## Introduction

The purpose of this book is to provide HR professionals and other business executives with key human capital measures. In business, where the need to measure is strong, benchmarking can help identify an organization's human capital strengths and weaknesses, create a framework for managing change and encourage employees toward continuous improvement.

Yet for some HR professionals, when it comes to measuring activities around human capital, concrete measures can feel elusive. Numbers that relate to the context of a specific business, particularly the same industry, employee size, and geographic location, are usually difficult to find. But it is precisely this organizational profiling that is most beneficial to enable similar organizations to compare themselves to each other.

2015-2016 Human Capital Benchmarking contains more than 40 metrics about human capital, such as turnover, cost-per-hire and salary increases, which are detailed enough to assist HR professionals in managing HR initiatives for their organization.

## How to Use This Book

Each human capital metric reports data by industry, employee size and region. More than 40 metrics are provided within the following categories: Organizational Data, HR Department Data, HR Expense Data, Compensation Data, Tuition/Education Data, Employment Data, and Expectations for Revenue and Organizational Hiring. The complete list of metrics and their corresponding page number is reported in the Table of Contents. Detailed explanations for each metric and for statistical definitions are provided in the Glossary. Please also refer to pages 2-3 for a listing of states in each geographic area.

## Methodology and Quality Control

The survey was created by SHRM and was reviewed by the SHRM Human Capital Measurement/HR Metrics Expertise Panel. The Panel is made up of U.S. and international SHRM members who are experts in the field of human capital measurement.

Every effort was made to ensure the accuracy of the data. At the completion of data collection, the data were checked for duplicate responses. When a respondent submitted a survey more than once (which occurred in rare instances), the most recent survey was retained and all prior submissions were deleted. The data, which were collected in 2015 for 2014 results, were then put through a rigorous accuracy check process.* The survey included many quantitative questions that were checked to ensure that they were understood by respondents and that the data submitted were accurate. For example, the number of HR full-time equivalent employees (FTEs) had to equal the sum of the categories of HR FTEs, and the number of HR FTEs had to be less than the total FTEs in the organization. The HR expenses had to be less than the total organizational expenses. Overall, there were few inconsistencies in the data. When inconsistencies were identified, steps were taken to resolve the discrepancy. If the data could not be verified and appeared inaccurate, they were excluded from the analysis. This was done to ensure that the highest quality data were included in the study.

## Understanding the Data

As you compare your own data against the other organizations, please keep the following in mind:

[^0]1. The book is based on data derived from the SHRM Benchmarking Database, which contains data from a random sample of SHRM members in the U.S. of varying staff sizes and industries. Therefore, any interpretations of these data should be kept within this context.
2. A deviation between your figure for any human capital measure and the comparative figure is not necessarily favorable or unfavorable; it is merely an indication that additional analyses may be needed. Human capital measures that relate more closely to the context of your organization's industry and employee size are more descriptive and meaningful than information that is more generic in nature, such as all industries combined. The larger the discrepancy between your figure and those found in this report, the greater the need for additional scrutiny.
3. In cases where you determine that potentially serious deviations do exist, it may be helpful to go back and calculate the same human capital metrics for your organization over the past several years to identify any trends that may exist.
4. The information in this book should be used as a tool for decision-making rather than an absolute standard. Because companies differ in their total rewards strategy, location, size and other factors, any two companies can be well managed, yet some of their human capital measures may differ greatly. No decision should be made solely based on the results of any one study.

## Working with the Data

The information in this book is designed to be a tool to help you evaluate decisions and activities that affect your organization's human capital. When reviewing these data, it is important to realize that business strategy, organizational culture and industry pressures are just a few of the many factors that drive various measures. For example, an industry that generally hires nonskilled labor, such as manufacturing, may have lower cost-per-hire than the high-tech industry which hires specialized knowledge workers. This is because organizations in the high-tech industry often spend more to source and recruit hard to find knowledge workers.

Absolute measures are not meaningful in isolation-they should be compared with one or more measures to determine whether a satisfactory level exists. Other measures, for example, might be your organization's past results in this area or comparatives based on organizational size, industry or geographic location.

Each page contains human capital benchmarks in aggregated form. There may be discrepancies between your organization's human capital benchmarks and the average or median numbers for a particular category. It is particularly helpful to communicate to line managers and
executives that just because your organization has benchmarks which are different from the average or median, it does not mean they are favorable or unfavorable. Rather it may be the result of a particular total rewards strategy, special circumstances or other business initiatives that cause differences with your organization's benchmarks.

## Regional Areas

The geography of the United States was broken down into five regional areas: Northeast, Southeast, North Central, Southwest Central and Pacific West. Below is a list of states found in each region.

## Northeast

Connecticut (CT)
Delaware (DE)
Maine (ME)
Maryland (MD)
Massachusetts (MA)
New Hampshire (NH)
New Jersey (NJ)
New York (NY)
Pennsylvania (PA)
Rhode Island (RI)
Vermont (VT)

## Southeast

Alabama (AL)
District of Columbia (DC)
Florida (FL)
Georgia (GA)
Kentucky (KY)
Mississippi (MS)
North Carolina (NC)
South Carolina (SC)
Tennessee (TN)
Virginia (VA)
West Virginia (WV)

## North Central

Illinois (IL)
Indiana (IN)
Iowa (IA)
Michigan (MI)
Minnesota (MN)
Nebraska (NE)
North Dakota (ND)
Ohio (OH)
South Dakota (SD)
Wisconsin (WI)

## Southwest Central

Arizona (AZ)
Arkansas (AR)
Colorado (CO)
Kansas (KS)
Louisiana (LA)

Missouri (MO)
New Mexico (NM)
Oklahoma (OK)
Texas (TX)
Utah (UT)

## Pacific West

Alaska (AK)
California (CA)
Hawaii (HI)
Idaho (ID)
Montana (MT)
Nevada (NV)
Oregon (OR)
Washington (WA)
Wyoming (WY)
www.ebook3000.com

# Human Capital Glossary of Metric Terms, Definitions, and Calculations 

## Statistical Definitions

## Percentile

The percentile is the percentage of responses in a group that have values less than or equal to that particular value. For example, when data are arranged from lowest to highest, the 25th percentile is the point at which 75 percent of the data are above and 25 percent are below it. Conversely, the 75th percentile is the point at which 25 percent of the data are above and 75 percent are below it.

## Median (50th percentile)

The median is the midpoint of the set of numbers or values arranged in ascending order. It is recommended that the median is used as a basis for all interpretations of the data when the average and median are discrepant.

## Average

The average is the sum of the responses divided by the total number of responses. It is also known as the mean. This measure is affected more than the median by the occurrence of outliers (extreme values). For this reason, the average reported may be greater than the 75th percentile or less than the 25th percentile.

## Organizational Data

## FTE

FTE is an abbreviation for full-time equivalent. Full-time equivalents represent the total labor hours invested. To convert part-time staff into FTEs, divide the total number of hours worked by part-time employees during the work year by the total number of hours in the work year (e.g., if the average work week is 37.5 hours, total number of hours in a work year would be 37.5 hours/week x 52 weeks $=1,950$ ). Converting the number of employees to FTEs
provides a more accurate understanding of the level of effort being applied in an organization. For example, if two employees are job-sharing, the FTE number is only one.

## Revenue

In business, revenue is the amount of money that a company actually receives from its activities, mostly from sales of products and/or services to customers. To investors, revenue is less important than profit, or income, which is the amount of money the company has earned after deducting all of its expenses.

## Revenue per FTE

Revenue per FTE is the total amount of revenue received during an organization's fiscal year divided by the number of FTEs. This ratio conceptually links the time and effort associated with the firm's human capital to its revenue output. If the revenue-per-FTE ratio increases, it indicates that there is greater efficiency and productivity because more output is being produced per FTE. If the ratio decreases, it indicates there is less efficiency and productivity.

## Net Income Before Taxes

Net income before taxes is the amount of revenue received during the fiscal year minus the operating expenses during the fiscal year.

## Net Income Before Taxes per FTE

Net income before taxes per FTE is the net income before taxes divided by the number of FTEs. It calculates efficiency by taking net income before taxes, which is the difference between gross revenue and expenses, and dividing the outcome by the number of FTEs. Unlike revenue per FTE, which has only one factor-revenue, net income per FTE comprises two factors, and it is best looked at over time.

## HR Department Data

## Total HR Staff

Total HR staff is the actual number of employees supporting the HR function for an organizational level. The primary responsibilities of these staff are directly HRrelated such as, but not limited to, administrative support directly related to HR, benefits, compensation, diversity, generalist, HRIS, and recruiting. Excluded staff are those whose primary responsibilities are not directly HR-related such as, but not limited to, facilities, health and safety, organizational development, payroll, phones, training, and travel services.

## HR-to-Employee Ratio

The HR-to-employee ratio provides a more manageable way to compare HR staffing levels between organizations. It represents the number of HR staff per 100 employees supported by HR in the organization. The number is calculated by dividing the number of HR FTEs by the total number of FTEs in the organization and multiplying the outcome by 100:
$\frac{\text { Total number of HR FTEs }}{\text { Total number of FTEs in the organization }} \times 100$

## Percentage of HR Staff in Supervisory Roles

The percentage of HR staff in supervisory roles is calculated by taking the number of HR staff in supervisory positions (FTEs) and dividing it by the total number of HR staff (FTEs). Because positions in this category supervise others, they often are called supervisor, manager, director or above.

## Percentage of HR Staff in Professional/ Technical Roles

The percentage of HR staff in professional/technical roles is calculated by taking the number of HR staff in professional/technical positions (FTEs) and dividing it by the total number of HR staff (FTEs). Positions in this category are generally exempt and do not supervise others. They may be called recruiter, benefits administrator, HR generalist, etc.

## Percentage of HR Staff in Administrative Support Roles

The percentage of HR staff in administrative support roles is calculated by taking the number of HR staff in administrative support positions (FTEs) and dividing it by the number by the total number of HR staff (FTEs). Often, but not always, positions in this category are nonexempt. They may be called coordinator, assistant, etc.

## Reporting Structure for the Head of HR

Reporting structure for the head of HR indicates to what position within the organization the head of HR reports.

Occasionally, in very small companies the head of HR may report to the CFO or head of an operating unit. In larger organizations, the head of HR usually reports to the President or CEO.

## Types of HR Positions Organizations Expect to Hire in the Coming Year

This metric reflects the expectations for HR hiring, including the types of HR positions that organizations anticipate hiring in 2015.

## Positions Included Within the Organization's Succession Plan

Succession planning varies by organization, and for that reason these data indicate which positions organizations typically include when conducting succession planning. For example, some organizations may include only executive-level positions for succession planning while others may include many executive-, manager-, and supervisory-level positions.

## HR Expense Data

## HR Expenses

Human resource expenses represent HR's total costs for a given fiscal year. Expenses include all salaries for the HR staff and all other costs/expenses including expenses related to outsourcing. Please exclude expenses not directly HR-related such as, but not limited to, facilities, health and safety, organizational development, payroll, phones, training, and travel services.

## HR-Expense-to-Operating-Expense Ratio

HR-expense-to-operating-expense ratio is calculated by dividing the organization's total HR expenses by the operating expenses for a given fiscal year. This ratio depicts the amount of HR expenses as a percentage of total operating expenses, which is an indication of the amount of dollars an organization invests in its HR function.

## HR-Expense-to-FTE Ratio

HR-expense-to-FTE ratio represents the amount of human resource dollars spent per FTE in the organization. It is calculated by taking the HR expenses for a given fiscal year and dividing that number by the number of FTEs in the organization.

## Compensation Data

## Annual Salary Increase

Annual salary increase is the percentage of increase in salaries that an organization expects to provide to its employees for a given fiscal year.

## Salaries as a Percentage of Operating Expense

The salaries as a percentage of operating expense metric is calculated by dividing the total amount of employee salaries by the operating expense for a given fiscal year.

## Target Bonus Percentage for Nonexecutives

The target bonus for nonexecutives represents the average percentage of base pay that is targeted to be paid out in cash to nonexecutive staff during a given year.

## Target Bonus Percentage for Executives

The target bonus for executives represents the average percentage of base pay that is targeted to be paid out in cash to executive staff during a given year.

## Tuition/Education Data

## Maximum Reimbursement Allowed for Tuition/Education Expenses per Year

The maximum reimbursement allowed for tuition/ education expenses per year is the maximum amount, in dollars, the organization paid for tuition/education per employee. These expenses do not include training expenses for seminars and other activities that are not part of a college- or university-level undergraduate or graduate course(s).

## Percentage of Employees Participating in Tuition/Education Reimbursement Programs

The percentage of employees participating in tuition or education reimbursement programs is the percentage of employees that participated in tuition reimbursement programs. These do not include reimbursements for seminars and other activities that are not part of a college- or university-level undergraduate or graduate course(s).

## Employment Data

## Number of Positions Filled

The number of positions filled reflects the number of open positions for which individuals were hired during the fiscal year. Open positions could be filled either by internal or external candidates. "Hired" means the individual accepted the position during the fiscal year, but may not have started until the following year. This would occur mostly with those candidates who accept positions during the last month of the organization's fiscal year.

## Time-to-Fill

Time-to-fill represents the number of days from when the job requisition was opened until the offer was accepted by the candidate. This number is calculated using calendar days, including weekends and holidays.

## Cost-per-Hire

Cost-per-hire represents the costs involved with a new hire. These costs include the sum of third party agency fees, advertising agency fees, job fairs, online job board fees, employee referrals, travel cost of applicants and staff, relocation costs, recruiter pay and benefits, and talent acquisition system costs, divided by the number of hires.

## Average Employee Tenure

Average employee tenure is the average length of employment in years for all regular full- and part-time employees in a given fiscal year. Typically, the more loyal employees are to a firm, the higher the employee tenure. To calculate the employee tenure length, calculate the average number of months all regular full- and part-time employees in a given fiscal year have been employed at an organization and divide that number by 12.

## Annual Overall Turnover Rate

Annual overall turnover rate is the rate at which employees enter and leave a company in a given fiscal year. Typically, the more loyal employees are to a firm, the lower the turnover rate. A 100\% turnover rate from year to year means that as many employees left the company as were hired. To calculate annual turnover, first calculate turnover for each month by dividing the number of separations during the month by the average number of employees during the month and multiplying by 100: \# of separations during month $\div$ average \# of employees during the month x 100. The annual turnover rate is then calculated by adding the 12 months of turnover percentages together.

## Annual Voluntary Turnover Rate

Annual voluntary turnover rate is the rate at which employees enter and voluntarily leave a company in a given fiscal year. To calculate annual voluntary turnover, first calculate the voluntary turnover for each month by dividing the number of voluntary separations during the month by the average number of employees during the month and multiplying by 100: \# of voluntary separations during month $\div$ average \# of employees during the month x 100 . The annual voluntary turnover rate is then calculated by adding the 12 months of voluntary turnover percentages together.

## Annual Involuntary Turnover Rate

Annual involuntary turnover rate is the rate at which employees enter and involuntarily leave a company in a given fiscal year. For example, involuntary terminations occur when the organization asks the employee to leave the company. They usually occur as a result of poor performance, layoffs or other reasons. Additional examples include separations due to death or disability. To calculate annual involuntary turnover rate, first calculate involuntary turnover for each month by dividing the number of
involuntary separations during the month by the average number of employees during the month and multiplying by 100: \# of involuntary separations during month $\div$ average \# of employees during the month x 100. The annual involuntary turnover rate is then calculated by adding the 12 months of turnover percentages together.

## Expectations for Revenue and Organizational Hiring

## Percentage of Organizations Expecting Changes in Revenue in the Coming Year

The expectations for revenue change indicate whether HR professionals anticipate their organization's revenue to increase, decrease or stay the same in 2015 compared with 2014

## Percentage of Organizations Expecting Changes in

 Hiring in the Coming YearThe expectations for changes in hiring indicate whether HR professionals anticipate their organization's hiring activity to increase, decrease or stay the same in 2015 compared with 2014.
