Care has been taken to confirm the accuracy of the information presented and to describe generally accepted practices. However, the author and publisher are not responsible for errors or omissions or for any consequences from application of the information in this book and make no warranty, expressed or implied, with respect to the currency, completeness, or accuracy of the contents of the publication. Application of this information in a particular situation remains the professional responsibility of the practitioner.

The author and publisher have exerted every effort to ensure that drug selection and dosage set forth in this text are in accordance with current recommendations and practice at the time of publication. However, in view of ongoing research, changes in government regulations, and the constant flow of information relating to drug therapy and drug reactions, the reader is urged to check the package insert for each drug for any change in indications and dosage and for added warnings and precautions. This is particularly important when the recommended agent is a new or infrequently employed drug.

Some drugs and medical devices presented in this publication have Food and Drug Administration (FDA) clearance for limited use in restricted research settings. It is the responsibility of the health care provider to ascertain the FDA status of each drug or device planned for use in their clinical practice.

Preface

The first edition of *Ocular Differential Diagnosis* was published in 1972, and various editions have been translated in Spanish, Turkish, Chinese, Portuguese, and Italian. All previous editions have been my work. Dr. Gonzalo Murillo of La Paz, Bolivia, helped in edition four and five with the diagnostic decision tables. In edition six, section editors helped to standardize the language and made helpful suggestions. I feel this is the best edition of *Ocular Differential Diagnosis* thus far. This text would not have been possible without the superb efforts of Renee Tindall, Dr. Fernando Murillo, Angie Brown, and Dr. Kae Chatman.

The *Ocular Differential Diagnosis* book provides comprehensive lists of causes for symptoms or findings. Frequently more information is needed and hopefully *Ocular Syndromes and Systemic Diseases* will furnish additional information to make a better diagnosis. I hope the ophthalmologist and optometrist using this book will bring any errors in this edition to my attention.

Little Rock, Arkansas

Frederick Hampton Roy M.D.

How To Use This Book

This book can be used easily and quickly by following the directions presented below.

- 85 If the sign or symptom relates to a particular region of the eye, turn to the table of contents preceding this page to find the number of the page on which listings of the signs and symptoms pertaining to the specific region begins. This latter page (or those immediately following) will refer the user to that (or those) on which the various causes of the condition are listed. For example, let us assume that the patient has pigmentation of the cornea. The table of contents on page vii shows that the cornea section begins on page 241. Turning to page 241 the user finds references to page 248 on which the causes of corneal pigmentation are listed according to type. In the subject index, this topic is listed as Cornea, pigmentation of, 248.
2. If the symptom, such as binocular diplopia or night blindness, does not relate to a particular region of the eye, look for it either in the subject index at the back of the book or under General Signs and Symptoms beginning on page 619.

Various features of a disease may be crosschecked. For instance, a “pulsating exophthalmos with orbital bruit and conjunctival edema” may be sought under orbit, page 3, where the user of the book is referred to exophthalmos, page 4, and orbital bruit, page 31, and under conjunctiva, page 183, where the user is referred to conjunctival edema, page 202. The terms “exophthalmos,” “orbital bruit” (under orbit, bruit of) and “conjunctival edema” (under conjunctiva, edema of) may also be found in the subject index. Terms such as “secondary glaucoma” are indexed under the noun, e.g., glaucoma, secondary.

3. Following some of the differential diagnosis lists are diagnostic decision tables. These tables list the history, physical signs, and laboratory tests that differentiate each possible diagnosis. These can be identified in the subject index because they are followed by a *t*.

I

Regional Signs and Symptoms

1

Orbit

Pseudoproptosis (Appearance of Exophthalmos)

1. *Asymmetry of bony orbits
2. Congenital cystic eyeball
3. *Contralateral enophthalmos (see p. 15)
4. Facial asymmetry as progressive facial hemiatrophy (Parry-Romberg syndrome)
5. Harlequin orbit (shallow orbit with arched superior and lateral wall) as with hypophosphatasia
6. Hypoplastic supraorbital ridges as in trisomy (Edward syndrome)
7. Retraction of upper lid as with thyroid disease
8. Slight blepharoptosis as with Horner syndrome of contralateral eye
9. Shallow orbit as in Crouzon disease (craniofacial dysostosis)
10. Unilateral congenital glaucoma
11. Unilateral high-axial myopia
12. Unilateral secondary glaucoma resulting from ocular trauma during childhood

Newell FW. *Ophthalmology: principles and concepts*, 7th ed. St. Louis: CV Mosby, 1992.

Rootman J. *Diseases of the orbit*. Philadelphia: JB Lippincott, 1988.

Exophthalmos

1. Drugs, including the following:

adrenal cortex injection	hydrocortisone	paramethasone
aldosterone	iodide and iodine solution and compounds	poliovirus vaccine
beclomethasone		prednisolone
betamethasone	levothyroxine	prednisone
carbimazole	liothyronine	propranolol
cocaine	liotrix	propylthiouracil
cortisone	lithium carbonate	radioactive iodides
desoxycorticosterone	medrysone succinylcholine	thyroglobulin
dexamethasone	meprednisone	thyroid
dextrothyroxine	methimazole	triamcinolone
fludrocortisone	methylprednisolone	vitamin A
flu-prednisolone	methylthiouracil	
fluorometholone	oral contraceptives	

2. Inflammation
 - A. Acute—orbital cellulitis
 - B. Acute suppurative—mucormycosis (diabetic or debility)
 - C. Allergic fungal sinusitis
 - D. Benign lymphoepithelial lesion (Mikulicz disease)
 - E. *Chronic (nongranulomatous—pseudotumor)
 - F. Chronic (granulomatous—tuberculosis, sarcoid (Schaumann syndrome), syphilis (lues), parasites, aspergillosis)
 - G. Relapsing polychondritis
3. Injuries
 - A. Foreign body
 - B. Orbital hemorrhage
 - C. Orbital roof fracture
 - D. Secondary carotid cavernous sinus fistula
 - E. Thermal burns

-
4. Systemic disease
 - A. Acute intracranial hypertension
 - B. Amyloidosis (Lubarsch-Pick syndrome)
 - C. Chloroma
 - D. Cretinism (hypothyroidism)
 - E. Hydrocephalus and ventriculoperitoneal syndrome
 - F. Hypervitaminosis A
 - G. Hypophosphatasia (phosphoethanolaminuria)
 - H. *Thyroid disorder
 - I. Myasthenia gravis (Erb-Goldflam syndrome)
 - J. Obesity
 5. Tumors
 - A. Cartilaginous tumors
 1. Cartilaginous hamartoma
 2. Chondroma
 3. Chondrosarcoma
 4. Mesenchymal chondrosarcoma
 - B. Cystic lesions
 1. Colobomatous cyst
 2. Dermoid cyst
 3. Hematocele
 4. Hydatid cyst
 5. Meningocele and meningoencephalocele
 6. Mucocele
 7. Optic nerve sheath cyst
 8. Simple epithelial cyst
 9. Teratoma
 - C. Fibrocytic tumors
 1. Fibroma
 2. Fibrosarcoma
 3. Fibrous histiocyoma
 4. Juvenile fibromatosis
 5. Nodular fasciitis
 - D. Histiocytic lesions
 1. Others
 - a. Juvenile xanthogranuloma (JXG, nevoxanthoendothelioma)
 - b. Sinus histiocytosis with massive lymphadenopathy
 2. Systemic histiocytoses (histiocytosis X) (Hand-Schüller-Christian disease)
 - E. Inflammatory pseudotumor of orbit
 1. Ectopic cerebellar tissue in orbit
 2. Local, such as fungus or foreign body
 3. Systemic such as sarcoidosis syndrome (Schaumann syndrome) or collagen disease
 4. Unknown cause
 - F. Lacrimal gland (fossa) lesions
 1. Epithelial tumors
 - a. Adenoid cystic carcinoma
 - b. Mucoepidermoid carcinoma

- c. Pleomorphic adenocarcinoma (malignant mixed tumor)
 - d. Pleomorphic adenoma (benign mixed tumor)
- 2. Nonepithelial lesions
 - a. Infectious
 - b. Inflammatory
 - c. Lymphoid and leukemia
 - d. Systemic (sarcoid)
- G. Lipocytic and myxoid tumors
 - 1. Lipoma
 - 2. Liposarcoma
 - 3. Myxoid liposarcoma
 - 4. Myxoma
- H. Lymphoid tumors and leukemias (excluding lacrimal gland lesions)
 - 1. Benign reactive lymphoid hyperplasia
 - 2. Burkitt lymphoma
 - 3. Lymphoblastic leukemia
 - 4. Myelogenous leukemia (granulocytic sarcoma)
 - 5. Non-Hodgkin lymphoma
- I. Metastatic tumors of the orbit
 - 1. Malignant melanoma of skin
 - 2. Neuroblastoma (child)
 - 3. Other sites such as Ewing sarcoma
 - 4. Primary in breast (adult female)
 - 5. Primary in lung (adult male)
 - 6. Primary in prostate (adult male)
- J. Nonepithelial lesions
 - 1. Benign reactive lymphoid hyperplasia
 - 2. Inflammatory pseudotumors (dacryoadenitis)
 - 3. Lymphoma
 - 4. Plasmacytoma
- K. Optic nerve and meningeal tumors
 - 1. Juvenile pilocytic astrocytoma (optic nerve glioma)
 - 2. Meningioma
 - a. Primary optic nerve sheath
 - b. Secondary
 - 3. Malignant optic nerve glioma
- L. Osseous and fibroosseous tumors
 - 1. Aneurysmal bone cyst
 - 2. Benign osteoblastoma
 - 3. Brown tumor of hyperparathyroidism
 - 4. Fibrous dysplasia (Albright syndrome)
 - 5. Giant cell granuloma
 - 6. Giant cell tumor (osteoclastoma)
 - 7. Infantile cortical hyperostosis
 - 8. Ossifying fibroma
 - 9. Osteoma
 - 10. Osteosarcoma
- M. Peripheral nerve tumors
 - 1. Alveolar soft-part sarcoma

-
2. Amputation neuroma
 3. Granular cell myoblastoma
 4. Neurilemoma
 - a. Benign
 - b. Malignant
 5. Neurofibroma
 - a. Plexiform
 - b. Solitary
 6. Paraganglioma (chemodectoma)
- N. Primary melanocytic tumors
1. Blue nevus
 2. Melanocytic hamartoma
 3. Melanotic progonoma (retinal tumor)
 4. Primary orbital melanoma
- O. Rhabdomyoma and rhabdomyosarcoma
1. Rhabdomyoma
 2. Rhabdomyosarcoma
- P. Secondary orbital tumors from adjacent structures
1. Conjunctival origin
 - a. Melanoma
 - b. Mucoepidermoid carcinoma
 - c. Squamous cell carcinoma
 2. Eyelid origin
 - a. Basal cell carcinoma
 - b. Melanoma
 - c. Sebaceous carcinoma
 - d. Squamous cell carcinoma
 3. Intracranial origin
 - a. Astrocytoma
 - b. Meningioma
 4. Intraocular origin
 - a. Medulloepithelioma
 - b. Neurilemoma
 - c. Retinoblastoma
 - d. Uveal melanoma
 5. Nasopharyngeal origin
 - a. Angiofibroma
 - b. Carcinoma
 - c. Melanoma
 6. Paranasal sinus origin
 - a. Ethmoid sinus carcinoma
 - b. Inverting papilloma
 - c. Maxillary sinus carcinoma
 - d. Rhabdomyosarcoma
- Q. Vasculogenic lesions
1. Capillary hemangioma
 2. Cavernous hemangioma
 3. Hemangiopericytoma
 4. Hemangiosarcoma

5. Kaposi sarcoma
 6. Lymphangioma
 7. Varices
 8. Vascular leiomyoma
 9. Vascular leiomyosarcoma
6. Vascular disorders
 - A. Allergic vasculitis
 - B. Angioedema (Quincke disease)
 - C. Arteriovenous aneurysm or varices
 - D. Arteriovenous fistula (varicose aneurysm)
 - E. Collagen disease—lupus erythematosus (Kaposi-Libman-Sacks syndrome), periarteritis nodosa (Kussmaul disease), or dermatomyositis (Wagner-Unverricht syndrome)
 - F. Cranial arteritis
 - G. Thrombophlebitis
 - H. Scurvy causing bilateral orbital hemorrhage

Syndromes and Diseases Associated with Exophthalmos

1. Actinomycosis
2. Albright syndrome (fibrous dysplasia)
3. Amyloidosis (Lubarsch-Pick syndrome)
4. Apert syndrome (sphenocraniosyndactyly)
5. Arteriovenous fistula (varicose aneurysm)
6. Aspergillosis
7. *Bacillus cereus*
8. Bloch-Sulzberger disease (incontinentia pigmenti)
9. Bonnet-Dechaume-Blanc syndrome (neuroretinoangiomas syndrome)
10. Bourneville syndrome (tuberous sclerosis)
11. Caffey syndrome (infantile cortical hyperostosis)
12. Carotid artery-cavernous sinus fistula
13. *Clostridium perfringens*
14. Coenurosis
15. Craniostenosis
16. Cretinism (hypothyroidism)
17. Crouzon disease (craniofacial dysostosis)
18. Cryptococcosis
19. Cushing syndrome (adrenocortical syndrome)

20. Dejean sign (orbital floor fracture)
21. de Lange syndrome (congenital muscular hypertrophy-cerebral syndrome)
22. Dermatomyositis (polymyositis dermatomyositis)
23. Dermoid
24. Diencephalic epilepsy syndrome (autonomic epilepsy syndrome)
25. Dirofilariasis
26. Dracontiasis (Guinea worm infection)
27. Engelmann syndrome (diaphyseal dysplasia)
28. Ewing sarcoma
29. Feer disease (infantile acrodynia)
30. Fibrosarcoma
31. Fibrous dysplasia (Albright syndrome)
32. Foix syndrome (cavernous sinus thrombosis)
33. Gardner syndrome
34. Grönblad-Strandberg syndrome (pseudoxanthoma elasticum)
35. Hallermann-Streiff-François syndrome (oculomandibulofacial dyscephaly)
36. Hand-Schüller-Christian disease (histiocytosis X)
37. Heerfordt syndrome (uveoparotid fever)
38. Hemangiomas
39. Herpes zoster
40. Hodgkin disease
41. Hollenhorst syndrome (chorioretinal infarction syndrome)
42. Horner syndrome (cervical sympathetic paralysis syndrome)
43. Hunter syndrome (MPS [mucopolysaccharidosis] II)
44. Hurler (MPS I-H) syndrome
45. Hutchinson disease (adrenal cortex neuroblastoma with orbital metastasis)
46. Hydatid cyst
47. Hydrocephalus chondrodystrophicus congenita (extreme hydrocephalus syndrome)
48. Hypertension
49. Hyperthyroidism (Basedow syndrome)
50. Hypervitaminosis A
51. Hypophosphatasia (phosphoethanolaminuria)
52. Jansen disease (metaphyseal dysostosis)
53. JXG (nevoxanthoendothelioma)
54. Kleeblattschädel syndrome (cloverleaf skull)
55. Leiomyoma
56. Leopard syndrome (multiple lentigines syndrome)
57. Leprechaunism
58. Leukemia
59. Linear nevus sebaceous of Jadassohn
60. Lupus erythematosus (Kaposi-Libman-Sacks syndrome)
61. Lymphoid hyperplasia
62. Lymphangioma
63. Lymphosarcoma
64. Melnick-Needles syndrome (osteodysplasty)
65. Meningioma
66. Mikulicz syndrome (dacryosialoadenopathy)
67. Möbius disease (congenital paralysis of sixth and seventh nerves)

68. Mucocele
69. Mucormycosis
70. Multiple myeloma
71. Mumps
72. Myasthenia gravis (Erb-Goldflam syndrome)
73. Neurilemoma
74. Noonan syndrome (male Turner syndrome)
75. Osteopetrosis (Albers-Schönberg syndrome)
76. Paget syndrome (osteitis deformans)
77. Periarteritis nodosa (Kussmaul syndrome)
78. Periocular and ocular metastatic tumors
79. Pfeiffer syndrome
80. Pierre-Robin syndrome (micrognathia-glossoptosis syndrome)
81. Progeria (Hutchinson-Gilford syndrome)
82. Pyknodysostosis
83. Quincke disease (angioedema)
84. Relapsing polychondritis
85. Retinoblastoma
86. Rhabdomyosarcoma
87. Rochon-Duvigneaud syndrome (superior orbital fissure syndrome)
88. Rollet syndrome (orbital apex-sphenoidal syndrome)
89. Sarcoidosis syndrome (Schaumann syndrome)
90. Scaphocephaly syndrome
91. Scheie syndrome (MPS I-S)
92. Scurvy (avitaminosis C)
93. Sebaceous gland carcinoma
94. Seckel syndrome (bird-headed dwarf syndrome)
95. Sézary syndrome (mycosis fungoides syndrome)
96. Shy-Gonatas syndrome (orthostatic hypotension syndrome)
97. Siegrist sign (pigmented choroidal vessels)
98. Silverman syndrome (battered baby syndrome)
99. Sphenocavernous syndrome
100. Streptococcus
101. Sturge-Weber syndrome (encephalofacial angiomatosis)
102. Syphilis (lues)
103. Thermal burns
104. Trichinellosis
105. Trisomy syndrome (Edward syndrome)
106. Tuberculosis
107. Turner syndrome (gonadal dysgenesis)
108. von Hippel-Lindau syndrome (retinocerebral angiomatosis)
109. von Recklinghausen disease (neurofibromatosis)
110. Wegener syndrome (Wegener granulomatosis)

Specific Exophthalmos

1. Age
 - A. Newborn—most common
 1. *Orbital sepsis
 2. Orbital neoplasm including congenital malignant teratoid neoplasm
 - B. Neonatal—osteomyelitis of the maxilla
 - C. Early childhood (up to 1 year of age—most common)
 1. *Dermoid
 2. *Hemangioma
 3. Dermolipoma
 4. Histiocytosis X including Hand-Schüller-Christian disease
 5. *Orbital extension of retinoblastoma
 - D. One to five years—most common
 1. *Dermoid
 2. Metastatic neuroblastoma
 3. Rhabdomyosarcoma
 4. Epithelial cyst, such as sebaceous cyst and epithelial inclusion cyst
 5. Glioma of optic nerve
 6. Sphenoid wing meningioma
 7. *Orbital extension of retinoblastoma
 8. Fibrous dysplasia (Albright syndrome)
 9. Metastatic embryonal sarcoma
 10. *Hemangioma
 - E. Five to ten years—most common
 1. Pseudotumor
 2. Orbital extension of retinoblastoma
 3. Malignant lymphomas and leukemias
 4. *Dermoid
 5. *Hemangioma
 6. Meningioma
 7. Fibrous dysplasia (Albright syndrome)
 8. Rhabdomyosarcoma
 9. Orbital hematoma
 10. Glioma of optic nerve
 - F. Ten to thirty years—most common
 1. *Pseudotumor
 2. Mucocele
 3. Meningioma
 4. *Endocrine ophthalmopathy (thyroid-related ophthalmopathy)
 5. Lacrimal gland tumor
 6. Malignant lymphomas and leukemias
 7. Dermoid
 8. Hemangioma
 9. Peripheral nerve tumors
 10. Undifferentiated sarcomas
 11. Osteoma
 12. Fibrous dysplasia (Albright syndrome)
 13. Rhabdomyosarcoma

-
14. Glioma of optic nerve
- G. Thirty to fifty years—most common
 1. *Pseudotumor
 2. Mucocele
 3. Malignant lymphomas and leukemias
 4. *Hemangioma
 5. *Endocrine ophthalmopathy (thyroid-related ophthalmopathy)
 6. Lacrimal gland tumors
 7. Rhinogenic carcinoma
 8. Malignant melanoma
 9. Osteosarcoma
 10. Fibrosarcoma
 11. Metastatic carcinoma
 12. Meningioma
 13. Dermoid
 - H. Fifty to seventy years—most common
 1. *Pseudotumor
 2. *Mucocele
 3. *Malignant lymphomas and leukemias
 4. Dermoid
 5. Carcinoma of palpebral or epibulbar origin
 6. *Meningioma
 7. *Endocrine ophthalmopathy (thyroid-related ophthalmopathy)
 8. Lacrimal gland tumor
 9. Osteosarcoma
 10. Fibrosarcoma
 11. Undifferentiated sarcoma
 12. Metastatic carcinoma
 13. Osteoma
 14. Fibrous dysplasia (Albright syndrome)
 15. Neurofibroma
 16. Hemangioma
 - I. More than seventy years—most common
 1. Melanoma
 2. Pseudotumor
 3. *Lymphoma
 4. *Metastatic tumor
 5. Basal cell carcinoma
 6. Mucocele
2. Unilateral exophthalmos—most common
 - A. Anatomical conditions
 1. Unilateral myopia of high degree
 2. Defects in the vault of the orbit: meningocele, encephalocele, hydroencephalocele
 3. Exophthalmos associated with arterial hypertension
 4. Recurrent exophthalmos from retrobulbar hemorrhage, lymphangioma
 5. Intermittent exophthalmos associated with venous anomalies within the cranium
 6. Disease of the pituitary gland; meningiomas involving sphenoid ridge

7. *Unilateral exophthalmos associated with endocrine or thyroid-related ophthalmopathy
- B. Traumatic conditions
1. Contralateral floor fracture with enophthalmos
 2. Fracture of the orbit with retrobulbar hemorrhage
 3. Laceration and rupture of the tissues of the orbit and the extraocular muscles
 4. Intracranial trauma sustained at birth; aneurysm in orbit
 5. Pulsating exophthalmos from carotid-cavernous aneurysm
 6. Spontaneous retrobulbar hemorrhage as seen in whooping cough
 7. Chronic subdural hematoma bulging into orbit
 8. Posterior exophthalmos (orbital apex lesion)
 - a. Pseudotumor
 - b. Malignant tumor
 - c. Benign tumor
 - d. Vascular disease
 - e. Infection
- C. Inflammatory conditions
1. Retrobulbar abscess and cellulitis
 2. Thrombophlebitis of the orbital veins
 3. Cavernous sinus thrombosis
 4. Erysipelas (St. Anthony fire)
 5. Tenonitis
 6. Periostitis (syphilitic or tuberculous)
 7. Orbital mucocele, pyocele; cholesteatoma
 8. Orbital exostosis
 9. Paget disease with hyperostosis
 10. Actinomycosis, trichinosis, mycotic pseudotumor
 11. Herpes (HSV-1) with acute retinal necrosis
- D. Disease of blood, lymph, and hematopoietic system
1. Rickets (avitaminosis D)
 2. Scurvy (avitaminosis C)
 3. Hemophilia (factor VIII deficiency)
 4. Lymphosarcoma
 5. Chloroma
 6. Hodgkin disease
- E. Space-taking lesions
1. Vascular anomalies
 - a. Congenital orbital varix (young patient with systemic abnormalities)
 - b. Cavernous hemangioma (middle age)
 - c. Capillary hemangioma (young children) Kasabach-Merrit syndrome
 - d. Lymphangiomas
 2. Orbital tumors: pseudotumors, orbital cysts, meningocele, lymphangioma, orbital meningioma, lacrimal gland tumor, sarcoma, metastatic carcinoma, metastatic adrenal tumors, osteomas arising in the accessory nasal sinuses, tumors of the nasopharynx (benign and malignant)
 3. Intracranial tumor with orbital extension including chordoma and meningioma
- F. Unilateral exophthalmos in children
1. Inflammation

2. Vascular disorders
 3. Neoplasms
 4. Metabolic diseases
 5. Developmental anomalies
 6. Others
 7. *Orbital cellulitis
3. Bilateral exophthalmos—most common
 - A. *Thyroid or endocrine ophthalmopathy
 - B. Orbital myositis (owing to causes other than thyroid dysfunction)
 - C. Cavernous sinus thrombosis (Foix syndrome)
 - D. Metastatic neuroblastoma
 - E. Hand-Schüller-Christian disease (histiocytosis X)
 - F. Crouzon disease (craniofacial dysostosis)
 - G. Paget disease (osteitis deformans)
 4. Type proptosis—most common
 - A. Straightforward—glioma of optic nerve, intraconal cavernous hemangioma
 - B. Down and temporal—mucocele of frontal sinus
 - C. Down and nasal—lacrimal gland lesion
 - D. Downward—tumor of roof of orbit
 - E. Upward—tumor of floor of orbit
 5. Transient exophthalmos
 - A. *Orbital varices
 - B. Orbital varices with intracranial extension
 - C. Arteriovenous malformations
 - D. Cavernous hemangioma
 - E. Intraorbital arteriovenous malformation
 6. Pulsating exophthalmos—most common
 - A. *Carotid-cavernous fistula
 - B. von Recklinghausen disease associated with bony defect of skull
 - C. Large frontal mucocele
 - D. Meningoencephalocele
 - E. Blow-in fracture of roof of orbit
 - F. Neurofibromatosis
 - G. Fistula
 - H. Malignancies
 - I. Mucoceles
 - J. Orbital varix
 - K. Dermoid cysts
 - L. Aneurysm
 7. Recurrent exophthalmos
 - A. Recurrent orbital inflammation (pseudotumor) or hemorrhage
 - B. Orbital cysts that rupture
 - C. Lymphangioma (children)
 - D. Syndrome of intermittent exophthalmos-congenital venous malformations of the orbit: venous angioma and orbital varix
 - E. Temporal lobe tumor with orbital extension
 - F. Neurofibromatosis
 - G. Vascular neoplasm

8. Intermittent exophthalmos
 - A. Orbital varices
 - B. Recurrent hemorrhage
 - C. Vascular neoplasm
 - D. Lymphangioma
9. Exophthalmos associated with conjunctival chemosis, restricted movement of eyes because of pain—pseudotumor
10. Exophthalmos in an acutely ill patient—cavernous sinus thrombosis
11. Exophthalmos associated with engorged conjunctival episcleral vessels
 - A. Nonpulsating—cerebral arteriovenous angioma, ophthalmic vein thrombosis, or cavernous sinus thrombosis
 - B. Pulsating exophthalmos—carotid-cavernous sinus fistula
12. Exophthalmos associated with a palpable mass in region of the lacrimal gland
 - A. Primary inflammatory exophthalmos
 - B. Neoplasm
 - C. Sarcoidosis syndrome (Schaumann syndrome)
 - D. Hodgkin disease
13. Exophthalmos in patient with uncontrolled diabetes, usually with acidosis, who develops unilateral lid edema, ptosis, internal and external ophthalmoplegia, proptosis, and severe vision loss—orbital mucormycosis
14. Exophthalmos in an infant with ecchymosis of the eyelids
 - A. Metastatic neuroblastoma
 - B. Orbital leukemia infiltration
15. Bilateral exophthalmos from bilateral orbital pseudotumor
 - A. Eosinophilic granuloma
 - B. Retroperitoneal fibrosis
 - C. Myasthenia gravis (Erb-Goldflam syndrome)

16. Retrobulbar hemorrhage	S	R		R	R		S
17. Venous malformation in lids, fornix, and canthal areas				U			
18. Vitreous hemorrhage							S
Laboratory Data							
1. Carotid angiography				U			R
2. Complete blood count	U						
3. Computed tomographic scan	U	U	U		U	S	U
4. Histopathology			S	U	U	U	S
5. Ultrasonography	U	U	U		S	U	U
6. Venous angiography				U			
7. Roentgenogram (orbit and skull)		R		U	S	S	S

R = rarely; S = sometimes; and U = usually.

Recurrent exophthalmos

Enophthalmos

1. Senility (common)
2. Wasting diseases—loss of orbital fat
3. *Injury—blowout fracture of floor of orbit (most common)
4. Orbital varices—transient exophthalmos with fat atrophy

5. Chronic or severe liver or gallbladder disease (usually in right eye owing to increased tone of orbicularis muscle and extraocular muscles)
6. Iatrogenic
 - A. Orbital decompression
 - B. Sinus surgery
7. Superior sulcus deformity
 - A. Traumatic bony loss
 - B. Atrophy of the orbital tissues
 - C. Levator detachment with ptosis
 - D. Migration of muscle cone implant
 - E. Herniated orbital fat secondary to an orbital fracture
8. Associated syndromes
 - A. Arthrogyrosis (amyoplasia congenital)
 - B. Babinski-Nageotte syndrome (medullary tegmental paralysis)
 - C. Cestan-Chenais syndrome (lesion in the lateral portion of medulla oblongata)
 - D. Cockayne syndrome (dwarfism with retinal atrophy and deafness)
 - E. Craniocervical syndrome (whiplash injury)
 - F. Cretinism (hypothyroidism)
 - G. Cryptophthalmia syndrome
 - H. Dejean syndrome (orbital floor syndrome)
 - I. Dejerine-Klumpke syndrome (thalamic hyperesthetic anesthesia)
 - J. Duane retraction syndrome
 - K. Freeman-Sheldon syndrome (craniocarpotarsal dysplasia)
 - L. General fibrosis syndrome
 - M. Greig syndrome (ocular hypertelorism syndrome)
 - N. Hemifacial microsomia syndrome (François-Haustrate syndrome)
 - O. Horner syndrome (cervical sympathetic paralysis syndrome)
 - P. Klippel-Trenaunay-Weber syndrome (angioosteohypertrophy syndrome)
 - Q. Krause syndrome (encephaloophthalmic syndrome)
 - R. Maple syrup urine disease (branched chain ketoaciduria)
 - S. Morquio syndrome (MPS IV)
 - T. Naffziger syndrome (scalenus anticus syndrome)
 - U. Pancoast syndrome (superior pulmonary sulcus syndrome)
 - V. Parry-Romberg syndrome (progressive facial hemiatrophy)
 - W. Passow syndrome (Bremer status dysraphicus)
 - X. Raeder syndrome (paratrigeminal paralysis)
 - Y. Retroparotid space syndrome
 - Z. Silent sinus syndrome

 - AA. Vernet syndrome (jugular foramen syndrome)
 - BB. von Herrenschiwand syndrome (sympathetic heterochromia)
 - CC. Wallenberg syndrome (dorsolateral medullary syndrome)
9. Apparent enophthalmos with horizontal conjugate gaze
10. Metastatic adenocarcinoma of orbit (cicatrical)
11. Neurofibromatosis: pulsating enophthalmos
12. Typhoid fever (abdominal typhus)

Albert DM, Jakobiec FA. *Principles and practice of ophthalmology*. Philadelphia: WB Saunders, 1994:1881-2095.

Stasior OG, Roen JL. Traumatic enophthalmos. *Ophthalmology* 1982;89:1267.

Intraorbital Calcifications

1. Calcification of more irregular configuration and texture
 - A. Cysticercosis
 - B. Orbital hematoma
 - C. Plexiform neurofibroma
 - D. Toxoplasmosis
 - E. Tuberculosis
2. Calcification of orbital vessels
 - A. Atheromatous plaque
 - B. Monkeberg sclerosis
 - C. Secondary to metabolic-endocrine disturbances such as hyperparathyroidism or hypervitaminosis
 - D. Band-shaped keratopathy
3. Chronic inflammatory and parasitic disease of the orbit
4. Hemangiopericytoma
5. Intraocular calcifications following
 - A. Congenital deformity
 - B. Malignant lacrimal gland tumor
 - C. Recurrent iritis and keratitis
 - D. Retinal detachment
 - E. Trauma (perforating, nonperforating, or surgical)
6. Intraocular sarcoma
7. Mucocoele
8. Myositis ossificans
9. Orbital phleboliths: helical form in veins—smooth, round, or oval
10. Organized hematomas of the orbit
11. *Retinoblastoma
12. Retrolental fibroplasia
13. Sites of intraocular calcification
 - A. Cyclitic membrane
 - B. Lens
 - C. Peripapillary choroid
 - D. Posterior pole to ora serrata in region of choroid and pigment epithelium
 - E. Retina
 - F. Vitreous

Diagnostic table

	Hyperthyroidism	Severe Anemias	Arteriovenous Aneurysm	Stenosis of Carotid Artery	Aneurysmal Angiomas of Orbit or Fundus	Abnormal Communication in Cavernous Sinus	Intermittent or Pulsating Exophthalmos
History							
1. Amaurosis fugax				U			
2. Bilateral	U	S					S
3. Congenital						S	S
4. Diplopia	S						
5. Familial	U						
6. Middle age	U				U		
7. Older patients				U			
8. Traumatic						U	S
Physical Findings							
1. Arteriovenous malformations of retina					U	S	S
2. Central or branch retinal artery occlusion				U			
3. Chemosis of conjunctiva	S					U	S
4. Conjunctival vessels dilated						U	S
5. Cotton-wool spots		U		U			
6. Enlargement periorbital veins of lids, forehead, temple						S	U
7. Exposure keratopathy	S						
8. Hollenhorst plaques				U			
9. Increased intraocular pressure						U	S
10. Increased lid pigmentation	U						
11. Infrequent blinking	U						
12. Lid edema	S						
13. Lid lag	U						
14. Neurofibromas in lids, conjunctiva, and cornea							S
15. Nodules in iris							S
16. Ophthalmoplegia	S						
17. Restriction of extraocular myaels	U						
18. Papilledema		U					
19. Retinal hemorrhage		S	U	S			
20. Retraction of upper lid	U						
21. Tremor of closed lids	U						
Laboratory Data							
1. Carotid arteriography				S			
2. Cerebral angiography					U	U	
3. Computed tomographic scan	U						
4. Orbital ultrasonogram	U						
5. Orbital venography							U
6. Orbital roentgenogram							S
7. Platelet levels and hemoglobin low counts		U					
8. T3-T4	U						

R = rarely; S = sometimes; and U = usually.

Orbital bruit (noise heard over orbit with stethoscope)

Orbital Bruit (Noise Heard Over Orbit with Stethoscope)

- 1. Bilateral
 - A. Hyperthyroidism
 - B. Severe anemias
- 2. Unilateral
 - A. *Abnormal communication in the cavernous sinus (i.e., bilateral carotid-cavernous sinus)

- B. Aneurysmal angioma of orbit or fundus such as in Wyburn-Mason syndrome (Bonnet-Dechaume-Blanc syndrome)
- C. Arteriovenous aneurysm (arteriovenous fistula)
- D. Intermittent or pulsating exophthalmos
- E. Stenosis of carotid artery including thrombosis, sclerosis, or external pressure such as that due to an outer-ridge sphenoidmeningioma

Albert DM, Jakobiec FA. *Principles and practice of ophthalmology*. Philadelphia: WB Saunders, 1994:1881-2095.

Grobb WE, et al. Facial hamartomas in children: neurofibroma, lymphangioma, and hemangioma. *Plast Reconstr Surg* 1980;66:509.

Kushner FH. Carotid-cavernous fistula as a complication of carotid endarterectomy. *Ann Ophthalmol* 1981;13:979.

Lloyd GA. Vascular anomalies in the orbit: C T and angiographic diagnosis. *Orbit* 1982;1:45.

Orbital Emphysema (Air Found in Orbital Tissues and Adnexa Usually Demonstrable by Palpation)

1. *Due to fracture of ethmoid sinuses or orbital floor
2. Following forceful blowing of nose
3. Injury from compressed air
4. Orbital cellulitis and abscess with gas formation by infecting organism
5. Osteomyelitis and infected sinus with fistulous communication with gas formation by infecting organism
6. Resulting from use of high-speed dental drill and air-water spray during oral operation
7. Subconjunctival emphysema seen with mechanical ventilation

Buckley MJ, et al. Orbital emphysema causing vision loss after a dental extraction. *J Am Dent Assoc* 1990;120:421-422.

Zimmer-Galler IE, Bartley GB. Orbital emphysema: case reports and review of the literature. *Mayo Clin Proc* 1994;69:115-121.

Orbital Pain

1. Acute dacryoadenitis
2. Amputation neuroma of the orbit
3. Associated syndromes
 - A. Cavernous sinus thrombosis syndrome
 - B. Charlin syndrome (nasal nerves syndrome)
 - C. Erysipelas
 - D. Ophthalmoplegic migraine syndrome
 - E. Raeder syndrome (paratrigeminal paralysis)
 - F. Tolosa-Hunt syndrome (painful ophthalmoplegia).
4. Break-bone fever (dengue fever)
5. Clostridium perfringens
6. Eye strain from uncorrected errors of refraction
7. Myositis
 - A. Collagen diseases
 - B. Infectious myositis
 - C. Trichinosis
8. Orbital cellulitis or abscess
9. Orbital periostitis because of injury, tuberculosis, syphilis, extension of sinus disease, or other conditions

10. *Pseudotumor or tumor of the orbit—pain infrequently present
11. Retrobulbar neuritis
12. Trauma
13. Tumors of cerebellopontine angle, frequent lesion of seventh nerve

Albert DM, Jakobiec FA. *Principles and practice of ophthalmology*. Philadelphia: WB Saunders, 1994:1881-2095.

Bullen CL, Younge BR. Chronic orbital myositis. *Ophthalmology* 1982;89:1749.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Shallow Orbits or Diminished Orbital Volume (Illusion of Proptosis or Glaucoma)

1. Aminopterin-induced syndrome
2. Apert syndrome (acrocephalosyndactyly)
3. Carpenter syndrome
4. Cerebrohepatorenal syndrome (Smith-Lemli-Opitz syndrome)
5. Craniostenosis
6. Crouzon disease (craniofacial dysostosis)
7. Diseases of nasal passages and sinuses
 - A. Dentigerous cysts
 - B. Fibrous dysplasia (Albright syndrome)
 - C. Hypoplasia of maxilla associated with chronic maxillary sinusitis
 - D. Rhinoscleroma
8. Dubowitz syndrome
9. Early enucleation of eye
10. *Familial hypoplasia of orbital margin
11. Frontometaphyseal dysplasia (FMD)
12. Hyperostosis (hypertrophy of orbital bones)
13. Hypophosphatasia-harlequin orbit (shallow orbit with arched superior and lateral wall)
14. Kleeblattschädel syndrome
15. Lateral displacement of medial orbital wall by hypertrophic polypoid nasal sinus disease
16. Marshall-Smith syndrome
17. Oculoauriculovertebral dysplasia (Goldenhar syndrome)
18. Osteogenesis imperfecta (van der Hoeve syndrome)
19. Radiation injury of bone
20. Robert syndrome (pseudothalidomide syndrome)
21. Saethre-Chotzen syndrome
22. Secondary to fracture
23. Stanesco dysostosis syndrome
24. Trisomy 13-(trisomy D) (Patau syndrome)
25. Trisomy (Edward syndrome)
26. Zellweger syndrome
27. 6q- D syndrome
28. 9p- syndrome

Cursiefen C, et al. Adenoma of the nonpigmented ciliary epithelium mimicking a malignant melanoma of the iris. *Arch Ophthalmol* 1999;117:113-118.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Smith DW. *Recognizable patterns of human malformation*, 4th ed. Philadelphia: WB Saunders, 1988.

Pseudohypertelorism (Illusion of Increased Distance Between Bony Orbits and Increased Interpupillary Distance)

1. Blepharophimosis
2. *Epicanthal skin folds
3. Exotropia
4. *Flat nasal bridge of nose
5. Increased distance between the inner canthi (telecanthus)
6. Widely spaced eyebrows

DeMyer W. The median cleft face syndrome. *Neurology* 1967;17:961.

Hypertelorism (Increased Distance Between Bony Orbits and Increased Interpupillary Distance)

1. Aarskog syndrome (faciodigitogenital syndrome)
2. Acrocollosal syndrome
3. Acrodysostosis syndrome
4. Albers-Schönberg disease (osteopetrosis)
5. Aminopterin-induced syndrome
6. * Apert syndrome (acro dysplasia)
7. * Association of hypertelorism, microtia, and facial clefting
8. * Baraitser-Winter syndrome
9. BBB syndrome (hypertelorism-hypospadias syndrome)
10. Blatt syndrome (cranioorbitoocular dysraphia)
11. Blepharinosofacial syndrome
12. Camptomelic dysplasia syndrome
13. Carpenter syndrome (acrocephalopolysyndactyly II)
14. Cat's-eye syndrome (Schachenmann syndrome)
15. Cerebral gigantism (Sotos syndrome)
16. Cerebrohepatorenal syndrome (Zellweger)
17. Cherubism
18. Chromosome partial long-arm deletion syndrome (de Grouchy syndrome)
19. Chromosome partial short-arm deletion syndrome [monosomy partial (short-arm) syndrome]
20. Chromosome short-arm deletion
21. Chondrodystrophia calcificans congenita (Conradi syndrome)
22. Cleft lip and palate sequence
23. Clefting, ectropion, and conical teeth syndrome
24. Cleidocranial dysostosis syndrome
25. Coffin-Lowry syndrome
26. Congenital hemihypertrophy
27. Craniocarpotarsal syndrome (Freeman-Sheldon syndrome)
28. Craniocleidodysostosis syndrome (Marie-Sainton syndrome)
29. Craniosynostosis-radial aplasia (Baller-Gerold syndrome)
30. Cretinism (hypothyroidism)
31. Cri-du-chat syndrome (Cry of the cat syndrome)
32. Crouzon disease (craniofacial dysostosis)
33. Cryptophthalmos syndrome
34. Curtius syndrome (ectodermal dysplasia with ocular malformations)
35. Diamond-Blackfan syndrome

36. DiGeorge sequence
37. Down syndrome (mongolism)
38. Dubowitz syndrome (dwarfism-eczema-peculiar facies)
39. Duplication 14Q syndrome
40. Ehlers-Danlos syndrome (fibrodysplasia elastica generalisata)
41. Engelmann syndrome (diaphyseal dysplasia)
42. 18P syndrome
43. Faciooculoacousticorenal syndrome
44. Familial characteristic
45. Familial metaphyseal dysplasia (Pyle disease)
46. Fetal alcohol syndrome
47. Fetal aminopterin effects
48. Fetal hydantoin effects
49. Fish odor syndrome
50. 4Q syndrome
51. Frontonasal dysplasia syndrome (median cleft face syndrome)
52. Frontal encephaloceles
53. Gorlin syndrome (orodigitofacial dysostosis)
54. Greig syndrome (hypertelorism)
55. Haney-Falls syndrome (congenital keratoconus posticus circumscriptus)
56. Holt-Oram syndrome
57. Hurler syndrome (MPS I-H)
58. Hydrocephalus
59. Hypomelanosis of Ito syndrome (systematized achromic nevus)
60. Ichthyosis (collodion baby)
61. Infantile gigantism
62. Infantile hypercalcemia with supraaortic stenosis (Williams-Beuren syndrome)
63. Iris dysplasia-hypertelorism-psychomotor retardation syndrome
64. Jacobs syndrome (triple X syndrome)
65. KBG syndrome (initials of family studied)
66. Kleeblattschädel syndrome (extreme hydrocephalus syndrome)
67. Klein syndrome
68. Klinefelter XXY syndrome (gynecomastia-aspermatogenesis syndrome)
69. Klippel-Feil syndrome (synostosis cervical vertebrae)
70. Larsen syndrome
71. Leprechaunism
72. Lissencephalia (Miller-Dieker syndrome)
73. Little syndrome (nail-patella syndrome)
74. Mandibulofacial dysostosis (Franceschetti syndrome)
75. Maple syrup urine disease (branched-chain ketoaciduria)
76. Marfan syndrome (arachnodactyly-dystrophia-mesodermalis congenita)
77. Marshall-Smith syndrome
78. Meckel-Gruber syndrome
79. Melnick-Needles syndrome (osteodysplasty)
80. Metaphyseal dysostosis (Jansen disease)
81. McFarland syndrome
82. Morquio-Ullrich syndrome (MPS IV)
83. Multiple basal cell nevi (Gorlin-Goltz syndrome)

84. Multiple lentigines syndrome (Leopard syndrome)
85. Myelomeningocele-Chiari malformations
86. Noonan syndrome (male Turner syndrome)
87. Oculodentodigital syndrome
88. Oculomandibulofacial dyscephaly (Hallermann-Streiff syndrome)
89. Optic nerve hypoplasia
90. Orofaciodigital (OFD) type I and type II (Mohr syndrome)
91. Osteogenesis imperfecta (van der Hoeves syndrome)
92. Otopalatodigital syndrome (OPD syndrome)
93. Pallister-Killian syndrome
94. Pena-shokeir type I syndrome
95. Pfeiffer syndrome
96. Potter syndrome (renofacial syndrome)
97. Ring B chromosome
98. Ring chromosome
99. Rieger syndrome (dysgenesis mesostromalis)
100. Robert syndrome (pseudothalidomide syndrome)
101. Robinow syndrome (fetal face syndrome)
102. Saethre-Chotzen syndrome (acrocephalosyndactyly type III)
103. Sjögren-Larson syndrome (oligophrenia-ichthyosis-spastic diplegia syndrome)
104. Sprengel syndrome
105. Traumatic nasoorbital fracture
106. Triploidy syndrome
107. Trisomy syndrome
108. Trisomy 6 q syndrome
109. Trisomy 9q syndrome
110. Trisomy 13- (Patau syndrome)
111. Trisomy 17p syndrome
112. Trisomy syndrome
113. Turner-Bonnevie-Ullrich-Nielsen syndrome
114. Turner syndrome (gonadal dysgenesis)
115. Waardenburg syndrome (embryonic fixation syndrome)
116. Weaver syndrome
117. Williams syndrome
118. XXXX syndrome
119. XXXXX syndrome
120. XXXXY syndrome
121. 4p- syndrome (Wolf syndrome)
122. 4p- D syndrome
123. 6p- D syndrome
124. 9p- syndrome
125. 10q- syndrome
126. 13q- syndrome
127. 18q- syndrome

Pallotta R. Iris coloboma ptosis, hypertelorism, and mental retardation: a new syndrome possibly localized on chromosome 2. *J Med Genet* 1991;28:342-344.

Hypotelorism (Decreased Distance Between Bony Orbits and Decreased Interpupillary Distance)

1. Arrhinencephaly (holoprosencephaly)
2. Cebocephalia
3. Cockayne syndrome (dwarfism with retinal atrophy and deafness)
4. Coffin-Siris syndrome
5. Ethmocephalus
6. *Familial
7. François diencephalic syndrome (Hallerman-Streiff syndrome)
8. Goldenhar syndrome (oculoauriculovertebral dysplasia)
9. Maternal phenylketonuria fetal effects
10. Meckel-Gruber syndrome
11. Median cleft lip (frontonasal dysplasia syndrome)
12. Median philtrum-premaxilla anlage
13. Ocular-dental-digital dysplasia (Meyer-Schivickerath and Weyers syndrome)
14. Ring syndrome
15. Trigenocephaly (C syndrome, Opitz trigonocephaly syndrome)
16. Trisomy 13- (Patau syndrome, trisomy D syndrome)
17. Trisomy 20p syndrome
18. Trisomy (Down syndrome, mongolism)
19. Turner syndrome (gonadal dysgenesis)
20. Williams syndrome
21. Wolf syndrome (monosomy partial syndrome)
22. 5p- D syndrome
23. 18p- syndrome

Deep-Set Eyes

1. Cockayne syndrome (dwarfism with retinal atrophy and deafness)
2. Craniocarpotarsal syndrome (Freeman-Sheldon syndrome)
3. Familial
4. Marfan syndrome (dolichostenomelia-arachnodactylyhyperchondroplasia-dystrophia mesodermalis congenita)
5. Mesodermal dysmorphodystrophy (Weill-Marchesani syndrome)
6. Oculocerebrorenal syndrome (Lowe syndrome)
7. Pyknodysostosis
8. Syndrome of blepharophimosis with myopathy

Aita JA. *Congenital facial anomalies with neurologic defects*. Springfield, IL: Charles C Thomas, 1969.

Prominent Supraorbital Ridges

1. Apert syndrome (acrocephalosyndactylism syndrome)

2. Basal cell nevus syndrome (Gorlin-Goltz syndrome)
3. Cleidocranial dysostosis (Marie-Sainton syndrome)
4. Congenital lipodystrophy
5. Congenital syphilis (congenital lues)
6. Ectodermal dysplasia (Curtius syndrome)
7. *Frontometaphyseal dysplasia
8. Hurler syndrome (MPS I-H)
9. Marfan syndrome (arachnodactyly-dystrophia mesodermalis congenita)
10. Otopalatodigital syndrome (Taybi syndrome)
11. Pyle metaphyseal dysplasia syndrome

Albert DM, Jakobiec FA. *Principles and practice of ophthalmology*. Philadelphia: WB Saunders, 1994:1881-2095.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Osteolysis of Bony Orbit

1. Autoimmune diseases, such as Wegener granulomatosis
2. Congenital
3. Hyperparathyroidism
4. Injury, such as blowout fracture of orbital floor
5. Meningocele and encephalocele of orbit
6. Metastasis from remote primary neoplasms
7. Primary orbital disease
 - A. Infectious, including tuberculosis and syphilis
 - B. Neoplastic, including neurofibroma and lacrimal gland tumor
 - C. Cystic, including dermoid and epidermoid cyst
8. Reticuloendotheliosis as histiocytosis X (Hand-Schüller-Christian disease)
9. Secondary extension of infectious or neoplastic disease from adjacent sinuses, brain, skin, bone, nasopharynx, and esophagus
10. Sinus disease including mucocoeles

Albert DM, Jakobiec FA. *Principles and practice of ophthalmology*. Philadelphia: WB Saunders, 1994:1881-2095.

Margo CE, et al. Psammomatoid ossifying fibroma. *Arch Ophthalmol* 1986;107:1347-1351.

Fossa Formation of Orbit (Local Expansion of Bony Orbital Wall Caused by Persistent Pressure; Bony Cortex is Intact)

1. Encapsulated benign lacrimal gland tumor
2. Encapsulated malignant lacrimal gland tumor
3. Orbital dermoid

Albert DM, Jakobiec FA. *Principles and practice of ophthalmology*. Philadelphia: WB Saunders, 1994:1881-2095.

Jacobs L, et al. *Computerized tomography of the orbit and sella turcica*. New York: Raven Press, 1980.

Zizmor J. Orbital radiology in unilateral exophthalmos. In: Turtz AI. *Proceedings of the Centennial Symposium: Manhattan Eye, Ear, and Throat Hospital, Vol I*. St. Louis: CV Mosby, 1969.

Subperiosteal Orbital Hemorrhage

1. Generalized diseases with bleeding diatheses
2. Paranasal sinusitis

3. Sudden elevation of cranial venous pressure
4. Trauma

Atalla ML, et al. Nontraumatic subperiosteal orbital hemorrhage. *Ophthalmology* 2001;108:183-189.

Hunt KE, Ross JJ. Orbital hemorrhage in the nonoperated eye as a complication of general endotracheal anesthesia. *Arch Ophthalmol* 1998;116L:105-106.

Orbital Hemorrhage

1. Idiopathic
2. Other
 - A. General endotracheal anesthesia
 - B. Late migration of orbital implant
3. Preexisting vascular tumors
 - A. Cholesterol granuloma
 - B. Cystic lymphangiomas
 - C. Hemorrhagic varix
4. Surgery
 - A. Retrobulbar injection
 - B. Rhinoplasty
 - C. Subtentorial infusion anesthesia
5. Systemic
 - A. Heparin
 - B. Thrombolytic
6. Trauma

Chorich LJ, et al. Hemorrhagic ocular complications associated with the use of systemic thrombolytic agents. *Ophthalmology* 1998;105:428-431.

Polito E, et al. Diagnosis and treatment of orbital hemorrhagic lesions. *Ann Ophthalmol* 1994;26:85-93.

Expansion of Orbital Margins (Usually Associated with Benign Tumors of the Orbit)

1. Dermoid
2. Hemangioma
3. Lacrimal gland tumors
4. Meningioma
5. Neurofibroma

Albert DM, Jakobiec FA. *Principles and practice of ophthalmology*. Philadelphia: WB Saunders, 1994:1881-2095.

Coleman DJ, et al. *Ultrasonography of the eye and orbit*. Philadelphia: Lea & Febiger, 1977.

Katz BJ, Nerad JA. Ophthalmic manifestations of fibrous dysplasia. *Ophthalmology* 1998;105:2207-2215.

Zizmor J. Orbital radiology in unilateral exophthalmos. In: Turtz AI, ed. *Proceedings of the Centennial Symposium: Manhattan Eye, Ear, and Throat Hospital, Vol I*. St. Louis: CV Mosby, 1969.

Hypertrophy of Orbital Bones (Hyperostosis or Sclerosis or Both)

1. Acromegaly
2. Anemias of childhood (severe: Cooley, sickle cell, spherocytosis, iron deficiency)
3. Cerebral atrophy (childhood)
4. Craniostenosis

5. Engelmann disease (hereditary diaphyseal dysplasia)
6. Hyperostosis frontalis interna
7. Idiopathic
8. Infantile cortical hyperostosis (Caffey disease)
9. Microcephaly
10. Myotonia atrophica (myotonic dystrophy, Curschmann-Steinert syndrome)
11. Osteopetrosis (Albers-Schönberg disease)
12. Paget disease (osteitis deformans)
13. Tumors of orbit, including osteoma, fibrous dysplasia (Albright syndrome), meningioma, metastatic neuroblastoma, mixed tumors of lacrimal gland, transitional cell carcinomas of the nasopharynx

Pseudoptosis

Pseudoptosis includes conditions that simulate ptosis, but lid droop is not the result of levator malfunction, and ptosis is usually corrected when the causative factors are cleared up or removed.

1. Due to globe displacement
 - A. Anophthalmia including poorly fitting prosthesis
 - B. *Enophthalmos such as that resulting from blowout fracture of the floor of the orbit or atrophy of orbital fat
 - C. *Microphthalmia
 - D. *Phthisis bulbi
 - E. Hypotony and inward collapse of eye
 - F. Cornea plana
 - G. Hypotropia of that eye or hypertropia of the other eye
2. Due to mechanical displacement of the lid
 - A. Inflammation
 1. Trachoma—thick, heavy lid
 2. *Chalazion or hordeolum
 3. Elephantiasis
 4. Chronic conjunctivitis-conjunctival thickening
 5. Traumatic or infectious edema involving the lid
 6. *Blepharitis
 7. Corneal foreign body
 8. Contact lens
 9. Sinusitis, cellulitis
 - B. Tumors, especially fibromas, lipomas, or hemangiomas
 - C. Scar tissue due to burns, physical trauma, and lacerations that can bind the lid down
 - D. Tumors of lacrimal gland—S-shaped lid
3. *Dermatochalasis (ptosis adiposa, baggy lids, “puffs”—senile atrophy of the lid skin)
4. Blepharochalasis—a rare condition occurring in young persons, characterized by recurrent bouts of inflammatory lid edema with subsequent stretching of the skin
5. The oriental lid—the palpebral fissure is narrower than normal and the upper lid rarely has a furrow; hence, the fold usually hangs down to or over the lid margin.

6. Dissociated vertical deviation (DVD)
7. Duane syndrome (retraction syndrome)
8. Blepharospasm—eyebrow lower than normal, hemifacial spasm
9. Contralateral widening of the lid fissure as pseudoptosis (see p. 4), exophthalmos, or lid retraction (see p. 62)
10. Vertical strabismus

Beard C. *Ptosis*. St. Louis: CV Mosby, 1969.

Huber A. *Eye symptoms in brain tumors*, 2nd ed. St. Louis: CV Mosby, 1971.

Blepharoptosis (Ptosis, Droopy Upper Lid; Weak Levator Palpebrae Superioris Muscle)

1. Congenital ptosis
 - A. *Simple (most congenital ptosis)—may be the result of autosomal dominant inheritance
 - B. Complicated ptosis
 1. Ptosis with ophthalmoplegia (most congenital ptosis)—the most commonly involved muscle is the superior rectus
 2. Ptosis with other lid deformities such as epicanthus, blepharophimosis, microphthalmia, and lid coloboma—may be hereditary
 3. Synkinetic (paradoxical) ptosis—aberrant nervous connections from the other extrinsic muscles of the eye and jaw to the levator muscle
 - a. Marcus Gunn phenomenon (jaw-winking reflex)—motor root of the fifth cranial nerve to the muscle of mastication also is misdirected through the third nerve to the levator muscle.
 - b. Phenomenon of Marin Amat (reverse jaw-winking reflex)
 - c. Misdirected third nerve syndrome—bizarre eyelid movements that may accompany various eye movements; the ptotic eyelid may rise as the medial rectus, the inferior rectus, or the superior rectus muscle contracts.
 4. Horner syndrome
 - C. Involutional ptosis
 - D. Mechanical
 1. Periorbital tumor
 2. Neuroma, neurofibroma
 3. Cicatricial skin changes
2. Acquired ptosis
 - A. Traumatic ptosis
 1. Eyelid laceration
 2. Postsurgical ptosis
 - a. Anterior transposition of inferior oblique muscle
 - b. Enucleation
 - c. Orbital operation
 - d. Cataract operation
 - e. Radial keratotomy

3. Foreign bodies lying in the roof of the orbit
 4. Fracture of orbital roof, also following contusion with resulting hematoma but without fracture
 5. Air-blast injury
 6. Botulinum toxin treatment of strabismus and blepharospasm
 7. Prolonged hard contact lens wear
 8. Infratemporal fossa foreign body
- B. Neurogenic ptosis
1. Peripheral involvement of the third nerve
 2. Basilar, cortical, and nuclear lesions
 3. Cerebral hemorrhages, tumors, or abscesses
 4. Multiple neuritis, nerve syphilis, or multiple sclerosis
 5. Horner syndrome—lower lid higher than other lower lid
 6. Familial dysautonomia (Riley-Day syndrome)
 7. Misdirected third nerve syndrome—following third nerve palsy the fibers do not regrow into their respective muscles.
 8. Aseptic meningitis, transient
 9. Pituitary tumor
- C. Myogenic ptosis
1. Primary muscular atrophy (late familial ptosis); ptosis is usually the only symptom.
 2. Dystrophia myotonia, in which there is dystrophia not only of the extraocular muscles but also of the face, neck, and extremities
 3. Myasthenia gravis, nonfamilial acquired ptosis
 4. The congenital fibrosis syndrome characterized by bilateral ptosis and gradual fibrosis of all the extraocular muscles
 5. Oculopharyngeal muscular dystrophy characterized by dysphagia and progressive bilateral ptosis
 6. Progressive familial myopathic ptosis and involvement of one, some, or all extraocular (and no other) muscles of one or both eyes
 7. Late spontaneous unilateral ptosis
 8. Amyloid degeneration with involvement of the levator muscle
 9. *Senility—loss of general muscle tone and atrophy of orbital fat
 10. Ptosis and normal pregnancy
 11. Hyperthyroidism and ptosis—following active stages
 12. Drugs, including the following:

adenine arabinoside	butalbital	desoxycorticosterone
adrenal cortex injection	butallylonal	dexamethasone
alcohol	butethal	dextrothyroxine
aldosterone	carbon dioxide	digitalis
allobarbital	carbromal	dimethyl tubocurarine
amobarbital	chloral hydrate	diphtheria and tetanus toxoids and pertussis (DPT)
amodiaquine	chloroquine	
aprobarbital	cocaine(?)	
aurothioglucose	cortisone	disulfiram(?)
aurothioglycanide	cyclobarbital	fludrocortisone
barbital	cyclopentyl allylbarbituric acid	fluorometholone
betamethasone		flu-prednisolone
butabarbital	cyclopentobarbital	F3T
gold Au-198	methyl alcohol	secobarbital
gold sodium thiomalate	methylpentynol	succinylcholine
heptabarbital	methylprednisolone	sulthiame
hexethal	metocurine iodide	talbutal
hexobarbital	nalidixic acid(?)	tetraethylammonium
hydrocortisone	nialamide	thiamylal
hydroxychloroquine	opium	thiopental
idoxuridine	oral contraceptives	tolazoline
isocarboxazid	paramethasone	tranylcypromine
isosorbide dinitrate(?)	pentobarbital	triamcinolone
loxapine	phencyclidine	trichloroethylene
measles virus vaccine (live)	phenelzine	trifluorothymidine
medrysone	phenobarbital	tubocurarine
mephensin	phenoxybenzamine	vidarabine
mephobarbital	prednisolone	vinbarbital
metharbital	prednisone	vinblastine
methitural	primidone	vincristine
methohexital	probarbital	

13. Corticosteroid ptosis—prolonged use of topical corticosteroid therapy
 14. Mascara ptosis—due to subconjunctival deposits of mascara
 15. Ptosis associated with chronic conjunctivitis and uveitis
 16. Use of botulinum toxin
- D. Protective ptosis following injury to the eye
- E. Mechanical ptosis
1. Tumor
 - a. Benign tumor—such as neurofibroma or hemangioma
 - b. Malignant tumor—such as basal cell carcinoma, squamous cell carcinoma, malignant melanoma, or rhabdomyosarcoma
 - c. Metastatic lesion—such as from breast or lung
 - d. Sinus extension—such as mucocele of frontal sinus
 2. Blepharochalasis—hereditary with recurrent attacks of severe edema and residual damage to the tissues
 3. Cicatricial ptosis—such as that secondary to cicatricial conjunctivitis (see p. 49-50) or surgical trauma to the superior fornix
 4. Contact lens migration
 5. Palpebral form of vernal conjunctivitis
 6. Intracranial extension—such as chordoma

Syndromes and Diseases Associated with Ptosis

1. Aarskog syndrome (faciogenital dysplasia)—x-linked
2. Acquired immunodeficiency syndrome
3. Addison disease (idiopathic hypoparathyroidism)
4. Alacrima congenital with distichiasis, conjunctivitis, keratitis—autosomal dominant
5. Albers-Schönberg syndrome (marble bone disease)
6. Albright syndrome (osteitis fibrosa disseminata)
7. Amyloidosis (Lubarsch-Pick syndrome)
8. Apert syndrome (acrocephalosyndactylia syndrome)
9. Arteriovenous fistula
10. Axenfeld-Schurenberg syndrome (cyclic oculomotor paralysis)
11. Babinski-Nageotte syndrome (medullary tegmental paralysis)
12. Basal cell carcinoma
13. Bassen-Kornzweig syndrome (abetalipoproteinemia)
14. Bell palsy (idiopathic facial paralysis)
15. Bing-Neel syndrome (Bing disease)
16. Blepharophimosis syndrome
17. Bonnet-Dechaume-Blanc syndrome (neuroretinoangiomas)
18. Bonnevie-Ullrich syndrome (pterygolympangiectasia)
19. Botulism
20. Brown syndrome (superior oblique tendon sheath syndrome)
21. Carpenter syndrome (acrocephalopolysyndactyly II)
22. Cavernous sinus syndrome (Foix syndrome)
23. Cerebral palsy
24. Cestan-Chenais syndrome (Cestan syndrome)
25. Chromosome long-arm deletion syndrome
26. Chromosome partial deletion (long-arm) syndrome (de Grouchy syndrome)
27. Chromosome short-arm deletion syndrome
28. Congenital fibrosis syndrome (all extraocular muscles)
29. Congenital fibrosis of the inferior rectus with ptosis—autosomal dominant
30. *Congenital ptosis
 - A. Simple failure of peripheral differentiation of muscles—dominant
 - B. Ptosis with blepharophimosis—dominant
 - C. Ptosis due to ophthalmoplegia—autosomal dominant
31. Craniocarpotarsal dysplasia (Freeman-Sheldon syndrome)
32. Craniocervical syndrome (whiplash injury)
33. Cretinism (juvenile hypothyroidism)
34. Creutzfeldt-Jakob syndrome (spastic pseudosclerosis)
35. Cri-du-chat syndrome (Cry of the cat syndrome)
36. Crouzon syndrome (craniofacial dysostosis)
37. Cushing syndrome (2) (cerebellopontine angle syndrome)
38. Dandy-Walker syndrome (atresia of foramen Magendie)
39. Dawson disease (subacute sclerosing panencephalitis)
40. Dejerine-Klumpke syndrome (lower radicular syndrome)
41. de Lange syndrome (congenital muscular hypertrophy—cerebral syndrome)
42. Devic syndrome (ophthalmoencephalomyelopathy)
43. Diphtheria
44. Dubowitz syndrome (dwarfism-eczema-peculiar facies)

45. Duck-bill lips, low-set ears—autosomal dominant
46. Eaton-Lambert syndrome (myasthenic syndrome)
47. Eclampsia and preeclampsia
48. Ehlers-Danlos syndrome (fibrodysplasia elastic generalisata)
49. Engelmann syndrome (osteopathia hyperostotica scleroticans multiplex infantalis)
50. Epidermal nevus syndrome (ichthyosis hystrix)
51. Erb-Goldflam syndrome (myasthenia gravis)
52. Erysipelas (St. Anthony fire)
53. Fabry syndrome
54. Faciorenal acromesometic syndrome
55. Fisher syndrome (ophthalmoplegia-ataxia-areflexia syndrome)
56. Fetal alcohol syndrome
57. Fetal trimethadione
58. Foramen lacerum syndrome (aneurysm of internal carotid artery syndrome)
59. Freeman-Sheldon syndrome
60. Garcin syndrome (half-base syndrome)
61. Gerlier disease (paralytic vertigo)
62. Gillum-Anderson syndrome (dominant blepharoptosis, high myopia)
63. Guillain-Barré syndrome (acute infectious neuritis)
64. Hairy elbow syndrome
65. Hemangiomas
66. Herpes zoster
67. Hodgkin disease
68. Horner syndrome (cervical sympathetic paralysis)
69. Hunter syndrome [mucopolysaccharidosis (MPS) II]
70. Hurler disease (MPS I)
71. Hyperammonemia
72. Hyperparathyroidism
73. Hyperthyroidism (Basedow syndrome)
74. Hypocalcemia
75. *Hypoparathyroidism
76. Hysteria
77. Infectious mononucleosis
78. Influenza
79. Jugular foramen syndrome (Vernet syndrome)
80. Kearns-Sarne syndrome
81. Kiloh-Nevin syndrome (muscular dystrophy of external ocular muscles)
82. Kohn-Romano syndrome (blepharoptosis, blepharophimosis, epicanthus inversus, telecanthus)
83. Komoto syndrome (congenital eyelid tetrad)
84. Krause syndrome (congenital encephaloophthalmic dysplasia)
85. Kugelberg-Welander syndrome (progressive proximal muscle atrophy)
86. Kussmaul disease (necrotizing angiitis)
87. Laurence-Moon-Bardet-Biedl syndrome (retinitis pigmentosa-polydactyly-adiposogenital syndrome)
88. Leigh disease (subacute necrotizing encephalomyelopathy)
89. Little syndrome (nail-patella syndrome)
90. Lymphangioma
91. Lymphedema

92. Malaria
93. Malignant hyperthermia syndrome
94. Maple-syrup urine disease (branched-chain ketoaciduria)
95. Marcus Gunn syndrome (jaw-winking syndrome)
96. Marin Amat syndrome (inverted Marcus Gunn syndrome)
97. MERRF syndrome
98. Micro syndrome
99. Misdirected third nerve syndrome
100. Möbius syndrome (congenital paralysis of the sixth and seventh nerves)
101. Morquio syndrome (keratosulfaturia)
102. Mucormycosis
103. Multiple sclerosis (disseminated sclerosis)
104. Myopathy, centronuclear with external ophthalmoplegia—autosomal dominant
105. Myotonic dystrophy syndrome (Curschmann-Steinert syndrome)
106. Myotubular myopathy—autosomal recessive or x-linked
107. Naffziger syndrome (scalenus anticus syndrome)
108. Neurilemoma
109. Neuroblastoma
110. Neurofibromatosis
111. Nonne-Milroy-Meige disease (congenital trophedema)
112. Noonan syndrome (male Turner syndrome)
113. Oculopharyngeal muscular dystrophy
114. Ophthalmoplegic migraine syndrome
115. Ophthalmoplegic—retinal degeneration (Kearns-Sayre syndrome)
116. Orodigital-facial syndrome (Papillon-Léage and Psaume syndrome)
117. Pachydermoperiostosis (Touraine-Solente-Gole syndrome)
118. Pancoast syndrome (superior pulmonary sulcus syndrome)
119. Parinaud syndrome (paralysis of vertical movements)
120. Parkinson syndrome (paralysis agitans)
121. Parry-Romberg syndrome (progressive facial hemiatrophy)
122. Periocular and ocular metastatic tumors
123. Pierre-Robin syndrome (micrognathia-glossoptosis syndrome)
124. Poliomyelitis
125. Progressive intracranial arterial occlusion syndrome
126. Purpura and ptosis—combined inheritance with male-to-male transmission
127. Raeder syndrome (paratrigeminal paralysis)
128. Retraction syndrome (Duane syndrome)—autosomal dominant
129. Retroparotid space syndrome
130. Riley-Day syndrome (congenital familial dysautonomia)
131. Ring D chromosome
132. Rollet syndrome (orbital apex-sphenoidal syndrome)
133. Rubinstein-Taybi syndrome (broad thumbs syndrome)
134. Scleroderma (progressive systemic sclerosis)
135. Scurvy (vitamin C deficiency)
136. Shy-Gonatas syndrome (similar to Hunter and Refsum syndrome)
137. Smith-Lemli-Opitz syndrome (cerebrohepatorenal syndrome)
138. Smith syndrome (facioskeletogenital dysplasia)
139. Sparganosis
140. Spider bites

141. Strabismus and ectopic pupils—autosomal dominant
142. Subclavian steal syndrome
143. Syphilis (acquired lues)
144. Syringomyelia (Passow syndrome)
145. Temporal arteritis syndrome (Hutchinson-Horton-Magath-Brown syndrome)
146. Thirteen Q syndrome (microcephaly, high nasal bridge, thumb hypoplasia)
147. Tolosa-Hunt syndrome (painful ophthalmoplegia)
148. 3p syndrome
149. Trachoma
150. Treft syndrome (optic atrophy and hearing loss)
151. Triploidy (chromosomes instead of 46)
152. Trisomy (E syndrome)
153. Tuberculosis
154. Tunbridge-Paley disease (juvenile diabetes, optic atrophy and hearing loss)
155. Turner syndrome (gonadal dysgenesis)
156. van Bogaert-Hozay syndrome
157. Vertebral fusion, posterior lumbosacral with ptosis—autosomal dominant
158. von Herrenschwand syndrome (sympathetic heterochromia)
159. von Recklinghausen syndrome (neurofibromatosis)
160. Waardenburg syndrome (embryonic fixation syndrome)
161. Wallenberg syndrome (dorsolateral medullary syndrome)
162. Weber syndrome (cerebellar peduncle syndrome)
163. Wernicke syndrome (hemorrhagic poliоencephalitis superior syndrome)

Diagnostic table

	Congenital Ptosis	Traumatic Ptosis	Neurogenic Ptosis as Horner Syndrome	Myogenic Ptosis as Myasthenia Gravis	Drugs as Steroid Ptosis	Mechanical Ptosis as Neurofibroma	Cicatricial Ptosis as Following Conjunctivitis
History							
1. Bilateral	S			U	S		U

Ptosis

Larned DC, et al. The association of congenital ptosis and congenital heart disease. *Ophthalmology* 1986;93:492-494.

McKusick VA. *Mendelian inheritance in man*, 12th ed. Baltimore: Johns Hopkins University Press, 1998.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Specific Blepharoptosis

- Unilateral ptosis with dilated pupil—tumor or abscess of temporal lobe and third nerve palsy
- Unilateral ptosis with miosis—midbrain lesion near the posterior commissure and Horner syndrome
- Ptosis with disturbance of integrated ocular movement—lesion near superior colliculus
- Bilateral ptosis with small immobile pupils and loss of upward rotation of eyeballs—lesion near posterior commissure
- Ptosis with loss of voluntary elevation but normal involuntary elevation of the lid when the eye looks up—supranuclear lesion
- Ptosis in repose and normal elevation with active motion—hereditary cerebellar ataxia of Pierre-Marie
- Ptosis onset in adolescent—familial chronic external ophthalmoplegia
- Ptosis may be early and only sign of nuclear paralysis in:
 - Botulism
 - Multiple sclerosis (disseminated sclerosis)
 - Hemorrhagic superior poliomyelitis of Wernicke
 - Tabes
 - Vasospasm of ophthalmoplegic migraine
- Ptosis with cranial nerve dysfunction suggests a basal lesion, such as the following:
 - Aneurysm

- B. Epidemic paralyzed vertigo (Gerlier disease)
 - C. *Herpes zoster
 - D. Meningitis
 - E. Polyneuritis of cranial nerves
 - F. *Trauma
10. Transient ptosis
- A. Acute exanthema
 - B. Acute infection such as erysipelas
 - C. *Botulinum toxin injection
 - D. Eclampsia
 - E. Exogenous poisons such as those due to alcohol, lead, carbon monoxide, arsenic, snake venom
 - F. Hematoma
 - G. Influenza
 - H. Scurvy (vitamin C deficiency)
11. Ptosis with orbicularis weakness—muscle disease
12. S-shaped ptosis
- A. Chronic chalazion
 - B. Cyst on lateral border of tarsus
 - C. Dermoid
 - D. Floppy eyelid syndrome
 - E. Lacrimal gland enlargement or prolapse
 - F. Lateral levator palpebrae superioris muscle dehiscence
 - G. Neurofibromatosis
 - H. Trachoma
 - I. Drugs, including the following:

acebutolol	etidocaine	practolol
acetophenazine	fluvoxamine	procaine
alseroxylon	gold sodium thiosulfate	prochlorperazine
atenolol	guanethidine	promazine
auronofin	labetalol	promethazine
beclomethasone	levodopa	propiomazine
botulinum A toxin	levothyroxine	propoxycaine
bupivacaine butaperazine	liothyronine	propranolol
carphenazine	liotrix	rauwolfia serpentina
carteolol	loxapine	rescinnamine
chlorprocaine	medroxyprogesterone	reserpine
chlorpromazine	mepiridine	syrosingopine
cisplatin	mepivacaine	thiethylperazine
combination products of estrogens and progestogens	meprednisone	thiopropazate
	mesoridazine	thiopropazine
	methdilazine	thioridazine
	methotrimeprazine	
contraceptives	methoxyflurane	thyroglobulin
dapiprazole hydrochloride	metoprolol	tobramycin
deserpidine	nadolol	trifluridine
diacetylmorphine	perphenazine	trifluromazine
diethazine	phenytoin	trimeprazine
estradiol	pindolol	trimethadione
ethopropazine	piperacetazine	trimethaphan

Dunn WJ, et al. Botulinum toxin for the treatment of dysthyroid ocular myopathy. *Ophthalmology* 1986;93:4770-4775.

Gerner EW, Hughes SM. Floppy eyelid with hyperglycinemia. *Am J Ophthalmol* 1984;98:614-615.

Haessler FH. *Eye signs in general disease*. Springfield, IL: Charles C Thomas, 1960.

Horner Syndrome

Horner syndrome comprises paralysis of sympathetic nerve supply with lid ptosis, miosis, apparent enophthalmos, frequently dilatation of the vessels with absence of sweating (anhidrosis) on homolateral side; the pupil demonstrates a decreased sensitivity to cocaine and hypersensitivity to adrenalin and may have heterochromia with congenital Horner syndrome.

1. Region of first neuron—lesions of hypothalamus and diencephalic region also suggest diabetes insipidus, disturbed temperature regulation, adiposogenital syndrome, and autonomic epidemic epilepsy of Penfield.
 - A. Arnold-Chiari malformation
 - B. Basal meningitis, such as in syphilis
 - C. Base-of-skull tumors (e.g., melanoma)
 - D. Multiple sclerosis
 - E. Pituitary tumor
 - F. Tumor of the third ventricle
 - G. Midbrain, such as in syphilis
 - H. Pons, such as in intrapontine hemorrhage
 - I. Medulla, such as in Wallenberg syndrome (lateral medullary syndrome)—thrombosis of posterior inferior cerebellar artery
 - J. Cervical region
 1. Syringomyelia
 2. Tumor
 3. Injury as traumatic dislocation of cervical vertebrae or dissection of the vertebral artery
 4. Syphilis (acquired lues)
 5. Poliomyelitis
 6. Meningitis
 7. Amyotrophic lateral sclerosis
 8. Related to scleroderma and facial hemiatrophy
 9. Vascular malformation such as agenesis of internal carotid artery
2. Region of second neuron
 - A. Spinal birth injury—Klumpke paralysis with injured lower brachial plexus
 - B. Cervical rib
 - C. Charcot-Tobias syndrome
 - D. Thoracic lesions
 1. Pancoast tumor—in apex of lung, such as carcinoma or tuberculosis
 2. Aneurysm of aorta, subclavian, or carotid artery
 3. Central venous catheterization
 4. Mediastinal tumors
 5. Lymphadenopathy of Hodgkin disease, leukemia, lymphosarcoma, or tuberculosis
 6. Stellate ganglion block
 7. Tube thoracostomy

E. Neck

1. *Enlarged lymph gland, tumors, aneurysm, and thyroid gland
2. Carcinoma of esophagus
3. Retropharyngeal tumors
4. Neuroma of sympathetic chain
5. Intraoral trauma with damage to internal carotid plexus
6. Thin intervertebral foramina of spinal cord, such as in pachymeningitis, hypertrophic spinal arthritis, ruptured intervertebral disc, and meningeal tumors
7. Traction of sternocleidomastoid muscle, such as from positioning on operating table
8. Complications of tonsillectomy
9. Mandibular tooth abscess
10. *Lesions of middle ear, such as in acute purulent otitis media and petromastoid operation
11. Carotid artery dissection
12. Internal carotid artery occlusion

3. Region of third neuron

- A. Aneurysm of internal carotid and its branches
- B. Paratrigeminal syndrome (Raeder syndrome)
- C. Cavernous sinus syndrome (Foix syndrome)
- D. Tumors of cysts of orbit
- E. Drugs can affect any region and include the following:

acetophenazine	levodopa	promethazine
alseroxylon	lidocaine	propiomazine
bupivacaine	mepivacaine	propoxycaine
butaperazine	mesoridazine	rauwolfia serpentina
carphenazine	methdilazine	rescinnamine
chloroprocaine	methotrimeprazine	reserpine
chlormpromazine	oral contraceptives	syrosingopine
deserpidine	perazine	thiethylperazine
diacetylmorphine	pericyazine	thiopropazate
diethazine	perphenazine	thiopropazine
ethopropazine	piperacetazine	thioridazine
etidocaine	prilocaine	trifluoperazine
fluphenazine	procaine	triflupromazine
guanethidine	prochlorperazine	trimeprazine
influenza virus vaccine	promazine	

- F. Cluster headaches (migrainous neuralgia)
- G. Herpes zoster
- H. Migraine
- I. Fetal varicella syndrome

1. Carotid arteriography			U
2. Computed tomographic scan of head	U	U	U
3. Cervical planigrams		U	
4. Pituitary panel—serum prolactin, growth hormone, adrenocorticotrophic hormone, follicle-stimulating hormone, luteinizing hormone, thyroid-stimulating hormone	S		
5. Pneumoencephalography	S		S
6. Visual field test	U		
7. Roentgenogram of chest		U	
8. Roentgenogram of skull	U		S

R = rarely; S = sometimes; and U = usually

Horner syndrome

Ptosis of Lower Lid (Uncommon Drooping of Lower Lid So that LID Margin is Adjacent to Globe But Below Limbus)

1. Blepharophimosis syndrome
2. *Cicatricial with mechanical displacement by scar, tumor, or skin disease; may be associated with ectropion
3. *Paralytic due to lower lid lagophthalmos
4. Pseudoptosis such as in exophthalmos and higher degrees of myopia
5. Idiopathic

Fox SA. Idiopathic blepharoptosis of lower eyelid. *Am J Ophthalmol* 1972;74:330-331.

Leatherbarron B, Collin JR. Eyelid surgery in facial palsy. *Eye* 1991;5:585-590.

Lagophthalmos (Inability to Close Eyelids Voluntarily)

1. *Physiologic—many people sleep with their eyes open, especially Asian people
2. Orbital—extreme proptosis
3. Mechanical—scarring of the lids or retractor muscles
4. Paralytic
 - A. Seventh nerve palsy (see p. 66)
 - B. Leprosy
 - C. Lesions of cerebral cortex and its projections, including bilateral frontal lesions
5. Psychological
 - A. Failure to comprehend the command
 - B. *Unwillingness to comply with the command

Harvey JT, Anderson RL. Lid lag and lagophthalmos. *Ophthalmol Surg* 1981;12:338.

Lessell S. Supranuclear paralysis of voluntary lid closure. *Arch Ophthalmol* 1972;88:241-244.

Pseudo-Lid Retraction

1. *Exophthalmos
2. Unilateral high axial myopia
3. Unilateral congenital glaucoma
4. Congenital cystic eyeball
5. Abnormalities of orbit
 - A. Asymmetry
 - B. Shallow such as in Crouzon disease (dysostosis craniofacialis)
 - C. Harlequin—shallow orbit with arched superior and lateral wall, such as in hypophosphatasia
6. Ptosis of other eyelid

Fox SA. The palpebral fissure. *Am J Ophthalmol* 1966;62:73-78.

Walsh FB, Hoyt WF. *Clinical neuro-ophthalmology*, 4th ed. Baltimore: Williams & Wilkins, 1985.

Lid Retraction

Lid retraction is defined normally as more than 85% of vertical palpebral fissures and 10 mm or less with the eyelids just concealing the corneoscleral limbus at the 12 and 6 o'clock meridians.

1. Lid retraction with upward movement of eye

- A. Congestive dysthyroid disease
 - B. Deficiency in upward gaze—following rectus operation or weakness of superior rectus
 - C. Excessive stimulation of levator muscles in Bell phenomenon with seventh nerve palsy
 - D. Levator muscles receive excessive stimuli from nerve fiber of superior rectus
 - E. Pretectal or periaqueductal lesion in midbrain
2. Lid retraction with downward movement of eye
- A. Aberrant regeneration of third nerve of inferior rectus to levator (pseudo-Graefe phenomenon)—elevation of lid in downward gaze
 - B. Brown syndrome (superior oblique tendon sheath syndrome)
 - C. Extrapyrarnidal syndrome of postencephalic parkinsonism and progressive supranuclear palsy
 - D. Failure of levator to relax on downward movement of eye
 - 1. Secondary neuromuscular
 - 2. *Mechanical, such as from a scar
 - E. Noncongestive type of dysthyroid exophthalmos (Graefe sign)—lid lag in downward gaze
3. Lid retraction with horizontal gaze
- A. Duane syndrome (retraction syndrome)
 - B. Underaction of lateral rectus muscle and spillover to levator causing widening
4. Lid retraction because of supranuclear lesions—usually bilateral when due to lesion in or about posterior commissure (Collier sign, tucked lids, posterior fossa stare)
- A. Bulbar poliomyelitis
 - B. Chorea (Huntington hereditary chorea)
 - C. Closed head injury associated with defective adduction of eyes, coarse nystagmus, nuclear palsy, pyramidal signs
 - D. Coma due to disease of ventral midbrain and pons
 - E. Craniostenosis
 - F. Epidemic encephalitis
 - G. Hydrocephalic infants
 - H. Hydrophobia
 - I. Hysteria
 - J. Malingering
 - K. Meningitis
 - L. Multiple sclerosis (disseminated sclerosis)
 - M. Parinaud syndrome (divergence paralysis)
 - N. Parkinson disease (paralysis agitans)
 - O. Russell syndrome
 - P. Sylvian aqueduct syndrome (Koerber-Solus-Elschnig syndrome)
 - Q. Syphilis (tabes)
 - R. Tumors of the midbrain; meningiomas of sphenoid wing; sellar, parasellar, and suprasellar tumors; and frontal or temporal lobe tumors
 - S. von Economo syndrome (encephalitis lethargica)
5. Lid retraction because of neuromuscular disease—commonly asymmetric or unilateral
- A. Drugs
 - 1. Phenylephrine and other sympathomimetics
 - 2. Prostigmin and Tensilon, especially with myasthenic levator involvement

3. Succinylcholine, subparalytic doses
4. Thyroid extract
- B. Fuch phenomenon—healing of injured third nerve, previously ptotic lid has involuntarily spastic raising with movements of eyes
- C. Infant lid retraction—transient because of maternal hyperthyroidism
- D. Irritation of cervical sympathetic nerve (Horner syndrome)
- E. *Mechanical suspension of lid such as that due to scar, tumor, surgical attachment to frontalis muscle, or shortening of levator muscle or following glaucoma filtering procedures
- F. Peripheral seventh nerve paresis with loss of orbicularis oculi muscle tone
6. Lid retraction with myopathic disease
 - A. Associated with hepatic cirrhosis
 - B. Thyroid myopathy (Graves disease, Basedow syndrome)
 1. Dalrymple sign—widening of palpebral fissure
 2. Stellwag sign—retraction of upper lid associated with infrequent or incomplete blinking
7. Lid retraction following operations on vertical muscles, such as recession of superior rectus muscle or simultaneous recession and restriction of the levator by common fascial check ligament between the two muscles
8. Paradoxical lid retraction because of paradoxical levator innervation
 - A. Defective ocular abduction with abducens palsy
 - B. Lid retraction associated with ptosis of the opposite eyelid (levator denervation supersensitivity)
 - C. Misdirection of third nerve axons (following acquired or congenital lesions)—occurs on attempt to adduct, elevate, or depress eye
 - D. Movement of lower jaw
 1. Contraction of external pterygoid muscle by opening mouth (Marcus Gunn)
 2. Contraction of internal pterygoid muscle by closing the mouth
9. Physiologic
 - A. Act of surprise
 - B. Slow onset of blindness, such as that secondary to glaucoma and optic atrophy
 - C. Time of attention

Collins JR, et al. Congenital eyelid retraction. *Br J Ophthalmol* 1990;74:542-544.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Walsh FB, Hoyt WF. *Clinical neuro-ophthalmology*, 4th ed. Baltimore: Williams & Wilkins, 1985.

Lid Lag

Lid lag is defined as occurring when the patient looks down and the eyelids lag behind briefly.

1. Congenital—usually in association with congenital ptosis
2. Hepatic failure
3. Iatrogenic—following ptosis surgery
4. Mechanical—scars of the upper lid
5. Myopathic disease
 - A. *Graefe sign—thyroid myopathy—the upper lid pauses and then follows the eye downward (Basedow syndrome)

- B. Myotonic dystrophia
- C. Periodic myotonic lid lag—familial (hyperkalemic) myotonic periodic paralysis
- 6. Neuromuscular disease
 - A. Excessive intake of thyroid extract
 - B. Physiologic lagophthalmos—short upper tarsus in some Asian and some white persons with incomplete descent of the lid during sleep
- 7. Supranuclear origin—extrapyramidal syndromes have defective inhibition of lids in downward gaze
 - A. Congenital supranuclear lid lag
 - B. Guillain-Barré syndrome
 - C. Postencephalitic parkinsonism, Parkinson syndrome (shaking palsy)
 - D. Progressive supranuclear palsy

Kirkali P, Kansu T. Lid lag in hyperkalemic periodic paralysis. *Ann Ophthalmol* 1991;23:422-423.

Tan E, et al. Lid lag and the Guillain-Barré syndrome. *J Clin Neuro-Ophthalmol* 1990;10:121-123.

Blepharospasm (Spasmodic Eyelid Closure)

Most common and important: Psychogenic onset commonly in children and young adults

1. Addison disease (adrenal cortical insufficiency)
2. Associated with syphilis, tetanus, and tetany
3. Basal ganglion dysfunction—onset usually after middle age; including Parkinson disease (shaking palsy)
4. Cerebral palsy
5. Cogan syndrome (nonsyphilitic interstitial keratitis) with vestibuloauditory symptoms
6. Drugs, including the following:

acetophenazine	dimethindene	methdilazine
amitriptyline	diphenhydramine	methotrimeprazine
amodiaquine	diphenylpyraline	nortriptyline
amoxapine(?)	doxepin	pentylene-tetrazol
amphetamine	doxylamine	perazine
antazoline	dronabinol	pericyazine
brompheniramine	droperidol	perphenazine
butaperazine	emetine	pheniramine
carbinoxamine	ethopropazine	phenmetrazine
carphenazine	fluphenazine	phenylephrine
chloroquine	haloperidol	piperacetazine
chlorpheniramine	hashish	prochlorperazine
chlorpromazine	hydroxychloroquine	promazine
clemastine	imipramine	promethazine
clomipramine	levodopa	propiomazine
desipramine	levothyroxine	protriptyline
dexbrompheniramine	liothyronine	pyrilamine
dexchlorpheniramine	liotrix	selegiline
dextroamphetamine	lorazepam	tetrahydrocannabinol
dextrothyroxine	marihuana	thiethylperazine
diethazine	mesoridazine	thiopropazate
dimercaprol	methamphetamine	thiopropazine
thioridazine	trifluoperidol	tripelennamine
thyroglobulin	triflupromazine	triprolidine
thyroid	trimeprazine	vidarabine
trifluoperazine	trimipramine	vinblastine

7. Electrical injury
8. Encephalitis
9. Epidemic keratoconjunctivitis
10. Hallervorden-Spatz
11. Hereditary reflex blepharospasm
12. Idiopathic (essential)
13. Leprosy (Hansen disease)
14. Meige syndrome
15. Obsessive-compulsive disorder
16. *Pain or light sensitivity following injury or inflammation or foreign bodies of lids, conjunctiva, cornea, or iris
17. Photosensitivity and sunburn
18. Poison ivy dermatitis
19. Postencephalitic blepharospasm
20. Psychogenic obsessive-compulsive disorder—onset commonly in children and young adults
21. Psychologic reflex blepharospasm—seen in premature infants with tactile stimulation of lids
22. Sparganosis
23. Systemic scleroderma (progressive systemic sclerosis)
24. Thomsen syndrome (congenital myotonia syndrome)
25. Tourette syndrome (coprolalia, generalized tic)

Facial Palsy

Facial palsy is defined as paralysis of facial muscles supplied by the seventh nerve; orbicularis oculi paralysis may result in epiphora and ectropion.

1. Congenital
2. Birth injury with nerve crushed at exit of stylomastoid foramen
3. Myogenic paralysis
 - A. Myotonic atrophy
 - B. Facioscapulohumeral type of muscular dystrophy
 - C. Myasthenia gravis (Erb-Goldflam syndrome)
 - D. Hypokalemia, periodic
 - E. Curare poisoning
 - F. Botulism
 - G. Congenital facial diplegia (Möbius syndrome)

-
- H. Infants, from maternal ingestion of thalidomide
 - I. Kugelberg-Welander syndrome
 - 4. Neurologic paralysis
 - A. Supranuclear paralysis—upper face, including orbicularis relatively unaffected with affected lower face
 - 1. Voluntary movement—pyramidal fibers involved, such as in Weber syndrome, with contralateral hemiplegia of face and limbs and ipsilateral oculomotor paralysis
 - 2. Weakness or abolition of the emotional movements of the face with retention of full voluntary activity, such as with lesion of anterior part of frontal lobe or near optic thalamus
 - B. Peripheral paralysis—involvement of upper and lower face
 - 1. Pontine lesion—associated structures involved include sixth nerve, conjugate ocular deviation to the same side, ipsilateral paralysis of jaw muscles, and pyramidal tract in paralysis of limb of opposite side
 - a. Acute nuclear lesions, such as with anterior poliomyelitis, Landry paralysis, or degenerative conditions
 - b. Foville syndrome—ipsilateral sixth nerve with loss of conjugate deviation to same side and hemiplegia of the opposite limbs
 - c. Millard-Gubler syndrome—ipsilateral sixth nerve paralysis and hemiplegia of the opposite limbs
 - d. Parotid gland surgery
 - e. Progressive muscular atrophy
 - f. Syringobulbia
 - g. Tumors
 - h. Vascular lesions
 - 2. Posterior fossa—associated with nerve deafness, loss of taste on anterior two thirds of tongue, and occasionally diminution of tears
 - a. Acoustic neuroma
 - b. CHARGE (coloboma, heart disease, atresia choanae, retarded growth and retarded development or central nervous system anomalies, genital hypoplasia, and ear anomalies or deafness) syndrome association
 - c. Facial neuritis due to polyneuritis cranialis, beriberi, encephalitis, diabetes, or intrathecal anesthesia
 - d. Fracture of the skull
 - e. Meningitis, including syphilitic and tuberculous
 - f. Preauricular cyst associated with congenital cholesteatoma
 - g. Tumors of facial nerve
 - 3. Petrous temporal bone—associated with decreased lacrimation and salivary secretion, loss of taste on anterior two thirds of tongue, and intensified sensation of loud noises
 - a. Arteriosclerosis
 - b. *Bell palsy—inflammation of facial nerve of unknown cause
 - c. Cephalic tetanus
 - d. Diabetes mellitus (Willis disease)
 - e. Fractures
 - f. Herpes zoster, spread from geniculate ganglion
 - g. Hypertension

- h. Nerve leprosy (Hansen disease)
 - i. Otitis media
 - j. Secondary syphilis
4. Facial lesions at or beyond the stylomastoid foramen
 - a. Fracture of the ramus of the mandible
 - b. Melkersson-Rosenthal syndrome (Melkersson idiopathic fibroedema)
 - c. Neoplasia or inflammatory swelling of parotid, such as in uveoparotid fever (Heerfordt disease) and Mikulicz disease
 - d. Supporting lymph nodes behind the angle of the jaw

Eggenberger ER. Facial palsy in Lyme disease. *N Engl J Med* 1993;328:1571.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Infrequent Blinking

1. *Contact lens use
2. Encephalitis, acute
3. Encephalitis or mild postencephalitic states
4. *Ethanol intake
5. Infants in first few months of life
6. Parkinson syndrome, including myostatic paresis of parkinsonism
7. Psychotic states
8. Progressive supranuclear palsy
9. Thyrotoxicosis including exophthalmic ophthalmoplegia (Stellwag sign)

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Walsh FB, Hoyt WF. *Clinical neuro-ophthalmology*, 4th ed. Baltimore: Williams & Wilkins, 1985.

Frequent Blinking

1. *Reflex—strong lights, sudden approach of objects toward eyes, loud noises, and touching the cornea; reflex blinking common in albinos and light intolerance
2. Spontaneous—mental state and environment
 - A. Children with habit spasm and facial tic
 - B. Blepharospasm
 - C. *Older persons with inadequate lacrimation and local irritation of the eyes
3. Disorders of central nervous system disease, such as parkinsonism or various forms of pseudobulbar palsy
4. Drugs, including the following:

acetylcholine	carbachol	etidocaine
allobarbital	carbamazepine	heptabarbital
ambenonium	chloroprocaine	hexethal
amobarbital	chloroquine	hexobarbital
amodiaquine	clofibrate	hydroxychloroquine
aprobarbital	cyclobarbital	isoflurophate
barbital bupivacaine	cyclopentobarbital	levodopa
butabarbital	demecarium	lidocaine
butalbital	dibucaine	mephobarbital
butallylonal	echothiophate	mepivacaine
butethal	edrophonium	methacholine
metharbital	pilocarpine	secobarbital
methitural	piperocaine	talbutal
methohexital	prilocaine	tetracaine
methylphenidate	primidone	thiamylal
neostigmine	probarbital	thiopental
pentobarbital	procaine	vinbarbital
phenobarbital	propoxycaine	
physostigmine	pyridostigmine	

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

Moses RA. *Adler's physiology of the eye*, 8th ed. St. Louis: CV Mosby, 1986.

Walsh FB, Hoyt WF. *Clinical neuro-ophthalmology*, 4th ed. Baltimore: Williams & Wilkins, 1985.

Lid Edema (Puffiness or Bagginess of Lids)

1. *Noninflammatory or minimally inflammatory swelling
 - A. Acosta syndrome (Mountain climbers syndrome)
 - B. Allergic gastroenteropathy with protein loss
 - C. Arteriovenous fistula
 - D. Cardiac and renal disease
 1. Nephrosis and acute glomerulonephritis—early morning edema
 2. Starvation and cachexia
 - E. Dermatochalasis
 - F. Elephantiasis
 1. Chronic eczema or infection (erysipelas)
 2. Hemolymphangioma
 3. Leprosy (Hansen disease)
 4. Lues (syphilis)
 5. Melkersson-Rosenthal syndrome (Melkersson idiopathic fibroedema)
 6. Nonne-Milroy-Meige disease (idiopathic hereditary lymphedema)
 7. von Recklinghausen disease (neurofibromatosis)
 8. Traumatic disruption of the lymph drainage system
 9. Tuberculosis
 - G. Endocrine exophthalmos (hyperthyroidism)
 - H. Foix syndrome (cavernous sinus syndrome)
 - I. Granulomatous ileocolitis
 - J. Hutchinson syndrome (adrenal cortex neuroblastoma with orbital metastasis)
 - K. Infectious generalized diseases
 1. Diphtheria
 2. Infectious mononucleosis
 3. Malaria
 4. Meningococcal meningitis
 5. Pertussis (whooping cough)
 6. Rheumatic fever
 7. Scarlet fever
 8. Trypanosomiasis
 9. Tuberculosis
 10. Yellow fever
 - L. Melkersson-Rosenthal syndrome
 - M. Nasal nerve syndrome (Charlin syndrome)

N. Parasitic infestations

1. Anthrax
2. Ascariasis
3. Chlamydia
4. Dermatophytosis
5. Myiasis
6. Onchocerciasis syndrome (river blindness)
7. Tapeworms
8. Toxocariasis
9. Trichinosis

O. Protrusion of fat through orbital fascia

P. Retinoblastoma

Q. Stasis, including premenstrual edema

R. Superior vena cava syndrome

S. Systemic scleroderma (progressive systemic scleroderma)

T. *Tumors and pseudotumors

1. Benign and malignant ectodermal and mesodermal tumors
2. Brill-Symmers disease (lymphosarcoma)
3. Hemangiomas
4. Hodgkin disease
5. Leukemic deposit
6. Liposarcoma
7. Meningiomas of sphenoid ridge with impediment of venous circulation of ophthalmic veins or cavernous sinus
8. Neurofibromatosis
9. Pseudotumors
 - a. Amyloid degeneration
 - b. Eosinophilic or basophilic granulomas

U. Trauma

1. Basilar skull fractures
2. Injury
3. *Surgery

V. Angioneurotic edema caused by drugs, including the following:

amitriptyline	acenocoumarol	auranofin
acetaminophen	amobarbital	aurothioglucose
acetanilid	amoxapine	aurothioglycanide
acetophenazine	amoxicillin	azatadine
acetyldigitoxin	ampicillin	bacitracin
acyclovir	anisindione	barbital
adrenal cortex injection	antazoline	belladonna
albuterol	antimony lithium thiomalate	bendroflumethiazide
alcohol	antimony potassium tartrate	benzalkonium
aldosterone	antimony sodium tartrate	benzathine penicillin G
allobarbitol	antimony sodium thioglycolate	benzphetamine
alprazolam		benzthiazide
aluminum nicotinate	antipyrine	betamethasone
aminosalicylate(?)	aprobarbital	betaxolol
aminosalicylic acid(?)	aspirin	bleomycin
amiodarone	atropine	botulinum A toxin
brimonidine tartrate	chlorprothixene	dicloxacillin
brompheniramine	chlortetracycline	dicumarol
bupivacaine	chlorthalidone	diethazine
busulfan	chrysarobin	diethylcarbazine
butabarbital	ciprofloxacin	diethylpropion
butalbital	cisplatin	digitalis
butallylonal	clindamycin	digitoxin
butaperazine	clofibrate	digoxin
butethal	clomipramine	diltiazem
cactinomycin	clonazepam	dimethindene
capreomycin	clonidine	dimethyl sulfoxide
captopril	clorazepate	diphenadione
carbamazepine	cloxacillin	diphenhydramine
carbenicillin	cobalt	diphenylpyraline
carbimazole	codeine	diphtheria and tetanus toxoids (adsorbed)
carbinoxamine	colloidal silver combination products	diphtheria and tetanus toxoids and pertussis vaccine (adsorbed)
carisoprodol		
carphenazine	cortisone	
cefaclor	cyclobarbitol	
cefadroxil	cyclopentobarbital	disulfiram
cefamandole	cyclophosphamide	doxepin
cefazolin	cyclosporine	doxorubicin
cefonicid	cyclothiazide	doxycycline
cefoperazone	cyproheptadine	doxylamine
ceforanide	cytarabine	droperidol
cefotaxime	dacarbazine	echothiophate
cefotetan	dactinomycin	emetine
cefoxitin	danazol	enalapril
cefsulodin	dantrolene	ergonovine
ceftazidime	dapiprazole hydrochloride	ergotamine
ceftizoxime	dapsone	erythromycin

ceftriaxone	daunorubicin	ether
cefuroxime	deferoxamine	ethionamide
cephalexin	demecrium	ethopropazine
cephaloglycin	demeclocycline	ethosuximide
cephaloridine	desipramine	ethotoin
cephalothin	deslanoside	ethyl biscoumacetate
cephapirin	desoxycorticosterone	etidocaine
cephradine	dexamethasone	etretinate
chloral hydrate	dexbrompheniramine	F3T
chlorambucil	dexchlorpheniramine	fenfluramine
chloramphenicol	dextrothyroxine	flecainide
chlordiazepoxide	dextran	floxuridine
chloroform	DHT	fludrocortisone
chloroprocaine	diacetylmorphine	fluorescein
chlorothiazide	diatrizoate meglumine and sodium	fluorometholone
chlorpheniramine		fluorouracil
chlorphentermine	diazepam	fluphenazine
chlorpropamide	dichlorphenamide	fluprednisone
flurazepam	maprotiline	nifedipine
gitalin	measles and rubella virus vaccine (live)	nitrazepam
glyburide	measles, mumps, and rubella virus vaccine (live)	nitrofurantoin
gold Au 198	measles virus vaccine (live)	nitromersol of estrogens and progestogens
gold sodium thiomalate	mecamylamine	olapatadine hydrochloride
griseofulvin	medroxyprogesterone	oxprenolol
guanethidine	medrysone	oral contraceptives
homatropine	mefenamic acid mepivacaine	ouabain
hydralazine	melphalan	oxacillin
halazepam	mephenytoin	oxyphenbutazone
haloperidol	mephobarbital	oxytetracycline
heparin	meprednisone	paramethadione
heptabarbital	meprobamate	paramethasone
hetacillin	mercuric oxide	penicillin
hexethal	methyl dopa	pentazocine
hexobarbital	mesoridazine	pentobarbital
hydrabamine penicillin V		perazine
hydrocortisone	methacycline	pericyazine
ibuprofen	metharbital	perphenazine
IDU (idoxuridine)	methdilazine	phenacetin
imipramine	methicillin	phenobarbital
indomethacin	methitural	phenoxymethyl penicillin
insulin	methohexital	phensuximide
iodide and iodine solution and compounds	methotrimeprazine	phenylbutazone
iodipamide	methsuximide	
meglumine	methyl scopolamine	phenylmercuric acetate
iothalamate	methysergide	phenylmercuric nitrate
meglumine	methylene blue	pimozide
iron dextran	methylergonovine	piperacetazine
isoniazid	methylprednisolone	piperazine
isopropyl unoprostone	metoclopramide	piroxicam
isosorbide	metrizamide	poliovirus vaccine
isotretinoin	metronidazole	polymyxin B prazosin
ketoprofen	mexiletine	potassium penicillin G
lanatoside C	mianserin	potassium penicillin V
latanoprost	midazolam	potassium phenethicillin
leuprolide acetate	minocycline	potassium phenoxymethyl
levodopa	mitomycin	prazepam
levothyroxine	moxalactam	prednisolone
lidocaine	mumps virus vaccine (live)	prednisone
liothyronine	nafcillin	primidone
liotrix	nalidixic acid	probarbital procaine penicillin G
lincomycin	naltrexone	
lithium carbonate	naproxen	procaine
loxapine	niacin	prochlorperazine
lorazepam	niacinamide	promazine
mannitol	nicotinic acid	promethazine
	nicotinyl alcohol	propiomazine
		propofol
		propoxycaine
protriptyline	streptomycin	thiopental
quinacrine	succinylcholine	thiopropazate
quinidine	sulindac	thiopropazine
quinine	suramin	thioridazine
rabies immune globulin	talbutal	thiotepa
rabies vaccine	temazepam	thiothixene
radioactive iodides	tetanus immune globulin	tocainide
ranitidine	tetanus toxoid	triamcinolone
rifampin	tetracycline	triazolam
rubella and mumps virus vaccine (live)	tetraethylammonium	trifluoperazine
rubella virus vaccine (live)	thiabendazole	
scopolamine	thiamylal	trifluperidol
secobarbital	thiethylperazine	triflupromazine
silver nitrate	thimerosal	trimeprazine
silver protein	thyroglobulin	trimethadione
smallpox vaccine	tolazamide	trimethidium
sodium antimony gluconate	tolbutamide	trimipramine
sodium iothalamate	tretinoin	vidarabine
acid isofluorophate		
sodium salicylate	trichloroethylene	vancomycin
	trifluridine	
	trimethaphan	verapamil
		vinbarbital
		vinblastine

-
2. Inflammatory edema
 - A. Acute hemorrhagic conjunctivitis
 - B. Allergic eczema (contact dermatitis)
 1. Anesthetics
 2. *Atropine (topical)
 3. Eczematous keratoconjunctivitis
 4. Iodine
 5. Mercury
 6. Neurodermatitis
 7. Penicillin
 8. Photodermatitis
 9. Quincke edema
 10. Tuberculosis (scrofula)
 - C. Anthrax
 - D. Bee sting of the cornea
 - E. Dacryoadenitis
 1. Acute dacryoadenitis
 2. Chronic dacryoadenitis
 - F. Epidemic keratoconjunctivitis
 - G. Erysipelas
 - H. Herpes simplex
 - I. Hollenhorst syndrome (chorioretinal infarction syndrome)
 - J. Hordeolum, chalazion
 - K. Lymphogranuloma venereum
 - L. Mycoses
 - M. Ophthalmic zoster

N. Other causes of lid edema

1. Conjunctival inflammations
 - a. Diphtheria
 - b. Newcastle disease (fowlpox)
 - c. Ophthalmia neonatorum
 - d. Parinaud syndrome (conjunctiva-adenitis syndrome)
2. Keratitis
3. Orbital inflammation
4. Periostitis
5. Scleritis (see p. 237-239)
 - a. Posterior scleritis
 - b. Scleromalacia perforans
6. Thermal, chemical, mechanical, or radiation injury
 - a. Hypothermal injury
 - b. Polychlorinated biphenyl (PCB)

O. Scalded skin syndrome (Ritter disease)

P. Serum sickness—systemic reaction to foreign serum, serum products, vaccines, penicillin, and sulfa drugs

Q. Silverman syndrome (battered-baby syndrome)

R. Spider bites

S. Urticaria due to drugs, including the following:

acenocoumarin	aurothioglycanide	cefadroxil
acetaminophen	azatadine	cefamandole
acetanilid	bacitracin	cefazolin
acetazolamide	barbital	cefonicid
acyclovir	Bacille Calmette-Guérin (BCG) vaccine	cefoperazone
albuterol		ceforanide
allobarbitol	bendroflumethiazide	cefotaxime
allopurinol	benzathine penicillin G	cefotetan
alprazolam	benzphetamine	cefoxitin
aluminum nicotinate	benzthiazide	cefsulodin
amiodarone	betamethasone	ceftazidime
amitriptyline	betaxolol	ceftizoxime
amobarbital	bleomycin	ceftriaxone
amoxapine	brompheniramine	cefuroxime
amoxicillin	bupivacaine	cephalexin
ampicillin	busulfan	cephaloglycin
anisindione	butabarbital	cephaloridine
antazoline	butalbital	cephalothin
antimony lithium thiomalate	butallylonal	cephapirin
antimony potassium tartrate	cactinomycin	cephradine
antimony sodium tartrate	capreomycin	chlorambucil
antimony sodium thioglycollate	captopril	chloramphenicol
	carbamazepine	
antipyrine	carbenicillin	chlordiazepoxide
aprobarbital	carbimazole	chlorprocaine
aspirin	carbinoxamine	chlorothiazide
auranofin	carisoprodol	chlorpheniramine
aurothioglucose	cefaclor	chlorphenetermine
		chlorporthixene
chlortetracycline	dimethyl sulfoxide (DMSO)	hydrocortisone
chlorthalidone	diphenadione	hydroflumethiazide
cimetidine	diphenhydramine	hydromorphone
cisplatin	diphenylpyraline	ibuprofen
clemastine	diphtheria and tetanus toxoids (adsorbed)	imipramine
clindamycin		indapamide
clofibrate	diphtheria and tetanus toxoids and pertussis (DPT)	indomethacin
clomiphene	vaccine (adsorbed)	influenza virus vaccine
clomipramine		insulin
clonazepam	diphtheria toxoids (adsorbed)	interferon
clonidine	disulfiram	iodide and iodine solutions and compounds
clorazepate	DPT vaccine	
cloxacillin	doxepin	iodipamide meglumine
cobalt	doxorubicin	iophendylate
codeine	doxycycline	iothalamate meglumine and sodium
cyclobarbitol	doxylamine	iothalamic acid
cyclopentobarbital	emetine	iron dextran
cyclophosphamide	enalapril	isoniazid
cyclosporine	erythromycin	isosorbide
cyclothiazide	ethionamide	isotretinoin
cyproheptadine	ethotoin	ketoprofen
cytarabine	ethoxzolamide	labetalol
dacarbazine	ethyl biscoumacetate	levallorphan
dactinomycin	etidocaine	levobunolol
danazol	etretinate	lidocaine
dantrolene	fenfluramine	lincomycin
dapsone	fenopropfen	lorazepam
daunorubicin	flecainide	loxapine
deferoxamine	fluorescein	mannitol
demeclocycline	fluorouracil	maprotiline
desipramine	flurazepam	measles and rubella virus vaccine (live)
dexamethasone	flurbiprofen	
dexbrompheniramine	framycetin	measles, mumps, and rubella virus vaccine (live)
dexchlorpheniramine	furosemide	
dextran	gentamicin	measles virus vaccine (live)
diacetylmorphine	glutethimide	
diatrizoate meglumine and sodium	gold Au 198	melphalan
	gold sodium thiomalate	
diazepam	gold sodium thiosulfate	mepredine

dichlorphenamide	griseofulvin	mephenytoin
dicloxacillin	halazepam	mephobarbital
dicumarol	heparin	mepivacaine
diethylcarbamazine	heptabarbital	meprobamate
diethylpropion	hetacillin	mercuric oxide
digitalis	hexethal	methacycline
diltiazem	hexobarbital	methadone
dimethindene	hydrabamine penicillin V	methaqualone
dimethyl imidazole carboxamide (DIC)	hydralazine	metharbital
methicillin	hydrochlorothiazide	methazolamide
methimazole	pentazocine	stibocaptate
methitural	pentobarbital	stibogluconate
methocarbamol	phenacetin	stibophen
methohexital	phendimetrazine	streptomycin
methotrexate	phenindione	succinylcholine
methyclothiazide	pheniramine	sulfacetamide
methyl dopa	phenobarbital	sulfachlorpyridazine
methylphenidate	phenprocoumon	sulfacytine
methylprednisolone	phentermine	sulfadiazine
methylthiouracil	phenylbutazone	sulfadimethoxine
methylprylon	phenylmercuric acetate	sulfamerazine
metoclopramide	phenylmercuric nitrate	sulfameter
metocurine iodide	piperazine	sulfamethazine
metolazone	piroxicam	sulfamethizole
metoprolol	poliovirus vaccine	sulfamethoxazole
metrizamide	polythiazide	sulfamethoxy pyridazine
metronidazole	potassium penicillin G	sulfanilamide
mianserin	potassium penicillin V	sulfaphenazole
midazolam	potassium phenethicillin	sulfapyridine
minocycline	practolol	sulfasalazine
mitomycin	prazepam	sulfathiazole
morphine	prazosin	sulfisoxazole
moxalactam	prilocaine	sulindac
mumps virus vaccine (live)	primidone	suramin
nafcillin	probarbital	talbutal
nalidixic acid	procaine	temazepam
nalorphine	procaine penicillin G	tetanus immune globulin
naloxone	procarbazine	tetanus toxoid
naltrexone	propoxycaine	tetracycline
naproxen	propranolol	thiabendazole
neomycin	propylthiouracil	thiamylal
neostigmine	protiptyline	thimerosal
niacin	pyrilamine	thiopental
niacinamide	quinacrine	thiotepa
nicotiny alcohol	quinethazone	thiothixene
nifedipine	quinidine	timolol
nitrazepam	quinine	triamcinolone
nitrofurantoin	rabies immune globulin	triazolam
nitromersol	rabies vaccine	trichlormethiazide
nortriptyline	radioactive iodides	trimethaphan
opium	ranitidine	trimipramine
oral contraceptives	rifampin	tripelennamine
oxacillin	rubella and mumps virus vaccine (live)	triprolidine
oxazepam	rubella virus vaccine (live)	tubocurarine
oxymorphone	secobarbital	vancomycin
oxyphenbutazone	smallpox vaccine	verapamil
oxytetracycline	sodium antimonylgluconate	vinbarbital
penicillamine	sodium salicylate	warfarin

T. Wegener syndrome (Wegener granulomatosis)

U. Vaccination

1. Ocular vaccina
2. Postvaccinial ocular syndrome
3. Variola

Cockerham KP, et al. Melkersson-Rosenthal syndrome. *Arch Ophthalmol* 2000;118:227-230.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Yeatts RP, White WL. Granulomatous blepharitis as a sign of Melkersson-Rosenthal syndrome. *Ophthalmology* 1997;104:1185-1190.

Bleeding of the Eyelid

1. Drugs, including the following:

acetazolamide	emetine	metoprolol
acetoexamide	ethoxzolamide	midazolam
allopurinol	flurazepam	mumps virus vaccine (live)
alprazolam	furosemide	naproxen
amantadine	glutethimide	nifedipine
amitriptyline	glyburide	nitrazepam
aspirin	gold Au 198	nortriptyline
auranofin	gold sodium thiomalate	oxazepam
aurothioglucose	gold sodium thiosulfate	oxprenolol
aurothioglucanide	halazepam	phenytoin
BCG vaccine	hydrochlorothiazide	piperazine
bendroflumethiazide	hydrocortisone	piroxicam
benzthiazide	hydroflumethiazide	polythiazide
betamethasone	ibuprofen	prazepam
betaxolol	imipramine	procarbazine
carbamazepine	indapamide	propranolol
chlordiazepoxide	indomethacin	protriptyline
chlorothiazide	influenza virus vaccine	quinethazone
chlorpropamide	interferon	quinine
chlorthalidone	ketoprofen	rifampin
cimetidine	levobunolol	rubella and mumps virus vaccine (live)
clofibrate	lorazepam	rubella virus vaccine (live)
clonazepam	measles and rubella virus vaccine (live)	smallpox vaccine
clorazepate		sodium salicylate
cyclothiazide	measles, mumps, and rubella virus vaccine (live)	sulfacetamide
cytarabine		
danazol	measles virus vaccine (live)	sulfachlorpyridazine
dapsone	methaqualone	sulfacytine
desipramine	methazolamide	sulfadiazine
dexamethasone	methyclothiazide	sulfadimethoxine
diazepam	methylprednisolone	sulfamerazine
dichlorphenamide	methylprylon	sulfameter
diltiazem	metolazone	sulfamethazine
sulfathiazole	sulfamethizole	tolbutamide
sulfamethoxazole	sulfisoxazole	triamcinolone
sulfamethoxypyridazine	temazepam	triazolam
sulfanilamide	tetanus immune globulin	trichlormethiazide
sulfaphenazole	tetanus toxoid	verapamil
sulfapyridine	timolol	
sulfasalazine	tolazamide	

2. Hutchinson syndrome (adrenal cortex neuroblastoma with orbital metastasis)
3. *Trauma

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

Ectropion (Lid Margin Turned Outward from the Eyeball)

1. Congenital ectropion
 - A. With distichiasis
 - B. With tight septum; microblepharon
 - C. With partial coloboma
 - D. With mandibulofacial dysostosis (Franceschetti syndrome)
 - E. With megaloblepharon (euryblepharon)
 - F. With microphthalmos or buphthalmos
 - G. Cerebrooculofacioskeletal syndrome
 - H. Down syndrome (mongolism)
 - I. Hartnup syndrome (niacin deficiency)
 - J. Lowe syndrome (oculocerebrorenal syndrome)
 - K. Miller syndrome
 - L. Milroy disease (oromandibular dystonia)
 - M. Robinow syndrome
 - N. Sjögren-Larsson syndrome
2. Acquired ectropion
 - A. Spastic ectropion
 1. *Acute spastic ectropion
 2. Blepharophimosis syndrome
 3. *Chronic spastic ectropion becoming cicatricial ectropion
 4. Hypothermal injury
 5. Myasthenia gravis—afternoon onset (Erb-Goldflam syndrome)
 6. Siemen syndrome (hereditary ectodermal dysplasia syndrome)
 - B. Atonic ectropion
 1. Anophthalmic socket
 2. Bell palsy (Idiopathic facial paralysis)
 3. Guillain-Barré syndrome (acute infectious neuritis)
 4. Paralytic ectropion—lagophthalmos, such as in seventh nerve palsy
 5. *Senile ectropion—tissue relaxation
 - C. Cicatricial ectropion
 1. Amendola syndrome
 2. Blastomycosis
 3. Collodion baby syndrome (congenital ichthyosis)
 4. Chronic dermatitis
 5. Cutaneous T-cell

6. Etretinate therapy
7. Excessive skin excision
8. Facial burns and scarring
9. Hydroa vacciniforme
10. Kabuki makeup syndrome
11. Leprosy (Hansen disease)
12. Orbital fracture repair
13. Palmoplantar keratoderma
14. Postblepharoplasty ectropion
15. Psoriasis (psoriasis vulgaris)
16. Radiation
17. Sézary syndrome (malignant cutaneous reticulosis syndrome)
18. Systemic fluorouracil
19. Thermal burns
20. Trauma
21. Transformation from chronic spastic ectropion
22. Zinsser-Engman-Cole syndrome (dyskeratosis congenita with pigmentation)
- D. Allergic ectropion-anaphylactic, contact, and microbial (usually temporary)
 1. Danbolt-Closs syndrome (acrodermatitis enteropathica)
 2. Elnichig syndrome
- E. Mechanical
 1. Kaposi disease (multiple idiopathic hemorrhagic sarcoma)
 2. Leiomyoma
 3. Lumps (chalazion, cysts, neurofibroma)

Hurwitz BS. Cicatricial ectropion: a complication of systemic fluorouracil. *Arch Ophthalmol* 1993;111:1608-1609.

Stratakis CA, et al. A variant of the cerebro-oculo-facio-skeletal syndrome with congenital ectropion and a case of lamellar ichthyosis in the same family. *Clin Genet* 1994;45:162-163.

Entropion (Inversion of Lid Margin)

1. Congenital, including congenital epiblepharon—inferior oblique insufficiency; ectrodactyly, ectodermal dysplasia, cleft lip-palate syndrome, including with and without lower eyelid retractor insertion
 - A. Inferior oblique insufficiency syndrome
 - B. Dental-ocular-cutaneous syndrome
 - C. Siemen syndrome (anhidrotic ectodermal dysplasia)
2. Acquired
 - A. Spastic entropion—acute, affecting lower lid, precipitated by acute inflammation or prolonged patching
 - B. Mechanical entropion
 1. Anophthalmos
 2. Enophthalmos
 3. Microphthalmos
 4. Lymphedema
 - C. *Senile entropion—relative enophthalmos secondary to fat atrophy
 - D. Cicatricial entropion—physical and chemical burns of conjunctiva and cicatrizing diseases, including trachoma and leprosy

1. Chronic cicatricial conjunctivitis
2. Leprosy (Hansen disease)
3. Radiation
4. Thermal burns
5. Trachoma
6. Following cryosurgery of the eyelid
7. Amendola syndrome
8. Variola

Bartley GB, et al. Congenital entropion with intact lower eyelid retractor insertion. *Am J Ophthalmol* 1991;112:437-441.

Westfall CT, et al. Operative complications of the transconjunctival inferior fornix approach. *Ophthalmology* 1991;98:1525-1528.

Epicanthus (Fold of Skin Over Inner Canthus of Eye)

1. Types
 - A. Epicanthus inversus—fold arises in the lower lid and extends upward to a point slightly above the inner canthus; it is accompanied by long medial canthal tendons, blepharophimosis, and ptosis—autosomal dominant
 - B. *Epicanthus palpebralis (common type)—epicanthal fold arises from the upper lid above the tarsal region and extends to the lower margin of the orbit
 - C. Epicanthus supraciliaris (unusual type)—epicanthal fold arises near brow and runs toward tear sac
 - D. *Epicanthus tarsalis (Mongolian eye)—epicanthal fold arises from the tarsal (lid) fold and loses itself in the skin close to the inner canthus—autosomal dominant
2. Associated conditions
 - A. Aminopterin-induced syndrome
 - B. Basal cell nevus syndrome (Gorlin syndrome)
 - C. Bassen-Kornzweig syndrome (familial hypolipoproteinemia)
 - D. Bilateral renal agenesis
 - E. Blepharophimosis, ptosis, epicanthus inversus syndrome
 - F. Bonnevie-Ullrich syndrome (pterygolympangiectasia)
 - G. Carpenter syndrome (acrocephalopolysyndactyly II)
 - H. Cat-eye syndrome (partial G-trisomy syndrome)
 - I. Cerebrofacioarticular syndrome of van Maldergen
 - J. Cerebrohepatorenal syndrome (Smith-Lemli-Opitz syndrome)
 - K. Chondrodystrophia (Conradi syndrome)
 - L. Chromosome long-arm deletion syndrome
 - M. Chromosome deletion (deletion 18)
 - N. Chromosome partial short-arm deletion syndrome (Wolf syndrome)
 - O. Chromosome short-arm deletion syndrome
 - P. Chromosome 13q partial deletion syndrome
 - Q. Congenital facial paralysis (Möbius syndrome)
 - R. Craniocarpotarsal syndrome (whistling face syndrome)
 - S. Craniosynostosis-radial aplasia (Baller-Gerold syndrome)
 - T. Cri-du-chat syndrome (Cry of the cat syndrome)
 - U. Dubowitz syndrome
 - V. Down syndrome (trisomy 21, mongolism)

- W. Drummond syndrome (idiopathic hypercalcemia, blue diaper syndrome)
 X. Ehlers-Danlos syndrome (fibrodysplasia elastica generalisata)
 Y. 18q syndrome
 Z. Familial blepharophimosis
- AA. Fetal alcohol syndrome
 BB. Freeman-Sheldon syndrome (whistling face syndrome)
 CC. 4Q syndrome
 DD. Gansslen syndrome (hematologic-metabolic bone disorder)
 EE. Greig syndrome (ocular hypertelorism syndrome)
 FF. Hurler syndrome (dysostosis multiplex)
 GG. Infantile hypercalcemia
 HH. Jacobs syndrome (triple X syndrome)
 II. Klinefelter XXY syndrome (gynecomastia-aspermatogenesis syndrome)
 JJ. Kohn-Romano syndrome (ptosis, blepharophimosis, epicanthus inversus, and telecanthus)
 KK. Komoto syndrome (congenital eyelid tetrad)
 LL. Laurence-Moon-Bardet-Biedl syndrome (retinitis pigmentosa-polydactyly-adiposogenital)
 MM. Leopard syndrome (multiple lentiginos syndrome)
 NN. Leroy syndrome (mucopolysaccharide excretion)
 OO. Little syndrome (nail patella syndrome)
 PP. Michel syndrome
 QQ. Mohr-Clausen syndrome (similar to orodigitofacial syndrome)
 RR. Noonan syndrome (Turner syndrome in males)
 SS. Oculocerebrorenal syndrome (Lowe syndrome)
 TT. Oculodigital dysplasia (microphthalmos syndrome)
 UU. Potter syndrome (renofacial syndrome)
 VV. Ring chromosome syndrome
 WW. Ring chromosome syndrome
 XX. Ring chromosome (microcephaly, hypertelorism, epicanthus)
 YY. Ring chromosome in the D group (13-15)
 ZZ. Robinow-Silverman-Smith syndrome
 AAA. Rubinstein-Taybi syndrome (broad thumbs syndrome)
 BBB. Schonenberg syndrome (dwarf-cardiopathy syndrome)
 CCC. Smith syndrome (facioskeletogenital dysplasia)
 DDD. TAR syndrome
 EEE. Thalassemia
 FFF. Trisomy syndrome (Edward syndrome)
 GGG. Turner syndrome (gonadal dysgenesis)
 HHH. Waardenburg syndrome (embryonic fixation syndrome)
 III. X-linked mental retardation syndrome
 JJJ. XXXXX syndrome

McKusick VA. *Mendelian inheritance in man*, 12th ed. Baltimore: Johns Hopkins University Press, 1998.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Hypopigmentation (Depigmentation of Eyelids)

1. Drugs, including the following:

adrenal cortex injection	dexamethasone	methimazole
alcohol	fludrocortisone	methotrexate
aldosterone beclomethasone	fluorometholone	methylprednisolone
amodiaquine	fluprenisolone	methylthiouracil
arsenic	gentamicin(?)	neostigmine
betamethasone	hydrocortisone	paramethasone
carbimazole	hydroquinone	physostigmine
chloramphenicol	hydroxychloroquine	prednisolone
chloroquine	isofluorophate	prednisone
corticosteroids	medrysone	propylthiouracil
cortisone	meprednisone	thiotepa
desoxycorticosterone	mercaptoethylamine	triamcinolone

2. Genetic factors

- A. Albinism
 - B. Chediak–Higashi syndrome (anomalous leukocytic inclusions with constitutional stigmata)
 - C. Cross-McKusick-Breen syndrome
 - D. Fanconi syndrome (amino diabetes)
 - E. Hermansky-Pudlak syndrome (oculocutaneous albinism and hemorrhagic diathesis)
 - F. Histidinemia
 - G. Homocystinuria
 - H. Incontinentia pigmenti achromians (hypomelanosis of Ito syndrome)
 - I. Menkes syndrome (kinky hair syndrome)
 - J. Nevus depigmentosus
 - K. Phenylketonuria (Folling syndrome)
 - L. Tuberous sclerosis (Bourneville syndrome)
 - M. Vitiligo
 - N. Vogt-Koyanagi-Harada syndrome (uveitis-vitiligo-alopecia-poliosis syndrome)
 - O. Waardenburg syndrome (embryonic fixation syndrome)
 - P. Wolf syndrome (chromosome partial deletion syndrome)
 - Q. Ziprkowski-Margolis syndrome
3. Following cryosurgery of the eyelid
 4. Burns (thermal, ultraviolet, ionizing, radiation)
 5. Trauma
 6. Kwashiorkor—malnutrition in children
 7. Chronic protein deficiency or loss and malabsorption of vitamin B₁₂
 8. Endocrine factors
 - A. Hypopituitarism (Simmond syndrome)
 - B. Addison disease (adrenal cortical insufficiency)
 - C. Hyperthyroidism (Graves disease)
 9. Inflammation and infection
 - A. Discoid lupus erythematosus
 - B. Eczematous dermatitis
 - C. Leprosy (Hansen disease)
 - D. Onchocerciasis syndrome (river blindness)
 - E. Pinta

- F. Pityriasis alba
 - G. Postinflammatory hypomelanoses
 - H. Post-kala-azar
 - I. Psoriasis
 - J. Sarcoidosis syndrome (Schaumann syndrome)
 - K. Syphilis (acquired lues)
 - L. Tinea versicolor
 - M. Vagabond leukoderma
 - N. Vitiligo
 - O. Yaws
10. Scleroderma (progressive systemic sclerosis)

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Hyperpigmentation (Discoloration of LIDS)

1. Deposits of the eyelids as caused by drugs, including:
2. Hyperpigmentation as caused by drugs, including the following:

acetophenazine	clofazimine	ketoprofen
acid bismuth sodium tartrate	colloidal silver	mercaptopurine
Alcian blue	cyclophosphamide	mercuric oxide
actinomycin C	cytarabine	mesoridazine
aluminum nicotinate	dactinomycin	methacycline
aminopterin	demeclocycline	methdilazine
amiodarone	diethazine	methotrexate
amodiaquine	doxycycline	methotrimeprazine
amphotericin B	dromostanolone	methylene blue
antipyrine	enalapril	mild silver protein
aurothiogluucose	epinephrine	minocycline
aurothioglycanide	ergocalciferol	minoxidil
bismuth oxychloride	ethopropazine	niacinamide
bismuth sodium tartrate	ferrocholinate	nicotinic acid
bismuth sodium thioglycollate	ferrous fumarate	nicotinyl alcohol
	ferrous gluconate	nitromersol
bismuth sodium triglycollamate	ferrous succinate	oxytetracycline
	ferrous sulfate	penicillamine
bismuth subcarbonate	floxuridine	perazine
bismuth subsalicylate chloroquine	fluorescein	pericyazine
	fluorouracil	perphenazine
bleomycin	fluoxymesterone	phenylmercuric acetate
busulfan	fluphenazine	phenylmercuric nitrate
butaperazine	gold Au 198	piperacetazine
calcitriol	gold sodium thiomalate	pipobroman
carphenazine	gold sodium thiosulfate	polysaccharide-iron complex
chlorpromazine	hydroxychloroquine	practolol
chlortetracycline	iron dextran	procarbazine
chrysarobin	prochlorperazine	
promazine	sulfamethizole	thioridazine
promethazine	sulfisoxazole	thioridazine
propiomazine	testolactone	trifluoperazine
quinacrine	testosterone	triflupromazine
rifampin	tetracycline	trimeprazine
rose bengal	thiethylperazine	uracil mustard
silver nitrate	thimerosal	vitamin A
silver protein	thiopropazine	vitamin D ₂
sulfacetamide	thioguanine	vitamin D ₃

-
3. Periorbital hyperpigmentation—dark circles around the eye
 - A. *Allergic rhinitis
 - B. *Familial (autosomal dominant)
 - C. Medium and dark complexioned white persons
 4. Brown hyperpigmentation
 - A. Genetic factors
 1. Acanthosis nigricans
 2. Albright syndrome (fibrous dysplasia)
 3. Cafe-au-lait and freckle-like macules in neurofibromatosis
 4. Dyskeratosis congenita
 5. Fanconi syndrome (amino diabetes)
 6. Freckles
 7. Lentigines
 8. Melanocytic nevus
 9. Neurocutaneous melanosis
 10. Seborrheic keratosis
 11. Xeroderma pigmentosum
 - B. Metabolic factors
 1. Gaucher syndrome (cerebroside lipidosis)
 2. Hemochromatosis
 3. Niemann-Pick disease (essential lipoid histiocytosis)
 4. Porphyria (cutanea tarda)
 5. Wilson disease (hepatolenticular degeneration)
 - C. Endocrine factors
 1. adrenocorticotrophic hormone (ACTH) therapy
 2. Addison disease (adrenal cortical insufficiency)
 3. Estrogen therapy
 4. Melanoma
 5. Pituitary tumors
 6. Pregnancy
 - D. Nutritional factors
 1. Kwashiorkor (hypoproteinemia syndrome)
 2. Pellagra (avitaminosis B₂)
 3. Sprue
 4. Vitamin B₁₂ deficiency (Addison pernicious anemia)
 - E. Chemical and pharmacologic agents
 1. Arsenic
 2. Berlock dermatosis
 3. Bleomycin

-
4. Busulfan
 5. Nitrogen mustard, topical
 6. Photochemical agents
- F. Physical agents
1. Ionizing radiation
 2. Thermal radiation
 3. *Trauma
 4. Ultraviolet light
- G. Inflammation and infection
1. Atopic dermatitis
 2. Lichen planus
 3. Lichen simplex chronicus
 4. Lupus erythematosus discoid (Kaposi-Libman-Sacks syndrome)
 5. Psoriasis
 6. Tinea versicolor
- H. Neoplasms
1. Acanthosis nigricans
 2. Malignant melanoma
 3. Mastocytosis
- I. Miscellaneous factors
1. Autosomal recessive ectodermal dysplasia
 2. Catatonic schizophrenia
 3. Chronic hepatic insufficiency
 4. Cronkhite-Canada syndrome
 5. Encephalitis
 6. Erythema dyschromicum perstans
 7. Liver spots
 8. Systemic scleroderma (progressive systemic sclerosis)
 9. Whipple syndrome (intestinal lipodystrophy)
5. Blue, gray or slate hyperpigmentation
- A. Genetic factors
1. Blue melanocytic nevus
 2. Dermal melanocytosis (Mongolian spot)
 3. Franceschetti-Jadassohn syndrome (reticular pigmented dermatosis)
 4. Incontinentia pigmenti (Bloch-Sulzberger syndrome)
 5. Oculodermal melanocytosis
- B. Metabolic factors
1. Amyloidosis, cutaneous macular (Lubarsch-Pick syndrome)
 2. Hemochromatosis
- C. Nutritional factors
1. Chronic nutritional insufficiency
- D. Inflammation and infection
1. Erythema dyschromicum perstans
 2. Pinta
 3. Riehl melanosis
- E. Chemical and pharmacologic agents
1. Chlorpromazine
 2. Gold
 3. Phenothiazine

4. Sulfonamides
5. Tetracycline
- F. Neoplasms
 1. Slate-gray dermal pigmentation with metastatic melanoma and melanogenemia
- G. Other
 1. Blue dye
 2. Cyanosis

Tumors of Eyelids

1. Molluscum contagiosum—small, greasy-appearing elevation that is usually umbilicated or any other granuloma
2. Neoplasm
 - A. Basal cell epithelioma—common; may be a red, circumscribed, lobulated growth involving the lid margin or may have an umbilicated center (rodent ulcer)
 - B. Squamous cell or Zeis cell epithelioma—hard pearly appearing lesion, usually without increased vascularity
 - C. Meibomian-gland carcinoma—resembles a chalazion
 - D. Metastatic tumors of the lid—respiratory tract, breast, skin (melanoma), gastrointestinal tract, or kidney
 - E. Keratoacanthoma—benign, hemispherical, elevated tumor with a central keratin-filled crater; develops within several months
 - F. Hemangioma—rubor of vascular tumor, usually having a smooth surface with tufts of vessels near the surface
 - G. Benign mixed tumor of the lacrimal (palpebral) gland
 - H. Trichilemmoma
 - I. Lymphangioma
 - J. Juvenile xanthogranuloma
3. Metaplasia or hyperplasia
 - A. Trichoepithelioma
 - B. Syringoma
 - C. *Sebaceous adenoma
 - D. *Papilloma—smooth, rounded, or pedunculated elevation
 - E. *Nevus—usually pigmented, raised, and smooth surfaced; however, may be papillomatous or contain hair
 - F. Benign calcifying epithelioma
 - G. Inverted follicular keratosis
 - H. Blue nevus—blue-black and velvet-like in appearance
 - I. Freckles
 - J. Lentigo simplex
 - K. Solar lentigo
 - L. Melasma

4. Cyst
 - A. Sebaceous
 - B. Sudoriferous
 - C. Traumatic
 - D. Congenital inclusion
5. Lipoid proteinosis—wax-like, pearly nodules
6. Pseudotumor of lid-encysted contact lens
7. Amyloidosis (Lubarsch-Pick syndrome)

Diagnostic table

	Molluscum Contagiosum*	Necroplasm as Basal Cell†	Metaplasia/Hyperplasia as Trichoepithelioma	Cyst as Sebaceous‡	Lipoid Proteinosis	Pseudotumor of Lids
History						
1. Foreign body history						U
2. Hereditary			S		U	
3. Malignancy previously	U					
4. More frequent lower lid	U					
5. Viral etiology	U					
Physical Findings						
1. A rise in hair-bearing skin	U					
2. Bead-like excrescences with loss of cilia at lid margins						U
3. Chalazion		U				
4. Chronic blepharitis		U			U	
5. Conjunctivitis	U					
6. Cystic nodules filled with sebaceous/serious material				U		
7. Ectropion		S				
8. Encysted contact lens						U
9. Entropion		S				
10. Flesh-colored, rounded papules—some pigmented			U			
11. Foreign body sensation						U
12. Keratitis	U					
13. Lid notching		U				
14. Lid retraction		U				
15. Madarosis		U				U
16. Nodular hyperemic lid lesion						U
17. Nodular/nodular ulcerative lid lesion		U				
18. Small umbilicated tumor	U					
19. Yellow-white nodule				U	U	
Laboratory Data						
Histopathology						
Epithelial cyst walls have serous/sebaceous material				U		
Granuloma	U					
Granulomatous infiltrates with micro-organisms						U
Large, nuclear forms, including multinucleated cells and monstrous cellular forms				U		
Lower lipid content						U
Narrow strand of basaloid cells like adenoid basal cell carcinomas, keratinizing cysts with pilar differentiation			U			
Tumor cells in nests, cords, sheets; peripheral cells may palisade	U		S			

R = rarely; S = sometimes; and U = usually.

Tumors of eyelids

Xanthelasma (Smooth Yellow Deposits in the Eyelid, Especially the Superior Nasal and Inferior Nasal Areas)

1. Xanthelasma with hyperlipemia (primary or secondary)
 - A. Type II—familial hyper-B-lipoproteinemia (familial hypercholesterolemia)
 - B. Type III—familial hyper-B- and hyper-pre-B-lipoproteinemia (familial hyperlipemia with hypercholesterolemia)
 - C. Other types are infrequent, including type I, familial fat-induced hyperlipoproteinemia (hyperchylomicronemia); type IV, familial hyper-pre-B-lipoproteinemia (carbohydrate-induced hyperlipemia); type V, familial hyperchylomicronemia with hyper-pre-B-lipoproteinemia (mixed hyperlipemia), lichen sclerosis et atrophicus.
2. Xanthelasma without hyperlipemia
 - A. Generalized
 - B. Histiocytosis X (eosinophilic granuloma, Hand-Schüller-Christian disease, and Letterer-Siwe disease)
 - C. Local (no systemic disease)
 - D. Reticulohistiocytoma cutis
 - E. Xanthoma disseminatum

Depot MJ, et al. Bilateral and extensive xanthelasma palpebrarum in a young man. *Ophthalmology* 1984;91:522-527.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Chronic Blepharitis (Inflammation of Lids)

1. Seborrhic—lid margin covered with small, white or gray scales
 - A. Associated with seborrhic dermatitis of the scalp
 - B. Aggravated by chemical fumes, smoke, and smog
 - C. May be associated with uncorrected refractive errors (especially hyperopia)
 - D. May be due to *Pityrosporon ovale*
 - E. *Aspergillus fumigatus* may be its cause
 - F. Associated with systemic diseases
 1. Acne rosacea
 2. *Acinetobacter lwoffii*
 3. Acrodermatitis chronica atrophicans
 4. Aspergillosis

5. Candidiasis
6. Cretinism (hypothyroidism)
7. Demodicosis
8. Dermatophytosis
9. Diphtheria
10. Erysipelas
11. Herpes simplex
12. Hypocalcemia
13. Hypoparathyroidism
14. Listerellosis
15. Malaria
16. *Moraxella lacunata*
17. Pellagra (avitaminosis B₃)
18. *Seborrheic dermatitis
19. Sporotrichosis
20. Staphylococcus
21. Streptococcus
22. Syphilis (acquired lues)
23. Scleroderma (systemic scleroderma)
24. Tuberculosis
25. Vaccinia
26. Xeroderma pigmentosum

G. Associated with syndromes

1. Danbolt-Closs syndrome (acrodermatitis enteropathica)
2. Down syndrome (mongolism)
3. Goldscheider syndrome (epidermolysis bullosa)
4. Hand-Schüller-Christian syndrome (lipoid granuloma syndrome)
5. Lyell syndrome (toxic epidermal necrolysis)
6. Myotonic dystrophy syndrome (Curschmann-Steinert syndrome)
7. Parkinson syndrome (paralysis agitans)
8. Sézary syndrome (mycosis fungoides syndrome)
9. Siemens syndrome (hereditary ectodermal dysplasia syndrome)
10. Syndrome of Beal (acute follicular conjunctivitis)
11. Wernicke syndrome
12. Thiamine deficiency
13. Wiskott-Aldrich syndrome
14. Zinsser-Engman-Cole syndrome (dyskeratosis congenita with pigmentation)

H. Drugs, including the following:

acyclovir	meperidine	thimerosal
benzalkonium	mercuric oxide	trifluridine
F3T idoxuridine	nitromersol	vidarabine
isosorbide	phenylmercuric acetate	
mannitol	phenylmercuric nitrate	

I. Ulcerative—suppurative inflammation of the follicles of the lashes and the associated glands of Zeis and Moll

- A. *Staphylococcus aureus* or *S. albus* may be responsible
- B. Due to mixed infection of a staphylococcus and *P. ovale*
- C. Associated with vaccinia

D. Due to *Blastomyces dermatitidis*

E. Herpes simplex—vesicles at lash line, then ulceration

J. *Angular—inflammation of the angles of the lids, usually associated with an angular conjunctivitis

A. *Candida albicans*

B. *Moraxella lacunata*

C. Stannus cerebellar syndrome (riboflavin deficiency)

D. *Staphylococcus aureus*

K. Exfoliative dermatitis owing to drugs, including the following:

acetohexamide	butethal	codeine
acetophenazine	captopril	cyclobarbital
acid bismuth sodium tartrate	carbamazepine	cyclopentobarbital
adiphenine	carbenicillin	cyclophosphamide
allobarbital	carbimazole	dapsone
allopurinol	carisoprodol	dicloxacillin
ambutonium	carphenazine	dicyclomine
aminosalicylate(?)	cefaclor	diethazine
aminosalicylic acid	cefadroxil	diltiazem
amithiozone	cefamandole	diphenamil
amobarbital	cefazolin	diphenadione
amodiaquine	cefonicid	diphenylhydantoin
amoxicillin	cefoperazone	droperidol
amoxicillin	ceforanide	enalapril
ampicillin	cefotaxime	erythryl tetranitrate
anisindione	cefotetan	erythromycin
anisotropine	cefoxitin	ethionamide
antipyrine	cefsulodin	ethopropazine
aprobarbital	ceftazidime	ethosuximide
atropine methylnitrate	ceftizoxime	ethotoin
auranofin	ceftriaxone	etidocaine
aurothioglucoase	cefuroxime	fenopropfen
aurothioglycanide	cephalexin	flecainide
barbital	cephaloglycin	fluphenazine
bismuth carbonate	cephaloridine	furosemide
bismuth oxychloride	cephalothin	glutethimide
bismuth salicylate	cephapirin	glyburide
bismuth sodium tartrate	cephradine	glycopyrrolate
bismuth sodium thioglycollate	chlorambucil	gold Au 198
bismuth sodium triglycollamate	chlorprocaine	gold sodium thiomalate
bismuth subcarbonate	chloroquine	gold sodium thiosulfate
bismuth subsalicylate	chlorpromazine	griseofulvin
bupivacaine	chlorpropamide	haloperidol
busulfan	chlorprothixene	heptabarbital
butabarbital	cimetidine	hetacillin
butalbital	ciprofloxacin	hexethal
butallylonal	clidinium	hexobarbital
butaperazine	clindamycin	hexocyclium
	cloxacillin	
hydroxychloroquine	oxyphenonium	sulfadiazine
indomethacin	paramethadione	sulfadimethoxine
iodide and iodine solutions and compounds	pentaerythritol tetranitrate	sulfamerazine
	pentobarbital	
isoniazid	perazine	sulfameter
isopropamide	pericyazine	sulfamethazine
isosorbide dinitrate	perphenazine	sulfamethizole
ketoprofen	phenindione	sulfamethoxazole
lidocaine	phenobarbital	sulfamethoxypridazine
lincomycin	phensuximide	sulfanilamide
mannitol hexanitrate	phenylbutazone	sulfaphenazole
mechlorethamine	phenytoin	sulfapyridine
melphalan	pimozide	sulfasalazine
mepenzolate	pipenzolate	sulfathiazole
mephenytoin	piperacetazine	sulfisoxazole
mephobarbital	piperidolate	sulindac
mepivacaine	piroxicam	talbutal
meprobamate	poldine	thiabendazole
mesoridazine	practolol	thiamylal
methantheleine	prilocaine	thiethylperazine
metharbital	primidone	thiopental
methdilazine	probarbital	thiopropazate
methicillin	procaine	thiopropazine
methimazole	procarbazine	thioridazine
methitural	prochlorperazine	thiothixene
methixene	promazine	tolazamide
methohexital	promethazine	tolbutamide
methotrimeprazine	propanteline	trichloroethylene
methsuximide	propiomazine	tridihexethyl
methylatropine nitrate	propoxycaine	triethylenemelamine
methylphenidate	propoxyphene	trifluoperazine
methylthiouracil	propranolol	trifluoperidol
methyprylon	propylthiouracil	triflupromazine
moxalactam	quinacrine	trimeprazine
nafcillin	quinidine	trimethadione
naltrexone	radioactive iodides	trolnitrate
naproxen(?)	rifampin	uracil mustard
nitroglycerin	secobarbital	vancomycin
oxacillin	streptomycin	vinbarbital
oxyphenbutazone	sulfacetamide	vitamin A
oxyphencylimine	sulfachlorpyridazine	
	sulfacytine	

L. Other types

- A. Due to mites (*Demodex folliculorum*)
- B. Due to pubic lice (*Phthirus pubis*)

M. Erythema due to drugs, including the following:

acebutolol	cefoxitin	diazepam
acetaminophen	cefsulodin	diazoxide
acetanilid	ceftazidime	DIC
acetazolamide	ceftizoxime	DMSO
acyclovir	ceftriaxone	DPT vaccine
adrenal cortex injection	cefuroxime	dichlorphenamide
aldosterone	cephalexin	diethylcarbamazine
albuterol	cephaloglycin	diethylpropion
allopurinol	cephaloridine	diltiazem
alprazolam	cephalothin	dimethindene
amitriptyline	cephapirin	dimethyl sulfoxide
amoxapine	cephradine	diphenhydramine
antazoline	chlorambucil	diphenylpyraline
atenolol	chlordiazepoxide	diphtheria and tetanus toxoids (adsorbed)
auranofin	chlorpheniramine	
aurothioglucose	chlorphentermine	diphtheria and tetanus toxoids and pertussis vaccine (adsorbed)
aurothioglucanide	chlorphentermine	
azatadine	chlortetracycline	
BCG vaccine	cimetidine	diphtheria toxoid (adsorbed)
Bis-chloroethyl-nitroso-urea (BCNU)	ciprofloxacin	disopyramide
	dapiprazole hydrochloride	disulfiram
beclomethasone	desoxycorticosterone	doxepin
benzalkonium	cisplatin	doxorubicin
benzathine penicillin G	clomastine	doxycycline
benzphetamine	clofibrate	doxylamine
betamethasone	clomipramine	enalapril
betaxolol	clonazepam	ergonovine
bleomycin	clorazepate	ergotamine
bromide	cortisone	ethionamide
brompheniramine	cyclophosphamide	ethoxzolamide
busulfan	cyclosporin	etretinate
cactinomycin	cyproheptadine	fenfluramine
captopril	cytarabine	fenopropfen
carbinoxamine	dacarbazine	flecainide
carmustine	dactinomycin	floxuridine
chloroethyl-cyclohexyl-nitrosourea (CCNU)	danazol	fluorometholone
	daunorubicin	fluorouracil
cefaclor	deferoxamine	flurazepam
cefadroxil	demeclocycline	flurbiprofen
cefamandole	desipramine	framycetin
cefazolin	dexamethasone	gold Au 198
cefonicid	dexbrompheniramine	gold sodium thiomalate
cefoperazone	dexchlorpheniramine	gold sodium thiosulfate
ceforanide	dextran	halazepam
cefotaxime	diacetylmorphine	hexachlorophene
cefotetan	diatrizoate	hydrabamine penicillin V
hydralazine	metocurine iodide	prazepam
hydrocortisone	metoprolol	prazosin
hydroxyurea	metronidazole	prednisolone
ibuprofen	mexiletine	prednisone
imipramine	mianserin	procaine penicillin G
influenza virus vaccine	midazolam	procarbazine
insulin	minocycline	propranolol
iodipamide meglumine	minoxidil	protriptyline
iothalamate meglumine and sodium	mitomycin	pyrilamine
	mitotane	
iothalamic acid	moxalactam	rabies immune globulin
iron dextran	mumps virus vaccine (live)	rabies vaccine
isotretinoin	nadolol	ranitidine
ketoprofen	nalorphine	rifampin
labetalol	naloxone	rubella and mumps virus vaccine (live)
levallorphan	naltrexone	
levobunolol	naproxen	semustine
lomustine	neomycin	smallpox vaccine
lorazepam	neostigmine	spironolactone
maprotiline	nifedipine	streptomycin
measles and rubella virus vaccine (live)	nitrazepam	streptozocin
	nitromersol	
measles virus vaccine (live)	nortriptyline	succinylcholine
measles, mumps, and rubella virus vaccine (live)	oxazepam	sulindac
	oxprenolol	
mechlorethamine	oxytetracycline	temazepam
medrysone	paramethasone	tetanus immune globulin
mefenamic acid	pentazocine	tetanus toxoid
meglumine and sodium	phenacetin	tetracycline
melfalan	phendimetrazine	thimerosal
meperidine	pheniramine	thiotepa
meprednisone	phentermine	timolol
mercuric oxide	phenylephrine	tocainide
methacycline	phenylmercuric acetate	trazodone
methazolamide	phenylmercuric nitrate	triazolam
methocarbamol	pindolol	triethylenemelamine
methotrexate	piroxicam	trimipramine
methoxsalen	poliovirus vaccine	trioxsalen
methylergonovine	potassium penicillin G	tripelennamine
methylprednisolone	potassium penicillin V	triprolidine
methysergide	potassium phenethicillin	tubocurarine
	practolol	uracil mustard
		Verapamil

Acute Blepharitis (Inflammation of Lids with Rapid Onset)

1. Usual allergy to drugs, including the following:

acenocoumarin
 acetaminophen
 acetanilid
 acetazolamide
 acetohexamide
 acetophenazine
 acetyldigitoxin
 actinomycin C
 acyclovir
 adenine arabinoside
 adiphenine
 allobarbitol
 allopurinol
 alprazolam
 aluminum nicotinate
 ambutoxium(?)
 aminopterin
 aminosalicilate(?)
 aminosalicilic acid(?)
 amithiozone
 amobarbital
 amodiaquine
 amoxicillin
 amphotericin B
 ampicillin
 amyl nitrite
 anisindione
 anisotropine
 antazoline
 antipyrine
 aprobarbital
 aspirin
 atropine
 atropine methylnitrate
 auranofin
 aurothioglucoase
 aurothioglucanide
 bacitracin
 barbital belladonna
 bendroflumethiazide
 benoxinate
 benzalkonium
 benzathine penicillin G
 benzphetamine
 benzthiazide
 diethazine
 diethylcarbamazone
 diethylpropion
 digitalis
 digitoxin
 digoxin
 dimercaprol
 dimethyl sulfoxide
 diphemanil
 diphenadione
 diphenylhydantoin
 diphtheria and tetanus toxoids (adsorbed)

 diphtheria and tetanus toxoids and pertussis vaccine (adsorbed)

 diphtheria toxoid adsorbed
 dipivefrin
 disulfiram
 doxorubicin
 dromostanolone
 droperidol
 dyclonine
 echothiophate
 edrophonium emetine
 ephedrine
 epinephrine
 ergonovine
 ergotamine
 erythromycin
 ethionamide
 ethopropazine
 ethosuximide
 ethotoin
 ethoxzolamide
 ethyl biscoumacetate
 etidocaine
 fenfluramine
 fluorescein
 fluorometholone
 fluorouracil
 fluoxymesterone
 fluphenazine
 flurazepam
 framycetin
 F3T
 furosemide
 gentamicin
 naphazoline
 naproxen
 neomycin
 neostigmine

 betamethasone
 betaxolol
 bishydroxycoumarin
 bleomycin
 bromide
 bupivacaine
 busulfan
 butabarbital
 butacaine
 butalbital
 butallylonal
 butaperazine
 butethal
 cactinomycin
 carbachol
 carbamazepine
 carbenicillin
 carbimazole
 carisoprodol
 carmustine
 carphenazine
 cefaclor
 cefadroxil
 cefamandole
 cefazolin
 cefonicid
 cefoperazone
 ceforanide
 cefotaxime
 cefotetan
 cefoxitin
 cefsulodin
 ceftazidime
 ceftizoxime
 ceftriaxone
 cefuroxime
 cephalaxin
 cephalirin
 cephaloglycin
 cephaloridine
 cephalothin
 cephradine
 chloral hydrate
 chlorambucil
 chloramphenicol
 gitalin
 glutethimide
 glyburide
 glycopyrrolate
 gold Au 198
 gold sodium thiomalate
 gold sodium thiosulfate
 griseofulvin
 halazepam
 haloperidol
 heparin
 heptabarbital
 hetacillin
 hexethal
 hexobarbital
 hexocyclium

 homatropine
 hyaluronidase
 hydrabamine penicillin V
 hydralazine
 hydrochlorothiazide
 hydrocortisone
 hydroflumethiazide
 hydromorphone
 hydroxyamphetamine
 hydroxychloroquine
 idoxuridine
 indapamide
 influenza virus vaccine
 insulin
 iodide and iodine solutions and compounds

 iodipamide meglumine
 iothalamate meglumine and sodium

 iothalamate acid
 isofluorophate
 isoniazid
 isopropamide
 kanamycin
 lanatoside C
 levallorphan
 levobunolol
 levodopa
 lidocaine
 lincomycin
 lomustine
 lorazepam
 poldine
 polymyxin B
 polythiazide
 potassium penicillin G

 chlordiazepoxide
 chlorprocaine
 chloroquine
 chlorothiazide
 chlorphenetermine
 chlorpromazine
 chlorpropamide
 chlorprothixene
 chlortetracycline
 chlorthalidone
 chrysarobin
 clidinium
 clindamycin
 clomiphene
 clonazepam
 clorazepate
 cloxacillin
 cobalt
 cocaine
 colistin
 colloidal silver
 cortisone
 cyclobarbitol
 cyclopentobarbital
 cyclopentolate
 cyclophosphamide
 cycloserine
 cyclothiazide
 cytarabine
 dacarbazine
 dactinomycin
 daunorubicin
 deferoxamine
 demecarium
 deslanoside
 dexamethasone
 diatrizoate meglumine and sodium

 diazepam
 diazoxide
 dibucaine
 dichlorophenamide
 dicloxacillin
 dicumarol
 dicyclomine
 measles and rubella virus vaccine (live)

 measles, mumps, and rubella virus vaccine (live)

 measles virus vaccine (live)
 mechlorethamine
 medrysone
 melphalan
 mepenzolate
 meperidine
 mephenytoin
 mephobarbital
 mepivacaine
 meprobamate
 mercuric oxide
 mesoridazine
 methacholine
 methantheline
 metharbital
 methazolamide
 methdilazine
 methicillin
 methimazole
 methitural
 methixene
 methohexital
 methotrexate
 methotrimprazine
 methsuximide
 methylclothiazide
 methylatropine nitrate
 methylidopa
 methylergonovine
 methylprednisolone
 methysergide
 methylthiouracil
 methyprylone
 metolazone
 metrizamide
 midazolam
 mild silver protein
 mitomycin
 morphine
 moxalactam
 mumps virus vaccine (live)
 nafcillin
 nalorphine
 naloxone
 naltrexone
 sulfamethoxypyridazine
 sulfanilamide
 sulfaphenazole
 sulfapyridine

niacinamide
nicotinic acid
nicotinyl alcohol
nitrazepam
nitrofurantoin
nitromersol
nystatin
opium
oral contraceptives
ouabain
oxacillin
oxprenolol
oxymorphone
oxyphenbutazone
oxyphenyclimine
oxyphenonium
paramethadione
pentobarbital
perazine
pericyazine
perphenazine
phenacaine
phenacetin
phendimetrazine
phenindione
phenobarbital
phenprocoumon
phensuximide
phentermine
phenylbutazone
phenylephrine
phenylmercuric acetate
phenylmercuric nitrate
phenytoin
physostigmine
pilocarpine
pipenzolate
piperacetazine
piperazine
piperidolate
piperocaine
pipobroman
potassium penicillin V
potassium phenethicillin
potassium phenoxymethyl penicillin
talbutal
prazepam
prednisolone
prilocaine
primidone
probarbital
procaine
procaine penicillin G
prochlorperazine
promazine
promethazine
propantheline
proparacaine
propiomazine
propoxycaine
propranolol
propylthiouracil
quinethazone
quinidine
quinine
rabies immune globulin
rabies vaccine
radioactive iodides
scopolamine
secobarbital
semustine
silver nitrate
silver protein
sodium salicylate
streptomycin
streptozocin
succinylcholine
sulfacetamide
sulfachlorpyridazine
sulfadiazine
sulfadimethoxine
sulfamerazine
sulfameter
sulfamethazine
sulfamethizole
sulfamethoxazole
sulfasalazine
sulfathiazole
sulfisoxazole
temazepam
testolactone
testosterone
tetanus immune globulin
tetanus toxoid
tetracaine
tetracycline
tetrahydrozoline
thiabendazole
thiamylal
thiethylperazine
thimerosal
thiopental
thiopropazate
thiopropazine
thioridazine
thiotepa
thiothixene
timolol
tolazamide
tolbutamide
trazodone
triazolam
trichlormethiazide
tridihexethyl
triethylenemelamine
trifluoperazine
trifluorothymidine
trifluperidol
triflupromazine
trifluridine
trimeprazine
trimethadione
tropicamide
uracil mustard
vancomycin
vidarabine
vinbarbital
warfarin

2. *Infections, such as bacterial, fungal, and viral

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

Tasman W, Jaeger E, eds. *Duane's clinical ophthalmology*. Philadelphia: JB Lippincott, 1990.

Thickened Eyelids

1. Trachoma
2. Multiple chalazia
3. *Chronic conjunctivitis
4. *Blepharitis—lid margins thickened
5. Tarsitis—rare, such as in syphilis or tuberculosis
6. Trisomy (E syndrome)
7. Congenital hypothyroidism
8. Pheochromocytoma, medullary thyroid carcinoma, and neurofibromatosis

Baum JL, Adler ME. Pheochromocytoma, medullary thyroid carcinoma, and multiple mucosal neuroma. *Arch Ophthalmol* 1972;87:574-584.

Gellis SS, Feingold M. *Atlas of mental retardation*. Washington, DC: US Government Printing Office, 1968.

Blepharophimosis (Short Palpebral Fissure)

1. Blepharochalasis
2. Blepharofacioskeletal syndrome
3. Blepharophimosis-amenorrhea syndrome (blepharophimosis, ptosis, epicanthus inversus syndrome)
4. Carpenter syndrome (acrocephalopolysyndactyly II)
5. Clefting syndrome with anterior chamber and lid anomalies
6. Craniocarpotarsal syndrome (Freeman-Sheldon syndrome; whistling face syndrome)
7. Down syndrome (trisomy 21, mongolism)
8. Dubowitz syndrome
9. 18P syndrome
10. Kaufman oculocerebrofacial syndrome
11. Klein-Waardenburg syndrome
12. Komoto syndrome (congenital eyelid tetrad)
13. Marden-Walker syndrome
14. Meyer-Schwickerath and Weyers syndrome
15. Michel syndrome
16. *Microphthalmos
17. Mohr syndrome (orofaciocigital syndrome II)
18. Mohr syndrome
19. Oculopalatoskeletal syndrome
20. Ohdo blepharophimosis syndrome
21. Pena-Shokeir type II syndrome
22. Progeria (Hutchinson-Gilford syndrome)
23. Rieger syndrome (dysgenesis mesostromalis)
24. Ring chromosome in the D group (13-15) (ring D syndrome)
25. Schonenberg syndrome (dwarf cardiopathy syndrome)
26. Schwartz-Jampel syndrome (osteochondromuscular dystrophy)
27. Simosa syndrome

28. Syndrome of blepharophimosis with myopathy
29. *Traumatic
30. Trisomy (E syndrome) (Edward syndrome)
31. Waardenburg syndrome (embryonic fixation syndrome)
32. Young-Simpson syndrome
33. X-linked mental retardation syndrome
34. 3p- syndrome
35. 10q- syndrome

Bonthron DT, et al. Parental consanguinity in the blepharophimosis, heart defect, hypothyroidism, mental retardation syndrome (Young-Simpson syndrome). *J Med Genet* 1993;30:255-256.

Euryblepharon

Euryblepharon is defined as a horizontally elongated palpebral aperture (normal, to mm) and may be associated with ectropion and present in other family members.

1. Excessive tension of skin
2. Defective separation of the lids
3. Excessive pull of the platysma
4. *Localized displacement of the lateral canthi
5. Hypoplasia of tarsus

Feldman E, et al. Euryblepharon: a case report with photographs documenting the condition from infancy to adulthood. *J Pediatr Ophthalmol Strabismus* 1980;17:307-309.

Gupta AK, et al. Euryblepharon. *J Pediatr Ophthalmol* 1972;9:173-174.

McCord CD, et al. Congenital euryblepharon. *Ann Ophthalmol* 1979;11:1217-1224.

Lid Coloboma

1. Amniogenic band syndrome (amniotic bands-Streeter anomaly)
2. Epidermal nevus syndrome
3. Facial clefting syndrome (Tessier syndromes)
4. Fraser syndrome
5. Frontonasal dysplasia syndrome
6. Goldenhar syndrome (oculoauriculovertebral dysplasia)
7. Miller syndrome
8. Nager syndrome
9. Nevus sebaceous of Jadassohn (linear sebaceous nevus syndrome)
10. Palpebral coloboma-lipoma syndrome
11. *Traumatic
12. Treacher Collins-Franceschetti syndrome (mandibulofacial dysostosis)

Braude LL, et al. Ocular abnormalities in the amniogenic band syndrome. *Br J Ophthalmol* 1981;65:299-303.

Necrosis of Eyelids

1. Drugs, including the following:

acenocoumarol	diphenadione	phenprocoumon
amphotericin B	ethyl biscoumacetate	tobramycin
anisindione	nafcillin	warfarin
dicumarol	phenindione	

2. *Mechanical, electrical, or thermal trauma
3. Periorbital cellulitis-periorbital necrotizing cellulitis
4. Secondary to infection

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

Scott PM, Bloome MA. Lid necrosis secondary to streptococcal periorbital cellulitis. *Ann Ophthalmol* 1981;13:461.

Poliosis (Whitening of Hair, Eyebrows, and Eyelashes)

1. Albino
2. Alopecia areata
3. *Aging
4. Drugs, including the following:

amodiaquine	dexamethasone	medrysone
betamethasone	epinephrine	prednisolone
chloroquine	fluorometholone	thiotepa
cortisone	hydrocortisone	
cyclosporin A	hydroxychloroquine	

5. Leprosy (Hansen disease)
6. Radiation therapy
7. Rubinstein-Taybi syndrome
8. Severe dermatitis
9. Stress
10. *Unknown etiology
11. Vitiligo
12. Vogt-Koyanagi-Harada syndrome (uveitis-vitiligo-alopecia-poliosis syndrome)
13. Waardenburg syndrome (embryonic fixation syndrome)
14. Werner syndrome (progeria of adults)

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Walsh FB, Hoyt WF. *Clinical neuro-ophthalmology*, 4th ed. Baltimore: Williams & Wilkins, 1985.

Trichomegaly (Long Lashes)

1. Associated with cataract and hereditary spherocytosis
2. Congenital with pigmentary retinal degeneration, dwarfism, and mental retardation
3. Cyclosporine induced
4. De Lange syndrome (congenital muscular hypertrophy—cerebral syndrome)
5. Ectodermal dysplasia (Curtius syndrome)
6. Human immunodeficiency virus (HIV)

7. Hypertrichosis (hirsutism)
8. Isolated adrenal malfunction and ovarian atrophy
9. Noonan syndrome (male Turner syndrome)
10. *Normal
11. Oliver-McFarlane syndrome
12. Rubinstein-Taybi syndrome (broad thumbs syndrome)
13. Schwartz syndrome

Chang TS, et al. Congenital trichomegaly, pigmentary degeneration of the retina and growth retardation Oliver-McFarlane syndrome year follow-up of the first reported case. *Can J Ophthalmol* 1993;28:191-193.

McKusick VA. *Mendelian inheritance in man*, 12th ed. Baltimore: Johns Hopkins University Press, 1998.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Madarosis (Loss of Eyelashes)

1. Chronic skin diseases, including psoriasis, neurodermatitis, exfoliative dermatitis, ichthyosis, alopecia areata, acne, lichen planus, epidermolysis bullosa, lupus erythematosus, acanthosis nigricans, dermatophytosis, hereditary ectodermal dysplasia syndrome and acrodermatitis
2. Congenital atrichia
3. Cryptophthalmos
4. Cutaneous t cell lymphoma
5. Demodicosis
6. Drugs, including the following:

acebutolol(?)	azathioprine(?)	cimetidine(?)
acenocoumarin(?)	benzphetamine(?)	cisplatin
acetazolamide(?)	betaxolol	clofibrate(?)
acetoheaxamide(?)	bishydroxycoumarin(?)	clomiphene(?)
acid bismuth sodium tartrate	bismuth oxychloride(?)	clonazepam(?)
actinomycin C(?)	bismuth sodium tartrate(?)	colchicine(?)
alcohol(?)	bismuth sodium thioglycollate(?)	cyclophosphamide(?)
allopurinol(?)		cytarabine(?)
aluminum nicotinate	bismuth sodium triglycollamate(?)	dacarbazine
amantadine(?)		dactinomycin(?)
aminopterin(?)	bismuth subcarbonate(?)	danazol(?)
aminosalicylate(?)	bismuth subsalicylate(?)	daunorubicin
aminosalicylic acid(?)	bleomycin(?)	desipramine(?)
amiodarone(?)	broxyquinoline(?)	dextroamphetamine(?)
amithiozone(?)	busulfan(?)	dextrothyroxine(?)
amitriptyline(?)	cactinomycin	diacetylmorphine(?)
amodiaquine(?)	captopril(?)	DIC
amoxapine(?)	carbamazepine(?)	dichlorphenamide(?)
amphetamine(?)	carbimazole(?)	dicumarol(?)
anisindione(?)	carmustine	diethylcarbamazine
aspirin(?)	CCNU	diethylpropion(?)
atenolol(?)	chlorambucil(?)	diltiazem(?)
auranofin(?)	chloroquine(?)	diphenadione(?)
aurothioglucose(?)	chlorphentermine(?)	divalproex sodium(?)
aurothioglycanide(?)	chlorpropamide(?)	doxepin(?)
doxorubicin	mechlorethamine(?)	pyridostigmine(?)
dromostanolone(?)	melphalan(?)	ranitidine
droperidol(?)	mephenytoin(?)	semustine
enalapril(?)	methamphetamine(?)	sodium salicylate(?)
epinephrine	methazolamide(?)	streptomycin(?)
ergonovine(?)	methimazole(?)	streptozocin
ergotamine(?)	methotrexate(?)	sulfacetamide(?)
ethionamide(?)	methylergonovine(?)	sulfachlorpyridazine(?)
ethotoin(?)	methylthiouracil(?)	sulfacytine(?)
ethoxzolamide(?)	methysergide(?)	sulfadiazine(?)
ethyl biscoumacetate(?)	metoprolol(?)	sulfadimethoxine(?)
etretinate(?)	mexiletine(?)	sulfamerazine(?)
fenfluramine(?)	mianserin(?)	sulfameter(?)
fenoprofen(?)	minocycline(?)	sulfamethazine(?)
flecainide(?)	minoxidil(?)	sulfamethizole(?)
floxuridine(?)	mitomycin	sulfamethoxazole
fluorouracil(?)	mitotane(?)	sulfamethoxypridazine(?)
fluoxymesterone(?)	morphine(?)	sulfanilamide(?)
gentamicin	nadolol(?)	sulfaphenazole(?)
glyburide	naltrexone(?)	sulfapyridine(?)
glycopyrrolate(?)	naproxen(?)	sulfasalazine(?)
gold au 198	niacin(?)	sulfathiazole(?)
gold sodium thiomalate(?)	niacinamide(?)	sulfisoxazole
gold sodium thiosulfate(?)	nicotinyl alcohol(?)	sulindac(?)
guanethidine(?)	nifedipine(?)	tamoxifen(?)
haloperidol(?)	nitrofurantoin(?)	testolactone(?)
HCNU	nortriptyline(?)	testosterone(?)
heparin(?)	opium(?)	tetracycline(?)
hydroxychloroquine(?)	oral contraceptives(?)	thiotepa
hydroxyurea(?)	oxprenolol(?)	timolol maleate
ibuprofen(?)	paramethadione(?)	tocainide(?)
imipramine(?)	penicillamine(?)	tolazamide(?)
indomethacin(?)	phendimetrazine(?)	tolbutamide(?)
interferon(?)	phenindione(?)	triethylenemelamine(?)
iodochlorhydroxyquin(?)	phenmetrazine(?)	trifluoperidol(?)
iodoquinol(?)	phenprocoumon(?)	trimethadione(?)
isotretinoin(?)	phentermine(?)	uracil mustard(?)
ketoprofen(?)	pindolol(?)	valproate sodium(?)
labetalol(?)	pipobroman(?)	valproic acid(?)
levobunolol	prazosin(?)	verapamil(?)
levodopa(?)	piroxicam	vinblastine(?)
lithium carbonate(?)	procarbazine(?)	vincristine(?)
lomustine	propranolol(?)	vitamin A
maprotiline(?)	propylthiouracil(?)	warfarin(?)
	protriptyline(?)	

7. Ehlers-Danlos syndrome, unspecified type
8. *Endocrine disease, including hypothyroidism, hyperthyroidism, pituitary insufficiency, hypoparathyroidism, and pituitary necrosis syndrome (Simmonds-Sheehan syndrome)
9. Following eyelid tattooing

10. Generalized hypotrichosis
11. HIV (human immunodeficiency virus)
12. Hypocalcemia
13. Hypothermal injury
14. *Idiopathic
15. Inflammation and infection of the lids, including seborrheic blepharitis, squamous blepharitis, herpes zoster, sebaceous gland carcinoma, vaccinia, mycotic infection, furuncles, and erysipelas
16. Intoxication with arsenic, bismuth, thallium, gold, quinine and vitamin A
17. Isolated madarosis
18. Keratosis decalvans
19. Keratosis follicularis
20. Keratosis spinulosa
21. Lid colobomas
22. Leprosy
23. Lipoid proteinosis (Urbach-Wiethe syndrome)
24. Polymorphous light eruption
25. Pseudoprogeria syndrome
26. Radiation
27. Severe debilitating systemic diseases, including tuberculosis, syphilis, sickle cell anemia, cholera, and Hansen disease (leprosy)
28. Trauma
29. Vogt-Koyanagi-Harada disease (uveitis-vitiligo-alopecia-poliosis syndrome)

Diagnostic table

	Drugs as Thiotepe	Vogt-Koyanagi Harada Disease	Endocrine Diseases (e.g., Hypothyroidism)	Inflammation and Infection (e.g., Blepharitis)	Radiation	Severe Systemic Diseases (e.g., Tuberculosis)	Chronic Skin Diseases (e.g., Psoriasis)
History							
1. Common in females							U
2. Common in whites							U
3. Congenital			S				
4. Hereditary							U
5. Japanese and Italian extraction		U					
6. Onset, 10 to 35 years							U
7. Seborrheic disease				U			
8. Thiotepe eyedrop usage	U						
9. Thyroidectomy/hypophysectomy			S				
10. Young adults	U						
Physical Findings							
1. Blepharitis				U	U	S

Coarse Eyebrows

1. Congenital hypothyroidism (cretinism)
2. CPD syndrome (chorioretinopathy and pituitary dysfunction)
3. Hunter syndrome [mucopolysaccharidosis (MPS II)]
4. Hurler syndrome (MPS I)
5. *Normal variation
6. Rubinstein-Taybi syndrome (broad thumbs syndrome)
7. Sanfilippo syndrome (MPS III)

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Synophrys (Confluent Eyebrows Extending to Midline)

1. Basal cell nevus syndrome (Gorlin syndrome)
2. Cornelia De Lange syndrome (congenital muscular hypertrophy-cerebral syndrome)
3. Deletion 3p syndrome
4. Duplication 3q syndrome
5. Frontometaphyseal dysplasia
6. Hirschhorn-Cooper syndrome (chromosome partial deletion syndrome)
7. Labard syndrome
8. *Normal variation
9. Partial trisomy chromosome 15
10. Smith-Lemli-Opitz syndrome (cerebrohepatorenal syndrome)
11. Thirteen trisomy syndrome (Patau syndrome)
12. Waardenburg syndrome (intercoloiridodermatoauditive dysplasia)

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Smith DW. *Recognizable patterns of human malformation*. Philadelphia: WB Saunders, 1970.

Hertogh Sign (Lack of Outer Third of Eyebrows)

1. Autonomic nervous system dysfunction
2. Diphtheria
3. *Endocrinopathies
4. Hypogonadism
5. Hypothyroidism
6. Neurodermatitis
7. Scleroderma (systemic scleroderma)

Pau H. *Differential diagnoses of eye diseases*, 2nd ed. New York: Thieme Medical, 1988.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Lid Myokymia (Spontaneous Fascicular Eyelid Tremor without Muscular Atrophy or Weakness)

1. *Not associated with organic disease
 - A. Fatigue
 - B. Lack of sleep
 - C. Bright light dazzle

- D. Irritative corneal or conjunctival lesions
 - E. Debility or anemia
 - F. Excessive alcohol or smoking
 - G. Overwork
2. Followed by spastic paretic facial contracture—in dorsal pons in adult and children
 3. Multiple sclerosis (disseminated sclerosis)
 4. Trigeminal neuralgia
 5. Myasthenia gravis (pseudoparalytic syndrome)
 6. Familial occurrence
 7. Autosomal dominant familial dystonia

Fraunfelder FT, Roy FH. *Current ocular therapy*, 5th ed. Philadelphia: WB Saunders, 2000.

Preseptal Cellulitis of Eyelid

1. Eczema
2. *Hordeolum
3. Neonatal conjunctivitis
4. Otitis media
5. Sinusitis
6. *S. aureus*
7. Toxic shock syndrome
8. Trauma
9. Upper respiratory tract
10. Varicella

Telecanthus (Disproportionate Increase in Distance Between Medial Canthi; Measurements in Infants Are 18 to 22 MM)

1. *Primary
2. Secondary—may occur secondarily to an increased distance between the bony orbits (see hypertelorism)
 - A. Aarskog syndrome
 - B. Blepharonasofacial syndrome
 - C. Blepharophimosis syndrome
 - D. Camptomelic dysplasia
 - E. Carpenter syndrome
 - F. Cerebrofacioarticular syndrome of van Maldegem
 - G. Coffin-Lowry syndrome

Flaring of Nasal Part of Eyebrow

1. Blepharonasofacial syndrome
2. Partial trisomy 10q syndrome

3. *Waardenburg syndrome
4. Williams syndrome

Isenberg SJ. *The eye in infancy*. Chicago: Year Book Medical, 1989.

High Arched Brow

1. Kabuki makeup syndrome
2. Shprintzen-Goldberg syndrome

Isenberg SJ. *The eye in infancy*. Chicago: Year Book Medical, 1989.

Absent Brow Hair

1. Cryptophthalmos
2. Duplication 14q syndrome
3. Pallister-Killian syndrome
4. Pseudoprogeria syndrome

Isenberg SJ. *The eye in infancy*. Chicago: Year Book Medical, 1989.

Trichiasis (Inward Turning Lashes)

1. *Inflammation/infection
 - A. Chronic blepharitis
 - B. Herpes simplex or zoster
 - C. Trachoma
2. Lid Tumors
 - A. Basal cell carcinoma
 - B. Capillary hemangioma
 - C. Conjunctiva amyloidosis
3. Medications
 - A. Epinephrine
 - B. Idoxuridine
 - C. Phospholine iodide
 - D. Pilocarpine
 - E. Practolol
 - F. Trifluridine
 - G. Vidarabine
4. Systemic/Immunologic Disorders
 - A. Erythema multiforme
 - B. Ocular cicatricial pemphigoid
 - C. Stevens-Johnson syndrome
 - D. Toxic epidermal necrolysis
 - E. Vernal kertoconjunctivitis
5. Trauma
 - A. Chemical injury (lye)
 - B. Mechanical injury or repair of injury
 1. Lower lid transconjunctival approach for floor fracture repair or blepharoplasty

2. After enucleation
3. After ectropion repair
4. Thermal burns to face/lids

Lacrimal System

Dacryoadenitis (Inflammation of Lacrimal Gland)

1. Acute dacryoadenitis—rare catarrhal inflammation of the lacrimal gland that usually accompanies systemic disease
 - A. In children—*mumps, measles, influenza, scarlet fever, erysipelas, typhoid fever
 - B. In adults—gonorrhoea, endogenous conjunctivitis and uveitis, infectious mononucleosis, typhoid fever, Crohn disease
 - C. Secondary to inflammation from lids or conjunctiva, to include *Klebsiella pneumoniae*, coliform organisms, **Staphylococcus*, **Streptococcus*, *Aedes aegypti*, **Diplococcus pneumoniae*, and **Neisseria gonorrhoea*
2. Chronic dacryoadenitis—proliferative inflammation of the lacrimal gland, usually because of specific granulomatous disease
 - A. Boeck sarcoid (Schaumann syndrome)
 - B. Heerfordt disease—chronic bilateral parotitis and uveitis, often associated with paresis of the cranial nerves, usually the seventh nerve, and other general symptoms
 1. *Sarcoidosis syndrome (Schaumann syndrome)
 2. Tuberculosis

- C. Mikulicz syndrome—dacryoadenitis and parotitis manifested by chronic bilateral swelling of the lacrimal and salivary glands
 - 1. Bang disease (brucellosis)
 - 2. Hodgkin disease
 - 3. Leukemia
 - 4. Lymphoma
 - 5. Lymphosarcoma (Brill-Symmers disease)
 - 6. Reticuloendothelial disease
 - 7. Mumps
 - 8. Sarcoidosis syndrome (Schaumann syndrome)
 - 9. Syphilis
 - 10. Tuberculosis
 - 11. Waldenstrom macroglobulinemia
- D. Miliary tuberculosis
- E. Pseudotumor
- F. Syphilis (gumma)
- 3. Painless enlargement of lacrimal gland
 - A. Leukemia
 - B. Mumps
- 4. Painful enlargement of lacrimal gland
 - A. Autoimmunologically mediated syndrome
 - B. Lymphomatous disease (25%)
 - C. Chronic enlargement arising from sarcoid or orbital pseudotumor (25%)
 - D. Lacrimal gland neoplasm (50%)
 - 1. Benign
 - a. Adenoma
 - b. Mixed tumor
 - 2. Malignant
 - a. Carcinoma unrelated to mixed tumor
 - b. Adenocarcinoma (adenoid cystic carcinoma)
 - c. Mucoepidermoid carcinoma
 - d. Squamous cell carcinoma
 - e. Mixed tumor

Diagnostic tables

	Children (e.g., Mumps)	Adult (e.g., Typhoid Fever)	Inflammation of Lids/Conjunctiva (e.g., Staphylococcus)
History			
1. Affects all ages			U
2. Contagious disease	U	U	
3. Virus infection	U		
Physical Findings			
1. Central retinal artery emboli		S	
2. Central scotoma		S	
3. Congenital punctal occlusion	R		
4. Conjunctivitis	U	U	U
5. Corneal ulcer	S	S	S
6. Cortical blindness	R		
7. Dacryocystitis		S	S
8. Ectropion			S
9. Endophthalmitis		S	S
10. Entropion			S
11. Exophthalmos	R		
12. Granuloma in lids			S
13. Hordeolum			S
14. Hypopyon		S	S
15. Keratitis	U		S
16. Lid abscess/cellulitis			S
17. Madarosis			S
18. Microphthalmos	R		
19. Optic atrophy	R		
20. Optic neuritis	S	S	
21. Panophthalmitis		S	S
22. Orbital vein thrombosis		S	
23. Paralysis of extraocular muscles	S	S	
24. Phlyctenules in conjunctiva			S
25. Ptosis			S
26. Retinal detachment		S	
27. Scleritis	S		
28. Tenonitis	U	U	
29. Uveitis	U	S	R
30. Dacryoadenitis	S	U	S
31. Vitreous hemorrhages	R	S	
Laboratory Data			
1. Stain and culture			
Gram-negative bacillus		U	
Gram-positive cocci			U

R = rarely; S = sometimes; and U = usually.

Acute dacryoadenitis (inflammation of lacrimal gland)

	Tuberculosis	Leukemia	Lymphosarcoma	Hodgkin Disease	Sarcoidosis	Lymphoma
History						
1. Children, young adults, and middle age		U	S	U		
2. Greater in blacks						U
3. Greater in females					S	
4. Greater in males		S	U			
5. Infants, small children						
6. Malignant lymphoma association				U		
7. Occurs 20 to 40 years					U	
Physical Findings						
1. Blepharitis	U	U				
2. Cataract				U		
3. Central serous retinopathy		S				
4. Chronic dacryocystitis	U					
5. Cranial nerve paralysis (usually facial)					S	
6. Exophthalmos			U			U
7. Extraocular muscle paralysis					S	
8. Firm, elastic, orbital mass	S	U				U
9. Follicular, hypertropic granulomatous, papillary or purulent conjunctivitis	U				S	
10. Granulomatous uveitis, posterior synechiae	U	U			U	U
11. Hemorrhage in conjunctiva, choroid, sclera, orbital tissue, retina, and/or optic disc	U	U				
12. Hypopyon	U					
13. Keratitis			U			
14. Keratoconjunctivitis sicca					S	
15. Painless lid swelling			U		S	
16. Papilledema		S			S	S
17. Peripheral retinal neovascularization		S				
18. Perivascular retinal white lines		S				
19. Posterior synechiae	U		U			
20. Retinal detachment		S				
21. Soft retinal exudates		U				
22. Subconjunctival nodules	U				U	
23. Lids: nodules (milia), ptosis					S	S
24. Optic-nerve; optic atrophy	S				S	S
Laboratory Data						
1. Angiotensin-converting enzyme test					U	
2. Aqueous cytology		U				
3. Biopsy of gland	U	U	U	U	U	U
4. Blood count		U	U	U		
5. Bone marrow		U	U			S
6. Chest roentgenogram	U		S	S		
7. Gallium scan test					U	
8. Kveim test					U	
9. Orbit/skull roentgenogram						U
10. Peripheral blood smear		U				
11. Tuberculin skin test	U					
12. HIV	U					

R = rarely; S = sometimes; and U = usually.

Mikulicz syndrome—chronic dacryoadenitis and parotitis

	Systemic Disease as Hemophilia	Local Trauma	Lid Disease as Pubic Lice/Nits on Lashes	Conjunctival Tumor as Granuloma	Subconjunctival Hemorrhage	Corneal Vascular Lesion
History						
1. Associated with systemic and local diseases						S
2. Hereditary	S					
3. Inflammation				U		
4. Skin disease			U			
5. Spontaneous appearance					U	
6. Trauma history	S	U			U	S
7. Aspirin intake					U	
Physical Findings						
1. Associated with sarcoid				U		
2. Conjunctival hemorrhage	S	S			U	U
3. Conjunctival keratinization		S		S		
4. Conjunctival necrosis		S				
5. Conjunctival nodules		S		S		
6. Corneal edema						S
7. Corneal opacity						S
8. Chemosis of conjunctiva		U		S	S	S
9. Epithelial inclusion cysts		S		S		
10. Exophthalmos	S	S				
11. Faulty closure of conjunctival surgical incisions				U		
12. Follicular conjunctivitis			U			
13. Glaucoma	S					
14. Infestation of lids (adult lice/nits on hair shifts)			U			
15. Leukoma of cornea						S
16. Lid hemorrhage	S	S	S			
17. Lid laceration		U			S	
18. Lid scaling			S			
19. Loss of vision	S	S				S
20. Low intraocular pressure		S			S	R
21. Madarosis			S			
22. Marginal keratitis			S	S		
23. Penetration/perforation of sclera		U			U	
24. Perforation/laceration of bulbar conjunctiva		U			U	
25. Pseudomembranous conjunctivitis		S		R		
26. Retained foreign bodies						
27. Retinal hemorrhages posttrauma	U	S				
28. Retinitis proliferans	S	R				
29. Retrobulbar hemorrhages	S	S				
30. Secondary to retinal/strabismus surgery				U	S	
31. Small rust-colored specks of excreta on the skin of the lids			U			
32. Superficial/deep corneal vessels						S
33. Vessels into old corneal lesion						S
34. Vitreous hemorrhage	S	U				
Laboratory Data						
1. Pulse transmission time and factor 8 assay	U					
2. Microscopic exam lid lice/nits			U			

R = rarely; S = sometimes; and U = usually.

Bloody tears

Bloody Tears

1. Conjunctiva
 - A. Application of a drug such as silver nitrate
 - B. Cachectic conjunctivitis
 - C. Focal dermal hypoplasia syndrome (Goltz syndrome)
 - D. Fibroma
 - E. *Giant papillary conjunctivitis secondary to contact lens wear or prosthesis wear

- F. Gross disturbance of autonomic nervous system
 - G. Hemangioma
 - H. Hereditary hemorrhagic telangiectasis
 - I. Inflammatory granuloma
 - J. Malignant melanoma
 - K. Metastatic carcinoid tumor
 - L. *Severe conjunctivitis with marked hyperemia
 - M. *Subconjunctival hemorrhage following sudden venous congestion of head from stooping, coughing, choking, Valsalva trauma, hemophilia or advanced athrombia
 - N. Vicarious menstruation with ectopic tissue
2. Corneal vascular lesion or pannus
 3. Lid
 - A. Pubic lice and nits on the lashes
 - B. Trauma
 4. Other
 - A. Familial telangiectasis
 - B. Hemophilia
 - C. Hysteria
 - D. Jaundice
 - E. Osler-Weber-Render
 - F. Pathologic process of lacrimal gland
 - G. Severe anemia
 - H. Severe epistaxis with regurgitation through the lacrimal passages

Dutt S, et al. Acute dacryoadenitis and Crohn's disease: findings and management. *Ophthalmic Plastic & Reconstructive Surg* 1992;8:295-299.

Hornblass A, et al. The management of epithelial tumors of the lacrimal sac. *Ophthalmology* 1982;7:476.

Krohel GB, et al. Bloody tears associated with familial telangiectasis. *Arch Ophthalmol* 1987;105:1489-1490.

Excessive Tears

1. Hypersecretion of tears—may be due to basic secretors (mucin, lacrimal, including secretion from glands of Kraus and Wolfring and oil, including secretion from Zeis, Moll, and Meibomian palpebral glands) or reflex secretors (main lacrimal glands and accessory palpebral glands)
 - A. Primary (disturbance of lacrimal gland)
 - B. Central or psychic
 1. Central nervous system lues
 2. Corticomeningeal lesions
 3. Emotional states
 4. Hysteria
 5. Physical pain
 6. Voluntary lacrimation, such as when acting
 - C. Neurogenic
 1. Ametropia, tropia, phoria, and eyestrain or fatigue
 2. Caloric, lacrimal, and reflex tearing—bilateral lacrimation when syringing the ear with warm or cold water and during Tensilon testing

3. Crocodile or alligator tears—unilateral profuse tearing when eating
 - a. Congenital, often associated with ipsilateral paresis of lateral rectus muscle
 - b. Acquired with onset in early stage of facial palsy (Bell palsy) or sequela with parasympathetic fibers to the otic ganglion growing back into superficial petrosal nerve
 - c. Duane retraction syndrome
4. Bell palsy (idiopathic facial paralysis)
5. Marin-Amat syndrome (inverted Marcus Gunn Jaw-wink phenomenon)
6. Melkersson-Rosenthal syndrome (Melkersson idiopathic fibro edema)

D. Section of the greater superficial petrosal nerve

7. Drugs, including the following:

acebutolol	doxorubicin	nalorphine
acetophenazine	edrophonium	naloxone
acetylcholine	epinephrine	neostigmine
adrenal cortex injection	ether	nifedipine
aldosterone	ethopropazine	nitrazepam
Apresoline	etretinate	opium
alcohol	floxuridine	oxazepam
alseroxylon	fludrocortisone	paramethasone
ambenonium	fluorometholone	pentazocine
antazoline	fluorouracil	perazine
atenolol	fluphenazine	pericyazine
beclomethasone	fluprednisolone	perphenazine
betamethasone	flurazepam	phenylephrine
bethanechol	glycerin	pindolol
bishydroxycoumarin	halazepam	piperacetazine
bleomycin	heparin	piperazine
butaperazine	hydralazine	piroxicam
carbachol	hydrocortisone	practolol
carphenazine	hydroxyamphetamine	prazepam
chloral hydrate	indomethacin(?)	prochlorperazine
chlordiazepoxide	isotretinoin	promazine
chlorpromazine	ketamine	promethazine
ciprofloxacin	labetalol	propiomazine
clonazepam	levallorphan	propoxyphene
clorazepate	lithium carbonate	propranolol
codeine	lorazepam	pyridostigmine quinidine
dactinomycin	meprednisone	pyridostigmine
dantrolene	mesoridazine	pyrilamine
desoxycorticosterone	methacholine	quinidine
dexamethasone	methaqualone	rauwolfia serpentina
dextran	methdilazine	rescinnamine
diazepam	methotrimeprazine	reserpine
diazoxide	methylprednisolone	rifampin
dicumarol	metoprolol	syrosingopine
diethazine	midazolam	temazepam
diethylcarbamazine	mitomycin	thiethylperazine
diltiazem	morphine	
disodium pamidronate	nadolol naltrexone	thiopropazate
thiopropazine	trifluoperazine	verapamil
thioridazine	triflupromazine	vinblastine
triazolam	trimeprazine	warfarin
trichloroethylene	tripelennamine	

-
8. Exposure to wind, cold, or bright light; photosensitivity and sunburn
 9. Glaucoma
 10. Horner syndrome (see p. 59) (cervical sympathetic paralysis syndrome)
 11. Inflammation or infection of the conjunctiva, uvea, cornea, orbit, lids, sinuses, teeth, or ears
 - a. Acute hemorrhagic conjunctivitis
 - b. Avitaminosis B (pellagra, niacin deficiency)
 - c. Conjunctivochalasis
 - d. Elschnig syndrome (I) (meibomian conjunctivitis)
 - e. Epidemic keratoconjunctivitis
 - f. Feer syndrome (acrodynia)
 - g. Hanhart syndrome (recessive keratosis palmoplantaris)
 - h. Keratoderma palmaris et plantaris
 - i. Reiter syndrome (polyarthritis enteric)
 - j. Stannus cerebellar syndrome (riboflavin deficiency)
 - k. Thelaziasis
 12. Lesions affecting the lids
 - a. Acrodermatitis chronic atrophicans
 - b. Blepharoptosis
 - c. Congenital distichiasis
 - d. *Ectropion
 - e. *Entropion
 - f. Epiblepharon
 - g. Eyelid retraction
 - h. *Facial paralysis
 - i. Lid imbrication syndrome
 - j. Papilloma
 - k. Punctal apposition
 - l. Trachoma
 - m. *Trichiasis
 13. Morquio-Brailsford syndrome (MPS IV)
 14. Myasthenia gravis—afternoon ectropion (Erb-Goldflam syndrome)
 15. Ophthalmorhinostomatohygrois syndrome
 16. Parkinson disease—facial akinesia
 17. Reflex, such as vomiting or laughing
 18. Sjögren syndrome (secreteoinhibitor syndrome)
 19. Stimulation of some cortical areas—thalamus, hypothalamus, cervical sympathetic ganglia, or the lacrimal nucleus
 - a. Diencephalic epilepsy syndrome (Penfield syndrome)
 - b. Encephalitis
 - c. acute
 - d. hemorrhagica superior
 - e. lethargy
 - f. periaxialis diffusa

- g. Engelmann syndrome (diaphyseal dysplasia)
 - h. Giant-cell arteritis (temporal arteritis)
 - i. Hypothalamic tumors
 - j. Meningitis
 - k. Page syndrome (hypertensive diencephalic syndrome)
 - l. Pseudobulbar palsy from Parkinson syndrome (shaking palsy)
 - m. Sluder syndrome (lower facial neuralgia syndrome)
 - n. Tic douloureux (trigeminal neuralgia syndrome)
 - o. Various senile dementias
20. Gradenigo syndrome (temporal syndrome)
 21. Raeder syndrome (paratrigeminal paralysis, cluster headache)
 22. Retroparotid space syndrome (Villaret syndrome)
 23. Rhabdomyosarcoma
 24. Rothmund syndrome (telangiectasia-pigmentation-cataract syndrome)
 25. Thermal burns
- D. Symptomatic
1. Bee sting of cornea
 2. Tabes
 3. Thyrotoxicosis (Basedow syndrome)
2. Inadequacy of lacrimal drainage system
- A. Congenital anomalies of lacrimal apparatus
1. Absence or atresia including ectrodactyly-ectodermal dysplasia-clefting syndrome
 2. Amniotocele
 3. *Fistulas of lacrimal sac and nasolacrimal duct
 4. Lateral displacement of medial canthi with lateral displacement of puncta and lengthening of canaliculi as in Waardenburg syndrome (interoculoiridodermatoauditive dysplasia)
 5. Obstruction of nasolacrimal drainage system, including Walker-Clodius syndrome (lobster claw deformity with nasolacrimal obstruction)
 6. *Unformed puncta (punctal atresia)
- B. Complications from diseases such as pemphigus, Stevens-Johnson syndrome (dermatostomatitis), and lupus.
- C. *Dacryocystitis
- D. *Distended canaliculi with obstruction, such as from *Actinomyces israelii* (*Streptothrix foersteri*), papilloma, or dacryolith
- E. Because of drugs, including the following:

acyclovir	isofluorophate
adenine arabinoside	neostigmine
colloidal silver	physostigmine
demecarium	quinacrine
DEP	silver nitrate
echothiophate	silver protein
epinephrine	thiotepa
F3T	trifluorothymide
floxuridine	trifluorothymidine (including Fuchs-Lyell syndrome) (allergic reaction due to drugs causing nasolacrimal obstruction)
fluorouracil	
idoxuridine	
IDU	

- F. *Eversion of inferior lacrimal punctum, including involutional ectropion (horizontal lid laxity and retractors disinsertion)
- G. Eversion of inferior lacrimal punctum secondary to ichthyosis or scleroderma
- H. Goltz syndrome (focal dermal hypoplasia syndrome)
- I. Inadequacy of physiologic lacrimal pump
- J. Traumatic lesions of lacrimal drainage system
- K. Tumor obstruction, including polyps, papillary hypertrophy, and neurofibromas
 1. Botulinum toxin usage
 2. Dyskeratosis congenita (Zinsser-Engman-Cole syndrome)
 3. Gravity inversion
 4. Irritation from dust and gases
 5. Inflammation or destruction of turbinates
 6. Inhalation cocaine abuse
 7. Leprosy (Hansen disease)
 8. Leukemia
 9. Plasmoma
 10. Rhinosporidiosis
 11. Scleroma
 12. Tuberculosis
 13. Tumors

40. Lacrimal gland enlargement			S						
41. Lid abscess							S		
42. Lid cicatrization inner canthus						U			S
43. Lid lag			U						
44. Lid retraction			U						
45. Mild dilated and fixed pupil		S							
46. Mucopurulent material from the sac at pressure					U				
47. Nystagmus	S								
48. Optic nerve atrophy		U	S						
49. Orbital cellulitis					S				
50. Panophthalmitis				S					
51. Papilledema			S						
52. Peripheral anterior synechiae		U							
53. Pouting of the punctum							U		
54. Proptosis (axial)			U						
55. Ptosis	S								S
56. Stenosis of lacrimal punctum						U			S
57. Strabismus	S								
58. Traumatic corneal epithelial erosions	U								
59. Uveitis							S		
60. Visual field defects		U	S						

R = rarely; S = sometimes; and U = usually.

Excessive tears

Drugs Found in Tears

Drugs, including the following:

alcian blue	fluorouracil	sodium salicylate
amodiaquine	hydroxychloroquine	trypan blue
aspirin	methotrexate	vitamin A
chloroquine	minocycline	
fluorescein	rose bengal	

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

Tabbara KF, Cooper H. Minocycline levels in tears of patients with active trachoma. *Arch Ophthalmol* 1989;107:93-95.

Dry Eye (Paucity or Absence of Tears)

1. Xerosis—local tissue changes
 - A. Cicatricial degeneration of conjunctiva and mucous tissues
 1. General—diphtheria
 2. Upper lid—trachoma
 3. Lower lid
 - a. Avitaminosis A
 - b. Chemical irritation (especially due to alkali)
 - c. Dermatitis herpetiformis (Dühring-Brocq disease)
 - d. Epidermolysis bullosa (Weber-Cockayne syndrome)
 - e. Erythema multiforme (Stevens-Johnson syndrome)
 - f. Ocular pemphigoid
 - g. Plummer-Vinson syndrome (sideropenic dysphagia syndrome)
 - h. Radium burns
 - i. Reiter syndrome (conjunctivourethrosynovial syndrome)
 - j. Sjögren syndrome (secretoinhibitor syndrome)
 - k. Uyemura syndrome (fundus albipunctatus with hemeralopia and xerosis)
 - B. Exposure keratitis
 1. Anterior lamella shortage secondary to trauma or facial burn
 2. *Deficient lid closure as part of facial palsy
 3. *Ectropion (see p. 81)
 4. Eyelid retraction-Graves ophthalmopathy (incomplete blink)
 5. Exophthalmos
 6. Following botulism
 7. *Infrequent blinking, such as with progressive supranuclear palsy
 8. Lack of blinking as during coma
 9. Levator spasm
 10. Melkersson-Rosenthal syndrome (Melkersson idiopathic fibroedema)
 11. Methylmalonic aciduria
 12. Ocular proptosis
 13. Rapid evaporation in hot, dry areas
 14. Stiff, immobile, retracted lids, such as those occurring secondary to tuberculoid leprosy (Hansen disease)
2. Keratoconjunctivitis sicca—primary tear diminution of main and accessory lacrimal glands
 - A. Congenital
 1. Congenital absence of lacrimal gland as in Bonnevie-Ullrich syndrome

2. Neurogenic
 3. Associated with generalized disturbance
 - a. Anhidrotic type of ectodermal dysplasia
 - b. Familial dysautonomia (Riley-Day syndrome)
 - c. Cri-du-chat syndrome (Cry of the cat syndrome)
 - d. Cystic fibrosis syndrome (fibrocystic disease of pancreas)
- B. Neurogenic hyposecretion
1. Central—aplasia of lacrimal nucleus or lesion of seventh nerve between nucleus and geniculate ganglion
 - a. Pontine lesions
 - b. Basal fractures
 - c. Otitis media
 2. Peripheral—greater superficial petrosal nerve, sphenopalatine ganglion, or lacrimal branch
 - a. Skull fractures
 - b. Associated with neoplasms
 - c. Neurologic lesion of fifth nerve (neuromyolytic keratitis)
 3. Herpes zoster of the geniculate ganglion (Ramsey-Hunt syndrome)
 4. Parasympathetic blocking drugs, such as atropine and scopolamine, may decrease an already barely adequate secretion.
 5. Botulism
 6. Deep anesthesia
 7. Debilitating disease, such as typhus and cholera, and high temperature
 8. Allergy
- C. Systemic disease
1. Allgrove syndrome
 2. Acquired immunodeficiency syndrome (AIDS)
 3. Amyotrophic lateral sclerosis
 4. Danbolt-Closs syndrome (acrodermatitis enteropathica)
 5. Disseminated lupus erythematosus (Kaposi-Libman-Sacks syndrome)
 6. Drugs, including the following:

acebutolol	butaperazine	dimethindene
acetophenazine	carbinoxamine	diphenhydramine
albuterol	carphenazine	diphenylpyraline
aluminum nicotinate(?)	chlorisondamine	disopyramide
amitriptyline	chlorothiazide	doxylamine
antazoline	chlorpheniramine	dronabinol
astemizole	chlorpromazine	ether
atenolol	chlorthalidone	ethopropazine
atropine	cimetidine(?)	etretinate
azatadine	clemastine fumarate	fluphenazine
belladonna	clonidine	hashish
bendroflumethiazide	cyclothiazide	hexamethonium
benzalkonium	cyproheptadine	homatropine
benzthiazide	desipramine	hydrochlorothiazide
brimonidine	dexbrompheniramine	hydroflumethiazide
brompheniramine	dexchlorpheniramine	imipramine
busulfan	diethazine	indapamide
isotretinoin	nitrous oxide	pyrilamine
lithium carbonate	nortriptyline	quinethazone
marihuana	opium	scopolamine
mesoridazine	oxprenolol	tetrahydrocannabinol
methdilazine	perazine	thiethylperazine
methotrexate	periciazine	thiopropazate
methotrimeprazine	perphenazine	thiopropazine
methoxsalen	pheniramine	thioridazine
methscopolamine	pimozide	timolol
methylclothiazide	pindolol	tolterodine
methyl dopa	piperacetazine	tartrate
methylthiouracil	polythiazide	trichlormethiazide
metolazone	practolol	trichloroethylene
metoprolol	prochlorperazine	trifluoperazine
morphine	promazine	triflupromazine
nadolol	promethazine	trimeprazine
niacin(?)	propiomazine	trioxsalen
niacinamide(?)	propranolol	tripelennamine
nicotiny alcohol(?)	protriptyline	triprolidine

7. Felty syndrome (uveitis-rheumatoid arthritis syndrome)
8. Gougerot-Sjögren syndrome (oligophrenia-ichthyosis-spastic diplegia syndrome)
9. Heerfordt syndrome (uveoparotitis)
10. Lubarsch-Pick syndrome (primary amyloidosis)
11. Mikulicz syndrome—acryoadenitis and parotitis
 - a. Hodgkin disease
 - b. Leukemia
 - c. Lymphoma
 - d. Lymphosarcoma
 - e. Mumps
 - f. Sarcoidosis syndrome (Schaumann syndrome)
 - g. Syphilis
 - h. Tuberculosis
 - i. Waldenstrom macroglobulinemia
12. Pancreatitis
13. Pheochromocytoma, medullary thyroid carcinoma, and multiple mucosal neuromas
14. Polyarteritis nodosa (Kussmaul disease)
15. Relapsing polychondritis
16. Rheumatoid arthritis (adult)
17. Scleroderma (progressive systemic sclerosis)

4

Extraocular Muscles

Pseudoesotropia (Ocular Appearance of Esotropia when no Manifest Deviation of Visual Axis is Present)

1. *Abnormal shape of skull or abnormal thickness of skin surrounding the orbits
2. Enophthalmos
3. Entropion (p. 79)
4. Hypotelorism with narrow interpupillary distance
5. Lateral displacement of the concavity of the upper eyelid margin from the center of the pupil
6. *Negative-angle kappa—pupillary light reflex displaced temporally (see Decentered Pupillary Light Reflex, p. 361)
7. *Prominent epicanthal fold
8. Telecanthus—the orbits are normally placed, but the medial canthi are far apart secondary to lateral displacement of the soft tissues

Shaterian ET, Weismann IL. An unusual case of pseudostrabismus. *Am Orthop J* 1973;23:68-70.

Urist MJ. Pseudostrabismus caused by abnormal configuration of the upper eyelid margins. *Am J Ophthalmol* 1973;75:455-456.

Esophoria and Esotropia (Visual Axis Deviated Inward; May be Latent or Manifest)

1. Comitant (nonparalytic)—angle of deviation is constant in all directions of gaze
 - A. Accommodative—hyperopic refractive error
 - B. Nonaccommodative—refractive error not cause of deviation
 1. Anomalous insertion of horizontally acting muscles
 2. Abnormal check ligaments
 3. Faulty innervational development
 4. Autosomal recessive trait

5. Idiopathic
6. Tumor of the brain
 - a. Cerebellar astrocytoma
 - b. Pontine glioma
2. Noncomitant—the angle of deviation varies in different directions of gaze
 - A. Abducens palsy (p. 161)
 - B. Accommodative spasm
 - C. Blowout fracture
 - D. Divergence paralysis
 - E. Drug use (marihuana)
 - F. Duane syndrome
 - G. Myasthenia gravis
 - H. Thyroid myopathy
3. “V” pattern esotropia—deviation greater in downward gaze
 - A. Underaction—superior oblique muscles
 - B. Overaction—inferior oblique muscles
4. “A” pattern esotropia
 - A. Underaction—inferior oblique muscles
5. Monocular esotropia—one eye may be used to the exclusion of the other; amblyopia is usual in the deviating eye
6. Esotropia—near/distance disparity
 - A. High accommodation convergence-accommodation (AC/A) ratio—greater convergence for near than for distance, causing greater esodeviation for near than for distance
 - B. Convergence excess—greater esodeviation for near than for distance
 - C. Divergence insufficiency—greater esodeviation for distance than for near

Helveston EM. The origins of congenital esotropia. *J Pediatr Ophthalmol Strabismus* 1993;30:215-232.

von Noorden GK. *Binocular vision and ocular motility: theory and management of strabismus*. St. Louis: CV Mosby, 1995.

Williams AS, Hoyt CS. Acute comitant esotropia in children with brain tumors. *Arch Ophthalmol* 1989;107:376.

Pseudoexotropia (Ocular Appearance of Exotropia when no Manifest Deviation of Visual Axis is Present)

1. Displaced macula (heterotopia of the macula; see p. 451)
2. Heterochromia when the lighter-colored eye appears to diverge (see p. 368-372)
3. Hypertelorism with wide interpupillary distance
4. Exophthalmos
5. Positive-angle kappa—pupillary light reflex displaced nasally (see decentered pupillary light reflex, p. 361)
6. Narrow lateral canthus
7. Wide palpebral fissure

Beyer-Machule C, von Noorden GK. *Atlas of ophthalmic surgery, Vol 1: Lids, orbits, extraocular muscles*. New York: Thieme Medical, 1984.

Shaterian ET, Weissman IL. An unusual case of pseudostrabismus. *Am Orthopt J* 1973;23:68-70.

Exophoria and Exotropia (Visual Axis Deviated Outward; May be Latent or Manifest)

1. Comitant
 - A. Refractive—myopic refractive error cause of deviation (low AC/A ratio)
 - B. Nonrefractive—refractive error not cause of deviation
 - C. Anomalous insertion of horizontally acting muscles
 - D. Abnormal check ligaments
 - E. Faulty innervational development
 - F. Autosomal-dominant trait
 - G. Idiopathic
2. Noncomitant
 - A. Convergence insufficiency
 - B. Divergence excess
 - C. Duane type II, III
 - D. Internuclear ophthalmoplegia
 - E. Myasthenia gravis
 - F. Third nerve palsy
 - G. Thyroid myopathy
3. Pattern exotropia
 - A. V exotropia—deviation greater in upward than in downward gaze
 1. Underaction superior oblique
 2. Overaction inferior oblique
 - B. Exotropia—deviation greater in downward than in upward gaze
 1. Underaction inferior oblique muscle
 2. Overaction superior oblique muscle

von Noorden GK. *Binocular vision and ocular motility: theory and management of strabismus*. St. Louis: CV Mosby.

Wright KW. *Pediatric ophthalmology and strabismus*. St. Louis: CV Mosby, 1995.

Pseudohypertropia

1. Facial asymmetry with one eye placed higher than the other
2. Unilateral coloboma of lid
3. Unilateral ptosis

Shaterian ET, Weissman IL. An unusual case of pseudostrabismus. *Am Orthop J* 1973;23:68-70.

Wright DW. *Pediatric ophthalmology and strabismus*. St. Louis: CV Mosby, 1995.

Hyperphoria and Hypertropia (Visual Axis Deviated Upward; May be Manifest or Latent)

1. Nonparalytic hypertropia
 - A. Abnormal insertion of muscles
 - B. Abnormal fascial attachments
 - C. Complications of systemic diseases, such as myasthenia gravis, thyrotoxicosis, and orbital tumors
2. Paralytic hypertropia—isolated cyclovertical muscle palsy
 - A. Brainstem disease
 - B. Fourth nerve palsy
 - C. Multiple sclerosis

- D. Skew deviation
- E. Third nerve palsy
- 3. Double hyperphoria (alternating circumduction)—fuses, but cover test shows alternating hyperphoria
- 4. Apparent paralysis of elevation of one eye
 - A. Local neuromuscular and orbital causes
 - 1. Dysthyroid ophthalmoplegia (noncongestive and congestive form)
 - 2. Myasthenia gravis (Erb-Goldflam syndrome)
 - 3. Orbital floor fracture
 - 4. Progressive supra nuclear ophthalmoplegia
 - 5. Oculomotor nerve paresis superior division
 - 6. Unilateral double-elevator palsy, congenital dysfunction of superior rectus and inferior oblique muscles
 - 7. Myositis
 - a. "Collagen diseases"
 - b. Infectious myositis
 - c. Trichinosis
 - 8. Orbital tumors
 - a. Dermoid cyst
 - b. Hemangioma
 - c. Lymphoma
 - d. Meningioma
 - e. Optic nerve glioma
 - f. Previous strabismus surgery
 - g. Rhabdomyosarcoma
 - 9. Systemic amyloidosis with ocular muscle infiltration
 - 10. Vertical retraction syndrome (Parinaud syndrome)
 - 11. Superior oblique tendon sheath syndrome (Brown syndrome)
 - B. Skew deviation due to a central nervous system lesion—one eye is above the other; may be the same for all directions of gaze or vary in different directions of gaze
 - 1. Unilateral labyrinthine disease
 - 2. Cerebellar tumors, such as astrocytomas and medulloblastomas
 - 3. Acoustic neuromas
 - 4. Vascular accidents of pons and cerebellum, such as thrombosis of cerebellar and pontine arteries
 - 5. Unilateral internuclear ophthalmoplegia and less frequently bilateral internuclear ophthalmoplegia
 - 6. Compressive lesions, such as platybasia and Arnold-Chiari malformation
 - 7. Brain-stem arteriovenous malformations
 - 8. Aberrant regeneration of third nerve
 - C. Central nervous system lesions
 - 1. Arteriosclerosis, thrombosis, arteritis (syphilitic), or embolus of fine vessels to midbrain
- 5. Apparent paralysis of elevation of both eyes
 - A. Physiologic in older persons
 - B. Parinaud syndrome (divergence paralysis)
 - C. Chronic progressive external ophthalmology (CPEO)
 - D. Progressive supranuclear palsy

- E. Myasthenia gravis
- F. Midbrain lesion
 - 1. Upgaze center
 - 2. Bilateral third nerve palsy
 - 3. Dorsal midbrain syndrome
- G. Congenital fibrous syndrome
- H. Thyroid myopathy
- I. Metastatic tumor (breast cancer)
- 6. Paralysis of downward gaze
 - A. Reverse Parinaud syndrome
 - B. Associated with choreoathetotic syndromes
 - C. Parkinsonian syndromes
 - D. Myasthenia gravis
 - E. Miscellaneous

Brown Superior Oblique Tendon Sheath Syndrome (Limitation of Elevation in Adduction that Resembles an Underaction of Inferior Oblique Muscle)

1. Congenital onset
 - A. Congenital Brown syndrome
 - B. Inelastic muscle-tendon complex
2. Anomalies of Superior Oblique Tendon fibers
3. Congenital pseudo-Brown Syndrome—anomalous inferior orbital adhesions
4. Posterior orbital bands
5. Acquired onset
 - A. Acquired Brown syndrome
 - B. Peritrochlear scarring and adhesions
 - C. Chronic sinusitis
6. Trauma—superior temporal orbit
7. Blepharoplasty and fat removal
8. Lichen sclerosis at astrophicus and morphea
9. Tendon-trochlear inflammation and edema
10. Idiopathic inflammatory (pain and click)
11. Trochlearitis with superior oblique myositis
12. Acute sinusitis
13. Adult rheumatoid arthritis
14. Juvenile rheumatoid arthritis
15. Systemic lupus erythematosus
16. Possibly distant trauma (CPR [cardiopulmonary resuscitation] and long-bone fractures)
17. Possibly postpartum hormonal change
18. Superior nasal orbital mass
19. Glaucoma implant
20. Neoplasm

21. Tight or inelastic superior oblique muscles
22. Thyroid disease (inelastic muscles)
23. Peribulbar anesthesia (inelastic tendon)
24. Hurler Scheie syndrome (inelastic tendon)
25. Superior oblique tuck (short tendon)
26. Idiopathic
27. Acquired pseudo-Brown syndrome
28. Orbital fracture
29. Retinal band around inferior oblique muscle
30. Inferior temporal adhesion
31. Following double plate Molteno implantation

Dobler-Dixon AA, et al. Prospective evaluation of extraocular motility following double-plate molteno implantation. *Arch Ophthalmol* 1999;117:1155-1160.

Duane Syndrome

Congenital ocular motility disorder is characterized by limited abduction or limited adduction. The palpebral fissure narrows on attempted adduction.

1. Type 1 characteristics
 - a. A or V phenomena
 - b. Defective abduction
 - c. Palpebral fissure narrowing on adduction
 - d. Retraction of the globe
 - e. Updrift or downdrift of the affected eye on adduction or attempted abduction
2. Type 2 characteristics
 - a. Abduction appears to be normal or only slightly limited
 - b. Distinct narrowing of the palpebral fissure and retraction of the globe on attempted adduction.
 - c. Limitation or complete palsy of adduction with exotropia of the paretic eye.
3. Type 3 characteristics
 - a. Limitation or absence of both abduction and adduction of the affected eye
 - b. Globe retraction and narrowing of the palpebral fissure on attempted adduction

Duane A. Congenital deficiency of abduction associated with impairment of adduction, retraction movements, contraction of the palpebral fissure, and oblique movements of the eye. *Arch Ophthalmol* 1996;114:1255-1256.

Duane TD, et al. Pseudo-Duane's retraction syndrome. *Trans Am Ophthalmol Soc* 1977;74:122-132.

Oculomotor Apraxia

Oculomotor apraxia is defined as defective or absent horizontal voluntary eye movements and includes head thrusting to look at objects to the side.

1. Ataxia-telangiectasia syndrome

2. Brain tumor
 - A. Astrocytoma
 - B. Lipoma
3. Isolated
4. Male predominance
5. Neurofibromatosis
6. Oral-facial-digital syndrome type II
7. Post cardiac surgery

Isenberg SJ. *The eye in infancy*. Chicago: Year Book Medical, 1989.

Monocular Limitation of Elevation of Adducted Eye with Forced Duction Test [In Elevation and Adduction (See Chart) Strabismus with Restricted Motility]

1. Acquired
 - A. Thyroid myopathy
 - B. *Excessive recession or resection of muscle
 - C. Orbital fracture
 - D. Retinal detachment operation
 - E. Strabismus surgery complicated by adhesions
 - F. CPEO
2. Congenital
 - A. Congenital fibrous syndrome
 - B. Neurogenic paralysis with secondary contracture of antagonist muscle
 - C. Duane retraction syndrome
 - D. Brown superior oblique tendon sheath syndrome
 - E. Strabismus fixus

Harley RD, et al. Congenital fibrosis of the extraocular muscles. *Trans Am Ophthalm Soc* 1978;76:197.

Wright KW. *Pediatric ophthalmology and strabismus*. St. Louis: CV Mosby, 1995.

Cyclic, Recurrent, Repetitive, Episodic Disorders of Extraocular Muscles

1. Cyclic strabismus
 - A. Associated with frontoorbital fibrous dysplasia
 - B. Associated with Graves disease
 - C. Associated with optic atrophy
 - D. Cyclic superior oblique palsy
 - E. Cyclic third nerve palsy
 - F. Esotropia, vertical
 1. Comitant
 2. Noncomitant
2. Cyclic vertical deviation
3. Diabetic nerve palsies
4. Myasthenia gravis

5. Oculogyric crisis (see p. 152)
6. Periodic alternating gaze deviation
7. Periodic alternating nystagmus
8. Periodic vertical nystagmus
 - A. Associated with potassium abnormality
 - B. Familial
9. Petit mal epilepsy
 - A. Exotropia
 - B. Upward deviation
10. Ping-pong gaze
11. Recurrent sixth nerve paralysis in children (see p. 169)
12. Spasmus nutans
13. Twitch of lids (orbicularis)

Hamed L. *Cyclic periodic disorders in diagnostic problems in clinical ophthalmology*. Margo CL, ed. Philadelphia: WB Saunders, 1994.

Hoyt WF, Keane JR. Superior oblique myokymia. *Arch Ophthalmol* 1970;84:461-467.

Windsor CE, Berg EF. Circadian heterotropia. *Am J Ophthalmol* 1969;67:565-571.

Syndromes and Diseases Associated with Strabismus

1. Esotropia syndrome
2. Exotropia syndrome
3. Aarskog syndrome (facial-digital-genital syndrome)
4. Aberfeld syndrome (congenital blepharophimosis associated with generalized myopathy)
5. Achondroplasia
6. Addison pernicious anemia
7. African eyeworm disease
8. Albinism
9. Albright hereditary osteodystrophy (pseudohypoparathyroidism)
10. Amyloidosis
11. Apert syndrome (acrocephalosyndactylism syndrome)
12. Arnold-Chiari syndrome (platybasia syndrome)
13. Arylsulfatase A deficiency syndrome
14. Aspergillosis
15. Axenfeld-Schurenberg syndrome (cyclic oculomotor paralysis)
16. Bacterial endocarditis
17. Bang disease (brucellosis)
18. Behçet syndrome (oculobuccogenital syndrome)
19. Benedikt syndrome (tegmental syndrome)
20. Best disease (vitelliform dystrophy)
21. Bielschowsky-Lutz-Cogan syndrome (internuclear ophthalmoplegia)
22. Bing-Neel syndrome (associated with macroglobulinemia and central nervous system symptoms)
23. Bloch-Sulzberger disease (incontinentia pigmenti)
24. Blocked nystagmus syndrome (nystagmus blockage syndrome)
25. Bonnet-Dechaume-Blanc syndrome (neuroretinoangiomas syndrome)
26. Bonnevie-Ullrich syndrome (pterygolympangiectasia)
27. Botulism

28. Brown-Marie syndrome (hereditary ataxia syndrome)
29. Canine tooth syndrome (class VII superior oblique palsy)
30. Cerebral palsy
31. Chediak-Higashi syndrome (anomalous leukocytic inclusions with constitutional stigmata)
32. Chromosome partial deletion (short-arm) syndrome (Wolf syndrome)
33. Chromosome 13q partial deletion (long-arm) syndrome (thirteen Q syndrome)
34. Chromosome partial deletion (long-arm) syndrome (DeGrouchy syndrome)
35. Chromosome partial (short-arm) partial deletion syndrome
36. Congenital syphilis
37. Convergence insufficiency syndrome
38. Craniocarpotarsal dysplasia (Freeman-Sheldon syndrome; whistling face syndrome)
39. Craniostenosis
40. Cri-du-chat syndrome (Cry of the cat syndrome)
41. Crohn disease (granulomatous ileocolitis)
42. Crouzon disease (craniofacial dysostosis)
43. Cushing syndrome (II) (cerebellopontine angle syndrome)
44. Cysticercosis
45. Cytomegalic inclusion disease, congenital
46. Dawson disease (subacute sclerosing panencephalitis)
47. De Lange syndrome (congenital muscular hypertrophy—cerebral syndrome)
48. Dengue fever
49. Devic syndrome (ophthalmoencephalomyelopathy)
50. Diabetes mellitus
51. Diphtheria
52. Diamond-Blackfan syndrome
53. Down disease (mongolism, trisomy 21)
54. Drugs, including the following:

alcohol	measles and rubella virus vaccine (live)	phenelzine
baclofen		rubella and mumps virus vaccine (live)
calcitriol	measles, mumps, and rubella virus vaccine (live)	rubella virus vaccine (live)
chloramphenicol(?)		tranlycypromine
chloroform	measles virus vaccine (live)	tripelennamine
cholecalciferol	metoclopramide	vitamin A
ergocalciferol	metrizamide	vitamin D ₂
insulin	mumps virus vaccine (live)	vitamin D ₃
iothalamate meglumine and sodium iothalamic acid	nialamide	
	pemoline	
isocarboxazid	pentylentetrazol	

55. Drummond syndrome (idiopathic hypercalcemia)
56. Duane syndrome (retraction syndrome)
57. Ectrodactyly-ectodermal dysplasia clefting syndrome (EEC syndrome)
58. Ehlers-Danlos disease (fibrodysplasia elastica generalisata)
59. Electrical injury
60. Ellis-van Creveld syndrome (chondroectodermal dysplasia)
61. Encephalitis, acute
62. Engelmann syndrome (osteopathia hyperostotica scleroticans multiplex infantalis)
63. Epidermal nevus syndrome (ichthyosis hystrix)

64. Erb-Goldflam disease
65. Fetal alcohol syndrome
66. Fibrosarcoma
67. François dyscephalic syndrome
68. Gaucher syndrome (glucocerebroside storage disease)
69. Gangliosidosis
 - A. Infantile (GM1)
 - B. Juvenile (GM2)
70. Goltz syndrome (focal dermal hypoplasia syndrome)
71. Gorlin-Goltz syndrome (multiple basal cell nevi syndrome)
72. Greig syndrome (ocular hypertelorism syndrome)
73. Grönblad-Strandberg syndrome (systemic elastodystrophy)
74. Hemangiomas
75. Hemifacial hyperplasia with strabismus (Bencze syndrome—autosomal dominant)
76. Hemifacial microsomia (otomandibular dysostosis)
77. Homocystinuria
78. Hurler disease (mucopolysaccharidoses type I)
79. Hutchinson syndrome (adrenal cortex neuroblastoma with orbital metastasis)
80. Hydrocephalus, congenital
81. Hydrophobia (rabies)
82. Hyperthyroidism
83. Hypocalcemia
84. Hypomelanosis of Ito syndrome (incontinentia pigmenti achromians)
85. Hypothermal injury
86. Hysteria
87. Infectious mononucleosis
88. Influenza
89. Jacobs syndrome (triple X syndrome)
90. Johnson syndrome (adherence syndrome)
91. Klippel-Feil syndrome (congenital brevicollis)
92. Koerber-Salus-Elschnig syndrome (nystagmus retractorius syndrome)
93. Kohn-Romano syndrome (telecanthus, ptosis, epicanthus inversus, blepharophimosis)
94. Krause syndrome (congenital encephaloophthalmic dysplasia)
95. Kugelberg-Welander syndrome (progressive muscle atrophy)
96. Kussmaul disease (necrotizing angitis)
97. Larsen syndrome (hypertelorism, microtia, and facial clefting)
98. Laurence-Moon-Bardet-Biedl syndrome (retinitis pigmentosa-polydactyly-adiposogenital syndrome)
99. Leigh disease (subacute necrotizing encephalomyelopathy)
100. Leukemia
101. Linear nevus sebaceous of Jadassohn
102. Lowe syndrome (oculocerebrorenal syndrome)
103. Lymphangioma
104. Lymphedema
105. Lymphoid hyperplasia (Burkitt lymphoma)
106. Malaria
107. Malignant hyperpyrexia syndrome
108. Malignant hyperthermia syndrome
109. Maple syrup urine disease

110. Marcus Gunn syndrome (jaw-winking syndrome)
111. Marfan syndrome (arachnodactyly-dystrophia mesodermalis congenita)
112. Measles
113. Melnick-Needles syndrome (osteodysplasty)
114. Mieten syndrome (corneal opacity, nystagmus, flexion contracture, growth failure)
115. Millard-Gubler syndrome (abducens–facial hemiplegia alternans)
116. Möbius syndrome (congenital paralysis of sixth or seventh nerves)
117. Monofixation syndrome (blind-spot syndrome)
118. Morning glory syndrome (hereditary central glial anomaly of the optic disk)
119. Mucocele
120. Mucormycosis
121. Mulibrey nanism syndrome (Perheentupa syndrome)
122. Multiple lentigines syndrome (leopard syndrome)
123. Multiple sclerosis
124. Mumps
125. Myasthenia gravis (Erb-Goldflam syndrome)
126. Naegeli syndrome (melanophoric nevus syndrome)
127. Nematode ophthalmia syndrome (toxocariasis)
128. Neonatal hemolytic disease of hyperbilirubinemia
129. Neuroblastoma
130. Nevus sebaceous of Jadassohn
131. Nevoid basal cell carcinoma syndrome
132. Nielsen syndrome (exhaustive psychosis syndrome)
133. Noonan syndrome (male Turner syndrome)
134. Noone-Milroy-Meige disease (congenital trophedema)
135. Nothnagel syndrome (ophthalmoplegia cerebellar ataxia syndrome)
136. Nystagmus compensation syndrome
137. Obesity-cerebroocular-skeletal anomalies syndrome
138. Ocular vaccinia
139. Oculocerebellar tegmental syndrome
140. Oculo-oto-ororenoerythropoietic syndrome
141. Ophthalmoplegic retinal degeneration syndrome
142. Orbital floor syndrome (Dejean syndrome)
143. Paget syndrome (osteitis deformans)
144. Pallister-Killian syndrome
145. Papillon-Léage and Psaume syndrome (orodigital facial syndrome)
146. Parkinson syndrome
147. Parry-Romberg disease (progressive facial hemiatrophy)
148. Periocular and ocular metastatic tumors
149. Pertussis (whooping cough)
150. Pierre Robin syndrome (micrognathia-glossoptosis syndrome)
151. Polymyalgia rheumatica
152. Postvaccinial ocular syndrome
153. Pseudoophthalmoplegia syndrome (Roth-Bielschowsky syndrome)
154. Prader-Willi syndrome (hypotonia-obesity syndrome)
155. Pseudohypoparathyroidism (Seabright-Bantam syndrome)
156. Reiter syndrome (conjunctivourethrosynovial syndrome)
157. Relapsing fever

158. Retinoblastoma
159. Ring chromosome 18
160. Ring D chromosome
161. Ring dermoid syndrome
162. Rocky Mountain spotted fever
163. Rubella, congenital
164. Rubinstein-Taybi syndrome (broad-thumb syndrome)
165. Sabin-Feldman syndrome
166. Sandifer syndrome (hiatus hernia-torticollis syndrome)
167. Schilder syndrome (encephalitis periaxialis diffusa)
168. Seckel bird-headed dwarfism
169. Skew deviation syndrome
170. Smallpox
171. Smith-Lemli-Opitz syndrome (cerebrohepatorenal syndrome)
172. Spongy degeneration of the white matter
173. Streptococcus
174. Superior oblique tendon sheath syndrome (Brown syndrome)
175. Supraaortic aortic stenosis syndrome (infantile hypercalcemia with mental retardation)
176. Tay-Sachs syndrome (familial amaurotic idiocy)
177. Temporal arteritis syndrome (cranial arteritis syndrome)
178. Terson syndrome (subarachnoid hemorrhage syndrome)
179. Thomsen syndrome (congenital myotonia syndrome)
180. Trichinosis

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Horizontal Gaze Palsy

Horizontal gaze palsy comprises an inability to look horizontally in a given direction; analysis includes optically induced movement, voluntary or command movement, pursuit movement, or vestibular movement.

1. Horizontal palsy of voluntary and command movement—frontal lobe gaze center (second frontal gyrus, Brodmann area 8) or in the corresponding internal capsule gaze palsy of side opposite lesion; it may be associated with facial palsy as well as hemiparesis or hemiplegia toward the side of the gaze palsy, caloric ocular movement intact, and doll's head intact.
2. Horizontal palsy of command and pursuit movements, optically induced movements, and vestibular movements—pons and posterior longitudinal bundle; the gaze palsy is toward the side of the lesion, facial palsy often present, caloric and doll's head responses are absent.

Huber A. *Eye symptoms in brain tumors*, 2nd ed. St. Louis: CV Mosby, 1971:44-47.

Oscillations of Eyes (Involuntary, Rapid, To-and-Fro Movement of Eyes Having no Rhythm or Regularity)

1. Ocular dysmetria—"overshooting" of the eyes with attempted fixation; horizontal ocular dysmetria is associated with lesions of the cerebellum or its pathways as in Friedreich ataxia, Huntington chorea, spinocerebellar degeneration, internuclear ophthalmoplegia, manic depression, alcoholism, schizophrenia, severe diffuse brain damage, cerebellopontine angle tumors, hereditary ectodermal dysplasia with olivopontocerebellar degeneration, Fabry disease (glycosphingolipid lipidosis), vestibulocerebellar ataxia, and toluene abuse
2. Ocular flutter—flutter-like oscillations that are intermittent, rapid, to-and-fro motions, or motions of equal amplitude, interrupt maintained fixation; horizontal ocular flutter is associated with lesions of the cerebellum or its pathways as in limb ataxia, multiple sclerosis, poliomyelitis, neoplasms, or vascular accident
3. Opsoclonus—irregular, hyperkinetic, multidirectional, spontaneous eye movement that persists in sleep
 - A. Infections
 1. Coxsackie B3
 2. Encephalitis—mild, severe, viral or post infections (including St. Louis encephalitis)
 3. *Haemophilus influenzae*
 4. Meningitis
 5. Paratyphi A
 6. Psittacosis
 7. Salmonella
 - B. Tumors
 1. Breast malignancy
 2. Bronchogenic carcinoma
 3. Glioblastoma
 4. Neuroblastoma
 5. Thyroid carcinoma
 6. Uterine carcinoma
 - C. Toxins and drugs
 1. Amitriptyline
 2. Chlordecone
 3. Lithium-haloperidol (Haldol)
 4. Thallium
 5. Toluene abuse
 - D. Other
 1. Acute cerebellar ataxia
 2. Friedreich ataxia
 3. Multiple sclerosis (disseminated sclerosis) (rare)
 4. Nonketotic coma
 5. Sign of "myoclonic encephalopathy of infancy"
 6. Vascular accidents
 7. Vertebrobasilar insufficiency
4. Lightning eye movements (ocular myoclonus)—rapid to-and-fro movements of small conjugate saccades; probably because of bilateral abnormality of a pontine paramedian

zone and pretectal lesions, such as vascular, inflammatory, neoplastic, demyelinating, or trauma of tegmentum as thyroid, lung or uterus carcinoma, neuroblastoma, Menzel hereditary ataxia, pontine myelinolysis, coxsackie B infection, cherry-red spot myoclonus syndrome, Ramsay-Hunt syndrome, and L-tryptophan

Cogwheel Eye Movements (Jerky Inaccurate Pursuit Movements)

1. Basal ganglia disease

- A. Anoxia
- B. Carbon disulfide poisoning
- C. Carbon monoxide poisoning
- D. Drugs, including:

acetophenazine	etidocaine	prazepam
alcohol	fluphenazine	prilocaine
allobarbital	flurazepam	primidone
alprazolam	halazepam	probarbital
alseroxylon	heptabarbital	procaine
amitriptyline	hexethal	prochlorperazine
amobarbital	hexobarbital	promazine
aprobarbital	imipramine	promethazine
barbital	lidocaine	propiomazine
bromide	lithium carbonate	propoxycaïne
bupivacaine	lorazepam	protriptyline
butabarbital	mephobarbital	rauwolfia serpentina
butalbital	mepivacaine	rescinnamine
butallylonal	mesoridazine	reserpine
butaperazine	metharbital	secobarbital
butethal	methdilazine	syrosingopine
carphenazine	methitural	talbutal
chloral hydrate	methohexital	temazepam
chlordiazepoxide	methotrimeprazine	thiamylal
chloroprocaine	midazolam	thiethylperazine
chlorpromazine	nitrazepam	thiopental
clonazepam	nortriptyline	thiopropazate
clorazepate	oxazepam	thiopropazine
cyclobarbital	pentobarbital	thioridazine
cyclopentobarbital	perazine	triazolam
deserpidine	periciazine	trifluoperazine
desipramine	perphenazine	triflupromazine
diazepam	phencyclidine	trimeprazine
diethazine	phenobarbital	vinbarbital
ethopropazine	piperacetazine	

- E. Exposure to manganese
 - F. Idiopathic
 - G. Parkinsonism (shaking palsy)
 - H. Trauma
2. Cerebellar tumors
 - A. Astrocytomas
 - B. Hemangioblastomas
 - C. Medulloblastomas
 3. With homonymous hemianopia, indicates parietal or occipital lobe involvement

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

Huber A. *Eye symptoms in brain tumors*, 2nd ed. St. Louis: CV Mosby, 1971.

Walsh FB, Hoyt WF. *Clinical neuro-ophthalmology*, 4th ed. Baltimore: Williams & Wilkins, 1985.

Pendular Nystagmus

Pendular nystagmus comprises oscillations that are approximately equal in rate in two directions; they may be horizontal or vertical.

1. Albinism in which the macula does not develop
2. Aniridia (see p. 364-365)
3. Bilateral chorioretinal lesions involving the macula in early infancy (congenital toxoplasmosis)
4. Brainstem or cerebellar dysfunction
5. *Congenital—cause unknown, may be inherited as autosomal dominant recessive or X-linked recessive trait; not infrequently associated with astigmatism and convergent strabismus
6. *Congenital cataracts
7. Congenital glaucoma
8. Corneal scars
9. Demyelinating disease
10. High myopia of early life
11. Internuclear ophthalmoplegia
12. Laurence-Moon-Bardet-Biedl syndrome (retinitis pigmentosa-polydactyly-adiposogenital syndrome)
13. Leber congenital amaurosis
14. Monocular or binocular visual deprivation
15. Optic nerve hypoplasia, coloboma
16. *Total color blindness (monochromatism)
17. Work in poor illuminations (e.g., mining) (rare)

Cogan DG. *Neurology of the ocular muscles*, 4th ed. Springfield, IL: Charles C Thomas, 1978.

Roy FH. *Ocular syndrome and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Walsh FB, Hoyt WF. *Clinical neuro-ophthalmology*, 4th ed. Baltimore: Williams & Wilkins, 1985.

Horizontal Jerk Nystagmus (Horizontal Oscillatory Movement of Eyes with a Fast and Slow Phase)

1. Albinism
2. Amblyopia (manifest latent nystagmus)

3. Cerebellar disease, acute or chronic; fast component to side of lesion
4. Chediak-Higashi syndrome (anomalous leukocytic inclusions with constitutional stigmata)
5. Congenital achromatopsia
6. Congenital cataracts
7. Congenital stationary night-blindness
8. Congenital X-linked, dominant, recessive
9. Leber congenital amaurosis
10. Lesions of labyrinth (e.g., Meniere syndrome) or when one labyrinth has been removed
11. Neoplastic angioendotheliomatosis
12. Optic nerve hypoplasia, coloboma
13. Vestibular nuclei involvement as in persons with multiple sclerosis

Barton JJ, Sharpe JA. Oscillopsia and horizontal nystagmus with accelerating slow phases following lumbar puncture in the Arnold-Chiari malformation. *Ann Neurol* 1993;33:418-421.

Spaeth GL. Ocular manifestations of the lipidoses. In: Tasman WC, ed. *Retinal disease in children*. New York: Harper & Row, 1971:187-188.

Vertical Nystagmus (Spontaneous Vertical Oscillations of Eyes)

1. Upbeat nystagmus—nystagmus in which the fast component is upward and usually most marked when the gaze is directed upward; usually due to a lesion in the posterior fossa
 - A. Brainstem lesion, such as that of the vestibular nuclei
 - B. Cerebellar disease—acute or chronic, especially in the vermis
 - C. Cerebellar degeneration
 - D. Drugs—barbiturates and Dilantin (phenytoin)
 - E. Encephalitis
 - F. Labyrinth disease—rare; has no lateralizing value
 - G. Multiple sclerosis
 - H. Idiopathic
2. Downbeat nystagmus—nystagmus in which the fast component is downward and usually most marked when the gaze is directed downward; probably due to a lesion in the lower end of the brain stem or cerebellum
 - A. Alcoholic cerebellar disease
 - B. Aneurysm of the supraclinoid part of left carotid siphon
 - C. Arnold-Chiari malformation—herniation of cerebellar tonsils and part of medulla through foramen magnum
 - D. Cerebellar atrophy/degeneration
 - E. Carbamazepine
 - F. Deformities of cervical spine
 - G. Diabetes mellitus
 - H. Encephalopathy
 - I. Ependymoma of posterior part of the fourth ventricle
 - J. Idiopathic
 - K. Insufficiency of basilar artery
 - L. Klippel-Feil anomaly—upward displacement of odontoid process into foramen magnum

- M. Meningioma extending into pontine cistern
- N. Morphine poisoning
- O. Multiple sclerosis (disseminated sclerosis)
- P. Neurogenic muscular atrophy
- Q. Platybasia (cerebellomedullary malformation syndrome)

Burde RM, Henkind P. Downbeat nystagmus. *Surv Ophthalmol* 1981;25:263.

Rotary Nystagmus (Rotary Oscillatory Movement of Eyes)

1. Benign paroxysmal positional nystagmus—fast component toward lower ear
2. *Cerebellar disease—acute or chronic
3. Cerebrotendinous xanthomatosis
4. Encephalitis
5. Lesion of vestibular nuclei in floor of fourth ventricle associated with multiple sclerosis, syringobulbia, or thrombosis of posteroinferior cerebellar artery or its branches
6. *Superior oblique myokymia—benign, intermittent, uniocular
7. Vestibular involvement (e.g., labyrinthitis, Meniere syndrome)

Leigh RJ, et al. Loss of ipsidirectional quick phases of torsional nystagmus with a unilateral midbrain lesion. *J Vestib Res* 1993;3:115-121.

Rosengart A, et al. Intermittent downbeat nystagmus due to vertebral artery compression. *Neurology* 1993;43:216-218.

See-Saw Nystagmus

One eye moves up as other eye moves down; in addition, there is torsion of eyes—eye moving up intorts, and eye moving down extorts. This nystagmus probably is due to lesions located in mesodiencephalic region, hypothalamus, and thalamus; it may be associated with bitemporal hemianopsia and reduced vertical optokinetic nystagmus.

1. Brainstem vascular disease
2. *Chiasmal glioma
3. *Chromophobe adenoma of the pituitary gland involving the optic chiasm and third ventricle
4. Congenital
5. *Craniopharyngioma, involving the optic chiasm and hypothalamus
6. Head injury with fracture of frontal
7. Idiopathic
8. Multiple sclerosis
9. Oligodendroglioma involving the pons and third ventricle
10. Postoperative after strabismus surgery
11. Retinitis pigmentosa
12. Septooptic dysplasia
13. Suprasellar epidermoid tumor involving optic chiasm and hypothalamus
14. Syringomyelia and syringobulbia

15. Toxoplasmosis of the brainstem

Fein JM, Williams RDB. See-saw nystagmus. *J Neurol Neurosurg Psychiatry* 1969;32:202-207.

Walsh FB, Hoyt WF. *Clinical neuro-ophthalmology*, 4th ed. Baltimore: Williams & Wilkins, 1985.

Retraction Nystagmus

Spasmodic retraction of eyes can occur when an attempt is made to move them in any direction; it is caused by lesions of midbrain, especially lesions in the vicinity of aqueduct of Sylvius).

1. Arteriovenous aneurysm
2. Brucellosis (Bang disease)
3. Cysticercus cyst
4. Ependymoma
5. Koerber-Salus-Elschnig syndrome (sylvian aqueduct syndrome)
6. Parinaud syndrome (paralysis of vertical movement)
7. Vascular lesions

Duke-Elder S, Scott GI. *System of ophthalmology*, Vol XII. St. Louis: CV Mosby, 1971.

Huber A. *Eye symptoms in brain tumors*, 2nd ed. St. Louis: CV Mosby, 1971.

Monocular Nystagmus

1. Horizontal
 - A. Lesions of optic nerve, chiasm, midbrain, or brainstem
 - B. Nervous system disease, such as multiple sclerosis, epidemic meningitis, and congenital syphilis
 - C. Seizures
 - D. Superior oblique myokymia—benign, intermittent, uniocular
 - E. Spasmus nutans—most common cause in children
 - F. Tumors of brainstem
 - G. Unilateral amblyopia
 - H. Unilateral astigmatism or high refractive error
 - I. Unilateral opacity of the ocular media
2. Vertical
 - A. Multiple sclerosis
 - B. Myokymia of lower eyelid
 - C. Sleep
 - D. Spasmus nutans
 - E. Unilateral amblyopia

Farmer J, Hoyt CS. Monocular nystagmus in infancy and early childhood. *Am J Ophthalmol* 1984;98:504-509.

Periodic Alternating Nystagmus

Periodic alternating nystagmus is central vestibular nystagmus with rhythmic jerk type of nystagmus that undergoes phasic or cyclic changes in amplitude and direction.

1. Arnold-Chiari malformation
2. Cerebral trauma or fractured skull
3. Chiasmal lesion, such as craniopharyngioma
4. Chronic otitis media
5. Congenital
6. Diabetes mellitus
7. Encephalitis
8. Friedreich hereditary ataxia
9. Meningioma of tentorium cerebelli, cerebellar glioma, and cholesteatoma of the cerebellopontine angle
10. Head trauma
11. Mesencephalic brainstem and cerebellar disease
12. Multiple sclerosis (disseminated sclerosis)
13. Syringobulbia (Passow syndrome)
14. Syphilitic optic atrophy
15. Tumor of the corpus callosum
16. Vertebrobasilar artery insufficiency
17. Vestibular nuclei lesions
18. von Recklinghausen syndrome (neurofibromatosis)

Davis DG, Smith JL. Periodic alternating nystagmus. *Am J Ophthalmol* 1971;72:757-762.

Walsh FB, Hoyt WF. *Clinical neuro-ophthalmology*, 4th ed. Baltimore: Williams & Wilkins, 1985.

Positional Nystagmus

Positional nystagmus is nystagmus that appears or changes in form or intensity after certain positional changes of the head indicate vestibular stimulation.

1. After general anesthesia
2. After head injury
3. Drugs, including the following:

acetophenazine	bromide	cefazolin
alcohol	bromisovalum	cefonicid
allobarbitol	broxyquinoline	cefoperazone
alprazolam	bupivacaine	ceforanide
amiodarone	butabarbital	cefotaxime
amitriptyline	butalbital	cefotetan
amobarbital	butallylonal	cefoxitin
amodiaquine	butaperazine	cefsulodin
amoxapine	butethal	ceftazidime
aprobarbital	calcitriol	ceftizoxime
aspirin	carbamazepine	ceftriaxone
auranofin	carbinoxamine	cefuroxime
aurothioglucose	carbon monoxide	cephalexin
aurothioglycanide	carbromal	cephaloglycin
baclofen	carisoprodol	cephaloridine
barbital	carphenazine	cephalothin
Bacille Calmette-Guérin (BCG) vaccine	cefaclor	cephapirin
	cefadroxil	cephradine
	cefamandole	chloral hydrate
bleomycin(?)	hashish	nortriptyline
chloramphenicol(?)	heptabarbital	oral contraceptives
chlordiazepoxide	hexethal	oxazepam
chloroform	hexobarbital	paramethadione
chloroprocaine	hydroxychloroquine	pemoline
chloroquine	ibuprofen	penicillamine
chlorpromazine	imipramine	pentazocine
cholecalciferol	influenza virus vaccine(?)	pentobarbital
clemastine	insulin	perhexiline
clomipramine	iodochlorhydroxyquin	pericyazine
clonazepam	iodoquinol	perphenazine
clorazepate	iophendylate	phenelzine
colistimethate	isoniazid	phenobarbital
colistin	ketamine	phenylpropanolamine
cyclobarbital	lidocaine	phenytoin
cyclopentobarbital	lithium carbonate	piperacetazine
cytarabine	lorazepam	piperazine
desipramine	marijuana	polymyxin B
diazepam	meperidine	prazepam
diethazine	mephenesin	prilocaine
digitalis(?)	mephentermine	primidone
diiiodohydroxyquin	mephentoin	probarbital
dimethyl tubocurarine iodide	mephobarbital	procaïne
	mepivacaine	procarbazine
diphenhydramine	meprobamate	prochlorperazine
diphenylhydantoin	mesoridazine	promazine
diphenylpyraline	metaraminol	promethazine
disulfiram	methaqualone	propiomazine
divalproex sodium	metharbital	propoxycaïne
doxepin	methdilazine	protriptyline
doxylamine	methitural	quinine
dronabinol	methocarbamol	scopolamine
ergocalciferol		

ergot(?)	methohexital	secobarbital
ethacrynic acid	methotrimeprazine	sodium salicylate
ethchlorvynol	methoxamine	streptomycin
ethopropazine	methyl alcohol	talbutal
ethotoin	methylpentynol	temazepam
etidocaine	methylthiouracil	tetanus immune globulin
fenfluramine	methyprylon	tetanus toxoid
flecainide	metoclopramide	tetrahydrocannabinol
floxuridine	metocurine iodide	thiamylal
fluorouracil	metrizamide	thiethylperazine
fluphenazine	mexiletine	thiopental
flurazepam	midazolam	thioperazine
glutethimide	nalidixic acid	thiopropazate
gold Au 198	nifedipine	thiopropazine
gold sodium thiomalate	nitrazepam	thioridazine
gold sodium thiosulfate	nitrofurantoin	tobramycin
halazepam	norepinephrine	tocainide
tranlycypromine	tripelennamine	vinblastine(?)
triazolam	tubocurarine	vincristine(?)
trichloroethylene	urea(?)	vitamin A
trifluoperazine	urethan	vitamin D
triflupromazine	valproate sodium	vitamin D ₂
trimeprazine	valproic acid	vitamin D ₃
trimethadione	verapamil	
trimipramine	vinbarbital	

4. Inner ear pathologic changes, including hemorrhage, inflammation, thrombosis, emboli, circulatory and secretory conditions
5. "Normal" persons
6. Other causes include neuritis, meningitis, tumors, vascular anomalies, degeneration, atrophy, syphilis, arteriosclerosis, hypertonia, vasomotor disturbance, allergic and toxic conditions, cranial trauma, hemorrhage, emboli, or thrombosis

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

Fujimoto M, et al. A study into the phenomenon of head-shaking nystagmus: its presence in a dizzy population. *J Otolaryngol* 1993;22:376-379.

Solomon SD. Positional nystagmus. *Arch Otolaryngol* 1969;90:58-63.

Optokinetic Nystagmus

Normal physiologic nystagmus is obtained by watching moving targets; slow components in direction targets are moving, and fast component move in the opposite direction. Abnormal optokinetic nystagmus can be seen in the following:

1. Aberrant regeneration of third nerve—absent vertical optokinetic nystagmus, normal horizontal optokinetic nystagmus
2. Internuclear palsies—horizontal targets bring out dissociation of ocular response movements
3. Lesions of optic tract, geniculate body, temporal and occipital lobes show no asymmetry of horizontal optokinetic responses
4. Lesions of parietal lobe give asymmetric horizontal optokinetic responses
5. Occipital lobe lesions with homonymous hemianopia and asymmetrical horizontal optokinetic responses suggests a mass lesion extending into parietal lobe rather than a vascular lesion
6. Parinaud syndrome—vertical optokinetic nystagmus with targets moving downward enhances the retraction nystagmus seen on attempted upgaze.
7. Parkinsonism (shaking palsy)—vertical optokinetic nystagmus may be reduced
8. See-saw nystagmus—vertical optokinetic nystagmus may be reduced either upward or downward (see p. 144)
9. Test for malingering in "blind" eye or eyes with normal optokinetic responses

Smith JL. *Optokinetic nystagmus: its use in topical neuro-ophthalmologic diagnosis*. Springfield, IL: Charles C Thomas, 1963.

Walsh FB, Hoyt WF. *Clinical neuro-ophthalmology*, 4th ed. Baltimore: Williams & Wilkins, 1985.

Syndromes and Diseases Associated with Nystagmus

1. African eye-worm disease
2. Albers-Schönberg syndrome (osteosclerosis fragilis generalisata)

3. Albinism, ocular
4. Alexander disease
5. Anterior spinal artery syndrome
6. Apert syndrome (acrocephalosyndactylism syndrome)
7. Arnold-Chiari syndrome (platybasia syndrome)
8. Arylsulfatase A deficiency syndrome
9. Babinski-Nageotte syndrome (medullary tegmental syndrome)
10. Bacterial endocarditis
11. Bassen-Kornzweig syndrome (abetalipoproteinemia)
12. Behçet syndrome (dermatostomatoophthalmic syndrome)
13. Behr disease (optic atrophy-ataxia syndrome)
14. Bielschowsky-Lutz-Cogan syndrome (internuclear ophthalmoplegia)
15. Bloch-Sulzberger disease (incontinentia pigmenti)*
16. Blocked nystagmus syndrome (nystagmus blockage syndrome)
17. Bonnet-Dechaume-Blanc syndrome (neuroretinoangiomas syndrome)
18. Botulism
19. Brown-Marie syndrome (hereditary ataxia syndrome)
20. Caisson syndrome (bends)
21. Canavan disease (spongy degeneration of the white matter)
22. Cerebral palsy
23. Cestan-Chenais syndrome (combination of Babinski-Nageotte and Avellis syndrome)
24. Charcot-Marie-Tooth disease (progressive peroneal muscular atrophy)
25. CHARGE syndrome (colomba, heart disease, atresia, choanae, retarded growth and retarded development or central nervous system anomalies, genital hypoplasia, and ear anomalies or deafness syndrome)
26. Chediak-Higashi syndrome (anomalous leukocytic inclusions with constitutional stigmata)
27. Cherry-red spot myoclonus syndrome
28. Chromosome 6p12
29. Chromosome 18, partial deletion (long-arm) syndrome
30. Cockayne syndrome (dwarfism with retinal atrophy and deafness)
31. Cogan syndrome (II) (oculomotor apraxia syndrome)
32. Cone dysfunction syndrome (achromatopsia)
33. Costen syndrome (temporomandibular joint syndrome)
34. Craniocervical syndrome (whiplash syndrome)
35. Craniopharyngioma
36. Craniostenosis
37. Creutzfeldt-Jakob syndrome (spastic pseudosclerosis)
38. Crouzon disease (craniofacial dysostosis)
39. Curtius syndrome (ectodermal dysplasia with ocular malformations)
40. Cushing syndrome (II) (angle tumor syndrome)
41. Cytomegalic inclusion disease, congenital
42. Dawson disease (subacute sclerosing panencephalitis)
43. de Lange syndrome (congenital muscular hypertrophy-cerebral syndrome)
44. Diencephalic syndrome (autonomic epilepsy syndrome) (Russell syndrome)
45. Disseminated lupus erythematosus (Kaposi-Libman-Sacks syndrome)
46. *Disseminated sclerosis (multiple sclerosis)
47. Down disease (mongolism, trisomy 21)
48. Drummond syndrome (idiopathic hypercalcemia)

49. Eclampsia and preeclampsia
50. Electrical injury
51. Encephalitis, acute
52. Epidermal nevus syndrome (ichthyosis hystrix)
53. Epiphyseal dysplasia, microcephaly, and nystagmus—autosomal recessive
54. Extreme hydrocephalus syndrome
55. Fanconi-Turler syndrome (familial ataxic diplegia)
56. Fetal hydantoin syndrome
57. Forsius-Eriksson syndrome (Aland disease)
58. François dyscephalic syndrome
59. Gangliosidosis (generalized gangliosidosis, infantile)
60. General fibrosis syndrome
61. Goltz syndrome (focal dermal hypoplasia syndrome)
62. Gorlin-Chaudhry-Moss syndrome
63. Guillain-Barré syndrome (acute infectious neuritis)
64. Hallervorden-Spatz syndrome (pigmentary degeneration of globus pallidus)
65. Hallgren syndrome (retinitis pigmentosa-deafness-ataxia syndrome)
66. Hand-Schüller-Christian syndrome (histiocytosis X)
67. Hanhart syndrome (recessive keratosis palmoplantaris)
68. Hartnup syndrome (niacin deficiency)
69. Hennebert syndrome (lentic-otitic-nystagmus syndrome)
70. Hermansky-Pudlak syndrome (oculocutaneous albinism and hemorrhagic diathesis)
71. Hurler syndrome (mucopolysaccharidoses I-H)
72. Hypervitaminosis D
73. Hypomelanosis of Ito syndrome (incontinentia pigmenti achromians)
74. Hypothyroidism (cretinism)
75. Hysteria
76. Infantile globoid cell leukodystrophy (Krabbe disease)
77. Infantile neuroaxonal dystrophy
78. Infectious mononucleosis
79. Japanese River fever (typhus)
80. Jeune disease (asphyxiating thoracic dystrophy)
81. Kernicterus—high levels of bilirubin in the blood
82. Klippel-Feil syndrome (congenital brevicollis)
83. Koerber-Salus-Elschnig syndrome (sylvian aqueduct syndrome)
84. Kohn-Romano syndrome (blepharophimosis, ptosis, epicanthus inversus, telecanthus) (Blepharophimosis syndrome)
85. Kugelberg-Welander syndrome (progressive proximal muscle atrophy)
86. Laurence-Moon-Bardet-Biedl syndrome (retinitis pigmentosa-polydactyly-adiposogenital syndrome)*
87. Leber congenital amaurosis syndrome (retinal aplasia)
88. Leigh disease (subacute necrotizing encephalomyelopathy)
89. Lenoble-Aubineau syndrome (nystagmus-myoclonia syndrome)
90. Lermoyez syndrome (form of Meniere disease)
91. Linear nevus sebaceous of Jadassohn
92. Lockjaw (tetanus)
93. Louis-Bar syndrome (ataxia-telangiectasia syndrome)
94. Lowe disease (oculocerebrorenal syndrome)
95. Malignant hyperthermia syndrome

96. Maple syrup urine disease
97. Marfan syndrome (acrachnadactyly-dystrophia mesodermalis congenita)
98. Marinesco-Sjögren syndrome (congenital spirocerebellar ataxia-congenital cataract-oligophrenia syndrome)
99. Meniere syndrome (vertigo, tinnitus, nystagmus)
100. Meningococemia (meningitis)
101. Mietens syndrome
102. Morning glory syndrome (optic nerve dysplasia, encephalocele)
103. Moyamoya disease (multiple progressive intracranial arterial occlusion)
104. Multiple lentiginos syndrome (Leopard syndrome)
105. Naegeli syndrome (melanophoric nevus syndrome)
106. *Nystagmus, congenital
107. O'Donnell-Pappas syndrome (dominant foveal hypoplasia and presenile cataracts)* optic nerve hypoplasia, coloboma
108. Papillon-Lefèvre syndrome (hyperkeratosis palmoplantaris with periodontosis)
109. Parkinson disease
110. Passow syndrome (status dysraphicus syndrome)
111. Pelizaeus-Merzbacher disease (aplasia axialis extracorticalis congenita)—x-linked
112. Photomyoclonus, diabetes mellitus, deafness, neuropathy, and cerebellar dysfunction—autosomal dominant
113. Poliomyelitis
114. Posthypoxic encephalopathy syndrome
115. Pyle disease (familial metaphyseal dysplasia)
116. Quinke disease (angioedema)
117. Rubella, congenital
118. Reimann syndrome (hyperviscosity syndrome)
119. Relapsing polychondritis
120. Scaphocephaly syndrome
121. Schilder disease (encephalitis periaxialis diffusa)
122. Seckel syndrome (bird-headed dwarf syndrome)*
123. Septooptic dysplasia (de Morsier syndrome)
124. Smith-Lemli-Opitz syndrome (cerebrohepatorenal syndrome)
125. Sorsby syndrome (hereditary macular coloboma syndrome)
126. Spastic paraplegia—x-linked
127. Split hand with congenital nystagmus, fundal changes, cataracts—autosomal dominant
128. Stannus cerebellar syndrome (riboflavin deficiency)
129. Subclavian steal syndrome
130. Tay-Sachs disease (familial amaurotic idiocy)
131. Traumatic encephalopathy syndrome (punch-drunk syndrome)
132. Tremor, nystagmus, and duodenal ulcer—autosomal dominant
133. Tuomaala-Haapanen syndrome (similar to pseudohypoparathyroidism)
134. Vermis syndrome
135. Vertebral basilar artery syndrome
136. von Economo syndrome (encephalitis lethargica)
137. von Reuss syndrome (galactosemic syndrome)
138. Wagner syndrome (hyaloideoretinal degeneration)
139. Wallenberg syndrome (lateral bulbar syndrome)
140. Werner syndrome (progeria of adults)
141. Wernicke syndrome (superior hemorrhagic polioencephalopathic syndrome)

142. Wildervanck syndrome (cervicooculoacoustic syndrome)
143. Wilson disease (hepatolenticular degeneration)
144. Wolf syndrome (monosomy partial syndrome)
145. Zellweger syndrome (cerebrohepatorenal syndrome of Zellweger)

Oculogyric Crisis (Spasmodic and Involuntary Deviation of Eyes, Usually Upward, Lasting from a Few Minutes to Several Hours)

1. Cerebellar disease
2. Drugs, including the following:

acetophenazine	flurazepam	phencyclidine
alprazolam	halazepam	pimozide
alseroxyton	haloperidol	piperacetazine
amantadine	hydroxychloroquine	prazepam
amitriptyline	imipramine	prochlorperazine
amodiaquine	influenza virus vaccine	promazine
butaperazine	levodopa	promethazine
carbamazepine	lithium carbonate	propiomazine
carphenazine	lorazepam	protriptyline
chlordiazepoxide	loxapine	rauwolfia serpentina
chloroquine	mesoridazine	rescinnamine
chlorpromazine	methdilazine	reserpine
chlorprothixene	methotrimeprazine	syrosingopine
cisplatin	metoclopramide	temazepam
clonazepam	metronidazole	thiethylperazine
clorazepate	midazolam	thiopropazate
deserpidine	nitrazepam	thiopropazine
desipramine	nortriptyline	thioridazine
diazepam	oxazepam	thiothixene
diethazine	pemoline	triazolam
doxepin	pentazocine	trifluoperazine
droperidol	perazine	trifluperidol
ethopropazine	pericyazine	triflupromazine
fluphenazine	perphenazine	trimeprazine

3. Late manifestations of encephalitis
4. Lesions of fourth ventricle and cerebellum, especially lesions of the flocculus
5. Multiple sclerosis (disseminated sclerosis)
6. Parkinsonism syndrome (shaking palsy)
7. Syphilis (acquired lues)
8. Trauma

Burstein AH, Fullerton T. Oculogyric crisis possibly related to pentazocine. *Ann Pharmacotherapy* 1993;27:874-876.

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

Ocular Bobbing

Both globes move synchronously in vertical plane by spontaneously and intermittently dipping downward through an arc of a few millimeters and then return to primary position; reverse ocular bobbing also has been described. Ocular bobbing differs from vertical nystagmus by virtue of absence of a fast and a slow component in movements; it is due to advanced pontine disease.

1. Acute organophosphate poisoning (Diazinon)
2. Associated with palatal myoclonus
3. *Encephalitis
4. Fibrocartilaginous embolism to the anterior spinal artery
5. Hypertensive pontine hemorrhage
6. Leigh encephalopathy (gangliosidosis GM type 3)
7. Locked-in syndrome
8. Phenothiazine and benzodiazepine poisoning (combined; reverse)
9. Ruptured giant distal posterior inferior cerebellar artery aneurysm
10. Thrombosis of basilar, middle cerebral, or vertebral arteries with posterior fossa infarction

Paralysis of Third Nerve (Oculomotor Nerve)

This type of paralysis includes ptosis, an inability to rotate the eye upward or inward, a dilated unreactive pupil (iridoplegia), and paralysis of accommodation (cycloplegia).

1. Intracerebral
 - A. Lesion of red nucleus (Benedikt syndrome)—homolateral oculomotor paralysis with contralateral intention tremor
 - B. Myasthenia Gravis and Mesencephalic Cavernous Angioma
 - C. Nuclear types—pareses of a single or a few extraocular muscles supplied by the oculomotor nerve in one or both eyes; there may or may not be pupillary disturbances (mydriasis, sluggish pupillary reaction) and paresis of accommodation; in tumors within or near the midbrain (pinealomas), there is a combination of isolated muscle pareses with vertical gaze palsy, possibly a disturbance of convergence, and nystagmus retractorius (Parinaud syndrome, sylvian aqueduct syndrome, pineal syndrome); includes Axenfeld-Schurenberg syndrome (cyclic oculomotor paralysis), Bruns syndrome (postural change syndrome), Claude syndrome (inferior nucleus ruber syndrome), congenital vertical retraction syndrome, and Nothnagel syndrome (ophthalmoplegia-cerebellar ataxia syndrome)
 - D. Occlusion of basilar artery—due to emboli especially but also to hemorrhage or aneurysm
 - E. Recurrent third nerve palsy secondary to vascular spasm of migraine
 - F. Syndrome of cerebral peduncle (Weber syndrome)—homolateral oculomotor paralysis and cross-hemiplegia
 - G. Tumors

2. Intracranial

- A. Amebic dysentery
- B. Aneurysm rupture at base of brain—third nerve paralysis, pain around the face (fifth nerve), and headache
- C. Botulism
- D. Chickenpox
- E. Craniopharyngioma
- F. Dengue fever
- G. Devic syndrome (optical myelitis)
- H. Diphtheria
- I. Encephalitis, acute
- J. Hepatic failure
- K. Hepatitis
- L. Influenza
- M. Lockjaw (tetanus)
- N. Lymphoma
- O. Malaria
- P. Measles immunization
- Q. Meningococcal meningitis
- R. Multiple sclerosis (disseminated sclerosis)
- S. Ophthalmic migraine
- T. Periarthritis nodosa
- U. Poliomyelitis
- V. Polyneuritis because of toxins such as alcohol, lead, arsenic, and carbon monoxide; dinitrophenol or carbon disulfide poisoning; or diabetes mellitus, herpes zoster, or mumps
- W. Rabies
- X. Relapsing polychondritis
- Y. Smallpox vaccination
- Z. Subdural hematoma

AA. Syphilis (acquired lues)

BB. Temporal arteritis syndrome (Hutchinson-Horton-Magrath-Brown syndrome)

CC. Tuberculosis

3. Lesions affecting exit from cranial cavity

- A. Cavernous sinus syndrome—paralysis of third, fourth, and sixth nerves with proptosis
 - 1. Aneurysm (arteriovenous fistula syndrome)
 - 2. Carotid-cavernous fistula
 - 3. Cavernous sinus thrombosis
 - 4. Extension from lateral sinus thrombosis
 - 5. Extension of nasopharyngeal tumor
 - 6. Pituitary adenoma—lateral extension
 - 7. Tolosa-Hunt syndrome (painful ophthalmoplegia)
 - B. Superior orbital fissure syndrome—same as for cavernous sinus syndrome except exophthalmos is less likely to occur and optic nerve involvement and miotic pupil are more likely
 - 1. Aneurysm of internal carotid artery syndrome (foramen lacerum syndrome)
 - 2. Occlusion of superior ophthalmic vein
 - 3. Skull fractures or hemorrhage
 - 4. Sphenoid sinus suppuration (sphenocavernous syndrome)
 - 5. Temporal syndrome (Gradenigo syndrome)
 - 6. Tumors, such as sphenoid ridge meningioma (Rochon-Duvigneaud syndrome), nasopharyngeal tumor, metastatic carcinoma, rhabdomyosarcoma, chordoma, and sarcoma
 - C. Orbital apex—involvement of third, fourth, sixth, and first division of fifth cranial nerves and optic nerve proptosis is common
4. Other
- A. Alber-Schönberg syndrome (marble bone disease, osteopetrosis)
 - B. Associated with aspirin poisoning
 - C. Congenital
 - D. Hodgkin disease
 - E. Lupus erythematosus (Kaposi-Libman-Sacks syndrome)
 - F. Myasthenia gravis (masquerade)
 - G. Passow syndrome (status dysgraphicus syndrome)
 - H. Porphyria cutanea tarda
 - I. Sarcoid (Schaumann syndrome)

Diagnostic table

	Intracerebral				Intracranial						Cranial Cavity Exit							
	Benedikt Syndrome	Weber Syndrome	Basilar Artery Emboli	Migraine	Tumors as Pseudoma	Parinaud Syndrome	Aneurysm Rupture Base Brain	Neuritis as Diabetes Mellitus	Poliomyelitis	Meningitis	Multiple Sclerosis	Temporal Arteritis	Post Coronary Artery Aneurysm	Post Viral	Cavernous Sinus Syndrome as Carotid-Cavernous Fistula	Superior Orbital Fissure Syndrome as Sphenoid Ridge Meningioma	Orbital Apex Syndrome	Isolated
History																		
1. All age groups					U								U					U
2. Children, 2 to 8 years				S									U					
3. Common—seventh decade	S	S					S									U

Childhood Causes of Third Nerve (Oculomotor) Palsy

- Trauma
- Neoplasm
- Undetermined
- Ophthalmoplegic migraine
- Postoperative cause
- Meningitis/encephalitis
- Subdural hematoma
- Viral or post-upper respiratory tract infection
- Varicella-zoster virus
- Aneurysm
- Orbital cellulitis
- Sinus disease
- Mesencephalic cyst
- Cyclic oculomotor nerve palsy
- Poison

Paralysis of Fourth Nerve (Trochlear Nerve)

This type of paralysis produces palsy of superior oblique muscle resulting in limitation of downward movement of eye when it is in adducted position; it is frequently associated with third cranial nerve palsy.

1. Intracerebral
 - A. Thrombosis of nutrient vessels, including median penetrating branch of basilar artery to fourth nucleus
 - B. Hemorrhage in the roof of the midbrain
 - C. Aneurysm, including direct involvement by posterior cerebral and superior cerebellar arteries
 - D. Tumors (rare if isolated fourth palsy)
 1. Primary
 - a. Gliomas, such as astrocytomas, ependymomas, and medulloblastomas
 - b. Other primary tumors, including meningiomas, pinealomas, craniopharyngiomas, and hemangiomas
 2. Unilateral trochlear nerve palsy
 - E. Metastatic lesions, such as those from the nasopharynx, rhabdomyosarcomas, and neuroblastomas
 - F. Neonatal hypoxia
 - G. Nuclear type—trochlear paresis combined with a homolateral oculomotor paresis, occasionally in association with vertical gaze palsies, convergence spasm or convergence palsy, and pupillary disturbances seen in tumors of the roof of the midbrain or pinealomas (pineal syndrome)
 - H. Claude syndrome (inferior nucleus ruber syndrome)
 - I. Passow syndrome (syringomyelia)
 - J. Inflammatory lesions, such as meningoencephalitis, cerebellitis, and abscess
 - K. Pseudotumor cerebri
2. Intracranial
 - A. Aneurysms, such as that of the posterior communicating artery or foramen lacerum syndrome (aneurysm of internal carotid artery syndrome)
 - B. Hematomas, traumatic
 - C. Hydrocephalus
 - D. Meningitis, encephalitis, polyneuritis—diabetes mellitus, herpes zoster, multiple sclerosis, myasthenia gravis, chickenpox, diphtheria, hydrophobia, Gradenigo syndrome, influenza, malaria, poliomyelitis
 - E. Trauma
 - F. Tumors, including cerebellopontine angle tumor and pituitary adenoma
3. Lesions affecting exit from cranial cavity
 - A. Cavernous sinus syndrome (Foix syndrome)
 - B. Superior orbital fissure syndrome (Rochon-Duvigneaud syndrome)
 - C. Orbital apex syndrome (Rollet syndrome)
4. Orbital lesions
 - A. Fracture of superior orbital rim
 - B. Sinusitis
 - C. Operations on the frontal sinus in which there is trochlear displacement
 - D. Trochlear disturbance, such as in Paget disease or hypertrophic arthritis
 - E. Adherence syndrome—adhesions between the superior rectus and superior oblique muscles

- F. Abnormal insertion of superior oblique muscle or abnormal fascial attachments
- G. Rochon-Duvigneaud syndrome (superior orbital fissure syndrome)
- H. Idiopathic

Diagnostic table

	Intracerebral			Intracranial			Exit from Cranial Cavity			Orbital		
	Thrombosis Basilar Artery	Aneurysm Posterior Cerebral/ Superior Cerebellar Arteries	Tumor as Pinealoma	Aneurysm Posterior Communicating Artery	Tumor as Cerebellopontine Angle	Polyneuritis	Cavernous Sinus Syndrome	Orbital Apex Syndrome	Superior Orbital Rim Fracture	Isolated	Isolated	Congenital
History												
1. Bacterial infection							S	S				
2. Hemorrhagic, neoplastic, or inflammation cause						U	U	U

Speer C, et al. Four cranial nerve palsy in pediatric patients with pseudotumor cerebri. *Am J Ophthalmol* 1999;127:236-237.

Childhood Causes of Fourth Nerve (Trochlear) Palsy

1. Trauma
2. Neoplasm
3. Undetermined
4. Postoperative cause
5. Meningitis
6. Hydrocephalus
7. Ophthalmoplegic migraine
8. Viral infection
9. Aneurysm
10. Other

Holmes JM, et al. Pediatric third, fourth, and sixth nerve palsies: a population-based study. *Am J Ophthalmol* 1999;127:388-392.

Kodsi SR, Younge BR. Acquired oculomotor, trochlear, and abducent cranial nerve palsies in pediatric patients. *Am J Ophthalmol* 1992;114:568-574.

Pseudoabducens Palsy

1. Accommodative spasm
2. Blowout fracture (medial rectus entrapment)
3. Cross fixation (congenital esotropia)
4. Duane syndrome (retraction syndrome)
5. Fibrosis of medial rectus
6. Horizontal gaze palsy (bilateral)—with or without contraction
7. Lack of effort involved in abducting a habitually adducted eye patch on other eye differentiates from abducens palsy
8. Myasthenia gravis
9. Myositis
10. Orbital cellulitis (abscess)
11. Overambitious (large) resection of medial rectus
12. Thyroid myopathy (Graves disease, hyperthyroidism)
13. Unwillingness to cooperate—doll's head phenomenon (sudden passive turning of head) differentiates from abducens palsy

Beyer-Machule C, von Noorden GK. *Atlas of ophthalmic surgery, Vol 1: Lids, orbits, extraocular muscles*. New York: Thieme Medical, 1984.

Goldhammer Y. Pseudopalsy of the abducens nerve. In: Smith JL, ed. *Neuro-ophthalmology update*. New York: Masson, 1977.

Paralysis of Sixth Nerve (Abducens Palsy)

This type of paralysis produces palsy of the lateral rectus muscle with esotropia increasing when the eye is moved laterally. The course of the sixth nerve makes it more vulnerable to injury than other cranial nerves.

1. Intracerebral
 - A. Foville syndrome (Foville peduncular syndrome)
 - B. Gaucher disease (cerebroside lipidosis)
 - C. Hydrocephalus
 - D. Inflammatory lesions, such as meningoencephalitis, cerebellitis, and abscess
 - E. Lateral ventricular cyst
 - F. Leukemia
 - G. Millard-Gubler syndrome (abducens-facial hemiplegia alternans)
 - H. *Mycoplasma pneumoniae*
 - I. Nuclear aplasia—autosomal dominant
 - J. Platybasia (cerebellomedullary malformation syndrome)
 - K. Spontaneous subdural hematoma
 - L. Thrombosis or aneurysm of nutrient vessels to sixth nucleus—basilar artery
 - M. Tumors—intracranial, pontine glioma, or metastatic tumor from breast, thyroid glands, or nasopharynx
 1. Primary
 - a. Gliomas, such as astrocytomas, ependymomas, and medulloblastomas
 - b. Other primary tumors, including meningiomas, pinealomas, craniopharyngiomas, and hemangiomas
 2. Metastatic lesions, such as those from the nasopharynx, rhabdomyosarcomas, and neuroblastomas
 - N. Wernicke encephalopathy—thiamine deficiency in alcoholics with sixth nerve palsy, paresis of horizontal conjugate gaze, nystagmus, ataxia, and Korsakoff psychosis
2. Intracranial
 - A. Carotid artery aneurysm (foramen lacerum syndrome)
 - B. Cerebellopontine angle tumor, such as acoustic neuroma, producing unilateral deafness, facial paralysis, diplopia, and papilledema
 - C. Chickenpox
 - D. Coccidioidomycosis
 - E. Congenital absence of sixth nerve
 - F. Cushing syndrome (II) (angle tumor syndrome)
 - G. Dandy-Walker syndrome (atresia of the foramen Magendie)
 - H. Diphtheria
 - I. Gradenigo syndrome—osteitis of petrous tip of pyramid following homolateral mastoid or middle ear infection; facial pain (fifth nerve involvement)
 - J. Greig syndrome (ocular hypertelorism syndrome)
 - K. Hydrophobia (rabies)
 - L. Hydrocephalus (decreased intracranial pressure)

- M. Increased intracranial pressure
- N. Malaria
- O. Massive pituitary adenoma
- P. Measles
- Q. Meningitis
- R. Möbius syndrome (congenital paralysis of sixth and seventh nerves)
- S. Neuritis because of diseases such as diabetes mellitus, herpes zoster, poliomyelitis, lead or arsenic poisoning, multiple sclerosis, syphilis, brucellosis
- T. Ophthalmoplegic migraine syndrome
- U. Osteosarcoma
- V. Passow syndrome (status dysraphicus syndrome)
- W. Pseudotumor cerebri (Symonds syndrome)
- X. Raymond syndrome (pontine syndrome)
- Y. Relapsing polychondritis
- Z. Skeletal dysplasia (mental retardation, abducens palsy)—x-linked

AA. Skull fractures—usually crush injury

BB. Spontaneous dissection of the internal carotid artery

CC. Subdural hematoma

Trichinellosis

Tumor extension as chordoma

Vascular lesions, because of congenital aneurysm, arteriovenous fistulas, diabetes, hypertension

Water-soluble contrast myelography

3. Lesions affecting exit of sixth nerve from cranial cavity

Cavernous sinus syndrome (Foix syndrome)

Le Fort I maxillary osteotomy

Optic nerve sheath fenestration

Orbital apex lesion

Percutaneous thermal ablation of trigeminal nerve rootlet

Sphenocavernous syndrome

Sphenopalatine fossa lesion—loss of tearing and paresis of second division of fifth nerve, most frequently because of malignant tumor

Superior orbital fissure syndrome

Tolosa-Hunt syndrome (painful ophthalmoplegia)

Transient in newborns

4. Other

Cluster headache

Cretinism (hypothyroid goiter)

Duane syndrome (retraction syndrome)

Engelmann syndrome (hereditary multiple diaphyseal sclerosis)

Following lumbar puncture, lumbar anesthesia, or Pantopaque injection for myelography

Kahler disease (multiple myeloma)

Lupus erythematosus (Kaposi-Libman-Sacks syndrome)

Myasthenia gravis

Optic nerve sheath fenestration (rare)

Preeclampsia

Sarcoidosis

Secondary to immunization or viral illness

Toxic substances, such as arsenic, carbon tetrachloride, dichloroacetylene, Dilantin, gold salts, isoniazid, nitrofurantoin, thalidomide, trichloroethylene, furaltadone (Altafur), lithium

Diagnostic tables

Paralysis of sixth nerve

	Intracerebral			Intracranial				Cranial Cavity Exit								
	Basilar Artery Aneurysm	Wernicke Encephalopathy	Millard-Gubler Syndrome	Foville Syndrome	Cerebellomedullary Malformation Syndrome	Meningitis	Carotid Artery Aneurysm	Gradenigo Syndrome	Cerebellopontine Angle Tumor as Acoustic Neuroma	Neuritis as Diabetes Mellitus	Myasthenia Gravis	Cavernous Sinus Syndrome	Superior Orbital Fissure Syndrome	Orbital Apex Syndrome	Isolated	Pseudo Tumor Cerebri
History																
1. Bilateral				U												S
2. Children								U							U	S
3. Common in alcoholics		U														
4. Common—20 to 40 years											U					S
5. Common—more than 40 years	U	U	U						U							R
6. Common—more than 60 years	U				U							U	R			
7. Extradural abscess of petrous portion temporal bone								U								
8. Lack of vitamin B ₁ (thiamine)		U														
9. More in females											U					U
10. More in males							U									
11. Pain, periocular												U	S	S		
12. Severe pain in ophthalmic branch of fifth cranial nerve								U								
13. Vascular/infectious/tumor at the pons base			U													
14. Vascular/inflammatory/tumor in cranial cavity												U	U	U		
15. Vascular/thrombosis/tumor of pyramidal tract				U												
16. Vestibular nerve tumor								U								
Physical Findings																
1. Anesthesia of face				U												
2. Associated hydrocephalus	S				S			S								U
3. Blepharitis		S														
4. Cataract									U							
5. Central scotoma		S														S
6. Conjunctivitis		S					U									
7. Cortical blindness						S										
8. Cotton-wool spots									U							
9. Deviation of eyes to the side opposite lesion and inability to move toward side lesion when unilateral			U													
10. Esotropia	U	S	U	U	S	S	S	S	S	S	S	U	U	U	U	
11. Hard exudates									S							
12. Involvement—other cranial nerves	S		U	U				U	U	S	R	U	U	U		S
13. Keratitis				U	U							S				
14. Lacrimation								U

16. Ophthalmoplegia		S										S				
17. Optic nerve atrophy	S					U				R		S	S	S	S	S
18. Optic neuritis	S				S	S	R						S			
19. Papilledema	S		U		S	S	S					U	S	U		
20. Paralysis lateral conjugate gaze			U													
21. Ptosis	S										U		U			
22. Pupillary afferent defects	S											U	U			S
23. Pupillary paralysis	S															
24. Reduced corneal sensitivity							S									
25. Retinal hemorrhages	S									S						
26. Retinal microaneurysms										U						
27. Retinal neovascularization										U						
28. Uveitis						U										
29. Vertical nystagmus in upgaze and downgaze				U												
30. Visual field defects							U					S	S	S		U
Laboratory Data																
1. Cerebral arteriography												U	S			
2. Cerebrospinal fluid abnormalities			U	U												U
3. Computed tomographic scan	U		U	U			U	U	U			U	U	U		U
4. Blood sugar (glycemia)										U						
5. MRI	U		U	U	U		U	U	U			U	U			U
6. Red blood cell count, white blood cell count, hemoglobin, and hematocrit						U					U					
7. Tensilon test			U	U							U					
8. Twenty-four-hour urine—thiamine		U														
9. Ultrasonography (oculorbital)													U	U		

R = rarely; S = sometimes; and U = usually.

Paralysis of third, fourth, and sixth cranial nerves

	Cavernous Sinus Thrombosis	Pituitary Adenoma	Aneurysm	Carotid-Cavernous Fistula	Nasopharyngeal Tumor	Lateral Sinus Thrombosis	Skull Fracture	Tumor as Sphenoid Ridge Meningioma	Superior Ophthalmic Vein Occlusion	Orbital Mass
History										
1. Common during fourth to seventh decades		U	S	S	U			U		
2. Common in females				S				U		
3. Common in males					U		S			
4. Congenital				S	R					S
5. Following head trauma	R		S	U			U			
6. Infectious etiology (septic thrombus)	U								U	S
7. Ocular pain			S	S		U				S
8. Unilateral	U		U	S	U				U	U
9. Visual loss		S	S	R		S				S
Physical Findings										
1. Anisocoria	U		U						U	
2. Central retinal vein occlusion				S						
3. Corneal ulcer	S		S							S
4. Choroidal folds	S			S			S			S
5. Dilated conjunctival vessels	S			U			S			S
6. Dilatation of episcleral veins	U			U					S	
7. Facial nerve involvement							U			
8. Glaucomatous cupping	S		S							
9. Hyperopia								S		
10. Increased intraocular pressure	S			U						S
11. Infections face/nose/forehead									U	
12. Ipsilateral horizontal gaze paresis							U			
13. Ischemic neuritis	S								S	
14. Keratopathy	U							U		
15. Leakage of blood/spinal fluid from external ear canal							U			
16. Lid edema	U					U				S
17. Mastoid ecchymosis (Battle sign)							U			
18. Miosis		S								
19. Nasolacrimal obstruction					U		S			
20. Ocular bruit				U						
21. Ocular hypotony		S								
22. Optic nerve atrophy		S	S			S		S		
23. Orbital hemorrhage	R					R				S
24. Papilledema	S	R	R				S	S		S
25. Pulsating exophthalmos		U								
26. Pupil, afferent defect	U		U					U	U	S
27. Proptosis	U	S		S		U		S		U
28. Ptosis	S	S								S
29. Retinal hemorrhages	S		S				S		S	
30. Trigeminal aesthesia		S				U				
31. Visual field defects		U	S				S	U		
Laboratory Data										
1. Arteriography, cerebral				U	U		S			
2. Biopsy/culture of paranasal sinus	S									S
3. Biopsy nasopharynx lesions					U					
4. Blood culture	U								S	S
5. Cerebrospinal fluid abnormal			U							
6. Computed tomographic orbit scan				U						U
7. Culture lesions face/nose/forehead	U								U	S
8. Paranasal sinus roentgenogram	U				S					S
9. Pituitary panel—serum prolactin, growth hormone, adrenocorticotrophic hormone, follicle-stimulating hormone, luteinizing hormone, thyroid-stimulating hormone		S								
10. Selective catheterization of external carotid arteries				U						
11. Selective cerebral angiography			U	U						
12. Visual field test		U						S		

R = rarely; S = sometimes; and U = usually.

Acute Ophthalmoplegia (Acute Onset of Extraocular Muscle Palsy)

1. Infranuclear
 - A. Aneurysm of internal carotid artery or circle of Willis
 - B. Trauma
 1. Orbital fracture
 2. Orbital hematoma
 - C. Orbital cellulitis secondary to acute paranasal sinusitis including mucormycosis in a diabetic
 - D. Ophthalmoplegic migraine
 - E. Myasthenia gravis
 - F. Orbital pseudotumor
 - G. Orbital tumors
 1. Lymphoma
 2. Metastatic
 3. Rhabdomyosarcoma
2. Nuclear
 - A. Acute and subacute infections
 1. Infectious encephalitis
 - a. Viral encephalitis
 - b. Anterior poliomyelitis
 - c. Encephalitis lethargica and other epidemic viral encephalitides
 - d. Fisher syndrome (ophthalmoplegia, ataxia, areflexia)
 - e. Rabies
 - f. Vaccinal encephalitis
 - g. Varicella, variola, measles, mumps, influenza, infectious mononucleosis
 - h. Zoster
 - i. Organismal encephalitic infections
 - j. Typhoid
 - k. Scarlet fever
 - l. Whooping cough
 - m. Gas gangrene
 - n. Septicemia
 - o. Pneumonia
 - p. Typhus
 - q. Malaria
 - r. Acute central nervous system diseases
 - s. Acute demyelinating diseases—acute disseminated encephalomyelitis, acute multiple sclerosis

 - u. Polyradiculoneuritis
 - v. Epidemic paralyzing vertigo
 - w. Acute infectious (rheumatic) polyneuritis
 - x. Interstitial neuritis—meningitis, cranial sinusitis, petrositis, nasal sinusitis, orbital periostitis, orbital abscess
 - y. Widespread infections
 - z. Meningovascular syphilis

- aa. Mucormycosis (diabetes, immunosuppressed, AIDS)
- bb. Tuberculosis
- cc. Torula and cryptococcosis
- dd. Toxic conditions
- ee. Diphtheria
- ff. Tetanus
- gg. Botulism
- hh. Allergic conditions
- ii. Sarcoidosis syndrome (Schaumann syndrome)
- jj. Recurrent multiple cranial nerve palsies
- 2. Metabolic diseases
 - 1. Deficiency diseases
 - 2. Thiamine deficiency (Wernicke-Korsakoff syndrome)
 - 3. Nicotinic acid deficiency—pellagra
 - 4. Ascorbic acid deficiency—scurvy
 - 5. Diabetes
 - 6. Anemias
 - 7. Primary anemia—leukemia
 - 8. Secondary anemia (loss of blood)
 - 9. Exophthalmic ophthalmoplegia
 - 10. Porphyria
- 3. Poisoning such as lead, carbon monoxide, snake poisons, wasp stings, ergot, sulfuric acid, phosphorus, triorthoceresylphosphate, and dichloroacetylene
- 4. Drugs, including the following:

vaccine (adsorbed)	butalbital	desipramine
acebutolol	butallylonal	desoxycorticosterone
acetohexamide	butaperazine	dexamethasone
acetophenazine	butethal	dextrothyroxine
adrenal cortex injection	calcitriol(?)	diazepam(?)
alcohol	carbamazepine	dibucaine
aldosterone	carisoprodol	diethazine
allobarbitol	carphenazine	digitalis
amitriptyline	chloral hydrate	digitoxin
amobarbitol	chlorambucil	dimethyl tubocurarine iodide
amodiaquine	chlordiazepoxide	diphenhydramine
atenolol	chloroform	diphenylhydantoin
amoxapine	chloroprocaïne	diphtheria and tetanus toxoids (adsorbed)
amphotericin B	chloroquine	
aprobarbitol	chlormpromazine	
aspirin	chlorpropamide	diphtheria and tetanus toxoids and pertussis
auranofin	cisplatin	
aurothioglucose	clomipramine	diphtheria toxoid (adsorbed)
aurothiogylicanide	clonazepam	disulfiram
barbital	clorazepate	doxepin
beclomethasone	colchicine	DPT vaccine
betamethasone	cortisone	ergocalciferol(?)
botulin A toxin	cyclobarbitol	ethambutol
butallylonal	cyclopentobarbitol	ethopropazine
bupivacaine	cytarabine	etidocaine
butabarbitol	methdilazine	procaine
fludrocortisone	methitalur	prochlorperazine
fluphenazine	methohexital	promazine
fluprednisolone	methotrexate	promethazine
flurazepam	methotrimeprazine	propiomazine
glyburide	methoxiflurane	propoxycaine
gold Au 198	methyl alcohol	propranolol
gold sodium thiomalate	methylidopa	protriptyline
gold sodium thiosulfate	methylene blue	quinacrine
halazepam	methylprednisolone	radioactive iodides(?)
griseofulvin	metoclopramide	rubella and mumps virus vaccine (live)
heptabarbitol	metocurine iodide	
hexachlorophene	metoprolol	rubella virus vaccine (live)
hexethal	metrizamide	secobarbitol
hexobarbitol	midazolam	sodium salicylate
hydrocortisone	mumps virus vaccine (live)	succinylcholine
hydroxychloroquine	nadolol	talbutal
imipramine	nalidixic acid	temazepam
indomethacin	naproxen	tetracaine
influenza virus vaccine	nitrazepam	thiamylal
insulin	nitrofurantoin	thiethylperazine
iodide and iodine solutions and compounds(?)	nortriptyline	thiopental
	oral contraceptives	thiopropazate
iophendylate	oxazepam	thiopropazine
isoniazid	oxyphenbutazone	thioridazine
ketoprofen	paramethadione	thyroglobulin
labetalol	paramethasone	thyroid trifluoperazine
levodopa	pentobarbitol	triflupromazine
levothyroxine	periciazine	trimeprazine
lidocaine	perphenazine	trimethadione
liothyronine	phenytoin	trimipramine
liotrix	pindolol	tolazamide
lorazepam	piperacetazine	tolbutamide
measles and rubella virus vaccine (live)	phenobarbitol	triamcinolone
	phenylbutazone	trichloroethylene
measles, mumps, and rubella virus vaccine	piperazine	tubocurarine
	piperocaine	vinbarbitol
measles virus vaccine	poliovirus vaccine	vinblastine
mephesisin	prazepam	vincristine
mephobarbitol	prednisolone	vitamin A
mepivacaine	prednisone	vitamin D
meprobamate	prilocaine	vitamin D ₂
mesoridazine	primidone	vitamin D ₃
metharbital	probarbitol	

5. Neoplasms and cysts
6. Trauma affecting the midbrain, base of the skull, and orbit
7. Vascular lesions as arteriosclerosis, hemorrhage and thrombosis in the midbrain, subarachnoid, hemorrhage, aneurysms, congenitally dilated arteries, giant-cell arteritis
8. Idiopathic—etiologic basis undetermined

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Chronic Ophthalmoplegia (Slow Onset of Extraocular Muscle Palsy)

1. Degenerative conditions
 - A. Amyotrophic lateral sclerosis—progressive bulbar palsy
 - B. Chronic progressive external ophthalmoplegia
 - C. Hereditary ataxias—Friedreich ataxia, Sanger-Brown ataxia
 - D. Progressive supranuclear palsy
 - E. Syringomyelia (syringobulbia)
 - F. Thyroid myopathy (Graves disease)
2. Infective conditions
 - A. Diffuse sclerosis
 - B. Disseminated sclerosis (multiple sclerosis)
 - C. Syphilis

Duke-Elder S, Scott GI. *System of ophthalmology*, Vol XII. St. Louis: CV Mosby, 1971.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Bilateral Complete Ophthalmoplegia (Bilateral Palsy of Ocular Muscles, Ptosis, with Pupil and Accommodation Involvement)

1. Arteriosclerotic hemorrhage and occlusion
2. Cerebellopontine angle tumors (Cushing syndrome II)
3. Encephalitis, acute
4. Fisher syndrome (ophthalmoplegia-ataxia areflexia syndrome)
5. Giant-cell arteritis (Hutchinson-Horton-Magath-Brown syndrome)
6. Kiloh-Nevin syndrome (ocular myoatomyopathy)
7. Midbrain tumors
8. Multiple sclerosis (rare)
9. Mucormycosis
10. Ohaha syndrome (ophthalmoplegia, hypotonia, ataxia hypacusis, athetosis)
11. Orbital abscess
12. Parinaud syndrome (conjunctiva-adenitis syndrome)
13. Retrobulbar block complication
14. Rochon-Duvigneaud syndrome (superior orbital fissure syndrome)
15. Rollet syndrome (orbital apex-sphenoidal syndrome)
16. Syphilis (acquired lues)
17. Trauma
18. Wernicke encephalopathies (thiamine deficiency)
19. Whipple disease (intestinal lipodystrophy)

Kaufman LM, et al. Invasive sinonasal polyps causing ophthalmoplegia, exophthalmos, and visual field loss. *Ophthalmology* 1989;96:1667-1672.

Sergott RC, et al. Simultaneous, bilateral diabetic ophthalmoplegia. *Ophthalmology* 1984;91:18-22.

External Ophthalmoplegia (Paralysis of Ocular Muscles Including Ptosis with Sparing of Pupil and Accommodation)

1. Abiotrophy—specific for one particular tissue, bilateral, symmetric
2. Amyloidosis (Lubarsch-Pick syndrome)
3. Aneurysm of internal carotid artery (foramen lacerum syndrome)
4. Bassen-Kornzweig syndrome (familial hypolipoproteinemia)
5. Bee sting
6. Chronic progressive external ophthalmoplegia
7. Congenital and familial
8. Diabetes mellitus (Willis disease)
9. Diphtheria
10. Epidemic encephalitis
11. Friedreich ataxia
12. Garcin syndrome (Schmincke tumor unilateral cranial paralysis)
13. Graves disease (hyperthyroidism)
14. Jacod syndrome (petrosphenoidal space syndrome)
15. Kearns-Sayre syndrome (ophthalmoplegic retinal degeneration syndrome)
16. Mumps
17. Myasthenia gravis (Erb-Goldflam syndrome)
18. Myotonic dystrophy (Curschmann-Steinert syndrome)
19. Myositis
20. Nevus sebaceous of Jadassohn
21. Nothnagel syndrome (ophthalmoplegia-cerebellar ataxia syndrome)
22. Oculopharyngeal syndrome (progressive muscular dystrophy with ptosis and dysphagia)
23. Olivopontocerebellar atrophy III (with retinal degeneration)—dominant
24. Ophthalmoplegia, progressive external, and scoliosis (horizontal gaze paralysis, familial)—recessive
25. Pernicious anemia
26. Polyradiculoneuritis (Guillain-Barré and Fisher syndromes)
27. Progressive facial hemiatrophy (Parry-Romberg syndrome)
28. Pseudotumor (orbital)
29. Refsum syndrome (heredopathia atactica polyneuritiformis syndrome)
30. Scleroderma (progressive systemic sclerosis)
31. Shy-Drager syndrome (orthostatic hypotension syndrome)
32. Shy-Gonatas syndrome (accumulation of lipids in muscles simulates gargoylism)
33. Tick paralysis (Lyme disease, Rocky Mountain spotted fever)
34. Vincristine—may have fifth and seventh nerve and peripheral neuropathies
35. Wernicke encephalopathies (beriberi, thiamine deficiency)

Internuclear Ophthalmoplegia

This condition comprises paralysis of the medial rectus muscles on attempted conjugate lateral gaze without other evidence of third nerve paralysis due to involvement of medial longitudinal fasciculus. Jerk nystagmus of abducting eye and vertical nystagmus, usually on upward gaze, may be present.

1. Bilateral
 - A. Arnold-Chiari malformation (cerebellomedullary malformation syndrome)
 - B. "Crack" cocaine
 - C. Fabry disease (glycosphingolipid lipidosis)
 - D. Inflammation, such as upper respiratory infection
 - E. Midbrain infarction
 - F. *Multiple sclerosis (disseminated sclerosis)
 - G. Myasthenia gravis (Erb-Goldflam syndrome)
 - H. Occlusive vascular disease
 - I. Oculocerebellar tegmental syndrome
 - J. Pontine hematoma
 - K. Syphilis (acquired lues)
 - L. Temporal arteritis
 - M. Vertebral basilar artery syndrome (whiplash injury)
 - N. Webino syndrome (wall-eyed exotropia bilateral internuclear ophthalmoplegia)
 - O. Wernicke encephalopathy
2. Unilateral
 - A. Bielschowsky-Lutz-Cogan syndrome (internuclear ophthalmoplegia)
 - B. Cryptococcosis (torulosis)
 - C. Multiple sclerosis (disseminated sclerosis)
 - D. Myasthenia gravis (Erb-Goldflam syndrome)
 - E. Neuro-Behçet Disease
 - F. Tumors of the brainstem
 - G. *Vascular lesion—infarct of small branch of basilar artery

Painful Ophthalmoplegia (Palsy of Ocular Muscles with Pain)

1. Adenocarcinoma metastatic to the orbit
2. Atypical facial neuralgia
3. Cavernous sinus syndrome (Foix syndrome)
4. Collier sphenoidal palsy
5. Diabetic ophthalmoplegia
6. Intracavernous carotid aneurysm
7. Myositis (orbital)
8. Nasopharyngeal tumor
9. Ophthalmoplegic migraine
10. Orbital abscess (mucormycosis-diabetes, immunosuppressed, AIDS)
11. Orbital apex sphenoidal syndrome (Rollet syndrome)

12. Orbital periostitis
13. Postherpetic neuralgia
14. Pseudotumor of orbit
15. Superior orbital fissure syndrome (Rochon-Duvigneaud syndrome, including superior orbital fissuritis)
16. Temporal arteritis
17. Tic douloureux of the first trigeminal division
18. Tolosa-Hunt syndrome (inflammatory lesion of cavernous sinus)

Diagnostic tables

	Multiple Sclerosis	Inflammation as Upper Respiratory Infection	Neoplasm as Medulloblastoma	Myasthenia Gravis	Arnold Chiari Malformation	Fabry Disease	Ischemia (Vasolar)
History

Sananman ML, Weintraub MI. Remitting ophthalmoplegia due to rhabdomyosarcoma. *Arch Ophthalmol* 1971;86:6:459-461.

Transient Ophthalmoplegia (Extraocular Muscle Paralysis of Short Duration)

1. Cranial irradiation and intrathecal chemotherapy
2. Cyclic esotropia
3. Cyclic oculomotor palsy
4. Following internal carotid artery ligation for treatment of intracavernous giant aneurysm
5. Lethargic encephalitis
6. Multiple sclerosis (disseminated sclerosis—usually the lateral rectus)
7. Myasthenia gravis (ocular, early)
8. Oculomotor nuclear complex infarction
9. Ophthalmoplegia migraine
10. Post lumbar puncture abducens palsy
11. Syphilis (acquired lues)
12. Tabes dorsalis
13. Treatment of arteriovenous fistulas with Debrun balloon technique
14. Wilson disease (hepatolenticular degeneration)

Gadoth N, Liel Y. Transient external ophthalmoplegia in Wilson's disease. *Metab Pediatr. Ophthalmol* 1980; 4:71-72.

Lepore FE, Nissenblatt MJ. Bilateral internuclear ophthalmoplegia after intrathecal chemotherapy and cranial irradiation. *Am J Ophthalmol* 1981;92:851-853.

Nakao S, et al. Transient ophthalmoplegia following internal carotid artery ligation for treatment of intracavernous giant aneurysm. *Surg Neurol* 1982;17:458-463.

Painful Ocular Movements (Pain with Movement of the Eyes)

1. Bone-break fever (dengue fever) (rare)
2. Influenza
3. Myositis
 - A. "Collagen diseases"
 - B. Infectious myositis
 - C. Trichinosis

4. Orbital cellulitis
5. Orbital periostitis
6. Retrobulbar neuritis

Jampel RS, Fells P. Monocular elevation paresis caused by a central nervous system lesion. *Arch Ophthalmol* 1968;80:45.

Poor Convergence (Inability of Both Eyes to Fixate Simultaneously on a Near Object)

1. Functional
 - A. Convergence insufficiency
 - B. Exophoria
 - C. Exotropia
 - D. Hysteria
 - E. Poor attention span
2. Organic
 - A. Brain lesion, to include bilateral occipital lobe lesions, superior colliculi, and anterior internuclear ophthalmoplegia, such as in hemorrhage, trauma, or tumors
 - B. Dorsal midbrain syndrome
 - C. Encephalitis
 - D. Exophthalmic goiter—Möbius sign
 - E. Exophthalmos
 - F. Multiple sclerosis
 - G. Myotonic dystrophy
 - H. Narcolepsy
 - I. Poor visual acuity in one or both eyes
 - J. Postencephalitis
 - K. Syphilis and tabes
 - L. Third nerve paralysis (see p. 153)
 - M. Whiplash injury
3. Drugs, including the following:

alcohol	cyclopentobarbital	opium
allobarbitol	dextroamphetamine	penicillamine
amobarbital	dimethyl tubocurarine iodide	pentobarbital
amphetamine	diphenylhydantoin	phenmetrazine
aprobital	floxuridine	phenobarbital
barbital	fluorouracil	phenytoin
bromide	heptobarbital	primidone
bromisovalum	hexethal	probarbital
butabarbitol	hexobarbital	secobarbital
butalbital	mephobarbital	talbutal
butallylonal	methamphetamine	thiamylal
butethal	metharbital	thiopental
carbamazepine	methitural	tubocurarine
carbon dioxide	methohexital	vinbarbital
chloral hydrate	metocurine iodide	
cyclobarbitol	morphine	

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

Walsh FB, Hoyt WF. *Clinical neuro-ophthalmology*, 4th ed. Baltimore: Williams & Wilkins, 1985.

Spasm of Convergence

Spasm of convergence occurs with spasm of accommodation and miosis (i.e., spasm of the near reflex).

1. Encephalitis—accompanied with nystagmus
2. Hysteria—may be confused with lateral rectus palsy
3. Labyrinthine fistulas
4. Kenny syndrome
5. Oculogyric crisis in myasthenia gravis
6. Paralysis of horizontal gaze with compensatory spasm of near reflex
7. Parinaud syndrome (divergence paralysis)
8. Tabes dorsalis
9. Trauma
10. Wernicke syndrome (avitaminosis B₁)

Feiler-Ofry V, et al. Lipoid proteinosis (Urbach-Wiethe Syndrome). *Br J Ophthalmol* 1979;63:694-698.

Thompson RA, Zynde RH. Convergence spasm associated with Wernicke's encephalopathy. *Neurology* 1969;19:711-712.

Divergence Paralysis

Divergence paralysis is defined as having a supranuclear cause with sudden onset of comitant esotropia and uncrossed diplopia at distance, fusion at near (usually 1-2 m) normal ductions and versions, and gross impairment of fusional amplitudes of divergence.

1. *Brainstem lesions
 - A. Cerebellar cyst
 - B. Hemangioma
 - C. Tumors, such as cerebellar and acoustic neuromas and pontine glioma
2. Cerebral hemorrhage
3. Diazepam
4. Diphtheria
5. Dorsal midbrain syndrome
6. Epidemic encephalitis
7. Functional
8. Head injuries
9. Increased intracranial pressure
10. Influenza
11. Lead poisoning
12. Multiple sclerosis (disseminated sclerosis)
13. Poliomyelitis
14. Syphilis
15. Unknown
16. Vascular disease
 - A. Diabetes mellitus
 - B. Hypertension

- C. Occlusion of subclavian artery with reversal of flow in vertebral artery
- D. Vertebral basilar insufficiency

Arai M, Fujii S. Divergence paralysis *Neurology* 1990;237:45-46.

Walsh FB, Hoyt WF. *Clinical neuro-ophthalmology*, 4th ed. Baltimore: Williams & Wilkins, 1985.

Oculocardiac Reflex

Bradycardia, nausea, and faintness occur and are dependent on trigeminal sensory stimulation evoked by pressure on or within the eyeball or from sensory impulses by stretching of ocular muscles.

1. Acute glaucoma
2. Anophthalmic socket
3. During ophthalmoscopy examination of premature infants
4. Exaggerated in epidemic encephalitis
5. Intermittent exophthalmos due to congenital venous malformations of the orbit
6. Intraocular injections
7. Orbital hematoma
8. *Pressure on globe
9. Retinal detachment operation
10. Severe injury to eye or orbit
11. *Traction on extraocular muscles including levator palpebrae superioris

Arnold RW, et al. Lack of global vagal propensity in patients with oculocardiac reflex. *Ophthalmology* 1994;101:1347-1352.

Clarke WN, et al. The oculocardiac reflex during ophthalmoscopy in premature infants. *Am J Ophthalmol* 1985;99:649-651.

Ginsburg RN, et al. Oculocardiac reflex in the anophthalmic socket. *Ophthalmic Surg* 1992;23:135-137.

Walsh FB, Hoyt WF. *Clinical neuro-ophthalmology*, 4th ed. Baltimore: Williams & Wilkins, 1985.

Retraction of the Globe (On Horizontal Conjugate Gaze)

1. *Duane syndrome (retraction syndrome)—cocontraction of horizontal rectus muscles, lateral rectus, and both vertical muscles, or medial and inferior rectus muscles or fibrotic lateral rectus
 - A. Acrorenoocular syndrome
 - B. Goldenhar syndrome
 - C. Hanhart syndrome
 - D. Isolated
 - E. Okihiro syndrome
 - F. Wildervanck syndrome (Klippel-Feil anomaly with Duane syndrome)
2. Fibrosis secondary to strabismus surgery
3. Medial wall fracture with incarceration of orbit contents—retraction of globe with attempted abduction
4. Orbital mass
 - A. Dermoid cyst
 - B. Hemangioma

- C. Lymphangioma
- D. Osteofibroma
- 5. Retraction of convergent nonfixating eye associated with loss of conjugate lateral gaze and occurrence of the near reflex on attempted lateral gaze
- 6. Thyroid myopathy

Holtz SJ. Congenital ocular anomalies associated with Duane's retraction syndrome, the nevus of ota, and axial anisometropia. *Am J Ophthalmol* 1974;74:729-731.

Isenberg SJ. *The eye in infancy*. Chicago: Year Book Medical, 1989.

Forced Duction Test

The eyeball is moved away from the muscle being tested; this is accomplished by grasping with a forceps the conjunctiva and episclera close to the limbus.

1. Supraduction-infraduction
 - A. Resistance
 1. Abnormal fascial or muscle attachments
 2. Congenital fibrosis syndrome
 3. Double elevator palsy
 4. Orbital floor fracture
 5. Orbital mass
 6. Thyroid myopathy of inferior rectus muscle
 - B. Unrestricted
 1. Elevator paresis
 2. Paresis of inferior superior rectus muscle
2. Supraduction in adduction
 - A. Brown superior oblique tendon sheath syndrome—resistance (see p. 132)
 - B. Paresis of inferior oblique muscle—unrestricted
3. Adduction
 - A. Resistance
 1. Chronic third nerve palsy with contracture lateral rectus
 2. Congenital fibrosis syndrome
 3. Duane retraction syndrome because of fibrosis of lateral rectus muscle
 4. Orbital mass
 5. Tight lateral rectus following excessive resection operation
 6. Thyroid myopathy
 - B. Unrestricted
 1. Extensive medial rectus recession
 2. Duane retraction syndrome because of central or peripheral cocontraction of medial and lateral rectus on attempted adduction
4. Abduction
 - A. Resistance
 1. Abnormal fascial or muscle attachments including strabismus fixus
 2. Blowout fracture
 3. Chronic sixth nerve palsy with contracture medial rectus
 4. Myositis
 5. Orbital mass
 6. Thyroid myopathy

Tight medial rectus following excessive resection operation

- B. Unrestricted
 1. Extensive lateral rectus recession
 2. Paralysis of lateral rectus muscle

Beyer-Machule C, von Noorden GK. *Atlas of ophthalmic surgery, Vol 1: Lids, orbits, extraocular muscles*. New York: Thieme Medical, 1984.

Double Elevator Palsy (Apparent Paralysis of Globe Elevators [i.e., Superior Rectus and Inferior Oblique Muscles])

1. Inferior rectus muscle restriction
 - A. Anomalous insertion of inferior rectus muscle
 - B. Blow-out fracture
 - C. Congenital orbital fibrosis syndrome
 - D. Thyroid ophthalmopathy
2. Monocular elevation paresis secondary to central nervous system lesions
 - A. Monocular elevation paresis
 - B. Skew deviation
3. Neurogenic or myogenic superior rectus muscle weakness
 - A. Myasthenia gravis (Erb-Goldflam syndrome)
 - B. Postoperative Berke-Motais surgery
 - C. Superior oblique tendon sheath syndrome (see p. 132)
 - D. Third cranial nerve palsy (see p. 153)
 - E. Trauma

Callahan M.A. Surgically mismanaged ptosis associated with double elevator palsy. *Arch Ophthalmol* 1981;99:108.

Ocular Neuromyotonia (Paroxysmal Monocular Deviations Ascribable to Involuntary Contraction of Muscles Innervated by Third, Fourth, or Sixth Cranial Nerves)

1. Aneurysmal compression of third nerve
2. Chondrosarcoma
3. Cystic craniopharyngioma
4. Following radiation therapy
5. Rhabdomyosarcoma

Bateman DE, Saunders M. Cyclic oculomotor palsy. *J Neurol Neurosurg Psychiatry* 1983;46:451.

Lessell S, et al. Ocular neuromyotonia after radiation therapy. *Am J Ophthalmol* 1986;102:766-770.

Extraocular Muscle Enlargement on Orbital Computerized and Tomographic Scan

1. Diffuse
 - A. Acromegaly
 - B. Amyloidosis
 - C. *Graves disease as thyroid ophthalmopathy
 - D. *Infection
 - E. Parasitic infiltration
 - F. Trauma

- G. Tumors, including pseudotumor
- H. Vascular abnormalities as arteriovenous fistula
- I. Collagen vascular disease
- 2. Focal
 - A. Cysticercosis
 - B. Hemorrhagic cyst
 - C. Primary or metastatic carcinoma
 - D. Trichinella

5

Conjunctiva

Cellular Responses

1. Basophilic reaction—significant only when seen in large numbers; immunoglobulin E (Ig-E) mediated allergic conditions; key role in asthma, atopy, and hypersensitivity responses; present in vernal (eosinophils) and giant papillary conjunctivitis (GPC) conjunctivitis.

2. Eosinophilic reaction—GPC (giant papillary conjunctivitis); Charcot-Leyden crystals are more prominent than intact eosinophils in chronic allergy; parasitic conjunctivitis.
 - A. *Vernal conjunctivitis—characteristic with fragmentation of eosinophil
 - B. Hay fever conjunctivitis—rarely fragmentation of eosinophil
 - C. Allergic conjunctivitis from various drugs, cosmetics, and other antigens
 - D. Atropine sensitivity—not present when eserine or pilocarpine is used
3. Mononuclear reaction
 - A. Viral disease—100% without secondary infection; usually lymphocytic
 1. *Epidemic keratoconjunctivitis—adenovirus type 8
 2. Pharyngoconjunctival fever—adenovirus type 3
 3. *Herpetic keratoconjunctivitis
 4. Acute follicular conjunctivitis of Beal
 - B. Chronic ocular infections
4. Neutrophilic reaction—early stage of severe viral conjunctivitis
 - A. All bacteria but two—*Neisseria catarrhalis* and *Haemophilus duplex* (Morax-Axenfeld diplobacillus)
 - B. Viruses of the family *Chlamydiaceae* [trachoma inclusion conjunctivitis (TRIC) agent]
 1. Trachoma
 2. *Inclusion conjunctivitis
 3. Lymphogranuloma venereum
 - C. Fungal disease
 1. Streptothrix conjunctivitis secondary to canaliculitis
 2. Nocardial corneal ulcers
 3. Monilial corneal ulcers
 - D. Unknown cause
 1. *Erythema multiforme (Stevens-Johnson syndrome)
 2. Conjunctivitis of Reiter disease
 - E. Vernal conjunctivitis—eosinophilic and neutrophilic reaction
 - F. Epidemic keratoconjunctivitis and herpetic keratoconjunctivitis have a shift from mononuclear to polymorphonuclear reaction when a membrane is formed
5. Plasma-cell reaction—trachoma—especially with spontaneous rupturing of follicles; chlamydial conjunctivitis
6. Epithelial changes
 - A. Keratinization of conjunctival epithelial cells
 1. *Alkali burn
 2. Vitamin A deficiency
 3. Exposure
 4. Cicatrization (such as pemphigoid and Stevens-Johnson syndrome)
 5. Keratoconjunctivitis sicca—partially keratinized epithelial cells, specific
 6. Epithelial plaque
 7. Superior limbic keratoconjunctivitis (SLK)
 - B. Large, multipointed epithelial cells
 1. Characteristic of viral infection
 2. *Most often found in herpetic keratitis
 - C. Intracellular granules
 1. Pseudoinclusion bodies—extension of nuclear material into cytoplasm
 2. Intracellular-free green pigment in cytoplasm—present in persons with dark complexion

3. Intracellular-free blue granules—present in cytoplasm in about 12% of normal individuals
4. Sex chromatin—present in nuclei of females only
7. Cellular inclusions
 - A. Trachoma and inclusion conjunctivitis have identical inclusions—basophilic, cytoplasmic (Halberstaedter-Prowazek)
 - B. *Molluscum contagiosum—eosinophilic, cytoplasmic (Henderson/Patterson)
 - C. Lymphogranuloma venereum—eosinophilic
 - D. *Herpes simplex and herpes zoster—eosinophilic, internuclear (Lipschütz)
 - E. Measles—multinucleated giant cells with eosinophilic internuclear inclusion bodies and cytoplasmic, eosinophilic masses
 - F. *Chickenpox—eosinophilic, internuclear
 - G. Smallpox—eosinophilic, cytoplasmic

Purulent Conjunctivitis

Purulent conjunctivitis is characterized as violent acute conjunctival inflammation, great swelling of lids, copious secretion of pus, and a marked tendency to corneal involvement and even possible loss of the eye.

1. Gram-positive group
 - A. Bacillus of Doderlein (*Lactobacillus* sp.)
 - B. *Listeria monocytogenes*
 - C. *Pneumococcus
 - D. Staphylococcus
 - E. *Streptococcus
2. Gram-negative group
 - A. *Aerobacter aerogenes*
 - B. Enterobacteriaceae
 - C. *Escherichia coli*
 - D. **Haemophilus influenzae* biotype III
 - E. *Klebsiella pneumoniae*
 - F. *Moraxella lacunata*
 - G. **Neisseria gonorrhoeae*

Snead JW, et al. *Listeria monocytogenes* endophthalmitis. *Am J Ophthalmol* 1977;84:337-344.

Acute Mucopurulent Conjunctivitis

This type of conjunctivitis is epidemic pink eye, marked hyperemia and a mucopurulent discharge, which tends toward spontaneous recovery.

1. Gram-positive group
 - A. *Pneumococcus
 - B. Staphylococcus—eyelid lesions and punctate staining of the lower cornea may occur
2. Gram-negative group
 - A. **Haemophilus aegyptius* (Koch-Weeks bacillus)
 - B. *H. influenzae*
3. Associated with exanthems and viral infections
 - A. German measles (Greig syndrome)
 - B. Measles (rubeola)
 - C. Mumps
 - D. *Reiter syndrome (conjunctivourethrosynovial syndrome)
 - E. Scarlet fever
4. Fungus
 - A. *Candida albicans*
 - B. Leptothrix
5. Lyell disease—toxic epidermal necrolysis or scalded-skin syndrome
6. Relapsing polychondritis
7. Sjögren syndrome (secretoinhibitor syndrome)
8. Etiology obscure in many cases

Fedukowicz HB. *External infections of the eye: bacterial, viral, and mycotic*, 3rd ed. New York: Appleton-Century-Crofts, 1984.

Okumoto M, Smolin G. Pneumococcal infections of the eye. *Am J Ophthalmol* 1974;77:346-352.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Chronic Mucopurulent Conjunctivitis (Mucopurulent Discharge, Moderate Hyperemia with a Chronic Course)

1. Infective element—lids or lacrimal apparatus
 - A. *Monilia* species
 - B. Morax-Axenfeld diplobacillus (angular conjunctivitis)
 - C. *Pneumococcus
 - D. Pubic lice
 - E. Staphylococcus
 - F. *Streptothrix foersteri*
2. Allergic—cosmetic
3. Irritative
 - A. Associated infections or irritation of lids, lacrimal apparatus, nose, or skin
 - B. Deficiency of lacrimal secretions

- C. Direct irritants—foreign body, mascara, dust, wind, smog, insecticides, chlorinated water, and many others
- D. Exposure—ectropion, facial paralysis, exophthalmos, and others
- E. Eyestrain
- F. Metabolic conditions—gout, alcoholism, or prolonged digestive disturbances
- G. Overtreatment by drugs—antibiotics, miotics, mydriatics

Fedukowicz HB. *External infections of the eye: bacterial, viral, and mycotic*, 3rd ed. New York: Appleton-Century-Crofts, 1984.

Geyer O, et al. Phenylephrine prodrug. *Ophthalmology* 1991;98:1483.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Membranous Conjunctivitis

Exudate permeates epithelium to such an extent that removal of membrane is difficult and a raw bleeding surface results. Membranous conjunctivitis can lead to symblepharon, ankyloblepharon, and entropion with trichiasis.

1. Chemical irritants
 - A. Acids, such as acetic or lactic
 - B. *Alkalis, such as ammonia or lime
 - C. Metallic salts, such as silver nitrate or copper sulfate
2. *Corynebacterium diphtheriae*
3. Ligneous conjunctivitis—chronic, cause unknown
4. Pneumococcus
5. Streptococcus
6. Uncommon—actinomyces, glandular fever, measles, *Neisseria catarrhalis*, variola, *Pseudomonas aeruginosa*, herpes simplex, *Leptothrix*, and epidemic keratoconjunctivitis (type adenovirus)

Fedukowicz HB. *External infections of the eye: bacterial, viral, and mycotic*, 3rd ed. New York: Appleton-Century-Crofts, 1984.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Pseudomembranous Conjunctivitis

In pseudomembranous conjunctivitis, the fibrin network is easily peeled off, leaving the conjunctiva intact; it forms on the conjunctiva.

1. Bacteria
 - A. *C. diphtheriae*
 - B. *Gonococcus
 - C. *Meningococcus
 - D. Pneumococcus
 - E. Staphylococcus
 - F. *Streptococcus
 - G. Uncommon—*H. aegyptius*, *H. influenzae*, *N. catarrhalis*, *Pseudomonas aeruginosa*, *E. coli*, *Bacillus subtilis*, Shigella, *Bacillus faecalis* alcaligenes, *Salmonella paratyphi* B, *Mycobacterium tuberculosis*, and *Treponema pallidum*
2. Viral
 - A. *Epidemic keratoconjunctivitis (type adenovirus)
 - B. *Herpes simplex

- C. Herpes zoster
- D. Reiter syndrome (conjunctivouethrosynovial syndrome)
- E. Vaccina
- 3. Fungal—*C. albicans*
- 4. *Allergic—vernal conjunctivitis
- 5. Toxic
 - A. *Stevens-Johnson syndrome can be caused by drugs, including the following:

acetaminophen	cefamandole	ethosuximide
acetanilid	cefazolin	ethotoin
acetazolamide	cefonicid	ethoxzolamide
acetohexamide	cefoperazone	fenoprofen
acetophenazine	ceforanide	fluphenazine
allobarbital	cefotaxime	furosemide
allopurinol	cefotetan	gentamicin
amidone	cefoxitin	glyburide
aminosalicylate(?)	cefsulodin	gold Au 198
aminosalicylic acid(?)	ceftazidime	gold sodium thiomalate
amithiozone	ceftizoxime	gold sodium thiosulfate
amobarbital	ceftriaxone	heptabarbital
amodiaquine	cefuroxime	hetacillin
amoxicillin	cephalexin	hexethal
ampicillin	cephaloglycin	hexobarbital
antipyrine	cephaloridine	hydrabamine penicillin V
aprobarbital	cephalothin	hydrochlorothiazide
aspirin	cephapirin	hydroflumethiazide
auranofin	cephradine	hydroxychloroquine
aurothioglucoase	chloroquine	ibuprofen
aurothioglycanide	chlorothiazide	indapamide
barbital	chlorpromazine	indomethacin
belladonna	chlorpropamide	isoniazid
bendroflumethiazide	chlortetracycline	lincomycin
benzathine penicillin G	chlorthalidone	mephenytoin
benzthiazide	cimetidine	mephobarbital
bromide	clindamycin	meprobamate
bromisovalum	cloxacillin	mesoridazine
butabarbital	cyclobarbital	methacycline
butalbital	cyclopentobarbital	metharbital
butallylonal	cyclothiazide	methazolamide
butaperazine	danazol	methdilazine
butethal	demeclocycline	methicillin
captopril	dichlorphenamide	methitural
carbamazepine	dicloxacillin	methohexital
carbenicillin	diethazine	methotrimeprazine
carbromal	diphenylhydantoin	methsuximide
carisoprodol	doxycycline	methyclothiazide
carphenazine	enalapril	methylphenidate
cefaclor	erythromycin	metolazone
cefadroxil	ethopropazine	minocycline
minoxidil	primidone	sulfanilamide
moxalactam	probarbital	sulfaphenazole
nafcillin	procaine penicillin G	sulfapyridine
naproxen	prochlorperazine	sulfasalazine
oxacillin	promazine	sulfathiazole
oxyphenbutazone	promethazine	sulfisoxazole
oxytetracycline	proparacaine	sulindac
paramethadione	propiomazine	sulthiame
pentobarbital	propranolol	talbutal
perazine	quinethazone	tetracycline
pericyazine	quinine	thiabendazole
perphenazine	rifampin	thiamylal
phenacetin	secobarbital	thiethylperazine
phenobarbital	smallpox vaccine	thiopental
phenoxymethyl penicillin	sodium salicylate	thiopropazate
phensuximide	sulfacetamide	thiopropazine
phenylbutazone	sulfachlorpyridazine	thioridazine
phenytoin	sulfacytine	tolazamide
piperacetazine	sulfadiazine	tolbutamide
piproxen	sulfadimethoxine	trichlormethiazide
polythiazide	sulfamerazine	trifluoperazine
potassium penicillin G	sulfameter	triflupromazine
potassium penicillin V	sulfamethazine	trimeprazine
potassium phenethicillin	sulfamethizole	trimethadione
potassium phenoxymethyl penicillin	sulfamethoxazole	vancomycin
	sulfamethoxypridazine	vinbarbital

B. Benign mucous membrane pemphigoid can be caused by drugs, including the following:

carbamazepine	isoniazid	practolol
carbimazole	methimazole	propylthiouracil
diphenylhydantoin	methsuximide	streptomycin
ethosuximide	methylthiouracil	trimethadione
griseofulvin	paramethadione	
hydralazine	phensuximide	

C. Lyell disease (toxic epidermal necrolysis or scalded-skin syndrome) can be caused by drugs, including the following:

acetaminophen	antipyrine	bismuth sodium thioglycollate
acetanilid	aprobarbital	
acetazolamide	aurothioglucoase	bismuth sodium triglycollamate
acid bismuth sodium tartrate	aurothioglycanide	
adrenal cortex injection	barbital	busulfan
aldosterone	bendroflumethiazide	butabarbital
allobarbital	benzthiazide	butalbital
amoxapine	benzathine penicillin G	butallylonal
amoxicillin	betamethasone	butethal
amobarbital	bismuth oxychloride	carbamazepine
ampicillin	bismuth sodium tartrate	carbenicillin
carbimazole	indomethacin	primidone
chlorambucil	isoniazid	probarbital
chlorothiazide	kanamycin	procaine penicillin G
chlortetracycline	mechlorethamine	procarbazine
chlorthalidone	melphalan	quinethazone
clomipramine	mephenytoin	secobarbital
cloxacillin	mephobarbital	smallpox vaccine
cortisone	meprednisone	sodium salicylate
cyclobarbital	methacycline	streptomycin
cyclopentobarbital	metharbital	sulfacetamide
cyclothiazide	methazolamide	sulfachlorpyridazine
cyclophosphamide	methicillin	sulfadiazine
dapsone	methitural	sulfadimethoxine
demeclocycline	methohexital	sulfamerazine
desoxycorticosterone	methotrexate	sulfameter
dexamethasone	methyclothiazide	sulfamethazine
	methylprednisolone	
dichlorphenamide	metolazone	sulfamethizole
dicloxacillin	minocycline	sulfamethoxazole
diltiazem	nafcillin	sulfamethoxypridazine
diphenylhydantoin	nitrofurantoin	sulfanilamide
doxepin	oxacillin	sulfaphenazole
doxycycline	oxyphenbutazone	sulfapyridine
erythromycin	oxytetracycline	sulfasalazine
ethambutol	paramethadione	sulfathiazole
ethotoin	paramethasone	sulfisoxazole
ethoxzolamide	penicillamine	sulindac
	pentobarbital	
fludrocortisone	phenobarbital	talbutal
fluprednisolone	phenylbutazone	tetracycline
gold Au 198	phenytoin	thiabendazole
gold sodium thiomalate	piroxicam	thiamylal
heptabarbital	poliovirus vaccine	thiopental
hetacillin	polythiazide	triamcinolone
hexethal	phenoxymethyl penicillin	trichlormethiazide
hexobarbital	phenylbutazone	triethylene-melamine
hydrabamine penicillin V	potassium penicillin G	trimethadione
hydrochlorothiazide	potassium penicillin V	trimipramine
hydrocortisone	potassium phenethicillin	uracil mustard
ibuprofen	prednisolone	vinbarbital
indapamide	prednisone	

- D. Pemphigus vulgaris
- E. Hereditary epidermolysis bullosa
- 6. Chemical irritants
 - A. Acids, such as acetic or lactic
 - B. *Alkalis, such as ammonia or lime
 - C. Metallic salts, such as silver nitrate or copper sulfate
 - D. Vegetable and animal irritants
- 7. Acute graft-versus-host disease
- 8. Foot-and-mouth disease

9. Koch-Weeks bacillus
10. Ligneous conjunctivitis—chronic, cause unknown

Ophthalmia Neonatorum (Conjunctivitis Occurring in Newborns)

1. *Chemical conjunctivitis, such as from silver nitrate instillation
2. *Chlamydial trachomatis
3. Bacteria
 - A. Gram positive
 1. *C. diphtheriae*
 2. *Staphylococcus aureus*
 3. *Staphylococcus epidermidis*
 4. Streptococcus group D
 5. *Streptococcus pneumoniae*
 6. *Streptococcus viridans*
 - B. Gram negative
 1. Coliform bacillus, such as *E. coli*
 2. *Enterobacter cloacae*
 3. *Haemophilus influenzae*
 4. *Haemophilus parainfluenzae*
 5. *K. pneumoniae*
 6. Meningococcus
 7. *Mima polymorpha*—gram negative
 8. *N. gonorrhoeae* and *N. catarrhalis*
 9. *Neisseria* organisms
 10. Pneumonococcus
 11. *Proteus mirabilis*
 12. *P. aeruginosa*
 13. *Pseudomonas pyocyanea*
 14. *S. marcescens*
4. Virus
 - A. Herpes simplex
 - B. *Streptococcus viridans*
 - C. Coxsackie A
 - D. TRIC virus
5. Other
 - A. *Acinetobacter* species
 - B. *Branhamella catarrhalis*
 - C. *C. albicans*

- D. *Citrobacter freundii*
- E. *Clostridium perfringens*
- F. Inclusion blennorrhoea

Acute Follicular Conjunctivitis Lymphoid Follicles (Cobblestoning) of Conjunctiva with Rapid Onset

1. *Inclusion conjunctivitis—adult inclusion conjunctivitis (AIC) (begins 2 days after exposure to organism, may be bilateral, no systemic symptoms, and a unilateral or bilateral preauricular node is often present).
2. *Adenovirus conjunctivitis—EKC has been reported worldwide from virus serotypes (the most common are 8, 11, and 19); pharyngoconjunctival fever (PCF) is usually caused by serotypes 3, 4, and 7.
 - A. Pharyngoconjunctival fever—usually because of type adenovirus; common in swimming-pool epidemics in the summer and fall
 - B. Epidemic keratoconjunctivitis because of adenovirus type (rarely occurs in children)
3. *Primary herpetic keratoconjunctivitis—conjunctival reaction may be follicular or pseudomembranous
4. Newcastle disease (fowlpox) conjunctivitis—usually seen in poultry handlers, veterinarians (caused by a paramyxovirus: single-stranded RNA virus that causes respiratory infections)
5. Influenza virus A
6. Herpes zoster
7. *Cat-scratch fever (Parinaud oculoglandular syndrome)—fever caused by two types of rickettsia: *Rochalimaea henselae* and *Afipia felis*
8. Echovirus keratoconjunctivitis
9. Trachoma (sometimes)
10. Bacterial *Streptococcus*, *Moraxella*, and *Treponema* organisms
11. Mesantoin use
12. *Chlamydia epizootic* (feline pneumonitis)
13. Ophthalmomyiasis
14. Acute hemorrhagic conjunctivitis
15. Neonatal inclusion conjunctivitis
16. Unknown types—a case that resists etiologic classification is encountered occasionally; it is probable that other viruses occasionally produce acute follicular conjunctivitis
17. Associated with regional adenitis
 - A. Angelucci syndrome (critical allergic conjunctivitis syndrome)

- B. Anoxic overwear syndrome
- C. Benjamin-Allen syndrome (brachial arch syndrome)
- D. Floppy eyelid syndrome
- E. *Giant papillary conjunctivitis syndrome
- F. *Inclusion conjunctivitis in adults—acute mucopurulent follicular inflammation, persisting as long as several months, sometimes with scarring
- G. Syndrome of Beal—transient unilateral disease, usually resolving in weeks

Chronic Follicular Conjunctivitis (Lymphoid Follicles Cobblestoning) of Conjunctiva with Long-Term Course)

1. Chronic follicular conjunctivitis—Axenfeld's type (orphan's) frequently found in institutionalized children; almost asymptomatic; long duration (to months or longer); no keratitis; cause unknown
2. *Chronic follicular conjunctivitis, toxic type
 - A. Bacterial origin, such as that due to a diplobacillus or other microorganism
 - B. Drugs, including the following:

acyclovir	DPE	neomycin
adenine arabinoside	echothiophate	neostigmine
amphotericin B	eserine	physostigmine
apraclonidine	F3T	pilocarpine
atropine	framycetin	scopolamine
carbachol	gentamicin	sulfacetamide
clonidine	homatropine	sulfamethizole
demecarium	hyaluronidase	sulfisoxazole
diatrizoate meglumine and sodium	idoxuridine	trifluorothymidine
	isofluorophate	trifluridine
diisopropyl fluorophosphate	ketorolac tromethamine	vidarabine
dipivefrin	methscopolamine	

- C. Chronic follicular conjunctivitis with epithelial keratitis; differentiated from Axenfeld type by shorter duration (to months) and by epithelial keratitis involving upper third of cornea; epidemic in schools; can be transmitted by mascara pencil; cause unknown
- D. Ectodermal syndrome (Rothmund syndrome)
- E. Folliculosis—associated general lymphoid hypertrophy
- F. *Molluscum contagiosum conjunctivitis
- G. Neurocutaneous syndrome (ectodermal dysgenesis)
- H. Parinaud syndrome—chronic fever and regional lymphadenopathy, frequently cat-scratch fever

Congestion of Conjunctiva (Noninfectious Hyperemia of the Conjunctiva)

1. *Acute lupus erythematosus (Kaposi-Libman-Sacks syndrome)
2. Alcoholism
3. *Allergic conjunctivitis, such as contact with cosmetics or plastic
4. Avitaminosis
5. Carcinoid syndrome
6. *Carotid-cavernous fistula or arteriovenous aneurysm
7. Cavernous sinus thrombosis (Foix syndrome)
8. Conjunctivitis caused by air pollution (smog, dust, or smoke)
9. *Drugs causing conjunctival hyperemia, including the following:

acetoexamide	betamethasone	chlordiazepoxide
acetylcholine	brimonidine tartrate	chloroform
acyclovir	bupivacaine	chloroprocaine
adrenal cortex injection	butalbital	chlorothiazide
adsorbed	butallylonal	chlorpropamide
alcohol	butethal	chlortetracycline
aldosterone	carbachol	chlorthalidone
allobarbitol	carmustine	chrysarobin
allopurinol	cefaclor	cimetidine
alprazolam	cefadroxil	cisplatin
alseroxylon	cefamandole	clindamycin
alseroxylon	cefazolin	clindamycin
amithiozone	cefonicid	clofibrate
amobarbital compounds and pertussis vaccine	cefoperazone	clonazepam
	ceforanide	clorazepate
antazoline	cefotaxime	colchicine
apraclonidine	cefotetan	colloidal silver
aprobarbital	cefoxitin	cortisone
aspirin	cefsulodin	cyclobarbitol
atropine	ceftazidime	cyclopentobarbital
auranofin	ceftizoxime	cycloserine
aurothioglucose	ceftriaxone	cyclosporine
aurothioglucanide	cefuroxime	cylothiazide
barbital	cephalexin	cytarabine
bischloroethylnitrosourea (BCNU)	cephaloglycin	deferoxamine
	cephaloridine	deserpidine
beclomethasone	cephalothin	desoxycorticosterone
belladonna	cephapirin	dexamethasone
bendroflumethiazide	cephradine	dextran
benzalkonium	chloral hydrate	dextrothyroxine
benzthiazide	chloramphenicol	diacetylmorphine
diatrizoate meglumine and diazepam	indapamide	nitrazepam
	indomethacin	nitromersol
dicumarol	interferon	norepinephrine
diethylcarbamazine	iodide and iodine solutions	olopatadine HCl
diltiazem	iothalamate meglumine and iothalamic acid	paramethasone
dimercaprol		phenoxybenzamine
diphenadione	ketoprofen	opium
diphtheria and tetanus toxoids	levothyroxine	oxazepam
	lidocaine	oxprenolol
disodium clodronate	lincomycin	oxyphenbutazone
disodium etidronate	liothyronine	oxyphenonium
disodium pamidronate emedastine	liotrix	pentazocine
	lithium carbonate	pentobarbital
difumarate	lorazepam	phenacetin
disopyramide	maprotiline	phenindione
doxorubicin	measles and rubella virus	phenobarbital
emetine	measles virus vaccine (live)	phenprocoumon
ephedrine	medrysone	phenylbutazone
erythromycin	mepidine	phenylephrine
ether	mephentermine	phenylmercuric acetate
ethotoin	mephentoin	phenylmercuric nitrate
ethyl biscoumacetate	mephobarbital	pilocarpine
etidocaine	mepivacaine	piroxicam
F3T	meprednisone	piroxicam
fenoprofen	mercuric oxide	polythiazide
fludrocortisone	metaraminol	practolol
fluorescein	methacholine	prazepam
fluorometholone	metharbital	prazosin
fluprednisolone	methimazole	prednisolone
flurazepam	methitural	prednisone
flurbiprofen	methocarbamol	prilocaine
gentamicin	methohexital	primidone
glyburide	methoxamine	probarbital
gold Au	methoxsalen	procaine
gold sodium thiomalate	methylclothiazide	propoxycaine
gold sodium thiosulfate	methyl dopa	propranolol
griseofulvin	methylprednisolone	propylthiouracil
halazepam	methylthiouracil	quinethazone
heparin	metolazone	radioactive iodides
heptabarbitol	metoprolol	ranitidine

hexethal	metronidazole	rauwolfia serpentina
hexobarbital	mianserin	rescinnamine
homatropine	midazolam	reserpine
hydralazine	minoxidil	rifampin
hydrochlorothiazide	morphine	rubella and mumps virus
hydrocortisone	moxalactam	rubella virus vaccine (live)
hydroflumethiazide	mumps virus vaccine (live)	scopolamine
ibuprofen	naproxen	secobarbital
idoxuridine (IDU)	nifedipine	sildenafil citrate
silver nitrate	sulfaphenazole	thyroglobulin
silver protein	sulfapyridine	thyroid
sodium chloride	sulfasalazine	tolazamide
sodium salicylate	sulfathiazole	tolazoline
streptomycin	sulfisoxazole	tolbutamide
sulfacetamide	syrosingopine	triamcinolone
sulfachlorpyridazine	talbutal	triazolam
sulfacytine	temazepam	trichlormethiazide
sulfadiazine	tetanus immune globulin	trichloroethylene
sulfadimethoxine	tetanus toxoid	trifluridine
sulfamerazine	tetracycline	trioxsalen vaccine (live)
sulfameter	thiabendazole	vancomycin
sulfamethazine	thiacetazone	verapamil
sulfamethizole	thiamylal	vidarabine
sulfamethoxazole	thimerosal	vinbarbital
sulfamethoxypyridazine	thiopental	vitamin A
sulfanilamide	thiotepa	

10. out (hyperuricemia)

11. Hormone deficiency (estrogenic)

12. Hypothyroidism

13. Irritative follicular conjunctivitis (see p. 193)

A. *Chemical conjunctivitis because of drugs, including the following:

acenocoumarol	cefazolin	cisplatin
acetaminophen	cefonicid	clofibrate
acetanilid	cefoperazone	clonazepam
acetoexamide	ceforanide	clorazepate
allobarbital	cefotaxime	colloidal silver
allopurinol	cefotetan	cyclobarbital
alprazolam	cefoxitin	cyclopentobarbital
amobarbital	cefsulodin	cycloserine
anisindione	ceftazidime	cyclosporine
antazoline	ceftizoxime	cyclothiazide
antipyrene	ceftriaxone	cytarabine
aprobarbital	cefuroxime	dextran
aspirin	cephalexin	diazepam
barbital	cephaloglycin	dicumarol
bendroflumethiazide	cephaloridine	diethylcarbamazine
benzalkonium	cephalothin	diltiazem
benzthiazide	cephapirin	dimercaprol
butabarbital	cephradine	diphenadione
butalbital	chloramphenicol	diphtheria and tetanus toxoids and pertussis vaccine
butallylonal	chlordiazepoxide	
butethal	chlorothiazide	
carbamazepine	chlorthalidone	disopyramide
carbimazole	chlorthalidone	doxorubicin
cefaclor	chrysarobin	emetine
cefadroxil	cimetidine	ephedrine
cefamandole	metolazone	ethotoin
ethyl biscoumacetate	metronidazole	secobarbital
fenopropfen	mianserin	silver nitrate
flurazepam	midazolam	silver protein
flurbiprofen	minoxidil	sodium salicylate
halazepam	morphine	streptomycin
heparin	moxalactam	sulfacetamide
heptabarbital	mumps virus vaccine (live)	sulfachlorpyridazine
hexethal	naproxen	sulfacytine
hexobarbital	nifedipine	sulfadiazine
hydralazine	nitrazepam	sulfadimethoxine
hydrochlorothiazide	opium	sulfamerazine
hydroflumethiazide	oxazepam	sulfameter
ibuprofen	oxprenolol	sulfamethazine
indapamide	oxyphenbutazone	sulfamethizole
indomethacin	oxyphenonium	sulfamethoxazole
interferon	pentazocine	sulfamethoxypyridazine
iodide and iodine solutions and compounds	pentobarbital	sulfanilamide
	phenacetin	sulfaphenazole
iothalamate	phenindione	sulfapyridine
meclumine and sodium	phenobarbital	sulfasalazine
iothamic acid	phenprocoumon	sulfathiazole
ketoprofen	phenylbutazone	sulfisoxazole
lithium carbonate	phenylephrine	talbutal
lorazepam	piroxicam	temazepam
maprotiline	polythiazide	tetanus immune globulin
measles and rubella virus vaccine (live)	practolol	tetanus toxoid
	prazepam	tetracycline
measles virus vaccine (live)	prazosin	thiamylal
mepidine	primidone	thiopental
mephentoin	probarbital	thiotepa
mephobarbital	propranolol	tolazamide
metharbital	propylthiouracil	tolbutamide
methimazole	quinethazone	triazolam
methitural	radioactive iodides	trichlormethiazide
methocarbamol	ranitidine	trichloroethylene
methohexital	rubella and mumps virus vaccine (live)	verapamil
methylclothiazide	rubella virus vaccine (live)	vinbarbital
methylidopa		vitamin A
methylthiouracil		warfarin

- B. Topical drugs that are hypotonic, hypertonic, or in which the pH is above or below 6.9 or a drug degradation causing chemical irritation
 - C. Toxic conjunctivitis because of drugs such as miotics or cycloplegics
 - D. Vegetable irritants (e.g., castor bean)
14. *Malignant lymphoma
 15. Ophthalmic vein thrombosis
 16. Photosensitive conjunctivitis
 17. *Polycythemia vera (Vaquez disease)
 18. Sjögren syndrome (secretoinhibitor syndrome)

19. Vascular changes
 - A. Facial paralysis (see p. 66-68)
 - B. *Hereditary hemorrhagic telangiectasis (Rendu-Osler-Weber disease)
 - C. Petechial hemorrhage of conjunctiva (see p. 206)

Ciliary Flush

Ciliary flush involves circumcorneal congestion and congestion of ciliary vessels immediately surrounding the cornea; individual vessels are not seen; color is violaceous; redness fades toward the fornices; and vessels do not move with conjunctiva.

1. Corneal disease, such as with inflammations and erosions
2. Glaucoma, especially acute glaucoma
3. Iridocyclitis
4. Iris irritation, such as with corneal foreign bodies
5. Iritis

Conjunctival Edema (Chemosis)

1. Acquired blockage of orbital lymphatics following orbital surgery (lateral orbitotomy) or because of erysipelas or lymphogranuloma venereum
2. *Chronic hereditary lymphedema (Nonne-Milroy-Meige disease)
3. *Drugs, including the following:

acetohexamide	aminosalicylate	antipyrine
acetophenazine	aminosalicylic acid	aprobarbital
acetyldigitoxin	amobarbital	aspirin
actinomycin C	amodiaquine	auranofin
adrenal cortex injection	amphotericin B	aurothioglucose
albuterol	antimony lithium thiomalate	aurothioglucanide
aldosterone	antimony potassium tartrate	barbital
allobarbital	antimony sodium tartrate	benoxinate
amantadine	antimony sodium thioglycollate	benzathine penicillin G
aminopterin		betamethasone
benzalkonium	clofibrate	fluorouracil
bleomycin	clomipramine	fluoymesterone
brinzolamide	cloxacillin	fluphenazine
bupivacaine	cocaine	fluprednisolone
butabarbital	colistin	gitalin
butacaine	colloidal silver	glyburide
butalbital	cortisone	gold Au 198
butallylonal	cyclobarbital	gold sodium thiomalate
butaperazine	cyclopentobarbital	griseofulvin
butethal	cyproheptadine	heptabarbital
cactinomycin	dactinomycin	hetacillin
captopril	danazol	hexachlorophene
carbachol	dapsone	hexamethonium
carbamazepine	daunorubicin	hexethyl
carbenicillin	demecarium	hexobarbital
carphenazine	demeclocycline	hydrabamine penicillin
cefaclor	desipramine	hydralazine
cefadroxil	deslanoside	hydrocortisone
cefamandole	desoxycorticosterone	hydroxychloroquine
cefazolin	dexamethasone	ibuprofen

cefonicid	dextrothyroxine	idoxuridine
cefoperazone	diacetylmorphine	IDU
ceforanide	diatrizoate meglumine and	imipramine
cefotaxime	sodium	iodide and iodine
cefotetan	dibucaine	solutions and
		compounds
cefoxitin	dicloxacillin	iron dextran
cefsulodin	diethazine	isofluorophate
ceftazidime	diethylcarbamazine	isosorbide
ceftizoxime	digitoxin	isotretinoin
ceftriaxone	dionin	ketoprofen
cefuroxime	dorzolamide	lanatoside C
cephalexin	doxepin	levodopa
cephaloglycin	doxorubicin	levothyroxine
cephaloridine	doxycycline	lidocaine
cephalothin	dromostanolone	lithium carbonate
cephapirin	dyclonine	mannitol
cephradine	echothiophate	maprotiline
chloral hydrate	emetine	mecamylamine
chlorambucil	enalapril	medrysone
chloramphenicol	epinephrine	melphalan
chlorhexidine	ergonovine	mephobarbital
chlorisondamine	ergotamine	mepivacaine
chloroprocaine	erythromycin	meprednisone
chloroquine	ethopropazine	mercuric oxide
chlorpromazine	etidocaine	mesoridazine
chlorpropamide	etretinate	metharbital
chlortetracycline	F3T	methdilazine
chrysarobin	floxuridine	methitural
cisplatin	fludrocortisone	methohexital
methotrimeprazine	phenylephrine	sodium
		antimonylgluconate
methyl dopa	pilocarpine	sodium salicylate
methylergonovine	piperacetazine	stibocaptate
methylpentynol	piperazine	stibophen
methylprednisolone	piperocaine	streptomycin
methysergide	pipobroman	succinylcholine
metoclopramide	poliovirus vaccine	sulindac
metrizamide	polynoxylin B	suramin
metronidazole	potassium penicillin G	talbutal
mianserin	potassium penicillin V	testolactone
mild silver protein	potassium phenethicillin	testosterone
minocycline	practolol	tetracaine
mitomycin	prazosin	tetracycline
moxalactam	prednisolone	tetraethylammonium
nafcillin	prednisone	thiamylal
naproxen	prilocaine	thiethylperazine
neomycin	primidone	thimerosal
nitromersol	probarbital	thiopental
nortriptyline	procaine	thiopropazate
oral contraceptives	procaine penicillin G	thiopropazine
ouabain	prochlorperazine	thioridazine
oxacillin	promazine	thiotepa
oxprenolol	promethazine	thyroid
oxyphenbutazone	propiomazine	tolazamide
oxytetracycline	propoxycaine	tolbutamide
paramethasone	protriptyline	triamcinolone
pentobarbital	quinacrine	trifluoperazine
pentolinium	radioactive iodides	triflupromazine
perazine	rifampin	trimeprazine
pericyazine	rubella virus vaccine (live)	trimethaphan
perphenazine	sanguinarine	trimethidinium
phenacaine	secobarbital	urokinase
phenazine	silicone	vidarabine
phenobarbital	silver nitrate	vinbarbital
phenylbutazone	silver protein	vinblastine

-
4. Glandular fever
 5. Hypersensitivity—local topical allergies
 6. *Increased bulk of orbital contents—orbital tumors, cysts, or endocrine exophthalmos
 7. Local inflammatory conditions
 - A. *Cerebral cavity—acute meningitis
 - B. *Eye—viral conjunctivitis, corneal ulcer, fulminating iritis, or panophthalmitis
 - C. Lacrimal passages—dacryocystitis
 - D. Lids—styes, vaccinia, acute meibomitis, insect bites, or vaccinal pocks
 - E. Nasal cavity—sinusitis
 - F. *Orbit—cellulitis, periostitis, dacryoadenitis, tenonitis
 8. Myxedema—infiltration with mucopolysaccharides
 9. Reduced plasma protein level—nephrotic state
 10. Systemic lupus erythematosus

11. Vasomotor instability—angioneurotic edema or premenstrual phase of water retention
12. Venous congestion—local obstruction of orbital apex, carotid-cavernous fistula, thrombosis of cavernous sinus, or right-sided heart failure
13. Whipple disease

Disdier P, et al. Chemosis associated with Whipple's disease. *Am J Ophthalmol* 1991;112:217-219.

Conjunctival Xerosis (Dryness of Conjunctiva)

1. Absence of blinking
2. Drugs, including the following:

acebutolol (?)	ketoprofen	practolol
amiodarone	labetalol (?)	primidone
atenolol (?)	levobunolol	propoxyphene
betaxolol	methyldopa	propranolol (?)
busulfan	metoprolol (?)	quinidine
chlorambucil	nadolol (?)	sulindac
clonidine (?)	naproxen (?)	thiabendazole
cyclophosphamide	oxprenolol (?)	timolol
doxepin	perhexiline	vinblastine (?)
ibuprofen	pindolol (?)	

3. Following cicatricial conjunctivitis (see p. 194)
4. Illness or coma
5. *Lack of closure of lids in sleep
6. Result of exposure of conjunctiva to air
 - A. Deficient closure of lids, such as with paralysis of orbicularis, as part of facial palsy, spasms of the levator, or ectropion
 - B. Excessive proptosis, such as in exophthalmic goiter or orbital tumor
7. Vitamin A deficiency
 - A. Dietary deficiencies, including malnutrition, cystic fibrosis, anorexia nervosa, and bulimia
 - B. Digestive tract disorders
 1. Colitis and enteritis
 2. *In pancreas—chronic pancreatitis
 3. In stomach—achlorhydria, chronic gastritis or diarrhea, peptic ulcer
 - C. Hookworm disease
 - D. *Liver disease, such as chronic cirrhosis
 - E. Malaria
 - F. Pregnancy
 - G. Pulmonary tuberculosis
 - H. Skin disorders, such as pityriasis rubra pilaris
 - I. *Thyroid gland disorder, such as hyperthyroidism
 - J. Uyemura syndrome (fundus albipunctatus with hemeralopia and xerosis)
8. Decrease tear production
 - A. Congenital alacrima

- B. Keratoconjunctivitis sicca
 - C. Riley-Day syndrome (familial dysautonomia)
 - D. Sjögren syndrome
 - E. Surgical excision of the lacrimal and accessory lacrimal glands
 - F. X-irradiation of the lacrimal gland
9. Following x-irradiation of the conjunctiva

Bitot Spots

Bitot spots are small gray or white, sharply outlined areas, cheeselike or foamy, occurring on either side of the limbus but especially in the temporal area.

1. Associated with coloboma of lid
2. Associated with corectopia, nystagmus, and absent foveal reflexes
3. Associated with Rieger anomaly
4. Congenital anomaly
5. Corneal snowflake dystrophy
6. Exposure
7. Idiopathic
8. *Keratitis follicularis (Darier-White disease) associated with retinitis pigmentosa
9. Pellagra or other poor nutritional states
10. Vitamin A deficiency

Daicker B. Ocular involvement in keratitis follicularis associated with retinitis pigmentosa. *Ophthalmologica* 1995;209:47-51.

de Keizer RJ. Conjunctival xerosis, arcus lipoides, and Rieger's disease. *Doc Ophthalmol* 1991;78:365-371.

Subconjunctival Hemorrhage (Blood Under Conjunctiva)

1. Acute febrile systemic infections
 - A. Bacteria, such as those responsible for meningococcal septicemia, subacute bacterial endocarditis, scarlet fever, diphtheria, typhoid fever, or cholera
 - B. Parasites, such as plasmodia (malaria)
 - C. Rickettsia, such as those causing typhus fever
 - D. Unknown infective agents, such as those causing glandular fever
 - E. Viruses, such as those responsible for influenza, smallpox, measles, yellow fever, sandfly fever, or Kaposi sarcoma
2. Associated with use of drugs, including the following:

acetylcholine
acid bismuth sodium tartrate
adrenal cortex injection
aldosterone
allopurinol
alseroxylon
bismuth subsalicylate
bupivacaine
butacaine
chloroprocaine
cobalt (?)
cocaine
combination products of estrogens and progestogens etidocaine

cortisone
deserpidine
desoxycorticosterone
dexamethasone
dibucaine
dyclonine
epinephrine
ethambutol
fludrocortisone
fluorometholone
fluorouracil
fluprednisolone
glycerin
heparin
hexachlorophene
hydrocortisone
indomethacin (?)
iodide and iodine solutions and compounds (?)

isosorbide
ketoprofen

aspirin
benoxinate
betamethasone
bismuth carbonate
bismuth oxychloride
bismuth salicylate
leuprolide acetate
lincomycin
mannitol
medroxyprogesterone
medrysone
mepivacaine
meprednisone
methaqualone
methylphenidate
methylprednisolone
mithramycin
mitotane
oxyphenbutazone
paramethasone
penicillamine
phenacaine
phenytoin
phenylbutazone
piperocaine
plicamycin
pralidoxime
prednisolone
prednisone
prilocaine
procaine
proparacaine
propoxycaine
radioactive iodides (?)
rauwolfia serpentina
rescinnamine

bismuth sodium tartrate
bismuth sodium thioglycollate

bismuth sodium triglycollamate

bismuth subcarbonate
reserpine
sodium chloride
sodium salicylate
sulfacetamide
sulfachlorpyridazine
sulfacytine
sulfadiazine
sulfadimethoxine
sulfamerazine
sulfamer
sulfamethazine
sulfamethizole
sulfamethoxazole
sulfamethoxypyridazine
sulfanilamide
sulfaphenazole
sulfapyridine
sulfasalazine
sulfathiazole
sulfisoxazole
sulindac
syrosingopine
tamoxifen
tetracaine
triamcinolone
trichloroethylene
urea
urokinase (?)
vitamin A

3. Blood dyscrasias

A. Associated with thrombocytopenia

1. *Anemias, especially, aplastic anemia

2. *Drugs, including the following:

absorbed acebutolol	aminopterin	aprobarbital
acebutolol	aminosalicylic acid (?)	atenolol
acenocoumarin	amithiozone	auranofin
acenocoumarol	amitriptyline	aurothioglucose
acetaminophen	amobarbital	aurothioglucanide
acetanilid	amodiaquine	azatadine
acetazolamide	amphotericin B	azathioprine
acetoexamide	ampicillin	barbital
acetophenazine	anisindione	bacillus Calmette Guérin (BCG) vaccine
actinomycin C	antimony lithium thiomalate	
acyclovir	antimony potassium tartrate	BCNU
allobarbital	antimony sodium thioglycollate	bendroflumethiazide
allopurinol		benzathine penicillin G
alprazolam	antipyrene	benzthiazide
bishydroxycoumarin	chlorpromazine	diphenhydramine
bleomycin	chlorpropamide	diphenylhydantoin
brompheniramine	chlorprothixene	diphenylpyraline
busulfan	chlortetracycline	divalproex sodium
butabarbital	chlorthalidone	dimethyl sulfoxide (DMSO)
butalbital	cholecalciferol	doxorubicin
butallylonal	cimetidine	doxycycline
butaperazine	cisplatin	doxylamine
butethal	clemastine	dromostanolone
cactinomycin	clindamycin	droperidol
calcifediol	clofibrate	enalapril
calcitriol	clonazepam	ergocalciferol
captopril	clorazepate	erythromycin
carbamazepine	cloxacillin	ethacrynic acid
carbenicillin	colchicine	ethopropazine
carbimazole	cyclobarbital	ethosuximide
carbinoxamine	cyclopentobarbital	ethotoin
carisoprodol	cyclophosphamide	ethoxzolamide
carmustine	cycloserine	ethyl biscoumacetate
carphenazine	cyclothiazide	fenfluramine
chloroethyl-cyclohexyl-nitrosourea (CCNU)	cyproheptadine	fenoprofen
	cytarabine	flecainide
cefaclor	dacarbazine	floxuridine
cefadroxil	dactinomycin	fluorouracil
cefamandole	dapsone	fluoxymesterone
cefazolin	daunorubicin	fluphenazine
cefonicid	deferoxamine	flurazepam
cefoperazone	demeclocycline	furosemide
ceforanide	desipramine	ganciclovir
cefotaxime	dexbrompheniramine	gentamicin
cefotetan	dexchlorpheniramine	glutethimide
cefoxitin	diazepam	glyburide
cefsulodin	diazoxide	gold Au 198
ceftizoxime	dimethyl imidazole carboxamide (DIC)	gold sodium thiomalate
ceftriaxone		gold sodium thiosulfate halazepam
cefuroxime	dichlorphenamide	
cephalexin	dicloxacillin	griseofulvin
cephaloglycin	dicumarol	guanethidine
cephaloridine	diethazine	haloperidol
cephalothin	dihydrotachysterol	heparin
cephapirin	diltiazem	heptabarbital
cephradine	dimercaprol	hetacillin
chlorambucil	dimethyl sulfoxide	hexethal
chloramphenicol	diphtheria and tetanus toxoids and pertussis vaccine	hexobarbital
chlordiazepoxide		hydracarbazine
chloroquine	dimethindene	hydralazine
chlorothiazide	diphenadione	hydrochlorothiazide
chlorpheniramine	methpyrlylon	hydroflumethiazide
hydroxychloroquine	metrizamide	polio virus vaccine
hydroxyurea	metronidazole	polythiazide
hydralazine	mexiletine	potassium penicillin G
ibuprofen	mianserin	potassium penicillin V
imipramine	minocycline	potassium phenethicillin
indapamide	mitomycin	potassium phenoxymethyl
indomethacin	moxalactam	prazepam
interferon alpha, beta, or gamma	mumps virus vaccine (live)	primidone
	nadolol	probarbital
iopamidol	naftillin	procaine penicillin G
isocarboxazid	nalidixic acid	procarbazine
isoniazid	naproxen	prochlorperazine
ketoprofen	nialamide	promazine
labetalol	nifedipine	promethazine
levodopa	nitrazepam	propiomazine
lincomycin	nitrofurantoin	propylthiouracil
lithium carbonate	nitroglycerin	protriptyline
lomustine	nortriptyline	pyrimethamine
lorazepam	oral contraceptives	quinacrine
loxapine	orphenadrine	quinethazone
maprotiline	oxacillin	quinidine
measles virus vaccine	oxazepam	quinine
mechlorethamine	oxyphenbutazone	ranitidine
mefenamic acid	oxytetracycline	rifampin
melphalan	paramethadione	rubella and mumps virus vaccine (live)
mephenytoin	penicillamine	
mephobarbital	penicillin	secobarbital
meprobamate	pentobarbital	semustine
mercaptapurine	perazine	sodium antimonygluconate
mesoridazine	pericyazine	stibocaptate
metolazone	perphenazine	stibophen
methacycline		streptomycin

methaqualone
metharbital
methazolamide
methdilazine
methicillin
methimazole
methitural
methohexital
methotrexate
methotrimeprazine
methsuximide
methyclothiazide
methyl dopa
methylene blue
methylphenidate
methylthiouracil
thiotepa
thiothixene
tocainide
tolazoline
tranylcypramine
trazodone
triazolam
tolazamide
tolbutamide
trichlormethiazide
triethylenemelamine

phenacetin
phenelzine
phenformin
phenindione
pheniramine
phenobarbital
phenoxymethyl
phenoxymethylpenicillin
phenprocoumon
phensuximide
phenylbutazone
phenytoin
pindolol
piperacetazine
piperazine
pipobroman
trifluoperazine
trifluoperidol
triflupromazine
trimeprazine
trimethadione
tripelennamine
triprolidine
uracil mustard
urethan
valproate sodium
valproic acid

streptozocin
suramin
temazepam
sulfonamides
talbutal
testolactone
testosterone
tetracycline
thiabendazole
thiamylal
thiethylperazine
thioguanine
thiopental
thiopropazate
thiopropazine
thioridazine
vancomycin
verapamil
vidarabine
vinbarbital
vinblastine
vincristine
vitamin A
vitamin D
vitamin D₂
vitamin D₃
warfarin

3. Leukemia
4. Septicemias
5. Splenic disorders, such as Banti or Gaucher disease, Felty syndrome, and hemolytic icterus
6. *Systemic lupus erythematosus (Kaposi-Libman-Sacks syndrome)
- B. Ehlers-Danlos syndrome (fibrodysplasia elastica generalisata)
- C. Hemochromatosis
- D. Schomberg disease
- E. Scurvy (avitaminosis C)
- F. Secondary, such as that because of nephritic, cardiac, or hepatic disease
- G. Thrombocytopenia purpura
4. Fragility of vessel walls because of systemic vascular disease
 - A. Age
 - B. Arteriosclerosis
 - C. Diabetes
 - D. Hypertension
 - E. Nephritis
5. Gravity inversion
6. Injury to orbital or adjacent structures, such as sinus, basal skull fracture, subarachnoid hemorrhage
7. Local acute inflammation, including, acute pneumococcal conjunctivitis, leptospirosis ictero-hemorrhagica, epidemic typhus, and scrub typhus
8. Local trauma, including surgical trauma
9. Remote injury associated with fractured bones and fat emboli following angiography or open heart operation causing "splinter" subconjunctival hemorrhage
10. Spontaneous during menstruation
11. Spontaneous rupture of telangiectasis, varicosities, aneurysm, or angiomatous tumor (see p. 201)
12. *Sudden severe venous congestion of head, including that because of coughing, vomiting, epileptic fit, strangulation, or an orbital tumor (neuroblastoma)
13. Without apparent cause—most common

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

Friberg TR, Weinreb RN. Ocular manifestations of gravity inversion. *JAMA* 1985;253.

Tumors of the Conjunctiva

1. Epithelial tumors
 - A. Keratoacanthoma
 - B. Dyskeratosis
 1. Epithelial plaques—leukoplakia, hereditary benign intraepithelial dyskeratosis
 2. Intraepithelial epithelioma (Bowen disease) (61N)
 - C. Metastatic uveal melanoma
 - D. *Papilloma—including virus types 11, 16, and 18
 - E. Epithelioma
 - F. Adenoma
 1. Papillary cystadenoma lymphomatosum (Warthin tumor)
 2. Oncocytoma (oxyphil-cell adenoma)
 3. Pleomorphic adenoma of Krause glands
2. Mesoblastic tumors
 - A. Inflammatory hyperplasias
 1. Granuloma
 2. Plasmoma
 - B. Connective tissue tumors
 1. Fibroma
 2. Lipoma
 3. Myxoma
3. The reticuloses
 - A. *Lymphoma
 - B. Lymphosarcoma
 - C. *Mycosis fungoides
4. Vascular tumors—angiomas
 - A. Polymorphous hemangioma, telangiectatic granuloma, granuloma pyogenicum
 - B. Lymphangioma
 - C. Angiosarcoma monomorphous angioma, Kaposi (hemorrhagic) sarcoma
5. Pigmented tumors
 - A. *Nevus
 - B. Malignant melanoma
 - C. Intraepithelial melanoma-precancerous melanosis
6. Peripheral nerve tumors
 - A. Neurofibroma
 1. *Neurilemmoma (neurinoma, schwannoma)
 2. Malignant schwannoma (neurogenic sarcoma; neurofibrosarcoma)
 3. Plexiform neurofibromatosis
 - B. Tuberous sclerosis (Bourneville disease)
 - C. *Intrascleral nerve loops
7. Amyloidosis
8. Metastatic renal cell carcinoma
9. Trematode-induced granulomas
10. Hypertrophic discoid lupus erythematosus

Limbal Mass

1. Allergic reaction
 - A. *Phlyctenules
 - B. Vernal limbal lesions
2. Amyloid—perilimbal
3. Associated with skin disease
 - A. *Acne rosacea (ocular rosacea)
 - B. Hereditary benign intraepithelial dyskeratosis
 - C. *Hodgkin disease
 - D. Limbal squamous carcinoma in xeroderma pigmentosa
 - E. Pityriasis rubra pilaris
 - F. Psoriasis (psoriasis vulgaris)
 - G. *Reticulum cell sarcoma—raised, pink, smooth lesions
4. Benign nodular fasciitis

5. *Dermoids
6. Ectopic lacrimal gland tissue
7. Epithelial hyperplasia
8. Fibrous histiocytoma
9. Fibroxanthoma
10. Granular cell tumor
11. Granulomas
12. Hemangioma
13. Intraepithelial epitheliomas (Bowen disease)
14. Lymphomas
15. Malignant melanomas
16. Mononucleosis (infectious)
17. *Nevi
18. Papillomas
19. Pterygia
20. Sarcomas
21. Salmon patch associated with relapsing polychondritis
22. Squamous cell carcinoma
23. Subconjunctival nodules associated with Crohn disease
24. Synthetic fiber granuloma

Large, Flat, Fleshy Lesions of Palpebral Conjunctiva

1. Accidental or surgical injuries
2. Carthy disease (pyorhinoblepharostomatitis vegetans)
3. *Chalazion
4. *Embryonal rhabdomyosarcoma of children
5. *Granuloma pyogenicum
6. Ligneous conjunctivitis
7. Lymphogranuloma venereum
8. Meibomian cell carcinoma
9. Myopic infection
10. Papillary hyperplasia of vernal conjunctivitis
11. *Syphilis
12. Tuberculosis
13. Tularemia

Friedman AH, Henkind P. Granuloma pyogenicum of the palpebral conjunctiva. *Am J Ophthalmol* 1971;71:868-872.

Pau H. *Differential diagnosis of eye diseases*, 2nd ed. New York: Thieme Medical, 1988.

Chronic or Recurrent Ulcers of the Conjunctiva

1. Behçet disease
2. Crohn disease
3. Drugs, including the following:

allopurinol	ferrous succinate	iron sorbitex
amphotericin B	ferrous sulfate	phenytoin
aspirin	floxuridine	polysaccharide-iron complex
ferrocholinate	fluorouracil	sodium salicylate
ferrous fumarate	gentamicin	
ferrous gluconate	iron dextran	

4. Fungi
5. *Herpes simplex
6. Mucous membrane pemphigoid
7. Pseudomonas ulcer in patients with AIDS
8. Soft chancre
9. *Syphilis (acquired lues)
10. Tuberculosis
11. Wegener granulomatosis

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

Fraunfelder FT, Roy FH. *Current ocular therapy*, 5th ed. Philadelphia: WB Saunders, 2000.

Hegab SM, et al. Conjunctival ulcer in patients with Crohn's disease. *Ophthalmic Surg Lasers* 1994;25:638-639.

Jordan DR, et al. Wegener's granulomatosis: eyelid and conjunctival manifestations as the presenting feature in two individuals. *Ophthalmology* 1994;101:602-607.

Phlyctenular Keratoconjunctivitis

This condition involves a localized conjunctival, limbal, or corneal nodule measuring about 1 to 3 mm.

1. *Delayed hypersensitivity to bacterial protein, particularly tuberculo-protein and staphylococci; lymphopathia venereum and coccidioidomycosis may also be allergens
2. Malnutrition
3. Secondary infection of the conjunctiva, especially from *S. aureus*, pneumococcus, and Koch-Weeks bacillus
4. Systemic infection
 - A. Bang disease (brucellosis)
 - B. Candidiasis
 - C. Neurodermatitis
 - D. Mikulicz-Radecki syndrome (dacryosialoadenopathy)
 - E. Trachoma
 - F. Sjögren syndrome (secretoinhibitor syndrome)

Davis PL, Watson JI. Experimental conjunctival phlyctenulosis. *Can J Ophthalmol* 1969;4:183-190.

Newell FW. *Ophthalmology: principles and concepts*, 7th ed. St. Louis: CV Mosby, 1991.

Pigmentation of the Conjunctiva (See Pigment Spots of Sclera and Episclera, p. 237)

1. Blood pigment
 - A. *After subconjunctival hemorrhage—red or later fine brown spots (see p. 206)
 - B. Yellow tinge of malaria, blackwater fever, or yellow fever
 - C. Pigmentary limbal ring associated with senile, traumatic, or diseased conditions
2. Bile pigments (yellow)—obstructive or hemorrhagic jaundice
3. Melanin pigmentation
 - A. Acanthosis nigricans
 - B. *Addison disease (adrenal cortical insufficiency)
 - C. Alcaptonuric ochronosis
 - D. Chlorpromazine (Thorazine)
 - E. Endogenous ochronosis
 - F. Keratomalacia
 - G. Trachoma
 - H. *Use of epinephrine or epinephrine bitartrate, borate, and hydrochloride
 - I. Vernal conjunctivitis
 - J. Vitiligo (leukoderma)—increased conjunctival pigmentation
 - K. Xeroderma pigmentosum
4. Drugs, including the following:

acid bismuth sodium tartrate	captopril	iron dextran
Alcian blue	chloroquine	iron sorbitol
amiodarone	chlortetracycline	ketoprofen
amodiaquine	chrysarobin	methacycline
amphotericin B	clofazimine	minocycline
antimony lithium thiomalate	colloidal silver demeclocycline	minoxidil
antimony potassium tartrate		methylene blue
antimony sodium tartrate	diethazine	oxytetracycline
antimony sodium thioglycollate	doxycycline	penicillamine
	enalapril	rifabutin
antipyrine	ethopropazine	rifampin silver nitrate silver protein
bismuth carbonate(?)	ferrocholinate	
bismuth oxychloride(?)	ferrous fumarate	trypan blue
bismuth salicylate(?)	ferrous gluconate	polysaccharide iron complex
bismuth sodium tartrate	ferrous succinate	quinacrine
bismuth sodium thioglycollate (?)	ferrous sulfate	rose bengal
	fluorescein	sodium antimonylgluconate
bismuth sodium triglycollamate(?)	gold AU 198	stibocaptate
	gold sodium thiomalate	stibophen
bismuth subcarbonate	gold sodium thiosulfate	tetracycline
bismuth subsalicylate	hydroxychloroquine	vitamin A

5. Foreign substances such as silver (argyrosis), iron (siderosis), copper (chalcosis), arsenic (arsenic melanosis), gold (chrysiasis), aluminum, quinones, aniline dyes, and eye cosmetics containing carbon black
6. *Benign melanosis—overactivity of melanocytes
 - A. Epithelial—congenital or acquired, for example, following radiation or use of

chemicals (arsenic); in Addison disease; because of chronic conjunctivitis (trachoma, vernal conjunctivitis, onchocerciasis, keratomalacia)

- B. Subepithelial—congenital or in association with melanosis oculi or nevus of Ota
7. Neoplasms
 - A. *Nevus—most common in children, localized stationary, elevated, cystic, may or may not have pigmentation
 - B. *Malignant melanoma arising from preexisting nevus, apparently normal conjunctiva, or from an area of acquired pigmentation (intraepithelial melanoma); occurs primarily in middle age; diffuse, flat, pigmentation; progressive; no cysts
 - C. Secondary melanotic tumors
 - D. Incidentally pigmented tumors, such as a melanocarcinoma
 - E. Secondary metastatic tumors from lung or breast
 8. Ocular causes, including the following:
 - A. Apocrine adenocarcinomas
 - B. Foreign bodies
 - C. Hematic cysts
 - D. Moll gland cystadenomas
 - E. Staphylomas
 - F. Subconjunctival hematomas

Cheskes J, et al. Ocular manifestations of alkaptonuric ochronosis. *Arch Ophthalmol* 2000;118:724-727.

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

Seregard S. Conjunctival melanoma. *Surv Ophthalmol* 1998;42:321-350.

Discoloration of Conjunctiva

1. Red
 - A. Subconjunctival hemorrhage
2. Yellow
 - A. Bilirubinemia—obstructive or hemorrhagic jaundice
 - B. Picric acid
 - C. Leptospirosis
 - D. Brucellosis (Barg disease or Mediterranean fever)
 - E. Aromatic nitro and amino compounds
 - F. Conjunctival fat—occurs primarily in older and black patients
 - G. Blood pigment tinge of malaria, blackwater fever, and yellow fever
3. Gray (black)
 - A. *Argyrosis (silver)
 - B. Drugs, including the following:
 - acetyomilid
 - phenols, specifically phenylic acid and carbon disulfide
 - atabrine
 - nitrochlorobenzene
 - C. Chrysiasis (gold)—grayish green effect
 - D. Arsenicals—ash white
 - E. Mascara
4. Brown
 - A. Subconjunctival hemorrhage—fine brown spots

- B. Pigmentary limbal ring associated with senile, traumatic, or diseased conditions
- C. *Benign melanosis—overactivity of melanocytes
 1. Epithelial—congenital or acquired, following radiation or use of chemicals (arsenic); in Addison disease (adrenal cortical insufficiency); because of chronic conjunctivitis (trachoma, vernal conjunctivitis, onchocerciasis, keratomalacia)
 2. Subepithelial—congenital or in association with melanosis oculi or nevus of Ota
- D. Neoplasms
 1. *Nevus—most common in children, localized, stationary, elevated, cystic, may or may not have pigmentation
 2. *Malignant melanoma arising from preexisting nevus, apparently normal conjunctiva, or from an area of acquired pigmentation (intraepithelial melanoma); occurs primarily in middle age; diffuse, flat, pigmentation; progressive; no cysts
- E. Drugs, including the following:

anilquinoline combinations (benzoquinone, paraquinone, hydroquinone)	aniline dyes	phenothiazine
	bromides	sympathomimetics (adrenalin, Eppy)
	chromic acid and chromates	
	phenol derivatives	

- F. Metabolic or vitamin disturbance, including alkaptonuria
- 5. Blue pigmentation
 - A. Ink tattoo from pens
 - B. Manganese dust

Crawford JB, et al. Combined nevi of the conjunctiva. *Arch Ophthalmol* 1999;117:1121-1127.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Symblepharon

Symblepharon involves fusing of the eyelid to an opposing surface, such as the tarsal and bulbar conjunctiva.

1. Physical trauma with denuded epithelium, including purulent, membranous, bullous, or ulcerative conjunctivitis and trauma
2. *Chemical burns—especially lime or caustic burns
3. *Inflammation—especially from drug reactions, including:

allobarbitol	carbachol (?)	gold sodium thiomalate
amobarbitol	clonidine (?)	gold sodium thiosulfate
aprobarbitol	colloidal silver	heptabarbitol
auranofin	cyclobarbitol	hexethal
aurothioglucose	demecarium	hexobarbitol
aurothioglycanide	diethylpropanediol (DEP)	idoxuridine
barbitol	dipiperidinoethane (DPE)	idoxuridine (IDU)
benzalkonium	dipivefrin	isoflurophate
butabarbitol	echothiophate	mephobarbitol
butalbital	epinephrine	metharbitol
butallylonal	F3T	methitural
butethal	gold Au 198	methohexital
mild silver protein	sulfacetamide	sulfapyridine
mitomycin	sulfachlorpyridazine	sulfasalazine
oxyphenbutazone	sulfacytine	sulfathiazole
penicillamine	sulfadiazine	sulfisoxazole
pentobarbitol	sulfadimethoxine	talbutal (?)
phenobarbitol	sulfamerazine	thiamylal
phenylbutazone	sulfameter	thiopental (?)
pilocarpine	sulfamethazine	timolol
primidone	sulfamethizole	trifluridine
probarbitol	sulfamethoxazole	vidarabine
secobarbitol	sulfamethoxypridazine	vinbarbitol (?)
silver nitrate	sulfanilamide	
silver protein	sulfaphenazole	

4. Long-standing acute inflammation
 - A. Pemphigus (Cazenave disease)
 - B. Stevens-Johnson disease (dermatostomatitis)
5. Congenital
6. Associated with cyanoacrylate tissue adhesive
7. Epidemic keratoconjunctivitis

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

Meyer SJ, et al. Conjunctival involvement in paraneoplastic pemphigus. *Am J Ophthalmol* 1992;114:621-624.

Conjunctival Concretions

Conjunctival concretions are small yellow spots that are most common in tarsal conjunctiva.

1. Chronic inflammatory conditions, including atopic keratoconjunctivitis, vernal conjunctivitis, and posttrachomatous degenerations
2. Elderly
3. Calcium deposits in patients with chronic renal failure treated with maintenance hemodialysis

Chin GN, et al. Ultrastructural and histochemical studies of conjunctival concretions. *Arch Ophthalmol* 1980;98:720.

Pahor D, et al. Conjunctival and corneal changes in chronic renal failure patients treated with maintenance hemodialysis. *Ophthalmologica* 1995;209:14-16.

Lesions of Caruncle

1. Apocrine hydrocystoma
2. Basal cell carcinoma
3. Capillary hemangioma
4. Chronic inflammation
5. Dermoid
6. Ectopic lacrimal gland
7. Epithelial inclusion cyst
8. Foreign-body granuloma
9. Granular cell myeloblastoma
10. Histiocytic lymphoma

11. Lipogranuloma
12. Lymphangiectasis
13. Malignant melanoma
14. Nevus
15. Normal caruncle
16. *Oncocytoma
17. Papilloma
18. Pilar cyst
19. Plasmacytoma
20. Pyogenic granuloma
21. Reactive lymphoid hyperplasia
22. Sebaceous gland hyperplasia
23. *Sebaceous gland adenoma
24. Seborrheic keratosis
25. Squamous cell carcinoma

Rennie IG. Oncocytomas of the lacrimal caruncle. *Br J Ophthalmol* 1980;64:935.

Globe

Microphthalmia (Small Globe)

1. Microphthalmia associated with the following:
 - A. Cataract—dominant inheritance
 - B. Coloboma—dominant and sex-linked inheritance
 - C. Congenital spastic diplegia—x-linked
 - D. Ectopic pupils—dominant inheritance
 - E. Glaucoma—recessive inheritance
 - F. Harelip and cleft palate—autosomal recessive
 - G. High hypermetropia—recessive inheritance
 - H. Malformation of hands and feet—autosomal recessive
 - I. Polydactyly—autosomal recessive
 - J. Retinitis pigmentosa and glaucoma—dominant inheritance
2. Colobomatous microphthalmia
 - A. X-linked
 1. Aicardi syndrome
 2. Bloch-Sulzberger syndrome (incontinentia pigmenti)
 3. Goltz syndrome (focal dermal hypoplasia)
 4. Lenz microphthalmia syndrome
 - B. Autosomal recessive
 1. Cohen syndrome
 2. Ellis-van Creveld syndrome
 3. Hepatic fibrosis, polycystic kidneys, colobomas, and encephalopathy
 4. Humeroradial synostosis
 5. Kartagener syndrome

6. Laurence-Moon-Biedl syndrome
7. Marinesco-Sjögren syndrome
8. Meckel syndrome
9. Micro syndrome
10. Sjögren-Larsson syndrome
11. Warburg syndrome
 - i. Autosomal dominant
 1. Basal cell nevus syndrome
 2. Congenital contractural arachnodactyly
 3. Crouzon syndrome
 4. Stickler syndrome
 5. Treacher Collins syndrome
 6. Tuberous sclerosis
 7. Zellweger syndrome
 - ii. Chromosomal abnormalities
 1. Deletions 4p, 4r, 11q, 13q, 18q, 18r, XO
 2. Duplications 3q, 4p, 4q, 7q, 9p, 9q, 13q, 22q
 3. Ring B syndrome
 4. Triploidy
 5. Trisomy 8, 9, 13, 17, 18, XXX, XYY
 - iii. Unknown cause
 1. Amniogenic band syndrome (Streeter dysplasia)
 2. Cat's-eye syndrome (Schmid-Fraccaro syndrome)
 3. CHARGE (colomba, heart disease, atresia choanae, retarded growth and retarded growth development or central nervous system anomalies, genital hypoplasia, and ear anomalies, or deafness) syndrome
 4. Dyscraniopygophalangea (Ullrich syndrome)
 5. Facial-clefting syndromes
 6. Frontonasal dysplasia (median cleft face syndrome)
 7. Goldenhar syndrome (oculoauriculovertebral syndrome)
 8. Hemifacial microsomia syndrome
 9. Linear sebaceous nevus syndrome
 10. Rubinstein-Taybi syndrome
12. Noncolobomatous microphthalmia
 - A. X-linked
 1. Anderson-Warburg syndrome
 2. Forsius-Eriksson syndrome (Aland disease)
 3. Lowe syndrome (oculocerebrorenal syndrome)
 - B. Autosomal recessive
 1. Cerebrooculofacioskeletal syndrome
 2. Conradi syndrome
 3. Cross syndrome
 4. Diamond-Blackfan syndrome
 5. Fanconi
 6. Obesity-cerebral-ocular-skeletal anomalies syndrome
 - C. Autosomal dominant
 1. Blatt syndrome
 2. Gansslen syndrome
 3. Hypomelanosis of Ito syndrome

4. Leri syndrome
5. Myotonic dystrophy
6. Rieger syndrome
- D. Chromosomal abnormalities
 1. Duplication 10q
 2. Trisomy 21Q syndrome
 3. Chromosome deletion Xp22.1
- E. Unknown cause
 1. Arachnoidal cyst
 2. Gorlin-Chaudhry-Moss syndrome
 3. Hallerman-Streiff syndrome
 4. Hutchinson-Gilford syndrome (progeria)
 5. Krause syndrome (encephalophthalmic)
 6. Meyer-Schwickerath and Weyers syndrome
 7. Pierre Robin syndrome
 8. Retinal disinsertion syndrome
 9. Sabin-Feldman syndrome
 10. Weyers syndrome
- F. Infectious etiology
 1. Congenital rubella (Gregg syndrome)
 2. Congenital spherocytic anemia
 3. Congenital toxoplasmosis
 4. Cytomegalovirus
 5. Epstein-Barr syndrome
 6. Herpes virus
 7. Mumps
 8. Varicella
- G. Intoxicants
 1. Fetal alcohol effects
 2. Maternal phenylketonuria fetal effects
13. Idiopathic
14. Nanophthalmos

Eng A, et al. Linear facial skin defects associated with microphthalmia and other malformations, with chromosome deletion Xp22.1. *J Am Acad Dermatol* 1994;31:680-682.

McKusick VA. *Mendelian inheritance in man*, 12th ed. Baltimore: Johns Hopkins University Press, 1998.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Buphthalmos (Large Globe)

Buphthalmos usually is associated with corneal abnormalities such as opacities and rupture of Descemet membrane; the transition from cornea to sclera is unclear, and a thin, bluish sclera may be present.

1. Associated with anterior chamber cleavage syndrome (Reese-Ellsworth syndrome)
2. Autosomal recessive inheritance
3. Cerebrohepatorenal syndrome (Smith-Lemli-Opitz syndrome)
4. Chondrodystrophia calcificans congenita (Conradi syndrome)
5. Congenital glaucoma
6. Congenital rubella syndrome (Gregg syndrome)

7. Cryptophthalmia syndrome (cryptophthalmos-syndactyly)
8. Hurler syndrome
9. Krabbe syndrome
10. Lowe syndrome (oculocerebrorenal syndrome)
11. Milroy disease (chronic hereditary edema; Noone-Milroy-Meige disease)
12. Neurofibromatosis (von Recklinghausen disease)
13. Oculodentodigital dysplasia
14. Rieger syndrome (hypodontia and iris dysgenesis)
15. Sporadic occurrence
16. Sturge-Weber syndrome (encephalotrigeminal syndrome)

McKusick VA. *Mendelian inheritance in man*, 12th ed. Baltimore: Johns Hopkins University Press, 1998.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Pseudoendophthalmitis (Conditions that Simulate Endophthalmitis)

1. *Chemical reactions from irritating chemicals (irrigating solutions or medications) introduced into the anterior chamber
2. Foreign material in the anterior chamber
3. Metastatic carcinoma
4. Retained lenticular material
5. Severe postoperative iridocyclitis
6. Toxic anterior segment syndrome (TASS)

Levine RA, Williamson DE. Metastatic carcinoma simulating a post-operative endophthalmitis. *Arch Ophthalmol* 1970;83:59-60.

Mamalis N. Inflammation. In: Charlton JF, Weinstein GW. *Ophthalmic surgery complications: prevention and management*. Philadelphia: JB Lippincott, 1995:313-338.

Monson MC, et al. Toxic anterior segment inflammation following cataract surgery. *J Cataract Ref Surg* 1992;18:184-189.

Endophthalmitis (Intraocular Infection)

1. Bacterial agents
 - A. Gram positive
 1. *Bacillus subtilis*, *megaterium*, *anthracis*, *cereus*
 2. *Clostridium perfringens* (*B. welchii*)
 3. *Clostridium tetani*
 4. *Coryneform bacterium*
 5. *Diplococcus pneumoniae* (*Pneumococcus*)
 6. Diphtheroids
 7. *Listeria monocytogenes*
 8. **Propionibacterium acnes*
 9. **Staphylococcus aureus*, *albus*, and *epidermidis*
 10. *Streptococcus viridans*, *S. hemolytic*, *S. pneumoniae*, and *Pyogenes salivarius*
 - B. Gram negative
 1. *Aerobacter aerogenes*
 2. *Enterobacter cloacae*
 3. *Escherichia coli*

4. *Fusobacterium* organisms
 5. *Klebsiella pneumoniae* (Friedlander bacillus)
 6. Meningococci
 7. *Morganella* species
 8. *Mycobacterium* organisms
 9. *Neisserias catarrhalis*
 10. *Ochrobactrum anthropi*
 11. *Pasteurella multocida* and *tularensis*
 12. *Proteus vulgaris* (*B. proteus*) and *mirabilis*
 13. **Pseudomonas aeruginosa* (*B. pyocyaneus*)
 14. *Serratia marcescens*
 15. *Yersinia enterocolitica* or *Y. pseudotuberculosis*
2. Fungal agents
 - A. Acanthamoeba
 - B. *Actinomyces* species, including *Nocardiosis*
 - C. *Aspergillus* species
 - D. *Blastomyces dermatitidis*
 - E. *Candida* species
 - F. *Cephalosporium* species, hyphas
 - G. *Coccidioides immitis*
 - H. *Cryptococcus neoformans*
 - I. Hormodendrum
 - J. *Hyalopus bogolepofi*
 - K. Hyalosporus
 - L. *Mucormycosis* species
 - M. *Neurospora sitophila*
 - N. *Sporothrix schenkii*
 - O. *Sporotrichum schenkii*
 - P. *Volutella* species
 3. Viral agents
 - A. Behçet syndrome (dermatostomatoophthalmic syndrome)
 - B. Cytomegalovirus
 - C. Myxovirus (influenza)
 - D. *Nocardia asteroides*
 - E. Vaccinia
 - F. Variola
 4. Nematode agents
 - A. *Taenia solium*
 - B. *Toxocara canis* and *T. cati*
 5. Other agents
 - A. Mycosis fungoides
 - B. *Exophiala jeanselmei* (yeast)

Intraocular Cartilage

1. Angiomatosis of the retina
2. Chromosome deletion
3. Chronic inflammation
4. Facial nevus of Jadassohn (linear sebaceous nevus syndrome)
5. Incidental findings in microphthalmic eye, microphthalmos with cyst, microphthalmic eye from a cyclopic orbit, in eyes with coloboma of the choroid and retina or ciliary body
6. Incontinentia pigmenti (Bloch-Sulzberger disease)
7. Persistent hyperplastic primary vitreous
8. Retinal dysplasia
9. Teratoid medulloepithelioma (dictyomas)
10. Trisomy (13-Patau syndrome) (globe less than 10 mm in diameter)

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Wilkes SR, et al. Ocular malformation in association with ipsilateral facial nevus of Jadassohn. *Am J Ophthalmol* 1981;92:344-352.

Intraocular Calcifications

1. Choroidal osteoma
2. Facial nevus of Jadassohn (linear sebaceous nevus syndrome)
3. Intraocular calcifications
 - A. Congenital deformity
 - B. Gitelman syndrome
 - C. Recurrent iritis and keratitis
 - D. Retinal detachment
 - E. Trauma (perforating, nonperforating, or surgical)
4. Intraocular sarcoma
5. *Retinoblastoma
6. Retinopathy of prematurity (end stage)
7. Sites of intraocular calcification
 - A. Calcific emboli of retinal and ciliary arteries
 - B. Cyclitic membrane
 - C. Lens
 - D. Peripapillary choroid
 - E. Posterior pole to ora serrata in region of choroid and pigment epithelium
 - F. Retina
 - G. Vitreous

Bourcier T, et al. Sclerochoroidal calcification associated with Gitelman syndrome. *Am J Ophthalmol* 1999;128:767-768.

Wolter JR. The message of a bony lens. *Ophthalmic Surg Lasers* 1981;12:332.

Intraocular Adipose Tissue

1. Congenital malformations
 - A. Dermoid or dermolipoma extending from the cornea or limbus into the globe
 - B. Malformed optic nerve
 - C. Persistent hyperplastic vitreous (PHPV) and other related ocular malformations, such as microphthalmia, persistent hyaloid vessels, cataract, and abnormal differentiation of the angle of the anterior chamber
2. Embolic phenomenon secondary to crush wounds of the thorax and abdomen or fracture of long bones of the extremities
3. Formation of fatty tissue within the marrow spaces of metaplastic bone
4. Missile passing through orbit carrying orbital fat into the eye

Font RL, et al. Intraocular adipose tissue and persistent hyperplastic primary vitreous. *Arch Ophthalmol* 1969;82:43-59.

Willis R, et al. Heterotropic adipose tissue and smooth muscle in the optic disc: association with isolated colobomas. *Arch Ophthalmol* 1972;86:139-146.

Soft Globe (Decreased Intraocular Pressure)

1. *Fistula from intraocular source, including penetrating intraocular trauma or surgery and ruptured wall of the globe
2. *Laser or cryotherapy ciliodestructive procedure
3. *Phthisis bulbi*
4. Choroidal detachment
5. Injury to the cervical sympathetic nerve
6. Serous detachment of the retina
7. Myotonic dystrophy (Curschmann-Steinert syndrome)
8. Systemic disturbances
 - A. Cardiac edema
 - B. Diabetic coma
 - C. Extreme or rapid dehydration because of malnutrition, cholera, or diarrhea
 - D. Decrease in ocular blood pressure due to hypotension, ligation of the carotid artery, carotid occlusion, or pulseless disease (Takayasu syndrome)
 - E. Giant cell arteritis (temporal arteritis syndrome)
 - F. Leprosy (Hansen disease)
 - G. Parkinson disease (shaking palsy)
 - H. Postencephalitic syndrome following severe cerebral trauma, barbiturate poisoning, in deep anesthesia, following leukotomy, or on the paralyzed side in cases of cerebral hemiplegia
 - I. Severe abdominal disturbances, such as intestinal perforation or obstruction
 - J. Profound anemias
 - K. Uremic coma

9. Drugs, including the following:

acebutolol	desoxycorticosterone	levobunolol
aceclidine	dexamethasone	lidocaine
acetazolamide	diacetylmorphine	mannitol
acetylcholine	diazepam	mannitol hexanitrate
acetyldigoxin	dichlorphenamide	marijuana
adrenal cortex injection	digitoxin	mecamylamine
aldosterone	digoxin	medrysone
albuterol	dimethyl tubocurarine iodide	meperidine
alcohol	diphenylhydantoin	mephenesin
allobarbitol	dipivefrin	mephobarbital
alseroxylon	dipiperidinoethane (DPE)	mepivacaine
amobarbital	dronabinol	meprednisone
amyl nitrite	droperidol	meprobamate(?)
antazoline	echothiophate	methacholine
aprobarbital	ephedrine	metharbital
acebutolol	epinephrine	methazolamide
aspirin	ergotamine	methitural
atenolol	ergonovine	methohexital
barbital	erythryl tetranitrate	methoxyflurane
beclomethasone	ether	methylclothiazide
bendroflumethiazide	ethoxzolamide	methyl dopa
benzthiazide	etidocaine	methylergonovine
betamethasone	fludrocortisone	methylprednisolone
betaxolol	fluorometholone	methysergide
bupivacaine	fluprednisolone	metipranolol
butabarbitol	flurazepam	metocurine iodide
butalbital	furosemide	metolazone
butallylonal	gitalin	metoprolol
butethal	glycerin	morphine
carbachol	guanethidine	nadolol
carisoprodol (?)	haloperidol	naphazoline
chlordiazepoxide	hashish	neostigmine
chlorisondamine	heparin	nitroglycerin
chloroform	heptabarbitol	nitrous oxide
chlorothiazide	hexamethonium	norepinephrine
chlorthalidone	hexethal	opium
cidofovir	hexobarbital	oral contraceptives
clofibrate (?)	hydrochlorothiazide	ouabain
clonidine	hydrocortisone	oxprenolol
cortisone	hydroflumethiazide	oxygen
cyclobarbitol	indapamide	paramethasone
cyclopentobarbital	insulin	phenylephrine
cyclothiazide	isofluorophate	pindolol
demecarium	isosorbide	prednisone
diethylpropanediol (DEP)	isosorbide dinitrate	procaine
deserpidine	labetalol	pyrilamine tripeleennamine
deslanoside	lanatoside C	pargyline
pentaerythritol tetranitrate	quinethazone	thiopental
pentobarbital	rauwolfia serpentina	timolol
pentolinium	rescinnamine	tolazoline
phenobarbital	reserpine	trichloroethylene
phenoxybenzamine(?)	secobarbital	trichlormethiazide
physostigmine	sodium salicylate	trifluperidol
pilocarpine	spironolactone	trimethaphan
polythiazide	succinylcholine	trimethidinium
practolol	syrosingopine	trolnitrate
prednisolone	talbutal	tubocurarine
primidone	tetraethylammonium	urea
probarbital	tetrahydrocannabinol	urokinase
propranolol	tetrahydrozoline	vinbarbital
protriptyline	thiamylal	vitamin A

10. Detachment of the ciliary body, planned or inadvertent
11. Hyperosmotic agents, such as mannitol or urea
12. Iritis or iridocyclitis
13. After central retinal vein occlusion
14. Myopia—low scleral rigidity may give false low readings with Schiötz tonometer, but normal readings with applanation intraocular pressure
15. Herpes zoster
16. Following irradiation by roentgenograms or beta rays
17. Congenital lesions, including microphthalmos, aniridia, and coloboma
18. Concussion trauma
19. Necrosis of anterior segment of the eye
20. Idiopathic, including normal variation

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

Maus M, Katz JL. Choroidal detachment flat anterior chamber and hypotony as complications of YAG laser cyclocoagulation. *Ophthalmology* 1990;97:69-71.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Phthisis Bulbi (Degenerative Shrinkage of Eyeball with Hypotony)

1. Ciliodestructive procedures such as cyclocryotherapy or laser
2. Endophthalmitis
3. Following cataract surgery, especially with rubella syndrome (German measles)
4. Panophthalmitis
5. Severe ocular injury with loss of tissue
6. Severe uveitis
7. Sympathetic ophthalmia
8. Tumor, such as retinoblastoma or malignant melanoma

Cyclin MN, et al. Ciliodestructive procedures in glaucoma: clinical signs. *Ophthalmology* 1991;12:1-15.

Newell FW. *Ophthalmology, principles and concepts*, 7th ed. St. Louis: CV Mosby, 1991.

Clinical Anophthalmos (Apparent Absence of Globe)

1. Anencephaly

2. Gross midline facial defects (median cleft face syndrome)
3. Dyscraniopygophalangea
4. Goldenhar syndrome (oculoauriculovertebral syndrome)
5. Goltz syndrome (focal dermal hypoplasia syndrome)
6. Hallermann-Streiff syndrome (dyscephalic mandibulo-oculofacial syndrome)
7. Hypervitaminosis A
8. Idiopathic
9. Klinefelter syndrome (gynecomastia-aspermatogenesis)
10. Lanzieri syndrome (craniofacial malformations)
11. Leri syndrome (carpal tunnel syndrome)
12. Meckel syndrome (dysencephalia splanchnocystica syndrome)
13. Oculovertbral dysplasia (Weyers-Thier syndrome)
14. Otocephaly
15. Trisomy 13-15
16. Sex-linked or recessive hereditary
17. Waardenburg anophthalmia syndrome (anophthalmos with limb anomalies)—recessive

Graham CA, et al. X-linked clinical anophthalmos: localization of the gene to Xq27-Xq28. *Ophthalm Paediatrics Genetics* 1991;12:43-48.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Oculodigital Stimulation

The patient presses on the globe through the lids with the index finger or hand; the patient has poor visual acuity.

1. Bilateral congenital cataracts
2. Combined retinal detachment and congenital cataract
3. Congenital glaucoma
4. Congenital rubella syndrome (German measles)
5. Leber amaurosis congenita or other congenital retinal degeneration (Leber tapetoretinal dystrophy syndrome)
6. Norrie disease (fetal iritis syndrome)
7. Total corneal leukoma

Franklin AH. Norrie's disease. *Am J Ophthalmol* 1971;72:947-948.

Roy FH. Ocular autostimulation. *Am J Ophthalmol* 1967;63:1776-1777.

Anterior Segment Ischemia

This condition involves hypoxia with involvement of the cornea, iris, anterior chamber, lens, and ciliary body.

1. Damage to normal intact anterior vessels
 - A. Pressure
 1. Scleral buckle
 2. Suture (Jensen procedure)
 - B. Thermal
 1. Cryotherapy
 2. Diathermy
2. Disinsertion of normal vessels (Hummelsheim or Knapp procedure)
3. Fuchs syndrome (I) (heterochromic cyclitis syndrome)
4. Hematologic abnormality

- A. Extreme leukocytosis
- B. Extreme thrombocytosis
- C. Hyperglobulinemia
- D. Red blood cell dysfunction including sickle cell trait
 - 1. Hemoglobinopathy
 - 2. Polycythemia vera (Vaquez-Osler syndrome)
- 5. Vessel wall abnormality (arteriosclerosis)
 - A. Arteriosclerosis
 - B. Giant cell arteritis

Birt CM, et al. Anterior segment ischemia in giant cell arteritis. *Can J Ophthalmol* 1994;29:93-94.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Saunders RA, et al. Anterior segment ischemia after strabismus surgery. *Surv Ophthalmol Lasers* 1995;38:456-466.

7

Sclera

Blue Sclera

Blue sclera is characterized by localized or generalized blue coloration of sclera because of thinness and loss of water content, which allow underlying dark choroid to be seen.

1. Associated with high urine excretion
 - A. Folling syndrome (phenylketonuria)
 - B. Hypophosphatasia (phosphoethanolaminuria)
 - C. Lowe syndrome (oculocerebrorenal syndrome; chondroitin-4-sulfate-uria)
2. Associated with skeletal disorders
 - A. Brachmann-de Lange syndrome
 - B. Brittle cornea syndrome (blue sclera syndrome)—recessive
 - C. Crouzon disease (craniofacial dysostosis)
 - D. Hallermann-Streiff syndrome (dyscephalia mandibulooculofacial syndrome)
 - E. *Marfan syndrome (dystrophia mesodermalis congenita)
 - F. Marshall-Smith syndrome
 - G. McCune-Albright syndrome (fibrosus dysplasia)
 - H. Mucopolysaccharidosis VI (Maroteaux-Lamy syndrome)
 - I. Osteogenesis imperfecta (van der Hoeve syndrome)
 - J. Paget syndrome (osteitis deformans)
 - K. Pierre Robin syndrome (micrognathia-glossoptosis syndrome)
 - L. Robert syndrome
 - M. Silver-Russell syndrome
 - N. Werner syndrome (progeria of adults)
3. Chromosome disorders
 - A. Trisomy syndrome
 - B. Turner syndrome
4. Ocular
 - A. *Congenital glaucoma
 - B. Myopia

-
- C. *Repeated surgeries
 - D. Scleromalacia (perforans)
 - E. Staphyloma
 - F. Trauma
5. Miscellaneous
- A. Ehlers-Danlos syndrome (fibrodysplasia elastica generalisata)
 - B. Goltz syndrome (focal dermal hypoplasia syndrome)
 - C. Incontinentia pigmenti (Bloch-Sulzberger syndrome)
 - D. Lax ligament syndrome
 - E. Minocycline-induced
 - F. Oculodermal melanocytosis (nevus of Ota)
 - G. Pseudoxanthoma elasticum (Grönblad-Strandberg syndrome)
 - H. Relapsing polychondritis

Cameron JA, et al. Epikeratoplasty for keratoglobus associated with blue sclera. *Ophthalmology* 1991;98:446-452.

Fraunfelder FT, Randall JA. Minocycline-induced sclera pigmentation. *Ophthalmology* 1997;104:936-938.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Diagnostic table

	McCune-Albright syndrome	Brittle cornea syndrome	Cusson's syndrome	Brachmann de Lange syndrome	Ehlers-Danlos syndrome	Hallerman-Straiff-François syndrome	Hypophosphatasia	Marfan syndrome	Osteogenesis imperfecta	Turner's syndrome	Werner's syndrome

R = rarely; S = sometimes; and U = usually.

Blue sclera

Dilated Episcleral Vessels

1. Carotid-cavernous fistula
2. Cavernous sinus thrombosis (Foix syndrome)
3. *Chronic respiratory diseases
4. *Glaucoma, untreated
5. Increased viscosity of circulating blood
 - A. Leukemia (early)
 - B. Polycythemia vera (erythema, Vaquez-Osler syndrome)
6. Occlusion of orbital veins of the apex of the orbit
 - A. Endocrine exophthalmos of rapid development
 - B. Inflammatory lesions
 - C. Orbital thrombophlebitis
 - D. Tumor (rare)
7. Ophthalmic vein thrombosis
8. Tricuspid Incompetence
9. Uveal neoplasm with localized engorgement

Boniuk M. The ocular manifestations of ophthalmic vein and aseptic cavernous sinus thrombosis. *Trans Am Acad Ophthalmol Otolaryngol* 1972;76:1519-1534.

Minas TF, Podos SM. Familial glaucoma associated with elevated episcleral venous pressure. *Arch Ophthalmol* 1968;80:202-213.

Episcleritis

Episcleritis is a benign, self-limited, nodular or diffuse disease that usually resolves spontaneously within weeks but has a tendency to recur. Inflammation of episcleral tissues causes discomfort rather than pain; it does not affect visual acuity. Even recurrent attacks do not produce scleritis. Complications are minimal and include areas of scleral transparency and localized keratitis)

1. *Idiopathic (single, short episode that does not recur)
2. Associated with the following diseases (recurrent attacks)
 - A. Addison syndrome (adrenal cortical insufficiency)
 - B. Arthritides
 1. Involving small and medium-sized vessels
 - a. Necrotizing granulomatous arthritis; Wegener granulomatosis (Wegener syndrome)
 - b. Polyarteritis nodosa (Kussmaul disease)
 2. Involving small, medium, and large vessels
 - a. Arteritis in collagen vascular diseases
 - b. Progressive systemic sclerosis (PSS; scleroderma)
 - c. Rheumatoid arthritis
 - d. Rheumatic fever
 - C. Cogan syndrome
 - D. Crohn disease (granulomatous ileocolitis)
 - E. Goodpasture syndrome (pulmonary hemosiderosis)
 - F. Heerfordt disease (uveoparotid fever)
 - G. Inflammatory pseudotumor
 - H. Initial manifestation of uveal melanoma (ciliary body)

- I. Myeloproliferative diseases
 - 1. Hodgkin disease
 - 2. T-cell leukemia
- J. Paraneoplastic syndromes
 - 1. Dermatomyositis
 - 2. Sweet syndrome (cutaneous paraneoplastic syndrome)
- K. Paraproteinemia
 - 1. Familial Mediterranean fever
 - 2. Necrobiotic xanthogranuloma [increased immunoglobulin G (IgG)/IgA]
- L. Parry-Romberg syndrome (progressive hemifacial atrophy)
- M. Relapsing polychondritis
- N. Skin diseases
 - 1. Chronic cutaneous lupus erythematosus (CCLE)
 - 2. Erythema elevatum diutinum
 - 3. Lichen planus
 - 4. PSS; scleroderma
 - 5. Psoriasis
 - 6. Reiter syndrome (polyarteritis enterica)
 - 7. Wiskott-Aldrich syndrome
- O. Terrien marginal corneal disease
- P. Ulcerative colitis (regional enteritis)
- Q. Weber-Christian disease (systemic panniculitis)
- R. Pseudoepiscleritis (lesions resembling episcleritis)
 - 1. Conjunctivitis
 - 2. In-growing lash
 - 3. *Inflamed pinguecula
 - 4. Punctate keratitis
 - 5. Sclerosing keratitis
 - 6. Wegener granulomatosis
- 3. Drugs
 - A. Pamidronate disodium
- 4. Infectious
 - A. Brucellosis (Bang disease, undulant fever)
 - B. Coccidioidomycosis
 - C. Influenza
 - D. Leprosy (Hansen disease)
 - E. Leptospirosis (Weil disease)
 - F. Lyme disease (borreliosis, relapsing fever)
 - G. Lymphogranuloma venereum (Nichols-Favre disease)
 - H. Nematode (*Angiostrongylus cantonensis*)
 - I. Q fever
- 5. Trauma
 - A. *Episcleral foreign body
 - B. Following transscleral fixation of posterior chamber IOL (intraocular lens)
 - C. Insect bite granuloma
 - D. Malpositioned (Jones) tube

Pigment Spots of Sclera and Episclera

1. *Acquired melanosis
2. Cysts
3. Drugs, including the following:

acetophenazine	iron dextran	promethazine
butaperazine	iron sorbitex	propiomazine
carphenazine	mesoridazine	thiethylperazine
chlorpromazine	methdilazine	thiopropazate
diethazine	methotrimeprazine	thiopropazine
ethopropazine	perazine	thioridazine
ferrocholinate	pericyazine	trifluoperazine
ferrous fumarate	perphenazine	triflupromazine
ferrous gluconate	piperacetazine	trimeprazine
ferrous succinate	polysaccharide iron complex	vitamin D
ferrous sulfate	prochlorperazine	vitamin D ₂
fluphenazine	promazine	vitamin D ₃

4. Extension of adjacent or underlying malignant melanoma
5. Foreign body
6. Intrasccleral nerve loops with uveal pigment (painful to touch)
7. *Nevus
8. Ochronosis with melanin deposition
9. *Resolving hemorrhage
10. Staphyloma
11. Transscleral migration of pigment following cryotherapy of intraocular tumor or trauma
12. Uveal melanocytes carried by the scleral emissaria into the episclera (most often in eyes, with dark irides in superior, inferior temporal, and nasal quadrants in descending frequency; conjunctiva freely movable over them)

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

Scleritis

Scleritis involves a potentially destructive inflammatory process that may accompany severe systemic disease. Ocular pain occasionally radiates to the temple, jaw, or sinuses. Women are more frequently affected than men. Most cases begin with bilateral involvement. Early perforation of sclera is possible. The anterior portion of the eye is affected most severely. Posterior scleritis may be a diagnostic challenge.

1. Associated with systemic disease
 - A. Collagen diseases
 1. *Dermatomyositis (Wagner-Unverricht syndrome)
 2. *Felty syndrome
 3. *Giant cell (temporal) arteritis

4. Juvenile rheumatoid arthritis (Still disease)
 5. Polyarteritis nodosa (Kussmaul disease)
 6. PSS; scleroderma
 7. Relapsing polychondritis
 8. Reiter syndrome (polyarteritis enterica)
 9. Rheumatoid arthritis
 10. Sjögren syndrome
 11. Systemic lupus erythematosus (SLE)
 12. Wegener granulomatosis (Wegener syndrome)
- B. Metabolic diseases
1. Cretinism (hypothyroidism)
 2. Gout
 3. Porphyria cutanea tarda
- C. Myeloproliferative diseases
1. Hodgkin disease (lymph node disease)
 2. Mycosis fungoides syndrome (Sézary syndrome)
2. Infectious
- A. Bacterial
1. Leprosy
 2. Lymphogranuloma venereum (Nichols-Favre disease)
 3. Syphilis (acquired lues)
 4. Tuberculosis
- B. Viral infections
1. Herpes simplex
 2. Herpes zoster
 3. Influenza
 4. Mumps
- C. Fungal—aspergillosis
- D. Helminth infection—acanthamoeba
- E. Protozoan—toxoplasmosis
- F. Infections
1. Associated with skin disease or immunosuppressive status
 2. Spreading directly from conjunctiva, cornea, uvea, periorbital tissues, nose, or sinuses
3. Miscellaneous
- A. Cogan syndrome
- B. Crohn disease (granulomatous ileocolitis)
- C. Goodpasture syndrome (pulmonary hemosiderosis)
- D. Erythema nodosum
- E. Exogenous infection via penetration through conjunctiva
- F. Hashimoto thyroiditis
- G. Heerfordt disease (uveoparotid fever)
- H. Necrobiotic xanthogranuloma (increased IgG/IgA)
- I. Terrien marginal corneal disease
- J. Uveitis
4. Drugs
- A. Pamidronate disodium
5. *Trauma—following cataract or strabismus surgery

Staphyloma (Stretching and Thinning of the Sclera with Incarceration of Uveal Tissue)

1. Collagen diseases
 - A. Felty syndrome
 - B. Rheumatoid arthritis (adult)
 - C. Wegener syndrome (Wegener granulomatosis)
2. Following trauma
 - A. Beta radiation
 - B. Deep scleral resection for episcleral malignancies
 - C. Pterygium excision and mitomycin therapy
 - D. Scleral buckle removal
 - E. Subconjunctival injection of corticosteroids
 - F. Ultrasound treatment for glaucoma
3. Infectious
 - A. Aspergillosis
 - B. Herpes zoster (rare)
 - C. Plague (bubonic plague)
 - D. Syphilis
 - E. Tuberculosis
4. Ocular cause
 - A. Buphthalmos associated with increased intraocular pressure
 - B. Corneoscleral ectasia
 - C. Myopia with increased anteroposterior diameter
 - D. Scleritis (e.g., secondary to rheumatoid arthritis)
 - E. Uveitis
5. Miscellaneous
 - A. Ehlers-Danlos syndrome (fibrodysplasia elastica generalisata)
 - B. Endarteritis
 - C. Epidermolysis bullosa
 - D. Hyperparathyroidism
 - E. Meckel syndrome (dysencephalia syndrome)
 - F. Oculodental syndrome (Peter syndrome)
 - G. Porphyria cutanea tarda

Episcleral and Scleral Tumors

1. Carcinomas
2. Choroidal melanomas
3. *Epibulbar tumor
4. Fibromas
5. Hemangiomas
6. Histiocytosis
7. Lymphomas
8. Leiomyoma (transscleral)
9. Melanoblastoma (spread from choroid)
10. Retinoblastoma

Cornea

Crystals of the Cornea (Deposition of Crystalline Substances in the Cornea)

1. Bietti marginal crystalline dystrophy
2. Calcium oxalate—dieffenbachia and other plants
3. Cholesterol crystals—primary or secondary with corneal neovascularization
4. *Crystalline dystrophy of Schnyder
5. Crystalline retinopathy
6. Cystinosis syndrome (Lignac-Fanconi syndrome)
 - A. Benign adult
 - B. Congenital
7. Drugs, such as indomethacin (Indocin), chloroquine, thioridazine (Mellaril), and clofazimine
8. Dysproteinemia
 - A. Cryoglobulinemia
 - B. *Multiple myeloma
9. Elevated bilirubin with crystalline dystrophy
10. Fine, multicolored glittering crystals following successful transplant that later underwent graft rejection and was treated with steroids
11. Gout (hyperuricemia)
12. Hyperparathyroidism
13. Immunoglobulin G (IgG) K monoclonal gammopathy
14. *Infectious crystalline retinopathy, usually with more indolent streptococcal and staphylococcal species

15. Post keratoplasty (Kaye dots)
16. Renal failure
17. Subconjunctival 5-fluorouracil
18. Uremia
19. Waldenström syndrome (macroglobulinemia syndrome)

Diagnostic table

	Cystinosis (i.e., Congenital)	Crystalline Dystrophy of Schnyder	Multiple Myeloma	Bietti Marginal Crystalline Dystrophy	Gout	Drugs (i.e., Chloroquine)	Hyperparathyroidism	Porphyria Cutanea Tarda	Cholesterol Crystals	Infectious Crystalline Keratopathy
History										
1. Amaurosis fungax			S							
2. Between 50 and 70 years			S							
3. Common in 40s								U		
4. Corneal trauma including chemical burns; infections including herpes simplex and zoster; interstitial keratitis									U	
5. Crystals appear 6 to 24 months	U	U								
6. Disseminated malignancy of plasma cells			U							
7. Excessive alcohol intake								U		
8. Fatal disease	U									
9. Genetic metabolic disease	S			S	U					
10. Glare					U					
11. Hereditary	U	U		U						
12. Thyroid surgery							S			
13. Photophobia	U									
14. Prior Corneal Surgery										U
Physical Findings										
1. Attenuated retinal vessels						S				
2. Bull's eye or doughnut retinal lesion						U				
3. Bushy eyebrows								S		
4. Cicatricial ectropion								S		
5. Conjunctival calcification							S	R		
6. Conjunctivitis					U					S
7. Corneal arcus		S								
8. Corneal neovascularization									S	
9. Corneal infiltrate										U
10. Cotton wool spots			S					S		
11. Crystals in conjunctiva	S	S					S			
12. Crystals in aqueous humor	U									
13. Choroidal detachment			S							
14. Dilated retina veins			S							
15. Episcleritis					S					
16. Lacrimal obstruction									S	
17. Macula edema									S	
18. Occlusion of central artery vein			S							
19. Ocular motor disturbances including sixth nerve palsy			S		S			S		
20. Optic nerve atrophy							U	S		
21. Pigmentary retinopathy	U					S				
22. Posterior scleritis					S					
23. Proptosis			S							
24. Ptosis							S			
25. Retinal hemorrhages			S							
26. Retinal microaneurysms			S							
27. Retinitis punctata albescens				U						
28. Retrobulbar neuritis			S							
29. Scleromalacia								S	R	
30. Silverwire or chalky-white arterioles						S				
31. Tumor of orbit			S							
32. Vascular engorgement of retina							S			
33. Vitreous hemorrhage			S							
34. Vogt limbal girdle		S								
35. Xanthelasma		S								
Laboratory Data										
1. Blood hyperviscosity			U							
2. Color vision abnormal						U				
3. Conjunctival biopsy	U								S	
4. Corneal cholesterol		U							U	
5. Electro-oculogram						S	S			
6. Corneal cholesterol		U							U	
7. Corneal scraping										U
8. Electro-oculogram						S	S			
9. Electroretinogram	U					U				
10. Fluorescein angiography	U					U				
11. High porphyria level in urine								U		
12. Hypercalcemia			U					U		
13. Hyperuricemia			S							
14. Hypophosphatemia							U	U		
15. Parathyroid hormone increased							U			
16. Proteinuria			U							
17. Serum lipid elevated									U	
18. Uricemia					U					
19. Visual field abnormal (blind spot enlarged and central scotoma)						U		U		

R = rarely; S = sometimes; and U = usually.

Crystals of the cornea (deposition of crystalline substance in the cornea)

Anesthesia of the Cornea (Hypesthesia or Diminished Corneal Sensation in Trigeminal Distribution)

1. Cornea
 - A. *Cerebellopontine angle tumors
 - B. Congenital
 - C. Corneal dystrophy—granular, lattice, macular, and crystalline
 - D. Dysautonomia
 - E. *Infections, including herpes zoster, herpes simplex, leprosy, and malaria
 - F. Inflammations, including that occurring after electrocautery of Bowman membrane, stromal edema, vascularized scars, congestive glaucoma, exposure keratitis, radiation damage, and vitamin A deficiency
 - G. Trauma, including constant wearing of contact lenses and postoperatively, including cataract extraction and within corneal transplant, following operation for detached retina—from an encircling band or, less frequently, a circumscribed buckle; from refractive surgery
2. Maxillary division
 - A. Congenital
 - B. Facial trauma
 - C. Interruption of trigeminal nerve or gasserian ganglion, including cerebellopontine angle tumor or other space-occupying lesion in the region of the superior orbital fissure
 - D. Maxillary antrum carcinoma
 - E. Neoplasm, foramen rotundum, sphenopterygoid fossa
 - F. Orbital floor fracture
 - G. Perineural spread of skin carcinoma
 - H. Surgery for trigeminal neuralgia
3. Ophthalmic division
 - A. Aneurysm, cavernous sinus
 - B. Neoplasm, cavernous sinus
 - C. Neoplasm, middle fossa
 - D. Neoplasm, orbital apex
 - E. Neoplasm, superior orbital fissure
4. Syndromes and diseases
 - A. Adie syndrome
 - B. Anhidrotic ectodermal dysplasia
 - C. Barré Lieou syndrome (posterior cervical sympathetic syndrome)
 - D. Diabetes mellitus—youth onset, more marked with age
 - E. Eaton-Lambert syndrome (myasthenic syndrome)
 - F. Familial corneal hypesthesia
 - G. Foix syndrome (cavernous sinus syndrome)
 - H. Gradenigo syndrome (temporal syndrome)
 - I. Hereditary fleck dystrophy of the cornea
 - J. Herpes zoster
 - K. Hunt syndrome (herpes zoster auricularis)
 - L. Hydroa vacciniforme (lower cornea)
 - M. Multiple sclerosis
 - N. Oculoauriculovertebral dysplasia (Goldenhar-Gorlin syndrome)
 - O. Nephropathic cystinosis

- P. Passow syndrome (Bremer status dysraphicus)
 - Q. Psoriasis (lower cornea)
 - R. Riley-Day syndrome (congenital familial dysautonomia)
 - S. Rochon-Duvigneaud syndrome (superior orbital fissure syndrome)
 - T. Rollet syndrome (orbital apex-sphenoidal syndrome)
 - U. Scholz subacute cerebral sclerosis (arylsulfatase A deficiency syndrome)
 - V. Temporal arteritis syndrome (cranial arteritis syndrome)
 - W. Tolosa-Hunt syndrome (painful ophthalmoplegia)
 - X. Vitamin A deficiency
5. Toxins and drugs, including oleoresin capsicum (pepper spray)

amiodarone	diazepam	paraldehyde
amitriptyline	gentamicin (?)	phencyclidine
amodiaquine	glutethimide	pindolol (?)
atenolol (?)	hydrogen sulfide	propranolol
betaxolol	hydroxychloroquine	steladex
bromide	imipramine	trifluoperazine (Stelazine)
carbon dioxide	levobunolol	timolol
carbon disulfide	meprobamate	trichloroethylene
carisoprodol	methyprylon	vinblastine
chloroquine	metoprolol (?)	vincristine
clorazepate	nadolol (?)	
desipramine	nortriptyline

Hyperplastic Corneal Nerves

This condition involves overgrowth of corneal nerves up to 20 times the normal number. This nonspecific change may occur in association with the following conditions:

1. Deep filiform dystrophy of Maeder and Danis
2. *Herpes simplex
3. *Herpes zoster
4. *Multiple endocrine neoplasia—type II B
5. Neurofibromatosis (von Recklinghausen syndrome)
6. Neuroparalytic keratitis
7. Normal eyes at advanced age
8. Ocular pemphigus foliaceus (Cazenave disease)
9. Opaque corneal grafts
10. Phthisis bulbi
11. Posterior polymorphous dystrophy

Charlin R. Neoplasia endocrina multiple type II-B. *Arch Chil Oftal* 1981;38:21-27.

Menshen JH. Corneal nerves. *Surv Ophthalmol* 1974;19:1-18.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Increased Visibility of Corneal Nerves

1. “Colloidin” skin syndrome (bullous ichthyosiform erythroderma)
2. Congenital
3. Ectodermal dysplasia (Rothmund syndrome)
4. Fuchs dystrophy
5. Ichthyosis
6. Idiopathic
7. *Keratoconus
8. Leprosy (Hansen disease)
9. Neurofibromatosis (von Recklinghausen syndrome)
10. *Neurofibromatosis associated with pheochromocytoma and thyroid carcinoma (Sipple syndrome)
11. Posterior polymorphous dystrophy
12. Primary amyloidosis
13. Refsum syndrome (phytanic acid storage disease)
14. Siemens disease (keratosis follicularis spinulosa decalvans)

Arffa RC. *Grayson's diseases of the cornea*, 3rd ed. St. Louis: Mosby-Year Book, 1991.

Pigmentation of the Cornea

1. Melanin pigmentation
 - A. Epithelial melanosis
 1. Congenital
 2. Presence of limbal malignant melanoma
 3. Sequela of trachoma and other inflammations
 4. Melanocytic migration in heavily pigmented persons
 - B. Stromal pigmentation such as that in ochronosis
 - C. Endothelial melanosis
 1. Congenital
 2. Senile
 3. Degenerative, including atrophic and inflammatory conditions (such as cornea guttata, herpes simplex, zoster keratitis, myopia, diabetes mellitus, senile cataract, chronic glaucoma, and melanoma)
 4. *Krukenberg spindle, with or without pigmentary glaucoma, may be present in association with diabetes mellitus
 5. Trauma—from contusions, wounds, or intraocular operations
 6. Turks line—fine vertical line in the lower portion of the cornea
2. Hematogenous pigmentation
 - A. *Blood staining of the cornea, most often because of total hyphema associated with elevated intraocular pressure
 - B. Hemorrhage into cornea—following subconjunctival hemorrhage and intracorneal hemorrhage from newly formed vessels, as in interstitial keratitis or mustard gas keratitis
 - C. Epithelial deposit associated with spherocytic anemia
 - D. Hemachromatosis
3. Metallic pigmentation

- A. Copper (chalcosis)
1. *Kayser-Fleischer ring—limbal ring associated with Wilson disease
 2. Copper foreign body in cornea or intraocular region
 3. Occupational exposure or topical therapeutic use of copper-containing substance
 4. Advanced cirrhosis of the liver, such as that associated with parasitic infestation (schistosomiasis)
- B. Silver (argyrosis)—from topical, local, or systemic use; also occupational use
- C. Gold (chrysiasis)—from topical, local, or systemic use
- D. Iron (siderosis)
1. Foreign body in cornea or intraocular area
 2. Iron lines
 - a. Fleischer ring—associated with keratoconus around base of the cone
 - b. Hudson-Stähli line—horizontal line at the junction of the middle and lower one third of the cornea, believed to be related to exposure, trauma of lid closure, and chronic corneal infection
 - c. Stocker line—line running parallel with head of the pterygium
 - d. Ferry line—associated with filtering blebs, believed to result from minute, repeated, localized trauma caused by eyelid striking the elevated bleb
 - e. Circular lesion associated with congenital spherocytosis
 - f. Iron lines following refractive corneal surgery, such as radial keratotomy and photorefractive keratectomy, and laser in situ keratomileusis (hyperopic and myopic)
- E. Bismuth (bismuthiasis)—from therapeutic use
- F. Arsenic melanosis
4. Drugs, discoloration, including the following:

acetophenazine	calcitriol	iodide
acid bismuth sodium tartrate	carphenazine	iodine solution
alcohol	chloroquine	iron dextran
amiodarone	chlorpromazine	iron sorbitex
amodiaquine	chlorprothixene	meperidine(?)
antimony potassium tartrate	chlortetracycline	mercuric oxide
antimony sodium tartrate	colloidal silver	mesoridazine
antimony sodium thioglycolate	diethazine	methdilazine
	echothiophate	methotrimprazine
auranofin	epinephrine	methylene blue
aurothioglucose	ergocalciferol	mild silver protein
aurothioglucanide	ethopropazine	perazine
bismuth carbonate	ferrocholinate	perhexiline
bismuth oxychloride	ferrous fumarate	pericyazine
bismuth salicylate	ferrous gluconate	perphenazine
bismuth sodium tartrate	ferrous succinate	phenylmercuric nitrate
bismuth sodium thioglycollate	ferrous sulfate	piperacetazine
	fluphenazine	polysaccharide-iron complex
bismuth sodium	gold Au 198	prazosin
triglycollamate	gold sodium thiomalate	prochlorperazine
bismuth subcarbonate	gold sodium thiosulfate	promazine
bismuth subsalicylate	hydroxychloroquine	promethazine
butaperazine	indomethacin	propiomazine
quinacrine	stibophen	trifluoperazine
quinidine	tetracycline	triflupromazine
radioactive solution	thiethylperazine	trimeprazine
silver nitrate	thimerosal	vitamin A(?)
silver protein	thiopropazate	vitamin D
sodium antimonylgluconate	thiopropazine	vitamin D ₂
stibocaptate	thioridazine	vitamin D ₃
stibogluconate	thiothixene	

5. Other color changes

- A. White discoloration—scars, fatty degeneration or infiltration, calcified areas
- B. Yellow, discoloration—hyaline or colloid degeneration, and Tangier disease (familial deficiency of high-density lipoprotein)
- C. Black discoloration—coal powder, dirt, epinephrine, or ink (tattooing)
- D. Yellow-brown discoloration—Kyrle disease (hyperkeratosis follicularis et parafollicularis in cutem penetrans)
- E. Grey-black discoloration—chronic phenol exposure as carbolic acid
- F. Grey-white discoloration—anesthetic cornea
- G. Brown discoloration—aniline (amidobenzole), including benzoquinone and hydroquinine

Corneal Edema

1. Drugs, including the following:

acetophenazine	chlortetracycline	idoxuridine (IDU)
acetylcholine	cocaine	lanatoside C
alpha-chymotrypsin	colistin	melphalan
amodiaquine	deslanoside	mesoridazine
amphotericin B	dibucaine	methdilazine
bacitracin	diethazine	methicillin
benoxinate	digitoxin	methotrimeprazine
benzalkonium chloride	digoxin	neomycin
benzathine penicillin G	dyclonine	perazine
butacaine	epinephrine	pericyazine
butaperazine	erythromycin	perphenazine
carbachol	ethopropazine	phenacaine
carphenazine	fluphenazine	phenoxymethyl penicillin
chloramphenicol	hydrabamine penicillin	phenylephrine
chlorhexidine	hydrogen peroxide	piperacetazine
chloroquine	hydroxychloroquine	piperocaine
chlorpromazine	idoxuridine	polymyxin B
potassium penicillin G	propiomazine	thiotepa
potassium penicillin V	quinacrine	trifluoperazine
potassium phenethicillin	silicone	triflupromazine
potassium phenoxymethyl penicillin	streptomycin	trifluridine
	tetracaine	trimeprazine
procaine penicillin G	tetracycline	urokinase
prochlorperazine	thiethylperazine	vidarabine
promazine	thiopropazate	vinblastine
promethazine	thiopropazine	
proparacaine	thioridazine	

2. Endothelial decompensation

A. Noninflammatory

1. *Acute hydrops with keratoconus
2. Congenital
 - a. Anhidrotic ectodermal dysplasia
 - b. *Birth trauma, typically a forceps injury
 - c. Congenital glaucoma
 - d. Congenital hereditary endothelial dystrophy
 - e. Posterior polymorphous dystrophy
3. Environmental cold in trigeminal nerve palsy
4. Essential corneal edema
5. Failed corneal graft
6. Metabolic such as myxedema and hypercholesteremia
7. Neuropathic conditions
8. Postsurgical
 - a. Anterior segment ischemia
 - b. Anterior synechiae
 - c. Direct mechanical damage to endothelium including argon laser iridotomy
 - d. Epithelial or fibrous downgrowth
 - e. Osmotic, such as irrigation of cornea or anterior chamber with distilled water
 - f. Plasma gas sterilization
 - g. Stripped Descemet membrane
 - h. Vitreous touch
9. Primary degenerative—Fuchs dystrophy
10. Traumatic
 - a. Anoxia of epithelium, such as from excessive wearing of contact lens (Sattler veil)
 - b. Brown-McLean Syndrome
 - c. Chemical, such as tear gas, hydrogen peroxide and Hibiclens
 - d. Exposure as in exophthalmos
 - e. Large epithelial defect
 - f. Nonpenetrating including after air bag inflation injury
 - g. Penetrating
 - h. Radiation injury such as from ultraviolet, roentgenograms, gamma rays
 - i. Retained foreign body-anterior chamber
 - j. Sympathectomy including jugular vein catheterization and Parry-Robson syndrome
 - k. Trigeminal nerve palsy with cold exposure

- B. Inflammatory
 - 1. Any severe iritis
 - 2. Acute graft rejection
 - 3. Chandler syndrome (iridocorneal endothelial syndrome)
 - 4. *Herpes simplex keratitis or keratouveitis
 - 5. *Herpes zoster keratouveitis
 - 6. Retinal tacks
- 3. Increased intraocular pressure
 - A. *Acute glaucoma
 - B. Chronic glaucoma
 - 1. Minimal to moderate pressure elevations in the presence of abnormal endothelium
 - 2. Prolonged moderately high elevations in the presence of normal or near-normal endothelium
- 4. Hypotony

2. Aberfeld syndrome (congenital blepharophimosis associated with generalized myopathy)
 3. Autosomal recessive or dominant trait
 4. Carpenter syndrome (acrocephalopolysyndactyly II)
 5. Cataract microcornea syndrome
 6. Chromosome partial deletion (long-arm) syndrome
 7. Deafness retardation, arched palate syndrome
 8. Ehlers-Danlos syndrome (fibrodysplasia elastica generalisata)
 9. Gansslen syndrome (familial hemolytic icterus)
 10. Hallermann-Streiff syndrome (dyscephalic mandibulooculofacial syndrome)
 11. Hemifacial microsomia syndrome (Francois Haustrate syndrome)
 12. Hutchinson-Gilford syndrome (progeria)
 13. Laurence-Moon-Biedl syndrome (retinitis pigmentosa-polydactylyadiposogenital syndrome)
 14. Lenz microphthalmia syndrome
 15. Little syndrome (nail patella syndrome)
 16. Marchesani syndrome (mesodermal dysmorphodystrophy)
 17. Marfan syndrome (arachnodactyly dystrophica mesodermalis congenita)
 18. Meckel syndrome (dysencephalia splanchnocystica syndrome)
 19. Meyer-Schwickerath-Weyers syndrome (oculodentodigital dysplasia)
 20. Microcornea, glaucoma, absent frontal sinuses
 21. Micro syndrome
 22. Rieger syndrome (hypodontia and iris dysgenesis)
 23. Ring chromosome
 24. Roberts pseudothalidomide syndrome
 25. Rubella syndrome (Gregg syndrome)
 26. Sabin-Feldman syndrome
 27. Schwartz syndrome (glaucoma associated with retinal detachment)
 28. Smith-Magenis syndrome
 29. Triploidy
 30. Trisomy 13 (D trisomy, Patau syndrome)
 31. Trisomy syndrome
 32. Waardenburg syndrome (interoculoiridodermatoauditive dysplasia)

Labaratory Data											
1. Immunoglobuin M antibody						U					
2. Chromosomal studies											U

R = rarely; S = sometimes; and U = usually.

Microcornea

Megalocornea (Cornea with a Horizontal Diameter of more than 14 MM)

1. Aarskog syndrome (faciodigitogenital syndrome)
2. Autosomal dominant or recessive trait
3. Congenital glaucoma (rare)
4. Craniosynostosis
5. Down syndrome
6. Facial hemiatrophy
7. Isolated
8. Marchesani syndrome (brachymorphia with spherophakia)
9. Marfan syndrome (arachnodactyly dystrophia mesodermalis congenita)
10. MMR (megalocornea-mental retardation) syndrome
11. MMMM (megalocornea, macrocephaly, mental and motor retardation) syndrome
12. Mucopolysaccharidoses I-S (Scheie syndrome)
13. Neuhauser syndrome (megalocornea-mental retardation syndrome)
14. Oculocerebrorenal syndrome (Lowe syndrome)
15. Oculodental syndrome (Peter syndrome)
16. Osteogenesis imperfecta (van der Hoeve syndrome)
17. Oxycephaly (dysostosis craniofacial dystosis)
18. Pierre Robin syndrome (micrognathia-glossoptosis syndrome)
19. Posterior embryotoxon
20. Rieger syndrome (hypodontia and iris syndrome)
21. Rubella syndrome (Gregg syndrome)
22. Sex-linked recessive trait
23. Sturge-Weber syndrome (meningocutaneous syndrome)

3. Genetic studies	U	U		U	U	U	U		U	U
4. Urine tests										
Aminoaciduria/phosphaturia						U				
Chondroitin sulfate B elevated						U				
Hematuria/proteinuria						U				
5. Visual field test			U		U				S	

R = rarely; S = sometimes; and U = usually.

Megalocornea (cornea having a horizontal diameter of more than fourteen millimeters)

Corneal Opacification in Infancy (See Conditions Simulating Congenital Glaucoma, p. 305)

1. *Birth trauma, such as Descemet membrane rupture
2. Chromosomal aberrations
 - A. Mongolism (Down syndrome)—trisomy 21
 - B. Trisomy 13 (Patau syndrome)
3. Congenital malformations
 - A. Amyloidosis (Lubarsch-Pick syndrome)
 - B. Anterior chamber cleavage syndromes
 1. Axenfeld anomaly
 2. Congenital central anterior synechiae
 3. Congenital anterior staphyloma
 4. *Peter anomaly
 5. Rieger anomaly
 - C. Bilateral corneal dermis-like choristomas
 - D. Congenital glaucoma
 - E. De Bary syndrome
 - F. *Dermoid tumors
 - G. *Sclerocornea
 - H. Xanthomas
4. Corneal dystrophy
 - A. *Congenital hereditary endothelial dystrophy
 - B. Congenital hereditary stromal dystrophy
 - C. Posterior polymorphous dystrophy
5. Idiopathic
6. Inborn errors of metabolism
 - A. *Mucopolysaccharidoses (MPS)
 1. Hurler syndrome (MPS IN)
 2. Maroteaux-Lamy syndrome (MPS VI)
 3. Morquio-Brailsford syndrome (MPS IV)
 4. Scheie syndrome (MPS IS)
 - B. Lowe syndrome (oculocerebrorenal syndrome)
 - C. von Gierke disease (glycogen disease)
 - D. Corneal lipoidosis—later
 - E. Mucopolipidosis
 1. Generalized gangliosidosis (GM1-gangliosidosis I and II)
 2. ML I (lipomucopolysaccharidosis)
 3. ML III (pseudo-Hurler polydystrophy)
 - F. Riley-Day syndrome (congenital familial dysautonomia)
7. Inflammatory processes
 - A. Corneal ulceration
 - B. Herpes simplex and herpes zoster
 - C. Interstitial keratitis
 - D. Rubella syndrome (German measles)
 - E. Savin syndrome

Topilow HW, et al. Bilateral corneal dermis-like choristomas. *Arch Ophthalmol* 1981;99:1387.

Band-Shaped Keratopathy

This type of corneal opacification extends horizontally over the cornea, at the level of the Bowman membrane, in the exposed part of the palpebral aperture.

1. Anterior mosaic dystrophy, primary type
 - A. Episkopi (sex-linked recessive)
 - B. Labrador keratopathy
2. Chemical fume related as mercury vapor or calcium bichromate vapor
3. Cyclosporine as eyedrops
4. De Bary syndrome
5. Discoid lupus erythematosus
6. Dysproteinemia
7. Gout (hyperuricemia)
8. High levels of visible electromagnetic radiation, such as xenon arc photocoagulation and laser causing acute severe anterior uveitis
9. Hypercalcemia
 - A. Excessive vitamin D as with oral intake, Boeck sarcoid with liver involvement, acute osteoporosis, Heerfordt syndrome, and Schaumann syndrome
 - B. Hyperparathyroidism
 - C. Hypophosphatasia (phosphoethanolaminuria)
 - D. Idiopathic hypercalcemia
 - E. Milk-alkali syndrome
 - F. Paget syndrome (osteitis deformans)
 - G. Renal failure, such as that associated with Fanconi syndrome (cystinosis)
10. Ichthyosis vulgaris
11. *Local degenerative diseases, including chronic uveitis, phthisis bulbi, absolute glaucoma, infantile polyarthritis (Still disease), rheumatoid arthritis, interstitial keratitis, Felty syndrome, and juvenile rheumatoid arthritis
12. Long-term miotic therapy
13. Long-term steroid phosphate preparations
14. Progressive facial hemiatrophy (Parry-Romberg syndrome)
15. Rothmund syndrome (ectodermal syndrome)
16. Silicone oil in anterior chamber
17. Traumatic—chronic exposure to irritants, such as mercury fumes, calomel, calcium bichromate vapor, and hair
18. Tuberous sclerosis (Bourneville syndrome)
19. Tumoral calcinosis
20. Viscoat usage
21. Wagner syndrome (hyaloideoretinal degeneration)
22. X-linked recessive ocular dystrophy

Schlotzer-Schrehardt U, et al. Corneal stromal calcification after topical steroid-phosphate therapy. *Arch Ophthalmol* 1999;117:1414-1416.

Corneal Keloids

1. Lowe syndrome (oculocerebrorenal syndrome)
2. Trauma, usually with perforation of the iris

Cibis GW, et al. Corneal keloid in Lowe's syndrome. *Arch Ophthalmol* 1982;100:1795.

Punctate Keratitis or Keratopathy

1. Alimentary disorders
 - A. Mouth
 1. *Dry mouth, as in Sjögren syndrome
 2. Ulcers, such as primary herpes, ocular cicatricial pemphigoid, and erythema multiforme
 - B. Lower alimentary tract
 1. Ulcerative colitis as in Sjögren disease
 2. Mild colitis, such as that due to an adenovirus
 - C. Stomach
 1. Indigestion as in Sjögren syndrome and acne rosacea
2. Articular diseases
 - A. Psoriasis arthropathica
 - B. Reiter disease (polyarthritis enterica)
 - C. Riley-Day syndrome (congenital familial dysautonomia)
 - D. Sjögren syndrome (secretoinhibitor syndrome)
3. Conjunctival discharge
 - A. Muroid
 1. Other types of keratoconjunctivitis sicca
 2. Sjögren disease (secretoinhibitor syndrome)
 - B. Mucopurulent (see p. 186)
 1. Angular blepharoconjunctivitis
 2. Erythema multiforme (Stevens-Johnson syndrome)
 3. Gonococcal
 4. Inclusion conjunctivitis (acute stage)
 5. Meningococcal
 6. Reiter disease (polyarthritis enterica)
 7. Trachoma
 8. Vernal conjunctivitis
 - C. Serous
 1. Adenovirus
 2. Herpes simplex
 3. Herpes zoster
 4. Inclusion conjunctivitis (later)
 5. Molluscum contagiosum
 6. Trachoma (later)
 7. Warts
4. Conjunctival inflammation
 - A. Cicatrizing (see p. 194)
 1. *Ocular cicatricial pemphigoid
 2. Chemical burns
 3. *Erythema multiforme (Stevens-Johnson syndrome)
 4. Diphtheria

5. Fuchs-Salzman-Terrien syndrome (allergic reactions from drugs)
 6. Radiation burns
 7. *Sjögren keratoconjunctivitis sicca
 8. Thermal burns
 9. Trachoma
- B. Diffuse catarrhal
1. Adenovirus
 2. Bacterial conjunctivitis
 3. Erythema multiforme (Stevens-Johnson syndrome)
 4. Onchocerciasis syndrome (river blindness)
 5. Reiter disease (polyarthritis enterica)
 6. Superior limbic keratoconjunctivitis
 7. Vaccinia
- C. Follicular (see p. 192 , 193)
1. Adenovirus
 2. Herpes simplex
 3. Herpes zoster
 4. Inclusion conjunctivitis
 5. Molluscum contagiosum
 6. Trachoma
- D. Giant papillary, such as in vernal and atopic conjunctivitis, and related to contact users, prosthesis, and exposed sutures
- E. Papillary
1. Sjögren syndrome (secretoinhibitor syndrome)
 2. Trachoma
5. Corneal conditions
- A. Deep keratitis, disciform or irregular
1. *Herpes simplex
 2. Herpes zoster and other viral diseases
 3. Corneal dystrophy (e.g., lattice)
 4. Harlequin syndrome
- B. Thinned facets because of previous ulcerative or other lesions
1. Acne rosacea (ocular rosacea)
 2. Erythema multiforme (Stevens-Johnson syndrome)
 3. Gorlin-Chaudhry-Moss syndrome
 4. Herpes simplex
 5. Sjögren keratoconjunctivitis sicca
- C. Vascularization
1. Acne rosacea (ocular rosacea)
 2. Molluscum contagiosum
 3. Ocular cicatricial pemphigoid
 4. Phlyctenular disease (see p. 214)
 5. Sjögren keratoconjunctivitis sicca
 6. Trachoma
 7. Vaccinia
- D. Trauma
1. Chemical injury
 2. Contact lens related
 3. Foreign body under upper eyelid

-
4. Mild, such as eye rubbing
 5. Ultraviolet photokeratopathy
 - E. Thygeson superficial punctate keratitis (SPK)
 6. Diseases of the lids
 - A. Dermatitis
 1. Psoriasis
 2. Seborrheic blepharitis
 - B. Ectropion (see p. 78-79)
 1. Exposure keratopathy
 2. Neuroparalytic keratopathy
 - C. Folliculitis (see p. 94)
 1. Blepharitis due to *Demodex folliculorum*
 2. Seborrheic blepharitis
 3. Staphylococcal blepharitis
 - D. Lid retraction (see p. 62-64)
 1. Endocrine exophthalmos
 2. *Exposure keratopathy
 - E. Madarosis, such as that associated with leprosy (stiff immobile lids)
 - F. Nodules
 1. Acne rosacea (ocular rosacea)
 2. Molluscum contagiosum
 3. Papilloma
 4. Warts
 - G. Trichiasis or entropion with traumatic keratitis
 - H. Vesicles or ulcers
 1. Herpes simplex
 2. Herpes zoster
 3. Ocular cicatricial pemphigoid
 4. Vaccinia
 - I. Floppy eyelid syndrome
 7. Diseases of the skin associated with punctate keratitis
 - A. Acne rosacea (ocular rosacea)
 - B. CRST (calcinosis, cutis, Raynaud phenomenon, sclerodactyly, and telangiectasia syndrome (calcinosis)
 - C. Erythema multiforme (Stevens-Johnson syndrome)
 - D. Follicular hyperkeratosis of the palms and soles
 - E. Hypertrichosis
 - F. Ichthyosis
 - G. Incontinentia pigmenti
 - H. Leprosy (Hansen disease)
 - I. Melkersson-Rosenthal syndrome (Melkersson idiopathic fibroedema)
 - J. Ocular cicatricial pemphigoid
 - K. Psoriasis
 8. Genitourinary diseases associated with punctate keratitis
 - A. Erythema multiforme (Stevens-Johnson syndrome)
 - B. Inclusion blennorrhoea
 - C. Ocular cicatricial pemphigoid
 - D. Reiter disease (polyarthritis enterica)
 9. Keratitis associated with use of drugs, including the following:

acebutolol	cytarabine	isoniazid
acetophenazine	deslanoside	isotretinoin
acetyldigitoxin	dexamethasone	labetalol
acyclovir	dexbrompheniramine	lanatoside C
adenine arabinoside	dexchlorpheniramine	levobunolol
adrenal cortex injection	dextran	lidocaine
aldosterone	dibucaine	medrysone
alcohol	diclofenac	mepivacaine
allopurinol	diethazine	mesoridazine
amantadine	diethylcarbamazine	methdilazine
amphotericin B	digitoxin	methimazole
antazoline	digoxin	methotrexate
antipyrine	dimethindene	methotrimeprazine
aspirin	dipivefrin	methoxsalen
atenolol	dorzolamide	methylprednisolone
auranofin	dipivalyl epinephrine (DPE)	methylthiouracil
aurothioglucose	dyclonine	metipranolol
aurothioglycanide	emedastine difumarate	metoprolol
bacitracin	emetine	minoxidil
benoxinate	epinephrine	nadolol
benzalkonium	ether	naphazoline
betamethasone	ethopropazine	neomycin
betaxolol	etidocaine	niacin
botulinum A toxin	etretinate	ofloxacin
brimonidine tartrate	F3T	oral contraceptives
brinzolamide	firaxetine hydrochloride	ouabain
brompheniramine	floxuridine	oxprenolol
bupivacaine	fluprednisolone	oxyphenbutazone
butacaine	flumethasone	paramethasone
butaperazine	fluorometholone	penicillamine
capecitabine	fluorouracil	perazine
carbimazole	fluphenazine	pericyazine
carphenazine	flurbiprofen	perphenazine
chloramphenicol	fluvoxamine maleate	phenacaine
chlorambucil	framycetin	pheniramine
chlorhexidine	gold sodium thiosulfate	phenylbutazone
chloroform	gentamicin	phenylephrine
chloroprocaine	gitalin	pilocarpine
chlorpheniramine	gold Au 198	pindolol
chlorpromazine	gold sodium thiomalate	piperacetazine
chlorprothixene	guanethidine	piperocaine
chlortetracycline	hexachlorophene	polymyxin B
chrysarobin	hydrocortisone	prednisolone
ciprofloxacin	idoxuridine	prilocaine
cocaine	IDU	procaine
colchicine	indomethacin	propofol
cortisone	iodide and iodine solutions and compounds	prochlorperazine
cyclopentolate		promazine
promethazine	sulfamethizole	thioridazine
proparacaine	sulfamethoxazole	thiotepa
propiomazine	sulfamethoxypridazine	thiothixene
propoxycaine	sulfanilamide	timolol
propylthiouracil	sulfaphenazole	tobramycin
quinacrine	sulfapyridine	trichloroethylene
radioactive iodides	sulfasalazine	trifluoperazine
rubella virus vaccine (live)	sulfathiazole	trifluorothymidine
smallpox vaccine	sulfisoxazole	triflupromazine
sodium salicylate	sulindac	trimeprazine
sulfacetamide	suramin	trimethoprim
sulfachlorpyridazine	tetracaine	trioxsalen
sulfacytine	tetracycline	tripelennamine
sulfadiazine	tetrahydrozoline	triprolidine
sulfadimethoxine	thiethylperazine	tropicamide
sulfamerazine	thimerosal	vidarabine
sulfameter	thiopropazate	vinblastine
sulfamethazine	thiopropazine	

-
10. Limbal conditions associated with punctate keratitis
 - A. Focal necrotic lesions
 1. Herpes simplex
 2. Phlyctenular disease
 3. Vaccinia
 - B. Follicles
 1. Acne rosacea (ocular rosacea)
 2. Herpes simplex
 3. Inclusion conjunctivitis
 4. Molluscum contagiosum
 5. Trachoma
 6. Other viral infections
 - C. Nodules and plaques
 1. Avitaminosis A (Bitot spots)
 2. Bowen disease (dyskeratosis)
 3. Intraepithelial melanoma
 4. Limbal vernal conjunctivitis
 11. Punctate keratitis preceded by lymphadenopathy
 - A. Adenovirus
 - B. Herpes simplex
 - C. Herpes zoster
 - D. Inclusion conjunctivitis
 - E. Trachoma
 - F. Vaccinia
 12. Respiratory diseases
 - A. Adenovirus infections
 - B. Myxovirus infections (influenza, Newcastle disease, mumps)
 - C. Recurrent herpes complicating any fever

Morphologic Classification of Punctate Corneal Lesions (Classification by Anatomic Location)

1. Punctate epithelial erosions—fine, very slightly depressed spots scarcely visible without staining with fluorescein
 - A. Warts
 - B. Artificial—silk keratitis
 - C. Staphylococcal blepharoconjunctivitis (lower cornea)
 - D. *Keratoconjunctivitis sicca (interpalpebral area)
 - E. *Exposure keratitis (interpalpebral area)
 - F. Neuroparalytic keratitis (see p. 246)
 - G. Ocular medications (especially those with preservatives)
 - H. Trichiasis
 - I. Trauma, mild (e.g., eye rubbing)
2. Punctate epithelial keratitis—very small, whitish flecks on the surface of the epithelium
 - A. Fine
 1. Scattered—staphylococcal blepharitis; viral keratitis, especially trachoma and molluscum contagiosum, sometimes inclusion conjunctivitis, and not infrequently herpetic keratitis and rubeola and rubella
 2. Confluent—keratitis sicca, exposure keratitis, vernal conjunctivitis, topical steroid-induced, and early viral keratitis
 - B. Coarse
 1. *Thygeson superficial punctate keratitis (characteristic)
 2. Herpes zoster
 3. Adenovirus infections
 4. Early herpes simplex
 5. Acne rosacea (lower cornea)
 6. *Encephalitozoon hellum*
 - C. Areolar—spots have enlarged to occupy a large area
 1. Herpes simplex
 2. Thygeson superficial punctate keratitis
 3. Herpes zoster
 4. Vaccinia
3. Filamentary keratitis or keratopathy—formation of fine epithelial filaments that are attached at one end
 - A. *Keratoconjunctivitis sicca (frequent)
 - B. Infections, such as that due to adenovirus, herpes, vaccinia, acne rosacea, molluscum contagiosum, rubella, rubeola, and staphylococcus
 - C. Trauma, such as wounds, abrasions, exposure to shortwave diathermy, and prolonged eye patching
 - D. Edema of cornea, such as that due to recurrent erosions or wearing of contact lens
 - E. Sarcoid with infiltration of conjunctiva and lacrimal gland
 - F. Heerfordt syndrome and Mikulicz syndrome
 - G. After irradiation of the lacrimal gland

- H. Keratoconus (see p. 288)
 - I. Neuropathic keratopathy (anesthesia of cornea, p. 246)
 - J. Conjunctival cicatrization, such as that associated with ocular cicatricial pemphigoid, erythema multiforme, ocular psoriasis, and advanced trachoma
 - K. Degenerative condition of corneal epithelium, such as in advanced glaucoma
 - L. Superior limbic keratoconjunctivitis
 - M. Hereditary hemorrhagic telangiectasis (Rendu-Osler-Weber disease)
 - N. Aerosol keratitis
 - O. Diabetes mellitus
 - P. Ectodermal dysplasia
 - Q. Following cataract or corneal transplant surgery
 - R. Following patching
 - S. Use of diphenhydramine hydrochloride (Benadryl)
 - T. Idiopathic
4. Punctate subepithelial keratitis—punctate epithelial keratitis may progress to combine epithelial and subepithelial lesions followed by healing of the epithelial component, leaving a punctate subepithelial keratitis typical of viral punctate keratitis
- A. Areolar or stellate lesions—grayish white
 1. Herpes simplex (usually)
 2. Herpes zoster
 3. Vaccinia
 4. Infectious mononucleosis
 5. Epstein-Barr virus infection
 6. Dimmer keratitis
 7. Brucellosis
 8. Onchocerciasis
 - B. Fine or medium-sized lesions, typically
 1. Adenovirus, especially types 3 and 7—grayish white
 - C. Yellowish tinge—typical of trachoma, inclusion conjunctivitis, acne rosacea, and marginal “catarrhal infiltrates” associated with staphylococcal blepharitis, *Neisseria* conjunctivitis, and Reiter disease
5. Punctate opacifications of Bowman membrane—gray, homogeneous, thickened spots, often with irregular edges
- A. Salzmann degeneration
 - B. Punctate lesion of trachoma, measles, or phlyctenular disease

Jones BR. Differential diagnosis of punctate keratitis. *Int Ophthalmol Clin* 1962;2:591-611.

Diesenhause MC, et al. Treatment of microsporidial keratoconjunctivitis with topical fumagillin. *Am J Ophthalmol* 1993;115:293-298.

Seedor JA, et al. Filamentary keratitis associated with diphenhydramine hydrochloride. *Am J Ophthalmol* 1986;101:376-377.

SICCA Keratitis (Dry Eye with Secondary Corneal Changes)

1. Boeck sarcoid (Schaumann syndrome)
2. Dermatitis herpetiformis
3. Diabetes mellitus (Willis disease)
4. Herpes simplex
5. Lye burns

6. *Ocular cicatricial pemphigoid
7. Polychondritis
8. *Sjögren syndrome (secretoinhibitor syndrome)
9. Trachoma
10. Vitamin A deficiency (xerosis)
11. Stevens-Johnson syndrome

Arffa RC. *Grayson's diseases of the cornea*, 3rd ed. St. Louis: Mosby-Year Book, 1991.

White Rings of the Cornea (Coats Disease)

These rings are made up of a series of tiny white dots that may coalesce at the level of Bowman membrane or just below it.

1. Congenital
2. Trauma
 - A. *Foreign body, usually metal
 - B. Occupational—in working with limestone, there may be deposition of some of the substance's components, especially calcium oxide, in the cornea
3. Intraocular disease
4. Iron deposition

Miller EM. Genesis of white rings of the cornea. *Am J Ophthalmol* 1966;61:904.

Nevins RC, Elliott JH. White ring of the cornea. *Arch Ophthalmol* 1969;82:457.

Dry Spots of the Cornea (Precorneal Tear Film Drying in Spot-Wise Fashion)

The precorneal tear film is best examined by using fluorescein and cobalt-blue filtered light. Patients may have difficulty wearing contact lenses or may have corneal pain. Normal tear-film breakup time is greater than seconds and averages 25 to 30 seconds.

1. Associated with corneal dellen (see p. 280)
2. Chemical burns
3. Chronic bacterial or viral conjunctivitis
4. Congenital alacrima
5. Instillation of topical anesthetic
6. *Keratitis sicca
7. *Ocular cicatricial pemphigoid
8. Ocular pemphigus (chronic cicatricial conjunctivitis)
9. Sleep apnea syndrome
10. Sometimes in elderly persons without obvious pathology
11. Stevens-Johnson syndrome (erythema multiforme)
12. Vitamin A deficiency

Dohlman CH. The function of the corneal epithelium in health and disease. *Invest Ophthalmol* 1971;10:376-407.

Lemp MA, Hamill JR. Factors affecting tear film break-up in normal eyes. *Arch Ophthalmol* 1973;89:103-105.

Mojon DS, et al. Eyelid, conjunctival and corneal findings in sleep apnea syndrome. *Ophthalmology* 1999;106:1182-1185.

Anterior Embryotoxon (Arcus)

In this condition, white or gray substance is deposited at level of the Descemet membrane and Bowman membrane initially and then in the stroma with a clear limbal interval.

1. *Age—may be present normally in a white patient older than 40 years of age or in a black patient older than 35 years of age
2. Alagille syndrome
3. Alport syndrome (hereditary nephritis)
4. Associated with corneal disease, such as interstitial keratitis
5. *Contralateral carotid occlusive disease-when unilateral
6. Familial hypercholesterolemia (type II, familial beta-lipoproteins and type III, familial hyper-beta and pre-beta lipoproteins [carbohydrate-induced hyperlipemia])
7. Hereditary—autosomal dominant or autosomal recessive inheritance
8. Isolated phenomenon
9. Long exposure to irritating dust or chemicals
10. Ocular anomaly association, such as blue sclera (see p. 231), megalocornea (see p. 255), or aniridia (see p. 364-365)
11. Secondary to ocular disease, such as large corneal scars, sclerokeratitis, limbal dermoid, nevus, or epithelial cyst
12. Schnyder crystalline dystrophy

Bagla SK, Golden RL. Unilateral arcus corneae senilis and carotid occlusive disease. *JAMA* 1975;233:450.

Hingorani M, et al. Ocular abnormalities in Alagille syndrome. *Ophthalmology* 1999;106:330-337.

Bowman Membrane Folds

1. Bullous keratopathy
2. Idiopathic
3. Inflammation
4. Lowering of intraocular pressure, such as occurs in association with phthisis bulbi

Duke-Elder S, Leigh AG. Diseases of the outer eye. *System of ophthalmology, Vol VIII, Part 2*. St. Louis: CV Mosby, 1965.

Diagnostic table

	Fabry Disease	Messman Dystrophy	Reis-Buckler Dystrophy	Drug-induced Cornea Vascularization	Post-traumatic Recurrent Erosion	Map-Dot Fingerprint Dystrophy
History						
1. Asymptomatic female carrier	U					
2. Bilateral	U	U	U	U		U
3. Common in adults					S	U
4. Common in women						U
5. Familial	S	U	U			S
6. Hereditary	S	U	U			S
7. History of corneal injury from fingernails, paper, photocoagulation or vitrectomy					U	
8. Ocular pain			S		U	R
9. Onset, first decade		U	U	S		
10. Patient taking chloroquine, amiodarone, phenotidzine, or indomethacin				U		
11. Photophobia		U	U		U	R
12. Recurrent erosions		R	U		U	S
Physical Findings						
1. Corneal bullae					S	
2. Corneal clouding			S			
3. Corneal irregularity		S	S		S	S
4. Decreased corneal sensation		R	S			
5. Diffuse opacities are geographic in nature at level of Bowman layer with peak-like projections into the epithelial layer			U			
6. Dot-like opacities, as gray-white intraepithelial opacities (round, oblong, or comma shaped)					S	U
7. Epithelial filament formation					U	
8. Epithelial loss					U	S
9. Epithelial microcysts					U	S
10. Fingerprint lesions are concentric contoured lines						U
11. Fingerprints are formed by subepithelial sheets						U
12. Foreign body sensation			U		U	R
13. Gray-white interlacing lines resembling the architecture of a map or diffuse gray patches						S
14. Dendritiform lesions of cornea					S	
15. Lack of adherence of sheets of epithelium					U	S
16. Lacrimation		U	S		U	R
17. Pigmented whorl-shaped lines travel in the epithelial and superficial subepithelial tissue	U			U		
18. Small bleb-like lesions in epithelium appears as small white-gray punctate opacities diffusely distributed over corneal surface		U				
19. Subepithelial scarring			S		U	U
20. Superficial reticulated gray-white opacities and epithelial defects			U			
21. Superficial pseudomicrocysts						U
22. Visual acuity decreased with lesion in pupil			S		U	R

R = rarely; S = sometimes; and U = usually.

Anterior corneal abnormalities

Delayed Corneal Wound Healing

Delayed corneal wound healing because of drugs, including the following:

adenine	desoxycorticosterone	methylprednisolone
adrenal cortex injection	dexamethasone	paramethasone
aldosterone	dibucaine	penicillamine(?)
alpha chymotrypsin(?)	dyclonine	phenacaine
amphotericin B	F3T	phenylephrine(?)
arabinoside	floxuridine	piperocaine
azathioprine	fludrocortisone	prednisolone
bacitracin	fluorometholone	prednisone
beclomethasone	fluprednisolone	proparacaine
benoxinate	flurbiprofen	sulfacetamide
benzalkonium	fluorouracil	sulfamethizole
betamethasone	ganciclovir	sulfisoxazole
butacaine	gentamicin	tetracaine
chymotrypsin (?)	hydrocortisone	thiotepa
cocaine	idoxuridine	triamcinolone
colchicine	iodine solution	trifluorothymidine
cortisone	medrysone	trifluridine
cytarabine	meprednisone	vidarabine

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

Anterior Corneal Mosaic

A pattern of fluorescein pooling in corneal epithelial grooves can be induced in any normal eye by pressure on the cornea.

1. Exophthalmos as in dysthyroid eye disease with corneal compression against the eyelids
2. Exposure to a high-pressure fire extinguisher jet
3. Pressure on the cornea, either directly on the cornea or indirectly through the lids

Bron AJ. Anterior corneal mosaic. *Br J Ophthalmol* 1968;52:659.

Frazer DG, et al. Compression keratopathy. *Am J Ophthalmol* 1986;102:208-210.

Linear Opacity in Superficial Corneal Stroma

1. Arc-like at superior limbus
 - A. Poorly fit contact lens
 - B. Well-fitting soft contact lens with tight eyelids
2. Central
 - A. Amiodarone
 - B. Chloroquine and hydroxychloroquine
 - C. Microcystic epithelial dystrophy
 - D. Phenothiazine

Arffa RC. *Grayson's diseases of the cornea*, 3rd ed. St. Louis: Mosby-Year Book, 1991.

Superficial Vertical Corneal Striations—Epithelial Wrinkles can be Accentuated with Fluorescein

1. Corneal surgery with corneal indentation or low intraocular pressure
2. Graves disease
3. Scarred lids
4. Soft contact lens

Blue PW, Lapiana FG. Superficial vertical corneal striations: a new eye sign of Graves' disease. *Ann Ophthalmol* 1980;12:635.

Mobilis EF, et al. Corneal wrinkling induced by ultra-thin soft contact lenses. *Ann Ophthalmol* 1980;12:371.

Dendritic Corneal Lesions (Area of Staining of Cornea in a Branching Pattern)

1. *Corneal erosions, in which the epithelium may become loose
2. *Herpes simplex
3. *Herpes zoster
4. Use of soft contact lenses
5. *Acanthamoeba keratitis
6. Latanoprost

Linguist TD, et al. Clinical signs and medical therapy of early acanthamoeba keratitis. *Arch Ophthalmol* 1988;106:73-76.

Sudesh S, et al. Corneal toxicity associated with latanoprost. *Arch Ophthalmol* 1999;117:539-540.

Bullous Keratopathy (Terminal Stages of Severe or Prolonged Epithelial Edema Secondary to Endothelial Damage)

1. Anterior-posterior corneal incisions for myopia
2. Anterior synechiae
3. Associated with progressive facial hemiatrophy (Parry-Romberg syndrome)
4. Birth trauma (forceps injury)
5. Chronic uveitis, especially herpes simplex or herpes zoster
6. Congenital corneal dystrophy
7. Congenital glaucoma
8. Congenital hereditary endothelial dystrophy
9. Corneal hydrops (acute keratoconus)
10. Epithelial downgrowth
11. *Following cataract surgery with or without intraocular implantation
12. Following perforating wounds, especially when the lens capsule or vitreous is adherent to the cornea
13. *Fuchs epithelial-endothelial dystrophy
14. Immunologic reaction after keratoplasty or endothelial decompensation
15. Iridocorneal endothelial syndrome
16. Long-standing glaucoma
17. Posterior polymorphous dystrophy
18. Prolonged inflammation of corneal stroma, such as in disciform or interstitial keratitis (rare)

19. Silicone oil in anterior chamber

Deekhuis WH, et al. Silicone oil in the anterior chamber of the eye. *Arch Ophthalmol* 1986;104:793.

Yamaguchi T, et al. Bullous keratopathy after anterior posterior radial keratotomy for myopia and myopic astigmatism. *Am J Ophthalmol* 1982;93:600-606.

Nummular Keratitis (Coin-Shaped Lesions of Cornea)

1. Brucellosis
2. Dimmers nummular keratitis
3. Epidemic keratoconjunctivitis
4. Herpes zoster
5. Infectious mononucleosis—Epstein-Barr virus
6. Onchocerciasis (River blindness)
7. Varicella
8. Herpes simplex

Arffa RC. *Grayson's diseases of the cornea*, 3rd ed. St. Louis: Mosby-Year Book, 1991.

Pau H. *Differential diagnosis of eye diseases*, 2nd ed. New York: Thieme Medical, 1988.

Deep Keratitis

1. Behçet disease (dermatostomatophthalmic syndrome)
2. Deep pustular keratitis
3. Disciform keratitis
4. Herpes zoster
5. Keratitis profunda
6. Stromal herpes
7. Vaccinia
8. Varicella

Arffa RC. *Grayson's diseases of the cornea*, 3rd ed. St. Louis: Mosby-Year Book, 1991.

Interstitial Keratitis (Corneal Stromal Inflammation, not Primarily on Anterior or Posterior Surfaces of Stroma)

1. After burns
 - A. Acid
 - B. Alkali
2. Deep punctate
 - A. Influenza
 - B. Local trauma
 - C. Mumps
 - D. *Ophthalmic zoster
3. *Luetic (syphilis)
4. Nonluetic
 - A. Acanthamoeba
 - B. rosacea (ocular rosacea)
 - C. Brucellosis (Bang disease)
 - D. Cogan I syndrome (nonsyphilitic interstitial keratitis)

- E. Epstein-Barr
 - F. Filariasis
 - G. Herpes simplex
 - H. Hodgkin disease (lymph node disease)
 - I. *Leishmania* species
 - J. Measles
 - K. Microsporida
 - L. Mycosis fungoides
 - M. Mumps
 - N. Onchocerciasis
 - O. Recurrent fever
 - P. Roberts pseudothalidomide syndrome
 - Q. Sarcoidosis (Schaumann syndrome)
 - R. Sleeping sickness (von Economo syndrome)
 - S. Steroid therapy
 - T. Topical anesthetic abuse
 - U. Trypanosomiasis
 - V. Tuberculosis (scrofulous keratitis)
 - W. Viral as metaherpetic keratitis
 - X. Corneal opacification after forceps delivery
 - Y. Human T-lymphotropic virus
5. Sclerosing keratitis
- A. Scleritis
 - 1. Foci or some local process
 - 2. Hennebert syndrome (luetetic otitic nystagmus syndrome)
 - 3. Sarcoidosis syndrome (Schaumann syndrome)
 - 4. Syphilis (acquired lues)
 - 5. Tuberculosis
 - B. Sclerocornea
 - C. Brawny (gelatinous) scleritis
6. With chemical poisons
- A. Arsenic
 - B. Gold
7. With corneal ring abscess
- A. Anterior segment necrosis
 - 1. After circular diathermy
 - 2. After a "string" encircling procedure for retinal detachment
 - 3. After multiple extraocular muscle surgery
 - B. *Bacillus subtilis*
 - C. *Bacterium pyocyaneum*
 - D. Pneumococci
 - E. *Proteus* species
8. With skin disease
- A. Herpes zoster
 - B. Incontinentia pigmenti (Bloch-Sulzberger syndrome)
 - C. Lichen planus
 - D. Molluscum contagiosum
 - E. Palmoplantar keratosis

- F. Pityriasis rubra pilaris
- G. Psoriasis

Arffa RC. *Grayson's diseases of the cornea*, 3rd ed. St. Louis: Mosby-Year Book, 1991.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Pannus (Superficial Vascular Invasion Confined to a Segment of the Cornea or Extending Around the Entire Limbus)

1. *Acne rosacea
2. *Allergic marginal infiltration
3. *Anoxic contact lens overwear syndrome
4. Ariboflavinosis keratopathy
5. *Contact lens usage
6. Deerfly fever (tularemia)
7. Degenerative-blind degenerative eyes; often associated with bullous keratopathy
8. Dermatitis herpetiformis (Duhring-Brocq disease)
9. Drugs including the following:

benoxinate	ibuprofen	proparacaine
benzalkonium	idoxuridine	silicone
butacaine	IDU	tetracaine
chlorhexidine	iodine solution	thimerosal
cocaine	oxyphenbutazone	trifluridine
dibucaine	phenacaine	urokinase(?)
dyclonine	phenylbutazone	vidarabine
F3T	piperocaine	

10. Fuchs corneal dystrophy (degenerative pannus)
11. Glaucoma (degenerative pannus)
12. *Haemophilus influenzae*
13. Histiocytosis X (Hand-Schüller-Christian syndrome)
14. Hypoparathyroidism
15. Inclusion conjunctivitis in infants and adults (micropannus) (chlamydia)
16. Keratoconjunctivitis sicca
17. Leishmaniasis
18. Leprosy (Hansen disease)
19. Linear nevus sebaceous of Jadassohn
20. Lyell disease (toxic epidermal necrolysis or scalded skin syndrome)
21. Lymphopathia venereum
22. Molluscum contagiosum
23. Ocular cicatricial pemphigoid
24. Onchocerciasis (river blindness)
25. Papilloma (wart)
26. Pellagra (avitaminosis B₁₂)
27. Pemphigus foliaceus (Cazenave disease)
28. Phlyctenular keratoconjunctivitis (see p. 280)
29. Siemens disease (keratosis follicularis spinulosa decalvans)

30. *Staphylococcal keratoconjunctivitis (micropannus)
31. Stevens-Johnson syndrome (mucocutaneous ocular syndrome)
32. *Superior limbic keratoconjunctivitis (micropannus)
33. Terrien disease (senile marginal atrophy)
34. Trachoma
35. Tuberculosis
36. Vaccinia
37. Vernal conjunctivitis (micropannus)
38. Vitamin B₁₂ deficiency (Addison pernicious anemia syndrome)

Pannus (superficial invasion of blood vessels confined to segment of cornea or extending around limbus)

Corneal Opacity—Diffuse

1. Acromesomelic dysplasia
2. *Birth trauma
3. Cockayne syndrome
4. *Congenital hereditary endothelial dystrophy
5. Congenital hereditary stromal dystrophy
6. Cystinosis
7. Fabry syndrome
8. Fetal rubella effects
9. GM gangliosidosis type 1
10. Hurler syndrome
11. Infection
12. Maroteaux-Lamy syndrome
13. Morquio syndrome
14. Mucopolidosis III
15. Mucopolidosis IV
16. Multiple sulfatase deficiency
17. MPS VII
18. Pachyonychia congenita syndrome
19. Pena-Shokeir type II syndrome [cerebrooculofacial-skeletal (COFS) syndrome]
20. Rutherford syndrome
21. Scheie syndrome
22. *Sclerocornea
23. Seip syndrome
24. Sialidosis, Goldberg type
25. Trisomy syndrome
26. 18q syndrome

Isenberg SJ. *The eye in infancy*. Chicago: Year Book Medical, 1989.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Corneal Opacity—Localized, Congenital

1. Acromegaloid changes, cutis verticis gyrata, and corneal leukoma
2. Aniridia
3. Autosomal dominant colomba
4. Cataract microcornea syndrome
5. *Dermoid limbal, central, and ring
6. Fetal alcohol syndrome
7. Fetal rubella effects
8. Fetal transfusion syndrome
9. Fucosidosis
10. Group 13—trisomy phenotype
11. Keratoconus posticus circumscriptus
12. Meesman syndrome
13. Peters anomaly and short stature
14. Pily syndrome (ophthalmomandibulomelic dysplasia)

15. Radial aplasia, anterior chamber cleavage syndrome
16. Richner-Hanhart syndrome
17. Rieger syndrome
18. Trisomy syndrome
19. Waardenburg syndrome
20. Wedge-shaped stromal opacity
21. 4p syndrome
22. 11q syndrome
23. 18q syndrome

Isenberg SJ. *The eye in infancy*. Chicago: Year Book Medical, 1989.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Deep Corneal Stromal Deposits

1. *Cornea farinata
2. Deep filiform dystrophy
3. Deep punctiform dystrophy associated with ichthyosis
4. Fleck corneal dystrophy
5. Gold (chrysiasis)
6. Lattice corneal dystrophy
7. Macular corneal dystrophy
8. Polymorphic amyloid degeneration

Kincaid MC, et al. Ocular chrysiasis. *Arch Ophthalmol* 1982;100:1791.

Mannis MJ, et al. Polymorphic amyloid degeneration of the cornea. *Arch Ophthalmol* 1981;99:1217-1219.

Intracorneal Hemorrhage

1. Associated with intraocular surgery
2. Diseases of cornea, such as corneal ulcers and chemical burns
3. Microbial keratitis
4. Migration from subconjunctival hemorrhage
5. Mooren ulceration
6. Ocular trauma
7. Spontaneous in contact lens wearers

Hurwitz BS. Spontaneous intracorneal hemorrhage caused by aphakic contact lens wear. *Ann Ophthalmol* 1981;13:57.

Ormerod LD, Egan KM. Spontaneous hyphaema and corneal haemorrhage as complications of microbial keratitis. *Br J Ophthalmol* 1988;71:933.

Wagoner MD, et al. Intracorneal hematoma in Mooren ulceration. *Am J Ophthalmol* 2000;129:251-253.

Central Posterior Stromal Corneal Deposits

1. Bence Jones proteinuria
2. Dysproteinemia
3. Filiform corneal dystrophy
4. Immunoglobulin deposition
 - A. Abnormal gamma globulin
 - B. Benign monoclonal gammopathy

5. Multiple myeloma

Barr CC, et al. Corneal crystalline deposits associated with dysproteinemia. *Arch Ophthalmol* 1980;98:884-889.

Yassa NH, et al. Corneal immunoglobulin deposition in the posterior stroma. *Arch Ophthalmol* 1987;105:99-103.

Dellen

Dellen is characterized by shallow corneal excavation near the limbus, usually on the temporal side; the base of the lesion is hazy and dry.

1. Following the wearing of contact lens
2. In elderly persons—limbal vasosclerosis
3. Lagophthalmos
4. Lengthy administration of cocaine
5. Postcataract section
6. *Swelling of perilimbal tissues
 - A. Allergic conjunctival edema
 - B. Episcleritis
 - C. *Filtering bleb
 - D. Limbal tumor
 - E. *Postoperative advancement of rectus muscle
 - F. Postoperative retinal detachment
 - G. Pinguecula
 - H. Subconjunctival effusion or injection
7. With hemeralopia

Soong HK, Quigley HA. Dellen associated with filtering blebs. *Arch Ophthalmol* 1983;101:385-387.

Phlyctenular Keratoconjunctivitis

This condition is characterized by a localized conjunctival, limbal, or corneal nodule about 1 to 3 mm in size.

1. *Delayed hypersensitivity to bacterial protein, particularly tuberculoprotein and staphylococci; lymphopathia venereum and coccidioidomycosis may also be allergens
2. Malnutrition
3. Secondary infection of the conjunctiva, especially from *Staphylococcus aureus*, pneumococcus, Koch-Weeks bacillus, chlamydia, coccidioidomycosis, and gonorrhea
4. Systemic infection
 - A. Bang disease (Brucellosis)
 - B. Candidiasis
 - C. Neurodermatitis
 - D. Mikulicz-Radecki syndrome (dacryosialoadenopathy)
 - E. Trachoma
 - F. Sjögren syndrome (secretoinhibitor syndrome)

Newell FW. *Ophthalmology, principles and concepts*, 7th ed. St. Louis: CV Mosby, 1991.

Corneal Ring Lesion

1. Acanthamoebic keratitis
2. Associated with rheumatoid arthritis—inferior

3. Associated with Sjögren syndrome (secretoinhibitor syndrome)
4. *Capnocytophaga ochracea*
5. Double-ring formation—allergic keratitis
6. Marginal dystrophy—degenerative chronic corneal lesion with stromal thinning and intact epithelium
7. Marginal ulceration—secondary to massive granuloma of sclera or necrotizing nodular scleritis (see p. 237)
8. Mooren ulcer—deeply undermined central edges and chronic course with inflammation, painful
9. Ring abscess—rapidly destructive purulent lesion in the deepest parts of the cornea
10. Ring ulcer—see marginal corneal ulcers (p. 283-286)
11. Steroid use in furrow dystrophy
12. Terrien marginal degeneration—usually begins superiorly
13. Wegener granulomatosis (Wegener syndrome)

Daut PM, et al. Chronic exposure keratopathy complicating surgical correction of ptosis in patients with chronic progressive external ophthalmoplegia. *Am J Ophthalmol* 2000;130:519-521.

Heidemann DG, et al. Necrotizing keratitis caused by *Capnocytophaga ochracea*. *Am J Ophthalmol* 1988;105:655-660.

Theodore FH, et al. The diagnostic value of a ring infiltrate in acanthamoebic keratitis. *Ophthalmology* 1985;92:1471-1480.

Corneoscleral Keratitis

1. Boeck sarcoid (Schaumann syndrome)
2. Gout (hyperuricemia)
3. Leprosy (Hansen disease)
4. Infections (e.g., pseudomonas)
5. Malformations, such as in sclerocornea (see p. 301)
6. Sarcoma
7. Syphilis (acquired lues)
8. Trisomy 13 (trisomy D)
9. Tuberculosis
10. Wegener granulomatosis

Arffa RC. *Grayson's diseases of the cornea*, 3rd ed. St. Louis: Mosby-Year Book, 1991.

Central Corneal Ulcer

1. Bacterial origin
 - A. *Diplococcus pneumoniae* (pneumococcus)—infiltrated gray-white or yellow disc-shaped central ulcer typically associated with diffuse keratitis, severe iridocyclitis, and hypopyon; follows corneal abrasion; occurs especially in the presence of chronic dacryocystitis; enhanced by general debility
 - B. *Beta-hemolytic streptococcus* and other streptococcus species
 - C. *Pseudomonas aeruginosa* but may also have *Pseudomonas acidovorans*, *Pseudomonas stutzeri*, *Pseudomonas mallei*, and *Pseudomonas pseudomallei*—primary corneal involvement, rapid spread often to panophthalmitis, large hypopyon, thick, greenish pus; may be contaminant of eserine and fluorescein often is associated with contact use.

- D. *Escherichia coli*
 - E. *Moraxella liquefaciens* (diplococcus of Petit)—morphologically resembles diplobacillus of Morax-Axenfeld, which is never seen in central corneal ulcers
 - F. *Klebsiella pneumoniae*
 - G. *Proteus vulgaris*
 - H. Actinomyces
 - I. Tuberculous—secondary to conjunctival or uveal infections
 - J. *Serratia marcescens*—gram-negative coccobacillus
 - K. **Staphylococcus aureus*, *S. epidermidis*, and other *Staphylococcus* species
 - L. *Mima polymorpha*
 - M. Dysgonic fermenter-2
 - N. Others
2. Viral origin
 - A. *Herpes simplex virus
 - B. Herpes zoster
 - C. Vaccinia virus
 - D. Variola
 - E. Others
 3. Mycotic origin—follows corneal trauma, such as foreign bodies in the cornea or corneal abrasions caused by vegetable matter, or diseases, such as radiation keratitis, exposure keratitis, herpes zoster, and ocular pemphigus; chronic course; shallow crater; absent corneal vascularization; may follow treatment with antibiotics or, more likely, treatment with steroid-antibiotic combinations
 - A. *Absidia corymbifera*
 - B. **Aspergillus* species
 - C. *Blastomyces dermatitidis*
 - D. **Candida albicans*
 - E. *Cephalosporium* species
 - F. **Fusarium solani*
 - G. *Nocardia* species
 - H. Others
 4. Acquired immune deficiency syndrome (AIDS) related
 5. Atopic
 6. Basement membrane abnormalities as microcysts, evidence of map, dot fingerprints, or anterior stromal dystrophies, trauma history, other dystrophy
 7. Brittle cornea syndrome
 8. Chemical—latex keratitis, alkali/acid burn
 9. *Dry eyes, including Sjögren syndrome
 10. Exposure as lagophthalmos, lid abnormalities, inadequate blink, facial palsy, proptosis, thyroid disease
 11. Extrusion of anterior chamber intraocular lens
 12. Factitious
 13. Hypogammaglobulinemia
 14. Medicamentous as drops
 15. Neurotrophic
 16. Thermal/radiation burns
 17. Sjögren syndrome
 18. Soluble tyrosine aminotransferase (STAT) deficiency

Marginal Corneal Ulcers

1. Ring ulcers—often bilateral, circumcorneal injection, and continuous ring or confluent multiple lesions
 - A. Acute leukemia
 - B. Bacillary dysentery
 - C. Brucellosis (Bang disease)
 - D. *Coalescence of several marginal ulcers
 - E. Dengue fever
 - F. Gold poisoning
 - G. Gonococcal arthritis
 - H. Following penetrating keratoplasty
 - I. Hookworm infestation
 - J. Influenza
 - K. Last stages of trachoma, secondary to small circumferential pannus
 - L. *Mooren ulcer
 - M. Polyarteritis nodosa (Kussmaul disease)
 - N. Porphyria
 - O. *Rheumatoid arthritis—Sjögren syndrome (secretion inhibitor syndrome)
 - P. Scleroderma (progressive systemic sclerosis)
 - Q. Systemic lupus erythematosus (Kaposi-Libman-Sacks syndrome)
 - R. Tuberculosis
 - S. Wegener granulomatosis (Wegener syndrome)
2. Simple marginal ulcers—superficial crescentic gray-colored ulcer
 - A. Infection—due to *Staphylococcus* organisms, Koch-Weeks bacillus, pseudomonas, diplobacillus of Morax-Axenfeld; usually chronic
 - B. Toxic or allergic including antiinflammatory drugs
 - C. Systemic disturbances, such as
 1. Acute upper respiratory infection
 2. Bacillary dysentery
 3. Barre-Lieou syndrome (posterior cervical sympathetic syndrome)
 4. Brucellosis (Bang disease)
 5. Crohn disease (granulomatous ileocolitis)
 6. Gout (hyperuricemia)
 7. Influenza
 8. Lupus erythematosus (Kaposi-Libman-Sacks syndrome)
 9. Polyarteritis nodosa (Kussmaul disease)

10. Postvaccinial ocular syndrome
11. *Rheumatoid arthritis–inferior cornea

Frueh BE, et al. Mycobacterium szulgai keratitis. *Arch Ophthalmol* 2000;118:1123-1124.

Diagnostic table

Marginal corneal ulcers

	Staphylococcus Infection	Gout	Lupus Erythematosus	Rheumatoid Arthritis	Polyarteritis Nodosa	Acute Leukemia	Mooren Ulcer
History							
1. All ages	U						
2. Associated with diabetes	S						
3. Hereditary		U	R				
4. Malignant blood disorder							
5. More in females			U	U			
6. More in males					U		
7. Occurs in children						S	
8. Occurs during second to third decades					U		
9. Occurs during third to fourth decades			U				
10. Occurs during fourth to fifth decades				U			
Physical Findings							
1. Anterior uveitis	S	R	S	S	S		S
2. Band keratopathy				S			
3. Blepharitis	U			S			
4. Cataract				S	R		S
5. Chemosis of conjunctiva	S			S			
6. Conjunctival phlyctenules	U		S				
7. Conjunctivitis	U	U	S	U	S		U
8. Corneal epithelial keratitis	U		S	U	S		U
9. Corneal opacity				S			U
10. Corneal perforation	U			S			S
11. Corneal vascularization	S		S				S
12. Cotton-wool spots			U	R	S	S	
13. Dacryocystitis	S						
14. Ectropion	S						
15. Endophthalmitis	S						
16. Entropion	S						
17. Episcleritis		S	S				
18. Exophthalmos					R		
19. Hordeolum	U						
20. Hypopyon	S			S		S	
21. Keratoconjunctivitis sicca			S	U	S		
22. Lid edema	S				S		S
23. Macular edema						S	S
24. Madarosis	S						
25. Noncalcific band keratopathy		S					
26. Nystagmus			R				
27. Ocular motor disturbances		R	R	S	S	S	
28. Optic nerve atrophy			S		R	S	
29. Optic neuritis			S			S	
30. Papilledema			U		R	S	
31. Ptosis	R		R		R		
32. Retinal detachment						S	
33. Retinal hemorrhage			U		U	U	

34. Retinal vein occlusion			S		S		
35. Scleritis		S	S	S	S	S	S
36. Scleromalacia perforans				S			
37. Subconjunctival nodules					S		
38. Tenonitis		S		S	S		
39. Visual field defects			S		R		
40. Vitreous opacities						S	

Laboratory Data

1. Angiography—retinal					U		
2. Autoantibodies to nuclear and cytoplasmic constituents			U				
3. Blood tests							
Eosinophilia				S			
Sedimentation rate elevated				U	U		S
Leukocytic count elevated					U	U	
Neutropenia				U			
Normocytic hypochromic anemia				U	U	U	
Thrombocytopenia				S		U	
4. Conjunctival/corneal exudates for culture/gram stain	U						
5. Diminished serum complement levels			S				
6. Electroretinogram abnormalities			U				
7. High uric acid urine/blood		U					
8. Joint changes—roentgenogram				U			
9. Latex agglutination test—rheumatoid factor				U			
10. Lupus erythematosus cell phenomenon			S				
11. Skeletal changes—roentgenogram						U	

R = rarely; S = sometimes; and U = usually.

Descemet Membrane Folds (Usually Following Hypotony; see p. 325)

1. *Trauma, such as that due to cataract or corneal surgery
2. Mechanical cause, such as firm, prolonged ocular bandaging or phthisis bulbi
3. Inflammatory condition, such as that following interstitial or herpes simplex keratitis
4. Diabetes (8%-33%)
5. Ochronosis
6. Toxic
 - A. Quinone and hydroquinone—vertical folds
 - B. Formaldehyde 26%
 - C. Experimental cold injury to cornea
 - D. Digitoxin
7. Idiopathic

Angell LK, et al. Visual prognosis in patients with ruptures in Descemet's membrane due to forceps injuries. *Arch Ophthalmol* 1981;99:2137.

Descemet Membrane Tears (Haab Striae)

1. *Acute hydrops of the cornea, such as that due to keratoconus (see p. 288)
2. *Buphthalmos (e.g., from congenital glaucoma)
3. Conical cornea
4. Myopia with marked anteroposterior diameter
5. *Trauma, such as birth injury or contusion

Angell LK, et al. Visual prognosis in patients with ruptures in Descemet's membrane due to forceps injuries. *Arch Ophthalmol* 1981;99:2137.

Cibis GW, Tripathi RC. The differential diagnosis of Descemet's tears (Haab's striae) and posterior polymorphous dystrophy bands. *Ophthalmology* 1982;89:614.

Descemet Membrane Thickening

1. *Central cornea guttata
 - A. Primary
 - B. Secondary cornea guttata
 1. *Congenital luetic interstitial keratitis
 2. Endothelial cell insult
 - a. Breaks in Descemet membrane, including scrolls of Descemet membrane in healed syphilitic interstitial keratitis
 - b. Chandler syndrome (iridocorneal endothelial syndrome)
 - c. Cogan-Reese syndrome (iris-nevus syndrome)
 - d. *Corneal dystrophy, including Fuchs syndrome
 - e. Posterior keratoconus syndrome
 - C. Transient cornea guttata associated with short-term episodes of iritis and corneal inflammation
2. Peripheral Hassall Henle warts

Alvarado JA, et al. Pathogenesis of Chandler's syndrome, essential iris atrophy, and the Cogan-Reese syndrome. *Invest Ophthalmol Vis Sci* 1986;27:873-882.

Rodrigues MM, et al. Fuchs' corneal dystrophy: a clinicopathologic study of the variation in corneal edema. *Ophthalmology* 1986;98:789-796.

Scattergood KD, et al. Scrolls of Descemet's membrane in healed syphilitic interstitial keratitis. *Ophthalmology* 1983;90:1518-1523.

Retrocorneal Pigmentation

1. Endothelial phagocytosis of free melanin pigment, such as Krukenberg spindle
2. Iris melanocytes, iris pigment epithelial cells, or pigment containing macrophages in the posterior corneal surface; can follow operative or accidental ocular trauma
3. Status post hyphema

Snip RC, et al. Posterior corneal pigmentation and fibrous proliferation by iris melanocytes. *Arch Ophthalmol* 1981;99:1232.

Low Endothelial Cell Count (Diminished Number of Corneal Endothelial Cells)

1. Acute and chronic uveitis
2. *Corneal endothelial dystrophy
3. Following cataract or other intraocular surgery
4. Cornea guttata, endothelial dystrophy, and Fuch dystrophy

Olsen T. Changes in the corneal endothelium after acute anterior uveitis as seen with the specular microscope. *Acta Ophthalmol Scand* 1980;58:250.

Murrell WJ, et al. The corneal endothelium and central corneal thickness in pigmentary dispersion syndrome. *Arch Ophthalmol* 1986;104:845-846.

Snail Tracks of Cornea

This condition involves irregular, discontinuous grayish white streaks or patches, usually orientated horizontally and obliquely on the corneal endothelium.

1. Corneal buttons preserved in corneal storage medium
2. Following ocular surgery
3. Ocular trauma

Alfonso E, et al. Snail tracks of the corneal endothelium. *Ophthalmology* 1986;99:344-349.

Keratoconus (Conical Cornea)

Keratoconus is characterized by noninflammatory ectasia of the cornea in its axial part, with considerable visual impairment because of development of a high degree of irregular myopic astigmatism. Keratoconus may be associated with

1. Acute hydrops of the cornea
2. Alagille syndrome
3. Anetoderma and bilateral subcapsular cataracts
4. Angelman syndrome
5. Aniridia
6. Apert syndrome (acro dysplasia)
7. Asthma, hay fever
8. *Atopic dermatitis, keratosis plantaris, and palmaris
9. Autographism
10. Avellino dystrophy

11. Blue sclerotics, including van der Hoeve syndrome (osteogenesis imperfecta) (see blue sclera, p. 231)
12. Chandler syndrome (iridocorneal endothelial syndrome)
13. Congenital hip dysplasia
14. Wearing of contact lens
15. Crouzon syndrome
16. Deep filiform corneal dystrophy
17. Ehlers-Danlos syndrome (fibrodysplasia elastica generalisata, cutis hyperelastica)
18. Essential iris atrophy
19. Facial hemiatrophy
20. *Familial
21. False chordae tendineae of left ventricle
22. Fleck corneal dystrophy
23. Focal dermal hypoplasia (Goltz syndrome)
24. Fuchs corneal endothelial dystrophy
25. Grönblad-Strandberg syndrome (pseudoxanthoma elasticum)
26. Hereditary history
27. Hyperextensible joints and mitral valve prolapse
28. Hyperornithemia
29. Infantile tapetoretinal degeneration of Leber
30. Iridocorneal dysgenesis
31. Iridoschisis
32. Joint hypermobility
33. Kurz syndrome
34. Laurence-Moon-Biedl syndrome (retinitis-polydactyly-adiposogenital syndrome)
35. Little syndrome (nail-patella syndrome)
36. Lymphogranuloma venereum
37. Marfan syndrome (arachnodactyly dystrophia mesodermalis congenita)
38. Measles retinopathy
39. Microcornea
40. Mongolism (Down syndrome)
41. Mulvihill-Smith syndrome
42. Neurocutaneous angiomatosis
43. Neurodermatitis
44. Neurofibromatosis (von Recklinghausen syndrome)
45. Noonan syndrome (male Turner syndrome)
46. Ocular hypertension
47. Pellucid marginal corneal degeneration
48. Posterior ectasia following laser in situ keratomileusis (generally if stromal bed less than 250 μ)
49. Posterior lenticonus
50. Posterior polymorphous dystrophy
51. Retinal disinsertion syndrome
52. Retinitis pigmentosa
53. Retinopathy of prematurity
54. Rieger syndrome
55. Tourette disease
56. Thalassemia syndrome
57. *Trauma, such as rubbing of eyes, birth injury, or contusion

58. Vernal catarrh
59. Vernal conjunctivitis
60. 18q syndrome

Cornea Plana (Decreased Corneal Curvature)

1. Isolated
2. Marfan syndrome
3. *Sclerocornea

Isenberg SJ. *The eye in infancy*. Chicago: Year Book Medical, 1989.

Staphyloma of Cornea (Corneal Stretching with Incarceration of Uveal Tissue)

1. Advanced keratoconus (see p. 288)
2. Avitaminosis A with keratomalacia
3. Congenital
4. *Following corneal ulcer (see p. 281 , 283), neuroparalytic keratitis, corneal leprosy, and severe corneal injury
5. Mucoviscidosis (cystic fibrosis of the pancreas)

Arffa RC. *Grayson's diseases of the cornea*, 3rd ed. St. Louis: Mosby-Year Book, 1991.

Whorl-Like Corneal Lesions

1. *Amiodarone toxicity
2. Amodiaquine hydrochloride administration
3. Atabrine administration
4. *Chloroquine and hydroxychloroquine toxicity
5. Chlorpromazine administration
6. *Fabry disease (diffuse angiokeratosis)
7. Incontinentia pigmenti
8. Indomethacin administration
9. Meperidine hydrochloride
10. Quinacrine administration
11. Urethan administration

Arffa RC. *Grayson's diseases of the cornea*, 3rd ed. St. Louis: Mosby-Year Book, 1991.

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

Ferreira RC, et al. Corneal abnormalities associated with incontinentia pigmenti. *Am J Ophthalmol* 1997;123:549-551.

Corneal Dermoids

These congenital corneal limbal lesions grow slowly. Tumors are yellowish, elevated, and variable in size; they consist of fibrofatty tissue covered by epidermal rather than by conjunctival epithelium and may contain ectodermal derivatives such as hair follicles, sebaceous glands, and sweat glands. Trauma, irritation, and puberty hasten their growth.

1. Bloch-Sulzberger syndrome (incontinentia pigmenti)
2. Cri-du-chat syndrome (cat-cry syndrome)
3. Duane retraction syndrome
4. Multiple dermoids of the cornea associated with miliary aneurysms of the retina
5. Neurocutaneous syndrome (ectomesodermal dysgenesis)
6. Nevus sebaceous of Jadassohn (linear nevus sebaceous of Jadassohn)
7. *Oculoauriculovertebral dysplasia (Goldenhar syndrome)
8. Organoid nevus syndrome
9. Ring dermoid syndrome—autosomal dominant
10. Sporadic
11. Thalidomide teratogenicities

Diagnostic Table

	Goldenhar Syndrome	Cri-du-chat Syndrome	Duane Retraction Syndrome	Bloch-Sulzberger Syndrome	Miliary Aneurysms of Retina	Thalidomide Teratogenicities	Neurocutaneous Syndrome	Nevus Sebaceous of Jadassohn Syndrome
History								
1. Drug ingestion during gestation						U		
2. Greater in females			U	U				
3. Greater left eye			U					
4. Hereditary	R	U	R	U	S		U	
5. Low birth weight		U						
6. Present at birth	U					U		U
7. Unilateral	S		U					
Physical Findings								
1. Absence/restricted adduction	S		U					
2. Antimongoloid palpebral fissures (temporal canthus lower)			U					S
3. Bulbar dermoid	U		S					S
4. Cataract	S	R		S			S	
5. Coloboma of lids	U							U
6. Corneal vascularization								S
7. Dacryocystitis	S							
8. Deficiency of tears		U						
9. Epicanthal folds		U

Wilson LA. *External diseases of the eye*. New York: Harper & Row, 1979.

Corneal Disease Associated with Lenticular Problems

1. Aberfeld syndrome (ocular and facial abnormalities syndrome)—cataracts, microcornea
2. Acrodermatitis chronica atrophicans—keratomalacia, corneal opacification, cataracts
3. Addison syndrome (idiopathic hypoparathyroidism)—keratoconjunctivitis, corneal ulcers, keratitic moniliasis, cataracts
4. Amiodarone—corneal deposits, anterior subcapsular cataracts
5. Amyloidosis—amyloid deposits of cornea, corneal dystrophy, pseudopodia lentis
6. Anderson-Warburg syndrome (oligophrenia-microphthalmos syndrome)—corneal opacification and lenticular destruction with a mass visible behind the lens
7. Andosky syndrome (atopic cataract syndrome)—atopic keratoconjunctivitis, keratoconus, uveitis, subcapsular cataract
8. Aniridia—microcornea and subluxated lenses
9. Anterior chamber cleavage syndrome (Reese-Ellsworth syndrome)—corneal opacities, anterior pole cataract
10. Anterior segment ischemia syndrome—corneal edema, corneal ulceration, cataract
11. Apert syndrome (absent digits cranial defects syndrome)—exposure keratitis, cataracts, ectopia lentis
12. Arteriovenous fistula (arteriovenous aneurysm)—bullous keratopathy, cataract
13. Aspergillosis—corneal ulcer, keratitis, cataract
14. *Atopic disease (atopic eczema, Besnier prurigo)—keratoconjunctivitis, keratoconus, cataract
15. Autosomal dominant—cataracts and microcornea
16. Avitaminosis C (scurvy)—keratitis, corneal ulcer, cataract
17. Chickenpox (varicella)—corneal ulcer, corneal opacity, keratitis, cataract
18. Chlorpromazine—corneal and lens opacities
19. Cholera—keratomalacia, cataract
20. Chromosome partial deletion (short-arm) syndrome—cataracts, corneal opacities

21. Cockayne syndrome (Mickey Mouse syndrome)—cataracts, band keratopathy, corneal dystrophy
22. Congenital spherocytic anemia (congenital hemolytic jaundice)—congenital cataract, ring-shaped pigmentary corneal deposits
23. Crouzon syndrome (Parrot-head syndrome)—exposure keratitis, cataract, corneal dystrophy
24. Cryptophthalmia syndrome (cryptophthalmos-syndactyly syndrome)—cornea differentiated from sclera, lens absence to hypoplasia, dislocation, and calcification
25. Cytomegalic inclusion disease (cytomegalovirus)—cataract, corneal opacities
26. Darier-White syndrome (keratosis follicularis)—keratosis, corneal subepithelial infiltrations, corneal ulceration, cataract
27. Dermatitis herpetiformis (Dühring-Broca disease)—corneal vascularization, cataract
28. Diphtheria-keratitis, corneal ulcer, cataract
29. Ehlers-Danlos syndrome (fibrodysplasia elastica generalisata)—microcornea, keratoconus, lens subluxation
30. Electrical injury—corneal perforation, necrosis of cornea, anterior or posterior subcapsular cataracts
31. Exfoliation syndrome (capsular exfoliation syndrome)—cataract, dislocated lens, corneal dystrophy, lens capsule exfoliation
32. Folling syndrome (phenylketonuria)—corneal opacities, cataracts
33. *Fuchs syndrome (I) (heterochromic cyclitis syndrome)—secondary cataract, edematous corneal epithelium
34. Goldscheider syndrome (epidermolysis bullosa)—bullous keratitis, corneal subepithelial blisters to corneal perforation, cataract
35. Gorlin-Goltz syndrome (multiple basal cell nevi syndrome)—cataract, corneal leukoma
36. Grönblad-Strandberg syndrome (elastorrhexis)—keratoconus, cataract, subluxation of lens
37. Hallermann-Streiff syndrome (oculomandibulofacial dyscephaly)—cataracts, microcornea
38. Hanhart syndrome (recessive keratosis palmoplantaris)—dendritic corneal lesions, keratitis, corneal haze, corneal neovascularization, cataract
39. Heerfordt syndrome (uveoparotid fever)—band keratopathy, keratoconjunctivitis, cataract
40. Hereditary ectodermal dysplasia syndrome (Siemens syndrome)—keratosis, corneal erosions, corneal dystrophy, cataract, lens luxation
41. *Herpes simplex—keratitis, corneal ulcer, cataract
42. *Herpes zoster—keratitis, corneal ulcer, cataract
43. Histiocytosis X (Hand-Schüller-Christian syndrome)—pannus, bullous keratopathy, corneal ulcer, cataract
44. Hodgkin disease—keratitis, cataract
45. Homocystinuria syndrome—dislocated lens, cataract, keratitis
46. Hutchinson-Gilford syndrome (progeria)—cataract, microcornea
47. Hydatid cyst (echinococcosis)—keratitis, corneal abscess, cataract
48. Hypervitaminosis D—band keratopathy, cataract
49. Hypoparathyroidism—keratitis, cataract
50. Hypophosphatasia (phosphoethanolaminuria)—cataract, corneal subepithelial calcifications
51. Influenza—keratitis, cataract

52. Jadassohn-type anetodermal—keratoconus, cataract
53. Jadassohn-Lewandowsky syndrome (pachyonychia congenita)—corneal dyskeratosis, cataract
54. *Juvenile rheumatoid arthritis (Still disease)—band keratopathy, cataract
55. Kussmaul disease (periarteritis nodosa)—corneal ulcer, cataract
56. Kyrle disease (hyperkeratosis penetrans)—subcapsular cataracts, subepithelial corneal opacities
57. Leri syndrome (carpal tunnel syndrome)—corneal clouding, cataract
58. Listerellosis (listeriosis)—keratitis, corneal abscess and ulcer, cataract
59. Little syndrome (nail-patella syndrome)—microcornea, keratoconus, cataract
60. Lowe syndrome (oculocerebrorenal syndrome)—cloudy cornea, cataracts, megalocornea, corneal dystrophy
61. Malaria—keratitis, cataract
62. Marchesani syndrome (brachymorphia with spherophakia)—lentic ulnar myopia, ectopia lentis, megalocornea, corneal opacity
63. Marfan syndrome (arachnodactyly-dystrophia-mesodermalis congenita)—lens dislocation, cataract, megalocornea, lenticular myopia
64. Matsoukas syndrome (oculocerebroarticuloskeletal syndromes)—cataract, corneal sclerosis
65. Meckel syndrome (dysencephalia splanchnocystica syndrome)—sclerocornea, microcornea, cataract
66. Morbilli (rubeola, measles)—corneal ulcer, cataract
67. Mucopolipidosis IV (ML IV)—corneal clouding, cataract
68. Nematode ophthalmia syndrome (toxocariasis)—cataract, larvae present in the cornea
69. Neurodermatitis (lichen simplex chronicus)—keratoconjunctivitis, atopic cataracts, keratoconus
70. Ocular toxoplasmosis (toxoplasmosis)—keratitis, cataract
71. Oculodental syndrome (Peter syndrome)—macrocornea, opacities of the corneal margin, ectopic lentis, corneoscleral staphyloma
72. O'Donnell-Pappas syndrome—presenile cataract, peripheral corneal pannus
73. Paget syndrome (osteitis deformans)—corneal ring opacities, cataract
74. Passow syndrome (status dysraphicus syndrome)—neuroparalytic keratitis, zonular cataract
75. Pemphigus foliaceus (Cazenave disease)—pannus, corneal infiltration, cataract
76. Pigmentary ocular dispersion syndrome (pigmentary glaucoma)—Krukenberg spindle, equatorial pigmentation of lens capsule
77. Pseudohypoparathyroidism (Seabright-Bantan syndrome)—punctate cataracts, keratitis
78. Radiation—corneal ulcer, punctate keratitis, cataracts, exfoliation of lens capsule
79. Refsum syndrome (phytanic acid oxidase deficiency)—corneal opacities, cataracts
80. Relapsing polychondritis—corneal ulcer, cataracts, keratoconjunctivitis sicca
81. Retinal disinsertion syndrome—lens subluxation, keratoconus
82. Retinopathy of prematurity—cataracts, corneal opacification
83. Rieger syndrome (dysgenesis mesodermalis corneae et irides)—microcornea, corneal opacities in Descemet membrane, dislocated lens
84. Romberg syndrome (facial hemiatrophy)—neuroparalytic keratitis, cataracts
85. Rubella syndrome (German measles)—corneal haziness, cataracts, microcornea
86. Sabin-Feldman syndrome—posterior lenticonus, microcornea
87. Sanfilippo-Good syndrome (MPS III)—deposits in cornea and lens

88. Schafer syndrome (keratosis palmoplantaris syndrome)—lesions in the lower portion of the cornea, cataract
89. Schaumann syndrome (sarcoidosis syndrome)—keratitis sicca, band-shaped keratitis, complicated cataract
90. Scheie syndrome (MPS IS)—diffuse haze to marked corneal clouding, cataracts
91. Stannus cerebellar syndrome—corneal vascularization, corneal opacities, cataracts
92. Stevens-Johnson syndrome (erythema multiforme exudativum)—keratitis, corneal ulcers, cataracts, pannus
93. Stickler syndrome (hereditary progressive arthroophthalmopathy)—keratopathy, cataracts
94. Thioridazine—corneal and lens opacities
95. Toxic lens syndrome—pigment precipitation on the surface of an intraocular lens, chronic uveitis
96. Trisomy syndrome—corneal and lens opacities
97. Turner syndrome (gonadal dysgenesis)—corneal nebulae, cataracts
98. Ultraviolet radiation—band keratopathy, keratitis, discoloring of lens
99. van Bogaert-Scherer-Epstein syndrome (familial hypercholesterolemia syndrome)—lipid keratopathy, cataract, juvenile corneal arcus
100. von Recklinghausen syndrome (neurofibromatosis)—nodular swelling of corneal nerves, cataracts
101. Waardenburg syndrome (intercoloiridodermatoauditive dysplasia)—microcornea, cornea plana, lenticonus
102. Wagner syndrome (hereditary hyaloideoretinal degeneration and palatoschisis)—corneal degeneration, including band-shaped keratopathy, cataracts
103. Ward syndrome (nevus jaw cyst syndrome)—congenital cataracts, congenital corneal opacities
104. Wegener syndrome (Wegener granulomatosis)—corneal ulcer, corneal abscess, cataract
105. Weil disease (leptospirosis)—keratitis, cataract
106. Werner syndrome (progeria of adults)—juvenile cataracts, bullous keratitis, trophic corneal defects
107. Yersiniosis—corneal ulcer, cataract
108. Zellweger syndrome (cerebrohepatorenal syndrome of Zellweger)—corneal opacities, cataract

Corneal Disease Associated with Retinal Problems

1. Abdominal typhus (enteric fever)—corneal ulcer, retinal detachment, central retinal artery emboli
2. *Acanthamoeba*—keratitis, pannus, corneal ring abscess, retinal perivasculitis
3. African eyeworm disease—keratitis, central retinal artery occlusion, macular hemorrhages
4. Amyloidosis—amyloid corneal deposits, corneal dystrophy, retinal hemorrhages
5. Anderson-Warburg syndrome (oligophrenia-microphthalmos syndrome)—corneal opacification, malformed retina with retina pseudotumors

6. Angioedema (hives)—central serous retinopathy, corneal edema
7. Anterior segment ischemia syndrome—corneal edema midperiphery retinal hemorrhages
8. Apert syndrome (acrodysplasia)—exposure keratitis, retinal detachment
9. Arteriovenous fistula—bullous keratopathy, retinal hemorrhages
10. Aspergillosis—corneal ulcer, keratitis, retinal hemorrhages, retinal detachment
11. Atopic dermatitis—keratoconus and retinal detachment
12. Avitaminosis C—retinal hemorrhages, keratitis, corneal ulcer
13. *Bacillus cereus*—ring abscess of cornea, necrosis of retina
14. Bang disease (brucellosis)—keratitis, chorioretinitis, macular edema
15. Behçet syndrome (dermatostomata-ophthalmic syndrome)—keratitis, posterior corneal abscess, retinal vascular changes
16. Bietti disease (Bietti marginal crystalline dystrophy)—marginal corneal dystrophy, retinitis punctate albescens
17. Candidiasis—keratitis, corneal ulcer, retinal atrophy, retinal detachment
18. Carotid artery syndrome—corneal ulcer, loss of corneal sensation, retinal edema, engorgement of retinal veins
19. Chickenpox (varicella)—corneal ulcer, corneal opacity, retinitis, hemorrhagic retinopathy
20. *Chloroquine—corneal epithelial pigmentation, macular lesions
21. Chronic granulomatous disease of childhood—keratitis, destructive chorioretinal lesions
22. Cockayne syndrome (dwarfism with retinal atrophy and deafness)—pigmentary degeneration, band keratopathy, corneal dystrophy
23. Crohn disease (granulomatous ileocolitis)—marginal corneal ulcers, keratitis, macular edema, macular hemorrhages
24. Cryoglobulinemia—deep corneal opacities, venous stasis
25. Cystinosis (aminoaciduria)—crystals in cornea and pigment in retina
26. Dengue fever—keratitis, corneal ulcer, retinal hemorrhages
27. Diffuse keratoses syndrome—corneal nodular thickening in the stroma worse in fall, retinal phlebitis
28. Diphtheria—keratitis, corneal ulcer, central artery occlusion
29. Disseminated lupus erythematosus (Kaposi-Libman-Sacks syndrome)—keratitis, keratoconjunctivitis sicca, corneal ulcer, central retinal vein occlusion, retinal detachment
30. Ehlers-Danlos syndrome (cutis hyperelastica)—keratoconus and retinitis pigmentosa
31. Electrical injury—corneal perforation, retinal edema, retinal hemorrhages, pigmentary degeneration, retinal holes, dilatation of retinal veins
32. Fabry disease (diffuse angiokeratosis)—whorl-like changes in cornea, central retinal artery occlusion, tortuosity of retinal vessels
33. Goldscheider syndrome (epidermolysis bullosa)—bullous keratitis with opacities, retinal detachment
34. Gronblad-Strandberg syndrome (systemic elastodystrophy)—angioid streaks of the retina, macular hemorrhages, retinal detachment, keratoconus
35. Hamman-Rich syndrome (alveolar capillary block syndrome)—keratomalacia ischemic retinopathy, cystic macular changes
36. Heerfordt syndrome (uveoparotid fever)—band keratopathy, retinal vasculitis
37. Hennebert syndrome (luetec otitic nystagmus syndrome)—interstitial keratitis, disseminated syphilitic chorioretinitis
38. Histiocytosis X (Hand-Schüller-Christian syndrome)—retinal hemorrhage, retinal detachment, bullous keratopathy, corneal ulcer, pannus

39. Hodgkin disease—keratitis, retinal hemorrhages
40. Hollenhorst syndrome (chorioretinal infarction syndrome)—hazy cornea, serous retinal detachment, pigmentary retinopathy
41. Hunter syndrome (MPS II)—splitting or absence of peripheral Bowman membrane, stromal haze, pigmentary retinal degeneration, narrowed retinal vessels
42. Hurler-Scheie syndrome (MPS IH-S)—corneal clouding, pigmentary retinopathy
43. Hurler syndrome (gargoylism)—diffuse corneal haziness, retinal pigmentary changes, megalocornea, retinal detachment
44. Hydatid cyst (echinococcosis)—keratitis, abscess of cornea, retinal detachment, retinal hemorrhages
45. Hyperlipoproteinemia—arcus juvenilis, lipemia retinalis, xanthomata of retina
46. Hyperparathyroidism—band keratopathy, vascular engorgement of retina
47. Hypovitaminosis A—keratomalacia with perforation, corneal opacity, retinal degeneration
48. Idiopathic hypercalcemia (blue-diaper syndrome)—band keratopathy, optic atrophy, papilledema
49. Indomethacin—corneal deposits, reduced retinal sensitivity
50. Influenza—keratitis, retinal hemorrhage
51. Japanese River fever (typhus)—keratitis, retinal hemorrhages
52. Juvenile rheumatoid arthritis (Still disease)—band keratopathy, macular edema
53. Kahler disease (multiple myeloma)—crystalline deposits of cornea, central retinal artery occlusion, retinal microaneurysms
54. Kussmaul disease (periarteritis nodosa)—retinal detachment, pseudoretinitis pigmentosa, corneal ulcer
55. Leber tapetoretinal dystrophy syndrome (retinal aplasia)—keratoconus, salt-and-pepper or “bone corpuscle” pigmentation, yellowish-brown or gray macular lesions
56. Lubarsch-Pick syndrome (primary amyloidosis)—amyloid corneal deposits, retinal hemorrhages
57. Lymphogranuloma venereum disease (Nicolas-Favre disease)—keratitis, pannus, corneal ulcer, keratoconus, tortuosity of retinal vessels, retinal hemorrhages
58. Marfan syndrome (arachnodactyly dystrophia mesodermalis congenita)—keratoconus, retinitis pigmentosa
59. Meckel syndrome (dysencephalia splanchnocystica syndrome)—sclerocornea, microcornea, retinal dysplasia
60. Meningococemia—keratitis, retinal endophlebitis
61. Mikulicz-Radeski syndrome (dacryosialoadenopathy)—keratoconjunctivitis, retinal candlewax spots
62. ML IV (mucopolipidosis IV)—corneal clouding, corneal opacities, retinal atrophy
63. Morbilli (measles-rubeola)—keratitis, corneal ulcer, pigmentary retinopathy, central retinal artery occlusion
64. Mucormycosis (phycomycosis)—corneal ulcer, striate keratopathy, retinitis, central retinal artery thrombosis
65. Mycosis fungoides syndrome (malignant cutaneous reticulosis syndrome)—keratoconjunctivitis, retinal edema, retinal hemorrhage
66. Myotonic dystrophy syndrome—corneal epithelial dystrophy, loss of corneal sensitivity, tapetoretinal degeneration, macular red spot, macular degeneration, chorioretinitis
67. Neurofibromatosis (von Recklinghausen syndrome)—nodular swelling nerves, hamartoma of retina
68. Norrie disease (atrophia oculi congenita)—malformation of sensory cells of retina, corneal nebulae

69. Oculodental syndrome (Peter syndrome)—corneoscleral staphyloma, megalocornea, corneal marginal opacities, macular pigmentation
70. Onchocerciasis syndrome—punctate keratitis, sclerosing keratitis, chorioretinitis, retinal degeneration
71. Paget syndrome (osteitis deformans)—corneal ring opacities, retinal hemorrhages, pigmentary retinopathy, macular changes resembling Kuhnt-Junius degeneration
72. Phenothiazine—epithelial and endothelial pigment, retinal pigmentation
73. Pierre Robin syndrome (micrognathia-glossoptosis)—retinal disinsertion, megalocornea
74. Plasma lecithin (cholesterol acyltransferase deficiency)—corneal stromal opacities, retinal hemorrhages
75. Porphyria cutanea tarda—keratitis, retinal hemorrhages, cotton-wool spots, macular edema
76. Postvaccinal ocular syndrome—corneal vesicles, and marginal ulcers, chorioretinitis, central serous retinopathy, central retinal vein thrombosis
77. Progressive systemic sclerosis—marginal corneal ulcers with cicatrization, cotton-wool spots, retinal hemorrhages
78. Radiation—corneal ulcer, punctate keratitis, keratoconjunctivitis sicca, retinal hemorrhage, macular degeneration, macular holes with vascularization
79. Refsum syndrome (phytanic acid oxidase deficiency)—band keratopathy, retinitis pigmentosa
80. Relapsing fever—interstitial keratitis, retinal hemorrhage
81. Relapsing polychondritis—corneal ulcer, retinal detachment, retinal artery thrombosis, keratoconjunctivitis sicca
82. Renal failure—cotton-wool spots, band keratopathy
83. Rendu-Osler syndrome (hereditary hemorrhagic telangiectasis)—intermittent filamentary keratitis, small retinal angiomas, retinal hemorrhages
84. Retinal disinsertion syndrome—bilateral keratoconus, retinal detachment
85. Retinoblastoma—corneal tumor, retinal neovascularization
86. Rothmund syndrome (telangiectasia-pigmentation cataract syndrome)—corneal lesions, retinal hyperpigmentation
87. Rubella syndrome (Gregg syndrome)—microcornea, pigmentary retinal changes
88. Sabin-Feldman syndrome—microcornea, chorioretinitis or atrophic degenerative chorioretinal changes
89. Sanfilippo-Good syndrome (MPS III)—slight narrowing of retinal vessels, acid mucopolysaccharide deposits in cornea
90. Schaumann syndrome (sarcoidosis syndrome)—mutton fat keratitic precipitates, keratitis sicca, band-shaped keratitis, inflammatory retinal exudates
91. Scheie syndrome (MPS IS)—diffuse to marked corneal clouding, tapetoretinal degeneration
92. Schwartz syndrome (glaucoma associated with retinal detachment)—retinal detachment, microcornea
93. Shy-Gonatas syndrome (orthostatic hypotension syndrome)—keratopathy, corneal ulcer, lattice-like white opacities in the area of Bowman membrane, retinal pigmentary degeneration
94. Smallpox—keratitis, congenital corneal clouding, chorioretinitis
95. Stannus cerebellar syndrome (riboflavin deficiency)—corneal vascularization, superficial diffuse keratitis, corneal opacities, brownish retinal patches
96. Stickler syndrome (hereditary progressive arthroophthalmopathy)—keratopathy, chorioretinal degeneration, total retinal detachment

97. Sturge-Weber syndrome (neurooculocutaneous angiomatosis)—retinal detachment, increased corneal diameter with cloudiness
98. Syphilis (acquired lues)—keratitis, retinal hemorrhages, retinal proliferation
99. Temporal arteritis syndrome (Hutchinson-Horton-Magath-Brown syndrome)—retinal detachments, narrowing of retinal vessels, central retinal artery occlusion, corneal hypesthesia
100. Trisomy 13 (Patau syndrome)—malformed cornea, retinal dysplasia
101. Tuberculosis—keratitis, pannus, corneal ulcer, retinitis
102. Ullrich syndrome (dyscraniopygophalangy)—cloudy cornea, corneal ulcers, chorioretinal coloboma
103. Ultraviolet radiation—photokeratitis, band keratopathy, herpes simplex keratitis, recurrent corneal erosions, retinal degeneration
104. Vaccinia—keratitis, pannus, corneal perforation, central serous retinopathy, pseudoretinitis pigmentosa
105. van Bogaert-Scherer-Epstein (primary hyperlipidemia)—arcus juvenilis of the cornea, lipid keratopathy, retinopathy with yellowish deposits
106. Vitreous tug syndrome—vitreous strands attached to corneal wound or scar, circumscribed retinal edema, posterior retinal detachment
107. von Gierke disease (glycogen storage disease type I)—corneal clouding, discrete nonelevated, yellow flecks in macula
108. Waardenburg syndrome (embryonic fixation syndrome)—microcornea, cornea plana, hypopigmentation and hypoplasia of retina
109. Wagner syndrome (hyaloideoretinal degeneration)—corneal degeneration, band-shaped keratopathy, hyaloideoretinal degeneration, narrowing of retinal vessels, retinal detachment, avascular preretinal membranes
110. Waldenström syndrome (macroglobulinemia syndrome)—crystalline corneal deposits, keratoconjunctivitis sicca, retinal venous thrombosis, retinal microaneurysms, cotton-wool spots
111. Weil disease (leptospirosis)—keratitis, retinitis
112. Werner syndrome (progeria of adults)—bullous keratitis, paramacular retinal degeneration
113. Wiskott-Aldrich syndrome (sex-linked draining ears, eczematoid dermatitis, bloody diarrhea)—corneal ulcers, retinal hemorrhages
114. Yersiniosis—corneal ulcer, retinal hemorrhages
115. Zellweger syndrome (cerebrohepatorenal syndrome)—corneal opacities, narrowing of retinal vessels, retinal holes without detachment, tapetoretinal degeneration
116. Zieve syndrome (hyperlipemia hemolytic anemia-icterus syndrome)—cloudy cornea, corneal ulcers, retinal lipemia

Corneal Diseases Associated with Deafness

1. Atopic dermatitis—limbal keratitis, conjunctivitis
2. *Cogan syndrome (nonsyphilitic interstitial keratitis)—interstitial keratitis
3. Meniere disease—iritis, glaucoma
4. *Polyarteritis nodosa (Kussmaul disease)—paralimbal keratitis, corneoscleral ulceration
5. Sarcoidosis syndrome (Schaumann syndrome)—primary stromal keratitis, keratoconjunctivitis sicca

6. *Syphilis (lues)—interstitial keratitis
7. 3-methyl-pentyn-3-yl acid phthalate (Whipcide, trichuricidal agent)—keratitis, uveitis, stromal keratitis
8. Tuberculosis—interstitial keratitis
9. Vogt-Koyanagi-Harada syndrome (uveitis-vitiligo-alopecia poliosis syndrome)— uveitis
10. Wegener granulomatosis—necrotizing sclerokeratitis

Heinemann MH, et al. Cogan's syndrome. *Ann Ophthalmol* 1980;12:667.

Trigger Mechanisms for Recurrent Herpes Simplex Keratitis

1. *Corticosteroids (topical)
2. *Emotional disturbances
3. *Exposure to sunlight (ultraviolet)
4. *Fever (most common)
5. Gastrointestinal upsets
6. Ingestion of food to which patient is allergic
7. Mechanical trauma
8. Menses

Sclerocornea

This type of developmental corneal abnormality has ill-defined limbus due to extension of opaque scleral tissue into the cornea. Vision varies with involvement. Somatic abnormalities include craniofacial, digital, skin, and testis abnormalities; deafness and mental retardation are seen.

1. Associated ocular abnormalities including:
 - A. Abnormalities of Descemet membrane, endothelium, and corneal stroma
 - B. Aniridia
 - C. Cataract
 - D. Coloboma
 - E. Cornea plana—occurrence
 - F. Dysgenesis of angle and iris

Postoperative Corneal Melt

This condition is characterized by central or peripheral thinning of corneal stroma after pterygium, refractive surgery, keratoplasty, glaucoma surgery, strabismus surgery, cataract surgery, or retina surgery.

1. AIDS
2. Collagen disorders
 - a. Polyarteritis nodosa
 - b. Rheumatoid arthritis
 - c. Scleroderma
 - d. Systemic lupus erythematosus
3. Delayed corneal wound healing due to drugs, including adenine arabinoside, adrenal cortex injections, aldosterones, alpha-chymotrypsin, azathioprine, betamethasone, butacaine, cocaine, cortisone, dexamethasone, fluorometholone, fluprednisolone, hydrocortisone, prednisolone, sulfacetamide, sulfamethizole, tetracaine, triamcinolone
4. Drug use
 - a. Steroid therapy
 - b. Stevens-Johnson syndrome
 - c. Topical anesthesia abuse
 - d. Topical nonsteroidal antiinflammatory agents
5. Marginal ring ulcer
 - a. Acute leukemia
 - b. Bacillary dysentery
 - c. Brucellosis
 - d. Dengue fever
 - e. Gonococcal arthritis
 - f. Hookworm infestation

Conditions Simulating Congenital Glaucoma

1. Blue sclera
 - A. Albright hereditary osteodystrophy (pseudohypoparathyroidism)
 - B. Craniofacial dysostosis (Crouzon disease)
 - C. de Lange syndrome

- D. Ehlers-Danlos syndrome
 - E. Fölling syndrome
 - F. Hallermann-Streiff syndrome (oculomandibulodyscephaly)
 - G. Incontinentia pigmenti (Bloch-Sulzberger syndrome)
 - H. Juvenile Paget disease (hyperphosphatasia, hereditary)
 - I. Lowe (oculocerebrorenal) syndrome
 - J. Marfan syndrome
 - K. Turner (XO, gonadal dysgenesis) syndrome
 - L. van der Hoeve syndrome (osteogenesis imperfecta)
 - M. Werner syndrome
2. Corneal opacity
- A. Congenital malformations
 1. Anterior corneal staphyloma
 2. Cornea plana
 3. Incontinentia pigmenti (Bloch-Sulzberger syndrome)
 4. Norrie disease
 5. *Peters anomaly
 6. Riley-Day syndrome (congenital familial dysautonomia)
 7. *Sclerocornea
 8. Trisomy 13-15 syndrome (Patau syndrome)
 - B. Edema
 1. *Birth injury, such as breaks in Descemet membrane
 2. Congenital hereditary corneal edema
 3. Fetal uveitis
 4. *Infectious keratitis (congenital syphilis, interstitial keratitis, rubella, variola, varicella, gonorrhea, mumps, and others)
 5. Keratitis (chemical)
 6. *Keratoconus
 - C. Metabolic disorders/dystrophies
 1. Congenital hereditary stromal dystrophy
 2. Corneal amyloidosis (Lubarsch-Pick syndrome)
 3. Corneal lipidosis
 4. Cystinosis (Lignac-Fanconi syndrome)
 5. Fabry disease
 6. Hyperlipidemia
 7. Mucopolysaccharidoses (MPS)
 - a. Hunter syndrome (MPS IIB)
 - b. Hurler syndrome (MPS IH)
 - c. Maroteaux-Lamy syndrome (MPS VI)
 - d. Morquio syndrome (MPS IV)
 - e. Sanfilippo syndrome (MPS IIIC)
 - f. Scheie syndrome (MPS IS)
 8. Porphyria (congenital)
 9. von Gierke glycogen storage disease
3. Epiphora (excessive tearing)
- A. *Lacrimal duct obstruction
 - B. *Viral, chemical or allergic conjunctivitis
4. Large corneas
- A. Apert syndrome

- B. High myopia
 - C. Keratoglobus
 - D. Marfan syndrome
 - E. Megalocornea
 - F. van der Hoeve syndrome (osteogenesis imperfecta)
5. *Photophobia—anterior uveitis (many causes)

Syndromes and Diseases Associated with Glaucoma

1. Ocular disease
 - A. Corneal endothelial disorders
 1. Fuchs endothelial dystrophy
 2. Iridocorneal endothelial (ICE) syndrome
 - a. Chandler syndrome
 - b. Cogan-Reese (iris-nevus) syndrome
 - c. Progressive iris atrophy
 3. Posterior polymorphous dystrophy
 - B. Developmental glaucoma with associated ocular anomalies
 1. Aniridia
 2. Axenfeld-Rieger syndrome
 3. Congenital ectropion uveae
 4. Congenital iris hypoplasia
 5. Megalocornea
 6. Microcornea
 7. Peters anomaly
 8. Sclerocornea
 - C. Elevated episcleral venous pressure (see p. 235)
 - D. Iris disorders
 1. Iridoschisis
 2. *Pigmentary glaucoma
 - E. Lens disorders
 1. Cataract
 - a. Lens-particle glaucoma
 - b. Phacoanaphylaxis
 - c. Phacolytic (lens protein) glaucoma
 - d. Phacomorphic (intumescent lens) glaucoma
 2. Dislocation of the lens
 3. *Exfoliation syndrome
 - F. Medications or chemicals
 1. Corticosteroids
 2. Others
 - G. Myopia
 - H. Ocular hemorrhage
 1. Degenerated ocular blood
 - a. Ghost cell glaucoma

- b. Hemolytic glaucoma
- c. Hemosideric glaucoma
- 2. *(2) Hyphema
 - a. Blunt trauma
 - b. Intraocular surgery
- 1. Intraoperative
- 2. Postoperative
 - c. Penetrating trauma
 - d. Spontaneous
- 1. Anterior segment neovascularization
- 2. Intraocular tumor
- 3. Pupillary vascular tufts
- (3) Orbital hemorrhage (massive)
- (4) Vitreous hemorrhage (massive)
- I. Ocular inflammation
 - 1. Choroiditis and retinitis
 - a. Cytomegalic inclusion retinitis
 - b. Sympathetic ophthalmia
 - c. Toxocariasis
 - d. Vogt-Koyanagi-Harada syndrome
 - 2. Episcleritis
 - 3. *Iridocyclitis
 - a. Acute anterior iridocyclitis
 - b. Ankylosing spondylitis
 - c. Behçet disease
 - d. Fuchs heterochromic cyclitis
 - e. Glaucomatocyclitic crisis (Posner-Schlossman syndrome)
 - f. Infectious diseases
- 1. Acquired immunodeficiency syndrome (AIDS)
- 2. Congenital rubella
- 3. Disseminated meningococemia
- 4. Hansen disease (leprosy)
- 5. Hemorrhagic fever with renal syndrome
- 6. Onchocerciasis (also keratitis)
- 7. Syphilis
- g. Juvenile rheumatoid arthritis (JRA)
- h. Pars planitis
- i. Precipitates on the trabecular meshwork (Grant syndrome)
- j. Reiter syndrome
- k. Sarcoid
- l. Trauma
- (4) Keratitis
 - a. Adenovirus type 10
 - b. Herpes simplex
 - c. Herpes zoster
 - d. Interstitial keratitis
- (5) Scleritis
- *J. Ocular surgery
 - 1. Aphakia or pseudophakia (see p. 405)

2. Corticosteroid induced
3. Cyclodialysis cleft (sudden closure)
4. Epithelial downgrowth
5. Malignant (ciliary block) glaucoma
6. Penetrating keratoplasty
 - a. Distortion of angle structures
 - b. Graft rejection
7. Vitreoretinal procedures
 - a. Intravitreal gas
 - b. Pars plana vitrectomy
 - c. Retinal photocoagulation
 - d. Scleral buckling surgery
 - e. Silicone oil
8. Ocular trauma
 1. Chemical burns (acid, alkali, and others)
 2. Contusion injuries
 - a. Angle recession
 - b. Hyphema
 - c. Iritis
 - d. Lens damage or dislocation
 - e. Trabecular damage
 3. Penetrating injuries
 - a. Epithelial downgrowth
 - b. Hyphema
 - c. Lens damage or dislocation
 - d. Peripheral anterior synechiae
 4. Radiation damage
 5. Retained intraocular foreign body (iron, copper)
 6. Retrobulbar hemorrhage (massive)
9. Ocular tumors
 1. Benign tumors of the anterior uvea
 - a. Adenomas
 - b. Cysts (primary versus secondary)
 - c. Iris nevi
 - d. Leiomyomas
 - e. Melanocytomas
 - f. Melanoses
 2. Histiocytosis X
 3. Leukemias
 4. Lymphomas
 5. Metastatic tumors
 - a. Carcinomas (most commonly, breast carcinoma in females and lung carcinoma in males)
 - b. Melanomas
 6. Multiple myeloma
 7. Ocular tumors of childhood
 - a. Juvenile xanthogranuloma
 - b. Medulloepithelioma (diktyoma)
 - c. Retinoblastoma

8. Orbital tumors
9. Primary uveal melanomas
10. Retrobulbar tumors
10. Retinal, vitreous, and choroidal disorders
 1. Angle closure
 - a. Acute choroidal hemorrhage
 - b. Central retinal vein occlusion (CRVO)
 - c. Ciliochoroidal effusion
11. AIDS
12. Arteriovenous malformations
13. Inflammatory conditions
14. Nanophthalmos
15. Surgery
16. Trauma
17. Tumors
18. Uveal effusion syndrome
 - d. Hemorrhagic retinal and choroidal detachment
 - e. Iris retraction syndrome with retinal detachment (Campbell)
 - f. Persistent hyperplastic primary vitreous (PHPV)
 - g. Postoperative panretinal photocoagulation
 - h. Postoperative scleral buckle
 - i. Retinal dysplasia
 - j. Retinopathy of prematurity (retrolental fibroplasia)
 - * (2) Neovascular glaucoma (see p. 324)
 - (3) Retinitis pigmentosa
 - (4) Rhegmatogenous retinal detachment (Schwartz syndrome)
2. Systemic disorders
 - A. AIDS
 - B. Angioneurotic edema (giant urticaria)
 - C. Ankylosing spondylitis (Marie-Strümpell disease)
 - D. Aortic arch syndrome
 - E. Behçet disease
 - F. Carotid artery occlusive disease
 - G. Carotid-cavernous fistula
 - H. Cavernous sinus thrombosis
 - I. Crouzon disease (craniofacial dysostosis)
 - J. Cushing disease
 - K. Developmental glaucoma as part of a syndrome
 1. Bing-Neel [macroglobulinemia and central nervous system (CNS)] syndrome
 2. Chondrodystrophy, joint dislocation, glaucoma, and mental retardation
 3. Chromosomal abnormalities
 - a. Chromosome partial deletion (long-arm) syndrome
 - b. Pericentric inversion of chromosome II
 - c. Trisomy 21 (Down syndrome)
 - d. Trisomy 16-18 (Edward syndrome)
 - e. Trisomy F (17-18)
 - f. Trisomy 13-15 (Patau syndrome)

- g. Turner syndrome (XO, gonadal dysgenesis)
 - h. 9p syndrome
 - 4. Cockayne syndrome
 - 5. Congenital rubella syndrome
 - 6. Cretinism (juvenile hypothyroidism)
 - 7. Cystinosis
 - 8. Dental-ocular-cutaneous syndrome
 - 9. Diamond-Blackfan syndrome
 - 10. Ehlers-Danlos syndrome
 - 11. Familial histiocytic dermatoarthritis syndrome
 - 12. Fetal alcohol syndrome
 - 13. Gorlin-Goltz (multiple basal cell nevi) syndrome
 - 14. Hallermann-Streiff syndrome (oculomandibulofacial dyscephaly)
 - 15. Homocystinuria
 - 16. Kartagener syndrome (sinusitis-bronchiectasis-situs inversus)
 - 17. Kimmelstiel-Wilson syndrome
 - 18. Klinefelter syndrome
 - 19. Klippel-Trenaunay-Weber syndrome
 - 20. Krabbe syndrome
 - 21. Krause syndrome (congenital encephaloophthalmic dysplasia)
 - 22. Lowe (oculocerebrorenal) syndrome
 - 23. Marfan syndrome (arachnodactyly dystrophia mesodermalis congenita)
 - 24. Meyer-Schwickerath-Weyers syndrome (oculodentodigital dysplasia)
 - 25. Miller (Wilms aniridia) syndrome
 - 26. MPS
 - a. Hurler syndrome (MPS IH)
 - b. Maroteaux-Lamy syndrome (MPS VI)
 - c. Morquio syndrome (MPS IV)
 - 27. Niden (telangiectasia-cataract) syndrome
 - 28. Pierre Robin syndrome (micrognathia-glossoptosis) syndrome
 - 29. Prader-Willi syndrome (hypotonia, hypogonadism, obesity, and mental retardation)
 - 30. Rubella syndrome
 - 31. Rubinstein-Taybi (broad thumb) syndrome
 - 32. Silverman (battered-child) syndrome
 - 33. Stickler syndrome (hereditary progressive arthroophthalmopathy)
 - 34. Treacher-Collins syndrome
 - 35. Ullrich syndrome (dyscraniopygophalangy)
 - 36. Waardenburg syndrome
 - 37. Wagner syndrome
 - 38. Weber-Christian disease
 - 39. Weil-Marchesani syndrome
 - 40. X-linked mental retardation (XLMR) syndrome
 - 41. Zellweger (cerebrohepatorenal) syndrome
- L. *L. Diabetes
 - M. Epidemic dropsy (argemone oil poisoning)
 - N. Giant cell arteritis
 - O. *Graves disease
 - P. Hemorrhagic fever with renal syndrome (nephropathia epidemica)

- Q. *Herpes simplex
- R. *Herpes zoster
- S. Histiocytosis X
- T. JRA
- U. Juvenile xanthogranuloma
- V. Leukemia
- W. Lymphoma
- X. Medications or chemicals
- Y. Metastatic carcinoma
- Z. Metastatic melanoma

- AA. Multiple myeloma
- BB. Phakomatoses

1. Nevus of Ota (oculodermal melanocytosis)
2. Sturge-Weber syndrome (encephalotrigeminal angiomatosis)
3. von Hippel-Lindau disease
4. von Recklinghausen neurofibromatosis

Glaucoma Suspect, Adult

1. Advanced age
2. *Applanation reading 21 mm Hg or greater
3. Asymmetric intraocular pressures (IOPs)
4. Black race
5. Contusion-angle deformity glaucoma in the fellow eye
6. *Diabetes mellitus
7. Diurnal fluctuation in IOP of 10 mm Hg or greater
8. Endothelial dystrophy of the cornea
9. *Exfoliative syndrome (see p. 400)
10. Family history of glaucoma
11. *Hemorrhage at optic disc margin
12. High myopia
13. IOP elevation following use of corticosteroids
14. Krukenberg spindle or dense trabecular pigment band
15. *Prominent cupping of optic disc
 - A. Asymmetry of cup-to-disc ratio

- B. Cup-to-disc ratio 0.4
- C. Cupping-to-disc margin
- D. Vertical elongation of cup
- 16. Retinal detachment (see p. 487)
- 17. *Retinal vein occlusion (see p. 468-472)
- 18. Schiötz scale reading 4.0/5.5 or 6.25/7.5 or less
- 19. Thyrotropic exophthalmos
- 20. *Visual field changes suggestive of glaucoma

Elevated Intraocular Pressure Measurement with Normal-Appearing Optic Disc

1. Acromegaly
2. Anesthesia
 - A. Ketamine
 - B. Nitrous oxide with intravitreal gas
 - C. Succinylcholine
3. *Blepharospasm
4. Caffeine intake
5. Cardiopulmonary bypass surgery
6. *Dysthyroid ophthalmopathy
7. Elevation in hemoglobin concentration
8. Excessive water intake
9. High scleral rigidity and indentation (e.g., Schiötz) tonometry
10. Horizontal gaze position
11. Hyperthermia
12. Hyperthyroid
13. Marked emotional stress
14. Mechanical factors in checking IOP (e.g., by patient's hair interfering with applanation tonometer arm)
15. Medications or chemicals
 - A. *Corticosteroids
 - B. Cycloplegics
 - C. Others
16. *Normal variation (ocular hypertension)
17. *Preglaucoma (IOP sufficiently elevated to cause damage to the optic nerve, but damage is not yet visible ophthalmoscopically)
18. Reduced gravity
19. Tight collar, short neck, obesity
20. Tobacco smoking
21. *Tonometer in need of calibration
22. Valsalva maneuver
23. Voluntary widening of palpebral fissure

Secondary Open-Angle Glaucoma

1. Corneal endothelial disorders
 - A. Fuchs endothelial dystrophy
 - B. Posterior polymorphous dystrophy
2. Elevated episcleral venous pressure (see p. 235)
3. Iris disorders
 - A. Iridoschisis
 - B. *Pigmentary glaucoma
4. Lens disorders
 - A. Cataract
 1. Lens particle glaucoma
 2. Phacoanaphylaxis
 3. Phacolytic (lens protein) glaucoma
 - B. Displaced lens (see p. 317-318)
 - C. *Exfoliation syndrome
5. Medications or chemicals
 - A. *Corticosteroids
 - B. Cycloplegic effect
 - C. Others
6. Ocular hemorrhage
7. Ocular inflammation
8. Ocular surgery
 - A. Alpha-chymotrypsin (enzyme glaucoma)
 - B. *Corticosteroid induced
 - C. Distortion of anterior chamber angle from limbal or keratoplasty sutures
 - D. Early postoperative elevation of IOP following cataract surgery (especially in eyes with preexisting glaucoma)
 - E. Hemorrhage
 1. Degenerated ocular blood
 - a. Ghost cell glaucoma
 - b. Hemolytic glaucoma
 - c. Hemosideric glaucoma
 2. * Hyphema
 3. Internal wound neovascularization (late postoperative hyphema)
 4. Pseudophakia
 - a. Anterior chamber intraocular lens (IOL), including uveitis, glaucoma, hyphema (UGH) syndrome
 - b. Iris-fixated IOL
 - c. Posterior chamber IOL (usually sulcus fixation)
 5. Retrobulbar hemorrhage (massive)
 - F. Inflammation
 - G. Intravitreal gas
 - H. Neodymium:yttrium-aluminum-aluminum-garnet (Nd:YAG) laser capsulotomy
 - I. Pseudophakic pigmentary dispersion (e.g., with posterior chamber implant)
 - J. Retained lens cortex
 - K. *Retained viscoelastic
 - L. Silicone oil

- M. Sudden closure of cyclodialysis cleft
- N. Vitreous filling anterior chamber
- 9. Ocular trauma
 - A. Chemical burns (acid, alkali, other)
 - B. Contusion
 - 1. Angle recession
 - 2. *Hyphema
 - 3. Iritis
 - 4. Trabecular damage
 - C. Radiation damage
 - D. Retained intraocular foreign body (iron, copper)
 - E. Retrobulbar hemorrhage (massive)
- 10. Ocular tumors
- 11. Retinal, vitreous, and choroidal disorders
 - A. *Neovascular glaucoma—open-angle stage (see p. 324)
 - B. Retinitis pigmentosa
 - C. Rhegmatogenous retinal detachment (Schwartz syndrome)
- 12. Systemic, such as ocular amyloidosis

Unilateral Glaucoma

- 1. Corneal endothelial disorders
 - A. Fuchs endothelial dystrophy with angle closure due to thickened peripheral cornea
 - B. Iridocorneal endothelial (ICE) syndrome
 - 1. Chandler syndrome
 - 2. Iris-nevus (Cogan-Reese) syndrome
 - 3. Progressive iris atrophy
- 2. Elevated episcleral venous pressure (see p. 235)
- 3. Lens disorders
 - A. Cataract
 - 1. Lens-particle glaucoma
 - 2. Phacoanaphylaxis
 - 3. Phacolytic (lens protein) glaucoma
 - 4. Phacomorphic (intumescent lens) glaucoma
 - B. Displacement of the lens
 - 1. Buphthalmos
 - 2. Cataract (mature or hypermature)
 - 3. Exfoliation syndrome
 - 4. Intraocular tumor
 - 5. PHPV
 - 6. Sturge-Weber syndrome (encephalotrigeminal angiomatosis)
 - 7. Trauma
 - 8. Uveitis
 - C. * Exfoliation syndrome (see p. 400)
- 4. Medications or chemicals

-
- A. Alpha-chymotrypsin (enzyme glaucoma)
 - B. Chemical burns
 - C. *Corticosteroids (topical or periocular)
 - D. Cycloplegics (angle closure or open angle)
 - E. Nitrous oxide inhalation with intraocular gas
 - F. Urokinase (intraocular)
 - G. Others
- 5. Ocular hemorrhage
 - 6. Ocular inflammation
 - 7. *Ocular surgery
 - 8. Ocular trauma
 - 9. Ocular tumors
 - 10. Retinal, vitreous, and choroidal disorders
 - A. Angle closure
 - 1. Acute choroidal hemorrhage
 - 2. *CRVO
 - 3. Ciliochoroidal effusion
 - a. Arteriovenous malformations
 - b. Inflammatory conditions
 - c. Nanophthalmos
 - d. Surgery
 - e. Trauma
 - f. Tumors
 - g. Uveal effusion syndrome
 - 4. Hemorrhagic retinal and choroidal detachment
 - 5. PHPV
 - 6. *Postoperative panretinal photocoagulation
 - 7. Postoperative scleral buckle
 - 8. Retinal dysplasia
 - 9. Retinopathy of prematurity (retrolental fibroplasia)
 - B. * Neovascular glaucoma (see p. 324)
 - 1. *Diabetic retinopathy
 - 2. Extraocular vascular disorders
 - a. Carotid-cavernous fistula
 - b. Carotid occlusive disease
 - c. Giant cell arteritis
 - 3. Ocular disorders—miscellaneous
 - a. Chronic glaucoma
 - b. Endophthalmitis
 - c. Intraocular malignancy
 - d. Iris melanoma
 - e. PHPV
 - f. Photoradiation or helium ion irradiation for uveal melanoma
 - g. Pseudophakia
 - h. Sympathetic ophthalmia
 - i.*Uveitis (chronic)
 - 4. Retinal disorders—miscellaneous
 - a. Coats disease

- b. Eales disease
 - c. Optic-nerve glioma with venous stasis
 - d. Retinal detachment (usually chronic)
 - e. Retinal vascular occlusive disorders
1. Retinal artery occlusion central or branch
 2. *Retinal vein occlusion central or branch
 1. f. Retinoblastoma
 2. g. Retinopathy of prematurity (retrolental fibroplasia)
 3. h. Retinoschisis
 4. i. Sickle cell retinopathy
 5. C. Open-angle glaucoma associated with rhegmatogenous retinal detachment (Schwartz syndrome)

Glaucoma Associated with Displaced Lens

1. Alport syndrome
2. Aniridia
3. Axenfeld-Rieger syndrome
4. Buphthalmos
5. *Cataract (mature or hypermature)
6. Cornea plana
7. Crouzon disease (craniofacial dysostosis)
8. Ectopia lentis et pupillae
9. Ehlers-Danlos syndrome
10. *Exfoliation syndrome (see p. 400)
11. High myopia
12. Homocystinuria
13. Hyperlysinemia
14. Intraocular tumor
15. Isolated microspherophakia
16. Klinefelter syndrome
17. Lowe (oculocerebrorenal) syndrome
18. *Marfan syndrome
19. Megalocornea
20. Oculodental syndrome
21. Refsum syndrome
22. Retinitis pigmentosa
23. Scleroderma
24. Simple ectopia lentis
25. Stickler syndrome
26. Sturge-Weber syndrome (encephalotrigeminal angiomatosis)
27. Sulfite oxidase deficiency
28. Syphilis
29. *Trauma
30. Treacher-Collins syndrome (mandibulofacial dysostosis)
31. Uveitis

32. Weill-Marchesani syndrome

Glaucoma and Elevated Episcleral Venous Pressure

1. Arteriovenous fistulas
 - A. Carotid-cavernous sinus fistulas
 1. Spontaneous
 2. Traumatic
 - B. Orbital-meningeal shunts
 - C. Orbital varices
 - D. *Sturge-Weber syndrome (encephalotrigeminal angiomatosis)
2. Idiopathic elevation of episcleral venous pressure
 - A. *Familial
 - B. Sporadic
3. Venous obstruction
 - A. Cavernous sinus thrombosis
 - B. *Congestive heart failure
 - C. Episcleral
 1. Chemical burns (acid, alkali, and others)
 2. Radiation
 - D. Jugular venous obstruction
 - E. Ocular amyloidosis
 - F. Orbital
 1. *Dysthyroid
 2. Orbital vein thrombosis
 3. Phlebitis
 4. Pseudotumor
 5. Retrobulbar tumor
 - G. Pulmonary venous obstruction
 - H. Superior vena cava (superior mediastinal) syndrome

Shields MB. *Textbook of glaucoma*, 3rd ed. Baltimore: Williams & Wilkins, 1992.

Weinreb RN, et al. Glaucoma secondary to elevated episcleral venous pressure. In: Ritch R, et al. *The glaucomas*. St. Louis: CV Mosby, 1989.

Glaucoma Associated with Shallow Anterior Chamber

1. *Primary-angle closure
 - A. Plateau iris syndrome
 - B. *Relative pupillary block (most common)
2. Secondary-angle closure
 - A. *CRVO (central retinal vein occlusion)
 - B. Choroidal hemorrhage (acute)
 - C. Ciliochoroidal effusion
 1. AIDS
 2. Arteriovenous malformations

3. *Inflammation
4. Nanophthalmos
5. Trauma
6. Tumor
7. Uveal effusion syndrome
- D. Cystinosis
- E. Drug-induced acute transitory myopia (diuretics, sulfonamides, and others)
- F. Elevated episcleral venous pressure associated with arteriovenous fistula
- G. Fuchs endothelial dystrophy—with peripheral corneal thickening
- H. Hemorrhagic retinal and choroidal detachment
- I. Hyperglycemia (acute)
- J. Inflammation
 1. Episcleritis
 2. Iridocyclitis with posterior synechiae and iris bombe
 3. Posterior scleritis
- K. Intraocular tumor (posterior segment melanoma, metastatic carcinoma, retinoblastoma, medulloepithelioma, and others)
- L. Lens dislocation (see p. 401-404)
- M. Luetic interstitial keratitis
- N. Malignant (ciliary block) glaucoma
- O. Maroteaux-Lamy syndrome (MPS VI)
- P. Multiple cysts of the iris and ciliary body
- Q. Nanophthalmos
- R. Pars plana vitrectomy
- S. PHPV
- T. *Phakic or aphakic pupillary block
- U. Phacomorphic (intumescent lens) glaucoma
- V. Postoperative panretinal photocoagulation
- W. Postoperative scleral buckle
- X. Pupil dilatation, including topical dilatation and systemic decongestants, bronchodilators, gastroenterologic and genitourinary disorders.
- Y. Retinal dysplasia
- Z. Retinopathy of prematurity (retrolental fibroplasia)

Shields MB. *Textbook of glaucoma*, 3rd ed. Baltimore: Williams & Wilkins, 1992.

Glaucoma in Aphakia or Pseudophakia

1. Alpha-chymotrypsin (enzyme glaucoma)
2. Ciliary-block (malignant) glaucoma
3. *Corticosteroid induced
4. Degenerated intraocular blood
 - A. Ghost cell glaucoma
 - B. Hemolytic glaucoma
 - C. Hemosideric glaucoma
5. Distortion of the anterior chamber angle by limbal sutures
6. *Early postoperative pressure elevation (especially in eyes with preexisting glaucoma)

7. Epithelial downgrowth
8. Fibrous proliferation
9. *Following Nd:YAG capsulotomy
10. Hyphema
 - A. Internal wound neovascularization (late postoperative hyphema)
 - B. Pseudophakia
 1. Anterior chamber IOL (including the UGH syndrome)
 2. Iris-fixated IOL
 3. Posterior-chamber IOL (usually sulcus fixation)
11. Inflammation
12. Peripheral anterior synechiae
13. Primary open-angle glaucoma
14. Pseudophakic pigmentary dispersion
15. *Pupillary block
16. *Retained lens cortex
17. *Retained viscoelastic
18. Vitreous filling the anterior chamber
19. Vitreous hemorrhage (massive)

Duane TD, Jaeger EA. *Clinical Ophthalmology*. New York: Harper & Row, 1994.

Shields MB. *Textbook of glaucoma*, 3rd ed. Baltimore: Williams & Wilkins, 1992.

Tessler DR, et al. Persistently raised intraocular pressure following extracapsular cataract extraction. *Br J Ophthalmol* 1990;74:272-274.

Medications and Chemicals that May Cause Elevated Intraocular Pressure

1. Anesthetic agents
 - A. Ketamine
 - B. Nitrous oxide (inhalation, especially in eyes with retinovitreal surgery and intraocular gas)
2. Anticholinergics/parasympatholytics
 - A. Antidepressants
 1. Amitriptyline (Elavil)
 2. Imipramine (Tofranil)
 3. Nortriptyline (Pamelor)
 4. Protriptyline (Vivactil)
 5. Trimipramine (Surmontil)
 - B. Antihistamines
 1. Anazolene (Vasocon-A)
 2. Brompheniramine (Dimetane)
 3. Cyclizine (Marezine)
 4. Cyproheptadine (Periactin)
 5. Diphenhydramine (Benadryl)
 6. Orphenadrine (Norgesic)
 7. Tripelennamine (Pyribenzamine)
 - C. Antiparkinson medications
 1. Biperiden (Akineton)
 2. Cycrimine (Pagitane)
 3. Trihexyphenidyl hydrochloride (Artane)

-
- D. Antispasmodic agents
 - 1. Dicyclomine (Bentyl)
 - 2. Diphemanil methylsulfate (Prantal)
 - 3. Hexocyclium methylsulfate (Tral)
 - 4. Hyoscyamine (Donnatal, Donnagel)
 - 5. Mepenzolate (Cantil)
 - 6. Methscopolamine bromide (Pamine)
 - 7. Oxyphenonium bromide (Antrenyl)
 - 8. Propantheline bromide (Pro-Banthine)
 - 9. Tridihexethyl chloride (Pathilon)
 - E. * Cycloplegics
 - 1. Atropine
 - 2. Cyclopentolate (Cyclogyl)
 - 3. Homatropine
 - 4. Tropicamide (Mydracil)
 - 5. Scopolamine (Hyoscine)
 - F. Miscellaneous
 - 1. Atropine (systemic)
 - 2. Glycopyrrolate (Robinul)
 - G. Phenothiazine
 - 1. Doxepin (Sinequan)
 - 2. Haloperidol (Haldol)
 - 3. Prochlorperazine (Compazine)
 - 4. Promethazine (Phenergan)
 - 5. Triflupromazine (Vesprin)
 - H. Poisoning
 - 1. Belladonna
 - 2. Jimson weed
 - 3. Argemone oil (epidemic dropsy)
 - 4. Caffeine
 - 5. Carbon dioxide inhalation
 - 6. Carmustine injection
 - 7. Chemical burns
 - A. Acid
 - 1. Chromic acid
 - 2. Hydrochloric (muriatic) acid
 - 3. Sulfuric (battery) acid
 - B. Alkali
 - 1. Ammonium hydroxide (ammonia)
 - 2. Calcium hydroxide (lime)
 - 3. Sodium hydroxide (lye)
 - C. Dibent [b.f][l,4] oxazepine (CR tear gas)
 - D. Formaldehyde gas (in aqueous solution formalin)
 - 8. CNS stimulants/anorexics
 - A. Dextroamphetamine
 - B. Methamphetamine
 - C. Phenmetrazine (Preludin)
 - D. Phentermine (Ionamin)
 - 9. *Corticosteroids

- A. *Ocular (topical)
 - 1. Dexamethasone (Decadron, Maxidex)
 - 2. Fluorometholone (FML, Flarex)
 - 3. Prednisolone acetate (Pred Forte)
 - 4. Prednisolone sodium phosphate (Inflamase)
- B. * Subconjunctival depot injection
 - 1. Methylprednisolone acetate
 - 2. Triamcinolone
- C. Systemic
 - 1. Betamethasone (Celestone)
 - 2. Cortisone acetate
 - 3. Dexamethasone (Decadron)
 - 4. Hydrocortisone (Cortef, Solu-Cortef)
 - 5. Methylprednisolone (Medrol)
 - 6. Paramethasone (Haldrone)
 - 7. Prednisolone
 - 8. Prednisone (Deltasone)
 - 9. Triamcinolone (Aristocort)
- 10. Idiopathic lens swelling
 - A. Acetylsalicylic acid (aspirin)
 - B. Sulfanilamide
 - C. Others
- 11. Intraocular injection
 - A. Alpha-chymotrypsin (enzyme glaucoma)
 - B. Urokinase
 - C. *Viscoelastic (Healon, others)
- 12. Methylphenidate (Ritalin)
- 13. Miotics
 - A. Carbachol
 - B. Demecarium (Humorsol)
 - C. Echothiophate (phospholine iodide)
 - D. Pilocarpine
- 14. Succinylcholine (Anectine)
- 15. Sympathomimetics
 - A. Ephedrine
 - B. Mydriatics
 - 1. Dipivalyl epinephrine (Propine)
 - 2. Epinephrine (many products)
 - 3. Hydroxyamphetamine (Paredrine)
 - 4. Phenylephrine (Neo-Synephrine)
 - C. Naphazoline (Naphcon)
 - D. Pheniramine maleate (Naphcon-A)
 - E. Phenylephrine (Neo-Synephrine)
 - F. Tetrahydrozoline (Visine)
- 16. Testosterone
- 17. Vasodilators
 - A. Elevation of IOP following subconjunctival injection
 - 1. Bamethan (Bupatol)

2. Isoxsuprine (Vasodilan)
 3. Tolazoline (Priscoline)
 4. Triaziquone (Trenimon)
- B. Amyl nitrite (Vaporole)
18. Water (excessive intake)

May be potentiated by monoamine oxidase inhibitors such as phenelzine, pargyline, or tranylcypromine.

Grant WM. *Toxicology of the eye*, 4th ed. Springfield, IL: Charles C Thomas, 1993.

Shields MB. *Textbook of glaucoma*, 3rd ed. Baltimore: Williams & Wilkins, 1992.

Primary Low-Tension Glaucoma

1. Nonglaucomatous optic nerve disorders resembling glaucomatous damage
 - A. Developmental abnormalities
 1. Colobomas of the optic-nerve head, including optic pits
 2. *Large physiologic cups
 3. Tilted discs
 - B. Nonglaucomatous causes of acquired cupping
 1. Compressive lesions
 - a. Aneurysm
 - b. Chiasmic arachnoiditis
 - c. Cyst
 - d. Tumor
 2. * Ischemic optic neuropathy (especially arteritic)
 - C. * Nonglaucomatous causes of nerve fiber bundle defects on visual field testing
 1. Chorioretinal lesions
 - a. Chorioretinitis
 - b. Retinal vascular occlusions
 - c. Tumors
 2. Optic-nerve head lesions
 - a. Colobomas
 - b. Drusen
 - c. Other
 3. Posterior lesion of the visual pathway
 - a. Meningioma
 - b. Pituitary tumor
 - c. Pseudotumor
 - d. Other
2. Undetected high-pressure glaucoma
 - A. Corneal edema giving false low measurement of IOP with applanation (e.g., Goldman or Perkins) tonometry
 - B. Intermittent elevation of IOP causing damage (IOP normal at time of examination)
 1. Glaucomatocyclitic crisis (Posner-Schlossman syndrome)
 2. Intermittent angle closure
 3. Others

- C. Low scleral rigidity giving false low measurement of IOP with indentation (e.g., Schiötz) tonometry
- D. *Prior elevation in pressure resulting in optic nerve damage
 - 1. Burned-out open-angle glaucoma
 - 2. Corticosteroids
 - 3. Pigmentary glaucoma
 - 4. Trauma
 - 5. Uveitis
- E. Wide diurnal variation (multiple measurements at different times of day required to rule-out high-pressure glaucoma)

Duane TD, Jaeger EA. *Clinical ophthalmology*. New York: Harper & Row, 1994.

Shields MB. *Textbook of glaucoma*, 3rd ed. Baltimore: Williams & Wilkins, 1992.

Werner EB. Low-tension glaucoma. In: Ritch R, et al. *The glaucomas*. St. Louis: CV Mosby, 1989.

Neovascular Glaucoma

- 1. *Diabetic retinopathy
- 2. Extraocular vascular disorders
 - A. Aortic arch syndrome
 - B. *Carotid artery occlusive disease
 - C. Carotid-cavernous fistula
 - D. Giant cell arteritis
- 3. Ocular disorders—miscellaneous
 - A. Chronic glaucoma
 - B. Endophthalmitis
 - C. Iris melanoma
 - D. PHPV
 - E. Pseudophakia
 - F. Sympathetic ophthalmia
 - G. *Uveitis
- 4. Retinal disorders—miscellaneous
 - A. Choroidal melanoma
 - B. Coats exudative retinopathy
 - C. Eales disease
 - D. Metastatic carcinoma
 - E. Norrie disease
 - F. Optic nerve glioma with subsequent venous stasis retinopathy
 - G. Photoradiation or helium ion irradiation for uveal melanoma
 - H. *Retinal detachment (usually chronic)
 - I. Retinal vascular occlusive disorders
 - 1. Branch retinal artery occlusion.
 - 2. *Branch retinal vein occlusion
 - 3. *Central retinal artery occlusion
 - 4. *Central retinal vein occlusion
 - J. Retinoblastoma
 - K. Retinopathy of prematurity (retrolental fibroplasia)

- L. Retinoschisis
- M. Sickle cell retinopathy
- N. Stickler syndrome (inherited vitreoretinal degeneration)
- O. Syphilitic retinal vasculitis

Duane TD, Jaeger EA. *Clinical ophthalmology*. New York: Harper & Row, 1994.

Shields MB. *Textbook of glaucoma*, 3rd ed. Baltimore: Williams & Wilkins, 1992.

Hypotony

1. *Essential hypotension
2. Secondary hypotony
 - A. Cartilaginous-arthritic-ophthalmic deafness
 - B. Ciliochoroidal detachment
 1. Chorioretinal inflammation
 2. Ocular neoplasm
 3. *Trauma, including ocular surgery
 - C. *Cyclitis
 - D. *Cyclodialysis
 - E. Decreased IOP from medications and chemicals
 1. Alcuronium
 2. Aminophylline (intravenous)
 3. *Carbonic anhydrase inhibitors (e.g., acetazolamide, methazolamide, ethoxzolamide)
 4. Cardiac glycosides (digitoxin, digoxin, lanatoside-C, ouabain)
 5. Dibenamine
 6. Dihydroergotoxine (Hydergine)
 7. HPMPC (cidofovir)
 8. Hyperosmotics (urea, glycerin, mannitol, ascorbic acid, glycerol, ethanol, trometamol)
 9. Isosorbide
 10. Pargyline (Eutonyl)
 11. Phentolamine (Regitine)
 12. Propranolol (Inderal)
 13. Thiopental (Pentothal)
 - F. * Deep anesthesia
 - G. Deep coma and severe cerebral disease
 - H. *Dehydration—severe (e.g., cholera, dysentery, diabetic coma)
 - I. *Diabetic coma
 - J. *Glaucoma medications (beta-blockers, sympathomimetics, miotics, carbonic anhydrase inhibitors)
 - K. Hilding syndrome
 - L. Horner syndrome
 - M. Hyperosmolarity
 - N. Intestinal perforation or obstruction
 - O. Intraocular lens mal position
 - P. Irradiation
 - Q. Morquio-Brailsford syndrome (MPS IV)

- R. Myotonic dystrophy
- S. Ocular ischemia
- T. *Ocular trauma with or without visible ciliary body injury
- U. *Perforating ocular trauma
- V. *Phthisis
- W. Postencephalitic syndrome
- X. *Postoperative surgical procedures especially for glaucoma
- Y. Raeder syndrome
- Z. *Retinal detachment

*AA. Systemic hypotension-severe (circulatory collapse, medications)

BB. Uremic coma

*CC. Wound leak

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Glaucoma Associated with Uveitis

1. Arthritis
2. Juvenile rheumatoid arthritis
3. Ankylosing spondylitis, Reiter syndrome, psoriatic arthritis
4. Fuchs heterochromic uveitis
5. Posner-Schlossman syndrome (glaucomatocyclitic crisis)
6. Herpes simplex
7. Herpes zoster
8. Hansen disease
9. Rubella
10. Mumps and other viral infections
11. Gnathostomiasis
12. Traumatic uveitis
13. Phacoanaphylactic glaucoma
14. Phacolytic glaucoma
15. Pseudophakic-inflammatory glaucoma
16. Intermediate uveitis (pars planitis)
17. Posterior uveitis
 - a. Ocular toxoplasmosis
 - b. Acute retinal necrosis
 - c. AIDS
 - d. Other posterior uveitides
18. Panuveitis
 - a. Sarcoidosis
 - b. Behçet syndrome
 - c. Sympathetic ophthalmia

- d. Vogt-Koyanagi-Harada syndrome
 - e. Congenital syphilis
 - f. Acquired syphilis
 - g. Tuberculosis
 - h. Onchocerciasis
19. Masquerade syndromes
- a. Intraocular neoplasia (uveal malignant melanoma, intraocular lymphoma, and others)
 - b. Retinal detachment
20. Open-angle glaucoma
21. Angle-closure glaucoma
22. Combined-mechanism glaucoma

Moorthy RS, et al. Glaucoma associated with uveitis. *Surv Ophthalmol* 1997;5:361-394.

Glaucoma Associated with Intraocular Tumors

1. Iris
 - A. Nevus
 - B. Melanocytoma
 - C. Iris pigment epithelium adenoma
 - D. Malignant melanoma
 - E. Metastatic
2. Ciliary body
 - A. Medulloepithelioma
 - B. Melanocytoma
 - C. Malignant melanoma
 - D. Metastatic
3. Choroid
 - A. Malignant melanoma
 - B. Metastatic
4. Optic nerve
 - A. Melanocytoma
 - B. Metastatic
5. Retina—retinoblastoma
6. Metastatic
 - A. Carcinoma
 - B. Cutaneous melanoma
 - C. Breast
 - D. Lung
 - E. Kidneys
 - F. Testicles
 - G. Prostate
 - H. Pancreas
 - I. Colon
 - J. Gastrointestinal

7. Others

- A. Leukemia
- B. Lymphoma
- C. Phakomatoses as Sturge-Weber or neurofibromatosis
- D. Multiple myelomas
- E. Juvenile xanthogranuloma

Shields CL, et al. Prevalence and mechanisms of secondary intraocular pressure elevation in eyes with intraocular tumors. *Ophthalmology* 1987;94:839-846.

10

Anterior Chamber

Hypopyon (Pus in Anterior Chamber)

1. Hypopyon ulcer—corneal ulcer with pus in the anterior chamber
 - A. Acanthamoeba
 - B. Acquired immunodeficiency syndrome (AIDS)
 - C. *Aspergillus* species
 - D. *Candida albicans*
 - E. Chemical injury
 - F. *Diplococcus pneumoniae*
 - G. *Escherichia coli*
 - H. *Fusarium* species
 - I. Herpes simplex
 - J. Herpes zoster
 - K. Measles
 - L. Moraxella
 - M. *Neisseria gonorrhoeae*
 - N. *Proteus vulgaris*
 - O. **Pseudomonas aeruginosa*

- P. *Serratia* species
 - Q. Smallpox
 - R. Spitting-cobra venom
 - S. Staphylococcus
 - T. *Streptococcus
2. Severe acute iridocyclitis
 3. Repeated corneal transplantation of human amniotic membrane
 4. Necrosis of intraocular tumors or metastasis
 5. Retained intraocular foreign bodies, including toxic lens syndrome
 6. Endophthalmitis—at time of surgical treatment, accidental trauma, in drug users, or spontaneous occurrence (see p. 223)
 - A. Acanthamoebae
 - B. Actinomycosis
 - C. Amebiasis
 - D. *Aspergillus* species
 - E. Bacterial including bacillus cereus
 - F. Behçet syndrome
 - G. *C. albicans*
 - H. Coccidioidomycosis
 - I. Coenurosis
 - J. Cysticercosis
 - K. *Fusarium* species
 - L. Hydatid cyst
 - M. Influenza
 - N. *Listeria monocytogenes*
 - O. Lockjaw (*Clostridium tetani*)
 - P. Metastatic bacterial endophthalmitis
 - Q. *Moraxella* species
 - R. *Mucor* species
 - S. *Mycobacterium avium*
 - T. **Pseudomonas* species
 - U. Relapsing fever
 - V. *Serratia marcescens*
 - W. Saprophytic fungi
 - X. *Staphylococcus
 - Y. *Streptococcus
 - Z. Sterile hypopyon
 1. Behçet syndrome (oculobuccogenital syndrome)
 2. Endotoxin contamination of ultrasonic bath
 3. Following cyanoacrylate sealing of a corneal perforation
 4. Following refractive surgery
 5. Histiocytosis X (Hand-Schüller-Christian syndrome)
 6. Intraocular lens or instrument polishing compounds or sterilization techniques
 7. *Juvenile rheumatoid arthritis
 8. Laser iridotomy
 9. Leukemia
 10. *Reaction to lens protein

11. Rough intraocular lens edges
12. von Bechterev-Strumpel syndrome (rheumatoid spondylitis)

- AA. Stevens-Johnson syndrome (dermatostomatitis)
- BB. Tight contact lens or contact lens overwear syndrome
- CC. Tuberculosis
- DD. Weil disease (leptospirosis)
- EE. Yersiniosis

1. Drugs, including the following:

benoxinate	ferrous gluconate	piperocaine
butacaine	ferrous succinate	polysaccharide-iron complex
cocaine	ferrous sulfate	proparacaine
colchicine (?)	iodide and iodine solutions and compounds	radioactive iodides
dibucaine		rifabutin
dyclonine	iron dextran	tetracaine urokinase
ferrocholinate	iron sorbitex	urokinase
ferrous fumarate	phenacaine	

2. Vitreous “fluff-ball”
 3. Following refractive surgery
 4. Pseudohypopyon
 - A. Ghost cell glaucoma with khaki-colored cells
 - B. Accidental intraocular steroid injection
1. Acute angle-closure glaucoma
 2. Non-Hodgkin lymphoma
 3. Pars plana vitrectomy and silicone oil injection

HypHEMA (Bleeding into the Anterior Chamber)

1. Trauma
 - A. Following laser iridectomy or strabismus surgery in aphakia
 - B. Honan balloon use in Fuchs heterochromic iridocyclitis
 - C. *Tear of ciliary body—post contusion deformity of anterior chamber
 - D. *To ciliary body, such as cyclodialysis
 - E. To iris, such as in iridodialysis or intraocular lens irritation
 - F. After airbag inflation
 - G. Metallic intraocular foreign body during magnetic resonance imaging
2. Overdistention of vessels
 - A. Obstruction of central retinal vein
 - B. Sudden lowering of high intraocular pressure
3. Fragility of vessel walls
 - A. Acute gonorrheal iridocyclitis

- B. Acute herpes iridocyclitis
- C. Acute rheumatoid iridocyclitis
- D. Ankylosing spondylitis
- 4. Blood abnormality
 - A. Anemias
 - B. Association with use of aspirin
 - C. Hemophilia
 - D. Leukemia
 - E. Purpura
 - F. Sickle cell disease
- 5. Metabolic disease
 - A. Diabetes mellitus (Willis disease)
 - B. Scurvy (avitaminosis C)
- 6. Neovascularization of iris (see rubeosis iridis, p. 366-367)
- 7. Vascularized tumors of iris (see pigmented and nonpigmented iris lesions, p. 374-375)
 - A. Angioma
 - B. Iris vascular tufts
 - C. *Juvenile xanthogranuloma (JXG)
 - D. Lymphosarcoma
 - E. Retinoblastoma
- 8. Wound vascularization following cataract extraction
- 9. Persistent pupillary membrane hemorrhage

Ta CN, Bowman RW. Hyphema caused by a metallic intraocular foreign body during magnetic resonance imaging. *Am J Ophthalmol* 2000;129:533-534.

Spontaneous Hyphema

1. Delayed following glaucoma surgery
2. Diseases of blood or blood vessels
 - A. Hemophilia
 - B. Leukemia
 - C. Malignant lymphoma
 - D. Purpura
 - E. Scurvy
3. Fibrovascular membranes in retrolenticular or zonular area
 - A. Persistent primary vitreous
 - B. Retinoschisis
 - C. Retinopathy of prematurity
4. Systemic hypertension
5. Hydrophthalmos
6. Iatrogenic
7. Intraocular neoplasms
8. *JXG—yellow nodules of skin and iris
9. Malignant exophthalmos

10. Microbial keratitis, especially *Moraxella*
11. Occult trauma or trauma with late effect
12. *Rubeosis iridis
13. Severe iritis with or without
 - A. Behçet disease (dermatostomatophthalmic syndrome)
 - B. Diabetes mellitus (Willis disease)
 - C. Gonococcal infection
 - D. Herpes zoster or herpes simplex
14. Use of warfarin, heparin, aspirin, or alcohol
15. Vascular anomalies of iris
16. Wound vascularization following cataract extraction

Koehler MP, Shelton DB. Spontaneous hyphema resulting from warfarin. *Ann Ophthalmol* 1983;15:858-859.

Pandolfi M. *Hemorrhages in ophthalmology*. New York: Thieme-Stratton, 1979.

Spontaneous Hyphema in Infants

1. Acute rheumatoid iridocyclitis
2. Blood dyscrasias, such as anemia, leukemia, and disseminated intravascular coagulation
3. Iritis
4. *JXG
5. Perinatal asphyxia
6. Persistent hyperplastic primary vitreous
7. Retinoblastoma
8. Retinoschisis
9. Retinopathy of prematurity
10. *Trauma without history (consider child abuse)

10. Homologous leucocytic antibody determination				S					U
11. Lumbosacral-spine roentgenogram									U
12. Macroglobulins negative									U
13. Orbital roentgenogram (globe calcium)		S			S				
14. Ultrasonography, ocular	U	U			U	U	S		
15. Visual fields									U

R = rarely; S = sometimes; and U = usually.

Plasmoid Aqueous (Aqueous with a High Protein Content)

1. Rheumatoid arthritis
2. Serum sickness
3. Infection with gonococcus
4. Following paracentesis or intraocular operation, such as cataract extraction
5. Severe corneal ulceration
6. Trauma

Newell FW. *Ophthalmology, principles and concepts*, 7th ed. St. Louis: CV Mosby, 1991.

Cholesterolosis of the Anterior Chamber

In this condition, cholesterol crystals develop in the anterior chamber; usually in a blind eye following trauma, but can be associated with hyphema or secondary glaucoma. It is also associated with the following:

1. *Chronic uveitis
2. Eales disease (periphlebitis)
3. Lens subluxation
4. Mature or hypermature cataract
5. Microphthalmia
6. *Phthisis bulbi
7. Retinal detachment
8. Traumatic cataract
9. Vascular disorders
10. Vitreous hemorrhage

Mishra RK, et al. Cholesterol crystals in Eales disease. *Indian J Ophthalmol* 1980;28:67-68.

Wand M, Garn RA. Cholesterolosis of the anterior chamber. *Am J Ophthalmol* 1974;78:143-144.

Gas Bubbles in the Anterior Chamber

1. *Clostridium perfringens*
2. *E. coli*
3. Yttrium-aluminum-garnet (YAG) laser treatment to the anterior segment
4. Postoperative intraocular surgery

Frantz JF, et al. Acute endogenous panophthalmitis caused by clostridium perfringens. *Am J Ophthalmol* 1974;78:295-303.

Obertymski H, Dyson C. *Clostridium perfringens* panophthalmitis. *Can J Ophthalmol* 1974;9:258-259.

Pigmentation of Trabecular Meshwork

1. In elderly individuals—inferior nasal or faint band circumferential
2. *Pseudoexfoliation of lens with or without glaucoma—unilateral or bilateral
3. *Pigmentary glaucoma
4. *Krukenberg spindle without glaucoma
5. *Malignant melanoma—one eye
6. Cyst of pigment layer of iris—unilateral
7. Previous intraocular operation, inflammation, or hyphema—scattered, mostly in lower angle
8. Nevus—dense, isolated patch

9. Open-angle glaucoma—patchy band, whole circumference
10. Following gamma irradiation for malignancy of nasal sinus

Epstein DL. *Chandler and Grant's glaucoma*, 3rd ed. Philadelphia: Lea & Febiger, 1986.

Roth M, Simmons RJ. Glaucoma associated with precipitates on the trabecular meshwork. *Ophthalmology* 1982;86:1614.

Pigment Liberation into the Anterior Chamber with Dilatation of Pupil

1. Diabetes mellitus (Willis disease)
2. Exercise
3. Hurler disease (mucopolysaccharidoses IH)
4. Low-tension glaucoma with pigment dispersion

Epstein DL. *Chandler and Grant's glaucoma*, 3rd ed. Philadelphia: Lea & Febiger, 1986.

Ritch R. Nonprogressive low tension glaucoma with pigmentary dispersion. *Am J Ophthalmol* 1982;94:190-196.

Grading of Anterior Chamber Angle Width (Usually Determined by Gonioscopy)

1. Grade 0: No angle structures visible—narrow angle, complete or partial closure (angle closure)
2. Grade 1: Unable to see posterior one half of trabecular meshwork—extremely narrow angle (probably capable of angle closure)
3. Grade 2: Part of Schlemm canal is visible—moderately narrow angle (may be capable of angle closure)
4. Grade 3: Posterior portion of Schlemm canal is visible—moderately open angle (incapable of angle closure)
5. Grade 4: Ciliary body is visible—open angle (incapable of angle closure)

Epstein DL. *Chandler and Grant's glaucoma*, 3rd ed. Philadelphia: Lea & Febiger, 1986.

Shields MB. *Textbook of glaucoma*, 2nd ed. Baltimore: Williams & Wilkins, 1986.

Blood in Schlemm Canal (Reversal of Normal Pressure Gradient)

1. *Artifact of goniolens flange occluding the episcleral veins in one or more quadrants
2. High episcleral venous pressure
 - A. *Carotid-cavernous sinus fistula (Red-eyed shunt syndrome)
 - B. *Dural-cavernous fistula
 - C. Mediastinal tumors
 - D. Orbital arteriovenous fistula
 - E. Sturge-Weber syndrome (meningocutaneous syndrome)
 - F. Superior vena cava obstruction (superior vena cava syndrome)
 - G. Tetralogy of Fallot
3. Low intraocular pressure
 - A. Following trabeculectomy
 - B. Hypotony (see p. 325)
 - C. Intraocular inflammation
4. Normal eye

Namba H. Blood reflux into anterior chamber after trabeculectomy. *Jpn J Ophthalmol* 1983;27:616-625.

Phelps CD, et al. Arterial anastomosis with Schlemm's canal. *Trans Am Ophthalmol Soc* 1985;83:304-315.

Phelps CD, et al. The diagnosis and prognosis of atypical carotid cavernous fistula. *Am J Ophthalmol* 1982;93:423-436.

Deep Anterior Chamber Angle

1. Normal variation
2. Aphakia
3. Myopia
4. Megalocornea or conical cornea including keratoconus (see p. 288)
5. Congenital glaucoma
6. Posterior dislocation of the lens (see p. 401-404)
7. Recession of anterior chamber angle

Newell FW. *Ophthalmology, principles and concepts*, 7th ed. St. Louis: CV Mosby, 1991.

Shields MB. *Textbook of glaucoma*, 2nd ed. Baltimore: Williams & Wilkins, 1986.

Narrow Anterior Chamber Angle (May be Capable of Angle Closure Glaucoma)

1. Normal variation
2. *Predisposition to angle closure
3. Anterior dislocation of the lens
4. Hyperopia
5. Spherophakia and microcornea
6. Postoperative intraocular operation with leaking wound (see hypotony, p. 325)
7. Choroidal detachment (see p. 532-535)
8. *Pupillary block
9. Loss of aqueous from perforating ulcer, corneal wound, or staphyloma (see hypotony, p. 325)
10. Intumescent senile cataract
11. Traumatic cataract that fluffs up
12. Primary hyperplastic primary vitreous (PHPV)
13. Peripheral anterior synechiae (see p. 341)
14. *Posterior entrapment of aqueous humor (malignant glaucoma or ciliary-block glaucoma)
15. Drugs, including the following:

acetazolamide	neostigmine	sulfamethizole
acetylcholine	physostigmine	sulfamethoxazole
alpha-chymotrypsin	pilocarpine	sulfamethoxypyridazine
demecarium	sulfacetamide	sulfanilamide
dichlorphenamide	sulfachlorpyridazine	sulfaphenazole
echothiophate	sulfadiazine	sulfapyridine
edrophonium	sulfadimethoxine	sulfasalazine
ethoxzolamide	sulfamerazine	sulfathiazole
isofluorophate	sulfameter	sulfisoxazole
methazolamide	sulfamethazine	

16. Plateau iris
17. Diffuse ciliary body or iris tumor

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

Newell FW. *Ophthalmology: principles and concepts*, 7th ed. St. Louis: CV Mosby, 1991.

Taylor BC, Winslow RL. Pseudophakic flat anterior chamber following retinal detachment repair. *Ophthalmology* 1981;88:935.

Irregular Depth of the Anterior Chamber

1. Partial dislocation of lens
2. Tumor of iris or ciliary body
3. Peripheral anterior synechiae on one side of the chamber (see p. 341)
4. Iris bombe or pupillary block
5. Ruptured lens capsule with swelling on one side
6. Anatomic narrowing superiorly
7. Subacute angle-closure glaucoma
8. Cyclodialysis and traumatic recession of chamber angle

Epstein DL. *Chandler and Grant's glaucoma*, 3rd ed. Philadelphia: Lea & Febiger, 1986.

Newell FW. *Ophthalmology, principles and concepts*, 7th ed. St. Louis: CV Mosby, 1991.

Peripheral Anterior Synechiae (Adhesion of Iris Tissue Across Anterior Chamber Structures in Variable Amounts Noted with Gonioscopy)

1. Bridge corneoscleral trabecular meshwork to Schwalbe line or anterior to Schwalbe line (uncommon)
 - A. Anterior chamber cleavage syndrome
 1. Axenfeld syndrome (posterior embryotoxon)
 2. Congenital central anterior synechiae
 3. Following intraocular lens implantation
 4. Reiger syndrome (dysgenesis mesostromatolysis)
 - B. Essential iris atrophy (see p. 373)
 - C. Iris bombe from occlusion of pupil
 - D. Iris or ciliary body tumor pushing iris into contact with cornea
 - E. Local adhesion with of epithelium or fibrous ingrowth
 - F. Penetrating injury of the cornea
 - G. Postoperative flat anterior chamber
2. Synechiae of iris limited to ciliary band, scleral spur, and trabecular meshwork (common)
 - A. *Following cataract surgery, intraocular implantation, refractive surgery, or laser trabeculoplasty
 - B. *Intraocular inflammation
 - C. *Neovascular glaucoma from fibrovascular membrane (see p. 324)
 - D. *Sequelae to angle-closure glaucoma

Epstein DL. *Chandler and Grant's glaucoma*, 3rd ed. Philadelphia: Lea & Febiger, 1986.

Kolker AE, Hetherington J. *Becker-Shaffer's diagnosis and therapy of the glaucomas*, 6th ed. St. Louis: CV Mosby, 1989.

Rouhiainen HJ, et al. Peripheral anterior synechiae formation after trabeculoplasty. *Arch Ophthalmol* 1988;106:189-191.

Neovascularization of Anterior Chamber Angle (Newly Formed Vessels Extend into the Trabecular Meshwork)

1. Anterior chamber angle
 - A. Congenital pupillary iris lens membrane with goniodysgenesis
 - B. Traumatic chamber angle
2. Iris tumors
 - A. Hemangioma
 - B. Melanoma
 - C. Metastatic carcinoma
3. Ocular vascular disease
 - A. *Central retinal artery thrombosis
 - B. *Central retinal vein thrombosis (see p. 468)
 - C. Hemiretinal branch vein occlusion (HBVO)
4. Postinflammatory
 - A. Anterior chamber implants
 - B. Fungal endophthalmitis
 - C. Radiation
 - D. Retinal detachment operation
 - E. Uveitis, chronic
5. Proximal vascular disease
 - A. Aortic arch syndrome (Takayasu syndrome)
 - B. Carotid cavernous fistula
 - C. Carotid ligation
 - D. Carotid occlusive disease
 - E. Cranial arteritis (temporal arteritis syndrome)
6. Retinal disease
 - A. Coats disease (Leber miliary aneurysms)
 - B. *Diabetic retinopathy
 - C. Eales disease (periphlebitis)
 - D. Glaucoma, chronic
 - E. Melanoma of choroid
 - F. Norrie disease (fetal iritis syndrome)
 - G. Persistent hyperplastic primary vitreous
 - H. Retinal detachment
 - I. Retinal hemangioma
 - J. Retinal vessel occlusion
 - K. Retinoblastoma
 - L. Retrolental fibroplasia
 - M. Sickle cell retinopathy (Herrick syndrome)

Shihab ZM, Lee PF. The significance of normal angle vessels. *Ophthalmic Surg Lasers* 1985;16:382-385.

IRIS Processes (Pectinate Ligaments in Anterior Chamber Angle)

1. Achondroplasia, diastrophic dwarfism, cartilage-hair hypoplasia, and spondyloepiphyseal dysplasia, anterior chamber cleavage syndrome, Axenfeld syndrome, Reiger syndrome, Peter anomaly.
2. Congenital glaucoma—may be associated with congenital microcoria and goniodysgenesis
3. Congenital scoliosis
4. Legg-Perthes disease (coxa plana)
5. Marfan syndrome (hypoplastic form of dystrophia mesodermalis congenita)
6. Mucopolysaccharidoses (including Hunter syndrome, Hurler syndrome, Scheie syndrome, and Sanfilippo-Good syndrome)
7. Myopic patients
8. *Normal, especially in brown-eyed persons
9. Pigmentary ocular dispersion syndrome

Dunn SP, et al. New findings in posterior amorphous corneal dystrophy. *Arch Ophthalmol* 1984;102:236-239.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

White Mass in Anterior Chamber

1. *Endophthalmitis
2. Ocular aspergillosis
3. Sterile inflammation following surgery or trauma
4. *Tumor

Katz G, et al. Ocular aspergillosis isolated in the anterior chamber. *Ophthalmology* 1993;100:1815-1818.

11

Pupil

Mydriasis (Dilated Pupil, Usually <5 MM)

1. Physiologic
 - A. Larger pupils in women than in men
 - B. Larger pupils in myopes than in hypermetropes
 - C. Larger pupils in blue irides than in brown irides
 - D. Larger pupils in adolescents and middle-aged persons than in very young or old persons
 - E. Surprise, fear, pain, strong emotion, or vestibular stimulation
 - F. General anesthesia of stages I, II, and IV
 - G. Autosensory pupillary reflex—stimulation of middle ear
 - H. Auditory pupillary reflex—tuning fork adjacent to ear
 - I. Vestibular pupillary reflex—stimulation of labyrinth by heat, cold, or rotation
 - J. Vagotonic pupillary reflex—stimulation on deep inspiration
2. Drugs, including the following:

(live)	alcohol	amitriptyline
acetaminophen	aldosterone	amobarbital
acetanilid	alkaloids	amoxapine
acetophenazine	allobarbitol	amphetamine
acetylcholine	alprazolam	amyl nitrite
adiphenine	alseroxylon	anisotropine
adrenal cortex injection	amantadine	antazoline
albuterol	ambutonium	antimony lithium thiomalate
antimony potassium tartrate	clomipramine	ether
antimony sodium tartrate	clonazepam	ethopropazine
antimony sodium	clonidine	fenfluramine
thioglycollate	clorazepate	fludrocortisone
aprobarbital	cocaine	fluorometholone
aspirin	codeine	fluphenazine
atropine	colistimethate	fluprednisolone
atropine methylnitrate	colistin	flurazepam
azatadine	contraceptives	fluvoxamine hydrochloride
baclofen	cortisone	gentamicin (?)
barbital	cryptenamine	glutethimide
belladonna	cyclizine	glycopyrrolate
benzathine	cyclobarbitol	guanethidine
benzphetamine	cyclopentobarbital	halazepam
benztropine	cyclopentolate	haloperidol
betamethasone	cyrimine	hashish
benzathine	cyproheptadine	heptabarbitol
biperiden	deserpidine	hexachlorophene
botulinum A	desipramine	hexamethonium
bromide	desoxycorticosterone	hexethal
bromisovalum	dexamethasone	hexobarbital
brompheniramine	dexbrompheniramine	hexocyclium
butabarbitol	dexchlorpheniramine	homatropine
butalbital	dextroamphetamine	hydrabamine penicillin V
butallylonal	diacetylmorphine	hydrabamine phenoxymethyl penicillin
butaperazine	diazepam	
butethal	dicyclomine	hydrocortisone
caramiphen	diethazine	hydromorphone
carbamazepine	diethylpropion	hydroxyamphetamine
carbinoxamine	digitalis	imipramine
carbon dioxide	digoxin	indomethacin (?)
carbromal	dimethindene	insulin
carisoprodol	diphepanil	iodide and iodine solutions and compounds
carphenazine	diphenhydramine	
chloral hydrate	diphenylhydantoin	isocarboxazid
chloramphenicol	diphenylpyraline	isoniazid
chlorcyclizine	diphtheria toxoid (adsorbed)	isopropamide
chlordiazepoxide	dipivefrin	levallorphan
chlorsondamine	disopyramide	levarterenol
chloroform	disulfiram	levodopa
chlorpheniramine	doxepin	lidocaine
chlorphenoxamine	doxylamine	lorazepam
chlorphentermine	dipivalyl epinephrine (DPE)	loxapine
chlorpromazine	droperidol	lysergic acid diethylamide (LSD)
chlorprothixene	emetine	
cimetidine	ephedrine	lysergide
clemastine	epinephrine	maprotiline
clidinium	ergot	marijuana
clomiphene	erythromycin	measles and rubella virus vaccine (live)
measles virus vaccine (live)	opium	promethazine
measles, mumps, and rubella virus vaccine	oral contraceptives	propantheline
	orphenadrine	propiomazine
mecamylamine	oxazepam	propoxyphene
meclizine	oxygen	protopraterines A and B
medrysone	oxymorphone	protriptyline
mepenzolate	oxyphenyclimine	psilocybin
meprednisone	oxyphenonium	pyrilamine
mephentermine	paraldehyde	quinidine
mephobarbital	paramethasone	quinine
meprednisone	pargyline	radioactive iodides
meprobamate	penicillin G	rauwolfia serpentina
mescaline	pentobarbital	rescinnamine
mesoridazine	pentolinium	reserpine
metaraminol	pentylene tetrazol	rubella and mumps virus vaccine (live)
methadone	perazine	scopolamine
methamphetamine	pericyazine	
methantheline	perphenazine	

methaqualone
metharbital
methdilazine
methitural
methixene
methohexital
methotrimeprazine
methoxamine
methscopolamine
methyl alcohol
methylatropine nitrate
methylene blue
methylpentynol
methylphenidate
methylprednisolone
methypylon
metoclopramide
midazolam
morphine
mumps virus vaccine (live)
nalidixic acid
nalorphine
naloxone
naltrexone
naphazoline
nialamide
nitrazepam
nitroglycerin (?)
nitrous oxide
norepinephrine
nortriptyline
trimethidinium
trimipramine
tripelennamine

phenacetin
phenimetrazine
phenelzine
pheniramine
phenmetrazine
phenobarbital
phenoxymethyl penicillin
phentermine
phenylephrine
phenylpropanolamine
phenytoin
pilocarpine
pipenzolate
piperacetazine
piperidolate
poldine
polymyxin B
potassium penicillin G
potassium penicillin V
potassium phenethicillin
potassium phenoxymethyl
penicillin
prazepam
prednisolone
prednisone
primidone
probarbital
procaine penicillin G
prochlorperazine
procyclidine
promazine
tropicamide
urethan
veratrum viride alkaloids

secobarbital
sodium antimonylgluconate
sodium salicylate
stibocaptate
stibogluconate
stibophen
syrosingopine
talbutal
temazepam
tetraethylammonium
tetrahydrocannabinol
tetrahydrozoline
thiocarbanidin (THC) (?)
thiamylal
thiethylperazine
thiopental
thiopropazate
thiopropazine thioridazine
thiothixene
tolazoline
tranlycypromine
trazodone
triamcinolone
triazolam
tridihexethyl
trifluoperazine
trifluoperidol
triflupromazine
trihexyphenidyl
trimeprazine
trimethaphan
vinbarbital

3. Toxins, including after-shave lotion, arsenic, *Clostridium botulinum* (gas gangrene), tetanus (lockjaw), cannabis, adrenergic agents (such as nasal sprays or asthma therapy in newborns), paraaminosalicylic acid, lead, carbon monoxide, organic phosphorus, bovine milk protein in infants with allergic malabsorption, *Datura stramonium* (Jimson weed), *Datura wrightii* (moonflower), and *Solanaceae* (nightshade), nitrocompounds and aminocompounds of benzene, carbon disulfide, and papaverine.
4. Ocular causes (mydriasis) (see fixed pupil section p. 348)
 - A. Glaucoma, usually acute
 - B. Glaucomocylitic crisis (Posner-Schlossman syndrome)
 - C. Hollenhorst syndrome (chorioretinal infarction syndrome)
 - D. *Iritis; uveitis
 - E. Intraocular foreign body (iron mydriasis)
 - F. Iris atrophy
 - G. Iris sphincter rupture
 - H. *Paralytic mydriasis following trauma
 - I. Photocoagulation complications
 - J. Retinoblastoma
5. Lesions of ciliary ganglion causing internal ophthalmoplegia (e.g., dilated pupil and absent accommodation)
 - A. Adie tonic pupil
 - B. Congenital lesion
 - C. Herpes zoster
 - D. Orbital floor fracture repair
 - E. Systemic lupus erythematosus (disseminated lupus erythematosus)
 - F. Varicella (chickenpox)
 - G. Yellow fever
6. Acute or chronic ophthalmoplegias (see p. 168-171)
7. Third-nerve lesion—also ptosis and ophthalmoplegia on affected side (see p. 168-171)
8. Coma because of alcohol ingestion, eclampsia, diabetes, uremia, epilepsy, apoplexy, or meningitis—the pupils are equally dilated and do not constrict with stimulation
9. Midbrain tumors, in which dilated pupils, paralysis of vertical gaze (especially upward gaze), and retraction nystagmus are manifested
 - A. Craniopharyngioma
 - B. Parinaud syndrome (paralysis of upgaze movements)
10. Epidural or subdural hematoma
11. Paralytic parasympathetic lesions
12. Irritative sympathetic lesion—pupillary dilatation widening of palpebral aperture and slight exophthalmos
 - A. Irritative lesion, such as tumor, encephalitis, or syringomyelia of the hypothalamus, midbrain, medulla, or cervical cord
 - B. Thoracic lesions, such as cervical rib, aneurysms of the thoracic vessels, mediastinal tumors, or tubercular pleurisy
 - C. *Cervical lesions, including nasopharyngeal tumors, thyroid swelling, or cervical nodes
 - D. Rabies (hydrophobia)
 - E. *Trauma

- F. Visceral disease
 - G. Aortic dilatation or exudative endocarditis (Roque sign)
 - H. Acute abdominal conditions, such as appendicitis, cholecystitis, or colitis (Moschowitz sign)
 - I. Psychiatric patients with pressure over McBurney point (Meyer phenomenon)
13. Tumors, injury, or hemorrhage of frontoparietal, parietal, temporal, or temporooccipital area—contralateral mydriasis and ipsilateral defect in the visual field
 14. Fractured skull
 15. Acute autonomic neuropathy
 16. Acute pandysautonomia
 17. Avitaminosis B₂ (pellagra)
 18. Chorea
 19. Clivus edge syndrome
 20. Craniocervical syndrome (whiplash injury)
 21. Foramen lacerum syndrome (aneurysm of internal carotid artery syndrome)
 22. Hemiacrosomia syndrome (hemifacial or unilateral hypertrophy)
 23. Iron deficiency anemia
 24. Lockjaw (tetanus)
 25. Mycosis fungoides syndrome (Sézary syndrome)
 26. Optic canal syndrome
 27. Parkinson syndrome (shaking palsy)
 28. Prematurity
 29. Pulseless disease
 30. Reye syndrome (acute encephalopathy syndrome)
 31. Rollet syndrome (orbital apex-sphenoidal syndrome)
 32. Suprarenal-sympathetic syndrome (adrenal medulla tumor syndrome)
 33. Temporal arteritis
 34. Weber syndrome (cerebellar peduncle syndrome)
 35. Wernicke syndrome (I) (avitaminosis B, thiamine deficiency)
 36. Zellweger syndrome (cerebrohepatorenal syndrome)

Relative Fixed, Dilated Pupil

1. Midbrain damage—vascular accidents, tumors, degenerative and infectious diseases
 - A. Dorsal (Edinger-Westphal nucleus and its connections)—rare, involves both pupils, pupillary near reaction often retained, and often associated with supranuclear vertical gaze palsy (upgaze)
 - B. *Ventral (fascicular part of third nerve)—associated with other neurologic deficits, such as Nothnagel syndrome, Benedikt syndrome, Weber syndrome, and involves other extraocular components of the third nerve

2. *Damage to the third nerve (from interpeduncular fossa to ciliary ganglion)
 - A. Basal aneurysms
 - B. Supratentorial space-occupying masses, causing displacement of the brainstem or transtentorial herniation of the uncus; patient is stuporous or comatose
 - C. Basal meningitis—often bilateral internal ophthalmoplegia
 - D. *Ischemic oculomotor palsy
 - E. Parasellar tumor (e.g., pituitary adenoma, meningioma, craniopharyngioma, nasopharyngeal carcinoma, or distant metastases)
 - F. Parasellar inflammation (e.g., Tolosa-Hunt syndrome, temporal arteritis, herpes zoster)
3. *Damage to the ciliary ganglion
 - A. Viral ciliary ganglionitis or involvement of the ciliary nerves, such as from herpes zoster
 - B. Orbital trauma or tumor
 - C. Trauma from inferior oblique surgery
 - D. Trauma from retrobulbar injections
4. Damage to short ciliary nerves
 - A. Blunt trauma to the globe may injure the ciliary plexus at the iris root (traumatic iridoplegia)
 - B. Choroidal trauma or tumor
5. *Damage to the iris
 - A. Degenerative or inflammatory diseases of the iris
 - B. Posterior synechiae
 - C. Acute rise of intraocular pressure (hypoxia or sphincter damage)
 - D. Blunt injury to the globe with sphincter damage (traumatic iridoplegia)
 - E. Pharmacologic blockade by atropinic substances
 - F. Following cataract surgery
6. Total blindness, including cortical blindness (see p. 632-636)
 - A. Bilateral optic nerve
 1. Anterior ischemic optic neuropathy
 2. Avulsion (traumatic)
 3. Optic neuritis
 - B. Bilateral retina
 1. Acute retinal necrosis
 2. Central retinal artery occlusion
 3. Central retinal vein occlusion
 4. Retina detachment

Miosis (Small Pupil) (Usually <2 MM)

1. Physiologic
 - A. Smaller pupil in men than in women
 - B. Smaller pupil in hypermetropes than in myopes
 - C. Smaller pupil in brown irides than in blue irides
 - D. Smaller pupil in very young or old than in adolescents and middle-aged persons

- E. Sleep, fatigue, coma
- F. Stage III anesthesia
- G. Near vision (synkinesis with convergence and accommodation)
- H. Vestibular stimulation

2. Drugs, including the following:

aceclidine	echothiophate	naloxone
acetophenazine	edrophonium	naltrexone
acetylcholine	ephedrine (?)	neostigmine
alcohol	ergot	nialamide
allobarbital	ergotamine	nitrous oxide
alseroxylon	ether	opium
ambenonium	ethopropazine	oxprenolol
amobarbital	fluphenazine	oxymorphone
aprobarbital	guanethidine	paraldehyde
baclofen	haloperidol	pentazocine
barbital	hashish	pentobarbital
bethanechol	heptabarbital	perazine
bromide	hexachlorophene	pericyazine
bromisovalum	hexethal	perphenazine
bupivacaine	hexobarbital	phencyclidine
butabarbital	hydromorphone	phenelzine
butalbital	indomethacin	phenobarbital
butallylonal	iodide and iodine solutions and compounds (?)	phenoxybenzamine
butaperazine		phenylephrine
butethal	isocarboxazid	physostigmine
carbachol	isoflurophate	pilocarpine
carbromal	isosorbide dinitrate (?)	piperacetazine
carisoprodol	levallorphan	piperazine
carphenazine	levodopa	piperocaine
chloral hydrate	lidocaine	prilocaine
chloroform	marijuana	primidone
chloroprocaine	meperdine	probarbital
chlorpromazine	mephobarbital	procaine
chlorprothixene	mepivacaine	prochlorperazine
clonidine	meprobamate	promazine
codeine	mesoridazine	promethazine
cyclobarbital	methacholine	propiomazine
cyclopentobarbital	methadone	propoxycaine
demecarium	methaqualone (?)	propoxyphene
deserpidine	metharbital	propranolol
diacetylmorphine	methdilazine	pyridostigmine
dibucaine	methitural	radioactive iodides (?)
diethazine	methohexital	rauwolfia serpentina
digitalis(?)	methotrimeprazine	rescinnamine reserpine
diisopropyl flurophosphate (DFP)	methyprylon	secobarbital
	midazolam	sulindac
dronabinol	morphine	syrosingopine
droperidol	nalorphine	talbutal
tetracaine	thiopropazine	trifluperidol
tetrahydrocannabinol	thioridazine	triflupromazine
thiamylal	thiothixene	trimeprazine
thiethylperazine	tolazoline	vinbarbital
thiopental	tranlycypromine	vitamin A
thiopropazate	trifluoperazine	

3. Ocular causes
 - A. *Accommodative spasm (hysteria)
 - B. Corneal irritation, such as keratitis or corneal injury
 - C. Conjunctival irritation
 - D. Congenital miosis (absent dilator muscle)
 - E. Dislocated lenses
 - F. Iritis
 - G. *Posterior iris synechiae, usually irregular
 - H. Retinitis pigmentosa
4. Central nervous system defects
 - A. Acute pontine angle lesion, such as hemorrhage or tumor associated with disturbed conjugate gaze
 - B. Arteriosclerotic and degenerative disease of the cerebrum
 - C. Encephalitis
 - D. Facial tetanus
 - E. Giant cell (temporal arteritis)
 - F. Infections or tumors of the cavernous sinus or superior orbital fissure
 - G. Purulent meningitis
 - H. Severe hypoxia
5. "Cluster headache" or histamine cephalgia-ptosis; miosis; red, watering eye on side of headache
6. Raeder paratrigeminal syndrome—ipsilateral miosis and pain—may be associated with third-nerve paralysis or corneal anesthesia
 - A. Extracranial aneurysm of internal carotid
 - B. Idiopathic
 - C. Meningioma
 - D. Migraine
 - E. Posttrauma
7. Argyll Robertson pupil—small and irregular; reacts better to accommodation than to light
 - A. Aberrant regeneration of the third nerve
 - B. Carbon disulfide poisoning
 - C. Cerebral aneurysm
 - D. Chronic alcoholism
 - E. *Diabetes mellitus (Willis disease)
 - F. Encephalitis
 - G. Friedreich ataxia
 - H. Malaria
 - I. Midbrain tumors, such as pinealomas and craniopharyngioma
 - J. Multiple sclerosis (disseminated sclerosis)
 - K. Senile and degenerative diseases of the central nervous system
 - L. Syphilis (acquired lues)

M. Syringomyelia

N. Trauma to skull or orbit

8. Ataxia, spastic with congenital miosis—dominant
9. Babinski-Nageotte syndrome (medulla tegmental paralysis)
10. Coenurosis
11. Craniocervical syndrome (whiplash injury)
12. Dejerine-Klumpke syndrome (lower radicular syndrome)
13. Devic syndrome (neuromyelitis optica)
14. *Diabetes mellitus
15. Eaton-Lambert syndrome (myasthenic syndrome)
16. Elevated intracranial pressure
17. *Horner syndrome (cervical sympathetic paralysis syndrome)
18. Jugular foramen syndrome (Vernet syndrome)
19. Lowe syndrome (oculocerebrorenal syndrome)
20. Marfan syndrome (arachnodactyly dystrophia mesodermalis congenita)
21. Morquio syndrome (mucopolysaccharidosis IV)
22. Myotonic dystrophy (Curschmann-Stewart syndrome)
23. Naffziger syndrome (scalenus anticus syndrome)
24. Pancoast syndrome (superior pulmonary sulcus syndrome)
25. Parkinsonism (shaking palsy)
26. Psychogenic diseases, such as schizophrenia, dementia precox, or hysteria
27. Refsum syndrome (phytanic acid storage disease)
28. Retroparotid space syndrome (Villaret syndrome)
29. Romberg syndrome (facial hemiatrophy)
30. Spider bites
31. Stormorken syndrome (thrombocytopathia bleeding tendency)
32. Tetanus (lockjaw)
33. von Herrenschwand syndrome (sympathetic heterochromia)
34. Wallenberg syndrome (dorsolateral medullary syndrome)
35. Wernicke syndrome (avitaminosis B₁, thiamine deficiency)

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Paradoxical Pupillary Reaction (Constricts when Light is Withdrawn)

1. Best disease
2. *Congenital achromatopsia
3. *Congenital stationary night blindness
4. Leber congenital amaurosis
5. Optic nerve hypoplasia
6. Retinitis pigmentosa

Barricks ME, et al. Paradoxical pupillary response s in congenital stationary night blindness. *Arch Ophthalmol* 1977;95:1800-1804.

Frank JW, et al. Paradoxical pupillary phenomena. *Arch Ophthalmol* 1988;106:1564.

Absence or Decrease of Pupillary Reaction to Light

This type of absence or decreased pupillary reaction to light is caused by drugs, including the following:

acetaminophen	chlorcyclizine	heptabarbital
acetanilid	chlordiazepoxide	hetacillin (?)
acetophenazine	chlorprocaine	hexachlorophene
alcohol	chlorpheniramine	hexethal
allobarbital	chlorphenoxamine	hexobarbital
alprazolam	chlorpromazine	homatropine
amitriptyline	chlorprothixene	imipramine
amobarbital	cholecalciferol	insulin
amoxapine	cimetidine	isocarboxazid
amoxicillin	clemastine	isoniazid
amphetamine	clomipramine	lidocaine
ampicillin	clonazepam	lorazepam
antazoline	clonidine	LSD
antimony lithium thiomalate	clorazepate	lysergide
antimony potassium tartrate	cloxacillin (?)	meclizine
antimony sodium tartrate	cocaine	meperidine
antimony sodium thioglycollate	cyclizine	mephobarbital
	cyclobarbital	mepivacaine
aprobarbital	cyclopentobarbital	meprobamate
aspirin	cycrimine	mescaline
atropine	desipramine	mesoridazine
baclofen	dexbrompheniramine	methamphetamine
barbital	dexchlorpheniramine	methaqualone
belladonna	dextroamphetamine	metharbital
benztropine	diacetylmorphine	methdilazine
biperiden	diazepam	methicillin (?)
bromide	dicloxacillin (?)	methitural
bromisovalum	diethazine	methohexital
brompheniramine	dimethindene	methotrimeprazine
butabarbital	diphenhydramine	methscopolamine
butalbital	diphenylpyraline	methyl alcohol
butallylonal	diphtheria toxoid, adsorbed	methypylon
butaperazine	doxepin	midazolam
butethal	doxylamine	nafcilin (?)
calcifediol	emetine	neomycin
calcitriol	ergocalciferol	nialamide
carbenicillin (?)	ergot	nitrazepam
carbinoxamine	ethopropazine	nortriptyline
carbon dioxide	etidocaine	orphenadrine
carbromal	fenfluramine	oxacillin (?)
carisoprodol	fluphenazine	oxazepam
carmustine	flurazepam	pargyline
carphenazine	glutethimide	pentobarbital
chloramphenicol	halazepam	pentylenetetrazol
perazine	propantheline	
periciazine	propiomazine	thiopental
perphenazine	propoxycaine	thiopropazate
phenacetin	protriptyline	thiopropazine
phencyclidine	psilocybin	thioridazine
phenelzine	pyrilamine	thiothixene
pheniramine	quinine	tranlycypromine
phenmetrazine	ranifidine	triazolam
phenobarbital	scopolamine	trichloroethylene
phenylpropanolamine	secobarbital	trifluoperazine
phenytoin	sodium antimonylgluconate	triflupromazine
piperacetazine	sodium salicylate	trihexyphenidyl
prazepam	stibocaptate	trimeprazine
prilocaine	stibogluconate	trimipramine
primidone	stibophen	tripelennamine
probarbital	talbutal	triprolidine
procaine	temazepam	urethan
prochlorperazine	tetanus immune globulin	vinbarbital
procyclidine	tetanus toxoid	vitamin D
promazine	thiamylal	vitamin D ₂
promethazine	thiethylperazine	vitamin D ₃

Anisocoria (Inequality of Pupils of ≥ 1 MM)

1. Central nervous system
 - A. *Adie (tonic) pupil
 - B. Aneurysm of the aorta or carotid artery
 - C. Cerebrovascular accidents
 - D. Cervical rib (ipsilateral constricted pupil)
 - E. Encephalitis (mild cases)
 - F. *Horner syndrome (cervical sympathetic paralysis syndrome)
 - G. Pontine lesions
 - H. Tabes dorsalis
 - I. Third-nerve paresis
 - J. Trigeminal neuralgia (tic douloureux)
 - K. Wernicke hemianopic pupil
2. Drugs, including the following:

alcohol	clemastine	dronabinol
antazoline	contraceptives	ethchlorvynol
bromide	dexbrompheniramine	etidocaine
bromisovalum	dexchlorpheniramine	hashish
brompheniramine	diacetylmorphine	isocarboxazid
bupivacaine	dimethindene	jimsonweed
carbinoxamine	diphenhydramine	lidocaine
carbromal	diphenylpyraline	LSD
chlorprocaine	disulfiram	lysergide
chlorpheniramine	doxylamine	marijuana
mepivacaine	phenylpropanolamine	tetrahydrocannabinol
mescaline	prilocaine	tranlycypromine
methaqualone	procaine	trichloroethylene
nialamide	propoxycaine	tripelennamine
oral contraceptives	psilocybin	triprolidine
phenelzine	pyrilamine	
pheniramine	scopolamine	

3. Ocular conditions
 - A. Artificial eye (pseudoanisocoria)
 - B. Cornea, such as keratitis or abrasion
 - C. Glaucoma, including pigmentary dispersion
 - D. *Iris, such as iritis, synechiae, iris atrophy, or iris sphincter rupture
 - E. Ocular trauma
 - F. Spastic miosis
4. Physiologic
 - A. Anisometropia—larger pupil with the more myopic eye
 - B. Familial
 - C. Lateral illumination of one eye gives more miosis in that eye than in the other
 - D. Nonfamilial—normal variation (small percentage of the population)
 - E. Tournay reaction—with the eyes turned sharply to the side, dilatation of the pupil of the abducting eye and miosis of pupil of the adducting eye
5. Unilateral miosis (see p. 349)
6. Unilateral mydriasis (see p. 349)

Cheng MM, Catalano RA. Fatigue-induced familial anisocoria. *Am J Ophthalmol* 1990;109:480-481.

Nakagawa TA, et al. Aerosolized atropine as an unusual cause of anisocoria in a child with asthma. *Pediatr Emerg Care* 1993;9:153-154.

Irregularity of Pupil (Including Oval or Peaked Pupil)

1. Adherent leukoma as one part of iris is pulled up to corneal scar, peripheral anterior synechiae, or corneal laceration with prolapse of iris
2. Alagille syndrome
3. Anterior chamber intraocular lens that is too long or erodes into uveal tissue
4. Argyll-Robertson pupil—small and irregular; reacts better to accommodation than to light; same type as seen in diabetic patients (pseudodiabetic pupil)
5. Congenital coloboma of the iris, usually below
6. Following laser iridectomy
7. Glaucoma—oval, dilated pupil
8. *Injury of the iris
9. Iris tuck of anterior chamber intraocular lens
10. *Iritis—usually small but pupil may be any shape with anterior or posterior synechiae
11. *Long-term intraocular inflammation
12. Medication, with faster reaction of one sector of iris than of another—miosis or mydriasis
13. Operation—as sector iridectomy or peripheral iridectomy
14. Optic atrophy due to causes such as syphilis, quinine poisoning, and internal ophthalmoplegia of vascular or traumatic origin

15. Piece of anterior capsule into anterior chamber
16. Posterior chamber intraocular lens with loop of intraocular lens holding the midportion of iris peripherally
17. Posterior chamber lens with two haptics having the lens either behind the pupil with the haptics in front or having the lens anterior to the pupil with the haptics behind the iris
18. Segmental iris atrophy
19. Tumors of iris or ciliary body
20. Vitreous or zonules into corneal laceration
21. Vitreous strand from behind pupil to wound
22. Wound leak with or without prolapse of the iris

Fuller JR. Iris creep producing correctopia in response to Molteno implants. *Arch Ophthalmol* 2001;119:304-306.

Hippus

Hippus is visible, rhythmic, but irregular pupillary oscillations that are deliberate in time. It comprises 2 mm or more excursions and has no localizing significance.

1. Normal
2. Incipient cataracts
3. Central nervous system diseases, including the presence of total third cranial nerve palsy, hemiplegia, meningitis (acute), cerebral syphilis, tabes, general paralysis, myasthenia gravis, tumors of corpora quadrigemina, epileptics, Cheyne-Stokes breathing, multiple sclerosis (disseminated sclerosis), and cerebral tumors
4. Neurasthenia (nervous exhaustion, Beard disease)
5. Drugs, including the following:

allobarbitol	cyclopentobarbitol	pentylentetrazol
amobarbitol	heptabarbitol	phenobarbitol
aprobarbitol	hexethal	primidone
barbitol	hexobarbitol	probarbitol
butabarbitol	mephobarbitol	secobarbitol
butalbital	metharbital	talbutal
butallylonal	methitural	thiamylal
butethal	methohexital	thiopental
cyclobarbitol	pentobarbitol	vinbarbitol

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

Zinn KM. *The pupil*. Springfield, IL: Charles C Thomas, 1972.

Tonohaptic Pupil

Tonohaptic pupil involves a long latent period preceding both contraction to light and redilatation, followed in each instance by a short but prompt movement.

1. Catatonic state
2. Diabetes mellitus (Willis disease)

3. Diabetes insipidus
4. Dystrophia adiposogenitalis (Fröhlich syndrome) or pituitary cachexia (Simmonds disease)
5. Introverted persons of the schizophrenic group
6. Parkinsonism (shaking palsy)
7. Pigmentary retinal dystrophy
8. Postencephalitic condition
9. Schizoid state

Duke-Elder S, Scott GI. *System of ophthalmology*, Vol 12. St. Louis: CV Mosby, 1971.

Leukokoria (White Pupil) (See Lesions Confused with Retinoblastoma, p. 502)

1. Angiomatosis of retina (cerebelloretinal hemangioblastomatosis)
2. Astrocytoma
3. *Cataract (congenital)
4. Choroidal hemangioma
5. *Coats disease (retinal telangiectasia)
6. Coloboma of choroid and optic disc
7. Congenital cytomegalovirus retinitis
8. Congenital retinal detachment
9. Exudative retinitis, chorioretinitis, or both
10. Falciform fold of retina
11. Familial exudative vitreoretinopathy
12. Herpes simplex retinitis
13. High myopia with advanced chorioretinal degeneration
14. *Medullation of nerve fiber layer
15. Metastatic endophthalmitis
16. Morning glory syndrome (hereditary central glial anomaly of the optic disc)
17. Nematode endophthalmitis (*Toxocara canis*)
18. Norrie disease (atrophia oculi congenita)
19. *Ocular toxocariasis
20. Organized vitreous hemorrhage
21. Persistent hyperplastic primary vitreous
22. Physiologic-eye photographed at 17 to 20 degrees temporal to fixation
23. Retinal dysplasia (massive retinal fibrosis)
24. *Retinoblastoma
25. Retinopathy of prematurity (ROP)
26. Retrolental membrane associated with Bloch-Sulzberger syndrome (incontinentia pigmenti)
27. *Toxoplasmosis (congenital)
28. Traumatic chorioretinitis
29. Tumors other than retinoblastoma
 - A. Choroidal hemangioma
 - B. Combined retinal hamartoma
 - C. Diktyoma
 - D. Glioneuroma
 - E. Leukemia
 - F. Medulloepithelioma

- G. Retinal astrocytic hamartoma
- H. Retinal capillary hemangioma
- 30. Uveitis (peripheral)
- 31. Vitreous organization following unsuspected penetrating wounds

R = rarely; S = sometimes; and U = usually.

Leukokoria (white pupil)

Long Ciliary Processes Extending into Dilated Pupillary Space

1. Aniridia
2. Anterior rotation of ciliary processes
 - A. After scleral buckling operation
 - B. Angle closure
 - C. Anterior choroidal separation
 - D. Cyst or tumor behind iris
 - E. Dislocated lens
 - F. From adherence to limbal scar
 - G. Plateau iris
3. Extreme mydriasis
4. Falciform detachment of the retina
5. Incontinentia pigmenti (Bloch-Sulzberger syndrome)
6. Norrie disease (atrophia oculi congenita)
7. Persistent hyperplastic primary vitreous (PHPV)
8. Retinal dysplasia of Reese
9. Retrolental fibroplasia (RLF)
10. Surgical coloboma
11. Trisomy 13 (trisomy D)

Epstein DL. *Chandler and Grant's glaucoma*, 3rd ed. Philadelphia: Lea & Febiger, 1986.

Hansen AC. Norrie's disease. *Am J Ophthalmol* 1963;66:320-332.

Persistent Pupillary Membrane

1. Fetal iritis
2. Hereditary
3. Physiologic
4. *Use of oxygen therapy in nursery for premature infants

Hornblass A. Persistent pupillary membrane and oxygen therapy in premature infants. *Ann Ophthalmol* 1971;3:95-99.

Decentered Pupillary Light Reflex

1. Positive angle kappa—pseudoexotropia
2. Negative angle kappa—pseudoesotropia
3. *Eccentric fixation—deep unilateral amblyopia
4. *Ectopic macula—macular displacement by retinal scarring or strands, such as retrolental fibroplasia
5. Ectopic pupil

Beyer-Machule C, von Noorden GK. *Atlas of ophthalmic surgery*, Vol 1: Lids, orbits, extraocular muscles. New York: Thieme Medical, 1984.

Pupillary Block Following Cataract Extraction

1. Air pupillary block
2. Dense, impermeable anterior hyaloid membrane
3. Free vitreous block

4. Intraocular lens effectively closing off pupil and iridectomies
5. Leaky wound
6. Nonperforating iridectomy
7. Posterior vitreous detachment associated with pooling or retrovitreal aqueous
8. Postoperative iridocyclitis
9. Subchoroidal hemorrhage
10. Swollen lens material behind the iris

Tomey KF, Traverso CE. Neodymium-YAG laser posterior capsulotomy for the treatment of aphakic and pseudophakic pupillary block. *Am J Ophthalmol* 1987;104:502-507.

Afferent Pupillary Defect

The pupil of the eye has diminished vision from disease of the retina or optic nerve and will fail to react directly to light but will constrict consensually when the healthy eye is stimulated.

1. Amblyopia (rare)
2. Branch retinal artery/vein occlusion
3. Central retinal artery/vein occlusion
4. Compressive optic neuropathy
 - A. Cavernous hemangiomas
 - B. Cystic tumors
 1. Cholesterol granuloma
 2. Conjunctival orbital cysts
 3. Dermoid cysts
 4. Mucoceles
 - C. Inflammatory and infiltrative processes
 - D. Optic nerve tumors
 1. Optic nerve gliomas
 2. Optic nerve meningiomas
 - E. Primary malignancies
 - F. Sarcoidosis
 - G. Solid orbital tumors
 1. Hemangiomas
 2. Meningiomas
 3. Schwannoma
 - H. Thyroid ophthalmopathy
 - I. Trauma
5. Diabetic retinopathy (severe)
6. Hyphema
7. Macular degeneration (rarely)
8. Neovascular glaucoma
9. *Optic neuritis
10. *Optic nerve lesion
11. Radiation
12. Reticulum cell sarcoma
13. Retinal detachment
14. *Toxoplasma* retinochoroiditis
15. Traumatic optic neuropathy and retinopathy
16. Unilateral optic nerve hypoplasia

Browning DJ, Tiedeman JS. The test light affects quantitation of the afferent pupillary defect. *Ophthalmology* 1987;94:53-55.

Iris

Aniridia (Absence of IRIS, Partial or Complete)

1. AGR triad—sporadic (bilateral or unilateral) aniridia, genitourinary abnormalities, and mental retardation
2. Associated ocular findings
 - A. Cataracts
 - B. Corneal dystrophy
 - C. Ectopia lentis
 - D. Glaucoma
 - E. *Macular aplasia—autosomal dominant
 - F. Microcornea and subluxated lenses
 - G. Nystagmus
 - H. Optic nerve hypoplasia
 - I. Photophobia
 - J. Poor foveal reflex
 - K. *Strabismus

3. Associated with autosomal-recessive inheritance with fully developed macula
4. Associated with unilateral renal agenesis and psychomotor retardation
5. Beckwith-Wiedemann syndrome
6. Deletion of short arm of 11th chromosome
7. Gillespie syndrome (incomplete aniridia, cerebellar ataxia, and oligophrenia)
8. Homocystinuria syndrome
9. Marinesco-Sjögren syndrome (congenital spinocerebellar ataxia)
10. Miller syndrome (Wilms aniridia syndrome)
11. Partial trisomy 2q
12. Peters syndrome (oculodental syndrome)
13. Rieger syndrome (dysgenesis mesostromalis)
14. Ring chromosome 6
15. Scaphocephaly syndrome
16. Siemens syndrome (anhidrotic ectodermal dysplasia)
17. *Traumatic
18. Ullrich syndrome (dyscraniopylophalangy)

Nelson IB, et al. Aniridia: a review. *Surv Ophthalmol* 1984;28:621-642.

Pearce WG. Variability of iris defects in autosomal dominant aniridia. *Can J Ophthalmol* 1994;29:25-29.

Coloboma of IRIS

This condition involves failure of fusions of fetal fissure in optic vesicle, usually inferior or inferonasal.

1. Acrorenocular syndrome
2. Aicardi syndrome
3. Aniridia
4. Biemond syndrome
5. Cat eye syndrome (partial G-trisomy syndrome)
6. CHARGE association (coloboma, heart anomaly, choanal atresia, retardation, genital, and ear anomalies)
7. Chromosome partial short-arm deletion syndrome
8. Ellis-van Creveld syndrome (chondroectodermal dysplasia)
9. Epidermal nevus syndrome (ichthyosis hystrix)
10. Focal dermal hypoplasia syndrome (Goltz syndrome)
11. Hallermann-Streiff-François syndrome (dyscephalic mandibulooculofacial syndrome)
12. Hemifacial microsoma syndrome (otomandibular dysostosis)
13. *Hereditary usually dominant may be recessive
14. Hurler syndrome (mucopolysaccharidosis I)
15. Hyperchromic heterochromia
16. Jeune disease (asphyxiating thoracic dystrophy)
17. Joubert syndrome
18. Kartagener syndrome
19. Klinefelter syndrome
20. Klippel-Trenaunay-Weber syndrome (angioosteohypertrophy syndrome)
21. Langer-Giedion syndrome
22. Lanzieri syndrome

23. Laurence-Moon-Bardet-Biedl syndrome (retinitis pigmentosa polydactyly-adiposogenital syndrome)
24. *Marfan syndrome (dolichostenomelia-arachnodactyly-hyperchondroplasia-dystrophia mesodermalis congenita)
25. Maternal use of thalidomide
26. Maternal vitamin A deficiency
27. Meckel syndrome
28. Median facial cleft syndrome
29. Microphthalmos syndrome (Meyer-Schwickerath and Weyers syndrome)
30. Nevoid basal cell carcinoma syndrome
31. Nevus sebaceous of Jadassohn (linear sebaceous nevus syndrome of Jadassohn)
32. Obesity-cerebral-ocular-skeletal anomalies syndrome
33. Oculoauriculovertebral dysplasia syndrome
34. Organoid nevus syndrome
35. Otomandibular dysostosis (hemifacial microsomia syndrome)
36. Partial deletion of group D chromosome
37. Rieger syndrome (dysgenesis mesodermalis corneae et irides)
38. Retinal dysplasia
39. Rubinstein-Taybi syndrome (broad-thumbs syndrome)
40. *Sporadic
41. Treacher Collins syndrome (Franceschetti syndrome)
42. Trisomy 13 (D trisomy) (Patau syndrome)
43. Trisomy 17 syndrome (Edwards syndrome)
44. Turner syndrome
45. Warburg syndrome
46. White sponge nevus
47. Wolf syndrome (monosomy partial syndrome)
48. 11q syndrome
49. 13q syndrome
50. 13r syndrome
51. 18q syndrome
52. 18r syndrome
53. XYY syndrome

Isenberg SJ. *The eye in infancy*. Chicago: Year Book Medical, 1989.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Rubeosis Iridis (Neovascularization [Newly Formed Blood Vessels] on the IRIS)

1. Proximal vascular disease
 - A. Aortic arch syndrome (pulseless disease; Takayasu syndrome)
 - B. Carotid-cavernous fistula (carotid artery syndrome)
 - C. Carotid ligation
 - D. Carotid occlusive disease
 - E. Cranial arteritis syndrome (giant cell arteritis)
2. Ocular vascular disease
 - A. *Central retinal artery thrombosis (see p. 457)
 - B. *Central retinal vein thrombosis (see p. 467)

- C. Long posterior ciliary artery occlusion
- D. Reversed flow through the ophthalmic artery
- 3. Retinal diseases
 - A. Coats disease (retinal telangiectasia)
 - B. *Diabetes mellitus
 - C. Eales disease (periphlebitis)
 - D. Glaucoma, chronic
 - E. Melanoma of choroid
 - F. Norrie disease (oligophrenia-microphthalmos syndrome)
 - G. Persistent hyperplastic primary vitreous
 - H. Retinal detachment
 - I. Retinal hemangioma

 - K. Retrolental fibroplasia
 - L. Sickle cell disease (Herrick syndrome)
- 4. Iris tumors
 - A. Hemangioma
 - B. Melanoma
 - C. Metastatic carcinoma
- 5. Postinflammatory
 - A. Argon laser coreoplasty
 - B. Exfoliation syndrome
 - C. Fibrinoid syndrome
 - D. Fungal endophthalmitis (see p. 223-225)
 - E. Iris neovascularization with pseudoexfoliation
 - F. Radiation
 - G. Surgery for retinal detachment
 - H. Uveitis, chronic
- 6. Vascular tufts at the pupillary margin
 - A. Cataract
 - B. Diabetes mellitus
 - C. Myotonic dystrophy syndrome (myotonia atrophica syndrome)
 - D. Ocular hypotony
 - E. Respiratory failure

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Ulbig MR, et al. Anterior hyaloidal fibrovascular proliferation after extracapsular cataract extraction in diabetic eye. *Am J Ophthalmol* 1993;115:321-326.

Hyperemia of IRIS (Dilatation of Preexisting Vessels of the IRIS)

- 1. Corneal ulcer
- 2. Foreign body on the cornea
- 3. Injury, intraocular
- 4. *Iridocyclitis
- 5. *Iritis
- 6. Scleritis
- 7. *Uveitis

O'Brien CS. *Ophthalmology: notes for students*. Iowa City: Athens Press, 1930.

Heterochromia (Difference of Color Between Two Irides)

1. Hypochromic heterochromia—abnormal eye with iris of lighter color than that of the fellow eye
 - A. Anemia with unilateral iritis
 - B. Chédiak-Higashi syndrome (anomalous leukocytic inclusions with constitutional stigmata)
 - C. *Congenital, sporadic, or familial
 - D. Conradi syndrome (epiphyseal congenital dysplasia)
 - E. Fuchs syndrome (I) (heterochromic cyclitis syndrome)
 - F. Gansslen syndrome (familial hemolytic icterus)
 - G. Glaucomatocyclitic crisis (Posner-Schlossman syndrome)
 - H. *Horner syndrome (cervical sympathetic paralysis syndrome)
 - I. Hypomelanosis of Ito syndrome (incontinentia pigmenti achromiens)
 - J. Infiltration of nonpigmented tumor into iris
 - K. *Iris atrophy (diffuse and unilateral), including that caused by trauma, inflammation, or senility
 - L. Iris coloboma
 - M. Parry-Romberg syndrome (facial hemiatrophy)
 - N. Status dysraphicus syndrome (Bremer syndrome)
 - O. Tuberous sclerosis hypopigmented iris spot (Bourneville syndrome)
 - P. Waardenburg-Klein syndrome (embryonic fixation syndrome)
2. Hyperchromic heterochromia—abnormal eye with iris darker than that in the fellow eye
 - A. Anterior or posterior chamber hemorrhage, prolonged
 - B. Coloboma
 - C. *Congenital, sporadic, or familial
 - D. Embryonic fixation syndrome (Waardenburg-Klein syndrome)
 - E. Incontinentia pigmenti (Bloch-Sulzberger syndrome)
 - F. Iris abscess
 - G. Iris stromal cysts
 - H. Malignant melanoma of the iris or other pigmented tumors of the iris
 - I. Microcornea (see p. 252-253)
 - J. Monocular melanosis in which there are excess chromatophores in the stroma of the iris (melanosis bulbi)
 - K. *Neovascular, such as rubeosis iridis or hyperemia of iris, unilateral (see p. 367 or p. 366)
 - L. Neurofibromatosis (von Recklinghausen syndrome)
 - M. *Nevi of iris
 - N. Perforating injuries or contusion of the globe occurring before the subject is seven years of age
 - O. Retention of intraocular iron foreign body—siderosis
 - P. Severe contusion with hypertrophy of the superficial layers of the stroma of the iris
 - Q. Status dysraphicus (Bremer syndrome)
3. Dark central pupillary margin, pale pigment around its circumference
 - A. Hereditary osteonychodysplasia
 - B. Normal iris

Hyperchromic heterochromia (abnormal eye with iris of darker color than fellow eye)

	Horner's Syndrome	Fuch's Heterochromia	Fosner-Schlossman Syndrome	Parry-Romberg's Syndrome	Chediak-Higashi Syndrome	Klein-Waardenberg's Syndrome	Bremer's Status Dysraphicus
History							
1. Familial							U
2. Greater in children	U						
3. Greater 20 to 50 years old			U	U			
4. Hereditary				U	U	U	
5. Lesion in the pons, cervical cord or hypothalamus							
6. Mild infective cyclitis		S	S				
7. Occurs in albinoid siblings born of consanguineous parents					U		
8. Paralysis of cervical sympathetic	S						
9. Photophobia					U		
Physical Findings							
1. Absence of nasal portion of eyebrows				S			
2. Blephanophimosis						U	
3. Blue iris						U	
4. Cataracts				S			S
5. Cells and flare in anterior chamber							
6. Corneal anesthesia							
7. Choroiditis		R					
8. Decreased pigmentation in choroid					S		
9. Elevated disc					S		
10. Enophthalmos	U			U			U
11. Epithelial corneal edema		S	U				
12. Glaucoma			U				
13. Glaucomatous cupping			R				
14. Hypertelorism						U	
15. Hypertrichosis							S
16. Hypotony							
17. Keratic precipitates			U				U
18. Keratitis				U			U
19. Miosis							
20. Mydriasis							
21. Narrowness and decreased number of retinal vessels					U		
22. Nystagmus					S		S
23. Oculocutaneous albinism							
24. Optic atrophy							S
25. Outer canthus lower than inner				S			
26. Papilledema					S		
27. Paresis of ocular muscles					S		
28. Ptosis	U			U			U
29. Vitreous opacities		S					

R = rarely; S = sometimes; and U = usually.

Hyperchromic heterochromia (abnormal eye with iris of lighter color than fellow eye)

IRIS Atrophy

1. Anterior segment ischemia syndrome
2. Arteriovenous fistula
3. Chandler syndrome (iridocorneal endothelial syndrome)
4. Complication of light coagulation and beta radiation
5. Complication of retinal detachment operation
6. *Congenital—autosomal dominant
7. Crohn disease (granulomatous ileocolitis)
8. *Essential (progressive) atrophy
9. Glaucomatous atrophy
 - A. Acute—atrophy or iridoschisis
 - B. *Chronic—stromal and epithelial
10. Hallermann-Streiff-François syndrome (dyscephalic mandibulooculofacial syndrome)
11. Hilding syndrome (destructive iridocyclitis and multiple joint dislocations)
12. Homocystinuria syndrome
13. Hypothermal injury
14. Iris nevus syndrome (Cogan-Reese syndrome)
15. Ischemia
 - A. Acute angle-closure glaucoma
 - B. Carotid-cavernous fistula
 - C. Hemoglobin sickle cell C disease
 - D. Occlusive artery disease
 - E. Orbital irritation
 - F. Surgery angle-closure glaucoma
 - G. *Trauma
16. Krause syndrome (congenital encephalo-ophthalmic dysplasia)
17. Neurogenic—tabes with stromal atrophy
18. Norrie disease (fetal iritis syndrome)
19. *Old age
20. Pierre Robin syndrome (micrognathia-glossoptosis syndrome)
21. Posterior pigment layer is swollen and degenerated
 - A. Diabetes mellitus (Willis disease)
 - B. Hurler syndrome (mucopolysaccharidoses I-H)
22. Postinflammatory—iritis because of diseases such as tuberculosis, syphilis (acquired lu es), herpes zoster, herpes simplex, smallpox, leprosy (Hansen disease), onchocerciasis syndrome (river blindness), sporotrichosis
23. Shy-Magee-Drager syndrome (orthostatic hypotension syndrome)
24. Spontaneous progressive
 - A. Congenital hypoplasia iris stroma
 - B. Rieger syndrome (dysgenesis mesostromalis)
25. Takayasu syndrome (aortic arch syndrome, pulseless disease)
26. Use of quinine, chloramine, mustard gas
27. Wagner syndrome (hyaloideoretinal degeneration)
28. Xeroderma pigmentosa, including skin lesions

Rodrigues MM, et al. Clinical electron microscopic, and immunohistochemical study of the corneal endothelium and Descemet's membrane in the iridocorneal endothelial syndrome. *Am J Ophthalmol* 1986;101:16-27.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Shields MB, et al. The essential iris atrophies. *Am J Ophthalmol* 1978;85:749-769.

Iridodonesis (Tremulous IRIS)

1. *Aphakia following cataract extraction
2. *Dislocation of the lens (see p. 405)
3. Hydrophthalmos or buphthalmos (see p. 222-223)
4. Hypermature senile cataract

Filatov V, et al. Dislocation of the crystalline lens in a patient with Sturge Weber syndrome. *Am J Ophthalmol* 1992;24:260-262.

Hornby SJ, et al. Visual acuity in children with coloboma. *Ophthalmology* 2000;107:511-520.

Huggon IC, et al. Contractural arachnodactyly with mitral regurgitation and iridodonesis. *Arch Dis Child* 1990;65:317-319.

Tumors Arising from Pigment Epithelium of IRIS

1. Hyperplasia
 - A. Primary (congenital)
 1. At pupillary margin
 2. At margins of colobomas
 - B. Acquired
 1. Region of sphincter—migrating epithelial cells appear in stroma as clump cells (equivocal origin)
 2. Cells can reach anterior surface of iris and proliferate (velvety black in appearance)
 - C. Secondary
 1. Intraocular inflammation—pigmented cells proliferate around the pupillary margin onto anterior iris surface
 2. Long-standing glaucoma
 - a. Proliferation around the pupillary margin onto the anterior iris surface
 - b. Migration through stroma to anterior surface at collarette
 3. *Trauma (including operation— proliferation of pigment epithelium on anterior surface of iris, across pupil, or on posterior surface of cornea)
 4. *Drugs, including the following: demecarium, echothiophate, edrophonium, isofluorophate, neostigmine, physostigmine, pilocarpine often associated with cystic formation
2. Neoplasia
 - A. *Benign—well-differentiated epithelial cells, usually pigmented, often with pseudoacinar arrangement and cysts; may have limited locally invasive properties
 - B. Malignant
 1. Carcinoma
 2. Local invasion, intraocular metastases
 3. Medulloepithelioma, embryonal type (diktyoma)
 4. Papillary cystadenoma

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

Morris PA, Henkind P. Neoplasms of the iris pigment epithelium. *Am J Ophthalmol* 1968;66:31.

Pigmented Lesions of IRIS

1. Adenoma of iris
2. Anterior chamber intraocular lens and segmental uveal ectropion

3. Anterior staphyloma
4. Corneal or scleral perforation
5. *Cyst—congenital, spontaneous, or traumatic, including pigmentation
6. Ectopic lacrimal gland tissue
7. *Ectropion uvea
8. Epithelioma of the ciliary body
9. Exudative mass in the anterior chamber
10. Foreign body of iris, including iron with siderosis
11. Fuchs syndrome of heterochromic cyclitis with the darker normal iris considered to contain a diffuse melanoma
12. Hemangioma of the iris with pigmentation because of hemorrhage
13. Hemosiderosis because of contusions with hyphema or injuries and disease in the posterior portion of the eye with recurrent bleeding
14. Juvenile xanthogranuloma (nevoxanthoendothelioma)
15. Leiomyoma or leiomyosarcoma of the iris
16. Leukemic infiltrates and malignant lymphomas
17. Malignant melanoma of the iris
18. Metastatic carcinomas arising in the lung, breast, gastrointestinal tract, thyroid gland, prostate gland, kidney, or testicle
19. Neurofibromatosis with increased pigmentation of the iris
20. *Nevi of the iris
21. Nodular thickening and scarring of the iris
22. Pigmentary glaucoma
23. Pigment epithelial tumors of the iris
24. Segmental melanosis oculi, including congenital melanosis
25. Stromal mass in the anterior chamber
26. Uveitis, such as that because of conglomerate tuberculous lesions of the stroma or sarcoid involvement of the iris
27. Varix

Chang M, et al. Adenoma of the pigment epithelium of the ciliary body simulating a malignant melanoma. *Am J Ophthalmol* 1979;88:40-48.

Lois N, et al. Primary cysts of the iris pigment epithelium. *Ophthalmology* 1998;105:1879-1885.

Shields JA, et al. Iris varix simulating an iris melanoma. *Arch Ophthalmol* 2000;118:707-709.

Shields CL, et al. Differentiation of adenoma of the iris pigment epithelium from iris cyst and melanoma. *Am J Ophthalmol* 1986;100:678-681.

Nonpigmented Lesions of IRIS

1. Amelanotic melanoma
2. Atypical mycobacterial panophthalmitis
3. Endothelioma
4. Exudative mass in the anterior chamber
5. Fibrosarcoma
6. *Foreign body
7. Forward extension of diktyoma
8. Hemangioma of the iris
9. *Iris cyst
10. Iris lymphoma
11. Iris nodules

- A. Ectodermal (Koepple nodules)—pupillary margin and gray with ocular inflammation
- B. Mesodermal (Busacca nodules)—anterior surface of iris in collarette region
- 12. Juvenile xanthogranuloma—may be associated with diffuse infiltration of the iris
- 13. Lacrimal Gland Choristoma of the Iris
- 14. Leiomyoma or leiomyosarcoma of the iris
- 15. Leprosy (Hansen disease)
 - A. Lepromas of the iris
 - B. Leprotic pearl—minute white spots on the surface of iris
- 16. Metastatic carcinoma of the iris arising from the lungs, breast, gastrointestinal tract, thyroid gland, prostate gland, kidney, or testicle
- 17. Neurofibroma and neuroglioma
- 18. Sarcoid nodules—multiple, discrete, irregularly distributed over the iris
- 19. Seeding of tumor, such as retinoblastoma, from the posterior segment
- 20. Syphilis (acquired lues)
 - A. Gummas—solitary, large, avascular, white lesions
 - B. Papules (condylomas)—multiple, small, vascular, yellowish lesions
- 21. Teratoma
- 22. Tuberculosis
 - A. Acute miliary—small grayish yellow or reddish nodules
 - B. Hyalinized or fibrotic scar (Michel flecks)
 - C. Tuberculoma—white-gray lesion

Conditions Simulating Anterior Uveitis or IRITIS

1. Brushfield spots
2. Fuchs syndrome (II) (Stevens-Johnson syndrome)
3. Hereditary deep dystrophy of cornea
4. Hyalinized keratitic precipitate
5. Iridoschisis—splitting of iris
6. Juvenile xanthogranuloma of the iris (nevoxanthoendothelioma)
7. Malignant lymphomas or leukemia
8. Malignant melanoma
9. Metastatic tumor arising from the lungs, breast, gastrointestinal tract, thyroid gland, prostate gland, kidney, or testicle
10. Neurofibromas of the iris
11. Pigment floaters in the anterior chamber, especially after mydriasis
12. *Pseudoexfoliation of the lens capsule (glaucoma capsulare)
13. Reticulum cell sarcoma
14. Retinoblastoma

15. Scleroderma (progressive systemic sclerosis)
16. *Siderosis bulbi

Syndromes and Diseases Associated with Iritis

1. Actinomycosis
2. Amebiasis (*entamoeba histolytica*)
3. Amendola syndrome (Brazilian pemphigus)
4. Anderson-Warburg syndrome (congenital progressive oculoacousticocerebral dysplasia)
5. Ankylosing spondylitis (von Bechterev-Strumpell syndrome)
6. Ascariasis
7. Aspergillosis
8. Beesting of the cornea
9. Behçet syndrome (oculobuccogenital syndrome)
10. Blastomycosis
11. Brucellosis (Bang disease)
12. Candidiasis
13. Charlin syndrome (nasociliary nerve syndrome)
14. *Chlamydia pneumoniae*
15. Coccidioidomycosis
16. Cryptococcosis
17. Cysticercosis
18. Cytomegalic inclusion disease (cytomegalovirus)
19. Dengue fever
20. Endophthalmitis phacoanaphylactica
21. *Following laser iridectomy
22. Fuchs syndrome (heterochromic cyclitis syndrome)
23. Henoch-Schönlein purpura (anaphylactoid purpura)
24. Herbicide exposure—2,4-dichlorophenoxyacetic acid
25. *Herpes simplex
26. *Herpes zoster
27. Histoplasmosis
28. Histiocytosis X (xanthomatous granuloma syndrome)
29. Hypervitaminosis D
30. Leptospirosis (Weill disease)
31. Mucormycosis (phycomycosis)
32. Mustard gas injury
33. *Mycoplasma pneumoniae*
34. Nocardiosis
35. Onchocerciasis syndrome (*Onchocerca volvulus*)
36. Reiter syndrome (conjunctivourethrosynovial syndrome)
37. Romberg syndrome (facial hemiatrophy)
38. Rubella syndrome (Gregg syndrome)
39. *Sarcoidosis syndrome (Schaumann syndrome)
40. Sporotrichosis

41. * Still disease (juvenile rheumatoid arthritis)
42. Syphilis (acquired lues)
43. Toxoplasmosis (ocular toxoplasmosis)
44. Tuberculosis
45. Vaccinia
46. Vogt-Koyanagi-Harada syndrome (uveitis, vitiligo-alopecia-poliosis syndrome)

IRITIS (Anterior Uveitis) in Children

1. Anterior and posterior uveitis
 - A. Retinoblastoma
 - B. *Sarcoidosis syndrome (Schaumann syndrome)
 - C. Sympathetic ophthalmia
 - D. Vogt-Koyanagi-Harada syndrome (uveitis-vitiligo-alopecia-poliosis syndrome)
2. *Chronic cyclitis (peripheral uveitis)
3. Fuchs heterochromic cyclitis
4. Iridocyclitis
 - A. Acute tubulointerstitial nephritis and uveitis
 - B. Ankylosing spondylitis (von Bechterev-Strumpell syndrome)
 - C. Behçet syndrome (oculobuccogenital syndrome)
 - D. Juvenile xanthogranuloma
 - E. Kawasaki disease
 - F. Leukemia
 - G. Multiple sclerosis
 - H. Psoriatic arthropathy
 - I. Reiter syndrome
 - J. Retinal capillaritis
 - K. *Sarcoidosis syndrome (Schaumann syndrome)
 - L. Still syndrome (juvenile rheumatoid arthritis)
 - M. *Trauma
 - N. Ulcerative colitis and Crohn disease
 - O. Unknown
 - P. Viral-associated disease
5. Keratouveitis
 - A. *Herpes simplex
 - B. *Herpes zoster

Diagnostic table

Iritis (anterior uveitis) in children

	Still Syndrome	Ankylosing Spondylitis	Behçet Syndrome	Sarcoidosis	Chronic Cyclitis (Para Planitis)	Fuchs Heterochromic Cyclitis	Herpes Simplex	Herpes Zoster	Vogt-Koyanagi-Harada Syndrome	Sympathetic Ophthalmia
History										
1. Before puberty	U	U								
2. Bilateral					S					
3. Familial	S									
4. Following trauma/surgery										U
5. Greater in females	S			U						
6. Greater in males		U				S				
7. Hereditary		U								
8. Occurs in young adults									U	R
9. Prominent in whites						U				
10. Prominent in blacks				U						
11. Seen in Japanese			S						U	
12. Virus infection			S				U	U	S	
Physical Fitness										
1. Anterior and posterior synechiae	S	U	S				S			
2. Band keratopathy	S	S		R						
3. Cataract	S	S	S	R	S	S		S	S	S
4. Conjunctivitis			S	R			S	S		
5. Corneal opacity			S			S				
6. Corneal ulcer							S			
7. Corneal edema						S	S	U		
8. Cyclitic membrane					U					
9. Cystoid macular edema					U					
10. Choroiditis						S			S	S
11. Dacryoadenitis				U						
12. Dacryocystitis				S						
13. Decreased corneal sensitivity							U	U		
14. Dendritic corneal figure							U	S		
15. Entropion								S		
16. Exophthalmos				S						
17. Extraocular muscle paralysis			U	S			R	S		
18. Glaucoma	S	S	S	S		S	S	S	S	S
19. Hyphema	S									
20. Hypopyon	S	S	R				R	R		
21. Iris bombé	S									
22. Iris hypoheterchromia						U	R	R		

R = rarely; S = sometimes; and U = usually.

23. Keratitis				S				U	U			S
24. Keratitic precipitates	U	U										
25. Macular edema	S		S									
26. Macular hemorrhage				R								
27. Optic atrophy			S	S

30. Retinal hemorrhages			S	S							R	
31. Retinal vasculitis			S									
32. Scleritis		S	S									
33. Sheathing of peripheral retinal veins					U							
34. Snowballs of peripheral inferior retina					U							
35. Strabismus			S									
36. Subconjunctival nodules			U			S						
37. Vitreous hemorrhages			S		S							
38. Vitreous opacity						S					S	S
39. White lashes											S	
40. Zoster rash of lid								S				
Laboratory Data												
1. Antinuclear antibody test (+)	U											
2. Biopsy of inferior forniceal follicles					U							
3. Cerebrospinal fluid protein level high					S							
4. Chest roentgenogram					U							
5. Elevated sed rate		U										
6. Fluorescein angiography		U				U					U	
7. Homologous leucocytic antibody determination	U	U	S									
8. Lumbosacral spine roentgenogram		U	U									
9. Macroglobulins (-)			U									
10. Rheumatoid factor and lupus erythematosus cell test (+)	U	U										
11. Serum angiotensin-converting enzyme					U							
12. Tuberculosis skin test					U							U
13. Ultrasonography					S							
14. Viral culture serial antibody titer								U	U			

R = rarely; S = sometimes; and U = usually.

Nongranulomatous Uveitis

1. Physical insult
 - A. Endogenous
 - B. Exogenous
2. *Toxic insults
 - A. Autointoxication—ptomaines, protein split products, and so forth from food poisoning
 - B. Bacterial endotoxins
 - C. Reticulum cell sarcoma of the brain
 - D. Toxins from disintegrating helminths
 - E. *Viral toxins
3. Immediate hypersensitive reaction
 - A. *Airborne allergens
 - B. Drugs, including the following:

acetazolamide	dichlorphenamide	measle vaccine
adrenal cortex injection	diethylcarbamazine	medrysone
aldosterone	diphtheria, pertussis, and tetanus (DPT) vaccine	meprednisone
amphotericin B		methazolamide
auranofin	disodium clodronate	methicillin
aurothioglucose	disodium etidronate	methylprednisolone
aurothioglucanide	disodium pamidronate	metipranolol
bacitracin	doxorubicin	mitomycin
bacille Calmette-Guérin (BCG) vaccine	dyclonine	neomycin
	echothiophate	neostigmine
beclomethasone	edrophonium	paramethasone
benoxinate	emetine	penicillin
betaxolol	epinephrine	penicillin O
brimonidine	erythromycin	penicillin hydrocortisone
bupivacaine	ethoxzolamide	phenacaine
butacaine	etidocaine	phenethicillin
chloramphenicol	floxuridine	physostigmine
chloroprocaine	fludrocortisone	piperocaine
chlortetracycline	fluorometholone	polymyxin B
chondroitin sulfate	fluorouracil	potassium
chymotrypsin	fluprednisolone	pralidoxime
cidofovir	gold Au 198	prednisolone
cobalt	gold sodium thiomalate	procaine
cocaine	gold sodium thiosulfate	proparacaine
colistin	hyaluronate acid	propoxycaine
contraceptives	hydrabamine	quinidine
cortisone	hydroxypropylmethylcellulose	radioactive iodides
cytarabine	ibuprofen	reserpine
demecarium	interleukin 3 and 6	rifampin
desoxycorticosterone	iodide and iodine solutions and compounds	smallpox vaccine
dexamethasone		sodium hyaluronate
diisopropyl flurophosphate (DFP)	isoflurophate	streptokinase
	latanoprost	streptomycin
dibucaine	lidocaine	sulfacetamide
sulfachlorpyridazine	sulfamethoxazole	sulfisoxazole
sulfacytine	sulfamethoxypridazine	tetracaine
sulfadiazine	sulfanilamide	tetracycline
sulfadimethoxine	sulfapyridine	thiotepa
sulfameter	sulfamerazine	triamcinolone
sulfamethazine	sulfasalazine	trifluoperazine
sulfamethizole	sulfathiazole	urokinase

- C. Foods
- D. Protein antigens (anaphylaxis)
- 4. Delayed hypersensitive reaction
 - A. Bacterial antigens
 - B. Viral antigens
- 5. Doubtful entities—nongranulomatous uveitis
 - A. Amebiasis
 - B. Diabetic iritis
 - C. Gouty iritis
 - D. Heterochromic iridocyclitis
 - E. *Sarcoidosis syndrome (Schaumann syndrome)
 - F. Secondary to metabolic disease, such as biliary cirrhosis and systemic xanthomatosis
 - G. Uveitis associated with collagen diseases
- 6. Mixed granulomatous and nongranulomatous
 - A. Lens-induced uveitis
 - B. *Peripheral uveitis
- 7. Human leukocyte antigen (HLA)-B27 associated diseases
 - A. Ankylosing spondylitis
 - B. Inflammatory bowel disease
 - C. Psoriasis
 - D. Reiter disease
- 8. Infections
 - A. Herpes zoster/herpes simplex
 - B. Lyme disease
 - C. Syphilis

- 2. Recognized clinical and histopathologic entity, of unknown cause
 - A. *Multiple sclerosis
 - B. *Sarcoidosis syndrome (Schaumann syndrome)
 - C. Sympathetic ophthalmia
- 3. Nonspecific granulomatous uveitis of unknown cause, including granulomatous ileocolitis
- 4. Mixed granulomatous and nongranulomatous
 - A. Lens-induced uveitis
 - B. Peripheral uveitis
- 5. Viral uveitis
 - A. Proven or probable
 1. Cytomegalic inclusion disease
 2. Herpes simplex
 3. Herpes zoster
 4. Vaccinia
 - B. Suspected
 1. Behçet syndrome (oculobuccogenital syndrome)
 2. Retinal capillaritis
 3. Vogt-Koyanagi-Harada syndrome (uveitis-vitiligo-alopecia-poliosis syndrome)
- 6. Histiocytosis X (includes eosinophilic granuloma, Hand-Schüller-Christian disease and Letterer-Siwe disease)

7. Following treatment of a choroidal melanoma with proton-beam irradiation

Cho AS, et al. Ocular involvement in patients with post-transplant lympho proliferative disorder. *Arch Ophthalmol* 2001;119:183-185.

Schwab IR. Herpes zoster sine herpette. *Ophthalmology* 1997;104:1421-1425.

Pigmented Ciliary Body Lesions

1. *Ciliary body cyst
2. Diffuse iris melanotic lesion
3. *Drugs including the following:

adrenal cortex injection	edrophonium	neostigmine
aldosterone	epinephrine	paramethasone
betamethasone	fludrocortisone	physostigmine
cortisone	fluprednisolone	pilocarpine
demecarium	hydrocortisone	prednisolone
desoxycorticosterone	isoflurophate	prednisone
dexamethasone	meprednisone	triamcinolone
echothiophate	methylprednisolone	

4. Malignant melanoma
5. Melanocytoma of ciliary body
6. Peripheral uveal detachment
7. Posttraumatic pigmentary migration

Biswas J, et al. 7 diffuse melanotic lesion of the iris as a presenting feature of ciliary body melanocytoma: report of a case and review of the literature. *Surv Ophthalmol* 1998;42:378-383.

Lois N, et al. Cavitory melanoma of the ciliary body. *Ophthalmology* 1998;105:1091-1098.

Neuroepithelial Tumors of Ciliary Body

1. Congenital
 - A. Glioneuroma
 - B. Medulloepithelioma
 1. *Benign
 2. Malignant
 - C. Teratoid medulloepithelioma
 1. Benign
 2. Malignant
2. Acquired
 - A. Adenocarcinoma
 1. *Papillary
 2. Pleomorphic
 3. Solid
 - B. Adenoma
 1. *Papillary
 2. Pleomorphic
 3. Solid
 - C. Mesectodermal leiomyoma
 - D. Pseudoadenomatous hyperplasia

Shields JA, et al. Observations on seven cases of intraocular leiomyoma. *Arch Ophthalmol* 1994;112:521-528.

Shields JA, et al. Natural causes and histopathologic findings of lacrimal gland cholestoma of the iris and ciliary body. *Am J Ophthalmol* 1995;119:219-224.

Internal Ophthalmoplegia

Internal ophthalmoplegia is characterized by paresis of ciliary body with loss of power of accommodation and pupil dilatation because of lesions of ciliary ganglion.

1. Acute porphyria—frequently bilateral
2. *Adie syndrome (myotonic pupil)
3. Aneurysm of the posterior communicating artery at its junction with the internal carotid—unilateral
4. Congenital—rare
5. *Cycloplegic ocular medication—most common
6. During acute illness—transient
7. During blepharoplasty—transient
8. Fisher syndrome (ophthalmoplegia-ataxia-areflexia syndrome)
9. Foramen lacerum syndrome (aneurysm of internal carotid artery)
10. Histiocytosis X (Hand-Schüller-Christian syndrome)
11. Hollenhorst syndrome (chorioretinal infarction syndrome)
12. *Increased intracranial pressure
13. Infections, including chickenpox, measles, diphtheria, syphilis, scarlet fever, pertussis, smallpox, influenza, herpes zoster, botulism, sinusitis, and viral hepatitis
14. Lubarsch-Pick syndrome (amyloidosis)
15. May be early lesion of acute or chronic ophthalmoplegia
16. Metastatic tumors of choroid
17. Nasopharyngeal carcinoma—early
18. Nothnagel syndrome (ophthalmoplegia-cerebellar ataxia syndrome)
19. Partial seizures
20. Retrobulbar injections of alcohol
21. Transscleral diathermy
22. Trauma to eye or orbit
23. Vogt-Koyanagi-Harada syndrome (uveitis-vitiligo-alopecia-poliosis syndrome)

Perlman JP, Conn H. Transient internal ophthalmoplegia during blepharoplasty: a report of three cases. *Ophthalm Plast Reconstr Surg* 1991;7:141-143.

Lens

Anterior Subcapsular Cataract

1. Acrodermatitis chronica atrophicans
2. Addison syndrome (adrenal cortical insufficiency)
3. Albinism
4. Allopurinol therapy
5. Alport syndrome (hereditary nephritis)
6. Amiodarone usage
7. Andogsky syndrome (dermatogenous cataract)
8. Aniridia
9. Anterior chamber air
10. Atopic (eczema cataract)
11. Beesting of cornea
12. Cerebrohepatorenal syndrome (Smith-Lemli-Opitz syndrome)
13. Chlorpromazine therapy

14. Chromosomal 3; 18 translocation
15. Comedo cataract
16. Coughing
17. Cryotherapy
18. Electric cataract
19. *Diabetes mellitus (Willis disease)
20. Facial paralysis (partial)
21. Frenkel syndrome (ocular contusion syndrome)
22. Goldscheider syndrome (epidermolysis bullosa)
23. Gyrate atrophy (ornithine ketoacid aminotransferase deficiency)
24. Head-banging (chronic)
25. Hemifacial microsomia syndrome (François-Haustrate syndrome)
26. Hypermature cataract with other changes
27. Hypoparathyroidism
28. Idiopathic—10% of normal population
29. Intraocular copper and iron
30. Isotretinoin
31. Jadassohn-Lewandowsky syndrome (epidermolysis bullosa)
32. Leber congenital amaurosis
33. Marinesco-Sjögren syndrome (oligophrenia syndrome)
34. Myotonic dystrophy (Curschmann-Steinert syndrome)
35. Naphthalene ingestion
36. Neodymium:yttrium-aluminum-garnet (Nd:YAG)
37. Neurodermatitis
38. Pemphigus foliaceus (Cazenave disease)
39. Phenothiazine therapy
40. Phospholine iodide use
41. Pseudohypoparathyroidism
42. Reese-Ellsworth syndrome (anterior chamber cleavage syndrome)
43. Rothmund syndrome (telangiectasia-pigmentation-cataract syndrome)
44. Scaphocephaly
45. Schizophrenia
46. Thorazine ingestion
47. *Trauma, such as contusion
48. Tyrosinosis
49. Vitrectomy for diabetic retinopathy
50. Werner syndrome (progeria of adults)
51. Wilson disease (hepatolenticular degeneration)
52. Zinc chloride (concentrated)

McCarty CA, et al. Schizophrenia, psychotropic medication, and cataract. *Ophthalmology* 1999;106:683-687.

Nuclear Cataracts

1. Alcohol
2. Arteriovenous fistula
3. Associated with photocoagulation, such as argon laser use
4. Capsular exfoliation syndrome
5. Congenital dysplasia
6. Conradi syndrome (multiple epiphyseal congenital dysplasia)
7. Coppock cataract, discoid cataract, zonular cataract—autosomal dominant
8. Hyperbaric oxygen therapy
9. Maple-syrup urine disease (branched-chain ketoaciduria)
10. Matsouka syndrome (oculocerebroarticuloskeletal syndrome)
11. Micro syndrome
12. Nuclear diffuse nonprogressive cataract—autosomal dominant, rarely recessive
13. *Nuclear sclerosis
 - A. *Pars plana vitrectomy for macular pucker
 - B. Smoking
14. Nuclear total cataract—autosomal dominant, rarely recessive
15. Paradichlorobenzene (mothballs)
16. Perforating injuries
17. Roy syndrome II—nuclear cataract associated with smoking
18. *Rubella syndrome (German measles)
19. Siemen syndrome (hereditary ectodermal dysplasia syndrome)
20. von Gierke disease (glucose-phosphate deficiency)

Lamellar (Stellate, Zonular, Cortical, Coronary) Cataracts

1. Alcohol
2. Aniridia
3. Argon laser
4. Autosomal-dominant congenital cataract
5. Congenital zonular cataract
6. Cortical cataract and congenital ichthyosis
7. Dermochonoral corneal dystrophy
8. Diabetes mellitus (Willis disease)
9. Females
10. Galactokinase deficiency (von Reuss syndrome)
11. Hagberg-Santavuori (neuronal ceroid-lipofuscinoses)
12. Hypertension
13. Hypoglycemia
14. Hypophosphatasia (phosphoethanolaminuria)
15. Iritis
16. Leiomyoma

17. Mannosidosis
18. Marfan syndrome (dolichostenomelia-arachnodactyly-hyperchondroplasia-dystrophia mesodermalis congenita)
19. Marshall syndrome (atypical ectodermal dysplasia)
20. Myotonic dystrophy syndrome (Curschmann-Steinert syndrome)
21. Neurofibromatosis 2 (central neurofibromatosis)
22. Nieden syndrome (telangiectasia cataract syndrome)
23. Nonwhites
24. Obesity (abdominal)
25. Organic nitrate explosives
26. Passow syndrome (status dysraphicus syndrome)
27. Riboflavin deficiency (Stannus cerebellar syndrome)
28. Roy syndrome (cataract associated with smoking)
29. *Sunlight
30. Tetany cataract (hypoparathyroidism)
31. *Ultraviolet-B light
32. Van Bogaert-Scherer-Epstein syndrome (primary hyperlipidemia)
33. Van der Hoeve syndrome (osteogenesis imperfecta)
34. Wagner syndrome (hyaloideoretinal degeneration)
35. Zonular cataract and nystagmus—X-linked

Punctate Cataracts (Numerous Small Opacities)

1. Albright hereditary osteodystrophy (pseudohypoparathyroidism)
2. Argon laser
3. Autosomal dominant vitreoretinopathopathy (ADVIRC)
4. Cockayne syndrome (dwarfism with retinal atrophy and deafness)
5. Cretinism (hypothyroidism)
6. Galactokinase deficiency (von Reuss syndrome)
7. Hypercalcemia (adult)
8. Hyperprolactinemia
9. Incontinentia pigmenti achromians
10. Lowe syndrome (oculocerebrorenal syndrome)
11. Rothmund syndrome (telangiectasia-pigmentation-cataract syndrome)
12. Supravalvular aortic stenosis (Williams-Beuren syndrome)

Posterior Subcapsular Cataract

1. Complicated cataract
 - A. Anterior segment involvement, such as that because of the following:
 1. Acute and chronic corneal ulcer
 2. *Iridocyclitis
 3. *Chronic anterior uveitis
 4. Acute or chronic glaucoma
 - B. Posterior segment involvement such as that because of the following:
 1. *Chronic posterior uveal inflammation
 2. Long-standing retinal detachment
 3. High myopia
 4. Hereditary retinal lesions, including retinitis pigmentosa
 5. Persistent hyperplastic primary vitreous
2. Congenital posterior polar lens changes
 - A. Spurious posterior capsular cataract (Mittendorf dot)
 - B. Posterior polar cataract—persistent fibrovascular sheath of lens with or without secondary cataract
 - C. Posterior lenticonus
3. Aberfeld syndrome (ocular and facial abnormalities syndrome)
4. Acrodermatitis chronica atrophicans
5. Alcoholism
6. Aniridia
7. Anterior segment ischemia syndrome
8. Aspergillosis
9. Bassen-Kornzweig syndrome (familial hypolipoproteinemia)
10. Bloch-Sulzberger syndrome (incontinentia pigmenti)
11. Buerger disease (thromboangiitis obliterans)
12. Capsular exfoliation syndrome
13. Carotid artery syndrome
14. Chromosome partial deletion (short-arm) syndrome
15. Congenital amaurosis of Leber (Leber congenital amaurosis)
16. Cushing syndrome
17. *Diabetes mellitus (Willis disease)
18. Drugs, including dinitrophenol busulfan (Myleran), triparanol (MER-29), PUVA (psoralen plus ultraviolet light of A-wave length), allopurinol, indapamide, megestrol acetate, and phenothiazine usage
19. Electrical injury
20. Engelmann syndrome (diaphyseal dysplasia)
21. Fabry disease (glycosphingolipid lipidosis)
22. Familial hypogonadism syndrome
23. Frenkel syndrome (ocular contusion syndrome)
24. Fuchs syndrome
25. Glassblowers (heat) cataract
26. Gyrate atrophy (ornithine ketoacid aminotransferase deficiency)
27. Hagberg-Santavuori syndrome (neuronal ceroid-lipofuscinoses)
28. Hair dye
29. Hand-Schüller-Christian syndrome (xanthomatous granuloma syndrome)
30. Harada syndrome (uveitis-vitiligo-alopecia-poliosis syndrome)

31. Heerfordt syndrome (uveoparotitis)
32. Hemochromatosis
33. Herpes simplex
34. Hodgkin disease
35. Hypertension
36. Hypoparathyroidism
37. Ionizing radiation, such as that encountered in x-ray, radium, or neutron therapy
38. Jacobsen-Brodwall syndrome
39. Kussmaul disease (necrotizing angiitis)
40. Kyrle disease (hyperkeratosis follicularis et parafollicularis in cutem penetrans)
41. Laurence-Moon-Bardet-Biedl syndrome (retinitis pigmentosa-polydactyly-adiposogenital)
42. Leprosy (Hansen disease)
43. Leri syndrome (carpal tunnel syndrome)
44. Leukemia
45. Lightning induced
46. Malaria
47. Meckel syndrome (dysencephalia splanchnocystic syndrome)
48. Myotonic dystrophy (Curschmann-Steinert syndrome)
49. Neurodermatitis (lichen simplex chronicus)
50. Neurofibromatosis 1 (von Recklinghausen syndrome)
51. Neurofibromatosis 2 (central neurofibromatosis)
52. Ocular trauma (blunt)
53. Oculotooroenoerythropoietic disease
54. O'Donnell-Pappas syndrome (foveal hypoplasia and presenile cataract—autosomal dominant)
55. Paget syndrome (osteitis deformans)
56. Pemphigus foliaceus (Cazenave disease)
57. Pernicious anemia syndrome
58. Pierre Robin syndrome (micrognathia-glossoptosis syndrome)
59. Posterior polar cataract—autosomal dominant
60. Pseudohypoparathyroidism
61. Refsum syndrome (phytanic acid storage disease)
62. Renal transplantation
63. Retinitis pigmentosa-deafness-ataxia syndrome
64. Roy syndrome I (unilateral cataract associated with smoking)
65. *Senile posterior cortical cataract
66. Sjögren syndrome (secretoinhibitor syndrome)
67. Silicone oil (intraocular)
68. *Steroid usage (topical or systemic)
69. Stickler syndrome (hereditary progressive arthro-ophthalmopathy)
70. Still disease (juvenile rheumatoid arthritis)
71. Toxocariasis (Nematode ophthalmia syndrome)
72. Trisomy (Patau syndrome)
73. Tuomaala-Haapanen syndrome (similar to pseudohypoparathyroidism)
74. Turner syndrome (gonadal dysgenesis)
75. Ultraviolet-B light
76. Uric acid (increased serum levels)
77. Vitrectomy for diabetic retinopathy

- 78. Weil disease (leptospirosis)
- 79. Werner syndrome (progeria of adults)
- 80. Yersiniosis

Iridescent Crystalline Deposits in Lens

1. Idiopathic
2. Hypothyroid (cretinism)
3. Hypocalcemia
 - A. Postoperative—removal of thyroid and accidental parathyroid removal
 - B. Idiopathic hypoparathyroidism
 - C. Pseudohypoparathyroidism (hypoparathyroid cretinism) or with hyperphosphatemia (Albright disease)
 - D. Pseudopseudohypoparathyroidism (brachymetacarpal dwarfism)
4. Myotonic dystrophy (Curschmann-Steinert syndrome)
5. Drugs, including the following:

acetophenazine	gold Au 198	prochlorperazine
amiodarone	gold sodium thiomalate	promazine
auranofin	gold sodium thiosulfate	promethazine
aurothioglucose	mercuric oxide	propiomazine
aurothioglycanide	mesoridazine	silver nitrate
butaperazine	methdilazine	silver protein
carphenazine	methotrimeprazine	thiethylperazine
chlorpromazine	mild silver protein	thiopropazate
chlorprothixene	perazine	thioridazine
colloidal silver	pericyazine	thiothixene
diazepam (?)	perphenazine	trifluoperazine
diethazine	phenylmercuric acetate	triflupromazine
ethopropazine	phenylmercuric nitrate	trimeprazine
fluphenazine	piperacetazine	

6. Cataract (coralliform and aculeiform) usually autosomal dominant; sometimes recessive

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

McKusick VA. *Mendelian inheritance in man*, 12th ed. Baltimore: Johns Hopkins University Press, 1998.

Oil Droplet in Lens

1. Anterior displacement of lens
2. *Galactosemia-transferase deficiency (von Reuss syndrome)
3. Lenticonus

Bellows JG, Bellows RT. Displacement of the lens. In: Bellows JG, ed. *Cataract and abnormalities of the lens*. New York: Grune & Stratton, 1975:277.

Beutler E, et al. Galactokinase deficiency as cause of cataract. *N Engl J Med* 1973;288:1203-1206.

Lenticonus (Conical Lens Surface Protuberance) and Lentiglobus (Globular Lens Surface Protuberance)

1. Anterior—rare and usually bilateral
 - A. *Alport syndrome (hereditary nephritis)
 - B. Spina bifida
 - C. Waardenburg syndrome (embryonic fixation syndrome)

2. Posterior—more common and often unilateral
 - A. Associated with persistent hyperplastic primary vitreous
 - B. Associated with remnants of hyaloid artery
 - C. Familial posterior lenticonus and microcornea
 - D. *Lowe syndrome (oculocerebrorenal syndrome)
 - E. Trauma

Bleik JH, et al. Familial posterior lenticonus and microcornea. *Arch Ophthalmol* 1992;110:1208.

Junk AK, et al. Bilateral anterior lenticonus. *Arch Ophthalmol* 2000;118:895-897.

Tripathi RC, et al. Pathogenesis of cataracts in patients with Lowe's syndrome. *Ophthalmology* 1986;93:1046-1051.

Lens Absorption

1. Congenital rubella syndrome (German measles)
2. Hallermann-Streiff syndrome (dyscephalic mandibulooculofacial syndrome)
3. Surgical trauma as discission
4. Trauma, blunt or penetrating

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Exfoliation of Lens Capsule

In this condition, superficial layers of the lens capsule split off and float in aqueous as a fine membrane.

1. *Senile exfoliation
2. Toxic exfoliation
 - A. Atrophic eyes
 - B. Prolonged iridocyclitis
 - C. Lodgment of metallic foreign body, such as iron or copper
3. Traumatic
 - A. Perforating injury
 - B. Contusions with suspensory ligament separated from a dislocated lens
4. Heat exposure, such as that experienced by glassblowers

Duke-Elder S. *System of ophthalmology*, Vol XI. St. Louis: CV Mosby, 1969.

Meades K, Versace P. True exfoliation of the lens capsule. *Aust N Z J Ophthalmol* 1992;20:347-348.

Microphakia or Spherophakia or Microspherophakia (Small Lens or Highly Spheric Lens)

1. Achard syndrome (Marfan syndrome with dysostosis mandibulofacialis)
2. Alport syndrome (hereditary nephritis)
3. Familial anomaly
4. Homocystinuria syndrome
5. Hyperlysinemia
6. Lenticular myopia as recessive inheritance trait
7. Little syndrome (hereditary osteoocychodysplasia)
8. Lowe syndrome (renal rickets)
9. *Marchesani syndrome (brachymorphy with spherophakia) (Weill-Marchesani syndrome)

10. Marfan syndrome (dolichostenomelia-arachnodactyly hyperchondroplasia dystrophica mesodermalis congenita)
11. Peter anomaly (anterior chamber cleavage syndrome)
12. Reticular dystrophy of the retinal pigment epithelium
13. Rubella syndrome (Gregg syndrome)
14. Waardenburg syndrome (embryonic fixation syndrome)

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Sorsby A. *Ophthalmic genetics*, 2nd ed. New York: Appleton-Century-Crofts, 1970.

Dislocated Lens

1. Achard syndrome (Marfan with dysostosis)
2. Adenoma of the nonpigmented epithelium of the ciliary body
3. Apert syndrome (sphenocraniosyndactyly)
4. Ascariasis
5. Associated ocular findings
 - A. *Aniridia
 - B. Coloboma of iris and choroid
 - C. *Congenital glaucoma
 - D. Ectopia lentis et pupillae
 - E. Focal dermal hypoplasia (Goltz syndrome)
 - F. High myopia
 - G. Isolated lens dislocation (up)
 - H. Megalocornea
 - I. Microcornea
 - J. Microspherophakia with hernia
 - K. Pseudoxanthoma
 - L. Retinitis pigmentosa
6. Autosomal recessive or dominant abnormality without other defects, except usually ectopic pupils
7. Capsular exfoliation syndrome
8. Crouzon disease
9. Cryptophthalmia syndrome (cryptophthalmos-syndactyly syndrome)
10. Dwarfism, genetic type
11. Ehlers-Danlos syndrome (cutis hyperelastica)
12. Gillum-Anderson syndrome (blepharoptosis, myopia, ectopia lentis)
13. Gorlin-Goltz syndrome
14. Grönblad-Strandberg syndrome (pseudoxanthoma elasticum)
15. Hereditary ectodermal dysplasia syndrome
16. *Homocystinuria—usually downward displacement of lens
17. Hyperlysinemia
18. Kniest syndrome
19. Late-onset localized junctional epidermolysis bullosa and mental retardation
20. Mandibulofacial dysostosis (Franceschetti syndrome)
21. Marchesani syndrome (brachymorphy with spherophakia)(Weill-Marchesani syndrome)
22. *Marfan syndrome (dolichostenomelia-arachnodactyly-hyperchondroplasia dystrophica mesodermalis congenita)—usually superior displacement of lens

23. Molybdenum cofactor deficiency (combined deficiency of sulfite oxidase and xanthine dehydrogenase)
24. Oculodental syndrome (Peters syndrome)
25. Pfaundler syndrome
26. Pierre Robin syndrome
27. Pseudoexfoliation (exfoliation syndrome)
28. Recession of anterior chamber angle
29. Refsum syndrome
30. Retinal disinsertion syndrome
31. Retinoblastoma
32. Rieger syndrome (dysgenesis mesostromalis)
33. Spherophakia (see p. 400)
34. Spontaneous (degenerative)
35. Sprengel deformity
36. Sturge-Weber syndrome
37. Sulfite oxidase deficiency
38. Surgical accidents (iatrogenic)
39. *Syphilis (lues)
40. *Trauma as in Frenkel syndrome (ocular contusion syndrome), beesting, and following YAG laser
41. Treacher Collins syndrome (mandibulofacial dysostosis)
42. Uveitis
43. Wildervanck syndrome (cervicooculoacoustic syndrome)

Diagnostic table

	Marfan Syndrome*	Weill-Marchesani Syndrome	Dwarfism as Cockayne Disease	Trauma*	Homocystinuria*	Syphilis*	Ehlers-Danlos Syndrome	Rieger Syndrome	Hyperlysinemia	Sulfite Oxidase Deficiency	Treacher-Collins Syndrome
History											
1. Autosomal dominant	U						U	U			S
2. Autosomal recessive		S	U		U						
3. Blunt ocular trauma				U							
4. Congenital	U	S				S					
5. Hereditary	U	U	U		U		U	S	S	S	U
Physical Findings											
1. Angioid streaks							U				
2. Angle recession				S							
3. Aniridia					R			S			
4. Antimongoloid obliquity (temporal canthus lower)		U									
5. Bialteral interstitial keratitis						U					
6. Blue sclera							U				
7. Cataract	U		U	S	R						
8. Central retinal artery occlusion					R						
9. Coloboma of iris	R				R						U
10. Corneal opacity		S						U			
11. Choroidal hemorrhage							S				
12. Choroiditis						U					
13. Decreased tearing			S								
14. Disciform macular degeneration							S	U			
15. Epicanthal folds							U				
16. Glaucoma		R		S	U			U			
17. Hyphema				U							
18. Iridodialysis				S							
19. Iris hypoplasia								U			
20. Iritis				U							
21. Keratoconus							U				
22. Macular edema				U							
23. Megalocornea	S	U									
24. Microcornea					R			U			
25. Microphthalmos					R			U			U
26. Myopia	U	U			U						
27. Nystagmus	U		U							U	
28. Optic atrophy		S	S		U	U		S			
29. Optic disc hypoplasia											U
30. Optic neuritis						U					
31. Papilledema					R						
32. Peripheral cystoid retinal degeneration					U						
33. Peripheral anterior synechiae				S				U			
34. Pigmented retinal appearance	S		U			U			U		
35. Retina detachment	S										
36. Spherophakia	U	U							U		
37. Strabismus	U										
38. Underdeveloped orbicularis oculi muscle											U
39. Vitreous hemorrhage							S				
Laboratory Data											
1. Cystathionine blood/urine										U	
2. Fluorescent treponemal antibody-absorption test						U					
3. Hemocystine/methionine in blood/urine					U						
4. Lysine/homoarginine in blood/urine									U		

R = rarely; S = sometimes; and U = usually.

Dislocated lens

Aphakia (Absence of Lens in Usual Position Behind the IRIS)

1. Congenital absence of lens—rare
2. Dislocation of the lens into vitreous cavity, anterior chamber, or subconjunctival area
3. Following cataract extraction
4. Gradual absorption of the lens

Hanna C, et al. Extraocular traumatic luxation of the lens. *J Ark Med Soc* 1969;66:210.

O'Brien CS. *Ophthalmology: notes for students*. Iowa City: Athens Press, 1930.

Equatorial Lens Pigmentation

1. Associated with myopia and retinal detachment
2. Congenital malformation
3. Pigmentary glaucoma
4. Uveitis

Delaney WV Jr. Equatorial lens pigmentation, myopia, and retinal detachment. *Am J Ophthalmol* 1975;79:194-205.

Unilateral Cataracts

1. Argon laser treatment
2. *Trauma
3. Complicated cataract
 - A. Anterior segment involvement, such as that because of the following:
 1. Acute and chronic corneal ulcer
 2. *Iridocyclitis
 3. Chronic anterior uveitis
 4. Acute or chronic glaucoma
 - B. Posterior segment involvement, such as that because of the following:
 1. Chronic posterior uveal inflammation
 2. Long-standing retinal detachment
 3. High myopia
 4. Hereditary retinal lesions
 5. Persistent hyperplastic primary vitreous
4. Roy syndrome I (unilateral cataract associated with smoking)
5. Congenital posterior polar lens changes
6. Glaucomatocyclitic crisis (Posner-Schlossman syndrome)
7. Conditions that give bilateral manifestations with earlier onset in one eye

Jarrett WH. Dislocation of the lens. *Arch Ophthalmol* 1967;78:289.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Roy FH. Cigarette smoking and the risk of cataract [Letter]. *JAMA* 1993;269:748.

Lenticular Disease Associated with Corneal Problems

1. Aberfeld syndrome (ocular and facial abnormalities syndrome)—cataracts, microcornea
2. Acrodermatitis chronica atrophicans—keratomalacia, corneal opacification, cataracts
3. Addison syndrome (idiopathic hypoparathyroidism)—keratoconjunctivitis, corneal ulcers, keratitic moniliasis, cataracts

4. Alport syndrome (hereditary nephritis)—anterior lenticonus, posterior polymorphous corneal dystrophy
5. *Amiodarone—corneal deposits, anterior subcapsular cataracts
6. Amyloidosis—amyloid deposits of cornea, corneal dystrophy, pseudopodia lentis
7. Anderson-Warburg syndrome (oligophrenia- microphthalmos syndrome) —corneal opacification and lenticular destruction with a mass visible behind the lens
8. Andogsky syndrome (atopic cataract syndrome)—atopic keratoconjunctivitis, keratoconus, uveitis, subcapsular cataract
9. Aniridia—microcornea and subluxated lenses
10. Anterior-chamber cleavage syndrome (Reese-Ellsworth syndrome)—corneal opacities, anterior pole cataract
11. Anterior segment ischemia syndrome—corneal edema, corneal ulceration, cataract
12. Apert syndrome (absent digits cranial defects syndrome)—exposure keratitis, cataracts, ectopia lentis
13. Arteriovenous fistula (arteriovenous aneurysm)—bullous keratopathy, cataract
14. Aspergillosis—corneal ulcer, keratitis, cataract
15. *Atopic dermatitis (atopic eczema, Besnier prurigo)—keratoconjunctivitis, keratoconus, cataract
16. Autosomal dominant—cataracts and microcornea
17. Avitaminosis C (scurvy)—keratitis, corneal ulcer, cataract
18. Chalcosis (intraocular copper containing foreign body) deposits in Descemet membrane and anterior lens capsule
19. Chickenpox (varicella)—corneal ulcer, corneal opacity, keratitis, cataract
20. Chlorpromazine—corneal and lens opacities
21. Cholera—keratomalacia, cataract
22. Chromosome partial deletion (short-arm) syndrome—cataracts, corneal opacities
23. Chrysiasis (gold)—corneal and lens deposits
24. Cockayne syndrome (Mickey Mouse syndrome)—cataracts, band keratopathy, corneal dystrophy
25. Congenital spherocytic anemia (congenital hemolytic jaundice)—congenital cataract, ring-shaped pigmentary corneal deposits
26. Crouzon syndrome (Parrot-head syndrome)—exposure keratitis, cataract, corneal dystrophy
27. Cryptophthalmia syndrome (cryptophthalmos-syndactyly syndrome)—cornea differentiated from sclera, lens absence to hypoplasia, dislocation, and calcification
28. Cytomegalic inclusion disease (cytomegalovirus)—cataract, corneal opacities
29. Darier-White syndrome (keratosis follicularis)—keratosis, corneal subepithelial infiltrations, corneal ulceration, cataract
30. Dermatitis herpetiformis (Duhring-Broca disease)—corneal vascularization, cataract
31. Dermochondral corneal dystrophy (of François)—cataract, corneal dystrophy
32. Diabetes mellitus—cataract, corneal edema secondary to rubeosis
33. Diphtheria—keratitis, corneal ulcer, cataract
34. Down syndrome (trisomy 21)—lens opacities, keratoconus
35. Ehler-Danlos syndrome (fibrodysplasia elastica generalisata)—microcornea, keratoconus, lens subluxation
36. Electrical injury—corneal perforation, necrosis of cornea, anterior or posterior subcapsular cataracts
37. Endothelial dystrophy and anterior polar cataract (Dohlman)
38. Exfoliation syndrome (capsular exfoliation syndrome)—cataract, dislocated lens, corneal dystrophy, lens capsule exfoliation

39. Fabry disease (glycosphingolipid lipidosis)—cataract, corneal dystrophy
40. Folling syndrome (phenylketonuria)—corneal opacities, cataracts
41. Fuchs syndrome (I) (heterochromic cyclitis syndrome)—secondary cataract, edematous corneal epithelium
42. Goldscheider syndrome (epidermolysis bullosa)—bullous keratitis, corneal subepithelial blisters to corneal perforation, cataract
43. Gorlin-Goltz syndrome (multiple basal cell nevi syndrome)—cataract, corneal leukoma
44. Grönblad-Strandberg syndrome (elastorrhexis)—keratoconus, cataract, subluxation of lens
45. Hallermann-Streiff syndrome (oculomandibulofacial dyscephaly)—cataracts, microcornea
46. Hanhart syndrome (recessive keratosis palmoplantaris)—dendritic corneal lesions, keratitis, corneal haze, corneal neovascularization, cataract
47. Heerfordt syndrome (uveoparotid fever)—band keratopathy, keratoconjunctivitis, cataract
48. Hereditary ectodermal dysplasia syndrome (Siemens syndrome)—keratosis, corneal erosions, corneal dystrophy, cataract, lens luxation
49. Herpes simplex—keratitis, corneal ulcer, cataracts
50. Herpes zoster—keratitis, corneal ulcer, cataract
51. Histiocytosis X (Hand-Schüller-Christian syndrome)—pannus, bullous keratopathy, corneal ulcer, cataract
52. Hodgkin disease—keratitis, cataract
53. Homocystinuria syndrome—dislocated lens, cataract, keratitis
54. Hutchinson-Gilford syndrome (progeria)—cataract, microcornea
55. Hydatid cyst (echinococcosis)—keratitis, corneal abscess, cataract
56. Hypervitaminosis D—band keratopathy, cataract
57. Hypoparathyroidism—keratitis, cataract
58. Hypophosphatasia (phosphoethanolaminuria)—cataract, corneal subepithelial calcifications
59. Influenza—keratitis, cataract
60. Jadassohn-type anetodermal—keratoconus, cataract
61. Jadassohn-Lewandowsky syndrome (pachyonychia congenita)—corneal dyskeratosis, cataract
62. *Juvenile rheumatoid arthritis (Still disease)—band keratopathy, cataract
63. Kussmaul disease (periarteritis nodosa)—corneal ulcer, cataract
64. Kyrle disease (hyperkeratosis penetrans)—subcapsular cataracts, subepithelial corneal opacities
65. Leber congenital amaurosis—cataracts, keratoconus
66. Leri syndrome (carpal tunnel syndrome)—corneal clouding, cataract
67. Listerellosis (listeriosis)—keratitis, corneal abscess and ulcer, cataract
68. Little syndrome (nail-patella syndrome)—microcornea, keratoconus, cataract
69. *Lowe syndrome (oculocerebrorenal syndrome)—cloudy cornea, cataracts, megalocornea, corneal dystrophy
70. Malaria—keratitis, cataract
71. Marchesani syndrome (brachymorphy with spherophakia)—lenticular myopia, ectopia lentis, megalocornea, corneal opacity
72. Marfan syndrome (arachnodactyly-dystrophia-mesodermalis congenita)—lens dislocation, cataract, megalocornea, lenticular myopia

73. Matsoukas syndrome (oculocerebroarticuloskeletal syndromes)—cataract, corneal sclerosis
74. Meckel syndrome (dysencephalia splanchnocystic syndrome)—sclerocornea, microcornea, cataract
75. Micro syndrome (autosomal recessive microcephaly, microcornea, congenital cataract, mental retardation, optic atrophy, and hypogenitalism)
76. Morbilli (rubeola, measles)—corneal ulcer, cataract
77. Mucopolipidosis IV (ML IV)—corneal clouding, cataract
78. Myotonic dystrophy (Curschmann-Steinert syndrome)—lens opacity, cornea-epithelial dystrophy
79. Nematode ophthalmia syndrome (toxocariasis)—cataract, larvae present in the cornea
80. Neurodermatitis (lichen simplex chronicus)—keratoconjunctivitis, atopic cataracts, keratoconus
81. Neurofibromatosis 1
82. Neurofibromatosis 2
83. Ocular toxoplasmosis (toxoplasmosis)—keratitis, cataract
84. Oculodental syndrome (Peter syndrome)—macrocornea, opacities of the corneal margin, ectopic lens, corneoscleral staphyloma
85. O'Donnell-Pappas syndrome—presenile cataract, peripheral corneal pannus
86. Paget syndrome (osteitis deformans)—corneal ring opacities, cataract
87. Passow syndrome (status dysraphicus syndrome)—neuroparalytic keratitis, zonular cataract
88. Pemphigus foliaceus (Cazenave disease)—pannus, corneal infiltration, cataract
89. Peter anomaly (anterior chamber cleavage syndrome—lens apposition to leukoma)
90. Pigmentary ocular dispersion syndrome (pigmentary glaucoma)—Krukenberg spindle, equatorial pigmentation of lens capsule
91. Pseudohypoparathyroidism (Seabright-Bantan syndrome)—punctate cataracts, keratitis
92. Radiation—corneal ulcer, punctate keratitis, cataracts, exfoliation of lens capsule
93. Refsum syndrome (phytanic acid oxidase deficiency)—corneal opacities, cataracts
94. Relapsing polychondritis—corneal ulcer, cataracts, keratoconjunctivitis sicca
95. Retinal disinsertion syndrome—lens subluxation, keratoconus
96. Retrolental fibroplasia (RLF)—cataracts, corneal opacification
97. Rieger syndrome (dysgenesis mesodermalis corneae et irides)—microcornea, corneal opacities in Descemet membrane, dislocated lens
98. Romberg syndrome (facial hemiatrophy)—neuroparalytic keratitis, cataracts
99. Rothmund syndrome (telangiectasia-pigmentation-cataract syndrome)—cataract, corneal lesions
100. *Rubella syndrome (German measles)—corneal haziness, cataracts, microcornea
101. Sabin-Feldman syndrome—posterior lenticonus, microcornea
102. Sanfilippo-Good syndrome (mucopolysaccharidosis III)—deposits in cornea and lens
103. Schafer syndrome (keratosis palmoplantaris syndrome)—lesions in the lower portion of the cornea, cataract
104. Schaumann syndrome (sarcoidosis syndrome)—keratitis sicca, band-shaped keratitis, complicated cataract
105. Scheie syndrome (mucopolysaccharidosis IS)—diffuse haze to marked corneal clouding, cataracts
106. Siderosis (intraocular iron foreign body)—iron deposition in lens and cornea
107. Stannus cerebellar syndrome—corneal vascularization, corneal opacities, cataracts

108. Steroids—cataract, may worsen certain types of corneal infections
109. Stevens-Johnson syndrome (erythema multiforme exudativum)—keratitis, corneal ulcers, cataracts, pannus
110. Stickler syndrome (hereditary progressive arthro-ophthalmopathy)—keratopathy, cataracts
111. Thioridazine—corneal and lens opacities
112. Toxic lens syndrome—pigment precipitation on the surface of an intraocular lens, chronic uveitis
113. Trisomy syndrome—corneal and lens opacities
114. Turner syndrome (gonadal dysgenesis)—corneal nebulae, cataracts
115. Ultraviolet radiation—band keratopathy, keratitis, discoloring of lens
116. van Bogaert-Scherer-Epstein syndrome (familial hypercholesterolemia syndrome)—lipid keratopathy, cataract, juvenile corneal arcus
117. von Recklinghausen syndrome (neurofibromatosis)—nodular swelling of corneal nerves, cataracts
118. Waardenburg syndrome (intercoloiridodermatoauditive dysplasia)—microcornea, cornea plana, lenticonus
119. Wagner syndrome (hereditary hyaloideoretinal degeneration and palatoschisis)—corneal degeneration, including band-shaped keratopathy, cataracts
120. Ward syndrome (nevus jaw cyst syndrome)—congenital cataracts, congenital corneal opacities
121. Wegener syndrome (Wegener granulomatosis)—corneal ulcer, corneal abscess, cataract
122. Weil disease (leptospirosis)—keratitis, cataract
123. Werner syndrome (progeria of adults)—juvenile cataracts, bullous keratitis, trophic corneal defects
124. *Wilson disease (hepatolenticular degeneration)—sunflower cataract, Kayser-Fleischer ring
125. Yersiniosis—corneal ulcer, cataract
126. Zellweger syndrome (cerebrohepatorenal syndrome of Zellweger)—corneal opacities, cataract

Drugs Associated with Cataracts

Acetophenazine (phenothiazine)	bacille Calmette-Guérin (BCG)vaccine (?)	butaperazine
acetohexamide	beclomethasone	cactinomycin
acetylcholine	benoxinate	calcitriol (?)
adrenal cortex injection	benzodiazepine	carbachol
alcohol	benzphetamine (?)	carbamazepine (?)
aldosterone	betamethasone	carbromal(?)
allopurinol	betaxolol (?)	carphenazine
amiodarone (?)	bleomycin	chloroprocaïne
amodiaquine	bupivacaine	chlorpropamide
azathioprine (?)	busulfan	chloroquine
chlormpromazine	ibuprofen (?)	chlorphentermine (?)
chlormpromazine	indomethacin (?)	piperacetazine
chlormprothixene	isofluorophate	piperazine (?)
cholecalciferol (?)	isotretinoin (?)	prazosin (?)
clomiphene (?)	levobunolol (?)	prednisolone
cobalt	lidocaine	prednisone (steroid)
colchicine(?)	lithium carbonate(?)	prilocaine
cortisone	lysergic acid diethylamide (LSD)	procaine
danazol(?)		prochlorperazine
deferoxamine	lysergide	promazine
demecarium	medrysone	promethazine
desoxycorticosterone	megestrol acetate	propiomazine
dexamethasone	mephenytoin (?)	propoxycaine
dextrothyroxine (?)	mepivacaine	piperocaine
diisopropyl flurophosphate (DFP)	meprednisone	psilocybin
	mescaline	PUVA (psoralens and ultraviolet A) (?)
diazoxide	mesoridazine	quinacrine
dibucaine	methdilazine	silicone
diethazine	methotrimeprazine	sulfonamides (maternal ingestion)
diethylpropion (?)	methoxsalen (?)	
doxorubicin	methylergonovine (?)	sulindac (?)
droperidol (?)	methylprednisolone	tamoxifen
dyclonine	methysergide (?)	tetracaine
echothiophate	mitomycin C (topical) (?)	thiethylperazine
ergocalciferol	mitotane	thiopropazate
ergonovine (?)	naltrexone	thiopropazine
ergot (?)	naproxen (?)	thioridazine
ergotamine (?)	neostigmine	thiothixene
ethopropazine	neostigmine	timolol (?)
ethotoin	nifedipine (?)	tolazamide
etidocaine	oral contraceptives (?)	triamcinolone
etretinate	oxygen	trifluoperazine
fenfluramine (?)	paramethasone	trifluperidol (?)
fludrocortisone	penicillamine (?)	triflupromazine
fluorometholone	perazine pericyazine	trimeprazine
fluphenazine	perphenazine	trioxsalen (?)
fluprednisolone	phenacaine	troleandomycin (?)
ganciclovir	phendimetrazine (?)	urokinase (?)
glyburide	phenmetrazine	verapamil (?)
gold	Phentermine (?)	vitamin D2 (?)
haloperidol (?)	Phenytoin	vitamin D3 (?)
hydrocortisone	Physostigmine	warfarin
hydroxychloroquine	Pilocarpine	

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

Syndromes and Diseases Associated with Cataracts

1. Aberfeld syndrome (blepharophimosis associated with generalized myopathy)
2. Acrodermatitis chronica atrophicans

3. Addison syndrome (adrenal cortical insufficiency)
4. Albinism
5. Albright hereditary osteodystrophy (pseudohypoparathyroidism)
6. Alopecia areata
7. *Alport syndrome (hereditary nephritis)
8. Alström disease (cataract and retinitis pigmentosa)
9. Andogsky syndrome (atopic cataract syndrome)
10. Anterior segment ischemia syndrome
11. Apert syndrome (acrocephalosyndactylism syndrome)
12. Apical malformations associated with cataracts
13. Arteriovenous fistula
14. Arthrogryposis multiplex congenita
15. Aspergillosis
16. *Atopic dermatitis syndrome
17. Autosomal dominant foveal hypoplasia and presenile cataract syndrome (O'Donnell-Pappas syndrome)
18. Bassen-Kornzweig syndrome (abetalipoproteinemia)
19. Bloch-Sulzberger syndrome (incontinentia pigmenti)
20. Bonnevie-Ullrich syndrome (pterygolympangiectasia)
21. Bourneville syndrome (tuberous sclerosis)
22. Buerger disease (thromboangiitis obliterans)
23. Caisson syndrome (bends)
24. Capsular exfoliation syndrome
25. Carotid artery syndrome
26. Cataract and hypertrophic neuropathy—autosomal recessive
27. Cataract with microcornea and coloboma of iris—autosomal dominant
28. Cataract, floriform—autosomal dominant
29. Cataract and cardiomyopathy—autosomal recessive
30. Cataract, congenital, or juvenile—autosomal recessive
31. Cataract, congenital total, with posterior sutural opacities in heterozygotes—X-linked
32. Cataract, congenital with absence deformity of leg—autosomal recessive
33. Cataract, congenital, with microcornea or slight microphthalmia—X-linked
34. Cataract, cortical, and congenital ichthyosis—autosomal recessive
35. Cataract, mental retardation, hypogonadism (Martsolf syndrome)
36. Cataract, microcephaly, arthrogryposis kyphosis syndrome (CAMAK syndrome)—autosomal recessive
37. Cataract microcephaly, failure to thrive, kyphoscoliosis syndrome (CAMFAK syndrome)—autosomal recessive
38. Cataract, nuclear and total nuclear—usually autosomal dominant rarely recessive
39. Cataract, zonular, and nystagmus—X-linked
40. Cat-eye syndrome (Schmid-Fraccaro syndrome)
41. Cerebral cholesterinosis (cerebrotendinous xanthomatosis)
42. Cerebellar ataxia, cataract, deafness, and dementia or psychosis
43. Cerebral palsy
44. Cerebrohepatorenal syndrome (Smith-Lemli-Opitz syndrome)
45. Cerebrotendinous xanthomatosis
46. Cholera
47. Chromosome 13q partial deletion (long-arm) syndrome
48. Chromosomal 3; 18 translocation

49. Chromosome deletion (short-arm) syndrome
50. Cockayne syndrome (dwarfism with retinal atrophy and deafness)
51. Cerebrooculofascioskeletal syndrome (COFS syndrome)
52. Congenital cataract and hypertrophic cardiomyopathy syndrome
53. Congenital cataract with oxycephaly (tower skull)
54. Congenital hemolytic icterus
55. Congenital ichthyosiform erythroderma
56. Congenital rubella syndrome (German measles)
57. Conradi syndrome (stippled epiphyses syndrome)
58. Comedo-cataract
59. Craniofacial dysostosis (Crouzon disease)
60. Cretinism (hypothyroidism)
61. Crome syndrome (congenital cataracts, epileptic fits, mental retardation, small stature)
62. Cushing syndrome
63. Cytomegalovirus
64. Darier-White syndrome (keratosis follicularis)
65. DeBary syndrome
66. Dermatitis herpetiformis
67. *Diabetes mellitus (Willis disease)
68. Diarrhea
69. Diphtheria
70. Ectodermal dysplasia
71. Edward syndrome
72. Electrical injury
73. Ellis-van Creveld syndrome (chondroectodermal dysplasia)
74. Engelmann syndrome (diaphyseal dysplasia)
75. Epidermal nevus syndrome (ichthyosis hystrix)
76. Fabry disease (diffuse angiokeratosis)
77. Familial congenital cataracts, microcornea, abnormal irides, nystagmus, and glaucoma syndrome
78. Familial congenital cataract, nonprogressive neurologic disorders, and mental deficiency syndrome
79. Familial histiocytic dermatoarthritis syndrome
80. Familial hypogonadism syndrome
81. Familial t(2;16) translocation
82. Fetal alcohol syndrome
83. Folling syndrome (phenylketonuria)
84. François dyscephalic syndrome (Hallermann-Streiff syndrome)
85. Frenkel syndrome (ocular contusion syndrome)
86. Fuchs syndrome (1) (heterochromic cyclitis syndrome)
87. Galactokinase deficiency—autosomal recessive
88. *Galactosemia-transferase deficiency
89. Goldenhar syndrome (oculoauriculovertebral dysplasia)
90. Goldscheider syndrome (epidermolysis bullosa)
91. Gorlin-Goltz syndrome (multiple basal cell nevi syndrome)
92. Grönblad-Strandberg syndrome (pseudoxanthoma elasticum)
93. Gyrate atrophy (ornithine ketoacid aminotransferase deficiency)
94. Hagberg-Santavuori syndrome (neuronal ceroid-lipofuscinosis)
95. Hallermann-Streiff syndrome (oculomandibulofacial dyscephaly)

96. Hand-Schüller-Christian syndrome (histiocytosis X)
97. Harada disease (uveitis-vitiligo-alopecia-poliosis syndrome)
98. Heerfordt syndrome (uveoparotid fever)
99. Hemifacial microsomia syndrome (François-Haustrate syndrome)
100. Herpes simplex virus
101. Hilding syndrome (destructive iridocyclitis and multiple joint dislocations)
102. Hodgkin disease
103. Homocystinuria
104. Hookworm disease
105. Hruby-Irvine-Gass syndrome (cystoid maculopathy following cataract extraction with vitreous loss)
106. Hutchinson-Gilford syndrome (progeria)
107. Hydatid cyst
108. Hypercalcemia (adult)
109. Hypercalcemia (infantile) with mental retardation (supravalvular aortic stenosis syndrome)
110. Hyperprolactinemia
111. Hypertrophic cardiomyopathy
112. Hypervitaminosis A
113. Hypervitaminosis D
114. Hypocalcemia
115. Hypoglycemia
116. Hypoparathyroidism
117. Hypophosphatasia (phosphoethanolaminuria)
118. Incontinentia pigmenti achromians
119. Infantile hypoglycemia (male)
120. Influenza
121. Infrared radiation
122. Intrauterine infections
 - A. herpes virus
 - B. mumps
 - C. rubella
 - D. toxoplasmosis
 - E. vaccinia
123. Jacobsen-Brodwall syndrome
124. Jadassohn-Lewandowsky syndrome (pachyonychia congenita)
125. Karsch-Neugebauer syndrome (nystagmus-split hand syndrome)
126. Klippel-Trenaunay-Weber syndrome (angioosteohypertrophy syndrome)
127. Krause syndrome (congenital encephalophthalmic dysplasia)
128. Kussmaul disease (periarteritis nodosa)
129. Kyrle disease (hyperkeratosis penetrans)
130. Lanzieri syndrome (craniofacial malformations)
131. Laser treatment for retinopathy of prematurity
132. Laurence-Moon-Biedl syndrome (retinitis pigmentosa-polydactyly-adiposogenital)
133. Leber syndrome (optic atrophy-amaurosis-pituitary syndrome)
134. Leiomyoma
135. Leri syndrome (carpal tunnel syndrome)
136. Lightning
137. Listerellosis
138. *Lowe syndrome (oculocerebrorenal syndrome)

139. Majewski syndrome (short-rib polydactyly syndrome)
140. Malaria
141. Male Turner syndrome (Noonan syndrome)
142. Malignant hyperpyrexia syndrome
143. Mandibulofacial dysostosis (Franceschetti syndrome)
144. Mannosidosis
145. Maple-syrup urine disease (branched-chain ketoaciduria)
146. Marfan syndrome (arachnodactyly dystrophia mesodermaliscongenita)
147. Marinesco-Sjögren syndrome (congenital cataract-oligophrenia syndrome)
148. Marshall syndrome (atypical ectodermal dysplasia)
149. Martsolf syndrome
150. Matsoukas syndrome (oculocerebroarticuloskeletal syndrome)
151. Meckel syndrome (dysencephalia splanchnocystic syndrome)
152. Microcephaly, microphthalmia, cataracts, and joint contractures syndrome
153. Microphthalmia-congenital anterior polar cataract syndrome—autosomal dominant
154. Micro syndrome
155. Miller syndrome (Wilms aniridia syndrome)
156. Monilethrix
157. Morgan syndrome (intracranial exostosis)
158. Morquio-Brailsford syndrome (mucopolysaccharidoses IV)
159. Multiple sulfatase deficiency
160. Myopic (high)
161. Myotonic dystrophy (Curschmann-Steinert syndrome)
162. Nail-patella syndrome (Little syndrome)
163. Nance-Horan syndrome (cataract-dental syndrome)
164. Neurodermatitis
165. Neurofibromatosis 1 (von Recklinghausen syndrome)
166. Neurofibromatosis 2 (central neurofibromatosis)
167. Nieden syndrome (telangiectasia-cataract syndrome)
168. Norrie disease
169. Oculotooroenoerythropoietic disease
170. Optic atrophy, cataract, and neurologic disorder—autosomal dominant
171. Osteogenesis imperfecta congenita, microcephaly, and cataracts—autosomal recessive
172. Osteopetrosis (Albers-Schönberg syndrome)
173. Oxycephaly
174. Pachyonychia congenita syndrome
175. Paget syndrome (idiopathic hyperphosphatasemia)
176. Pallister-Killian syndrome
177. Partial trisomy 10q trisomy
178. Passow syndrome (syringomyelia)
179. Patau syndrome
180. Pellagra (avitaminosis B₂)
181. Pemphigus foliaceus (Cazenave disease)
182. Pernicious anemia syndrome (vitamin B₁₂ deficiency)
183. Pierre Robin syndrome (micrognathia-glossoptosis syndrome)
184. Prader-Labhart-Willi syndrome (hypogenital dystrophy with diabetic tendency)
185. Pseudoexfoliation syndrome
186. Pseudohypoparathyroidism
187. Radiation

188. Reese-Ellsworth syndrome (anterior chamber cleavage syndrome)
189. Refsum syndrome (phytanic acid storage disease)
190. Renal failure (chronic)
191. Renal transplantation
192. Retinal ischemic infarction syndrome
193. *Retinitis pigmentosa-deafness-ataxia syndrome
194. Rhizomelic chondrodysplasia punctata
195. Riboflavin deficiency syndrome (oculoorogenital syndrome)
196. Ring chromosome in the D group
197. Robert syndrome
198. Robert pseudothalidomide syndrome
199. Romberg syndrome (facial hemiatrophy)
200. Rothmund syndrome (infantile poikiloderma)
201. *Roy syndrome I (unilateral cataract associated with smoking)
202. Roy syndrome II—nuclear cataract associated with smoking
203. Rubeola (measles)
204. Rubinstein-Taybi syndrome (broad-thumbs syndrome)
205. Scaphocephaly syndrome (craniofacial dysostoses)
206. Schaefer syndrome (congenital dyskeratosis)
207. Schwartz syndrome
208. Scurvy (avitaminosis C)
209. Sickle cell disease (Herrick syndrome)
210. Siemen syndrome (congenital atrophy of the skin)
211. Sjögren syndrome (secretoinhibitor syndrome)
212. Sjögren-Larsson syndrome (oligophrenia ichthyosis)
213. Smith-Lemli-Opitz syndrome
214. Split-hand with congenital nystagmus, fundal changes, cataracts—autosomal dominant
215. Spondyloepiphyseal dysplasia (SED) dwarfism
216. Stannus cerebellar syndrome (vitamin B₂ deficiency)
217. Stickler syndrome (hereditary progressive arthro-ophthalmopathy)
218. *Still disease (juvenile rheumatoid arthritis)
219. Thrombocytopenia-absent radius (TAR) syndrome
220. Toxocariasis (nematode ophthalmia syndrome)
221. Treacher Collins syndrome (mandibulofacial dysostosis)
222. Trichomegaly, spherocytosis, and cataract—autosomal dominant
223. Trichorrhexis nodosa (argininosuccinicaciduria)
224. Trisomy 13 syndrome (Patau syndrome)
225. Trisomy 16 syndrome (Edward syndrome)
226. Trisomy 20p syndrome
227. Trisomy 21 (Down syndrome)
228. Tuomaala-Haapanen syndrome
229. Turner syndrome (gonadal dysgenesis)
230. Tyrosinosis (Hanhart syndrome)
231. Usher syndrome (hereditary retinitis pigmentosa—deafness syndrome)
232. Uvea-touch syndrome
233. Van der Hoeve syndrome (brittle-bone disease)
234. Van Bogaert-Scherer-Epstein syndrome (primary hyperlipidemia)
235. Varicella infection
236. von Recklinghausen syndrome (neurofibromatosis)

237. Wagner syndrome (hyaloideoretinal degeneration)
238. Warburg syndrome (hydrocephalus, agyria, and absent cortical laminar retinal dysplasia with or without encephalocele)
239. Ward syndrome (nevus-jaw cyst syndrome)
240. Wegener syndrome (Wegener granulomatosis)
241. Weil disease (leptospirosis)
242. Werner syndrome (scleropoikiloderma)
243. Wilson disease (hepatolenticular degeneration)
244. Yersiniosis
245. Zellweger syndrome (cerebrohepatorenal syndrome)
246. 31 syndrome
247. 4p syndrome
248. 18p syndrome
249. 18q syndrome

Lenticulocorneal Adherence (Lens Adjacent to Endothelium of Cornea)

1. Acquired anterior corneal disease as ulcer with perforation or trauma
2. Aniridia
3. Peters anomaly (oculodental syndrome)
4. Rieger anomaly (dysgenesis mesostromalis)

Kivlin JD, et al. Peters' anomaly as a consequence of genetic and nongenetic syndromes. *Arch Ophthalmol* 1986;104:61-64.

Waring G, et al. Ultrastructure and successful keratoplasty of sclerocornea in Mieten's syndrome. *Am J Ophthalmol* 1980;90:469-475.

Spasm of Accommodation

This condition involves increased tone of ciliary body with increased convexity of crystalline lens (see p. 619-622).

1. Alcoholism
2. Cerebrovascular accident
3. Contusion injury to the globe or head
4. Cyclic oculomotor palsy or spasm
5. Diabetes mellitus
6. Drugs, such as aceclidine, acetylcholine, carbachol, demecarium, DFP, digitalis, echothiophate, guanethidine, isofluorophate, methylene blue, morphine, neostigmine, opium, physostigmine, pilocarpine
7. Fatigue cramp of overworked ciliary muscle; most frequent with compound hyperopia and mixed astigmatism associated with anisometropia
8. Graves disease (hyperthyroidism, Basedow syndrome)

9. Infectious, such as diphtheria, helminthic infestations, or sinus disease
10. Irritative lesions of brain stem and oculomotor trunk, such as epidemic encephalitis, tabes, meningitis, influenza, scleritis, measles, or orbital inflammation
11. Middle cerebral artery occlusion
12. Ocular inflammation, such as ciliary muscle irritant
13. Pineal tumor
14. Reflex irritation, such as in trigeminal neuralgia
15. Sympathetic paralysis
16. Trauma

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

Walsh FB, Hoyt WF. *Clinical neuro-ophthalmology*, 4th ed. Baltimore: Williams & Wilkins, 1988.

Paresis of Accommodation

This condition involves partial or total loss of physiologic ability to change the shape of the lens and thus the focus of the eye (see Mydriasis, p. 622-623); this ability is related to age (see Acquired Hyperopia, p. 344-348).

1. *Presbyopia—gradual decrease in amplitude of accommodation related to age
2. Accommodative insufficiency
 - A. Asthenic individuals
 - B. Illness or debilitation, including intestinal toxemia, tuberculosis, influenza, whooping cough, measles, and tonsillar and dental infections
 - C. Anemia
 - D. Overwork
 - E. Whiplash injury
3. Ciliary body aplasia—with or without pupillary and iris abnormalities
4. Iridocyclitis—acute and chronic
5. Glaucoma with atrophy of ciliary body
6. Choroidal metastasis with suprachoroidal extension
7. Trauma, such as tears in iris sphincter, tears at root of iris, or recession of the anterior chamber angle with posterior displacement of the ciliary attachment and ocular hypotension
8. Rupture of zonular fibers and partial subluxation of lens
9. Myotonic dystrophy (Curschmann-Steinert syndrome)
10. Drugs, including the following:

acetazolamide	amphetamine	betamethasone
acetophenazine	anisindione	bethanechol
adiphenine	anisotropine	biperiden
alcohol	antazoline	bromide
alprazolam	atropine	butaperazine
ambutonium	belladonna	captopril (?)
aminosalicylate (?)	bendroflumethiazide	caramiphen
aminosalicylic acid (?)	benzathine penicillin G	carbachol
amitriptyline	benzphetamine	carbamazepine
amodiaquine	benzthiazide	carbinoxamine
amoxapine	benztropine	carbon dioxide
carphenazine	indapamide	phenindione
chloramphenicol	iodide and iodine solutions and compounds	phenmetrazine
chlordiazepoxide		phentermine
chlorisondamine	isoniazid	pilocarpine
chlorothiazide	isopropamide	pimozide
chlorphenoxamine	maprotiline	pipenzolate
chlorpromazine	marijuana	piperacetazine
chlorthalidone	mecamylamine	piperazine
cimetidine	medrysone	piperidolate
clemastine	mepenzolate	piperocaine
clidinium	meprobamate	piroxicam (?)
clomipramine	mescaline	poldine
clonazepam	mesoridazine	polythiazide
clorazepate	methacholine	potassium penicillin G
cocaine	methamphetamine	potassium penicillin V
cortisone	methantheline	potassium phenethicillin
cyclopentolate	methaqualone	pralidoxime
cyclothiazide	methazolamide	prazepam
cyrimine	methdilazine	prednisolone
desipramine	methixene	primidone
dexamethasone	methotrimeprazine	procaine penicillin G
dextroamphetamine	methscopolamine	procarbazine
diacetylmorphine	methylclothiazide	prochlorperazine
diazepam	methylatropine nitrate	procyclidine
dibucaine	methylene blue	promazine
dichlorphenamide	methyprylon	promethazine

dicyclomine	methysergide metolazone	propantheline
diethazine	mianserin	propiomazine
diphenamil	midazolam	propranolol
diphenadione	morphine	protriptyline
diphenhydramine	nalidixic acid	psilocybin
diphenylpyraline	naproxen	pyrilamine
emetine	nitrazepam	quinethazone
ergot	nortriptyline	radioactive iodides
ethopropazine	opium	rubella virus vaccine (live)
fluorometholone	orphenadrine	scopolamine
fluphenazine	oxazepam	streptomycin
glycopyrrolate	oxymorphone	temazepam
hexamethonium	oxyphenacylimine	tetanus immune globulin
hexocyclium	oxyphenonium	tetanus toxoid
homatropine	pargyline	tetracaine
hydrochlorothiazide	pentazocine	tetraethylammonium
hydrocortisone	pentolinium	tetrahydrocannabinol
hydroflumethiazide	perazine	thiethylperazine
hydromorphone	periciazine	thiopropazate
hydroxyamphetamine	perphenazine	thiopropazine
imipramine	phendimetrazine	thioridazine
thiothixene	trifluperidol	trimipramine
triazolam	triflupromazine	tripelennamine
trichlormethiazide	trihexyphenidyl	tropicamide
trichloroethylene	trimeprazine	vinblastine
tridihexethyl	trimethaphan	
trifluoperazine	trimethidinium	

-
11. Neurogenic causes
 - A. Infectious conditions
 1. Epidemic encephalitis
 2. Anterior poliomyelitis
 3. Exanthemas and acute infections, such as scarlet fever, mumps, measles, influenza, typhoid fever, dengue fever, viral hepatitis, amebic dysentery, and malaria
 4. Herpes zoster
 5. Syphilis (lues)
 6. Tuberculosis
 7. Leprosy (Hansen disease)
 8. Focal infections, such as from teeth or nasal sinuses
 - B. Toxic conditions
 1. Alcohol
 2. Lead
 3. Arsenic
 4. Carbon monoxide
 5. Diphtheritic paralysis
 6. Botulism
 7. Extensive burn
 8. Snake venom
 - C. Degenerative conditions
 1. Congenital hereditary ophthalmoplegia
 2. Progressive congenital ophthalmoplegia
 3. Hereditary ataxia
 4. Myotonic dystrophy (Curschmann-Steinert syndrome)
 5. Myasthenia gravis
 - D. Metabolic conditions
 1. Acute hemorrhagic anterior polioencephalitis of Wernicke
 2. Diabetes mellitus
 3. Lactation
 4. Following pregnancy
 - E. Isolated internal ophthalmoplegia
 - F. Isolated failure of near reflex, such as with inverse Argyll-Robertson pupil
 - G. Lesions of parasympathetic nuclei in midbrain
 1. Encephalitis
 2. Pineal tumor
 3. Other signs of mesencephalic disease, including multiple sclerosis, infectious polyneuropathy, and vascular lesions
 4. Syphilis—bilateral
 - H. Trauma to head or neck

1. Cerebral concussion
2. Craniocervical extension injuries

Pau FH. *Differential diagnosis of eye diseases*, 2nd ed. New York: Thieme Medical, 1988.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Walsh FB, Hoyt WF. *Clinical neuro-ophthalmology*, 4th ed. Baltimore: Williams & Wilkins, 1985.

14

Vitreous

Pseudodetachment of Vitreous (Conditions Simulating Detachment of Vitreous)

1. Enormous cavity in the vitreous body with a relatively thin posterior wall
2. Membranous formations within the vitreous associated with uveitis and hemorrhage
3. Outline of the ascending portion of Cloquet canal just anterior to the disc

Tolentino FI, et al. *Vitreoretinal disorders: diagnoses and management*. Philadelphia: WB Saunders, 1976.

Anterior Vitreous Detachment

In this condition, the anterior vitreous cortex may be separated from the posterior lens or posterior zonular fibers.

1. Retrolenticular—usually caused by vitreous shrinkage
 - A. *Trauma (most common)
 - B. Hemorrhage—usually secondary to trauma
 - C. Senescence (rare)
 - D. Inflammation
 - E. Retinal detachment (see p. 487)
 - F. *Iatrogenic after injection of vitreous substitutes (gas)
2. Retroocular
 - A. Vitreous shrinkage (see p. 432)
 - B. Ciliary body tumor
 - C. Blood
 - D. Exudate

3. Retrolenticular and retroocular combined occurs with rupture of the hyaloideocapsular ligament

Tolentino FI, et al. *Vitreoretinal disorders: diagnosis and management*. Philadelphia: WB Saunders, 1976.

Posterior Vitreous Detachment

1. Complete posterior detachment
 - A. Simple detachment—occurs in young persons
 1. Exudate from chorioretinal focus
 2. Hemorrhage between the vitreous and the retina
 3. Retraction of the cortical vitreous caused by exudate within the vitreous
 4. Vitreous hemorrhage in a young individual with vitreous shrinking due to thrombosis of central retinal vein, retinal neovascularization
 - B. Complete posterior detachment with collapse
 1. Senescent changes are primary cause
 2. Uveitis
 3. Trauma
 4. Hemorrhage
 5. Sodium hyaluronate
 - C. Funnel-shaped posterior detachment
 1. Perforating injuries of globe
 2. Retinal neovascularization
 3. Massive vitreous detachment
 - D. Atypical complete posterior detachment—residual adherence of vitreous to a peripheral retinal area
 1. Focus of chorioretinitis
 2. Following cataract extraction with loss of vitreous
 3. Following perforating wounds
 4. Posterior uveitis with inflammatory cells
2. Partial posterior detachment (unusual)
 - A. Superior detachment—primarily a senescent change; generally forerunner of posterior vitreous detachment with collapse
 - B. Partial posterior detachment (not infrequent)
 1. Preretinal hemorrhage
 2. Retinal neovascularization
 - C. Partial lateral or partial inferior detachment
 1. Focus of choroiditis
 2. Circumscribed retinal periphlebitis
 3. Intraocular foreign body

Foos RY, et al. Posterior vitreous detachment in diabetic subjects. *Ophthalmology* 1980;87:122.

Jaffe NS. *The vitreous in clinical ophthalmology*. St. Louis: CV Mosby, 1969.

Nirankari VS, et al. Pseudo-vitreous hemorrhage: a new intraoperative complication of sodium hyaluronate. *Ophthalmic Surg Lasers* 1981;12:503.

Diagnostic table

	<i>Complete, Simple Posterior Vitreous Detachment</i>	<i>Complete Posterior Vitreous Detachment with Collapse</i>
Age	Young	Old or myopes of any age
Etiology	Inflammation, hemorrhage, trauma	Senescence
Refractive error	Unimportant	Myopia in younger patients
Prior vitreous degeneration	None	Fibrillary degeneration and cavities
Vitreous cells	Cells and vitreous precipitates	None
Rocking movements of vitreous	Rare	Frequent
Retinal breaks	Rare (except trauma)	10–15%
Hemorrhages	Rare in inflammatory disorders	10–15%
Vitreoretinal traction	Rare	10–15%
Prepapillary opacity	Yes	Yes
Onset	Slowly progressive	
Shape of posterior vitreous border	Spherical	Collapsed

Jaffe NS. *The vitreous in clinical ophthalmology*. St. Louis: CV Mosby, 1969.

Posterior vitreous detachment

Vitreous Hemorrhage

1. Acquired lues (syphilis)
2. Arsenic toxicity
3. Ascariasis
4. Avulsed retinal vessel syndrome
5. Battered baby syndrome (Silverman syndrome)
6. Behçet syndrome (dermatostomatoophthalmic syndrome)
7. Blood disease—retinal hemorrhage breaking into vitreous
 - A. Anemias
 1. Aplastic anemia
 2. Hemolytic anemia
 3. Hypochromic anemia
 4. Pernicious anemia
 - B. Dysproteinemias—macroglobulins and cryoglobulins
 - C. Hemophilia associated with trauma
 - D. Leukemias
 - E. Multiple myeloma (Kahler disease)
 - F. Polycythemia vera (Vaquez disease)
 - G. Thrombocytopenic purpura
8. Coats disease (retinal telangiectasia)
9. Collagen disease
 - A. Dermatomyositis
 - B. Disseminated lupus erythematosus (Kaposi-Libman-Sacks syndrome)
 - C. Polyarteritis nodosa (Kussmaul disease)
 - D. Scleroderma (progressive systemic sclerosis)
10. Complete posterior vitreous detachment with collapse (10%-15% at time of event)
11. Cysticercosis
12. Dengue fever
13. Diabetes mellitus-proliferative retinopathy
14. Dislocation of intraocular lenses
15. Disseminated intravascular coagulation
16. Drusen of optic disc
17. Eales disease
18. Exudative age-related macular degeneration
19. Familial exudative vitreoretinopathy
20. Ganciclovir Implant
21. Gronblad-Strandberg syndrome (systemic elastodystrophy)
22. Hemorrhages in the newborn
 - A. Hemorrhagic disease of the newborn factor VII and prothrombin deficiency
 - B. Persistent vessels of the hyaloid system
 - C. Retinal hemorrhage of newborn breaking through to vitreous cavity
23. Iatrogenic globe perforation associated with strabismus surgery
24. Indomethacin reaction
25. Influenza
26. Intraocular foreign body
27. Intraocular tumor
28. Hypertension (venous occlusive disease)
29. Juvenile retinoschisis

30. *Macroaneurysm (retinal arterial)
31. Malaria
32. Malignant melanoma
33. Migration from anterior bleeding as from angle-supported, iris-supported, or posterior chamber lenses
34. *Neovascularization following vascular occlusion (primarily venous occlusive disease)
35. Neovascularization of cataract wound
36. Ocular ischemic syndrome with neovascularization of disc
37. Pars planitis
38. Persistent hyaloid artery
39. Persistent hyperplastic primary vitreous (PHPV)
40. *Posterior vitreous detachment (PVD)
41. Purtscher disease (traumatic retinal angiopathy)
42. Retinal angiomas (von Hippel disease)
43. *Retinal break or tear with or without retinal detachment and avulsed retinal vessels
44. *Retinal hemorrhage, including vein occlusion and sickle retinopathy, arterial macroaneurysm
45. Retinal tacks (intrusion)
46. Retinoblastoma
47. Retinopathy of prematurity-proliferative stage
48. Scleral buckle (intrusion)
49. Sleep apnea
50. Sickle cell disease (Herrick syndrome)—SA, SS, or SC
51. Surgical cataract complication with lenticular fragments dislocated into vitreous
52. Terson syndrome of associated vitreous and subarachnoid hemorrhage syndrome
53. Thalassemia (Cooley anemia)
54. Thromboangiitis obliterans (Buerger disease)
55. Tissue plasminogen activator (t-PA)
56. Tuberous sclerosis
57. von Hippel-Lindau disease (angiomas retinae)
58. von Willebrand syndrome
59. Trauma
60. Traumatic asphyxia
61. Tuberculosis
62. Uveitis (associated with)
63. Varicella zoster

17. Visual field test abnormal (rarely performed)												S		

R = rarely; S = sometimes; and U = usually.

	<i>Asteroid Hyalosis</i>	<i>Synchysis Scintillans</i>
Age of patient	Elderly	Usually young
Bilaterality	Usually unilateral (75%)	Usually bilateral
Incidence	Rare	Extremely rare
Appearance	Spherical white bodies	Flat, angular crystals
Motility	Moves with vitreous structures and returns to original positions	Moves freely and falls to floor of vitreous
Chemistry	Calcium soaps	Cholesterol crystal
Associated ocular disease	None; diabetes mellitus?	Secondary to other ocular disease or trauma

Jaffe NS. *The vitreous in clinical ophthalmology*. St. Louis: CV Mosby, 1969.

Asteroid hyalosis versus synchysis scintillans

Vitreous Opacities

1. Opaque sheets anterior to the vitreous
 - A. Elschnig pearls after extracapsular cataract extraction or needling (posterior capsule opacification)
 - B. Normal posterior capsule—often following extracapsular cataract extraction or needling
 - C. Soemmerring ring following extracapsular cataract extraction or needling
 - D. Vitreous adhesions to iris, capsule, or intraocular lens (IOL) after cataract extraction with vitreous loss
2. Pseudoglioma-leukokoria (see p. 357)
3. Scattered opacities
 - A. Amyloid disease—rare (seen in older persons)
 - B. Ankylosing spondylitis
 - C. Coagula of the colloid basis of the gel
 - D. Crystalline deposits
 1. Asteroid hyalosis
 2. Synchrony scintillans
 - E. Endophthalmitis
 - F. Heterochromic uveitis—in persons 20 to 50 years of age; of all uveitis, iris atrophy, lens changes
 - G. Myeloma, multiple—rare: in persons 50 to 70 years old, associated with bone pain, anemia
 - H. Myopia, severe
 - I. Pigment cells—posttraumatic (hemorrhage), senile, or melanotic, associated with rhegmatogenous retinal detachment.
 - J. Protein coagulaplasmoid vitreous
 1. Choroidal tumors (very rare—reported in metastatic breast cancer once)
 2. Contusions
 3. Intermediate uveitis (pars planitis)
 4. Retinochoroiditis
 - K. Red blood cells (see vitreous hemorrhage, p. 424)
 - L. Snowball opacities—rare, associated with pars planitis or sarcoidosis, endophthalmitis (indolent)
 - M. Tissue cells—epithelial, histiocytic, glial
 - N. Toxoplasmosis—active
 - O. Tumor cells—retinoblastoma in older child, reticulum cell sarcoma (older persons)
 - P. Vitreous degeneration—Wagner disease, Ehlers-Danlos syndrome, and Marfan syndrome, senescent aging changes, myopia
 - Q. Whipple disease
 - R. White blood cells—inflammatory disease, vitreitis
 - S. Retinitis pigmentosa
4. Single opacities
 - A. Anterior hyaloid remnant (Mittendorf dot)—25% normal eyes, dot on posterior lens surface
 - B. Hyaloid remnants (uncommon)—persistent hyperplastic primary vitreous
 - C. Foreign body—history of trauma or surgery
 - D. Dislocated lens (see p. 401)

- E. Parasitic cysts
 1. Hydatid disease (echinococcosis)—rare, children and young adults, tropical
 2. Cysticercosis—rare
- F. Vitreous detachment—common in older or myopic persons

Persistent Hyperplastic Primary Vitreous

1. Cerebrooculodysplasia-muscular dystrophy
2. Fetal alcohol syndrome
3. Incontinentia pigmenti
4. Norrie disease
5. Septooptic pituitary
6. Sporadic unilateral and isolated finding
7. Trisomy 13
8. Warburg syndrome

Katsuya-Lauer A, et al. Persistent hyperplastic primary vitreous associated with septo-optic-pituitary dysplasia and schizencephaly. *Arch Ophthalmol* 2000;118:578-580.

Beads in Vitreous (Snowballs in Vitreous)

1. African eye-worm disease (loiasis)
2. Amyloidosis (Lubarsch-Pick syndrome)
3. Behçet syndrome (dermatostomatophthalmic syndrome)
4. Birdshot retinochoroidopathy
5. Brucellosis (Bang disease)
6. Familial exudative vitreoretinopathy (Criswick-Schepens syndrome)
7. *Haemophilus influenzae*
8. Irvine syndrome
9. Jacobsen-Brodwall syndrome
10. Ocular toxocariasis
11. Ocular toxoplasmosis
12. Oculotoxorenoerythropoietic disease
13. Pars planitis
14. Retinoblastoma
15. Sarcoidosis
16. Severe uveitis
17. Sympathetic ophthalmia
18. Toxic lens syndrome
19. Typhus (Japanese river fever)
20. Vogt-Koyanagi-Harada syndrome (uveitis-vitiligo-alopecia-poliosis syndrome)

Noda S, et al. Patients with asteroid hyalosis and visible floaters. *Jpn J Ophthalmol* 1995;37:452-455.

Schlaegel TF. The uvea. *Arch Ophthalmol* 1971;85:635.

Complications Following Operative Vitreous Loss

1. Inflammatory complications
 - A. Irritable eye (chronically)
 - B. Recurrent or persistent uveitis
 - C. Vitreitis with vitreous opacities
2. Wound complications
 - A. Epithelial invasion or downgrowth
 - B. Fibrous ingrowth
 - C. Fistula or gaping of wound (with or without vitreous wick syndrome)
 - D. *Infection or endophthalmitis
 - E. Excessive astigmatism
3. Corneal complications
 - A. Corneal edema (vitreocorneal touch)
 - B. Bullous keratopathy
 - C. Corneal opacification
4. Secondary glaucoma
 - A. Vitreous obstruction of anterior chamber angle
 - B. Pupillary block (iridohyaloid adhesions, anterior hyaloid displacement, uveitis)
 - C. Iris and vitreous adherence to wound (peripheral anterior synechiae)
5. Fibroblastic and traction phenomena
 - A. Pupillary membrane
 - B. Pupillary distortion—"peaked" or updrawn synechiae
 - C. Cystoid macular edema (CME)
 - D. Retinal detachment
 - E. Optic neuritis or papilledema
 - F. Vitreous hemorrhage
 - G. Posterior vitreous detachment

Krupin T, Kolker AG. *Atlas of complications in ophthalmic surgery*. St. Louis: CV Mosby, 1993.

Peyman GA, Shulman JA. *Intravitreal surgery: principles and practice*. New York: Appleton-Lange, 1994.

Postoperative Vitreous Retraction

Usually, this condition is manifested by circular equatorial retinal fold or star-shaped retinal fold.

1. Accidental perforation of the sclera at operation, which may be associated with hemorrhage and loss of vitreous resulting in a pathologic formation of new epiretinal membrane or proliferative vitreoretinopathy
2. Giant retinal breaks allowing a large area of direct contact between the choroid and the vitreous
3. Perforating diathermy and excessively strong or repeated applications of superficial diathermy, which may cause vitreous hemorrhage or thermal injury to the vitreous; impairment of chorioretinal blood circulation may result in exudation and hemorrhage into the vitreous
4. Venous stasis caused by the compression of vortex veins by the indentation resulting from a buckling procedure

Jaffe NS. *The vitreous in clinical ophthalmology*. St. Louis: CV Mosby, 1969.

Vitreous Cyst (Cystic Structure in Vitreous Body)

1. Congenital (developmental)—may be associated with hyaloid remnants
2. Acquired
 - A. Infectious cyst
 1. Coenurosis (*Coenurus cerebralis* larva of dog tapeworm)
 2. Luetic retinochoroiditis
 3. Toxoplasmosis
 - B. Myopia
 - C. Parasitic cysts
 1. Cysticercosis—rare
 2. Echinococcosis
 3. Hydatid disease (echinococcosis)—rare, children and young adults, tropical
 4. Nematode cyst (toxocariasis)
 - D. Pigmentary retinopathy
 - E. Retinal detachment
 - F. Trauma

Retina

Anatomic Classification of Macular Diseases

1. Vitreoretinal surface
 - A. Preretinal hemorrhage and subinternal limiting membrane hemorrhage
 - B. Vitreous traction on the macula
 - C. Epiretinal membrane and macular pucker
2. Nerve fiber–ganglion cell layers
 - A. Hereditary cerebromacular degeneration
 1. Sphingolipidoses
 - a. Tay-Sachs disease (GM_2 –gangliosidosis type I)
 - b. Sandhoff disease ($GM\ MDSD_2$ –gangliosidosis type II)
 - c. Niemann-Pick disease type A (essential lipid histiocytosis)
 - d. Niemann-Pick disease type B (sea-blue histiocyte syndrome)
 - e. Lactoside ceramidosis
 - f. Metachromatic leukodystrophy (arylsulfatase A deficiency)
 - g. Gaucher disease (glucocerebroside storage disease)
 - h. Farber lipogranulomatosis
 - i. Generalized gangliosidosis (GM_1 –gangliosidosis type I)
 - j. Mucopolipidosis I (lipomucopolysaccharidosis)
 2. Goldberg disease (unclassified syndrome with features of mucopolysaccharidoses, sphingolipidoses, and mucopolipidoses)
 3. Ceroid lipofuscinosis
 - a. Hagberg-Santevuori (infantile)
 - b. Jansky-Bielschowsky disease (late infantile)
 - c. Spielmeyer-Vogt Batten
 - B. Vitreoretinal dystrophies
 1. Macular degeneration in congenital hereditary x-linked retinoschisis
 2. Goldmann-Favre syndrome (vitreotapetoretinal degeneration)—recessive
3. Nerve fiber, ganglion cell, inner plexiform, inner nuclear, outer plexiform layers
 - A. Ischemia secondary to inadequate perfusion of retinal vessels
 1. Branch artery occlusion
 2. Branch vein occlusion
 3. Diabetes mellitus
4. Outer plexiform layer
 - A. Cystoid macular degeneration (see p. 439)
 1. With retinal vascular leakage
 - a. Acute nongranulomatous iridocyclitis
 - b. Acute cyclitis
 - c. Hypertension
 - d. Medication (epinephrine, nicotinic acid)
 - e. Neoproliferative diabetic retinopathy

-
- f. Pars planitis
 - g. Postoperative (Irvine-Gass syndrome)
 - h. Radiation retinopathy
 - i. Retinitis pigmentosa
 - j. Sarcoidosis
 - k. Vascular anomalies
- 2. Without obvious retinal vascular leakage
 - a. Vitreous traction on the macula
 - b. Serous detachment of sensory epithelium
 - c. Serous detachment of pigment epithelium
 - d. Hemorrhagic detachment of macula
 - e. Choroidal tumors
- B. Lipid deposits in macula secondary to vascular disease in retina
- 1. Stellate retinopathy (see p. 443)
 - a. Hypertensive retinopathy
 - b. Diabetic retinopathy
 - c. Coats disease (retinal telangiectasia)
 - d. Trauma—ocular or cerebral
 - e. Retinal artery or vein occlusion (see p. 457 and 468)
 - f. Retinal periphlebitis
 - g. Juxtapapillary choroiditis
 - h. Papilledema (see p. 593-601)
 - i. Angiomatosis retinae
 - j. Papillitis (see p. 578-585 , 587-588)
 - k. Acute, febrile illness, such as measles, influenza, meningitis, erysipelas, psittacosis, Behçet disease
 - l. Chronic infections, such as tuberculosis or syphilis
 - m. Coccidioidomycosis
 - n. Parasitic infection, such as that due to teniae, *Giardia*, *Ancylostoma*
 - o. Idiopathic
 - 2. Circinate retinopathy
 - a. Senile vascular disease
 - b. Venous obstruction
 - c. Diabetic retinopathy
 - d. Coats disease (retinal telangiectasia)
 - e. Retinal detachment
 - f. Anemia
 - g. Leukemia
 - h. Idiopathic (primary)
 - i. Retinal arterial macroaneurysm
 - 3. Diabetic retinopathy
5. Outer nuclear layer or photoreceptor elements
- A. Congenital hereditary vision defects
 - 1. Trichromatism (anomalous)
 - 2. Dichromatism
 - 3. Monochromatism
 - B. Hereditary macular dystrophies
 - 1. Progressive cone dystrophy
 - 2. Inverse (macular) retinitis pigmentosa

- C. Olivopontocerebellar degeneration
- D. Light toxicity
 - 1. Operating microscope burn
 - 2. Solar burn
- 6. Pigment epithelium
 - A. Hereditary macular dystrophies
 - 1. Vitelliform dystrophy (Best disease)
 - 2. Adult onset foveomacular vitelliform dystrophy (adult Best)
 - 3. Fundus flavimaculatus
 - 4. Fundus flavimaculatus with macular involvement (Stargardt disease)
 - 5. Dominant drusen (Doyme honeycomb dystrophy)
 - 6. Reticular pigment dystrophy (Sjögren)
 - 7. Butterfly-shaped pigment dystrophy (Deutman)
 - 8. Central areolar choroidal and pigment epithelial dystrophy
 - 9. Sorsby fundus dystrophy
 - B. Inflammatory lesions
 - 1. Rubella syndrome (German measles)
 - 2. Acute posterior multifocal placoid pigment epitheliopathy
 - C. Toxic lesions
 - 1. Chloroquine
 - 2. Hydroxychloroquine
 - 3. Phenothiazine
 - a. Chlorpromazine
 - b. Thioridazine
 - 4. Sparsomycin
 - 5. Ethambutol
 - 6. Indomethacin
 - 7. Quinine
 - 8. Desferrioxamine
 - 9. Penicillamine
 - D. Drusen (senile, degenerative)
 - E. Refsum syndrome (phytanic acid storage disease)
 - F. Myotonic dystrophy syndrome
- 7. Bruch membrane
 - A. Angioid streaks associated with
 - 1. Pseudoxanthoma elasticum (Grönblad-Strandberg syndrome)
 - 2. Senile elastosis of skin
 - 3. Osteitis deformans (Paget disease)
 - 4. Fibrodysplasia hyperelastica (Ehler-Danlos syndrome)
 - 5. Sickle cell anemia
 - 6. Acromegaly
 - 7. Beta-thalassemia
 - 8. Abetalipoproteinemia (Bassen-Kornzweig syndrome)
 - B. Lacquer cracks in pathologic myopia
 - C. Traumatic fracture of Bruch membrane
- 8. Pigment epithelium-Bruch membrane choriocapillaris
 - A. Degenerative lesions
 - 1. Disciform macular degeneration (senile, juvenile)

2. Age-related macular degeneration
3. Adult hereditary cerebromacular degeneration (Kufs?)
- B. Serous detachment of neuroepithelium or pigment epithelium associated with the following:
 1. Central serous chorioretinopathy
 2. Hemangioma of choroid
 3. Malignant melanoma
 4. Pit of the optic disk
 5. Hypotony (see p. 325-326)
 6. Leukemic infiltrates of choroid
 7. Terminal illness
 8. Trauma
 9. Uveitis
 10. Optic neuritis (see p. 578-585 , 587-588)
 11. Papilledema (see p. 593-601)
 12. Acute hypertension
 13. Vitreous traction
 14. Angioid streaks (see p. 526-529)
 15. Vogt-Koyanagi-Harada syndrome
 16. *Toxocara canis*
 17. Myopic choroidal degeneration
 18. Metastatic carcinoma
 19. Choroidal nevus
 20. Collagen vascular disease
 21. Hemorrhagic or organized disciform detachment
9. Choroid
 - A. Degenerative lesions
 1. Central areolar choroidal atrophy
 2. Myopic choroidal atrophy
 3. Helicoid peripapillary chorioretinal atrophy (?)
 - B. Inflammatory lesions
 1. Histoplasmosis
 - C. Vascular occlusive lesions
10. Miscellaneous
 - A. Retinal inflammations (multilayer alterations that may involve the macula)
 1. *Toxoplasma gondii*
 2. *T. canis*
 3. Septic emboli
 4. Cytomegalovirus retinitis
 5. *Candida* organisms
 6. Bacteria
 - B. Congenital anomalies of the macula
 1. Aplasia
 2. Hypoplasia
 3. Heterotopia
 4. Colobomas (see p. 450)
 5. Aberrant macular vessels

Maumenee AE, Emery JM. An anatomic classification of diseases of the macula. *Am J Ophthalmol* 1972;74:594-599.

Yannuzzi LA, et al. *The macula: a comprehensive text and atlas*. Baltimore: Williams & Wilkins, 1979.

Bilateral Macular Lesions

1. Development defects (colobomas)
2. Drugs, including the following:

allopurinol (?)	clonidine (?)	iodochlorhydroxyquin
amodiaquine	griseofulvin (?)	iodoquinol
broxyquinoline hydr	oxychloroquine	quinine
chloroquine	ibuprofen (?)	thioridazine
chlorpromazine	indomethacin (?)	

3. Infectious entities
 - A. Herpes simplex
 - B. *Cytomegalic retinitis
 - C. Candidiasis and nocardiosis
 - D. *T. canis* (visceral larva migrans syndrome)
 - E. Congenital syphilis
 - F. *Tuberculosis
 - G. *Ocular histoplasmosis
 - H. Congenital toxoplasmosis
4. Intrauterine inflammations
5. Noninfectious entities
 - A. Best disease
 - B. Stargardt disease
 - C. *Exudative age-related macular degeneration
6. Presumed inflammatory origin

Bronstein MA, et al. Bilateral macular lesions. *Ann Ophthalmol* 1981;13:859-861.

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

Pseudomacular Edema

1. Exudative senile maculopathy—serous or hemorrhagic detachment of the macular retina in persons 50 years of age or older, including “giant cyst of macula”
2. Serous detachment of retinal pigment epithelium
3. Central serous retinopathy caused by drugs, including the following:

adrenal cortex injection	fludrocortisone	paramethasone
aldosterone fl	uprednisolone p	rednisolone
betamethasone hydr	ocortisone	prednisone
cortisone	indomethacin	triamcinol one (?)
desoxycorticosterone me	thylprednisolone	
dexamethasone or	al contraceptives

Gass JDM. Pathogenesis of disciform detachment of neuroepithelium. *Am J Ophthalmol* 1967;63:573-711.

Macular Edema

This condition involves the loss of foveal depression with ophthalmoscope and outline of multiple cystoid. Spaces can be retroilluminated with slit lamp; often a yellow exudate lies deep within or beneath retina in foveal area.

1. Acquired parafoveal telangiectasis
2. Amebiasis (amebic dysentery)
3. Bang disease (brucellosis)
4. Behçet syndrome (dermatostomatophthalmic syndrome)
5. *Carotid artery obstruction
6. Central angiospastic retinopathy
7. Coats disease
8. Choroidal tumors
9. Crohn disease
10. *Cytomegalovirus retinitis
11. *Diabetic retinopathy
12. Dominant inheritance macular dystrophy
13. Drugs, including the following:

acetazolamide dy	clonine	methotrimeprazine
acetophenazine epinephr	ine methy	clothiazide
adrenal cortex injection	ergot methyl	prednisolone
aldosterone estradiol		metisazone
allopurinol (?)	ethambutol naproxen	
aluminum nicotinate	ethopropazine	niacin
amithiozone e	thoxzolamide	niacinamide
amodiaquine etidocaine		nicotinic acid
aspirin fluphe	nazine nicotiny	alcohol
bendroflumethiazide flupre	dnisolone paramethasone	
benoxinate fludroco	rtisone pe	razine
benzthiazide gancicl	ovir periciaz	ine
betamethasone g	riseofulvin perphenazin	e
betaxolol hexa	methonium	phenacaine
broxyquinoline hyaluro	nidase pheny	lephrine (?)
bupivacaine hydroch	lorothiazide piperacetazine	
butacaine hydrocortisone		polythiazide
butaperazine hydroflume	thiazide prednisol	one
carbromal hy	droxychloroquine prednisone	
carphenazine ibuprofen		prilocaine
chloramphenicol indapamide		procaine
chloroquine indomethacin	(?)	prochlorperazine
chlorothiazide pr	iodide and iodine solutions and compounds	omazine
chlorpromazine		promethazine
chymotrypsin (?)	iodochlorhydroxyquin proparacaine	
cobalt (?)	iodoquinol	propiomazine
cortisone io	thalamate	propoxycaine
cyclothiazide iothal	amic acid	quinethazone
desoxycorticosterone	latanoprost quinine	
dexamethasone levobu	nolol (?)	radioactive iodides
dibucaine l	idocaine	sodium salicylate
dichlorphenamide	me glumine and sodium	sulindac
diethazine mepred	nisonone tamoxifen	
diiodohydroxyquin meso	ridazine tetracaine	
dipivefrin methaz	olamide thiethy	lperazine
dipivalyl epinephrine (DPE)	methdilazine	thiopropazate
thiopropazine triamcinol	one	triflupromazine
thioridazine trichlormeth	iazide trimeprazine	(?)
thiothalidomine trichl	oroethylene	zidovudine
timolol t	rifluoperazine	

14. Electrical injuries to the retina
15. Epikeratophakia complication
16. Fabry disease (ceramide trihexoside lipidosis)
17. Felty syndrome (rheumatoid arthritis with hypersplenism)
18. Following corneal-relaxing incisions
19. Goldmann-Favre disease (hyaloideoretinal degeneration)
20. Gyrate atrophy
21. Hallermann-Streiff syndrome (dyscephalic mandibulooculofacial syndrome)
22. Hemangiomas of choroid
23. Hemangioma of choroid
24. Hunter syndrome (mucopolysaccharidoses II, or MPS II)
25. Hurler syndrome (MPS I-H)
26. Hypertensive retinopathy
27. Hypotony (postoperative)
28. *Irvine-Gass syndrome
29. Large central foveal cyst
30. Leukemia
31. Meningococemia (*Neisseria meningitidis*)
32. Macular dystrophy—dominant
33. Nematode, intraretinal
34. Nylon suture toxicity
35. Optic nerve pit
36. Pars planitis (peripheral uveitis)
37. Photocoagulation
38. Porphyria cutanea tarda
39. Posterior capsule rupture
40. *Preretinal fibrosis (macular pucker)
41. Punctata albescens retinopathy
42. Radiation retinopathy
43. Retinitis pigmentosa
44. Retinohypophysary syndrome (Lijo-Pavia-Lis syndrome)
45. Scheie syndrome
46. Scleral buckle
47. Silverman syndrome (battered baby syndrome)
48. Subacute sclerosing panencephalitis (Dawson disease)
49. Toxoplasmic chorioretinitis
50. Trauma to globe (commotio retinae)
51. Ultraviolet light from sun, operating microscope, or other bright light sources
52. Uveitis (anterior or posterior)
53. *Vein occlusion, including branch vein occlusion (see p. 468)
54. von Hippel-Lindau syndrome (retinocerebral angiomatosis)
55. Yttrium-aluminum–garnet (YAG) laser posterior capsulotomy

Absence of Foveal Reflex

The absence of foveal reflex is caused by drugs, including amodiaquine, chloroquine, diiodohydroxyquin, hydroxychloroquine, iodochlorhydroxyquin, or quinine.

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

Macular Pucker

Macular pucker involves tiny folds that often are arranged in a stellate manner around macula and usually are associated with a preretinal membrane (preretinal macular fibrosis, preretinal vitreous membrane, surface wrinkling retinopathy, cellophane maculopathy).

1. Associated with proliferative retinopathy
 - A. *Diabetes retinopathy
 - B. Eales disease
 - C. *Hypertension
 - D. Sickle cell disease
 - E. Vein occlusion
2. Central serous chorioretinopathy
 - A. Psychopharmacologic medication use
 - B. Corticosteroid use
 - C. Hypertension
3. Congenital
4. Following photocoagulation or cryoretinopexy
5. Following traumatic posterior vitreous separation, such as blunt trauma to the eye and whiplash injury (craniocervical syndrome)
6. Loss of formed vitreous at operation
7. Idiopathic (probably related to spontaneous posterior vitreous detachment)
8. Macular detachment
9. Multiple retinal operations
10. Penetrating or blunt injuries
11. Posterior uveitis
12. *Proliferative vitreoretinopathy following vitreoretinal surgery
13. Retinal detachment
14. Trauma (blunt)
15. Vitreous hemorrhage

McDonald HR, et al. Surgical management of idiopathic epiretinal membranes. *Ophthalmology* 1986;93:978-983.

Macular Exudates and Hemorrhages

1. Retinal macroaneurysms
2. Hemorrhagic age-related macular degeneration (ARMD)
3. Diabetic macular edema
4. Retinal telangiectasis
5. With dense subretinal and subretinal pigment epithelium (sub-RPE [retinal pigment epithelium]) hemorrhages simulate the appearance of retinal macroaneurysms.

Yannuzzi LA, et al. *The macula: a comprehensive text and atlas*. Baltimore: Williams & Wilkins, 1979.

Macular Star or Stellate Retinopathy (Exudates in a Star Formation Radiating Around Macula in the Nerve Fiber Layer)

1. Acute febrile illness, such as measles, influenza, meningitis, erysipelas, psittacosis, Behçet disease (dermatostomatophthalmic syndrome)
2. Cat-scratch fever
3. Chronic infections, such as tuberculosis or syphilis
4. Coccidioidomycosis
5. Gansslen syndrome (familial hemolytic icterus)
6. *Hypertension
7. Idiopathic
8. Juxtapapillary choroiditis (Jensen disease)
9. *Neuroretinitis
10. Obstruction of the artery or vein supplying the macular area (see p. 457 and 468)
11. Ocular or cerebral trauma
12. Parasitic infection, such as that due to teniae, *Giardia*, *Ancylostoma*
13. *Papilledema (see p. 563-601)
14. Papillitis (see p. 578-585 , 587-588)
15. Retinal periphlebitis

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Yannuzzi LA, et al. *The macula: a comprehensive text and atlas*. Baltimore: Williams & Wilkins, 1979.

Diagnostic table

Stellate retinopathy (exudates in a star formation radiating around the macula in the nerve fiber layer)

	Hypertension	Ocular Trauma	Retinal Periphlebitis	Papillitis	Papilledema	Acute Febrile Illness i.e. Behçet's Disease	Chronic Infections i.e. Tuberculosis	Coccidioidomycosis
History								
1. Communicable disease							U	
2. Elevated blood pressure	U							
3. Hereditary	S							
4. History of ocular trauma		U						
5. In young men			U					
6. Increased intracranial pressure					U			
7. Monocular loss of vision			S	U				
8. Occurs between 15 and 45 years of age				U				
9. Occurs in adults						U		
10. Occurs in people living in an endemic area								U
Physical Findings								
1. Absence of spontaneous venous pulse					S			
2. Arteriosclerosis	U							
3. Blepharitis							S	
4. Capillary nonperfusion			S					U
5. Cellulitis							S	
6. Conjunctivitis							S	
7. Corneal ulcer							S	
8. Cotton wool spots	S	S						
9. Choroidal rupture		S						
10. Choroiditis							S	
11. Dacryocystitis							S	
12. Diffuse gray-white appearance of the neurosensory retina	S							
13. Diplopia		S						
14. Disc hemorrhages					S			
15. Disc pallor (late)				U				
16. Enophthalmos		S						
17. Episcleritis	S							S
18. Fatty exudates					S			
19. Granulomatous lesion of optic nerve head								S
20. Hypopyon								S
21. Intravitreal hemorrhage		S	S					
22. Iritis		S						
23. Keratitis						S	S	
24. Keratoconjunctivitis sicca						U		
25. Lens subluxation or dislocation		S						
26. Macular edema								
27. Meibomianitis								
28. Miosis		S						
29. Mutton-fat keratic precipitates								S
30. Nystagmus						R		
31. Ocular pain		S						
32. Ocular pain on movements				U				

33. Optic disc edema	S		U		S			
34. Optic nerve atrophy						S	S	
35. Optic nerve capillary hyperemia				U				
36. Optic neuritis						S	S	
37. Palsies of extraocular muscles								S
38. Pannus						S	S	
39. Panophthalmitis						S	S	
40. Paralysis of accommodation		S						
41. Paralysis of sixth cranial nerve								S
42. Perivascular exudates		S						
43. Perivascular sheathing		S				S		
44. Recurrent uveitis						U		
45. Relative afferent pupillary defect				U				
46. Retinal arterial narrowing	U							
47. Retinal detachment		S						
48. Retinal edema					S			
49. Retinal hemorrhages	S							
50. Retinal tears or disinsertion		S	S					
51. Retinal vasculitis		S				S		
52. Retinitis						U	S	
53. Scleral perforation							S	
54. Scleritis							S	
55. Secondary glaucoma						S		S
56. Subconjunctival nodules							S	
57. Subtle vertical striae on the temporal side of disc					S			
58. Uveitis							S	S
59. Venous dilation			S			S		
60. Venous obstruction			S					
61. Vision may be reduced		S						
62. Vitreal floaters								S
63. Vitreal opacity								S
64. Vitreous cells				S			S	S
65. Vitreous inflammation				S			S	S

R = Rarely; S = sometimes; and U = usually.

Retinociliary Vein—Disappears from the Retina at Disc Margin Without Connection to Central Retinal Vein

1. Acquired
 - A. Arachnoid cyst of the optic nerve
 - B. Central retinal vein occlusion (see p. 468)
 - C. Chronic atrophic papilledema from causes including craniopharyngioma (see p. 595-597)
 - D. Glioma of the optic disc
2. Congenital

Wolter JJ. Retinociliary vein associated with a craniopharyngioma. *Ann Ophthalmol* 1979;11:751.

Cherry-Red Spot in Macula (Rule Out Macular Hemorrhage)

1. Cardiac myxomas
2. Cryoglobulinemia
3. Dapsone poisoning
4. Hallervorden-Spatz disease (pigmentary degeneration of globus pallidus)
5. Hollenhorst syndrome (chorioretinal infarction syndrome)
6. Hurler syndrome (MPS I-H)
7. *Hypertension (severe)
8. Intralesional chalazion corticosteroid injection
9. Leber congenital amaurosis
10. Macular hemorrhage
11. *Macular hole with surrounding retinal detachment
12. ML I (lipomucopolysaccharidosis)
13. Myotonic dystrophy syndrome (Curschmann-Steinert syndrome)
14. Multiple sulfatase deficiency
15. *Occlusion of central retinal artery (see p. 457)
16. Quinine toxicity
17. Sphingolipidoses
 - A. Cherry-red spot myoclonus

Diagnostic table

	High Myopia (Fuchs Spot)*	Disciform Macular Degeneration	Inflammation as Histoplasmosis*	Angioid Streaks	Familial
History					
1. Familial					U
2. Greater in whites than blacks			U		
3. In persons 30 to 50 years	U			U	
4. In persons 50 years and older		U			
5. Mainly central visual loss		U			
6. Metamorphopsia		U			
7. More often men			U		
8. Myopia more than 12 diopters	U				
Physical Findings					
1. Circumpapillary choroiditis			U		
2. Dark spot in macula	U	S			
3. Enlarging myopic crescent	U				
4. Macular lesion in active stage, pigment ring with sensory retinal detachment			U		
5. Mottled macular appearance	U				
6. Pigment epithelial retinal detachment	U	U			
7. Ruptures in Bruch membrane	U			U	
8. Scattered atrophic chorioretinal spots in mid and far periphery			U		
9. Serous retinal separation	S	U			
Laboratory Data					
1. Fluorescein angiography	U	U	U	U	U
2. Histoplasmin skin test			U		

R = rarely; S = sometimes; and U = usually.

Macular hemorrhage

Parafoveal Telangiectasia

This condition is a retinal microvascular anomaly involving the parafoveal capillary network as well as the immediately adjacent vascular bed and is best demonstrated by fluorescein angiography.

1. Carotid artery obstruction
2. *Diabetes mellitus, usually bilateral
3. *Idiopathic
4. Localized form of Coats disease, usually unilateral
5. *Small branch vein occlusion
6. Small retinal capillary hemangioma, usually unilateral
7. Roentgenogram, irradiation

Gass JD, Oyakawa T. Idiopathic juxtafoveal telangiectasia. *Arch Ophthalmol* 1982;100:769.

Millay RH, et al. Abnormal glucose metabolism and parafoveal telangiectasia. *Am J Ophthalmol* 1986;102:363-370.

Microhemorrhagic Maculopathy—Small Monocular Macular Hemorrhage that is Punctate, Round or Bilobed

1. Increased venous stasis (Valsalva stress)
2. Impaired blood platelet aggregation
3. Medications that impair platelet function including aspirin, ibuprofen (Motrin), pentazocine, propranolol hydrochloride and oral contraceptives.

Pruett RC, Carvalho ACA, Trempe CL. Microhemorrhagic maculopathy. *Arch Ophthalmol* 1980;99:425.

Macular Cyst

Macular cyst must be differentiated from macular hole with Hruby lens or contact lens and slit lamp.

1. Amebiasis
2. Cysticercosis—subretinal cyst
3. *Cystic degeneration—common following trauma, uveitis, and vascular disease
4. Hamman-Rich syndrome (alveolar capillary block syndrome)
5. Histoplasmosis
6. Hydatid disease (echinococcosis)
7. Parasitic and mycotic cysts

McDonnell PJ, et al. Clinical features of idiopathic macular cysts and holes. *Am J Ophthalmol* 1982;93:777-786.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Macular Hole

Macular hole must be differentiated from macular cyst with Hruby lens or contact lens and slit lamp)

1. *Idiopathic (most common, may be bilateral)
2. From the following:
 - A. Edema (see p. 439)
 1. Inflammatory

2. Toxic
 3. Vascular
 4. Following papilledema
- B. High myopia
 - C. Ischemic, such as with retinal detachment or choroidal tumor—the macula is separated from choriocapillaris
 - D. Degenerative conditions of the retina and retinal dystrophy
 - E. Trauma
 - F. Radiation injury
 - G. Glaucoma
 - H. Posterior senile retinoschisis
 - I. High tension electric shock
 - J. Central serous chorioretinopathy
 - K. Optic disc coloboma
 - L. Posterior retinal detachment associated with optic pits
 - M. Industrial laser burns
 - N. Lightning—induced
 - O. Posterior microphthalmos
 - P. Septic embolization
 - Q. Subhyaloid hemorrhage
 - R. Topical pilocarpine use
 - S. YAG laser
3. Dawson disease (subacute sclerosing panencephalitis)
 4. Foveomacular retinitis—usually young males
 5. *Pseudohole due to epiretinal membrane (may differentiated from true hole by fluorescein angiography)
 6. Sickle cell disease

Benedict WL, Shami M. Impending macular hole associated with topical pilocarpine. *Am J Ophthalmol* 1992;114:765-779.

Smiddy WE. Atypical presentations of macular holes. *Arch Ophthalmol* 1993;111:626-631.

Macular Coloboma

This condition involves bilaterally symmetric, circumscribed, excavated defects in choroid and retina in the region of macula associated with reduced vision

1. Autosomal dominant
2. Autosomal recessive inheritance with skeletal anomalies
3. Conditions that exhibit choroidal coloboma (see p. 555-556)
4. Down syndrome
5. Hypercalciuria, myopia, and macular coloboma
6. Isolated

7. Macular coloboma with brachydactyly
8. Sorsby syndrome I

Isenberg SJ. *The eye in infancy*. Chicago: Year Book Medical, 1989.

Yamaguchi K, Tamai M. Congenital macular coloboma in Down syndrome. *Ann Ophthalmol* 1990;22:222-223.

Elevated Macular Lesion

1. Angiospastic retinopathy
2. Central serous detachment of retina
3. Chorioretinitis especially histoplasmosis and toxoplasmosis
4. Choroidal hemangioma
5. Dawson disease (subacute sclerosing panencephalitis)
6. Malignant melanoma
7. Varix of the vortex ampulla
8. Sickle cell disease

Al-Abdulla NA, et al. Sickle cell disease presenting with extensive peri-macular arteriolar occlusions in a nine-year-old boy. *Am J Ophthalmol* 2000;130:419-428.

Cunningham E T, et al. Central serous chorioretinopathy in patients with systemic lupus erythematosus. *Ophthalmology* 1996;103:2081-2090.

Newell FW. *Ophthalmology: principles and concepts*, 7th ed. St. Louis: CV Mosby, 1991.

Heterotopia of the Macula

This condition involves an abnormal location of the macula in relation to the optic disc; the eye with the ectopic macula tends to deviate in the same direction as macular displacement; visual fields show displacement of blind spot and cover-uncover test shows no shift of fixation.

1. Chorioretinitis
2. Congenital
3. *Retinopathy of prematurity
4. Inflammatory
5. *Proliferative diabetic retinopathy

Bresnick GH. Visual function abnormalities in macular heterotopia caused by proliferative diabetic retinopathy. *Am J Ophthalmol* 1981;92:85-102.

Stem SD, Arenberg IK. Heterotopia of the macula with associated retinal detachment. *J Pediatr Ophthalmol* 1969;6:198-202.

White or Yellow Flat Macular Lesion and Pigmentary Change

1. Posttraumatic—pigmentary disturbance; cysts or hole at macula
2. Postinflammatory—chorioretinal atrophy with pigment clumping at center and periphery of lesion
3. Coloboma of macula—atrophic area at macula often associated with coloboma of disc; sclera may be ectatic (see p. 450)
4. Radiation injuries—common after solar eclipse; punched-out appearance
5. Fuchs dark spot-pigmented spot associated with other signs of degenerative myopia
6. Drugs, including the following:

adrenal cortex injection	dexamethasone (?)	iodochlorhydroxyquin
aldosterone	diiodohydroxyquin	methylprednisolone
allopurinol (?)	fludrocortisone	oral contraceptives
amodiaquine	fluprednisolone (?)	paramethasone (?)
betamethasone (?)	griseofulvin	prednisolone (?)
chloroquine	hydrocortisone (?)	prednisone (?)
cortisone (?)	hydroxychloroquine	quinine
desoxycorticosterone (?)	indomethacin (?)	triamcinolone

7. Stellate retinopathy—star-shaped exudates (see p. 443)
8. Hard exudates and circinate retinopathy (see p. 495)
9. Drusen—common, discrete yellow spots beneath the retina
10. Doyne honeycomb choroiditis—rare; honeycomb pattern of yellow patches at posterior pole; degenerative changes at macula
11. Heredomacular dystrophies
 - A. Best disease (vitelliruptive macular dystrophy) up to 18 years of age; egg-yolk lesion at macula, later absorbed to leave atrophic scar
 - B. Fundus flavimaculatus—yellow patches at posterior pole; degenerative changes at macula
 - C. Stargardt disease (juvenile macular degeneration) to 10 years of age; variable appearance in different families; bilateral lesions showing some degree of symmetry
 - D. Behr disease (optic atrophy-ataxia syndrome)—adults, similar to Stargardt type
 - E. Presenile and senile—pigmentary changes followed by atrophy, bilateral and symmetric
12. Central choroidal sclerosis—rare, atrophic retina with sclerosed choroidal vessels showing clearly
13. Central areolar choroidal atrophy—rare, exudate and edema followed by sharply defined atrophic area with white strands of choroidal vessels
14. Pseudoinflammatory macular dystrophy—rare, initially edema and exudates followed by scarring with pigmentary disturbance and atrophic patches
15. Gaucher disease (glucocerebroside storage disease)—rare, ring-shaped macular lesions, lipid deposits in cornea and conjunctiva
16. Diffuse leukoencephalopathy—rare, white deposits in periphery and macular area
17. Sjögren-Larsson syndrome (oligophrenia-ichthyosis-spastic diplegia syndrome)
18. Angioid streaks (see p. 526-529)
19. Multiple evanescent white-dot syndrome (MEWDS) usually unilateral, predominantly healthy women, vitreitis
20. Acute multifocal placoid pigment epitheliopathy—rare, map-like pigmentary disturbance of posterior pole or more widespread over posterior fundus

Eagle RC, et al. Retinal pigment epithelial abnormalities in fundus flavimaculatus. *Ophthalmology* 1980;87:1189.

 - E. Refsum disease (phytanic acid storage disease)
 - F. Tay-Sachs syndrome (gangliosidosis GM₂-type I)
 - G. Vitamin A
 - H. MPS
 1. Hunter syndrome (MPS II)
 2. Hurler syndrome (MPS I-H)
 3. Sanfilippo-Good syndrome (MPS III)
 4. Scheie syndrome (MPS I-S)
 - I. *Drugs, including the following:

acetophenazine	cephapirin	moxalactam
amiodarone (?)	cephradine	naproxen
amodiaquine	chloramphenicol	penicillamine
azathioprine	chloroquine	perazine
benzotropine (?)	chlorphenoxamine (?)	pericyazine
biperiden (?)	chlorpromazine	perphenazine
butaperazine	chlorprothixene	piperacetazine
carbamazepine	cisplatin	prazosin (?)
carphenazine	clofazimine	prochlorperazine
cefactor	clonidine (?)	procyclidine (?)
cefadroxil	cobalt (?)	promazine
cefamandole	cycrimine (?)	promethazine
	deferoxamine	
cefazolin	diethazine	propiomazine
cefonicid	diethylcarbamazine	quinacrine (?)
cefoperazone	ethambutol (?)	quinine
ceforanide	ethopropazine	sulindac (?)
cefotaxime	fluphenazine	tamoxifen
cefotetan	hydroxychloroquine	thiethylperazine
cefoxitin	indomethacin (?)	thiopropazate
cefsulodin	ketoprofen (?)	thiopropazine
ceftazidime	mesoridazine	thioridazine
ceftriaxone	methdilazine	thiothixene
cefuroxime	methotrexate	trifluoperazine
cephalexin	methotrimeprazine	triflupromazine
cephaloridine	minoxidil (?)	trihexyphenidyl (?)
cephalothin	mitotane	trimeprazine

Macular Wisps and Foveolar Splinter

These are noted in focal illumination with Goldmann contact lenses but are invisible ophthalmoscopically.

1. Direct and indirect ocular concussion
2. Following absorption of small prefoveal hemorrhage
3. Foveomacular retinitis
4. Juvenile macular degeneration
5. Old, healed chorioretinitis
6. Retinitis pigmentosa
7. Spontaneous senile posterior vitreous detachment
8. Whiplash injury

2. Blood dyscrasia
3. Diabetic retinopathy
4. Retinal macroaneurysm
5. Terson syndrome
6. Valsalva retinopathy

Ulbig MW, et al. Long-term results after drainage of premacular subhyaloid hemorrhage into the vitreous with a pulsed Nd:YAG laser.

Retinal Vascular Tortuosity

1. Acute malnutrition
2. Aortic coarctation
3. Bazzana syndrome (angiospastic ophthalmoaauricular syndrome)
4. Choked disc (see p. 593)
5. Chronic respiratory insufficiency, such as in cystic fibrosis and familial dysautonomia (Riley-Day syndrome)
6. *Coats disease (retinal telangiectasia)
7. Congenital
8. Cri-du-chat syndrome (cat-cry syndrome)
9. Cryoglobulinemia
10. Down syndrome (trisomy 21)
11. Eales disease (periphlebitis)
12. Engelmann syndrome (diaphyseal dysplasia)
13. Fabry disease (diffuse angiokeratosis)
14. *Glaucoma, open angle
15. Granulocytic sarcoma of orbit
16. Hereditary hemorrhagic telangiectasis (Osler disease)—tortuosity and varicosity

17. Hypertension
18. Kenny syndrome (dwarfism, thickened long bone cortex, transient hypocalcemia)
19. *Leukemia
20. Lymphogranuloma venereum (Nicolas-Favre disease)
21. Maroteaux-Lamy syndrome (mucopolysaccharidoses type VI)
22. Macroglobulinemia
23. Mosse syndrome (polycythemia-hepatic cirrhosis syndrome)
24. Myopia
25. Normal variation with fullness
26. Polycythemia with vessel fullness
27. Retinopathy of prematurity
28. Racemose hemangioma of retina, angiomatosis retinae without obvious tumor formation, or von Hippel-Lindau syndrome (retinocerebral angiomatosis)
29. Reimann syndrome (hyperviscosity syndrome)
30. *Sickle cell disease
31. Visceral larva migrans (nematode ophthalmia syndrome)

Davis JL, et al. Granulocytic sarcoma of the orbit. *Ophthalmology* 1985;92:1758-1762.

2. Loaiasis (*Loa loa*)
3. Macroglobulinemia (Waldenstrom syndrome)

Schlaegel TF. *Essentials of uveitis*. Boston: Little, Brown, 1969.

Ophthalmodynamometry

When blood pressure of the retinal artery is measured, a difference between the eyes of about 15% of diastolic readings is considered significant.

1. False-positive or variable readings
 - A. Abnormally high or low intraocular pressure or asymmetry between the two eyes
 - B. Cardiac abnormalities, such as atrial fibrillation, heart block, or extrasystoles
 - C. Marked asymmetry of retinal vessels in the two eyes
 - D. Measurements of ophthalmic artery pressure lower than 20 g on the instrument
 - E. Poor patient cooperation
 - F. Variation in systemic blood pressure between readings
2. High ophthalmodynamometry values
 - A. Basilar-vertebral occlusion
 - B. Bilateral distal internal carotid occlusion—unusual
 - C. Progressive intracranial arterial occlusion syndrome
3. Low ophthalmodynamometry values
 - A. Both sides reduced with orthostatic hypotension
 - B. *Reduced on side of an occluded internal carotid artery

Walsh FB, Hoyt WF. *Clinical neuro-ophthalmology*, 4th ed. Baltimore: Williams & Wilkins, 1985.

Pulsation of Retinal Arteriole (High Pulse Pressure)

1. Aortic regurgitation
2. Hyperthyroidism
3. *Intraocular blood pressure higher than diastolic blood pressure but lower than systolic blood pressure

Newell FW. *Ophthalmology: principles and concepts*, 7th ed. St. Louis: CV Mosby, 1992.

Retinal Artery Occlusion

This condition involves a sudden, painless visual loss; on ophthalmoscopic examination, a diffuse retinal pallor and a cherry-red spot in macula are noted.

1. Embolism—cardiac or pulmonary sources
 - A. Air emboli following trauma or surgery
 - B. Amniotic fluid embolization
 - C. Cardiac myxoma
 - D. Corticosteroid emboli
 - E. Espildora-Luque syndrome (ophthalmic Sylvian syndrome)
 - F. Fat emboli following long-bone fractures
 - G. Iatrogenic trauma induced by angiography
 - H. *In older patients—due to atheroma of carotid artery
 - I. In young persons—due to poststreptococcal vegetations (rheumatic fever), cardiac catheterization, or valvotomy
 - J. Leudoemboli—vasculitis, Purtscher retinopathy, septic endocarditis
 - K. Moyamoya disease (multiple progressive intracranial arterial occlusion)
 - L. Nicolau syndrome (emboli of medication inadvertently introduced into artery)
 - M. Synthetic material used in cardiac and vascular procedures
 - N. Talc emboli—long-term intravenous drug abusers
 - O. Tumors—atrial myxoma, mitral valve papillary fibroelastoma
 - P. With cerebral infarction after periocular subcutaneous cosmetic silicone injection
2. *Atherosclerosis of common carotid artery (ophthalmodynamometry employed for diagnosis)
3. Ischemia
 - A. Carotid occlusion or dissection
 - B. Essential hypotension
 - C. Following orbital floor fractures or repair
 - D. Following surgery for retinal detachment
 - E. Generalized shock
 - F. Heart failure (rare)
 - G. Kahler disease (multiple myeloma)
 - H. Knee-chest position
 - I. Massive hemorrhage, such as that occurring in hematemesis, gastrointestinal bleeding, or surgical procedures
 - J. Migraine
 - K. Mosse syndrome (polycythemia-hepatic cirrhosis syndrome)
 - L. Orbital hemorrhage following retrobulbar injection
 - M. After surgery for scoliosis
 - N. Too rapid lowering of blood pressure in hypertensive subjects
4. Inflammation

- A. Abdominal typhus (typhoid fever)
 - B. African eye-worm disease (loiasis)
 - C. Arteriole vasculitis, such as periarteritis nodosa (Kussmaul disease)
 - D. Bacterial endocarditis
 - E. Behçet disease (dermatostomatophthalmic syndrome)

 - B. Following ocular trauma with secondary glaucoma in youths with sickle-trait hemoglobinopathy
 - C. Polycythemia vera (Vaquez-Osler syndrome)
 - D. Sickle cell disease
 6. Syphilis (acquired lues)
 7. Associated factors
 8. Diathermy of persistent hyaloid
 - A. Drusen of optic nerve (see p. 559-560)
 - B. Giant cell arteritis
 - C. Papilledema (see p. 593-601)
 - D. Subdural cerebral hemorrhage
 - E. Arteriosclerosis of central retinal artery
 - F. Chronic simple glaucoma
 9. After dye, yellow photocoagulation
 10. Complication of retrobulbar block
 11. Degos syndrome (malignant atrophic papulosis)
 12. Disseminated lupus erythematosus
 13. Fabry-Anderson syndrome (glycosphingolipid lipidosis)
 14. Goldenhar-Gorlin syndrome (oculoauriculovertebral dysplasia)
 15. Homocystinuria syndrome
 16. Hyperhomocystinemia
 17. Lyme disease
 18. Neoplastic angioendotheliomatosis
 19. Polymyalgia rheumatica
 20. Protein S deficiency
 21. Relapsing polychondritis

22. Sneddon syndrome (livedo reticularis, neurologic abnormalities, and labile hypertension)
23. Use of tranexamic acid therapy

50. Vitreous hemorrhage			S		S	
51. White wedge-shaped infarcts in choroid					S	

Laboratory Data

1. Abnormal ophthalmodynamometry		S	U			
2. Biopsy of temporal artery: fragmentation of the elastic lamina, smooth muscle necrosis, cellular infiltration with lymphocytes, epithelioid cells and giant cells					U	
3. Carotid arteriography		S				
4. Depression of hemoglobin, white blood cells and platelets						U
5. Elevated antistreptolysin titer	S					
6. Elevated C reactive protein	S					
7. Elevated ESR	S			U		
8. Elevated white blood cells	U					
9. False positive STS (serologic test for syphilis)						U
10. Fluorescein angiography abnormal	U	U	U	U	U	S
11. Hemoglobin electrophoresis: presence of HbS					U	
12. L.E. cells positive						U
13. Positive antinuclear antibody trait						U
14. Positive throat culture for group A streptococcus	S					

R = rarely; S = sometimes; and U = usually.

Localized Arterial Narrowing

1. Retinal atrophy following:
 - A. Degeneration
 - B. Inflammation
 - C. Trauma
 - D. Treatment with diathermy, light, or cryopexy
2. Any vascular retinopathy

Nover A. *The ocular fundus: methods of examination and typical findings*, 4th ed. Philadelphia: Lea & Febiger, 1981.

Perkins ES, Dobree JH. *The differential diagnosis of fundus conditions*. St. Louis: CV Mosby, 1972.

Generalized Arterial Narrowing

1. Local causes
 - A. Apparent narrowing
 1. High hypermetropia—common, small disc, narrow vessels, sometimes pseudopapilledema (see p. 601)
 2. Congenital microphthalmos—rare, hypermetropia, often cataract (see p. 252-253)
 3. Aphakia—cataract operation, dislocated lens (see p. 405)
 4. Hollenhorst syndrome (chorioretinal infarction syndrome)
 5. Wagner syndrome (hyaloideoretinal degeneration)
 - B. Trauma
 1. Avulsion of optic nerve—rare, secondary optic atrophy
 2. Fracture involving bony optic canal—rare, secondary optic atrophy
 3. Following retroocular injection—rare secondary optic atrophy
 4. Orbital hemorrhage following retroocular injection or orbital operation—rare, secondary optic atrophy
 5. Carotid ligation for carotid—cavernous fistula, rare, secondary optic atrophy
 6. Following angiography—rare, secondary optic atrophy
 7. Siderosis bulbi—metallic intraocular foreign body
 - C. Infection and edema
 1. Orbital cellulitis—exophthalmos, restricted ocular movements
 2. Following thyrotropic exophthalmos—ocular muscle paresis, lid retraction
 - D. Degenerations, such as progressive cone-rod degeneration
 - E. Primary tapetoretinal degenerations, such as retinitis pigmentosa; Hallgren syndrome (retinitis pigmentosa-deafness-ataxia syndrome)
2. Systemic disease
 - A. Arteriosclerosis
 1. In involutionary sclerosis—population older than 50 years of age, generalized arteriolar narrowing, diminished light reflexes
 2. In arteriosclerotic disease
 - a. Arteriosclerotic central artery occlusion—common arteriovenous crossing signs, focal arteriolar constriction
 - b. *Embolus from atheromatous plaque, common, sudden onset, visible white embolus

B. Hypertensive conditions

1. *Essential hypertension—retinal hemorrhages, cotton-wool spots, arteriovenous crossing signs
2. *Malignant hypertension—retinal hemorrhages, cotton-wool spots, edema of disc
3. Toxemia of pregnancy—rare, sometimes hemorrhages, cotton-wool spots, edema of disc, serous detachment
4. Coarctation of aorta—rare, hypertensive changes vary greatly in degree
5. Pheochromocytoma—rare, hypertensive changes vary greatly in degree
6. Adrenal tumor, hyperaldosteronism (adrenal medulla tumor syndrome)—rare, hypertensive changes vary greatly in degree
7. Cushing tumor (adrenocortical hyperfunction)—rare, hypertensive changes vary greatly in degree
8. Motor-neuron disease of cervicothoracic cord hypertension; may occur after prolonged artificial pulmonary ventilation

C. Other forms of vascular disease

1. Retinal ischemia—hypotension following severe or recurrent bleeding, unilateral blindness in patients
2. *Temporal arteritis (cranial arteritis, giant-cell arteritis)—common, 50 years or older; mean age at onset, 55 years; sudden blindness at onset
3. Polyarteritis nodosa (Kussmaul disease)—multiple signs involving choroid, retina, cornea, episclera, and ocular muscles
4. Proliferative diabetic retinopathy—arterial narrowing occurs in 17% of patients with proliferative diabetic retinopathy, mainly in cicatricial stage
5. Cardiac arrest—thread-like arterioles, segmentation of blood column, generalized retinal pallor, pallor of disc, sometimes macular cherry-red spot
6. Raynaud disease (idiopathic paroxysmal digital cyanosis)—young adults, more common in women

D. Renal disease

1. Acute glomerulonephritis—preceding illnesses, including scarlet fever, streptococcal tonsillitis, otitis media, erysipelas (St. Anthony fire), subacute bacterial endocarditis, polyarteritis nodosa (Kussmaul disease)
2. Chronic glomerulonephritis—often asymptomatic and found on routine examination
3. Pyelonephritis and pyelitis—most common causes of renal failure

E. Diseases of the central nervous system

1. Migraine
2. *Syphilitic neuroretinitis
3. Viral neuroretinitis (rare complication)
4. Tay-Sachs disease (amaurotic familial idiocy)
5. Jansky-Bielschowsky disease (amaurotic familial idiocy, late form)
6. Myotonic dystrophy syndrome (Curschmann-Steinert syndrome)
7. Retinohypophysis syndrome (Lijo Pavia-Lis syndrome)
8. Zellweger syndrome (cerebrohepatorenal syndrome of Zellweger)

F. Toxic causes

1. Chloroquine, hydroxychloroquine, quinacrine, amodiaquine
2. Lead
3. Quinine—rare, may follow large dose (abortifacient) or normal dose in sensitive subjects

G. Other causes

1. Caisson syndrome (bends)
2. Chédiak-Higashi syndrome (oculocutaneous albinism with recurrent infections; autosomal recessive)
3. Hunter syndrome (MPS II)
4. Sanfilippo-Good syndrome (MPS III)

Perkins ES, Dobree JH. *The differential diagnosis of fundus conditions*. St. Louis: CV Mosby, 1972.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Periarteritis Retinalis Segmentalis

White or yellow plaques are arranged in segments encircling arteries like a cuff and are localized to one or more arterial branches.

1. *Arteriosclerosis secondary to vein obstruction
2. Herpes zoster
3. Hypercholesterolemia
4. Lupus erythematosus (disseminated lupus erythematosus)
5. Metastatic uveitis
6. Periarteritis nodosa (necrotizing angiitis)
7. *Sarcoidosis syndrome
8. Syphilis (acquired lues)
9. *Temporal arteritis (giant cell arteritis)
10. *Tuberculous retinitis
11. Uveitis, idiopathic

Crouch ER, Goldberg MF. Retinal periarteritis secondary to syphilis. *Arch Ophthalmol* 1975;93:384-387.

Rask AJ. Peri-arteritis retinalis segmentalis. *Acta Ophthalmol* 1969;47:234-237.

Frosted-Branch Angitis

In this condition, unusual thick sheathing surrounds all the retinal veins and less often the arteries, making them look like frosted tree branches.

1. Herpes simplex viruses types 1 and 2
2. Acute lymphoblastic leukemia
3. Large cell lymphoma
4. Crohn disease
5. Systemic lupus erythematosus
6. Acquired immune deficiency syndrome

Kim TS, et al. Retinal angiopathy resembling unilateral frosted branch angiitis in a patient with relapsing acute lymphoblastic leukemia. *Am J Ophthalmol* 1994;117,6:806-808.

Ridley ME, et al. Retinal manifestations of ocular lymphoma. *J Ophthalmol* 1992;99,7:1153-1161.

Sheathing of Retinal Veins

In this condition, white or gray envelopes are around veins; retinal or vitreous hemorrhage and exudates may be present.

1. Disc only—developmental
2. Disc and retina—papillitis or papilledema

3. Peripheral sheathing
 - A. *Acute retinal necrosis
 - B. Amebiasis
 - C. Behçet disease (dermatostomatophthalmic syndrome)
 - D. Brucellosis—rare, tortuosity and sheathing of veins, vitreous haze, retinal hemorrhages
 - E. Candidiasis
 - F. Coccidioidomycosis
 - G. Eales disease (periphlebitis)
 - H. Diabetes mellitus
 - I. Filariasis—hemorrhages and exudates
 - J. Hypertension
 - K. Infectious mononucleosis—peripheral or central perivascular involvement, venous engorgement and sheathing associated with retinal hemorrhages
 - L. Lupus erythematosus
 - M. Non-Hodgkin lymphoma
 - N. Onchocerciasis syndrome (river blindness)
 - O. Rickettsial infections—peripheral or central perivascular involvement, venous engorgement and sheathing associated with retinal hemorrhages
 - P. *Sarcoidosis
 - Q. Septicemia and bacteremia—rare, venous engorgement, usually with multiple hemorrhages and focal sheathing
 - R. Sickle cell disease
 - S. Syphilis (secondary) (acquired lues)
 - T. Tuberculin or bacille Calmette-Guérin (BCG) vaccination—rare, sectorial, or generalized changes
 - U. Viral infections, including the following:
 1. Cytomegalovirus retinitis
 2. Herpes simplex (likely responsible for acute retinal necrosis)
 3. Herpes zoster ophthalmicus
 4. Influenza
 5. Rift Valley fever
4. Peripheral sheathing without secondary retinopathy—multiple sclerosis
5. Wide and usually dense sheathing of dilated and tortuous veins, suggestive of myelogenous leukemia

Brown S, et al. Intraocular lymphoma presenting as retinal vasculitis. *Surv Ophthalmol* 1994;39:138-140.

R = rarely; S = sometimes; and U = usually.

Central retinal vein occlusion

Dilated Retinal Veins

Normally, the arteriole-venule ratio is 2:3; with an increase in this ratio, the retinal veins may be dilated.

1. Congenital
 - A. Congenital tortuosity of retinal vessels—rare, sometimes associated with coarctation of aorta
 - B. Fabry disease (hereditary dystrophic lipidosis)
 - C. Hemangioma
 - D. Longfellow-Graether syndrome
 - E. Ocular fundi in newborns
 - F. Racemose (arteriovenous) aneurysm—rare, arteriovenous anastomoses localized to sector of retina
 - G. *Retinopathy of prematurity with plus disease
 - H. von Hippel-Lindau disease (angiomatosis)—familial in 20% of cases, bilateral in 50%
2. Trauma and inflammation
 - A. Anterior uveitis—dilatation of veins, often slight hyperemia of disc
 - B. Carotid-cavernous fistula—fracture of base of skull, progressive exophthalmos, bruit
 - C. Cavernous sinus thrombosis—rare, proptosis and orbital edema
 - D. *Impending obstruction of the central retinal vein
 - E. Periphlebitis—sheathing of vessels
3. Cardiovascular disease—dilatation may be present but rarely dominates the fundus picture
 - A. Arteriosclerosis
 - B. Involutionary sclerosis (later stages)
 - C. Secondary to defective arterial flow, such as in the following:
 1. Aortic arch syndrome (pulseless disease)
 2. Cardiac insufficiency
 3. Congenital heart disease
 4. Iatrogenic (lowering of blood pressure)
 5. Severe blood loss
 6. *Stenosis or occlusion of common carotid
 7. *Temporal arteritis
 8. Venous stasis (hypotensive retinopathy of Kearns and Hollenhorst)
 - D. Heritable thrombophilia and hypofibrinolysis
4. Respiratory disease—venous dilatation may occur with purplish hue of whole retina; obstruction of venous return from the head, such as in the following:
 - A. Congenital septal defect (Fallot tetralogy)
 - B. Emphysema
 - C. Hamman-Rich syndrome (diffuse pulmonary fibrosis syndrome)
 - D. Heart failure of any type
 - E. Kartagener syndrome (sinusitis-bronchiectasis-situs inversus syndrome)
 - F. Mechanical compression of chest
 - G. Mediastinal tumor obstructing superior vena cava
5. Diseases of the central nervous system
 - A. *Carotid-cavernous fistula—fractured base of skull; rupture of berry aneurysm, arteriosclerosis

- B. Hemangioma of posterior fossa—rare, papilledema, often grossly dilated veins
 - C. Optic nerve lesion—rare, secondary to orbital space-occupying lesion
 - D. *Papilledema (see p. 593-601)
 - E. Retrolenticular syndrome (Dejerine-Roussy syndrome)
 - F. *Subarachnoid hemorrhage—head injury; subhyaloid hemorrhages near disc, dilated veins, sometimes papilledema
6. Blood diseases
- A. Aplastic anemia—hemorrhage is the most striking sign, often spreading around the disc
 - B. Cryoglobulinemia—rare, may occur with multiple myeloma, veins dilated, tortuous, and sometimes beaded
 - C. Gansslen syndrome (familial hemolytic icterus)
 - D. Lymphatic leukemia
 - E. Macrocytic anemia of all types—common, retinopathy absent unless hemoglobin below 50%; pale fundus, superficial hemorrhages, cotton-wool spots
 - 1. Pernicious anemia
 - 2. Steatorrhea
 - 3. Celiac disease
 - 4. Carcinoma of stomach
 - F. Macroglobulinemia—rare; veins dilated tortuous and sometimes beaded, hemorrhages and occasionally microaneurysms
 - G. Monocytic leukemia
 - H. Myelogenous leukemia
 - I. Multiple myeloma (Kahler disease)
 - J. Polycythemia rubra vera (primary; Vaquez disease)—common in males; hemorrhages; papilledema may be marked and venous thrombosis may occur
 - K. Secondary polycythemia—common; hemorrhages, papilledema and venous thrombosis may occur
 - L. Sickle cell disease—dilatation of peripheral veins with retinal, subhyaloid, and vitreous hemorrhages
 - M. Thrombocytopenic purpura—retinal and subhyaloid hemorrhages near disc, moderate venous dilatation
7. Acute febrile illnesses—rare, occasional dilatation of retinal veins with a few hemorrhages and mild edema of disc
- A. Infectious mononucleosis
 - B. Influenza
 - C. Rickettsial infections
 - D. Septicemia
8. Metabolic diseases
- A. Cystic fibrosis syndrome (fibrocystic disease of pancreas)—venous congestion often swelling of disc
 - B. Plasma lecithin
 - C. *Diabetic retinopathy—larger veins affected, often beaded
9. Collagen diseases
- A. Polyarteritis nodosa—among other fundus lesions, dilated veins may occur
 - B. Sclerosis, progressive systemic (scleroderma)

- C. Systemic lupus erythematosus—cotton-wool spots, occasional hemorrhages, and moderate dilatation of veins
10. Toxic conditions, such as methyl alcohol ingestion

Glueck CJ, et al. Heritable thrombophilia and hypofibrinolysis—possible causes of retinal vein occlusion. *Arch Ophthalmol* 1999;117:43-49.

Newell FW. *Ophthalmology: principles and practice*, 7th ed. St. Louis: CV Mosby, 1991.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Tortuosity of Retinal Veins and Hypoplasia of Optic Nerves

1. Endocrinopathy, especially pituitary deficiency
2. Alcohol abuse; fetal alcohol syndrome
3. Migraine disturbances
4. Agenesis of the corpus callosum associated with mutations
5. Preterm birth also associated with retinal artery/visceral tortuosity

Hellstrom A, et al. Optic nerve hypoplasia with isolated tortuosity of the retinal veins. *Arch Ophthalmol* 1999;117:880-884.

Central Retinal Vein Occlusion

This condition is characterized by massive hemorrhage into the posterior portion of the eye and dilated retinal veins.

1. External compression of the vein
 - A. Atherosclerosis of central retinal artery
 - B. Connective tissue strand within the floor of the physiologic excavation
 - C. Multiple crossings of the same artery and vein or congenital venous loops or twists in the retinal surface
 - D. Pseudotumor cerebri
2. Degenerative or inflammatory venous disease, causing detachment, proliferation, and hydrops
 - A. Acquired immunodeficiency syndrome (AIDS; HIV retinopathy)
 - B. Arterial hypertension
 - C. Arteriovenous malformations of retina
 - D. Cardiac decompensation
 - E. Closed-head trauma
 - F. *Diabetes mellitus (Willis disease)
 - G. Ipsilateral internal carotid artery stenosis
 - H. Lyme disease
 - I. Optic disc drusen
 - J. Optic nerve inflammation
 - K. Sarcoidosis
 - L. Serpiginous choroiditis
 - M. Systemic granulomatous disease, particularly tuberculosis
3. Thrombosis from venous stagnation
 - A. Spasm of corresponding retinal arterioles
 - B. Blood dyscrasias
 1. Cryoglobulinemia
 2. Emphysema with secondary erythrocytosis

3. Deficiencies in endemic pathway (factor V R506Q mutation)
 4. Homocystinemia
 5. Increased platelet aggregation
 6. Leukemias
 7. Lymphoma
 8. *Multiple myeloma
 9. *Polycythemia vera
 10. Sickle cell disease
- C. Increased viscosity of the blood
1. Cystic fibrosis of pancreas
 2. Following peritoneal dialysis
 3. Hyperproteinemia
 4. *Macroglobulinemia
 5. Use of tranexamic acid
- D. Sudden reduction of systemic blood pressure because of cardiac decompensation, surgical or traumatic shock, or therapy for arterial hypertension
- E. *Glaucoma (preexisting)
- F. Increased risk of thrombosis
1. Hereditary
 - a. Antithrombin III deficiency
 - b. Protein C deficiency or protein S deficiency
 - c. Rare disorders of fibrinogen and fibrinolysis
 - i. Certain dysfibrinogenemias
 - ii. Abnormal plasminogen
 2. Acquired
 - a. Carcinoma
 - b. Hematologic proliferative disorders
 - i. Acute promyelocytic leukemia
 - ii. Myeloproliferative disorders (polycythemia, essential thrombocythemia)
 - c. Behçet syndrome
 - d. Lupus anticoagulant
 - e. Nephrosis
 - f. Complications of therapy
 - i. Oral contraceptives
 - ii. Infusion of prothrombin complex concentrates
 - iii. Heparin-induced thrombocytopenia
- G. Carotid-cavernous sinus fistula
- H. *Syphilis
- I. With immunoglobulin G (IgG) lambda monoclonal gammopathy
- J. Coil embolization of carotid-ophthalmic aneurysms
- K. Oral contraceptive

Wenzler EM, et al. Hyperhomocystinemia in retinal artery and retinal vein occlusion. *Am J Ophthalmol* 1993;115:162-167.

Dilated Retinal Veins and Retinal Hemorrhages

1. Carotid-cavernous fistula
2. *Cavernous sinus fistula syndrome (carotid artery syndrome)
3. Cavernous sinus thrombosis (hypophyseal-sphenoidal syndrome)
4. *Central retinal vein occlusion (see p. 468)
5. Cervical tuberculosis
6. Choroidal melanoma remote to the neovascularization
7. Congenital tortuosity and dilatation of the retinal vessels
8. Cryoglobulinemia
9. *Diabetes mellitus
10. Intravitreal myiasis
11. Leukemia
12. Lymphomas
13. Macroglobulinemia (Waldenström syndrome)
14. Multiple myeloma (myelomatosis)
15. Ophthalmic vein thrombosis
16. Pappataci fever (phlebotomus fever)
17. Paraproteinemias and dysproteinemias
18. Polycythemia vera
19. Retinal arteritis
20. *Sickle cell disease
21. *Syphilis (acquired lues)

Kalina RE, Kaiser M. Familial retinal hemorrhages. *Am J Ophthalmol* 1972;74:252-255.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Retinal Hemorrhages

Retinal hemorrhages include bleeding that may be intraretinal or preretinal hemorrhages into the vitreous or subretinal hemorrhages.

1. Congestion of the head and neck, such as in newborns, in hanging, or during choking
2. Trauma, including electrical injury, hypothermal injury, and child abuse
3. Vascular obstruction, such as cardiorespiratory obesity syndrome, cystic fibrosis syndrome, negative acceleration syndrome, (hydrostatic pressure syndrome), ophthalmoplegic migraine syndrome, papilledema (see p. 593-601), subarachnoid hemorrhages, superior vena cava syndrome, Symonds syndrome (benign intracranial hypertension), thrombocytopenia, thrombosis, and Wernicke syndrome (avitaminosis B₁)
4. Inflammatory conditions, such as Criswick-Schepens syndrome (familial exudative vitreoretinopathy), Loffler syndrome (eosinophilic pneumonitis), perivasculitis, and subacute bacterial endocarditis
5. *Acute febrile and infectious illnesses, including amebiasis ankylostomiasis, aspergillosis, bacterial endocarditis, coccidioidomycosis, cryptococcosis (torulosis), cysticercosis, dengue fever, hydatid cyst (echinococcosis), hydrophobia (rabies), infectious mononucleosis, influenza, Japanese River fever (typhus), lymphogranuloma venereum (Nicolas-Favre disease), metastatic bacterial endophthalmitis, nematode ophthalmia syndrome (toxocariasis), pertussis (whooping cough), Q fever, relapsing fever, trichinellosis, Weil disease (leptospirosis), and yersiniosis
6. *Vascular disease, such as arteriosclerosis, atherosclerosis, arteriovenous fistula, disseminated intravascular coagulation, hypertension, Paget syndrome (hypertensive diencephalic

syndrome), progressive systemic sclerosis, pulmonary insufficiency, the retinopathies, particularly diabetic and hypertensive, and when the circulation through the eye is diminished in hypotensive retinopathy, such as in carotid vascular insufficiency syndrome or pulseless disease (Takayasu syndrome), suprarenal-sympathetic syndrome, temporal arteritis syndrome (cranial arteritis syndrome), and in conditions of extreme cachexia

7. Anemia that may be secondary to drugs, including the following:

acebutolol	benzthiazide	chlormphenicol
acenocoumarin	bishydroxycoumarin	chlordiazepoxide
acetaminophen	bleomycin	chloroquine
acetanilid	brompheniramine	chlorthiazide
acetazolamide	busulfan	chlorpheniramine
acetoheaxamide	butabarbital	chlorpromazine
acetophenazine	butalbital	chlorpropamide
actinomycin C	butallylonal	chlorprothixene
acyclovir	butaperazine	chlortetracycline
allobarbital	butethal	chlorthalidone
allopurinol	cactinomycin	cholecalciferol
alprazolam	calcitriol	cimetidine
aminopterin	captopril	cisplatin
aminosalicylate (?)	carbamazepine	clemastine
aminosalicylic acid (?)	carbenicillin	clindamycin
amithiozone	carbimazole	clofibrate
amitriptyline	carbinoxamine	clonazepam
amobarbital	carisoprodol	clorzepate
amodiaquine	carmustine	cloxacillin
amoxicillin	carphenazine	colchicine
amphotericin B	cefaclor	cyclobarbital
ampicillin	cefadroxil	cyclopentobarbital
antazoline	cefamandole	cyclophosphamide
anisindione	cefazolin	cycloserine
antimony lithium thiomalate	cefonicid	cyclosporine
antimony potassium tartrate	cefoperazone	cyclothiazide
antimony sodium tartrate	ceforanide	cyproheptadine
antimony sodium thioglycollate	cefotaxime	cytarabine
	cefotetan	dacarbazine
antipyrine	cefoxitin	dactinomycin
aprobarbital	cefsulodin	dapsone
atenolol	ceftizoxime	daunorubicin
auranofin	ceftriaxone	deferoxamine
aurothioglucose	cefuroxime	demeclocycline
aurothioglycanide	cephalexin	desipramine
azatadine	cephaloglycin	dexbrompheniramine
azathioprine	cephaloridine	dexchlorpheniramine
barbital	cephalothin	diazepam
BCG vaccine	cephapirin	diazoxide
bendroflumethiazide	cephradine	dichlorphenamide
benzathine penicillin G	chlorambucil	dicloxacillin
dicumarol	hexethal	methotrexate
diethazine	hexobarbital	methsuximide
diltiazem	hydrabamine penicillin V	methylclothiazide
dimercaprol	hydralazine	methyl dopa
dimethindene	hydrabamine phenoxymethyl penicillin	methylene blue
dimethyl sulfoxide		methylphenidate
diphenadione	hydrochlorothiazide	methylthiouracil
diphenhydramine	hydroflumethiazide	methyprylon
diphenylhydantoin	hydroxychloroquine	metolazone
diphenylpyraline	hydroxyurea	metoprolol
diphtheria and tetanus toxoids and pertussis vaccine (adsorbed)	ibuprofen	metrizamide
	imipramine	metronidazole
	indapamide	mexiletine
	indomethacin	mianserin
doxorubicin	influenza virus vaccine	midazolam
doxycycline	interferon	minocycline
doxylamine	isocarboxazid	mitomycin
dromostanolone	isoniazid	moxalactam
droperidol	labetalol	mumps virus vaccine (live)
enalapril	levodopa	nadolol
ergocalciferol	lincomycin	nafcillin
erythromycin	lithium carbonate	nalidixic acid
ethacrynic acid	lomustine	naproxen
ethopropazine	lorazepam	nialamide
ethosuximide	loxapine	nifedipine
ethotoin	maprotiline	nitrazepam
ethoxzolamide	measles and rubella virus vaccine (live)	nitrofurantoin
ethyl biscoumacetate		nitroglycerin
fenfluramine	measles, mumps and rubella virus vaccine (live)	nortriptyline
fenopropfen		oral contraceptives
flecainide	measles virus vaccine (live)	orphenadrine
floxuridine	mechlorethamine	oxacillin
fluorouracil	mefenamic acid	oxazepam
fluoxymersterone	melphalan	oxyphenbutazone
fluphenazine	mephenytoin	oxytetracycline
flurazepam	mephobarbital	paramethadione
furosemide	meprobamate	penicillamine
gentamicin	mercaptapurine	pentobarbital
glutethimide	mesoridazine	perazine
glyburide	methacycline	periciazine
gold Au 198	methaqualone	perphenazine
gold sodium thiomalate	metharbital	phenacetin
gold sodium thiosulfate	methazolamide	phenelzine
griseofulvin	methdilazine	phenformin
guanethidine	methicillin	phenindione
halazepam	methimazole	pheniramine
haloperidol	methitural	phenobarbital
heparin	methohexital	phenprocoumon
heptabarbital	methotrimeprazine	phensuximide
hetacillin	rifampin	tolazamide
phenylbutazone	rubella and mumps virus vaccine (live)	tolazoline
phenytoin		tolbutamide
pindolol	rubella virus vaccine (live)	tranylcypromine
piperacetazine	secobarbital	trazodone
piperazine	semustine	triazolam
pipobroman	sodium antimonogluconate	trichlormethiazide
poliovirus vaccine	stibocaptate	triethylenemelamine
polythiazide	stibogluconate	trifluoperazine
potassium penicillin G		

potassium penicillin V
potassium phenethicillin
prazepam
primidone
probarbital
procaine penicillin G
procarbazine
prochlorperazine
promazine
promethazine
propiomazine
propylthiouracil
protriptyline
pyrilamine
pyrimethamine
quinacrine
quinethazone
quinidine
quinine
ranitidine

stibophen
streptomycin
sulfonamides
suramin
talbutal
temazepam
testolactone
testosterone
tetracycline
thiabendazole
thiamylal
thiethylperazine
thioguanine
thiopental
thiopropazate
thiopropazine
thioridazine
thiotepa
thiothixene
tocainide

trifluoperidol
triflupromazine
trimeprazine
trimethadione
tripelennamine
triprolidine
uracil mustard
urethan
vancomycin
verapamil
vidarabine
vinbarbital
vinblastine
vincristine
vitamin A
vitamin D
vitamin D₂
vitamin D₃
warfarin

8. Vascularized neoplasms, including hereditary hemorrhagic telangiectasia (Rendu-Osler-Weber disease), and periocular and ocular metastatic tumors
9. Drugs, including the following:

acetylcholine	bismuth sodium triglycollamate	fludrocortisone
acid bismuth sodium tartrate		fluorometholone
adrenal cortex injection	bismuth subcarbonate	fluorouracil
aldosterone	bismuth subsalicylate	fluprednisolone
allopurinol (?)	butacaine	glycerin
alseroxylon	cobalt (?)	heparin
aspirin	cocaine	hexachlorophene
benoxinate	cortisone	hydrocortisone
betamethasone	deserpidine	indomethacin
bismuth carbonate	desoxycorticosterone	iodide and iodine solution compounds
bismuth oxychloride	dexamethasone	
bismuth salicylate	dibucaine	isosorbide
bismuth sodium tartrate	dyclonine	ketoprofen
bismuth sodium thioglycollate	epinephrine	lincomycin
	ethambutol	mannitol
medrysone	proparacaine	sulfamethoxypyridazine
meprednisone	radioactive iodides	sulfanilamide
methaqualone	rauwolfia serpentina	sulfaphenazole
methylphenidate	rescinamine	sulfapyridine
methylprednisolone	reserpine	sulfasalazine
mithramycin	sodium chloride	sulfathiazole
mitotane	sodium salicylate	sulfisoxazole
oxyphenbutazone	sulfacetamide	
paramethasone	sulfachlorpyridazine	sulindac
penicillamine	sulfacytine	syrosingopine
phenacaine	sulfadiazine	tamoxifen
phenylbutazone	sulfadimethoxine	tetracaine
piperocaine	sulfamerazine	triamcinolone
plicamycin	sulfameter	trichloroethylene
pralidoxime	sulfamethazine	urea
prednisolone	sulfamethizole	urokinase (?)
prednisone	sulfamethoxazole	vitamin A

10. Hematopoietic system, such as the anemias, Bing-Neel syndrome (association of macroglobulinemia and central nervous system symptoms), Fanconi syndrome (amino diabetes), Gansslen syndrome (familial hemolytic icterus), Henoch-Schönlein purpura, Herrick syndrome (sickle cell disease), Jacobsen-Brodwell syndrome, leukemias, hemophilia, polycythemia, purpuras, oculotooroorenoerythropoietic disease, Plummer-Vinson syndrome (sideropenic dysphagia syndrome), Reimann syndrome (hyperviscosity syndrome), Waldenström syndrome (macroglobulinemia syndrome), Wiskott-Aldrich syndrome (purpura), also following blood transfusion with incompatibility of blood groups
11. Acosta syndrome (mountain climber syndrome)
12. Amyloidosis
13. Behçet syndrome (dermatostomatoophthalmic syndrome)
14. Bloch-Sulzberger syndrome (incontinentia pigmenti)
15. Bourneville syndrome (tuberous sclerosis)
16. Epidural steroid injection, gas myelography, or epiduroscopy
17. Following labor induced by oxytocin or dinoprostone in newborns
18. Following use of YAG laser
19. Histiocytosis X (Hand-Schüller-Christian syndrome)
20. HIV-related retinopathy
21. Hodgkin disease
22. Juvenile diabetes—dwarfism-obesity syndrome
23. Macular degeneration, age related (exudative type)
24. Morning-glory syndrome (hereditary central glial anomaly of the optic disc)
25. Mycosis fungoides syndrome (Sézary syndrome)
26. Neuroblastoma
27. Optic nerve drusen (see p. 559-560)
28. Paget syndrome (osteitis deformans)
29. Plasma lecithin (cholesterol acyltransferase deficiency)
30. Polymyalgia rheumatica
31. Polymyositis dermatomyositis (Wagner-Unverricht syndrome)
32. Porphyria cutanea tarda

33. Purtscher retinopathy
34. Radiation retinopathy
35. Sarcoidosis syndrome (Schaumann syndrome)
36. Schamberg disease (self-limiting cutaneous vasculitis)
37. Terson syndrome

Diagnostic table

Retinal hemorrhage with central white spot

	Septic Retinitis—Candida Albicans	Hematopoietic System—Leukemia	Diabetes Mellitus	Vascular Disease—Arteriovenous Fistula	Collagen Disease—Polyarteritis Nodosa	Cyanosis Retinae—Carcinoma of Lung
History						
1. Acute or chronic blood disorder		U				
2. Chronic mucocutaneous candidiasis	S					
3. Congenital				S		
4. Familial			U			
5. In overweight persons			U			
6. Males between ages 20 to 50					U	
7. More in females				S		
8. More in males					U	U
9. Over age 40			U			U
10. Secondary to penetrating or blunt trauma				U		
11. Systemic dissemination in drug addicts, in debilitated patients or immunosuppressed patients	U					
Physical Findings						
1. Asteroid hyalosis			S			
2. Blepharitis	S					
3. Cataract			U	S	S	
4. Cells and flare	U			S	U	
5. Chemosis				S		
6. Conjunctival cicatrization	S					
7. Conjunctival papillary hypertrophy		S				
8. Conjunctival necrosis				S		
9. Conjunctivitis	U				S	
10. Corneal stromal infiltrate	S					
11. Corneal stromal vascularization	S			S		
12. Corneal ulcer					S	
13. Cotton wool spots		U	U		U	
14. Dacryocystitis	S					
15. Darkening of blood column in conjunctival and retinal vessels						U
16. Ectropion uvea			S	U		
17. Eczema of eyelids	S					
18. Edema of eyelids	S			S		
19. Endophthalmitis	U					
20. Engorgement of conjunctival vessels		S				
21. Exophthalmos				S		
22. Exudative detachment of retina	U				U	
23. Glaucoma		S	S	S		
24. Granuloma of eyelids						
25. Hard yellow exudates of retina			U			
26. Hyperemia of eyelids	S					
27. Hyperemia of optic nerve	S					
28. Hypopyon	U	U				
29. Iris atrophy				R		
30. Irregular sheathing of retinal veins			U			
31. Irregularity of arterial caliber						U

32. Keratitis	S					
33. Lipemia retinalis			S			
34. Macular edema		S	S			S
35. Microaneurysms of retina			U			
36. Optic atrophy		S	S	S	S	
37. Optic neuritis		S	S			
38. Papilledema		S		S		S
39. Papillitis	S					
40. Panophthalmitis	U					
41. Paralysis of extraocular muscles		S	S	S	S	
42. Perivasculitis	S					
43. Phlyctenular keratoconjunctivitis	S					
44. Pseudoretinitis pigmentosa					S	
45. Ptosis				S	S	
46. Retinal atrophy	S					
47. Retinal degeneration				S		
48. Retinal detachment		S	S			
49. Retinal embolism			U			
50. Rubeosis iridis			S			
51. Scleritis					U	
52. Segmental inflammation of retinal arteries					S	
53. Tenonitis					U	
54. Uveitis					U	
55. Vascular engorgement in retina	S	U	U			U
56. Vitreal hemorrhages			U			
57. Vitreous abscess with cellular reaction	S					
58. Vitreous opacities	S	S				
Lab Data						
1. Aqueous and/or vitreous tap for candida isolation	U					
2. Biopsy of temporal artery shows typical arteritic lesion					S	
3. Biopsy of palpable nodules in the neck						S
4. Biopsy of tender muscle positive					S	
5. Blood tests						
—Anemia		U			U	
—Eosinophilia					S	
—E.S.R. elevated					U	
—Hyperglycemia more than 140 mg/L			U			
—Immature abnormal white cells in peripheral blood and bone marrow		U				
—Leukocytosis		U			U	
—Thrombocytopenia					U	
6. Bronchoscopy for visualization and biopsy	R					U
7. Carotid arteriography abnormal				U		
8. Cerebral arteriography abnormal				S		
9. Roentgenograms of the skull abnormal				S		
10. Roentgenograms of chest abnormal						S
11. Urinalysis						
—Cylindruria					U	
—Glycosuria			U			
—Hematuria					U	
—Ketonuria			U			
—Proteinuria					U	

R = rarely; S = sometimes; and U = usually.

Microaneurysms of Retina (Punctate Red Spots Scattered Over Region of Posterior Pole)

1. Aging
2. Aplastic anemia—punctate hemorrhage
3. Associated with cotton-wool spots (see p. 491)
4. Bonnet-Dechaume-Blanc syndrome (cerebroretinal arteriovenous aneurysm syndrome)
5. Choroiditis
6. Chronic uveitis
7. Coats disease (retinal telangiectasia)
8. *Diabetes mellitus
9. Disseminated lupus erythematosus (Kaposi-Libman-Sacks syndrome)
10. Eales disease (periphlebitis)
11. Fabry disease (diffuse angiokeratosis)
12. *Hypertension
13. Hypotensive retinopathy, such as pulseless disease (aortic arch syndrome)
14. Kahler disease (myelomatosis)
15. Leukemias—punctate hemorrhages
16. *Loa loa* infection
17. Macroglobulinemia (Waldenström syndrome)
18. Mauriac syndrome (juvenile diabetes-dwarfism-obesity syndrome)
19. Ocular ischemic syndrome (carotid occlusive disease)
20. Osler hemorrhagic telangiectasia (hereditary hemorrhagic telangiectasis)
21. Pelizaeus-Merzbacher syndrome (aplasia axialis extracorticalis congenita)
22. Reimann syndrome (hyperviscosity syndrome)
23. *Retinoblastoma
24. Sickle cell hemoglobin C disease
25. Skin divers
26. Subacute bacterial endocarditis
27. Venous occlusion—occlusion of central retinal vein or one of its branches (see p. 468)

Polkinghorne PJ, et al. Ocular fundus lesions in divers. *Lancet* 1988;Dec:1381-1383.

Diagnostic table

Microaneurysms of Retina

	Diabetes Mellitus*	Hypertensive Retinopathy*	Central Retinal Vein Occlusion	Blood Disorder as Leukemia	Hypotensive Retinopathy as Pulseless Disease	Retinoblastoma*	Leber Miliary Aneurysm	Subacute Bacterial Endocarditis	Eales Disease	Fabry Disease	Osler Hemorrhagic Teleangiectasia
History											
1. Acute or chronic blood disorder				U							
2. Elevated blood pressure		U									
3. Familial	U			S		S					
4. Hereditary				S		S	U			U	U
5. Japanese extraction					U						
6. Lipoid storage disorders										U	
7. More in females					U						
8. More in males									U		
9. More than 40 years	U										
10. Occurs in children/youth					U	U	S		U		
11. Occurs in middle to older age			U		S			U			
Physical Findings											
1. Asteroid hyalosis	S										
2. Cataract	U				U					U	
3. Central retinal artery occlusion										U	
4. Choroiditis								S			
5. Corneal opacity										U	
6. Cotton-wool spots	U	U	U	U	U						
7. Endophthalmitis						U					
8. Ectropion uvea	U										
9. Exophthalmos						S					
10. Extraocular muscle paralysis	S		S	S		U				U	
11. Filamentary keratitis											U
12. Glaucoma	S		U	S		U					
13. Hard yellow exudates	U										
14. Heterochromia iridis						U					
15. Hyphema						U					
16. Hypopyon				S		U					
17. Hypotony	S										
18. Iris atrophy					S						
19. Keratoconus							S				
20. Leukokoria						U					
21. Lid edema						U			U		
22. Lipemia retinalis	U										
23. Macular edema	S			S							
24. Mydriasis						U					
25. Nystagmus							S				
26. Optic nerve atrophy	S			S	S						
27. Optic neuritis				S				S			
28. Papilledema		U	S		S		U			U	
29. Papillary hypertrophy of conjunctiva				U							

30. Retinal detachment		S		S						U	
31. Retinal hemorrhages	U	U	U	U							R
32. Retinal neovascularization	U		U						U		
33. Roth spots				U				U			
34. Retinal pigmentation (bone corpuscle or salt and pepper-like)							U				
35. Rubeosis iridis	U		U			U					
36. Small retinal angiomas											U
37. Star-shaped angiomas of the palpebral conjunctiva											U
38. Varicosities of palpebral and bulbar conjunctiva										U	
39. Vitreal hemorrhages	S	U				U			U		
40. Vitreous opacities				U				U			
Laboratory Data											
1. Angiographic brain studies					U						
2. Biopsy of tumor						S					
3. Blood culture								U			
4. Computed tomographic scan						U					
5. Chest roentgenogram									U		
6. ELISA for tuberculosis									U		
7. Fluorescein angiography	S	U	U	S	U				U		S
8. Glucose tolerance test or random blood sugar	U										
9. Lipid profile										U	
10. Ocular ultrasonography							U				
11. Ophthalmodynamometry					U						
12. Purified protein derivative									U		
13. Ultrasound of carotids					U						
14. Venereal disease reaction level					U						
15. Visual fields			U								
16. White blood cell count, hemoglobin, hematocrit				U							

R = rarely; S = sometimes; and U = usually.

Retinal Arteriovenous Shunt at the Arteriovenous Crossing

1. Diabetic retinopathy
2. Leber's miliary aneurysm
3. Retinal vein occlusion
4. Takayasu disease

Tanaka T, et al. Retinal arteriovenous shunt at the arteriovenous crossing. *Ophthalmology* 1998;105:1251-1258.

Tanaka T, Shimizu K. Retinal arteriovenous shunts in Takayasu disease. *Ophthalmology* 1987;94:1380-1388.

Macroaneurysms of Retinal Arteries

These macroaneurysms are found within the first three orders of bifurcation of arterioles; they are frequently associated with localized hemorrhage and exudation.

1. Congenital
2. *Generalized arteriosclerosis
3. *Hypertension
4. Idiopathic
5. Following open heart surgery

Kuhn F. Retinal emboli after open heart surgery. *Arch Ophthalmol* 1989;107:317.

Robertson DM. Macroaneurysm of the retinal arteries. *Trans Am Acad Ophthalmol Otolaryngol* 1973;77:55-67.

Schatz H. *Essential fluorescein angiography: a compendium of classical cases*. San Anselmo, CA: Pacific Press, 1982.

Retinal Neovascularization (Growth of Abnormal New Blood Vessels into the Vitreous)

1. Anemia
2. Behçet syndrome (dermatostomatophthalmic syndrome)
3. *Central retinal vein occlusion (see p. 468)
4. *Diabetes mellitus
5. Eales disease (periphlebitis)
6. Ehlers-Danlos syndrome (fibrodysplasia elastica generalisata)
7. Hypertension (malignant and essential)
8. Leukemia
9. Lupus erythematosus
10. Macroglobulinemia (Waldenström syndrome)
11. Retinal detachment with hemorrhage
12. *Sickle cell disease
13. Syphilis (acquired lues)
14. Trauma
15. von Hippel-Lindau syndrome (retinocerebral angiomatosis)
16. Werlhof disease (hemophilia and thrombocytopenic purpura)

L'Esperance FA, James WA. *Diabetic retinopathy: clinical evaluation and management*, 2nd ed. St. Louis: CV Mosby, 1982.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Predisposition to Rhegmatogenous Retinal Detachment

1. Aphakia (see p. 405)

2. Branch retinal vein occlusion
3. High myopia
4. Chorioretinitis
5. Peripheral retinal degeneration
 - A. Vitreous base excavation
 - B. *Retinal hole
 - C. Retinoschisis
 - D. Cystic retinal tuft
 - E. Zonular traction tuft
 - F. Meridional folds
 - G. Partial-thickness retinal tear
 - H. *Full-thickness retinal tear
 - I. *Lattice degeneration
 - J. Vitreous base avulsion
6. Trauma—blunt and perforating, including operation for strabismus and block excision of epithelial implantation cysts and tumors of the anterior uvea
7. Angiomas of retinae

Gonzales CA, et al. Bilateral rhegmatogenous retinal detachments with unilateral vitreous base avulsion as the presenting signs of child abuse. *Am J Ophthalmol* 1999;127,4:475-477.

Ikuno Y, et al. Tractional retinal detachment after branch retinal vein occlusion. *Ophthalmology* 1998;105:417-423.

Jonas JB, et al. Rhegmatogenous retinal detachment after block excision of epithelial implantation cysts and tumors of the anterior uvea. *Ophthalmology* 1999;106:1942-1946.

Retinal Detachment (Location and Morphologic Classification)

1. Equator
 - A. Myopic type—equatorial horseshoe tear
 - B. Equatorial type associated with lattice degeneration
2. Ora serrata
 - A. Aphakic, with multiple small breaks often in nasal periphery
 - B. Dialysis in young, lower temporal quadrant, often bilateral
 - C. Giant dialysis, often bilateral
3. Posterior pole
 - A. Macular breaks, rare
 - B. Other breaks at posterior pole, from cellular proliferation in inner retinal surface

Benson WE. *Retinal detachment: diagnosis and management*, 2nd ed. Philadelphia: JB Lippincott, 1988.

Syndromes and Diseases Associated with Retinal Detachment

1. Exudative
 - A. Systemic disease
 1. Abdominal typhus
 2. Aspergillosis
 3. Atopic dermatitis
 4. Blood diseases
 - a. Dysproteinemias

-
- b. Leukemia
 - c. Sickle cell disease
5. Boutonneuse fever (rickettsia)
 6. Candidiasis
 7. Coenurosis
 8. Cryoglobulinemia
 9. Cryptococcosis
 10. Cysticercosis
 11. Disseminated intravascular coagulation
 12. Extreme venous congestion, such as occurs during choking
 13. Goldscheider syndrome (epidermolysis bullosa)
 14. Goodpasture syndrome (chronic relapsing pulmonary hemosiderosis)
 15. Grönblad-Strandberg syndrome (systemic elastodystrophy)
 16. Histiocytosis X (Hand-Schüller-Christian syndrome)
 17. Homocystinuria syndrome
 18. Hurler syndrome (MPS I-H)
 19. Hydatid cyst
 20. Hypertension—grade IV
 21. Krause syndrome (congenital encephalo-ophthalmic dysplasia)
 22. *Lupus erythematosus
 23. Lymphoma
 24. Polyarteritis nodosa (Kussmaul disease)
 25. Reese syndrome (D trisomy)
 26. Regional enteritis
 27. Relapsing polychondritis
 28. Renal disease, including chronic glomerulonephritis or uremia
 29. Rheumatoid arthritis
 30. Rheumatic fever
 31. Rift Valley fever
 32. Sturge-Weber syndrome (meningocutaneous syndrome)
 33. Syphilis
 34. Temporal arteritis syndrome (cranial arteritis syndrome)
 35. Toxemia of pregnancy
 36. Vogt-Koyanagi-Harada syndrome
- B. Ocular disease
1. Acute retinal necrosis
 2. Choroidal or retinal tumor
 - a. Hemangioma
 - b. Melanoma
 - c. Metastasis—including that from breast, lung, and stomach
 - d. Retinoblastoma
 3. Colobomas of the optic nerve
 4. Dominant myopia and retinal detachment
 5. Familial exudative vitreoretinopathy
 6. Harada disease and Vogt-Koyanagi syndrome
 7. Lymphoid hyperplasia of the uveal tract
 8. Morning-glory syndrome (hereditary central glial anomaly of the optic disk)
 9. Nanophthalmos

10. Norrie disease (atrophia oculi congenita)—x-linked
 11. Optic nerve pit
 12. Postinflammation of the orbit or sinuses or cyclitis
 13. Retina, congenital nonattachment and falciform folds—autosomal recessive
 14. Schwartz syndrome (glaucoma associated with retinal detachment)
 15. Scleritis (especially posterior scleritis)
 16. Sympathetic ophthalmia
 17. *Toxocara* infection
 18. Uveal effusion syndrome
- C. Associated with retinal or choroidal vascular disease
1. Coats disease (retinal telangiectasia)
 - a. In juvenile
 - b. In adult
 2. Central serous choroidopathy
 3. Detached pigment epithelium
 4. Eales disease (periphlebitis)
 5. Excessive panphotocoagulation
 6. Exudative age-related macular degeneration
 7. Hollenhorst syndrome (chorioretinal infarction syndrome)
 8. Incontinentia pigmenti
 9. Osteoporosis-pseudoglioma syndrome
 10. Post irradiation
 11. Scleral buckling
 12. Subpigment epithelium hemorrhage
 13. von Hippel Lindau disease (retinocerebral angiomatosis)
- D. Drugs, including the following:

aceclidine	echothiophate	oxygen
adrenal cortex injection	fludrocortisone	oxyphenbutazone
aldosterone	fluorometholone	penicillamine
beclo-methasone	fluprednisolone	phenylbutazone
betamethasone	ganciclovir	physostigmine (?)
carbachol	hydrocortisone	pilocarpine
chymotrypsin (?)	isofluorophate (?)	prednisone
cortisone	medrysone	prednisolone
demecarium (?)	meperidine	sane paramethasone
dexamethasone	methyl prednisolone	triamcinolone
diisopropyl fluorphosphate (DFP)	methylphenidate	
	neostigmine (?)	

- E. Traction
- A. *Pull of adherent and degenerated vitreous
 - B. Organized vitreous band
 1. After vitreous hemorrhage
 - a. Spontaneous
 - b. Traumatic
 2. Hypertensive retinopathy
 3. Posthemorrhagic proliferative retinopathy
 4. Sickle cell retinopathy
 - C. Postneovascularization of vitreous

1. *Diabetic retinopathy, proliferative
 2. Eales disease (periphlebitis)
 3. Ehlers-Danlos syndrome (fibrodysplasia elastica-generalisata)
 4. Fibrinoid syndrome
 5. *Retinopathy of prematurity
 6. Severe uveitis
- D. Congenital deformities, such as retinal dysplasia, coloboma, persistence of fetal vascular system, and pit of optic nerve
- E. 18Q syndrome
- F. Penetrating injury
- G. *Proliferative vitreoretinopathy
- H. Puckering syndrome
- I. Retinal disinsertion syndrome
- J. Retinopathy of prematurity
- K. Warburg syndrome
- F. Rhegmatogenous
- A. Accommodation spasm, including strong miotics
- B. Alport syndrome (neuropathy and deafness)
- C. Apert syndrome (acrocephalosyndactylism syndrome)
- D. Equatorial or anterior choroiditis
- E. FOAR syndrome
- F. Following YAG laser capsulotomy
- G. Hereditary ocular vitreoretinal degeneration and skeletal abnormality (cleft palate)
- H. Juxtapapillary microholes
- I. Knobloch syndrome (retinal detachment and occipital encephalocele)—autosomal recessive
- J. Marchesani syndrome
- K. Marfan syndrome (arachnodactyly dystrophia mesodermalis congenita)
- L. Marshall (D) syndrome
- M. Meckel syndrome
- N. Myopia, including staphyloma—autosomal dominant or recessive
- O. Retinal degeneration at periphery
1. Presenile or myopic type
 2. Lattice and paving-stone types—autosomal dominant
- P. Retinal detachment—autosomal dominant or x-linked
- Q. Retinal vein occlusion
- R. Retinoschisis—adult or juvenile
- S. Smith-Magenis syndrome
- T. Spondyloepiphyseal dysplasia, congenital
- U. Stickler syndrome (hereditary progressive arthro-ophthalmopathy)
- V. Trauma
1. Direct injury—perforating wound and foreign body
 2. Indirect injury including block excision of epithelial implantation cysts and tumors of the anterior uvea.
 3. Post cataract operation
 - a. Sunset syndrome
 - b. Vitreous tug syndrome
 4. Battered-baby syndrome (Silverman syndrome)

- W. *Viral retinitis
 - 1. Acute retinal necrosis
 - 2. Cytomegalovirus retinitis
- X. Vitreous degeneration
- Y. Wagner syndrome (hyaloideoretinal degeneration)

Retinal Folds

1. Proliferative retinal folds—inner layer outstrips outer layer
2. Traction folds
 - A. Associated with remnants of hyaloid artery
 - B. Secondary to vitreous traction
 - C. *Retinopathy of prematurity (cicatrical form)
3. Falciform retinal fold (congenital retinal septum)
 - A. Familial exudative vitreoretinopathy
 - B. Isolated
 - C. Trisomy syndrome
 - D. Warburg syndrome
4. Chronic uveitis
5. Parasite
6. Occult intraocular foreign body
7. *Shaken baby syndrome
8. Terson syndrome

Cotton-Wool Spots

These spots are soft exudates (fluffy, white, focal infarcts in the nerve fiber layer).

1. Acute pancreatitis
2. Amniotic fluid embolization
3. Anemic conditions
 - A. Cirrhosis of the liver
 - B. Following cardiac surgery
 - C. Gastric ulcer syndrome
 - D. Hypotensive retinopathy

- E. Ligation of the carotid artery
- F. Severe primary and secondary anemias
- G. Severe systemic blood loss
- 4. Blood disease
 - A. Aplastic anemia
 - B. Dysproteinemia
 - C. Leukemia
 - D. Multiple myeloma (myelomatosis)
 - E. Pernicious anemia (vitamin B₁₂ deficiency)
 - F. Waldenström syndrome (macroglobulinemia syndrome)
- 5. Carbon monoxide poisoning
- 6. Carcinomatous cachexia
- 7. Collagen diseases
 - A. Dermatomyositis (polymyositis dermatomyositis)
 - B. Diffuse scleroderma
 - C. Disseminated lupus erythematosus (systemic lupus erythematosus)
 - D. Polyarteritis nodosa (necrotizing angiitis)
 - E. Rheumatoid arthritis with scleromalacia perforans or polymyalgia rheumatica
- 8. *Diabetic retinopathy
- 9. Hodgkin disease
- 10. Infective conditions
 - A. *HIV
 - B. Pneumonia
 - C. Rheumatic fever
 - D. Rift Valley fever
 - E. Rocky mountain spotted fever (spotted fever)
 - F. Roth septic retinitis
 - G. Subacute bacterial endocarditis
- 11. Microemboli following cardiac operation
- 12. Primary amyloidosis (idiopathic amyloidosis)
- 13. Primary open-angle glaucoma
- 14. Protein C and protein S deficiency
- 15. Purtscher retinopathy (fat embolism syndrome)
- 16. Renal disease
- 17. Serum disease
- 18. Suprarenal-sympathetic syndrome (pheochromocytoma syndrome)
- 19. Takayasu syndrome (aortic arch syndrome)
- 20. Toxemic retinopathy of pregnancy
- 21. *Untreated malignant hypertension

Diagnostic table

Cotton-wool spots

	Malignant Hypertension	Toxemia of Pregnancy	Collagen Disease (Lupus Erythematosus)	Diabetes Mellitus	Anemic Conditions (Hypotensive Retinopathy)	Infective Conditions (Subacute Bacterial Endocarditis)	Traumatic Conditions (Purtscher Retinopathy)	Renal Disease (Renal Failure)	Blood Disease (Severe Anemia)
History									
1. Absence of renal function								U	
2. Accidents associated with sudden rise in blood pressure and congestion of head and chest							U		
3. Acute massive blood loss					U				
4. After thirty-second week of pregnancy		U							
5. Decreased blood pressure					U				S
6. Elevated blood pressure	U	U				U		U	
7. Familial	U			U					S
8. Pericarditis caused by staphylococcus epidermidis						U			
9. More in females		U	U						
10. After age 40				U					
11. Young persons	U	U	U						
Physical Findings									
1. Altered visual acuity		U		S	U				
2. Arteriosclerosis	U			S					
3. Asteroid hyalosis				S					
4. Band keratopathy								S	
5. Cataract				U					
6. Choroiditis						S			
7. Conjunctival calcium deposits								S	
8. Conjunctival petechiae						S			
9. Conjunctival phlyctenulae				S					
10. Corneal ulcer				S					
11. Cortical blindness								S	
12. Deep stromal keratitis				S					
13. Episcleritis				S					
14. Erythema or scaling of lids				S					
15. Floaters in aqueous and vitreous						S			
16. Hard yellow exudates	S			U					
17. Ischemic optic neuropathy				S	S				U
18. Keratoconjunctivitis sicca				S					
19. Lipemia retinalis				U					
20. Macular edema				S					
21. Macular star	S								
22. Microaneurysms of retina				U					
23. Optic atrophy				S	S				
24. Optic disc edema	S	S		S					
25. Optic neuritis				S		S			
26. Palpebral conjunctival pallor									U
27. Papillitis						S			
28. Posterior and macular serous detachment							U		

29. Preretinal hemorrhage						S			
30. Retinal artery occlusion			S			R			
31. Retinal arteriolar narrowing	U	U							
32. Retinal detachment		S	S						
33. Retinal edema	U						U	U	
34. Retinal hemorrhages	U	U	S		U	S	U		U
35. Retinal neovascularization				S					
36. Retinal venous dilation	S		S	U	S		U		
37. Roth spot					U	S			
38. Rubeosis iridis				U					
39. Scleritis			S						
40. Telangiectasis of lids			S						
41. Third nerve paresis				S					
42. Uveitis			S						
43. Vascular sheathing				S					U

Laboratory Data

1. Blood culture positive for staphylococcus epidermidis						U			
2. BUN elevated								U	
3. Depression of hemoglobin, white cells and platelets			U		U				U
4. Fluorescein angiography									
Dilated capillaries at margin of lesion with aneurysm dilations	U								
Varicose looping and corkscrew coiling	U								
5. Glycosuria				U					
6. Hypercalcemia								U	
7. Hyperglycemia				U					
8. Hyponatremia								U	
9. Lupus erythematosus cell positive			U						
10. Positive immunofluorescence test (for antinuclear antibodies)			U						
11. Proteinuria		U							U
12. Roentgenogram multiple bone fractures							U		

R = rarely; S = sometimes; and U = usually.

Hard Exudates (Yellowish White Discrete Masses Deep in the Retina)

1. Circinate retinopathy
2. Coats disease (retinal telangiectasia)
3. *Diabetes mellitus
4. *Exudative age-related macular degeneration
5. *Hypertensive disease
6. Radiation induced
7. Retinal arterial macroaneurysm

Diagnostic table

	Diabetes Mellitus*	Hypertensive Disease*	Coats' Disease	Essential Hypercholesterolemic Xanthomatosis
History				
1. Bilateral	U	S		U
2. Congenital			U	
3. Elevated blood pressure		U		
4. Familial	U			U
5. More in males			S	
6. Occurs in persons up to 10 years old			U	
7. Occurs in persons 11 to 40 years old	S		R	R
8. Occurs in persons more than 40 years old		U		S
Physical Findings				
1. Anterior uveitis			U	
2. Cataract—coronary				U
3. Cataract—vesicular and posterior subcapsular cataract	U			
4. Conjunctivitis				U
5. Corneal arcus	S			U
6. Cotton-wool spots	U	U		
7. Glaucoma	S		S	
8. Lipid rings around microaneurysms				U
9. Macular edema	S	U	U	
10. Optic disc edema		S		
11. Optic nerve atrophy	S		U	
12. Retinal detachment	S	S	U	
13. Retinal hemorrhages		U	S	
14. Retinal microaneurysms	U	U	U	
15. Retinal telangiectatic vessels			S	
16. Retinal vein occlusion	S	S	U	U
17. Retinal vein sheathing	U	U		
18. Rubeosis iridis	S		U	
19. Vitreous hemorrhage	S	U	U	
Laboratory Data				
1. Elevated blood sugar	U			
2. Elevated lipid profile, including cholesterol and triglyceride	S	S		U
3. Phosphorus 32 uptake elevation			U	
4. Retinal angiography	S	U	U	U
5. Ultrasound, ocular	R		U	

R = rarely; S = sometimes; and U = usually.

Hard exudates (yellowish-white discrete masses deep in retina)

Retinal Exudate and Hemorrhage

1. Capillary telangiectasis of retina (Reese)
2. Coats disease (retinal telangiectasia)
3. *Diabetes mellitus
4. Eales disease (periphlebitis)
5. Multiple retinal aneurysms (Leber syndrome)
6. Racemose hemangioma of the retina
7. von Hippel-Lindau, with absence of visible angioma (retinocerebral angiomatosis)

Ballantyne AJ, Michaelson IC. *Textbook of the fundus of the eye*, 3rd ed. Baltimore: Williams & Wilkins, 1981.

Michelson JB, et al. Ocular reticulum cell sarcoma. *Arch Ophthalmol* 1981;99:1409.

Retinitis or Pseudoretinitis Pigmentosa

Pigment may be bone corpuscular dots or heaped-up masses; salt and pepper fundus

1. Retinitis pigmentosa
 - A. Abetalipoproteinemia (Bassen-Kornzweig syndrome)
 - B. Alström disease (cataract and retinitis pigmentosa)
 - C. Cockayne syndrome (dwarfism with retinal atrophy and deafness)
 - D. Dialinas-Amalric syndrome (deaf-mutism-retinal degeneration syndrome)
 - E. Hallgren syndrome (retinitis pigmentosa-deafness-ataxia syndrome)
 - F. Hypotrichosis, syndactyly and retinitis pigmentosa—autosomal recessive
 - G. Hunter syndrome (MPS II)
 - H. Hurler syndrome (MPS I)
 - I. Infantile phytanic acid storage disease
 - J. Jeune syndrome
 - K. *Kearns-Sayre syndrome (ophthalmoplegic retinal degeneration syndrome)
 - L. Laurence-Moon-Bardet-Biedl syndrome (retinitis pigmentosa-polydactyly-adiposogenital syndrome)
 - M. Metaphyseal chondrodysplasia with retinitis pigmentosa—autosomal recessive
 - N. Microcephaly with chorioretinopathy
 - O. Multiple sulfatase deficiency
 - P. Muscular atrophy, ataxia, retinitis pigmentosa, diabetes mellitus—autosomal dominant
 - Q. Olivopontocerebellar atrophy, type III
 - R. NARP syndrome
 - S. Pallidal degeneration, progressive with retinitis pigmentosa—autosomal recessive
 - T. *Refsum syndrome (phytanic acid storage disease)
 - U. Retinitis pigmentosa alone (usually autosomal recessive but may be autosomal dominant or sex linked)
 - V. Retinitis pigmentosa associated with myopia, keratoconus, or glaucoma
 - W. Retinitis pigmentosa, congenital deafness—sex linked
 - X. Retinitis pigmentosa inversa (predominant—pigmentation around the disc and macula) and deafness—autosomal recessive
 - Y. Retinitis pigmentosa, nerve deafness, mental retardation, and hypogonadism—autosomal recessive
 - Z. Retinitis pigmentosa, PRRPE type (with preserved para-arteriole retinal pigment epithelium)—autosomal recessive

- AA. Retinitis pigmentosa, spastic quadriplegia, and mental retardation—autosomal recessive
 - BB. Rud syndrome
 - CC. Sanfilippo disease (MPS III)
 - Scheie disease (MPS IS)
 - Spielmeier-Vogt syndrome (cerebroretinal degeneration)
 - Usher syndrome (hereditary retinitis pigmentosa-deafness syndrome)
2. Senile changes—degenerative pigmentation
 3. Vascular lesion, such as occlusion of arteriole
 4. Inflammatory
 - AA. Behçet disease (oculobuccogenital syndrome)
 - BB. Chickenpox virus
 - CC. Cytomegalic inclusion disease
 - DD. Dawson disease (inclusion-body encephalitis)
 - EE. Fetal varicella effects
 - FF. Focal dermal hypoplasia (Goltz syndrome)
 - GG. Harada disease (Vogt-Koyanagi-Harada syndrome)
 - HH. Hypomelanosis of Ito
 - II. Influenza virus
 - JJ. Nematode endophthalmitis (visceral larva migrans syndrome)
 - KK. Onchocerciasis (river blindness)
 - LL. Polyarteritis nodosa (Kussmaul disease)
 - MM. Rubella (German measles)
 - NN. Rubeola (measles)
 - OO. *Syphilis
 - PP. *Toxoplasmosis
 - QQ. Typhoid fever (enteric fever)
 - RR. Vaccinia
 5. Toxic
 - A. Accidental intraocular injection of depot corticosteroids<?>
 - B. Chloroquine and atabrine
 - C. Diaminodiphenoxyalkanes—possible drug for treatment of schistosomiasis
 - D. Indomethacin
 - E. Phenothiazine
 1. Chlorpromazine
 2. Thioridazine (Mellaril)
 - F. Pregl solution (Septojod, formerly used for treatment of puerperal sepsis)
 - G. Quinine
 - H. Sparsomycin
 6. Acute lymphocytic leukemia
 7. Alagille syndrome
 8. Alport syndrome
 9. Bardet-Biedl syndrome
 10. Batters disease
 11. Cryogenic “pigmentary fallout”—following use of cryosurgery for retinal detachment
 12. Cystinosis syndrome (Lignac-Fanconi syndrome)
 13. External ophthalmoplegias
 14. *Gardner syndrome (congenital hypertrophy of the retinal pigment epithelium and familial intestinal polyposis)

15. Hagberg-Santavuori syndrome (neuronal ceroid lipofuscinosis)
16. Hallervorden-Spatz syndrome (pigmentary degeneration of globus pallidus)
17. Hereditary ataxias (Friedrich and Marie)
18. Leber congenital amaurosis
19. Lens dislocated into vitreous
20. MERRF syndrome
21. Mucopolysaccharidosis IV (ML IV)
22. Myotonic dystrophy syndrome (Curschmann-Steinert syndrome)
23. Neuronal ceroid lipofuscinosis
 - A. Infantile form
 - B. Late infantile form (Jansky-Bielschowsky)
 - C. Adult form (Kufs syndrome)
24. Pelizaeus-Merzbacher syndrome (aplasia axialis extracorticalis congenita)
25. Pellagra (ariboflavinosis)
26. Progressive cone-rod degeneration
27. Renal disorders, including familial juvenile nephronophthisis (medullary cystic disease)
28. Rud syndrome (hypophyseal deficiency)
29. Sjögren-Larsson syndrome (oligophrenia-ichthyosis-spastic diplegia syndrome)
30. Tapetal-like reflex syndrome
31. Trauma, including blunt, penetrating, obstetric, and radiotherapy, Frenkel syndrome (ocular contusion syndrome)
32. Waardenburg syndrome (interoculoiridodermatoauditive dysplasia)
33. Zellweger syndrome and pseudo-Zellweger syndrome

Diagnostic table

Retinal bone corpuscular dots

	Retinitis Pigmentosa	Senile Degeneration	Vascular (Arterial Occlusion)	Inflammatory (Rubella)	Toxic (Chloroquine)	Cystinosis	Trauma (Blunt)	Progressive Cone-rod Degeneration	Myotonic Dystrophy
History									
1. Amaurosis fugax			S						
2. Children						U			
3. Common in males	U								
4. Glare					U				
5. Hereditary	U					U		U	U
6. Older age group		U							
7. Lacrimation						S			
8. Night blindness	U								
9. Onset, about 20 years									U
10. Photophobia						U			
11. Rubela infection, first trimester				U					
12. Trauma							U		
Physical Findings									
1. Angle recession							S		
2. Bull's eye or doughnut retinal lesion					U			U	
3. Buphthalmos				S					
4. Cataracts	S					U	S		U
5. Conjunctival hemorrhage							S		
6. Conjunctivitis				S					
7. Corneal haziness				S		U			
8. Crystals located in conjunctiva, cornea						U			
9. Cystoid macular edema	R								
10. Disc drusen	S								
11. Disc hamartoma	S								
12. Epithelial corneal edema							S		R
13. Glaucoma	S			S					
14. Hyphema							S		
15. Hypotony							S		
16. Iris atrophy				S					
17. Keratopathy				S	U				R
18. Keratoconus	R								
19. Loss of corneal sensitivity									U
20. Macular degeneration	R	U							U
21. Macular red spot									U
22. May progress to blindness	U				S				
23. Megalocornea				S					
24. Microcornea				S					
25. Microphthalmos	R			S					
26. Minute whitish corneal dots in whorl pattern					U				
27. Myopia	U								
28. Neovascular retinal proliferation			S						
29. Nystagmus	R		U					S	
30. Optic disc atrophy/pallor	U			S				U	R
31. Peripheral retinal drusen		U							

32. Progressive external ophthalmoplegia	R								S
33. Ptosis	R								U
34. Pupil dilated and fixed							S		
35. Retinal arteriosclerosis		U							
36. Retinal hemorrhage							S		
37. Retinal vessel attenuation	U	U	S		S			S	
38. Retrobulbar hemorrhage							S		U
39. Sheathing of retinal vessels	R		R		S				
40. Silver wire or chalky-white arterioles			U		S				
41. Spherophakia				R					
42. Strabismus	R			S					
43. Uveitis				S					
44. Vitreous opacities	U								
Laboratory Data									
1. Color vision abnormalities	U				S				U
2. Cystine in conjunctival biopsy, cultured skin fibroblasts or polymorphonuclear leukocytes						U			
3. Dark adaptation abnormal	U								
4. Electro-oculogram	U				U				S
5. Electroretinogram	U				U				U
6. Fluorescein angiography							R		
Bull's eye lesion					U				U
Diffuse hyperfluorescence scattered spicules of pigment, dye leakage from cystoid macular edema may be present	U	S		S			S		
Peripheral arteriolar occlusion			U						
7. Fluorescent rubella antibody test				U					
8. Hemoglobin electrophoresis			U						
9. Leukopenia				U					U
10. Red blood cell count elevated			U						
11. Rubella virus hemagglutination inhibition				U					
12. Serum immunoglobulin G concentration reduced									U
13. Visual field abnormal	U	R	S		S				U

R = rarely; S = sometimes; and U = usually.

Lesions Confused with Retinoblastoma

1. Anomalous optic disc
2. Anteriorly dislocated lens with secondary glaucoma
3. *Coats disease (retinal telangiectasia)
4. Coloboma of choroid and optic disc (see p. 555-556)
5. Congenital corneal opacity
6. Congenital rubella syndrome (Gregg syndrome)
7. Cysts in a remnant of the hyaloid artery
8. Developmental retinal cyst
9. Glioma of the retina
10. Hematoma under retinal pigment epithelium
11. High myopia with advanced chorioretinal degeneration
12. Juvenile (x-linked) retinoschisis
13. Juvenile xanthogranuloma (nevoxanthoendothelioma)
14. *Larval granulomatosis (*T. canis*)
15. Medullation of nerve fiber layer
16. Metastatic endophthalmitis
17. Norrie disease (atrophia oculi congenita)
18. Oligodendroglioma of the retina
19. Organization of intraocular hemorrhage
20. *Persistent hyperplastic primary vitreous
21. Retinal detachment due to choroidal or vitreous hemorrhage
22. Retinal dysplasia (massive retinal fibrosis)
23. *Retinopathy of prematurity
24. Retrolental membrane associated with Bloch-Sulzberger syndrome (incontinentia pigmenti)
25. Rhegmatogenous and falciform retinal detachment
26. Secondary glaucoma
27. Sex-linked microphthalmia
28. Tapetoretinal degeneration
29. Trisomy 13 (Patau syndrome)
30. *Toxoplasmosis (ocular toxoplasmosis)
31. Traumatic chorioretinitis
32. *Tumors other than retinoblastoma
33. Uveitis in secondary retinal detachment
34. "White-with-pressure" sign

Diagnostic table

Single dark fundus lesion

	Retinal Detachment	Retinoschisis (Senile)	Macular Degeneration (Exudative)	Chorioretinitis ie Ocular Histoplasmosis	Intraocular Foreign Body	Coats' Disease	Ocular Metastatic Tumors	Choroidal Detachment	Melanocytoma of Optic Nerve	Malignant Melanoma
History										
1. Affects both sexes equally		U		U						
2. Aphakic, myopic and traumatized eyes	U									
3. Bilateral		U					S			
4. Diagnosed between two to ten years of age						U				
5. Discovery may be at birth						U				
6. Discovered in middle age									U	
7. During or immediately following an operation								U		
8. Familial blindness	S									
9. Hereditary	S		S							
10. History of ocular trauma					U			U		
11. History of scleritis or episcleritis								U		
12. More in blacks and other dark complexioned people									U	
13. Most are young adults				U	U					
14. Most common in females									U	
15. Most common in males					U	U				
16. Ocular pain							U			S
17. Onset in advanced age			U		S					
18. Onset in juvenile period			S							
19. Over 50 years of age			S							
20. Unilateral in 90%						U			U	
21. Wide age range	U			U						
Physical Findings										
1. Abnormal afferent pupillary reaction	S	S			U			S	U	
2. Anterior chamber flat					S			U		
3. Atrophic macular degeneration								U		
4. Atrophic scar around nerve head			U	U						
5. Blood vessels narrowed and yellow					U		R			U
6. Cataract	S				S	U				
7. Cholesterol crystals of retina								U		
8. Choroidal elevations of periphery										
9. Choroiditis				U						
10. Conjunctival and episcleral injection								U		
11. Corneal striae and aqueous flare								U		
12. Dark smooth multilobulated elevations								U		
13. Elevation of the retina	U	U							U	
14. Enlargement of blind spot									S	
15. Extraocular muscle paralysis							S			
16. Exudative and atrophic retinal reaction			U							
17. Glaucoma						U	S			
18. Hazy vitreous					S			U		
19. Impairment of central vision			U		S					
20. Iris discolored (green in copper, yellow in iron)					U					
21. Iritis	S									
22. Loss of vision	S		U		U			S	U	U
23. Low intraocular pressure	U							U		

24. Macular edema				U					
25. Macular hemorrhages			S	S					
26. Microaneurysms in retina						U			
27. Neovascular glaucoma						S			
28. Optic nerve swelling							S		S
29. Retinal detachment	U	S				S	R	R	U
30. Retinal exudates						U			
31. Retinal folds or striae	S						U		
32. Retinal hemorrhages			U						
33. Retina is wrinkled and gray	U								
34. Retinal ischemia						U			
35. Retinal neovascularization				U					
36. Retinal tears or holes	U	S							
37. Retinal telangiectasia						U			
38. Rubeosis iridis							S		
39. Sensory retinal detachment						S			
40. Serous elevation overlying mass in retina							U		
41. Shifting subretinal fluid							U	S	
42. Splitting of the neurosensory retina		U							
43. Subretinal hemorrhages							S		
44. Tortuosity of retinal vessels	U								
45. Uveitis							U		
46. Vitreal hemorrhage						S	S		S
47. Vitreous cells	S								
48. Vitreous green or yellow and liquid						U			
49. Yellow macular deposits						U			
Laboratory Data									
1. A scan									U
2. B scan	U					U	U		U
3. 32 P test							U		U
4. Fluorescein angiography									U

R = rarely; S = sometimes; and U = usually.

Single White Lesion of Retina

1. *Amelanotic melanoma
2. Astrocytoma of tuberous sclerosis
3. Degeneration of retinal pigment epithelium
4. Diktyoma
5. Glioma of optic nerve
6. Hamartomas of the optic disc of retinitis pigmentosa
7. Metastatic or direct extension of a tumor
8. Neurofibroma of von Recklinghausen syndrome
9. *Retinoblastoma
10. **T. canis*

Nicholson DH, Green WR, eds. *Pediatric ocular tumors*. New York: Masson, 1981.

Robertson DM. Hamartomas of the optic disc with retinitis pigmentosa. *Am J Ophthalmol* 1972;74:526-531.

Pale Fundus Lesions

1. Generalized pallor
 - A. Albinism—photophobia; defective vision; absence of pigment in iris, retina, and choroid
 - B. Chediak-Higashi syndrome (oculocutaneous albinism with recurrent infections)
 - C. Waardenburg syndrome (embryonic fixation syndrome)
 - D. Choroideremia—rare; night blindness; contraction of visual fields; degeneration of pigment epithelium in periphery with exposure of choroidal vessels
 - E. Myopia—thinning of retina and choroidal crescent at disc
 - F. Retinal ischemia
 1. Occlusion of retinal arteries (see p. 457)
 2. Spasm of retinal arteries—angiospasm: quinine, lead poisoning, migraine, or Raynaud disease
 3. Anemia
 - G. *Vascular retinopathies—hypertension, edema, hemorrhages, swelling of disc
 - H. Leukemia
 - I. The lipidoses
 1. Congenital, rare
 2. Infantile (Tay-Sachs disease)
 3. Late infantile—(Jansky-Bielschowsky syndrome)—2 to 4 years of age
 4. Juvenile—(Spielmeyer-Vogt syndrome)—5 to 8 years of age; optic atrophy
 5. Adult—(Kufs disease)—15 to 25 years of age; eyes may be normal or show some pigmented macular changes
 - J. Gaucher disease (glucocerebroside storage disease)
 - K. Hereditary dystrophic lipidosis (Fabry disease)
 - L. Hyperlipemia
 1. Diabetes—rare, yellowish retinal and choroidal vessels
 2. Essential hyperlipemic xanthomatosis—rare, yellowish retinal and choroidal vessels
 - M. Oguchi disease
2. Localized pale areas
 - A. Medullated nerve fibers (see p. 507)
 - B. *Retinopathy of prematurity

- C. Localized retinal edema
 - 1. Inflammation
 - 2. Trauma
 - 3. Vascular lesions
- D. Retinal detachment and schisis (see p. 487)
- E. *Retinoblastoma
- F. Coats disease (retinal telangiectasia)
- G. Coloboma (see p. 450-451)
- H. Normal fundus features—pale streaks mark site of ciliary nerves
- I. Atrophic areas—diathermy, light coagulation, or cryosurgery
- J. Scattered retinal exudates
 - 1. Preretinal—severe posterior uveitis; discrete white spots, often most marked along vessels adjacent to a patch of choroiditis
 - 2. Retinal
 - a. Purtscher compression syndrome—cotton-wool spots
 - b. Fat emboli
 - c. Hemangiomas—yellow exudates
 - d. *Hypertensive retinopathy—cotton-wool and hard exudates
 - e. Toxemia of pregnancy
 - f. Hypotensive retinopathy
 - g. Pulseless disease (Takayasu syndrome)
 - h. Arterial occlusion
 - i. Blood loss—cotton-wool spots
 - j. Anemia (all types)
 - k. Leukemia
 - l. Purpura
 - m. Macroglobulinemia (Waldenström syndrome)
 - n. Hodgkin disease—soft exudates
 - o. *Diabetes—cotton-wool and hard exudates
 - p. Hypercholesterolemia—lipid deposits
 - q. Systemic lupus erythematosus (disseminated lupus erythematosus)
 - r. Dermatomyositis—cotton-wool spots
 - s. Polyarteritis nodosa (Kussmaul disease)
 - t. Scleroderma (progressive systemic sclerosis)
 - u. Vitamin A deficiency—small white spots along course of retinal vessels
 - v. Retinal capillaritis—yellowish white spots in substance of retina
 - w. Leber congenital retinal aplasia—bilateral blindness, multiple white specks
 - x. Female carrier of retinitis pigmentosa—brilliant silvery reflex with shining yellow spots deep to retinal vessels
 - 3. Dystrophic conditions
 - A. Gyrate atrophy—rare, irregular atrophic areas with visual defects and night blindness
 - B. Choroidal sclerosis—rare, diffuse peripapillary or central choroidal atrophy with larger choroidal vessels prominent
 - C. Infarction or occlusion of ciliary arteries—rare, embolism (air, fat), injury, atrophic area with prominent choroidal vessels
 - D. Pseudoinflammatory macular dystrophy—rare, fourth to sixth decades, central edema, hemorrhage and exudate, bilateral and symmetric

- E. Helicoid peripapillary chorioretinal atrophy—rare, congenital and adult forms, star-shaped atrophic areas radiating from disc
- F. Retinitis punctata albescens—rare, onset in second and third decades, multiple discrete whitish dots which may appear crystalline, night blindness and field defects in progressive type
- G. Fundus flavimaculatus—rare, onset in second and third decades, yellow flecks deep in the retina
- H. Geographic choroiditis—rare, map-like pigmentary disturbance at posterior pole or more widespread over posterior fundus
- I. Doyne honeycomb dystrophy—rare; middle age and older; drusen at posterior pole, with pigmentary or cystoid macular changes
- J. Progressive bifocal chorioretinal atrophy—atrophy temporal to disc, extending later; night blindness in late stage

Ballantyne AJ, Michaelson IC. *Textbook of the fundus of the eye*, 3rd ed. Baltimore: Williams & Wilkins, 1981.

Bloome MA, Garcia CA. *Manual of retinal and choroidal dystrophies*. East Norwalk, CT: Appleton-Century-Crofts, 1981.

Perkins ES, Dobree JH. *The differential diagnosis of fundus conditions*. St. Louis: CV Mosby, 1972.

Medullated Nerve Fibers

In this condition, an opaque white patch is usually adjacent to and may cover the disc; it is localized to one sector of the disc and peripapillary or arcuate with a peripheral, feathered edge.

1. *Isolated finding
2. Autosomal-recessive or -dominant inheritance
3. Associated with the following:
 - A. Aplasia of macula
 - B. Coloboma of optic nerve or choroid (see p. 555-556)
 - C. Conus of disc
 - D. Cranial dysostosis (oxycephaly, dolichocephaly, brachycephaly, and craniofacial dysostosis)
 - E. Hyaloid remnants
 - F. Macular colobomas (see p. 450)
 - G. Myopia
 - H. *Neurofibromatosis

Ballantyne AJ, Michaelson IC. *Textbook of the fundus of the eye*, 3rd ed. Baltimore: Williams & Wilkins, 1981.

Pigmented Fundus Lesions

1. Diffuse pigmentation
 - A. Negroid fundus—accentuation of fundus pigmentation
 - B. Melanosis bulbi—rare, pigmentation of external eye and fundus
 - C. Nevus of Ota
 - D. Waardenburg syndrome (embryonic fixation)
2. Single pigmented lesions
 - A. Flat lesions
 1. Benign melanoma—bluish, gray, or black lesion
 2. Pigmented scar—patch of dense pigment, usually atrophic area in center

3. Fuchs dark spot—dark spot in macular region
 4. *Macular degeneration (exudate, age-related)
- B. Raised lesions
1. Simple detachment (see p. 487)
 - a. Macular, such as in central serous retinopathy
 - b. Associated with uveitis, such as that associated with Vogt-Koyanagi-Harada syndrome
 - c. Hemorrhagic macrocyst
 2. *Malignant melanoma—raised pigmented lesion with secondary detachment, abnormal vessels
 3. Choroidal hemorrhage—trauma, spontaneous in patients with vascular disease, high myopia
 4. *Exudative macular lesion—common, old age, subretinal exudate
 5. Hemangioma of choroid—rare, raised grayish tumor near disc, secondary detachment later
 6. *Metastatic tumor—flat tumor with little pigment, primary in breast, or lung
 7. Chorioretinitis
 8. Foreign body
 9. Coats disease (retinal telangiectasia)
3. Multiple pigmented lesions
- A. Scattered focal lesions
1. *Congenital melanosis—cat's-paw patches of pigment in one sector of fundus (may be part of Gardner syndrome)
 2. Postinflammatory—flat pigment with areas of atrophy
 3. Hypertensive retinopathy—hypertensive vascular changes with scattered pigmentation
 4. Siegrist streaks—rare, chain of pigment spots along sclerosed choroidal vessel
 5. Paravenous retinochoroidal atrophy—paravenous pigmentation with chorioretinal atrophy
 6. Incontinentia pigmenti (Bloch-Sulzberger syndrome)
 7. Chorioretinal scars from cryosurgery
- B. Widely disseminated pigmentary changes
1. Genetic conditions
 - a. Typical retinitis pigmentosa—attenuation of retinal vessels, optic atrophy (myopia, posterior polar cataract, keratoconus)
 - b. Atypical retinitis pigmentosa—rare, little or no pigment, pigment in clumps
 - c. Retinitis pigmentosa syndromes
 - i. Cockayne syndrome (dwarfism with retinal atrophy and deafness)
 - ii. Hallgren syndrome (retinitis pigmentosa-deafness-ataxia syndrome)
 - iii. Kearns syndrome (ophthalmoplegic retinal degeneration syndrome)
 - iv. Laurence-Moon-Biedl syndrome (retinitis pigmentosa polydactyly-adiposogenital syndrome)
 - v. Leber congenital retinal aplasia syndrome

- vi. Lignac-Fanconi syndrome (cystinosis syndrome)
- vii. Myotonic dystrophy syndrome (dystrophia myotonica syndrome)
- viii. Pelizaeus-Merzbacher syndrome (aplasia axialis extracorticalis congenital)
- 2. Infectious conditions—secondary retinitis pigmentosa
 - a. Syphilis (congenital)—pepper-and-salt pigmentation, interstitial keratitis
 - b. Syphilitic neuroretinitis—rare, retinitis pigmentosa
 - c. Rubella—cataract, secondary retinitis pigmentosa (nonprogressive)
 - d. Vaccinia—rare, retinitis pigmentosa, history of vaccination
- 3. Metabolic Disturbances
 - a. Refsum syndrome (phytanic acid storage disease)
 - b. Bassen-Kornzweig syndrome (familial hypolipoproteinemia)
- 4. Toxic conditions, such as chloroquine, phenothiazine derivatives; usually central pigmentation; cornea and lens change
- 4. Ciliary body and choroid
 - A. Tumors
 - 1. Hemangioma
 - 2. Malignant melanoma
 - 3. *Metastatic carcinoma, such as that from the lungs, breast, testis, kidney, prostate gland, bladder
 - 4. Nevus
 - 5. Neurilemmoma
 - 6. Neurofibroma
 - B. Detachment—serous or hemorrhagic
 - C. *Lymphoma and leukemias
 - D. Peripheral giant cysts
- 5. Vitreous body
 - A. Hemorrhage
 - B. Abscess
- 6. Staphyloma of sclera

Perkins ES, Dobree JH. *The differential diagnosis of fundus conditions*. St. Louis: CV Mosby, 1972.

Zinn K, Marmor M, eds. *The retinal pigment epithelium*. Cambridge, MA: Harvard University Press, 1979.

Cholesterol Emboli of Retina (Hollenhorst Plaques)

Bright-yellow plaques are often observed at bifurcation of arterioles, indicative of generalized atherosclerosis, and should signal the ophthalmologist to measure retinal artery pressures and refer the patient for general medical evaluation.

- 1. Abdominal aortic aneurysms
- 2. *Aortic stenosis
- 3. Arteriography showing occlusions in one or more cervical arteries
- 4. Atrial fibrillation
- 5. Bleeding duodenal or gastric ulcer
- 6. *Bruits in one or both carotid arteries
- 7. *Calcification of internal carotids (Doppler ultrasonography)
- 8. Congestive heart failure

9. Coronary heart disease with myocardial infarct or angina
10. *Diabetes mellitus
11. New or old strokes or transient attacks of cerebral ischemia
12. Peripheral atherosclerosis obliterans, popliteal or femoral aneurysms
13. Renal artery occlusions
14. *Retinal arterial occlusions
15. Torsion and calcification of aorta (roentgenogram)
16. Vocal cord paralysis (aortic arch aneurysm)

Pfaffenbach DD, Hollenhorst RW. Morbidity and survivorship of patients with embolic cholesterol crystals in the ocular fundus. *Am J Ophthalmol* 1973;75:66-72.

Wylie EJ, Ehrenfeld WK. *Extracranial occlusive cerebrovascular disease: diagnosis and management*. Philadelphia: WB Saunders, 1970.

Retinal Microemboli

1. Platelet fibrin—mural or “tail” thrombus in carotid occlusion
2. *Cholesterol-lipid-eroding atheroma in carotid bifurcation
3. Calcific or fibrinoid
 - A. Calcific valvular disease dislodged spontaneously following cardiac catheterization, or angiography, or prolapse of mitral valve
 - B. Rheumatic heart disease
 - C. Myocardial disease
 - D. Septic emboli
4. Foreign bodies
 - A. Silicone or cloth particles covered cardiac valves
 - B. Talc or cornstarch emboli from drug addicts
 - C. Mercury
 - D. Secondary to retrobulbar or intranasal methyl prednisolone acetate
5. Tumors
 - A. Cardiac myxomas
 - B. Metastatic tumors including malignant melanomas and breast carcinomas
6. Fat emboli from fracture of the long bones
7. Air emboli from crushing injuries of the chest

Fraunfelder FT, Roy FH. *Current ocular therapy*, 5th ed. Philadelphia: WB Saunders, 2000.

Williams IM, et al. Brain and retinal microemboli during cardiac surgery. *Ann Neurol* 1991;30:736-737.

Lipemia Retinalis (Arterioles and Venules Similar in Color and Appearing Orange-Yellow to White)

1. Primary hyperlipoproteinemia
 - A. Type I—familial fat-induced hyperlipoproteinemia (hyperchylomicronemia)
 - B. Type III—familial hyperbetalipoproteinemia and hyperprebetalipoproteinemia (carbohydrate-induced hyperlipemia)
 - C. Type IV—familial hyperprebetalipoproteinemia (carbohydrate-induced hyperlipemia)
 - D. Type V—familial hyperchylomicronemia with hyperprebetalipoproteinemia (mixed hyperlipemia)
2. *Diabetes mellitus with hyperlipemia
3. Secondary hyperlipoproteinemia

- A. Biliary obstruction
- B. Chronic pancreatitis
- C. Chronic renal failure
- D. Coats disease in adults (retinal telangiectasia)
- E. Glycogen storage disease
- F. Hypergammaglobulinemia
- G. Hypothyroidism (cretinism)
- H. Idiopathic hypercalcemia
- I. Insulin-deficient diabetes mellitus (Willis disease)
- J. *Malignant neoplasms
- K. Nephrotic syndrome (lipoid nephrosis)
- L. Progressive lipodystrophy

Spaeth GL. Ocular manifestations of the lipidoses. In: Tasman W, ed. *Retinal diseases in children*. New York: Harper & Row, 1971.

Hemorrhagic or Serous Exudates Beneath Pigment Epithelium

1. Angioid streaks (see p. 526-529)
2. Best macular degeneration (vitelliruptive macular dystrophy)
3. Coats disease (retinal telangiectasia)
4. Doyne honeycomb macular degeneration
5. *Histoplasmosis (histoplasmosis choroiditis)
6. *Macular drusen in age-related macular degeneration
7. Myopia
8. Solid neoplasms
9. Trauma

Gitter KA, et al. Traumatic hemorrhagic detachment of retinal pigment epithelium. *Arch Ophthalmol* 1968;79:729-732.

Retinal Vascular Tumors and Angiomatosis Retinae Syndromes

1. Associated with pheochromocytoma
2. Blue rubber bleb nevus syndrome (Bean syndrome)
3. Bonnet-Dechaune-Blanc syndrome (neuroretinal angiomatosis syndrome)
4. Cavernous retinal hemangioma—intraretinal angiomas
5. *Coats disease (retinal telangiectasia)
6. Gorlin syndrome
7. Racemose angioma—with arteriovenous anomalies of central nervous system (Wyburn-Mason syndrome)
8. Retinal telangiectasis (Leber military aneurysms)—telangiectasia retinae of Reese
9. Sturge-Weber syndrome (meningocutaneous syndrome)
10. *von Hippel-Lindau syndrome (retinocerebral angiomatosis retinae)

Crompton JL, Taylor D. Ocular lesion in the blue rubber nevus syndrome. *Ophthalmology* 1981;65:133-137.

Diagnostic tables

	Retinal Telangiectasia	Cavernous Retinal Hemangioma	Wyburn Mason Syndrome	Coats' Disease	Von Hippel-Lindau Syndrome	Sturge-Weber Syndrome	Pheochromocytoma
History							
1. Bilateral	S		S	S	S		
2. Congenital	U	U	R	U	R	U	
3. Greater in males	S	S		S			
4. Occurs during second to third decades					U		
5. Occurs before fourth decade			U				
6. Occurs during fourth to sixth decades							U
7. Onset during first decade of life	U	U		U			
Physical Findings							
1. Third, fourth, and sixth nerve palsies			S				
2. Angiomatosis of iris					S		
3. Choroidal hemangioma						U	
4. Conjunctival telangiectasia					S		
5. Glaucoma	R			S	S	S	
6. Optic atrophy							
7. Papilledema			S				U
8. Port-wine lid stain						S	
9. Ptosis			R				
10. Pulsatile exophthalmos			S				
11. Retinal hemorrhage	U		S	U	S		S
12. Soft exudates of retina	S		S	S	S		S
13. Telangiectatic retinal vessels	U	U		U	S	U	S
14. Total retinal detachment	R			U	S	S	
15. Uveitis	R			S			
Laboratory Data							
1. Computed tomographic scan of head			U				
2. Cerebral angiography			U		S	R	
3. Fluorescein angiography	S	S	U	S	U	S	S
4. Ocular ultrasound	R	S	R	U	U	U	U
5. Urinary catecholamine and vanillylmandelic acid							U
6. Visual field test	S	S	U	S	U	S	S

R = rarely; S = sometimes; and U = usually.

Retinal vascular tumors

	<i>Purtscher Retinopathy</i>	<i>Commotio Retinae</i>	<i>Traumatic Asphyxia</i>	<i>Fat Embolism</i>
Type of trauma	Chest compression	Local	Chest	Fractures
Accompanying signs	None	None	Cyanosis	Chest, cerebral, and cutaneous signs
Onset of systemic picture	None	None	Immediate	Symptom-free, 48-hour interval
Initial vision	Variable	20/200	Variable	Occasionally reduced
Duration of loss of vision	Several weeks	Days	Several weeks	Several weeks
Ultimate vision	Normal	Normal	Variable	Normal
External eye	Normal	Contused	Hemorrhage	Normal or petechiae
Fundus picture	Exudates and hemorrhage	Retinal edema	Normal or hemorrhage	Exudate, edema, and hemorrhages
Onset of fundus abnormalities	Within 1 to 2 days	A few hours	Immediate or a few hours	After 1 to 2 days

Ballantyne AJ, Michaelson IC. *Textbook of the fundus of the eye*, 3rd ed. Baltimore: Williams & Wilkins, 1981.

Traumatic retinopathies

Retinal “Sea-Fans”

These are vasoproliferative lesions with a characteristic fan-shaped appearance, also called a “parachute” lesion.

1. Aortic arch syndrome (pulseless disease)
2. Carotid-cavernous fistula (carotid artery syndrome)
3. *Central and branch retinal vein occlusion (see p. 468)
4. Chronic myelocytic leukemia
5. *Diabetes mellitus
6. Eales disease (periphlebitis)
7. Facioscapulohumeral muscular dystrophy (FSH [facio scapulo numeral] syndrome)
8. Incontinentia pigmenti I (Block-Sulzberger syndrome)
9. Familial exudative vitreoretinopathy (Criswick-Schepens syndrome)
10. Hemoglobin C trait
11. Leukemia
12. Long-standing retinal detachment
13. Lupus erythematosus
14. Macroglobulinemia
15. Multiple sclerosis
16. Polycythemia vera (erythremia)
17. *Retinopathy of prematurity
18. Sarcoidosis syndrome
19. *Sickle cell disease
20. Talc and cornstarch emboli
21. Uveitis, including pars planitis

Gurwin EB, et al. Retinal telangiectasis in facioscapulohumeral muscular dystrophy with deafness. *Arch Ophthalmol* 1985;103:1695-1707.

Nover A. *The ocular fundus: methods of examination and typical findings*, 4th ed. Philadelphia: Lea & Febiger, 1981.

Retinal Vessels Displaced Nasally

1. Axial myopia
2. *Glaucoma
3. Inflammation
4. Trauma

Ballantyne AJ, Michaelson IC. *Textbook of the fundus of the eye*, 3rd ed. Baltimore: Williams & Wilkins, 1981.

Nover A. *The ocular fundus: methods of examination and typical findings*, 4th ed. Philadelphia: Lea & Febiger, 1981.

Peripheral Fundus Lesions

1. Pale raised lesions
 - A. Vitreous opacities—white fluffy or discrete opacities, associated with pars planitis or sarcoid uveitis
 - B. Retinopathy of prematurity—retinal edema and dense white lesions with neovascularization
 - C. Toxocariasis (nematode ophthalmia syndrome)—vitreous opacities with peripheral granuloma
 - D. Leprosy (Hansen disease)—peripheral exudates with anterior uveal involvement
 - E. Vitreoretinal dystrophies—bands in vitreous with retinoschisis or retinal detachment
 - F. Angiomatosis—retinal tumor with enlarged, feeding vessels
 - G. *Retinoblastoma—raised, creamy-white, fluffy lesion without inflammatory signs
2. Flat lesions
 - A. Coloboma—pale area with pigmented edge in region of fetal cleft
 - B. Chorioretinitis
 1. Disseminated, congenital syphilis—pepper-and-salt or larger confluent lesions
 2. Toxoplasmosis—pigmented scars of old lesions
 3. Cytomegalic inclusion disease—localized chorioretinitis or general peripheral infiltration
 4. *Histoplasmosis—peripheral punched-out lesions with or without pigmentation
 - C. Peripheral degenerations
 1. Senile changes—of eyes older than years of age, depigmented areas with pigmented margins (cobblestone degeneration)
 2. Secondary pigmentary degeneration—peripheral pigmentary changes similar to senile type or to retinitis pigmentosa
 3. Cystoid degeneration—multiple cystic spaces and thin areas in peripheral retina
 4. *Lattice degeneration—lace work of white lines with depigmented and pigmented patches
 5. Cystinosis (cystine storage aminoaciduria dwarfism syndrome)—granular rings of pigment in periphery of fundus, similar to cobblestone degeneration
 - D. Equatorial linear pigment disturbance
 1. Ophthalmomyiasis internal
 2. Histoplasmosis syndrome
 - E. Retinitis
 1. *Acute retinal necrosis
 2. *Cytomegalovirus retinitis

3. Dark raised lesions
 - A. Choroidal detachment (see p. 532-535)
 1. Spontaneous—slowly progressive detachment, no inflammatory signs
 2. *Postoperative—intraocular operation; particularly for cataract and glaucoma; shallow anterior chamber; leaking wound
 3. Exudative
 - a. Inflammatory—shallow anterior chamber, myopia, and peripheral detachment
 - b. Vascular—nephritis, hypertension, toxemia of pregnancy, polyarteritis nodosa, leukemia
 - c. *Tumors—intraocular tumors; tumors of orbit and lacrimal gland
 - d. Traumatic—contusion injuries, perforating wounds, hypotony, anterior chamber may be shallow or deep if perforation occurs posteriorly
 - B. Exudative retinal detachment (see p. 487)
 1. *Secondary to general disease with retinopathy—hypertension, toxemia of pregnancy, leukemia, dysproteinemia, polyarteritis nodosa, rickettsial arteritis, venous congestion, talc and cornstarch emboli
 2. Secondary to local disease of the eye—inflammatory signs with exudative detachment, Harada disease, sympathetic ophthalmitis, scleritis, tenonitis, choroidal tumor, and ophthalmomyiasis
 - C. Simple detachment—myopia in two thirds of patients, trauma, may follow cataract extraction or discission for congenital cataract
 - D. Cysts
 1. Ciliary body—larger cysts usually push iris forward; rarely, cyst extends backward to be seen ophthalmoscopically
 2. Pars plana—may enlarge and appear as a multilocular reddish-brown cyst
 - E. Scleral indentation—retinal detachment operation
 - F. Neoplasms of ciliary body
 1. Benign epithelioma—brown spot to 2 mm in diameter on surface of ciliary body
 2. *Other tumors—diktyoma, leiomyoma, reticulosos, neurofibroma, malignant melanoma, rare, usually present as a mass protruding through the root of iris; may cause glaucoma; dark bulge seen ophthalmoscopically; lens changes adjacent to tumor
 - G. Neoplasms of choroid
 1. Congenital melanosis—cat's-paw patches of pigment in one sector of fundus
 2. Choroidal nevus—flat, bluish gray or black lesion
 3. *Malignant melanoma—raised, pigmented lesion with secondary detachment
 4. Secondary metastatic—rare, primary lesion in breast, lung, and so on
4. Vascular lesions
 - A. Periphlebitis (Eales disease) common; young adults; sheathing of peripheral veins; hemorrhages in new vessels and later retinal detachment (see p. 487)
 - B. *Perivasculitis secondary to uveitis—perivasular infiltration, particularly in pars planitis, sarcoidosis, Behçet disease, and toxoplasmosis
 - C. Systemic diseases
 1. Rickettsia—engorgement of veins, retinal edema, hemorrhages, and exudates

2. Multiple sclerosis (disseminated sclerosis)—sheathing of veins (see p. 468)
3. Polyarteritis nodosa (necrotizing angiitis)—hemorrhages, exudates, and serous detachment of retina (see p. 488)
4. Tuberculin or BCG inoculation—rare, sheathing of peripheral veins with hemorrhages
5. *Sickle cell retinopathy (Herrick syndrome)—dilatation of peripheral veins, hemorrhages, and connective tissue sheets in periphery; new vessel formation

Mason GI. Bilateral ophthalmomyiasis interna. *Am J Ophthalmol* 1981;91:65-70.

Perkins ES, Dobree JH. *The differential diagnosis of fundus conditions*. St. Louis: CV Mosby, 1972.

Tasman W, Shields JA. *Disorders of the peripheral fundus*. New York: Harper & Row, 1980.

Retinal Disease Associated with Corneal Problems

1. Abdominal typhus (enteric fever)—corneal ulcer, retinal detachment, central retinal artery emboli
2. Acanthamoeba—keratitis, pannus, corneal ring abscess, retinal perivasculitis
3. African eyeworm disease—keratitis, central retinal artery occlusion, macular hemorrhages
4. Amyloidosis—amyloid corneal deposits, corneal dystrophy, retinal hemorrhages
5. Anderson-Warburg syndrome (oligophrenia-microphthalmos syndrome)—corneal opacification, malformed retina with retina pseudotumors
6. Angioedema (hives)—central serous retinopathy, corneal edema
7. *Anterior segment ischemia syndrome—corneal edema midperiphery retinal hemorrhages
8. Apert syndrome (acrodysplasia)—exposure keratitis, retinal detachment
9. Arteriovenous fistula—bullous keratopathy, retinal hemorrhages
10. Aspergillosis—corneal ulcer, keratitis, retinal hemorrhages, retinal detachment
11. Atopic dermatitis—keratoconus and retinal detachment
12. Avitaminosis C—retinal hemorrhages, keratitis, corneal ulcer
13. Bacillus cereus—ring abscess of cornea, necrosis of retina
14. Bang disease (brucellosis)—keratitis, chorioretinitis, macular edema
15. Behçet syndrome (dermatostomata-ophthalmic syndrome)—keratitis, posterior corneal abscess, retinal vascular changes
16. Bietti disease (Bietti marginal crystalline dystrophy)—marginal corneal dystrophy, retinitis punctate albescens
17. Candidiasis—keratitis, corneal ulcer, retinal atrophy, retinal detachment
18. *Carotid artery syndrome—corneal ulcer, loss of corneal sensation, retinal edema, engorgement of retinal veins
19. Chickenpox (varicella)—corneal ulcer, corneal opacity, retinitis, hemorrhagic retinopathy
20. Chloroquine—corneal epithelial pigmentation, macular lesions
21. Chronic granulomatous disease of childhood—keratitis, destructive chorioretinal lesions
22. Cockayne syndrome (dwarfism with retinal atrophy and deafness)—pigmentary degeneration, band keratopathy, corneal dystrophy

23. Crohn disease (granulomatous ileocolitis)—marginal corneal ulcers, keratitis, macular edema, macular hemorrhages
24. Cryoglobulinemia—deep corneal opacities, venous stasis
25. Cystinosis (aminoaciduria)—crystals in cornea and pigment in retina
26. Dengue fever—keratitis, corneal ulcer, retinal hemorrhages
27. Diffuse keratoses syndrome—corneal nodular thickening in the stroma worse in fall, retinal phlebitis
28. Diphtheria—keratitis, corneal ulcer, central artery occlusion
29. Disseminated lupus erythematosus (Kaposi-Libman-Sacks syndrome)—keratitis, keratoconjunctivitis sicca, corneal ulcer, central retinal vein occlusion, retinal detachment
30. Ehlers-Danlos syndrome (cutis hyperelastica)—keratoconus, and retinitis pigmentosa
31. Electrical injury—corneal perforation, retinal edema, retinal hemorrhages, pigmentary degeneration, retinal holes, dilatation of retinal veins
32. Fabry disease (diffuse angiokeratosis)—whorl-like changes in cornea, central retinal artery occlusion, tortuosity of retinal vessels
33. Goldscheider syndrome (epidermolysis bullosa)—bullous keratitis with opacities, retinal detachment
34. Gronblad-Strandberg syndrome (systemic elastodystrophy)—angioid streaks of the retina, macular hemorrhages, retinal detachment, keratoconus
35. Hamman-Rich syndrome (alveolar capillary block syndrome)—keratomalacia ischemic retinopathy, cystic macular changes
36. Heerfordt syndrome (uveoparotid fever)—band keratopathy, retinal vasculitis
37. Hennebert syndrome (luetec otitic nystagmus syndrome)—interstitial keratitis, disseminated syphilitic chorioretinitis
38. Histiocytosis X (Hand-Schüller-Christian syndrome)—retinal hemorrhage, retinal detachment, bullous keratopathy, corneal ulcer, pannus
39. Hodgkin disease—keratitis, retinal hemorrhages
40. Hollenhorst syndrome (chorioretinal infarction syndrome)—hazy cornea, serous retinal detachment, pigmentary retinopathy
41. Hunter syndrome (MPS II)—splitting or absence of peripheral Bowman membrane, stromal haze, pigmentary retinal degeneration, narrowed retinal vessels
42. Hurler-Scheie syndrome (MPS IH-S)—corneal clouding, pigmentary retinopathy
43. Hurler syndrome (gargoylism)—diffuse corneal haziness, retinal pigmentary changes, megalocornea, retinal detachment
44. Hydatid cyst (echinococcosis)—keratitis, abscess of cornea, retinal detachment, retinal hemorrhages
45. Hyperlipoproteinemia—arcus juvenilis, lipemia retinalis, xanthomata of retina
46. Hyperparathyroidism—band keratopathy, vascular engorgement of retina
47. Hypovitaminosis A—keratomalacia with perforation, corneal opacity, retinal degeneration
48. Idiopathic hypercalcemia (blue-diaper syndrome)—band keratopathy, optic atrophy, papilledema
49. Indomethacin—corneal deposits, reduced retinal sensitivity
50. Influenza—keratitis, retinal hemorrhage
51. Japanese River fever (typhus)—keratitis, retinal hemorrhages
52. Juvenile rheumatoid arthritis (Still disease)—band keratopathy, macular edema
53. Kahler disease (multiple myeloma)—crystalline deposits of cornea, central retinal artery occlusion, retinal microaneurysms

54. Kussmaul disease (periarteritis nodosa)—retinal detachment, pseudoretinitis pigmentosa, corneal ulcer
55. Leber tapetoretinal dystrophy syndrome (retinal aplasia)—keratoconus, salt-and-pepper or “bone corpuscle” pigmentation, yellowish brown or gray macular lesions
56. Lubarsch-Pick syndrome (primary amyloidosis)—amyloid corneal deposits, retinal hemorrhages
57. *Lymphogranuloma venereum disease (Nicolas-Favre disease)—keratitis, pannus, corneal ulcer, keratoconus, tortuosity of retinal vessels, retinal hemorrhages
58. Marfan syndrome (arachnodactyly dystrophia mesodermalis congenita)—keratoconus, retinitis pigmentosa
59. Meckel syndrome (dysencephalia splanchnocystic syndrome)—sclerocornea, microcornea, retinal dysplasia
60. Meningococemia—keratitis, retinal endophlebitis
61. Mikulicz-Radeski syndrome (dacryosialoadenopathy)—keratoconjunctivitis, retinal candlewax spots
62. ML IV (mucopolipidosis IV)—corneal clouding, corneal opacities, retinal atrophy
63. Morbilli (measles-rubeola)—keratitis, corneal ulcer, pigmentary retinopathy, central retinal artery occlusion
64. Mucormycosis (phycomycosis)—corneal ulcer, striate keratopathy, retinitis, central retinal artery thrombosis
65. Mycosis fungoides syndrome (malignant cutaneous reticulosis syndrome)—keratoconjunctivitis, retinal edema, retinal hemorrhage
66. Myotonic dystrophy syndrome—corneal epithelial dystrophy, loss of corneal sensitivity, tapetoretinal degeneration, macular red spot, macular degeneration, chorioretinitis
67. *Neurofibromatosis (von Recklinghausen syndrome)—nodular swelling nerves, hamartoma of retina
68. Norrie disease (atrophia oculi congenita)—malformation of sensory cells of retina, corneal nebulae
69. Oculodental syndrome (Peters syndrome)—corneoscleral staphyloma, megalocornea, corneal marginal opacities, macular pigmentation
70. Onchocerciasis syndrome—punctate keratitis, sclerosing keratitis, chorioretinitis, retinal degeneration
71. Paget syndrome (osteitis deformans)—corneal ring opacities, retinal hemorrhages, pigmentary retinopathy, macular changes resembling Kuhnt-Junius degeneration
72. Phenothiazine—epithelial and endothelial pigment, retinal pigmentation
73. Pierre Robin syndrome (micrognathia-glossoptosis)—retinal disinsertion, megalocornea
74. Plasma lecithin (cholesterol acyltransferase deficiency)—corneal stromal opacities, retinal hemorrhages
75. Porphyria cutanea tarda—keratitis, retinal hemorrhages, cotton-wool spots, macular edema
76. Postvaccinial ocular syndrome—corneal vesicles, and marginal ulcers, chorioretinitis, central serous retinopathy, central retinal vein thrombosis
77. Progressive systemic sclerosis—marginal corneal ulcers with cicatrization, cotton-wool spots, retinal hemorrhages
78. Radiation—corneal ulcer, punctate keratitis, keratoconjunctivitis sicca, retinal hemorrhage, macular degeneration, macular holes with vascularization
79. *Refsum syndrome (phytanic acid oxidase deficiency)—band keratopathy, retinitis pigmentosa

80. Relapsing fever—interstitial keratitis, retinal hemorrhage
81. Relapsing polychondritis—corneal ulcer, retinal detachment, retinal artery thrombosis, keratoconjunctivitis sicca
82. Renal failure—cotton-wool spots, band keratopathy
83. Rendu-Osler syndrome (hereditary hemorrhagic telangiectasis)—intermittent filamentary keratitis, small retinal angiomas, retinal hemorrhages
84. Retinal disinsertion syndrome—bilateral keratoconus, retinal detachment
85. *Retinoblastoma—corneal neovascularization, retinal tumor
86. Rothmund syndrome (telangiectasia-pigmentation cataract syndrome)—corneal lesions, retinal hyperpigmentation
87. Rubella syndrome (Gregg syndrome)—microcornea, pigmentary retinal changes
88. Sabin-Feldman syndrome—microcornea, chorioretinitis or atrophic degenerative chorioretinal changes
89. Sanfillipo-Good syndrome (mucopolysaccharidosis III)—slight narrowing of retinal vessels, acid mucopolysaccharide deposits in cornea.
90. *Schaumann syndrome (sarcoidosis syndrome)—mutton fat keratitic precipitates, keratitis sicca, band-shaped keratitis, inflammatory retinal exudates
91. Scheie syndrome (MPS I-S)—diffuse to marked corneal clouding, tapetoretinal degeneration
92. Schwartz syndrome (glaucoma associated with retinal detachment)—retinal detachment, microcornea
93. Shy-Gonatas syndrome (orthostatic hypotension syndrome)—keratopathy, corneal ulcer, lattice-like white opacities in the area of Bowman membrane, retinal pigmentary degeneration
94. Smallpox—keratitis, congenital corneal clouding, chorioretinitis
95. Stannus cerebellar syndrome (riboflavin deficiency)—corneal vascularization, superficial diffuse keratitis, corneal opacities, brownish retinal patches
96. Stickler syndrome (hereditary progressive arthrophthalmopathy)—keratopathy, chorioretinal degeneration, total retinal detachment
97. Sturge-Weber syndrome (neurooculocutaneous angiomatosis)—retinal detachment, increased corneal diameter with cloudiness
98. *Syphilis (acquired lues)—keratitis, retinal hemorrhages, retinal proliferation
99. *Temporal arteritis syndrome (Hutchinson-Horton-Magath-Brown syndrome)—retinal detachments, narrowing of retinal vessels, central retinal artery occlusion, corneal hypesthesia
100. Trisomy 13 (Patau syndrome)—malformed cornea, retinal dysplasia
101. *Tuberculosis—keratitis, pannus, corneal ulcer, retinitis
102. Ullrich syndrome (dyscraniopygophalangy)—cloudy cornea, corneal ulcers, chorioretinal coloboma
103. Ultraviolet radiation—photokeratitis, band keratopathy, herpes simplex keratitis, recurrent corneal erosions, retinal degeneration
104. Vaccinia—keratitis, pannus, corneal perforation, central serous retinopathy, pseudoretinitis pigmentosa
105. van Bogaert-Scherer-Epstein (primary hyperlipidemia)—arcus juvenilis of the cornea, lipid keratopathy, retinopathy with yellowish deposits
106. Vitreous tug syndrome—vitreous strands attached to corneal wound or scar, circumscribed retinal edema, posterior retinal detachment
107. von Gierke disease (glycogen storage disease type I)—corneal clouding, discrete nonelevated, yellow flecks in macula

108. Waardenburg syndrome (embryonic fixation syndrome)—microcornea, cornea plana, hypopigmentation and hypoplasia of retina
109. Wagner syndrome (hyaloideoretinal degeneration)—corneal degeneration, band-shaped keratopathy, hyaloideoretinal degeneration, narrowing of retinal vessels, retinal detachment, avascular preretinal membranes
110. Waldenström syndrome (macroglobulinemia syndrome)—crystalline corneal deposits, keratoconjunctivitis sicca, retinal venous thrombosis, retinal microaneurysms, cotton-wool spots
111. Weil disease (leptospirosis)—keratitis, retinitis
112. Werner syndrome (progeria of adults)—bullous keratitis, paramacular retinal degeneration
113. Wiskott-Aldrich syndrome (sex-linked draining ears, eczematoid dermatitis, bloody diarrhea)—corneal ulcers, retinal hemorrhages
114. Yersiniosis—corneal ulcer, retinal hemorrhages
115. Zellweger syndrome (cerebrohepatorenal syndrome)—corneal opacities, narrowing of retinal vessels, retinal holes without detachment, tapetoretinal degeneration
116. Zieve syndrome (hyperlipemia hemolytic anemia-icterus syndrome)—cloudy cornea, corneal ulcers, retinal lipemia

Arffa RC. *Grayson's disease of the cornea*, 3rd ed. St. Louis: Mosby-Yearbook, 1991.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Retinal Lesions Associated with Deafness

1. Alport syndrome (hereditary familial congenital hemorrhagic nephritis)
2. Alström disease—retinitis pigmentosa
3. Choroideremia, obesity, and congenital deafness
4. Cockayne syndrome (dwarfism with retinal atrophy and deafness)
5. Dialinas-Amalric syndrome (deaf-mutism-retinal degeneration syndrome)
6. *Harada syndrome (Vogt-Koyanagi-Harada syndrome)
7. Hallgren syndrome (retinitis pigmentosa-deafness-ataxia syndrome)
8. Hunter syndrome (MPS II)
9. Laurence-Moon-Bardet-Biedl syndrome (retinitis pigmentosa-polydactyly adiposogenital syndrome)
10. Norrie disease—mental retardation, X-linked retinal malformation, and hearing loss
11. *Refsum syndrome (phytanic acid storage disease)
12. Retinal vessel changes, muscular dystrophy, mental retardation, and hearing loss
13. Rubella (German measles)—cardiac disorders, cataract, salt-and-pepper pigmentation
14. Sanfilippo syndrome (MPS III, autosomal recessive)
15. *Syphilis—acquired or congenital
16. Usher syndrome (hereditary retinitis pigmentosa—deafness syndrome)
17. Waardenburg syndrome (embryonic fixation syndrome)

Ayazi S. Choroideremia obesity, and congenital deafness. *Am J Ophthalmol* 1981;92:63-69.

Millay RH, et al. Ophthalmologic and systemic manifestations of Alström's disease. *Am J Ophthalmol* 1986;102:482-490.

Subretinal Fibrosis

1. Central serous chorioretinopathy
2. Long-standing rhegmatogenous retinal detachment

3. Proliferative vitreoretinopathy
4. Vogt-Koyanagi-Harada disease

Kuo IC, et al. Subretinal fibrosis in patients with Vogt-Koyanagi-Harada disease. *Ophthalmology* 2000;107:1721-1728.

Rathinam SR, et al. Vogt-Koyanagi-Harada syndrome after cutaneous injury. *Ophthalmology* 1999;106:635-638.

Epiretinal Membranes—Membranes that Grow on the Inner Surface of the Retina

1. *After retinal photocoagulation, cryotherapy, or reattachment of retina
2. Following blunt or penetrating injuries
3. *Idiopathic
4. Nonproliferative retinal vascular disorders
5. *Proliferative retinopathies
6. Rhegmatogenous retinal detachment (see p. 468)
7. Sickle cell disease, including sickle cell C, sickle cell S, and sickle cell B with thalassemia
8. Vitreous hemorrhage (see p. 424)

Carney MD, Jampol LM. Epiretinal membranes in sickle cell retinopathy. *Arch Ophthalmol* 1987;105:214-217.

Cherfan GM, et al. Nuclear sclerotic cataract after vitrectomy for idiopathic epiretinal membranes causing macular pucker. *Am J Ophthalmol* 1991;111:434-438.

Lansing MB, et al. The effect of pars plana vitrectomy and transforming growth factor-beta without epiretinal membrane peeling on full-thickness macular holes. *Ophthalmology* 1993;100:871-872.

Linear Streaks Pattern in Fundus

1. *Angioid streaks (see p. 526-529)
2. Bird-shot retinochoroidopathy
3. Choroidal rupture
4. Demarcation lines
5. *Presumed ocular histoplasmosis syndrome—peripheral, parallel to equator
6. Migrating parasites
 - A. Botfly larvae
 - B. Trematodes
7. *Retinal and choroidal detachment
8. *Snail-track configuration of lattice degeneration

Fountain JA, Schloegel TF. Linear streaks of the equator in the presumed ocular histoplasmosis syndrome. *Arch Ophthalmol* 1981;99:246.

Yellow-Orange Lesions of Subretinal Fundus

1. Acute inflammatory lesions of pigment epithelium, choriocapillaris, and choroid
2. *Detachment of retinal pigment epithelium
3. Isolated pocket of subretinal fluid
4. Subretinal fluid following scleral buckling procedure

Avirs LR, Hilton GF. Lesions simulating serous detachments of the pigment epithelium. *Arch Ophthalmol* 1980;98:1427-1429.

Lobes LR, Grand MG. Subretinal lesions following scleral buckling procedure. *Arch Ophthalmol* 1980;98:680-683.

Talc Retinopathy—Drug Addicts who Inject Drugs Intravenously

1. Optic disc neovascularization (see p. 562-563)
2. Peripheral retinal neovascularization (see p. 514)
3. Vitreous hemorrhage (see p. 424)

O'Brien RJ, Schroedl BL. Talc retinopathy. *Optom Vis Sci* 1991;68:54-57.

Tse DT, Ober RR. Talc retinopathy. *Am J Ophthalmol* 1980;90:624-640.

Crystalline Retinopathy

1. Bietti crystalline dystrophy (Bietti disease)
2. Chronic retinal detachment
3. Cystinosis (cystine storage-aminoaciduria-dwarfism syndrome)
4. Gyrate atrophy with hyperornithemia (ornithine ketoacid aminotransferase deficiency)
5. Hyperoxaluria (oxalosis)
6. Nitrofurantoin therapy
7. Retinal pathology
8. Sjögren-Larson syndrome (oligophrenia-ichthyosis-spastic diplegia syndrome)
9. *Talc emboli
10. *Tamoxifen retinopathy

Ahmed I, et al. Crystalline retinopathy associated with chronic retinal detachment. *Arch Ophthalmol* 1998;116:1449-1454.

Ibanez HE, et al. Crystalline retinopathy associated with long-term nitrofurantoin therapy. *Arch Ophthalmol* 1994;112:304-305.

Willemsen MA, et al. Juvenile macular dystrophy associated with deficient activity of fatty aldehyde dehydrogenase in Sjögren-Larsson syndrome. *Am J Ophthalmol* 2000;130:782-789.

Pulfrich Stereo-Illusion Phenomenon

This condition involves central serous elevation of the macula with abnormal latency of the visual-evoked potential.

1. *Optic nerve disease—demyelinating optic neuropathy
2. Media opacity
3. Anisocoria
4. Macular disease

Greenberg HS. Visual-evoked responses. *J Clin Neuro Ophthalmol* 1981;1:273.

Hofeldt AJ, et al. Pulfrich stereo-illusion phenomenon in serous sensory retinal detachment of the macula. *Am J Ophthalmol* 1985;100:576-580.

Parafoveal Telangiectasia

This type of retinal microvascular anomaly involves the parafoveal capillary network as well as immediately adjacent vascular bed and is best demonstrated by fluorescein angiography.

1. *Carotid artery obstruction
2. *Diabetes mellitus usually bilateral
3. *Idiopathic
4. Localized form of Coats disease, usually unilateral
5. Small-branch venular occlusion

6. Small retinal capillary hemangioma, usually unilateral
7. Roentgenogram, irradiation

Gass JD, Oyakawa T. Idiopathic juxtafoveal telangiectasia. *Arch Ophthalmol* 1982;100:769.

Millay RH, et al. Abnormal glucose metabolism and parafoveal telangiectasia. *Am J Ophthalmol* 1986;102:363-370.

Hereditary Pediatric Retinal Degenerations

1. Acquired
 - A. Juvenile retinitis pigmentosa
 - B. Early onset retinitis pigmentosa
 1. Autosomal dominant
 2. Autosomal recessive
 3. X-linked recessive
2. Congenital
 - A. Complicated Leber congenital amaurosis
 1. Multiple neurologic abnormalities
 2. Others
 3. Saldino-Mainzer syndrome
 4. Senior-Loken syndrome (tubulointerstitial nephropathy syndrome)
 5. Zellweger syndrome (cerebrohepatorenal syndrome of Zellweger)
 - B. Uncomplicated Leber congenital amaurosis

Foxman SG, et al. Classification of congenital and early onset retinitis pigmentosa. *Arch Ophthalmol* 1985;103:1502-1506.

Nickel B, Hoyt CS. Leber's congenital amaurosis. *Arch Ophthalmol* 1982;100:1089-1092.

Reticular Pattern of Dark Lines in Fundus

1. Granular pigmentary pattern of the peripheral fundus
2. Multiple drusen of peripheral fundus
3. Reticular degeneration of the pigment epithelium (peripheral)
4. Reticular pattern dystrophy of posterior fundus (Sjögren reticular dystrophy, Mesker macroreticular dystrophy, pattern dystrophy of the retinal pigment epithelium, Doyne honeycomb reticular degeneration)
5. Tapetochoroidal hypopigmentation

Gass JDM, et al. Drusen and disciform macular detachment and degeneration. *Arch Ophthalmol* 1973;90:206-217.

Lewis H, et al. Reticular degeneration of the pigment epithelium. *Ophthalmology* 1985;92:1485-1495.

Retinal Pigment Epithelial Tears

This condition involves a flat, uniform, crescent-shaped area of exposed choroid of pigment epithelial elevation.

1. Acute retinal necrosis
2. *After laser photocoagulation
3. Along margin of retinal detachment
4. *Associated with pigment epithelial detachments
5. Spontaneous
6. Trauma

Fox GM, Blumenkranz M. Giant retinal pigment epithelial tears in acute retinal necrosis. *Am J Ophthalmol* 1993;116:302-306.

Levin LA, et al. Retinal pigment epithelial tears associated with trauma. *Am J Ophthalmol* 1991;112:396-400.

Schoeppner G, et al. The risk of fellow eye visual loss with unilateral retinal pigment epithelial tears. *Am J Ophthalmol* 1989;108:683-685.

Retinal Pigment Epithelial Folds

1. Choroidal folds (see p. 530)
2. Pigment epithelial detachment
3. Retinal pigment epithelial tears (rips)
4. Retinal striae
5. *Subretinal neovascularization

Schatz H, et al. Retinal pigment epithelial folds associated with retinal pigment epithelial detachment in macular degeneration. *Ophthalmology* 1990;97:658-665.

Schoeppner G, et al. The risk of fellow eye visual loss with unilateral retinal pigment epithelial tears. *Am J Ophthalmol* 1989;108:683-685.

Mizuo Phenomenon

This condition involves a change of color of the fundus from red in the dark-adapted state to golden immediately or shortly after the onset of light.

1. Oguchi disease
2. X-linked juvenile retinoschisis
3. X-linked recessive cone dystrophy

de Jong PTV, et al. Mizuo phenomenon in X-linked retinoschisis. *Arch Ophthalmol* 1991;109:1104-1108.

Mizuo GA. A new discovery in dark adaptation in Oguchi's disease. *Acta Soc Ophthalmol Jpn* 1913;17:1148-1150.

Usui T, et al. Mizuo phenomenon observed by scanning laser ophthalmoscopy in a patient with Oguchi disease. *Am J Ophthalmol* 2000;130:359-361.

White-Dot Fovea

This is a ring-like lesion in the macula with numerous confluent white dots arranged in a ring around the foveal margin.

1. Crystalline retinopathies
2. Epiretinal membrane with pseudohole
3. Gunn dots
4. Macular halo syndrome
5. Macular hole
6. Niemann-Pick disease
7. Vitreomacular traction syndrome

16

Choroid

Angioid Streaks

Angioid streaks are ruptures of Bruch membrane characterized ophthalmoscopically by brownish lines surrounding the disc and radiating toward the periphery.

1. AC hemoglobinopathy
2. Acanthocytosis (abetalipoproteinemia, Bassen-Kornzweeg syndrome)
3. Acromegaly
4. Acquired hemolytic anemia
5. Beta thalassemia minor
6. Calcinosis
7. Chronic congenital idiopathic hyperphosphatasemia
8. Chronic familial hyperphosphatemia
9. Cardiovascular disease with hypertension
10. Cooley anemia
11. Diffuse lipomatosis

12. Dwarfism
13. Epilepsy
14. Facial angiomatosis
15. Fibrodysplasia hyperelastica (Ehlers-Danlos syndrome)
16. François dyscephalic syndrome (Hallermann-Streiff syndrome)
17. Hemochromatosis
18. Hereditary spherocytosis
19. Hypercalcinosis
20. Idiopathic thrombocytic purpura
21. Lead poisoning
22. Myopia
23. Neurofibromatosis
24. Ocular melanocytosis
25. Optic disc drusen
26. Osteitis deformans (Paget disease)
27. Pituitary tumor
28. Previous choroidal detachment
29. *Pseudoxanthoma elasticum (Grönblad-Strandberg syndrome)
30. Senile (actinic) elastosis of the skin
31. Sickle cell disease (Herrick syndrome)
32. Sturge-Weber syndrome
33. Trauma
34. Tuberous sclerosis
35. Thrombocytopenic purpura

Aessopos A, et al. Angioid streaks in sickle-thalassemia. *Am J Ophthalmol* 1994;117:589-592.

Mansour AM. Is there an association between optic disc drusen and angioid streaks? *Graefes Arch Clin Exp Ophthalmol* 1992;230:595-596.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Choroidal Folds

Choroidal folds are folds of the posterior pole, at the level of the choroid, with Hruby lens and pattern of alternating light lines on fluorescein angiography.

1. Choroidal tumor, such as a melanoma
2. Disciform degeneration
3. Exophthalmos
4. Graves disease (Basedow syndrome)
5. High hyperopia
6. Idiopathic—no underlying pathologic state
7. Infection of paranasal sinuses
8. Long-standing orbital inflammation
9. Massive cranioorbital hemangiopericytoma
10. *Ocular hypotony (see p. 325)
11. Orbital mass
12. Papilledema (see p. 593)
13. Posteriorly located choroidal detachment
14. Postoperative condition, such as scleral buckle
15. Primary retinal detachment
16. Subretinal neovascularization
17. Uveitis

Lesions Confused with Malignant Melanoma

1. Ciliary body and choroid
 - A. Angioid streaks (see p. 526)
 - B. Choroiditis
 - C. Coats disease
 - D. Detachment
 - E. Leukemia and lymphoma
 - F. Limited choroidal hemorrhage
 - G. Lymphoid hyperplasia
 - H. Nodular hyperplasia
 - I. Sclerouveitis
 - J. Tumors
 1. Hemangioma
 2. Melanocytoma
 3. Meningioma
 4. Metastatic carcinoma, including lung
 5. Neurilemmoma
 6. Neurofibroma
 7. Neuroendocrine tumor
 8. Nevus
 9. Retinal oligodendroglioma
 - K. Uveal effusion

2. Optic-nerve head
 - A. Congenital crater
 - B. Melanocytoma
3. Retina
 - A. Chorioretinitis
 - B. Ciliary body and choroid
 - C. Disciform macular degeneration
 - D. Foreign body
 - E. Hemorrhagic macrocyst of retina
 - F. Lesions of pigment epithelium
 - G. Retinal detachment
 1. Macular
 2. More extensive
 - H. Retinoschisis
4. Scleral thickening as amyloidosis
5. Vitreous body
 - A. Abscess
 - B. Hemorrhages

Simon CK, et al. Bilateral uveal effusion associated with scleral thickening due to amyloidosis. *Arch Ophthalmol* 2000;118:1293-1295.

Choroidal Hemorrhage

1. Acute choroiditis
2. *After glaucoma filtering procedure (especially with Sturge-Weber syndrome)
3. Choroidal vascular aneurysm
4. Choroidal vascular sclerosis, such as senile macular degeneration with hemorrhage (disciform degeneration of the macula)
5. General diseases
 - A. Arteriosclerosis
 - B. Blood dyscrasias
 1. Leukemia
 2. Pernicious anemia
 3. Purpura
 4. Thrombocytopenia
 - C. Diabetes mellitus (Willis disease)
 - D. Ehlers-Danlos syndrome (fibrodysplasia elastica generalisata)
 - E. Paget disease (osteitis deformans)
 - F. Valsalva maneuver
6. Myopia—accompanied by choroidal atrophy
7. Papilledema—rare

Boker T, Steinmetz R. Hyperopia and choroidal neovascularization. *Ophthalmology* 1994;101:972.

Madreperla SA, et al. Choroidal hemangiomas. *Ophthalmology* 1997;104:1773-1779.

VanMeurs JC, van der Bosch WA. Suprachoroidal hemorrhage following a Valsalva maneuver. *Arch Ophthalmol* 1993;111:1025-1026.

Choroidal Detachment

Choroidal detachment can be differentiated from retinal detachment and tumor by its solid appearance, smooth surface, and appearance of normal retinal vessels with color unchanged and good transillumination.

1. *Acute ocular hypotony (see p. 325)
 - A. Myopia
 - B. Operative or perforating wounds, including those required for surgical treatment of cataract, glaucoma, grafting of cornea, and retinal detachment
 - C. Severe uveitis with severe visual loss, intense ocular pain, unusually low tension, and extremely deep anterior chamber in women
 - D. Yttrium-aluminum-garnet (YAG) laser cyclophotocoagulation
2. Inflammatory disease
 - A. Acute sinusitis
 - B. Chronic cyclitis
 - C. Harada disease (Vogt-Koyanagi-Harada syndrome)
 - D. Orbital abscess
 - E. Orbital pseudotumor
 - F. Scleritis and tenonitis
 - G. Sympathetic ophthalmia
3. Neoplastic disease
 - A. Intraocular tumor, such as metastatic or malignant melanoma
 - B. Leukemia
 - C. Orbital tumor
4. Spontaneous detachment associated with uveal effusion, such as nonrhegmatogenous retinal detachment, shifting subretinal fluid, and peripheral annular choroidal detachment affecting males almost exclusively
5. Trauma
 - A. Complication of scleral buckling retinal detachment surgery
 - B. Contusion of globe without perforation
 - C. Following perforation injury, including that because of perforating corneal ulcer
 - D. Phthisical eye with traction of organized inflammatory tissue
6. Vascular disease
 - A. Diabetes mellitus (Willis disease)
 - B. Disseminated intravascular coagulation
 - C. Hypertension
 - D. Leukemia
 - E. Multiple myeloma (Kahler disease)
 - F. Nephritis
 - G. Oral acetazolamide
 - H. Periarteritis nodosa (Kussmaul disease)
 - I. Syphilitic vascular disease
 - J. Toxemia of pregnancy

Diagnostic table

Choroidal detachment (solid appearance, smooth surface and normal retinal vessels with unchanged color)

	Inflammatory Disease as Harada Disease	Vascular Disease as Diabetes Mellitus	Neoplastic Disorder as Malignant Melanoma	Ocular Trauma as Blunt Trauma	Acute Ocular Hypotony	Spontaneous Detachment with Uveal Effusion as Nonrhegmatogenous Retinal Detachment
History						
1. Bilateral	U	U				
2. Common in males				U		U
3. Familial		U				
4. Japanese/Italian extraction	U					
5. Occurs in persons 11 to 40 years		S				
6. Occurs in young adults	U	U				
7. Ocular pain					S	
8. Surgery					U	
9. Virus infection	U					
10. Visual distortion			S			S
Physical Findings						
1. Acute diffuse exudative choroiditis	U					U
2. Cataracts	S		U		S	
3. Cyclodialysis cleft					S	
4. Corneal abrasions				S		
5. Corneal arcus		S				
6. Cotton-wool spots		U				
7. Choroidal folds					S	
8. Choroidal nevus			S			
9. Choroidal rupture				U	S	S
10. Decreased intraocular pressure				S	U	U
11. Endothelial corneal damage				S		
12. Extraocular muscle paralysis			S			
13. Exudative iridocyclitis	U					S
14. Glaucoma	U	S	S	S		
15. Hyphema				S		
16. Hypermetropia			U			
17. Increased lid pigmentation			S			
18. Iridodialysis				S		
19. Macular edema					S	
20. Macular hemorrhage	S					
21. Optic nerve atrophy		S	S	S		
22. Orbital mass			S			
23. Papilledema	U		S			
24. Phthisis bulbi	S					
25. Pigmentary retinopathy	U		S			
26. Pigmentary iris degeneration					S	
27. Pigmented/amelanotic choroidal mass			U			
28. Poliosis	U					
29. Recessed chamber angle				S		
30. Retinal detachment	U	S	U	S		U
31. Retinal edema	U					S
32. Retinal folds					U	

33. Retinal hemorrhage			S	S'		
34. Retinal microaneurysms		U				
35. Retinal vein occlusion		S				
36. Scleral rupture				S	S	
37. Shallow anterior chamber					S	
38. Subluxed lens				S		
39. Sympathetic ophthalmitis	U					
40. Uveitis	U					
41. Vitreous detachment				S		S
42. Vitreous hemorrhage			S	S		
43. Vitreous opacities	U					
44. White lashes	U					
Laboratory Data						
1. Abnormal blood sugar		U				
2. Computed tomographic scan of globe			S	S		
3. Fluorescein angiography	U	U	U	U		S
4. Phosphorus 32 uptake elevated			U			
5. Ultrasonography, globe	S		S	U	U	U

R = rarely; S = sometimes; and U = usually.

Conditions Simulating Posterior Uveitis or Choroiditis

1. Angioid streaks (see p. 526)
2. Central serous retinopathy
 - A. Central serous retinopathy and exudative chorioretinopathy associated with systemic vasculitis
 - B. Central serous retinopathy associated with crater-like holes in the optic disc
 - C. Choroidal
 - D. Chorioretinal
 - E. Retinal
3. Chorioretinopathy with hereditary microcephaly
4. Circinate retinopathy
5. Congenital macular dysplasia
6. Doyne homogeneous retinal degeneration
7. Drug-induced macular disease
 - A. Chloroquine (Aralen)
 - B. Indomethacin (Indocin)
 - C. Thioridazine (Mellaril)
8. Drusen because of the following:
 - A. Disease (vascular, inflammatory, or neoplastic)
 - B. Heredity (primary degeneration)
 - C. Senility
9. Fundus flavimaculatus
10. Helicoid peripapillary chorioretinal degeneration
11. Hemangioma of the choroid
12. Idiopathic hyperlipemia
13. Ischemic ocular inflammation
14. Ischemic optic neuropathy (vascular pseudopapillitis)
15. Jensen disease (juxtapapillary retinopathy)
16. Macular degeneration
17. Malignant melanoma
18. Metastatic carcinoma
19. Night-blinding retinochoroidopathies
 - A. Predominantly choroidal heredodegenerations
 1. Choroidal sclerosis
 2. Choroideremia
 3. Fuchs spot
 4. Gyrate atrophy of choroid
 5. Myopic retinopathy and choroidopathy
 - B. Predominantly tapetoretinal heredodegenerations
 1. Retinitis pigmentosa group
 2. Retinitis punctata albescens
20. Opacities of the macular retina
 - A. Cotton-wool patches (see p. 491-494)
 - B. Glial scars
 - C. Hemorrhage
 - D. Hemosiderin
 - E. Inspissated exudates
 - F. Lipoid deposits

- G. Pigment epithelium
 - 1. Pigment epithelium migration
 - 2. Pigment epithelium secretion
 - 3. Pigment epithelium seeds
 - 4. Proliferation in response to demand for phagocytes
 - 5. Proliferation with formation of cuticular masses
 - 6. Proliferation with metaplasia
 - 7. Simple proliferation
- 21. Peripheral chorioretinal atrophy
- 22. Pigmentary perivenous–chorioretinal degeneration
- 23. Primary familial amyloidosis
- 24. Relapsing polychondritis
- 25. Retinal perforation during surgical treatment for strabismus
- 26. Retinal vasculitis
 - A. Involvement of central retinal vein (papillophlebitis)
 - B. Retinal periarteritis
 - C. Retinal periphlebitis
- 27. Retinoblastoma
- 28. Sickle cell retinopathy
- 29. Solar burns
- 30. Sorsby pseudoinflammatory (hemorrhagic) macular degeneration
- 31. Vitreous hemorrhage (see p. 421-422)

Choroiditis (Posterior Uveitis)

- 1. Anterior and posterior uveitis
 - A. Herpes viruses
 - B. Peripheral uveitis (cyclitis)
 - C. Sarcoidosis syndrome (Schaumann syndrome)
 - D. Syphilis (acquired lues)
 - E. Toxoplasmosis
 - F. Tuberculosis
 - G. Unknown
 - H. Vogt-Koyanagi-Harada syndrome (uveitis-vitiligo-alopecia-poliosis syndrome)
- 2. Acquired immunodeficiency syndrome (AIDS)
- 3. Acute posterior multifocal placoid pigment epitheliopathy
- 4. Behçet syndrome
- 5. Bird-shot choroidopathy
- 6. Candidiasis
- 7. Cat-scratch disease
- 8. Cryptococcosis
- 9. Cytomegalovirus inclusion disease
- 10. Coccidioidomycosis
- 11. Epstein-Barr virus
- 12. Lyme disease

13. Histoplasmosis
14. Multiple evanescent white dot syndrome
15. Multiple sclerosis
16. *Pneumocystis carinii*
17. Punctate inner choroidopathy
18. Sarcoidosis syndrome (Schaumann syndrome)
19. Serpiginous choroidopathy
20. Syphilis (acquired lues)
21. Systemic lupus erythematosus
22. Toxocariasis
23. *Toxoplasmosis
24. Unknown
25. Varicella zoster

Diagnostic table

<i>Symptomatology</i>	<i>Granulomatous Uveitis</i>	<i>Nongranulomatous Uveitis</i>	
		<i>Acute, Self-limited Insult</i>	<i>Chronic or Often Repeated Insult</i>
Anterior ocular changes	Sometimes epithelioid or "mutton-fat" keratotic deposits; often Koeppe nodules	Usually none	None in early irreversible in stage; terminal stages
Vitreous changes	Usually heavy vitreous blurring; heavy veil-like opacities	Slight to intense general blurring; fine muscae or string-like fibrinous opacities	Slowly increasing blue with heavy opacities in terminal stages
Retinal and subretinal edema	Usually slight or moderate and localized around exudates; intense only when there is a secondary allergic reaction	Marked and generalized, with blurring of neuro-retinal vascular bed	Low grade at onset; may become intense in later stages
Choroidal exudates	Heavy massive exudates—edges may be blurred by surrounding retinal and subretinal edema	No heavy massive exudates; occasionally localized areas of deeper infiltration	Great tendency to localized deep ill-defined infiltrates (lymphocyte, etc.)
Secondary retinal involvement	Almost invariable with retinal destruction	None or limited to pigment and neuroepithelium	None in early stage; irreversible in later stages with involvement of neuro-epithelium
Residual organic damage in retina and choroid	Heavy glial scars with massive pigment heaping which often surrounds the lesion	No fine granular changes in pigment epithelium but damage to neuroepithelium and occasionally superficial gliosis	Fine granular change in early stages; superficial gliosis in terminal stages

Schlaegel TF. *Essentials of uveitis*. Boston: Little, Brown, 1983.

Characteristics of granulomatous and nongranulomatous inflammation in posterior uvea

Chorioretinitis Juxtapapillaris

This large, irregular opaque mass that protrudes three to four diopters and obscures the retinal vessels is seen near the disc and may be confused with acute optic neuritis or a tumor.

1. Acanthamoeba keratitis of fellow eye
2. Bird-shot retinochoroidopathy
3. *Coccidioides immitis*
4. Histoplasmosis
5. Sarcoidosis syndrome (Schaumann syndrome)
6. Syphilis (acquired lues)
7. Toxoplasmosis
8. Tuberculosis

Choroidal Neovascularization

Choroidal neovascularization comprises new vessel formation from choriocapillaris through a defect in the Bruch membrane as suggested by fluorescein angiography.

1. Choroidal neovascular ingrowth at the margin of the optic nerve head
 - A. Angioid streaks (see p. 526)
 - B. Hyaline bodies of optic nerve head
 - C. Idiopathic choroidal neovascularization
 - D. Macular drusen

Shields JA, et al. Adenoma of the retinal pigment epithelium simulating a juxtapapillary choroidal neovascular membrane. *Arch Ophthalmol* 2001;119:289-292.

Ischemic Infarcts of Choroid (Elschnig Spots)

When healed, these may show small, disseminated yellowish scars with central pigment deposits and may be associated with retinal separation when acute.

1. Chronic glomerulonephritis
2. Collagen disease, such as scleroderma
3. *Malignant hypertension
4. Toxemia of pregnancy

Klein BA. Ischemic infarcts of choroid (Elschnig spots). *Am J Ophthalmol* 1968;66:1069-1074.

Venecia G, et al. The eye in accelerated hypertension—Elschnig's spots in nonhuman primates. *Arch Ophthalmol* 1980;98:913.

Chorioretinal and Choriovitreous Neovascularization

This type of new vessel formation from choroid into the retina or vitreous usually occurs after photocoagulation or after any of the following:

1. Atrophic scars in the presumed ocular histoplasmosis syndrome
2. Central serous chorioretinopathy
3. *Diabetes mellitus (Willis disease)

4. Diseases of the retinal pigment epithelium
5. Eales disease (periphlebitis)
6. Leber syndrome (optic atrophy–amaurosis pituitary syndrome)
7. Sarcoidosis syndrome (Schaumann syndrome)
8. Sickle cell disease (Herrick syndrome)

Dizon-Moore RV, et al. Chorioretinal and choriovitreal neovascularization. *Arch Ophthalmol* 1981;99:842.

Uveal Effusion

Uveal effusion involves leaking of fluid from the choriocapillaris into the choroid or subretinal space or both.

1. Hydrostatic
 - A. Dural arteriovenous fistula
 - B. *Hypotony, wound leak
 - C. Nanophthalmos
2. Idiopathic
3. Inflammatory
 - A. After panretinal photocoagulation
 - B. HIV
 - C. Scleritis, infected scleral buckle
 - D. Systemic lupus erythematosus
 - E. Trauma, intraocular surgery
 - F. Uveitis, sympathetic ophthalmia, Harada disease

Uyama M, et al. Uveal effusion syndrome. *Ophthalmology* 2000;107:441-449.

Wisotsky BJ, et al. Angle closure glaucoma as an initial presentation of systemic lupus erythematosus. *Ophthalmology* 1998;105:1170-1172.

Choroid Coloboma

1. Aicardi syndrome
2. Basal cell nevus syndrome (Gorlin syndrome)
3. Cat-eye syndrome (partial G-trisomy)
4. CHARGE association among coloboma, heart anomaly, choanal atresia, retardation, genital and ear anomalies
5. Doubtful association
 - A. Crouzon syndrome (dysostosis craniofacialis)
 - B. Ellis-Van Creveld syndrome (chondroectodermal dysplasia)
 - C. Hallerman-Streiff syndrome (dyscephalic mandibulooculofacial)
 - D. Incontinentia pigmenti I (Block-Sulzberger syndrome)
 - E. Kartagener syndrome (bronchiectasis-dextrocardia-sinusitis)
 - F. Laurence-Moon-Bardet-Biedl syndrome (retinitis pigmentosa-polydactyl-adiposogenital syndrome)
 - G. Pierre Robin syndrome (micrognathia-glossoptosis syndrome)
 - H. Stickler syndrome (hereditary progressive arthro-ophthalmopathy)
 - I. Tuberous sclerosis (Bourneville syndrome)

6. Goldenhar syndrome (oculoauriculovertebral dysplasia)
7. Goltz syndrome (focal dermal hypoplasia syndrome)
8. Isolated, sporadic
9. Joubert syndrome with bilateral chorioretinal coloboma (coloboma, chorioretinal with cerebellar vermis aplasia)
10. Klinefelter syndrome (gynecomastia-aspermatogenesis syndrome)
11. Lenz microphthalmia syndrome
12. Linear sebaceous nevus syndrome
13. Median facial cleft syndrome
14. Meckel syndrome (dysencephalia splanchnocystic syndrome)
15. Retinal astrocytoma
16. Retinal dysplasia
17. Retinoblastoma
18. Rubinstein-Taybi syndrome (broad-thumbs syndrome)
19. Triploidy
20. *Trisomy (Edward syndrome)
21. Trisomy (Patau syndrome)
22. Turner syndrome
23. Warburg syndrome
24. 13q syndrome

Daufenbach DR, et al. Chorioretinal colobomas in a pediatric population. *Ophthalmology* 1998;105:1455-1458.

Choroidal Ischemia

This condition involves decreased choroidal perfusion demonstrated by fluorescein angiography.

1. Arteritic anterior ischemic optic neuropathy
2. Disseminated intravascular coagulation
3. *Hypertension, severe
4. Renal failure
5. Systemic lupus erythematosus
6. Toxemia of pregnancy
7. Thrombotic thrombocytopenic purpura

Kinyoun JL, Kalina RE. Visual loss from choroidal ischemia. *Am J Ophthalmol* 1986;101:650-656.

Slavin ML, Barondes MJ. Visual loss caused by choroidal ischemia preceding anterior ischemic optic neuropathy in giant cell arteritis. *Am J Ophthalmol* 1994;117:81-86.

Pars Planitis (Peripheral Uveitis)

In pars planitis, inferior exudates in the peripheral retina, ora, pars plana, and peripheral vitreous, vitreous ray and cells, posterior cortical cataract, perivasculitis, partial thrombosis of central retinal vein, glaucoma, peripheral retinal hemorrhages, and retinal detachment may be present.

1. Dental infection
2. Hereditary

3. *Idiopathic
4. Multiple sclerosis (disseminated sclerosis)
5. Nematodiasis
6. Rheumatic disease
7. Sarcoidosis syndrome (Schaumann syndrome)
8. Sinus infection
9. Streptococcal hypersensitivity
10. Syphilis (acquired lues)
11. Toxoplasmosis
12. Ulcerative colitis (inflammatory bowel disease)

Josephberg RG, et al. A fluorescein angiographic study of patients with pars planitis and peripheral exudation (snowbanking) before and after cryopexy. *Ophthalmology* 1994;101:262-266.

Phillips WB, et al. Pars planitis presenting with vitreous hemorrhage. *Ophthalmic Surg Lasers* 1993;24:630-631.

Diagnostic table

	<i>Chronicity</i>	<i>Vitreous Opacities</i>	<i>Retinal Edema</i>	<i>Fluorescein Leakage</i>	<i>Organized Vitreous</i>	<i>Distinguishing Features</i>
Acute nongranulomatous iritis	–	±	±	±	–	Acute red eye
Acute recurrent cyclitis	+	+	+	+	+	Localized area of inflammation in ciliary body
Nematode	+	+	+	+(?)	+	Nodular focus and dragged retina, one eye
Irvine-Gass syndrome	+	+	+	+	±	Usually postoperative
Behçet syndrome	+	+	+	+(?)	+	Retinal vasculitis
Peripheral toxoplasmosis	±	+	±	±	±	Localized area of inflammation
Sarcoidosis	+	+	+	+	+	Other ocular signs of sarcoidosis

Differential diagnosis of pars planitis

17

Optic Nerve

Blurred Optic-Nerve Heads

Ciliooptic Vein

This vein appears at the disc edge and dips into the optic nerve to anastomose with branches of the central retinal vein

1. Congenital
2. Neurofibromatosis (von Recklinghausen syndrome)
3. Sturge-Weber syndrome (meningocutaneous syndrome)

Zaret CR, et al. Cilio-optic vein associated with phakomatosis. *Ophthalmology* 1980;87:330-334.

Drusen of Optic Nerve

These white or yellow conglomerate, translucent bodies in the optic nerve may cause field defects.

1. Alagille syndrome
2. Alport syndrome (hereditary nephritis)
3. Angioid streaks (pseudoxanthoma elasticum; Grönblad-Strandberg syndrome)
4. Associated with corneal dystrophy
5. Diabetes mellitus (Willis disease)
6. Friedreich ataxia
7. Glaucoma
8. Hereditary—autosomal dominant
9. High myopia
10. Idiopathic
11. Meningioma (unusual)
12. Pituitary tumor (unusual)
13. Retinal vein occlusion
14. Retinitis pigmentosa
15. Systemic lupus erythematosus (SLE)
16. Status dysraphicus syndrome (Passow syndrome)
17. Syphilis (acquired lues)
18. Tuberous sclerosis (Bourneville syndrome)
19. Wilson disease (hepatolenticular degeneration)

Chern S, et al. Central retinal vein occlusion associated with drusen of the optic disc. *Ann Ophthalmol* 1991;23:66-69.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Fluid Enlargement of Retrobulbar Optic Nerve or Sheath (Demonstrated by Computed Tomographic Scanning and Echography)

1. Arachnoiditis
2. Basilar artery aneurysm
3. Bilateral temporal lobe cysts
4. Central retinal vein occlusion (see p. 468-472)
5. Facial trauma
6. Ilijejunal bypass
7. Occipital intradural arteriovenous malformation
8. Optic-nerve meningioma
9. Optic-nerve sheath cyst
10. Pseudotumor cerebri
11. Subdural hematoma
12. Trauma (intrasheath hemorrhage of optic nerve)
13. Uveal meningeal syndrome

Hupp SL, Glaser JS. Optic nerve sheath decompression. *Arch Ophthalmol* 1987;105:386-389.

Hyperemia of Optic Disc

1. Central retinal vein thrombosis (see p. 468-472)
2. Hemangioma
3. Hypermetropia

4. Hypertensive retinopathy
5. Ischemic optic neuropathy
6. Neovascularization
7. Optic neuritis (see p. 578)
8. Papilledema (see p. 593)
9. Polycythemia vera (Vaquez disease)
10. von Hippel-Lindau disease (retinocerebral angiomatosis)

Duke-Elder S, Scott GI. *System of ophthalmology*, vol 12. St. Louis: CV Mosby, 1971.

Ischemic Optic Neuropathy

The anterior form is occlusive disease of the optic-nerve head and retrolaminar region of the optic nerve; the posterior form is occlusion of one or more nutrient arteries to the rest of the optic nerve. Onset is usually sudden, with painless unilateral visual loss and visual-field defect.

1. Compression
 - A. Orbital hemorrhage (trauma)
 - B. Thyroid disease (Graves disease)
2. Drugs
 - A. Sumatriptan
 - B. Vigabatrin
3. Systemic diseases (often in combination)
 - A. Arteriosclerosis
 - B. Arrhythmia
 - C. Atherosclerosis
 - D. Cerebrovascular disease
 - E. Diabetes mellitus
 - F. Gastrointestinal ulcer
 - G. Hypercholesterolemia
 - H. Hyperhomocystinemia
 - I. Hyperparathyroidism
 - J. Hypertension, nocturnal hypotension
 - K. Ischemic heart disease
 - L. Sickle cell disease
 - M. Takayasu disease
4. Vasculitis
 - A. Allergic vasculitis
 - B. Buerger disease
 - C. Churg-Strauss syndrome (allergic granulomatosis and angiitis)
 - D. Collagen diseases, including polyarteritis nodosum and systemic lupus
 - E. Giant cell (temporal) arteritis
 - F. Postimmunization
 - G. Postviral vasculitis
 - H. Syphilis
5. Miscellaneous
 - A. Acute anemia

- B. Anemia combined with hypotension
- C. Carotid artery disease
- D. Fabry disease (angiokeratoma corporis diffusum)
- E. Hypertensive with peritoneal dialysis
- F. Low tension glaucoma
- G. Glucose-6-phosphate dehydrogenase deficiency
- H. Migraine
- I. Polycythemia vera
- J. Radiation
- K. Retinal artery occlusion
- L. Tobacco
- M. Various vascular disorders (e.g., cavernous sinus thrombosis)

Optic-Nerve Atrophy

1. Chromosome disorders
 - A. Angelman syndrome (happy puppet syndrome; microdeletion of chromosome 15q11-13)
 - B. Chromosome deletion (long arm) syndrome (de Grouchy syndrome)
 - C. Cri-du-chat syndrome (cat-cry syndrome; deletion of short arm of chromosome 5)
 - D. Patau syndrome (trisomy syndrome)
 - E. Subacute sclerosing panencephalitis (Dawson disease)
2. Demyelinating and degenerative diseases
 - A. Arylsulfatase A deficiency syndrome (ADL, metachromatic leukodystrophy)
 - B. Devic syndrome (optical myelitis)
 - C. Hereditary motor sensory neuropathy (HMSN I; Charcot-Marie-Tooth syndrome)
 - D. Hereditary optic atrophy (Behr syndrome)
 - E. Multiple sclerosis
3. Dermatologic disorders
 - A. Keratoderma palmaris et plantaris
 - B. McCune-Albright syndrome (fibrous dysplasia)
 - C. Naegeli syndrome (reticular pigmented dermatosis)
 - D. Porphyria cutanea tarda
 - E. Pseudoxanthoma elasticum (Grönblad-Strandberg syndrome)
 - F. Wrinkly-skin syndrome
4. Drugs, poisons, and vaccines, including the following:

acetophenazine	auranofin (?)	calcifediol
acetylsalicylic acid	aurothioglucose (?)	calcitriol
adrenal cortex injection	aurothioglycanide (?)	carbamazepine
aldosterone	barbital	carbon dioxide
allobarbitol	beclomethasone	carbromal
amobarbital	benzathine penicillin G	carphenazine
antimony lithium thiomalate	betamethasone	cephaloridine (?)
antimony potassium tartrate	bromide (?)	chloramphenicol (?)
antimony sodium tartrate	bupivacaine (?)	chlorprocaine (?)
antimony sodium thioglycollate	butabarbital	chloroquine
	butalbital	chlorpromazine
antipyrine	butallylonal	cholecalciferol
aprobarbital	butaperazine	cisplatin
aspirin	butethal	clindamycin
cocaine	mesoridazine	sodium salicylate
colchicine compounds	methaqualone(?)	stibocaptate
cortisone	metharbital	stibogluconate
cyclobarbitol	methdilazine	stibophen
cyclopentobarbital	methitural	sulfacetamide
danazol	methohexital	sulfachlorpyridazine
dapsone	methotrimeprazine	sulfacytine
desoxycorticosterone	methyl alcohol	sulfadimethoxine
dexamethasone	methylene blue	sulfamerazine
diatrizoate meglumine or sodium	methylprednisolone	sulfameter
	methypylon	sulfamethazine
diethazine	mitotane	sulfamethizole
ergocalciferol	nadolol(?)	sulfamethoxazole
ethambutol	nalidixic acid	sulfamethoxypridazine
ethopropazine	naproxen (?)	sulfanilamide
etidocaine (?)	oxyphenbutazone	sulfaphenazole
fludrocortisone	penicillamine	sulfapyridine
fluorometholone	pentobarbital	sulfasalazine
fluphenazine	perazine	sulfathiazole
fluprednisolone	pericyazine	sulfisoxazole
gentamicin	perphenazine	sulthiame
glutethimide	phenelzine (?)	talbutal
gold Au 198	phenobarbital	tamoxifen
gold sodium thiomalate (?)	phenoxymethyl penicillin	thiamylal
gold sodium thiosulfate (?)	phenylbutazone	thiethylperazine

heptabarbital	piperacetazine	thiopental
hexachlorophene	potassium penicillin G	thiopropazate
hexamethonium	potassium penicillin V	thiopropazine
hexethal	potassium phenethicillin	thioridazine
hexobarbital	prednisolone	tobramycin
hydrabamine phenoxymethyl	prilocaine (?)	tranlycypromine (?)
penicillin	primidone	
hydrocortisone	procaine penicillin G	triamcinolone
hydroxychloroquine	procaine (?)	trichloroethylene
ibuprofen	procarbazine	trifluoperazine
interferon		triflupromazine
iodine and iodine solutions and	prochlorperazine	trimeprazine
	promazine	tryparsamide
iodochlorhydroxyquin	promethazine	vaccines–influenza
iodoquinol	propiomazine	vinbarbital
isocarboxazid (?)	propoxycaïne (?)	vinblastine
isoniazid	quinine	vincristine
lidocaine (?)	radioactive iodides	vitamin A
medrysone	silicone	vitamin D (retinol)
mephobarbital	streptomycin	vitamin D ₂
		(ergocalciferol)
mepivacaine (?)	secobarbital	vitamin D ₃
		(cholecalciferol)
meprednisone	sodium	warfarin
	antimonylgluconate	

-
5. Endocrine
 - A. Cretinism (hypothyroidism)
 - B. Cushing syndrome (adrenocortical syndrome)
 - C. Diabetes mellitus
 - D. DIDMOAD (diabetes mellitus and insipidus with optic atrophy and deafness) syndrome; Wolfram syndrome, Marquardt-Loriaux syndrome)
 - E. Fröhlich syndrome (dystrophia adiposogenitalis)
 - F. Hyperparathyroidism
 - G. Hypophosphatasia (phosphoethanolaminuria)
 - H. Juvenile diabetes mellitus (Mauriac syndrome)
 - I. Pituitary gigantism syndrome (Launois syndrome)
 - J. Simmonds syndrome (hypopituitarism syndrome)
 - K. Retinohypophysis syndrome (Lijo Pavia-Lis syndrome)
 - L. Zollinger-Ellison syndrome (polyglandular adenomatosis syndrome)
 6. Granulomatoses
 - A. Sarcoidosis
 - B. Tuberculosis
 - C. Wegener syndrome (Wegener granulomatosis)
 7. Infectious
 - A. African eye-worm disease (loiasis)
 - B. Anthrax
 - C. Congenital cytomegalic inclusion disease
 - D. Congenital rubella syndrome (Gregg syndrome)
 - E. Cysticercosis
 - F. Deerfly fever (tularemia)
 - G. Encephalitis
 - H. Encephal meningitis
 - I. Echinococcosis (hydatid cyst)
 - J. Lyme disease (borreliosis, relapsing fever)
 - K. Malaria
 - L. Meningitis
 - M. Measles (morbilli)
 - N. von Mikulicz-Radecki syndrome (dacryosialoadenopathy)
 - O. Mumps (epidemic parotitis)
 - P. Mycoplasma pneumoniae
 - Q. Onchocerciasis syndrome (river blindness)
 - R. Rocky Mountain spotted fever
 - S. Syphilis (congenital or acquired)
 - T. Toxoplasmosis
 - U. Yellow fever
 8. Inherited
 - A. Congenital optic atrophy (autosomal dominant or recessive)
 - B. Jensen syndrome (opticoacoustic nerve atrophy with dementia; X-linked)
 - C. Juvenile optic atrophy (autosomal dominant)
 - D. Metaphyseal dysplasia, anetoderma and optic atrophy (autosomal recessive)
 - E. Myotonic dystrophy
 - F. Optic atrophy, cataract and neurologic disorder (dominant)
 - G. Optic atrophy, non-Leber type, early onset (X-linked)

- H. Optic atrophy, polyneuropathy, and deafness (X-linked)
 - I. Optic atrophy, spastic paraplegia syndrome (X-linked)
 - J. Optic atrophy, spastic paraplegia, dementia (autosomal dominant)
 - K. Optic atrophy, nerve deafness, and distal neurogenic amyotrophy (recessive)
 - L. Optic atrophy with demyelinating of central nervous system (autosomal dominant)
 - M. Optic atrophy hypoplasia, familial, bilateral (autosomal dominant)
13. Inherited metabolic disorders
- A. Leukodystrophies
 1. Adrenoleukodystrophy (ALD)
 2. Canavan disease (spongy degeneration of the nervous system)
 3. Cockayne syndrome
 4. Homocystinuria syndrome
 5. Krabbe disease
 6. Maple syrup urine disease
 7. Menkes disease (kinky-hair syndrome)
 - B. Peroxisome abnormalities
 1. Defective biogenesis:
 - a. Infantile Refsum syndrome (heredopathia atactica polyneuritiformis)
 - b. Neonatal ALD (adrenal cortical atrophy, patchy brain demyelination)
 - c. Zellweger syndrome (cerebrohepatorenal syndrome)
 2. Refsum syndrome (heredopathia atactica polyneuritiformis)
 3. Rhizomeric chondrodysplasia punctata
 4. Single enzyme deficiency
 - a. Primary hyperoxaluria type I
 - b. X-linked ALD
 - C. Storage disorders
 1. Lipidoses
 - a. Generalized gangliosidosis
 - i. Gangliosidosis GM2, type
 - ii. Generalized gangliosidosis GM type
 - iii. Juvenile gangliosidosis GM type
 - b. Sphingolipidoses (arylsulfatase A deficiency syndrome)
 - i. Arylsulfatase A deficiency syndrome (metachromatic leukodystrophy)
 - c. Late infant form: Greenfield disease
 - d. Adult form: Bogaert-Nijssen-Peiffer syndrome
 - e. Austin disease (multiple sulfatase deficiency)
 - f. Fabry disease (angiokeratoma corporis diffusum)
 - g. Krabbe disease (globoid cell leukodystrophy)
 - h. Niemann-Pick syndrome (essential lipoid histiocytosis)
 - i. Tay-Sachs syndrome (hexosaminidase deficiency)
 2. Glucose-phosphate dehydrogenase deficiency (von Gierke disease)
 3. Mucopolidoses IV (ML IV)
 4. Mucopolysaccharidoses (MPS) or lysosomal storage diseases
 - a. MPS I-H (Hurler syndrome; chondroosteodystrophy or lipochondrodystrophy)
 - b. MPS I-S (Scheie syndrome)

- c. MPS II (Hunter syndrome)
 - d. MPS III (Sanfilippo syndrome)
 - e. MPS IV (Morquio syndrome)
 - f. MPS VI (Maroteaux-Lamy syndrome)
5. Neural ceroid lipofuscinosis
- a. Infantile type: Haltia-Santavuori disease
 - b. Late infantile type: Jansky-Bielschowsky disease (internuclear ophthalmoplegia)
 - c. Juvenile type: Batten disease (Spielmeyer-Vogt-Sjögren syndrome; cerebroretinal degeneration)
6. Other disorders involving lipids
- a. Bassen-Kornzweig syndrome (familial hypolipoproteinemia)
 - b. Refsum syndrome (heredopathia atactica polyneuritiformis)
10. Local
- A. Aphakic cystoid macula edema (ACME; Irvine-Gass syndrome)
 - B. Bird-shot chorioretinopathy
 - C. Coats disease
 - D. Drusen of optic nerve
 - E. Glaucoma
 - F. Vascular occlusion
11. Mental and psychomotor deficiency, retardation
- A. Drummond syndrome (idiopathic hypercalcemia)
 - B. Familial dysautonomia (Riley-Day syndrome)
 - C. Hallervorden-Spatz syndrome
 - D. Hallgren syndrome (retinitis pigmentosa-deafness-ataxia syndrome)
 - E. Klopfer disease
 - F. Rubinstein-Taybi syndrome
12. Miscellaneous
- A. Albinism
 - B. Anemia
 - C. Arachnoidal adhesion (e.g., caused by tabes)
 - D. Bloch-Sulzberger disease (incontinentia pigmenti)
 - E. Bobble-head doll syndrome (massive dilatation of third ventricle)
 - F. Bonnet-Dechaume-Blanc syndrome (neuroretinoangiomas)
 - G. Brown-Sequard syndrome
 - H. Cerebellar ataxia (Louis-Bar syndrome)
 - I. Cerebral palsy
 - J. Cystic fibrosis syndrome
 - K. Foster-Kennedy syndrome (basal-frontal syndrome)
 - L. Histiocytosis X eosinophil granuloma (Hand-Schuller-Christian syndrome)
 - M. Incipient prechiasmal optic nerve compression syndrome
 - N. Laurence-Moon-Bardet-Biedl syndrome (retinitis pigmentosa-polydactyly-adiposogenital syndrome)
 - O. Leber syndrome
 - P. Oculodental syndrome (Peter syndrome)
 - Q. Optic cochleodental degeneration syndrome
 - R. Peliazeus-Merzbacher disease (aplasia axialis extracorticalis congenita)
 - S. Posthypoxic syndrome
 - T. Pseudotumor cerebri

- U. Rieger syndrome
 - V. Russell syndrome
 - W. Status dysraphicus syndrome (Passow syndrome)
 - X. Sphenomaxillary fossa syndrome (pterygopalatine fossa syndrome)
 - Y. Wagner disease (hereditary vitreoretinal degeneration)
13. Nutritional deficiency
- A. Avitaminosis B (Wernicke syndrome, beriberi)
 - B. Avitaminosis B (pellagra)
 - C. Garland syndrome (central nervous system deficiency)
 - D. (?) Infantile neuroaxonal dystrophy (possible vitamin E deficiency, Seitelberger disease II)
 - E. Kwashiorkor syndrome (hypoproteinemia syndrome)
 - F. (?) Oculoorogenital syndrome (avitaminosis B with possible avitaminosis A)
14. Orbital
- A. Hutchinson-Pepper syndrome (metastatic infraorbital neuroblastoma)
 - B. Rollet syndrome (orbital apex syndrome)
 - C. Superior orbital fissure syndrome (Rochon-Duvigneaud syndrome)
15. Rheumatoid
- A. von Bechterew-Stumpelld syndrome (ankylosing spondylitis)
 - B. Behçet disease (oculobuccogenital syndrome)
 - C. Polymyalgia rheumatica
 - D. SLE
16. Skeletal disorders
- A. Achondroplasia
 - B. Albers-Schonberg syndrome (osteopetrosis)
 - C. Anencephaly
 - D. Apert syndrome (acrocephalosyndactylism syndrome)
 - E. Brachmann-de Lange syndrome
 - F. Camurati-Engelmann syndrome (progressive diaphyseal dysplasia)
 - G. Chondrodystrophia calcificans congenita (Conradi syndrome)
 - H. Cloverleaf skull syndrome (Kleeblattschädel deformity)
 - I. Craniometaphyseal dysplasia (Pyle syndrome)
 - J. Craniostenosis
 - 1. Oxycephaly
 - 2. Plagiocephaly
 - 3. Scaphocephaly
 - 4. Trigonocephaly
 - K. Crouzon syndrome (craniofacial dysostosis)
 - L. Enchondromatosis syndrome (Ollier syndrome)
 - M. Generalized gangliosidosis GM type
 - N. Greig syndrome (hypertelorism ocularis)
 - O. Hallermann-Streiff-François syndrome (oculomandibulofacial dyscephaly)
 - P. Hutchinson-Gilford progeria syndrome (progeria)
 - Q. Marchesani syndrome
 - R. McCune-Albright syndrome (fibrosus dysplasia)
 - S. Metaphyseal dysplasia, anetoderma, and optic atrophy
 - T. Microcephaly
 - U. Osteogenesis imperfecta (van der Hoeve syndrome)
 - V. Paget syndrome (osteitis deformans)

- W. Primary hyperoxaluria type (osteodystrophy hydrocephalus)
- X. Zellweger syndrome (cerebrohepatorenal syndrome)
- 17. Trauma
 - A. Direct and indirect optic nerve trauma
 - B. Electrical injury
 - C. Mechanical injury/surgical trauma (orbital floor fracture, malar fractures, Krönlein lateral orbitotomy)
 - D. Ocular contusion
 - E. Optic-nerve evulsion
 - F. Radiation
- 18. Tumors
 - A. Craniopharyngiomas
 - B. Ectopic pinealomas
 - C. Gliomas
 - D. Hemangiomas
 - E. Meningiomas
 - F. Nasopharyngeal carcinomas
 - G. Neuroblastomas
 - H. Pituitary adenomas
 - I. Pseudo-Foster Kennedy syndrome
 - J. Pseudo-pseudo-Foster Kennedy syndrome
 - K. von Recklinghausen syndrome (neurofibromatosis)
 - L. Tumors extending into fourth ventricle and cerebellum causing papilledema
- 19. Vascular
 - A. Aneurysm of internal carotid artery (foramen lacerum syndrome)
 - B. Arteriosclerosis
 - C. Cavernous sinus thrombosis (Foix syndrome)
 - D. Giant cell (temporal arteritis)
 - E. Hollenhorst syndrome (chorioretinal infarction syndrome)
 - F. Kussmaul disease (necrotizing angiitis)
 - G. Occlusion of the carotid artery
 - H. Sickle cell disease (Herrick syndrome)
 - I. Takayasu syndrome (aortic arch syndrome)

Optic-Nerve Atrophy and Deafness

1. Adult form of arylsulfatase A deficiency (Bogaert-Nijssen-Peiffer syndrome; opticocochleodental degeneration)
2. Camuati-Engelmann syndrome (progressive diaphyseal dysplasia)
3. HMSN I (Charcot-Marie-Tooth syndrome)
4. Congenital rubella syndrome (German measles, Gregg syndrome)

5. Cockayne syndrome (dwarfism with retinal atrophy and deafness)
6. Craniometaphyseal dysplasia (Pyle syndrome)
7. DIDMOAD syndrome (optic atrophy, sensorineural deafness, diabetes mellitus and diabetes insipidus)
8. Dominant inheritance–congenital deafness and progressive optic nerve atrophy
9. Friedreich ataxia (optic atrophy, ataxia, and progressive hearing loss)
10. Generalized gangliosidosis GM type
11. Hallgren syndrome (retinitis pigmentosa-deafness-ataxia syndrome)
12. Juvenile diabetes mellitus
13. Krabbe syndrome (infantile globoid [II] cell leukodystrophy)
14. ML IV
15. MPS I-H (Hurler syndrome)
16. MPS II (Hunter syndrome)
17. MPS IV (Morquio syndrome)
18. (?) MPS (Maroteaux-Lamy syndrome)
19. (?) Niemann-Pick syndrome (essential lipid histiocytosis)
20. Osteogenesis imperfecta
21. Recessive: nerve deafness, optic atrophy, and distal neurogenic amyotrophy
22. Refsum syndrome (phytanic acid oxidase deficiency)
23. Rosenberg-Chutorian syndrome
24. Sylvester disease
25. Treft syndrome

Syndromes and Diseases Associated with Optic Atrophy

1. Achondroplasia
2. Acquired lues (syphilis)
3. African eye worm disease (loiasis)
4. Albers-Schonberg syndrome (osteopetrosis)
5. Albinism
6. Albright syndrome (fibrous dysplasia)
7. Anemia
8. Anencephaly
9. Aneurysm of internal carotid artery syndrome (foramen lacerum syndrome)
10. Anthrax
11. Apert syndrome (acrocephalosyndactylism syndrome)
12. Arachnoidal adhesion, including tabes
13. Arteriosclerosis
14. Arylsulfatase A deficiency syndrome (metachromatic leukodystrophy)
15. Avitaminosis B₂ (pellagra)
16. Bassen-Kornzweig syndrome (familial hypolipoproteinemia)
17. Batten-Mayou syndrome (cerebroretinal degeneration)
18. Behçet syndrome (oculobuccogenital syndrome)
19. Behr syndrome (optic atrophy-ataxia)
20. Bielschowsky-Jansky disease (internuclear ophthalmoplegia)

21. Bloch-Sulzberger disease (incontinentia pigmenti)
22. Bobble-head doll syndrome
23. Bonnet-Dechaume-Blanc syndrome (neuroretinoangiomas)
24. Brown-Marie syndrome (hereditary ataxia syndrome)
25. Brown-Séquard syndrome (lesion of spinal cord)
26. Carbon monoxide
27. Central nervous system deficiency—bitemporal pallor because of deficient diet (Garland syndrome)
28. Cerebral palsy
29. Cerebellar ataxia
30. Charcot-Marie-Tooth syndrome (progressive neuritic muscular syndrome)
31. Chondrodystrophia calcificans congenita (Conradi syndrome)
32. Chromosome deletion (long-arm) syndrome (de Grouchy syndrome)
33. Coats disease (retinal telangiectasia)
34. Cockayne syndrome (dwarfism with retinal atrophy and deafness)
35. Congenital cytomegalic inclusion disease
36. Congenital optic atrophy—autosomal dominant or recessive
37. Congenital syphilis
38. Craniometaphyseal dysplasia (Pyle syndrome)
39. Craniostenosis (including oxycephaly, scaphocephaly, trigonocephaly, and plagiocephaly)
40. Cretinism (hypothyroidism)
41. Cri-du-chat syndrome (cat-cry syndrome)
42. Crouzon syndrome (craniofacial dysostosis)
43. Cushing syndrome (adrenocortical syndrome)
44. Cystic fibrosis syndrome (fibrocystic disease of pancreas)
45. Cysticercosis
46. Dawson disease (subacute sclerosing panencephalitis)
47. Deerfly fever (tularemia)
48. de Lange syndrome (congenital muscular hypertrophy-cerebral syndrome)
49. Devic syndrome (optical myelitis)
50. Diabetes mellitus
51. Didmoad-Wolfram syndrome (diabetes mellitus and insipidus with optic atrophy and deafness)—autosomal recessive
52. Diencephalic syndrome (Penfield syndrome)
53. Disseminated lupus erythematosus (Kaposi-Libman-Sacks syndrome)
54. Dollinger-Bielschowsky syndrome (lipidosis)
55. Drugs, including the following:

acetophenazine	antimony sodium thioglycollate	bupivacaine (?)
allobarbitol		butabarbital
alseroxylon (?)	antipyrine	butalbital
aminosalicylate (?)	aprobarbital	butallylonal
aminosalicylic acid (?)	aspirin	butaperazine
amobarbital	barbital	butethal
amodiaquine	betamethasone	calcitriol
antimony lithium thiomalate	bromide (?)	carbromal
antimony potassium tartrate	bromisovalum	carphenazine
antimony sodium tartrate	broxyquinoline	chloramphenicol
chloroprocaine (?)	levothyroxine (?)	sodium antimonylgluconate
chloroquine	lidocaine (?)	sodium salicylate
chlorpromazine	liothyronine	stibocaptate
cholecalciferol	liotrix (?)	stibogluconate
clindamycin	medrysone	stibophen
cobalt (?)	mephobarbital	streptomycin
cocaine	mepivacaine (?)	sulfacetamide (?)
cortisone	mesoridazine	sulfachlorpyridazine (?)
cyclobarbitol	metharbital	sulfacytine (?)
cyclopentobarbital	methdilazine	sulfadiazine (?)
cycloserine (?)	methitural	sulfadimethoxine (?)
dapsone	methohexital	sulfamerazine (?)
deferoxamine	methotrexate (?)	sulfameter (?)
deserpidine(?)	methotrimeprazine	sulfamethazine
dexamethasone	methyl alcohol	sulfamethizole (?)
dextrothyroxine (?)	methylene blue	sulfamethoxazole (?)
diethazine	methylergonovine (?)	sulfamethoxypridazine
digitalis (?)	methylprednisolone	sulfanilamide (?)
diiiodohydroxyquin	methysergide (?)	sulfaphenazole
ergocalciferol	nitroglycerin (?)	sulfapyridine (?)
ergonovine (?)	oral contraceptives	sulfasalazine (?)
ergot (?)	oxyphenbutazone	sulfathiazole (?)
ergotamine (?)	pentobarbital	sulfisoxazole (?)
ethambutol	perazine	suramin
ethopropazine	pericyazine	syrosingopine (?)
etidocaine (?)	perphenazine	talbutal
ferrocholinate (?)	phenobarbital	thiamylal
ferrous fumarate (?)	phenylbutazone	thiethylperazine
ferrous gluconate (?)	piperacetazine	thiopental
ferrous succinate (?)	polysaccharide iron complex (?)	thiopropazate
ferrous sulfate (?)		thiopropazine
fluorometholone	prednisolone	thioridazine

fluphenazine	prilocaine (?)	thyroglobulin (?)
gentamicin	primidone	thyroid (?)
heptabarbital	probarbital	
hexachlorophene	procaine (?)	tobramycin
hexamethonium	prochlorperazine	trichloroethylene
hexethal	promazine	trifluoperazine
hexobarbital	promethazine	triflupromazine
hydrocortisone	propiomazine	trimeprazine
hydroxychloroquine	propoxycaine (?)	tryparsamide
iodide and iodine solutions and compounds	propoxyphene	vinbarbital
	quinine	vinblastine
iodochlorhydroxyquin	radioactive iodides	vincristine
iodoquinol	rauwolfia serpentina (?)	vitamin A
iron dextran (?)	rescinamine (?)	vitamin D
iron sorbitex	reserpine (?)	vitamin D ₂
isoniazid	secobarbital	vitamin D ₃

56. Drummond syndrome (idiopathic hypercalcemia)
57. Drusen of optic nerve
58. Dyschondroplasia syndrome (Ollier syndrome)
59. Electrical injury
60. Encephalitis, acute
61. Engelmann syndrome (diaphyseal dysplasia)
62. Exfoliation syndrome
63. Foix syndrome (cavernous sinus thrombosis)
64. Foster-Kennedy syndrome (basal-frontal syndrome)
65. Friedreich ataxia (optic atrophy and sensorineural deafness)—recessive
66. Fröhlich syndrome (dystrophia adiposogenitalis)
67. Galactosyl ceramide lipidosis (globoid cell leukodystrophy)
68. Gangliosidosis GM 1, type
69. Generalized gangliosidosis (infantile)
70. Greig syndrome (hypertelorism ocularis)
71. Glaucoma
72. Glucose-phosphate dehydrogenase deficiency (von Gierke disease)
73. Grönblad-Strandberg syndrome (systemic elastodystrophy)
74. Hallermann-Streiff-François syndrome (oculomandibulofacial dyscephaly)
75. Hallervorden-Spatz syndrome (pigmentary degeneration of globus pallidus)
76. Hallgren syndrome (retinitis-pigmentosa deafness-ataxia syndrome)
77. Happy-puppet syndrome (puppet children)
78. Herrick syndrome (sickle cell disease)
79. Histiocytosis X (Hand-Schüller-Christian syndrome)
80. Hollenhorst syndrome (chorioretinal infarction syndrome)
81. Homocystinuria syndrome
82. Hutchinson syndrome (progeria)
83. Hydatid cyst
84. Hydrocephalus chondrodystrophicus congenita (Kleeblattschädel syndrome)
85. Hyperparathyroidism
86. Hypophosphatasia (phosphoethanolaminuria)
87. Incipient prechiasmal optic nerve compression syndrome
88. Infantile neuroaxonal dystrophy (Seitelberger disease II)
89. Infantile type of neuronal ceroid lipofuscinosis
90. Infections such as basal meningitis, infectious encephalomeningitis (especially measles epidemic parotitis), congenital neurosyphilis (rare before 2 years of age), and toxoplasmosis
91. Irvine syndrome (spontaneous rupture of vitreous face with vitreous adhesions to the wound followed by macular edema)
92. Jensen syndrome (opticoacoustic nerve atrophy with dementia)—X-linked
93. Juvenile diabetes—rare
94. Juvenile optic atrophy—autosomal dominant
95. Keratoderma palmaris et plantaris
96. Kloepfer disease
97. Krabbe disease (meningocutaneous syndrome)
98. Kussmaul disease (necrotizing angiitis)
99. Kwashiorkor (hypoproteinemia syndrome)
100. Laurence-Moon-Bardet-Biedl syndrome (retinitis pigmentosa-polydactyly-adiposogenital syndrome)

101. Leber syndrome (optic atrophy-amaurosis-pituitary syndrome)
102. Leigh disease (subacute necrotizing encephalomyelopathy)
103. Leukemia
104. Malaria
105. Maple syrup urine disease (branched-chain ketoaciduria)
106. Marchesani syndrome (brachymorphy with spherophakia)
107. Maroteaux-Lamy disease (MPS VI)
108. Marquardt-Loriaux syndrome
109. Measles (morbilli)
110. Menkes disease (kinky-hair disease)
111. MERRF syndrome
112. Metachromatic leukodystrophy (Greenfield disease)
113. Metaphyseal dysplasia, anetoderma, and optic atrophy—autosomal recessive
114. Microcephaly
115. Micro syndrome
116. Mikulicz-Radecki syndrome (dacryosialoadenopathy)
117. ML IV
118. MPS IH (Hurler syndrome)
119. MPS IS (Scheie syndrome)
120. MPS II (Hunter syndrome)
121. MPS IV (Morquio syndrome)
122. Multiple sclerosis (disseminated sclerosis)
123. Mumps
124. Naegeli syndrome (reticular pigmented dermatosis)
125. Niemann-Pick syndrome (essential lipoid histiocytosis)
126. Occlusion of carotid artery
127. Oculodental syndrome (Peter syndrome)
128. Oculoorogenital syndrome (riboflavin deficiency syndrome)
129. Onchocerciasis syndrome (river blindness)
130. Optic atrophy, cataract and neurologic disorder—dominant
131. Optic atrophy, nerve deafness, and distal neurogenic amyotrophy—recessive
132. Optic atrophy, non-Leber type, with early onset—x-linked
133. Optic atrophy, polyneuropathy and deafness—x-linked
134. Optic atrophy, spastic paraplegia syndrome—x-linked
135. Optic atrophy with demyelinating of central nervous system—autosomal dominant
136. Optic nerve hypoplasia, familial, bilateral—autosomal dominant
137. Opticocochleodental degeneration syndrome
138. Orbital operation, such as following orbital floor fracture, reduction of malar fractures and Krönlein lateral orbitotomy
139. Osteogenesis imperfecta (van der Hoeve syndrome)
140. Paget syndrome (osteitis deformans)
141. Passow syndrome (syringomyelia)
142. Pelizaeus-Merzbacher disease (aplasia axialis extracorticalis congenita)
143. Pituitary gigantism syndrome (Launois syndrome)
144. Polymyalgia rheumatica
145. Porphyria cutanea tarda
146. Posthypoxic encephalopathy syndrome
147. Radiation
148. Refsum syndrome (phytanic acid oxidase deficiency)

149. Relapsing fever
150. Retinohypophysary syndrome (Lijo Pavia-Lis syndrome)
151. Rieger syndrome (hypodontia and iris dysgenesis)
152. Riley-Day syndrome (congenital familial dysautonomia)
153. Rochon-Duvigneaud syndrome (superior orbital fissure syndrome)
154. Rocky Mountain spotted fever
155. Rollet syndrome (orbital apex-sphenoidal syndrome)
156. Rosenberg-Chutorian syndrome
157. Rubella syndrome (German measles)
158. Rubinstein-Taybi syndrome (broad thumb syndrome)
159. Russell syndrome
160. Sabin-Feldman syndrome
161. Sanfilippo disease (MPS III)
162. Scaphocephaly syndrome
163. Schaumann syndrome (sarcoidosis syndrome)
164. Schilder syndrome (encephalitis periaxialis diffusa)
165. Simmonds syndrome (hypopituitarism syndrome)
166. Spastic paraplegia, optic atrophy, dementia—autosomal dominant
167. Sphenomaxillary fossa syndrome (pterygopalatine fossa syndrome)
168. Spielmeyer-Vogt syndrome (cerebroretinal degeneration)
169. Spongy degeneration of the white matter
170. Suprarenal—sympathetic syndrome (adrenal medulla tumor syndrome)
171. Sylvester disease
172. Simmond syndrome (benign intracranial hypertension)
173. Takayasu syndrome (aortic arch syndrome)
174. Tay-Sachs syndrome (hexosaminidase deficiency)
175. Temporal arteritis syndrome (Hutchinson-Horton-Magath-Brown syndrome)
176. Toxins, including lead, chronic cyanide intoxication such as from eating cassava, thallium (used for treatment of scalp fungi)
177. Trauma, evulsion of optic nerve, and ocular contusion
178. Treft syndrome
179. Trisomy D syndrome (Patau syndrome)
180. Tuberculosis
181. Tumors, including craniopharyngiomas, ectopic pinealomas, gliomas, hemangiomas, meningiomas, nasopharyngeal carcinomas, neuroblastomas, pituitary adenomas, and tumors extending into fourth ventricle and cerebellum causing papilledema
182. Tunbridge-Paley disease
183. Vaccinia
184. Vascular accident
185. von Bekterev-Strumpell syndrome (ankylosing spondylitis)
186. von Recklinghausen syndrome (neurofibromatosis)
187. Wagner syndrome (hyaloideoretinal degeneration)
188. Wegener syndrome (Wegener granulomatosis)
189. Wernicke syndrome (thiamine deficiency)
190. Wrinkly-skin syndrome
191. Yellow fever
192. Zellweger syndrome (cerebrohepatorenal syndrome)
193. Zollinger-Ellison syndrome (polyglandular adenomatosis syndrome)

Optic Neuritis (Papillitis and Retrobulbar Neuritis)

This condition is characterized by progressive loss of vision and possibly complete amaurosis; pain in or behind the eye, especially on lateral movement; Marcus Gunn pupillary phenomenon; and central or paracentral scotoma.

1. Demyelinating and degenerative diseases
 - A. Adrenoleukodystrophy
 - B. Hereditary ataxia (Brown-Marie syndrome)
 - C. Multiple sclerosis
 - D. Opticomyelitis (Devic disease)
2. Drugs, poisons, vaccines
 - A. Drugs, including the following:

acetohexamide	ergocalciferol (?)	methitural
acetyldigitoxin	ergonovine	methohexital
alcohol	ergotamine	methyl alcohol
allobarbitol	ethambutol	methylegonovine
aminosalicylate	ethchlorvynol	methysergide
aminosalicylic acid (?)	ethionamide	metronidazole(?)
amiodarone (?)	etidocaine (?)	minoxidil(?)
amitriptyline	etoposide	mumps virus vaccine (live)
amobarbital	etretinate	naproxen
aprobartol	fenoprofen	nialamide (?)
barbital	ferrocholate (?)	nitrofurantoin (?)
bromisovalum	ferrous fumarate (?)	nortriptyline
broxyquinoline	ferrous gluconate (?)	nystatin
bupivacaine (?)	ferrous succinate	oral contraceptives
butabartol	ferrous sulfate (?)	ouabain
butalbitol	fluorouracil (?)	oxyphenbutazone
butallylonal	gitalin	penicillamine
butethal	glyburide	pentobarbital
calcitriol (?)	heptabarbitol	phenobarbital
caramiphen	hexethal	phenylbutazone
carbromal	hexobarbital	piroxicam (?)
carmustine	ibuprofen	poliovirus vaccine (?)
chloral hydrate (?)	imipramine	polysaccharide-iron complex (?)
chloramphenicol	indomethacin (?)	
chloroprocaine (?)	influenza virus vaccine	prilocaine (?)
chlorpropamide (?)	interferon alpha, beta, or gamma	primidone
cholecalciferol		probarbital
cisplatin	iodide and iodine solutions	procaine (?)
clindamycin	and compounds	procarbazine
clophene (?)	iodochlorhydroxyquin	propoxycaine (?)
cyclobartol	iodoquinol	protriptyline
cyclopentobarbital	iron dextran (?)	quinacrine
cycloserine (?)	iron sorbitex (?)	quinidine
deferoxamine	isocarboxazid (?)	rabies immune globulin
desipramine	isoniazid	rabies vaccine
deslanoside	isotretinoin	radioactive iodides
dextrothyroxine (?)	kanamycin (?)	rifampin (?)
didanosine	lanatoside C	rubella and mumps virus vaccine (live)
diethylpropion (?)	levothyroxine (?)	
digitalis	lidocaine	rubella virus vaccine (live)
digitoxin	liothyronine (?)	secobarbital
digoxin	liotrix (?)	smallpox vaccine
diiodohydroxyquin	measles and rubella virus	streptomycin
diphtheria and tetanus toxoids (adsorbed)	vaccine (live)	sulfacetamide
	measles, mumps, and rubella	sulfachlorpyridazine
diphtheria and tetanus toxoids and pertussis	virus vaccine	sulfacytine
	mephobarbital	sulfadiazine
diphtheria toxoid (adsorbed)	mepivacaine (?)	sulfadimethoxine
disulfiram	metharbital	sulfamerazine
sulfameter	sulindac (?)	tolbutamide
sulfamethizole	talbutal	trichloroethylene
sulfamethoxazole	tamoxifen (?)	tryparsamide
sulfamethoxypridazine	tetanus immune globulin (?)	vaccine (adsorbed)
sulfanilamide	tetanus toxoid (?)	vinbarbital
sulfaphenazole	thiamylal	vinblastine
sulfapyridine	thiopental	vincristine
sulfasalazine	thyroglobulin (?)	vitamin D
sulfathiazole	thyroid (?)	vitamin D ₂ (?)
sulfisoxazole	tolazamide	vitamin D ₃ (?)

-
- B. Poisons (inhalation, skin absorption, or ingestion): alcohol, arsenicals (inorganic, gaseous, or organic), carbon disulfide, carbon tetrachloride, chlorodinitrobenzene and dinitrobenzene, copper, dinitrotoluene, Lysol solution, mercury, methyl bromide, methyl alcohol, siderosis (exogenous: intraocular foreign body or endogenous: iron metabolism disorders), tobacco, toluene (methyl benzene), trichlorethylene, tricresyl phosphate, venoms (e.g., bee sting), vinyl benzene (styrene)
 - C. Vaccines and toxoids: Bacille Calmette-Guérin (BCG) vaccination, diphtheria toxoid (absorbed), diphtheria and tetanus toxoids (absorbed), influenza virus vaccine, measles or mumps or rubella live vaccine, poliovirus vaccine, rabies immune globulin, rabies vaccine, smallpox vaccine, tetanus immune globulin (?), tetanus toxoid (?), bee and wasp sting.
3. Infection and inflammation
- A. Bacterial
 1. Anthrax
 2. Botulism (toxin from clostridium botulinum)
 3. Brucellosis (undulant fever)
 4. Diphtheria
 5. Endocarditis
 6. Leptospirosis (Weil syndrome)
 7. Lyme disease (borreliosis, relapsing fever)
 8. Mycoplasma pneumoniae
 9. Pertussis (whooping cough)
 10. Streptococcus (scarlet fever)
 11. Syphilis (acquired lues)
 12. Tuberculosis
 13. Typhoid fever (abdominal typhus)
 - B. Fungal
 1. Candidiasis
 2. Coccidioidomycosis
 3. Mucormycosis
 4. Torulosis (cryptococcus)
 - C. Viral
 1. Acquired immune deficiency syndrome (AIDS)
 2. Bornholm disease (epidemic pleurodynia)
 3. Chickenpox (varicella)
 4. Epidemic keratoconjunctivitis
 5. Equine encephalitis
 6. Hepatitis A, B, C

7. Infectious mononucleosis
8. Influenza
9. Measles (rubeola)
10. Mumps
11. Pappataci fever (sandfly fever)
12. Poliomyelitis
13. Smallpox
14. Yellow fever
- D. Protozoan
 1. Malaria
 2. Toxoplasmosis
 3. Trypanosomiasis
- E. Rickettsia
 1. Boutonneuse fever rickettsia (Marseilles fever)
 2. Japanese river fever (typhus)
 3. Q fever
 4. Rocky Mountain spotted fever
- F. Orbit
 1. Herpes zoster
 2. Infections of the gasserian ganglion
 3. von Mikulicz-Radecki syndrome (dacryosialoadenopathy)
 4. Rollet syndrome (orbital apex syndrome)
 5. Tolosa-Hunt syndrome (painful ophthalmoplegia)
- G. *Helminth* infestations
 1. Acanthamoeba
 2. Echinococcosis (hydatid cyst)
 3. Onchocerciasis (river blindness)
 4. Toxocariasis (nematode ophthalmia syndrome)
 5. Trichinellosis
- H. Spread from sphenoid and posterior ethmoidal sinuses
- I. Postinfectious
 1. Guillain-Barré syndrome (acute infectious neuritis)
 2. Reye syndrome (acute encephalopathy syndrome)
 3. Subacute sclerosing panencephalitis (Dawson disease)
 4. Vogt-Koyanagi-Harada syndrome (uveitis-vitiligo-alopecia-poliosis syndrome)
4. Noninfectious arteritis, hypersensitivity vasculitis
 - A. Involving small vessels
 1. Drugs
 2. Henoch-Schönlein
 - B. Involving small and medium-sized vessels
 1. Polyarteritis nodosa (Kussmaul disease)
 2. Necrotizing granulomatous arthritis
 - a. Sarcoidosis
 - b. Wegener granulomatosis (Wegener syndrome)
 3. Buerger disease (thromboangiitis obliterans)
 4. Localized arteritis
 - a. Idiopathic
 - b. Polyarteritis nodosa

-
- C. Involving large, medium and small vessels
 - 1. Arteritis in collagen vascular disease
 - a. Behçet disease (oculobuccogenital syndrome)
 - b. Progressive systemic sclerosis (PSS; scleroderma)
 - c. Rheumatoid arthritis
 - d. SLE
 - 2. Giant cell (temporal) arteritis
 - 3. Takayasu syndrome (aortic arch syndrome)
 - D. Idiopathic paroxysmal digital cyanosis (Raynaud disease)
 - E. Multiple myeloma (Kahler disease)
5. Others
- A. Chorioretinitis
 - B. Cystic fibrosis syndrome
 - C. Hutchinson-Gilfor (progeria) syndrome
 - D. Hysteria
 - E. McCune-Albright syndrome (fibrous dysplasia)
 - F. Naegeli syndrome (melanophoric nevus)
 - G. Paget disease (osteitis deformans)
 - H. Parkinson syndrome (paralysis agitans)
 - I. Relapsing polychondritis
 - J. Stevens-Johnson syndrome (erythema multiforme exudativum)
 - K. Uveitis, including sympathetic ophthalmia
6. Systemic diseases
- A. Endocrine
 - 1. Diabetes mellitus
 - 2. Hypoparathyroidism
 - 3. Hyperthyroidism (Basedow syndrome)
 - 4. Hyperthyroidism
 - 5. Juvenile diabetes-dwarfism-obesity syndrome (Mauriac syndrome)
 - 6. Lactation
 - 7. Pregnancy
 - 8. Puberty
 - 9. Retinohypophysary syndrome (Lijo Pavia-Lis syndrome)
 - B. Nutritional diseases
 - 1. Beriberi (vitamin B deficiency)
 - 2. Carcinomatosis
 - 3. Hyperemesis gravidarum
 - 4. Pellagra (vitamin B deficiency)
 - C. Rheumatic disease, arthritis
 - 1. Felty syndrome
 - 2. Juvenile rheumatoid arthritis (Still disease)
 - 3. Polymyalgia rheumatica
 - 4. Reiter syndrome (polyarthritis enterica)
 - 5. Rheumatoid arthritis
 - D. Miscellaneous
 - 1. Amyloidosis (Lubarsch-Pick syndrome)
 - 2. Chronic glomerulonephritis with secondary renal hypertension or pyelonephritis
 - 3. Emphysema

4. Hepatic failure
 5. Hypertension
 6. Porphyria
 7. Trauma
- E. Mechanical
- F. Radiation
1. Electromagnetic
 - a. High voltage/lighting
 - b. Microwave
 - c. Laser burn
 - d. X-ray
 2. Radioactive source
 - a. a-ruthenium
 - b. b-betatron
 - c. g-cobalt
 - d. pisotope
7. Tumors
- A. Craniopharyngioma
 - B. Hemangiopericytoma of optic nerve
 - C. Myeloproliferative diseases
 1. Hodgkin disease
 2. Leukemia
 3. Lymphoma
 - D. Neuroblastoma

Diagnostic tables

	Vision	Visual Fields	Retinal Veins	Color of Nerve Head	Retinal Hemorrhages	Peripapillary Retinal Edema	Vitreous Cells	Symmetry of Nerve Heads	Comments
1. Early papilledema	Normal	Normal (except blind spot enlargement)	Slightly distended; early loss of spontaneous pulsations	Pink	±	±	—	Often asymmetric	Headaches
2. Advanced papilledema	Normal or, at times, somewhat reduced	Normal (except blind spot enlargement)	Distended without spontaneous pulsations	Very pink to pale	+	+	—	Often symmetric	Sixth nerve palsies are additional clue to increased pressure
3. Hyperopia and physiologic variants	Normal	Normal	Normal	Normal	—	—	—	Often symmetric	Fundus seen with + lens; central disc cupping usually present
4. Optic neuritis	Impaired	Central scotoma ± peripheral loss	Distended ± spontaneous pulsations	Pink	±	±	±	Usually unilateral	Precipitous onset; may have pain with ocular motility
5. Optic nerve tumor	Normal or markedly reduced	Normal or markedly reduced	Normal or distended	May be pigmented if disc tumor contains melanin; very pink to pale	±	±	—	Usually unilateral	May involve only the orbital or intracranial optic nerve, and not the intra-ocular portion; primary nerve tumors are rarely observed on the disc
6. Optic nerve avulsion	Blind eye	—	Sludged	Pale	±	—	±	Contralateral eye normal	Contre-coup or direct trauma
7. Hyaline bodies of nerve head parents	Normal	Normal or a variety of field cuts	Normal	Normal	— (Very rarely +)	—	—	Often symmetric hyaline bodies sometimes seen at disc margins in one eye only	Often familial (examine and siblings)
8. Hypotony of eye (after trauma)	Slightly impaired	Usually normal	Distended	Pink ±	±	Peripheral edema	—	Unilateral	Soft eye; commotio retinae

2. Hematoma
3. Ischemic optic neuropathy
4. Papilledema (see p. 593)
5. Retinal lesions that also exhibit metamorphopsia, e.g., serous or angiospastic retinopathy
6. Tumors
 - A. Disc
 1. Gliomas
 2. Meningiomas
 3. Metastatic carcinoma
 4. Neurofibromas
 - B. Expanding lesions of anterior and middle cranial fossa producing central scotoma
 1. Craniopharyngiomas
 2. Ectopic pinealomas
 3. Meningiomas
 4. Metastatic carcinomas
 5. Myeloproliferative diseases
 - a. Hodgkin disease
 - b. Lymphomas
 - c. Plasmacytoma
 6. Nasopharyngeal carcinomas
 7. Pituitary adenomas

Huber A. *Eye symptoms in brain tumors*, 2nd ed. St. Louis: CV Mosby, 1971.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Optociliary Shunts (Tortuous, Ectatic Channels from Optic Nerve to Choroid)

1. Arachnoid cyst of the optic nerve
2. Central retinal vein occlusion (see p. 468-472)
3. Chronic atrophic papilledema
4. Drusen of the optic nerve
5. Optic-nerve glioma
6. Primary nerve sheath meningioma
7. Sickle cell trait
8. Sphenoorbital meningioma

Dowhan TP, et al. Optociliary shunts and sickle retinopathy in a woman with sickle cell trait. *Ann Ophthalmol* 1990;22:66-69.

Mendoza RM, et al. Optociliary veins in optic nerve sheath meningioma. *Ophthalmology* 1999;106:311-318.

Papilledema (Swelling of Optic Disc)

1. Drugs, poisons, and vaccines

A. Drugs (those in all capitalized letters are drugs that also cause pseudotumor cerebri):

acetophenazine	DEMECLOCYCLINE
ADRENAL CORTEX INJECTION	DESOXYCORTICOSTERONE
ALDOSTERONE	DEXAMETHASONE
allobarbitol	DEXTROTHYROXINE
amiodarone	didanosine
amobarbitol	diethazine
AMPHOTERICIN B	DOXYCYCLINE
antimony lithium thiomalate	ELTROXIN
antimony potassium tartrate	ethambutol
antimony sodium tartrate	ethopropazine
antimony sodium thioglycollate	etidocaine (?)
aprobarbitol	etoposide
aspirin	FLUDROCORTISONE
auranofin (?)	fluorometholone
aurothioglucose (?)	fluphenazine
aurothioglucanide (?)	FLUPREDNISOLONE
Azathioprine	GENTAMICIN
barbitol	glutethimide
benzathine penicillin G	gold Au 198
bromide (?)	gold sodium thiomalate (?)
bupivacaine (?)	gold sodium thiosulfate (?)
butabarbital	heptabarbital
butalbital	HEXACHLOROPHENE
butallylonal	hexethyl
butaperazine	hexobarbital
butethal	hydrabamine phenoxymethyl penicillin
calcitriol	HYDROCORTISONE
carbamazepine	IBUPROFEN
carbon dioxide	INDOMETHACIN
carphenazine	INSULIN-LIKE GROWTH FACTOR I
cephaloridine (?)	interferon
chlorambucil	interferon alpha, beta, or gamma
chloramphenicol (?)	isocarboxazid (?)
chloroprocaine (?)	isoniazid
chlorpromazine	ISOTRETINOIN
CHLORTETRACYCLINE	KETOPROFEN
cholecalciferol	LEVODOPA
cisplatin	LEVOTHYROXINE
colchicine	lidocaine
CORTISONE	LIOTHYRONINE
cyclobarbital	LITHIUM CARBONATE
cyclopentobarbital	LITHIUM CITRATE
DANAZOL	MANGANESE
mephobarbital	PROCAINE PENICILLIN G
mepivacaine (?)	procarbazine
MEPREDNISONE	prochlorperazine
mesoridazine	promazine
METHACYCLINE	promethazine
methaqualone (?)	propiomazine
metharbital	propoxycaine (?)
methdilazine	PYRIDOXINE
methitural	quinine
methohexital	RETINOIDS
methotrimeprazine	secobarbital
methyl alcohol	sodium antimonylgluconate
methylene blue	sodium salicylate
METHYLPREDNISOLONE	stibocaptate
methypylon	stibogluconate
mitotane	stibophen
nadolol (?)	sulfacetamide
NALIDIXIC ACID	sulfachlorpyridazine
Naproxen (?)	sulfacytine
NITROFURANTOIN	sulfadimethoxine
NITROGLYCERIN	sulfamerazine
NORPLANT	sulfamerter
ofloxacin	sulfamethazine
ORAL CONTRACEPTIVES	sulfamethizole
OXYTETRACYCLINE	sulfamethoxazole
PARAMETHASONE	sulfamethoxypridazine
penicillamine	sulfanilamide
pentobarbital	sulfaphenazole
perazine	sulfapyridine
PERHEXILINE	sulfasalazine
pericyazine	sulfathiazole
perphenazine	sulfisoxazole
phenelzine (?)	sulthiame
phenobarbital	talbutal
phenoxymethyl penicillin	tamoxifen
PHENYLPROPANOLAMINE	TETRACYCLINE
PHENYTOIN	thiamylal
piperacetazine	thiethylperazine
POTASSIUM PENICILLIN G	thiopental
POTASSIUM PENICILLIN V	thiopropazate
PREDNISOLONE	thiopropazine
PREDNISONE	thioridazine
prilocaine (?)	THYROGLOBULIN
primidone	THYROID
probarbital	tranlycypromine (?)
procaine (?)	trifluoperazine
trimeprazine	triflupromazine
vinbarbital	vitamin D (calcitriol)
VITAMIN A (RETINOL)	vitamin D ₂ (ergocalciferol)
	vitamin D ₃ (cholecalciferol)

-
- B. Poisons (inhalation, skin absorption, or ingestion)
 - 1. Carbon dioxide
 - 2. Lead
 - 3. Methyl alcohol
 - C. Vaccines
 - 1. Diphtheria-tetanus toxoids-pertussis vaccine (absorbed)
 - 2. Influenza virus vaccine
 - 3. Measles or mumps or rubella live vaccine
2. Intracranial causes—usually bilateral
- A. Tumors
 - 1. *Frontal lobe lesion—mental changes (apathy, euphoria, and social behavioral changes); normal visual field if confined to frontal lobe; most likely, tumors are medulloblastoma, meningioma, astrocytoma, glioblastoma, or metastasis from lung or breast
 - 2. *Temporal lobe lesions—formed hallucinations, superior homonymous quadrantanopia, or homonymous hemianopia, ipsilateral mydriatic fixed pupil and oculomotor paresis, and contralateral facial palsy; most likely, tumors are medulloblastoma, meningioma, astrocytoma, glioblastoma, or metastasis from lung or breast
 - 3. *Parietal lobe lesions—visual agnosia such as alexia or dyslexia, complete homonymous hemianopia, or inferior homonymous quadrantanopia, disturbances of trigeminal nerve, including decreased corneal sensation and positive (asymmetric response) optokinetic nystagmus; most likely caused by:
 - a. Astrocytoma
 - b. Glioblastoma
 - c. Medulloblastoma
 - d. Meningioma
 - e. Metastasis from lung or breast
 - 4. Occipital lobe lesions—unformed visual hallucinations and homonymous congruous visual field defect; most likely caused by the following:
 - a. Astrocytoma
 - b. Glioblastoma
 - c. Hemangioma
 - d. Meningioma
 - e. Metastasis from lung or breast
 - 5. Third-ventricle and sellar lesions—visual field of bitemporal hemianopia or unilateral blindness and contralateral temporal hemianopia; most likely, tumors are craniopharyngioma
 - 6. Fourth-ventricle and cerebellum lesions—ataxia, asynergy, dysmetria, hypotonia, and acquired jerk nystagmus, usually horizontal and more pronounced in lateral gaze; most likely caused by:
 - a. Astrocytoma
 - b. Hemangioblastoma
 - c. Medulloblastoma
 - d. Metastasis from lung or breast

7. Cerebellar-pontine angle tumor such as Cushing syndrome II (acoustic neuroma syndrome)
8. Base skull tumor, such as Garcin syndrome (half-base syndrome)
9. Chiasmal tumor such as Fröhlich syndrome (dystrophia adiposogenitalis)
10. Neuroblastoma
11. Russell syndrome (diencephalic syndrome)
12. Zollinger-Ellison syndrome (polyglandular adenomatosis syndrome)
- B. Decreased intracranial capacity, such as in acrocephalosyndactyly (Apert disease), Arnold-Chiari syndrome (cerebellomedullary malformation syndrome), craniofacial dysostosis (Crouzon disease), craniostenosis, hypertelorism, and tower skull (oxycephaly)
- C. Pseudotumor cerebri (Symonds syndrome)—bilateral papilledema and increased intracranial pressure but negative neurologic and general physical findings
 1. Addison disease (adrenal cortical insufficiency)
 2. Autosomal dominant endosteal hyperostosis
 3. Chronic respiratory insufficiency
 4. Familial Mediterranean fever
 5. Hypertension
 6. Multiple sclerosis
 7. Polyangiitis overlap syndrome
 8. Psittacosis
 9. Renal disease
 10. Reye syndrome
 11. Sarcoidosis
 12. SLE
 13. Thrombocytopenia purpura
 14. Vitamin A (excessive) after overeating carrots in a weight loss program
 15. Drugs including the following:

(absorbed) levodopa (?)	hexachlorophene	nitrofurantoin
adrenal cortex injection	hydrabamine penicillin V	nitroglycerin
aldosterone	hydrocortisone	ofloxacin
amiodarone	ibuprofen (?)	oral contraceptives
benzathine penicillin G	indomethacin	oxytetracycline
betamethasone	isotretinoin	paramethasone
chlorambucil	ketoprofen	penicillin G
chlortetracycline	leuprolide acetate	penicillin V
cortisone	levonorgestrel	perhexiline
danazol	levothyroxine	phenylpropanolamine
demeclocycline	liothyronine	phenytoin
desoxycorticosterone	liotrix	potassium
dexamethasone	lithium carbonate	potassium phenethicillin
diphtheria and tetanus toxoids and pertussis vaccine	manganese	prednisolone
	medroxyprogesterone	prednisone
doxycycline	medrysone	procaine
etretinate	meprednisone	tetracycline
fludrocortisone	methacycline	thyroglobulin
fluprednisolone	methylprednisolone	thyroid
gentamicin	minocycline	triamcinolone
griseofulvin	nalidixic acid	vitamin A

16. Frankl-Hochwart syndrome (pineal-neurologic-ophthalmic syndrome)
 17. Glomus jugulare tumor
 18. Iron-deficiency anemia
 19. Menarche
 20. Pregnancy
 21. Thrombosis of the sagittal or lateral sinus, such as that following otitis media in children
 22. *Yersinia pseudotuberculosis*
3. Neurologic disorders
 - A. Cerebral palsy
 - B. Foster-Kennedy syndrome
 1. Aneurysm of internal carotid, anterior cerebral, or anterior communicating artery
 2. Arteriosclerotic plaques of internal carotid or anterior cerebral arteries
 3. Chiasmal arachnoiditis secondary to trauma, spinal anesthesia, or syphilis
 4. Craniopharyngioma with forward extension
 5. Frontal lobe tumors or abscess
 6. Glioma of the intracranial portion of optic nerve
 7. Internal hydrocephalus because of tumor of posterior fossa
 8. Old unilateral optic nerve atrophy (e.g., consecutive ischemic optic neuropathies)
 9. Olfactory groove, sphenoid ridge and suprasellar meningioma
 - C. High cerebrospinal fluid protein content and defective absorption (e.g., Guillain-Barré syndrome (Acute Infectious Neuritis))
 - D. Muscular dystrophy
 - E. Parkinson syndrome (shaking palsy)
 - F. Status dysraphicus syndrome (Passow syndrome, syringomyelia)
 - G. Subdural or subarachnoid hemorrhage
 4. Miscellaneous
 - A. Abscess
 - B. Angioedema
 - C. Brown-Séquard syndrome
 - D. Camurati-Engelmann syndrome (progressive diaphyseal dysplasia)
 - E. Chediak-Higashi syndrome (anomalous leukocytic inclusions with constitutional stigma)
 - F. Churg-Strauss syndrome (allergic granulomatosis and angiitis)
 - G. Citrullinemia (late onset)
 - H. Degos syndrome (malignant atrophic papulosis)
 - I. Fabry disease (angiokeratoma corporis diffusum)
 - J. Hydrocephalus
 - K. Kenny syndrome
 - L. McCune-Albright syndrome (fibrous dysplasia)
 - M. Nocturnal hypoventilation
 - N. Pelizaeus-Merzbacher syndrome (aplasia axialis extracorticalis congenita)
 - O. Polymyalgia rheumatica
 - P. Primary hyperoxaluria type
 - Q. Renal insufficiency

-
5. Ocular cause—usually unilateral
 - A. Acute glaucoma
 - B. ACME (Irvine-Gass syndrome)
 - C. Central retinal vein or artery occlusion
 - D. Hypotony, including that following intraocular surgery
 - E. Inflammatory
 1. Bird-shot retinochoroidenopathy
 2. Gumma of nerve head
 3. Juxtapapillary choroiditis
 4. Neuroretinitis (see p. 563)
 5. Retinal vasculitis
 6. Rocky Mountain spotted fever
 7. Sarcoidosis
 8. Tuberculoma of nerve head
 9. Uveitis
 10. Vasculitis
 - F. Trauma
 - G. Tumors
 1. Glioma
 2. Hemangioma
 3. Melanocytoma
 4. Melanotic sarcoma
 5. Neurofibromatosis (von Recklinghausen disease)
 6. Periocular and ocular metastatic tumors
 7. Secondary carcinoma
 8. Tuberosus sclerosis
 6. Orbital cause—usually unilateral, may have exophthalmos
 - A. Aneurysm of the ophthalmic artery
 - B. Orbital abscess
 - C. Rollet syndrome (orbital apex syndrome)
 - D. Scaphocephaly syndrome (craniofacial dysostosis)
 - E. Sinusitis
 - F. Superior orbital fissure syndrome (Rochon-Duvigneaud syndrome)
 - G. Trauma
 - H. Tumors
 1. Benign
 - a. Cystic adenoma
 - b. Dermoid cyst
 - c. Osteopetrosis (Albers-Schonberg disease)
 - d. Paget disease
 2. Malignant
 - a. Fibrosarcoma
 - b. Glioma
 - c. Hutchinson-Pepper syndrome
 - d. Lacrimal gland
 - e. Lymphosarcoma
 - f. Myosarcoma

-
- g. Osteosarcoma
 - h. Secondary metastasis and extension from nasopharynx or sinuses
 - 3. Orbital invasion by intracranial tumor (e.g., chordoma)
 - 7. Systemic diseases—usually bilateral
 - A. Blood dyscrasias
 - 1. Iron-deficiency anemias
 - 2. Pernicious anemia
 - 3. Thrombocytopenic purpura
 - B. Carbohydrate metabolisms disorders
 - 1. Diabetes mellitus
 - 2. ML III
 - 3. MPS II (Hunter syndrome)
 - 4. MPS VI (Maroteaux-Lamy syndrome)
 - C. Cardiopulmonary insufficiency
 - 1. Chronic bronchitis
 - 2. Congenital heart disease
 - 3. Cystic fibrosis of lungs
 - 4. Pickwickian syndrome
 - 5. Pulmonary emphysema
 - D. Collagen diseases
 - 1. Polyarteritis nodosa
 - 2. PSS (scleroderma)
 - 3. Relapsing polychondritis
 - 4. SLE
 - E. Endocrine
 - 1. Addison disease (adrenal cortical insufficiency)
 - 2. Diabetes mellitus (Willis disease)
 - 3. Hyperparathyroidism
 - 4. Hyperthyroidism (Basedow syndrome)
 - 5. Hypothyroidism
 - 6. Hypocalcemia
 - 7. Hypoparathyroidism
 - 8. Hypophosphatasia
 - 9. Idiopathic hypercalcemia (Drummond syndrome)
 - 10. Menses
 - 11. Pituitary deficiency
 - 12. Pregnancy
 - 13. Pseudohypoparathyroidism syndrome
 - 14. Suppression of adrenal function from prolonged use of steroids
 - 15. Suprarenal-sympathetic syndrome
 - F. Giant cell (temporal arteritis)
 - G. Hypertension/arteriosclerosis
 - H. Infectious (rare usually optic neuritis)
 - 1. AIDS
 - 2. Anterior poliomyelitis
 - 3. Bang disease (brucellosis)
 - 4. Chickenpox
 - 5. Coccidioidomycosis
 - 6. Echinococcosis (hydatid cyst)

7. Encephalitis
 8. Infectious mononucleosis
 9. Lyme disease (borreliosis, relapsing fever)
 10. Malaria
 11. Meningitis
 12. *Mycoplasma pneumoniae*
 13. Parasitic infections (e.g., cysticercosis, cryptococcus)
 14. Parinaud syndrome (divergence paralysis)
 15. Pertussis (whooping cough)
 16. Presumed ocular histoplasmosis
 17. Psittacosis
 18. Sandfly fever (Pappataci fever)
 19. Trichinellosis
 20. Whipple disease (intestinal lipodystrophy)
- I. Postinfectious
 1. Guillain-Barré syndrome (acute infectious neuritis)
 2. Reye syndrome (acute encephalopathy syndrome)
 3. Subacute sclerosing panencephalitis (Dawson disease)
 4. Vogt-Koyanagi-Harada syndrome (uveitis-vitiligo-alopecia-poliosis)
 - J. Myeloproliferative diseases
 1. Histiocytosis X (lipoid granuloma)
 2. Hodgkin disease
 3. Leukemia
 4. Multiple myeloma
 5. Mycosis fungoides (Sézary syndrome)
 6. Polycythemia vera
 - K. Paraproteinemias
 1. Cryoglobulinemia
 2. Macroglobulinemia
 3. Mediterranean fever
 4. POEMS syndrome (polyneuropathy, organomegaly, endocrinopathy, M protein, and skin changes)
 - L. Nutritional diseases
 1. Beriberi (thiamine deficiency)
 2. Pellagra (niacin deficiency)
 3. Plummer-Vinson syndrome (deficiency of vitamin B complex and iron)
 4. Vitamin B₁₂ deficiency
 - M. Sarcoidosis (Heerford syndrome, Schaumann syndrome)
8. Trauma
 - A. Battered/shaken baby syndrome
 - B. Cerebral hemorrhage
 - C. Purtscher syndrome
 9. Vascular malformations
 - A. Arteriovenous fistula
 - B. Aneurysms
 1. Bonnet-Dechaume-Blanc syndrome (neuroretinoangiomatosis)
 2. Foramen lacerum syndrome (aneurysm of internal carotid artery syndrome)
 3. Superior vena cava syndrome
 - C. Cavernous sinus thrombosis (Foix syndrome)

Pseudopapilledema (May be Mistaken for Swelling of Optic Nerve)

1. Arteriovenous aneurysms (racemose aneurysms) of the retina (Wyburn-Mason syndrome)
2. Bergmeister papilla
3. Cervicocoloacoustic syndrome
4. Down syndrome
5. Drusen of optic nerve (see p. 559)
6. Epipapillary membrane and Bergmeister papilla
7. Fuchs coloboma (partial)
8. Hematoma
9. High hyperopia or astigmatism
10. Juvenile diabetes mellitus (Mauriac syndrome)
11. Medullated nerve fibers (opaque nerve fibers)
12. Normal variant
13. Opacities or haziness of the media, especially nuclear sclerosis of the lens
14. Optic neuritis or papillitis (see p. 578)
15. Peripapillary retinal hemangioma
16. Sarcoidosis (Schaumann syndrome)
17. Tilted disc (partial)
18. Tortuosity and anomalous early branching of the retinal vessels
19. Tumors of disc
 - A. Gliomas
 - B. Meningiomas
 - C. Metastatic
 - D. Neurinoma
 - E. Neurofibroma

7. Cerebral spinal fluid									U	U	U								
8. Chest roentgenogram																		U	
9. Fluorescein angiography							S											U	U
10. Lipid profile																		U	S
11. Sed rate									U										S
12. Ultrasonography, orbit	S						S											U	
13. MRI	U	U	U	U	U	U	U	S	U	R									

R = rarely; S = sometimes; and U = usually.

Peripapillary Subretinal Neovascularization

1. Excessive laser treatment
2. Optic disc drusen
3. Optic nerve coloboma

4. Presumed histoplasmosis syndrome
5. Presumed sarcoidosis
6. Serpiginous peripapillary choroiditis

Gragoudas ES, Regan CDJ. Peripapillary subretinal neovascularization in presumed sarcoidosis. *Arch Ophthalmol* 1981;99:1194.

Yedavally S, Frank RN. Peripapillary subretinal neovascularization associated with coloboma of the optic nerve. *Arch Ophthalmol* 1993;111:552-553.

Pigmented Tumors of Optic Disc

1. Drusen
2. Bourneville syndrome (tuberous sclerosis)
3. Hemangioma of the disc with hemorrhages and secondary pigmentation
4. Malignant melanoma
5. Melanocytomas
6. Metastases

Apple DJ, et al. Congenital anomalies of the optic disc. *Surv Ophthalmol* 1982;27:3.

Pseudoglaucomatous Atrophy of Optic Disc

This condition involves cupping of the nerve head with optic atrophy and field defects simulating true glaucoma but without ocular hypertension.

1. Arteriosclerosis
2. Congenital anomalies of the optic disc
 - A. Branching of vessels behind the lamina so that the individual branches appear at the disc margins
 - B. Coloboma within the nerve sheath
 - C. Congenital coloboma of the optic disc
 - D. Morning-glory anomaly
 - E. Oblique insertion of the optic nerve
 - F. Traction of the disc with bowing of the scleral crescent
3. Giant cell (temporal) arteritis
4. Optic pit
5. Patients using digitalis
6. Reduced blood supply to optic nerve (e.g., acute hypotension, blood loss [severe] carotid insufficiency, gastrointestinal bleeding, ischemic optic neuropathy, myocardial infarction, pernicious anemia)
7. Schnobel cavernous atrophy
8. Syphilitic optic-nerve atrophy
9. Tumors arising near the chiasm

Jonas JB, et al. Pseudoglaucomatous physiologic large cups. *Am J Ophthalmol* 1989;107:137-144.

Kolker AE, Hetherington J. *Becker-Schaffer's diagnosis and therapy of the glaucomas*, 6th ed. St. Louis: CV Mosby, 1989.

Moore M, et al. Progressive optic nerve cupping and neural rim decrease in a patient with bilateral autosomal dominant optic nerve colobomas. *Am J Ophthalmol* 2000;129:517-520.

Vaughan D, et al. *General ophthalmology*, 12th ed. Norwalk, CT: Appleton & Lange, 1989.

Temporally Displaced Disc (Dragged Disc)

1. Abnormal tortuous retinal vessels temporally
2. Ectopic macula
3. ROP
4. Temporally displaced vessels

Gow J, Oliver GL. Familial exudative vitreoretinopathy. *Arch Ophthalmol* 1971;86:150-155.

18

Visual-Field Defects

Pseudo-Visual-Field Defects

1. Facial contour
 - A. Prominent nose
 - B. Bushy, projecting eyebrows
 - C. High cheekbones
 - D. Ptosis or blepharochalasis
 - E. Sunken globes
 - F. Fracture of orbit
2. Corneal opacities
3. Lenticular opacities, especially if miotics are used, will depress fields and exaggerate existing scotomas
4. Aphakia without lens or with convex lens; little distortion with contact lens or intraocular lens
5. Dull patient; patient may be mentally defective, have toxemia, arteriosclerosis, cerebral tumor, brain abscess, or increased intracranial pressure
6. Pupillary size
 - A. Decrease in miotic field, especially with opacities of ocular media
7. Uncorrected refractive errors—correct for distance testing
8. Head tilting when the head is tilted toward the left shoulder; the right blind spot is elevated; when the head is tilted toward the right shoulder, the right blind spot is lowered

9. Environmental artifacts
 - A. Reduction in illumination of screen and test objects magnifies field defect
 - B. Variation in size of test object changes field defect
 - C. Standard distance of patient from screen
 - D. Attention of patient
 - E. Technique of examiner
10. Psychologic artifacts
 - A. Patient's misunderstanding of test
 - B. Tiring of patient by prolonged testing
 - C. Malingering—isopters at different distances are inconsistent
 - D. Hysteria—spiral field defects may be found
11. Frames of glasses and segments of multifocal lenses
12. Colored contact lenses

Insler MS, et al. Visual field constriction caused by colored contact lenses. *Arch Ophthalmol* 1988;106:1680-1682.

Meyer DR, et al. Evaluating the visual field effects of blepharoptosis using automated static perimetry. *Ophthalmology* 1993;100:651-659.

Pau H. *Differential diagnosis of eye diseases*, 2nd ed. New York: Thieme Medical, 1988.

Bilateral Central Scotomas

These are bilateral macular defects with decreased visual acuity; scotomas may be central or centrocecal.

1. Bilateral macular lesions, such as cysts or those due to hemorrhage, edema, degeneration, detachment, hole, or infection (see p. 439)
2. Bilateral optic-nerve lesions
 - A. Papilledema with macular edema (see p. 593)
 - B. Bipituitary adenoma compressing the prechiasmatic segment of the distal optic nerve
 - C. Papillitis (see p. 578)
 - D. Retrobulbar neuritis (see p. 578)
3. Diabetes mellitus
4. Familial optic atrophies (see p. 564)
5. Hyperbaric oxygen
6. Migraine—forerunner of visual auras
7. *Nutritional deficiency, such as thiamine or vitamin B₁₂ deficiency
8. Pernicious anemia
9. Occipital cortex lesions
10. Toxic agents
 - A. Aromatic aminocompounds and nitrocompounds—aniline, nitrobenzene, trinitrotoluene
 - B. Carbon disulfide
 - C. Drugs, including:

acetophenazine	aluminum nicotinate (?)	aspirin
acetyldigitoxin	aminosalicylic acid (?)	barbital
adrenal cortex injection	amiodarone	beclomethasone
alcohol	amobarbital	betamethasone
aldosterone	amodiaquine	bromide
alkavervir	antazoline	bromisovalum
allobarbitol	aprobarbital	brompheniramine
butabarbital	emetine	nicotinic acid (?)
butalbital	epinephrine	nicotinyl alcohol (?)
butallylonal	ergonovine	ofloxacin
butaperazine	ergot	opium
butethal	ergotamine	oral contraceptives
caramiphen (?)	ethambutol	ouabain
carbinoxamine	ethchlorvynol	oxygen
carbon dioxide	ethopropazine	oxyphenbutazone
carbromal	fludrocortisone	paramethadione
carisoprodol	fluorometholone	paramethasone
carphenazine	fluphenazine	pentobarbital
chloramphenicol	fluprednisolone	perazine
chloroquine	gitalin	pericyazine
chlorpheniramine	heptabarbital	perphenazine
chlorpromazine	hexamethonium	phenobarbital
chlorpropamide (?)	hexethal	piperacetazine
chlortetracycline	hexobarbital	prednisolone
ciprofloxacin	hydrocortisone	prednisone
cisplatin	hydroxychloroquine	primidone
clemastine	ibuprofen	probarbital
clomiphene	indomethacin (?)	prochlorperazine
cobalt (?)	influenza virus vaccine	promazine
contraceptives	interleukin 2, 3, and 6	promethazine
cortisone	iodide and iodine solutions and compounds	propiomazine
cyclobarbital		quinacrine
danazol	iothalamic acid	quinidine

dapiprazole hydrochloride	isoniazid	quinine
deferoxamine	lanatoside C	radioactive iodides
demeclocycline	lidocaine	secobarbital
deslanoside	lithium carbonate	sodium
desoxycorticosterone	medrysone	sodium salicylate
dexamethasone	mephobarbital	streptomycin
dexbrompheniramine	meprednisone	sulfacetamide
dexchlorpheniramine	meprobamate	sulfachlorpyridazine
diatrizoate meglumine and sodium	mesoridazine	sulfadiazine
diazoxide	methacycline	sulfadimethoxine
diethazine	metharbital	sulfamerazine
diethylcarbamazine	methdilazine	sulfameter
digitalis	methitural	sulfamethizole
digitoxin	methohexital	sulfamethoxazole
	methotrimeprazine	sulfamethoxypyrida zine
digoxin	methoxsalen	sulfanilamide
dimethindene	methyl dopa	sulfaphenazole
diphenhydramine	methylergonovine	sulfisoxazole
diphenylpyraline	methylprednisolone	talbutal
diphtheria and tetanus toxoids absorbed	methysergide	thiamylal
disulfiram	morphine (?)	thiethylperazine
doxylamine	naproxen	thiopental
thiopropazine	niacinamide (?)	thiopropazate
thioridazine	trichloroethylene	trimethadione
thyroid (?)	trifluoperazine	vinbarbital
triamcinolone	triflupromazine	
	trimeprazine	

- D. Ethyl alcohol
- E. Halogenated hydrocarbons—methyl chloride, methyl bromide, iodoform, trichloroethylene
- F. Metals—lead, thallium (inorganic), arsenic
- G. Methyl alcohol
- H. Tobacco

Enlargement of Blind Spot

1. Blind spot syndrome (multiple evanescent white-dot syndrome [MEWS])
2. Coloboma of the optic nerve
3. Drugs, including the following:

adrenal cortex injection	ergot	oxytetracycline
aldosterone	fludrocortisone	paramethasone
betamethasone	fluorometholone	prednisolone
carbon dioxide	fluprednisolone	prednisone
chlortetracycline	hydrocortisone	quinacrine
cortisone	indomethacin (?)	tetracycline
demeclocycline	medrysone	triamcinolone
desoxycorticosterone	methacycline	trichloroethylene
dexamethasone	methylprednisolone	vigabatrin
doxycycline	minocycline	vitamin A

4. Drusen of the optic nerve (see p. 559)
5. Glaucoma
6. Inferior conus
7. Inverted disc or nasally directed scleral canal
8. Juxtapapillary choroiditis
9. Medullated nerve fibers
10. Multifocal choroiditis
11. Multifocal evanescent white-dot syndrome
12. *Papilledema (pseudotumor cerebri) (see p. 593)
13. Papillitis (see p. 578)
14. Progressive myopia with a temporal crescent
15. Senility—senile halo
16. High-resistance instrument players

Singh K, et al. Acute idiopathic blind spot enlargement. *Ophthalmology* 1991;98:497-502.

Arcuate (Cuneate) Scotoma

In this condition, scotoma follows the lines of the nerve fibers in the retina with the narrow end at the blind spot and broad end at horizontal raphe.

1. Acute bleeding episode
2. Branch artery occlusion
3. Branch vein occlusion
4. Chorioretinitis juxtapapillaris
5. Coloboma of the disc
6. Drusen of optic nerve
7. *Glaucoma
8. High myopia
9. Inferior conus
10. Ischemic optic neuropathy
11. Myelinated nerve fibers

Greve EL, Verriest G. *Fourth International Visual Field Symposium*. The Hague, Netherlands, 1981.

Harrington DO, Drake MV. *The visual fields: text and atlas of clinical perimetry*, 6th ed. St. Louis: CV Mosby, 1990.

Unilateral Sector-Shaped Defects

In this condition, the narrow end of scotoma characteristically touches the physiologic blind spot.

1. Optic disc involvement
 - A. Glaucoma (early stages primarily on nasal side)
 - B. Papillitis
 - C. Secondary optic atrophy after choked disc (more on nasal side)
2. Retina
 - A. Branch artery occlusion (see p. 468-472)
 - B. Juxtapapillary chorioretinitis
3. Optic nerve—between disc and chiasm
 - A. Aneurysm
 - B. Drusen
 - C. Tumor

Hart WM, Becker B. The onset and evolution of glaucomatous visual field defects. *Ophthalmology* 1982;89:268.

Spekreijse H, Apkarian PA. *Visual pathways*. The Hague, Netherlands: Dr. Junk, 1981.

Peripheral-Field Contraction

Central vision is present; the patient may complain of poor night vision.

1. Choroiditis—periphery of fundus
2. *Chronic atrophic papilledema (pseudotumor cerebri)
3. Bilateral homonymous hemianopia (if the macular sparing in one homonymous hemianopia)

is larger than that in the other homonymous hemianopia, the spared central portion of the field has small vertical steps, above and below fixation, where the two areas of macular sparing do not quite coincide.)

A. Cortical blindness with damage to occipital lobe and macular recovery

1. Anoxia
2. Carbon monoxide poisoning
3. Cardiac arrest
4. Cerebral angiography
5. Exsanguination
6. Trauma

B. Stroke of infarction of occipital lobe

4. Drugs, including the following:

acetophenazine	cyclobarbital	ibuprofen
acridine	deslanoside	indomethacin
alcohol	desoxycorticosterone	iodide and iodine solutions and compounds
allobarbital	dexamethasone	
amobarbital	diethazine	isoniazid
amodiaquine	digitalis	lanatoside C
aprobarbital	digoxin	lithium carbonate
arsenic	disulfiram	medrysone
aspirin	emetine	mephobarbital
barbital	epinephrine	mesoridazine
bromisovalum	ergot	metharbital
butalbital	ethambutol	methdilazine
butallylonal	ethchlorvynol	methitural
butaperazine	ethopropazine	methohexital
butethal	ethylhydrocupreine	methotrimeprazine
carbon dioxide	filax mas	methylprednisolone
carbon monoxide	fludrocortisone	methysergide
carbromal	fluorometholone	morphine (?)
carisoprodol	fluphenazine	niacinamide (?)
carphenazine	fluprednisolone	nicotinic acid (?)
chloramphenicol	gitalin	nicotiny alcohol (?)
chloroquine	heptabarbital	opium
chlorpromazine	hexamethonium	oral contraceptives
chlorpropamide (?)	hexethal	ouabain
clomiphene	hexobarbital	oxygen
cobalt	hydrocortisone	paramethadione
cortisone	hydroxychloroquine	pomas

5. Drusen of optic disc
6. Frontal-lobe tumors
7. General apathy in a lackadaisical subject
8. *Glaucoma
9. Hysteria and malingering
10. Many conditions in which night blindness occurs (see p. 656)
11. Optic atrophy (see p. 564)
12. Papillitis (see p. 578)
13. Post vitrectomy with fluid-air exchange

14. Retinitis—periphery of fundus
15. Retinitis pigmentosa
16. Unilateral concentric constriction, excluding diseased retina or glaucoma, suggests lesion of optic nerve and chiasm
 - A. Meningioma of tuberculum sellae, sphenoid ridge, or the olfactory groove
 - B. Tumor of optic nerve

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects and drug interactions*. Woburn, MA: Butterworth-Heinemann, 2001.

Altitudinal Hemianopia

This condition comprises defective vision or blindness in the upper or lower horizontal half of the visual field. It may be unilateral or bilateral; unilateral field defect is prechiasmal.

1. Anemia—produces bilateral inferior altitudinal hemianopia
2. *Anterior ischemic optic neuropathy
3. Bilateral branch retinal artery occlusion
4. Fusiform aneurysms (arteriosclerotic or congenital)—may produce inferior altitudinal hemianopia by pressure against the lateral halves of the optic chiasm or nerve
5. Herpes zoster
6. Lesion that presses the chiasm upward against the superior margin of the optic foramen
7. Occipital lobe lesions
 - A. Hypoxia
 - B. Stroke
8. Olfactory groove meningioma extending posteroinferior to compress the intracranial portion of the optic nerve
9. Optic-nerve lesion
 - A. Anterior ischemia optic neuropathy
 - B. Coloboma
 - C. Glaucoma
 - D. Optic neuritis
 - E. Papilledema
 - F. *Trauma
 - G. Tumor
10. Sclerotic plaques of internal carotid artery or anterior cerebral arteries—pressure of plaques on optic nerve results in inferior altitudinal hemianopia
11. Following pars plana vitrectomy

Harrington DO, Drake MV. *The visual fields: a text and atlas of clinical perimetry*, 6th ed. St. Louis: CV Mosby, 1990.

Miyashita K, et al. Superior altitudinal hemianopia and herpes zoster. *Ann Ophthalmol* 1993;25:20-23.

Binasal Hemianopia

This condition comprises defects in the nasal half of visual fields, usually incomplete. This condition is due to lateral involvement of chiasm; it presupposes bilateral lesions.

1. Bilateral occipital lesion (thrombosis)
2. Chiasmic arachnoiditis, postneuritic optic atrophy, and bilateral retrobulbar neuritis of multiple sclerosis
3. Damage to chiasm
4. Drusen of optic nerve (see p. 559)
5. Fusiform aneurysms—arteriosclerotic or congenital—of internal carotid artery
6. Glaucoma
7. Meningiomas, especially from the lesser wing of the sphenoid bone
8. Nasal quadrant peripheral depression of glaucoma—bilateral and reasonably symmetrical
9. Pituitary tumor with third ventricle dilatation pushing laterally
10. Retinal damage
11. Severe exsanguination
12. Sclerotic plaques of internal carotid artery or anterior cerebral arteries
13. Symmetric lesions in the temporal halves of both retinas, such as severe retinal edema associated with diabetic retinopathy
14. Trauma

Cox TA, et al. Unilateral nasal hemianopia as a sign of intracranial optic nerve compression. *Am J Ophthalmol* 1981;92:230-232.

Harrington DO, Drake MV. *The visual fields: text and atlas of clinical perimetry*, 6th ed. St. Louis: CV Mosby, 1990.

Pau H. *Differential diagnosis of eye diseases*, 2nd ed. New York: Thieme Medical, 1988.

Bitemporal Hemianopia

This condition involves defects in the temporal half of the visual field, usually incomplete; it is due to pressure on the optic chiasm.

1. Chiasmal lesions
 - A. Congenital defect such as de Morsier syndrome (septo-optic dysplasia); autosomal dominant
 - B. Inflammatory lesions
 1. *Basal meningitis, including: chronic chiasmal syphilitic, tuberculous, actinomycotic, and cysticercal arachnoiditis
 2. Chiasmal neuritis
 - C. Tumors of the chiasm
 1. *Primary tumors, including gliomas in childhood
 2. *Secondary tumors (rare), including meningiomas, retinoblastoma, pinealoma, and ependymoma
 - D. Vascular lesions
 1. Arterial compression
 2. Arteriosclerosis
 3. Ectasia of the intracranial carotid arteries
 4. *Intracranial aneurysms, such as congenital, endocardial emboli, traumatic, atheromatous, or syphilitic, especially intrasellar aneurysms
 5. Thrombosis of the carotid artery
2. Perisellar lesions
 - A. Parasellar tumors
 1. Injuries to the chiasmal pathway, such as from trauma
 2. *Meningioma of the sphenoid ridge

3. Migraine
4. Sudden onset without apparent cause
 - a. Arteriosclerotic or giant cell arteritic occlusion of nutrient vessels of the chiasm in older patients
 - b. Disseminated sclerosis
5. Tumors of the basal meninges
6. Tumors of the sphenoid bone including osteochondroma, sarcoma, anaplastic carcinoma
- B. Presellar tumors
 1. *Meningioma of the olfactory groove
 2. Neuroblastoma of the olfactory groove
- C. Suprasellar tumors
 1. Chordoma
 2. *Craniopharyngioma—manifestations may include diabetes insipidus, infantilism, and calcification of hypophyseal-pituitary region
 3. Epidermoids
 4. Lymphoblastoma
 5. Pinealoma
 6. *Suprasellar meningioma
 7. Teratoma
 8. Tumors of the frontal lobe, including porencephaly (cystic cavity in brain substance) and glioma
 9. Tumors of the third ventricle and internal hydrocephalus, such as glioma and epidymoma
3. Pituitary lesions
 - A. Pituitary hyperplasia
 - B. Pituitary tumors
 1. Adenoma
 - a. Acidophilic adenoma—varies from gigantism to acromegaly
 - b. Basophilic adenoma—hyperadrenalism (Cushing disease), Nelson syndrome
 - c. Chromophobe adenoma—varies from no endocrine symptoms to panhypopituitarism; most common type of pituitary tumor, Fröhlich syndrome
 2. Adenocarcinoma (rare)
 3. Metastatic tumors as from breast (rare)

Kerrison JB, Lee AG. Acute loss of vision during pregnancy due to a suprasellar mass. *Surv Ophthalmol* 1997;41:400-401.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Homonymous Quadrantanopia

In this condition, one quadrant is involved in upper or lower and right or left visual fields; etiology may include tumor, vascular lesion, or infection.

1. Superior homonymous quadrantanopia
 - A. Inferior lip of the calcarine fissure—congruous
 - B. Temporal lobe—incongruous
2. Inferior homonymous quadrantanopia
 - A. Anton syndrome (denial—visual hallucination)

- B. Superior radiation in parietal lobe—incongruous
- C. Upper lip of the calcarine fissure in the occipital lobe—congruous

Bosley TM, et al. Neuro-imaging and positron emission tomography of congenital homonymous hemianopsia. *Am J Ophthalmol* 1991;111:413-418.

Harrington DO, Drake MV. *The visual fields: textbook and atlas of clinical perimetry*, 6th ed. St. Louis: CV Mosby, 1990.

Crossed Quadrantanopia

In this condition, the upper quadrant of one visual field is along with the lower quadrant of opposite visual field.

1. *Asymmetric homonymous hemianopia, such as vascular lesion of the upper lip of the calcarine area on one side and the lower lip of the opposite calcarine cortex
2. Chiasm compression from lesion below compressing it against contiguous arterial structure
3. Glaucoma
4. Inflammatory lesion, such as choroiditis juxtapapillaris

Harrington DO, Drake MV. *The visual fields: text and atlas of clinical perimetry*, 6th ed. St. Louis: CV Mosby, 1990.

Homonymous Hemianopia

This type of hemianopia affects the right or left halves of the visual fields; the lesion is posterior to the optic chiasm,

1. Optic tract lesions—visual conduction system posterior to optic chiasm and anterior to lateral geniculate body; lesion demonstrates incongruous field defect on side opposite to defect, often with decreased vision, optic atrophy and afferent pupil.
 - A. Demyelinative disease—retrobulbar, multiple sclerosis, and Schilder disease
 - B. Migraine
 - C. Pituitary adenomas and craniopharyngiomas (most common); nasopharyngeal carcinomas, chordomas, infundibulomas, and gliomas (less common)
 - D. Saccular aneurysms of internal carotid or posterior communicating artery
 - E. Trauma
2. Temporoparietal lesions—temporal lobe lesions are manifest initially in the upper visual fields, whereas lesions of the parietal lobe are first manifest in the lower visual fields
 - A. Diffuse demyelinating diseases
 1. Krabbe type (Sturge-Weber-Krabbe syndrome)
 2. Metachromatic leukoencephalopathy
 3. Pelizaeus-Merzbacher type (aplasia axialis extracorticalis congenita)
 4. Progressive multifocal leukoencephalopathy
 5. Schilder type (encephalitis periaxialis diffusa)
 6. Spongy degeneration of the brain (Canavan disease)
 - B. Migraine
 - C. Tumor—gradual onset of symptoms—lesions include intrinsic astrocytoma and glioblastoma, extrinsic meningioma, and lung metastasis
 - D. Vascular lesions—sudden onset
 1. Embolism—may be associated with rheumatic or arteriosclerotic heart disease, bacterial endocarditis, myocardial infarction, or septic focus in lungs

2. Occlusion—middle cerebral occlusion affects primarily the arm and face; anterior cerebral occlusion affects primarily the leg
3. Subdural hematoma—spontaneous or following trauma
4. Thrombosis—premonitory symptoms include unilateral blackouts in one eye
- E. Trauma (surgical)
3. Occipital lesions—congruous field defect and macular sparing most likely
 - A. Demyelinative disease
 1. Creutzfeldt-Jakob disease
 2. Krabbe type (Sturge-Weber-Krabbe syndrome)
 3. Metachromatic leukoencephalopathy
 4. Pelizaeus-Merzbacher type (aplasia axialis extracorticalis congenita)
 5. Progressive multifocal leukoencephalopathy
 6. Schilder type (encephalitis periaxialis diffusa)
 7. Spongy degeneration of the brain (Canavan disease)
 - B. Migraine
 - C. Poisons, such as carbon monoxide, digitalis, mescal, opium, lysergic acid diethylamide
 - D. Trauma
 1. Direct—penetrating missiles and depressed bone fragments
 2. Indirect—general concussion syndrome
 3. Temporal lobectomy
 - E. Tumors—gradual onset of symptoms—lesions include intrinsic astrocytoma and glioblastoma, extrinsic meningioma, and lung metastasis
 - F. Vascular lesion—sudden onset
 1. Arteriovenous anomalies
 2. Aneurysms (rare)
 3. Occlusion of posterior cerebral artery—thrombotic or embolic
 4. Subclavian steal syndrome, with reversal of blood flow through the vertebral artery

Harrington DO, Drake MV. *The visual fields: text and atlas of clinical perimetry*, 6th ed. St. Louis: CV Mosby, 1990.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Vargas ME, et al. Homonymous field defect as the first manifestation of Creutzfeldt-Jakob disease. *Am J Ophthalmol* 1995;119:497-504.

Spiral-Field Defects

1. *Hysteria
2. Radiation therapy in or about the retina, optic nerve, and anterior visual pathways

Fitzgerald CR, et al. Radiation therapy in and about the retina, optic nerve, and anterior visual pathway. *Arch Ophthalmol* 1981;99:611-623.

Double Homonymous Hemianopia

This condition involves peripheral constriction with small vertical steps above and below fixation as a result of lesions of the occipital area and probable involvement of striate cortex of both occipital lobes.

1. Bilateral central retinal artery occlusion
2. Bilateral central retinal vein occlusion

3. Bilateral vascular lesions involving a calcarine fissure
4. Increased intracranial pressure with shift of uncal portion of temporal lobe down over edge of tentorium with compression of posterior cerebral arteries and infarction in calcarine cortex.
5. Partial recovery from cortical blindness (see p. 632) from trauma, anoxia, carbon monoxide poisoning, cerebral angiography, cardiac arrest, exsanguination, and other similar conditions
6. Severe end-stage glaucoma
7. Severe trauma with massive brain damage as in depressed fracture of occiput

Harrington DO, Drake MV. *The visual fields: text and atlas of clinical perimetry*, 6th ed. St. Louis: CV Mosby, 1990.

II

General Signs and Symptoms

19

Visual Disturbance

Acquired Myopia*

This condition comprises an error of refraction in which parallel rays of light focus in front of the retina, usually producing blurred distant vision and clear near vision.

1. *Conditions such as diabetes mellitus or nuclear sclerotic cataract in which there is increased index of refraction of lens
2. *Refractive myopia—increased curvature of the refracting surfaces because of the following:
 - A. Ciliary muscle spasm
 1. Functional—adolescence, hysteria
 2. Miotics such as carbachol, demecarium, echothiophate, isoflurophate, neostigmine, and physostigmine
 3. Trauma—ocular contusion or anterior dislocation of the lens
 4. Mushroom (*Amanita muscaria*) poisoning

B. Lens hydration changes—diabetes mellitus, dysentery, or toxemia of pregnancy

C. Drug reaction—probably because of ciliary body edema, including the following:

acetazolamide	haloperidol (?)	piperacetazine
acetophenazine	hyaluronidase	polythiazide
adrenal cortexinjection	hyaluronic acid	prednisolone
alcohol	hydrochlorothiazide	prednisone
aldosterone	hydrocortisone	prochlorperazine
aspirin	hydroflumethiazide	promazine
beclomethasone	hydroxypropyl	promethazine
bendroflumethiazide	ibuprofen	propiomazine
benzthiazide	indapamide	quinethazone
betamethasone	isofluorophate	quinine
betaxolol	isosorbide dinitrate	sodium salicylate
butaperazine	isotretinoin	spironolactone
carbachol	levobunolol	sulfacetamide
carphenazine	medrysone	sulfachlorpyridazine
chlorothiazide	meprednisone	sulfacytine
chlorpromazine	mesoridazine	sulfadiazine
chlortetracycline	methacholine	sulfadimethoxine
chlorthalidone	methacycline	sulfamerazine
cimetidine (?)	methazolamide	sulfameter
clofibrate	methdilazine	sulfamethazine
codeine	methotrimeprazine	sulfamethizole
cortisone	methsuximide	sulfamethoxazole
cyclothiazide	methyclothiazide	sulfamethoxypridazine
demecarium	methylcellulose	sulfanilamide
demeclocycline	methylprednisolone	sulfaphenazole
desoxycorticosterone	metolazone	sulfapyridine
dexamethasone	minocycline	
dichlorphenamide	morphine	sulfasalazine
diethazine	neostigmine	sulfathiazole
digitalis (?)	opium	sulfisoxazole
doxycycline	oral contraceptives	tetracycline
droperidol (?)	oxygen	thiethylperazine
echothiophate	oxytetracycline	thiopropazate
ethopropazine	paramethasone	thiopropazine
ethosuximide	penicillamine	thioridazine
ethoxzolamide	perazine	timolol
etretinate	pericyazine	triamcinolone
fludrocortisone	perphenazine	trichlormethiazide
fluorometholone	phenformin	trifluoperazine
fluphenazine	phensuximide	trifluperidol (?)
fluprednisolone	physostigmine	triflupromazine
glibenclamide	pilocarpine	trimeprazine

- D. Elongated globe
 - E. Paralysis of accommodation for distance (sympathetic paralysis)—young patient with unilateral Homer syndrome or migraine
 - F. Retinopathy of prematurity (retrolental fibroplasia)
 - G. Congenital glaucoma
 - H. Albinism
 - I. Gyrate atrophy (ornithine ketoacid aminotransferase deficiency)
 - J. Hypoparathyroidism
 - K. Malaria
 - L. Inherited
 1. Cochlear deafness with myopia and intellectual impairment—autosomal recessive
 2. Epiphyseal dysplasia of femoral heads, myopia, deafness—autosomal recessive
 3. Epiphyseal dysplasia, multiple, with myopia and conductive deafness—autosomal dominant
 4. Microcornea and cataract—autosomal dominant
 5. Microphthalmos with myopia and corectopia—autosomal dominant
 6. Myopia—autosomal recessive or dominant or less often X-linked
 7. Night blindness, congenital stationary with myopia (nyctalopia-myopia)—X-linked
 8. Night blindness with high-grade myopia—autosomal recessive
 9. Pinguecula blindness (total color blindness with myopia, achromatopsia with myopia)—autosomal recessive
 - M. With scleral buckling surgery
3. Syndromes associated with myopia
- A. Aberfeld syndrome (congenital blepharophimosis)
 - B. Achard syndrome (Marfan syndrome with mandibulofacial dysostosis)
 - C. Alport syndrome (hereditary familial congenital hemorrhagic nephritis)
 - D. Bloch-Sulzberger syndrome
 - E. Chromosome partial deletion (long-arm) syndrome
 - F. Cohen syndrome
 - G. Cri-du-chat syndrome
 - H. de Lange syndrome (congenital muscular hypertrophy cerebral syndrome)
 - I. Down syndrome (trisomy syndrome)
 - J. Ehlers-Danlos syndrome (fibrodysplasia elastica generalisata)
 - K. Fetal alcohol syndrome
 - L. Forsius-Eriksson syndrome (Aland disease)
 - M. Gansslen syndrome (familial hemolytic icterus)
 - N. Haney-Falls syndrome (congenital keratoconus posticus circumscriptus)
 - O. Homocystinuria
 - P. Hypomelanosis of Ito syndrome
 - Q. Kartagener syndrome (sinusitis, bronchiectasis, situs inversus syndrome)
 - R. Kniest syndrome
 - S. Laurence-Moon-Bardet-Biedl syndrome (retinitis pigmentosa-polydactyly-adiposogenital syndrome)
 - T. Marchesani syndrome (brachymorphy with spherophakia)
 - U. Marfan syndrome (arachnodactyly dystrophia mesodermalis congenita)

- V. Marshall syndrome (atypical ectodermal dysplasia)
- W. Matsoukas syndrome (oculocerebroarticuloskeletal syndrome)
- X. Myasthenia gravis (Erb-Goldflam syndrome)
- Y. Noonan syndrome (male Turner syndrome)
- Z. Obesity-cerebral-ocular-skeletal anomalies syndrome

- AA. Oculodental syndrome (Peter syndrome)
- BB. Pierre Robin syndrome (micrognathia-glossoptosis syndrome)
- CC. Pigmentary ocular dispersion syndrome
- DD. Rubinstein-Taybi syndrome (broad-thumbs syndrome)
- EE. SED congenita (spondyloepiphyseal dysplasia, congenital type)—autosomal dominant
- FF. Scheie syndrome
- GG. Schwartz syndrome (glaucoma associated with retinal detachment)
- HH. Siemens syndrome (hereditary ectodermal dysplasia syndrome)—autosomal recessive
- II. Smith-Magenis syndrome
- JJ. Stickler syndrome (hereditary progressive arthroophthalmopathy)—autosomal dominant
- KK. Trisomy 20p syndrome
- LL. Trisomy syndrome
- MM. Tuomaala-Haapanen syndrome (unknown etiology, similar to pseudohypoparathyroidism)
- NN. Van Bogaert-Hozoy syndrome (similar to Rubinstein-Taybi syndrome)
- OO. Wagner syndrome (hyaloideoretinal degeneration)
- PP. Weill-Marchesani syndrome (brachymorphy with spherophakia)
- QQ. Wrinkly-skin syndrome
- RR. XXXXY syndrome (hypogenitalism, limited elbow pronation, low dermal finger tip ridge count)

- 4. Transient myopia
 - A. Chemical agents and disease
 - B. *Diabetes
 - C. *After surgery
 - D. Trauma

Sorenson AL, et al. Ultrasonographic measurement of induced myopia associated with capsular bag distention syndrome. *Ophthalmology* 2000;107:902-908.

Acquired Hyperopia

This condition comprises far-sightedness and error of refraction in which parallel rays of light focus behind the retina, usually producing clear distant vision and blurred near vision.

- 1. Aarskog syndrome (facial-digital-genital syndrome)
- 2. Adie syndrome (tonic pupil)

3. *Aphakia
4. Best syndrome (vitelliform dystrophy)
5. *Diabetes mellitus (poorly controlled to controlled)
6. Down syndrome (mongolism)
7. Drugs, including the following:

antihistamines	sulfachlorpyridazine (?)	sulfanilamide (?)
cannabis	sulfadiazine (?)	sulfaphenazole (?)
chloroquine	sulfadimethoxine (?)	sulfapyridine (?)
ergot	sulfamerazine	sulfasalazine (?)
imipramine	sulfameter (?)	sulfathiazole (?)
meprobamate	sulfamethazine	sulfisoxazole (?)
parasympatholytic drugs	sulfamethizole	tolbutamide (?)
penicillamine	sulfamethoxazole	
phenothiazine	sulfamethoxypyridazine (?)	

8. Flat cornea
9. Gorlin-Chaudhry-Moss syndrome (multiple basal cell nevi syndrome)
10. *Hyperopia—refractive or axial
11. Hypoglycemia
12. Kenny syndrome (nanophthalmos with hyperopia)
13. Leber congenital amaurosis
14. Lesions causing internal ophthalmoplegia with paralysis of accommodation
15. Macular edema
16. Orbital tumor with extraocular globe pressure and retinal striae
17. Postsurgical correction of myopia (retinal keratotomy, automated lamella keratoplasty, photoreactive keratectomy)
18. *Presbyopia
19. Rubinstein-Taybi syndrome
20. Sorsby syndrome (hereditary macular coloboma syndrome)
21. Toxin of *Clostridium botulinum*
22. Trauma to the eye with posterior dislocation of the lens, macular edema, or ciliary body contusion

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

Dysmegalopsia—Optical Illusions of Size

1. Macropsia (objects appear larger)
 - A. *Miotics
 - B. *Spasm of accommodation (see p. 416-417)
 - C. Use of excessive plus lenses
2. Metamorphopsia (objects appear distorted)
 - A. Cerebral
 1. Drug intoxications
 2. Epilepsy
 3. Focal lesions such as thrombosis of right middle cerebral artery

4. Migraine
5. Parietal lobe lesion, including tumor and vascular lesion
6. Schizophrenia
- B. Hysteria
- C. Ocular
 1. Astigmatism
 2. *Macular lesions, including orbital tumor with macular striae and macular edema, inflammation, heterotopia or hole
 3. Posterior vitreous separation and residual vitreoretinal macular traction
 4. Retinal detachment
- D. Paget disease (osteitis deformans)
3. Micropsia (objects appear smaller)
 - A. Accommodative paralysis and subnormal accommodation
 - B. Atropinization
 - C. Botulism
 - D. Diphtheria
 - E. *Presbyopia
 - F. Use of excessive minus lenses
 - G. Use of scopolamine
4. Teleopsia (objects appear farther away than they actually are)
 - A. Bilateral parietal lesion
 - B. Parietal lesion in nondominant hemisphere

Pau H. *Differential diagnosis of eye diseases*, 2nd ed. New York: Thieme Medical, 1988.

Pau H. *Differential diagnosis of eye diseases*, 2nd ed. New York: Thieme Medical, 1988.

Amaurosis Fugax (Transient Monocular Blackout of Vision)

1. Amaurosis fugax syndrome

2. Arteriosclerosis, hypertension, and hypertensive crisis
3. Canalis opticus syndrome: functional—hysteria, neurasthenia
4. *Cerebrovascular insufficiency
 - A. Arterial aneurysms
 - B. Congenital or acquired arteriovenous malformations
 - C. Fibromuscular hyperplasia
 - D. Post-traumatic acute and chronic arterial occlusion
 - E. Takayasu syndrome (pulseless disease)
 - F. *Unilateral occlusive carotid disease
5. Compressive optic neuropathy
6. Corneal surface problems
7. Functional—hysteria, neurasthenia
8. Hematologic causes
 - A. Emboli
 1. Infective, such as subacute bacterial endocarditis
 2. Gas in dysbarism
 - B. Idiopathic thrombocytosis
 - C. Multiple myeloma (Kahler disease)
 - D. Polycythemia (Vaquez disease)
 - E. Severe anemia
 - F. Sickle cell disease (Herrick syndrome)
9. Hypotension of fundus
 - A. Cardiac arrhythmia
 - B. Glaucoma, narrow angle, pigment dispersion
 - C. Gaze-evoked amaurosis (transient monocular loss of vision occurring in a particular direction of eccentric gaze)
 1. *Bone fragment adjacent to optic nerve following orbital fracture
 2. *Central retinal artery occlusion
 3. Optic nerve sheath meningiomas
 4. Orbital cavernous hemangiomas
 5. Orbital osteoma
 - D. Impending vascular occlusion, retinal vasospasm associated with systemic vasospastic disease (migraine)
 - E. Increased intracranial pressure, such as from intracranial tumors that interfere with vascular supply to the optic nerve
 - F. Increased venous pressure
 1. Impending central retinal vein occlusion (see p. 468-472)
 2. Intermittent elevation of intraocular pressure (glaucoma)
 - G. Negative G-force in pilots—circular maneuver with head toward the center of the circle
 - H. Ocular ischemic syndrome
 - I. Orbital vascular insufficiency with giant cell arteritis
 - J. Papilledema—lasts for to seconds (see p. 593)
 - K. Positive G-force in pilots—circular maneuver with feet toward center of circle
 - L. Vasospasm including temporal arteritis, polyarteritis nodosa, eosinophilic vasculitis, migraine and cluster headache
10. Large vitreous floater
11. Optic disc anomalies (congenital)
12. Ornithine transcarbamoylase deficiency

13. Pituitary tumor
14. Polymyalgia rheumatica
15. Quinine poisoning
16. Raynaud disease (paroxysmal digital cyanosis)
17. Retrobulbar anesthesia
18. Schleral buckling procedure
19. Spontaneous bleeding from a normal-appearing iris or intraocular lens iris touch
20. Taveras syndrome (progressive intracranial arterial occlusion syndrome)
21. Uhthoff symptom—vision decreased with exercise or ocular hyperthermia can occur with:
 - A. Friedreich ataxia
 - B. Insufficiency of posterior cerebral arteries
 - C. Intracellar and parasellar tumor
 - D. Multiple sclerosis (disseminated sclerosis)
22. Uremic amaurosis—with eclampsia
23. Vasospasm
24. Wasp sting

Bernard GA, et al. Vasospastic amaurosis fugax. *Arch Ophthalmol* 1999;117:1568.

Sudden Painless Loss of Visual Acuity—One Eye

1. Acute keratoconus
2. Complication of retrobulbar block
3. Injury to the optic nerve
4. Meningeal carcinomatosis
5. Occlusion of central retinal artery
6. *Retinal detachment
7. Vitreous or retinal hemorrhage

Appen RE, et al. Meningeal carcinomatosis with blindness. *Am J Ophthalmol* 1978;86:661-665.

Brookshire GL, et al. Life-threatening complication of retrobulbar block. *Ophthalmology* 1986;93:1476-1478.

Kearne JR. Sudden blindness after ventriculography: bilateral retinal vascular occlusion superimposed on papilledema. *Am J Ophthalmol* 1974;78:275-278.

Posttraumatic Loss of Vision

1. *Acute (angle-closure) glaucoma precipitated by emotional trauma of recent accident or from intumescent lens capsular trauma or other blunt trauma
2. Avulsion of optic nerve by lateral orbital wall trauma or contrecoup blow to head
3. Central retinal artery or vein occlusion (from markedly increased orbital pressure or embolus)
4. Cortical blindness from hematoma, ischemia, or anoxia (patient may be unaware of blindness)
5. Hyphema, vitreous hemorrhage
6. Hysteria

7. Indirect trauma to optic nerves or chiasm
8. Intracranial interruption of visual pathways (hemorrhage, foreign body)
9. *Lid swelling, blood or foreign material covering cornea, corneal damage
10. Malingering
11. *Retinal detachment
12. Traumatic cataract, luxation of the lens (see p. 401)
13. Traumatic retinal edema and hemorrhages of retina from direct or contrecoup blows

Deutsch TA, Feller DB. *Paton and Goldberg's management of ocular injuries*. Philadelphia: WB Saunders, 1985.

Decreased Visual Acuity

1. Achromatopsia
2. Amblyopia ex anopsia—disuse
 - A. Anisometropia—difference in refractive error between the eyes
 - B. Monocular occlusion
 - C. Strabismus—esotropia, exotropia, or hypertropia
 - D. Unilateral atropinization
3. Anomalous elevation of optic disc with hyperplastic glial tissue and anomalous retinal vessels
4. Apparently normal eye with central fixation with poorer visual acuity in one than other eye—anisometropia
5. Apparently normal eye with normal fixation with disparity between near and distance vision—amblyopia, hysteria, malingering, retrobulbar neuritis, presbyopia, and micronystagmus
6. Apparently normal eye with normal fixation with poor distance and near vision astigmatism, amblyopia, hyperopia in older persons
7. Drugs, including the following:

acebutolol	amantadine	antipyrine
aceclidine	ambenonium	aprobarbital
acetaminophen	ambutonium	aspirin
acetanilid	aminosalicylate (?)	atenolol
acetazolamide	aminosalicylic acid (?)	atropine
acetoexamide	amiodarone	azatadine
acetophenazine	amithiozone	bacitracin
acetyldigitoxin	amitriptyline	baclufen
acid bismuth sodium tartrate (?)	amobarbital	barbital
	amodiaquine	bacille Calmette-Guérin (BCG) vaccine
acyclovir	amoxapine	
adiphenine	amphetamine	belladonna
adrenal cortexinjection	amphotericin B	bendroflumethiazide
albuterol	amyl nitrite	benoxinate
alcohol	anisindione	benzathine penicillin G
aldosterone	anisotropine	benzphetamine
alkavervir	antazoline	benzthiazide
allobarbitol	antimony lithium thiomalate	benztropine
allopurinol	antimony potassium tartrate	betamethasone
alprazolam	antimony sodium tartrate	betaxolol
alseroxyton	antimony sodium thioglycollate	biperiden
aluminum nicotinate		bismuth oxychloride
bismuth sodium tartrate (?)	chloral hydrate	dantrolene
bismuth sodium thioglycollate (?)	chlorambucil	dapsone
	chloramphenicol	deferoxamine
bismuth sodium triglycollamate (?)	chlorcyclizine	demecarium
	chlordiazepoxide	demeclocycline
bismuth subcarbonate (?)	chloroform	deserpidine
bismuth subsalicylate (?)	chloroprocaine	desipramine
bromide	chloroquine	deslanoside
bromisovalum	chlorothiazide	desoxycorticosterone
brompheniramine	chlorpheniramine	dexamethasone
broxyquinoline	chlorphenoxamine	dexbrompheniramine
bupivacaine	chlorphentermine	dexchlorpheniramine
busulfan	chlorprocaine	dextroamphetamine
butabarbital	chlorpromazine	dextrothyroxine
butacaine	chlorpropamide	diatrizoate meglumine and sodium
butalbital	chlorprothixene	
butallylonal	chlortetracycline	diazepam
butaperazine	chlorthalidone	diazoxide
capreomycin	cimetidine	dibucaine
captopril	cisplatin	dichlorphenamide
carbachol	clemastine	dicumarol
carbamazepine	clidinium	dicyclomine
carbinoxamine	clofazimine	diethazine
carbon dioxide	clofibrate	diethylpropion
carbromal	clomiphene	digitalis
carisoprodol	clomipramine	digitoxin
carmustine	clonazepam	digoxin
carphenazine	clonidine	diltiazem
cefadroxil (?)	clorazepate	dimethindene
cefadroxil (?)	cobalt	diphenamid
cefamandole (?)	cocaine	diphenadione
cefazolin (?)	codeine	diphenhydramine
cefonicid (?)	colchicine	diphenylpyraline
cefoperazone (?)	colloidal silver	diphtheria and tetanus toxoids adsorbed
ceforanide (?)	cortisone	
cefotaxime (?)	cryptenamine	diphtheria and tetanus toxoids and pertussis (adsorbed)

cefotetan (?)	cyclizine	
cefoxitin (?)	cyclobarbitol	
cefsulodin (?)	cyclopentobarbital	diphtheria toxoid (adsorbed)
ceftazidime (?)	cyclopentolate	dipivefrin
ceftizoxime (?)	cyclophosphamide	disopyramide
ceftriaxone(?)	cycloserine	disulfiram
cefuroxime(?)	cyclosporine	doxepin
cephalexin(?)	cyclothiazide	doxycycline
cephaloglycin (?)	cycrimine	doxylamine
cephaloridine (?)	cyproheptadine	dronabinol
cephalothin (?)	cytarabine	droperidol
cephapirin (?)	dacarbazine	dyclonine
cephradine (?)	danazol	echothiophate
edrophonium	homatropine	mannitol hexanitrate
emetine	hydrabamine	penicillin V
enalapril	hydalazine

Cortical Blindness (Cerebral Blindness)

This condition involves a complete loss of all visual sensation, including all appreciation of light and dark and a loss of reflex lid closure to bright illumination and to threatening gestures; retention of pupil constriction to light and accommodation; normal ophthalmoscopic examination; and normal motility. It may be associated with hemiplegia, sensory disorders, aphasia, and disorientation.

1. Degenerative conditions
 - A. Alper progressive gray matter
 - B. Cerebral dysgenesis associated with dementia
 - C. Creutzfeldt-Jakob disease (corticostriatospinal degeneration)
 - D. Cytomegalic inclusion disease (rare)
 - E. Galactosemia
 - F. Hodgkin disease
 - G. Infantile neuroaxonal dystrophy

 - I. Phenylpyruvic oligophrenia
 - J. Pompe disease (generalized glycogenesis)
 - K. Porencephaly
 - L. Renal failure
 - M. Schilder disease (encephalitis periaxialis diffusa)
 - N. Scholz subacute cerebral sclerosis
 - O. Spongy degeneration of the brain
 - P. Subacute sclerosing panencephalitis
 - Q. Tay-Sachs disease (familial amaurotic idiocy)
 - R. Toxoplasmosis (rare)
2. Drugs, including the following:

alcohol	cyclothiazide (?)	indapamide (?)
bendroflumethiazide (?)	diatrizoate meglumine or sodium estradiol	iopamidol
benzthiazide (?)		iothalamate meglumine or sodium iothalanuc
carbon dioxide	ether (?)	
carbon monoxide	etoposide	ketamine (?)
chloroform (?)	etretinate	lead poisoning
chlorothiazide	FK506	meglumine
chlorthalidone	glycine	methadone
cisplatin	hexamethonium chloride	methyclothiazide (?)
corticotropin	hydrochlorothiazide (?)	methylergonovine (?)
cyclosporin	hydroflumethiazide (?)	metolazone (?)
metrizamide	sulfadimethoxine	sulfasalazine
nifedipine	sulfamerazine	sulfathiazole
nitroglycerin	sulfameter	sulfisoxazole
nitrous oxide (?)	sulfamethazine	tansy poisoning
polythiazide (?)	sulfamethizole	thiopental (?)
quinethazone	sulfamethoxazole	trichlormethiazide (?)
sulfacetamide	sulfamethoxypyridazine	vinblastine
sulfachlorpyridazine	sulfanilamide	vincristine
sulfacytine	sulfaphenazole	
sulfadiazine	sulfapyridine	

-
3. *Inflammatory lesions
 - A. Bacterial endocarditis
 - B. Encephalitis (including that due to measles and pertussis) and subacute sclerosing panencephalitis
 - C. Influenza
 - D. Meningococcal meningitis
 - E. Mumps
 - F. Pneumococcal meningitis
 - G. Syphilitic meningitis
 4. Space-taking lesions, such as tumors, gummas, abscesses, and cysts
 5. *Trauma
 - A. Birth trauma, including heart dysfunction, postictal, and vertebral artery injury
 - B. Chiropractic manipulation of the neck and odontotic subluxation
 - C. Posthypoxic syndrome
 - D. Subdural hematoma with cerebral edema
 - E. Occipital region
 - F. Ventriculography and ventriculoatrial shunt operation
 6. *Vascular lesions
 - A. Air embolism
 - B. Angioma of occipital region
 - C. Angiospastic lesions, including hypertension, nephritis, eclampsia, uremia, and chronic lead poisoning (saturnism)
 - D. Anoxia from chronic respiratory insufficiency
 - E. Anoxia from high altitude
 - F. Basilar artery thrombosis
 - G. Bilateral posterior cerebral artery occlusion
 - H. Blood loss syndrome (acute cerebral hypotension)
 - I. Blood transfusion reaction
 - J. Cardiac arrest
 - K. Cerebral hemorrhage
 - L. Electroshock
 - M. Following burns and sunstroke
 - N. Following cardiac, cerebral or vertebral angiography
 - O. Hemorrhage in spastic paralysis
 - P. Herniation of hippocampal gyrus associated with subdural hematoma
 - Q. Hydrocephalus and microcephaly
 - R. Malaria
 - S. Obstruction of the local venous sinus, such as from septic thrombosis of superior longitudinal sinus

- T. Periarteritis nodosa
- U. Subarachnoid hemorrhage
- V. "Subclavian steal syndrome" with reversal of blood flow through the vertebral artery
- W. Thrombotic thrombocytopenic purpura

Diagnostic table

	Trauma (Subdural Hematoma)	Space-occupying Lesions (Occipital Tumors)	Inflammatory Lesions as Meningitis	Vascular Lesion (Subarachnoid Hemorrhage)	Drugs (Alcohol [Methanol])	Degenerative Condition (Renal Failure)
History						
1. Accidental ingestion					U	
2. Diplopia	S	S	S		U	
3. Formed hallucinations		S		R		
4. Head injury	U			S		
5. Photophobia			U	U		
6. Photopsia			U			
7. Systemic bacterial infection			U			
8. Systemic hypertension				S		U
9. Unformed hallucination		U				
10. Usually in elderly persons		U				
Physical Findings						
1. Blepharoptosis				S		
2. Cataract						S
3. Choroidal ischemic infarcts						S
4. Conjunctivitis			U			
5. Cotton-wool spots						U
6. Exophthalmos				S		
7. Failing visual acuity		U			U	
8. Fixed dilated pupil	U			S		
9. Glaucoma						S
10. Keratitis			U			
11. Lid edema						U
12. Macular edema			S			
13. Miosis			S			
14. Nonrhegmatogenous retinal detachment						S
15. Nystagmus			S		U	
16. Oculomotor paralysis				S		
17. Optic nerve atrophy			U		U	
18. Optic neuritis			S			
19. Panophthalmitis			S			
20. Papilledema	U	U	S	U	U	U
21. Paralysis of sixth cranial nerve	S		S			
22. Paresis of seventh cranial nerve			S			
23. Retinal edema						U
24. Retinal hemorrhage	S			U		U
25. Subhyaloid hemorrhage						
26. Unilateral central retinal vein occlusion				U		S
27. Uveitis			U			
Laboratory Data						
1. Cerebral angiography	U	U	S	U		
2. Cerebrospinal fluid abnormal			U	U		
3. Computed tomographic scan of head	U	U		U		
4. Electroencephalogram	R					
5. Pneumoencephalogram	S					
6. Proteinuria/hematuria						U
7. Red blood cell count, white blood cell count, hemoglobin, hematocrit			U		U	
8. Serum blood-urea nitrogen, creatinine potassium, phosphate, sulfate increased						U
9. Serum sodium, calcium CO ₂ , decreased						U
10. Skull roentgenogram	S	S	S			
11. Subdural tap—children	U					

R = rarely; S = sometimes; and U = usually.

Cortical blindness

Blindness in Childhood

1. Cornea
 - A. Hereditary dystrophies
 - B. Inflammations such as varicella, rubeola, vaccinia, and gonorrhea, ophthalmia neonatorum, and pemphigus
 - C. Trauma (abrasion or laceration)
2. Cortical blindness (see p. 632)
3. Globe
 - A. Anophthalmos (see p. 228)
 - B. Buphthalmos (see p. 222)
 - C. Congenital, primary infantile, or secondary glaucoma (see p. 305)
 - D. Hydrophthalmos
 - E. Microphthalmos (see p. 220)
4. Lens
 - A. Aphakia
 - B. Congenital cataracts (see syndromes associated with cataracts, p. 410-416)
5. Optic nerve
 - A. Aplasia
 - B. Asphyxia at birth
 - C. Associated with widespread disease such as mental deficiency, cerebral palsy, or epilepsy
 - D. Atrophy (hereditary or secondary) (see p. 564)
 - E. Cavernous sinus thrombosis (Foix syndrome)
 - F. Cerebral hemorrhage (associated with major brain damage from accidental trauma, abuse or birth trauma)
 - G. Crouzon syndrome (craniofacial dysostosis)
 - H. Hydrocephalus
 - I. Inflammatory damage—encephalomyelitis, encephalitis, tuberculous
 - J. Osteopetrosis (Albers-Schönberg syndrome)
 - K. Subdural hematoma
 - L. Trauma—fracture at the orbital canal
 - M. Tumors
6. Psychic blindness
 - A. Agnosia
 - B. Alexia
7. Retina
 - A. Achromatopsia
 - B. Albinism
 - C. Coats disease (retinal telangiectasia)
 - D. Early chorioretinal hereditary degenerations, including Stargardt disease and pigmentary retinopathy (see pseudoretinitis pigmentosa, p. 497-499)
 - E. Embryopathies, including rubella, toxoplasmosis, and syphilis
 - F. High myopia
 - G. Infantile macular degeneration
 - H. Pseudoretinitis pigmentosa (see p. 497-499)
 - I. Reese retinal dysplasia
 - J. Retinal detachment
 - K. Retinoblastoma

- L. Retinoschisis
- M. Retinopathy of prematurity
- N. Tapetoretinal degeneration
- 8. Syndromes associated with amaurosis or blindness
 - A. Adie syndrome
 - B. Davidoff single ventricle
 - C. Laurence-Moon-Bardet-Biedl syndrome (retinitis-pigmentosa-polydactyly-adiposogenital syndrome)
 - D. Malformative syndrome with cryptophthalmos
 - E. Marfan syndrome (arachnodactyly dystrophia mesodermalis congenita)
 - F. Metachromatic leukodystrophy (arylsulfatase A deficiency syndrome)
 - G. Niemann-Pick syndrome (essential lipoid histiocytosis)
 - H. Sandhoff disease
 - I. Schilder disease (encephalitis periaxialis diffusa)
- 9. Uveal tract
 - A. Chorioretinitis
 - B. Congenital coloboma
 - C. Iridocyclitis
- 10. Vitreous
 - A. Persistence of primary vitreous
 - B. Pseudoglioma

Brownstein S, et al. Sandhoff's disease (Gmgangliosidosis type 2). *Arch Ophthalmol* 1980;98:1089.

Pau H. *Differential diagnosis of eye diseases*, 2nd ed. New York: Thieme Medical, 1988.

Binocular Diplopia (Double Vision Using Both Eyes)

1. Intractable postoperative diplopia
 - A. Anomalous retinal correspondence with or without amblyopia (common), which is called *paradoxical diplopia*
 - B. Cyclotropia due to oblique muscle operation
 - C. Following surgical treatment of retinal detachment because of symblepharon or limitation of extraocular movement
 - D. "Horror fusionis" (rare)—congenital or developmental deficiency of fusion (i.e., absence of sensory correspondence between two eyes (not the same as abnormal retinal correspondence, because visual directions are normal in these cases))
 - E. Large surgical overcorrection
2. Other
 - A. Aniseikonia, including association with macular disease
 - B. Divergence paresis
 - C. Heterophoria—due to lesions such as orbital tumor and cellulitis
 - D. Narcolepsy
 - E. Physiologic diplopia
 - F. Psychogenic causes
3. Paralysis of one or more extraocular muscles
 - A. Fourth-nerve palsy (rare) (see p. 158)
 - B. *Sixth-nerve palsy—has no localizing value (see p. 161)
 - C. Third-nerve palsy—with isolated muscle paralysis one must suspect a nuclear lesion (hemorrhage, syphilis, multiple sclerosis) or myasthenia gravis (see p. 153)

Benegas NM, et al. Diplopia secondary to aniseikonia associated with macular disease. *Arch Ophthalmol* 1999;117:896-899.

Norman ME, Dyer JA. Ophthalmic manifestations of narcolepsy. *Am J Ophthalmol* 1987;103:81-86.

Schanzer B, Bordaberry M. The child with divergence paresis. *Surv Ophthalmol* 1998;42:571-574.

Binocular Triplopia (Uniocular Diplopia)

1. Abnormal retinal correspondence with single image given two associations of direction so that the abnormal retinal point is brought into consciousness at the same time as the macula image
2. Central uniocular diplopia (rare)—systemic or neurologic causes include cerebral aneurysm, abscess or gross degenerative lesions, encephalitis lethargica, postencephalitis, multiple sclerosis, basal meningitis, cerebellar tumor, and vertebrobasilar insufficiency
3. *Malingering, hysteria, or psychogenic causes
4. Optical causes external to the eye
 - A. Double or single prism placed in center of pupil before one eye
 - B. *Improper correction of a high astigmatism
 - C. *Looking through the edge of a bifocal or margin of lens
5. Optical causes in the eye
 - A. Air bubbles or transparent foreign bodies in aqueous or vitreous
 - B. Complete or partial contraction of the eyelids in which the eyelids impinge on the cornea (de Schweintz)
 - C. Dislocation of the lens or misalignment of corneal and lenticular optical axis
 - D. Double pupil
 - E. High myopia, probably because of irregular astigmatism
 - F. Irregular astigmatism, such as pressure on the globe
 - G. Irregular spasm of the ciliary muscle
 - H. Keratoconus (see p. 288)
 - I. Lens abnormalities, such as fluid clefts or incipient cataract
 - J. Looking through edge of intraocular lens
 - K. *Map-dot fingerprint dystrophy
 - L. Megalocornea (see p. 255)
 - M. Migration of filtering bleb into the cornea
 - N. Multifocal intraocular lens
 - O. Post iridectomy
 - P. *Refractive surgery
 - Q. Retinal detachment
 - R. Spherophakia (see p. 400-401)

Wyzinski P, O'Dell L. Subjective and objective findings after radial keratotomy. *Ophthalmology* 1989;96:1608-1611.

Diplopia Following Head Trauma

1. Avulsion, contusion, or transection of extraocular muscles
2. Avulsion of the pulley of the superior oblique

3. Decompensation of a preexisting ocular phoria, becoming a tropia
4. Edema or detachment of the macula (monocular diplopia)
5. *Hematoma in the orbit or the ocular muscles
6. *Orbital fracture (particularly blowout fracture of the floor, causing restricted function of inferior rectus and inferior oblique muscles)
7. Subluxation of the lens (monocular diplopia)
8. Third, fourth, or sixth cranial nerve palsies (orbital or intracranial) (see pp. 158, 161, 153)
9. “Whiplash” injury and the diplopias of obscure origin

Deutsch TA, Feller DB. *Paton's and Goldberg's management of ocular injuries*. Philadelphia: WB Saunders, 1985.

Eccentric Vision

In this condition, vision is best when the individual is not looking directly at object of regard.

1. Central scotoma
2. Craniopharyngioma
3. Eccentric fixation with amblyopia
4. Ectopic macula, such as macula displaced by retinal scarring or fibrous strands, often a result of retinopathy of prematurity
5. Glaucoma—late with only eccentric field remaining
6. Homonymous hemianopia with macular involvement (see p. 613)
7. *Macular scar, such as with age-related macular degeneration.

Beyer-Machule C, von Noorden GK: *Atlas of ophthalmic surgery, vol 1: Lids, orbits, extraocular muscles*. New York: Thieme Medical, 1984.

Huber A. *Eye signs and symptoms in brain tumors*, 3rd ed. St. Louis: CV Mosby, 1976.

Decreased Dark Adaptation (Nyctalopia; Night Blindness)

1. Choroideremia
2. Congenital night blindness
3. *May be due to drugs, including the following:

alcohol	hashish	methysergide
amodiaquine	hydroxychloroquine	oxygen
cantanidin	indomethacin (?)	pilocarpine
carbon dioxide	isotretinoin	psilocybin
chloroquine	lithium carbonate	silver nitrate
colloidal silver	lysergic acid diethylamide (LSD)	silver protein
deferoxamine		tetrahydrocannabinol
dronabinol	lysergide	TI-iC
ergonovine	marihuana	vinblastine
ergotamine	mescaline	vincristine
etretinate	methylergonovine	

4. Progressive cone-rod dystrophy
5. Refsum syndrome (heredopathia atactica polyneuritiformis syndrome)
6. Retinitis pigmentosa (see p. 497)

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

Tasman W, Jaeger E, eds. *Duane's clinical ophthalmology*. Philadelphia: JB Lippincott, 1990.

Astigmatism

In this condition, the refractive power of the eye varies along different meridians; its steepest meridian is vertical in “with the rule” (corrected with plus cylinder at 90 degrees) and horizontal in “against the rule.”

1. Adnexal masses
2. Anterior segment surgery for cornea, lens, or glaucoma
3. *Chalazion
4. *Contact lens wear
5. *Corneal scars
6. *Following refractive surgery
7. Keratoconus (see p. 288)
8. May be dominant inheritance with incomplete penetrance
9. Nuclear cataract with coloboma of lens, iris, and choroid
10. Oversized, rigid, anterior chamber, intraocular lens implant
11. Physiologic—about 0.5 diopters of “with the rule”
12. Retinal detachment procedures
13. Scleral infolding
14. Tilted intraocular lens

Visual Allesthesia

This condition involves displacement of image to opposite half of the visual field.

1. Parietooccipital lobe disease
 - A. Neoplasm
 - B. Vascular insufficiency
 - C. Trauma
 - D. Seizure activity
2. Occipital-lobe disease
 - A. Neoplasm
 - B. Vascular insufficiency
 - C. Trauma
 - D. Seizure activity

Visual Acuity Loss After Glaucoma Surgery

1. Cystoid macular edema
2. *Hypotony maculopathy
3. Intraocular pressure spike
4. *Lens opacification
5. Postoperative capsule opacity
6. Retinal detachment
7. Suprachoroidal hemorrhage
8. Unknown
9. Vitreous hemorrhage
10. Wipeout (loss of central fixation)

Costa VP, et al. Loss of visual acuity after trabeculectomy. *Ophthalmology* 1993;100:599-612.

Watson RG, et al. The complications of trabeculectomy (a year follow-up). *Eye* 1990;4:425-438.

Sudden Painful Loss of Vision

1. Acute-angle closure glaucoma
2. Fracture of the lesser wing of the sphenoid bone
3. Keratoconus
4. Optic neuritis
5. Temporal arteritis
6. Uveitis

Friedberg MA, Rapuano CJ. *Office and emergency room diagnosis and treatment of eye disease*. Philadelphia: JB Lippincott, 1990.

Sudden Painless Loss of Vision—Both Eyes

1. Brain injury
2. Brainstem arteriovenous malformations
3. Meningeal carcinomatosis
4. Quinine poisoning
5. Wood alcohol poisoning (methyl)

Friedberg MA, Rapuano CJ. *Office and emergency room diagnosis and treatment of eye disease*. Philadelphia: JB Lippincott, 1990.

Kerrison JB, Lee AG. Acute loss of vision during pregnancy due to a suprasellar mass. *Surv Ophthalmol* 1997;41:400-401.

Gradual Painless Loss of Vision

1. Age-related macular degeneration
2. *Bartonella henselae*
3. Behcet disease
4. Cardiolipin antibody syndrome
5. Cataract
6. Chronic corneal disease
7. Diabetic retinopathy
8. Eales disease

9. Glaucoma, open-angle
10. Herpetic viral infection
11. Idiopathic causes
12. Optic neuropathy/atrophy
13. Refractive error
14. Retinal disease, chronic
15. Systemic lupus erythematosus
16. Wegener granulomatosis

Friedberg MA, Rapuano CJ. *Office and emergency room diagnosis and treatment of eye disease*. Philadelphia: JB Lippincott, 1990.

Goldstein SM, et al. Cancer-associated retinopathy. *Arch Ophthalmol* 1999;117:1641-1645.

20

Visual Complaint

Photopsia (Scintillations, Sparks, or Flashes of Light Before the Eyes)

1. Associated with arteriovenous aneurysm
2. Auditory-visual synesthetic phenomena—optic nerve lesion; usually demyelinating
3. Brain concussion
4. Clomiphene citrate (Clomid)
5. Focal lesions of occipital region
6. Glaucoma
7. Idiopathic thrombocytosis
8. Impending retinal detachment
9. Lyme borreliosis
10. *Migraine and epilepsy
11. Moore lightning streak—traction of a partially liquefied vitreous on the retina
12. Oculodigital phenomenon (entopic phenomenon)
13. Paraneoplastic retinopathy
14. Phosphene of quick eye motion (Flick phosphene)

15. Retinal microembolization
16. Retinitis
17. Vertebral basilar insufficiency

Mikkila HA, et al. The expanding clinical spectrum of ocular Lyme borreliosis. *Ophthalmology* 2000;107:581-587.

Pau H. *Differential diagnosis of eye diseases*, 2nd ed. New York: Thieme Medical, 1988.

Walsh FB, Hoyt WF. *Clinical neuro-ophthalmology*, 4th ed. Baltimore: Williams & Wilkins, 1985.

Hallucinations (Formed Images)

1. Blind persons (central or peripheral visual field loss)
2. Bilateral eye covering—such as may be required after an eye operation, especially in older patients
3. Ocular lesions, such as retinal hemorrhage, glaucoma, optic atrophy of tertiary syphilis, and choroidal neovascularization.
4. Psychoses
5. Central nervous system lesions
 - A. Alzheimer disease
 - B. Diffuse irritative lesion of parietotemporal area, including uncinete seizures of the temporal lobe, stimulation of superior colliculus, and optic radiation
 - C. Encephalitis
 - D. Hippocampus lesions
 - E. Hypophyseal duct tumors
 - F. Measles
 - G. Medulloblastoma
 - H. Myxedema
 - I. Narcolepsy
 - J. Occipital lobe seizures—moving lights and colors, visual and complex hallucinations with formed images
 - K. Papilledema (see p. 593)
 - L. Peduncular hallucinations with midbrain lesions from vascular, encephalitic, and mass lesions
 - M. Pellagra
 - N. Pituitary and optic chiasmal lesion
 - O. Vertebrobasilar insufficiency/basilar artery migraine
6. Chronic mountain sickness (Monge syndrome)
7. Malignant melanoma
8. Poisonings, such as mushroom, psilocin, cannabis, hashish, hemp, camphor, mescaline from peyote, myristica (nutmeg), gasoline, mullet (Hawaiian fish), and ololiuqui (morning-glory seeds)
9. Drugs, including the following:

acetylcholinesterase inhibitors	aldosterone	amyl nitrite
acetaminophen	allobarbitol	antazoline
acetanilid	alprazolam	aprobarbital
acetophenazine	amantadine	aspirin
acid bismuth sodium tartrate	amitriptyline	atenolol
acyclovir	amobarbital	atropine
adrenal cortex injection	amodiaquine	azatadine
albuterol	amoxapine	baclofen
alcohol	amphetamine	barbital
belladonna	cephapirin	diphenylpyraline
bendroflumethiazide	cephradine	disopyramide
benzathine penicillin G	chloral hydrate	disulfiram
benzphetamine	chlorambucil	ditaven
benztropine	chlordiazepoxide	divalproex sodium
betamethasone	chloroquine	doxepin
betaxolol	chlorpheniramine	doxycycline
biperiden	chlorphenoxamine	dronabinol
bismuth oxychloride	chlorpromazine	droperidol
bismuth sodium tartrate	chlortetracycline	enalapril
bismuth sodium thioglycollate	chlorthalidone	ephedrine
	cholecalciferol	ergocalciferol
bismuth sodium triglycollamate	cimetidine	ethchlorvynol
	clemastine	ethionamide
bismuth subcarbonate	clomipramine	ethopropazine
bismuth subsalicylate	clonazepam	ethosuximide
bromide	clonidine	fenfluramine
brompheniramine	clorazepate	flecainide
butabarbital	cocaine	fludrocortisone
butalbital	codeine	fluphenazine
butallylonal	cortisone	fluprednisolone
butaperazine	cyclizine	furosemide
butethal	cyclobarbital	gentamicin
calcitriol	cyclopentobarbital	glutethimide
capreomycin	cyclopentolate	glycerin
captopril	cycloserine	griseofulvin
carbamazepine	cyclosporine	halazepam
carbinoxamine	cyclothiazide	

carbon dioxide	cyrimine	haloperidol
carphenazine	cyproheptadine	hashish
cefaclor	dantrolene	heptabarbital
cefadroxil	dapsone	hexethal
cefamandole	demeclocycline	hexobarbital
cefazolin	desipramine	homatropine
cefonicid	desoxycorticosterone	hydrabamine
cefoperazone	dexamethasone	penicillin V
ceforanide	dexbrompheniramine	hydrochlorothiazide
cefotaxime	dexchlorpheniramine	hydrocortisone
cefotetan	dextroamphetamine	hydroflumethiazide
cefoxitin	dextrothyroxine	hydroxychloroquine
cefsulodin	diazepam	hydroxyurea
ceftazidime	diethazine	ibuprofen
ceftizoxime	diethylpropion	imipramine
ceftriaxone	digitalis	indapamide
cefuroxime	digoxin	indomethacin
cephalexin	diltiazem	interferon
cephaloglycin	dimethindene	iodide and iodine solutions and compounds
cephaloridine	diphenhydramine	isoniazid
cephalothin	diphenylhydantoin	isosorbide
ketamine	moxalactam	polythiazide
ketoprofen	nadolol	potassium penicillin G
labetalol	nalidixic acid	potassium penicillin V
levallorphan	nalorphine	phenoxymethyl penicillin
levobunolol	naloxone	practolol
levodopa	naltrexone	prazepam
levothyroxine	neostigmine	prazosin
lidocaine	nialamide	prednisolone
liothyronine	nifedipine	prednisone
liotrix	nitrazepam	primidone
lithium carbonate	nitrofurantoin (?)	probarbital
lorazepam	nitroglycerin (?)	procaine penicillin G
lysergide	nortriptyline	prochlorperazine
mannitol	opium (?)	procyclidine
maprotiline	orphenadrine	promazine
marihuana	oxazepam	promethazine
meclizine	oxprenolol	propiomazine
meperidine	oxyphenbutazone	propoxyphene
mephentermine	oxytetracycline	propranolol
mephobarbital	paraldehyde	protriptyline
meprednisone	paramethasone	psilocybin
mescaline	pargyline	pyrilamine
mesoridazine	pemoline	quinacrine
methacycline	penicillin	quinethazone
methamphetamine	pentazocine	quinidine
methaqualone	pentobarbital	quinine
metharbital	pentylene-tetrazol	radioactive iodides
methdilazine	perazine	ranitidine
methitural	perhexiline (?)	scopolamine
methohexital	pericyazine	secobarbital
methotrimeprazine	perphenazine	sodium salicylate
methscopolamine	phenacetin	sulfacetamide
methsuximide	phencyclidine	sulfachlorpyridazine
methylclothiazide	phendimetrazine	sulfacetyne
methylidopa	phenelzine	sulfadiazine
methylpentynol	pheniramine	sulfadimethoxine
methylphenidate	phenobarbital	sulfamerazine
methylprednisolone	phensuximide	sulfameter
methyprylon	phentermine	sulfamethazine
methysergide	phenoxymethyl	sulfamethizole
metolazone	phenylbutazone	sulfamethoxazole
metoprolol	phenylephrine	sulfamethoxy-pyridazine
metrizamide	phenylpropanolamine	sulfanilamide
metronidazole	phenytoin	sulfaphenazole
mexiletine	pimozide	sulfapyridine
mianserin	pindolol	sulfasalazine
midazolam	piperacetazine	sulfisoxazole
minocycline	piperazine	sulfathiazole
morphine (?)	piroxicam	sulindac (?)
talbutal	thyroid	trimipramine
temazepam	timolol	tripelennamine
tetanus immune globulin	tobramycin	triprolidine
tetanus toxoid	tocainide	tropicamide
tetracycline	trazodone	urea
tetrahydrocannabinol	triamcinolone	valproate sodium
thiabendazole	triazolam	valproic acid
thiamylal	trichlormethiazide	verapamil
thiethylperazine	trichloroethylene	vidarabine
thiopental	trifluoperazine	vinbarbital
thiopropazate	trifluoperidol	vinblastine
thiopropazine	triflupromazine	vincristine
thioridazine	trihexyphenidyl	vitamin D
thyroglobulin	trimeprazine

“Spots” Before Eyes (Dots or Filaments that Move With Movement of Eye)

1. *Vitreous opacities—muscae volitantes; associated with preretinal hemorrhage, myopia, posterior vitreous detachment, or intraocular inflammations
2. Scotomatous defects
 - A. Retinal lesions
 - B. Myopia
3. Corneal foreign-body reflection/corneal opacity
4. Carbon tetrachloride poisoning
5. Migraine

Grant WM. *Toxicology of the eye*, 2nd ed. Springfield, IL: Charles C Thomas, 1974.

Vaughan D, et al. *General ophthalmology*, 14th ed. Norwalk, CT: Appleton & Lange, 1995.

Colored Halos Around Lights (Blue and Violet are Next to the Stimulating Light and Red Outermost)

1. Glaucoma
 - A. Acute-angle closure with stretching of corneal lamellae
 - B. Open-angle glaucoma—halo noted on awakening (intraocular pressure is highest in the morning)
2. Mucus on the cornea
3. Corneal scar/corneal edema
4. Krukenberg spindle
5. Lens opacities

6. Vitreous opacities (see p. 429-430)
7. Any haze of ocular media
8. Drugs probably affecting corneal epithelium, including the following:

acetophenazine	fluorometholone	piperacetazine
acetyldigitoxin	fluphenazine	prednisolone
amiodarone	gitalin	prochlorperazine
amodiaquine	hydrocortisone	promazine
amyl nitrite	hydroxychloroquine	promethazine
butaperazine	lanatoside C	propiomazine
carphenazine	medrysone	quinacrine
chloroquine	mesoridazine	sildenafil
chlorine dioxide	methdilazine	thiethylperazine
chlorpromazine	methotrimeprazine	thiopropazate
cortisone	methylprednisolone	thiopropazine
deslanoside	nitroglycerin	thioridazine
dexamethasone	nitronaphthalene	trifluoperazine
diethazine	oral contraceptives	triflupromazine
digitalis	ouabain	trimeprazine
digitoxin	paramethadione	trimethadione
digoxin	perazine	water (sterile)
ethopropazine	pericyazine	
ethylene diamine	perphenazine	

9. Physiologic halos—most common when lens acts as diffracting gradient
10. Too intense exposure to light, as in snow blindness
11. Asymmetric placement of the intraocular lens in relation to the pupillary aperture

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

Gabrieli CB, et al. Subjective visual halos after sildenafil (Viagra) administration. *Ophthalmology* 2001;108:877-881.

Mantyljarvi M, et al. Ocular side effects of amiodarone. *Surv Ophthalmol* 1998;42:360-366.

Light Streaks

1. Cataracts
2. Contact lenses
3. Excessive tear meniscus
4. Intraocular lens scratches
5. Lashes
6. *Migraine
7. Posterior capsules—lens fibers and debris-filled corrugations
8. Rapid eye movements (especially in a dark environment)
9. Reflection off edge of intraocular lens
10. Reflection off manipulation holes of intraocular lens
11. *Retinal break/tear or detachment
12. Spectacles
13. Windshields, windows

Holladay JT, et al. Diagnosis and treatment of mysterious light streaks seen by patients following extracapsular cataract extraction. *American Intraimplant Society Journal* 1985;11:21-23.

Holladay JT, et al. The optimal size of a posterior capsulotomy. *American Intraimplant Society Journal* 1985;11:18-20.

Photophobia (Painful Intolerance of the Eyes to Light)

1. Aniridia
2. *Ocular, including conjunctivitis, keratitis, iritis, iridocyclitis, uveitis, and corneal, lenticular, and vitreous opacities, Angelucci syndrome (critical allergic conjunctivitis), acute hemorrhagic conjunctiva, and cone-dysfunction syndrome
3. Albinism
4. Total color blindness (achromatopsia)
5. Patients with corneal lesions having diseases characterized by photosensitization (xeroderma pigmentosa, hydroa vacciniforme, and smallpox)
6. Systemic diseases, including botulism, cystinosis, erythropoietic porphyria, hypoparathyroidism, rabies, psittacosis, and schistosomiasis
7. Toxic causes, including mercury poisoning
8. Drugs, including the following:

acetoexamide	chlorpromazine	ethosuximide
acetophenazine	chlorpropamide	ethotoin
adiphenine	chlortetracycline	ferrocholinate
adrenal cortex injection	cimetidine	ferrous fumarate
alprazolam	clidinium	ferrous gluconate
allobarbital	clonazepam	ferrous succinate
ambutonium	clomiphene	ferrous sulfate
amiodarone	clorazepate	flecainide
amitriptyline	dapiprazole hydrochloride	floxuridine
amobarbital	deferoxamine	fludrocortisone
amodiaquine	demeclocycline	fluorometholone
anisotropine	desipramine	fluorouracil
antazoline	dextran	fluoxetine hydrochloride
atropine	dextrothyroxine	fluphenazine
auranofin	diacetylmorphine	fluprednisolone
aurothioglucose	diazepam (?)	flurazepam
aurothioglucanide	dicyclomine	fluvoxamine maleate
beclomethasone	diethylcarbamazine	furosemide (?)
belladonna	diethazine	glyburide
bendroflumethiazide	digitalis	glycopyrrrolate
benzthiazide	digitoxin	gold Au 198
betamethasone	dimethyl sulfoxide	gold sodium thiomalate
botulinum A toxin	diphepanil	gold sodium thiosulfate
brimonidine tartrate	dipivalyl epinephrine (DPE)	guanethidine
brinzolamide	dipivefrin	halazepam
bromide	disopyramide	hashish
brompheniramine	doxepin	hexethal
butaperazine	doxycycline	hexobarbital
capecitabine	dronabinol	hexocyclium
captopril (?)	edrophonium	homatropine
carbon dioxide	enalapril	hydralazine
carphenazine	ethambutol	hydroxyamphetamine indomethacin
chlordiazepoxide	ethionamide	
chloroquine	ethopropazine	hydroxychloroquine
ibuprofen	metronidazole	quinacrine
imipramine	minocycline	quinidine
indomethacin	nalidixic acid	quinine
iron dextran	naltrexone	rabies immune globulin
iron sorbitex	nialamide	rabies vaccine
isocarboxazid	norfloxacin	scopolamine
isoniazid	norepinephrine	sildenafil citrate
isopropamide	nortriptyline	streptomycin
labetalol	oral contraceptives	temazepam
latanoprost	oxazepam	tetanus immune globulin
levarterenol	oxprenolol	tetanus toxoid
levothyroxine	oxyphenbutazone	tetracycline
liothyronine	oxyphenyclimine	thiethylperazine
liotrix	oxyphenonium	thiopropazate
lithium carbonate	oxytetracycline	thiopropazine
lorazepam	paramethadione	thioridazine
marihuana	perazine	thyroglobulin thyroid
midazolam	pericyazine	tolazamide
mepenzolate	perphenazine	tolbutamide
	phenelzine	
mephenytoin	phensuximide	tranlycypromine
mesoridazine	phenylbutazone	trichloroethylene
methacycline	pipenzolate	tridihexethyl
methanthelene	piperacetazine	trifluoperazine
methdilazine	piperidolate	triflupromazine
methixene	poldine	trimeprazine
methotrimeprazine	practolol	trimethadione
methoxsalen	procarbazine	trioxsalen
methsuximide	prochlorperazine	tripelennamine
methyl alcohol	promazine	vancomycin
methylatropine nitrate	promethazine	vinbarbital
methyl dopa	propantheline	vinblastine
metoclopramide	propiomazine	vincristine
metrizamide	protriptyline	

9. Normal ocular findings with photophobia
- A. Trigeminal neuralgia (Charlin syndrome)
 - B. Migraine
 - C. Neurasthenia
 - D. Meningitis
 - E. Subarachnoid hemorrhage
 - F. Acromegaly
 - G. Associated with hypophyseal tumor and craniopharyngioma
 - H. During and following retrobulbar neuritis
 - I. Acrodynia (Feer syndrome)
 - J. Following severe head injury
 - K. Hypoparathyroidism
 - L. Lesions of gasserian ganglion

- M. Tumors of ophthalmic branch of the trigeminal nerve, such as neuroma, middle fossa tumor, and posterior fossa tumor, such as meningioma or acoustic neuroma
- N. Increased intracranial pressure, including subdural hematomas
10. Acrodermatitis chronica atrophicans
 11. Avitaminosis B (pellagra)
 12. Chédiak-Higashi syndrome (anomalous leukocytic inclusions with constitutional stigmata)
 13. Danbolt-Closs syndrome (acrodermatitis enteropathica)
 14. Elschmig syndrome (meibomian conjunctivitis)
 15. Feer syndrome (acrodynia)
 16. Folling syndrome (phenylketonuria)
 17. Following refractive surgery
 18. Gradenigo syndrome (temporal syndrome)
 19. Hanhart syndrome (pseudoherpetic keratitis)
 20. Hartnup syndrome (niacin deficiency)
 21. Hysteria
 22. Infantile globoid cell leukodystrophy (Krabbe disease)
 23. Keratoderma palmaris et plantaris
 24. Photosensitivity and sunburn
 25. Reiter syndrome (polyarthritis enterica)

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

Roy FH. *Ocular syndromes and systemic diseases*, 3rd ed. Philadelphia: Lippincott Williams & Wilkins, 2002.

Asthenopia (Uncomfortable Ocular Sensation or Eye Ache)

1. Dazzling from bright light
2. Episcleritis or scleritis
3. Glaucoma
4. Iritis or iridocyclitis
5. Neurasthenia or hysteria
6. Passive congestion
7. Phoria or tropia
8. Retrobulbar neuritis
9. Sinus disease
10. Spasm from muscles held too long in a restricted position
11. Subclinical open-angle glaucoma
12. Uncorrected refractive errors, especially hyperopia or astigmatism
13. Unknown
14. Use of miotics
15. Weak accommodation

Otto J. Asthenopia and wide-angle glaucoma. *Glaucoma* 1986;8:75-77.

Pau H. *Differential diagnosis of eye diseases*, 2nd ed. New York: Thieme Medical, 1988.

Dazzling or Glare Discomfort

1. Altered pupillary response

2. Asymmetric placement of the intraocular lens in relation to the pupillary aperture
3. Corneal scars or foreign bodies
4. Drugs, such as chloroquine, acetazolamide, or trimethadione (Tridione)
5. Emotional disorders
6. Following refractive surgery
7. Idiopathic
8. Lenticular changes

Brems RN, et al. Posterior chamber intraocular lenses in a series of autopsy eyes. *J Cataract Refract Surg* 1986;12:367-375.

Vaughan D, et al. *General ophthalmology*, 12th ed. Norwalk, CT: Appleton & Lange, 1989.

Chromatopsia (Colored Vision, Objects are Abnormally Colored)

1. Blue color (cyanopsia)
 - A. Drugs, including the following:

acetyldigitoxin	deslanoside	methylene blue
alcohol	digitalis	nalidixic acid
amodiaquine	digitoxin	oral contraceptives
amphetamine	digoxin	ouabain
chloroquine	gitalin	quinacrine
combination products of estrogens and progestogens	hydroxyamphetamine	sildenafil citrate
	hydroxychloroquine	
	lanatoside C	

- B. Pseudophakia
 - C. Optic atrophy of tertiary syphilis
2. Red color (erythroptosis)
 - A. Drugs, including the following:

acetyldigitoxin	methylergonovine	sulfamethazine
atropine	methysergide	sulfamethizole
belladonna	naproxen	sulfamethoxazole
deslanoside	ouabain	sulfamethoxypyridazine
digitalis	quinine	sulfanilamide
digitoxin	sulfacetamide	sulfaphenazole
digoxin	sulfachlorpyridazine	sulfapyridine
ergonovine	sulfacytine	sulfasalazine
ergotamine	sulfadiazine	sulfathiazole
gitalin	sulfadimethoxine	sulfisoxazole
homatropine	sulfamerazine	sulthiame
lanatoside C	sulfameter	

- B. Hysteria
 - C. Optic atrophy of tertiary syphilis
 - D. Vitreous or retinal hemorrhage (see p. 473-478)
 - E. Pseudophakia and aphakia
 - F. Snow blindness or blindness following electric shock
 - G. After working with green monochrome video display terminals
 - H. Welding arc maculopathy

3. Yellow color (xanthopsia)

A. Drugs, including the following:

acetaminophen	furosemide	rescinamine
acetanilid	gitalin	reserpine
acetophenazine	hashish	secobarbital
acetyldigitoxin	heptabarbital	silver nitrate
allobarbital	hexethal	silver protein
alseroxylon	hexobarbital	sodium salicylate
amobarbital	hydrochlorothiazide	streptomycin
amodiaquine	hydroflumethiazide	sulfacetamide
amyl nitrite	hydroxychloroquine	sulfachlorpyridazine
aprobarbital	indapamide	sulfacytine
aspirin	lanatoside C	sulfadiazine
barbital	marijuana	sulfadimethoxine
bendroflumethiazide	mephobarbital	sulfamerazine
benzthiazide	mesoridazine	sulfameter
butabarbital	methaqualone	sulfamethazine
butalbital	metharbital methazolamide	sulfamethizole
butallylonal	methdilazine	sulfamethoxazole
butaperazine	methitural	sulfamethoxypridazine
butethal	methohexital	sulfanilamide
carbachol (?)	methotrimeprazine	sulfaphenazole
carbon dioxide	methyclothiazide	sulfapyridine
carphenazine	metolazone	sulfasalazine
chloramphenicol	mild silver protein	sulfathiazole
chloroquine	nalidixic acid	sulfisoxazole
chlorothiazide	nitrofurantoin (?)	syrosingopine
chlorpromazine	ouabain	talbutal
chlortetracycline	pentobarbital	tetrahydrocannabinol
chlorthalidone	pentylene-tetrazol	tetrahydrocannabinol (THC)
cimetidine (?)	perazine	thiabendazole
colloidal silver	pericyazine	thiamylal
cyclobarbital	perphenazine	thiethylperazine
	phenacetin	
cyclopentobarbital	phenobarbital	thiopental
cyclothiazide	piperacetazine	thiopropazate
deserpidine	polythiazide	thiopropazine
deslanoside	primidone	thioridazine
diethazine	probarbital	trichlormethiazide
digitalis	prochlorperazine	trifluoperazine
digitoxin	promazine	triflupromazine
digoxin	promethazine	trimeprazine
dronabinol	propiomazine	vinbarbital
ethopropazine	quinacrine	vitamin A
fluorescein	quinethazone	
fluphenazine	rauwolfia serpentina	

B. Lenticular change

C. Aphakia

D. Poisons, including aconite, dichlorodiphenyl trichloroethane, carbon disulfide, chromic acid, methyl salicylate, aspidium (Felix mas), santonin, picric acid

E. Jaundice

F. Hysteria

4. Green color (chloropsia)

A. Drugs, including the following:

acetyldigitoxin	digoxin	naproxen
allobarbitol	epinephrine	ouabain
amobarbitol	gitalin	pentobarbitol
amodiaquine	griseofulvin	phenobarbitol
apobarbitol	heptabarbitol	primidone
barbitol	hexethal	probarbitol
butabarbitol	hexobarbitol	quinacrine
butalbitol	hydroxychloroquine	quinine
butallylonal	iodide and iodine solutions and compounds	radioactive iodides
butethal		secobarbitol
chloroquine	lanatoside C	talbutol
cyclobarbitol	mephobarbitol	thiamylal
cyclopentobarbitol	metharbitol	thiopental
deslanoside	methitural	vinbarbitol
digitalis	methohexital	
digitoxin	nalidixic acid	

B. Poisons such as santonin

5. Violet color (ianthinopsia)

A. Drugs, including the following:

dronabinol	marihuana	quinacrine
hashish	nalidixic acid	tetrahydrocannabinol

B. Pseudophakia and aphakia

C. Intracameral air

6. Brown color

A. Drugs, including the following:

acetophenazine	methotrimeprazine	THC
butaperazine	perazine	thiethylperazine
carphenazine	pericyazine	thiopropazate
chlorpromazine	perphenazine	thiopropazine
diethazine	piperacetazine	thioridazine
ethopropazine	prochlorperazine	trifluoperazine
fluphenazine	promazine	triflupromazine
mesoridazine	promethazine	trimeprazine
methdilazine	propiomazine	

B. Lenticular change

C. White color

A. Drugs, including the following:

capreomycin	paramethadione	trimethadione
diphenylhydantoin	phenytoin	

B. Pseudophakia and aphakia

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

Uniat L, et al. Welding arc maculopathy. *Am J Ophthalmol* 1986;102:394-395.

Walsh FB, Hoyt WF. *Clinical neuro-ophthalmology*, vol 1, 4th ed. Baltimore: Williams & Wilkins, 1985.

Heightened Color Perception

1. Heightened color perception is due to drugs, including the following:

dronabinol	lysergide	psilocybin
ethionamide	marihuana	tetrahydrocannabinol
hashish	mescaline	THC
LSD	oxygen	

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

Nyctalopia (Night Blindness)

1. Anemia
2. Carbon monoxide poisoning
3. Congenital high myopia
4. Diffuse opacities of media including corneal edema, keratitis and nuclear cataract
5. Following refractive surgery
6. Glaucoma—especially open-angle and angle-closure glaucoma
7. Paraneoplastic retinopathy including melanoma-associated retinopathy and cancer-associated retinopathy
8. Psychologic causes—malingering or psychoses
9. Optic atrophy
10. Refsum syndrome (phytanic acid oxidase deficiency)
11. Tapetoretinal degenerations
 - A. Choroideremia
 - B. Congenital night blindness
 1. Dominant form
 2. Recessive form
 3. Recessive, sex-linked
 - C. Detachment of retina, including malignant melanoma
 - D. Drugs, including the following:

acetophenazine	mesoridazine	propiomazine
amodiaquine	methdilazine	quinidine
butaperazine	methotrimeprazine	quinine
carphenazine	paramethadione	thiethylperazine
chloroquine	perazine	thiopropazate
chlorpromazine	pericyazine	thiopropazine
diethazine	perphenazine	thioridazine
ethiopropazine	piperacetazine	trifluoperazine
fluphenazine	prochlorperazine	triflupromazine
hydroxychloroquine	promazine	trimeprazine
indomethacin	promethazine	trimethadione

- E. Drusen (familial)—minimal
- F. Fleck retina—nonprogressive, congenital, rare
- G. Fundus flavimaculatus—minimal
- H. General choroidal sclerosis
- I. Gyrate atrophy
- J. Retinitis pigmentosa
- K. Retinitis punctata albescens

- L. Miner nystagmus
- M. Oguchi disease—may be abnormal
- 12. Visual field defects
- 13. Vitamin A deficiency
 - A. Dietary deficiencies, including malnutrition, alcoholism and cystic fibrosis
 - B. Digestive tract disturbance
 - 1. Colitis and enteritis
 - 2. Crohn disease
 - 3. Jejunioileal bypass surgery
 - 4. In pancreas—such as chronic pancreatitis
 - 5. In stomach—achlorhydria, chronic gastritis or diarrhea, peptic ulcer
 - 6. Abetalipoproteinemia
 - C. Liver disease, such as chronic cirrhosis
 - D. Malaria
 - E. Pregnancy
 - F. Pulmonary tuberculosis
 - G. Skin disorders, such as pityriasis rubra pilaris
 - H. Thyroid gland disorders, such as hyperthyroidism
- 14. Vitreous opacities, including hemorrhage
- 15. Vitreoretinal degeneration—sex-linked recessive and autosomal recessive

Hemeralopia

This condition involves day blindness, that is, an inability to see as distinctly in a bright light as in a dim one.

1. Adie pupil
2. Albinism
3. Aniridia
4. Central opacities of the lens—nuclear or perinuclear cataracts
5. Central scotoma
6. Congenital—autosomal recessive trait usually associated with amblyopia and color deficiency
7. Hereditary retinoschisis
8. Intraocular iron
9. Partial occlusion of the central retinal artery (see p. 457-461)
10. Refsum syndrome (phytanic acid oxidase deficiency)
11. Total color blindness

Gehrs K, Tiedeman J. Hemeralopia in an older adult. *Surv Ophthalmol* 1992;37:185-189.

Pau H. *Differential diagnosis of eye diseases*, 2nd ed. New York: Thieme Medical, 1988.

Oscillopsia

This condition involves illusionary movement of the environment; it may be unilateral or bilateral and usually occurs because of acquired nystagmus.

1. Drugs, including the following:

alcohol	cyclopentobarbital	phenobarbital
allobarbital	diphenylhydantoin	primidone
amobarbital	gentamicin	probarbital
aprobarbital	heptabarbital	secobarbital
barbital	hexethal	talbutal
butabarbital	hexobarbital	thiamylal
butalbital	mephobarbital	thiopental
butallylonal	metharbital	valproate sodium
butethal	methitural	valproic acid
carbamazepine	methohexital	vinbarbital
cyclobarbital	pentobarbital	

2. Fixation and voluntary nystagmus

3. Defective vestibuloocular reflex/vestibular pathway lesion occurs during movement of the head or body

A. Sectioning of vestibular (VIII) nerve for vertigo

B. Streptomycin toxicity

C. Spontaneous loss

4. Head trauma/seizures

5. Intermittent exotropia

6. Involvement of medial longitudinal fasciculus affecting ipsilateral medial rectus in internuclear ophthalmoplegia—monocular oscillopsia

7. Myokymia of the eyelid

8. Opsoclonus and ocular flutter

9. Vertebral artery dissection

Chrousos GA, et al. Two cases of downbeat nystagmus and oscillopsia associated with carbamazepine. *Am J Ophthalmol* 1987;103:221-224.

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

Hicks PA, et al. Ophthalmic manifestation of vertebral artery dissection: patients seen at Mayo Clinic from 1976-1992. *Ophthalmology* 1994;101:1786-1792.

Color Blindness

1. Inherited—stable defect, affecting both eyes

A. Bassen-Kornzweig syndrome (abetalipoproteinemia)

B. Congenital dyslexia syndrome (developmental dyslexia syndrome)

C. Down syndrome (mongolism)

D. Duane retraction syndrome (Stilling syndrome)

E. Duchenne muscular dystrophy

F. Glucose-6-phosphate dehydrogenase deficiency (glycogen storage disease type I)

G. Guillain-Barré syndrome (acute infectious neuritis)

H. Hemophilia

- I. "Intrinsic" defect
 1. Dichromat—two colors mixed to see white
 - a. Deuteranope—green deficiency
 - b. Protanope—red deficiency
 - c. Tritanope—blue deficiency
 2. Monochromat—one color mixed to see white
 - a. Cone deficient
 - b. Rod deficient
 3. Trichromat—three colors mixed to see white
 - a. Deuteranomaly—green anomaly
 - b. Protanomaly—red anomaly
 - c. Tritanomaly—blue anomaly
 - J. Kallman syndrome (hypogonadotrophic hypogonadism-anosmia syndrome)
 - K. Klinefelter syndrome (XXY) (gynecomastia-aspermatogenesis syndrome)
 - L. Turner syndrome (XO) (gonadal dysgenesis)
2. Acquired—defect can increase or decrease; may affect only one eye; impairment of other visual function; often characterized by chromatopsia; hue discrimination primarily affected; yellow-blue defects more common in retinal disease; red-green defects in optic nerve disease
 - A. Advanced hypertensive retinopathy
 - B. Albinism
 - C. Amblyopia
 - D. Blue-yellow defect with retinal disorders from drugs, including the following:

acetophenazine	deferoxamine	piperacetazine
amiodarone (?)	diethazine	prazosin (?)
amodiaquine	diethylcarbazine	prochlorperazine
azathioprine	ethambutol	procyclidine (?)
benztropine (?)	ethopropazine	promazine
biperiden (?)	fluphenazine	promethazine
butaperazine	hydroxychloroquine	propiomazine
carbamazepine	indomethacin (?)	quinacrine (?)
carphenazine	ketoprofen (?)	quinine
cephaloridine (?)	mesoridazine	sulindac (?)
chloramphenicol	methdilazine	tamoxifen
chloroquine	methotrexate	thiethylperazine
chlorphenoxamine (?)	methotrimeprazine	thiopropazate
chlorpromazine	minoxidil (?)	thiopropazine
chlorprothixene	mitotane	thioridazine
cisplatin	naproxen (?)	thiothixene
clofazimine	penicillamine	trifluoperazine
clonidine (?)	perazine	triflupromazine
cobalt (?)	pericyazine	trihexyphenidyl(?)
cycrimine (?)	perphenazine	trimeprazine

- E. Chorioretinitis
- F. Color anomia—inability to name colors; may be associated with homonymous hemianopia resulting from infarct of posterior parietal and corpus callosum
- G. Diabetic retinitis

H. Dominantly inherited juvenile optic atrophy

I. Drugs and chemical substances causing optic neuropathy with red-green defect, including the following:

acetophenazine	diethazine	methylergonovine
alcohol	ergocalciferol	methysergide (?)
allobarbital	ergonovine (?)	nitroglycerin (?)
alseroxylon (?)	ergot (?)	oxyphenbutazone
aminosalicylate (?)	ergotamine (?)	pentobarbital
aminosalicylic acid (?)	ethambutol	perazine
amobarbital	ethopropazine	pericyazine
amodiaquine	etidocaine (?)	perphenazine
antimony lithium thiomalate	ferrocholinate (?)	phenobarbital
antimony potassium tartrate	ferrous fumarate (?)	phenylbutazone
antimony sodium tartrate	ferrous gluconate (?)	piperacetazine
antimony sodium thioglycollate	ferrous succinate (?)	polysaccharide-iron complex (?)
	ferrous sulfate (?)	
antipyrine	fluorometholone	prednisolone
aprobarbital	fluphenazine	prilocaine (?)
aspirin	gentamicin	primidone
barbital	heptabarbital	probarbital
betamethasone	hexachlorophene	procaine (?)
bromide (?)	hexamethonium	prochlorperazine
bromisovalum	hexethal	promazine
broxyquinoline	hexobarbital	promethazine
bupivacaine (?)	hydrocortisone	propiomazine
butabarbital	hydroxychloroquine	propoxycaine (?)
butalbital	iodide and iodine solutions and compounds	propoxyphene
butallylonal		quinine
butaperazine	iodochlorhydroxyquin	radioactive iodides
butethal	iodoquinol	rauwolfia serpentina (?)
calcitriol	iron dextran (?)	rescinnamine (?)
carbromal	iron sorbitex (?)	reserpine (?)
carphenazine	isoniazid	secobarbital
chloramphenicol	levothyroxine (?)	sodium antimonylgluconate
chloroprocaine (?)	lidocaine (?)	sodium salicylate
chloroquine	liothyronine(?)	stibocaptate
chlorpromazine	liotrix (?)	stibogluconate
cholecalciferol	medrysone	stibophen
clindamycin	mephobarbital	streptomycin
cobalt (?)	mepivacaine (?)	sulfacetamide (?)
cortisone	mesoridazine	sulfachlorpyridazine (?)
cyclobarbital	metharbital	sulfacytine (?)
cyclopentobarbital	methdilazine	sulfadiazine (?)
cycloserine (?)	methitural	sulfadimethoxine (?)
dapsone	methohexital	sulfamerazine (?)
deferoxamine	methotrexate (?)	sulfameter (?)
deserpidine (?)	methotrimeprazine	sulfamethazine
dexamethasone	methyl alcohol	sulfamethizole (?)
dextrothyroxine (?)	methylene blue	sulfamethoxazole (?)
sulfamethoxypridazine (?)	thiamylal	trifluoperazine
sulfanilamide (?)	thiethylperazine	triflupromazine
sulfaphenazole (?)	thiopental	trimeprazine
sulfapyridine (?)	thiopropazate	tryparsamide
sulfasalazine (?)	thiopropazine	vinbarbital
sulfathiazole (?)	thioridazine	vinblastine
sulfisoxazole (?)	thyroglobulin (?)	vincristine
suramin	thyroid (?)	vitamin A
syrosingopine (?)	tobramycin	vitamin D
talbutal	trichloroethylene

Palinopsia

This condition involves persistence or recurrence of visual images after exciting stimulus object has been removed; the patient has a hemianopic field defect. Polyopia (visual trailing effect with movement) may be present.

1. Acute migraine
2. Demyelinative optic neuritis
3. Encephalitis
4. Epilepsy
5. Intoxications, such as mescal delirium, LSD, trazodone-induced and clomiphene citrate.
6. Kartagener syndrome
7. Laser treatment of diabetic macular edema

8. Leber hereditary optic neuropathy
9. Temporal-parietal-occipital lesion
 - A. Degenerative
 - B. Neoplastic
 - C. Traumatic
 - D. Vascular
10. Schizophrenia
11. Drug, such as nefazodone (akinetopsia—persistence of moving objects)

Horton JC, Trobe JD. Akinetopsia from nefazodone toxicity. *Am J Ophthalmol* 1999;128,4:530-531.

Kawasaki A, Purvin V. Persistent palinopsia following ingestion of LSD. *Arch Ophthalmol* 1996;114:47-50.

Purvin VA. Visual disturbance secondary to clomiphen citrate. *Arch Ophthalmol* 1995;113:482-484.

Vertical Reading (Patient Reads from Above Downward)

1. Astigmatism—high error of refraction
2. Homonymous hemianopia (see p. 613)
3. Voluntary as oriental script written vertically

O'Brien CS. *Ophthalmology: notes for students*. Iowa City: Athens Press, 1930.

Visual Agnosia

This condition involves a failure to recognize objects by sight for animate and inanimate objects, but it does not interfere with recognition of language symbols.

1. Drugs
2. Klüver-Bucy syndrome (temporal lobectomy behavior syndrome)
3. Lesion of Brodmann area 18

Fraunfelder FT, Fraunfelder FW. *Drug-induced ocular side effects*. Woburn, MA: Butterworth-Heinemann, 2001.

Scheie HG. *Textbook of ophthalmology*, 10th ed. Philadelphia: WB Saunders, 1986.

Ocular Lateropulsion

The eyes feel as though they are being drawn toward one side, but this problem can be overcome with conscious effort; full range of extraocular muscle movements is maintained.

1. Lateral medullary disease, including infarction of lateral medullary plate, acoustic neuroma, posterior fossa meningioma, or multiple sclerosis
2. Peripheral vestibular disease

Meyer KT, et al. Ocular lateropulsion. *Arch Ophthalmol* 1980;98:1614-1616.

Pain in and About Eye

1. Ocular
 - A. Angle-closure glaucoma
 - B. Chronic ocular hypoxia, carotid occlusive disease
 - C. Dry-eye and tear-deficiency syndrome

- D. Local lid, conjunctival, and anterior segment disease
- E. Ocular inflammation including lyme borreliosis
- 2. Ophthalmic division
 - A. Herpes zoster
 - B. Migraine, cluster headache
 - C. Painful ophthalmoplegia syndrome
 - D. Raeder paratrigeminal neuralgia
 - E. Referred (dural) pain, including occipital infarction
 - F. Sinusitis
 - G. Tic douloureux (infrequent in V1)
- 3. Mandibular division
 - A. Dental disease
 - B. Tic douloureux
- 4. Maxillary division
 - A. Dental disease
 - B. Nasopharyngeal carcinoma
 - C. Sinusitis
 - D. Temporomandibular syndrome
 - E. Tic douloureux
- 5. Miscellaneous
 - A. Atypical facial neuralgias
 - B. Cranial arteritis
 - C. Pain with medullary lesions
 - D. Trigeminal tumors

Glaser JS. *Neuro-ophthalmology*, 2nd ed. Philadelphia: JB Lippincott, 1989.

Hill LM, Hasting G. Carotidynia: a pain syndrome. *J Family Practice* 1994;39:71-75.

Headache

- 1. Vascular headache of migraine type
 - A. Cephalalgia migraine (migraine equivalent)—migraine aura without headache
 - B. Classic migraine—migraine with aura
 - C. Common migraine—migraine without aura
 - D. Complicated migraine—hemiplegic migraine and ophthalmoplegia migraine
 - E. Cluster headache
 - F. Lower-half headache
- 2. Muscle-contraction headache
- 3. Combined (skeletal vascular)
- 4. Headache of nasal vasomotor reaction
- 5. Headache of delusional, conversion, or hypochondriacal states
- 6. Nonmigraine vascular headaches
 - A. Primary or metastatic tumors of meninges, vessels, or brain
 - B. Hematomas (epidural, subdural, or parenchymal)
 - C. Abscesses (epidural, subdural, or parenchymal)
 - D. Post lumbar puncture headache (leakage, headache)
 - E. Pseudomotor cerebri and various causes of brain swelling
- 7. Headache due to overt cranial inflammation
 - A. Intracranial disorders
 - 1. Mass

2. Meningitis
3. Subarachnoid hemorrhage
- B. Extracranial disorders (temporal arteritis)
8. Headache because of diseases of ocular structures
9. Headache because of diseases of aural structures
10. Headache because of diseases of the nasal and sinus structures
11. Headache because of diseases of dental structures
12. Headache because of diseases of other cranial and neck structures
13. Cranial neuritides
14. Cranial neuralgia
 - A. Glossopharyngeal neuralgia
 - B. Trigeminal neuralgia
15. Analgesic/ergotamine rebound headache

Friedman AP, et al. Classification of headache. *Neurology* 1962;12:173.

Mikkila HA, et al. The expanding clinical spectrum of ocular lyme borreliosis. *Ophthalmology* 2000;107:581-587.

Pulfrich Phenomenon

This condition involves a three-dimensional illusion in which a moving object that is viewed binocularly with a light attenuating filter in front of one eye appears to transcribe an anomalous pathway.

1. Age-related macular degeneration
2. Anisocoria
 - A. Induced
 - B. Traumatic
3. Anisometropic amblyopia
4. Cataract
5. Central serous retinopathy
6. Corneal Opacity
7. Hemianopia
8. Multiple Sclerosis
9. Optic Neuritis
10. Postretinal detachment repair

Larkin EB, Dutton GN, Heron G. Impaired perception of moving objects after minor injuries to the eye midface: the pulfrich phenomenon. *Br J Oral Maxillofac Surg* 1994;32:360-362.

Head Position

Head Turn (Face Turn)

1. Head turned toward right (gaze left)
 - A. Left Brown syndrome
 - B. Left inferior oblique muscle palsy
 - C. Left medial rectus muscle palsy
 - D. Left superior oblique muscle palsy
 - E. Right Duane syndrome
 - F. Right jerk nystagmus
 - G. Right inferior rectus muscle palsy
 - H. Right lateral rectus muscle palsy
 - I. Right superior rectus muscle palsy
 - J. Right supranuclear gaze paresis
2. Head turned toward left (gaze right)
 - A. Left Duane syndrome
 - B. Left jerk nystagmus
 - C. Left inferior rectus muscle palsy
 - D. Left lateral rectus muscle palsy
 - E. Left superior rectus muscle palsy
 - F. Left supranuclear gaze paresis
 - G. Right Brown syndrome
 - H. Right inferior rectus muscle palsy
 - I. Right medial rectus muscle palsy
 - J. Right superior oblique muscle palsy
3. Head turned toward either left or right
 - A. Congenital jerk nystagmus—head turned away from field with least amplitude of nystagmus (i.e., left jerk nystagmus improves in right gaze; left head turn)
 - B. Esotropia—head turned in the direction of convergent eye (cross fixation)
 - C. Hearing defect
 - D. One blind eye—head turn away affected side (good eye fixates in adduction)

- E. Photophobia (see p. 650)
- F. Progressive intracranial arterial occlusion syndrome (Taveras syndrome)
- G. Strabismus fixus (general fibrosis syndrome)
- H. Under corrected myope

Hiatt RL, Cope-Troupe C. Abnormal head positions due to ocular problems. *Ann Ophthalmol* 1978;10:881-892.

Kushner BJ. Ocular causes of abnormal head postures. *Ophthalmology* 1979;86:2115-2125.

Walsh FB, Hoyt WF. *Clinical neuro-ophthalmology*, 4th ed. Baltimore: Williams & Wilkins, 1985.

Head Tilt (Head Tilted Toward Either Shoulder or Around an Anteroposterior Axis)

1. Head tilted toward right
 - A. Left superior oblique muscle palsy
 - B. Left superior rectus muscle palsy
 - C. Right inferior oblique muscle palsy
 - D. Right inferior rectus muscle palsy
2. Head tilted toward left
 - A. Left inferior oblique muscle palsy
 - B. Left inferior rectus muscle palsy
 - C. Right superior oblique muscle palsy
 - D. Right superior rectus muscle palsy
3. Head tilted toward either right or left
 - A. Astigmatism
 - B. Beckwith-Wiedemann syndrome
 - C. Blowout fracture
 - D. Incorrectly aligned cylinder axis
 - E. Monocular torticollis—patching of eyes does not eliminate problem; roentgenogram may help
 1. Congenital malformation of fracture of cervical spine or vertebral processes
 2. Fracture of clavicle
 3. Functional habit and hysteria
 4. Pain from infection
 - a. Adenitis
 - b. Arthritis
 - c. Mastoiditis
 - d. Synovitis
 5. Paralysis of absent muscles on opposite side of head tilt
 6. Sandifer syndrome (hiatus hernia-torticollis syndrome)
 7. Spasm of sternocleidomastoid or contracture of sternocleidomastoid muscle on side of head tilt
 8. Vestibular defect
 - a. Acoustic neuroma
 - b. Labyrinthitis
 - c. Otitis media
 - F. Nystagmus—turned away from field with least amplitude of nystagmus
 - G. Superior oblique tendon sheath syndrome (Brown syndrome)

Greenberg MF, Pollard ZF. Ocular plagiocephaly: ocular torticollis with skull and facial asymmetry. *Ophthalmology* 2000;107:173-179.

Kattah JC, Dagi TF. Compensatory head tilt in upbeating nystagmus. *J Clin Neuro-Ophthalmol* 1990;10:27-31.

Rubin SE, et al. Ocular torticollis. *Surv Ophthalmol* 1986;30:366.

Chin Elevation

1. Adaptive symptom of contact lens wearer
2. A-esotropia with fusion in downward gaze
3. Blowout fracture of orbit
4. Brown syndrome (superior oblique tendon sheath syndrome)
5. Double elevator palsy
6. General fibrosis syndrome (strabismus fixus)
7. Incomplete bilateral ptosis
8. Inferior oblique muscle palsy
9. Parinaud syndrome (dorsal midbrain syndrome)
10. Superior rectus muscle palsy
11. Supranuclear lesion (upgaze palsy)
12. Thyroidectomy
13. "V" pattern exotropia with fusion in downward gaze

Beyer-Machule C, von Noorden GK: *Atlas of ophthalmic surgery, vol 1: Lids, orbits, extraocular muscles*. New York: Thieme Medical, 1984.

Hiatt RL, Cope-Troupe C. Abnormal head positions due to ocular problems. *Ann Ophthalmol* 1978;10:881-892.

Chin Depression

1. "A" pattern exotropia with fusion in upward gaze (A pattern)
2. Inferior rectus muscle palsy
3. Photophobia
4. Progressive supranuclear palsy
5. Superior oblique muscle palsy (bilateral)
6. Supranuclear lesion (down gaze palsy)
7. Uncorrected myope of low degree
8. "V" pattern esotropia with fusion in upward gaze

Beyer-Machule C, von Noorden GK. *Atlas of ophthalmic surgery, vol 1: Lids, orbits, extraocular muscles*. New York: Thieme Medical, 1984.

Kushner BJ. Ocular causes of abnormal head postures. *Ophthalmology* 1979;86:2115-2125.

Head Nodding

1. Benign or familial tremor
2. Bobble head doll syndrome—to-and-fro bobbing of the head and trunk, at 2- to 3-second intervals because of cyst of third ventricle
3. Congenital nystagmus
4. Extrapyrmidal dysfunction, such as paralysis agitans (Parkinson syndrome)
5. Habit spasm
6. Spasms nutans

Gottlob I, et al. Head nodding is compensatory in spasmus nutans. *Ophthalmology* 1992;99:1024-1031.

Rubin SE, Slavin ML. Head nodding associated with intermittent esotropia. *J Pediatr Ophthalmol Strabismus* 1990;27:250-251.

Head Tremor

1. Cerebellar system afflictions (benign essential senile tremor)—most common
2. Extraparamidal disorder
3. Hereditary postural tremor (familial tremor)
4. Postural tremor

Hughes AJ, et al. Paroxysmal dystonic head tumor. *Mov Disord* 1991;6:85-86.

Klawans HL. Rhythmic head tremor. *JAMA* 1982;248:1510.

Head Thrust

1. Oculomotor apraxia—defect or horizontal voluntary movements
2. Ataxia-telangiectasia syndrome
3. Isolated
4. Male predominance
5. Oral-facial-digital syndrome type II

Isenberg SJ. *The eye in infancy*. Chicago: Year Book Medical, 1989.

 - low endothelial cell count 288
 - megalocornea 255, 256-257 *t*
 - microcornea 252-253, 254 *t*
 - nerves of
 - hypoplastic 247
 - visibility of, increased 248
 - opacification of, in infants 258
 - opacity of 278-279
 - pannus 274-275, 276-277 *t*
 - phlyctenular keratoconjunctivitis 288
 - pigmentation of 248-250
 - problems of, retinal disease and 517-521
 - problems related to, lenticular disease associated with 405-409
 - punctate keratitis 260-265
 - retrocorneal pigmentation 288
 - ring lesion of 280-281
 - sicca keratitis 266-267
 - snail tracks of 288
 - staphyloma of 290

striations of, superficial vertical 271
 stroma of, superficial, linear opacity in 270
 stromal deposits of
 central posterior 279-280
 deep 279
 ulcer of
 central 281-283
 marginal 283-284, 285-286 *t*
 uveitis and 542-544
 white rings of 267
 wound healing of, delayed 270

Cornea plana 290

Corneal melt, postoperative 302-304

Corneoscleral keratitis 281

Cortical blindness 632-636

Cotton-wool spots 491-494

Crossed quadrantanopia 613

Crystal(s), of cornea 242-243, 244-245 *t*

Crystalline deposits, iridescent, in lens 399

Crystalline retinopathy 523

Cuneate scotoma 607

Cyclic strabismus 134

Cyst(s)

 blood, orbital 43-44

 conjunctival 212

 hematic, orbital 43-44

 macular 449

 vitreous 432

D

Dacryoadenitis 110-111, 112 *t*

Dacryocystitis 125-126

Dark adaptation, decreased 640

Dazzling discomfort 652-653

Deafness

 corneal diseases associated with 300-301

 optic nerve atrophy and 570-571

 retinal lesions associated with 521

Dellen 280

Dermatologic disorders, conjunctival disorders associated with 195-196

Dermoid(s), corneal 291, 292 *t*

Descemet membrane 287-288

Detachment, choroidal 532-535

Diarrhea, uveitis and 544

Diplopia

 binocular 638-639

 following head trauma 639-640

 uniocular 639

Disc, neovascularization of, uveitis and 544

Distichiasis 104

Divergence paralysis 178-179

Double elevator palsy 181

Double homonymous hemianopia 614-615

Double vision 638-639

Drug(s), elevated intraocular pressure due to 320-323

Drusen, of optic nerve 559-560

Dry eye 122-124

Dry spots, of cornea 267

Duane syndrome 133

Dysmegalopsia 623-624

E

Eccentric vision 640

Ectropion 78-79

Edema

 conjunctival 202-205

 of cornea 250-252

 lid 69-77

 macular 439-442

 pseudomacular 439

Elschnig spots 554

Embolus(i), cholesterol, of retina 509-510

Embryotoxon, anterior, of cornea 267-268

Emphysema, orbital 33

Endophthalmitis 223-225

Entropion 79-80

Epicanthus 80-81

Epiretinal membranes 522

Episclera

 pigment spots of 237

 tumors of 240

Episcleral venous pressure, elevated, glaucoma and 318

Episcleral vessels, dilated 235

Episcleritis 235-237

Epithelium, pigment, of retina, hemorrhagic or serous

 exudates beneath 511

Esophoria 128-129

Esotropia 128-129

Euryblepharon 98

Exophoria 130

Exophthalmos 4-8

 age-related 11-12, 16-29 *t*

 bilateral 14

 diminished orbital volume in 34

 drugs for 4

 inflammation with 4

 injuries associated with 4

 intermittent 15

 pulsating 14, 29 *t*

 recurrent 14, 30 *t*

 specific 15

 syndromes and diseases associated with 8-10

 systemic disease 5

 transient 14

 tumors associated with 5-8

 tumors-associated with

 cartilaginous 5

 cystic lesions 5

 fibrocytic tumors 5

 fibroosseous 6

 histiocytic lesions 5

- inflammatory pseudotumor of orbit 5
- lacrimal gland lesions 5-6
- leukemias 6
- lipocytic 6

 - oscillations of eyes 140-141
 - painful ocular movements 176-177
 - paralysis of fourth nerve 158, 159*t*, 164-165*t*
 - paralysis of sixth nerve 161, 162-163*t*, 164-165*t*, 166-167
 - paralysis of third nerve 153, 154-155*t*, 157, 164-165*t*
 - poor convergence 177-178
 - pseudoabducens palsy 160-161
 - pseudoesotropia 128
 - pseudoexotropia 129
 - pseudohypertropia 130
 - retraction of globe 179-180
 - spasm of convergence 178
 - enlargement of, on orbital CT scan 181-182
 - paralysis of, uveitis and 548-549
 - Exudative detachment, uveitis and 544-545
 - Eye(s)
 - deep-set 38
 - dry 122-124
 - Eyebrow(s)
 - absent brow hair 108
 - coarse 105
 - high arched 108
 - nasal part of, flaring of 107-108
 - Eyelashes
 - long 99-100
 - loss of 100-101, 102-103*t*, 104
 - whitening of 99
 - Eyelid(s) 45-109 *See also* Lid(s)
- F**
- Facial palsy 66-68
- Fibrosis(es), subretinal 521-522
- Fissure(s), palpebral
 - antimongoloid 47-48
 - mongoloid 46-47
- Flush, ciliary 201
- Forced duction test, for ocular muscle disorders 180-181
- Fourth nerve, paralysis of 158, 159*t*, 160, 164-165*t*
- Fovea, white-dot 525
- Foveal reflex, absence of 442
- Foveolar splinter, macular wisps and 454
- Fundus
 - hemorrhage in, of infant or young child 479
 - linear streaks pattern in 522

reticular pattern of dark lines in 524
 salt-and-pepper, uveitis and 550
 subretinal, yellow-orange lesions of 522

Fundus lesions

pale 505-507
 peripheral, of retina 515-517
 pigmented 507-509

G

Gas bubbles, in anterior chamber 338

Genital disorders, conjunctival disorders associated with 196-197

Glare discomfort 652-653

Glaucoma

in adults 312-313
 in aphakia 319-320
 congenital, conditions simulating 305-307
 displaced lens-related 317-318
 and elevated episcleral venous pressure 318
 intraocular tumors and 327-328
 neovascular 324-325
 primary low-tension 323-324
 in pseudophakia 319-320
 secondary open-angle 314-315
 shallow anterior chamber and 318-319
 surgery for, visual acuity loss after 642
 syndromes and diseases associated with 307-312
 unilateral 315-317
 uveitis-related 326-327, 545-546

Glaucoma suspect, in infants 305

Globe 220-230

anterior segment ischemia 229-230
 buphthalmos 222-223
 clinical anophthalmos 228-229
 endophthalmitis 223-225
 intraocular adipose tissue 226
 intraocular calcifications 225-226
 intraocular cartilage 225
 microphthalmia 220-222
 oculodigital stimulation 229
 phthisis bulbi 228
 pseudoendophthalmitis 223
 retraction of 179-180
 soft 226-228

Globe elevators, paralysis of 181

H

Hallucination(s) 645-648

Halo(s), colored, around lights 648-649

Head nodding 667

Head position 665-668

chin depression 667
 chin elevation 667
 head nodding 667
 head thrust 668
 head tilt 666-667
 head tremor 668
 head turn 665-666

Head thrust 668

Head tilt 666-667

Head trauma, diplopia following 639-640

Head tremor 668

Head turn 665-666

Headache(s) 663-664

Heightened color perception 656

Hemeralopia 657

Hemianopia, binasal 610-611

Hemianopia

altitudinal 610
 bitemporal 611-612
 homonymous 613-614
 double 614-615

Hemorrhage

choroidal 531-532
 in fundus, of infant or young child 479
 intracorneal 279
 macular 443, 447-448
 optic disc 562
 orbital 40
 subperiosteal 39-40
 retinal *See* Retinal hemorrhage
 retinal exudates and 497
 retinovitreal, in young adult 479
 subconjunctival 206-210
 subhyaloid, premacular 455
 vitreous 424-428

Hepatomegaly, uveitis and 546

Hereditary pediatric retinal degenerations 524

Herpes simplex keratitis, recurrent, trigger mechanisms for 301

Hertoch sign 105

Heterochromia 368-372

Heterotopia, of macula 451

Hippus 366

Hollenhorst plaques 509-510

Homonymous hemianopia 613-614
 double 614-615

Homonymous quadrantanopia 612-613

Horizontal gaze palsy 139

Horizontal jerk nystagmus 142-143

Horner syndrome 59-60, 61 *t*

Hydrops, corneal 252

Hyperemia

of iris 367
 of optic disc 560-561

Hyperopia, acquired 622-623

Hyperostosis, orbital 40-41

Hyperphoria 130-132

Hyperpigmentation, of eyelid 83-86

Hyperplastic nerves, of cornea 247

Hypertelorism 35-37

Hypertropia 130-132

Hyphema 331-332

spontaneous 333, 334-335 *t*
 in infants 333, 336-337 *t*

Hypopigmentation, of eyelid 81-83

Hypoplasia

macular 454-455

optic nerve 577-578

Hypopyon 329-331

Hypotelorism 38

Hypotony 325-326

I

Infant(s)

corneal opacification of 258

glaucoma suspect in 305

hemorrhage in fundus of 479

spontaneous hyphema in 333, 336-337*t*

Inflammatory pseudotumor of orbit 5

Influenza-like disease, uveitis and 546

Internal ophthalmoplegia 385

Internuclear ophthalmoplegia 173, 174*t*

Interstitial keratitis 272-274

Intracorneal hemorrhage 279

Intraocular adipose tissue 226

Intraocular calcifications 225-226

Intraocular cartilage 225

Intraocular pressure 305-328

elevated

medications and chemicals causing 320-323

with normal-appearing optic disc 313

glaucoma

in aphakia 319-320

congenital, conditions simulating 305-307

displaced lens-related 317-318

elevated episcleral venous pressure 318

intraocular tumors and 327-328

neovascular 324-325

primary low-tension 323-324

in pseudophakia 319-320

secondary open-angle 314-315

shallow anterior chamber and 318-319

syndromes and diseases associated with 307-312

unilateral 315-317

uveitis-related 326-327

glaucoma suspect

in adults 312-313

in infants 305

hypotony 325-326

Intraocular tumors, glaucoma associated with 327-328

Intraorbital calcifications 31

Irides, difference of color between 368-372

Iridis, rubeosis 366-367

Iridodonesis 374

Iris 364-385

absence of 364-365

aniridia 364-365

atrophy of 373

coloboma of 365-366

difference of color between two irides 368-372

diseases associated with 377-378

heterochromia 368-372

hyperemia of 367

internal ophthalmoplegia 385

neovascularization of 366-367

uveitis and 546

neuroepithelial tumors of ciliary body 384-385

nonpigmented lesions of 375-376

pigment epithelium of, tumors arising from 374

pigmented ciliary body lesions of 384

pigmented lesions of 374-375

syndromes associated with 377-378

tremulous 374

Iris processes 343

Iritis 378-380

in children 378-380

conditions simulating anterior 376-377

Ischemia

anterior segment 229-230

choroidal 556

Ischemic infarcts, of choroid 554

J

Jaundice, uveitis and 546

K

Keloid(s), corneal 260

Keratitis

corneoscleral 281

deep 272

herpes simplex, recurrent, trigger mechanisms for 301

nummular 272

punctate 260-265

sicca 266-267

Keratoconjunctivitis, phlyctenular 214, 288

Keratoconus 288-290

Keratomycosis, predisposing factors for 301

Keratopathy

band-shaped 259

bullous 271-272

Keratopathy(ies), punctate 260-265

Keratotic skin lesions, corneal problems associated with 293

L

Lacrimal gland (fossa) lesions 5-6

Lacrimal sac, infection of 125-126

Lacrimal system 110-126

bloody tears 111, 115

dacryoadenitis 110-111

- dacryocystitis 125-126
 - dry eye 122-124
 - inflammation of 110-111
 - Lagophthalmos 62
 - Lamellar cataracts 391-392
 - Lateropulsion, ocular 662
 - Leg(s), nodules in, uveitis and 547
 - Lens 386-420
 - absence from usual position of 405
 - absorption of 400
 - adjacent to endothelium of cornea 416
 - anterior subcapsular cataract 386-390
 - aphakia 405
 - dislocated 401-404
 - displaced, glaucoma associated with 317-318
 - equatorial pigmentation of 405
 - iridescent crystalline deposits in 399
 - lenticonus 399-400
 - lenticulocorneal adherence 416
 - lentiglobus 399-400
 - microphakia 400-401
 - microspherophakia 400-401
 - oil droplet in 399
 - paresis of accommodation 417-420
 - small 400-401
 - spasm of accommodation 416-417
 - spherophakia 400-401
 - Lens capsule, exfoliation of 400
 - Lenticonus 399-400
 - Lenticular disease, corneal disease-related 405-409
 - Lenticular problems, corneal diseases associated with 293-296
 - Lenticulocorneal adherence 416
 - Lentiglobus 399-400
 - Lesion(s)
 - confused with retinoblastoma 502-504
 - fundus
 - pale 505-507
 - peripheral, of retina 515-517
 - pigmented 507-509
 - macular
 - bilateral 439
 - elevated 451
 - nonpigmented, of iris 375-376
 - pigmented, of iris 374-375
 - pigmented ciliary body 384
 - retinal, deafness associated with 521
 - skin
 - keratotic, corneal problems associated with 293
 - uveitis and 550
 - Leukokoria 357-360
 - Lid(s) 45-109
 - ankyloblepharon 107
 - antimongoloid palpebral fissure 47-48
 - bagginess of 69-77
 - bleeding of 77-78
 - blepharitis
 - acute 94-97
 - chronic 88-93
 - blepharophimosis 97-98
 - blepharoptosis 49-51
 - blepharospasm of 65-66
 - blinking
 - frequent 68-69
 - infrequent 68
 - coloboma 98
 - distichiasis 104
 - ectropion 78-79
 - edema of 69-77
 - entropion 79-80
 - epicanthus 80-81
 - euryblepharon 98
 - excrescences of, corneal problems associated with 293
 - facial palsy 66
 - Hertoch sign 105
 - Horner syndrome 59-60
 - hyperpigmentation 83-86
 - hypopigmentation 81-83
 - lagophthalmos 62
 - lower, ptosis of 62
 - madarosis 100-101, 104
 - mongoloid palpebral fissure 46-47
 - myokymia 105-106
 - necrosis of 99
 - poliosis 99
 - preseptal cellulitis 106
 - pseudo-lid retraction 62
 - pseudoptosis 48-49
 - puffiness of 69-77
 - retraction of 62-64
 - synophrys 105
 - telecanthus 106-107
 - thickened 97
 - trichiasis 108-109
 - trichomegaly 99-100
 - tumors of 86, 87*t*, 88
 - xanthelasma 88
 - Lid lag 64-65
 - Ligament(s), pectinate, in anterior chamber angle 343
 - Light streaks 649
 - Limbal mass 212-213
 - Lipemia retinalis 510-511
 - Loss of vision
 - bilateral transient 624
 - gradual painless 642-643
 - posttraumatic 626-627
 - sudden painful 642
 - sudden painless 642
 - Low endothelial cell count 288
- ## M
- Macroaneurysm(s), of retinal arteries 486
 - Macula
 - cherry-red spot in 446-447
 - exudates of 443

- hemorrhage from 443, 447-448
 - heterotopia of 451
 - pigmentary changes in 452-454
 - white or yellow flat macular lesions resulting in 451-452
 - Macular coloboma 450-451
 - Macular cyst 449
 - Macular diseases, anatomic classification of 435-438
 - Macular edema 439-442
 - Macular hole 449-450
 - Macular hypoplasia 454-455
 - Macular lesions
 - bilateral 439
 - bull's-eye 454
 - elevated 451
 - flat, white or yellow, and pigmentary change 451-452
 - Macular pucker 442-443
 - Macular star retinopathy 443-445
 - Macular wisps, and foveolar splinter 454
 - Maculopathy(ies), microhemorrhagic 449
 - Madarosis 100-101, 102-103 *t*, 104
 - Malignant melanoma, choroidal lesions confused with 530-531
 - Marginal corneal ulcer 283-284, 285-286 *t*
 - Mass(es)
 - limbal 212-213
 - white, in anterior chamber 343
 - Megalocornea 255, 256-257 *t*
 - Melanoma, malignant, choroidal lesions confused with 530-531
 - Membrane(s), epiretinal 522
 - Membranous conjunctivitis 187
 - Meningism, uveitis and 546-547
 - Microaneurysm(s), of retina 483-485
 - Microcornea 252-253, 254 *t*
 - Microembolus(i), retinal 510
 - Microhemorrhagic maculopathy 449
 - Microphakia 400-401

 - peripapillary subretinal neovascularization 601-602
 - pseudoptic neuritis 586
 - pseudopapilledema 601
 - retrobulbar, fluid enlargement of 560
 - retrobulbar neuritis 578-585, 587-588
 - tumors of 6
 - Optic nerve(s), hypoplasia of 468
 - Optic nerve heads, blurred 584-585
 - Optic neuritis 578-585, 587-588
 - uveitis and 547-548
 - Optic neuropathy, ischemic 561-562
 - Optic sheath, fluid enlargement of 560
 - Opticociliary shunts 586
 - Optokinetic nystagmus 148
 - Orbit 3-44
 - blood cyst of 43-44
 - bones of, hypertrophy of 40-41
 - bony, osteolysis of 39
 - bruit of 31, 32*t*, 33
 - deep-set eyes 38
 - emphysema of 33
 - enophthalmos 15, 30
 - exophthalmos 4-8
 - fossa formation of 39
 - hematic cysts of 43-44
 - hemorrhage of 40
 - subperiosteal 39-40
 - hyperostosis 40-41
 - hypertelorism 35-37
 - hypotelorism 38
 - inflammatory pseudotumor of 5
 - intraorbital calcifications 31
 - large 43
 - margins of, expansion of 40
 - optic canals
 - erosion of 42
 - expansion of 41
 - small 41-42
 - pain affecting 33-34
 - prominent supraorbital ridges 38-39
 - pseudohypertelorism 35
 - pseudoproptosis 3
 - shallow 34
 - small 43
 - superior orbital fissure
 - enlargement of 42-43
 - narrowing of 43
 - vascular disorders of 8
 - Oscillopsia 658
- ## P
- Pain
 - in and about eye 662-663
 - orbital 33-34
 - Palinopsia 661-662
 - Palpebral fissure
 - antimongoloid 47-48
 - mongoloid 46-47
 - Palsy(ies)
 - abducens 160, 161, 162-163*t*, 164-165*t*, 166
 - double elevator 181
 - facial 66-68
 - oculomotor 153, 154-155*t*, 156-157, 164-165*t*
 - pseudoabducens 160-161
 - trochlear 158, 159*t*, 160, 164-165*t*
 - Pannus 274-275, 276-277*t*
 - Papilledema 593-601
 - bilateral 591-593
 - drugs and 593-595
 - intracranial causes of 595-597
 - neurologic disorders and 597
 - ocular causes of 598
 - orbital causes of 598-599
 - poisons and 593-595
 - systemic diseases and 599-600
 - trauma and 599-600
 - unilateral 589-590
 - uveitis and 548
 - vaccines and 593-595
 - vascular malformations and 600-601
 - Papillitis 578-585, 587-588
 - uveitis and 547-548

- Paradoxical pupillary reaction 352
 Parafoveal telangiectasia 449, 523-524
 Paralysis, divergence 178-179
 Paresis of accommodation 417-420
 Pars planitis 556-558
 Pectinate ligaments, in anterior chamber angle 343
 Pediatric retinal degenerations, hereditary 524
 Pendular nystagmus 142
 Periarteritis retinalis segmentalis 464
 Periodic alternating nystagmus 145-146
 Peripapillary subretinal neovascularization 601-602
 Peripheral anterior synechiae 341-342
 Peripheral fundus lesions, of retina 515-517
 Peripheral nerve tumors 6-7
 Peripheral uveitis 556-558
 Peripheral-field contraction 608-610
 Perivenous sheathing, uveitis and 549
 Persistent hyperplastic primary vitreous 430
 Phlyctenular keratoconjunctivitis 214, 288
 Photophobia 650-652
 Photopsia 644-645
 Phthisis bulbi 228
 Pigment epithelium
 of iris, tumors arising from 374
 of retina, hemorrhagic or serous exudates beneath 511
 Pigment spots
 of episclera 237
 of sclera 237
 Pigmentation, retrocorneal 288
 Pigmented fundus lesions 507-509
 Pigmented lesions, of iris 374-375
 Plasmoid aqueous 338
 Pneumonitis, uveitis and 549
 Poliosis 99
 Positional nystagmus 146-148
 Posterior subcapsular cataracts 393-398
 Postoperative corneal melt 302-304
 Posttraumatic loss of vision 626-627
 Premacular subhyaloid hemorrhage 455
 Preseptal cellulitis 106
 Prominent supraorbital ridges 38-39
 Prostatitis, uveitis and 550
 Pseudoabducens palsy 160-161
 Pseudoendophthalmitis 223
 Pseudoesotropia 128
 Pseudoexotropia 129
 Pseudohypertelorism 35
 Pseudohypertropia 130
 Pseudo-lid retraction 62
 Pseudomacular edema 439
 Pseudomembranous conjunctivitis 187-191
 Pseudooptic neuritis 586
 Pseudopapilledema 601
 Pseudophakia, glaucoma in 319-320
 Pseudoproptosis 3
 Pseudoptosis 48-49
 Pseudoretinitis pigmentosa 497-499
 Ptosis 55-56 *t*
 acquired 49-51
 congenital 49
 of lower lid 62
 mechanical 51
 myogenic 50-51
 neurogenic 50
 protective 51
 specific 11-15
 S-shaped 58
 syndromes and diseases associated with 52-55
 transient 58
 traumatic 49-50
 Pulfrich phenomenon 664
 Pulfrich stereo-illusion phenomenon 523
 Punctate cataracts 392
 Punctate keratitis 260-265
 Punctate lesions, morphologic classification of 265-266
 Pupil(s) 344-363
 afferent defect of 362-363
 constriction of, when light is withdrawn 352
 decentered pupillary light reflex 361
 dilated 344-348
 pigment liberation into anterior chamber with 339
 dilated space of, long ciliary processes extending into 361
 hippus 356
 inequality of 354-355
 irregularity of 355-356
 oval 355-356
 paradoxical reaction to 352
 persistent pupillary membrane 361
 pupillary block following cataract extraction 361-362
 pupillary light reflex, decentered 361
 reaction to light by, absence of decrease of 353-354
 relative fixed, dilated 348-349
 small 349-352
 tonohaptic 356-357
 white 357-360
 Pupillary block, following cataract extraction 361-362
 Pupillary membrane, persistent 361
 Purulent conjunctivitis 185-187
- ## Q
- Quadrantanopia
 crossed 613
 homonymous 612-613
- ## R
- Reading, vertical 662
 Retina 433-525 *See also diseases specific to and* Macula
 cholesterol emboli of 509-510

exudates of
 hard 495-496
 and hemorrhage 497
 generalized arterial narrowing of 462-464
 localized arterial narrowing of 462
 medullated nerve fibers of 507
 microaneurysms of 483-485
 microemboli of 510
 peripheral fundus lesions of 515-517
 pigment epithelium of, hemorrhagic or serous exudates
 beneath 511
 problems related to, corneal diseases associated with 296-300
 venous pulsations of, absence of 465
 Retina detachment 487
 diseases associated with 487-491
 rhegmatogenous, predisposition to 486-487
 syndromes associated with 487-491
 Retinal arteries, macroaneurysms of 486
 Retinal arteriole, pulsation of 457
 Retinal artery occlusion 457-461
 Retinal bone corpuscular dots 500-501
 Retinal disease, corneal problems associated with 517-521
 Retinal folds 491
 Retinal hemorrhage 473-478
 with central white spot 479, 480-482 *t*
 dilated retinal veins and 473
 Retinal lesions, deafness associated with 521
 Retinal pigment epithelial folds 525
 Retinal pigment epithelial tears 524-525
 Retinal neovascularization 486
 Retinal "sea-fans" 514
 Retinal vascular tortuosity 455-456
 Retinal vascular tumors 511-512
 Retinal veins 464-465
 dilated 466-468
 and retinal hemorrhage 473
 occlusion of, central 468-472
 tortuosity of 468
 Retinal vessels
 nasal displacement of 514-515
 temporary displacement of 514
 Retinitis 497-499
 Retinoblastoma, lesions confused with 502-504
 Retinociliary vein, disappearance from retina at disc margin
 without connection to central retinal vein 446
 Retinopathy(ies)
 crystalline 523
 macular star 443-445
 stellate 443-445
 talc 523
 traumatic 513
 Retinovitreal hemorrhage, in young adults 479
 Retraction nystagmus 145
 Retrobulbar neuritis 578-585, 587-588
 Retrocorneal pigmentation 288

Rhabdomyoma(s) 7
 Rhabdomyosarcoma(s) 7
 Rotary nystagmus 144
 Roth spot 479
 Rubeosis iridis 366-367

S

Salt-and-pepper fundus, uveitis and 550
 Schlemm canal, blood in 339-340
 Sclera 231-240
 blue 231-232, 233-234 *t*
 dilated episcleral vessels 235
 episcleritis 235-237
 pigment spots of 237
 scleritis 237-239
 staphyloma 239
 stretching of 239
 thinning of 239
 tumors of 240
 Scleritis 237-239
 Sclerocornea 301-302
 Scotoma(s)
 arcuate 607
 bilateral central 605-607
 cuneate 607
 "Sea-fans", retinal 514
 See-saw nystagmus 144-145
 Sicca keratitis 266-267
 Sixth nerve, paralysis of 161, 162-163 *t*, 164 *t*, 165 *t*, 166
 Skin lesions
 keratotic, corneal problems associated with 293
 uveitis and 550
 Snail tracks, of cornea 288
 Snowball(s), in vitreous 430
 Spasm of accommodation 416-417
 Spasm of convergence 178
 Spherophakia 400-401
 Spontaneous hyphema 333, 334-335 *t*
 in infants 333, 336-337 *t*
 "Spots" before eyes 648
 Staphyloma 239
 of cornea 290
 Stellate retinopathy 443
 Stomatitis, uveitis and 550
 Strabismus
 cyclic 134
 syndromes and diseases associated with 135-139
 Stromal deposits, corneal
 central posterior 279-280
 deep 279
 Subcapsular cataracts
 anterior 386-390
 posterior 393-398
 Subconjunctival hemorrhage 206-210
 Subretinal fibrosis 521-522
 Subretinal fundus, yellow-orange lesions of 522

Superior orbital fissure
 enlargement of 42-43
 narrowing of 43
 Supraorbital ridges, prominent 38-39
 Symblepharon 217-218
 Synechiae, peripheral anterior 341-342
 Synophrys 105

T

Talc retinopathy 523
 Tear(s)
 absence of 122-124
 bloody 111, 114*t*, 118
 drugs found in 122
 excessive 115-119, 120-121*t*, 126
 paucity of 122-124
 retinal pigment epithelial 524-525
 Telangiectasia, parafoveal 449, 523-524
 Telangiectasis, conjunctival 201-202
 Telecanthus 106-107
 Third nerve, paralysis of 153, 154-155*t*, 156-157, 164-165*t*
 Thrust, head 668
 Tonsillitis, uveitis and 551
 Tortuosity(ies), conjunctival 201-202
 Trabecular meshwork, of anterior chamber, pigmentation of 338-339
 Trauma
 head, diplopia following 639-640
 nonpenetrating, uveitis and 551
 Tremor(s), head 668
 Trichiasis 108-109
 Trichomegaly 99-100
 Triptopia, binocular 639
 Tumor(s)
 conjunctival 211-212
 episcleral 240
 exophthalmos-related 5-8
 of eyelids 86, 88
 intraocular, glaucoma associated with 327-328
 of lids 87*t*
 neuroepithelial, of ciliary body 384-385
 from pigment epithelium of iris 374
 pigmented, of optic disc 602
 scleral 240
 vascular, retinal 511-512

U

Ulcer(s)
 conjunctival
 chronic 214
 recurrent 214
 corneal
 central 281-283
 marginal 283-284, 285-286*t*
 Unilateral glaucoma 315-317

Unilateral sector-shaped defects 608
 Uniocular diplopia 639
 Uvea, posterior, inflammation in, granulomatous and nongranulomatous 552
 Uveal effusion 555
 Uveitis
 anterior 378-380
 conditions simulating anterior 376-377
 glaucoma associated with 326-327
 granulomatous 382-384
 nongranulomatous 381-382
 peripheral 556-558
 posterior 537-538
 in children, conditions simulating 538
 conditions simulating 536-537, 538
 syndromes and diseases associated with 539-551

V

Varicosity(ies), conjunctival 201-202
 Vascular disorders, of orbit 8
 Vascular tumors, retinal 511-512
 Vein(s)
 cilioptic 559
 retinal *See* Retinal veins
 Venous beading 456
 Vertical nystagmus 143-144
