEOREM}

\section*{Angle between Vectors}

If \(\mathbf{u}\) and \(\mathbf{v}\) are two nonzero vectors, the angle \(\theta, 0 \leq \theta \leq \pi\), between \(\mathbf{u}\) and \(\mathbf{v}\) is determined by the formula
\[
\begin{equation*}
\cos \theta=\frac{\mathbf{u} \cdot \mathbf{v}}{\|\mathbf{u}\|\|\mathbf{v}\|} \tag{8}
\end{equation*}
\]

\section*{EXAMPLE 2}

\section*{Finding the Angle between Two Vectors}

Find the angle \(\theta\) between \(\mathbf{u}=4 \mathbf{i}-3 \mathbf{j}\) and \(\mathbf{v}=2 \mathbf{i}+5 \mathbf{j}\).
Solution Find \(\mathbf{u} \cdot \mathbf{v},\|\mathbf{u}\|\), and \(\|\mathbf{v}\|\).

\section*{Figure 65}

\[
\begin{aligned}
\mathbf{u} \cdot \mathbf{v} & =4(2)+(-3)(5)=-7 \\
\|\mathbf{u}\| & =\sqrt{4^{2}+(-3)^{2}}=5 \\
\|\mathbf{v}\| & =\sqrt{2^{2}+5^{2}}=\sqrt{29}
\end{aligned}
\]

By formula (8), if \(\theta\) is the angle between \(\mathbf{u}\) and \(\mathbf{v}\), then
\[
\cos \theta=\frac{\mathbf{u} \cdot \mathbf{v}}{\|\mathbf{u}\|\|\mathbf{v}\|}=\frac{-7}{5 \sqrt{29}} \approx-0.26
\]

Thus, \(\theta \approx \cos ^{-1}(-0.26) \approx 105^{\circ}\). See Figure 65.
am-Now Work problems 7(a) and (b)

\section*{3 Determine Whether Two Vectors Are Parallel}

Two vectors \(\mathbf{v}\) and \(\mathbf{w}\) are said to be parallel if there is a nonzero scalar \(\alpha\) so that \(\mathbf{v}=\alpha \mathbf{w}\). In this case, the angle \(\theta\) between \(\mathbf{v}\) and \(\mathbf{w}\) is 0 or \(\pi\).

\section*{EXAMPLE 3 \\ Determining Whether Vectors Are Parallel}

The vectors \(\mathbf{v}=3 \mathbf{i}-\mathbf{j}\) and \(\mathbf{w}=6 \mathbf{i}-2 \mathbf{j}\) are parallel, since \(\mathbf{v}=\frac{1}{2} \mathbf{w}\). Furthermore, since
\[
\cos \theta=\frac{\mathbf{v} \cdot \mathbf{w}}{\|\mathbf{v}\|\|\mathbf{w}\|}=\frac{18+2}{\sqrt{10} \sqrt{40}}=\frac{20}{\sqrt{400}}=1
\]
the angle \(\theta\) between \(\mathbf{v}\) and \(\mathbf{w}\) is 0 .

\section*{4 Determine Whether Two Vectors Are Orthogonal}

Figure 66
\(\mathbf{v}\) is orthogonal to \(\mathbf{w}\).

If the angle \(\theta\) between two nonzero vectors \(\mathbf{v}\) and \(\mathbf{w}\) is \(\frac{\pi}{2}\), the vectors \(\mathbf{v}\) and \(\mathbf{w}\) are called orthogonal. \({ }^{*}\) See Figure 66.

Since \(\cos \frac{\pi}{2}=0\), it follows from formula (8) that if \(\mathbf{v}\) and \(\mathbf{w}\) are orthogonal, then \(\mathbf{v} \cdot \mathbf{w}=0\).

On the other hand, if \(\mathbf{v} \cdot \mathbf{w}=0\), then \(\mathbf{v}=\mathbf{0}\) or \(\mathbf{w}=\mathbf{0}\) or \(\cos \theta=0\). If \(\cos \theta=0\), then \(\theta=\frac{\pi}{2}\), and \(\mathbf{v}\) and \(\mathbf{w}\) are orthogonal. If \(\mathbf{v}\) or \(\mathbf{w}\) is the zero vector, then, since the zero vector has no specific direction, we adopt the convention that the zero vector is orthogonal to every vector.

\footnotetext{
*Orthogonal, perpendicular, and normal are all terms that mean "meet at a right angle." It is customary to refer to two vectors as being orthogonal, to two lines as being perpendicular, and to a line and a plane or a vector and a plane as being normal.
}

THEOREM Two vectors \(\mathbf{v}\) and \(\mathbf{w}\) are orthogonal if and only if
\[
\mathbf{v} \cdot \mathbf{w}=0
\]

Figure 67

\section*{EXAMPLE 4 \\ Determining Whether Two Vectors Are Orthogonal}

The vectors
\[
\mathbf{v}=2 \mathbf{i}-\mathbf{j} \quad \text { and } \quad \mathbf{w}=3 \mathbf{i}+6 \mathbf{j}
\]
are orthogonal, since
\[
\mathbf{v} \cdot \mathbf{w}=6-6=0
\]

See Figure 67.
mon Now Wroblem 7(c)

\section*{5 Decompose a Vector into Two Orthogonal Vectors}

In the last section, we discussed how to add two vectors to find the resultant vector. Now, we discuss the reverse problem, decomposing a vector into the sum of two components.

In many physical applications, it is necessary to find "how much" of a vector is applied in a given direction. Look at Figure 68. The force \(\mathbf{F}\) due to gravity is pulling straight down (toward the center of Earth) on the block. To study the effect of gravity on the block, it is necessary to determine how much of \(\mathbf{F}\) is actually pushing the block down the incline \(\left(\mathbf{F}_{1}\right)\) and how much is pressing the block against the incline \(\left(\mathbf{F}_{2}\right)\), at a right angle to the incline. Knowing the decomposition of \(\mathbf{F}\) often enables us to determine when friction (the force holding the block in place on the incline) is overcome and the block slides down the incline.

Suppose that \(\mathbf{v}\) and \(\mathbf{w}\) are two nonzero vectors with the same initial point \(P\). We seek to decompose \(\mathbf{v}\) into two vectors: \(\mathbf{v}_{1}\), which is parallel to \(\mathbf{w}\), and \(\mathbf{v}_{2}\), which is orthogonal to \(\mathbf{w}\). See Figure 69(a) and (b). The vector \(\mathbf{v}_{1}\) is called the vector projection of \(\mathbf{v}\) onto \(w\).

The vector \(\mathbf{v}_{1}\) is obtained as follows: From the terminal point of \(\mathbf{v}\), drop a perpendicular to the line containing \(\mathbf{w}\). The vector \(\mathbf{v}_{1}\) is the vector from \(P\) to the foot of this perpendicular. The vector \(\mathbf{v}_{2}\) is given by \(\mathbf{v}_{2}=\mathbf{v}-\mathbf{v}_{1}\). Note that \(\mathbf{v}=\mathbf{v}_{1}+\mathbf{v}_{2}\), the vector \(\mathbf{v}_{1}\) is parallel to \(\mathbf{w}\), and the vector \(\mathbf{v}_{2}\) is orthogonal to \(\mathbf{w}\). This is the decomposition of \(\mathbf{v}\) that was sought.

Now we seek a formula for \(\mathbf{v}_{1}\) that is based on a knowledge of the vectors \(\mathbf{v}\) and \(\mathbf{w}\). Since \(\mathbf{v}=\mathbf{v}_{1}+\mathbf{v}_{2}\), we have
\[
\begin{equation*}
\mathbf{v} \cdot \mathbf{w}=\left(\mathbf{v}_{1}+\mathbf{v}_{2}\right) \cdot \mathbf{w}=\mathbf{v}_{1} \cdot \mathbf{w}+\mathbf{v}_{2} \cdot \mathbf{w} \tag{9}
\end{equation*}
\]

Since \(\mathbf{v}_{2}\) is orthogonal to \(\mathbf{w}\), we have \(\mathbf{v}_{2} \cdot \mathbf{w}=0\). Since \(\mathbf{v}_{1}\) is parallel to \(\mathbf{w}\), we have \(\mathbf{v}_{1}=\alpha \mathbf{w}\) for some scalar \(\alpha\). Equation (9) can be written as
\[
\begin{aligned}
\mathbf{v} \cdot \mathbf{w} & =\alpha \mathbf{w} \cdot \mathbf{w}=\alpha\|\mathbf{w}\|^{2} \quad v_{1}=\alpha w ; v_{2} \cdot w=0 \\
\alpha & =\frac{\mathbf{v} \cdot \mathbf{w}}{\|\mathbf{w}\|^{2}}
\end{aligned}
\]

Then
\[
\mathbf{v}_{1}=\alpha \mathbf{w}=\frac{\mathbf{v} \cdot \mathbf{w}}{\|\mathbf{w}\|^{2}} \mathbf{w}
\]

\section*{THEOREM If \(\mathbf{v}\) and \(\mathbf{w}\) are two nonzero vectors, the vector projection of \(\mathbf{v}\) onto \(\mathbf{w}\) is}
\[
\begin{equation*}
\mathbf{v}_{1}=\frac{\mathbf{v} \cdot \mathbf{w}}{\|\mathbf{w}\|^{2}} \mathbf{w} \tag{10}
\end{equation*}
\]

The decomposition of \(\mathbf{v}\) into \(\mathbf{v}_{1}\) and \(\mathbf{v}_{2}\), where \(\mathbf{v}_{1}\) is parallel to \(\mathbf{w}\) and \(\mathbf{v}_{2}\) is orthogonal to \(\mathbf{w}\), is
\[
\begin{equation*}
\mathbf{v}_{1}=\frac{\mathbf{v} \cdot \mathbf{w}}{\|\mathbf{w}\|^{2}} \mathbf{w} \quad \mathbf{v}_{2}=\mathbf{v}-\mathbf{v}_{1} \tag{11}
\end{equation*}
\]

\section*{EXAMPLE 5 Decomposing a Vector into Two Orthogonal Vectors}

Find the vector projection of \(\mathbf{v}=\mathbf{i}+3 \mathbf{j}\) onto \(\mathbf{w}=\mathbf{i}+\mathbf{j}\). Decompose \(\mathbf{v}\) into two vectors, \(\mathbf{v}_{1}\) and \(\mathbf{v}_{2}\), where \(\mathbf{v}_{1}\) is parallel to \(\mathbf{w}\) and \(\mathbf{v}_{2}\) is orthogonal to \(\mathbf{w}\).
Solution Use formulas (10) and (11).

Figure 70

\[
\begin{aligned}
& \mathbf{v}_{1}=\frac{\mathbf{v} \cdot \mathbf{w}}{\|\mathbf{w}\|^{2}} \mathbf{w}=\frac{1+3}{(\sqrt{2})^{2}} \mathbf{w}=2 \mathbf{w}=2(\mathbf{i}+\mathbf{j}) \\
& \mathbf{v}_{2}=\mathbf{v}-\mathbf{v}_{1}=(\mathbf{i}+3 \mathbf{j})-2(\mathbf{i}+\mathbf{j})=-\mathbf{i}+\mathbf{j}
\end{aligned}
\]

See Figure 70.
an Now Work problem 19

\section*{EXAMPLE 6 Finding the Force Required to Hold a Wagon on a Hill}

A wagon with two small children as occupants that weighs 100 pounds is on a hill with a grade of \(20^{\circ}\). What is the magnitude of the force that is required to keep the wagon from rolling down the hill?

Solution
Figure 71

See Figure 71. We wish to find the magnitude of the force \(\mathbf{v}\) that is acting to cause the wagon to roll down the hill. A force with the same magnitude in the opposite direction of \(\mathbf{v}\) will keep the wagon from rolling down the hill. The force of gravity is orthogonal to the level ground, so the force of the wagon due to gravity can be represented by the vector
\[
\mathbf{F}_{\mathrm{g}}=-100 \mathbf{j}
\]

Determine the vector projection of \(\mathbf{F}_{\mathrm{g}}\) onto \(\mathbf{w}\), which is the force parallel to the hill. The vector \(\mathbf{w}\) is given by
\[
\mathbf{w}=\cos 20^{\circ} \mathbf{i}+\sin 20^{\circ} \mathbf{j}
\]

The vector projection of \(\mathbf{F}_{\mathrm{g}}\) onto \(\mathbf{w}\) is
\[
\begin{aligned}
\mathbf{v} & =\frac{\mathbf{F}_{\mathrm{g}} \cdot \mathbf{w}}{\|\mathbf{w}\|^{2}} \mathbf{w} \\
& =\frac{-100\left(\sin 20^{\circ}\right)}{\left(\sqrt{\left.\cos ^{2} 20^{\circ}+\sin ^{2} 20^{\circ}\right)^{2}}\right.}\left(\cos 20^{\circ} \mathbf{i}+\sin 20^{\circ} \mathbf{j}\right) \\
& \approx-34.2\left(\cos 20^{\circ} \mathbf{i}+\sin 20^{\circ} \mathbf{j}\right)
\end{aligned}
\]

The magnitude of \(\mathbf{v}\) is 34.2 pounds, so the magnitude of the force required to keep the wagon from rolling down the hill is 34.2 pounds.

Figure 72

\section*{6 Compute Work}

In elementary physics, the work \(W\) done by a constant force \(\mathbf{F}\) in moving an object from a point \(A\) to a point \(B\) is defined as
\[
W=(\text { magnitude of force })(\text { distance })=\|\mathbf{F}\|\|\overrightarrow{A B}\|
\]

Work is commonly measured in foot-pounds or in newton-meters (joules).
In this definition, it is assumed that the force \(\mathbf{F}\) is applied along the line of motion. If the constant force \(\mathbf{F}\) is not along the line of motion, but instead is at an angle \(\theta\) to the direction of the motion, as illustrated in Figure 72, then the work \(W\) done by \(\mathbf{F}\) in moving an object from \(A\) to \(B\) is defined as
\[
\begin{equation*}
W=\mathbf{F} \cdot \overrightarrow{A B} \tag{12}
\end{equation*}
\]

This definition is compatible with the force-times-distance definition, since
\[
\begin{aligned}
& W=(\text { amount of force in the direction of } \overrightarrow{A B})(\text { distance }) \\
&=\| \text { projection of } \mathbf{F} \text { on } A B\|\|\overrightarrow{A B}\|=\frac{\mathbf{F} \cdot \overrightarrow{A B}}{\|\overrightarrow{A B}\|^{2}}\|\overrightarrow{A B}\|\|\overrightarrow{A B}\|=\mathbf{F} \cdot \overrightarrow{A B} \\
& \uparrow \\
& \text { Use formula ( } 10 \text { ). }
\end{aligned}
\]

\section*{EXAMPLE 7 Computing Work}

Figure 73(a) shows a girl pulling a wagon with a force of 50 pounds. How much work is done in moving the wagon 100 feet if the handle makes an angle of \(30^{\circ}\) with the ground?

Figure 73

Solution Position the vectors in a coordinate system in such a way that the wagon is moved from \((0,0)\) to \((100,0)\). The motion is from \(A=(0,0)\) to \(B=(100,0)\), so \(\overrightarrow{A B}=100 \mathbf{i}\). The force vector \(\mathbf{F}\), as shown in Figure 73(b), is
\[
\mathbf{F}=50\left(\cos 30^{\circ} \mathbf{i}+\sin 30^{\circ} \mathbf{j}\right)=50\left(\frac{\sqrt{3}}{2} \mathbf{i}+\frac{1}{2} \mathbf{j}\right)=25(\sqrt{3} \mathbf{i}+\mathbf{j})
\]

By formula (12), the work done is
\[
W=\mathbf{F} \cdot \overrightarrow{A B}=25(\sqrt{3} \mathbf{i}+\mathbf{j}) \cdot 100 \mathbf{i}=2500 \sqrt{3} \text { foot-pounds }
\]
am Now Work problem 25

\section*{Historical Feature}

We stated in an earlier Historical Feature that complex numbers were used as vectors in the plane before the general notion of a vector was clarified. Suppose that we make the correspondence
\[
\begin{aligned}
\text { Vector } & \leftrightarrow \text { Complex number } \\
a \mathbf{i}+b \mathbf{j} & \leftrightarrow a+b i \\
c \mathbf{i}+d \mathbf{j} & \leftrightarrow c+d i
\end{aligned}
\]

Show that
\[
(a \mathbf{i}+b \mathbf{j}) \cdot(\mathbf{c} \mathbf{i}+d \mathbf{j})=\text { real part }[(\overline{a+b i})(c+d i)]
\]

This is how the dot product was found originally. The imaginary part is also interesting. It is called a determinant (see Section 10.3) and represents the area of the parallelogram whose edges are the vectors. This is close to some of Hermann Grassmann's ideas and is also connected with the scalar triple product of three-dimensional vectors.

\subsection*{8.5 Assess Your Understanding}
'Are You Prepared?' The answer is given at the end of these exercises. If you get the wrong answer, read the page listed in red.
1. In a triangle with sides \(a, b, c\) and angles \(A, B, C\), the Law of Cosines states that \(\qquad\) (p. 555)

\section*{Concepts and Vocabulary}
2. If \(\mathbf{v}=a_{1} \mathbf{i}+b_{1} \mathbf{j}\) and \(\mathbf{w}=a_{2} \mathbf{i}+b_{2} \mathbf{j}\) are two vectors, then the \(\qquad\) is defined as \(\mathbf{v} \cdot \mathbf{w}=a_{1} a_{2}+b_{1} b_{2}\).
3. If \(\mathbf{v} \cdot \mathbf{w}=0\), then the two vectors \(\mathbf{v}\) and \(\mathbf{w}\) are \(\qquad\) .
4. If \(\mathbf{v}=3 \mathbf{w}\), then the two vectors \(\mathbf{v}\) and \(\mathbf{w}\) are \(\qquad\) .
5. True or False Given two nonzero vectors \(\mathbf{v}\) and \(\mathbf{w}\), it is always possible to decompose \(\mathbf{v}\) into two vectors, one parallel to \(\mathbf{w}\) and the other perpendicular to \(\mathbf{w}\).
6. True or False Work is a physical example of a vector.

\section*{Skill Building}

In Problems 7-16, (a) find the dot product \(\mathbf{v} \cdot \mathbf{w}\); (b) find the angle between \(\mathbf{v}\) and \(\mathbf{w}\); (c) state whether the vectors are parallel, orthogonal, or neither.
7. \(\mathbf{v}=\mathbf{i}-\mathbf{j}, \quad \mathbf{w}=\mathbf{i}+\mathbf{j}\)
8. \(\mathbf{v}=\mathbf{i}+\mathbf{j}, \quad \mathbf{w}=-\mathbf{i}+\mathbf{j}\)
9. \(\mathbf{v}=2 \mathbf{i}+\mathbf{j}, \quad \mathbf{w}=\mathbf{i}-2 \mathbf{j}\)
10. \(\mathbf{v}=2 \mathbf{i}+2 \mathbf{j}, \quad \mathbf{w}=\mathbf{i}+2 \mathbf{j}\)
11. \(\mathbf{v}=\sqrt{3} \mathbf{i}-\mathbf{j}, \quad \mathbf{w}=\mathbf{i}+\mathbf{j}\)
12. \(\mathbf{v}=\mathbf{i}+\sqrt{3} \mathbf{j}, \quad \mathbf{w}=\mathbf{i}-\mathbf{j}\)
13. \(\mathbf{v}=3 \mathbf{i}+4 \mathbf{j}, \quad \mathbf{w}=-6 \mathbf{i}-8 \mathbf{j}\)
14. \(\mathbf{v}=3 \mathbf{i}-4 \mathbf{j}, \quad \mathbf{w}=9 \mathbf{i}-12 \mathbf{j}\)
15. \(\mathbf{v}=4 \mathbf{i}, \quad \mathbf{w}=\mathbf{j}\)
16. \(\mathbf{v}=\mathbf{i}, \quad \mathbf{w}=-3 \mathbf{j}\)
17. Find \(a\) so that the vectors \(\mathbf{v}=\mathbf{i}-a \mathbf{j}\) and \(\mathbf{w}=2 \mathbf{i}+3 \mathbf{j}\) are orthogonal.
18. Find \(b\) so that the vectors \(\mathbf{v}=\mathbf{i}+\mathbf{j}\) and \(\mathbf{w}=\mathbf{i}+b \mathbf{j}\) are orthogonal.
In Problems 19-24, decompose \(\mathbf{v}\) into two vectors \(\mathbf{v}_{1}\) and \(\mathbf{v}_{2}\), where \(\mathbf{v}_{1}\) is parallel to \(\mathbf{w}\) and \(\mathbf{v}_{2}\) is orthogonal to \(\mathbf{w}\).
19. \(\mathbf{v}=2 \mathbf{i}-3 \mathbf{j}, \quad \mathbf{w}=\mathbf{i}-\mathbf{j}\)
20. \(\mathbf{v}=-3 \mathbf{i}+2 \mathbf{j}, \quad \mathbf{w}=2 \mathbf{i}+\mathbf{j}\)
21. \(\mathbf{v}=\mathbf{i}-\mathbf{j}, \quad \mathbf{w}=-\mathbf{i}-2 \mathbf{j}\)
22. \(\mathbf{v}=2 \mathbf{i}-\mathbf{j}, \quad \mathbf{w}=\mathbf{i}-2 \mathbf{j}\)
23. \(\mathbf{v}=3 \mathbf{i}+\mathbf{j}, \quad \mathbf{w}=-2 \mathbf{i}-\mathbf{j}\)
24. \(\mathbf{v}=\mathbf{i}-3 \mathbf{j}, \quad \mathbf{w}=4 \mathbf{i}-\mathbf{j}\)

\section*{Applications and Extensions}
25. Computing Work Find the work done by a force of 3 pounds acting in the direction \(60^{\circ}\) to the horizontal in moving an object 6 feet from \((0,0)\) to \((6,0)\).
26. Computing Work A wagon is pulled horizontally by exerting a force of 20 pounds on the handle at an angle of \(30^{\circ}\) with the horizontal. How much work is done in moving the wagon 100 feet?
27. Solar Energy The amount of energy collected by a solar panel depends on the intensity of the sun's rays and the area of the panel. Let the vector \(\mathbf{I}\) represent the intensity, in watts per square centimeter, having the direction of the sun's rays. Let the vector \(\mathbf{A}\) represent the area, in square centimeters, whose direction is the orientation of a solar panel. See the figure. The total number of watts collected by the panel is given by \(W=|\mathbf{I} \cdot \mathbf{A}|\).

Suppose that \(\mathbf{I}=\langle-0.02,-0.01\rangle\) and \(\mathbf{A}=\langle 300,400\rangle\).
(a) Find \(\|\mathbf{I}\|\) and \(\|\mathbf{A}\|\) and interpret the meaning of each.
(b) Compute \(W\) and interpret its meaning.
(c) If the solar panel is to collect the maximum number of watts, what must be true about \(\mathbf{I}\) and \(\mathbf{A}\) ?
28. Rainfall Measurement Let the vector \(\mathbf{R}\) represent the amount of rainfall, in inches, whose direction is the inclination of the rain to a rain gauge. Let the vector \(\mathbf{A}\) represent the area, in square inches, whose direction is the orientation of the opening of the rain gauge. See the figure. The volume of rain collected in the gauge, in cubic inches, is given by \(V=|\mathbf{R} \cdot \mathbf{A}|\), even when the rain falls in a slanted direction or the gauge is not perfectly vertical.

Suppose that \(\mathbf{R}=\langle 0.75,-1.75\rangle\) and \(\mathbf{A}=\langle 0.3,1\rangle\).
(a) Find \(\|\mathbf{R}\|\) and \(\|\mathbf{A}\|\) and interpret the meaning of each.
(b) Compute \(V\) and interpret its meaning.
(c) If the gauge is to collect the maximum volume of rain, what must be true about \(\mathbf{R}\) and \(\mathbf{A}\) ?
29. Braking Load A Toyota Sienna with a gross weight of 5300 pounds is parked on a street with an \(8^{\circ}\) grade. See the figure. Find the magnitude of the force required to keep the Sienna from rolling down the hill. What is the magnitude of the force perpendicular to the hill?

30. Braking Load A Chevrolet Silverado with a gross weight of 4500 pounds is parked on a street with a \(10^{\circ}\) grade. Find the magnitude of the force required to keep the Silverado from rolling down the hill. What is the magnitude of the force perpendicular to the hill?
31. Ramp Angle Billy and Timmy are using a ramp to load furniture into a truck. While rolling a 250 -pound piano up the ramp, they discover that the truck is too full of other furniture for the piano to fit. Timmy holds the piano in place on the ramp while Billy repositions other items to make room for it in the truck. If the angle of inclination of the ramp is \(20^{\circ}\), how many pounds of force must Timmy exert to hold the piano in position?

32. Incline Angle A bulldozer exerts 1000 pounds of force to prevent a 5000 -pound boulder from rolling down a hill. Determine the angle of inclination of the hill.
33. Given vectors \(\mathbf{u}=\mathbf{i}+5 \mathbf{j}\) and \(\mathbf{v}=4 \mathbf{i}+y \mathbf{j}\), find \(y\) so that the angle between the vectors is \(114^{\circ}\). State the answer correct to three decimal places. \({ }^{+}\)
34. Given vectors \(\mathbf{u}=x \mathbf{i}+2 \mathbf{j}\) and \(\mathbf{v}=7 \mathbf{i}-3 \mathbf{j}\), find \(x\) so that the angle between the vectors is \(75^{\circ}\). State the answer correct to three decimal places.
35. Find the acute angle that a constant unit force vector makes with the positive \(x\)-axis if the work done by the force in moving a particle from \((0,0)\) to \((4,0)\) equals 2 .
36. Prove the distributive property:
\[
\mathbf{u} \cdot(\mathbf{v}+\mathbf{w})=\mathbf{u} \cdot \mathbf{v}+\mathbf{u} \cdot \mathbf{w}
\]
37. Prove property (5), \(\mathbf{0} \cdot \mathbf{v}=0\).
38. If \(\mathbf{v}\) is a unit vector and the angle between \(\mathbf{v}\) and \(\mathbf{i}\) is \(\alpha\), show that \(\mathbf{v}=\cos \alpha \mathbf{i}+\sin \alpha \mathbf{j}\).
39. Suppose that \(\mathbf{v}\) and \(\mathbf{w}\) are unit vectors. If the angle between \(\mathbf{v}\) and \(\mathbf{i}\) is \(\alpha\) and that between \(\mathbf{w}\) and \(\mathbf{i}\) is \(\beta\), use the idea of the dot product \(\mathbf{v} \cdot \mathbf{w}\) to prove that
\[
\cos (\alpha-\beta)=\cos \alpha \cos \beta+\sin \alpha \sin \beta
\]
40. Show that the projection of \(\mathbf{v}\) onto \(\mathbf{i}\) is \((\mathbf{v} \cdot \mathbf{i}) \mathbf{i}\). Then show that we can always write a vector \(\mathbf{v}\) as
\[
\mathbf{v}=(\mathbf{v} \cdot \mathbf{i}) \mathbf{i}+(\mathbf{v} \cdot \mathbf{j}) \mathbf{j}
\]
41. (a) If \(\mathbf{u}\) and \(\mathbf{v}\) have the same magnitude, show that \(\mathbf{u}+\mathbf{v}\) and \(\mathbf{u}-\mathbf{v}\) are orthogonal.
(b) Use this to prove that an angle inscribed in a semicircle is a right angle (see the figure).

42. Let \(\mathbf{v}\) and \(\mathbf{w}\) denote two nonzero vectors. Show that the vector \(\mathbf{v}-\alpha \mathbf{w}\) is orthogonal to \(\mathbf{w}\) if \(\alpha=\frac{\mathbf{v} \cdot \mathbf{w}}{\|\mathbf{w}\|^{2}}\).
43. Let \(\mathbf{v}\) and \(\mathbf{w}\) denote two nonzero vectors. Show that the vectors \(\|\mathbf{w}\| \mathbf{v}+\|\mathbf{v}\| \mathbf{w}\) and \(\|\mathbf{w}\| \mathbf{v}-\|\mathbf{v}\| \mathbf{w}\) are orthogonal.
44. In the definition of work given in this section, what is the work done if \(\mathbf{F}\) is orthogonal to \(\overrightarrow{A B}\) ?
45. Prove the polarization identity,
\[
\|\mathbf{u}+\mathbf{v}\|^{2}-\|\mathbf{u}-\mathbf{v}\|^{2}=4(\mathbf{u} \cdot \mathbf{v})
\]

\section*{Discussion and Writing}
46. Create an application (different from any found in the text) that requires a dot product.

\section*{Retain Your Knowledge}

Problems 47-50 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
47. Find the average rate of change of \(f(x)=x^{3}-5 x^{2}+27\) from -3 to 2 .
48. Find the exact value of \(5 \cos 60^{\circ}+2 \tan \frac{\pi}{4}\). Do not use a calculator.
49. Establish the identity: \(\left(1-\sin ^{2} \theta\right)\left(1+\tan ^{2} \theta\right)=1\)
50. Volume of a Box An open-top box is made from a sheet of metal by cutting squares from each corner and folding up the sides. The sheet has a length of 19 inches and a width of 13 inches. If \(x\) is the length of one side of the square to be cut out, write a function, \(V(x)\), for the volume of the box in terms of \(x\).

\section*{'Are You Prepared?' Answer}

\subsection*{8.6 Vectors in Space}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Distance Formula (Foundations, Section 1, p. 3)

Now Work the 'Are You Prepared?' problem on page 645.
OBJECTIVES 1 Find the Distance between Two Points in Space ( \(p .639\) )
2 Find Position Vectors in Space (p. 639)
3 Perform Operations on Vectors (p. 640)
4 Find the Dot Product (p. 641)
5 Find the Angle between Two Vectors (p. 642)
6 Find the Direction Angles of a Vector (p. 643)

Figure 74

\section*{Rectangular Coordinates in Space}

In the plane, each point is associated with an ordered pair of real numbers. In space, each point is associated with an ordered triple of real numbers. Through a fixed point, called the origin \(\boldsymbol{O}\), draw three mutually perpendicular lines: the \(x\)-axis, the \(y\)-axis, and the \(z\)-axis. On each of these axes, select an appropriate scale and the positive direction. See Figure 74.

The direction chosen for the positive \(z\)-axis in Figure 74 makes the system right-handed. This conforms to the right-hand rule, which states that if the index finger of the right hand points in the direction of the positive \(x\)-axis and the middle finger points in the direction of the positive \(y\)-axis, then the thumb will point in the direction of the positive \(z\)-axis. See Figure 75.

Associate with each point \(P\) an ordered triple \((x, y, z)\) of real numbers, the coordinates of \(\boldsymbol{P}\). For example, the point \((2,3,4)\) is located by starting at the origin and moving 2 units along the positive \(x\)-axis, 3 units in the direction of the positive \(y\)-axis, and 4 units in the direction of the positive \(z\)-axis. See Figure 76.

Figure 75

Figure 76

Figure 76 also shows the location of the points \((2,0,0),(0,3,0),(0,0,4)\), and \((2,3,0)\). Points of the form \((x, 0,0)\) lie on the \(x\)-axis, and points of the forms \((0, y, 0)\) and \((0,0, z)\) lie on the \(y\)-axis and \(z\)-axis, respectively. Points of the form \((x, y, 0)\) lie in a plane called the \(\boldsymbol{x y}\)-plane. Its equation is \(z=0\). Similarly, points of the form \((x, 0, z)\) lie in the \(\boldsymbol{x z}\)-plane (equation \(y=0\) ), and points of the form \((0, y, z)\) lie in the \(y z\)-plane (equation \(x=0\) ). See Figure 77(a). By extension of these ideas, all points obeying the equation \(z=3\) will lie in a plane parallel to and 3 units above the \(x y\)-plane. The equation \(y=4\) represents a plane parallel to the \(x z\)-plane and 4 units to the right of the plane \(y=0\). See Figure 77(b).

Figure 77

wn Now Work problem 9

\section*{1 Find the Distance between Two Points in Space}

The formula for the distance between two points in space is an extension of the Distance Formula for points in the plane given in Foundations, Section 1.

\section*{THEOREM}

\section*{Distance Formula in Space}

If \(P_{1}=\left(x_{1}, y_{1}, z_{1}\right)\) and \(P_{2}=\left(x_{2}, y_{2}, z_{2}\right)\) are two points in space, the distance \(d\) from \(P_{1}\) to \(P_{2}\) is
\[
\begin{equation*}
d=\sqrt{\left(x_{2}-x_{1}\right)^{2}+\left(y_{2}-y_{1}\right)^{2}+\left(z_{2}-z_{1}\right)^{2}} \tag{1}
\end{equation*}
\]

The proof, which we omit, utilizes a double application of the Pythagorean Theorem.

\section*{EXAMPLE I Using the Distance Formula}

Find the distance from \(P_{1}=(-1,3,2)\) to \(P_{2}=(4,-2,5)\).

\section*{Solution}
\(d=\sqrt{[4-(-1)]^{2}+[-2-3]^{2}+[5-2]^{2}}=\sqrt{25+25+9}=\sqrt{59}\)
anlon Work problem 15

\section*{2 Find Position Vectors in Space}

To represent vectors in space, we introduce the unit vectors \(\mathbf{i}, \mathbf{j}\), and \(\mathbf{k}\) whose directions are along the positive \(x\)-axis, the positive \(y\)-axis, and the positive \(z\)-axis, respectively. If \(\mathbf{v}\) is a vector with initial point at the origin \(O\) and terminal point at \(P=(a, b, c)\), then we can represent \(\mathbf{v}\) in terms of the vectors \(\mathbf{i}, \mathbf{j}\), and \(\mathbf{k}\) as
\[
\mathbf{v}=a \mathbf{i}+b \mathbf{j}+c \mathbf{k}
\]

See Figure 78.
The scalars \(a, b\), and \(c\) are called the components of the vector \(\mathbf{v}=a \mathbf{i}+b \mathbf{j}+c \mathbf{k}\), with \(a\) being the component in the direction \(\mathbf{i}, b\) the component in the direction \(\mathbf{j}\), and \(c\) the component in the direction \(\mathbf{k}\).

A vector whose initial point is at the origin is called a position vector. The next result states that any vector whose initial point is not at the origin is equal to a unique position vector.

THEOREM
Suppose that \(\mathbf{v}\) is a vector with initial point \(P_{1}=\left(x_{1}, y_{1}, z_{1}\right)\), not necessarily the origin, and terminal point \(P_{2}=\left(x_{2}, y_{2}, z_{2}\right)\). If \(\mathbf{v}=\overrightarrow{P_{1} P_{2}}\), then \(\mathbf{v}\) is equal to the position vector
\[
\begin{equation*}
\mathbf{v}=\left(x_{2}-x_{1}\right) \mathbf{i}+\left(y_{2}-y_{1}\right) \mathbf{j}+\left(z_{2}-z_{1}\right) \mathbf{k} \tag{2}
\end{equation*}
\]

Figure 79 illustrates this result.
Figure 79

\section*{EXAMPLE 2 Finding a Position Vector}

Find the position vector of the vector \(\mathbf{v}=\overrightarrow{P_{1} P_{2}}\) if \(P_{1}=(-1,2,3)\) and \(P_{2}=(4,6,2)\).
Solution By equation (2), the position vector equal to \(\mathbf{v}\) is
\[
\mathbf{v}=[4-(-1)] \mathbf{i}+(6-2) \mathbf{j}+(2-3) \mathbf{k}=5 \mathbf{i}+4 \mathbf{j}-\mathbf{k}
\]
am Now Work problem 29

\section*{3 Perform Operations on Vectors}

Equality, addition, subtraction, scalar product, and magnitude can be defined in terms of the components of a vector.

DEFINITION
Let \(\mathbf{v}=a_{1} \mathbf{i}+b_{1} \mathbf{j}+c_{1} \mathbf{k}\) and \(\mathbf{w}=a_{2} \mathbf{i}+b_{2} \mathbf{j}+c_{2} \mathbf{k}\) be two vectors, and let \(\alpha\) be a scalar. Then
\[
\begin{aligned}
\mathbf{v} & =\mathbf{w} \quad \text { if and only if } \quad a_{1}=a_{2}, b_{1}=b_{2}, \text { and } c_{1}=c_{2} \\
\mathbf{v}+\mathbf{w} & =\left(a_{1}+a_{2}\right) \mathbf{i}+\left(b_{1}+b_{2}\right) \mathbf{j}+\left(c_{1}+c_{2}\right) \mathbf{k} \\
\mathbf{v}-\mathbf{w} & =\left(a_{1}-a_{2}\right) \mathbf{i}+\left(b_{1}-b_{2}\right) \mathbf{j}+\left(c_{1}-c_{2}\right) \mathbf{k} \\
\alpha \mathbf{v} & =\left(\alpha a_{1}\right) \mathbf{i}+\left(\alpha b_{1}\right) \mathbf{j}+\left(\alpha c_{1}\right) \mathbf{k} \\
\|\mathbf{v}\| & =\sqrt{a_{1}^{2}+b_{1}^{2}+c_{1}^{2}}
\end{aligned}
\]

These definitions are compatible with the geometric definitions given in Section 8.4 for vectors in a plane.

\section*{EXAMPLE 3 Adding and Subtracting Vectors}

If \(\mathbf{v}=2 \mathbf{i}+3 \mathbf{j}-2 \mathbf{k}\) and \(\mathbf{w}=3 \mathbf{i}-4 \mathbf{j}+5 \mathbf{k}\), find:
(a) \(\mathbf{v}+\mathbf{w}\)
(b) \(\mathbf{v}-\mathbf{w}\)

Solution
(a) \(\mathbf{v}+\mathbf{w}=(2 \mathbf{i}+3 \mathbf{j}-2 \mathbf{k})+(3 \mathbf{i}-4 \mathbf{j}+5 \mathbf{k})\)
\[
\begin{aligned}
& =(2+3) \mathbf{i}+(3-4) \mathbf{j}+(-2+5) \mathbf{k} \\
& =5 \mathbf{i}-\mathbf{j}+3 \mathbf{k}
\end{aligned}
\]
(b) \(\mathbf{v}-\mathbf{w}=(2 \mathbf{i}+3 \mathbf{j}-2 \mathbf{k})-(3 \mathbf{i}-4 \mathbf{j}+5 \mathbf{k})\)
\[
\begin{aligned}
& =(2-3) \mathbf{i}+[3-(-4)] \mathbf{j}+[-2-5] \mathbf{k} \\
& =-\mathbf{i}+7 \mathbf{j}-7 \mathbf{k}
\end{aligned}
\]

\section*{EXAMPLE 4 Finding Scalar Products and Magnitudes}

If \(\mathbf{v}=2 \mathbf{i}+3 \mathbf{j}-2 \mathbf{k}\) and \(\mathbf{w}=3 \mathbf{i}-4 \mathbf{j}+5 \mathbf{k}\), find:
(a) \(3 \mathbf{v}\)
(b) \(2 \mathbf{v}-3 \mathbf{w}\)
(c) \(\|\mathbf{v}\|\)

Solution

\section*{THEOREM}
(a) \(3 \mathbf{v}=3(2 \mathbf{i}+3 \mathbf{j}-2 \mathbf{k})=6 \mathbf{i}+9 \mathbf{j}-6 \mathbf{k}\)
(b) \(2 \mathbf{v}-3 \mathbf{w}=2(2 \mathbf{i}+3 \mathbf{j}-2 \mathbf{k})-3(3 \mathbf{i}-4 \mathbf{j}+5 \mathbf{k})\)
\(=4 \mathbf{i}+6 \mathbf{j}-4 \mathbf{k}-9 \mathbf{i}+12 \mathbf{j}-15 \mathbf{k}=-5 \mathbf{i}+18 \mathbf{j}-19 \mathbf{k}\)
(c) \(\|\mathbf{v}\|=\|2 \mathbf{i}+3 \mathbf{j}-2 \mathbf{k}\|=\sqrt{2^{2}+3^{2}+(-2)^{2}}=\sqrt{17}\)
-Now Work problems 33 and 39
Recall that a unit vector \(\mathbf{u}\) is one for which \(\|\mathbf{u}\|=1\). In many applications, it is useful to be able to find a unit vector \(\mathbf{u}\) that has the same direction as a given vector \(\mathbf{v}\).

\section*{Unit Vector in the Direction of \(\mathbf{v}\)}

For any nonzero vector \(\mathbf{v}\), the vector
\[
\mathbf{u}=\frac{\mathbf{v}}{\|\mathbf{v}\|}
\]
is a unit vector that has the same direction as \(\mathbf{v}\).

As a consequence of this theorem, if \(\mathbf{u}\) is a unit vector in the same direction as a vector \(\mathbf{v}\), then \(\mathbf{v}\) may be expressed as
\[
\mathbf{v}=\|\mathbf{v}\| \mathbf{u}
\]

\section*{EXAMPLE 5}

\section*{Finding a Unit Vector}

Find the unit vector in the same direction as \(\mathbf{v}=2 \mathbf{i}-3 \mathbf{j}-6 \mathbf{k}\).
Solution Find \(\|\mathbf{v}\|\) first.
\[
\|\mathbf{v}\|=\|2 \mathbf{i}-3 \mathbf{j}-6 \mathbf{k}\|=\sqrt{4+9+36}=\sqrt{49}=7
\]

Now multiply \(\mathbf{v}\) by the scalar \(\frac{1}{\|\mathbf{v}\|}=\frac{1}{7}\). The result is the unit vector
\[
\mathbf{u}=\frac{\mathbf{v}}{\|\mathbf{v}\|}=\frac{2 \mathbf{i}-3 \mathbf{j}-6 \mathbf{k}}{7}=\frac{2}{7} \mathbf{i}-\frac{3}{7} \mathbf{j}-\frac{6}{7} \mathbf{k}
\]
am Now Work problem 47

\section*{4 Find the Dot Product}

The definition of dot product in space is an extension of the definition given for vectors in a plane.

If \(\mathbf{v}=a_{1} \mathbf{i}+b_{1} \mathbf{j}+c_{1} \mathbf{k}\) and \(\mathbf{w}=a_{2} \mathbf{i}+b_{2} \mathbf{j}+c_{2} \mathbf{k}\) are two vectors, the dot product \(\mathbf{v} \cdot \mathbf{w}\) is defined as
\[
\begin{equation*}
\mathbf{v} \cdot \mathbf{w}=a_{1} a_{2}+b_{1} b_{2}+c_{1} c_{2} \tag{3}
\end{equation*}
\]

\section*{EXAMPLE 6 Finding Dot Products}

If \(\mathbf{v}=2 \mathbf{i}-3 \mathbf{j}+6 \mathbf{k}\) and \(\mathbf{w}=5 \mathbf{i}+3 \mathbf{j}-\mathbf{k}\), find:
(a) \(\mathbf{v} \cdot \mathbf{w}\)
(b) \(\mathbf{w} \cdot \mathbf{v}\)
(c) \(\mathbf{v} \cdot \mathbf{v}\)
(d) \(\mathbf{w} \cdot \mathbf{w}\)
(e) \(\|\mathbf{v}\|\)
(f) \(\|\boldsymbol{w}\|\)

\section*{Solution}

\section*{THEOREM}
(a) \(\mathbf{v} \cdot \mathbf{w}=2(5)+(-3) 3+6(-1)=-5\)
(b) \(\mathbf{w} \cdot \mathbf{v}=5(2)+3(-3)+(-1)(6)=-5\)
(c) \(\mathbf{v} \cdot \mathbf{v}=2(2)+(-3)(-3)+6(6)=49\)
(d) \(\mathbf{w} \cdot \mathbf{w}=5(5)+3(3)+(-1)(-1)=35\)
(e) \(\|\mathbf{v}\|=\sqrt{2^{2}+(-3)^{2}+6^{2}}=\sqrt{49}=7\)
(f) \(\|\mathbf{w}\|=\sqrt{5^{2}+3^{2}+(-1)^{2}}=\sqrt{35}\)

The dot product in space has the same properties as the dot product in a plane.

\section*{Properties of the Dot Product}

If \(\mathbf{u}, \mathbf{v}\), and \(\mathbf{w}\) are vectors, then
Commutative Property
\[
\mathbf{u} \cdot \mathbf{v}=\mathbf{v} \cdot \mathbf{u}
\]

Distributive Property
\[
\mathbf{u} \cdot(\mathbf{v}+\mathbf{w})=\mathbf{u} \cdot \mathbf{v}+\mathbf{u} \cdot \mathbf{w}
\]
\[
\begin{aligned}
& \mathbf{v} \cdot \mathbf{v}=\|\mathbf{v}\|^{2} \\
& \mathbf{0} \cdot \mathbf{v}=0
\end{aligned}
\]

\section*{5 Find the Angle between Two Vectors}

The angle \(\theta\) between two vectors in space follows the same formula as for two vectors in a plane.

\section*{THEOREM}

\section*{Angle between Vectors}

If \(\mathbf{u}\) and \(\mathbf{v}\) are two nonzero vectors, the angle \(\theta, 0 \leq \theta \leq \pi\), between \(\mathbf{u}\) and \(\mathbf{v}\) is determined by the formula
\[
\begin{equation*}
\cos \theta=\frac{\mathbf{u} \cdot \mathbf{v}}{\|\mathbf{u}\|\|\mathbf{v}\|} \tag{4}
\end{equation*}
\]

\section*{EXAMPLE 7}

Finding the Angle between Two Vectors
Find the angle \(\theta\) between \(\mathbf{u}=2 \mathbf{i}-3 \mathbf{j}+6 \mathbf{k}\) and \(\mathbf{v}=2 \mathbf{i}+5 \mathbf{j}-\mathbf{k}\).
Solution Compute the quantities \(\mathbf{u} \cdot \mathbf{v},\|\mathbf{u}\|\), and \(\|\mathbf{v}\|\).
\[
\begin{aligned}
\mathbf{u} \cdot \mathbf{v} & =2(2)+(-3)(5)+6(-1)=-17 \\
\|\mathbf{u}\| & =\sqrt{2^{2}+(-3)^{2}+6^{2}}=\sqrt{49}=7 \\
\|\mathbf{v}\| & =\sqrt{2^{2}+5^{2}+(-1)^{2}}=\sqrt{30}
\end{aligned}
\]

By formula (4), if \(\theta\) is the angle between \(\mathbf{u}\) and \(\mathbf{v}\), then
\[
\cos \theta=\frac{\mathbf{u} \cdot \mathbf{v}}{\|\mathbf{u}\|\|\mathbf{v}\|}=\frac{-17}{7 \sqrt{30}} \approx-0.443
\]

Thus, \(\theta \approx \cos ^{-1}(-0.443) \approx 116.3^{\circ}\).
am Now Work problem 51

\section*{6 Find the Direction Angles of a Vector}

A nonzero vector \(\mathbf{v}\) in space can be described by specifying its magnitude and its three direction angles \(\alpha, \beta\), and \(\gamma\). These direction angles are defined as
\(\alpha=\) the angle between \(\mathbf{v}\) and \(\mathbf{i}\), the positive \(x\)-axis, \(0 \leq \alpha \leq \pi\)
\(\beta=\) the angle between \(\mathbf{v}\) and \(\mathbf{j}\), the positive \(y\)-axis, \(0 \leq \beta \leq \pi\)
\(\gamma=\) the angle between \(\mathbf{v}\) and \(\mathbf{k}\), the positive \(z\)-axis, \(0 \leq \gamma \leq \pi\)
See Figure 80.
Figure 80

Our first goal is to find expressions for \(\alpha, \beta\), and \(\gamma\) in terms of the components of a vector. Let \(\mathbf{v}=a \mathbf{i}+b \mathbf{j}+c \mathbf{k}\) denote a nonzero vector. The angle \(\alpha\) between \(\mathbf{v}\) and \(\mathbf{i}\), the positive \(x\)-axis, obeys
\[
\cos \alpha=\frac{\mathbf{v} \cdot \mathbf{i}}{\|\mathbf{v}\|\|\mathbf{i}\|}=\frac{a}{\|\mathbf{v}\|}
\]

Similarly,
\[
\cos \beta=\frac{b}{\|\mathbf{v}\|} \quad \text { and } \quad \cos \gamma=\frac{c}{\|\mathbf{v}\|}
\]

Since \(\|\mathbf{v}\|=\sqrt{a^{2}+b^{2}+c^{2}}\), the following result is obtained.

\section*{Direction Angles}

If \(\mathbf{v}=a \mathbf{i}+b \mathbf{j}+c \mathbf{k}\) is a nonzero vector in space, the direction angles \(\alpha, \beta\), and \(\gamma\) obey
\[
\begin{align*}
& \cos \alpha=\frac{a}{\sqrt{a^{2}+b^{2}+c^{2}}}=\frac{a}{\|\mathbf{v}\|} \quad \cos \beta=\frac{b}{\sqrt{a^{2}+b^{2}+c^{2}}}=\frac{b}{\|\mathbf{v}\|} \\
& \cos \gamma=\frac{c}{\sqrt{a^{2}+b^{2}+c^{2}}}=\frac{c}{\|\mathbf{v}\|} \tag{5}
\end{align*}
\]

The numbers \(\cos \alpha, \cos \beta\), and \(\cos \gamma\) are called the direction cosines of the vector \(\mathbf{v}\).

\section*{EXAMPLE 8 Finding the Direction Angles of a Vector}

Find the direction angles of \(\mathbf{v}=-3 \mathbf{i}+2 \mathbf{j}-6 \mathbf{k}\).
Solution
\(\|\mathbf{v}\|=\sqrt{(-3)^{2}+2^{2}+(-6)^{2}}=\sqrt{49}=7\)
Using the formulas in equation (5), we have
\[
\begin{aligned}
\cos \alpha & =\frac{-3}{7} & \cos \beta & =\frac{2}{7}
\end{aligned} \begin{array}{clrl}
\cos \gamma & =\frac{-6}{7} \\
\alpha & \approx 115.4^{\circ} & \beta & \approx 73.4^{\circ}
\end{array} \gamma \gamma \approx 149.0^{\circ}
\]

\section*{THEOREM Property of the Direction Cosines}

If \(\alpha, \beta\), and \(\gamma\) are the direction angles of a nonzero vector \(\mathbf{v}\) in space, then
\[
\cos ^{2} \alpha+\cos ^{2} \beta+\cos ^{2} \gamma=1
\]

The proof is a direct consequence of the equations in (5).
Based on equation (6), when two direction cosines are known, the third is determined up to its sign. Knowing two direction cosines is not sufficient to uniquely determine the direction of a vector in space.

\section*{EXAMPLE 9 \\ Finding a Direction Angle of a Vector}

The vector \(\mathbf{v}\) makes an angle of \(\alpha=\frac{\pi}{3}\) with the positive \(x\)-axis, an angle of \(\beta=\frac{\pi}{3}\) with the positive \(y\)-axis, and an acute angle \(\gamma\) with the positive \(z\)-axis. Find \(\gamma\).

Solution By equation (6), we have
\[
\begin{aligned}
\cos ^{2}\left(\frac{\pi}{3}\right)+\cos ^{2}\left(\frac{\pi}{3}\right)+\cos ^{2} \gamma & =1 \quad 0<\gamma<\frac{\pi}{2} \\
\left(\frac{1}{2}\right)^{2}+\left(\frac{1}{2}\right)^{2}+\cos ^{2} \gamma & =1 \\
\cos ^{2} \gamma & =\frac{1}{2} \\
\cos \gamma=\frac{\sqrt{2}}{2} \text { or } \cos \gamma & =-\frac{\sqrt{2}}{2} \\
\gamma=\frac{\pi}{4} \text { or } \gamma & =\frac{3 \pi}{4}
\end{aligned}
\]

Since \(\gamma\) must be acute, \(\gamma=\frac{\pi}{4}\).
The direction cosines of a vector give information about only the direction of the vector; they provide no information about its magnitude. For example, any vector that is parallel to the \(x y\)-plane and makes an angle of \(\frac{\pi}{4}\) radian with the positive \(x\)-axis and \(y\)-axis has direction cosines
\[
\cos \alpha=\frac{\sqrt{2}}{2} \quad \cos \beta=\frac{\sqrt{2}}{2} \quad \cos \gamma=0
\]

However, if the direction angles and the magnitude of a vector are known, the vector is uniquely determined.

Show that any nonzero vector \(\mathbf{v}\) in space can be written in terms of its magnitude and direction cosines as
\[
\begin{equation*}
\mathbf{v}=\|\mathbf{v}\|[(\cos \alpha) \mathbf{i}+(\cos \beta) \mathbf{j}+(\cos \gamma) \mathbf{k}] \tag{7}
\end{equation*}
\]

\section*{Solution}

Let \(\mathbf{v}=a \mathbf{i}+b \mathbf{j}+c \mathbf{k}\). From the equations in (5), note that
\[
a=\|\mathbf{v}\| \cos \alpha \quad b=\|\mathbf{v}\| \cos \beta \quad c=\|\mathbf{v}\| \cos \gamma
\]

Substituting gives
\[
\begin{aligned}
\mathbf{v}=a \mathbf{i}+b \mathbf{j}+c \mathbf{k} & =\|\mathbf{v}\|(\cos \alpha) \mathbf{i}+\|\mathbf{v}\|(\cos \beta) \mathbf{j}+\|\mathbf{v}\|(\cos \gamma) \mathbf{k} \\
& =\|\mathbf{v}\|[(\cos \alpha) \mathbf{i}+(\cos \beta) \mathbf{j}+(\cos \gamma) \mathbf{k}]
\end{aligned}
\]

\section*{amon Work problem 59}

Example 10 shows that the direction cosines of a vector \(\mathbf{v}\) are also the components of the unit vector in the direction of \(\mathbf{v}\).

\subsection*{8.6 Assess Your Understanding}
'Are You Prepared?' The answer is given at the end of these exercises. If you get the wrong answer, read the page listed in red.
1. The distance \(d\) from \(P_{1}=\left(x_{1}, y_{1}\right)\) to \(P_{2}=\left(x_{2}, y_{2}\right)\) is \(d=\) \(\qquad\) .(p.3)

\section*{Concepts and Vocabulary}
2. In space, points of the form \((x, y, 0)\) lie in a plane called the \(\qquad\) -
3. If \(\mathbf{v}=a \mathbf{i}+b \mathbf{j}+c \mathbf{k}\) is a vector in space, the scalars \(a, b, c\) are called the \(\qquad\) of \(\mathbf{v}\).
4. The squares of the direction cosines of a vector in space add up to \(\qquad\) -

\section*{Skill Building}

In Problems 7-14, describe the set of points \((x, y, z)\) defined by the equation(s).
7. \(y=0\)
8. \(x=0\)
9. \(z=2\)
10. \(y=3\)
11. \(x=-4\)
12. \(z=-3\)
13. \(x=1\) and \(y=2\)
14. \(x=3\) and \(z=1\)

In Problems 15-20, find the distance from \(P_{1}\) to \(P_{2}\).
15. \(P_{1}=(0,0,0)\) and \(P_{2}=(4,1,2)\)
16. \(P_{1}=(0,0,0)\) and \(P_{2}=(1,-2,3)\)
17. \(P_{1}=(-1,2,-3)\) and \(P_{2}=(0,-2,1)\)
18. \(P_{1}=(-2,2,3)\) and \(P_{2}=(4,0,-3)\)
19. \(P_{1}=(4,-2,-2)\) and \(P_{2}=(3,2,1)\)
20. \(P_{1}=(2,-3,-3)\) and \(P_{2}=(4,1,-1)\)

In Problems 21-26, opposite vertices of a rectangular box whose edges are parallel to the coordinate axes are given. List the coordinates of the other six vertices of the box.
21. \((0,0,0)\); \((2,1,3)\)
22. \((0,0,0)\); \((4,2,2)\)
23. \((1,2,3)\); \((3,4,5)\)
24. \((5,6,1)\); \((3,8,2)\)
25. \((-1,0,2)\); \((4,2,5)\)
26. \((-2,-3,0)\); \((-6,7,1)\)

In Problems 27-32, the vector \(\mathbf{v}\) has initial point \(P\) and terminal point \(Q\). Write \(\mathbf{v}\) in the form \(a \mathbf{i}+b \mathbf{j}+c \mathbf{k}\); that is, find its position vector.
27. \(P=(0,0,0) ; \quad Q=(3,4,-1)\)
28. \(P=(0,0,0) ; \quad Q=(-3,-5,4)\)
29. \(P=(3,2,-1) ; \quad Q=(5,6,0)\)
30. \(P=(-3,2,0) ; \quad Q=(6,5,-1)\)
31. \(P=(-2,-1,4) ; \quad Q=(6,-2,4)\)
32. \(P=(-1,4,-2) ; \quad Q=(6,2,2)\)

In Problems 33-38, find \(\|\mathbf{v}\|\).
33. \(\mathbf{v}=3 \mathbf{i}-6 \mathbf{j}-2 \mathbf{k}\)
34. \(\mathbf{v}=-6 \mathbf{i}+12 \mathbf{j}+4 \mathbf{k}\)
35. \(\mathbf{v}=\mathbf{i}-\mathbf{j}+\mathbf{k}\)
36. \(\mathbf{v}=-\mathbf{i}-\mathbf{j}+\mathbf{k}\)
37. \(\mathbf{v}=-2 \mathbf{i}+3 \mathbf{j}-3 \mathbf{k}\)
38. \(\mathbf{v}=6 \mathbf{i}+2 \mathbf{j}-2 \mathbf{k}\)

In Problems 39-44, find each quantity if \(\mathbf{v}=3 \mathbf{i}-5 \mathbf{j}+2 \mathbf{k}\) and \(\mathbf{w}=-2 \mathbf{i}+3 \mathbf{j}-2 \mathbf{k}\).
39. \(2 \mathbf{v}+3 \mathbf{w}\)
40. \(3 \mathbf{v}-2 \mathbf{w}\)
41. \(\|v-w\|\)
42. \(\|\mathbf{v}+\mathbf{w}\|\)
43. \(\|\mathbf{v}\|-\|\mathbf{w}\|\)
44. \(\|\mathbf{v}\|+\|\mathbf{w}\|\)

In Problems 45-50, find the unit vector in the same direction as \(\mathbf{v}\).
45. \(\mathbf{v}=5 \mathbf{i}\)
46. \(\mathbf{v}=-3 \mathbf{j}\)
48. \(\mathbf{v}=-6 \mathbf{i}+12 \mathbf{j}+4 \mathbf{k}\)
49. \(\mathbf{v}=\mathbf{i}+\mathbf{j}+\mathbf{k}\)
47. \(\mathbf{v}=3 \mathbf{i}-6 \mathbf{j}-2 \mathbf{k}\)
50. \(\mathbf{v}=2 \mathbf{i}-\mathbf{j}+\mathbf{k}\)

In Problems 51-58, find the dot product \(\mathbf{v} \cdot \mathbf{w}\) and the angle between \(\mathbf{v}\) and \(\mathbf{w}\).
51. \(\mathbf{v}=\mathbf{i}-\mathbf{j}, \quad \mathbf{w}=\mathbf{i}+\mathbf{j}+\mathbf{k}\)
52. \(\mathbf{v}=\mathbf{i}+\mathbf{j}, \quad \mathbf{w}=-\mathbf{i}+\mathbf{j}-\mathbf{k}\)
53. \(\mathbf{v}=2 \mathbf{i}+\mathbf{j}-3 \mathbf{k}, \quad \mathbf{w}=\mathbf{i}+2 \mathbf{j}+2 \mathbf{k}\)
54. \(\mathbf{v}=2 \mathbf{i}+2 \mathbf{j}-\mathbf{k}, \quad \mathbf{w}=\mathbf{i}+2 \mathbf{j}+3 \mathbf{k}\)
55. \(\mathbf{v}=3 \mathbf{i}-\mathbf{j}+2 \mathbf{k}, \quad \mathbf{w}=\mathbf{i}+\mathbf{j}-\mathbf{k}\)
56. \(\mathbf{v}=\mathbf{i}+3 \mathbf{j}+2 \mathbf{k}, \quad \mathbf{w}=\mathbf{i}-\mathbf{j}+\mathbf{k}\)
57. \(\mathbf{v}=3 \mathbf{i}+4 \mathbf{j}+\mathbf{k}, \quad \mathbf{w}=6 \mathbf{i}+8 \mathbf{j}+2 \mathbf{k}\)
58. \(\mathbf{v}=3 \mathbf{i}-4 \mathbf{j}+\mathbf{k}, \quad \mathbf{w}=6 \mathbf{i}-8 \mathbf{j}+2 \mathbf{k}\)

In Problems 59-66, find the direction angles of each vector. Write each vector in the form of equation (7).
59. \(\mathbf{v}=3 \mathbf{i}-6 \mathbf{j}-2 \mathbf{k}\)
60. \(\mathbf{v}=-6 \mathbf{i}+12 \mathbf{j}+4 \mathbf{k}\)
61. \(\mathbf{v}=\mathbf{i}+\mathbf{j}+\mathbf{k}\)
62. \(\mathbf{v}=\mathbf{i}-\mathbf{j}-\mathbf{k}\)
63. \(\mathbf{v}=\mathbf{i}+\mathbf{j}\)
64. \(\mathbf{v}=\mathbf{j}+\mathbf{k}\)
65. \(\mathbf{v}=3 \mathbf{i}-5 \mathbf{j}+2 \mathbf{k}\)
66. \(\mathbf{v}=2 \mathbf{i}+3 \mathbf{j}-4 \mathbf{k}\)

\section*{Applications and Extensions}
67. Robotic Arm Consider the double-jointed robotic arm shown in the figure. Let the lower arm be modeled by \(\mathbf{a}=\langle 2,3,4\rangle\), the middle arm be modeled by \(\mathbf{b}=\langle 1,-1,3\rangle\), and the upper arm be modeled by \(\mathbf{c}=\langle 4,-1,-2\rangle\), where units are in feet.

(a) Find a vector \(\mathbf{d}\) that represents the position of the hand.
(b) Determine the distance of the hand from the origin.
68. The Sphere In space, the collection of all points that are the same distance from some fixed point is called a sphere. See the illustration. The constant distance is called the radius, and the fixed point is the center of the sphere. Show that the equation of a sphere with center at \(\left(x_{0}, y_{0}, z_{0}\right)\) and radius \(r\) is
\[
\left(x-x_{0}\right)^{2}+\left(y-y_{0}\right)^{2}+\left(z-z_{0}\right)^{2}=r^{2}
\]
[Hint: Use the Distance Formula (1).]

In Problems 69 and 70, find the equation of a sphere with radius \(r\) and center \(P_{0}\).
69. \(r=1 ; P_{0}=(3,1,1)\)
70. \(r=2 ; P_{0}=(1,2,2)\)

In Problems 71-76, find the radius and center of each sphere.
[Hint: Complete the square in each variable.]
71. \(x^{2}+y^{2}+z^{2}+2 x-2 y=2\)
72. \(x^{2}+y^{2}+z^{2}+2 x-2 z=-1\)
73. \(x^{2}+y^{2}+z^{2}-4 x+4 y+2 z=0\)
74. \(x^{2}+y^{2}+z^{2}-4 x=0\)
75. \(2 x^{2}+2 y^{2}+2 z^{2}-8 x+4 z=-1\)
76. \(3 x^{2}+3 y^{2}+3 z^{2}+6 x-6 y=3\)

The work \(W\) done by a constant force \(\mathbf{F}\) in moving an object from a point \(A\) in space to a point \(B\) in space is defined as \(W=\mathbf{F} \cdot \overrightarrow{A B}\). Use this definition in Problems 77-79.
77. Work Find the work done by a force of 3 newtons acting in the direction \(2 \mathbf{i}+\mathbf{j}+2 \mathbf{k}\) in moving an object 2 meters from \((0,0,0)\) to \((0,2,0)\).
78. Work Find the work done by a force of 1 newton acting in the direction \(2 \mathbf{i}+2 \mathbf{j}+\mathbf{k}\) in moving an object 3 meters from \((0,0,0)\) to \((1,2,2)\).
79. Work Find the work done in moving an object along a vector \(\mathbf{u}=3 \mathbf{i}+2 \mathbf{j}-5 \mathbf{k}\) if the applied force is \(\mathbf{F}=2 \mathbf{i}-\mathbf{j}-\mathbf{k}\). Use meters for distance and newtons for force.

\section*{Retain Your Knowledge}

Problems 80-83 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
80. Solve: \(\frac{3}{x-2} \geq 5\)
81. Given \(f(x)=2 x-3\) and \(g(x)=x^{2}+x-1\), find \((f \circ g)(x)\).
82. Find the exact value of \(\sin 80^{\circ} \cos 50^{\circ}-\cos 80^{\circ} \sin 50^{\circ}\).
83. Solve the triangle.

\section*{‘Are You Prepared?' Answer}
1. \(\sqrt{\left(x_{2}-x_{1}\right)^{2}+\left(y_{2}-y_{1}\right)^{2}}\)

\subsection*{8.7 The Cross Product}

OBJECTIVES 1 Find the Cross Product of Two Vectors (p. 647)
2 Know Algebraic Properties of the Cross Product (p. 649)
3 Know Geometric Properties of the Cross Product (p. 650)
4 Find a Vector Orthogonal to Two Given Vectors (p.650)
5 Find the Area of a Parallelogram (p. 651)

\section*{1 Find the Cross Product of Two Vectors}

For vectors in space, and only for vectors in space, a second product of two vectors is defined, called the cross product. The cross product of two vectors in space is also a vector that has applications in both geometry and physics.

DEFINITION
If \(\mathbf{v}=a_{1} \mathbf{i}+b_{1} \mathbf{j}+c_{1} \mathbf{k}\) and \(\mathbf{w}=a_{2} \mathbf{i}+b_{2} \mathbf{j}+c_{2} \mathbf{k}\) are two vectors in space, the cross product \(\mathbf{v} \times \mathbf{w}\) is defined as the vector
\[
\begin{equation*}
\mathbf{v} \times \mathbf{w}=\left(b_{1} c_{2}-b_{2} c_{1}\right) \mathbf{i}-\left(a_{1} c_{2}-a_{2} c_{1}\right) \mathbf{j}+\left(a_{1} b_{2}-a_{2} b_{1}\right) \mathbf{k} \tag{1}
\end{equation*}
\]

Notice that the cross product \(\mathbf{v} \times \mathbf{w}\) of two vectors is a vector. Because of this, it is sometimes referred to as the vector product.

\section*{EXAMPLE I}

Finding a Cross Product Using Equation (I)
If \(\mathbf{v}=2 \mathbf{i}+3 \mathbf{j}+5 \mathbf{k}\) and \(\mathbf{w}=\mathbf{i}+2 \mathbf{j}+3 \mathbf{k}\), find \(\mathbf{v} \times \mathbf{w}\).
Solution
\[
\begin{aligned}
\mathbf{v} \times \mathbf{w} & =(3 \cdot 3-2 \cdot 5) \mathbf{i}-(2 \cdot 3-1 \cdot 5) \mathbf{j}+(2 \cdot 2-1 \cdot 3) \mathbf{k} \quad \text { Equation (1) } \\
& =(9-10) \mathbf{i}-(6-5) \mathbf{j}+(4-3) \mathbf{k} \\
& =-\mathbf{i}-\mathbf{j}+\mathbf{k}
\end{aligned}
\]

Determinants* may be used as an aid in computing cross products. A \(\mathbf{2}\) by \(\mathbf{2}\) determinant, symbolized by
\[
\left|\begin{array}{ll}
a_{1} & b_{1} \\
a_{2} & b_{2}
\end{array}\right|
\]
has the value \(a_{1} b_{2}-a_{2} b_{1}\); that is,
\[
\left|\begin{array}{ll}
a_{1} & b_{1} \\
a_{2} & b_{2}
\end{array}\right|=a_{1} b_{2}-a_{2} b_{1}
\]

A \(\mathbf{3}\) by \(\mathbf{3}\) determinant has the value
\[
\left|\begin{array}{lll}
A & B & C \\
a_{1} & b_{1} & c_{1} \\
a_{2} & b_{2} & c_{2}
\end{array}\right|=\left|\begin{array}{ll}
b_{1} & c_{1} \\
b_{2} & c_{2}
\end{array}\right| A-\left|\begin{array}{ll}
a_{1} & c_{1} \\
a_{2} & c_{2}
\end{array}\right| B+\left|\begin{array}{ll}
a_{1} & b_{1} \\
a_{2} & b_{2}
\end{array}\right| C
\]

\section*{EXAMPLE 2 Evaluating Determinants}
(a) \(\left|\begin{array}{ll}2 & 3 \\ 1 & 2\end{array}\right|=2 \cdot 2-1 \cdot 3=4-3=1\)
(b) \(\left|\begin{array}{lll}A & B & C \\ 2 & 3 & 5 \\ 1 & 2 & 3\end{array}\right|=\left|\begin{array}{ll}3 & 5 \\ 2 & 3\end{array}\right| A-\left|\begin{array}{ll}2 & 5 \\ 1 & 3\end{array}\right| B+\left|\begin{array}{ll}2 & 3 \\ 1 & 2\end{array}\right| C\)
\[
\begin{aligned}
& =(9-10) A-(6-5) B+(4-3) C \\
& =-A-B+C
\end{aligned}
\]
an Now Work problem 7
The cross product of the vectors \(\mathbf{v}=a_{1} \mathbf{i}+b_{1} \mathbf{j}+c_{1} \mathbf{k}\) and \(\mathbf{w}=a_{2} \mathbf{i}+b_{2} \mathbf{j}+c_{2} \mathbf{k}\), that is,
\[
\mathbf{v} \times \mathbf{w}=\left(b_{1} c_{2}-b_{2} c_{1}\right) \mathbf{i}-\left(a_{1} c_{2}-a_{2} c_{1}\right) \mathbf{j}+\left(a_{1} b_{2}-a_{2} b_{1}\right) \mathbf{k}
\]
may be written symbolically using determinants as
\[
\mathbf{v} \times \mathbf{w}=\left|\begin{array}{ccc}
\mathbf{i} & \mathbf{j} & \mathbf{k} \\
a_{1} & b_{1} & c_{1} \\
a_{2} & b_{2} & c_{2}
\end{array}\right|=\left|\begin{array}{ll}
b_{1} & c_{1} \\
b_{2} & c_{2}
\end{array}\right| \mathbf{i}-\left|\begin{array}{ll}
a_{1} & c_{1} \\
a_{2} & c_{2}
\end{array}\right| \mathbf{j}+\left|\begin{array}{ll}
a_{1} & b_{1} \\
a_{2} & b_{2}
\end{array}\right| \mathbf{k}
\]

\section*{EXAMPLE 3 Using Determinants to Find Cross Products}

If \(\mathbf{v}=2 \mathbf{i}+3 \mathbf{j}+5 \mathbf{k}\) and \(\mathbf{w}=\mathbf{i}+2 \mathbf{j}+3 \mathbf{k}\), find:
(a) \(\mathbf{v} \times \mathbf{w}\)
(b) \(\mathbf{w} \times \mathbf{v}\)
(c) \(\mathbf{v} \times \mathbf{v}\)
(d) \(\mathbf{w} \times \mathbf{w}\)

Solution
(a) \(\mathbf{v} \times \mathbf{w}=\left|\begin{array}{lll}\mathbf{i} & \mathbf{j} & \mathbf{k} \\ 2 & 3 & 5 \\ 1 & 2 & 3\end{array}\right|=\left|\begin{array}{ll}3 & 5 \\ 2 & 3\end{array}\right| \mathbf{i}-\left|\begin{array}{ll}2 & 5 \\ 1 & 3\end{array}\right| \mathbf{j}+\left|\begin{array}{ll}2 & 3 \\ 1 & 2\end{array}\right| \mathbf{k}=-\mathbf{i}-\mathbf{j}+\mathbf{k}\)
(b) \(\mathbf{w} \times \mathbf{v}=\left|\begin{array}{lll}\mathbf{i} & \mathbf{j} & \mathbf{k} \\ 1 & 2 & 3 \\ 2 & 3 & 5\end{array}\right|=\left|\begin{array}{ll}2 & 3 \\ 3 & 5\end{array}\right| \mathbf{i}-\left|\begin{array}{ll}1 & 3 \\ 2 & 5\end{array}\right| \mathbf{j}+\left|\begin{array}{ll}1 & 2 \\ 2 & 3\end{array}\right| \mathbf{k}=\mathbf{i}+\mathbf{j}-\mathbf{k}\)
(c) \(\mathbf{v} \times \mathbf{v}=\left|\begin{array}{ccc}\mathbf{i} & \mathbf{j} & \mathbf{k} \\ 2 & 3 & 5 \\ 2 & 3 & 5\end{array}\right|=\left|\begin{array}{ll}3 & 5 \\ 3 & 5\end{array}\right| \mathbf{i}-\left|\begin{array}{ll}2 & 5 \\ 2 & 5\end{array}\right| \mathbf{j}+\left|\begin{array}{ll}2 & 3 \\ 2 & 3\end{array}\right| \mathbf{k}=0 \mathbf{i}-0 \mathbf{j}+0 \mathbf{k}=\mathbf{0}\)
(d) \(\mathbf{w} \times \mathbf{w}=\left|\begin{array}{lll}\mathbf{i} & \mathbf{j} & \mathbf{k} \\ 1 & 2 & 3 \\ 1 & 2 & 3\end{array}\right|\)
\[
=\left|\begin{array}{ll}
2 & 3 \\
2 & 3
\end{array}\right| \mathbf{i}-\left|\begin{array}{ll}
1 & 3 \\
1 & 3
\end{array}\right| \mathbf{j}+\left|\begin{array}{ll}
1 & 2 \\
1 & 2
\end{array}\right| \mathbf{k}=0 \mathbf{i}-0 \mathbf{j}+0 \mathbf{k}=\mathbf{0}
\]
-Now Work problem 15

\section*{2 Know Algebraic Properties of the Cross Product}

Notice in Examples 3(a) and (b) that \(\mathbf{v} \times \mathbf{w}\) and \(\mathbf{w} \times \mathbf{v}\) are negatives of one another. From Examples 3(c) and (d), one might conjecture that the cross product of a vector with itself is the zero vector. These and other algebraic properties of the cross product are given next.

\section*{Algebraic Properties of the Cross Product}

If \(\mathbf{u}, \mathbf{v}\), and \(\mathbf{w}\) are vectors in space and if \(\alpha\) is a scalar, then
\[
\begin{align*}
\mathbf{u} \times \mathbf{u} & =\mathbf{0}  \tag{2}\\
\mathbf{u} \times \mathbf{v} & =-(\mathbf{v} \times \mathbf{u})  \tag{3}\\
\alpha(\mathbf{u} \times \mathbf{v}) & =(\alpha \mathbf{u}) \times \mathbf{v}=\mathbf{u} \times(\alpha \mathbf{v})  \tag{4}\\
\mathbf{u} \times(\mathbf{v}+\mathbf{w}) & =(\mathbf{u} \times \mathbf{v})+(\mathbf{u} \times \mathbf{w})
\end{align*}
\]

Proof We will prove properties (2) and (4) here and leave properties (3) and (5) as exercises (see Problems 60 and 61).

To prove property (2), let \(\mathbf{u}=a_{1} \mathbf{i}+b_{1} \mathbf{j}+c_{1} \mathbf{k}\). Then
\[
\begin{aligned}
\mathbf{u} \times \mathbf{u}=\left|\begin{array}{ccc}
\mathbf{i} & \mathbf{j} & \mathbf{k} \\
a_{1} & b_{1} & c_{1} \\
a_{1} & b_{1} & c_{1}
\end{array}\right| & =\left|\begin{array}{cc}
b_{1} & c_{1} \\
b_{1} & c_{1}
\end{array}\right| \mathbf{i}-\left|\begin{array}{ll}
a_{1} & c_{1} \\
a_{1} & c_{1}
\end{array}\right| \mathbf{j}+\left|\begin{array}{ll}
a_{1} & b_{1} \\
a_{1} & b_{1}
\end{array}\right| \mathbf{k} \\
& =0 \mathbf{i}-0 \mathbf{j}+0 \mathbf{k}=\mathbf{0}
\end{aligned}
\]

To prove property (4), let \(\mathbf{u}=a_{1} \mathbf{i}+b_{1} \mathbf{j}+c_{1} \mathbf{k}\) and \(\mathbf{v}=a_{2} \mathbf{i}+b_{2} \mathbf{j}+c_{2} \mathbf{k}\). Then
\[
\begin{align*}
& \alpha(\mathbf{u} \times \mathbf{v})=\underset{\uparrow}{=} \alpha\left[\left(b_{1} c_{2}-b_{2} c_{1}\right) \mathbf{i}-\left(a_{1} c_{2}-a_{2} c_{1}\right) \mathbf{j}+\left(a_{1} b_{2}-a_{2} b_{1}\right) \mathbf{k}\right] \\
& \text { Apply (1). } \\
&=\alpha\left(b_{1} c_{2}-b_{2} c_{1}\right) \mathbf{i}-\alpha\left(a_{1} c_{2}-a_{2} c_{1}\right) \mathbf{j}+\alpha\left(a_{1} b_{2}-a_{2} b_{1}\right) \mathbf{k} \tag{6}
\end{align*}
\]

Since \(\alpha \mathbf{u}=\alpha a_{1} \mathbf{i}+\alpha b_{1} \mathbf{j}+\alpha c_{1} \mathbf{k}\), we have
\[
\begin{align*}
(\alpha \mathbf{u}) \times \mathbf{v} & =\left(\alpha b_{1} c_{2}-b_{2} \alpha c_{1}\right) \mathbf{i}-\left(\alpha a_{1} c_{2}-a_{2} \alpha c_{1}\right) \mathbf{j}+\left(\alpha a_{1} b_{2}-a_{2} \alpha b_{1}\right) \mathbf{k} \\
& =\alpha\left(b_{1} c_{2}-b_{2} c_{1}\right) \mathbf{i}-\alpha\left(a_{1} c_{2}-a_{2} c_{1}\right) \mathbf{j}+\alpha\left(a_{1} b_{2}-a_{2} b_{1}\right) \mathbf{k} \tag{7}
\end{align*}
\]

Based on equations (6) and (7), the first part of property (4) follows. The second part can be proved in like fashion.

\section*{3 Know Geometric Properties of the Cross Product}

\section*{THEOREM \\ Geometric Properties of the Cross Product}

Let \(\mathbf{u}\) and \(\mathbf{v}\) be vectors in space.
\(\mathbf{u} \times \mathbf{v}\) is orthogonal to both \(\mathbf{u}\) and \(\mathbf{v}\).
\(\|\mathbf{u} \times \mathbf{v}\|=\|\mathbf{u}\|\|\mathbf{v}\| \sin \theta\)
where \(\theta\) is the angle between \(\mathbf{u}\) and \(\mathbf{v}\).
\(\|\mathbf{u} \times \mathbf{v}\|\) is the area of the parallelogram
having \(\mathbf{u} \neq \mathbf{0}\) and \(\mathbf{v} \neq \mathbf{0}\) as adjacent sides.
\(\mathbf{u} \times \mathbf{v}=\mathbf{0}\) if and only if \(\mathbf{u}\) and \(\mathbf{v}\) are parallel.

Proof of Property (8) Let \(\mathbf{u}=a_{1} \mathbf{i}+b_{1} \mathbf{j}+c_{1} \mathbf{k}\) and \(\mathbf{v}=a_{2} \mathbf{i}+b_{2} \mathbf{j}+c_{2} \mathbf{k}\). Then
Figure 81

\[
\mathbf{u} \times \mathbf{v}=\left(b_{1} c_{2}-b_{2} c_{1}\right) \mathbf{i}-\left(a_{1} c_{2}-a_{2} c_{1}\right) \mathbf{j}+\left(a_{1} b_{2}-a_{2} b_{1}\right) \mathbf{k}
\]

Now compute the dot product \(\mathbf{u} \cdot(\mathbf{u} \times \mathbf{v})\).
\[
\begin{aligned}
\mathbf{u} \cdot(\mathbf{u} \times \mathbf{v}) & =\left(a_{1} \mathbf{i}+b_{1} \mathbf{j}+c_{1} \mathbf{k}\right) \cdot\left[\left(b_{1} c_{2}-b_{2} c_{1}\right) \mathbf{i}-\left(a_{1} c_{2}-a_{2} c_{1}\right) \mathbf{j}+\left(a_{1} b_{2}-a_{2} b_{1}\right) \mathbf{k}\right] \\
& =a_{1}\left(b_{1} c_{2}-b_{2} c_{1}\right)-b_{1}\left(a_{1} c_{2}-a_{2} c_{1}\right)+c_{1}\left(a_{1} b_{2}-a_{2} b_{1}\right)=0
\end{aligned}
\]

Since two vectors are orthogonal if their dot product is zero, it follows that \(\mathbf{u}\) and \(\mathbf{u} \times \mathbf{v}\) are orthogonal. Similarly, \(\mathbf{v} \cdot(\mathbf{u} \times \mathbf{v})=0\), so \(\mathbf{v}\) and \(\mathbf{u} \times \mathbf{v}\) are orthogonal.

Figure 82

\section*{4 Find a Vector Orthogonal to Two Given Vectors}

As long as the vectors \(\mathbf{u}\) and \(\mathbf{v}\) are not parallel, they will form a plane in space. See Figure 81. Based on property (8), the vector \(\mathbf{u} \times \mathbf{v}\) is normal to this plane. As Figure 81 illustrates, there are essentially (without regard to magnitude) two vectors normal to the plane containing \(\mathbf{u}\) and \(\mathbf{v}\). It can be shown that the vector \(\mathbf{u} \times \mathbf{v}\) is the one determined by the thumb of the right hand when the other fingers of the right hand are cupped so that they point in a direction from \(\mathbf{u}\) to \(\mathbf{v}\). See Figure 82.*

\section*{EXAMPLE 4}

\section*{Finding a Vector Orthogonal to Two Given Vectors}

Find a vector that is orthogonal to \(\mathbf{u}=3 \mathbf{i}-2 \mathbf{j}+\mathbf{k}\) and \(\mathbf{v}=-\mathbf{i}+3 \mathbf{j}-\mathbf{k}\).
Solution Based on property (8), such a vector is \(\mathbf{u} \times \mathbf{v}\).
\[
\mathbf{u} \times \mathbf{v}=\left|\begin{array}{rrr}
\mathbf{i} & \mathbf{j} & \mathbf{k} \\
3 & -2 & 1 \\
-1 & 3 & -1
\end{array}\right|=(2-3) \mathbf{i}-[-3-(-1)] \mathbf{j}+(9-2) \mathbf{k}=-\mathbf{i}+2 \mathbf{j}+7 \mathbf{k}
\]

The vector \(-\mathbf{i}+2 \mathbf{j}+7 \mathbf{k}\) is orthogonal to both \(\mathbf{u}\) and \(\mathbf{v}\).
Check: Two vectors are orthogonal if their dot product is zero.
\[
\begin{aligned}
& \mathbf{u} \cdot(-\mathbf{i}+2 \mathbf{j}+7 \mathbf{k})=(3 \mathbf{i}-2 \mathbf{j}+\mathbf{k}) \cdot(-\mathbf{i}+2 \mathbf{j}+7 \mathbf{k})=-3-4+7=0 \\
& \mathbf{v} \cdot(-\mathbf{i}+2 \mathbf{j}+7 \mathbf{k})=(-\mathbf{i}+3 \mathbf{j}-\mathbf{k}) \cdot(-\mathbf{i}+2 \mathbf{j}+7 \mathbf{k})=1+6-7=0
\end{aligned}
\]

The proof of property (9) is left as an exercise. See Problem 62.

\footnotetext{
*This is a consequence of using a "right-handed" coordinate system.
}

Figure 83

\section*{5 Find the Area of a Parallelogram}

Proof of Property (10) Suppose that \(\mathbf{u}\) and \(\mathbf{v}\) are adjacent sides of a parallelogram. See Figure 83. Then the lengths of these sides are \(\|\mathbf{u}\|\) and \(\|\mathbf{v}\|\). If \(\theta\) is the angle between \(\mathbf{u}\) and \(\mathbf{v}\), then the height of the parallelogram is \(\|\mathbf{v}\| \sin \theta\) and its area is
\[
\text { Area of parallelogram }=\text { Base } \times \text { Height }=\|\mathbf{u}\|[\|\mathbf{v}\| \sin \theta]=\|\mathbf{u} \times \mathbf{v}\|
\]

Property (9)

\section*{Finding the Area of a Parallelogram}

Find the area of the parallelogram whose vertices are \(P_{1}=(0,0,0)\), \(P_{2}=(3,-2,1), P_{3}=(-1,3,-1)\), and \(P_{4}=(2,1,0)\).
Solution
WARNING Not all pairs of vertices give rise to a side. For example, \(\overrightarrow{P_{1} P_{4}}\) is a diagonal of the parallelogram \(\xrightarrow{\text { since }} \overrightarrow{P_{1} P_{3}}+\overrightarrow{P_{3} P_{4}}=\overrightarrow{P_{1} P_{4}}\). Also, \(\overrightarrow{P_{1} P_{3}}\) and \(\overrightarrow{P_{2} P_{4}}\) are not adjacent sides; they are parallel sides.

Two adjacent sides of this parallelogram are
\[
\mathbf{u}=\overrightarrow{P_{1} P_{2}}=3 \mathbf{i}-2 \mathbf{j}+\mathbf{k} \quad \text { and } \quad \mathbf{v}=\overrightarrow{P_{1} P_{3}}=-\mathbf{i}+3 \mathbf{j}-\mathbf{k}
\]

Since \(\mathbf{u} \times \mathbf{v}=-\mathbf{i}+2 \mathbf{j}+7 \mathbf{k}\) (Example 4), the area of the parallelogram is Area of parallelogram \(=\|\mathbf{u} \times \mathbf{v}\|=\sqrt{1+4+49}=\sqrt{54}=3 \sqrt{6}\) square units

\section*{anl Now Work problem 49}

Proof of Property (11) The proof requires two parts. If \(\mathbf{u}\) and \(\mathbf{v}\) are parallel, then there is a scalar \(\alpha\) such that \(\mathbf{u}=\alpha \mathbf{v}\). Then
\[
\mathbf{u} \times \mathbf{v}=(\alpha \mathbf{v}) \times \underset{\substack{\mathbf{v}} \underset{\text { Property (4) }}{=} \alpha(\mathbf{v} \times \mathbf{v}) \underset{\uparrow}{=} \quad \mathbf{0}}{\underset{\uparrow}{=}}
\]

If \(\mathbf{u} \times \mathbf{v}=\mathbf{0}\), then, by property (9), we have
\[
\|\mathbf{u} \times \mathbf{v}\|=\|\mathbf{u}\|\|\mathbf{v}\| \sin \theta=0
\]

Since \(\mathbf{u} \neq \mathbf{0}\) and \(\mathbf{v} \neq \mathbf{0}\), we must have \(\sin \theta=0\), so \(\theta=0\) or \(\theta=\pi\). In either case, since \(\theta\) is the angle between \(\mathbf{u}\) and \(\mathbf{v}\), then \(\mathbf{u}\) and \(\mathbf{v}\) are parallel.

\subsection*{8.7 Assess Your Understanding}

\section*{Concepts and Vocabulary}
1. True or False If \(\mathbf{u}\) and \(\mathbf{v}\) are parallel vectors, then \(\mathbf{u} \times \mathbf{v}=\mathbf{0}\).
2. True or False For any vector \(\mathbf{v}, \mathbf{v} \times \mathbf{v}=\mathbf{0}\).
3. True or False If \(\mathbf{u}\) and \(\mathbf{v}\) are vectors, then \(\mathbf{u} \times \mathbf{v}+\mathbf{v} \times \mathbf{u}=\mathbf{0}\).
4. True or False \(\mathbf{u} \times \mathbf{v}\) is a vector that is parallel to both \(\mathbf{u}\) and \(\mathbf{v}\).
5. True or False \(\|\mathbf{u} \times \mathbf{v}\|=\|\mathbf{u}\|\|\mathbf{v}\| \cos \theta\), where \(\theta\) is the angle between \(\mathbf{u}\) and \(\mathbf{v}\).
6. True or False The area of the parallelogram having \(\mathbf{u}\) and \(\mathbf{v}\) as adjacent sides is the magnitude of the cross product of \(\mathbf{u}\) and \(\mathbf{v}\).

\section*{Skill Building}

In Problems 7-14, find the value of each determinant.
7. \(\left|\begin{array}{ll}3 & 4 \\ 1 & 2\end{array}\right|\)
8. \(\left|\begin{array}{rr}-2 & 5 \\ 2 & -3\end{array}\right|\)
9. \(\left|\begin{array}{rr}6 & 5 \\ -2 & -1\end{array}\right|\)
10. \(\left|\begin{array}{rr}-4 & 0 \\ 5 & 3\end{array}\right|\)
11. \(\left|\begin{array}{lll}A & B & C \\ 2 & 1 & 4 \\ 1 & 3 & 1\end{array}\right|\)
12. \(\left|\begin{array}{lll}A & B & C \\ 0 & 2 & 4 \\ 3 & 1 & 3\end{array}\right|\)
13. \(\left|\begin{array}{rrr}A & B & C \\ -1 & 3 & 5 \\ 5 & 0 & -2\end{array}\right|\)
14. \(\left|\begin{array}{rrr}A & B & C \\ 1 & -2 & -3 \\ 0 & 2 & -2\end{array}\right|\)

In Problems 15-22, find (a) \(\mathbf{v} \times \mathbf{w}\), (b) \(\mathbf{w} \times \mathbf{v}\), (c) \(\mathbf{w} \times \mathbf{w}\), and (d) \(\mathbf{v} \times \mathbf{v}\).
15. \(\mathbf{v}=2 \mathbf{i}-3 \mathbf{j}+\mathbf{k}\)
16. \(\mathbf{v}=-\mathbf{i}+3 \mathbf{j}+2 \mathbf{k}\)
\(\mathbf{w}=3 \mathbf{i}-2 \mathbf{j}-\mathbf{k}\)
17. \(\mathbf{v}=\mathbf{i}+\mathbf{j}\)
\(\mathbf{w}=3 \mathbf{i}-2 \mathbf{j}-\mathbf{k}\)
20. \(\mathbf{v}=3 \mathbf{i}+\mathbf{j}+3 \mathbf{k}\)
\(\mathbf{w}=\mathbf{i}-\mathbf{k}\)
\(\mathbf{w}=2 \mathbf{i}+\mathbf{j}+\mathbf{k}\)
18. \(\mathbf{v}=\mathbf{i}-4 \mathbf{j}+2 \mathbf{k}\)
21. \(\mathbf{v}=\mathbf{i}-\mathbf{j}-\mathbf{k}\)
\(\mathbf{w}=3 \mathbf{i}+2 \mathbf{j}+\mathbf{k}\)
19. \(\mathbf{v}=2 \mathbf{i}-\mathbf{j}+2 \mathbf{k}\)
\(\mathbf{w}=\mathbf{j}-\mathbf{k}\)
\(\mathbf{w}=4 \mathbf{i}-3 \mathbf{k}\)
22. \(\mathbf{v}=2 \mathbf{i}-3 \mathbf{j}\)
\(\mathbf{w}=3 \mathbf{j}-2 \mathbf{k}\)

In Problems 23-44, use the given vectors \(\mathbf{u}, \mathbf{v}\), and \(\mathbf{w}\) to find each expression.
\[
\mathbf{u}=2 \mathbf{i}-3 \mathbf{j}+\mathbf{k} \quad \mathbf{v}=-3 \mathbf{i}+3 \mathbf{j}+2 \mathbf{k} \quad \mathbf{w}=\mathbf{i}+\mathbf{j}+3 \mathbf{k}
\]
23. \(\mathbf{u} \times \mathbf{v}\)
24. \(\mathbf{v} \times \mathbf{w}\)
25. \(\mathbf{v} \times \mathbf{u}\)
27. \(v \times v\)
28. \(w \times w\)
30. \(\mathbf{v} \times(4 \mathbf{w})\)
33. \(\mathbf{u} \cdot(\mathbf{u} \times \mathbf{v})\)
36. \((\mathbf{u} \times \mathbf{v}) \cdot \mathbf{w}\)
39. \(\mathbf{u} \times(\mathbf{v} \times \mathbf{v})\)
31. \(\mathbf{u} \times(2 \mathbf{v})\)
29. \((3 \mathbf{u}) \times \mathbf{v}\)
32. \((-3 \mathbf{v}) \times \mathbf{w}\)
35. \(\mathbf{u} \cdot(\mathbf{v} \times \mathbf{w})\)
38. \((\mathbf{v} \times \mathbf{u}) \cdot \mathbf{w}\)
41. Find a vector orthogonal to both \(\mathbf{u}\) and \(\mathbf{v}\).
43. Find a vector orthogonal to both \(\mathbf{u}\) and \(\mathbf{i}+\mathbf{j}\).
42. Find a vector orthogonal to both \(\mathbf{u}\) and \(\mathbf{w}\).
44. Find a vector orthogonal to both \(\mathbf{u}\) and \(\mathbf{j}+\mathbf{k}\).

In Problems 45-48, find the area of the parallelogram with one corner at \(P_{1}\) and adjacent sides \(\overrightarrow{P_{1} P_{2}}\) and \(\overrightarrow{P_{1} P_{3}}\).
45. \(P_{1}=(0,0,0), \quad P_{2}=(1,2,3), \quad P_{3}=(-2,3,0)\)
46. \(P_{1}=(0,0,0), \quad P_{2}=(2,3,1), \quad P_{3}=(-2,4,1)\)
47. \(P_{1}=(1,2,0), \quad P_{2}=(-2,3,4), \quad P_{3}=(0,-2,3)\)
48. \(P_{1}=(-2,0,2), \quad P_{2}=(2,1,-1), \quad P_{3}=(2,-1,2)\)

In Problems 49-52, find the area of the parallelogram with vertices \(P_{1}, P_{2}, P_{3}\), and \(P_{4}\).
49. \(P_{1}=(1,1,2), \quad P_{2}=(1,2,3), \quad P_{3}=(-2,3,0)\),
\(P_{4}=(-2,4,1)\)
51. \(P_{1}=(1,2,-1), \quad P_{2}=(4,2,-3), \quad P_{3}=(6,-5,2)\),
\(P_{4}=(9,-5,0)\)
50. \(P_{1}=(2,1,1), \quad P_{2}=(2,3,1), \quad P_{3}=(-2,4,1)\),
\(P_{4}=(-2,6,1)\)
52. \(P_{1}=(-1,1,1), \quad P_{2}=(-1,2,2), \quad P_{3}=(-3,4,-5)\), \(P_{4}=(-3,5,-4)\)

\section*{Applications and Extensions}
53. Find a unit vector normal to the plane containing \(\mathbf{v}=\mathbf{i}+3 \mathbf{j}-2 \mathbf{k}\) and \(\mathbf{w}=-2 \mathbf{i}+\mathbf{j}+3 \mathbf{k}\).
54. Find a unit vector normal to the plane containing \(\mathbf{v}=2 \mathbf{i}+3 \mathbf{j}-\mathbf{k}\) and \(\mathbf{w}=-2 \mathbf{i}-4 \mathbf{j}-3 \mathbf{k}\).
55. Volume of a Parallelepiped A parallelepiped is a prism whose faces are all parallelograms. Let \(\mathbf{A}, \mathbf{B}\), and \(\mathbf{C}\) be the vectors that define the parallelepiped shown in the figure. The volume V of the parallelepiped is given by the formula \(V=|(\mathbf{A} \times \mathbf{B}) \cdot \mathbf{C}|\).

Find the volume of a parallelepiped if the defining vectors are \(\mathbf{A}=3 \mathbf{i}-2 \mathbf{j}+4 \mathbf{k}, \mathbf{B}=2 \mathbf{i}+\mathbf{j}-2 \mathbf{k}\), and \(\mathbf{C}=3 \mathbf{i}-6 \mathbf{j}-2 \mathbf{k}\).
56. Volume of a Parallelepiped Refer to Problem 55. Find the volume of a parallelepiped whose defining vectors are \(\mathbf{A}=\langle 1,0,6\rangle, \mathbf{B}=\langle 2,3,-8\rangle\), and \(\mathbf{C}=\langle 8,-5,6\rangle\).
57. Prove for vectors \(\mathbf{u}\) and \(\mathbf{v}\) that
\[
\|\mathbf{u} \times \mathbf{v}\|^{2}=\|\mathbf{u}\|^{2}\|\mathbf{v}\|^{2}-(\mathbf{u} \cdot \mathbf{v})^{2}
\]
[Hint: Proceed as in the proof of property (4), computing first the left side and then the right side.]
58. Show that if \(\mathbf{u}\) and \(\mathbf{v}\) are orthogonal, then
\[
\|\mathbf{u} \times \mathbf{v}\|=\|\mathbf{u}\|\|\mathbf{v}\|
\]
59. Show that if \(\mathbf{u}\) and \(\mathbf{v}\) are orthogonal unit vectors, then \(\mathbf{u} \times \mathbf{v}\) is also a unit vector.
60. Prove property (3).
61. Prove property (5).
62. Prove property (9).
[Hint: Use the result of Problem 57 and the fact that if \(\theta\) is the angle between \(\mathbf{u}\) and \(\mathbf{v}\), then \(\mathbf{u} \cdot \mathbf{v}=\|\mathbf{u}\|\|\mathbf{v}\| \cos \theta\).]

\section*{Discussion and Writing}
63. If \(\mathbf{u} \cdot \mathbf{v}=0\) and \(\mathbf{u} \times \mathbf{v}=\mathbf{0}\), what, if anything, can you conclude about \(\mathbf{u}\) and \(\mathbf{v}\) ?

\section*{Retain Your Knowledge}

Problems 64-67 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
64. Find the exact value of \(\cos ^{-1}\left(\frac{1}{\sqrt{2}}\right)\).
65. Find two pairs of polar coordinates \((r, \theta)\), one with \(r>0\) and the other with \(r<0\), for the point with rectangular coordinates \((-8,-15)\). Express \(\theta\) in radians.
66. Tattoo Cost For custom tattoos, a tattoo shop charges \(\$ 150\) for the first hour and \(\$ 90\) per hour for each additional hour of work. If the total cost for a tattoo is \(\$ 780\), how many hours of custom work were required?
67. Use properties of logarithms to write \(\log _{4} \frac{\sqrt{x}}{z^{3}}\) as a sum or difference of logarithms. Express powers as factors.

\section*{Review Exercises}

In Problems 1-3, plot each point given in polar coordinates, and find its rectangular coordinates.
1. \(\left(3, \frac{\pi}{6}\right)\)
2. \(\left(-2, \frac{4 \pi}{3}\right)\)
3. \(\left(-3,-\frac{\pi}{2}\right)\)

In Problems 4-6, the rectangular coordinates of a point are given. Find two pairs of polar coordinates \((r, \theta)\) for each point, one with \(r>0\) and the other with \(r<0\). Express \(\theta\) in radians.
4. \((-3,3)\)
5. \((0,-2)\)
6. \((3,4)\)

In Problems 7-10, the variables r and \(\theta\) represent polar coordinates. (a) Write each polar equation as an equation in rectangular coordinates \((x, y)\). (b) Identify the equation and graph it.
7. \(r=2 \sin \theta\)
8. \(r=5\)
9. \(\theta=\frac{\pi}{4}\)
10. \(r^{2}+4 r \sin \theta-8 r \cos \theta=5\)

In Problems 11-13, sketch the graph of each polar equation. Be sure to test for symmetry.
11. \(r=4 \cos \theta\)
12. \(r=3-3 \sin \theta\)
13. \(r=4-\cos \theta\)

In Problems 14 and 15, write each complex number in polar form. Express each argument in degrees.
14. \(-1-i\)
15. \(4-3 i\)

In Problems 16-18, write each complex number in the standard form \(a+b i\), and plot each in the complex plane.
16. \(2\left(\cos 150^{\circ}+i \sin 150^{\circ}\right)\)
17. \(3\left(\cos \frac{2 \pi}{3}+i \sin \frac{2 \pi}{3}\right)\)
18. \(0.1\left(\cos 350^{\circ}+i \sin 350^{\circ}\right)\)

In Problems 19-21, find \(z w\) and \(\frac{z}{w}\). Leave your answers in polar form.
19. \(z=\cos 80^{\circ}+i \sin 80^{\circ}\)
20. \(z=3\left(\cos \frac{9 \pi}{5}+i \sin \frac{9 \pi}{5}\right)\)
21. \(z=5\left(\cos 10^{\circ}+i \sin 10^{\circ}\right)\)
\(w=\cos 50^{\circ}+i \sin 50^{\circ}\)
\(w=2\left(\cos \frac{\pi}{5}+i \sin \frac{\pi}{5}\right)\)
\(w=\cos 355^{\circ}+i \sin 355^{\circ}\)

In Problems 22-25, write each expression in the standard form \(a+b i\).
22. \(\left[3\left(\cos 20^{\circ}+i \sin 20^{\circ}\right)\right]^{3}\)
23. \(\left[\sqrt{2}\left(\cos \frac{5 \pi}{8}+i \sin \frac{5 \pi}{8}\right)\right]^{4}\)
24. \((1-\sqrt{3} i)^{6}\)
25. \((3+4 i)^{4}\)
26. Find all the complex cube roots of 27 .

In Problems 27 and 28, use the figure to the right to graph each of the following:
27. \(\mathbf{u}+\mathbf{v}\)
28. \(2 \mathbf{u}+3 \mathbf{v}\)

In Problems 29 and 30, the vector \(\mathbf{v}\) is represented by the directed line segment \(\overrightarrow{P Q}\). Write \(\mathbf{v}\) in the form \(a \mathbf{i}+b \mathbf{j}\) and find \(\|\mathbf{v}\|\).
29. \(P=(1,-2) ; \quad Q=(3,-6)\)
30. \(P=(0,-2) ; \quad Q=(-1,1)\)

In Problems 31-35, use the vectors \(\mathbf{v}=-2 \mathbf{i}+\mathbf{j}\) and \(\mathbf{w}=4 \mathbf{i}-3 \mathbf{j}\) to find:
31. \(\mathbf{v}+\mathbf{w}\)
33. \(\|v\|\)
35. Find a unit vector in the same direction as \(\mathbf{v}\).
37. Find the direction angle between \(\mathbf{i}\) and \(\mathbf{v}=-\mathbf{i}+\sqrt{3} \mathbf{j}\).
39. A vector \(\mathbf{v}\) has initial point \(P=(1,3,-2)\) and terminal point \(Q=(4,-2,1)\). Write \(\mathbf{v}\) in the form \(\mathbf{v}=a \mathbf{i}+b \mathbf{j}+c \mathbf{k}\).
32. \(4 \mathbf{v}-3 \mathbf{w}\)
34. \(\|\mathbf{v}\|+\|\mathbf{w}\|\)
36. Find the vector \(\mathbf{v}\) in the \(x y\)-plane with magnitude 3 if the direction angle of \(\mathbf{v}\) is \(60^{\circ}\).
38. Find the distance from \(P_{1}=(1,3,-2)\) to \(P_{2}=(4,-2,1)\).

In Problems 40-45, use the vectors \(\mathbf{v}=3 \mathbf{i}+\mathbf{j}-2 \mathbf{k}\) and \(\mathbf{w}=-3 \mathbf{i}+2 \mathbf{j}-\mathbf{k}\) to find each expression.
40. \(4 \mathbf{v}-3 \mathbf{w}\)
41. \(\|v-w\|\)
42. \(\|\mathbf{v}\|-\|\mathbf{w}\|\)
43. \(\mathbf{v} \times \mathbf{w}\)
44. \(\mathbf{v} \cdot(\mathbf{v} \times \mathbf{w})\)
45. Find a unit vector orthogonal to both \(\mathbf{v}\) and \(\mathbf{w}\).

In Problems 46-49, find the dot product \(\mathbf{v} \cdot \mathbf{w}\) and the angle between \(\mathbf{v}\) and \(\mathbf{w}\).
46. \(\mathbf{v}=-2 \mathbf{i}+\mathbf{j}, \quad \mathbf{w}=4 \mathbf{i}-3 \mathbf{j}\)
47. \(\mathbf{v}=\mathbf{i}-3 \mathbf{j}, \quad \mathbf{w}=-\mathbf{i}+\mathbf{j}\)
48. \(\mathbf{v}=\mathbf{i}+\mathbf{j}+\mathbf{k}, \quad \mathbf{w}=\mathbf{i}-\mathbf{j}+\mathbf{k}\)
49. \(\mathbf{v}=4 \mathbf{i}-\mathbf{j}+2 \mathbf{k}, \quad \mathbf{w}=\mathbf{i}-2 \mathbf{j}-3 \mathbf{k}\)

In Problems 50-52, determine whether \(\mathbf{v}\) and \(\mathbf{w}\) are parallel, orthogonal, or neither.
50. \(\mathbf{v}=2 \mathbf{i}+3 \mathbf{j} ; \quad \mathbf{w}=-4 \mathbf{i}-6 \mathbf{j}\)
51. \(\mathbf{v}=-2 \mathbf{i}+2 \mathbf{j} ; \quad \mathbf{w}=-3 \mathbf{i}+2 \mathbf{j}\)
52. \(\mathbf{v}=3 \mathbf{i}-2 \mathbf{j} ; \quad \mathbf{w}=4 \mathbf{i}+6 \mathbf{j}\)

In Problems 53 and 54, decompose \(\mathbf{v}\) into two vectors, one parallel to \(\mathbf{w}\) and the other orthogonal to \(\mathbf{w}\).
53. \(\mathbf{v}=2 \mathbf{i}+\mathbf{j} ; \quad \mathbf{w}=-4 \mathbf{i}+3 \mathbf{j}\)
55. Find the direction angles of the vector \(\mathbf{v}=3 \mathbf{i}-4 \mathbf{j}+2 \mathbf{k}\).
57. If \(\mathbf{u} \times \mathbf{v}=2 \mathbf{i}-3 \mathbf{j}+\mathbf{k}\), what is \(\mathbf{v} \times \mathbf{u}\) ?
54. \(\mathbf{v}=2 \mathbf{i}+3 \mathbf{j} ; \mathbf{w}=3 \mathbf{i}+\mathbf{j}\)
56. Find the area of the parallelogram with vertices \(P_{1}=(1,1,1)\), \(P_{2}=(2,3,4), P_{3}=(6,5,2)\), and \(P_{4}=(7,7,5)\).
58. Suppose that \(\mathbf{u}=3 \mathbf{v}\). What is \(\mathbf{u} \times \mathbf{v}\) ?
59. Actual Speed and Direction of a Swimmer A swimmer can maintain a constant speed of 5 miles per hour. If the swimmer heads directly across a river that has a current moving at the rate of 2 miles per hour, what is the actual speed of the swimmer? (See the figure.) If the river is 1 mile wide, how far downstream will the swimmer end up from the point directly across the river from the starting point?

60. Static Equilibrium A weight of 2000 pounds is suspended from two cables, as shown in the figure. What are the tensions in the two cables?

61. Computing Work Find the work done by a force of 5 pounds acting in the direction \(60^{\circ}\) to the horizontal in moving an object 20 feet from \((0,0)\) to \((20,0)\).
62. Braking Load A moving van with a gross weight of 8000 pounds is parked on a street with a \(5^{\circ}\) grade. Find the magnitude of the force required to keep the van from rolling down the hill. What is the magnitude of the force perpendicular to the hill?

\section*{Chapter Test}

Chapter Test Prep Videos include step-by-step solutions to all chapter test exercises and can be found in MyMathLablil or on this text's You TubeChannel.

In Problems 1-3, plot each point given in polar coordinates.
1. \(\left(2, \frac{3 \pi}{4}\right)\)
2. \(\left(3,-\frac{\pi}{6}\right)\)
3. \(\left(-4, \frac{\pi}{3}\right)\)
4. Convert \((2,2 \sqrt{3})\) from rectangular coordinates to polar coordinates \((r, \theta)\), where \(r>0\) and \(0 \leq \theta<2 \pi\).

In Problems 5-7, convert the polar equation to a rectangular equation. Graph the equation.
5. \(r=7\)
6. \(\tan \theta=3\)
7. \(r \sin ^{2} \theta+8 \sin \theta=r\)

In Problems 8 and 9, test the polar equation for symmetry with respect to the pole, the polar axis, and the line \(\theta=\frac{\pi}{2}\).
8. \(r^{2} \cos \theta=5\)
9. \(r=5 \sin \theta \cos ^{2} \theta\)

In Problems 10-12, perform the given operation, where \(z=2\left(\cos 85^{\circ}+i \sin 85^{\circ}\right)\) and \(w=3\left(\cos 22^{\circ}+i \sin 22^{\circ}\right)\). Write your answer in polar form.
10. \(z \cdot w\)
11. \(\frac{w}{z}\)
12. \(w^{5}\)
13. Find all the complex cube roots of \(-8+8 \sqrt{3} i\). Then plot them in the complex plane.

In Problems 14-18, \(P_{1}=(3 \sqrt{2}, 7 \sqrt{2})\) and \(P_{2}=(8 \sqrt{2}, 2 \sqrt{2})\).
14. Find the position vector \(\mathbf{v}\) equal to \(\overrightarrow{P_{1} P_{2}}\).
17. Find the direction angle of \(\mathbf{v}\).
15. Find \(\|v\|\).
16. Find the unit vector in the direction of \(\mathbf{v}\).
18. Decompose \(\mathbf{v}\) into its vertical and horizontal components.

In Problems 19-22, \(\mathbf{v}_{1}=\langle 4,6\rangle, \mathbf{v}_{2}=\langle-3,-6\rangle, \mathbf{v}_{3}=\langle-8,4\rangle\), and \(\mathbf{v}_{4}=\langle 10,15\rangle\).
19. Find the vector \(\mathbf{v}_{1}+2 \mathbf{v}_{2}-\mathbf{v}_{3}\).
20. Which two vectors are parallel?
21. Which two vectors are orthogonal?
22. Find the angle between the vectors \(\mathbf{v}_{1}\) and \(\mathbf{v}_{2}\).

In Problems 23-25, use the vectors \(\mathbf{u}=2 \mathbf{i}-3 \mathbf{j}+\mathbf{k}\) and \(\mathbf{v}=-\mathbf{i}+3 \mathbf{j}+2 \mathbf{k}\).
23. Find \(\mathbf{u} \times \mathbf{v}\).
24. Find the direction angles for \(\mathbf{u}\).
25. Find the area of the parallelogram that has \(\mathbf{u}\) and \(\mathbf{v}\) as adjacent sides.
26. A 1200-pound chandelier is to be suspended over a large ballroom; the chandelier will be hung on two cables of equal length whose ends will be attached to the ceiling, 16 feet apart. The chandelier will be free-hanging so that the ends of the cable will make equal angles with the ceiling. If the top of the chandelier is to be 16 feet from the ceiling, what is the minimum tension each cable must be able to endure?

\section*{Cumulative Review}
1. Find the real solutions, if any, of the equation \(e^{x^{2}-9}=1\).
2. Find an equation for the line containing the origin that makes an angle of \(30^{\circ}\) with the positive \(x\)-axis.
3. Find an equation for the circle with center at the point \((0,1)\) and radius 3 . Graph this circle.
4. What is the domain of the function \(f(x)=\ln (1-2 x)\) ?
5. Test the equation \(x^{2}+y^{3}=2 x^{4}\) for symmetry with respect to the \(x\)-axis, the \(y\)-axis, and the origin.
6. Graph the function \(y=|\ln x|\).
7. Graph the function \(y=|\sin x|\).
8. Graph the function \(y=\sin |x|\).
9. Find the exact value of \(\sin ^{-1}\left(-\frac{1}{2}\right)\).
10. Graph the equations \(x=3\) and \(y=4\) on the same set of rectangular axes.
11. Graph the equations \(r=2\) and \(\theta=\frac{\pi}{3}\) on the same set of polar axes.
12. What are the amplitude and period of \(y=-4 \cos (\pi x)\) ?

\section*{Chapter Projects}

I. Modeling Aircraft Motion Four aerodynamic forces act on an airplane in flight: lift, weight, thrust, and drag. While an aircraft is in flight, these four forces continuously battle each other. Weight opposes lift, and drag opposes thrust. See the figure. In balanced flight at constant speed, both the lift and weight are equal and the thrust and drag are equal.
1. What will happen to the aircraft if the lift is held constant while the weight is decreased (say, from burning off fuel)?
2. What will happen to the aircraft if the lift is decreased while the weight is held constant?
3. What will happen to the aircraft if the thrust is increased while the drag is held constant?
4. What will happen to the aircraft if the drag is increased while the thrust is held constant?

Source: www.aeromuseum.org/eduHowtoFly.html

In 1903 the Wright brothers made the first controlled powered flight. The weight of their plane was approximately 700 pounds (lb). Newton's Second Law of Motion states that force \(=\) mass \(\times\) acceleration \((F=m a)\). If the mass is measured in kilograms ( kg ) and acceleration in meters per second squared \(\left(\mathrm{m} / \mathrm{sec}^{2}\right)\), then the force will be measured in newtons ( N ). [Note: \(1 \mathrm{~N}=1 \mathrm{~kg} \cdot \mathrm{~m} / \mathrm{sec}^{2}\).]
5. If \(1 \mathrm{~kg}=2.205 \mathrm{lb}\), convert the weight of the Wright brothers' plane to kilograms.
6. If acceleration due to gravity is \(a=9.80 \mathrm{~m} / \mathrm{sec}^{2}\), determine the force due to weight on the Wright brothers' plane.
7. What must be true about the lift force of the Wright brothers' plane for it to get off the ground?
8. The weight of a fully loaded Cessna 170 B is 2200 lb . What lift force is required to get this plane off the ground?
9. The maximum gross weight of a Boeing 747 is \(255,000 \mathrm{lb}\). What lift force is required to get this jet off the ground?

The following projects are available at the Instructors' Resource Center (IRC):
II. Project at Motorola Signal Fades due to Interference Complex trigonometric functions are used to ensure that a cellphone has optimal reception as the user travels up and down an elevator.
III. Compound Interest The effect of continuously compounded interest is analyzed using polar coordinates.
IV. Complex Equations Analysis of complex equations illustrates the connections between complex and real equations. At times, using complex equations is more efficient for proving mathematical theorems.

\section*{Analytic Geometry}

\section*{The Orbit of the Hale-Bopp Comet}

The orbits of the Hale-Bopp comet and Earth can be modeled using ellipses, the subject of Section 9.3. The Internet-based Project at the end of this chapter explores the possibility of the Hale-Bopp comet colliding with Earth.

\section*{<A Look Back}

In the Foundations chapter, we introduced rectangular coordinates and showed how geometry problems can be solved algebraically. We defined a circle geometrically and then used the distance formula and rectangular coordinates to obtain an equation for a circle.

\section*{A Look Ahead>}

In this chapter, geometric definitions are given for the conics, and the distance formula and rectangular coordinates are used to obtain their equations.

Historically, Apollonius (200 BC) was among the first to study conics and discover some of their interesting properties. Today, conics are still studied because of their many uses. Paraboloids of revolution (parabolas rotated about their axes of symmetry) are used as signal collectors (the satellite dishes used with radar and dish TV, for example), as solar energy collectors, and as reflectors (telescopes, light projection, and so on). The planets circle the Sun in approximately elliptical orbits. Elliptical surfaces can be used to reflect signals such as light and sound from one place to another. A third conic, the hyperbola, can be used to determine the location of lightning strikes.

The Greeks used the methods of Euclidean geometry to study conics. However, we shall use the more powerful methods of analytic geometry, which employs both algebra and geometry, for our study of conics.

\subsection*{9.1 Conics}

OBJECTIVE 1 Know the Names of the Conics (p. 660)

\section*{1 Know the Names of the Conics}

The word conic derives from the word cone, which is a geometric figure that can be constructed in the following way: Let \(a\) and \(g\) be two distinct lines that intersect at a point \(V\). Keep the line \(a\) fixed. Now rotate the line \(g\) about \(a\), while maintaining the same angle between \(a\) and \(g\). The collection of points swept out (generated) by the line \(g\) is called a (right circular) cone. See Figure 1. The fixed line \(a\) is called the axis of the cone; the point \(V\) is its vertex; the lines that pass through \(V\) and make the same angle with \(a\) as \(g\) are generators of the cone. Each generator is a line that lies entirely on the cone. The cone consists of two parts, called nappes, that intersect at the vertex.
Figure 1

Conics, an abbreviation for conic sections, are curves that result from the intersection of a right circular cone and a plane. The conics we shall study arise when the plane does not contain the vertex, as shown in Figure 2. These conics are circles when the plane is perpendicular to the axis of the cone and intersects each generator; ellipses when the plane is tilted slightly so that it intersects each generator, but intersects only one nappe of the cone; parabolas when the plane is tilted farther so that it is parallel to one (and only one) generator and intersects only one nappe of the cone; and hyperbolas when the plane intersects both nappes.

If the plane does contain the vertex, the intersection of the plane and the cone is a point, a line, or a pair of intersecting lines. These are usually called degenerate conics.
Figure 2

(a) Circle

(b) Ellipse

(c) Parabola

(d) Hyperbola

Conic sections are used in modeling many different applications. For example, parabolas are used in describing satellite dishes and telescopes (see Figures 14 and 15 on page 666). Ellipses are used to model the orbits of planets and whispering chambers (see pages 675 and 676). And hyperbolas are used to locate lightning strikes and model nuclear cooling towers (see Problems 76 and 77 in Section 9.4).

\subsection*{9.2 The Parabola}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Distance Formula (Foundations, Section 1, p. 3 )
- Symmetry (Foundations, Section 2, pp. 12-14)
- Square Root Method (Section 2.3, pp. 138-139)
- Completing the Square (Appendix A, Section A.4, pp. A38-A39)
- Graphing Techniques: Transformations (Section 1.5, pp. 89-97)

Now Work the 'Are You Prepared?' problems on page 667.
OBJECTIVES 1 Analyze Parabolas with Vertex at the Origin (p. 661)
2 Analyze Parabolas with Vertex at ( \(h, k\) ) (p. 664)
3 Solve Applied Problems Involving Parabolas (p. 665)

\section*{DEFINITION}

Figure 3

\section*{1 Analyze Parabolas with Vertex at the Origin}

If we choose to locate the vertex \(V\) at the origin \((0,0)\), we can conveniently position the focus \(F\) on either the \(x\)-axis or the \(y\)-axis. First, consider the case where the focus \(F\) is on the positive \(x\)-axis, as shown in Figure 4. Because the distance from \(F\) to \(V\) is \(a\), the coordinates of \(F\) will be \((a, 0)\) with \(a>0\). Similarly, because the distance from \(V\) to the directrix \(D\) is also \(a\), and because \(D\) must be perpendicular to the \(x\)-axis (since the \(x\)-axis is the axis of symmetry), the equation of the directrix \(D\) must be \(x=-a\).

Now, if \(P=(x, y)\) is any point on the parabola, \(P\) must obey equation (1):
\[
\begin{aligned}
d(F, P) & =d(P, D) & & \\
\sqrt{(x-a)^{2}+(y-0)^{2}} & =\sqrt{(x-(-a))^{2}+(y-y)^{2}} & & \text { Use the Distance Formula. } \\
(x-a)^{2}+y^{2} & =(x+a)^{2} & & \text { Square both sides. } \\
x^{2}-2 a x+a^{2}+y^{2} & =x^{2}+2 a x+a^{2} & & \text { Square binomials. } \\
y^{2} & =4 a x & & \text { Simplify. }
\end{aligned}
\]

\section*{THEOREM}

\section*{Equation of a Parabola: Vertex at ( 0,0 ), Focus at \((a, 0), a>0\)}

The equation of a parabola with vertex at \((0,0)\), focus at \((a, 0)\), and directrix \(x=-a, a>0\), is
\[
\begin{equation*}
y^{2}=4 a x \tag{2}
\end{equation*}
\]

Recall that \(a\) is the distance from the vertex to the focus of a parabola. When graphing the parabola \(y^{2}=4 a x\), it is helpful to determine the "opening" by finding the points that lie directly above or below the focus \((a, 0)\). This is done by letting \(x=a\) in \(y^{2}=4 a x\), so \(y^{2}=4 a(a)=4 a^{2}\), or \(y= \pm 2 a\). The line segment joining these two points, \((a, 2 a)\) and \((a,-2 a)\), is called the latus rectum; its length is \(4 a\).

\section*{EXAMPLE I}

Figure 5
Solution

COMMENT To graph the parabola \(y^{2}=12 x\) discussed in Example 1, graph the two functions \(Y_{1}=\sqrt{12 x}\) and \(Y_{2}=-\sqrt{12 x}\). Do this and compare what you see with Figure 5.

\section*{Finding the Equation of a Parabola and Graphing It}

Find an equation of the parabola with vertex at \((0,0)\) and focus at \((3,0)\). Graph the equation.
The distance from the vertex \((0,0)\) to the focus \((3,0)\) is \(a=3\). Based on equation (2), the equation of this parabola is
\[
\begin{aligned}
& y^{2}=4 a x \\
& y^{2}=12 x \quad a=3
\end{aligned}
\]

To graph this parabola, find the two points that determine the latus rectum by letting \(x=3\). Then
\[
\begin{aligned}
y^{2} & =12 x=12(3)=36 \\
y & = \pm 6 \quad \text { Solve for } y .
\end{aligned}
\]

The points \((3,6)\) and \((3,-6)\) determine the latus rectum. These points help in graphing the parabola because they determine the "opening." See Figure 5.

\section*{Now Work}

PROBLEM
19
By reversing the steps used to obtain equation (2), it follows that the graph of an equation of the form of equation (2), \(y^{2}=4 a x\), is a parabola; its vertex is at \((0,0)\), its focus is at \((a, 0)\), its directrix is the line \(x=-a\), and its axis of symmetry is the \(x\)-axis.

For the remainder of this section, the direction "Analyze the equation" will mean to find the vertex, focus, and directrix of the parabola and graph it.

Figure 6

\section*{EXAMPLE 2}

\section*{Analyzing the Equation of a Parabola}

Analyze the equation: \(y^{2}=8 x\)
Solution The equation \(y^{2}=8 x\) is of the form \(y^{2}=4 a x\), where \(4 a=8\), so \(a=2\). Consequently, the graph of the equation is a parabola with vertex at \((0,0)\) and focus on the positive \(x\)-axis at \((a, 0)=(2,0)\). The directrix is the vertical line \(x=-2\). The two points that determine the latus rectum are obtained by letting \(x=2\). Then \(y^{2}=16\), so \(y= \pm 4\). The points \((2,-4)\) and \((2,4)\) determine the latus rectum. See Figure 6 for the graph.

Recall that we arrived at equation (2) after placing the focus on the positive \(x\)-axis. If the focus is placed on the negative \(x\)-axis, positive \(y\)-axis, or negative \(y\)-axis, a different form of the equation for the parabola results. The four forms of the equation of a parabola with vertex at \((0,0)\) and focus on a coordinate axis a distance \(a\) from \((0,0)\) are given in Table 1, and their graphs are given in Figure 7. Notice that each graph is symmetric with respect to its axis of symmetry.
\begin{tabular}{|c|c|c|c|c|c|}
\hline \multirow[t]{6}{*}{Table 1} & \multicolumn{5}{|l|}{Equations of a Parabola: Vertex at (0, 0); Focus on an Axis; \(\boldsymbol{a}>0\)} \\
\hline & Vertex & Focus & Directrix & Equation & Description \\
\hline & \((0,0)\) & \((a, 0)\) & \(x=-a\) & \(y^{2}=4 a x\) & Axis of symmetry is the \(x\)-axis, opens right \\
\hline & \((0,0)\) & \((-a, 0)\) & \(x=a\) & \(y^{2}=-4 a x\) & Axis of symmetry is the \(x\)-axis, opens left \\
\hline & \((0,0)\) & \((0, a)\) & \(y=-a\) & \(x^{2}=4 a y\) & Axis of symmetry is the \(y\)-axis, opens up \\
\hline & \((0,0)\) & \((0,-a)\) & \(y=a\) & \(x^{2}=-4 a y\) & Axis of symmetry is the \(y\)-axis, opens down \\
\hline
\end{tabular}

Figure 7

(a) \(y^{2}=4 a x\)

(b) \(y^{2}=-4 a x\)

(c) \(x^{2}=4 a y\)

(d) \(x^{2}=-4 a y\)

\section*{EXAMPLE 3}

Figure 8

\section*{Analyzing the Equation of a Parabola}

Analyze the equation: \(x^{2}=-12 y\)
The equation \(x^{2}=-12 y\) is of the form \(x^{2}=-4 a y\), with \(a=3\). Consequently, the graph of the equation is a parabola with vertex at \((0,0)\), focus at \((0,-3)\), and directrix the line \(y=3\). The parabola opens down, and its axis of symmetry is the \(y\)-axis. To obtain the points defining the latus rectum, let \(y=-3\). Then \(x^{2}=36\), so \(x= \pm 6\). The points \((-6,-3)\) and \((6,-3)\) determine the latus rectum. See Figure 8 for the graph.
anm Now Work problem 39

\section*{Finding the Equation of a Parabola}

Find the equation of the parabola with focus at \((0,4)\) and directrix the line \(y=-4\). Graph the equation.
Figure 9

A parabola whose focus is at \((0,4)\) and whose directrix is the horizontal line \(y=-4\) will have its vertex at \((0,0)\). (Do you see why? The vertex is midway between the focus and the directrix.) Since the focus is on the positive \(y\)-axis at \((0,4)\), the equation of this parabola is of the form \(x^{2}=4 a y\), with \(a=4\); that is,
\[
\begin{gathered}
x^{2}=4 a y=4(4) y=16 y \\
\uparrow \\
a=4
\end{gathered}
\]

Letting \(y=4\) yields \(x^{2}=64\), so \(x= \pm 8\). The points \((8,4)\) and \((-8,4)\) determine the latus rectum. Figure 9 shows the graph of \(x^{2}=16 y\).

\section*{EXAMPLE 5}

Figure 10

\section*{Finding the Equation of a Parabola}

Find the equation of a parabola with vertex at \((0,0)\) if its axis of symmetry is the \(x\)-axis and its graph contains the point \(\left(-\frac{1}{2}, 2\right)\). Find its focus and directrix, and graph the equation.

Solution The vertex is at the origin, the axis of symmetry is the \(x\)-axis, and the graph contains a point in the second quadrant, so the parabola opens to the left. From Table 1, note that the form of the equation is
\[
y^{2}=-4 a x
\]

Because the point \(\left(-\frac{1}{2}, 2\right)\) is on the parabola, the coordinates \(x=-\frac{1}{2}, y=2\) must satisfy \(y^{2}=-4 a x\). Substituting \(x=-\frac{1}{2}\) and \(y=2\) into this equation leads to
\[
\begin{aligned}
& 4=-4 a\left(-\frac{1}{2}\right) \quad y^{2}=-4 a x ; x=-\frac{1}{2}, y=2 \\
& a=2
\end{aligned}
\]

The equation of the parabola is
\[
y^{2}=-4(2) x=-8 x
\]

The focus is at \((-2,0)\) and the directrix is the line \(x=2\). Letting \(x=-2\) gives \(y^{2}=16\), so \(y= \pm 4\). The points \((-2,4)\) and \((-2,-4)\) determine the latus rectum. See Figure 10.

Now Nork problem 27

\section*{2 Analyze Parabolas with Vertex at (h, k)}

If a parabola with vertex at the origin and axis of symmetry along a coordinate axis is shifted horizontally \(h\) units and then vertically \(k\) units, the result is a parabola with vertex at \((h, k)\) and axis of symmetry parallel to a coordinate axis. The equations of such parabolas have the same forms as those in Table 1 , but \(x\) is replaced by \(x-h\) (the horizontal shift) and \(y\) is replaced by \(y-k\) (the vertical shift). Table 2 gives the forms of the equations of such parabolas. Figures 11(a)-(d) illustrate the graphs for \(h>0, k>0\).

NOTE It is not recommended that Table 2 be memorized. Rather use the ideas of transformations (shift horizontally \(h\) units, vertically \(k\) units), along with the fact that a represents the distance from the vertex to the focus, to determine the various components of a parabola. It is also helpful to understand that parabolas of the form " \(x^{2}=\) " will open up or down, while parabolas of the form " \(y^{2}=\) " will open left or right.

Table 2
\begin{tabular}{|c|c|c|c|c|}
\hline \multicolumn{5}{|l|}{Equations of a Parabola: Vertex at (h, k); Axis of Symmetry Parallel to a Coordinate Axis; \(\boldsymbol{a}>0\)} \\
\hline Vertex & Focus & Directrix & Equation & Description \\
\hline (h, k) & \((h+a, k)\) & \(x=h-a\) & \((y-k)^{2}=4 a(x-h)\) & Axis of symmetry is parallel to the \(x\)-axis, opens right \\
\hline (h, k) & \((h-a, k)\) & \(x=h+a\) & \((y-k)^{2}=-4 a(x-h)\) & Axis of symmetry is parallel to the \(x\)-axis, opens left \\
\hline (h, k) & \((h, k+a)\) & \(y=k-a\) & \((x-h)^{2}=4 a(y-k)\) & Axis of symmetry is parallel to the \(y\)-axis, opens up \\
\hline (h, k) & \((h, k-a)\) & \(y=k+a\) & \((x-h)^{2}=-4 a(y-k)\) & Axis of symmetry is parallel to the \(y\)-axis, opens down \\
\hline
\end{tabular}

(d) \((x-h)^{2}=-4 a(y-k)\)

\section*{EXAMPLE 6}

Solution

Figure 12

\section*{Finding the Equation of a Parabola, Vertex Not at the Origin}

Find an equation of the parabola with vertex at \((-2,3)\) and focus at \((0,3)\). Graph the equation.
The vertex \((-2,3)\) and focus \((0,3)\) both lie on the horizontal line \(y=3\) (the axis of symmetry). The distance \(a\) from the vertex \((-2,3)\) to the focus \((0,3)\) is \(a=2\). Also, because the focus lies to the right of the vertex, the parabola opens to the right. Consequently, the form of the equation is
\[
(y-k)^{2}=4 a(x-h)
\]
where \((h, k)=(-2,3)\) and \(a=2\). Therefore, the equation is
\[
\begin{aligned}
& (y-3)^{2}=4 \cdot 2[x-(-2)] \\
& (y-3)^{2}=8(x+2)
\end{aligned}
\]

To find the points that define the latus rectum, let \(x=0\), so that \((y-3)^{2}=16\). Then \(y-3= \pm 4\), so \(y=-1\) or \(y=7\). The points \((0,-1)\) and \((0,7)\) determine the latus rectum; the line \(x=-4\) is the directrix. See Figure 12 .

\section*{am Now Work problem 29}

Polynomial equations define parabolas whenever they involve two variables that are quadratic in one variable and linear in the other.

\section*{EXAMPLE 7}

Solution

\section*{Figure 13}

\section*{Analyzing the Equation of a Parabola}

Analyze the equation: \(x^{2}+4 x-4 y=0\)
To analyze the equation \(x^{2}+4 x-4 y=0\), complete the square involving the variable \(x\).
\[
\begin{aligned}
x^{2}+4 x-4 y & =0 & & \\
x^{2}+4 x & =4 y & & \text { Isolate the terms involving } \times \text { on the left side. } \\
x^{2}+4 x+4 & =4 y+4 & & \text { Complete the square on the left side. } \\
(x+2)^{2} & =4(y+1) & & \text { Factor. }
\end{aligned}
\]

This equation is of the form \((x-h)^{2}=4 a(y-k)\), with \(h=-2, k=-1\), and \(a=1\). The graph is a parabola with vertex at \((h, k)=(-2,-1)\) that opens up. The focus is \(a=1\) unit above the vertex at \((-2,0)\), and the directrix is the line \(y=-2\). See Figure 13.

\section*{3 Solve Applied Problems Involving Parabolas}

Parabolas find their way into many applications. For example, as discussed in Section 2.6, suspension bridges have cables in the shape of a parabola. Another property of parabolas that is used in applications is their reflecting property.

Suppose that a mirror is shaped like a paraboloid of revolution, a surface formed by rotating a parabola about its axis of symmetry. If a light (or any other emitting source) is placed at the focus of the parabola, all the rays emanating from the light reflect off the mirror in lines parallel to the axis of symmetry. This principle is used in the design of searchlights, flashlights, certain automobile headlights, and other such devices. See Figure 14.

Conversely, suppose that rays of light (or other signals) emanate from a distant source so that they are essentially parallel. When these rays strike the surface of a parabolic mirror whose axis of symmetry is parallel to these rays, they are reflected to a single point at the focus. This principle is used in the design of some solar energy devices, satellite dishes, and the mirrors used in some types of telescopes. See Figure 15.

Figure 14 Searchlight

Figure 15
Telescope

\section*{EXAMPLE 8 Satellite Dish}

A satellite dish is shaped like a paraboloid of revolution. The signals that emanate from a satellite strike the surface of the dish and are reflected to a single point, where the receiver is located. If the dish is 8 feet across at its opening and 3 feet deep at its center, at what position should the receiver be placed? That is, where is the focus?

Solution Figure 16(a) shows the satellite dish. Draw the parabola used to form the dish on a rectangular coordinate system so that the vertex of the parabola is at the origin and its focus is on the positive \(y\)-axis. See Figure 16(b).
Figure 16

The form of the equation of the parabola is
\[
x^{2}=4 a y
\]
and its focus is at \((0, a)\). Since \((4,3)\) is a point on the graph, this gives
\[
\begin{aligned}
4^{2} & =4 a(3) & & x^{2}=4 a y ; x=4, y=3 \\
a & =\frac{4}{3} & & \text { Solve for } a .
\end{aligned}
\]

The receiver should be located \(1 \frac{1}{3}\) feet ( 1 foot, 4 inches) from the base of the dish, along its axis of symmetry.

\subsection*{9.2 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. The formula for the distance \(d\) from \(P_{1}=\left(x_{1}, y_{1}\right)\) to \(P_{2}=\left(x_{2}, y_{2}\right)\) is \(d=\) \(\qquad\) . (p.3)
2. To complete the square of \(x^{2}-4 x\), add \(\qquad\) .(pp.A38-A39)
3. Use the Square Root Method to find the real solutions of \((x+4)^{2}=9\). (pp. 138-139)
4. The point that is symmetric with respect to the \(x\)-axis to the point \((-2,5)\) is \(\qquad\) . (pp. 12-13)
5. To graph \(y=(x-3)^{2}+1\), shift the graph of \(y=x^{2}\) to the right \(\qquad\) units and then \(\qquad\) 1 unit. (pp. 89-91)

\section*{Concepts and Vocabulary}
6. A(n) \(\qquad\) is the collection of all points in the plane such that the distance from each point to a fixed point equals its distance to a fixed line.

\section*{Answer Problems 7-10 using the figure.}
7. If \(a>0\), the equation of the parabola is of the form
(a) \((y-k)^{2}=4 a(x-h)\)
(b) \((y-k)^{2}=-4 a(x-h)\)
(c) \((x-h)^{2}=4 a(y-k)\)
(d) \((x-h)^{2}=-4 a(y-k)\)
8. The coordinates of the vertex are \(\qquad\) .
9. If \(a=4\), then the coordinates of the focus are \(\qquad\) .
10. If \(a=4\), then the equation of the directrix is \(\qquad\) .

\section*{Skill Building}

In Problems 11-18, the graph of a parabola is given. Match each graph to its equation.
(A) \(y^{2}=4 x\)
(C) \(y^{2}=-4 x\)
(E) \((y-1)^{2}=4(x-1)\)
(G) \((y-1)^{2}=-4(x-1)\)
(B) \(x^{2}=4 y\)
(D) \(x^{2}=-4 y\)

\section*{Applications and Extensions}
63. Satellite Dish A satellite dish is shaped like a paraboloid of revolution. The signals that emanate from a satellite strike the surface of the dish and are reflected to a single point, where the receiver is located. If the dish is 10 feet across at its opening and 4 feet deep at its center, at what position should the receiver be placed?
64. Constructing a TV Dish A cable TV receiving dish is in the shape of a paraboloid of revolution. Find the location of the receiver, which is placed at the focus, if the dish is 6 feet across at its opening and 2 feet deep.
65. Constructing a Flashlight The reflector of a flashlight is in the shape of a paraboloid of revolution. Its diameter is 4 inches and its depth is 1 inch. How far from the vertex should the light bulb be placed so that the rays will be reflected parallel to the axis?
66. Constructing a Headlight A sealed-beam headlight is in the shape of a paraboloid of revolution. The bulb, which is placed at the focus, is 1 inch from the vertex. If the depth is to be 2 inches, what is the diameter of the headlight at its opening?
67. Suspension Bridge The cables of a suspension bridge are in the shape of a parabola, as shown in the figure. The towers supporting the cable are 600 feet apart and 80 feet high. If the cables touch the road surface midway between the towers, what is the height of the cable from the road at a point 150 feet from the center of the bridge?

68. Suspension Bridge The cables of a suspension bridge are in the shape of a parabola. The towers supporting the cable are

400 feet apart and 100 feet high. If the cables are at a height of 10 feet midway between the towers, what is the height of the cable at a point 50 feet from the center of the bridge?
69. Searchlight A searchlight is shaped like a paraboloid of revolution. If the light source is located 2 feet from the base along the axis of symmetry and the opening is 5 feet across, how deep should the searchlight be?
70. Searchlight A searchlight is shaped like a paraboloid of revolution. If the light source is located 2 feet from the base along the axis of symmetry and the depth of the searchlight is 4 feet, what should the width of the opening be?
71. Solar Heat A mirror is shaped like a paraboloid of revolution and is used to concentrate the rays of the sun at its focus, creating a heat source. See the figure. If the mirror is 20 feet across at its opening and is 6 feet deep, where will the heat source be concentrated?

72. Reflecting Telescope A reflecting telescope contains a mirror shaped like a paraboloid of revolution. If the mirror is 4 inches across at its opening and is 3 inches deep, where will the collected light be concentrated?
73. Parabolic Arch Bridge A bridge is built in the shape of a parabolic arch. The bridge has a span of 120 feet and a maximum height of 25 feet. See the illustration. Choose a
suitable rectangular coordinate system and find the height of the arch at distances of 10,30 , and 50 feet from the center.

74. Parabolic Arch Bridge A bridge is to be built in the shape . of a parabolic arch and is to have a span of 100 feet. The height of the arch a distance of 40 feet from the center is to be 10 feet. Find the height of the arch at its center.
75. Gateway Arch The Gateway Arch in St. Louis is often mistaken to be parabolic in shape. In fact, it is a catenary, which has a more complicated formula than a parabola. The Arch is 630 feet high and 630 feet wide at its base.
(a) Find the equation of a parabola with the same dimensions. Let \(x\) equal the horizontal distance from the center of the arc.
(b) The following table gives the height of the Arch at various widths; find the corresponding heights for the parabola found in (a).
\begin{tabular}{|cc|}
\hline Width (ft) & Height (ft) \\
\hline 567 & 100 \\
478 & 312.5 \\
308 & 525 \\
\hline
\end{tabular}
(c) Do the data support the notion that the Arch is in the shape of a parabola?

\subsection*{9.3 The Ellipse}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Distance Formula (Foundations, Section 1, p. 3)
- Completing the Square (Appendix A, Section A.4, pp. A38-A39)
- Intercepts (Foundations, Section 2, pp. 11-12)
- Symmetry (Foundations, Section 2, pp. 12-14)
- Circles (Foundations, Section 4, pp. 34-37)
- Graphing Techniques: Transformations (Section 1.5, pp. 89-97)

Now Work the 'Are You Prepared?' problems on page 676.
OBJECTIVES 1 Analyze Ellipses with Center at the Origin (p. 670)
2 Analyze Ellipses with Center at ( \(h, k\) ) ( \(p\). 674)
3 Solve Applied Problems Involving Ellipses (p. 675)

\section*{DEFINITION}

Figure 17

Figure 18

An ellipse is the collection of all points in the plane the sum of whose distances from two fixed points, called the foci, is a constant.

The definition contains within it a physical means for drawing an ellipse. Find a piece of string (the length of this string is the constant referred to in the definition). Then take two thumbtacks (the foci) and stick them into a piece of cardboard so that the distance between them is less than the length of the string. Now attach the ends of the string to the thumbtacks and, using the point of a pencil, pull the string taut. See Figure 17. Keeping the string taut, rotate the pencil around the two thumbtacks. The pencil traces out an ellipse, as shown in Figure 17.

In Figure 17, the foci are labeled \(F_{1}\) and \(F_{2}\). The line containing the foci is called the major axis. The midpoint of the line segment joining the foci is the center of the ellipse. The line through the center and perpendicular to the major axis is the minor axis.

The two points of intersection of the ellipse and the major axis are the vertices, \(V_{1}\) and \(V_{2}\), of the ellipse. The distance from one vertex to the other is the length of the major axis. The ellipse is symmetric with respect to its major axis, with respect to its minor axis, and with respect to its center.

\section*{1 Analyze Ellipses with Center at the Origin}

With these ideas in mind, we are ready to find the equation of an ellipse in a rectangular coordinate system. First, place the center of the ellipse at the origin. Second, position the ellipse so that its major axis coincides with a coordinate axis, say the \(x\)-axis, as shown in Figure 18. If \(c\) is the distance from the center to a focus, one focus is at \(F_{1}=(-c, 0)\) and the other at \(F_{2}=(c, 0)\). As we shall see, it is convenient to let \(2 a\) denote the constant distance referred to in the definition. Then, if \(P=(x, y)\) is any point on the ellipse,
\[
\begin{aligned}
& d\left(F_{1}, P\right)+d\left(F_{2}, P\right)=2 a \quad \text { The sum of the distances from } P \\
& \sqrt{(x-(-c))^{2}+(y-0)^{2}}+\sqrt{(x-c)^{2}+(y-0)^{2}}=2 a \\
& \sqrt{(x+c)^{2}+y^{2}}=2 a-\sqrt{(x-c)^{2}+y^{2}} \\
& (x+c)^{2}+y^{2}=4 a^{2}-4 a \sqrt{(x-c)^{2}+y^{2}} \\
& +(x-c)^{2}+y^{2} \\
& x^{2}+2 c x+c^{2}+y^{2}=4 a^{2}-4 a \sqrt{(x-c)^{2}+y^{2}} \quad \text { Square binomials. } \\
& +x^{2}-2 c x+c^{2}+y^{2} \\
& 4 c x-4 a^{2}=-4 a \sqrt{(x-c)^{2}+y^{2}} \\
& c x-a^{2}=-a \sqrt{(x-c)^{2}+y^{2}} \\
& \left(c x-a^{2}\right)^{2}=a^{2}\left[(x-c)^{2}+y^{2}\right] \\
& c^{2} x^{2}-2 a^{2} c x+a^{4}=a^{2}\left(x^{2}-2 c x+c^{2}+y^{2}\right) \\
& \left(c^{2}-a^{2}\right) x^{2}-a^{2} y^{2}=a^{2} c^{2}-a^{4} \\
& \left(a^{2}-c^{2}\right) x^{2}+a^{2} y^{2}=a^{2}\left(a^{2}-c^{2}\right) \\
& \text { The sum of the distances from } P \\
& \text { to the foci equals a constant, } 2 \text { a. } \\
& \text { Use the Distance Formula. } \\
& \text { Isolate one radical. } \\
& \text { Square both sides. } \\
& \text { Square binomials. } \\
& \text { Simplify; isolate the radical. } \\
& \text { Divide each side by } 4 . \\
& \text { Square both sides again. } \\
& \text { Square binomials. } \\
& \text { Rearrange the terms. } \\
& \text { Multiply each side by }-1 \text {; } \\
& \text { factor } a^{2} \text { on the right side. }
\end{aligned}
\]

To obtain points on the ellipse off the \(x\)-axis, it must be that \(a>c\). To see why, look again at Figure 18. Then
\[
\begin{aligned}
d\left(F_{1}, P\right)+d\left(F_{2}, P\right) & >d\left(F_{1}, F_{2}\right) & & \text { The sum of the lengths of two sides of a triangle } \\
2 a & >2 c & & \text { is greater than the length of the third side. } \\
a & >c & & d\left(F_{1}, P\right)+d\left(F_{2}, P\right)=2 a, d\left(F_{1}, F_{2}\right)=2 c
\end{aligned}
\]

Because \(a>c>0\), this means \(a^{2}>c^{2}\), so \(a^{2}-c^{2}>0\). Let \(b^{2}=a^{2}-c^{2}, b>0\). Then \(a>b\) and equation (1) can be written as
\[
\begin{aligned}
b^{2} x^{2}+a^{2} y^{2} & =a^{2} b^{2} \\
\frac{x^{2}}{a^{2}}+\frac{y^{2}}{b^{2}} & =1 \quad \text { Divide each side by } a^{2} b^{2} .
\end{aligned}
\]

As you can verify, the graph of this equation has symmetry with respect to the \(x\)-axis, the \(y\)-axis, and the origin.

Because the major axis is the \(x\)-axis, find the vertices of this ellipse by letting \(y=0\). The vertices satisfy the equation \(\frac{x^{2}}{a^{2}}=1\), the solutions of which are \(x= \pm a\). Consequently, the vertices of this ellipse are \(V_{1}=(-a, 0)\) and \(V_{2}=(a, 0)\). The \(y\)-intercepts of the ellipse, found by letting \(x=0\), have coordinates \((0,-b)\) and \((0, b)\). These four intercepts, \((a, 0),(-a, 0),(0, b)\), and \((0,-b)\), are used to graph the ellipse.

\section*{THEOREM}

\section*{Equation of an Ellipse: Center at (0, 0); Major Axis along the \(x\)-Axis}

An equation of the ellipse with center at \((0,0)\), foci at \((-c, 0)\) and \((c, 0)\), and vertices at \((-a, 0)\) and \((a, 0)\) is
\[
\begin{equation*}
\frac{x^{2}}{a^{2}}+\frac{y^{2}}{b^{2}}=1, \quad \text { where } a>b>0 \text { and } b^{2}=a^{2}-c^{2} \tag{2}
\end{equation*}
\]

The major axis is the \(x\)-axis. See Figure 19 .

\section*{Figure 19}

Notice in Figure 19 the right triangle formed by the points \((0,0),(c, 0)\), and \((0, b)\). Because \(b^{2}=a^{2}-c^{2}\) (or \(b^{2}+c^{2}=a^{2}\) ), the distance from the focus at \((c, 0)\) to the point \((0, b)\) is \(a\).

This can be seen another way. Look at the two right triangles in Figure 19. They are congruent. Do you see why? Because the sum of the distances from the foci to a point on the ellipse is \(2 a\), it follows that the distance from \((c, 0)\) to \((0, b)\) is \(a\).

\section*{EXAMPLE I Finding an Equation of an Ellipse}

Find an equation of the ellipse with center at the origin, one focus at (3,0), and a vertex at \((-4,0)\). Graph the equation.
The ellipse has its center at the origin, and because the given focus and vertex lie on the \(x\)-axis, the major axis is the \(x\)-axis. The distance from the center, \((0,0)\), to one of the foci, \((3,0)\), is \(c=3\). The distance from the center, \((0,0)\), to one of the vertices, \((-4,0)\), is \(a=4\). From equation (2), it follows that
\[
b^{2}=a^{2}-c^{2}=16-9=7
\]
so an equation of the ellipse is
\[
\frac{x^{2}}{16}+\frac{y^{2}}{7}=1
\]

Figure 20 shows the graph.

Figure 21

In Figure 20 the intercepts of the equation are used to graph the ellipse. Following this practice will make it easier for you to obtain an accurate graph of an ellipse.

COMMENT The intercepts of the ellipse also provide information about how to set the viewing rectangle for graphing an ellipse. To graph the ellipse
\[
\frac{x^{2}}{16}+\frac{y^{2}}{7}=1
\]
discussed in Example 1, we set the viewing rectangle using a square screen that includes the intercepts, perhaps \(-4.5 \leq x \leq 4.5,-3 \leq y \leq 3\). Then we proceed to solve the equation for \(y\) :
\[
\begin{array}{rlrl}
\frac{x^{2}}{16}+\frac{y^{2}}{7} & =1 & \\
\frac{y^{2}}{7} & =1-\frac{x^{2}}{16} & & \text { Subtract } \frac{x^{2}}{16} \text { from each side. } \\
y^{2} & =7\left(1-\frac{x^{2}}{16}\right) & & \text { Multiply both sides by } 7 . \\
y & = \pm \sqrt{7\left(1-\frac{x^{2}}{16}\right)} & & \text { Take the square root of each side. }
\end{array}
\]

Now graph the two functions
\[
Y_{1}=\sqrt{7\left(1-\frac{x^{2}}{16}\right)} \text { and } Y_{2}=-\sqrt{7\left(1-\frac{x^{2}}{16}\right)}
\]

Figure 21 shows the result.

\section*{mon Now Work problem 27}

An equation of the form of equation (2), with \(a>b\), is the equation of an ellipse with center at the origin, foci on the \(x\)-axis at \((-c, 0)\) and \((c, 0)\), where \(c^{2}=a^{2}-b^{2}\), and major axis along the \(x\)-axis.

For the remainder of this section, the direction "Analyze the equation" will mean to find the center, major axis, foci, and vertices of the ellipse and graph it.

\section*{EXAMPLE 2 \\ Analyzing the Equation of an Ellipse}

Analyze the equation: \(\frac{x^{2}}{25}+\frac{y^{2}}{9}=1\)
Solution The given equation is of the form of equation (2), with \(a^{2}=25\) and \(b^{2}=9\). The equation is that of an ellipse with center \((0,0)\) and major axis along the \(x\)-axis. The vertices are at \(( \pm a, 0)=( \pm 5,0)\). Because \(b^{2}=a^{2}-c^{2}\), this means
\[
c^{2}=a^{2}-b^{2}=25-9=16
\]

The foci are at \(( \pm c, 0)=( \pm 4,0)\). Figure 22 shows the graph.
Figure 22

If the major axis of an ellipse with center at \((0,0)\) lies on the \(y\)-axis, the foci are at \((0,-c)\) and \((0, c)\). Using the same steps as before, the definition of an ellipse leads to the following result:

\section*{THEOREM}

Figure 23

\section*{EXAMPLE 3}

Figure 24

Equation of an Ellipse: Center at ( \(\mathbf{0}, \mathbf{0}\) ); Major Axis along the \(\boldsymbol{y}\)-Axis
An equation of the ellipse with center at \((0,0)\), foci at \((0,-c)\) and \((0, c)\), and vertices at \((0,-a)\) and \((0, a)\) is
\[
\begin{equation*}
\frac{x^{2}}{b^{2}}+\frac{y^{2}}{a^{2}}=1, \quad \text { where } a>b>0 \text { and } b^{2}=a^{2}-c^{2} \tag{3}
\end{equation*}
\]

The major axis is the \(y\)-axis.
Figure 23 illustrates the graph of such an ellipse. Again, notice the right triangle formed by the points at \((0,0),(b, 0)\), and \((0, c)\), so that \(a^{2}=b^{2}+c^{2}\) (or \(b^{2}=a^{2}-c^{2}\) ).

Look closely at equations (2) and (3). Although they may look alike, there is a difference! In equation (2), the larger number, \(a^{2}\), is in the denominator of the \(x^{2}\)-term, so the major axis of the ellipse is along the \(x\)-axis. In equation (3), the larger number, \(a^{2}\), is in the denominator of the \(y^{2}\)-term, so the major axis is along the \(y\)-axis.

\section*{EXAMPLE 4}

\section*{Solution}

Figure 25

\section*{Analyzing the Equation of an Ellipse}

Analyze the equation: \(9 x^{2}+y^{2}=9\)
To put the equation in proper form, divide each side by 9 .
\[
x^{2}+\frac{y^{2}}{9}=1
\]

The larger denominator, 9 , is in the \(y^{2}\)-term so, based on equation (3), this is the equation of an ellipse with center at the origin and major axis along the \(y\)-axis. Also, \(a^{2}=9, b^{2}=1\), and \(c^{2}=a^{2}-b^{2}=9-1=8\). The vertices are at \((0, \pm a)=(0, \pm 3)\), and the foci are at \((0, \pm c)=(0, \pm 2 \sqrt{2})\). The \(x\)-intercepts are at \(( \pm b, 0)=( \pm 1,0)\). Figure 24 shows the graph.
an Now Work problem 21

\section*{Finding an Equation of an Ellipse}

Find an equation of the ellipse having one focus at \((0,2)\) and vertices at \((0,-3)\) and \((0,3)\). Graph the equation.
By plotting the given focus and vertices, note that the major axis is the \(y\)-axis. Because the vertices are at \((0,-3)\) and \((0,3)\), the center of this ellipse is at their midpoint, the origin. The distance from the center, \((0,0)\), to one of the foci, \((0,2)\), is \(c=2\). The distance from the center, \((0,0)\), to one of the vertices, \((0,3)\), is \(a=3\). So \(b^{2}=a^{2}-c^{2}=9-4=5\). The form of the equation of this ellipse is given by equation (3).
\[
\begin{aligned}
& \frac{x^{2}}{b^{2}}+\frac{y^{2}}{a^{2}}=1 \\
& \frac{x^{2}}{5}+\frac{y^{2}}{9}=1
\end{aligned}
\]

Figure 25 shows the graph.

The circle may be considered a special kind of ellipse. To see why, let \(a=b\) in equation (2) or (3). Then
\[
\begin{aligned}
& \frac{x^{2}}{a^{2}}+\frac{y^{2}}{a^{2}}=1 \\
& x^{2}+y^{2}=a^{2}
\end{aligned}
\]

This is the equation of a circle with center at the origin and radius \(a\). The value of \(c\) is
\[
\begin{array}{r}
c^{2}=a^{2}-b^{2} \underset{\uparrow}{\uparrow} 0 \\
a=b
\end{array}
\]

This indicates that the closer the two foci of an ellipse are to the center, the more the ellipse will look like a circle.

\section*{2 Analyze Ellipses with Center at (h,k)}

If an ellipse with center at the origin and major axis coinciding with a coordinate axis is shifted horizontally \(h\) units and then vertically \(k\) units, the result is an ellipse with center at \((h, k)\) and major axis parallel to a coordinate axis. The equations of such ellipses have the same forms as those given in equations (2) and (3), except that \(x\) is replaced by \(x-h\) (the horizontal shift) and \(y\) is replaced by \(y-k\) (the vertical shift). Table 3 gives the forms of the equations of such ellipses, and Figure 26 shows their graphs.

NOTE It is not recommended that Table 3 be memorized. Rather, use the ideas of transformations (horizontally \(h\) units, vertically \(k\) units), along with the fact that arepresents the distance from the center to the vertices, crepresents the distance from the center to the foci, and \(b^{2}=a^{2}-c^{2}\left(\right.\) or \(\left.c^{2}=a^{2}-b^{2}\right)\).
\begin{tabular}{|ccccc|}
\hline \multicolumn{2}{|c|}{\begin{tabular}{c} 
Equations of an Ellipse: Center at ( \(\boldsymbol{h}, \boldsymbol{k}\) ); Major Axis Parallel to a Coordinate Axis \\
Center \\
Major Axis
\end{tabular}} & Foci & Vertices & Equation \\
\hline\((h, k)\) & Parallel to the \(x\)-axis & \((h+c, k)\) & \((h+a, k)\) & \(\frac{(x-h)^{2}}{a^{2}}+\frac{(y-k)^{2}}{b^{2}}=1\), \\
& & \((h-c, k)\) & \((h-a, k)\) & \(a>b>0\) and \(b^{2}=a^{2}-c^{2}\) \\
\((h, k)\) & Parallel to the \(y\)-axis & \((h, k+c)\) & \((h, k+a)\) & \(\frac{(x-h)^{2}}{b^{2}}+\frac{(y-k)^{2}}{a^{2}}=1\), \\
& & \((h, k-c)\) & \((h, k-a)\) & \(a>b>0\) and \(b^{2}=a^{2}-c^{2}\) \\
\hline
\end{tabular}

Figure 26

(a) \(\frac{(x-h)^{2}}{a^{2}}+\frac{(y-k)^{2}}{b^{2}}=1\)

(b) \(\frac{(x-h)^{2}}{b^{2}}+\frac{(y-k)^{2}}{a^{2}}=1\)

\section*{EXAMPLE 5}

\section*{Finding an Equation of an Ellipse, Center Not at the Origin}

Find an equation for the ellipse with center at \((2,-3)\), one focus at \((3,-3)\), and one vertex at \((5,-3)\). Graph the equation.
Solution The center is at \((h, k)=(2,-3)\), so \(h=2\) and \(k=-3\). Plot the center, focus, and vertex, and note that the points all lie on the line \(y=-3\). Hence the major axis
is parallel to the \(x\)-axis. The distance from the center \((2,-3)\) to a focus \((3,-3)\) is \(c=1\); the distance from the center \((2,-3)\) to a vertex \((5,-3)\) is \(a=3\). Then \(b^{2}=a^{2}-c^{2}=9-1=8\). The form of the equation is
\[
\begin{aligned}
& \frac{(x-h)^{2}}{a^{2}}+\frac{(y-k)^{2}}{b^{2}}=1, \quad \text { where } h=2, k=-3, a=3, b=2 \sqrt{2} \\
& \frac{(x-2)^{2}}{9}+\frac{(y+3)^{2}}{8}=1
\end{aligned}
\]

To graph the equation, use the center \((h, k)=(2,-3)\) to locate the vertices. The major axis is parallel to the \(x\)-axis, so the vertices are \(a=3\) units left and right of the center \((2,-3)\). Therefore, the vertices are
\[
V_{1}=(2-3,-3)=(-1,-3) \text { and } V_{2}=(2+3,-3)=(5,-3)
\]

Figure 27

Since \(c=1\) and the major axis is parallel to the \(x\)-axis, the foci are 1 unit left and right of the center. Therefore, the foci are
\[
F_{1}=(2-1,-3)=(1,-3) \quad \text { and } \quad F_{2}=(2+1,-3)=(3,-3)
\]

Finally, we use the value of \(b=2 \sqrt{2}\) to find the two points above and below the center.
\[
(2,-3-2 \sqrt{2}) \text { and }(2,-3+2 \sqrt{2})
\]

Figure 27 shows the graph.
am Now Work problem 55

\section*{EXAMPLE 6 Analyzing the Equation of an Ellipse}

Analyze the equation: \(4 x^{2}+y^{2}-8 x+4 y+4=0\)

\section*{Solution Complete the squares in \(x\) and in \(y\).}

Figure 28

\[
\begin{aligned}
4 x^{2}+y^{2}-8 x+4 y+4 & =0 \\
4 x^{2}-8 x+y^{2}+4 y & =-4 \\
4\left(x^{2}-2 x\right)+\left(y^{2}+4 y\right) & =-4 \\
4\left(x^{2}-2 x+1\right)+\left(y^{2}+4 y+4\right) & =-4+4+4 \\
4(x-1)^{2}+(y+2)^{2} & =4 \\
(x-1)^{2}+\frac{(y+2)^{2}}{4} & =1
\end{aligned}
\]

This is the equation of an ellipse with center at \((1,-2)\) and major axis parallel to the \(y\)-axis. Since \(a^{2}=4\) and \(b^{2}=1\), we have \(c^{2}=a^{2}-b^{2}=4-1=3\). The vertices are at \((h, k \pm a)=(1,-2 \pm 2)\), or \((1,0)\) and \((1,-4)\). The foci are at \((h, k \pm c)=(1,-2 \pm \sqrt{3})\), or \((1,-2-\sqrt{3})\) and \((1,-2+\sqrt{3})\). Figure 28 shows the graph.

\section*{3 Solve Applied Problems Involving Ellipses}

\section*{4.}

Ellipses are found in many applications in science and engineering. For example, the orbits of the planets around the Sun are elliptical, with the Sun's position at a focus. See Figure 29 on the following page.

Figure 29

Stone and concrete bridges are often shaped as semielliptical arches. Elliptical gears are used in machinery when a variable rate of motion is required.

Ellipses also have an interesting reflection property. If a source of light (or sound) is placed at one focus, the waves transmitted by the source reflect off the ellipse and concentrate at the other focus. This is the principle behind whispering galleries, which are rooms designed with elliptical ceilings. A person standing at one focus of the ellipse can whisper and be heard by a person standing at the other focus, because all the sound waves that reach the ceiling are reflected to the other person.

\section*{EXAMPLE 7 A Whispering Gallery}

The whispering gallery in the Museum of Science and Industry in Chicago is 47.3 feet long. The distance from the center of the room to the foci is 20.3 feet. Find an equation that describes the shape of the room. How high is the room at its center? Source: Chicago Museum of Science and Industry Web site; www.msichicago.org

Solution Set up a rectangular coordinate system so that the center of the ellipse is at the origin and the major axis is along the \(x\)-axis. The equation of the ellipse is
\[
\frac{x^{2}}{a^{2}}+\frac{y^{2}}{b^{2}}=1
\]

Since the length of the room is 47.3 feet, the distance from the center of the room to each vertex (the end of the room) is \(\frac{47.3}{2}=23.65\) feet, so \(a=23.65\) feet. The distance from the center of the room to each focus is \(c=20.3\) feet. See Figure 30.

Because \(b^{2}=a^{2}-c^{2}\), this means \(b^{2}=23.65^{2}-20.3^{2}=147.2325\). An equation that describes the shape of the room is given by
Figure 30

\[
\frac{x^{2}}{23.65^{2}}+\frac{y^{2}}{147.2325}=1
\]

The height of the room at its center is \(b=\sqrt{147.2325} \approx 12.1\) feet.

In Problems 79-83, use the fact that the orbit of a planet about the Sun is an ellipse, with the Sun at one focus. The aphelion of a planet is its greatest distance from the Sun, and the perihelion is its shortest distance. The mean distance of a planet from the Sun is the length of the semimajor axis of the elliptical orbit. See the illustration.
79. Earth The mean distance of Earth from the Sun is 93 million miles. If the aphelion of Earth is 94.5 million miles, what is the perihelion? Write an equation for the orbit of Earth around the Sun.
80. Mars The mean distance of Mars from the Sun is 142 million miles. If the perihelion of Mars is 128.5 million miles, what is

the aphelion? Write an equation for the orbit of Mars about the Sun.
81. Jupiter The aphelion of Jupiter is 507 million miles. If the distance from the center of its elliptical orbit to the Sun is 23.2 million miles, what is the perihelion? What is the mean distance? Write an equation for the orbit of Jupiter around the Sun.
82. Pluto The perihelion of Pluto is 4551 million miles, and the distance from the center of its elliptical orbit to the Sun is 897.5 million miles. Find the aphelion of Pluto. What is the mean distance of Pluto from the Sun? Write an equation for the orbit of Pluto about the Sun.
83. Elliptical Orbit A planet orbits a star in an elliptical orbit with the star located at one foci. The perihelion of the planet is 5 million miles. The eccentricity \(e\) of a conic section is \(e=\frac{c}{a}\). If the eccentricity of the orbit is 0.75 , find the aphelion of the planet. \({ }^{\dagger}\)
84. A rectangle is inscribed in an ellipse with major axis of length 14 meters and minor axis of length 4 meters. Find the maximum area of a rectangle inscribed in the ellipse. Round your answer to two decimal places. \({ }^{\dagger}\)
85. Let \(D\) be the line given by the equation \(x+5=0\). Let \(E\) be the conic section given by the equation \(x^{2}+5 y^{2}=20\). Let the point \(C\) be the vertex of \(E\) with the smaller \(x\)-coordinate, and let \(B\) be the endpoint of the minor axis of \(E\) with the larger
\(y\)-coordinate. Determine the exact \(y\)-coordinate of the point \(M\) on \(D\) that is equidistant from points \(B\) and C. \({ }^{\dagger}\)
86. Show that an equation of the form
\[
A x^{2}+C y^{2}+F=0, \quad A \neq 0, C \neq 0, F \neq 0
\]
where \(A\) and \(C\) are of the same sign and \(F\) is of opposite sign, (a) is the equation of an ellipse with center at \((0,0)\) if \(A \neq C\).
(b) is the equation of a circle with center \((0,0)\) if \(A=C\).
87. Show that the graph of an equation of the form
\[
A x^{2}+C y^{2}+D x+E y+F=0, \quad A \neq 0, C \neq 0
\]
where \(A\) and \(C\) are of the same sign,
(a) is an ellipse if \(\frac{D^{2}}{4 A}+\frac{E^{2}}{4 C}-F\) is the same sign as \(A\).
(b) is a point if \(\frac{D^{2}}{4 A}+\frac{E^{2}}{4 C}-F=0\).
(c) contains no points if \(\frac{D^{2}}{4 A}+\frac{E^{2}}{4 C}-F\) is of opposite sign to \(A\).

\section*{Discussion and Writing}
88. The eccentricity \(e\) of an ellipse is defined as the number \(\frac{c}{a}\), where \(a\) is the distance of a vertex from the center and \(c\) is the distance of a focus from the center. Because \(a>c\), it follows that \(e<1\). Write a brief paragraph about the general shape of each of the following ellipses. Be sure to justify your conclusions.
(a) Eccentricity close to 0
(b) Eccentricity \(=0.5\)
(c) Eccentricity close to 1

\section*{-Retain Your knowledge}

Problems 89-92 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
89. Find the zeros of the quadratic function \(f(x)=(x-5)^{2}-12\). What are the \(x\)-intercepts, if any, of the graph of the function?
90. Find the domain of the rational function \(f(x)=\frac{2 x-3}{x-5}\). Find any horizontal, vertical, or oblique asymptotes.
91. Find the work done by a force of 80 pounds acting in the direction of \(50^{\circ}\) to the horizontal in moving an object 12 feet from \((0,0)\) to \((12,0)\). Round to one decimal place.
92. Solve the right triangle shown.

14

\section*{'Are You Prepared?' Answers}
1. \(\sqrt{13}\)
2. \(\frac{9}{4}\)
3. \((-2,0),(2,0),(0,-4),(0,4)\)

6. \((x-2)^{2}+(y+3)^{2}=1\)

\subsection*{9.4 The Hyperbola}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Distance Formula (Foundations, Section 1, p. 3)
- Completing the Square (Appendix A, Section A.4, pp. A38-A39)
- Intercepts (Foundations, Section 2, pp. 11-12)
- Symmetry (Foundations, Section 2, pp. 12-15)

Now Work the 'Are You Prepared?' problems on page 689.
OBJECTIVES 1 Analyze Hyperbolas with Center at the Origin (p. 680)
2 Find the Asymptotes of a Hyperbola (p. 684)
3 Analyze Hyperbolas with Center at ( \(h, k\) ) ( \(p\). 686)
4 Solve Applied Problems Involving Hyperbolas (p. 687)

}

\section*{DEFINITION}

Figure 31

Figure 32
\(d\left(F_{1}, P\right)-d\left(F_{2}, P\right)= \pm 2 a\)

A hyperbola is the collection of all points in the plane the difference of whose distances from two fixed points, called the foci, is a constant.

Figure 31 illustrates a hyperbola with foci \(F_{1}\) and \(F_{2}\). The line containing the foci is called the transverse axis. The midpoint of the line segment joining the foci is the center of the hyperbola. The line through the center and perpendicular to the transverse axis is the conjugate axis. The hyperbola consists of two separate curves, called branches, that are symmetric with respect to the transverse axis, conjugate axis, and center. The two points of intersection of the hyperbola and the transverse axis are the vertices, \(V_{1}\) and \(V_{2}\), of the hyperbola.

\section*{1 Analyze Hyperbolas with Center at the Origin}

With these ideas in mind, we are now ready to find the equation of a hyperbola in the rectangular coordinate system. First, place the center at the origin. Next, position the hyperbola so that its transverse axis coincides with a coordinate axis. Suppose that the transverse axis coincides with the \(x\)-axis, as shown in Figure 32.

If \(c\) is the distance from the center to a focus, one focus is at \(F_{1}=(-c, 0)\) and the other at \(F_{2}=(c, 0)\). Now we let the constant difference of the distances from any point \(P=(x, y)\) on the hyperbola to the foci \(F_{1}\) and \(F_{2}\) be denoted by \(\pm 2 a\). (If \(P\) is on the right branch, the + sign is used; if \(P\) is on the left branch, the - sign is used.) The coordinates of \(P\) must satisfy the equation
\[
\begin{array}{rlrl}
d\left(F_{1}, P\right)-d\left(F_{2}, P\right)= & \pm 2 a & & \text { Difference of the distances } \\
\sqrt{(x-(-c))^{2}+y^{2}}-\sqrt{(x-c)^{2}+y^{2}}= \pm 2 a & & \text { (romP to the foci equals } \pm 2 a . \\
\sqrt{(x+c)^{2}+y^{2}}= & \pm 2 a+\sqrt{(x-c)^{2}+y^{2}} & & \text { Isolate one radical. } \\
(x+c)^{2}+y^{2}= & 4 a^{2} \pm 4 a \sqrt{(x-c)^{2}+y^{2}} & & \text { Square both sides. } \\
& +(x-c)^{2}+y^{2} &
\end{array}
\]

Next, remove the parentheses.
\[
\begin{array}{rlrl}
x^{2}+2 c x+c^{2}+y^{2} & =4 a^{2} \pm 4 a \sqrt{(x-c)^{2}+y^{2}}+x^{2}-2 c x+c^{2}+y^{2} \\
4 c x-4 a^{2} & = \pm 4 a \sqrt{(x-c)^{2}+y^{2}} & & \text { Simplify; isolate the radical. } \\
c x-a^{2} & = \pm a \sqrt{(x-c)^{2}+y^{2}} & & \text { Divide each side by 4. } \\
\left(c x-a^{2}\right)^{2} & =a^{2}\left[(x-c)^{2}+y^{2}\right] & & \text { Square both sides. } \\
c^{2} x^{2}-2 c a^{2} x+a^{4} & =a^{2}\left(x^{2}-2 c x+c^{2}+y^{2}\right) & & \text { Simplify. } \\
c^{2} x^{2}+a^{4} & =a^{2} x^{2}+a^{2} c^{2}+a^{2} y^{2} & & \text { Distribute and simplify. } \\
\left(c^{2}-a^{2}\right) x^{2}-a^{2} y^{2} & =a^{2} c^{2}-a^{4} & & \text { Rearrange terms. } \\
\left(c^{2}-a^{2}\right) x^{2}-a^{2} y^{2} & =a^{2}\left(c^{2}-a^{2}\right) & & \text { Factor } a^{2} \text { on the right side. }
\end{array}
\]

To obtain points on the hyperbola off the \(x\)-axis, it must be that \(a<c\). To see why, look again at Figure 32.
\[
\begin{array}{rlrl}
d\left(F_{1}, P\right) & <d\left(F_{2}, P\right)+d\left(F_{1}, F_{2}\right) & & \text { Use triangle } F_{1} P F_{2} . \\
d\left(F_{1}, P\right)-d\left(F_{2}, P\right) & <d\left(F_{1}, F_{2}\right) & & \\
2 a<2 c & & \text { Pis on the right branch, so } \\
& & d\left(F_{1}, P\right)-d\left(F_{2}, P\right)=2 a ; \\
a<c & & d\left(F_{1}, F_{2}\right)=2 c .
\end{array}
\]

Figure 33

Because \(a<c\), this means \(a^{2}<c^{2}\), so \(c^{2}-a^{2}>0\). Let \(b^{2}=c^{2}-a^{2}, b>0\). Then equation (1) can be written as
\[
\begin{aligned}
b^{2} x^{2}-a^{2} y^{2} & =a^{2} b^{2} \\
\frac{x^{2}}{a^{2}}-\frac{y^{2}}{b^{2}} & =1 \quad \text { Divide each side by } a^{2} b^{2} .
\end{aligned}
\]

To find the vertices of the hyperbola defined by this equation, let \(y=0\). The vertices satisfy the equation \(\frac{x^{2}}{a^{2}}=1\), the solutions of which are \(x= \pm a\). Consequently, the vertices of the hyperbola are \(V_{1}=(-a, 0)\) and \(V_{2}=(a, 0)\). Notice that the distance from the center \((0,0)\) to either vertex is \(a\).

\section*{THEOREM}

\section*{EXAMPLE I}

\section*{Solution}

Equation of a Hyperbola: Center at ( 0,0 ); Transverse Axis along the \(x\)-Axis
An equation of the hyperbola with center at \((0,0)\), foci at \((-c, 0)\) and \((c, 0)\), and vertices at \((-a, 0)\) and \((a, 0)\) is
\[
\begin{equation*}
\frac{x^{2}}{a^{2}}-\frac{y^{2}}{b^{2}}=1, \quad \text { where } b^{2}=c^{2}-a^{2} \tag{2}
\end{equation*}
\]

The transverse axis is the \(x\)-axis.

See Figure 33. As you can verify, the hyperbola defined by equation (2) is symmetric with respect to the \(x\)-axis, \(y\)-axis, and origin. To find the \(y\)-intercepts, if any, let \(x=0\) in equation (2). This results in the equation \(\frac{y^{2}}{b^{2}}=-1\), which has no real solution, so the hyperbola defined by equation (2) has no \(y\)-intercepts. In fact, since \(\frac{x^{2}}{a^{2}}-1=\frac{y^{2}}{b^{2}} \geq 0\), it follows that \(\frac{x^{2}}{a^{2}} \geq 1\). There are no points on the graph for \(-a<x<a\).

\section*{Finding and Graphing an Equation of a Hyperbola}

Find an equation of the hyperbola with center at the origin, one focus at \((3,0)\), and one vertex at \((-2,0)\). Graph the equation.
The hyperbola has its center at the origin. Plot the center, focus, and vertex. Since they all lie on the \(x\)-axis, the transverse axis coincides with the \(x\)-axis. One focus is at \((c, 0)=(3,0)\), so \(c=3\). One vertex is at \((-a, 0)=(-2,0)\), so \(a=2\). From equation (2), it follows that \(b^{2}=c^{2}-a^{2}=9-4=5\), so an equation of the hyperbola is
\[
\frac{x^{2}}{4}-\frac{y^{2}}{5}=1
\]

To graph a hyperbola, it is helpful to locate and plot other points on the graph. For example, to find the points above and below the foci, let \(x= \pm 3\). Then
\[
\begin{aligned}
\frac{x^{2}}{4}-\frac{y^{2}}{5} & =1 \\
\frac{( \pm 3)^{2}}{4}-\frac{y^{2}}{5} & =1 \quad x= \pm 3 \\
\frac{9}{4}-\frac{y^{2}}{5} & =1 \\
\frac{y^{2}}{5} & =\frac{5}{4}
\end{aligned}
\]

Figure 34

\[
\begin{aligned}
y^{2} & =\frac{25}{4} \\
y & = \pm \frac{5}{2}
\end{aligned}
\]

The points above and below the foci are \(\left( \pm 3, \frac{5}{2}\right)\) and \(\left( \pm 3,-\frac{5}{2}\right)\). These points determine the "opening" of the hyperbola. See Figure 34.

COMMENT To graph the hyperbola \(\frac{x^{2}}{4}-\frac{y^{2}}{5}=1\) discussed in Example 1, the two functions \(Y_{1}=\sqrt{5} \sqrt{\frac{x^{2}}{4}-1}\) and \(Y_{2}=-\sqrt{5} \sqrt{\frac{x^{2}}{4}-1}\) must be graphed. Do this and compare the result with Figure 34.
am Now Work problem 19
An equation of the form of equation (2) is the equation of a hyperbola with center at the origin; foci on the \(x\)-axis at \((-c, 0)\) and \((c, 0)\), where \(c^{2}=a^{2}+b^{2}\); and transverse axis along the \(x\)-axis.

For the next two examples, the direction "Analyze the equation" will mean to find the center, transverse axis, vertices, and foci of the hyperbola and graph it.

\section*{EXAMPLE 2 Analyzing the Equation of a Hyperbola}

Analyze the equation: \(\frac{x^{2}}{16}-\frac{y^{2}}{4}=1\)
Solution The given equation is of the form of equation (2), with \(a^{2}=16\) and \(b^{2}=4\). The graph of the equation is a hyperbola with center at \((0,0)\) and transverse axis along the \(x\)-axis. Also, \(c^{2}=a^{2}+b^{2}=16+4=20\). The vertices are at \(( \pm a, 0)=( \pm 4,0)\), and the foci are at \(( \pm c, 0)=( \pm 2 \sqrt{5}, 0)\).

To locate the points on the graph above and below the foci, let \(x= \pm 2 \sqrt{5}\). Then
\[
\begin{aligned}
\frac{x^{2}}{16}-\frac{y^{2}}{4} & =1 \\
\frac{( \pm 2 \sqrt{5})^{2}}{16}-\frac{y^{2}}{4} & =1 \quad x= \pm 2 \sqrt{5} \\
\frac{20}{16}-\frac{y^{2}}{4} & =1 \\
\frac{5}{4}-\frac{y^{2}}{4} & =1 \\
\frac{y^{2}}{4} & =\frac{1}{4} \\
y & = \pm 1
\end{aligned}
\]

The points above and below the foci are \(( \pm 2 \sqrt{5}, 1)\) and \(( \pm 2 \sqrt{5},-1)\). See Figure 35.

THEOREM

Figure 36
\(\frac{y^{2}}{a^{2}}-\frac{x^{2}}{b^{2}}=1, \quad b^{2}=c^{2}-a^{2}\)

\section*{Equation of a Hyperbola: Center at (0, 0); Transverse Axis along the \(y\)-Axis}

An equation of the hyperbola with center at \((0,0)\), foci at \((0,-c)\) and \((0, c)\), and vertices at \((0,-a)\) and \((0, a)\) is
\[
\begin{equation*}
\frac{y^{2}}{a^{2}}-\frac{x^{2}}{b^{2}}=1, \quad \text { where } b^{2}=c^{2}-a^{2} \tag{3}
\end{equation*}
\]

The transverse axis is the \(y\)-axis.

Figure 36 shows the graph of a typical hyperbola defined by equation (3).
An equation of the form of equation (2), \(\frac{x^{2}}{a^{2}}-\frac{y^{2}}{b^{2}}=1\), is the equation of a hyperbola with center at the origin; foci on the \(x\)-axis at \((-c, 0)\) and \((c, 0)\), where \(b^{2}=c^{2}-a^{2}\left(\right.\) or \(\left.c^{2}=a^{2}+b^{2}\right) ;\) and transverse axis along the \(x\)-axis.

An equation of the form of equation (3), \(\frac{y^{2}}{a^{2}}-\frac{x^{2}}{b^{2}}=1\), is the equation of a hyperbola with center at the origin; foci on the \(y\)-axis at \((0,-c)\) and \((0, c)\), where \(b^{2}=c^{2}-a^{2}\left(\right.\) or \(\left.c^{2}=a^{2}+b^{2}\right) ;\) and transverse axis along the \(y\)-axis.

Notice the difference in the forms of equations (2) and (3). When the \(y^{2}\)-term is subtracted from the \(x^{2}\)-term, the transverse axis is along the \(x\)-axis. When the \(x^{2}\)-term is subtracted from the \(y^{2}\)-term, the transverse axis is along the \(y\)-axis.

\section*{EXAMPLE 3 Analyzing the Equation of a Hyperbola}

Analyze the equation: \(y^{2}-4 x^{2}=4\)
Solution To put the equation in proper form, divide each side by 4 :

Figure 37

\[
\frac{y^{2}}{4}-x^{2}=1
\]

Since the \(x^{2}\)-term is subtracted from the \(y^{2}\)-term, the equation is that of a hyperbola with center at the origin and transverse axis along the \(y\)-axis. Also, comparing the above equation to equation (3), note that \(a^{2}=4, b^{2}=1\), and \(c^{2}=a^{2}+b^{2}=5\). The vertices are at \((0, \pm a)=(0, \pm 2)\), and the foci are at \((0, \pm c)=(0, \pm \sqrt{5})\).

To locate other points on the graph, let \(x= \pm 2\). Then
\[
\begin{aligned}
y^{2}-4 x^{2} & =4 \\
y^{2}-4( \pm 2)^{2} & =4 \quad x= \pm 2 \\
y^{2}-16 & =4 \\
y^{2} & =20 \\
y & = \pm 2 \sqrt{5}
\end{aligned}
\]

Four other points on the graph are \(( \pm 2,2 \sqrt{5})\) and \(( \pm 2,-2 \sqrt{5})\). See Figure 37 .

\section*{EXAMPLE 4}

\section*{Finding an Equation of a Hyperbola}

Find an equation of the hyperbola that has one vertex at \((0,2)\) and foci at \((0,-3)\) and \((0,3)\). Graph the equation.
Solution
Because the foci are at \((0,-3)\) and \((0,3)\), the center of the hyperbola, which is at their midpoint, is the origin. Because the foci lie on the \(y\)-axis, the transverse

Figure 38

axis is along the \(y\)-axis. The given information also reveals that \(c=3, a=2\), and \(b^{2}=c^{2}-a^{2}=9-4=5\). The form of the equation of the hyperbola is given by equation (3):
\[
\begin{aligned}
& \frac{y^{2}}{a^{2}}-\frac{x^{2}}{b^{2}}=1 \\
& \frac{y^{2}}{4}-\frac{x^{2}}{5}=1
\end{aligned}
\]

Let \(y= \pm 3\) to obtain points on the graph on either side of each focus. See Figure 38.
Now Work problem 21
Look at the equations of the hyperbolas in Examples 2 and 4. For the hyperbola in Example 2, \(a^{2}=16\) and \(b^{2}=4\), so \(a>b\); for the hyperbola in Example 4, \(a^{2}=4\) and \(b^{2}=5\), so \(a<b\). This indicates that for hyperbolas, there are no requirements involving the relative sizes of \(a\) and \(b\). Contrast this situation to the case of an ellipse, in which the relative sizes of \(a\) and \(b\) dictate which axis is the major axis. Hyperbolas have another feature to distinguish them from ellipses and parabolas: Hyperbolas have asymptotes.

\section*{2 Find the Asymptotes of a Hyperbola}

Recall from Section 3.4 that a horizontal or oblique asymptote of a graph is a line with the property that the distance from the line to points on the graph approaches 0 as \(x \rightarrow-\infty\) or as \(x \rightarrow \infty\). The asymptotes provide information about the end behavior of the graph of a hyperbola.

\section*{THEOREM}

\section*{Asymptotes of a Hyperbola}

The hyperbola \(\frac{x^{2}}{a^{2}}-\frac{y^{2}}{b^{2}}=1\) has the two oblique asymptotes
\[
\begin{equation*}
y=\frac{b}{a} x \quad \text { and } \quad y=-\frac{b}{a} x \tag{4}
\end{equation*}
\]

Proof Begin by solving for \(y\) in the equation of the hyperbola.
\[
\begin{aligned}
\frac{x^{2}}{a^{2}}-\frac{y^{2}}{b^{2}} & =1 \\
\frac{y^{2}}{b^{2}} & =\frac{x^{2}}{a^{2}}-1 \\
y^{2} & =b^{2}\left(\frac{x^{2}}{a^{2}}-1\right)
\end{aligned}
\]

Because \(x \neq 0\), the right side can be rearranged in the form
\[
\begin{aligned}
y^{2} & =\frac{b^{2} x^{2}}{a^{2}}\left(1-\frac{a^{2}}{x^{2}}\right) \\
y & = \pm \frac{b x}{a} \sqrt{1-\frac{a^{2}}{x^{2}}}
\end{aligned}
\]

Now, as \(x \rightarrow-\infty\) or as \(x \rightarrow \infty\), the term \(\frac{a^{2}}{x^{2}}\) approaches 0 , so the expression under the radical approaches 1 . So, as \(x \rightarrow-\infty\) or as \(x \rightarrow \infty\), the value of \(y\) approaches \(\pm \frac{b x}{a}\); that is, the graph of the hyperbola approaches the lines
\[
y=-\frac{b}{a} x \quad \text { and } \quad y=\frac{b}{a} x
\]

These lines are oblique asymptotes of the hyperbola.

Figure 39
\(\frac{x^{2}}{a^{2}}-\frac{y^{2}}{b^{2}}=1\)

\section*{THEOREM}

The asymptotes of a hyperbola are not part of the hyperbola, but they do serve as a guide for graphing a hyperbola. For example, suppose that we want to graph the equation
\[
\frac{x^{2}}{a^{2}}-\frac{y^{2}}{b^{2}}=1
\]

Begin by plotting the vertices \((-a, 0)\) and \((a, 0)\). Then plot the points \((0,-b)\) and \((0, b)\) and use these four points to construct a rectangle, as shown in Figure 39. The diagonals of this rectangle have slopes \(\frac{b}{a}\) and \(-\frac{b}{a}\), and their extensions are the asymptotes \(y=\frac{b}{a} x\) and \(y=-\frac{b}{a} x\) of the hyperbola. If we graph the asymptotes, we can use them to establish the "opening" of the hyperbola and avoid plotting other points.

\section*{Asymptotes of a Hyperbola}

The hyperbola \(\frac{y^{2}}{a^{2}}-\frac{x^{2}}{b^{2}}=1\) has the two oblique asymptotes
\[
\begin{equation*}
y=\frac{a}{b} x \quad \text { and } \quad y=-\frac{a}{b} x \tag{5}
\end{equation*}
\]

You are asked to prove this result in Problem 84.
For the remainder of this section, the direction "Analyze the equation" will mean to find the center, transverse axis, vertices, foci, and asymptotes of the hyperbola and graph it.

\section*{EXAMPLE 5}

Figure 40

\section*{Analyzing the Equation of a Hyperbola}

Analyze the equation: \(\frac{y^{2}}{4}-x^{2}=1\)
Solution Because the \(x^{2}\)-term is subtracted from the \(y^{2}\)-term, the equation is of the form of equation (3) and is a hyperbola with center at the origin and transverse axis along the \(y\)-axis. Also, comparing this equation to equation (3), note that \(a^{2}=4\), \(b^{2}=1\), and \(c^{2}=a^{2}+b^{2}=5\). The vertices are at \((0, \pm a)=(0, \pm 2)\), and the foci are at \((0, \pm c)=(0, \pm \sqrt{5})\). Using equation (5) with \(a=2\) and \(b=1\), the asymptotes are the lines \(y=\frac{a}{b} x=2 x\) and \(y=-\frac{a}{b} x=-2 x\). Form the rectangle containing the points \((0, \pm a)=(0, \pm 2)\) and \(( \pm b, 0)=( \pm 1,0)\). The extensions of the diagonals of this rectangle are the asymptotes. Now graph the rectangle, the asymptotes, and the hyperbola. See Figure 40.

\section*{EXAMPLE 6}

Solution

\section*{Analyzing the Equation of a Hyperbola}

Analyze the equation: \(9 x^{2}-4 y^{2}=36\)
Divide each side of the equation by 36 to put the equation in proper form.
\[
\frac{x^{2}}{4}-\frac{y^{2}}{9}=1
\]

Now analyze the equation. The center of the hyperbola is the origin. Because the \(x^{2}\)-term is first in the equation, the transverse axis is along the \(x\)-axis, and the vertices and foci will lie on the \(x\)-axis. Using equation (2), note that \(a^{2}=4, b^{2}=9\), and \(c^{2}=a^{2}+b^{2}=13\). The vertices are \(a=2\) units left and right of the center

Figure 41

at \(( \pm a, 0)=( \pm 2,0)\), the foci are \(c=\sqrt{13}\) units left and right of the center at \(( \pm c, 0)=( \pm \sqrt{13}, 0)\), and the asymptotes have the equations
\[
y=\frac{b}{a} x=\frac{3}{2} x \quad \text { and } \quad y=-\frac{b}{a} x=-\frac{3}{2} x
\]

To graph the hyperbola, form the rectangle containing the points \(( \pm a, 0)\) and \((0, \pm b)\), that is, \((-2,0),(2,0),(0,-3)\), and \((0,3)\). The extensions of the diagonals of this rectangle are the asymptotes. See Figure 41 for the graph.

\section*{Now Work problem 31}

\section*{3 Analyze Hyperbolas with Center at ( \(\boldsymbol{h}, \boldsymbol{k}\) )}

If a hyperbola with center at the origin and transverse axis coinciding with a coordinate axis is shifted horizontally \(h\) units and then vertically \(k\) units, the result is a hyperbola with center at \((h, k)\) and transverse axis parallel to a coordinate axis. The equations of such hyperbolas have the same forms as those given in equations (2) and (3), except that \(x\) is replaced by \(x-h\) (the horizontal shift) and \(y\) is replaced by \(y-k\) (the vertical shift). Table 4 gives the forms of the equations of such hyperbolas. See Figure 42 for typical graphs.

Table 4

Figure 42
NOTE it is not recommended that Table 4 be memorized. Rather, use the ideas of transformations (shift horizontally \(h\) units, vertically \(k\) units), along with the fact that a represents the distance from the center to the vertices, c represents the distance from the center to the foci, and \(b^{2}=c^{2}-a^{2}\left(\right.\) or \(\left.c^{2}=a^{2}+b^{2}\right)\).

(a) \(\frac{(x-h)^{2}}{a^{2}}-\frac{(y-k)^{2}}{b^{2}}=1\)

(b) \(\frac{(y-k)^{2}}{a^{2}}-\frac{(x-h)^{2}}{b^{2}}=1\)

\section*{EXAMPLE 7}

Solution

\section*{Finding an Equation of a Hyperbola, Center Not at the Origin}

Find an equation for the hyperbola with center at \((1,-2)\), one focus at \((4,-2)\), and one vertex at \((3,-2)\). Graph the equation.
The center is at \((h, k)=(1,-2)\), so \(h=1\) and \(k=-2\). Because the center, focus, and vertex all lie on the line \(y=-2\), the transverse axis is parallel to the \(x\)-axis. The distance from the center \((1,-2)\) to the focus \((4,-2)\) is \(c=3\); the distance from

\section*{EXAMPLE 8}

\section*{Solution}

Figure 44

the center \((1,-2)\) to the vertex \((3,-2)\) is \(a=2\). Then \(b^{2}=c^{2}-a^{2}=9-4=5\). The equation is
\[
\begin{aligned}
& \frac{(x-h)^{2}}{a^{2}}-\frac{(y-k)^{2}}{b^{2}}=1 \\
& \frac{(x-1)^{2}}{4}-\frac{(y+2)^{2}}{5}=1
\end{aligned}
\]

See Figure 43.

NHOW WOMK problem 41

\section*{Analyzing the Equation of a Hyperbola}

Analyze the equation: \(-x^{2}+4 y^{2}-2 x-16 y+11=0\)
Complete the squares in \(x\) and in \(y\).
\[
\begin{aligned}
-x^{2}+4 y^{2}-2 x-16 y+11 & =0 & & \\
-\left(x^{2}+2 x\right)+4\left(y^{2}-4 y\right) & =-11 & & \text { Group terms. } \\
-\left(x^{2}+2 x+1\right)+4\left(y^{2}-4 y+4\right) & =-11-1+16 & & \text { Complete each square. } \\
-(x+1)^{2}+4(y-2)^{2} & =4 & & \text { Factor. } \\
(y-2)^{2}-\frac{(x+1)^{2}}{4} & =1 & & \text { Divide each side by } 4 .
\end{aligned}
\]

This is the equation of a hyperbola with center at \((-1,2)\) and transverse axis parallel to the \(y\)-axis. Also, \(a^{2}=1\) and \(b^{2}=4\), so \(c^{2}=a^{2}+b^{2}=5\). Because the transverse axis is parallel to the \(y\)-axis, the vertices and foci are located \(a\) and \(c\) units above and below the center, respectively. The vertices are at \((h, k \pm a)=(-1,2 \pm 1)\), or \((-1,1)\) and \((-1,3)\). The foci are at \((h, k \pm c)=(-1,2 \pm \sqrt{ } 5)\). The asymptotes are \(y-2=\frac{1}{2}(x+1)\) and \(y-2=-\frac{1}{2}(x+1)\). Figure 44 shows the graph.

\section*{Now Work problem 55}

\section*{4 Solve Applied Problems Involving Hyperbolas}

Figure 45

Look at Figure 45. Suppose that three microphones are located at points \(O_{1}, O_{2}\), and \(O_{3}\) (the foci of the two hyperbolas). In addition, suppose that a gun is fired at \(S\), and the microphone at \(O_{1}\) records the gunshot 1 second after the microphone at \(O_{2}\). Because sound travels at about 1100 feet per second, we conclude that the microphone at \(O_{1}\) is 1100 feet farther from the gunshot than \(O_{2}\). We can model this situation by saying that \(S\) lies on a branch of a hyperbola with foci at \(O_{1}\) and \(O_{2}\). (Do you see why? The difference of the distances from \(S\) to \(O_{1}\) and from \(S\) to \(O_{2}\) is the constant 1100.) If the third microphone, at \(O_{3}\), records the gunshot 2 seconds after \(O_{1}\), then \(S\) lies on a branch of a second hyperbola with foci at \(O_{1}\) and \(O_{3}\). In this case, the constant difference is 2200 . The intersection of the two hyperbolas identifies the location of \(S\).

\section*{EXAMPLE 9}

\section*{Lightning Strikes}

Suppose that two people standing 1 mile apart both see a flash of lightning. After a period of time, the person standing at point \(A\) hears the thunder. One second later, the person standing at point \(B\) hears the thunder. If the person at \(B\) is due west of the person at \(A\), and the lightning strike is known to occur due north of the person standing at point \(A\), where did the lightning strike occur?

\section*{Solution}

See Figure 46, in which the ordered pair \((x, y)\) represents the location of the lightning strike. Sound travels at 1100 feet per second, so the person at point \(A\) is 1100 feet closer to the lightning strike than the person at point \(B\). Since the difference of the distance from \((x, y)\) to \(B\) and the distance from \((x, y)\) to \(A\) is the constant 1100, the point \((x, y)\) lies on a hyperbola whose foci are at \(A\) and \(B\).

\section*{Figure 46}

An equation of the hyperbola is
\[
\frac{x^{2}}{a^{2}}-\frac{y^{2}}{b^{2}}=1
\]
where \(2 a=1100\), so \(a=550\).
Because the distance between the two people is 1 mile ( 5280 feet) and each person is at a focus of the hyperbola, this means
\[
\begin{aligned}
2 c & =5280 \\
c & =\frac{5280}{2}=2640
\end{aligned}
\]

Because \(b^{2}=c^{2}-a^{2}=2640^{2}-550^{2}=6,667,100\), the equation of the hyperbola that describes the location of the lightning strike is
\[
\frac{x^{2}}{550^{2}}-\frac{y^{2}}{6,667,100}=1
\]

Refer to Figure 46. Because the lightning strike occurred due north of the individual at the point \(A=(2640,0)\), let \(x=2640\) and solve the resulting equation.
\[
\begin{aligned}
\frac{2640^{2}}{550^{2}}-\frac{y^{2}}{6,667,100} & =1 & & \\
-\frac{y^{2}}{6,667,100} & =-22.04 & & \text { Subtract } \frac{2640^{2}}{550^{2}} \text { from both sides. } \\
y^{2} & =146,942,884 & & \text { Multiply both sides by }-6,667,100 . \\
y & =12,122 & & \begin{array}{l}
y>\text { O since the lightning strike } \\
\text { occurred in quadrant I. }
\end{array}
\end{aligned}
\]

Check: The difference between the distance from \((2640,12,122)\) to the person at the point \(B=(-2640,0)\) and the distance from \((2640,12,122)\) to the person at the point \(A=(2640,0)\) should be 1100 . From the distance formula, the difference in the distances is
\[
\sqrt{[2640-(-2640)]^{2}+(12,122-0)^{2}}-\sqrt{(2640-2640)^{2}+(12,122-0)^{2}}=1100
\]
as required.
The lightning strike occurred 12,122 feet north of the person standing at point \(A\).

\subsection*{9.4 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. The distance \(d\) from \(P_{1}=(3,-4)\) to \(P_{2}=(-2,1)\) is \(d=\) \(\qquad\) . (p. 3)
2. To complete the square of \(x^{2}+5 x\), add \(\qquad\) (pp. A38-A39)
3. Find the intercepts of the equation \(y^{2}=9+4 x^{2}\). (p. 12)
4. True or False The equation \(y^{2}=9+x^{2}\) is symmetric with respect to the \(x\)-axis, the \(y\)-axis, and the origin. (pp. 12-14)
5. To graph \(y=(x-5)^{3}-4\), shift the graph of \(y=x^{3}\) to the (left/right) \(\qquad\) unit(s) and then (up/down) \(\qquad\) unit(s) (pp. 89-91)
6. Find the vertical asymptotes, if any, and the horizontal or oblique asymptote, if any, of \(y=\frac{x^{2}-9}{x^{2}-4}\). (pp. 236-239)

\section*{Concepts and Vocabulary}
7. \(\mathrm{A}(\mathrm{n})\) \(\qquad\) is the collection of points in the plane the difference of whose distances from two fixed points is a constant.
8. For a hyperbola, the foci lie on a line called the \(\qquad\)
9. The equation of the hyperbola is of the form
(a) \(\frac{(x-h)^{2}}{a^{2}}-\frac{(y-k)^{2}}{b^{2}}=1\)
(b) \(\frac{(y-k)^{2}}{a^{2}}-\frac{(x-h)^{2}}{b^{2}}=1\)
10. If the center of the hyperbola is \((2,1)\) and \(a=3\), then the coordinates of the vertices are \(\qquad\) and \(\qquad\) -.
11. If the center of the hyperbola is \((2,1)\) and \(c=5\), then the coordinates of the foci are \(\qquad\) and \(\qquad\) .
12. In a hyperbola, if \(a=3\) and \(c=5\), then \(b=\) _.
13. For the hyperbola \(\frac{x^{2}}{4}-\frac{y^{2}}{9}=1\), the value of \(a\) is __, the value of \(b\) is \(\qquad\) , and the transverse axis is the \(\qquad\) -axis.
14. For the hyperbola \(\frac{y^{2}}{16}-\frac{x^{2}}{81}=1\), the asymptotes are
\(\qquad\) and \(\qquad\) _.

\section*{Skill Building}

In Problems 15-18, the graph of a hyperbola is given. Match each graph to its equation.
(A) \(\frac{x^{2}}{4}-y^{2}=1\)
(B) \(x^{2}-\frac{y^{2}}{4}=1\)
(C) \(\frac{y^{2}}{4}-x^{2}=1\)
(D) \(y^{2}-\frac{x^{2}}{4}=1\)
15.

16.

17.

18.

In Problems 19-28, find an equation for the hyperbola described. Graph the equation.
19. Center at \((0,0)\); focus at \((3,0)\); vertex at \((1,0)\)
21. Center at \((0,0)\); focus at \((0,-6)\); vertex at \((0,4)\)
23. Foci at \((-5,0)\) and \((5,0)\); vertex at \((3,0)\)
25. Vertices at \((0,-6)\) and \((0,6)\); asymptote the line \(y=2 x\)
27. Foci at \((-4,0)\) and \((4,0)\); asymptote the line \(y=-x\)
20. Center at \((0,0)\); focus at \((0,5)\); vertex at \((0,3)\)
22. Center at \((0,0)\); focus at \((-3,0)\); vertex at \((2,0)\)
24. Focus at \((0,6)\); vertices at \((0,-2)\) and \((0,2)\)
26. Vertices at \((-4,0)\) and \((4,0)\); asymptote the line \(y=2 x\)
28. Foci at \((0,-2)\) and \((0,2)\); asymptote the line \(y=-x\)

In Problems 29-36, find the center, transverse axis, vertices, foci, and asymptotes. Graph each equation.
29. \(\frac{x^{2}}{25}-\frac{y^{2}}{9}=1\)
30. \(\frac{y^{2}}{16}-\frac{x^{2}}{4}=1\)
31. \(4 x^{2}-y^{2}=16\)
32. \(4 y^{2}-x^{2}=16\)
33. \(y^{2}-9 x^{2}=9\)
34. \(x^{2}-y^{2}=4\)
35. \(y^{2}-x^{2}=25\)
36. \(2 x^{2}-y^{2}=4\)

In Problems 37-40, write an equation for each hyperbola.
37.

38.

39.

40.

In Problems 41-48, find an equation for the hyperbola described. Graph the equation.
41. Center at \((4,-1)\); focus at \((7,-1)\); vertex at \((6,-1)\)
43. Center at \((-3,-4)\); focus at \((-3,-8)\); vertex at \((-3,-2)\)
45. Foci at \((3,7)\) and \((7,7)\); vertex at \((6,7)\)
47. Vertices at \((-1,-1)\) and \((3,-1)\); asymptote the line \(y+1=\frac{3}{2}(x-1)\)
42. Center at \((-3,1)\); focus at \((-3,6)\); vertex at \((-3,4)\)
44. Center at \((1,4)\); focus at \((-2,4)\); vertex at \((0,4)\)
46. Focus at \((-4,0)\); vertices at \((-4,4)\) and \((-4,2)\)
48. Vertices at \((1,-3)\) and \((1,1)\); asymptote the line \(y+1=\frac{3}{2}(x-1)\)

In Problems 49-62, find the center, transverse axis, vertices, foci, and asymptotes. Graph each equation.
49. \(\frac{(x-2)^{2}}{4}-\frac{(y+3)^{2}}{9}=1\)
50. \(\frac{(y+3)^{2}}{4}-\frac{(x-2)^{2}}{9}=1\)
51. \((y-2)^{2}-4(x+2)^{2}=4\)
52. \((x+4)^{2}-9(y-3)^{2}=9\)
53. \((x+1)^{2}-(y+2)^{2}=4\)
54. \((y-3)^{2}-(x+2)^{2}=4\)
55. \(x^{2}-y^{2}-2 x-2 y-1=0\)
56. \(y^{2}-x^{2}-4 y+4 x-1=0\)
57. \(y^{2}-4 x^{2}-4 y-8 x-4=0\)
58. \(2 x^{2}-y^{2}+4 x+4 y-4=0\)
59. \(4 x^{2}-y^{2}-24 x-4 y+16=0\)
60. \(2 y^{2}-x^{2}+2 x+8 y+3=0\)
61. \(y^{2}-4 x^{2}-16 x-2 y-19=0\)
62. \(x^{2}-3 y^{2}+8 x-6 y+4=0\)

In Problems 63-66, graph each function. Be sure to label any intercepts. [Hint: Notice that each function is half a hyperbola.]
63. \(f(x)=\sqrt{16+4 x^{2}}\)
64. \(f(x)=-\sqrt{9+9 x^{2}}\)
65. \(f(x)=-\sqrt{-25+x^{2}}\)
66. \(f(x)=\sqrt{-1+x^{2}}\)

\section*{Mixed Practice}

In Problems 67-74, analyze each conic.
67. \(\frac{(x-3)^{2}}{4}-\frac{y^{2}}{25}=1\)
68. \(\frac{(y+2)^{2}}{16}-\frac{(x-2)^{2}}{4}=1\)
69. \(x^{2}=16(y-3)\)
70. \(y^{2}=-12(x+1)\)
71. \(25 x^{2}+9 y^{2}-250 x+400=0\)
73. \(x^{2}-6 x-8 y-31=0\)
74. \(9 x^{2}-y^{2}-18 x-8 y-88=0\)

\section*{Applications and Extensions}
75. Fireworks Display Suppose that two people standing 2 miles apart both see the burst from a fireworks display. After a period of time the first person, standing at point \(A\), hears the burst. One second later the second person, standing at point \(B\), hears the burst. If the person at point \(B\) is due west of the person at point \(A\), and if the display is known to occur due north of the person at point \(A\), where did the fireworks display occur?
76. Lightning Strikes Suppose that two people standing 1 mile apart both see a flash of lightning. After a period of time
the first person, standing at point \(A\), hears the thunder. Two seconds later the second person, standing at point \(B\), hears the thunder. If the person at point \(B\) is due west of the person at point \(A\), and if the lightning strike is known to occur due north of the person standing at point \(A\), where did the lightning strike occur?
77. Nuclear Power Plant Some nuclear power plants utilize "natural draft" cooling towers in the shape of a hyperboloid, a solid obtained by rotating a hyperbola about its conjugate axis. Suppose that such a cooling tower has a base diameter
of 400 feet and the diameter at its narrowest point, 360 feet above the ground, is 200 feet. If the diameter at the top of the tower is 300 feet, how tall is the tower?

\section*{Source: Bay Area Air Quality Management District}
78. An Explosion Two recording devices are set 2400 feet apart, with the device at point \(A\) to the west of the device at point \(B\). At a point between the devices, 300 feet from point \(B\), a small amount of explosive is detonated. The recording devices record the time until the sound reaches each. How far directly north of point \(B\) should a second explosion be done so that the measured time difference recorded by the devices is the same as that for the first detonation?
79. Rutherford's Experiment In May 1911, Ernest Rutherford published a paper in Philosophical Magazine. In this article, he described the motion of alpha particles as they are shot at a piece of gold foil 0.00004 cm thick. Before conducting this experiment, Rutherford expected that the alpha particles would shoot through the foil just as a bullet would shoot through snow. Instead, a small fraction of the alpha particles bounced off the foil. This led to the conclusion that the nucleus of an atom is dense, while the remainder of the atom is sparse. Only the density of the nucleus could cause the alpha particles to deviate from their path. The figure shows a diagram from Rutherford's paper that indicates that the deflected alpha particles follow the path of one branch of a hyperbola.

(a) Find an equation of the asymptotes under this scenario.
(b) If the vertex of the path of the alpha particles is 10 cm from the center of the hyperbola, find a model that describes the path of the particle.
80. Hyperbolic Mirrors Hyperbolas have interesting reflective properties that make them useful for lenses and mirrors. For example, if a ray of light strikes a convex hyperbolic mirror on a line that would (theoretically) pass through its rear focus, it is reflected through the front focus. This property, and that of the parabola, were used to develop the Cassegrain telescope in 1672. The focus of the parabolic mirror and the rear focus of the hyperbolic mirror are the
same point. The rays are collected by the parabolic mirror, reflected toward the (common) focus, and thus are reflected by the hyperbolic mirror through the opening to its front focus, where the eyepiece is located. If the equation of the hyperbola is \(\frac{y^{2}}{9}-\frac{x^{2}}{16}=1\) and the focal length (distance from the vertex to the focus) of the parabola is 6 , find the equation of the parabola.

\section*{Source: www.enchantedlearning.com}
81. The eccentricity \(e\) of a hyperbola is defined as the number \(\frac{c}{a}\), where \(a\) is the distance of a vertex from the center, and \(c\) is the distance of a focus from the center. Because \(c>a\), it follows that \(e>1\). Describe the general shape of a hyperbola whose eccentricity is close to 1 . What is the shape if \(e\) is very large?
82. A hyperbola for which \(a=b\) is called an equilateral hyperbola. Find the eccentricity \(e\) of an equilateral hyperbola.
[Note: The eccentricity of a hyperbola is defined in Problem 81.]
83. Two hyperbolas that have the same set of asymptotes are called conjugate. Show that the hyperbolas
\[
\frac{x^{2}}{4}-y^{2}=1 \quad \text { and } \quad y^{2}-\frac{x^{2}}{4}=1
\]
are conjugate. Graph each hyperbola on the same set of coordinate axes.
84. Prove that the hyperbola
\[
\frac{y^{2}}{a^{2}}-\frac{x^{2}}{b^{2}}=1
\]
has the two oblique asymptotes
\[
y=\frac{a}{b} x \quad \text { and } \quad y=-\frac{a}{b} x
\]
85. Show that the graph of an equation of the form
\[
A x^{2}+C y^{2}+F=0 \quad A \neq 0, C \neq 0, F \neq 0
\]
where \(A\) and \(C\) are opposite in sign, is a hyperbola with center at \((0,0)\).
86. Show that the graph of an equation of the form
\[
A x^{2}+C y^{2}+D x+E y+F=0 \quad A \neq 0, C \neq 0
\]
where \(A\) and \(C\) are opposite in sign,
(a) is a hyperbola if \(\frac{D^{2}}{4 A}+\frac{E^{2}}{4 C}-F \neq 0\).
(b) is two intersecting lines if \(\frac{D^{2}}{4 A}+\frac{E^{2}}{4 C}-F=0\).

\section*{Retain Your Knowledge}

Problems 87-90 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
87. For \(y=\frac{3}{2} \cos (6 x+3 \pi)\), find the amplitude, period, and phase shift. Then graph the function, showing at least two periods.
88. Solve the triangle described: \(a=7, b=10\), and \(C=100^{\circ}\).
89. Find the rectangular coordinates of the point with the polar coordinates \(\left(12,-\frac{\pi}{3}\right)\).
90. Transform the polar equation \(r=6 \sin \theta\) to an equation in rectangular coordinates. Then identify and graph the equation.

\section*{'Are You Prepared?' Answers}
1. \(5 \sqrt{2}\)
2. \(\frac{25}{4}\)
3. \((0,-3),(0,3)\)

5. right; 5; down; 4
6. Vertical: \(x=-2, x=2\); horizontal: \(y=1\)

\subsection*{9.5 Rotation of Axes; General Form of a Conic}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Sum Formulas for Sine and Cosine (Section 6.5, pp. 499 and 502)
- Half-angle Formulas for Sine and Cosine (Section 6.6, p. 515)

Now Work the 'Are You Prepared?' problems on page 698.
OBJECTIVES 1 Identify a Conic (p.692)
2 Use a Rotation of Axes to Transform Equations (p. 693)
3 Analyze an Equation Using a Rotation of Axes (p. 695)
4 Identify Conics without a Rotation of Axes (p. 697)

In this section, we show that the graph of a general second-degree polynomial containing two variables \(x\) and \(y\)-that is, an equation of the form
\[
\begin{equation*}
A x^{2}+B x y+C y^{2}+D x+E y+F=0 \tag{1}
\end{equation*}
\]
where \(A, B\), and \(C\) are not simultaneously 0 -is a conic. We shall not concern ourselves here with the degenerate cases of equation (1), such as \(x^{2}+y^{2}=0\), whose graph is a single point \((0,0)\); or \(x^{2}+3 y^{2}+3=0\), whose graph contains no points; or \(x^{2}-4 y^{2}=0\), whose graph is two lines, \(x-2 y=0\) and \(x+2 y=0\).

We begin with the case where \(B=0\). In this case, the term containing \(x y\) is not present, so equation (1) has the form
\[
A x^{2}+C y^{2}+D x+E y+F=0
\]
where either \(A \neq 0\) or \(C \neq 0\).

\section*{1 Identify a Conic}

We have already discussed the procedure for identifying the graph of this kind of equation; complete the squares of the quadratic expressions in \(x\) or \(y\), or both. Once this has been done, the conic can be identified by comparing it to one of the forms studied in Sections 9.2 through 9.4.

In fact, though, the conic can be identified directly from the equation without completing the squares.

\section*{THEOREM}

\section*{Identifying Conics without Completing the Squares}

Excluding degenerate cases, the equation
\[
\begin{equation*}
A x^{2}+C y^{2}+D x+E y+F=0 \tag{2}
\end{equation*}
\]
where \(A\) and \(C\) cannot both equal zero:
(a) Defines a parabola if \(A C=0\).
(b) Defines an ellipse (or a circle) if \(A C>0\).
(c) Defines a hyperbola if \(A C<0\).

\section*{Proof}
(a) If \(A C=0\), then either \(A=0\) or \(C=0\), but not both, so the form of equation (2) is either
\[
A x^{2}+D x+E y+F=0, \quad A \neq 0
\]
or
\[
C y^{2}+D x+E y+F=0, \quad C \neq 0
\]

Using the results of Problems 78 and 79 in Exercise 9.2, it follows that, except for the degenerate cases, the equation is a parabola.
(b) If \(A C>0\), then \(A\) and \(C\) are of the same sign. Using the results of Problem 87 in Exercise 9.3, except for the degenerate cases, the equation is an ellipse.
(c) If \(A C<0\), then \(A\) and \(C\) are of opposite signs. Using the results of Problem 86 in Exercise 9.4, except for the degenerate cases, the equation is a hyperbola.

We will not be concerned with the degenerate cases of equation (2). However, in practice, you should be alert to the possibility of degeneracy.

\section*{EXAMPLE I Identifying a Conic without Completing the Squares}

Identify the graph of each equation without completing the squares.
(a) \(3 x^{2}+6 y^{2}+6 x-12 y=0\)
(b) \(2 x^{2}-3 y^{2}+6 y+4=0\)
(c) \(y^{2}-2 x+4=0\)

Solution (a) Compare the given equation to equation (2) and conclude that \(A=3\) and \(C=6\). Since \(A C=18>0\), the equation defines an ellipse.
(b) Here \(A=2\) and \(C=-3\), so \(A C=-6<0\). The equation defines a hyperbola.
(c) Here \(A=0\) and \(C=1\), so \(A C=0\). The equation defines a parabola.
an Now Work problem 11
Although we can now identify the type of conic represented by any equation of the form of equation (2) without completing the squares, we still need to complete the squares if we desire additional information about the conic, such as its graph.

\section*{2 Use a Rotation of Axes to Transform Equations}

Now let's turn our attention to equations of the form of equation (1), where \(B \neq 0\). To discuss this case, we introduce a new procedure: rotation of axes.

In a rotation of axes, the origin remains fixed while the \(x\)-axis and \(y\)-axis are rotated through an angle \(\theta\) to a new position; the new positions of the \(x\)-axis and the \(y\)-axis are denoted by \(x^{\prime}\) and \(y^{\prime}\), respectively, as shown in Figure 47(a).

Now look at Figure 47(b). There the point \(P\) has the coordinates \((x, y)\) relative to the \(x y\)-plane, while the same point \(P\) has coordinates \(\left(x^{\prime}, y^{\prime}\right)\) relative to the \(x^{\prime} y^{\prime}\)-plane. We seek relationships that will enable us to express \(x\) and \(y\) in terms of \(x^{\prime}, y^{\prime}\), and \(\theta\).

As Figure 47(b) shows, \(r\) denotes the distance from the origin \(O\) to the point \(P\), and \(\alpha\) denotes the angle between the positive \(x^{\prime}\)-axis and the ray from \(O\) through \(P\). Then, using the definitions of sine and cosine, we have
\[
\begin{align*}
x^{\prime} & =r \cos \alpha & y^{\prime} & =r \sin \alpha  \tag{3}\\
x & =r \cos (\theta+\alpha) & y & =r \sin (\theta+\alpha) \tag{4}
\end{align*}
\]

Now
\[
\begin{array}{rlrl}
x & =r \cos (\theta+\alpha) & \\
& =r(\cos \theta \cos \alpha-\sin \theta \sin \alpha) & & \\
& =(r \cos \alpha)(\cos \theta)-(r \sin \alpha)(\sin \theta) \\
& =x^{\prime} \cos \theta-y^{\prime} \sin \theta & \text { By equation (3) }
\end{array}
\]

Similarly,
\[
\begin{aligned}
y & =r \sin (\theta+\alpha) & & \\
& =r(\sin \theta \cos \alpha+\cos \theta \sin \alpha) & & \text { Apply the Sum Formula for sine. } \\
& =x^{\prime} \sin \theta+y^{\prime} \cos \theta & & \text { By equation (3) }
\end{aligned}
\]

\section*{THEOREM}

\section*{Rotation Formulas}

If the \(x\) - and \(y\)-axes are rotated through an angle \(\theta\), the coordinates \((x, y)\) of a point \(P\) relative to the \(x y\)-plane and the coordinates \(\left(x^{\prime}, y^{\prime}\right)\) of the same point relative to the new \(x^{\prime}\) - and \(y^{\prime}\)-axes are related by the formulas
\[
x=x^{\prime} \cos \theta-y^{\prime} \sin \theta \quad y=x^{\prime} \sin \theta+y^{\prime} \cos \theta
\]

\section*{EXAMPLE 2 Rotating Axes}

Express the equation \(x y=1\) in terms of new \(x^{\prime} y^{\prime}\)-coordinates by rotating the axes through a \(45^{\circ}\) angle. Discuss the new equation.

Solution

Figure 48

Let \(\theta=45^{\circ}\) in equation (5). Then
\[
\begin{aligned}
& x=x^{\prime} \cos 45^{\circ}-y^{\prime} \sin 45^{\circ}=x^{\prime} \frac{\sqrt{2}}{2}-y^{\prime} \frac{\sqrt{2}}{2}=\frac{\sqrt{2}}{2}\left(x^{\prime}-y^{\prime}\right) \\
& y=x^{\prime} \sin 45^{\circ}+y^{\prime} \cos 45^{\circ}=x^{\prime} \frac{\sqrt{2}}{2}+y^{\prime} \frac{\sqrt{2}}{2}=\frac{\sqrt{2}}{2}\left(x^{\prime}+y^{\prime}\right)
\end{aligned}
\]

Substituting these expressions for \(x\) and \(y\) in \(x y=1\) gives
\[
\begin{aligned}
{\left[\frac{\sqrt{2}}{2}\left(x^{\prime}-y^{\prime}\right)\right]\left[\frac{\sqrt{2}}{2}\left(x^{\prime}+y^{\prime}\right)\right] } & =1 \\
\frac{1}{2}\left(x^{\prime 2}-y^{\prime 2}\right) & =1 \\
\frac{x^{\prime 2}}{2}-\frac{y^{\prime 2}}{2} & =1
\end{aligned}
\]

This is the equation of a hyperbola with center at \((0,0)\) and transverse axis along the \(x^{\prime}\)-axis. The vertices are at \(( \pm \sqrt{2}, 0)\) on the \(x^{\prime}\)-axis; the asymptotes are \(y^{\prime}=x^{\prime}\) and \(y^{\prime}=-x^{\prime}\) (which correspond to the original \(x\) - and \(y\)-axes). See Figure 48 for the graph.

As Example 2 illustrates, a rotation of axes through an appropriate angle can transform a second-degree equation in \(x\) and \(y\) containing an \(x y\)-term into one in \(x^{\prime}\) and \(y^{\prime}\) in which no \(x^{\prime} y^{\prime}\)-term appears. In fact, we will show that a rotation of axes through an appropriate angle transforms any equation of the form of equation (1) into an equation in \(x^{\prime}\) and \(y^{\prime}\) without an \(x^{\prime} y^{\prime}\)-term.

To find the formula for choosing an appropriate angle \(\theta\) through which to rotate the axes, begin with equation (1),
\[
A x^{2}+B x y+C y^{2}+D x+E y+F=0 \quad B \neq 0
\]

Next rotate through an angle \(\theta\) using the rotation formulas (5).
\[
\begin{aligned}
A\left(x^{\prime} \cos \theta-y^{\prime} \sin \theta\right)^{2} & +B\left(x^{\prime} \cos \theta-y^{\prime} \sin \theta\right)\left(x^{\prime} \sin \theta+y^{\prime} \cos \theta\right) \\
& +C\left(x^{\prime} \sin \theta+y^{\prime} \cos \theta\right)^{2}+D\left(x^{\prime} \cos \theta-y^{\prime} \sin \theta\right) \\
& +E\left(x^{\prime} \sin \theta+y^{\prime} \cos \theta\right)+F=0
\end{aligned}
\]

Expanding and collecting like terms gives
\[
\begin{align*}
\left(A \cos ^{2} \theta+B \sin \theta \cos \theta+C \sin ^{2} \theta\right) x^{\prime 2} & +\left[B\left(\cos ^{2} \theta-\sin ^{2} \theta\right)+2(C-A)(\sin \theta \cos \theta)\right] x^{\prime} y^{\prime} \\
& +\left(A \sin ^{2} \theta-B \sin \theta \cos \theta+C \cos ^{2} \theta\right) y^{\prime 2} \\
& +(D \cos \theta+E \sin \theta) x^{\prime} \\
& +(-D \sin \theta+E \cos \theta) y^{\prime}+F=0 \tag{6}
\end{align*}
\]

In equation (6), the coefficient of \(x^{\prime} y^{\prime}\) is
\[
B\left(\cos ^{2} \theta-\sin ^{2} \theta\right)+2(C-A)(\sin \theta \cos \theta)
\]

\section*{THEOREM}

WARNING Be careful if you use a calculator to solve equation (7).
1. If \(\cot (2 \theta)=0\), then \(2 \theta=90^{\circ}\) and \(\theta=45^{\circ}\)
2. If \(\cot (2 \theta) \neq 0\), first find \(\cos (2 \theta)\). Then use the inverse cosine function key(s) to obtain \(2 \theta, 0^{\circ}<2 \theta<180^{\circ}\). Finally, divide by 2 to obtain the correct acute angle \(\theta\).

Because we want to eliminate the \(x^{\prime} y^{\prime}\)-term, we select an angle \(\theta\) so that this coefficient is 0 .
\[
\begin{aligned}
B\left(\cos ^{2} \theta-\sin ^{2} \theta\right)+2(C-A)(\sin \theta \cos \theta) & =0 \\
B \cos (2 \theta)+(C-A) \sin (2 \theta) & =0 \\
B \cos (2 \theta) & =(A-C) \sin (2 \theta) \\
\cot (2 \theta) & =\frac{A-C}{B} \quad B \neq 0
\end{aligned}
\]

Double-angle
Formulas

To transform the equation
\[
A x^{2}+B x y+C y^{2}+D x+E y+F=0 \quad B \neq 0
\]
into an equation in \(x^{\prime}\) and \(y^{\prime}\) without an \(x^{\prime} y^{\prime}\)-term, rotate the axes through an angle \(\theta\) that satisfies the equation
\[
\begin{equation*}
\cot (2 \theta)=\frac{A-C}{B} \tag{7}
\end{equation*}
\]

Equation (7) has an infinite number of solutions for \(\theta\). We shall adopt the convention of choosing the acute angle \(\theta\) that satisfies (7). There are two possibilities:

If \(\cot (2 \theta) \geq 0\), then \(0^{\circ}<2 \theta \leq 90^{\circ}\), so \(0^{\circ}<\theta \leq 45^{\circ}\).
If \(\cot (2 \theta)<0\), then \(90^{\circ}<2 \theta<180^{\circ}\), so \(45^{\circ}<\theta<90^{\circ}\).
Each of these results in a counterclockwise rotation of the axes through an acute angle \(\theta\).*

\section*{3 Analyze an Equation Using a Rotation of Axes}

For the remainder of this section, the direction "Analyze the equation" will mean to transform the given equation so that it contains no \(x y\)-term and to graph the equation.

\section*{EXAMPLE 3}

Solution

\section*{Analyzing an Equation Using a Rotation of Axes}

Analyze the equation: \(x^{2}+\sqrt{3} x y+2 y^{2}-10=0\)
Because an \(x y\)-term is present, the axes must be rotated. Using \(A=1, B=\sqrt{3}\), and \(C=2\) in equation (7), the appropriate acute angle \(\theta\) through which to rotate the axes satisfies the equation
\[
\cot (2 \theta)=\frac{A-C}{B}=\frac{-1}{\sqrt{3}}=-\frac{\sqrt{3}}{3} \quad 0^{\circ}<2 \theta<180^{\circ}
\]

Because \(\cot (2 \theta)=-\frac{\sqrt{3}}{3}\), this means \(2 \theta=120^{\circ}\), so \(\theta=60^{\circ}\). Using \(\theta=60^{\circ}\) in the rotation formulas (5) yields
\[
\begin{aligned}
& x=x^{\prime} \cos 60^{\circ}-y^{\prime} \sin 60^{\circ}=\frac{1}{2} x^{\prime}-\frac{\sqrt{3}}{2} y^{\prime}=\frac{1}{2}\left(x^{\prime}-\sqrt{3} y^{\prime}\right) \\
& y=x^{\prime} \sin 60^{\circ}+y^{\prime} \cos 60^{\circ}=\frac{\sqrt{3}}{2} x^{\prime}+\frac{1}{2} y^{\prime}=\frac{1}{2}\left(\sqrt{3} x^{\prime}+y^{\prime}\right)
\end{aligned}
\]
*Any rotation through an angle \(\theta\) that satisfies \(\cot (2 \theta)=\frac{A-C}{B}\) eliminates the \(x^{\prime} y^{\prime}\)-term. However, the final form of the transformed equation may be different (but equivalent), depending on the angle chosen.

Substituting these values into the original equation and simplifying give
\[
\begin{aligned}
x^{2}+\sqrt{3} x y+2 y^{2}-10 & =0 \\
\frac{1}{4}\left(x^{\prime}-\sqrt{3} y^{\prime}\right)^{2}+\sqrt{3}\left[\frac{1}{2}\left(x^{\prime}-\sqrt{3} y^{\prime}\right)\right]\left[\frac{1}{2}\left(\sqrt{3} x^{\prime}+y^{\prime}\right)\right]+2\left[\frac{1}{4}\left(\sqrt{3} x^{\prime}+y^{\prime}\right)^{2}\right] & =10
\end{aligned}
\]

Multiply both sides by 4 and expand to obtain

Figure 49
\[
x^{\prime 2}-2 \sqrt{3} x^{\prime} y^{\prime}+3 y^{\prime 2}+\sqrt{3}\left(\sqrt{3} x^{\prime 2}-2 x^{\prime} y^{\prime}-\sqrt{3} y^{\prime 2}\right)+2\left(3 x^{\prime 2}+2 \sqrt{3} x^{\prime} y^{\prime}+y^{\prime 2}\right)=40
\]

\[
10 x^{\prime 2}+2 y^{\prime 2}=40
\]
\[
\frac{x^{\prime 2}}{4}+\frac{y^{\prime 2}}{20}=1
\]

This is the equation of an ellipse with center at \((0,0)\) and major axis along the \(y^{\prime}\)-axis. The vertices are at \((0, \pm 2 \sqrt{5})\) on the \(y^{\prime}\)-axis. See Figure 49 for the graph.

Now Work problem 31
In Example 3, the acute angle \(\theta\) through which to rotate the axes was easy to find because of the numbers used in the given equation. In general, the equation \(\cot (2 \theta)=\frac{A-C}{B}\) will not have such a "nice" solution. As the next example shows, we can still find the appropriate rotation formulas without using a calculator approximation by applying Half-angle Formulas.

\section*{EXAMPLE 4}

Solution Letting \(A=4, B=-4\), and \(C=1\) in equation (7), the appropriate angle \(\theta\) through which to rotate the axes satisfies
\[
\cot (2 \theta)=\frac{A-C}{B}=\frac{3}{-4}=-\frac{3}{4}
\]

To use the rotation formulas (5), we need to know the values of \(\sin \theta\) and \(\cos \theta\). Since we seek an acute angle \(\theta\), we know that \(\sin \theta>0\) and \(\cos \theta>0\). Use the Half-angle Formulas in the form
\[
\sin \theta=\sqrt{\frac{1-\cos (2 \theta)}{2}} \quad \cos \theta=\sqrt{\frac{1+\cos (2 \theta)}{2}}
\]

Now we need to find the value of \(\cos (2 \theta)\). Since \(\cot (2 \theta)=-\frac{3}{4}\), then \(90^{\circ}<2 \theta<180^{\circ}\) (Do you know why?), so \(\cos (2 \theta)=-\frac{3}{5}\). Then
\[
\begin{aligned}
& \sin \theta=\sqrt{\frac{1-\cos (2 \theta)}{2}}=\sqrt{\frac{1-\left(-\frac{3}{5}\right)}{2}}=\sqrt{\frac{4}{5}}=\frac{2}{\sqrt{5}}=\frac{2 \sqrt{5}}{5} \\
& \cos \theta=\sqrt{\frac{1+\cos (2 \theta)}{2}}=\sqrt{\frac{1+\left(-\frac{3}{5}\right)}{2}}=\sqrt{\frac{1}{5}}=\frac{1}{\sqrt{5}}=\frac{\sqrt{5}}{5}
\end{aligned}
\]

With these values, the rotation formulas (5) are
\[
\begin{aligned}
& x=\frac{\sqrt{5}}{5} x^{\prime}-\frac{2 \sqrt{5}}{5} y^{\prime}=\frac{\sqrt{5}}{5}\left(x^{\prime}-2 y^{\prime}\right) \\
& y=\frac{2 \sqrt{5}}{5} x^{\prime}+\frac{\sqrt{5}}{5} y^{\prime}=\frac{\sqrt{5}}{5}\left(2 x^{\prime}+y^{\prime}\right)
\end{aligned}
\]

Figure 50

Substituting these values in the original equation and simplifying give
\[
\begin{aligned}
4 x^{2}-4 x y+y^{2}+5 \sqrt{5} x+5 & =0 \\
4\left[\frac{\sqrt{5}}{5}\left(x^{\prime}-2 y^{\prime}\right)\right]^{2}-4\left[\frac{\sqrt{5}}{5}\left(x^{\prime}-2 y^{\prime}\right)\right]\left[\frac{\sqrt{5}}{5}\left(2 x^{\prime}+y^{\prime}\right)\right] & \\
+\left[\frac{\sqrt{5}}{5}\left(2 x^{\prime}+y^{\prime}\right)\right]^{2}+5 \sqrt{5}\left[\frac{\sqrt{5}}{5}\left(x^{\prime}-2 y^{\prime}\right)\right] & =-5
\end{aligned}
\]

Multiply both sides by 5 and expand to obtain
\[
\begin{array}{rlrl}
4\left(x^{\prime 2}-4 x^{\prime} y^{\prime}+4 y^{\prime 2}\right)-4\left(2 x^{\prime 2}-3 x^{\prime} y^{\prime}-2 y^{\prime 2}\right) & & \\
+4 x^{\prime 2}+4 x^{\prime} y^{\prime}+y^{\prime 2}+25\left(x^{\prime}-2 y^{\prime}\right) & =-25 \\
25 y^{\prime 2}-50 y^{\prime}+25 x^{\prime} & =-25 & & \\
y^{\prime 2}-2 y^{\prime}+x^{\prime} & =-1 & \text { Combine like terms. } \\
y^{\prime 2}-2 y^{\prime}+1 & =-x^{\prime} & \text { Divide by } 25 . \\
\left(y^{\prime}-1\right)^{2} & =-x^{\prime} & & \text { Complete the square in } y^{\prime} .
\end{array}
\]

This is the equation of a parabola with vertex at \((0,1)\) in the \(x^{\prime} y^{\prime}\)-plane. The axis of symmetry is parallel to the \(x^{\prime}\)-axis. Use a calculator to solve \(\sin \theta=\frac{2 \sqrt{5}}{5}\), and find that \(\theta \approx 63.4^{\circ}\). See Figure 50 for the graph.

\section*{am Now Work problem 37}

\section*{4 Identify Conics without a Rotation of Axes}

Suppose that we are required only to identify (rather than analyze) the graph of an equation of the form
\[
\begin{equation*}
A x^{2}+B x y+C y^{2}+D x+E y+F=0 \quad B \neq 0 \tag{8}
\end{equation*}
\]

Applying the rotation formulas (5) to this equation gives an equation of the form
\[
\begin{equation*}
A^{\prime} x^{\prime 2}+B^{\prime} x^{\prime} y^{\prime}+C^{\prime} y^{\prime 2}+D^{\prime} x^{\prime}+E^{\prime} y^{\prime}+F^{\prime}=0 \tag{9}
\end{equation*}
\]
where \(A^{\prime}, B^{\prime}, C^{\prime}, D^{\prime}, E^{\prime}\), and \(F^{\prime}\) can be expressed in terms of \(A, B, C, D, E, F\) and the angle \(\theta\) of rotation (see Problem 53). It can be shown that the value of \(B^{2}-4 A C\) in equation (8) and the value of \(B^{\prime 2}-4 A^{\prime} C^{\prime}\) in equation (9) are equal no matter what angle \(\theta\) of rotation is chosen (see Problem 55). In particular, if the angle \(\theta\) of rotation satisfies equation (7), then \(B^{\prime}=0\) in equation (9), and \(B^{2}-4 A C=-4 A^{\prime} C^{\prime}\). Because equation (9) then has the form of equation (2),
\[
A^{\prime} x^{\prime 2}+C^{\prime} y^{\prime 2}+D^{\prime} x^{\prime}+E^{\prime} y^{\prime}+F^{\prime}=0
\]
we can identify its graph without completing the squares, as we did in the beginning of this section. In fact, now we can identify the conic described by any equation of the form of equation (8) without a rotation of axes.

\section*{Identifying Conics without a Rotation of Axes}

Except for degenerate cases, the equation
\[
A x^{2}+B x y+C y^{2}+D x+E y+F=0
\]
(a) Defines a parabola if \(B^{2}-4 A C=0\).
(b) Defines an ellipse (or a circle) if \(B^{2}-4 A C<0\).
(c) Defines a hyperbola if \(B^{2}-4 A C>0\).

You are asked to prove this theorem in Problem 56.

\section*{EXAMPLE 5 Identifying a Conic without a Rotation of Axes}

Identify the graph of the equation: \(8 x^{2}-12 x y+17 y^{2}-4 \sqrt{5} x-2 \sqrt{5} y-15=0\)
Solution Here \(A=8, B=-12\), and \(C=17\), so \(B^{2}-4 A C=-400\). Since \(B^{2}-4 A C<0\), the equation defines an ellipse.

Now Work problem 43

\subsection*{9.5 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. The sum formula for the sine function is \(\sin (A+B)=\) \(\qquad\) .(p. 502)
2. The Double-angle Formula for the sine function is \(\sin (2 \theta)=\) \(\qquad\) . (p. 512)

\section*{Concepts and Vocabulary}
5. To transform the equation
\[
A x^{2}+B x y+C y^{2}+D x+E y+F=0, \quad B \neq 0
\]
into one in \(x^{\prime}\) and \(y^{\prime}\) without an \(x^{\prime} y^{\prime}\)-term, rotate the axes through an acute angle \(\theta\) that satisfies the equation.
6. Except for degenerate cases, the equation
\[
A x^{2}+B x y+C y^{2}+D x+E y+F=0
\]
defines \(\mathrm{a}(\mathrm{n})\) \(\qquad\) if \(B^{2}-4 A C=0\).
7. Except for degenerate cases, the equation
\[
A x^{2}+B x y+C y^{2}+D x+E y+F=0
\]
defines an ellipse if \(\qquad\) .

\section*{Skill Building}

In Problems 11-20, identify the graph of each equation without completing the squares.
11. \(x^{2}+4 x+y+3=0\)
12. \(2 y^{2}-3 y+3 x=0\)
13. \(6 x^{2}+3 y^{2}-12 x+6 y=0\)
14. \(2 x^{2}+y^{2}-8 x+4 y+2=0\)
15. \(3 x^{2}-2 y^{2}+6 x+4=0\)
16. \(4 x^{2}-3 y^{2}-8 x+6 y+1=0\)
17. \(2 y^{2}-x^{2}-y+x=0\)
18. \(y^{2}-8 x^{2}-2 x-y=0\)
19. \(x^{2}+y^{2}-8 x+4 y=0\)
20. \(2 x^{2}+2 y^{2}-8 x+8 y=0\)

In Problems 21-30, determine the appropriate rotation formulas to use so that the new equation contains no xy-term.
21. \(x^{2}+4 x y+y^{2}-3=0\)
22. \(x^{2}-4 x y+y^{2}-3=0\)
23. \(5 x^{2}+6 x y+5 y^{2}-8=0\)
24. \(3 x^{2}-10 x y+3 y^{2}-32=0\)
25. \(13 x^{2}-6 \sqrt{3} x y+7 y^{2}-16=0\)
26. \(11 x^{2}+10 \sqrt{3} x y+y^{2}-4=0\)
27. \(4 x^{2}-4 x y+y^{2}-8 \sqrt{5} x-16 \sqrt{5} y=0\)
28. \(x^{2}+4 x y+4 y^{2}+5 \sqrt{5} y+5=0\)
29. \(25 x^{2}-36 x y+40 y^{2}-12 \sqrt{13} x-8 \sqrt{13} y=0\)
30. \(34 x^{2}-24 x y+41 y^{2}-25=0\)

In Problems 31-42, rotate the axes so that the new equation contains no xy-term. Analyze and graph the new equation. Refer to Problems 21-30 for Problems 31-40.
31. \(x^{2}+4 x y+y^{2}-3=0\)
32. \(x^{2}-4 x y+y^{2}-3=0\)
33. \(5 x^{2}+6 x y+5 y^{2}-8=0\)
34. \(3 x^{2}-10 x y+3 y^{2}-32=0\)
35. \(13 x^{2}-6 \sqrt{3} x y+7 y^{2}-16=0\)
36. \(11 x^{2}+10 \sqrt{3} x y+y^{2}-4=0\)
37. \(4 x^{2}-4 x y+y^{2}-8 \sqrt{5} x-16 \sqrt{5} y=0\)
38. \(x^{2}+4 x y+4 y^{2}+5 \sqrt{5} y+5=0\)
39. \(25 x^{2}-36 x y+40 y^{2}-12 \sqrt{13} x-8 \sqrt{13} y=0\)
40. \(34 x^{2}-24 x y+41 y^{2}-25=0\)
41. \(16 x^{2}+24 x y+9 y^{2}-130 x+90 y=0\)
42. \(16 x^{2}+24 x y+9 y^{2}-60 x+80 y=0\)

In Problems 43-52, identify the graph of each equation without applying a rotation of axes.
43. \(x^{2}+3 x y-2 y^{2}+3 x+2 y+5=0\)
44. \(2 x^{2}-3 x y+4 y^{2}+2 x+3 y-5=0\)
45. \(x^{2}-7 x y+3 y^{2}-y-10=0\)
46. \(2 x^{2}-3 x y+2 y^{2}-4 x-2=0\)
47. \(9 x^{2}+12 x y+4 y^{2}-x-y=0\)
48. \(10 x^{2}+12 x y+4 y^{2}-x-y+10=0\)
49. \(10 x^{2}-12 x y+4 y^{2}-x-y-10=0\)
50. \(4 x^{2}+12 x y+9 y^{2}-x-y=0\)
51. \(3 x^{2}-2 x y+y^{2}+4 x+2 y-1=0\)
52. \(3 x^{2}+2 x y+y^{2}+4 x-2 y+10=0\)

\section*{Applications and Extensions}

In Problems 53-56, apply the rotation formulas (5) to
\[
A x^{2}+B x y+C y^{2}+D x+E y+F=0
\]
to obtain the equation
\[
A^{\prime} x^{\prime 2}+B^{\prime} x^{\prime} y^{\prime}+C^{\prime} y^{\prime 2}+D^{\prime} x^{\prime}+E^{\prime} y^{\prime}+F^{\prime}=0
\]
53. Express \(A^{\prime}, B^{\prime}, C^{\prime}, D^{\prime}, E^{\prime}\), and \(F^{\prime}\) in terms of \(A, B, C, D, E, F\), and the angle \(\theta\) of rotation.
[Hint: Refer to equation (6).]
54. Show that \(A+C=A^{\prime}+C^{\prime}\), and thus show that \(A+C\) is invariant; that is, its value does not change under a rotation of axes.
55. Refer to Problem 54. Show that \(B^{2}-4 A C\) is invariant.
56. Prove that, except for degenerate cases, the equation
\[
A x^{2}+B x y+C y^{2}+D x+E y+F=0
\]
(a) Defines a parabola if \(B^{2}-4 A C=0\).
(b) Defines an ellipse (or a circle) if \(B^{2}-4 A C<0\).
(c) Defines a hyperbola if \(B^{2}-4 A C>0\).
57. Use the rotation formulas (5) to show that distance is invariant under a rotation of axes. That is, show that the distance from \(P_{1}=\left(x_{1}, y_{1}\right)\) to \(P_{2}=\left(x_{2}, y_{2}\right)\) in the \(x y\)-plane equals the distance from \(P_{1}=\left(x_{1}^{\prime}, y_{1}^{\prime}\right)\) to \(P_{2}=\left(x_{2}^{\prime}, y_{2}^{\prime}\right)\) in the \(x^{\prime} y^{\prime}\)-plane.
58. Show that the graph of the equation \(x^{1 / 2}+y^{1 / 2}=a^{1 / 2}\) is part of the graph of a parabola.

\section*{Discussion and Writing}
59. Formulate a strategy for discussing and graphing an equation of the form
\[
A x^{2}+C y^{2}+D x+E y+F=0
\]
60. Explain how your strategy presented in Problem 59 changes if the equation is of the following form:
\[
A x^{2}+B x y+C y^{2}+D x+E y+F=0
\]

\section*{Retain Your Knowledge}

Problems 61-64 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
61. Solve the triangle described: \(a=7, b=9\), and \(c=11\).
62. Find the area of the triangle described: \(a=14, b=11\), and \(\mathrm{C}=30^{\circ}\).
63. Transform the equation \(x y=1\) from rectangular coordinates to polar coordinates.
64. Write the complex number \(2-5 i\) in polar form.

\section*{'Are You Prepared?' Answers}
1. \(\sin A \cos B+\cos A \sin B\)
2. \(2 \sin \theta \cos \theta\)
3. \(\sqrt{\frac{1-\cos \theta}{2}}\)
4. \(\sqrt{\frac{1+\cos \theta}{2}}\)

\subsection*{9.6 Polar Equations of Conics}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Polar Coordinates (Section 8.1, pp. 584-591)

Now Work the 'Are You Prepared?' problems on page 704.

\section*{OBJECTIVES 1 Analyze and Graph Polar Equations of Conics (p. 699)}

2 Convert the Polar Equation of a Conic to a Rectangular Equation (p. 703)

\section*{1 Analyze and Graph Polar Equations of Conics}

Sections 9.2 through 9.4 gave separate definitions for the parabola, ellipse, and hyperbola based on geometric properties and the distance formula. This section presents an alternative definition that simultaneously defines all these conics. As

DEFINITION

Figure 51

we shall see, this approach is well suited to polar coordinate representation. (Refer to Section 8.1.)

Let \(D\) denote a fixed line called the directrix; let \(F\) denote a fixed point called the focus, which is not on \(D\); and let \(e\) be a fixed positive number called the eccentricity. A conic is the set of points \(P\) in the plane such that the ratio of the distance from \(F\) to \(P\) to the distance from \(D\) to \(P\) equals \(e\). That is, a conic is the collection of points \(P\) for which
\[
\begin{equation*}
\frac{d(F, P)}{d(D, P)}=e \tag{1}
\end{equation*}
\]

If \(e=1\), the conic is a parabola.
If \(e<1\), the conic is an ellipse.
If \(e>1\), the conic is a hyperbola.

Observe that if \(e=1\), the definition of a parabola in equation (1) is exactly the same as the definition used earlier in Section 9.2.

In the case of an ellipse, the major axis is a line through the focus perpendicular to the directrix. In the case of a hyperbola, the transverse axis is a line through the focus perpendicular to the directrix. For both an ellipse and a hyperbola, the eccentricity \(e\) satisfies
\[
\begin{equation*}
e=\frac{c}{a} \tag{2}
\end{equation*}
\]
where \(c\) is the distance from the center to the focus and \(a\) is the distance from the center to a vertex.

Just as we did earlier using rectangular coordinates, we derive equations for the conics in polar coordinates by choosing a convenient position for the focus \(F\) and the directrix \(D\). The focus \(F\) is positioned at the pole, and the directrix \(D\) is either parallel or perpendicular to the polar axis.

Suppose that we start with the directrix \(D\) perpendicular to the polar axis at a distance \(p\) units to the left of the pole (the focus \(F\) ). See Figure 51.

If \(P=(r, \theta)\) is any point on the conic, then, by equation (1),
\[
\begin{equation*}
\frac{d(F, P)}{d(D, P)}=e \quad \text { or } \quad d(F, P)=e \cdot d(D, P) \tag{3}
\end{equation*}
\]

Now use the point \(Q\) obtained by dropping the perpendicular from \(P\) to the polar axis to calculate \(d(D, P)\).
\[
d(D, P)=p+d(O, Q)=p+r \cos \theta
\]

Using this expression and the fact that \(d(F, P)=d(O, P)=r\) in equation (3) gives
\[
\begin{aligned}
d(F, P) & =e \cdot d(D, P) \\
r & =e(p+r \cos \theta) \\
r & =e p+e r \cos \theta \\
r-e r \cos \theta & =e p \\
r(1-e \cos \theta) & =e p \\
r & =\frac{e p}{1-e \cos \theta}
\end{aligned}
\]

\section*{THEOREM}

Figure 52

Polar Equation of a Conic; Focus at the Pole; Directrix Perpendicular to the Polar Axis a Distance \(\boldsymbol{p}\) to the Left of the Pole
The polar equation of a conic with focus at the pole and directrix perpendicular to the polar axis at a distance \(p\) to the left of the pole is
\[
\begin{equation*}
r=\frac{e p}{1-e \cos \theta} \tag{4}
\end{equation*}
\]
where \(e\) is the eccentricity of the conic.

\section*{EXAMPLE I}

\section*{Solution}

\section*{Analyzing and Graphing the Polar Equation of a Conic}

Analyze and graph the equation: \(r=\frac{4}{2-\cos \theta}\)
The given equation is not quite in the form of equation (4), since the first term in the denominator is 2 instead of 1 . Divide the numerator and denominator by 2 to obtain
\[
r=\frac{2}{1-\frac{1}{2} \cos \theta} \quad r=\frac{e p}{1-e \cos \theta}
\]

This equation is in the form of equation (4), with
\[
e=\frac{1}{2} \quad \text { and } \quad e p=2
\]

Then
\[
\frac{1}{2} p=2, \quad \text { so } \quad p=4
\]

Hence the conic is an ellipse, because \(e=\frac{1}{2}<1\). One focus is at the pole, and the directrix is perpendicular to the polar axis, a distance of \(p=4\) units to the left of the pole. It follows that the major axis is along the polar axis. To find the vertices, let \(\theta=0\) and \(\theta=\pi\). The vertices of the ellipse are \((4,0)\) and \(\left(\frac{4}{3}, \pi\right)\). The midpoint of the vertices, \(\left(\frac{4}{3}, 0\right)\) in polar coordinates, is the center of the ellipse. [Do you see why? The vertices \((4,0)\) and \(\left(\frac{4}{3}, \pi\right)\) in polar coordinates are \((4,0)\) and \(\left(-\frac{4}{3}, 0\right)\) in rectangular coordinates. The midpoint in rectangular coordinates is \(\left(\frac{4}{3}, 0\right)\), which is also \(\left(\frac{4}{3}, 0\right)\) in polar coordinates.] Then \(a=\) distance from the center to a vertex \(=\frac{8}{3}\). Using \(a=\frac{8}{3}\) and \(e=\frac{1}{2}\) in equation (2), \(e=\frac{c}{a}\), yields \(c=a e=\frac{4}{3}\). Finally, using \(a=\frac{8}{3}\) and \(c=\frac{4}{3}\) in \(b^{2}=a^{2}-c^{2}\) yields
\[
\begin{aligned}
b^{2} & =a^{2}-c^{2}=\frac{64}{9}-\frac{16}{9}=\frac{48}{9} \\
b & =\frac{4 \sqrt{3}}{3}
\end{aligned}
\]

Figure 52 shows the graph.

\section*{Exploration}

Graph \(r_{1}=\frac{4}{2+\cos \theta}\) and compare the result with Figure 52. What do you conclude? Clear the screen and graph \(r_{1}=\frac{4}{2-\sin \theta}\) and then \(r_{1}=\frac{4}{2+\sin \theta}\). Compare each of these graphs with Figure 52. What do you conclude?

Equation (4) was obtained under the assumption that the directrix was perpendicular to the polar axis at a distance \(p\) units to the left of the pole. A similar derivation (see Problem 43), in which the directrix is perpendicular to the polar axis at a distance \(p\) units to the right of the pole, results in the equation
\[
r=\frac{e p}{1+e \cos \theta}
\]

In Problems 44 and 45, you are asked to derive the polar equations of conics with focus at the pole and directrix parallel to the polar axis. Table 5 summarizes the polar equations of conics.

Table 5

\section*{Polar Equations of Conics (Focus at the Pole, Eccentricity e) Equation Description}
(a) \(r=\frac{e p}{1-e \cos \theta}\)

Directrix is perpendicular to the polar axis at a distance \(p\) units to the left of the pole.
(b) \(r=\frac{e p}{1+e \cos \theta} \quad\) Directrix is perpendicular to the polar axis at a distance \(p\) units to the right of the pole.
(c) \(r=\frac{e p}{1+e \sin \theta} \quad\) Directrix is parallel to the polar axis at a distance \(p\) units above the pole.
(d) \(r=\frac{e p}{1-e \sin \theta} \quad\) Directrix is parallel to the polar axis at a distance \(p\) units below the pole.

\section*{Eccentricity}

If \(e=1\), the conic is a parabola; the axis of symmetry is perpendicular to the directrix.
If \(e<1\), the conic is an ellipse; the major axis is perpendicular to the directrix.
If \(e>1\), the conic is a hyperbola; the transverse axis is perpendicular to the directrix.

\section*{EXAMPLE 2 Analyzing and Graphing the Polar Equation of a Conic}

Analyze and graph the equation: \(r=\frac{6}{3+3 \sin \theta}\)
Solution To place the equation in proper form, divide the numerator and denominator by 3 to get
\[
r=\frac{2}{1+\sin \theta}
\]

Figure 53

Referring to Table 5 , conclude that this equation is in the form of equation (c) with
\[
\begin{aligned}
e=1 \quad \text { and } \quad e p & =2 \\
p & =2 \quad e=1
\end{aligned}
\]

The conic is a parabola with focus at the pole. The directrix is parallel to the polar axis at a distance 2 units above the pole; the axis of symmetry is perpendicular to the polar axis. The vertex of the parabola, which is at the midpoint of the focus and directrix on the axis of symmetry, is \(\left(1, \frac{\pi}{2}\right)\). See Figure 53 for the graph. Notice that we plotted two additional points, \((2,0)\) and \((2, \pi)\), to assist in graphing.

\section*{Now Work problem 13}

\section*{EXAMPLE 3 Analyzing and Graphing the Polar Equation of a Conic}

Analyze and graph the equation: \(r=\frac{3}{1+3 \cos \theta}\)
Solution This equation is in the form of equation (b) in Table 5. This means that
\[
\begin{aligned}
e=3 \quad \text { and } \quad e p & =3 \\
p & =1 \quad e=3
\end{aligned}
\]

Figure 54

This is the equation of a hyperbola with a focus at the pole. The directrix is perpendicular to the polar axis, \(p=1\) unit to the right of the pole. The transverse axis is along the polar axis. To find the vertices, let \(\theta=0\) and \(\theta=\pi\). The vertices are \(\left(\frac{3}{4}, 0\right)\) and \(\left(-\frac{3}{2}, \pi\right)\). The center, which is at the midpoint of \(\left(\frac{3}{4}, 0\right)\) and \(\left(-\frac{3}{2}, \pi\right)\), is \(\left(\frac{9}{8}, 0\right)\). Then \(c=\) distance from the center to a focus \(=\frac{9}{8}\). Since \(e=3\), it follows from equation (2), \(e=\frac{c}{a}\), that \(a=\frac{3}{8}\). Finally, using \(a=\frac{3}{8}\) and \(c=\frac{9}{8}\) in \(b^{2}=c^{2}-a^{2}\) gives
\[
\begin{aligned}
b^{2} & =c^{2}-a^{2}=\frac{81}{64}-\frac{9}{64}=\frac{72}{64}=\frac{9}{8} \\
b & =\frac{3}{2 \sqrt{2}}=\frac{3 \sqrt{2}}{4}
\end{aligned}
\]

Figure 54 shows the graph. Notice that we plotted two additional points, \(\left(3, \frac{\pi}{2}\right)\) and \(\left(3, \frac{3 \pi}{2}\right)\), on the left branch and used symmetry to obtain the right branch. The asymptotes of this hyperbola were found in the usual way by constructing the rectangle shown.
am Now Work problem 17

\section*{2 Convert the Polar Equation of a Conic to a Rectangular Equation}

\section*{EXAMPLE 4}

Converting a Polar Equation to a Rectangular Equation
Convert the polar equation
\[
r=\frac{1}{3-3 \cos \theta}
\]
to a rectangular equation.
Solution The strategy here is first to rearrange the equation and square each side before using the transformation equations.
\[
\begin{array}{rlrl}
r & =\frac{1}{3-3 \cos \theta} & \\
3 r-3 r \cos \theta & =1 & & \\
3 r & =1+3 r \cos \theta & & \text { Rearrange the equation. } \\
9 r^{2} & =(1+3 r \cos \theta)^{2} & & \text { Square each side. } \\
9\left(x^{2}+y^{2}\right) & =(1+3 x)^{2} & x^{2}+y^{2}=r^{2} ; x=r \cos \theta \\
9 x^{2}+9 y^{2} & =9 x^{2}+6 x+1 & & \\
9 y^{2} & =6 x+1 &
\end{array}
\]

This is the equation of a parabola in rectangular coordinates.

\subsection*{9.6 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. If \((x, y)\) are the rectangular coordinates of a point \(P\) and \((r, \theta)\) are its polar coordinates, then \(x=\) \(\qquad\) and \(y=\) \(\qquad\) . (pp. 586-587)

\section*{Concepts and Vocabulary}
3. A \(\qquad\) is the set of points \(P\) in the plane such that the ratio of the distance from a fixed point called the \(\qquad\) to \(P\) to the distance from a fixed line called the \(\qquad\) to \(P\) equals a constant \(e\).
4. The eccentricity \(e\) of a parabola is \(\qquad\) , of an ellipse it is \(\qquad\) , and of a hyperbola it is \(\qquad\) .
2. Transform the equation \(r=6 \cos \theta\) from polar coordinates to rectangular coordinates. (pp. 590-591)

\section*{Skill Building}

In Problems 7-12, identify the conic that each polar equation represents. Also, give the position of the directrix.
7. \(r=\frac{1}{1+\cos \theta}\)
8. \(r=\frac{3}{1-\sin \theta}\)
9. \(r=\frac{4}{2-3 \sin \theta}\)
10. \(r=\frac{2}{1+2 \cos \theta}\)
11. \(r=\frac{3}{4-2 \cos \theta}\)
12. \(r=\frac{6}{8+2 \sin \theta}\)

In Problems 13-24, analyze each equation and graph it.
13. \(r=\frac{1}{1+\cos \theta}\)
14. \(r=\frac{3}{1-\sin \theta}\)
15. \(r=\frac{8}{4+3 \sin \theta}\)
16. \(r=\frac{10}{5+4 \cos \theta}\)
17. \(r=\frac{9}{3-6 \cos \theta}\)
18. \(r=\frac{12}{4+8 \sin \theta}\)
19. \(r=\frac{8}{2-\sin \theta}\)
20. \(r=\frac{8}{2+4 \cos \theta}\)
21. \(r(3-2 \sin \theta)=6\)
22. \(r(2-\cos \theta)=2\)
23. \(r=\frac{6 \sec \theta}{2 \sec \theta-1}\)
24. \(r=\frac{3 \csc \theta}{\csc \theta-1}\)

In Problems 25-36, convert each polar equation to a rectangular equation.
25. \(r=\frac{1}{1+\cos \theta}\)
26. \(r=\frac{3}{1-\sin \theta}\)
27. \(r=\frac{8}{4+3 \sin \theta}\)
28. \(r=\frac{10}{5+4 \cos \theta}\)
29. \(r=\frac{9}{3-6 \cos \theta}\)
30. \(r=\frac{12}{4+8 \sin \theta}\)
31. \(r=\frac{8}{2-\sin \theta}\)
32. \(r=\frac{8}{2+4 \cos \theta}\)
33. \(r(3-2 \sin \theta)=6\)
34. \(r(2-\cos \theta)=2\)
35. \(r=\frac{6 \sec \theta}{2 \sec \theta-1}\)
36. \(r=\frac{3 \csc \theta}{\csc \theta-1}\)

In Problems 37-42, find a polar equation for each conic. Each has a focus at the pole.
37. \(e=1\); directrix is parallel to the polar axis 1 unit above the pole.
39. \(e=\frac{4}{5}\); directrix is perpendicular to the polar axis 3 units to the left of the pole.
41. \(e=6\); directrix is parallel to the polar axis 2 units below the pole.
38. \(e=1\); directrix is parallel to the polar axis 2 units below the pole.
40. \(e=\frac{2}{3}\); directrix is parallel to the polar axis 3 units above the pole.
42. \(e=5\); directrix is perpendicular to the polar axis 5 units to the right of the pole.

\section*{Applications and Extensions}
43. Derive equation (b) in Table 5:
\[
r=\frac{e p}{1+e \cos \theta}
\]
44. Derive equation (c) in Table 5:
\[
r=\frac{e p}{1+e \sin \theta}
\]
45. Derive equation (d) in Table 5:
\[
r=\frac{e p}{1-e \sin \theta}
\]
46. Orbit of Mercury The planet Mercury travels around the Sun in an elliptical orbit given approximately by
\[
r=\frac{(3.442) 10^{7}}{1-0.206 \cos \theta}
\]
where \(r\) is measured in miles and the Sun is at the pole. Find the distance from Mercury to the Sun at aphelion (greatest
distance from the Sun) and at perihelion (shortest distance from the Sun). See the figure. Use the aphelion and perihelion to graph the orbit of Mercury using a graphing utility.

\section*{Retain Your Knowledge}

Problems 47-50 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
47. Find the area of the triangle described: \(a=7, b=8\), and \(c=10\). Round to two decimal places.
48. Without graphing, determine the amplitude and period of \(y=4 \cos \left(\frac{1}{5} x\right)\).
49. Solve on the interval \(0 \leq x<2 \pi: 2 \cos ^{2} x+\cos x-1=0\)
50. For \(\mathbf{v}=10 \mathbf{i}-24 \mathbf{j}\), find \(\|\mathbf{v}\|\).

\section*{'Are You Prepared?' Answers}
\(\begin{array}{ll}\text { 1. } r \cos \theta ; r \sin \theta & \text { 2. } x^{2}+y^{2}=6 x \text { or }(x-3)^{2}+y^{2}=9\end{array}\)

\subsection*{9.7 Plane Curves and Parametric Equations}

\section*{PREPARING FOR THIS SECTION Before getting started, review the following:}
- Amplitude and Period of Sinusoidal Graphs (Section 5.4, pp. 424-426)

Now Work the 'Are You Prepared?' problem on page 714.

\section*{OBJECTIVES 1 Graph Parametric Equations (p. 706)}

2 Find a Rectangular Equation for a Curve Defined Parametrically (p. 706)
3 Use Time as a Parameter in Parametric Equations (p. 708)
4 Find Parametric Equations for Curves Defined by Rectangular Equations (p.711)

Equations of the form \(y=f(x)\), where \(f\) is a function, have graphs that are intersected no more than once by any vertical line. The graphs of many of the conics and certain other, more complicated graphs do not have this characteristic. Yet each graph, like the graph of a function, is a collection of points \((x, y)\) in the \(x y\)-plane; that is, each is a plane curve. This section discusses another way of representing such graphs.

Let \(x=f(t)\) and \(y=g(t)\), where \(f\) and \(g\) are two functions whose common domain is some interval \(I\). The collection of points defined by
\[
(x, y)=(f(t), g(t))
\]
is called a plane curve. The equations
\[
x=f(t) \quad y=g(t)
\]
where \(t\) is in \(I\), are called parametric equations of the curve. The variable \(t\) is called a parameter.

Figure 55

\section*{1 Graph Parametric Equations}

Parametric equations are particularly useful in describing movement along a curve. Suppose that a curve is defined by the parametric equations
\[
x=f(t), \quad y=g(t), \quad a \leq t \leq b
\]
where \(f\) and \(g\) are each defined over the interval \(a \leq t \leq b\). For a given value of \(t\), we can find the value of \(x=f(t)\) and \(y=g(t)\), obtaining a point \((x, y)\) on the curve. In fact, as \(t\) varies over the interval from \(t=a\) to \(t=b\), successive values of \(t\) give rise to a directed movement along the curve; that is, the curve is traced out in a certain direction by the corresponding succession of points \((x, y)\). See Figure 55. The arrows show the direction, or orientation, along the curve as \(t\) varies from \(a\) to \(b\).

\section*{EXAMPLE I}

Solution

COMMENT Most graphing utilities have the capability of graphing parametric equations. Appendix B, Section 9.

\section*{Graphing a Curve Defined by Parametric Equations}

Graph the curve defined by the parametric equations
\[
\begin{equation*}
x=3 t^{2}, \quad y=2 t, \quad-2 \leq t \leq 2 \tag{1}
\end{equation*}
\]

For each number \(t,-2 \leq t \leq 2\), there corresponds a number \(x\) and a number \(y\). For example, when \(t=-2\), then \(x=3(-2)^{2}=12\) and \(y=2(-2)=-4\). When \(t=0\), then \(x=0\) and \(y=0\). We can set up a table listing various choices of the parameter \(t\) and the corresponding values for \(x\) and \(y\), as shown in Table 6. Plotting these points and connecting them with a smooth curve lead to Figure 56. The arrows in Figure 56 are used to indicate the orientation.

Table 6
\begin{tabular}{|rrrl|}
\hline \(\boldsymbol{t}\) & \(\boldsymbol{x}\) & \(\boldsymbol{y}\) & \multicolumn{1}{c|}{\((\boldsymbol{x}, \boldsymbol{y})\)} \\
\hline-2 & 12 & -4 & \((12,-4)\) \\
-1 & 3 & -2 & \((3,-2)\) \\
0 & 0 & 0 & \((0,0)\) \\
1 & 3 & 2 & \((3,2)\) \\
2 & 12 & 4 & \((12,4)\) \\
\hline
\end{tabular}

Figure 56

\section*{Exploration}

Graph the following parametric equations using a graphing utility with \(X \min =0, X_{\max }=15\), \(Y_{\min }=-5, Y \max =5\), and \(T\) step \(=0.1\) :
1. \(x=\frac{3 t^{2}}{4}, y=t,-4 \leq t \leq 4\)
2. \(x=3 t^{2}+12 t+12, y=2 t+4,-4 \leq t \leq 0\)
3. \(x=3 t^{\frac{2}{3}}, y=2 \sqrt[3]{t},-8 \leq t \leq 8\)

Compare these graphs to the graph in Figure 56. Conclude that parametric equations defining a curve are not unique; that is, different parametric equations can represent the same graph.

\section*{2 Find a Rectangular Equation for a Curve Defined Parametrically}

The curve given in Example 1 should be familiar. To identify it accurately, find the corresponding rectangular equation by eliminating the parameter \(t\) from the parametric equations given in Example 1:
\[
x=3 t^{2}, \quad y=2 t, \quad-2 \leq t \leq 2
\]

Solve for \(t\) in \(y=2 t\), obtaining \(t=\frac{y}{2}\), and substitute this expression in the other equation to get
\[
\begin{gathered}
x=3 t^{2}=3\left(\frac{y}{2}\right)^{2}=\frac{3 y^{2}}{4} \\
t=\frac{y}{2}
\end{gathered}
\]

This equation, \(x=\frac{3 y^{2}}{4}\), is the equation of a parabola with vertex at \((0,0)\) and axis of symmetry along the \(x\)-axis.

Note that the parameterized curve defined by equation (1) and shown in Figure 56 is only a part of the parabola \(x=\frac{3 y^{2}}{4}\). The graph of the rectangular equation obtained by eliminating the parameter in general contains more points than the original parameterized curve. Therefore, care must be taken when a parameterized curve is graphed after eliminating the parameter. Even so, eliminating the parameter \(t\) of a parameterized curve to identify it accurately is sometimes a better approach than plotting points. However, the elimination process sometimes requires a little ingenuity.

\section*{EXAMPLE 2}

Finding the Rectangular Equation of a Curve Defined Parametrically
Find the rectangular equation of the curve whose parametric equations are
\[
x=a \cos t, \quad y=a \sin t, \quad-\infty<t<\infty
\]
where \(a>0\) is a constant. Graph this curve, indicating its orientation.

\section*{Solution}

The presence of sines and cosines in the parametric equations suggests using a Pythagorean Identity. In fact, because
\[
\cos t=\frac{x}{a} \quad \sin t=\frac{y}{a}
\]
this means that
\[
\begin{aligned}
\cos ^{2} t+\sin ^{2} t & =1 \\
\left(\frac{x}{a}\right)^{2}+\left(\frac{y}{a}\right)^{2} & =1 \\
x^{2}+y^{2} & =a^{2}
\end{aligned}
\]

The curve is a circle with center at \((0,0)\) and radius \(a\). As the parameter \(t\) increases, say from \(t=0\) [the point \((a, 0)]\) to \(t=\frac{\pi}{2}\) [the point \(\left.(0, a)\right]\) to \(t=\pi\) [the point \((-a, 0)]\), note that the corresponding points are traced in a counterclockwise direction around the circle. The orientation is as indicated in Figure 57.
mon Work problems 7 and 19
Let's analyze the curve in Example 2 further. The domain of each parametric equation is \(-\infty<t<\infty\). That means the graph in Figure 57 is actually being repeated each time that \(t\) increases by \(2 \pi\).

If we wanted the curve to consist of exactly 1 revolution in the counterclockwise direction, we could write
\[
x=a \cos t, \quad y=a \sin t, \quad 0 \leq t \leq 2 \pi
\]

This curve starts at \(t=0\) [the point \((a, 0)]\) and, proceeding counterclockwise around the circle, ends at \(t=2 \pi\) [also the point \((a, 0)]\).

If we wanted the curve to consist of exactly three revolutions in the counterclockwise direction, we could write
\[
x=a \cos t, \quad y=a \sin t, \quad-2 \pi \leq t \leq 4 \pi
\]
or
\[
x=a \cos t, \quad y=a \sin t, \quad 0 \leq t \leq 6 \pi
\]
or
\[
x=a \cos t, \quad y=a \sin t, \quad 2 \pi \leq t \leq 8 \pi
\]

\section*{EXAMPLE 3}

Figure 58

Figure 59

Figure 60

(a)

(b)

\section*{Solution}

\section*{Describing Parametric Equations}

Find rectangular equations for the following curves defined by parametric equations. Graph each curve.
(a) \(x=a \cos t, \quad y=a \sin t, \quad 0 \leq t \leq \pi, \quad a>0\)
(b) \(x=-a \sin t, \quad y=-a \cos t, \quad 0 \leq t \leq \pi, \quad a>0\)
(a) Eliminate the parameter \(t\) using a Pythagorean Identity.
\[
\begin{aligned}
\cos ^{2} t+\sin ^{2} t & =1 \\
\left(\frac{x}{a}\right)^{2}+\left(\frac{y}{a}\right)^{2} & =1 \\
x^{2}+y^{2} & =a^{2}
\end{aligned}
\]

The curve defined by these parametric equations lies on a circle with radius \(a\) and center at \((0,0)\). The curve begins at the point \((a, 0)\) when \(t=0\); passes through the point \((0, a)\) when \(t=\frac{\pi}{2}\); and ends at the point \((-a, 0)\) when \(t=\pi\).

The parametric equations define the upper semicircle of a circle of radius \(a\) with a counterclockwise orientation. See Figure 58. The rectangular equation is
\[
y=\sqrt{a^{2}-x^{2}} \quad-a \leq x \leq a
\]
(b) Eliminate the parameter \(t\) using a Pythagorean Identity.
\[
\begin{aligned}
\sin ^{2} t+\cos ^{2} t & =1 \\
\left(\frac{x}{-a}\right)^{2}+\left(\frac{y}{-a}\right)^{2} & =1 \\
x^{2}+y^{2} & =a^{2}
\end{aligned}
\]

The curve defined by these parametric equations lies on a circle with radius \(a\) and center at \((0,0)\). The curve begins at the point \((0,-a)\) when \(t=0\); passes through the point \((-a, 0)\) when \(t=\frac{\pi}{2}\); and ends at the point \((0, a)\) when \(t=\pi\). The parametric equations define the left semicircle of a circle of radius \(a\) with a clockwise orientation. See Figure 59. The rectangular equation is
\[
x=-\sqrt{a^{2}-y^{2}} \quad-a \leq y \leq a
\]

\section*{Seeing the Concept}

Graph \(x=\cos t, y=\sin t\) for \(0 \leq t \leq 2 \pi\). Compare to Figure 57. Graph \(x=\cos t, y=\sin t\) for \(0 \leq t \leq \pi\). Compare to Figure 58. Graph \(x=-\sin t, y=-\cos t\) for \(0 \leq t \leq \pi\). Compare to Figure 59.

Example 3 illustrates the versatility of parametric equations for replacing complicated rectangular equations, while providing additional information about orientation. These characteristics make parametric equations very useful in applications, such as projectile motion.

\section*{3 Use Time as a Parameter in Parametric Equations}

If we think of the parameter \(t\) as time, then the parametric equations \(x=f(t)\) and \(y=g(t)\) of a curve \(C\) specify how the \(x\) - and \(y\)-coordinates of a moving point vary with time.

For example, we can use parametric equations to model the motion of an object, sometimes referred to as curvilinear motion. Using parametric equations, we can specify not only where the object travels - that is, its location \((x, y)\)-but also when it gets there-that is, the time \(t\).

When an object is propelled upward at an inclination \(\theta\) to the horizontal with initial speed \(v_{0}\), the resulting motion is called projectile motion. See Figure 60(a).

In calculus it is shown that the parametric equations of the path of a projectile fired at an inclination \(\theta\) to the horizontal, with an initial speed \(v_{0}\), from a height \(h\) above the horizontal, are
\[
\begin{equation*}
x=\left(v_{0} \cos \theta\right) t \quad y=-\frac{1}{2} g t^{2}+\left(v_{0} \sin \theta\right) t+h \tag{2}
\end{equation*}
\]
where \(t\) is the time and \(g\) is the constant acceleration due to gravity (approximately \(32 \mathrm{ft} / \mathrm{sec} / \mathrm{sec}\) or \(9.8 \mathrm{~m} / \mathrm{sec} / \mathrm{sec}\) ). See Figure 60(b).

\section*{EXAMPLE 4 Projectile Motion}

Figure 61 Cle

Figure 62

Suppose that Jim hit a golf ball with an initial velocity of 150 feet per second at an angle of \(30^{\circ}\) to the horizontal. See Figure 61.
(a) Find parametric equations that describe the position of the ball as a function of time.
(b) How long was the golf ball in the air?
(c) When was the ball at its maximum height? Determine the maximum height of the ball.
(d) Determine the distance that the ball traveled.
(e) Using a graphing utility, simulate the motion of the golf ball by simultaneously graphing the equations found in part (a).

Solution (a) Note that \(v_{0}=150 \mathrm{ft} / \mathrm{sec}, \theta=30^{\circ}, h=0 \mathrm{ft}\) (the ball is on the ground), and \(g=32 \mathrm{ft} / \mathrm{sec}^{2}\) (since the units are in feet and seconds). Substitute these values into equations (2) to get
\[
\begin{array}{rlrl}
x & =\left(v_{0} \cos \theta\right) t & y & =-\frac{1}{2} g t^{2}+\left(v_{0} \sin \theta\right) t+h \\
& =\left(150 \cos 30^{\circ}\right) t & & =-\frac{1}{2}(32) t^{2}+\left(150 \sin 30^{\circ}\right) t+0 \\
& =75 \sqrt{3} t & & =-16 t^{2}+75 t
\end{array}
\]
(b) To determine the length of time that the ball was in the air, solve the equation \(y=0\).
\[
\begin{aligned}
-16 t^{2}+75 t & =0 \\
t(-16 t+75) & =0 \\
t=0 \mathrm{sec} \text { or } t=\frac{75}{16} & =4.6875 \mathrm{sec}
\end{aligned}
\]

The ball struck the ground after 4.6875 seconds.
(c) Notice that the height \(y\) of the ball is a quadratic function of \(t\), so the maximum height of the ball can be found by determining the vertex of \(y=-16 t^{2}+75 t\). The value of \(t\) at the vertex is
\[
t=\frac{-b}{2 a}=\frac{-75}{-32}=2.34375 \mathrm{sec}
\]

The ball was at its maximum height after 2.34375 seconds. The maximum height of the ball is found by evaluating the function \(y\) at \(t=2.34375\) seconds.
\[
\text { Maximum height }=-16(2.34375)^{2}+75(2.34375) \approx 87.89 \text { feet }
\]
(d) Since the ball was in the air for 4.6875 seconds, the horizontal distance that the ball traveled is
\[
x=(75 \sqrt{3}) 4.6875 \approx 608.92 \text { feet }
\]
(e) Enter the equations from part (a) into a graphing utility with \(T \min =0\), \(T \max =4.7\), and \(T\) step \(=0.1\). Use ZOOM-SQUARE to avoid any distortion to the angle of elevation. See Figure 62.

\section*{Exploration}

Simulate the motion of a ball thrown straight up with an initial speed of 100 feet per second from a height of 5 feet above the ground. Use PARametric mode with \(T \min =0, T \max =6.5\), Tstep \(=0.1, X \min =0, X \max =5, Y \min =0\), and \(Y \max =180\). What happens to the speed with which the graph is drawn as the ball goes up and then comes back down? How do you interpret this physically? Repeat the experiment using other values for Tstep. How does this affect the experiment?
[Hint: In the projectile motion equations, let \(\theta=90^{\circ}, v_{0}=100, h=5\), and \(g=32\). Use \(x=3\) instead of \(x=0\) to see the vertical motion better.]
Result In Figure 63(a) the ball is going up. In Figure 63(b) the ball is near its highest point. Finally, in Figure 63(c), the ball is coming back down.

Figure 63

Notice that as the ball goes up, its speed decreases, until at the highest point it is zero. Then the speed increases as the ball comes back down.

A graphing utility can be used to simulate other kinds of motion as well. Let's work again Example 5 from Appendix A, Section A.9.

\section*{EXAMPLE 5 Simulating Motion}

Tanya, who is a long-distance runner, runs at an average speed of 8 miles per hour. Two hours after Tanya leaves your house, you leave in your Honda and follow the same route. If your average speed is 40 miles per hour, how long will it be before you catch up to Tanya? See Figure 64. Use a simulation of the two motions to verify the answer.

Figure 64

Solution Begin with two sets of parametric equations: one to describe Tanya's motion, the other to describe the motion of the Honda. We choose time \(t=0\) to be when Tanya leaves the house. If we choose \(y_{1}=2\) as Tanya's path, then we can use \(y_{2}=4\) as the parallel path of the Honda. The horizontal distances traversed in time \(t\) (Distance \(=\) Rate \(\times\) Time \()\) are
\[
\text { Tanya: } \quad x_{1}=8 t \quad \text { Honda: } \quad x_{2}=40(t-2)
\]

The Honda catches up to Tanya when \(x_{1}=x_{2}\).
\[
\begin{aligned}
8 t & =40(t-2) \\
8 t & =40 t-80 \\
-32 t & =-80 \\
t & =\frac{-80}{-32}=2.5
\end{aligned}
\]

The Honda catches up to Tanya 2.5 hours after Tanya leaves the house.

In PARametric mode with \(T\) step \(=0.01\), simultaneously graph
\[
\begin{array}{lll}
\text { Tanya: } & x_{1}=8 t \quad \text { Honda: } & x_{2}=40(t-2) \\
& y_{1}=2 & \\
y_{2}=4
\end{array}
\]
for \(0 \leq t \leq 3\).
Figure 65 shows the relative position of Tanya and the Honda for \(t=0\), \(t=2, t=2.25, t=2.5\), and \(t=2.75\).

Figure 65

\section*{4 Find Parametric Equations for Curves Defined by Rectangular Equations}

We now take up the question of how to find parametric equations of a given curve.
If a curve is defined by the equation \(y=f(x)\), where \(f\) is a function, one way of finding parametric equations is to let \(x=t\). Then \(y=f(t)\), and
\[
x=t, y=f(t), t \text { in the domain of } f
\]
are parametric equations of the curve.

\section*{EXAMPLE 6}

Finding Parametric Equations for a Curve Defined by a Rectangular Equation
Find two different parametric equations for the equation \(y=x^{2}-4\).
Solution For the first parametric equation, let \(x=t\). Then the parametric equations are
\[
x=t, \quad y=t^{2}-4, \quad-\infty<t<\infty
\]

A second parametric equation is found by letting \(x=t^{3}\). Then the parametric equations become
\[
x=t^{3}, \quad y=t^{6}-4, \quad-\infty<t<\infty
\]

Care must be taken when using the second approach in Example 6, since the substitution for \(x\) must be a function that allows \(x\) to take on all the values stipulated by the domain of \(f\). For example, letting \(x=t^{2}\) so that \(y=t^{4}-4\) does not result in equivalent parametric equations for \(y=x^{2}-4\), since only points for which \(x \geq 0\) are obtained; yet the domain of \(y=x^{2}-4\) is \(\{x \mid x\) is any real number \(\}\).

\section*{EXAMPLE 7}

Solution
Figure 66

Figure 67

Finding Parametric Equations for an Object in Motion
Find parametric equations for the ellipse
\[
x^{2}+\frac{y^{2}}{9}=1
\]
where the parameter \(t\) is time (in seconds) and
(a) The motion around the ellipse is clockwise, begins at the point \((0,3)\), and requires 1 second for a complete revolution.
(b) The motion around the ellipse is counterclockwise, begins at the point \((1,0)\), and requires 2 seconds for a complete revolution.
(a) See Figure 66. Because the motion begins at the point \((0,3)\), we want \(x=0\) and \(y=3\) when \(t=0\). Furthermore, because the given equation is an ellipse, begin by letting
\[
x=\sin (\omega t) \quad y=3 \cos (\omega t)
\]
for some constant \(\omega\). These parametric equations satisfy the equation of the ellipse. Furthermore, with this choice, when \(t=0\), we have \(x=0\) and \(y=3\).

For the motion to be clockwise, the motion has to begin with the value of \(x\) increasing and \(y\) decreasing as \(t\) increases. This requires that \(\omega>0\). [Do you know why? If \(\omega>0\), then \(x=\sin (\omega t)\) is increasing when \(t>0\) is near zero, and \(y=3 \cos (\omega t)\) is decreasing when \(t>0\) is near zero.] See the red part of the graph in Figure 66.

Finally, since 1 revolution requires 1 second, the period \(\frac{2 \pi}{\omega}=1\), so \(\omega=2 \pi\). Parametric equations that satisfy the conditions stipulated are
\[
\begin{equation*}
x=\sin (2 \pi t), \quad y=3 \cos (2 \pi t), \quad 0 \leq t \leq 1 \tag{3}
\end{equation*}
\]
(b) See Figure 67. Since the motion begins at the point \((1,0)\), we want \(x=1\) and \(y=0\) when \(t=0\). The given equation is an ellipse, so begin by letting
\[
x=\cos (\omega t) \quad y=3 \sin (\omega t)
\]
for some constant \(\omega\). These parametric equations satisfy the equation of the ellipse. Furthermore, with this choice, when \(t=0\), we have \(x=1\) and \(y=0\).

For the motion to be counterclockwise, the motion has to begin with the value of \(x\) decreasing and \(y\) increasing as \(t\) increases. This requires that \(\omega>0\). [Do you know why?] Finally, since 1 revolution requires 2 seconds, the period is \(\frac{2 \pi}{\omega}=2\), so \(\omega=\pi\). The parametric equations that satisfy the conditions stipulated are
\[
\begin{equation*}
x=\cos (\pi t), \quad y=3 \sin (\pi t), \quad 0 \leq t \leq 2 \tag{4}
\end{equation*}
\]

Either equations (3) or equations (4) can serve as parametric equations for the ellipse \(x^{2}+\frac{y^{2}}{9}=1\) given in Example 7. The direction of the motion, the beginning point, and the time for 1 revolution give a particular parametric representation.

\section*{The Cycloid}

Suppose that a circle of radius \(a\) rolls along a horizontal line without slipping. As the circle rolls along the line, a point \(P\) on the circle traces out a curve called a cycloid (see Figure 68). We now seek parametric equations* for a cycloid.

Figure 68

\section*{Exploration}

Graph \(x=t-\sin t, \quad y=1-\cos t\), \(0 \leq t \leq 3 \pi\), using your graphing utility with Tstep \(=\frac{\pi}{36}\) and a square screen Compare your results with Figure 68.

We begin with a circle of radius \(a\) and take the fixed line on which the circle rolls as the \(x\)-axis. Let the origin be one of the points at which the point \(P\) comes in contact with the \(x\)-axis. Figure 68 illustrates the position of this point \(P\) after the circle has rolled somewhat. The angle \(t\) (in radians) measures the angle through which the circle has rolled.

Because we require no slippage, it follows that
\[
\operatorname{Arc} A P=d(O, A)
\]

The length of the \(\operatorname{arc} A P\) is given by \(s=r \theta\), where \(r=a\) and \(\theta=t\) radians. Then
\[
\text { at }=d(O, A) \quad s=r \theta, \text { where } r=\text { a and } \theta=t
\]

The \(x\)-coordinate of the point \(P\) is
\[
d(O, X)=d(O, A)-d(X, A)=a t-a \sin t=a(t-\sin t)
\]

The \(y\)-coordinate of the point \(P\) is
\[
d(O, Y)=d(A, C)-d(B, C)=a-a \cos t=a(1-\cos t)
\]

The parametric equations of the cycloid are
\[
\begin{equation*}
x=a(t-\sin t) \quad y=a(1-\cos t) \tag{5}
\end{equation*}
\]

\section*{Applications to Mechanics}

If \(a\) is negative in equation (5), we obtain an inverted cycloid, as shown in Figure 69(a). The inverted cycloid occurs as a result of some remarkable applications in the field of mechanics. We shall mention two of them: the brachistochrone and the tautochrone. \({ }^{\dagger}\)

*Any attempt to derive the rectangular equation of a cycloid would soon demonstrate how complicated the task is.
\({ }^{\dagger}\) In Greek, brachistochrone means "the shortest time" and tautochrone means "equal time."

Figure 70

The brachistochrone is the curve of quickest descent. If a particle is constrained to follow some path from one point \(A\) to a lower point \(B\) (not on the same vertical line) and is acted on only by gravity, the time needed to make the descent is least if the path is an inverted cycloid. See Figure \(69(\mathrm{~b})\) on the previous page. This remarkable discovery, which has been attributed to many famous mathematicians (including Johann Bernoulli and Blaise Pascal), was a significant step in creating the branch of mathematics known as the calculus of variations.

To define the tautochrone, let \(Q\) be the lowest point on an inverted cycloid. If several particles placed at various positions on an inverted cycloid simultaneously begin to slide down the cycloid, they will reach the point \(Q\) at the same time, as indicated in Figure 69(c) on the previous page. The tautochrone property of the cycloid was used by Christiaan Huygens (1629-1695), the Dutch mathematician, physicist, and astronomer, to construct a pendulum clock with a bob that swings along a cycloid (see Figure 70). In Huygens' clock, the bob was made to swing along a cycloid by suspending the bob on a thin wire constrained by two plates shaped like cycloids. In a clock of this design, the period of the pendulum is independent of its amplitude.

\subsection*{9.7 Assess Your Understanding}
'Are You Prepared?' The answer is given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. The function \(f(x)=3 \sin (4 x)\) has amplitude \(\qquad\) and period \(\qquad\) . (pp. 424-426)

\section*{Concepts and Vocabulary}
2. Let \(x=f(t)\) and \(y=g(t)\), where \(f\) and \(g\) are two functions whose common domain is some interval \(I\). The collection of points defined by \((x, y)=(f(t), g(t))\) is called \(\mathrm{a}(\mathrm{n})\) .The variable \(t\) is called a(n) \(\qquad\) .
3. The parametric equations \(x=2 \sin t, y=3 \cos t\) define \(\mathrm{a}(\mathrm{n})\) \(\qquad\) .
4. If a circle rolls along a horizontal line without slippage, a fixed point \(P\) on the circle will trace out a curve called a(n) \(\qquad\) .
5. True or False Parametric equations defining a curve are unique.
6. True or False Curves defined using parametric equations have an orientation.

\section*{Skill Building}

In Problems 7-26, graph the curve whose parametric equations are given, and show its orientation. Find the rectangular equation of each curve.
7. \(x=3 t+2, \quad y=t+1 ; \quad 0 \leq t \leq 4\)
8. \(x=t-3, \quad y=2 t+4 ; \quad 0 \leq t \leq 2\)
9. \(x=t+2, \quad y=\sqrt{t} ; \quad t \geq 0\)
10. \(x=\sqrt{2 t}, \quad y=4 t ; \quad t \geq 0\)
11. \(x=t^{2}+4, \quad y=t^{2}-4 ; \quad-\infty<t<\infty\)
12. \(x=\sqrt{t}+4, \quad y=\sqrt{t}-4 ; \quad t \geq 0\)
13. \(x=3 t^{2}, \quad y=t+1 ; \quad-\infty<t<\infty\)
14. \(x=2 t-4, \quad y=4 t^{2} ; \quad-\infty<t<\infty\)
15. \(x=2 e^{t}, \quad y=1+e^{t} ; \quad t \geq 0\)
16. \(x=e^{t}, \quad y=e^{-t} ; \quad t \geq 0\)
17. \(x=\sqrt{t}, \quad y=t^{3 / 2} ; \quad t \geq 0\)
18. \(x=t^{3 / 2}+1, \quad y=\sqrt{t} ; \quad t \geq 0\)
19. \(x=2 \cos t, \quad y=3 \sin t ; \quad 0 \leq t \leq 2 \pi\)
20. \(x=2 \cos t, \quad y=3 \sin t ; \quad 0 \leq t \leq \pi\)
21. \(x=2 \cos t, \quad y=3 \sin t ; \quad-\pi \leq t \leq 0\)
22. \(x=2 \cos t, \quad y=\sin t ; \quad 0 \leq t \leq \frac{\pi}{2}\)
23. \(x=\sec t, \quad y=\tan t ; \quad 0 \leq t \leq \frac{\pi}{4}\)
24. \(x=\csc t, \quad y=\cot t ; \quad \frac{\pi}{4} \leq t \leq \frac{\pi}{2}\)
25. \(x=\sin ^{2} t, \quad y=\cos ^{2} t ; \quad 0 \leq t \leq 2 \pi\)
26. \(x=t^{2}, \quad y=\ln t ; \quad t>0\)

In Problems 27-34, find two different parametric equations for each rectangular equation.
27. \(y=4 x-1\)
28. \(y=-8 x+3\)
29. \(y=x^{2}+1\)
30. \(y=-2 x^{2}+1\)
31. \(y=x^{3}\)
32. \(y=x^{4}+1\)
33. \(x=y^{3 / 2}\)
34. \(x=\sqrt{y}\)

In Problems 35-38, find parametric equations that define the curve shown.
35.

36.

37.

38.

In Problems 39-42, find parametric equations for an object that moves along the ellipse \(\frac{x^{2}}{4}+\frac{y^{2}}{9}=1\) with the motion described.
39. The motion begins at \((2,0)\), is clockwise, and requires 2 seconds for a complete revolution.
41. The motion begins at \((0,3)\), is clockwise, and requires 1 second for a complete revolution.
40. The motion begins at \((0,3)\), is counterclockwise, and requires 1 second for a complete revolution.
42. The motion begins at \((2,0)\), is counterclockwise, and requires 3 seconds for a complete revolution.

In Problems 43 and 44, the parametric equations of four curves are given. Graph each of them, indicating the orientation.
43. \(C_{1}: \quad x=t, \quad y=t^{2} ; \quad-4 \leq t \leq 4\)
\(C_{2}: \quad x=\cos t, \quad y=1-\sin ^{2} t ; \quad 0 \leq t \leq \pi\)
\(C_{3}: \quad x=e^{t}, \quad y=e^{2 t} ; \quad 0 \leq t \leq \ln 4\)
\(C_{4}: \quad x=\sqrt{t}, \quad y=t ; \quad 0 \leq t \leq 16\)
44. \(C_{1}: \quad x=t, \quad y=\sqrt{1-t^{2}} ; \quad-1 \leq t \leq 1\)
\(C_{2}: \quad x=\sin t, \quad y=\cos t ; \quad 0 \leq t \leq 2 \pi\)
\(C_{3}: \quad x=\cos t, \quad y=\sin t ; \quad 0 \leq t \leq 2 \pi\)
\(C_{4}: \quad x=\sqrt{1-t^{2}}, \quad y=t ; \quad-1 \leq t \leq 1\)

In Problems 45-48, use a graphing utility to graph the curve defined by the given parametric equations.
45. \(x=t \sin t, \quad y=t \cos t, \quad t>0\)
46. \(x=\sin t+\cos t, \quad y=\sin t-\cos t\)
47. \(x=4 \sin t-2 \sin (2 t)\)
\(y=4 \cos t-2 \cos (2 t)\)
48. \(x=4 \sin t+2 \sin (2 t)\)
\(y=4 \cos t+2 \cos (2 t)\)

\section*{Applications and Extensions}
49. Projectile Motion Bob throws a ball straight up with an 2. initial speed of 50 feet per second from a height of 6 feet.
(a) Find parametric equations that model the motion of the ball as a function of time.
(b) How long is the ball in the air?
(c) When is the ball at its maximum height? Determine the maximum height of the ball.
(d) Simulate the motion of the ball by graphing the equations found in part (a).
50. Projectile Motion Alice throws a ball straight up with an initial speed of 40 feet per second from a height of 5 feet.
(a) Find parametric equations that model the motion of the ball as a function of time.
(b) How long is the ball in the air?
(c) When is the ball at its maximum height? Determine the maximum height of the ball.
(d) Simulate the motion of the ball by graphing the equations found in part (a).
51. Catching a Train Bill's train leaves at \(8: 06 \mathrm{Am}\) and accelerates at the rate of 2 meters per second per second. Bill, who can run 5 meters per second, arrives at the train station 5 seconds after the train has left and runs for the train.
(a) Find parametric equations that model the motions of the train and Bill as a function of time.
[Hint: The position \(s\) at time \(t\) of an object having acceleration \(a\) is \(s=\frac{1}{2} a t^{2}\).]
(b) Determine algebraically whether Bill will catch the train. If so, when?
(c) Simulate the motion of the train and Bill by simultaneously graphing the equations found in part (a).
52. Catching a Bus Jodi's bus leaves at \(5: 30\) PM and accelerates at the rate of 3 meters per second per second. Jodi, who can run 5 meters per second, arrives at the bus station 2 seconds after the bus has left and runs for the bus.
(a) Find parametric equations that model the motions of the bus and Jodi as a function of time.
[Hint: The position \(s\) at time \(t\) of an object having acceleration \(a\) is \(s=\frac{1}{2} a t^{2}\).]
(b) Determine algebraically whether Jodi will catch the bus. If so, when?
(c) Simulate the motion of the bus and Jodi by simultaneously graphing the equations found in part (a).
53. Projectile Motion Ichiro throws a baseball with an initial
 speed of 145 feet per second at an angle of \(20^{\circ}\) to the horizontal. The ball leaves Ichiro's hand at a height of 5 feet.
(a) Find parametric equations that model the position of the ball as a function of time.
(b) How long is the ball in the air?
(c) Determine the horizontal distance that the ball travels.
(d) When is the ball at its maximum height? Determine the maximum height of the ball.
(e) Using a graphing utility, simultaneously graph the equations found in part (a).
54. Projectile Motion Mark Texeira hit a baseball with an initial speed of 125 feet per second at an angle of \(40^{\circ}\) to the horizontal. The ball was hit at a height of 3 feet off the ground.
(a) Find parametric equations that model the position of the ball as a function of time.
(b) How long was the ball in the air?
(c) Determine the horizontal distance that the ball traveled.
(d) When was the ball at its maximum height? Determine the maximum height of the ball.
(e) Using a graphing utility, simultaneously graph the equations found in part (a).
55. Projectile Motion Suppose that Adam hits a golf ball off a cliff 300 meters high with an initial speed of 40 meters per second at an angle of \(45^{\circ}\) to the horizontal.
(a) Find parametric equations that model the position of the ball as a function of time.
(b) How long is the ball in the air?
(c) Determine the horizontal distance that the ball travels.
(d) When is the ball at its maximum height? Determine the maximum height of the ball.
(e) Using a graphing utility, simultaneously graph the equations found in part (a).
56. Projectile Motion Suppose that Karla hits a golf ball off a cliff 300 meters high with an initial speed of 40 meters per second at an angle of \(45^{\circ}\) to the horizontal on the Moon (gravity on the Moon is one-sixth of that on Earth).
(a) Find parametric equations that model the position of the ball as a function of time.
(b) How long is the ball in the air?
(c) Determine the horizontal distance that the ball travels.
(d) When is the ball at its maximum height? Determine the maximum height of the ball.
(e) Using a graphing utility, simultaneously graph the equations found in part (a).
57. Uniform Motion A Toyota Camry (traveling east at 40 mph ) and a Chevy Impala (traveling north at 30 mph ) are heading toward the same intersection. The Camry is 5 miles from the intersection when the Impala is 4 miles from the intersection. See the figure.
(a) Find parametric equations that model the motion of the Camry and the Impala.
(b) Find a formula for the distance between the cars as a function of time.

(c) Graph the function in part (b) using a graphing utility.
(d) What is the minimum distance between the cars? When are the cars closest?
(e) Simulate the motion of the cars by simultaneously graphing the equations found in part (a).
58. Uniform Motion A Cessna (heading south at 120 mph ) and a Boeing 747 (heading west at 600 mph ) are flying toward the same point at the same altitude. The Cessna is 100 miles from the point where the flight patterns intersect, and the 747 is 550 miles from this intersection point. See the figure.
(a) Find parametric equations that model the motion of the Cessna and the 747.
(b) Find a formula for the distance between the planes as a function of time.

(c) Graph the function in part (b) using a graphing utility.
(d) What is the minimum distance between the planes? When are the planes closest?
(e) Simulate the motion of the planes by simultaneously graphing the equations found in part (a).
59. The Green Monster The left field wall at Fenway Park is 310 feet from home plate; the wall itself (affectionately named the Green Monster) is 37 feet high. A batted ball must clear the wall to be a home run. Suppose a ball leaves the bat 3 feet off the ground, at an angle of \(45^{\circ}\). Use \(g=32\) feet per second \({ }^{2}\) as the acceleration due to gravity, and ignore any air resistance.
(a) Find parametric equations that model the position of the ball as a function of time.
(b) What is the maximum height of the ball if it leaves the bat with a speed of 90 miles per hour? Give your answer in feet.
(c) How far is the ball from home plate at its maximum height? Give your answer in feet.
(d) If the ball is hit straight down the left field wall, will it clear the Green Monster? If it does, by how much does it clear the wall?

Source: The Boston Red Sox
60. Projectile Motion The position of a projectile fired with an initial velocity \(v_{0}\) feet per second and at an angle \(\theta\) to the horizontal at the end of \(t\) seconds is given by the parametric equations
\[
x=\left(v_{0} \cos \theta\right) t \quad y=\left(v_{0} \sin \theta\right) t-16 t^{2}
\]

See the illustration.

(a) Obtain the rectangular equation of the trajectory, and identify the curve.
(b) Show that the projectile hits the ground \((y=0)\) when \(t=\frac{1}{16} v_{0} \sin \theta\).
(c) How far has the projectile traveled (horizontally) when it strikes the ground? In other words, find the range \(R\).
(d) Find the time \(t\) when \(x=y\). Then find the horizontal distance \(x\) and the vertical distance \(y\) traveled by the projectile in this time. Then compute \(\sqrt{x^{2}+y^{2}}\). This is the distance \(R\), the range, that the projectile travels up a plane inclined at \(45^{\circ}\) to the horizontal \((x=y)\). See the following illustration. (See also Problem 97 in Section 6.6.)

61. Show that the parametric equations for a line passing through the points \(\left(x_{1}, y_{1}\right)\) and \(\left(x_{2}, y_{2}\right)\) are
\[
\begin{aligned}
& x=\left(x_{2}-x_{1}\right) t+x_{1} \\
& y=\left(y_{2}-y_{1}\right) t+y_{1}, \quad-\infty<t<\infty
\end{aligned}
\]

What is the orientation of this line?
62. Hypocycloid The hypocycloid is a curve defined by the parametric equations
\[
x(t)=\cos ^{3} t, \quad y(t)=\sin ^{3} t, \quad 0 \leq t \leq 2 \pi
\]
(a) Graph the hypocycloid using a graphing utility.
(b) Find a rectangular equation of the hypocycloid.

\section*{Discussion and Writing}
63. In Problem 62, you graphed the hypocycloid. Now graph the rectangular equations of the hypocycloid. Did you obtain a complete graph? If not, experiment until you do.
64. Look up the curves called hypocycloid and epicycloid. Write a report on what you find. Be sure to draw comparisons with the cycloid.

\section*{Retain Your Knowledge}

Problems 65-68 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
65. Graph the equation \(3 x-4 y=8\) on the \(x y\)-plane.
66. Graph \(y=2 \cos (2 x)+\sin \left(\frac{x}{2}\right)\) on the \(x y\)-plane.
67. The International Space Station (ISS) orbits Earth at a height of approximately 248 miles above the surface. What is the distance, in miles, on the surface of Earth that can be observed from the ISS? Assume that Earth's radius is 3960 miles.
Source: nasa.gov
68. The displacement \(d\) (in meters) of an object at time \(t\) (in seconds) is given by \(d=2 \cos (4 t)\).
(a) Describe the motion of the object.
(b) What is the maximum displacement of the object from its rest position?
(c) What is the time required for 1 oscillation?
(d) What is the frequency?

\]

\section*{Formulas}

Rotation formulas (p. 694)

Angle \(\theta\) of rotation that eliminates the \(x^{\prime} y^{\prime}\)-term (p. 695)

\section*{Objectives}

\section*{Section}
9.1
\(9.21 \quad\) Analyze parabolas with vertex at the origin (p. 661)
2 Analyze parabolas with vertex at \((h, k)\) (p. 664)
3 Solve applied problems involving parabolas (p. 665)
\(9.3 \quad 1 \quad\) Analyze ellipses with center at the origin (p. 670)
2 Analyze ellipses with center at \((h, k)\) (p. 674)
3 Solve applied problems involving ellipses (p. 675)
9.41 Analyze hyperbolas with center at the origin (p. 680)

2 Find the asymptotes of a hyperbola (p. 684)
3 Analyze hyperbolas with center at ( \(h, k\) ) (p. 686)
4 Solve applied problems involving hyperbolas (p. 687)
\(9.5 \quad 1 \quad\) Identify a conic (p. 692)
2 Use a rotation of axes to transform equations (p. 693)
3 Analyze an equation using a rotation of axes (p. 695)
4 Identify conics without a rotation of axes (p. 697)
9.6
9.7

\section*{You should be able to ...}

Know the names of the conics (p. 660)

1 Analyze and graph polar equations of conics (p. 699)
2 Convert the polar equation of a conic to a rectangular equation (p. 703)
1 Graph parametric equations (p. 706)

2 Find a rectangular equation for a curve defined parametrically (p. 706)
3 Use time as a parameter in parametric equations (p. 708)
4 Find parametric equations for curves defined by rectangular equations (p. 711)

\section*{Review Exercises}

In Problems 1-10, identify each equation. If it is a parabola, give its vertex, focus, and directrix; if it is an ellipse, give its center, vertices, and foci; if it is a hyperbola, give its center, vertices, foci, and asymptotes.
1. \(y^{2}=-16 x\)
2. \(\frac{x^{2}}{25}-y^{2}=1\)
3. \(\frac{y^{2}}{25}+\frac{x^{2}}{16}=1\)
4. \(x^{2}+4 y=4\)
5. \(4 x^{2}-y^{2}=8\)
6. \(x^{2}-4 x=2 y\)
7. \(y^{2}-4 y-4 x^{2}+8 x=4\)
8. \(4 x^{2}+9 y^{2}-16 x-18 y=11\)
9. \(4 x^{2}-16 x+16 y+32=0\)
10. \(9 x^{2}+4 y^{2}-18 x+8 y=23\)

In Problems 11-18, find an equation of the conic described. Graph the equation.
11. Parabola; focus at \((-2,0)\); directrix the line \(x=2\)
12. Hyperbola; center at \((0,0)\); focus at \((0,4)\); vertex at \((0,-2)\)
13. Ellipse; foci at \((-3,0)\) and \((3,0)\); vertex at \((4,0)\)
14. Parabola; vertex at \((2,-3)\); focus at \((2,-4)\)
15. Hyperbola; center at \((-2,-3)\); focus at \((-4,-3)\); vertex at \((-3,-3)\)
16. Ellipse; foci at \((-4,2)\) and \((-4,8)\); vertex at \((-4,10)\)
17. Center at \((-1,2) ; \quad a=3 ; \quad c=4\); transverse axis parallel to the \(x\)-axis
18. Vertices at \((0,1)\) and \((6,1)\); asymptote the line \(3 y+2 x=9\)

In Problems 19-23, identify each conic without completing the squares and without applying a rotation of axes.
19. \(y^{2}+4 x+3 y-8=0\)
20. \(x^{2}+2 y^{2}+4 x-8 y+2=0\)
21. \(9 x^{2}-12 x y+4 y^{2}+8 x+12 y=0\)
22. \(4 x^{2}+10 x y+4 y^{2}-9=0\)
23. \(x^{2}-2 x y+3 y^{2}+2 x+4 y-1=0\)

In Problems 24-26, rotate the axes so that the new equation contains no xy-term. Analyze and graph the new equation.
24. \(2 x^{2}+5 x y+2 y^{2}-\frac{9}{2}=0\)
25. \(6 x^{2}+4 x y+9 y^{2}-20=0\)
26. \(4 x^{2}-12 x y+9 y^{2}+12 x+8 y=0\)

In Problems 27-29, identify the conic that each polar equation represents and graph it.
27. \(r=\frac{4}{1-\cos \theta}\)
28. \(r=\frac{6}{2-\sin \theta}\)
29. \(r=\frac{8}{4+8 \cos \theta}\)

In Problems 30 and 31, convert each polar equation to a rectangular equation.
30. \(r=\frac{4}{1-\cos \theta}\)
31. \(r=\frac{8}{4+8 \cos \theta}\)

In Problems 32-34, graph the curve whose parametric equations are given and show its orientation. Find the rectangular equation of each curve.
32. \(x=4 t-2, \quad y=1-t ; \quad-\infty<t<\infty\)
33. \(x=3 \sin t, \quad y=4 \cos t+2 ; \quad 0 \leq t \leq 2 \pi\)
34. \(x=\sec ^{2} t, \quad y=\tan ^{2} t ; \quad 0 \leq t \leq \frac{\pi}{4}\)
35. Find two different parametric equations for \(y=-2 x+4\).
36. Find parametric equations for an object that moves along the ellipse \(\frac{x^{2}}{16}+\frac{y^{2}}{9}=1\) where the motion begins at \((4,0)\), is counterclockwise, and requires 4 seconds for a complete revolution.
37. Find an equation of the hyperbola whose foci are the vertices of the ellipse \(4 x^{2}+9 y^{2}=36\) and whose vertices are the foci of this ellipse.
38. Describe the collection of points in a plane so that the distance from each point to the point \((3,0)\) is three-fourths of its distance from the line \(x=\frac{16}{3}\).
39. Searchlight A searchlight is shaped like a paraboloid of revolution. If a light source is located 1 foot from the vertex along the axis of symmetry and the opening is 2 feet across,
how deep should the mirror be in order to reflect the light rays parallel to the axis of symmetry?
40. Semielliptical Arch Bridge A bridge is built in the shape of a semielliptical arch. The bridge has a span of 60 feet and a maximum height of 20 feet. Find the height of the arch at distances of 5,10 , and 20 feet from the center.
41. Calibrating Instruments In a test of their recording devices, a team of seismologists positioned two of the devices 2000 feet apart, with the device at point \(A\) to the west of the device at point \(B\). At a point between the devices and 200 feet from point \(B\), a small amount of explosive was detonated and a note made of the time at which the sound reached each device. A second explosion is to be carried out at a point directly north of point \(B\). How far north should the site of the second explosion be chosen so that the measured time difference recorded by the devices for the second detonation is the same as that recorded for the first detonation?
42. Uniform Motion Mary's train leaves at 7:15 AM and accelerates at the rate of 3 meters per second per second. Mary, who can run 6 meters per second, arrives at the train station 2 seconds after the train has left.
(a) Find parametric equations that model the motion of the train and Mary as a function of time.
[Hint: The position \(s\) at time \(t\) of an object having acceleration \(a\) is \(s=\frac{1}{2} a t^{2}\).]
(b) Determine algebraically whether Mary will catch the train. If so, when?
(c) Simulate the motions of the train and Mary by simultaneously graphing the equations found in part (a).
43. Projectile Motion Drew Brees throws a football with an initial speed of 80 feet per second at an angle of \(35^{\circ}\) to the horizontal. The ball leaves Brees's hand at a height of 6 feet.
(a) Find parametric equations that model the position of the ball as a function of time.
(b) How long is the ball in the air?
(c) When is the ball at its maximum height? Determine the maximum height of the ball.
(d) Determine the horizontal distance that the ball travels.
(e) Using a graphing utility, simultaneously graph the equations found in part (a).
44. Formulate a strategy for discussing and graphing an equation of the form
\[
A x^{2}+B x y+C y^{2}+D x+E y+F=0
\]

\section*{Chapter Test}

Chapter Test Prep Videos include step-by-step solutions to all chapter test exercises and can be found in MyMathLabll or on this text's You Tube" Channel (search "SullivanPrecalcUC3e").

In Problems 1-3, identify each equation. If it is a parabola, give its vertex, focus, and directrix; if an ellipse, give its center, vertices, and foci; if a hyperbola, give its center, vertices, foci, and asymptotes.
1. \(\frac{(x+1)^{2}}{4}-\frac{y^{2}}{9}=1\)
2. \(8 y=(x-1)^{2}-4\)
3. \(2 x^{2}+3 y^{2}+4 x-6 y=13\)

\section*{In Problems 4-6, find an equation of the conic described; graph the equation.}
4. Parabola: focus \((-1,4.5)\), vertex \((-1,3)\)
5. Ellipse: center \((0,0)\), vertex \((0,-4)\), focus \((0,3)\)
6. Hyperbola: center \((2,2)\), vertex \((2,4)\), contains the point \((2+\sqrt{10}, 5)\)

In Problems 7-9, identify each conic without completing the square or rotating axes.
7. \(2 x^{2}+5 x y+3 y^{2}+3 x-7=0\)
8. \(3 x^{2}-x y+2 y^{2}+3 y+1=0\)
9. \(x^{2}-6 x y+9 y^{2}+2 x-3 y-2=0\)
10. Given the equation \(41 x^{2}-24 x y+34 y^{2}-25=0\), rotate the axes so that there is no \(x y\)-term. Analyze and graph the new equation.
11. Identify the conic represented by the polar equation \(r=\frac{3}{1-2 \cos \theta}\). Find the rectangular equation.
12. Graph the curve whose parametric equations are given and show its orientation. Find the rectangular equation for the curve.
\[
x=3 t-2, \quad y=1-\sqrt{t}, \quad 0 \leq t \leq 9
\]
13. A parabolic reflector (paraboloid of revolution) is used by TV crews at football games to pick up the referee's announcements, quarterback signals, and so on. A microphone is placed at the focus of the parabola. If a certain reflector is 4 feet wide and 1.5 feet deep, where should the microphone be placed?

\section*{Cumulative Review}
1. For \(f(x)=-3 x^{2}+5 x-2\), find
\[
\frac{f(x+h)-f(x)}{h} \quad h \neq 0
\]
2. In the complex number system, solve the equation
\[
9 x^{4}+33 x^{3}-71 x^{2}-57 x-10=0
\]
3. For what numbers \(x\) is \(6-x \geq x^{2}\) ?
4. (a) Find the domain and range of \(y=3^{x}+2\).
(b) Find the inverse of \(y=3^{x}+2\) and state its domain and range.
5. \(f(x)=\log _{4}(x-2)\)
(a) Solve \(f(x)=2\).
(b) Solve \(f(x) \leq 2\).
6. Find an equation for each of the following graphs:
(a) Line:

(b) Circle:

(d) Parabola:

(e) Hyperbola:

(c) Ellipse:

(f) Exponential:

7. Find all the solutions of the equation \(\sin (2 \theta)=0.5\).
8. Find a polar equation for the line containing the origin that makes an angle of \(30^{\circ}\) with the positive \(x\)-axis.
9. Find a polar equation for the circle with center at the point \((0,4)\) and radius 4 . Graph this circle.
10. What is the domain of the function \(f(x)=\frac{3}{\sin x+\cos x}\) ?
11. Solve the equation \(\cot (2 \theta)=1\), where \(0^{\circ}<\theta<90^{\circ}\).
12. Find the rectangular equation of the curve
\[
x=5 \tan t, y=5 \sec ^{2} t,-\frac{\pi}{2}<t<\frac{\pi}{2}
\]

\section*{Chapter Projects}

\section*{Internet-based Project}
I. The Hale-Bopp Comet The orbits of planets and some comets about the Sun are ellipses, with the Sun at one focus. The aphelion of a planet is its greatest distance from the Sun,

and the perihelion is its shortest distance. The mean distance of a planet from the Sun is the length of the semimajor axis of the elliptical orbit. See the illustration.
1. Research the history of the Hale-Bopp comet on the Internet. In particular, determine the aphelion and perihelion. Often these values are given in terms of astronomical units. What is an astronomical unit? What is it equivalent to in miles? In kilometers? What is the orbital period of the Hale-Bopp comet? When will it next be visible from Earth? How close does it come to Earth?
2. Find a model for the orbit of the Hale-Bopp Comet around the Sun. Use the \(x\)-axis as the major axis.
3. The Hale-Bopp comet has an orbit that is roughly perpendicular to that of Earth. Find a model for the orbit of Earth using the \(y\)-axis as the major axis.
4. Use a graphing utility or some other graphing technology to graph the paths of the orbits. Based on the graphs, do the paths of the orbits intersect? Does this mean the Hale-Bopp comet will collide with Earth?

The following projects can be found at the Instructor's Resource Center (IRC):
II. The Orbits of Neptune and Pluto Pluto and Neptune travel around the Sun in elliptical orbits. Pluto, at times, comes closer to the Sun than Neptune, the outermost planet. This project examines and analyzes the two orbits.
III. Project at Motorola Distorted Deployable Space Reflector Antennas An engineer designs an antenna that will deploy in space to collect sunlight.
IV. Constructing a Bridge over the East River The size of ships using a river and fluctuations in water height due to tides or flooding must be considered when designing a bridge that will cross a major waterway.
V. Systems of Parametric Equations Which approach to use when solving a system of equations depends on the form of the system and on the domains of the equations.

\title{
Systems of Equations and Inequalities
}

\section*{Economic Outcomes}

\section*{Annual Earnings of Young Adults}

For both males and females, earnings increase with education: full-time workers with at least a bachelor's degree have higher median earnings than those with less education. For example, in 2010, male college graduates earned 79 percent more than male high school completers. Females with a bachelor's or higher degree earned 74 percent more than female high school completers. Males and females who dropped out of high school earned 27 and 30 percent less, respectively, than male and female high school completers.

The median earnings of young adults who had at least a bachelor's degree declined in the 1970s relative to their counterparts who were high school completers, before increasing between 1980 and 2010. Males with a bachelor's degree or higher had earnings 19 percent higher than male high school completers in 1980 and had earnings 79 percent higher in 2010. Among females, those with at least a bachelor's degree had earnings 34 percent higher than female high school completers in 1980, compared with earnings 74 percent higher in 2010.

\section*{<A Look Back}

In Appendix A, Section A.8, and in Chapters 2, 3, and 4, we solved various kinds of equations and inequalities involving a single variable.

\section*{A Look Ahead>}

In this chapter we take up the problem of solving equations and inequalities containing two or more variables. There are various ways to solve such problems.

The method of substitution for solving equations in several unknowns dates back to ancient times.

The method of elimination, although it had existed for centuries, was put into systematic order by Karl Friedrich Gauss (1777-1855) and by Camille Jordan (1838-1922).

The theory of matrices was developed in 1857 by Arthur Cayley (1821-1895), although only later were matrices used as we use them in this chapter. Matrices have become a very flexible instrument, useful in almost all areas of mathematics.

The method of determinants was invented by Takakazu Seki Kôwa (16421708) in 1683 in Japan and by Gottfried Wilhelm von Leibniz (1646-1716) in 1693 in Germany. Cramer's Rule is named after Gabriel Cramer (1704-1752) of Switzerland, who popularized the use of determinants for solving linear systems.

Section 10.5, on partial fraction decomposition, provides an application of systems of equations. This particular application is one that is used in integral calculus.

Section 10.8 introduces linear programming, a modern application of linear inequalities. This topic is particularly useful for students interested in operations research.

\subsection*{10.1 Systems of Linear Equations: Substitution and Elimination}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Linear Equations (Appendix A, Section A.8, pp. A64-A66)
- Lines (Foundations, Section 3, pp. 19-29)

Now Work the 'Are You Prepared?' problems on page 733.

\section*{OBJECTIVES 1 Solve Systems of Equations by Substitution (p. 725)}

2 Solve Systems of Equations by Elimination (p. 726)
3 Identify Inconsistent Systems of Equations Containing Two Variables (p. 728)
4 Express the Solution of a System of Dependent Equations Containing Two Variables (p. 729)
5 Solve Systems of Three Equations Containing Three Variables (p. 729)
6 Identify Inconsistent Systems of Equations Containing Three Variables (p.731)
7 Express the Solution of a System of Dependent Equations Containing Three Variables (p. 732)

We begin with an example.

\section*{EXAMPLE I Movie TheaterTicket Sales}

A movie theater sells tickets for \(\$ 8.00\) each, with seniors receiving a discount of \(\$ 2.00\). One evening the theater took in \(\$ 3580\) in revenue. If \(x\) represents the number of tickets sold at \(\$ 8.00\) and \(y\) the number of tickets sold at the discounted price of \(\$ 6.00\), write an equation that relates these variables.

Solution Each nondiscounted ticket brings in \(\$ 8.00\), so \(x\) tickets will bring in \(8 x\) dollars. Similarly, \(y\) discounted tickets bring in \(6 y\) dollars. Since the total brought in is \(\$ 3580\), we must have
\[
8 x+6 y=3580
\]

In Example 1, suppose that we also know that 525 tickets were sold that evening. Then we have another equation relating the variables \(x\) and \(y\) :
\[
x+y=525
\]

The two equations
\[
\begin{aligned}
8 x+6 y & =3580 \\
x+y & =525
\end{aligned}
\]
form a system of equations.
In general, a system of equations is a collection of two or more equations, each containing one or more variables. Example 2 gives some illustrations of systems of equations.

\section*{EXAMPLE 2 Examples of Systems of Equations}
(a) \(\left\{\begin{aligned} 2 x+y & =5 \\ -4 x+6 y & =-2\end{aligned}\right.\)
(1) Two equations containing two variables, \(x\) and \(y\)
(b) \(\left\{\begin{aligned} x+y^{2} & =5 \\ 2 x+y & =4\end{aligned}\right.\)
(1) Two equations containing two variables, \(x\) and \(y\)
(c) \(\left\{\begin{aligned} x+y+z=6 & \text { (1) } \\ 3 x-2 y+4 z=9 & \text { (2) } \\ x-y-z=0 & \text { (3) }\end{aligned}\right.\)
(d) \(\left\{\begin{array}{l}x+y+z=5 \\ x-y=2\end{array}\right.\)

Two equations containing three variables, \(x, y\), and \(z\)
(e) \(\left\{\begin{aligned} x+y+z & =6 \\ 2 x+2 z & =4 \\ y+z & =2 \\ x & =4\end{aligned}\right.\)

Four equations containing three variables, \(x, y\), and \(z\)

We use a brace to remind us that we are dealing with a system of equations, and we number each equation in the system.

A solution of a system of equations consists of values for the variables that are solutions of each equation of the system. To solve a system of equations means to find all solutions of the system.

For example, \(x=2, y=1\) is a solution of the system in Example 2(a), because
\[
\left\{\begin{array} { r l } 
{ 2 x + y } & { = 5 ( 1 ) } \\
{ - 4 x + 6 y } & { = - 2 }
\end{array} \quad \left\{\begin{array}{rl}
2(2)+1
\end{array} \quad\left\{\begin{array}{r}
1
\end{array}\right)=5+1=-4(2)+6(1)=-8+6=-2 \$\right.\right.
\]

This solution may also be written as the ordered pair \((2,1)\).
A solution of the system in Example 2(b) is \(x=1, y=2\), because
\[
\left\{\begin{array}{r}
x+y^{2}=5 \\
2 x+y=4
\end{array}\right.
\]

Another solution of the system in Example 2(b) is \(x=\frac{11}{4}, y=-\frac{3}{2}\), which you can
check for yourself. check for yourself.

A solution of the system in Example 2(c) is \(x=3, y=2, z=1\), because
\[
\left\{\begin{array}{r}
x+y+z=6 \\
3 x-2 y+4 z=9 \\
x-y-z=0
\end{array}\right.
\]

This solution may also be written as the ordered triplet \((3,2,1)\).
Note that \(x=3, y=3, z=0\) is not a solution of the system in Example 2(c).
\[
\left\{\begin{array}{r}
x+y+z=6 \\
3 x-2 y+4 z=9 \\
x-y-z=0
\end{array}\right.
\]

Although \(x=3, y=3\), and \(z=0\) satisfy equations (1) and (3), they do not satisfy equation (2). Any solution of the system must satisfy each equation of the system.
m Now Work problem 9
When a system of equations has at least one solution, it is said to be consistent. When a system of equations has no solution, it is called inconsistent.

An equation in \(n\) variables is said to be linear if it is equivalent to an equation of the form
\[
a_{1} x_{1}+a_{2} x_{2}+\cdots+a_{n} x_{n}=b
\]
where \(x_{1}, x_{2}, \ldots, x_{n}\) are \(n\) distinct variables, \(a_{1}, a_{2}, \ldots, a_{n}, b\) are constants, and at least one of the \(a\) 's is not 0 .

Some examples of linear equations are
\[
2 x+3 y=2 \quad 5 x-2 y+3 z=10 \quad 8 x+8 y-2 z+5 w=0
\]

If each equation in a system of equations is linear, we have a system of linear equations. The systems in Examples 2(a), (c), (d), and (e) are linear, whereas the system in Example 2(b) is nonlinear. In this chapter we shall solve linear systems in Sections 10.1 to 10.3. Nonlinear systems are discussed in Section 10.6.

We begin by discussing a system of two linear equations containing two variables. The problem of solving such a system can be viewed as a geometry problem. The graph of each equation in such a system is a line. So a system of two linear equations containing two variables represents a pair of lines. The lines either (1) intersect or (2) are parallel or (3) are coincident (that is, identical).
1. If the lines intersect, the system of equations has one solution, given by the point of intersection. The system is consistent and the equations are independent. See Figure 1(a).
2. If the lines are parallel, the system of equations has no solution, because the lines never intersect. The system is inconsistent. See Figure 1(b).
3. If the lines are coincident (the lines lie on top of each other), the system of equations has infinitely many solutions, represented by the totality of points on the line. The system is consistent and the equations are dependent. See Figure 1(c).

Figure 1 Consistent and Independent

(a) Intersecting lines; system has one solution

(b) Parallel lines; system has no solution

Consistent and Dependent

(c) Coincident lines; system has infinitely many solutions

\section*{EXAMPLE 3 Graphing a System of Linear Equations}

Graph the system: \(\left\{\begin{aligned} 2 x+y & =-1 \quad \text { (1) } \\ -4 x+6 y & =42 \quad \text { (2) }\end{aligned}\right.\)

\section*{Solution}

Figure 2

First, solve each equation for \(y\). This is equivalent to writing each equation in slopeintercept form. Equation (1) in slope-intercept form is \(y=-2 x-1\), which has slope -2 and \(y\)-intercept -1 . Equation (2) in slope-intercept form is \(y=\frac{2}{3} x+7\), which has slope \(\frac{2}{3}\) and \(y\)-intercept 7 . Figure 2 shows their graphs.

From the graph in Figure 2, we see that the lines intersect, so the system given in Example 3 is consistent. The graph can also be used as a means of approximating the solution. For this system, the solution appears to be the point \((-3,5)\).

\section*{Seeing the Concept}

Graph the lines \(2 x+y=-1\left(Y_{1}=-2 x-1\right)\) and \(-4 x+6 y=42\left(Y_{2}=\frac{2}{3} x+7\right)\) and compare what you see with Figure 2 . Use INTERSECT to verify that the point of intersection is \((-3,5)\).

\section*{1 Solve Systems of Equations by Substitution}

Most of the time we must use algebraic methods to obtain exact solutions. A number of methods are available for solving systems of linear equations algebraically. In this section, we introduce two methods: substitution and elimination. We illustrate the method of substitution by solving the system given in Example 3.

\section*{EXAMPLE 4 How to Solve a System of Linear Equations by Substitution}

\section*{Step-by-Step Solution}

Step 1: Pick one of the equations and solve for one of the variables in terms of the remaining variable(s).

Solve: \(\left\{\begin{aligned} 2 x+y & =-1 \\ -4 x+6 y & =42\end{aligned}\right.\)
Solve equation (1) for \(y\).
\[
\begin{aligned}
2 x+y & =-1 & & \text { Equation (1) } \\
y & =-2 x-1 \quad & & \text { Subtract } 2 \times \text { from each side of (1). }
\end{aligned}
\]

Substitute \(-2 x-1\) for \(y\) in equation (2). The result is an equation containing just the variable \(x\), which we can solve.
\[
\begin{aligned}
-4 x+6 y & =42 \quad \text { Equation (2) } \\
-4 x+6(-2 x-1) & =42 \quad \text { Substitute }-2 x-1 \text { for } y \text { in (2). }
\end{aligned}
\]

Step 3: If one equation in one variable results, solve this equation. Otherwise, repeat Steps 1 and 2 until a single equation with one variable remains.
\[
\begin{aligned}
-4 x-12 x-6 & =42 & & \text { Distribute. } \\
-16 x-6 & =42 & & \text { Combine like terms. } \\
-16 x & =48 & & \text { Add } 6 \text { to both sides. } \\
x & =\frac{48}{-16} & & \text { Divide both sides by }-16 . \\
x & =-3 & & \text { Simplify. }
\end{aligned}
\]

Step 4: Find the values of the remaining variables by backsubstitution.

Because we know that \(x=-3\), we can find the value of \(y\) by back-substitution - that is, by substituting -3 for \(x\) in one of the original equations. Equation (1) seems easier to work with, so we will back-substitute into equation (1).
\[
\begin{aligned}
2 x+y & =-1 & & \text { Equation (1) } \\
2(-3)+y & =-1 & & \text { Substitute }-3 \text { for xin equation (1). } \\
-6+y & =-1 & & \text { Simplify. } \\
y & =-1+6 & & \text { Add } 6 \text { to both sides. } \\
y & =5 & & \text { Simplify. }
\end{aligned}
\]

\footnotetext{
In Words
When using elimination, get the coefficients of one of the variables to be opposites.
}

We have \(x=-3\) and \(y=5\). Verify that both equations are satisfied (true) for these values.
\[
\left\{\begin{array}{c}
2 x+y=-1 ; 2(-3)+5=-6+5=-1 \\
-4 x+6 y=42 ;-4(-3)+6(5)=12+30=42
\end{array}\right.
\]

The solution of the system is \(x=-3\) and \(y=5\). The solution can also be written as the ordered pair \((-3,5)\).
am Now Use Substitution to Work problem 19

\section*{2 Solve Systems of Equations by Elimination}

A second method for solving a system of linear equations is the method of elimination. This method is usually preferred over substitution if substitution leads to fractions or if the system contains more than two variables. Elimination also provides the necessary motivation for solving systems using matrices (the subject of Section 10.2).

The idea behind the method of elimination is to replace the original system of equations by an equivalent system so that adding two of the equations eliminates a variable. The rules for obtaining equivalent equations are the same as those studied earlier. However, we may also interchange any two equations of the system and/or replace any equation in the system by the sum (or difference) of that equation and a nonzero multiple of any other equation in the system.

\section*{Rules for Obtaining an Equivalent System of Equations}
1. Interchange any two equations of the system.
2. Multiply (or divide) each side of an equation by the same nonzero constant.
3. Replace any equation in the system by the sum (or difference) of that equation and a nonzero multiple of any other equation in the system.

An example will give you the idea. As you work through the example, pay particular attention to the pattern being followed.

\section*{EXAMPLE 5 How to Solve a System of Linear Equations by Elimination}

Solve: \(\left\{\begin{aligned} 2 x+3 y & =1 \\ -x+y= & -3\end{aligned}\right.\)

\section*{Step-by-Step Solution}

Step 1: Multiply both sides of one or both equations by a nonzero constant so that the coefficients of one of the variables are additive inverses. equations are additive inverses.
\[
\begin{align*}
\left\{\begin{aligned}
2 x+3 y & =1 \\
-x+y & =-3
\end{aligned}\right. \\
\left\{\begin{aligned}
2 x+3 y & =1 \\
2(-x+y) & =2(-3)
\end{aligned}\right.  \tag{1}\\
\left\{\begin{aligned}
2 x+3 y & =1 \\
-2 x+2 y & =-6
\end{aligned}\right.
\end{align*}
\]

Step 2: Add the equations to eliminate the variable. Solve the resulting equation for the remaining unknown.
\[
\left\{\begin{align*}
2 x+3 y & =1 & & (1)  \tag{2}\\
-2 x+2 y & =-6 & & (2) \\
\hline 5 y & =-5 & & \text { Add equations (1) and (2). } \\
y & =-1 & & \text { Divide both sides by } 5 .
\end{align*}\right.
\]

Step 3: Back-substitute the value of the variable found in Step 2 into one of the original equations to find the value of the remaining variable.

Back-substitute \(y=-1\) into equation (1) and solve for \(x\).
\[
\begin{aligned}
2 x+3 y & =1 & & \text { Equation (1) } \\
2 x+3(-1) & =1 & & \text { Substitute }-1 \text { for } y \text { in equation (1). } \\
2 x-3 & =1 & & \text { Simplify. } \\
2 x & =4 & & \text { Add 3 to both sides. } \\
x & =2 & & \text { Divide both sides by } 2 .
\end{aligned}
\]

Step 4: Check the solution found.

We leave the check to you.

The solution of the system is \(x=2\) and \(y=-1\). The solution can also be written as the ordered pair \((2,-1)\).
an Now Use Elimination to Work problem 19

\section*{EXAMPLE 6}

\section*{Movie Theater Ticket Sales}

A movie theater sells tickets for \(\$ 8.00\) each, with seniors receiving a discount of \(\$ 2.00\). One evening the theater sold 525 tickets and took in \(\$ 3580\) in revenue. How many of each type of ticket were sold?

Solution If \(x\) represents the number of tickets sold at \(\$ 8.00\) and \(y\) the number of tickets sold at the discounted price of \(\$ 6.00\), then the given information results in the system of equations
\[
\left\{\begin{aligned}
8 x+6 y & =3580 \\
x+y & =525
\end{aligned}\right.
\]

Using the method of elimination, first multiply the second equation by -6 , and then add the equations.
\[
\left\{\begin{array}{rlrl}
8 x+6 y & =3580 & & (1) \\
-6 x-6 y & =-3150 \\
\hline 2 x & =430 & & \text { Add the equations. } \\
x & =215 & &
\end{array}\right.
\]

Since \(x+y=525\), then \(y=525-x=525-215=310\). So 215 nondiscounted tickets and 310 senior discount tickets were sold.

\section*{3 Identify Inconsistent Systems of Equations Containing Two Variables}

The previous examples dealt with consistent systems of equations that had a single solution. The next two examples deal with two other possibilities that may occur, the first being a system that has no solution.

\section*{EXAMPLE 7 \\ An Inconsistent System of Linear Equations}

Solve: \(\left\{\begin{array}{l}2 x+y=5 \\ 4 x+2 y=8\end{array}\right.\)
Solution We choose to use the method of substitution and solve equation (1) for \(y\).
\[
\begin{array}{rlrl}
2 x+y & =5 \\
y & =-2 x+5 \quad & & \text { subtract } 2 \times \text { from each side. }
\end{array}
\]

Now substitute \(-2 x+5\) for \(y\) in equation (2) and solve for \(x\).

Figure 3

\[
\begin{aligned}
& 4 x+2 y=8 \\
& 4 x+2(-2 x+5)=8 \text { Substitute }-2 x+5 \text { for } y \text { in }(2)
\end{aligned}
\]
\[
\begin{aligned}
4 x-4 x+10 & =8 \quad \text { Distribute } \\
10 & =8 \quad \text { Simplify }
\end{aligned}
\]

This statement is false. Conclude that the system has no solution and is therefore inconsistent.

Figure 3 illustrates the pair of lines whose equations form the system in Example 7. Notice that the graphs of the two equations are lines, each with slope -2 ; one has a \(y\)-intercept of 5 , the other a \(y\)-intercept of 4 . The lines are parallel and have no point of intersection. This geometric statement is equivalent to the algebraic statement that the system has no solution.

\section*{Seeing the Concept}

Graph the lines \(2 x+y=5\left(Y_{1}=-2 x+5\right)\) and \(4 x+2 y=8\left(Y_{2}=-2 x+4\right)\) and compare what you see with Figure 3. How can you be sure that the lines are parallel?

\title{
4 Express the Solution of a System of Dependent Equations Containing Two Variables
}

\section*{EXAMPLE 8}

\section*{Solution}

Figure 4

Solving a System of Dependent Equations
Solve: \(\left\{\begin{aligned} 2 x+y & =4 \\ -6 x-3 y & =-12\end{aligned}\right.\)
We choose to use the method of elimination.
\[
\begin{aligned}
& \left\{\begin{aligned}
2 x+y & =4 \quad(1) \\
-6 x-3 y & =-12 \quad(2)
\end{aligned}\right. \\
& \begin{aligned}
6 x+3 y & =12 \\
-6 x-3 y & =-12 \\
0 & =0
\end{aligned} \quad \text { (1) }
\end{aligned} \quad \text { Multiply each side of equation (1) by } 3 .
\]

The statement \(0=0\) is true. This means the equation \(6 x+3 y=12\) is equivalent to \(-6 x-3 y=-12\). Therefore, the original system is equivalent to a system containing one equation, so the equations are dependent.This means that any values of \(x\) and \(y\) that satisfy \(6 x+3 y=12\) or, equivalently, \(2 x+y=4\) are solutions. For example, \(x=2, y=0 ; x=0, y=4 ; x=-2, y=8 ; x=4, y=-4\); and so on, are solutions. There are, in fact, infinitely many values of \(x\) and \(y\) for which \(2 x+y=4\), so the original system has infinitely many solutions. We will write the solution of the original system either as
\[
y=-2 x+4, \quad \text { where } x \text { can be any real number }
\]
or as
\[
x=-\frac{1}{2} y+2, \quad \text { where } y \text { can be any real number. }
\]

The solution can also be expressed as \(\{(x, y) \mid y=-2 x+4, x\) is any real number \(\}\) or as \(\left\{(x, y) \left\lvert\, x=-\frac{1}{2} y+2\right., y\right.\) is any real number \(\}\).

Figure 4 illustrates the situation presented in Example 8. Notice that the graphs of the two equations are lines, each with slope -2 and each with \(y\)-intercept 4 . The lines are coincident. Notice also that equation (2) in the original system is -3 times equation (1), indicating that the two equations are dependent.

For the system in Example 8, some of the infinite number of solutions can be written down by assigning values to \(x\) and then finding \(y=-2 x+4\).
\[
\begin{aligned}
& \text { If } x=-1 \text {, then } y=-2(-1)+4=6 . \\
& \text { If } x=0 \text {, then } y=4 . \\
& \text { If } x=2 \text {, then } y=0 .
\end{aligned}
\]

The ordered pairs \((-1,6),(0,4)\), and \((2,0)\) are three of the points on the line in Figure 4.

\section*{Seeing the Concept}

Graph the lines \(2 x+y=4\left(Y_{1}=-2 x+4\right)\) and \(-6 x-3 y=-12\left(Y_{2}=-2 x+4\right)\) and compare what you see with Figure 4. How can you be sure that the lines are coincident?

Now Work problems 25 and 29

\section*{5 Solve Systems of Three Equations Containing Three Variables}

Just like a system of two linear equations containing two variables, a system of three linear equations containing three variables has (1) exactly one solution (a consistent system with independent equations), or (2) no solution
(an inconsistent system), or (3) infinitely many solutions (a consistent system with dependent equations).

The problem of solving a system of three linear equations containing three variables can be viewed as a geometry problem. The graph of each equation in such a system is a plane in space. A system of three linear equations containing three variables represents three planes in space. Figure 5 illustrates some of the possibilities.
Figure 5

Recall that a solution to a system of equations consists of values for the variables that are solutions of each equation of the system. For example, \(x=3\), \(y=-1, z=-5\) or, using an ordered triplet, \((3,-1,-5)\) is a solution to the system of equations
\[
\left\{\begin{array}{rlrl}
x+y+z & =-3 & (1) & \\
2+(-1)+(-5)=-3 \\
2 x-3 y+6 z & =-21 & (2) & \\
2(3)-3(-1)+6(-5)=6+3-30=-21 \\
-3 x+5 y & =-14 & \text { (3) } & \\
-3(3)+5(-1)=-9-5=-14
\end{array}\right.
\]
because these values of the variables are solutions of each equation.
Typically, when solving a system of three linear equations containing three variables, we use the method of elimination. Recall that the idea behind the method of elimination is to form equivalent equations so that adding two of the equations eliminates a variable.

\section*{EXAMPLE 9}

\section*{Solving a System of Three Linear Equations with Three Variables}

Use the method of elimination to solve the system of equations.
\[
\left\{\begin{aligned}
x+y-z & =-1 \\
4 x-3 y+2 z & =16 \\
2 x-2 y-3 z & =5
\end{aligned}\right.
\]

Solution
For a system of three equations, attempt to eliminate one variable at a time, using pairs of equations, until an equation with a single variable remains. Our strategy for solving this system will be to use equation (1) to eliminate the variable \(x\) from equations (2) and (3). We can then treat the new equations (2) and (3) as a system with two unknowns. Alternatively, we could use equation (1) to eliminate either \(y\) or \(z\) from equations (2) and (3). Try one of these approaches for yourself.

We begin by multiplying each side of equation (1) by -4 and adding the result to equation (2). (Do you see why? The coefficients of \(x\) are now opposites.) We also multiply equation (1) by -2 and add the result to equation (3). Notice that these two procedures result in the elimination of the variable \(x\) from equations (2) and (3).
\[
\begin{aligned}
& x+y-z=-1 \text { (1) Multiply by }-4 \text {. } \\
& 4 x-3 y+2 z=16(2 \\
& \text { (2) } \\
& x+y-z=-1 \text { (1) Multiply by }-2 \text {. } \\
& 2 x-2 y-3 z=5(3)
\end{aligned}
\]

Now concentrate on the new equations (2) and (3), treating them as a system of two equations containing two variables. It is easiest to eliminate \(z\). Multiply each side of equation (3) by 6 and add equations (2) and (3). The result is the new equation (3).
\[
\begin{array}{rlrl}
-7 y+6 z & =20(2) \\
-4 y-z & =7(3) \text { Multiply by } 6 . & \begin{aligned}
-7 y+6 z & =20(2) \\
-24 y-6 z & =42 \\
\hline-31 y & =62
\end{aligned}(\text { Add. }
\end{array} \longrightarrow\left\{\begin{aligned}
x+y-z & =-1 \\
-7 y+6 z & =20 \\
-31 y & =62
\end{aligned}\right.
\]

Now solve equation (3) for \(y\) by dividing both sides of the equation by -31 .
\[
\left\{\begin{aligned}
x+y-z & =-1 \\
-7 y+6 z & =20 \\
y & =-2
\end{aligned}\right.
\]

Back-substitute \(y=-2\) in equation (2) and solve for \(z\).
\[
\begin{array}{rlrl}
-7 y+6 z & =20 & & (2) \\
-7(-2)+6 z & =20 \quad & \text { substitute }-2 \text { for } y \text { in (2). } \\
6 z & =6 \quad & \text { Subtract } 14 \text { from both sides of the equation. } \\
z & =1 \quad & \text { Divide both sides of the equation by } 6 .
\end{array}
\]

Finally, back-substitute \(y=-2\) and \(z=1\) in equation (1) and solve for \(x\).
\[
\begin{aligned}
x+y-z & =-1 & & (1) \\
x+(-2)-1 & =-1 & & \text { Substitute }-2 \text { for } y \text { and } 1 \text { for } z \text { in (1). } \\
x-3 & =-1 & & \text { Simplify. } \\
x & =2 & & \text { Add } 3 \text { to both sides. }
\end{aligned}
\]

The solution of the original system is \(x=2, y=-2, z=1\) or, using an ordered triplet, \((2,-2,1)\). You should check this solution.

Look back over the solution given in Example 9. Note the pattern of removing one of the variables from two of the equations, followed by solving this system of two equations and two unknowns. Although which variable to remove is your choice, the methodology remains the same for all systems.
allon Now Work problem 43

\section*{6 Identify Inconsistent Systems of Equations Containing Three Variables}

\section*{EXAMPLE 10 Identify an Inconsistent System of Linear Equations}

Solve: \(\left\{\begin{aligned} 2 x+y-z & =-2 \\ x+2 y-z & =-9 \\ x-4 y+z & =1\end{aligned}\right.\)
Solution Our strategy is the same as in Example 9. However, in this system, it seems easiest to eliminate the variable \(z\) first. Do you see why?

Multiply each side of equation (1) by -1 and add the result to equation (2). Also, add equations (2) and (3).
\[
\begin{align*}
2 x+y-z=-2 & \text { (1) Multiply by -1. } \\
x+2 y-z=-9 & \text { (2) }  \tag{2}\\
x-y+z & =2 \\
x+2 y-z & =-9
\end{align*} \quad \text { (2) }
\]

Now concentrate on the new equations (2) and (3), treating them as a system of two equations containing two variables. Multiply each side of equation (2) by 2 and add the result to equation (3).
\[
\begin{aligned}
-x+y & =-7 \\
2 x-2 y & =-8
\end{aligned}
\]

Equation (3) has no solution, so the system is inconsistent.

\section*{7 Express the Solution of a System of Dependent Equations Containing Three Variables}

\section*{EXAMPLE II Solving a System of Dependent Equations}

Solve: \(\left\{\begin{aligned} x-2 y-z & =8 \\ 2 x-3 y+z & =23 \\ 4 x-5 y+5 z & =53\end{aligned}\right.\)
Solution Our plan is to eliminate \(x\) from equations (2) and (3). Multiply each side of equation (1) by -2 and add the result to equation (2). Also, multiply each side of equation (1) by -4 and add the result to equation (3).
\[
\begin{align*}
& x-2 y-z=8 \\
& \text { (1) Multiply by -2 } \\
& -2 x+4 y+2 z=-16 \\
& \begin{array}{r}
2 x-3 y+z=23 \\
\hline y+3 z=7 \text { (2) }
\end{array} \\
& \begin{aligned}
& x-2 y-z=8 \\
& 4(1) \\
& 4 x-5 y+5 z=53 \text { (3) Multiply by -4. }
\end{aligned} \begin{aligned}
-4 x+8 y+4 z & =-32 \\
4 x-5 y+5 z & =53
\end{aligned} \quad\left\{\begin{aligned}
x-2 y-z & =8 \\
y+3 z & =7 \\
3 y+9 z & =21
\end{aligned}\right. \tag{1}
\end{align*}
\]

Treat equations (2) and (3) as a system of two equations containing two variables, and eliminate the variable \(y\) by multiplying both sides of equation (2) by -3 and adding the result to equation (3).
\[
\begin{aligned}
y+3 z & =7(2) \text { Multiply by -3. } \quad \begin{aligned}
-3 y-9 z & =-21 \\
3 y+9 z & =21
\end{aligned}(3) \\
3 y+9 z & =21 \\
0 & =0
\end{aligned} \longrightarrow\left\{\begin{aligned}
x-2 y-z & =8 \\
y+3 z & =7 \\
0 & =0
\end{aligned}\right.
\]

The original system is equivalent to a system containing two equations, so the equations are dependent and the system has infinitely many solutions. If we solve equation (2) for \(y\), we can express \(y\) in terms of \(z\) as \(y=-3 z+7\). Substitute this expression into equation (1) to determine \(x\) in terms of \(z\).
\[
\begin{aligned}
x-2 y-z & =8 & & (1) \\
x-2(-3 z+7)-z & =8 & & \text { Substitute } \\
x+6 z-14-z & =8 & & \text { Distribute } \\
x+5 z & =22 & & \text { Combine like } \\
x & =-5 z+22 & & \text { Solve for } x .
\end{aligned}
\]

We will write the solution to the system as
\[
\left\{\begin{array}{l}
x=-5 z+22 \\
y=-3 z+7
\end{array} \text { where } z\right. \text { can be any real number. }
\]

This way of writing the solution makes it easier to find specific solutions of the system. To find specific solutions, choose any value of \(z\) and use the equations \(x=-5 z+22\) and \(y=-3 z+7\) to determine \(x\) and \(y\). For example, if \(z=0\), then \(x=22\) and \(y=7\), and if \(z=1\), then \(x=17\) and \(y=4\).

Using ordered triplets, the solution is
\[
\{(x, y, z) \mid x=-5 z+22, y=-3 z+7, z \text { is any real number }\}
\]

\section*{Now Work problem 45}

Two distinct points in the Cartesian plane determine a unique line. Given three noncollinear points, we can find the (unique) quadratic function whose graph contains these three points.

\section*{EXAMPLE 12 Curve Fitting}

Find real numbers \(a, b\), and \(c\) so that the graph of the quadratic function \(y=a x^{2}+b x+c\) contains the points \((-1,-4),(1,6)\), and \((3,0)\).
Solution The three points must satisfy the equation \(y=a x^{2}+b x+c\).
For \((-1,-4)\) we have: \(-4=a(-1)^{2}+b(-1)+c \quad-4=a-b+c\)
For \((1,6)\) we have: \(\quad 6=a(1)^{2}+b(1)+c \quad 6=a+b+c\)
For \((3,0)\) we have: \(\quad 0=a(3)^{2}+b(3)+c \quad 0=9 a+3 b+c\)

Figure 6

Determine \(a, b\), and \(c\) so that each equation is satisfied. That is, solve the following system of three equations containing three variables:
\[
\left\{\begin{array}{rr}
a-b+c= & -4 \\
a+b+c= & 6 \\
9 a+3 b+c= & 0
\end{array}\right.
\]

Solving this system of equations, we obtain \(a=-2, b=5\), and \(c=3\). So the quadratic function whose graph contains the points \((-1,-4),(1,6)\), and \((3,0)\) is
\[
y=-2 x^{2}+5 x+3 \quad y=a x^{2}+b x+c, \quad a=-2, b=5, c=3
\]

Figure 6 shows the graph of the function, along with the three points.

\subsection*{10.1 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. Solve the equation: \(3 x+4=8-x\). (pp.A64-A66)
2. (a) Graph the line: \(3 x+4 y=12\).
(b) What is the slope of a line parallel to this line? (pp. 26-28)

\section*{Concepts and Vocabulary}
3. If a system of equations has no solution, it is said to be
\(\qquad\) .
4. If a system of equations has one solution, the system is
\(\qquad\) and the equations are \(\qquad\) .
5. If the solution to a system of two linear equations containing two unknowns is \(x=3, y=-2\), then the lines intersect at the point \(\qquad\) -
6. If the lines that make up a system of two linear equations are coincident, then the system is \(\qquad\) and the equations are \(\qquad\) .

In Problems 7-16, verify that the values of the variables listed are solutions of the system of equations.

13. \(\left\{\begin{aligned} 3 x+3 y+2 z & =4 \\ x-y-z & =0 \\ 2 y-3 z & =-8\end{aligned}\right.\) \(x=1, y=-1, z=2\);
14. \(\left\{\begin{aligned} 4 x-z & =7 \\ 8 x+5 y-z & =0 \\ -x-y+5 z & =6\end{aligned}\right.\) (1, -1, 2) \(x=2, y=-3, z=1\); (2, -3, 1)
15. \(\left\{\begin{aligned} 3 x+3 y+2 z & =4 \\ x-3 y+z & =10 \\ 5 x-2 y-3 z & =8\end{aligned}\right.\)
\(x=2, y=-2, z=2 ;(2,-2,2)\)
16. \(\left\{\begin{aligned} 4 x-5 z & =6 \\ 5 y-z & =-17 \\ -x-6 y+5 z & =24\end{aligned}\right.\) \(x=4, y=-3, z=2 ;(4,-3,2)\)

In Problems 17-54, solve each system of equations. If the system has no solution, say that it is inconsistent.
17. \(\left\{\begin{array}{l}x+y=8 \\ x-y=4\end{array}\right.\)
18. \(\left\{\begin{array}{l}x+2 y=-7 \\ x+y=-3\end{array}\right.\)
19. \(\left\{\begin{array}{l}5 x-y=21 \\ 2 x+3 y=-12\end{array}\right.\)
20. \(\left\{\begin{aligned} x+3 y & =5 \\ 2 x-3 y & =-8\end{aligned}\right.\)
21. \(\left\{\begin{aligned} 3 x & =24 \\ x+2 y & =0\end{aligned}\right.\)
22. \(\left\{\begin{aligned} 4 x+5 y & =-3 \\ -2 y & =-8\end{aligned}\right.\)
23. \(\left\{\begin{array}{l}3 x-6 y=2 \\ 5 x+4 y=1\end{array}\right.\)
24. \(\left\{\begin{array}{l}2 x+4 y=\frac{2}{3} \\ 3 x-5 y=-10\end{array}\right.\)
25. \(\left\{\begin{array}{l}2 x+y=1 \\ 4 x+2 y=3\end{array}\right.\)
26. \(\left\{\begin{aligned} x-y & =5 \\ -3 x+3 y & =2\end{aligned}\right.\)
27. \(\left\{\begin{array}{l}2 x-y=0 \\ 4 x+2 y=12\end{array}\right.\)
28. \(\left\{\begin{array}{l}3 x+3 y=-1 \\ 4 x+y=\frac{8}{3}\end{array}\right.\)
29. \(\left\{\begin{array}{r}x+2 y=4 \\ 2 x+4 y=8\end{array}\right.\)
30. \(\left\{\begin{array}{l}3 x-y=7 \\ 9 x-3 y=21\end{array}\right.\)
31. \(\left\{\begin{aligned} 2 x-3 y & =-1 \\ 10 x+y & =11\end{aligned}\right.\)
32. \(\left\{\begin{array}{l}3 x-2 y=0 \\ 5 x+10 y=4\end{array}\right.\)
33. \(\left\{\begin{aligned} 2 x+3 y & =6 \\ x-y & =\frac{1}{2}\end{aligned}\right.\)
34. \(\left\{\begin{aligned} \frac{1}{2} x+y & =-2 \\ x-2 y & =8\end{aligned}\right.\)
35. \(\left\{\begin{array}{l}\frac{1}{2} x+\frac{1}{3} y=3 \\ \frac{1}{4} x-\frac{2}{3} y=-1\end{array}\right.\)
36. \(\left\{\begin{array}{l}\frac{1}{3} x-\frac{3}{2} y=-5 \\ \frac{3}{4} x+\frac{1}{3} y=11\end{array}\right.\)
37. \(\left\{\begin{array}{r}3 x-5 y=3 \\ 15 x+5 y=21\end{array}\right.\)
38. \(\left\{\begin{aligned} 2 x-y & =-1 \\ x+\frac{1}{2} y & =\frac{3}{2}\end{aligned}\right.\)
39. \(\left\{\begin{array}{l}\frac{1}{x}+\frac{1}{y}=8 \\ \frac{3}{x}-\frac{5}{y}=0\end{array}\right.\)
40. \(\left\{\begin{array}{l}\frac{4}{x}-\frac{3}{y}=0 \\ \frac{6}{x}+\frac{3}{2 y}=2\end{array}\right.\)
[Hint: Let \(u=\frac{1}{x}\) and \(v=\frac{1}{y}\), and solve for \(u\) and \(v\). Then \(x=\frac{1}{u}\) and \(\left.y=\frac{1}{v}.\right]\)
41. \(\left\{\begin{aligned} x-y & =6 \\ 2 x-3 z & =16 \\ 2 y+z & =4\end{aligned}\right.\)
42. \(\left\{\begin{aligned} 2 x+y & =-4 \\ -2 y+4 z & =0 \\ 3 x-2 z & =-11\end{aligned}\right.\)
43. \(\left\{\begin{aligned} x-2 y+3 z & =7 \\ 2 x+y+z & =4 \\ -3 x+2 y-2 z & =-10\end{aligned}\right.\)
44. \(\left\{\begin{aligned} 2 x+y-3 z= & 0 \\ -2 x+2 y+z= & -7 \\ 3 x-4 y-3 z= & 7\end{aligned}\right.\)
45. \(\left\{\begin{aligned} x-y-z & =1 \\ 2 x+3 y+z & =2 \\ 3 x+2 y & =0\end{aligned}\right.\)
46. \(\left\{\begin{aligned} 2 x-3 y-z & =0 \\ -x+2 y+z & =5 \\ 3 x-4 y-z & =1\end{aligned}\right.\)
47. \(\left\{\begin{aligned} x-y-z & =1 \\ -x+2 y-3 z & =-4 \\ 3 x-2 y-7 z & =0\end{aligned}\right.\)
48. \(\left\{\begin{aligned} 2 x-3 y-z & =0 \\ 3 x+2 y+2 z & =2 \\ x+5 y+3 z & =2\end{aligned}\right.\)
51. \(\left\{\begin{aligned} x+y-z & =6 \\ 3 x-2 y+z & =-5 \\ x+3 y-2 z & =14\end{aligned}\right.\)
53. \(\left\{\begin{aligned} x+2 y-z & =-3 \\ 2 x-4 y+z & =-7 \\ -2 x+2 y-3 z & =4\end{aligned}\right.\)
49. \(\left\{\begin{aligned} 2 x-2 y+3 z & =6 \\ 4 x-3 y+2 z & =0 \\ -2 x+3 y-7 z & =1\end{aligned}\right.\)
50. \(\left\{\begin{array}{rr}3 x-2 y+2 z= & 6 \\ 7 x-3 y+2 z= & -1 \\ 2 x-3 y+4 z= & 0\end{array}\right.\)

\section*{Applications and Extensions}
55. The perimeter of a rectangular floor is 90 feet. Find the dimensions of the floor if the length is twice the width.
56. The length of fence required to enclose a rectangular field is 3000 meters. What are the dimensions of the field if it is known that the difference between its length and its width is 50 meters?
57. Orbital Launches In 2012 there was a total of 78 commercial and noncommercial orbital launches worldwide. In addition, the number of noncommercial orbital launches was two less than three times the number of commercial orbital launches. Determine the number of commercial and noncommercial orbital launches in 2012.

\section*{Source: Federal Aviation Administration}
58. Movie Theater Tickets A movie theater charges \(\$ 9.00\) for adults and \(\$ 7.00\) for senior citizens. On a day when 325 people paid an admission, the total receipts were \(\$ 2495\). How many who paid were adults? How many were seniors?
59. Mixing Nuts A store sells cashews for \(\$ 5.00\) per pound and peanuts for \(\$ 1.50\) per pound. The manager decides to mix 30 pounds of peanuts with some cashews and sell the mixture for \(\$ 3.00\) per pound. How many pounds of cashews should be mixed with the peanuts so that the mixture will produce the same revenue as selling the nuts separately?
60. Mixing a Solution A chemist wants to make 14 liters of a \(40 \%\) acid solution. She has solutions that are \(30 \%\) acid and \(65 \%\) acid. How much of each must she mix?
61. Presale Order A wireless store owner takes presale orders for a new smartphone and tablet. He gets 340 preorders for the smartphone and 250 preorders for the tablet. The combined value of the preorders is \(\$ 270,500\). If the price of a smartphone and tablet together is \(\$ 965\), how much does each device cost?
62. Financial Planning A recently retired couple needs \(\$ 12,000\) per year to supplement their Social Security. They have \(\$ 150,000\) to invest to obtain this income. They have decided on two investment options: AA bonds yielding \(10 \%\) per annum and a Bank Certificate yielding 5\%.
(a) How much should be invested in each to realize exactly \(\$ 12,000\) ?
(b) If, after 2 years, the couple requires \(\$ 14,000\) per year in income, how should they reallocate their investment to achieve the new amount?
63. Computing Wind Speed With a tail wind, a small Piper aircraft can fly 600 miles in 3 hours. Against this same wind, the Piper can fly the same distance in 4 hours. Find the average wind speed and the average airspeed of the Piper.

64. Computing Wind Speed The average airspeed of a singleengine aircraft is 150 miles per hour. If the aircraft flew the same distance in 2 hours with the wind as it flew in 3 hours against the wind, what was the wind speed?
65. Restaurant Management \(A\) restaurant manager wants to purchase 200 sets of dishes. One design costs \(\$ 25\) per set, and another costs \(\$ 45\) per set. If she has only \(\$ 7400\) to spend, how many sets of each design should she order?
66. Cost of Fast Food One group of people purchased 10 hot dogs and 5 soft drinks at a cost of \(\$ 35.00\). A second bought 7 hot dogs and 4 soft drinks at a cost of \(\$ 25.25\). What is the cost of a single hot dog? A single soft drink?

We paid \(\$ 25.25\).
How much is one hot dog?
How much is one soda?

67. Computing a Refund The grocery store we use does not mark prices on its goods. My wife went to this store, bought three 1-pound packages of bacon and two cartons of eggs, and paid a total of \(\$ 13.45\). Not knowing that she went to the store, I also went to the same store, purchased two 1-pound packages of bacon and three cartons of eggs, and paid a total of \(\$ 11.45\). Now we want to return two 1-pound packages of bacon and two cartons of eggs. How much will be refunded?
68. Finding the Current of a Stream Pamela requires 3 hours to swim 15 miles downstream on the Illinois River. The return trip upstream takes 5 hours. Find Pamela's average speed in still water. How fast is the current? (Assume that Pamela's speed is the same in each direction.)
69. Pharmacy A doctor's prescription calls for a daily intake containing 40 milligrams (mg) of vitamin C and 30 mg of vitamin D. Your pharmacy stocks two liquids that can be used: One contains \(20 \%\) vitamin C and \(30 \%\) vitamin D, the other \(40 \%\) vitamin C and \(20 \%\) vitamin D. How many milligrams of each compound should be mixed to fill the prescription?
70. Pharmacy A doctor's prescription calls for the creation of pills that contain 12 units of vitamin \(\mathrm{B}_{12}\) and 12 units of vitamin E . Your pharmacy stocks two powders that can be used to make these pills: One contains \(20 \%\) vitamin \(\mathrm{B}_{12}\) and \(30 \%\) vitamin \(E\), the other \(40 \%\) vitamin \(B_{12}\) and \(20 \%\) vitamin E. How many units of each powder should be mixed in each pill?
71. Curve Fitting Find real numbers \(a, b\), and \(c\) so that the graph of the function \(y=a x^{2}+b x+c\) contains the points \((-1,4),(2,3)\), and \((0,1)\).
72. Curve Fitting Find real numbers \(a, b\), and \(c\) so that the graph of the function \(y=a x^{2}+b x+c\) contains the points \((-1,-2),(1,-4)\), and \((2,4)\).
73. IS-LM Model in Economics In economics, the IS curve is a linear equation that represents all combinations of income \(Y\) and interest rates \(r\) that maintain an equilibrium in the market for goods in the economy. The LM curve is a linear equation that represents all combinations of income \(Y\) and interest rates \(r\) that maintain an equilibrium in the market for money in the economy. In an economy, suppose that the equilibrium level of income (in millions of dollars) and interest rates satisfy the system of equations
\[
\left\{\begin{array}{l}
0.06 Y-5000 r=240 \\
0.06 Y+6000 r=900
\end{array}\right.
\]

Find the equilibrium level of income and interest rates.
74. IS-LM Model in Economics In economics, the IS curve is a linear equation that represents all combinations of income \(Y\) and interest rates \(r\) that maintain an equilibrium in the market for goods in the economy. The LM curve is a linear equation that represents all combinations of income \(Y\) and interest rates \(r\) that maintain an equilibrium in the market for money in the economy. In an economy, suppose that the equilibrium level of income (in millions of dollars) and interest rates satisfy the system of equations
\[
\left\{\begin{array}{l}
0.05 Y-1000 r=10 \\
0.05 Y+800 r=100
\end{array}\right.
\]

Find the equilibrium level of income and interest rates.
75. Electricity: Kirchhoff's Rules An application of Kirchhoff's Rules to the circuit shown results in the following system of equations:
\[
\left\{\begin{aligned}
I_{2} & =I_{1}+I_{3} \\
5-3 I_{1}-5 I_{2} & =0 \\
10-5 I_{2}-7 I_{3} & =0
\end{aligned}\right.
\]

Find the currents \(I_{1}, I_{2}\), and \(I_{3}\).

77. Theater Revenues A Broadway theater has 500 seats, divided into orchestra, main, and balcony seating. Orchestra seats sell for \(\$ 50\), main seats for \(\$ 35\), and balcony seats for \(\$ 25\). If all the seats are sold, the gross revenue to the theater is \(\$ 17,100\). If all the main and balcony seats are sold, but only half the orchestra seats are sold, the gross revenue is \(\$ 14,600\). How many of each kind of seat are there?
78. Theater Revenues A movie theater charges \(\$ 8.00\) for adults, \(\$ 4.50\) for children, and \(\$ 6.00\) for senior citizens. One day the theater sold 405 tickets and collected \(\$ 2320\) in receipts. Twice as many children's tickets were sold as adult tickets. How many adults, children, and senior citizens went to the theater that day?
79. Nutrition A dietitian wishes a patient to have a meal that has 66 grams ( g ) of protein, 94.5 g of carbohydrates, and 910 milligrams ( mg ) of calcium. The hospital food service tells the dietitian that the dinner for today is chicken, corn, and \(2 \%\) milk. Each serving of chicken has 30 g of protein, 35 g of carbohydrates, and 200 mg of calcium. Each serving of corn has 3 g of protein, 16 g of carbohydrates, and 10 mg of calcium. Each glass of \(2 \%\) milk has 9 g of protein, 13 g of carbohydrates, and 300 mg of calcium. How many servings of each food should the dietitian provide for the patient?
80. Investments Kelly has \(\$ 20,000\) to invest. As her financial planner, you recommend that she diversify into three investments: Treasury bills that yield \(5 \%\) simple interest, Treasury bonds that yield 7\% simple interest, and corporate
bonds that yield \(10 \%\) simple interest. Kelly wishes to earn \(\$ 1390\) per year in income. Also, Kelly wants her investment in Treasury bills to be \(\$ 3000\) more than her investment in corporate bonds. How much money should Kelly place in each investment?
81. Prices of Fast Food One group of customers bought 8 deluxe hamburgers, 6 orders of large fries, and 6 large colas for \(\$ 26.10\). A second group ordered 10 deluxe hamburgers, 6 large fries, and 8 large colas and paid \(\$ 31.60\). Is there sufficient information to determine the price of each food item? If not, construct a table showing the various possibilities. Assume that the hamburgers cost between \(\$ 1.75\) and \(\$ 2.25\), the fries between \(\$ 0.75\) and \(\$ 1.00\), and the colas between \(\$ 0.60\) and \(\$ 0.90\).
82. Prices of Fast Food Use the information given in Problem 81. Suppose that a third group purchased 3 deluxe hamburgers, 2 large fries, and 4 large colas for \(\$ 10.95\). Now is there sufficient information to determine the price of each food item? If so, determine each price.
83. Painting a House Three painters, (Beth, Bill, and Edie), working together, can paint the exterior of a home in 10 hours (hr). Bill and Edie together have painted a similar house in 15 hr . One day, all three worked on this same kind of house for 4 hr , after which Edie left. Beth and Bill required 8 more hr to finish. Assuming no gain or loss in efficiency, how long should it take each person to complete such a job alone?

\section*{Discussion and Writing}
84. Make up a system of three linear equations containing three variables that has:
(a) No solution
(b) Exactly one solution
(c) Infinitely many solutions

Give the three systems to a friend to solve and critique.
85. Write a brief paragraph outlining your strategy for solving a system of two linear equations containing two variables.
86. Do you prefer the method of substitution or the method of elimination for solving a system of two linear equations containing two variables? Give your reasons.

\section*{Retain Your Knowledge}

Problems 87-90 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
87. Sketch the graph of \(f(x)=-3^{1-x}+2\).
88. Factor each of the following:
(a) \(4(2 x-3)^{3} \cdot 2 \cdot\left(x^{3}+5\right)^{2}+2\left(x^{3}+5\right) \cdot 3 x^{2} \cdot(2 x-3)^{4}\)
(b) \(\frac{1}{2}(3 x-5)^{-\frac{1}{2}} \cdot 3 \cdot(x+3)^{-\frac{1}{2}}-\frac{1}{2}(x+3)^{-\frac{3}{2}}(3 x-5)^{\frac{1}{2}}\)
89. Find the exact value of \(\sin ^{-1}\left[\sin \left(-\frac{10 \pi}{9}\right)\right]\).
90. Write \(-\sqrt{3}+i\) in polar form. Express each argument in degrees.

\section*{'Are You Prepared?' Answers}

2. (a)

(b) \(-\frac{3}{4}\)

\subsection*{10.2 Systems of Linear Equations: Matrices}

OBJECTIVES 1 Write the Augmented Matrix of a System of Linear Equations (p. 738)
2 Write the System of Equations from the Augmented Matrix (p.739)
3 Perform Row Operations on a Matrix ( p .740 )
4 Solve a System of Linear Equations Using Matrices (p. 741)

The systematic approach of the method of elimination for solving a system of linear equations provides another method of solution that involves a simplified notation.

Consider the following system of linear equations:
\[
\left\{\begin{array}{r}
x+4 y=14 \\
3 x-2 y=0
\end{array}\right.
\]

If we choose not to write the symbols used for the variables, we can represent this system as
\[
\left[\begin{array}{rr|r}
1 & 4 & 14 \\
3 & -2 & 0
\end{array}\right]
\]
where it is understood that the first column represents the coefficients of the variable \(x\), the second column the coefficients of \(y\), and the third column the constants on the right side of the equal signs. The vertical line serves as a reminder of the equal signs. The large square brackets are used to denote a matrix in algebra.

\section*{DEFINITION}

A matrix is defined as a rectangular array of numbers,

Each number \(a_{i j}\) of the matrix has two indexes: the row index \(i\) and the column index \(j\). The matrix shown in display (1) has \(m\) rows and \(n\) columns. The numbers \(a_{i j}\) are usually referred to as the entries of the matrix. For example, \(a_{23}\) refers to the entry in the second row, third column.

\section*{1 Write the Augmented Matrix of a System of Linear Equations}

Now we will use matrix notation to represent a system of linear equations. The matrix used to represent a system of linear equations is called an augmented matrix. In writing the augmented matrix of a system, the variables of each equation must be on the left side of the equal sign and the constants on the right side. A variable that does not appear in an equation has a coefficient of 0 .

\section*{EXAMPLE I}

Writing the Augmented Matrix of a System of Linear Equations
Write the augmented matrix of each system of equations.
(a) \(\left\{\begin{array}{l}3 x-4 y=-6 \\ 2 x-3 y=-5\end{array}\right.\)
(b) \(\left\{\begin{aligned} 2 x-y+z & =0 \\ x+z-1 & =0 \\ x+2 y-8 & =0\end{aligned}\right.\)

Solution (a) The augmented matrix is

CAUTION Be sure variables and constants are lined up correctly before writing the augmented matrix.
\[
\left[\begin{array}{rr|r}
3 & -4 & -6 \\
2 & -3 & -5
\end{array}\right]
\]
(b) Care must be taken that the system be written so that the coefficients of all variables are present (if any variable is missing, its coefficient is 0 ). Also, all constants must be to the right of the equal sign. We need to rearrange the given system as follows:
\[
\begin{aligned}
& \left\{\begin{aligned}
2 x-y+z & =0 \\
x+z-1 & =0 \\
x+2 y-8 & =0
\end{aligned}\right. \\
& \left\{\begin{aligned}
2 x-y+z & =0 \\
x+0 \cdot y+z & =1 \\
x+2 y+0 \cdot z & =8
\end{aligned}\right.
\end{aligned}
\]

The augmented matrix is
\[
\left[\begin{array}{rrr|r}
2 & -1 & 1 & 0 \\
1 & 0 & 1 & 1 \\
1 & 2 & 0 & 8
\end{array}\right]
\]

If we do not include the constants to the right of the equal sign (that is, to the right of the vertical bar in the augmented matrix of a system of equations), the resulting matrix is called the coefficient matrix of the system. For the systems discussed in Example 1, the coefficient matrices are
\[
\left[\begin{array}{ll}
3 & -4 \\
2 & -3
\end{array}\right] \text { and }\left[\begin{array}{rrr}
2 & -1 & 1 \\
1 & 0 & 1 \\
1 & 2 & 0
\end{array}\right]
\]

Now Work problem 7

\section*{2 Write the System of Equations from the Augmented Matrix}

\section*{EXAMPLE 2}

Solution

\section*{Writing the System of Linear Equations} from the Augmented Matrix
Write the system of linear equations corresponding to each augmented matrix.
(a) \(\left[\begin{array}{rr|r}5 & 2 & 13 \\ -3 & 1 & -10\end{array}\right]\)
(b) \(\left[\begin{array}{rrr|r}3 & -1 & -1 & 7 \\ 2 & 0 & 2 & 8 \\ 0 & 1 & 1 & 0\end{array}\right]\)
(a) The matrix has two rows and so represents a system of two equations. The two columns to the left of the vertical bar indicate that the system has two variables. If \(x\) and \(y\) are used to denote these variables, the system of equations is
\[
\left\{\begin{aligned}
5 x+2 y & =13 \\
-3 x+y & =-10
\end{aligned}\right.
\]
(b) Since the augmented matrix has three rows, it represents a system of three equations. Since there are three columns to the left of the vertical bar, the system contains three variables. If \(x, y\), and \(z\) are the three variables, the system of equations is
\[
\left\{\begin{aligned}
3 x-y-z & =7 \\
2 x+2 z & =8 \\
y+z & =0
\end{aligned}\right.
\]

\section*{3 Perform Row Operations on a Matrix}

Row operations on a matrix are used to solve systems of equations when the system is written as an augmented matrix. There are three basic row operations.

\section*{Row Operations}
1. Interchange any two rows.
2. Replace a row by a nonzero multiple of that row.
3. Replace a row by the sum of that row and a constant nonzero multiple of some other row.

These three row operations correspond to the three rules given earlier for obtaining an equivalent system of equations. When a row operation is performed on a matrix, the resulting matrix represents a system of equations equivalent to the system represented by the original matrix.

For example, consider the augmented matrix
\[
\left[\begin{array}{rr|r}
1 & 2 & 3 \\
4 & -1 & 2
\end{array}\right]
\]

Suppose that we want to apply a row operation to this matrix that results in a matrix whose entry in row 2 , column 1 is a 0 . The row operation to use is

Multiply each entry in row 1 by -4 and add the result to the corresponding entries in row 2.

If we use \(R_{2}\) to represent the new entries in row 2 and \(r_{1}\) and \(r_{2}\) to represent the original entries in rows 1 and 2, respectively, we can represent the row operation in statement (2) by
\[
R_{2}=-4 r_{1}+r_{2}
\]

Then
\[
\begin{gathered}
{\left[\begin{array}{rr|r}
1 & 2 & 3 \\
4 & -1 & 2
\end{array}\right] \underset{\uparrow}{\rightarrow}\left[\begin{array}{cc}
1 & 2 \\
-4(1)+4 & -4(2)+(-1)
\end{array} \begin{array}{c}
3 \\
-4(3)+2
\end{array}\right]=\left[\begin{array}{rr|r}
1 & 2 & 3 \\
0 & -9 & -10
\end{array}\right]} \\
R_{2}=-4 r_{1}+r_{2}
\end{gathered}
\]

As desired, we now have the entry 0 in row 2 , column 1 .

\section*{EXAMPLE 3 Applying a Row Operation to an Augmented Matrix}

Apply the row operation \(R_{2}=-3 r_{1}+r_{2}\) to the augmented matrix
\[
\left[\begin{array}{ll|l}
1 & -2 & 2 \\
3 & -5 & 9
\end{array}\right]
\]

Solution The row operation \(R_{2}=-3 r_{1}+r_{2}\) says that the entries in row 2 are to be replaced by the entries obtained after multiplying each entry in row 1 by -3 and adding the result to the corresponding entries in row 2 .
\[
\begin{gathered}
{\left[\begin{array}{ll|l}
1 & -2 & 2 \\
3 & -5 & 9
\end{array}\right] \underset{\uparrow}{\rightarrow}\left[\begin{array}{cc}
1 & -2 \\
-3(1)+3 & (-3)(-2)+(-5)
\end{array} \begin{array}{c}
2 \\
-3(2)+9
\end{array}\right]=\left[\begin{array}{cc|c}
1 & -2 & 2 \\
0 & 1 & 3
\end{array}\right]} \\
R_{2}=-3 r_{1}+r_{2}
\end{gathered}
\]

\section*{EXAMPLE 4 Finding a Particular Row Operation}

Find a row operation that will result in the augmented matrix
\[
\left[\begin{array}{rr|r}
1 & -2 & 2 \\
0 & 1 & 3
\end{array}\right]
\]
having a 0 in row 1 , column 2 .
Solution We want a 0 in row 1, column 2. Because there is a 1 in row 2, column 2, this result can be accomplished by multiplying row 2 by 2 and adding the result to row 1 . That is, apply the row operation \(R_{1}=2 r_{2}+r_{1}\).
\[
\begin{gathered}
{\left[\begin{array}{rr|r}
1 & -2 & 2 \\
0 & 1 & 3
\end{array}\right] \underset{\uparrow}{\rightarrow}\left[\begin{array}{cc|c}
2(0)+1 & 2(1)+(-2) & 2(3)+2 \\
0 & 1 & 3
\end{array}\right]=\left[\begin{array}{ll|l}
1 & 0 & 8 \\
0 & 1 & 3
\end{array}\right]} \\
R_{1}=2 r_{2}+r_{1}
\end{gathered}
\]

A word about the notation that we have introduced. A row operation such as \(R_{1}=2 r_{2}+r_{1}\) changes the entries in row 1 . Note also that for this type of row operation, we change the entries in a given row by multiplying the entries in some other row by an appropriate nonzero number and adding the results to the original entries of the row to be changed.

\section*{4 Solve a System of Linear Equations Using Matrices}

To solve a system of linear equations using matrices, use row operations on the augmented matrix of the system to obtain a matrix that is in row echelon form.

A matrix is in row echelon form when the following conditions are met:
1. The entry in row 1 , column 1 is a 1 , and only 0 's appear below it.
2. The first nonzero entry in each row after the first row is a 1 , only 0 's appear below it, and the 1 appears to the right of the first nonzero entry in any row above.
3. Any rows that contain all 0 's to the left of the vertical bar appear at the bottom.

For example, for a system of three equations containing three variables, \(x, y\), and \(z\), with a unique solution, the augmented matrix is in row echelon form if it is of the form
\[
\left[\begin{array}{ccc|c}
1 & a & b & d \\
0 & 1 & c & e \\
0 & 0 & 1 & f
\end{array}\right]
\]
where \(a, b, c, d, e\), and \(f\) are real numbers. The last row of this augmented matrix states that \(z=f\). We can then determine the value of \(y\) using back-substitution with \(z=f\), since row 2 represents the equation \(y+c z=e\). Finally, \(x\) is determined using back-substitution again.

Two advantages of solving a system of equations by writing the augmented matrix in row echelon form are the following:
1. The process is algorithmic; that is, it consists of repetitive steps that can be programmed on a computer.
2. The process works on any system of linear equations, no matter how many equations or variables are present.

The next example shows how to write a matrix in row echelon form.

\section*{EXAMPLE 5 How to Solve a System of Linear Equations Using Matrices}

Solve: \(\left\{\begin{aligned} 2 x+2 y & =6 \\ x+y+z & =1 \\ 3 x+4 y-z & =13\end{aligned}\right.\)

\section*{Step-by-Step Solution}

Step 1: Write the augmented matrix that represents the system.

Step 2: Perform row operations that result in the entry in row 1, column 1 becoming 1 .

To get a 1 in row 1 , column 1 , interchange rows 1 and 2 . [Note that this is equivalent to interchanging equations (1) and (2) of the system.]
\[
\left[\begin{array}{rrr|r}
1 & 1 & 1 & 1 \\
2 & 2 & 0 & 6 \\
3 & 4 & -1 & 13
\end{array}\right]
\]

Step 3: Perform row operations that leave the entry in row 1, column 1 a 1 , while causing the entries in column 1 below row 1 to become O's.

Next, we want a 0 in row 2 , column 1 and a 0 in row 3 , column 1 . Use the row operations \(R_{2}=-2 r_{1}+r_{2}\) and \(R_{3}=-3 r_{1}+r_{3}\) to accomplish this. Notice that row 1 is unchanged using these row operations. Also, do you see that performing these row operations simultaneously is the same as doing one followed by the other?
\[
\begin{gathered}
{\left[\begin{array}{rrr|r}
1 & 1 & 1 & 1 \\
2 & 2 & 0 & 6 \\
3 & 4 & -1 & 13
\end{array}\right] \uparrow\left[\begin{array}{rrr|r}
1 & 1 & 1 & 1 \\
0 & 0 & -2 & 4 \\
0 & 1 & -4 & 10
\end{array}\right]} \\
R_{2}=-2 r_{1}+r_{2} \\
R_{3}=-3 r_{1}+r_{3}
\end{gathered}
\]

We want the entry in row 2 , column 2 to be 1 . We also want to have a 0 below the 1 in row 2 , column 2 . Interchanging rows 2 and 3 will accomplish both goals.
\[
\begin{gathered}
{\left[\begin{array}{rrr|r}
1 & 1 & 1 & 1 \\
0 & 0 & -2 & 4 \\
0 & 1 & -4 & 10
\end{array}\right] \uparrow\left[\begin{array}{rrr|r}
1 & 1 & 1 & 1 \\
0 & 1 & -4 & 10 \\
0 & 0 & -2 & 4
\end{array}\right]} \\
\text { Interchange } \\
\text { rows } 2 \text { and } 3 .
\end{gathered}
\]

Step 5: Repeat Step 4, placing a 1 To obtain a 1 in row 3, column 3, use the row operation \(R_{3}=-\frac{1}{2} r_{3}\). The result is in row 3, column 3.

Step 6: The matrix on the right in Step 5 is the row echelon form of the augmented matrix. Use backsubstitution to solve the original system.
\[
\begin{gathered}
{\left[\begin{array}{rrr|r}
1 & 1 & 1 & 1 \\
0 & 1 & -4 & 10 \\
0 & 0 & -2 & 4
\end{array}\right]}
\end{gathered} \underset{\uparrow}{\uparrow}\left[\begin{array}{rrr|r}
1 & 1 & 1 & 1 \\
0 & 1 & -4 & 10 \\
0 & 0 & 1 & -2
\end{array}\right]
\]

The third row of the augmented matrix represents the equation \(z=-2\). Using \(z=-2\), back-substitute into the equation \(y-4 z=10\) (from the second row) and obtain
\[
\begin{aligned}
y-4 z & =10 \\
y-4(-2) & =10 \quad z=-2 \\
y & =2 \quad \text { Solve for } y
\end{aligned}
\]

Finally, back-substitute \(y=2\) and \(z=-2\) into the equation \(x+y+z=1\) (from the first row) and obtain
\[
\begin{array}{rlrl}
x+y+z & =1 \\
x+2+(-2) & =1 & y=2, z=-2 \\
x & =1 & \text { Solve for } x .
\end{array}
\]

The solution of the system is \(x=1, y=2, z=-2\) or, using an ordered triplet, (1, 2, -2 ).

\section*{Matrix Method for Solving a System of Linear Equations (Row Echelon Form)}

STEP 1: Write the augmented matrix that represents the system.
STEP 2: Perform row operations that place the entry 1 in row 1 , column 1.
STEP 3: Perform row operations that leave the entry 1 in row 1, column 1 unchanged, while causing 0 's to appear below it in column 1 .
Step 4: Perform row operations that place the entry 1 in row 2 , column 2 but leave the entries in columns to the left unchanged. If it is impossible to place a 1 in row 2 , column 2 , proceed to place a 1 in row 2 , column 3 . Once a 1 is in place, perform row operations to place 0 's below it. (Place any rows that contain only 0 's on the left side of the vertical bar, at the bottom of the matrix.)
STEP 5: Now repeat Step 4, placing a 1 in the next row, but one column to the right. Continue until the bottom row or the vertical bar is reached.
STEP 6: The matrix that results is the row echelon form of the augmented matrix. Analyze the system of equations corresponding to it to solve the original system.

\section*{EXAMPLE 6}

Solution

Solving a System of Linear Equations Using Matrices
(Row Echelon Form)
Solve: \(\left\{\begin{aligned} x-y+z=8 \\ 2 x+3 y-z=-2 \\ 3 x-2 y-9 z=9\end{aligned}\right.\)
Step 1: The augmented matrix of the system is
\[
\left[\begin{array}{rrr|r}
1 & -1 & 1 & 8 \\
2 & 3 & -1 & -2 \\
3 & -2 & -9 & 9
\end{array}\right]
\]

STEP 2: Because the entry 1 is already present in row 1 , column 1 , go to Step 3.
Step 3: Perform the row operations \(R_{2}=-2 r_{1}+r_{2}\) and \(R_{3}=-3 r_{1}+r_{3}\). Each of these leaves the entry 1 in row 1 , column 1 unchanged, while causing 0 's to appear under it.
\[
\begin{gathered}
{\left[\begin{array}{rrr|r}
1 & -1 & 1 & 8 \\
2 & 3 & -1 & -2 \\
3 & -2 & -9 & 9
\end{array}\right] \underset{\uparrow}{\rightarrow}\left[\begin{array}{rrr|r}
1 & -1 & 1 & 8 \\
0 & 5 & -3 & -18 \\
0 & 1 & -12 & -15
\end{array}\right]} \\
R_{2}=-2 r_{1}+r_{2} \\
R_{3}=-3 r_{1}+r_{3}
\end{gathered}
\]

STEP 4: The easiest way to obtain the entry 1 in row 2 , column 2 without altering column 1 is to interchange rows 2 and 3 (another way would be to multiply row 2 by \(\frac{1}{5}\), but this introduces fractions).
\[
\left[\begin{array}{rrr|r}
1 & -1 & 1 & 8 \\
0 & 1 & -12 & -15 \\
0 & 5 & -3 & -18
\end{array}\right]
\]

To get a 0 under the 1 in row 2 , column 2 , perform the row operation \(R_{3}=-5 r_{2}+r_{3}\).
\[
\begin{gathered}
{\left[\begin{array}{rrr|r}
1 & -1 & 1 & 8 \\
0 & 1 & -12 & -15 \\
0 & 5 & -3 & -18
\end{array}\right] \uparrow \underset{\uparrow}{\rightarrow}\left[\begin{array}{rrr|r}
1 & -1 & 1 & 8 \\
0 & 1 & -12 & -15 \\
0 & 0 & 57 & 57
\end{array}\right]} \\
R_{3}=-5 r_{2}+r_{3}
\end{gathered}
\]

STEP 5: Continuing, obtain a 1 in row 3, column 3 by using \(R_{3}=\frac{1}{57} r_{3}\).
\[
\begin{gathered}
{\left[\begin{array}{rrr|r}
1 & -1 & 1 & 8 \\
0 & 1 & -12 & -15 \\
0 & 0 & 57 & 57
\end{array}\right] \uparrow\left[\begin{array}{rrr|r}
1 & -1 & 1 & 8 \\
0 & 1 & -12 & -15 \\
0 & 0 & 1 & 1
\end{array}\right]} \\
R_{3}=\frac{1}{57} r_{3}
\end{gathered}
\]

STEP 6: The matrix on the right is the row echelon form of the augmented matrix. The system of equations represented by the matrix in row echelon form is
\[
\left\{\begin{aligned}
x-y+z & =8 \\
y-12 z & =-15 \\
z & =1
\end{aligned}\right.
\]

Using \(z=1\), back-substitute to get
\[
\left\{\begin{array} { r l } 
{ x - y + 1 } & { = 8 } \\
{ y - 1 2 ( 1 ) } & { = - 1 5 \quad ( 2 ) } \\
{ \text { Simplify. } }
\end{array} \quad \left\{\begin{array}{rl}
x-y & =7 \\
y & =-3
\end{array}\right.\right.
\]

We get \(y=-3\) and, back-substituting into \(x-y=7\), we find that \(x=4\). The solution of the system is \(x=4, y=-3, z=1\) or, using an ordered triplet, (4, -3, 1).

Sometimes it is advantageous to write a matrix in reduced row echelon form. In this form, row operations are used to obtain entries that are 0 above (as well as below) the leading 1 in a row. For example, the row echelon form obtained in the solution to Example 6 is
\[
\left[\begin{array}{rrr|r}
1 & -1 & 1 & 8 \\
0 & 1 & -12 & -15 \\
0 & 0 & 1 & 1
\end{array}\right]
\]

To write this matrix in reduced row echelon form, proceed as follows:
\[
\begin{aligned}
{\left[\begin{array}{rrr|r}
1 & -1 & 1 & 8 \\
0 & 1 & -12 & -15 \\
0 & 0 & 1 & 1
\end{array}\right] } & \rightarrow\left[\begin{array}{rrr|r}
1 & 0 & -11 & -7 \\
0 & 1 & -12 & -15 \\
0 & 0 & 1 & 1
\end{array}\right]
\end{aligned} \begin{aligned}
\uparrow & \rightarrow\left[\begin{array}{lll|r}
1 & 0 & 0 & 4 \\
0 & 1 & 0 & -3 \\
0 & 0 & 1 & 1
\end{array}\right] \\
& R_{1}=r_{2}+r_{1}
\end{aligned}
\]

The matrix is now written in reduced row echelon form. The advantage of writing the matrix in this form is that the solution to the system, \(x=4, y=-3, z=1\), is readily found, without the need to back-substitute. Another advantage will be seen in Section 10.4, where the inverse of a matrix is discussed. The methodology used to write a matrix in reduced row echelon form is called Gauss-Jordan elimination.

Now Work problems 37 and 47
The matrix method for solving a system of linear equations also identifies systems that have infinitely many solutions and systems that are inconsistent.

\section*{EXAMPLE 7 Solving a Dependent System of Linear Equations Using Matrices}

Solve: \(\left\{\begin{aligned} 6 x-y-z & =4 \\ -12 x+2 y+2 z & =-8 \\ 5 x+y-z & =3\end{aligned}\right.\)
Solution We start with the augmented matrix of the system and proceed to obtain a 1 in row 1 , column 1 with 0's below.
\[
\begin{array}{r}
{\left[\begin{array}{rrr|r}
6 & -1 & -1 \\
-12 & 2 & 2 & 4 \\
5 & 1 & -1 & 3
\end{array}\right] \uparrow \underset{\uparrow}{\uparrow}\left[\begin{array}{rrr|r}
1 & -2 & 0 & 1 \\
-12 & 2 & 2 & -8 \\
5 & 1 & -1 & 3
\end{array}\right]}
\end{array} \underset{\uparrow}{\rightarrow}\left[\begin{array}{rrr|r}
1 & -2 & 0 & 1 \\
0 & -22 & 2 & 4 \\
0 & 11 & -1 & -2
\end{array}\right]
\]

Obtaining a 1 in row 2 , column 2 without altering column 1 can be accomplished by \(R_{2}=-\frac{1}{22} r_{2}\) or by \(R_{3}=\frac{1}{11} r_{3}\) and interchanging rows 2 and 3 or by \(R_{2}=\frac{23}{11} r_{3}+r_{2}\).
We shall use the first of these.
\[
\begin{array}{r}
{\left[\begin{array}{rrr|r}
1 & -2 & 0 \\
0 & -22 & 2 & 1 \\
0 & 11 & -1 & -2
\end{array}\right] \uparrow \underset{\uparrow}{\rightarrow}\left[\begin{array}{rrr|r}
1 & -2 & 0 \\
0 & 1 & -\frac{1}{11} & -\frac{2}{11} \\
0 & 11 & -1 & \rightarrow 2
\end{array}\right]} \\
\rightarrow\left[\begin{array}{rrr|r}
1 & -2 & 0 & 1 \\
0 & 1 & -\frac{1}{11} & -\frac{2}{11} \\
0 & 0 & 0 & 0
\end{array}\right] \\
R_{2}=-\frac{1}{22} r_{2}
\end{array}
\]

This matrix is in row echelon form. Because the bottom row consists entirely of 0 's, the system actually consists of only two equations.
\[
\left\{\begin{aligned}
x-2 y & =1 \\
y-\frac{1}{11} z & =-\frac{2}{11}
\end{aligned}\right.
\]

To make it easier to write down some of the solutions, express both \(x\) and \(y\) in terms of \(z\).

From the second equation, \(y=\frac{1}{11} z-\frac{2}{11}\). Now back-substitute this solution for \(y\) into the first equation to get
\[
x=2 y+1=2\left(\frac{1}{11} z-\frac{2}{11}\right)+1=\frac{2}{11} z+\frac{7}{11}
\]

The original system is equivalent to the system
\[
\left\{\begin{array}{l}
x=\frac{2}{11} z+\frac{7}{11} \quad(1) \\
y=\frac{1}{11} z-\frac{2}{11}
\end{array} \quad \text { (2) } \quad \text { where } z\right. \text { can be any real number }
\]

Let's look at the situation. The original system of three equations is equivalent to a system containing two equations. This means that any values of \(x, y, z\) that satisfy both
\[
x=\frac{2}{11} z+\frac{7}{11} \quad \text { and } \quad y=\frac{1}{11} z-\frac{2}{11}
\]
will be solutions. For example, \(z=0, x=\frac{7}{11}, y=-\frac{2}{11} ; z=1, x=\frac{9}{11}, y=-\frac{1}{11}\); and \(z=-1, x=\frac{5}{11}, y=-\frac{3}{11}\) are some of the solutions of the original system. There are, in fact, infinitely many values of \(x, y\), and \(z\) for which the two equations are satisfied. That is, the original system has infinitely many solutions. We will write the solution of the original system as
\[
\left\{\begin{array}{l}
x=\frac{2}{11} z+\frac{7}{11} \\
y=\frac{1}{11} z-\frac{2}{11}
\end{array} \text { where } z\right. \text { can be any real number }
\]
or, using ordered triplets, as
\[
\left\{(x, y, z) \left\lvert\, x=\frac{2}{11} z+\frac{7}{11}\right., y=\frac{1}{11} z-\frac{2}{11}, z \text { any real number }\right\}
\]

We can also find the solution by writing the augmented matrix in reduced row echelon form. Starting with the row echelon form, we have
\[
\begin{gathered}
{\left[\begin{array}{rrr|r}
1 & -2 & 0 & 1 \\
0 & 1 & -\frac{1}{11} & -\frac{2}{11} \\
0 & 0 & 0 & 0
\end{array}\right] \uparrow \rightarrow\left[\begin{array}{rrr|r}
1 & 0 & -\frac{2}{11} & \frac{7}{11} \\
0 & 1 & -\frac{1}{11} & -\frac{2}{11} \\
0 & 0 & 0 & 0
\end{array}\right]} \\
R_{1}=2 r_{2}+r_{1}
\end{gathered}
\]

The matrix on the right is in reduced row echelon form. The corresponding system of equations is
\[
\left\{\begin{array}{l}
x-\frac{2}{11} z=\frac{7}{11} \\
y-\frac{1}{11} z=-\frac{2}{11}
\end{array} \text { (2) where } z\right. \text { can be any real number }
\]
or, equivalently,
\[
\left\{\begin{array}{l}
x=\frac{2}{11} z+\frac{7}{11} \\
y=\frac{1}{11} z-\frac{2}{11}
\end{array}\right. \text { where z can be any real number }
\]
am Now Work problem 53

\section*{EXAMPLE 8 Solving an Inconsistent System of Linear Equations} Using Matrices
Solve: \(\left\{\begin{aligned} x+y+z & =6 \\ 2 x-y-z & =3 \\ x+2 y+2 z & =0\end{aligned}\right.\)

Solution We proceed as follows, beginning with the augmented matrix.

This matrix is in row echelon form. The bottom row is equivalent to the equation
\[
0 x+0 y+0 z=-27
\]
which has no solution. The original system is inconsistent.
an Now Work problem 27
The matrix method is especially effective for systems of equations for which the number of equations and the number of variables are unequal. Here, too, such a system is either inconsistent or consistent. If it is consistent, it will have either exactly one solution or infinitely many solutions.

\section*{EXAMPLE 9 Solving a System of Linear Equations Using Matrices}

Solve: \(\left\{\begin{aligned} x-2 y+z & =0 \\ 2 x+2 y-3 z & =-3 \\ y-z & =-1 \\ -x+4 y+2 z & =13\end{aligned}\right.\)
Solution Begin with the augmented matrix.
\[
\begin{aligned}
& {\left[\begin{array}{rrr|r}
1 & -2 & 1 & 0 \\
2 & 2 & -3 & -3 \\
0 & 1 & -1 & -1 \\
-1 & 4 & 2 & 13
\end{array}\right] \rightarrow\left[\begin{array}{rrr|r}
1 & -2 & 1 & 0 \\
0 & 6 & -5 & -3 \\
0 & 1 & -1 & -1 \\
0 & 2 & 3 & 13
\end{array}\right] \rightarrow\left[\begin{array}{rrr|r}
1 & -2 & 1 & 0 \\
0 & 1 & -1 & -1 \\
0 & 6 & -5 & -3 \\
0 & 2 & 3 & 13
\end{array}\right]} \\
& R_{2}=-2 r_{1}+r_{2} \quad \text { Interchange rows } 2 \text { and } 3 \text {. } \\
& R_{4}=r_{1}+r_{4} \\
& \begin{array}{l}
\begin{array}{l}
\rightarrow\left[\begin{array}{rrr|r}
1 & -2 & 1 & 0 \\
0 & 1 & -1 & -1 \\
0 & 0 & 1 & 3 \\
0 & 0 & 5 & 15
\end{array}\right] \uparrow \underset{ }{\rightarrow} \uparrow\left[\begin{array}{rrr|r}
1 & -2 & 1 & 0 \\
0 & 1 & -1 & -1 \\
0 & 0 & 1 & 3 \\
0 & 0 & 0 & 0
\end{array}\right] \\
\begin{array}{l}
R_{3}=-6 r_{2}+r_{3} \\
R_{4}=-2 r_{2}+r_{4}
\end{array}
\end{array} \begin{aligned}
R_{4}=-5 r_{3}+r_{4}
\end{aligned}
\end{array}
\end{aligned}
\]

We could stop here, since the matrix is in row echelon form, and back-substitute \(z=3\) to find \(x\) and \(y\). Or we can continue and obtain the reduced row echelon form.
\[
\left.\begin{array}{r}
{\left[\begin{array}{rrr|r}
1 & -2 & 1 & 0 \\
0 & 1 & -1 & -1 \\
0 & 0 & 1 & 3 \\
0 & 0 & 0 & 0
\end{array}\right]} \\
\uparrow
\end{array} \underset{\left.\begin{array}{rrr|r}
1 & 0 & -1 & -2 \\
0 & 1 & -1 & -1 \\
0 & 0 & 1 & 3 \\
0 & 0 & 0 & 0
\end{array}\right]}{\substack{ \\
R_{1}=2 r_{2}+r_{1}}} \begin{array}{rl} 
\\
\uparrow
\end{array} \begin{array}{lll|l}
{\left[\begin{array}{lll}
1 & 0 & 0 \\
0 & 1 & 0 \\
0 & 0 & 1
\end{array}\right.} & 1 \\
0 \\
0 & 0 & 0 & 0
\end{array}\right]
\]

The matrix is now in reduced row echelon form, and we can see that the solution is \(x=1, y=2, z=3\) or, using an ordered triplet, \((1,2,3)\).

\section*{EXAMPLE IO Financial Planning}

Adam and Michelle require an additional \(\$ 25,000\) in annual income (beyond their pension benefits). They are rather risk averse and have narrowed their investment choices down to Treasury notes that yield \(3 \%\), Treasury bonds that yield \(5 \%\), and corporate bonds that yield \(6 \%\). If they have \(\$ 600,000\) to invest and want the amount invested in Treasury notes to equal the total amount invested in Treasury bonds and corporate bonds, how much should they place in each investment?

\section*{Solution}

COMMENT Most graphing utilities have the capability to put an augmented matrix into row echelon form (ref) and also into reduced row echelon form (rref). See Appendix B, Section B.7, for a discussion.

Let \(n, b\), and \(c\) represent the amounts invested in Treasury notes, Treasury bonds, and corporate bonds, respectively. There is a total of \(\$ 600,000\) to invest, which means that the sum of the amounts invested in Treasury notes, Treasury bonds, and corporate bonds should equal \(\$ 600,000\). The first equation is
\[
n+b+c=600,000
\]

If \(\$ 100,000\) was invested in Treasury notes, the income would be \(0.03(\$ 100,000)=\) \(\$ 3000\). In general, if \(n\) dollars was invested in Treasury notes, the income would be \(0.03 n\). Since the total income is \(\$ 25,000\), the second equation is
\[
\begin{equation*}
0.03 n+0.05 b+0.06 c=25,000 \tag{2}
\end{equation*}
\]

The amount invested in Treasury notes should equal the amount invested in Treasury bonds and corporate bonds, so the third equation is
\[
\begin{equation*}
n=b+c \quad \text { or } \quad n-b-c=0 \tag{3}
\end{equation*}
\]

We have the following system of equations:
\[
\left\{\begin{aligned}
n+b+c & =600,000 \\
0.03 n+0.05 b+0.06 c & =25,000 \\
n-b-c & =0
\end{aligned}\right.
\]

Begin with the augmented matrix and proceed as follows:
\[
\begin{aligned}
{\left[\begin{array}{rrr|r}
1 & 1 & 1 & 600,000 \\
0.03 & 0.05 & 0.06 & 25,000 \\
1 & -1 & -1 & 0
\end{array}\right] } & \rightarrow\left[\begin{array}{rrr|r}
1 & 1 & 1 & 600,000 \\
0 & 0.02 & 0.03 & 7000 \\
0 & -2 & -2 & -600,000
\end{array}\right] \\
& R_{2}=-0.03 r_{1}+r_{2} \\
& R_{3}=-r_{1}+r_{3}
\end{aligned}
\]
\[
\begin{aligned}
\underset{\uparrow}{\rightarrow}\left[\begin{array}{rrl|r}
1 & 1 & 1 \\
0 & 1 & 1.5 \\
0 & -2 & -2
\end{array}\right. & \left.\begin{array}{r}
600,000 \\
350,000 \\
-600,000
\end{array}\right]
\end{aligned} \underset{\uparrow}{ } \rightarrow\left[\begin{array}{lll|l}
1 & 1 & 1 & 600,000 \\
0 & 1 & 1.5 & 350,000 \\
0 & 0 & 1 & 100,000
\end{array}\right]
\]

The matrix is now in row echelon form. The final matrix represents the system
\[
\left\{\begin{aligned}
n+b+c & =600,000 \\
b+1.5 c & =350,000 \\
c & =100,000
\end{aligned}\right.
\]

From equation (3), we determine that Adam and Michelle should invest \(\$ 100,000\) in corporate bonds. Back-substitute 100,000 into equation (2) to find that \(b=200,000\), so Adam and Michelle should invest \(\$ 200,000\) in Treasury bonds. Back-substitute these values into equation (1) and find that \(n=300,000\), so \(\$ 300,000\) should be invested in Treasury notes.

\subsection*{10.2 Assess Your Understanding}

\section*{Concepts and Vocabulary}
1. An \(m\) by \(n\) rectangular array of numbers is called \(\mathrm{a}(\mathrm{n})\)
\(\qquad\) .
2. The matrix used to represent a system of linear equations is called a(n) \(\qquad\) matrix.

\section*{Skill Building}

In Problems 5-16, write the augmented matrix of the given system of equations.
5. \(\left\{\begin{aligned} x-5 y & =5 \\ 4 x+3 y & =6\end{aligned}\right.\)
6. \(\left\{\begin{array}{l}3 x+4 y=7 \\ 4 x-2 y=5\end{array}\right.\)
7. \(\left\{\begin{array}{l}2 x+3 y-6=0 \\ 4 x-6 y+2=0\end{array}\right.\)
8. \(\left\{\begin{array}{r}9 x-y=0 \\ 3 x-y-4=0\end{array}\right.\)
9. \(\left\{\begin{array}{l}0.01 x-0.03 y=0.06 \\ 0.13 x+0.10 y=0.20\end{array}\right.\)
10. \(\left\{\begin{aligned} \frac{4}{3} x-\frac{3}{2} y & =\frac{3}{4} \\ -\frac{1}{4} x+\frac{1}{3} y & =\frac{2}{3}\end{aligned}\right.\)
11. \(\left\{\begin{aligned} x-y+z & =10 \\ 3 x+3 y & =5 \\ x+y+2 z & =2\end{aligned}\right.\)
12. \(\left\{\begin{aligned} 5 x-y-z & =0 \\ x+y & =5 \\ 2 x-3 z & =2\end{aligned}\right.\)
13. \(\left\{\begin{aligned} x+y-z & =2 \\ 3 x-2 y & =2 \\ 5 x+3 y-z & =1\end{aligned}\right.\)
14. \(\left\{\begin{aligned} 2 x+3 y-4 z= & 0 \\ x-5 z+2= & 0 \\ x+2 y-3 z= & -2\end{aligned}\right.\)
15. \(\left\{\begin{aligned} x-y-z & =10 \\ 2 x+y+2 z & =-1 \\ -3 x+4 y & =5 \\ 4 x-5 y+z & =0\end{aligned}\right.\)
16. \(\left\{\begin{aligned} x-y+2 z-w & =5 \\ x+3 y-4 z+2 w & =2 \\ 3 x-y-5 z-w & =-1\end{aligned}\right.\)

In Problems 17-24, write the system of equations corresponding to each augmented matrix. Then perform the indicated row operation(s) on the given augmented matrix.
17. \(\left[\begin{array}{cc|c}1 & -3 & -2 \\ 2 & -5 & 5\end{array}\right] \quad R_{2}=-2 r_{1}+r_{2}\)
18. \(\left[\begin{array}{ll|l}1 & -3 & -3 \\ 2 & -5 & -4\end{array}\right]\)
\(R_{2}=-2 r_{1}+r_{2}\)
19. \(\left[\begin{array}{rrr|r}1 & -3 & 4 & 3 \\ 3 & -5 & 6 & 6 \\ -5 & 3 & 4 & 6\end{array}\right] \begin{aligned} & R_{2}=-3 r_{1}+r_{2} \\ & R_{3}=5 r_{1}+r_{3}\end{aligned}\)
20. \(\left[\begin{array}{rrr|r}1 & -3 & 3 & -5 \\ -4 & -5 & -3 & -5 \\ -3 & -2 & 4 & 6\end{array}\right] \begin{aligned} & R_{2}=4 r_{1}+r_{2} \\ & R_{3}=3 r_{1}+r_{3}\end{aligned}\)
21. \(\left[\begin{array}{rrr|r}1 & -3 & 2 & -6 \\ 2 & -5 & 3 & -4 \\ -3 & -6 & 4 & 6\end{array}\right] \begin{aligned} & R_{2}=-2 r_{1}+r_{2} \\ & R_{3}=3 r_{1}+r_{3}\end{aligned}\)
22. \(\left[\begin{array}{rrr|r}1 & -3 & -4 & -6 \\ 6 & -5 & 6 & -6 \\ -1 & 1 & 4 & 6\end{array}\right] \begin{aligned} & R_{2}=-6 r_{1}+r_{2} \\ & R_{3}=r_{1}+r_{3}\end{aligned}\)
23. \(\left[\begin{array}{rrr|r}5 & -3 & 1 & -2 \\ 2 & -5 & 6 & -2 \\ -4 & 1 & 4 & 6\end{array}\right] \begin{aligned} & R_{1}=-2 r_{2}+r_{1} \\ & R_{3}=2 r_{2}+r_{3}\end{aligned}\)
24. \(\left[\begin{array}{rrr|r}4 & -3 & -1 & 2 \\ 3 & -5 & 2 & 6 \\ -3 & -6 & 4 & 6\end{array}\right] \begin{aligned} & R_{1}=-r_{2}+r_{1} \\ & R_{3}=r \\ & r_{2}+r_{3}\end{aligned}\)

In Problems 25-36, the reduced row echelon form of a system of linear equations is given. Write the system of equations corresponding to the given matrix. Use \(x, y\); or \(x, y\), \(z\); or \(x_{1}, x_{2}, x_{3}, x_{4}\) as variables. Determine whether the system is consistent or inconsistent. If it is consistent, give the solution.
25. \(\left[\begin{array}{rr|r}1 & 0 & 5 \\ 0 & 1 & -1\end{array}\right]\)
26. \(\left[\begin{array}{rr|r}1 & 0 & -4 \\ 0 & 1 & 0\end{array}\right]\)
27. \(\left[\begin{array}{lll|l}1 & 0 & 0 & 1 \\ 0 & 1 & 0 & 2 \\ 0 & 0 & 0 & 3\end{array}\right]\)
28. \(\left[\begin{array}{lll|l}1 & 0 & 0 & 0 \\ 0 & 1 & 0 & 0 \\ 0 & 0 & 0 & 2\end{array}\right]\)
29. \(\left[\begin{array}{rrr|r}1 & 0 & 2 & -1 \\ 0 & 1 & -4 & -2 \\ 0 & 0 & 0 & 0\end{array}\right]\)
30. \(\left[\begin{array}{lll|l}1 & 0 & 4 & 4 \\ 0 & 1 & 3 & 2 \\ 0 & 0 & 0 & 0\end{array}\right]\)
31. \(\left[\begin{array}{llll|l}1 & 0 & 0 & 0 & 1 \\ 0 & 1 & 0 & 1 & 2 \\ 0 & 0 & 1 & 2 & 3\end{array}\right]\)
32. \(\left[\begin{array}{llll|l}1 & 0 & 0 & 0 & 1 \\ 0 & 1 & 0 & 2 & 2 \\ 0 & 0 & 1 & 3 & 0\end{array}\right]\)
33. \(\left[\begin{array}{llll|l}1 & 0 & 0 & 4 & 2 \\ 0 & 1 & 1 & 3 & 3 \\ 0 & 0 & 0 & 0 & 0\end{array}\right]\)
34. \(\left[\begin{array}{llll|l}1 & 0 & 0 & 0 & 1 \\ 0 & 1 & 0 & 0 & 2 \\ 0 & 0 & 1 & 2 & 3\end{array}\right]\)
35. \(\left[\begin{array}{rrrr|r}1 & 0 & 0 & 1 & -2 \\ 0 & 1 & 0 & 2 & 2 \\ 0 & 0 & 1 & -1 & 0 \\ 0 & 0 & 0 & 0 & 0\end{array}\right]\)
36. \(\left[\begin{array}{llll|l}1 & 0 & 0 & 0 & 1 \\ 0 & 1 & 0 & 0 & 2 \\ 0 & 0 & 1 & 0 & 3 \\ 0 & 0 & 0 & 1 & 0\end{array}\right]\)

In Problems 37-72, solve each system of equations using matrices (row operations). If the system has no solution, say that it is inconsistent.
37. \(\left\{\begin{array}{l}x+y=8 \\ x-y=4\end{array}\right.\)
38. \(\left\{\begin{array}{l}x+2 y=5 \\ x+y=3\end{array}\right.\)
39. \(\left\{\begin{array}{l}2 x-4 y=-2 \\ 3 x+2 y=3\end{array}\right.\)
40. \(\left\{\begin{array}{l}3 x+3 y=3 \\ 4 x+2 y=\frac{8}{3}\end{array}\right.\)
\(41\left\{\begin{array}{r}x+2 y=4 \\ 2 x+4 y=8\end{array}\right.\)
42. \(\left\{\begin{array}{l}3 x-y=7 \\ 9 x-3 y=21\end{array}\right.\)
43. \(\left\{\begin{aligned} 2 x+3 y & =6 \\ x-y & =\frac{1}{2}\end{aligned}\right.\)
44. \(\left\{\begin{aligned} \frac{1}{2} x+y & =-2 \\ x-2 y & =8\end{aligned}\right.\)
46. \(\left\{\begin{aligned} 2 x-y & =-1 \\ x+\frac{1}{2} y & =\frac{3}{2}\end{aligned}\right.\)
49. \(\left\{\begin{aligned} x-2 y+3 z & =7 \\ 2 x+y+z & =4 \\ -3 x+2 y-2 z & =-10\end{aligned}\right.\)
52. \(\left\{\begin{array}{r}2 x-3 y-z=0 \\ -x+2 y+z=5 \\ 3 x-4 y-z=1\end{array}\right.\)
55. \(\left\{\begin{aligned} 2 x-2 y+3 z & =6 \\ 4 x-3 y+2 z & =0 \\ -2 x+3 y-7 z & =1\end{aligned}\right.\)
58. \(\left\{\begin{aligned} x-y+z & =-4 \\ 2 x-3 y+4 z & =-15 \\ 5 x+y-2 z & =12\end{aligned}\right.\)
61. \(\left\{\begin{aligned} 3 x+y-z & =\frac{2}{3} \\ 2 x-y+z & =1 \\ 4 x+2 y & =\frac{8}{3}\end{aligned}\right.\)
64. \(\left\{\begin{aligned} x+y+z+w & =4 \\ -x+2 y+z & =0 \\ 2 x+3 y+z-w & =6 \\ -2 x+y-2 z+2 w & =-1\end{aligned}\right.\)
67. \(\left\{\begin{array}{r}x-y+z=5 \\ 3 x+2 y-2 z=0\end{array}\right.\)
70. \(\left\{\begin{array}{r}x-3 y+z=1 \\ 2 x-y-4 z=0 \\ x-3 y+2 z=1 \\ x-2 y=5\end{array}\right.\)
68. \(\left\{\begin{array}{r}2 x+y-z=4 \\ -x+y+3 z=1\end{array}\right.\)
47. \(\left\{\begin{aligned} & x-y= 6 \\ & 2 x-3 z= 16 \\ & 2 y+z=4\end{aligned}\right.\)
50. \(\left\{\begin{aligned} 2 x+y-3 z & =0 \\ -2 x+2 y+z & =-7 \\ 3 x-4 y-3 z & =7\end{aligned}\right.\)
53. \(\left\{\begin{aligned}-x+y+z= & -1 \\ -x+2 y-3 z= & -4 \\ 3 x-2 y-7 z= & 0\end{aligned}\right.\)
56. \(\left\{\begin{array}{lr}3 x-2 y+2 z= & 6 \\ 7 x-3 y+2 z= & -1 \\ 2 x-3 y+4 z= & 0\end{array}\right.\)
59. \(\left\{\begin{aligned} x+2 y-z & =-3 \\ 2 x-4 y+z & =-7 \\ -2 x+2 y-3 z & =4\end{aligned}\right.\)
62. \(\left\{\begin{array}{r}x+y=1 \\ 2 x-y+z=1 \\ x+2 y+z=\frac{8}{3}\end{array}\right.\)
65. \(\left\{\begin{aligned} x+2 y+z & =1 \\ 2 x-y+2 z & =2 \\ 3 x+y+3 z & =3\end{aligned}\right.\)
71. \(\left\{\begin{aligned} 4 x+y+z-w & =4 \\ x-y+2 z+3 w & =3\end{aligned}\right.\)
45. \(\left\{\begin{array}{r}3 x-5 y=3 \\ 15 x+5 y=21\end{array}\right.\)
48. \(\left\{\begin{array}{rr}2 x+y= & -4 \\ -2 y+4 z & =0 \\ 3 x-2 z & =-11\end{array}\right.\)
51. \(\left\{\begin{array}{r}2 x-2 y-2 z=2 \\ 2 x+3 y+z=2 \\ 3 x+2 y=0\end{array}\right.\)
54. \(\left\{\begin{array}{r}2 x-3 y-z=0 \\ 3 x+2 y+2 z=2 \\ x+5 y+3 z=2\end{array}\right.\)
57. \(\left\{\begin{aligned} x+y-z= & 6 \\ 3 x-2 y+z= & -5 \\ x+3 y-2 z= & 14\end{aligned}\right.\)
60. \(\left\{\begin{aligned} x+4 y-3 z= & -8 \\ 3 x-y+3 z= & 12 \\ x+y+6 z= & 1\end{aligned}\right.\)
63. \(\left\{\begin{aligned} x+y+z+w= & 4 \\ 2 x-y+z= & 0 \\ 3 x+2 y+z-w= & 6 \\ x-2 y-2 z+2 w= & -1\end{aligned}\right.\)
66. \(\left\{\begin{aligned} x+2 y-z & =3 \\ 2 x-y+2 z & =6 \\ x-3 y+3 z & =4\end{aligned}\right.\)
69. \(\left\{\begin{array}{r}2 x+3 y-z=3 \\ x-y-z=0 \\ -x+y+z=0 \\ x+y+3 z=5\end{array}\right.\)
72. \(\left\{\begin{array}{r}-4 x+y=5 \\ 2 x-y+z-w=5 \\ z+w=4\end{array}\right.\)

\section*{Applications and Extensions}
73. Curve Fitting Find the function \(y=a x^{2}+b x+c\) whose graph contains the points \((1,2),(-2,-7)\), and \((2,-3)\).
74. Curve Fitting Find the function \(y=a x^{2}+b x+c\) whose graph contains the points \((1,-1),(3,-1)\), and \((-2,14)\).
75. Curve Fitting Find the function \(f(x)=a x^{3}+b x^{2}+\) \(c x+d\) for which \(f(-3)=-112, f(-1)=-2, f(1)=4\), and \(f(2)=13\).
76. Curve Fitting Find the function \(f(x)=a x^{3}+b x^{2}+\) \(c x+d\) for which \(f(-2)=-10, f(-1)=3, f(1)=5\), and \(f(3)=15\).
77. Nutrition A dietitian at Palos Community Hospital wants a patient to have a meal that has 78 grams (g) of protein, 59 g of carbohydrates, and 75 milligrams (mg) of vitamin A. The hospital food service tells the dietitian that the dinner for today is salmon steak, baked eggs, and acorn squash. Each serving of salmon steak has 30 g of protein, 20 g of carbohydrates, and 2 mg of vitamin A . Each serving of baked eggs contains 15 g of protein, 2 g of carbohydrates, and 20 mg of vitamin A. Each serving of acorn squash contains 3 g of protein, 25 g of carbohydrates, and 32 mg of vitamin A. How many servings of each food should the dietitian provide for the patient?
78. Nutrition A dietitian at General Hospital wants a patient to have a meal that has 47 grams \((\mathrm{g})\) of protein, 58 g of carbohydrates, and 630 milligrams (mg) of calcium. The hospital food service tells the dietitian that the dinner for today is pork chops, corn on the cob, and \(2 \%\) milk. Each serving of pork chops has 23 g of protein, 0 g of carbohydrates, and 10 mg of calcium. Each serving of corn on the cob contains 3 g of protein, 16 g of carbohydrates, and 10 mg of calcium. Each glass of \(2 \%\) milk contains 9 g of protein, 13 g of carbohydrates, and 300 mg of calcium. How many servings of each food should the dietitian provide for the patient?
79. Financial Planning Carletta has \(\$ 10,000\) to invest. As her financial consultant, you recommend that she invest in Treasury bills that yield \(6 \%\), Treasury bonds that yield \(7 \%\), and corporate bonds that yield \(8 \%\). Carletta wants to have an annual income of \(\$ 680\), and the amount invested in corporate bonds must be half that invested in Treasury bills. Find the amount in each investment.
80. Landscaping A landscape company is hired to plant trees in three new subdivisions. The company charges the developer for each tree planted, an hourly rate to plant the trees, and a fixed delivery charge. In one subdivision it took 166 labor hours to plant 250 trees for a cost of \(\$ 7520\). In a second subdivision it took 124 labor hours to plant 200 trees for a cost of \(\$ 5945\). In the final subdivision it took 200 labor hours to plant 300 trees for a cost of \(\$ 8985\). Determine the cost for each tree, the hourly labor charge, and the fixed delivery charge.

\section*{Source: www.bx.org}
81. Production To manufacture an automobile requires painting, drying, and polishing. Epsilon Motor Company produces three types of cars: the Delta, the Beta, and the Sigma. Each Delta requires 10 hours (hr) for painting, 3 hr for drying, and 2 hr for polishing. A Beta requires 16 hr for painting, 5 hr for drying, and 3 hr for polishing, and a Sigma requires 8 hr for painting, 2 hr for drying, and 1 hr for polishing. If the company has 240 hr for painting, 69 hr for drying, and 41 hr for polishing per month, how many of each type of car are produced?
82. Production A Florida juice company completes the preparation of its products by sterilizing, filling, and labeling bottles. Each case of orange juice requires 9 minutes (min) for sterilizing, 6 min for filling, and 1 min for labeling. Each case of grapefruit juice requires 10 min for sterilizing, 4 min for filling, and 2 min for labeling. Each case of tomato juice requires 12 min for sterilizing, 4 min for filling, and 1 min for labeling. If the company runs the sterilizing machine for 398 min , the filling machine for 164 min , and the labeling machine for 58 min, how many cases of each type of juice are prepared?
83. Electricity: Kirchhoff's Rules An application of Kirchhoff's Rules to the circuit shown results in the following system of equations:
\[
\left\{\begin{aligned}
-4+8-2 I_{2} & =0 \\
8 & =5 I_{4}+I_{1} \\
4 & =3 I_{3}+I_{1} \\
I_{3}+I_{4} & =I_{1}
\end{aligned}\right.
\]

Find the currents \(I_{1}, I_{2}, I_{3}\), and \(I_{4}\).

Source: Based on Raymond Serway. Physics, 3rd ed. (Philadelphia: Saunders, 1990), Prob. 34. p. 790.
84. Electricity: Kirchhoff's Rules An application of Kirchhoff's Rules to the circuit shown results in the following system of equations:
\[
\left\{\begin{aligned}
I_{1} & =I_{3}+I_{2} \\
24-6 I_{1}-3 I_{3} & =0 \\
12+24-6 I_{1}-6 I_{2} & =0
\end{aligned}\right.
\]

Find the currents \(I_{1}, I_{2}\), and \(I_{3}\).

Source: Ibid., Prob. 38, p. 791.
85. Financial Planning Three retired couples each require an additional annual income of \(\$ 2000\) per year.As their financial consultant, you recommend that they invest some money in Treasury bills that yield 7\%, some money in corporate bonds that yield \(9 \%\), and some money in "junk bonds" that yield \(11 \%\). Prepare a table for each couple showing the various ways that their goals can be achieved:
(a) If the first couple has \(\$ 20,000\) to invest.
(b) If the second couple has \(\$ 25,000\) to invest.
(c) If the third couple has \(\$ 30,000\) to invest.
(d) What advice would you give each couple regarding the amount to invest and the choices available?
[Hint: Higher yields generally carry more risk.]
86. Financial Planning A young couple has \(\$ 25,000\) to invest. As their financial consultant, you recommend that they invest some money in Treasury bills that yield 7\%, some money in corporate bonds that yield \(9 \%\), and some money in junk bonds that yield \(11 \%\). Prepare a table showing the various ways that this couple can achieve the following goals:
(a) \(\$ 1500\) per year in income
(b) \(\$ 2000\) per year in income
(c) \(\$ 2500\) per year in income
(d) What advice would you give this couple regarding the income that they require and the choices available?
[Hint: Higher yields generally carry more risk.]
87. Pharmacy A doctor's prescription calls for a daily intake of a supplement containing 40 milligrams ( mg ) of vitamin C and

30 mg of vitamin D. Your pharmacy stocks three supplements that can be used: one contains \(20 \%\) vitamin C and \(30 \%\) vitamin D; a second, \(40 \%\) vitamin C and \(20 \%\) vitamin D; and a third, \(30 \%\) vitamin C and \(50 \%\) vitamin D. Create a table showing the possible combinations that could be used to fill the prescription.
88. Pharmacy A doctor's prescription calls for the creation of pills that contain 12 units of vitamin \(\mathrm{B}_{12}\) and 12 units of vitamin \(E\). Your pharmacy stocks three powders that can be used to make these pills: one contains \(20 \%\) vitamin \(\mathrm{B}_{12}\) and \(30 \%\) vitamin E ; a second, \(40 \%\) vitamin \(\mathrm{B}_{12}\) and \(20 \%\) vitamin E; and a third, \(30 \%\) vitamin \(B_{12}\) and \(40 \%\) vitamin E. Create a table showing the possible combinations of each powder that could be mixed in each pill.

\section*{Discussion and Writing}
89. Write a brief paragraph or two outlining your strategy for solving a system of linear equations using matrices.
90. When solving a system of linear equations using matrices, do you prefer to place the augmented matrix in row echelon form or in reduced row echelon form? Give reasons for your choice.
91. Make up a system of three linear equations containing three variables that has:
(a) No solution
(b) Exactly one solution
(c) Infinitely many solutions

Give the three systems to a friend to solve and critique.

\section*{-Retain Your Knowledge}

Problems 92-95 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
92. State the domain of \(f(x)=-e^{x+5}-6\).
93. Solve \(x^{2}-3 x<6+2 x\).
94. Graph: \(f(x)=\frac{2 x^{2}-x-1}{x^{2}+2 x+1}\)
95. Use a calculator to approximate \(\cos ^{-1}(-0.75)\) in radians, rounded to two decimal places.

\subsection*{10.3 Systems of Linear Equations: Determinants}

OBJECTIVES 1 Evaluate 2 by 2 Determinants (p. 753)
2 Use Cramer's Rule to Solve a System of Two Equations Containing Two Variables (p. 753)
3 Evaluate 3 by 3 Determinants (p. 756)
4 Use Cramer's Rule to Solve a System of Three Equations Containing Three Variables (p. 757)
5 Know Properties of Determinants (p. 759)

In the preceding section, we described a method of using matrices to solve a system of linear equations. This section deals with yet another method for solving systems of linear equations; however, it can be used only when the number of equations equals the number of variables. Although the method will work for any system (provided that the number of equations equals the number of variables), it is most often used for systems of two equations containing two variables or three equations containing three variables. This method, called Cramer's Rule, is based on the concept of a determinant.

\section*{1 Evaluate 2 by 2 Determinants}

DEFINITION
If \(a, b, c\), and \(d\) are four real numbers, the symbol
\[
D=\left|\begin{array}{ll}
a & b \\
c & d
\end{array}\right|
\]
is called a \(\mathbf{2}\) by \(\mathbf{2}\) determinant. Its value is the number \(a d-b c\); that is,
\[
D=\left|\begin{array}{ll}
a & b  \tag{1}\\
c & d
\end{array}\right|=a d-b c
\]

The following device may be helpful for remembering the value of a 2 by 2 determinant:

\section*{EXAMPLE I Evaluating a \(2 \times 2\) Determinant}

Evaluate: \(\left|\begin{array}{rr}3 & -2 \\ 6 & 1\end{array}\right|\)
Solution
\[
\begin{aligned}
\left|\begin{array}{rr}
3 & -2 \\
6 & 1
\end{array}\right| & =(3)(1)-(6)(-2) \\
& =3-(-12) \\
& =15
\end{aligned}
\]
an Now Work problem 7

\section*{2 Use Cramer's Rule to Solve a System of Two Equations Containing Two Variables}

Let's see the role that a 2 by 2 determinant plays in the solution of a system of two equations containing two variables. Consider the system
\[
\left\{\begin{array}{l}
a x+b y=s  \tag{2}\\
c x+d y=t
\end{array}\right.
\]

We use the method of elimination to solve this system.
Provided \(d \neq 0\) and \(b \neq 0\), this system is equivalent to the system
\[
\left\{\begin{aligned}
a d x+b d y=s d & \text { (1) } \\
b c x+b d y=t b & \text { Multiply by } d . \\
\text { (2) } & \text { Multiply by } b .
\end{aligned}\right.
\]

Subtract the second equation from the first equation and obtain
\[
\left\{\begin{align*}
(a d-b c) x+0 \cdot y & =s d-t b  \tag{1}\\
b c x+b d y & =t b
\end{align*}\right.
\]

Now the first equation can be rewritten using determinant notation.
\[
\left|\begin{array}{ll}
a & b \\
c & d
\end{array}\right| x=\left|\begin{array}{ll}
s & b \\
t & d
\end{array}\right|
\]

If \(D=\left|\begin{array}{ll}a & b \\ c & d\end{array}\right|=a d-b c \neq 0\), solve for \(x\) to get
\[
x=\frac{\left|\begin{array}{ll}
s & b  \tag{3}\\
t & d
\end{array}\right|}{\left|\begin{array}{ll}
a & b \\
c & d
\end{array}\right|}=\frac{\left|\begin{array}{ll}
s & b \\
t & d
\end{array}\right|}{D}
\]

Return now to the original system (2). Provided that \(a \neq 0\) and \(c \neq 0\), the system is equivalent to
\[
\left\{\begin{array}{l}
a c x+b c y=c s \quad(1) \quad \text { Multiply by } c \\
a c x+a d y=a t \quad \text { (2) } \quad \text { Multiply by } a .
\end{array}\right.
\]

Subtract the first equation from the second equation and obtain
\[
\left\{\begin{align*}
a c x+b c y & =c s  \tag{1}\\
0 \cdot x+(a d-b c) y & =a t-c s
\end{align*}\right.
\]

The second equation can now be rewritten using determinant notation.
\[
\left|\begin{array}{ll}
a & b \\
c & d
\end{array}\right| y=\left|\begin{array}{ll}
a & s \\
c & t
\end{array}\right|
\]

If \(D=\left|\begin{array}{ll}a & b \\ c & d\end{array}\right|=a d-b c \neq 0\), solve for \(y\) to get
\[
y=\frac{\left|\begin{array}{ll}
a & s  \tag{4}\\
c & t
\end{array}\right|}{\left|\begin{array}{ll}
a & b \\
c & d
\end{array}\right|}=\frac{\left|\begin{array}{ll}
a & s \\
c & t
\end{array}\right|}{D}
\]

Equations (3) and (4) lead to the following result, called Cramer's Rule.

\section*{THEOREM Cramer's Rule for Two Equations Containing Two Variables}

The solution to the system of equations
\[
\left\{\begin{array}{l}
a x+b y=s  \tag{5}\\
c x+d y=t
\end{array}\right.
\]
is given by
\[
x=\frac{\left|\begin{array}{ll}
s & b  \tag{6}\\
t & d
\end{array}\right|}{\left|\begin{array}{ll}
a & b \\
c & d
\end{array}\right|} \quad y=\frac{\left|\begin{array}{ll}
a & s \\
c & t
\end{array}\right|}{\left|\begin{array}{ll}
a & b \\
c & d
\end{array}\right|}
\]
provided that
\[
D=\left|\begin{array}{ll}
a & b \\
c & d
\end{array}\right|=a d-b c \neq 0
\]

In the derivation given for Cramer's Rule, we assumed that none of the numbers \(a, b, c\), and \(d\) was 0 . In Problem 65 you will be asked to complete the proof under the less stringent condition that \(D=a d-b c \neq 0\).

Now look carefully at the pattern in Cramer's Rule. The denominator in the solution (6) is the determinant of the coefficients of the variables.
\[
\left\{\begin{array}{l}
a x+b y=s \\
c x+d y=t
\end{array} \quad D=\left|\begin{array}{ll}
a & b \\
c & d
\end{array}\right|\right.
\]

In the solution for \(x\), the numerator is the determinant, denoted by \(D_{x}\), formed by replacing the entries in the first column (the coefficients of \(x\) ) of \(D\) by the constants on the right side of the equal sign.
\[
D_{x}=\left|\begin{array}{ll}
s & b \\
t & d
\end{array}\right|
\]

In the solution for \(y\), the numerator is the determinant, denoted by \(D_{y}\), formed by replacing the entries in the second column (the coefficients of \(y\) ) of \(D\) by the constants on the right side of the equal sign.
\[
D_{y}=\left|\begin{array}{ll}
a & s \\
c & t
\end{array}\right|
\]

Cramer's Rule then states that if \(D \neq 0\),
\[
\begin{equation*}
x=\frac{D_{x}}{D} \quad y=\frac{D_{y}}{D} \tag{7}
\end{equation*}
\]

\section*{EXAMPLE 2 Solving a System of Linear Equations Using Determinants}

Use Cramer's Rule, if applicable, to solve the system
\[
\left\{\begin{array}{l}
3 x-2 y=4 \\
6 x+y=13
\end{array}\right.
\]

Solution The determinant \(D\) of the coefficients of the variables is
\[
D=\left|\begin{array}{rr}
3 & -2 \\
6 & 1
\end{array}\right|=(3)(1)-(6)(-2)=15
\]

Because \(D \neq 0\), Cramer's Rule (7) can be used.
\[
\begin{aligned}
x & =\frac{D_{x}}{D}=\frac{\left|\begin{array}{rr}
4 & -2 \\
13 & 1
\end{array}\right|}{15} & y & =\frac{D_{y}}{D}=\frac{\left|\begin{array}{rr}
3 & 4 \\
6 & 13
\end{array}\right|}{15} \\
& =\frac{(4)(1)-(13)(-2)}{15} & & =\frac{(3)(13)-(6)(4)}{15} \\
& =\frac{30}{15} & & =\frac{15}{15} \\
& =2 & & =1
\end{aligned}
\]

The solution is \(x=2, y=1\) or, using an ordered pair, \((2,1)\).

In attempting to use Cramer's Rule, if the determinant \(D\) of the coefficients of the variables is found to equal 0 (so that Cramer's Rule is not applicable), then the system either is consistent with dependent equations or is inconsistent. To determine whether the system has no solution or infinitely many solutions, solve the system using the methods of Section 10.1 or 10.2.

\section*{3 Evaluate 3 by 3 Determinants}

To use Cramer's Rule to solve a system of three equations containing three variables, we need to define a 3 by 3 determinant.

A \(\mathbf{3}\) by \(\mathbf{3}\) determinant is symbolized by
\[
\left|\begin{array}{lll}
a_{11} & a_{12} & a_{13}  \tag{8}\\
a_{21} & a_{22} & a_{23} \\
a_{31} & a_{32} & a_{33}
\end{array}\right|
\]
in which \(a_{11}, a_{12}, \ldots\), are real numbers.
As with matrices, we use a double subscript to identify an entry by indicating its row and column numbers. For example, the entry \(a_{23}\) is in row 2 , column 3 .

The value of a 3 by 3 determinant may be defined in terms of 2 by 2 determinants by the following formula:
\[
\left|\begin{array}{lll}
a_{11} & a_{12} & a_{13}  \tag{9}\\
a_{21} & a_{22} & a_{23} \\
a_{31} & a_{32} & a_{33}
\end{array}\right|=a_{11}\left|\begin{array}{cc}
a_{22} & a_{23} \\
a_{32} & a_{33}
\end{array}\right|-a_{12}\left|\begin{array}{ll}
a_{21} & a_{23} \\
a_{31} & a_{33}
\end{array}\right|+a_{13}\left|\begin{array}{ll}
a_{21} & a_{22} \\
a_{31} & a_{32}
\end{array}\right|
\]

In Words
The graphic below should help to visualize the minor of \(a_{11}\) in a 3 by 3 determinant:
\[
\left|\begin{array}{lll}
a_{11} & a_{12} & a_{13} \\
a_{21} & a_{22} & a_{23} \\
a_{31} & a_{32} & a_{33}
\end{array}\right|
\]

\section*{EXAMPLE 3}

Solution
(a) \(M_{12}\) is the determinant that results from removing the first row and second column from \(A\).
\[
A=\left|\begin{array}{rrr}
2 & -1 & 3 \\
-2 & 5 & 1 \\
0 & 6 & -9
\end{array}\right| \quad M_{12}=\left|\begin{array}{rr}
-2 & 1 \\
0 & -9
\end{array}\right|=(-2)(-9)-(0)(1)=18
\]
(b) \(M_{23}\) is the determinant that results from removing the second row and third column from \(A\).
\[
A=\left|\begin{array}{rrr}
2 & -1 & 3 \\
-2 & 5 & 1 \\
0 & 6 & -9
\end{array}\right| \quad M_{23}=\left|\begin{array}{rr}
2 & -1 \\
0 & 6
\end{array}\right|=(2)(6)-(0)(-1)=12
\]

Referring to formula (9), we see that each element \(a_{i j}\) in the first row of the determinant is multiplied by its minor, but sometimes this term is added and other times subtracted. To determine whether to add or subtract a term, we must consider the cofactor.

For an \(n\) by \(n\) determinant \(A\), the cofactor of entry \(a_{i j}\), denoted by \(A_{i j}\), is given by
\[
A_{i j}=(-1)^{i+j} M_{i j}
\]
where \(M_{i j}\) is the minor of entry \(a_{i j}\).
The exponent of \((-1)^{i+j}\) is the sum of the row and column of the entry \(a_{i j}\), so if \(i+j\) is even, \((-1)^{i+j}\) will equal 1 , and if \(i+j\) is odd, \((-1)^{i+j}\) will equal -1 .

To find the value of a determinant, multiply each entry in any row or column by its cofactor and sum the results. This process is referred to as expanding across a row or column. For example, the value of the 3 by 3 determinant in formula (9) was found by expanding across row 1 .

If we choose to expand down column 2 , we obtain
\[
\left|\begin{array}{lll}
a_{11} & a_{12} & a_{13} \\
a_{21} & a_{22} & a_{23} \\
a_{31} & a_{32} & a_{33}
\end{array}\right|=(-1)^{1+2} a_{12}\left|\begin{array}{ll}
a_{21} & a_{23} \\
a_{31} & a_{33}
\end{array}\right|+(-1)^{2+2} a_{22}\left|\begin{array}{ll}
a_{11} & a_{13} \\
a_{31} & a_{33}
\end{array}\right|+(-1)^{3+2} a_{32}\left|\begin{array}{ll}
a_{11} & a_{13} \\
a_{21} & a_{23}
\end{array}\right|
\]

If we choose to expand across row 3, we obtain
\[
\left|\begin{array}{lll}
a_{11} & a_{12} & a_{13} \\
a_{21} & a_{22} & a_{23} \\
a_{31} & a_{32} & a_{33}
\end{array}\right| \xlongequal{\text { Expand across row 3. }}=(-1)^{3+1} a_{31}\left|\begin{array}{ll}
a_{12} & a_{13} \\
a_{22} & a_{23}
\end{array}\right|+(-1)^{3+2} a_{32}\left|\begin{array}{ll}
a_{11} & a_{13} \\
a_{21} & a_{23}
\end{array}\right|+(-1)^{3+3} a_{33}\left|\begin{array}{ll}
a_{11} & a_{12} \\
a_{21} & a_{22}
\end{array}\right|
\]

It can be shown that the value of a determinant does not depend on the choice of the row or column used in the expansion. However, expanding across a row or column that has an entry equal to 0 reduces the amount of work needed to compute the value of the determinant.

\section*{EXAMPLE 4 Evaluating a \(3 \times 3\) Determinant}

Find the value of the 3 by 3 determinant: \(\left|\begin{array}{rrr}3 & 0 & -1 \\ 4 & 6 & 2 \\ 8 & -2 & 3\end{array}\right|\)
Solution Because of the 0 in row 1, column 2, it is easiest to expand across row 1 or down column 2 . We choose to expand across row 1 .
\[
\begin{aligned}
\left|\begin{array}{rrr}
3 & 0 & -1 \\
4 & 6 & 2 \\
8 & -2 & 3
\end{array}\right| & =(-1)^{1+1} \cdot 3 \cdot\left|\begin{array}{rr}
6 & 2 \\
-2 & 3
\end{array}\right|+(-1)^{1+2} \cdot 0 \cdot\left|\begin{array}{ll}
4 & 2 \\
8 & 3
\end{array}\right|+(-1)^{1+3} \cdot(-1) \cdot\left|\begin{array}{rr}
4 & 6 \\
8 & -2
\end{array}\right| \\
& =3(18-(-4))-0+(-1)(-8-48) \\
& =3(22)+(-1)(-56) \\
& =66+56=122
\end{aligned}
\]
am= Now Work problem 11

\section*{4 Use Cramer's Rule to Solve a System of Three Equations Containing Three Variables}

Consider the following system of three equations containing three variables.
\[
\left\{\begin{array}{l}
a_{11} x+a_{12} y+a_{13} z=c_{1}  \tag{10}\\
a_{21} x+a_{22} y+a_{23} z=c_{2} \\
a_{31} x+a_{32} y+a_{33} z=c_{3}
\end{array}\right.
\]

It can be shown that if the determinant \(D\) of the coefficients of the variables is not 0 , that is, if
\[
D=\left|\begin{array}{lll}
a_{11} & a_{12} & a_{13} \\
a_{21} & a_{22} & a_{23} \\
a_{31} & a_{32} & a_{33}
\end{array}\right| \neq 0
\]
then the unique solution of system (10) is given by

\section*{THEOREM}

Cramer's Rule for Three Equations Containing Three Variables
\[
x=\frac{D_{x}}{D} \quad y=\frac{D_{y}}{D} \quad z=\frac{D_{z}}{D}
\]
where
\[
D_{x}=\left|\begin{array}{lll}
c_{1} & a_{12} & a_{13} \\
c_{2} & a_{22} & a_{23} \\
c_{3} & a_{32} & a_{33}
\end{array}\right| \quad D_{y}=\left|\begin{array}{lll}
a_{11} & c_{1} & a_{13} \\
a_{21} & c_{2} & a_{23} \\
a_{31} & c_{3} & a_{33}
\end{array}\right| \quad D_{z}=\left|\begin{array}{lll}
a_{11} & a_{12} & c_{1} \\
a_{21} & a_{22} & c_{2} \\
a_{31} & a_{32} & c_{3}
\end{array}\right|
\]

Do you see the similarity between this pattern and the pattern observed earlier for a system of two equations containing two variables?

\section*{EXAMPLE 5 Using Cramer's Rule}

Use Cramer's Rule, if applicable, to solve the following system:
\[
\left\{\begin{aligned}
2 x+y-z & =3 \\
-x+2 y+4 z & =-3 \\
x-2 y-3 z & =4
\end{aligned}\right.
\]

Solution The value of the determinant \(D\) of the coefficients of the variables is
\[
\begin{aligned}
D=\left|\begin{array}{rrr}
2 & 1 & -1 \\
-1 & 2 & 4 \\
1 & -2 & -3
\end{array}\right| & =(-1)^{1+1} \cdot 2 \cdot\left|\begin{array}{rr}
2 & 4 \\
-2 & -3
\end{array}\right|+(-1)^{1+2} \cdot 1 \cdot\left|\begin{array}{rr}
-1 & 4 \\
1 & -3
\end{array}\right|+(-1)^{1+3}(-1)\left|\begin{array}{rr}
-1 & 2 \\
1 & -2
\end{array}\right| \\
& =2(2)-1(-1)+(-1)(0) \\
& =4+1=5
\end{aligned}
\]

Because \(D \neq 0\), we proceed to find the values of \(D_{x}, D_{y}\), and \(D_{z}\). To find \(D_{x}\), we replace the coefficients of \(x\) in \(D\) with the constants and then evaluate the determinant.
\[
\begin{aligned}
D_{x}=\left|\begin{array}{rrr}
3 & 1 & -1 \\
-3 & 2 & 4 \\
4 & -2 & -3
\end{array}\right| & =(-1)^{1+1} \cdot 3 \cdot\left|\begin{array}{rr}
2 & 4 \\
-2 & -3
\end{array}\right|+(-1)^{1+2} \cdot 1 \cdot\left|\begin{array}{rr}
-3 & 4 \\
4 & -3
\end{array}\right|+(-1)^{1+3}(-1)\left|\begin{array}{rr}
-3 & 2 \\
4 & -2
\end{array}\right| \\
& =3(2)-1(-7)+(-1)(-2)=15 \\
D_{y}=\left|\begin{array}{rrr}
2 & 3 & -1 \\
-1 & -3 & 4 \\
1 & 4 & -3
\end{array}\right| & =(-1)^{1+1} \cdot 2 \cdot\left|\begin{array}{rr}
-3 & 4 \\
4 & -3
\end{array}\right|+(-1)^{1+2} \cdot 3 \cdot\left|\begin{array}{rr}
-1 & 4 \\
1 & -3
\end{array}\right|+(-1)^{1+3}(-1)\left|\begin{array}{rr}
-1 & -3 \\
1 & 4
\end{array}\right| \\
& =2(-7)-3(-1)+(-1)(-1)=-10 \\
D_{z}=\left|\begin{array}{rrr}
2 & 1 & 3 \\
-1 & 2 & -3 \\
1 & -2 & 4
\end{array}\right| & =(-1)^{1+1} \cdot 2 \cdot\left|\begin{array}{rr}
2 & -3 \\
-2 & 4
\end{array}\right|+(-1)^{1+2} \cdot 1 \cdot\left|\begin{array}{rr}
-1 & -3 \\
1 & 4
\end{array}\right|+(-1)^{1+3} \cdot 3 \cdot\left|\begin{array}{rr}
-1 & 2 \\
1 & -2
\end{array}\right| \\
& =2(2)-1(-1)+3(0)=5
\end{aligned}
\]

As a result,
\[
x=\frac{D_{x}}{D}=\frac{15}{5}=3 \quad y=\frac{D_{y}}{D}=\frac{-10}{5}=-2 \quad z=\frac{D_{z}}{D}=\frac{5}{5}=1
\]

The solution is \(x=3, y=-2, z=1\) or, using an ordered triplet, \((3,-2,1)\).

In the case where \(D=0\), Cramer's Rule does not apply. To determine whether the system has no solution or infinitely many solutions, it is necessary to solve the system using the methods of Section 10.1 or Section 10.2.
all Now Work problem 33

\section*{5 Know Properties of Determinants}

Determinants have several properties that are sometimes helpful for obtaining their value. We list some of them here.

THEOREM
The value of a determinant changes sign if any two rows (or any two columns) are interchanged.
(11)

Proof for 2 by 2 Determinants
\[
\left|\begin{array}{ll}
a & b \\
c & d
\end{array}\right|=a d-b c \quad \text { and } \quad\left|\begin{array}{ll}
c & d \\
a & b
\end{array}\right|=b c-a d=-(a d-b c)
\]

\section*{EXAMPLE 6 Demonstrating Theorem (11)}
\[
\left|\begin{array}{ll}
3 & 4 \\
1 & 2
\end{array}\right|=6-4=2 \quad\left|\begin{array}{ll}
1 & 2 \\
3 & 4
\end{array}\right|=4-6=-2
\]

THEOREM If all the entries in any row (or any column) equal 0 , the value of the determinant is 0 .

Proof Expand across the row (or down the column) containing the 0 's.

THEOREM If any two rows (or any two columns) of a determinant have corresponding entries that are equal, the value of the determinant is 0 .
(13)

You are asked to prove this result in Problem 68 for a 3 by 3 determinant in which the entries in column 1 equal the entries in column 3.

\section*{EXAMPLE 7 DemonstratingTheorem (13)}
\[
\begin{aligned}
\left|\begin{array}{lll}
1 & 2 & 3 \\
1 & 2 & 3 \\
4 & 5 & 6
\end{array}\right| & =(-1)^{1+1} \cdot 1 \cdot\left|\begin{array}{ll}
2 & 3 \\
5 & 6
\end{array}\right|+(-1)^{1+2} \cdot 2 \cdot\left|\begin{array}{ll}
1 & 3 \\
4 & 6
\end{array}\right|+(-1)^{1+3} \cdot 3 \cdot\left|\begin{array}{ll}
1 & 2 \\
4 & 5
\end{array}\right| \\
& =1(-3)-2(-6)+3(-3)=-3+12-9=0
\end{aligned}
\]

In Problem 67, you are asked to prove this result for a 3 by 3 determinant using row 2.

\section*{EXAMPLE 8 Demonstrating Theorem (14)}
\[
\begin{aligned}
\left|\begin{array}{rr}
1 & 2 \\
4 & 6
\end{array}\right| & =6-8=-2 \\
\left|\begin{array}{rr}
k & 2 k \\
4 & 6
\end{array}\right| & =6 k-8 k=-2 k=k(-2)=k\left|\begin{array}{ll}
1 & 2 \\
4 & 6
\end{array}\right|
\end{aligned}
\]

\section*{THEOREM}

If the entries of any row (or any column) of a determinant are multiplied by a nonzero number \(k\) and the result is added to the corresponding entries of another row (or column), the value of the determinant remains unchanged. (15)

In Problem 69, you are asked to prove this result for a 3 by 3 determinant using rows 1 and 2.

\section*{EXAMPLE 9 Demonstrating Theorem (15)}
\[
\begin{array}{r}
\left|\begin{array}{ll}
3 & 4 \\
5 & 2
\end{array}\right|=-14 \quad\left|\begin{array}{ll}
3 & 4 \\
5 & 2
\end{array}\right| \underset{\uparrow}{\rightarrow}\left|\begin{array}{rr}
-7 & 0 \\
5 & 2
\end{array}\right|=-14 \\
\\
\text { Multiply row } 2 \text { by }-2 \text { and add to row } 1 .
\end{array}
\]

\subsection*{10.3 Assess Your Understanding}

\section*{Concepts and Vocabulary}
1. \(D=\left|\begin{array}{ll}a & b \\ c & d\end{array}\right|=\) \(\qquad\)
2. Using Cramer's Rule, the value of \(x\) that satisfies the system
of equations \(\left\{\begin{aligned} 2 x+3 y & =5 \\ x-4 y & =-3\end{aligned}\right.\) is \(x=\frac{\left|\begin{array}{rr}2 & 3 \\ 1 & -4\end{array}\right|}{}\).
3. True or False A determinant can never equal 0.
4. True or False When using Cramer's Rule, if \(D=0\), then the system of linear equations is inconsistent.
5. True or False The value of a determinant remains unchanged if any two rows or any two columns are interchanged.
6. True or False If any row (or any column) of a determinant is multiplied by a nonzero number \(k\), the value of the determinant remains unchanged.

\section*{Skill Building}

In Problems 7-14, find the value of each determinant.
7. \(\left|\begin{array}{rr}6 & 4 \\ -1 & 3\end{array}\right|\)
8. \(\left|\begin{array}{rr}8 & -3 \\ 4 & 2\end{array}\right|\)
9. \(\left|\begin{array}{rr}-3 & -1 \\ 4 & 2\end{array}\right|\)
10. \(\left|\begin{array}{ll}-4 & 2 \\ -5 & 3\end{array}\right|\)
11. \(\left|\begin{array}{rrr}3 & 4 & 2 \\ 1 & -1 & 5 \\ 1 & 2 & -2\end{array}\right|\)
12. \(\left|\begin{array}{rrr}1 & 3 & -2 \\ 6 & 1 & -5 \\ 8 & 2 & 3\end{array}\right|\)
13. \(\left|\begin{array}{lll}4 & -1 & 2 \\ 6 & -1 & 0 \\ 1 & -3 & 4\end{array}\right|\)
14. \(\left|\begin{array}{rrr}3 & -9 & 4 \\ 1 & 4 & 0 \\ 8 & -3 & 1\end{array}\right|\)

In Problems 15-42, solve each system of equations using Cramer's Rule if it is applicable. If Cramer's Rule is not applicable, say so.
15. \(\left\{\begin{array}{l}x+y=8 \\ x-y=4\end{array}\right.\)
16. \(\left\{\begin{array}{l}x+2 y=5 \\ x-y=3\end{array}\right.\)
17. \(\left\{\begin{array}{l}5 x-y=13 \\ 2 x+3 y=12\end{array}\right.\)
18. \(\left\{\begin{aligned} x+3 y & =5 \\ 2 x-3 y & =-8\end{aligned}\right.\)
19. \(\left\{\begin{aligned} 3 x & =24 \\ x+2 y & =0\end{aligned}\right.\)
20. \(\left\{\begin{aligned} 4 x+5 y & =-3 \\ -2 y & =-4\end{aligned}\right.\)
21. \(\left\{\begin{array}{l}3 x-6 y=24 \\ 5 x+4 y=12\end{array}\right.\)
22. \(\left\{\begin{array}{l}2 x+4 y=16 \\ 3 x-5 y=-9\end{array}\right.\)
23. \(\left\{\begin{array}{l}3 x-2 y=4 \\ 6 x-4 y=0\end{array}\right.\)
24. \(\left\{\begin{aligned}-x+2 y & =5 \\ 4 x-8 y & =6\end{aligned}\right.\)
25. \(\left\{\begin{array}{l}2 x-4 y=-2 \\ 3 x+2 y=3\end{array}\right.\)
26. \(\left\{\begin{array}{l}3 x+3 y=3 \\ 4 x+2 y=\frac{8}{3}\end{array}\right.\)
27. \(\left\{\begin{aligned} 2 x-3 y & =-1 \\ 10 x+10 y & =5\end{aligned}\right.\)
28. \(\left\{\begin{array}{l}3 x-2 y=0 \\ 5 x+10 y=4\end{array}\right.\)
29. \(\left\{\begin{aligned} 2 x+3 y & =6 \\ x-y & =\frac{1}{2}\end{aligned}\right.\)
30. \(\left\{\begin{aligned} \frac{1}{2} x+y & =-2 \\ x-2 y & =8\end{aligned}\right.\)
31. \(\left\{\begin{aligned} 3 x-5 y & =3 \\ 15 x+5 y & =21\end{aligned}\right.\)
32. \(\left\{\begin{aligned} 2 x-y & =-1 \\ x+\frac{1}{2} y & =\frac{3}{2}\end{aligned}\right.\)
33. \(\left\{\begin{aligned} x+y-z & =6 \\ 3 x-2 y+z & =-5 \\ x+3 y-2 z & =14\end{aligned}\right.\)
34. \(\left\{\begin{aligned} x-y+z & =-4 \\ 2 x-3 y+4 z & =-15 \\ 5 x+y-2 z & =12\end{aligned}\right.\)
35. \(\left\{\begin{aligned} x+2 y-z & =-3 \\ 2 x-4 y+z & =-7 \\ -2 x+2 y-3 z & =4\end{aligned}\right.\)
36. \(\left\{\begin{aligned} x+4 y-3 z & =-8 \\ 3 x-y+3 z & =12 \\ x+y+6 z & =1\end{aligned}\right.\)
37. \(\left\{\begin{aligned} x-2 y+3 z & =1 \\ 3 x+y-2 z & =0 \\ 2 x-4 y+6 z & =2\end{aligned}\right.\)
38. \(\left\{\begin{aligned} x-y+2 z & =5 \\ 3 x+2 y & =4 \\ -2 x+2 y-4 z & =-10\end{aligned}\right.\)
39. \(\left\{\begin{aligned} x+2 y-z & =0 \\ 2 x-4 y+z & =0 \\ -2 x+2 y-3 z & =0\end{aligned}\right.\)
40. \(\left\{\begin{aligned} x+4 y-3 z & =0 \\ 3 x-y+3 z & =0 \\ x+y+6 z & =0\end{aligned}\right.\)
41. \(\left\{\begin{aligned} x-2 y+3 z & =0 \\ 3 x+y-2 z & =0 \\ 2 x-4 y+6 z & =0\end{aligned}\right.\)
42. \(\left\{\begin{aligned} x-y+2 z & =0 \\ 3 x+2 y & =0 \\ -2 x+2 y-4 z & =0\end{aligned}\right.\)

In Problems 43-50, use properties of determinants to find the value of each determinant if it is known that
\[
\left|\begin{array}{ccc}
x & y & z \\
u & v & w \\
1 & 2 & 3
\end{array}\right|=4
\]
43. \(\left|\begin{array}{llr}1 & 2 & 3 \\ u & v & w \\ x & y & z\end{array}\right|\)
44. \(\left|\begin{array}{llr}x & y & z \\ u & v & w \\ 2 & 4 & 6\end{array}\right|\)
45. \(\left|\begin{array}{rrr}x & y & z \\ -3 & -6 & -9 \\ u & v & w\end{array}\right|\)
46. \(\left|\begin{array}{ccc}1 & 2 & 3 \\ x-u & y-v & z-w \\ u & v & w\end{array}\right|\)
47. \(\left|\begin{array}{ccc}1 & 2 & 3 \\ x-3 & y-6 & z-9 \\ 2 u & 2 v & 2 w\end{array}\right|\)
48. \(\left|\begin{array}{ccc}x & y & z-x \\ u & v & w-u \\ 1 & 2 & 2\end{array}\right|\)
49. \(\left|\begin{array}{ccc}1 & 2 & 3 \\ 2 x & 2 y & 2 z \\ u-1 & v-2 & w-3\end{array}\right|\)
50. \(\left|\begin{array}{ccc}x+3 & y+6 & z+9 \\ 3 u-1 & 3 v-2 & 3 w-3 \\ 1 & 2 & 3\end{array}\right|\)

\section*{Mixed Practice}

In Problems 51-56, solve for \(x\).
51. \(\left|\begin{array}{ll}x & x \\ 4 & 3\end{array}\right|=5\)
52. \(\left|\begin{array}{ll}x & 1 \\ 3 & x\end{array}\right|=-2\)
53. \(\left|\begin{array}{rrr}x & 1 & 1 \\ 4 & 3 & 2 \\ -1 & 2 & 5\end{array}\right|=2\)
54. \(\left|\begin{array}{rrr}3 & 2 & 4 \\ 1 & x & 5 \\ 0 & 1 & -2\end{array}\right|=0\)
55. \(\left|\begin{array}{rrr}x & 2 & 3 \\ 1 & x & 0 \\ 6 & 1 & -2\end{array}\right|=7\)
56. \(\left|\begin{array}{lll}x & 1 & 2 \\ 1 & x & 3 \\ 0 & 1 & 2\end{array}\right|=-4 x\)

\section*{Applications and Extensions}
57. Geometry: Equation of a Line An equation of the line containing the two points \(\left(x_{1}, y_{1}\right)\) and \(\left(x_{2}, y_{2}\right)\) may be expressed as the determinant
\[
\left|\begin{array}{lll}
x & y & 1 \\
x_{1} & y_{1} & 1 \\
x_{2} & y_{2} & 1
\end{array}\right|=0
\]

Prove this result by expanding the determinant and comparing the result to the two-point form of the equation of a line.
58. Geometry: Collinear Points Using the result obtained in Problem 57, show that three distinct points \(\left(x_{1}, y_{1}\right),\left(x_{2}, y_{2}\right)\), and \(\left(x_{3}, y_{3}\right)\) are collinear (lie on the same line) if and only if
\[
\left|\begin{array}{lll}
x_{1} & y_{1} & 1 \\
x_{2} & y_{2} & 1 \\
x_{3} & y_{3} & 1
\end{array}\right|=0
\]
59. Geometry: Area of a Triangle A triangle has vertices \(\left(x_{1}, y_{1}\right)\), \(\left(x_{2}, y_{2}\right)\), and \(\left(x_{3}, y_{3}\right)\). The area of the triangle is given by the absolute value of \(D\), where \(D=\frac{1}{2}\left|\begin{array}{ccc}x_{1} & x_{2} & x_{3} \\ y_{1} & y_{2} & y_{3} \\ 1 & 1 & 1\end{array}\right|\). Use this formula to find the area of a triangle with vertices \((2,3),(5,2)\), and \((6,5)\).
60. Geometry: Area of a Polygon The formula from Problem 59 can be used to find the area of a polygon. To do so, divide the polygon into non-overlapping triangular regions and find the sum of the areas. Use this approach to find the area of the given polygon.

61. Geometry: Area of a Polygon Another approach for finding the area of a polygon by using determinants is to use the formula
\(A=\frac{1}{2}\left(\left|\begin{array}{ll}x_{1} & y_{1} \\ x_{2} & y_{2}\end{array}\right|+\left|\begin{array}{ll}x_{2} & y_{2} \\ x_{3} & y_{3}\end{array}\right|+\left|\begin{array}{ll}x_{3} & y_{3} \\ x_{4} & y_{4}\end{array}\right|+\cdots+\left|\begin{array}{ll}x_{n} & y_{n} \\ x_{1} & y_{1}\end{array}\right|\right)\) where \(\left(x_{1}, y_{1}\right),\left(x_{2}, y_{2}\right), \ldots,\left(x_{n}, y_{n}\right)\) are the \(n\) corner points in counterclockwise order. Use this formula to compute the area of the polygon from Problem 60 again. Which method do you prefer?
62. Show that the formula in Problem 61 yields the same result as the formula from Problem 59 by expanding the determinants in each and simplifying.
63. Geometry: Equation of a Circle An equation of the circle containing the distinct point \(\left(x_{1}, y_{1}\right),\left(x_{2}, y_{2}\right)\), and \(\left(x_{3}, y_{3}\right)\) can be found using the following equation.
\[
\left|\begin{array}{cccc}
1 & 1 & 1 & 1 \\
x & x_{1} & x_{2} & x_{3} \\
y & y_{1} & y_{2} & y_{3} \\
x^{2}+y^{2} & x_{1}^{2}+y_{1}^{2} & x_{2}^{2}+y_{2}^{2} & x_{3}^{2}+y_{3}^{2}
\end{array}\right|=0
\]

Find the equation of the circle containing the points \((7,-5),(3,3)\), and \((6,2)\). Write the equation in standard form.
64. Show that \(\left|\begin{array}{lll}x^{2} & x & 1 \\ y^{2} & y & 1 \\ z^{2} & z & 1\end{array}\right|=(y-z)(x-y)(x-z)\).
65. Complete the proof of Cramer's Rule for two equations containing two variables.
[Hint: In system (5), page 754, if \(a=0\), then \(b \neq 0\) and \(c \neq 0\), since \(D=-b c \neq 0\). Now show that equation (6) provides a solution of the system when \(a=0\). Then three cases remain: \(b=0, c=0\), and \(d=0\).]
66. Interchange columns 1 and 3 of a 3 by 3 determinant. Show that the value of the new determinant is -1 times the value of the original determinant.
67. Multiply each entry in row 2 of a 3 by 3 determinant by the number \(k, k \neq 0\). Show that the value of the new determinant is \(k\) times the value of the original determinant.
68. Prove that a 3 by 3 determinant in which the entries in column 1 equal those in column 3 has the value 0 .
69. Prove that if row 2 of a 3 by 3 determinant is multiplied by \(k, k \neq 0\), and the result is added to the entries in row 1 , there is no change in the value of the determinant.

\section*{Retain Your Knowledge}

Problems 70-73 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
70. For the points \(P=(-4,3)\) and \(Q=(5,-1)\) write the vector \(\mathbf{v}\) represented by the directed line segment \(\overrightarrow{P Q}\) in the form \(a \mathbf{i}+b \mathbf{j}\) and find \(\|\mathbf{v}\|\).
71. List the potential rational zeros of the polynomial function \(P(x)=2 x^{3}-5 x^{2}+x-10\)
72. Graph \(f(x)=(x+1)^{2}-4\) using transformations (shifting, compressing, stretching and/or reflecting).
73. Find the exact value of \(\tan 42^{\circ}-\cot 48^{\circ}\) without using a calculator.

\subsection*{10.4 Matrix Algebra}

OBJECTIVES 1 Find the Sum and Difference of Two Matrices (p.764)
2 Find Scalar Multiples of a Matrix ( \(p .766\) )
3 Find the Product of Two Matrices (p.767)
4 Find the Inverse of a Matrix (p.771)
5 Solve a System of Linear Equations Using an Inverse Matrix (p.775)

In Section 10.2, we defined a matrix as a rectangular array of real numbers and used an augmented matrix to represent a system of linear equations. There is, however, a branch of mathematics, called linear algebra, that deals with matrices in such a way that an algebra of matrices is permitted. In this section, we provide a survey of how this matrix algebra is developed.

Before getting started, we restate the definition of a matrix.

\section*{DEFINITION}

A matrix is defined as a rectangular array of numbers:
\begin{tabular}{llllll} 
& Column 1 & Column 2 & & Column \(j\) & \\
Row 1 \\
Row 2 \\
\(\vdots\) \\
Row 1
\end{tabular}\(\left[\begin{array}{llllll}a_{11} & a_{12} & \ldots & a_{1 j} & \ldots & a_{1 n} \\
a_{21} & a_{22} & \ldots & a_{2 j} & \ldots & a_{2 n} \\
\vdots & \vdots & & \vdots & & \vdots \\
\text { Row m } & a_{i 2} & \cdots & a_{i j} & \cdots & a_{i n} \\
a_{i 1} & \vdots & & \vdots & & \vdots \\
\vdots & a_{m 2} & \ldots & a_{m j} & \ldots & a_{m n}\end{array}\right]\)

Each number \(a_{i j}\) of the matrix has two indexes: the row index \(i\) and the column index \(j\). The matrix shown here has \(m\) rows and \(n\) columns. The numbers \(a_{i j}\) are usually referred to as the entries of the matrix. For example, \(a_{23}\) refers to the entry in the second row, third column.

\section*{EXAMPLE I Arranging Data in a Matrix}

In a survey of 900 people, the following information was obtained:
\begin{tabular}{cl}
200 males & Thought federal defense spending was too high \\
150 males & Thought federal defense spending was too low \\
45 males & Had no opinion \\
315 females & Thought federal defense spending was too high \\
125 females & Thought federal defense spending was too low \\
65 females & Had no opinion
\end{tabular}

We can arrange these data in a rectangular array as follows:
\begin{tabular}{|lccc|}
\hline & Too High & Too Low & No Opinion \\
\hline Male & 200 & 150 & 45 \\
Female & 315 & 125 & 65 \\
\hline
\end{tabular}
or as the matrix
\(\left[\begin{array}{lll}200 & 150 & 45 \\ 315 & 125 & 65\end{array}\right]\)

This matrix has two rows (representing male and female) and three columns (representing "too high," "too low," and "no opinion").

The matrix we developed in Example 1 has 2 rows and 3 columns. In general, a matrix with \(m\) rows and \(n\) columns is called an \(\boldsymbol{m}\) by \(\boldsymbol{n}\) matrix. The matrix we developed in Example 1 is a 2 by 3 matrix and contains \(2 \cdot 3=6\) entries. An \(m\) by \(n\) matrix will contain \(m \cdot n\) entries.

If an \(m\) by \(n\) matrix has the same number of rows as columns, that is, if \(m=n\), then the matrix is referred to as a square matrix.

\section*{EXAMPLE 2 Examples of Matrices}
(a) \(\left[\begin{array}{rr}5 & 0 \\ -6 & 1\end{array}\right] \quad\) A 2 by 2 square matrix
(b) \(\left[\begin{array}{lll}1 & 0 & 3\end{array}\right]\) A 1 by 3 matrix
(c) \(\left[\begin{array}{rrr}6 & -2 & 4 \\ 4 & 3 & 5 \\ 8 & 0 & 1\end{array}\right] \quad\) A 3 by 3 square matrix

\section*{1 Find the Sum and Difference of Two Matrices}

We begin our discussion of matrix algebra by first defining equivalent matrices and then defining the operations of addition and subtraction. It is important to note that these definitions require both matrices to have the same number of rows and the same number of columns as a condition for equality and for addition and subtraction.

We usually represent matrices by capital letters, such as \(A, B\), and \(C\).

\section*{DEFINITION}

Two matrices \(A\) and \(B\) are said to be equal, written as
\[
A=B
\]
provided that \(A\) and \(B\) have the same number of rows and the same number of columns and each entry \(a_{i j}\) in \(A\) is equal to the corresponding entry \(b_{i j}\) in \(B\).

For example,
\[
\begin{aligned}
& {\left[\begin{array}{rr}
2 & 1 \\
0.5 & -1
\end{array}\right]=\left[\begin{array}{rr}
\sqrt{4} & 1 \\
\frac{1}{2} & -1
\end{array}\right] \text { and }\left[\begin{array}{rrr}
3 & 2 & 1 \\
0 & 1 & -2
\end{array}\right]=\left[\begin{array}{rrr}
\sqrt{9} & \sqrt{4} & 1 \\
0 & 1 & \sqrt[3]{-8}
\end{array}\right]} \\
& {\left[\begin{array}{ll}
4 & 1 \\
6 & 1
\end{array}\right] \neq\left[\begin{array}{ll}
4 & 0 \\
6 & 1
\end{array}\right] \quad \text { Because the entries in row } 1 \text {, column } 2 \text { are not equal }} \\
& {\left[\begin{array}{lll}
4 & 1 & 2 \\
6 & 1 & 2
\end{array}\right] \neq\left[\begin{array}{llll}
4 & 1 & 2 & 3 \\
6 & 1 & 2 & 4
\end{array}\right] \begin{array}{l}
\text { Because the matrix on the left has } 3 \text { columns and } \\
\text { the matrix on the right has } 4 \text { columns }
\end{array}}
\end{aligned}
\]

Suppose that \(A\) and \(B\) represent two \(m\) by \(n\) matrices. We define their sum \(\boldsymbol{A}+\boldsymbol{B}\) to be the \(m\) by \(n\) matrix formed by adding the corresponding entries \(a_{i j}\) of \(A\) and \(b_{i j}\) of \(B\). The difference \(\boldsymbol{A}-\boldsymbol{B}\) is defined as the \(m\) by \(n\) matrix formed by subtracting the entries \(b_{i j}\) in \(B\) from the corresponding entries \(a_{i j}\) in \(A\). Addition and subtraction of matrices are allowed only for matrices having the same number \(m\) of rows and the same number \(n\) of columns. For example, a 2 by 3 matrix and a 2 by 4 matrix cannot be added or subtracted.

\section*{EXAMPLE 3 Adding and Subtracting Matrices}

Suppose that
\[
A=\left[\begin{array}{rrrr}
2 & 4 & 8 & -3 \\
0 & 1 & 2 & 3
\end{array}\right] \text { and } B=\left[\begin{array}{rrrr}
-3 & 4 & 0 & 1 \\
6 & 8 & 2 & 0
\end{array}\right]
\]

Find: (a) \(A+B \quad\) (b) \(A-B\)

Solution

Figure 7

(a) \(A+B=\left[\begin{array}{rrrr}2 & 4 & 8 & -3 \\ 0 & 1 & 2 & 3\end{array}\right]+\left[\begin{array}{rrrr}-3 & 4 & 0 & 1 \\ 6 & 8 & 2 & 0\end{array}\right]\)
\[
\begin{aligned}
& =\left[\begin{array}{llrr}
2+(-3) & 4+4 & 8+0 & -3+1 \\
0+6 & 1+8 & 2+2 & 3+0
\end{array}\right] \text { Add corresponding entries. } \\
& =\left[\begin{array}{rrrr}
-1 & 8 & 8 & -2 \\
6 & 9 & 4 & 3
\end{array}\right]
\end{aligned}
\]
(b) \(A-B=\left[\begin{array}{rrrr}2 & 4 & 8 & -3 \\ 0 & 1 & 2 & 3\end{array}\right]-\left[\begin{array}{rrrr}-3 & 4 & 0 & 1 \\ 6 & 8 & 2 & 0\end{array}\right]\) \(=\left[\begin{array}{lllr}2-(-3) & 4-4 & 8-0 & -3-1 \\ 0-6 & 1-8 & 2-2 & 3-0\end{array}\right] \quad\) Subtract corresponding entries. \(=\left[\begin{array}{rrrr}5 & 0 & 8 & -4 \\ -6 & -7 & 0 & 3\end{array}\right]\)

\section*{Seeing the Concept}

Graphing utilities can make the sometimes tedious process of matrix algebra easy. In fact, most graphing calculators can handle matrices as large as 9 by 9 , some even larger ones. Enter the matrices into a graphing utility. Name them \(A\) and \(B\). Figure 7 shows the results of adding and subtracting \(A\) and \(B\).

\section*{Now Work problem 9}

Many of the algebraic properties of sums of real numbers are also true for sums of matrices. Suppose that \(A, B\), and \(C\) are \(m\) by \(n\) matrices. Then matrix addition is commutative. That is,

\section*{Commutative Property of Matrix Addition}
\[
A+B=B+A
\]

Matrix addition is also associative. That is,

\section*{Associative Property of Matrix Addition}
\[
(A+B)+C=A+(B+C)
\]

Although we shall not prove these results, the proofs, as the following example illustrates, are based on the commutative and associative properties for real numbers.

\section*{EXAMPLE 4 Demonstrating the Commutative Property}
\[
\begin{aligned}
{\left[\begin{array}{rrr}
2 & 3 & -1 \\
4 & 0 & 7
\end{array}\right]+\left[\begin{array}{rrr}
-1 & 2 & 1 \\
5 & -3 & 4
\end{array}\right] } & =\left[\begin{array}{lll}
2+(-1) & 3+2 & -1+1 \\
4+5 & 0+(-3) & 7+4
\end{array}\right] \\
& =\left[\begin{array}{rrr}
-1+2 & 2+3 & 1+(-1) \\
5+4 & -3+0 & 4+7
\end{array}\right] \\
& =\left[\begin{array}{rrr}
-1 & 2 & 1 \\
5 & -3 & 4
\end{array}\right]+\left[\begin{array}{rrr}
2 & 3 & -1 \\
4 & 0 & 7
\end{array}\right]
\end{aligned}
\]

A matrix whose entries are all equal to 0 is called a zero matrix. Each of the following matrices is a zero matrix.
\[
\left[\begin{array}{ll}
0 & 0 \\
0 & 0
\end{array}\right] \begin{aligned}
& 2 \text { by } 2 \text { square } \\
& \text { zero matrix }
\end{aligned}\left[\begin{array}{lll}
0 & 0 & 0 \\
0 & 0 & 0
\end{array}\right] \begin{aligned}
& 2 \text { by } 3 \text { zero } \\
& \text { matrix }
\end{aligned} \quad\left[\begin{array}{lll}
0 & 0 & 0
\end{array}\right] \begin{gathered}
1 \text { by } 3 \text { zero } \\
\text { matrix }
\end{gathered}
\]

Zero matrices have properties similar to the real number 0 . If \(A\) is an \(m\) by \(n\) matrix and 0 is an \(m\) by \(n\) zero matrix, then
\[
A+0=0+A=A
\]

In other words, a zero matrix is an additive identity in matrix algebra.

\section*{2 Find Scalar Multiples of a Matrix}

We can also multiply a matrix by a real number. If \(k\) is a real number and \(A\) is an \(m\) by \(n\) matrix, the matrix \(k A\) is the \(m\) by \(n\) matrix formed by multiplying each entry \(a_{i j}\) in \(A\) by \(k\). The number \(k\) is sometimes referred to as a scalar, and the matrix \(k A\) is called a scalar multiple of \(A\).

\section*{EXAMPLE 5 Operations Using Matrices}

Suppose that
\[
A=\left[\begin{array}{rrr}
3 & 1 & 5 \\
-2 & 0 & 6
\end{array}\right] \quad B=\left[\begin{array}{rrr}
4 & 1 & 0 \\
8 & 1 & -3
\end{array}\right] \quad C=\left[\begin{array}{rr}
9 & 0 \\
-3 & 6
\end{array}\right]
\]
Find:
(a) \(4 A\)
(b) \(\frac{1}{3} C\)
(c) \(3 A-2 B\)

Solution
(a) \(4 A=4\left[\begin{array}{rrr}3 & 1 & 5 \\ -2 & 0 & 6\end{array}\right]=\left[\begin{array}{ccc}4 \cdot 3 & 4 \cdot 1 & 4 \cdot 5 \\ 4(-2) & 4 \cdot 0 & 4 \cdot 6\end{array}\right]=\left[\begin{array}{ccc}12 & 4 & 20 \\ -8 & 0 & 24\end{array}\right]\)
(b) \(\frac{1}{3} C=\frac{1}{3}\left[\begin{array}{rr}9 & 0 \\ -3 & 6\end{array}\right]=\left[\begin{array}{ll}\frac{1}{3} \cdot 9 & \frac{1}{3} \cdot 0 \\ \frac{1}{3}(-3) & \frac{1}{3} \cdot 6\end{array}\right]=\left[\begin{array}{rr}3 & 0 \\ -1 & 2\end{array}\right]\)
(c) \(3 A-2 B=3\left[\begin{array}{rrr}3 & 1 & 5 \\ -2 & 0 & 6\end{array}\right]-2\left[\begin{array}{rrr}4 & 1 & 0 \\ 8 & 1 & -3\end{array}\right]\)
\(=\left[\begin{array}{ccc}3 \cdot 3 & 3 \cdot 1 & 3 \cdot 5 \\ 3(-2) & 3 \cdot 0 & 3 \cdot 6\end{array}\right]-\left[\begin{array}{ccc}2 \cdot 4 & 2 \cdot 1 & 2 \cdot 0 \\ 2 \cdot 8 & 2 \cdot 1 & 2(-3)\end{array}\right]\)
\(=\left[\begin{array}{rrr}9 & 3 & 15 \\ -6 & 0 & 18\end{array}\right]-\left[\begin{array}{rrr}8 & 2 & 0 \\ 16 & 2 & -6\end{array}\right]\)
\(=\left[\begin{array}{ccl}9-8 & 3-2 & 15-0 \\ -6-16 & 0-2 & 18-(-6)\end{array}\right]\)
\(=\left[\begin{array}{rrr}1 & 1 & 15 \\ -22 & -2 & 24\end{array}\right]\)
Check: Enter the matrices \(A, B\), and \(C\) into a graphing utility. Then find \(4 A, \frac{1}{3} C\), and \(3 A-2 B\).

We list next some of the algebraic properties of scalar multiplication. Let \(h\) and \(k\) be real numbers, and let \(A\) and \(B\) be \(m\) by \(n\) matrices. Then

Properties of Scalar Multiplication
\[
\begin{aligned}
k(h A) & =(k h) A \\
(k+h) A & =k A+h A \\
k(A+B) & =k A+k B
\end{aligned}
\]

\section*{3 Find the Product of Two Matrices}

Unlike the straightforward definition for adding two matrices, the definition for multiplying two matrices is not what we might expect. In preparation for this definition, we need the following definitions:

A row vector \(\boldsymbol{R}\) is a 1 by \(n\) matrix
\[
R=\left[\begin{array}{llll}
r_{1} & r_{2} & \cdots & r_{n}
\end{array}\right]
\]

A column vector \(\boldsymbol{C}\) is an \(n\) by 1 matrix
\[
C=\left[\begin{array}{c}
c_{1} \\
c_{2} \\
\vdots \\
c_{n}
\end{array}\right]
\]

The product \(\boldsymbol{R C}\) of \(R\) times \(C\) is defined as the number
\[
R C=\left[\begin{array}{llll}
r_{1} & r_{2} & \cdots & r_{n}
\end{array}\right]\left[\begin{array}{c}
c_{1} \\
c_{2} \\
\vdots \\
c_{n}
\end{array}\right]=r_{1} c_{1}+r_{2} c_{2}+\cdots+r_{n} c_{n}
\]

Notice that a row vector and a column vector can be multiplied only if they contain the same number of entries.

EXAMPLE 6 The Product of a Row Vector and a Column Vector
If \(R=\left[\begin{array}{lll}3 & -5 & 2\end{array}\right]\) and \(C=\left[\begin{array}{r}3 \\ 4 \\ -5\end{array}\right]\), then
\(R C=\left[\begin{array}{lll}3 & -5 & 2\end{array}\right]\left[\begin{array}{r}3 \\ 4 \\ -5\end{array}\right]=3 \cdot 3+(-5) 4+2(-5)=9-20-10=-21\)

\section*{EXAMPLE 7}

\section*{Using Matrices to Compute Revenue}

A clothing store sells men's shirts for \(\$ 40\), silk ties for \(\$ 20\), and wool suits for \(\$ 400\). Last month, the store had sales consisting of 100 shirts, 200 ties, and 50 suits. What was the total revenue due to these sales?

Solution We set up a row vector \(R\) to represent the prices of these three items and a column vector \(C\) to represent the corresponding number of items sold. Then
\[
\begin{array}{cc}
\text { Prices } \\
\text { Shirts Ties Suits } \\
{\left[\begin{array}{lll}
40 & 20 & 400
\end{array}\right]}
\end{array} \quad C=\left[\begin{array}{r}
\text { Number } \\
\text { sold }
\end{array} \begin{array}{r}
100 \\
200 \\
50
\end{array}\right] \begin{aligned}
& \text { Shirts } \\
& \begin{array}{l}
\text { Ties } \\
\text { Suits }
\end{array}
\end{aligned}
\]

The total revenue obtained is the product \(R C\). That is,
\[
\begin{aligned}
R C & =\left[\begin{array}{lll}
40 & 20 & 400
\end{array}\right]\left[\begin{array}{r}
100 \\
200 \\
50
\end{array}\right] \\
& =\underbrace{40 \cdot 100}_{\text {Shirt revenue }}+\underbrace{20 \cdot 200}_{\text {Tie revenue }}+\underbrace{400 \cdot 50}_{\text {Suit revenue }}=\underbrace{\$ 28,000}_{\text {Total revenue }}
\end{aligned}
\]

The definition for multiplying two matrices is based on the definition of a row vector times a column vector.

\section*{DEFINITION}

In Words
To find the product \(A B\), the number of columns in \(A\) must equal the number of rows in \(B\).

Let \(A\) denote an \(m\) by \(r\) matrix and let \(B\) denote an \(r\) by \(n\) matrix. The product \(A B\) is defined as the \(m\) by \(n\) matrix whose entry in row \(i\), column \(j\) is the product of the \(i\) th row of \(A\) and the \(j\) th column of \(B\).

The definition of the product \(A B\) of two matrices \(A\) and \(B\), in this order, requires that the number of columns of \(A\) equal the number of rows of \(B\); otherwise, no product is defined.

An example will help to clarify the definition.

\section*{Multiplying Two Matrices}

Find the product \(A B\) if
\[
A=\left[\begin{array}{rrr}
2 & 4 & -1 \\
5 & 8 & 0
\end{array}\right] \quad \text { and } \quad B=\left[\begin{array}{rrrr}
2 & 5 & 1 & 4 \\
4 & 8 & 0 & 6 \\
-3 & 1 & -2 & -1
\end{array}\right]
\]

Solution
First, note that \(A\) is 2 by 3 and \(B\) is 3 by 4 . The number of columns in \(A\) equals the number of rows in \(B\), so the product \(A B\) is defined and will be a 2 by 4 matrix.

Suppose that we want the entry in row 2 , column 3 of \(A B\). To find it, find the product of the row vector from row 2 of \(A\) and the column vector from column 3 of \(B\).

Column 3 of \(B\)
\[
\begin{aligned}
& \text { Row } 2 \text { of } A \\
& {\left[\begin{array}{ccc}
5 & 8 & 0
\end{array}\right]\left[\begin{array}{r}
1 \\
0 \\
-2
\end{array}\right]=5 \cdot 1+8 \cdot 0+0(-2)=5}
\end{aligned}
\]

So far, we have
\[
A B=\left[-\square \frac{\downarrow}{\square}-\overline{5}-\right] \leftarrow \text { Column 3 }
\]

Now, to find the entry in row 1 , column 4 of \(A B\), find the product of row 1 of \(A\) and column 4 of \(B\).
\[
\begin{aligned}
& \text { Column } 4 \text { of } B \\
& \text { Row } 1 \text { of } A \\
& {\left[\begin{array}{lll}
2 & 4 & -1
\end{array}\right]\left[\begin{array}{r}
4 \\
6 \\
-1
\end{array}\right]=2 \cdot 4+4 \cdot 6+(-1)(-1)=33}
\end{aligned}
\]

Continuing in this fashion, we find \(A B\).
\[
A B=\left[\begin{array}{rrr}
2 & 4 & -1 \\
5 & 8 & 0
\end{array}\right]\left[\begin{array}{rrrr}
2 & 5 & 1 & 4 \\
4 & 8 & 0 & 6 \\
-3 & 1 & -2 & -1
\end{array}\right]
\]
\(=\left[\begin{array}{llll}\begin{array}{l}\text { Row } 1 \text { of } A \\ \text { times } \\ \text { column } 1 \text { of } B\end{array} & \begin{array}{l}\text { Row } 1 \text { of } A \\ \text { times } \\ \text { column } 2 \text { of } B\end{array} & \begin{array}{l}\text { Row } 1 \text { of } A \\ \text { times } \\ \text { column } 3 \text { of } B\end{array} & \begin{array}{l}\text { Row } 1 \text { of } A \\ \text { times } \\ \text { column } 4 \text { of } B\end{array} \\ \begin{array}{l}\text { Row } 2 \text { of } A \\ \text { times } \\ \text { column } 1 \text { of } B\end{array} & \begin{array}{l}\text { Row } 2 \text { of } A \\ \text { times } \\ \text { column } 2 \text { of } B\end{array} & \begin{array}{l}\text { Row } 2 \text { of } A \\ \text { times } \\ \text { column } 3 \text { of } B\end{array} & \begin{array}{l}\text { Row } 2 \text { of } A \\ \text { times } \\ \text { column } 4 \text { of } B\end{array}\end{array}\right]\)
\(=\left[\begin{array}{llll}2 \cdot 2+4 \cdot 4+(-1)(-3) & 2 \cdot 5+4 \cdot 8+(-1) 1 & 2 \cdot 1+4 \cdot 0+(-1)(-2) & 33 \text { (from earlier) } \\ 5 \cdot 2+8 \cdot 4+0(-3) & 5 \cdot 5+8 \cdot 8+0 \cdot 1 & 5(\text { from earlier }) & 5 \cdot 4+8 \cdot 6+0(-1)\end{array}\right]\)
\(=\left[\begin{array}{llll}23 & 41 & 4 & 33 \\ 42 & 89 & 5 & 68\end{array}\right]\)

Check: Enter the matrices \(A\) and \(B\). Then find \(A B\). (See what happens if you try to
find \(B A\).)
allon Now Work problem 25
Notice that for the matrices given in Example 8, the product \(B A\) is not defined because \(B\) is 3 by 4 and \(A\) is 2 by 3 .

Another result that can occur when multiplying two matrices is illustrated in the next example.

\section*{EXAMPLE 9 Multiplying Two Matrices}

If
\[
A=\left[\begin{array}{rrr}
2 & 1 & 3 \\
1 & -1 & 0
\end{array}\right] \text { and } B=\left[\begin{array}{ll}
1 & 0 \\
2 & 1 \\
3 & 2
\end{array}\right]
\]
find: (a) \(A B\) (b) \(B A\)

Solution
(a) \(A B=\begin{array}{rr}{\left[\begin{array}{rrr}2 & 1 & 3 \\ 1 & -1 & 0\end{array}\right]} \\ 2 \text { by } 3\end{array}\left[\begin{array}{ll}1 & 0 \\ 2 & 1 \\ 3 & 2 \\ 3 \text { by } 2\end{array}\right]=\underset{2 \text { by } 2}{\left[\begin{array}{rr}13 & 7 \\ -1 & -1\end{array}\right]}\)
(b) \(B A=\left[\begin{array}{ll}1 & 0 \\ 2 & 1 \\ 3 & 2\end{array}\right]\left[\begin{array}{rrr}2 & 1 & 3 \\ 1 & -1 & 0\end{array}\right]=\left[\begin{array}{lll}2 & 1 & 3 \\ 5 & 1 & 6 \\ 8 & 1 & 9\end{array}\right]\)
\[
3 \text { by } 2 \quad 2 \text { by } 3 \quad 3 \text { by } 3
\]

Notice in Example 9 that \(A B\) is 2 by 2 and \(B A\) is 3 by 3 . It is possible for both \(A B\) and \(B A\) to be defined and yet be unequal. In fact, even if \(A\) and \(B\) are both \(n\) by \(n\) matrices so that \(A B\) and \(B A\) are each defined and \(n\) by \(n, A B\) and \(B A\) will usually be unequal.

\section*{EXAMPLE IO Multiplying Two Square Matrices}

If
\[
A=\left[\begin{array}{ll}
2 & 1 \\
0 & 4
\end{array}\right] \quad \text { and } \quad B=\left[\begin{array}{rr}
-3 & 1 \\
1 & 2
\end{array}\right]
\]
find: (a) \(A B\)
(b) \(B A\)

Solution
(a) \(A B=\left[\begin{array}{ll}2 & 1 \\ 0 & 4\end{array}\right]\left[\begin{array}{rr}-3 & 1 \\ 1 & 2\end{array}\right]=\left[\begin{array}{rr}-5 & 4 \\ 4 & 8\end{array}\right]\)
(b) \(B A=\left[\begin{array}{rr}-3 & 1 \\ 1 & 2\end{array}\right]\left[\begin{array}{ll}2 & 1 \\ 0 & 4\end{array}\right]=\left[\begin{array}{rr}-6 & 1 \\ 2 & 9\end{array}\right]\)

The preceding examples demonstrate that an important property of real numbers, the commutative property of multiplication, is not shared by matrices. In general:

Matrix multiplication is not commutative.
an Now Work problems 15 and 17
Next we give two of the properties of real numbers that are shared by matrices. Assuming that each product and sum is defined, we have the following:

\section*{Associative Property of Matrix Multiplication}
\[
A(B C)=(A B) C
\]

\section*{Distributive Property}
\[
A(B+C)=A B+A C
\]

For an \(n\) by \(n\) square matrix, the entries located in row \(i\), column \(i, 1 \leq i \leq n\), are called the diagonal entries or the main diagonal. The \(n\) by \(n\) square matrix whose diagonal entries are 1 's, while all other entries are 0 's, is called the identity matrix \(\boldsymbol{I}_{n}\). For example,
\[
I_{2}=\left[\begin{array}{ll}
1 & 0 \\
0 & 1
\end{array}\right] \quad I_{3}=\left[\begin{array}{lll}
1 & 0 & 0 \\
0 & 1 & 0 \\
0 & 0 & 1
\end{array}\right]
\]
and so on.

\section*{EXAMPLE II Multiplication with an Identity Matrix}

Let
\[
A=\left[\begin{array}{rrr}
-1 & 2 & 0 \\
0 & 1 & 3
\end{array}\right] \text { and } B=\left[\begin{array}{ll}
3 & 2 \\
4 & 6 \\
5 & 2
\end{array}\right]
\]
Find: (a) \(A I_{3}\)
(b) \(I_{2} A\)
(c) \(B I_{2}\)

Solution
(a) \(A I_{3}=\left[\begin{array}{rrr}-1 & 2 & 0 \\ 0 & 1 & 3\end{array}\right]\left[\begin{array}{lll}1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 1\end{array}\right]=\left[\begin{array}{rrr}-1 & 2 & 0 \\ 0 & 1 & 3\end{array}\right]=A\)
(b) \(I_{2} A=\left[\begin{array}{ll}1 & 0 \\ 0 & 1\end{array}\right]\left[\begin{array}{rrr}-1 & 2 & 0 \\ 0 & 1 & 3\end{array}\right]=\left[\begin{array}{rrr}-1 & 2 & 0 \\ 0 & 1 & 3\end{array}\right]=A\)
(c) \(B I_{2}=\left[\begin{array}{ll}3 & 2 \\ 4 & 6 \\ 5 & 2\end{array}\right]\left[\begin{array}{ll}1 & 0 \\ 0 & 1\end{array}\right]=\left[\begin{array}{ll}3 & 2 \\ 4 & 6 \\ 5 & 2\end{array}\right]=B\)

Example 11 demonstrates the following property:

\section*{Identity Property}

If \(A\) is an \(m\) by \(n\) matrix, then
\[
I_{m} A=A \quad \text { and } \quad A I_{n}=A
\]

If \(A\) is an \(n\) by \(n\) square matrix,
\[
A I_{n}=I_{n} A=A
\]

An identity matrix has properties similar to those of the real number 1. In other words, an identity matrix is a multiplicative identity in matrix algebra.

\section*{4 Find the Inverse of a Matrix}

DEFINITION
Let \(A\) be a square \(n\) by \(n\) matrix. If there exists an \(n\) by \(n\) matrix \(A^{-1}\) (this is read " \(A\) inverse") for which
\[
A A^{-1}=A^{-1} A=I_{n}
\]
then \(A^{-1}\) is called the inverse of the matrix \(A\).

As we shall soon see, not every square matrix has an inverse. When a matrix \(A\) does have an inverse \(A^{-1}\), then \(A\) is said to be nonsingular. If a matrix \(A\) has no inverse, it is called singular.

Show that the inverse of
\[
A=\left[\begin{array}{ll}
3 & 1 \\
2 & 1
\end{array}\right] \quad \text { is } \quad A^{-1}=\left[\begin{array}{rr}
1 & -1 \\
-2 & 3
\end{array}\right]
\]

Solution We need to show that \(A A^{-1}=A^{-1} A=I_{2}\).
\[
\begin{aligned}
& A A^{-1}=\left[\begin{array}{ll}
3 & 1 \\
2 & 1
\end{array}\right]\left[\begin{array}{rr}
1 & -1 \\
-2 & 3
\end{array}\right]=\left[\begin{array}{ll}
1 & 0 \\
0 & 1
\end{array}\right]=I_{2} \\
& A^{-1} A=\left[\begin{array}{rr}
1 & -1 \\
-2 & 3
\end{array}\right]\left[\begin{array}{ll}
3 & 1 \\
2 & 1
\end{array}\right]=\left[\begin{array}{ll}
1 & 0 \\
0 & 1
\end{array}\right]=I_{2}
\end{aligned}
\]

We now show one way to find the inverse of
\[
A=\left[\begin{array}{ll}
3 & 1 \\
2 & 1
\end{array}\right]
\]

Suppose that \(A^{-1}\) is given by
\[
A^{-1}=\left[\begin{array}{ll}
x & y  \tag{1}\\
z & w
\end{array}\right]
\]
where \(x, y, z\), and \(w\) are four variables. Based on the definition of an inverse, if \(A\) has an inverse,
\[
\begin{aligned}
A A^{-1} & =I_{2} \\
{\left[\begin{array}{ll}
3 & 1 \\
2 & 1
\end{array}\right]\left[\begin{array}{ll}
x & y \\
z & w
\end{array}\right] } & =\left[\begin{array}{ll}
1 & 0 \\
0 & 1
\end{array}\right] \\
{\left[\begin{array}{ll}
3 x+z & 3 y+w \\
2 x+z & 2 y+w
\end{array}\right] } & =\left[\begin{array}{ll}
1 & 0 \\
0 & 1
\end{array}\right]
\end{aligned}
\]

Because corresponding entries must be equal, it follows that this matrix equation is equivalent to two systems of linear equations.
\[
\left\{\begin{array} { l } 
{ 3 x + z = 1 } \\
{ 2 x + z = 0 }
\end{array} \quad \left\{\begin{array}{l}
3 y+w=0 \\
2 y+w=1
\end{array}\right.\right.
\]

The augmented matrix of each system is
\[
\left[\begin{array}{ll|l}
3 & 1 & 1  \tag{2}\\
2 & 1 & 0
\end{array}\right] \quad\left[\begin{array}{ll|l}
3 & 1 & 0 \\
2 & 1 & 1
\end{array}\right]
\]

The usual procedure would be to transform each augmented matrix into reduced row echelon form. Notice, though, that the left sides of the augmented matrices are equal, so the same row operations (see Section 10.2) can be used to reduce each one. We find it more efficient to combine the two augmented matrices (2) into a single matrix, as shown next, and then transform it into reduced row echelon form.
\[
\left[\begin{array}{ll|ll}
3 & 1 & 1 & 0 \\
2 & 1 & 0 & 1
\end{array}\right]
\]

We attempt to transform the left side into an identity matrix.
\[
\begin{align*}
{\left[\begin{array}{ll|ll}
3 & 1 & 1 & 0 \\
2 & 1 & 0 & 1
\end{array}\right] } & \rightarrow
\end{align*} \begin{array}{ll}
\uparrow & {\left[\begin{array}{ll|rr}
1 & 0 & 1 & -1 \\
2 & 1 & 0 & 1
\end{array}\right]} \\
& R_{1}=-1 r_{2}+r_{1}  \tag{3}\\
& \rightarrow\left[\begin{array}{ll}
1 & 0 \\
0 & 1
\end{array} \left\lvert\, \begin{array}{rr}
1 & -1 \\
& \\
& R_{2}=-2 r_{1}+r_{2}
\end{array}\right.\right]
\end{array}
\]

Matrix (3) is in reduced row echelon form.
Now we reverse the earlier step of combining the two augmented matrices in (2) and write the single matrix (3) as two augmented matrices.
\[
\left[\begin{array}{ll|r}
1 & 0 & 1 \\
0 & 1 & -2
\end{array}\right] \text { and }\left[\begin{array}{rr|r}
1 & 0 & -1 \\
0 & 1 & 3
\end{array}\right]
\]

We conclude from these matrices that \(x=1, z=-2\), and \(y=-1, w=3\). Substituting these values into matrix (1), we find that
\[
A^{-1}=\left[\begin{array}{rr}
1 & -1 \\
-2 & 3
\end{array}\right]
\]

Notice in display (3) that the 2 by 2 matrix to the right of the vertical bar is, in fact, the inverse of \(A\). Also notice that the identity matrix \(I_{2}\) is the matrix that appears to the left of the vertical bar. These observations, and the following procedure used to get display (3), will work in general.

\section*{Procedure for Finding the Inverse of a Nonsingular Matrix}

To find the inverse of an \(n\) by \(n\) nonsingular matrix \(A\), proceed as follows:
Step 1: Form the matrix \(\left[A \mid I_{n}\right]\).
STEP 2: Transform the matrix \(\left[A \mid I_{n}\right]\) into reduced row echelon form.
STEP 3: The reduced row echelon form of \(\left[A \mid I_{n}\right]\) will contain the identity matrix \(I_{n}\) to the left of the vertical bar; the \(n\) by \(n\) matrix to the right of the vertical bar is the inverse of \(A\).

\section*{EXAMPLE I 3 Finding the Inverse of a Matrix}

The matrix
\[
A=\left[\begin{array}{rrr}
1 & 1 & 0 \\
-1 & 3 & 4 \\
0 & 4 & 3
\end{array}\right]
\]
is nonsingular. Find its inverse.
Solution First, form the matrix
\[
\left[A \mid I_{3}\right]=\left[\begin{array}{rrr|rrr}
1 & 1 & 0 & 1 & 0 & 0 \\
-1 & 3 & 4 & 0 & 1 & 0 \\
0 & 4 & 3 & 0 & 0 & 1
\end{array}\right]
\]

Next, use row operations to transform \(\left[A \mid I_{3}\right]\) into reduced row echelon form.
\[
\begin{aligned}
& {\left[\left.\begin{array}{rrr}
1 & 1 & 0 \\
-1 & 3 & 4 \\
0 & 4 & 3
\end{array} \right\rvert\, \begin{array}{lll}
1 & 0 & 0 \\
0 & 1 & 0 \\
0 & 0 & 1
\end{array}\right] \underset{\uparrow}{\rightarrow}\left[\left.\begin{array}{lll|lll}
1 & 1 & 0 \\
0 & 4 & 4 \\
0 & 4 & 3
\end{array} \right\rvert\, \begin{array}{lll}
1 & 0 & 0 \\
1 & 1 & 0 \\
0 & 0 & 1
\end{array}\right] \underset{\uparrow}{\rightarrow}\left[\begin{array}{lll|lll}
1 & 1 & 0 & 1 & 0 & 0 \\
0 & 1 & 1 & \frac{1}{4} & \frac{1}{4} & 0 \\
0 & 4 & 3 & 0 & 0 & 1
\end{array}\right]} \\
& R_{2}=r_{1}+r_{2} \quad R_{2}=\frac{1}{4} r_{2}
\end{aligned}
\]
\[
\begin{aligned}
& \uparrow\left[\begin{array}{lll|rrr}
1 & 0 & 0 & \frac{7}{4} & \frac{3}{4} & -1 \\
0 & 1 & 0 & -\frac{3}{4} & -\frac{3}{4} & 1 \\
0 & 0 & 1 & 1 & 1 & -1
\end{array}\right] \\
& R_{1}=r_{3}+r_{1} \\
& R_{2}=-1 r_{3}+r_{2}
\end{aligned}
\]

The matrix \(\left[A \mid I_{3}\right]\) is now in reduced row echelon form, and the identity matrix \(I_{3}\) is to the left of the vertical bar. The inverse of \(A\) is
\[
A^{-1}=\left[\begin{array}{rrr}
\frac{7}{4} & \frac{3}{4} & -1 \\
-\frac{3}{4} & -\frac{3}{4} & 1 \\
1 & 1 & -1
\end{array}\right]
\]

You can (and should) verify that this is the correct inverse by showing that
\[
A A^{-1}=A^{-1} A=I_{3}
\]

Check: Enter matrix \(A\) into a graphing utility. Figure 8 shows \(A^{-1}\).
am Now Work problem 33
If transforming the matrix \(\left[A \mid I_{n}\right]\) into reduced row echelon form does not result in the identity matrix \(I_{n}\) to the left of the vertical bar, \(A\) is singular and has no inverse.

\section*{EXAMPLE I4 ShowingThat a Matrix Has No Inverse}

Show that the matrix \(A=\left[\begin{array}{ll}4 & 6 \\ 2 & 3\end{array}\right]\) has no inverse.
Solution Proceeding as in Example 13, form the matrix
\[
\left[A \mid I_{2}\right]=\left[\begin{array}{ll|ll}
4 & 6 & 1 & 0 \\
2 & 3 & 0 & 1
\end{array}\right]
\]

Then use row operations to transform \(\left[A \mid I_{2}\right]\) into reduced row echelon form.
\[
\begin{aligned}
{\left[A \mid I_{2}\right]=\left[\begin{array}{ll|ll}
4 & 6 \\
2 & 3 & 1 & 0 \\
0 & 1
\end{array}\right] }
\end{aligned} \underset{\uparrow}{\rightarrow} \begin{aligned}
& {\left[\begin{array}{ll|ll}
1 & \frac{3}{2} & \frac{1}{4} & 0 \\
2 & 3 & 0 & 1
\end{array}\right] \uparrow\left[\begin{array}{rr|rr}
1 & \frac{3}{2} & \begin{array}{rr}
\frac{1}{4} & 0 \\
0 & 0
\end{array} & \rightarrow\left[\begin{array}{ll}
-\frac{1}{2} & 1
\end{array}\right] \\
R_{1} & =\frac{1}{4} r_{1} & R_{2}=-2 r_{1}+r_{2}
\end{array}\right.} \\
&
\end{aligned}
\]

The matrix \(\left[A \mid I_{2}\right]\) is sufficiently reduced to see that the identity matrix cannot appear to the left of the vertical bar. We conclude that \(A\) is singular and so has no inverse.

It can be shown that if the determinant of a matrix is 0 , the matrix is singular. The determinant of matrix \(A\) from Example 14 is
\[
\left|\begin{array}{ll}
4 & 6 \\
2 & 3
\end{array}\right|=4 \cdot 3-6 \cdot 2=0
\]

Check: Enter the matrix \(A\). Try to find its inverse. What happens?
am Now Work problem 61

\section*{5 Solve a System of Linear Equations Using an Inverse Matrix}

Inverse matrices can be used to solve systems of equations in which the number of equations is the same as the number of variables.

\section*{EXAMPLE I5 Using an Inverse Matrix to Solve a System of Linear Equations}

Solve the system of equations: \(\left\{\begin{aligned} x+y & =3 \\ -x+3 y+4 z & =-3 \\ 4 y+3 z & =2\end{aligned}\right.\)
Solution If we let
\[
A=\left[\begin{array}{rrr}
1 & 1 & 0 \\
-1 & 3 & 4 \\
0 & 4 & 3
\end{array}\right] \quad X=\left[\begin{array}{l}
x \\
y \\
z
\end{array}\right] \quad B=\left[\begin{array}{r}
3 \\
-3 \\
2
\end{array}\right]
\]
the original system of equations can be written compactly as the matrix equation
\[
\begin{equation*}
A X=B \tag{4}
\end{equation*}
\]

From Example 13, the matrix \(A\) has the inverse \(A^{-1}\). Multiply each side of equation (4) by \(A^{-1}\).
\[
\begin{align*}
A X & =B & & \\
A^{-1}(A X) & =A^{-1} B & & \text { Multiply both sides by } A^{-1} \\
\left(A^{-1} A\right) X & =A^{-1} B & & \text { Associative Property of multiplication } \\
I_{3} X & =A^{-1} B & & \text { Definition of an inverse matrix } \\
X & =A^{-1} B & & \text { Property of the identity matrix } \tag{5}
\end{align*}
\]

Now use (5) to find \(X=\left[\begin{array}{l}x \\ y \\ z\end{array}\right]\).

The solution is \(x=1, y=2, z=-2\) or, using an ordered triplet, \((1,2,-2)\).

The method used in Example 15 to solve a system of equations is particularly useful when it is necessary to solve several systems of equations in which the constants appearing to the right of the equal signs change, while the coefficients of the variables on the left side remain the same. See Problems 41-60 for some illustrations. Be careful; this method can be used only if the inverse exists. If it does not exist, row reduction must be used since the system is either inconsistent or dependent.

\section*{Historical Feature}

Arthur Cayley (1821-1895)

Matrices were invented in 1857 by Arthur Cayley (1821-1895) as a way of efficiently computing the result of substituting one linear system into another (see Historical Problem 3). The resulting system had incredible richness, in the sense that a wide variety of mathematical systems could be mimicked by the matrices. Cayley and his friend

James J. Sylvester (1814-1897) spent much of the rest of their lives elaborating the theory. The torch was then passed to Georg Frobenius (1849-1917), whose deep investigations established a central place for matrices in modern mathematics. In 1924, rather to the surprise of physicists, it was found that matrices (with complex numbers in them) were exactly the right tool for describing the behavior of atomic systems. Today, matrices are used in a wide variety of applications.

\section*{Historical Problems}
1. Matrices and Complex Numbers Frobenius emphasized in his research how matrices could be used to mimic other mathematical systems. Here, we mimic the behavior of complex numbers using matrices. Mathematicians call such a relationship an isomorphism.
\[
\begin{aligned}
& \text { Complex number } \longleftrightarrow \text { Matrix } \\
& \qquad a+b i \longleftrightarrow\left[\begin{array}{rr}
a & b \\
-b & a
\end{array}\right]
\end{aligned}
\]

Note that the complex number can be read off the top line of the matrix. Thus,
\[
2+3 i \longleftrightarrow\left[\begin{array}{rr}
2 & 3 \\
-3 & 2
\end{array}\right] \text { and }\left[\begin{array}{rr}
4 & -2 \\
2 & 4
\end{array}\right] \longleftrightarrow 4-2 i
\]
(a) Find the matrices corresponding to \(2-5 i\) and \(1+3 i\).
(b) Multiply the two matrices.
(c) Find the corresponding complex number for the matrix found in part (b).
(d) Multiply \(2-5 i\) and \(1+3 i\). The result should be the same as that found in part (c).

The process also works for addition and subtraction. Try it for yourself.
2. Compute \((a+b i)(a-b i)\) using matrices. Interpret the result.
3. Cayley's Definition of Matrix Multiplication Cayley invented matrix multiplication to simplify the following problem:
\[
\left\{\begin{array} { l } 
{ u = a r + b s } \\
{ v = c r + d s }
\end{array} \quad \left\{\begin{array}{l}
x=k u+l v \\
y=m u+n v
\end{array}\right.\right.
\]
(a) Find \(x\) and \(y\) in terms of \(r\) and \(s\) by substituting \(u\) and \(v\) from the first system of equations into the second system of equations.
(b) Use the result of part (a) to find the 2 by 2 matrix \(A\) in
\[
\left[\begin{array}{l}
x \\
y
\end{array}\right]=A\left[\begin{array}{l}
r \\
s
\end{array}\right]
\]
(c) Now look at the following way to do it. Write the equations in matrix form.
\[
\left[\begin{array}{l}
u \\
v
\end{array}\right]=\left[\begin{array}{ll}
a & b \\
c & d
\end{array}\right]\left[\begin{array}{l}
r \\
s
\end{array}\right] \quad\left[\begin{array}{l}
x \\
y
\end{array}\right]=\left[\begin{array}{ll}
k & I \\
m & n
\end{array}\right]\left[\begin{array}{l}
u \\
v
\end{array}\right]
\]

So
\[
\left[\begin{array}{l}
x \\
y
\end{array}\right]=\left[\begin{array}{ll}
k & l \\
m & n
\end{array}\right]\left[\begin{array}{ll}
a & b \\
c & d
\end{array}\right]\left[\begin{array}{l}
r \\
s
\end{array}\right]
\]

Do you see how Cayley defined matrix multiplication?

\subsection*{10.4 Assess Your Understanding}

\section*{Concepts and Vocabulary}
1. A matrix that has the same number of rows as columns is called a(n) \(\qquad\) matrix.
2. True or False Matrix addition is commutative.
3. To find the product \(A B\) of two matrices \(A\) and \(B\), the number of \(\qquad\) in matrix \(A\) must equal the number of \(\qquad\) in matrix \(B\).
4. True or False Matrix multiplication is commutative.
5. Suppose that \(A\) is a square \(n\) by \(n\) matrix that is nonsingular. The matrix \(B\) such that \(A B=B A=I_{n}\) is called the \(\qquad\) of the matrix \(A\).
6. If a matrix \(A\) has no inverse, it is called \(\qquad\) .
7. True or False The identity matrix has properties similar to those of the real number 1.
8. If \(A X=B\) represents a matrix equation where \(A\) is a nonsingular matrix, then we can solve the equation using \(X=\) \(\qquad\) .

\section*{Skill Building}

In Problems 9-24, use the following matrices to evaluate the given expression.
\[
A=\left[\begin{array}{rrr}
0 & 3 & -5 \\
1 & 2 & 6
\end{array}\right] \quad B=\left[\begin{array}{rrr}
4 & 1 & 0 \\
-2 & 3 & -2
\end{array}\right] \quad C=\left[\begin{array}{rr}
4 & 1 \\
6 & 2 \\
-2 & 3
\end{array}\right]
\]
9. \(A+B\)
10. \(A-B\)
11. \(4 A\)
12. \(-3 B\)
13. \(3 A-2 B\)
14. \(2 A+4 B\)
15. \(A C\)
16. \(B C\)
17. \(C A\)
18. \(C B\)
19. \(C(A+B)\)
20. \((A+B) C\)
21. \(A C-3 I_{2}\)
22. \(C A+5 I_{3}\)
23. \(C A-C B\)
24. \(A C+B C\)

In Problems 25-30, find the product.
25. \(\left[\begin{array}{rr}2 & -2 \\ 1 & 0\end{array}\right]\left[\begin{array}{rrrr}2 & 1 & 4 & 6 \\ 3 & -1 & 3 & 2\end{array}\right]\)
26. \(\left[\begin{array}{ll}4 & 1 \\ 2 & 1\end{array}\right]\left[\begin{array}{rrrr}-6 & 6 & 1 & 0 \\ 2 & 5 & 4 & -1\end{array}\right]\)
27. \(\left[\begin{array}{rrr}1 & 2 & 3 \\ 0 & -1 & 4\end{array}\right]\left[\begin{array}{rr}1 & 2 \\ -1 & 0 \\ 2 & 4\end{array}\right]\)
28. \(\left[\begin{array}{rr}1 & -1 \\ -3 & 2 \\ 0 & 5\end{array}\right]\left[\begin{array}{rrr}2 & 8 & -1 \\ 3 & 6 & 0\end{array}\right]\)
29. \(\left[\begin{array}{rrr}1 & 0 & 1 \\ 2 & 4 & 1 \\ 3 & 6 & 1\end{array}\right]\left[\begin{array}{rr}1 & 3 \\ 6 & 2 \\ 8 & -1\end{array}\right]\)
30. \(\left[\begin{array}{rrr}4 & -2 & 3 \\ 0 & 1 & 2 \\ -1 & 0 & 1\end{array}\right]\left[\begin{array}{rr}2 & 6 \\ 1 & -1 \\ 0 & 2\end{array}\right]\)

In Problems 31-40, each matrix is nonsingular. Find the inverse of each matrix.
31. \(\left[\begin{array}{ll}2 & 1 \\ 1 & 1\end{array}\right]\)
32. \(\left[\begin{array}{rr}3 & -1 \\ -2 & 1\end{array}\right]\)
33. \(\left[\begin{array}{ll}6 & 5 \\ 2 & 2\end{array}\right]\)
34. \(\left[\begin{array}{rr}-4 & 1 \\ 6 & -2\end{array}\right]\)
35. \(\left[\begin{array}{ll}2 & 1 \\ a & a\end{array}\right] \quad a \neq 0\)
36. \(\left[\begin{array}{ll}b & 3 \\ b & 2\end{array}\right] \quad b \neq 0\)
37. \(\left[\begin{array}{rrr}1 & -1 & 1 \\ 0 & -2 & 1 \\ -2 & -3 & 0\end{array}\right]\)
38. \(\left[\begin{array}{rrr}1 & 0 & 2 \\ -1 & 2 & 3 \\ 1 & -1 & 0\end{array}\right]\)
39. \(\left[\begin{array}{rrr}1 & 1 & 1 \\ 3 & 2 & -1 \\ 3 & 1 & 2\end{array}\right]\)
40. \(\left[\begin{array}{rrr}3 & 3 & 1 \\ 1 & 2 & 1 \\ 2 & -1 & 1\end{array}\right]\)

In Problems 41-60, use the inverses found in Problems 31-40 to solve each system of equations.
41. \(\left\{\begin{array}{r}2 x+y=8 \\ x+y=5\end{array}\right.\)
42. \(\left\{\begin{array}{r}3 x-y=8 \\ -2 x+y=4\end{array}\right.\)
43. \(\left\{\begin{array}{r}2 x+y=0 \\ x+y=5\end{array}\right.\)
44. \(\left\{\begin{aligned} 3 x-y & =4 \\ -2 x+y & =5\end{aligned}\right.\)
45. \(\left\{\begin{array}{l}6 x+5 y=7 \\ 2 x+2 y=2\end{array}\right.\)
46. \(\left\{\begin{aligned}-4 x+y & =0 \\ 6 x-2 y & =14\end{aligned}\right.\)
47. \(\left\{\begin{array}{l}6 x+5 y=13 \\ 2 x+2 y=5\end{array}\right.\)
48. \(\left\{\begin{aligned}-4 x+y & =5 \\ 6 x-2 y & =-9\end{aligned}\right.\)
49. \(\left\{\begin{array}{l}2 x+y=-3 \\ a x+a y=-a\end{array} \quad a \neq 0\right.\)
50. \(\left\{\begin{array}{l}b x+3 y=2 b+3 \\ b x+2 y=2 b+2\end{array} \quad b \neq 0\right.\)
51. \(\left\{\begin{array}{l}2 x+y=\frac{7}{a} \\ a x+a y=5\end{array} \quad a \neq 0\right.\)
52. \(\left\{\begin{array}{l}b x+3 y=14 \\ b x+2 y=10\end{array} \quad b \neq 0\right.\)
53. \(\left\{\begin{aligned} x-y+z & =0 \\ -2 y+z & =-1 \\ -2 x-3 y & =-5\end{aligned}\right.\)
54. \(\left\{\begin{aligned} x+2 z= & 6 \\ -x+2 y+3 z= & -5 \\ x-y= & 6\end{aligned}\right.\)
55. \(\left\{\begin{aligned} x-y+z & =2 \\ -2 y+z & =2 \\ -2 x-3 y & =\frac{1}{2}\end{aligned}\right.\)
56. \(\left\{\begin{aligned} x+2 z & =2 \\ -x+2 y+3 z & =-\frac{3}{2} \\ x-y & =2\end{aligned}\right.\)
57. \(\left\{\begin{aligned} x+y+z & =9 \\ 3 x+2 y-z & =8 \\ 3 x+y+2 z & =1\end{aligned}\right.\)
58. \(\left\{\begin{aligned} 3 x+3 y+z & =8 \\ x+2 y+z & =5 \\ 2 x-y+z & =4\end{aligned}\right.\)
59. \(\left\{\begin{aligned} x+y+z & =2 \\ 3 x+2 y-z & =\frac{7}{3} \\ 3 x+y+2 z & =\frac{10}{3}\end{aligned}\right.\)
60. \(\left\{\begin{aligned} 3 x+3 y+z & =1 \\ x+2 y+z & =0 \\ 2 x-y+z & =4\end{aligned}\right.\)

In Problems 61-66, show that each matrix has no inverse.
61. \(\left[\begin{array}{ll}4 & 2 \\ 2 & 1\end{array}\right]\)
62. \(\left[\begin{array}{rr}-3 & \frac{1}{2} \\ 6 & -1\end{array}\right]\)
63. \(\left[\begin{array}{ll}15 & 3 \\ 10 & 2\end{array}\right]\)
64. \(\left[\begin{array}{rr}-3 & 0 \\ 4 & 0\end{array}\right]\)
65. \(\left[\begin{array}{rrr}-3 & 1 & -1 \\ 1 & -4 & -7 \\ 1 & 2 & 5\end{array}\right]\)
66. \(\left[\begin{array}{rrr}1 & 1 & -3 \\ 2 & -4 & 1 \\ -5 & 7 & 1\end{array}\right]\)

In Problems 67-70, use a graphing utility to find the inverse, if it exists, of each matrix. Round answers to two decimal places.
67. \(\left[\begin{array}{rrr}25 & 61 & -12 \\ 18 & -2 & 4 \\ 8 & 35 & 21\end{array}\right]\)
68. \(\left[\begin{array}{rrr}18 & -3 & 4 \\ 6 & -20 & 14 \\ 10 & 25 & -15\end{array}\right]\)
69. \(\left[\begin{array}{rrrr}44 & 21 & 18 & 6 \\ -2 & 10 & 15 & 5 \\ 21 & 12 & -12 & 4 \\ -8 & -16 & 4 & 9\end{array}\right]\)
70. \(\left[\begin{array}{rrrr}16 & 22 & -3 & 5 \\ 21 & -17 & 4 & 8 \\ 2 & 8 & 27 & 20 \\ 5 & 15 & -3 & -10\end{array}\right]\)

In Problems 71-74, use the idea behind Example 15 with a graphing utility to solve the following systems of equations. Round answers to two decimal places.
71. \(\left\{\begin{aligned} 25 x+61 y-12 z & =10 \\ 18 x-12 y+7 z & =-9 \\ 3 x+4 y-z & =12\end{aligned}\right.\)
72. \(\left\{\begin{aligned} 25 x+61 y-12 z & =15 \\ 18 x-12 y+7 z & =-3 \\ 3 x+4 y-z & =12\end{aligned}\right.\)
73. \(\left\{\begin{aligned} 25 x+61 y-12 z & =21 \\ 18 x-12 y+7 z & =7 \\ 3 x+4 y-z & =-2\end{aligned}\right.\)
74. \(\left\{\begin{aligned} 25 x+61 y-12 z & =25 \\ 18 x-12 y+7 z & =10 \\ 3 x+4 y-z & =-4\end{aligned}\right.\)

\section*{Mixed Practice}

In Problems 75-82, algebraically solve each system of equations using any method you wish.
75. \(\left\{\begin{array}{l}2 x+3 y=11 \\ 5 x+7 y=24\end{array}\right.\)
76. \(\left\{\begin{aligned} 2 x+8 y & =-8 \\ x+7 y & =-13\end{aligned}\right.\)
77. \(\left\{\begin{aligned} x-2 y+4 z & =2 \\ -3 x+5 y-2 z & =17 \\ 4 x-3 y & =-22\end{aligned}\right.\)
78. \(\left\{\begin{aligned} 2 x+3 y-z & =-2 \\ 4 x+3 z & =6 \\ 6 y-2 z & =2\end{aligned}\right.\)
79. \(\left\{\begin{aligned} 5 x-y+4 z & =2 \\ -x+5 y-4 z & =3 \\ 7 x+13 y-4 z & =17\end{aligned}\right.\)
80. \(\left\{\begin{array}{l}3 x+2 y-z=2 \\ 2 x+y+6 z=-7 \\ 2 x+2 y-14 z=17\end{array}\right.\)
81. \(\left\{\begin{aligned} 2 x-3 y+z & =4 \\ -3 x+2 y-z & =-3 \\ -5 y+z & =6\end{aligned}\right.\)
82. \(\left\{\begin{aligned}-4 x+3 y+2 z & =6 \\ 3 x+y-z & =-2 \\ x+9 y+z & =6\end{aligned}\right.\)

\section*{Applications and Extensions}
83. College Tuition Nikki and Joe take classes at a community college, LCCC, and a local university, SIUE. The number of credit hours taken and the cost per credit hour (2013-2014 academic year, tuition and fees) are as follows:
\begin{tabular}{|c|c|c|c|c|}
\hline & LCCC & SIUE & \multicolumn{2}{|r|}{Cost per Credit Hour} \\
\hline Nikki & 6 & 9 & LCCC & \$100.00 \\
\hline Joe & 3 & 12 & SIUE & \$332.38 \\
\hline
\end{tabular}
(a) Write a matrix \(A\) for the credit hours taken by each student and a matrix \(B\) for the cost per credit hour.
(b) Compute \(A B\) and interpret the results.

Sources: www.lc.edu, www.siue.edu
84. School Loan Interest Jamal and Stephanie each have school loans issued from the same two banks. The amounts borrowed and the monthly interest rates are given next (interest is compounded monthly):
(a) Write a matrix \(A\) for the amounts borrowed by each student and a matrix \(B\) for the monthly interest rates.
(b) Compute \(A B\) and interpret the results.
(c) Let \(C=\left[\begin{array}{l}1 \\ 1\end{array}\right]\). Compute \(A(C+B)\) and interpret the results.
\begin{tabular}{|lcc|}
\hline & Lender 1 & Lender 2 \\
\hline Jamal & \(\$ 4000\) & \(\$ 3000\) \\
Stephanie & \(\$ 2500\) & \(\$ 3800\) \\
\hline
\end{tabular}
\begin{tabular}{|cc|}
\hline & Monthly Interest Rate \\
\hline Lender 1 & \(0.011(1.1 \%)\) \\
\hline Lender 2 & \(0.006(0.6 \%)\) \\
\hline
\end{tabular}
85. Computing the Cost of Production The Acme Steel Company is a producer of stainless steel and aluminum containers. On a certain day, the following stainless steel containers were manufactured: 500 with 10 -gallon (gal) capacity, 350 with 5 -gal capacity, and 400 with 1 -gal capacity. On the same day, the following aluminum containers were manufactured: 700 with 10 -gal capacity, 500 with 5 -gal capacity, and 850 with 1-gal capacity.
(a) Find a 2 by 3 matrix representing these data. Find a 3 by 2 matrix to represent the same data.
(b) If the amount of material used in the 10-gal containers is 15 pounds (lb), the amount used in the 5 -gal containers is 8 lb , and the amount used in the 1 -gal containers is 3 lb , find a 3 by 1 matrix representing the amount of material used.
(c) Multiply the 2 by 3 matrix found in part (a) and the 3 by 1 matrix found in part (b) to get a 2 by 1 matrix showing the day's usage of material.
(d) If stainless steel costs Acme \(\$ 0.75 / \mathrm{lb}\) and aluminum costs \(\$ 0.80 / \mathrm{lb}\), find a 1 by 2 matrix representing cost.
(e) Multiply the matrices found in parts (c) and (d) to determine the total cost of the day's production.
86. Computing Profit Rizza Ford has two locations, one in 4. the city and the other in the suburbs. In January, the city location sold 400 subcompacts, 250 intermediate-size cars, and 50 SUVs; in February, it sold 350 subcompacts, 100 intermediates, and 30 SUVs. At the suburban location in January, 450 subcompacts, 200 intermediates, and 140 SUVs were sold. In February, the suburban location sold 350 subcompacts, 300 intermediates, and 100 SUVs.
(a) Find 2 by 3 matrices that summarize the sales data for each location for January and February (one matrix for each month).
(b) Use matrix addition to obtain total sales for the 2-month period.
(c) The profit on each kind of car is \(\$ 100\) per subcompact, \(\$ 150\) per intermediate, and \(\$ 200\) per SUV. Find a 3 by 1 matrix representing this profit.
(d) Multiply the matrices found in parts (b) and (c) to get a 2 by 1 matrix showing the profit at each location.
87. Cryptography One method of encryption is to use a matrix to encrypt the message and then use the corresponding inverse matrix to decode the message. The encrypted matrix, \(E\), is obtained by multiplying the message matrix, \(M\), by a key matrix, \(K\). The original message can be retrieved by multiplying the encrypted matrix by the inverse of the key matrix. That is, \(E=M \cdot K\) and \(M=E \cdot K^{-1}\).
(a) Given the key matrix \(K=\left[\begin{array}{lll}2 & 1 & 1 \\ 1 & 1 & 0 \\ 1 & 1 & 1\end{array}\right]\),find its inverse, \(K^{-1}\). [Note: This key matrix is known as the \(Q_{2}^{3}\) Fibonacci encryption matrix.]
(b) Use your result from part (a) to decode the encrypted matrix \(E=\left[\begin{array}{ccc}47 & 34 & 33 \\ 44 & 36 & 27 \\ 47 & 41 & 20\end{array}\right]\).
(c) Each entry in your result for part (b) represents the position of a letter in the English alphabet ( \(A=1, B=2, C=3\), and so on). What is the original message?
Source: goldenmuseum.com
88. Economic Mobility The relative income of a child (low, medium, or high) generally depends on the relative income of the child's parents. The matrix \(P\), given by
\[
\begin{aligned}
& \text { Parent's Income } \\
& \mathrm{L} \\
& \mathrm{M} \\
& \mathrm{M} \\
& \mathrm{H}
\end{aligned} \mathrm{[ } \mathrm{\begin{array}{ccc}
0.4 & 0.2 & 0.1
\end{array}} \mathrm{{0.5} &{0.6} &{0.5}} \mathrm{{0.1} &{0.2} &{0.4}} \mathrm{]L} \mathrm{M} \text { Child's income } \mathrm{H} \text {. }
\]
is called a left stochastic transition matrix. For example, the entry \(P_{21}=0.5\) means that \(50 \%\) of the children of low relative
income parents will transition to the medium level of income. The diagonal entry \(P_{i i}\) represents the percent of children who remain in the same income level as their parents. Assuming that the transition matrix is valid from one generation to the next, compute and interpret \(P^{2}\).
Source: Understanding Mobility in America, April 2006
89. Consider the 2 by 2 square matrix
\[
A=\left[\begin{array}{ll}
a & b \\
c & d
\end{array}\right]
\]

If \(D=a d-b c \neq 0\), show that \(A\) is nonsingular and that
\[
A^{-1}=\frac{1}{D}\left[\begin{array}{rr}
d & -b \\
-c & a
\end{array}\right]
\]

In graph theory, an adjacency matrix, \(A\), is a way of representing which nodes (or vertices) are connected. For a simple directed graph, each entry, \(a_{i j}\), is either 1 (if a direct path exists from node \(i\) to node j) or 0 (if no direct path exists from node \(i\) to node \(j\) ). For example, consider the following graph and corresponding adjacency matrix.

The entry \(a_{14}\) is 1 because a direct path exists from node 1 to node 4. However, the entry \(a_{41}\) is 0 because no path exists from node 4 to node 1. The entry \(a_{33}\) is 1 because a direct path exists from node 3 to itself. The matrix \(B_{k}=A+A^{2}+\cdots+A^{k}\) indicates the number of ways to get from node ito node \(j\) within \(k\) moves (steps). Use this information in Problems 90-92.
90. Website Map A content map can be used to show how different pages on a website are connected. For example, the following content map shows the relationship among the five pages of a certain website with links between pages represented by arrows.

The concept map can be represented by a 5 by 5 adjacency matrix where each entry, \(a_{i j}\), is either 1 (if a link exists from page \(i\) to page \(j\) ) or 0 (if no link exists from page \(i\) to page \(j\) ).
(a) Write the 5 by 5 adjacency matrix that represents the given concept map.
(b) Explain the significance of the entries on the main diagonal in your result from part (a).
(c) Find and interpret \(A^{2}\).
91. Three-Click Rule An unofficial, and often contested, guideline for web design is to make all website content available to a user within three clicks. The webpage adjacency matrix for a certain website is given by
\[
A=\left[\begin{array}{lllll}
0 & 1 & 1 & 0 & 0 \\
1 & 0 & 0 & 1 & 1 \\
1 & 0 & 0 & 1 & 0 \\
0 & 0 & 1 & 0 & 1 \\
0 & 1 & 0 & 0 & 0
\end{array}\right]
\]
(a) Find \(\mathrm{B}_{3}\). Does this website adhere to the Three-Click Rule?
(b) Which page can be reached the most number of ways from page 1 within three clicks?
92. Six Degrees of Social Media Six degrees of separation is the theory that an individual is no more than six steps away, by means of personal relationship, from any other individual in the world. An adjacency matrix that shows the social links among a group of people is called a sociogram. Such social graphs are used extensively by social media platforms such as Facebook and Twitter to create richer experiences for users. The adjacency matrix below shows the follower status among 10 Twitter users where the entry \(a_{i j}\) is 1 if User \(i\) is following User \(j\), and is 0 otherwise.
(Note that Twitter allows a user to follow someone who is not following him or her.) If a tweet (a Twitter message) is posted by a user, the message can be re-tweeted by that user's followers.
\[
\left[\begin{array}{llllllllll}
0 & 1 & 1 & 0 & 0 & 0 & 0 & 0 & 0 & 0 \\
0 & 0 & 1 & 0 & 0 & 0 & 0 & 1 & 0 & 0 \\

\]
(a) Using a graphing utility, find \(B_{6}\) and determine whether all 10 users are able to view a tweet by any of the other 10 users within 6 tweets.
(b) Which user's tweets can be seen the greatest number of ways by the other 9 users within 6 tweets?
93. Image Compression JPEG (Joint Photographic Experts Group) is a commonly used method for compressing digital images. As part of the compression process, JPEG uses the Discrete Cosine Transformation (DCT) to transform pixel intensities so that the coding portion of the compression algorithm is more efficient. The DCT is the product \(C=\) \(B A B^{T}\), where \(A\) is an 8 by 8 block of pixel intensities from a preprocessed image and \(B\) is a special transformation matrix. The matrix \(B^{T}\) is the transpose of \(B\) and is formed by switching the rows and columns of matrix \(B\). For example, if \(M=\left[\begin{array}{lll}1 & 2 & 3 \\ 4 & 5 & 6 \\ 7 & 8 & 9\end{array}\right]\), then \(M^{T}=\left[\begin{array}{lll}1 & 4 & 7 \\ 2 & 5 & 8 \\ 3 & 6 & 9\end{array}\right]\). Use a graphing
utility to find the DCT of the given intensity matrix, rounding each entry to three decimal places
\[
A=\left[\begin{array}{llllllll}
70 & 72 & 72 & 71 & 70 & 73 & 72 & 70 \\
72 & 72 & 71 & 70 & 73 & 74 & 71 & 70 \\
70 & 70 & 71 & 70 & 72 & 71 & 72 & 73 \\
68 & 71 & 70 & 69 & 70 & 72 & 72 & 71 \\
70 & 70 & 71 & 70 & 71 & 72 & 70 & 68 \\
69 & 68 & 70 & 72 & 73 & 70 & 71 & 71 \\
71 & 70 & 70 & 70 & 71 & 71 & 70 & 72 \\
72 & 71 & 72 & 71 & 73 & 74 & 72 & 71
\end{array}\right]
\]
\[

\end{array}\right]
\]
94. Computer Graphics: Translating An important aspect of computer graphics is the ability to transform the coordinates of points within a graphic. For transformation purposes, a point \((x, y)\) is represented as the column matrix \(X=\left[\begin{array}{l}x \\ y \\ 1\end{array}\right]\). To translate a point \((x, y)\) horizontally \(h\) units and vertically \(k\) units, we use the translation matrix \(S=\left[\begin{array}{ccc}1 & 0 & h \\ 0 & 1 & k \\ 0 & 0 & 1\end{array}\right]\) and compute the matrix product \(S X\). The translation is to the right for \(h>0\) and to the left for \(h<0\). Likewise, the translation is up for \(k>0\) and down for \(k<0\). The transformed coordinates are the first two entries in the resulting column matrix.
(a) Write the translation matrix needed to translate a point 3 units to the left and 5 units up.
(b) Find and interpret \(S^{-1}\).
95. Computer Graphics: Rotating Besides translating a point, it is also important in computer graphics to be able to rotate a point. This is achieved by multiplying a point's column matrix (see Problem 94) by an appropriate rotation matrix \(R\) to form the matrix product \(R X\). For example, to rotate a
point \(60^{\circ}\), the rotation matrix is \(R=\left[\begin{array}{ccc}\frac{1}{2} & -\frac{\sqrt{3}}{2} & 0 \\ \frac{\sqrt{3}}{2} & \frac{1}{2} & 0 \\ 0 & 0 & 1\end{array}\right]\).
(a) Write the coordinates of the point \((6,4)\) after it has been rotated \(60^{\circ}\).
(b) Find and interpret \(R^{-1}\).
96. Computer Graphics (See Problems 94 and 95.) In many situations in computer graphics, the final transformation of a point is the result of several separate transformations. For example, we may wish to rotate a figure around some specific point, such as a line segment around its midpoint. This would involve translating all the points so that the midpoint is at the origin, rotating the points, and then translating the points so that the midpoint is back at its original position. The transformations could be done one by one, but it is more convenient to represent the complete transformation in a single matrix. Consider a line segment with endpoints \((4,2)\) and \((8,-6)\) that we wish to rotate \(60^{\circ}\) around its midpoint.
(a) Find the midpoint of the line segment, and use it to form the translation matrix \(S\). (Hint: You will need to change the signs of the midpoint coordinates.)
(b) Form the transformation matrix \(C=S^{-1} R S\).
(c) Transform the endpoints of the line segment by finding the product \(C X\), where \(X=\left[\begin{array}{rr}4 & 8 \\ 2 & -6 \\ 1 & 1\end{array}\right]\) contains the coordinates of both endpoints. What are the coordinates of the endpoints of the rotated line segment?
(d) Find the matrix \(C^{-1}\) that can be used to get the transformed endpoints back to their original coordinates.

\section*{Discussion and Writing}
97. Create a situation different from any found in the text that can be represented by a matrix.
98. Explain why the number of columns in matrix \(A\) must equal the number of rows in matrix \(B\) when finding the product \(A B\).
99. If \(a, b\), and \(c \neq 0\) are real numbers with \(a c=b c\), then \(a=b\). Does this same property hold for matrices? In other words, if \(A, B\), and \(C\), are matrices and \(A C=B C\), must \(A=B\) ?
100. What is the solution of the system of equations \(A X=0\) if \(A^{-1}\) exists? Discuss the solution of \(A X=0\) if \(A^{-1}\) does not exist.

\section*{Retain Your Knowledge}

Problems 101-104 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
101. Write a polynomial with minimum degree and leading coefficient 1 that has zeros \(x=3\) (multiplicity 2 ), \(x=0\) (multiplicity 3 ), and \(x=-2\) (multiplicity 1 ).
102. For \(\mathbf{v}=-2 \mathbf{i}-\mathbf{j}\) and \(\mathbf{w}=2 \mathbf{i}+\mathbf{j}\), find the dot product \(\mathbf{v} \cdot \mathbf{w}\) and the angle between \(\mathbf{v}\) and \(\mathbf{w}\).
103. Solve: \(\frac{5 x}{x+2}=\frac{x}{x-2}\)
104. Write \(\cos \left(\csc ^{-1} u\right)\) as an algebraic expression in \(u\).

\subsection*{10.5 Partial Fraction Decomposition}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Identity (Appendix A, Section A.8, p. A63)
- Proper and Improper Rational Functions (Section 3.4, p. 238)
- Factoring Polynomials (Appendix A, Section A.4, pp. A32-A38)
- Complex Zeros; Fundamental Theorem of Algebra (Section 3.3, p. 227)

Now Work the ‘Are You Prepared?’ problems on page 787.

Consider the problem of adding two rational expressions:
\[
\frac{3}{x+4} \text { and } \frac{2}{x-3}
\]

The result is
\[
\frac{3}{x+4}+\frac{2}{x-3}=\frac{3(x-3)+2(x+4)}{(x+4)(x-3)}=\frac{5 x-1}{x^{2}+x-12}
\]

The reverse procedure, starting with the rational expression \(\frac{5 x-1}{x^{2}+x-12}\) and writing it as the sum (or difference) of the two simpler fractions \(\frac{3}{x+4}\) and \(\frac{2}{x-3}\), is referred to as partial fraction decomposition, and the two simpler fractions are called partial fractions. Decomposing a rational expression into a sum of partial fractions is important in solving certain types of calculus problems. This section presents a systematic way to decompose rational expressions.

We begin by recalling that a rational expression is the ratio of two polynomials, say \(P\) and \(Q \neq 0\). We assume that \(P\) and \(Q\) have no common factors. Recall also that a rational expression \(\frac{P}{Q}\) is called proper if the degree of the polynomial in the numerator is less than the degree of the polynomial in the denominator. Otherwise, the rational expression is termed improper.

Because any improper rational expression can be reduced by long division to a mixed form consisting of the sum of a polynomial and a proper rational expression, we shall restrict the discussion that follows to proper rational expressions.

The partial fraction decomposition of the rational expression \(\frac{P}{Q}\) depends on the factors of the denominator \(Q\). Recall from Section 3.3 that any polynomial whose coefficients are real numbers can be factored (over the real numbers) into products of linear and/or irreducible quadratic factors. This means that the denominator \(Q\) of the rational expression \(\frac{P}{Q}\) will contain only factors of one or both of the following types:
1. Linear factors of the form \(x-a\), where \(a\) is a real number.
2. Irreducible quadratic factors of the form \(a x^{2}+b x+c\), where \(a, b\), and \(c\) are real numbers, \(a \neq 0\), and \(b^{2}-4 a c<0\) (which guarantees that \(a x^{2}+b x+c\) cannot be written as the product of two linear factors with real coefficients).
As it turns out, there are four cases to be examined. We begin with the case for which \(Q\) has only nonrepeated linear factors.

\section*{1 Decompose \(\frac{P}{Q}\), Where \(Q\) Has Only Nonrepeated Linear Factors}

\section*{Case 1: Q has only nonrepeated linear factors.}

Under the assumption that \(Q\) has only nonrepeated linear factors, the polynomial \(Q\) has the form
\[
Q(x)=\left(x-a_{1}\right)\left(x-a_{2}\right) \cdot \cdots \cdot\left(x-a_{n}\right)
\]
where none of the numbers \(a_{1}, a_{2}, \ldots, a_{n}\) are equal. In this case, the partial fraction decomposition of \(\frac{P}{Q}\) is of the form
\[
\begin{equation*}
\frac{P(x)}{Q(x)}=\frac{A_{1}}{x-a_{1}}+\frac{A_{2}}{x-a_{2}}+\cdots+\frac{A_{n}}{x-a_{n}} \tag{1}
\end{equation*}
\]
where the numbers \(A_{1}, A_{2}, \ldots, A_{n}\) are to be determined.

We show how to find these numbers in the example that follows.

\section*{EXAMPLE I}

Nonrepeated Linear Factors
Write the partial fraction decomposition of \(\frac{x}{x^{2}-5 x+6}\).

\section*{Solution}

First, factor the denominator,
\[
x^{2}-5 x+6=(x-2)(x-3)
\]
and conclude that the denominator contains only nonrepeated linear factors. Then decompose the rational expression according to equation (1):
\[
\begin{equation*}
\frac{x}{x^{2}-5 x+6}=\frac{A}{x-2}+\frac{B}{x-3} \tag{2}
\end{equation*}
\]
where \(A\) and \(B\) are to be determined. To find \(A\) and \(B\), clear the fractions by multiplying each side by \((x-2)(x-3)=x^{2}-5 x+6\). The result is
\[
\begin{equation*}
x=A(x-3)+B(x-2) \tag{3}
\end{equation*}
\]
or
\[
x=(A+B) x+(-3 A-2 B)
\]

This equation is an identity in \(x\). Equate the coefficients of like powers of \(x\) to get
\[
\begin{cases}1=A+B & \text { Equate coefficients of } x: 1 x=(A+B) x \\ 0=-3 A-2 B & \text { Equate the constants: } 0=-3 A-2 B\end{cases}
\]

This system of two equations containing two variables, \(A\) and \(B\), can be solved using whatever method you wish. Solving it yields
\[
A=-2 \quad B=3
\]

From equation (2), the partial fraction decomposition is
\[
\frac{x}{x^{2}-5 x+6}=\frac{-2}{x-2}+\frac{3}{x-3}
\]

Check: The decomposition can be checked by adding the rational expressions.
\[
\begin{aligned}
\frac{-2}{x-2}+\frac{3}{x-3} & =\frac{-2(x-3)+3(x-2)}{(x-2)(x-3)}=\frac{x}{(x-2)(x-3)} \\
& =\frac{x}{x^{2}-5 x+6}
\end{aligned}
\]

The numbers to be found in the partial fraction decomposition can sometimes be found more readily by using suitable choices for \(x\) (which may include complex numbers) in the identity obtained after fractions have been cleared. In Example 1, the identity after clearing fractions is equation (3):
\[
x=A(x-3)+B(x-2)
\]

Letting \(x=2\) in this expression, the term containing \(B\) drops out, leaving \(2=A(-1)\), or \(A=-2\). Similarly, letting \(x=3\), the term containing \(A\) drops out, leaving \(3=B\). As before, \(A=-2\) and \(B=3\).

\section*{2 Decompose \(\frac{P}{Q}\), Where \(Q\) Has Repeated Linear Factors}

\section*{Case 2: \(\mathbf{Q}\) has repeated linear factors.}

If the polynomial \(Q\) has a repeated linear factor, say \((x-a)^{n}, n \geq 2\) an integer, then, in the partial fraction decomposition of \(\frac{P}{Q}\), allow for the terms
\[
\frac{A_{1}}{x-a}+\frac{A_{2}}{(x-a)^{2}}+\cdots+\frac{A_{n}}{(x-a)^{n}}
\]
where the numbers \(A_{1}, A_{2}, \ldots, A_{n}\) are to be determined.

\section*{EXAMPLE 2}

Solution

\section*{Repeated Linear Factors}

Write the partial fraction decomposition of \(\frac{x+2}{x^{3}-2 x^{2}+x}\).
First, we factor the denominator,
\[
x^{3}-2 x^{2}+x=x\left(x^{2}-2 x+1\right)=x(x-1)^{2}
\]
and find that the denominator has the nonrepeated linear factor \(x\) and the repeated linear factor \((x-1)^{2}\). By Case 1 , we must allow for the term \(\frac{A}{x}\) in the decomposition; and by Case 2 , we must allow for the terms \(\frac{B}{x-1}+\frac{C^{x}}{(x-1)^{2}}\) in the decomposition.

We write
\[
\begin{equation*}
\frac{x+2}{x^{3}-2 x^{2}+x}=\frac{A}{x}+\frac{B}{x-1}+\frac{C}{(x-1)^{2}} \tag{4}
\end{equation*}
\]

Again, clear fractions by multiplying each side by \(x^{3}-2 x^{2}+x=x(x-1)^{2}\). The result is the identity
\[
\begin{equation*}
x+2=A(x-1)^{2}+B x(x-1)+C x \tag{5}
\end{equation*}
\]

Letting \(x=0\) in this expression, the terms containing \(B\) and \(C\) drop out, leaving \(2=A(-1)^{2}\), or \(A=2\). Similarly, letting \(x=1\), the terms containing \(A\) and \(B\) drop out, leaving \(3=C\). Then equation (5) becomes
\[
x+2=2(x-1)^{2}+B x(x-1)+3 x
\]

Let \(x=2\) (any choice other than 0 or 1 will work as well). The result is
\[
\begin{aligned}
4 & =2(1)^{2}+B(2)(1)+3(2) \\
4 & =2+2 B+6 \\
2 B & =-4 \\
B & =-2
\end{aligned}
\]

We have \(A=2, B=-2\), and \(C=3\).
From equation (4), the partial fraction decomposition is
\[
\frac{x+2}{x^{3}-2 x^{2}+x}=\frac{2}{x}+\frac{-2}{x-1}+\frac{3}{(x-1)^{2}}
\]

Write the partial fraction decomposition of \(\frac{x^{3}-8}{x^{2}(x-1)^{3}}\).

Solution The denominator contains the repeated linear factors \(x^{2}\) and \((x-1)^{3}\). The partial fraction decomposition takes the form
\[
\begin{equation*}
\frac{x^{3}-8}{x^{2}(x-1)^{3}}=\frac{A}{x}+\frac{B}{x^{2}}+\frac{C}{x-1}+\frac{D}{(x-1)^{2}}+\frac{E}{(x-1)^{3}} \tag{6}
\end{equation*}
\]

As before, clear fractions and obtain the identity
\[
\begin{equation*}
x^{3}-8=A x(x-1)^{3}+B(x-1)^{3}+C x^{2}(x-1)^{2}+D x^{2}(x-1)+E x^{2} \tag{7}
\end{equation*}
\]

Let \(x=0\). (Do you see why this choice was made?) Then
\[
\begin{aligned}
-8 & =B(-1) \\
B & =8
\end{aligned}
\]

Let \(x=1\) in equation (7). Then
\[
-7=E
\]

Use \(B=8\) and \(E=-7\) in equation (7), and collect like terms.
\[
\begin{align*}
& x^{3}-8= A x(x-1)^{3}+8(x-1)^{3} \\
&+C x^{2}(x-1)^{2}+D x^{2}(x-1)-7 x^{2} \\
& x^{3}-8-8\left(x^{3}-3 x^{2}+3 x-1\right)+7 x^{2}= A x(x-1)^{3} \\
&+C x^{2}(x-1)^{2}+D x^{2}(x-1) \\
&-7 x^{3}+31 x^{2}-24 x= x(x-1)\left[A(x-1)^{2}+C x(x-1)+D x\right] \\
& x(x-1)(-7 x+24)=x(x-1)\left[A(x-1)^{2}+C x(x-1)+D x\right] \\
&-7 x+24= A(x-1)^{2}+C x(x-1)+D x \tag{8}
\end{align*}
\]

Now work with equation (8). Let \(x=0\). Then
\[
24=A
\]

Let \(x=1\) in equation (8). Then
\[
17=D
\]

Use \(A=24\) and \(D=17\) in equation (8).
\[
-7 x+24=24(x-1)^{2}+C x(x-1)+17 x
\]

Let \(x=2\) and simplify.
\[
\begin{aligned}
-14+24 & =24+C(2)+34 \\
-48 & =2 C \\
-24 & =C
\end{aligned}
\]

We now know all the numbers \(A, B, C, D\), and \(E\), so, from equation (6), we have the decomposition
\[
\frac{x^{3}-8}{x^{2}(x-1)^{3}}=\frac{24}{x}+\frac{8}{x^{2}}+\frac{-24}{x-1}+\frac{17}{(x-1)^{2}}+\frac{-7}{(x-1)^{3}}
\]

\section*{Now Work Example 3 by solving the system of five equations containing five variables that the expansion of equation (7) leads to.}
amenow Work problem 19
The final two cases involve irreducible quadratic factors. A quadratic factor is irreducible if it cannot be factored into linear factors with real coefficients. A quadratic expression \(a x^{2}+b x+c\) is irreducible whenever \(b^{2}-4 a c<0\). For example, \(x^{2}+x+1\) and \(x^{2}+4\) are irreducible.

\section*{3 Decompose \(\frac{P}{Q}\), Where \(Q\) Has a Nonrepeated Irreducible Quadratic Factor}

\section*{Case 3: Q contains a nonrepeated irreducible quadratic factor.}

If \(Q\) contains a nonrepeated irreducible quadratic factor of the form \(a x^{2}+b x+c\), then, in the partial fraction decomposition of \(\frac{P}{Q}\), allow for the term
\[
\frac{A x+B}{a x^{2}+b x+c}
\]
where the numbers \(A\) and \(B\) are to be determined.

\section*{EXAMPLE 4}

Nonrepeated Irreducible Quadratic Factor
Write the partial fraction decomposition of \(\frac{3 x-5}{x^{3}-1}\).

\section*{Solution Factor the denominator,}
\[
x^{3}-1=(x-1)\left(x^{2}+x+1\right)
\]
and find that it has a nonrepeated linear factor \(x-1\) and a nonrepeated irreducible quadratic factor \(x^{2}+x+1\). Allow for the term \(\frac{A}{x-1}\) by Case 1 , and allow for the term \(\frac{B x+C}{x^{2}+x+1}\) by Case 3 . Write
\[
\begin{equation*}
\frac{3 x-5}{x^{3}-1}=\frac{A}{x-1}+\frac{B x+C}{x^{2}+x+1} \tag{9}
\end{equation*}
\]

Clear fractions by multiplying each side of equation (9) by \(x^{3}-1=\) \((x-1)\left(x^{2}+x+1\right)\) to obtain the identity
\[
\begin{equation*}
3 x-5=A\left(x^{2}+x+1\right)+(B x+C)(x-1) \tag{10}
\end{equation*}
\]

Expand the identity in (10) to obtain
\[
3 x-5=(A+B) x^{2}+(A-B+C) x+(A-C)
\]

This identity leads to the system of equations
\[
\left\{\begin{aligned}
A+B & =0 \\
A-B+C & =3 \\
A-C & =-5
\end{aligned}\right.
\]

The solution of this system is \(A=-\frac{2}{3}, B=\frac{2}{3}, C=\frac{13}{3}\). Then, from equation (9),
\[
\frac{3 x-5}{x^{3}-1}=\frac{-\frac{2}{3}}{x-1}+\frac{\frac{2}{3} x+\frac{13}{3}}{x^{2}+x+1}
\]

\footnotetext{
Now Work Example 4 using equation (10) and assigning values to \(\boldsymbol{x}\).
amen Now Work problem 21
}

\section*{4 Decompose \(\frac{P}{Q}\), Where \(Q\) Has a Repeated Irreducible Quadratic Factor}

\section*{Case 4: \(\mathbf{Q}\) contains a repeated irreducible quadratic factor.}

If the polynomial \(Q\) contains a repeated irreducible quadratic factor \(\left(a x^{2}+b x+c\right)^{n}, n \geq 2, n\) an integer, then, in the partial fraction decomposition of \(\frac{P}{Q}\), allow for the terms
\[
\frac{A_{1} x+B_{1}}{a x^{2}+b x+c}+\frac{A_{2} x+B_{2}}{\left(a x^{2}+b x+c\right)^{2}}+\cdots+\frac{A_{n} x+B_{n}}{\left(a x^{2}+b x+c\right)^{n}}
\]
where the numbers \(A_{1}, B_{1}, A_{2}, B_{2}, \ldots, A_{n}, B_{n}\) are to be determined.

\section*{EXAMPLE 5 Repeated Irreducible Quadratic Factor}

Write the partial fraction decomposition of \(\frac{x^{3}+x^{2}}{\left(x^{2}+4\right)^{2}}\).
Solution The denominator contains the repeated irreducible quadratic factor \(\left(x^{2}+4\right)^{2}\), so write
\[
\begin{equation*}
\frac{x^{3}+x^{2}}{\left(x^{2}+4\right)^{2}}=\frac{A x+B}{x^{2}+4}+\frac{C x+D}{\left(x^{2}+4\right)^{2}} \tag{11}
\end{equation*}
\]

Clear fractions to obtain
\[
x^{3}+x^{2}=(A x+B)\left(x^{2}+4\right)+C x+D
\]

Collecting like terms yields the identity
\[
x^{3}+x^{2}=A x^{3}+B x^{2}+(4 A+C) x+4 B+D
\]

Equating coefficients, we arrive at the system
\[
\left\{\begin{aligned}
A & =1 \\
B & =1 \\
4 A+C & =0 \\
4 B+D & =0
\end{aligned}\right.
\]

The solution is \(A=1, B=1, C=-4, D=-4\). From equation (11),
\[
\frac{x^{3}+x^{2}}{\left(x^{2}+4\right)^{2}}=\frac{x+1}{x^{2}+4}+\frac{-4 x-4}{\left(x^{2}+4\right)^{2}}
\]

\subsection*{10.5 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. True or False The equation \((x-1)^{2}-1=x(x-2)\) is an example of an identity. (p. A63)
2. True or False The rational expression \(\frac{5 x^{2}-1}{x^{3}+1}\) is proper. (p.238)
3. Factor completely: \(3 x^{4}+6 x^{3}+3 x^{2}\) (pp. A37-A38)
4. True or False Every polynomial with real numbers as coefficients can be factored into products of linear and/or irreducible quadratic factors. (p. 227)

\section*{Skill Building}

In Problems 5-12, tell whether the given rational expression is proper or improper. If improper, rewrite it as the sum of a polynomial and a proper rational expression.
5. \(\frac{x}{x^{2}-1}\)
6. \(\frac{5 x+2}{x^{3}-1}\)
7. \(\frac{x^{2}+5}{x^{2}-4}\)
8. \(\frac{3 x^{2}-2}{x^{2}-1}\)
9. \(\frac{5 x^{3}+2 x-1}{x^{2}-4}\)
10. \(\frac{3 x^{4}+x^{2}-2}{x^{3}+8}\)
11. \(\frac{x(x-1)}{(x+4)(x-3)}\)
12. \(\frac{2 x\left(x^{2}+4\right)}{x^{2}+1}\)

In Problems 13-46, write the partial fraction decomposition of each rational expression.
13. \(\frac{4}{x(x-1)}\)
14. \(\frac{3 x}{(x+2)(x-1)}\)
15. \(\frac{1}{x\left(x^{2}+1\right)}\)
16. \(\frac{1}{(x+1)\left(x^{2}+4\right)}\)
17. \(\frac{x}{(x-1)(x-2)}\)
18. \(\frac{3 x}{(x+2)(x-4)}\)
19. \(\frac{x^{2}}{(x-1)^{2}(x+1)}\)
20. \(\frac{x+1}{x^{2}(x-2)}\)
21. \(\frac{1}{x^{3}-8}\)
22. \(\frac{2 x+4}{x^{3}-1}\)
23. \(\frac{x^{2}}{(x-1)^{2}(x+1)^{2}}\)
24. \(\frac{x+1}{x^{2}(x-2)^{2}}\)
25. \(\frac{x-3}{(x+2)(x+1)^{2}}\)
26. \(\frac{x^{2}+x}{(x+2)(x-1)^{2}}\)
27. \(\frac{x+4}{x^{2}\left(x^{2}+4\right)}\)
28. \(\frac{10 x^{2}+2 x}{(x-1)^{2}\left(x^{2}+2\right)}\)
29. \(\frac{x^{2}+2 x+3}{(x+1)\left(x^{2}+2 x+4\right)}\)
30. \(\frac{x^{2}-11 x-18}{x\left(x^{2}+3 x+3\right)}\)
31. \(\frac{x}{(3 x-2)(2 x+1)}\)
32. \(\frac{1}{(2 x+3)(4 x-1)}\)
33. \(\frac{x}{x^{2}+2 x-3}\)
34. \(\frac{x^{2}-x-8}{(x+1)\left(x^{2}+5 x+6\right)}\)
35. \(\frac{x^{2}+2 x+3}{\left(x^{2}+4\right)^{2}}\)
36. \(\frac{x^{3}+1}{\left(x^{2}+16\right)^{2}}\)

\subsection*{10.6 Systems of Nonlinear Equations}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Lines (Foundations, Section 3, pp. 19-29)
- Ellipses (Section 9.3, pp. 670-676)
- Circles (Foundations, Section 4, pp. 34-37)
- Parabolas (Section 9.2, pp. 661-666)

Now Work the ‘Are You Prepared?’ problems on page 794.
- Hyperbolas (Section 9.4, pp. 680-688)

\section*{OBJECTIVES \\ 1 Solve a System of Nonlinear Equations Using Substitution (p. 789)}

2 Solve a System of Nonlinear Equations Using Elimination (p. 790)

\section*{1 Solve a System of Nonlinear Equations Using Substitution}

In Section 10.1, we observed that the solution to a system of linear equations could be found geometrically by determining the point(s) of intersection (if any) of the graphs of the equations in the system. Similarly, when solving systems of nonlinear equations, the solution(s) also represents the point(s) of intersection (if any) of the graphs of the equations.

There is no general methodology for solving a system of nonlinear equations. At some times substitution is best; at other times elimination is best; and sometimes neither of these methods works. Experience and a certain degree of imagination are your allies here.

Before we begin, two comments are in order.
1. If the system contains two variables and if the equations in the system are easy to graph, then graph them. By graphing each equation in the system, you can get an idea how many solutions a system has and approximately where they are located.
2. Extraneous solutions can creep in when solving nonlinear systems, so it is imperative to check all apparent solutions.

\section*{EXAMPLE I}

\section*{Solving a System of Nonlinear Equations}

Solve the following system of equations:
\[
\left\{\begin{array}{l}
3 x-y=-2 \\
2 x^{2}-y=0
\end{array}\right.
\]

First, notice that the system contains two variables and that we know how to graph each equation. See Figure 9. The system apparently has two solutions.

To use substitution to solve the system, we choose to solve equation (1) for \(y\).
\[
\begin{aligned}
3 x-y & =-2 \quad \text { Equation (1) } \\
y & =3 x+2
\end{aligned}
\]

Substitute \(3 x+2\) for \(y\) in equation (2). The result is an equation containing just the variable \(x\), which we can then solve.
\[
\begin{aligned}
2 x^{2}-y & =0 & & \text { Equation (2) } \\
2 x^{2}-(3 x+2) & =0 & & \text { Substitute } 3 x+2 \text { for } y . \\
2 x^{2}-3 x-2 & =0 & & \text { Distribute. } \\
(2 x+1)(x-2) & =0 & & \text { Factor. } \\
2 x+1=0 \quad \text { or } x-2 & =0 & & \text { Apply the Zero-Product Property. } \\
x=-\frac{1}{2} & \text { or } \quad x & =2 &
\end{aligned}
\]

Using these values for \(x\) in \(y=3 x+2\), we find
\[
y=3\left(-\frac{1}{2}\right)+2=\frac{1}{2} \quad \text { or } \quad y=3(2)+2=8
\]

The apparent solutions are \(x=-\frac{1}{2}, y=\frac{1}{2}\) and \(x=2, y=8\).
Check: For \(x=-\frac{1}{2}, y=\frac{1}{2}\),
\[
\left\{\begin{array}{l}
3\left(-\frac{1}{2}\right)-\frac{1}{2}=-\frac{3}{2}-\frac{1}{2}=-2  \tag{1}\\
2\left(-\frac{1}{2}\right)^{2}-\frac{1}{2}=2\left(\frac{1}{4}\right)-\frac{1}{2}=0
\end{array}\right.
\]

For \(x=2, y=8\),
\[
\left\{\begin{aligned}
3(2)-8 & =6-8=-2 \\
2(2)^{2}-8 & =2(4)-8=0
\end{aligned}\right.
\]

Each solution checks. The graphs in Figure 9 intersect at the points \(\left(-\frac{1}{2}, \frac{1}{2}\right)\) and \((2,8)\).

Check: Graph \(3 x-y=-2\left(Y_{1}=3 x+2\right)\) and \(2 x^{2}-y=0\left(Y_{2}=2 x^{2}\right)\), and compare what you see with Figure 9. Use INTERSECT (twice) to find the two points of intersection.
m-Now Work problem 15 using substitution
2 Solve a System of Nonlinear Equations Using Elimination

\section*{EXAMPLE 2 Solving a System of Nonlinear Equations}

Solve: \(\left\{\begin{array}{l}x^{2}+y^{2}=13 \\ x^{2}-y=7\end{array}\right.\)
(1) Acircle
(2) Aparabola

First, graph each equation, as shown in Figure 10. Based on the graph, we expect four solutions. By subtracting equation (2) from equation (1), the variable \(x\) can be eliminated.
\[
\left\{\begin{array}{l}
x^{2}+y^{2}=13 \\
x^{2}-y=7
\end{array}\right. \text { Subtract. }
\]

This quadratic equation in \(y\) can be solved by factoring.
\[
\begin{aligned}
& y^{2}+y-6=0 \quad \text { Place is standard form. } \\
& (y+3)(y-2)=0 \quad \text { Factor. } \\
& y=-3 \text { or } y=2 \text { Apply the Zero-Product Property. }
\end{aligned}
\]

Use these values for \(y\) in equation (2) to find \(x\).
\[
\begin{aligned}
& \text { If } y=2 \text {, then } x^{2}=y+7=9 \text {, so } x=3 \text { or }-3 . \\
& \text { If } y=-3 \text {, then } x^{2}=y+7=4 \text {, so } x=2 \text { or }-2 .
\end{aligned}
\]

We have four potential solutions: \(x=3, y=2 ; \quad x=-3, y=2 ; \quad x=2, y=-3\); and \(x=-2, y=-3\).

You should verify that, in fact, these four solutions also satisfy equation (1), so all four are solutions of the system. The four points, \((3,2),(-3,2),(2,-3)\), and \((-2,-3)\), are the points of intersection of the graphs. Look again at Figure 10.

Check: Graph \(x^{2}+y^{2}=13\) and \(x^{2}-y=7\). (Remember that to graph \(x^{2}+y^{2}=13\) requires two functions: \(Y_{1}=\sqrt{13-x^{2}}\) and \(Y_{2}=-\sqrt{13-x^{2}}\).) Use INTERSECT to find the points of intersection.
an Now Work problem 13 usingelimination

\section*{EXAMPLE 3 Solving a System of Nonlinear Equations}

Figure 11

\section*{EXAMPLE 4 Solving a System of Nonlinear Equations}

Solve: \(\left\{\begin{array}{r}x^{2}+x+y^{2}-3 y+2=0 \\ x+1+\frac{y^{2}-y}{x}=0\end{array}\right.\)

\section*{Solution Using Elimination}

Solve: \(\left\{\begin{aligned} x^{2}-y^{2} & =4 & & \text { (1) } \\ y & =x^{2} & & \text { A hyperbola } \\ & & & \text { A parabola }\end{aligned}\right.\) replace \(x^{2}\) by \(y\) in equation (1). The result is graphs of these two equations do not intersect. See Figure 11.

Solution Either substitution or elimination can be used here. Using substitution,
\[
\begin{array}{rl}
y-y^{2}=4 & y=x^{2} \\
y^{2}-y+4=0 & \text { Place in standard form. }
\end{array}
\]

This is a quadratic equation. Its discriminant is \((-1)^{2}-4 \cdot 1 \cdot 4=1-16=\) \(-15<0\). The equation has no real solutions, so the system is inconsistent. The

First, multiply equation (2) by \(x\) to eliminate the fraction. The result is an equivalent system because \(x\) cannot be 0 . [Look at equation (2) to see why.]
\[
\left\{\begin{array}{r}
x^{2}+x+y^{2}-3 y+2=0  \tag{1}\\
x^{2}+x+y^{2}-y=0
\end{array}\right.
\]

Now subtract equation (2) from equation (1) to eliminate \(x\). The result is
\[
\begin{aligned}
-2 y+2 & =0 \\
y & =1 \quad \text { Solve for } y
\end{aligned}
\]

To find \(x\), back-substitute \(y=1\) in equation (1):
\[
\begin{array}{rlrl}
x^{2}+x+y^{2}-3 y+2 & =0 & & \text { Equation (1) } \\
x^{2}+x+1-3+2 & =0 & & \text { Substitute } 1 \text { for } y . \\
x^{2}+x & =0 & & \text { Simplify. } \\
x(x+1) & =0 & & \text { Factor. } \\
x=0 & \text { or } \quad x & =-1 & \\
\text { Apply the Zero-Product Property. }
\end{array}
\]

Because \(x\) cannot be 0 , the value \(x=0\) is extraneous, so discard it.
Check: Now check \(x=-1, y=1\) :
\[
\left\{\begin{align*}
(-1)^{2}+(-1)+1^{2}-3(1)+2 & =1-1+1-3+2=0  \tag{2}\\
-1+1+\frac{1^{2}-1}{-1} & =0+\frac{0}{-1}=0
\end{align*}\right.
\]

The solution is \(x=-1, y=1\). The point of intersection of the graphs of the equations is \((-1,1)\).

In Problem 55 you are asked to graph the equations given in Example 4. Be sure to show holes in the graph of equation (2) for \(x=0\).
Now Work problems 29 And 49

\section*{EXAMPLE 5 Solving a System of Nonlinear Equations}

Solve: \(\left\{\begin{array}{l}3 x y-2 y^{2}=-2 \\ 9 x^{2}+4 y^{2}=10\end{array}\right.\)
Solution Multiply equation (1) by 2 and add the result to equation (2) to eliminate the \(y^{2}\) terms.
\[
\left\{\begin{aligned}
6 x y-4 y^{2}=-4 & \\
\begin{array}{ll}
6 x^{2}+4 y^{2}=10
\end{array} & (2) \\
9 x^{2}+6 x y=6 & \text { Add. } \\
9 x^{2}+2 & \text { Divide each side by } 3 .
\end{aligned}\right.
\]

Since \(x \neq 0\) (do you see why?), solve for \(y\) in this equation to get
\[
\begin{equation*}
y=\frac{2-3 x^{2}}{2 x} \quad x \neq 0 \tag{3}
\end{equation*}
\]

Now substitute for \(y\) in equation (2) of the system.
\[
\begin{aligned}
9 x^{2}+4 y^{2} & =10 & & \text { Equation (2) } \\
9 x^{2}+4\left(\frac{2-3 x^{2}}{2 x}\right)^{2} & =10 & & \text { Substitute } \frac{2-3 x^{2}}{2 x} \text { for } y . \\
9 x^{2}+\frac{4-12 x^{2}+9 x^{4}}{x^{2}} & =10 & & \text { Expand and simplify. } \\
9 x^{4}+4-12 x^{2}+9 x^{4} & =10 x^{2} & & \text { Multiply both sides by } x^{2} . \\
18 x^{4}-22 x^{2}+4 & =0 & & \text { Subtract } 10 x^{2} \text { from both sides. } \\
9 x^{4}-11 x^{2}+2 & =0 & & \text { Divide both sides by } 2 .
\end{aligned}
\]

This quadratic equation (in \(x^{2}\) ) can be factored:
\[
\begin{array}{ccrrr}
\left(9 x^{2}-2\right)\left(x^{2}-1\right)=0 \\
9 x^{2}-2=0 & & \text { or } & x^{2}-1=0 \\
x^{2}=\frac{2}{9} & \text { or } & x^{2}=1 \\
x= \pm \sqrt{\frac{2}{9}}= \pm \frac{\sqrt{2}}{3} & & \text { or } & & x= \pm 1
\end{array}
\]

To find \(y\), use equation (3):
\[
\begin{aligned}
& \text { If } x=\frac{\sqrt{2}}{3}: \quad y=\frac{2-3 x^{2}}{2 x}=\frac{2-\frac{2}{3}}{2\left(\frac{\sqrt{2}}{3}\right)}=\frac{4}{2 \sqrt{2}}=\sqrt{2} \\
& \text { If } x=-\frac{\sqrt{2}}{3}: \quad y=\frac{2-3 x^{2}}{2 x}=\frac{2-\frac{2}{3}}{2\left(-\frac{\sqrt{2}}{3}\right)}=\frac{4}{-2 \sqrt{2}}=-\sqrt{2}
\end{aligned}
\]
\[
\begin{aligned}
& \text { If } x=1: \quad y=\frac{2-3 x^{2}}{2 x}=\frac{2-3(1)^{2}}{2}=-\frac{1}{2} \\
& \text { If } x=-1: \quad y=\frac{2-3 x^{2}}{2 x}=\frac{2-3(-1)^{2}}{-2}=\frac{1}{2}
\end{aligned}
\]

The system has four solutions: \(\left(\frac{\sqrt{2}}{3}, \sqrt{2}\right),\left(-\frac{\sqrt{2}}{3},-\sqrt{2}\right),\left(1,-\frac{1}{2}\right),\left(-1, \frac{1}{2}\right)\).
Check them for yourself.

Now Work problem 47
The next example illustrates an imaginative solution to a system of nonlinear equations.

Solution Let \(v_{1}, v_{2}\), and \(v_{3}\) denote the speeds of the first-, second-, and third-place runners, respectively. Let \(t_{1}\) and \(t_{2}\) denote the times (in hours) required for the first-place runner and the second-place runner to finish the race. Then we have the system of equations
\[
\begin{cases}50=v_{1} t_{1} & \text { (1) } \quad \text { First-place runner goes } 50 \text { miles in } t_{1} \text { hours. } \\ 49=v_{2} t_{1} & \text { (2) } \quad \text { Second-place runner goes } 49 \text { miles in } t_{1} \text { hours. } \\ 46=v_{3} t_{1} & \text { (3) } \quad \text { Third-place runner goes } 46 \text { miles in } t_{1} \text { hours. } \\ 50=v_{2} t_{2} & \text { (4) } \quad \text { Second-place runner goes } 50 \text { miles in } t_{2} \text { hours. }\end{cases}
\]

We seek the distance \(d\) of the third-place runner from the finish at time \(t_{2}\). At time \(t_{2}\), the third-place runner has gone a distance of \(v_{3} t_{2}\) miles, so the distance \(d\) remaining is \(50-v_{3} t_{2}\). Now
\[
\begin{aligned}
d & =50-v_{3} t_{2} \\
& =50-v_{3}\left(t_{1} \cdot \frac{t_{2}}{t_{1}}\right) \\
& =50-\left(v_{3} t_{1}\right) \cdot \frac{t_{2}}{t_{1}} \\
& =50-46 \cdot \frac{50}{\frac{v_{2}}{50}} \\
& =50-46 \cdot \frac{v_{1}}{v_{2}}
\end{aligned} \quad\left\{\begin{array}{l}
\text { From (3), } v_{3} t_{1}=46 \\
\text { From (4), } t_{2}=\frac{50}{v_{2}} \\
\text { From (1), } t_{1}=\frac{50}{v_{1}} \\
\end{array} \quad=50-46 \cdot \frac{50}{49} \quad\right. \text { From the quotient of (1) and (2) }
\]

\section*{Historical Feature}
n the beginning of this section, we said that imagination and experience are important in solving systems of nonlinear equations. Indeed, these kinds of problems lead into some of the deepest and most difficult parts of modern mathematics. Look again at the graphs in Examples 1 and 2 of this section (Figures 9 and 10). We see that Example 1 has two solutions and Example 2 has four solutions. We might conjecture that the number of solutions is equal to the product of the degrees of the equations involved. This conjecture was indeed made by Étienne Bézout (1730-1783), but working out the details took about 150 years. It turns out that to arrive at the correct number of intersections, we must count not only the complex number intersections but also those intersections that, in a certain sense, lie at infinity. For example, a parabola and a line lying on the axis of the parabola intersect at the vertex and at infinity. This topic is part of the study of algebraic geometry.

\section*{Historical Problem}

A papyrus dating back to 1950 BC contains the following problem: "A given surface area of 100 units of area shall be represented as the sum of two squares whose sides are to each other as \(1: \frac{3}{4}\)." Solve for the sides by solving the system of equations
\[
\left\{\begin{aligned}
x^{2}+y^{2} & =100 \\
x & =\frac{3}{4} y
\end{aligned}\right.
\]

\subsection*{10.6 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. Graph the equation: \(y=3 x+2\) (pp. 24-25)
3. Graph the equation: \(y^{2}=x^{2}-1\) (pp. 679-686)
2. Graph the equation: \(y+4=x^{2}\) (pp. 664-665)
4. Graph the equation: \(x^{2}+4 y^{2}=4\) (pp. 669-674)

\section*{Skill Building}

In Problems 5-24, graph each equation of the system. Then solve the system to find the points of intersection.
5. \(\left\{\begin{array}{l}y=x^{2}+1 \\ y=x+1\end{array}\right.\)
6. \(\left\{\begin{array}{l}y=x^{2}+1 \\ y=4 x+1\end{array}\right.\)

63. \(\left\{\begin{aligned} x y & =2 \\ y & =\ln x\end{aligned}\right.\)
64. \(\left\{\begin{aligned} x^{2}+y^{2} & =4 \\ y & =\ln x\end{aligned}\right.\)

\section*{- Mixed Practice}

In Problems 65-70, graph each equation and find the point(s) of intersection, if any.
65. The line \(x+2 y=0\) and the circle \((x-1)^{2}+(y-1)^{2}=5\)
66. The line \(x+2 y+6=0\) and the circle \((x+1)^{2}+(y+1)^{2}=5\)
67. The circle \((x-1)^{2}+(y+2)^{2}=4\) and the parabola \(y^{2}+4 y-x+1=0\)
68. The circle \((x+2)^{2}+(y-1)^{2}=4\) and the parabola \(y^{2}-2 y-x-5=0\)
69. \(y=\frac{4}{x-3}\) and the circle \(x^{2}-6 x+y^{2}+1=0 \quad\) 70. \(y=\frac{4}{x+2}\) and the circle \(x^{2}+4 x+y^{2}-4=0\)

\section*{Applications and Extensions}
71. The difference of two numbers is 2 , and the sum of their squares is 10 . Find the numbers.
72. The sum of two numbers is 7 , and the difference of their squares is 21 . Find the numbers.
73. The product of two numbers is 4 , and the sum of their squares is 8 . Find the numbers.
74. The product of two numbers is 10 , and the difference of their squares is 21 . Find the numbers.
75. The difference of two numbers is the same as their product, and the sum of their reciprocals is 5 . Find the numbers.
76. The sum of two numbers is the same as their product, and the difference of their reciprocals is 3 . Find the numbers.
77. The ratio of \(a\) to \(b\) is \(\frac{2}{3}\). The sum of \(a\) and \(b\) is 10 . What is the ratio of \(a+b\) to \(b-a\) ?
78. The ratio of \(a\) to \(b\) is \(4: 3\). The sum of \(a\) and \(b\) is 14 . What is the ratio of \(a-b\) to \(a+b\) ?
79. Geometry The perimeter of a rectangle is 16 inches, and its area is 15 square inches. What are its dimensions?
80. Geometry An area of 52 square feet is to be enclosed by two squares whose sides are in the ratio of 2:3. Find the sides of the squares.
81. Geometry Two circles have circumferences that add up to \(12 \pi\) centimeters and areas that add up to \(20 \pi\) square centimeters. Find the radius of each circle.
82. Geometry The altitude of an isosceles triangle drawn to its base is 3 centimeters, and its perimeter is 18 centimeters. Find the length of its base.
83. The Tortoise and the Hare In a 21 -meter race between a tortoise and a hare, the tortoise leaves 9 minutes before the hare. The hare, by running at an average speed of 0.5 meter per hour faster than the tortoise, crosses the finish line 3 minutes before the tortoise. What are the average speeds of the tortoise and the hare?

84. Running a Race In a 1 -mile race, the winner crosses the
 finish line 10 feet ahead of the second-place runner and 20 feet ahead of the third-place runner. Assuming that each runner maintains a constant speed throughout the race, by how many feet does the second-place runner beat the thirdplace runner?
85. Constructing a Box A rectangular piece of cardboard, whose area is 216 square centimeters, is made into an open box by cutting a 2 -centimeter square from each corner and turning up the sides. See the figure. If the box is to have a volume of 224 cubic centimeters, what size cardboard should you start with?

86. Constructing a Cylindrical Tube A rectangular piece of cardboard, whose area is 216 square centimeters, is made into a cylindrical tube by joining together two sides of the rectangle. See the figure. If the tube is to have a volume of 224 cubic centimeters, what size cardboard should you start with?

87. Fencing A farmer has 300 feet of fence available to enclose a 4500 -square-foot region in the shape of adjoining squares, with sides of length \(x\) and \(y\). See the figure. Find \(x\) and \(y\).

88. Bending Wire A wire 60 feet long is cut into two pieces. Is it possible to bend one piece into the shape of a square and the other into the shape of a circle so that the total area enclosed by the two pieces is 100 square feet? If this is possible, find the length of the side of the square and the radius of the circle.
89. Geometry Find formulas for the length \(l\) and width \(w\) of a rectangle in terms of its area \(A\) and perimeter \(P\).
90. Geometry Find formulas for the base \(b\) and one of the equal sides \(l\) of an isosceles triangle in terms of its altitude \(h\) and perimeter \(P\).
91. Descartes' Method of Equal Roots Descartes' method for finding tangents depends on the idea that for many graphs, the tangent line at a given point is the unique line that intersects the graph at that point only. We apply his method to find an equation of the tangent line to the parabola \(y=x^{2}\) at the point \((2,4)\). See the figure.

First, we know that the equation of the tangent line must be in the form \(y=m x+b\). Using the fact that the point \((2,4)\) is on the line, we can solve for \(b\) in terms of \(m\) and get the equation \(y=m x+(4-2 m)\). Now we want \((2,4)\) to be the unique solution to the system
\[
\left\{\begin{array}{l}
y=x^{2} \\
y=m x+4-2 m
\end{array}\right.
\]

From this system, we get \(x^{2}-m x+(2 m-4)=0\). By using the quadratic formula, we get
\[
x=\frac{m \pm \sqrt{m^{2}-4(2 m-4)}}{2}
\]

To obtain a unique solution for \(x\), the two roots must be equal; in other words, the discriminant \(m^{2}-4(2 m-4)\) must be 0 . Complete the work to get \(m\), and write an equation of the tangent line.

In Problems 92-98, use Descartes' method from Problem 91 to find the equation of the line tangent to each graph at the given point.
92. \(x^{2}+y^{2}=10\); at \((1,3)\)
93. \(y=x^{2}+2\); at \((1,3)\)
94. \(x^{2}+y=5\); at \((-2,1)\)
95. \(2 x^{2}+3 y^{2}=14\); at \((1,2)\)
96. \(3 x^{2}+y^{2}=7\); at \((-1,2)\)
97. \(x^{2}-y^{2}=3\); at \((2,1)\)
98. \(2 y^{2}-x^{2}=14\); at \((2,3)\)
99. If \(r_{1}\) and \(r_{2}\) are two solutions of a quadratic equation \(a x^{2}+b x+c=0\), it can be shown that
\[
r_{1}+r_{2}=-\frac{b}{a} \quad \text { and } \quad r_{1} r_{2}=\frac{c}{a}
\]

Solve this system of equations for \(r_{1}\) and \(r_{2}\).

\section*{Discussion and Writing}
100. A circle and a line intersect at most twice. A circle and a parabola intersect at most four times. Deduce that a circle and the graph of a polynomial of degree 3 intersect at most six times. What do you conjecture about a polynomial of degree 4? What about a polynomial of degree \(n\) ? Can you explain your conclusions using an algebraic argument?
101. Suppose that you are the manager of a sheet metal shop. A customer asks you to manufacture 10,000 boxes, each box being open on top. The boxes are required to have a square
base and a 9-cubic-foot capacity. You construct the boxes by cutting out a square from each corner of a square piece of sheet metal and folding along the edges.
(a) What are the dimensions of the square to be cut if the area of the square piece of sheet metal is 100 square feet?
(b) Could you make the box using a smaller piece of sheet metal? Make a list of the dimensions of the box for various pieces of sheet metal.

\section*{Retain Your Knowledge}

Problems 102-105 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
102. Solve using the quadratic formula: \(7 x^{2}=8-6 x\)
103. Find the equation of the line with slope \(-\frac{2}{5}\) that passes through the point \((10,-7)\).
104. Given \(\cot \theta=\frac{24}{7}\) and \(\cos \theta<0\), find the exact value of each of the remaining trigonometric functions.
105. Finding the Grade of a Mountain Trail A straight trail with uniform inclination leads from a hotel, elevation 5300 feet, to a lake in the valley, elevation 4100 feet. The length of the trail is 4420 feet. What is the inclination (grade) of the trail?

\section*{'Are You Prepared?' Answers}

1.
2.

4.

\subsection*{10.7 Systems of Inequalities}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Solving Linear Inequalities (Appendix A, Section A.10, pp. A84-A86)
- Lines (Foundations, Section 3, pp. 19-29)
- Circles (Foundations, Section 4, pp. 34-37)
- Graphing Techniques: Transformations (Section 1.5, pp. 89-97)

Now Work the 'Are You Prepared?' problems on page 803.
\[
\begin{aligned}
\text { OBJECTIVES } & 1 \text { Graph an Inequality (p. 798) } \\
& 2 \text { Graph a System of Inequalities (p.800) }
\end{aligned}
\]

In the Appendix, Section A.10, we discussed inequalities in one variable. In this section, we discuss inequalities in two variables.

\section*{EXAMPLE I Examples of Inequalities in Two Variables}
(a) \(3 x+y \leq 6\)
(b) \(x^{2}+y^{2}<4\)
(c) \(y^{2}>x\)

\section*{1 Graph an Inequality}

An inequality in two variables \(x\) and \(y\) is satisfied by an ordered pair \((a, b)\) if, when \(x\) is replaced by \(a\) and \(y\) by \(b\), a true statement results. The graph of an inequality in two variables \(x\) and \(y\) consists of all points \((x, y)\) whose coordinates satisfy the inequality.

Let's look at an example.

\section*{EXAMPLE 2 Graphing an Inequality}

Graph the linear inequality: \(3 x+y \leq 6\)
Solution Begin by graphing the equation
\[
3 x+y=6
\]
formed by replacing (for now) the \(\leq\) symbol with an \(=\) sign. The graph of the equation is a line. See Figure 12(a). This line is part of the graph of the inequality that we seek because the inequality is nonstrict, so we draw the line as a solid line. (Do you see why? We are seeking points for which \(3 x+y\) is less than or equal to 6 .)

Figure 12

(a) \(3 x+y=6\)

(b) Graph of \(3 x+y \leq 6\)

Now let's test a few randomly selected points to see whether they belong to the graph of the inequality.
\[
3 x+y \leq 6
\]
\[
(4,-1) \quad 3(4)+(-1)=11>6
\]
\[
\begin{aligned}
& (5,5) \\
& (-1,2) \\
& (-2,-2)
\end{aligned}
\]
\[
3(5)+5=20>6
\]
\[
3(-1)+2=-1 \leq 6
\]
\[
3(-2)+(-2)=-8 \leq 6
\]

\section*{Conclusion}

Does not belong to the graph
Does not belong to the graph
Belongs to the graph
Belongs to the graph

Look again at Figure 12(a). Notice that the two points that belong to the graph both lie on the same side of the line, and the two points that do not belong to the graph lie on the opposite side. As it turns out, all the points that satisfy the inequality will lie on one side of the line, all the points that do not satisfy the inequality will lie on the other side. The graph we seek consists of all points that lie on the line or on the same side of the line as \((-1,2)\) and \((-2,-2)\), and is shown as the shaded region in Figure 12(b).

\section*{am Now Work problem 15}

The graph of any inequality in two variables may be obtained in a like way. The steps to follow are given next.

\section*{Steps for Graphing an Inequality}

STEP 1: Replace the inequality symbol with an equal sign and graph the resulting equation. If the inequality is strict, use dashes; if it is nonstrict, use a solid mark. This graph separates the \(x y\)-plane into two or more regions.
STEP 2: In each region, select a test point \(P\).
(a) If the coordinates of \(P\) satisfy the inequality, so do all the points in that region. Indicate this by shading the region.
(b) If the coordinates of \(P\) do not satisfy the inequality, no point in that region does.

\section*{EXAMPLE 3}

Solution
Figure 13

\section*{Graphing an Inequality}

Graph: \(x^{2}+y^{2} \leq 4\)
STEP 1: Graph the equation \(x^{2}+y^{2}=4\), a circle of radius 2, center at the origin. A solid circle will be used because the inequality is not strict.
STEP 2: Use two test points, one inside the circle, the other outside.
\[
\begin{array}{cl}
\text { Inside } & (0,0): x^{2}+y^{2}=0^{2}+0^{2}=0 \leq 4 \quad \text { Belongs to the graph } \\
\text { Outside } & (4,0): x^{2}+y^{2}=4^{2}+0^{2}=16>4
\end{array}
\]

All the points inside and on the circle satisfy the inequality. See Figure 13.

\section*{- Now Work problem 17}

\section*{Linear Inequalities}

Linear inequalities are inequalities in one of the forms
\[
A x+B y<C \quad A x+B y>C \quad A x+B y \leq C \quad A x+B y \geq C
\]
where \(A\) and \(B\) are not both zero.

The graph of the corresponding equation of a linear inequality is a line that separates the \(x y\)-plane into two regions called half-planes. See Figure 14.

As shown, \(A x+B y=C\) is the equation of the boundary line, and it divides the plane into two half-planes: one for which \(A x+B y<C\) and the other for which \(A x+B y>C\). Because of this, for linear inequalities, only one test point is required. Be sure the test point is not on the boundary line.

Figure 14

\section*{EXAMPLE 4 Graphing Linear Inequalities}

Graph: (a) \(y<2 \quad\) (b) \(y \geq 2 x\) used to graph inequalities. To see how, read Appendix B, Section B.6.
(a) The graph of the equation \(y=2\) is a dashed horizontal line and so is not part of the graph of the inequality. Since \((0,0)\) satisfies the inequality, the graph consists of the half-plane below the line \(y=2\). See Figure 15.

Figure 15

(b) The graph of the equation \(y=2 x\) is a solid line and so is part of the graph of the inequality. Using \((3,0)\) as a test point, we find it does not satisfy the inequality \([0<2 \cdot 3]\). Points in the half-plane on the opposite side of \((3,0)\) satisfy the inequality. See Figure 16.

Figure 16

am Now Work problem 13

\section*{2 Graph a System of Inequalities}

The graph of a system of inequalities in two variables \(x\) and \(y\) is the set of all points \((x, y)\) that simultaneously satisfy each inequality in the system. The graph of a system of inequalities can be obtained by graphing each inequality individually and then determining where, if at all, they intersect.

\section*{EXAMPLE 5}

\section*{Graphing a System of Linear Inequalities}

Graph the system: \(\left\{\begin{array}{r}x+y \geq 2 \\ 2 x-y \leq 4\end{array}\right.\)
Solution Begin by graphing the lines \(x+y=2\) and \(2 x-y=4\) using a solid line since both inequalities are nonstrict. Use the test point \((0,0)\) for each inequality. For example, \((0,0)\) does not satisfy \(x+y \geq 2\), so shade above the line \(x+y=2\). See Figure 17(a). Also, \((0,0)\) does satisfy \(2 x-y \leq 4\), so shade above the line \(2 x-y=4\). See

Figure 17(b). The intersection of the shaded regions (in purple) gives us the result presented in Figure 17(c). Note that the boundary lines are part of the graph of the system.

\section*{Figure 17}

(a) \(\begin{gathered}\text { Graph of } \\ x+y>2\end{gathered}\)

(b) \(\begin{aligned} & \text { Graph of } \\ & 2 x-y \leq 4\end{aligned}\)

(c) \(\left\{\begin{array}{l}x+y \geq 2 \\ 2 x-y \leq 4\end{array}\right.\)

\section*{EXAMPLE 6 Graphing a System of Linear Inequalities}

Graph the system: \(\left\{\begin{array}{l}x+y \leq 2 \\ x+y \geq 0\end{array}\right.\)

\section*{Solution}

See Figure 18. The overlapping purple-shaded region together with the two boundary lines is the graph of the system.

\section*{Figure 18}

NOTE In Example 6 the test point cannot be \((O, O)\) because it lies on a boundary line.

\section*{EXAMPLE 7 Graphing a System of Linear Inequalities}

Graph the systems:
(a) \(\left\{\begin{array}{l}2 x-y \geq 0 \\ 2 x-y \geq 2\end{array}\right.\)
(b) \(\left\{\begin{array}{l}x+2 y \leq 2 \\ x+2 y \geq 6\end{array}\right.\)
(a) See Figure 19. The overlapping purpleshaded region, combined with the boundary line \(2 x-y=2\), is the graph of the system. Note that the graph of the system is identical to the graph of the single inequality \(2 x-y \geq 2\).
(b) See Figure 20. Because no overlapping region results, there are no points in the \(x y\)-plane that simultaneously satisfy each inequality. The system has no solution.

Figure 19

Figure 20

\section*{EXAMPLE 8 Graphing a System of Nonlinear Inequalities}

Graph the region below the graph of \(x+y=2\) and above the graph of \(y=x^{2}-4\) by graphing the system:
\[
\left\{\begin{aligned}
y & \geq x^{2}-4 \\
x+y & \leq 2
\end{aligned}\right.
\]

Graph the boundary lines with solid lines and label all points of intersection.
Solution Figure 21 shows the graph of the region on or above the graph of the parabola \(y=x^{2}-4\) and on or below the graph of the line \(x+y=2\). The points of intersection are found by solving the system of equations
\[
\left\{\begin{aligned}
y & =x^{2}-4 \\
x+y & =2
\end{aligned}\right.
\]

Using substitution, we find
\[
\begin{array}{r}
x+\left(x^{2}-4\right)=2 \\
x^{2}+x-6=0 \\
(x+3)(x-2)=0 \\
x=-3 \text { or } x=2
\end{array}
\]

The two points of intersection are \((-3,5)\) and \((2,0)\).

Now Work problem 37

\section*{EXAMPLE 9 Graphing a System of Four Linear Inequalities}

Figure 22

Graph the system: \(\left\{\begin{aligned} x+y & \geq 3 \\ 2 x+y & \geq 4 \\ x & \geq 0 \\ y & \geq 0\end{aligned}\right.\)
Solution See Figure 22. The two inequalities \(x \geq 0\) and \(y \geq 0\) require the graph of the system to be in quadrant I , or on a non-negative coordinate axis. We concentrate on the remaining two inequalities. The intersection of the graphs of these inequalities is shown in dark purple.

\section*{EXAMPLE IO Financial Planning}

A retired couple can invest up to \(\$ 25,000\). As their financial adviser, you recommend that they place at least \(\$ 15,000\) in Treasury bills yielding \(2 \%\) and at most \(\$ 5000\) in corporate bonds yielding \(3 \%\).
(a) Using \(x\) to denote the amount of money invested in Treasury bills and \(y\) the amount invested in corporate bonds, write a system of linear inequalities that describes the possible amounts of each investment. We shall assume that \(x\) and \(y\) are in thousands of dollars.
(b) Graph the system.

\section*{Solution (a) The system of linear inequalities is}
\[
\left\{\begin{aligned}
x \geq 0 & \text { xand yare nonnegative variables since they } \\
y \geq 0 & \text { represent money invested, in thousands of dollars. } \\
x+y \leq 25 & \text { The total of the two investments, } x+y, \text { cannot exceed } \$ 25,000 \\
x \geq 15 & \text { At least } \$ 15,000 \text { in Treasury bills } \\
y \leq 5 & \text { At most } \$ 5000 \text { in corporate bonds }
\end{aligned}\right.
\]
(b) See the shaded region in Figure 23. Note that the inequalities \(x \geq 0\) and \(y \geq 0\) require that the graph of the system be in quadrant I or on a non-negative coordinate axis.

Figure 23

The graph of the system of linear inequalities in Figure 23 is said to be bounded, because it can be contained within some circle of sufficiently large radius. A graph that cannot be contained in any circle is said to be unbounded. For example, the graph of the system of linear inequalities in Figure 22 is unbounded, since it extends indefinitely in the positive \(x\) and positive \(y\) directions.

Notice in Figures 22 and 23 that those points belonging to the graph that are also points of intersection of boundary lines have been plotted. Such points are referred to as vertices or corner points of the graph. The system graphed in Figure 22 has three corner points: \((0,4),(1,2)\), and \((3,0)\). The system graphed in Figure 23 has four corner points: \((15,0),(25,0),(20,5)\), and \((15,5)\).

These ideas will be used in the next section in developing a method for solving linear programming problems, an important application of linear inequalities.

\section*{an Now Work problem 45}

\subsection*{10.7 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. Solve the inequality: \(3 x+4<8-x\) (pp. A84-A85)
2. Graph the equation: \(3 x-2 y=6\) (pp. 26-27)
3. Graph the equation: \(x^{2}+y^{2}=9\) (pp. 35-36)
4. Graph the equation: \(y=x^{2}+4\) (pp. 89-90)
5. True or False The lines \(2 x+y=4\) and \(4 x+2 y=0\) are parallel. (pp. 27-28)
6. The graph of \(y=(x-2)^{2}\) may be obtained by shifting the graph of \(\qquad\) to the \(\qquad\) (left/right) a distance of \(\qquad\) units. (pp. \(\overline{90-91)}\)

\section*{Concepts and Vocabulary}
7. When graphing an inequality in two variables, if the inequality is strict use \(\qquad\) ; if the inequality is nonstrict use a \(\qquad\) mark.
8. The graph of the corresponding equation of a linear inequality is a line that separates the \(x y\)-plane into two regions. The two regions are called \(\qquad\) -.
9. True or False The graph of a system of inequalities must have an overlapping region.
10. If a graph of a system of linear inequalities cannot be contained in any circle, then it is said to be \(\qquad\) -

\section*{Skill Building}

In Problems 11-22, graph each inequality.
11. \(x \geq 0\)
12. \(y \geq 0\)
13. \(x \geq 4\)
14. \(y \leq 2\)
15. \(2 x+y \geq 6\)
16. \(3 x+2 y \leq 6\)
17. \(x^{2}+y^{2}>1\)
18. \(x^{2}+y^{2} \leq 9\)
19. \(y \leq x^{2}-1\)
20. \(y>x^{2}+2\)
21. \(x y \geq 4\)
22. \(x y \leq 1\)

In Problems 23-34, graph each system of linear inequalities.
23. \(\left\{\begin{array}{r}x+y \leq 2 \\ 2 x+y \geq 4\end{array}\right.\)
24. \(\left\{\begin{aligned} 3 x-y & \geq 6 \\ x+2 y & \leq 2\end{aligned}\right.\)
25. \(\left\{\begin{array}{l}2 x-y \leq 4 \\ 3 x+2 y \geq-6\end{array}\right.\)
26. \(\left\{\begin{array}{l}4 x-5 y \leq 0 \\ 2 x-y \geq 2\end{array}\right.\)
27. \(\left\{\begin{array}{l}2 x-3 y \leq 0 \\ 3 x+2 y \leq 6\end{array}\right.\)
28. \(\left\{\begin{aligned} 4 x-y & \geq 2 \\ x+2 y & \geq 2\end{aligned}\right.\)
31. \(\left\{\begin{array}{l}2 x+y \geq-2 \\ 2 x+y \geq 2\end{array}\right.\)
32. \(\left\{\begin{array}{l}x-4 y \leq 4 \\ x-4 y \geq 0\end{array}\right.\)
29. \(\left\{\begin{array}{r}x-2 y \leq 6 \\ 2 x-4 y \geq 0\end{array}\right.\)
30. \(\left\{\begin{array}{l}x+4 y \leq 8 \\ x+4 y \geq 4\end{array}\right.\)
33. \(\left\{\begin{array}{l}2 x+3 y \geq 6 \\ 2 x+3 y \leq 0\end{array}\right.\)
34. \(\left\{\begin{array}{l}2 x+y \geq 0 \\ 2 x+y \geq 2\end{array}\right.\)

In Problems 35-42, graph each system of inequalities.
35. \(\left\{\begin{array}{l}x^{2}+y^{2} \leq 9 \\ x+y \geq 3\end{array}\right.\)
36. \(\left\{\begin{array}{l}x^{2}+y^{2} \geq 9 \\ x+y \leq 3\end{array}\right.\)
37. \(\left\{\begin{array}{l}y \geq x^{2}-4 \\ y \leq x-2\end{array}\right.\)
38. \(\left\{\begin{array}{l}y^{2} \leq x \\ y \geq x\end{array}\right.\)
39. \(\left\{\begin{array}{l}x^{2}+y^{2} \leq 16 \\ y \geq x^{2}-4\end{array}\right.\)
40. \(\left\{\begin{array}{l}x^{2}+y^{2} \leq 25 \\ y \leq x^{2}-5\end{array}\right.\)
41. \(\left\{\begin{aligned} x y & \geq 4 \\ y & \geq x^{2}+1\end{aligned}\right.\)
42. \(\left\{\begin{array}{l}y+x^{2} \leq 1 \\ y \geq x^{2}-1\end{array}\right.\)

In Problems 43-52, graph each system of linear inequalities. Tell whether the graph is bounded or unbounded, and label the corner points.
43. \(\left\{\begin{aligned} x & \geq 0 \\ y & \geq 0 \\ 2 x+y & \leq 6 \\ x+2 y & \leq 6\end{aligned}\right.\)
44. \(\left\{\begin{aligned} x & \geq 0 \\ y & \geq 0 \\ x+y & \geq 4 \\ 2 x+3 y & \geq 6\end{aligned}\right.\)
45. \(\left\{\begin{aligned} x & \geq 0 \\ y & \geq 0 \\ x+y & \geq 2 \\ 2 x+y & \geq 4\end{aligned}\right.\)
46. \(\left\{\begin{aligned} x & \geq 0 \\ y & \geq 0 \\ 3 x+y & \leq 6 \\ 2 x+y & \leq 2\end{aligned}\right.\)
47. \(\left\{\begin{aligned} x & \geq 0 \\ y & \geq 0 \\ x+y & \geq 2 \\ 2 x+3 y & \leq 12 \\ 3 x+y & \leq 12\end{aligned}\right.\)
48. \(\left\{\begin{aligned} x & \geq 0 \\ y & \geq 0 \\ x+y & \geq 1 \\ x+y & \leq 7 \\ 2 x+y & \leq 10\end{aligned}\right.\)
49. \(\left\{\begin{aligned} x & \geq 0 \\ y & \geq 0 \\ x+y & \geq 2 \\ x+y & \leq 8 \\ 2 x+y & \leq 10\end{aligned}\right.\)
50. \(\left\{\begin{aligned} x & \geq 0 \\ y & \geq 0 \\ x+y & \geq 2 \\ x+y & \leq 8 \\ x+2 y & \geq 1\end{aligned}\right.\)
51. \(\left\{\begin{aligned} x & \geq 0 \\ y & \geq 0 \\ x+2 y & \geq 1 \\ x+2 y & \leq 10\end{aligned}\right.\)
52. \(\left\{\begin{aligned} x & \geq 0 \\ y & \geq 0 \\ x+2 y & \geq 1 \\ x+2 y & \leq 10 \\ x+y & \geq 2 \\ x+y & \leq 8\end{aligned}\right.\)

In Problems 53-56, write a system of linear inequalities for the given graph.

\section*{Applications and Extensions}
57. Financial Planning A retired couple has up to \(\$ 50,000\) to
 invest. As their financial adviser, you recommend that they place at least \(\$ 35,000\) in Treasury bills yielding \(1 \%\) and at most \(\$ 10,000\) in corporate bonds yielding \(3 \%\).
(a) Using \(x\) to denote the amount of money invested in Treasury bills and \(y\) to denote the amount invested in corporate bonds, write a system of linear inequalities that describes the possible amounts of each investment.
(b) Graph the system and label the corner points.
58. Manufacturing Trucks Mike's Toy Truck Company manufactures two models of toy trucks, a standard model and a deluxe model. Each standard model requires 2 hours (hr) for painting and 3 hr for detail work; each deluxe model requires 3 hr for painting and 4 hr for detail work. Two painters and three detail workers are employed by the company, and each works 40 hr per week.
(a) Using \(x\) to denote the number of standard-model trucks and \(y\) to denote the number of deluxe-model trucks, write a system of linear inequalities that describes the possible number of each model of truck that can be manufactured in a week.
(b) Graph the system and label the corner points.

59. Blending Coffee Bill's Coffee House, has available 75 pounds (lb) of \(A\) grade coffee and 120 lb of \(B\) grade coffee. These will be blended into 1-lb packages as follows: an economy blend that contains 4 ounces (oz) of \(A\) grade coffee and 12 oz of \(B\) grade coffee and a
superior blend that contains 8 oz of \(A\) grade coffee and 8 oz of \(B\) grade coffee.
(a) Using \(x\) to denote the number of packages of the economy blend and \(y\) to denote the number of packages of the superior blend, write a system of linear inequalities that describes the possible number of packages of each kind of blend.
(b) Graph the system and label the corner points.
60. Mixed Nuts Nola's Nuts has available 90 pounds (lb) of cashews and 120 lb of peanuts. These are to be mixed in 12-ounce (oz) packages as follows: a lower-priced package containing 8 oz of peanuts and 4 oz of cashews and a quality package containing 6 oz of peanuts and 6 oz of cashews.
(a) Use \(x\) to denote the number of lower-priced packages, and use \(y\) to denote the number of quality packages. Write a system of linear inequalities that describes the possible number of each kind of package.
(b) Graph the system and label the corner points.
61. Transporting Goods A small truck can carry no more than 1600 pounds (lb) of cargo and no more than 150 cubic feet \(\left(\mathrm{ft}^{3}\right)\) of cargo. A printer weighs 20 lb and occupies \(3 \mathrm{ft}^{3}\) of space. A microwave oven weighs 30 lb and occupies \(2 \mathrm{ft}^{3}\) of space.
(a) Using \(x\) to represent the number of microwave ovens and \(y\) to represent the numbers of printers, write a system of linear inequalities that describes the number of ovens and printers that can be hauled by the truck.
(b) Graph the system and label the corner points.

\section*{Retain Your Knowledge}

Problems 62-65 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
62. Solve \(2(x+1)^{2}+8=0\) in the complex number system.
63. Write the polar equation \(3 r=\sin \theta\) as an equation in rectangular coordinates. Identify the equation and graph it.
64. Use the Intermediate Value Theorem to show that \(f(x)=6 x^{2}+5 x-6\) has a real zero on the interval [ \(\left.-1,2\right]\).
65. Solve the equation \(2 \cos ^{2} \theta-\cos \theta-1=0\) on the interval \(0 \leq \theta<2 \pi\).

6. \(y=x^{2}\); right;2

\subsection*{10.8 Linear Programming}

OBJECTIVES 1 Set Up a Linear Programming Problem (p. 806)
2 Solve a Linear Programming Problem (p. 807)

Historically, linear programming evolved as a technique for solving problems involving resource allocation of goods and materials for the U.S. Air Force during World War II. Today, linear programming techniques are used to solve a wide variety of problems, such as optimizing airline scheduling and establishing telephone lines. Although most practical linear programming problems involve systems of several hundred linear inequalities containing several hundred variables, we will limit our discussion to problems containing only two variables, because we can solve such problems using graphing techniques.*

\section*{1 Set Up a Linear Programming Problem}

We begin by returning to Example 10 of the previous section.

\section*{EXAMPLE I}

\section*{Financial Planning}

A retired couple has up to \(\$ 25,000\) to invest. As their financial adviser, you recommend that they place at least \(\$ 15,000\) in Treasury bills yielding \(2 \%\) and at most \(\$ 5000\) in corporate bonds yielding \(3 \%\). Develop a model that can be used to determine how much money they should place in each investment so that income is maximized.

Solution The problem is typical of a linear programming problem. The problem requires that a certain linear expression, the income, be maximized. If \(I\) represents income, \(x\) the amount invested in Treasury bills at \(2 \%\), and \(y\) the amount invested in corporate bonds at \(3 \%\), then
\[
I=0.02 x+0.03 y
\]

Assume, as before, that \(I, x\), and \(y\) are in thousands of dollars.
The linear expression \(I=0.02 x+0.03 y\) is called the objective function. Further, the problem requires that the maximum income be achieved under certain conditions or constraints, each of which is a linear inequality involving the variables. (See Example 10 in Section 10.7.) The linear programming problem may be modeled as
\[
\text { Maximize } \quad I=0.02 x+0.03 y
\]
subject to the conditions that
\[
\left\{\begin{aligned}
x \geq 0, & y \\
x+y & \leq 25 \\
x & \geq 15 \\
y & \leq 5
\end{aligned}\right.
\]

In general, every linear programming problem has two components:
1. A linear objective function that is to be maximized or minimized
2. A collection of linear inequalities that must be satisfied simultaneously

\footnotetext{
*The simplex method is a way to solve linear programming problems involving many inequalities and variables. This method was developed by George Dantzig in 1946 and is particularly well suited for computerization. In 1984, Narendra Karmarkar of Bell Laboratories discovered a way of solving large linear programming problems that improves on the simplex method.
}

A linear programming problem in two variables \(x\) and \(y\) consists of maximizing (or minimizing) a linear objective function
\[
z=A x+B y \quad A \text { and } B \text { are real numbers, not both } 0
\]
subject to certain conditions, or constraints, expressible as linear inequalities in \(x\) and \(y\).

\section*{2 Solve a Linear Programming Problem}

To maximize (or minimize) the quantity \(z=A x+B y\), we need to identify points \((x, y)\) that make the expression for \(z\) the largest (or smallest) possible. But not all points \((x, y)\) are eligible; only those that also satisfy each linear inequality (constraint) can be used. We refer to each point \((x, y)\) that satisfies the system of linear inequalities (the constraints) as a feasible point. In a linear programming problem, we seek the feasible point(s) that maximizes (or minimizes) the objective function.

Let's look again at the linear programming problem in Example 1.

\section*{EXAMPLE 2 Analyzing a Linear Programming Problem}

Consider the linear programming problem
\[
\text { Maximize } \quad I=0.02 x+0.03 y
\]
subject to the conditions that
\[
\left\{\begin{aligned}
x & \geq 0 \\
y & \geq 0 \\
x+y & \leq 25 \\
x & \geq 15 \\
y & \leq 5
\end{aligned}\right.
\]

Graph the constraints. Then graph the objective function for \(I=0,0.3,0.45,0.55\), and 0.6 .
Solution Figure 24 shows the graph of the constraints. We superimpose on this graph the graph of the objective function for the given values of \(I\).

For \(I=0\), the objective function is the line \(0=0.02 x+0.03 y\).
For \(I=0.3\), the objective function is the line \(0.3=0.02 x+0.03 y\).
For \(I=0.45\), the objective function is the line \(0.45=0.02 x+0.03 y\).
For \(I=0.55\), the objective function is the line \(0.55=0.02 x+0.03 y\).
For \(I=0.6\), the objective function is the line \(0.6=0.02 x+0.03 y\).
Figure 24

\section*{DEFINITION}

\section*{THEOREM}

A solution to a linear programming problem consists of a feasible point that maximizes (or minimizes) the objective function, together with the corresponding value of the objective function.

One condition for a linear programming problem in two variables to have a solution is that the graph of the feasible points be bounded. (Refer to the discussion following Example 10 in Section 10.7.)

If none of the feasible points maximizes (or minimizes) the objective function or if there are no feasible points, the linear programming problem has no solution.

Consider the linear programming problem posed in Example 2, and look again at Figure 24. The feasible points are the points that lie in the shaded region. For example, \((20,3)\) is a feasible point, as are \((15,5),(20,5),(18,4)\), and so on. To find the solution of the problem requires that we find a feasible point \((x, y)\) that makes \(I=0.02 x+0.03 y\) as large as possible. Notice that as \(I\) increases in value from \(I=0\) to \(I=0.3\) to \(I=0.45\) to \(I=0.55\) to \(I=0.6\), we obtain a collection of parallel lines. Further, notice that the largest value of \(I\) that can be obtained using feasible points is \(I=0.55\), which corresponds to the line \(0.55=0.02 x+0.03 y\). Any larger value of \(I\) results in a line that does not pass through any feasible points. Finally, notice that the feasible point that yields \(I=0.55\) is the point \((20,5)\), a corner point. These observations form the basis of the following result, which we state without proof.

\section*{Location of the Solution of a Linear Programming Problem}

If a linear programming problem has a solution, it is located at a corner point of the graph of the feasible points.
If a linear programming problem has multiple solutions, at least one of them is located at a corner point of the graph of the feasible points.
In either case, the corresponding value of the objective function is unique.

We shall not consider here linear programming problems that have no solution. As a result, we can outline the procedure for solving a linear programming problem as follows:

\section*{Procedure for Solving a Linear Programming Problem}

STEP 1: Write an expression for the quantity to be maximized (or minimized). This expression is the objective function.
STEP 2: Write all the constraints as a system of linear inequalities, and graph the system.
STEP 3: List the corner points of the graph of the feasible points.
STEP 4: List the corresponding values of the objective function at each corner point. The largest (or smallest) of these is the solution.

\section*{EXAMPLE 3 Solving a Minimum Linear Programming Problem}

Minimize the expression
\[
z=2 x+3 y
\]
subject to the constraints
\[
y \leq 5 \quad x \leq 6 \quad x+y \geq 2 \quad x \geq 0 \quad y \geq 0
\]

Solution STEP 1: The objective function is \(z=2 x+3 y\).

Figure 25

STEP 2: We seek the smallest value of \(z\) that can occur if \(x\) and \(y\) are solutions of the system of linear inequalities
\[
\left\{\begin{aligned}
y & \leq 5 \\
x & \leq 6 \\
x+y & \geq 2 \\
x & \geq 0 \\
y & \geq 0
\end{aligned}\right.
\]

Step 3: The graph of this system (the set of feasible points) is shown in Figure 25. The corner points have also been plotted.
STEP 4: Table 1 lists the corner points and the corresponding values of the objective function. From the table, the minimum value of \(z\) is 4 , and it occurs at the point \((2,0)\).
Table 1 \begin{tabular}{cc} 
& \begin{tabular}{c} 
Value of the Objective Function \\
\(\boldsymbol{z}=\mathbf{2 x}+\mathbf{3 y}\)
\end{tabular} \\
\cline { 2 - 3 } & Corner Point \((\boldsymbol{x}, \boldsymbol{y})\)
\end{tabular} \begin{tabular}{l}
\(z=2(0)+3(2)=6\) \\
\((0,2)\) \\
\((0,5)\) \\
\((6,5)\) \\
\((6,0)\) \\
\((2,0)\)
\end{tabular}

Now Work problems 5 And 11

\section*{EXAMPLE 4 Maximizing Profit}

At the end of every month, after filling orders for its regular customers, a coffee company has some pure Colombian coffee and some special-blend coffee remaining. The practice of the company has been to package a mixture of the two coffees into 1-pound (lb) packages as follows: a low-grade mixture containing 4 ounces (oz) of Colombian coffee and 12 oz of special-blend coffee and a high-grade mixture containing 8 oz of Colombian and 8 oz of special-blend coffee. A profit of \(\$ 0.30\) per package is made on the low-grade mixture, whereas a profit of \(\$ 0.40\) per package is made on the high-grade mixture. This month, 120 lb of special-blend coffee and 100 lb of pure Colombian coffee remain. How many packages of each mixture should be prepared to achieve a maximum profit? Assume that all packages prepared can be sold.

Solution STEP 1: Begin by assigning symbols for the two variables.
\(x=\) Number of packages of the low-grade mixture
\(y=\) Number of packages of the high-grade mixture
If \(P\) denotes the profit, then
\[
P=\$ 0.30 x+\$ 0.40 y \quad \text { Objective function }
\]

STEP 2: The goal is to maximize \(P\) subject to certain constraints on \(x\) and \(y\). Because \(x\) and \(y\) represent numbers of packages, the only meaningful values for \(x\) and \(y\) are nonnegative integers. This yields the two constraints
\[
x \geq 0 \quad y \geq 0 \quad \text { Nonnegative constraints }
\]

There is only so much of each type of coffee available. For example, the total amount of Colombian coffee used in the two mixtures cannot exceed 100 lb ,
or 1600 oz. Because there are 4 oz in each low-grade package and 8 oz in each high-grade package, we have the constraint
\[
4 x+8 y \leq 1600 \text { Colombian coffee constraint }
\]

Similarly, the supply of 120 lb , or 1920 oz , of special-blend coffee leads to the constraint
\[
12 x+8 y \leq 1920 \text { Special-blend coffee constraint }
\]

The linear programming problem may be stated as
\[
\text { Maximize } \quad P=0.3 x+0.4 y
\]
subject to the constraints
\[
x \geq 0 \quad y \geq 0 \quad 4 x+8 y \leq 1600 \quad 12 x+8 y \leq 1920
\]

Figure 26

Table 2
\begin{tabular}{|ll|}

\hline\((0,0)\) & \(P=0\) \\
\((0,200)\) & \(P=0.3(0)+0.4(200)=\$ 80\) \\
\((40,180)\) & \(P=0.3(40)+0.4(180)=\$ 84\) \\
\((160,0)\) & \(P=0.3(160)+0.4(0)=\$ 48\) \\
\hline
\end{tabular}

\subsection*{10.8 Assess Your Understanding}

\section*{Concepts and Vocabulary}
1. A linear programming problem requires that a linear expression, called the \(\qquad\) , be maximized or minimized.
2. True or False If a linear programming problem has a solution, it is located at a corner point of the graph of the feasible points.

\section*{Skill Building}

In Problems 3-8, find the maximum and minimum value of the given objective function of a linear programming problem. The figure illustrates the graph of the feasible points.
3. \(z=x+y\)
4. \(z=2 x+3 y\)
5. \(z=x+10 y\)
6. \(z=10 x+y\)
7. \(z=5 x+7 y\)
8. \(z=7 x+5 y\)

In Problems 9-18, solve each linear programming problem.
9. Maximize \(z=2 x+y\) subject to \(x \geq 0, \quad y \geq 0, \quad x+y \leq 6, \quad x+y \geq 1\)
10. Maximize \(z=x+3 y\) subject to \(x \geq 0, \quad y \geq 0, \quad x+y \geq 3, \quad x \leq 5, \quad y \leq 7\)
11. Minimize \(z=2 x+5 y\) subject to \(x \geq 0, \quad y \geq 0, \quad x+y \geq 2, \quad x \leq 5, \quad y \leq 3\)
12. Minimize \(z=3 x+4 y\) subject to \(x \geq 0, \quad y \geq 0, \quad 2 x+3 y \geq 6, \quad x+y \leq 8\)
13. Maximize \(z=3 x+5 y\) subject to \(x \geq 0, \quad y \geq 0, \quad x+y \geq 2, \quad 2 x+3 y \leq 12, \quad 3 x+2 y \leq 12\)
14. Maximize \(z=5 x+3 y\) subject to \(x \geq 0, \quad y \geq 0, \quad x+y \geq 2, \quad x+y \leq 8, \quad 2 x+y \leq 10\)
15. Minimize \(z=5 x+4 y\) subject to \(x \geq 0, \quad y \geq 0, \quad x+y \geq 2, \quad 2 x+3 y \leq 12, \quad 3 x+y \leq 12\)
16. Minimize \(z=2 x+3 y\) subject to \(x \geq 0, \quad y \geq 0, \quad x+y \geq 3, \quad x+y \leq 9, \quad x+3 y \geq 6\)
17. Maximize \(z=5 x+2 y\) subject to \(x \geq 0, \quad y \geq 0, \quad x+y \leq 10, \quad 2 x+y \geq 10, \quad x+2 y \geq 10\)
18. Maximize \(z=2 x+4 y\) subject to \(x \geq 0, \quad y \geq 0, \quad 2 x+y \geq 4, \quad x+y \leq 9\)

\section*{Applications and Extensions}
19. Maximizing Profit A manufacturer of skis produces two types: downhill and cross-country. Use the following table to determine how many of each kind of ski should be produced to achieve a maximum profit. What is the maximum profit? What would the maximum profit be if the time available for manufacturing were increased to 48 hours?
\begin{tabular}{|llcc|}
\hline & Downhill & \begin{tabular}{c} 
Cross- \\
country
\end{tabular} & \begin{tabular}{c} 
Time \\
Available
\end{tabular} \\
\hline Manufacturing time per ski & 2 hours & 1 hour & 40 hours \\
Finishing time per ski & 1 hour & 1 hour & 32 hours \\
\hline Profit per ski & \(\$ 70\) & \(\$ 50\) & \\
\hline
\end{tabular}
20. Farm Management A farmer has 70 acres of land available for planting either soybeans or wheat. The cost of preparing the soil, the workdays required, and the expected profit per acre planted for each type of crop are given in the following table.
\begin{tabular}{|lcc|}
\hline & Soybeans & Wheat \\
\hline Preparation cost per acre & \(\$ 60\) & \(\$ 30\) \\
Workdays required per acre & 3 & 4 \\
Profit per acre & \(\$ 180\) & \(\$ 100\) \\
\hline
\end{tabular}

The farmer cannot spend more than \(\$ 1800\) in preparation costs and cannot use a total of more than 120 workdays. How many acres of each crop should be planted to maximize the profit? What is the maximum profit? What is the maximum profit if the farmer is willing to spend no more than \(\$ 2400\) on preparation?
21. Banquet Seating A banquet hall offers two types of tables for rent: 6-person rectangular tables at a cost of \(\$ 28\) each and 10 -person round tables at a cost of \(\$ 52\) each. Kathleen would like to rent the hall for a wedding banquet and needs tables for 250 people. The room can have a maximum of 35 tables, and the hall has only 15 rectangular tables available. How many of each type of table should be rented to minimize cost, and what is the minimum cost?
Source: www.facilities.princeton.edu
22. Spring Break The student activities department of a community college plans to rent buses and vans for a springbreak trip. Each bus has 40 regular seats and 1 special seat designed to accommodate travelers with disabilities. Each van has 8 regular seats and 3 special seats. The rental cost is \(\$ 350\) for each van and \(\$ 975\) for each bus. If 320 regular and 36 special seats are required for the trip, how many vehicles of each type should be rented to minimize cost?

23. Return on Investment An investment broker is instructed by her client to invest up to \(\$ 20,000\), some in a junk bond yielding \(9 \%\) per annum and some in Treasury bills yielding \(7 \%\) per annum. The client wants to invest at least \(\$ 8000\) in T-bills and no more than \(\$ 12,000\) in the junk bond.
(a) How much should the broker recommend that the client place in each investment to maximize income if the client insists that the amount invested in T-bills must equal or exceed the amount placed in the junk bond?
(b) How much should the broker recommend that the client place in each investment to maximize income if the client insists that the amount invested in T-bills must not exceed the amount placed in the junk bond?
24. Production Scheduling In a factory, machine 1 produces 8 -inch (in.) pliers at the rate of 60 units per hour (hr) and 6 -in. pliers at the rate of 70 units \(/ \mathrm{hr}\). Machine 2 produces 8 -in. pliers at the rate of \(40 \mathrm{units} / \mathrm{hr}\) and 6 -in. pliers at the rate of 20 units \(/ \mathrm{hr}\). It costs \(\$ 50 / \mathrm{hr}\) to operate machine 1 , and machine 2 costs \(\$ 30 / \mathrm{hr}\) to operate. The production schedule requires that at least 240 units of \(8-\mathrm{in}\). pliers and at least 140 units of 6 -in. pliers be produced during each \(10-\mathrm{hr}\) day. Which combination of machines will cost the least money to operate?
25. Maximizing Profit on Ice Skates A factory manufactures two kinds of ice skates: racing skates and figure skates. The racing skates require 6 work-hours in the fabrication department, whereas the figure skates require 4 work-hours there. The racing skates require 1 work-hour in the finishing department, whereas the figure skates require 2 work-hours there. The fabricating department has available at most 120 work-hours per day, and the finishing department has no more than 40 work-hours per day available. If the profit on
each racing skate is \(\$ 10\) and the profit on each figure skate is \(\$ 12\), how many of each should be manufactured each day to maximize profit? (Assume that all skates made are sold.)
26. Ice Cream The Mom and Pop Ice Cream Company makes two kinds of chocolate ice cream: regular and premium. The properties of 1 gallon (gal) of each type are shown in the table:
\begin{tabular}{|l|l|l|}
\hline & Regular & Premium \\
\hline Flavoring & 24 oz & 20 oz \\
Milk-fat products & 12 oz & 20 oz \\
Shipping weight & 5 lbs & 6 lbs \\
Profit & \(\$ 0.75\) & \(\$ 0.90\) \\
\hline
\end{tabular}

In addition, current commitments require the company to make at least 1 gal of premium for every 4 gal of regular. Each day, the company has available 725 pounds (lb) of flavoring and 425 lb of milk-fat products. If the company can ship no more than 3000 lb of product per day, how many gallons of each type should be produced daily to maximize profit?
Source: www.scitoys.com/ingredients/ice_cream.html
27. Managing a Meat Market A meat market combines ground beef and ground pork in a single package for meat loaf. The ground beef is \(75 \%\) lean ( \(75 \%\) beef, \(25 \%\) fat) and costs the market \(\$ 0.75\) per pound (lb). The ground pork is \(60 \%\) lean and costs the market \(\$ 0.45 / \mathrm{lb}\). The meat loaf must be at least \(70 \%\) lean. If the market wants to use at least 50 lb of its available pork, but no more than 200 lb of its available ground beef, how much ground beef should be mixed with ground pork so that the cost is minimized?

28. Financial Planning A retired couple has up to \(\$ 50,000\) to place in fixed-income securities. Their financial advisor suggests two
securities to them: one is an AAA bond that yields \(8 \%\) per annum; the other is a certificate of deposit (CD) that yields \(4 \%\). After careful consideration of the alternatives, the couple decides to place at most \(\$ 20,000\) in the AAA bond and at least \(\$ 15,000\) in the CD. They also instruct the financial advisor to place at least as much in the CD as in the AAA bond. How should the financial advisor proceed to maximize the return on their investment?
29. Product Design An entrepreneur is having a design group produce at least six samples of a new kind of fastener that he wants to market. It costs \(\$ 9.00\) to produce each metal fastener and \(\$ 4.00\) to produce each plastic fastener. He wants to have at least two of each version of the fastener and needs to have all the samples 24 hours (hr) from now. It takes 4 hr to produce each metal sample and 2 hr to produce each plastic sample. To minimize the cost of the samples, how many of each kind should the entrepreneur order? What will be the cost of the samples?
30. Animal Nutrition Kevin's dog Amadeus likes two kinds of canned dog food. Gourmet Dog costs 40 cents a can and has 20 units of a vitamin complex; the calorie content is 75 calories. Chow Hound costs 32 cents a can and has 35 units of vitamins and 50 calories. Kevin likes Amadeus to have at least 1175 units of vitamins a month and at least 2375 calories during the same time period. Kevin has space to store only 60 cans of dog food at a time. How much of each kind of dog food should Kevin buy each month to minimize his cost?
31. Airline Revenue An airline has two classes of service: first class and coach. Management's experience has been that each aircraft should have at least 8 but no more than 16 firstclass seats and at least 80 but no more than 120 coach seats.
(a) If management decides that the ratio of first class to coach seats should never exceed 1:12, with how many of each type of seat should an aircraft be configured to maximize revenue?
(b) If management decides that the ratio of first class to coach seats should never exceed 1:8, with how many of each type of seat should an aircraft be configured to maximize revenue?
(c) If you were management, what would you do?
[Hint: Assume that the airline charges \(\$ C\) for a coach seat and \(\$ F\) for a first-class seat; \(C>0, F>C\).]

\section*{Discussion and Writing}
32. Explain in your own words what a linear programming problem is and how it can be solved.

\section*{-Retain Your Knowledge}

Problems 33-36 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
33. Solve \(2 m^{2 / 5}-m^{1 / 5}=1\).
34. Graph \(y=-\tan \left(x-\frac{\pi}{2}\right)\) for at least two periods. Use the graph to determine the domain and range.
35. Radioactive Decay The half-life of titanium- 44 is 63 years. How long will it take 200 grams to decay to 75 grams? Round to one decimal place.
36. Find the equation of the line parallel to \(y=3 x+11\) passing through \((-2,1)\).

\section*{Chapter Review}

\section*{Things to Know}

\section*{Systems of equations (pp. 723-725)}

Systems with no solutions are inconsistent. Systems with a solution are consistent.
Consistent systems of linear equations have either a unique solution (independent) or an infinite number of solutions (dependent).

\section*{Matrix (p. 738)}

Rectangular array of numbers, called entries
Augmented matrix (p. 738)
Row operations (p. 740)
Row echelon form (p. 741)
Determinants and Cramer's Rule (pp. 753-757)

\section*{Matrix (p. 763)}
\(m\) by \(n\) matrix (p. 763)
Identity matrix \(I_{n}\) (p.770)
Inverse of a matrix (p. 771)
Nonsingular matrix (p. 771)

Matrix with \(m\) rows and \(n\) columns
An \(n\) by \(n\) square matrix whose diagonal entries are 1 's, while all other entries are 0 's \(A^{-1}\) is the inverse of \(A\) if \(A A^{-1}=A^{-1} A=I_{n}\).

A square matrix that has an inverse

\section*{Linear programming problem (p. 806-807)}

Maximize (or minimize) a linear objective function, \(z=A x+B y\), subject to certain conditions, or constraints, expressible as linear inequalities in \(x\) and \(y\). A feasible point \((x, y)\) is a point that satisfies the constraints (linear inequalities) of a linear programming problem.

\section*{Location of solution (p. 808)}

If a linear programming problem has a solution, it is located at a corner point of the graph of the feasible points. If a linear programming problem has multiple solutions, at least one of them is located at a corner point of the graph of the feasible points. In either case, the corresponding value of the objective function is unique.

\section*{Objectives}

\section*{Section You should be able to ...}
10.1 1 Solve systems of equations by substitution (p. 725)

2 Solve systems of equations by elimination (p. 726)
3 Identify inconsistent systems of equations containing two variables (p. 728)
4 Express the solution of a system of dependent equations containing two variables (p. 729)

5 Solve systems of three equations containing three variables (p. 729)
6 Identify inconsistent systems of equations containing three variables (p. 731)
7 Express the solution of a system of dependent equations containing three variables (p. 732)
10.2 1 Write the augmented matrix of a system of linear equations (p.738)

2 Write the system of equations from the augmented matrix (p. 739)
3 Perform row operations on a matrix (p. 740)
4 Solve a system of linear equations using matrices (p. 741)
10.31 Evaluate 2 by 2 determinants (p. 753)

2 Use Cramer's Rule to solve a system of two equations containing two variables (p. 753)
3 Evaluate 3 by 3 determinants (p. 756)
4 Use Cramer's Rule to solve a system of three equations containing three variables (p. 757)

5 Know properties of determinants (p. 759)

\section*{Review Exercises}

In Problems 1-10, solve each system of equations using the method of substitution or the method of elimination. If the system has no solution, say that it is inconsistent.
1. \(\left\{\begin{array}{l}2 x-y=5 \\ 5 x+2 y=8\end{array}\right.\)
2. \(\left\{\begin{aligned} 3 x-4 y & =4 \\ x-3 y & =\frac{1}{2}\end{aligned}\right.\)
3. \(\left\{\begin{aligned} x-2 y-4 & =0 \\ 3 x+2 y-4 & =0\end{aligned}\right.\)
4. \(\left\{\begin{array}{l}y=2 x-5 \\ x=3 y+4\end{array}\right.\)
5. \(\left\{\begin{aligned} x-3 y+4 & =0 \\ \frac{1}{2} x-\frac{3}{2} y+\frac{4}{3} & =0\end{aligned}\right.\)
6. \(\left\{\begin{aligned} 2 x+3 y-13 & =0 \\ 3 x-2 y & =0\end{aligned}\right.\)
7. \(\left\{\begin{aligned} 2 x+5 y & =10 \\ 4 x+10 y & =20\end{aligned}\right.\)
8. \(\left\{\begin{aligned} x+2 y-z & =6 \\ 2 x-y+3 z & =-13 \\ 3 x-2 y+3 z & =-16\end{aligned}\right.\)
9. \(\left\{\begin{aligned} 2 x-4 y+z & =-15 \\ x+2 y-4 z & =27 \\ 5 x-6 y-2 z & =-3\end{aligned}\right.\)
10. \(\left\{\begin{aligned} x-4 y+3 z & =15 \\ -3 x+y-5 z & =-5 \\ -7 x-5 y-9 z & =10\end{aligned}\right.\)

In Problems 11 and 12, write the system of equations that corresponds to the given augmented matrix.
11. \(\left[\begin{array}{rr|r}3 & 2 & 8 \\ 1 & 4 & -1\end{array}\right]\)
12. \(\left[\begin{array}{rrr|r}1 & 2 & 5 & -2 \\ 5 & 0 & -3 & 8 \\ 2 & -1 & 0 & 0\end{array}\right]\)

In Problems 13-16, use the following matrices to compute each expression.
\[
A=\left[\begin{array}{rr}
1 & 0 \\
2 & 4 \\
-1 & 2
\end{array}\right] \quad B=\left[\begin{array}{rrr}
4 & -3 & 0 \\
1 & 1 & -2
\end{array}\right] \quad C=\left[\begin{array}{rr}
3 & -4 \\
1 & 5 \\
5 & 2
\end{array}\right]
\]
13. \(A+C\)
14. \(6 A\)
15. \(A B\)
16. \(B C\)

In Problems 17-19, find the inverse, if there is one, of each matrix. If there is not an inverse, say that the matrix is singular.
17. \(\left[\begin{array}{ll}4 & 6 \\ 1 & 3\end{array}\right]\)
18. \(\left[\begin{array}{rrr}1 & 3 & 3 \\ 1 & 2 & 1 \\ 1 & -1 & 2\end{array}\right]\)
19. \(\left[\begin{array}{rr}4 & -8 \\ -1 & 2\end{array}\right]\)

In Problems 20-25, solve each system of equations using matrices. If the system has no solution, say that it is inconsistent.
20. \(\left\{\begin{aligned} 3 x-2 y & =1 \\ 10 x+10 y & =5\end{aligned}\right.\)
21. \(\left\{\begin{array}{l}5 x-6 y-3 z=6 \\ 4 x-7 y-2 z=-3 \\ 3 x+y-7 z=1\end{array}\right.\)
22. \(\left\{\begin{array}{l}2 x+y+z=5 \\ 4 x-y-3 z=1 \\ 8 x+y-z=5\end{array}\right.\)
23. \(\left\{\begin{aligned} x-2 z & =1 \\ 2 x+3 y & =-3 \\ 4 x-3 y-4 z & =3\end{aligned}\right.\)
24. \(\left\{\begin{aligned} x-y+z & =0 \\ x-y-5 z-6 & =0 \\ 2 x-2 y+z-1 & =0\end{aligned}\right.\)
25. \(\left\{\begin{aligned} x-y-z-t & =1 \\ 2 x+y-z+2 t & =3 \\ x-2 y-2 z-3 t & =0 \\ 3 x-4 y+z+5 t & =-3\end{aligned}\right.\)

In Problems 26-28, find the value of each determinant.
26. \(\left|\begin{array}{ll}3 & 4 \\ 1 & 3\end{array}\right|\)
27. \(\left|\begin{array}{rrr}1 & 4 & 0 \\ -1 & 2 & 6 \\ 4 & 1 & 3\end{array}\right|\)
28. \(\left|\begin{array}{rrr}2 & 1 & -3 \\ 5 & 0 & 1 \\ 2 & 6 & 0\end{array}\right|\)

In Problems 29-31, use Cramer's Rule, if applicable, to solve each system.
29. \(\left\{\begin{array}{r}x-2 y=4 \\ 3 x+2 y=4\end{array}\right.\)
30. \(\left\{\begin{aligned} 2 x+3 y-13 & =0 \\ 3 x-2 y & =0\end{aligned}\right.\)
31. \(\left\{\begin{aligned} x+2 y-z & =6 \\ 2 x-y+3 z & =-13 \\ 3 x-2 y+3 z & =-16\end{aligned}\right.\)

In Problems 32 and 33, use properties of determinants to find the value of each determinant if it is known that \(\left|\begin{array}{ll}x & y \\ a & b\end{array}\right|=8\).
32. \(\left|\begin{array}{ll}2 x & y \\ 2 a & b\end{array}\right|\)
33. \(\left|\begin{array}{ll}y & x \\ b & a\end{array}\right|\)

In Problems 34-38, write the partial fraction decomposition of each rational expression.
34. \(\frac{6}{x(x-4)}\)
35. \(\frac{x-4}{x^{2}(x-1)}\)
36. \(\frac{x}{\left(x^{2}+9\right)(x+1)}\)
37. \(\frac{x^{3}}{\left(x^{2}+4\right)^{2}}\)
38. \(\frac{x^{2}}{\left(x^{2}+1\right)\left(x^{2}-1\right)}\)

In Problems 39-43, solve each system of equations.
39. \(\left\{\begin{aligned} 2 x+y+3 & =0 \\ x^{2}+y^{2} & =5\end{aligned}\right.\)
40. \(\left\{\begin{array}{l}2 x y+y^{2}=10 \\ 3 y^{2}-x y=2\end{array}\right.\)
41. \(\left\{\begin{aligned} x^{2}+y^{2} & =6 y \\ x^{2} & =3 y\end{aligned}\right.\)
42. \(\left\{\begin{aligned} 3 x^{2}+4 x y+5 y^{2} & =8 \\ x^{2}+3 x y+2 y^{2} & =0\end{aligned}\right.\)
43. \(\left\{\begin{aligned} x^{2}-3 x+y^{2}+y & =-2 \\ \frac{x^{2}-x}{y}+y+1 & =0\end{aligned}\right.\)

In Problems 44 and 45, graph each inequality.
44. \(3 x+4 y \leq 12\)
45. \(y \leq x^{2}\)

In Problems 46-48, graph each system of inequalities. Tell whether the graph is bounded or unbounded, and label the corner points.
46. \(\left\{\begin{array}{r}-2 x+y \leq 2 \\ x+y \geq 2\end{array}\right.\)
47. \(\left\{\begin{aligned} x & \geq 0 \\ y & \geq 0 \\ x+y & \leq 4 \\ 2 x+3 y & \leq 6\end{aligned}\right.\)
48. \(\left\{\begin{aligned} x & \geq 0 \\ y & \geq 0 \\ 2 x+y & \leq 8 \\ x+2 y & \geq 2\end{aligned}\right.\)

In Problems 49 and 50, graph each system of inequalities.
49. \(\left\{\begin{array}{l}x^{2}+y^{2} \leq 16 \\ x+y \geq 2\end{array}\right.\)
50. \(\left\{\begin{array}{r}x^{2}+y^{2} \leq 25 \\ x y \leq 4\end{array}\right.\)

In Problems 51 and 52, solve each linear programming problem.
51. Maximize \(z=3 x+4 y\) subject to \(x \geq 0, y \geq 0,3 x+2 y \geq 6, x+y \leq 8\)
52. Minimize \(z=3 x+5 y\) subject to \(x \geq 0, y \geq 0, x+y \geq 1,3 x+2 y \leq 12, x+3 y \leq 12\)
53. Find \(A\) so that the system of equations has infinitely many solutions.
\[
\left\{\begin{array}{r}
2 x+5 y=5 \\
4 x+10 y=A
\end{array}\right.
\]
54. Find \(A\) so that the system in Problem 53 is inconsistent.
55. Curve Fitting Find the quadratic function \(y=a x^{2}+b x+c\) that passes through the three points \((0,1),(1,0)\), and \((-2,1)\).
56. Blending Coffee A coffee distributor is blending a new coffee that will cost \(\$ 6.90\) per pound. It will consist of a blend of \(\$ 6.00\)-per-pound coffee and \(\$ 9.00\)-per-pound coffee. What amounts of each type of coffee should be mixed to achieve the desired blend?
[Hint: Assume that the weight of the blended coffee is 100 pounds.]

57. Cookie Orders A cookie company makes three kinds of cookies (oatmeal raisin, chocolate chip, and shortbread) packaged in small, medium, and large boxes. The small box contains 1 dozen oatmeal raisin and 1 dozen chocolate chip; the medium box has 2 dozen oatmeal raisin, 1 dozen chocolate chip, and 1 dozen shortbread; the large box contains 2 dozen oatmeal raisin, 2 dozen chocolate chip, and 3 dozen shortbread. If you require exactly 15 dozen oatmeal raisin, 10 dozen chocolate chip, and 11 dozen shortbread, how many of each size box should you buy?
58. Mixed Nuts A store that specializes in selling nuts has available 72 pounds ( lb ) of cashews and 120 lb of peanuts. These are to be mixed in 12-ounce (oz) packages as follows: a lower-priced package containing 8 oz of peanuts and 4 oz of cashews and a quality package containing 6 oz of peanuts and 6 oz of cashews.
(a) Use \(x\) to denote the number of lower-priced packages, and use \(y\) to denote the number of quality packages. Write a system of linear inequalities that describes the possible number of each kind of package.
(b) Graph the system and label the corner points.
59. Determining the Speed of the Current of the Aguarico River On a recent trip to the Cuyabeno Wildlife Reserve in the Amazon region of Ecuador, Mike took a 100-kilometer trip by speedboat down the Aguarico River from Chiritza to the Flotel Orellana. As Mike watched the Amazon unfold, he wondered how fast the speedboat was going and how fast the current of the white-water Aguarico River was. Mike timed the trip downstream at 2.5 hours and the return trip at 3 hours. What were the two speeds?
60. Constant Rate Jobs If Bruce and Bryce work together for 1 hour and 20 minutes, they will finish a certain job. If Bryce and Marty work together for 1 hour and 36 minutes, the same job can be finished. If Marty and Bruce work together, they can complete this job in 2 hours and 40 minutes. How long will it take each of them working alone to finish the job?
61. Minimizing Production Cost A factory produces gasoline engines and diesel engines. Each week the factory is obligated to deliver at least 20 gasoline engines and at least 15 diesel engines. Due to physical limitations, however, the factory cannot make more than 60 gasoline engines or more than 40 diesel engines in any given week. Finally, to prevent layoffs, a total of at least 50 engines must be produced. If gasoline engines cost \(\$ 450\) each to produce and diesel engines cost \(\$ 550\) each to produce, how many of each should be produced per week to minimize the cost? What is the excess capacity of the factory? That is, how many of each kind of engine is being produced in excess of the number that the factory is obligated to deliver?
62. Describe four ways of solving a system of three linear equations containing three variables. Which method do you prefer? Why?

\section*{Chapter Test}

In Problems 1-4, solve each system of equations using the method of substitution or the method of elimination. If the system has no solution, say that it is inconsistent.
1. \(\left\{\begin{aligned}-2 x+y & =-7 \\ 4 x+3 y & =9\end{aligned}\right.\)
2. \(\left\{\begin{aligned} \frac{1}{3} x-2 y & =1 \\ 5 x-30 y & =18\end{aligned}\right.\)
3. \(\left\{\begin{aligned} & x-y+2 z= 5 \\ & 3 x+4 y-z=-2 \\ & 5 x+2 y+3 z=8\end{aligned}\right.\)
4. \(\left\{\begin{aligned} 3 x+2 y-8 z & =-3 \\ -x-\frac{2}{3} y+z & =1 \\ 6 x-3 y+15 z & =8\end{aligned}\right.\)
5. Write the augmented matrix corresponding to the system of
equations: \(\left\{\begin{aligned} 4 x-5 y+z= & 0 \\ -2 x-y+6= & -19 \\ x+5 y-5 z= & 10\end{aligned}\right.\)
6. Write the system of equations corresponding to the
\[
\text { augmented matrix: }\left[\begin{array}{rrr|r}
3 & 2 & 4 & -6 \\
1 & 0 & 8 & 2 \\
-2 & 1 & 3 & -11
\end{array}\right]
\]

In Problems 7-10, use the given matrices to compute each expression.
\[
A=\left[\begin{array}{rr}
1 & -1 \\
0 & -4 \\
3 & 2
\end{array}\right] \quad B=\left[\begin{array}{rrr}
1 & -2 & 5 \\
0 & 3 & 1
\end{array}\right] C=\left[\begin{array}{rr}
4 & 6 \\
1 & -3 \\
-1 & 8
\end{array}\right]
\]
7. \(2 A+C\)
8. \(A-3 C\)
9. \(C B\)
10. \(B A\)

In Problems 11 and 12, find the inverse of each nonsingular matrix.
11. \(A=\left[\begin{array}{ll}3 & 2 \\ 5 & 4\end{array}\right]\)
12. \(B=\left[\begin{array}{rrr}1 & -1 & 1 \\ 2 & 5 & -1 \\ 2 & 3 & 0\end{array}\right]\)

In Problems 13-16, solve each system of equations using matrices. If the system has no solution, say that it is inconsistent.
13. \(\left\{\begin{array}{l}6 x+3 y=12 \\ 2 x-y=-2\end{array}\right.\)
14. \(\left\{\begin{array}{l}x+\frac{1}{4} y=7 \\ 8 x+2 y=56\end{array}\right.\)
15. \(\left\{\begin{aligned} x+2 y+4 z & =-3 \\ 2 x+7 y+15 z & =-12 \\ 4 x+7 y+13 z & =-10\end{aligned}\right.\)
16. \(\left\{\begin{aligned} 2 x+2 y-3 z= & 5 \\ x-y+2 z= & 8 \\ 3 x+5 y-8 z= & -2\end{aligned}\right.\)

In Problems 17 and 18, find the value of each determinant.
17. \(\left|\begin{array}{rr}-2 & 5 \\ 3 & 7\end{array}\right|\)
18. \(\left|\begin{array}{rrr}2 & -4 & 6 \\ 1 & 4 & 0 \\ -1 & 2 & -4\end{array}\right|\)

In Problems 19 and 20, use Cramer's Rule, if possible, to solve each system.
19. \(\left\{\begin{array}{l}4 x+3 y=-23 \\ 3 x-5 y=19\end{array}\right.\)
20. \(\left\{\begin{aligned} 4 x-3 y+2 z= & 15 \\ -2 x+y-3 z= & -15 \\ 5 x-5 y+2 z= & 18\end{aligned}\right.\)

In Problems 21 and 22, solve each system of equations.
21. \(\left\{\begin{aligned} 3 x^{2}+y^{2} & =12 \\ y^{2} & =9 x\end{aligned}\right.\)
22. \(\left\{\begin{aligned} 2 y^{2}-3 x^{2} & =5 \\ y-x & =1\end{aligned}\right.\)
23. Graph the system of inequalities: \(\left\{\begin{aligned} x^{2}+y^{2} & \leq 100 \\ 4 x-3 y & \geq 0\end{aligned}\right.\)

In Problems 24 and 25, write the partial fraction decomposition of each rational expression.
24. \(\frac{3 x+7}{(x+3)^{2}}\)
25. \(\frac{4 x^{2}-3}{x\left(x^{2}+3\right)^{2}}\)
26. Graph the system of inequalities. Tell whether the graph is bounded or unbounded, and label all corner points.
\[
\left\{\begin{array}{l}
x \geq 0 \\
y \geq 0 \\
x+2 y \geq 8 \\
2 x-3 y \geq 2
\end{array}\right.
\]
27. Maximize \(z=5 x+8 y\) subject to \(x \geq 0,2 x+y \leq 8\), and \(x-3 y \leq-3\).
28. Megan went clothes shopping and bought 2 pairs of flare jeans, 2 camisoles, and 4 T-shirts for \(\$ 90.00\). At the same store, Paige bought one pair of flare jeans and 3 T-shirts for \(\$ 42.50\), while Kara bought 1 pair of flare jeans, 3 camisoles, and 2 T-shirts for \(\$ 62.00\). Determine the price of each clothing item.

\section*{Cumulative Review}

In Problems 1-6, solve each equation.
1. \(2 x^{2}-x=0\)
2. \(\sqrt{3 x+1}=4\)
3. \(2 x^{3}-3 x^{2}-8 x-3=0\)
4. \(3^{x}=9^{x+1}\)
5. \(\log _{3}(x-1)+\log _{3}(2 x+1)=2\)
6. \(3^{x}=e\)
7. Determine whether the function \(g(x)=\frac{2 x^{3}}{x^{4}+1}\) is even, odd, or neither. Is the graph of \(g\) symmetric with respect to the \(x\)-axis, \(y\)-axis, or origin?
8. Find the center and radius of the circle \(x^{2}+y^{2}-2 x+4 y-11=0\). Graph the circle.
9. Graph \(f(x)=3^{x-2}+1\) using transformations. What are the domain, range, and horizontal asymptote of \(f\) ?
10. The function \(f(x)=\frac{5}{x+2}\) is one-to-one. Find \(f^{-1}\). Find the domain and the range of \(f\) and the domain and the range of \(f^{-1}\).
11. Graph each equation.
(a) \(y=3 x+6\)
(b) \(x^{2}+y^{2}=4\)
(c) \(y=x^{3}\)
(d) \(y=\frac{1}{x}\)
(e) \(y=\sqrt{x}\)
(f) \(y=e^{x}\)
(g) \(y=\ln x\)
(h) \(2 x^{2}+5 y^{2}=1\)
(i) \(x^{2}-3 y^{2}=1\)
(j) \(x^{2}-2 x-4 y+1=0\)
12. \(f(x)=x^{3}-3 x+5\)
(a) Using a graphing utility, graph \(f\) and approximate the zero(s) of \(f\).
(b) Using a graphing utility, approximate the local maxima and local minima.
(c) Determine the intervals on which \(f\) is increasing.

\section*{Chapter Projects}
I. Markov Chains A Markov chain (or process) is one in which future outcomes are determined by a current state. Future outcomes are based on probabilities. The probability of moving to a certain state depends only on the state previously occupied and does not vary with time. An example of a Markov chain is the maximum education achieved by children based on the highest education attained by their parents, where the states are (1) earned college degree, (2) high school diploma only, (3) elementary school only. If \(p_{i j}\) is the probability of moving from state \(i\) to state \(j\), the transition matrix is the \(m \times m\) matrix
\[
P=\left[\begin{array}{cccc}
p_{11} & p_{12} & \cdots & p_{1 m} \\
\vdots & \vdots & & \vdots \\
p_{m 1} & p_{m 2} & \cdots & p_{m m}
\end{array}\right]
\]

The table represents the probabilities of the highest educational level of children based on the highest educational level of their parents. For example, the table shows that the probability \(p_{21}\) is \(40 \%\) that parents with a high-school education (row 2) will have children with a college education (column 1).
\begin{tabular}{|l|ccc|}
\hline \begin{tabular}{l} 
Highest \\
\begin{tabular}{l} 
Educational \\
Level of \\
Parents
\end{tabular}
\end{tabular} & \multicolumn{3}{|c|}{ Maximum Education That Children Achieve } \\
\cline { 2 - 4 } & College & High School & Elementary \\
\hline College & \(80 \%\) & \(18 \%\) & \(2 \%\) \\
High school & \(40 \%\) & \(50 \%\) & \(10 \%\) \\
Elementary & \(20 \%\) & \(60 \%\) & \(20 \%\) \\
\hline
\end{tabular}
1. Convert the percentages to decimals.
2. What is the transition matrix?
3. Sum across the rows. What do you notice? Why do you think that you obtained this result?
4. If \(P\) is the transition matrix of a Markov chain, the \((i, j)\) th entry of \(P^{n}\) ( \(n\)th power of \(P\) ) gives the probability of passing from state \(i\) to state \(j\) in \(n\) stages. What is the probability that a grandchild of a college graduate is a college graduate?
5. What is the probability that the grandchild of a high school graduate finishes college?
6. The row vector \(v^{(0)}=\left[\begin{array}{lll}0.309 & 0.567 & 0.124\end{array}\right]\) represents the proportion of the U.S. population 25 years or older that has college, high school, and elementary school, respectively, as the highest educational level in 2012.* In a Markov chain the probability distribution \(v^{(k)}\) after \(k\) stages is \(v^{(k)}=v^{(0)} P^{k}\), where \(P^{k}\) is the \(k\) th power of the transition matrix. What will be the distribution of highest educational attainment of the grandchildren of the current population?
7. Calculate \(P^{3}, P^{4}, P^{5}, \ldots\). Continue until the matrix does not change. This is called the long-run or steadystate distribution. What is the long-run distribution of highest educational attainment of the population?
*Source: U.S. Census Bureau.

\section*{UN Projects World Population Will Hit 9.6 Billion by 2050}

The population of the planet is expected to reach 9.6 billion by 2050, according to a new UN report-a slightly larger number than anticipated, as fertility projections have been pushed upward in nations where women have the most children.

More than half of this projected demographic growth will be in Africa, which continues to add people even as population growth in the world at large slows down.
"Although population growth has slowed for the world as a whole, this report reminds us that some developing countries, especially in Africa, are still growing rapidly," said Under-SecretaryGeneral for Economic and Social Affairs Wu Hongbo, in the UN
 report.

World Population Prospects: The 2012 Revision notes that the population in the developed regions of the world should remain stable at around 1.3 billion until 2050 thanks to trends of low fertility, while the world's 49 least-developed countries are projected to double in population size.

The new figures do not mean that world population growth has started to speed up again. As countries industrialize, they tend to undergo "demographic transition," wherein high death and birth rates are slowly replaced with low birth and death rates. It's a demographic shift often helped along by an increase in the granting of rights for women.

Some experts suspect that the world population will plateau around 2060, and there's a possibility that - after a transitional period of a higher death rate than birth rate-world birth and death rates could actually even out, keeping the human population stable.

\section*{<A Look Back, A Look Ahead>}

This chapter may be divided into three independent parts: Sections 11.1-11.3, Section 11.4, and Section 11.5.

In Chapter 1, we defined a function and its domain, which was usually some set of real numbers. In Sections 11.1-11.3, we discuss a sequence, which is a function whose domain is the set of positive integers.

Throughout this text, where it seemed appropriate, we have given proofs of many of the results. In Section 11.4, a technique for proving theorems involving natural numbers is discussed.

In Appendix A, Section A.3, there are formulas for expanding \((a+b)^{2}\) and \((a+b)^{3}\). In Section 11.5, we discuss the Binomial Theorem, a formula for the expansion of \((x+a)^{n}\), where \(n\) is any positive integer.

The topics introduced in this chapter are covered in more detail in courses titled Discrete Mathematics. Applications of these topics can be found in the fields of computer science, engineering, business and economics, the social sciences, and the physical and biological sciences.

\subsection*{11.1 Sequences}

PREPARING FOR THIS SECTION Before getting started, review the following concept:
- Functions (Section 1.1, pp. 43-51)

Now Work the 'Are You Prepared?' problems on page 826.
OBJECTIVES 1 Write the First Several Terms of a Sequence (p. 820)
2 Write the Terms of a Sequence Defined by a Recursive Formula (p. 823)
3 Use Summation Notation (p. 824)
4 Find the Sum of a Sequence (p. 825)

\section*{DEFINITION}

When you hear the word sequence as in "a sequence of events," you probably think of something that happens first, then second, and so on. In mathematics as well, the word sequence refers to outcomes that are first, second, and so on.

A sequence is a function whose domain is the set of positive integers.

So in a sequence the inputs are \(1,2,3, \ldots\) Because a sequence is a function, it will have a graph. Figure \(1(\mathrm{a})\) shows the graph of the function \(f(x)=\frac{1}{x}, x>0\). If all the points on this graph were removed except those whose \(x\)-coordinates are positive integers-that is, if all points were removed except \((1,1),\left(2, \frac{1}{2}\right),\left(3, \frac{1}{3}\right)\), and so on-the remaining points would be the graph of the sequence \(f(n)=\frac{1}{n}\), as shown in Figure 1(b). Note that \(n\) is used to represent the independent variable in a sequence. This serves to remind us that \(n\) is a positive integer.

Figure 1

(a) \(f(x)=\frac{1}{x^{2}}, x>0\)

(b) \(f(n)=\frac{1}{n}, n\) a positive integer

\section*{1 Write the First Several Terms of a Sequence}

A sequence is usually represented by listing its values in order. For example, the sequence whose graph is given in Figure 1(b) might be represented as
\[
f(1), f(2), f(3), f(4), \ldots \quad \text { or } \quad 1, \frac{1}{2}, \frac{1}{3}, \frac{1}{4}, \ldots
\]

The list never ends, as the ellipsis indicates. The numbers in this ordered list are called the terms of the sequence.

In dealing with sequences, subscripted letters, such as \(a_{1}\), are used to represent the first term, \(a_{2}\) for the second term, \(a_{3}\) for the third term, and so on.

For the sequence \(f(n)=\frac{1}{n}\), this means
\(\underbrace{a_{1}=f(1)=1}_{\text {first term }}, \underbrace{a_{2}=f(2)=\frac{1}{2}}_{\text {second term }}, \underbrace{a_{3}=f(3)=\frac{1}{3}}_{\text {thirdterm }}, \underbrace{a_{4}=f(4)=\frac{1}{4}}_{\text {fourthterm }}, \ldots, \quad \underbrace{a_{n}=f(n)=\frac{1}{n}}_{n^{\text {th }} \text { term }}, \ldots\)

In other words, the traditional function notation \(f(n)\) typically is not used for sequences. For this particular sequence, we have a rule for the \(n\)th term, which is \(a_{n}=\frac{1}{n}\), so it is easy to find any term of the sequence.

When a formula for the \(n\)th term (sometimes called the general term) of a sequence is known, the entire sequence can be represented by placing braces around the formula for the \(n\)th term. For example, the sequence whose \(n\)th term is \(b_{n}=\left(\frac{1}{2}\right)^{n}\) may be represented as
\[
\left\{b_{n}\right\}=\left\{\left(\frac{1}{2}\right)^{n}\right\}
\]
or by
\[
b_{1}=\frac{1}{2}, \quad b_{2}=\frac{1}{4}, \quad b_{3}=\frac{1}{8}, \ldots, \quad b_{n}=\left(\frac{1}{2}\right)^{n}, \ldots
\]

\section*{EXAMPLE I Writing the First Several Terms of a Sequence}

Write down the first six terms of the following sequence and graph it.
\[
\left\{a_{n}\right\}=\left\{\frac{n-1}{n}\right\}
\]

Solution The first six terms of the sequence are

Figure 2

\[
a_{1}=\frac{1-1}{1}=0, a_{2}=\frac{2-1}{2}=\frac{1}{2}, a_{3}=\frac{3-1}{3}=\frac{2}{3}, a_{4}=\frac{3}{4}, a_{5}=\frac{4}{5}, a_{6}=\frac{5}{6}
\]

See Figure 2 for the graph.

COMMENT Graphing utilities can be used to write the terms of a sequence and graph them. Figure 3 shows the sequence given in Example 1 generated on a TI- 84 Plus graphing calculator. The first few terms of the sequence are shown on the viewing window. Press the right arrow key to scroll right to see the remaining terms of the sequence. Figure 4 shows a graph of the sequence. Note that the first term of the sequence is not visible because it lies on the \(x\)-axis. TRACE the graph to see the terms of the sequence. The TABLE feature can also be used to generate the terms of the sequence. See Table 1.

Figure 3

Figure 4

Table 1

\footnotetext{
an Now Work problem 17
}

\section*{EXAMPLE 2}

Writing the First Several Terms of a Sequence
Write down the first six terms of the following sequence and graph it.
\[
\left\{b_{n}\right\}=\left\{(-1)^{n+1}\left(\frac{2}{n}\right)\right\}
\]

Solution The first six terms of the sequence are

Figure 5

\[
\begin{gathered}
b_{1}=(-1)^{1+1}\left(\frac{2}{1}\right)=2, \quad b_{2}=(-1)^{2+1}\left(\frac{2}{2}\right)=-1, \quad b_{3}=(-1)^{3+1}\left(\frac{2}{3}\right)=\frac{2}{3}, \\
b_{4}=-\frac{1}{2}, \quad b_{5}=\frac{2}{5}, \quad b_{6}=-\frac{1}{3}
\end{gathered}
\]

See Figure 5 for the graph.
Notice that in the sequence \(\left\{b_{n}\right\}\) in Example 2, the signs of the terms alternate. This occurs when we use factors such as \((-1)^{n+1}\), which equals 1 if \(n\) is odd and -1 if \(n\) is even, or \((-1)^{n}\), which equals -1 if \(n\) is odd and 1 if \(n\) is even.

\section*{EXAMPLE 3 Writing the First Several Terms of a Sequence}

Write down the first six terms of the following sequence and graph it.
\[
\left\{c_{n}\right\}=\left\{\begin{array}{ll}
n & \text { if } n \text { is even } \\
\frac{1}{n} & \text { if } n \text { is odd }
\end{array}\right\}
\]

Solution The first six terms of the sequence are
\[
c_{1}=\frac{1}{1}=1, \quad c_{2}=2, \quad c_{3}=\frac{1}{3}, \quad c_{4}=4, \quad c_{5}=\frac{1}{5}, \quad c_{6}=6
\]

Figure 6

See Figure 6 for the graph.
-Now Work problem 19

NOTE The formulas that determine the terms of a sequence are not unique. For example, the terms of the sequence obtained in Example 3 could also be found using
\[
\left\{d_{n}\right\}=\left\{n^{(-1)^{n}}\right\}
\]

Sometimes a sequence is indicated by an observed pattern in the first few terms that makes it possible to infer the makeup of the \(n\)th term. In the example that follows, enough terms of the sequence are given so that a natural choice for the \(n\)th term is suggested.

\section*{EXAMPLE 4 Determining a Sequence from a Pattern}
(a) \(e, \frac{e^{2}}{2}, \frac{e^{3}}{3}, \frac{e^{4}}{4}, \ldots\)
\(a_{n}=\frac{e^{n}}{n}\)
(b) \(1, \frac{1}{3}, \frac{1}{9}, \frac{1}{27}, \ldots\)
\(b_{n}=\frac{1}{3^{n-1}}\)
(c) \(1,3,5,7, \ldots\)
\(c_{n}=2 n-1\)
(d) \(1,4,9,16,25, \ldots\)
\(d_{n}=n^{2}\)
(e) \(1,-\frac{1}{2}, \frac{1}{3},-\frac{1}{4}, \frac{1}{5}, \ldots\)
\(e_{n}=(-1)^{n-1}\left(\frac{1}{n}\right)\)

\section*{Now Work problem 27}

\section*{The Factorial Symbol}

Some sequences in mathematics involve a special product called a factorial.
\[
\text { DEFINITION If } n \geq 0 \text { is an integer, the factorial symbol } n!\text { is defined as follows: }
\]
\[
\begin{aligned}
& 0!=1 \quad 1!=1 \\
& n!=n(n-1) \cdot \cdots \cdot 3 \cdot 2 \cdot 1 \quad \text { if } n \geq 2
\end{aligned}
\]

Table 2
\begin{tabular}{|cc|}
\hline \(\boldsymbol{n}\) & \(\boldsymbol{n}!\) \\
\hline 0 & 1 \\
1 & 1 \\
2 & 2 \\
3 & 6 \\
4 & 24 \\
5 & 120 \\
6 & 720 \\
\hline
\end{tabular}

\section*{Exploration}

Use your calculator's factorial key to see how fast factorials increase in value. Find the value of 69!. What happens when you try to find 70!? In fact, 70 ! is larger than \(10^{100}\) (a googol).

For example, \(2!=2 \cdot 1=2,3!=3 \cdot 2 \cdot 1=6,4!=4 \cdot 3 \cdot 2 \cdot 1=24\), and so on. Table 2 lists the values of \(n\) ! for \(0 \leq n \leq 6\).

Because
\[
n!=n(\underbrace{n-1)(n-2) \cdot \ldots \cdot 3 \cdot 2 \cdot 1}_{(n-1)!}
\]
the formula
\[
n!=n(n-1)!
\]
gives successive factorials. For example, because \(6!=720\), this means
\[
7!=7 \cdot 6!=7(720)=5040
\]
and
\[
8!=8 \cdot 7!=8(5040)=40,320
\]
an Now Work problem 11

\section*{2 Write the Terms of a Sequence Defined by a Recursive Formula}

A second way of defining a sequence is to assign a value to the first (or the first few) term(s) and specify the \(n\)th term by a formula or equation that involves one or more of the terms preceding it. Such sequences are said to be defined recursively, and the rule or formula is called a recursive formula.

\section*{EXAMPLE 5}

Solution The first term is given as \(s_{1}=1\). To get the second term, use \(n=2\) in the formula \(s_{n}=n s_{n-1}\) to get \(s_{2}=2 s_{1}=2 \cdot 1=2\). To get the third term, use \(n=3\) in the formula to get \(s_{3}=3 s_{2}=3 \cdot 2=6\). To get a new term requires knowing the value of the preceding term. The first five terms are
\[
\begin{aligned}
& s_{1}=1 \\
& s_{2}=2 \cdot 1=2 \\
& s_{3}=3 \cdot 2=6 \\
& s_{4}=4 \cdot 6=24 \\
& s_{5}=5 \cdot 24=120
\end{aligned}
\]

Do you recognize this sequence? \(s_{n}=n\) !

\section*{EXAMPLE 6 Writing the Terms of a Recursively Defined Sequence}

Write down the first five terms of the following recursively defined sequence.
\[
u_{1}=1, \quad u_{2}=1, \quad u_{n}=u_{n-2}+u_{n-1}
\]

Solution The first two terms are given. Finding each successive term requires knowing the previous two terms. That is,
\[
\begin{aligned}
& u_{1}=1 \\
& u_{2}=1 \\
& u_{3}=u_{1}+u_{2}=1+1=2 \\
& u_{4}=u_{2}+u_{3}=1+2=3 \\
& u_{5}=u_{3}+u_{4}=2+3=5
\end{aligned}
\]

The sequence defined in Example 6 is called the Fibonacci sequence, and the terms of this sequence are called Fibonacci numbers. These numbers appear in a wide variety of applications (see Problems 85-88).

Now Work problems 35 and 43

\section*{3 Use Summation Notation}

It is often important to find the sum of the first \(n\) terms of a sequence \(\left\{a_{n}\right\}\) - that is,
\[
a_{1}+a_{2}+a_{3}+\cdots+a_{n}
\]

Rather than writing down all these terms, we can use summation notation to express the sum more concisely:
\[
a_{1}+a_{2}+a_{3}+\cdots+a_{n}=\sum_{k=1}^{n} a_{k}
\]

The symbol \(\Sigma\) (the Greek letter sigma, which is an \(S\) in our alphabet) is simply an instruction to sum, or add up, the terms. The integer \(k\) is called the index of the sum; it tells where to start the sum and where to end it. The expression
\[
\sum_{k=1}^{n} a_{k}
\]
is an instruction to add the terms \(a_{k}\) of the sequence \(\left\{a_{n}\right\}\) starting with \(k=1\) and ending with \(k=n\). The expression reads, "the sum of \(a_{k}\) from \(k=1\) to \(k=n\)."

\section*{EXAMPLE 7 Expanding Summation Notation}

Write out each sum.
(a) \(\sum_{k=1}^{n} \frac{1}{k}\)
(b) \(\sum_{k=1}^{n} k\) !

Solution
(a) \(\sum_{k=1}^{n} \frac{1}{k}=1+\frac{1}{2}+\frac{1}{3}+\cdots+\frac{1}{n}\)
(b) \(\sum_{k=1}^{n} k!=1!+2!+\cdots+n\) !
am Now Work problem 51

\section*{EXAMPLE 8 Writing a Sum in Summation Notation}

Express each sum using summation notation.
(a) \(1^{2}+2^{2}+3^{2}+\cdots+9^{2}\)
(b) \(1+\frac{1}{2}+\frac{1}{4}+\frac{1}{8}+\cdots+\frac{1}{2^{n-1}}\)

Solution (a) The sum \(1^{2}+2^{2}+3^{2}+\cdots+9^{2}\) has 9 terms, each of the form \(k^{2}\), and starts at \(k=1\) and ends at \(k=9\) :
(b) The sum
\[
1^{2}+2^{2}+3^{2}+\cdots+9^{2}=\sum_{k=1}^{9} k^{2}
\]
\[
1+\frac{1}{2}+\frac{1}{4}+\frac{1}{8}+\cdots+\frac{1}{2^{n-1}}
\]
has \(n\) terms, each of the form \(\frac{1}{2^{k-1}}\), and starts at \(k=1\) and ends at \(k=n\) :
\[
1+\frac{1}{2}+\frac{1}{4}+\frac{1}{8}+\cdots+\frac{1}{2^{n-1}}=\sum_{k=1}^{n} \frac{1}{2^{k-1}}
\]

The index of summation need not always begin at 1 or end at \(n\); for example, the sum in Example 8(b) could also be expressed as
\[
\sum_{k=0}^{n-1} \frac{1}{2^{k}}=1+\frac{1}{2}+\frac{1}{4}+\cdots+\frac{1}{2^{n-1}}
\]

Letters other than \(k\) may be used as the index. For example,
\[
\sum_{j=1}^{n} j!\quad \text { and } \quad \sum_{i=1}^{n} i!
\]
both represent the same sum given in Example 7(b).
am Now Work problem 61

\section*{4 Find the Sum of a Sequence}

The following theorem lists some properties of sequences using summation notation. These properties are useful for adding the terms of a sequence.

\section*{THEOREM}

\section*{Properties of Sequences}

If \(\left\{a_{n}\right\}\) and \(\left\{b_{n}\right\}\) are two sequences and \(c\) is a real number, then
\[
\begin{align*}
& \sum_{k=1}^{n}\left(c a_{k}\right)=c a_{1}+c a_{2}+\cdots+c a_{n}=c\left(a_{1}+a_{2}+\cdots+a_{n}\right)=c \sum_{k=1}^{n} a_{k}  \tag{1}\\
& \sum_{k=1}^{n}\left(a_{k}+b_{k}\right)=\sum_{k=1}^{n} a_{k}+\sum_{k=1}^{n} b_{k}  \tag{2}\\
& \sum_{k=1}^{n}\left(a_{k}-b_{k}\right)=\sum_{k=1}^{n} a_{k}-\sum_{k=1}^{n} b_{k}  \tag{3}\\
& \sum_{k=j+1}^{n} a_{k}=\sum_{k=1}^{n} a_{k}-\sum_{k=1}^{j} a_{k}, \quad \text { where } 0<j<n \tag{4}
\end{align*}
\]

The proof of property (1) follows from the distributive property of real numbers. The proofs of properties (2) and (3) are based on the commutative and associative properties of real numbers. Property (4) states that the sum from \(j+1\) to \(n\) equals the sum from 1 to \(n\) minus the sum from 1 to \(j\). It can be helpful to employ this property when the index of summation begins at a number larger than 1.

The next theorem provides some formulas for finding the sums of certain sequences.

Formulas for Sums of Sequences
\[
\begin{align*}
& \sum_{k=1}^{n} c=\underbrace{c+c+\cdots+c}_{n \text { terms }}=c n \quad c \text { is a real number }  \tag{5}\\
& \sum_{k=1}^{n} k=1+2+3+\cdots+n=\frac{n(n+1)}{2}  \tag{6}\\
& \sum_{k=1}^{n} k^{2}=1^{2}+2^{2}+3^{2}+\cdots+n^{2}=\frac{n(n+1)(2 n+1)}{6}  \tag{7}\\
& \sum_{k=1}^{n} k^{3}=1^{3}+2^{3}+3^{3}+\cdots+n^{3}=\left[\frac{n(n+1)}{2}\right]^{2} \tag{8}
\end{align*}
\]

The proof of formula (5) follows from the definition of summation notation. You are asked to prove formula (6) in Problem 92. The proofs of formulas (7) and (8) require mathematical induction, which is discussed in Section 11.4.

Notice the difference between formulas (5) and (6). In (5), the constant \(c\) is being summed from 1 to \(n\), while in (6) the index of summation \(k\) is being summed from 1 to \(n\).

\section*{EXAMPLE 9 Finding the Sum of a Sequence}

Find the sum of each sequence.
(a) \(\sum_{k=1}^{5}(3 k)\)
(b) \(\sum_{k=1}^{10}\left(k^{3}+1\right)\)
(c) \(\sum_{k=1}^{24}\left(k^{2}-7 k+2\right)\)
(d) \(\sum_{k=6}^{20}\left(4 k^{2}\right)\)

Solution
(a) \(\sum_{k=1}^{5}(3 k)=3 \sum_{k=1}^{5} k\)

Property (1)
\(=3\left(\frac{5(5+1)}{2}\right)\)
\[
=3(15)
\]
\[
=45
\]
(b) \(\sum_{k=1}^{10}\left(k^{3}+1\right)=\sum_{k=1}^{10} k^{3}+\sum_{k=1}^{10} 1\)

Property (2)
\[
\begin{aligned}
& =\left(\frac{10(10+1)}{2}\right)^{2}+1(10) \\
& =3025+10 \\
& =3035
\end{aligned}
\]

Formula (6)
\(\begin{array}{ll} & =\left(\frac{10(10+1)}{2}\right)^{2}+1(10) \quad \quad \text { Formulas (8) and (5) } \\ & =3025+10 \\ & =3035\end{array}\)
(c) \(\sum_{k=1}^{24}\left(k^{2}-7 k+2\right)=\sum_{k=1}^{24} k^{2}-\sum_{k=1}^{24}(7 k)+\sum_{k=1}^{24} 2 \quad \quad\) Properties (2) and (3)
\[
=\sum_{k=1}^{24} k^{2}-7 \sum_{k=1}^{24} k+\sum_{k=1}^{24} 2
\]
\[
=\frac{24(24+1)(2 \cdot 24+1)}{6}-7\left(\frac{24(24+1)}{2}\right)+2(24) \quad \text { Formulas (7), (6), (5) }
\]
\[
=4900-2100+48
\]
\[
=2848
\]
(d) Notice that the index of summation starts at 6 . We use property (4) as follows:
\[
\begin{gathered}
\sum_{k=6}^{20}\left(4 k^{2}\right)=4 \sum_{k=6}^{20} k^{2}=4\left[\sum_{k=1}^{20} k^{2}-\sum_{k=1}^{5} k^{2}\right]=4\left[\frac{20(21)(41)}{6}-\frac{5(6)(11)}{6}\right] \\
\begin{array}{c}
\text { Property (1) } \\
\text { Property (4) } \\
\\
=4[2870-55]=11,260
\end{array}
\end{gathered}
\]

\subsection*{11.1 Assess Your Understanding}

\section*{'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.}
1. For the function \(f(x)=\frac{x-1}{x}\), find \(f(2)\) and \(f(3)\).
(pp. 46-49)
2. True or False A function is a relation between two sets \(D\) and \(R\) such that each element \(x\) in the first set \(D\) is related to exactly one element \(y\) in the second set \(R\). (pp. 43-46)
3. \(\mathrm{A}(\mathrm{n})\) \(\qquad\) is a function whose domain is the set of positive integers.
4. True or False The notation \(a_{5}\) represents the fifth term of a sequence.
5. If \(n \geq 0\) is an integer, then \(n!=\) \(\qquad\) when \(n \geq 2\).
6. The sequence \(a_{1}=5, a_{n}=3 a_{n-1}\) is an example of a
\(\qquad\) sequence.
7. The notation \(a_{1}+a_{2}+a_{3}+\cdots+a_{n}=\sum_{k=1}^{n} a_{k}\) is an example of \(\qquad\) notation.
8. True or False \(\sum_{k=1}^{n} k=1+2+3+\cdots+n=\frac{n(n+1)}{2}\)

\section*{Skill Building}

In Problems 9-14, evaluate each factorial expression.
9. 10 !
10. 9 !
11. \(\frac{9!}{6!}\)
12. \(\frac{12!}{10!}\)
13. \(\frac{3!7!}{4!}\)
14. \(\frac{5!8!}{3!}\)

In Problems 15-26, write down the first five terms of each sequence.
15. \(\left\{s_{n}\right\}=\{n\}\)
16. \(\left\{s_{n}\right\}=\left\{n^{2}+1\right\}\)
17. \(\left\{a_{n}\right\}=\left\{\frac{n}{n+2}\right\}\)
18. \(\left\{b_{n}\right\}=\left\{\frac{2 n+1}{2 n}\right\}\)
19. \(\left\{c_{n}\right\}=\left\{(-1)^{n+1} n^{2}\right\}\)
20. \(\left\{d_{n}\right\}=\left\{(-1)^{n-1}\left(\frac{n}{2 n-1}\right)\right\}\)
21. \(\left\{s_{n}\right\}=\left\{\frac{2^{n}}{3^{n}+1}\right\}\)
22. \(\left\{s_{n}\right\}=\left\{\left(\frac{4}{3}\right)^{n}\right\}\)
23. \(\left\{t_{n}\right\}=\left\{\frac{(-1)^{n}}{(n+1)(n+2)}\right\}\)
24. \(\left\{a_{n}\right\}=\left\{\frac{3^{n}}{n}\right\}\)
25. \(\left\{b_{n}\right\}=\left\{\frac{n}{e^{n}}\right\}\)
26. \(\left\{c_{n}\right\}=\left\{\frac{n^{2}}{2^{n}}\right\}\)

In Problems 27-34, the given pattern continues. Write down the nth term of a sequence \(\left\{a_{n}\right\}\) suggested by the pattern.
27. \(\frac{1}{2}, \frac{2}{3}, \frac{3}{4}, \frac{4}{5}, \ldots\)
28. \(\frac{1}{1 \cdot 2}, \frac{1}{2 \cdot 3}, \frac{1}{3 \cdot 4}, \frac{1}{4 \cdot 5}, \cdots\)
29. \(1, \frac{1}{2}, \frac{1}{4}, \frac{1}{8}, \ldots\)
30. \(\frac{2}{3}, \frac{4}{9}, \frac{8}{27}, \frac{16}{81}, \ldots\)
31. \(1,-1,1,-1,1,-1, \ldots\)
32. \(1, \frac{1}{2}, 3, \frac{1}{4}, 5, \frac{1}{6}, 7, \frac{1}{8}, \ldots\)
33. \(1,-2,3,-4,5,-6, \ldots\)
34. \(2,-4,6,-8,10, \ldots\)

In Problems 35-48, a sequence is defined recursively. Write down the first five terms.
35. \(a_{1}=2 ; \quad a_{n}=3+a_{n-1}\)
36. \(a_{1}=3 ; \quad a_{n}=4-a_{n-1}\)
37. \(a_{1}=-2 ; \quad a_{n}=n+a_{n-1}\)
38. \(a_{1}=1 ; \quad a_{n}=n-a_{n-1}\)
39. \(a_{1}=5 ; \quad a_{n}=2 a_{n-1}\)
40. \(a_{1}=2 ; \quad a_{n}=-a_{n-1}\)
41. \(a_{1}=3 ; \quad a_{n}=\frac{a_{n-1}}{n}\)
42. \(a_{1}=-2 ; \quad a_{n}=n+3 a_{n-1}\)
43. \(a_{1}=1 ; \quad a_{2}=2 ; \quad a_{n}=a_{n-1} \cdot a_{n-2}\)
44. \(a_{1}=-1 ; \quad a_{2}=1 ; \quad a_{n}=a_{n-2}+n a_{n-1}\)
45. \(a_{1}=A ; \quad a_{n}=a_{n-1}+d\)
46. \(a_{1}=A ; \quad a_{n}=r a_{n-1}, \quad r \neq 0\)
47. \(a_{1}=\sqrt{2} ; \quad a_{n}=\sqrt{2+a_{n-1}}\)
48. \(a_{1}=\sqrt{2} ; \quad a_{n}=\sqrt{\frac{a_{n-1}}{2}}\)

In Problems 49-58, write out each sum.
49. \(\sum_{k=1}^{n}(k+2)\)
50. \(\sum_{k=1}^{n}(2 k+1)\)
51. \(\sum_{k=1}^{n} \frac{k^{2}}{2}\)
52. \(\sum_{k=1}^{n}(k+1)^{2}\)
53. \(\sum_{k=0}^{n} \frac{1}{3^{k}}\)
54. \(\sum_{k=0}^{n}\left(\frac{3}{2}\right)^{k}\)
55. \(\sum_{k=0}^{n-1} \frac{1}{3^{k+1}}\)
56. \(\sum_{k=0}^{n-1}(2 k+1)\)
57. \(\sum_{k=2}^{n}(-1)^{k} \ln k\)
58. \(\sum_{k=3}^{n}(-1)^{k+1} 2^{k}\)

In Problems 59-68, express each sum using summation notation.
59. \(1+2+3+\cdots+20\)
60. \(1^{3}+2^{3}+3^{3}+\cdots+8^{3}\)
61. \(\frac{1}{2}+\frac{2}{3}+\frac{3}{4}+\cdots+\frac{13}{13+1}\)
62. \(1+3+5+7+\cdots+[2(12)-1]\)
63. \(1-\frac{1}{3}+\frac{1}{9}-\frac{1}{27}+\cdots+(-1)^{6}\left(\frac{1}{3^{6}}\right)\)
64. \(\frac{2}{3}-\frac{4}{9}+\frac{8}{27}-\cdots+(-1)^{12}\left(\frac{2}{3}\right)^{11}\)
65. \(3+\frac{3^{2}}{2}+\frac{3^{3}}{3}+\cdots+\frac{3^{n}}{n}\)
66. \(\frac{1}{e}+\frac{2}{e^{2}}+\frac{3}{e^{3}}+\cdots+\frac{n}{e^{n}}\)
67. \(a+(a+d)+(a+2 d)+\cdots+(a+n d)\)
68. \(a+a r+a r^{2}+\cdots+a r^{n-1}\)

In Problems 69-80, find the sum of each sequence.
69. \(\sum_{k=1}^{40} 5\)
70. \(\sum_{k=1}^{50} 8\)
73. \(\sum_{k=1}^{20}(5 k+3)\)
74. \(\sum_{k=1}^{26}(3 k-7)\)
77. \(\sum_{k=10}^{60}(2 k)\)
78. \(\sum_{k=8}^{40}(-3 k)\)
71. \(\sum_{k=1}^{40} k\)
72. \(\sum_{k=1}^{24}(-k)\)
75. \(\sum_{k=1}^{16}\left(k^{2}+4\right)\)
79. \(\sum_{k=5}^{20} k^{3}\)
76. \(\sum_{k=0}^{14}\left(k^{2}-4\right)\)
80. \(\sum_{k=4}^{24} k^{3}\)

\section*{Applications and Extensions}
81. Credit Card Debt John has a balance of \(\$ 3000\) on his Discover card, which charges \(1 \%\) interest per month on any unpaid balance. John can afford to pay \(\$ 100\) toward the balance each month. His balance each month after making a \(\$ 100\) payment is given by the recursively defined sequence
\[
B_{0}=\$ 3000 \quad B_{n}=1.01 B_{n-1}-100
\]

Determine John's balance after making the first payment. That is, determine \(B_{1}\).
82. Trout Population A pond currently has 2000 trout in it A fish hatchery decides to add an additional 20 trout each month. It is also known that the trout population is growing at a rate of \(3 \%\) per month. The size of the population after \(n\) months is given by the recursively defined sequence
\[
p_{0}=2000 \quad p_{n}=1.03 p_{n-1}+20
\]

How many trout are in the pond after 2 months? That is, what is \(p_{2}\) ?
83. Car Loans Phil bought a car by taking out a loan for \(\$ 18,500\) at \(0.5 \%\) interest per month. Phil's normal monthly payment is \(\$ 434.47\) per month, but he decides that he can afford to pay \(\$ 100\) extra toward the balance each month. His balance each month is given by the recursively defined sequence
\[
B_{0}=\$ 18,500 \quad B_{n}=1.005 B_{n-1}-534.47
\]

Determine Phil's balance after making the first payment. That is, determine \(B_{1}\).
84. Environmental Control The Environmental Protection Agency (EPA) determines that Maple Lake has 250 tons of pollutant as a result of industrial waste and that \(10 \%\) of the pollutant present is neutralized by solar oxidation every year. The EPA imposes new pollution-control laws that result in 15 tons of new pollutant entering the lake each year. The amount of pollutant in the lake after \(n\) years is given by the recursively defined sequence
\[
p_{0}=250 \quad p_{n}=0.9 p_{n-1}+15
\]

Determine the amount of pollutant in the lake after 2 years. That is, determine \(p_{2}\).
85. Growth of a Rabbit Colony A colony of rabbits begins with one pair of mature rabbits, which will produce a pair of offspring (one male, one female) each month. Assume that all rabbits mature in 1 month and produce a pair of offspring (one male, one female) after 2 months. If no rabbits ever die, how many pairs of mature rabbits are there after 7 months?
[Hint: A Fibonacci sequence models this colony. Do you see why?]

86. Fibonacci Sequence Let
\[
u_{n}=\frac{(1+\sqrt{5})^{n}-(1-\sqrt{5})^{n}}{2^{n} \sqrt{5}}
\]
define the \(n\)th term of a sequence.
(a) Show that \(u_{1}=1\) and \(u_{2}=1\).
(b) Show that \(u_{n+2}=u_{n+1}+u_{n}\).
(c) Draw the conclusion that \(\left\{u_{n}\right\}\) is a Fibonacci sequence.
87. Pascal's Triangle Divide the triangular array shown (called Pascal's triangle) using diagonal lines as indicated. Find the sum of the numbers in each diagonal row. Do you recognize this sequence?

88. Fibonacci Sequence Use the result of Problem 86 to do the following problems.
(a) Write the first 11 terms of the Fibonacci sequence.
(b) Write the first 10 terms of the ratio \(\frac{u_{n+1}}{u_{n}}\).
(c) As \(n\) gets large, what number does the ratio approach? This number is referred to as the golden ratio. Rectangles whose sides are in this ratio were considered pleasing to the eye by the Greeks. For example, the façade of the Parthenon was constructed using the golden ratio.
(d) Write down the first 10 terms of the ratio \(\frac{u_{n}}{u_{n+1}}\).
(e) As \(n\) gets large, what number does the ratio approach? This number is referred to as the conjugate golden ratio. This ratio is believed to have been used in the construction of the Great Pyramid in Egypt. The ratio equals the sum of the areas of the four face triangles divided by the total surface area of the Great Pyramid.
\(\measuredangle\) 89. Approximating \(f(x)=e^{x}\) In calculus, it can be shown that
\[
f(x)=e^{x}=\sum_{k=0}^{\infty} \frac{x^{k}}{k!}
\]

We can approximate the value of \(f(x)=e^{x}\) for any \(x\) using the following sum
\[
f(x)=e^{x} \approx \sum_{k=0}^{n} \frac{x^{k}}{k!}
\]
for some \(n\).
(a) Approximate \(f(1.3)\) with \(n=4\)
(b) Approximate \(f(1.3)\) with \(n=7\).
(c) Use a calculator to approximate \(f(1.3)\).
(d) Using trial and error, along with a graphing utility's SEQuence mode, determine the value of \(n\) required to approximate \(f(1.3)\) correct to eight decimal places.
90. Approximating \(\boldsymbol{f}(\boldsymbol{x})=\boldsymbol{e}^{\boldsymbol{x}}\) Refer to Problem 89.
(a) Approximate \(f(-2.4)\) with \(n=3\).
(b) Approximate \(f(-2.4)\) with \(n=6\).
(c) Use a calculator to approximate \(f(-2.4)\).
(d) Using trial and error, along with a graphing utility's SEQuence mode, determine the value of \(n\) required to approximate \(f(-2.4)\) correct to eight decimal places.
91. Bode's Law In 1772, Johann Bode published the following formula for predicting the mean distances, in astronomical units (AU), of the planets from the sun:
\[
a_{1}=0.4 \quad a_{n}=0.4+0.3 \cdot 2^{n-2}, n \geq 2
\]
where \(n\) is the number of the planet from the sun.
(a) Determine the first eight terms of this sequence.
(b) At the time of Bode's publication, the known planets were Mercury (0.39 AU), Venus (0.72 AU), Earth (1 AU), Mars (1.52 AU), Jupiter (5.20 AU), and Saturn ( 9.54 AU ). How do the actual distances compare to the terms of the sequence?
(c) The planet Uranus was discovered in 1781 and the asteroid Ceres was discovered in 1801. The mean orbital distances from the sun to Uranus and Ceres* are 19.2 AU and 2.77 AU , respectively. How well do these values fit within the sequence?
(d) Determine the ninth and tenth terms of Bode's sequence.
(e) The planets Neptune and Pluto* were discovered in 1846 and 1930, respectively. Their mean orbital distances from the sun are 30.07 AU and 39.44 AU, respectively. How do these actual distances compare to the terms of the sequence?
(f) On July 29, 2005, NASA announced the discovery of a dwarf planet \({ }^{*}(n=11)\), which has been named Eris. Use Bode's Law to predict the mean orbital distance of Eris from the sun. Its actual mean distance is not yet known, but Eris is currently about 97 astronomical units from the sun.
Sources: NASA.
92. Show that
\[
1+2+\cdots+(n-1)+n=\frac{n(n+1)}{2}
\]
[Hint: Let
\[
\begin{aligned}
& S=1+2+\cdots+(n-1)+n \\
& S=n+(n-1)+(n-2)+\cdots+1
\end{aligned}
\]

Add these equations. Then
\[
2 S=\underbrace{[1+n]+[2+(n-1)+\cdots]+[n+1]}_{n \text { terms in brackets }}
\]

Now complete the derivation.]
*Ceres, Haumea, Makemake, Pluto, and Eris are referred to as dwarf planets.

Computing Square Roots A method for approximating \(\sqrt{p}\) can be traced back to the Babylonians. The formula is given by the recursively defined sequence
\[
a_{0}=k \quad a_{n}=\frac{1}{2}\left(a_{n-1}+\frac{p}{a_{n-1}}\right)
\]
where \(k\) is an initial guess as to the value of the square root. Use this recursive formula to approximate the following square roots by finding \(a_{5}\). Compare this result to the value provided by your calculator.
93. \(\sqrt{5}\)
94. \(\sqrt{8}\)
95. \(\sqrt{21}\)
96. \(\sqrt{89}\)

\section*{Explaining Concepts: Discussion and Writing}
97. Investigate various applications that lead to a Fibonacci sequence, such as in art, architecture, or financial markets. Write an essay on these applications.

\section*{-Retain Your Knowledge}

Problems 98-101 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
98. If \(\$ 2500\) is invested at \(3 \%\) compounded monthly, find the amount that results after a period of 2 years.
99. Write the complex number \(-1-i\) in polar form. Express the argument in degrees.
100. For \(\mathbf{v}=2 \mathbf{i}-\mathbf{j}+3 \mathbf{k}\) and \(\mathbf{w}=\mathbf{i}+2 \mathbf{j}-\mathbf{k}\), find the cross product \(\mathbf{v} \times \mathbf{w}\).
101. Find an equation of the parabola with vertex \((-3,4)\) and focus \((1,4)\).

\section*{'Are You Prepared?' Answers}
1. \(f(2)=\frac{1}{2} ; f(3)=\frac{2}{3}\)
2. True

\subsection*{11.2 Arithmetic Sequences}
\[
\begin{array}{lll}
\text { OBJECTIVES } & 1 \text { Determine Whether a Sequence Is Arithmetic (p. 830) } \\
& 2 \text { Find a Formula for an Arithmetic Sequence (p. 831) } \\
& 3 \text { Find the Sum of an Arithmetic Sequence (p. 832) }
\end{array}
\]

\section*{1 Determine Whether a Sequence Is Arithmetic}

When the difference between successive terms of a sequence is always the same number, the sequence is called arithmetic.

DEFINITION
An arithmetic sequence* may be defined recursively as \(a_{1}=a, a_{n}-a_{n-1}=d\), or as
\[
\begin{equation*}
a_{1}=a, \quad a_{n}=a_{n-1}+d \tag{1}
\end{equation*}
\]
where \(a_{1}=a\) and \(d\) are real numbers. The number \(a\) is the first term, and the number \(d\) is called the common difference.

The terms of an arithmetic sequence with first term \(a_{1}\) and common difference \(d\) follow the pattern
\[
a_{1}, \quad a_{1}+d, \quad a_{1}+2 d, \quad a_{1}+3 d, \ldots
\]

\section*{EXAMPLE I Determining Whether a Sequence Is Arithmetic}

The sequence
\[
4, \quad 6, \quad 8, \quad 10, \ldots
\]
is arithmetic since the difference of successive terms is 2 . The first term is \(a_{1}=4\), and the common difference is \(d=2\).

\section*{EXAMPLE 2 Determining Whether a Sequence Is Arithmetic}

Show that the following sequence is arithmetic. Find the first term and the common difference.
\[
\left\{s_{n}\right\}=\{3 n+5\}
\]

Solution The first term is \(s_{1}=3 \cdot 1+5=8\). The \(n\)th term and the \((n-1)\) st term of the sequence \(\left\{s_{n}\right\}\) are
\[
s_{n}=3 n+5 \text { and } s_{n-1}=3(n-1)+5=3 n+2
\]

Their difference \(d\) is
\[
d=s_{n}-s_{n-1}=(3 n+5)-(3 n+2)=5-2=3
\]

Since the difference of any two successive terms is the constant 3 , the sequence \(\left\{s_{n}\right\}\) is arithmetic and the common difference is 3 .

\section*{EXAMPLE 3 DeterminingWhether a Sequence Is Arithmetic}

Show that the sequence \(\left\{t_{n}\right\}=\{4-n\}\) is arithmetic. Find the first term and the common difference.

Solution The first term is \(t_{1}=4-1=3\). The \(n\)th term and the \((n-1)\) st term are
\[
t_{n}=4-n \quad \text { and } \quad t_{n-1}=4-(n-1)=5-n
\]

Their difference \(d\) is
\[
d=t_{n}-t_{n-1}=(4-n)-(5-n)=4-5=-1
\]

Since the difference of any two successive terms is the constant \(-1,\left\{t_{n}\right\}\) is an arithmetic sequence whose common difference is -1 .

Now Work problem 7

\section*{2 Find a Formula for an Arithmetic Sequence}

Suppose that \(a\) is the first term of an arithmetic sequence whose common difference is \(d\). We seek a formula for the \(n\)th term, \(a_{n}\). To see the pattern, consider the first few terms.
\[
\begin{aligned}
a_{1} & =a \\
a_{2} & =a_{1}+d=a_{1}+1 \cdot d \\
a_{3} & =a_{2}+d=\left(a_{1}+d\right)+d=a_{1}+2 \cdot d \\
a_{4} & =a_{3}+d=\left(a_{1}+2 \cdot d\right)+d=a_{1}+3 \cdot d \\
a_{5} & =a_{4}+d=\left(a_{1}+3 \cdot d\right)+d=a_{1}+4 \cdot d \\
& \vdots \\
a_{n} & =a_{n-1}+d=\left[a_{1}+(n-2) d\right]+d=a_{1}+(n-1) d
\end{aligned}
\]

This leads to the following result:

\section*{THEOREM}

\section*{nth Term of an Arithmetic Sequence}

For an arithmetic sequence \(\left\{a_{n}\right\}\) whose first term is \(a_{1}\) and whose common difference is \(d\), the \(n\)th term is determined by the formula
\[
\begin{equation*}
a_{n}=a_{1}+(n-1) d \tag{2}
\end{equation*}
\]

\section*{EXAMPLE 4 Finding a Particular Term of an Arithmetic Sequence}

Find the 41 st term of the arithmetic sequence: \(2,6,10,14,18, \ldots\)
Solution The first term of this arithmetic sequence is \(a_{1}=2\), and the common difference is \(d=4\). By formula (2), the \(n\)th term is
\[
a_{n}=2+(n-1) 4 \quad a_{n}=a_{1}+(n-1) d ; a_{1}=2, d=4
\]

The 41st term is
\[
a_{41}=2+(41-1) \cdot 4=162
\]

\section*{EXAMPLE 5}

Finding a Recursive Formula for an Arithmetic Sequence
The 8th term of an arithmetic sequence is 75 , and the 20 th term is 39 .
(a) Find the first term and the common difference.
(b) Give a recursive formula for the sequence.
(c) What is the \(n\)th term of the sequence?

\section*{Solution}

\section*{Exploration}

Graph the recursive formula from Example 5, \(a_{1}=96, a_{n}=a_{n-1}-3\), using a graphing utility. Conclude that the graph of the recursive formula behaves like the graph of a linear function. How is \(d\), the common difference, related to \(m\), the slope of a line?
(a) Formula (2) states that \(a_{n}=a_{1}+(n-1) d\). As a result,
\[
\left\{\begin{array}{l}
a_{8}=a_{1}+7 d=75 \\
a_{20}=a_{1}+19 d=39
\end{array}\right.
\]

This is a system of two linear equations containing two variables, \(a_{1}\) and \(d\), which can be solved by elimination. Subtracting the second equation from the first gives
\[
\begin{aligned}
-12 d & =36 \\
d & =-3
\end{aligned}
\]

With \(d=-3\), use \(a_{1}+7 d=75\) to find that \(a_{1}=75-7 d=75-7(-3)\) \(=96\). The first term is \(a_{1}=96\), and the common difference is \(d=-3\).
(b) Using formula (1), a recursive formula for this sequence is
\[
a_{1}=96, \quad a_{n}=a_{n-1}-3
\]
(c) Using formula (2), a formula for the \(n\)th term of the sequence \(\left\{a_{n}\right\}\) is
\[
a_{n}=a_{1}+(n-1) d=96+(n-1)(-3)=99-3 n
\]

\section*{3 Find the Sum of an Arithmetic Sequence}

The next result gives two formulas for finding the sum of the first \(n\) terms of an arithmetic sequence.

\section*{Sum of the First \(\boldsymbol{n}\) Terms of an Arithmetic Sequence}

Let \(\left\{a_{n}\right\}\) be an arithmetic sequence with first term \(a_{1}\) and common difference \(d\). The sum \(S_{n}\) of the first \(n\) terms of \(\left\{a_{n}\right\}\) may be found in two ways:
\[
\begin{align*}
S_{n}=a_{1}+a_{2}+a_{3}+\cdots & +a_{n} \\
=\sum_{k=1}^{n}\left[a_{1}+(k-1) d\right] & =\frac{n}{2}\left[2 a_{1}+(n-1) d\right]  \tag{3}\\
& =\frac{n}{2}\left(a_{1}+a_{n}\right) \tag{4}
\end{align*}
\]

\section*{Proof}
\[
\begin{aligned}
& S_{n}=a_{1}+a_{2}+a_{3}+\cdots+a_{n} \\
& =a_{1}+\left(a_{1}+d\right)+\left(a_{1}+2 d\right)+\cdots+\left[a_{1}+(n-1) d\right] \text { Formula (2) } \\
& =\left(a_{1}+a_{1}+\cdots+a_{1}\right)+[d+2 d+\cdots+(n-1) d] \text { Rearrangeterms. } \\
& \text { nterms } \\
& =n a_{1}+d[1+2+\cdots+(n-1)] \\
& =n a_{1}+d\left[\frac{(n-1) n}{2}\right] \quad \text { Formula 6, Section 11.1 } \\
& =n a_{1}+\frac{n}{2}(n-1) d \\
& =\frac{n}{2}\left[2 a_{1}+(n-1) d\right] \quad \text { Factor out } \frac{n}{2} \text {, this is formula (3). } \\
& =\frac{n}{2}\left[a_{1}+a_{1}+(n-1) d\right] \\
& =\frac{n}{2}\left(a_{1}+a_{n}\right) \quad \text { Use formula (2); this is formula (4). }
\end{aligned}
\]

There are two ways to find the sum of the first \(n\) terms of an arithmetic sequence. Notice that formula (3) involves the first term and common difference, whereas formula (4) involves the first term and the \(n\)th term. Use whichever form is easier.

\section*{EXAMPLE 6 Finding the Sum of an Arithmetic Sequence}

Find the sum \(S_{n}\) of the first \(n\) terms of the sequence \(\left\{a_{n}\right\}=\{3 n+5\}\); that is, find
\[
8+11+14+\cdots+(3 n+5)=\sum_{k=1}^{n}(3 k+5)
\]

Solution The sequence \(\left\{a_{n}\right\}=\{3 n+5\}\) is an arithmetic sequence with first term \(a_{1}=8\) and \(n\)th term \(a_{n}=3 n+5\). To find the sum \(S_{n}\), use formula (4).
\[
\begin{aligned}
S_{n}=\sum_{k=1}^{n}(3 k+5) & =\frac{n}{2}[8+(3 n+5)]=\frac{n}{2}(3 n+13) \\
S_{n} & =\frac{n}{2}\left(a_{1}+a_{n}\right)
\end{aligned}
\]

\section*{EXAMPLE 7 Finding the Sum of an Arithmetic Sequence}

Find the sum: \(60+64+68+72+\cdots+120\)
Solution This is the sum \(S_{n}\) of an arithmetic sequence \(\left\{a_{n}\right\}\) whose first term is \(a_{1}=60\) and whose common difference is \(d=4\). The \(n\)th term is \(a_{n}=120\). Use formula (2) to find \(n\).
\[
\begin{aligned}
a_{n} & =a_{1}+(n-1) d & & \text { Formula (2) } \\
120 & =60+(n-1) \cdot 4 & & a_{n}=120, a_{1}=60, d=4 \\
60 & =4(n-1) & & \text { Simplify. } \\
15 & =n-1 & & \text { Simplify. } \\
n & =16 & & \text { Solve for } n .
\end{aligned}
\]

Now use formula (4) to find the sum \(S_{16}\).
\[
\begin{gathered}
60+64+68+\cdots+120=\underset{\uparrow}{=} S_{16}=\frac{16}{2}(60+120)=1440 \\
S_{n}=\frac{n}{2}\left(a_{1}+a_{n}\right)
\end{gathered}
\]
an Now Work problem 41

\section*{EXAMPLE 8 Creating a Floor Design}

A ceramic tile floor is designed in the shape of a trapezoid 20 feet wide at the base and 10 feet wide at the top. See Figure 7. The tiles, which measure 12 inches by 12 inches, are to be placed so that each successive row contains one fewer tile than the preceding row. How many tiles will be required?

Figure 7

Solution The bottom row requires 20 tiles and the top row, 10 tiles. Since each successive row requires one less tile, the total number of tiles required is
\[
S=20+19+18+\cdots+11+10
\]

This is the sum of an arithmetic sequence; the common difference is -1 . The number of terms to be added is \(n=11\), with the first term \(a_{1}=20\) and the last term \(a_{11}=10\). The sum \(S\) is
\[
S=\frac{n}{2}\left(a_{1}+a_{11}\right)=\frac{11}{2}(20+10)=165
\]

In all, 165 tiles will be required.

\subsection*{11.2 Assess Your Understanding}

\section*{Concepts and Vocabulary}
1. In \(\mathrm{a}(\mathrm{n})\) \(\qquad\) sequence, the difference between successive terms is a constant.
2. True or False For an arithmetic sequence \(\left\{a_{n}\right\}\) whose first term is \(a_{1}\) and whose common difference is \(d\), the \(n\)th term is determined by the formula \(a_{n}=a_{1}+n d\).
3. If the fifth term of an arithmetic sequence is 12 and the common difference is 5 , then the sixth term of the sequence is \(\qquad\) .
4. True or False The sum \(S_{n}\) of the first \(n\) terms of an arithmetic sequence \(\left\{a_{n}\right\}\) whose first term is \(a_{1}\) can be found using the formula \(S_{n}=\frac{n}{2}\left(a_{1}+a_{n}\right)\).

\section*{Skill Building}

In Problems 5-14, show that each sequence is arithmetic. Find the common difference and write out the first four terms.
5. \(\left\{s_{n}\right\}=\{n+4\}\)
6. \(\left\{s_{n}\right\}=\{n-5\}\)
7. \(\left\{a_{n}\right\}=\{2 n-5\}\)
8. \(\left\{b_{n}\right\}=\{3 n+1\}\)
9. \(\left\{c_{n}\right\}=\{6-2 n\}\)
10. \(\left\{a_{n}\right\}=\{4-2 n\}\)
11. \(\left\{t_{n}\right\}=\left\{\frac{1}{2}-\frac{1}{3} n\right\}\)
12. \(\left\{t_{n}\right\}=\left\{\frac{2}{3}+\frac{n}{4}\right\}\)
13. \(\left\{s_{n}\right\}=\left\{\ln 3^{n}\right\}\)
14. \(\left\{s_{n}\right\}=\left\{e^{\ln n}\right\}\)

In Problems 15-22, find the nth term of the arithmetic sequence \(\left\{a_{n}\right\}\) whose initial term a and common difference \(d\) are given. What is the fifty-first term?
15. \(a_{1}=2 ; d=3\)
16. \(a_{1}=-2 ; \quad d=4\)
17. \(a_{1}=5 ; \quad d=-3\)
18. \(a_{1}=6 ; \quad d=-2\)
19. \(a_{1}=0 ; \quad d=\frac{1}{2}\)
20. \(a_{1}=1 ; \quad d=-\frac{1}{3}\)
21. \(a_{1}=\sqrt{2} ; \quad d=\sqrt{2}\)
22. \(a_{1}=0 ; \quad d=\pi\)

In Problems 23-28, find the indicated term in each arithmetic sequence.
23. 100th term of \(2,4,6, \ldots\)
24. 80th term of \(-1,1,3, \ldots\)
25. 90th term of \(1,-2,-5, \ldots\)
26. 80 th term of \(5,0,-5, \ldots\)
27. 80th term of \(2, \frac{5}{2}, 3, \frac{7}{2}, \ldots\)
28. 70th term of \(2 \sqrt{5}, 4 \sqrt{5}, 6 \sqrt{5}, \ldots\)

In Problems 29-36, find the first term and the common difference of the arithmetic sequence described. Give a recursive formula for the sequence. Find a formula for the nth term.
29. 8 th term is 8 ; 20th term is 44
30. 4th term is 3 ; 20th term is 35
31. 9th term is -5 ; 15 th term is 31
32. 8 th term is \(4 ; 18\) th term is -96
33. 15 th term is 0 ; 40th term is -50
34. 5th term is -2 ; 13th term is 30
35. 14th term is \(-1 ;\) 18th term is -9
36. 12th term is \(4 ; 18\) th term is 28

In Problems 37-54, find each sum.
37. \(1+3+5+\cdots+(2 n-1)\)
38. \(2+4+6+\cdots+2 n\)
39. \(7+12+17+\cdots+(2+5 n)\)
40. \(-1+3+7+\cdots+(4 n-5)\)
41. \(2+4+6+\cdots+70\)
42. \(1+3+5+\cdots+59\)
43. \(5+9+13+\cdots+49\)
44. \(2+5+8+\cdots+41\)
45. \(73+78+83+88+\cdots+558\)
46. \(7+1-5-11-\cdots-299\)
47. \(4+4.5+5+5.5+\cdots+100\)
48. \(8+8 \frac{1}{4}+8 \frac{1}{2}+8 \frac{3}{4}+9+\cdots+50\)
49. \(\sum_{n=1}^{80}(2 n-5)\)
50. \(\sum_{n=1}^{90}(3-2 n)\)
53. The sum of the first 120 terms of the sequence \(14,16,18\), 20, ...

\section*{Applications and Extensions}
55. Find \(x\) so that \(x+3,2 x+1\), and \(5 x+2\) are consecutive terms of an arithmetic sequence.
56. Find \(x\) so that \(2 x, 3 x+2\), and \(5 x+3\) are consecutive terms of an arithmetic sequence.
57. How many terms must be added in an arithmetic sequence whose first term is 11 and whose common difference is 3 to obtain a sum of 1092 ?
58. How many terms must be added in an arithmetic sequence whose first term is 78 and whose common difference is -4 to obtain a sum of 702 ?
59. Drury Lane Theater The Drury Lane Theater has 25 seats in
 the first row and 30 rows in all. Each successive row contains one additional seat. How many seats are in the theater?
60. Football Stadium The corner section of a football stadium has 15 seats in the first row and 40 rows in all. Each successive row contains two additional seats. How many seats are in this section?

61. Creating a Mosaic A mosaic is designed in the shape of an equilateral triangle, 20 feet on each side. Each tile in the mosaic is in the shape of an equilateral triangle, 12 inches to a side. The tiles are to alternate in color as shown in the illustration. How many tiles of each color will be required?

\section*{Explaining Concepts: Discussion and Writing}
68. Make up an arithmetic sequence. Give it to a friend and ask for its twentieth term.
62. Constructing a Brick Staircase A brick staircase has a total of 30 steps. The bottom step requires 100 bricks. Each successive step requires two fewer bricks than the prior step.
(a) How many bricks are required for the top step?
(b) How many bricks are required to build the staircase?
63. Cooling Air As a parcel of air rises (for example, as it is pushed over a mountain), it cools at the dry adiabatic lapse rate of \(5.5^{\circ} \mathrm{F}\) per 1000 feet until it reaches its dew point. If the ground temperature is \(67^{\circ} \mathrm{F}\), write a formula for the sequence of temperatures, \(\left\{T_{n}\right\}\), of a parcel of air that has risen \(n\) thousand feet. What is the temperature of a parcel of air if it has risen 5000 feet?
Source: National Aeronautics and Space Administration
64. Citrus Ladders Ladders used by fruit pickers are typically tapered with a wide bottom for stability and a narrow top for ease of picking. If the bottom rung of such a ladder is 49 inches wide and the top rung is 24 inches wide, how many rungs does the ladder have if each rung is 2.5 inches shorter than the one below it? How much material would be needed to make the rungs for the ladder described?
Source: www.stokesladders.com
65. Seats in an Amphitheater An outdoor amphitheater has 35 seats in the first row, 37 in the second row, 39 in the third row, and so on. There are 27 rows altogether. How many can the amphitheater seat?
66. Stadium Construction How many rows are in the corner section of a stadium containing 2040 seats if the first row has 10 seats and each successive row has 4 additional seats?
67. Salary If you take a job with a starting salary of \(\$ 35,000\) per year and a guaranteed raise of \(\$ 1400\) per year, how many years will it be before your aggregate salary is \(\$ 280,000\) ?
[Hint: Your aggregate salary after 2 years is \(\$ 35,000+(\$ 35,000+\$ 1400)\).]
69. Describe the similarities and differences between arithmetic sequences and linear functions.

\section*{Retain Your Knowledge}

Problems 70-73 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
70. If a credit card charges \(15.3 \%\) interest compounded monthly, find the effective rate.
71. The vector \(\mathbf{v}\) has initial point \(P(-1,2)\) and terminal point \(Q(3,-4)\). Write \(\mathbf{v}\) in the form \(a \mathbf{i}+b \mathbf{j}\); that is, find its position vector.
72. Analyze and graph the equation: \(25 x^{2}+4 y^{2}=100\)
73. Find the inverse of the matrix \(\left[\begin{array}{rr}2 & 0 \\ 3 & -1\end{array}\right]\), if there is one, or state that the matrix is singular.

\subsection*{11.3 Geometric Sequences; Geometric Series}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Compound Interest (Section 4.7, pp. 340-345)

Now Work the ‘Are You Prepared?’ problems on page 844.
OBJECTIVES 1 Determine Whether a Sequence Is Geometric (p. 836)
2 Find a Formula for a Geometric Sequence (p. 837)
3 Find the Sum of a Geometric Sequence (p. 838)
4 Determine Whether a Geometric Series Converges or Diverges (p. 839)
5 Solve Annuity Problems (p. 842)

\section*{1 Determine Whether a Sequence Is Geometric}

When the ratio of successive terms of a sequence is always the same nonzero number, the sequence is called geometric.

DEFINITION
A geometric sequence \({ }^{*}\) may be defined recursively as \(a_{1}=a, \frac{a_{n}}{a_{n-1}}=r\), or as
\[
\begin{equation*}
a_{1}=a, \quad a_{n}=r a_{n-1} \tag{1}
\end{equation*}
\]
where \(a_{1}=a\) and \(r \neq 0\) are real numbers. The number \(a_{1}\) is the first term, and the nonzero number \(r\) is called the common ratio.

The terms of a geometric sequence with first term \(a_{1}\) and common ratio \(r\) follow the pattern
\[
a_{1}, \quad a_{1} r, \quad a_{1} r^{2}, \quad a_{1} r^{3}, \ldots
\]

\section*{EXAMPLE I DeterminingWhether a Sequence Is Geometric}

The sequence
\(2,6,18,54,162, \ldots\)
is geometric because the ratio of successive terms is \(3 ;\left(\frac{6}{2}=\frac{18}{6}=\frac{54}{18}=\cdots=3\right)\).
The first term is \(a_{1}=2\), and the common ratio is 3 .

\footnotetext{
*Sometimes called a geometric progression.
}

\section*{EXAMPLE 2 Determining Whether a Sequence Is Geometric}

Show that the following sequence is geometric.
\[
\left\{s_{n}\right\}=\left\{2^{-n}\right\}
\]

Find the first term and the common ratio.
Solution The first term is \(s_{1}=2^{-1}=\frac{1}{2}\). The \(n\)th term and the \((n-1)\) st term of the sequence \(\left\{s_{n}\right\}\) are
\[
s_{n}=2^{-n} \text { and } s_{n-1}=2^{-(n-1)}
\]

Their ratio is
\[
\frac{s_{n}}{s_{n-1}}=\frac{2^{-n}}{2^{-(n-1)}}=2^{-n+(n-1)}=2^{-1}=\frac{1}{2}
\]

Because the ratio of successive terms is the nonzero constant \(\frac{1}{2}\), the sequence \(\left\{s_{n}\right\}\) is geometric with common ratio \(\frac{1}{2}\).

\section*{EXAMPLE 3 Determining Whether a Sequence Is Geometric}

Show that the following sequence is geometric.
\[
\left\{t_{n}\right\}=\left\{3 \cdot 4^{n}\right\}
\]

Find the first term and the common ratio.
Solution The first term is \(t_{1}=3 \cdot 4^{1}=12\). The \(n\)th term and the \((n-1)\) st term are
\[
t_{n}=3 \cdot 4^{n} \text { and } t_{n-1}=3 \cdot 4^{n-1}
\]

Their ratio is
\[
\frac{t_{n}}{t_{n-1}}=\frac{3 \cdot 4^{n}}{3 \cdot 4^{n-1}}=4^{n-(n-1)}=4
\]

The sequence, \(\left\{t_{n}\right\}\), is a geometric sequence with common ratio 4 .
em Now Work problem 11

\section*{2 Find a Formula for a Geometric Sequence}

Suppose that \(a_{1}\) is the first term of a geometric sequence with common ratio \(r \neq 0\). We seek a formula for the \(n\)th term, \(a_{n}\). To see the pattern, consider the first few terms:
\[
\begin{aligned}
a_{1} & =a_{1} \cdot 1=a_{1} r^{0} \\
a_{2} & =r a_{1}=a_{1} r^{1} \\
a_{3} & =r a_{2}=r\left(a_{1} r\right)=a_{1} r^{2} \\
a_{4} & =r a_{3}=r\left(a_{1} r^{2}\right)=a_{1} r^{3} \\
a_{5} & =r a_{4}=r\left(a_{1} r^{3}\right)=a_{1} r^{4} \\
& \vdots \\
a_{n} & =r a_{n-1}=r\left(a_{1} r^{n-2}\right)=a_{1} r^{n-1}
\end{aligned}
\]

This leads to the following result:

For a geometric sequence \(\left\{a_{n}\right\}\) whose first term is \(a_{1}\) and whose common ratio is \(r\), the \(n\)th term is determined by the formula
\[
\begin{equation*}
a_{n}=a_{1} r^{n-1} \quad r \neq 0 \tag{2}
\end{equation*}
\]

\section*{EXAMPLE 4}

\section*{Exploration}

Use a graphing utility to find the ninth term of the sequence given in Example 4. Use it to find the 20th and 50th terms. Now use a graphing utility to graph the recursive formula found in Example 4(c). Conclude that the graph of the recursive formula behaves like the graph of an exponential function. How is \(r\), the common ratio, related to \(a\), the base of the exponential function \(y=a^{x}\) ?

Finding a Particular Term of a Geometric Sequence
(a) Find the \(n\)th term of the geometric sequence: \(10,9, \frac{81}{10}, \frac{729}{100} \ldots\)
(b) Find the 9th term of this sequence.
(c) Find a recursive formula for this sequence.
(a) The first term of this geometric sequence is \(a_{1}=10\) and the common ratio is \(\frac{9}{10}\). (Use \(\frac{9}{10}\) or \(\frac{\frac{81}{10}}{9}=\frac{9}{10}\) or any two successive terms.) Then, by formula (2), the \(n\)th term is
\[
a_{n}=10\left(\frac{9}{10}\right)^{n-1} \quad a_{n}=a_{1} r^{n-1} ; a_{1}=10, r=\frac{9}{10}
\]
(b) The 9th term is
\[
a_{9}=10\left(\frac{9}{10}\right)^{9-1}=10\left(\frac{9}{10}\right)^{8} \approx 4.3046721
\]
(c) The first term in the sequence is 10 and the common ratio is \(r=\frac{9}{10}\). Using formula (1), the recursive formula is \(a_{1}=10, a_{n}=\frac{9}{10} a_{n-1}\).
-Now Work problems 19, 27, and 35

\section*{3 Find the Sum of a Geometric Sequence}

The next result gives a formula for finding the sum of the first \(n\) terms of a geometric sequence.

\section*{Sum of the First \(\boldsymbol{n}\) Terms of a Geometric Sequence}

Let \(\left\{a_{n}\right\}\) be a geometric sequence with first term \(a_{1}\) and common ratio \(r\), where \(r \neq 0, r \neq 1\). The sum \(S_{n}\) of the first \(n\) terms of \(\left\{a_{n}\right\}\) is
\[
\begin{align*}
S_{n} & =a_{1}+a_{1} r+a_{1} r^{2}+\cdots+a_{1} r^{n-1}=\sum_{k=1}^{n} a_{1} r^{k-1} \\
& =a_{1} \cdot \frac{1-r^{n}}{1-r} \quad r \neq 0,1 \tag{3}
\end{align*}
\]

Proof The sum \(S_{n}\) of the first \(n\) terms of \(\left\{a_{n}\right\}=\left\{a_{1} r^{n-1}\right\}\) is
\[
\begin{equation*}
S_{n}=a_{1}+a_{1} r+\cdots+a_{1} r^{n-1} \tag{4}
\end{equation*}
\]

Multiply each side by \(r\) to obtain
\[
\begin{equation*}
r S_{n}=a_{1} r+a_{1} r^{2}+\cdots+a_{1} r^{n} \tag{5}
\end{equation*}
\]

Now, subtract (5) from (4). The result is
\[
\begin{aligned}
S_{n}-r S_{n} & =a_{1}-a_{1} r^{n} \\
(1-r) S_{n} & =a_{1}\left(1-r^{n}\right)
\end{aligned}
\]

Solve for \(S_{n}\). Note that \(r \neq 1\).
\[
S_{n}=a_{1} \cdot \frac{1-r^{n}}{1-r}
\]

\section*{EXAMPLE 5 Finding the Sum of the First \(n\) Terms of a Geometric Sequence}

Find the sum \(S_{n}\) of the first \(n\) terms of the sequence \(\left\{\left(\frac{1}{2}\right)^{n}\right\}\); that is, find
\[
\frac{1}{2}+\frac{1}{4}+\frac{1}{8}+\cdots+\left(\frac{1}{2}\right)^{n}=\sum_{k=1}^{n} \frac{1}{2}\left(\frac{1}{2}\right)^{k-1}
\]

Solution The sequence \(\left\{\left(\frac{1}{2}\right)^{n}\right\}\) is a geometric sequence with \(a_{1}=\frac{1}{2}\) and \(r=\frac{1}{2}\). Use formula (3) to get
\[
\begin{aligned}
S_{n}=\sum_{k=1}^{n} \frac{1}{2}\left(\frac{1}{2}\right)^{k-1} & =\frac{1}{2}+\frac{1}{4}+\frac{1}{8}+\cdots+\left(\frac{1}{2}\right)^{n} \\
& =\frac{1}{2}\left[\frac{1-\left(\frac{1}{2}\right)^{n}}{1-\frac{1}{2}}\right] \quad \text { Formula (3); } a_{1}=\frac{1}{2}, r=\frac{1}{2} \\
& =\frac{1}{2}\left[\frac{1-\left(\frac{1}{2}\right)^{n}}{\frac{1}{2}}\right] \\
& =1-\left(\frac{1}{2}\right)^{n}
\end{aligned}
\]

Figure 8
Solution

DEFINITION

Using a Graphing Utility to Find the Sum of a Geometric Sequence
Use a graphing utility to find the sum of the first 15 terms of the sequence \(\left\{\left(\frac{1}{3}\right)^{n}\right\}\); that is, find
\[
\frac{1}{3}+\frac{1}{9}+\frac{1}{27}+\cdots+\left(\frac{1}{3}\right)^{15}=\sum_{k=1}^{15} \frac{1}{3}\left(\frac{1}{3}\right)^{k-1}
\]

Figure 8 shows the result obtained using a TI-84 Plus graphing calculator. The sum of the first 15 terms of the sequence \(\left\{\left(\frac{1}{3}\right)^{n}\right\}\) is 0.4999999652 .
NOTE: The TI-84 display may look different if a different operating system is used.
amm Now Work problem 47
4 Determine Whether a Geometric Series Converges or Diverges
An infinite sum of the form
\[
a_{1}+a_{1} r+a_{1} r^{2}+\cdots+a_{1} r^{n-1}+\cdots
\]
with first term \(a_{1}\) and common ratio \(r\) is called an infinite geometric series and is denoted by
\[
\sum_{k=1}^{\infty} a_{1} r^{k-1}
\]

Based on formula (3), the sum \(S_{n}\) of the first \(n\) terms of a geometric series is
\[
\begin{equation*}
S_{n}=a_{1} \cdot \frac{1-r^{n}}{1-r}=\frac{a_{1}}{1-r}-\frac{a_{1} r^{n}}{1-r} \tag{6}
\end{equation*}
\]
\(\$\) NOTE In calculus, limit notation is used and written as
\[
\begin{aligned}
L & =\lim _{n \rightarrow \infty} S_{n}=\lim _{n \rightarrow \infty} \sum_{k=1}^{n} a_{1} r^{k-1} \\
& =\sum_{k=1}^{\infty} a_{1} r^{k-1}
\end{aligned}
\]

If this finite sum \(S_{n}\) approaches a number \(L\) as \(n \rightarrow \infty\), then the infinite geometric series \(\sum_{k=1}^{\infty} a_{1} r^{k-1}\) converges. \(L\) is called the sum of the infinite geometric series. The sum is written
\[
L=\sum_{k=1}^{\infty} a_{1} r^{k-1}
\]

A series that does not converge is called a divergent series.

\section*{THEOREM}

\section*{Convergence of an Infinite Geometric Series}

If \(|r|<1\), the infinite geometric series \(\sum_{k=1}^{\infty} a_{1} r^{k-1}\) converges. Its sum is
\[
\begin{equation*}
\sum_{k=1}^{\infty} a_{1} r^{k-1}=\frac{a_{1}}{1-r} \tag{7}
\end{equation*}
\]

Intuitive Proof Because \(|r|<1\), it follows that \(\left|r^{n}\right|\) approaches 0 as \(n \rightarrow \infty\). Then, based on formula (6), the term \(\frac{a_{1} r^{n}}{1-r}\) approaches 0 , so the sum \(S_{n}\) approaches \(\frac{a_{1}}{1-r}\)
as \(n \rightarrow \infty\).

\section*{EXAMPLE 7}

Determining Whether a Geometric Series Converges or Diverges
Determine whether the geometric series
\[
\sum_{k=1}^{\infty} 2\left(\frac{2}{3}\right)^{k-1}=2+\frac{4}{3}+\frac{8}{9}+\cdots
\]
converges or diverges. If it converges, find its sum.
Solution Comparing \(\sum_{k=1}^{\infty} 2\left(\frac{2}{3}\right)^{k-1}\) to \(\sum_{k=1}^{\infty} a_{1} r^{k-1}\), note that the first term is \(a_{1}=2\) and the common ratio is \(r=\frac{2}{3}\). Because \(|r|<1\), the series converges. Use formula (7) to
find its sum: find its sum:
\[
\sum_{k=1}^{\infty} 2\left(\frac{2}{3}\right)^{k-1}=2+\frac{4}{3}+\frac{8}{9}+\cdots=\frac{2}{1-\frac{2}{3}}=6
\]

Now Work problem 53

\section*{EXAMPLE 8}

\section*{Repeating Decimals}

Show that the repeating decimal \(0.999 \ldots\) equals 1 .
Solution The decimal \(0.999 \ldots=0.9+0.09+0.009+\cdots=\frac{9}{10}+\frac{9}{100}+\frac{9}{1000}+\cdots\) is an infinite geometric series. Write it in the form \(\sum_{k=1}^{\infty} a_{1} r^{k-1}\) and use formula (7).
\(0.999 \ldots=\frac{9}{10}+\frac{9}{100}+\frac{9}{1000}+\cdots=\sum_{k=1}^{\infty} \frac{9}{10^{k}}=\sum_{k=1}^{\infty} \frac{9}{10 \cdot 10^{k-1}}=\sum_{k=1}^{\infty} \frac{9}{10}\left(\frac{1}{10}\right)^{k-1}\)

Compare this series to \(\sum_{k=1}^{\infty} a_{1} r^{k-1}\) and note that \(a_{1}=\frac{9}{10}\) and \(r=\frac{1}{10}\). Because \(|r|<1\), the series converges and its sum is
\[
0.999 \ldots=\frac{\frac{9}{10}}{1-\frac{1}{10}}=\frac{\frac{9}{10}}{\frac{9}{10}}=1
\]

The repeating decimal \(0.999 \ldots\) equals 1.

\section*{EXAMPLE 9}

Figure 9

\section*{Pendulum Swings}

Initially, a pendulum swings through an arc of 18 inches. See Figure 9. On each successive swing, the length of the arc is 0.98 of the previous length.
(a) What is the length of the arc of the 10th swing?
(b) On which swing is the length of the arc first less than 12 inches?
(c) After 15 swings, what total distance will the pendulum have swung?
(d) When it stops, what total distance will the pendulum have swung?

Solution (a) The length of the first swing is 18 inches.
The length of the second swing is \(0.98(18)\) inches.
The length of the third swing is \(0.98(0.98)(18)=0.98^{2}(18)\) inches.
The length of the arc of the 10th swing is
\[
(0.98)^{9}(18) \approx 15.007 \text { inches }
\]
(b) The length of the arc of the \(n\)th swing is \((0.98)^{n-1}(18)\). For this to be exactly 12 inches requires that
\((0.98)^{n-1}(18)=12\)
\[
\begin{array}{rlrl}
(0.98)^{n-1} & =\frac{12}{18}=\frac{2}{3} & & \text { Divide both sides by } 18 . \\
n-1 & =\log _{0.98}\left(\frac{2}{3}\right) & & \text { Express as a logarithm. } \\
n & =1+\frac{\ln \left(\frac{2}{3}\right)}{\ln 0.98} \approx 1+20.07=21.07 & \begin{array}{l}
\text { Solve for n; use the Change } \\
\text { of Base Formula. }
\end{array}
\end{array}
\]

The length of the arc of the pendulum exceeds 12 inches on the 21 st swing and is first less than 12 inches on the 22 nd swing.
(c) After 15 swings, the pendulum will have swung the following total distance \(L\) :
\[
L=\underset{\text { 1st }}{18}+\underset{\text { 2nd }}{0.98(18)}+\underset{\text { 3rd }}{(0.98)^{2}(18)}+\underset{\text { 3th }}{(0.98)^{3}(18)}+\cdots+\underset{\text { 4th }}{(0.98)^{14}(18)}
\]

This is the sum of a geometric sequence. The common ratio is 0.98 ; the first term is 18 . The sum has 15 terms, so
\[
L=18 \cdot \frac{1-0.98^{15}}{1-0.98} \approx 18(13.07) \approx 235.3 \text { inches }
\]

The pendulum will have swung through 235.3 inches after 15 swings.
(d) When the pendulum stops, it will have swung the following total distance \(T\) :
\[
T=18+0.98(18)+(0.98)^{2}(18)+(0.98)^{3}(18)+\cdots
\]

This is the sum of an infinite geometric series. The common ratio is \(r=0.98\); the first term is \(a_{1}=18\). Because \(|r|<1\), the series converges. Its sum is
\[
T=\frac{a_{1}}{1-r}=\frac{18}{1-0.98}=900
\]

The pendulum will have swung a total of 900 inches when it finally stops.

\section*{5 Solve Annuity Problems}

Section 4.7 developed the compound interest formula, which gives the future value when a fixed amount of money is deposited in an account that pays interest compounded periodically. Often, though, money is invested in small amounts at periodic intervals. An annuity is a sequence of equal periodic deposits. The periodic deposits may be made annually, quarterly, monthly, or daily.

When deposits are made at the same time that the interest is credited, the annuity is called ordinary. We will deal only with ordinary annuities here. The amount of an annuity is the sum of all deposits made plus all interest paid.

Suppose that the interest rate that an account earns is \(i\) percent per payment period (expressed as a decimal). For example, if an account pays \(12 \%\) compounded monthly ( 12 times a year), then \(i=\frac{0.12}{12}=0.01\). If an account pays \(8 \%\) compounded quarterly (4 times a year), then \(i=\frac{0.08}{4}=0.02\).

To develop a formula for the amount of an annuity, suppose that \(\$ P\) is deposited each payment period for \(n\) payment periods in an account that earns \(i\) percent per payment period. When the last deposit is made at the \(n\)th payment period, the first deposit of \(\$ P\) has earned interest compounded for \(n-1\) payment periods, the second deposit of \(\$ P\) has earned interest compounded for \(n-2\) payment periods, and so on. Table 3 shows the value of each deposit after \(n\) deposits have been made.

Table 3
\begin{tabular}{|c|c|c|c|c|c|c|}
\hline Deposit & 1 & 2 & 3 & \(\cdots\) & \(n-1\) & \(n\) \\
Amount & \(P(1+i)^{n-1}\) & \(P(1+i)^{n-2}\) & \(P(1+i)^{n-3}\) & \(\cdots\) & \(P(1+i)\) & \(P\) \\
\hline
\end{tabular}

The amount \(A\) of the annuity is the sum of the amounts shown in Table 3 ; that is,
\[
\begin{aligned}
A & =P \cdot(1+i)^{n-1}+P \cdot(1+i)^{n-2}+\cdots+P \cdot(1+i)+P \\
& =P\left[1+(1+i)+\cdots+(1+i)^{n-1}\right]
\end{aligned}
\]

The expression in brackets is the sum of a geometric sequence with \(n\) terms and a common ratio of \((1+i)\). As a result,
\[
\begin{aligned}
A & =P\left[1+(1+i)+\cdots+(1+i)^{n-2}+(1+i)^{n-1}\right] \\
& =P \cdot \frac{1-(1+i)^{n}}{1-(1+i)}=P \cdot \frac{1-(1+i)^{n}}{-i}=P \cdot \frac{(1+i)^{n}-1}{i}
\end{aligned}
\]

The following result has been established:

\section*{Amount of an Annuity}

Suppose that \(P\) is the deposit in dollars made at the end of each payment period for an annuity paying \(i\) percent interest per payment period. The amount \(A\) of the annuity after \(n\) deposits is
\[
\begin{equation*}
A=P \cdot \frac{(1+i)^{n}-1}{i} \tag{8}
\end{equation*}
\]

NOTE: In using formula (8), remember that when the nth deposit is made, the first deposit has earned interest for \(n-1\) compounding periods.

\section*{EXAMPLE 10}

\section*{Determining the Amount of an Annuity}

To save for retirement, Brett decides to place \(\$ 4000\) into an individual retirement account (IRA) each year for the next 30 years. What will the value of the IRA be when Brett makes his 30th deposit? Assume that the rate of return of the IRA is \(10 \%\) per annum compounded annually. (This is the historical rate of return in the stock market.)

Solution This is an ordinary annuity with \(n=30\) annual deposits of \(P=\$ 4000\). The rate of interest per payment period is \(i=\frac{0.10}{1}=0.10\). The amount \(A\) of the annuity after 30 deposits is
\[
A=\$ 4000 \frac{(1+0.10)^{30}-1}{0.10}=\$ 4000(164.494023)=\$ 657,976.09
\]

\section*{EXAMPLE II}

\section*{Determining the Amount of an Annuity}

To save for her daughter's college education, Ms. Miranda decides to put \(\$ 50\) aside every month in a credit union account paying \(10 \%\) interest compounded monthly. She begins this savings program when her daughter is 3 years old. How much will she have saved by the time she makes the 180th deposit? How old is her daughter at this time?

Solution This is an annuity with \(P=\$ 50, n=180\), and \(i=\frac{0.10}{12}\). The amount \(A\) saved is
\[
A=\$ 50 \frac{\left(1+\frac{0.10}{12}\right)^{180}-1}{\frac{0.10}{12}}=\$ 50(414.47035)=\$ 20,723.52
\]

Since there are 12 deposits per year, when the 180th deposit is made \(\frac{180}{12}=15\) years have passed, and Ms. Miranda's daughter is 18 years old.

Now Work problem
91

\section*{Historical Feature}

Fibonacci

Sequences are among the oldest objects of mathematical investigation, having been studied for over 3500 years. After the initial steps, however, little progress was made until about 1600

Arithmetic and geometric sequences appear in the Rhind papyrus, a mathematical text containing 85 problems copied around 1650 BC by the Egyptian scribe Ahmes from an earlier work (see Historical Problem 1). Fibonacci (AD 1220) wrote about problems similar to those found in the Rhind papyrus, leading one to suspect that Fibonacci may have had material available that is now lost. This material would have been in the non-Euclidean Greek tradition of

Heron (about AD 75) and Diophantus (about AD 250). One problem, again modified slightly, is still with us in the familiar puzzle rhyme "As I was going to St. Ives . . . " (see Historical Problem 2).

The Rhind papyrus indicates that the Egyptians knew how to add up the terms of an arithmetic or geometric sequence, as did the Babylonians. The rule for summing up a geometric sequence is found in Euclid's Elements (Book IX, 35, 36), where, like all Euclid's algebra, it is presented in a geometric form.

Investigations of other kinds of sequences began in the 1500s, when algebra became sufficiently developed to handle the more complicated problems. The development of calculus in the 1600 s added a powerful new tool, especially for finding the sum of an infinite series, and the subject continues to flourish today.

\section*{Historical Problems}
1. Arithmetic sequence problem from the Rhind papyrus (statement modified slightly for clarity) One hundred loaves of bread are to be divided among five people so that the amounts that they receive form an arithmetic sequence. The first two together receive one-seventh of what the last three receive. How many loaves does each receive?
[Partial answer: First person receives \(1 \frac{2}{3}\) loaves.]
2. The following old English children's rhyme resembles one of the Rhind papyrus problems.

As I was going to St. Ives
I met a man with seven wives

Each wife had seven sacks
Each sack had seven cats
Each cat had seven kits [kittens]
Kits, cats, sacks, wives
How many were going to St. Ives?
(a) Assuming that the speaker and the cat fanciers met by traveling in opposite directions, what is the answer?
(b) How many kittens are being transported?
(c) Kits, cats, sacks, wives; how many?

\subsection*{11.3 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. If \(\$ 1000\) is invested at \(4 \%\) per annum compounded semiannually, how much is in the account after 2 years? (pp. 340-341)
2. How much do you need to invest now at \(5 \%\) per annum compounded monthly so that in 1 year you will have \$10,000? (p. 344)

\section*{Concepts and Vocabulary}
3. In \(\mathrm{a}(\mathrm{n})\) \(\qquad\) sequence the ratio of successive terms is a constant.
4. If \(|r|<1\), the sum of the geometric series \(\sum_{k=1}^{\infty} a r^{k-1}\) is \(\qquad\) .
5. If a series does not converge, it is called \(a(n)\) \(\qquad\) -
6. True or False A geometric sequence may be defined recursively.
7. True or False In a geometric sequence the common ratio is always a positive number.
8. True or False For a geometric sequence with first term \(a_{1}\) and common ratio \(r\), where \(r \neq 0, r \neq 1\), the sum of the first \(n\) terms is \(S_{n}=a_{1} \cdot \frac{1-r^{n}}{1-r}\).

\section*{Skill Building}

In Problems 9-18, show that each sequence is geometric. Then find the common ratio and write out the first four terms.
9. \(\left\{s_{n}\right\}=\left\{3^{n}\right\}\)
10. \(\left\{s_{n}\right\}=\left\{(-5)^{n}\right\}\)
11. \(\left\{a_{n}\right\}=\left\{-3\left(\frac{1}{2}\right)^{n}\right\}\)
12. \(\left\{b_{n}\right\}=\left\{\left(\frac{5}{2}\right)^{n}\right\}\)
13. \(\left\{c_{n}\right\}=\left\{\frac{2^{n-1}}{4}\right\}\)
14. \(\left\{d_{n}\right\}=\left\{\frac{3^{n}}{9}\right\}\)
15. \(\left\{e_{n}\right\}=\left\{2^{n / 3}\right\}\)
16. \(\left\{f_{n}\right\}=\left\{3^{2 n}\right\}\)
17. \(\left\{t_{n}\right\}=\left\{\frac{3^{n-1}}{2^{n}}\right\}\)
18. \(\left\{u_{n}\right\}=\left\{\frac{2^{n}}{3^{n-1}}\right\}\)

In Problems 19-26, find the 5th term and the nth term of the geometric sequence whose initial term \(a_{1}\) and common ratio \(r\) are given.
19. \(a_{1}=2 ; \quad r=3\)
20. \(a_{1}=-2 ; \quad r=4\)
21. \(a_{1}=5 ; \quad r=-1\)
22. \(a_{1}=6 ; \quad r=-2\)
23. \(a_{1}=0 ; \quad r=\frac{1}{2}\)
24. \(a_{1}=1 ; \quad r=-\frac{1}{3}\)
25. \(a_{1}=\sqrt{2} ; \quad r=\sqrt{2}\)
26. \(a_{1}=0 ; \quad r=\frac{1}{\pi}\)

In Problems 27-32, find the indicated term of each geometric sequence.
27. 7 th term of \(1, \frac{1}{2}, \frac{1}{4}, \ldots\)
28. 8th term of \(1,3,9, \ldots\)
29. 9th term of \(1,-1,1, \ldots\)
30. 10th term of \(-1,2,-4, \ldots\)
31. 8 th term of \(0.4,0.04,0.004, \ldots\)
32. 7 th term of \(0.1,1.0,10.0, \ldots\)

In Problems 33-40, find the nth term \(a_{n}\) of each geometric sequence. When given, \(r\) is the common ratio.
33. \(7,14,28,56, \ldots\)
34. \(5,10,20,40, \ldots\)
35. \(-3,1,-\frac{1}{3}, \frac{1}{9}, \ldots\)
36. \(4,1, \frac{1}{4}, \frac{1}{16}, \ldots\)
37. \(a_{6}=243 ; \quad r=-3\)
38. \(a_{2}=7 ; \quad r=\frac{1}{3}\)
39. \(a_{2}=7 ; \quad a_{4}=1575\)
40. \(a_{3}=\frac{1}{3} ; \quad a_{6}=\frac{1}{81}\)

In Problems 41-46, find each sum.
41. \(\frac{1}{4}+\frac{2}{4}+\frac{2^{2}}{4}+\frac{2^{3}}{4}+\cdots+\frac{2^{n-1}}{4}\)
42. \(\frac{3}{9}+\frac{3^{2}}{9}+\frac{3^{3}}{9}+\cdots+\frac{3^{n}}{9}\)
43. \(\sum_{k=1}^{n}\left(\frac{2}{3}\right)^{k}\)
44. \(\sum_{k=1}^{n} 4 \cdot 3^{k-1}\)
45. \(-1-2-4-8-\cdots-\left(2^{n-1}\right)\)
46. \(2+\frac{6}{5}+\frac{18}{25}+\cdots+2\left(\frac{3}{5}\right)^{n-1}\)

For Problems 47-52, use a graphing utility to find the sum of each geometric sequence.
47. \(\frac{1}{4}+\frac{2}{4}+\frac{2^{2}}{4}+\frac{2^{3}}{4}+\cdots+\frac{2^{14}}{4}\)
48. \(\frac{3}{9}+\frac{3^{2}}{9}+\frac{3^{3}}{9}+\cdots+\frac{3^{15}}{9}\)
49. \(\sum_{n=1}^{15}\left(\frac{2}{3}\right)^{n}\)
50. \(\sum_{n=1}^{15} 4 \cdot 3^{n-1}\)
51. \(-1-2-4-8-\cdots-2^{14}\)
52. \(2+\frac{6}{5}+\frac{18}{25}+\cdots+2\left(\frac{3}{5}\right)^{15}\)

In Problems 53-68, determine whether each infinite geometric series converges or diverges. If it converges, find its sum.
53. \(1+\frac{1}{3}+\frac{1}{9}+\cdots\)
54. \(2+\frac{4}{3}+\frac{8}{9}+\cdots\)
55. \(8+4+2+\cdots\)
56. \(6+2+\frac{2}{3}+\cdots\)
57. \(2-\frac{1}{2}+\frac{1}{8}-\frac{1}{32}+\cdots\)
58. \(1-\frac{3}{4}+\frac{9}{16}-\frac{27}{64}+\cdots\)
59. \(8+12+18+27+\cdots\)
60. \(9+12+16+\frac{64}{3}+\cdots\)
61. \(\sum_{k=1}^{\infty} 5\left(\frac{1}{4}\right)^{k-1}\)
62. \(\sum_{k=1}^{\infty} 8\left(\frac{1}{3}\right)^{k-1}\)
63. \(\sum_{k=1}^{\infty} \frac{1}{2} \cdot 3^{k-1}\)
64. \(\sum_{k=1}^{\infty} 3\left(\frac{3}{2}\right)^{k-1}\)
65. \(\sum_{k=1}^{\infty} 6\left(-\frac{2}{3}\right)^{k-1}\)
66. \(\sum_{k=1}^{\infty} 4\left(-\frac{1}{2}\right)^{k-1}\)
67. \(\sum_{k=1}^{\infty} 3\left(\frac{2}{3}\right)^{k}\)
68. \(\sum_{k=1}^{\infty} 2\left(\frac{3}{4}\right)^{k}\)

\section*{Mixed Practice}

In Problems 69-82, determine whether the given sequence is arithmetic, geometric, or neither. If the sequence is arithmetic, find the common difference; if it is geometric, find the common ratio. If the sequence is arithmetic or geometric, find the sum of the first 50 terms.
69. \(\{n+2\}\)
70. \(\{2 n-5\}\)
71. \(\left\{4 n^{2}\right\}\)
72. \(\left\{5 n^{2}+1\right\}\)
73. \(\left\{3-\frac{2}{3} n\right\}\)
74. \(\left\{8-\frac{3}{4} n\right\}\)
75. \(1,3,6,10, \ldots\)
76. \(2,4,6,8, \ldots\)
77. \(\left\{\left(\frac{2}{3}\right)^{n}\right\}\)
78. \(\left\{\left(\frac{5}{4}\right)^{n}\right\}\)
79. \(-1,2,-4,8, \ldots\)
80. \(1,1,2,3,5,8, \ldots\)
81. \(\left\{3^{n / 2}\right\}\)
82. \(\left\{(-1)^{n}\right\}\)

\section*{Applications and Extensions}
83. Find \(x\) so that \(x, x+2\), and \(x+3\) are consecutive terms of a geometric sequence.
84. Find \(x\) so that \(x-1, x\), and \(x+2\) are consecutive terms of a geometric sequence.
85. Salary Increases If you have been hired at an annual salary of \(\$ 35,000\) and expect to receive annual increases of \(3 \%\), what will your salary be when you begin your fifth year?
86. Equipment Depreciation A new piece of equipment cost a company \(\$ 15,000\). Each year, for tax purposes, the company depreciates the value by \(15 \%\). What value should the company give the equipment after 5 years?
87. Pendulum Swings Initially, a pendulum swings through an arc of 2 feet. On each successive swing, the length of the arc is 0.9 of the previous length.
(a) What is the length of the arc of the 10th swing?
(b) On which swing is the length of the arc first less than 1 foot?
(c) After 15 swings, what total length will the pendulum have swung?
(d) When it stops, what total length will the pendulum have swung?
88. Bouncing Balls A ball is dropped from a height of 30 feet. Each time it strikes the ground, it bounces up to 0.8 of the previous height.

(a) What height will the ball bounce up to after it strikes the ground for the third time?
(b) How high will it bounce after it strikes the ground for the \(n\)th time?
(c) How many times does the ball need to strike the ground before its bounce is less than 6 inches?
(d) What total distance does the ball travel before it stops bouncing?
89. Retirement Christine contributes \(\$ 100\) each month to her 401(k). What will be the value of Christine's 401(k) after the 360th deposit ( 30 years) if the per annum rate of return is assumed to be \(12 \%\) compounded monthly?
90. Saving for a Home Jolene wants to purchase a new home. Suppose that she invests \(\$ 400\) per month into a mutual fund. If the per annum rate of return of the mutual fund is assumed to be \(10 \%\) compounded monthly, how much will Jolene have for a down payment after the 36th deposit ( 3 years)?
91. Tax-Sheltered Annuity Don contributes \(\$ 500\) at the end of each quarter to a tax-sheltered annuity (TSA). What will the value of the TSA be after the 80th deposit (20 years) if the per annum rate of return is assumed to be \(8 \%\) compounded quarterly?
92. Retirement Ray contributes \(\$ 1000\) to an individual retirement account (IRA) semiannually. What will the value of the IRA be when Ray makes his 30th deposit (after 15 years) if the per annum rate of return is assumed to be \(10 \%\) compounded semiannually?
93. Sinking Fund Scott and Alice want to purchase a vacation home in 10 years and need \(\$ 50,000\) for a down payment. How much should they place in a savings account each month if the per annum rate of return is assumed to be \(6 \%\) compounded monthly?
94. Sinking Fund For a child born in 1996, the cost of a 4 -year college education at a public university is projected to be \(\$ 150,000\). Assuming an \(8 \%\) per annum rate of return compounded monthly, how much must be contributed to a college fund every month to have \(\$ 150,000\) in 18 years when the child begins college?
95. Grains of Wheat on a Chess Board In an old fable, a commoner who had saved the king's life was told he could ask the king for any just reward. Being a shrewd man, the commoner said, "A simple wish, sire. Place one grain of wheat on the first square of a chessboard, two grains on the second square, four grains on the third square, continuing until you have filled the board. This is all I seek." Compute the total number of grains needed to do this to see why the request, seemingly simple, could not be granted. (A chessboard consists of \(8 \times 8=64\) squares.)

96. Look at the figure. What fraction of the square is eventually shaded if the indicated shading process continues indefinitely?

97. Multiplier Suppose that throughout the U.S. economy, individuals spend \(90 \%\) of every additional dollar that they earn. Economists would say that an individual's marginal propensity to consume is 0.90 . For example, if Jane earns an additional dollar, she will spend \(0.9(1)=\$ 0.90\) of it. The individual who earns \(\$ 0.90\) (from Jane) will spend \(90 \%\) of it, or \(\$ 0.81\). This process of spending continues and results in an infinite geometric series as follows:
\[
1,0.90,0.90^{2}, 0.90^{3}, 0.90^{4}, \ldots
\]

The sum of this infinite geometric series is called the multiplier. What is the multiplier if individuals spend \(90 \%\) of every additional dollar that they earn?
98. Multiplier Refer to Problem 97. Suppose that the marginal propensity to consume throughout the U.S. economy is 0.95 . What is the multiplier for the U.S. economy?
99. Stock Price One method of pricing a stock is to discount the stream of future dividends of the stock. Suppose that a stock pays \(\$ P\) per year in dividends and, historically, the dividend has been increased \(i \%\) per year. If you desire an annual rate of return of \(r \%\), this method of pricing a stock states that the price that you should pay is the present value of an infinite stream of payments:

Price \(=P+P \cdot \frac{1+i}{1+r}+P \cdot\left(\frac{1+i}{1+r}\right)^{2}+P \cdot\left(\frac{1+i}{1+r}\right)^{3}+\cdots\)

The price of the stock is the sum of an infinite geometric series. Suppose that a stock pays an annual dividend of \(\$ 4.00\) and, historically, the dividend has been increased 3\% per year. You desire an annual rate of return of \(9 \%\). What is the most you should pay for the stock?
100. Stock Price Refer to Problem 99. Suppose that a stock pays an annual dividend of \(\$ 2.50\) and, historically, the dividend has increased \(4 \%\) per year. You desire an annual rate of return of \(11 \%\). What is the most that you should pay for the stock?
101. A Rich Man's Promise A rich man promises to give you \(\$ 1000\) on September 1, 2014. Each day thereafter he will give you \(\frac{9}{10}\) of what he gave you the previous day. What is the first date on which the amount you receive is less than \(1 \phi\) ? How much have you received when this happens?
102. Seating Revenue A special section in the end zone of a football stadium has 2 seats in the first row and 14 rows total. Each successive row has 2 seats more than the row before. In this particular section, the first seat is sold for 1 cent, and each following seat sells for \(5 \%\) more than the previous seat. Find the total revenue generated if every seat in the section is sold. Round only the final answer, and state the final answer in dollars rounded to two decimal places. \((\mathrm{JJC})^{\dagger}\)
per year. Management gives you the following options with regard to your salary over the 7 years.
1. A bonus of \(\$ 100,000\) each year
2. An annual increase of \(4.5 \%\) per year beginning after 1 year
3. An annual increase of \(\$ 95,000\) per year beginning after 1 year
Which option provides the most money over the 7 -year period? Which the least? Which would you choose? Why?
106. Critical Thinking Suppose you were offered a job in which you would work 8 hours per day for 5 workdays per week for 1 month at hard manual labor. Your pay the first day would be 1 penny. On the second day your pay would be two pennies; the third day 4 pennies. Your pay would double on each successive workday. There are 22 workdays

\footnotetext{
\({ }^{\dagger}\) Courtesy of the Joliet Junior College Mathematics Department
}
in the month. There will be no sick days. If you miss a day of work, there is no pay or pay increase. How much would you get paid if you work all 22 days? How much do you get paid for the 22nd workday? What risks do you run if you take this job offer? Would you take the job?
107. Can a sequence be both arithmetic and geometric? Give reasons for your answer.
108. Make up a geometric sequence. Give it to a friend and ask for its 20th term.
109. Make up two infinite geometric series, one that has a sum and one that does not. Give them to a friend and ask for the sum of each series.
110. Describe the similarities and differences between geometric sequences and exponential functions.

\section*{Retain Your Knowledge}

Problems 111-114 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
111. Use the Change-of-Base Formula and a calculator to evaluate \(\log _{7} 62\). Round the answer to three decimal places.
112. Find the unit vector in the same direction as \(\mathbf{v}=8 \mathbf{i}-15 \mathbf{j}\).
113. Find the equation of the hyperbola with vertices at \((-2,0)\) and \((2,0)\) and a focus at \((4,0)\).
114. Find the value of the determinant: \(\left|\begin{array}{rrr}3 & 1 & 0 \\ 0 & -2 & 6 \\ 4 & -1 & -2\end{array}\right|\).

\subsection*{11.4 Mathematical Induction}

OBJECTIVE 1 Prove Statements Using Mathematical Induction (p. 847)

\section*{1 Prove Statements Using Mathematical Induction}

Mathematical induction is a method for proving that statements involving natural numbers are true for all natural numbers.*

For example, the statement " \(2 n\) is always an even integer" can be proved for all natural numbers \(n\) by using mathematical induction. Also, the statement "the sum of the first \(n\) positive odd integers equals \(n^{2}\)," that is,
\[
\begin{equation*}
1+3+5+\cdots+(2 n-1)=n^{2} \tag{1}
\end{equation*}
\]
can be proved for all natural numbers \(n\) by using mathematical induction.
Before stating the method of mathematical induction, let's try to gain a sense of the power of the method. We shall use the statement in equation (1) for this purpose by restating it for various values of \(n=1,2,3, \ldots\).
\(n=1 \quad\) The sum of the first positive odd integer is \(1^{2} ; 1=1^{2}\).
\(n=2\) The sum of the first 2 positive odd integers is \(2^{2}\); \(1+3=4=2^{2}\).
\(n=3\) The sum of the first 3 positive odd integers is \(3^{2}\); \(1+3+5=9=3^{2}\).
\(n=4 \quad\) The sum of the first 4 positive odd integers is \(4^{2}\);
\[
1+3+5+7=16=4^{2}
\]

\footnotetext{
*Recall that the natural numbers are the numbers \(1,2,3,4, \ldots\) In other words, the terms natural numbers and positive integers are synonymous.
}

\section*{THEOREM}

Although from this pattern we might conjecture that statement (1) is true for any choice of \(n\), can we really be sure that it does not fail for some choice of \(n\) ? The method of proof by mathematical induction will, in fact, prove that the statement is true for all \(n\).

\section*{The Principle of Mathematical Induction}

Suppose that the following two conditions are satisfied with regard to a statement about natural numbers:

CONDITION I: The statement is true for the natural number 1. CONDITION II: If the statement is true for some natural number \(k\), it is also true for the next natural number \(k+1\).
Then the statement is true for all natural numbers.

Figure 10

We shall not prove this principle. However, the following physical interpretation illustrates why the principle works. Think of a collection of natural numbers obeying a statement as a collection of infinitely many dominoes. See Figure 10.

Now, suppose that two facts are given:
1. The first domino is pushed over.
2. If one domino falls over, say the \(k\) th domino, so will the next one, the
\((k+1)\) st domino.
Is it safe to conclude that all the dominoes fall over? The answer is yes, because if the first one falls (Condition I), the second one does also (by Condition II); and if the second one falls, so does the third (by Condition II); and so on.

Now let's prove some statements about natural numbers using mathematical induction.

\section*{EXAMPLE I Using Mathematical Induction}

Show that the following statement is true for all natural numbers \(n\).
\[
\begin{equation*}
1+3+5+\cdots+(2 n-1)=n^{2} \tag{2}
\end{equation*}
\]

Solution First, show that statement (2) holds for \(n=1\). Because \(1=1^{2}\), statement (2) is true for \(n=1\). Condition I holds.

Next, show that Condition II holds. From statement (2), assume that
\[
\begin{equation*}
1+3+5+\cdots+(2 k-1)=k^{2} \tag{3}
\end{equation*}
\]
is true for some natural number \(k\).
Now show that, based on equation (3), statement (2) holds for \(k+1\). Look at the sum of the first \(k+1\) positive odd integers to determine whether this sum equals \((k+1)^{2}\).
\[
\begin{aligned}
1+3+5+\cdots+[2(k+1)-1] & =\underbrace{[1+3+5+\cdots+(2 k-1)]}_{=k^{2} \text { by equation }(3)}+(2 k+1) \\
& =k^{2}+(2 k+1) \\
& =k^{2}+2 k+1=(k+1)^{2}
\end{aligned}
\]

Conditions I and II are satisfied; by the Principle of Mathematical Induction, statement (2) is true for all natural numbers \(n\).

\section*{EXAMPLE 2}

\section*{Using Mathematical Induction}

Show that the following statement is true for all natural numbers \(n\).
\[
2^{n}>n
\]

Solution First, show that the statement \(2^{n}>n\) holds when \(n=1\). Because \(2^{1}=2>1\), the inequality is true for \(n=1\). Condition I holds.

Next, assume, for some natural number \(k\), that \(2^{k}>k\). Now show that the formula holds for \(k+1\); that is, show that \(2^{k+1}>k+1\).
\[
\begin{aligned}
2^{k+1}=2 \cdot 2^{k} & >2 \cdot k=k+k \underset{\uparrow}{\uparrow} \underset{ }{\gtrless} k+1 \\
& \text { We know that } \\
& 2^{k}>k .
\end{aligned}
\]

If \(2^{k}>k\), then \(2^{k+1}>k+1\), so Condition II of the Principle of Mathematical Induction is satisfied. The statement \(2^{n}>n\) is true for all natural numbers \(n\).

\section*{EXAMPLE 3 Using Mathematical Induction}

Show that the following formula is true for all natural numbers \(n\).
\[
\begin{equation*}
1+2+3+\cdots+n=\frac{n(n+1)}{2} \tag{4}
\end{equation*}
\]

Solution First, show that formula (4) is true when \(n=1\). Because
\[
\frac{1(1+1)}{2}=\frac{1(2)}{2}=1
\]

Condition I of the Principle of Mathematical Induction holds.
Next, assume that formula (4) holds for some \(k\), and determine whether the formula then holds for \(k+1\). Assume that
\[
\begin{equation*}
1+2+3+\cdots+k=\frac{k(k+1)}{2} \text { for some } k \tag{5}
\end{equation*}
\]

Now show that
\[
1+2+3+\cdots+(k+1)=\frac{(k+1)[(k+1)+1]}{2}=\frac{(k+1)(k+2)}{2}
\]
as follows:
\[
\begin{aligned}
1+2+3+\cdots+(k+1) & =\underbrace{[1+2+3+\cdots+k]}_{=\frac{k(k+1)}{2}}+(k+1) \\
& =\frac{k(k+1)}{2}+(k+1) \\
& =\frac{k^{2}+k+2 k+2}{2} \\
& =\frac{k^{2}+3 k+2}{2}=\frac{(k+1)(k+2)}{2}
\end{aligned}
\]

Condition II also holds. As a result, formula (4) is true for all natural numbers \(n\).

\section*{EXAMPLE 4 Using Mathematical Induction}

Show that \(3^{n}-1\) is divisible by 2 for all natural numbers \(n\).
Solution First, show that the statement is true when \(n=1\). Because \(3^{1}-1=3-1=2\) is divisible by 2 , the statement is true when \(n=1\). Condition I is satisfied.

Next, assume that the statement holds for some \(k\), and then determine whether the statement holds for \(k+1\). Assume that \(3^{k}-1\) is divisible by 2 for some \(k\). Now show that \(3^{k+1}-1\) is divisible by 2 .
\[
\begin{aligned}
3^{k+1}-1 & =3^{k+1}-3^{k}+3^{k}-1 \\
& =3^{k}(3-1)+\left(3^{k}-1\right)=3^{k} \cdot 2+\left(3^{k}-1\right)
\end{aligned}
\]

Because \(3^{k} \cdot 2\) is divisible by 2 and \(3^{k}-1\) is divisible by 2 , it follows that \(3^{k} \cdot 2+\left(3^{k}-1\right)=3^{k+1}-1\) is divisible by 2 . Condition II is also satisfied. As a result, the statement " \(3 n-1\) is divisible by 2 " is true for all natural numbers \(n\).

\section*{-Now Work problem 19}

WARNING The conclusion that a statement involving natural numbers is true for all natural numbers is made only after both Conditions I and II of the Principle of Mathematical Induction have been satisfied. Problem 28 demonstrates a statement for which only Condition I holds, and the statement is not true for all natural numbers. Problem 29 demonstrates a statement for which only Condition II holds, and the statement is not true for any natural number.

\subsection*{11.4 Assess Your Understanding}

\section*{Skill Building}

In Problems 1-22, use the Principle of Mathematical Induction to show that the given statement is true for all natural numbers \(n\).
1. \(2+4+6+\cdots+2 n=n(n+1)\)
3. \(3+4+5+\cdots+(n+2)=\frac{1}{2} n(n+5)\)
5. \(2+5+8+\cdots+(3 n-1)=\frac{1}{2} n(3 n+1)\)
7. \(1+2+2^{2}+\cdots+2^{n-1}=2^{n}-1\)
9. \(1+4+4^{2}+\cdots+4^{n-1}=\frac{1}{3}\left(4^{n}-1\right)\)
11. \(\frac{1}{1 \cdot 2}+\frac{1}{2 \cdot 3}+\frac{1}{3 \cdot 4}+\cdots+\frac{1}{n(n+1)}=\frac{n}{n+1}\)
13. \(1^{2}+2^{2}+3^{2}+\cdots+n^{2}=\frac{1}{6} n(n+1)(2 n+1)\)
15. \(4+3+2+\cdots+(5-n)=\frac{1}{2} n(9-n)\)
17. \(1 \cdot 2+2 \cdot 3+3 \cdot 4+\cdots+n(n+1)=\frac{1}{3} n(n+1)(n+2)\)
18. \(1 \cdot 2+3 \cdot 4+5 \cdot 6+\cdots+(2 n-1)(2 n)=\frac{1}{3} n(n+1)(4 n-1)\)
19. \(n^{2}+n\) is divisible by 2 .
21. \(n^{2}-n+2\) is divisible by 2 .

\section*{Applications and Extensions}

In Problems 23-27, prove each statement.
23. If \(x>1\), then \(x^{n}>1\).
24. If \(0<x<1\), then \(0<x^{n}<1\).
25. \(a-b\) is a factor of \(a^{n}-b^{n}\).
\(\left[\right.\) Hint: \(\left.a^{k+1}-b^{k+1}=a\left(a^{k}-b^{k}\right)+b^{k}(a-b)\right]\)
26. \(a+b\) is a factor of \(a^{2 n+1}+b^{2 n+1}\).
27. \((1+a)^{n} \geq 1+n a\), for \(a>0\)
2. \(1+5+9+\cdots+(4 n-3)=n(2 n-1)\)
4. \(3+5+7+\cdots+(2 n+1)=n(n+2)\)
6. \(1+4+7+\cdots+(3 n-2)=\frac{1}{2} n(3 n-1)\)
8. \(1+3+3^{2}+\cdots+3^{n-1}=\frac{1}{2}\left(3^{n}-1\right)\)
10. \(1+5+5^{2}+\cdots+5^{n-1}=\frac{1}{4}\left(5^{n}-1\right)\)
12. \(\frac{1}{1 \cdot 3}+\frac{1}{3 \cdot 5}+\frac{1}{5 \cdot 7}+\cdots+\frac{1}{(2 n-1)(2 n+1)}=\frac{n}{2 n+1}\)
14. \(1^{3}+2^{3}+3^{3}+\cdots+n^{3}=\frac{1}{4} n^{2}(n+1)^{2}\)
16. \(-2-3-4-\cdots-(n+1)=-\frac{1}{2} n(n+3)\)
30. Use mathematical induction to prove that if \(r \neq 1\), then
\[
a+a r+a r^{2}+\cdots+a r^{n-1}=a \frac{1-r^{n}}{1-r}
\]
31. Use mathematical induction to prove that
\[
\begin{aligned}
a & +(a+d)+(a+2 d) \\
& +\cdots+[a+(n-1) d]=n a+d \frac{n(n-1)}{2}
\end{aligned}
\]
32. Extended Principle of Mathematical Induction The Extended Principle of Mathematical Induction states that if Conditions I and II hold, that is,
(I) A statement is true for a natural number \(j\).
(II) If the statement is true for some natural number \(k \geq j\), then it is also true for the next natural number \(k+1\). then the statement is true for all natural numbers \(\geq j\). Use the Extended Principle of Mathematical Induction to show that the number of diagonals in a convex polygon of \(n\) sides is \(\frac{1}{2} n(n-3)\).
[Hint: Begin by showing that the result is true when \(n=4\) (Condition I).]
33. Geometry Use the Extended Principle of Mathematical Induction to show that the sum of the interior angles of a convex polygon of \(n\) sides equals \((n-2) \cdot 180^{\circ}\).

\section*{Discussion and Writing}
34. How would you explain the Principle of Mathematical Induction to a friend?

\section*{Retain Your Knowledge}

Problems 35-38 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared or the final exam.
35. Solve: \(\log _{2} \sqrt{x+5}=4\)
36. A mass of 500 kg is suspended from two cables, as shown in the figure. What are the tensions in the two cables?

37. Solve the system: \(\left\{\begin{array}{l}4 x+3 y=-7 \\ 2 x-5 y=16\end{array}\right.\)
38. For \(A=\left[\begin{array}{rrr}1 & 2 & -1 \\ 0 & 1 & 4\end{array}\right]\) and \(B=\left[\begin{array}{rr}3 & -1 \\ 1 & 0 \\ -2 & 2\end{array}\right]\), find \(A \cdot B\).

\subsection*{11.5 The Binomial Theorem}

\section*{OBJECTIVES 1 Evaluate \(\binom{n}{j}\) (p. 852)}

2 Use the Binomial Theorem (p. 854)

Formulas have been given for expanding \((x+a)^{n}\) for \(n=2\) and \(n=3\). The Binomial Theorem* is a formula for the expansion of \((x+a)^{n}\) for any positive integer \(n\). If \(n=1,2,3\), and 4, the expansion of \((x+a)^{n}\) is straightforward.
\[
\begin{aligned}
& (x+a)^{1}=x+a \\
& (x+a)^{2}=x^{2}+2 a x+a^{2} \\
& (x+a)^{3}=x^{3}+3 a x^{2}+3 a^{2} x+a^{3} \\
& (x+a)^{4}=x^{4}+4 a x^{3}+6 a^{2} x^{2}+4 a^{3} x+a^{4}
\end{aligned}
\]
*The name is derived from the fact that \(x+a\) is a binomial; that is, it contains two terms.

COMMENT On a graphing calculator, the symbol \(\binom{n}{j}\) may be denoted by the key nCr .

Notice that each expansion of \((x+a)^{n}\) begins with \(x^{n}\) and ends with \(a^{n}\). From left to right, the powers of \(x\) are decreasing by 1 , while the powers of \(a\) are increasing by 1 . Also, the number of terms equals \(n+1\). Notice, too, that the degree of each monomial in the expansion equals \(n\). For example, in the expansion of \((x+a)^{3}\), each monomial \(\left(x^{3}, 3 a x^{2}, 3 a^{2} x, a^{3}\right)\) is of degree 3 . As a result, it is reasonable to conjecture that the expansion of \((x+a)^{n}\) would look like this:
\[
(x+a)^{n}=x^{n}+
\]
\(\qquad\) \(a x^{n-1}+\) \(\qquad\) \(a^{2} x^{n-2}+\cdots+\) \(\qquad\) \(a^{n-1} x+a^{n}\)
where the blanks are numbers to be found. This is in fact the case, as will be seen shortly.

Before we can fill in the blanks, we need to introduce the symbol \(\binom{n}{j}\).
1 Evaluate \(\binom{n}{j}\)
The symbol \(\binom{n}{j}\), read " \(n\) taken \(j\) at a time," is defined next.

DEFINITION
If \(j\) and \(n\) are integers with \(0 \leq j \leq n\), the symbol \(\binom{\boldsymbol{n}}{\boldsymbol{j}}\) is defined as
\[
\begin{equation*}
\binom{n}{j}=\frac{n!}{j!(n-j)!} \tag{1}
\end{equation*}
\]

\section*{EXAMPLE I}

Evaluating \(\binom{n}{j}\)
Find:
(a) \(\binom{3}{1}\)
(b) \(\binom{4}{2}\)
(c) \(\binom{8}{7}\)
(d) \(\binom{65}{15}\)

Solution

Figure 11

(a) \(\binom{3}{1}=\frac{3!}{1!(3-1)!}=\frac{3!}{1!2!}=\frac{3 \cdot 2 \cdot 1}{1(2 \cdot 1)}=\frac{6}{2}=3\)
(b) \(\binom{4}{2}=\frac{4!}{2!(4-2)!}=\frac{4!}{2!2!}=\frac{4 \cdot 3 \cdot 2 \cdot 1}{(2 \cdot 1)(2 \cdot 1)}=\frac{24}{4}=6\)
(c) \(\binom{8}{7}=\frac{8!}{7!(8-7)!}=\frac{8!}{7!1!}=\frac{8 \cdot 7!}{7!\cdot 1!}=\frac{8}{1}=8\)
\[
8!=8 \cdot 7!
\]
(d) Figure 11 shows the solution using a TI-84 Plus graphing calculator. So
\[
\binom{65}{15} \approx 2.073746998 \times 10^{14}
\]
-Now Work problem 5
Four useful formulas involving the symbol \(\binom{n}{j}\) are
\[
\binom{n}{0}=1 \quad\binom{n}{1}=n \quad\binom{n}{n-1}=n \quad\binom{n}{n}=1
\]
\[
\text { Proof } \begin{aligned}
\binom{n}{0} & =\frac{n!}{0!(n-0)!}=\frac{n!}{0!n!}=\frac{1}{1}=1 \\
\binom{n}{1} & =\frac{n!}{1!(n-1)!}=\frac{n!}{(n-1)!}=\frac{n(n-1)!}{(n-1)!}=n
\end{aligned}
\]

You are asked to prove the remaining two formulas in Problem 45.
Suppose that the values of the symbol \(\binom{n}{j}\) are arranged in a triangular display,
as shown next and in Figure 12 .
\[
\begin{gathered}
\binom{0}{0} \\
\binom{1}{0}\binom{1}{1} \\
\binom{2}{0}\binom{2}{1}\binom{2}{2} \\
\binom{3}{0}\binom{3}{1}\binom{3}{2}\binom{3}{3} \\
\binom{4}{0}\binom{4}{1}\binom{4}{2}\binom{4}{3}\binom{4}{4} \\
\binom{5}{0}\binom{5}{1}\binom{5}{2}\binom{5}{3}\binom{5}{4}\binom{5}{5}
\end{gathered}
\]

Figure 12
The Pascal triangle
\[
\begin{aligned}
& n=0 \longrightarrow \\
& n=1 \longrightarrow \\
& n=2 \longrightarrow \\
& n=3 \longrightarrow \\
& n=4 \longrightarrow \\
& n=5 \longrightarrow 1
\end{aligned}
\]

This display is called the Pascal triangle, named after Blaise Pascal (1623-1662), a French mathematician.

The Pascal triangle has 1's down the sides. To get any other entry, add the two nearest entries in the row above it. The shaded triangles in Figure 12 illustrate this feature of the Pascal triangle. Based on this feature, the row corresponding to \(n=6\) is found as follows:
\[
\begin{aligned}
& n=6 \rightarrow \quad 1 \quad 6 \quad 15 \quad 2015 \quad 6 \quad 1
\end{aligned}
\]

This addition always works (see the theorem on page 856).
Although the Pascal triangle provides an interesting and organized display of the symbol \(\binom{n}{j}\), in practice it is not all that helpful. For example, if you wanted to know the value of \(\binom{12}{5}\), you would need to produce 13 rows of the triangle before seeing the answer. It is much faster to use definition (1).

\section*{2 Use the Binomial Theorem}

\section*{THEOREM}

\section*{Binomial Theorem}

Let \(x\) and \(a\) be real numbers. For any positive integer \(n\), we have
\[
\begin{align*}
(x+a)^{n} & =\binom{n}{0} x^{n}+\binom{n}{1} a x^{n-1}+\cdots+\binom{n}{j} a^{j} x^{n-j}+\cdots+\binom{n}{n} a^{n} \\
& =\sum_{j=0}^{n}\binom{n}{j} x^{n-j} a^{j} \tag{2}
\end{align*}
\]

Now you know why it was necessary to introduce the symbol \(\binom{n}{j}\); these symbols are the numerical coefficients that appear in the expansion of \((x+a)^{n}\). Because of this, the symbol \(\binom{n}{j}\) is called a binomial coefficient.

\section*{EXAMPLE 2 Expanding a Binomial}

Use the Binomial Theorem to expand \((x+2)^{5}\).
Solution In the Binomial Theorem, let \(a=2\) and \(n=5\). Then
\[
\begin{aligned}
(x+2)^{5} & =\binom{5}{{ }_{\uparrow}} x^{5}+\binom{5}{1} 2 x^{4}+\binom{5}{2} 2^{2} x^{3}+\binom{5}{3} 2^{3} x^{2}+\binom{5}{4} 2^{4} x+\binom{5}{5} 2^{5} \\
& \text { Use equation (2). } \\
& =1 \cdot x^{5}+5 \cdot 2 x^{4}+10 \cdot 4 x^{3}+10 \cdot 8 x^{2}+5 \cdot 16 x+1 \cdot 32 \\
& \uparrow \\
& \text { Use rown } n=5 \text { of the Pascal triangle or formula (1) for }\binom{n}{j} . \\
& =x^{5}+10 x^{4}+40 x^{3}+80 x^{2}+80 x+32
\end{aligned}
\]

\section*{EXAMPLE 3 Expanding a Binomial}

Expand \((2 y-3)^{4}\) using the Binomial Theorem.
Solution First, rewrite the expression \((2 y-3)^{4}\) as \([2 y+(-3)]^{4}\). Now use the Binomial Theorem with \(n=4, x=2 y\), and \(a=-3\).
\[
\begin{aligned}
{[2 y+(-3)]^{4}=} & \binom{4}{0}(2 y)^{4}+\binom{4}{1}(-3)(2 y)^{3}+\binom{4}{2}(-3)^{2}(2 y)^{2} \\
& +\binom{4}{3}(-3)^{3}(2 y)+\binom{4}{4}(-3)^{4} \\
= & 1 \cdot 16 y^{4}+4(-3) 8 y^{3}+6 \cdot 9 \cdot 4 y^{2}+4(-27) 2 y+1 \cdot 81 \\
& \uparrow \\
& \text { Use row } n=4 \text { of the Pascal triangle or formula ( } 1) \text { for }\binom{n}{j} \\
= & 16 y^{4}-96 y^{3}+216 y^{2}-216 y+81
\end{aligned}
\]

In this expansion, note that the signs alternate because \(a=-3<0\).

\section*{EXAMPLE 4 Finding a Particular Coefficient in a Binomial Expansion}

Find the coefficient of \(y^{8}\) in the expansion of \((2 y+3)^{10}\).

\section*{Solution Write out the expansion using the Binomial Theorem.}
\[
\begin{aligned}
(2 y+3)^{10}= & \binom{10}{0}(2 y)^{10}+\binom{10}{1}(2 y)^{9}(3)^{1}+\binom{10}{2}(2 y)^{8}(3)^{2}+\binom{10}{3}(2 y)^{7}(3)^{3} \\
& +\binom{10}{4}(2 y)^{6}(3)^{4}+\cdots+\binom{10}{9}(2 y)(3)^{9}+\binom{10}{10}(3)^{10}
\end{aligned}
\]

From the third term in the expansion, the coefficient of \(y^{8}\) is
\[
\binom{10}{2}(2)^{8}(3)^{2}=\frac{10!}{2!8!} \cdot 2^{8} \cdot 9=\frac{10 \cdot 9 \cdot 8!}{2 \cdot 8!} \cdot 2^{8} \cdot 9=103,680
\]

As this solution demonstrates, the Binomial Theorem can be used to find a particular term in an expansion without writing the entire expansion.

Based on the expansion of \((x+a)^{n}\), the term containing \(x^{j}\) is
\[
\begin{equation*}
\binom{n}{n-j} a^{n-j} x^{j} \tag{3}
\end{equation*}
\]

Example 4 can be solved by using formula (3) with \(n=10, a=3, x=2 y\), and \(j=8\). The term containing \(y^{8}\) is
\[
\begin{aligned}
\binom{10}{10-8} 3^{10-8}(2 y)^{8} & =\binom{10}{2} \cdot 3^{2} \cdot 2^{8} \cdot y^{8}=\frac{10!}{2!8!} \cdot 9 \cdot 2^{8} y^{8} \\
& =\frac{10 \cdot 9 \cdot 8!}{2 \cdot 8!} \cdot 9 \cdot 2^{8} y^{8}=103,680 y^{8}
\end{aligned}
\]

\section*{EXAMPLE 5 Finding a Particular Term in a Binomial Expansion}

Find the sixth term in the expansion of \((x+2)^{9}\).
Solution A Expand using the Binomial Theorem until the 6th term is reached.
\[
\begin{aligned}
(x+2)^{9}= & \binom{9}{0} x^{9}+\binom{9}{1} x^{8} \cdot 2+\binom{9}{2} x^{7} \cdot 2^{2}+\binom{9}{3} x^{6} \cdot 2^{3}+\binom{9}{4} x^{5} \cdot 2^{4} \\
& +\binom{9}{5} x^{4} \cdot 2^{5}+\cdots
\end{aligned}
\]

The 6th term is
\[
\binom{9}{5} x^{4} \cdot 2^{5}=\frac{9!}{5!4!} \cdot x^{4} \cdot 32=4032 x^{4}
\]

Solution B The 6th term in the expansion of \((x+2)^{9}\), which has 10 terms total, contains \(x^{4}\). (Do you see why?) By formula (3), the 6th term is
\[
\binom{9}{9-4} 2^{9-4} x^{4}=\binom{9}{5} 2^{5} x^{4}=\frac{9!}{5!4!} \cdot 32 x^{4}=4032 x^{4}
\]

The following theorem shows that the triangular addition feature of the Pascal triangle illustrated in Figure 12 always works.

THEOREM
If \(n\) and \(j\) are integers with \(1 \leq j \leq n\), then
\[
\begin{equation*}
\binom{n}{j-1}+\binom{n}{j}=\binom{n+1}{j} \tag{4}
\end{equation*}
\]

Proof
\[
\begin{aligned}
\binom{n}{j-1}+\binom{n}{j} & =\frac{n!}{(j-1)![n-(j-1)]!}+\frac{n!}{j!(n-j)!} \\
& =\frac{n!}{(j-1)!(n-j+1)!}+\frac{n!}{j!(n-j)!} \\
& =\frac{j n!}{j(j-1)!(n-j+1)!}+\frac{(n-j+1) n!}{j!(n-j+1)(n-j)!} \\
& =\frac{j n!}{j!(n-j+1)!}+\frac{(n-j+1) n!}{j!(n-j+1)!} \\
& =\frac{j n!+(n-j+1) n!}{j!(n-j+1)!} \\
& =\frac{n!(j+n-j+1)}{j!(n-j+1)!} \quad \text { the second term by } \frac{n-j+1}{n-j+1} 1 \\
& =\frac{n!(n+1)}{j!(n-j+1)!}=\frac{(n+1)!}{j![(n+1)-j]!}=\binom{n+1}{j}
\end{aligned}
\]

\section*{Historical Feature}

Omar Khayyám (1048-1131)

The case \(n=2\) of the Binomial Theorem, \((a+b)^{2}\), was known to Euclid in 300 BC , but the general law seems to have been discovered by the Persian mathematician and astronomer Omar Khayyám (1048-1131), who is also well known as the author of the Rubáiyát, a collection of four-line poems making observations on the human condition. Omar Khayyám did not state the Binomial Theorem explicitly, but he claimed to have a method for extracting third, fourth, fifth roots, and so on. A little study shows that one must know the Binomial Theorem to create such a method.

The heart of the Binomial Theorem is the formula for the numerical coefficients, and, as we saw, they can be written in a symmetric triangular form. The Pascal triangle appears first in the books of Yang Hui (about 1270) and Chu Shih-chieh (1303). Pascal's name is attached to the triangle because of the many applications he made of it, especially to counting and probability. In establishing these results, he was one of the earliest users of mathematical induction.

Many people worked on the proof of the Binomial Theorem, which was finally completed for all \(n\) (including complex numbers) by Niels Abel (1802-1829).

\subsection*{11.5 Assess Your Understanding}

\section*{Concepts and Vocabulary}
1. The \(\qquad\) is a triangular display of the binomial coefficients.
2. \(\binom{n}{0}=\) and \(\binom{n}{1}=\) \(\qquad\)
3. True or False \(\binom{n}{j}=\frac{j!}{(n-j)!n!}\)
4. The \(\qquad\) can be used to expand expressions like \((2 x+3)^{6}\).

\section*{Skill Building}

In Problems 5-16, evaluate each expression.
5. \(\binom{5}{3}\)
6. \(\binom{7}{3}\)
7. \(\binom{7}{5}\)
8. \(\binom{9}{7}\)
9. \(\binom{50}{49}\)
10. \(\binom{100}{98}\)
11. \(\binom{1000}{1000}\)
12. \(\binom{1000}{0}\)
13. \(\binom{55}{23}\)
14. \(\binom{60}{20}\)
15. \(\binom{47}{25}\)
16. \(\binom{37}{19}\)

In Problems 17-28, expand each expression using the Binomial Theorem.
17. \((x+1)^{5}\)
18. \((x-1)^{5}\)
19. \((x-2)^{6}\)
20. \((x+3)^{5}\)
21. \((3 x+1)^{4}\)
22. \((2 x+3)^{5}\)
23. \(\left(x^{2}+y^{2}\right)^{5}\)
24. \(\left(x^{2}-y^{2}\right)^{6}\)
25. \((\sqrt{x}+\sqrt{2})^{6}\)
26. \((\sqrt{x}-\sqrt{3})^{4}\)
27. \((a x+b y)^{5}\)
28. \((a x-b y)^{4}\)

In Problems 29-42, use the Binomial Theorem to find the indicated coefficient or term.
29. The coefficient of \(x^{6}\) in the expansion of \((x+3)^{10}\)
31. The coefficient of \(x^{7}\) in the expansion of \((2 x-1)^{12}\)
33. The coefficient of \(x^{7}\) in the expansion of \((2 x+3)^{9}\)
35. The 5 th term in the expansion of \((x+3)^{7}\)
37. The 3rd term in the expansion of \((3 x-2)^{9}\)
39. The coefficient of \(x^{0}\) in the expansion of \(\left(x^{2}+\frac{1}{x}\right)^{12}\)
41. The coefficient of \(x^{4}\) in the expansion of \(\left(x-\frac{2}{\sqrt{x}}\right)^{10}\)
30. The coefficient of \(x^{3}\) in the expansion of \((x-3)^{10}\)
32. The coefficient of \(x^{3}\) in the expansion of \((2 x+1)^{12}\)
34. The coefficient of \(x^{2}\) in the expansion of \((2 x-3)^{9}\)
36. The 3rd term in the expansion of \((x-3)^{7}\)
38. The 6th term in the expansion of \((3 x+2)^{8}\)
40. The coefficient of \(x^{0}\) in the expansion of \(\left(x-\frac{1}{x^{2}}\right)^{9}\)
42. The coefficient of \(x^{2}\) in the expansion of \(\left(\sqrt{x}+\frac{3}{\sqrt{x}}\right)^{8}\)

\section*{Applications and Extensions}
43. Use the Binomial Theorem to find the numerical value of \((1.001)^{5}\) correct to five decimal places.
[Hint: \((1.001)^{5}=\left(1+10^{-3}\right)^{5}\) ]
44. Use the Binomial Theorem to find the numerical value of \((0.998)^{6}\) correct to five decimal places.
45. Show that \(\binom{n}{n-1}=n\) and \(\binom{n}{n}=1\).
46. Show that if \(n\) and \(j\) are integers with \(0 \leq j \leq n\), then
\[
\binom{n}{j}=\binom{n}{n-j}
\]

Conclude that the Pascal triangle is symmetric with respect to a vertical line drawn from the topmost entry.
47. If \(n\) is a positive integer, show that
\[
\binom{n}{0}+\binom{n}{1}+\cdots+\binom{n}{n}=2^{n}
\]
[Hint: \(2^{n}=(1+1)^{n}\); now use the Binomial Theorem.]
48. If \(n\) is a positive integer, show that
\[
\binom{n}{0}-\binom{n}{1}+\binom{n}{2}-\cdots+(-1)^{n}\binom{n}{n}=0
\]
49. \(\binom{5}{0}\left(\frac{1}{4}\right)^{5}+\binom{5}{1}\left(\frac{1}{4}\right)^{4}\left(\frac{3}{4}\right)+\binom{5}{2}\left(\frac{1}{4}\right)^{3}\left(\frac{3}{4}\right)^{2}\)
\[
+\binom{5}{3}\left(\frac{1}{4}\right)^{2}\left(\frac{3}{4}\right)^{3}+\binom{5}{4}\left(\frac{1}{4}\right)\left(\frac{3}{4}\right)^{4}+\binom{5}{5}\left(\frac{3}{4}\right)^{5}=?
\]
50. Stirling's Formula An approximation for \(n\) !, when \(n\) is large, is given by
\[
n!\approx \sqrt{2 n \pi}\left(\frac{n}{e}\right)^{n}\left(1+\frac{1}{12 n-1}\right)
\]

Calculate 12 !, 20!, and 25 ! on your calculator. Then use Stirling's formula to approximate 12 !, 20!, and 25 !.

\section*{Retain Your Knowledge}

Problems 51-54 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
51. Solve \(6^{x}=5^{x+1}\). Express the answer both in exact form and as a decimal rounded to three decimal places.
52. For \(\mathbf{v}=2 \mathbf{i}+3 \mathbf{j}\) and \(\mathbf{w}=3 \mathbf{i}-2 \mathbf{j}\) :
(a) Find the dot product \(\mathbf{v} \cdot \mathbf{w}\).
(b) Find the angle between \(\mathbf{v}\) and \(\mathbf{w}\).
(c) Are the vectors parallel, orthogonal, or neither?
53. Solve the system of equations:
\[
\left\{\begin{aligned}
x-y-z & =0 \\
2 x+y+3 z & =-1 \\
4 x+2 y-z & =12
\end{aligned}\right.
\]
54. Graph the system of inequalities. Tell whether the graph is bounded or unbounded, and label the corner points.
\[
\left\{\begin{array}{r}
x \geq 0 \\
y \geq 0 \\
x+y \leq 6 \\
2 x+y \leq 10
\end{array}\right.
\]

\section*{Chapter Review}

\section*{Things to Know}

Sequence (p. 820)
Factorials (p. 822)
Arithmetic sequence (pp. 830 and 831)
Sum of the first \(n\) terms of an arithmetic sequence (p. 832)
Geometric sequence
(pp. 836 and 837)
Sum of the first \(n\) terms of a geometric sequence (p. 838)
Infinite geometric series (p. 839)

Sum of a convergent infinite geometric series (p. 840)

Amount of an Annuity (p. 842)

Principle of Mathematical Induction (p. 848)

Binomial coefficient (p. 852)
Pascal's triangle (p. 853)
Binomial Theorem (p. 854)

A function whose domain is the set of positive integers
\(0!=1,1!=1, n!=n(n-1) \cdot \cdots \cdot 3 \cdot 2 \cdot 1\) if \(n \geq 2\) is an integer
\(a_{1}=a, a_{n}=a_{n-1}+d\), where \(a_{1}=a=\) first term, \(d=\) common difference
\(a_{n}=a_{1}+(n-1) d\)
\(S_{n}=\frac{n}{2}\left[2 a_{1}+(n-1) d\right]=\frac{n}{2}\left(a_{1}+a_{n}\right)\)
\(a_{1}=a, \quad a_{n}=r a_{n-1}\), where \(a_{1}=a=\) first term, \(r=\) common ratio
\(a_{n}=a_{1} r^{n-1}, \quad(r \neq 0)\)
\(S_{n}=a_{1} \cdot \frac{1-r^{n}}{1-r}, \quad r \neq 0,1\)
\(a_{1}+a_{1} r+\cdots+a_{1} r^{n-1}+\cdots=\sum_{k=1}^{\infty} a_{1} r^{k-1}\)
If \(|r|<1, \sum_{k=1}^{\infty} a_{1} r^{k-1}=\frac{a_{1}}{1-r}\)
\(A=P \cdot \frac{(1+i)^{n}-1}{i}\), where \(P=\) the deposit (in dollars) made at the end of each payment period, \(i=\) interest rate per pay period, and \(A=\) the amount of the annuity after \(n\) deposits. If the following two conditions are satisfied,

Condition I: The statement is true for the natural number 1.
Condition II: If the statement is true for some natural number \(k\), it is also true for \(k+1\). then the statement is true for all natural numbers.
\[
\binom{n}{j}=\frac{n!}{j!(n-j)!}
\]

See Figure 12.
\[
(x+a)^{n}=\binom{n}{0} x^{n}+\binom{n}{1} a x^{n-1}+\cdots+\binom{n}{j} a^{j} x^{n-j}+\cdots+\binom{n}{n} a^{n}=\sum_{j=0}^{n}\binom{n}{j} x^{n-j} a^{j}
\]

\section*{Objectives}

\section*{Section}
11.1 1 Write the first several terms of a sequence (p. 820)

2 Write the terms of a sequence defined by a recursive formula (p. 823)
3 Use summation notation (p. 824)
4 Find the sum of a sequence (p. 825)
11.2

1 Determine whether a sequence is arithmetic (p. 830)
2 Find a formula for an arithmetic sequence (p. 831)
3 Find the sum of an arithmetic sequence (p. 832)
11.3

1 Determine whether a sequence is geometric (p. 836)
2 Find a formula for a geometric sequence (p. 837)
3 Find the sum of a geometric sequence (p. 838)
4 Determine whether a geometric series converges or diverges (p. 839)
5 Solve annuity problems (p. 842)
11.4 1 Prove statements using mathematical induction (p. 847)
11.5

1 Evaluate \(\binom{n}{j}\) (p. 852)
2 Use the Binomial Theorem (p. 854)

\section*{Review Exercises}

In Problems 1-4, write down the first five terms of each sequence.
1. \(\left\{a_{n}\right\}=\left\{(-1)^{n}\left(\frac{n+3}{n+2}\right)\right\}\)
2. \(\left\{c_{n}\right\}=\left\{\frac{2^{n}}{n^{2}}\right\}\)
3. \(a_{1}=3 ; \quad a_{n}=\frac{2}{3} a_{n-1}\)
4. \(a_{1}=2 ; \quad a_{n}=2-a_{n-1}\)
5. Write out \(\sum_{k=1}^{4}(4 k+2)\)
6. Express \(1-\frac{1}{2}+\frac{1}{3}-\frac{1}{4}+\ldots+\frac{1}{13}\) using summation notation.

In Problems 7-12, determine whether the given sequence is arithmetic, geometric, or neither. If the sequence is arithmetic, find the common difference and the sum of the first \(n\) terms. If the sequence is geometric, find the common ratio and the sum of the first \(n\) terms.
7. \(\left\{a_{n}\right\}=\{n+5\}\)
8. \(\left\{c_{n}\right\}=\left\{2 n^{3}\right\}\)
9. \(\left\{s_{n}\right\}=\left\{2^{3 n}\right\}\)
10. \(0,4,8,12, \ldots\)
11. \(3, \frac{3}{2}, \frac{3}{4}, \frac{3}{8}, \frac{3}{16}, \ldots\)
12. \(\frac{2}{3}, \frac{3}{4}, \frac{4}{5}, \frac{5}{6}, \ldots\)

In Problems 13-16, find each sum.
13. \(\sum_{k=1}^{50}(3 k)\)
14. \(\sum_{k=1}^{30}\left(k^{2}+2\right)\)
15. \(\sum_{k=1}^{40}(-2 k+8)\)
16. \(\sum_{k=1}^{7}\left(\frac{1}{3}\right)^{k}\)

In Problems 17-19, find the indicated term in each sequence. [Hint: Find the general term first.]
17. 9th term of \(3,7,11,15, \ldots\)
18. 11 th term of \(1, \frac{1}{10}, \frac{1}{100}, \ldots\)
19. 9 th term of \(\sqrt{2}, 2 \sqrt{2}, 3 \sqrt{2}, \ldots\)

In Problems 20 and 21, find a general formula for each arithmetic sequence.
20. 7th term is \(31 ; 20\) th term is 96
21. 10th term is \(0 ; 18\) th term is 8

In Problems 22-25, determine whether each infinite geometric series converges or diverges. If it converges, find its sum.
22. \(3+1+\frac{1}{3}+\frac{1}{9}+\cdots\)
23. \(2-1+\frac{1}{2}-\frac{1}{4}+\cdots\)
24. \(\frac{1}{2}+\frac{3}{4}+\frac{9}{8}+\cdots\).
25. \(\sum_{k=1}^{\infty} 4\left(\frac{1}{2}\right)^{k-1}\)

In Problems 26-28, use the Principle of Mathematical Induction to show that the given statement is true for all natural numbers.
26. \(3+6+9+\cdots+3 n=\frac{3 n}{2}(n+1)\)
27. \(2+6+18+\cdots+2 \cdot 3^{n-1}=3^{n}-1\)
28. \(1^{2}+4^{2}+7^{2}+\cdots+(3 n-2)^{2}=\frac{1}{2} n\left(6 n^{2}-3 n-1\right)\)
29. Evaluate: \(\binom{5}{2}\)

In Problems 30 and 31, expand each expression using the Binomial Theorem.
30. \((x+2)^{5}\)
32. Find the coefficient of \(x^{7}\) in the expansion of \((x+2)^{9}\).
33. Find the coefficient of \(x^{2}\) in the expansion of \((2 x+1)^{7}\).
34. Constructing a Brick Staircase A brick staircase has a total of 25 steps. The bottom step requires 80 bricks. Each successive step requires three fewer bricks than the prior step.
(a) How many bricks are required for the top step?
(b) How many bricks are required to build the staircase?
35. Creating a Floor Design A mosaic tile floor is designed in the shape of a trapezoid 30 feet wide at the base and 15 feet wide at the top. The tiles, 12 inches by 12 inches, are to be placed so that each successive row contains one less tile than the row below. How many tiles will be required?
36. Bouncing Balls A ball is dropped from a height of 20 feet. Each time it strikes the ground, it bounces up to threequarters of the height of the previous bounce.
(a) What height will the ball bounce up to after it strikes the ground for the third time?
31. \((3 x-4)^{4}\)
(b) How high will it bounce after it strikes the ground for the \(n\)th time?
(c) How many times does the ball need to strike the ground before its bounce is less than 6 inches?
(d) What total distance does the ball travel before it stops bouncing?
37. Retirement Planning Chris gets paid once a month and contributes \(\$ 200\) each pay period into his \(401(\mathrm{k})\). If Chris plans on retiring in 20 years, what will be the value of his \(401(\mathrm{k})\) if the per annum rate of return of the \(401(\mathrm{k})\) is \(10 \%\) compounded monthly?
38. Salary Increases Your friend has just been hired at an annual salary of \(\$ 20,000\). If she expects to receive annual increases of \(4 \%\), what will be her salary as she begins her 5th year?

\section*{Chapter Test}

In Problems 1 and 2, write down the first five terms of each sequence.
1. \(\left\{s_{n}\right\}=\left\{\frac{n^{2}-1}{n+8}\right\}\)
2. \(a_{1}=4, a_{n}=3 a_{n-1}+2\)

Chapter Test Prep Videos include step-by-step solutions to all chapter test exercises and can be found in MyMathLabll or on this text's
You Tuhe" Channel (search "SullivanPrecalcUC3e").

In Problems 3 and 4, write out each sum. Evaluate each sum.
3. \(\sum_{k=1}^{3}(-1)^{k+1}\left(\frac{k+1}{k^{2}}\right)\)
4. \(\sum_{k=1}^{4}\left[\left(\frac{2}{3}\right)^{k}-k\right]\)

In Problems 6-11, determine whether the given sequence is arithmetic, geometric, or neither. If the sequence is arithmetic, find the common difference and the sum of the first \(n\) terms. If the sequence is geometric, find the common ratio and the sum of the first \(n\) terms.
6. \(6,12,36,144, \ldots\)
7. \(\left\{-\frac{1}{2} \cdot 4^{n}\right\}\)
8. \(-2,-10,-18,-26, \ldots\)
9. \(\left\{-\frac{n}{2}+7\right\}\)
10. \(25,10,4, \frac{8}{5}, \ldots\)
11. \(\left\{\frac{2 n-3}{2 n+1}\right\}\)
12. Determine whether the infinite geometric series
\[
256-64+16-4+\cdots
\]
converges or diverges. If it converges, find its sum.
13. Expand \((3 m+2)^{5}\) using the Binomial Theorem.
14. Use the Principle of Mathematical Induction to show that the given statement is true for all natural numbers.
\(\left(1+\frac{1}{1}\right)\left(1+\frac{1}{2}\right)\left(1+\frac{1}{3}\right) \cdots\left(1+\frac{1}{n}\right)=n+1\)
15. A new car sold for \(\$ 31,000\). If the vehicle loses \(15 \%\) of its value each year, how much will it be worth after 10 years?
16. A weightlifter begins his routine by benching 100 pounds and increases the weight by 30 pounds for each set. If he does 10 repetitions in each set, what is the total weight that he will have lifted after 5 sets?

\section*{Cumulative Review}
1. Find all the solutions, real and complex, of the equation \(\left|x^{2}\right|=9\).
2. (a) Graph the circle \(x^{2}+y^{2}=100\) and the parabola \(y=3 x^{2}\).
(b) Solve the system of equations: \(\left\{\begin{aligned} x^{2}+y^{2} & =100 \\ y & =3 x^{2}\end{aligned}\right.\)
(c) Where do the circle and the parabola intersect?
3. Solve the equation \(2 e^{x}=5\).
4. Find an equation of the line with slope 5 and \(x\)-intercept 2 .
5. Find the standard equation of the circle whose center is the point \((-1,2)\) if \((3,5)\) is a point on the circle.
6. \(f(x)=\frac{3 x}{x-2}, \quad g(x)=2 x+1\)

Find:
(a) \((f \circ g)(2)\)
(b) \((g \circ f)(4)\)
(c) \((f \circ g)(x)\)
(d) The domain of \((f \circ g)(x)\)
(e) \((g \circ f)(x)\)
(f) The domain of \((g \circ f)(x)\)
(g) The function \(g^{-1}\) and its domain
(h) The function \(f^{-1}\) and its domain
7. Find the equation of an ellipse with center at the origin, a focus at \((0,3)\), and a vertex at \((0,4)\).
8. Find the equation of a parabola with vertex at \((-1,2)\) and focus at \((-1,3)\).

\section*{Chapter Projects}

\section*{(ค) Internet-based Project}
I. Population Growth The size of the population of the United States essentially depends on its current population, the birth and death rates of the population, and immigration. Let \(b\) represent the birth rate of the U.S. population and \(d\) represent its death rate. Then \(r=b-d\) represents the growth rate of the population, where \(r\) varies from year to year. The U.S. population after \(n\) years can be modeled using the recursive function
\[
p_{n}=(1+r) p_{n-1}+I
\]
where \(I\) represents net immigration into the United States.
1. Using data from the CIA World Factbook at www.cia.gov/ cia/publications/factbook/index.html, determine the birth and death rates for all races for the most recent year that data are available. Birth rates and death rates are given
as the number of live births per 1000 population. Each must be computed as the number of births (deaths) per individual. For example, in 2013, the birth rate was 13.66 per 1000 , and the death rate was 8.39 per 1,000 ,
so \(b=\frac{13.66}{1000}=0.01366\), and \(d=\frac{8.39}{1,000}=0.00839\).

Next, using data from the Immigration and Naturalization Service www.fedstats.gov, determine the net immigration to the United States for the same year used to obtain \(b\) and \(d\) in Problem 1.
2. Determine the value of \(r\), the growth rate of the population.
3. Find a recursive formula for the population of the United States.
4. Use the recursive formula to predict the population of the United States in the following year. In other words, if data are available up to the year 2013, predict the U.S. population in 2014.
5. Compare your prediction to the actual data.
6. Repeat Problems \(1-5\) for Uganda using the CIA World Factbook (in 2013, the birth rate was 44.5 per 1000, and the death rate was 11.26 per 1000).
7. Do your results for the United States (a developed country) and Uganda (a developing country) seem in line with the article in the chapter opener? Explain.
8. Do you think the recursive formula found in Problem 3 will be useful in predicting future populations? Why or why not?

The following projects are available at the Instructor's Resource Center (IRC).
II. Project at Motorola Digital Wireless Communication Cell phones take speech and change it into digital code using only zeros and ones. See how the code length can be modeled using a mathematical sequence.
III. Economics Economists use the current price of a good and a recursive model to predict future consumer demand and to determine future production.
IV. Standardized Tests Many tests of intelligence, aptitude, and achievement contain questions asking for the terms of a mathematical sequence.

\section*{Counting and Probability}

\section*{Deal or No Deal}

By LYNN ELBER, AP Television Writer-LOS ANGELES-The promise of an easy million bucks, a stage crowded with sexy models and the smoothly calibrated charm of host Howie Mandel made Deal or No Deal an unexpected hit in television's December dead zone. Based on a series that debuted in Holland in 2002 and became an international hit, Deal or No Deal is about luck and playing the odds. Contestants are faced with 26 briefcases held by 26 models, each case with a hidden value ranging from a penny to the top prize that will escalate by week's end to \(\$ 3\) million. As the game progresses and cases are eliminated, a contestant weighs the chance of snaring a big prize against lesser but still tempting offers made by the show's "bank," represented by an anonymous, silhouetted figure.

Source: Adapted from Lynn Elber, "'Deal or No Deal'

\section*{<A Look Back}

We introduced sets in Appendix A and have been using them to represent solutions of equations and inequalities and to represent the domain and range of functions.

\section*{A Look Ahead>}

Here we discuss methods for counting the number of elements in a set and the role of sets in probability.

\section*{Outline}
12.1 Counting
12.2 Permutations and Combinations
12.3 Probability

Chapter Review
Chapter Test
Cumulative Review
Chapter Projects

\subsection*{12.1 Counting}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Sets (Appendix A, Section A.1, pp. A1-A3)

Now Work the 'Are You Prepared?' problems on page 867.
OBJECTIVES 1 Find All the Subsets of a Set (p. 867)
2 Count the Number of Elements in a Set (p. 863)
3 Solve Counting Problems Using the Multiplication Principle (p. 865)

Counting plays a major role in many diverse areas, such as probability, statistics, and computer science; counting techniques are a part of a branch of mathematics called combinatorics.

\section*{1 Find All the Subsets of a Set}

We begin by reviewing the ways that two sets can be compared.
If two sets \(A\) and \(B\) have precisely the same elements, we say that \(A\) and \(B\) are equal and write \(A=B\).

If each element of a set \(A\) is also an element of a set \(B\), we say that \(A\) is a subset of \(B\) and write \(A \subseteq B\).

If \(A \subseteq B\) and \(A \neq B\), we say that \(A\) is a proper subset of \(B\) and write \(A \subset B\).
If \(A \subseteq B\), every element in set \(A\) is also in set \(B\), but \(B\) may or may not have additional elements. If \(A \subset B\), every element in \(A\) is also in \(B\), and \(B\) has at least one element not found in \(A\).

Finally, we agree that the empty set, \(\varnothing\), is a subset of every set; that is,
\[
\varnothing \subseteq A \quad \text { for any set } A
\]

\section*{EXAMPLE I Finding All the Subsets of a Set}

Write down all the subsets of the set \(\{a, b, c\}\).
Solution To organize the work, write down all the subsets with no elements, then those with one element, then those with two elements, and finally those with three elements. This gives all the subsets. Do you see why?
\begin{tabular}{llll}
0 Elements & \(\mathbf{1}\) Element & 2 Elements & 3 Elements \\
\(\varnothing\) & \(\{a\},\{b\},\{c\}\) & \(\{a, b\},\{b, c\},\{a, c\}\) & \(\{a, b, c\}\)
\end{tabular}
am Now Work problem 9

\section*{2 Count the Number of Elements in a Set}

As you count the number of students in a classroom or the number of pennies in your pocket, what you are really doing is matching, on a one-to-one basis, each object to be counted with the set of counting numbers, \(1,2,3, \ldots, n\), for some number \(n\). If a set \(A\) matched up in this fashion with the set \(\{1,2, \ldots, 25\}\), you would conclude that there are 25 elements in the set \(A\). The notation \(n(A)=25\) is used to indicate that there are 25 elements in the set \(A\).

Because the empty set has no elements, we write
\[
n(\varnothing)=0
\]

If the number of elements in a set is a nonnegative integer, the set is finite. Otherwise, it is infinite. We shall concern ourselves only with finite sets.

Look again at Example 1. A set with 3 elements has \(2^{3}=8\) subsets. This result can be generalized.

If \(A\) is a set with \(n\) elements, \(A\) has \(2^{n}\) subsets.

For example, the set \(\{a, b, c, d, e\}\) has \(2^{5}=32\) subsets.

\section*{EXAMPLE 2 Analyzing Survey Data}

In a survey of 100 college students, 35 were registered in College Algebra, 52 were registered in Computer Science I, and 18 were registered in both courses.
(a) How many students were registered in College Algebra or Computer Science I?
(b) How many were registered in neither course?

Solution

Figure 1

(a) First, let \(A=\) set of students in College Algebra
\[
B=\text { set of students in Computer Science I }
\]

Then the given information tells us that
\[
n(A)=35 \quad n(B)=52 \quad n(A \cap B)=18
\]

Refer to Figure 1. Since \(n(A \cap B)=18\), the common part of the circles representing set \(A\) and set \(B\) has 18 elements. In addition, the remaining portion of the circle representing set \(A\) has \(35-18=17\) elements. Similarly, the remaining portion of the circle representing set \(B\) has \(52-18=34\) elements. This means that \(17+18+34=69\) students were registered in College Algebra or Computer Science I.
(b) Since 100 students were surveyed, it follows that \(100-69=31\) were registered in neither course.
```

Now Work problems 17 and 27

```

The solution to Example 2 contains the basis for a general counting formula. If we count the elements in each of two sets \(A\) and \(B\), we necessarily count twice any elements that are in both \(A\) and \(B\)-that is, those elements in \(A \cap B\). To count correctly the elements that are in \(A\) or \(B\)-that is, to find \(n(A \cup B)\)-subtract those in \(A \cap B\) from \(n(A)+n(B)\).

\section*{Counting Formula}

If \(A\) and \(B\) are finite sets,
\[
\begin{equation*}
n(A \cup B)=n(A)+n(B)-n(A \cap B) \tag{1}
\end{equation*}
\]

Refer to Example 2. Using (1), we have
\[
\begin{aligned}
n(A \cup B) & =n(A)+n(B)-n(A \cap B) \\
& =35+52-18 \\
& =69
\end{aligned}
\]

There are 69 students registered in College Algebra or Computer Science I.
A special case of the counting formula (1) occurs if \(A\) and \(B\) have no elements in common. In this case, \(A \cap B=\varnothing\), so \(n(A \cap B)=0\).

\section*{Addition Principle of Counting}

If two sets \(A\) and \(B\) have no elements in common, that is,
\[
\text { if } A \cap B=\varnothing \text {, then } n(A \cup B)=n(A)+n(B)
\]

Formula (2) can be generalized.

\section*{THEOREM General Addition Principle of Counting}

If, for \(n\) sets \(A_{1}, A_{2}, \ldots, A_{n}\), no two have elements in common,
\[
\begin{equation*}
n\left(A_{1} \cup A_{2} \cup \cdots \cup A_{n}\right)=n\left(A_{1}\right)+n\left(A_{2}\right)+\cdots+n\left(A_{n}\right) \tag{3}
\end{equation*}
\]

\section*{EXAMPLE 3 \\ Counting}

Table 1 lists the level of education for all United States residents 25 years of age or older in 2012.
Table 1
\begin{tabular}{|lc|}
\hline Level of Education & Number of U.S. Residents at Least 25 Years Old \\
\hline Not a high school graduate & \(25,276,000\) \\
High school graduate & \(62,113,000\) \\
Some college, but no degree & \(34,163,000\) \\
Associate's degree & \(19,737,000\) \\
Bachelor's degree & \(40,561,000\) \\
Advanced degree & \(22,730,000\) \\
\hline
\end{tabular}

Source: U.S. Census Bureau
(a) How many U.S. residents 25 years of age or older had an associate's degree or a bachelor's degree?
(b) How many U.S. residents 25 years of age or older had an associate's degree, a bachelor's degree, or an advanced degree?
Solution Let \(A\) represent the set of associate's degree holders, \(B\) represent the set of bachelor's degree holders, and \(C\) represent the set of advanced degree holders. No two of the sets \(A, B\), and \(C\) have elements in common (although the holder of an advanced degree certainly also holds a bachelor's degree, the individual would be part of the set for which the highest degree has been conferred). Then
\[
n(A)=19,737,000 \quad n(B)=40,561,000 \quad n(C)=22,730,000
\]
(a) Using formula (2),
\[
n(A \cup B)=n(A)+n(B)=19,737,000+40,561,000=60,298,000
\]

There were \(60,298,000\) U.S. residents 25 years of age or older who had an associate's degree or a bachelor's degree.
(b) Using formula (3),
\[
\begin{aligned}
n(A \cup B \cup C) & =n(A)+n(B)+n(C) \\
& =19,737,000+40,561,000+22,730,000 \\
& =83,028,000
\end{aligned}
\]

There were \(83,028,000\) U.S. residents 25 years of age or older who had an associate's degree, a bachelor's degree, or an advanced degree.

Now Work problem 31

\section*{3 Solve Counting Problems Using the Multiplication Principle}

\section*{EXAMPLE 4 Counting the Number of Possible Meals}

The fixed-price dinner at Mabenka Restaurant provides the following choices:
Appetizer: soup or salad
Entree: baked chicken, broiled beef patty, baby beef liver, or roast beef au jus
Dessert: ice cream or cheesecake
How many different meals can be ordered?

Solution Ordering such a meal requires three separate decisions:

\section*{Choose an Appetizer}

2 choices

\section*{Choose an Entree}

4 choices

\section*{Choose a Dessert}

2 choices

Look at the tree diagram in Figure 2. Note that for each choice of appetizer, there are 4 choices of entrees. And for each of these \(2 \cdot 4=8\) choices, there are 2 choices for dessert. A total of
\[
2 \cdot 4 \cdot 2=16
\]
different meals can be ordered.
Figure 2 Appetizer Entree Dessert

Example 4 demonstrates a general principle of counting.

\section*{THEOREM \\ Multiplication Principle of Counting}

If a task consists of a sequence of choices in which there are \(p\) selections for the first choice, \(q\) selections for the second choice, \(r\) selections for the third choice, and so on, the task of making these selections can be done in
\[
p \cdot q \cdot r \cdot \cdots
\]
different ways.

\section*{Forming Codes}

How many two-symbol code words can be formed if the first symbol is an uppercase letter and the second symbol is a digit?

Solution It sometimes helps to begin by listing some of the possibilities. The code consists of an uppercase letter followed by a digit, so some possibilities are \(\mathrm{A} 1, \mathrm{~A} 2, \mathrm{~B} 3, \mathrm{X} 0\), and so on. The task consists of making two selections: The first selection requires choosing an uppercase letter ( 26 choices), and the second task requires choosing a digit (10 choices). By the Multiplication Principle, there are
\[
26 \cdot 10=260
\]
different code words of the type described.

\subsection*{12.1 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. The \(\qquad\) of \(A\) and \(B\) consists of all elements in either \(A\) or \(B\) or both. (p. A2)
2. The both \(\bar{A}\) and \(B\). (p. A 2\()\)
3. True or False The intersection of two sets is always a subset of their union. (p. A2)
4. True or False If \(A\) is a set, the complement of \(A\) is the set of all the elements in the universal set that are not in \(A\) (p. A2)

\section*{Concepts and Vocabulary}
5. If each element of a set \(A\) is also an element of a set \(B\), we say that \(A\) is a \(\qquad\) of \(B\) and write \(A\) \(\qquad\) B.
6. If the number of elements in a set is a nonnegative integer, we say that the set is \(\qquad\) -
7. If \(A\) and \(B\) are finite sets, the Counting Formula states that \(n(A \cup B)=\) \(\qquad\) -.
8. True or False If a task consists of a sequence of three choices in which there are \(p\) selections for the first choice, \(q\) selections for the second choice, and \(r\) selections for the third choice, the task of making these selections can be done in \(p \cdot q \cdot r\) different ways.

\section*{Skill Building}
9. Write down all the subsets of \(\{a, b, c, d\}\).
11. If \(n(A)=15, n(B)=20\), and \(n(A \cap B)=10\), find \(n(A \cup B)\).
13. If \(n(A \cup B)=50, n(A \cap B)=10\), and \(n(B)=20\), find \(n(A)\).
10. Write down all the subsets of \(\{a, b, c, d, e\}\).
12. If \(n(A)=30, n(B)=40\), and \(n(A \cup B)=45\), find \(n(A \cap B)\).
14. If \(n(A \cup B)=60, n(A \cap B)=40\), and \(n(A)=n(B)\), find \(n(A)\).

In Problems 15-22, use the information given in the figure.
15. How many are in set \(A\) ?
16. How many are in set \(B\) ?
17. How many are in \(A\) or \(B\) ?
18. How many are in \(A\) and \(B\) ?
19. How many are in \(A\) but not \(C\) ?
20. How many are not in \(A\) ?
21. How many are in \(A\) and \(B\) and \(C\) ?
22. How many are in \(A\) or \(B\) or \(C\) ?

\section*{Applications and Extensions}
23. Shirts and Ties A man has 5 shirts and 3 ties. How many different shirt and tie arrangements can he wear?
24. Blouses and Skirts \(A\) woman has 5 blouses and 8 skirts. How many different outfits can she wear?
25. Four-digit Numbers How many four-digit numbers can be formed using the digits \(0,1,2,3,4,5,6,7,8\), and 9 if the first digit cannot be 0 ? Repeated digits are allowed.
26. Five-digit Numbers How many five-digit numbers can be formed using the digits \(0,1,2,3,4,5,6,7,8\), and 9 if the first digit cannot be 0 or 1 ? Repeated digits are allowed.
27. Analyzing Survey Data In a consumer survey of 500 people, 200 indicated that they would be buying a major appliance within the next month, 150 indicated that they would buy a car, and 25 said that they would purchase both a major appliance and a car. How many will purchase neither? How many will purchase only a car?
28. Analyzing Survey Data In a student survey, 200 indicated that they would attend Summer Session I, and 150 indicated Summer Session II. If 75 students plan to attend both summer sessions, and 275 indicated that they would attend neither session, how many students participated in the survey?
29. Analyzing Survey Data In a survey of 100 investors in the stock market, 50 owned shares in IBM 40 owned shares in AT\&T
45 owned shares in GE
20 owned shares in both IBM and GE 15 owned shares in both AT\&T and GE 20 owned shares in both IBM and AT\&T 5 owned shares in all three
(a) How many of the investors surveyed did not have shares in any of the three companies?
(b) How many owned just IBM shares?
(c) How many owned just GE shares?
(d) How many owned neither IBM nor GE?
(e) How many owned either IBM or AT\&T but no GE?
30. Classifying Blood Types Human blood is classified as either Rh+ or Rh-. Blood is also classified by type: A, if it contains an A antigen but not a B antigen; B , if it contains a \(B\) antigen but not an \(A\) antigen; \(A B\), if it contains both \(A\) and \(B\) antigens; and \(O\), if it contains neither antigen. Draw a Venn diagram illustrating the various blood types. Based on this classification, how many different kinds of blood are there?
31. Demographics The following data represent the marital status of males 18 years old and older in 2012.
\begin{tabular}{llc|} 
& & \\
\hline & Marital Status & Number (in millions) \\
\hline Married & 65.3 \\
Widowed & 2.9 \\
Divorced & 10.7 \\
Never married & 41.0 \\
\hline
\end{tabular}

Source: Current Population Survey
(a) Determine the number of males 18 years old and older who were widowed or divorced.
(b) Determine the number of males 18 years old and older who were married, widowed, or divorced.
32. Demographics The following data represent the marital status of females 18 years old and older in 2012.
\begin{tabular}{llc|} 
& & \\
\hline & Marital Status & Number (in millions) \\
\hline Married & 66.0 \\
Widowed & 11.2 \\
Divorced & 14.2 \\
Never married & 36.2 \\
\hline
\end{tabular}

Source: Current Population Survey
(a) Determine the number of females 18 years old and older who were widowed or divorced.
(b) Determine the number of females 18 years old and older who were married, widowed, or divorced.
33. Stock Portfolios As a financial planner, you are asked to select one stock each from the following groups: 8 DOW stocks, 15 NASDAQ stocks, and 4 global stocks. How many different portfolios are possible?

\section*{Explaining Concepts: Discussion and Writing}
34. Make up a problem different from any found in the text that requires the addition principle of counting to solve. Give it to a friend to solve and critique.
35. Investigate the notion of counting as it relates to infinite sets. Write an essay on your findings.

\section*{Retain Your Knowledge}

Problems 36-39 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
36. Sketch the graph of \((x-2)^{2}+(y+1)^{2}=9\).
37. Find all the real zeros of the function \(f(x)=(x-2)\left(x^{2}-3 x-10\right)\).
38. A water tower is located near a building. From a window in the building, the angle of elevation to the top of the tower is \(32^{\circ}\), and the angle of depression to the base of the tower is \(42^{\circ}\). If the tower is 250 feet high, how far is it from the building, to the nearest tenth of a foot?
39. Given the vectors \(\mathbf{v}=2 \mathbf{i}-\mathbf{j}+3 \mathbf{k}\) and \(\mathbf{w}=3 \mathbf{i}+5 \mathbf{j}-\mathbf{k}\), find \(\mathbf{v} \times \mathbf{w}\).

\section*{'Are You Prepared?' Answers}
1. union
2. intersection
3. True
4. True

\subsection*{12.2 Permutations and Combinations}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Factorial (Section 11.1, p. 822)

Now Work the 'Are You Prepared?' problems on page 874.
OBJECTIVES 1 Solve Counting Problems Using Permutations Involving \(n\) Distinct Objects (p. 869)
2 Solve Counting Problems Using Combinations (p. 871)
3 Solve Counting Problems Using Permutations Involving \(n\) Nondistinct Objects (p. 873)

\section*{1 Solve Counting Problems Using Permutations Involving \(\boldsymbol{n}\) Distinct Objects}

\section*{DEFINITION}

A permutation is an ordered arrangement of \(r\) objects chosen from \(n\) objects.

We discuss three types of permutations:
1. The \(n\) objects are distinct (different), and repetition is allowed in the selection of \(r\) of them. [Distinct, with repetition]
2. The \(n\) objects are distinct (different), and repetition is not allowed in the selection of \(r\) of them, where \(r \leq n\). [Distinct, without repetition]
3. The \(n\) objects are not distinct, and we use all of them in the arrangement. [Not distinct]

We discuss the first two types here and deal with the third type at the end of this section.

The first type of permutation ( \(n\) distinct objects, repetition allowed) is handled using the Multiplication Principle.

\section*{EXAMPLE I] Counting Airport Codes [Permutation: Distinct, with Repetition]}

The International Airline Transportation Association (IATA) assigns three-letter codes to represent airport locations. For example, the airport code for Ft. Lauderdale, Florida, is FLL. Notice that repetition is allowed in forming this code. How many airport codes are possible?
Solution An airport code is formed by choosing 3 letters from 26 letters and arranging them in order. In the ordered arrangement a letter may be repeated. This is an example of a permutation with repetition in which 3 objects are chosen from 26 distinct objects.

The task of counting the number of such arrangements consists of making three selections. Each selection requires choosing a letter of the alphabet ( 26 choices). By the Multiplication Principle, there are
\[
26 \cdot 26 \cdot 26=26^{3}=17,576
\]
possible airport codes.
The solution given to Example 1 can be generalized.

\section*{THEOREM Permutations: Distinct Objects with Repetition}

The number of ordered arrangements of \(r\) objects chosen from \(n\) distinct objects, in which repetition is allowed, is \(n^{r}\).

\section*{Now Work problem 33}

Now let's consider permutations in which the objects are distinct and repetition is not allowed.

\section*{EXAMPLE 2}

\section*{Forming Codes [Permutation: Distinct, without Repetition]}

Suppose a three-letter code is to be formed using any of the 26 uppercase letters of the alphabet, but no letter is to be used more than once. How many different threeletter codes are there?

Solution Some of the possibilities are \(\mathrm{ABC}, \mathrm{ABD}, \mathrm{ABZ}, \mathrm{ACB}, \mathrm{CBA}\), and so on. The task consists of making three selections. The first selection requires choosing from 26 letters. Since no letter can be used more than once, the second selection requires choosing from 25 letters. The third selection requires choosing from 24 letters. (Do you see why?) By the Multiplication Principle, there are
\[
26 \cdot 25 \cdot 24=15,600
\]
different three-letter codes with no letter repeated.

For the second type of permutation, we introduce the following notation.
The notation \(\boldsymbol{P}(\boldsymbol{n}, \boldsymbol{r})\) represents the number of ordered arrangements of \(r\) objects chosen from \(n\) distinct objects, where \(r \leq n\) and repetition is not allowed.

For example, the question posed in Example 2 asks for the number of ways in which the 26 letters of the alphabet can be arranged, in order, using three nonrepeated letters. The answer is
\[
P(26,3)=26 \cdot 25 \cdot 24=15,600
\]

\section*{EXAMPLE 3 Lining People Up}

In how many ways can 5 people be lined up?
Solution The 5 people are distinct. Once a person is in line, that person will not be repeated elsewhere in the line; and, in lining people up, order is important. This is a permutation of 5 distinct objects taken 5 at a time, so 5 people can be lined up in
\[
P(5,5)=\underbrace{5 \cdot 4 \cdot 3 \cdot 2 \cdot 1}_{5 \text { factors }}=120 \text { ways }
\]
amen Now Work problem 35
To arrive at a formula for \(P(n, r)\), note that the task of obtaining an ordered arrangement of \(n\) objects in which only \(r \leq n\) of them are used, without repeating any of them, requires making \(r\) selections. For the first selection, there are \(n\) choices; for the second selection, there are \(n-1\) choices; for the third selection, there are \(n-2\) choices; \(\ldots\); for the \(r\) th selection, there are \(n-(r-1)\) choices. By the Multiplication Principle, we have
\[
\begin{aligned}
P(n, r) & =n \cdot(n-1) \cdot(n-2) \cdot \cdots \cdot[n-(r-1)] \\
& =n \cdot(n-1) \cdot(n-2) \cdots \cdot(n-r+1)
\end{aligned}
\]

This formula for \(P(n, r)\) can be compactly written using factorial notation.*
\[
\begin{aligned}
P(n, r) & =n \cdot(n-1) \cdot(n-2) \cdot \cdots \cdot(n-r+1) \\
& =n \cdot(n-1) \cdot(n-2) \cdots \cdot(n-r+1) \cdot \frac{(n-r) \cdots \cdot 3 \cdot 2 \cdot 1}{(n-r) \cdots \cdots \cdot 3 \cdot 2 \cdot 1}=\frac{n!}{(n-r)!}
\end{aligned}
\]

\section*{THEOREM}

\section*{Permutations of \(r\) Objects Chosen from \(n\) Distinct Objects without Repetition}

The number of arrangements of \(n\) objects using \(r \leq n\) of them, in which
1. the \(n\) objects are distinct,
2. once an object is used it cannot be repeated, and
3. order is important,
is given by the formula
\[
P(n, r)=\frac{n!}{(n-r)!}
\]
*Recall that \(0!=1,1!=1,2!=2 \cdot 1, \ldots, n!=n(n-1) \cdot \cdots \cdot 3 \cdot 2 \cdot 1\).

\section*{EXAMPLE 4 Computing Permutations}
Evaluate:
(a) \(P(7,3)\)
(b) \(P(6,1)\)
(c) \(P(52,5)\)

\section*{Solution We work parts (a) and (b) in two ways.}
(a) \(P(7,3)=\underbrace{7 \cdot 6 \cdot 5}=210\)
\[
3 \text { factors }
\]
or
\[
P(7,3)=\frac{7!}{(7-3)!}=\frac{7!}{4!}=\frac{7 \cdot 6 \cdot 5 \cdot 4!}{4!}=210
\]
(b) \(P(6,1)=6=6\)
\[
1 \text { factor }
\]
or

Figure 3

\[
P(6,1)=\frac{6!}{(6-1)!}=\frac{6!}{5!}=\frac{6 \cdot 5!}{5!}=6
\]
(c) Figure 3 shows the solution using a TI-84 Plus graphing calculator. Thus
\[
P(52,5)=311,875,200
\]

Now Work problem 7

\section*{EXAMPLE 5 The Birthday Problem}

All we know about Shannon, Patrick, and Ryan is that they have different birthdays. If all the possible ways this could occur were listed, how many would there be? Assume that there are 365 days in a year.
Solution This is an example of a permutation in which 3 birthdays are selected from a possible 365 days, and no birthday may repeat itself. The number of ways this can occur is
\[
P(365,3)=\frac{365!}{(365-3)!}=\frac{365 \cdot 364 \cdot 363 \cdot 362!}{362!}=365 \cdot 364 \cdot 363=48,228,180
\]

There are 48,228,180 ways in which all three people can have different birthdays.
Now Work problem 47

\section*{2 Solve Counting Problems Using Combinations}

In a permutation, order is important. For example, the arrangements \(A B C, C A B\), \(B A C, \ldots\) are considered different arrangements of the letters \(A, B\), and \(C\). In many situations, though, order is unimportant. For example, in the card game of poker, the order in which the cards are received does not matter; it is the combination of the cards that matters.

A combination is an arrangement, without regard to order, of \(r\) objects selected from \(n\) distinct objects without repetition, where \(r \leq n\). The notation \(\boldsymbol{C}(\boldsymbol{n}, \boldsymbol{r})\) represents the number of combinations of \(n\) distinct objects using \(r\) of them.

\section*{EXAMPLE 6}

\section*{Listing Combinations}

List all the combinations of the 4 objects \(a, b, c, d\) taken 2 at a time. What is \(C(4,2)\) ?
Solution One combination of \(a, b, c, d\) taken 2 at a time is

Exclude \(b a\) from the list because order is not important in a combination (this means that we do not distinguish \(a b\) from \(b a\) ). The list of all combinations of \(a, b, c, d\) taken 2 at a time is
\[
a b, \quad a c, \quad a d, \quad b c, \quad b d, \quad c d
\]
so
\[
C(4,2)=6
\]

A formula for \(C(n, r)\) can be found by noting that the only difference between a permutation of type 2 (distinct, without repetition) and a combination is that order is disregarded in combinations. To determine \(C(n, r)\), eliminate from the formula for \(P(n, r)\) the number of permutations that are simply rearrangements of a given set of \(r\) objects. This can be determined from the formula for \(P(n, r)\) by calculating \(P(r, r)=r\) !. Thus, dividing \(P(n, r)\) by \(r\) ! yields the desired formula for \(C(n, r)\) :
\[
C(n, r)=\frac{P(n, r)}{r!} \underset{\uparrow}{ }=\frac{\frac{n!}{(n-r)!}}{r!}=\frac{n!}{(n-r)!r!}
\]

We have proved the following result:

The number of arrangements of \(n\) objects using \(r \leq n\) of them, in which
1. the \(n\) objects are distinct,
2. once an object is used, it cannot be repeated, and
3. order is not important,
is given by the formula
\[
\begin{equation*}
C(n, r)=\frac{n!}{(n-r)!r!} \tag{2}
\end{equation*}
\]

Based on formula (2), we discover that the symbol \(C(n, r)\) and the symbol \(\binom{n}{r}\) for the binomial coefficients are, in fact, the same. The Pascal triangle (see Section 11.5) can be used to find the value of \(C(n, r)\). However, because it is more practical and convenient, we will use formula (2) instead.

\section*{EXAMPLE 7}

\section*{Using Formula (2)}

Use formula (2) to find the value of each expression.
(a) \(C(3,1)\)
(b) \(C(6,3)\)
(c) \(C(n, n)\)
(d) \(C(n, 0)\)
(e) \(C(52,5)\)

Solution
(a) \(C(3,1)=\frac{3!}{(3-1)!1!}=\frac{3!}{2!1!}=\frac{3 \cdot 2 \cdot 1}{2 \cdot 1 \cdot 1}=3\)
(b) \(C(6,3)=\frac{6!}{(6-3)!3!}=\frac{6 \cdot 5 \cdot 4 \cdot 3!}{3!\cdot 3!}=\frac{6 \cdot 5 \cdot 4}{6}=20\)
(c) \(C(n, n)=\frac{n!}{(n-n)!n!}=\frac{n!}{0!n!}=\frac{1}{1}=1\)

Figure 4

(d) \(C(n, 0)=\frac{n!}{(n-0)!0!}=\frac{n!}{n!0!}=\frac{1}{1}=1\)
(e) Figure 4 shows the solution using a TI-84 Plus graphing calculator. So
\[
C(52,5)=2,598,960
\]
```

Now Work problem 15

```

\section*{EXAMPLE 8 Forming Committees}

How many different committees of 3 people can be formed from a pool of 7 people?
Solution The 7 people are distinct. More important, though, is the observation that the order of being selected for a committee is not significant. The problem asks for the number of combinations of 7 objects taken 3 at a time.
\[
C(7,3)=\frac{7!}{4!3!}=\frac{7 \cdot 6 \cdot 5 \cdot 4!}{4!3!}=\frac{7 \cdot 6 \cdot 5}{6}=35
\]

Thirty-five different committees can be formed.

\section*{EXAMPLE 9 Forming Committees}

In how many ways can a committee consisting of 2 faculty members and 3 students be formed if 6 faculty members and 10 students are eligible to serve on the committee?

Solution The problem can be separated into two parts: the number of ways in which the faculty members can be chosen, \(C(6,2)\), and the number of ways in which the student members can be chosen, \(C(10,3)\). By the Multiplication Principle, the committee can be formed in
\[
\begin{aligned}
C(6,2) \cdot C(10,3) & =\frac{6!}{4!2!} \cdot \frac{10!}{7!3!}=\frac{6 \cdot 5 \cdot 4!}{4!2!} \cdot \frac{10 \cdot 9 \cdot 8 \cdot 7!}{7!3!} \\
& =\frac{30}{2} \cdot \frac{720}{6}=1800 \text { ways }
\end{aligned}
\]

\section*{an Now Work problem 49}

3 Solve Counting Problems Using Permutations Involving \(\boldsymbol{n}\) Nondistinct Objects

\section*{EXAMPLE IO Forming Different Words}

How many different words (real or imaginary) can be formed using all the letters in the word REARRANGE?

Solution Each word formed will have 9 letters: 3 R's, 2 A's, 2 E's, 1 N, and 1 G. To construct each word, we need to fill in 9 positions with the 9 letters:
\[
\begin{array}{lllllllll}
\overline{1} & \overline{2} & \overline{3} & \overline{4} & \overline{5} & \overline{6} & \overline{7} & \overline{8} & \overline{9}
\end{array}
\]

The process of forming a word consists of five tasks:
Task 1: Choose the positions for the 3 R's.
Task 2: Choose the positions for the 2 A's.
Task 3: Choose the positions for the 2 E's.

Task 4: Choose the position for the 1 N .
Task 5: Choose the position for the 1 G .
Task 1 can be done in \(C(9,3)\) ways. There then remain 6 positions to be filled, so Task 2 can be done in \(C(6,2)\) ways. There remain 4 positions to be filled, so Task 3 can be done in \(C(4,2)\) ways. There remain 2 positions to be filled, so Task 4 can be done in \(C(2,1)\) ways. The last position can be filled in \(C(1,1)\) way. Using the Multiplication Principle, the number of possible words that can be formed is
\[
\begin{aligned}
C(9,3) \cdot C(6,2) \cdot C(4,2) \cdot C(2,1) \cdot C(1,1) & =\frac{9!}{3!\cdot 6!} \cdot \frac{6!}{2!\cdot 4!} \cdot \frac{4!}{2!\cdot 2!} \cdot \frac{2!}{1!\cdot 1!} \cdot \frac{1!}{0!\cdot 1!} \\
& =\frac{9!}{3!\cdot 2!\cdot 2!\cdot 1!\cdot 1!}=15,120
\end{aligned}
\]

15,120 possible words can be formed.
The form of the expression before the answer to Example 10 is suggestive of a general result. Had the letters in REARRANGE each been different, there would have been \(P(9,9)=9\) ! possible words formed. This is the numerator of the answer. The presence of 3 R's, 2 A's, and 2 E's reduces the number of different words, as the entries in the denominator illustrate. This leads to the following result:

\section*{THEOREM Permutations Involving \(\boldsymbol{n}\) Objects That Are Not Distinct}

The number of permutations of \(n\) objects of which \(n_{1}\) are of one kind, \(n_{2}\) are of a second kind, \(\ldots\), and \(n_{k}\) are of a \(k\) th kind is given by
\[
\begin{equation*}
\frac{n!}{n_{1}!\cdot n_{2}!\cdot \cdots \cdot n_{k}!} \tag{3}
\end{equation*}
\]
where \(n=n_{1}+n_{2}+\cdots+n_{k}\).

\section*{EXAMPLE II Arranging Flags}

How many different vertical arrangements are there of 8 flags if 4 are white, 3 are blue, and 1 is red?
Solution We seek the number of permutations of 8 objects, of which 4 are of one kind, 3 are of a second kind, and 1 is of a third kind. Using formula (3), we find that there are
\[
\frac{8!}{4!\cdot 3!\cdot 1!}=\frac{8 \cdot 7 \cdot 6 \cdot 5 \cdot 4!}{4!\cdot 3!\cdot 1!}=280 \text { different arrangements }
\]

32. Forming Codes How many two-letter codes can be formed using the letters \(A, B, C, D\), and \(E\) ? Repeated letters are allowed.
33. Forming Numbers How many three-digit numbers can be formed using the digits 0 and 1 ? Repeated digits are allowed.
34. Forming Numbers How many three-digit numbers can be formed using the digits \(0,1,2,3,4,5,6,7,8\), and 9 ? Repeated digits are allowed.
35. Lining People Up In how many ways can 4 people be lined up?
36. Stacking Boxes In how many ways can 5 different boxes be stacked?
37. Forming Codes How many different three-letter codes are there if only the letters \(A, B, C, D\), and \(E\) can be used and no letter can be used more than once?
38. Forming Codes How many different four-letter codes are there if only the letters \(A, B, C, D, E\), and \(F\) can be used and no letter can be used more than once?
39. Stocks on the NYSE Companies whose stocks are listed on the New York Stock Exchange (NYSE) have their company name represented by 1,2 , or 3 letters (repetition of letters is allowed). What is the maximum number of companies that can be listed on the NYSE?
40. Stocks on the NASDAQ Companies whose stocks are listed on the NASDAQ stock exchange have their company name represented by 4 or 5 letters (repetition of letters is allowed). What is the maximum number of companies that can be listed on the NASDAQ?
41. Establishing Committees In how many ways can a committee of 4 students be formed from a pool of 7 students?
42. Establishing Committees In how many ways can a committee of 3 professors be formed from a department that has 8 professors?
43. Possible Answers on a True/False Test How many arrangements of answers are possible for a true/false test with 10 questions?
44. Possible Answers on a Multiple-choice Test How many arrangements of answers are possible in a multiple-choice test with 5 questions, each of which has 4 possible answers?
45. Arranging Books Five different mathematics books are to be arranged on a student's desk. How many arrangements are possible?

46. Forming License Plate Numbers How many different license plate numbers can be made using 2 letters followed by 4 digits selected from the digits 0 through 9, if:
(a) Letters and digits may be repeated?
(b) Letters may be repeated, but digits may not?
(c) Neither letters nor digits may be repeated?
47. Birthday Problem In how many ways can 2 people each have different birthdays? Assume that there are 365 days in a year.
48. Birthday Problem In how many ways can 5 people all have different birthdays? Assume that there are 365 days in a year.
49. Forming a Committee A student dance committee is to be formed consisting of 2 boys and 3 girls. If the membership is to be chosen from 4 boys and 8 girls, how many different committees are possible?
50. Forming a Committee The student relations committee of a college consists of 2 administrators, 3 faculty members, and 5 students. Four administrators, 8 faculty members, and 20 students are eligible to serve. How many different committees are possible?
51. Forming Words How many different 9-letter words (real or imaginary) can be formed from the letters in the word ECONOMICS?
52. Forming Words How many different 11 -letter words (real or imaginary) can be formed from the letters in the word MATHEMATICS?
53. Selecting Objects An urn contains 7 white balls and 3 red balls. Three balls are selected. In how many ways can the 3 balls be drawn from the total of 10 balls:
(a) If 2 balls are white and 1 is red?
(b) If all 3 balls are white?
(c) If all 3 balls are red?
54. Selecting Objects An urn contains 15 red balls and 10 white balls. Five balls are selected. In how many ways can the 5 balls be drawn from the total of 25 balls:
(a) If all 5 balls are red?
(b) If 3 balls are red and 2 are white?
(c) If at least 4 are red balls?
55. Senate Committees The U.S. Senate has 100 members. Suppose that it is desired to place each senator on exactly 1 of 7 possible committees. The first committee has 22 members, the second has 13 , the third has 10 , the fourth has 5 , the fifth has 16 , and the sixth and seventh have 17 apiece. In how many ways can these committees be formed?
56. Football Teams A defensive football squad consists of 25 players. Of these, 10 are linemen, 10 are linebackers, and 5 are safeties. How many different teams of 5 linemen, 3 linebackers, and 3 safeties can be formed?

57. Baseball In the American Baseball League, a designated hitter may be used to hit in place of the pitcher. How many batting orders are possible? (There are 9 regular players on a team.)
58. Baseball In the National Baseball League, the pitcher usually bats ninth. If this is the case, how many batting orders is it possible for a manager to use?
59. Baseball Teams A baseball team has 15 members. Four of the players are pitchers, and the remaining 11 members can play any position. How many different teams of 9 players can be formed?
60. World Series In the World Series the American League team \((A)\) and the National League team \((N)\) play until one team wins four games. If the sequence of winners is designated by letters (for example, \(N A A A A\) means that the National League team won the first game and the American League won the next four), how many different sequences are possible?
61. Basketball Teams A basketball team has 6 players who play guard ( 2 of 5 starting positions). How many different teams are possible, assuming that the remaining 3 positions are filled and it is not possible to distinguish a left guard from a right guard?
62. Basketball Teams On a basketball team of 12 players, 2 play only center, 3 play only guard, and the rest play forward ( 5 players on a team: 2 forwards, 2 guards, and 1 center). How many different teams are possible, assuming that it is not possible to distinguish left and right guards and left and right forwards?
63. Combination Locks A combination lock displays 50 numbers. To open it, you turn clockwise to a number, then rotate counterclockwise to the second number, and then rotate clockwise to the third number.
(a) How many different lock combinations are there?
(b) Comment on the description of such a lock as a combination lock.

2. False

\subsection*{12.3 Probability}

OBJECTIVES 1 Construct Probability Models (p. 877)
2 Compute Probabilities of Equally Likely Outcomes (p. 879)
3 Find Probabilities of the Union of Two Events (p. 881)
4 Use the Complement Rule to Find Probabilities (p. 882)

Probability is an area of mathematics that deals with experiments that yield random results, yet admit a certain regularity. Such experiments do not always produce the same result or outcome, so the result of any one observation is not predictable. However, the results of the experiment over a long period do produce regular patterns that enable us to make predictions with remarkable accuracy.

\section*{EXAMPLE I Tossing a Fair Coin}

In tossing a fair coin, the outcome is either a head or a tail. On any particular throw, we cannot predict what will happen, but if we toss the coin many times, we observe that the number of times that a head comes up is approximately equal to the number of times that a tail comes up. It seems reasonable, therefore, to assign a probability of \(\frac{1}{2}\) that a head comes up and a probability of \(\frac{1}{2}\) that a tail comes up.

\section*{1 Construct Probability Models}

The discussion in Example 1 constitutes the construction of a probability model for the experiment of tossing a fair coin once. A probability model has two components: a sample space and an assignment of probabilities. A sample space \(S\) is a set whose elements represent all the possibilities that can occur as a result of the experiment. Each element of \(S\) is called an outcome. To each outcome, a number is assigned, called the probability of that outcome, which has two properties:
1. The probability assigned to each outcome is nonnegative.
2. The sum of all the probabilities equals 1 .

A probability model with the sample space
\[
S=\left\{e_{1}, e_{2}, \ldots, e_{n}\right\}
\]
where \(e_{1}, e_{2}, \ldots, e_{n}\) are the possible outcomes and \(P\left(e_{1}\right), P\left(e_{2}\right), \ldots, P\left(e_{n}\right)\) are the respective probabilities of these outcomes, requires that
\[
\begin{equation*}
P\left(e_{1}\right) \geq 0, P\left(e_{2}\right) \geq 0, \ldots, P\left(e_{n}\right) \geq 0 \tag{1}
\end{equation*}
\]
\[
\begin{equation*}
\sum_{i=1}^{n} P\left(e_{i}\right)=P\left(e_{1}\right)+P\left(e_{2}\right)+\cdots+P\left(e_{n}\right)=1 \tag{2}
\end{equation*}
\]

\section*{EXAMPLE 2}

\section*{Determining Probability Models}

In a bag of \(\mathrm{M} \& \mathrm{Ms},^{\mathrm{TM}}\) the candies are colored red, green, blue, brown, yellow, and orange. A candy is drawn from the bag and the color is recorded. The sample space of this experiment is \(\{\) red, green, blue, brown, yellow, orange \(\}\). Determine which of the following are probability models.
(a)
\begin{tabular}{|lc|}
\hline Outcome & Probability \\
\hline red & 0.3 \\
green & 0.15 \\
blue & 0 \\
brown & 0.15 \\
yellow & 0.2 \\
orange & 0.2 \\
\hline
\end{tabular}
(c)
\begin{tabular}{|lc|}
\hline Outcome & Probability \\
\hline red & 0.3 \\
green & -0.3 \\
blue & 0.2 \\
brown & 0.4 \\
yellow & 0.2 \\
orange & 0.2 \\
\hline
\end{tabular}
(b)
\begin{tabular}{|lc|}
\hline Outcome & Probability \\
\hline red & 0.1 \\
green & 0.1 \\
blue & 0.1 \\
brown & 0.4 \\
yellow & 0.2 \\
orange & 0.3 \\
\hline
\end{tabular}
(d)
\begin{tabular}{|lc|}
\hline Outcome & Probability \\
\hline red & 0 \\
green & 0 \\
blue & 0 \\
brown & 0 \\
yellow & 1 \\
orange & 0 \\
\hline
\end{tabular}

Solution (a) This model is a probability model because all the outcomes have probabilities that are nonnegative, and the sum of the probabilities is 1.
(b) This model is not a probability model because the sum of the probabilities is not 1.
(c) This model is not a probability model because \(P\) (green) is less than 0 . Remember that all probabilities must be nonnegative.
(d) This model is a probability model because all the outcomes have probabilities that are nonnegative, and the sum of the probabilities is 1 . Notice that \(P(\) yellow \()=1\), meaning that this outcome will occur with \(100 \%\) certainty each time that the experiment is repeated. This means that the bag of \(\mathrm{M} \& \mathrm{Ms}^{\mathrm{TM}}\) contains only yellow candies.
am Now Work problem 7

\section*{EXAMPLE 3 Constructing a Probability Model}

An experiment consists of rolling a fair die once. A die is a cube with each face having \(1,2,3,4,5\), or 6 dots on it. See Figure 5 . Construct a probability model for this experiment.

\section*{Solution}

Figure 5

A sample space \(S\) consists of all the possibilities that can occur. Because rolling the die results in one of six faces showing, the sample space \(S\) consists of
\[
S=\{1,2,3,4,5,6\}
\]

Because the die is fair, one face is no more likely to occur than another. As a result, our assignment of probabilities is
\[
\begin{array}{ll}
P(1)=\frac{1}{6} & P(2)=\frac{1}{6} \\
P(3)=\frac{1}{6} & P(4)=\frac{1}{6} \\
P(5)=\frac{1}{6} & P(6)=\frac{1}{6}
\end{array}
\]

Now suppose that a die is loaded (weighted) so that the probability assignments are
\[
P(1)=0 \quad P(2)=0 \quad P(3)=\frac{1}{3} \quad P(4)=\frac{2}{3} \quad P(5)=0 \quad P(6)=0
\]

This assignment would be made if the die were loaded so that only a 3 or 4 could occur and the 4 were twice as likely as the 3 to occur. This assignment is consistent with the definition, since each assignment is nonnegative, and the sum of all the probability assignments equals 1 .

Wn Now Work problem 23

\section*{EXAMPLE 4}

\section*{Solution}

\section*{In Words}
\(P(S)=1\) means that one of the outcomes in the sample space must occur in an experiment.

\section*{Constructing a Probability Model}

An experiment consists of tossing a coin. The coin is weighted so that heads (H) is three times as likely to occur as tails (T). Construct a probability model for this experiment.
The sample space \(S\) is \(S=\{\mathrm{H}, \mathrm{T}\}\). If \(x\) denotes the probability that a tail occurs,
\[
P(T)=x \quad \text { and } \quad P(H)=3 x
\]

Since the sum of the probabilities of the possible outcomes must equal 1 , we have
\[
\begin{aligned}
P(T)+P(H)=x+3 x & =1 \\
4 x & =1 \\
x & =\frac{1}{4}
\end{aligned}
\]

Assign the probabilities
\[
P(T)=\frac{1}{4} \quad P(H)=\frac{3}{4}
\]

\section*{Now Work problem 27}

In working with probability models, the term event is used to describe a set of possible outcomes of the experiment. An event \(E\) is some subset of the sample space \(S\). The probability of an event \(E, E \neq \varnothing\), denoted by \(P(E)\), is defined as the sum of the probabilities of the outcomes in \(E\). We can also think of the probability of an event \(E\) as the likelihood that the event \(E\) occurs. If \(E=\varnothing\), then \(P(E)=0\); if \(E=S\), then \(P(E)=P(S)=1\).

\section*{2 Compute Probabilities of Equally Likely Outcomes}

When the same probability is assigned to each outcome of the sample space, the experiment is said to have equally likely outcomes.

\section*{Probability for Equally Likely Outcomes}

If an experiment has \(n\) equally likely outcomes, and if the number of ways in which an event \(E\) can occur is \(m\), then the probability of \(E\) is
\[
\begin{equation*}
P(E)=\frac{\text { Number of ways that } E \text { can occur }}{\text { Number of possible outcomes }}=\frac{m}{n} \tag{3}
\end{equation*}
\]

If \(S\) is the sample space of this experiment,
\[
\begin{equation*}
P(E)=\frac{n(E)}{n(S)} \tag{4}
\end{equation*}
\]

\section*{EXAMPLE 5}

\section*{Calculating Probabilities of Events Involving Equally Likely Outcomes}

Calculate the probability that in a 3 -child family there are 2 boys and 1 girl. Assume equally likely outcomes.

\section*{Solution}

Figure 6

Begin by constructing a tree diagram to help in listing the possible outcomes of the experiment. See Figure 6, where B stands for boy and G for girl. The sample space \(S\) of this experiment is
\[
S=\{\mathrm{BBB}, \mathrm{BBG}, \mathrm{BGB}, \mathrm{BGG}, \mathrm{GBB}, \mathrm{GBG}, \mathrm{GGB}, \mathrm{GGG}\}
\]
so \(n(S)=8\).
We wish to know the probability of the event \(E\) :"having two boys and one girl." From Figure 6, we conclude that \(E=\{\mathrm{BBG}, \mathrm{BGB}, \mathrm{GBB}\}\), so \(n(E)=3\). Since the outcomes are equally likely, the probability of \(E\) is
\[
P(E)=\frac{n(E)}{n(S)}=\frac{3}{8}
\]

\section*{am Now Work problem 37}

So far, we have calculated probabilities of single events. Now we compute probabilities of multiple events, which are called compound probabilities.

\section*{EXAMPLE 6}

\section*{Computing Compound Probabilities}

Consider the experiment of rolling a single fair die. Let \(E\) represent the event "roll an odd number," and let \(F\) represent the event "roll a 1 or 2 ."
(a) Write the event \(E\) and \(F\). What is \(n(E \cap F)\) ?
(b) Write the event \(E\) or \(F\). What is \(n(E \cup F)\) ?
(c) Compute \(P(E)\). Compute \(P(F)\).
(d) Compute \(P(E \cap F)\).
(e) Compute \(P(E \cup F)\).

Solution The sample space \(S\) of the experiment is \(\{1,2,3,4,5,6\}\), so \(n(S)=6\). Since the die is fair, the outcomes are equally likely. The event \(E\) : "roll an odd number" is \(\{1,3,5\}\), and the event \(F\) : "roll a 1 or 2 " is \(\{1,2\}\), so \(n(E)=3\) and \(n(F)=2\).
(a) In probability, the word and means the intersection of two events. The event \(E\) and \(F\) is written
\[
E \cap F=\{1,3,5\} \cap\{1,2\}=\{1\} \quad n(E \cap F)=1
\]
(b) In probability, the word or means the union of the two events. The event \(E\) or \(F\) is written
\[
E \cup F=\{1,3,5\} \cup\{1,2\}=\{1,2,3,5\} \quad n(E \cup F)=4
\]
(c) Use formula (4). Then
\[
P(E)=\frac{n(E)}{n(S)}=\frac{3}{6}=\frac{1}{2} \quad P(F)=\frac{n(F)}{n(S)}=\frac{2}{6}=\frac{1}{3}
\]
(d) \(P(E \cap F)=\frac{n(E \cap F)}{n(S)}=\frac{1}{6}\)
(e) \(P(E \cup F)=\frac{n(E \cup F)}{n(S)}=\frac{4}{6}=\frac{2}{3}\)

\section*{3 Find Probabilities of the Union of Two Events}

The next formula can be used to find the probability of the union of two events.

THEOREM
For any two events \(E\) and \(F\),
\[
\begin{equation*}
P(E \cup F)=P(E)+P(F)-P(E \cap F) \tag{5}
\end{equation*}
\]

This result is a consequence of the Counting Formula discussed earlier in Section 12.1.

For example, formula (5) can be used to find \(P(E \cup F)\) in Example 6(e). Then \(P(E \cup F)=P(E)+P(F)-P(E \cap F)=\frac{1}{2}+\frac{1}{3}-\frac{1}{6}=\frac{3}{6}+\frac{2}{6}-\frac{1}{6}=\frac{4}{6}=\frac{2}{3}\) as before.

\section*{EXAMPLE 7}

Solution

\section*{Computing Probabilities of the Union of Two Events}

If \(P(E)=0.2, P(F)=0.3\), and \(P(E \cap F)=0.1\), find the probability of \(E\) or \(F\). That is, find \(P(E \cup F)\).

Use formula (5).
\[
\text { Probability of } \begin{aligned}
E \text { or } F=P(E \cup F) & =P(E)+P(F)-P(E \cap F) \\
& =0.2+0.3-0.1=0.4
\end{aligned}
\]

A Venn diagram can sometimes be used to obtain probabilities. To construct a Venn diagram representing the information in Example 7, draw two sets \(E\) and \(F\). Begin with the fact that \(P(E \cap F)=0.1\). See Figure 7(a).Then, since \(P(E)=0.2\) and \(P(F)=0.3\), fill in \(E\) with \(0.2-0.1=0.1\) and \(F\) with \(0.3-0.1=0.2\). See Figure 7(b). Since \(P(S)=1\), complete the diagram by inserting \(1-(0.1+0.1+0.2)=0.6\) outside the circles. See Figure 7(c). Now it is easy to see, for example, that the probability of \(F\), but not \(E\), is 0.2 . Also, the probability of neither \(E\) nor \(F\) is 0.6 .

Figure 7

(a)

(b)

(c)

\section*{Now Work problem 45}

If events \(E\) and \(F\) are disjoint so that \(E \cap F=\varnothing\), we say they are mutually exclusive. In this case, \(P(E \cap F)=0\), and formula (5) takes the following form:

\section*{THEOREM}

\section*{Mutually Exclusive Events}

If \(E\) and \(F\) are mutually exclusive events,
\[
P(E \cup F)=P(E)+P(F)
\]

\section*{EXAMPLE 8 Computing Probabilities of the Union of Two Mutually} Exclusive Events

If \(P(E)=0.4\) and \(P(F)=0.25\), and \(E\) and \(F\) are mutually exclusive, find \(P(E \cup F)\).

Solution Since \(E\) and \(F\) are mutually exclusive, use formula (6).
\[
P(E \cup F)=P(E)+P(F)=0.4+0.25=0.65
\]

Now Work problem 47

\section*{4 Use the Complement Rule to Find Probabilities}

Recall that if \(A\) is a set, the complement of \(A\), denoted \(\bar{A}\), is the set of all elements in the universal set \(U\) that are not in \(A\). We similarly define the complement of an event.

\section*{Complement of an Event}

Let \(S\) denote the sample space of an experiment, and let \(E\) denote an event.
The complement of \(\boldsymbol{E}\), denoted \(\bar{E}\), is the set of all outcomes in the sample space \(S\) that are not outcomes in the event \(E\).

The complement of an event \(E\)-that is, \(\bar{E}\)-in a sample space \(S\) has the following two properties:
\[
E \cap \bar{E}=\varnothing \quad E \cup \bar{E}=S
\]

Since \(E\) and \(\bar{E}\) are mutually exclusive, it follows from (6) that
\[
P(E \cup \bar{E})=P(S)=1 \quad P(E)+P(\bar{E})=1 \quad P(\bar{E})=1-P(E)
\]

We have the following result:

\section*{THEOREM Computing Probabilities of Complementary Events}

If \(E\) represents any event and \(\bar{E}\) represents the complement of \(E\), then
\[
\begin{equation*}
P(\bar{E})=1-P(E) \tag{7}
\end{equation*}
\]

\section*{EXAMPLE 9 Computing Probabilities Using Complements}

On the local news the weather reporter stated that the probability of rain tomorrow is \(40 \%\). What is the probability that it will not rain?
Solution The complement of the event "rain" is "no rain."
\[
P(\text { no rain })=1-P(\text { rain })=1-0.4=0.6
\]

There is a \(60 \%\) chance of no rain tomorrow.
am Now Work problem 51

\section*{EXAMPLE IO Birthday Problem}

What is the probability that in a group of 10 people, at least 2 people have the same birthday? Assume that there are 365 days in a year.

Solution Assume that a person is as likely to be born on one day as another, so the outcomes are equally likely.

First determine the number of outcomes in the sample space \(S\). There are 365 possibilities for each person's birthday. Since there are 10 people in the group, there are \(365^{10}\) possibilities for the birthdays. [For one person in the group, there are 365 days on which his or her birthday can fall; for two people, there are (365) (365) \(=365^{2}\) pairs of days; and, in general, using the Multiplication Principle, for \(n\) people there are \(365^{n}\) possibilities.] So
\[
n(S)=365^{10}
\]

We wish to find the probability of the event \(E\) : "at least two people have the same birthday." It is difficult to count the elements in this set; it is much easier to count the elements of the complementary event \(\bar{E}\) : "no two people have the same birthday."

Find \(n(\bar{E})\) as follows: Choose one person at random. There are 365 possibilities for his or her birthday. Choose a second person. There are 364 possibilities for this birthday, if no two people are to have the same birthday. Choose a third person. There are 363 possibilities left for this birthday. Finally, arrive at the tenth person. There are 356 possibilities left for this birthday. By the Multiplication Principle, the total number of possibilities is
\[
n(\bar{E})=365 \cdot 364 \cdot 363 \cdot \cdots \cdot 356
\]

The probability of the event \(\bar{E}\) is
\[
P(\bar{E})=\frac{n(\bar{E})}{n(S)}=\frac{365 \cdot 364 \cdot 363 \cdot \cdots \cdot 356}{365^{10}} \approx 0.883
\]

The probability of two or more people in a group of 10 people having the same birthday is then
\[
P(E)=1-P(\bar{E}) \approx 1-0.883=0.117
\]

The birthday problem can be solved for any group size. The following table gives the probabilities for two or more people having the same birthday for various group sizes. Notice that the probability is greater than \(\frac{1}{2}\) for any group of 23 or more people.
\begin{tabular}{|c|c|c|c|c|c|c|c|c|c|c|c|c|c|c|c|c|}
\hline \multicolumn{17}{|c|}{Number of People} \\
\hline & 5 & 10 & 15 & 20 & 21 & 22 & 23 & 24 & 25 & 30 & 40 & 50 & 60 & 70 & 80 & 90 \\
\hline \begin{tabular}{l}
Probability \\
That Two or More Have the Same Birthday
\end{tabular} & 0.027 & 0.117 & 0.253 & 0.411 & 0.444 & 0.476 & 0.507 & 0.538 & 0.569 & 0.706 & 0.891 & 0.970 & 0.994 & 0.99916 & 0.99991 & 0.99999 \\
\hline
\end{tabular}

\section*{Historical Feature}

Blaise Pascal (1623-1662)

Set theory, counting, and probability first took form as a systematic theory in an exchange of letters (1654) between Pierre de Fermat (1601-1665) and Blaise Pascal (16231662). They discussed the problem of how to divide the stakes in a game that is interrupted before completion, knowing how many points each player needs to win. Fermat solved the problem by listing all possibilities and counting the favorable ones, whereas Pascal made use of the triangle that now bears his name. As mentioned in the text, the entries in Pascal's triangle
are equivalent to \(C(n, r)\). This recognition of the role of \(C(n, r)\) in counting is the foundation of all further developments.

The first book on probability, the work of Christiaan Huygens (16291695), appeared in 1657. In it, the notion of mathematical expectation is explored. This allows the calculation of the profit or loss that a gambler might expect, knowing the probabilities involved in the game (see the Historical Problem that follows).

Although Girolamo Cardano (1501-1576) wrote a treatise on probability, it was not published until 1663 in Cardano's collected works, and this was too late to have had any effect on the early development of the theory.
(continued)

\section*{(continued)}

In 1713, the posthumously published Ars Conjectandi of Jakob Bernoulli (1654-1705) gave the theory the form it would have until 1900. Recently, both combinatorics (counting) and probability have undergone rapid development thanks to the use of computers.

A final comment about notation. The notations \(C(n, r)\) and \(P(n, r)\) are variants of a form of notation developed in England after 1830. The notation \(\binom{n}{r}\) for \(C(n, r)\) goes back to Leonhard Euler (1707-1783)

\section*{Historical Problem}
1. The Problem Discussed by Fermat and Pascal A game between two equally skilled players, \(A\) and \(B\), is interrupted when \(A\) needs 2 points to win and \(B\) needs 3 points. In what proportion should the stakes be divided?
(a) Fermat's solution List all possible outcomes that can occur as a result of four more plays. Determine the probability of each player winning. The probabilities for \(A\) to win and \(B\) to win then determine how the stakes should be divided.
but is now losing ground because it has no clearly related symbolism of the same type for permutations. The set symbols \(U\) and \(\cap\) were introduced by Giuseppe Peano (1858-1932) in 1888 in a slightly different context. The inclusion symbol \(\subset\) was introduced by E . Schroeder (1841-1902) about 1890. We owe the treatment of set theory in this text to George Boole (1815-1864), who wrote \(A+B\) for \(A \cup B\) and \(A B\) for \(A \cap B\) (statisticians still use \(A B\) for \(A \cap B\) ).
(b) Pascal's solution Use combinations to determine the number of ways that the 2 points needed for \(A\) to win could occur in four plays. Then use combinations to determine the number of ways that the 3 points needed for \(B\) to win could occur. This is trickier than it looks, since \(A\) can win with 2 points in two plays, in three plays, or in four plays. Compute the probabilities and compare with the results in part (a).

\subsection*{12.3 Assess Your Understanding}

\section*{Concepts and Vocabulary}
1. When the same probability is assigned to each outcome of a sample space, the experiment is said to have outcomes.
2. The \(\qquad\) of an event \(E\) is the set of all outcomes in the sample space \(S\) that are not outcomes in the event \(E\).
3. True or False The probability of an event can never equal 0.
4. True or False In a probability model, the sum of all probabilities is 1 .

\section*{Skill Building}
5. In a probability model, which of the following numbers could be the probability of an outcome?
\[
\begin{array}{llllll}
0 & 0.01 & 0.35 & -0.4 & 1 & 1.4
\end{array}
\]
7. Determine whether the following is a probability model.
\begin{tabular}{|lc|}
\hline Outcome & Probability \\
\hline 1 & 0.2 \\
2 & 0.3 \\
3 & 0.1 \\
4 & 0.4 \\
\hline
\end{tabular}
9. Determine whether the following is a probability model.
\begin{tabular}{|lc|}
\hline Outcome & Probability \\
\hline Linda & 0.3 \\
Jean & 0.2 \\
Grant & 0.1 \\
Jim & 0.3 \\
\hline
\end{tabular}
6. In a probability model, which of the following numbers could be the probability of an outcome?
\[
1.5 \quad \frac{1}{2} \quad \frac{3}{4} \quad \frac{2}{3} \quad 0 \quad-\frac{1}{4}
\]
8. Determine whether the following is a probability model.
\begin{tabular}{|lc|}
\hline Outcome & Probability \\
\hline Steve & 0.4 \\
Bob & 0.3 \\
Faye & 0.1 \\
Patricia & 0.2 \\
\hline
\end{tabular}
10. Determine whether the following is a probability model.
\begin{tabular}{|lc|}
\hline Outcome & Probability \\
\hline Erica & 0.3 \\
Joanne & 0.2 \\
Laura & 0.1 \\
Donna & 0.5 \\
Angela & -0.1 \\
\hline
\end{tabular}

In Problems 11-16, construct a probability model for each experiment.
11. Tossing a fair coin twice
12. Tossing two fair coins once
13. Tossing two fair coins, then a fair die
14. Tossing a fair coin, a fair die, and then a fair coin
15. Tossing three fair coins once
16. Tossing one fair coin three times

In Problems 17-22, use the following spinners to construct a probability model for each experiment.

Spinner I (4 equal areas)

Spinner II
(3 equal areas)

Spinner III (2 equal areas)
17. Spin spinner I, then spinner II. What is the probability of getting a 2 or a 4 , followed by Red?
18. Spin spinner III, then spinner II. What is the probability of getting Forward, followed by Yellow or Green?
19. Spin spinner I, then II, then III. What is the probability of getting a 1, followed by Red or Green, followed by Backward?
20. Spin spinner II, then I, then III. What is the probability of getting Yellow, followed by a 2 or a 4 , followed by Forward?
21. Spin spinner I twice, then spinner II. What is the probability of getting a 2 , followed by a 2 or a 4 , followed by Red or Green?
22. Spin spinner III, then spinner I twice. What is the probability of getting Forward, followed by a 1 or a 3 , followed by a 2 or a 4?
In Problems 23-26, consider the experiment of tossing a coin twice. The table lists six possible assignments of probabilities for this experiment. Using this table, answer the following questions.
\begin{tabular}{|lcccc|}
\hline & \multicolumn{4}{c|}{ Sample Space } \\
\cline { 2 - 5 } Assignment & HH & HT & TH & TT \\
\hline A & \(\frac{1}{4}\) & \(\frac{1}{4}\) & \(\frac{1}{4}\) & \(\frac{1}{4}\) \\
B & 0 & 0 & 0 & 1 \\
C & \(\frac{3}{16}\) & \(\frac{5}{16}\) & \(\frac{5}{16}\) & \(\frac{3}{16}\) \\
D & \(\frac{1}{2}\) & \(\frac{1}{2}\) & \(-\frac{1}{2}\) & \(\frac{1}{2}\) \\
E & \(\frac{1}{4}\) & \(\frac{1}{4}\) & \(\frac{1}{4}\) & \(\frac{1}{8}\) \\
F & \(\frac{1}{9}\) & \(\frac{2}{9}\) & \(\frac{2}{9}\) & \(\frac{4}{9}\) \\
\hline
\end{tabular}
23. Which of the assignments of probabilities is(are) consistent with the definition of a probability model?
24. Which of the assignments of probabilities should be used if the coin is known to be fair?
25. Which of the assignments of probabilities should be used if the coin is known to always come up tails?
26. Which of the assignments of probabilities should be used if tails is twice as likely as heads to occur?
27. Assigning Probabilities A coin is weighted so that heads is four times as likely as tails to occur. What probability should be assigned to heads? to tails?
28. Assigning Probabilities A coin is weighted so that tails is twice as likely as heads to occur. What probability should be assigned to heads? to tails?
29. Assigning Probabilities \(A\) die is weighted so that an odd-numbered face is twice as likely to occur as an evennumbered face. What probability should be assigned to each face?
30. Assigning Probabilities A die is weighted so that a six cannot appear. The other faces occur with the same probability. What probability should be assigned to each face?

For Problems 31-34, the sample space is \(S=\{1,2,3,4,5,6\), \(7,8,9,10\}\). Suppose that the outcomes are equally likely.
31. Compute the probability of the event \(E=\{1,2,3\}\).
32. Compute the probability of the event \(F=\{3,5,9,10\}\).
33. Compute the probability of the event \(E\) : "an even number."
34. Compute the probability of the event \(F\) : "an odd number."

For Problems 35 and 36, an urn contains 5 white marbles, 10 green marbles, 8 yellow marbles, and 7 black marbles.
35. If one marble is selected, determine the probability that it is white.
36. If one marble is selected, determine the probability that it is black.

\section*{In Problems 37-40, assume equally likely outcomes.}
37. Determine the probability of having 3 boys in a 3-child family.
38. Determine the probability of having 3 girls in a 3-child family.
39. Determine the probability of having 1 girl and 3 boys in a 4-child family.
40. Determine the probability of having 2 girls and 2 boys in a 4-child family.

For Problems 41-44, two fair dice are rolled.
41. Determine the probability that the sum of the two dice is 7 .
42. Determine the probability that the sum of the two dice is 11 .
43. Determine the probability that the sum of the two dice is 3 .
44. Determine the probability that the sum of the two dice is 12 .

In Problems 45-48, find the probability of the indicated event if \(P(A)=0.25\) and \(P(B)=0.45\).
45. \(P(A \cup B)\) if \(P(A \cap B)=0.15\)
46. \(P(A \cap B)\) if \(P(A \cup B)=0.6\)
47. \(P(A \cup B)\) if \(A, B\) are mutually exclusive
48. \(P(A \cap B)\) if \(A, B\) are mutually exclusive
49. If \(P(A)=0.60, P(A \cup B)=0.85\), and \(P(A \cap B)=0.05\), find \(P(B)\).
50. If \(P(B)=0.30, P(A \cup B)=0.65\), and \(P(A \cap B)=0.15\), find \(P(A)\).
51. Automobile Theft According to the Insurance Information Institute, there is a \(12 \%\) probability that an automobile theft in the United States will be cleared by arrests. If an automobile theft case is randomly selected, what is the probability that it is not cleared by an arrest?
52. Pet Ownership According to the American Pet Products Manufacturers Association, there is a \(62 \%\) probability that a U.S. household owns a pet. If a U.S. household is randomly selected, what is the probability that it does not own a pet?
53. Cat Ownership According to the American Pet Products Manufacturers Association, there is a \(33 \%\) probability that a U.S. pet owner owns a cat. If a U.S. pet owner is randomly selected, what is the probability that he or she does not own a cat?
54. Doctorate Degrees According to the U.S. National Center for Education Statistics, in 2011 there was a 16.3 \% probability that a doctoral degree awarded at a U.S. university was awarded in engineering. If a 2011 U.S. doctoral recipient is randomly selected, what is the probability that his or her degree was not in engineering?
55. Online Gambling According to a Casino FYI survey, 6.4\% of U.S. adults admitted to having spent money gambling online. If a U.S. adult is selected at random, what is the probability that he or she has never spent any money gambling online?
56. Girl Scout Cookies According to the Girl Scouts of America, \(9 \%\) of all Girl Scout cookies sold are Shortbread/Trefoils. If a box of Girl Scout cookies is selected at random, what is the probability that it is not Shortbread/Trefoils?

For Problems 57-60, a golf ball is selected at random from a container. If the container has 9 white balls, 8 green balls, and 3 orange balls, find the probability of each event.
57. The golf ball is white or green.
58. The golf ball is white or orange.
59. The golf ball is not white.
60. The golf ball is not green.
61. On The Price is Right, there is a game in which a bag is filled with 3 strike chips and 5 numbers. Let's say that the numbers in the bag are \(0,1,3,6\), and 9 . What is the probability of selecting a strike chip or the number 1 ?
62. Another game on The Price is Right requires the contestant to spin a wheel with numbers \(5,10,15,20, \ldots, 100\). What is the probability that the contestant spins 100 or 30 ?

Problems 63-66 are based on a consumer survey of annual incomes in 100 households. The following table gives the data.
\begin{tabular}{|lccccc|}
\hline Income & \(\$ 0-9999\) & \(\$ 10,000-19,999\) & \(\$ 20,000-29,999\) & \(\$ 30,000-39,999\) & \(\$ 40,000\) or more \\
\hline \begin{tabular}{l} 
Number of \\
households
\end{tabular} & 5 & 35 & 30 & & \\
\hline
\end{tabular}
63. What is the probability that a household has an annual income of \(\$ 30,000\) or more?
64. What is the probability that a household has an annual income between \(\$ 10,000\) and \(\$ 29,999\), inclusive?
65. What is the probability that a household has an annual income of less than \(\$ 20,000\) ?
66. What is the probability that a household has an annual income of \(\$ 20,000\) or more?
67. Surveys In a survey about the number of TV sets in a house, the following probability table was constructed:
\begin{tabular}{|l|ccccc|}
\hline \begin{tabular}{l} 
Number \\
of TV sets
\end{tabular} & 0 & 1 & 2 & 3 & 4 or more \\
\hline Probability & 0.05 & 0.24 & 0.33 & 0.21 & 0.17 \\
\hline
\end{tabular}

Find the probability of a house having:
(a) 1 or 2 TV sets
(b) 1 or more TV sets
(c) 3 or fewer TV sets
(d) 3 or more TV sets
(e) Fewer than 2 TV sets
(f) Fewer than 1 TV set
(g) 1,2 , or 3 TV sets
(h) 2 or more TV sets
68. Checkout Lines Through observation, it has been determined that the probability for a given number of people waiting in line at the " 5 items or less" checkout register of a supermarket is as follows:
\begin{tabular}{|l|ccccc|}
\hline \begin{tabular}{l} 
Number \\
waiting in line
\end{tabular} & 0 & 1 & 2 & 3 & 4 or more \\
\hline Probability & 0.10 & 0.15 & 0.20 & 0.24 & 0.31 \\
\hline
\end{tabular}

Find the probability of:
(a) At most 2 people in line
(b) At least 2 people in line
(c) At least 1 person in line
69. In a certain Precalculus class, there are 18 freshmen and 15 sophomores. Of the 18 freshmen, 10 are male, and of the 15 sophomores, 8 are male. Find the probability that a randomly selected student is:
(a) A freshman or female
(b) A sophomore or male
70. The faculty of the mathematics department at Joliet Junior College is composed of 4 females and 9 males. Of the 4 females, 2 are under age 40, and of the 9 males, 3 are under age 40 . Find the probability that a randomly selected faculty member is:
(a) Female or under age 40
(b) Male or over age 40
71. Birthday Problem What is the probability that at least 2 people in a group of 12 people have the same birthday? Assume that there are 365 days in a year.
72. Birthday Problem What is the probability that at least 2 people in a group of 35 people have the same birthday? Assume that there are 365 days in a year.
73. Winning a Lottery In a certain lottery, there are ten balls numbered \(1,2,3,4,5,6,7,8,9,10\). Of these, five are drawn in order. If you pick five numbers that match those drawn in the correct order, you win \(\$ 1,000,000\). What is the probability of winning such a lottery?

\section*{Retain Your Knowledge}

Problems 74-77 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
74. To sketch the graph of \(g(x)=|x+2|-3\), move the graph of \(f(x)=|x|\) \(\qquad\) units \(\qquad\) and then \(\qquad\) units \(\qquad\) .
75. Find the rectangular coordinates of the point whose polar coordinates are \(\left(6, \frac{2 \pi}{3}\right)\).
76. Solve: \(\log _{5}(x+3)=2\)
77. Solve the given system using matrices.
\[
\left\{\begin{aligned}
3 x+y+2 z & =1 \\
2 x-2 y+5 z & =5 \\
x+3 y+2 z & =-9
\end{aligned}\right.
\]

\section*{Chapter Review}

\section*{Things to Know}

\section*{Counting formula (p. 864)}

Addition Principle of Counting (p. 864)
Multiplication Principle of Counting (p. 866)

\section*{Permutation (p. 869)}

Number of permutations: Distinct, with repetition (p. 869)

Number of permutations: Distinct, without repetition (p. 870)

\section*{Combinations (p. 871)}

\section*{Number of combinations (p. 872)}

\section*{Number of permutations: Not distinct (p. 874)}

\section*{Sample space (p. 877)}

\section*{Probability (p. 877)}

\section*{Probability for equally likely outcomes (p.879)}

Probability of the union of two events (p. 881)
Probability of the complement of an event (p. 882)
\(n(A \cup B)=n(A)+n(B)-n(A \cap B)\)
If \(A \cap B=\varnothing\), then \(n(A \cup B)=n(A)+n(B)\).
If a task consists of a sequence of choices in which there are \(p\) selections for the first choice, \(q\) selections for the second choice, and so on, the task of making these selections can be done in \(p \cdot q \cdot \cdots\) different ways.
An ordered arrangement of \(r\) objects chosen from \(n\) objects.
\(n^{r}\); The \(n\) objects are distinct (different), and repetition is allowed in the selection of \(r\) of them.
\(P(n, r)=n(n-1) \cdot \cdots \cdot[n-(r-1)]=\frac{n!}{(n-r)!}\)
The \(n\) objects are distinct (different), and repetition is not allowed in the selection of \(r\) of them, where \(r \leq n\).
An arrangement, without regard to order, of \(r\) objects selected from \(n\) distinct objects, where \(r \leq n\)
\(C(n, r)=\frac{P(n, r)}{r!}=\frac{n!}{(n-r)!r!}\)
\(\frac{n!}{n_{1}!n_{2}!\cdots n_{k}!}\)
The number of permutations of \(n\) objects of which \(n_{1}\) are of one kind, \(n_{2}\) are of a second kind, ..., and \(n_{k}\) are of a \(k\) th kind, where \(n=n_{1}+n_{2}+\cdots+n_{k}\)
Set whose elements represent the possible outcomes that can occur as a result of an experiment
A nonnegative number assigned to each outcome of a sample space; the sum of all the probabilities of the outcomes equals 1.
\(P(E)=\frac{n(E)}{n(S)}\); The same probability is assigned to each outcome.
\(P(E \cup F)=P(E)+P(F)-P(E \cap F)\)
\(P(\bar{E})=1-P(E)\)

\section*{Objectives}

\section*{Section}

You should be able to ...
Example(s)
\(12.1 \quad 1\) Find all the subsets of a set (p. 863)
2 Count the number of elements in a set (p. 863)
3 Solve counting problems using the Multiplication Principle (p. 865)
12.2 \(\quad 1\) Solve counting problems using permutations involving \(n\) distinct objects (p. 869)
2 Solve counting problems using combinations (p. 871)
3 Solve counting problems using permutations involving \(n\) nondistinct objects (p. 873)
\(12.3 \quad 1\) Construct probability models (p. 877)
2-4 22(b)
2 Compute probabilities of equally likely outcomes (p. 879)
5,6
22(b), 23(a), 24, 25
3 Find probabilities of the union of two events (p. 881)
7, 8
9, 10
4 Use the Complement Rule to find probabilities (p. 882)
22(c), 23(b)

\section*{Review Exercises}
1. Write down all the subsets of the set \(\{\) Dave, Joanne, Erica \(\}\).
2. If \(n(A)=8, n(B)=12\), and \(n(A \cap B)=3\), find \(n(A \cup B)\).
3. If \(n(A)=12, n(A \cup B)=30\), and \(n(A \cap B)=6\), find \(n(B)\).

In Problems 4-9, use the information supplied in the figure.
4. How many are in \(A\) ?
5. How many are in \(A\) or \(B\) ?
6. How many are in \(A\) and \(C\) ?
7. How many are not in \(B\) ?
8. How many are in neither \(A\) nor \(C\) ?
9. How many are in \(B\) but not in \(C\) ?

In Problems 10 and 11, compute the given expression.
10. \(P(8,3)\)
11. \(C(8,3)\)
12. Stocking a Store A clothing store sells pure wool and polyester-wool suits. Each suit comes in 3 colors and 10 sizes. How many suits are required for a complete assortment?
13. Baseball On a given day, the American Baseball League schedules 7 games. How many different outcomes are possible, assuming that each game is played to completion?
14. Choosing Seats If 4 people enter a bus having 9 vacant seats, in how many ways can they be seated?
15. Choosing a Team In how many ways can a squad of 4 relay runners be chosen from a track team of 8 runners?
16. Baseball In how many ways can 2 teams from 14 teams in the American League be chosen without regard to which team is at home?
17. Telephone Numbers Using the digits \(0,1,2, \ldots, 9\), how many 7-digit numbers can be formed if the first digit cannot be 0 or 9 and if the last digit is greater than or equal to 2 and less than or equal to 3? Repeated digits are allowed.
18. License Plate Possibilities A license plate consists of 1 letter, excluding O and I , followed by a 4-digit number that
cannot have a 0 in the lead position. How many different plates are possible?
19. Binary Codes Using the digits 0 and 1 , how many different numbers consisting of 8 digits can be formed?
20. Arranging Flags How many different vertical arrangements are there of 10 flags if 4 are white, 3 are blue, 2 are green, and 1 is red?
21. Forming Committees A group of 9 people is going to be formed into committees of 4,3 , and 2 people. How many committees can be formed if:
(a) A person can serve on any number of committees?
(b) No person can serve on more than one committee?
22. Birthday Problem For this problem, assume that a year has 365 days.
(a) In how many ways can 18 people have different birthdays?
(b) What is the probability that no 2 people in a group of 18 people have the same birthday?
(c) What is the probability that at least 2 people in a group of 18 people have the same birthday?
23. Unemployment According to the U.S. Bureau of Labor Statistics, \(8.1 \%\) of the U.S. labor force was unemployed in 2012.
(a) What is the probability that a randomly selected member of the U.S. labor force was unemployed in 2012?
(b) What is the probability that a randomly selected member of the U.S. labor force was not unemployed in 2012?
24. You have four \(\$ 1\) bills, three \(\$ 5\) bills, and two \(\$ 10\) bills in your wallet. If you pick a bill at random, what is the probability that it will be a \(\$ 1\) bill?
25. Each of the numbers, \(1,2, \ldots, 100\) is written on an index card, and the cards are shuffled. If a card is selected at
random, what is the probability that the number on the card is divisible by 5 ? What is the probability that the card selected either is a 1 or names a prime number?
26. At the Milex tune-up and brake repair shop, the manager has found that a car will require a tune-up with a probability of 0.6 , a brake job with a probability of 0.1 , and both with a probability of 0.02 .
(a) What is the probability that a car requires either a tuneup or a brake job?
(b) What is the probability that a car requires a tune-up but not a brake job?
(c) What is the probability that a car requires neither a tune-up nor a brake job?

\section*{Chapter Test} Chapter Test Prep Videos include step-by-step solutions to all chapter test exercises and can be found in Mymathlabll or on this text's You Tube" Channel (search "SullivanPrecalcUC3e").

In Problems 1-4, a survey of 70 college freshmen asked whether students planned to take biology, chemistry, or physics during their first year. Use the diagram to answer each question.

1. How many of the surveyed students plan to take physics during their first year?
2. How many of the surveyed students do not plan to take biology, chemistry, or physics during their first year?
3. How many of the surveyed students plan to take only biology and chemistry during their first year?
4. How many of the surveyed students plan to take physics or chemistry during their first year?

In Problems 5-7, compute the value of the given expression.
5. 7!
6. \(P(10,6)\)
7. \(C(11,5)\)
8. \(\mathbf{M \& M ' s}{ }^{\circledR}\) offers customers the opportunity to create their own color mix of candy. There are 21 colors to choose from, and customers are allowed to select up to 6 different colors. How many different color mixes are possible, assuming that no color is selected more than once and 6 different colors are chosen?
9. How many distinct 8 -letter words (real or imaginary) can be formed from the letters in the word REDEEMED?
10. In horse racing, an exacta bet requires the bettor to pick the first two horses in the exact order. If there are 8 horses in a race, in how many ways could you make an exacta bet?
11. On February 20, 2004, the Ohio Bureau of Motor Vehicles unveiled the state's new license plate format. The plate consists of three letters (A-Z) followed by 4 digits (0-9). Assume that all letters and digits may be used, except that the third letter cannot be O, I, or Z. If repetitions are allowed, how many different plates are possible?
12. Kiersten applies for admission to the University of Southern California (USC) and Florida State University (FSU). She estimates that she has a \(60 \%\) chance of being admitted to USC, a \(70 \%\) chance of being admitted to FSU, and a \(35 \%\) chance of being admitted to both universities.
(a) What is the probability that she will be admitted to either USC or FSU?
(b) What is the probability that she will not be admitted to FSU?
13. A cooler contains 8 bottles of Pepsi, 5 bottles of Coke, 4 bottles of Mountain Dew, and 3 bottles of IBC.
(a) What is the probability that a bottle chosen at random is Coke?
(b) What is the probability that a bottle chosen at random is either Pepsi or IBC?
14. A study on the age distribution of students at a community college gave the following table:
\begin{tabular}{|l|cccccc|}
\hline Age & 17 and under & \(18-20\) & \(21-24\) & \(25-34\) & \(35-64\) & 65 and over \\
\hline Probability & 0.03 & \(? ? ?\) & 0.23 & 0.29 & 0.25 & 0.01 \\
\hline
\end{tabular}

What must be the probability that a randomly selected student at the college is between 18 and 20 years old?
15. Powerball is a multistate lottery in which 5 white balls from a drum with 53 balls and 1 red ball from a drum with 42 red balls are selected. For a \(\$ 1\) ticket, players get one chance at winning the jackpot by matching all 6 numbers. \({ }^{\dagger}\) What is the probability of selecting the winning numbers on a \(\$ 1\) play if the order of the white balls does not matter?
16. If you roll a die five times, what is the probability that you obtain exactly 2 fours?

\footnotetext{
\({ }^{\dagger}\) In January 2012, the Powerball format changed to 59 white balls and 35 red balls, and the price per product was increased to \(\$ 2\).
}

\section*{Cumulative Review}
1. Solve: \(3 x^{2}-2 x=-1\)
2. Graph \(f(x)=x^{2}+4 x-5\) by determining whether the graph opens up or down and by finding the vertex, axis of symmetry, and intercepts.
3. Graph \(f(x)=2(x+1)^{2}-4\) using transformations.
4. Solve: \(|x-4| \leq 0.01\)
5. Find the complex zeros of
\[
f(x)=5 x^{4}-9 x^{3}-7 x^{2}-31 x-6
\]
6. Graph \(g(x)=3^{x-1}+5\) using transformations. Determine the domain, the range, and the horizontal asymptote of \(g\).
7. What is the exact value of \(\log _{3} 9\) ?
8. Solve: \(\log _{2}(3 x-2)+\log _{2} x=4\)
9. Solve the system: \(\left\{\begin{aligned} x-2 y+z & =15 \\ 3 x+y-3 z & =-8 \\ -2 x+4 y-z & =-27\end{aligned}\right.\)
10. What is the 33 rd term in the sequence \(-3,1,5,9, \ldots\) ? What is the sum of the first 20 terms?
11. Graph: \(y=3 \sin (2 x+\pi)\)
12. Solve the following triangle and determine its area.

13. In January 2012, the format of the Powerball lottery game changed so that 5 white balls are drawn from a drum with 59 white balls, and 1 red ball is drawn from a drum with 35 red balls. For a \(\$ 2\) ticket, players get one chance at winning the jackpot by matching all 6 numbers. What is the probability of winning the jackpot if the order of the white balls does not matter? Compare this to the result from Problem 15 in the Chapter Test.

\section*{Chapter Projects}

I. The Monty Hall Game The Monty Hall Game, based on a segment from the game show Let's Make a Deal, is a classic probability problem that continues to stir debate. A more recent game show, Deal or No Deal (see the chapter-opening vignette) has often been compared to the classic Monty Hall Game.
1. Research the Monty Hall Game and Deal or No Deal.
2. In the Monty Hall Game, what is the probability that a contestant wins if she does not switch? What is the probability that she wins if she does switch? Perform a simulation to estimate the probabilities. Do the values agree with your research?
3. Suppose the game Deal or No Deal is played with only three suitcases. Explain why this game is not the same as the Monty Hall Game.
4. Suppose the game Deal or No Deal is played with 26 suitcases and the contestant is not allowed to switch at the end. What is the probability that the contestant will win the grand prize?
5. Suppose the game Deal or No Deal is played with 26 suitcases and the contestant is allowed to switch at the end. Perform a simulation to estimate the probability that the contestant will win the grand prize if he does not switch at the end.
6. Repeat Problem 5, but assume that the contestant will always switch at the end.

The following projects are available at the Instructor's Resource Center (IRC).
II. Project at Motorola: Probability of Error in Digital Wireless Communications Transmission errors in digital communications can often be detected by adding an extra digit of code to each transmitted signal. Investigate the probability of identifying an erroneous code using this simple coding method.
III. Surveys Polling (or taking a survey) is big business in the United States. Take and analyze a survey; then consider why different pollsters might get different results.
IV. Law of Large Numbers The probability that an event occurs (say, a head in a coin toss), is the proportion of heads you expect in the long run. A simulation is used to show that as a coin is flipped more and more times, the proportion of heads gets ever closer to 0.5 .
V. Simulation Electronic simulation of an experiment is often an economical way to investigate a theoretical probability. Develop a theory without leaving your desk.

\title{
A Preview of Calculus: The Limit, Derivative, and Integral of a Function
}

Thomas Malthus on Population Growth
In the late 1700 s, the British economist Thomas Malthus presented a report that criticized those who thought that life was going to continue to improve for humans. Malthus put his report together quickly and titled it An Essay on the Principle of Population as it Affects the Future Improvement of Society, with Remarks on the Speculations of Mr. Godwin, M. Condorcet, and Other Writers.

Malthus argued that because the human population tends to increase geometrically ( \(1,2,4,16\), and so on) and that food supplies will likely only increase arithmetically ( \(1,2,3,4\), and so on), populations will naturally be held in check due to food shortages. Malthus also suggested that there are other checks on population growth (and he considered these natural and a good thing). Nonetheless, he was concerned that poverty is inevitable and will continue.

Malthus' used historical data to suggest that population growth has been doubling every twenty-five years in the United States (still in the early stages of development back in the late 18th Century). Malthus surmised that the youth of the country along with the vast amount of areas conducive to farming would lead to a birth rate that exceeded
 most countries in the world.

Malthus believed there are two "checks" that control the population growth. One type is called a preventative checks-these are checks that decrease the birth rate. The second type are called positive checks - these are checks that increase the death rate. Positive checks include war, famine, and natural disasters. Malthus believed that fear of famine was a major reason the birth rate may decrease. After all, who would want to have a child knowing the child may suffer from hunger, or worse, starvation?

> -See Chapter Project I-

\section*{<A Look Back}

In this text we have studied a variety of functions: polynomial functions (including linear and quadratic functions), rational functions, exponential and logarithmic functions, trigonometric functions, and the inverse trigonometric functions. For each of these, we found their domain and range, intercepts, symmetry, if any, and asymptotes, if any, and we graphed each. We also discussed whether these functions were even, odd, or neither and determined on what intervals they were increasing and decreasing. We also discussed the idea of their average rate of change.

\section*{A Look Ahead>}

In calculus, other properties are discussed, such as finding limits of functions, determining where functions are continuous, finding the derivative of functions, and finding the integral of functions. In this chapter, we give an introduction to these properties. After you have completed this chapter, you will be well prepared for a first course in calculus.

\subsection*{13.1 Finding Limits Using Tables and Graphs}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Piecewise-defined Functions (Section 1.4, pp. 83-85)

Now Work the 'Are You Prepared?' problems on page 895.
OBJECTIVES 1 Find a Limit Using a Table (p. 892)
2 Find a Limit Using a Graph (p. 894)

The idea of the limit of a function is what connects algebra and geometry to the mathematics of calculus. In working with the limit of a function, we encounter notation of the form
\[
\lim _{x \rightarrow c} f(x)=N
\]

This is read as "the limit of \(f(x)\) as \(x\) approaches \(c\) equals the number \(N\)." Here \(f\) is a function defined on some open interval containing the number \(c ; f\) need not be defined at \(c\), however.

We may describe the meaning of \(\lim _{x \rightarrow c} f(x)=N\) as follows:

For all \(x\) approximately equal to \(c\), with \(x \neq c\), the corresponding value of \(f(x)\) is approximately equal to \(N\).

Another description of \(\lim _{x \rightarrow c} f(x)=N\) is

As \(x\) gets closer to \(c\), but remains unequal to \(c\), the corresponding value of \(f(x)\) gets closer to \(N\).

\section*{1 Find a Limit Using a Table}

Tables generated with the help of a calculator are useful for finding limits.

\section*{EXAMPLE I Finding a Limit Using a Table}

Find: \(\lim _{x \rightarrow 3}\left(5 x^{2}\right)\)
Solution Here \(f(x)=5 x^{2}\) and \(c=3\). Choose a value for \(x\) close to 3 , such as 2.99 . Then select additional numbers that get closer to 3 but remain less than 3 . Next choose values of \(x\) greater than 3 , such as 3.01 , that get closer to 3. Finally, evaluate \(f\) at each choice to obtain Table 1.

Table 1
\begin{tabular}{|l|cccccccc|}
\hline \(\boldsymbol{x}\) & 2.99 & 2.999 & 2.9999 & \(\rightarrow\) & \(\leftarrow\) & 3.0001 & 3.001 & 3.01 \\
\(\boldsymbol{f}(\boldsymbol{x})=\mathbf{5} \boldsymbol{x}^{\mathbf{2}}\) & 44.701 & 44.97 & 44.997 & \(\rightarrow\) & \(\leftarrow\) & 45.003 & 45.03 & 45.301 \\
\hline
\end{tabular}

From Table 1, as \(x\) gets closer to 3, the value of \(f(x)=5 x^{2}\) appears to get closer to 45 . That is,
\[
\lim _{x \rightarrow 3}\left(5 x^{2}\right)=45
\]

\section*{Table 2}

When choosing the values of \(x\) in a table, the number to start with and the subsequent entries are arbitrary. However, the entries should be chosen so that the table makes it clear what the corresponding values of \(f\) are getting close to.

COMMENT A graphing utility with a TABLE feature can be used to generate the entries. Table 2 shows the result using a TI-84 Plus graphing calculator.

\section*{Now Work problem 7}

\section*{EXAMPLE 2 \\ Finding a Limit Using a Table}

Find: \(\begin{array}{ll}\text { (a) } \lim _{x \rightarrow 2} \frac{x^{2}-4}{x-2} & \text { (b) } \lim _{x \rightarrow 2}(x+2)\end{array}\)
Solution

Table 3
(a) Here \(f(x)=\frac{x^{2}-4}{x-2}\) and \(c=2\). Notice that the domain of \(f\) is \(\{x \mid x \neq 2\}\), so \(f\) is not defined at 2 . Proceed to choose values of \(x\) close to 2 and evaluate \(f\) at each choice, as shown in Table 3.
\begin{tabular}{|l|llllllll|}
\hline \(\boldsymbol{x}\) \\
\(\boldsymbol{f}(\boldsymbol{x})=\frac{\boldsymbol{x}^{2}-\mathbf{4}}{\boldsymbol{x}-\mathbf{2}}\) & 3.99 & 3.999 & 3.9999 & \(\rightarrow\) & \(\leftarrow\) & 4.0001 & 4.001 & 4.01 \\
\hline
\end{tabular}

Infer that as \(x\) gets closer to 2, the value of \(f(x)=\frac{x^{2}-4}{x-2}\) gets closer to 4. That is,
\[
\lim _{x \rightarrow 2} \frac{x^{2}-4}{x-2}=4
\]
(b) Here \(g(x)=x+2\) and \(c=2\). The domain of \(g\) is all real numbers. See Table 4 .

\section*{Table 4}
\begin{tabular}{|l|llllllll|}
\hline \(\boldsymbol{x}\) & 1.99 & 1.999 & 1.9999 & \(\rightarrow\) & \(\leftarrow\) & 2.0001 & 2.001 & 2.01 \\
\(\boldsymbol{g}(\boldsymbol{x})=\boldsymbol{x}+\mathbf{2}\) & 3.99 & 3.999 & 3.9999 & \(\rightarrow\) & \(\leftarrow\) & 4.0001 & 4.001 & 4.01 \\
\hline
\end{tabular}

We infer that as \(x\) gets closer to 2 , the value of \(g(x)\) gets closer to 4. That is,
\[
\lim _{x \rightarrow 2}(x+2)=4
\]

Check: Use a graphing utility with a TABLE feature to verify the results obtained in Example 2.

The conclusion that \(\lim _{x \rightarrow 2}(x+2)=4\) could have been obtained without the use of Table 4 ; as \(x\) gets closer to 2 , it follows that \(x+2\) will get closer to \(2+2=4\).

Also, for part (a), you are right if you make the observation that for \(x \neq 2\),
\[
f(x)=\frac{x^{2}-4}{x-2}=\frac{(x-2)(x+2)}{x-2}=x+2 \quad x \neq 2
\]

Therefore,
\[
\lim _{x \rightarrow 2} \frac{x^{2}-4}{x-2}=\lim _{x \rightarrow 2}(x+2)=4
\]

Let's look at an example for which the factoring technique used above does not work.

\section*{EXAMPLE 3 Finding a Limit Using a Table}

Find: \(\lim _{x \rightarrow 0} \frac{\sin x}{x}\)
Solution First, observe that the domain of the function \(f(x)=\frac{\sin x}{x}\) is \(\{x \mid x \neq 0\}\). Create Table 5 , where \(x\) is measured in radians.

\section*{Table 5}
\begin{tabular}{|l|llllllll|}
\hline \(\boldsymbol{x}\) (radians) & -0.03 & -0.02 & -0.01 & \(\rightarrow\) & \(\leftarrow\) & 0.01 & 0.02 & 0.03 \\
\(\boldsymbol{f}(\boldsymbol{x})=\frac{\boldsymbol{\operatorname { s i n } \boldsymbol { x }}}{\boldsymbol{x}}\) & 0.99985 & 0.99993 & 0.99998 & \(\rightarrow\) & \(\leftarrow\) & 0.99998 & 0.99993 & 0.99985 \\
\hline
\end{tabular}

From Table 5, it appears that \(\lim _{x \rightarrow 0} \frac{\sin x}{x}=1\).
Check: Use a graphing utility with a TABLE feature to verify the results obtained in Example 3.

\section*{2 Find a Limit Using a Graph}

The graph of a function \(f\) can also be of help in finding limits. See Figure 1. In each graph, notice that as \(x\) gets closer to \(c\), the value of \(f\) gets closer to the number \(N\). We conclude that
\[
\lim _{x \rightarrow c} f(x)=N
\]

This is the conclusion regardless of the value of \(f\) at \(c\). In Figure \(1(\mathrm{a}), f(c)=N\), and in Figure \(1(\mathrm{~b}), f(c) \neq N\). Figure \(1(\mathrm{c})\) illustrates that \(\lim _{x \rightarrow c} f(x)=N\), even if \(f\) is not defined at \(c\).

Figure 1

(a)

\(f(c) \neq N ; \lim _{x \rightarrow C} f(x)=N\)
(b)

\(f(c)\) not defined; \(\lim _{x \rightarrow c} f(x)=N\)
(c)

\section*{EXAMPLE 4 Finding a Limit by Graphing}

Figure 2

Find: \(\lim _{x \rightarrow 2} f(x)\) if \(f(x)= \begin{cases}3 x-2 & \text { if } x \neq 2 \\ 3 & \text { if } x=2\end{cases}\)

The function \(f\) is a piecewise-defined function. Its graph is shown in Figure 2. We conclude from the graph that \(\lim _{x \rightarrow 2} f(x)=4\).

Notice in Example 4 that the value of \(f\) at 2 - that is, \(f(2)=3\)-plays no role in the conclusion that \(\lim _{x \rightarrow 2} f(x)=4\). In fact, even if \(f\) were undefined at 2 , it would still be the case that \(\lim _{x \rightarrow 2} \underset{x \rightarrow 2}{ } f(x)=4\).
amenow Work problem 23

Sometimes there is no single number that the values of \(f\) get closer to as \(x\) gets closer to \(c\). In this case, we say that \(\boldsymbol{f}\) has no limit as \(\boldsymbol{x}\) approaches \(\boldsymbol{c}\) or that \(\lim _{x \rightarrow c} f(x)\) does not exist.

\section*{EXAMPLE 5 A Function That Has No Limit at 0}

Find: \(\quad \lim _{x \rightarrow 0} f(x)\) if \(f(x)= \begin{cases}x & \text { if } x \leq 0 \\ 1 & \text { if } x>0\end{cases}\)

Figure 3

Solution See Figure 3. As \(x\) gets closer to 0 but remains negative, the value of \(f\) also gets closer to 0 . As \(x\) gets closer to 0 but remains positive, the value of \(f\) always equals 1 . Since there is no single number that the values of \(f\) are close to when \(x\) is close to 0 , we conclude that \(\lim _{x \rightarrow 0} f(x)\) does not exist.

\section*{Now Work problems 17 and 37}

\section*{EXAMPLE 6}

\section*{Solution Table 6 shows the solution, from which we conclude that}

Using a Graphing Utility to Find a Limit
Find: \(\lim _{x \rightarrow 2} \frac{x^{3}-2 x^{2}+4 x-8}{x^{4}-2 x^{3}+x-2}\)
\[
\lim _{x \rightarrow 2} \frac{x^{3}-2 x^{2}+4 x-8}{x^{4}-2 x^{3}+x-2}=0.889
\]
rounded to three decimal places.

\section*{Table 6}

Now Work problem 43

In the next section, we will see how algebra can be used to obtain exact limits of functions like the one in Example 6.

\subsection*{13.1 Assess Your Understanding}
"Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. Graph \(f(x)=\left\{\begin{array}{ll}3 x-2 & \text { if } x \neq 2 \\ 3 & \text { if } x=2\end{array}(\right.\) pp. 83-85)
2. If \(f(x)=\left\{\begin{array}{ll}x & \text { if } x \leq 0 \\ 1 & \text { if } x>0\end{array}\right.\) what is \(f(0)\) ? (pp. 83-85)

\section*{Concepts and Vocabulary}
3. The limit of a function \(f(x)\) as \(x\) approaches \(c\) is denoted by the symbol \(\qquad\) .
4. If a function \(f\) has no limit as \(x\) approaches \(c\), then we say that \(\lim _{x \rightarrow c} f(x)\) \(\qquad\) .
5. True or False \(\lim _{x \rightarrow c} f(x)=N\) may be described by saying that the value of \(\underset{\substack{x \rightarrow c}}{ }(x)\) gets closer to \(N\) as \(x\) gets closer to \(c\) but remains unequal to \(c\).
6. True or False \(\lim _{x \rightarrow c} f(x)\) exists and equals some number for any function \(f\) as long as \(c\) is in the domain of \(f\).

\section*{Skill Building}

In Problems 7-16, use a table to find the indicated limit.
7. \(\lim _{x \rightarrow 2}\left(4 x^{3}\right)\)
8. \(\lim _{x \rightarrow 3}\left(2 x^{2}+1\right)\)
9. \(\lim _{x \rightarrow 0} \frac{x+1}{x^{2}+1}\)
10. \(\lim _{x \rightarrow 0} \frac{2-x}{x^{2}+4}\)
11. \(\lim _{x \rightarrow 4} \frac{x^{2}-4 x}{x-4}\)
12. \(\lim _{x \rightarrow 3} \frac{x^{2}-9}{x^{2}-3 x}\)
13. \(\lim _{x \rightarrow 0}\left(e^{x}+1\right)\)
14. \(\lim _{x \rightarrow 0} \frac{e^{x}-e^{-x}}{2}\)
15. \(\lim _{x \rightarrow 0} \frac{\cos x-1}{x}, x\) in radians
16. \(\lim _{x \rightarrow 0} \frac{\tan x}{x}, x\) in radians

In Problems 17-22, use the graph shown to determine whether the limit exists. If it does, find its value.
17. \(\lim _{x \rightarrow 2} f(x)\)

18. \(\lim _{x \rightarrow 4} f(x)\)

21. \(\lim _{x \rightarrow 3} f(x)\)

19. \(\lim _{x \rightarrow 2} f(x)\)

22. \(\lim _{x \rightarrow 4} f(x)\)

In Problems 23-42, graph each function. Use the graph to find the indicated limit, if it exists.
23. \(\lim _{x \rightarrow 4} f(x), \quad f(x)=3 x+1\)
24. \(\lim _{x \rightarrow-1} f(x), f(x)=2 x-1\)
25. \(\lim _{x \rightarrow 2} f(x), \quad f(x)=1-x^{2}\)
26. \(\lim _{x \rightarrow-1} f(x), \quad f(x)=x^{3}-1\)
27. \(\lim _{x \rightarrow-3} f(x), \quad f(x)=|2 x|\)
28. \(\lim _{x \rightarrow 4} f(x), \quad f(x)=3 \sqrt{x}\)
29. \(\lim _{x \rightarrow \pi / 2} f(x), \quad f(x)=\sin x\)
30. \(\lim _{x \rightarrow \pi} f(x), f(x)=\cos x\)
31. \(\lim _{x \rightarrow 0} f(x), \quad f(x)=e^{x}\)
32. \(\lim _{x \rightarrow 1} f(x), \quad f(x)=\ln x\)
33. \(\lim _{x \rightarrow-1} f(x), \quad f(x)=\frac{1}{x}\)
34. \(\lim _{x \rightarrow 2} f(x), \quad f(x)=\frac{1}{x^{2}}\)
35. \(\lim _{x \rightarrow 0} f(x), \quad f(x)= \begin{cases}x^{2} & \text { if } x \geq 0 \\ 2 x & \text { if } x<0\end{cases}\)
36. \(\lim _{x \rightarrow 0} f(x), \quad f(x)= \begin{cases}x-1 & \text { if } x<0 \\ 3 x-1 & \text { if } x \geq 0\end{cases}\)
37. \(\lim _{x \rightarrow 1} f(x), \quad f(x)= \begin{cases}3 x & \text { if } x \leq 1 \\ x+1 & \text { if } x>1\end{cases}\)
38. \(\lim _{x \rightarrow 2} f(x), \quad f(x)= \begin{cases}x^{2} & \text { if } x \leq 2 \\ 2 x-1 & \text { if } x>2\end{cases}\)
39. \(\lim _{x \rightarrow 0} f(x), \quad f(x)= \begin{cases}x & \text { if } x<0 \\ 1 & \text { if } x=0 \\ 3 x & \text { if } x>0\end{cases}\)
40. \(\lim _{x \rightarrow 0} f(x), \quad f(x)=\left\{\begin{aligned} 1 & \text { if } x<0 \\ -1 & \text { if } x>0\end{aligned}\right.\)
41. \(\lim _{x \rightarrow 0} f(x), \quad f(x)= \begin{cases}\sin x & \text { if } x \leq 0 \\ x^{2} & \text { if } x>0\end{cases}\)
42. \(\lim _{x \rightarrow 0} f(x), \quad f(x)= \begin{cases}e^{x} & \text { if } x>0 \\ 1-x & \text { if } x \leq 0\end{cases}\)

In Problems 43-48, use a graphing utility to find the indicated limit rounded to two decimal places.
43. \(\lim _{x \rightarrow 1} \frac{x^{3}-x^{2}+x-1}{x^{4}-x^{3}+2 x-2}\)
44. \(\lim _{x \rightarrow-1} \frac{x^{3}+x^{2}+3 x+3}{x^{4}+x^{3}+2 x+2}\)
45. \(\lim _{x \rightarrow 2} \frac{x^{3}-2 x^{2}+4 x-8}{x^{2}+x-6}\)
46. \(\lim _{x \rightarrow 1} \frac{x^{3}-x^{2}+3 x-3}{x^{2}+3 x-4}\)
47. \(\lim _{x \rightarrow-1} \frac{x^{3}+2 x^{2}+x}{x^{4}+x^{3}+2 x+2}\)
48. \(\lim _{x \rightarrow 3} \frac{x^{3}-3 x^{2}+4 x-12}{x^{4}-3 x^{3}+x-3}\)

\section*{Retain Your Knowledge}

Problems 49-52 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
49. Let \(A(2,-3)\) and \(B(6,-11)\) be points in a plane. Find the distance between the points and the midpoint of the line segment connecting the points.
50. Find the center, foci, and vertices of the ellipse \(\frac{(x-2)^{2}}{9}+\frac{(y+1)^{2}}{13}=1\).
51. Logan invests \(\$ 4000\) at an annual interest rate of \(6 \%\). How much money will she have after 10 years if interest is compounded continuously?
52. Assuming \(r>0\) and \(0 \leq \theta<2 \pi\), find the polar coordinates of the point whose rectangular coordinates are \((-2,2 \sqrt{ } 3)\).

\section*{'Are You Prepared?' Answers}
1. See Figure 2 on page 894.
2. \(f(0)=0\)

\subsection*{13.2 Algebra Techniques for Finding Limits}

OBJECTIVES 1 Find the Limit of a Sum, a Difference, and a Product (p. 898)
2 Find the Limit of a Polynomial (p. 899)
3 Find the Limit of a Power or a Root (p.900)
4 Find the Limit of a Quotient (p. 901)
5 Find the Limit of an Average Rate of Change (p.902)

\section*{THEOREM}

\section*{In Words}

The limit of a constant is the constant.

\section*{In Words}

The limit of \(x\) as \(x\) approaches \(c\) is \(c\).

We mentioned in the previous section that algebra can sometimes be used to find the exact value of a limit. This is accomplished by developing two formulas involving limits and several properties of limits.

\section*{Two Formulas: \(\lim _{x \rightarrow c} b\) and \(\lim _{x \rightarrow c} x\)}

Limit of a Constant
For the constant function \(f(x)=b\),
\[
\begin{equation*}
\lim _{x \rightarrow c} f(x)=\lim _{x \rightarrow c} b=b \tag{1}
\end{equation*}
\]
where \(c\) is any number.

\section*{Limit of \(x\)}

For the identity function \(f(x)=x\),
\[
\begin{equation*}
\lim _{x \rightarrow c} f(x)=\lim _{x \rightarrow c} x=c \tag{2}
\end{equation*}
\]
where \(c\) is any number.
We use graphs to establish formulas (1) and (2). Since the graph of a constant function is a horizontal line, it follows that, no matter how close \(x\) is to \(c\), the corresponding value of \(f(x)\) equals \(b\). That is, \(\lim _{x \rightarrow c} b=b\). See Figure 4 .

See Figure 5. For any choice of \(c\), as \(x\) gets closer to \(c\), the corresponding value of \(f(x)\) is \(x\), which is just as close to \(c\). That is, \(\lim _{x \rightarrow c} x=c\).

Figure 4

Figure 5

\section*{EXAMPLE I Using Formulas (1) and (2)}
(a) \(\lim _{x \rightarrow 3} 5=5\)
(b) \(\lim _{x \rightarrow 3} x=3\)
(c) \(\lim _{x \rightarrow 0}(-8)=-8\)
(c) \(\lim _{x \rightarrow-1 / 2} x=-\frac{1}{2}\)

\section*{Now Work problem 7}

Formulas (1) and (2), when used with the properties that follow, enable us to evaluate limits of more complicated functions.

\section*{1 Find the Limit of a Sum, a Difference, and a Product}

In the following properties, we assume that \(f\) and \(g\) are two functions for which both \(\lim _{x \rightarrow c} f(x)\) and \(\lim _{x \rightarrow c} g(x)\) exist.

\section*{THEOREM}
```

In Words
The limit of the sum of two
functions equals the sum of their
limits.

```

\section*{EXAMPLE 2 Finding the Limit of a Sum}

Find: \(\lim _{x \rightarrow-3}(x+4)\)
Solution The limit we seek is the sum of two functions: \(f(x)=x\) and \(g(x)=4\). From formulas (1) and (2), we know that
\[
\lim _{x \rightarrow-3} f(x)=\lim _{x \rightarrow-3} x=-3 \text { and } \lim _{x \rightarrow-3} g(x)=\lim _{x \rightarrow-3} 4=4
\]

From formula (3), it follows that
\[
\lim _{x \rightarrow-3}(x+4)=\lim _{x \rightarrow-3} x+\lim _{x \rightarrow-3} 4=-3+4=1
\]

\section*{THEOREM}

\section*{In Words}

The limit of the difference of two
functions equals the difference of their limits.

Limit of a Difference
\[
\begin{equation*}
\lim _{x \rightarrow c}[f(x)-g(x)]=\lim _{x \rightarrow c} f(x)-\lim _{x \rightarrow c} g(x) \tag{4}
\end{equation*}
\]

\section*{EXAMPLE 3 Finding the Limit of a Difference}

Find: \(\lim _{x \rightarrow 4}(6-x)\)
Solution The limit we seek is the difference of two functions: \(f(x)=6\) and \(g(x)=x\). From formulas (1) and (2), we know that
\[
\lim _{x \rightarrow 4} f(x)=\lim _{x \rightarrow 4} 6=6 \text { and } \lim _{x \rightarrow 4} g(x)=\lim _{x \rightarrow 4} x=4
\]

From formula (4), it follows that
\[
\lim _{x \rightarrow 4}(6-x)=\lim _{x \rightarrow 4} 6-\lim _{x \rightarrow 4} x=6-4=2
\]

\section*{THEOREM}

\section*{In Words}

The limit of the product of two functions equals the product of their limits.

Limit of a Product
\[
\begin{equation*}
\lim _{x \rightarrow c}[f(x) \cdot g(x)]=\left[\lim _{x \rightarrow c} f(x)\right]\left[\lim _{x \rightarrow c} g(x)\right] \tag{5}
\end{equation*}
\]

Find: \(\lim _{x \rightarrow-5}(-4 x)\)

Solution The limit we seek is the product of two functions: \(f(x)=-4\) and \(g(x)=x\). From formulas (1) and (2), we know that
\[
\lim _{x \rightarrow-5} f(x)=\lim _{x \rightarrow-5}(-4)=-4 \text { and } \lim _{x \rightarrow-5} g(x)=\lim _{x \rightarrow-5} x=-5
\]

From formula (5), it follows that
\[
\lim _{x \rightarrow-5}(-4 x)=\left[\lim _{x \rightarrow-5}(-4)\right]\left[\lim _{x \rightarrow-5} x\right]=(-4)(-5)=20
\]

\section*{EXAMPLE 5}

Solution

\section*{THEOREM}

\section*{EXAMPLE 6}

\section*{Finding the Limit of a Monomial}

Find: \(\quad \lim _{x \rightarrow 2}\left(-4 x^{3}\right)\)
Solution
\[
\begin{aligned}
\lim _{x \rightarrow c}\left(a x^{n}\right) & =\left[\lim _{x \rightarrow c} a\right]\left[\lim _{x \rightarrow c} x^{n}\right]=a[\lim _{x \rightarrow c} \underbrace{(x \cdot x \cdot x \cdot \ldots \cdot x)}_{n \text { factors }}] \\
& =a \underbrace{a\left[\lim _{x \rightarrow c} x\right]\left[\lim _{x \rightarrow c} x\right]\left[\lim _{x \rightarrow c} x\right] \ldots\left[\lim _{x \rightarrow c} x\right]}_{n \rightarrow c} \\
& =a \cdot \underbrace{c \cdot c \cdot c \cdot \ldots \cdot c}_{n \text { factors }}=a c^{n}
\end{aligned}
\]

Limit of a Monomial
If \(n \geq 1\) is a positive integer and \(a\) is a constant, then
\[
\begin{equation*}
\lim _{x \rightarrow c}\left(a x^{n}\right)=a c^{n} \tag{6}
\end{equation*}
\]
for any number \(c\).

\section*{Proof}
\(\lim _{x \rightarrow 2}\left(-4 x^{3}\right)=-4 \cdot 2^{3}=-4 \cdot 8=-32\)

\section*{2 Find the Limit of a Polynomial}

Since a polynomial is a sum of monomials, we can use formula (6) and the repeated use of formula (3) to obtain the following result:

\section*{THEOREM}

\section*{Limit of a Polynomial}

If \(P\) is a polynomial function, then
\[
\begin{equation*}
\lim _{x \rightarrow c} P(x)=P(c) \tag{7}
\end{equation*}
\]
for any number \(c\).

\section*{In Words}

To find the limit of a polynomial as \(x\) approaches \(c\), all we need to do is evaluate the polynomial at \(c\).

Proof If \(P\) is a polynomial function-that is, if
\[
P(x)=a_{n} x^{n}+a_{n-1} x^{n-1}+\cdots+a_{1} x+a_{0}
\]
then
\[
\begin{aligned}
\lim _{x \rightarrow c} P(x) & =\lim _{x \rightarrow c}\left[a_{n} x^{n}+a_{n-1} x^{n-1}+\cdots+a_{1} x+a_{0}\right] \\
& =\lim _{x \rightarrow c}\left(a_{n} x^{n}\right)+\lim _{x \rightarrow c}\left(a_{n-1} x^{n-1}\right)+\cdots+\lim _{x \rightarrow c}\left(a_{1} x\right)+\lim _{x \rightarrow c} a_{0} \\
& =a_{n} c^{n}+a_{n-1} c^{n-1}+\cdots+a_{1} c+a_{0} \\
& =P(c)
\end{aligned}
\]

\section*{EXAMPLE 7 Finding the Limit of a Polynomial}

Find: \(\lim _{x \rightarrow 2}\left[5 x^{4}-6 x^{3}+3 x^{2}+4 x-2\right]\)
Solution \(\quad \lim _{x \rightarrow 2}\left[5 x^{4}-6 x^{3}+3 x^{2}+4 x-2\right]=5 \cdot 2^{4}-6 \cdot 2^{3}+3 \cdot 2^{2}+4 \cdot 2-2\)
\[
\begin{aligned}
& =5 \cdot 16-6 \cdot 8+3 \cdot 4+8-2 \\
& =80-48+12+6=50
\end{aligned}
\]

\section*{Now Work problem 17}

\section*{3 Find the Limit of a Power or a Root}

\section*{THEOREM}

Limit of a Power or Root
If \(\lim _{x \rightarrow c} f(x)\) exists and if \(n \geq 2\) is a positive integer, then
\[
\begin{equation*}
\lim _{x \rightarrow c}[f(x)]^{n}=\left[\lim _{x \rightarrow c} f(x)\right]^{n} \tag{8}
\end{equation*}
\]
and
\[
\begin{equation*}
\lim _{x \rightarrow c} \sqrt[n]{f(x)}=\sqrt[n]{\lim _{x \rightarrow c} f(x)} \tag{9}
\end{equation*}
\]

In formula (9), we require that both \(\sqrt[n]{f(x)}\) and \(\sqrt[n]{\lim _{x \rightarrow c} f(x)}\) be defined.

Look carefully at equations (8) and (9) and compare each side.

\section*{EXAMPLE 8}

Solution

Finding the Limit of a Power or a Root
Find:
(a) \(\lim _{x \rightarrow 1}(3 x-5)^{4}\)
(b) \(\lim _{x \rightarrow 0} \sqrt{5 x^{2}+8}\)
(c) \(\lim _{x \rightarrow-1}\left(5 x^{3}-x+3\right)^{4 / 3}\)
(a) \(\lim _{x \rightarrow 1}(3 x-5)^{4}=\left[\lim _{x \rightarrow 1}(3 x-5)\right]^{4}=(-2)^{4}=16\)
(b) \(\lim _{x \rightarrow 0} \sqrt{5 x^{2}+8}=\sqrt{\lim _{x \rightarrow 0}\left(5 x^{2}+8\right)}=\sqrt{8}=2 \sqrt{2}\)
(c) \(\lim _{x \rightarrow-1}\left(5 x^{3}-x+3\right)^{4 / 3}=\sqrt[3]{\lim _{x \rightarrow-1}\left(5 x^{3}-x+3\right)^{4}}\)
\(=\sqrt[3]{\left[\lim _{x \rightarrow-1}\left(5 x^{3}-x+3\right)\right]^{4}}=\sqrt[3]{(-1)^{4}}=\sqrt[3]{1}=1\)

\section*{4 Find the Limit of a Quotient}

\section*{THEOREM}
```

In Words
The limit of the quotient of two functions equals the quotient of their limits, provided that the limit of the denominator is not zero.

```

Limit of a Quotient
\[
\begin{equation*}
\lim _{x \rightarrow c \rightarrow}\left[\frac{f(x)}{g(x)}\right]=\frac{\lim _{x \rightarrow c} f(x)}{\lim _{x \rightarrow c} g(x)} \tag{10}
\end{equation*}
\]
provided that \(\lim _{x \rightarrow c} g(x) \neq 0\).

\section*{EXAMPLE 9 Finding the Limit of a Quotient}

Find: \(\lim _{x \rightarrow 1} \frac{5 x^{3}-x+2}{3 x+4}\)
Solution The limit we seek involves the quotient of two functions: \(f(x)=5 x^{3}-x+2\) and \(g(x)=3 x+4\). First, we find the limit of the denominator \(g(x)\).
\[
\lim _{x \rightarrow 1} g(x)=\lim _{x \rightarrow 1}(3 x+4)=7
\]

Since the limit of the denominator is not zero, we can proceed to use formula (10).
\[
\lim _{x \rightarrow 1} \frac{5 x^{3}-x+2}{3 x+4}=\frac{\lim _{x \rightarrow 1}\left(5 x^{3}-x+2\right)}{\lim _{x \rightarrow 1}(3 x+4)}=\frac{6}{7}
\]

\section*{am Now Work problem 25}

When the limit of the denominator is zero, formula (10) cannot be used. In such cases, other strategies need to be used. Let's look at two examples.

\section*{EXAMPLE IO Finding the Limit of a Quotient}

Find: \(\begin{array}{ll}\text { (a) } \lim _{x \rightarrow 3} \frac{x^{2}-x-6}{x^{2}-9} & \text { (b) } \lim _{x \rightarrow 0} \frac{5 x-\sin x}{x}\end{array}\)
Solution (a) The limit of the denominator equals zero, so formula (10) cannot be used. Instead, notice that the expression can be factored as
\[
\frac{x^{2}-x-6}{x^{2}-9}=\frac{(x-3)(x+2)}{(x-3)(x+3)}
\]

When we compute a limit as \(x\) approaches 3 , we are interested in the values of the function when \(x\) is close to 3 but unequal to 3 . Since \(x \neq 3\), we can divide out the \((x-3)\) 's. Formula (10) can then be used.
\[
\lim _{x \rightarrow 3} \frac{x^{2}-x-6}{x^{2}-9}=\lim _{x \rightarrow 3} \frac{(x-3)(x+2)}{(x-3)(x+3)}=\frac{\lim _{x \rightarrow 3}(x+2)}{\lim _{x \rightarrow 3}(x+3)}=\frac{5}{6}
\]
(b) Again, the limit of the denominator is zero. In this situation, perform the indicated operation and divide by \(x\).
\[
\lim _{x \rightarrow 0} \frac{5 x-\sin x}{x}=\lim _{x \rightarrow 0}\left[\frac{5 x}{x}-\frac{\sin x}{x}\right]=\lim _{\uparrow \rightarrow 0} \frac{5 x}{x^{\prime}}-\lim _{x \rightarrow 0} \frac{\sin x}{x}=5-1=4
\]

\section*{EXAMPLE II Finding Limits Using Algebraic Properties}

Find: \(\lim _{x \rightarrow 2} \frac{x^{3}-2 x^{2}+4 x-8}{x^{4}-2 x^{3}+x-2}\)
Solution The limit of the denominator is zero, so formula (10) cannot be used. We factor the expression.
\[
\frac{x^{3}-2 x^{2}+4 x-8}{x^{4}-2 x^{3}+x-2}=\frac{x^{2}(x-2)+4(x-2)}{x^{3}(x-2)+1(x-2)}=\frac{\left(x^{2}+4\right)(x-2)}{\left(x^{3}+1\right)(x-2)}
\]

Factor by grouping
Then
\[
\lim _{x \rightarrow 2} \frac{x^{3}-2 x^{2}+4 x-8}{x^{4}-2 x^{3}+x-2}=\lim _{x \rightarrow 2} \frac{\left(x^{2}+4\right)(x-2)}{\left(x^{3}+1\right)(x-2)}=\frac{8}{9}
\]
which is exact.
Compare the exact solution above with the approximate solution found in Example 6 of Section 13.1.

\section*{5 Find the Limit of an Average Rate of Change}

\section*{EXAMPLE 12 Finding the Limit of an Average Rate of Change}

Find the limit as \(x\) approaches 2 of the average rate of change of the function
\[
f(x)=x^{2}+3 x
\]
from 2 to \(x\).
Solution The average rate of change of \(f\) from 2 to \(x\) is
\[
\frac{\Delta y}{\Delta x}=\frac{f(x)-f(2)}{x-2}=\frac{\left(x^{2}+3 x\right)-10}{x-2}=\frac{(x+5)(x-2)}{x-2}
\]

The limit of the average rate of change is
\[
\lim _{x \rightarrow 2} \frac{f(x)-f(2)}{x-2}=\lim _{x \rightarrow 2} \frac{\left(x^{2}+3 x\right)-10}{x-2}=\lim _{x \rightarrow 2} \frac{(x+5)(x-2)}{x-2}=7
\]

\section*{SUMMARY}

To find exact values for \(\lim _{x \rightarrow c} f(x)\), try the following:
1. If \(f\) is a polynomial function, \(\lim _{x \rightarrow c} f(x)=f(c)\). (formula (7))
2. If \(f\) is a polynomial raised to a power or is the root of a polynomial, use formula (8) or (9) with formula (7).
3. If \(f\) is a quotient and the limit of the denominator is not zero, use the fact that the limit of a quotient is the quotient of the limits. (formula (10))
4. If \(f\) is a quotient and the limit of the denominator is zero, use other techniques, such as factoring.

\subsection*{13.2 Assess Your Understanding}

\section*{Concepts and Vocabulary}
1. The limit of the product of two functions equals the of their limits.
2. \(\lim _{x \rightarrow c} b=\) \(\qquad\) .

33. \(\lim _{x \rightarrow 1} \frac{x^{3}-1}{x-1}\)
34. \(\lim _{x \rightarrow 1} \frac{x^{4}-1}{x-1}\)
35. \(\lim _{x \rightarrow-1} \frac{(x+1)^{2}}{x^{2}-1}\)
36. \(\lim _{x \rightarrow 2} \frac{x^{3}-8}{x^{2}-4}\)
37. \(\lim _{x \rightarrow 1} \frac{x^{3}-x^{2}+x-1}{x^{4}-x^{3}+2 x-2}-\)
38. \(\lim _{x \rightarrow-1} \frac{x^{3}+x^{2}+3 x+3}{x^{4}+x^{3}+2 x+2} \quad\) 39. \(\lim _{x \rightarrow 2} \frac{x^{3}-2 x^{2}+4 x-8}{x^{2}+x-6}-\)
40. \(\lim _{x \rightarrow 1} \frac{x^{3}-x^{2}+3 x-3}{x^{2}+3 x-4}-\)
41. \(\lim _{x \rightarrow-1} \frac{x^{3}+2 x^{2}+x}{x^{4}+x^{3}+2 x+2}\)
42. \(\lim _{x \rightarrow 3} \frac{x^{3}-3 x^{2}+4 x-12}{x^{4}-3 x^{3}+x-3}-\)

In Problems 43-52, find the limit as \(x\) approaches \(c\) of the average rate of change of each function from \(c\) to \(x\).
43. \(c=2 ; f(x)=5 x-3\)
44. \(c=-2 ; f(x)=4-3 x\)
45. \(c=3 ; f(x)=x^{2}\)
46. \(c=3 ; \quad f(x)=x^{3}\)
47. \(c=-1 ; \quad f(x)=x^{2}+2 x\)
48. \(c=-1 ; \quad f(x)=2 x^{2}-3 x\)
49. \(c=0 ; \quad f(x)=3 x^{3}-2 x^{2}+4\)
50. \(c=0 ; \quad f(x)=4 x^{3}-5 x+8\)
51. \(c=1 ; \quad f(x)=\frac{1}{x}\)
52. \(c=1 ; f(x)=\frac{1}{x^{2}}\)

In Problems 53-56, use the properties of limits and the facts that
\[
\lim _{x \rightarrow 0} \frac{\sin x}{x}=1 \quad \lim _{x \rightarrow 0} \frac{\cos x-1}{x}=0 \quad \lim _{x \rightarrow 0} \sin x=0 \quad \lim _{x \rightarrow 0} \cos x=1
\]
where \(x\) is in radians, to find each limit.
53. \(\lim _{x \rightarrow 0} \frac{\tan x}{x}\)
54. \(\lim _{x \rightarrow 0} \frac{\sin (2 x)}{x} 2\)
[Hint: Use a Double-angle Formula.]
55. \(\lim _{x \rightarrow 0} \frac{3 \sin x+\cos x-1}{4 x}-\)
56. \(\lim _{x \rightarrow 0} \frac{\sin ^{2} x+\sin x(\cos x-1)}{x^{2}}\)

\section*{Retain Your Knowledge}

Problems 57-60 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
57. Graph the function \(f(x)=x^{3}+x^{2}+1\).
59. Give the exact value of \(\sin ^{-1} \frac{\sqrt{3}}{2}\).
58. Find the inverse of the function \(g(x)=\frac{2 x+3}{x+1}\).
60. Use the Binomial Theorem to expand \((x+2)^{4}\).

\subsection*{13.3 One-sided Limits; Continuous Functions}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Piecewise-defined Functions (Section 1.4, pp. 83-85)
- Library of Functions (Section 1.4, pp. 78-83)
- Polynomial Functions (Section 3.1, pp. 192-207)
- Properties of Rational Functions (Section 3.4, pp. 232-240)
- The Graph of a Rational Function (Section 3.5, pp. 243-255)
- Properties of the Exponential Function (Section 4.3, pp. 299 and 301)
- Properties of the Logarithmic Function (Section 4.4, p. 314)
- Properties of the Trigonometric Functions (Section 5.4, pp. 421 and 423, and Section 5.5, pp. 436-441) Now Work the 'Are You Prepared?' problems on page 908.

OBJECTIVES 1 Find the One-sided Limits of a Function (p. 904)
2 Determine Whether a Function Is Continuous (p. 906)

\section*{1 Find the One-sided Limits of a Function}

Earlier we described \(\lim _{x \rightarrow c} f(x)=N\) by saying that as \(x\) gets closer to \(c\) but remains unequal to \(c\), the corresponding values of \(f(x)\) get closer to \(N\). Whether we use a numerical argument or the graph of the function \(f\), the variable \(x\) can get closer to \(c\) in only two ways: by approaching \(c\) from the left, through numbers less than \(c\), or by approaching \(c\) from the right, through numbers greater than \(c\).

If we approach \(c\) from only one side, we have a one-sided limit. The notation
\[
\lim _{x \rightarrow c^{-}} f(x)=L
\]
is called the left limit. It is read "the limit of \(f(x)\) as \(x\) approaches \(c\) from the left equals \(L\) " and may be described by the following statement:

As \(x\) gets closer to \(c\) but remains less than \(c\), the corresponding value of \(f(x)\) gets closer to \(L\).

The notation \(x \rightarrow c^{-}\)is used to remind us that \(x\) is less than \(c\).
The notation
\[
\lim _{x \rightarrow c^{+}} f(x)=R
\]
is called the right limit. It is read "the limit of \(f(x)\) as \(x\) approaches \(c\) from the right equals \(R\) " and may be described by the following statement:

As \(x\) gets closer to \(c\), but remains greater than \(c\), the corresponding value of \(f(x)\) gets closer to \(R\).

The notation \(x \rightarrow c^{+}\)is used to remind us that \(x\) is greater than \(c\).

Figure 6 illustrates left and right limits.
Figure 6

The left and right limits can be used to determine whether \(\lim _{x \rightarrow c} f(x)\) exists. See Figure 7.

Figure 7

\(\lim _{x \rightarrow c^{-}} f(x)=\lim _{x \rightarrow c^{+}} f(x)\)
(a)

(b)

As Figure 7(a) illustrates, \(\lim _{x \rightarrow c} f(x)\) exists and equals the common value of the left limit and the right limit \((L \stackrel{x \rightarrow c}{=} R)\). In Figure 7(b), we see that \(\lim _{x \rightarrow c} f(x)\) does not exist because \(L \neq R\). This leads us to the following result.

\section*{THEOREM}

Suppose that \(\lim _{x \rightarrow c^{-}} f(x)=L\) and \(\lim _{x \rightarrow c^{+}} f(x)=R\). Then \(\lim _{x \rightarrow c} f(x)\) exists if and only if \(L=R\). Furthermore, if \(L \stackrel{x \rightarrow c^{-}}{=} R\), then \(\lim _{x \rightarrow c} f(x)=\stackrel{x \rightarrow c}{L}=R\).

Collectively, the left and right limits of a function are called one-sided limits of the function.

\section*{EXAMPLE I Finding One-sided Limits of a Function}

For the function
\[
f(x)= \begin{cases}2 x-1 & \text { if } x<2 \\ 1 & \text { if } x=2 \\ x-2 & \text { if } x>2\end{cases}
\]
find:
(a) \(\lim _{x \rightarrow 2^{-}} f(x)\)
(b) \(\lim _{x \rightarrow 2^{+}} f(x)\)
(c) \(\lim _{x \rightarrow 2} f(x)\)

Figure 8

\section*{Solution}

Figure 8 shows the graph of \(f\).
(a) To find \(\lim _{x \rightarrow 2^{-}} f(x)\), look at the values of \(f\) when \(x\) is close to 2 but less than 2 . Since \(f(x)=2 x-1\) for such numbers, we conclude that
\[
\lim _{x \rightarrow 2^{-}} f(x)=\lim _{x \rightarrow 2^{-}}(2 x-1)=3
\]
(b) To find \(\lim _{x \rightarrow 2^{+}} f(x)\), look at the values of \(f\) when \(x\) is close to 2 but greater than 2 .

Since \(f(x)=x-2\) for such numbers, we conclude that
\[
\lim _{x \rightarrow 2^{+}} f(x)=\lim _{x \rightarrow 2^{+}}(x-2)=0
\]
(c) Since the left and right limits are unequal, \(\lim _{x \rightarrow 2} f(x)\) does not exist.

\section*{2 Determine Whether a Function Is Continuous}

We have observed that \(f(c)\), the value of the function \(f\) at \(c\), plays no role in determining the one-sided limits of \(f\) at \(c\). What is the role of the value of a function at \(c\) and its one-sided limits at \(c\) ? Let's look at some of the possibilities. See Figure 9.

Figure 9

(a)

\(\lim _{x \rightarrow c^{-}} f(x) \neq \lim _{x \rightarrow c^{+}} f(x)\), so \(\lim _{x \rightarrow c} f(x)\) does not exist; \(f(c)\) is defined

\(\lim _{x \rightarrow c^{-}} f(x)=\lim _{x \rightarrow c^{+}} f(x)\), so \(\lim _{x \rightarrow c} f(x)\) exists;
\(\lim _{x \rightarrow c} f(x) \neq f(c)\)
(b)

\[
\lim _{x \rightarrow c^{-}} f(x) \neq \lim _{x \rightarrow c^{+}} f(x) \text {, so } \lim _{x \rightarrow c} f(x) \text { does not exist; }
\]
\(f(c)\) is not defined
(d)
(e)

\(\lim _{x \rightarrow c^{-}} f(x)=\lim _{x \rightarrow c^{+}} f(x)\), so \(\lim _{x \rightarrow c} f(x)\) exists;
\(f(c)\) is not defined
(c)

\(\lim _{x \rightarrow c^{-}} f(x)=f(c) \neq \lim _{x \rightarrow c^{+}} f(x)\),
so \(\lim _{x \rightarrow c} f(x)\) does not exist;
\(f(c)\) is defined (f)

Much earlier in this text, we said that a function \(f\) was continuous if its graph could be drawn without lifting pencil from paper. Figure 9 reveals that the only graph that has this characteristic is the graph in Figure 9(a), for which the onesided limits at \(c\) each exist and are equal to the value of \(f\) at \(c\). This leads us to the following definition.

\section*{DEFINITION}

A function \(f\) is continuous at \(c\) if
1. \(f\) is defined at \(c\); that is, \(c\) is in the domain of \(f\) so that \(f(c)\) equals a number.
2. \(\lim _{x \rightarrow c^{-}} f(x)=f(c)\)
3. \(\lim _{x \rightarrow c^{+}} f(x)=f(c)\)

In other words, a function \(f\) is continuous at \(c\) if
\[
\lim _{x \rightarrow c} f(x)=f(c)
\]

If \(f\) is not continuous at \(c\), we say that \(f\) is discontinuous at \(c\). Each function whose graph appears in Figures 9(b) to 9(f) is discontinuous at \(c\).

Look again at formula (7) on page 899. Based on (7), we conclude that a polynomial function is continuous at every number.

Look at formula (10) on page 901 . We conclude that a rational function is continuous at every number, except any at which it is not defined. At numbers where a rational function is not defined, either a hole appears in the graph or else an asymptote appears.

\section*{Determining the Numbers at Which a Rational Function Is Continuous}
(a) Determine the numbers at which the rational function
\[
R(x)=\frac{x-2}{x^{2}-6 x+8}
\]
is continuous.
(b) Use limits to analyze the graph of \(R\) near 2 and near 4 .
(c) Graph \(R\).

Figure 10

Solution
(a) Since \(R(x)=\frac{x-2}{(x-2)(x-4)}\), the domain of \(R\) is \(\{x \mid x \neq 2, x \neq 4\}\).
\(R\) is a rational function, so it is defined at every number except 2 and 4 . We conclude that \(R\) is discontinuous at both 2 and 4 . (Condition 1 of the definition is violated.)
(b) To determine the behavior of the graph near 2 and near 4, look at \(\lim _{x \rightarrow 2} R(x)\) and \(\lim _{x \rightarrow 4} R(x)\).

For \(\lim _{x \rightarrow 2} R(x)\), we have
\[
\lim _{x \rightarrow 2} R(x)=\lim _{x \rightarrow 2} \frac{x-2}{(x-2)(x-4)}=\lim _{x \rightarrow 2} \frac{1}{x-4}=-\frac{1}{2}
\]

As \(x\) gets closer to 2, the graph of \(R\) gets closer to \(-\frac{1}{2}\). Since \(R\) is not defined at 2, the graph will have a hole at \(\left(2,-\frac{1}{2}\right)\).

For \(\lim _{x \rightarrow 4} R(x)\), we have
\[
\lim _{x \rightarrow 4} R(x)=\lim _{x \rightarrow 4} \frac{x-2}{(x-2)(x-4)}=\lim _{x \rightarrow 4} \frac{1}{x-4}
\]

If \(x<4\) and \(x\) is getting closer to 4 , the value of \(\frac{1}{x-4}\) is negative and is becoming unbounded; that is, \(\lim _{x \rightarrow 4^{-}} R(x)=-\infty\).
If \(x>4\) and \(x\) is getting closer to 4 , the value of \(\frac{1}{x-4}\) is positive and is becoming unbounded; that is, \(\lim _{x \rightarrow 4^{+}} R(x)=\infty\).

Since \(|R(x)| \rightarrow \infty\) for \(x\) close to 4, the graph of \(R\) will have a vertical asymptote at \(x=4\).
(c) It is easiest to graph \(R\) by observing that
\[
\text { if } x \neq 2, \quad \text { then } \quad R(x)=\frac{x-2}{(x-2)(x-4)}=\frac{1}{x-4}
\]

Therefore, the graph of \(R\) is the graph of \(y=\frac{1}{x}\) shifted to the right 4 units with a hole at \(\left(2,-\frac{1}{2}\right)\). See Figure 10 .

\section*{an Now Work problem 73}

The exponential, logarithmic, sine, and cosine functions are continuous at every number in their domain. The tangent, cotangent, secant, and cosecant functions are continuous except at numbers for which they are not defined, where asymptotes occur. The square root function and absolute value function are continuous at every number in their domain. The function \(f(x)=\operatorname{int}(x)\) is continuous except for \(x=\) an integer, where a jump occurs in the graph.

Piecewise-defined functions require special attention.

\section*{EXAMPLE 3 \\ Determining Where a Piecewise-defined Function Is Continuous}

Determine the numbers at which the following function is continuous.
\[
f(x)= \begin{cases}x^{2} & \text { if } x \leq 0 \\ x+1 & \text { if } 0<x<2 \\ 5-x & \text { if } 2 \leq x \leq 5\end{cases}
\]

Solution The "pieces" of \(f\)-that is, \(y=x^{2}, y=x+1\), and \(y=5-x\)-are each continuous for every number since they are polynomials. In other words, when we graph the pieces, we will not lift our pencil. When we graph the function \(f\), however, we have to be careful, because the pieces change at \(x=0\) and at \(x=2\). So the numbers we need to investigate for \(f\) are \(x=0\) and \(x=2\).
\[
\begin{aligned}
\text { At } x=0: \quad f(0) & =0^{2}=0 \\
\lim _{x \rightarrow 0^{-}} f(x) & =\lim _{x \rightarrow 0^{-}} x^{2}=0 \\
\lim _{x \rightarrow 0^{+}} f(x) & =\lim _{x \rightarrow 0^{+}}(x+1)=1
\end{aligned}
\]

Since \(\lim _{x \rightarrow 0^{+}} f(x) \neq f(0), f\) is not continuous at \(x=0\).
\[
\text { At } x=2: \quad f(2)=5-2=36 \text { ( } \begin{aligned}
& =5-1)=3 \\
\lim _{x \rightarrow 2^{-}} f(x) & =\lim _{x \rightarrow 2^{-}}(x+1)=3 \\
\lim _{x \rightarrow 2^{+}} f(x) & =\lim _{x \rightarrow 2^{+}}(5-x)=3
\end{aligned}
\]

So \(f\) is continuous at \(x=2\).
The graph of \(f\), given in Figure 11, demonstrates the conclusions drawn above.

\section*{SUMMARY}

Library of Functions: Continuity Properties

Function
Polynomial function
Rational function \(R(x)=\frac{P(x)}{Q(x)}, \quad\{x \mid Q(x) \neq 0\}\)
\(P, Q\) are polynomials
Exponential function Logarithmic function Sine and cosine functions
Tangent and secant functions

Cotangent and cosecant functions

Domain
All real numbers

All real numbers
Positive real numbers
All real numbers
All real numbers, except odd integer multiples of \(\frac{\pi}{2}\)
All real numbers, except integer multiples of \(\pi\)

\section*{Property}

Continuous at every number in the domain Continuous at every number in the domain Hole or vertical asymptote where \(R\) is undefined
Continuous at every number in the domain Continuous at every number in the domain Continuous at every number in the domain Continuous at every number in the domain Vertical asymptotes at odd integer multiples of \(\frac{\pi}{2}\) Continuous at every number in the domain Vertical asymptotes at integer multiples of \(\pi\)

\subsection*{13.3 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. For the function \(f(x)= \begin{cases}x^{2} & \text { if } x \leq 0 \\ x+1 & \text { if } 0<x<2, \\ 5-x & \text { if } 2 \leq x \leq 5\end{cases}\) find \(f(0)\) and \(f(2)\). (pp. 83-85)
2. What are the domain and range of \(f(x)=\ln x\) ? (p.314)
3. True or False The exponential function \(f(x)=e^{x}\) is increasing on the interval \((-\infty, \infty)\). (p. 299)
4. Name the trigonometric functions that have asymptotes. (pp.421-424;436-441)
5. True or False Some rational functions have holes in their graph. (pp. 251-253)
6. True or False Every polynomial function has a graph that can be traced without lifting pencil from paper. (pp.192-193)

\section*{Concepts and Vocabulary}
7. If we approach \(c\) from only one side, then we have \(\mathrm{a}(\mathrm{n})\) limit.
8. The notation \(\qquad\) is used to describe the fact that as \(x\) gets closer to \(c\) but remains greater than \(c\), the value of \(f(x)\) gets closer to \(R\).
9. If \(\lim _{x \rightarrow c} f(x)=f(c)\), then \(f\) is \(\qquad\) at \(\qquad\) -
10. True or False For any function \(f\), \(\lim _{x \rightarrow c^{-}} f(x)=\lim _{x \rightarrow c^{+}} f(x)\).
11. True or False If \(f\) is continuous at \(c\), then \(\lim _{x \rightarrow c^{+}} f(x)=f(c)\).
12. True or False Every polynomial function is continuous at every real number.

\section*{Skill Building}

In Problems 13-32, use the accompanying graph of \(y=f(x)\).
13. What is the domain of \(f\) ?
14. What is the range of \(f\) ?
15. Find the \(x\)-intercept(s), if any, of \(f\).
16. Find the \(y\)-intercept(s), if any, of \(f\).
17. Find \(f(-8)\) and \(f(-4)\).
18. Find \(f(2)\) and \(f(6)\).
19. Find \(\lim _{x \rightarrow-6^{-}} f(x)\).
20. Find \(\lim _{x \rightarrow-6^{+}} f(x)\).
21. Find \(\lim _{x \rightarrow-4^{-}} f(x)\).
22. Find \(\lim _{x \rightarrow-4^{+}} f(x)\).
23. Find \(\lim _{x \rightarrow 2^{-}} f(x)\).
24. Find \(\lim _{x \rightarrow 2^{+}} f(x)\).

25. Does \(\lim _{x \rightarrow 4} f(x)\) exist? If it does, what is it?
26. Does \(\lim _{x \rightarrow 0} f(x)\) exist? If it does, what is it?
27. Is \(f\) continuous at -6 ?
28. Is \(f\) continuous at -4 ?
29. Is \(f\) continuous at 0 ?
30. Is \(f\) continuous at 2 ?
31. Is \(f\) continuous at 4 ?
32. Is \(f\) continuous at 5 ?

In Problems 33-44, find the one-sided limit.
33. \(\lim _{x \rightarrow 1^{+}}(2 x+3)\)
34. \(\lim _{x \rightarrow 2^{-}}(4-2 x)\)
35. \(\lim _{x \rightarrow 1^{-}}\left(2 x^{3}+5 x\right)\)
36. \(\lim _{x \rightarrow-2^{+}}\left(3 x^{2}-8\right)\)
37. \(\lim _{x \rightarrow \pi / 2^{+}} \sin x\)
38. \(\lim _{x \rightarrow \pi^{-}}(3 \cos x)\)
39. \(\lim _{x \rightarrow 2^{+}} \frac{x^{2}-4}{x-2}\)
40. \(\lim _{x \rightarrow 1^{-}} \frac{x^{3}-x}{x-1}\)
41. \(\lim _{x \rightarrow-1^{-}} \frac{x^{2}-1}{x^{3}+1}\)
42. \(\lim _{x \rightarrow 0^{+}} \frac{x^{3}-x^{2}}{x^{4}+x^{2}}\)
43. \(\lim _{x \rightarrow-2^{+}} \frac{x^{2}+x-2}{x^{2}+2 x}\)
44. \(\lim _{x \rightarrow-4^{-}} \frac{x^{2}+x-12}{x^{2}+4 x}\)

In Problems 45-60, determine whether \(f\) is continuous at \(c\).
45. \(f(x)=x^{3}-3 x^{2}+2 x-6 \quad c=2\)
46. \(f(x)=3 x^{2}-6 x+5 \quad c=-3\)
47. \(f(x)=\frac{x^{2}+5}{x-6} \quad c=3\)
48. \(f(x)=\frac{x^{3}-8}{x^{2}+4} \quad c=2\)
49. \(f(x)=\frac{x+3}{x-3} \quad c=3\)
50. \(f(x)=\frac{x-6}{x+6} \quad c=-6\)
51. \(f(x)=\frac{x^{3}+3 x}{x^{2}-3 x} \quad c=0\)
52. \(f(x)=\frac{x^{2}-6 x}{x^{2}+6 x} \quad c=0\)
53. \(f(x)=\left\{\begin{array}{ll}\frac{x^{3}+3 x}{x^{2}-3 x} & \text { if } x \neq 0 \\ 1 & \text { if } x=0\end{array} \quad c=0\right.\)
54. \(f(x)=\left\{\begin{array}{ll}\frac{x^{2}-6 x}{x^{2}+6 x} & \text { if } x \neq 0 \\ -2 & \text { if } x=0\end{array} \quad c=0\right.\)
55. \(f(x)=\left\{\begin{array}{ll}\frac{x^{3}+3 x}{x^{2}-3 x} & \text { if } x \neq 0 \\ -1 & \text { if } x=0\end{array} \quad c=0\right.\)
56. \(f(x)=\left\{\begin{array}{ll}\frac{x^{2}-6 x}{x^{2}+6 x} & \text { if } x \neq 0 \\ -1 & \text { if } x=0\end{array} \quad c=0\right.\)
57. \(f(x)= \begin{cases}\frac{x^{3}-1}{x^{2}-1} & \text { if } x<1 \\ 2 & \text { if } x=1 \quad c=1 \\ \frac{3}{x+1} & \text { if } x>1\end{cases}\)
58. \(f(x)= \begin{cases}\frac{x^{2}-2 x}{x-2} & \text { if } x<2 \\ 2 & \text { if } x=2 \quad c=2 \\ \frac{x-4}{x-1} & \text { if } x>2\end{cases}\)
59. \(f(x)= \begin{cases}2 e^{x} & \text { if } x<0 \\ 2 & \text { if } x=0 \quad c=0 \\ \frac{x^{3}+2 x^{2}}{x^{2}} & \text { if } x>0\end{cases}\)
60. \(f(x)= \begin{cases}3 \cos x & \text { if } x<0 \\ 3 & \text { if } x=0 \quad c=0 \\ \frac{x^{3}+3 x^{2}}{x^{2}} & \text { if } x>0\end{cases}\)

In Problems 61-72, find the numbers at which \(f\) is continuous. At which numbers is \(f\) discontinuous?
61. \(f(x)=2 x+3\)
62. \(f(x)=4-3 x\)
63. \(f(x)=3 x^{2}+x\)
64. \(f(x)=-3 x^{3}+7\)
65. \(f(x)=4 \sin x\)
66. \(f(x)=-2 \cos x\)
67. \(f(x)=2 \tan x\)
68. \(f(x)=4 \csc x\)
69. \(f(x)=\frac{2 x+5}{x^{2}-4}\)
70. \(f(x)=\frac{x^{2}-4}{x^{2}-9}\)
71. \(f(x)=\frac{x-3}{\ln x}\)
72. \(f(x)=\frac{\ln x}{x-3}\)

In Problems 73-76, discuss whether \(R\) is continuous at \(c\). Use limits to analyze the graph of \(R\) at \(c\). Graph \(R\).
73. \(R(x)=\frac{x-1}{x^{2}-1}, \quad c=-1\) and \(c=1\)
74. \(R(x)=\frac{3 x+6}{x^{2}-4}, \quad c=-2\) and \(c=2\)
75. \(R(x)=\frac{x^{2}+x}{x^{2}-1}, \quad c=-1\) and \(c=1\)
76. \(R(x)=\frac{x^{2}+4 x}{x^{2}-16}, \quad c=-4\) and \(c=4\)

In Problems 77-82, determine where each rational function is undefined. Determine whether an asymptote or a hole appears at such numbers.
77. \(R(x)=\frac{x^{3}-x^{2}+x-1}{x^{4}-x^{3}+2 x-2}\)
78. \(R(x)=\frac{x^{3}+x^{2}+3 x+3}{x^{4}+x^{3}+2 x+2}\)
79. \(R(x)=\frac{x^{3}-2 x^{2}+4 x-8}{x^{2}+x-6}\)
80. \(R(x)=\frac{x^{3}-x^{2}+3 x-3}{x^{2}+3 x-4}\)
81. \(R(x)=\frac{x^{3}+2 x^{2}+x}{x^{4}+x^{3}+2 x+2}\)
82. \(R(x)=\frac{x^{3}-3 x^{2}+4 x-12}{x^{4}-3 x^{3}+x-3}\)

For Problems 83-88, use a graphing utility to graph the functions \(R\) given in Problems 77-82. Verify the solutions found above.

\section*{Discussion and Writing}
89. Name three functions that are continuous at every real
90. Create a function that is not continuous at the number 5. number.

\section*{Retain Your Knowledge}

Problems 91-94 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
91. Find any vertical or horizontal asymptotes for the graph of \(f(x)=\frac{3 x-4}{x-4}\)
92. Evaluate \(P(5,3)\)
93. Write \(5 \ln x+2 \ln y-4 \ln z\) as a single natural logarithm.
94. Write the augmented matrix for the following system:
\[
\left\{\begin{aligned}
3 x+y+2 z & =4 \\
x+2 z & =5 \\
y-3 z & =-2
\end{aligned}\right.
\]

\section*{'Are You Prepared?' Answers}
1. \(f(0)=0 ; f(2)=3\)
2. Domain: \(\{x \mid x>0\}\); range \(\{y \mid-\infty<y<\infty\}\)
3. True
4. Secant, cosecant, tangent, cotangent
5. True
6. True

\subsection*{13.4 The Tangent Problem; The Derivative}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Point-Slope Form of a Line (Foundations, Section 3, p. 23)
- Average Rate of Change (Section 1.3, pp. 72-74)

Now Work the 'Are You Prepared?' problems on page 916.

> OBJECTIVES 1 Find an Equation of the Tangent Line to the Graph of a Function (p. 911)
> 2 Find the Derivative of a Function (p. 913)
> 3 Find Instantaneous Rates of Change (p. 914)
> 4 Find the Instantaneous Speed of a Particle (p. 914)

\section*{The Tangent Problem}

One question that motivated the development of calculus was a geometry problem, the tangent problem. This problem asks,"What is the slope of the tangent line to the graph of a function \(y=f(x)\) at a point \(P\) on its graph?" See Figure 12.

We first need to define what we mean by a tangent line. In high school geometry, the tangent line to a circle at a point is defined as the line that intersects the circle at exactly that one point. Look at Figure 13. Notice that the tangent line just touches the graph of the circle.

Figure 12

Figure 13

This definition, however, does not work in general. Look at Figure 14. The lines \(L_{1}\) and \(L_{2}\) intersect the graph at only one point \(P\), but neither just touches the graph at \(P\). Additionally, the tangent line \(L_{T}\) shown in Figure 15 touches the graph of \(f\) at \(P\) but also intersects the graph elsewhere. So how should we define the tangent line to the graph of \(f\) at a point \(P\) ?

Figure 14

Figure 15

\section*{1 Find an Equation of the Tangent Line to the Graph of a Function}

The tangent line \(L_{T}\) to the graph of a function \(y=f(x)\) at a point \(P\) necessarily contains the point \(P\). To find an equation for \(L_{T}\) using the point-slope form of the equation of a line, we need to find the slope \(m_{\tan }\) of the tangent line.

Figure 16

Suppose that the coordinates of the point \(P\) are \((c, f(c))\). Locate another point \(Q=(x, f(x))\) on the graph of \(f\). The line containing \(P\) and \(Q\) is a secant line. (Refer to Section 1.3.) The slope \(m_{\mathrm{sec}}\) of the secant line is
\[
m_{\mathrm{sec}}=\frac{f(x)-f(c)}{x-c}
\]

Now look at Figure 16.
As we move along the graph of \(f\) from \(Q\) toward \(P\), we obtain a succession of secant lines. The closer we get to \(P\), the closer the secant line is to the tangent line \(L_{T}\). The limiting position of these secant lines is the tangent line \(L_{T}\). Therefore, the limiting value of the slopes of these secant lines equals the slope of the tangent line. Also, as we move from \(Q\) toward \(P\), the values of \(x\) get closer to \(c\). Therefore,
\[
m_{\mathrm{tan}}=\lim _{x \rightarrow c} m_{\mathrm{sec}}=\lim _{x \rightarrow c} \frac{f(x)-f(c)}{x-c}
\]

\section*{DEFINITION}

THEOREM
If \(m_{\mathrm{tan}}\) exists, an equation of the tangent line is
\[
\begin{equation*}
y-f(c)=m_{\tan }(x-c) \tag{2}
\end{equation*}
\]

\section*{EXAMPLE I}

Figure 17

\section*{Finding an Equation of the Tangent Line}

Find an equation of the tangent line to the graph of \(f(x)=\frac{x^{2}}{4}\) at the point \(\left(1, \frac{1}{4}\right)\).
Graph \(f\) and the tangent line.
The tangent line contains the point \(\left(1, \frac{1}{4}\right)\). The slope of the tangent line to the graph of \(f(x)=\frac{x^{2}}{4}\) at \(\left(1, \frac{1}{4}\right)\) is
\[
\begin{aligned}
m_{\mathrm{tan}}=\lim _{x \rightarrow 1} \frac{f(x)-f(1)}{x-1} & =\lim _{x \rightarrow 1} \frac{\frac{x^{2}}{4}-\frac{1}{4}}{x-1}=\lim _{x \rightarrow 1} \frac{(x-1)(x+1)}{4(x-1)} \\
& =\lim _{x \rightarrow 1} \frac{x+1}{4}=\frac{1}{2}
\end{aligned}
\]

An equation of the tangent line is
\[
\begin{aligned}
y-\frac{1}{4} & =\frac{1}{2}(x-1) \quad y-f(c)=m_{\tan }(x-c) \\
y & =\frac{1}{2} x-\frac{1}{4}
\end{aligned}
\]

Figure 17 shows the graph of \(y=\frac{x^{2}}{4}\) and the tangent line at \(\left(1, \frac{1}{4}\right)\).

\section*{2 Find the Derivative of a Function}

The limit in formula (1) has an important generalization: it is called the derivative of \(f\) at \(c\).

\section*{DEFINITION}

Let \(y=f(x)\) denote a function \(f\). If \(c\) is a number in the domain of \(f\), then the derivative of \(\boldsymbol{f}\) at \(\boldsymbol{c}\), denoted by \(f^{\prime}(c)\) and read " \(f\) prime of \(c\)," is defined as
\[
\begin{equation*}
f^{\prime}(c)=\lim _{x \rightarrow c} \frac{f(x)-f(c)}{x-c} \tag{3}
\end{equation*}
\]
provided that this limit exists.

\section*{EXAMPLE 2 Finding the Derivative of a Function}

Find the derivative of \(f(x)=2 x^{2}-5 x\) at 2 . That is, find \(f^{\prime}(2)\).
Solution Since \(f(2)=2(2)^{2}-5(2)=-2\), we have
\[
\frac{f(x)-f(2)}{x-2}=\frac{\left(2 x^{2}-5 x\right)-(-2)}{x-2}=\frac{2 x^{2}-5 x+2}{x-2}=\frac{(2 x-1)(x-2)}{x-2}
\]

The derivative of \(f\) at 2 is
\[
f^{\prime}(2)=\lim _{x \rightarrow 2} \frac{f(x)-f(2)}{x-2}=\lim _{x \rightarrow 2} \frac{(2 x-1)(x-2)}{x-2}=3
\]

\section*{Now Work}

Problem 21

Example 2 provides a way of finding the derivative at 2 analytically. Graphing utilities have built-in procedures to approximate the derivative of a function at any number \(c\). Consult your owner's manual for the appropriate keystrokes.

\section*{EXAMPLE 3 Finding the Derivative of a Function Using a Graphing Utility}

Use a graphing utility to find the derivative of \(f(x)=2 x^{2}-5 x\) at 2 . That is, find \(f^{\prime}(2)\).

\section*{Solution Figure 18 shows the solution using a TI-84 Plus}
graphing calculator. As shown, \(f^{\prime}(2)=3\).

Figure 18

Now Work problem 33

\section*{EXAMPLE 4 Finding the Derivative of a Function}

Find the derivative of \(f(x)=x^{2}\) at \(c\). That is, find \(f^{\prime}(c)\).
Solution Since \(f(c)=c^{2}\), we have
\[
\frac{f(x)-f(c)}{x-c}=\frac{x^{2}-c^{2}}{x-c}=\frac{(x+c)(x-c)}{x-c}
\]

The derivative of \(f\) at \(c\) is
\[
f^{\prime}(c)=\lim _{x \rightarrow c} \frac{f(x)-f(c)}{x-c}=\lim _{x \rightarrow c} \frac{(x+c)(x-c)}{x-c}=2 c
\]

As Example 4 illustrates, the derivative of \(f(x)=x^{2}\) exists and equals \(2 c\) for any number \(c\). In other words, the derivative is itself a function, and using \(x\) for the independent variable, we can write \(f^{\prime}(x)=2 x\). The function \(f^{\prime}\) is called the derivative function of \(\boldsymbol{f}\) or the derivative of \(\boldsymbol{f}\). We also say that \(f\) is differentiable. The instruction "differentiate \(f\) " means "find the derivative of \(f\)."

\section*{3 Find Instantaneous Rates of Change}

The average rate of change of a function \(f\) from \(c\) to \(x\) is
\[
\frac{\Delta y}{\Delta x}=\frac{f(x)-f(c)}{x-c}
\]

The limit as \(x\) approaches \(c\) of the average rate of change of \(f\), based on formula (3), is the derivative of \(f\) at \(c\).

\section*{DEFINITION}

The derivative of \(f\) at \(c\) is also called the instantaneous rate of change of \(f\) with respect to \(\boldsymbol{x}\) at \(\boldsymbol{c}\). That is,
\[
\begin{equation*}
\binom{\text { Instantaneous rate of }}{\text { change of } f \text { with respect to } x \text { at } c}=f^{\prime}(c)=\lim _{x \rightarrow c} \frac{f(x)-f(c)}{x-c} \tag{4}
\end{equation*}
\]

\section*{EXAMPLE 5}

\section*{Finding the Instantaneous Rate of Change}

The volume \(V\) of a right circular cone of height \(h=6\) feet and radius \(r\) feet is \(V=V(r)=\frac{1}{3} \pi r^{2} h=2 \pi r^{2}\). If \(r\) is increasing, find the instantaneous rate of change of the volume \(V\) with respect to the radius \(r\) at \(r=3\).

Solution The instantaneous rate of change of \(V\) with respect to \(r\) at \(r=3\) is the derivative \(V^{\prime}(3)\).
\[
\begin{aligned}
V^{\prime}(3) & =\lim _{r \rightarrow 3} \frac{V(r)-V(3)}{r-3}=\lim _{r \rightarrow 3} \frac{2 \pi r^{2}-18 \pi}{r-3}=\lim _{r \rightarrow 3} \frac{2 \pi\left(r^{2}-9\right)}{r-3} \\
& =\lim _{r \rightarrow 3}[2 \pi(r+3)]=12 \pi
\end{aligned}
\]

At the instant \(r=3\) feet, the volume of the cone is increasing with respect to \(r\) at a rate of \(12 \pi \approx 37.699\) cubic feet per 1 -foot change in the radius.
amenow Work problem 43

\section*{4 Find the Instantaneous Speed of a Particle}

If \(s=f(t)\) denotes the position of a particle at time \(t\), then the average speed of the particle from \(c\) to \(t\) is
\[
\begin{equation*}
\frac{\text { Change in position }}{\text { Change in time }}=\frac{\Delta s}{\Delta t}=\frac{f(t)-f(c)}{t-c} \tag{5}
\end{equation*}
\]

The limit as \(t\) approaches \(c\) of the expression in formula (5) is the instantaneous speed of the particle at \(c\) or the velocity of the particle at \(c\). That is,
\[
\begin{equation*}
\binom{\text { Instantaneous speed of }}{\text { a particle at time } c}=f^{\prime}(c)=\lim _{t \rightarrow c} \frac{f(t)-f(c)}{t-c} \tag{6}
\end{equation*}
\]

\section*{EXAMPLE 6 Finding the Instantaneous Speed of a Particle}

In physics it is shown that the height \(s\) of a ball thrown straight up with an initial speed of 80 feet per second ( \(\mathrm{ft} / \mathrm{sec}\) ) from a rooftop 96 feet high is
\[
s=s(t)=-16 t^{2}+80 t+96
\]
where \(t\) is the elapsed time that the ball is in the air. The ball misses the rooftop on its way down and eventually strikes the ground. See Figure 19.
(a) When does the ball strike the ground? That is, how long is the ball in the air?
(b) At what time \(t\) will the ball pass the rooftop on its way down?
(c) What is the average speed of the ball from \(t=0\) to \(t=2\) ?
(d) What is the instantaneous speed of the ball at time \(t_{0}\) ?
(e) What is the instantaneous speed of the ball at \(t=2\) ?
(f) When is the instantaneous speed of the ball equal to zero?
(g) What is the instantaneous speed of the ball as it passes the rooftop on the way down?
(h) What is the instantaneous speed of the ball when it strikes the ground?

Solution (a) The ball strikes the ground when \(s=s(t)=0\).
\[
\begin{aligned}
-16 t^{2}+80 t+96 & =0 \\
t^{2}-5 t-6 & =0 \\
(t-6)(t+1) & =0 \\
t=6 \quad \text { or } \quad t & =-1
\end{aligned}
\]

Discard the solution \(t=-1\). The ball strikes the ground after 6 sec .
(b) The ball passes the rooftop when \(s=s(t)=96\).
\[
\begin{aligned}
-16 t^{2}+80 t+96 & =96 \\
t^{2}-5 t & =0 \\
t(t-5) & =0 \\
t=0 \quad \text { or } \quad t & =5
\end{aligned}
\]

Discard the solution \(t=0\). The ball passes the rooftop on the way down after 5 sec .
(c) The average speed of the ball from \(t=0\) to \(t=2\) is
\[
\frac{\Delta s}{\Delta t}=\frac{s(2)-s(0)}{2-0}=\frac{192-96}{2}=48 \mathrm{ft} / \mathrm{sec}
\]
(d) The instantaneous speed of the ball at time \(t_{0}\) is the derivative \(s^{\prime}\left(t_{0}\right)\); that is,
\[
\begin{aligned}
s^{\prime}\left(t_{0}\right) & =\lim _{t \rightarrow t_{0}} \frac{s(t)-s\left(t_{0}\right)}{t-t_{0}} \\
& =\lim _{t \rightarrow t_{0}} \frac{\left(-16 t^{2}+80 t+96\right)-\left(-16 t_{0}^{2}+80 t_{0}+96\right)}{t-t_{0}} \\
& =\lim _{t \rightarrow t_{0}} \frac{-16\left[t^{2}-t_{0}^{2}-5 t+5 t_{0}\right]}{t-t_{0}} \\
& =\lim _{t \rightarrow t_{0}} \frac{-16\left[\left(t+t_{0}\right)\left(t-t_{0}\right)-5\left(t-t_{0}\right)\right]}{t-t_{0}} \\
& =\lim _{t \rightarrow t_{0}} \frac{-16\left[\left(t+t_{0}-5\right)\left(t-t_{0}\right)\right]}{t-\tau_{0}}
\end{aligned}=\lim _{t \rightarrow t_{0}}\left[-16\left(t+t_{0}-5\right)\right] . \quad=-16\left(2 t_{0}-5\right) \mathrm{ft} / \mathrm{sec} 8
\]

Replace \(t_{0}\) by \(t\). The instantaneous speed of the ball at time \(t\) is
\[
s^{\prime}(t)=-16(2 t-5) \mathrm{ft} / \mathrm{sec}
\]

\section*{Exploration}

Determine the vertex of the quadratic function given in Example 6. What do you conclude about the velocity when \(s(t)\) is a maximum?
(e) At \(t=2 \mathrm{sec}\), the instantaneous speed of the ball is
\[
s^{\prime}(2)=-16(2 \cdot 2-5)=-16(-1)=16 \mathrm{ft} / \mathrm{sec}
\]
(f) The instantaneous speed of the ball is zero when
\[
\begin{aligned}
s^{\prime}(t) & =0 \\
-16(2 t-5) & =0 \\
t & =\frac{5}{2}=2.5 \mathrm{sec}
\end{aligned}
\]
(g) The ball passes the rooftop on the way down when \(t=5\). The instantaneous speed at \(t=5\) is
\[
s^{\prime}(5)=-16(10-5)=-80 \mathrm{ft} / \mathrm{sec}
\]

At \(t=5 \mathrm{sec}\), the ball is traveling \(-80 \mathrm{ft} / \mathrm{sec}\). When the instantaneous rate of change is negative, it means that the direction of the object is downward. The ball is traveling \(80 \mathrm{ft} / \mathrm{sec}\) in the downward direction when \(t=5 \mathrm{sec}\).
(h) The ball strikes the ground when \(t=6\). The instantaneous speed when \(t=6\) is
\[
s^{\prime}(6)=-16(12-5)=-112 \mathrm{ft} / \mathrm{sec}
\]

The speed of the ball at \(t=6 \mathrm{sec}\) is \(-112 \mathrm{ft} / \mathrm{sec}\). Again, the negative value implies that the ball is traveling downward.

\section*{SUMMARY}

The derivative of a function \(y=f(x)\) at \(c\) is defined as
\[
f^{\prime}(c)=\lim _{x \rightarrow c} \frac{f(x)-f(c)}{x-c}
\]

In geometry, \(f^{\prime}(c)\) equals the slope of the tangent line to the graph of \(f\) at the point \((c, f(c))\).
In physics, \(f^{\prime}(c)\) equals the instantaneous speed (velocity) of a particle at time \(c\), where \(s=f(t)\) is the position of the particle at time \(t\).

In applications, if two variables are related by the function \(y=f(x)\), then \(f^{\prime}(c)\) equals the instantaneous rate of change of \(f\) with respect to \(x\) at \(c\).

\subsection*{13.4 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. Find an equation of the line with slope 5 containing the point (2, -4). (p. 23)
2. True or False The average rate of change of a function \(f\) from \(a\) to \(b\) is
\[
\frac{f(b)+f(a)}{b+a}(\text { pp. 72-73) }
\]

\section*{Concepts and Vocabulary}
3. If \(\lim _{x \rightarrow c} \frac{f(x)-f(c)}{x-c}\) exists, it equals the slope of the
\(\qquad\) to the graph of \(f\) at the point \((c, f(c))\).
4. If \(\lim _{x \rightarrow c} \frac{f(x)-f(c)}{x-c}\) exists, it is called the \(\qquad\) of \(f\) at \(c\).
5. If \(s=f(t)\) denotes the position of a particle at time \(t\), the derivative \(f^{\prime}(c)\) is the \(\qquad\) of the particle at \(c\).
6. True or False The tangent line to a function is the limiting position of a secant line.
7. True or False The slope of the tangent line to the graph of \(f\) at \((c, f(c))\) is the derivative of \(f\) at \(c\).
8. True or False The velocity of a particle whose position at time \(t\) is \(s(t)\) is the derivative \(s^{\prime}(t)\).

\section*{Skill Building}

In Problems 9-20, find the slope of the tangent line to the graph of \(f\) at the given point. Graph \(f\) and the tangent line.
9. \(f(x)=3 x+5\) at \((1,8)\)
10. \(f(x)=-2 x+1\) at \((-1,3)\)
11. \(f(x)=x^{2}+2\) at \((-1,3)\)
12. \(f(x)=3-x^{2}\) at \((1,2)\)
13. \(f(x)=3 x^{2}\) at \((2,12)\)
14. \(f(x)=-4 x^{2}\) at \((-2,-16)\)
15. \(f(x)=2 x^{2}+x\) at \((1,3)\)
16. \(f(x)=3 x^{2}-x\) at \((0,0)\)
17. \(f(x)=x^{2}-2 x+3\) at \((-1,6)\)
18. \(f(x)=-2 x^{2}+x-3\) at \((1,-4)\)
19. \(f(x)=x^{3}+x\) at \((2,10)\)
20. \(f(x)=x^{3}-x^{2}\) at \((1,0)\)

In Problems 21-32, find the derivative of each function at the given number.
21. \(f(x)=-4 x+5\) at 3
22. \(f(x)=-4+3 x\) at 1
23. \(f(x)=x^{2}-3\) at 0
24. \(f(x)=2 x^{2}+1\) at -1
25. \(f(x)=2 x^{2}+3 x\) at 1
26. \(f(x)=3 x^{2}-4 x\) at 2
27. \(f(x)=x^{3}+4 x\) at -1
28. \(f(x)=2 x^{3}-x^{2}\) at 2
29. \(f(x)=x^{3}+x^{2}-2 x\) at 1
30. \(f(x)=x^{3}-2 x^{2}+x\) at -1
31. \(f(x)=\sin x\) at 0
32. \(f(x)=\cos x\) at 0

In Problems 33-42, use a graphing utility to find the derivative of each function at the given number.
33. \(f(x)=3 x^{3}-6 x^{2}+2\) at -2
34. \(f(x)=-5 x^{4}+6 x^{2}-10\) at 5
35. \(f(x)=\frac{-x^{3}+1}{x^{2}+5 x+7}\) at 8
36. \(f(x)=\frac{-5 x^{4}+9 x+3}{x^{3}+5 x^{2}-6}\) at -3
37. \(f(x)=x \sin x\) at \(\frac{\pi}{3}\)
38. \(f(x)=x \sin x\) at \(\frac{\pi}{4}\)
39. \(f(x)=x^{2} \sin x\) at \(\frac{\pi}{3}\)
40. \(f(x)=x^{2} \sin x\) at \(\frac{\pi}{4}\)
41. \(f(x)=e^{x} \sin x\) at 2
42. \(f(x)=e^{-x} \sin x\) at 2

\section*{Applications and Extensions}
43. Instantaneous Rate of Change The volume \(V\) of a right circular cylinder of height 3 feet and radius \(r\) feet is \(V=V(r)=3 \pi r^{2}\). Find the instantaneous rate of change of the volume with respect to the radius \(r\) at \(r=3\).
44. Instantaneous Rate of Change The surface area \(S\) of a sphere of radius \(r\) feet is \(S=S(r)=4 \pi r^{2}\). Find the instantaneous rate of change of the surface area with respect to the radius \(r\) at \(r=2\).
45. Instantaneous Rate of Change The volume \(V\) of a sphere of radius \(r\) feet is \(V=V(r)=\frac{4}{3} \pi r^{3}\). Find the instantaneous rate of change of the volume with respect to the radius \(r\) at \(r=2\).
46. Instantaneous Rate of Change The volume \(V\) of a cube of side \(x\) meters is \(V=V(x)=x^{3}\). Find the instantaneous rate of change of the volume with respect to the side \(x\) at \(x=3\).
47. Instantaneous Speed of a Ball In physics it is shown that the height \(s\) of a ball thrown straight up with an initial speed of \(96 \mathrm{ft} / \mathrm{sec}\) from ground level is
\[
s=s(t)=-16 t^{2}+96 t
\]
where \(t\) is the elapsed time that the ball is in the air.
(a) When does the ball strike the ground? That is, how long is the ball in the air?
(b) What is the average speed of the ball from \(t=0\) to \(t=2\) ?
(c) What is the instantaneous speed of the ball at time \(t\) ?
(d) What is the instantaneous speed of the ball at \(t=2\) ?
(e) When is the instantaneous speed of the ball equal to zero?
(f) How high is the ball when its instantaneous speed equals zero?
(g) What is the instantaneous speed of the ball when it strikes the ground?
48. Instantaneous Speed of a Ball In physics it is shown that the height \(s\) of a ball thrown straight down with an initial speed of \(48 \mathrm{ft} / \mathrm{sec}\) from a rooftop 160 feet high is
\[
s=s(t)=-16 t^{2}-48 t+160
\]
where \(t\) is the elapsed time that the ball is in the air.
(a) When does the ball strike the ground? That is, how long is the ball in the air?
(b) What is the average speed of the ball from \(t=0\) to \(t=1\) ?
(c) What is the instantaneous speed of the ball at time \(t\) ?
(d) What is the instantaneous speed of the ball at \(t=1\) ?
(e) What is the instantaneous speed of the ball when it strikes the ground?
49. Instantaneous Speed on the Moon An astronaut throws a ball down into a crater on the moon. The height \(s\) (in feet) of the ball from the bottom of the crater after \(t\) seconds is given in the following table:
\begin{tabular}{lll|}
\begin{tabular}{l} 
Time, \(t\) \\
(in seconds)
\end{tabular} & \begin{tabular}{l} 
Distance, \(s\) \\
(in feet)
\end{tabular} \\
\hline 0 & 1000 \\
1 & 987 \\
2 & 969 \\
3 & 945 \\
4 & 917 \\
5 & 883 \\
6 & 843 \\
7 & 800 \\
8 & 749 \\
\hline
\end{tabular}
(a) Find the average speed from \(t=1\) to \(t=4\) seconds.
(b) Find the average speed from \(t=1\) to \(t=3\) seconds.
(c) Find the average speed from \(t=1\) to \(t=2\) seconds.
(d) Using a graphing utility, find the quadratic function of best fit.
(e) Using the function found in part (d), determine the instantaneous speed at \(t=1\) second.
50. Instantaneous Rate of Change The data to the right represent 4. the total revenue \(R\) (in dollars) received from selling \(x\) bicycles at Tunney's Bicycle Shop.
(a) Find the average rate of change in revenue from \(x=25\) to \(x=150\) bicycles.
(b) Find the average rate of change in revenue from \(x=25\) to \(x=102\) bicycles.
(c) Find the average rate of change in revenue from \(x=25\) to \(x=60\) bicycles.
(d) Using a graphing utility, find the quadratic function of best fit.
\(\left.\begin{array}{|cc|}\hline 0 & \begin{array}{l}\text { Number of } \\ \text { Bicycles, } x\end{array}\end{array} \begin{array}{l}\text { Total Revenue, } \boldsymbol{R} \\ \text { (in dollars) }\end{array}\right]\)
(e) Using the function found in part (d), determine the instantaneous rate of change of revenue at \(x=25\) bicycles.

\section*{Retain Your Knowledge}

Problems 51-54 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
51. Find the vertex and focus of the parabola
\(x^{2}-2 x-2 y+7=0\).
52. Solve the system by substitution: \(\left\{\begin{array}{l}y=x+4 \\ x^{2}-y=-2\end{array}\right.\)
53. Evaluate: \(C(5,3)\)
54. Find the area of the given triangle, rounded to two decimal places.

\section*{'Are You Prepared?' Answers}

\section*{1. \(y=5 x-14 \quad\) 2. False}

\subsection*{13.5 The Area Problem; The Integral}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Geometry Formulas (Appendix A, Section A.2, pp. A15-A16)

Now Work the 'Are You Prepared?’ problems on page 923.

OBJECTIVES 1 Approximate the Area under the Graph of a Function (p. 919)
2 Approximate Integrals Using a Graphing Utility (p. 923)

Figure 20

\section*{The Area Problem}

The development of the integral, like that of the derivative, was originally motivated to a large extent by a problem in geometry: the area problem.

\section*{Area Problem}

Suppose that \(y=f(x)\) is a function whose domain is a closed interval [ \(a, b]\). We assume that \(f(x) \geq 0\) for all \(x\) in \([a, b]\). Find the area enclosed by the graph of \(f\), the \(x\)-axis, and the vertical lines \(x=a\) and \(x=b\).

Figure 20 illustrates the area problem. We refer to the area \(A\) shown as the area under the graph of \(f\) from \(a\) to \(b\).

For a constant function \(f(x)=k\) and for a linear function \(f(x)=m x+B\), we can solve the area problem using formulas from geometry. See Figures 21(a) and (b).

Figure 21

(a)

(b)

For most other functions, no formulas from geometry are available.
We begin by discussing a way to approximate the area under the graph of a function \(f\) from \(a\) to \(b\).

\section*{1 Approximate the Area under the Graph of a Function}

We use rectangles to approximate the area under the graph of a function \(f\). We do this by partitioning or dividing the interval \([a, b]\) into subintervals of equal length. On each subinterval, we form a rectangle whose base is the length of the subinterval and whose height is \(f(u)\) for some number \(u\) in the subinterval. Look at Figure 22.

Figure 22

(a)

\[
\left|\underset{\frac{b-a}{4}}{ }\right| \underset{\frac{b-a}{4}}{ }\left|\underset{\frac{b-a}{4}}{ }\right| \underset{\frac{b-a}{4}}{ } \mathbf{}
\]

4 subintervals
(b)

In Figure 22(a), the interval [ \(a, b\) ] is partitioned into two subintervals, each of length \(\frac{b-a}{2}\), and the number \(u\) is chosen as the left endpoint of each subinterval.

In Figure 22(b), the interval \([a, b]\) is partitioned into four subintervals, each of length \(\frac{b-a}{4}\), and the number \(u\) is chosen as the right endpoint of each subinterval.

The area \(A\) under \(f\) from \(a\) to \(b\) is approximated by adding the areas of the rectangles formed by the partition.

Using Figure 22(a),
\[
\text { Area } \begin{aligned}
A & \approx \text { area of first rectangle }+ \text { area of second rectangle } \\
& =f\left(u_{1}\right) \frac{b-a}{2}+f\left(u_{2}\right) \frac{b-a}{2}
\end{aligned}
\]

Using Figure 22(b),
Area \(A \approx\) area of first rectangle + area of second rectangle
\[
+ \text { area of third rectangle }+ \text { area of fourth rectangle }
\]
\[
=f\left(u_{1}\right) \frac{b-a}{4}+f\left(u_{2}\right) \frac{b-a}{4}+f\left(u_{3}\right) \frac{b-a}{4}+f\left(u_{4}\right) \frac{b-a}{4}
\]

In approximating the area under the graph of a function \(f\) from \(a\) to \(b\), the choice of the number \(u\) in each subinterval is arbitrary. For convenience, we shall always pick \(u\) as either the left endpoint of each subinterval or the right endpoint. The choice of how many subintervals to use is also arbitrary. In general, the more subintervals used, the better the approximation will be. Let's look at a specific example.

\section*{EXAMPLE I}

Figure 23

2 subintervals; u's are left endpoints
(a)

2 subintervals; u's are right endpoints
(b)

4 subintervals; u's are left endpoints
(c)

Approximating the Area under the Graph of \(f(x)=2 x\) from 0 to I
Approximate the area \(A\) under the graph of \(f(x)=2 x\) from 0 to 1 as follows:
(a) Partition \([0,1]\) into two subintervals of equal length and choose \(u\) as the left endpoint.
(b) Partition \([0,1]\) into two subintervals of equal length and choose \(u\) as the right endpoint.
(c) Partition \([0,1]\) into four subintervals of equal length and choose \(u\) as the left endpoint.
(d) Partition \([0,1]\) into four subintervals of equal length and choose \(u\) as the right endpoint.
(e) Compare the approximations found in parts (a)-(d) with the actual area.
(a) Partition \([0,1]\) into two subintervals, each of length \(\frac{1}{2}\), and choose \(u\) as the left endpoint. See Figure 23(a). The area \(A\) is approximated as
\[
\begin{aligned}
A & \approx f(0)\left(\frac{1}{2}\right)+f\left(\frac{1}{2}\right)\left(\frac{1}{2}\right) \\
& =(0)\left(\frac{1}{2}\right)+(1)\left(\frac{1}{2}\right) \quad f(0)=2 \cdot 0=0 ; f\left(\frac{1}{2}\right)=2 \cdot \frac{1}{2}=1 \\
& =\frac{1}{2}=0.5
\end{aligned}
\]
(b) Partition \([0,1]\) into two subintervals, each of length \(\frac{1}{2}\), and choose \(u\) as the right endpoint. See Figure 23(b). The area \(A\) is approximated as
\[
\begin{aligned}
A & \approx f\left(\frac{1}{2}\right)\left(\frac{1}{2}\right)+f(1)\left(\frac{1}{2}\right) \\
& =(1)\left(\frac{1}{2}\right)+(2)\left(\frac{1}{2}\right) \\
& =\frac{3}{2}=1.5
\end{aligned}
\]
(c) Partition \([0,1]\) into four subintervals, each of length \(\frac{1}{4}\), and choose \(u\) as the left endpoint. See Figure 23(c). The area \(A\) is approximated as
\[
\begin{aligned}
A & \approx f(0)\left(\frac{1}{4}\right)+f\left(\frac{1}{4}\right)\left(\frac{1}{4}\right)+f\left(\frac{1}{2}\right)\left(\frac{1}{4}\right)+f\left(\frac{3}{4}\right)\left(\frac{1}{4}\right) \\
& =(0)\left(\frac{1}{4}\right)+\left(\frac{1}{2}\right)\left(\frac{1}{4}\right)+(1)\left(\frac{1}{4}\right)+\left(\frac{3}{2}\right)\left(\frac{1}{4}\right) \\
& =\frac{3}{4}=0.75
\end{aligned}
\]

Figure 23 (continued)

4 subintervals; u's are right endpoints (d)
(d) Partition \([0,1]\) into four subintervals, each of length \(\frac{1}{4}\), and choose \(u\) as the right endpoint. See Figure \(23(\mathrm{~d})\). The area \(A\) is approximated as
\[
\begin{aligned}
A & \approx f\left(\frac{1}{4}\right)\left(\frac{1}{4}\right)+f\left(\frac{1}{2}\right)\left(\frac{1}{4}\right)+f\left(\frac{3}{4}\right)\left(\frac{1}{4}\right)+f(1)\left(\frac{1}{4}\right) \\
& =\left(\frac{1}{2}\right)\left(\frac{1}{4}\right)+(1)\left(\frac{1}{4}\right)+\left(\frac{3}{2}\right)\left(\frac{1}{4}\right)+(2)\left(\frac{1}{4}\right) \\
& =\frac{5}{4}=1.25
\end{aligned}
\]
(e) The actual area under the graph of \(f(x)=2 x\) from 0 to 1 is the area of a right triangle whose base is of length 1 and whose height is 2 . The actual area \(A\) is therefore
\[
A=\frac{1}{2} \text { base } \times \text { height }=\left(\frac{1}{2}\right)(1)(2)=1
\]

Now look at Table 7, which shows the approximations to the area under the graph of \(f(x)=2 x\) from 0 to 1 for \(n=2,4,10\), and 100 subintervals. Notice that the approximations to the actual area improve as the number of subintervals increases.

Table 7
\begin{tabular}{|l|cllccc|}
\hline Using left endpoints: & \(n\) & 2 & 4 & 10 & 100 \\
& Area & 0.5 & 0.75 & 0.9 & 0.99 \\
Using right endpoints: & \(n\) & 2 & 4 & 10 & 100 \\
& Area & 1.5 & 1.25 & 1.1 & 1.01 \\
\hline
\end{tabular}

You are asked to confirm the entries in Table 7 in Problem 31.
There is another useful observation about Example 1. Look again at Figures 23(a)-(d) and at Table 7. Since the graph of \(f(x)=2 x\) is increasing on \([0,1]\), the choice of \(u\) as the left endpoint gives a lower-bound estimate to the actual area, while choosing \(u\) as the right endpoint gives an upper-bound estimate. Do you see why?

\section*{Now Work problem 9}

\section*{EXAMPLE 2 Approximating the Area under the Graph of \(f(x)=x^{2}\)}

Approximate the area under the graph of \(f(x)=x^{2}\) from 1 to 5 as follows:
(a) Using four subintervals of equal length
(b) Using eight subintervals of equal length

In each case, choose the number \(u\) to be the left endpoint of each subinterval.
Solution (a) See Figure 24. Using four subintervals of equal length, the interval [1,5] is partitioned into subintervals of length \(\frac{5-1}{4}=1\) as follows:
\[
[1,2] \quad[2,3] \quad[3,4] \quad[4,5]
\]

Each of these subintervals is of length 1 . Choosing \(u\) as the left endpoint of each subinterval, the area \(A\) under the graph of \(f(x)=x^{2}\) is approximated by
\[
\text { Area } \begin{aligned}
A & \approx f(1)(1)+f(2)(1)+f(3)(1)+f(4)(1) \\
& =1+4+9+16=30
\end{aligned}
\]
(b) See Figure 25 on the next page. Using eight subintervals of equal length, the interval \([1,5]\) is partitioned into subintervals of length \(\frac{5-1}{8}=0.5\) as follows:
[1, 1.5]
\([1.5,2]\)
\([2,2.5]\)
\([2.5,3]\)
\([3,3.5]\)
\([3.5,4] \quad[4,4.5]\)
\([4.5,5]\)

Figure 25

8 subintervals; each of length \(1 / 2\)
Figure 26

\[
|\stackrel{\leftrightarrow}{\Delta x}|
\]

Each of these subintervals is of length 0.5 . Choosing \(u\) as the left endpoint of each subinterval, the area \(A\) under the graph of \(f(x)=x^{2}\) is approximated by
\[
\begin{aligned}
\text { Area } A \approx & f(1)(0.5)+f(1.5)(0.5)+f(2)(0.5)+f(2.5)(0.5) \\
& +f(3)(0.5)+f(3.5)(0.5)+f(4)(0.5)+f(4.5)(0.5) \\
= & {[f(1)+f(1.5)+f(2)+f(2.5)+f(3)+f(3.5)+f(4)+f(4.5)](0.5) } \\
= & {[1+2.25+4+6.25+9+12.25+16+20.25](0.5) } \\
= & 35.5
\end{aligned}
\]

In general, we approximate the area under the graph of a function \(y=f(x)\) from \(a\) to \(b\) as follows:
1. Partition the interval \([a, b]\) into \(n\) subintervals of equal length. The length \(\Delta x\) of each subinterval is then
\[
\Delta x=\frac{b-a}{n}
\]
2. In each of these subintervals, pick a number \(u\) and evaluate the function \(f\) at each \(u\). This results in \(n\) numbers \(u_{1}, u_{2}, \ldots, u_{n}\) and \(n\) functional values \(f\left(u_{1}\right), f\left(u_{2}\right), \ldots, f\left(u_{n}\right)\).
3. Form \(n\) rectangles with base equal to \(\Delta x\), the length of each subinterval, and with height equal to the functional value \(f\left(u_{i}\right), i=1,2, \ldots, n\). See Figure 26.
4. Add up the areas of the \(n\) rectangles.
\[
\begin{aligned}
A_{1}+A_{2}+\cdots+A_{n} & =f\left(u_{1}\right) \Delta x+f\left(u_{2}\right) \Delta x+\cdots+f\left(u_{n}\right) \Delta x \\
& =\sum_{i=1}^{n} f\left(u_{i}\right) \Delta x
\end{aligned}
\]

This number is the approximation to the area under the graph of \(f\) from \(a\) to \(b\).

\section*{Definition of Area}

We have observed that the larger the number \(n\) of subintervals used, the better the approximation to the area. If we let \(n\) become unbounded, we obtain the exact area under the graph of \(f\) from \(a\) to \(b\).

\section*{DEFINITION}

\section*{Area under a Graph}

Let \(f\) denote a function whose domain is a closed interval \([a, b]\) and suppose \(f(x) \geq 0\) on \([a, b]\). Partition \([a, b]\) into \(n\) subintervals, each of length \(\Delta x=\frac{b-a}{n}\). In each subinterval, pick a number \(u_{i}, i=1,2, \ldots, n\), and evaluate \(f\left(u_{i}\right)\). Form the products \(f\left(u_{i}\right) \Delta x\) and add them up, obtaining the sum
\[
\sum_{i=1}^{n} f\left(u_{i}\right) \Delta x
\]

If the limit of this sum exists as \(n \rightarrow \infty\), that is,
\[
\text { if } \quad \lim _{n \rightarrow \infty} \sum_{i=1}^{n} f\left(u_{i}\right) \Delta x \quad \text { exists }
\]
it is defined as the area under the graph of \(f\) from \(a\) to \(b\). If this limit exists, it is denoted by
\[
\int_{a}^{b} f(x) d x
\]
which is read as "the integral from \(a\) to \(b\) of \(f(x)\)."

\section*{2 Approximate Integrals Using a Graphing Utility}

\section*{EXAMPLE 3 Using a Graphing Utility to Approximate an Integral}

Use a graphing utility to approximate the area under the graph of \(f(x)=x^{2}\) from 1 to 5 . That is, evaluate the integral
\[
\int_{1}^{5} x^{2} d x
\]

Figure 27
Solution

Ans. Fr -a
\(124 / 3\)

Figure 27 shows the result using a TI-84 Plus calculator. Consult your owner's manual for the proper keystrokes.
The value of the integral is \(\frac{124}{3}\).
In calculus, techniques are given for evaluating integrals to obtain exact answers.

\subsection*{13.5 Assess Your Understanding}

\section*{'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.}
1. The formula for the area \(A\) of a rectangle of length \(l\) and width \(w\) is \(\qquad\) . (p. A15)
2. \(\sum_{k=1}^{4}(2 k+1)=\). (pp. \(\left.824-826\right)\)

\section*{Concepts and Vocabulary}
3. The integral from \(a\) to \(b\) of \(f(x)\) is denoted by \(\qquad\) .
4. The area under the graph of \(f\) from \(a\) to \(b\) is denoted by

\section*{Skill Building}

In Problems 5 and 6, refer to the illustration. The interval \([1,3]\) is partitioned into two subintervals [1,2] and [2,3].

5. Approximate the area \(A\), choosing \(u\) as the left endpoint of each subinterval.
6. Approximate the area \(A\), choosing \(u\) as the right endpoint of each subinterval.
In Problems 7 and 8, refer to the illustration. The interval \([0,8]\) is partitioned into four subintervals \([0,2],[2,4],[4,6]\), and \([6,8]\).

\[
f(0)=10, f(2)=6, f(4)=7, f(6)=5, f(8)=1
\]
7. Approximate the area \(A\), choosing \(u\) as the left endpoint of each subinterval.
8. Approximate the area \(A\), choosing \(u\) as the right endpoint of each subinterval.
9. The function \(f(x)=3 x\) is defined on the interval \([0,6]\).
(a) Graph \(f\).

In (b)-(e), approximate the area \(A\) under \(f\) from 0 to 6 as follows:
(b) Partition \([0,6]\) into three subintervals of equal length and choose \(u\) as the left endpoint of each subinterval.
(c) Partition \([0,6]\) into three subintervals of equal length and choose \(u\) as the right endpoint of each subinterval.
(d) Partition \([0,6]\) into six subintervals of equal length and choose \(u\) as the left endpoint of each subinterval.
(e) Partition [0,6] into six subintervals of equal length and choose \(u\) as the right endpoint of each subinterval.
(f) What is the actual area \(A\) ?
10. Repeat Problem 9 for \(f(x)=4 x\).
11. The function \(f(x)=-3 x+9\) is defined on the interval \([0,3]\).
(a) Graph \(f\).

In (b)-(e), approximate the area \(A\) under \(f\) from 0 to 3 as follows:
(b) Partition \([0,3]\) into three subintervals of equal length and choose \(u\) as the left endpoint of each subinterval.
(c) Partition \([0,3]\) into three subintervals of equal length and choose \(u\) as the right endpoint of each subinterval.
(d) Partition \([0,3]\) into six subintervals of equal length and choose \(u\) as the left endpoint of each subinterval.
(e) Partition \([0,3]\) into six subintervals of equal length and choose \(u\) as the right endpoint of each subinterval.
(f) What is the actual area \(A\) ?
12. Repeat Problem 11 for \(f(x)=-2 x+8\).

In Problems 13-22, a function \(f\) is defined over an interval \([a, b]\).
(a) Graph \(f\), indicating the area \(A\) under from a to \(b\).
(b) Approximate the area A by partitioning \([a, b]\) into four subintervals of equal length and choosing \(u\) as the left endpoint of each subinterval.
(c) Approximate the area \(A\) by partitioning [ \(a, b]\) into eight subintervals of equal length and choosing \(u\) as the left endpoint of each subinterval.
(d) Express the area \(A\) as an integral.
(e) Use a graphing utility to approximate the integral.
13. \(f(x)=x^{2}+2, \quad[0,4]\)
14. \(f(x)=x^{2}-4, \quad[2,6]\)
15. \(f(x)=x^{3}, \quad[0,4]\)
16. \(f(x)=x^{3},[1,5]\)
17. \(f(x)=\frac{1}{x}, \quad[1,5]\)
18. \(f(x)=\sqrt{x},[0,4]\)
19. \(f(x)=e^{x}, \quad[-1,3]\)
20. \(f(x)=\ln x, \quad[3,7]\)
21. \(f(x)=\sin x, \quad[0, \pi]\)
22. \(f(x)=\cos x, \quad\left[0, \frac{\pi}{2}\right]\)
In Problems 23-30, an integral is given.
(a) What area does the integral represent?
(b) Provide a graph that illustrates this area.
(c) Use a graphing utility to approximate this area.
23. \(\int_{0}^{4}(3 x+1) d x\)
24. \(\int_{1}^{3}(-2 x+7) d x\)
25. \(\int_{2}^{5}\left(x^{2}-1\right) d x\)
26. \(\int_{0}^{4}\left(16-x^{2}\right) d x\)
27. \(\int_{0}^{\pi / 2} \sin x d x\)
28. \(\int_{-\pi / 4}^{\pi / 4} \cos x d x\)
29. \(\int_{0}^{2} e^{x} d x\)
30. \(\int_{e}^{2 e} \ln x d x\)
31. Confirm the entries in Table 7.
[Hint: Review the formula for the sum of an arithmetic sequence.]
32. Consider the function \(f(x)=\sqrt{1-x^{2}}\) whose domain is the interval \([-1,1]\).
(a) Graph \(f\).
(b) Approximate the area under the graph of \(f\) from -1 to 1 by dividing \([-1,1]\) into five subintervals, each of equal length.
(c) Approximate the area under the graph of \(f\) from -1 to 1 by dividing \([-1,1]\) into ten subintervals, each of equal length.
(d) Express the area as an integral.
(e) Evaluate the integral using a graphing utility.
(f) What is the actual area?

\section*{Retain Your Knowledge}

Problems 33-36 are based on material learned earlier in the course. The purpose of these problems is to keep the material fresh in your mind so that you are better prepared for the final exam.
33. Graph the function \(f(x)=\log _{2} x\).
34. If \(A=\left[\begin{array}{ll}1 & 2 \\ 3 & 4\end{array}\right]\) and \(B=\left[\begin{array}{lll}5 & 6 & 0 \\ 7 & 8 & 1\end{array}\right]\), find \(A B\).
35. if \(f(x)=2 x^{2}+3 x+1, \quad\) find \(\frac{f(x+h)-f(x)}{h}\) and simplify.
36. Find the partial fraction decomposition of \(\frac{16}{(x-2)(x+2)^{2}}\).

\section*{Chapter Review}

\section*{Things to Know}

\section*{Limit (p. 892)}
\[
\lim _{x \rightarrow c} f(x)=N
\]

As \(x\) gets closer to \(c, x \neq c\), the value of \(f\) gets closer to \(N\).

\section*{Limit formulas (p. 897)}
\[
\begin{aligned}
& \lim _{x \rightarrow c} b=b \\
& \lim _{x \rightarrow c} x=c
\end{aligned}
\]

The limit of a constant is the constant.
The limit of \(x\) as \(x\) approaches \(c\) is \(c\).

Limit properties (pp. 898, 900, 901)
\(\lim _{x \rightarrow c}[f(x)+g(x)]=\lim _{x \rightarrow c} f(x)+\lim _{x \rightarrow c} g(x)\)
\(\lim _{x \rightarrow c}[f(x)-g(x)]=\lim _{x \rightarrow c} f(x)-\lim _{x \rightarrow c} g(x)\)
\(\lim _{x \rightarrow c}[f(x) \cdot g(x)]=\lim _{x \rightarrow c} f(x) \cdot \lim _{x \rightarrow c} g(x)\)
\(\lim _{x \rightarrow c}\left[\frac{f(x)}{g(x)}\right]=\frac{\lim _{x \rightarrow c} f(x)}{\lim _{x \rightarrow c} g(x)}\left(\lim _{x \rightarrow c} g(x) \neq 0\right)\)
\(\lim _{x \rightarrow c}[f(x)]^{n}=\left[\lim _{x \rightarrow c} f(x)\right]^{n}\)
\(\lim _{x \rightarrow c} \sqrt[n]{f(x)}=\sqrt[n]{\lim _{x \rightarrow c} f(x)}\)
Limit of a polynomial (p.899)
\(\lim _{x \rightarrow c} P(x)=P(c)\), where \(P\) is a polynomial

\section*{Continuous function (p. 906)}
\(\lim _{x \rightarrow c} f(x)=f(c)\)

The limit of a sum equals the sum of the limits.
The limit of a difference equals the difference of the limits.
The limit of a product equals the product of the limits.

The limit of a quotient equals the quotient of the limits, provided that the limit of the denominator is not zero.
Provided \(\lim _{x \rightarrow c} f(x)\) exists, \(n \geq 2\) an integer.
Provided \(\sqrt[n]{f(x)}\) and \(\sqrt[n]{\lim _{x \rightarrow c} f(x)}\) are both defined, \(n \geq 2\) an integer.

\section*{Derivative of a function (p. 913)}
\(f^{\prime}(c)=\lim _{x \rightarrow c} \frac{f(x)-f(c)}{x-c}\), provided that the limit exists

\section*{Area under a graph (p. 922)}
\(\int_{a}^{b} f(x) d x=\lim _{n \rightarrow \infty} \sum_{i=1}^{n} f\left(u_{i}\right) \Delta x\), provided that the limit exists

8. \(\lim _{x \rightarrow-3} \frac{x^{2}-9}{x^{2}-x-12}\)
9. \(\lim _{x \rightarrow-1} \frac{x^{2}-1}{x^{3}-1}\)
10. \(\lim _{x \rightarrow 2} \frac{x^{3}-8}{x^{3}-2 x^{2}+4 x-8}\)
11. \(\lim _{x \rightarrow 3} \frac{x^{4}-3 x^{3}+x-3}{x^{3}-3 x^{2}+2 x-6}\)

In Problems 12-15, determine whether \(f\) is continuous at \(c\).
12. \(f(x)=3 x^{4}-x^{2}+2 \quad c=5\)
14. \(f(x)=\left\{\begin{array}{ll}\frac{x^{2}-4}{x+2} & \text { if } x \neq-2 \\ 4 & \text { if } x=-2\end{array} \quad c=-2\right.\)
13. \(f(x)=\frac{x^{2}-4}{x+2} \quad c=-2\)
15. \(f(x)=\left\{\begin{array}{ll}\frac{x^{2}-4}{x+2} & \text { if } x \neq-2 \\ -4 & \text { if } x=-2\end{array} \quad c=-2\right.\)

In Problems 16-27, use the accompanying graph of \(y=f(x)\).
16. What is the domain of \(f\) ?
17. What is the range of \(f\) ?
18. Find the \(x\)-intercept(s), if any, of \(f\).
19. Find the \(y\)-intercept(s), if any, of \(f\).
20. Find \(f(-6)\) and \(f(-4)\).
21. Find \(\lim _{x \rightarrow-4^{-}} f(x)\).
22. Find \(\lim _{x \rightarrow-4^{+}} f(x)\).
23. Find \(\lim _{x \rightarrow 2^{-}} f(x)\).
25. Does \(\lim _{x \rightarrow 0} f(x)\) exist? If it does, what is it?
24. Find \(\lim _{x \rightarrow 2^{+}} f(x)\).
26. Is \(f\) continuous at 0 ?
27. Is \(f\) continuous at 4 ?
28. Discuss whether \(R(x)=\frac{x+4}{x^{2}-16}\) is continuous at \(c=-4\) and \(c=4\). Use limits to analyze the graph of \(R\) at \(c\).
29. Determine where the rational function \(R(x)=\frac{x^{3}-2 x^{2}+4 x-8}{x^{2}-11 x+18}\) is undefined. Determine whether an asymptote or a hole appears at such numbers.

In Problems 30-32, find the slope of the tangent line to the graph of \(f\) at the given point. Graph \(f\) and the tangent line.
30. \(f(x)=2 x^{2}+8 x\) at \((1,10)\)
31. \(f(x)=x^{2}+2 x-3\) at \((-1,-4)\)
32. \(f(x)=x^{3}+x^{2}\) at \((2,12)\)

In Problems 33-35, find the derivative of each function at the number indicated.
33. \(f(x)=-4 x^{2}+5\) at 3
34. \(f(x)=x^{2}-3 x\) at 0
35. \(f(x)=2 x^{2}+3 x+2\) at 1

In Problems 36 and 37, find the derivative of each function at the number indicated using a graphing utility.
36. \(f(x)=4 x^{4}-3 x^{3}+6 x-9\) at -2
37. \(f(x)=x^{3} \tan x\) at \(\frac{\pi}{6}\)
38. Instantaneous Speed of a Ball In physics it is shown that the height \(s\) of a ball thrown straight up with an initial speed of \(96 \mathrm{ft} / \mathrm{sec}\) from a rooftop 112 feet high is
\[
s=s(t)=-16 t^{2}+96 t+112
\]
where \(t\) is the elapsed time that the ball is in the air. The ball misses the rooftop on its way down and eventually strikes the ground.
(a) When does the ball strike the ground? That is, how long is the ball in the air?
(b) At what time \(t\) will the ball pass the rooftop on its way down?
(c) What is the average speed of the ball from \(t=0\) to \(t=2\) ?
(d) What is the instantaneous speed of the ball at time \(t\) ?
(e) What is the instantaneous speed of the ball at \(t=2\) ?
(f) When is the instantaneous speed of the ball equal to zero?
(g) What is the instantaneous speed of the ball as it passes the rooftop on the way down?
(h) What is the instantaneous speed of the ball when it strikes the ground?
39. Instantaneous Rate of Change The following data represent the revenue \(R\) (in dollars) received from selling \(x\) wristwatches at Wilk's Watch Shop.

(a) Find the average rate of change of revenue from \(x=25\) to \(x=130\) wristwatches.
(b) Find the average rate of change of revenue from \(x=25\) to \(x=90\) wristwatches.
(c) Find the average rate of change of revenue from \(x=25\) to \(x=50\) wristwatches.
(d) Using a graphing utility, find the quadratic function of best fit.
(e) Using the function found in part (d), determine the instantaneous rate of change of revenue at \(x=25\) wristwatches.
40. The function \(f(x)=2 x+3\) is defined on the interval [0, 4].
(a) Graph \(f\).

In (b)-(e), approximate the area \(A\) under \(f\) from \(x=0\) to \(x=4\) as follows:
(b) Partition \([0,4]\) into four subintervals of equal length and choose \(u\) as the left endpoint of each subinterval.
(c) Partition \([0,4]\) into four subintervals of equal length and choose \(u\) as the right endpoint of each subinterval.
(d) Partition \([0,4]\) into eight subintervals of equal length and choose \(u\) as the left endpoint of each subinterval.
(e) Partition \([0,4]\) into eight subintervals of equal length and choose \(u\) as the right endpoint of each subinterval.
(f) What is the actual area \(A\) ?

In Problems 41 and 42, a function fis defined over an interval \([a, b]\).
(a) Graph \(f\), indicating the area \(A\) under from a to \(b\).
(b) Approximate the area \(A\) by partitioning \([a, b]\) into three subintervals of equal length and choosing \(u\) as the left endpoint of each subinterval.
(c) Approximate the area \(A\) by partitioning \([a, b]\) into six subintervals of equal length and choosing \(u\) as the left endpoint of each subinterval.
(d) Express the area \(A\) as an integral.
(e) Use a graphing utility to approximate the integral.
41. \(f(x)=4-x^{2}, \quad[-1,2]\)
42. \(f(x)=\frac{1}{x^{2}}, \quad[1,4]\)

In Problems 43 and 44, an integral is given.
(a) What area does the integral represent?
(b) Provide a graph that illustrates this area.
(c) Use a graphing utility to approximate this area.
43. \(\int_{-1}^{3}\left(9-x^{2}\right) d x\)
44. \(\int_{-1}^{1} e^{x} d x\)

\section*{Chapter Test} exercises and can be found in MyMathLabll or on this text's YouTube" Channel (search "SullivanPrecalcUC3e").

\section*{In Problems 1-6, find each limit.}
1. \(\lim _{x \rightarrow 3}\left(-x^{2}+3 x-5\right)\)
2. \(\lim _{x \rightarrow 2^{+}} \frac{|x-2|}{3 x-6}\)
3. \(\lim _{x \rightarrow-6} \sqrt{7-3 x}\)
4. \(\lim _{x \rightarrow-1} \frac{x^{2}-4 x-5}{x^{3}+1}\)
5. \(\lim _{x \rightarrow 5}\left[(3 x)(x-2)^{2}\right]\)
6. \(\lim _{x \rightarrow \frac{\pi}{4}} \frac{\tan x}{1+\cos ^{2} x}\)
7. Determine the value for \(k\) that will make the function continuous at \(c=4\).
\[
f(x)= \begin{cases}\frac{x^{2}-9}{x+3} & \text { if } x \leq 4 \\ k x+5 & \text { if } x>4\end{cases}
\]

In Problems 8-12, use the accompanying graph of \(y=f(x)\).

8. Find \(\lim _{x \rightarrow 3^{+}} f(x)\)
9. Find \(\lim _{x \rightarrow 3^{-}} f(x)\)
10. Find \(\lim _{x \rightarrow-2} f(x)\)
11. Does \(\lim _{x \rightarrow 1} f(x)\) exist? If so, what is it? If not, explain why not.
12. Determine whether \(f\) is continuous at each of the following numbers. If it is not, explain why not.
(a) \(x=-2\)
(b) \(x=1\)
(c) \(x=3\)
(d) \(x=4\)
13. Determine where the rational function
\[
R(x)=\frac{x^{3}+6 x^{2}-4 x-24}{x^{2}+5 x-14}
\]
is undefined. Determine whether an asymptote or a hole appears at such numbers.
14. For the function \(f(x)=4 x^{2}-11 x-3\) :
(a) Find the derivative of \(f\) at \(x=2\).
(b) Find the equation of the tangent line to the graph of \(f\) at the point \((2,-9)\).
(c) Graph \(f\) and the tangent line.
15. The function \(f(x)=\sqrt{16-x^{2}}\) is defined on the interval \([0,4]\).
(a) Graph \(f\).
(b) Partition \([0,4]\) into eight subintervals of equal length and choose \(u\) as the left endpoint of each subinterval. Use the partition to approximate the area under the graph of \(f\) and above the \(x\)-axis from \(x=0\) to \(x=4\).
(c) Find the exact area of the region and compare it to the approximation in part (b).
16. Write the integral that represents the shaded area. Do not attempt to evaluate.

17. A particle is moving along a straight line according to some position function \(s(t)\). The distance (in feet) of the particle, \(s\), from its starting point after \(t\) seconds is given in the table. Find the average rate of change of distance from \(t=3\) to \(t=6\) seconds.

\section*{Chapter Projects}

I. World Population Thomas Malthus believed that "population, when unchecked, increases in a geometrical progression of such nature as to double itself every twenty-five years." However, the growth of population is limited because the resources available to us are limited in supply. If Malthus's conjecture were true, geometric growth of the world's population would imply that
\[
\frac{P_{t}}{P_{t-1}}=r+1, \text { where } r \text { is the growth rate }
\]
1. Using world population data and a graphing utility, find the logistic growth function of best fit, treating the year as the independent variable. Let \(t=0\) represent 1950, \(t=1\) represent 1951, and so on, until you have entered all the years and the corresponding populations up to the current year.
2. Graph \(Y_{1}=f(t)\), where \(f(t)\) represents the logistic growth function of best fit found in part (a).
3. Determine the instantaneous rate of growth of population in 1960 using the numerical derivative function on your graphing utility.
4. Use the result from part (c) to predict the population in 1961. What was the actual population in 1961?
5. Determine the instantaneous growth of population in 1970, 1980, 1990, 2000, and 2010. What is happening to the instantaneous growth rate as time passes? Is Malthus' contention of a geometric growth rate accurate?
6. Using the numerical derivative function on your graphing utility, graph \(Y_{2}=f^{\prime}(t)\), where \(f^{\prime}(t)\) represents the derivative of \(f(t)\) with respect to time. \(Y_{2}\) is the growth rate of the population at any time \(t\).
7. Using the MAXIMUM function on your graphing utility, determine the year in which the growth rate of the population is largest. What is happening to the growth rate in the years following the maximum? Find this point on the graph of \(Y_{1}=f(t)\).
8. Evaluate \(\lim _{t \rightarrow \infty} f(t)\). This limiting value is the carrying capacity of Earth. What is the carrying capacity of Earth?
9. What do you think will happen if the population of Earth exceeds the carrying capacity? Do you think that agricultural output will continue to increase at the same rate as population growth? What effect will urban sprawl have on agricultural output?

The following projects are available on the Instructor's Resource Center (IRC).
II. Project at Motorola: Curing Rates Engineers at Motorola use calculus to find the curing rate of a sealant.
III. Finding the Profit-maximizing Level of Output A manufacturer uses calculus to maximize profit.

PREPARING FOR THIS BOOK Before getting started, read "To the Student" at the beginning of this text on page xxiv.

OBJECTIVES 1 Work with Sets (p.A1)
2 Graph Inequalities (p. A4)
3 Find Distance on the Real Number Line (p. A5)
4 Evaluate Algebraic Expressions (p. A6)
5 Determine the Domain of a Variable (p.A7)
6 Use the Laws of Exponents (p. A7)
7 Evaluate Square Roots (p. A9)
8 Use a Calculator to Evaluate Exponents (p. A10)

\section*{1 Work with Sets}

A set is a well-defined collection of distinct objects. The objects of a set are called its elements. By well-defined, we mean that there is a rule that enables us to determine whether a given object is an element of the set. If a set has no elements, it is called the empty set, or null set, and is denoted by the symbol \(\varnothing\).

For example, the set of digits consists of the collection of numbers \(0,1,2,3,4\), \(5,6,7,8\), and 9 . If we use the symbol \(D\) to denote the set of digits, then we can write
\[
D=\{0,1,2,3,4,5,6,7,8,9\}
\]

In this notation, the braces \(\{\quad\}\) are used to enclose the objects, or elements, in the set. This method of denoting a set is called the roster method. A second way to denote a set is to use set-builder notation, where the set \(D\) of digits is written as

\section*{EXAMPLE I Using Set-Builder Notation and the Roster Method}
(a) \(E=\{x \mid x\) is an even digit \(\}=\{0,2,4,6,8\}\)
(b) \(O=\{x \mid x\) is an odd digit \(\}=\{1,3,5,7,9\}\)

Because the elements of a set are distinct, we never repeat elements. For example, we would never write \(\{1,2,3,2\}\); the correct listing is \(\{1,2,3\}\). Because a set is a collection, the order in which the elements are listed does not matter. Thus, \(\{1,2,3\},\{1,3,2\},\{2,1,3\}\), and so on, all represent the same set.

If every element of a set \(A\) is also an element of a set \(B\), then \(A\) is a subset of \(B\), which is denoted \(A \subseteq B\). If two sets \(A\) and \(B\) have the same elements, then \(A\) equals \(B\), which is denoted \(A=B\).

For example, \(\{1,2,3\} \subseteq\{1,2,3,4,5\}\) and \(\{1,2,3\}=\{2,3,1\}\).

\section*{DEFINITION}

If \(A\) and \(B\) are sets, the intersection of \(A\) with \(B\), denoted \(A \cap B\), is the set consisting of elements that belong to both \(A\) and \(B\). The union of \(A\) with \(B\), denoted \(A \cup B\), is the set consisting of elements that belong to either set \(A\) or set \(B\) or to both.

\section*{EXAMPLE 2 Finding the Intersection and Union of Sets}

Let \(A=\{1,3,5,8\}, B=\{3,5,7\}\), and \(C=\{2,4,6,8\}\). Find:
(a) \(A \cap B\)
(b) \(A \cup B\)
(c) \(B \cap(A \cup C)\)

Solution
(a) \(A \cap B=\{1,3,5,8\} \cap\{3,5,7\}=\{3,5\}\)
(b) \(A \cup B=\{1,3,5,8\} \cup\{3,5,7\}=\{1,3,5,7,8\}\)
(c) \(B \cap(A \cup C)=\{3,5,7\} \cap(\{1,3,5,8\} \cup\{2,4,6,8\})\)
\(=\{3,5,7\} \cap\{1,2,3,4,5,6,8\}=\{3,5\}\)
am Now Work problem 13
When working with sets, it is common practice to designate a universal set \(U\), the set consisting of all the elements to be considered. With a universal set designated, elements of the universal set not found in a given set can be considered.

\section*{DEFINITION}

If \(A\) is a set, then the complement of \(A\), denoted \(\bar{A}\), is the set consisting of all the elements in the universal set that are not in \(A\). \({ }^{*}\)

\section*{EXAMPLE 3 Finding the Complement of a Set}

If the universal set is \(U=\{1,2,3,4,5,6,7,8,9\}\) and if \(A=\{1,3,5,7,9\}\), then \(\bar{A}=\{2,4,6,8\}\).

It follows from the definition of complement that \(A \cup \bar{A}=U\) and \(A \cap \bar{A}=\varnothing\). Do you see why?
-Now Work problem 17

It is often helpful to draw pictures of sets. Such pictures, called Venn diagrams, represent sets as circles enclosed in a rectangle. The rectangle represents the universal set. Such diagrams often make it easier to visualize various relationships among sets. See Figure 1.

The Venn diagram in Figure 2(a) illustrates that \(A \subseteq B\). The Venn diagram in Figure 2(b) illustrates that \(A\) and \(B\) have no elements in common-that is, \(A \cap B=\varnothing\). The sets \(A\) and \(B\) in Figure 2(b) are disjoint.

Figure 2

Figures 3(a), 3(b), and 3(c) use Venn diagrams to illustrate the definitions of intersection, union, and complement, respectively.

\section*{Figure 3}

(a) \(A \cap B\) intersection

(b) \(A \cup B\) union

(c) \(\bar{A}\)
complement

\section*{Real Numbers}

Real numbers are represented by symbols such as
\[
25, \quad 0, \quad-3, \quad \frac{1}{2}, \quad-\frac{5}{4}, \quad 0.125, \quad \sqrt{2}, \quad \pi, \quad \sqrt[3]{-2}, \quad 0.666 \ldots
\]

The set of counting numbers, or natural numbers, contains the numbers in the set \(\{1,2,3,4, \ldots\}\). (The three dots, called an ellipsis, indicate that the pattern continues indefinitely.) The set of integers contains the numbers in the set \(\{\ldots,-3,-2,-1,0,1,2,3, \ldots\}\). A rational number is a number that can be expressed as a quotient \(\frac{a}{b}\) of two integers, where the integer \(b\) cannot be 0 . Examples of rational numbers are \(\frac{3}{4}, \frac{5}{2}, \frac{0}{4}\), and \(-\frac{2}{3}\). Since \(\frac{a}{1}=a\) for any integer \(a\), every integer is also a rational number. Real numbers that are not rational are called irrational. Examples of irrational numbers are \(\sqrt{2}\) and \(\pi\) (the Greek letter pi), which equals the constant ratio of the circumference to the diameter of a circle. See Figure 4.

Real numbers can be represented as decimals. Rational real numbers have decimal representations that either terminate or are nonterminating with repeating
 blocks of digits. For example, \(\frac{3}{4}=0.75\), which terminates; and \(\frac{2}{3}=0.666 \ldots\), in which the digit 6 repeats indefinitely. Irrational real numbers have decimal representations that neither repeat nor terminate. For example, \(\sqrt{2}=1.414213 \ldots\). and \(\pi=3.14159 \ldots\). In practice, the decimal representation of an irrational number is given as an approximation. We use the symbol \(\approx(\) read as "approximately equal to") to write \(\sqrt{2} \approx 1.4142\) and \(\pi \approx 3.1416\).
```

In Words
If a product equals O, then one or
both of the factors is O.

```

Figure 5
Real number line

\section*{DEFINITION}

Figure 6

Figure 7

Two frequently used properties of real numbers are given next. Suppose that \(a\), \(b\), and \(c\) are real numbers.

\section*{Distributive Property}
\[
a \cdot(b+c)=a b+a c
\]

\section*{Zero-Product Property}

If \(a b=0\), then either \(a=0\) or \(b=0\) or both equal 0 .

The Distributive Property can be used to remove parentheses:
\[
2(x+3)=2 x+2 \cdot 3=2 x+6
\]

The Zero-Product Property will be used to solve equations (Section A.8). For example, if \(2 x=0\), then \(2=0\) or \(x=0\). Since \(2 \neq 0\), it follows that \(x=0\).

\section*{The Real Number Line}

The real numbers can be represented by points on a line called the real number line. There is a one-to-one correspondence between real numbers and points on a line. That is, every real number corresponds to a point on the line, and each point on the line has a unique real number associated with it.

Pick a point on the line somewhere in the center, and label it \(O\). This point, called the origin, corresponds to the real number 0. See Figure 5. The point 1 unit to the right of \(O\) corresponds to the number 1 . The distance between 0 and 1 determines the scale of the number line. For example, the point associated with the number 2 is twice as far from \(O\) as 1 . Notice that an arrowhead on the right end of the line indicates the direction in which the numbers increase. Points to the left of the origin correspond to the real numbers \(-1,-2\), and so on. Figure 5 also shows the points associated with the rational numbers \(-\frac{1}{2}\) and \(\frac{1}{2}\) and the points associated with the irrational numbers \(\sqrt{2}\) and \(\pi\).

The real number associated with a point \(P\) is called the coordinate of \(P\), and the line whose points have been assigned coordinates is called the real number line.

The real number line consists of three classes of real numbers, as shown in Figure 6.
1. The negative real numbers are the coordinates of points to the left of the origin \(O\).
2. The real number zero is the coordinate of the origin \(O\).
3. The positive real numbers are the coordinates of points to the right of the origin \(O\).
-Now Work problem 21

\section*{2 Graph Inequalities}

An important property of the real number line follows from the fact that, given two numbers (points) \(a\) and \(b\), either \(a\) is to the left of \(b\), or \(a\) is at the same location as \(b\), or \(a\) is to the right of \(b\). See Figure 7 .

If \(a\) is to the left of \(b\), then " \(a\) is less than \(b\)," which is denoted \(a<b\). If \(a\) is to the right of \(b\), then " \(a\) is greater than \(b\)," which is denoted \(a>b\). If \(a\) is at the same location as \(b\), then \(a=b\). If \(a\) is either less than or equal to \(b\), then write \(a \leq b\).

Similarly, \(a \geq b\) means that \(a\) is either greater than or equal to \(b\). Collectively, the symbols \(<,>, \leq\), and \(\geq\) are called inequality symbols.

Note that \(a<b\) and \(b>a\) mean the same thing. It does not matter whether we write \(2<3\) or \(3>2\).

Furthermore, if \(a<b\) or if \(b>a\), then the difference \(b-a\) is positive. Do you see why?

An inequality is a statement in which two expressions are related by an inequality symbol. The expressions are referred to as the sides of the inequality. Statements of the form \(a<b\) or \(b>a\) are called strict inequalities, whereas statements of the form \(a \leq b\) or \(b \geq a\) are called nonstrict inequalities.

The following conclusions are based on the discussion so far.
\[
\begin{array}{ll}
a>0 & \text { is equivalent to } a \text { is positive } \\
a<0 & \text { is equivalent to } a \text { is negative }
\end{array}
\]

The inequality \(a>0\) is sometimes read as " \(a\) is positive." If \(a \geq 0\), then either \(a>0\) or \(a=0\), and this is read as " \(a\) is nonnegative."

Now Work problems 25 and 35

\section*{EXAMPLE 4}

Figure 8
Solution

Figure 9

DEFINITION

\section*{3 Find Distance on the Real Number Line}

The absolute value of a number \(a\) is the distance from 0 to \(a\) on the number line. For example, -4 is 4 units from 0 , and 3 is 3 units from 0 . See Figure 10. Thus the absolute value of -4 is 4 , and the absolute value of 3 is 3 .

A more formal definition of absolute value is given next.

\section*{Graphing Inequalities}
(a) On the real number line, graph all numbers \(x\) for which \(x>4\).
(b) On the real number line, graph all numbers \(x\) for which \(x \leq 5\).
(a) See Figure 8. Note that we use a left parenthesis to indicate that the number 4 is not part of the graph.
(b) See Figure 9. Note that we use a right bracket to indicate that the number 5 is part of the graph.

\section*{Now Work problem 41}

The absolute value of a real number \(a\), denoted by the symbol \(|a|\), is defined by the rules
\[
|a|=a \quad \text { if } a \geq 0 \quad \text { and } \quad|a|=-a \quad \text { if } a<0
\]

For example, because \(-4<0\), the second rule must be used to get \(|-4|=\) \(-(-4)=4\).

\section*{EXAMPLE 5}

\section*{Computing Absolute Value}
(a) \(|8|=8\)
(b) \(|0|=0\)
(c) \(|-15|=-(-15)=15\)

Look again at Figure 10. The distance from -4 to 3 is 7 units. This distance is the difference \(3-(-4)\), obtained by subtracting the smaller coordinate from
the larger. However, because \(|3-(-4)|=|7|=7\) and \(|-4-3|=|-7|=7\), absolute value can be used to calculate the distance between two points without being concerned about which is smaller.

\section*{DEFINITION}

If \(P\) and \(Q\) are two points on a real number line with coordinates \(a\) and \(b\), respectively, then the distance between \(\boldsymbol{P}\) and \(\boldsymbol{Q}\), denoted by \(d(P, Q)\), is
\[
d(P, Q)=|b-a|
\]

Since \(|b-a|=|a-b|\), it follows that \(d(P, Q)=d(Q, P)\).

\section*{EXAMPLE 6 Finding Distance on a Number Line}

Let \(P, Q\), and \(R\) be points on a real number line with coordinates \(-5,7\), and -3 , respectively. Find the distance
(a) between \(P\) and \(Q\)
(b) between \(Q\) and \(R\)

Solution See Figure 11.
Figure 11

\[
\left.\begin{array}{rl}
\leftarrow \\
\leftarrow & (P, Q)
\end{array}\right)|7-(-5)|=12 \longrightarrow \mid
\]
(a) \(d(P, Q)=|7-(-5)|=|12|=12\)
(b) \(d(Q, R)=|-3-7|=|-10|=10\)

\section*{4 Evaluate Algebraic Expressions}

In algebra, letters such as \(x, y, a, b\), and \(c\) are used to represent numbers. If the letter used represents any number from a given set of numbers, it is called a variable. A constant is either a fixed number, such as 5 or \(\sqrt{3}\), or a letter that represents a fixed (possibly unspecified) number.

Constants and variables are combined using the operations of addition, subtraction, multiplication, and division to form algebraic expressions. Examples of algebraic expressions include
\[
x+3 \quad \frac{3}{1-t} \quad 7 x-2 y
\]

To evaluate an algebraic expression, substitute a numerical value for each variable.

\section*{EXAMPLE 7}

\section*{Evaluating an Algebraic Expression}

Evaluate each expression if \(x=3\) and \(y=-1\).
(a) \(x+3 y\)
(b) \(5 x y\)
(c) \(\frac{3 y}{2-2 x}\)
(d) \(|-4 x+y|\)

Solution (a) Substitute 3 for \(x\) and -1 for \(y\) in the expression \(x+3 y\).
\[
\begin{aligned}
x+3 y & =3+3(-1)=3+(-3)=0 \\
& \uparrow \\
x & =3, y=-1
\end{aligned}
\]
(b) If \(x=3\) and \(y=-1\), then
\[
5 x y=5(3)(-1)=-15
\]
(c) If \(x=3\) and \(y=-1\), then
\[
\frac{3 y}{2-2 x}=\frac{3(-1)}{2-2(3)}=\frac{-3}{2-6}=\frac{-3}{-4}=\frac{3}{4}
\]
(d) If \(x=3\) and \(y=-1\), then
\[
\begin{aligned}
& \quad|-4 x+y|=|-4(3)+(-1)|=|-12+(-1)|=|-13|=13 \\
& \text { Now Work Problems } 49 \text { And } 57
\end{aligned}
\]

\section*{5 Determine the Domain of a Variable}

In working with expressions or formulas involving variables, the variables may be allowed to take on values from only a certain set of numbers. For example, in the formula for the area \(A\) of a circle of radius \(r, A=\pi r^{2}\), the variable \(r\) is restricted to the positive real numbers (since a radius cannot be 0 or negative). In the expression \(\frac{1}{x}\), the variable \(x\) cannot take on the value 0 , since division by 0 is not defined.

DEFINITION
The set of values that a variable may assume is called the domain of the variable.

\section*{EXAMPLE 8 Finding the Domain of a Variable}

The domain of the variable \(x\) in the expression
\[
\frac{5}{x-2}
\]
is \(\{x \mid x \neq 2\}\), since if \(x=2\), the denominator becomes 0 , which is not defined.

\section*{EXAMPLE 9 Circumference of a Circle}

In the formula for the circumference \(C\) of a circle of radius \(r\), which is
\[
C=2 \pi r
\]
the domain of the variable \(r\), representing the radius of the circle, is the set of positive real numbers, \(\{r \mid r>0\}\). The domain of the variable \(C\), representing the circumference of the circle, is also the set of positive real numbers, \(\{C \mid C>0\}\).

In describing the domain of a variable, either set notation or words may be used, whichever is more convenient.
am Now Work problem 67

\section*{6 Use the Laws of Exponents}

Integer exponents provide a shorthand notation for representing repeated multiplications of a real number. For example,
\[
2^{3}=2 \cdot 2 \cdot 2=8 \quad 3^{4}=3 \cdot 3 \cdot 3 \cdot 3=81
\]

DEFINITION

WARNING Be careful with negatives and exponents.
\[
-2^{4}=-1 \cdot 2^{4}=-16
\]
whereas
\[
(-2)^{4}=(-2)(-2)(-2)(-2)=16
\]

DEFINITION

DEFINITION
If \(a\) is a real number and \(n\) is a positive integer, then the symbol \(a^{n}\) represents the product of \(n\) factors of \(a\). That is,
\[
\begin{equation*}
a^{n}=\underbrace{a \cdot a \cdot \cdots \cdot a}_{\text {nfactors }} \tag{1}
\end{equation*}
\]

In the definition, it is understood that \(a^{1}=a\). In addition, \(a^{2}=a \cdot a, a^{3}=a \cdot a \cdot a\), and so on. In the expression \(a^{n}, a\) is called the base and \(n\) is called the exponent, or power. \(a^{n}\) is read as " \(a\) raised to the power \(n\) " or as " \(a\) to the \(n\)th power." Usually, \(a^{2}\) is read as " \(a\) squared" and \(a^{3}\) is read as " \(a\) cubed."

In working with exponents, the operation of raising to a power is performed before any other operation. Here are some examples:
\[
\begin{aligned}
4 \cdot 3^{2}=4 \cdot 9 & =36 & & 2^{2}+3^{2}=4+9=13 \\
& -2^{4}=-16 & & 5 \cdot 3^{2}+2 \cdot 4=5 \cdot 9+2 \cdot 4=45+8=53
\end{aligned}
\]

Parentheses are used to indicate operations to be performed first. For example,
\[
(-2)^{4}=(-2)(-2)(-2)(-2)=16 \quad(2+3)^{2}=5^{2}=25
\]

If \(a \neq 0\), then
\[
a^{0}=1
\]

If \(a \neq 0\) and if \(n\) is a positive integer, then
\[
a^{-n}=\frac{1}{a^{n}}
\]

Whenever you encounter a negative exponent, think "reciprocal."

\section*{EXAMPLE IO Evaluating Expressions Containing Negative Exponents}
(a) \(2^{-3}=\frac{1}{2^{3}}=\frac{1}{8}\)
(b) \(x^{-4}=\frac{1}{x^{4}}\)
(c) \(\left(\frac{1}{5}\right)^{-2}=\frac{1}{\left(\frac{1}{5}\right)^{2}}=\frac{1}{\frac{1}{25}}=25\)
-Now Work problems 85 and 105
The following properties, called the Laws of Exponents, can be proved using the preceding definitions. In the list, \(a\) and \(b\) are real numbers, and \(m\) and \(n\) are integers.

\section*{THEOREM}
\[
\begin{gathered}
a^{m} a^{n}=a^{m+n} \quad\left(a^{m}\right)^{n}=a^{m n} \quad(a b)^{n}=a^{n} b^{n} \\
\frac{a^{m}}{a^{n}}=a^{m-n}=\frac{1}{a^{n-m}} \quad \text { if } a \neq 0 \quad\left(\frac{a}{b}\right)^{n}=\frac{a^{n}}{b^{n}} \quad \text { if } b \neq 0
\end{gathered}
\]

\section*{EXAMPLE II Using the Laws of Exponents}

Write each expression so that all exponents are positive.
(a) \(\frac{x^{5} y^{-2}}{x^{3} y} \quad x \neq 0, \quad y \neq 0\)
(b) \(\left(\frac{x^{-3}}{3 y^{-1}}\right)^{-2} \quad x \neq 0, \quad y \neq 0\)

Solution

\section*{In Words}
\(\sqrt{36}\) means "give me the nonnegative number whose square is 36 ."
(a) \(\frac{x^{5} y^{-2}}{x^{3} y}=\frac{x^{5}}{x^{3}} \cdot \frac{y^{-2}}{y}=x^{5-3} \cdot y^{-2-1}=x^{2} y^{-3}=x^{2} \cdot \frac{1}{y^{3}}=\frac{x^{2}}{y^{3}}\)
(b) \(\left(\frac{x^{-3}}{3 y^{-1}}\right)^{-2}=\frac{\left(x^{-3}\right)^{-2}}{\left(3 y^{-1}\right)^{-2}}=\frac{x^{6}}{3^{-2}\left(y^{-1}\right)^{-2}}=\frac{x^{6}}{\frac{1}{9} y^{2}}=\frac{9 x^{6}}{y^{2}}\)
an Now Work problems 87 and 97

\section*{7 Evaluate Square Roots}

A real number is squared when it is raised to the power 2 . The inverse of squaring is finding a square root. For example, since \(6^{2}=36\) and \((-6)^{2}=36\), the numbers 6 and -6 are square roots of 36 .

The symbol \(\sqrt{ }\), called a radical sign, is used to denote the principal, or nonnegative, square root. For example, \(\sqrt{36}=6\).

If \(a\) is a nonnegative real number, the nonnegative number \(b\), such that \(b^{2}=a\), is the principal square root of \(a\) and is denoted by \(b=\sqrt{a}\).

The following comments are noteworthy:
1. Negative numbers do not have square roots (in the real number system), because the square of any real number is nonnegative. For example, \(\sqrt{-4}\) is not a real number, because there is no real number whose square is -4 .
2. The principal square root of 0 is 0 , since \(0^{2}=0\). That is, \(\sqrt{0}=0\).
3. The principal square root of a positive number is positive.
4. If \(c \geq 0\), then \((\sqrt{c})^{2}=c\). For example, \((\sqrt{2})^{2}=2\) and \((\sqrt{3})^{2}=3\).

\section*{EXAMPLE 12 Evaluating Square Roots}
(a) \(\sqrt{64}=8\)
(b) \(\sqrt{\frac{1}{16}}=\frac{1}{4}\)
(c) \((\sqrt{1.4})^{2}=1.4\)

Examples 12(a) and (b) are examples of square roots of perfect squares, since \(64=8^{2}\) and \(\frac{1}{16}=\left(\frac{1}{4}\right)^{2}\).

Consider the expression \(\sqrt{a^{2}}\). Since \(a^{2} \geq 0\), the principal square root of \(a^{2}\) is defined whether \(a>0\) or \(a<0\). However, since the principal square root is nonnegative, an absolute value is needed to ensure the nonnegative result. That is,
\[
\begin{equation*}
\sqrt{a^{2}}=|a| \quad \text { where } a \text { is any real number } \tag{2}
\end{equation*}
\]

\section*{EXAMPLE 13 Simplifying Expressions Using Equation (2)}
(a) \(\sqrt{(2.3)^{2}}=|2.3|=2.3\)
(b) \(\sqrt{(-2.3)^{2}}=|-2.3|=2.3\)
(c) \(\sqrt{x^{2}}=|x|\)

\section*{Calculators}

Calculators are finite machines. As a result, they are incapable of displaying decimals that contain a large number of digits. For example, some calculators are capable of displaying only eight digits. When a number requires more than eight digits, the calculator either truncates or rounds. To see how your calculator handles decimals, divide 2 by 3. How many digits do you see? Is the last digit a 6 or a 7 ? If it is a 6 , your calculator truncates; if it is a 7 , your calculator rounds.

There are different kinds of calculators. An arithmetic calculator can only add, subtract, multiply, and divide numbers; therefore, this type is not adequate for this course. Scientific calculators have all the capabilities of arithmetic calculators and also contain function keys labeled \(\ln , \log , \sin , \cos , \tan , x^{y}\), inv, and so on. Graphing calculators have all the capabilities of scientific calculators and contain a screen on which graphs can be displayed. In this book, the graphing calculator is optional. The symbol frown whenever a graphing calculator is used.

\section*{8 Use a Calculator to Evaluate Exponents}

Your calculator has a caret key, \(\wedge\), which is used for computations involving exponents.

\section*{EXAMPLE I4 Exponents on a Graphing Calculator}

Evaluate: \((2.3)^{5}\)

\section*{Solution Figure 12 shows the result using a TI-84 graphing calculator.}

Figure 12

\section*{A. 1 Assess Your Understanding}

\section*{Concepts and Vocabulary}
1. \(\mathrm{A}(\mathrm{n})\) \(\qquad\) is a letter used in algebra to represent any number from a given set of numbers.
2. On the real number line, the real number zero is the coordinate of the \(\qquad\) .
3. An inequality of the form \(a>b\) is called a(n) \(\qquad\) inequality.
4. In the expression \(2^{4}\), the number 2 is called the \(\qquad\) and 4 is called the \(\qquad\) .
5. True or False The product of two negative real numbers is always greater than zero.
6. True or False The distance between two distinct points on the real number line is always greater than zero.
7. True or False The absolute value of a real number is always greater than zero.
8. True or False To multiply two expressions having the same base, retain the base and multiply the exponents.

\section*{Skill Building}

In Problems 9-20, use \(U=\) universal set \(=\{0,1,2,3,4,5,6,7,8,9\}, A=\{1,3,4,5,9\}, B=\{2,4,6,7,8\}\), and \(C=\{1,3,4,6\}\) to find each set.
9. \(A \cup B\)
10. \(A \cup C\)
11. \(A \cap B\)
12. \(A \cap C\)
13. \((A \cup B) \cap C\)
14. \((A \cap B) \cup C\)
15. \(\bar{A}\)
16. \(\bar{C}\)
17. \(\overline{A \cap B}\)
18. \(\overline{B \cup C}\)
19. \(\bar{A} \cup \bar{B}\)
20. \(\bar{B} \cap \bar{C}\)
21. On the real number line, label the points with coordinates \(0,1,-1, \frac{5}{2},-2.5, \frac{3}{4}\), and 0.25 .
22. On the real number line, label the points with coordinates \(0,-2,2,-1.5, \frac{3}{2}, \frac{1}{3}\), and \(\frac{2}{3}\).

In Problems 23-32, replace the question mark by \(<,>\), or \(=\), whichever is correct.
23. \(\frac{1}{2} ? 0\)
24. 5 ? 6
25. \(-1 ?-2\)
26. \(-3 ?-\frac{5}{2}\)
27. \(\pi\) ? 3.14
28. \(\sqrt{2} ? 1.41\)
29. \(\frac{1}{2} ? 0.5\)
30. \(\frac{1}{3} ? 0.33\)
31. \(\frac{2}{3} ? 0.67\)
32. \(\frac{1}{4} ? 0.25\)

In Problems 33-38, write each statement as an inequality.
33. \(x\) is positive
34. \(z\) is negative
36. \(y\) is greater than -5
37. \(x\) is less than or equal to 1
35. \(x\) is less than 2
38. \(x\) is greater than or equal to 2

In Problems 39-42, graph the numbers \(x\) on the real number line.
39. \(x \geq-2\)
40. \(x<4\)
41. \(x>-1\)
42. \(x \leq 7\)

In Problems 43-48, use the given real number line to compute each distance.

43. \(d(C, D)\)
44. \(d(C, A)\)
45. \(d(D, E)\)
46. \(d(C, E)\)
47. \(d(A, E)\)
48. \(d(D, B)\)

In Problems 49-56, evaluate each expression if \(x=-2\) and \(y=3\).
49. \(x+2 y\)
50. \(3 x+y\)
51. \(5 x y+2\)
52. \(-2 x+x y\)

113. \(\sqrt{x^{2}+y^{2}}\)
114. \(\sqrt{x^{2}}+\sqrt{y^{2}}\)
115. \(x^{y}\)
116. \(y^{x}\)
117. Find the value of the expression \(2 x^{3}-3 x^{2}+5 x-4\) if \(x=2\). What is the value if \(x=1\) ?
118. Find the value of the expression \(4 x^{3}+3 x^{2}-x+2\) if \(x=1\). What is the value if \(x=2\) ?
119. What is the value of \(\frac{(666)^{4}}{(222)^{4}}\) ?
120. What is the value of \((0.1)^{3}(20)^{3}\) ?

In Problems 121-128, use a calculator to evaluate each expression. Round your answer to three decimal places.
121. \((8.2)^{6}\)
122. \((3.7)^{5}\)
123. \((6.1)^{-3}\)
124. \((2.2)^{-5}\)
125. \((-2.8)^{6}\)
126. \(-(2.8)^{6}\)
127. \((-8.11)^{-4}\)
128. \(-(8.11)^{-4}\)

\section*{Applications and Extensions}

In Problems 129-138, express each statement as an equation involving the indicated variables.
129. Area of a Rectangle The area \(A\) of a rectangle is the product of its length \(l\) and its width \(w\).

130. Perimeter of a Rectangle The perimeter \(P\) of a rectangle is twice the sum of its length \(l\) and its width \(w\).
131. Circumference of a Circle The circumference \(C\) of a circle is the product of \(\pi\) and its diameter \(d\).

132. Area of a Triangle The area \(A\) of a triangle is one-half the product of its base \(b\) and its height \(h\).

133. Area of an Equilateral Triangle The area \(A\) of an equilateral triangle is \(\frac{\sqrt{3}}{4}\) times the square of the length \(x\) of
one side. one side.

134. Perimeter of an Equilateral Triangle The perimeter \(P\) of an equilateral triangle is 3 times the length \(x\) of one side.
135. Volume of a Sphere The volume \(V\) of a sphere is \(\frac{4}{3}\) times \(\pi\) times the cube of the radius \(r\).

136. Surface Area of a Sphere The surface area \(S\) of a sphere is 4 times \(\pi\) times the square of the radius \(r\).
137. Volume of a Cube The volume \(V\) of a cube is the cube of the length \(x\) of a side.

138. Surface Area of a Cube The surface area \(S\) of a cube is 6 times the square of the length \(x\) of a side.
139. Manufacturing Cost The weekly production cost \(C\) of manufacturing \(x\) watches is given by the formula \(C=4000+2 x\), where the variable \(C\) is in dollars.
(a) What is the cost of producing 1000 watches?
(b) What is the cost of producing 2000 watches?
140. Balancing a Checkbook At the beginning of the month, Mike had a balance of \(\$ 210\) in his checking account. During the next month, he deposited \(\$ 80\), wrote a check for \(\$ 120\), made another deposit of \(\$ 25\), and wrote two checks: one for \(\$ 60\) and the other for \(\$ 32\). He was also assessed a monthly service charge of \(\$ 5\). What was his balance at the end of the month?

In Problems 141 and 142, write an inequality using an absolute value to describe each statement.
141. \(x\) is at least 6 units from 4 .
142. \(x\) is more than 5 units from 2 .
143. U.S. Voltage In the United States, normal household voltage is 110 volts. It is acceptable for the actual voltage \(x\) to differ from normal by at most 5 volts. A formula that describes this is
\[
|x-110| \leq 5
\]
(a) Show that a voltage of 108 volts is acceptable.
(b) Show that a voltage of 104 volts is not acceptable.
144. Foreign Voltage In some countries, normal household voltage is 220 volts. It is acceptable for the actual voltage \(x\) to differ from normal by at most 8 volts. A formula that describes this is
\[
|x-220| \leq 8
\]
(a) Show that a voltage of 214 volts is acceptable.
(b) Show that a voltage of 209 volts is not acceptable.
145. Making Precision Ball Bearings The FireBall Company manufactures ball bearings for precision equipment. One of its products is a ball bearing with a stated radius of 3 centimeters (cm). Only ball bearings with a radius within 0.01 cm of this stated radius are acceptable. If \(x\) is the radius of a ball bearing, a formula describing this situation is
\[
|x-3| \leq 0.01
\]
(a) Is a ball bearing of radius \(x=2.999\) acceptable?
(b) Is a ball bearing of radius \(x=2.89\) acceptable?
146. Body Temperature Normal human body temperature is \(98.6^{\circ} \mathrm{F}\). A temperature \(x\) that differs from normal by at least \(1.5^{\circ} \mathrm{F}\) is considered unhealthy. A formula that describes this is
\[
|x-98.6| \geq 1.5
\]
(a) Show that a temperature of \(97^{\circ} \mathrm{F}\) is unhealthy.
(b) Show that a temperature of \(100^{\circ} \mathrm{F}\) is not unhealthy.
147. Does \(\frac{1}{3}\) equal 0.333 ? If not, which is larger? By how much?
148. Does \(\frac{2}{3}\) equal 0.666 ? If not, which is larger? By how much?

\section*{Discussion and Writing}
149. Is there a positive real number "closest" to 0 ?
150. Number Game I'm thinking of a number! It lies between 1 and 10 ; its square is rational and lies between 1 and 10 . The number is larger than \(\pi\). Correct to two decimal places (that is, truncated to two decimal places) name the number. Now think of your own number, describe it, and challenge a fellow student to name it.
151. Write a brief paragraph that illustrates the similarities and differences between "less than" \((<)\) and "less than or equal to" ( \(\leq\) ).
152. Give a reason why the statement \(5<8\) is true.

\section*{A. 2 Geometry Essentials}

OBJECTIVES 1 Use the Pythagorean Theorem and Its Converse (p. A13)
2 Know Geometry Formulas (p. A15)
3 Understand Congruent Triangles and Similar Triangles (p. A16)

Figure 13

\section*{1 Use the Pythagorean Theorem and Its Converse}

The Pythagorean Theorem is a statement about right triangles. A right triangle is one that contains a right angle-that is, an angle of \(90^{\circ}\). The side of the triangle opposite the \(90^{\circ}\) angle is called the hypotenuse; the remaining two sides are called legs. In Figure 13, \(c\) represents the length of the hypotenuse, and \(a\) and \(b\) represent the lengths of the legs. Note the use of the symbol \(\square\) to show the \(90^{\circ}\) angle. The Pythagorean Theorem is stated next.

PYTHAGOREAN
THEOREM

In a right triangle, the square of the length of the hypotenuse is equal to the sum of the squares of the lengths of the legs. That is, in the right triangle shown in Figure 13,
\[
\begin{equation*}
c^{2}=a^{2}+b^{2} \tag{1}
\end{equation*}
\]

A proof of the Pythagorean Theorem is given at the end of this section.

\section*{EXAMPLE I}

Solution Since the triangle is a right triangle, use the Pythagorean Theorem with \(a=4\) and \(b=3\) to find the length \(c\) of the hypotenuse. From equation (1),
\[
\begin{aligned}
c^{2} & =a^{2}+b^{2} \\
c^{2} & =4^{2}+3^{2}=16+9=25 \\
c & =\sqrt{25}=5
\end{aligned}
\]
am Now Work problem 13
The converse of the Pythagorean Theorem is also true.
In a triangle, if the square of the length of one side equals the sum of the squares of the lengths of the other two sides, the triangle is a right triangle. The \(90^{\circ}\) angle is opposite the longest side.

A proof is given at the end of this section.

\section*{EXAMPLE 2}

Figure 14
Solution

\section*{EXAMPLE 3}

\section*{Verifying That a Triangle Is a Right Triangle}

Show that a triangle whose sides are of lengths 5,12 , and 13 is a right triangle. Identify the hypotenuse.
Square the lengths of the sides.
\[
5^{2}=25 \quad 12^{2}=144 \quad 13^{2}=169
\]

Notice that the sum of the first two squares ( 25 and 144) equals the third square (169). That is, because \(5^{2}+12^{2}=13^{2}\), the triangle is a right triangle. The longest side, 13 , is the hypotenuse. See Figure 14.
am Now Work problem 21

\section*{Applying the Pythagorean Theorem}

The tallest building in the world is Burj Khalifa in Dubai, United Arab Emirates, at 2717 feet and 163 floors. The observation deck is 1483 feet above ground level. How far can a person standing on the observation deck see (with the aid of a telescope)? Use 3960 miles for the radius of Earth.
Source: Council on Tall Buildings and Urban Habitat
Solution From the center of Earth, draw two radii: one through Burj Khalifa and the other to the farthest point a person can see from the observation deck. See Figure 15. Apply the Pythagorean Theorem to the right triangle.
\[
\begin{aligned}
& \text { Since } 1 \text { mile }=5280 \text { feet, } 1483 \text { feet }=\frac{1483}{5280} \text { mile. Thus } \\
& \begin{aligned}
d^{2}+(3960)^{2} & =\left(3960+\frac{1483}{5280}\right)^{2} \\
d^{2} & =\left(3960+\frac{1483}{5280}\right)^{2}-(3960)^{2} \approx 2224.58 \\
d & \approx 47.17
\end{aligned}
\end{aligned}
\]

A person can see more than 47 miles from the observation deck.

Figure 15

-Now Work problem 53

\section*{2 Know Geometry Formulas}

Certain formulas from geometry are useful in solving algebra problems.
For a rectangle of length \(l\) and width \(w\),

\[
\text { Area }=l w \quad \text { Perimeter }=2 l+2 w
\]

For a triangle with base \(b\) and altitude \(h\),
\[
\text { Area }=\frac{1}{2} b h
\]

For a circle of radius \(r\) (diameter \(d=2 r\) ),
\[
\text { Area }=\pi r^{2} \quad \text { Circumference }=2 \pi r=\pi d
\]

For a closed rectangular box of length \(l\), width \(w\), and height \(h\),
\[
\text { Volume }=l w h \quad \text { Surface area }=2 l h+2 w h+2 l w
\]

For a sphere of radius \(r\),
\[
\text { Volume }=\frac{4}{3} \pi r^{3} \quad \text { Surface area }=4 \pi r^{2}
\]

For a right circular cylinder of height \(h\) and radius \(r\),
\[
\text { Volume }=\pi r^{2} h \quad \text { Surface area }=2 \pi r^{2}+2 \pi r h
\]

Now Work problem 29

\section*{Using Geometry Formulas}

A Christmas tree ornament is in the shape of a semicircle on top of a triangle. How many square centimeters \((\mathrm{cm})\) of copper is required to make the ornament if the height of the triangle is 6 cm and the base is 4 cm ?

\section*{Solution}

\section*{Figure 16}

\section*{In Words}

Two triangles are congruent if they have the same size and shape.

See Figure 16. The amount of copper required equals the shaded area. This area is the sum of the areas of the triangle and the semicircle. The triangle has height \(h=6\) and base \(b=4\). The semicircle has diameter \(d=4\), so its radius is \(r=2\).
\[
\begin{aligned}
\text { Area } & =\text { Area of triangle }+ \text { Area of semicircle } \\
& =\frac{1}{2} b h+\frac{1}{2} \pi r^{2}=\frac{1}{2}(4)(6)+\frac{1}{2} \pi \cdot 2^{2} \quad b=4 ; h=6 ; r=2 \\
& =12+2 \pi \approx 18.28 \mathrm{~cm}^{2}
\end{aligned}
\]

About \(18.28 \mathrm{~cm}^{2}\) of copper is required.
Now Work Problem 47

\section*{3 Understand Congruent Triangles and Similar Triangles}

Throughout the text we will make reference to triangles, beginning here, with a discussion of congruent triangles. According to dictionary.com, the word congruent means "coinciding exactly when superimposed." For example, two angles are congruent if they have the same measure, and two line segments are congruent if they have the same length.

DEFINITION
Two triangles are congruent if each pair of corresponding angles have the same measure and each pair of corresponding sides are the same length.

In Figure 17, corresponding angles are equal and the lengths of the corresponding sides are equal: \(a=d, b=e\), and \(c=f\). Hence these triangles are congruent.

Figure 17 Congruent Triangles

Actually, it is not necessary to verify that all three angles and all three sides are the same measure to determine whether two triangles are congruent.

\section*{Determining Congruent Triangles}
1. Angle-Side-Angle Case Two triangles are congruent if the measures of two of the angles are equal and the lengths of the corresponding sides between the two angles are equal.

For example, in Figure 18(a), the two triangles are congruent because the measures of two angles and the included side are equal.
2. Side-Side-Side Case Two triangles are congruent if the lengths of the corresponding sides of the triangles are equal.

For example, in Figure 18(b), the two triangles are congruent because the lengths of the three corresponding sides are all equal.
3. Side-Angle-Side Case Two triangles are congruent if the lengths of two corresponding sides are equal and the measures of the angles between the two sides are the same.

For example, in Figure 18(c), the two triangles are congruent because the lengths of two sides and the measure of the included angle are equal.

Figure 18

(a)

(b)

(c)

See the following definition to contrast congruent triangles with similar triangles.

\section*{DEFINITION}

\section*{In Words}

Two triangles are similar if they have the same shape, but (possibly) different sizes.

Two triangles are similar if the measures of the corresponding angles are equal and the lengths of the corresponding sides are proportional.

For example, the triangles in Figure 19 are similar because the corresponding angles are equal. In addition, the lengths of the corresponding sides are proportional because each side in the triangle on the right is twice as long as each corresponding side in the triangle on the left. That is, the ratio of the corresponding sides is a constant: \(\frac{d}{a}=\frac{e}{b}=\frac{f}{c}=2\).

Figure 19

It is not necessary to verify that all three angles are equal and all three sides are proportional to determine whether two triangles are congruent.

\section*{Determining Similar Triangles}
1. Angle-Angle Case Two triangles are similar if two of the corresponding angles have equal measures.

For example, in Figure 20(a), the two triangles are similar because two angles have equal measures.
2. Side-Side-Side Case Two triangles are similar if the lengths of all three sides of each triangle are proportional.

For example, in Figure 20(b), the two triangles are similar because
\[
\frac{10}{30}=\frac{5}{15}=\frac{6}{18}=\frac{1}{3}
\]
3. Side-Angle-Side Case Two triangles are similar if two corresponding sides are proportional and the angles between the two sides have equal measure.

For example, in Figure 20(c), the two triangles are similar because \(\frac{4}{6}=\frac{12}{18}=\frac{2}{3}\) and the angles between the sides have equal measure.

Figure 20

(a)

(b)

(c)

\section*{EXAMPLE 5 Using Similar Triangles}

Given that the triangles in Figure 21 are similar, find the missing length \(x\) and the angles \(A, B\), and \(C\).

Figure 21

Sollution Because the triangles are similar, corresponding angles are equal, so \(A=90^{\circ}, B=60^{\circ}\), and \(C=30^{\circ}\). Also, the corresponding sides are proportional. That is, \(\frac{3}{5}=\frac{6}{x}\). We solve this equation for \(x\).
\[
\begin{aligned}
\frac{3}{5} & =\frac{6}{x} & & \\
5 x \cdot \frac{3}{5} & =5 x \cdot \frac{6}{x} & & \text { Multiply both sides by } 5 x \\
3 x & =30 & & \text { Simplify. } \\
x & =10 \quad & & \text { Divide both sides by } 3 .
\end{aligned}
\]

The missing length is 10 units.

\section*{-Now Work problem 41}

Proof of the Pythagorean Theorem Begin with a square, each side of length \(a+b\). In this square, form four right triangles, each having legs equal in length to \(a\) and \(b\). See Figure 22. All these triangles are congruent (two sides and their included angle are equal). As a result, the hypotenuse of each is the same, say \(c\), and the pink shading in Figure 22 indicates a square with an area equal to \(c^{2}\).

Figure 22

The area of the original square with sides \(a+b\) equals the sum of the areas of the four triangles (each of area \(\frac{1}{2} a b\) ) plus the area of the square with side \(c\). That is,
\[
\begin{aligned}
(a+b)^{2} & =\frac{1}{2} a b+\frac{1}{2} a b+\frac{1}{2} a b+\frac{1}{2} a b+c^{2} \\
a^{2}+2 a b+b^{2} & =2 a b+c^{2} \\
a^{2}+b^{2} & =c^{2}
\end{aligned}
\]

The proof is complete.
Proof of the Converse of the Pythagorean Theorem Begin with two triangles: one a right triangle with legs \(a\) and \(b\) and the other a triangle with sides \(a, b\), and \(c\) for which \(c^{2}=a^{2}+b^{2}\). See Figure 23. By the Pythagorean Theorem, the length \(x\) of the third side of the first triangle is
\[
x^{2}=a^{2}+b^{2}
\]

But \(c^{2}=a^{2}+b^{2}\). Hence,
\[
\begin{aligned}
x^{2} & =c^{2} \\
x & =c
\end{aligned}
\]

The two triangles have sides with the same length and are therefore congruent. This means corresponding angles are equal, so the angle opposite side \(c\) of the second triangle equals \(90^{\circ}\).

The proof is complete.

\section*{A. 2 Assess Your Understanding}

\section*{Concepts and Vocabulary}
1. \(\mathrm{A}(\mathrm{n})\) 90 degrees. The longest side is called the \(\qquad\) -.
2. For a triangle with base \(b\) and altitude \(h\), a formula for the area \(A\) is \(\qquad\) .
3. The formula for the circumference \(C\) of a circle of radius \(r\) is
\(\qquad\) -.
4. Two triangles are \(\qquad\) if corresponding angles are equal and the lengths of the corresponding sides are proportional.
5. True or False In a right triangle, the square of the length of the longest side equals the sum of the squares of the lengths of the other two sides.
6. True or False The triangle with sides of lengths 6,8 , and 10 is a right triangle.
7. True or False The volume of a sphere of radius \(r\) is \(\frac{4}{3} \pi r^{2}\).
8. True or False The triangles shown are congruent.

9. True or False The triangles shown are similar.

10. True or False The triangles shown are similar.

\section*{Skill Building}

In Problems 11-16, the lengths of the legs of a right triangle are given. Find the hypotenuse.
11. \(a=5, \quad b=12\)
12. \(a=6, \quad b=8\)
13. \(a=10, \quad b=24\)
14. \(a=4, \quad b=3\)
15. \(a=7, \quad b=24\)
16. \(a=14, \quad b=48\)

In Problems 17-24, the lengths of the sides of a triangle are given. Determine which are right triangles. For those that are, identify the hypotenuse.

\section*{Applications and Extensions}
45. How many feet does a wheel with a diameter of 16 inches travel after four revolutions?
46. How many revolutions will a circular disk with a diameter of 4 feet have completed after it has rolled 20 feet?
47. In the figure shown, \(A B C D\) is a square, with each side of length 6 feet. The width of the border (shaded portion) between the outer square \(E F G H\) and \(A B C D\) is 2 feet. Find the area of the border.

48. Refer to the figure. Square \(A B C D\) has an area of 100 square feet; square \(B E F G\) has an area of 16 square feet. What is the area of the triangle \(C G F\) ?

49. Architecture A Norman window consists of a rectangle surmounted by a semicircle. Find the area of the Norman window shown in the illustration. How much wood frame is needed to enclose the window?

50. Construction A circular swimming pool that is 20 feet in diameter is enclosed by a wooden deck that is 3 feet wide. What is the area of the deck? How much fence is required to enclose the deck?

51. How Tall Is the Great Pyramid? The ancient Greek philosopher Thales of Miletus is reported on one occasion to have visited Egypt and calculated the height of the Great Pyramid of Cheops by means of shadow reckoning. Thales knew that each side of the base of the pyramid was 252 paces and that his own height was 2 paces. He measured the length of the pyramid's shadow to be 114 paces and determined the length of his shadow to be 3 paces. See the illustration. Using similar triangles, determine the height of the Great Pyramid in terms of the number of paces.

In Problems 53-55, use the facts that the radius of Earth is 3960 miles and 1 mile \(=5280\) feet.
53. How Far Can You See? The conning tower of the U.S.S. Silversides, a World War II submarine now permanently stationed in Muskegon, Michigan, is approximately 20 feet above sea level. How far can you see from the conning tower?
54. How Far Can You See? A person who is 6 feet tall is standing on the beach in Fort Lauderdale, Florida, and looks out onto the Atlantic Ocean. Suddenly, a ship appears on the horizon. How far is the ship from shore?
55. How Far Can You See? The deck of a destroyer is 100 feet above sea level. How far can a person see from the deck? How far can a person see from the bridge, which is 150 feet above sea level?
56. Suppose that \(m\) and \(n\) are positive integers with \(m>n\). If \(a=m^{2}-n^{2}, b=2 m n\), and \(c=m^{2}+n^{2}\), show that \(a, b\), and \(c\) are the lengths of the sides of a right triangle. (This formula can be used to find the sides of a right triangle that are integers, such as \(3,4,5 ; 5,12,13\); and so on. Such triplets of integers are called Pythagorean triples.)

\section*{Discussion and Writing}
57. You have 1000 feet of flexible pool siding and wish to construct a swimming pool. Experiment with rectangular-shaped pools with perimeters of 1000 feet. How do their areas vary? What is the shape of the rectangle with the largest area? Now compute the area enclosed by a circular pool with a perimeter (circumference) of 1000 feet. What would be your choice of shape for the pool? If rectangular, what is your preference for dimensions? Justify your choice. If your only consideration is to have a pool that encloses the most area, what shape should you use?

58. The Gibb's Hill Lighthouse, Southampton, Bermuda, in operation since 1846, stands 117 feet high on a hill 245 feet high, so its beam of light is 362 feet above sea level. A brochure states that the light itself can be seen on the horizon about 26 miles from the lighthouse. Verify the accuracy of this information. The brochure further states ships 40 miles away can see the light and that planes flying at 10,000 feet can see it 120 miles away. Verify the accuracy of these statements. What assumption did the brochure make about the height of the ship?

\section*{A. 3 Polynomials}

OBJECTIVES 1 Recognize Monomials (p. A22)
2 Recognize Polynomials (p. A23)
3 Add and Subtract Polynomials (p. A24)
4 Multiply Polynomials (p. A25)
5 Know Formulas for Special Products (p. A26)
6 Divide Polynomials Using Long Division (p. A27)
7 Work with Polynomials in Two Variables (p. A30)

We have described algebra as a generalization of arithmetic in which letters are used to represent real numbers. From now on, we shall use the letters at the end of the alphabet, such as \(x, y\), and \(z\), to represent variables and shall use the letters at the beginning of the alphabet, such as \(a, b\), and \(c\), to represent constants. In the expressions \(3 x+5\) and \(a x+b\), it is understood that \(x\) is a variable and that \(a\) and \(b\) are constants, even though the constants \(a\) and \(b\) are unspecified. As you will find out, the context usually makes the intended meaning clear.

\section*{1 Recognize Monomials}

DEFINITION

NOTE The nonnegative integers are the integers \(0,1,2,3, \ldots\).

A monomial in one variable is the product of a constant and a variable raised to a nonnegative integer power. A monomial is of the form
\[
a x^{k}
\]
where \(a\) is a constant, \(x\) is a variable, and \(k \geq 0\) is an integer. The constant \(a\) is called the coefficient of the monomial. If \(a \neq 0\), then \(k\) is called the degree of the monomial.

\section*{EXAMPLE I Examples of Monomials}

\section*{Monomial}
(a) \(6 x^{2}\)
(b) \(-\sqrt{2} x^{3}\)
(c) 3
(d) \(-5 x\)
(e) \(x^{4}\)

\section*{Coefficient}

6
\(-\sqrt{2}\)
3
\(-5\)
1

\section*{Degree}

2
3
0 Since \(3=3 \cdot 1=3 x^{0}, x \neq 0\)
1 Since \(-5 x=-5 x^{1}\)
4 Since \(x^{4}=1 \cdot x^{4}\)

\section*{EXAMPLE 2 Examples of Nonmonomial Expressions}
(a) \(3 x^{1 / 2}\) is not a monomial, since the exponent of the variable \(x\) is \(\frac{1}{2}\), and \(\frac{1}{2}\) is not a nonnegative integer.
(b) \(4 x^{-3}\) is not a monomial, since the exponent of the variable \(x\) is -3 , and -3 is not a nonnegative integer.
```

Nmow Work problem 7

```

\section*{2 Recognize Polynomials}

Two monomials with the same variable raised to the same power are called like terms. For example, \(2 x^{4}\) and \(-5 x^{4}\) are like terms. In contrast, the monomials \(2 x^{3}\) and \(2 x^{5}\) are not like terms.

Like terms may be added or subtracted using the Distributive Property. For example,
\[
2 x^{2}+5 x^{2}=(2+5) x^{2}=7 x^{2} \text { and } 8 x^{3}-5 x^{3}=(8-5) x^{3}=3 x^{3}
\]

The sum or difference of two monomials having different degrees is called a binomial. The sum or difference of three monomials with three different degrees is a trinomial. For example,
\[
\begin{aligned}
& x^{2}-2 \text { is a binomial } \\
& x^{3}-3 x+5 \text { is a trinomial } \\
& 2 x^{2}+5 x^{2}+2=7 x^{2}+2 \text { is a binomial }
\end{aligned}
\]

DEFINITION

In Words
A polynomial is a sum of monomials.

A polynomial in one variable is an algebraic expression of the form
\[
\begin{equation*}
a_{n} x^{n}+a_{n-1} x^{n-1}+\cdots+a_{1} x+a_{0} \tag{1}
\end{equation*}
\]
where \(a_{n}, a_{n-1}, \ldots, a_{1}, a_{0}\) are constants,* called the coefficients of the polynomial, \(n \geq 0\) is an integer, and \(x\) is a variable. If \(a_{n} \neq 0\), it is called the leading coefficient, and \(n\) is called the degree of the polynomial.

The monomials that make up a polynomial are called its terms. If all the coefficients are 0 , the polynomial is called the zero polynomial, which has no degree.

Polynomials are usually written in standard form, beginning with the nonzero term of highest degree and continuing with terms in descending order according to degree. If a power of \(x\) is missing, it is because its coefficient is zero.

\section*{EXAMPLE 3}

\section*{Examples of Polynomials}
\[
\begin{aligned}
& \text { Polynomial } \\
& -8 x^{3}+4 x^{2}-6 x+2 \\
& 3 x^{2}-5=3 x^{2}+0 \cdot x+(-5) \\
& 8-2 x+x^{2}=1 \cdot x^{2}+(-2) x+8 \\
& 5 x+\sqrt{2}=5 x^{1}+\sqrt{2} \\
& 3=3 \cdot 1=3 \cdot x^{0} \\
& 0
\end{aligned}
\]
\begin{tabular}{ll} 
Coefficients & Degree \\
\(-8,4,-6,2\) & 3 \\
\(3,0,-5\) & 2 \\
\(1,-2,8\) & 2 \\
\(5, \sqrt{2}\) & 1 \\
3 & 0 \\
0 & No degree
\end{tabular}

\footnotetext{
*The notation \(a_{n}\) is read as " \(a\) sub \(n\)." The number \(n\) is called a subscript and should not be confused with an exponent. Subscripts are used to distinguish one constant from another when a large or undetermined number of constants are required.
}

Although we have been using \(x\) to represent the variable, letters such as \(y\) or \(z\) are also commonly used.
\[
\begin{aligned}
& 3 x^{4}-x^{2}+2 \text { is a polynomial (in } x \text { ) of degree } 4 . \\
& 9 y^{3}-2 y^{2}+y-3 \text { is a polynomial (in } y \text { ) of degree } 3 . \\
& z^{5}+\pi \text { is a polynomial (in } z \text { ) of degree } 5 .
\end{aligned}
\]

Algebraic expressions such as
\[
\frac{1}{x} \text { and } \frac{x^{2}+1}{x+5}
\]
are not polynomials. The first is not a polynomial because \(\frac{1}{x}=x^{-1}\) has an exponent that is not a nonnegative integer. Although the second expression is the quotient of two polynomials, the polynomial in the denominator has degree greater than 0 , so the expression cannot be a polynomial.
am Now Work problem 17

\section*{3 Add and Subtract Polynomials}

Polynomials are added and subtracted by combining like terms.

\section*{EXAMPLE 4 Adding Polynomials}

Find the sum of the polynomials:
\[
8 x^{3}-2 x^{2}+6 x-2 \text { and } 3 x^{4}-2 x^{3}+x^{2}+x
\]

Solution The sum can be found using a horizontal or vertical format.
Horizontal Addition: The idea here is to group the like terms and then combine them.
\[
\begin{aligned}
& \left(8 x^{3}-2 x^{2}+6 x-2\right)+\left(3 x^{4}-2 x^{3}+x^{2}+x\right) \\
& \quad=3 x^{4}+\left(8 x^{3}-2 x^{3}\right)+\left(-2 x^{2}+x^{2}\right)+(6 x+x)-2 \\
& \quad=3 x^{4}+6 x^{3}-x^{2}+7 x-2
\end{aligned}
\]

Vertical Addition: The idea here is to vertically line up the like terms in each polynomial and then add the coefficients.
\[
\begin{array}{r}
x^{4} \begin{array}{c}
x^{3} x^{2} \\
8 x^{3}-2 x^{2}+6 x-2
\end{array}+\frac{x^{1}}{3 x^{4}-2 x^{3}+x^{2}+x} \\
3 x^{4}+6 x^{3}-x^{2}+7 x-2
\end{array}
\]

Subtraction of polynomials can be performed horizontally or vertically as well.

\section*{EXAMPLE 5 Subtracting Polynomials}

Find the difference: \(\left(3 x^{4}-4 x^{3}+6 x^{2}-1\right)-\left(2 x^{4}-8 x^{2}-6 x+5\right)\)

\section*{Solution}

\section*{Horizontal Subtraction:}
\[
\begin{aligned}
& \left(3 x^{4}-4 x^{3}+6 x^{2}-1\right)-\left(2 x^{4}-8 x^{2}-6 x+5\right) \\
& =3 x^{4}-4 x^{3}+6 x^{2}-1+\underbrace{\left(-2 x^{4}+8 x^{2}+6 x-5\right)}_{\begin{array}{c}
\text { Be sure to change the sign of each } \\
\text { term in the second polynomial. }
\end{array}} \\
& =\left(3 x^{4}-2 x^{4}\right)+\left(-4 x^{3}\right)+\left(6 x^{2}+8 x^{2}\right)+6 x+(-1-5) \\
& \uparrow
\end{aligned} \quad \begin{aligned}
& \text { Group like terms. } \\
& =x^{4}-4 x^{3}+14 x^{2}+6 x-6
\end{aligned}
\]

Vertical Subtraction: We line up like terms, change the sign of each coefficient of the second polynomial, and add vertically.
\[
\begin{array}{rrrrrr}
x^{x^{4}} x^{3} x^{2} & x^{1} x^{0} & x^{x^{4}} x^{3} & x^{2} & x^{1} \\
3 x^{4}-4 x^{3}+6 x^{2} & -1 & & 3 x^{4}-4 x^{3}+6 x^{2} & -1 \\
-\left[\underline{2 x^{4}}-8 x^{2}-6 x+5\right] & =+ & \frac{-2 x^{4}+8 x^{2}+6 x-5}{x^{4}-4 x^{3}+14 x^{2}+6 x-6}
\end{array}
\]

The choice of which of these methods to use for adding and subtracting polynomials is left to you. To save space, we most often use the horizontal format.
-Now Work problem 29

COMMENT Vertical subtraction will be used when we divide polynomials.

\section*{4 Multiply Polynomials}

Two monomials may be multiplied using the Laws of Exponents and the Commutative and Associative Properties. For example,
\[
\left(2 x^{3}\right) \cdot\left(5 x^{4}\right)=(2 \cdot 5) \cdot\left(x^{3} \cdot x^{4}\right)=10 x^{3+4}=10 x^{7}
\]

Products of polynomials are found by repeated use of the Distributive Property and the Laws of Exponents. Again, you have a choice of a horizontal or vertical format.

\section*{EXAMPLE 6}

Multiplying Polynomials
Find the product: \((2 x+5)\left(x^{2}-x+2\right)\)

\section*{Solution Horizontal Multiplication:}
\[
\begin{aligned}
(2 x+5)\left(x^{2}-x+2\right) & =2 x\left(x^{2}-x+2\right)+5\left(x^{2}-x+2\right) \\
& \uparrow \\
& \text { Distributive Property } \\
& =\left(2 x \cdot x^{2}-2 x \cdot x+2 x \cdot 2\right)+\left(5 \cdot x^{2}-5 \cdot x+5 \cdot 2\right) \\
& \uparrow \\
& \text { Distributive Property } \\
& =\left(2 x^{3}-2 x^{2}+4 x\right)+\left(5 x^{2}-5 x+10\right) \\
& \uparrow \\
& \text { Law of Exponents } \\
& =2 x^{3}+3 x^{2}-x+10 \\
& \uparrow \\
& \text { Combine like terms. }
\end{aligned}
\]

Vertical Multiplication: The idea here is very much like multiplying a two-digit number by a three-digit number.
\[
\begin{aligned}
& x^{2}-x+2 \\
& 2 x+5 \\
& \begin{array}{l}
5 x^{2}-5 x+10
\end{array} \\
&(+) \text { This line is } 5\left(x^{2}-x+2\right) \\
& \frac{2 x^{3}-2 x^{2}+4 x}{2 x^{3}+3 x^{2}-x+10} \text { This line is } 2 x\left(x^{2}-x+2\right) . \\
& \text { Sum of the above two lines }
\end{aligned}
\]

\section*{5 Know Formulas for Special Products}

Certain products, called special products, occur frequently in algebra. They can be calculated using the FOIL (First, Outer, Inner, Last) method of multiplying two binomials.

\section*{EXAMPLE 7 Using FOIL}

(b) \((x+2)^{2}=(x+2)(x+2)=x^{2}+2 x+2 x+4=x^{2}+4 x+4\)
(c) \((x-3)^{2}=(x-3)(x-3)=x^{2}-3 x-3 x+9=x^{2}-6 x+9\)
(d) \((x+3)(x+1)=x^{2}+x+3 x+3=x^{2}+4 x+3\)
(e) \((2 x+1)(3 x+4)=6 x^{2}+8 x+3 x+4=6 x^{2}+11 x+4\)

\section*{Nom Now Problems 47 and 55}

Some products have been given special names because of their form. The following special products are based on Examples 7(a), (b), and (c).

\section*{Difference of Two Squares}
\[
\begin{equation*}
(a-b)(a+b)=a^{2}-b^{2} \tag{2}
\end{equation*}
\]

Squares of Binomials, or Perfect Squares
\[
\begin{align*}
& (a+b)^{2}=a^{2}+2 a b+b^{2}  \tag{3a}\\
& (a-b)^{2}=a^{2}-2 a b+b^{2} \tag{3b}
\end{align*}
\]

\section*{EXAMPLE 8 Using Special Product Formulas}
(a) \((x-5)(x+5)=x^{2}-5^{2}=x^{2}-25\)

Difference of two squares
(b) \((x+7)^{2}=x^{2}+2 \cdot 7 \cdot x+7^{2}=x^{2}+14 x+49\)

Square of a binomial
(c) \((2 x+1)^{2}=(2 x)^{2}+2 \cdot 1 \cdot 2 x+1^{2}=4 x^{2}+4 x+1\)

Note that we used \(2 x\) in place of a in formula (3a).
(d) \((3 x-4)^{2}=(3 x)^{2}-2 \cdot 4 \cdot 3 x+4^{2}=9 x^{2}-24 x+16\) Replace a by \(3 x\) in formula (3b)

Let's look at some more examples that lead to general formulas.

\section*{EXAMPLE 9 Cubing a Binomial}
(a) \((x+2)^{3}=(x+2)(x+2)^{2}=(x+2)\left(x^{2}+4 x+4\right) \quad\) Formula (3a)
\[
\begin{aligned}
& =x\left(x^{2}+4 x+4\right)+2\left(x^{2}+4 x+4\right) \\
& =\left(x^{3}+4 x^{2}+4 x\right)+\left(2 x^{2}+8 x+8\right) \\
& =x^{3}+6 x^{2}+12 x+8
\end{aligned}
\]
(b) \((x-1)^{3}=(x-1)(x-1)^{2}=(x-1)\left(x^{2}-2 x+1\right) \quad\) Formula (3b) \(=x\left(x^{2}-2 x+1\right)-1\left(x^{2}-2 x+1\right)\)
\(=\left(x^{3}-2 x^{2}+x\right)+\left(-x^{2}+2 x-1\right)\)
\[
=x^{3}-3 x^{2}+3 x-1
\]

\section*{Cubes of Binomials, or Perfect Cubes}
\[
\begin{align*}
& (a+b)^{3}=a^{3}+3 a^{2} b+3 a b^{2}+b^{3}  \tag{4a}\\
& (a-b)^{3}=a^{3}-3 a^{2} b+3 a b^{2}-b^{3} \tag{4b}
\end{align*}
\]

\section*{allow Work problem 85}

EXAMPLE IO Forming the Difference of Two Cubes
\[
\begin{aligned}
(x-1)\left(x^{2}+x+1\right) & =x\left(x^{2}+x+1\right)-1\left(x^{2}+x+1\right) \\
& =x^{3}+x^{2}+x-x^{2}-x-1 \\
& =x^{3}-1
\end{aligned}
\]

\section*{EXAMPLE II Forming the Sum of Two Cubes}
\[
\begin{aligned}
(x+2)\left(x^{2}-2 x+4\right) & =x\left(x^{2}-2 x+4\right)+2\left(x^{2}-2 x+4\right) \\
& =x^{3}-2 x^{2}+4 x+2 x^{2}-4 x+8 \\
& =x^{3}+8
\end{aligned}
\]

Examples 10 and 11 lead to two more special products.

\section*{Difference of Two Cubes}
\[
\begin{equation*}
(a-b)\left(a^{2}+a b+b^{2}\right)=a^{3}-b^{3} \tag{5}
\end{equation*}
\]

\section*{Sum of Two Cubes}
\[
\begin{equation*}
(a+b)\left(a^{2}-a b+b^{2}\right)=a^{3}+b^{3} \tag{6}
\end{equation*}
\]

\section*{6 Divide Polynomials Using Long Division}

The procedure for dividing two polynomials is similar to the procedure for dividing two integers.

\section*{EXAMPLE I2 Dividing Two Integers}

Divide 842 by 15.

\section*{Solution}

\section*{EXAMPLE I3 Dividing Two Polynomials}

Find the quotient and the remainder when
\[
3 x^{3}+4 x^{2}+x+7 \text { is divided by } x^{2}+1
\]

Solution Each polynomial is in standard form. The dividend is \(3 x^{3}+4 x^{2}+x+7\), and the divisor is \(x^{2}+1\).

NOTE Remember, a polynomial is in standard form when the terms are written according to descending degree.

Step 1: Divide the leading term of the dividend, \(3 x^{3}\), by the leading term of the divisor, \(x^{2}\). Enter the result, \(3 x\), over the term \(3 x^{3}\), as follows:
\[
\frac{3 x}{x ^ { 2 } + 1 \longdiv { 3 x ^ { 3 } + 4 x ^ { 2 } + x + 7 }}
\]

STEP 2: Multiply \(3 x\) by \(x^{2}+1\), and enter the result below the dividend.
\[
\begin{array}{r}
\frac{3 x}{x ^ { 2 } + 1 \longdiv { 3 x ^ { 3 } + 4 x ^ { 2 } + x + 7 }} \begin{array}{r}
\frac{3 x^{3}+3 x}{\uparrow}
\end{array} 3 x \cdot\left(x^{2}+1\right)=3 x^{3}+3 x \\
\text { Align the 3xterm under the } x \text { to make the next step easier. }
\end{array}
\]

Step 3: Subtract and bring down the remaining terms.
\[
\begin{aligned}
& \frac{3 x}{x ^ { 2 } + 1 \longdiv { 3 x ^ { 3 } + 4 x ^ { 2 } + x + 7 }} \\
& \frac{3 x^{3}+3 x}{4 x^{2}-2 x+7} \leftarrow \text { Subtract (change the signs and add). } \\
& \leftarrow \text { Bring down the } 4 x^{2} \text { and the } 7 .
\end{aligned}
\]

COMMENT If the degree of the divisor is greater than the degree of the dividend, the process ends.

STEP 4: Repeat Steps \(1-3\) using \(4 x^{2}-2 x+7\) as the dividend.
\[
\begin{aligned}
& \frac{4 x^{2}+4}{-2 x+3} \leftarrow \text { Multiply } x^{2}+1 \text { by } 4 \text {; subtract. }
\end{aligned}
\]

Since \(x^{2}\) does not divide into \(-2 x\) evenly (that is, the result is not a monomial), the process ends. The quotient is \(3 x+4\), and the remainder is \(-2 x+3\).

Check: (Quotient) (Divisor) + Remainder
\[
\begin{aligned}
& =(3 x+4)\left(x^{2}+1\right)+(-2 x+3) \\
& =3 x^{3}+3 x+4 x^{2}+4+(-2 x+3) \\
& =3 x^{3}+4 x^{2}+x+7=\text { Dividend }
\end{aligned}
\]

Then
\[
\frac{3 x^{3}+4 x^{2}+x+7}{x^{2}+1}=3 x+4+\frac{-2 x+3}{x^{2}+1}
\]

The next example combines the steps involved in long division.

\section*{EXAMPLE I4 \\ Dividing Two Polynomials}

Find the quotient and the remainder when
\[
x^{4}-3 x^{3}+2 x-5 \text { is divided by } x^{2}-x+1
\]

Solution In setting up this division problem, it is necessary to leave a space for the missing \(x^{2}\) term in the dividend.
\[
\begin{aligned}
& \text { Divisor } \rightarrow x ^ { 2 } - x + 1 \longdiv { x ^ { 2 } - 2 x - 3 } \begin{array} { l } 
{ x ^ { 4 } - 3 x ^ { 3 } + 2 x - 5 } \\
{ \leftarrow \text { Quotient } } \\
{ \leftarrow \text { Dividend } }
\end{array} \\
& \text { Subtract } \rightarrow \\
& \text { Subtract } \rightarrow \\
& \text { Subtract } \rightarrow \\
& \begin{array}{r}
\frac{x^{4}-x^{3}+x^{2}}{-2 x^{3}-x^{2}+2 x-5} \\
\frac{-2 x^{3}+2 x^{2}-2 x}{-3 x^{2}+4 x-5} \\
\frac{-3 x^{2}+3 x-3}{x-2}
\end{array} \leftarrow \text { Remainder }
\end{aligned}
\]

Check: (Quotient) (Divisor) + Remainder
\[
\begin{aligned}
& =\left(x^{2}-2 x-3\right)\left(x^{2}-x+1\right)+(x-2) \\
& =x^{4}-x^{3}+x^{2}-2 x^{3}+2 x^{2}-2 x-3 x^{2}+3 x-3+x-2 \\
& =x^{4}-3 x^{3}+2 x-5=\text { Dividend }
\end{aligned}
\]

As a result,
\[
\frac{x^{4}-3 x^{3}+2 x-5}{x^{2}-x+1}=x^{2}-2 x-3+\frac{x-2}{x^{2}-x+1}
\]

The process of dividing two polynomials leads to the following result:

Let \(Q\) be a polynomial of positive degree, and let \(P\) be a polynomial whose degree is greater than or equal to the degree of \(Q\).The remainder after dividing \(P\) by \(Q\) is either the zero polynomial or a polynomial whose degree is less than the degree of the divisor \(Q\).

\section*{am Now Work problem 93}

\section*{7 Work with Polynomials in Two Variables}

A monomial in two variables \(x\) and \(y\) has the form \(a x^{n} y^{m}\), where \(a\) is a constant, \(x\) and \(y\) are variables, and \(n\) and \(m\) are nonnegative integers. The degree of a monomial is the sum of the powers of the variables.

For example,
\[
2 x y^{3}, \quad x^{2} y^{2}, \quad \text { and } x^{3} y
\]
are all monomials that have degree 4 .
A polynomial in two variables \(x\) and \(y\) is the sum of one or more monomials in two variables. The degree of a polynomial in two variables is the highest degree of all the monomials with nonzero coefficients.

\section*{EXAMPLE I5 Examples of Polynomials in Two Variables}
\[
\begin{array}{ccc}
3 x^{2}+2 x^{3} y+5 & \pi x^{3}-y^{2} & x^{4}+4 x^{3} y-x y^{3}+y^{4} \\
\text { Two variables, } & \text { Two variables, } & \text { Two variables, } \\
\text { degree is 4. } & \text { degree is } 3 . & \text { degree is } 4 .
\end{array}
\]

Multiplying polynomials in two variables is handled in the same way as multiplying polynomials in one variable.

\section*{EXAMPLE 16 Using a Special Product Formula}

To multiply \((2 x-y)^{2}\), use the Square of a Binomial formula (3b) with \(2 x\) instead of \(a\) and with \(y\) instead of \(b\).
\[
\begin{aligned}
(2 x-y)^{2} & =(2 x)^{2}-2 \cdot y \cdot 2 x+y^{2} \\
& =4 x^{2}-4 x y+y^{2}
\end{aligned}
\]

\section*{A. 3 Assess Your Understanding}

\section*{Concepts and Vocabulary}
1. The polynomial \(3 x^{4}-2 x^{3}+13 x^{2}-5\) is of degree \(\qquad\) .
4. True or False \(4 x^{-2}\) is a monomial of degree -2 .

The leading coefficient is \(\qquad\) -.
2. \(\left(x^{2}-4\right)\left(x^{2}+4\right)=\) \(\qquad\) . _.
5. True or False The degree of the product of two nonzero polynomials equals the sum of their degrees.
3. \((x-2)\left(x^{2}+2 x+4\right)=\) \(\qquad\) .
6. True or False \((x+a)\left(x^{2}+a x+a\right)=x^{3}+a^{3}\).

\section*{Skill Building}

In Problems 7-16, tell whether the expression is a monomial. If it is, name the variable(s) and the coefficient and give the degree of the monomial. If it is not a monomial, state why not.
7. \(2 x^{3}\)
8. \(-4 x^{2}\)
9. \(\frac{8}{x}\)
10. \(-2 x^{-3}\)
11. \(-2 x y^{2}\)
12. \(5 x^{2} y^{3}\)
13. \(\frac{8 x}{y}\)
14. \(-\frac{2 x^{2}}{y^{3}}\)
15. \(x^{2}+y^{2}\)
16. \(3 x^{2}+4\)

In Problems 17-26, tell whether the expression is a polynomial. If it is, give its degree. If it is not, state why not.
17. \(3 x^{2}-5\)
18. \(1-4 x\)
19. 5
20. \(-\pi\)
21. \(3 x^{2}-\frac{5}{x}\)
22. \(\frac{3}{x}+2\)
23. \(2 y^{3}-\sqrt{2}\)
24. \(10 z^{2}+z\)
25. \(\frac{x^{2}+5}{x^{3}-1}\)
26. \(\frac{3 x^{3}+2 x-1}{x^{2}+x+1}\)

In Problems 27-46, add, subtract, or multiply, as indicated. Express your answer as a single polynomial in standard form.
27. \(\left(x^{2}+4 x+5\right)+(3 x-3)\)
28. \(\left(x^{3}+3 x^{2}+2\right)+\left(x^{2}-4 x+4\right)\)
29. \(\left(x^{3}-2 x^{2}+5 x+10\right)-\left(2 x^{2}-4 x+3\right)\)
30. \(\left(x^{2}-3 x-4\right)-\left(x^{3}-3 x^{2}+x+5\right)\)
31. \(\left(6 x^{5}+x^{3}+x\right)+\left(5 x^{4}-x^{3}+3 x^{2}\right)\)
32. \(\left(10 x^{5}-8 x^{2}\right)+\left(3 x^{3}-2 x^{2}+6\right)\)
33. \(\left(x^{2}-3 x+1\right)+2\left(3 x^{2}+x-4\right)\)
34. \(-2\left(x^{2}+x+1\right)+\left(-5 x^{2}-x+2\right)\)
35. \(6\left(x^{3}+x^{2}-3\right)-4\left(2 x^{3}-3 x^{2}\right)\)
36. \(8\left(4 x^{3}-3 x^{2}-1\right)-6\left(4 x^{3}+8 x-2\right)\)
37. \(\left(x^{2}-x+2\right)+\left(2 x^{2}-3 x+5\right)-\left(x^{2}+1\right)\)
38. \(\left(x^{2}+1\right)-\left(4 x^{2}+5\right)+\left(x^{2}+x-2\right)\)
39. \(9\left(y^{2}-3 y+4\right)-6\left(1-y^{2}\right)\)
40. \(8\left(1-y^{3}\right)+4\left(1+y+y^{2}+y^{3}\right)\)
41. \(x\left(x^{2}+x-4\right)\)
42. \(4 x^{2}\left(x^{3}-x+2\right)\)
43. \(-2 x^{2}\left(4 x^{3}+5\right)\)
44. \(5 x^{3}(3 x-4)\)
45. \((x+1)\left(x^{2}+2 x-4\right)\)
46. \((2 x-3)\left(x^{2}+x+1\right)\)

In Problems 47-64, multiply the polynomials using the FOIL method. Express your answer as a single polynomial in standard form.
47. \((x+2)(x+4)\)
48. \((x+3)(x+5)\)
49. \((2 x+5)(x+2)\)
50. \((3 x+1)(2 x+1)\)
51. \((x-4)(x+2)\)
52. \((x+4)(x-2)\)
53. \((x-3)(x-2)\)
54. \((x-5)(x-1)\)
55. \((2 x+3)(x-2)\)
56. \((2 x-4)(3 x+1)\)
57. \((-2 x+3)(x-4)\)
58. \((-3 x-1)(x+1)\)
59. \((-x-2)(-2 x-4)\)
60. \((-2 x-3)(3-x)\)
61. \((x-2 y)(x+y)\)
62. \((2 x+3 y)(x-y)\)
63. \((-2 x-3 y)(3 x+2 y)\)
64. \((x-3 y)(-2 x+y)\)

In Problems 65-88, multiply the polynomials using the special product formulas. Express your answer as a single polynomial in standard form.
65. \((x-7)(x+7)\)
66. \((x-1)(x+1)\)
68. \((3 x+2)(3 x-2)\)
69. \((x+4)^{2}\)
71. \((x-4)^{2}\)
72. \((x-5)^{2}\)
74. \((5 x-3)(5 x+3)\)
75. \((2 x-3)^{2}\)
77. \((x+y)(x-y)\)
78. \((x+3 y)(x-3 y)\)
80. \((3 x+4 y)(3 x-4 y)\)
81. \((x+y)^{2}\)
83. \((x-2 y)^{2}\)
84. \((2 x+3 y)^{2}\)
87. \((2 x+1)^{3}\)
67. \((2 x+3)(2 x-3)\)
70. \((x+5)^{2}\)
73. \((3 x+4)(3 x-4)\)
76. \((3 x-4)^{2}\)
79. \((3 x+y)(3 x-y)\)
82. \((x-y)^{2}\)
85. \((x-2)^{3}\)
88. \((3 x-2)^{3}\)

In Problems 89-104, find the quotient and the remainder. Check your work by verifying that
\((\) Quotient \()(\) Divisor \()+\) Remainder \(=\) Dividend
89. \(4 x^{3}-3 x^{2}+x+1\) divided by \(x+2\)
91. \(4 x^{3}-3 x^{2}+x+1\) divided by \(x^{2}\)
93. \(5 x^{4}-3 x^{2}+x+1\) divided by \(x^{2}+2\)
95. \(4 x^{5}-3 x^{2}+x+1\) divided by \(2 x^{3}-1\)
97. \(2 x^{4}-3 x^{3}+x+1\) divided by \(2 x^{2}+x+1\)
99. \(-4 x^{3}+x^{2}-4\) divided by \(x-1\)
101. \(1-x^{2}+x^{4}\) divided by \(x^{2}+x+1\)
103. \(x^{3}-a^{3}\) divided by \(x-a\)
90. \(3 x^{3}-x^{2}+x-2\) divided by \(x+2\)
92. \(3 x^{3}-x^{2}+x-2\) divided by \(x^{2}\)
94. \(5 x^{4}-x^{2}+x-2\) divided by \(x^{2}+2\)
96. \(3 x^{5}-x^{2}+x-2\) divided by \(3 x^{3}-1\)
98. \(3 x^{4}-x^{3}+x-2\) divided by \(3 x^{2}+x+1\)
100. \(-3 x^{4}-2 x-1\) divided by \(x-1\)
102. \(1-x^{2}+x^{4}\) divided by \(x^{2}-x+1\)
104. \(x^{5}-a^{5}\) divided by \(x-a\)

\section*{Discussion and Writing}
105. Explain why the degree of the product of two nonzero polynomials equals the sum of their degrees.
106. Explain why the degree of the sum of two polynomials of different degrees equals the larger of their degrees.
107. Give a careful statement about the degree of the sum of two polynomials of the same degree.
108. Do you prefer adding two polynomials using the horizontal method or the vertical method? Write a brief position paper defending your choice.
109. Do you prefer to memorize the rule for the square of a binomial \((x+a)^{2}\) or to use FOIL to obtain the product? Write a brief position paper defending your choice.

\section*{A. 4 Factoring Polynomials}

OBJECTIVES 1 Factor the Difference of Two Squares and the Sum and Difference of Two Cubes (p. A33)
2 Factor Perfect Squares (p. A34)
3 Factor a Second-Degree Polynomial: \(x^{2}+B x+C\) (p. A34)
4 Factor by Grouping (p. A36)
5 Factor a Second-Degree Polynomial: \(A x^{2}+B x+C, A \neq 1\) (p. A37)
6 Complete the Square (p. A38)

Consider the following product:
\[
(2 x+3)(x-4)=2 x^{2}-5 x-12
\]

The two polynomials on the left side are called factors of the polynomial on the right side. Expressing a given polynomial as a product of other polynomials-that is, finding the factors of a polynomial - is called factoring.

We shall restrict our discussion here to factoring polynomials in one variable into products of polynomials in one variable, where all coefficients are integers. We call this factoring over the integers.

Any polynomial can be written as the product of 1 times itself or as -1 times its additive inverse. If a polynomial cannot be written as the product of two other polynomials (excluding 1 and -1 ), then the polynomial is prime. When a polynomial has been written as a product consisting only of prime factors, it is factored completely. Examples of prime polynomials (over the integers) are
\[
2, \quad 3, \quad 5, \quad x, \quad x+1, \quad x-1, \quad 3 x+4, \quad x^{2}+4
\]

The first factor to look for in a factoring problem is a common monomial factor present in each term of the polynomial. If one is present, use the Distributive Property to factor it out. Continue factoring out monomial factors until none are left.

COMMENT Over the real numbers, \(3 x+4\) factors into \(3\left(x+\frac{4}{3}\right)\). It is the noninteger \(\frac{4}{3}\) that causes \(3 x+4\) to be prime over the integers.

\section*{Identifying Common Monomial Factors}
\begin{tabular}{llll} 
& \begin{tabular}{l} 
Common \\
Monomial
\end{tabular} & \begin{tabular}{l} 
Remaining \\
Factor
\end{tabular} & Factored Form \\
\(2 x+4\) & 2 & \(x+2\) & \(2 x+4=2(x+2)\) \\
\(3 x-6\) & 3 & \(x-2\) & \(3 x-6=3(x-2)\) \\
\(2 x^{2}-4 x+8\) & 2 & \(x^{2}-2 x+4\) & \(2 x^{2}-4 x+8=2\left(x^{2}-2 x+4\right)\) \\
\(8 x-12\) & 4 & \(2 x-3\) & \(8 x-12=4(2 x-3)\) \\
\(x^{2}+x\) & \(x\) & \(x+1\) & \(x^{2}+x=x(x+1)\) \\
\(x^{3}-3 x^{2}\) & \(x^{2}\) & \(x-3\) & \(x^{3}-3 x^{2}=x^{2}(x-3)\) \\
\(6 x^{2}+9 x\) & \(3 x\) & \(2 x+3\) & \(6 x^{2}+9 x=3 x(2 x+3)\)
\end{tabular}

Notice that, once all common monomial factors have been removed from a polynomial, the remaining factor is either a prime polynomial of degree 1 or a polynomial of degree 2 or higher. (Do you see why?)
al Now Work problem 5

\section*{1 Factor the Difference of Two Squares and the Sum and Difference of Two Cubes}

When you factor a polynomial, first check for common monomial factors. Then see whether you can use one of the special formulas discussed in the previous section.

Difference of Two Squares
Perfect Squares

Sum of Two Cubes
Difference of Two Cubes
\[
\begin{aligned}
& a^{2}-b^{2}=(a-b)(a+b) \\
& a^{2}+2 a b+b^{2}=(a+b)^{2} \\
& a^{2}-2 a b+b^{2}=(a-b)^{2} \\
& a^{3}+b^{3}=(a+b)\left(a^{2}-a b+b^{2}\right) \\
& a^{3}-b^{3}=(a-b)\left(a^{2}+a b+b^{2}\right)
\end{aligned}
\]

\section*{EXAMPLE 2 Factoring the Difference of Two Squares}

Factor completely: \(x^{2}-4\)
Solution Note that \(x^{2}-4\) is the difference of two squares, \(x^{2}\) and \(2^{2}\).
\[
x^{2}-4=(x-2)(x+2)
\]

\section*{EXAMPLE 3 Factoring the Difference of Two Cubes}

Factor completely: \(x^{3}-1\)
Solution Because \(x^{3}-1\) is the difference of two cubes, \(x^{3}\) and \(1^{3}\),
\[
x^{3}-1=(x-1)\left(x^{2}+x+1\right)
\]

\section*{EXAMPLE 4 Factoring the Sum of Two Cubes}

Factor completely: \(x^{3}+8\)
Solution Because \(x^{3}+8\) is the sum of two cubes, \(x^{3}\) and \(2^{3}\),
\[
x^{3}+8=(x+2)\left(x^{2}-2 x+4\right)
\]

\section*{EXAMPLE 5 Factoring the Difference of Two Squares}

Factor completely: \(x^{4}-16\)
Solution Because \(x^{4}-16\) is the difference of two squares, \(x^{4}=\left(x^{2}\right)^{2}\) and \(16=4^{2}\),
\[
x^{4}-16=\left(x^{2}-4\right)\left(x^{2}+4\right)
\]

But \(x^{2}-4\) is also the difference of two squares, so
\[
x^{4}-16=\left(x^{2}-4\right)\left(x^{2}+4\right)=(x-2)(x+2)\left(x^{2}+4\right)
\]

\section*{2 Factor Perfect Squares}

When the first term and third term of a trinomial are both positive and are perfect squares, such as \(x^{2}, 9 x^{2}, 1\), and 4 , check to see whether the trinomial is a perfect square.

\section*{EXAMPLE 6 Factoring Perfect Squares}

Factor completely: \(x^{2}+6 x+9\)
Solution The first term, \(x^{2}\), and the third term, \(9=3^{2}\), are perfect squares. Because the middle term, \(6 x\), is twice the product of \(x\) and 3 , the trinomial is a perfect square.
\[
x^{2}+6 x+9=(x+3)^{2}
\]

\section*{EXAMPLE 7 \\ Factoring Perfect Squares}

Factor completely: \(9 x^{2}-6 x+1\)
Solution The first term, \(9 x^{2}=(3 x)^{2}\), and the third term, \(1=1^{2}\), are perfect squares. Because the middle term, \(-6 x\), is -2 times the product of \(3 x\) and 1 , the trinomial is a perfect square.
\[
9 x^{2}-6 x+1=(3 x-1)^{2}
\]

\section*{EXAMPLE 8}

\section*{Factoring Perfect Squares}

Factor completely: \(25 x^{2}+30 x+9\)
Solution The first term, \(25 x^{2}=(5 x)^{2}\), and the third term, \(9=3^{2}\), are perfect squares. Because the middle term, \(30 x\), is twice the product of \(5 x\) and 3 , the trinomial is a perfect square.
\[
25 x^{2}+30 x+9=(5 x+3)^{2}
\]
an Now Work problems 25 and 99
If a trinomial is not a perfect square, it may be possible to factor it using the technique discussed next.

\section*{3 Factor a Second-Degree Polynomial: \(x^{2}+B x+C\)}

The idea behind factoring a second-degree polynomial like \(x^{2}+B x+C\) is to see whether it can be made equal to the product of two (possibly equal) first-degree polynomials.

For example, consider
\[
(x+3)(x+4)=x^{2}+7 x+12
\]

The factors of \(x^{2}+7 x+12\) are \(x+3\) and \(x+4\). Note the following:
\[
\begin{gathered}
x^{2}+7 x+12=(x+3)(x+4) \\
\square \\
-72 \text { is the product of } 3 \text { and } 4 . \\
\square
\end{gathered}
\]

In general, if \(x^{2}+B x+C=(x+a)(x+b)=x^{2}+(a+b) x+a b\), then \(a b=C\) and \(a+b=B\).

To factor a second-degree polynomial \(x^{2}+B x+C\), find integers whose product is \(C\) and whose sum is \(B\). That is, if there are numbers \(a, b\), where \(a b=C\) and \(a+b=B\), then
\[
x^{2}+B x+C=(x+a)(x+b)
\]

\section*{EXAMPLE 9 Factoring Trinomials}

Factor completely: \(x^{2}+7 x+10\)
Solution First determine all integers whose product is 10 , and then compute their sums.
\begin{tabular}{|l|cccc|}
\hline Integers whose product is \(\mathbf{1 0}\) & 1,10 & \(-1,-10\) & 2,5 & \(-2,-5\) \\
Sum & 11 & -11 & 7 & -7 \\
\hline
\end{tabular}

The integers 2 and 5 have a product of 10 and add up to 7 , the coefficient of the middle term. As a result,
\[
x^{2}+7 x+10=(x+2)(x+5)
\]

\section*{EXAMPLE IO Factoring Trinomials}

Factor completely: \(x^{2}-6 x+8\)
Solution First determine all integers whose product is 8 , and then compute each sum.
\begin{tabular}{|l|cccc|}
\hline Integers whose product is 8 & 1,8 & \(-1,-8\) & 2,4 & \(-2,-4\) \\
Sum & 9 & -9 & 6 & -6 \\
\hline
\end{tabular}

Since -6 is the coefficient of the middle term,
\[
x^{2}-6 x+8=(x-2)(x-4)
\]

\section*{EXAMPLE II Factoring Trinomials}

Factor completely: \(x^{2}-x-12\)
Solution First determine all integers whose product is -12 , and then compute each sum.
\begin{tabular}{|l|cccccc|}
\hline Integers whose & & & & & \\
product is \(\mathbf{- 1 2}\) & \(1,-12\) & \(-1,12\) & \(2,-6\) & \(-2,6\) & \(3,-4\) & \(-3,4\) \\
Sum & -11 & 11 & -4 & 4 & -1 & 1 \\
\hline
\end{tabular}

Since -1 is the coefficient of the middle term,
\[
x^{2}-x-12=(x+3)(x-4)
\]

\section*{EXAMPLE 12 Factoring Trinomials}

Factor completely: \(x^{2}+4 x-12\)
Solution The integers -2 and 6 have a product of -12 and have the sum 4 , so
\[
x^{2}+4 x-12=(x-2)(x+6)
\]

To avoid errors in factoring, always check your answer by multiplying it out to see whether the result equals the original expression.

When none of the possibilities works, the polynomial is prime.

\section*{EXAMPLE I3 Identifying Prime Polynomials}

Show that \(x^{2}+9\) is prime
Solution First list the integers whose product is 9 , and then compute their sums.
\begin{tabular}{|l|cccc|}
\hline Integers whose product is \(\mathbf{9}\) & 1,9 & \(-1,-9\) & 3,3 & \(-3,-3\) \\
Sum & 10 & -10 & 6 & -6 \\
\hline
\end{tabular}

Since the coefficient of the middle term in \(x^{2}+9=x^{2}+0 x+9\) is 0 , and none of the sums equals 0 , this means that \(x^{2}+9\) is prime.

Example 13 demonstrates a more general result:

THEOREM Any polynomial of the form \(x^{2}+a^{2}, a\) real, is prime.
-Now Work problems 39 and 83

\section*{4 Factor by Grouping}

Sometimes a common factor does not occur in every term of the polynomial but does occur in each of several groups of terms that together make up the polynomial. When this happens, the common factor can be factored out of each group by means of the Distributive Property. This technique is called factoring by grouping.

\section*{EXAMPLE 14 Factoring by Grouping}

Factor completely by grouping: \(\left(x^{2}+2\right) x+\left(x^{2}+2\right) \cdot 3\)
Solution Note the common factor \(x^{2}+2\). Applying the Distributive Property yields
\[
\left(x^{2}+2\right) x+\left(x^{2}+2\right) \cdot 3=\left(x^{2}+2\right)(x+3)
\]

Since \(x^{2}+2\) and \(x+3\) are prime, the factorization is complete.
The next example shows a factoring problem that occurs in calculus.

\section*{EXAMPLE I5 Factoring by Grouping}

Factor completely by grouping: \(3(x-1)^{2}(x+2)^{4}+4(x-1)^{3}(x+2)^{3}\)
Solution Here, \((x-1)^{2}(x+2)^{3}\) is a common factor of both \(3(x-1)^{2}(x+2)^{4}\) and \(4(x-1)^{3}(x+2)^{3}\). As a result,
\[
\begin{aligned}
3(x-1)^{2}(x+2)^{4}+4(x-1)^{3}(x+2)^{3} & =(x-1)^{2}(x+2)^{3}[3(x+2)+4(x-1)] \\
& =(x-1)^{2}(x+2)^{3}[3 x+6+4 x-4] \\
& =(x-1)^{2}(x+2)^{3}(7 x+2)
\end{aligned}
\]

\section*{EXAMPLE 16 Factoring by Grouping}

Factor completely by grouping: \(x^{3}-4 x^{2}+2 x-8\)
Solution To see whether factoring by grouping will work, group the first two terms and the last two terms. Then look for a common factor in each group. In this example, factor
\(x^{2}\) from \(x^{3}-4 x^{2}\) and 2 from \(2 x-8\). The remaining factor in each case is the same, \(x-4\). This means that factoring by grouping will work, as follows:
\[
\begin{aligned}
x^{3}-4 x^{2}+2 x-8 & =\left(x^{3}-4 x^{2}\right)+(2 x-8) \\
& =x^{2}(x-4)+2(x-4) \\
& =(x-4)\left(x^{2}+2\right)
\end{aligned}
\]

Since \(x^{2}+2\) and \(x-4\) are prime, the factorization is complete.
am Now Work problems 51 and 127

\section*{5 Factor a Second-Degree Polynomial: \(A x^{2}+B x+C, A \neq 1\)}

To factor a second-degree polynomial \(A x^{2}+B x+C\), when \(A \neq 1\) and \(A, B\), and \(C\) have no common factors, follow these steps:

\section*{Steps for Factoring \(A x^{2}+B x+C\), when \(A \neq 1\) and \(A, B\), and \(C\) Have No Common Factors}

Step 1: Find the value of \(A C\).
STEP 2: Find integers whose product is \(A C\) that add up to \(B\). That is, find \(a\) and \(b\) such that \(a b=A C\) and \(a+b=B\).
Step 3: Write \(A x^{2}+B x+C=A x^{2}+a x+b x+C\).
Step 4: Factor this last expression by grouping.

\section*{EXAMPLE 17 Factoring Trinomials}

Factor completely: \(2 x^{2}+5 x+3\)
Solution Comparing \(2 x^{2}+5 x+3\) to \(A x^{2}+B x+C\), note that \(A=2, B=5\), and \(C=3\).
STEP 1: The value of \(A C\) is \(2 \cdot 3=6\).
STEP 2: Determine the integers whose product is \(A C=6\), and compute their sums.
\begin{tabular}{|l|cccc|}
\hline Integers whose product is 6 & 1,6 & \(-1,-6\) & 2,3 & \(-2,-3\) \\
Sum & 7 & -7 & 5 & -5 \\
\hline
\end{tabular}

Step 3: The integers whose product is 6 that add up to \(B=5\) are 2 and 3 .
\[
2 x^{2}+5 x+3=2 x^{2}+2 x+3 x+3
\]

STEP 4: Factor by grouping.
\[
\begin{aligned}
2 x^{2}+2 x+3 x+3 & =\left(2 x^{2}+2 x\right)+(3 x+3) \\
& =2 x(x+1)+3(x+1) \\
& =(x+1)(2 x+3)
\end{aligned}
\]

As a result,
\[
2 x^{2}+5 x+3=(x+1)(2 x+3)
\]

\section*{EXAMPLE I 8}

Factoring Trinomials
Factor completely: \(2 x^{2}-x-6\)
Comparing \(2 x^{2}-x-6\) to \(A x^{2}+B x+C\), note that \(A=2, B=-1\), and \(C=-6\).

STEP 1: The value of \(A C\) is \(2 \cdot(-6)=-12\).
STEP 2: Determine the integers whose product is \(A C=-12\), and compute their sums.
\begin{tabular}{|l|cccccc|}
\hline Integers whose & & & & & \\
product is \(\mathbf{- 1 2}\) & \(1,-12\) & \(-1,12\) & \(2,-6\) & \(-2,6\) & \(3,-4\) & \(-3,4\) \\
Sum & -11 & 11 & -4 & 4 & -1 & 1 \\
\hline
\end{tabular}

STEP 3: The integers whose product is -12 that add up to \(B=-1\) are -4 and 3 .
\[
2 x^{2}-x-6=2 x^{2}-4 x+3 x-6
\]

STEP 4: Factor by grouping.
\[
\begin{aligned}
2 x^{2}-4 x+3 x-6 & =\left(2 x^{2}-4 x\right)+(3 x-6) \\
& =2 x(x-2)+3(x-2) \\
& =(x-2)(2 x+3)
\end{aligned}
\]

As a result,
\[
2 x^{2}-x-6=(x-2)(2 x+3)
\]
-Now Work problem 57

\end{tabular}

\section*{6 Complete the Square}

The idea behind completing the square in one variable is to "adjust" an expression of the form \(x^{2}+b x\) to make it a perfect square. Perfect squares are trinomials of the form
\[
x^{2}+2 a x+a^{2}=(x+a)^{2} \quad \text { or } \quad x^{2}-2 a x+a^{2}=(x-a)^{2}
\]

For example, \(x^{2}+6 x+9\) is a perfect square because \(x^{2}+6 x+9=(x+3)^{2}\). And \(p^{2}-12 p+36\) is a perfect square because \(p^{2}-12 p+36=(p-6)^{2}\).

So how do we "adjust" \(x^{2}+b x\) to make it a perfect square? We do it by adding a number. For example, to make \(x^{2}+6 x\) a perfect square, add 9. But how do we know to add 9 ? Divide the coefficient on the first-degree term, 6 , by 2 , and then square the result to obtain 9 . This approach works in general.

\section*{Completing the Square}

Identify the coefficient of the first-degree term. Multiply this coefficient by \(\frac{1}{2}\) and then square the result. That is, determine the value of \(b\) in \(x^{2}+b x\) and compute \(\left(\frac{1}{2} b\right)^{2}\).

\section*{EXAMPLE 19 Completing the Square}

Determine the number that must be added to each expression to complete the square. Then factor the expression.
\begin{tabular}{|llcc|}
\hline Start & Add & Result & Factored Form \\
\hline\(y^{2}+8 y\) & \(\left(\frac{1}{2} \cdot 8\right)^{2}=16\) & \(y^{2}+8 y+16\) & \((y+4)^{2}\) \\
\(x^{2}+12 x\) & \(\left(\frac{1}{2} \cdot 12\right)^{2}=36\) & \(x^{2}+12 x+36\) & \((x+6)^{2}\) \\
\(a^{2}-20 a\) & \(\left(\frac{1}{2} \cdot(-20)\right)^{2}=100\) & \(a^{2}-20 a+100\) & \((a-10)^{2}\) \\
\(p^{2}-5 p\) & \(\left(\frac{1}{2} \cdot(-5)\right)^{2}=\frac{25}{4}\) & \(p^{2}-5 p+\frac{25}{4}\) & \(\left(p-\frac{5}{2}\right)^{2}\) \\
\hline
\end{tabular}

Note that the factored form of a perfect square is either
\[
x^{2}+b x+\left(\frac{b}{2}\right)^{2}=\left(x+\frac{b}{2}\right)^{2} \quad \text { or } \quad x^{2}-b x+\left(\frac{b}{2}\right)^{2}=\left(x-\frac{b}{2}\right)^{2}
\]

\section*{Now Work problem 69}

Are you wondering why making an expression a perfect square is called "completing the square"? Look at the square in Figure 24. Its area is \((y+4)^{2}\). The yellow area is \(y^{2}\) and each orange area is \(4 y\) (for a total area of \(8 y\) ). The sum of these areas is \(y^{2}+8 y\). To complete the square, we need to add the area of the green region: \(4 \cdot 4=16\). As a result, \(y^{2}+8 y+16=(y+4)^{2}\).

\section*{A. 4 Assess Your Understanding}

\section*{Concepts and Vocabulary}
1. If factored completely, \(3 x^{3}-12 x=\) \(\qquad\) .
2. If a polynomial cannot be written as the product of two other polynomials (excluding 1 and -1 ), then the polynomial is said to be \(\qquad\) .

\section*{Skill Building}

In Problems 5-14, factor each polynomial by removing the common monomial factor.
5. \(3 x+6\)
6. \(7 x-14\)
7. \(a x^{2}+a\)
8. \(a x-a\)
9. \(x^{3}+x^{2}+x\)
10. \(x^{3}-x^{2}+x\)
11. \(2 x^{2}-2 x\)
12. \(3 x^{2}-3 x\)
13. \(3 x^{2} y-6 x y^{2}+12 x y\)
14. \(60 x^{2} y-48 x y^{2}+72 x^{3} y\)

In Problems 15-22, factor the difference of two squares.
15. \(x^{2}-1\)
16. \(x^{2}-4\)
17. \(4 x^{2}-1\)
18. \(9 x^{2}-1\)
19. \(x^{2}-16\)
20. \(x^{2}-25\)
21. \(25 x^{2}-4\)
22. \(36 x^{2}-9\)

In Problems 23-32, factor the perfect squares.
23. \(x^{2}+2 x+1\)
24. \(x^{2}-4 x+4\)
25. \(x^{2}+4 x+4\)
26. \(x^{2}-2 x+1\)
27. \(x^{2}-10 x+25\)
28. \(x^{2}+10 x+25\)

113. \((x+2)^{2}-5(x+2)\)
114. \((x-1)^{2}-2(x-1)\)
115. \((3 x-2)^{3}-27\)
116. \((5 x+1)^{3}-1\)
117. \(3\left(x^{2}+10 x+25\right)-4(x+5)\)
118. \(7\left(x^{2}-6 x+9\right)+5(x-3)\)
119. \(x^{3}+2 x^{2}-x-2\)
122. \(x^{4}+x^{3}+x+1\)

\section*{Applications and Extensions}
\(\star\) In Problems 123-132, expressions that occur in calculus are given. Factor each expression completely.
123. \(2(3 x+4)^{2}+(2 x+3) \cdot 2(3 x+4) \cdot 3\)
124. \(5(2 x+1)^{2}+(5 x-6) \cdot 2(2 x+1) \cdot 2\)
125. \(2 x(2 x+5)+x^{2} \cdot 2\)
126. \(3 x^{2}(8 x-3)+x^{3} \cdot 8\)
127. \(2(x+3)(x-2)^{3}+(x+3)^{2} \cdot 3(x-2)^{2}\)
128. \(4(x+5)^{3}(x-1)^{2}+(x+5)^{4} \cdot 2(x-1)\)
129. \((4 x-3)^{2}+x \cdot 2(4 x-3) \cdot 4\)
130. \(3 x^{2}(3 x+4)^{2}+x^{3} \cdot 2(3 x+4) \cdot 3\)
131. \(2(3 x-5) \cdot 3(2 x+1)^{3}+(3 x-5)^{2} \cdot 3(2 x+1)^{2} \cdot 2\)
132. \(3(4 x+5)^{2} \cdot 4(5 x+1)^{2}+(4 x+5)^{3} \cdot 2(5 x+1) \cdot 5\)
133. Show that \(x^{2}+4\) is prime.
134. Show that \(x^{2}+x+1\) is prime.

\section*{Discussion and Writing}
135. Make up a polynomial that factors into a perfect square.
136. Explain to a fellow student what you look for first when presented with a factoring problem. What do you do next?

\section*{A. 5 Synthetic Division}

OBJECTIVE 1 Divide Polynomials Using Synthetic Division (p. A41)

\section*{1 Divide Polynomials Using Synthetic Division}

To find the quotient as well as the remainder when a polynomial of degree 1 or higher is divided by \(x-c\), a shortened version of long division, called synthetic division, makes the task simpler.

To see how synthetic division works, first consider long division for dividing the polynomial \(2 x^{3}-x^{2}+3\) by \(x-3\).
\[
\begin{aligned}
& x - 3 \longdiv { 2 x ^ { 2 } + 5 x + 1 5 } \leftarrow x ^ { 3 } - x ^ { 2 } + 3 6 \text { Quotient } \\
& \frac{2 x^{3}-6 x^{2}}{5 x^{2}} \\
& \frac{5 x^{2}-15 x}{15 x}+3 \\
& \frac{15 x-45}{48} \leftarrow \text { Remainder }
\end{aligned}
\]

Check: (Divisor) \(\cdot(\) Quotient \()+\) Remainder
\[
\begin{aligned}
& =(x-3)\left(2 x^{2}+5 x+15\right)+48 \\
& =2 x^{3}+5 x^{2}+15 x-6 x^{2}-15 x-45+48 \\
& =2 x^{3}-x^{2}+3
\end{aligned}
\]

The process of synthetic division arises from rewriting the long division in a more compact form, using simpler notation. For example, in the long division above, the terms in blue are not really necessary because they are identical to the terms directly above them. Removing these terms gives the following display:
\[
\begin{array}{r}
2 x^{2}+5 x+15 \\
x - 3 \longdiv { 2 x ^ { 3 } - x ^ { 2 } } + 3 \\
\frac{-6 x^{2}}{5 x^{2}} \\
\frac{-15 x}{15 x} \\
\\
\frac{-45}{48}
\end{array}
\]

Most of the \(x\) 's that appear in this process can also be removed, provided that care is used in positioning each coefficient. In this regard, use 0 as the coefficient of \(x\) in the dividend, because that power of \(x\) is missing. This gives
\[
\begin{aligned}
& \begin{array}{l}
2 x^{2}+5 x+15 \\
x - 3 \longdiv { 2 - 1 0 } 0
\end{array} \\
& \begin{array}{r}
-6 \\
\hline 5
\end{array} \\
& \frac{-15}{15} \\
& \begin{array}{r}
-45 \\
\hline 48
\end{array}
\end{aligned}
\]

To make this display more compact, move the lines up until the numbers in blue align horizontally.

Because the leading coefficient of the divisor is always 1 , the leading coefficient of the dividend will also be the leading coefficient of the quotient. Place the leading coefficient of the quotient, 2 , in the circled position. Now, the first three numbers in row 4 are precisely the coefficients of the quotient, and the last number in row 4 is the remainder. Thus row 1 is not really needed, so the process can be compressed to three rows, with the bottom row containing both the coefficients of the quotient and the remainder.
\[
\begin{array}{rrrrl}
x - 3 \longdiv { 2 } & -1 & 0 & 3 & \text { Row } 1 \\
& -6 & -15 & -45 & \text { Row 2 (subtract) } \\
& 5 & 15 & 48 & \operatorname{Row} 3
\end{array}
\]

Recall that the entries in row 3 are obtained by subtracting the entries in row 2 from those in row 1 . Rather than subtracting the entries in row 2 , change the sign of each entry and add. With this modification, the display will look like this:
\[
\begin{array}{rrrrl}
x - 3 \longdiv { 2 } & -1 & 0 & 3 & \text { Row 1 } \\
& 6 & 15 & 45 & \text { Row 2 (add) } \\
\hline 2 & 5 & 15 & 48 & \text { Row } 3
\end{array}
\]

Note that the entries in row 2 are three times the prior entries in row 3. As the last modification to the display, replace the \(x-3\) with 3 . The entries in row 3 give the quotient and the remainder, as shown next.

Let's go through an example step by step.

\section*{EXAMPLE I}

Using Synthetic Division to Find the Quotient and Remainder
Use synthetic division to find the quotient and remainder when
\[
x^{3}-4 x^{2}-5 \text { is divided by } x-3
\]

\section*{Solution STEP 1: Write the dividend in descending powers of \(x\). Then copy the coefficients,} remembering to insert a 0 for any missing powers of \(x\).
\[
\begin{array}{ccccc}
1 & -4 & 0 & -5 & \text { Row } 1
\end{array}
\]

Step 2: Insert the usual division symbol. In synthetic division, the divisor is of the form \(x-c\), and \(c\) is the number placed to the left of the division symbol. Here, since the divisor is \(x-3\), insert 3 to the left of division symbol.
\[
3 \longdiv { 1 - 4 \quad 0 \quad - 5 } \text { Row } 1
\]

Step 3: Bring the 1 down two rows, and enter it in row 3.

Step 4: Multiply the latest entry in row 3 by 3, and place the result in row 2 , one column over to the right.

Step 5: Add the entry in row 2 to the entry above it in row 1 , and enter the sum in row 3.

STEP 6: Repeat Steps 4 and 5 until no more entries are available in row 1.
\[
\begin{array}{rrrr}
3 \longdiv { 1 } - 4 0 & -5 & \text { Row 1 } \\
3 & -3 & -9 & \text { Row } \\
1+14 & -3 & -14 & \text { Row 3 }
\end{array}
\]

STEP 7: The final entry in row 3 , the -14 , is the remainder; the other entries in row 3 , the \(1,-1\), and -3 , are the coefficients (in descending order) of a polynomial whose degree is 1 less than that of the dividend. This is the quotient. Thus,
\[
\text { Quotient }=x^{2}-x-3 \quad \text { Remainder }=-14
\]

Check: (Divisor) (Quotient) + Remainder
\[
\begin{aligned}
& =(x-3)\left(x^{2}-x-3\right)+(-14) \\
& =\left(x^{3}-x^{2}-3 x-3 x^{2}+3 x+9\right)+(-14) \\
& =x^{3}-4 x^{2}-5=\text { Dividend }
\end{aligned}
\]

Let's do an example in which all seven steps are combined.

\section*{EXAMPLE 2 Using Synthetic Division to Verify a Factor}

Use synthetic division to show that \(x+3\) is a factor of
\[
2 x^{5}+5 x^{4}-2 x^{3}+2 x^{2}-2 x+3
\]

Solution If the remainder is 0 , then the divisor is a factor of the dividend, and the quotient is the other factor. The divisor is \(x+3=x-(-3)\), so place -3 to the left of the division symbol. Then the row 3 entries will be multiplied by -3 , entered in row 2 , and added to row 1.
\[
\begin{array}{rrrrrrr}
- 3 \longdiv { 2 } & 5 & -2 & 2 & -2 & 3 & \text { Row 1 } \\
& -6 & 3 & -3 & 3 & -3 & \text { Row 2 } \\
\hline 2 & -1 & 1 & -1 & 1 & 0 & \text { Row } 3
\end{array}
\]

The remainder is 0 , so
\[
\begin{gathered}
\text { Dividend }=(\text { Divisor })(\text { Quotient })+\text { Remainder } \\
2 x^{5}+5 x^{4}-2 x^{3}+2 x^{2}-2 x+3=(x+3)\left(2 x^{4}-x^{3}+x^{2}-x+1\right)
\end{gathered}
\]

Hence, \(x+3\) is a factor of \(2 x^{5}+5 x^{4}-2 x^{3}+2 x^{2}-2 x+3\).

As Example 2 illustrates, the remainder after division gives information about whether the divisor is or is not a factor. More will come about this in Chapter 3.
-Now Work problems 7 and 17

\section*{A. 5 Assess Your Understanding}

\section*{Concepts and Vocabulary}
1. To check division, ensure that the expression being divided-the dividend-equals the product of the \(\qquad\) and the \(\qquad\) plus the \(\qquad\) .
2. To divide \(2 x^{3}-5 x+1\) by \(x+3\) using synthetic division, the first step is to write \(\qquad\) \(\square\).
3. True or False In using synthetic division, the divisor is always a polynomial of degree 1, whose leading coefficient is 1.
4. True or False \(- 2 \longdiv { 5 } \begin{array} { r r r } { 5 } & { 2 } \\ { } & { - 1 0 } & { 1 4 } \end{array}\) means \(\frac{5 x^{3}+3 x^{2}+2 x+1}{x+2}=5 x^{2}-7 x+16+\frac{-31}{x+2}\).
\[
\begin{array}{rrrr}
-10 & 14 & -32 \\
\hline 5 & -7 & 16 & -31
\end{array}
\]

\section*{Skill Building}

In Problems 5-16, use synthetic division to find the quotient and remainder when:
5. \(x^{3}-x^{2}+2 x+4\) is divided by \(x-2\)
6. \(x^{3}+2 x^{2}-3 x+1\) is divided by \(x+1\)
7. \(3 x^{3}+2 x^{2}-x+3\) is divided by \(x-3\)
8. \(-4 x^{3}+2 x^{2}-x+1\) is divided by \(x+2\)
9. \(x^{5}-4 x^{3}+x\) is divided by \(x+3\)
10. \(x^{4}+x^{2}+2\) is divided by \(x-2\)
11. \(4 x^{6}-3 x^{4}+x^{2}+5\) is divided by \(x-1\)
12. \(x^{5}+5 x^{3}-10\) is divided by \(x+1\)
13. \(0.1 x^{3}+0.2 x\) is divided by \(x+1.1\)
14. \(0.1 x^{2}-0.2\) is divided by \(x+2.1\)
15. \(x^{5}-1\) is divided by \(x-1\)
16. \(x^{5}+1\) is divided by \(x+1\)

\section*{In Problems 17-26, use synthetic division to determine whether \(x-c\) is a factor of the given polynomial.}
17. \(4 x^{3}-3 x^{2}-8 x+4 ; \quad x-2\)
18. \(-4 x^{3}+5 x^{2}+8 ; x+3\)
19. \(3 x^{4}-6 x^{3}-5 x+10 ; \quad x-2\)
20. \(4 x^{4}-15 x^{2}-4 ; \quad x-2\)
21. \(3 x^{6}+82 x^{3}+27 ; x+3\)
22. \(2 x^{6}-18 x^{4}+x^{2}-9 ; \quad x+3\)
23. \(4 x^{6}-64 x^{4}+x^{2}-15 ; \quad x+4\)
24. \(x^{6}-16 x^{4}+x^{2}-16 ; \quad x+4\)
25. \(2 x^{4}-x^{3}+2 x-1 ; \quad x-\frac{1}{2}\)
26. \(3 x^{4}+x^{3}-3 x+1 ; \quad x+\frac{1}{3}\)

\section*{Applications and Extensions}
27. Find the sum of \(a, b, c\), and \(d\) if
\[
\frac{x^{3}-2 x^{2}+3 x+5}{x+2}=a x^{2}+b x+c+\frac{d}{x+2}
\]

\section*{Discussion and Writing}
28. When dividing a polynomial by \(x-c\), do you prefer to use long division or synthetic division? Does the value of \(c\) make a difference to you in choosing? Give reasons.

\section*{A. 6 Rational Expressions}

OBJECTIVES 1 Reduce a Rational Expression to Lowest Terms (p. A45)
2 Multiply and Divide Rational Expressions (p. A46)
3 Add and Subtract Rational Expressions (p. A47)
4 Use the Least Common Multiple Method (p. A48)
5 Simplify Complex Rational Expressions (p. A50)

\section*{1 Reduce a Rational Expression to Lowest Terms}

The quotient of two polynomials forms a result called a rational expression. Some examples of rational expressions are
(a) \(\frac{x^{3}+1}{x}\)
(b) \(\frac{3 x^{2}+x-2}{x^{2}+5}\)
(c) \(\frac{x}{x^{2}-1}\)
(d) \(\frac{x y^{2}}{(x-y)^{2}}\)

Expressions (a), (b), and (c) are rational expressions in one variable, \(x\), whereas (d) is a rational expression in two variables, \(x\) and \(y\).

Rational expressions are described in the same manner as rational numbers. In expression (a), the polynomial \(x^{3}+1\) is the numerator, and \(x\) is the denominator. When the numerator and denominator of a rational expression contain no common factors (except 1 and -1 ), the rational expression is reduced to lowest terms, or simplified.

The polynomial in the denominator of a rational expression cannot be equal to 0 because division by 0 is not defined. For example, for the expression \(\frac{x^{3}+1}{x}\), \(x\) cannot take on the value 0 . The domain of the variable \(x\) is \(\{x \mid x \neq 0\}\).

A rational expression is reduced to lowest terms by factoring the numerator and the denominator completely and dividing out any common factors using the Reduction Property:
\[
\begin{equation*}
\frac{a \mathscr{C}^{\prime}}{b \mathscr{C}^{\prime}}=\frac{a}{b} \quad \text { if } \quad b \neq 0, c \neq 0 \tag{1}
\end{equation*}
\]

\section*{EXAMPLE I}

Solution

WARNING Apply the Reduction Property only to rational expressions written in factored form. Be sure to divide out only common factors, not common terms!

Reducing a Rational Expression to Lowest Terms
Reduce to lowest terms: \(\frac{x^{2}+4 x+4}{x^{2}+3 x+2}\)
Begin by factoring the numerator and the denominator.
\[
\begin{aligned}
& x^{2}+4 x+4=(x+2)(x+2) \\
& x^{2}+3 x+2=(x+2)(x+1)
\end{aligned}
\]

Since a common factor, \(x+2\), appears, the original expression is not in lowest terms. To reduce it to lowest terms, use the Reduction Property:
\[
\frac{x^{2}+4 x+4}{x^{2}+3 x+2}=\frac{(x+2)(x+2)}{(x+2)(x+1)}=\frac{x+2}{x+1} \quad x \neq-2,-1
\]

\section*{EXAMPLE 2 Reducing Rational Expressions to Lowest Terms}

Reduce each rational expression to lowest terms.
(a) \(\frac{x^{3}-8}{x^{3}-2 x^{2}}\)
(b) \(\frac{8-2 x}{x^{2}-x-12}\)

Solution
(a) \(\frac{x^{3}-8}{x^{3}-2 x^{2}}=\frac{(x-2)\left(x^{2}+2 x+4\right)}{x^{2}(x-2)}=\frac{x^{2}+2 x+4}{x^{2}} \quad x \neq 0,2\)
(b) \(\frac{8-2 x}{x^{2}-x-12}=\frac{2(4-x)}{(x-4)(x+3)}=\frac{2(-1)(x-4)}{(x-4)(x+3)}=\frac{-2}{x+3} \quad x \neq-3,4\)

\section*{-Now Work problem 5}

\section*{2 Multiply and Divide Rational Expressions}

The rules for multiplying and dividing rational expressions are the same as the rules for multiplying and dividing rational numbers. If \(\frac{a}{b}\) and \(\frac{c}{d}, b \neq 0, d \neq 0\), are two
rational expressions, then rational expressions, then
\[
\begin{equation*}
\frac{a}{b} \cdot \frac{c}{d}=\frac{a c}{b d} \quad \text { if } \quad b \neq 0, d \neq 0 \tag{2}
\end{equation*}
\]
\[
\begin{equation*}
\frac{\frac{a}{b}}{\frac{c}{d}}=\frac{a}{b} \cdot \frac{d}{c}=\frac{a d}{b c} \quad \text { if } \quad b \neq 0, c \neq 0, d \neq 0 \tag{3}
\end{equation*}
\]

In using equations (2) and (3) with rational expressions, be sure first to factor each polynomial completely so that common factors can be divided out. Leave your answer in factored form.

\section*{EXAMPLE 3 Multiplying and Dividing Rational Expressions}

Perform the indicated operation and simplify the result. Leave your answer in factored form.
(a) \(\frac{x^{2}-2 x+1}{x^{3}+x} \cdot \frac{4 x^{2}+4}{x^{2}+x-2}\)
(b) \(\frac{\frac{x+3}{x^{2}-4}}{\frac{x^{2}-x-12}{x^{3}-8}}\)

Solution
(a) \(\frac{x^{2}-2 x+1}{x^{3}+x} \cdot \frac{4 x^{2}+4}{x^{2}+x-2}=\frac{(x-1)^{2}}{x\left(x^{2}+1\right)} \cdot \frac{4\left(x^{2}+1\right)}{(x+2)(x-1)}\)
\[
\begin{aligned}
& =\frac{(x-1)^{2}(4)\left(x^{2}+1\right)}{x\left(x^{2}+1\right)(x+2)(x-1)} \\
& =\frac{4(x-1)}{x(x+2)} \quad x \neq-2,0,1
\end{aligned}
\]
(b) \(\frac{\frac{x+3}{x^{2}-4}}{\frac{x^{2}-x-12}{x^{3}-8}}=\frac{x+3}{x^{2}-4} \cdot \frac{x^{3}-8}{x^{2}-x-12}\)
\[
\begin{aligned}
& =\frac{x+3}{(x-2)(x+2)} \cdot \frac{(x-2)\left(x^{2}+2 x+4\right)}{(x-4)(x+3)} \\
& =\frac{(x+3)(x-2)\left(x^{2}+2 x+4\right)}{(x-2)(x+2)(x-4)(x+3)} \\
& =\frac{x^{2}+2 x+4}{(x+2)(x-4)} \quad x \neq-3,-2,2,4
\end{aligned}
\]

\section*{3 Add and Subtract Rational Expressions}

In Words
To add (or subtract) two rational expressions with the same denominator, keep the common denominator and add (or subtract) the numerators.

The rules for adding and subtracting rational expressions are the same as the rules for adding and subtracting rational numbers. If the denominators of two rational expressions to be added (or subtracted) are equal, then add (or subtract) the numerators and keep the common denominator.

If \(\frac{a}{b}\) and \(\frac{c}{b}\) are two rational expressions, then
\[
\begin{equation*}
\frac{a}{b}+\frac{c}{b}=\frac{a+c}{b} \quad \frac{a}{b}-\frac{c}{b}=\frac{a-c}{b} \quad \text { if } b \neq 0 \tag{4}
\end{equation*}
\]

\section*{EXAMPLE 4}

\section*{Adding and Subtracting Rational Expressions with Equal Denominators}

Perform the indicated operation and simplify the result. Leave your answer in factored form.
(a) \(\frac{2 x^{2}-4}{2 x+5}+\frac{x+3}{2 x+5} \quad x \neq-\frac{5}{2}\)
(b) \(\frac{x}{x-3}-\frac{3 x+2}{x-3} \quad x \neq 3\)
(a) \(\frac{2 x^{2}-4}{2 x+5}+\frac{x+3}{2 x+5}=\frac{\left(2 x^{2}-4\right)+(x+3)}{2 x+5}\)
\[
=\frac{2 x^{2}+x-1}{2 x+5}=\frac{(2 x-1)(x+1)}{2 x+5}
\]
(b) \(\frac{x}{x-3}-\frac{3 x+2}{x-3}=\frac{x-(3 x+2)}{x-3}=\frac{x-3 x-2}{x-3}\)
\[
=\frac{-2 x-2}{x-3}=\frac{-2(x+1)}{x-3}
\]

\section*{EXAMPLE 5}

\section*{Adding Rational Expressions Whose Denominators} Are Additive Inverses of Each Other

Perform the indicated operation and simplify the result. Leave your answer in factored form.
\[
\frac{2 x}{x-3}+\frac{5}{3-x} \quad x \neq 3
\]

\section*{Solution}

Notice that the denominators of the two rational expressions are different. However, the denominator of the second expression is the additive inverse of the denominator of the first. That is,
\[
3-x=-x+3=-1 \cdot(x-3)=-(x-3)
\]

Then
\[
\begin{aligned}
\frac{2 x}{x-3}+\frac{5}{3-x} & =\frac{2 x}{x-3}+\frac{5}{-(x-3)}
\end{aligned} \begin{aligned}
& \frac{2 x}{x-3}+\frac{-5}{x-3} \\
& \uparrow \\
3-x=-(x-3) & \frac{a}{-b}
\end{aligned}=\frac{-a}{b}, ~=\frac{2 x+(-5)}{x-3}=\frac{2 x-5}{x-3} .
\]

If the denominators of two rational expressions to be added or subtracted are not equal, the general formulas for adding and subtracting rational expressions can be used.
\[
\begin{align*}
& \frac{a}{b}+\frac{c}{d}=\frac{a \cdot d}{b \cdot d}+\frac{b \cdot c}{b \cdot d}=\frac{a d+b c}{b d} \quad \text { if } \quad b \neq 0, d \neq 0  \tag{5a}\\
& \frac{a}{b}-\frac{c}{d}=\frac{a \cdot d}{b \cdot d}-\frac{b \cdot c}{b \cdot d}=\frac{a d-b c}{b d} \quad \text { if } \quad b \neq 0, d \neq 0 \tag{5b}
\end{align*}
\]

\section*{EXAMPLE 6}

Solution

\section*{Adding and Subtracting Rational Expressions with Unequal Denominators}

Perform the indicated operation and simplify the result. Leave your answer in factored form.
(a) \(\frac{x-3}{x+4}+\frac{x}{x-2} \quad x \neq-4,2\)
(b) \(\frac{x^{2}}{x^{2}-4}-\frac{1}{x} \quad x \neq-2,0,2\)
(a) \(\frac{x-3}{x+4}+\frac{x}{x-2}=\frac{x-3}{x+4} \cdot \frac{x-2}{x-2}+\frac{x+4}{x+4} \cdot \frac{x}{x-2}\)
\[
=\frac{(x-3)(x-2)+(x+4)(x)}{(x+4)(x-2)}
\]
\[
=\frac{x^{2}-5 x+6+x^{2}+4 x}{(x+4)(x-2)}=\frac{2 x^{2}-x+6}{(x+4)(x-2)}
\]
(b) \(\frac{x^{2}}{x^{2}-4}-\frac{1}{x}=\frac{x^{2}}{x^{2}-4} \cdot \frac{x}{x}-\frac{x^{2}-4}{x^{2}-4} \cdot \frac{1}{x}=\frac{x^{2}(x)-\left(x^{2}-4\right)(1)}{\left(x^{2}-4\right)(x)}\)
(5b)
\[
=\frac{x^{3}-x^{2}+4}{x(x-2)(x+2)}
\]
-Now Work problem 47

\section*{4 Use the Least Common Multiple Method}

If the denominators of two rational expressions to be added (or subtracted) have common factors, it usually is better not to use the general rules given by equations (5a) and (5b). Instead, just as with fractions, the least common multiple (LCM) method is used. The LCM method uses the polynomial of least degree that has each denominator polynomial as a factor.

\section*{The LCM Method for Adding or Subtracting Rational Expressions}

The least common multiple (LCM) method requires four steps:
STEP 1: Factor completely the polynomial in the denominator of each rational expression.
STEP 2: The LCM of the denominators is the product of each of these factors raised to a power equal to the greatest number of times that the factor occurs in the polynomials.
STEP 3: Write each rational expression using the LCM as the common denominator.
STEP 4: Add or subtract the rational expressions using equation (4).

Let's consider an example that requires only Steps 1 and 2.

\section*{EXAMPLE 7 Finding the Least Common Multiple}

Find the least common multiple of the following pair of polynomials:
\[
x(x-1)^{2}(x+1) \text { and } 4(x-1)(x+1)^{3}
\]

Solution STEP 1: The polynomials are already factored completely as
\[
x(x-1)^{2}(x+1) \quad \text { and } \quad 4(x-1)(x+1)^{3}
\]

STEP 2: Start by writing the factors of the left-hand polynomial. (Or you could start with the one on the right.)
\[
x(x-1)^{2}(x+1)
\]

Now look at the right-hand polynomial. Its first factor, 4, does not appear in our list, so we insert it.
\[
4 x(x-1)^{2}(x+1)
\]

The next factor, \(x-1\), is already in our list, so no change is necessary. The final factor is \((x+1)^{3}\). Since our list has \(x+1\) to the first power only, we replace \(x+1\) in the list by \((x+1)^{3}\). The LCM is
\[
4 x(x-1)^{2}(x+1)^{3}
\]

Notice that the LCM in Example 7 is, in fact, the polynomial of least degree that contains \(x(x-1)^{2}(x+1)\) and \(4(x-1)(x+1)^{3}\) as factors.
an Now Work problem 53

\section*{EXAMPLE 8}

Solution

\section*{Using the Least Common Multiple to Add Rational Expressions}

Perform the indicated operation and simplify the result. Leave your answer in factored form.
\[
\frac{x}{x^{2}+3 x+2}+\frac{2 x-3}{x^{2}-1} \quad x \neq-2,-1,1
\]

STEP 1: Factor completely the polynomials in the denominators.
\[
\begin{aligned}
x^{2}+3 x+2 & =(x+2)(x+1) \\
x^{2}-1 & =(x-1)(x+1)
\end{aligned}
\]

STEP 2: The LCM is \((x+2)(x+1)(x-1)\). Do you see why?
Step 3: Write each rational expression using the LCM as the denominator.
\[
\begin{aligned}
& \frac{x}{x^{2}+3 x+2}=\frac{x}{(x+2)(x+1)}=\frac{x}{(x+2)(x+1)} \cdot \frac{x-1}{x-1}=\frac{x(x-1)}{(x+2)(x+1)(x-1)} \\
& \frac{2 x-3}{x^{2}-1}=\frac{2 x-3}{(x-1)(x+1)}=\frac{2 x-3}{\begin{array}{l}
\text { Multiply numerator and } \\
\text { denominator by } x-1 \\
\text { to get the LCM in the }
\end{array}} \\
& \begin{array}{l}
\text { denominator. }
\end{array} \\
& \begin{array}{l}
\text { (x-1)(x+1)} \cdot \frac{x+2}{x+2}=\frac{(2 x-3)(x+2)}{(x-1)(x+1)(x+2)} \\
\begin{array}{l}
\text { Multiply numerator and } \\
\text { denominator by } x+2 \\
\text { to get the LCM in the } \\
\text { denominator. }
\end{array}
\end{array}
\end{aligned}
\]

STEP 4: Now add by using equation (4).
\[
\begin{aligned}
\frac{x}{x^{2}+3 x+2}+\frac{2 x-3}{x^{2}-1} & =\frac{x(x-1)}{(x+2)(x+1)(x-1)}+\frac{(2 x-3)(x+2)}{(x+2)(x+1)(x-1)} \\
& =\frac{\left(x^{2}-x\right)+\left(2 x^{2}+x-6\right)}{(x+2)(x+1)(x-1)} \\
& =\frac{3 x^{2}-6}{(x+2)(x+1)(x-1)}=\frac{3\left(x^{2}-2\right)}{(x+2)(x+1)(x-1)}
\end{aligned}
\]

\section*{EXAMPLE 9}

\section*{Using the Least Common Multiple to Subtract Rational Expressions}

Perform the indicated operation and simplify the result. Leave your answer in factored form.
\[
\frac{3}{x^{2}+x}-\frac{x+4}{x^{2}+2 x+1} \quad x \neq-1,0
\]

Solution STEP 1: Factor completely the polynomials in the denominators.
\[
\begin{aligned}
x^{2}+x & =x(x+1) \\
x^{2}+2 x+1 & =(x+1)^{2}
\end{aligned}
\]

Step 2: The LCM is \(x(x+1)^{2}\).
STEP 3: Write each rational expression using the LCM as the denominator.
\[
\begin{aligned}
& \frac{3}{x^{2}+x}=\frac{3}{x(x+1)}=\frac{3}{x(x+1)} \cdot \frac{x+1}{x+1}=\frac{3(x+1)}{x(x+1)^{2}} \\
& \frac{x+4}{x^{2}+2 x+1}=\frac{x+4}{(x+1)^{2}}=\frac{x+4}{(x+1)^{2}} \cdot \frac{x}{x}=\frac{x(x+4)}{x(x+1)^{2}}
\end{aligned}
\]

STEP 4: Subtract, using equation (4).
\[
\begin{aligned}
\frac{3}{x^{2}+x}-\frac{x+4}{x^{2}+2 x+1} & =\frac{3(x+1)}{x(x+1)^{2}}-\frac{x(x+4)}{x(x+1)^{2}} \\
& =\frac{3(x+1)-x(x+4)}{x(x+1)^{2}} \\
& =\frac{3 x+3-x^{2}-4 x}{x(x+1)^{2}} \\
& =\frac{-x^{2}-x+3}{x(x+1)^{2}}
\end{aligned}
\]

\section*{Now Work problem 63}

\section*{5 Simplify Complex Rational Expressions}

When sums and/or differences of rational expressions appear as the numerator and/ or denominator of a quotient, the quotient is called a complex rational expression.* For example,
\[
\frac{1+\frac{1}{x}}{1-\frac{1}{x}} \text { and } \frac{\frac{x^{2}}{x^{2}-4}-3}{\frac{x-3}{x+2}-1}
\]
are complex rational expressions. To simplify a complex rational expression means to write it as a rational expression reduced to lowest terms. This can be accomplished in either of two ways.

\section*{Simplifying a Complex Rational Expression}

Method 1: Treat the numerator and denominator of the complex rational expression separately, performing whatever operations are indicated and simplifying the results. Follow this by simplifying the resulting rational expression.
Method 2: Find the LCM of the denominators of all rational expressions that appear in the complex rational expression. Multiply the numerator and denominator of the complex rational expression by the LCM and simplify the result.

Both methods are shown in the next example. By carefully studying each method, you can discover situations in which one method may be easier to use than the other.

\section*{EXAMPLE IO Simplifying a Complex Rational Expression}

Simplify: \(\frac{\frac{1}{2}+\frac{3}{x}}{\frac{x+3}{4}} \quad x \neq-3,0\)
Solution Method 1: First perform the indicated operation in the numerator, and then divide.
\[
\begin{aligned}
& \frac{\frac{1}{2}+\frac{3}{x}}{\frac{x+3}{4}}=\frac{\frac{1 \cdot x+2 \cdot 3}{2 \cdot x}}{\frac{x+3}{4}}=\frac{\frac{x+6}{2 x}}{\frac{x+3}{4}} \overbrace{\text { Rule for adding quotients }}^{\text {Rule for dividing quotients }} \\
& \begin{array}{l}
=\frac{(x+6) \cdot 4}{2 \cdot x \cdot(x+3)}=\frac{2 \cdot 2 \cdot(x+6)}{2 \cdot x \cdot(x+3)}=\frac{2(x+6)}{x(x+3)} \\
\text { Rule for multiplying quotients }
\end{array}
\end{aligned}
\]

Method 2: The rational expressions that appear in the complex rational expression are
\[
\frac{1}{2}, \frac{3}{x}, \frac{x+3}{4}
\]

The LCM of their denominators is \(4 x\). Multiply the numerator and denominator of the complex rational expression by \(4 x\) and then simplify.
\[
\begin{gathered}
\frac{\frac{1}{2}+\frac{3}{x}}{\frac{x+3}{4}}=\frac{4 x \cdot\left(\frac{1}{2}+\frac{3}{x}\right)}{4 x \cdot\left(\frac{x+3}{4}\right)}=\frac{4 x \cdot \frac{1}{2}+4 x \cdot \frac{3}{x}}{\frac{4 x \cdot(x+3)}{4}} \\
\begin{array}{c}
\text { Multiply the } \\
\text { numerator and } \\
\text { denominator by } 4 x
\end{array} \\
=\frac{2 \cdot 2 x \cdot \frac{1}{2}+4 x \cdot \frac{3}{x}}{\begin{array}{l}
\text { Use the Distributive }
\end{array}} \\
\frac{4 x \cdot(x+3)}{4}
\end{gathered}=\frac{2 x+12}{x(x+3)}=\frac{2(x+6)}{x(x+3)}
\]

\section*{EXAMPLE II Simplifying a Complex Rational Expression}

Simplify: \(\frac{\frac{x^{2}}{x-4}+2}{\frac{2 x-2}{x}-1} \quad x \neq 0,2,4\)
Solution Here Method 1 is used.
\[
\begin{aligned}
\frac{\frac{x^{2}}{x-4}+2}{\frac{2 x-2}{x}-1} & =\frac{\frac{x^{2}}{x-4}+\frac{2(x-4)}{x-4}}{\frac{2 x-2}{x}-\frac{x}{x}}=\frac{\frac{x^{2}+2 x-8}{x-4}}{\frac{2 x-2-x}{x}} \\
& =\frac{\frac{(x+4)(x-2)}{x-4}}{\frac{x-2}{x}}=\frac{(x+4)(x-2)}{x-4} \cdot \frac{x}{x-2} \\
& =\frac{(x+4) \cdot x}{x-4}=\frac{x(x+4)}{x-4}
\end{aligned}
\]
am Now Work problem 73

\section*{Application}

\section*{EXAMPLE 12 Solving an Application in Electricity}

Figure 25

An electrical circuit contains two resistors connected in parallel, as shown in Figure 25. If their resistances are \(R_{1}\) and \(R_{2}\) ohms, respectively, their combined resistance \(R\) is given by the formula
\[
R=\frac{1}{\frac{1}{R_{1}}+\frac{1}{R_{2}}}
\]

Express \(R\) as a rational expression; that is, simplify the right-hand side of this formula. Evaluate the rational expression if \(R_{1}=6 \mathrm{ohms}\) and \(R_{2}=10 \mathrm{ohms}\).
Solution Using Method 2, consider 1 as the fraction \(\frac{1}{1}\). Then the rational expressions in the complex rational expression are
\[
\frac{1}{1}, \frac{1}{R_{1}}, \frac{1}{R_{2}}
\]

The LCM of the denominators is \(R_{1} R_{2}\). Multiply the numerator and denominator of the complex rational expression by \(R_{1} R_{2}\) and simplify.
\[
\frac{1}{\frac{1}{R_{1}}+\frac{1}{R_{2}}}=\frac{1 \cdot R_{1} R_{2}}{\left(\frac{1}{R_{1}}+\frac{1}{R_{2}}\right) \cdot R_{1} R_{2}}=\frac{R_{1} R_{2}}{\frac{1}{R_{1}} \cdot R_{1} R_{2}+\frac{1}{R_{2}} \cdot R_{1} R_{2}}=\frac{R_{1} R_{2}}{R_{2}+R_{1}}
\]

Thus,
\[
R=\frac{R_{1} R_{2}}{R_{2}+R_{1}}
\]

If \(R_{1}=6\) and \(R_{2}=10\), then
\[
R=\frac{6 \cdot 10}{10+6}=\frac{60}{16}=\frac{15}{4} \mathrm{ohms}
\]

\section*{A. 6 Assess Your Understanding}

\section*{Concepts and Vocabulary}
1. When the numerator and denominator of a rational expression contain no common factors (except 1 and -1 ), the rational expression is in \(\qquad\) .
2. LCM is an abbreviation for \(\qquad\) .
3. True or False The rational expression \(\frac{2 x^{3}-4 x}{x-2}\) is reduced to lowest terms.
4. True or False The LCM of \(2 x^{3}+6 x^{2}\) and \(6 x^{4}+4 x^{3}\) is \(4 x^{3}(x+1)\).

\section*{Skill Building}

In Problems 5-16, reduce each rational expression to lowest terms.
5. \(\frac{3 x+9}{x^{2}-9}\)
6. \(\frac{4 x^{2}+8 x}{12 x+24}\)
7. \(\frac{x^{2}-2 x}{3 x-6}\)
8. \(\frac{15 x^{2}+24 x}{3 x^{2}}\)
9. \(\frac{24 x^{2}}{12 x^{2}-6 x}\)
10. \(\frac{x^{2}+4 x+4}{x^{2}-4}\)
11. \(\frac{y^{2}-25}{2 y^{2}-8 y-10}\)
12. \(\frac{3 y^{2}-y-2}{3 y^{2}+5 y+2}\)
13. \(\frac{x^{2}+4 x-5}{x^{2}-2 x+1}\)
14. \(\frac{x-x^{2}}{x^{2}+x-2}\)
15. \(\frac{x^{2}+5 x-14}{2-x}\)
16. \(\frac{2 x^{2}+5 x-3}{1-2 x}\)

In Problems 17-34, perform the indicated operation and simplify the result. Leave your answer in factored form.
17. \(\frac{3 x+6}{5 x^{2}} \cdot \frac{x}{x^{2}-4}\)
18. \(\frac{3}{2 x} \cdot \frac{x^{2}}{6 x+10}\)
19. \(\frac{4 x^{2}}{x^{2}-16} \cdot \frac{x^{3}-64}{2 x}\)
20. \(\frac{12}{x^{2}+x} \cdot \frac{x^{3}+1}{4 x-2}\)
21. \(\frac{4 x-8}{-3 x} \cdot \frac{12}{12-6 x}\)
22. \(\frac{6 x-27}{5 x} \cdot \frac{2}{4 x-18}\)
23. \(\frac{x^{2}-3 x-10}{x^{2}+2 x-35} \cdot \frac{x^{2}+4 x-21}{x^{2}+9 x+14}\)
24. \(\frac{x^{2}+x-6}{x^{2}+4 x-5} \cdot \frac{x^{2}-25}{x^{2}+2 x-15}\)
25. \(\frac{\frac{6 x}{x^{2}-4}}{\frac{3 x-9}{2 x+4}}\)
26. \(\frac{\frac{12 x}{5 x+20}}{\frac{4 x^{2}}{x^{2}-16}}\)
27. \(\frac{\frac{8 x}{x^{2}-1}}{\frac{10 x}{x+1}}\)
28. \(\frac{\frac{x-2}{4 x}}{\frac{x^{2}-4 x+4}{12 x}}\)
29. \(\frac{\frac{4-x}{4+x}}{\frac{4 x}{x^{2}-16}}\)
30. \(\frac{\frac{3+x}{3-x}}{\frac{x^{2}-9}{9 x^{3}}}\)
31. \(\frac{\frac{x^{2}+7 x+12}{x^{2}-7 x+12}}{\frac{x^{2}+x-12}{x^{2}-x-12}}\)
32. \(\frac{\frac{x^{2}+7 x+6}{x^{2}+x-6}}{\frac{x^{2}+5 x-6}{x^{2}+5 x+6}}\)
33. \(\frac{\frac{2 x^{2}-x-28}{3 x^{2}-x-2}}{\frac{4 x^{2}+16 x+7}{3 x^{2}+11 x+6}}\)
34. \(\frac{\frac{9 x^{2}+3 x-2}{12 x^{2}+5 x-2}}{\frac{9 x^{2}-6 x+1}{8 x^{2}-10 x-3}}\)

In Problems 35-52, perform the indicated operation and simplify the result. Leave your answer in factored form.
35. \(\frac{x}{2}+\frac{5}{2}\)
36. \(\frac{3}{x}-\frac{6}{x}\)
37. \(\frac{x^{2}}{2 x-3}-\frac{4}{2 x-3}\)
38. \(\frac{3 x^{2}}{2 x-1}-\frac{9}{2 x-1}\)
39. \(\frac{x+1}{x-3}+\frac{2 x-3}{x-3}\)
40. \(\frac{2 x-5}{3 x+2}+\frac{x+4}{3 x+2}\)
41. \(\frac{3 x+5}{2 x-1}-\frac{2 x-4}{2 x-1}\)
42. \(\frac{5 x-4}{3 x+4}-\frac{x+1}{3 x+4}\)
43. \(\frac{4}{x-2}+\frac{x}{2-x}\)
44. \(\frac{6}{x-1}-\frac{x}{1-x}\)
45. \(\frac{4}{x-1}-\frac{2}{x+2}\)
46. \(\frac{2}{x+5}-\frac{5}{x-5}\)
47. \(\frac{x}{x+1}+\frac{2 x-3}{x-1}\)
48. \(\frac{3 x}{x-4}+\frac{2 x}{x+3}\)
49. \(\frac{x-3}{x+2}-\frac{x+4}{x-2}\)
50. \(\frac{2 x-3}{x-1}-\frac{2 x+1}{x+1}\)
51. \(\frac{x}{x^{2}-4}+\frac{1}{x}\)
52. \(\frac{x-1}{x^{3}}+\frac{x}{x^{2}+1}\)

In Problems 53-60, find the LCM of the given polynomials.
53. \(x^{2}-4, x^{2}-x-2\)
54. \(x^{2}-x-12, x^{2}-8 x+16\)
55. \(x^{3}-x, x^{2}-x\)
56. \(3 x^{2}-27,2 x^{2}-x-15\)
57. \(4 x^{3}-4 x^{2}+x, \quad 2 x^{3}-x^{2}, \quad x^{3}\)
58. \(x-3, \quad x^{2}+3 x, \quad x^{3}-9 x\)
59. \(x^{3}-x, \quad x^{3}-2 x^{2}+x, \quad x^{3}-1\)
60. \(x^{2}+4 x+4, x^{3}+2 x^{2}, \quad(x+2)^{3}\)

In Problems 61-72, perform the indicated operations and simplify the result. Leave your answer in factored form.
61. \(\frac{x}{x^{2}-7 x+6}-\frac{x}{x^{2}-2 x-24}\)
62. \(\frac{x}{x-3}-\frac{x+1}{x^{2}+5 x-24}\)
63. \(\frac{4 x}{x^{2}-4}-\frac{2}{x^{2}+x-6}\)
64. \(\frac{3 x}{x-1}-\frac{x-4}{x^{2}-2 x+1}\)
65. \(\frac{3}{(x-1)^{2}(x+1)}+\frac{2}{(x-1)(x+1)^{2}}\)
66. \(\frac{2}{(x+2)^{2}(x-1)}-\frac{6}{(x+2)(x-1)^{2}}\)
67. \(\frac{x+4}{x^{2}-x-2}-\frac{2 x+3}{x^{2}+2 x-8}\)
68. \(\frac{2 x-3}{x^{2}+8 x+7}-\frac{x-2}{(x+1)^{2}}\)
69. \(\frac{1}{x}-\frac{2}{x^{2}+x}+\frac{3}{x^{3}-x^{2}}\)
70. \(\frac{x}{(x-1)^{2}}+\frac{2}{x}-\frac{x+1}{x^{3}-x^{2}}\)
71. \(\frac{1}{h}\left(\frac{1}{x+h}-\frac{1}{x}\right)\)
72. \(\frac{1}{h}\left[\frac{1}{(x+h)^{2}}-\frac{1}{x^{2}}\right]\)

In Problems 73-84, perform the indicated operations and simplify the result. Leave your answer in factored form.
73. \(\frac{1+\frac{1}{x}}{1-\frac{1}{x}}\)
74. \(\frac{4+\frac{1}{x^{2}}}{3-\frac{1}{x^{2}}}\)
75. \(\frac{2-\frac{x+1}{x}}{3+\frac{x-1}{x+1}}\)
76. \(\frac{1-\frac{x}{x+1}}{2-\frac{x-1}{x}}\)
77. \(\frac{\frac{x+4}{x-2}-\frac{x-3}{x+1}}{x+1}\)
78. \(\frac{\frac{x-2}{x+1}-\frac{x}{x-2}}{x+3}\)
79. \(\frac{\frac{x-2}{x+2}+\frac{x-1}{x+1}}{\frac{x}{x+1}-\frac{2 x-3}{x}}\)
80. \(\frac{\frac{2 x+5}{x}-\frac{x}{x-3}}{\frac{x^{2}}{x-3}-\frac{(x+1)^{2}}{x+3}}\)
81. \(1-\frac{1}{1-\frac{1}{x}}\)
82. \(1-\frac{1}{1-\frac{1}{1-x}}\)
83. \(\frac{2(x-1)^{-1}+3}{3(x-1)^{-1}+2}\)
84. \(\frac{4(x+2)^{-1}-3}{3(x+2)^{-1}-1}\)
\(\$\) In Problems 85-92, expressions that occur in calculus are given. Reduce each expression to lowest terms.
85. \(\frac{(2 x+3) \cdot 3-(3 x-5) \cdot 2}{(3 x-5)^{2}}\)
86. \(\frac{(4 x+1) \cdot 5-(5 x-2) \cdot 4}{(5 x-2)^{2}}\)
87. \(\frac{x \cdot 2 x-\left(x^{2}+1\right) \cdot 1}{\left(x^{2}+1\right)^{2}}\)
88. \(\frac{x \cdot 2 x-\left(x^{2}-4\right) \cdot 1}{\left(x^{2}-4\right)^{2}}\)
89. \(\frac{(3 x+1) \cdot 2 x-x^{2} \cdot 3}{(3 x+1)^{2}}\)
90. \(\frac{(2 x-5) \cdot 3 x^{2}-x^{3} \cdot 2}{(2 x-5)^{2}}\)
91. \(\frac{\left(x^{2}+1\right) \cdot 3-(3 x+4) \cdot 2 x}{\left(x^{2}+1\right)^{2}}\)
92. \(\frac{\left(x^{2}+9\right) \cdot 2-(2 x-5) \cdot 2 x}{\left(x^{2}+9\right)^{2}}\)

\section*{Applications and Extensions}
93. The Lensmaker's Equation The focal length \(f\) of a lens with index of refraction \(n\) is
\[
\frac{1}{f}=(n-1)\left[\frac{1}{R_{1}}+\frac{1}{R_{2}}\right]
\]
where \(R_{1}\) and \(R_{2}\) are the radii of curvature of the front and back surfaces of the lens. Express \(f\) as a rational expression. Evaluate the rationalexpression for \(n=1.5, R_{1}=0.1\) meter, and \(R_{2}=0.2\) meter.
94. Electrical Circuits An electrical circuit contains three resistors connected in parallel. If their resistances are \(R_{1}, R_{2}\), and \(R_{3}\) ohms, respectively, their combined resistance \(R\) is given by the formula
\[
\frac{1}{R}=\frac{1}{R_{1}}+\frac{1}{R_{2}}+\frac{1}{R_{3}}
\]

Express \(R\) as a rational expression. Evaluate \(R\) for \(R_{1}=5\) ohms, \(R_{2}=4\) ohms, and \(R_{3}=10\) ohms.

\section*{Discussion and Writing}
95. The following expressions are called continued fractions:
\[
1+\frac{1}{x}, \quad 1+\frac{1}{1+\frac{1}{x}}, \quad 1+\frac{1}{1+\frac{1}{1+\frac{1}{x}}}, \quad 1+\frac{1}{1+\frac{1}{1+\frac{1}{1+\frac{1}{x}}}}, \ldots
\]

Each simplifies to an expression of the form
\[
\frac{a x+b}{b x+c}
\]

Trace the successive values of \(a, b\), and \(c\) as you "continue" the fraction. Can you discover the patterns that these values follow? Go to the library and research Fibonacci numbers. Write a report on your findings.
96. Explain to a fellow student when you would use the LCM method to add two rational expressions. Give two examples of adding two rational expressions, one in which you use the LCM and the other in which you do not.
97. Which of the two methods given in the text for simplifying complex rational expressions do you prefer? Write a brief paragraph stating the reasons for your choice.

\section*{A. 7 nth Roots; Rational Exponents}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Exponents, Square Roots (Appendix A, Section A.1, pp. A7-A9)

Now Work the 'Are You Prepared?' problems on page A60.
OBJECTIVES 1 Work with \(n\)th Roots ( \(p\). A55)
2 Simplify Radicals (p.A56)
3 Rationalize Denominators (p. A57)
4 Simplify Expressions with Rational Exponents (p. A58)

\section*{1 Work with nth Roots}

DEFINITION

\section*{In Words}

The symbol \(\sqrt[n]{a}\) means "give me the number that, when raised to the power \(n\), equals a."

The principal \(\boldsymbol{n}\) th root of a real number \(\boldsymbol{a}, n \geq 2\) an integer, symbolized by \(\sqrt[n]{a}\), is defined as follows:
\[
\sqrt[n]{a}=b \quad \text { means } \quad a=b^{n}
\]
where \(a \geq 0\) and \(b \geq 0\) if \(n\) is even, and \(a, b\) are any real numbers if \(n\) is odd.

Notice that if \(a\) is negative and \(n\) is even, then \(\sqrt[n]{a}\) is not defined. When it is defined, the principal \(n\)th root of a number is unique.

The symbol \(\sqrt[n]{a}\) for the principal \(n\)th root of \(a\) is called a radical; the integer \(n\) is called the index, and \(a\) is called the radicand. If the index of a radical is 2 , then \(\sqrt[2]{a}\) is called the square root of \(a\), and the index 2 is omitted to simply write \(\sqrt{a}\). If the index is 3 , then \(\sqrt[3]{a}\) is called the cube root of \(a\).

\section*{EXAMPLE I Simplifying Principal nth Roots}
(a) \(\sqrt[3]{8}=\sqrt[3]{2^{3}}=2\) The number whose cube is 8 is 2 .
(b) \(\sqrt[3]{-64}=\sqrt[3]{(-4)^{3}}=-4\)
(c) \(\sqrt[4]{\frac{1}{16}}=\sqrt[4]{\left(\frac{1}{2}\right)^{4}}=\frac{1}{2}\)
(d) \(\sqrt[6]{(-2)^{6}}=|-2|=2\)

These are examples of perfect roots, since each simplifies to a rational number. Notice the absolute value in Example 1(d). If \(n\) is even, then the principal \(n\)th root must be nonnegative.

In general, if \(n \geq 2\) is an integer and \(a\) is a real number, then
\[
\begin{array}{ll}
\sqrt[n]{a^{n}}=a & \text { if } n \geq 3 \text { is odd } \\
\sqrt[n]{a^{n}}=|a| & \text { if } n \geq 2 \text { is even } \tag{1b}
\end{array}
\]
amon Work problem 7
Radicals provide a way of representing many irrational real numbers. For example, there is no rational number whose square is 2 . In terms of radicals, it can be said that \(\sqrt{2}\) is the positive number whose square is 2 .

\section*{EXAMPLE 2 Using a Calculator to Approximate Roots}

Use a calculator to approximate \(\sqrt[5]{16}\).
Solution Figure 26 shows the result using a TI-84 Plus graphing calculator.

Figure 26

am Now Work problem 101

\section*{2 Simplify Radicals}

Let \(n \geq 2\) and \(m \geq 2\) denote positive integers, and let \(a\) and \(b\) represent real numbers. Assuming that all radicals are defined, the following properties are useful.

Properties of Radicals
\[
\begin{align*}
\sqrt[n]{a b} & =\sqrt[n]{a} \sqrt[n]{b}  \tag{2a}\\
\sqrt[n]{\frac{a}{b}} & =\frac{\sqrt[n]{a}}{\sqrt[n]{b}}  \tag{2b}\\
\sqrt[n]{a^{m}} & =(\sqrt[n]{a})^{m} \tag{2c}
\end{align*}
\]

When used in reference to radicals, the direction to "simplify" will mean to remove from the radicals any perfect roots that occur as factors.

\section*{EXAMPLE 3 Simplifying Radicals}
(a) \(\sqrt{32}=\sqrt{16 \cdot 2}=\sqrt{16} \cdot \sqrt{2}=4 \sqrt{2}\)

Factor out 16, (2a)
a perfect square.
(b) \(\sqrt[3]{16}=\sqrt[3]{8 \cdot 2}=\sqrt[3]{8} \cdot \sqrt[3]{2}=\sqrt[3]{2^{3}} \cdot \sqrt[3]{2}=2 \sqrt[3]{2}\)
(c) \(\sqrt[3]{-16 x^{4}}=\sqrt[3]{-8 \cdot 2 \cdot x^{3} \cdot x}=\sqrt[3]{\left(-8 x^{3}\right)(2 x)}\)

Factor perfect cubes inside radical Group perfect cubes
\[
=\sqrt[3]{(-2 x)^{3} \cdot 2 x}=\sqrt[3]{(-2 x)^{3}} \cdot \sqrt[3]{2 x}=-2 x \sqrt[3]{2 x}
\]
(d) \(\sqrt[4]{\frac{16 x^{5}}{81}}=\sqrt[4]{\frac{2^{4} x^{4} x}{3^{4}}}=\sqrt[4]{\left(\frac{2 x}{3}\right)^{4} \cdot x}=\sqrt[4]{\left(\frac{2 x}{3}\right)^{4}} \cdot \sqrt[4]{x}=\left|\frac{2 x}{3}\right| \sqrt[4]{x}=\frac{2}{3}|x| \sqrt[4]{x}\)
-Now Work problems 11 and 17
Two or more radicals can be added or subtracted, provided that they have the same index and the same radicand. Such radicals are called like radicals.

\section*{EXAMPLE 4 Combining Like Radicals}
(a) \(-8 \sqrt{12}+\sqrt{3}=-8 \sqrt{4 \cdot 3}+\sqrt{3}\)
\[
\begin{aligned}
& =-8 \cdot \sqrt{4} \sqrt{3}+\sqrt{3} \\
& =-16 \sqrt{3}+1 \sqrt{3} \\
& =-15 \sqrt{3}
\end{aligned}
\]
(b) \(\sqrt[3]{8 x^{4}}+\sqrt[3]{-x}+4 \sqrt[3]{27 x}=\sqrt[3]{2^{3} x^{3} x}+\sqrt[3]{-1 \cdot x}+4 \sqrt[3]{3^{3} x}\)
\[
\begin{aligned}
& =\sqrt[3]{(2 x)^{3}} \cdot \sqrt[3]{x}+\sqrt[3]{-1} \cdot \sqrt[3]{x}+4 \sqrt[3]{3^{3}} \cdot \sqrt[3]{x} \\
& =2 x \sqrt[3]{x}-1 \cdot \sqrt[3]{x}+12 \sqrt[3]{x} \\
& =(2 x+11) \sqrt[3]{x}
\end{aligned}
\]

\section*{Now Work problem 33}

\section*{3 Rationalize Denominators}

When radicals occur in quotients, it is customary to rewrite the quotient so that the new denominator contains no radicals. This process is referred to as rationalizing the denominator.

The idea is to multiply by an appropriate expression so that the new denominator contains no radicals. For example:
\begin{tabular}{|lll|}
\hline \begin{tabular}{l} 
If a Denominator \\
Contains the Factor
\end{tabular} & Multiply by & \begin{tabular}{l} 
To Obtain a Denominator \\
Free of Radicals
\end{tabular} \\
\hline\(\sqrt{3}\) & \(\sqrt{3}\) & \((\sqrt{3})^{2}=3\) \\
\(\sqrt{3}+1\) & \(\sqrt{3}-1\) & \((\sqrt{3})^{2}-1^{2}=3-1=2\) \\
\(\sqrt{2}-3\) & \(\sqrt{2}+3\) & \((\sqrt{2})^{2}-3^{2}=2-9=-7\) \\
\(\sqrt{5}-\sqrt{3}\) & \(\sqrt{5}+\sqrt{3}\) & \((\sqrt{5})^{2}-(\sqrt{3})^{2}=5-3=2\) \\
\(\sqrt[3]{4}\) & \(\sqrt[3]{2}\) & \(\sqrt[3]{4} \cdot \sqrt[3]{2}=\sqrt[3]{8}=2\) \\
\hline
\end{tabular}

In rationalizing the denominator of a quotient, be sure to multiply both the numerator and the denominator by the expression.

\section*{EXAMPLE 5 Rationalizing Denominators}

Rationalize the denominator of each expression:
(a) \(\frac{1}{\sqrt{3}}\)
(b) \(\frac{5}{4 \sqrt[3]{4}}\)
(c) \(\frac{\sqrt{2}}{\sqrt{3}-3 \sqrt{2}}\)

Solution (a) The denominator contains the factor \(\sqrt{3}\), so multiply the numerator and denominator by \(\sqrt{3}\) to obtain
\[
\frac{1}{\sqrt{3}}=\frac{1}{\sqrt{3}} \cdot \frac{\sqrt{3}}{\sqrt{3}}=\frac{\sqrt{3}}{(\sqrt{3})^{2}}=\frac{\sqrt{3}}{3}
\]
(b) The denominator contains the factor \(\sqrt[3]{4}\), so multiply the numerator and denominator by \(\sqrt[3]{2}\) to obtain
\[
\frac{5}{4 \sqrt[3]{4}}=\frac{5}{4 \sqrt[3]{4}} \cdot \frac{\sqrt[3]{2}}{\sqrt[3]{2}}=\frac{5 \sqrt[3]{2}}{4 \sqrt[3]{8}}=\frac{5 \sqrt[3]{2}}{8}
\]
(c) The denominator contains the factor \(\sqrt{3}-3 \sqrt{2}\), so multiply the numerator and denominator by \(\sqrt{3}+3 \sqrt{2}\) to obtain
\[
\begin{aligned}
\frac{\sqrt{2}}{\sqrt{3}-3 \sqrt{2}} & =\frac{\sqrt{2}}{\sqrt{3}-3 \sqrt{2}} \cdot \frac{\sqrt{3}+3 \sqrt{2}}{\sqrt{3}+3 \sqrt{2}}=\frac{\sqrt{2}(\sqrt{3}+3 \sqrt{2})}{(\sqrt{3})^{2}-(3 \sqrt{2})^{2}} \\
& =\frac{\sqrt{2} \sqrt{3}+3(\sqrt{2})^{2}}{3-18}=\frac{\sqrt{6}+6}{-15}=-\frac{6+\sqrt{6}}{15}
\end{aligned}
\]
-Now Work problem 47

\section*{4 Simplify Expressions with Rational Exponents}

Radicals are used to define rational exponents.

\section*{DEFINITION If \(a\) is a real number and \(n \geq 2\) is an integer, then}
\[
\begin{equation*}
a^{1 / n}=\sqrt[n]{a} \tag{3}
\end{equation*}
\]
provided that \(\sqrt[n]{a}\) exists.

Note that if \(n\) is even and \(a<0\), then \(\sqrt[n]{a}\) and \(a^{1 / n}\) do not exist.

\section*{EXAMPLE 6 Writing Expressions Containing Fractional Exponents as Radicals}
(a) \(4^{1 / 2}=\sqrt{4}=2\)
(b) \(8^{1 / 2}=\sqrt{8}=2 \sqrt{2}\)
(c) \((-27)^{1 / 3}=\sqrt[3]{-27}=-3\)
(d) \(16^{1 / 3}=\sqrt[3]{16}=2 \sqrt[3]{2}\)

If \(a\) is a real number and \(m\) and \(n\) are integers containing no common factors, with \(n \geq 2\), then
\[
\begin{equation*}
a^{m / n}=\sqrt[n]{a^{m}}=(\sqrt[n]{a})^{m} \tag{4}
\end{equation*}
\]
provided that \(\sqrt[n]{a}\) exists.

Two comments about equation (4) should be noted:
1. The exponent \(\frac{m}{n}\) must be in lowest terms, and \(n\) must be positive.
2. In simplifying the rational expression \(a^{m / n}\), either \(\sqrt[n]{a^{m}}\) or \((\sqrt[n]{a})^{m}\) may be used, the choice depending on which is easier to simplify. Generally, taking the root first, as in \((\sqrt[n]{a})^{m}\), is easier.

\section*{EXAMPLE 7 Using Equation (4)}
(a) \(4^{3 / 2}=(\sqrt{4})^{3}=2^{3}=8\)
(b) \((-8)^{4 / 3}=(\sqrt[3]{-8})^{4}=(-2)^{4}=16\)
(c) \((32)^{-2 / 5}=(\sqrt[5]{32})^{-2}=2^{-2}=\frac{1}{4}\)
(d) \(25^{6 / 4}=25^{3 / 2}=(\sqrt{25})^{3}=5^{3}=125\)

\section*{-Now Work problem 55}

It can be shown that the Laws of Exponents (page A8) hold for rational exponents. The next example illustrates using the Law of Exponents to simplify.

\section*{EXAMPLE 8 Simplifying Expressions Containing Rational Exponents}

Simplify each expression. Express your answer in such a way that only positive exponents occur. Assume that the variables are positive.
(a) \(\left(x^{2 / 3} y\right)\left(x^{-2} y\right)^{1 / 2}\)
(b) \(\left(\frac{2 x^{1 / 3}}{y^{2 / 3}}\right)^{-3}\)
(c) \(\left(\frac{9 x^{2} y^{1 / 3}}{x^{1 / 3} y}\right)^{1 / 2}\)

Solution
\[
\begin{aligned}
& \text { (a) }\left(x^{2 / 3} y\right)\left(x^{-2} y\right)^{1 / 2}=\left(x^{2 / 3} y\right)\left[\left(x^{-2}\right)^{1 / 2} y^{1 / 2}\right] \quad(a b)^{n}=a^{n} b^{n} \\
& =x^{2 / 3} y x^{-1} y^{1 / 2} \\
& \left(a^{m}\right)^{n}=a^{m n} \\
& =\left(x^{2 / 3} \cdot x^{-1}\right)\left(y \cdot y^{1 / 2}\right) \\
& =x^{-1 / 3} y^{3 / 2} \quad a^{m} \cdot a^{n}=a^{m+n} \\
& =\frac{y^{3 / 2}}{x^{1 / 3}} \quad a^{-n}=\frac{1}{a^{n}} \\
& \text { (b) }\left(\frac{2 x^{1 / 3}}{y^{2 / 3}}\right)^{-3}=\left(\frac{y^{2 / 3}}{2 x^{1 / 3}}\right)^{3}=\frac{\left(y^{2 / 3}\right)^{3}}{\left(2 x^{1 / 3}\right)^{3}}=\frac{y^{2}}{2^{3}\left(x^{1 / 3}\right)^{3}}=\frac{y^{2}}{8 x} \\
& \text { (c) }\left(\frac{9 x^{2} y^{1 / 3}}{x^{1 / 3} y}\right)^{1 / 2}=\left(\frac{9 x^{2-(1 / 3)}}{y^{1-(1 / 3)}}\right)^{1 / 2}=\left(\frac{9 x^{5 / 3}}{y^{2 / 3}}\right)^{1 / 2}=\frac{9^{1 / 2}\left(x^{5 / 3}\right)^{1 / 2}}{\left(y^{2 / 3}\right)^{1 / 2}}=\frac{3 x^{5 / 6}}{y^{1 / 3}}
\end{aligned}
\]

\section*{Now Work problem 71}

The next two examples illustrate some algebra needed for certain calculus problems.

\section*{EXAMPLE 9 \\ Writing an Expression as a Single Quotient}

Write the following expression as a single quotient in which only positive exponents appear.
\[
\begin{aligned}
&\left(x^{2}+1\right)^{1 / 2}+x \cdot \frac{1}{2}\left(x^{2}+1\right)^{-1 / 2} \cdot 2 x \\
&\left(x^{2}+1\right)^{1 / 2}+x \cdot \frac{1}{2}\left(x^{2}+1\right)^{-1 / 2} \cdot 2 x=\left(x^{2}+1\right)^{1 / 2}+\frac{x^{2}}{\left(x^{2}+1\right)^{1 / 2}} \\
&=\frac{\left(x^{2}+1\right)^{1 / 2}\left(x^{2}+1\right)^{1 / 2}+x^{2}}{\left(x^{2}+1\right)^{1 / 2}} \\
&=\frac{\left(x^{2}+1\right)+x^{2}}{\left(x^{2}+1\right)^{1 / 2}} \\
&=\frac{2 x^{2}+1}{\left(x^{2}+1\right)^{1 / 2}}
\end{aligned}
\]

Solution

\section*{EXAMPLE IO Factoring an Expression Containing Rational Exponents}

Factor: \(\frac{4}{3} x^{1 / 3}(2 x+1)+2 x^{4 / 3}\)
Solution Begin by writing \(2 x^{4 / 3}\) as a fraction with 3 as the denominator.
\[
\begin{aligned}
& \frac{4}{3} x^{1 / 3}(2 x+1)+2 x^{4 / 3}=\frac{4 x^{1 / 3}(2 x+1)}{3}+\frac{6 x^{4 / 3}}{3}=\frac{4 x^{1 / 3}(2 x+1)+6 x^{4 / 3}}{3} \\
&=\frac{2 x^{1 / 3}[2(2 x+1)+3 x]}{3}=\frac{2 x^{1 / 3}(7 x+2)}{3} \\
& \text { Add the two fractions. } \\
& 2 \text { and } x^{1 / 3} \text { are common factors. } \quad \text { Simplify. }
\end{aligned}
\]

\section*{am Now Work problem 89}

\section*{Historical Note}

TThe radical sign, \(V\), was first used in print by Christoff Rudolff in 1525. It is thought to be the manuscript form of the letter \(r\) (for the Latin word radix \(=\) root), although this is not quite conclusively confirmed. It took a long time for \(V\) to become the standard symbol for a square root and much longer to standardize \(\sqrt[3]{ }, \sqrt[4]{,} \sqrt[5]{ }\) and so on. The indexes of the root were placed in every conceivable position, with
\[
\sqrt{3} 8, \quad \sqrt{3}\left(38, \text { and } \quad V_{3} 8\right.
\]
all being variants for \(\sqrt[3]{8}\). The notation \(\sqrt{ } \sqrt{ } 16\) was popular for \(\sqrt[4]{16}\). By the 1700 s, the index had settled where we now put it.

The bar on top of the present radical symbol, as follows,
\[
\sqrt{a^{2}+2 a b+b^{2}}
\]
is the last survivor of the vinculum, a bar placed atop an expression to indicate what we would now indicate with parentheses. For example,
\[
a \overline{b+c}=a(b+c)
\]

\section*{A. 7 Assess Your Understanding}
"Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages in red.
1. \((-3)^{2}=\) \(\qquad\) ; \(-3^{2}=\) \(\qquad\) (p. A8)
2. \(\sqrt{16}=\) \(\qquad\) ; \(\sqrt{(-4)^{2}}=\) \(\qquad\) (p. A9)

\section*{Concepts and Vocabulary}
3. In the symbol \(\sqrt[n]{a}\), the integer \(n\) is called the \(\qquad\) .
4. True or False \(\sqrt[5]{-32}=-2\)
5. We call \(\sqrt[3]{a}\) the \(\qquad\) of \(a\).
6. True or False \(\sqrt[4]{(-3)^{4}}=-3\)

92. \(6 x^{1 / 2}(2 x+3)+x^{3 / 2} \cdot 8 \quad x \geq 0\)
93. \(3\left(x^{2}+4\right)^{4 / 3}+x \cdot 4\left(x^{2}+4\right)^{1 / 3} \cdot 2 x\)
94. \(2 x(3 x+4)^{4 / 3}+x^{2} \cdot 4(3 x+4)^{1 / 3}\)
95. \(4(3 x+5)^{1 / 3}(2 x+3)^{3 / 2}+3(3 x+5)^{4 / 3}(2 x+3)^{1 / 2} \quad x \geq-\frac{3}{2}\)
96. \(6(6 x+1)^{1 / 3}(4 x-3)^{3 / 2}+6(6 x+1)^{4 / 3}(4 x-3)^{1 / 2} \quad x \geq \frac{3}{4}\)
97. \(3 x^{-1 / 2}+\frac{3}{2} x^{1 / 2} \quad x>0\)
98. \(8 x^{1 / 3}-4 x^{-2 / 3} \quad x \neq 0\)

In Problems 99-106, use a calculator to approximate each radical. Round your answer to two decimal places.
99. \(\sqrt{2}\)
100. \(\sqrt{7}\)
101. \(\sqrt[3]{4}\)
102. \(\sqrt[3]{-5}\)
103. \(\frac{2+\sqrt{3}}{3-\sqrt{5}}\)
104. \(\frac{\sqrt{5}-2}{\sqrt{2}+4}\)
105. \(\frac{3 \sqrt[3]{5}-\sqrt{2}}{\sqrt{3}}\)
106. \(\frac{2 \sqrt{3}-\sqrt[3]{4}}{\sqrt{2}}\)
107. Calculating the Amount of Gasoline in a Tank A Shell station stores its gasoline in underground tanks that are right circular cylinders lying on their sides. See the illustration. The volume \(V\) of gasoline in the tank (in gallons) is given by the formula
\[
V=40 h^{2} \sqrt{\frac{96}{h}-0.608}
\]

where \(h\) is the height of the gasoline (in inches) as measured on a depth stick.
(a) If \(h=12\) inches, how many gallons of gasoline are in the tank?
(b) If \(h=1\) inch, how many gallons of gasoline are in the tank?
108. Inclined Planes The final velocity \(v\) of an object in feet per second ( \(\mathrm{ft} / \mathrm{sec}\) ) after it slides down a frictionless inclined plane of height \(h\) feet is
\[
v=\sqrt{64 h+v_{0}^{2}}
\]
where \(v_{0}\) is the initial velocity (in \(\mathrm{ft} / \mathrm{sec}\) ) of the object.
(a) What is the final velocity \(v\) of an object that slides down a frictionless inclined plane of height 4 feet? Assume that the initial velocity is 0 .
(b) What is the final velocity \(v\) of an object that slides down a frictionless inclined plane of height 16 feet? Assume that the initial velocity is 0 .
(c) What is the final velocity \(v\) of an object that slides down a frictionless inclined plane
 of height 2 feet with an initial velocity of \(4 \mathrm{ft} / \mathrm{sec}\) ?

\section*{Problems 109-112 require the following information.}

Period of a Pendulum The period \(T\), in seconds, of a pendulum of length \(l\), in feet, may be approximated using the formula
\[
T=2 \pi \sqrt{\frac{l}{32}}
\]

In Problems 109-112, express your answer both as a square root and as a decimal.
109. Find the period \(T\) of a pendulum whose length is 64 feet.
110. Find the period \(T\) of a pendulum whose length is 16 feet.
111. Find the period \(T\) of a pendulum whose length is 8 inches.
112. Find the period \(T\) of a pendulum whose length is 4 inches.

\section*{Discussion and Writing}
113. Give an example to show that \(\sqrt{a^{2}}\) is not equal to \(a\). Use it to explain why \(\sqrt{a^{2}}=|a|\).

\section*{'Are You Prepared?' Answers}
1. \(9 ;-9\)
2. \(4 ; 4\)

\section*{A. 8 Solving Equations}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Factoring Polynomials (Appendix A, Section A.4, pp. A32-A38)
- Zero-Product Property (Appendix A, Section A.1, p. A4)
- Rational Expressions (Appendix A, Section A.6, pp. A45-A50)

Now Work the 'Are You Prepared?' problems on page A70.
OBJECTIVES 1 Solve Linear Equations (p. A64)
2 Solve Rational Equations (p. A66)
3 Solve Equations by Factoring (p. A67)
4 Solve Radical Equations (p. A68)

An equation in one variable is a statement in which two expressions, at least one containing the variable, are set equal. The expressions are called the sides of the equation. Since an equation is a statement, it may be true or false, depending on the value of the variable. Unless otherwise restricted, the admissible values of the variable are those in the domain of the variable. Those admissible values of the variable, if any, that result in a true statement are called solutions, or roots, of the equation. To solve an equation means to find all the solutions of the equation.

For example, the following are all equations in one variable, \(x\) :
\[
x+5=9 \quad x^{2}+5 x=2 x-2 \quad \frac{x^{2}-4}{x+1}=0 \quad \sqrt{x^{2}+9}=5
\]

The first of these statements, \(x+5=9\), is true when \(x=4\) and false for any other choice of \(x\). Thus 4 is a solution of the equation \(x+5=9\). Also, 4 satisfies the equation \(x+5=9\), because, when 4 is substituted for \(x\), a true statement results.

Sometimes an equation will have more than one solution. For example, the equation
\[
\frac{x^{2}-4}{x+1}=0
\]
has \(x=-2\) and \(x=2\) as solutions.
Usually, set notation is used to write the solution of an equation. This set is called the solution set of the equation. For example, the solution set of the equation \(x^{2}-9=0\) is \(\{-3,3\}\).

Some equations have no real solution. For example, \(x^{2}+9=5\) has no real solution, because there is no real number whose square, when added to 9 , equals 5 .

An equation that is satisfied for every choice of the variable for which both sides are defined is called an identity. For example, the equation
\[
3 x+5=x+3+2 x+2
\]
is an identity, because this statement is true for any real number \(x\).
One method for solving equations requires that a series of equivalent equations be developed from the original equation until an obvious solution results.

For example, all the following equations are equivalent, because each has only the solution \(x=5\).
\[
\begin{aligned}
2 x+3 & =13 \\
2 x & =10 \\
x & =5
\end{aligned}
\]

WARNING Squaring both sides of an equation does not necessarily lead to an equivalent equation.

The question, though, is "How do I obtain an equivalent equation?" In general, there are five ways to do so.

\section*{Procedures That Result in Equivalent Equations}
1. Interchange the two sides of the equation:
\[
3=x \text { is equivalent to } x=3
\]
2. Simplify the sides of the equation by combining like terms, eliminating parentheses, and so on:
\[
\begin{aligned}
x+2+6 & =2 x+3(x+1) \\
\text { is equivalent to } x+8 & =5 x+3
\end{aligned}
\]
3. Add or subtract the same expression on both sides of the equation:
\[
\begin{aligned}
3 x-5 & =4 \\
\text { is equivalent to }(3 x-5)+5 & =4+5
\end{aligned}
\]
4. Multiply or divide both sides of the equation by the same nonzero expression:
\[
\begin{aligned}
\frac{3 x}{x-1} & =\frac{6}{x-1} \quad x \neq 1 \\
\text { is equivalent to } \frac{3 x}{x-1} \cdot(x-1) & =\frac{6}{x-1} \cdot(x-1)
\end{aligned}
\]
5. If one side of the equation is 0 and the other side can be factored, use the

Zero-Product Property and set each factor equal to 0 .
\[
\begin{aligned}
& \qquad x(x-3)=0 \\
& \text { is equivalent to } x=0 \text { or } x-3=0
\end{aligned}
\]

Whenever it is possible to solve an equation in your head, do so. For example:
\[
\begin{aligned}
& \text { The solution of } 2 x=8 \text { is } x=4 \\
& \text { The solution of } 3 x-15=0 \text { is } x=5 \text {. }
\end{aligned}
\]

\section*{am Now Work problem 9}

Some specific types of equations that can be solved algebraically to obtain exact solutions are now introduced, starting with linear equations.

\section*{1 Solve Linear Equations}

Linear equations are equations such as
\[
3 x+12=0 \quad \frac{3}{4} x-\frac{1}{5}=0 \quad 0.62 x-0.3=0
\]

A linear equation in one variable is equivalent to an equation of the form
\[
a x+b=0
\]
where \(a\) and \(b\) are real numbers and \(a \neq 0\).

Sometimes a linear equation is called a first-degree equation, because the left side is a polynomial in \(x\) of degree 1 .

\section*{EXAMPLE I Solving a Linear Equation}

Solve the equation: \(3(x-2)=5(x-1)\)
Solution
\[
\begin{aligned}
3(x-2) & =5(x-1) & & \\
3 x-6 & =5 x-5 & & \text { Use the Distributive Property. } \\
3 x-6-5 x & =5 x-5-5 x & & \text { Subtract } 5 \times \text { from each side. } \\
-2 x-6 & =-5 & & \text { Simplify. } \\
-2 x-6+6 & =-5+6 & & \text { Add } 6 \text { to each side. } \\
-2 x & =1 & & \text { Simplify. } \\
\frac{-2 x}{-2} & =\frac{1}{-2} & & \text { Divide each side by }-2 . \\
x & =-\frac{1}{2} & & \text { Simplify. }
\end{aligned}
\]

Check: Let \(x=-\frac{1}{2}\) in the expression on the left side of the equation and simplify. Let \(x=-\frac{1}{2}\) in the expression on the right side of the equation and simplify. If the two expressions are equal, the solution checks.
\[
\begin{aligned}
& 3(x-2)=3\left(-\frac{1}{2}-2\right)=3\left(-\frac{5}{2}\right)=-\frac{15}{2} \\
& 5(x-1)=5\left(-\frac{1}{2}-1\right)=5\left(-\frac{3}{2}\right)=-\frac{15}{2}
\end{aligned}
\]

Since the two expressions are equal, the solution \(x=-\frac{1}{2}\) checks. The solution set is \(\left\{-\frac{1}{2}\right\}\).

\section*{Now Work problem 15}

The next example illustrates the solution of an equation that does not appear to be linear but leads to a linear equation upon simplification.

\section*{EXAMPLE 2 Solving an Equation That Leads to a Linear Equation}

Solve the equation: \((2 x-1)(x-1)=(x-5)(2 x-5)\)
Solution
\[
\begin{aligned}
(2 x-1)(x-1) & =(x-5)(2 x-5) & & \\
2 x^{2}-3 x+1 & =2 x^{2}-15 x+25 & & \text { Multiply and combine like terms. } \\
2 x^{2}-3 x+1-2 x^{2} & =2 x^{2}-15 x+25-2 x^{2} & & \text { Subtract } 2 x^{2} \text { from each side. } \\
-3 x+1 & =-15 x+25 & & \text { Simplify. } \\
-3 x+1-1 & =-15 x+25-1 & & \text { Subtract } 1 \text { from each side. } \\
-3 x & =-15 x+24 & & \text { Simplify. } \\
-3 x+15 x & =-15 x+24+15 x & & \text { Add } 15 \times \text { to each side. } \\
12 x & =24 & & \text { Simplify. } \\
\frac{12 x}{12} & =\frac{24}{12} & & \text { Divide each side by } 12 . \\
x & =2 & & \text { Simplify. }
\end{aligned}
\]

Check: \((2 x-1)(x-1)=(2 \cdot 2-1)(2-1)=(3)(1)=3\)
\[
(x-5)(2 x-5)=(2-5)(2 \cdot 2-5)=(-3)(-1)=3
\]

Since the two expressions are equal, the solution checks. The solution set is \(\{2\}\).
Now Work problem 25

\section*{2 Solve Rational Equations}

A rational equation is an equation that contains a rational expression. Examples of rational equations are
\[
\frac{3}{x+1}=\frac{2}{x-1}+7 \quad \text { and } \quad \frac{x-5}{x-4}=\frac{3}{x+2}
\]

To solve a rational equation, multiply both sides of the equation by the least common multiple of the denominators of the rational expressions that make up the rational equation.

\section*{EXAMPLE 3 Solving a Rational Equation}

Solve the equation: \(\frac{3}{x-2}=\frac{1}{x-1}+\frac{7}{(x-1)(x-2)}\)

Solution First, note that the domain of the variable is \(\{x \mid x \neq 1, x \neq 2\}\). Clear the equation of rational expressions by multiplying both sides by the least common multiple of the denominators of the three rational expressions, \((x-1)(x-2)\).
\[
\begin{aligned}
& \frac{3}{x-2}=\frac{1}{x-1}+\frac{7}{(x-1)(x-2)} \\
& (x-1)(x-2) \frac{3}{x-2}=(x-1)(x-2)\left[\frac{1}{x-1}+\frac{7}{(x-1)(x-2)}\right] \\
& 3 x-3=(x-1)(x-2) \frac{1}{x-1}+(x-1)(x-2) \frac{7}{(x-1)(x-2)} \\
& 3 x-3=(x-2)+7 \\
& 3 x-3=x+5 \\
& 2 x=8 \\
& x=4 \\
& \text { Multiply both sides by } \\
& (x-1)(x-2) \text {; divide out } \\
& \text { common factors on the left. } \\
& \text { Use the Distributive Property } \\
& \text { on each side; divide out } \\
& \text { common factors on the right. } \\
& \text { Rewrite the equation. } \\
& \text { Combine like terms. } \\
& \text { Add } 3 \text { to each side; subtract } \\
& x \text { from each side. } \\
& \text { Divide by } 2 . \\
& \text { Check: } \frac{3}{x-2}=\frac{3}{4-2}=\frac{3}{2} \\
& \frac{1}{x-1}+\frac{7}{(x-1)(x-2)}=\frac{1}{4-1}+\frac{7}{(4-1)(4-2)}=\frac{1}{3}+\frac{7}{3 \cdot 2}=\frac{2}{6}+\frac{7}{6}=\frac{9}{6}=\frac{3}{2}
\end{aligned}
\]

Since the two expressions are equal, \(x=4\) checks. The solution set is \(\{4\}\).

Sometimes the process of creating equivalent equations leads to apparent solutions that are not solutions of the original equation. These are called extraneous solutions.

\section*{EXAMPLE 4 A Rational Equation with No Solution}

Solve the equation: \(\frac{3 x}{x-1}+2=\frac{3}{x-1}\)
Solution First, note that the domain of the variable is \(\{x \mid x \neq 1\}\). Since the two rational expressions in the equation have the same denominator, \(x-1\), multiply both sides by \(x-1\) to clear the rational expressions from the equation. The resulting equation is equivalent to the original equation for \(x \neq 1\).
\[
\begin{array}{rlrl}
\frac{3 x}{x-1}+2 & =\frac{3}{x-1} & \\
\left(\frac{3 x}{x-1}+2\right) \cdot(x-1) & =\frac{3}{x-1} \cdot(x-1) \\
\frac{3 x}{x-1} \cdot(x-1)+2 \cdot(x-1) & =3 & & \begin{array}{l}
\text { Multiply both sides by } x-1 \text {; divide } \\
\text { out common factors on the right. }
\end{array} \\
3 x+2 x-2 & =3 \\
5 x-2 & =3 & & \begin{array}{l}
\text { Use the Distributive Property on } \\
\text { the left side; divide out common } \\
\text { factors on the left. }
\end{array} \\
5 x & =5 & & \text { Simplify. } \\
x & =1 & & \text { Combine like terms. }
\end{array}
\]

The solution appears to be 1 . But recall that \(x=1\) is not in the domain of the variable, so \(x=1\) is an extraneous solution. The equation has no solution. The solution set is \(\varnothing\).
```

-Now Work problem 37

```

\section*{3 Solve Equations by Factoring}

Many equations can be solved by factoring and then using the Zero-Product Property.

\section*{EXAMPLE 5 Solving Equations by Factoring}

Solve the equations:
(a) \(x^{2}=4 x\)
(b) \(x^{3}-x^{2}-4 x+4=0\)

Solution (a) Begin by collecting all terms on one side. This results in 0 on one side and an expression to be factored on the other.
\[
\begin{aligned}
x^{2} & =4 x \\
x^{2}-4 x & =0 \\
x(x-4) & =0 \quad \text { Factor. } \\
x=0 \quad \text { or } \quad x-4 & =0 \quad \text { Apply the Zero-Product Property. } \\
x & =4
\end{aligned}
\]

Check:
\[
\begin{array}{lll}
x=0: & 0^{2}=4 \cdot 0 & \text { So } 0 \text { is a solution. } \\
x=4: & 4^{2}=4 \cdot 4 & \text { So } 4 \text { is a solution. }
\end{array}
\]

The solution set is \(\{0,4\}\).
(b) Group the terms of \(x^{3}-x^{2}-4 x+4=0\) as follows:
\[
\left(x^{3}-x^{2}\right)-(4 x-4)=0
\]

Factor out \(x^{2}\) from the first grouping and 4 from the second.
\[
x^{2}(x-1)-4(x-1)=0
\]

This reveals the common factor \((x-1)\), so
\[
\left.\begin{array}{rlrlrl}
\left(x^{2}-4\right)(x-1) & =0 & & & \\
(x-2)(x+2) & (x-1) & =0 & & & \text { Factor again. } \\
x-2=0 & \text { or } & x+2 & =0 & \text { or } & x-1
\end{array}\right)=0 \quad \text { Set each factor equal to } 0 . \text {. } \begin{array}{rlrl} 
& x & & \\
x=2 & x & & \\
x-2 & & \text { Solve. }
\end{array}
\]
\[
\begin{array}{rlrl}
\text { Check: } & x=-2: \quad(-2)^{3}-(-2)^{2}-4(-2)+4=-8-4+8+4=0 & -2 \text { is a solution } \\
& x=1: \quad 1^{3}-1^{2}-4(1)+4=1-1-4+4=0 & & 1 \text { is a solution. } \\
& x=2: \quad 2^{3}-2^{2}-4(2)+4=8-4-8+4=0 & & 2 \text { is a solution. }
\end{array}
\]

The solution set is \(\{-2,1,2\}\).
```

-Now Work problem 41

```

\section*{4 Solve Radical Equations}

When the variable in an equation occurs in a square root, cube root, and so on - that is, when it occurs in a radical - the equation is called a radical equation. Sometimes a suitable operation changes a radical equation to one that is linear or quadratic. A commonly used procedure is to isolate the most complicated radical on one side of the equation and then eliminate it by raising each side to a power equal to the index of the radical. Care must be taken, however, because apparent solutions that are not, in fact, solutions of the original equation may result. Recall that these are called extraneous solutions. In radical equations, extraneous solutions may occur when the index of the radical is even. Therefore, it is important to check all answers when working with radical equations.

\section*{EXAMPLE 6 Solving a Radical Equation}

Find the real solutions of the equation: \(\sqrt[3]{2 x-4}-2=0\)
Solution The equation contains a radical whose index is 3 . Isolate it on the left side:
\[
\begin{array}{r}
\sqrt[3]{2 x-4}-2=0 \\
\sqrt[3]{2 x-4}=2
\end{array}
\]

Because the index of the radical is 3 , raise each side to the third power and solve.
\[
\begin{array}{rlrl}
(\sqrt[3]{2 x-4})^{3} & =2^{3} & & \text { Raise each side to the power } 3 . \\
2 x-4 & =8 & & \text { Simplify. } \\
2 x & =12 \quad & \text { Add 4 to both sides. } \\
x & =6 \quad \text { Divide both sides by } 2 . \\
\text { Check: } \sqrt[3]{2(6)-4}-2=\sqrt[3]{12-4}-2=\sqrt[3]{8}-2=2-2=0
\end{array}
\]

The solution set is \(\{6\}\).

\section*{EXAMPLE 7 Solving a Radical Equation}

Find the real solutions of the equation: \(\sqrt{x-1}=x-7\)

\section*{Solution Square both sides since the index of a square root is 2 .}
\[
\begin{array}{rlrl}
\sqrt{x-1} & =x-7 & & \\
(\sqrt{x-1})^{2} & =(x-7)^{2} & & \text { Square both sides. } \\
x-1 & =x^{2}-14 x+49 & & \text { Remove parentheses. } \\
x^{2}-15 x+50 & =0 & & \text { Putin standard form. } \\
(x-10)(x-5)=0 & & \text { Factor. } \\
x=10 \quad \text { or } \quad x=5 & & \text { Apply the Zero-Product Property and solve. } \\
x=10: & \sqrt{x-1}=\sqrt{10-1}=\sqrt{9}=3 \text { and } x-7=10-7=3 \\
\text { Check: } x=\sqrt{x-10}=\sqrt{5-1}=\sqrt{4}=2 \text { and } x-7=5-7=-2
\end{array}
\]

The apparent solution \(x=5\) is extraneous; the only solution of the equation is \(x=10\). The solution set is \(\{10\}\).

\section*{Now Work problem 51}

Sometimes, it is necessary to raise each side to a power more than once in order to solve a radical equation.

\section*{EXAMPLE 8}

\section*{Solving a Radical Equation}

Find the real solutions of the equation: \(\sqrt{2 x+3}-\sqrt{x+2}=2\)
Solution First, isolate the more complicated radical expression (in this case, \(\sqrt{2 x+3}\) ) on the left side:
\[
\sqrt{2 x+3}=\sqrt{x+2}+2
\]

Now square both sides (the index of the radical is 2 ).
\[
\begin{aligned}
(\sqrt{2 x+3})^{2} & =(\sqrt{x+2}+2)^{2} & & \\
2 x+3 & =(\sqrt{x+2})^{2}+4 \sqrt{x+2}+4 & & \text { Remove parentheses. } \\
2 x+3 & =x+2+4 \sqrt{x+2}+4 & & \text { Simplify. } \\
2 x+3 & =x+6+4 \sqrt{x+2} & & \text { Combine like terms. }
\end{aligned}
\]

The equation still contains a radical. Isolate the remaining radical on the right side and again square both sides.
\[
\begin{array}{rlrl}
x-3 & =4 \sqrt{x+2} & & \text { Isolate the radical on the right side. } \\
(x-3)^{2} & =16(x+2) & & \text { square both sides. } \\
x^{2}-6 x+9 & =16 x+32 & & \text { Remove parentheses. } \\
x^{2}-22 x-23 & =0 & & \text { Put in standard form. } \\
(x-23)(x+1) & =0 & & \text { Factor. } \\
x=23 & \text { or } x & =-1 & \\
& & & \text { Apply the Zero-Product Property and solve. } \\
\text { Check: } \quad x=23: & \sqrt{2(23)+3}-\sqrt{23+2}=\sqrt{49}-\sqrt{25}=7-5=2 \\
x=-1: \quad \sqrt{2(-1)+3}-\sqrt{-1+2}=\sqrt{1}-\sqrt{1}=1-1=0
\end{array}
\]

The apparent solution \(x=-1\) is extraneous; the only solution is \(x=23\). The solution set is \(\{23\}\).

\section*{A. 8 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. Find the least common multiple of the denominators of \(\frac{3}{x^{2}-4}\) and \(\frac{5}{x^{2}-3 x+2}\). (p. A49)
2. The solution set of the equation \((x-3)(3 x+5)=0\) is
\(\qquad\) (p. A4)
3. Factor:
(a) \(2 x^{2}-10 x(\mathrm{p} . \mathrm{A} 32)\)
(b) \(x^{3}+3 x^{2}-4 x-12\) (p. A36)
4. (a) \(\sqrt[3]{x^{3}}=\) \(\qquad\) . (p. A56)
(b) \((\sqrt[4]{x-3})^{4}=\) \(\qquad\) . (p. A56)

\section*{Concepts and Vocabulary}
5. Two equations that have the same solution set are called
6. An equation that is satisfied for every choice of the variable for which both sides are defined is called \(\mathrm{a}(\mathrm{n})\) \(\qquad\) .
7. When an apparent solution does not satisfy the original equation, it is called \(a(n)\) \(\qquad\) solution.
8. True or False Some equations have no solution.

\section*{Skill Building}
In Problems 9-66, solve each equation.
9. \(2 x-3=5\)
10. \(3 x+4=-8\)
11. \(\frac{1}{3} x=\frac{5}{12}\)
12. \(\frac{2}{3} x=\frac{9}{2}\)

70. Chemistry \(P V=n R T\) for \(T\)
72. Mechanics \(v=-g t+v_{0}\) for \(t\)

\section*{Applications and Extensions}
73. Physics: Using Sound to Measure Distance The distance to the surface of the water in a well can sometimes be found by dropping an object into the well and measuring the time elapsed until a sound is heard. If \(t_{1}\) is the time (measured in seconds) that it takes for the object to strike the water, then \(t_{1}\) will obey the equation \(s=16 t_{1}^{2}\), where \(s\) is the distance (measured in feet). It follows that \(t_{1}=\frac{\sqrt{s}}{4}\). Suppose that \(t_{2}\) is the time that it takes for the sound of the impact to reach your ears. Because sound travels at a speed of approximately 1100 feet per second, the time \(t_{2}\) for the sound to travel

the distance \(s\) will be \(t_{2}=\frac{s}{1100}\). See the illustration. Now \(t_{1}+t_{2}\) is the total time that elapses from the moment that the object is dropped to the moment that a sound is heard. We have the equation
\[
\text { Total time elapsed }=\frac{\sqrt{s}}{4}+\frac{s}{1100}
\]

Find the distance to the water's surface if the total time elapsed from dropping a rock to hearing it hit water is 4 seconds.
74. Crushing Load A civil engineer relates the thickness \(T\), in inches, and the height \(H\), in feet, of a square wooden pillar to its crushing load \(L\), in tons, using the model \(T=\sqrt[4]{\frac{L H^{2}}{25}}\).
If a square wooden pillar is 4 inches thick and 10 feet high, what is its crushing load?
75. Foucault's Pendulum The period of a pendulum is the time it takes the pendulum to make one full swing back and forth. The period \(T\), in seconds, is given by the formula \(T=2 \pi \sqrt{\frac{l}{32}}\), where \(l\) is the length, in feet, of the pendulum. In 1851, Jean-Bernard-Leon Foucault demonstrated the axial rotation of Earth using a large pendulum that he hung in the Pantheon in Paris. The period of Foucault's pendulum was approximately 16.5 seconds. What was its length?

\section*{Discussion and Writing}
76. Make up a radical equation that has no solution
77. Make up a radical equation that has an extraneous solution.
78. Discuss the step in the solving process for radical equations that leads to the possibility of extraneous solutions. Why is there no such possibility for linear and quadratic equations?
79. What Went Wrong? On an exam, Jane solved the equation \(\sqrt{2 x}+3-x=0\) and wrote that the solution set was \(\{-1,3\}\). Jane received 3 out of 5 points for the problem. Jane asks you why she received 3 out of 5 points. Provide an explanation.
80. Which of the following pairs of equations are equivalent? Explain.
(a) \(x^{2}=9 ; \quad x=3\)
(b) \(x=\sqrt{9} ; \quad x=3\)
(c) \((x-1)(x-2)=(x-1)^{2} ; \quad x-2=x-1\)

\section*{81. The equation}
\[
\frac{5}{x+3}+3=\frac{8+x}{x+3}
\]
has no solution, yet when we go through the process of solving it we obtain \(x=-3\). Write a brief paragraph to explain what causes this to happen.
82. Make up an equation that has no solution and give it to a fellow student to solve. Ask the student to write a critique of your equation.

\section*{‘Are You Prepared?’ Answers}
1. \((x-2)(x+2)(x-1)\)
2. \(\left\{-\frac{5}{3}, 3\right\}\)
3. (a) \(2 x(x-5)\)
(b) \((x+2)(x-2)(x+3)\)
4. (a) \(x\)
(b) \(x-3\)

\section*{A. 9 Problem Solving: Interest, Mixture, Uniform Motion, Constant Rate Job Applications}

OBJECTIVES 1 Translate Verbal Descriptions into Mathematical Expressions (p. A72)
2 Solve Interest Problems (p. A73)
3 Solve Mixture Problems (p. A74)
4 Solve Uniform Motion Problems (p. A75)
5 Solve Constant Rate Job Problems (p. A77)

The icon is. is a Model It! icon. It indicates that the discussion or problem involves modeling.

Applied (word) problems do not come in the form "Solve the equation. . . . "Instead, they supply information using words, a verbal description of the real problem. Solving applied problems requires the ability to translate the verbal description into the language of mathematics. This can be done by using variables to represent unknown quantities and then finding relationships (such as equations) that involve these variables. The process of doing all this is called mathematical modeling. The equation or inequality that represents the relationship among the variables is called a model.

Any solution to the mathematical problem must be checked against the mathematical problem, the verbal description, and the real problem. See Figure 27 for an illustration of the modeling process.

Figure 27

1 Translate Verbal Descriptions into Mathematical Expressions
Let's look at a few examples that will help with translating certain words into mathematical symbols.

\section*{EXAMPLE I Translating Verbal Descriptions into Mathematical Expressions}
(a) The (average) speed of an object equals the distance traveled divided by the time required.
Translation: If \(r\) is the speed, \(d\) the distance, and \(t\) the time, then \(r=\frac{d}{t}\).
(b) Let \(x\) denote a number.

The number 5 times as large as \(x\) is \(5 x\).
The number 3 less than \(x\) is \(x-3\).
The number that exceeds \(x\) by 4 is \(x+4\).
The number that, when added to \(x\), gives 5 is \(5-x\).
an Now Work Problem 7
Always check the units used to measure the variables of an applied problem. In Example 1(a), if \(r\) is measured in miles per hour, then the distance \(d\) must be expressed in miles, and the time \(t\) must be expressed in hours. It is a good practice to check units to be sure that they are consistent and make sense.

\section*{Steps for Solving Applied Problems}

Step 1: Read the problem carefully, perhaps two or three times. Pay particular attention to the question being asked in order to identify what you are looking for. If you can, determine realistic possibilities for the answer.

Step 2: Assign a letter (variable) to represent what you are looking for, and, if necessary, express any remaining unknown quantities in terms of this variable.
Step 3: Make a list of all the known facts, and translate them into mathematical expressions. These may take the form of an equation or an inequality involving the variable. If possible, draw an appropriately labeled diagram to assist you. Sometimes, creating a table or chart helps.
Step 4: Solve the equation for the variable, and then answer the question.
Step 5: Check the answer with the facts in the problem. If it agrees, congratulations! If it does not agree, try again.

\section*{2 Solve Interest Problems}

Interest is money paid for the use of money. The total amount borrowed (whether by an individual from a bank in the form of a loan or by a bank from an individual in the form of a savings account) is called the principal. The rate of interest, expressed as a percent, is the amount charged for the use of the principal for a given period of time, usually on a yearly (that is, on a per annum) basis.

\section*{Simple Interest Formula}

If a principal of \(P\) dollars is borrowed for a period of \(t\) years at a per annum interest rate \(r\), expressed as a decimal, the interest \(I\) charged is
\[
I=P r t
\]

Interest charged according to formula (1) is called simple interest. When using formula (1), be sure to express \(r\) as a decimal. For example, if the rate of interest is \(4 \%\), then \(r=0.04\).

\section*{EXAMPLE 2 Finance: Computing Interest on a Loan}

Suppose that Juanita borrows \(\$ 500\) for 6 months at the simple interest rate of \(9 \%\) per annum. What is the interest that Juanita will be charged on the loan? How much does Juanita owe after 6 months?

Solution The rate of interest is given per annum, so the actual time that the money is borrowed must be expressed in years. The interest charged would be the principal, \(\$ 500\), times the rate of interest \((9 \%=0.09)\) times the time in years, \(\frac{1}{2}\) :
\[
\text { Interest charged }=I=\operatorname{Prt}=(500)(0.09)\left(\frac{1}{2}\right)=\$ 22.50
\]

After 6 months, Juanita will owe what she borrowed plus the interest:
\[
\$ 500+\$ 22.50=\$ 522.50
\]

\section*{EXAMPLE 3}

\section*{Financial Planning}

Candy has \(\$ 70,000\) to invest and wants an annual return of \(\$ 2800\), which requires an overall rate of return of \(4 \%\). She can invest in a safe, government-insured certificate of deposit, but it pays only \(2 \%\). To obtain \(4 \%\), she agrees to invest some of her
money in noninsured corporate bonds paying 7\%. How much should be placed in each investment to achieve her goal?

Solution STEP 1: The question is asking for two dollar amounts: the principal to invest in the corporate bonds and the principal to invest in the certificate of deposit.
STEP 2: Let \(b\) represent the amount (in dollars) to be invested in the bonds. Then \(70,000-b\) is the amount that will be invested in the certificate. (Do you see why?)
Step 3: Now set up Table 1:

Table 1
\begin{tabular}{|lllll|}
\hline & Principal (\$) & Rate & Time (yr) & Interest (\$) \\
\hline Bonds & \(b\) & \(7 \%=0.07\) & 1 & \(0.07 b\) \\
Certificate & \(70,000-b\) & \(2 \%=0.02\) & 1 & \(0.02(70,000-b)\) \\
Total & 70,000 & \(4 \%=0.04\) & 1 & \(0.04(70,000)=2800\) \\
\hline
\end{tabular}

The total interest from the investments is equal to \(0.04(70,000)=2800\), which leads to the equation
\[
0.07 b+0.02(70,000-b)=2800
\]
(Note that the units are consistent: the unit is dollars on each side.)
STEP 4: \(0.07 b+1400-0.02 b=2800\)
\[
\begin{aligned}
0.05 b & =1400 & & \text { Simplify } \\
b & =28,000 & & \text { Divide both sides by } 0.05
\end{aligned}
\]

Candy should place \(\$ 28,000\) in the bonds and \(\$ 70,000-\$ 28,000=\$ 42,000\) in the certificate.
STEP 5: The interest on the bonds after 1 year is \(0.07(\$ 28,000)=\$ 1960\); the interest on the certificate after 1 year is \(0.02(\$ 42,000)=\$ 840\). The total annual interest is \(\$ 2800\), the required amount.
mow Work problem 17

\section*{3 Solve Mixture Problems}

Oil refineries sometimes produce gasoline that is a blend of two or more types of fuel; bakeries occasionally blend two or more types of flour for their bread. These problems are referred to as mixture problems because they combine two or more quantities to form a mixture.

\section*{EXAMPLE 4 \\ Blending Coffees}

The manager of a local coffee shop decides to experiment with a new blend of coffee. She will mix some B grade Colombian coffee that sells for \(\$ 5\) per pound with some A grade Arabica coffee that sells for \(\$ 10\) per pound to get 100 pounds of the new blend. The selling price of the new blend is to be \(\$ 7\) per pound, and there is to be no difference in revenue between selling the new blend and selling the other types. How many pounds of the B grade Colombian coffee and how many pounds of the A grade Arabica coffee are required?
Solution STEP 1: The question is asking how many pounds of Colombian coffee and how many pounds of Arabica coffee are needed to make 100 pounds of the mixture.
STEP 2: Let \(c\) represent the number of pounds of the \(B\) grade Colombian coffee. Then \(100-c\) equals the number of pounds of the A grade Arabica coffee.
Step 3: See Figure 28.

Figure 28

There is to be no difference in revenue between selling the A and B grades separately and the blend. This leads to the following equation:
\[
\begin{aligned}
& \left\{\begin{array}{c}
\text { Price per pound } \\
\text { of B grade }
\end{array}\right\}\left\{\begin{array}{c}
\text { Pounds of } \\
\text { B grade }
\end{array}\right\}+\left\{\begin{array}{c}
\text { Price per pound } \\
\text { of A grade }
\end{array}\right\}\left\{\begin{array}{c}
\text { Pounds of } \\
\text { A grade }
\end{array}\right\}=\left\{\begin{array}{c}
\text { Price per pound } \\
\text { of blend }
\end{array}\right\}\left\{\begin{array}{c}
\text { Pounds of } \\
\text { blend }
\end{array}\right\}
\end{aligned}
\]

STEP 4: Solve the equation.
\[
\begin{aligned}
5 c+10(100-c) & =700 \\
5 c+1000-10 c & =700 \\
-5 c & =-300 \\
c & =60
\end{aligned}
\]

The manager should blend 60 pounds of B grade Colombian coffee with \(100-60=40\) pounds of A grade Arabica coffee to get the desired blend.
STEP 5: The 60 pounds of B grade coffee would sell for \((\$ 5)(60)=\$ 300\), and the 40 pounds of A grade coffee would sell for \((\$ 10)(40)=\$ 400\); the total revenue, \(\$ 700\), equals the revenue obtained from selling the blend, as desired.
anm Now Work problem 21

\section*{4 Solve Uniform Motion Problems}

Objects that move at a constant speed are said to be in uniform motion. When the average speed of an object is known, it can be interpreted as that object's constant speed. For example, a bicyclist traveling at an average speed of 25 miles per hour can be modeled as being in uniform motion with a constant speed of 25 miles per hour.

\section*{Uniform Motion Formula}

If an object moves at an average speed (rate) \(r\), the distance \(d\) covered in time \(t\) is given by the formula
\[
d=r t
\]

That is, Distance \(=\) Rate \(\cdot\) Time.

\section*{EXAMPLE 5 Physics: Uniform Motion}

Tanya, who is a long-distance runner, runs at an average speed of 8 miles per hour ( \(\mathrm{mi} / \mathrm{hr}\) ). Two hours after Tanya leaves your house, you leave in your Honda and

Solution Refer to Figure 29. Use \(t\) to represent the time (in hours) that it takes the Honda to catch up to Tanya. When this occurs, the total time elapsed for Tanya is \(t+2\) hours.

Figure 29

Set up Table 2:

Table 2
\begin{tabular}{|lccc|}
\hline & Rate (mi/hr) & Time (hr) & Distance (mi) \\
\hline Tanya & 8 & \(t+2\) & \(8(t+2)\) \\
Honda & 40 & \(t\) & \(40 t\) \\
\hline
\end{tabular}

The distance traveled is the same for both, which leads to the following equation:
\[
\begin{aligned}
8(t+2) & =40 t \\
8 t+16 & =40 t \\
32 t & =16 \\
t & =\frac{1}{2} \text { hour }
\end{aligned}
\]

It will take the Honda \(\frac{1}{2}\) hour to catch up to Tanya. Each will have gone 20 miles.

Check: In 2.5 hours, Tanya travels a distance of \((2.5)(8)=20\) miles. In \(\frac{1}{2}\) hour, the Honda travels a distance of \(\left(\frac{1}{2}\right)(40)=20\) miles.

\section*{EXAMPLE 6 Physics: Uniform Motion}

A motorboat heads upstream a distance of 24 miles on a river whose current is running at 3 miles per hour ( \(\mathrm{mi} / \mathrm{hr}\) ). The trip up and back takes 6 hours. Assuming that the motorboat maintained a constant speed relative to the water, what was its speed?
Solution
See Figure 30. Use \(r\) to represent the constant speed of the motorboat relative to the water. Then the true speed going upstream is \(r-3 \mathrm{mi} / \mathrm{hr}\), and the true speed going downstream is \(r+3 \mathrm{mi} / \mathrm{hr}\). Since Distance \(=\) Rate \(\times\) Time, then Time \(=\frac{\text { Distance }}{\text { Rate }}\).
Set up Table 3. Set up Table 3:

Figure 30

Table 3 \begin{tabular}{llllc|}
\cline { 2 - 4 } & \begin{tabular}{l} 
Rate \\
\(\mathbf{( m i / h r )}\)
\end{tabular} & \begin{tabular}{l} 
Distance \\
\(\mathbf{( m i )}\)
\end{tabular} & \begin{tabular}{l} 
Time \\
\(\mathbf{( h r )}\)
\end{tabular} & \(=\frac{\text { Distance }}{\text { Rate }}\) \\
\hline Upstream & \(r-3\) & 24 & \(\frac{24}{r-3}\) \\
Downstream & \(r+3\) & 24 & \(\frac{24}{r+3}\) \\
\hline
\end{tabular}

The total time up and back is 6 hours, which gives the equation
\[
\begin{aligned}
\frac{24}{r-3}+\frac{24}{r+3} & =6 & & \\
\frac{24(r+3)+24(r-3)}{(r-3)(r+3)} & =6 & & \text { Add the quotients on the left. } \\
\frac{48 r}{r^{2}-9} & =6 & & \text { Simplify. } \\
48 r & =6\left(r^{2}-9\right) & & \text { Multiply both sides by } r^{2}-9 . \\
6 r^{2}-48 r-54 & =0 & & \text { Place in standard form. } \\
r^{2}-8 r-9 & =0 & & \text { Divide by } 6 . \\
(r-9)(r+1) & =0 & & \text { Factor. } \\
r=9 \text { or } r & =-1 & & \text { Apply the Zero-Product Property and solve. }
\end{aligned}
\]

Discard the solution \(r=-1 \mathrm{mi} / \mathrm{hr}\), and conclude that the speed of the motorboat relative to the water is \(9 \mathrm{mi} / \mathrm{hr}\).
am Now Work problem 27

\section*{5 Solve Constant Rate Job Problems}

This section involves jobs that are performed at a constant rate. The assumption is that if a job can be done in \(t\) units of time, then \(\frac{1}{t}\) of the job is done in 1 unit of time. Thus, if a job takes 4 hours, then \(1 / 4\) of the job is done in 1 hour.

\section*{EXAMPLE 7 Working Together to Do a Job}

At 10 Am Danny is asked by his father to weed the garden. From past experience, Danny knows that this will take him 4 hours, working alone. His older brother, Mike, when it is his turn to do this job, requires 6 hours. Since Mike wants to go golfing with Danny and has a reservation for 1 pm, he agrees to help Danny. Assuming no gain or loss of efficiency, when will they finish if they work together? Can they make the golf date?
Solution
Table 4
\begin{tabular}{|lcc|}
\hline & \begin{tabular}{l} 
Hours to \\
Do Job
\end{tabular} & \begin{tabular}{l} 
Part of \\
Job Done \\
in 1 Hour
\end{tabular} \\
\hline Danny & 4 & \(\frac{1}{4}\) \\
Mike & 6 & \(\frac{1}{6}\) \\
Together & \(t\) & \(\frac{1}{t}\) \\
\hline
\end{tabular}

Set up Table 4. In 1 hour, Danny does \(\frac{1}{4}\) of the job, and in 1 hour, Mike does \(\frac{1}{6}\) of the job. Let \(t\) be the time (in hours) that it takes them to do the job together. In 1 hour, then, \(\frac{1}{t}\) of the job is completed. Reason as follows:
\[
\binom{\text { Part done by Danny }}{\text { in } 1 \text { hour }}+\binom{\text { Part done by Mike }}{\text { in } 1 \text { hour }}=\binom{\text { Part done together }}{\text { in } 1 \text { hour }}
\]

From Table 4,
\[
\begin{array}{rlrl}
\frac{1}{4}+\frac{1}{6} & =\frac{1}{t} \quad \text { The model } \\
\frac{3}{12}+\frac{2}{12} & =\frac{1}{t} \quad & L C D=12 \text { (left side) } \\
\frac{5}{12} & =\frac{1}{t} \\
5 t & =12 \quad & \\
t & =\frac{12}{5} \quad \text { Multiply both sides by } 12 t .
\end{array}
\]

Working together, Danny and Mike can do the job in \(\frac{12}{5}\) hours, or 2 hours, 24 minutes. They should make the golf date, since they will finish at 12:24 PM.

\section*{A. 9 Assess Your Understanding}

\section*{Concepts and Vocabulary}
1. The process of using variables to represent unknown quantities and then finding relationships that involve these variables is referred to as \(\qquad\) -
2. The money paid for the use of money is \(\qquad\) .
3. Objects that move at a constant rate are said to be in
\(\qquad\) -
4. True or False The amount charged for the use of principal for a given period of time is called the rate of interest.
5. True or False If an object moves at an average speed \(r\), the distance \(d\) covered in time \(t\) is given by the formula \(d=r t\).
6. Suppose that you want to mix two coffees in order to obtain 100 pounds of the blend. If \(x\) represents the number of pounds of coffee A , write an algebraic expression that represents the number of pounds of coffee \(B\).

\section*{Applications and Extensions}

In Problems 7-16, translate each sentence into a mathematical equation. Be sure to identify the meaning of all symbols.
7. Geometry The area of a circle is the product of the number \(\pi\) and the square of the radius.
8. Geometry The circumference of a circle is the product of the number \(\pi\) and twice the radius.
9. Geometry The area of a square is the square of the length of a side.
10. Geometry The perimeter of a square is four times the length of a side.
11. Physics Force equals the product of mass and acceleration.
12. Physics Pressure is force per unit area.
13. Physics Work equals force times distance.
14. Physics Kinetic energy is one-half the product of the mass and the square of the velocity.
15. Business The total variable cost \(C\) of manufacturing \(x\) dishwashers is \(\$ 150\) per dishwasher times the number of dishwashers manufactured.
16. Business The total revenue \(R\) derived from selling \(x\) dishwashers is \(\$ 250\) per dishwasher times the number of dishwashers sold.
17. Financial Planning Betsy, a recent retiree, requires \(\$ 6000\) per year in extra income. She has \(\$ 50,000\) to invest and can invest in B-rated bonds paying \(15 \%\) per year or in a certificate of deposit (CD) paying 7\% per year. How much money should Betsy invest in each to realize exactly \(\$ 6000\) in interest per year?
18. Financial Planning After 2 years, Betsy (see Problem 17) finds that she will now require \(\$ 7000\) per year. Assuming that the remaining information is the same, how should the money be reinvested?
19. Banking A bank loaned out \(\$ 12,000\), part of it at the rate of \(8 \%\) per year and the rest at the rate of \(18 \%\) per year. If the interest received totaled \(\$ 1000\), how much was loaned at \(8 \%\) ?
20. Banking Wendy, a loan officer at a bank, has \(\$ 1,000,000\) to lend and is required to obtain an average return of \(18 \%\) per year. If she can lend at the rate of \(19 \%\) or at the rate of \(16 \%\), how much can she lend at the \(16 \%\) rate and still meet her requirement?
21. Blending Teas The manager of a store that specializes in selling tea decides to experiment with a new blend. She will mix some Earl Grey tea that sells for \(\$ 5\) per pound with some Orange Pekoe tea that sells for \(\$ 3\) per pound to get 100 pounds
of the new blend. The selling price of the new blend is to be \(\$ 4.50\) per pound, and there is to be no difference in revenue from selling the new blend versus selling the other types. How many pounds of the Earl Grey tea and of the Orange Pekoe tea are required?
22. Business: Blending Coffee A coffee manufacturer wants to market a new blend of coffee that sells for \(\$ 3.90\) per pound by mixing two coffees that sell for \(\$ 2.75\) and \(\$ 5\) per pound, respectively. What amounts of each coffee should be blended to obtain the desired mixture?
[Hint: Assume that the total weight of the desired blend is 100 pounds.]
23. Business: Mixing Nuts A nut store normally sells cashews for \(\$ 9.00\) per pound and almonds for \(\$ 3.50\) per pound. But at the end of the month the almonds had not sold well, so, in order to sell 60 pounds of almonds, the manager decided to mix the 60 pounds of almonds with some cashews and sell the mixture for \(\$ 7.50\) per pound. How many pounds of cashews should be mixed with the almonds to ensure no change in the profit?
24. Business: Mixing Candy A candy store sells boxes of candy containing caramels and cremes. Each box sells for \(\$ 12.50\) and holds 30 pieces of candy (all pieces are the same size). If the caramels cost \(\$ 0.25\) to produce and the cremes cost \(\$ 0.45\) to produce, how many of each should be in a box to yield a profit of \(\$ 3\) ?
25. Physics: Uniform Motion A motorboat can maintain a constant speed of 16 miles per hour relative to the water. The boat makes a trip upstream to a certain point in 20 minutes; the return trip takes 15 minutes. What is the speed of the current? See the figure.

26. Physics: Uniform Motion A motorboat heads upstream on a river that has a current of 3 miles per hour. The trip upstream takes 5 hours, and the return trip takes 2.5 hours. What is the speed of the motorboat? (Assume that the motorboat maintains a constant speed relative to the water.)
27. Physics: Uniform Motion A motorboat maintained a constant speed of 15 miles per hour relative to the water in going 10 miles upstream and then returning. The total time for the trip was 1.5 hours. Use this information to find the speed of the current.
28. Physics: Uniform Motion Two cars enter the Florida Turnpike at Commercial Boulevard at 8:00 AM, each heading for Wildwood. One car's average speed is 10 miles per hour more than the other's. The faster car arrives at Wildwood at 11:00 am, \(\frac{1}{2}\) hour before the other car. What was the average speed of each car? How far did each travel?
29. Moving Walkways The speed of a moving walkway is typically about 2.5 feet per second. Walking on such a moving walkway, it takes Karen a total of 40 seconds to travel 50 feet with the movement of the walkway and then back again against the movement of the walkway. What is Karen's normal walking speed?
Source: Answers.com
30. High-Speed Walkways Toronto's Pearson International Airport has a high-speed version of a moving walkway. If Liam walks while riding this moving walkway, he can travel 280 meters in 60 seconds less time than if he stands still on the moving walkway. If Liam walks at a normal rate of 1.5 meters per second, what is the speed of the high-speed walkway?
31. Tennis A regulation doubles tennis court has an area of 2808 square feet. If it is 6 feet longer than twice its width, determine the dimensions of the court.
Source: United States Tennis Association
32. Laser Printers It takes an HP LaserJet 1300 laser printer 10 minutes longer to complete a 600 -page print job by itself than it takes an HP LaserJet 2420 to complete the same job by itself. Together the two printers can complete the job in 12 minutes. How long does it take each printer to complete the print job alone? What is the speed of each printer? Source: Hewlett-Packard
33. Working Together on a Job Trent can deliver his newspapers in 30 minutes. It takes Lois 20 minutes to do the same route. How long would it take them to deliver the newspapers if they worked together?
34. Working Together on a Job Patrick, by himself, can paint four rooms in 10 hours. If he hires April to help, they can do the same job together in 6 hours. If he lets April work alone, how long will it take her to paint four rooms?
35. Enclosing a Garden A gardener has 46 feet of fencing to be used to enclose a rectangular garden that has a border 2 feet wide surrounding it. See the figure.
(a) If the length of the garden is to be twice its width, what will be the dimensions of the garden?
(b) What is the area of the garden?
(c) If the length and width of the garden are to be the same, what will be the dimensions of the garden?
(d) What will be the area of the square garden?

36. Construction A pond is enclosed by a wooden deck that is 3 feet wide. The fence surrounding the deck is 100 feet long.
(a) If the pond is square, what are its dimensions?
(b) If the pond is rectangular and the length of the pond is to be three times its width, what are its dimensions?
(c) If the pond is circular, what is its diameter?
(d) Which pond has the greatest area?
37. Football A tight end can run the 100 -yard dash in 12 seconds. A defensive back can do it in 10 seconds. The tight end catches a pass at his own 20-yard line with the defensive back at the 15 -yard line. (See the figure.) If no other players are nearby, at what yard line will the defensive back catch up to the tight end?
[Hint: At time \(t=0\), the defensive back is 5 yards behind the tight end.]

38. Computing Business Expense Therese, an outside salesperson, uses her car for both business and pleasure. Last year, she traveled 30,000 miles, using 900 gallons of gasoline. Her car gets 40 miles per gallon on the highway and 25 in the city. She can deduct all highway travel, but no city travel, on her taxes. How many miles should Therese deduct as a business expense?
39. Mixing Water and Antifreeze How much water should be added to 1 gallon of pure antifreeze to obtain a solution that is \(60 \%\) antifreeze?
40. Mixing Water and Antifreeze The cooling system of a certain foreign-made car has a capacity of 15 liters. If the system is filled with a mixture that is \(40 \%\) antifreeze, how much of this mixture should be drained and replaced by pure antifreeze so that the system is filled with a solution that is \(60 \%\) antifreeze?
41. Chemistry: Salt Solutions How much water must be evaporated from 32 ounces of a \(4 \%\) salt solution to make a \(6 \%\) salt solution?
42. Chemistry: Salt Solutions How much water must be evaporated from 240 gallons of a \(3 \%\) salt solution to produce a \(5 \%\) salt solution?
43. Purity of Gold The purity of gold is measured in karats, with pure gold being 24 karats. Other purities of gold are expressed as proportional parts of pure gold. Thus, 18 -karat gold is \(\frac{18}{24}\), or \(75 \%\) pure gold; 12 -karat gold is \(\frac{12}{24}\), or \(50 \%\) pure gold; and so on. How much 12 -karat gold should be mixed with pure gold to obtain 60 grams of 16 -karat gold?
44. Chemistry: Sugar Molecules A sugar molecule has twice as many atoms of hydrogen as of oxygen and one more atom of carbon than of oxygen. If a sugar molecule has a total of 45 atoms, how many are oxygen? How many are hydrogen?
45. Running a Race Mike can run the mile in 6 minutes, and Dan can run the mile in 9 minutes. If Mike gives Dan a head start of 1 minute, how far from the start will Mike pass Dan? How long does it take? See the figure.

46. Range of an Airplane An air rescue plane averages 300 miles per hour in still air. It carries enough fuel for 5 hours of flying time. If, upon takeoff, it encounters a head wind of \(30 \mathrm{mi} / \mathrm{hr}\), how far can it fly and return safely? (Assume that the wind speed remains constant.)
47. Emptying Oil Tankers An oil tanker can be emptied by the main pump in 4 hours. An auxiliary pump can empty the tanker in 9 hours. If the main pump is started at 9 AM , when is the latest the auxiliary pump can be started so that the tanker is emptied by noon?
48. Cement Mix A 20 -pound bag of Economy brand cement mix contains \(25 \%\) cement and \(75 \%\) sand. How much pure cement must be added to produce a cement mix that is \(40 \%\) cement?
49. Emptying a Tub A bathroom tub will fill in 15 minutes with both faucets open and the stopper in place. With both
faucets closed and the stopper removed, the tub will empty in 20 minutes. How long will it take for the tub to fill if both faucets are open and the stopper is removed?
50. Using Two Pumps A 5-horsepower (hp) pump can empty a pool in 5 hours. A smaller, 2-hp pump empties the same pool in 8 hours. The pumps are used together to begin emptying this pool. After two hours, the 2-hp pump breaks down. How long will it take the larger pump to empty the pool?
51. A Biathlon Suppose that you have entered an 87 -mile biathlon that consists of a run and a bicycle race. During your run, your average speed is 6 miles per hour, and during your bicycle race, your average speed is 25 miles per hour. You finish the race in 5 hours. What is the distance of the run? What is the distance of the bicycle race?
52. Cyclists Two cyclists leave a city at the same time, one going east and the other going west. The westbound cyclist bikes 5 mph faster than the eastbound cyclist. After 6 hours they are 246 miles apart. How fast is each cyclist riding?
53. Comparing Olympic Heroes In the 2012 Olympics, Usain Bolt of Jamaica won the gold medal in the 100 -meter race with a time of 9.69 seconds. In the 1896 Olympics, Thomas Burke, of the United States, won the gold medal in the 100 -meter race in 12.0 seconds. If they ran in the same race repeating their respective times, by how many meters would Bolt beat Burke?
54. Constructing a Coffee Can A 39-ounce can of Hills Bros. \({ }^{\circledR}\) coffee requires 188.5 square inches of aluminum. If its height is 7 inches, what is its radius? [Hint: The surface area \(S\) of a right cylinder is \(S=2 \pi r^{2}+2 \pi r h\), where \(r\) is the radius and \(h\) is the height.]

\section*{Discussion and Writing}
55. Critical Thinking You are the manager of a clothing store and have just purchased 100 dress shirts for \(\$ 20.00\) each. After 1 month of selling the shirts at the regular price, you plan to have a sale giving \(40 \%\) off the original selling price. However, you still want to make a profit of \(\$ 4\) on each shirt at the sale price. What should you price the shirts at initially to ensure this? If, instead of \(40 \%\) off at the sale, you give \(50 \%\) off, by how much is your profit reduced?
56. Critical Thinking Make up a word problem that requires solving a linear equation as part of its solution. Exchange problems with a friend. Write a critique of your friend's problem.
57. Critical Thinking Without solving, explain what is wrong with the following mixture problem: How many liters of \(25 \%\) ethanol should be added to 20 liters of \(48 \%\) ethanol to obtain a solution of \(58 \%\) ethanol? Now go through an algebraic solution. What happens?
58. Computing Average Speed In going from Chicago to Atlanta, a car averages 45 miles per hour, and in going from Atlanta to Miami, it averages 55 miles per hour. If Atlanta is halfway between Chicago and Miami, what is the average speed from Chicago to Miami? Discuss an intuitive solution. Write a paragraph defending your intuitive solution. Then solve the problem algebraically. Is your intuitive solution the same as the algebraic one? If not, find the flaw.
59. Speed of a Plane On a recent flight from Phoenix to Kansas City, a distance of 919 nautical miles, the plane arrived 20 minutes early. On leaving the aircraft, I asked the captain, "What was our tail wind?" He replied, "I don't know, but our ground speed was 550 knots." How can you determine whether enough information is provided to find the tail wind? If possible, find the tail wind. (1 knot = 1 nautical mile per hour)

\section*{A. 10 Interval Notation; Solving Inequalities}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Algebra Essentials (Appendix A, Section A.1, pp. A4-A5)

Now Work the 'Are You Prepared?’ problems on page A86.
OBJECTIVES 1 Use Interval Notation (p. A81)
2 Use Properties of Inequalities (p. A82)
3 Solve Inequalities (p. A84)
4 Solve Combined Inequalities (p. A85)

Suppose that \(a\) and \(b\) are two real numbers and \(a<b\). The notation \(a<x<b\) means that \(x\) is a number between \(a\) and \(b\). The expression \(a<x<b\) is equivalent to the two inequalities \(a<x\) and \(x<b\). Similarly, the expression \(a \leq x \leq b\) is equivalent to the two inequalities \(a \leq x\) and \(x \leq b\). The remaining two possibilities, \(a \leq x<b\) and \(a<x \leq b\), are defined similarly.

Although it is acceptable to write \(3 \geq x \geq 2\), it is preferable to reverse the inequality symbols and write instead \(2 \leq x \leq 3\) so that the values go from smaller to larger, reading left to right.

A statement such as \(2 \leq x \leq 1\) is false because there is no number \(x\) for which \(2 \leq x\) and \(x \leq 1\). Finally, never mix inequality symbols, as in \(2 \leq x \geq 3\).

\section*{1 Use Interval Notation}

Let \(a\) and \(b\) represent two real numbers with \(a<b\).

\section*{In Words}

The notation \([a, b]\) represents all real numbers between \(a\) and \(b\), inclusive. The notation \((a, b)\) represents all real numbers between \(a\) and \(b\), not including either a or \(b\).

A closed interval, denoted by \([\boldsymbol{a}, \boldsymbol{b}]\), consists of all real numbers \(x\) for which \(a \leq x \leq b\).
An open interval, denoted by \((\boldsymbol{a}, \boldsymbol{b})\), consists of all real numbers \(x\) for which \(a<x<b\).
The half-open, or half-closed, intervals are \((\boldsymbol{a}, \boldsymbol{b}]\), consisting of all real numbers \(x\) for which \(a<x \leq b\), and \([\boldsymbol{a}, \boldsymbol{b}\) ), consisting of all real numbers \(x\) for which \(a \leq x<b\).

In each of these definitions, \(a\) is called the left endpoint and \(b\) the right endpoint of the interval.

The symbol \(\infty\) (read as "infinity") is not a real number, but a notational device used to indicate unboundedness in the positive direction. The symbol \(-\infty\) (read as "negative infinity") also is not a real number, but a notational device used to indicate unboundedness in the negative direction. The symbols \(\infty\) and \(-\infty\), are used to define five other kinds of intervals:
\([a, \infty)\) Consists of all real numbers \(x\) for which \(x \geq a\)
\((a, \infty)\) Consists of all real numbers \(x\) for which \(x>a\)
\((-\infty, a]\) Consists of all real numbers \(x\) for which \(x \leq a\)
\((-\infty, \boldsymbol{a})\) Consists of all real numbers \(x\) for which \(x<a\)
\((-\infty, \infty)\) Consists of all real numbers \(x\)
Note that \(\infty\) and \(-\infty\) are never included as endpoints, since neither is a real number.

Table 5 on the following page summarizes interval notation, corresponding inequality notation, and their graphs.

Table 5
\begin{tabular}{|c|c|c|}
\hline Interval & Inequality & Graph \\
\hline The open interval ( \(a, b\) ) & \(a<x<b\) &  \\
\hline The closed interval [ \(a, b\) ] & \(a \leq x \leq b\) &  \\
\hline The half-open interval \([a, b)\) & \(a \leq x<b\) &  \\
\hline The half-open interval ( \(a, b\) ] & \(a<x \leq b\) &  \\
\hline The interval [ \(a, \infty\) ) & \(x \geq a\) &  \\
\hline The interval ( \(a, \infty\) ) & \(x>a\) &  \\
\hline The interval ( \(-\infty\), a] & \(x \leq a\) &  \\
\hline The interval ( \(-\infty\), a) & \(x<a\) &  \\
\hline The interval ( \(-\infty, \infty\) ) & All real numbers & \(\longrightarrow \longrightarrow\) \\
\hline
\end{tabular}

\section*{EXAMPLE I Writing Inequalities Using Interval Notation}

Write each inequality using interval notation.
(a) \(1 \leq x \leq 3\)
(b) \(-4<x<0\)
(c) \(x>5\)
(d) \(x \leq 1\)

Solution (a) \(1 \leq x \leq 3\) describes all real numbers \(x\) between 1 and 3 , inclusive, which is \([1,3]\) in interval notation.
(b) In interval notation, \(-4<x<0\) is written \((-4,0)\).
(c) \(x>5\) consists of all real numbers \(x\) greater than 5 , which in interval notation, is \((5, \infty)\).
(d) In interval notation, \(x \leq 1\) is written \((-\infty, 1]\).

\section*{EXAMPLE 2 Writing Intervals Using Inequality Notation}

Write each interval as an inequality involving \(x\).
(a) \([1,4)\)
(b) \((2, \infty)\)
(c) \([2,3]\)
(d) \((-\infty,-3]\)

Solution (a) \([1,4)\) consists of all real numbers \(x\) for which \(1 \leq x<4\).
(b) \((2, \infty)\) consists of all real numbers \(x\) for which \(x>2\).
(c) \([2,3]\) consists of all real numbers \(x\) for which \(2 \leq x \leq 3\).
(d) \((-\infty,-3]\) consists of all real numbers \(x\) for which \(x \leq-3\).

\section*{Now Work problems 11, 23, and 31}

\section*{2 Use Properties of Inequalities}

The product of two positive real numbers is positive, the product of two negative real numbers is positive, and the product of 0 and 0 is 0 . For any real number \(a\), the value of \(a^{2}\) is 0 or positive; that is, \(a^{2}\) is nonnegative. This is called the nonnegative property.

\section*{Nonnegative Property}

For any real number \(a\),

\section*{In Words}

The square of a real number is never negative.

If the same number is added to both sides of an inequality, an equivalent inequality results. For example, since \(3<5\), then \(3+4<5+4\) or \(7<9\). This is called the addition property of inequalities.

\section*{Addition Property of Inequalities}

For real numbers \(a, b\), and \(c\),
\[
\begin{align*}
& \text { If } a<b \text {, then } a+c<b+c \text {. }  \tag{2a}\\
& \text { If } a>b \text {, then } a+c>b+c . \tag{2b}
\end{align*}
\]

The addition property states that the sense, or direction, of an inequality remains unchanged when the same number is added to each side.

Now let's see what happens when each side of an inequality is multiplied by a nonzero number. Begin with \(3<7\) and multiply each side by 2 . The numbers 6 and 14 that result obey the inequality \(6<14\).

Now start with \(9>2\) and multiply each side by -4 . The numbers -36 and -8 that result obey the inequality \(-36<-8\).

Note that the effect of multiplying both sides of \(9>2\) by the negative number -4 is that the direction of the inequality symbol is reversed. This leads to the following general multiplication properties for inequalities:

\section*{Multiplication Properties for Inequalities}

For real numbers \(a, b\), and \(c\) :
\[
\begin{align*}
& \text { If } a<b \text { and if } c>0 \text {, then } a c<b c \text {. } \\
& \text { If } a<b \text { and if } c<0 \text {, then } a c>b c \text {. }  \tag{3a}\\
& \text { If } a>b \text { and if } c>0 \text {, then } a c>b c \text {. } \\
& \text { If } a>b \text { and if } c<0 \text {, then } a c<b c . \tag{3b}
\end{align*}
\]

The multiplication properties state that the sense, or direction, of an inequality remains the same when each side is multiplied by a positive real number, whereas the direction is reversed when each side is multiplied by a negative real number.

\section*{EXAMPLE 3}

\section*{Multiplication Property of Inequalities}
(a) If \(2 x<6\), then \(\frac{1}{2}(2 x)<\frac{1}{2}(6)\), or \(x<3\).
(b) If \(\frac{x}{-3}>12\), then \(-3\left(\frac{x}{-3}\right)<-3(12)\), or \(x<-36\).
(c) If \(-4 x<-8\), then \(\frac{-4 x}{-4}>\frac{-8}{-4}\), or \(x>2\).
(d) If \(-x>8\), then \((-1)(-x)<(-1)(8)\), or \(x<-8\).

\section*{an Now Work problem 45}

The reciprocal property states that the reciprocal of a positive real number is positive and that the reciprocal of a negative real number is negative.

\section*{Reciprocal Property for Inequalities}
\[
\begin{align*}
& \text { If } a>0, \text { then } \frac{1}{a}>0 . \quad \text { If } \frac{1}{a}>0, \text { then } a>0 .  \tag{4a}\\
& \text { If } a<0, \text { then } \frac{1}{a}<0 .  \tag{4b}\\
& \text { If } \frac{1}{a}<0, \text { then } a<0 .
\end{align*}
\]

\section*{3 Solve Inequalities}

An inequality in one variable is a statement involving two expressions, at least one containing the variable, separated by one of the inequality symbols \(<, \leq,>\), or \(\geq\). To solve an inequality means to find all values of the variable for which the statement is true. These values are solutions of the inequality.

For example, the following are all inequalities involving one variable \(x\) :
\[
x+5<8 \quad 2 x-3 \geq 4 \quad x^{2}-1 \leq 3 \quad \frac{x+1}{x-2}>0
\]

As with equations, one method for solving an inequality is to replace it by a series of equivalent inequalities until an inequality with an obvious solution, such as \(x<3\), is obtained. Equivalent inequalities are obtained by applying some of the same properties as those used to find equivalent equations. The addition property and the multiplication properties form the basis for the following procedures.

\section*{Procedures That Leave the Inequality Symbol Unchanged}
1. Simplify both sides of the inequality by combining like terms and eliminating parentheses:
\[
\begin{aligned}
& (x+2)+6>2 x+5(x+1) \\
& \text { is equivalent to } \\
& x+8>7 x+5
\end{aligned}
\]
2. Add or subtract the same expression on both sides of the inequality:
\[
\begin{aligned}
3 x-5 & <4 \\
\text { is equivalent to } \quad(3 x-5)+5 & <4+5
\end{aligned}
\]
3. Multiply or divide both sides of the inequality by the same positive expression:
\[
4 x>16 \text { is equivalent to } \frac{4 x}{4}>\frac{16}{4}
\]

\section*{Procedures That Reverse the Sense or Direction of the Inequality Symbol}
1. Interchange the two sides of the inequality:
\[
3<x \text { is equivalent to } x>3
\]
2. Multiply or divide both sides of the inequality by the same negative expression:
\[
-2 x>6 \text { is equivalent to } \frac{-2 x}{-2}<\frac{6}{-2}
\]

As the examples that follow illustrate, inequalities can be solved by using many of the same steps that would be used to solve equations. In writing the solution of an inequality, either set notation or interval notation may be used, whichever is more convenient.

\section*{EXAMPLE 4 Solving an Inequality}

Solve the inequality \(4 x+7 \geq 2 x-3\), and graph the solution set.

\author{
Solution
}
\[
\begin{array}{rlrl}
4 x+7 & \geq 2 x-3 & & \\
4 x+7-7 & \geq 2 x-3-7 & & \text { Subtract } 7 \text { from both sides. } \\
4 x & \geq 2 x-10 & & \text { Simplify. } \\
4 x-2 x & \geq 2 x-10-2 x & & \text { Subtract } 2 x \text { from both sides. } \\
2 x & \geq-10 & & \text { Simplify. } \\
\frac{2 x}{2} & \geq \frac{-10}{2} & & \text { Divide both sides by 2. (The direction } \\
x & \geq-5 & & \text { of the inequality symbol is unchanged.) } \\
\text { Simplify. }
\end{array}
\]

\section*{Figure 31}

The solution set is \(\{x \mid x \geq-5\}\) or, using interval notation, all numbers in the interval \([-5, \infty)\). See Figure 31 for the graph.

Now Work problem 57

\section*{4 Solve Combined Inequalities}

\section*{EXAMPLE 5 Solving Combined Inequalities}

Solve the inequality \(-5<3 x-2<1\), and graph the solution set.

Solution Recall that the inequality
\[
-5<3 x-2<1
\]
is equivalent to the two inequalities
\[
-5<3 x-2 \text { and } 3 x-2<1
\]

Solve each of these inequalities separately.
\[
\begin{array}{rlrl}
-5 & <3 x-2 & 3 x-2 & <1 \\
-5+2 & <3 x-2+2 & \text { Add 2 to both sides. } & 3 x-2+2<1+2 \\
-3 & <3 x & \text { Simplify. } & 3 x \\
\frac{-3}{3} & <\frac{3 x}{3} & & \text { Divide both sides by 3. }
\end{array}
\]

The solution set of the original pair of inequalities consists of all \(x\) for which
\[
-1<x \text { and } x<1
\]

Figure 32

This may be written more compactly as \(\{x \mid-1<x<1\}\). In interval notation, the solution is \((-1,1)\). See Figure 32 for the graph.

Observe in the preceding process that solving the two inequalities required exactly the same steps. A shortcut to solving the original inequality algebraically is to deal with the two inequalities at the same time, as follows:
\[
\begin{array}{rlrlrl}
-5 & <3 x-2 & <1 & & \\
-5+2 & <3 x-2+2 & <1+2 & & \text { Add } 2 \text { to each part. } \\
-3 & <3 x & & <3 & & \text { Simplify. } \\
\frac{-3}{3} & <\quad \frac{3 x}{3} & <\frac{3}{3} & & \text { Divide each part by 3. } \\
-1 & < & x & & <1 & \\
\text { Simplify. }
\end{array}
\]
-Now Work problem 73

\section*{EXAMPLE 6 Using the Reciprocal Property to Solve an Inequality}

Solve the inequality \((4 x-1)^{-1}>0\), and graph the solution set.
Solution Recall that \((4 x-1)^{-1}=\frac{1}{4 x-1}\). The Reciprocal Property states that when \(\frac{1}{a}>0\), then \(a>0\). Hence,
\[
\begin{aligned}
(4 x-1)^{-1} & >0 \\
\frac{1}{4 x-1} & >0 \\
4 x-1 & >0 \quad \text { Reciprocal Property } \\
4 x & >1 \\
x & >\frac{1}{4}
\end{aligned}
\]

Figure 33

The solution set is \(\left\{x \left\lvert\, x>\frac{1}{4}\right.\right\}\)-that is, all \(x\) in the interval \(\left(\frac{1}{4}, \infty\right)\). Figure 33 illustrates the graph.

\section*{A. 10 Assess Your Understanding}

\section*{'Are You Prepared?'}

Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. Graph the inequality: \(x \geq-2\). (pp. A4-A5)
2. Graph the inequality: \(x<1\). (pp.A4-A5)

\section*{Concepts and Vocabulary}
3. If each side of an inequality is multiplied by \(a(n)\) number, then the direction of the inequality symbol is reversed.
4. \(\mathrm{A}(\mathrm{n})\) \(\qquad\) , denoted \([a, b]\), consists of all real numbers \(x\) for which \(a \leq x \leq b\).
5. The \(\qquad\) states that the sense, or direction, of an inequality remains the same if each side is multiplied by a positive number, whereas the direction is reversed if each side is multiplied by a negative number.

In Problems 6-9, determine whether the statement is True or False if \(a<b\) and \(c<0\).
6. \(a+c<b+c\)
7. \(a-c<b-c\)
8. \(a c>b c\)
9. \(\frac{a}{c}<\frac{b}{c}\)
10. True or False The square of any real number is always nonnegative.

\section*{Skill Building}

In Problems 11-16, express the graph shown in blue using interval notation. Also express each as an inequality involving \(x\).
11. \(\begin{array}{llllll}1 & {[ } & 1 & 1 & 1\end{array}\)
14.

12.

15.

13. \(\xrightarrow[-1]{1} \begin{array}{lllll}\mathrm{C} & 1 \\ \xrightarrow{+}\end{array}\)
16.

In Problems 17-22, an inequality is given. Write the inequality obtained by:
(a) Adding 3 to each side of the given inequality.
(b) Subtracting 5 from each side of the given inequality.
(c) Multiplying each side of the given inequality by 3.
(d) Multiplying each side of the given inequality by -2 .
17. \(3<5\)
18. \(2>1\)
19. \(4>-3\)
20. \(-3>-5\)
21. \(2 x+1<2\)
22. \(1-2 x>5\)

In Problems 23-30, write each inequality using interval notation, and illustrate each inequality using the real number line.
23. \(0 \leq x \leq 4\)
24. \(-1<x<5\)
25. \(4 \leq x<6\)
26. \(-2<x<0\)
27. \(x \geq 4\)
28. \(x \leq 5\)
29. \(x<-4\)
30. \(x>1\)

In Problems 31-38, write each interval as an inequality involving \(x\), and illustrate each inequality using the real number line.
31. \([2,5]\)
32. \((1,2)\)
33. \((-3,-2)\)
34. \([0,1)\)
35. \([4, \infty)\)
36. \((-\infty, 2]\)
37. \((-\infty,-3)\)
38. \((-8, \infty)\)

In Problems 39-52, fill in the blank with the correct inequality symbol.
39. If \(x<5\), then \(x-5\) \(\qquad\) 0. 40. If \(x<-4\), then \(x+4\) \(\qquad\) 0. 41. If \(x>-4\), then \(x+4\) \(\qquad\) 0.
42. If \(x>6\), then \(x-6\) \(\qquad\) 0 43. If \(x \geq-4\), then \(3 x\) \(\qquad\) -12 .
44. If \(x \leq 3\), then \(2 x\) \(\qquad\) 6.
45. If \(x>6\), then \(-2 x\) \(\qquad\) -12 .
46. If \(x>-2\), then \(-4 x\) \(\qquad\) 8. 47. If \(x \geq 5\), then \(-4 x\) \(\qquad\) -20 .
48. If \(x \leq-4\), then \(-3 x\) \(\qquad\) 12. 49. If \(2 x>6\), then \(x\) \(\qquad\) 3.
50. If \(3 x \leq 12\), then \(x\) \(\qquad\) 4.
51. If \(-\frac{1}{2} x \leq 3\), then \(x\) \(\qquad\) -6. 52. If \(-\frac{1}{4} x>1\), then \(x\) \(\qquad\) \(-4\).

In Problems 53-88, solve each inequality. Express your answer using set notation or interval notation. Graph the solution set.
53. \(x+1<5\)
54. \(x-6<1\)
55. \(1-2 x \leq 3\)
56. \(2-3 x \leq 5\)
57. \(3 x-7>2\)
58. \(2 x+5>1\)
59. \(3 x-1 \geq 3+x\)
60. \(2 x-2 \geq 3+x\)
61. \(-2(x+3)<8\)
62. \(-3(1-x)<12\)
63. \(4-3(1-x) \leq 3\)
64. \(8-4(2-x) \leq-2 x\)
65. \(\frac{1}{2}(x-4)>x+8\)
66. \(3 x+4>\frac{1}{3}(x-2)\)
67. \(\frac{x}{2} \geq 1-\frac{x}{4}\)
68. \(\frac{x}{3} \geq 2+\frac{x}{6}\)
69. \(0 \leq 2 x-6 \leq 4\)
70. \(4 \leq 2 x+2 \leq 10\)
71. \(-5 \leq 4-3 x \leq 2\)
72. \(-3 \leq 3-2 x \leq 9\)
73. \(-3<\frac{2 x-1}{4}<0\)
74. \(0<\frac{3 x+2}{2}<4\)
75. \(1<1-\frac{1}{2} x<4\)
76. \(0<1-\frac{1}{3} x<1\)
77. \((x+2)(x-3)>(x-1)(x+1)\)
78. \((x-1)(x+1)>(x-3)(x+4)\)
79. \(x(4 x+3) \leq(2 x+1)^{2}\)
80. \(x(9 x-5) \leq(3 x-1)^{2}\)
81. \(\frac{1}{2} \leq \frac{x+1}{3}<\frac{3}{4}\)
82. \(\frac{1}{3}<\frac{x+1}{2} \leq \frac{2}{3}\)
83. \((4 x+2)^{-1}<0\)
84. \((2 x-1)^{-1}>0\)
85. \(0<\frac{2}{x}<\frac{3}{5}\)
86. \(0<\frac{4}{x}<\frac{2}{3}\)
87. \(0<(2 x-4)^{-1}<\frac{1}{2}\)
88. \(0<(3 x+6)^{-1}<\frac{1}{3}\)

\section*{Applications and Extensions}
89. What is the domain of the variable in the expression \(\sqrt{3 x+6}\) ?
90. What is the domain of the variable in the expression \(\sqrt{8+2 x}\) ?
91. A young adult may be defined as someone older than 21 and less than 30 years of age. Express this statement using inequalities.
92. Middle-aged may be defined as being 40 or more and less than 60.Express this statement using inequalities.
93. Life Expectancy According to the National Center for Health Statistics, an average 30 -year-old male in 2008 could expect to live at least 47.3 more years, and an average 30 -year-old female in 2008 could expect to live at least 51.6 more years.
(a) To what age could an average 30 -year-old male expect to live? Express your answer as an inequality.
(b) To what age could an average 30-year-old female expect to live? Express your answer as an inequality.
(c) Who could expect to live longer, a male or a female? By how many years?
Source: National Vital Statistics Reports, Vol. 61, No. 3, September 2012.

94. General Chemistry For a certain ideal gas, the volume \(V\) (in cubic centimeters) equals 20 times the temperature \(T\) (in degrees Celsius). If the temperature varies from \(80^{\circ}\) to \(120^{\circ} \mathrm{C}\), inclusive, what is the corresponding range of the volume of the gas?
95. Real Estate A real estate agent agrees to sell an apartment complex according to the following commission schedule: \(\$ 45,000\) plus \(25 \%\) of the selling price in excess of \(\$ 900,000\). Assuming that the complex will sell at some price between \(\$ 900,000\) and \(\$ 1,100,000\), inclusive, over what range does the agent's commission vary? How does the commission vary as a percent of the selling price?
96. Sales Commission A used-car salesperson is paid a commission of \(\$ 25\) plus \(40 \%\) of the selling price in excess of owner's cost. The owner claims that used cars typically sell for at least owner's cost plus \(\$ 200\) and at most owner's cost plus \(\$ 3000\). For each sale made, over what range can the salesperson expect the commission to vary?
97. Federal Tax Withholding The percentage method of withholding for federal income tax (2013) states that a single person whose weekly wages, after subtracting withholding allowances, are over \(\$ 739\), but not over \(\$ 1732\), shall have \(\$ 95.95\) plus \(25 \%\) of the excess over \(\$ 739\) withheld. Over
what range does the amount withheld vary if the weekly wages vary from \(\$ 800\) to \(\$ 1000\), inclusive?
Source: Employer's Tax Guide. Department of the Treasury, Internal Revenue Service, Publication 2013.
98. Exercising Sue wants to lose weight. For healthy weight loss, the American College of Sports Medicine (ACSM) recommends 200 to 300 minutes of exercise per week. For the first six days of the week, Sue exercised \(40,45,0,50\), 25 , and 35 minutes. How long should Sue exercise on the seventh day in order to stay within the ACSM guidelines?
99. Electricity Rates Commonwealth Edison Company's charge for electricity in January 2013 is \(10.62 \phi\) per kilowatt-hour. In addition, each monthly bill contains a customer charge of \(\$ 13.04\). If last year's bills ranged from a low of \(\$ 82.07\) to a high of \(\$ 278.54\), over what range did usage vary (in kilowatthours)?
Source: Commonwealth Edison Co., January 2013.
100. Water Bills The Village of Oak Lawn charges homeowners \(\$ 52.74\) per quarter-year, plus \(\$ 5.37\) per 1000 gallons for water usage in excess of 10,000 gallons. In 2013 one homeowner's quarterly bill ranged from a high of \(\$ 165.51\) to a low of \(\$ 101.07\). Over what range did water usage vary?
Source: Village of Oak Lawn, Illinois, January 2013.
101. Markup of a New Car The markup over dealer's cost of a new car ranges from \(12 \%\) to \(18 \%\). If the sticker price is \(\$ 18,000\), over what range will the dealer's cost vary?
102. IQ Tests A standard intelligence test has an average score of 100 . According to statistical theory, of the people who take the test, the \(2.5 \%\) with the highest scores will have scores of more than \(1.96 \sigma\) above the average, where \(\sigma\) (sigma, a number called the standard deviation) depends on the nature of the test. If \(\sigma=12\) for this test and there is (in principle) no upper limit to the score possible on the test, write the interval of possible test scores of the people in the top \(2.5 \%\).
103. Computing Grades In your Economics 101 class, you have scores of \(68,82,87\), and 89 on the first four of five tests. To get a grade of \(B\), the average of the first five test scores must be greater than or equal to 80 and less than 90 .
(a) Solve an inequality to find the range of the score that you need on the last test to get a B.
(b) What score do you need if the fifth test counts double?

104. "Light" Foods For food products to be labeled "light," the U.S. Food and Drug Administration requires that the altered product must either contain at least one-third calories of the regular product or contain at least one-half less fat than the regular product. If a serving of Miracle Whip \({ }^{\circledR}\) Light contains 20 calories and 1.5 grams of fat, then what must be true about either the number of calories or the grams of fat in a serving of regular Miracle Whip®?
105. Arithmetic Mean If \(a<b\), show that \(a<\frac{a+b}{2}<b\). The number \(\frac{a+b}{2}\) is called the arithmetic mean of \(a\) and \(b\).
106. Refer to Problem 105. Show that the arithmetic mean of \(a\) and \(b\) is equidistant from \(a\) and \(b\).
107. Geometric Mean If \(0<a<b\), show that \(a<\sqrt{a b}<b\). The number \(\sqrt{a b}\) is called the geometric mean of \(a\) and \(b\).
108. Refer to Problems 105 and 107. Show that the geometric mean of \(a\) and \(b\) is less than the arithmetic mean of \(a\) and \(b\).
109. Harmonic Mean For \(0<a<b\), let \(h\) be defined by
\[
\frac{1}{h}=\frac{1}{2}\left(\frac{1}{a}+\frac{1}{b}\right)
\]

Show that \(a<h<b\). The number \(h\) is called the harmonic mean of \(a\) and \(b\).
110. Refer to Problems 105,107 , and 109. Show that the harmonic mean of \(a\) and \(b\) equals the geometric mean squared divided by the arithmetic mean.
111. Another Reciprocal Property Prove that if \(0<a<b\), then \(0<\frac{1}{b}<\frac{1}{a}\).

\section*{Discussion and Writing}
112. Make up an inequality that has no solution. Make up one that has exactly one solution.
113. The inequality \(x^{2}+1<-5\) has no real solution. Explain why.
114. Do you prefer to use inequality notation or interval notation to express the solution to an inequality? Give your reasons. Are there particular circumstances when you prefer one to the other? Cite examples.
115. How would you explain to a fellow student the underlying reason for the multiplication properties for inequalities (page A83)? That is, the sense (direction) of an inequality remains the same if each side is multiplied by a positive real number, whereas the direction is reversed if each side is multiplied by a negative real number.

\section*{'Are You Prepared?' Answers}
1. \(\xrightarrow[-4]{\stackrel{+}{+}}\)

\section*{A. 11 Complex Numbers}

PREPARING FOR THIS SECTION Before getting started, review the following:
- Classification of Numbers (Appendix A, Section A.1, p. A3)
- Rationalizing Denominators (Appendix A, Section A.7, pp. A57-A58)

Now Work the 'Are You Prepared?' problems on page A94.
OBJECTIVE 1 Add, Subtract, Multiply, and Divide Complex Numbers (p. A90)

\section*{Complex Numbers}

One property of a real number is that its square is nonnegative (greater than or equal to 0 ). For example, there is no real number \(x\) for which
\[
x^{2}=-1
\]

The introduction of the imaginary unit will remedy this situation.

The imaginary unit, denoted by \(i\), is the number whose square is -1 ; that is,
\[
i^{2}=-1
\]

This should not be a surprise. If our universe were to consist only of integers, there would be no number \(x\) for which \(2 x=1\). This unfortunate circumstance was remedied by introducing numbers such as \(\frac{1}{2}\) and \(\frac{2}{3}\), the rational numbers. If our universe were to consist only of rational numbers, there would be no \(x\) whose square
equals 2 . That is, there would be no number \(x\) for which \(x^{2}=2\). To remedy this, mathematicians introduced numbers such as \(\sqrt{2}\) and \(\sqrt[3]{5}\), the irrational numbers. Recall that the real numbers consist of the rational numbers and the irrational numbers. Now, if our universe were to consist only of real numbers, there would be no number \(x\) whose square is -1 . To remedy this, mathematicians introduced a number \(i\), whose square is -1 .

In the progression outlined, each time that a situation was encountered that was unsuitable, a new number system was introduced to remedy the situation. And each new number system contained the earlier number system as a subset. The number system that results from introducing the number \(i\) is called the complex number system.

Complex numbers are numbers of the form \(\boldsymbol{a}+\boldsymbol{b} \boldsymbol{i}\), where \(a\) and \(b\) are real numbers. The real number \(a\) is called the real part of the number \(a+b i\); the real number \(b\) is called the imaginary part of \(a+b i\).

For example, the complex number \(-5+6 i\) has the real part -5 and the imaginary part 6.

When a complex number is written in the form \(a+b i\), where \(a\) and \(b\) are real numbers, it is in standard form. However, if the imaginary part of a complex number is negative, such as in the complex number \(3+(-2) i\), then it is written in the form \(3-2 i\) instead.

Also, the complex number \(a+0 i\) is usually written simply as \(a\). This serves to remind us that the real numbers are a subset of the complex numbers. The complex number \(0+b i\) is usually written as \(b i\). Sometimes the complex number \(b i\) is called a pure imaginary number.

\section*{1 Add, Subtract, Multiply, and Divide Complex Numbers}

Equality, addition, subtraction, and multiplication of complex numbers are defined so as to preserve the familiar rules of algebra for real numbers. Thus, two complex numbers are equal if and only if their real parts are equal and their imaginary parts are equal.

\section*{Equality of Complex Numbers}
\[
\begin{equation*}
a+b i=c+d i \quad \text { if and only if } \quad a=c \text { and } b=d \tag{1}
\end{equation*}
\]

Two complex numbers are added by forming the complex number whose real part is the sum of the real parts and whose imaginary part is the sum of the imaginary parts.

\section*{Sum of Complex Numbers}
\[
\begin{equation*}
(a+b i)+(c+d i)=(a+c)+(b+d) i \tag{2}
\end{equation*}
\]

To subtract two complex numbers, use this rule:
Difference of Complex Numbers
\[
\begin{equation*}
(a+b i)-(c+d i)=(a-c)+(b-d) i \tag{3}
\end{equation*}
\]

\section*{EXAMPLE I Adding and Subtracting Complex Numbers}
(a) \((3+5 i)+(-2+3 i)=[3+(-2)]+(5+3) i=1+8 i\)
(b) \((6+4 i)-(3+6 i)=(6-3)+(4-6) i=3+(-2) i=3-2 i\)
```

Now Work problem 13

```

Products of complex numbers are calculated as illustrated in Example 2.

\section*{EXAMPLE 2 Multiplying Complex Numbers}
\[
\begin{aligned}
(5+3 i) \cdot(2+7 i) & =5(2+7 i)+3 i(2+7 i) & & \text { Distributive Property } \\
& =10+35 i+6 i+21 i^{2} & & \text { Distributive Property } \\
& =10+41 i+21(-1) & & i^{2}=-1 \\
& =-11+41 i & &
\end{aligned}
\]

Based on the procedure of Example 2, the product of two complex numbers is defined by the following formula:

\section*{Product of Complex Numbers}
\[
\begin{equation*}
(a+b i) \cdot(c+d i)=(a c-b d)+(a d+b c) i \tag{4}
\end{equation*}
\]

Do not bother to memorize formula (4). Instead, whenever it is necessary to multiply two complex numbers, follow the usual rules for multiplying two binomials, as in Example 2, remembering that \(i^{2}=-1\). For example,
\[
\begin{aligned}
(2 i)(2 i) & =4 i^{2}=-4 \\
(2+i)(1-i) & =2-2 i+i-i^{2}=3-i
\end{aligned}
\]

\section*{am Now Work problem 19}

Algebraic properties for addition and multiplication, such as the Commutative, Associative, and Distributive Properties, hold for complex numbers. However, the property that every nonzero complex number has a multiplicative inverse, or reciprocal, requires a closer look.

\section*{Conjugates}

DEFINITION
If \(z=a+b i\) is a complex number, then its conjugate, denoted by \(\bar{z}\), is defined as
\[
\bar{z}=\overline{a+b i}=a-b i
\]

For example, \(\overline{2+3 i}=2-3 i\) and \(\overline{-6-2 i}=-6+2 i\).

\section*{EXAMPLE 3 Multiplying a Complex Number by Its Conjugate}

Find the product of the complex number \(z=3+4 i\) and its conjugate \(\bar{z}\).
Solution Since \(\bar{z}=3-4 i\),
\[
z \bar{z}=(3+4 i)(3-4 i)=9-12 i+12 i-16 i^{2}=9+16=25
\]

The result obtained in Example 3 has an important generalization.

THEOREM
The product of a complex number and its conjugate is a nonnegative real number. That is, if \(z=a+b i\), then
\[
z \bar{z}=a^{2}+b^{2}
\]

Proof If \(z=a+b i\), then
\[
z \bar{z}=(a+b i)(a-b i)=a^{2}-a b i+a b i-(b i)^{2}=a^{2}-b^{2} i^{2}=a^{2}+b^{2}
\]

To express the reciprocal of a nonzero complex number \(z\) in standard form, multiply the numerator and denominator of \(\frac{1}{z}\) by its conjugate \(\bar{z}\). That is, if \(z=a+b i\) is a nonzero complex number, then
\[
\frac{1}{a+b i}=\frac{1}{z}=\frac{1}{z} \cdot \frac{\bar{z}}{\bar{z}}=\frac{\bar{z}}{z \bar{z}}=\frac{a-b i}{a^{2}+b^{2}}=\frac{a}{a^{2}+b^{2}}-\frac{b}{a^{2}+b^{2}} i
\]

Use (5).

\section*{EXAMPLE 4 Writing the Reciprocal of a Complex Number in Standard Form} Write \(\frac{1}{3+4 i}\) in standard form \(a+b i\); that is, find the reciprocal of \(3+4 i\).
Solution Multiply the numerator and denominator of \(\frac{1}{3+4 i}\) by the conjugate of \(3+4 i\), the complex number \(3-4 i\). The result is
\[
\frac{1}{3+4 i}=\frac{1}{3+4 i} \cdot \frac{3-4 i}{3-4 i}=\frac{3-4 i}{9+16}=\frac{3}{25}-\frac{4}{25} i
\]

To express the quotient of two complex numbers in standard form, multiply the numerator and denominator of the quotient by the conjugate of the denominator.

\section*{EXAMPLE 5 Writing the Quotient of Complex Numbers in Standard Form}

Write each of the following in standard form.
(a) \(\frac{1+4 i}{5-12 i}\)
(b) \(\frac{2-3 i}{4-3 i}\)

Solution
(a) \(\frac{1+4 i}{5-12 i}=\frac{1+4 i}{5-12 i} \cdot \frac{5+12 i}{5+12 i}=\frac{5+12 i+20 i+48 i^{2}}{25+144}\)
\[
=\frac{-43+32 i}{169}=-\frac{43}{169}+\frac{32}{169} i
\]
(b) \(\frac{2-3 i}{4-3 i}=\frac{2-3 i}{4-3 i} \cdot \frac{4+3 i}{4+3 i}=\frac{8+6 i-12 i-9 i^{2}}{16+9}=\frac{17-6 i}{25}=\frac{17}{25}-\frac{6}{25} i\)
-Now Work problem 27

\section*{EXAMPLE 6}

\section*{Writing Other Expressions in Standard Form}

If \(z=2-3 i\) and \(w=5+2 i\), write each of the following expressions in standard form.
(a) \(\frac{z}{w}\)
(b) \(\overline{z+w}\)
(c) \(z+\bar{z}\)

Solution
(a) \(\frac{z}{w}=\frac{z \cdot \bar{w}}{w \cdot \bar{w}}=\frac{(2-3 i)(5-2 i)}{(5+2 i)(5-2 i)}=\frac{10-4 i-15 i+6 i^{2}}{25+4}\)
\[
=\frac{4-19 i}{29}=\frac{4}{29}-\frac{19}{29} i
\]
(b) \(\overline{z+w}=\overline{(2-3 i)+(5+2 i)}=\overline{7-i}=7+i\)
(c) \(z+\bar{z}=(2-3 i)+(2+3 i)=4\)

The conjugate of a complex number has certain general properties that will be useful later.

For a real number \(a=a+0 i\), the conjugate is \(\bar{a}=\overline{a+0 i}=a-0 i=a\).

THEOREM The conjugate of a real number is the real number itself.
Other properties that are direct consequences of the definition of the conjugate are given next. In each statement, \(z\) and \(w\) represent complex numbers.

THEOREM
The conjugate of the conjugate of a complex number is the complex number itself.
\[
\overline{\bar{z}}=z
\]

The conjugate of the sum of two complex numbers equals the sum of their conjugates.
\[
\overline{z+w}=\bar{z}+\bar{w}
\]

The conjugate of the product of two complex numbers equals the product of their conjugates.
\[
\overline{z \cdot w}=\bar{z} \cdot \bar{w}
\]

The proofs of equations (6), (7), and (8) are left as exercises. See Problems 60-62.

\section*{Powers of \(\boldsymbol{i}\)}

The powers of \(i\) follow a pattern that is useful to know.
\[
\begin{array}{ll}
i^{1}=i & i^{5}=i^{4} \cdot i=1 \cdot i=i \\
i^{2}=-1 & i^{6}=i^{4} \cdot i^{2}=-1 \\
i^{3}=i^{2} \cdot i=-i & i^{7}=i^{4} \cdot i^{3}=-i \\
i^{4}=i^{2} \cdot i^{2}=(-1)(-1)=1 & i^{8}=i^{4} \cdot i^{4}=1
\end{array}
\]

And so on. The powers of \(i\) repeat with every fourth power.

\section*{EXAMPLE 7 Evaluating Powers of \(\boldsymbol{i}\)}
(a) \(i^{27}=i^{24} \cdot i^{3}=\left(i^{4}\right)^{6} \cdot i^{3}=1^{6} \cdot i^{3}=-i\)
(b) \(i^{101}=i^{100} \cdot i^{1}=\left(i^{4}\right)^{25} \cdot i=1^{25} \cdot i=i\)

\section*{EXAMPLE 8 Writing the Power of a Complex Number in Standard Form}

Write \((2+i)^{3}\) in standard form.
Solution Use the special product formula for \((a+b)^{3}\).
\[
(a+b)^{3}=a^{3}+3 a^{2} b+3 a b^{2}+b^{3}
\]

Using this special product formula,

NOTE: If you did not remember the special product formula for \((a+b)^{3}\), you could find \((2+i)^{3}\) by simplifying \((2+i)^{2}\) \((2+i)\).
\[
\begin{aligned}
(2+i)^{3} & =2^{3}+3 \cdot 2^{2} \cdot i+3 \cdot 2 \cdot i^{2}+i^{3} \\
& =8+6(-1)+12 i+(-i) \\
& =2+11 i
\end{aligned}
\]

\section*{Square Roots of Negative Numbers}

Because \(i^{2}=-1\), the square root of a negative number can be defined.

\section*{DEFINITION}

If \(N\) is a positive real number, then the principal square root of \(\boldsymbol{- N}\), denoted by \(\sqrt{-N}\), is
\[
\sqrt{-N}=\sqrt{N i}
\]
where \(i\) is the imaginary unit and \(i^{2}=-1\).

\section*{EXAMPLE 9 Evaluating the Square Root of a Negative Number}
(a) \(\sqrt{-1}=\sqrt{1} i=i\)
(b) \(\sqrt{-16}=\sqrt{16} i=4 i\)
(c) \(\sqrt{-8}=\sqrt{8} i=2 \sqrt{2} i\)

\section*{A. 11 Assess Your Understanding}
'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.
1. Name the integers and the rational numbers in the set \(\left\{-3,0, \sqrt{2}, \frac{6}{5}, \pi\right\} .(\) p. A3)
3. Rationalize the denominator of \(\frac{3}{2+\sqrt{3}}\). (pp. A57-A58)
2. True or False Rational numbers and irrational numbers are in the set of real numbers. (p. A3)

\section*{Concepts and Vocabulary}
4. In the complex number \(5+2 i\), the number 5 is called the part; the number 2 is called the \(\qquad\) part; the number \(i\) is called the \(\qquad\) .
5. \(i^{2}=\) \(\qquad\) \(; i^{3}=\) \(\qquad\) \(; i^{4}=\) \(\qquad\)
6. True or False The conjugate of \(2+5 i\) is \(-2-5 i\).
7. True or False All real numbers are complex numbers.
8. True or False The product of a complex number and its conjugate is a nonnegative real number.

\section*{Skill Building}

In Problems 9-46, write each expression in the standard form \(a+b i\).
9. \((2-3 i)+(6+8 i)\)
10. \((4+5 i)+(-8+2 i)\)
11. \((-3+2 i)-(4-4 i)\)
12. \((3-4 i)-(-3-4 i)\)
13. \((2-5 i)-(8+6 i)\)
14. \((-8+4 i)-(2-2 i)\)
15. \(3(2-6 i)\)
16. \(-4(2+8 i)\)
17. \(2 i(2-3 i)\)
18. \(3 i(-3+4 i)\)
19. \((3-4 i)(2+i)\)
20. \((5+3 i)(2-i)\)
21. \((-6+i)(-6-i)\)
22. \((-3+i)(3+i)\)
23. \(\frac{10}{3-4 i}\)
24. \(\frac{13}{5-12 i}\)
25. \(\frac{2+i}{i}\)
26. \(\frac{2-i}{-2 i}\)
27. \(\frac{6-i}{1+i}\)
28. \(\frac{2+3 i}{1-i}\)
29. \(\left(\frac{1}{2}+\frac{\sqrt{3}}{2} i\right)^{2}\)
30. \(\left(\frac{\sqrt{3}}{2}-\frac{1}{2} i\right)^{2}\)
31. \((1+i)^{2}\)
32. \((1-i)^{2}\)
33. \(i^{23}\)
34. \(i^{14}\)
35. \(i^{-15}\)
36. \(i^{-23}\)
37. \(i^{6}-5\)
38. \(4+i^{3}\)
39. \(6 i^{3}-4 i^{5}\)
40. \(4 i^{3}-2 i^{2}+1\)
41. \((1+i)^{3}\)
42. \((3 i)^{4}+1\)
43. \(i^{7}\left(1+i^{2}\right)\)
44. \(2 i^{4}\left(1+i^{2}\right)\)
45. \(i^{6}+i^{4}+i^{2}+1\)
46. \(i^{7}+i^{5}+i^{3}+i\)

In Problems 47-52, perform the indicated operations and express your answer in the standard form a \(+b i\).
47. \(\sqrt{-4}\)
48. \(\sqrt{-9}\)
49. \(\sqrt{-25}\)
50. \(\sqrt{-64}\)
51. \(\sqrt{(3+4 i)(4 i-3)}\)
52. \(\sqrt{(4+3 i)(3 i-4)}\)

\section*{Applications and Extensions}

In Problems 53-56, \(z=3-4 i\) and \(w=8+3 i\). Write each expression in the standard form \(a+b i\).
53. \(z+\bar{z}\)
54. \(w-\bar{w}\)
55. \(z \bar{z}\)
56. \(\overline{z-w}\)
57. Electrical Circuits The impedance \(Z\), in ohms, of a circuit element is defined as the ratio of the phasor voltage \(V\), in volts, across the element to the phasor current \(I\), in amperes, through the elements. That is, \(Z=\frac{V}{I}\). If the voltage across a circuit element is \(18+i\) volts and the current through the element is \(3-4 i\) amperes, determine the impedance.
58. Parallel Circuits In an ac circuit with two parallel pathways, the total impedance \(Z\), in ohms, satisfies the formula \(\frac{1}{Z}=\frac{1}{Z_{1}}+\frac{1}{Z_{2}}\), where \(Z_{1}\) is the impedance of the first
pathway and \(Z_{2}\) is the impedance of the second pathway. Determine the total impedance if the impedances of the two pathways are \(Z_{1}=2+i\) ohms and \(Z_{2}=4-3 i\) ohms.
59. Use \(z=a+b i\) to show that \(z+\bar{z}=2 a\) and that \(z-\bar{z}=2 b i\).
60. Use \(z=a+b i\) to show that \(\overline{\bar{z}}=z\).
61. Use \(z=a+b i\) and \(w=c+d i\) to show that \(\overline{z+w}=\bar{z}+\bar{w}\).
62. Use \(z=a+b i\) and \(w=c+d i\) to show that \(\overline{z \cdot w}=\bar{z} \cdot \bar{w}\).

\section*{Discussion and Writing}
63. Explain to a friend how you would add two complex numbers and how you would multiply two complex numbers. Explain any differences between the two explanations.
64. Write a brief paragraph that compares the method used to rationalize denominators and the method used to write the quotient of two complex numbers in standard form.
65. Use an Internet search engine to investigate the origins of complex numbers. Write a paragraph describing what you find, and present it to the class.
66. Explain how the method of multiplying two complex numbers is related to multiplying two binomials.
67. What Went Wrong? A student multiplied \(\sqrt{-9}\) and \(\sqrt{-9}\) as follows:
\[
\begin{aligned}
\sqrt{-9} \cdot \sqrt{-9} & =\sqrt{(-9)(-9)} \\
& =\sqrt{81} \\
& =9
\end{aligned}
\]

The instructor marked the problem incorrect. Why?

\section*{'Are You Prepared?’ Answers}
1. Integers: \(\{-3,0\}\); rational numbers: \(\left\{-3,0, \frac{6}{5}\right\}\)
2. True
3. \(3(2-\sqrt{3})\)

\section*{B. 9 Using a Graphing Utility to Graph Parametric Equations}

\section*{B. 1 The Viewing Rectangle}

Figure 1
\(y=2 x\)

Figure 2

All graphing utilities - that is, all graphing calculators and all computer software graphing packages - graph equations by plotting points on a screen. The screen itself actually consists of small rectangles called pixels. The more pixels the screen has, the better the resolution. Most graphing calculators have 2048 pixels per square inch; most computer screens have 4096 to 8192 pixels per square inch. When a point to be plotted lies inside a pixel, the pixel is turned on (lights up). The graph of an equation is a collection of pixels. Figure 1 shows how the graph of \(y=2 x\) looks on a TI-84 Plus graphing calculator.

The screen of a graphing utility will display the coordinate axes of a rectangular coordinate system. However, the scale must be set on each axis. The smallest and largest values of \(x\) and \(y\) to be included in the graph must also be set. This is called setting the viewing rectangle or viewing window. Figure 2 illustrates a typical viewing window.

To select the viewing window, values must be given to the following expressions:
\(X \min : \quad\) the smallest value of \(x\)
\(X\) max: \(\quad\) the largest value of \(x\)
\(X\) scl: \(\quad\) the number of units per tick mark on the \(x\)-axis
\(Y \min : \quad\) the smallest value of \(y\)
\(Y\) max: the largest value of \(y\)
\(Y \mathrm{scl}: \quad\) the number of units per tick mark on the \(y\)-axis
Figure 3 illustrates these settings and their relation to the Cartesian coordinate system.

Figure 3

If the scale used on each axis is known, the minimum and maximum values of \(x\) and \(y\) shown on the screen can be determined by counting the tick marks. Look again at Figure 2 on the previous page. For a scale of 1 on each axis, the minimum and maximum values of \(x\) are -10 and 10 , respectively, the minimum and maximum values of \(y\) are also -10 and 10 . If the scale is 2 on each axis, then the minimum and maximum values of \(x\) are -20 and 20, respectively, and the minimum and maximum values of \(y\) are -20 and 20 , respectively.

Conversely, if the minimum and maximum values of \(x\) and \(y\) are known, then the scales can be found by counting the tick marks displayed. This text follows the practice of showing the minimum and maximum values of \(x\) and \(y\) in illustrations so that the reader will know how the viewing window was set. See Figure 4.

Figure 4

\[
\begin{array}{rlrl}
X \min & =-3 & Y \min & =-4 \\
X \max & =3 & Y \max & =4 \\
X \text { scl } & =1 & Y \text { scl } & =2
\end{array}
\]

\section*{EXAMPLE I}

Figure 5

\section*{Finding the Coordinates of a Point Shown} on a Graphing Utility Screen
Find the coordinates of the point shown in Figure 5. Assume that the coordinates are integers.
Solution First note that the viewing window used in Figure 5 is
\[
\begin{array}{rlrl}
X \min & =-3 & Y \min & =-4 \\
X \max & =3 & Y \max & =4 \\
X \mathrm{scl} & =1 & Y \mathrm{scl} & =2
\end{array}
\]

The point shown is 2 tick units to the left on the horizontal axis (scale \(=1\) ) and 1 tick unit up on the vertical axis \((\) scale \(=2)\). The coordinates of the point shown are \((-2,2)\).

\section*{B. 1 Exercises}

12. \((5,0),(6,8),(-2,-3)\)
13. \((40,20),(-20,-80),(10,40)\)
14. \((-80,60),(20,-30),(-20,-40)\)
15. \((0,0),(100,5),(5,150)\)
16. \((0,-1),(100,50),(-10,30)\)

\section*{B. 2 Using a Graphing Utility to Graph Equations}

From Examples 2 and 3 in Foundations, Section 2, recall that a graph can be obtained by plotting points in a rectangular coordinate system and connecting them. Graphing utilities perform these same steps when graphing an equation. For example, the TI-84 Plus determines 95 evenly spaced input values,* starting at \(X \mathrm{~min}\) and ending at \(X \mathrm{max}\), uses the equation to determine the output values, plots these points on the screen, and finally (if in the connected mode) draws a line between consecutive points.

To graph an equation in two variables \(x\) and \(y\) using a graphing utility requires that the equation be written in the form \(y=\{\) expression in \(x\}\). If the original equation is not in this form, replace it by equivalent equations until the form \(y=\{\) expression in \(x\}\) is obtained.

\section*{Steps for Graphing an Equation Using a Graphing Utility}

STEP 1: Solve the equation for \(y\) in terms of \(x\).
STEP 2: Get into the graphing mode of the graphing utility. The screen will usually display \(Y_{1}=\), prompting the user to enter the expression involving \(x\) that was found in Step 1. (Consult your manual for the correct way to enter the expression. For example, \(y=x^{2}\) might be entered as \(x^{\wedge} 2\) or as \(x^{*} x\) or as \(x x^{Y} 2\) ).
Ster 3: Select the viewing window. Without prior knowledge about the behavior of the graph of the equation, it is common to select the standard viewing window** initially. The viewing window is then adjusted based on the graph that appears. In this text the standard viewing window is
\[
\begin{array}{rlrl}
X \min & =-10 & Y \min & =-10 \\
X \max & =10 & Y \max & =10 \\
X \mathrm{scl} & =1 & Y \mathrm{scl} & =1
\end{array}
\]

STEP 4: Graph.
STEP 5: Adjust the viewing window until a complete graph is obtained.

\footnotetext{
*These input values depend on the values of \(X \min\) and \(X \max\). For example, if \(X \min =-10\) and \(X \max =10\), then the first input value will be -10 and the next input value will be \(-10+\frac{10-(-10)}{94}=-9.7872\), and so on.
**Some graphing utilities have a ZOOM-STANDARD feature that automatically sets the viewing window to the standard viewing window and graphs the equation.
}

\section*{EXAMPLE I Graphing an Equation on a Graphing Utility}

Graph the equation: \(6 x^{2}+3 y=36\)

\section*{Solution}

Figure 8

\section*{EXAMPLE 2}

STEP 1: Solve for \(y\) in terms of \(x\).
\[
\begin{aligned}
6 x^{2}+3 y & =36 \\
3 y & =-6 x^{2}+36 \quad \text { subtract } 6 x^{2} \text { from both sides of the equation. } \\
y & =-2 x^{2}+12 \quad \text { Divide both sides of the equation by } 3 \text { and simplify. }
\end{aligned}
\]

STEP 2: From the \(Y_{1}=\) screen, enter the expression \(-2 x^{2}+12\) after the prompt.
Step 3: Set the viewing window to the standard viewing window.
Step 4: Graph. The screen should look like Figure 6.
Step 5: The graph of \(y=-2 x^{2}+12\) is not complete. The value of \(Y\) max must be increased so that the top portion of the graph is visible. Increasing the value of \(Y\) max to 12 gives the graph in Figure 7. The graph is now complete.

Figure 6

Figure 7

Look again at Figure 7. Although a complete graph is shown, the graph might be improved by adjusting the values of \(X \min\) and \(X \mathrm{max}\). Figure 8 shows the graph of \(y=-2 x^{2}+12\) using \(X \min =-4\) and \(X \max =4\). Do you think this is a better choice for the viewing window?

\section*{Creating a Table and Graphing an Equation}

Create a table and graph the equation: \(y=x^{3}\)
Solution Most graphing utilities have the capability of creating a table of values for an equation. (Check your manual to see if your graphing utility has this capability.) Table 1 illustrates a table of values for \(y=x^{3}\) on a TI-84 Plus. See Figure 9 for the graph.

Table 1

Figure 9

\section*{B. 2 Exercises}

In Problems 1-16, graph each equation using the following viewing windows:
(a) \(X \min =-5\)
\(X \max =5\)
(b) \(X \min =-10\)
\(X \mathrm{scl}=1\)
\(X \max =10\)
\(Y \min =-4\)
\(X \mathrm{scl}=2\)
\(Y \max =4\)
\(Y\) min \(=-8\)
\(Y \mathrm{scl}=1\)
\(Y\) max \(=8\)
1. \(y=x+2\)
2. \(y=x-2\)
3. \(y=-x+2\)
4. \(y=-x-2\)
5. \(y=2 x+2\)
6. \(y=2 x-2\)
7. \(y=-2 x+2\)
8. \(y=-2 x-2\)
9. \(y=x^{2}+2\)
10. \(y=x^{2}-2\)
11. \(y=-x^{2}+2\)
12. \(y=-x^{2}-2\)
13. \(3 x+2 y=6\)
14. \(3 x-2 y=6\)
15. \(-3 x+2 y=6\)
16. \(-3 x-2 y=6\)

17-32. For each of the above equations, create a table, \(-3 \leq x \leq 3\), and list points on the graph.

\section*{B. 3 Using a Graphing Utility to Locate Intercepts and Check for Symmetry}

\section*{Value and Zero (or Root)}

Most graphing utilities have an eVALUEate feature that, given a value of \(x\), determines the value of \(y\) for an equation. This feature can be used to evaluate an equation at \(x=0\) to determine the \(y\)-intercept. Most graphing utilities also have a ZERO (or ROOT) feature that can be used to determine the \(x\)-intercept(s) of an equation.

\section*{EXAMPLE I Finding Intercepts Using a Graphing Utility}

Use a graphing utility to find the intercepts of the equation \(y=x^{3}-8\).
Solution Figure 10(a) shows the graph of \(y=x^{3}-8\).
Figure 10

(a)

(b)

(c)

The eVALUEate feature of a TI-84 Plus graphing calculator accepts as input a value of \(x\) and determines the value of \(y\). If we let \(x=0\), we find that the \(y\)-intercept is -8 . See Figure 10(b).

The ZERO feature of a TI-84 Plus is used to find the \(x\)-intercept(s). See Figure 10(c). The \(x\)-intercept is 2 .

\section*{EXAMPLE 2 Graphing the Equation \(y=\frac{1}{x}\)}

Graph the equation \(y=\frac{1}{x}\). Based on the graph, infer information about intercepts and symmetry.
Solution Figure 11 shows the graph. Infer from the graph that there are no intercepts. Also infer that symmetry with respect to the origin is a possibility. The TABLE feature on a graphing utility can provide further evidence of symmetry with respect to the origin. Using a TABLE, observe that for any ordered pair \((x, y)\), the ordered pair \((-x,-y)\) is also a point on the graph.
Figure 11

\section*{B. 3 Exercises}

In Problems 1-6, use ZERO (or ROOT) to approximate the smaller of the two \(x\)-intercepts of each equation. Express the answer rounded to two decimal places.
1. \(y=x^{2}+4 x+2\)
2. \(y=x^{2}+4 x-3\)
3. \(y=2 x^{2}+4 x+1\)
4. \(y=3 x^{2}+5 x+1\)
5. \(y=2 x^{2}-3 x-1\)
6. \(y=2 x^{2}-4 x-1\)

In Problems 7-12, use ZERO (or ROOT) to approximate the positive x-intercepts of each equation. Express each answer rounded to two decimal places.
7. \(y=x^{3}+3.2 x^{2}-16.83 x-5.31\)
8. \(y=x^{3}+3.2 x^{2}-7.25 x-6.3\)
9. \(y=x^{4}-1.4 x^{3}-33.71 x^{2}+23.94 x+292.41\)
10. \(y=x^{4}+1.2 x^{3}-7.46 x^{2}-4.692 x+15.2881\)
11. \(y=x^{3}+19.5 x^{2}-1021 x+1000.5\)
12. \(y=x^{3}+14.2 x^{2}-4.8 x-12.4\)

\section*{B. 4 Using a Graphing Utility to Solve Equations}

For many equations, there are no algebraic techniques that lead to a solution. For such equations, a graphing utility can often be used to investigate possible solutions. When a graphing utility is used to solve an equation, approximate solutions usually are obtained. Unless otherwise stated, this text follows the practice of giving approximate solutions rounded to two decimal places.

The ZERO (or ROOT) feature of a graphing utility can be used to find the solutions of an equation when one side of the equation is 0 . In using this feature to solve equations, make use of the fact that the \(x\)-intercepts (or zeros) of the graph of an equation are found by letting \(y=0\) and solving the equation for \(x\). Solving an equation for \(x\) when one side of the equation is 0 is equivalent to finding where the graph of the corresponding equation crosses or touches the \(x\)-axis.

\section*{EXAMPLE I Using ZERO (or ROOT) to Approximate Solutions of an Equation}

Find the solution(s) of the equation \(x^{2}-6 x+7=0\). Round answers to two decimal places.
Solution The solutions of the equation \(x^{2}-6 x+7=0\) are the same as the \(x\)-intercepts of the graph of \(Y_{1}=x^{2}-6 x+7\). Begin by graphing the equation. See Figure 12(a).

From the graph there appear to be two \(x\)-intercepts (solutions to the equation): one between 1 and 2, the other between 4 and 5 .

Figure 12

Using the ZERO (or ROOT) feature of the graphing utility, determine that the \(x\)-intercepts, and thus the solutions to the equation, are \(x=1.59\) and \(x=4.41\), rounded to two decimal places. See Figures 12(b) and (c).

A second method for solving equations using a graphing utility involves the INTERSECT feature of the graphing utility. This feature is used most effectively when one side of the equation is not 0 .

\section*{EXAMPLE 2 Using INTERSECT to Approximate Solutions of an Equation}

Find the solution(s) to the equation \(3(x-2)=5(x-1)\). Round answers to two decimal places.

Solution Begin by graphing each side of the equation as follows: graph \(Y_{1}=3(x-2)\) and \(Y_{2}=5(x-1)\). See Figure 13(a).

Figure 13

(a)

(b)

At the point of intersection of the graphs, the values of the \(y\)-coordinates are the same. Conclude that the \(x\)-coordinate of the point of intersection represents the solution to the equation. Do you see why? The INTERSECT feature on a graphing utility determines the point of intersection of the graphs. Using this feature, find that the graphs intersect at \((-0.5,-7.5)\). See Figure 13(b). The solution of the equation is therefore \(x=-0.5\).

\section*{SUMMARY}

Here are the steps to follow for approximating solutions of equations.
Steps for Approximating Solutions of Equations Using ZERO (or ROOT)
STEP 1: Write the equation in the form \(\{\) expression in \(x\}=0\).
STEP 2: Graph \(Y_{1}=\{\) expression in \(x\}\).
Be sure that the graph is complete. That is, be sure that all the intercepts are shown on the screen.
Step 3: Use ZERO (or ROOT) to determine each \(x\)-intercept of the graph.

\section*{Steps for Approximating Solutions of Equations Using INTERSECT}

STEP 1: Graph \(Y_{1}=\{\) expression in \(x\) on the left side of the equation \(\}\).
Graph \(Y_{2}=\{\) expression in \(x\) on the right side of the equation \(\}\).
STEP 2: Use INTERSECT to determine each \(x\)-coordinate of the point(s) of intersection, if any.
Be sure that the graphs are complete. That is, be sure that all the points of intersection are shown on the screen.

\section*{EXAMPLE 3}

\section*{Solving a Radical Equation}

Find the real solutions of the equation \(\sqrt[3]{2 x-4}-2=0\).
Solution Figure 14 shows the graph of the equation \(Y_{1}=\sqrt[3]{2 x-4}-2\). From the graph, note that one \(x\)-intercept is near 6 . Using ZERO (or ROOT), find that the \(x\)-intercept is 6 . The only solution is \(x=6\).

Figure 14

\section*{B. 5 Square Screens}

Figure 15

Most graphing utilities have a rectangular screen. Because of this, using the same settings for both \(x\) and \(y\) will result in a distorted view. For example, Figure 15 shows the graph of the line \(y=x\) connecting the points \((-4,-4)\) and \((4,4)\).

The line is expected to bisect the first and third quadrants, but it doesn't. The selections for \(X \min , X \max , Y \min\), and \(Y \max\) must be adjusted so that a square screen results. On most graphing utilities, this is accomplished by setting the ratio of \(x\) to \(y\) at \(3: 2\).* For example, if
\[
\begin{array}{ll}
X \min =-6 & Y \min =-4 \\
X \max =6 & Y \max =4
\end{array}
\]
then the ratio of \(x\) to \(y\) is
\[
\frac{X \max -X \min }{Y \max -Y \min }=\frac{6-(-6)}{4-(-4)}=\frac{12}{8}=\frac{3}{2}
\]
for a ratio of \(3: 2\), resulting in a square screen.

\section*{EXAMPLE I}

\section*{Examples of Viewing Rectangles That Result in Square Screens}

Figure 16

Figure 16 shows the graph of the line \(y=x\) on a square screen using the viewing rectangle given in part (b). Notice that the line now bisects the first and third quadrants. Compare this illustration to Figure 15.

\section*{B. 5 Exercises}
(b) \(X \min =-6\)
\(X \max =6\)
\(X \mathrm{scl}=1\)
\(Y \min =-4\)
\(Y \max =4\)
\(Y \mathrm{scl}=1\)
(c) \(X \min =-12\)
\(X \max =12\)
\(X \mathrm{scl}=1\)
\(Y \min =-8\)
\(\begin{aligned} Y \max & =8 \\ Y \text { scl } & =2\end{aligned}\)
\(\begin{aligned} Y \max & =8 \\ Y \mathrm{scl} & =2\end{aligned}\)
(a) \(X \min =-3\)
\(X \max =3\)
\(X\) scl \(=1\)
\(Y \min =-2\)
\(Y \max =2\)
\(Y \mathrm{scl}=1\)

In Problems 1-8, determine which of the given viewing rectangles result in a square screen.
1. \(X \min =-3\)
\(X \max =3\)
\(X \mathrm{scl}=2\)
\(Y\) min \(=-2\)
\(Y\) max \(=2\)
\(Y\) scl \(=2\)
5. \(X \min =-6\)
\(X \max =6\)
\(X \mathrm{scl}=1\)
2. \(X \min =-5\)
\(X \max =5\)
\(X \mathrm{scl}=1\)
\(Y\) min \(=-4\)
\(Y \max =4\)
\(Y \mathrm{scl}=1\)
6. \(X \min =-6\)
\(X \max =6\)
3. \(\begin{aligned} X \min & =0 \\ X \max & =9 \\ X_{\mathrm{scl}} & =3\end{aligned}\)
\(X \mathrm{scl}=3\)
\(Y \min =-2\)
\(Y \max =4\)
\(Y \mathrm{scl}=2\)
7. \(X \min =0\)
\(X \max =9\)
\(X \mathrm{scl}=1\)

4. \(X \min =-6\)
\[
X \max =6
\]
\(Y\) min \(=-2\)
\(X \mathrm{scl}=2\)
\(Y \min =-2\)
\(Y \max =4\)
\(X \mathrm{scl}=1\)
\(Y\) min \(=-4\)
\(Y \max =4\)
\(Y \mathrm{scl}=2\)
8. \(X \min =-6\)
\(X \max =6\)
\(\begin{array}{rlrl}Y \max & =2 & Y \max & =4 \\ Y \mathrm{scl} & =0.5 & Y \mathrm{scl} & =1\end{array}\)
\(Y \mathrm{scl}=1\)
\(X \mathrm{scl}=2\)
\(Y\) min \(=-4\)
\(Y \max =4\)
\(Y \mathrm{scl}=2\)
9. If \(X \min =-4, X \max =8\), and \(X \mathrm{scl}=1\), how should \(Y \min , Y \max\), and \(Y \mathrm{scl}\) be selected so that the viewing rectangle contains the point \((4,8)\) and the screen is square?
10. If \(X \min =-6, X \max =12\), and \(X \mathrm{scl}=2\), how should \(Y \min , Y \max\), and \(Y \mathrm{scl}\) be selected so that the viewing rectangle contains the point \((4,8)\) and the screen is square?

\footnotetext{
*Some graphing utilities have a built-in function that automatically squares the screen. For example, the TI- 84 has a ZSquare function that does this. Some graphing utilities require a ratio other than \(3: 2\) to square the screen. For example, the HP 48G requires the ratio of \(x\) to \(y\) to be \(2: 1\) for a square screen. Consult your manual.
}

\section*{B. 6 Using a Graphing Utility to Graph Inequalities}

\section*{EXAMPLE I Graphing an Inequality Using a Graphing Utility}

Use a graphing utility to graph: \(3 x+y-6 \leq 0\)
Solution Begin by graphing the equation \(3 x+y-6=0\left(Y_{1}=-3 x+6\right)\). See Figure 17 .
As with graphing by hand, test points selected from each region and determine whether they satisfy the inequality. To test the point \((-1,2)\), for example, enter \(3(-1)+2-6 \leq 0\). See Figure \(18(\mathrm{a})\). The 1 that appears indicates that the statement entered (the inequality) is true. When the point \((5,5)\) is tested, a 0 appears, indicating that the statement entered is false. Thus \((-1,2)\) is a part of the graph of the inequality, and \((5,5)\) is not. Figure \(18(b)\) shows the graph of the inequality on a TI-84 Plus.*

Figure 17

Figure 18

(a)

(b)

The steps to follow to graph an inequality using a graphing utility are given next.

\section*{Steps for Graphing an Inequality Using a Graphing Utility}

STEP 1: Replace the inequality symbol by an equal sign, solve the equation for \(y\), and graph the equation.
STEP 2: In each region, select a test point \(P\) and determine whether the coordinates of \(P\) satisfy the inequality.
(a) If the test point satisfies the inequality, then so do all the points in the region. Indicate this by using the graphing utility to shade the region.
(b) If the coordinates of \(P\) do not satisfy the inequality, then none of the points in that region do.

\section*{B. 7 Using a Graphing Utility to Solve Systems of Linear Equations}

Most graphing utilities have the capability to put the augmented matrix of a system of linear equations in row echelon form. The next example, Example 6 from Section 10.2, demonstrates this feature using a TI-84 Plus graphing calculator.

\section*{EXAMPLE I}

Solution The augmented matrix of the system is

> Solving a System of Linear Equations Using a Graphing Utility

Solve: \(\left\{\begin{aligned} x-y+z=8 \\ 2 x+3 y-z=-2 \\ 3 x-2 y-9 z=9\end{aligned}\right.\)
\[
\left[\begin{array}{rrr|r}
1 & -1 & 1 & 8 \\
2 & 3 & -1 & -2 \\
3 & -2 & -9 & 9
\end{array}\right]
\]

Enter this matrix into the graphing utility and name it \(A\). See Figure 19(a). Use the REF (row echelon form) command on matrix \(A\). The results are shown in Figure 19(b).

Figure 19

The system of equations represented by the matrix in row echelon form is
\[
\left[\begin{array}{rrr|r}
1 & -\frac{2}{3} & -3 & 3 \\
0 & 1 & \frac{15}{13} & -\frac{24}{13} \\
0 & 0 & 1 & 1
\end{array}\right]\left\{\begin{array}{rr}
x-\frac{2}{3} y-3 z & =3 \\
y+\frac{15}{13} z=-\frac{24}{13} \\
z= & 1
\end{array}\right.
\]

Using \(z=1\), back-substitute to get
\[
\left\{\begin{array} { r l } 
{ x - \frac { 2 } { 3 } y - 3 ( 1 ) } & { = 3 }  \tag{1}\\
{ y + \frac { 1 5 } { 1 3 } ( 1 ) } & { = - \frac { 2 4 } { 1 3 } ( 2 ) \underset { \text { Simplify. } } { \longrightarrow } }
\end{array} \left\{\begin{array}{rl}
x-\frac{2}{3} y= & 6 \\
y & =\frac{-39}{13}=-3
\end{array}\right.\right.
\]

Solve the second equation for \(y\), to find that \(y=-3\). Back-substitute \(y=-3\) into \(x-\frac{2}{3} y=6\), to find that \(x=4\). The solution of the system is \(x=4, y=-3, z=1\).

Notice that the row echelon form of the augmented matrix using the graphing utility differs from the row echelon form in Chapter 10 (p. 746), yet both matrices provide the same solution! This is because the two solutions used different row

Figure 20
 operations to obtain the row echelon form. In all likelihood, the two solutions parted ways in Step 4 of the algebraic solution, where fractions were avoided by interchanging rows 2 and 3 .

Most graphing utilities also have the ability to put a matrix in reduced row echelon form. Figure 20 shows the reduced row echelon form of the augmented matrix from Example 1 using the RREF command on a TI-84 Plus graphing calculator. From this command, note that the solution of the system is \(x=4\), \(y=-3, z=1\).

\section*{B.8 Using a Graphing Utility to Graph a Polar Equation}

Most graphing utilities require the following steps in order to obtain the graph of a polar equation. Be sure to be in POLar mode.

\section*{Graphing a Polar Equation Using a Graphing Utility}

Step 1: Set the mode to POLar. Solve the equation for \(r\) in terms of \(\theta\).
STEP 2: Select the viewing rectangle in polar mode. Besides setting \(X\) min, \(X \max , X \mathrm{scl}\), and so forth, the viewing rectangle in polar mode requires setting the minimum and maximum values for \(\theta\) and an increment setting for \(\theta\) ( \(\theta\) step). In addition, a square screen and radian measure should be used.
STEP 3: Enter the expression involving \(\theta\) that you found in Step 1. (Consult your manual for the correct way to enter the expression.)
STEP 4: Graph.

\section*{EXAMPLE I Graphing a Polar Equation Using a Graphing Utility}

Use a graphing utility to graph the polar equation \(r \sin \theta=2\).

\section*{Solution Step 1: Solve the equation for \(r\) in terms of \(\theta\).}
\[
\begin{aligned}
r \sin \theta & =2 \\
r & =\frac{2}{\sin \theta}
\end{aligned}
\]

STEP 2: From the POLar mode, select the viewing rectangle.
\[
\begin{array}{rlrl}
\theta \min & =0 & X \min & =-9 \\
\theta \max & =2 \pi & X \max & =9 \\
\operatorname{man} & =-6 \\
\theta \text { step } & =\frac{\pi}{24} & X \text { scl } & =1
\end{array}
\]
\(\theta\) step determines the number of points that the graphing utility will plot. For example, if \(\theta\) step is \(\frac{\pi}{24}\), the graphing utility will evaluate \(r\) at \(\theta=0(\theta \min ), \frac{\pi}{24}, \frac{2 \pi}{24}, \frac{3 \pi}{24}\), and so forth, up to \(2 \pi(\theta \max )\). The smaller \(\theta\) step is, the more points the graphing utility will plot. The reader is encouraged to experiment with different values for \(\theta \mathrm{min}\), \(\theta\) max, and \(\theta\) step to see how the graph is affected.

STEP 3: Enter the expression \(\frac{2}{\sin \theta}\) after the prompt \(r_{1}=\).
Step 4: Graph.
The graph is shown in Figure 21.

\section*{B. 9 Using a Graphing Utility to Graph Parametric Equations}

Most graphing utilities have the capability of graphing parametric equations. The following steps are usually required to obtain the graph of parametric equations. Check your owner's manual to see how yours works.

\section*{Graphing Parametric Equations Using a Graphing Utility}

STEP 1: Set the mode to PARametric. Enter \(x(t)\) and \(y(t)\).
STEP 2: Select the viewing window. In addition to setting \(X \min , X \max , X \mathrm{scl}\), and so on, the viewing window in parametric mode requires setting minimum and maximum values for the parameter \(t\) and an increment setting for \(t\) (Tstep).

Step 3: Graph.

\section*{EXAMPLE I}

\author{
Solution
}

Figure 22

\section*{Graphing a Curve Defined by Parametric Equations Using a Graphing Utility}

Graph the curve defined by the parametric equations
\[
x=3 t^{2}, \quad y=2 t, \quad-2 \leq t \leq 2
\]

STEP 1: Enter the equations \(x(t)=3 t^{2}, y(t)=2 t\) with the graphing utility in PARametric mode.
Step 2: Select the viewing window. The interval is \(-2 \leq t \leq 2\), so select the following square viewing window:
\[
\begin{aligned}
& T \min =-2 \quad X \min =0 \quad Y \min =-5 \\
& T \max =2 \quad X \max =15 \quad Y \max =5 \\
& \text { Tstep }=0.1 \quad X \text { scl }=1 \quad Y \text { scl }=1
\end{aligned}
\]

Choose \(T \min =-2\) and \(T \max =2\) because \(-2 \leq t \leq 2\). Finally, the choice for Tstep will determine the number of points that the graphing utility will plot. For example, with \(T\) step at 0.1, the graphing utility will evaluate \(x\) and \(y\) at \(t=-2,-1.9,-1.8\), and so on. The smaller the Tstep, the more points the graphing utility will plot. The reader is encouraged to experiment with different values of Tstep to see how the graph is affected.
STEP 3: Graph. Note the direction in which the graph is drawn. This direction shows the orientation of the curve.

The graph shown in Figure 22 is complete.

\section*{Exploration}

Graph the following parametric equations using a graphing utility with \(X \min =0, X \max =15\), \(Y_{\min }=-5, Y \max =5\), and \(T\) step \(=0.1\).
1. \(x=\frac{3 t^{2}}{4}, y=t,-4 \leq t \leq 4\)
2. \(x=3 t^{2}+12 t+12, \quad y=2 t+4,-4 \leq t \leq 0\)
3. \(x=3 t^{2 / 3}, \quad y=2 \sqrt[3]{t}, \quad-8 \leq t \leq 8\)

Compare these graphs to the graph in Figure 22. Conclude that parametric equations defining a curve are not unique; that is, different parametric equations can represent the same graph.

\section*{Exploration}

In FUNCtion mode, graph \(x=\frac{3 y^{2}}{4}\left(Y_{1}=\sqrt{\frac{4 x}{3}}\right.\) and \(\left.Y_{2}=-\sqrt{\frac{4 x}{3}}\right)\) with \(X \min =0, X \max =15\), \(Y \min =-5, Y \max =5\). Compare this graph with Figure 22. Why do the graphs differ?

\section*{Answers}

\section*{77. (a), (c), (d)}

(b) \(\{-1,2\}\)
79. (a) \(a=1: f(x)=(x+3)(x-1)=x^{2}+2 x-3\)
\[
\begin{aligned}
& a=2: f(x)=2(x+3)(x-1)=2 x^{2}+4 x-6 \\
& a=-2: f(x)=-2(x+3)(x-1)=-2 x^{2}-4 x+6 \\
& a=5: f(x)=5(x+3)(x-1)=5 x^{2}+10 x-15
\end{aligned}
\]
(b) The value of \(a\) does not affect the \(x\)-intercepts, but it changes the \(y\)-intercept by a factor of \(a\). (c) The value of \(a\) does not affect the axis of symmetry. It is \(x=-1\) for all values of \(a\). (d) The value of \(a\) does not affect the \(x\)-coordinate of the vertex. However, the \(y\)-coordinate of the vertex is multiplied by \(a\).
(e) The mean of the \(x\)-intercepts is the \(x\)-coordinate of the vertex.
83. \(\$ 500 ; \$ 1,000,000 \quad\) 85. (a) \(70,000 \mathrm{mp} 3\) players \(\quad\) (b) \(\$ 2500\) 87. (a) \(171 \mathrm{ft} \quad\) (b) 49 mph (c) Reaction time \(\quad\) 89. (a) 187 or 188 watches; \(\$ 7031.20\) (b) \(P(x)=-0.2 x^{2}+43 x-1750 \quad\) (c) 107 or 108 watches; \(\$ 561.20 \quad\) 91. \(f(x)=2(x+4)(x-2) \quad\) 93. If \(x\) is even, then \(a x^{2}\) and \(b x\) are even and \(a x^{2}+b x\) is even, which means that \(a x^{2}+b x+c\) is odd. If \(x\) is odd, then \(a x^{2}\) and \(b x\) are odd and \(a x^{2}+b x\) is even, which means that \(a x^{2}+b x+c\) is odd. In either case, \(f(x)\) is odd. 95.

132. \(y=-\frac{2}{5} x-\frac{11}{5}\)
133. \(\{x \mid x \neq-5\}\)
134. \(\frac{-2-\sqrt{7}}{2}, \frac{-2+\sqrt{7}}{2}\)
135. \(\left\{-\frac{4}{5}, 2\right\}\)

\section*{Historical Problems (page 223)}
1. \(\left(x-\frac{b}{3}\right)^{3}+b\left(x-\frac{b}{3}\right)^{2}+c\left(x-\frac{b}{3}\right)+d=0\)
\[
x^{3}-b x^{2}+\frac{b^{2} x}{3}-\frac{b^{3}}{27}+b x^{2}-\frac{2 b^{2} x}{3}+\frac{b^{3}}{9}+c x-\frac{b c}{3}+d=0
\]
\[
x^{3}+\left(c-\frac{b^{2}}{3}\right) x+\left(\frac{2 b^{3}}{27}-\frac{b c}{3}+d\right)=0
\]

Let \(p=c-\frac{b^{2}}{3}\) and \(q=\frac{2 b^{3}}{27}-\frac{b c}{3}+d\). Then \(x^{3}+p x+q=0\).
3.
\[
\begin{aligned}
3 H K & =-p \\
K & =-\frac{p}{3 H} \\
H^{3}+\left(-\frac{p}{3 H}\right)^{3} & =-q \\
H^{3}-\frac{p^{3}}{27 H^{3}} & =-q \\
27 H^{6}-p^{3} & =-27 q H^{3} \\
27 H^{6}+27 q H^{3}-p^{3} & =0 \\
H^{3} & =\frac{-27 q \pm \sqrt{(27 q)^{2}-4(27)\left(-p^{3}\right)}}{2 \cdot 27} \\
H^{3} & =\frac{-q}{2} \pm \sqrt{\frac{27^{2} q^{2}}{2^{2}\left(27^{2}\right)}+\frac{4(27) p^{3}}{2^{2}\left(27^{2}\right)}} \\
H^{3} & =\frac{-q}{2} \pm \sqrt{\frac{q^{2}}{4}+\frac{p^{3}}{27}} \\
H & =\sqrt[3]{\frac{-q}{2}+\sqrt{\frac{q^{2}}{4}+\frac{p^{3}}{27}}}
\end{aligned}
\]
2.
\[
\begin{aligned}
(H+K)^{3}+p(H+K)+q & =0 \\
H^{3}+3 H^{2} K+3 H K^{2}+K^{3}+p H+p K+q & =0 \\
\text { Let } 3 H K & =-p . \\
H^{3}-p H-p K+K^{3}+p H+p K+q=0, H^{3}+K^{3} & =-q
\end{aligned}
\]
\[
\text { 4. } \begin{aligned}
H^{3}+K^{3} & =-q \\
K^{3} & =-q-H^{3}
\end{aligned}
\]
\[
K^{3}=-q-\left[\frac{-q}{2}+\sqrt{\frac{q^{2}}{4}+\frac{p^{3}}{27}}\right]
\]
\[
K^{3}=\frac{-q}{2}-\sqrt{\frac{q^{2}}{4}+\frac{p^{3}}{27}}
\]
\[
K=\sqrt[3]{\frac{-q}{2}-\sqrt{\frac{q^{2}}{4}+\frac{p^{3}}{27}}}
\]
5. \(x=H+K\)
\[
x=\sqrt[3]{\frac{-q}{2}+\sqrt{\frac{q^{2}}{4}+\frac{p^{3}}{27}}}+\sqrt[3]{\frac{-q}{2}-\sqrt{\frac{q^{2}}{4}+\frac{p^{3}}{27}}}
\]
(Note that if we had used the negative root in 3, the result would have been the same.)
\(\begin{array}{lll}\text { 6. } x=3 & \text { 7. } x=2 & \text { 8. } x=2\end{array}\)

Choose the positive root for now.

113. (a) \(-\frac{1}{3}\)
(b) 1
115. (a) -2 (b) 6 117. (a) -4 (b) \(-12 \quad\) 119. \(\approx 15.81 \mathrm{~min} \quad\) 121. Let \(a\) be a real number and \(P=(x, y)\) be the point on the unit circle that corresponds to \(t\). Consider the equation \(\tan t=\frac{y}{x}=a\). Then \(y=a x\). But \(x^{2}+y^{2}=1\), so \(x^{2}+a^{2} x^{2}=1\). So \(x= \pm \frac{1}{\sqrt{1+a^{2}}}\) and \(y= \pm \frac{a}{\sqrt{1+a^{2}}}\); that is, for any real number \(a\), there is a point \(P=(x, y)\) on the unit circle for which \(\tan t=a\). In other words, the range of the tangent function is the set of all real numbers. 123. Suppose that there is a number \(p, 0<p<2 \pi\), for which \(\sin (\theta+p)=\sin \theta\) for all \(\theta\). If \(\theta=0\), then \(\sin (0+p)=\sin p=\sin 0=0\), so \(p=\pi\). If \(\theta=\frac{\pi}{2}\), then \(\sin \left(\frac{\pi}{2}+p\right)=\sin \left(\frac{\pi}{2}\right)\). But \(p=\pi\). Thus, \(\sin \left(\frac{3 \pi}{2}\right)=-1=\sin \left(\frac{\pi}{2}\right)=1\). This is impossible. Therefore, the smallest positive number \(p\) for which \(\sin (\theta+p)=\sin \theta\) for all \(\theta\) is \(2 \pi\). 125. \(\sec \theta=\frac{1}{\cos \theta}\); \(\operatorname{since} \cos \theta\) has period \(2 \pi\), so does \(\sec \theta\). 127. If \(P=(a, b)\) is the point on the unit circle corresponding to \(\theta\), then \(Q=(-a,-b)\) is the point on the unit circle corresponding to \(\theta+\pi\). Thus, \(\tan (\theta+\pi)=\frac{-b}{-a}=\frac{b}{a}=\tan \theta\). Suppose that there exists a number \(p, 0<p<\pi\), for which \(\tan (\theta+p)=\tan \theta\) for all \(\theta\). Then, if \(\theta=0\), then \(\tan p=\tan 0=0\). But this means that \(p\) is a multiple of \(\pi\). Since no multiple of \(\pi\) exists in the interval \((0, \pi)\), this is a contradiction. Therefore, the period of \(f(\theta)=\tan \theta\) is \(\pi\).
129. Let \(P=(a, b)\) be the point on the unit circle corresponding to \(\theta\). Then \(\csc \theta=\frac{1}{b}=\frac{1}{\sin \theta} ; \sec \theta=\frac{1}{a}=\frac{1}{\cos \theta} ;\) and \(\cot \theta=\frac{a}{b}=\frac{1}{b / a}=\frac{1}{\tan \theta}\). 131. \((\sin \theta \cos \phi)^{2}+(\sin \theta \sin \phi)^{2}+\cos ^{2} \theta=\sin ^{2} \theta \cos ^{2} \phi+\sin ^{2} \theta \sin ^{2} \phi+\cos ^{2} \theta=\sin ^{2} \theta\left(\cos ^{2} \phi+\sin ^{2} \phi\right)+\cos ^{2} \theta=\sin ^{2} \theta+\cos ^{2} \theta=1\) 137. \section*{Cumulative Review (page 460)}
1. \(\left\{-1, \frac{1}{2}\right\} \quad\) 2. \(y-5=-3(x+2)\) or \(y=-3 x-1 \quad\) 3. \(x^{2}+(y+2)^{2}=16\)
4. A line; slope \(\frac{2}{3}\); intercepts \((6,0)\) and \((0,-4)\)

5. A circle; center ( \(1,-2\) ); radius 3

6.

(e)

(f)

8. \(f^{-1}(x)=\frac{1}{3}(x+2)\)
9. \(-2 \quad 10\)
10. \(\left(-\frac{3 \pi}{4}, 3\right) \frac{y}{5}\left(\frac{\pi}{4}, 3\right)\left(\frac{\pi}{2}, 0\right)\)
11. \(3-\frac{3 \sqrt{3}}{2} \quad\) 12. \(y=2\left(3^{x}\right)\)
13. \(y=3 \cos \left(\frac{\pi}{6} x\right)\)

14. (a) \(f(x)=-3 x-3\);
\(m=-3 ;(-1,0),(0,-3)\)

(b) \(f(x)=(x-1)^{2}-6 ;(0,-5)\), \((-\sqrt{6}+1,0),(\sqrt{6}+1,0)\)

(c) We have that \(y=3\) when \(x=-2\) and \(y=-6\) when \(x=1\). Both points satisfy \(y=a e^{x}\). Therefore, for \((-2,3)\) we have \(3=a e^{-2}\), which implies that \(a=3 e^{2}\). But for \((1,-6)\) we have \(-6=a e^{1}\), which implies that \(a=-6 e^{-1}\). Therefore, there is no exponential function \(y=a e^{x}\) that contains \((-2,3)\) and \((1,-6)\).
15. (a) \(f(x)=\frac{1}{6}(x+2)(x-3)(x-5)\)
(b) \(R(x)=-\frac{(x+2)(x-3)(x-5)}{3(x-2)}\)

87. \(\frac{u \sqrt{1-v^{2}}-v}{\sqrt{1+u^{2}}}:-\infty<u<\infty ;-1 \leq v \leq 1 \quad\) 89. \(\frac{u v-\sqrt{1-u^{2}} \sqrt{1-v^{2}}}{v \sqrt{1-u^{2}}+u \sqrt{1-v^{2}}}:-1 \leq u \leq 1 ;-1 \leq v \leq 1 \quad\) 91. \(\left\{\frac{\pi}{2}, \frac{7 \pi}{6}\right\} \quad\) 93. \(\left\{\frac{\pi}{4}\right\} \quad\) 95. \(\left\{\frac{11 \pi}{6}\right\}\)
97. Let \(\alpha=\sin ^{-1} v\) and \(\beta=\cos ^{-1} v\). Then \(\sin \alpha=\cos \beta=v\), and \(\operatorname{since} \sin \alpha=\cos \left(\frac{\pi}{2}-\alpha\right), \cos \left(\frac{\pi}{2}-\alpha\right)=\cos \beta\).

If \(v \geq 0\), then \(0 \leq \alpha \leq \frac{\pi}{2}\), so \(\left(\frac{\pi}{2}-\alpha\right)\) and \(\beta\) both lie on \(\left[0, \frac{\pi}{2}\right]\). If \(v<0\), then \(-\frac{\pi}{2} \leq \alpha<0\), so \(\left(\frac{\pi}{2}-\alpha\right)\) and \(\beta\) both lie on \(\left(\frac{\pi}{2}, \pi\right]\).
Either way, \(\cos \left(\frac{\pi}{2}-\alpha\right)=\cos \beta\) implies \(\frac{\pi}{2}-\alpha=\beta\), or \(\alpha+\beta=\frac{\pi}{2}\).
99. Let \(\alpha=\tan ^{-1} \frac{1}{v}\) and \(\beta=\tan ^{-1} v\). Because \(v \neq 0, \alpha, \beta \neq 0\). Then \(\tan \alpha=\frac{1}{v}=\frac{1}{\tan \beta}=\cot \beta\), and since \(\tan \alpha=\cot \left(\frac{\pi}{2}-\alpha\right)\), \(\cot \left(\frac{\pi}{2}-\alpha\right)=\cot \beta\). Because \(v>0,0<\alpha<\frac{\pi}{2}\), and so \(\left(\frac{\pi}{2}-\alpha\right)\) and \(\beta\) both lie on \(\left(0, \frac{\pi}{2}\right)\). Then \(\cot \left(\frac{\pi}{2}-\alpha\right)=\cot \beta\) implies \(\frac{\pi}{2}-\alpha=\beta\), or \(\alpha=\frac{\pi}{2}-\beta\).
101. \(\sin \left(\sin ^{-1} v+\cos ^{-1} v\right)=\sin \left(\sin ^{-1} v\right) \cos \left(\cos ^{-1} v\right)+\cos \left(\sin ^{-1} v\right) \sin \left(\cos ^{-1} v\right)=(v)(v)+\sqrt{1-v^{2}} \sqrt{1-v^{2}}=v^{2}+1-v^{2}=1\) 103. \(\frac{\sin (x+h)-\sin x}{h}=\frac{\sin x \cos h+\cos x \sin h-\sin x}{h}=\frac{\cos x \sin h-\sin x(1-\cos h)}{h}=\cos x \cdot \frac{\sin h}{h}-\sin x \cdot \frac{1-\cos h}{h}\)
105. (a) \(\tan \left(\tan ^{-1} 1+\tan ^{-1} 2+\tan ^{-1} 3\right)=\tan \left(\left(\tan ^{-1} 1+\tan ^{-1} 2\right)+\tan ^{-1} 3\right)=\frac{\tan \left(\tan ^{-1} 1+\tan ^{-1} 2\right)+\tan \left(\tan ^{-1} 3\right)}{1-\tan \left(\tan ^{-1} 1+\tan ^{-1} 2\right) \tan \left(\tan ^{-1} 3\right)}\) \(=\frac{\frac{\tan \left(\tan ^{-1} 1\right)+\tan \left(\tan ^{-1} 2\right)}{1-\tan \left(\tan ^{-1} 1\right) \tan \left(\tan ^{-1} 2\right)}+3}{1-\frac{\tan \left(\tan ^{-1} 1\right)+\tan \left(\tan ^{-1} 2\right)}{1-\tan \left(\tan ^{-1} 1\right) \tan \left(\tan ^{-1} 2\right)} \cdot 3}=\frac{\frac{1+2}{1-1 \cdot 2}+3}{1-\frac{1+2}{1-1 \cdot 2} \cdot 3}=\frac{\frac{3}{-1}+3}{1-\frac{3}{-1} \cdot 3}=\frac{-3+3}{1+9}=\frac{0}{10}=0\)
(b) From the definition of the inverse tangent function, \(0<\tan ^{-1} 1<\frac{\pi}{2}, 0<\tan ^{-1} 2<\frac{\pi}{2}\), and \(0<\tan ^{-1} 3<\frac{\pi}{2}\), so \(0<\tan ^{-1} 1+\tan ^{-1} 2+\tan ^{-1} 3<\frac{3 \pi}{2}\).
On the interval \(\left(0, \frac{3 \pi}{2}\right), \tan \theta=0 \quad\) if and only if \(\theta=\pi\). Therefore, from part (a), \(\tan ^{-1} 1+\tan ^{-1} 2+\tan ^{-1} 3=\pi\).
107. \(\tan \theta=\tan \left(\theta_{2}-\theta_{1}\right)=\frac{\tan \theta_{2}-\tan \theta_{1}}{1+\tan \theta_{1} \tan \theta_{2}}=\frac{m_{2}-m_{1}}{1+m_{1} m_{2}}\)
109. \(2 \cot (\alpha-\beta)=\frac{2}{\tan (\alpha-\beta)}=2\left(\frac{1+\tan \alpha \tan \beta}{\tan \alpha-\tan \beta}\right)=2\left(\frac{1+(x+1)(x-1)}{(x+1)-(x-1)}\right)=2\left(\frac{1+x^{2}-1}{x+1-x+1}\right)=\frac{2 x^{2}}{2}=x^{2}\)
111. \(\tan \frac{\pi}{2}\) is not defined; \(\tan \left(\frac{\pi}{2}-\theta\right)=\frac{\sin \left(\frac{\pi}{2}-\theta\right)}{\cos \left(\frac{\pi}{2}-\theta\right)}=\frac{\cos \theta}{\sin \theta}=\cot \theta\).
112. \(\left(-\frac{1}{3},-\frac{5}{9}\right),(-5,1)\)
113. \(510^{\circ}\)
114. \(\frac{9 \pi}{2} \mathrm{~cm}^{2} \approx 14.14 \mathrm{~cm}^{2}\)

55. Suppose \(0<\theta<\pi\). Then, by the Law of Cosines, \(d^{2}=r^{2}+r^{2}-2 r^{2} \cos \theta=4 r^{2}\left(\frac{1-\cos \theta}{2}\right) \Rightarrow d=2 r \sqrt{\frac{1-\cos \theta}{2}}=2 r \sin \frac{\theta}{2}\).

Since, for any angle in \((0, \pi), d\) is strictly less than the length of the arc subtended by \(\theta\)-that is, \(d<r \theta-\operatorname{then} 2 r \sin \frac{\theta}{2}<r \theta\), or \(2 \sin \frac{\theta}{2}<\theta\).
Since \(\cos \frac{\theta}{2}<1\), then, for \(0<\theta<\pi, \sin \theta=2 \sin \frac{\theta}{2} \cos \frac{\theta}{2}<2 \sin \frac{\theta}{2}<\theta\). If \(\theta \geq \pi\), then, \(\operatorname{since} \sin \theta \leq 1, \sin \theta<\theta\). Thus \(\sin \theta<\theta\) for all \(\theta>0\).
57. \(\sin \frac{C}{2}=\sqrt{\frac{1-\cos C}{2}}=\sqrt{\frac{1-\frac{a^{2}+b^{2}-c^{2}}{2 a b}}{2}}=\sqrt{\frac{2 a b-a^{2}-b^{2}+c^{2}}{4 a b}}=\sqrt{\frac{c^{2}-(a-b)^{2}}{4 a b}}=\sqrt{\frac{(c+a-b)(c+b-a)}{4 a b}}\)
\[
=\sqrt{\frac{(2 s-2 b)(2 s-2 a)}{4 a b}}=\sqrt{\frac{(s-a)(s-b)}{a b}}
\]

59. \(\cos 18^{\circ}+i \sin 18^{\circ}, \cos 90^{\circ}+i \sin 90^{\circ}, \cos 162^{\circ}+i \sin 162^{\circ}, \cos 234^{\circ}+i \sin 234^{\circ}, \cos 306^{\circ}+i \sin 306^{\circ}\)
61. \(1, i,-1,-i\)

67. Assume the theorem is true for \(n \geq 1\).

For \(n=0\) :
\(z^{0}=r^{0}[\cos (0 \cdot \theta)+i \sin (0 \cdot \theta)]\)
\(1=1 \cdot[\cos (0)+i \sin (0)]\)
\(1=1 \cdot[1+0]\)
\(1=1\) True
63. Look at formula (8); \(\left|z_{k}\right|=\sqrt[n]{r}\) for all \(k\).
65. Look at formula (8). The \(z_{k}\) are spaced apart by an angle of \(\frac{2 \pi}{n}\).

For negative integers:
\[
\begin{array}{rlrl}
z^{-n} & =\left(z^{n}\right)^{-1}=\left(r^{n}[\cos (n \theta)+i \sin (n \theta)]\right)^{-1} \quad \text { with } n \geq 1 \\
& =\frac{1}{r^{n}[\cos (n \theta)+i \sin (n \theta)]} & & \\
& =\frac{1}{r^{n}[\cos (n \theta)+i \sin (n \theta)]} \cdot \frac{\cos (n \theta)-i \sin (n \theta)}{\cos (n \theta)-i \sin (n \theta)} & \\
& =\frac{\cos (n \theta)-i \sin (n \theta)}{r^{n}\left(\cos ^{2}(n \theta)+\sin ^{2}(n \theta)\right)} & & \\
& =\frac{\cos (n \theta)-i \sin (n \theta)}{r^{n}} & & \sin ^{2} \theta+\cos ^{2} \theta=1 \\
& =r^{-n}[\cos (n \theta)-i \sin (n \theta)] & \cos (-\theta)=\cos (\theta) ; \quad \sin (-\theta)=-\sin (\theta) & \\
& =r^{-n}[\cos (-n \theta)+i \sin (-n \theta)] & &
\end{array}
\]

Thus, De Moivre's Theorem is true for all integers.
69. \(\approx 40.50\)
70. Minimum; \(f\left(\frac{6}{5}\right)=-\frac{16}{5}\)

\(\left.\|\mathbf{u} \times \mathbf{v}\|^{2}=\sqrt{\left(b_{1} c_{2}-b_{2} c_{1}\right)^{2}+\left(a_{1} c_{2}-a_{2} c_{1}\right)^{2}+\left(a_{1} b_{2}-a_{2} b_{1}\right)^{2}}\right)^{2}\)
\[
=b_{1}^{2} c_{2}^{2}-2 b_{1} b_{2} c_{1} c_{2}+b_{2}^{2} c_{1}^{2}+a_{1}^{2} c_{2}^{2}-2 a_{1} a_{2} c_{1} c_{2}+a_{2}^{2} c_{1}^{2}+a_{1}^{2} b_{2}^{2}-2 a_{1} a_{2} b_{1} b_{2}+a_{2}^{2} b_{1}^{2}
\]
\(\|\mathbf{u}\|^{2}=a_{1}^{2}+b_{1}^{2}+c_{1}^{2},\|\mathbf{v}\|^{2}=a_{2}^{2}+b_{2}^{2}+c_{2}^{2}\)
\(\|\mathbf{u}\|^{2}\|\mathbf{v}\|^{2}=\left(a_{1}^{2}+b_{1}^{2}+c_{1}^{2}\right)\left(a_{2}^{2}+b_{2}^{2}+c_{2}^{2}\right)=a_{1}^{2} a_{2}^{2}+a_{1}^{2} b_{2}^{2}+a_{1}^{2} c_{2}^{2}+b_{1}^{2} a_{2}^{2}+b_{1}^{2} b_{2}^{2}+b_{1}^{2} c_{2}^{2}+a_{2}^{2} c_{1}^{2}+b_{2}^{2} c_{1}^{2}+c_{1}^{2} c_{2}^{2}\)
\((\mathbf{u} \cdot \mathbf{v})^{2}=\left(a_{1} a_{2}+b_{1} b_{2}+c_{1} c_{2}\right)^{2}=\left(a_{1} a_{2}+b_{1} b_{2}+c_{1} c_{2}\right)\left(a_{1} a_{2}+b_{1} b_{2}+c_{1} c_{2}\right)\)
\(=a_{1}^{2} a_{2}^{2}+a_{1} a_{2} b_{1} b_{2}+a_{1} a_{2} c_{1} c_{2}+b_{1} b_{2} c_{1} c_{2}+b_{1} b_{2} a_{1} a_{2}+b_{1}^{2} b_{2}^{2}+b_{1} b_{2} c_{1} c_{2}+a_{1} a_{2} c_{1} c_{2}+c_{1}^{2} c_{2}^{2}\)
\(=a_{1}^{2} a_{2}^{2}+b_{1}^{2} b_{2}^{2}+c_{1}^{2} c_{2}^{2}+2 a_{1} a_{2} b_{1} b_{2}+2 b_{1} b_{2} c_{1} c_{2}+2 a_{1} a_{2} c_{1} c_{2}\)
\(\|\mathbf{u}\|^{2}\|\mathbf{v}\|^{2}-(\mathbf{u} \cdot \mathbf{v})^{2}=a_{1}^{2} b_{2}^{2}+a_{1}^{2} c_{2}^{2}+b_{1}^{2} a_{2}^{2}+a_{2}^{2} c_{1}^{2}+b_{2}^{2} c_{1}^{2}+b_{1}^{2} c_{2}^{2}-2 a_{1} a_{2} b_{1} b_{2}-2 b_{1} b_{2} c_{1} c_{2}-2 a_{1} a_{2} c_{1} c_{2}\), which equals \(\|\mathbf{u} \times \mathbf{v}\|^{2}\).
59. By Problem 58, since \(\mathbf{u}\) and \(\mathbf{v}\) are orthogonal, \(\|\mathbf{u} \times \mathbf{v}\|=\|\mathbf{u}\|\|\mathbf{v}\|\). If, in addition, \(\mathbf{u}\) and \(\mathbf{v}\) are unit vectors, \(\|\mathbf{u} \times \mathbf{v}\|=1 \cdot 1=1\).
61. Assume that \(\mathbf{u}=a \mathbf{i}+b \mathbf{j}+c \mathbf{k}, \mathbf{v}=d \mathbf{i}+e \mathbf{j}+f \mathbf{k}\), and \(\mathbf{w}=l \mathbf{i}+m \mathbf{j}+n \mathbf{k}\). Then \(\mathbf{u} \times \mathbf{v}=(b f-e c) \mathbf{i}-(a f-d c) \mathbf{j}+(a e-d b) \mathbf{k}\),
\(\mathbf{u} \times \mathbf{w}=(b n-m c) \mathbf{i}-(a n-l c) \mathbf{j}+(a m-l b) \mathbf{k}\), and \(\mathbf{v}+\mathbf{w}=(d+l) \mathbf{i}+(e+m) \mathbf{j}+(f+n) \mathbf{k}\).
Therefore, \((\mathbf{u} \times \mathbf{v})+(\mathbf{u} \times \mathbf{w})=(b f-e c+b n-m c) \mathbf{i}-(a f-d c+a n-l c) \mathbf{j}+(a e-d b+a m-l b) \mathbf{k}\) and \(\mathbf{u} \times(\mathbf{v}+\mathbf{w})\)
\(=[b(f+n)-(e+m) c] \mathbf{i}-[a(f+n)-(d+l) c] \mathbf{j}+[a(e+m)-(d+l) b] \mathbf{k}\)
\(=(b f-e c+b n-m c) \mathbf{i}-(a f-d c+a n-l c) \mathbf{j}+(a e-d b+a m-l b) \mathbf{k}\), which equals \((\mathbf{u} \times \mathbf{v})+(\mathbf{u} \times \mathbf{w})\).

63. 1.5625 ft from the base of the dish, along the axis of symmetry
65. 1 in. from the vertex, along the axis of symmetry
67. 20 ft
69. 0.78125 ft
71. 4.17 ft from the base, along the axis of symmetry
73. \(24.31 \mathrm{ft}, 18.75 \mathrm{ft}, 7.64 \mathrm{ft}\)
75. (a) \(y=-\frac{2}{315} x^{2}+630\)
(b) \(567 \mathrm{ft}: 119.7 \mathrm{ft} ; 478 \mathrm{ft}: 267.3 \mathrm{ft} ; 308 \mathrm{ft}: 479.4 \mathrm{ft} \quad\) (c) No
77. \(C y^{2}+D x=0, C \neq 0, D \neq 0 \quad\) This is the equation of a parabola with vertex at \((0,0)\) and axis of symmetry the \(x\)-axis.
\[
\begin{aligned}
C y^{2} & =-D x \\
y^{2} & =-\frac{D}{C} x
\end{aligned}
\]

The focus is \(\left(-\frac{D}{4 C}, 0\right)\); the directrix is the line \(x=\frac{D}{4 C}\). The parabola opens to the right if \(-\frac{D}{C}>0\) and to the left if \(-\frac{D}{C}<0\).
79. \(C y^{2}+D x+E y+F=0, C \neq 0\)
\[
\begin{aligned}
C y^{2}+E y & =-D x-F \\
y^{2}+\frac{E}{C} y & =-\frac{D}{C} x-\frac{F}{C} \\
\left(y+\frac{E}{2 C}\right)^{2} & =-\frac{D}{C} x-\frac{F}{C}+\frac{E^{2}}{4 C^{2}} \\
\left(y+\frac{E}{2 C}\right)^{2} & =-\frac{D}{C} x+\frac{E^{2}-4 C F}{4 C^{2}}
\end{aligned}
\]
(a) If \(D \neq 0\), then the equation may be written as
\(\left(y+\frac{E}{2 C}\right)^{2}=-\frac{D}{C}\left(x-\frac{E^{2}-4 C F}{4 C D}\right)\).
This is the equation of a parabola with vertex at \(\left(\frac{E^{2}-4 C F}{4 C D},-\frac{E}{2 C}\right)\) and axis of symmetry parallel to the \(x\)-axis.
(b)-(d) If \(D=0\), the graph of the equation contains no points if \(E^{2}-4 C F<0\), is a single horizontal line if \(E^{2}-4 C F=0\), and is two horizontal lines if \(E^{2}-4 C F>0\).

31. \(\theta=45^{\circ}\) (see Problem 21)
\(x^{\prime 2}-\frac{y^{\prime 2}}{3}=1\)
Hyperbola
Center at origin
Transverse axis is the \(x^{\prime}\)-axis.
Vertices at \(( \pm 1,0)\)

37. \(\theta \approx 63^{\circ}\) (see Problem 27)
\(y^{\prime 2}=8 x^{\prime}\)
Parabola
Vertex at \((0,0)\)
Focus at \((2,0)\)

33. \(\theta=45^{\circ}\) (see Problem 23)
\(x^{\prime 2}+\frac{y^{\prime 2}}{4}=1\)
Ellipse
Center at \((0,0)\)
Major axis is the \(y^{\prime}\)-axis.
Vertices at \((0, \pm 2)\)

39. \(\theta \approx 34^{\circ}\) (see Problem 29)
\[
\frac{\left(x^{\prime}-2\right)^{2}}{4}+y^{\prime 2}=1
\]

Ellipse
Center at \((2,0)\)
Major axis is the \(x^{\prime}\)-axis.
Vertices at \((4,0)\) and \((0,0)\)

35. \(\theta=60^{\circ}\) (see Problem 25)
\(\frac{x^{\prime 2}}{4}+y^{\prime 2}=1\)
Ellipse
Center at \((0,0)\)
Major axis is the \(x^{\prime}\)-axis.
Vertices at ( \(\pm 2,0)\)

41. \(\cot (2 \theta)=\frac{7}{24}\);
\(\theta=\sin ^{-1}\left(\frac{3}{5}\right) \approx 37^{\circ}\)
\(\left(x^{\prime}-1\right)^{2}=-6\left(y^{\prime}-\frac{1}{6}\right)\)
Parabola
Vertex at \(\left(1, \frac{1}{6}\right)\)
Focus at \(\left(1,-\frac{4}{3}\right)\)

43. Hyperbola 45. Hyperbola 47. Parabola 49. Ellipse 51. Ellipse
53. Refer to equation (6): \(A^{\prime}=A \cos ^{2} \theta+B \sin \theta \cos \theta+C \sin ^{2} \theta\)
\[
\begin{aligned}
B^{\prime} & =B\left(\cos ^{2} \theta-\sin ^{2} \theta\right)+2(C-A)(\sin \theta \cos \theta) \\
C^{\prime} & =A \sin ^{2} \theta-B \sin \theta \cos \theta+C \cos ^{2} \theta \\
D^{\prime} & =D \cos \theta+E \sin \theta \\
E^{\prime} & =-D \sin \theta+E \cos \theta \\
F^{\prime} & =F
\end{aligned}
\]
55. Use Problem 53 to find \(B^{\prime 2}-4 A^{\prime} C^{\prime}\). After much cancellation, \(B^{\prime 2}-4 A^{\prime} C^{\prime}=B^{2}-4 A C\).
57. The distance between \(P_{1}\) and \(P_{2}\) in the \(x^{\prime} y^{\prime}\)-plane equals \(\sqrt{\left(x_{2}{ }^{\prime}-x_{1}{ }^{\prime}\right)^{2}+\left(y_{2}{ }^{\prime}-y_{1}{ }^{\prime}\right)^{2}}\).

Assuming that \(x^{\prime}=x \cos \theta-y \sin \theta\) and \(y^{\prime}=x \sin \theta+y \cos \theta\), then
\(\left(x_{2}{ }^{\prime}-x_{1}{ }^{\prime}\right)^{2}=\left(x_{2} \cos \theta-y_{2} \sin \theta-x_{1} \cos \theta+y_{1} \sin \theta\right)^{2}\)
\[
=\cos ^{2} \theta\left(x_{2}-x_{1}\right)^{2}-2 \sin \theta \cos \theta\left(x_{2}-x_{1}\right)\left(y_{2}-y_{1}\right)+\sin ^{2} \theta\left(y_{2}-y_{1}\right)^{2}, \text { and }
\]
\(\left(y_{2}^{\prime}-y_{1}^{\prime}\right)^{2}=\left(x_{2} \sin \theta+y_{2} \cos \theta-x_{1} \sin \theta-y_{1} \cos \theta\right)^{2}=\sin ^{2} \theta\left(x_{2}-x_{1}\right)^{2}+2 \sin \theta \cos \theta\left(x_{2}-x_{1}\right)\left(y_{2}-y_{1}\right)+\cos ^{2} \theta\left(y_{2}-y_{1}\right)^{2}\).
Therefore, \(\left(x_{2}{ }^{\prime}-x_{1}{ }^{\prime}\right)^{2}+\left(y_{2}{ }^{\prime}-y_{1}{ }^{\prime}\right)^{2}=\cos ^{2} \theta\left(x_{2}-x_{1}\right)^{2}+\sin ^{2} \theta\left(x_{2}-x_{1}\right)^{2}+\sin ^{2} \theta\left(y_{2}-y_{1}\right)^{2}+\cos ^{2} \theta\left(y_{2}-y_{1}\right)^{2}\)
\[
=\left(x_{2}-x_{1}\right)^{2}\left(\cos ^{2} \theta+\sin ^{2} \theta\right)+\left(y_{2}-y_{1}\right)^{2}\left(\sin ^{2} \theta+\cos ^{2} \theta\right)=\left(x_{2}-x_{1}\right)^{2}+\left(y_{2}-y_{1}\right)^{2}
\]
61. \(A \approx 39.4^{\circ}, B \approx 54.7^{\circ}, C \approx 85.9^{\circ} \quad\) 62.38.5 63. \(r^{2} \cos \theta \sin \theta=1 \quad\) 64. \(\sqrt{29}\left(\cos 291.8^{\circ}+i \sin 291.8^{\circ}\right)\)

10. \(\frac{(x-1)^{2}}{4}+\frac{(y+1)^{2}}{9}=1\) : Ellipse; center \((1,-1)\), vertices \((1,2)\) and \((1,-4)\), foci \((1,-1+\sqrt{5})\) and \((1,-1-\sqrt{5})\)
11. \(y^{2}=-8 x\)

14. \((x-2)^{2}=-4(y+3)\)

17. \(\frac{(x+1)^{2}}{9}-\frac{(y-2)^{2}}{7}=1\)

24. \(x^{\prime 2}-\frac{y^{\prime 2}}{9}=1\)

Hyperbola
Center at the origin
Transverse axis is the \(x^{\prime}\)-axis.
Vertices at \(( \pm 1,0)\)

27. Parabola; directrix is perpendicular to the polar axis 4 units to the left of the pole; vertex is \((2, \pi)\).

12. \(\frac{y^{2}}{4}-\frac{x^{2}}{12}=1\)

15. \((x+2)^{2}-\frac{(y+3)^{2}}{3}=1\)

18. \(\frac{(x-3)^{2}}{9}-\frac{(y-1)^{2}}{4}=1\)

25. \(\frac{x^{\prime 2}}{2}+\frac{y^{\prime 2}}{4}=1\)

Ellipse
Center at origin
Major axis is the \(y^{\prime}\)-axis.
Vertices at \((0, \pm 2)\)

28. Ellipse; directrix is parallel to the polar axis 6 units below the pole; vertices are \(\left(6, \frac{\pi}{2}\right)\) and \(\left(2, \frac{3 \pi}{2}\right)\).

30. \(y^{2}-8 x-16=0 \quad\) 31. \(3 x^{2}-y^{2}-8 x+4=0\)
32.

\(x+4 y=2\)
33.

\(\frac{x^{2}}{9}+\frac{(y-2)^{2}}{16}=1\)
13. \(\frac{x^{2}}{16}+\frac{y^{2}}{7}=1\)

16. \(\frac{(x+4)^{2}}{16}+\frac{(y-5)^{2}}{25}=1\)

19. Parabola
20. Ellipse
21. Parabola
22. Hyperbola
23. Ellipse
26. \(y^{\prime 2}=-\frac{4 \sqrt{13}}{13} x^{\prime}\)

Parabola
Vertex at the origin
Focus on the \(x^{\prime}\)-axis at \(\left(-\frac{\sqrt{13}}{13}, 0\right)\)

29. Hyperbola; directrix is perpendicular to the polar axis 1 unit to the right of the pole; vertices are \(\left(\frac{2}{3}, 0\right)\) and \((-2, \pi)\).

34.

\(1+y=x\)
35. \(x=t, y=-2 t+4,-\infty<t<\infty ; x=\frac{t-4}{-2}, y=t,-\infty<t<\infty\) 36. \(x=4 \cos \left(\frac{\pi}{2} t\right), y=3 \sin \left(\frac{\pi}{2} t\right), 0 \leq t \leq 4 \quad\) 37. \(\frac{x^{2}}{5}-\frac{y^{2}}{4}=1\)

57. \(\left(y_{1}-y_{2}\right) x-\left(x_{1}-x_{2}\right) y+\left(x_{1} y_{2}-x_{2} y_{1}\right)=0\)
\[
\begin{aligned}
\left(y_{1}-y_{2}\right) x+\left(x_{2}-x_{1}\right) y & =x_{2} y_{1}-x_{1} y_{2} \\
\left(x_{2}-x_{1}\right) y-\left(x_{2}-x_{1}\right) y_{1} & =\left(y_{2}-y_{1}\right) x+x_{2} y_{1}-x_{1} y_{2}-\left(x_{2}-x_{1}\right) y_{1} \\
\left(x_{2}-x_{1}\right)\left(y-y_{1}\right) & =\left(y_{2}-y_{1}\right) x-\left(y_{2}-y_{1}\right) x_{1} \\
y-y_{1} & =\frac{y_{2}-y_{1}}{x_{2}-x_{1}}\left(x-x_{1}\right)
\end{aligned}
\]
61. 50.5 square units 63. \((x-3)^{2}+(y+2)^{2}=25\)
65. If \(a=0\), we have
\[
\begin{aligned}
b y & =s \\
c x+d y & =t
\end{aligned}
\]

Thus, \(y=\frac{s}{b}\) and
\(x=\frac{t-d y}{c}=\frac{t b-d s}{b c}\)
Using Cramer's Rule, we get
\(x=\frac{s d-t b}{-b c}=\frac{t b-s d}{b c}\)
\(y=\frac{-s c}{-b c}=\frac{s}{b}\)

If \(b=0\), we have
\[
\begin{aligned}
a x & =s \\
c x+d y & =t
\end{aligned}
\]

Since \(D=a d \neq 0\), then \(a \neq 0\) and \(d \neq 0\).
Thus, \(x=\frac{s}{a}\) and
\[
y=\frac{t-c x}{d}=\frac{t a-c s}{a d}
\]

Using Cramer's Rule, we get
\(x=\frac{s d}{a d}=\frac{s}{a}\)
\(y=\frac{t a-c s}{a d}\)

If \(c=0\), we have
\(a x+b y=s\)
\[
d y=t
\]

Since \(D=a d \neq 0\), then
\(a \neq 0\) and \(d \neq 0\).
Thus, \(y=\frac{t}{d}\) and
\(x=\frac{s-b y}{a}=\frac{s d-b t}{a d}\)
Using Cramer's Rule, we get
\(x=\frac{s d-b t}{a d}\)
\(y=\frac{a t}{a d}=\frac{t}{d}\)

If \(d=0\), we have \(a x+b y=s\)
\[
c x=t
\]

Since \(D=-b c \neq 0\), then \(b \neq 0\) and \(c \neq 0\).
Thus, \(x=\frac{t}{c}\) and
\(y=\frac{s-a x}{b}=\frac{s c-a t}{b c}\)
Using Cramer's Rule, we get
\(x=\frac{-t b}{-b c}=\frac{t}{c}\)
\(y=\frac{a t-s c}{-b c}=\frac{s c-a t}{b c}\)

\subsection*{11.4 Assess Your Understanding (page 850)}
1. (I) \(n=1: 2(1)=2\) and \(1(1+1)=2\)
(II) If \(2+4+6+\cdots+2 k=k(k+1)\), then \(2+4+6+\cdots+2 k+2(k+1)=(2+4+6+\cdots+2 k)+2(k+1)\)
\[
=k(k+1)+2(k+1)=k^{2}+3 k+2=(k+1)(k+2)=(k+1)[(k+1)+1] .
\]
3. (I) \(n=1: 1+2=3\) and \(\frac{1}{2}(1)(1+5)=\frac{1}{2}(6)=3\)
(II) If \(3+4+5+\cdots+(k+2)=\frac{1}{2} k(k+5)\), then \(3+4+5+\cdots+(k+2)+[(k+1)+2]\)
\[
=[3+4+5+\cdots+(k+2)]+(k+3)=\frac{1}{2} k(k+5)+k+3=\frac{1}{2}\left(k^{2}+7 k+6\right)=\frac{1}{2}(k+1)(k+6)=\frac{1}{2}(k+1)[(k+1)+5] .
\]
5. (I) \(n=1: 3(1)-1=2\) and \(\frac{1}{2}(1)[3(1)+1]=\frac{1}{2}(4)=2\)
(II) If \(2+5+8+\cdots+(3 k-1)=\frac{1}{2} k(3 k+1)\), then \(2+5+8+\cdots+(3 k-1)+[3(k+1)-1]\) \(=[2+5+8+\cdots+(3 k-1)]+(3 k+2)=\frac{1}{2} k(3 k+1)+(3 k+2)=\frac{1}{2}\left(3 k^{2}+7 k+4\right)=\frac{1}{2}(k+1)(3 k+4)\) \(=\frac{1}{2}(k+1)[3(k+1)+1]\).
7. (I) \(n=1: 2^{1-1}=1\) and \(2^{1}-1=1\)
(II) If \(1+2+2^{2}+\cdots+2^{k-1}=2^{k}-1\), then \(1+2+2^{2}+\cdots+2^{k-1}+2^{(k+1)-1}=\left(1+2+2^{2}+\cdots+2^{k-1}\right)+2^{k}\) \(=2^{k}-1+2^{k}=2\left(2^{k}\right)-1=2^{k+1}-1\).
9. (II) \(n=1: 4^{1-1}=1\) and \(\frac{1}{3}\left(4^{1}-1\right)=\frac{1}{3}(3)=1\)
(II) If \(1+4+4^{2}+\cdots+4^{k-1}=\frac{1}{3}\left(4^{k}-1\right)\), then \(1+4+4^{2}+\cdots+4^{k-1}+4^{(k+1)-1}=\left(1+4+4^{2}+\cdots+4^{k-1}\right)+4^{k}\) \(=\frac{1}{3}\left(4^{k}-1\right)+4^{k}=\frac{1}{3}\left[4^{k}-1+3\left(4^{k}\right)\right]=\frac{1}{3}\left[4\left(4^{k}\right)-1\right]=\frac{1}{3}\left(4^{k+1}-1\right)\).
11. (I) \(n=1: \frac{1}{1 \cdot 2}=\frac{1}{2}\) and \(\frac{1}{1+1}=\frac{1}{2}\)
(II) If \(\frac{1}{1 \cdot 2}+\frac{1}{2 \cdot 3}+\frac{1}{3 \cdot 4}+\cdots+\frac{1}{k(k+1)}=\frac{k}{k+1}\), then \(\frac{1}{1 \cdot 2}+\frac{1}{2 \cdot 3}+\frac{1}{3 \cdot 4}+\cdots+\frac{1}{k(k+1)}+\frac{1}{(k+1)[(k+1)+1]}\)
\(=\left[\frac{1}{1 \cdot 2}+\frac{1}{2 \cdot 3}+\frac{1}{3 \cdot 4}+\cdots+\frac{1}{k(k+1)}\right]+\frac{1}{(k+1)(k+2)}=\frac{k}{k+1}+\frac{1}{(k+1)(k+2)}=\frac{k(k+2)+1}{(k+1)(k+2)}\) \(=\frac{k^{2}+2 k+1}{(k+1)(k+2)}=\frac{(k+1)^{2}}{(k+1)(k+2)}=\frac{k+1}{k+2}=\frac{k+1}{(k+1)+1}\).
13. (I) \(n=1: 1^{2}=1\) and \(\frac{1}{6} \cdot 1 \cdot 2 \cdot 3=1\)
(II) If \(1^{2}+2^{2}+3^{2}+\cdots+k^{2}=\frac{1}{6} k(k+1)(2 k+1)\), then \(1^{2}+2^{2}+3^{2}+\cdots+k^{2}+(k+1)^{2}\)
\[
\begin{aligned}
& =\left(1^{2}+2^{2}+3^{2}+\cdots+k^{2}\right)+(k+1)^{2}=\frac{1}{6} k(k+1)(2 k+1)+(k+1)^{2}=\frac{1}{6}\left(2 k^{3}+9 k^{2}+13 k+6\right) \\
& =\frac{1}{6}(k+1)(k+2)(2 k+3)=\frac{1}{6}(k+1)[(k+1)+1][2(k+1)+1]
\end{aligned}
\]
15. (II) \(n=1: 5-1=4\) and \(\frac{1}{2}(1)(9-1)=\frac{1}{2} \cdot 8=4\)
(II) If \(4+3+2+\cdots+(5-k)=\frac{1}{2} k(9-k)\), then \(4+3+2+\cdots+(5-k)+[5-(k+1)]\)
\(=[4+3+2+\cdots+(5-k)]+4-k=\frac{1}{2} k(9-k)+4-k=\frac{1}{2}\left(9 k-k^{2}+8-2 k\right)=\frac{1}{2}\left(-k^{2}+7 k+8\right)\)
\(=\frac{1}{2}(k+1)(8-k)=\frac{1}{2}(k+1)[9-(k+1)]\).
17. (I) \(n=1: 1 \cdot(1+1)=2\) and \(\frac{1}{3} \cdot 1 \cdot 2 \cdot 3=2\)
(II) If \(1 \cdot 2+2 \cdot 3+3 \cdot 4+\cdots+k(k+1)=\frac{1}{3} k(k+1)(k+2)\), then \(1 \cdot 2+2 \cdot 3+3 \cdot 4+\cdots+k(k+1)\)
\(+(k+1)[(k+1)+1]=[1 \cdot 2+2 \cdot 3+3 \cdot 4+\cdots+k(k+1)]+(k+1)(k+2)\)
\(=\frac{1}{3} k(k+1)(k+2)+\frac{1}{3} \cdot 3(k+1)(k+2)=\frac{1}{3}(k+1)(k+2)(k+3)=\frac{1}{3}(k+1)[(k+1)+1][(k+1)+2]\).
19. (I) \(n=1: 1^{2}+1=2\), which is divisible by 2 .
(II) If \(k^{2}+k\) is divisible by 2 , then \((k+1)^{2}+(k+1)=k^{2}+2 k+1+k+1=\left(k^{2}+k\right)+2 k+2\). Since \(k^{2}+k\) is divisible by 2 , and \(2 k+2\) is divisible by 2 , then \((k+1)^{2}+(k+1)\) is divisible by 2 .
21. (I) \(n=1: 1^{2}-1+2=2\), which is divisible by 2 .
(II) If \(k^{2}-k+2\) is divisible by 2 , then \((k+1)^{2}-(k+1)+2=k^{2}+2 k+1-k-1+2=\left(k^{2}-k+2\right)+2 k\). Since \(k^{2}-k+2\) is divisible by 2 , and \(2 k\) is divisible by 2 , then \((k+1)^{2}-(k+1)+2\) is divisible by 2 .
23. (I) \(n=1\) : If \(x>1\), then \(x^{1}=x>1\).
(II) Assume, for an arbitrary natural number \(k\), that if \(x>1\) then \(x^{k}>1\). Multiply both sides of the inequality \(x^{k}>1\) by \(x\). If \(x>1\), then \(x^{k+1}>x>1\).
25. (I) \(n=1: a-b\) is a factor of \(a^{1}-b^{1}=a-b\).
(II) If \(a-b\) is a factor of \(a^{k}-b^{k}\), then \(a^{k+1}-b^{k+1}=a\left(a^{k}-b^{k}\right)+b^{k}(a-b)\).

Since \(a-b\) is a factor of \(a^{k}-b^{k}\) and \(a-b\) is a factor of \(a-b\), then \(a-b\) is a factor of \(a^{k+1}-b^{k+1}\).
27. (I) \(n=1:(1+a)^{1}=1+a \geq 1+1 \cdot a\)
(II) Assume that there is an integer \(k\) for which the inequality holds. So \((1+a)^{k} \geq 1+k a\). We need to show that \((1+a)^{k+1} \geq 1+(k+1) a\). \((1+a)^{k+1}=(1+a)^{k}(1+a) \geq(1+k a)(1+a)=1+k a^{2}+a+k a=1+(k+1) a+k a^{2} \geq 1+(k+1) a\).
29. If \(2+4+6+\cdots+2 k=k^{2}+k+2\), then \(2+4+6+\cdots+2 k+2(k+1)\)
\[
\begin{aligned}
& =(2+4+6+\cdots+2 k)+2 k+2=k^{2}+k+2+2 k+2=k^{2}+3 k+4=\left(k^{2}+2 k+1\right)+(k+1)+2 \\
& =(k+1)^{2}+(k+1)+2
\end{aligned}
\]

But \(2 \cdot 1=2\) and \(1^{2}+1+2=4\). The fact is that \(2+4+6+\cdots+2 n=n^{2}+n\), not \(n^{2}+n+2\) (Problem 1).
31. (I) \(n=1:[a+(1-1) d]=a\) and \(1 \cdot a+d \frac{1 \cdot(1-1)}{2}=a\).
(II) If \(a+(a+d)+(a+2 d)+\cdots+[a+(k-1) d]=k a+d \frac{k(k-1)}{2}\), then
\(a+(a+d)+(a+2 d)+\cdots+[a+(k-1) d]+[a+((k+1)-1) d]=k a+d \frac{k(k-1)}{2}+a+k d\)
\(=(k+1) a+d \frac{k(k-1)+2 k}{2}=(k+1) a+d \frac{(k+1)(k)}{2}=(k+1) a+d \frac{(k+1)[(k+1)-1]}{2}\).
33. (I) \(n=3\) : The sum of the angles of a triangle is \((3-2) \cdot 180^{\circ}=180^{\circ}\).
(II) Assume for some \(k \geq 3\) that the sum of the angles of a convex polygon of \(k\) sides is \((k-2) \cdot 180^{\circ}\). A convex polygon of \(k+1\) sides consists of a convex polygon of \(k\) sides plus a triangle (see the illustration). The sum of the angles is \((k-2) \cdot 180^{\circ}+180^{\circ}=(k-1) \cdot 180^{\circ}=[(k+1)-2] \cdot 180^{\circ}\).

38. \(\$ 23,397.17\)

\section*{Chapter Test (page 860)}
1. \(0, \frac{3}{10}, \frac{8}{11}, \frac{5}{4}, \frac{24}{13} \quad\) 2. \(4,14,44,134,404 \quad\) 3. \(2-\frac{3}{4}+\frac{4}{9}=\frac{61}{36} \quad\) 4. \(-\frac{1}{3}-\frac{14}{9}-\frac{73}{27}-\frac{308}{81}=-\frac{680}{81} \quad\) 5. \(\sum_{k=1}^{10}(-1)^{k}\left(\frac{k+1}{k+4}\right) \quad\) 6. Neither
7. Geometric; \(r=4 ; S_{n}=\frac{2}{3}\left(1-4^{n}\right) \quad\) 8. Arithmetic: \(d=-8 ; S_{n}=n(2-4 n) \quad\) 9. Arithmetic; \(d=-\frac{1}{2} ; S_{n}=\frac{n}{4}(27-n)\)
10. Geometric; \(r=\frac{2}{5} ; S_{n}=\frac{125}{3}\left[1-\left(\frac{2}{5}\right)^{n}\right]\) 11. Neither 12. Converges; \(\frac{1024}{5} \quad\) 13. \(243 m^{5}+810 m^{4}+1080 m^{3}+720 m^{2}+240 m+32\)
14. First show that the statement holds for \(n=1 \cdot\left(1+\frac{1}{1}\right)=1+1=2\). The equality is true for \(n=1\), so Condition I holds. Next, assume that \(\left(1+\frac{1}{1}\right)\left(1+\frac{1}{2}\right)\left(1+\frac{1}{3}\right) \cdots\left(1+\frac{1}{n}\right)=n+1\) is true for some \(k\), and determine whether the formula then holds for \(k+1\). Assume that \(\left(1+\frac{1}{1}\right)\left(1+\frac{1}{2}\right)\left(1+\frac{1}{3}\right) \cdots\left(1+\frac{1}{k}\right)=k+1\). Now show that \(\left(1+\frac{1}{1}\right)\left(1+\frac{1}{2}\right)\left(1+\frac{1}{3}\right) \cdots\left(1+\frac{1}{k}\right)\left(1+\frac{1}{k+1}\right)\)
\(=(k+1)+1=k+2\). Do this as follows:
\(\left(1+\frac{1}{1}\right)\left(1+\frac{1}{2}\right)\left(1+\frac{1}{3}\right) \cdots\left(1+\frac{1}{k}\right)\left(1+\frac{1}{k+1}\right)=\left[\left(1+\frac{1}{1}\right)\left(1+\frac{1}{2}\right)\left(1+\frac{1}{3}\right) \cdots\left(1+\frac{1}{k}\right)\right]\left(1+\frac{1}{k+1}\right)\)
\(=(k+1)\left(1+\frac{1}{k+1}\right)(\) induction assumption \()=(k+1) \cdot 1+(k+1) \cdot \frac{1}{k+1}=k+1+1=k+2\)
Condition II also holds. Thus, the formula holds true for all natural numbers.
15. After 10 years, the car will be worth \(\$ 6103.11\).
16. The weightlifter will have lifted a total of 8000 pounds after 5 sets.

89. \(\{x \mid x \geq-2\)
91. \(21<\) Age \(<30\)
93. (a) Male \(\geq 77.3\) years \(\quad\) (b) Female \(\geq 81.6\) years
(c) A female can expect to live 4.3 years longer.
95. The agent's commission ranges from \(\$ 45,000\) to \(\$ 95,000\), inclusive. As a percent of selling price, the commission ranges from \(5 \%\) to \(8.6 \%\), inclusive. 97. The amount withheld varies from \(\$ 111.20\) to \(\$ 161.20\), inclusive. 99. The usage varies from \(650 \mathrm{~kW} \cdot \mathrm{hr}\) to \(2500 \mathrm{~kW} \cdot \mathrm{hr}\), inclusive. 101. The dealer's cost varies from \(\$ 15,254.24\) to \(\$ 16,071.43\), inclusive. 103. (a) You need at least a 74 on the fifth test. (b) You need at least a 77 on the fifth test.
105. \(\frac{a+b}{2}-a=\frac{a+b-2 a}{2}=\frac{b-a}{2}>0\); therefore, \(a<\frac{a+b}{2} . b-\frac{a+b}{2}=\frac{2 b-a-b}{2}=\frac{b-a}{2}>0\); therefore, \(b>\frac{a+b}{2}\).
107. \((\sqrt{a b})^{2}-a^{2}=a b-a^{2}=a(b-a)>0\); thus \((\sqrt{a b})^{2}>a^{2}\) and \(\sqrt{a b}>a\).
\[
b^{2}-(\sqrt{a b})^{2}=b^{2}-a b=b(b-a)>0 ; \text { thus } b^{2}>(\sqrt{a b})^{2} \text { and } b>\sqrt{a b}
\]
109. \(h-a=\frac{2 a b}{a+b}-a=\frac{a b-a^{2}}{a+b}=\frac{a(b-a)}{a+b}>0\); thus \(h>a . b-h=b-\frac{2 a b}{a+b}=\frac{b^{2}-a b}{a+b}=\frac{b(b-a)}{a+b}>0\); thus \(h<b\).
111. Since \(0<a<b\), then \(a-b<0\) and \(\frac{a-b}{a b}<0\). So \(\frac{a}{a b}-\frac{b}{a b}<0\), or \(\frac{1}{b}-\frac{1}{a}<0\). Therefore, \(\frac{1}{b}<\frac{1}{a}\). And \(0<\frac{1}{b}\) because \(b>0\).
113. \(x^{2}+1 \geq 1\) for all real numbers \(x\).

\section*{CONICS}

\section*{Parabola}

\[
y^{2}=4 a x
\]
\[
y^{2}=-4 a x
\]

\(x^{2}=4 a y\)
\(x^{2}=-4 a y\)

Ellipse
\[
\frac{x^{2}}{a^{2}}+\frac{y^{2}}{b^{2}}=1, \quad a>b, c^{2}=a^{2}-b^{2}
\]

\[
\frac{x^{2}}{b^{2}}+\frac{y^{2}}{a^{2}}=1, \quad a>b, c^{2}=a^{2}-b^{2}
\]

\section*{Hyperbola}
\[
\begin{aligned}
& V_{1}=(-a, 0) \\
& \frac{x^{2}}{a^{2}}-\frac{y^{2}}{b^{2}}=1, \quad c^{2}=a^{2}+b^{2} \\
& \text { Asymptotes: } y=\frac{b}{a} x, \quad y=-\frac{b}{a} x
\end{aligned}
\]

\section*{PROPERTIES OF LOGARITHMS}
\(\log _{a}(M N)=\log _{a} M+\log _{a} N\)
\(\log _{a}\left(\frac{M}{N}\right)=\log _{a} M-\log _{a} N\)
\(\log _{a} M^{r}=r \log _{a} M\)
\(\log _{a} M=\frac{\log M}{\log a}=\frac{\ln M}{\ln a}\)

\section*{PERMUTATIONS/COMBINATIONS}
\(0!=1 \quad 1!=1\)
\(n!=n(n-1) \cdot\).
\(P(n, r)=\frac{n!}{(n-r)!}\)
\(C(n, r)=\binom{n}{r}=\frac{n!}{(n-r)!r!}\)

\[
\frac{y^{2}}{a^{2}}-\frac{x^{2}}{b^{2}}=1, \quad c^{2}=a^{2}+b^{2}
\]

Asymptotes: \(\quad y=\frac{a}{b} x, \quad y=-\frac{a}{b} x\)

\section*{BINOMIAL THEOREM}
\[
\begin{aligned}
(a+b)^{n}=a^{n}+\binom{n}{1} b a^{n-1} & +\binom{n}{2} b^{2} a^{n-2} \\
& +\cdots+\binom{n}{n-1} b^{n-1} a+b^{n}
\end{aligned}
\]

\section*{ARITHMETIC SEQUENCE}
\[
\begin{aligned}
a_{1}+\left(a_{1}+d\right)+\left(a_{1}+\right. & 2 d)+\cdots+\left[a_{1}+(n-1) d\right] \\
& =\frac{n}{2}\left[2 a_{1}+(n-1) d\right]=\frac{n}{2}\left[a_{1}+a_{n}\right]
\end{aligned}
\]

\section*{GEOMETRIC SEQUENCE}
\[
a_{1}+a_{1} r+a_{1} r^{2}+\cdots+a_{1} r^{n-1}=a_{1} \cdot \frac{1-r^{n}}{1-r}
\]

\section*{GEOMETRIC SERIES}
\[
\text { If } \begin{aligned}
|r|<1, a_{1}+a_{1} r+a_{1} r^{2}+\cdots & =\sum_{k=1}^{\infty} a_{1} r^{k-1} \\
& =\frac{a_{1}}{1-r}
\end{aligned}
\]

\section*{LIBRARY OF FUNCTIONS}

Identity Function
\(f(x)=x\)

\section*{Square Root Function}
\[
f(x)=\sqrt{x}
\]

Absolute Value Function
\(f(x)=|x|\)

Square Function
\(f(x)=x^{2}\)

\section*{Reciprocal Function}
\(f(x)=\frac{1}{x}\)

Exponential Function
\(f(x)=e^{x}\)

\section*{Cosine Function}
\(f(x)=\cos x\)

\section*{Cube Function}
\(f(x)=x^{3}\)

\section*{Cube Root Function}
\[
f(x)=\sqrt[3]{x}
\]

Natural Logarithm Function \(f(x)=\ln x\)

\section*{Tangent Function}
\(f(x)=\tan x\)

\section*{Cotangent Function}
\(f(x)=\cot x\)

\section*{FORMULAS/EQUATIONS}

Distance Formula

\section*{Standard Equation of a Circle}

\section*{Slope Formula}

Point-Slope
Equation of a Line

Slope-Intercept Equation of a Line

Quadratic Formula

If \(P_{1}=\left(x_{1}, y_{1}\right)\) and \(P_{2}=\left(x_{2}, y_{2}\right)\), the distance from \(P_{1}\) to \(P_{2}\) is
\[
d\left(P_{1}, P_{2}\right)=\sqrt{\left(x_{2}-x_{1}\right)^{2}+\left(y_{2}-y_{1}\right)^{2}}
\]

The standard equation of a circle of radius \(r\) with center at \((h, k)\) is
\[
(x-h)^{2}+(y-k)^{2}=r^{2}
\]

The slope \(m\) of the line containing the points \(P_{1}=\left(x_{1}, y_{1}\right)\) and \(P_{2}=\left(x_{2}, y_{2}\right)\) is
\[
\begin{aligned}
m=\frac{y_{2}-y_{1}}{x_{2}-x_{1}} & \text { if } x_{1} \neq x_{2} \\
m \text { is undefined } & \text { if } x_{1}=x_{2}
\end{aligned}
\]

The equation of a line with slope \(m\) containing the point \(\left(x_{1}, y_{1}\right)\) is
\[
y-y_{1}=m\left(x-x_{1}\right)
\]

The equation of a line with slope \(m\) and \(y\)-intercept \(b\) is
\[
y=m x+b
\]

The solutions of the equation \(a x^{2}+b x+c=0, a \neq 0\), are
\[
x=\frac{-b \pm \sqrt{b^{2}-4 a c}}{2 a}
\]

If \(b^{2}-4 a c>0\), there are two unequal real solutions.
If \(b^{2}-4 a c=0\), there is a repeated real solution.
If \(b^{2}-4 a c<0\), there are two complex solutions that are not real.

\section*{GEOMETRY FORMULAS}

\section*{Circle}

Triangle

\section*{Rectangle}

\section*{Rectangular Box}

Sphere

Right Circular Cylinder

\[
r=\text { Radius, } A=\text { Area, } C=\text { Circumference }
\]
\[
A=\pi r^{2} \quad C=2 \pi r
\]
\(b=\) Base, \(h=\) Altitude (Height), \(A=\) area
\[
A=\frac{1}{2} b h
\]
\(l=\) Length, \(w=\) Width, \(A=\) area, \(P=\) perimeter
\[
A=l w \quad P=2 l+2 w
\]
\(l=\) Length, \(w=\) Width, \(h=\) Height, \(V=\) Volume, \(S=\) Surface area
\[
V=l w h \quad S=2 l w+2 l h+2 w h
\]
\(r=\) Radius, \(V=\) Volume, \(S=\) Surface area
\[
V=\frac{4}{3} \pi r^{3} \quad S=4 \pi r^{2}
\]
\(r=\) Radius, \(h=\) Height, \(V=\) Volume, \(S=\) Surface area
\[
V=\pi r^{2} h \quad S=2 \pi r^{2}+2 \pi r h
\]

\section*{TRIGONOMETRIC FUNCTIONS}

Let \(t\) be a real number and let \(P=(x, y)\) be the point on the unit circle that corresponds to \(t\).
\(\sin t=y\)
\(\cos t=x\)
\(\tan t=\frac{y}{x}, \quad x \neq 0\)
\(\csc t=\frac{1}{y}, \quad y \neq 0 \quad \sec t=\frac{1}{x}, \quad x \neq 0 \quad \cot t=\frac{x}{y}, \quad y \neq 0\)

\section*{TRIGONOMETRIC IDENTITIES}

\section*{Fundamental Identities}
\(\tan \theta=\frac{\sin \theta}{\cos \theta} \quad \cot \theta=\frac{\cos \theta}{\sin \theta}\)
\(\csc \theta=\frac{1}{\sin \theta} \quad \sec \theta=\frac{1}{\cos \theta} \quad \cot \theta=\frac{1}{\tan \theta}\)
\(\sin ^{2} \theta+\cos ^{2} \theta=1\)
\(\tan ^{2} \theta+1=\sec ^{2} \theta\)
\(\cot ^{2} \theta+1=\csc ^{2} \theta\)

\section*{Half-Angle Formulas}
\(\sin \frac{\theta}{2}= \pm \sqrt{\frac{1-\cos \theta}{2}}\)
\(\cos \frac{\theta}{2}= \pm \sqrt{\frac{1+\cos \theta}{2}}\)
\(\tan \frac{\theta}{2}=\frac{1-\cos \theta}{\sin \theta}\)

Double-Angle Formulas
\(\sin (2 \theta)=2 \sin \theta \cos \theta\)
\(\cos (2 \theta)=\cos ^{2} \theta-\sin ^{2} \theta\)
\(\cos (2 \theta)=2 \cos ^{2} \theta-1\)
\(\cos (2 \theta)=1-2 \sin ^{2} \theta\)
\(\tan (2 \theta)=\frac{2 \tan \theta}{1-\tan ^{2} \theta}\)

\section*{Product-to-Sum Formulas}
\(\sin \alpha \sin \beta=\frac{1}{2}[\cos (\alpha-\beta)-\cos (\alpha+\beta)]\)
\(\cos \alpha \cos \beta=\frac{1}{2}[\cos (\alpha-\beta)+\cos (\alpha+\beta)]\)
\(\sin \alpha \cos \beta=\frac{1}{2}[\sin (\alpha+\beta)+\sin (\alpha-\beta)]\)

\section*{Sum-to-Product Formulas}
\[
\begin{aligned}
& \sin \alpha+\sin \beta=2 \sin \frac{\alpha+\beta}{2} \cos \frac{\alpha-\beta}{2} \\
& \sin \alpha-\sin \beta=2 \sin \frac{\alpha-\beta}{2} \cos \frac{\alpha+\beta}{2} \\
& \cos \alpha+\cos \beta=2 \cos \frac{\alpha+\beta}{2} \cos \frac{\alpha-\beta}{2} \\
& \cos \alpha-\cos \beta=-2 \sin \frac{\alpha+\beta}{2} \sin \frac{\alpha-\beta}{2}
\end{aligned}
\]

\section*{Law of Sines}
\(\frac{\sin A}{a}=\frac{\sin B}{b}=\frac{\sin C}{c}\)

\section*{Law of Cosines}
\(a^{2}=b^{2}+c^{2}-2 b c \cos A\)
\(b^{2}=a^{2}+c^{2}-2 a c \cos B\) \(c^{2}=a^{2}+b^{2}-2 a b \cos C\)```

[^0]:    *A postulate from geometry states that the transversal $\overline{P_{1} P_{2}}$ forms congruent corresponding angles with the parallel line segments $\overline{P_{1} A}$ and $\overline{M B}$.

[^1]:    *The sets $X$ and $Y$ will usually be sets of real numbers, in which case a (real) function results. The two sets can also be sets of complex numbers, and then we have defined a complex function. In the broad definition (proposed by Lejeune Dirichlet), $X$ and $Y$ can be any two sets.

[^2]:    *Although a precise definition requires calculus, we'll agree for now that a continuous function is one whose graph has no gaps or holes and can be traced without lifting the pencil from the paper.
