IARC: Group 1, known carcinogen

Label Signal Word: DANGER

Regulatory Authority:

- AB 2588-Air Toxics "Hot Spots" Chemicals (CAL)
- The "Director's List" (CAL/OSHA)
- Actively registered pesticide in California.
- EPCRA Section 304 RQ: CERCLA, 10 lb (4.54 kg)
- Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)
- Clean Water Act: Toxic Pollutant (Section 401.15); Section 307 Toxic Pollutants as chromium and compounds
- Safe Drinking Water Act: MCL, 0.05 mg/L as chromium, hexavalent
- RCRA Section 261 Hazardous Constituents, waste number not listed
- EPCRA (Section 313): Includes any unique chemical substances that contains chromium as part of that chemical's infrastructure. Form R *de minimis* concentration reporting level: Chromium(VI) compounds: 0.1%

Description: Red-orange hygroscopic crystalline solid. Soluble in water; solubility = 236 g/100 mL @ 20°C. Molecular weight = 262.0. Boiling point (decomposes) = 395°C; Melting/Freezing point = 357°C.

Incompatibilities: A strong oxidizer; violent reaction with reducing agents, combustible materials. Reacts with fluorine, hydrazine (violent), zirconium dusts, potassium iodide, sodium tetraborate, sodium tetraborate decahydrate, sodium borohydride.

Permissible Exposure Limits in Air: OSHA (ceiling): 0.1 mg/m³ (as CrO₃); ACGIH⁽¹⁾: 0.5 mg/m³ (as Cr); NIOSH⁽²⁾: 0.001 mg/m³ (as Cr); MAK (Germany): Class 2.

Determination in Air: Hexavalent chromium may be determined by filtration followed by visible absorption spectrophotometry according to NIOSH Method #7600⁽¹⁸⁾. Also, Filter (5.0- μm PVC membrane); Ion chromatography, conductivity detection; NIOSH Method #7604⁽¹⁸⁾.

Permissible Concentration in Water: To protect human health, hexavalent chromium should be held below 0.05 mg/L according to EPA⁽⁶⁾ in studies on priority toxic pollutants. This is also a WHO recommendation for total chromium in drinking water.

Determination in Water: Chromium(VI) may be determined by extraction and atomic absorption or colorimetry (using diphenylhydrazide).

Routes of Entry: Inhalation, ingestion, skin and eye contact.

Harmful Effects and Symptoms

Short Term Exposure: **Eyes:** Redness, pain, blurred vision. Highly corrosive; can cause severe and deep burns. **Skin:** Burning sensation and redness. **Inhalation:** Cough, sore throat, wheezing and a burning sensation. **Ingestion:** Abdominal pain and burning sensation, nausea and vomiting. Victim of exposure may go into shock or collapse. IDLH level = 15 mg/m³ as chromium(VI); potential carcinogen. May cause liver and kidney damage.

Long Term Exposure: Repeated or prolonged skin contact may cause sensitization. Repeated or prolonged inhalation exposure may cause asthma. May affect the respiratory tract, kidneys, liver. May cause nasal septum perforation. Carcinogenic to humans.

Points of Attack: Kidneys, liver, respiratory tract.

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: Examination of the respiratory tract. Liver and kidney function tests. Evaluation by a qualified allergist.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Sodium Dimethyldithiocarbamate

Use Type: Fungicide

CAS Number: 128-04-1

Formula: C₃H₆NNaS₂

Synonyms: Aceto SDD 40; AI3-14673; Carbamic acid, dimethyldithio-, sodium salt; Carbamodithioic acid, dimethyl-, sodium salt; Caswell No. 762; DDC; *N,N*-Dimethyldithiocarbamate, Sodium salt; dimethyldithio carbamate sodium salt; *N,N*-Dimethyldithio carbamic acid, sodium salt; Dimethyldithio carbamic acid, sodium salt; Dimetilditio carbamato sodico (Spanish); DMDK; Methyl namate; MSL; NSC 85566; SDDC; Sodium dimethylaminocarbodithioate; Sodium dimethylamino carbodithioate; Sodium dimethylcarbomodithioate; Sodium dimethyldithiocarbamate; Sodium *N,N*-dimethyl dithiocarbamate

Trade Names: ALCOBAM NM[®]; ALGEX, Kemira Chemical (Finland); ALGATROL-30, Kemira Chemical (Finland); AMA-30, Kemira Chemical (Finland); BIOQUEST, Kemira Chemical (Finland); BIOTREAT, Kemira Chemical (Finland); BROGDEX 555[®]; CARBON-S[®]; DIBAM[®]; FRESHGARD 40[®]; SHARSTOP 204[®]; STA-FRESH 615[®]; STERISEAL LIQUID-40[®]; THIOSTOP-N[®]; VULNOPOL[®] NM; WING STOP-B[®]

Producers: Huntsman (USA); Kemira Chemical (Finland); Tessenderlo Chemie (Belgium)

Chemical Class: Dithiocarbamate

EPA/OPP PC Code: 034804

California DPR Chemical Code: 548

RTECS Number: FD3500000

EINECS Number: 204-876-7

Uses: Used in wastewater treatment and for the removal of heavy metals.

U.S. Maximum Allowable Residue Levels for Sodium Dimethyldithiocarbamate (40 CFR 180.152):

CROP	ppm
Melon	25.0

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Likely carcinogen

California Prop. 65: Developmental toxin

U.S. TRI: Developmental toxin

Label Signal Word: WARNING

Regulatory Authority:

- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- Actively registered pesticide in California
- RCRA Section 261 Hazardous Constituents
- EPA Hazardous Waste Number (RCRA No.): U382
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: Crystalline solid. Molecular weight = 143.22.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)].⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Concentrated solutions are slightly corrosive to eyes and mucous membranes. Dust inhalation can cause irritation of the respiratory system with sneezing. Eye contact can cause irritation, watering, pain, and inflammation of the eyelids. Skin contact can cause irritation and minor ulceration. Ingestion can cause nausea, vomiting, fever, muscle twitching, seizure, rapid respiration, slow heart beat. Severe exposure may result in death.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, skin, eyes.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Before employment and at regular times after that, the following are recommended: If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least

15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious and able to swallow, have victim drink 4 to 8 ounces of water. Do not induce vomiting. *Note to physician or authorized medical personnel:* Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

Sodium Fluoride

Use Type: Insecticide and wood preservative

CAS Number: 7681-49-4

Formula: NaF

Synonyms: Disodium difluoride; FDA 0101; Fluorid sodny (Czech); Fluorure de sodium (French); Fluoruro sodico (Spanish); Natrium fluoride; NCI-C55221; Sodium hydrofluoride; Sodium monofluoride; Trisodium trifluoride

Trade Names: (Note: Many of these trade names are for roach control or wood preservatives and used in combination with other compounds) ALCOA SODIUM FLUORIDE[®], Alcoa Inc (USA); ANTIBULIT[®]; CAVTROL[®]; CHECKMATE[®]; CHEMIFLOUR[®]; CREDO[®]; FITABS[®]; FLORIDINE[®]; FLOROCID[®]; FLOZENGES[®]; FLUORAL[®]; FLUORIDENT[®]; FLUORIGARD[®]; FLUORINEED[®]; FLUORINSE[®]; FLUORITAB[®]; FLOUR-O-KOTE[®]; FLURA-GEL[®]; FLURCARE[®]; FUNGOL B[®]; GEL II[®]; GELUTION[®]; IRADICAV[®]; KARIDIUM[®]; KARIGEL[®]; KARI-RINSE[®]; LEA-COV[®]; LEMOFLUR[®]; LURIDE[®]; NAFEEN[®]; NUFLOUR[®]; OSSALIN[®]; OSSIN[®]; PEDIAFLOR[®]; PEDIDENT[®]; PENNWHITE[®]; PERGANTENE[®]; PHOS-FLUR[®]; POINT TWO[®]; PROPORTION[®]; RAFLUR[®]; RESCUE SQUAD[®]; ROACH SALT[®]; SO-FLO[®]; STAY-FLO[®]; STUDAFLOUR[®]; SUPER-DENT[®]; T-FLUORIDE[®]; THERA-FLUR-N[®]; VILLIAUMITE[®]; ZENDIUM[®]; ZYMAFLUR[®]

Producers: Air Products & Chemicals (USA); Alcoa Inc (USA); ATOFINA Chemicals (France); Bayer Chemicals (Germany); Central Glass (Japan); Derivados del Fluor (Spain); Morita (Japan); Navin Fluorine Industries (India); Olin Corp. (USA); Philipp Brothers Chemicals (USA); Solvay Group (Belgium); Stella Chemifa (Japan)

Chemical Class: Inorganic

EPA/OPP PC Code: 075202

California DPR Chemical Code: 537

ICSC Number: 0951

RTECS Number: WB0350000

EEC Number: 009-004-00-7

EINECS Number: 231-667-8

Uses: Widely used in the chemical industry; in water treatment; as an insecticide, primarily for roach control; chemical cleaning, electroplating, glass manufacture, vitreous enamels, preservative for adhesives, toothpastes, disinfectant, dental prophylaxis. It is used as a wood preservative, particularly to preserve railroad ties. Also used orally in the treatment of various bone diseases to increase bone density and to relieve bone pain.

Carcinogen/Hazard Classifications

IARC: Group 3, unclassifiable

Label Signal Word: DANGER or WARNING

WHO Acute Hazard: Class II, moderately hazardous

Regulatory Authority:

- Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below)
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 1000 lb (454 kg)
- The "Director's List" (CAL/OSHA)
- Actively registered pesticide in California

Description: Odorless, white powder or colorless crystals. Pesticide grade is often dyed blue. Often used in a solution. Boiling point = 1695–1704°C. Melting/Freezing point = 988–993°C. Vapor pressure = 1 mbar @ 1080°C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 0, Reactivity 0. Slightly soluble in water.

Incompatibilities: Strong oxidizers and acids.

Permissible Exposure Limits in Air: The applicable regulations are those for the fluoride ion. The OSHA⁽²⁾ PEL, and NIOSH⁽²⁾ REL, and ACGIH⁽¹⁾ TLV is 2.5 mg/m³ TWA as fluoride. HSE⁽³³⁾ and DFG⁽³⁾ set the same values. The NIOSH⁽²⁾ IDLH is 250 mg/m³ as Fluorides (F). The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set MAC values for soluble fluorides in ambient air in residential areas of 0.03 mg/m³ on a momentary basis and 0.01 mg/m³ on an average daily basis. A number of states have set limits for fluoride in ambient air⁽⁶⁰⁾ ranging from as low as 2.85 µg/m³ (Iowa) to as high as 60,000 µg/m³ (Kentucky).

Determination in Air: Treated pad (special coating)/Pre-Filter; Sodium hydroxide; Ion-specific electrode; NIOSH IV, Method #7902, Fluorides⁽¹⁸⁾. See also #7906.

Permissible Concentration in Water: As with air, the applicable regulations are those for the fluoride ion. The values which have been set for drinking water⁽⁶¹⁾ are a standard of 4.0 mg/L set by EPA and a guideline of 2.4 mg/L set by the State of Maine.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact. Liquid can be absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Sodium fluoride can affect you when breathed in. Inhalation of dust or mist can cause severe irritation and burns of the eyes and skin. Irritates the eyes and respiratory system. May cause permanent eye damage. Exposure can cause nausea, abdominal pain, diarrhea, salivation, thirst, sweating.

Long Term Exposure: Repeated or prolonged industrial contact can cause dermatitis. Repeated exposure can cause fluoride to build-up in the body. Can irritate the lungs; bronchitis may develop. Repeated exposure can cause fluoride to build up in the body causing stiffness, brittle bones, stiff spine, calcification of ligaments of ribs, pelvis; and crippling. Repeated exposures can cause weakness, and muscle twitching, tremors, convulsions, coma and even death. May cause kidney damage. Prolonged contact can cause sores in the nose and perforated septum. High concentrations can damage the developing fetus. These effects DO NOT occur when sodium fluoride is used in drinking water for dental cavity prevention.

Points of Attack: Eyes, skin, respiratory system, central nervous system, skeleton and kidneys.

Medical Surveillance: Lung function tests. Urine fluorine levels (above 4 mg/dl indicates overexposure). Kidney function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Sodium Fluoroacetate

Use Type: Insecticide and rodenticide (rat poison).

CAS Number: 62-74-8

Formula: C₂H₂FNaO₂; FCH₂COONa

Alert: A Restricted Use Pesticide (RUP). It is seldom used as an insecticide.

Synonyms: 1080; Acetic acid, fluoro-, sodium salt; Fluoroacetic acid, sodium salt; Compound 1080; Fluoroacetato sodico (Spanish); Fluoroacetato di sodio (Italian); Fluoroessigsaeure (German); Monofluoroessigsaeure, natrium (German); Natriumfluoroacetat (Dutch); Natriumfluoroacetat (German); NSC 77690; SMFA; Sodio, fluoroacetato di (Italian); Sodium fluoroacetate; Sodium fluoroacetic acid; Sodium fluoroacetate; Sodium fluoroacetate de (French); Sodium monofluoroacetate

Trade Names: AI3-08434[®]; FLUORAKIL[®] 3; FRATOL[®]; FURATOL[®]; RATBANE 1080[®]; TEN-EIGHTY[®]; TL 869[®]; YASOKNOCK[®]

Producers: (Note: 1080 and Compound 1080 are currently active and manufactured for use in the United States by the U.S. Department of Agriculture and various state agricultural departments and used as bait for rodents and large predators.) Fluorochem Ltd. (UK); Tull Chemical (USA)

Chemical Class: Unclassified

EPA/OPP PC Code: 075003

California DPR Chemical Code: 633

ICSC Number: 0484

RTECS Number: AH9100000

EEC Number: 607-082-00-2

Uses: Sodium Fluoroacetate is primarily used around sewers, ships and warehouses, and in agriculture to control rats, mice, squirrels, prairie dogs, coyotes, rabbits and other small pests. It is seldom used as an insecticide. It is very toxic to birds, domestic animals and wildlife either by consuming the bait or eating poisoned carcasses. It is sometimes used in 1% solutions which are injected into collars which are strapped to the necks of sheep, goats and other livestock that predators are attracted to. Coyotes that puncture the collars are likely to be fatally poisoned by the sodium fluoroacetate as a result.

Carcinogen/Hazard Classifications

TRI Developmental Toxin: Reproductive toxin

Label Signal Word: DANGER

WHO Acute Hazard: Class 1 a, extremely hazardous

Regulatory Authority:

- Banned or Severely Restricted (Several Countries) (UN)⁽¹³⁾
- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (DFG)⁽³⁾ (HSE)⁽³³⁾ (OSHA)⁽⁵⁸⁾
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- The "Director's List" (CAL/OSHA)

- EPA Hazardous Waste Number (RCRA No.): P058
- RCRA, 40CFR261, Appendix 8 Hazardous Constituents
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 10/10,000 lb (4.54/4,540 kg)
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 10 lb (4.54 kg)
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- Canada, WHMIS, Ingredients Disclosure List

Description: Sodium fluoroacetate is a fluffy, colorless, odorless, hygroscopic solid (sometimes dyed black). Soluble in water; solubility = 110 g/100 cc @ 20°C. Boiling point = (decomposes). Non-volatile. Melting/Freezing point = 200°C (decomposes below MP). Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 0, Reactivity 0.

Incompatibilities: Alkaline metals and carbon disulfide.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ TWA is 0.05 mg/m³. The NIOSH⁽²⁾ TWA is the same and the NIOSH⁽²⁾ STEL is 0.15 mg/m³. The HSE⁽³³⁾ TWA, the DFG MAK⁽³⁾ and the recommended ACGIH⁽¹⁾ TWA value is 0.05 mg/m³. The STEL value is 0.15 mg/m³. The notation "skin" is added to indicate the possibility of cutaneous absorption. The NIOSH⁽²⁾ IDLH level = 2.5 mg/m³.

Determination in Air: Filter; Water; Ion chromatography; NIOSH II(5) Method #S30⁽¹⁸⁾.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, skin absorption, ingestion, eye and/or skin contact.

Harmful Effects and Symptoms

Short Term Exposure: May affect the cardiovascular system and central nervous system, causing cardiac disorders and respiratory failure. Exposure may result in death. This material is super toxic. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. The probable oral lethal dose in humans is less than 5 mg/kg, or a taste (less than 7 drops) for a 150 lb person. Symptoms include nausea, vomiting, apprehension, auditory hallucinations, facial paresthesia, twitching face muscle, pulsus alternans, ectopic heartbeat, tachard, ventricular fibrillation. Symptoms are usually seen within one-half hour of exposure, but severe effects may be delayed as long as 20 hours. A rebuttable presumption against registration of sodium fluoroacetate for pesticidal uses was issued on December 1, 1976 by the U.S. EPA. on the basis of reductions in nontarget and endangered species and because there is no human antidote.

Long Term Exposure: May cause liver and kidney damage. Affects the central nervous system causing epileptiform convulsive seizures that may be followed by severe depression.

Points of Attack: Cardiovascular system, lungs, kidneys, liver and central nervous system.

Medical Surveillance: Consider the points of attack in preplacement and periodic physical examinations. Liver and kidney function tests. Lung function tests. Consider chest x-ray following acute overexposure. Examination of the nervous system.

First Aid: Speed in removing material from eyes and skin is of extreme importance. If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Sodium Metaborate

Use Type: Herbicide

CAS Number: 7775-19-1

Formula: NaBO₂

Synonyms: Sodium metaborate (NaBO₂); Monosodium metaborate; Boric acid (HBO₂), sodium salt; Sodium borate (NaBO₂) (6CI)

Trade Names: ALLPRO BARACIDE®; ATRATOL®; canceled; BAREGROUND®; MONOBOR-CHLORATE®; PRAMITOL®, Makhteshim-Agan Industries (Israel); TRI-KILL®; UREABOR®

Producers: Ashland (USA); Makhteshim-Agan Industries (Israel); Rio Tinto (UK)

Chemical Class: Inorganic

EPA/OPP PC Code: 011104

California DPR Chemical Code: 689

Uses: Used in photographic chemicals, adhesives, textile processing, detergent, cleaners, and corrosion inhibition.

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION, WARNING, DANGER

Regulatory Authority:

- Actively registered pesticide in California.

Description: White lumpy solid or powder. Soluble in water. Molecular weight = 65.83. Density 2.463. Melting point = 90°C. Fuses to clear glass = 965°C. Boiling point = 1434°C.

Incompatibilities: Contact with moisture forms a basic mixture. Keep away from acids.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Corrosive. Severe eye irritant. Irritates the skin and respiratory tract.

Medical Surveillance:

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious and able to swallow, have victim drink 4 to 8 ounces of water. Do not induce vomiting. *Note to physician or authorized medical personnel:* Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

Producers: Agrilience (USA); Bayer CropScience (Germany); Dow AgroSciences (USA); Drexel Chemical (USA); Helena Chemical (USA); KMG Chemicals (USA); Luxembourg Industries (Israel); Nufarm (Australia); PBI/Gordon (USA); The Scotts Company (USA)

Chemical Class: Arsenical (organo-)

EPA/OPP PC Code: 013803

California DPR Chemical Code: 34

Uses: MSMA is used extensively as a selective post-emergence herbicide to control grassy weeds in cotton crops, in non-agricultural areas and in industrial applications.

Human toxicity (long-term)⁽⁷⁷⁾: Low–70.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Very low–1936.86508 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group B2, probable carcinogen (as cacodylic acid, the parent chemical)

California Prop. 65: Carcinogen (as cacodylic acid, the parent chemical)

IARC: Group 1, known carcinogen

Label Signal Word: CAUTION or WARNING

WHO Acute Hazard: Class III, slightly hazardous (as cacodylic acid, the parent chemical)

Regulatory Authority:

- AB 2588-Air Toxics "Hot Spots" Chemicals (CAL)
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- The "Director's List" (CAL/OSHA)
- Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112) as arsenic compounds
- Clean Water Act: Toxic Pollutant (Section 401.15) as arsenic and compounds
- RCRA Section 261 Hazardous Constituents, waste number not listed

- EPCRA Section 304 RQ: CERCLA, 1 lb (0.454 kg)
- EPCRA (Section 313): Includes any unique chemical substance that contains arsenic as part of that chemical's infrastructure. Form R *de minimis* concentration reporting level: as organic arsenic compounds, 1.0%
- Marine pollutant (49CFR, Subchapter 172.101, Appendix B) as arsenates

Description: Colorless crystalline solid; solution may be dyed red or green. Odorless. Solid may float or sink in water; solid and solution are highly soluble in water. Molecular weight = 162; 292 (hexahydrate). Boiling point = Decomposes. Melting/Freezing point = 117°C; 58°C (hexahydrate); Specific gravity: 1.0 20°C (solid); 1.4–1.6 @ 20°C (solutions). Hazard Identification (based on NFPA-704 M Rating System): Health Hazards (Blue): 1; Flammability (Red): 1; Reactivity (Yellow): 0.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ PEL for organic arsenic compounds is 0.5 mg/m³ TWA for an 8-hour workshift. There is no NIOSH⁽²⁾ recommendation. The ACGIH⁽¹⁾ TLV is 0.2 mg/m³ TWA.

Determination in Air: Filter; Reagent; Ion chromatography/Hydride generation atomic absorption spectrometry; NIOSH IV, Method #5022, Arsenic, organo-⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution. EPA⁽⁶⁾ recommends a zero concentration of arsenic for human health reasons but has set a guideline of 50 µg/L⁽⁶¹⁾ for drinking water.

Determination in Water: See OSHA Method ID-105 for arsenic.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Grade 2; LD₅₀ = 0.5 to 5 g/kg (rat).

Long Term Exposure: Repeated contact may cause skin sensitivity. Chronic exposure to arsenic compounds can cause dermatitis and digestive disorders. Renal damage may develop. In animals: kidney damage, muscle tremor, seizure, possible gastrointestinal tract, reproductive effects, possible liver damage.

Points of Attack: Skin, kidneys, liver.

Medical Surveillance: Kidney function tests. Examination by a qualified allergist. Kidney, liver, lung function tests. Consider chest x-ray following acute overexposure.

First Aid: If artificial respiration is administered, *avoid mouth-to-mouth resuscitation; use bag/mask apparatus.* Solid or solution: Irritating to skin and eyes. If swallowed, will cause nausea, vomiting, or loss of consciousness. Remove contaminated clothing and shoes. Flush affected areas with plenty of water. If in eyes, hold eyelids open and flush with plenty of water. If swallowed and victim is conscious and able to swallow, have victim drink 4 to 8 ounces of water and have victim induce vomiting. If

swallowed and victim is unconscious or having convulsions, do nothing except keep victim warm.

Sodium Pentachlorophenate

Use Type: Fungicide, algaeicide, molluscicide, microbiocide and as a wood preservative

CAS Number: 131-52-2

Formula: C₆Cl₅NaO; C₆Cl₅ONa

Alert: There are no registered products of sodium pentachlorophenate in the U.S.

Synonyms: PCP-sodium; PCP sodium salt; Pentachlorophenate sodium; Pentachlorophenol, sodium salt; Pentachlorophenoxy sodium; Pentaclorofenato sodico (Spanish); Pentaphenate; Phenol, pentachloro-, sodium salt; Phenol, pentachloro-, sodium salt, monohydrate; PKHFN; sodium PCP; Sodium pentachlorophenol; Sodium pentachlorophenolate; Sodium pentachlorophenoxide; Sodium, (pentachlorophenoxy)-; Sodium pentachlorophenate
Trade Names: AI3-16418[®]; DOW DORMANT FUNGICIDE[®], Dow AgroSciences (USA), canceled; DOWICIDE G[®], Dow AgroSciences (USA), canceled; DOWICIDE G-ST[®], Dow AgroSciences (USA), canceled; GR 48-11PS[®]; GR 48-32S[®]; NAPCLOR-G[®]; SANTOBRITE[®]; SANTOBRITE D[®]; WEEDBEADS[®]

Producers: Dow AgroSciences (USA); Fluorochem (UK)

Chemical Class: Chlorinated phenol; chlorophenoxy

EPA/OPP PC Code: 063003

California DPR Chemical Code: 540

ICSC Number: 0532

RTECS Number: SM6490000

EEC Number: 604-003-00-3

EINECS Number: 205-025-2

Uses: Used as a wood preservative and a fungicide in cellulose products, textiles, water-based latex paints, adhesives, leather, pulp, paper and industrial waste systems; general disinfectant and control of the intermediate snail host off schistosomiasis. In 1993, all manufacturers discontinued their registrations of products containing sodium pentachlorophenate.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group B2, probable carcinogen (as pentachlorophenate)

California Prop. 65: Listed (as pentachlorophenate)

IARC: Group 2B, possible carcinogen

Label Signal Word: WARNING or DANGER

WHO Acute Hazard: Class 1b, highly hazardous (as pentachlorophenate)

Endocrine Disruptor: Suspected endocrine disruptor (as pentachlorophenate)

Regulatory Authority:

- Air Pollutant Standard Set (former USSR)⁽⁴³⁾
- EPA Hazardous Waste Number (RCRA No.): listed as "None"
- AB 2588-Air Toxics "Hot Spots" Chemicals (CAL) as chlorophenoxy pesticides
- The "Director's List" (CAL/OSHA) as chlorophenoxy pesticides
- RCRA, 40CFR261, Appendix 8 Hazardous Constituents
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B), severe pollutant
- Canada, WHMIS, Ingredients Disclosure List

Description: White or tan crystalline solid or powder. Phenolic odor. Soluble in water; solubility = 33% (wt/vol) @ 25°C; 33 g/100 ml water at 25°C.

Incompatibilities: Oxidizers

Permissible Exposure Limits in Air: The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set an MAC of 0.1 mg/m³ in workplace air and MAC values for ambient air in residential areas as follows: 0.005 mg/m³ on a momentary basis and 0.001 mg/m³ on a daily average basis.

Determination in Air: No OELs have been established.

Permissible Concentration in Water: The former USSR-UNEP/IRPTC project⁽⁴³⁾ set a MAC in water bodies used for domestic purposes of 5 mg/m³ and in water bodies used for fishery purposes of 0.0005 mg/L.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Exposure to fine dusts or sprays cause burning in eyes and painful irritation in upper respiratory tract. If inhaled, it will induce violent coughing and sneezing. Skin irritation results from brief exposures, causing a burning sensation or rash. Symptoms of severe systemic intoxication include loss of appetite, respiratory difficulties, anesthesia, fever, sweating, difficulty in breathing and rapidly progressive coma. Severe intoxications, including fatalities, have been reported from uncontrolled use. This compound causes inflamed gastric mucosa, congestion of the lungs, edema in the brain, cardiac dilatation, degeneration of the liver and kidneys. Individuals suffering from kidney and liver diseases have a lowered resistance and should not be exposed.

Long Term Exposure: May cause skin allergy. May cause anemia. May damage the liver and kidneys. Repeated exposure can cause headache, weakness, sweating, fever, muscle twitching, dizziness, confusion, and death.

Points of Attack: Skin, blood, liver, and kidneys.

Medical Surveillance: Completed blood count. Liver and kidney function tests. Evaluation by a qualified allergist.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Sodium Tellurite

Use Type: Pesticide

CAS Number: 10102-20-2

Formula: Na₂O₃Te; Na₂TeO₃

Alert: No longer registered as a pesticide in the U.S.

Synonyms: Sodium tellurate(IV); Telluric acid, disodium salt; Tellurous acid, disodium salt; Tellurito sodico (Spanish)

Producers: Great Western Inorganics (USA); Molekula Fine Chemicals (UK)

RTECS Number: WY24500000

EINECS Number: 233-268-4

Uses: Used in bacteriology and medicine. Formerly used as pesticide.

Regulatory Authority:

- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (DFG)⁽³⁾ (HSE)⁽³³⁾ (OSHA)⁽⁵⁸⁾ (former USSR)⁽⁴³⁾
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 500/10,000 lb (227/4,540 kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)
- Canada, WHMIS, Ingredients Disclosure List

Description: Sodium tellurite is a white crystalline solid. Hazard Identification (based on NFPA-704 M Rating

System): Health 2, Flammability 0, Reactivity 0. Slightly soluble in water.

Incompatibilities: Cadmium, nitric acid, halogens and oxidizers.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ PEL for tellurium compounds of 0.1 mg/m³. NIOSH⁽²⁾ and ACGIH⁽¹⁾ recommend the same level as does HSE⁽³³⁾ and DFG⁽³⁾.

Permissible Concentration in Water: The former USSR⁽⁴³⁾ has set an MAC for tellurium in water bodies used for domestic purposes of 0.01 mg/L.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact. Absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the skin and eyes. Irritates the respiratory tract causing cough and wheezing. The material is both an oral and dermal toxic hazard. The material is toxic by ingestion. Oral ingestion of tellurium compounds is generally regarded as extremely toxic. The probable oral lethal dose is 5-50 mg/kg or between 7 drops and 1 teaspoonful for a 70 kg (150 lb) person. Tellurium compounds are regarded as super toxic for skin exposures. Symptoms of exposure are sleepiness, fatigue, stupor; loss of appetite, nausea, vomiting, stomach pain, metallic taste, garlic odor of the breath and sweat, dryness of the mouth or excessive salivation, renal pain, bronchitis, irregular breathing; cyanosis, fatty degeneration of the liver, and unconsciousness.

Long Term Exposure: Tellurium compounds cause reproductive damage. May cause liver and kidney damage. Can cause lung irritation; bronchitis may develop with cough, phlegm, and/or shortness of breath. Repeated exposure can cause weakness, fatigue, dizziness, and loss of consciousness.

Points of Attack: Liver, kidneys and lungs.

Medical Surveillance: Lung function tests. Liver and kidney function tests.

First Aid: Skin Contact: Flood all areas of body that have contacted the substance with water. Don't wait to remove contaminated clothing; do it under the water stream. Use soap to help assure removal. Isolate contaminated clothing when removed to prevent contact by others. **Eye Contact:** Remove any contact lenses at once. Immediately flush eyes well with copious quantities of water or normal saline for at least 20-30 minutes. Seek medical attention. **Inhalation:** Leave contaminated area immediately; breathe fresh air. Proper respiratory protection must be supplied to any rescuers. If coughing, difficult breathing or any other symptoms develop, seek medical attention at once, even if symptoms develop many hours after exposure. **Ingestion:** If unconscious or convulsing, do not induce vomiting or give anything by mouth. Assure that victim's airway is open and lay him on his side with his head lower than his body and transport at once to a medical facility. If conscious and not convulsing, give a glass of water to dilute the substance. If medical advice is not readily available, consider inducing

vomiting of this toxic material. Transport at once to a medical facility.

Sodium Tetraborate

Use Type: Insecticide, herbicide and molluscicide

CAS Number: 1303-96-4; 1330-43-4 as borates, tetra, sodium salts (anhydrous)

Formula: Na₂B₄O₇

Synonyms: Borates, tetra, sodium salt, anhydrous; Borax (B₄Na₂O₇·10H₂O); Caswell No. 109; Disodium tetraborate decahydrate; Sodium tetraborate decahydrate; Sodium borate anhydrous; Sodium borate decahydrate

Trade Names: BORATEEM[®], U.S. Borax (USA), canceled; BORICIN[®]; BURA[®]; GERSTLEY[®] BORATE[®]; GROGAN[®], canceled; JAIKIN[®]; NEOBOR[®]; POLYBOR[®]; RASORITE 65[®]; SOLUBOR[®]; THREE ELEPHANT V-BOR[®], IMC Chemicals (USA); 20 MULE TEAM[®], U.S. Borax (USA)

Producers: Agrium (Canada); American Borate (USA); Allipo Chemicals (India); Chemettal (Germany); Cia. Quimica Universal de Industrias (Mexico); Eagle-Picher Minerals (USA); Holvoet Chimie (Belgium); IMC Chemicals (USA); Kerr-McGee (USA); OxyChem (USA); Quantum Chemicals (Australia); Rohm & Haas (USA); SQM (Chile); Textron Systems (USA); SB Boron (USA); TCI America (USA); U.S. Borax (USA); Varsal Instruments (USA)

Chemical Class: Inorganic

EPA/OPP PC Code: 011102; 011112 as borates, tetra, sodium salts (anhydrous)

California DPR Chemical Code: 79; 5054 as borates, tetra, sodium salts (anhydrous)

ICSC Number: 0567; 1229 as borates, tetra, sodium salts (anhydrous)

RTECS Number: VZ2275000; ED4588000 as borates, tetra, sodium salts (anhydrous)

Uses: Pesticide products containing boric acid and its sodium salts are registered in the U.S. for use as insecticides, fungicides and herbicides. They are used on several agricultural and many non-agricultural sites including residential, commercial, medical, veterinary, industrial, forestry and food/feed handling areas. They are marketed in many formulations including liquids, soluble

and emulsifiable concentrates, granulars, powders, dusts, pellets, tablets, solids, pastes, baits, and crystalline rods.

U.S. Maximum Allowable Residue Levels for Borax ($B_4Na_2O_7 \cdot 10H_2O$), (40 CFR 180.1121):

Borax along with boric acid and its salts are exempt from the requirements of a tolerance when used in or on raw agricultural commodities.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group E, Unlikely carcinogen

Label Signal Word: CAUTION, WARNING, DANGER

WHO Acute Hazard: Class U, unlikely to be hazardous

Regulatory Authority:

- Actively registered pesticide in California.

Description: White to gray crystalline solid, granules, or powder. Becomes colorless on exposure to air. Odorless. Soluble in water; solubility = 2.56 g/100 mL @ 20°C. Molecular weight = 201.25. Density = 1.73. Melting/Freezing point = 756°C. Boiling point = 1575°C (decomposition).

Incompatibilities: Moisture, acids, metallic salts. Forms partial hydrate in moist air.

Permissible Exposure Limits in Air: NIOSH⁽²⁾; 1 mg/m₃ TWA; ACGIH⁽¹⁾ TLV: 1 mg/m₃ TWA as Borates, tetra, sodium salts.

Determination in Air: Collection on a filter and gravimetric analysis. See NIOSH Method #0500 Particulates NOR (total)⁽¹⁸⁾.

Permissible Concentration in Water: No criteria set but EPA has suggested⁽³²⁾ an ambient water limit of 138 µg/L based on health effects. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, skin, eyes, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes, skin, and respiratory tract. Ingestion in high dose or through damaged skin, may affect the central nervous system, kidneys, and gastrointestinal tract.

Long Term Exposure: Repeated or prolonged contact with skin may cause dermatitis. Repeated or prolonged inhalation may affect the respiratory tract.

Points of Attack: Eyes, skin, respiratory system.

Medical Surveillance: Consider the points of attack in preplacement and periodic physical examinations.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce*

vomiting when formulations containing petroleum solvents are ingested. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Stibine

Use Type: Fumigant

CAS Number: 7803-52-3

Formula: H₃Sb; SbH₃

Alert: No products of Stibine registered in the U.S.

Synonyms: Antimonwasserstoffes (German); Antimony hydride; Antimony trihydride; Antymonowodor (Polish); Hydrogen antimonide; Stibnite

ICSC Number: 0776

RTECS Number: WJ0700000

EEC Number: 051-003-00-9

Uses: Stibine is used as a fumigating agent. It is used in metallurgy, welding or cutting with blow torches, soldering, filling of hydrogen balloons, etching of zinc, and chemical processes. No products registered in the U.S.

Carcinogen/Hazard Classifications

TRI Developmental Toxin: Reproductive and developmental toxin as antimony compounds

Regulatory Authority:

- Very Toxic Substance (World Bank)⁽¹⁵⁾
- U.S. DOT Inhalation Hazard Chemicals
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- The "Director's List" (CAL/OSHA)
- OSHA 29CFR1910.119, Appendix A, Process Safety List of Highly Hazardous Chemicals, TQ = 500 lb (227 kg)
- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (DFG)⁽³⁾ (HSE)⁽³³⁾ (OSHA)⁽⁵⁸⁾ (Several States)⁽⁶⁰⁾

As antimony compounds:

- Banned or Severely Restricted (New Zealand)⁽¹³⁾ (Many countries, especially in food) (UN)⁽³⁵⁾
- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (OSHA)⁽²⁾ (California) (HSE) (Ontario, Quebec)

- RCRA, 40CFR261, Appendix 8 Hazardous Constituents, waste number not listed (as antimony compounds, n.o.s.)
- Safe Drinking Water Act, MCL, treatment technique; MCL, 0.006 mg/L; MCLG, 0.006 mg/L; Regulated Chemical (47FR9352)
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 100 lb (45.4 kg)
- EPCRA Section 313: Includes any unique chemical substance that contains antimony as part of that chemical's infrastructure. Form R *de minimus* concentration reporting level: 0.1%
- Canada, WHMIS, Ingredients Disclosure List; National Pollutant Release Inventory (as antimony compounds)

Description: Stibine is a colorless gas with a characteristic disagreeable odor. It is produced by dissolving zinc/antimony or magnesium-antimony in hydrochloric acid. Poor solubility in water. Boiling point = -18°C . Melting/Freezing point = -88°C . Flash point = flammable gas. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 4, Reactivity 2.

Incompatibilities: A flammable gas. Incompatible with acids, halogenated hydrocarbons, oxidizers, moisture, chlorine, ammonia. Reacts violently with chlorine, concentrated nitric acid and ozone. Decomposes in air. Thermally unstable: quick decomposition @ 200°C producing metallic antimony and explosive hydrogen gas.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ TWA, the DFG MAK⁽³⁾ and ACGIH⁽¹⁾ TWA value is 0.1 ppm (0.5 mg/m³). The NIOSH⁽²⁾ IDLH level = 5 ppm. Several states have set guidelines or standards for Stibine in ambient air⁽⁶⁰⁾ ranging from 5.0 µg/m³ (North Dakota) to 8.0 µg/m³ (Virginia) to 10.0 µg/m³ (Connecticut) to 12.0 µg/m³ (Nevada).

Determination in Air: Si gel (special coating); Hydrochloric acid; Visible spectrophotometry; NIOSH IV, Method #6008⁽¹⁸⁾.

Permissible Concentration in Water: The U.S. EPA allows 0.006 ppm of antimony per million parts of drinking water.

Routes of Entry: Inhalation of gas.

Harmful Effects and Symptoms

Short Term Exposure: Stibine can affect you when breathed in. May be fatal if absorbed through the skin or inhaled. A strong sensitizer. May cause severe allergic

respiratory reaction. Exposure can cause rapid, fatal poisoning, with symptoms of headaches, nausea, dark or bloody urine, pain in the back and abdomen, slowed breathing and death. Exposure can also irritate the lungs and may lead to a build-up of fluid (pulmonary edema) a medical emergency that can be delayed for several hours. This can cause death. Stibine destroys red blood cells and can also cause liver and kidney damage.

Long Term Exposure: Stibine destroys red blood cells (hemolysis). May affect the kidneys, liver; hemoglobinuria, hematuria (blood in the urine), hemolytic anemia, jaundice. May affect the central nervous system.

Points of Attack: Blood, liver, kidneys, respiratory system and central nervous system. Lung cancer has been observed in some studies of rats that breathed high levels of antimony. No human studies are available. It is unknown whether antimony will cause cancer in people.

Medical Surveillance: Antimony can be measured in the urine, feces, and blood for several days after exposure. For those with frequent or potentially high exposure (half the TLV or greater), the following are recommended before beginning work and at regular times after that: Lung function tests. If symptoms develop or overexposure is suspected, the following may be useful: Consider chest x-ray after acute overexposure. Blood and urine hemoglobin levels. Liver and kidney function tests. Examination of the central nervous system. Examination by a qualified allergist.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper *and* lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray.

Stoddard Solvent

Use Type: Insecticide and herbicide

CAS Number: 8052-41-3

Formula: C₉H₂₀

Alert: There are no Stoddard Solvent pesticide products currently registered in the U.S.

Synonyms: Cleaning solvent; Dry cleaner naphtha; Mineral spirits; Naphtha safety solvent; Petroleum solvent; Spotting solvent; Varnoline; White spirits

Chemical Class: Unclassified (miscellaneous hydrocarbon)

EPA/OPP PC Code: 063504

ICSC Number: 0361

RTECS Number: WJ8925000

EEC Number: 649-345-00-4

EINECS Number: 232-489-3

Uses: Stoddard Solvent is used in dry cleaning, in degreasing of metal parts and as a paint thinner. It is also an insecticide and herbicide; however, there are no pesticide products currently registered in the U.S.

Regulatory Authority:

- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (OSHA)⁽⁵⁸⁾ (Several States)⁽⁶⁰⁾
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- The "Director's List" (CAL/OSHA)
- Canada, WHMIS, Ingredients Disclosure List

Description: A mixture of saturated various hydrocarbons (C₇–C₁₂) that may include benzene. A refined petroleum solvent containing >65% C₁₀ or higher hydrocarbons. Colorless liquid. Kerosene-like odor; odor threshold = 1 ppm (NY) to 30 ppm (NJ). Insoluble in water. Boiling point = 154–202°C; also 130–230°C. Melting/Freezing point = <-30°C. Flash point = 39–60°C; also listed at 21°C and >38°C. Vapor pressure = 0.1–1.4 kPa @ 20°C. Autoignition temperature = 229°C; also 230–240°C (ICSC). Explosive limits: LEL = 0.6%; UEL = 8.0%. Hazard Identification (based on NFPA-704 M Rating System): Health 0, Flammability 2, Reactivity 0. Log K_{ow} = 3.16–7.06. Values above 3.0 are likely to bioaccumulate in marine organisms. (ICSC)

Incompatibilities: Forms explosive mixture with air. Strong oxidizers. Attacks some forms of plastics, rubber, and coatings.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ PEL is 500 ppm (2,900 mg/m³) TWA. NIOSH⁽²⁾ recommends a TWA 350 mg/m³ and a ceiling of 1800 mg/m³ not to be exceeded during any 15 minute work period. ACGIH⁽¹⁾ recommends a TWA of 100 ppm (525 mg/m³). The NIOSH⁽²⁾ IDLH level = 20,000 mg/m³. Several states have set guidelines or standards for Stoddard Solvent in ambient air⁽⁶⁰⁾ ranging from 5.25 to 10.50 mg/m³ (North Dakota) to 7.0 mg/m³ (Connecticut) to 12.5 mg/m³ (Nevada).

Determination in Air: Adsorption on charcoal, workup with CS₂, analysis by gas chromatography/flame ionization. See NIOSH Method 1550 for Naphthas.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: *Inhalation:* Causes irritation of the eyes and respiratory tract. Exposure to levels above 2400 mg/m³ may cause headache, dizziness and nose and throat irritation. More severe exposures may cause nausea and vomiting, a feeling of intoxication, weakness, muscle twitches and in extreme cases convulsions, unconsciousness and death. *Skin:* Contact with liquid may cause irritation and drying of skin. This can result in dermatitis. *Eyes:* Contact with liquid or vapor levels of 900 mg/m³ to 2400 mg/m³ may cause irritation and tearing. *Ingestion:* Small amounts may cause headache, dizziness, nausea, vomiting, intoxication, weakness, muscle twitches, convulsions and unconsciousness. May cause aspiration into the lungs and chemical pneumonia. As little as 3 ounces may be fatal. If liquid is breathed into the lungs as little as 1 ounce may cause death due to respiratory failure.

Long Term Exposure: Prolonged or repeated contact with liquid may cause defatting of the skin with drying, irritation, and skin ulcers. Exposure to vapor may cause eye, nose and throat irritation, fatigue, headache, anemia, jaundice, and damage to the liver and bone marrow. In animals: kidney damage. Repeated exposure may cause a rare reaction in some people that destroys blood cells (aplastic anemia). This can be fatal. Many petroleum-based solvents have been shown to cause brain and/or nerve damage. Effects may include reduced memory and concentration, personality changes, fatigue, sleep disturbances, reduced coordination, effects on the autonomic nerves and/or nerves to the limbs.

Points of Attack: Eyes, skin, respiratory system, central nervous system, liver and kidneys.

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: Complete blood count. Evaluation for brain effects. Liver and kidney function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Do not induce vomiting.

Note to physician or authorized medical personnel: Treat symptomatically for central nervous system depression. Supportive treatment for pulmonary edema using oxygen may be needed when aspiration of liquids or massive exposure to vapors has occurred.

Streptomycin

Use Type: Fungicide and microbiocide

CAS Number: 57-92-1

Formula: C₂₁H₃₉N₇O₁₂

Synonyms: NSC-14083; Streptomycin A; D-Streptamine, O-2-deoxy-2-(methylamino)- α -L-glucopyranosyl-(1->2)-O-5-deoxy-3-C-formyl- α -L-lyxofuranosyl-(1->4)-N, N'-bis(aminomethyl)-; Streptomycine; Streptomycinum; Streptomyzin (German)

Trade Names: AGRIMYCIN 17[®]; AGREPT[®]; AGRISTREP[®]; AGRO STREP[®], Zeneca Agro (UK) (now Syngenta), canceled; AS-50[®]; CHEMFORM[®]; GEROX[®]; HOKKO-MYCIN[®]; PLANTOMYCIN[®]; RIMOSIDEN[®]; REPAR[®] STREPTOMYCIN; STREPCEN[®]

Producers: Zeneca Agro (UK) (now Syngenta)

Chemical Class: Unclassified

EPA/OPP PC Code: 006306

California DPR Chemical Code: 1217

Uses: Streptomycin is a human antibiotic drug which also is used as a pesticide, to control bacteria, fungi and algae in crops. Streptomycin controls bacterial and fungal diseases of certain fruit, vegetables, seed, and ornamental crops, and controls algae in ornamental ponds and aquaria. The use of streptomycin to control fireblight on apples and pears accounts for 58% of its total use. Other significant uses are on nursery stock and in landscape maintenance (17% of use), and on tobacco (7% of use).

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION, WARNING, DANGER

Regulatory Authority:

- Actively registered pesticide in California.
- AB 1803-Well Monitoring Chemical (CAL)

- FIFRA, 40CFR 180.102-1147: tolerances and/or tolerance exemptions for pesticides in or on raw agricultural commodities

Description: Off-white powder derived from *Streptomyces griseus* bacteria. Soluble in water. Molecular weight = 581.6

Incompatibilities: Unstable in strong acids and alkalis. Incompatible with alkaline materials.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Streptomycin Sulfate

Use Type: Fungicide

CAS Number: 3810-74-0

Formula: C₄₂H₇₈N₁₄O₂₄·H₆O₁₂S₃

Synonyms: Streptomycin sesquisulfate; D-Streptamine, O-2-deoxy-2-(methylamino)- α -L-glucopyranosyl-(1->2)-O-5-deoxy-3-C-formyl- α -L-lyxofuranosyl-(1->4)-N, N'-bis(aminoiminomethyl)-, sulfate (2:3) (salt)

Trade Names: AGRIMYCIN[®], Syngenta (Switzerland); AGRISTREP[®]; AS-50[®], Syngenta (Switzerland); PHYTOMYCIN[®]; PLANTOMYCIN[®]; STREPCIN[®]; STREP-GRAN[®]; STREPSULFAT[®]; STREPTOMYCIN SULFATE[®]; STREPTOMYCIN SULPHATE B.P.[®]; STREPTOREX[®]; STREPVET[®]; VETSTREP[®]

Producers: Gustafson (USA); Nufarm (Australia); Syngenta (Switzerland)

EPA/OPP PC Code: 006310

California DPR Chemical Code: 3834

Uses: Streptomycin is a human antibiotic drug which also is used as a pesticide to control bacteria, fungi and algae in crops. It controls bacterial and fungal diseases of certain fruit, vegetables, seed, and ornamental crops, and controls algae in ornamental ponds and aquaria. The use of streptomycin to control fireblight on apples and pears accounts for 58% of its total use. Other significant uses are on nursery stock and in landscape maintenance (17% of use), and on tobacco (7% of use). [U.S. EPA RED Facts]

Carcinogen/Hazard Classifications

California Prop. 65: Developmental toxin

Label Signal Word: CAUTION, WARNING

Regulatory Authority:

- Proposition 65 chemical (CAL)
- Actively registered pesticide in California.

Description: Off-white powder derived from *Streptomyces griseus* bacteria. Soluble in water. Molecular weight = 1457.38

Incompatibilities: May react violently with carbon dust, finely divided aluminum, magnesium, potassium and alkaline materials.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Strychnine

Use Type: Rodenticide and avicide

CAS Number: 57-24-9; 60-41-3 (sulfate)

Formula: C₂₁H₂₂N₂O₂

Alert: A Restricted Use Pesticide (RUP)

Synonyms: Estricnina (Spanish); Stricnina (Italian); Strychnidin-10-One; Strychnin (German); Strychnos

Trade Names: BOOMER-RID[®]; CERTOX[®]; DOLCO MOUSE CEREAL[®]; GOPHER BAIT[®]; GOPHER-GETTER[®], Elston Manufacturing (USA); GOPHER-GO AG BAIT[®], Southwest Chemical Co. (USA); HARE-RID[®]; KWIK-KIL[®]; MOLE DEATH[®]; MOUSE-NOTS[®]; MOUSE-RID[®]; MOUSE-TOX[®]; NUX VOMICA[®]; PIED PIPER MOUSE SEED[®]; RO-DEX[®]; SANASEED[®]

Producers: Elston Manufacturing (USA); Kothari Phytochemicals International (India); Southwest Chemical Co. (USA)

Chemical Class: Botanical

EPA/OPP PC Code: 076901

California DPR Chemical Code: 554

ICSC Number: 0197

RTECS Number: WL2275000; WL255000 (sulfate)

EEC Number: 614-003-00-5; 614-004-00-0 (sulfate)

EINECS Number: 200-319-7

Uses: Strychnine products are allowed for use only below ground where exposure to food and feed crops is not expected, and it is a Restricted Use Pesticide (RUP). It can be used in orchards, feed crop sites, pastures, range land, alfalfa fields, irrigation systems, nonagriculture rights-of-way, forests, and residential sites. Pocket gophers are primary targets.

Carcinogen/Hazard Classifications

Label Signal Word: DANGER

WHO Acute Hazard: Class 1b, highly hazardous

Regulatory Authority:

- Banned or Severely Restricted (Several Countries) (UN)⁽¹³⁾
- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (DFG)⁽³⁾ (HSE)⁽³³⁾ (OSHA)⁽⁵⁸⁾ (Several States)⁽⁶⁰⁾
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- The "Director's List" (CAL/OSHA)
- Actively registered pesticide in California.
- Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below)
- EPA Hazardous Waste Number (RCRA No.): P108
- RCRA, 40CFR261, Appendix 8 Hazardous Constituents
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4,540 kg)
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 10 lb (4.54 kg)
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)
- Canada, WHMIS, Ingredients Disclosure List

Description: White crystalline prisms or white powder. Sprays may be dissolved in xylene or kerosene. Very bitter taste. Practically insoluble in water; solubility = 140 ppm @ 22°C. The sulfate is slightly more soluble. Molecular weight = 334.44; 383.49 (sulfate). Boiling point = 270°C @ 5 mbar (decomposes). Melting/Freezing point = 268–285°C (decomposes). Log K_{ow} = 1.62. Unlikely to bioaccumulate in marine organisms.

Incompatibilities: Strong oxidizers. Dangerous when heated.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ PEL, DFG MAK⁽³⁾, HSE⁽³³⁾ TWA, and the ACGIH⁽¹⁾ TWA value is 0.15 mg/m³. The STEL set by HSE⁽³³⁾ is 0.45 mg/m³. The NIOSH⁽²⁾ IDLH value is 3.0 mg/m³. Several states have set guidelines or standards for strychnine in ambient air⁽⁶⁰⁾ ranging from 1.5 µg/m³ (North Dakota) to 2.5 µg/m³ (Virginia) to 3.0 µg/m³ (Connecticut) to 4.0 µg/m³ (Nevada).

Determination in Air: Filter; Reagent; High-pressure liquid chromatography/Ultraviolet detection; NIOSH IV, Method #5016.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation of dust, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Affects the central nervous system, causing convulsions, muscle contractions, and respiratory failure. Super toxic; probable oral lethal dose in humans is less than 5 mg/kg, a taste (less than 7 drops) for a 70 kg (150 lb) person. It causes violent generalized convulsions. Death results from respiratory arrest as the respiratory muscles are in sustained spasm. The lowest lethal oral dose reported for humans is 30 mg/kg. Respiratory paralysis and arrest are likely to occur following severe exposure to strychnine. Signs and symptoms of acute exposure generally involve excitation of all portions of the central nervous system. Convulsions, bilateral horizontal nystagmus (rapid, synchronous, horizontal, oscillations of the eyeballs), agitation, restlessness, apprehension, and abrupt, jerking movements of the extremities may occur. Victims may also experience stiffness, painful muscle cramping (especially in the legs), and opisthotonos (spasm in which the spine and extremities are bent with convexity forward, the body resting on the head and heels). Vomiting and renal failure, as well as cyanosis (blue tint to skin and mucous membranes) and rhabdomyolysis (destruction of skeletal muscle), may be found.

Long Term Exposure: Chronic allergen if inhaled or ingested.

Points of Attack: Central nervous system.

Medical Surveillance: Consider the points of attack in preplacement and periodic physical examinations. Examination by a qualified allergist.

First Aid: Remove victims from exposure. Emergency personnel should avoid self-exposure to strychnine. **Warning:** Any unnecessary sensory input may induce seizures. Isolate the victims from any avoidable distractions. Rush to a health care facility! Evaluate vital signs including pulse and respiratory rate, and note any trauma. If no pulse is detected, provide CPR. If not breathing, provide artificial respiration. If breathing is labored, administer oxygen or other respiratory support. Remove contaminated clothing as soon as possible. If eye exposure has occurred, remove any contact lenses at once; eyes must be flushed with lukewarm water for at least 15 minutes. Wash exposed skin areas thoroughly with soap and water. Obtain authorization and/or further instructions from the local hospital for administration of an antidote or performance of other invasive procedures.

Sulfallate

Use Type: Herbicide

CAS Number: 95-06-7

Formula: C₈H₁₄ClNS₂

Alert: No products registered with the U.S. EPA. It is a carcinogen, use with extreme caution.

Synonyms: CDEC; Chlorallyl diethyldithiocarbamate; 2-Chlorallyl diethyldithiocarbamate; 2-Chlorallyl-*N,N*-diethyldithiocarbamate; 2-Chloroallyl-*N,N*-diethyldithiocarbamate; 2-Chloro-2-propene-1-thiol diethyldithiocarbamate; 2-Chloro-2-propenyldiethylcarbomodithioate; CP 4572; Diethylcarbomodithioic acid 2-Chloro-2-propenyl ester; Diethyldithiocarbamic acid-2-chloroallyl ester; NCI-C00453; Thioallate

Trade Names: VEGADEX[®], Monsanto (USA), canceled 8/17/1984; VEGADEX SUPER[®], Monsanto (USA), canceled 8/17/1984; VEGA-RAND[®], Helena Chemical (USA), canceled 6/1/1984

Chemical Class: Dithiocarbamate

EPA/OPP PC Code: 039001

California DPR Chemical Code: 115

RTECS Number: EZ5075000

Uses: The major use for sulfallate is as a pre-emergent selective herbicide to control certain annual grasses and broadleaf weeds around vegetable and fruit crops. Sulfallate has also been used for weed control among shrubbery and ornamental plants. There are no currently registered products in the U.S.

Carcinogen/Hazard Classifications

U.S. NTP Carcinogen: Reasonably anticipated carcinogen

California Prop. 65: Carcinogen

IARC: Group 2B, possible carcinogen

Regulatory Authority:

- Carcinogen (Animal Positive) (IARC, NCI)⁽⁹⁾
- AB 2588-Air Toxics "Hot Spots" Chemicals (CAL)
- Proposition 65 chemical (CAL)
- The "Director's List" (CAL/OSHA)

Description: Sulfallate is an amber liquid. Molecular weight = 223.79. Boiling point = 128–130°C under 1.0 mm pressure. Flash point = 88°C. Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 1, Reactivity 0. Slightly soluble in water.

Incompatibilities: Strong oxidizers.

Permissible Exposure Limits in Air: No standards set.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact. May be absorbed by the skin.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes and skin. High exposure may cause fatigue, sleepiness, headache, dizziness, upset stomach, severe rash and personality changes; muscle weakness and collapse may result. The LD₅₀ (oral, rat) = 850 mg/kg (slightly toxic). Unlike carbamates the dithiocarbamates are not cholinesterase inhibitors, but some of them may react with recently ingested alcohol or alcohol-containing products including wine, medications, and cold remedies such as cough-syrups.

Long Term Exposure: Repeated or prolonged skin contact may cause rash from irritation. A probable carcinogen in humans. Repeated exposure may cause kidney damage. Sulfallate, a chlorinated dithiocarbamate, administered in the feed, was carcinogenic to Osborne-Mendel rats and to mice, inducing mammary gland tumors in females of both species, tumors of the fore stomach in male rats, and lung tumors in male mice. May be a cholinesterase inhibitor.

Points of Attack: Skin, eyes, kidneys, plasma and red blood cell cholinesterase. Cancer site in animals: stomach, lungs.

Medical Surveillance: Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Kidney function tests. Consider chest x-ray following acute overexposure

First Aid: *Skin Contact:* Flood all areas of body that have contacted the substance with water. Don't wait to remove contaminated clothing; do it under the water stream. Use soap to help assure removal. Isolate contaminated clothing when removed to prevent contact by others. *Eye Contact:* Remove any contact lenses at once. Flush eyes well with copious quantities of water or normal saline for at least 20-30 minutes. Seek medical attention. *Inhalation:* Leave contaminated area immediately; breathe fresh air. Proper respiratory protection must be supplied to any rescuers. If coughing, difficult breathing or any other symptoms develop, seek medical attention at once, even if symptoms develop many hours after exposure. *Ingestion:* If convulsions are not present, give a glass or two of water or milk to dilute the substance. Assure that the person's airway is unobstructed and contact a hospital or poison center immediately for advice on whether or not to induce vomiting.

Sulfentrazone (ANSI)

Use Type: Herbicide

CAS Number: 122836-35-5

Formula: C₁₁H₁₀Cl₂F₂N₄O₃S

Synonyms: 1-(2,4-Dichloro-5-methylsulfonylamidophenyl)-4-difluoromethyl-4,5-dihydro-3-methyl-1H-1,2,4-triazol-5-one; 2-(2,4-Dichloro-5-methylsulfonylamidophenyl)-4-difluoromethyl-2,4-dihydro-5-methyl-3H-1,2,4-triazol-3-one; 1-[2,4-Dichloro-5-(N²-methylsulfonylamino)phenyl]-3-methyl-4-difluoromethyl-Δ²-1,2,4-triazolin-5-one; Methanesulfonamide, N-[2,4-dichloro-5-(4-

(difluoromethyl)-4,5-dihydro-3-methyl-5-oxo-1H-1,2,4-triazol-1-yl)phenyl]-

Trade Names: AUTHORITY[®], FMC Agricultural Products Group (USA); CANOPY XL[®], DuPont Crop Protection (USA); COVER[®], DuPont Crop Protection (USA); F6285[®], FMC Agricultural Products (USA); FMC[®] 97285, FMC Agricultural Products (USA); GAUNTLET[®], FMC Agricultural Products (USA); SPARTAN[®], FMC Agricultural Products (USA); SULFENTRAZONE[®] (F6285) 4F, FMC Agricultural Products (USA); SULFENTRAZONE[®] (F6285) 75DF, FMC Agricultural Products (USA)

Producers: DuPont Crop Protection (USA); FMC Agricultural Products (USA); PBI/Gordon (USA)

Chemical Class: Triazolone

EPA/OPP PC Code: 129081

Uses: Used for pre-plant weed control on a variety of products.

U.S. Maximum Allowable Residue Levels for Sulfentrazone (40 CFR 180.498):

CROP	ppm
Asparagus	0.15
Bean, lima, succulent	0.1
Bean, lima, succulent	0.15
Cabbage	0.2
Chickpea, seed	0.1
Corn, field, forage	0.2
Corn, field, grain	0.15
Corn, field, stover	0.3
Cowpea, succulent	0.1
Flax, seed	0.2
Grain, cereal, bran, except sweet corn	0.15
Grain, cereal, forage, except sweet corn	0.2
Grain, cereal, grain, except sweet corn	0.1
Grain, cereal, hay, except sweet corn	0.2
Grain, cereal, hulls, except sweet corn	0.3
Grain, cereal, stover, except sweet corn	0.1
Grain, cereal, straw, except sweet corn	0.6
Horseradish, roots	0.2

Sugarcane, cane	0.15
Sugarcane, molasses	0.2

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group E, Unlikely carcinogen

Label Signal Word: CAUTION or WARNING

Description: Tan solid. Faint sulfur-like odor. Melting point = 120-122°C.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, passing through the skin, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: May cause skin and severe eye irritation. Moderately poisonous if ingested or inhaled. Exposure to a triazine (simazine) has caused acute and subacute dermatitis in the former USSR, characterized by erythema, slight edema, moderate pruritus, and burning lasting 4 to 5 days.

Long Term Exposure: May cause lung irritation and damage. May cause skin allergy. Contact with some triazine compounds (such as atrazine) may increase risks for tumors known to be associated with hormonal factors. These have been observed in both animals and human beings, and are consistent with the known effects on the hypothalamic pituitary gonadal axis. Repeated exposure may cause weight loss and reduced red blood cell count. May be mutagenic.

Points of Attack: Liver, lungs, skin.

Medical Surveillance: Before beginning employment and at regular times after that, for those with frequent or potentially high exposures, the following is recommended: Lung function tests. Consider chest x-ray following acute overexposure. Evaluation by a qualified allergist. Examination of the nervous system.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water or milk and induce vomiting. Do not make an unconscious person vomit.

Sulfluramid

Use Type: Insecticide, acaricide

CAS Number: 4151-50-2

Formula: C₁₀H₆F₁₇NO₂S

Synonyms: *N*-Ethylperfluorooctanesulfonamide; 1-Octane sulfonamide, *N*-ethyl-1,1,2,2,3,3,4,4,5,5,6,6,7,7,8,8,8-heptadecafluoro-

Trade Names: FINITRON[®], Griffin (USA); FIRSTLINE[®], FMC Agricultural Products (USA); FLUORGUARD[®], FMC Agricultural Products (USA); GX-071[®], Griffin (USA); MICRO-GEN ANT REACTOR[®], Whitnir Micro-Gen Research Laboratories (USA); VOLCANO[®], Griffin (USA)

Producers: FMC Agricultural Products (USA); Griffin (USA); Whitnir Micro-Gen Research Laboratories (USA)

Chemical Class: Fluorinated sulfonamide

EPA/OPP PC Code: 128992

California DPR Chemical Code: 2314

Uses: Used as ant, roach and termite trap bait.

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION

WHO Acute Hazard: Class III, slightly hazardous

Description: White crystalline solid. Odorless. Melting point = 96°C. Insoluble in water.

Incompatibilities: Slowly hydrolyzes in water, releasing ammonia and forming acetate salts.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation and skin contact.

Harmful Effects and Symptoms

Short Term Exposure: Will cause skin burns and respiratory insufficiency. Eye contamination.

Points of Attack: Skin, eyes, lungs.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Sulfometuron-methyl

Use Type: Herbicide

CAS Number: 74222-97-2

Formula: C₁₅H₁₆N₄O₅S

Synonyms: Benzoic acid, 2-[[(((4,6-dimethyl-2-pyrimidinyl)amino)carbonyl)amino)sulfonyl]-, methyl ester; Benzoic acid, *o*-[(3-(4,6-dimethyl-2-pyrimidinyl)ureido)sulfonyl]-, methyl ester; Methyl 2-[[(((4,6-dimethyl-2-pyrimidinyl)amino)carbonyl)amino)sulfonyl]benzoate; Sulfometuron methyl; Methyl 2-[[(((4,6-dimethyl-2-pyrimidinyl)amino)carbonyl)amino)sulfonyl]benzoate

Trade Names: DPX-T5648[®], DuPont Crop Protection (USA); KNOCKOUT[®]; LANDMARK[®] MP, (sulfometuron-methyl + chlorsulfuron), DuPont Crop Protection (USA); OUST[®], DuPont Crop Protection (USA); OUSTAR[®], DuPont Crop Protection (USA); RIVERDALE[®], Nufarm (Australia); STAMPRO[®], Dow AgroSciences (USA)

Producers: Dow AgroSciences (USA); DuPont Crop Protection (USA); Micro-flo (USA); Nufarm (Australia)

Chemical Class: Sulfonylurea

EPA/OPP PC Code: 122001; (122002 old EPA code number)

California DPR Chemical Code: 2149

Uses: Used to control annual and perennial grasses and broadleaf weeds on landscapes, rights-of-ways, fence rows, forests, industrial structure areas and non-crop lands.

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION, DANGER

WHO Acute Hazard: Class U, unlikely to be hazardous (as sulfometuron, parent compound)

Regulatory Authority:

- AB 1803-Well Monitoring Chemical (CAL)
- Actively registered pesticide in California.

Description: White to colorless solid. Odorless. Slightly soluble in water. Melting/Freezing point = 203-205°C. Molecular weight = 364.4.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)].⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or burns. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides.

May be harmful if swallowed. Skin contact may cause allergic reaction.

Long Term Exposure: Repeated or prolonged contact may cause skin and lung sensitization, resulting in allergies.

Points of Attack: Skin.

Medical Surveillance: Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group E, Unlikely a carcinogen

Label Signal Word: CAUTION

WHO Acute Hazard: Class U, unlikely to be hazardous (as glyphosate, the parent compound)

Incompatibilities: Solutions are corrosive to iron, unlined steel, and galvanized steel forming a highly combustible or explosive gas mixture. Do not store glyphosate compounds in containers made from these materials.

Permissible Exposure Limits in Air: No OELs have been established in the US for this chemical. For glyphosate (the parent compound), the former USSR^(35, 43) has set a ceiling value in workplace air of 1.5 mg/m³.

Permissible Concentration in Water: The U.S. EPA has developed data on glyphosate including a no-observed-adverse effects level (NOAEL) of 10 mg/kg/day. This corresponds to a drinking water equivalent level of 3.5 mg/L from which a lifetime health advisory of 0.7 mg/L was derived. California⁽⁶¹⁾ has set a guideline of 0.5 mg/L for drinking water.

Determination in Water: Analysis of glyphosate is by a high-performance liquid chromatographic (HPLC) method.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact. Absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes and skin. Nausea is often the first symptom, followed by vomiting, abdominal cramps, diarrhea, excessive salivation, headache, giddiness, dizziness, weakness, tightness in the chest, loss of muscle coordination, slurring of speech, muscle twitching (particularly the tongue and eyelid), respiratory difficulty, blurring or dimness of vision, pinpoint pupils, profound weakness, mental confusion, disorientation and drowsiness.

Long Term Exposure: May cause liver and kidney damage.

It does not seem to exhibit reproductive effects, mutagenicity, or carcinogenicity in animal studies.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, eyes, skin and blood cholinesterase.

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: Liver and kidney function tests. Exam of the nervous system.

First Aid: Speed in removing material from eyes and skin is of extreme importance. If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Shampoo hair promptly if contaminated. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

SulfoTEPP

Use Type: Insecticide

CAS Number: 3689-24-5

Formula: C₈H₂₀O₅P₂S₂

Alert: A Restricted Use Pesticide (RUP). Not registered in the U.S.

Synonyms: Bis-*O,O*-Diethylphosphorothionic anhydride; Dithio; Dithiodiphosphoric acid, tetraethyl ester; Dithiotep; Dithiofos; Dithion; Dithione; Dithiophos; Di(thiophosphoric) acid, tetraethyl ester; Dithiopyrophosphate de tetraethyle (French); ENT 16,273; Ethyl thiopyrophosphate; Pirofos; Pyrophosphorodithioic acid, tetraethyl ester; Pyrophosphorodithioic acid, *O,O,O,O*-tetraethyl ester; Sulfatep; TEDP; TEDTP; *O,O,O,O*-Tetraethyl-dithio-difosfaat (Dutch);

Tetraethyldithiopyrophosphate; *O, O, O, O*-Tetraethyldithiopyrophosphate; Tetraethyl dithio pyrophosphate; *O, O, O, O*-Tetraetil-di tio-pirofosfato (Italian); Thiotepp

Trade Names: ASP[®] 47; BAY E-393[®], Bayer CropScience (Germany), canceled; BAYER-E-393[®], Bayer CropScience (Germany), canceled; BLADAFUM[®]; BLADAFUME[®]; BLADAFUN[®]; E393[®]; LETHALAIRE G-57[®]; PLANT DITHIO AEROSOL[®]; PLANTFUME 103 SMOKE GENERATOR[®]

Producers: Bayer CropScience (Germany); Rallis India (India); Shenzhen Guomeng Industry Co., Ltd. (China)

Chemical Class: Organophosphate

EPA/OPP PC Code: 079501

California DPR Chemical Code: 558

ICSC Number: 0895

RTECS Number: XN4375000

EEC Number: 015-027-00-3

EINECS Number: 222-995-2

Uses: Sulfotepp is a restricted use insecticide/acaricide used on greenhouse ornamentals, including carnations, chrysanthemums, geraniums, gladiolus, poinsettias, snapdragons, azaleas, and roses. Sulfotepp is used to control aphids, spider mites, thrips, and whiteflies prior to shipment of plants, which is important for ensuring that plants are pest-free when shipped as mandated by intrastate, interstate, and international requirements. There are no sulfotepp products currently registered in the U.S.

Carcinogen/Hazard Classifications

Label Signal Word: DANGER

WHO Acute Hazard: Class I a, extremely hazardous

Regulatory Authority:

- Banned or Severely Restricted (in former USSR) (UN)⁽¹³⁾
- Very Toxic Substance (World Bank)⁽¹⁵⁾

- RCRA, 40CFR261, Appendix 8 Hazardous Constituents
- RCRA 40CFR264, Appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL $\mu\text{g/L}$): 8270(10)
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 500 lb (227kg)
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 100 lb (45.4 kg)
- U.S. DOT Inhalation Hazard Chemicals as organophosphates
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)
- Canada, WHMIS, Ingredients Disclosure List

Description: Sulfotepp is a pale yellow, mobile liquid. Garlic-like odor. A pesticide that may be absorbed on a solid carrier or mixed in a more flammable liquid. Practically insoluble in water; solubility = 50 ppm @ 20°C; 1:1500 @ 22. Molecular weight = 322.35. Boiling point = 131–135°C @ 2 mmHg. Vapor pressure = 1.7×10^{-4} mbar @ 20°C. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 1, Reactivity 1. Log K_{ow} = 4.1. Values above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Strong oxidizers. Hydrolyzes very slowly in aqueous solution. Attacks some forms of plastic, rubber and, coating. Corrosive to iron.

Permissible Exposure Limits in Air: The OSHA/NIOSH TWA⁽²⁾ and the recommended ACGIH⁽¹⁾ TWA is 0.2 mg/m³. The HSE⁽³³⁾ has set a TWA of 0.2 mg/m³ and an STEL of 0.6 mg/m³. The notation "skin" is added to indicate the possibility of cutaneous absorption. The NIOSH⁽²⁾ IDLH level = 10 mg/m³. The DFG⁽³⁾ has set an MAK of 0.015 ppm (0.2 mg/m³). Several states have set guidelines or standards for sulfotep in ambient air ranging from 3.5 $\mu\text{g/m}^3$ (Virginia) to 4.0 $\mu\text{g/m}^3$ (Connecticut) to 5.0 $\mu\text{g/m}^3$ (Nevada) to 20.0 $\mu\text{g/m}^3$ (North Dakota).

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH Method IV Method #5600, Organophosphorus pesticides.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, skin absorption, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes and skin. Can cause rapid, fatal, organophosphate poisoning. Contact may cause eye pain, blurred vision. May affect the nervous system. Symptoms of exposure include, lacrimation (discharge of tears), rhinorrhea (discharge of thin nasal mucus), headache, cyanosis, anorexia, nausea, vomiting, diarrhea, localized sweating, weakness, twitching, paralysis, Cheyne-Stokes respiration, convulsions, low blood pressure, cardiac irregular/irregularities, respiratory failure and death. Super toxic, probable oral lethal dose in humans is less than 5 mg/kg, or a taste (less than 7 drops) for a 70 kg (150 lb) person. It is a cholinesterase inhibitor. Material is similar to parathion in symptomatology, including nausea followed by vomiting, abdominal cramps, diarrhea, excessive salivation, headache, giddiness, dizziness, weakness, tightness in chest, blurring of vision, tearing, slurring of speech, confusion, difficulty breathing, convulsions, coma and even death. Delayed pulmonary edema may occur after inhalation.

Long Term Exposure: A cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. Repeated exposure may

cause personality changes of depression, anxiety, or irritability.

Points of Attack: Eyes, skin, respiratory system, central nervous system, cardiovascular system, blood cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above test as soon as possible and get an exam of the nervous system.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious

person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. **Antidotes:** Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the

patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Sulfoxide

Use Type: Insecticide and synergist

CAS Number: 120-62-7

Formula: C₁₈H₂₈O₃S

Synonyms: ENT 16,634; Isosafrole-*n*-octylsulfoxide; Isosafrole, octyl sulfoxide; 1,2-(Methylenedioxy)-4-[2-(octylsulfinyl)propyl]benzene; 1,2-(methylenedioxy)-4-[2-(octylsulfinyl)propyl]benzene; 1-Methyl-2-(3,4-methylenedioxyphenyl)ethyl octyl sulfoxide; NCI-C02824; *n*-Octylisofafrole sulfoxide; *n*-Octyl sulfoxide isosafrole; Piperonyl sulfoxide; Sulfoxyl; Sulphoxide

Trade Names: SULFOX-CIDE[®], Prentiss (USA), canceled

Producers: Bayer CropScience (Germany); Prentiss (USA)

EPA/OPP PC Code: 057101

California DPR Chemical Code: 559

Uses: Not registered in the U.S. Primary uses are in household and pet sprays.

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION or WARNING

Regulatory Authority:

- Actively registered pesticide in California.

Description: Light yellow to brownish, oily liquid. Practically insoluble in water. Molecular weight = 324.49.

Incompatibilities: Violent reaction with perchloric acid.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Absorbed through the unbroken skin.

Ingestion.

Harmful Effects and Symptoms

Short Term Exposure: May cause irritation to skin, eyes, and respiratory tract. Slightly to moderate toxic effects by skin contact, or ingestion.

Long Term Exposure: May be carcinogenic.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

SVOVEL®; SVOVL®; TECHNETIUM TC 99M®; TESULOID®; THIOLUX®; THION® 80; THION® 95; THIORIT®; TIOLENE®, ZOLVIS®

Producers: Agrium (Canada); Akzo Nobel (Netherlands); ASARCO (USA); BASF (Germany); Bonide Products (USA); Boliden (Sweden); Cerexagri (France); Chemical Products (USA); Cia. Quimica Universal de Industrias (Mexico); Coogee Chemicals (Australia); DuPont (USA); Esseco (Italy); Exxon Mobil Chemical (USA); Georgia Gulf Sulfur (USA); Goldschmidt (Germany); Gujarat Pesticides (India); Incitec Pivot (Australia); International Sulfur (USA); Juhua Group Corp. (China); Montana Sulphur (USA); OxyChem (USA); Pbi/Gordon (USA); Rhodia (France); Sasol Chemical (South Africa); Sinopec Corporation (China); Solvay Barium Strontium (Germany); Synthetic Products (USA); Teck Cominco (Canada); Tessengerlo (Belgium); United Agri Products (UAP)

Chemical Class: Inorganic

EPA/OPP PC Code: 077501

California DPR Chemical Code: 560

ICSC Number: 1166

RTECS Number: WS4250000

EINECS Number: 231-722-6

Uses: Widely used in the manufacture of drugs, fungicides, gunpowder, wood pulp, rubber, and various chemical products including sulfuric acid, and carbon bisulfide. Sulfur is used to control powdery mildew, rust, brown rot, cotton root rot, black spot, leaf rot, scab, mites; thrips and flea hopper. As a fertilizer it increases crude protein of forages, improves drought resistance and winter hardiness and general plant hardiness, color and uniformity.

U.S. Maximum Allowable Residue Levels for Sulfur (40 CFR 180.1001 and 180.930): *Note:* There are 229 crops with residue levels for sulfur and compounds of sulfur. Sulfur is exempt from residue tolerances.

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION

WHO Acute Hazard: Class U, unlikely to be hazardous

Regulatory Authority:

- Air Pollutant Standard Set (former USSR)⁽³⁵⁾
- Actively registered pesticide in California.
- Canada, WHMIS, Ingredients Disclosure List

Description: Sulfur is a yellow crystalline solid or powder. Often transported in the molten state. Insoluble in water. Boiling point = 445°C. Melting/Freezing point = 113°-120°C. Flash point = 207°C. Autoignition temperature = 232°C. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 1, Reactivity 0.

Incompatibilities: Combustible solid. Liquid forms sulfur dioxide with air. Violent reaction with strong oxidizers, halogen compounds, phosphorus, sodium, tin, uranium, metal carbides and other compounds. Forms explosive, shock-sensitive or pyrophoric mixtures with ammonia, ammonium nitrate, bromates, calcium carbide, charcoal,

chlorates, hydrocarbons, iodates, iron. Attacks steel when moist.

Permissible Exposure Limits in Air: The former USSR⁽³⁵⁾ has set an MAC for workplace air of 6.0 mg/m³ of elemental sulfur.

Determination in Air: Filter; Acid; Inductively coupled plasma; NIOSH IV, Method #7300, Elements.⁽¹⁸⁾

Permissible Concentration in Water: Mexico⁽³⁵⁾ has set an MAC of 0.5 mg/L of sulfides in estuaries.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Sulfur can affect you when breathed in. Irritates the eyes, skin and respiratory tract. Exposure can cause inflammation of the nose and irritate the lungs.

Long Term Exposure: Repeated exposures may cause chronic bronchitis to develop with cough, phlegm, and/or shortness of breath. Contact can irritate the skin and may cause a skin allergy. Repeated exposure to sulfur dust may cause permanent eye damage (clouding of the eye lens and chronic irritation).

Points of Attack: Skin and respiratory tract.

Medical Surveillance: Before beginning employment and at regular times after that, the following are recommended: Lung function tests. Eye examination. If symptoms develop or overexposure is suspected, the following may be useful: Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Sulfuryl Fluoride

Use Type: Fumigant

CAS Number: 2699-79-8

Formula: F₂O₂S; SO₂F₂

Alert: A Restricted Use Pesticide (RUP).

Synonyms: Fluorure de sulfuryle (French); Fluoruro de sulfurilo (Spanish); Sulfonyl fluoride; Sulfur difluoride dioxide; Sulfuric oxyfluoride; Sulphuryl difluoride; Sulphuryl fluoride

Trade Names: TERMAFUME[®]; VIKANE[®], Dow AgroSciences (USA); VIKANE FUMIGANT[®], Dow AgroSciences (USA)

Producers: Dow AgroSciences (USA); Fluorochem Ltd. (USA); Ozark Fluorine Specialties (USA)

Chemical Class: Inorganic gas

EPA/OPP PC Code: 078003

California DPR Chemical Code: 618

ICSC Number: 1402

RTECS Number: WT5075000

EEC Number: 009-015-00-7

EINECS Number: 220-281-5

Uses: Sulfuryl fluoride is used to fumigate closed structures and their contents such as domestic dwellings, garages, barns, storage buildings, commercial warehouses, ships in port, and railroad cars. It controls numerous insect pests including termites, powder post beetles, old house borers, bedbugs, carpet beetles, clothes moths and cockroaches, as well as rats and mice. It is also used in organic synthesis of drugs and dyes.

U.S. Maximum Allowable Residue Levels for Sulfuryl Fluoride (40 CFR 180.575):

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Unlikely Carcinogen

Regulatory Authority:

- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (HSE)⁽³³⁾ (OSHA)⁽⁵⁸⁾ (Several States)⁽⁶⁰⁾
- U.S. DOT Inhalation Hazard Chemicals
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- The "Director's List" (CAL/OSHA)
- Actively registered pesticide in California.
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- Canada, WHMIS, Ingredients Disclosure List

Description: Sulfuryl fluoride is a colorless, odorless gas. Boiling point = -55°C. Melting/Freezing point = -137°C. Slightly soluble in water.

Incompatibilities: Can react with water, steam. Fluorides form explosive gases on contact with strong acids or acid fumes.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ TWA, the HSE⁽³³⁾ and ACGIH⁽¹⁾ TWA value is 5 ppm (20 mg/m³). The HSE⁽³³⁾ STEL is 10 ppm (40 mg/m³). The NIOSH⁽²⁾ IDLH level = 200 ppm. Several states have set guidelines or standards for sulfuryl fluoride in ambient air⁽⁶⁰⁾ ranging from 200-400 µg/m³ (North Dakota) to 350 µg/m³ (Virginia) to 400 µg/m³ (Connecticut) to 476 µg/m³ (Nevada).

Determination in Air: Charcoal tube; Sodium hydroxide; Ion chromatography; NIOSH IV, Method #6012⁽¹⁸⁾.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, eye and/or skin contact (liquid).

Harmful Effects and Symptoms

Short Term Exposure: May cause conjunctivitis, rhinitis, pharyngitis, paresthesia. Contact with the liquid may cause frostbite. High exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. Overexposure can cause nausea, vomiting, itching, muscle twitching, tremors and seizures.

Long Term Exposure: May cause kidney damage. Repeated high exposures can cause deposits of fluorides in the bones (fluorosis) that may cause pain, disability and mottling of the teeth.

Points of Attack: Eyes, skin, respiratory system, central nervous system and kidneys.

Medical Surveillance: Consider the points of attack in preplacement and periodic physical examinations. Fluoride level in urine. (for fluoride in urine use NIOSH #8308). Levels higher than 4 mg/L may indicate overexposure. If symptoms develop or overexposure is suspected, the following may be useful: Consider chest x-ray after acute overexposure. Kidney function tests. Examination of the nervous system. Kidney function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray. If frostbite has occurred, seek medical attention immediately; do *NOT* rub the affected areas or flush them with water. In order to prevent further tissue damage, do *NOT* attempt to remove frozen clothing from frostbitten areas. If frostbite has *NOT* occurred, immediately and thoroughly wash contaminated skin with soap and water.

Producers: Bayer CropScience (Germany)

Chemical Class: Organophosphate

EPA/OPP PC Code: 111501

California DPR Chemical Code: 2006

ICSC Number: 1248

RTECS Number: TE4165000

EINECS Number: 252-545-0

Uses: No products registered in the U.S.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group E, unlikely carcinogen

TRI Developmental Toxin: Developmental toxin

Label Signal Word: DANGER

WHO Acute Hazard: Class II, moderately hazardous

Regulatory Authority:

- Banned or Severely Restricted (Germany, Malaysia) (UN)⁽¹³⁾
- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (NIOSH)⁽²⁾ (Several States)⁽⁶⁰⁾
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- The "Director's List" (CAL/OSHA)
- Actively registered pesticide in California.
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- U.S. DOT Inhalation Hazard Chemicals as organophosphates
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B), severe pollutant
- Canada, WHMIS, Ingredients Disclosure List

Description: Sulprofos is a colorless to tan-colored oily liquid. Poor solubility in water; solubility = <50 ppm.

Molecular weight = 322.45. Boiling point = 155–158°C @ 0.1 mbar. Vapor pressure = 63 mmHg @ 20°C.

Incompatibilities: Strong oxidizers. When heated to decomposition, this material forms toxic oxides of phosphorus and sulfur.

Permissible Exposure Limits in Air: There is no OSHA⁽²⁾ PEL. NIOSH⁽²⁾ and ACGIH⁽¹⁾ recommends a TWA of 1.0 mg/m³. Several states have set guidelines of standards for sulprofos in ambient air⁽⁶⁰⁾ ranging from 16.0 µg/m³ (Virginia) to 20.0 µg/m³ (Connecticut) to 24.0 µg/m³ (Nevada) to 100.0 µg/m³ (North Dakota).

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH IV, Method #5600, Organophosphorus pesticides.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact. Absorbed by the skin.

Harmful Effects and Symptoms

Short Term Exposure: May affect the nervous system, causing convulsions and respiratory failure. Shows typical anticholinesterase effects. Sulprofos can affect you when breathed in and quickly enters the body by passing through the skin. Severe poisoning can occur from skin contact. It is an organophosphate pesticide. Exposure can cause rapid severe poisoning with headache, sweating, nausea and vomiting, diarrhea, loss of coordination, convulsions, respiratory failure, and death. This is considered a moderately toxic compound (LD₅₀ for rats is 65 mg/kg). Delayed pulmonary edema may occur after inhalation.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure.

Points of Attack: Respiratory system, central nervous system, cardiovascular system and blood cholinesterase

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal". Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory

support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting.** If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. **Antidotes:** Two antidotes are administered to treat organophosphate

poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

T

2,4,5-T

Use Type: Herbicide and plant growth regulator

CAS Number: 93-76-5

Formula: C₈H₅Cl₃O₃; Cl₃C₆H₂OCH₂COOH

Alert: Use of this chemical in the U.S. was canceled in 1985.

Synonyms: Acetic acid, (2,4,5-T)-; Acetic acid, (2,4,5-trichlorophenoxy)-; Acide 2,4,5-trichlorophenoxyacetique (French); Acido (2,4,5-tricloro-fenossi)-acetico (Italian); Acido 2,4,5-triclorofenoxiacetico (Spanish); Amine; (2,4,5-Trichloro-fenoxy)-azijnzuur (Dutch); 2,4,5-Trichlorophenoxyacetic acid; (2,4,5-Trichlor-phenoxy)-essigsaeure (German)

Trade Names: (Note: all of the following products that contain 2,4,5-T have been canceled in the U.S.)

BCF-BUSHKILLER[®]; BRUSH-OFF 445 LOW VOLATILE BRUSH KILLER[®]; BRUSH RHAP[®]; BRUSHTOX[®]; DACAMINE[®]; DEBROUSSAILLANT CONCENTRE[®]; DEBROUSSAILLANT SUPER CONCENTRE[®]; DECAMINE 4T[®]; DED-WEED BRUSHKILLER[®]; DED-WEED LV-6 BRUSH KIL[®]; T-5 BRUSH KIL[®]; DINOXOL[®]; ENVERT-T[®]; ESTERCIDE T-2 AND T-245[®]; ESTERON[®]; ESTERON 245[®]; ESTERON BRUSH KILLER[®]; FENCE RIDER[®]; FORRON[®]; FORST U 46[®]; FORTEX[®]; FRUITONEA[®]; INVERTON 245[®]; LINE RIDER[®]; PHORTOX[®]; REDDON[®]; REDDOX[®]; SPONTOX[®]; SUPER D WEEDONE[®]; TIPPON[®]; T-NOX[®]; TORMONA[®]; TRANSAMINE[®]; TRIBUTON[®]; TRINOXOL[®]; TRIOXON[®]; TRIOXONE[®]; TRIOXAL[®]; VEON[®]; VEON 245[®]; VERTON2T[®]; VISKORHAPLOW VOLATILE ESTER[®]; WEEDAR[®]; WEEDONE

Chemical Class: Chlorophenoxy acid

EPA/OPP PC Code: 082001

California DPR Chemical Code: 639

ICSC Number: 0075

RTECS Number: AJ8400000

EEC Number: 607-041-00-9

EINECS Number: 202-273-3

Uses: 2,4,5-T products in the U.S. were canceled in 1985. It was used as a post-emergence herbicide to control broadleaf weeds, shrubs and woody plants on range land, rice, vacant areas, turf, residential areas and food crops. It can also act as a growth regulator to control fruit drops and increase the yield of citrus crops.

Human toxicity (long-term)⁽⁷⁷⁾: Low–70.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Very low–79154.36150 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

California Prop. 65: Listed

IARC: Group 2B, possible carcinogen

Label Signal Word: CAUTION

Endocrine Disruptor: Probable ED

- EPA Hazardous Waste Number (RCRA No.): U232
- RCRA, 40CFR261, Appendix 8 Hazardous Constituents
- RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.72; Nonwastewater (mg/kg), 7.9
- RCRA 40CFR264, Appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL ug/L): 8150(2)
- Safe Drinking Water Act: Priority List (55FR1470)
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 1000 lb (454 kg)

Description: Colorless to tan crystalline solid. Slightly soluble in water; solubility = 278 mg/L @ 25°C. Molecular weight 255.49. Melting/Freezing point = 154–158°C. Vapor pressure = very low/negligible. Log K_{ow} = 3.3/3.9. Also reported at 4.0 (Kenaga, E.E., & C.A. Goring. *Aquatic Toxicology*, 1980). Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: The aqueous solution is a weak acid. Incompatible with sulfuric acid, bases, ammonia, aliphatic amines, alkanolamines, isocyanates, alkylene oxides, epichlorohydrin; strong oxidizers such as chlorine, bromine, fluorine, and strong bases.

Permissible Exposure Limits in Air: The OSHA/NIOSH TWA⁽²⁾, the DFG MAK⁽³⁾, the HSE⁽³³⁾ TWA, and the ACGIH⁽¹⁾ TWA value is 10 mg/m³. The HSE⁽³³⁾ STEL value is 20 mg/m³. The NIOSH⁽²⁾ IDLH level = 250 mg/m³. Several states have set guidelines or standards for 2,4,5-T in ambient air⁽⁶⁰⁾ ranging from 1.0 µg/m³ (Pennsylvania) to 100.0 µg/m³ (North Dakota) to 160 µg/m³ (Virginia) to 238.0 µg/m³ (Nevada).

Determination in Air: Filter; Methanol; High-pressure liquid chromatography/Ultraviolet detection; NIOSH IV, Method #5001⁽¹⁸⁾.

Permissible Concentration in Water: The U.S. EPA (see reference below) has set a lifetime health advisory of 21.0 µg/L. Mexico⁽³⁵⁾ has set limits of 100 µg/L in estuaries and 10 µg/L in coastal waters. The State of Kansas⁽⁶¹⁾ has set a guideline for drinking water of 700.0 µg/L.

Determination in Water: Liquid extraction and gas chromatography (See EPA reference below)

Routes of Entry: Inhalation, ingestion, skin and/or eye contact. Absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes, skin, and respiratory tract. **Inhalation:** Increasingly severe symptoms may include nose and throat irritation, weakness, tiredness, metallic taste in mouth, loss of appetite, diarrhea, heart problems, heart failure and death. **Skin:** Reddening and itching may develop. absorption is slow, but may contribute significantly to total exposure. **Eyes:** Irritation may develop. **Ingestion:** 350 mg (0.01 ounce) produces only a metallic taste in the mouth, lasting about 2 hours. Approximate 4 teaspoonfuls (150 lb man) may cause weakness, tiredness, loss of appetite, diarrhea, heart problems, heart failure, and death. **Note:** Reported effects of 2,4,5-T are due to accidental exposures, often at unknown levels or duration. In addition, 2,4,5-T may be contaminated with very small amounts of another more toxic compound 2,3,7,8-tetrachlorodibenzo-*p*-dioxin (Dioxin). Therefore, some of the symptoms off exposure to 2,4,5,-T may be due to contaminants.

Long Term Exposure: Levels above the standard may produce skin irritation, acne-like skin sores, loss of skin coloration in small patches, GI tract ulcer, and nerve disorders resulting in difficulty controlling muscles. Animal studies also indicate the possibility of an increased susceptibility to infection. Changes in generic material and birth defects have been reported in laboratory studies and may be due to 2,4,5-T or its contaminant. Whether these effects are produced in humans is unknown. In animals: ataxia; skin irritation, acne-like rash; liver damage.

Points of Attack: Skin, liver and gastrointestinal tract.

Medical Surveillance: If symptoms develop or overexposure is suspected, liver or kidney function tests may be useful.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an

unconscious person vomit. **Note to physician or authorized medical personnel:** If ingested, remove by lavage or vomiting. Use general supportive measures for CNS depression. Use quinidine for myotonia.

Tebufenozide (ANSI)

Use Type: Insecticide, insect growth regulator

CAS Number: 112410-23-8

Formula: C₂₂H₂₈N₂O₂

Synonyms: Benzoic acid, 3,5-dimethyl-, 1-(1,1-dimethylethyl)-2-(4-ethylbenzoyl)hydrazide; *N-tert-Butyl-N'-(4-ethylbenzoyl)-3,5-dimethylbenzoylhydrazide*; 3,5-Dimethylbenzoic acid 1-(1,1-dimethylethyl)-2-(4-ethylbenzoyl)hydrazine

Trade Names: CONFIRM[®], Dow AgroSciences (USA); MIMIC[®], Dow AgroSciences (USA); RH-5992[®]

Producers: Dow AgroSciences (USA)

Chemical Class: Diacylhydrazine

EPA/OPP PC Code: 129026

California DPR Chemical Code: 3957

Uses: Tebufenozide is an insect growth regulator that interferes with molting of Lepidopteran larvae. It is used on fruitworm, fireworms, false armyworm, gypsy moth, and spanworms, and is applied pre-harvest.

U.S. Maximum Allowable Residue Levels for Tebufenozide (40 CFR 180.482):

CROP	ppm
Almond, hulls	25
Animal feed, nongrass, group 18	0.5

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group E, Unlikely a carcinogen

Label Signal Word: CAUTION

Description: Practically insoluble in water. Melting/Freezing point = 189°C. Log K_{ow} = > 3.0. Likely to bioaccumulate in marine organisms.

Incompatibilities: Contact with flammable material may cause fire and explosions. Contact with combustible or oxidizable materials may form heat-, shock-, and friction-sensitive explosive mixtures. Static electricity may also cause explosions. Keep away from all acids, especially dibasic organic acids, ammonium compounds, antimony sulfide, arsenic trioxide, metal sulfides, powdered metals, calcium aluminum hydride, cyanides, manganese dioxide, phosphorus, selenium, sulfur, thiocyanates, zinc.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Ingestion

Harmful Effects and Symptoms

Short Term Exposure: Toxic if ingested.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Producers: Dow AgroSciences (USA)

Chemical Class: Sulfonylurea

EPA/OPP PC Code: 105501

California DPR Chemical Code: 1810

RTECS Number: YS4250000

Uses: Tebuthiuron is a broad spectrum herbicide that is used to control weeds in non-cropland areas, range lands, rights-of-way and industrial sites. In grasslands and sugar cane it controls woody and herbaceous plants and weeds such as alfalfa, bluegrasses, chickweed, clover, dock, goldenrod and mullein.

U.S. Maximum Allowable Residue Levels for Tebuthiuron (40 CFR 180.390):

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group D, unclassifiable

U.S. TRI: Developmental toxin

Label Signal Word: CAUTION or WARNING

WHO Acute Hazard: Class III, slightly hazardous

Regulatory Authority:

- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- AB 1803-Well Monitoring Chemical (CAL)
- Actively registered pesticide in California.
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: Grayish to dark-brown pellets, granules, or powder; Technical grade is colorless. Musty odor. Slightly soluble in water: solubility: 2,575 ppm @ 25°C (powder). Molecular weight = 228.35. Melting/Freezing point = 163°C. Vapor pressure = 2.2×10^{-6} mmHg @ 20°C; 0.27 mPa @ 25°C. Log K_{ow} = 1.78. Unlikely to bioaccumulate in marine organisms.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Ingestion. Skin contact.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or burns. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed. Skin contact may cause allergic reaction.

Long Term Exposure: Repeated or prolonged contact may cause skin and lung sensitization, resulting in allergies.

Points of Attack: Skin.

Medical Surveillance: Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Tecnazene

Use Type: Fungicide and plant growth regulator

CAS Number: 117-18-0

Formula: $C_6HCl_4NO_2$; $NO_2-C_6H-Cl_4$

Synonyms: 3-Nitro-1,2,4,5-tetrachlorobenzene; TCNB; Tecnazen (German); Tecnazene; 1,2,4,5-Tetrachloro-3-nitrobenzene; 2,3,5,6-Tetrachloronitrobenzene; 2,3,5,6-Tetrachlor-3-nitrobenzol (German)

Trade Names: CHIPMAN 3,142[®]; FOLOSAN[®]; FUSAREX[®]; FUMITE[®]; FOLOSAN[®]

Chemical Class: Nitro compound of an aromatic compound

EPA/OPP PC Code: 055201

California DPR Chemical Code: 2918

Uses: Not registered in the U.S. Used as a sprout inhibitor on stored potatoes; as a fungicide mainly as a smoke formulation in greenhouses.

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION or WARNING

WHO Acute Hazard: Class U, unlikely to be hazardous

Description: A colorless crystalline solid. Odorless. Slightly soluble in water. Molecular weight = 260.87. Boiling point = 304°C. Melting/Freezing point = 99°C; Log K_{ow} = >3.85. Values above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Contact with alkalis may form explosive metal salts.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Skin

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Tefluthrin

Use Type: Insecticide, miticide

CAS Number: 79538-32-2

Formula: C₁₇H₁₄ClF₇O₂

Alert: A Restricted Use Pesticide (RUP)

Synonyms: Cyclopropanecarboxylic acid, 3-(2-chloro-3,3,3-trifluoro-1-propenyl)-2,2-dimethyl-, (2,3,5,6-tetrafluoro-4-methylphenyl)methyl ester, (1 α ,3 α (Z))-(-)-; (2,3,5,6-Tetrafluoro-4-methylphenyl)methyl *cis*-3-(2-chloro-3,3,3-trifluoro-1-propenyl)-2,2-dimethylcyclopropane carboxylate; Tefluthrine

Trade Names: FORCE[®] Syngenta (Switzerland); FORZA[®]; JF 6064[®]; KOMET-RP[®]; PP 993[®]; R 151993[®]

Producers: Syngenta (Switzerland)

Chemical Class: Pyrethroid

EPA/OPP PC Code: 128912

California DPR Chemical Code: 3839

Uses: Registered in the U.S. for use on corn. Elsewhere it is registered for use on a variety of crops, e.g., peanuts, sweet potato, sugarcane, cabbage, radish, Brussels sprouts, and strawberries.

U.S. Maximum Allowable Residue Levels Tefluthrin (40 CFR 180.440):

CROP	ppm
Corn, field, forage	0.06
Corn, field, grain	0.06
Corn, field, stover	0.06
Corn, pop, forage	0.06
Corn, pop, grain	0.06
Corn, pop, stover	0.06
Corn, sweet, forage	0.06
Corn, sweet, kernel plus cob with husks removed	0.06
Corn, sweet, stover	0.06

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION or DANGER

WHO Acute Hazard: Class 1b, highly hazardous

Endocrine Disruptor: Suspected endocrine disruptor

Description: Crystalline solid. Slightly soluble in water; solubility = < 0.002 ppm. Molecular weight = 418.71.

Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders or dust. Incompatible with silver compounds. Mixture with some silver compounds forms explosive salts of silver oxalate.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Producers: Agrimor International (USA); Agsin (Singapore); BASF Agricultural Products Group (Germany); Biesterfeld Siemsglueck International. GmbH (Germany); American Cyanamid's Agricultural Products Group (USA); Ehrenstorfer, Dr. (Germany); Gharda Chemicals (India); Ki-Hara Chemicals Ltd. (UK); Merck (Germany); Sigma-Aldrich Laborchemikalien (Germany)

Chemical Class: Organophosphate

EPA/OPP PC Code: 059001

California DPR Chemical Code: 1

ICSC Number: 0199

RTECS Number: TF6890000

EINECS Number: 222-191-1

Uses: Temephos is one of the few organophosphates that is registered to control mosquito larvae. It is a non-systemic insecticide for use on wetlands, ponds, lakes and other moist areas to control mosquito, gnat, black fly, midge, pinkie and sandfly larvae.

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION, DANGER, WARNING, depending on the formulation

WHO Acute Hazard: Class U, unlikely to be hazardous

Regulatory Authority:

- Air Pollutant Standard Set (ACGIH⁽¹⁾) (OSHA⁽⁵⁸⁾) (former USSR^(35, 43)) (Several States)⁽⁶⁰⁾
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- The "Director's List" (CAL/OSHA)
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- U.S. DOT Inhalation Hazard Chemicals as organophosphates
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)
- Canada, WHMIS, Ingredients Disclosure List

Description: Temephos is a crystalline solid. The technical product is an amber viscous liquid. Molecular weight = 466.47. Melting/Freezing point = 31°C. Practically insoluble in water. Combustible.

Incompatibilities: Strong acids and bases. Gives off toxic oxides of sulfur and phosphorus in fire.

Permissible Exposure Limits in Air: OSHA⁽²⁾ has set a TWA of 15 mg/m³ for total dust and 5 mg/m³ for the respirable fraction. NIOSH⁽²⁾ recommends a TWA of 10 mg/m³ for total dust and 5 mg/m³ for the respirable fraction.

ACGIH⁽¹⁾ recommends a TWA value of 10 mg/m³. The former USSR^(35, 43) has set a MAC in workplace air of 0.5 mg/m³. Several states have set guidelines or standards for Temephos in ambient air⁽⁶⁰⁾ ranging from 100 µg/m³ (North Dakota) to 160 µg/m³ (Virginia) to 200 µg/m³ (Connecticut) to 238 µg/m³ (Nevada).

Determination in Air: Collection on a filter and gravimetric analysis.

Permissible Concentration in Water: No criteria set. Experience in the field for a period of more than one year has shown, however, that 1 mg/L in drinking water is without effect.

Determination in Water: Techniques used for residue determination include colorimetry and gas liquid chromatography and may be applicable to water analysis.

Routes of Entry: Inhalation, skin absorption, ingestion, skin and/or eye contact

Harmful Effects and Symptoms

Short Term Exposure: Temephos can affect you when breathed in and quickly enters the body by passing through the skin. Severe poisoning can occur from skin contact. It is a moderately toxic organophosphate chemical. Exposure can cause rapid severe poisoning with headache, sweating, nausea and vomiting, diarrhea, loss of coordination, and death. Delayed pulmonary edema may occur after inhalation.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam,

an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup. *Note to physician or authorized medical personnel:* Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control

the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

TEPP

Use Type: Aphicide and acaricide

CAS Number: 107-49-3

Formula: C₈H₂₀O₇P₂

Alert: There are no TEPP products currently registered in the U.S. It is a Restricted Use Pesticide (RUP)

Synonyms: Bis-*O,O*-diethylphosphoric anhydride; Diphosphoric acid, tetraethyl ester; ENT 18,771; Ethyl pyrophosphate, tetra-; Phosphoric acid, tetraethyl ester; Commercial 40%; Pyrophosphate de tetraethyle (French); TEP; *O,O,O,O*-tetraethyl-diphosphat, Bis(*O,O*-diethylphosphorsaeure-anhydrid (German); *O,O,O,O*-Tetraethyl-difosfaat (Dutch); *O,O,O,O*-Tetraetil-pirofosfato (Italian); Tetraethyl pyrofosfaat (Belgian); Tetraethyl pyrophosphate; Tetraethyl pyrophosphate, liquid; Tetrastigmine

Trade Names: BLADAN[®]; BLADON[®]; FOSVEX[®]; GRISOL[®]; HEPT[®]; HEXAMITE; KILLAX[®]; KILMITE 40[®]; LETHALAIRE[®] G-52; LIROHEX[®]; MORTOPAL[®]; MOTOPAL[®]; NIFOS[®]; NIFOS T[®]; NIFROST[®]; TETRON[®]; TETRON-100[®]; VAPOTONE[®]

Chemical Class: Organophosphate

EPA/OPP PC Code: 079601

California DPR Chemical Code: 577

ICSC Number: 1158

RTECS Number: UX6825000

EEC Number: 015-025-00-2

Uses: Used as an insecticide and also, in medicine, as a parasympathic nervous system stimulant.

Regulatory Authority:

- Canada, WHMIS, Ingredients Disclosure List

Description: TEPP is a colorless to amber liquid. Faint, fruity odor. Combustible; flash point not found. Soluble in water. Molecular weight = 290.21 Boiling point = 138°C @ 2.3 mbar. Decomposes below boiling point @170°C.

Melting/Freezing point = 0°C. Vapor pressure = 1.48 x 10⁻⁴ mbar @ 20°C; 4.5 x 10⁻⁴ mbar @ 30°C. Log K_{ow} = 2.96. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Strong oxidizers, alkalis, water. Hydrolyzes quickly in water, forming pyrophosphoric acid and highly flammable ethylene gas.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ TWA, the DFG MAK⁽³⁾, the HSE,⁽³³⁾ as well as ACGIH⁽¹⁾ has set a TWA of 0.004 ppm (0.05 mg/m³). HSE⁽³³⁾ adds an STEL of 0.01 ppm (0.2 mg/m³). The notation "skin" is added to indicate the possibility of cutaneous absorption. The NIOSH⁽²⁾ IDLH level = 5 mg/m³. Several states have set guidelines or standards for TEPP in ambient air⁽⁶⁰⁾ ranging from 1.0 µg/m³ (Connecticut) to 5.0 µg/m³ (North Dakota) to 80,000 µg/m³ (Virginia) to a much higher value for Nevada.

Determination in Air: Chromosorb tube-102(2); Toluene; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH IV Method #2504⁽¹⁸⁾, Tetraethyl Pyrophosphate. OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH Method IV Method #5600, Organophosphorus pesticides.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, skin absorption, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Symptoms of exposure include eye pain, blurred vision, lacrimation (discharge of tears), rhinorrhea (discharge of thin nasal mucous), headache, chest tightness, cyanosis; anorexia, nausea, vomiting, diarrhea, weakness, twitching, paralysis, Cheyne-Stokes respiration, convulsions, low blood pressure, cardiac irregular/irregularities; sweating. TEPP is classified as super toxic. Probable oral lethal dose in humans is less than 5 mg/kg (a taste) for a 150 lb person. A small drop in the eye may cause death. Small doses at frequent intervals are additive. Poisonings always develop at a rapid rate. It is a cholinesterase inhibitor. Delayed pulmonary edema may occur after inhalation.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Eyes, respiratory system, central nervous system, cardiovascular system, gastrointestinal tract and blood cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase

levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some*

cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water. Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Terbacil (ANSI)**Use Type:** Herbicide**CAS Number:** 5902-51-2**Formula:** C₉H₁₃ClN₂O₂

Synonyms: 3-*tert*-Butyl-5-chloro-6-methyluracil (German); 3-*tert*-Butyl-5-chloro-6-methyluracil; 5-Chloro-3-*tert*-butyl-6-methyluracil; 5-Chloro-3-(1,1-dimethylethyl)-6-methyl-2,4(1*H*,3*H*)-pyrimidinedione; 5-Chloro-3-(1,1-dimethyl)-6-methyl-2,4(1*H*,3*H*)-pyrimidinedione; 5-Chloro-3-(1,1-dimethylethyl)-6-methyl-2,4(1*H*,3*H*)-pyrimidinedione; 5-Chloro-3-*tert*-butyl-6-methyluracil; 2,4(1*H*,3*H*)-Pyrimidinedione, 5-chloro-3-(1,1-dimethylethyl)-6-methyl-; Uracil, 3-*tert*-butyl-5-chloro-6-methyl-

Trade Names: COMPOUND[®] 732, DuPont Crop Protection (USA); DUPONT[®] 732, DuPont Crop Protection (USA); EXPERIMENTAL HERBICIDE 732, DuPont Crop Protection (USA); GEONTER[®]; SINBAR[®], DuPont Crop Protection (USA); TURBSVIL[®]; ZOBAR[®], DuPont Crop Protection (USA), canceled 12/16/1991

Producers: DuPont Crop Protection (USA)**Chemical Class:** Substituted uracil**EPA/OPP PC Code:** 012701**California DPR Chemical Code:** 532**RTECS Number:** YQ9360000

Uses: Terbacil is a selective herbicide that treats a broad spectrum of broadleaf weeds and grasses. It is formulated as a wettable powder and is applied by aircraft or ground equipment on terrestrial food and feed crops (e.g., apples, mint/peppermint/spearmint, sugarcane, and ornamentals), forestry [e.g., cottonwood (forest/shelterbelt)], terrestrial food (e.g., asparagus, blackberry, boysenberry, dewberry, loganberry, peach, raspberry, youngberry and strawberry), and terrestrial feed (e.g., alfalfa, sainfoin (hay and fodder), and forage).

U.S. Maximum Allowable Residue Levels for Terbacil (40 CFR 180.209):

CROP	ppm
Alfalfa, forage	1.0
Alfalfa, hay	2.0
Apple	0.3
Asparagus	0.4
Blueberry	0.2
Caneberry subgroup 13a	0.2
Peach	0.2
Peppermint, tops	2.0
Spearmint, tops	2.0
Strawberry	0.1
Sugarcane, cane	0.4
Watermelon	0.4

Carcinogen/Hazard Classifications**U.S. EPA Carcinogens:** Group E, Unlikely a carcinogen**California Prop. 65:** Developmental toxin**U.S. TRI:** Developmental toxin**Label Signal Word:** CAUTION**WHO Acute Hazard:** Class U, unlikely to be hazardous**Regulatory Authority:**

- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: White crystalline powder; colorless crystalline solid. Odorless. Slightly soluble in water; solubility = 712 ppm @ 25°C. Melting/Freezing point = 176°C. Molecular weight = 216.69. Density = 1.34 @ 25°C. Vapor pressure = 4.5 x 10⁻⁷ mmHg @ 29.5°C.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)].⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Terbufos (ANSI)

Use Type: Insecticide and nematicide

CAS Number: 13071-79-9

Formula: C₉H₂₁O₂PS₃; (C₂H₅O)₂PSSCH₂SC(CH₃)₃

Alert: A Restricted Use Pesticide (RUP).

Synonyms: S-[(Tert-butylthio)methyl]-O, O-diethylphosphorodithioate; S-[(1,1-Dimethylethyl)thio)methyl]-O, O-diethylphosphorodithioate; Phosphorodithioic acid S-[(tert-butylthio)methyl]-O, O-diethylester; Phosphorodithioic acid S-[(1,1-dimethylethyl)thio)methyl]-O, O-diethyl ester

Trade Names: AC 921000®; ARAGRAN®; CONTRAVEN®; COUNTER®, BASF Agricultural Products Group (Germany); COUNTER 15G SYSTEMIC INSECTICIDE®, BASF Agricultural Products Group (Germany); PLYDOX®; TERBUROX®, Rotam Agrochemical (Hong Kong)

Producers: Biesterfeld Siemsglues International. GmbH (Germany); BASF Agricultural Products Group (Germany); Hebei Long Age Pesticide (China); Ki-Hara Chemicals Ltd. (UK); Rotam Agrochemical (Hong Kong); Shenzhen Guomeng Industry Co., Ltd. (China); Sigma-Aldrich Laborchemikalien (Germany)

Chemical Class: Organophosphate

EPA/OPP PC Code: 105001

California DPR Chemical Code: 2925

RTECS Number: TD7200000

EINECS Number: 235-963-8

Uses: This insecticide and nematicide is applied at planting time to corn, sugar beets, sorghum, maize, cotton, bananas and cabbage. It controls corn rootworms, wireworms, white grubs, maggots, billbugs and nematodes. Some above ground pests can be controlled when soil has been treated with terbufos. Terbufos has no residential use.

U.S. Maximum Allowable Residue Levels for Terbufos (40 CFR 180.352):

CROP	ppm
Banana	0.025
Beet, sugar, roots	0.05
Beet, sugar, tops	0.1
Corn, field, forage	0.05
Corn, field, stover	0.05
Corn, grain	0.05

Corn, pop, forage	0.5
Corn, pop, stover	0.5
Corn, sweet, forage	0.5
Corn, sweet, kernel plus cob with husks removed	0.05
Corn, sweet, stover	0.5
Sorghum, forage	0.5
Sorghum, grain	0.05
Sorghum, grain, stover	0.5

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group E, unlikely carcinogen

Label Signal Word: DANGER

WHO Acute Hazard: Class Ia, Extremely Hazardous

Regulatory Authority:

- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 100 lb (45.4 kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)
- U.S. DOT Inhalation Hazard Chemicals as organophosphates
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B), severe pollutant

Description: Colorless to pale yellow liquid. Slightly soluble in water. Molecular weight = 288.45. Boiling point = 70°C @ 0.01 mm. Melting/Freezing point = -29°C. Vapor pressure = 3 x 10⁻⁴ mmHg @ 20°C. Flash point = 88°C (oc). Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 3, Reactivity 0.

Incompatibilities: Strong oxidizers.

Permissible Exposure Limits in Air: No standards set.

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH Method IV Method #5600, Organophosphorus pesticides.⁽¹⁸⁾

Permissible Concentration in Water: The U.S. EPA (see reference below) has developed a lifetime health advisory of 0.18 µg/L. No other criteria set, but runoff from spills or fire control may cause water pollution.

Determination in Water: Analysis of terbufos is by a gas chromatographic (GC) method applicable to the determination of certain nitrogen-phosphorus containing pesticides in water samples. In this method, approximately 1 liter of sample is extracted with Methylene chloride. The extract is concentrated and the compounds are separated using capillary column GC. Measurement is made using a nitrogen-phosphorus detector.

Routes of Entry: Inhalation, ingestion and skin contact.

Harmful Effects and Symptoms

Short Term Exposure: This material may be fatal if swallowed, inhaled, or absorbed through the skin. Repeated inhalation or skin contact may progressively increase susceptibility to poisoning. Acute exposure to terbufos may produce the following signs and symptoms: pinpoint pupils, blurred vision, headache, dizziness, muscle spasms, and profound weakness. Vomiting, diarrhea, abdominal pain,

seizures, and coma may also occur. The heart rate may decrease following oral exposure or increase following dermal exposure. Chest pain may be noted. Hypotension (low blood pressure) may be noted, although hypertension (high blood pressure) is not uncommon. Respiratory symptoms include dyspnea (shortness of breath), respiratory depression, and respiratory paralysis. Psychosis may occur. Delayed pulmonary edema may occur after inhalation.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be

double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. **Antidotes:** Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required.

Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Terbutryn (ANSI)

Use Type: Herbicide

CAS Number: 886-50-0

Formula: C₁₀H₁₉N₅S

Synonyms: 4-Aethylamino-2-*tert*-butylamino-6-methylthio-*S*-triazin (German); 2-*tert*-Butylamino-4-ethylamino-6-methylmercapto-*S*-triazine; 2-*tert*-Butylamino-4-ethylamino-6-methylthio-*S*-triazine; Caswell No. 125-D; 2-Methylthio-4-ethylamino-6-*tert*-butylamino-*S*-triazine; Terbutryne; *S*-Triazine, 2-(*tert*-butylamino)-4-(ethylamino)-6-(methylthio)-; 1,3,5-Triazine-2,4-diamine, *N*-(1,1-dimethylethyl)-*N'*-ethyl-6-(methylthio)-

Trade Names: A-1866[®]; BATTALION[®]; Makhteshim-Agan Industries (Israel); CLAROSAN[®]; GESAPRIM[®]; GS-14260[®]; HS-14260[®]; IGRAN[®] Syngenta (Switzerland), canceled; IGRATER[®]; PLANTONIT[®]; PREBANE[®]; PROKIL, Gowan (USA), canceled; SENATE[®]; SHORT-STOP[®]; SHORTSTOP[®]; TERBUTREX[®]

Producers: Gowan (USA); Makhteshim-Agan Industries (Israel); Syngenta (Switzerland)

Chemical Class: Triazine

EPA/OPP PC Code: 080813

California DPR Chemical Code: 1691

Uses: Not registered in the U.S. Terbutryn is a selective herbicide for pre-emergence and post-emergence control of most grasses and annual broadleaf weeds. It is used in winter wheat, winter barley, sorghum, sugarcane, sunflowers, peas and potatoes. It is also used as an aquatic herbicide for control of algae and floating weeds in waterways, reservoirs, and fish ponds.

Human toxicity (long-term)⁽⁷⁷⁾: Extra high–0.70 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Low–101.20343 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group C, possible carcinogen

Label Signal Word: CAUTION or WARNING

WHO Acute Hazard: Class U, unlikely to be hazardous

Description: Colorless crystalline solid or white powder. Very slightly soluble in water; solubility = 26 mg/L @ 20°C. Molecular weight = 241.39. Melting/Freezing point = 104°C. Boiling point = 154–160°C @ 0.06 mmHg. Vapor pressure = 2.3 x 10⁻⁶ mbar @ 20°C; also listed at 9.6 x 10⁻⁶ mmHg @ 20°C. Log K_{ow} = 3.55. Values above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Hydrolized in strong acids or basic solutions and is decomposed by ultraviolet exposure. It is not corrosive.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, passing through the skin, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: May cause skin and severe eye irritation. Moderately poisonous if ingested or inhaled. Exposure to a triazine (simazine) has caused acute and subacute dermatitis in the former USSR, characterized by erythema, slight edema, moderate pruritus, and burning lasting 4 to 5 days.

Long Term Exposure: May cause lung irritation and damage. May cause skin allergy. Contact with some triazine compounds (such as atrazine) may increase risks for tumors known to be associated with hormonal factors. These have been observed in both animals and human beings, and are consistent with the known effects on the hypothalamic pituitary gonadal axis. Repeated exposure may cause weight loss and reduced red blood cell count. May be mutagenic.

Points of Attack: Liver, lungs and skin.

Medical Surveillance: Before beginning employment and at regular times after that, for those with frequent or potentially high exposures, the following is recommended: Lung function tests. Consider chest x-ray following acute overexposure. Evaluation by a qualified allergist. Examination of the nervous system.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water or milk and induce vomiting. Do not make an unconscious person vomit.

Tetrachlorvinphos

Use Type: Insecticide

CAS Number: 961-11-5 (E-isomer); 22248-79-9 (Z-isomer)

Formula: C₁₀H₅Cl₄O₄P

Synonyms: Benzyl alcohol, 2,4,5-trichloro- α -(chloromethylene)-, dimethyl phosphate; 2-Chloro-1-(2,4,5-trichlorophenyl)ethenyl dimethyl phosphate; 2-Chloro-1-(2,4,5-trichlorophenyl)vinyl dimethyl phosphate; 2-Chloro-1-(2,4,5-trichlorophenyl)vinyl phosphoric acid dimethyl ester; CVMP; *O,O*-Dimethyl-*O*-2-chloro-1-(2,4,5-

trichlorophenyl)vinyl phosphate; *O,O*-Dimethyl-*O*-2-chloro-1-(2,4,5-trichlorophenyl)vinyl phosphat (German); Dimethyl 2,4,5-trichloro- α -(chloromethylene)benzyl phosphate; ENT 25841; NCI-C00168; OMS 595; Phosphoric acid, 2-chloro-1-(2,3,5-trichlorophenyl)ethenyl dimethyl ester; Phosphoric acid, 2-chloro-1-(2,4,5-trichlorophenyl)vinyl dimethyl ester; Phosphoric acid, 2-chloro-1-(2,4,5-trichlorophenyl)ethenyl dimethyl ester; Phosphoric acid, 2-chloro-1-(2,3,5-trichlorophenyl)ethenyl dimethyl ester; Tetrachlorvinphos (Spanish); 2,4,5-Trichloro- α -(chloromethylene)benzyl phosphate

Trade Names: AMERICARE RABON[®], KMG Chemicals (USA); CLEANCROP[®]; EQUI-FLY[®] ORAL LARVICIDE; EQUITROL[®]; FLY PATROL[®]; GARDONA[®]; IPO 8[®]; RABON[®], KMG Chemicals (USA); RABOND[®]; SD 8447[®]; STIROFOS[®]

Producers: BASF Agricultural Products (Germany); KMG Chemicals (USA)

Chemical Class: Organophosphate

EPA/OPP PC Code: 083702 (E-isomer); 083701 (Z-isomer)

California DPR Chemical Code: 305

RTECS Number: TB9100000

Uses: Tetrachlorvinphos is applied dermally to livestock to control flies and mites. It is used as an oral larvicide in cattle, Hog, goats and horses; in cattle ear tags to control flies; in cattle feedlots; in poultry dust boxes to control poultry mites; and in poultry houses. Tetrachlorvinphos also is used in pet sleeping areas and pet flea collars and to control flies around refuse sites, recreational areas, and for general outdoor treatment. Currently, there are 83 products registered with the U.S. EPA. There are a total 471 products that are active, canceled or transferred.

Human toxicity (long-term)⁽⁷⁷⁾: Very low–875.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Intermediate–49.75254 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Tetrachlorvinphos (40 CFR 180.252):

CROP	ppm
Cattle	–
Cattle, fat	1.5
Cattle, meat & mbyp	-
Egg	0.1
Goat, fat	0.5
Hog	–
Horse	–
Horse, fat	0.5
Milk, fat	0.5
Poultry, fat	0.75

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group C, possible carcinogen

IARC: Group 3, unclassifiable

Label Signal Word: CAUTION

WHO Acute Hazard: Class U, unlikely to be hazardous

Regulatory Authority:

- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- AB 2588-Air Toxics "Hot Spots" Chemicals (CAL)
- The "Director's List" (CAL/OSHA)
- Actively registered pesticide in California.
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- DOT Inhalation Hazard Chemicals as organophosphates

Description: Off-white powder. Slightly soluble in water. Melting/Freezing point = 98°C. Vapor pressure = 4.2×10^{-8} mmHg @ 20°C.

Incompatibilities: May react violently with antimony(V) pentafluoride. Incompatible with lead diacetate, magnesium, silver nitrate. When heated to decomposition, this material forms toxic oxides of phosphorus and fumes of chlorine.

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame ionization detection; NIOSH IV, Method #5600, Organophosphorus Pesticides.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin and eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Eye pupils are small, blurred vision, eye watering, runny nose, cough, shortness of breath, salivation, dizziness, nausea, stomach cramps, diarrhea, and vomiting, increased blood pressure, profuse sweating, hypermotility, hallucinations, irritability, tingling of the skin, drowsiness, slow heartbeat, convulsions, fluid in lungs, loss of consciousness, incontinence, breathing stops, death. Organophosphates inhibit the action of acetylcholinesterase enzymes, and alter the way in which nervous impulses are transmitted. The effects can last for hours, days, or much longer. The action of the enzymes is reestablished after new enzymes are formed.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Organophosphates may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, blood cholinesterase, kidneys

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

First Aid: Speed in removing material from eyes and skin is of extreme importance. Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO

hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting.* If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water do NOT induce vomiting but immediately administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *unconscious or having convulsions*, do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Notes to physician or authorized medical personnel:* N-methylpyridinium-2-aldoxime (2-PAMCI) when used in conjunction with atropine reacts with the phosphorylated cholinesterase, thereby restoring normal activity to by removing the phosphorylating group. The combination of these two chemicals is synergistic and must be administered within minutes to a few hours following exposure (depending on the specific agent) to be effective. Give 2-PAMCI (Pralidoxime; Protopam), 2.5 gm in 100 ml of sterile water or in 5% dextrose and water, intravenously, slowly, in 15-30 minutes; if sufficient fluid is not available, give 1 gm of 2-PAMCI in 3 ml of distilled water by deep intramuscular injection; repeat this every half hour if respiration weakens or if muscle fasciculation or convulsions recur. Also Diazepam, an anticonvulsant, might be considered.

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION or DANGER

WHO Acute Hazard: Class U, unlikely to be hazardous

Regulatory Authority:

- FIFRA, 180.3(4); class of chlorinated organic pesticide
- FIFRA, 40CFR185: tolerances for pesticides in food.

Description: Colorless to white crystalline solid or whitish to slightly yellow powder. Liquid may contain a flammable solvent. Odorless. Practically insoluble in water; solubility = 50 µg/L @ 20°C. Molecular weight = 356.04. Melting/Freezing point = 145-148°C. Vapor pressure = 0.032 mPa @ 20°C. Log K_{ow} = 4.58. Values above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Strong oxidizers. Sulfur oxides and hydrogen chloride are produced in the heat of fire.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation of dust.

Harmful Effects and Symptoms

Short Term Exposure: May cause irritation of the eyes, skin, and respiratory tract.

Long Term Exposure: May cause kidney and liver damage.

Points of Attack: Kidneys and liver.

Medical Surveillance: Kidney and liver function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the

skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Tetramethrin (ANSI)

Use Type: Insecticide

CAS Number: 7696-12-0

Formula: C₁₉H₂₅NO₄

Synonyms: A13-27339; Bioneopynamin; Caswell No. 844; (1-Cyclohexane-1,2-dicarboximido)methyl chrysanthemumate; Cyclohex-1-ene-1,2-dicarboximidomethyl (±)-*cis-trans*-chrysanthemate; (1-Cyclohexene-1,2-dicarboximido)methyl 2,2-dimethyl-3-(2-methylpropenyl)cyclopropanecarboxylate; Cyclopropanecarboxylic acid, 2,2-dimethyl-3-(2-methyl-1-propenyl)-, (1,3,4,5,6,7-hexahydro-1,3-dioxo-2*H*-isoindol-2-yl)methyl ester (9CI); 2,2-Dimethyl-3-(2-methyl-1-propenyl)cyclopropanecarboxylic acid (1,3,4,5,6,7-hexahydro-1,3-dioxo-2*H*-isoindol-2-yl)methyl ester; ENT 27339; NSC 190939; *d*-Phthalthrin; 2,3,4,5-Tetrahydrophthalimidomethylchrysanthemate; 3,4,5,6-Tetrahydrophthalimidomethyl (±)-*cis-trans*-chrysanthemate; 3,4,5,6-Tetrahydrophthalimidomethyl (±)-(Z)-(E)-chrysanthemate; 3,4,5,6-Tetrahydrophthalimidomethyl *cis* and *trans* dlchrysanthemummonocarboxylic acid; *N*-(3,4,5,6-Tetrahydrophthalimido)-methyl *dl-cis,trans*-chrysanthemate; *N*-(3,4,5,6-Tetrahydrophthalimido)-methyl *dl*-(Z),(E)-chrysanthemate; Tetramethrin, (±)-; Tetramethrine; Tetramethrin, racemic; (±)-*cis/trans*-Phthalthrin

Trade Names: FMC 9260[®], FMC Agricultural Products (USA); ENT-27339; EVERCIDE INTERMEDIATE[®] 2265 (tetramethrin + fenvalerate); MULTICIDE[®]; NEOPYNAMIN[®]; NEOPYNAMINE[®]; NEOPYNAMIN FORTE[®]; NIAGARA[®]-9260, FMC Agricultural Products

(USA); NIA[®]-9260; PHTHALTHRIN[®]; SP-1103; SUMITOMO[®] SP-1103, Sumitomo Chemical (Japan)

Producers: Agsin (Singapore); Ascot International UK; Bonide Products (USA); Changzhou Kangmei Chemical Industry Co., Ltd. (China); FMC Agricultural Products (USA); Ki-Hara Chemicals Ltd. (UK); Sumitomo Chemical (Japan); SuYan Agrochemical Group (China); Valent BioSciences (USA)

Chemical Class: Pyrethroid

EPA/OPP PC Code: 069003

California DPR Chemical Code: 1695

ICSC Number: 0334

RTECS Number: GZ1730000

Uses: Tetramethrin is formulated as an aerosol and used primarily for indoor pest control or in mosquito coils. It is also used in shampoos to control fleas and ticks on pets. It is often formulated with other insecticides and synergists. Currently, there are more than 319 registered products containing tetramethrin. Another 500 products have either been canceled or transferred in the U.S.

Human toxicity (long-term)⁽⁷⁷⁾: Very low–8750.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Extra high–0.26608 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group C, possible carcinogen

Label Signal Word: CAUTION

WHO Acute Hazard: Class U, unlikely to be hazardous

Endocrine Disruptor: Suspected in Colborn list

Regulatory Authority:

- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- Actively registered pesticide in California.
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: White to colorless crystalline solid. Practically insoluble in water. Molecular weight = 331.39. Melting/Freezing point = 69-74°C. Vapor pressure = 10 Pa @ 20°C.

Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders or dust. Incompatible with silver compounds. Mixture with some silver compounds forms explosive salts of silver oxalate.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Pyrethroids can affect you when breathed in and by passing through your skin. Irritates the eyes and respiratory tract. High exposure can affect the nervous system causing headache, nausea, vomiting, fatigue, and restlessness, rhinorrhea (discharge of thin nasal mucous).

Long Term Exposure: High or repeated exposure can cause lung allergy (with cough, wheezing and/or shortness of breath) or hay fever symptoms (sneezing, runny or stuffy

nose). Allergic “pneumonia” can also occur with cough, chest pain, breathing difficulty and abnormal chest x-ray. Repeated attacks may lead to permanent scarring. Skin allergy may also develop with rash and itching, even with lower exposures. Skin contact can cause rash with redness, blisters and intense itching. A severe generalized allergy can occur with weakness and collapse.

Points of Attack: Respiratory system, skin, central nervous system.

Medical Surveillance: Before beginning employment and at regular times after that, the following are recommended: Lung function tests. These may be normal if the person is not having an attack at the time of the test. Consider chest x-ray if lung symptoms are present. Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Thallium Sulfate

Use Type: Rodenticide and insecticide

CAS Number: 10031-59-1(sulfate); 7446-18-6 [sulfate(I)]

Formula: Th_2SO_4 (CAS 7446-18-6)

Alert: No longer registered in the U.S.

Synonyms: *Thallium Sulfate:* Sulfato de talio (Spanish); Sulfuric acid, thallium salt; Thallium sulfate; Thallium sulphate

Thallium Sulfate(I): C.F.S.; CFS-Giftweizen (German); Dithallium sulfate; Dithallium(1+) sulfate; Dithallium(I) sulfate; Eccothal; M7-Giftkoerner; Rattengiftkonserv (German); Sulfato de talio (Spanish); Sulfuric acid, dithallium (+1) salt; Sulfuric acid, dithallium (I) salt(8Cl,9Cl); Sulfuric acid, thallium(1+) salt(1:2); Sulfuric acid, thallium(I) salt(1:2); Thallium(1+) sulfate (2:1); Thallium(I) Sulfate (2:1); Thallous Sulfate

Trade Names: RATOX[®]; ZELIO[®]

Producers: American Elements (USA); Fluorochem (UK); GFS Chemicals (USA); Great Western Inorganics (USA); Newmont Koch (UK); PPM Pure Metals (Germany); UMICORE (Belgium)

Chemical Class: Inorganic, heavy metal salt

EPA/OPP PC Code: 080001

California DPR Chemical Code:

ICSC Number: 0336 [thallium(I) sulfate]

RTECS Number: XG6600000 (sulfate); XG7800000 [sulfate(I)]

EEC Number: 081-002-00-9 [sulfate(I)]

EINECS Number: 231-201-3 [thallium(I) sulfate]

Uses: Thallium sulfate is used mainly to control rats, squirrels, prairie dogs, mice, house mice and moles. It is also used to control ants and cockroaches. It is readily absorbed from ingestion and also absorbed through the skin. Its unintended effects is to poison livestock, wildlife and domestic animals. It is no longer registered for pesticide use in the U.S.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group D, unclassifiable

WHO Acute Hazard: Class Ib, highly hazardous

Regulatory Authority:

- Banned or Severely Restricted (Many Countries) (UN)⁽¹³⁾
- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (DFG)⁽³⁾ (HSE)⁽³³⁾ (OSHA)⁽⁵⁸⁾ (former USSR)⁽⁴³⁾ (Several States)⁽⁶⁰⁾

Thallium(I) sulfate (7446-18-6):

- Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below); 40CFR401.15 Section 307 Toxic Pollutants
- EPA Hazardous Waste Number (RCRA No.): P115
- RCRA, 40CFR261, Appendix 8 Hazardous Constituents
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 100 lb (45.4 kg)
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4,540 kg)
- The “Director’s List” (CAL/OSHA)
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

Thallium sulfate (10031-59-1):

- Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below); 40CFR401.15 Section 307 Toxic Pollutants
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4,540 kg)
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 100 lb (45.4 kg)
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

- Appendix B Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4,540 kg)
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

Thallium compounds:

- Clean Water Act: 40CFR401.15 Section 307 Toxic Pollutants as thallium and compounds.
- RCRA, 40CFR261, Appendix 8 Hazardous Constituents, waste number not listed.
- PCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B) as thallium compounds, n.o.s.; thallium compounds (pesticides)
- Canada, WHMIS, Ingredients Disclosure List
- AB 2588-Air Toxics “Hot Spots” Chemicals (CAL)
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- The “Director’s List” (CAL/OSHA)

Description: Thallium sulfate(I) is a white or colorless, crystalline solid. Odorless. Slightly soluble in water; solubility 5 g/100mL @ 20°C. Melting/Freezing point = 632°C.

Incompatibilities: Varies. Thallium metal reacts violently with strong acids (such as hydrochloric, sulfuric and nitric) and strong oxidizers (such as chlorine, bromine and fluorine). Reacts with other halogens at room temperature.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ PEL, the DFG MAK⁽³⁾, the HSE⁽³³⁾ and the ACGIH⁽¹⁾ TWA value for thallium (soluble compounds) is 0.1 mg TI/m³. The NIOSH⁽²⁾ IDLH level = 15 mg/m³. The notation “skin” is added to indicate the possibility of cutaneous absorption. The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set a MAC in workplace air for thallium bromide and iodide of 0.01 mg/m³. Several states have set guidelines or standards for thallium soluble compounds in ambient air⁽⁶⁰⁾ ranging from 0.238 µg/m³ (Kansas) to 0.33 µg/m³ (New York) to 1.0 µg/m³ (Florida, North Dakota) to 1.6 µg/m³ (Virginia) to 2.0 µg/m³ (Connecticut and Nevada) to 2.47 µg/m³ (Pennsylvania).

Determination in Air: Filter; Acid; Inductively coupled plasma; NIOSH IV, Method #7300, Element. See also OSHA Method ID-121.⁽⁵⁸⁾

Permissible Concentration in Water: To protect freshwater aquatic life, 1400 µg/L on an acute toxicity basis and 40 µg/L on a chronic basis. To protect saltwater aquatic life, 2,130 µg/L on an acute toxicity basis. For the protection of human health from the toxic properties of thallium ingested through water and contaminated aquatic organisms, the ambient water criterion is 13.0 µg/L⁽⁶⁾. Kansas⁽⁶¹⁾ has set a guideline for thallium in drinking water of 13.0 µg/L. The former USSR⁽³⁵⁾ has set an MAC in water bodies used for domestic purposes of 0.1 µg/L.

Determination in Water: Digestion followed by atomic absorption measurement gives total thallium. Dissolved

thallium may be determined by the same procedure preceded by 0.45 micron filtration.

Routes of Entry: Ingestion and percutaneous absorption of dust, eye/skin contact.

Harmful Effects and Symptoms

Short Term Exposure: Thallium salts may be eye and skin irritants and skin sensitizers. Exposure can cause fatigue, weakness, poor appetite, insomnia, and mood changes. Acute poisoning rarely occurs in industry, and is usually due to ingestion of thallium. When it occurs, gastrointestinal symptoms, abdominal colic, loss of kidney function, peripheral neuritis, strabismus, disorientation, convulsions, joint pain, and alopecia develop rapidly. The symptoms of acute thallium poisoning (except for gastrointestinal symptoms) do not become manifest until 12 hours to 4 days after exposure. Death is due to damage to the central nervous system. Thallium may affect the peripheral and the central nervous system, liver and kidneys, the gastrointestinal tract, skin (hair) and the cardiovascular system, resulting in polyneuritis, optic nerve atrophy, encephalopathy, cardiac disturbances, liver and kidney damage, alopecia. Exposure may result in death. The nitrate can irritate and burn the skin and eyes. The nitrate can damage the nervous system causing headache, weakness, irritability, pain, “pins and needles” in arms and legs, convulsions, coma, and death. The sulfate(I) irritates the eyes and the skin. May affect the nervous system, cardiovascular system, kidneys and gastrointestinal tract. Exposure may result in death. Exposure may result in hair loss. Delayed pulmonary edema may occur after inhalation.

Long Term Exposure: Thallium is an extremely toxic and cumulative poison. In non-fatal occupational cases of moderate or long-term exposure, early symptoms usually include fatigue, limb pain, metallic taste in the mouth and loss of hair, although loss of hair is not always present as an early symptom. Later, peripheral neuritis, proteinuria, and joint pains occur. Occasionally, neurological signs are the presenting factor, especially in more severe poisonings. Long-term exposure may produce optic atrophy, paresthesia, and changes in papillary and superficial tendon reflexes (slowed responses). Some thallium compounds are teratogens in animals.

Points of Attack: Eyes, central nervous system, lungs, liver, kidneys, gastrointestinal tract and body hair.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Preplacement and periodic examinations should give special consideration to the eyes, central nervous system, gastrointestinal symptoms, and liver and kidney function. Hair loss may be a significant sign. Urine examinations may be helpful.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek

medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give a slurry of activated charcoal in water to drink and induce vomiting. Do not make an unconscious person vomit. The symptoms of acute thallium poisoning (except for gastrointestinal symptoms) do not become manifest until 12 hours to 4 days after exposure.

Thiabendazole

Use Type: Fungicide

CAS Number: 148-79-8

Formula: C₁₀H₇N₃S

Synonyms: AI3-50598; 1*H*-Benzimidazole, 2-(4-thiazolyl)-; Benzimidazole, 2-(4-thiazolyl)-; 4-(2-Benzimidazolyl)thiazole; Caswell No. 849A; TBDZ; TBZ; 2-Thiazole-4-ylbenzimidazole; 2-(Thiazol-4-yl)benzimidazole; 2-(1,3-Thiazol-4-yl)benzimidazole; 2-(4'-Thiazolyl)benzimidazole; 2-(4-Thiazolyl)benzimidazole; 2-(4-Thiazolyl)-1*H*-benzimidazole; Tiabendazol (Spanish)

Trade Names: AGROSOL[®], Agrilience (USA); AGROSOL[®]-T, (with thiram); APL-LUSTER[®], Cerexagri (France); ARBOTECT[®]; BOVIZOLE[®]; BRODEX[®]; CHEM-TEK[®]; CITRUS LUSTER[®], Cerexagri (France); DECCO SALT NO. 19[®], Cerexagri (France); E-Z-EX[®]; EPROFIL[®]; EQUIVET TZ[®]; EQUIZOLE[®]; FRESHGARD[®], FMC Agricultural Products (USA);

FUNGICIDE 4T[®]; GRANOX[®], Agrilience (USA); IRGAGUARD[®], Syngenta (Switzerland); LOMBRISTOP[®]; MERTEC[®]; MERTECT 160[®]; METASOL TK-100[®], BASF Agricultural Products (Germany); MINTEZOL[®]; MINZOLUM[®]; MK-360[®]; MYCOZOL[®]; NEMAPAN[®]; NSC 525040[®]; OMNIZOLE[®]; POLIVAL[®]; RIVAL[®], (captan + PCNB + thiabendazole), Gustafson (USA); RPH[®]; RTU-VITAVAX-EXTRA[®], Gustafson (USA); STA-FRESH[®], FMC Agricultural Products (USA); TBZ 6[®]; TECTO[®]; TECTO RPH[®]; TECTO 10P[®]; TECTO 40F[®]; TESTO[®]; THIABEN[®]; THIABENDAZOLUM[®]; THIABENZAZOLE[®]; THIABENZOLE[®]; THIBENZOL[®]; THIBENZOLE[®]; THIBENZOLE 200[®]; THIBENZOLE ATT[®]; TIABENDAZOLE[®]; TOBAZ[®]; TOP FORM WORMER[®]; VITAVAX[®], Crompton (USA);

Producers: Agrilience (USA); Agsin (Singapore); BASF Agricultural Products (Germany); Cerexagri (France); Crompton (USA); FMC Agricultural Products (USA); Gustafson (USA); Kawaguchi Chemical Industry (Japan); Syngenta (Switzerland)

Chemical Class: Benzimidazole

EPA/OPP PC Code: 060101

California DPR Chemical Code: 587

RTECS Number: DE0700000

Uses: Thiabendazole is a fungicide used in diseases such as blight, mold, stain and rot that are found on fruit and vegetables; Dutch Elm disease; and diseases found in food storage. It is also used to treat roundworms and similar conditions in livestock and humans. Thiabendazole is used medicinally as a chelating agent to bind metals.

Human toxicity (long-term)⁽⁷⁷⁾: Very low--700.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Intermediate--18.65477 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Thiabendazole (40 CFR 180.242):

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Likely carcinogen in high doses; Unlikely Carcinogen in low doses.

U.S. TRI: Developmental toxin

Label Signal Word: CAUTION, WARNING or DANGER

WHO Acute Hazard: Class U, unlikely to be hazardous

Regulatory Authority:

- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- Actively registered pesticide in California.
- FIFRA, 40CFR185: tolerances for pesticides in food
- FIFRA, 40CFR186: tolerances for pesticides in animal feeds
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: White to tan crystalline solid. Odorless. Soluble in water. Melting/Freezing point = 304°C. Molecular weight = 201.26. Vapor pressure = 4.1×10^{-8} mmHg @ 20°C.

Incompatibilities: When heated to decomposition this material forms toxic oxides of nitrogen and sulfur.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)].⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Thiafluamide (Flufenacet)

Use Type: Herbicide

CAS Number: 142459-58-3

Formula: C₁₄H₁₂O₂N₃SF₄

Synonyms: Acetamide, *N*-(4-fluorophenyl)-*N*-(1-methylethyl)-2-[(5-(trifluoromethyl)-1,3,4-thiadiazol-2-yl)oxy]-; Flufenacet; *N*-(4-Fluorophenyl)-*N*-(1-methylethyl)-2[(5-(trifluoromethyl)-1,3,4-thiadiazol-2-yl)oxy]acetamide benzoate

Trade Names: AXIOM[®], Bayer CropScience (Germany); DOMAIN[®], Bayer CropScience (Germany); EPIC[®], Bayer CropScience (Germany); FOE 5043[®] technical, Bayer CropScience (Germany)

Producers: Bayer CropScience (Germany)

Chemical Class: Thiadiazole (EPA); Anilide

EPA/OPP PC Code: 121903

California DPR Chemical Code: 5293

Uses: Flufenacet is applied to the soil surface or incorporated pre-emergence in field corn, corn grown for silage, or soybeans to control certain annual grasses and broadleaf weeds.

Human toxicity (long-term)⁽⁷⁷⁾: Intermediate–28.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Low–245.00 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Not Likely a carcinogen

Label Signal Word: CAUTION, WARNING or DANGER

WHO Acute Hazard: Class III, slightly hazardous

Description: Tan solid. Mercaptan-like odor. Slightly soluble in water. Melting point = 75.5–77.0°C. Molecular weight = 362.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Thiazopyr (ANSI)

Use Type: Herbicide

CAS Number: 117718-60-2

Formula: C₁₆H₁₇F₅N₂O₂S

Alert: Not permitted as an active ingredient by the European Commission after July 25, 2003. Human toxicity (long-term): High

Synonyms: 3-Pyridinecarboxylic acid, 2-(difluoromethyl)-5-(4,5-dihydro-2-thiazolyl)-4-(2-methylpropyl)-6-(trifluoromethyl)-, methyl ester

Trade Names: MANDATE[®], Dow AgroSciences (USA); MON-13200[®], Dow AgroSciences (USA); VISOR[®], Dow AgroSciences (USA)

Producers: Dow AgroSciences (USA); Rohm & Haas (USA)

Chemical Class: Pyridine

California DPR Chemical Code: 3984

Uses: Used as a preemergent herbicide to control annual grasses and certain broadleaf weeds on citrus crops.

Human toxicity (long-term)⁽⁷⁷⁾: High–5.60 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Low–406.10450 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Thiazopyr (40 CFR 180.496):

The residue limit is 0.05 ppm for the following: grapefruit and oranges.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group C, possible carcinogen

Label Signal Word: CAUTION or WARNING

Endocrine Disruptor: Suspected endocrine disruptor

Description: Light tan granular solid. Sulfurous odor. Low solubility in water. Melting point = 77.3–79.1°C.

Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders or dust. Incompatible with silver compounds. Mixture with some silver compounds forms explosive salts of silver oxalate.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Skin: moderately irritating. Eyes: substantially irritating. High toxicity.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Thidiazuron

Use Type: Defoliant, plant growth regulator

CAS Number: 51707-55-2

Formula: C₉H₈N₄OS

Synonyms: 5-*N*-Phenylcarbamoylamino-1,2,3-thiadiazole; 1-Phenyl-3-(1,2,3-thiadiazol-5-yl)urea; *N*-Phenyl-*N'*-1,2,3-thiadiazol-5-yl-urea; *N*-Phenyl-*N'*-(1,2,3-thiadiazyl)urea; TDZ; (N-1,2,3-Thiadiazolyl-5)-*N'*-phenylurea; Urea, *N*-phenyl-*N'*-1,2,3-thiadiazol-5-yl (9CI)

Trade Names: DAZE[®], FMC Agricultural Products (USA); DEFOLIT[®]; DROPP[®], Bayer Crop Science (Germany); GINSTAR EC[®] (thidiazuron + diuron), Bayer Crop Science (Germany); LEAFLESS[®], Compton (USA); SN 49537[®];

Producers: AJE (Switzerland) Bayer Crop Science (Germany); Crompton (USA); FMC Agricultural Products (USA); Micro-Flo (USA); Wuzhou International (China)

Chemical Class: Sulfonylurea

EPA/OPP PC Code: 120301 (208100 and 208800 are old EPA code numbers)

California DPR Chemical Code: 2162

Uses: Used primarily as a cotton defoliant in order to increase the harvest yield. Not applied to food crops.

U.S. Maximum Allowable Residue Levels for Thidiazuron (40 CFR 180.403):

CROP	ppm
Cattle, fat, meat & mby	0.2
Cotton, hulls	0.8
Cotton, undelinted seed	0.4
Egg	0.1
Goat, fat, meat & mby	0.2
Hog, fat, meat & mby	0.2
Horse, fat, meat & mby	0.2
Milk	0.05
Poultry, fat, meat & mby	0.2
Sheep, fat, meat & mby	0.2

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION, DANGER

WHO Acute Hazard: Class U, unlikely to be hazardous

Regulatory Authority:

- FIFRA, 40CFR186: tolerances for pesticides in animal feeds

Description: Crystalline solid. Slightly soluble in water. Molecular weight = 220.29.

Incompatibilities: Heat of decomposition can form toxic nitrogen oxides and sulfur oxides.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or burns. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed. Skin contact may cause allergic reaction.

Long Term Exposure: Repeated or prolonged contact may cause skin and lung sensitization, resulting in allergies.

Points of Attack: Skin

Medical Surveillance: Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Thifensulfuron Methyl

Use Type: Herbicide

CAS Number: 79277-27-3

Formula: C₁₁H₁₁N₅O₆S₂

Synonyms: Methyl 3-[[[(4-methoxy-6-methyl-1,3,5-triazin-2-yl)amino]carbonyl]amino]sulfonyl]-2-thiophenecarboxylate; 2-Thiophenecarboxylic acid, 3-[[[(4-methoxy-6-methyl-1,3,5-triazin-2-yl)amino]carbonyl]amino]sulfonyl]-, methyl ester; Thiameturon-methyl

Trade Names: ALLY[®], DuPont Crop Protection (USA); BASIS[®], (rimsulfuron + thifensulfuron methyl), DuPont Crop Protection (USA); CANVAS[®], (thifensulfuron methyl + tribenuron methyl + metsulfuron-methyl), DuPont Crop Protection (USA); DPX-M6316[®], DuPont Crop Protection (USA); EXPRESS[®], DuPont Crop Protection (USA); HARMONY[®] Extra, (thifensulfuron methyl + tribenuron methyl), DuPont Crop Protection (USA); INM-6316[®]; PINNACLE[®], DuPont Crop Protection (USA);

PROSPECT[®], Whyte Agrochemicals (UK); RELIANCE[®], DuPont Crop Protection (USA); SYNCHRONY[®], (chlorimuron-ethyl + thifensulfuron methyl), DuPont Crop Protection (USA)

Producers: DuPont Crop Protection (USA); Epochem Co., (China); Whyte Agrochemicals (UK)

Chemical Class: Sulfonylurea; triazine

EPA/OPP PC Code: 128845

California DPR Chemical Code: 2237

Human toxicity (long-term)⁽⁷⁷⁾: Low–91.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Very low–19952.62315 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION or WARNING

WHO Acute Hazard: Class U, unlikely to be hazardous

Description: Vapor pressure = 1.3×10^{-10} mmHg @ 20°C. Human toxicity (long-term): High

Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders or dust. Incompatible with silver compounds. Mixture with some silver compounds forms explosive salts of silver oxalate.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, passing through the skin, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: May cause skin and severe eye irritation. Moderately poisonous if ingested or inhaled. Exposure to a triazine (simazine) has caused acute and subacute dermatitis in the former USSR, characterized by erythema, slight edema, moderate pruritus, and burning lasting 4 to 5 days.

Long Term Exposure: May cause lung irritation and damage. May cause skin allergy. Contact with some triazine compounds (such as atrazine) may increase risks for tumors known to be associated with hormonal factors. These have been observed in both animals and human beings, and are consistent with the known effects on the hypothalamic pituitary gonadal axis. Repeated exposure may cause weight loss and reduced red blood cell count.

Points of Attack: Liver, lungs, skin.

Medical Surveillance: Before beginning employment and at regular times after that, for those with frequent or potentially high exposures, the following is recommended: Lung function tests. Consider chest x-ray following acute overexposure. Evaluation by a qualified allergist. Examination of the nervous system.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If

this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water or milk and induce vomiting. Do not make an unconscious person vomit.

Thiobencarb (ANSI)

Use Type: Herbicide

CAS Number: 28249-77-6

Formula: C₁₂H₁₆ClNOS

Synonyms: Carbamic acid, diethyl-, S-(4-chlorobenzyl)ester; Carbamothioic acid, diethyl-, S-[(4-chlorophenyl)methyl] ester; S-(4-Chlorobenzyl) N,N-diethylthiocarbamate; S-(p-Chlorobenzyl)diethylthiocarbamate; p-Chlorobenzyl N,N-diethylthiolcarbamate; S-[(4-Chlorophenyl)methyl] diethylcarbamothioate; S-[(4-Chlorophenyl)methyl] N,N-diethylthiocarbamate; Carbamic acid, diethylthio-S-(p-chlorobenzyl) ester; carbamothioic acid, diethyl-,S-[chlorophenyl)methyl]ester; Caswell No. 207DA; S-(p-Chlorobenzyl)diethylthiocarbamate; S-4-Chlorobenzyl diethylthiocarbamate; S-(4-Chlorobenzyl) N,N-diethylthiocarbamate; S-[(4-chlorophenyl)methyl] diethylcarbamothioate; thiobencarbe; α-Toluenethiol, p-chloro-, diethylcarbamate

Trade Names: B-3015[®]; BENCARB[®]; BENTHIOCARB[®]; BOLERO[®], Valent USA (USA); IMC 3950[®]; SATURN[®]; SATURNO[®]; SIACARB[®]; TAMARIZ[®]

Producers: Valent USA (USA)

Chemical Class: Thiocarbamate

EPA/OPP PC Code: 108401; (283500 old EPA code number)

California DPR Chemical Code: 1933

RTECS Number: EZ7260000

Uses: Thiobencarb is a thiocarbamate herbicide that is applied primarily to rice as well as to lettuce, celery, and endive to control grasses and broadleaf weeds.

Human toxicity (long-term)⁽⁷⁷⁾: Low–70.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Low–185.74195 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Thiobencarb (40 CFR 180.401):

The maximum allowable residue level is 0.05 ppm for milk. The maximum allowable residue level is 1.0 for rice, straw. The maximum allowable residue level is 0.2 for the following: Cattle, fat; Cattle, meat; Cattle, mby; Celery; Egg; Endive; Goat, fat; Goat, meat; Goat, mby; Hog, fat; Hog, meat; Hog, mby; Horse, fat; Horse, meat; Horse,

mby; Lettuce; Poultry, Fat; Poultry, meat; Poultry, meat byproducts; Rice, Grain; Sheep, fat; Sheep, meat; Sheep, mby

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group D, unclassifiable, inadequate data

Label Signal Word: CAUTION

WHO Acute Hazard: Class II, moderately hazardous

Regulatory Authority:

- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- AB 1803-Well Monitoring Chemical (CAL)
- The "Director's List" (CAL/OSHA)
- MCL (Maximum Contaminants Levels) list of contaminants (CAL)
- Actively registered pesticide in California.
- FIFRA, 40CFR186: tolerances for pesticides in animal feeds
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: Light yellow to brownish-yellow liquid. Very sparingly soluble in water; solubility = 30 mg/L @ 20°C. Molecular weight 257.8. Density = 1.145–1.180 @ 20°C. Melting/Freezing point = 3.3°C. Boiling point = 126–129°C @ 0.008 mmHg. Vapor pressure = 1.9×10^{-6} mbar @ 20°C. Log K_{ow} = 3.42. Values above 3.0 are likely to bioaccumulate in marine organisms.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Low levels of toxicity. Concentrated solutions are slightly corrosive to eyes and mucous membranes. Dust inhalation can cause irritation of the respiratory system with sneezing. Eye contact can cause irritation, watering, pain, and inflammation of the eyelids. Skin contact can cause irritation and minor ulceration. Ingestion can cause nausea, vomiting, fever, muscle twitching, seizure, rapid respiration, slow heart beat. Severe exposure may result in death.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, skin, eyes.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Before employment and at regular times after that, the following are recommended: If symptoms develop or overexposure occurs, get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek

medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious and able to swallow, have victim drink 4 to 8 ounces of water. Do not induce vomiting. *Note to physician or authorized medical personnel:* Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

California DPR Chemical Code: 2202

RTECS Number: KJ4301050

Uses: Thiodicarb is used primarily on cotton, sweet corn, and soybeans. The remaining usage is spread among leafy vegetables, cole crops, ornamentals, and other minor use sites. Thiodicarb acts as an ovicide against cotton bollworms and budworms.

Human toxicity (long-term)⁽⁷⁷⁾: Intermediate–18.61702 ppb, CHCL (Chronic Human Carcinogen Level)

Fish toxicity (threshold)⁽⁷⁷⁾: Low–353.55339 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Methomyl (40 CFR 180.253): The U.S. EPA has determined that methomyl is a degradate of thiodicarb, which is a registered pesticide. Therefore, methomyl residues resulting from applications of both thiodicarb and methomyl have been considered in an aggregate risk assessment and compared to appropriate toxicological endpoints for methomyl.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group B2, probable carcinogen

California Prop. 65: Carcinogen

Label Signal Word: CAUTION, WARNING

WHO Acute Hazard: Class II, moderately hazardous

Regulatory Authority:

- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- Actively registered pesticide in California.
- RCRA Section 261 Hazardous Constituents
- EPA Hazardous Waste Number (RCRA No.): U410
- RCRA Universal Treatment Standards: Wastewater (mg/L), 0.019; Nonwastewater (mg/kg), 1.4
- Safe Drinking Water Act: Priority List (55 FR 1470)
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: White to light tan crystalline powder. Slight sulfurous odor. Soluble in water. Molecular weight = 354.52. Melting/freezing point = 168-175°C. Vapor pressure = 1.1×10^{-7} mmHg @ 20°C.

Incompatibilities: May react violently with strong oxidizers, chlorobenzenediazonium salts, mercurous chloride. Incompatible with cadmium bromide, zinc acetate. May form explosive materials with phosphorus pentachloride. May not be compatible with nitrates. Moisture may cause hydrolysis or other forms of decomposition.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Skin contact, ingestion and inhalation.

Harmful Effects and Symptoms

Short Term Exposure: Eye pupils are small, blurred vision, eye watering, runny nose, cough, shortness of breath, salivation, nausea, stomach cramps, diarrhea, and vomiting,

increased blood pressure, profuse sweating, hypermotility, hallucinations, agitation, tingling of the skin, slow heartbeat, convulsions, fluid in lungs, loss of consciousness, incontinence, breathing stops, death. Carbamates inhibit the acetylcholinesterase enzymes and alter the way in which nervous impulses are transmitted. However, within several hours carbamates spontaneously detach from the enzymes.

Long Term Exposure: A potent cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure.

First Aid: Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect eyes. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. *Do NOT induce vomiting.** If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of

activated charcoal (2 oz in 8 oz of water). If victim is *unconscious or having convulsions*, do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Medical note:* 2-PAMCI may be contraindicated in the case of some carbamate poisonings.

Thiofanox

Use Type: A systemic insecticide and acaricide.

CAS Number: 39196-18-4

Formula: $C_9H_{18}N_2O_2S$; $(CH_3)_3CC(CH_2SCH_3)=NOCONHCH_3$

Synonyms: 3,3-Dimethyl-1-(methylthio)-2-butanone-O-[(methylamino)carbonyl]oxime; ENT 27,851; Thiofanocarb (South Africa); Thiophanox

Trade Names: DACAMOX®; DIAMOND SHAMROCK DS-15647®; DS-15647®

Producers: Rhone-Poulenc Agro France (France)

Chemical Class: Methyl carbamate

EPA/OPP PC Code: 109201

California DPR Chemical Code: 2938

RTECS Number: EL8200000

EINECS Number: 254-346-4

Uses: Has been used to control pests on cotton and mango crops.

Carcinogen/Hazard Classifications

WHO Acute Hazard: Class 1b, highly hazardous

Regulatory Authority:

- EPA Hazardous Waste Number (RCRA No.): P045
- RCRA, 40CFR261, Appendix 8 Hazardous Constituents
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4,540 kg)
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 100 lb (45.4 kg)

Description: Colorless solid with a pungent odor. Molecular weight = 218.33. Melting/Freezing point = 57°C.

Permissible Exposure Limits in Air: No standards set.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, eye and/or skin contact.

Harmful Effects and Symptoms

Short Term Exposure: This material is moderately to highly toxic. It is a cholinesterase inhibitor. Symptoms of exposure include nausea, vomiting, abdominal cramps, diarrhea, excessive salivation, sweating, weakness, runny nose, tightness of chest (inhalation exposure), blurred vision, tearing, muscle spasm, loss of eye coordination, ocular pain, extreme dilation of the pupil, loss of muscle coordination, slurring of speech, difficulty in breathing, excessive respiratory tract mucous, skin discoloration, and hypertension. High exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure.

Points of Attack: Blood, eyes and lungs.

Medical Surveillance: Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving carbamate or organophosphate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous

system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Eye examination. Lung function tests. Consider chest x-ray following acute overexposure.

First Aid: Speed in removing material from eyes and skin is of extreme importance. If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Shampoo hair promptly if contaminated. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray.

Thionazin

Use Type: Insecticide, fungicide and nematocide

CAS Number: 297-97-2

Formula: C₈H₁₃N₂O₃PS

Synonyms: AC 18133; *O,O*-Diaethyl-*O*-(pyrazin-2yl)-monothiophosphat (German); *O,O*-Diaethyl-*O*-(2-pyrazinyl)-thionophosphat (German); *O,O*-Diethyl-*O*,2-pyrazinyl phosphorothioate; Diethyl-*O*-2-pyrazinyl phosphorothionate; *O,O*-Diethyl-*O*-2-pyrazinyl phosphothionate; *O,O*-Diethyl-*O*-pyrazinyl thiophosphate; EN 18133; ENT 25 580; Phosphorothioic Acid-*O,O*-diethyl-*O*-2-pyrazinyl ester; Pyrazinol-*O*-ester with *O,O*-diethyl phosphorothioate pyrazinol *O* ester

Trade Names: AMERICAN CYANAMID® 18133; CL®18133®; CYNEM®; EXPERIMENTAL NEMATOCIDE 18,133®; NEMAFOS®; NEMAPHOS®; NEMATOCIDE®; ZINOPHOS®

Producers: Diachem (Italy); Schering (Germany); Shell Chemicals (UK)

Chemical Class: Organophosphate

EPA/OPP PC Code: 032401

California DPR Chemical Code: 2939

RTECS Number: TF5775000

RCRA Number: P040

EINECS Number: 206-97-2

Uses: Discontinued use as a pesticide.

Regulatory Authority:

- Very Toxic Substance (World Bank)⁽¹⁵⁾
- RCRA, 40CFR261, Appendix 8 Hazardous Constituents
- RCRA 40CFR264, Appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL $\mu\text{g/L}$): 8270(10)
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 500 lb (227kg)
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 100 lb (45.4 kg)
- U.S. DOT Inhalation Hazard Chemicals as organophosphates

Description: Thionazin, C₈H₁₃N₂O₃PS, is an amber to colorless liquid. Very slightly soluble in water; solubility = 1150 ppm @ 20°C. Molecular weight = 284.25. Melting/Freezing point = -1.7°C. Boiling point = 80°C @ 0.001 mmHg. Vapor pressure = 3.8 x 10⁻³ mbar @ 39°C. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 1, Reactivity 0.

Incompatibilities: Strong alkalis.

Permissible Exposure Limits in Air: No standards set. However it is an organophosphate pesticide.

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH Method IV Method #5600, Organophosphorus pesticides.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, eye and/or skin contact. Absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes, skin, and respiratory tract. Contact may cause burns to skin and eyes. Poisonous; may be fatal if inhaled, swallowed or absorbed through skin. Acute effects include loss of appetite, nausea, vomiting, diarrhea, excessive salivation, papillary constriction, bronchoconstriction, muscle twitching, convulsions, and coma. Organic phosphorus insecticides are absorbed by the skin, as well as by the respiratory and gastrointestinal tracts. They are cholinesterase inhibitors. Symptoms of exposure include headache, giddiness, blurred vision, nervousness, weakness, nausea, cramps, diarrhea, and discomfort in the chest. Signs include sweating, tearing, salivation, vomiting, cyanosis, convulsions, coma, loss of reflexes and loss of sphincter control. Delayed pulmonary edema may occur after inhalation.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage. May cause dermatitis.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not

breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. **Antidotes:** Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening

situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

- Proposition 65 chemical (CAL)
- Actively registered pesticide in California.
- EPA Hazardous Waste Number (RCRA No.): U409
- RCRA Section 261 Hazardous Constituents
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: Colorless crystalline solid. Low solubility in water; solubility = 3.58 ppm @ 20°C. Molecular weight = 342.41. Melting/Freezing point = 177.6°C.

Incompatibilities: May form explosive materials with phosphorus pentachloride.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)].⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Absorbed through the skin, inhalation, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Eye pupils are small, blurred vision, eye watering, runny nose, cough, shortness of breath, salivation, nausea, stomach cramps, diarrhea, and vomiting, increased blood pressure, profuse sweating, hypermotility, hallucinations, agitation, tingling of the skin, slow heartbeat, convulsions, fluid in lungs, loss of consciousness, incontinence, breathing stops, death. Carbamates inhibit the acetylcholinesterase enzymes and alter the way in which nervous impulses are transmitted. However, within several hours carbamates spontaneously detach from the enzymes.

Long Term Exposure: A potent cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as

soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure.

First Aid: Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect eyes. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. *Do NOT induce vomiting.* * If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *unconscious or having convulsions*, do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Medical note:* 2-PAMCI may be contraindicated in the case of some carbamate poisonings.

Thiosemicarbazide

Use Type: Rodenticide

CAS Number: 79-19-6

Formula: CH₃N₃S; H₂NNHCSNH₂

Synonyms: AI3-16319; Aminothiourea; 1-Aminothiourea; N-Aminothiourea; 1-Amino-2-thiourea; Hydrazinecarbothioamide; Isothiosemicarbazide; Semicarbazide, 3-Thio-; Semicarbazide, thio-; Thiocarbamoylhydrazine; Thiocarbonylhydrazine; 2-Thiosemicarbazide; 3-Thiosemicarbazide; Tiosemicarbazida (Spanish); TSC; TSZ

Producers: Atofina (France); Eurolabs Ltd. (UK); Fairmount Chemical (USA); Fluorchem (UK); GFS Chemicals (USA); OxonItalia (Italy); TCI America (USA)

RTECS Number: VT4200000

EINECS Number: 201-184-7

Uses: This compound is used as a reagent for ketones and certain metals, for photography and as a rodenticide. It is also effective for control of bacterial leaf blight of rice.

Regulatory Authority:

- EPA Hazardous Waste Number (RCRA No.): P116
- RCRA, 40CFR261, Appendix 8 Hazardous Constituents
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4,540 kg)
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 100 lb (45.4 kg)
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: White crystalline powder. Odorless. Soluble in water. Molecular weight = 91.14. Melting/Freezing point = (decomposes) 182°C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0.

Incompatibilities: Strong oxidizers, nitrates.

Permissible Exposure Limits in Air: No standards set.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, eye and/or skin contact. Absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Azides can cause decreased blood pressure and consequently have action similar to cyanides and nitrites. This material is highly toxic by ingestion. May cause delayed toxic effects in blood and skin. May be

mutagenic in human cells. Thiosemicarbazide may induce goiter and has also been reported to cause bone marrow depression with accompanying decreases in white blood cells and platelets. It may also cause skin irritation.

Long Term Exposure: May cause delayed toxic effects in blood and skin. May be mutagenic in human cells. May be a cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving carbamate pesticides (or organophosphates) is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving carbamate pesticides (or organophosphates) is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use.

First Aid: Speed in removing material from eyes and skin is of extreme importance. If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Shampoo hair promptly if contaminated. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of

water and induce vomiting. Do not make an unconscious person vomit.

Chemical Class: Dithiocarbamate

EPA/OPP PC Code: 079801

California DPR Chemical Code: 589

ICSC Number: 0757

RTECS Number: JO14000000

EEC Number: 006-005-00-4

EINECS Number: 205-286-2

Uses: Thiram is used as a fungicide to prevent crop damage in the field and to prevent crops from deterioration in storage or transport. Thiram is also used as a seed, nut, fruit, and mushroom disinfectant from a variety of fungal diseases. In addition, it is used as an animal repellent to protect fruit trees and ornamentals from damage by rabbits, rodents, and deer. Thiram has been used in the treatment of human scabies, as a sun screen, and as a bactericide applied directly to the skin or incorporated into soap. Thiram is used as a rubber accelerator and vulcanizer and as a bacteriostat for edible oils and fats. It is also used as a rodent repellent, wood preservative, and may be used in the blending of lubricant oils.

Human toxicity (long-term)⁽⁷⁷⁾: Low–56.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Extra high–0.53654 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Thiram (40 CFR 180.132):

CROP	ppm
Apple	7
Banana, pulp	1
Peach	7
Strawberry	7

Carcinogen/Hazard Classifications

TRI Developmental Toxin: Reproductive and developmental toxin

IARC: Group 3, unclassifiable

WHO Acute Hazard: Class III, slightly hazardous

Endocrine Disruptor: Suspected endocrine disruptor

Regulatory Authority:

- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (DFG)⁽³⁾ (HSE)⁽³³⁾ (OSHA)⁽⁵⁸⁾ (former USSR)^(35, 43) (Several States)⁽⁶⁰⁾
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- The “Director’s List” (CAL/OSHA)
- Actively registered pesticide in California.
- EPA Hazardous Waste Number (RCRA No.): U244
- RCRA, 40CFR261, Appendix 8 Hazardous Constituents
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 10 lb (4.54 kg)
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- Canada, WHMIS, Ingredients Disclosure List

Description: Thiram is a colorless to yellow, crystalline solid. The methyl analog of disulfiram.* Characteristic odor. Commercial pesticide products may be dyed blue. Practically insoluble in water; solubility = 26 ppm @ 20°C; 30 ppm @ 25°C. Boiling point = 129°C. Melting/Freezing point = 156°C. Flash point = 148°C. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 1, Reactivity. Log K_{ow} = 1.79 to 2.0. Unlikely to bioaccumulate in marine organisms. *See also disulfiram.

Incompatibilities: Strong oxidizers, strong acids and oxidizable materials.

Permissible Exposure Limits in Air: The OSHA/NIOSH⁽²⁾ TWA, the DFG MAK⁽³⁾ and the HSE⁽³³⁾ TWA value for Thiram is 5 mg/m³. The STEL value set by HSE⁽³³⁾ is 10 mg/m³. The NIOSH⁽²⁾ IDLH level = 100 mg/m³. The ACGIH TWA is 1.0 mg/m³⁽¹⁾. The former USSR^(35,43) has set a MAC for workplace air of 0.5 mg/m³. The former USSR^(35,43) has also set MAC values for ambient air in residential areas of 0.01 mg/m³ on a momentary basis and 0.006 mg/m³ on a daily average basis. Several states have set guidelines or standards for Thiram in ambient air⁽⁶⁰⁾ ranging from 50 µg/m³ (North Dakota) to 80 µg/m³ (Virginia) to 100 µg/m³ (Connecticut) to 119 µg/m³ (Nevada).

Determination in Air: Filter; CH₃CN; High-pressure liquid chromatography/Ultraviolet detection; NIOSH IV, Method #5005.⁽¹⁸⁾

Permissible Concentration in Water: The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set an MAC in water bodies used for domestic purposes of 1.0 µg/L. Further, it has set a MAC in water bodies used for fishery purposes of zero. The State of Maine⁽⁶¹⁾ has set a guideline for Thiram in drinking water of 10 µg/L.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes, skin, and respiratory tract. High exposures can cause kidney and liver damage. Brain and nerve damage can also occur.

Inhalation: Inhalation can cause irritation of the respiratory tract with stuffy nose, nosebleeds, hoarseness, cough and/or phlegm. Animal studies indicate that irritation of the nose and throat may occur at levels above 5 mg/m³. **Skin:** Exposure to spray containing 45% Thiram resulted in irritation and skin sensitization. Skin irritation can lead to rash, and allergy. **Eyes:** May cause irritation, tearing and sensitivity to light. **Ingestion:** No information available on human exposure. In animal studies, 38 ppm in food caused nausea, vomiting, diarrhea, hyperexcitability, weakness and loss of muscle control. Death may occur from ingestion of approximately one teaspoonful. **Note:** Unlike carbamates the dithiocarbamates are not cholinesterase inhibitors, but some of them may react with recently ingested alcohol or alcohol-containing products including wine, medications, and cold remedies such as cough-syrups. See also disulfiram.

Long Term Exposure: Repeated or prolonged contact may cause skin sensitization. Prolonged contact has caused eye irritation, tearing, increased sensitivity to light, reduced night vision and blurred vision. Occupational exposures to 0.03 mg/m³ over a 5 year period has caused mild irritation of the nose and throat. Whether it has this effect in humans is not known. May affect the thyroid and liver. Thiram has caused birth defects in laboratory animals and has been shown to be a teratogen in animals.

Points of Attack: Eyes, skin, respiratory system and central nervous system.

Medical Surveillance: Preplacement and periodic medical examinations should give special attention to history of skin allergy, eye irritation, and significant respiratory, liver, or kidney disease. Workers should be aware of the potentiating action of alcoholic beverages when working with tetramethylthiuram disulfide.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Thymol

Use Type: Dye and biocide

CAS Number: 89-83-8

Formula: C₁₀H₁₄O

Synonyms: *p*-Cymen-3-ol; 3-*p*-Cymenol; 3-Hydroxy-4-cymene; 3-Hydroxy-*p*-cymene; 3-Hydroxy-1-methyl-4-isopropylbenzene; Isopropyl cresol; 6-Isopropyl-3-cresol; 6-Isopropyl-*m*-cresol; 2-Isopropyl-5-methylphenol; 1-Methyl-3-hydroxy-4-isopropylbenzene; 5-Methyl-2-isopropyl-1-phenol; 5-Methyl-2-(1-methylethyl)phenol; Thyme camphor; Thymic acid; *m*-Thymol

Trade Names: BENEFECT®; ECOPAC®; RO-PE® L; THYMO-CIDE®; TOPPS®

Chemical Class: Phenol

EPA/OPP PC Code: 080402

California DPR Chemical Code: 991

Uses: Thymol is a constituent of oil of thyme, a naturally occurring mixture of compounds in the plant *Thymus vulgaris* L, or thyme. Thymol is an active ingredient in pesticide products registered for use as animal repellents, fungicides/fungistats, medical disinfectants, tuberculocides, and virucides. These products are used on a variety of indoor and outdoor sites, to control target pests including animal pathogenic bacteria and fungi, several viruses including HIV-I, and birds, squirrels, beavers, rats, mice, dogs, cats and deer. Products are liquids applied by spray, mop, brush-on, wipe-on dip, aerosol, immersion and spot treatment. Thymol also has many non-pesticidal uses, including use in perfumes, food flavorings, mouthwashes, pharmaceutical preparations and cosmetics.

U.S. Maximum Allowable Residue Levels for Thymol (40 CFR 180.1240):

Thymol has been exempt from residue levels on honey and honeycomb.

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION or DANGER

Regulatory Authority:

- Actively registered pesticide in California.

Description: White, crystalline solid or colorless plates. Slightly soluble in water; solubility = 850 ppm @ 20°C. Molecular weight 150.2. Density = 0.972. Boiling point = 234°C. Melting/Freezing point = 51–53°C. Vapor pressure = 1 mmHg @ 64°. Log K_{ow} = 3.32. Values above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: React with boranes, alkalies, aliphatic amines, amides, nitric acid. Keep away from oxidizers, sulfuric acid, caustics, ammonia, aliphatic amines, alkanolamines, isocyanates, alkylene oxides, epichlorohydrin.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Toxaphene

Use Type: Insecticide

CAS Number: 8001-35-2

Formula: C₁₀H₁₀Cl₈

Alert: Toxaphene is a carcinogen and teratogen and should be handled with extreme caution. There are no currently registered products of toxaphene in the U.S; all uses were banned in 1982. Human toxicity (long-term): High.

Synonyms: Camphechlor; Chem-Phene; Camphene, octachloro-; Camphochlor; Camphochlor; Camphofene chlorinated camphene; Chlorocamphene; ENT 9735; NCI-C00259; Octachlorocamphene; PCC; PCHK; Penphene; Polychlorocamphene; Polychlorinated camphene; Polychlorocamphene; Technical chlorinated camphene, 67-69% chlorine; Toxafeen (Dutch); Toxafeno (Spanish); Toxaphen (German)

Trade Names: AGRICIDE MAGGOT KILLER (F)[®]; ALLTEX[®]; ALLTOX[®]; ANATOX[®]; ATTAC-2[®]; ATTAC 6[®]; ATTAC 6-3[®]; HUILEUX[®]; CANFECLOR[®]; CLOR CHEM T-590[®]; COMPOUND 3956[®]; COTTON TOX MP82[®]; CRESTOXO[®]; CRISTOXO 90[®]; DR. Producers: DuPont Crop Protection (USA)

Chemical Class: Organochlorine; Halo-organics

EPA/OPP PC Code: 080501

California DPR Chemical Code: 594

ICSC Number: 0843

RTECS Number: XW5250000

EEC Number: 602-044-00-1

EINECS Number: 232-283-3

Uses: Toxaphene is a broad spectrum, chlorinated hydrocarbon pesticide that contains over 670 chemicals. All uses of toxaphene were banned in the U.S. in 1982. It was used primarily in the southern United States to control insect

pests on cotton and other crops. It was also used to control insect pests on livestock and to kill unwanted fish in lakes.

- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

- Canada, WHMIS, Ingredients Disclosure List

Description: Amber, waxy solid. Mild, piney, chlorine- and camphor-like odor; somewhat like turpentine. Usually dissolved in a flammable solvent. Flammability depends on the solvent used. Practically insoluble in water; solubility = 2.8 ppm @ 20°C. It sticks to the soil and settles into lakes, stream sediments and mud. Molecular weight = 413.84. Melting/Freezing point = 65–90°C. Vapor pressure = 7.1×10^{-6} mmHg @ 20°C. Flash point = 135°C (solid); 29°C (solution). Autoignition temperature = 530°C. Explosive limits: LEL = 1.1%; UEL = 6.4% (solvents only). Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 0, Reactivity 0. Log K_{ow} = 3.5; also reported at 5.25. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Contact with strong oxidizers may cause fire and explosion hazard. Decomposes, producing fumes of hydrogen chloride and chlorine in heat above 155°C, on contact with strong bases, strong sunlight, and catalysts such as iron. Slightly corrosive to metals in the presence of moisture.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ PEL, DFG MAK⁽³⁾, and ACGIH⁽¹⁾ TWA value is 0.5 mg/m³, and the ACGIH STEL⁽¹⁾ is 1.0 mg/m³. The notation “skin” is added to indicate the possibility of cutaneous absorption. The NIOSH⁽²⁾ IDLH level = [Ca] 200 mg/m³. The former USSR⁽³⁵⁾ has set an MAC for ambient air in residential areas of 7.0 $\mu\text{g/m}^3$ on a once-daily basis. A number of states have set guidelines or standards for toxaphene in ambient air⁽⁶⁰⁾ ranging from 1.19 $\mu\text{g/m}^3$ (Kansas) to 1.2 $\mu\text{g/m}^3$ (Pennsylvania) to 1.67 $\mu\text{g/m}^3$ (New York) to 2.5 $\mu\text{g/m}^3$ (Connecticut and South Carolina) to 5.0 $\mu\text{g/m}^3$ (Florida) to 5.0–10.0 $\mu\text{g/m}^3$ (North Dakota) to 8.0 $\mu\text{g/m}^3$ (Virginia) to 12.0 $\mu\text{g/m}^3$ (Nevada).

Determination in Air: Filtration from air, working up with petroleum ether and analysis by gas chromatography. See NIOSH Method S-67.

Permissible Concentration in Water: The U.S. EPA has set a drinking water standard of 0.003 milligrams of toxaphene per liter of drinking water (0.003 mg/L). To protect freshwater aquatic life–0.013 $\mu\text{g/L}$ as a 24-hour average is never to exceed 1.6 $\mu\text{g/L}$. To protect saltwater aquatic life–never to exceed 0.07 $\mu\text{g/L}$. To protect human health, preferably zero. An additional lifetime cancer risk of 1 in 100,000 is presented by a concentration of 0.0071 $\mu\text{g/L}$.⁽⁶⁾ The International Joint Commission of the United States and Canada has recommended a water standard of 0.008 ppm for protection of aquatic life. States which have set drinking water guidelines include Maine at 5.0 $\mu\text{g/L}$ and Minnesota

at 0.3 µg/L⁽⁶¹⁾. Mexico⁽³⁵⁾ has set MPC values of 30 µg/L for estuaries, 3.0 µg/L for coastal waters and 5.0 µg/L for receiving waters used for drinking water supply.

Determination in Water: Gas chromatography (EPA Method 608) or gas chromatography plus mass spectrometry (EPA Method 625).

Routes of Entry: Inhalation, skin absorption, ingestion, eye and/or skin contact.

Harmful Effects and Symptoms

Short Term Exposure: High concentrations can irritate the skin and eyes. A nervous system depressant causing tremors, weakness, dizziness, increased saliva, convulsions, unconsciousness, and possible death. High exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. Inhalation of spray at unknown levels has caused bronchitis and inflammation of the lungs. If spilled on clothing and allowed to remain, can cause pain and reddening. May be absorbed through skin, contributing to symptoms described under ingestion. Absorbed through the stomach and intestines. 0.6 grams (about 1/50 of an oz) has caused convulsions. Other symptoms include nausea, vomiting, bluish coloration of the skin, and coma. Estimated lethal dose for an adult is between 2 and 7 grams (1/15-1/4 ounce).

Long Term Exposure: Aplastic anemia (low blood count) is an uncommon but serious reaction to toxaphene. High or repeated exposure may cause liver and kidney damage. Toxaphene is suspected of causing brain damage. Changes in genetic material have been observed in workers exposed to toxaphene. An animal study reported that toxaphene caused cancer of the thyroid gland when the animals were exposed to high levels over their lifetimes. It is not known whether toxaphene can affect reproduction or cause birth defects in people. Animal studies have reported that toxaphene affects the development of newborn animals when their mothers are exposed during pregnancy.

Points of Attack: Central nervous system, skin. Cancer site in animals: liver cancer; thyroid tumors.

Medical Surveillance: Consider the points of attack in replacement and periodic physical examinations. Complete blood count. Complete examination of the nervous system. Liver and kidney function tests. Consider chest x-ray following acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large

quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray.

Tralkoxydim

Use Type: Herbicide

CAS Number: 87820-88-0

Formula: C₂₀H₂₇NO₃

Synonyms: 2-Cyclohexen-1-one, 2-[1-(ethoxyimino)propyl]-3-hydroxy-5-(2,4,6-trimethylphenyl)-(9CI); 2-[1-(Ethoxyimino)propyl]-3-hydroxy-5-mesitylcyclohex-2-en-one; 2-[1-(Ethoxyimino)propyl]-3-hydroxy-5-(2,4,6-trimethylphenyl)-2-cyclohexen-1-one; Tralkoxydime

Trade Names: ACHIEVE®, Syngenta (Switzerland); ACHIEVE®-40DG, Syngenta (Switzerland); GRASP®,

Syngenta (Switzerland); ICI-A 604[®]; PP 604[®]; SPLENDOR[®], Syngenta (Switzerland)

Producers: Syngenta (Switzerland)

Chemical Class: Cyclohexanedione

EPA/OPP PC Code: 121000

California DPR Chemical Code: 5457

Uses: Tralkoxydim is applied to actively growing weeds in wheat, barley, triticale and cereal rye to control wild oats, green foxtail, yellow foxtail, annual ryegrass (Italian) and Persian darnel.

Human toxicity (long-term)⁽⁷⁷⁾: Intermediate–20.83 ppb, CHCL (Chronic Human Carcinogen Level)

Fish toxicity (threshold)⁽⁷⁷⁾: Very low–1154.96119 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Tralkoxydim (40 CFR 180.548):

The revocation date for the following residue levels was February 28, 2003.

CROP	ppm
Barley, grain	0.02
Barley, hay	0.02
Barley, straw	0.05
Wheat, forage	0.05
Wheat, grain	0.02
Wheat, hay	0.02
Wheat, straw	0.05

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Likely carcinogen

Label Signal Word: CAUTION

WHO Acute Hazard: Class III, slightly hazardous

Description: Off white to pale pink crystalline solid. Faint burnt odor. Soluble in water. Molecular weight = 329.47. Melting/Freezing point = 110°C. Vapor pressure = Extremely low; 3.5×10^{-10} . Non-corrosive, stable at normal warehouse temperatures.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Tralomethrin

Use Type: Insecticide

CAS Number: 66841-25-6

Formula: C₂₂H₁₉Br₄NO₃

Synonyms: (S)- α -Cyano-3-phenoxybenzyl (1R,3R)-3-(2,2-dibromovinyl)-2,2-dimethylcyclopropanecarboxylate [metabolite of tralomethrin]; (S)- α -Cyano-3-phenoxybenzyl (1S,3R)-3-(2,2-dibromovinyl)-2,2-dimethylcyclopropanecarboxylate [metabolite of tralomethrin]; Cyano(3-phenoxyphenyl)methyl; Cyclopropanecarboxylic acid, 2,2-dimethyl-3-(1,2,2,2-tetrabromoethyl)-, cyano(3-phenoxyphenyl)methyl ester (9CI); 2,2-Dimethyl-3-(1,2,2,2-tetrabromoethyl)cyclopropanecarboxylic acid, cyano(3-phenoxyphenyl)methyl ester; 2,2-Dimethyl-3-(1,2,2,2-tetrabromoethyl)cyclopropanecarboxylate; (1R,3S)3[(1'RS)(1',2',2',2'-Tetrabromoethyl)]-2,2-dimethylcyclopropanecarboxylic acid, (S)- α -cyano-3-phenoxybenzyl ester; Tralomethrine

Trade Names: DETHMOR[®]; HAG-107[®]; RU-25472[®]; RU-25474[®]; SCOUT[®]; SCOUT[®] X-TRA Gel insecticide

Chemical Class: Pyrethroid

EPA/OPP PC Code: 121501; (128822 old EPA code number)

California DPR Chemical Code: 2329

Human toxicity (long-term)⁽⁷⁷⁾: Low–52.50 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Extra high–0.06714 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Tralomethrin (40 CFR 180.422):

CROP	ppm
Broccoli	0.5
Cotton, refined oil	0.2
Cotton, undelinted seed	0.02
Feed processing and storage areas	0.02
Lettuce, head	1.0
Lettuce, leaf	3.0
Processed food	0.02
Soybean	0.05
Sunflower, seed	0.05

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION

Endocrine Disruptor: Suspected endocrine disruptor

Regulatory Authority:

- FIFRA, 40CFR185: tolerances for pesticides in food

Description: Yellow-orange resinous solid. Soluble in water; solubility = 70 mg/kg. Molecular weight = 665.05. Density = 1.70 @ 20°C. Boiling point = 138°C. Vapor pressure = 17 pPa

Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders or dust. Incompatible with silver compounds. Mixture with some silver compounds forms explosive salts of silver oxalate.

Permissible Exposure Limits in Air:

Determination in Air: Collection by impinger or fritted bubbler, analysis by gas liquid chromatography/ultraviolet. See NIOSH IV, Method #5008⁽¹⁸⁾ (pyrethrum).

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Determination in Water: Collection by impinger or fritted bubbler, analysis by gas liquid chromatography/ultraviolet. See NIOSH IV, Method #5008.⁽¹⁸⁾

Routes of Entry: Inhalation, ingestion, absorbed through skin.

Harmful Effects and Symptoms

Short Term Exposure: Contact may cause burns to skin and eyes. Poisonous; may be fatal if inhaled, swallowed or absorbed through skin. Contact may cause burns to skin and eyes.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Triaccontanol

Use Type: Plant growth regulator

CAS Number: 593-50-0

Formula: C₃₀H₆₂O

Synonyms: 1-Hydroxytriaccontane; Melissyl alcohol; Myricyl alcohol; 1-Triaccontanol

Trade Names: M 8164[®]; TRIACON-10[®], canceled; ULTRIA[®], canceled; UREKA[®], Sudarshan Chemical Industries (India)

Producers: Sudarshan Chemical Industries (India)

Chemical Class: Naturally occurring plant hormone

EPA/OPP PC Code: 116201

Uses: Not registered in the U.S. Triaccontanol raises plant yield by improving cell division and photosynthesis.

Description: White crystalline solid. Practically insoluble in water. Melting/Freezing point = 91°C. Molecular weight = 438.82

Permissible Exposure Limits in Air:

Determination in Air: Collection by charcoal tube, 2-Butanol/CS₂; analysis by gas chromatography/flame ionization detection; NIOSH (IV) [Method #1400, Alcohols I].

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Triadimefon

Use Type: Fungicide

CAS Number: 43121-43-3

Formula: C₁₄H₁₆ClN₃O₂

Synonyms: 2-Butanone, 1-(4-chlorophenoxy)-3,3-dimethyl-1-(1-*H*-1,2,4-triazol-1-yl)-; 2-Butanone, 1-(4-chlorophenoxy)-3,3-dimethyl-1-(1,2,4-triazol-1-yl)-; 1-[(*tert*-Butylcarbonyl-4-chlorophenoxy)methyl]-1*H*-1,2,4-triazole; Caswell No. 862AA; 1-(4-Chlorophenoxy)-3,3-dimethyl-1-(1*H*-1,2,4-triazol-1-yl)-2-butanone; 1-(4-Chlorophenoxy)-3,3-dimethyl-1-(1,2,4-triazol-1-yl)-butan-2-one; 1-(4-Chlorophenoxy)-3,3-dimethyl-1-(1*H*-1,2,4-triazol-1-yl)butanone; 1-(4-Chlorophenoxy)-3,3-dimethyl-1-(1,2,4-triazol-1-yl)-2-butanone; 1-(4-Chlorophenoxy)-3,3-dimethyl-1-(1,2,4-triazol-1-yl)-2-butanone; 1-(4-Chlorophenoxy)-3,3-dimethyl-1-(1,2,4-triazol-1-yl)butanone; NSC 303303; Triadimefon triazole fungicide; Triadimefone; Triadimeform; 1*H*-1,2,4-Triazole, 1-[(*tert*-butylcarbonyl-4-chlorophenoxy)methyl]-; 1-(1,2,4-Triazolyl-1)-1-(4-chloro-phenoxy)3,3-dimethylbutanone; 1-[(*tert*-Butylcarbonyl-4-chlorophenoxy)methyl]-

Trade Names: ACCOST®; ACIZOL®; AMIRAL®; BAY® 6681-F, Bayer CropScience (Germany); BAYLETON®, Bayer CropScience (Germany); BAY®-MEB-6447, Bayer CropScience (Germany); BAYER® 6681-F, Bayer CropScience (Germany); BAYER® MEB-6447, Bayer CropScience (Germany); MEB 6447®; PRO-TEK®, ROFON®

Producers: Agrimor International (USA); Agsin (Singapore); Bayer CropScience (Germany); Bonide (USA)

Chemical Class: Chlorophenoxy; azole; triazole

EPA/OPP PC Code: 109901

California DPR Chemical Code: 2133

RTECS Number: EL7100000

Uses: Triadimefon is a systemic fungicide that is used to control powdery mildews, rusts, and other fungi on coffee, seed grasses, cereals, fruits, grapes, vegetables, vines, pineapple, sugar cane, sugar beets, turf, shrubs, and trees.

Human toxicity (long-term)⁽⁷⁷⁾: Intermediate–28.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Intermediate–68.11770 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group 3, possible carcinogen

California Prop. 65: Developmental toxin; female and male reproductive toxin

TRI Developmental Toxin: Reproductive and developmental toxin

Label Signal Word: CAUTION, WARNING or DANGER

WHO Acute Hazard: Class III, slightly hazardous

Endocrine Disruptor: Suspected endocrine disruptor

Regulatory Authority:

- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- FIFRA, 40CFR185: tolerances for pesticides in food
- FIFRA, 40CFR186: tolerances for pesticides in animal feeds
- AB 2588-Air Toxics “Hot Spots” Chemicals (CAL) as chlorophenoxy pesticides
- The “Director’s List” (CAL/OSHA) as chlorophenoxy pesticides
- Actively registered pesticide in California.
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: Colorless crystalline solid. Soluble in water; solubility = 250 ppm. Melting point = 82.3°C. Molecular weight = 293.78

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Poisonous; may be fatal if inhaled, swallowed, or absorbed through skin. Severely irritates eyes, skin and respiratory tract, with burning sensation, pain, redness and swelling. Metabolic stimulant. If inhaled, causes coughing, dilated pupils, headache, profuse perspiration, intense thirst, extreme fatigue, rapid pulse, high fever, clammy, flushed skin, rapid breathing, nausea, vomiting, cyanosis (bluish tint to skin and lips), anxiety and confusion, convulsions, risk of lung edema. If swallowed, face and lips turn bluish. Liver injury with associated jaundice, kidney failure, and cardiac arrhythmias are commonly noted. Nerve damage, which may be delayed, may include swelling of legs and feet, muscle twitch and stupor. Severe exposure can cause death from heart failure. Dust or liquid left in contact

with the skin for several hours may be absorbed. This may result in severe delayed symptoms as listed above. These symptoms may last for months or years.

Long Term Exposure: Workers exposed to chlorophenoxy compounds such as 2,4-D (in the manufacturing process) over a five to ten year period at levels above 10 mg/m³ complained of weakness, rapid fatigue, headache and vertigo. Liver damage, low blood pressure and slowed heartbeat were also found. Based on animal tests, may affect human reproduction.

Points of Attack: Eyes, skin, respiratory system, central nervous system, cardiovascular system, liver, kidney.

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: Liver and kidney function tests. Exam of the nervous system.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested.* Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Triadimenol

Use Type: Fungicide; breakdown product

CAS Number: 55219-65-3

Formula: C₁₄H₁₈ClN₃O₂

Synonyms: β-(4-Chlorophenoxy)-α-(1,1-dimethylethyl)-1*H*-1,2,4-triazole-1-ethanol; (1*RS*,2*RS*,1*RS*,2*SR*)-1-(4-Chlorophenoxy)-3,3-dimethyl-1-(1*H*-1,2,4-triazol-1-yl)butan-2-ol; 2-(4-Chlorophenoxy)-1-tert-butyl-2-(1*H*-1,2,4-triazole-1-yl)ethanol; Ethanol, 2-(4-Chlorophenoxy)-1-tert-butyl-2-(1*H*-1,2,4-triazole-1-yl)-; 1*H*-1,2,4-Triazole-1-ethanol, β-(4-chlorophenoxy)-α-(1,1-dimethylethyl)-

Trade Names: BAYFIDAN[®], Bayer CropScience (Germany); BAYFRDAN EW[®], Bayer CropScience (Germany); BAY KWG 0519[®], Bayer CropScience (Germany); BAYTAN[®] SEED TREATMENT, Bayer CropScience (Germany); BAYTAN 30[®] FUNGICIDE, Gustafson (USA); PROTEGE ALLEGIANCE BAYTAN[®], Gustafson (USA); SPINNAKER[®]; SUMMIT[®]; TRIADIMENOL[®]; TRIAFOL[®]; TRIAPHOL[®]

Producers: Agsin (Singapore); Bayer CropScience (Germany); Gustafson (USA)

Chemical Class: Chlorophenoxy; azole

EPA/OPP PC Code: 127201

California DPR Chemical Code: 2307

EINECS Number: 259-537-6

Uses: Triadimenol is used to control seed- and soil-borne diseases and to provide early season control of foliar diseases. It is applied to seeds of barley, corn, oats, rye, sorghum and wheat and also to fruits, vegetables and ornamentals.

Human toxicity (long-term)⁽⁷⁷⁾: Intermediate–26.600 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Very low–2294.778860 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Description: Colorless solid and white to tan powder. Melting point = 82°C. Molecular weight = 293.75. Vapor pressure = 3.12×10^{-10} mmHg @ 20°C.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Poisonous; may be fatal if inhaled, swallowed, or absorbed through skin. Severely irritates eyes, skin and respiratory tract, with burning sensation, pain, redness and swelling. Metabolic stimulant. If inhaled, causes coughing, dilated pupils, headache, profuse perspiration, intense thirst, extreme fatigue, rapid pulse, high fever, clammy, flushed skin, rapid breathing, nausea, vomiting, cyanosis (bluish tint to skin and lips), anxiety and confusion, convulsions, risk of lung edema. If swallowed, face and lips turn bluish. Liver injury with associated jaundice, kidney failure, and cardiac arrhythmias are commonly noted. Nerve damage, which may be delayed, may include swelling of legs and feet, muscle twitch and stupor. Severe exposure can cause death from heart failure. Dust or liquid left in contact with the skin for several hours may be absorbed. This may result in severe delayed symptoms as listed above. These symptoms may last for months or years.

Long Term Exposure: Workers exposed to chlorophenoxy compounds such as 2,4-D (in the manufacturing process) over a five to ten year period at levels above 10 mg/m³ complained of weakness, rapid fatigue, headache and vertigo. Liver damage, low blood pressure and slowed

heartbeat were also found. Based on animal tests, may affects human reproduction.

Points of Attack: Eyes, skin, respiratory system, central nervous system, cardiovascular system, liver, kidney.

Medical Surveillance: If symptoms develop or overexposure is suspected, liver or kidney function tests may be useful. Liver function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person drink or vomit. *Note to Physician:* If ingested, remove by lavage or vomiting. Use general supportive measures for CNS depression. Use quinidine for myotonia.

Triallate

Use Type: Herbicide

CAS Number: 2303-17-5

Formula: C₁₀H₁₆Cl₃NOS

Synonyms: Carbamic acid, diisopropylthio-, S-(2,3,3-trichloroallyl) ester; Bis(1-methylethyl)carbamothioic acid S-(2,3,3-trichloro-2-propenyl) ester; Carbamothioic acid, bis(1-methylethyl)-, S-(2,3,3-trichloro-2-propenyl) ester; Caswell No. 870A; N-Diisopropylthiocarbamic acid S-2,3,3-trichloro-2-propenyl ester; Diisopropyltrichloroallyl thiocarbamate; NSC 379698; 2-Propene-1-thiol, 2,3,3-trichloro-, diisopropylcarbamate; thiocarbamic acid, N-diisopropyl-, S-2,3,3-Trichloroallyl ester; Tri-allate; 2,3,3-Trichloroallyl N,N-diisopropylthiocarbamate; S-2,3,3-Trichloroallyl N,N-diisopropylthiocarbamate; S-(2,3,3-Trichloroallyl) diisopropylthiocarbamate; 2,3,3-

Trichloroallyl diisopropylthiocarbamate; *S*-(2,3,3-Trichloro-2-propenyl)bis(1-methylethyl)carbamothioate

Trade Names: AVADEX BW[®], Monsanto (USA); BUCKLE[®], (triallate + trifluralin), Monsanto (USA); CP-23426[®]; DIPHAL[®]; FAR-GO[®], Monsanto (USA), canceled; FAR-GO[®]; FORTRESS[®], Monsanto (USA); OVADEX BW[®]

Producers: Monsanto (USA); Gowan Company (USA)

Chemical Class: Thiocarbamate

EPA/OPP PC Code: 078802

California DPR Chemical Code: 49

ICSC Number: 0201

RTECS Number: EZ8575000

RCRA Number: U389

EEC Number: 006-039-00-X

Uses: Triallate is a pre-emergent or post-emergent herbicide used to control a variety of annual grasses and wild oats on several grains, oilseed and vegetable crops. Its use has been restricted to use in CO, ID, KS, MN, MT, NE, NV, ND, OR, SD, UT, WA, and WY. Its use on canary grass has been revoked. Monsanto announced in March, 2004, that its brands of triallate products have been sold to Gowan Company.

Human toxicity (long-term)⁽⁷⁷⁾: High–9.10 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Intermediate–54.442630 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels: for Triallate (40 CFR 180.314):

CROP	ppm
Barley, grain	0.05
Barley, straw	0.05
Beet, sugar, dried pulp	0.2
Beet, sugar, roots	0.1
Beet, sugar, tops	0.5
Lentil	0.05
Lentil, hay	0.05
Pea	0.05
Pea, field, hay	0.05
Pea, field, vines	0.05
Wheat, grain	0.05
Wheat, straw	0.05

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group C, possible carcinogen

Label Signal Word: CAUTION

WHO Acute Hazard: Class III, slightly hazardous

Regulatory Authority:

- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- RCRA Section 261 Hazardous Constituents
- RCRA Universal Treatment Standards: Wastewater (mg/L), 0.003; Nonwastewater (mg/kg), 1.4
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: Oily, amber liquid (technical) or colorless, crystalline solid. May be dissolved in a flammable solvent.

Practically insoluble in water; solubility = 4 ppm @ 25°C. Molecular weight = 304.66. Density = 1.273 @ 25°C; also reported 1.04 @ 25°C. Boiling point = 117°C at 0.4 mmHg. Melting/Freezing point = 29°C. Vapor pressure = 1.6×10^{-4} mbar @ 25°C. Log K_{ow} = 3.96. Values above 3.0 are likely to bioaccumulate in marine organisms.

Determination in Air: Filter; none; Gravimetric; NIOSH IV⁽¹⁸⁾ [Particulates NOR; #0500 (total), #0600 (respirable)]

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Low levels of toxicity. Concentrated solutions are slightly corrosive to eyes and mucous membranes. Dust inhalation can cause irritation of the respiratory system with sneezing. Eye contact can cause irritation, watering, pain, and inflammation of the eyelids. Skin contact can cause irritation and minor ulceration. Ingestion can cause nausea, vomiting, fever, muscle twitching, seizure, rapid respiration, slow heart beat. Severe exposure may result in death.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, skin, eyes.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious and able to swallow, have victim drink 4 to 8 ounces of water. Do not induce vomiting. *Note to physician or authorized medical personnel:* Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

Triasulfuron

Use Type: Herbicide

CAS Number: 82097-50-5

Formula: C₁₄H₁₆ClN₅O₅S

Synonyms: Benzenesulfonamide, 2-(2-chloroethoxy)-N-[[[(4-methoxy-6-methyl-1,3,5-triazin-2-yl)amino]carbonyl]-]; 2-(2-Chloroethoxy)-N-[[[(4-methoxy-6-methyl-1,3,5-triazin-2-yl)amino]carbonyl]benzenesulfonamide; 1-[2-(2-Chloroethoxy)phenylsulfonyl]-3-(4-methoxy-6-methyl-1,3,5-triazin-2-yl)urea; 3-(6-Methoxy-4-methyl-1,3,5-triazin-2-yl)-1-[2-(2-chloroethoxy)phenylsulfonyl]urea; Urea, N-[2-(2-chloroethoxy)phenylsulfonyl]-N'-(6-methoxy-4-methyl-1,3,5-triazinyl-2-yl)-

Trade Names: AMBER[®], Syngenta (Switzerland); CGA 131036[®], Syngenta (Switzerland); LOGRAN[®]; RAVE[®], Syngenta (Switzerland)

Producers: Syngenta (Switzerland)

Chemical Class: Sulfonyl urea

EPA/OPP PC Code: 128969 (128985 old EPA code number)

California DPR Chemical Code: 5100

Uses: Used for the control of annual ryegrass, paradoxa grass and a wide range of broadleaf weeds in wheat and the post-emergence control of wild radishes in wheat, oats and barley.

Human toxicity (long-term)⁽⁷⁷⁾: Low—70.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Very low—68600.000680 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Triasulfuron (40 CFR 180.459):

CROP	ppm

Wheat, grain	0.02
Wheat, straw	2.0

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group E, Unlikely a carcinogen

Label Signal Word: CAUTION

WHO Acute Hazard: Class U, unlikely to be hazardous

Description: White crystalline solid. Soluble in water. Molecular weight = 401.85. Melting point = 178.1°C.

Incompatibilities: Slowly hydrolyzes in water, releasing ammonia and forming acetate salts.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, passing through the skin, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or burns. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed. Skin contact may cause allergic reaction.

Long Term Exposure: Repeated or prolonged contact may cause skin and lung sensitization, resulting in allergies.

Points of Attack: Skin.

Medical Surveillance: Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Triazamate

Use Type: Insecticide

CAS Number: 112143-82-5

Formula: C₁₃H₂₂N₄O₃S

Synonyms: Acetic acid, [(1-((dimethylamino)carbonyl)-3-(1,1-dimethylethyl)-1H-1,2,4-triazol-5-yl)thio]-, ethyl ester (9CI); Ethyl(3-*tert*-butyl-1-dimethylcarbamoyl-1H-1,2,4-triazol-5-ylthio)acetate

Trade Names: AZTEC[®], BASF Agricultural Products (Germany); RH-7988[®]; RH-7988-25W[®] experimental aphicide in water-soluble pouches

Producers: BASF Agricultural Products (Germany); Omya Agro (Switzerland)

Chemical Class: Unclassified

EPA/OPP PC Code: 128100

California DPR Chemical Code: 5517

Uses: Not registered in the U.S. Used to control root aphids on fir Christmas trees and apple trees.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Not likely a carcinogen

WHO Acute Hazard: Class II, moderately hazardous

Incompatibilities: May not be compatible with nitrates. Moisture may cause hydrolysis or other forms of decomposition.

Determination in Air: Ionization. NIOSH IV⁽¹⁸⁾ Method#1450, Esters

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, passing through the skin, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: May cause skin and severe eye irritation. Moderately poisonous if ingested or inhaled. Exposure to a triazine (simazine) has caused acute and subacute dermatitis in the former USSR, characterized by erythema, slight edema, moderate pruritus, and burning lasting 4 to 5 days.

Long Term Exposure: May cause lung irritation and damage. May cause skin allergy. Contact with some triazine compounds (such as atrazine) may increase risks for tumors known to be associated with hormonal factors. These have been observed in both animals and human beings, and are consistent with the known effects on the hypothalamic pituitary gonadal axis. Repeated exposure may cause weight loss and reduced red blood cell count. May be mutagenic.

Points of Attack: Liver, lungs, skin.

Medical Surveillance: Before beginning employment and at regular times after that, for those with frequent or potentially high exposures, the following is recommended: Lung function tests. Consider chest x-ray following acute

overexposure. Evaluation by a qualified allergist. Examination of the nervous system.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water or milk and induce vomiting. Do not make an unconscious person vomit.

Triazophos

Use Type: Insecticide

CAS Number: 24017-47-8

Formula: C₁₂H₁₆N₃O₃PS

Synonyms: *O, O*-Diethyl *O*-(1-phenyl-1H-1,2,4-triazol-3-yl) phosphorothioate; 1-Phenyl-3-(*O, O*-diethylthionophosphoryl)-1,2,4-triazole; 1-Phenyl-1,2,4-triazolyl-3-(*O, O*-diethylthionophosphate); Phosphorothioic acid, *O, O*-diethyl *O*-(1-phenyl-1H-1,2,4-triazol-3-yl) ester

Trade Names: HILAZPOPHOS[®], Hindustan Insecticides (India); HOE 2960 OJ[®]; HOE 002960[®]; HOSTATHION[®], AgrEvo (Germany), Bayer CropScience (Germany); SUTATHION[®], Sudarshan Chemical Industries (India)

Producers: Agsin (Singapore); AgrEvo (Germany), Bayer CropScience (Germany); Biesterfeld Siemsglueck International. GmbH (Germany); Gharda Chemicals (India); Hindustan Insecticides (India); Hunan Tianyu Pesticide Chemical Group (China); Sanonda Ltd. (Australia); Sanonda Zhengzhou Pesticide Co. Ltd. (China); Shenzhen Guomeng Industry Co., Ltd. (China); Sudarshan Chemical Industries (India)

Chemical Class: Organophosphate

EPA/OPP PC Code: 344600

California DPR Chemical Code: 3543

RTECS Number: TF5635000

Uses: Not registered in the U.S. Triazophos is a broad spectrum insecticide and acaricide used to control sucking and chewing pests on a variety of crops, including cotton, rice, corn, beets and fruit trees.

Carcinogen/Hazard Classifications

WHO Acute Hazard: Class 1b, highly hazardous

Regulatory Authority:

- EPCRA Section 302 Extremely Hazardous Substances: TPQ = 500 lb (227 kg)

- EPCRA Section 304 RQ: EHS, 1 lb (0.454 kg)
- DOT Inhalation Hazard Chemicals
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

Description: Tan, oily liquid. Slightly soluble in water; solubility = 40 mg/L @ 25°C. Molecular weight = 313.30.

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame ionization detection; NIOSH IV⁽¹⁸⁾, Method #5600, Organophosphorus Pesticides.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; dizziness; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; irritability; tingling of the skin; drowsiness; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Organophosphates inhibit the action of acetylcholinesterase enzymes, and alter the way in which nervous impulses are transmitted. The effects can last for hours, days, or much longer. The action of the enzymes is reestablished after new enzymes are formed.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Organophosphates may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, blood cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

First Aid: Eyes: Speed in removing material from skin is of extreme importance. Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin and/or eye contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting.* If conscious, alert, and able to swallow,

rinse mouth and have victim drink 4 to 8 ounces of water do NOT induce vomiting but immediately administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *unconscious or having convulsions*, do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Notes to physician or authorized medical personnel:* N-methylpyridinium-2-aldoxime (2-PAMCI) when used in conjunction with atropine reacts with the phosphorylated cholinesterase, thereby restoring normal activity to by removing the phosphorylating group. The combination of these two chemicals is synergistic and must be administered within minutes to a few hours following exposure (depending on the specific agent) to be effective. Give 2-PAMCI (Pralidoxime; Protopam), 2.5 gm in 100 ml of sterile water or in 5% dextrose and water, intravenously, slowly, in 15-30 minutes; if sufficient fluid is not available, give 1 gm of 2-PAMCI in 3 ml of distilled water by deep intramuscular injection; repeat this every half hour if respiration weakens or if muscle fasciculation or convulsions recur. Also Diazepam, an anticonvulsant, might be considered.

Tribufos

Use Type: Herbicide, defoliant, plant growth regulator

CAS Number: 78-48-8

Formula: C₁₂H₂₇OPS₃

Synonyms: A13-25812; Butyl phosphorotrithioate; Caswell No. 864; Fosforotritioato de S,S,S-tributilo (Spanish); Merphos-oxide; Phosphorotrithioic acid, S,S,S-tributyl ester; TBTP; Tribufos; S,S,S-Tributyl phosphorotrithioate; S,S,S-Tributyl trithiophosphate

Trade Names: B-1776[®]; BUTIFOS[®]; BUTIPHOS[®], canceled; CHEMAGRO[®] 1776; CHEMAGRO[®] B-1776; DE-GREEN[®]; DEF[®], Bayer CropScience (Germany); DEF DEFOLIANT[®], Bayer CropScience (Germany); DELEAF DEFOLIANT[®]; EASY OFF[®]-D; E-Z-OFF[®] D; FOLEX[®] 6EC, AMVAC Chemical (USA); FOS-FALL[®] A; ORTHO[®] phosphate defoliant

Producers: AMVAC Chemical (USA); Bayer CropScience (Germany); Cerexagri (France); Micro-Flo (USA)

Chemical Class: Organophosphate

EPA/OPP PC Code: 074801

California DPR Chemical Code: 190

RTECS Number: TG5425000

Uses: Tribufos is an organophosphate defoliant used for cotton crops. It is specifically used to defoliate cotton in preparation for machine harvesting. It was first registered in the United States in 1961. Tolerances for tribufos were revoked in July, 2002, because the specific tolerances are either no longer needed or are associated with food uses that are no longer registered in the United States.

Human toxicity (long-term)⁽⁷⁷⁾: High—1.46444 ppb, CHCL (Chronic Human Carcinogen Level)

Fish toxicity (threshold)⁽⁷⁷⁾: Intermediate—13.345590 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Likely carcinogen in high doses; not likely carcinogen in low doses.

Label Signal Word: CAUTION, WARNING or DANGER

Regulatory Authority:

- Actively registered pesticide in California.
- FIFRA, 180.3(5); class of cholinesterase-inhibiting pesticide
- DOT Inhalation Hazard Chemicals
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: Clear, colorless to light yellow liquid. Mercaptan-like odor. Insoluble in water. Molecular weight 314.54. Density = 1.06 @ 20°C. Boiling point = 150°C @ 0.3 @ mmHg. Melting/Freezing point = < -25°C. Vapor pressure = 1.6×10^{-6} mmHg @ 20°C. Log K_{ow} = 5.68. Values above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Alkaline materials.

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame ionization detection; NIOSH IV⁽¹⁸⁾; Method #5600, Organophosphorus Pesticides.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; dizziness; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; irritability; tingling of the skin; drowsiness; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Organophosphates inhibit the action of acetylcholinesterase enzymes, and alter the way in which nervous impulses are transmitted. The effects can last for hours, days, or much longer. The action of the enzymes is reestablished after new enzymes are formed.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Organophosphates may damage the

nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, blood cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

First Aid: Speed in removing material from skin is of extreme importance. **Eye:** Contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin and/or eye contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting.* If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water do NOT induce vomiting but immediately administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *unconscious or having convulsions*, do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. **Note to physician or authorized medical personnel.** Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear

to be obstructing the airway; intubate if necessary. *Notes to physician or authorized medical personnel:* N-methylpyridinium-2-aldoxime (2-PAMCI) when used in conjunction with atropine reacts with the phosphorylated cholinesterase, thereby restoring normal activity to by removing the phosphorylating group. The combination of these two chemicals is synergistic and must be administered within minutes to a few hours following exposure (depending on the specific agent) to be effective. Give 2-PAMCI (Pralidoxime; Protopam), 2.5 gm in 100 ml of sterile water or in 5% dextrose and water, intravenously, slowly, in 15-30 minutes; if sufficient fluid is not available, give 1 gm of 2-PAMCI in 3 ml of distilled water by deep intramuscular injection; repeat this every half hour if respiration weakens or if muscle fasciculation or convulsions recur. Also Diazepam, an anticonvulsant, might be considered.

Tributyltin Chloride

Use Type: Rodent repellent, antifoulant, and microbiocide

CAS Number: 1461-22-9

Formula: C₁₂H₂₇ClSn

Synonyms: Chlorotributylstannane; O,O-Dimethyl dithiobis(thioformate); Dimexan; Dimexano; Formic acid, dithiobis(thio-, O,O-dimethyl ester; Thioperoxydicarbonic acid [(HO)C(S)]₂S₂], dimethyl ester; Stannane, tributylchloro-; Tributylchlorostannane; Tri-*n*-butyltin chloride; Tri-*n*-butylzinn-chlorid (German)

Trade Names: BIOMET® 12 RODENT REPELLENT, Atofina Chemicals (USA), canceled 7/1/1987

Producers: Atofina Chemicals (USA)

Chemical Class: Organotin

EPA/OPP PC Code: 083107

California DPR Chemical Code: 1891

Uses: Tributyltin compounds have been registered as molluscicides, as antifoulants on boats, ships, quays, buoys, crabpots, fish nets, and cages, as wood preservatives, as slimicides on masonry, as disinfectants, and as biocides for cooling systems, power station cooling towers, pulp and paper mills, breweries, leather processing, and textile mills.

Carcinogen/Hazard Classifications

Label Signal Word: WARNING

Endocrine Disruptor: Known Endocrine Disruptor.

Regulatory Authority:

- Actively registered pesticide in California.
- Marine pollutant (49CFR, Subchapter 172.101, Appendix B) as tributyltin compounds
- The Food and Drug Administration (FDA) regulates the use of some organic tin compounds in coatings and plastic food packaging.

Incompatibilities: Violent reaction with oxidizers, barium, potassium, and sodium. When heated to decomposition or on contact with acids or acid fumes, may produce highly toxic chloride fumes; deadly phosgene gas may be formed. May cause pitting of some metals.

Permissible Exposure Limits in Air: OSHA/NIOSH, and ACGIH (1) TWA is 0.1 mg/m³ (for tin organic compounds) and ACGIH STEL is 0.2 mg/m³. The notation "skin" is added indicating the possibility of cutaneous absorption. The NIOSH⁽²⁾ IDLH level = 25 mg/m³ (as Sn).

Determination in Air: Filter/XAD-2® (tube); Acetic acid / CH₃CN; High-pressure liquid chromatography/Graphite furnace atomic absorption spectrometry; NIOSH IV⁽¹⁸⁾, Method #5504, Organotin compounds.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution. No criteria set, but EPA⁽³²⁾ has suggested a permissible ambient goal of 1.4 µg/L based on health effects.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes, skin, and respiratory tract. Contact may cause skin burns. Inhalation can cause coughing, wheezing and/or shortness of breath. Toxic hazard rating is high for oral, intravenous, intraperitoneal administration. This material causes swelling of the brain and spinal cord. Exposure may result in muscular weakness and paralysis, leading to respiratory failure, convulsive movements, closure of eyelids and sensitivity to light, headaches, and EEG changes, headache, dizziness, psychological and neurological disturbances, vertigo (an illusion of movement), sore throat, cough, abdominal pain, nausea, vomiting, diarrhea, urine retention, paresis, focal anesthesia, pruritus. Higher levels can cause unconsciousness, collapse and death.

Long Term Exposure: Repeated or prolonged contact can cause dermatitis; dry and cracked skin. May cause brain damage, hepatic necrosis; kidney damage.

Points of Attack: Skin, brain, kidneys.

Medical Surveillance: Tests to measure total tin and specific organotin compounds in blood, urine, feces, and body tissues. Normally, small amounts of tin can be found in the body because of the daily exposure to small amounts in the food. Therefore, the available tests cannot tell you when you were exposed or the exact amount of tin to which you were exposed, but can help determine if you were exposed to an unusually high amount of tin in the near past.

Kidney function tests. Psychological testing. Examination of the nervous system. EEG

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested.* Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Tributyltin Fluoride

Use Type: Fungicide, antifoulant, and microbiocide

CAS Number: 1983-10-4

Formula: C₁₂H₂₇FSn

Synonyms: Fluorotributylstannane; Stannane, tributylfluoro-; Tri-*n*-butyltin fluoride; Tributylflourostannane

Chemical Class: Organotin

EPA/OPP PC Code: 083112

California DPR Chemical Code: 1030

Uses: Not registered in the U.S. Most uses are for antifouling products for boat hulls, paints, fishing gear and other marine applications.

Regulatory Authority:

- Actively registered pesticide in California.
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- Marine pollutant (49CFR, Subchapter 172.101, Appendix B) as tributyltin compounds

Incompatibilities: Violent reaction with oxidizers, barium, potassium, and sodium.

Permissible Exposure Limits in Air: OSHA/NIOSH, and ACGIH (1) TWA is 0.1 mg/m³ (for tin organic compounds) and ACGIH STEL is 0.2 mg/m³. The notation "skin" is

added indicating the possibility of cutaneous absorption. The NIOSH⁽²⁾ IDLH level = 25 mg/m³ (as Sn).

Trichlorfon

Use Type: Insecticide

CAS Number: 52-68-6

Formula: C₄H₈Cl₃O₄P; (CH₃O)₂POCHOHCCl₃

Alert: Use of trichlorfon in the U.S. for food and feed applications was canceled in 1995.

Synonyms: Chlorophos; Chlorophthalm; Chloroxyphos; Clorofos (Russian); DETF; Dimethoxy-2,2,2-trichloro-1-hydroxy-ethylphosphine oxide; *O,O*-Dimethyl (1-hydroxy-2,2,2-trichloroethyl)phosphat (German); *O,O*-Dimethyl (1-hydroxy-2,2,2-trichloroethyl)phosphonsaeure ester (German); *O,O*-Dimethyl (1-hydroxy-2,2,2-trichloroethyl)phosphonate; Dimethyl 1-hydroxy-2,2,2-trichloroethylphosphonate; *O,O*-Dimethyl (2,2,2-trichloro-1-hydroxyethyl)phosphonate; Dimethyl (2,2,2-trichloro-1-hydroxyethyl)phosphonate; *O,O*-Dimethyl (2,2,2-trichloro-1-idrossi-etil)-fosfonato (Italian); ENT 19,763; Foschlorem (Polish); 1-Hydroxy-2,2,2-trichloroethylphosphonic acid dimethyl ester; Hypodermacid; Methyl chlorophos; Metifonate; Metrifonate; Metriphosphate; NCI-C54831; Phoschlor; Phosphonic acid, (2,2,2-trichloro-1-hydroxyethyl)-, dimethyl ester; Polfoschlor; Trichlorofon (Dutch); 2,2,2-Trichloro-1-hydroxyethyl-phosphonate, dimethyl ester; (2,2,2-Trichloro-1-hydroxyethyl)phosphonic acid dimethyl ester; Trichlorophene; Trichlorphon

(China); Sinon Corporation (Taiwan); Takeda Chemical Industries (Japan)

Chemical Class: Organophosphate

EPA/OPP PC Code: 057901

California DPR Chemical Code: 88

ICSC Number: 0585

RTECS Number: AO700000

EEC Number: 015-021-00-0

EINECS Number: 200-149-3

Uses: Trichlorfon has non-agriculture uses on golf course turf, home lawns and similar venues, and in non-food contact areas of food and meat processing plants. Also on ornamental shrubs and plants, and ornamental and bait fish ponds. Overseas, trichlorfon is used as cattle pour-on, which is classified as a food-use. It is used against insects such as lepidopteran larvae (caterpillars), white grubs, mole crickets, cattle lice, sod webworms, leaf miners, stink bugs, flies, ants, cockroaches, earwigs, crickets, diving beetles, water scavenger beetles, water boatman, backswimmers, water scorpions, giant water bugs and pillbugs. Use of all food and feed uses in the U.S. were voluntarily canceled November 21, 1995. It was used on Brussels sprouts, barley, beets, blueberries, beans (dry and snap), corn, field corn, popcorn, sweet corn, cotton, cow peas, lima beans, tomatoes, cabbage, carrots (including tops), cauliflower, collards, cowpeas, southern peas, black-eyed peas, crowder peas, pumpkins, collards, lettuce and alfalfa, cotton, peanuts, peppers, pumpkins, tobacco, soybeans and treatment to manure.

Human toxicity (long-term)⁽⁷⁷⁾: Intermediate–14.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Intermediate–24.99773 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Trichlorfon (40 CFR 180.198): The Maximum Residue levels for cattle fat, cattle meat, and cattle meat byproducts (mbyp) are 0.1 ppm.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Likely carcinogen in high doses; Unlikely carcinogen in low doses

IARC: Group 3, unclassifiable

Label Signal Word: WARNING or CAUTION

WHO Acute Hazard: Class II, moderately hazardous

Regulatory Authority:

- Air Pollutant Standard Set (former USSR)^(35, 43)

- AB 2588-Air Toxics “Hot Spots” Chemicals (CAL)
- The “Director’s List” (CAL/OSHA)
- Actively registered pesticide in California
- Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below)
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 100 lb (45.4 kg)
- Dropped from Extremely Hazardous Substance (EPA-SARA) in 1988
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- U.S. DOT Inhalation Hazard Chemicals as organophosphates
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

Description: White to pale yellow crystalline solid. Ethyl ether odor. Slightly soluble in water; rapid hydrolysis. Molecular weight = 257.42. Boiling point = 100°C @ 1mmHg. Melting/Freezing point = 83–84°C. Vapor Pressure = 7.6×10^{-6} mbar @ 20°C. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 1, Reactivity 0.

Incompatibilities: Alkaline materials, e.g., lime, lime sulfur, etc. Corrosive to iron and steel.

Permissible Exposure Limits in Air: The former USSR^(35, 43) has set an MAC in workplace air of 0.5 mg/m³ and in ambient air in residential areas of 0.04 mg/m³ on a momentary basis and 0.02 mg/m³ on a daily average basis.

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH Method IV Method #5600, Organophosphorus pesticides.⁽¹⁸⁾

Permissible Concentration in Water: The former USSR^(35, 43) has set an MAC in water bodies used for domestic purposes of 0.05 mg/L and in water bodies used for fishery purposes of zero.

Routes of Entry: Inhalation, ingestion and skin contact.

Harmful Effects and Symptoms

Short Term Exposure: Very toxic. Probable oral lethal dose (human) 50-500 mg/kg, between 1 teaspoon and 1 ounce for 150 lb (70 kg) person. Toxicity relatively low among organophosphate insecticides, although a potent cholinesterase inhibitor. Skin sensitivity has been reported. Symptoms of exposure: muscle weakness, twitching, respiratory depression, sweating, vomiting, diarrhea, chest and abdominal distress, sometimes pulmonary edema, excessive salivation, headache, giddiness, vertigo and weakness, runny nose and sensation of tightness in chest (inhalation), blurring of vision, tearing, ocular pain, loss of muscle coordination, and slurring of speech. Delayed pulmonary edema may occur after inhalation.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of “normal.” Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. **Ingestion:** Call poison control. Loosen all

clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary

to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Trichlorobenzoic Acid

Use Type: Herbicide

CAS Number: 50-31-7

Formula: C₇H₃Cl₃O₂

Synonyms: NCI-C60242; NSC 21914; 2,3,6-TBA; 2,3,6-TCB; 2,3,6-TCBA; 2,3,6-TrCB acid; 2,3,6-Trichlorbenzoesaure (German); 2,3,6-Trichlorobenzoic acid

Trade Names: BENZABAR[®]; BENZAC[®]; BENZOBOR[®], U.S. Borax (USA), canceled; FEN-ALL[®]; HC 1281[®]; T-2[®]; TRIBAC[®]; TRYBEN[®]; TRYSBEN 200[®]; UREABOR[®], U.S. Borax (USA), canceled; ZOBAR[®], DuPont (USA)

Producers: DuPont (USA); U.S. Borax (USA)

Chemical Class: Organochlorine

EPA/OPP PC Code: 017302

California DPR Chemical Code: 602

Uses: Not registered in the U.S.

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION

WHO Acute Hazard: Class III, slightly hazardous

Regulatory Authority:

- FIFRA, 180.3(4); class of chlorinated organic pesticide.

Incompatibilities: Keep away from oxidizers, sulfuric acid, caustics, ammonia, aliphatic amines, alkanolamines, isocyanates, alkylene oxides, epichlorohydrin. When heated to decomposition this material forms toxic fumes of chlorine.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion. Absorbed through the intact skin.

Harmful Effects and Symptoms

Short Term Exposure: Symptoms include apprehension, anxiety, confusion, nervous excitation, dizziness, headache, numbness and weakness in limbs, muscle twitching, tremors, nausea and vomiting, slow, shallow respiration, bluish face, convulsions, loss of consciousness, breathing stops, death.

Long Term Exposure:

Points of Attack: CNS. May be fatal if inhaled, ingested, or absorbed through the skin

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

First Aid: Eyes: Speed in removing material from skin is of extreme importance. Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Directly, irrigate with large amounts of plain, tepid water or saline for 20 minutes, occasionally lifting the lower and upper lids. During this time, remove contact lenses, if easily removable without additional trauma to the eye. Get medical aid immediately. Have physician check for possible delayed damage. **Skin:** Get medical aid. Skin and/or eye contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organochlorine pesticides, immediately flush exposed skin, hair, and under nails with plain, running, tepid water for 20 minutes, then wash twice with mild soap. Shampoo hair promptly if contaminated; protect eyes. **Do not scrub skin or hair**, since this can increase absorption through the skin. Rinse thoroughly with water. Victims who are able and cooperative may assist with their own decontamination. Remove and double-bag contaminated clothing and personal belongings. Leather absorbs many organochlorines; therefore, items such as leather shoes, gloves, and belts should be discarded. If the skin is swollen or inflamed, cool affected areas with cold compresses. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. *Do not induce vomiting.** In cases of ingestion, the patient is at risk of CNS depression or seizures, which may lead to pulmonary aspiration during vomiting. If the victim is conscious and

able to swallow, *administer an aqueous slurry of activated charcoal at 1 gm/kg (usual adult dose 60–90 g, child dose 25–50 g). A soda can and straw may be of assistance when offering charcoal to a child. The efficacy of activated charcoal for some organochlorine poisoning (such as chlordane) is uncertain. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. *In some cases you may be specifically instructed by Poison Control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water. Do not give activated charcoal before or with ipecac syrup.* **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organochlorine pesticides, immediately remove the victim from the contaminated area to fresh air. For inhalation exposures, monitor for respiratory distress. If the victim is not breathing, administer artificial respiration. *Do not use mouth-to-mouth resuscitation; use bag/mask apparatus.* If cough or breathing difficulty develops, evaluate for respiratory tract irritation, bronchitis, or pneumonitis. If breathing is difficult, administer 100% humidified supplemental oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended.

Trichloronate

Use Type: Insecticide

CAS Number: 327-98-0

Formula: $C_{10}H_{12}Cl_3O_2PS$; $C_6H_2(Cl_3)-O-P(S)(CH_2CH_3)OCH_2CH_3$

Synonyms: *O*-Aethyl-*O*-(2,4,5-trichlorophenyl)-aethylthionophosphonat (German); ENT 25,712; *O*-Ethyl-*O*-2,4,5-trichlorophenyl ethyl-phosphonothioate; Ethyl trichlorophenylethylphosphonothioate; Phosphonothioic acid, ethyl-, *O*-ethyl *O*-(2,4,5-trichlorophenyl) ester; Trichloronat; 2,4,5-Trichlorophenol-*O*-ester with *O*-ethyl ethylphosphonothioate

Trade Names: AGRISIL[®]; AGRITOX[®]; BAY[®] 37289, Bayer CropScience (Germany); BAYER[®] 37289, Bayer CropScience (Germany); BAYER S[®] 4400, Bayer CropScience (Germany); CHEMAGRO[®] 37289; FENOPHOSPHON[®]; FITOSOL[®]; PHYTOSOL[®]; RICHLORONATE[®]; STAUFFER[®]N-3049; WIRKSTOFF[®] 37289

Producers: Bayer CropScience (Germany); Ehrenstorfer, Dr. (Germany)

Chemical Class: Organophosphate

EPA/OPP PC Code: 456200

California DPR Chemical Code: 5001

RTECS Number: TB0700000

EINECS Number: 206-326-1

Uses: This is a non-systemic, organophosphate insecticide which is used for the control of soil insects. It is particularly harmful to honey bees. There are no registered products in the U.S.

Fish toxicity (threshold)⁽⁷⁷⁾: Intermediate–14.47908 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority:

- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 500 lb (227kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)
- AB 1803-Well Monitoring Chemical (CAL)
- The “Director’s List” (CAL/OSHA) as a trichlorophenol
- U.S. DOT Inhalation Hazard Chemicals as organophosphates
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B) as trichloronate

Description: Yellow to amber liquid. Practically insoluble in water; solubility = 50ppm @ 20°C. Molecular weight = 333.59. Boiling point = 108°C @ 0.012 mbar. Vapor pressure = 1.7×10^{-5} mbar @ 20°C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0.

Incompatibilities: Strong bases.

Permissible Exposure Limits in Air: No standards set.

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH Method IV Method #5600, Organophosphorus pesticides.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, skin absorption, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Toxic effects are due to action on the nervous system. It has high oral toxicity and death can occur in acute poisonings. Delayed neurotoxicity has been reported. Symptoms of exposure include headache, dizziness, nausea, salivation, vomiting, abdominal pain, diarrhea, chest pain, decreased heart rate, excessive discharge of mucous from the air passages, difficult breathing, contraction of the pupil, blurred vision, profuse perspiration, muscle twitching and spasms, profound weakness, psychotic behavior, uncoordination, unconsciousness, rarely convulsions. Low level absorption syndrome is similar to influenza. High dosage may cause toxic psychosis similar to alcoholism. Exposures may be misdiagnosed as asthma and heart failure. Organic phosphorus insecticides are absorbed by the skin, as well as by the respiratory and gastrointestinal tracts. They are cholinesterase inhibitors. Symptoms of exposure include headache, giddiness, blurred vision, nervousness, weakness, nausea, cramps, diarrhea, and discomfort in the chest. Signs include sweating, tearing, salivation, vomiting, cyanosis, convulsions, coma, loss of reflexes and loss of sphincter

control. Delayed pulmonary edema may occur after inhalation.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of “normal.” Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim

from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered

intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Trichlorophenols

Use Type: Defoliant, fungicide and algicide

CAS Number: 25167-82-2 (mixed isomers); 15950-66-0 (2,3,4-); 933-78-8 (2,3,5-); 933-75-5 (2,3,6-); 95-95-4 (2,4,5-); 88-06-2 (2,4,6-); 609-19-8 (3,4,5-)

Formula: C₆H₃Cl₃O; HOC₆H₂Cl₃

Alert: 2,4,6-Trichlorophenol is a carcinogen and should be handled with extreme caution. No pesticide uses are registered in the U.S.

Synonyms: 25167-82-2: Phenol, trichloro-; Trichlorofenol (Czech, Spanish); Triclorofenol

15950-66-0: Phenol, 2,3,4-trichloro-; 2,3,4-Trichlorofenol (Czech, Spanish); 2,3,4-Trichlorophenol; Trichlorophenol, 2,3,4-

933-78-8: Phenol, 2,3,5-trichloro-; 2,3,5-Trichlorofenol (Czech, Spanish); 2,3,5-Trichlorophenol; Trichlorophenol, 2,3,5-

933-75-5: Phenol, 2,3,6-trichloro-; 2,3,6-Trichlorofenol (Czech, Spanish); 2,3,6-Trichlorophenol; Trichlorophenol, 2,3,6-

88-06-2: NCI-CO2904; Phenachlor; phenol, 2,4,6-Trichloro-; 2,4,6-Trichlorofenol (Czech, Spanish); 2,4,6-Trichlorophenol; Trichlorophenol, 2,4,6-; 1,3,5-Trichloro-2-hydroxybenzene

609-19-8: Phenol, 3,4,5-trichloro-; 3,4,5-Trichlorophenol (Czech, Spanish); 3,4,5-Trichlorophenol; Trichlorophenol, 3,4,5-

Trade Names: 25167-82-2: OMAL[®]; 88-06-2: DOWICIDE 2S[®], Dow AgroSciences (USA); OMAL[®]; 95-95-4: PREVENTOL 1[®], Bayer CropScience (Germany)

Producers: Coalite Chemicals (UK); Dow AgroSciences (USA); Ehrenstorfer, Dr. (Germany); Excel Industries (India); Fluorochem (UK); Nippon Kayaku (Japan); Rhodia (France)

Chemical Class: Chlorinated phenols

EPA/OPPP Code: 064210 (2,4,5-isomer); 064212 (2,4,6-isomer)

California DPR Chemical Code: 1189 (Trichlorophenols); 1382 (2,4,5-isomer); 640 (2,4,6-isomer)

ICSC Number: 0879 (2,4,5-isomer); 1122 (2,4,6-isomer)

RTECS Number: SN1400000 (2,4,5-isomer); SN1575000 (2,4,6-isomer); SN1650000 (3,4,5-isomer); SN1300000 (2,3,6-isomer)

EEC Number: 604-017-00-X (2,4,5-isomer); 604-012-00-2 (2,4,6-isomer)

EINECS Number: 202-467-8 (2,4,5-isomer)

Uses: 2,4,5-TCP is used to produce defoliant 2,4,5-T and related products. Also used directly as a fungicide, anti-mildew and preservative agent, algicide, bactericide. 2,4,6-TCP is used to produce 2,3,4,6-TCP and PCP. Used directly as germicide, bactericide, glue and wood preservative, and anti-mildew treatment. No pesticide uses are registered in the U.S.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group B2, probable carcinogen (2,4,6-isomer)

U.S. NTP Carcinogen: Reasonably anticipated carcinogen (2,4,6-isomer)

California Prop. 65: Listed (2,4,6-isomer)

IARC: Group 2B, possible carcinogen (2,4,5-isomer; 2,4,6-isomer) *Note:* In animal studies, one chlorophenol, 2,4,6-trichlorophenol, caused leukemia in rats and liver cancer in mice. The Department of Health and Human Services has determined that 2,4,6-trichlorophenol may reasonably be anticipated to be a carcinogen.

Regulatory Authority:

Description: Trichlorophenols exists as 6 isomers (2,4,5-; 3,4,5-; 2,4,6-; 2,3,4-; 2,3,5-, and 2,3,6-). The most important (heavily regulated) are the 2,4,5- and 2,4,6-isomers. The 2,4,5-isomer is white powder or needles; the 2,3,5- and 2,3,6-isomers are colorless crystals; the 2,4,5-

isomer is a grey crystalline solid or flakes; the 2,4,6-*isomer* is a colorless to light yellow crystalline solid. They have a phenolic odor. Boiling point = 248–253°C (2,3,5-*isomer*); 253°C (2,3,6-*isomer*); 253°C (2,4,5-*isomer*); 246°C (2,4,6-*isomer*). Melting/Freezing point = 84°C (2,3,4-*isomer*); 62°C (2,3,5-*isomer*); 58°C (2,3,6-*isomer*); 67°C (2,4,5-*isomer*); 70°C (2,4,6-*isomer*). Flash point = 78°C (2,3,6-*isomer*); 99°C (2,4,6-*isomer*). Hazard Identification (based on NFPA-704 M Rating System): [2,4,6-*isomer*] Health 2, Flammability 1, Reactivity 0. All isomers are slightly soluble or practically insoluble in water. Log K_{ow} = 4.6. (3,4,5-*isomer*); 3.6 (2,3,6-*isomer*); 3.7 (2,4,5-*isomer*); 3.9 (2,4,6-*isomer*). Values above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Perhaps the most notable incompatibility is the reaction of 2,4,5-trichlorophenol in alkaline medium at high temperatures to produce dioxin. (2,3,4-*isomer*) reacts with oxidizers, acid anhydrides, and acid chlorides. (2,3,5-*isomer*) Decomposes on heating, on burning and on contact with strong oxidants producing toxic and corrosive fumes of hydrogen chloride. The substance is a weak acid. (2,3,6-*isomer*) The substance is a weak acid. pH= 4.8/4.2. (2,4,6-*isomer*) Reacts violently with strong oxidants and is incompatible with acid chlorides and acid anhydrides.

Permissible Exposure Limits in Air: Sweden⁽⁵⁵⁾ has set an MAC in workplace air of 0.5 mg/m³ and an STEL of 1.5 mg/m³. The former USSR⁽⁵⁵⁾ has set a MAC in ambient air in residential areas of 3.0 µg/m³ for the 2,4,6-*isomer* on a once-daily basis. Some states have set guidelines or standards for the trichlorophenols in ambient air⁽⁶⁰⁾. Massachusetts has set zero for the 2,4,6-*isomer* and 1.6 µg/m³ for the 2,4,5-*isomer*. Pennsylvania has set 3,500 µg/m³ for the 2,4,5-*isomer* on a one-year exposure basis.

Determination in Air: Use NIOSH: (*o*-chlorophenol) P&CAM Method #337, Chlorophenols.⁽¹⁸⁾

Permissible Concentration in Water: For 2,4,6-trichlorophenol, to protect freshwater aquatic life, 970 µg/L on a chronic toxicity basis. To protect saltwater aquatic life—no criteria developed due to insufficient data. To protect human health, for 2,4,5-TCP, 2,600 µg/L; for 2,4,6-TCP, preferably zero. An additional lifetime cancer risk of 1 in 100,000 occurs at a level of 12 µg/L. These are based on organoleptic effects. A limit based on toxicological effects for 2,4,5-TCP would be 1,600 µg/L⁽⁶⁾. Kansas⁽⁶¹⁾ has set a guideline for the 2,4,5-*isomer* in drinking water of 1.0 µg/L. Values for the 2,4,6-*isomer* have been set by Kansas at 17.0 µg/L, by Minnesota at 17.5 µg/L and by Maine at 700.0 µg/L. The WHO⁽⁵⁵⁾ has set a limit for the 2,4,6-*isomer* in drinking water of 10.0 µg/L. EPA recommends that drinking water contain no more than 0.04 mg/L of 2-chlorophenol for a lifetime exposure for an adult, and 0.05 mg/L for a 1-day, 10-day, or longer exposure for a child. For 2,4-dichlorophenol, EPA recommends that drinking water contain no more than 0.03 mg/L for a 1-day, 10-day, or longer exposure for a child.

Determination in Water: Methylene chloride extraction followed by gas chromatography with flame ionization or electron capture detection (EPA Method 604) or gas chromatography plus mass spectrometry (EPA Method 625).

Routes of Entry: Inhalation, ingestion, skin and/or eye contact. May be absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Trichlorophenols irritate the eyes, the skin and the respiratory tract. A central nervous system depressant. High exposures can cause weakness, difficulty in breathing, tremors, convulsions, coma, and possible death. See also chlorophenols. (2,3,5-*isomer*) A mixture of trichlorophenols may cause irritation of the skin, eyes and respiratory tract. These substances may cause acute metabolic effects resulting in damage in several organs notably the CNS. Some technical products may contain highly toxic impurities including polychlorinated dibenzo-*p*-dioxins and -furans. (2,4,5-*isomer*)⁽⁵²⁾: Irritation of the skin, eyes, nose, and pharynx, redness and edema of the skin, dermatitis, corneal injury, iritis, sweating, thirst, nausea, vomiting, diarrhea, abdominal pain, cyanosis, hyperactivity, stupor, decreased activity and motor weakness, increase followed by decrease in respiratory rate and urinary output, fever, increased bowel action, lung, liver or kidney damage, convulsions, collapse, and coma.

Long Term Exposure: Repeated or prolonged contact with skin may cause dermatitis; drying and cracking. May affect the liver and kidneys. A related chemical, *phenol*, can cause liver and kidney damage. May be carcinogenic to humans. If any of the trichlorophenols is contaminated with 2,3,7,8-tetrachlorodibenzo-*p*-dioxin, the following effects may occur: acne-like skin rash, liver damage, nervous system damage with symptoms of weakness, pain in the legs, and numbness. Chlorophenols leave the body quickly, so they are not likely to accumulate in the mother's tissues or breast milk. There are no human studies on the effects of chlorophenols on developing fetuses. Studies in rats showed that chlorophenols can pass through the placenta and produce toxic effects to the developing fetuses. The most common problems in children are delayed hardening of the bones of the breastbone, spine, and skull.

Points of Attack: Cancer site in animals (2,4,6-*isomer*): liver and leukemia.

Medical Surveillance: Liver and kidney function tests. Complete blood count.

First Aid: Skin Contact: Flood all areas of body that have contacted the substance with water. Don't wait to remove contaminated clothing; do it under the water stream. Use soap to help assure removal. Isolate contaminated clothing when removed to prevent contact by others. **Eye Contact:** Remove any contact lenses at once. Immediately flush eyes well with copious quantities of water or normal saline for at least 20 to 30 minutes. Seek medical attention. **Inhalation:** Leave contaminated area immediately; breathe fresh air.

Proper respiratory protection must be supplied to any rescuers. If coughing, difficult breathing or any other symptoms develop, seek medical attention at once, even if symptoms develop many hours after exposure. *Ingestion:* If unconscious or convulsing, do not induce vomiting or give anything by mouth. Assure that victim's airway is open and lay him on his side with his head lower than his body and transport at once to a medical facility. If conscious and not convulsing, give a slurry of activated charcoal in water. If medical advice is not readily available, do not induce vomiting, and rush the victim to the nearest medical facility.

2,4,5-Trichlorophenoxyacetic Acid, Esters

Use Type: Herbicide, defoliant, plant growth stimulant

CAS Number: 93-76-5; 93-78-7 (isopropyl ester); 93-79-8 (butyl ester); 1928-47-8 (ethylhexyl ester); 2545-59-7 (butoxyethyl ester); 25168-15-4 (isooctyl ester); 61792-07-2 (propyl ester)

Formula: C₈H₅Cl₃O₃; C₁₁H₁₁Cl₃O₃ (isopropyl ester); C₁₂H₁₃Cl₃O₃ (butyl ester); C₁₄H₁₇Cl₃O₄ (butoxyethyl ester); C₁₆H₂₁Cl₃O₃ (isooctyl ester)

Alert: 2,4,5-T, when combined with 2,4-D, is the chemical known as *Agent Orange* which received notoriety after it was extensively used as a defoliant in the Vietnam war. It is a plant growth stimulant, closely related to a number of other herbicides such as 2,4-D and MCPA, which cannot be metabolized by plants. When applied in high concentrations they cause uncontrollable and grossly distorted growth.

Synonyms: 93-76-5: Phenoxyacetic acid, 2,4,5-trichloro-; 2,4,5-Trichlorophenoxyacetic acid

93-78-7: 2,4,5-Trichlorophenoxyacetic acid, isopropyl ester; Isopropyl 2,4,5-trichlorophenoxyacetate; Acetic acid, (2,4,5-trichlorophenoxy)-, isopropyl ester; 2,4,5-T, isopropyl ester

93-79-8: Acetic acid, (2,4,5-T)-, butyl ester; Acetic acid, (2,4,5-trichlorophenoxy)-, butyl ester; Butyl-2,4,5-T; Butylate-2,4,5-T; Butyl 2,4,5-trichlorophenoxyacetate; *n*-Butyl(2,4,5-trichlorophenoxy)acetate; 2,4,5-T-*n*-Butyl ester; 2,4,5-Trichlorophenoxyacetic acid, butyl ester

1928-47-8: Acetic acid, (2,4,5-trichlorophenoxy)-, 2-ethylhexyl ester; Ethylhexyl-2,4,5-T; 2,4,5-T Ethylhexyl ester; 2-Ethylhexyl 2,4,5-trichlorophenoxyacetate; 2,4,5-Trichlorophenoxyacetic acid, 2-ethylhexyl ester

2545-59-7: Acetic acid, (2,4,5-trichlorophenoxy)-, 2-butoxyethyl ester; Butoxyethyl 2,4,5-T; Butoxyethyl 2,4,5-trichlorophenoxyacetate; Butoxyethanol 2,4,5-trichlorophenoxyacetate; 2,4,5-T Butoxyethyl ester; 2,4,5-Trichlorophenoxyacetic acid, butoxyethanol ester (25168-15-4) Acetic acid, (2,4,5-trichlorophenoxy)-, isooctyl ester; 2,4,5-Isooctyl ester; Isooctyl 2,4,5-trichlorophenoxyacetate; 2,4,5-Trichlorophenoxyacetic acid, isooctyl ester

61792-07-2: Acetic acid, (2,4,5-trichlorophenoxy)-, 1-methyl propyl ester

Trade Names: ARBORICID® (butyl ester); BCF-BUSHKILLER®; BLADEx-H® (butoxyethyl ester); BRUSH RHAP®; BRUSH-OFF® 445 mild volatile brush killer; BRUSH TOX®; DACAMINE®; DEBROUSSAILLANT® CONCENTRE (French); DEBROUSSAILLANT® SUPER-CONCENTRE (French); DECAMINE-4T®; DED-WEED® LV-6 BRUSH KIL; DED-WEED® T-5 BRUSH KIL; DED-WEED® BRUSH KILLER; DINOXOL®; ENVERT-T®; ESTERCIDE® T-2; ESTERCIDE® T-245; ESTERON® 245 BE; ESTERON® BRUSH KILLER; FARMCO FENCE RIDER®; FLOMORE® (butyl ester); FORRON®; FORST® U 46; FORTEX®; FRUITONE®-A; HORMOSLYR® 500T (butoxyethyl ester); INVERTON® 245; KILEX®-3 (butyl ester); KRZEWOTOKS® (butyl ester); LINE RIDER®, LO VOL®, PHORTOX®, REDDON®, REDDOX®, SPONTOX®, SUPER D WEEDONE®, TIPPON®, TORMONA®, TORMONA® (butyl ester); TRANSAMINE®, TRIBUTON®, TRINOXOL®, TRIOXON®, TRIOXONE®, TRIOXONE® (butyl ester); U 46®, U 46T® (isooctyl ester); U46KW® (butyl ester); VEON® 245; VERTON® 2T; VISKO RHAP® low volatile ester; WEEDAR®, WEEDONE®

Producers: Agrilience (USA); Dow Chemical (USA); Bayer CropScience (Germany); Occidental Chemical (USA);

Chemical Class: Chlorophenoxy

EPA/OPP PC Code: 082001; 082056 (butyl ester); 082066 (isopropyl ester); 082063 (isooctyl ester); 082053 (butoxy ethanol ester) (082072 use code No. 082053)

California DPR Chemical Code: 639

ICSC Number: 0075

RTECS Number: AJ8400000; AJ8485000 (butyl ester)

EEC Number: 607-041-00-9

Uses: Use of 2,4,5-T in the United States has been canceled since 1985. Some or all applications may be classified by the U.S. EPA as Restricted Use Pesticides (RUP). Used as a herbicide around industrial and residential sites, lumber yards, and vacant lots, range land, aquatic sites, turf, and food crops. Has been used as a growth regulator to increase size of citrus fruits and reduce drop of deciduous fruit.

Human toxicity (long-term)⁽⁷⁷⁾: (CAS: 93-76-5) Low–70.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: (CAS: 93-76-5) Very low–79154.36150 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

California Prop. 65: Carcinogen

IARC: Group 2B, possible carcinogen

Endocrine Disruptor: Known ED

Regulatory Authority:

- AB 2588-Air Toxics “Hot Spots” Chemicals (CAL) as chlorophenoxy pesticides
- The “Director’s List” (CAL/OSHA) as chlorophenoxy pesticides
- Clean Water Act: Section 311 Hazardous Substances/RQ (same as CERCLA)
- EPA Hazardous Waste Number (RCRA No.): F027; U232
- EPCRA Section 304 RQ: CERCLA, 1000 lb (454 kg)

Description: Colorless to tan crystalline solid. Odorless. Slightly soluble in water; solubility = 265 mg/L @ 25°C. Melting/Freezing point = 154–158°C. Vapor pressure = < 1 x 10⁻⁷ mm.Hg; < 0.01 mPa @ 20°C. Log K_{ow} = 3.95. Values above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: The aqueous solution is a weak acid. Incompatible with sulfuric acid, bases, ammonia, aliphatic amines, alkanolamines, isocyanates, alkylene oxides, epichlorohydrin; oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc). May not be compatible with nitrates. Moisture may cause hydrolysis or other forms of decomposition. When heated to decomposition, this material forms toxic fumes of chlorine.

Permissible Exposure Limits in Air: The OSHA/NIOSH TWA (58), and the ACGIH TWA value is 10 mg/m³. The NIOSH⁽²⁾ IDLH level = 250 mg/m³.

Determination in Air: Filter; Methanol; High-pressure liquid chromatography/Ultraviolet detection; NIOSH IV⁽¹⁸⁾, Method #5001.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution. The U.S. EPA (see reference below) has set a lifetime health advisory of 21.0 µg/L.

Determination in Water: Liquid extraction and gas chromatography (See EPA reference below)

Routes of Entry: Inhalation, ingestion, skin and/or eye contact. Absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Poisonous; may be fatal if inhaled, swallowed, or absorbed through skin. Severely irritates eyes, skin and respiratory tract, with burning sensation, pain, redness and swelling. Metabolic stimulant. If inhaled, causes coughing, dilated pupils, headache, profuse perspiration, intense thirst, extreme fatigue, rapid pulse, high fever, clammy, flushed skin, rapid breathing, nausea, vomiting, cyanosis (bluish tint to skin and lips), anxiety and confusion, convulsions, risk of lung edema. If swallowed, face and lips turn bluish. Liver injury with associated jaundice, kidney failure, and cardiac arrhythmias are commonly noted. Nerve damage, which may be delayed, may include swelling of legs and feet, muscle twitch and stupor. Severe exposure can cause death from heart failure. Dust or liquid left in contact with the skin for several hours may be absorbed. This may result in severe delayed symptoms as listed above. These symptoms may last for months or years. **Skin:** Reddening and itching may develop. absorption is slow, but may contribute significantly to total exposure. **Eyes:** Irritation may develop. **Ingestion:** 350 mg (0.01 ounce) produces only a metallic taste in the mouth, lasting about 2 hours. Approximate 4 teaspoonfuls (150 lb man) may cause weakness, tiredness, loss of appetite, diarrhea, heart problems, heart failure, and death. **Note:** Reported effects of 2,4,5-T are due to accidental exposures, often at unknown levels or duration. In addition, 2,4,5-T may be contaminated with very small amounts of another more toxic compound 2,3,7,8-Tetrachlorodibenzo-*p*-dioxin (TCDD, Dioxin)*. Therefore, some of the symptoms off exposure to 2,4,5,-T may be due to contaminants. * Said to be the most toxic, chlorine-containing compound.

Long Term Exposure: Levels above the standard may produce skin irritation, acne-like skin sores, loss of skin coloration in small patches, GI tract ulcer, and nerve disorders resulting in difficulty controlling muscles. Animal studies also indicate the possibility of an increased susceptibility to infection. Changes in generic material and birth defects have been reported in laboratory studies and may be due to 2,4,5-T or its contaminant. Whether these effects are produced in humans is unknown. In animals: ataxia, skin irritation, acne-like rash, liver damage.

Points of Attack: If symptoms develop or overexposure is suspected, liver or kidney function tests may be useful. Liver function tests. Test gastrointestinal tract.

Medical Surveillance: If symptoms develop or overexposure is suspected, liver or kidney function tests may be useful. Liver function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure,

begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested.* Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit. *Note to Physician:* If ingested, remove by lavage or vomiting. Use general supportive measures for CNS depression. Consider the use of quinidine for myotonia.

Triclocarban

Use Type: Fungicide and antiseptic

CAS Number: 101-20-2

Formula: C₁₃H₆Cl₃N₂O

Synonyms: *N*-(4-Chlorophenyl)-*N'*-(3,4-dichlorophenyl)urea; *N*-(3,4-Dichlorophenyl)-*N'*-(4-chlorophenyl)urea; ENT 26,925; NSC-72005; TCC; Trichlorocarbanilide; 3,4,4'-Trichlorocarbanilide; 3,4,4'-Trichlorodiphenylurea; Urea, *N*-(4-chlorophenyl)-*N'*-(3,4-dichlorophenyl)-(9CI)

Trade Names: CUSITER[®]; CUTISAN[®]; GENOFACE[®]; NOBACTER[®]; PROCUTENE[®]; SOLUBACTER[®]

Chemical Class: Anilide

EPA/OPP PC Code: 027901

California DPR Chemical Code: 844

Uses: Not registered in the U.S. Triclocarban is used as an anti-bacterial and anti-fungal agent in disinfectants, shampoos, shower cream, cosmetics, soaps, and other household products. It is used to kill bacteria and many other diseases.

Regulatory Authority:

- Actively registered pesticide in California.

Description: White crystals or powder. Molecular weight = 315.60. Melting point = 250-256°C.

Incompatibilities: When heated to decomposition this material forms toxic oxides of nitrogen and fumes of chlorine.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large

quantities of water and induce vomiting. Do not make an unconscious person vomit.

Triclopyr (ANSI)

Use Type: Herbicide

CAS Number: 55335-06-3

Formula: C₇H₄Cl₃NO₃

Alert: Some products may be classified as Restricted Use Pesticides (RUP)

Synonyms: Acetic acid, [(3,5,6-trichloro-2-pyridinyl)oxy]-; Triclopyr, triethylamine salt; 3,5,6-Trichloro-2-pyridinyloxyacetic acid

Trade Names: [*Note:* See the following record, Triclopyr, triethylamine salt, for trade names containing the salt of triclopyr] ACCESS[®]; CROSSBOW[®], (triclopyr + 2,4-D ester), Dow AgroSciences (USA); ET[®]; GARLON[®], Dow AgroSciences (USA); GRAZON[®]; PATHFINDER[®]; REDEEM[®], Dow AgroSciences (USA); RELY[®]; REMEDY[®]; RIVERDALE TAHOE[®] Nufarm (Australia); TURFLON[®], Dow AgroSciences (USA)

Producers: Dow AgroSciences (USA); Gharda Chemicals (India); Micro-Flo (USA); Nufarm (Australia)

Chemical Class: Chloropyridinyl; pyridine compound

EPA/OPP PC Code: 116001

Uses: Triclopyr is a systemic herbicide used on rice, range land and pasture, rights-of-way, forestry and grasslands, including home lawns, for control of broadleaf weeds and woody plants. Triclopyr is usually available as a triclopyr butoxyethyl ester (BEE) or as a triclopyr triethylamine salt (TEA).

Human toxicity (long-term)⁽⁷⁷⁾: Very low–350.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Very low–23713.98000 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group D, unclassifiable, ambiguous data

Label Signal Word: CAUTION, DANGER

WHO Acute Hazard: Class III, slightly hazardous

Regulatory Authority:

- Actively registered pesticide in California.

Description: White to colorless, feathery solid. Molecular weight = 256.48. Soluble in water; solubility = 440 mg/L @ 24°C. Melting/Freezing point = 148–150°C. Boiling point = decomposes @ 290°C. Vapor pressure = 1.26 x 10⁻⁶ mmHg @ 25°C.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least

15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Triclosan

Use Type: Microbiocide, pesticide

CAS Number: 3380-34-5

Formula: C₁₂H₇Cl₃O₂

Synonyms: 5-Chloro-2-(2,4-dichlorophenoxy)phenol; 5-Chloro-2-(2,4-dichlorophenoxyphenol); 2'-Hydroxy-2,4,4'-trichloro-phenylether; Phenol, 5-chloro-2-(2,4-dichlorophenoxy)-; TCC; 2,4,4'-Trichloro-2'-hydroxy diphenyl ether

Trade Names: BAC-TEX; CH-3565[®]; ITGAGUARD[®], Ciba Specialty Chemicals (Switzerland); IRGASAN[®], Ciba Specialty Chemicals (Switzerland); IRGASAN[®] DP-300, Ciba Specialty Chemicals (Switzerland); LEXOL[®] 300; MICROBAN[®] ADDITIVE; SANITIZED[®] BRAND; TRICLOSAN[®]; ULTRA FRESH[®]; VIKOL[®]; VINYZENE[®], Rohm and Haas (USA)

Producers: Ciba Specialty Chemicals (Switzerland); Novartis (Switzerland) (now Syngenta); Rohm and Haas (USA); Schering-Plough Health Care Products (USA); Syngenta (Switzerland)

Chemical Class: Chlorophenol

EPA/OPP PC Code: 054901

California DPR Chemical Code: 1371

Uses: Triclosan is a broad-spectrum antibacterial and antimicrobial agent used to make creams, lotions, deodorants, detergents, dish soaps, laundry soaps, cosmetics, toothpastes, acne creams and mouthwashes.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Unclassifiable

IARC: Group 2B, possible carcinogen

Label Signal Word: CAUTION, WARNING or DANGER

Regulatory Authority:

- AB 2588-Air Toxics "Hot Spots" Chemicals (CAL) as chlorophenoxy pesticides
- The "Director's List" (CAL/OSHA) as chlorophenoxy pesticides
- Actively registered pesticide in California.

Description: Off-white, crystalline solid or powder. Insoluble in water. Molecular weight = 289.52. Melting/Freezing point = 55°C.

Incompatibilities: Reacts with boranes, alkalis, aliphatic amines, amides, nitric acid, sulfuric acid.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Poisonous; may be fatal if inhaled, swallowed, or absorbed through skin. Severely irritates eyes, skin and respiratory tract, with burning sensation, pain, redness and swelling. Metabolic stimulant. If inhaled, causes coughing, dilated pupils, headache, profuse perspiration, intense thirst, extreme fatigue, rapid pulse, high fever, clammy, flushed skin, rapid breathing, nausea, vomiting, cyanosis (bluish tint to skin and lips), anxiety and confusion, convulsions, risk of lung edema. If swallowed, face and lips turn bluish. Liver injury with associated jaundice, kidney failure, and cardiac arrhythmias are commonly noted. Nerve damage, which may be delayed, may include swelling of legs and feet, muscle twitch and stupor. Severe exposure can cause death from heart failure. Dust or liquid left in contact with the skin for several hours may be absorbed. This may result in severe delayed symptoms as listed above. These symptoms may last for months or years.

Long Term Exposure: Workers exposed to chlorophenoxy compounds such as 2,4-D (in the manufacturing process) over a five to ten year period at levels above 10 mg/m³ complained of weakness, rapid fatigue, headache and vertigo. Liver damage, low blood pressure and slowed heartbeat were also found. Based on animal tests, may affect human reproduction.

Points of Attack: Eyes, skin, respiratory system, central nervous system, cardiovascular system, liver, kidney

Medical Surveillance: If symptoms develop or overexposure is suspected, liver or kidney function tests may be useful. Liver function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person drink or vomit. *Note to Physician:* If ingested, remove by lavage or vomiting. Use general supportive measures for CNS depression. Consider the use of quinidine for myotonia.

Triethanolamine Dodecylbenzene Sulfonate

Use Type: Fungicide, insecticide, microbiocide and adjuvant

CAS Number: 27323-41-7

Formula: C₁₈H₂₀O₃S·C₆H₁₅NO₃

Synonyms: A13-26730-X; Benzenesulfonic acid, dodecyl-, compounded with 2,2',2"-nitrilotris[ethanol](1:1); Dodecylbenzenesulfonic acid, triethanolamine salt; Dodecylbenzenesulfonic acid, compounded with 2,2',2"-nitrilotris(ethanol) (1:1); Dodecylbenzenesulfonic acid triethanolamine salt; 2-2',2"-Nitrilotris-dodecylbenzene sulfonate (Salt); Triethanolamine DBS; Triethanolamine dodecylbenzene sulfonate

Trade Names: WITCONATE[®]-60L; WITCONATE[®]-60T; WITCONATE[®]-79S; WITCONATE[®]-5725; WITCONATE[®] S-1280; WITCONATE[®] TAB

Chemical Class: Soap

EPA/OPP PC Code: 079020

California DPR Chemical Code: 984

RTECS Number: DB6700000

Uses: Not registered in the U.S. Widely used as a surfactant.

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION, WARNING or DANGER

Regulatory Authority:

- The "Director's List" (CAL/OSHA)
- Actively registered pesticide in California.
- Clean Water Act: Section 311 Hazardous Substances/RQ (same as CERCLA)
- EPCRA Section 304 RQ: CERCLA, 1000 lb (454 kg)

Description: Yellowish brown or amber liquid. Sinks and mixes with water. Molecular weight = 475.6 (solute). Hazard Identification (based on NFPA-704 M Rating System): Health Hazards (Blue): 1; Flammability (Red): 1; Reactivity (Yellow): 0.

Incompatibilities: Acids, acid fumes, oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc).

Permissible Exposure Limits in Air: Not established.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution. Not established.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or prolonged contact with skin may cause irritation. May cause irritation of mouth and stomach.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Triflumizole

Use Type: Fungicide

CAS Number: 68694-11-1

Formula: C₁₅H₁₅ClF₃N₃O

Synonyms: 1-[1-((4-Chloro-2-(trifluoromethyl)phenyl)imino)-2-propoxyethyl]-1*H*-imidazole; 1-[*N*-(4-Chloro-2-trifluoromethylphenyl)-propoxyacetimidoyl]-imidazole; (*E*)-4-Chloro- α,α,α -trifluoro-*N*-(1-(1*H*-imidazol-1-yl)-2-propoxyethylidene)-*O*-toluidine; 1*H*-Imidazole, 1-[1-((4-Chloro-2-(trifluoromethyl)phenyl)imino)-2-propoxyethyl]-, (*E*)-

Trade Names: A815[®], Crompton Corporation (USA); CONDOR[®]; DUOTOP[®]; NF-114[®]; PROCURE[®], Crompton (USA); TERRAGUARD[®], Crompton Corporation (USA); TRIFMINE[®]

Producers: Crompton Corporation (USA)

Chemical Class: Imidazole; conazole fungicide

EPA/OPP PC Code: 128879

California DPR Chemical Code: 2260

ICSC Number: 1252

RTECS Number: NI4490000

Uses: Triflumizole is used in control of *Cylindrocladium* root and petiole rot on *Spathiphyllum*.

Human toxicity (long-term)⁽⁷⁷⁾: Very low–105.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Intermediate–47.02080 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Vegetable, cucurbit, group 9	0.5

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group E, Unlikely carcinogen

Label Signal Word: CAUTION

WHO Acute Hazard: Class III, slightly hazardous

Description: Colorless crystals. Moderately soluble in water; solubility = 1.253 g/100 ml @ 20°C. Molecular weight = 345.7. Melting/Freezing point = 63°C. Vapor pressure = 1.1×10^{-8} mmHg @ 20°C; 1.4×10^{-3} Pa at 25°C. Log K_{ow} = 1.43. Unlikely to bioaccumulate in marine organisms.

Incompatibilities: Strong oxidizers. Decomposes in fire forming toxic and corrosive oxides of nitrogen, hydrogen fluoride, and hydrogen chloride.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation or ingestion.

Harmful Effects and Symptoms

Long Term Exposure: Skin sensitization. Liver damage and decreased hemoglobin levels.

Points of Attack: Liver and blood.

Medical Surveillance: Liver function tests. Hemoglobin level. Complete blood count.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Chemical Class: Organofluorine

EPA/OPP PC Code: 036101

California DPR Chemical Code: 597

ICSC Number: 0205

RTECS Number: XU9275000

EEC Number: 609-046-00-1

EINECS Number: 216-428-8

Uses: Trifluralin is a selective, pre-emergence herbicide used to control many annual grasses and broadleaf weeds in a large variety of tree fruit, nut, vegetable, and grain crops, including soybeans, sunflowers, cotton, and alfalfa. It is used on winter wheat and barley, oilseed rape, carrots, lettuce, sugar beets and beans. It is also used on set-aside land, i.e., arable land temporarily taken out of use. Trifluralin should be incorporated into the soil by mechanical means within 24 hours of application. Granular formulations may be incorporated by overhead irrigation.

Human toxicity (long-term)⁽⁷⁷⁾: High–5.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: High–1.57645 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Trifluralin (40 CFR 180.207):

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group C, possible carcinogen

IARC: Group 3, unclassifiable

Label Signal Word: WARNING or CAUTION

WHO Acute Hazard: Class U, unlikely to be hazardous

Endocrine Disruptor: Suspected endocrine disruptor

Regulatory Authority:

- Banned or Severely Restricted (in U.S.) (UN)⁽¹³⁾
- AB 1803-Well Monitoring Chemical (CAL)
- AB 2588-Air Toxics “Hot Spots” Chemicals (CAL)
- CAL Air Resources Board/AB 1807 Toxic Air Contaminants
- The “Director’s List” (CAL/OSHA)
- Actively registered pesticide in California.
- Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)
- Safe Drinking Water Act: Priority List (55 FR 1470)
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- Canada, WHMIS, Ingredients Disclosure List

Description: Yellow-orange to orange crystalline solid. Practically insoluble in water; solubility = 3.9 ppm @ 27°C. Molecular weight = 335.31. Boiling point = 139°C @ 4.2 mbar. Melting/Freezing point = 49°C. Vapor pressure = 2.11 x 10⁻⁴ mmHg @ 29°C. Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 1, Reactivity 0. Log K_{ow} = 5.1. Values above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Store in temperatures above 4.4°C. Fluorocarbons can react violently with barium, potassium, sodium.

Permissible Exposure Limits in Air: The state of Pennsylvania has set a guideline for trifluralin in ambient air⁽⁶⁰⁾ of 1,150 µg/m³.

Permissible Concentration in Water: EPA has set a lifetime health advisory of 2.0 µg/L. The state of Maine has set a guideline for drinking water of 200.0 µg/L⁽⁶¹⁾.

Routes of Entry: Inhalation, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Inhalation can cause irritation of the respiratory tract with cough, phlegm, and/or tightness in the chest. The vapor can cause eye and skin irritation. Skin contact can cause irritation and rash which can be exacerbated by sunlight. The majority of reported trifluralin exposure cases were occupational in nature. Other reported symptoms include respiratory involvement, abdominal cramps, nausea, diarrhea, headache, lethargy and parasthesia following dermal or inhalation exposure.

Long Term Exposure: May cause skin sensitization. High or repeated exposure may affect the liver and kidneys and/or cause anemia. There is some dispute about the actual carcinogenic effect of trifluralin. NCI⁽⁹⁾ reports clear

evidence of carcinogenicity in mice but not in rats. Some authorities feel that dipropyl nitrosamine formed in trifluralin manufacture and contained in the technical material might be the actual culprit and the purified trifluralin might not have this problem.

Points of Attack: Skin, eyes, liver, kidneys, and blood.

Medical Surveillance: Kidney and liver function tests. Complete blood count.

First Aid: Skin Contact: Flood all areas of body that have contacted the substance with water. Don't wait to remove contaminated clothing; do it under the water stream. Use soap to help assure removal. Isolate contaminated clothing when removed to prevent contact by others. **Eye Contact:** Remove any contact lenses at once. Flush eyes well with copious quantities of water or normal saline for at least 20 to 30 minutes. Seek medical attention. **Inhalation:** Leave contaminated area immediately; breathe fresh air. Proper respiratory protection must be supplied to any rescuers. If coughing, difficult breathing or any other symptoms develop, seek medical attention at once, even if symptoms develop many hours after exposure. **Ingestion:** If convulsions are not present, give a glass or two of water or milk to dilute the substance. Assure that the person's airway is unobstructed and contact a hospital or poison center immediately for advice on whether or not to induce vomiting.

Trimethacarb (ANSI)

Use Type: Insecticide, molluscicide, dog and cat repellent

CAS Number: 12407-86-2

Formula: C₁₁H₁₅NO₂

Synonyms: Carbamic acid, methyl-, mixed 3,4,5- and 2,3,5-triphenylmethyl esters (4:1); Methylcarbamic acid, trimethylphenyl ester; Trimethacarb; 3,4,5-Trimethylphenyl methylcarbamate and 2,3,5-trimethylphenyl methylcarbamate

Trade Names: BROOT[®], Union Carbide (USA), canceled; LANDRIN[®] [3,4,5- and 2,3,5-Trimethylphenyl methylcarbamate isomers (4:1)]; OMS 597[®]; SD 8530[®] (mixture of 3,4,5- and 2,3,5-Trimethylphenyl methylcarbamate isomers); UC 27867[®], Union Carbide (USA), canceled

Producers: Drexel Chemical (USA); Union Carbide (USA)

Chemical Class: Carbamate

EPA/OPP PC Code: 102400

California DPR Chemical Code: 2962

Uses: Not registered in the U.S. Tolerances were revoked by the U.S. EPA October 15, 2002. A general use pesticide used against the corn rootworm.

Carcinogen/Hazard Classifications

Label Signal Word: WARNING

Description: Off-white granules. Molecular weight = 193.24. Does not melt.

Incompatibilities: May form explosive materials with phosphorus pentachloride. Avoid contact with acids and alkalis.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, skin contact, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; agitation; tingling of the skin; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Carbamates inhibit the acetylcholinesterase enzymes and alter the way in which nervous impulses are transmitted. However, within several hours carbamates spontaneously detach from the enzymes.

Long Term Exposure: A potent cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing

overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure.

First Aid: Eyes: Speed in removing material from skin is of extreme importance. Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin and/or eye contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect eyes. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. **Do NOT induce vomiting.*** If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *unconscious or having convulsions*, do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* **Do NOT** give activated charcoal before or with ipecac syrup. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. **Do NOT** use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr)

intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted: repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Medical note:* 2-PAMCI may be contraindicated in the case of some carbamate poisonings.

Chemical Class: Organotin, heavy metal

EPA/OPP PC Code: 496700 (*acetate*); 496500 (*chloride*); 083601 (*hydroxide*); 083602 (*fluoride*); 496900 use code No. 083602 (*fluoride*)

California DPR Chemical Code: 599 (*hydroxide*)

RTECS Number: WH6650000 (*acetate*); WH6860000 (*chloride*); WH8575000 (*hydroxide*)

EINECS Number: 211-358-4 (*chloride*); 200-990-6 (*hydroxide*)

Uses: The U.S. EPA terminated the special review of Triphenyltin hydroxide in September, 2000, which put into

question the tolerance revocation of the compound in pesticides. Triphenyltin compounds are used as biocides to prevent fouling of boats, to preserve wood, kill mollusks and as anti-fouling agents in paint. It has been used to control blight on potatoes, leaf spots on sugar beets and peanuts, and scab and other diseases on pecans. Also used on carrots. Use of organotin compounds in antifouling paint has been restricted in many countries because of their adverse effects on the oyster industry and aquatic ecosystems.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group B2, probable carcinogen (*hydroxide*)

California Prop. 65: Carcinogen (*hydroxide*); Developmental toxin (*hydroxide, methacrylate*)

Description: *Triphenyltin acetate:* (C₆H₅)₃SnOOCCH₃, is a white solid. Melting/Freezing point = 122°C. Practically insoluble in water. *Triphenyltin chloride:* (C₆H₅)₃SnCl is a colorless to yellow crystalline solid with a characteristic odor. Boiling point = 240° @ 13.5 mmHg. Melting/Freezing point = 106°C. Hazard Identification (based on NFPA-704

M Rating System): Health 3, Flammability 2, Reactivity 0. Insoluble in water. *Triphenyltin hydroxide*: $(C_6H_5)_3SnOH$ is a white crystalline solid or powder. Practically insoluble in water; solubility = 1 ppm @ 20°C. Molecular weight 276.42. Melting/Freezing point = 119°C (decomposes). Vapor pressure = 4.3×10^{-7} mbar @ 50°C.

Incompatibilities: *Triphenyltin chloride*: violent reaction with strong oxidizers. Keep away from moisture.

Permissible Exposure Limits in Air: OSHA/NIOSH⁽²⁾, and ACGIH⁽¹⁾ TWA is 0.1 mg/m³ (for tin organic compounds) and ACGIH STEL⁽¹⁾ is 0.2 mg/m³. The notation "skin" is added indicating the possibility of cutaneous absorption. The NIOSH⁽²⁾ IDLH level = 25 mg/m³ (as Sn).

Determination in Air: Filter/XAD-2[®] (tube); Acetic acid / CH_3CN ; High-pressure liquid chromatography/Graphite furnace atomic absorption spectrometry; NIOSH IV, Method #5504, Organotin compounds.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set, but EPA⁽³²⁾ has suggested a permissible ambient goal of 1.4 µg/L based on health effects.

Routes of Entry: Inhalation, skin absorption, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: These chemicals are strong poisons that can cause neurologic emergencies. Breathing, swallowing, or skin contact with some organotins, such as trimethyltin and triethyltin compounds, can interfere with the way the brain and nervous system work. In severe cases, it can cause death. Toxic and irritating to the eyes, skin, and respiratory system. Dermal exposure may lead to severe skin burns as well as renal failure and possible death in the case of the chloride. Symptom of exposure include headache, vertigo (an illusion of movement), psycho-neurologic disturbance, sore throat, cough, abdominal pain, vomiting, urine retention, paresis, focal anesthesia.

Long Term Exposure: Exposure may affect the nervous system causing headache, nausea, vomiting, dizziness, decreased coordination, muscle weakness, and visual changes. Triphenyltin chloride can irritate the lungs; bronchitis may develop. In animals: hemolysis, hepatic necrosis, kidney damage. Tributyltins, have been shown to affect the immune system in animals, but this has not been examined in people. Studies in animals also have shown that some organotins, such as tributyltins can affect the reproductive system. This, also, has not been examined in people.

Points of Attack: Kidneys and liver.

Medical Surveillance: Kidney and liver function tests. Evaluation of the nervous system. Lung function tests.

First Aid: (triphenyltin hydroxide) Speed in removing material from skin and eyes is of extreme importance. **Skin Contact:** Flood all areas of body that have contacted the substance with water. Don't wait to remove contaminated clothing; do it under the water stream. Use soap to help

assure removal. Shampoo hair promptly if contaminated. Isolate contaminated clothing when removed to prevent contact by others. **Eye Contact:** Remove any contact lenses at once. Immediately flush eyes well with copious quantities of water or normal saline for at least 20 to 30 minutes. Seek medical attention. **Inhalation:** Leave contaminated area immediately; breathe fresh air. Proper respiratory protection must be supplied to any rescuers. If coughing, difficult breathing or any other symptoms develop, seek medical attention at once, even if symptoms develop many hours after exposure. **Ingestion:** Contact a physician, hospital or poison center at once. If the victim is unconscious or convulsing, do not induce vomiting or give anything by mouth. Assure that his airway is open and lay him on his side with his head lower than his body and transport immediately to a medical facility. If conscious and not convulsing, give a glass of water to dilute the substance. Vomiting should not be induced without a physician's advice.

Triflusulfuron-methyl

Use Type: Herbicide

CAS Number: 126535-15-7

Formula: $C_{16}H_{17}F_3N_6O_6S$ (triflusulfuron)

Synonyms: Benzoic acid, 2-[[[(4-(dimethylamino)-6-(2,2,2-trifluoroethoxy)-1,3,5-triazin-2-yl)amino)carbonyl]amino)sulfonyl]-3-methyl-, methyl ester; Methyl 2-[[[(4-

(dimethylamino)-6-(2,2,2-trifluoroethoxy)-1,3,5-triazin-2-yl)amino)carbonyl)amino)sulfonyl]-3-, methylbenzoate

Trade Names: DPX-66037[®], DEBUT[®], DuPont Crop Protection (USA); SAFARI[®], DuPont Crop Protection (USA); UPBEET[®], DuPont Crop Protection (USA)

Producers: DuPont Crop Protection (USA)

Chemical Class: Sulfonylurea

EPA/OPP PC Code: 129002

California DPR Chemical Code: 3875

Uses: Registered for use on sugar beets and chicory.

Human toxicity (long-term)⁽⁷⁷⁾: Intermediate–16.80 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Very low–185735.513150 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Triflurosulfuron methyl (40 CFR 180.492):

The maximum allowable residue level for the following products is 0.05 ppm: beet sugar, roots and tops); chicory roots.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group C, possible carcinogen

Label Signal Word: CAUTION

WHO Acute Hazard: Class U, unlikely to be hazardous

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, passing through the skin, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: May cause skin and severe eye irritation. Moderately poisonous if ingested or inhaled. Exposure to a triazine (simazine) has caused acute and subacute dermatitis in the former USSR, characterized by erythema, slight edema, moderate pruritus, and burning lasting 4 to 5 days.

Long Term Exposure: May cause lung irritation and damage. May cause skin allergy. Contact with some triazine compounds (such as atrazine) may increase risks for tumors known to be associated with hormonal factors. These have been observed in both animals and human beings, and are consistent with the known effects on the hypothalamic pituitary gonadal axis. Repeated exposure may cause weight loss and reduced red blood cell count. May be mutagenic.

Points of Attack: Liver, lungs, skin.

Medical Surveillance: Before beginning employment and at regular times after that, for those with frequent or potentially high exposures, the following is recommended: Lung function tests. Consider chest x-ray following acute overexposure. Evaluation by a qualified allergist. Examination of the nervous system.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately

with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water or milk and induce vomiting. Do not make an unconscious person vomit.

Tris(hydroxymethyl)-nitromethane

Use Type: Microbiocide

CAS Number: 126-11-4

Formula: C₄H₉NO₅

Synonyms: 2-(Hydroxymethyl)-2-nitro-1,3-propanediol; 2-Hydroxymethyl-2-nitropropane-1,3-diol; Isobutylglycerol, nitro-; Methane, trimethylolnitro-; Nitroisobutylglycerol; Nitrotris(hydroxymethyl)methane; 2-Nitro-2-(hydroxymethyl)-1,3-propanediol; Trihydroxymethylnitromethane; Trimethylolnitromethane; Tris(hydroxymethyl)nitromethane

Trade Names: CIMCOOL[®]; DC & R[®]; KNOCK OUT[®]; TRIS NITRO[®], Dow Chemical (USA)

Producers: Dow Chemical (USA)

Chemical Class: Unclassified

EPA/OPP PC Code: 083902

California DPR Chemical Code: 1105

Uses: Used as a biocide in water treatment facilities

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION

Regulatory Authority:

- Actively registered pesticide in California.

Description: White crystalline solid. Soluble in water. Molecular weight = 151.16. Boiling point = decomposes. Melting/Freezing point = 214°C (pure); 175°C (decomposes).

Permissible Exposure Limits in Air: No OELs established.

Determination in Air: Filter; none; Gravimetric; NIOSH IV⁽¹⁸⁾ [Particulates NOR; #0500 (total), #0600 (respirable)]

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Vapor caused eye irritation and redness. Inhalation may cause dizziness, rapid breathing, headache. May be narcotic in high concentrations. Ingestion

is poisonous and may cause gastrointestinal irritation with dizziness, and fatigue.

Long Term Exposure: May cause skin dryness and cracking.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Trisodium Phosphate

Use Type: Fungicide, herbicide, pH adjustment, microbiocide

CAS Number: 7601-54-9

Formula: O_4P_3Na

Synonyms: Disodium dihydrogen pyrophosphate; Fosfato sodico (Spanish); Monosodium dihydrogen phosphate; Monosodium phosphate; MSP; Phosphoric acid, trisodium salt; Sodium acid pyrophosphate; Sodium dihydrogen phosphate; Sodium phosphate; Sodium phosphate, anhydrous; Sodium phosphate, monobasic; Sodium phosphate dibasic; Sodium phosphate, tribasic; Tertiary sodium phosphate; Tribasic sodium phosphate; Trinatriumphosphat (German); Trisodium orthophosphate; TSP

Trade Names: ANTISAL[®]-4; DRI-TRI[®]; EMULSIPHOS[®]; EMULSIPHOS[®] 440/660; NUTRIFOS[®] STP; OAKITE[®]; TROMETE[®]

Producers: Abaquim (Mexico); Alquimia Mexicana (Mexico); AMRESO (USA); Chongqing Chuandong Chemical (Group) (China); EM Industries (USA); FMC (USA); Harcros Chemicals (USA); Hindustan Chemical (India); Kemira Chemicals (Finland); Montedison (Italy); Pacific Century (USA); Rhodia (France); Solutia (USA)

Chemical Class: Phosphate

EPA/OPP PC Code: 076406

California DPR Chemical Code: 1579

ICSC Number: 1178

RTECS Number: TC9490000

EINECS Number: 231-509-8

Uses: Used to remove insecticide residues from fruit and inhibiting mold; as an emulsifier in processed cheese; to

inhibit potato virus X, and tobacco mosaic virus; pH value adjustment. Also used in photographic developers; removing boiler scale, in water softeners, aluminum polishing, sugar refining, cleaning compounds, and in animal feeds.

U.S. Maximum Allowable Residue Levels: Residues of trisodium phosphate are exempted from the requirement of a tolerance when used as a surfactant, emulsifier, or wetting agent in pesticide formulations applied to growing crops or to raw agricultural commodities after harvest.

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION

Regulatory Authority:

- The "Director's List" (CAL/OSHA)
- Actively registered pesticide in California.

Description: Colorless or white granular powder. Odorless. Soluble in water; solubility = 8.8 g/100 ml; 1 part boiling water; the aqueous solution is strongly alkaline. Molecular weight = 163.9. Density = 1.6. Melting/Freezing point = about 75°C (rapid heating); Log K_{ow} = negative. Unlikely to bioaccumulate in marine organisms.

Incompatibilities: Contact with water forms a caustic solution. Vigorous reaction with strong acids. In the presence of moisture, mild steel, copper, or brass may be corroded by TSP. May react violently with antimony(V) pentafluoride. Incompatible with lead diacetate, magnesium, silver nitrate.

Permissible Exposure Limits in Air: No OELs established.

Determination in Air: Filter; Hydrochloric acid; Titration; NIOSH IV⁽¹⁸⁾, Method #7401, Alkaline Dust. See also OSHA Method ID-121.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution. There are no criteria for TSP *per se*. Based on similar materials, EPA guidelines recommended criteria for pH as follows: to protect freshwater aquatic life-pH 6.5 to 9.0; to protect saltwater aquatic life-pH 6.5 to 8.5; and to protect humans' drinking water-pH 5 to 9.

Routes of Entry: Inhalation, ingestion, skin contact.

Harmful Effects and Symptoms

Short Term Exposure: Caustic material. Contact can cause skin and severe eye irritation. Prolonged contact can cause burns, eye damage and possible blindness. Dust will irritate respiratory tract. Exposure may cause lung edema. Ingestion will damage gastrointestinal tract.

Points of Attack: Eyes, skin, respiratory system

Medical Surveillance: Skin irritation may develop from repeated exposure to the solid or low concentrations of the liquid. Irritation to the lungs, nose, throat and mouth may occur if exposed to low levels for long periods of time. May cause temporary loss of hair.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the

skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious and able to swallow, have victim drink 4 to 8 ounces of water. *Do not induce vomiting. Note to physician or authorized medical personnel:* Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

U

Urea

Use Type: Fertilizer and fungicide

CAS Number: 57-13-6

Formula: CH₄N₂O; H₂NCONH₂

Synonyms: Carbamide; Carbamide resin; Carbamimidic acid; Carbonyl diamide; Carbonyldiamine; Isourea; NCI-C02119; Pseudourea

Trade Names: PRESPERSION, 75 UREA[®]; SUPERCEL 3000[®]; UREAPHIL[®]; UREOPHIL[®]; UREVERT[®]; VARIOFORM II[®]

Producers: Abaquim (Mexico); Achema (Lithuania); Agrium (Canada); Alaska Nitrogen (USA); Borden Chemical (USA); BP Chemicals (UK); Cargill Crop Nutrition (USA); CF Industries (USA); Chambal Fertilisers and Chemicals (India); Chemopetrol (Czech Republic); Chimco (Bulgaria); DSCL (India); DSM (Netherlands); EniChem S.p.A. (Italy); Grande Paroisse (France); Hydro Agri Chemicals (Norway); ICI Group (UK); Incitec Pivot (Australia); Indo Gulf (India); Jilin Chemical (China); Juhua Group Corp. (China); Kemira GrowHow Oy (Finland); Kynoch (South Africa); Messer Group (Germany); Monsanto (USA); Nagarjuna Fertilizers and Chemicals (India); Neste Chemicals (Finland); Nissan Chemicals (Japan); Petroquimica de Venezuela (Pequiven); Potash Corporation of Saskatchewan Inc. (Canada); ProdiCa (USA); Qatar Fertiliser (Qatar); Saudi Basic Industries Corp. (Saudi Arabia); Southern Petrochemical Industries Corporation Ltd. (SPIC) (India); Terra Nitrogen (USA); Ube Agri-Materials, (Japan); Wesfarmers CSBP Ltd. (Australia)

Chemical Class: Inorganic

EPA/OPP PC Code: 085702

California DPR Chemical Code: 662

ICSC Number: 0595

RTECS Number: YR6250000

EINECS Number: 200-315-5

Uses: Used in fertilizers and animal feeds, as a fungicide, in the manufacture of resins and plastics, as a stabilizer in explosives and in medicines, and others. Urea is used to protect against frost and is used in some pesticides as an inert ingredient as a stabilizer, as an inhibitor and as an intensifier for herbicides.

U.S. Maximum Allowable Residue Levels for Urea (40 CFR 180.920 and 40CFR 180.950): Urea is exempt from requirements for a tolerance.

Regulatory Authority:

- Air Pollutant Standard Set (New York)⁽⁶⁰⁾ (former USSR)⁽³⁵⁾

- Actively registered pesticide in California.
- Canada, WHMIS, Ingredients Disclosure List

Description: White crystalline solid or powder. Soluble in water; solubility = 1.2 x 10⁶ ppm @ 25°C. Molecular weight = 60.08. Boiling point = (decomposes). Melting/Freezing point = 133°C. Log K_{ow} = negative. Unlikely to bioaccumulate in marine organisms.

Incompatibilities: Violent with strong oxidizers, chlorine, permanganates, dichromates, nitrites, inorganic chlorides, chlorites, and perchlorates Contact with hypochlorites can result in the formation of explosive compounds.

Permissible Exposure Limits in Air: The state of New York⁽⁶¹⁾ has set a guidelines for urea in ambient air of 0.03 µg/m³. The former USSR has set an MAC in ambient air in residential areas of 0.2 mg/m³ on a daily average basis.

Permissible Concentration in Water: The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set an MAC in water bodies used for domestic purposes of 80.0 mg/L.

Routes of Entry: Inhalation, ingestion, eye and/or skin contact.

Harmful Effects and Symptoms

Short Term Exposure: *Inhalation:* Causes irritation of the respiratory tract. Dust may cause difficult breathing especially if the person has asthma. *Skin:* May cause irritation, burning or stinging. *Eyes:* Causes irritation. *Ingestion:* There have been no reported cases of human toxicity. However, some toxic effects have been seen in sheep with impaired liver function.

Long Term Exposure: Prolonged skin contact may cause dermatitis.

Points of Attack: Skin

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

V

Validamycin

Use Type: Fungicide

CAS Number: 37248-47-8

Formula: C₂₀H₃₅NO₁₃; C₂₀H₃₅NO₁₃·HCl (hydrochloride)

Synonyms: [1S(1 α ,4 α ,5 β , 6 α)]-1,5,6-Trideoxy-4-O- β -D-glucopyranosyl-5-(hydromethyl)-1-[(4,5,6-trihydroxy-3-(hydroxymethyl)-2-cyclohexen-1-yl)amino]-D-chiroinositol; NSC 122023; Validamycin A

Trade Names: ANTIBIOTIC N-329 B[®]; SOLACOL[®]; VALIDACIN[®]; VALIMON[®]; VALINOMICIN[®]

Producers: Agrimor International (USA); Epochem Co., (China); Hebei Huafeng Chemical Group (China); Nagarjuna Agrichem (India); Wuhan kernel Bio-pesticide (China)

Chemical Class: Carbohydrate

RTECS Number: YV9468000

Uses: Not registered in the U.S. Validamycin is a non-systemic plant antibiotic that controls plant fungi that attacks roots. It is used against soil borne diseases for the control of Rhizoctonia solani in rice, potatoes, vegetables, and others as well as damping off diseases in vegetable seedlings, cotton, sugar beets, rice and other plants. It is a general use fungicide and also mixed with a variety of pesticides.

Carcinogen/Hazard Classifications

WHO Acute Hazard: Class U, unlikely to be hazardous

Regulatory Authority:

- EPCRA Section 302 Extremely Hazardous Substances: TPQ = 1000/10,000 lb (454/4,540 kg)
- EPCRA Section 304 RQ: EHS, 1 lb (0.454 kg)

Description: Colorless powder or crystalline solid. Odorless. Soluble in water. Molecular weight = 497.5. Melting point = 130-135°C.

Incompatibilities: Slightly unstable in acidic media.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large

quantities of water and induce vomiting. Do not make an unconscious person vomit.

Vernolate

Use Type: Herbicide

CAS Number: 1929-77-7

Formula: C₁₀H₂₁NOS

Synonyms: Carbamic acid, dipropylthio-, S-propyl ester; Carbamothioic acid, dipropyl-, S-propyl ester; Dipropylthiocarbamic acid-S-propyl ester; PPTC; Propyl-N, N-dipropylthiolcarbamate; S-Propyl dipropylthiocarbamate; S-Propyl dipropyl (thiocarbamate); N-Propyl-di-N-propylthiolcarbamate

Trade Names: R-1607[®]; REWARD[®], Zeneca Ag Products (USA) (now Syngenta), canceled; SURPASS[®], Zeneca Ag Products (USA) (now Syngenta), canceled; SURPASS[®]-E, Zeneca Ag Products (USA) (now Syngenta), canceled; VERNAM[®], Drexel Chemical (USA), canceled; VERNAM[®]-E, Drexel Chemical (USA), canceled; VERNAM[®]-G, Drexel Chemical (USA), canceled; VOMZLATE[®]

Producers: Drexel Chemical (USA); Zeneca Ag Products (USA) (now Syngenta)

Chemical Class: Thiocarbamate

EPA/OPP PC Code: 041404

California DPR Chemical Code: 1987

Uses: Not registered in the U.S. Vernolate is a selective herbicide used to control a variety of weeds as their seeds germinate. These weeds include annual broadleaf weeds, annual grasses, perennial grasses, nut sedges and seedling Johnson grass. Agricultural crop use sites include soybeans, peanuts, groundnuts, soya beans, maize, tobacco, and sweet potatoes.

Human toxicity (long-term)⁽⁷⁷⁾: High-7.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Low-344.93242 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION

WHO Acute Hazard: Class II, moderately hazardous

Regulatory Authority:

- AB 1803-Well Monitoring Chemical (CAL)
- EPA Hazardous Waste Number (RCRA No.): U385

- RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.003; Nonwastewater (mg/kg), 1.4

Description: Clear, colorless liquid. Faint, aromatic odor. Soluble in water; solubility = 95 ppm @ 20°C; 107 mg/L @ 25°C. Molecular weight 203.37. Density = 0.953 @ 20°C. Boiling point = 149°C @ 30 mmHg; 150° @ 30 mmHg. Vapor pressure = 1.04×10^{-2} mmHg @ 25°C. Log K_{ow} = 3.49. Values above 3.0 may be able to bioaccumulate in marine organisms.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Low levels of toxicity. Concentrated solutions are slightly corrosive to eyes and mucous membranes. Dust inhalation can cause irritation of the respiratory system with sneezing. Eye contact can cause irritation, watering, pain, and inflammation of the eyelids. Skin contact can cause irritation and minor ulceration. Ingestion can cause nausea, vomiting, fever, muscle twitching, seizure, rapid respiration, slow heart beat. Severe exposure may result in death.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, skin, eyes.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Before employment and at regular times after that, the following are recommended: If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious and able to swallow, have victim drink 4 to 8 ounces of water. Do not induce vomiting. *Note to physician or authorized medical personnel:* Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate

pulmonary injury and should be discouraged for at least 72 hours following exposure.

Vinclozolin

Use Type: Fungicide

CAS Number: 50471-44-8

Formula: $C_{12}H_9Cl_2NO_3$

Synonyms: Caswell No. 323C; (RS)-3-(3,5-Dichlorophenyl)-5-ethenyl-5-methyl-2,4-oxazolinedione; 3-(3,5-Dichlorophenyl)-5-ethenyl-5-methyl-2,4-oxazolinedione; 3-(3,5-Dichlorophenyl)-5-ethenyl-5-methyl-2,4-oxazolinedione; (RS)-3-(3,5-Dichlorophenyl)-5-methyl-5-vinyl-1,3-oxazolidine-2,4-dione; *N*-3,5-Dichlorophenyl-5-methyl-5-vinyl-1,3-oxazolidine-2,4-dione; 2,4-Oxazolinedione, 3-(3,5-dichlorophenyl)-5-ethenyl-5-methyl-; 2,4-Oxazolinedione, 3-(3,5-dichlorophenyl)-5-methyl-5-vinyl-

Trade Names: BAS-352-F[®], BASF Agricultural Products (Germany); BAS-35204-F[®], BASF Agricultural Products (Germany); CURALAN[®], BASF Agricultural Products (Germany); FLOTILLA[®], BASF Agricultural Products (Germany); FUMITE RONALIN[®], BASF Agricultural Products (Germany); MASCOT[®] contact turf fungicide; ORNALIN[®], canceled; POWERDRIVE[®]; RONILAN[®], BASF Agricultural Products (Germany); RONILAN-DF[®], BASF Agricultural Products (Germany); RONALINE-FL[®], BASF Agricultural Products (Germany); TOUCHE[®], BASF Agricultural Products (Germany); VINCHLOZOLINE[®]; VINCLOZOLINE[®]; VORLAND[®], BASF Agricultural Products (Germany)

Producers: BASF Agricultural Products (Germany); BASF Canada (Canada)

Chemical Class: Dicarboximide

EPA/OPP PC Code: 113201

California DPR Chemical Code: 2129

RTECS Number: RP8530000

Uses: Vinclozolin is a non-systemic fungicide currently registered in the United States for use on vines (such as grapes), strawberries, raspberries, chicory grown for Belgian endive, lettuce, kiwi, canola, succulent beans, and dry bulb onions. Import tolerances have been established to permit

importation of vinclozolin-treated cucumbers, sweet peppers, and wine (from treated grapes), but there are no U.S. registrations for these uses. Vinclozolin is also registered for use on ornamentals and turf. BASF, the manufacturer of vinclozolin, requested the phase-out of the following uses: onions, raspberries and ornamentals immediately; kiwi and chicory in December, 2001; and lettuce and snap beans in July, 2004. BASF also requested revocation of the import tolerances to cover residues in/on peppers and cucumbers in January, 2001. After 2004, only use on canola, non-domestic wine grapes, and turf will remain. Labels have been recently amended to prohibit use on turf except for golf courses and industrial park landscapes and to prohibit use on sod except for transplant onto golf courses.

Fish toxicity (threshold)⁽⁷⁷⁾: Low–396.87174000 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Vinclozolin (40 CFR 180.380):

CROP	ppm
Bean, succulent	2.0
Canola, seed	1.0

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group C, possible carcinogen

California Prop. 65: Carcinogen and developmental toxin

TRI Developmental Toxin: Reproductive and developmental toxin

Label Signal Word: CAUTION

WHO Acute Hazard: Class U, unlikely to be hazardous

Endocrine Disruptor: Suspected endocrine disruptor

Regulatory Authority:

- Actively registered pesticide in California.
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- EPA 40 CFR 372.65, Specific Toxic Chemical Listings

Description: Colorless, crystalline solid. Slight aromatic odor. Practically insoluble in water. Molecular weight = 286.11. Melting point = 108°C. Vapor pressure = 1.25×10^{-7} mmHg @ 20°C.

Determination in Air: Filter; none; Gravimetric; NIOSH IV⁽¹⁸⁾ [Particulates NOR; #0500 (total), #0600 (respirable)]

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation of dust or aerosols, ingestion.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Producers: Agrimor International (USA); Bell Laboratories (USA); Diachem (Italy); DuPont (USA); I.N.D.I.A. Industrie Chimiche (Italy); Neogen Corporation (USA); Prentiss Inc. (USA); Rhone-Poulenc Jardin (France); Reckitt Benckiser Plc (UK); Shacco (USA); Shell Chemical

(Netherlands); Shenzhen Guomeng Industry Co., Ltd. (China); Whyte Agrochemical (UK)

Chemical Class: Coumarin

EPA/OPP PC Code: 086002 (warfarin); 086003 (sodium salt)

California DPR Chemical Code: 621 (warfarin); 1184 (sodium salt)

ICSC Number: 0821 (warfarin)

RTECS Number: GN4550000; GN4725000 (sodium)

EEC Number: 607-056-00-0 (warfarin)

EINECS Number: 201-377-6 (warfarin)

Uses: Warfarin and its sodium salt is an anticoagulant rodenticide used for controlling rats and house mice in and around homes, animal and agricultural premises, and commercial and industrial sites. It is effective in very low dosages. About a week is required before a marked reduction in the rodent population is noticeable. Rodents do not become bait-shy after once tasting warfarin; they continue to consume it until its anti-clotting properties have produced death through internal hemorrhaging. It can be used year-after-year wherever a rodent problem exists. Warfarin and its sodium salt is only slightly dangerous to humans and domestic animals when used as directed, but care must be taken with young pigs, which are especially susceptible. The sodium salt is also used to treat people with blood hyper-coagulation problems.

Carcinogen/Hazard Classifications

California Prop. 65: Listed; Reproductive toxin

TRI Developmental Toxin: Developmental toxin as warfarin and salts

Label Signal Word: DANGER or CAUTION, depending on the concentration

WHO Acute Hazard: Class 1b, highly hazardous (warfarin)

Endocrine Disruptor: Suspected endocrine disruptor (warfarin)

Regulatory Authority:

- Very Toxic Substance (World Bank)⁽¹⁵⁾
- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (DFG)⁽³⁾ (HSE)⁽³³⁾ (OSHA)⁽⁵⁸⁾ (former USSR)⁽³⁵⁾ (Several States)⁽⁶⁰⁾
- AB 2588-Air Toxics "Hot Spots" Chemicals (CAL)
- Proposition 65 chemical (CAL)
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- The "Director's List" (CAL/OSHA)
- Actively registered pesticide in California.
- EPA Hazardous Waste Number (RCRA No.): U248, warfarin salts when present at concentrations less than 0.3%; P001, warfarin salts when present at concentrations greater than 0.3%.

- RCRA, 40CFR261, Appendix 8 Hazardous Constituents
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 500/10,000 lb (227/4,540 kg) warfarin and warfarin sodium
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 100 lb (45.4 kg)
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)
- Canada, WHMIS, Ingredients Disclosure List
- *Sodium salt*:
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4,540 kg)
- EPA Hazardous Waste Number (RCRA No.): U248, warfarin salts when present at concentrations less than 0.3%; P001, warfarin salts when present at concentrations greater than 0.3%
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

Description: Warfarin is a colorless, odorless crystalline solid. Although warfarin is usually available commercially as the sodium salt, the following physical properties refer to the pure substance. Practically insoluble in water; solubility = 15 ppm @ 20°C. Molecular weight = 308.36. Melting/Freezing point = 161°C (decomposes below BP). Vapor pressure = 8.7×10^{-2} mbar @ 20°C. Log K_{ow} = < 2.4. Unlikely to bioaccumulate in marine organisms. The sodium salt is soluble in water and is even less likely to bioaccumulate in marine organisms.

Incompatibilities: Strong oxidizers, strong acids and strong bases.

Permissible Exposure Limits in Air: The OSHA/NIOSH⁽²⁾ TWA, the HSE⁽³³⁾ TWA, and the ACGIH TWA value⁽¹⁾ is 0.1 mg/m³. The STEL value added by HSE⁽³³⁾ is 0.3 mg/m³. The NIOSH⁽²⁾ IDLH level = 100 mg/m³. The DFG MAK value is 0.5 mg/m³⁽³⁾. The former USSR has set an MAC of 1.0 µg/m³⁽³⁵⁾. Several states have set guidelines or standards for warfarin in ambient air⁽⁶⁰⁾ ranging from 0.016 µg/m³ (Virginia) to 1.0–3.0 µg/m³ (North Dakota) to 2.0 µg/m³ (Connecticut and Nevada).

Determination in Air: Filter; Methanol; High-pressure liquid chromatography/Ultraviolet detection; NIOSH IV⁽¹⁸⁾, Method #5002.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Ingestion, inhalation, skin and/or eye contact. Skin contact should be avoided.

Harmful Effects and Symptoms

Short Term Exposure: Warfarin is classified as very toxic, and may cause hemorrhage at even low levels. Probable oral

lethal dose in humans is 50–500 mg/kg, between 1 teaspoon and 1 ounce for a 150 lb person. Warfarin sodium is a powerful anticoagulant. Hemorrhage is the most common sign and may be manifested by hemorrhagic skin rashes and lip, nose, and upper airway bleeding. Upper airway pain, difficulty in speaking and swallowing, and dyspnea (shortness of breath) may occur. Back pain may be noted. Other symptoms of warfarin exposure begin a few days or weeks after ingestion. They include epistaxis (nose bleed), bleeding gums, pallor, and sometimes hematomas around joints and on buttocks, blood in urine and feces; hematoma arms, legs; bleeding lips, mucous membrane hemorrhage; petechial rash; abnormal/abnormalities hematologic indices. Later, paralysis due to cerebral hemorrhage, and finally hemorrhagic shock and death may occur.

Long Term Exposure: Anemia can result from severe or repeated bleeding. Repeated exposure may affect the liver and kidneys. Material is believed to be teratogenic in humans. There is limited evidence that warfarin may decrease fertility in females. Animal tests indicates that warfarin may cause malformations in human babies.

Points of Attack: Blood and cardiovascular system.

Medical Surveillance: Consider the points of attack in preplacement and periodic physical examinations. Blood test for prothrombin time. Complete blood count. Persons taking “blood thinning” medications are at increased risk.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended.

Z

Zilkonium Chloride

Use Type: Herbicide, algaecide, antiseptic, antimicrobial agent.

CAS Number: 8001-54-5; 8045-22-5

Synonyms: Alkyl dimethyl benzyl ammonium chloride [50% (C₁₂), 30% (C₁₄), 17% (C₁₆), 3% (C₁₈)]; Alkyl dimethylbenzyl ammonium chloride; Alkyldimethyl(phenylmethyl)quaternary ammonium chlorides; Benzalkonium chloride; BTC; Pheneene germicidal solution and tincture; Quaternary ammonium compounds, alkylbenzyl dimethyl, chlorides; Zephiran chloride

Trade Names: AMMONYX[®]; ARQUAD DMMCB-75[®]; BARQUAT[®] MB-50; BARQUAT[®] MB-80; BAYCLEAN[®]; BIO-QUAT 50-24[®], Lonza Group (Switzerland); CATAMINE[®] AB; CONSAN[®]; DRAPOLENE[®]; GARDIQUAT[®]-1450; HYAMINE[®]-3500; INTEXAN[®] LB-50; KATAMINE[®] AB; NEO GERM-I-TOL[®]; ONYX BTC; OSVAN; RODALON[®]; SENTINEL[®]; TRITON[®] K-60; VIKROL[®] RQ

Producers: Lonza Group (Switzerland); Onyx Oil & Chem Co

Chemical Class: Quaternary ammonium compound

EPA/OPP PC Code: 069106, 069109*

Uses: Used as an algicide to control slime mold, algae, fish pathogens, and mollusks in ponds, canals and bodies of water. Also widely used in deodorants, detergents sanitizers and germicides for applications in food plants, laundries, and operating rooms.

Carcinogen/Hazard Classifications

Label Signal Word: DANGER

Regulatory Authority:

- Actively registered pesticide in California.

Description: White to yellowish-white amorphous powder. Colorless. Aromatic odor, bitter taste. Very soluble in water; forms an alkaline solution

Incompatibilities: Keep aqueous solution away from acids. When heated to decomposition or on contact with acids or acid fumes, may produce highly toxic chloride fumes; deadly phosgene gas may be formed. May cause pitting of some metals.

Harmful Effects and Symptoms

Short Term Exposure: Irritates skin and eyes. Central nervous system (CNS) poison.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately

with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Zineb

Use Type: Fungicide, insecticide

CAS Number: 12122-67-7

Formula: C₄H₆N₂S₄Zn

Alert: Zineb was formerly registered in the U.S. as a General Use Pesticide (GUP) and was rated as a pesticide of low toxicity—EPA toxicity class IV. Products containing zineb were required to carry the Signal Word CAUTION on the label. Following an EPA Special Review of all the ethylene(bis)dithiocarbamate pesticides (EDBCs), including zineb, all registrations for zineb were voluntarily canceled by the manufacturer. All tolerances for zineb in agricultural commodities in the U.S. (except grapes used in winemaking) were revoked, effective 12/31/94. The tolerance for grapes used in winemaking was revoked, effective 12/31/97. (EXTOXNET)

Synonyms: Carbamodithioic acid, 1,2-ethanediylbis-, zinc complex; Carbamodithioic acid, 1,2-ethanediylbis-, zinc salt; EBDC, zinc salt; ENT 14,874; 1,2-Ethanediylbis(carbamodithioato)zinc; [1,2-Ethanediylbis(carbamodithioato)](2-)zinc; 1,2-Ethanediylbis(carbamodithioato)(2-)-S,S'-zinc; 1,2-Ethanediylbiscarbamodithioic acid, zinc complex; 1,2-Ethanediylbiscarbamothioic acid, zinc salt; Ethylenebis(dithiocarbamate)zinc; Ethylenebis(dithiocarbamic acid), zinc salt; Ethyl zimate; Zinc ethylenebis(dithiocarbamate); Zinc ethylenebis(dithiocarbamate); Zinc ethylene-1,2-bisdithiocarbamate; Zinc, [ethylenebis(dithiocarbamate)]-; Zinc ethylenebis(dithiocarbamate); Zink-[N,N'-aethylenbis(dithiocarbamat)] (German)

Trade Names: ASPOR[®]; ASPORUM[®]; BERCEMA[®]; BLIGHTOX[®]; BLITEX[®]; BLIZENE[®]; CARBADINE[®]; CHEM ZINEB[®]; CINEB[®]; CRITTOX[®]; CYNKOTOX[®]; DAISEN[®]; DEVIZEB[®]; DIPHER[®]; DITHANE[®] 7-78;

DITHANE® Z; DITHANE® Z-78; DITIAMINA®; FBC® PROTECTANT FUNGICIDE; HEXATHANE®; KUPRATSIN®; KYPZIN®; LIROTAN®; LONACOL®; MICIDE®; MILTOX®; MILTOX® SPECIAL; NOVOSIR® N; NOVOZIN® N 50; NOVOZIR®; NOVOZIR® N; NOVOZIR® N 50; PAMOSOL® 2 FORTE PARZATE®; PARZATE® ZINEB; PEROSIN®; PEROSIN® 75B; PEROZIN®; PEROZINE®; POLYRAM® Z; POLYGRAM® Z; SPERLOX®-Z; THIODOW®; TRITHAC®; TURBAIR® ZINEB; TIEZENE®; TRIPART®; TRIPART® BLUE; TITOFTOROL®; TRIMANZONE®; TRITOFTOROL®; TSINEB (Russian); TURBAIR® DICAMATE Z-78®; ZEBENIDE®; ZEBTOX®; ZIDAN®; ZIMATE®; ZINOSAN®; ZEBTOX®

Producers: Agrimor International (USA); Barmac Industries (Australia); Limin Chemical (China)

Chemical Class: Dithiocarbamate

EPA/OPP PC Code: 014506

California DPR Chemical Code: 627

ICSC Number: 0350

RTECS Number: ZH3325000

EEC Number: 006-078-00-2

Uses: Not registered in the U.S. Ethylene(bis)dithiocarbamate pesticides (EDBCs), including zineb, are dithiocarbamate fungicides used to prevent crop damage in the field and to protect harvested crops from deterioration during storage or transport. Zineb was used to protect fruit and vegetable crops from a wide range of foliar and other diseases. Zineb can be formed by combining nabam and zinc sulfate in the spray tank.

Human toxicity (long-term)⁽⁷⁷⁾: Very low–350.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Very low–3547.0692700 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

U.S. TRI: Developmental and reproductive toxin

California Prop. 65: Delisted as a carcinogen Oct. 29, 1999

IARC: Group 3, unclassifiable

Label Signal Word: CAUTION, WARNING or DANGER

WHO Acute Hazard: Class U, unlikely to be hazardous

Endocrine Disruptor: Suspected endocrine disruptor

Regulatory Authority:

- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- AB 1803-Well Monitoring Chemical (CAL)
- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- AB 2588-Air Toxics “Hot Spots” Chemicals (CAL)
- The “Director’s List” (CAL/OSHA)
- Clean Water Act: Section 307 Toxic Pollutants as zinc and compounds
- Safe Drinking Water Act: SMCL, 5 mg/L; Priority List (55 FR 1470) as zinc

- FIFRA, 40CFR 180.102-1147: tolerances and/or tolerance exemptions for pesticides in or on raw agricultural commodities

Description: Yellow to light-tan crystalline solid or powder. Slightly soluble in water; solubility = 12 ppm. Molecular weight = 275.73. Melting/Freezing point = Decomposes below melting point at 157°C. Vapor pressure = 7.5×10^{-8} mmHg @ 20°C. Combustible. Forms explosive mixture with air. Flash point = 880°C. Autoignition temperature = 149°C. Log K_{ow} = 20^(ICSC). Values above 3.0 may be able to bioaccumulate in marine organisms.

Incompatibilities: Unstable in moisture and light. Decomposition products in fire includes oxides of nitrogen and sulfur.

Determination in Air: Filter; none; Gravimetric; NIOSH IV⁽¹⁸⁾ [Particulates NOR; #0500 (total), #0600 (respirable)]

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation of dust or aerosols, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Low levels of toxicity. Concentrated solutions are slightly corrosive to eyes and mucous membranes. Dust inhalation can cause irritation of the respiratory system with sneezing. Eye contact can cause irritation, watering, pain, and inflammation of the eyelids. Skin contact can cause irritation and minor ulceration. Ingestion can cause nausea, vomiting, fever, muscle twitching, seizure, rapid respiration, slow heart beat. Severe exposure may result in death.

Long Term Exposure: Repeated or prolonged contact may cause dermatitis and skin sensitization. May affect the blood, central nervous system, and liver.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, skin, eyes.

Medical Surveillance: There are tests available to measure zinc in your blood, urine, hair, saliva, and feces. High levels of zinc in the feces can mean high recent zinc exposure. High levels of zinc in the blood can mean high zinc consumption and/or high exposure. Tests to measure zinc in hair may provide information on long-term zinc exposure; however, the relationship between levels in your hair and the amount of zinc you were exposed to is not clear. Before employment and at regular times after that, the following are recommended: If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count and liver function tests. Consider chest x-ray following acute overexposure. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious and able to swallow, have victim drink 4 to 8 ounces of water. Do not induce vomiting. *Note to physician or authorized medical personnel:* Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

Zinc Phosphide

Use Type: Rodenticide

CAS Number: 1314-84-7

Formula: P₂Zn₃; Zn₃P₂

Alert: Metallic phosphides on clothes, skin, or hair can react with water or moisture to generate phosphine gas. Vomitus containing phosphides can also off-gas phosphine. Phosphine is extremely flammable and explosive; it may ignite spontaneously on contact, with air.

Synonyms: Fosfuro de zinc (Spanish); Phosphure de zinc (French); Phosvin; Zinc fosfid; Zinkfosfide (Dutch); Zinco(fosfuro di) (Italian); Zinc(phosphure de) (French); Zinkphosphid (German)

Trade Names: BAKER BRAND[®], canceled 10/10/1989; BLUE-OX[®]; E-Z FLO[®], Bayer CropScience (Germany), canceled 12/2/1985; GOPHA-RID[®], Bell Laboratories (USA); HOPKINS[®], Neogen Corp. (USA); KILRAT[®]; MOLETOX II[®], Bonide Products (USA); MOUS-CON[®]; MR. KILL RAT[®]; MR RAT GUARD[®]; NOTT ZINC PHOSPHIDE 93[®], Neogen Corp. (USA); RATOL[®]; ROBAN II AG[®], canceled 7/11/2001; RUMETAN[®]; ZINC-TOX[®]; ZP[®], Bell Laboratories (USA)

Producers: Agrimor International (USA); Bayer CropScience (Germany); Bell Laboratories (USA); Bharat Pulverizing Mills (India); Bonide Products (USA); Excel

Industries (India); Fluorochem (UK); Neogen Corp. (USA); Jingma Chemicals Ltd. (China); Shenzhen Guomeng Industry Co., Ltd. (China); United Phosphorus (India)

Chemical Class: Inorganic zinc compound

EPA/OPP PC Code: 088601

California DPR Chemical Code: 626

ICSC Number: 0602

RTECS Number: ZH4900000

EEC Number: 015-006-00-9

EINECS Number: 215-244-5

Uses: Zinc phosphide reacts with the acidic conditions in the gut to form phosphine gas, which interferes with cell respiration. The rodenticide may be used to control many species of rodents, including mice, ground squirrels, prairie dogs, voles, moles, rats, muskrats, nutria and gophers. It may be used as an indoor or outdoor spot treatment for rodents as well as around burrows or underground in orchards, vineyards, various food crops, range lands, and non-crop areas. Zinc phosphide is formulated as a bait/solid, dust, granular, pellet/tablet or wettable powder and is also applied as a broadcast treatment by ground or aerial applications.

U.S. Maximum Allowable Residue Levels for Zinc Phosphide (40 CFR 180.225):

Note: The following residue limits are for phosphine compounds that produce phosphine gas.

Carcinogen/Hazard Classifications

Label Signal Word: DANGER, WARNING or CAUTION

WHO Acute Hazard: Class 1b, highly hazardous

Regulatory Authority:

- Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below); 40CFR401.15 Section 307 Toxic Pollutants; Section 313 Water Priority Chemicals (57FR41331, 9/9/92)
- Safe Drinking Water Act: SMCL 5 mg/L; Priority List (55 FR 1470) as zinc
- EPA Hazardous Waste Number (RCRA No.): P122; U249 (concentrations of 10% or less)
- FIFRA, 40CFR152.175: restricted use pesticide
- FIFRA, 40CFR180.102-1147: tolerances and/or tolerance exemptions for pesticides in or on raw agricultural commodities
- RCRA, 40CFR261, Appendix 8 Hazardous Constituents
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 500 lb (227kg)
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 100 lb (45.4 kg), when present at concentrations greater than 10%
- AB 2588-Air Toxics "Hot Spots" Chemicals (CAL) as zinc compounds
- The "Director's List" (CAL/OSHA)
- Actively registered pesticide in California

- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

- Canada, WHMIS, Ingredients Disclosure List

Description: Zinc phosphide is a gray crystalline powder. Mild garlic odor. Insoluble in cold water; slowly decomposes. Boiling point = 1100°C. Melting/Freezing point = 420°C.

Incompatibilities: Decomposes in water or on contact with strong acids evolution of spontaneously flammable phosphine. Decomposes on heating and on contact water producing toxic and flammable fumes of phosphorus, zinc oxides, and phosphine. Incompatible with carbon dioxide, halogenated agents.

Permissible Exposure Limits in Air: OSHA⁽²⁾ PEL = 0.3 ppm (averaged over an 8-hour workshift). NIOSH⁽²⁾ IDLH (immediately dangerous to life or health) = 50 ppm. ERPG-2 (Emergency Response Planning Guideline) (maximum airborne concentration below which it is believed nearly all individuals could be exposed for up to 1 hour without experiencing or developing irreversible or other serious adverse health effects or symptoms that could impair an individual's ability to take protective action) = 0.5 ppm.

Permissible Concentration in Water: There are a number of standards for zinc in water set around the world⁽³⁵⁾:

EEC	100-500 µg/L	for drinking water
Germany	2000 µg/L	for drinking water
Mexico	10,000 µg/L	for estuaries
Mexico	10 µg/L	for coastal waters
former USSR	5000 µg/L	for drinking water
former USSR	1000 µg/L	for surface water
former USSR	10 µg/L	in water for fishery purposes
WHO	5000 µg/L	in water for esthetic quality

Note: The USEPA⁽⁶⁾ recommends that drinking water should contain no more than 5 milligrams per liter of water (5 mg/L) because of taste. The state of Kansas has set a drinking water limit of 5 mg/L also⁽⁶¹⁾.

Routes of Entry: Inhalation, ingestion, eye and/or skin contact. Absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the respiratory tract. Contact with the eyes can cause severe irritation, burns and permanent damage. Skin contact causes irritation. This chemical is a CNS depressant. Inhalation of zinc phosphide dust is followed in several hours by vomiting, diarrhea, cyanosis (bluing of skin), rapid pulse, fever and shock. The breath smells of phosphine. The compound is very caustic and may cause closing of the esophagus. Inhalation of phosphine (formed when zinc phosphide is exposed to flame, water or acids) can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. Zinc phosphide is very caustic when ingested and forms phosphine. The probable oral lethal dose is 5-50 mg/kg, or between 7 drops and 1 teaspoonful for a 70 kg (150 lb) person. Most patients die after about 30 hours from peripheral vascular collapse secondary to the

compound's direct effects. Extensive liver damage and kidney damage can also occur. Ingestion of 4-5 grams has produced death in human adults, but also doses of 25 to 50 grams have been survived. The lowest oral lethal dose reported for women is 80 mg/kg. Symptoms of oral ingestion include nausea, abdominal pain, vomiting, tightness in chest, excitement, agitation and chills; faintness, weakness, dyspnea, fall in blood pressure, change in pulse rate, diarrhea, intense thirst, convulsions, paralysis, and coma. Early labored breathing, shock, halted urinary output, metabolic acidosis, muscle cramps and convulsions are grave prognostic signs.

Long Term Exposure: The substance may cause effects on the liver, kidneys, heart and nervous system. Repeated exposure of low exposures causes chronic poisoning, anemia, bronchitis, and gastrointestinal, visual, speech, and motor disturbances.

Points of Attack: Lungs, liver, kidneys, heart, blood and central nervous system.

Medical Surveillance: There are tests available to measure zinc in your blood, urine, hair, saliva, and feces. High levels of zinc in the feces can mean high recent zinc exposure. High levels of zinc in the blood can mean high zinc consumption and/or high exposure. Tests to measure zinc in hair may provide information on long-term zinc exposure; however, the relationship between levels in your hair and the amount of zinc you were exposed to is not clear. Liver and kidney function tests. EKG. Lung function tests. Consider chest x-ray following acute overexposure. Complete blood count.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled get medical attention for phosphine (IDLH level = 50 ppm), remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. If the zinc salt is ingested, get medical attention for phosphine poisoning. Give one tablespoonful of mustard in a glass of warm water; repeat until vomit fluid is clear; avoid use of all oils. Do not make an unconscious person vomit. Medical observation is recommended for at least 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Death from phosphine may occur following convulsions, which may occur suddenly after apparent recovery of patient.

Note to physician or authorized medical personnel: In case of zinc salt ingestion, empty stomach with emetics or gastric lavage with 1:5000 solution of potassium permanganate. As first aid for pulmonary edema, a physician or authorized paramedic may consider administering a corticosteroid spray.

Advanced Treatment for phosphine exposure: In cases of respiratory compromise secure airway and respiration via endotracheal intubation. If not possible, perform cricothyroidotomy if equipped and trained to do so. Treat patients who have bronchospasm with aerosolized bronchodilators. The use of bronchial sensitizing agents in situations of multiple chemical exposures may pose additional risks. Consider the health of the myocardium before choosing which type of bronchodilator should be administered. Cardiac sensitizing agents may be appropriate; however, the use of cardiac sensitizing agents after exposure to certain chemicals may pose enhanced risk of cardiac arrhythmias (especially in the elderly). Consider racemic epinephrine aerosol for children who develop stridor. Dose 0.25–0.75 mL of 2.25% racemic epinephrine solution in 2.5 cc water, repeat every 20 minutes as needed, cautioning for myocardial variability. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. If evidence of shock or hypotension is observed begin fluid administration. For adults, bolus 1000 mL/hour intravenous saline or lactated Ringer's solution if blood pressure is under 80 mm Hg; if systolic pressure is over 90 mm Hg, an infusion rate of 150 to 200 mL/hour is sufficient. For children with compromised perfusion administer a 20 mL/kg bolus of normal saline over 10 to 20 minutes, then infuse at 2 to 3 mL/kg/hour.

Zinc Sulfate Heptahydrate

Use Type: Fungicide, herbicide, miticide

CAS Number: 7733-02-0 (heptahydrate); 7446-19-7 (monohydrate)

Formula: $\text{ZnSO}_4 \cdot 7\text{H}_2\text{O}$ (heptahydrate); $\text{ZnSO}_4 \cdot \text{H}_2\text{O}$ (monohydrate)

Synonyms: A13-03967; Caswell No. 927; Sulfate de zinc (French); Sulfuric acid zinc salt; White-vitriol; White-copperas; Zinc sulphate monohydrate; Zincum-sulfuricum; Zinc sulphate heptahydrate

Trade Names: BUFOPTO-ZINC-SULFATE[®]; MEDIZINC[®]; MOSS-B-WARE[®]; NEOZIN[®]; OP-THAL-ZIN[®]; OP-THAL-ZIN[®]; OPTISED[®]; OPTRAEX[®]; ORAZINC[®]; PREFRIN-Z[®]; SOLVEZINC[®]; SOLVEZINK[®]; VERAZINC[®]; VISINE-AC[®]; ZINC-200[®]; ZINC-VITRIOL[®]; ZINCATE[®]; ZINCFRIN[®]; ZINCI-SULFAS[®]; ZINCOMED[®]; ZINK-GROB[®]; ZINKLET[®]; ZINKOSITE[®]

Producers of zinc and zinc compounds: ASARCO (USA); Anglo American (UK); Arcon International Resources (Ireland); Billiton (UK); Boliden (Sweden); CP/Philbrochem (USA); Dowa Mining (Japan); Faci (Italy); Grillo-Werke (Germany); Hall, C.P. (USA); Industrias Penoles (Mexico); Jost; Kemira (Finland); Korea Zinc (South Korea); Maranda Mining (South Africa); Max Atotech (India); TotalMetorex (South Africa); Mitsubishi Materials (Japan); Mitsui Mining (Japan); Nippon Mining & Metals (Japan); Noranda (Canada); Numinor (Israel); Pasmenco (Australia); PPM Pure Metals (Germany); Rio Tinto (UK); Shepherd Chemical (USA); Synthetic Products (USA); Teck Cominco (Canada); UMICORE (Belgium); Zinc Corp. of America (USA); Zinc Corp. of South Africa (South Africa)

Chemical Class: Inorganic zinc

EPA/OPPPC Code: 089001 (heptahydrate and anhydrous); 527200 (monohydrate)

California DPR Chemical Code: 667 (heptahydrate); 1852 (anhydrous); 2995 (monohydrate)

RTECS Number: ZH5260000

EINECS Number: 231-793-3 (heptahydrate)

Uses: Zinc sulfate anhydrous and zinc sulfate heptahydrate are not registered as pesticides in the U.S. Zinc sulfate is used in small amounts to increase the yield of cotton, cereals, vegetables and fruit and crops such as pecan, deciduous fruit, peanuts, corn, and many citrus. Zinc sulfate is used in the production of water treatment chemicals, the production of rayon, and in animal feed supplements.

Carcinogen/Hazard Classifications

U.S. TRI: Developmental and reproductive toxins

Label Signal Word: DANGER (heptahydrate)

Regulatory Authority:

- Clean Water Act: Section 307 Toxic Pollutants as zinc and compounds

- AB 2588-Air Toxics “Hot Spots” Chemicals (CAL) as zinc compounds
- The “Director’s List” (CAL/OSHA) as zinc compounds

- Safe Drinking Water Act: SMCL, 5 mg/L; Priority List (55 FR 1470) as zinc
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 1000 lb (454 kg) as zinc sulfate
- EPCRA Section 313: Form R *de minimis* concentration reporting level: 1.0% as zinc compounds
- Actively registered pesticide in California as CAS: 7733-02-0

Description: Colorless granules or crystalline solid. Odorless. Soluble in water; solubility 54 g/100 ml @ x20°C. Molecular weight =161.43. Density = 3.54 @ 25. Decomposes below boiling point @ 500°C. Melting/Freezing point = 100°C (heptahydrate); monohydrate loses water above 250°C. Log K_{ow} = > 3.0. Values above 3.0 are likely to bioaccumulate in marine organisms.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution. If powder is inhaled will cause coughing or labored breathing. Solid is irritating to skin and eyes. Swallowing will cause nausea and vomiting.

Routes of Entry: Inhalation, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes, skin, and respiratory tract.

Medical Surveillance: There are tests available to measure zinc in your blood, urine, hair, saliva, and feces. High levels of zinc in the feces can mean high recent zinc exposure. High levels of zinc in the blood can mean high zinc consumption and/or high exposure. Tests to measure zinc in hair may provide information on long-term zinc exposure; however, the relationship between levels in your hair and the amount of zinc you were exposed to is not clear.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Chemical Class: Dithiocarbamate

EPA/OPP PC Code: 034805

California DPR Chemical Code: 629

ICSC Number: 0348

RTECS Number: ZH0525000

EEC Number: 006-012-00-2

Uses: Ziram is an agricultural fungicide registered to control fungal diseases on a wide range of crops including stone fruits, pome fruits, nut crops, vegetables and commercially grown ornamentals, and as a soil and seed treatment. In

addition, it is formulated as a bird and rabbit repellent for outdoor foliar applications to ornamentals and as an additive in industrial adhesives, caulking, and latex paints.

Human toxicity (long-term)⁽⁷⁷⁾: Very low–140.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Extra high–0.6214300 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Ziram (40 CFR 180.116):

The maximum allowable residue level is 0.1 ppm for almonds and pecans. The maximum allowable residue level is 7.0 ppm for the following crops: Apple, Apricot, Bean; Beet, garden, roots; Beet, garden, roots and tops; Beet, garden, tops; Blackberry, Blueberry, Boysenberry, Broccoli, Brussels sprouts, Cabbage; Carrot, roots; Cauliflower, Celery, Cherry, Collards, Cranberry, Cucumber, Dewberry, Eggplant, Gooseberry, Grape, Huckleberry, Kale, Kohlrabi, Lettuce, Loganberry, Melon, Nectarine, Onion, Pea, Peach, Peanut, Pear, Pepper, Pumpkin, Quince, Radish; Radish, roots; Radish, tops; Raspberry, Rutabaga; Rutabaga, roots; Rutabaga, tops; Spinach, Squash; Squash, summer; Strawberry, Tomato, Turnip; Turnip, greens; Turnip, roots; Youngberry

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Likely carcinogen

U.S. TRI: Developmental and reproductive toxin

IARC: Group 3, unclassifiable

Label Signal Word: CAUTION, WARNING or DANGER

WHO Acute Hazard: Class III, slightly hazardous

Endocrine Disruptor: Suspected endocrine disruptor

Regulatory Authority:

- AB 1803-Well Monitoring Chemical (CAL)
- Actively registered pesticide in California.
- Clean Water Act: Section 307 Toxic Pollutants as zinc and compounds
- Safe Drinking Water Act: SMCL, 5 mg/L; Priority List (55 FR 1470) as zinc
- AB 2588-Air Toxics “Hot Spots” Chemicals (CAL) as zinc compounds
- EPA Hazardous Waste Number (RCRA No.): P205
- RCRA, 40CFR261, Appendix 8 Hazardous Constituents
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 1 lb (0.454 kg) as Zinc, bis(dimethylcarbamodithioato-*S,S'*)-
- FIFRA, 180.3[3] dithiocarbamates
- The “Director’s List” (CAL/OSHA) as zinc compounds
- EPCRA Section 313: Form R *de minimis* concentration reporting level: 1.0% as zinc compounds
- Regulated Marine Pollutant
- Canada, WHMIS, Ingredients Disclosure List

Description: White powder (pure). Odorless. Practically insoluble in water; solubility = 72 ppm @ 25°C. Molecular weight = 305.81. Density: 1.71 1.65 @ 20°C. Melting/Freezing point = 248°C. Vapor pressure = 1 x 10⁻⁷ mmHg @ 20°C. Combustible. Dust forms explosive mixture

with air. Log K_{ow} = 1.1. Highly toxic to marine organisms, but unlikely to bioaccumulate.

Incompatibilities: Contact with acids can cause decomposition. Decomposition products in fire includes oxides of nitrogen and sulfur.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation of dust or aerosol, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Low levels of toxicity. Concentrated solutions are slightly corrosive to eyes and mucous membranes. Dust inhalation can cause irritation of the respiratory system with sneezing. Eye contact can cause irritation, watering, pain, and inflammation of the eyelids. Skin contact can cause irritation and minor ulceration. Ingestion can cause nausea, vomiting, fever, muscle twitching, seizure, rapid respiration, slow heart beat. Severe exposure may result in death.

Long Term Exposure: May affect the central nervous system

Points of Attack: Respiratory system, central nervous system, cardiovascular system, skin, eyes.

Medical Surveillance: There are tests available to measure zinc in your blood, urine, hair, saliva, and feces. High levels of zinc in the feces can mean high recent zinc exposure. High levels of zinc in the blood can mean high zinc consumption and/or high exposure. Tests to measure zinc in hair may provide information on long-term zinc exposure; however, the relationship between levels in your hair and the amount of zinc you were exposed to is not clear. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Before employment and at regular times after that, the following are recommended: If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious and able to swallow, have victim drink 4 to 8 ounces of water. Do not induce vomiting. *Note to physician or authorized medical personnel:* Medical observation is

recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

Appendix A: List of Companies Cited

- A -

A H Marks & Co., Ltd., United Kingdom
 A.M.P.E.R.E. Industrie SA Dept Chimie, France
 Abaquim, MexicoAcido de Mexico S.A. de C.V., Mexico
 ABCR GmbH & Co. KG, Germany
 Acetex Corporation, Canada
 Achema SC, Lithuania
 Acros Organics N.V., Belgium
 Adheswara Group of Companies, India
 Adrian Resources Ltd., Canada
 Advanced Synthesis Technologies, United States
 Aero Agro Chemical Industries, Ltd., India
 AGA Gas , see Linde Gas AG, (Germany), Spain
 Agan Chemical Manufacturers Ltd., Israel
 AgraQuest, United States
 AgrEvo, see Bayer CropScience (Germany), Germany
 Agrichem (International) Limited, United Kingdom
 AgriChem B.V., The Netherlands
 Agrides S.A., Spain
 Agriliance, United States
 Agrimor International Co., United States
 Agrium , Canada
 Agro-care Chemical Industry Group, China
 Agrochemicals del Ecuador (AGROCHEM), Ecuador
 Agropharm Ltd., United Kingdom
 Agrowchem Inc., Canada
 Agsin Pte. Ltd., Singapore
 Agway Inc., United States
 Aimco Pesticides Ltd., India
 Air Liquide Group, France
 Air Products & Chemicals, United States
 AJE GmbH, Switzerland
 Akzo Nobel Functional Chemicals BV, The Netherlands
 Akzo Nobel, The Netherlands
 Alaska Nitrogen Products LLC, United States
 Albemarle Corporation, United States
 Albright & Wilson Pty., United Kingdom
 Alcide Corporation, United States
 Alcoa Inc, United States
 Alcotan Laboratories S.A., Spain
 Aldrich Chemical Co., United States
 Alfa Rio Quimica Ltda, Brazil
 Alfa Aesar, United States
 Alkyl Amines Chemicals , India
 Allipo Chemicals, India
 Alquimia Mexicana, Mexico
 Alta Laboratories , India
 Amchem Products, see Dow AgroScience (USA), United States
 American Cyanamid's Agricultural Products Group , see
 BASF Agricultural Products Group (Germany), United States
 American Elements Inc, United States
 American Gas Group, United States
 Amomex Mexicana, S.A. de C.V., Mexico
 AMVAC Chemical, United States
 Anhui Huaxing Chemical Industry Co., Ltd., China
 Anhui Fengle Agrochemical Co., Ltd., China
 ANWIL S. A., Poland
 Apache Nitrogen Products, United States
 Aquashade Inc., United States
 Arab Potash Company, Jordan
 Archimica Ltd., United Kingdom
 Aristech Chemical Corporation, see Sunoco Chemicals Unit of Sunoco Inc. (USA), United States
 Arkema Group S.A., France
 Arkema Group Inc., see Arkema Group S.A. (France), United States
 Arvesta Corporation, United States
 Aryan Pesticides Ltd., India
 Asahi Glass Chemicals Division , Japan
 ASARCO , United States
 Ascot International Ltd., United Kingdom
 Ashland Inc., United States
 Asia Pacific Resources Ltd., Thailand
 Atanor S.A., Argentina
 Atofina Chemicals Inc., see Arkema Inc., (USA), United States
 ATOFINA, see Arkema Group S.A. (France), France
 Atul Ltd., India
 Aventis CropScience, see Bayer CropScience (Germany), France
 Avitrol Corporation, United States
 Azot Association, Ukraine

- B -

Baker Petrolite (USA), United States
 Barmac Industries, Australia
 BASF Agricultural Products Group, United States
 BASF Group AG, Germany
 BASF Agricultural Products Group, Germany
 BASF Canada Inc, Canada
 BASF Corporation, United States
 Bayer Group, Germany
 Bayer CropScience AG, Germany
 BEC Group Ltd. (Bhilai Engineering Corporation), India
 Becker Underwood Inc., United States

Bell Laboratories, Inc., United States
Bhageria Dye-Chem Ltd., India
Bharat Rasayan Ltd., India
Bharat Pulverizing Mills Pvt. Ltd., India
Bhp Billiton Ltd., Australia
BHP Billiton Plc, United Kingdom
Biesterfeld Siemsglueck International. GmbH , Germany
Bilbaina de Alquitrane, Spain
Bilt Chemicals, see Solaris ChemTech Ltd. (India), India
BOC Gases, United Kingdom
Boehringer Ingelheim , Germany
Boliden AB, Spain
Bombay Ammonia and Chemical Company, India
Bonide Products, Inc., United States
Borden Chemical , United States
Borregaard, Norway
BP Chemicals , United Kingdom
Brotherton Specialty Products, United Kingdom
Buckman Laboratories, Inc., United States

- C -

C.P. Hall, United States
Caffaro S.p.A, Italy, Italy
Caldic Chemie B.V., The Netherlands
Calliope SA, France
Cangzhou Green Chemical Co., Ltd., China
Carbueros Metalicos, Spain
Cargill Crop Nutrition, United States
CECA, France
Cedar Chemical Corporation, United States
Celanese AG, Germany
Celite Corp., United States
Celtic Chemicals Ltd., United Kingdom
Central Glass, Japan
CEPSA, Spain
Cerexagri Inc. - North America, United States
Cerexagri Inc. - Europe/International, France
Certis USA, LLC, United States
CF Industries Inc., United States
Changfeng Chemical, China
Changzhou Fengdeng Pesticide Factory, China
Changzhou Wujin Linchuan Chemical Factory, China
Changzhou Kangmei Chemical Industry Co., Ltd., China
Chemada Fine Chemicals, Israel
Chemical Company, The, United States
Chemical Lime Co., United States
Chemical Products Corporation, United States
Cheminova A/S, Denmark
Chevron Phillips Chemical Company LP, United States
ChevronTexaco Corp, United States
Chimco AD, Bulgaria
China Chemicals, China

China Petrochemical Development Corporation (CPDC), Taiwan
Chongqing Chuandong Chemical (Group), China
Chromos Agro d.d., Croatia
Cia. Petroquimica do Sul (COPESUL), Brazil
Cia. Universal de Industrias S.A. de C.V., Mexico
Ciba Specialty Chemicals, Switzerland
Ciba-Geigy , now Sygenta, Switzerland
Clariant International , Switzerland
Clariant International, Germany
Cleary Chemical Corp, United States
Cleveland Potash, United Kingdom
Coalite Chemicals Ltd., United Kingdom
Cognis GmbH, Germany
CONDEA GmbH, Germany
Continental Lime, United States
Coogee Chemicals, Australia
Copene Petroquimica do Nordeste SA, Brazil
Coromandel Fertilisers Ltd., India
Creanova , United States
Crompton Corporation, United States
Crop Care Australasia Pty Ltd., Australia
Crowley Chemical, United States
Crown Technology, United States
CTC Organics, United States
Cyanides & Chemicals Company, India
Cytec Industries, United States

- D -

Daicel Chemical Industries, Japan
Dainippon Ink and Chemicals, Japan
Dankalk, Denmark
Dead Sea Bromine Group, Israel
Deepak Fertilizers and Petrochemicals Corp. Ltd., India
Degesch America, United States
Degussa AG, Germany
Degussa-Huls AG, see Degussa AG (Germany), Germany
Delta Chemical, United States
Denki Kagaku Kogyo Kabushiki Kaisha (Denka), Japan
Derivados del Fluor SA, Spain
Deza a. s., Czech Republic
Dhanuka Group, India
Dharamsi Morarji Chemicals, India
Dhruv Chemical Industries, India
Diachem S.p.A., Italy
Dow AgroSciences LLC, United States
Dow Chemical, United States
Drexel Chemical Company, United States
DSM Agro BV, The Netherlands
DSM Fine Chemicals, The Netherlands
DuPont, United States
DuPont Crop Protection, United States
Dynamit Nobel AG, Germany

- E -

E.I.D. Parry (India) Ltd., see Coromandel Fertilisers (India),
India
EaglePicher Industries , United States
Eastman Chemical Co., United States
Ecogen Inc., United States
EDEN Bioscience Corp., United States
Ehrenstorfer, Dr., GmbH, Germany
El Dorado Chemical Company, United States
Elston Manufacturing , United States
EM Industries, United States
Emerald BioAgriculture Corp, United States
EniChem S.p.A., Italy
Entek Corporation, United States
Epochem Co., Ltd., China
Equistar Chemicals, United States
Ercros S.A., Spain
Esseco Group S.p.A., Italy
Eurolabs Ltd., United Kingdom
Excel Industries Ltd., India
Exxon Mobil Chemical Company, United States

- F -

Fairmount Chemical Company, United States
Feinchemie Schwebda GmbH, Germany
Ferro Corporation, United States
Fine Agrochemicals Ltd., United Kingdom
Fluorochem Ltd., United Kingdom
FMC Agricultural Products Group, United States
Forward (Beihai) Hepu Pesticide Co., Ltd., China
Fulon Chemical Industrial Co., Ltd., Taiwan

- G -

Gadiv Petrochemical Industries Ltd., Israel
Gayatri Minerals & Chemicals, India
General Quimica S.A., Spain
Georgia Gulf Sulfur, United States
Georgia-Pacific Corporation, United States
GFS Chemicals Inc., United States
Gharda Chemicals Ltd., India
GlaxoSmithKline Plc, United Kingdom
Godavari Fertilisers and Chemicals , India
Goldschmidt Chemicals, see Degussa Group (Germany),
Germany
Gowan Company, United States
Grande Paroisse SA, France
Great Western Inorganics, United States
Great Lakes Chemical Corporation, United States
Griffin L.L.C. , United States
Grupo Aragonesas S. A., Spain
Grupo Mexico SA de C.V., Mexico

Gujarat Pesticides, India
Gustafson L LC, United States
Gwalior Chemical Industries, India

- H -

Haifa Chemicals Ltd., Israel
Haldor Topsoe A/S, Denmark
Halocarbon Products Corporation, United States
Harcros Chemicals Inc, United States
Hebei Huafeng Chemical Group , China
Hebei Long Age Pesticide Co., Ltd., China
Helena Chemical Company, United States
Hellenic Corundum SA, Greece
Hercules Inc., United States
Hindustan Organic Chemicals, India
Hindustan Insecticides Ltd., India
Hockley International Ltd., United Kingdom
Hoek Loos BV, The Netherlands
Hokko Chemical Industry Co., Ltd., Japan
Holvoet Chimie, France
Honeywell Performance Polymers & Chemicals, United
States
Honshu Chemical Industry, Japan
Hummel Croton Inc., United States
Hunan Tianyu Pesticide Chemical Group Co., Ltd., China
Hunan Darong Chemical & Pesticide Co., Ltd., China
Huntsman, United States
Hydro Agri Chemicals, Norway

- I -

Note: This is now a pure agricultural chemical and seed business. Monsanto's chemical businesses were spun off to Solutia and the remainder purchased by Pharmacia. Pharmacia distributed its remaining shares in Monsanto to its shareholders on August 13, 2002, making Monsanto a completely independent agricultural company.

ISRAEL**Israel Agro-Ecology Division, Ministry of the Environment****Address:** Phone: +972-2 655 3845**Fax:** +972-2 655 3848**Web site:** www1.sviva.gov.il

The Agro-Ecology Division deals with the prevention and treatment of environmental degradation arising from improper agricultural practices in Israel's rural sector, especially in the areas of pesticides, aerial and ground spraying, fertilizer contamination, agricultural effluents from dairy farms, and agricultural wastes. The Ministries of Agriculture, Health and the Environment are responsible for monitoring pesticide use and chemical control for agriculture, which is applied to approximately 95% of Israeli crops.

Israel Ministry of Environment**Address:** Phone: +972 2 655 3802**Fax:** +972 2 655 3817**Web site:** www1.sviva.gov.il**ITALY****Codex Alimentarius Commission****Address:** Secretariat, FAO/WHO Food Standards Programme, Food and Agriculture Organization of the United Nations

Viale delle Terme di Caracalla, 00100 Rome, Italy

Phone: +39 6 5705-1**Fax:** +39 6 5705-4593**E-mail:** codex@fao.org**Web site:** www.codexalimentarius.net

The Codex Alimentarius Commission was created in 1963 by FAO and WHO to develop food standards, guidelines and related texts such as codes of practice under the Joint FAO/WHO Food Standards Programme. The main purposes of this Programme are protecting health of the consumers and ensuring fair trade practices in the food trade, and promoting coordination of all food standards work undertaken by international governmental and non-governmental organizations.

European Chemical Bureau (ECB)**Address:** Institute for Health and Consumer Protection Joint Research Centre

Via Fermi 1, I-21020 Ispra (VA), Italy

E-mail: remi.allanou@jrd.it**Web site:** <http://ecb.jrd.it>

The ECB is the focal point for the assessment of dangerous chemicals for the European Community.

Food and Agricultural Organization of the United Nations**Address:** Viale delle Terme di Caracalla, 00100 Rome, Italy**Phone:** +39 06 5705 1**Fax:** +39 06 5705 3152**Cable Address:** FOODAGRI ROME**E-mail:** FAO-HQ@fao.org**Web site:** www.fao.org

FAO is one of the largest specialized agencies in the United Nations system and the lead agency for agriculture, forestry, fisheries and rural development. An intergovernmental organization, FAO has 183 member countries plus one member organization, the European Community.

Food and Agriculture Pesticide Management**Address:** Food and Agriculture Organization of the United Nations (FAO)

Viale delle Terme di Caracella, 00100 Rome, Italy

Phone: +39 6 5705-1**Fax:** +39 6 5705 3152**E-mail:** FAO-HQ@fao.org**Web site:** www.fao.org

Pesticide Management is an activity carried out within the overall framework of the Plant Protection Service of FAO. It is designed to work together with member countries as a partner to introduce sustainable and environmentally sound agricultural practices which reduce the health hazard associated with the use of pesticides.

International Plant Protection Convention**Address:** Secretariat, IPPC

Food and Agriculture Organization of the United Nations (FAO)

Viale delle Terme di Caracella, 00100 Rome, Italy

Phone: +39 6 5705 4812**Fax:** +39 6 5705 6347**E-mail:** IPPC@fao.org**Web site:** www.ippc.int/IPP/En/default

The purpose of the International Plant Protection Convention is to secure a common and effective action to prevent the spread and introduction of pests of plants and plant products, and to promote appropriate measures for their control. It also includes both direct and indirect damage by pests, thus including weeds. The provisions extend to cover conveyances, containers, storage places, soil and other objects or material capable of harboring plant pests. National Plant Protection Organizations and Regional Plant Protection Organizations work together to help contracting parties meet their IPPC obligations.

Italian Department for the Environment**Address:** Web site: www.amb.casaccia.enea.it

Department for the Environment promotes and performs studies, research, and experimental and demonstration work in the environmental field and transfers know-how and results to the public administration, economic operators and the community.

The leading public body for protecting and improving the environment in England and Wales.

UNITED STATES

Agency for Toxic Substances and Disease Registry

Address: U.S. Department of Health and Human Services, ATSDR, U.S. Public Health Service, Centers for Disease Control and Prevention, 1600 Clifton Rd. Atlanta, GA 30333, USA

Phone: +1 888-422-8737

Fax: +1 404-498-0093

Hotline: +1 404-639-6360, 24-hour emergency number.

E-mail: atsdric@cdc.gov

Web site: www.atsdr.cdc.gov

ATSDR's mission is to prevent exposure and adverse human health effects and diminished quality of life associated with exposure to hazardous substances from waste sites, unplanned releases, and other sources of pollution present in the environment. The ATSDR ToxFAQs™ is a series of summaries about hazardous substances developed by the ATSDR Division of Toxicology. Information for this series is excerpted from the ATSDR Toxicological Profiles and Public Health Statements. Each fact sheet serves as a quick and easy to understand guide. Answers are provided to the most frequently asked questions about exposure to hazardous substances found around hazardous waste sites and the effects of exposure on human health.

Agriculture Research Service

Address: U.S. Department of Agriculture
Jamie L. Whitten Bldg., 302-A, 14th & Independence Ave., S.W., Washington, DC 20250, USA

Phone: +1 202-720-3656

Fax: +1 202-720-5437

E-mail: eknipling@ars.usda.gov

Web site: www.ars.usda.gov

Agriculture Research Service is the in-house research agency of the U.S. Department of Agriculture. It is one of the Research, Education and Economics agencies charged with extending the nation's scientific knowledge across a broad range of program areas that affect the American people on a daily basis. The Agricultural Research Service is one of the largest agencies of USDA. ARS research covers a broad range scientific disciplines, and is carried out across the United States in over 120 labs within 9 Area Offices.

Biopesticides and Pollution Prevention Division

Address: Office of Pesticide Programs

U. S. Environmental Protection Agency

Ariel Rios Building, 1200 Pennsylvania Ave., N.W., Washington, D.C. 20460, USA

Phone: +1 703-305-8098 (Ombudsman)

Web site: www.epa.gov/pesticides/biopesticides

The biopesticides program seeks to expedite the registration of biopesticides and to encourage the use of safer pest management practices including biopesticides. BPPD is responsible for risk/benefit assessment and risk management functions for microbial pesticides, tolerance reassessment, biochemical pesticides, plant pesticides, and the Pesticide Environmental Stewardship Program (PESP).

Center for Environmental Research Information

Address: U.S. Environmental Protection Agency
Office of Research and Development (ORD)

26 W. Martin Luther King Dr., P.O. Box 12505, Cincinnati, OH 45268, USA

Phone: +1 513-569-7562

Fax: +1 513-569-7566

CERI is the focal point for the exchange of scientific and technical environmental information produced by the Office of Research and Development, its 12 research laboratories, and associated programs nationwide. Hours: 8:00 a.m. - 4:30 p.m., Monday - Friday EST.

Food Safety and Inspection Service

Address: U. S. Department of Agriculture
Washington, D.C. 20250-3700

Phone: (Meat and Poultry Hotline) +1 800-535-4555

Medical Inquiries: +1 202-720-9113

E-mail: MPHotline.fsis@usda.gov

Web site: www.fsis.usda.gov

The Food Safety and Inspection Service is the public health agency in the U.S. Department of Agriculture responsible for ensuring that the nation's commercial supply of meat, poultry, and egg products is safe, wholesome, and correctly labeled and packaged, as required by the Federal Meat Inspection Act, the Poultry Products Inspection Act, and the Egg Products Inspection Act. The FSIS Web site has a complete list of e-mail contacts within the service.

Food Safety Research Information Office

National Agricultural Library, U.S. Department of Agriculture, Agriculture Research Service

Address: 10301 Baltimore Ave., Room 303, Beltsville, MD 20705-2351, USA

Phone: +1 301-504-7374

E-mail: yalonso@nal.usda.gov

Web site: www.nal.usda.gov/fsrio

Supports the food safety research community with an online database.

Headquarters Information Resources Center

Address: U.S. Environmental Protection Agency
Ariel Rios Building, 1200 Pennsylvania Ave., N.W.,
Washington, D.C. 20460, USA

Phone: +1 202-260-5922

Fax: +1 202-260-5153

E-mail: library-hq@epamail.epa.gov

Web site: www.epa.gov/natlibra/hqirc

Provides access to EPA information for United States and International requests, and has a range of information services consisting of environmental and related subjects of interest to EPA staff, including online searching of commercial databases. The focus of the IRC collection is on environmental regulations, policy, planning, and administration. Hours: 8 a.m. - 5 p.m., Monday - Friday

National Center for Toxicological Research

Address: U.S. Food and Drug Administration
3900 NCTR Road, Jefferson, AR 72079, USA

Phone: +1 870-543-7130

E-mail: rhuber@nctr.fda.gov

Web site: www.fda.gov/nctr

Provides fundamental and applied research specifically designed to define biological mechanisms of action underlying the toxicity of products regulated by the FDA. This research is aimed at understanding critical biological events in the expression of toxicity and at developing methods to improve assessment of human exposure, susceptibility and risk.

National Health Information Center

Address: U.S. Public Health Service
Office of Disease Prevention and Health Promotion
(ODPHP)

Address: P.O. Box 1133, Washington, DC 20013-1133,
USA

Phone: +1 301-565-4167, 800-336-4797

Fax: +1 301-984-4256

E-mail: nhicinfo@health.org

Web site: www.health.gov/nhic

NHIC puts health professionals and consumers in touch with those organizations that are best able to provide answers.

National Institute of Environmental Health Sciences

Address: National Institutes of Health

Address: P.O. Box 12233, Research Triangle Park, NC
27709, USA

Phone: +1 919-541-3201, 800-643-4794, Communications
Office, 919-541-2605

Fax: +1 919-541-2260

E-mail: environmental@niehs.nih.gov

Web site: www.niehs.nih.gov

Supports and conducts basic research focusing on the interaction between humans and potentially toxic or harmful agents in the environment. Its research is the basis for preventive programs for environment-related disease and for action by regulatory agencies. Has a basic program to research problems of hazardous wastes. Has one of the world's largest research libraries. Operates the Environmental Health Clearinghouse and the National Toxicology Program. Provides research grants to Environmental Health Sciences Centers at universities and medical schools.

National Service Center for Environmental Publications

Address: U.S. Environmental Protection Agency
P.O. Box 42419, Cincinnati, OH 45242-0419, USA

Phone: +1 513-489-8190, 800-490-9198

Fax: +1 513-489-8695

E-mail: ncepimal@one.net

Web site: www.epa.gov/ncepi

The central clearinghouse for the exchange of scientific, technical and public-oriented environmental information published by the Environmental Protection Agency. Provides copies of EPA documents and multimedia products upon request. It operates Monday through Friday, 7:30 a.m. - 5:30 p.m. EST.

National Toxicology Program

Address: National Institute of Environmental Health
Science, P.O. Box 12233, 111 Alexander Dr., Research
Triangle Park, NC 27709, USA

Phone: +1 919-541-3345

E-mail: liaison@starbase.niehs.nih.gov

Web site: <http://ntp-server.niehs.nih.gov>

The NTP is an interagency program consisting of relevant toxicology activities of the National Institutes of Health's National Institute of Environmental Health Sciences, the Centers for Disease Control and Prevention's National Institute for Occupational Safety and Health, and the Food and Drug Administration's National Center for Toxicological Research.

Occupational Safety and Health Administration

Address: U.S. Department of Labor
200 Constitution Ave. NW, Washington, DC 20210, USA

Phone: Public Information: +1 202-693-1999

Emergency phone: +1 800-321-OSHA, 800-321-6742

Fax: +1 202-219-5986

Web site: www.osha.gov

The mission of the Occupational Safety and Health Administration is to save lives, prevent injuries and protect the health of America's workers.

Office of Air and Radiation

Address: U.S. Environmental Protection Agency
Ariel Rios Building, 1200 Pennsylvania Ave., N.W.,
Washington, D.C. 20460 , USA

Phone: +1 202-564-7400

E-mail:

<http://joshua.epa.gov/oar/task.nsf/Comments?OpenForm>

Web site: www.epa.gov/oar

Deals with issues that affect the quality of our air and protection from exposure to harmful radiation. OAR develops national programs, technical policies, and regulations for controlling air pollution and radiation exposure. Areas of concern to OAR include indoor and outdoor air quality, stationary and mobile sources of air pollution, radon, acid rain, stratospheric ozone depletion, radiation protection, and pollution prevention.

Office of Air Quality Planning and Standards

Address: Office of Air and Radiation
U.S. Environmental Protection Agency
Mail Drop 10, Research Triangle Park, NC 27711, USA
Phone: +1 919-541-5618

Fax: +1 919-541-0501

E-mail:

<http://joshua.epa.gov/oar/task.nsf/Comments?OpenForm>

Web site: www.epa.gov/oar/oaqps

Directs national efforts to meet air quality goals, particularly for smog, air toxics, carbon monoxide, lead, particulate matter (soot and dust), sulfur dioxide, and nitrogen dioxide. The office is responsible for more than half of the guidance documents, regulations, and regulatory activities required by the Clean Air Act Amendments of 1990.

Office of Emergency and Remedial Response (Superfund)

Address: Emergency Response Division
U.S. Environmental Protection Agency
Crystal Gateway One, 13th Fl., 1235 Jefferson Davis Hwy.,
Arlington, VA 22202, USA

Phone: +1 703-603-8760

National Response Center: +1 800-424-8802

Web site: www.epa.gov/superfund

The Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), also known as the 'Superfund' Act, requires EPA to create new processes, policies, and procedures, and develop new technical capabilities for treating and containing hazardous substances.

Office of Environmental Information

Address: U.S. Environmental Protection Agency
Ariel Rios Building, 1200 Pennsylvania Ave., N.W.,
Washington, D.C. 20460 , USA

Phone: +1 202-260-2090 - EPA Locator, 202-260-2080 -
Public Information Center

E-mail: public-access@epa.gov

Web site: www.epa.gov/eq

A one-stop source of data and information on environmental quality, status and trends, including environmental profiles, the Digital Library of Environmental Quality, and the environmental Atlas.

Office of Pesticide Programs

Address: U. S. Environmental Protection Agency
Ariel Rios Building, 1200 Pennsylvania Ave., N.W.,
Washington, D.C. 20460 , USA

Phone: +1 703-305-5805

Web site: www.epa.gov/pesticides

The OPP regulates the use of all pesticides in the U.S. and establishes maximum levels for pesticide residue in food.

Office of Prevention, Pesticides and Toxic Substances

Address: U.S. Environmental Protection Agency
Ariel Rios Building, 1200 Pennsylvania Ave., N.W.,
Washington, D.C. 20460 , USA

Phone: +1 202-260-9262

Web site: www.epa.gov/oppts/asstadm.htm

Promotes pollution prevention and evaluates pesticides.

The RACI is both the qualifying body in Australia for
professional chemists and a learned society promoting the
science and practice of chemistry in all its branches. The
Division of Cereal Chemistry concentrates on chemical
aspects of the cereal-grain industry such as bread and other
products from wheat, beer, and malt from barley.

CropLife International

Address: 143 Avenue Louise, B-1000 Brussels, Belgium
Phone: +32 2 542 04 10
Fax: +32 2 542 04 19
E-mail: croplife@croplife.org
Web site: www.croplife.org

CropLife International is the global federation representing the plant science industry. It supports a network of 75 regional and national associations and their member companies worldwide, in six Regional Associations: Africa/Middle-East, Asia-Pacific, Europe, Japan, Latin America and North America. CropLife International was formerly Global Crop Protection Association.

European Association for Bioindustries, The

Address: Avenue de l'Armee 6, 1040 Brussels, Belgium
Phone: +32 2 735.03.13
Fax: +32 2 735.49.60
E-mail: mail@europabio.org
Web site: www.europabio.org

EuropaBio, the European Association for Bioindustries, represents nearly 40 member companies operating worldwide and 18 national biotechnology associations. Members are involved in a wide range of activities: human and animal health care, diagnostics, bio-informatics, chemicals, crop protection, agriculture, food and environmental products and services. EuropaBio also has associate members such as international commercial, financial, asset management and other service-providing companies, regional biotechnology development organizations and scientific institutes.

European Centre for Ecotoxicology and Toxicology of Chemicals

Address: Avenue E. Van Nieuwenuye 4, Box 6, B-1160 Brussels, Belgium
Phone: +32 2 675 3600
Fax: +32 2 675 3625
Web site: www.ecetoc.org

A scientific, non-profit making, non-commercial association, financed by 50 of the leading companies with interests in the manufacture and use of chemicals. It provides a scientific forum through which the European chemical industry can research, review, assess and publish studies on the ecotoxicology and toxicology of chemicals.

European Chemical Industry Council

Address: Avenue Van Nieuwenhuyse, 4 Box 1, B-1160 Brussels, Belgium
Phone: +32 2 676 7211
Fax: +32 2 676 7300
E-mail: mail@cefic.be
Web site: www.cefic.be

CEFIC is made up of the national chemical industry federations of 22 countries in Europe and large international

companies which are members in their own right. Web site for individual federations and their members is www.cefic.org/product_families.

European Chemical Society

Address: Department of Chemistry, Universite Catholique de Louvain, Batiments Lavoisier, Place Louis Pasteur, 1, B-1348 Louvain-la-Neuve, Belgium

Fax: +32-0-47 80 33

E-mail: ecs@chim.ucl.ac.be

Web site: www.chim.ucl.ac.be/CHIM/ECS/

The European Chemical Society was founded in 1995. It seeks to promote European chemistry both inside and outside Europe, to network and unite chemists at the European level, to circulate information among European chemists, to provide a forum for European chemists, to promote public awareness and appreciation of chemistry, and to encourage the young research students to become actively involved in the Society.

European Crop Protection Association

Address: 6 Avenue E van Nieuwenhuyse, B-1160 Brussels, Belgium

Phone: +32 2 663 15 50

Fax: +32 2 663 15 60

E-mail: ecpa@ecpa.be

Web site: www.ecpa.be

ECPA is the pan-European voice of the crop protection industry. The membership includes both national associations and companies throughout Europe, including Central and Eastern Europe. In addition to traditional crop protection products such as herbicides, fungicides and insecticides, members also provide biopesticides and genetically modified crops. ECPA is a member of CropLife International (formerly Global Crop Protection Association).

European Fertilizer Manufacturers Association

Address: Avenue E, Van Nieuwenhuyse 4, B-1160 Brussels, Belgium

Phone: +32 2 675 3550

Fax: +32 2 675 3961

E-mail: main@efma.be

Web site: www.efma.org

EFMA is a trade association to promote role of mineral fertilizers in European agriculture and horticulture.

Federation of Asian Chemical Societies /The Chemical Society of Japan

Address: c/o Prof. Yoshito Takeuchi
1-5 Kanda-Surugadai, Chiyoda-ku, Tokyo, 101-0062, Japan

Phone: +81 3 3292-6161

Fax: +81 3 3292-6318

E-mail: facs@chemistry.or.jp

Web site: www.ozchemnet.adfa.oz.au/FACS

Japan Chemical Industry Association

Address: Kazan Bldg., 3-2-4 Kasumigaseki, Chiyoda-Ku, Tokyo, 100-0013, Japan

Phone: +81 3 3580 0751

Fax: +81 3 3580 0970

E-mail: chemical@jcia-net.or.jp

Web site: www.nikkakyo.org

Japan Crop Protection Association

Address: Nihonbashi Club Bldg., 5-8, 1-chome Muromachi, Nihonbashi, Chuo-ku, Tokyo 103, Japan

Phone: +81 3 3241 02 30

Fax: +81 3 3241 31 49

Web site: www.jcpa.or.jp

The Japan Crop Protection Association is the nonprofit organization of Japanese manufacturers, formulators and distributors of crop protection products. JCPA represents 90 companies that manufacture, sell and distribute more than 95% of Japan's crop protection products. It is a member of CropLife International.

Pesticides Manufacturers & Formulators Association of India

Address: Nippon Noyaku Gakkai

1-43-11 Komagome, Toshima-ku, Tokyo 170-8484, Japan

Fax: +81 3 3943 6086

Web site: www.soc.nii.ac.pk

Provides a forum for the exchange of ideas on developing pesticides and their contribution to environmental and life sciences.

JORDAN

Africa/Middle East Working Group (AMEWG), see CropLife Africa Middle East (Jordan)

CropLife Africa Middle East

Address: P.O. Box 961810 Sport City, 11196 Amman, Jordan

Phone: +962 79 567 409

Fax: +962 6 5671 878

The Africa/Middle-East Working Group represents Crop Protection Industry Associations in Cameroon, Ivory Coast, Ghana, Kenya, Malawi, Nigeria, South Africa, Tanzania, Zambia, Zimbabwe, Algeria, Egypt, Jordan, Israel, Lebanon, Morocco and Syria.

CropLife Africa & Middle East promotes the benefits of crop protection and biotechnology products and their importance to sustainable agriculture and food production. CropLife Africa & Middle East is a member of CropLife International.

LATVIA

Latvian Institute of Organic Synthesis

Address: Aizkraukles iela 21, LV-1006 Riga, Latvia

Phone: +371 7 551 822

Fax: +371 7 553 493

Web site: www.osi.lanet.lv/osi-info

MACEDONIA

Society of Chemists and Technologists of Macedonia

Address: Institute of Chemistry, Arhimedova 5, P.O.B. 161, Skopje, Macedonia

Phone: +389 91 117-055

Fax: +389 91 226-865

Web site: www.pmf.ukim.edu.mk

MEXICO

CIQUIM

Address: Consultoria en Ingenieria Quimica

Boyaca No. 557-2, Col. Guadalupe Tepeyec, 07740 Mexico D.F., Mexico

Phone: +52 5 587-00-52

Fax: +52 5 587-00-52

E-mail: egg@dec5500.ind.imp.mx

National Association of the Chemical Industry

Address: Asociacion Nacional de la Industria Química ,
Providencia 1118 Col. del Valle C.P., 03100 México, D.F., Mexico

Phone: +55 52-30-51-00

Fax: +52 52-30-51-07

E-mail: aniq@aniq.org.mx

THE NETHERLANDS

Association of the Dutch Chemical Industry

Address: Vereniging van de Nederlandse Chemische Industrie (VNCI)
 P. O. Box 443, 2260 AK, Leidschendam, The Netherlands
Phone: +31 70 337 8787
Fax: +31 70 320 3903
E-mail: info@vncl.nl
Web site: www.vncl.nl

Netherlands Crop Protection Association

Address: Nederlandse Stichting voor Fytopharmacie (NEFYTO)
 P.B. 80523, 2508 Gm den Haag, The Netherlands
Phone: +31 70-351 48 51
Fax: +31 70-354 97 66
Web site: www.nefyto.nl

Nefyto is the trade association of the Dutch agrochemical industry. Affiliated to Nefyto are companies that manufacture and/or market crop protection products in the Netherlands. Nefyto has 15 participants, together representing 90% of the turnover of crop protection products in the Netherlands.

Organotin Environmental Programme Association

Address: Drs. J.A. Jonker
 Wachtoren 11, 4336 KL Middelburg, The Netherlands
Phone: +31 118 617 063
Fax: +31 118 617 349
 Promotes and fosters the dissemination of scientific and technical information on the environmental effects of organic compounds.

Royal Netherlands Chemical Society

Address: Koninklijke Nederlandse Chemische Vereniging
 Burnierstraat 1, 2596 HV The Hague, The Netherlands
Phone: +31 70 346 9406
Fax: +31 70 362 5197
E-mail: kncv@kncv.nl
Web site: www.kncv.nl/kncven
 The professional organization for chemists and chemical engineers in The Netherlands.

NEW ZEALAND

New Zealand Chemical Industry Council

Address: P. O. Box 5069, Wellington, New Zealand
Phone: +64 4 499 4311
Fax: +64 4 472 7100

United Nations Environmental Program, Chemical Unit

Address: 11-13, chemin des Anemones, 1219 chatelaine, Geneva, Switzerland

Phone: +41 22 917 81 11

Fax: +41 22 797 34 60

E-mail: chemicals@unep.ch

Web site: www.chem.unep.ch/irptc

UNEP Chemicals is the center for all chemicals-related activities of the United Nations Environment Programme. The unit works towards making the world a safer place from toxic chemicals by helping governments take needed global actions for the sound management of chemicals, by promoting the exchange of information on chemicals, and by helping to build the capacities of countries around the world to use chemicals safely.

THAILAND

Asia-Pacific Crop Protection Association, see CropLife Asia

CropLife Asia

Address: 28th floor, Rasa Tower Building, 555, Pahonyothin Road, Chatuchak, Bangkok 10900, Thailand.

Phone: +66 2937-0487

Fax: +66 2937-0491

E-mail: info@croplifeasia.org

Web site: www.croplifeasia.org

CropLife Asia (formerly the Asia-Pacific Crop Protection Association) provides regional leadership and representation for the plant science industry. It promotes and supports the safe and responsible use of crop

production technologies, and their role in the development of a sustainable agriculture system in the Asia-Pacific region.

Fertilizer Advisory, Development and Information Network for Asia and the Pacific

Address: FADINAP, Rural Development Section, Population and rural and Urban Development Division

United Nations Building, Bangkok 10200, Thailand

Web site: www.fadinap.org

Note: Since 1991, FADINAP has been promoting environmentally-friendly fertilization in an effort to promote a better environment while ensuring food security. FADINAP works closely with national and international fertilizer organizations as well as with the fertilizer industry.

TURKEY**Turkish Chemical Manufacturers Association**

Address: Türkiye Kimya Sanayicileri Derneği Deđirmen Sokak, Pařmaz Sitesi, No:19, Duranbey Apt. K:3 D.9, Kozyatađý / Erenköy, 81090 Istanbul, Turkey

Phone: +90 216 416 76 44

Fax: +90 216 416 92 18

Web site: www.biochemsoc.org.uk

British Agrochemicals Association, see Crop Protection Association (UK)

British Calcium Carbonates Federation

Address: Omya UL Ltd.

Curtis Rd., Dorking, Surrey RH4 1XA, UK

Phone: +44 1 3068 86688

Fax: +44 1 3067 47444

E-mail: lindsay.watson@omya.com.uk

CABI Biosciences

Address: Bakeham Lane, Egham, Surrey TW20 9TY, UK

Phone: +44 1491-829080

Fax: +44 1491-829100

E-mail: bioscienceUK@cabi.org

Web site: www.cabi-bioscience.org

CABI *Bioscience* integrates four former international biological institutes, the International Institute of Biological Control (IIBC), the International Institute of Entomology (IIE), the International Institute of Parasitology (IIP) and the International Mycological Institute (IMI). Today it forms a group of scientists working in the fields of agricultural sustainability and biological diversity. It operates from six centers worldwide, in Kenya, Malaysia, Trinidad, Pakistan, Switzerland and the UK..

Chemical Industries Association

Address: Kings Buildings, Smith Square, London SW1P 3JJ, UK

Phone: +44 171 834 3399

Fax: +44 171 834 4469

E-mail: enquiries@cia.org.uk

Web site: www.cia.org.uk

The Chemical Industries Association is the UK chemical industry's leading trade and employer organization and embraces all the industry's trade sectors, product types and business activities.

Crop Protection Association

Address: 4 Lincoln Court, Lincoln Road, Peterborough PE1 2RP, UK

Phone: +44 17 33 349 225

Fax: +44 17 33 562 523

E-mail: info@cropprotection.org.uk

Web site: www.cropprotection.org.uk

The Crop Protection Association is the United Kingdom trade body representing companies engaged in manufacture, formulation and distribution of pesticide products for agriculture, forestry, horticulture, gardening, industrial, amenity and local authority uses. Formerly the British Agrochemicals Association.

Institute of Food Science and Technology

Address: 5 Cambridge Court, 210 Shepherd's Bush Road, London W6 7NJ, UK

Phone: +44 (0)20-7603 6316

Fax: +44 (0)20-7602 9936

E-mail: ifst@ifst.org

Web site: www.ifst.org

The IFST seeks to further the application of science and technology to all aspects of the supply of safe, wholesome, nutritious and attractive food, nationally and internationally.

Pesticide Action Network UK

Address: Development House
56-64 Leonard St., London 7065 0907, UK

E-mail: admin@pan-uk.org

Web site: www.pan-uk.org

Mission is to eliminate the hazards of pesticides; reduce dependence on pesticides and prevent unnecessary expansion of their use; and increase sustainable and ecological alternatives to chemical pest control.

Royal Society of Chemistry

Address: Burlington House, Piccadilly, London W1V 0BN, UK

Phone: +44 207 440 3312

Fax: +44 207 437 8883

E-mail: franklin@rsc.org.uk

Web site: www.rsc.org.uk

The learned society for chemistry and professional chemists in the United Kingdom.

Society of Chemical Industry

Address: 14/15 Belgrave Square, London SW1X 8PS, UK

Phone: +44 207 598 1500

Fax: +44 207 598 1545

E-mail: members@chemind.demon.co.uk

Web site: www.sci.mond.org

A global interdisciplinary network with deep roots in business, manufacturing, consumer affairs, research and education at all levels. Has particular strengths in the agricultural, food, pharmaceutical, water, construction, energy and environmental product and service areas.

UNITED STATES

American Association of Cereal Chemists

Address: 3340 Pilot Knob Road, St. Paul, MN 55121, USA

Phone: +1 651-454-7250

Fax: +1 651-454-0766

E-mail: aacc@scisoc.org

Web site: www.aaccnet.org

The American Association of Cereal Chemists members are specialists in the use of cereal grains in foods. AACC gathers and disseminates scientific and technical information to professionals in the grain-based foods industry worldwide.

American Chemistry Council

Address: 1300 Wilson Boulevard, Arlington, VA 22209, USA

Phone: +1 703 741-5000

Hotline: +1 800 424-9300, Non-emergency, 800 262-8200

Fax: +1 703 741-6000

E-mail: nicole_naylor@americanchemistry.com

Web site: www.americanchemistry.com

Formerly known as Chemical Manufacturers Association (CMA). A trade association of chemical manufacturers, representing more than 90 percent of the production for basic industrial chemicals in the U.S. Administers research in areas significant to chemical manufacturing such as air and water pollution control, operates Chemical Transportation Emergency Center (CHEMTREC) to control and report chemical accidents. ACC is organized by industrial groups and also by issue groups that serve as coordinators and advocates in their fields of specializations.

American Chemical Society

Address: 1155 16th Street, NW, Washington, D.C. 20036, USA

Phone: +1 202 872-4600, 800 227-5558

Fax: +1 202 872-4615

E-mail: nbyerly@vt.edu

Web site: www.acs.org

A professional organization of chemists and chemical engineers. Conducts studies and surveys, professional and student conferences and programs, administers grants and fellowship programs, maintains extensive chemical databanks, online services, and more than 33 divisions and hundreds of subcommittees covering all aspects of fundamental and applied chemistry. Helps interpret technical data and refers citizens to local scientists.

American Council on Science and Health

Address: 1995 Broadway, 2nd Floor, New York, NY 10023-5860, USA

Phone: +1 212-362-7044

Fax: +1 212-362-4919

Web site: www.acsh.org

ACSH is a nonprofit, consumer education organization dedicated to providing the public with mainstream scientific information on issues related to food, nutrition, chemicals, pharmaceuticals, lifestyle, the environment and health.

American Crop Protection Association, see CropLife America (US)

American Meat Science Association

Address: 1111 N. Dunlap Ave, Savoy, IL 61874, USA

Phone: +1 217 356-5368

Fax: +1 217 398-4119

Web site: www.meatscience.org

The Association seeks to promote the application of science and technology in the production, processing, packaging, distribution, preparation, evaluation, and utilization of all types of meat and meat related products from all animal species.

Association of American Plant Food Control Officials

Address: D.L. Terry, Secretary, University of Kentucky, 103 Regulatory Services Building, Lexington, KY 40546-0275, USA

Phone: +1 859-257-2668

Fax: +1 859-257-9478

E-mail: dterry@uky.edu

Web site: <http://www.aapfco.org>

The AAPFCO is an organization of fertilizer control officials from each state in the United States, from Canada and from Puerto Rico who are actively engaged in the administration of fertilizer laws and regulations. Also, research workers employed by these governments who are engaged in any investigation concerning mixed fertilizers, fertilizer materials, their effect, and/or their component parts.

Association of Natural Bio-control Producers

Address: Executive Director, 2230 Martin Dr., Tustin Ranch, CA 92782, USA

Phone: +1 714-544-8295

Fax: +1 714-544-8295

E-mail: maclayb2@aol.com

Web site: www.anbp.org

Represents the commercial biocontrol industry.

Biotechnical Industry Organization

Address: 1255 Eye St., N.W., Ste. 400, Washington, DC 20005, USA

Phone: 202-962-9200

E-mail: ldry@bio.org

Web site: www.bio.org

This organization unites two biotechnology trade organizations, comprising 503 companies, under one umbrella. The organizations are the Biotechnology Association (IBA) and the Association of Biotechnology Companies (ABC), which represented emerging companies and universities, and focused on technology transfer issues, meetings and other business development activities. Food and agriculture issues are a subdivision of BIO.

Center for Integrated Pest Management

Address: College of Agriculture and Life Sciences
North Carolina State University

Raleigh, NC, USA

Phone: +1 919-513-1432

E-mail: cipm@ncsu.edu

Web site: <http://ipmwww.ncsu.edu/cipm>

The Center for Integrated Pest Management was established in 1991 to serve a lead role in technology development, program implementation, training, and public awareness for IPM at the state, regional, and national levels. The CIPM is an organizational unit within the College of Agriculture and Life Sciences at North Carolina State University. It is composed of faculty members from all academic departments in the College and involves all relevant disciplines impacting on IPM. The CIPM also involves scientists from other universities across the nation through grants, contracts, or other formal working relationships. It is part of the National Science Foundation.

Center for Science in the Public Interest

Address: 1875 Connecticut Ave, N.W., Ste. 300, Washington, DC 20009, USA

Phone: +1 202-332-9110

Fax: +1 202-265-4954

E-mail: cspi@cspinet.org

Web site: www.cspinet.org

The Center for Science in the Public Interest (CSPI) is a nonprofit education and advocacy organization that focuses on improving the safety and nutritional quality of our food supply and on reducing the damage caused by alcoholic beverages. CSPI seeks to promote health through educating the public about nutrition and alcohol. It represents citizens' interests before legislative, regulatory, and judicial bodies, and it works to ensure advances in science are used for the public good.

Chemical Abstract Services (CAS)

Address: 2540 Olentangy River Rd., P.O. Box 3012, Columbus, Ohio 43210, USA

Phone: +1 614 447-3600, 800 753-4227

Fax: +1 614 447-3713

E-mail: help@cas.org

Web site: www.cas.org

Chemical Abstracts Service produces the world's largest and most comprehensive databases of chemical information. Principal databases, CHEMICAL ABSTRACTS and REGISTRY, include nearly 16 million abstracts of chemistry-related literature and patents and more than 30 million substance records respectively.

Chemical Industry Institute of Toxicology

Address: 6 Davis Dr., P.O. Box 12137, Research Triangle Park, NC 27709-2137, USA

Phone: +1 919 558-1200

Fax: +1 919 558-1300

E-mail: CIIInfo@ciit.org

Web site: www.ciit.org

A not-for-profit toxicology research institute that provides an improved scientific basis for understanding and assessing the potential adverse effects of chemicals, pharmaceuticals, and consumer products on human health.

Chemical Manufacturers Association (CMA), see American Chemistry Council (ACC)

Chemical Transportation Emergency Center (CHEMTREC)

Address: American Chemistry Council, 1300 Wilson Boulevard, Arlington, VA 22209-2380, USA

Phone: +1 800 262-8200

Continental US emergency phone only: +1 800 424-9300, non-emergency, 800 262-8200

International emergencies only, +1 703 527-3887, non-emergency, 703 741-5516

Fax: +1 703 741-6037

E-mail: chemtrec@americanchemistry.com

Web site: www.chemtrec.com

Handles emergency calls regarding chemical spills, leaks, fires, exposures, or accidents. Chemical emergency number open 24 hours, every day. CHEMTREC provides emergency response information for incidents involving hazardous materials, serving the chemical and transportation industries and emergency services who may be called upon as first responders. Also provides referrals to manufacturers, regulatory agencies, and research institutions. A public service of the American Chemistry Council.

Chlorine Chemistry Council

Address: 1300 Wilson Boulevard, Arlington, VA 22209, USA

Phone: +1 703 741-5000

Web site: <http://c3.org>

Comprised of chlorine and chlorinated product manufacturers, CCC is a business council of the American Chemistry Council. It strives to achieve policies that promote the continuing, responsible uses of chlorine and chlorine-based products.

Chlorine Institute, Inc., The

Address: 2001 L Street N.W., Suite 506, Washington, DC 20036

Phone: +1 202 775-2790

Fax: +1 202 223-7225

E-mail: tkerns@cl2.com

Web site: www.cl2.com

A trade association of companies that are involved or interested in the safe production, distribution and use of chlorine, sodium and potassium hydroxides, and sodium hypochlorite, and the distribution and use of hydrogen chloride.

Consortium for International Crop Protection

Address: Dr. Richard E. Ford, Executive Director Oregon State University, c/o Integrated Plant Protection Center, 2040 Cordley Hall, Corvallis, OR 97330, USA

E-mail: R-FORD1@uiuc.edu

Web site: www.ipmnet.org

A non-profit organization formed in 1978 by a group of U.S. universities. Its principal purpose is to assist developing nations reduce food crop losses caused by pests while also safe-guarding the environment.

Council for Biotechnology Information

Address: P.O. Box 34280, Washington, DC, 20043-0380, USA

Phone: 202-467-6565

Web site: www.whybiotech.com

The council was launched in April of 2000 by seven leading biotechnology companies and two trade associations with a vision to create a new communications initiative built on a mix of research, advertising, media relations and constituency relations. CBI's founding companies are BASF, Bayer CropScience, Dow Chemical, DuPont, Monsanto and Syngenta. Two trade associations, the Biotechnology Industry Organization and CropLife America, also are members.

CropLife America

Address: 1156 15th Street, N.W., Ste. 400, Washington, DC 20005, USA

Phone: +1 202-296-1585

Fax: +1 202-463-0474

E-mail: member-service@croplifeamerica.org

Web site: www.croplifeamerica.org

CropLife America represents the developers, manufacturers, formulators and distributors of plant science solutions for agriculture and pest management in the United States. It promotes the environmentally sound use of crop protection products for the economical production of safe, high quality, abundant food, fiber and other crops. CropLife America was formerly the American Crop Protection Association.

Environmental Working Group

Address: 1436 U Street NW, Ste. 100, Washington DC 20009, USA

Phone: +1 202-667-6982

Fax: +1 202-232-2592

E-mail: info@ewg.org

Web site: www.ewg.org

This organization investigates issues affecting the environment, particularly issues involving the use of agricultural chemicals.

Fertilizer Institute, The

Address: Union Center Plaza, 820 First Street, N.E., Suite 430, Washington, D.C. 20002, USA

Phone: +1 202-962-0490

Fax: +1 202-962-0577

E-mail: kmathers@tfi.org

Web site: <http://www.tfi.org>

Represent the makers, transporters and providers of fertilizer.

Insecticide Resistance Action Committee

Address: P.O. Box 413708, Kansas City, MO 64141-3708, USA

Web site: www.plantprotection.org/IRAC

Provides a coordinated crop protection industry response to the development of resistance in insect and mite pests. During the last decade, IRAC has formed several international working groups to provide practical solutions to mite and insect resistance problems within major crops and pesticide groups.

Institute of Food Technologists

Address: 525 West Van Buren, Ste. 1000, Chicago, IL 60607, USA

Phone: +1 312 782-8424

Fax: +1 312 782-8348

E-mail: info@ift.org

Web site: www.ift.org

The Institute of Food Technologists is a nonprofit scientific society with 28,000 members working in food science, food technology, and related professions in industry, academia and government.

National Lime Association (NLA)

Address: 200 North Glebe Road, Suite 800, Arlington, Virginia 22203, USA

Phone: +1 703 243-5463

Fax: +1 703 243-5489

E-mail: natlime@lime.org

Web site: www.lime.org

The trade association for U. S. and Canadian manufacturers of high calcium quicklime, dolomitic quicklime, and hydrated lime, collectively referred to as "lime."

Natural Resources Defense Council (NRDC)

Address: 40 West 20th St., New York, NY 10011, USA

Phone: +1 212-727-2700

Fax: +1 212-727-1773

E-mail: nrdcinfo@nrdc.org

Web site: www.nrdc.org

NRDC uses law, science, and the support of more than 500,000 members nationwide to protect the planet's wildlife and wild places and to ensure a safe and healthy environment for all living things. Maintains offices in Washington, Los Angeles, and San Francisco.

Pesticide Action Network (PAN); Pesticide Action Network North America (PANNA)

Address: 49 Powell St., Ste. 500, San Francisco, CA 94102, USA

Phone: +1 415-981-1771

Fax: +1 415-981-1991

E-mail: panna@panna.org

Web site: www.panna.org

Pesticide Action Network North America is the regional center for PAN International. PANNA has campaigned to replace pesticides with ecologically sound alternatives since 1982. The organization links over 100 affiliated health, consumer, labor, environment, progressive agriculture and public interest groups in Canada, Mexico and the U.S. with more than 600 partners worldwide to promote healthier, more effective pest management through research, policy development, education, media, demonstrations of alternatives and international advocacy campaigns. This activist group has a wealth of information useful to anyone in the industry.

Society of Environmental Toxicology and Chemistry

Address: 1010 N. 12th Ave., Pensacola, FL 32501-3370, USA

Phone: +1 904 469 1500

Fax: +1 904 469 9778

E-mail: setac@setac.org

Web site: www.setac.org

An independent, international, nonprofit professional society that provides a forum for individuals and institutions engaged in the study of environmental issues, management and conservation of natural resources, environmental education, and environmental research and development. Offices in Belgium, Australia and the United States.

Sulphur Institute, The

Address: 1140 Connecticut Ave., N.W., Ste. 612, Washington, DC 20036, USA

Phone: +1 202-293-9660

Fax: +1 202-293-2940

E-mail: sulphur@sulphurinstitute.org

Web site: www.sulphurinstitute.org

TSI is an international, non-profit organization supported by the world's sulphur industry, dedicated to promoting its consumption in established and new markets, as well as its safe handling and transport

URUGUAY

Latin American and Caribbean Food Science and Technology Association (ALACCTA)

Address: Asociacion Latinoamericana y del Caribe de Ciencia y Tecnologia de Alimentos (ALACCTA)

Ave. Centenario 3143 Ap. 302, 11600 Montevideo, Uruguay

Fax: +582 2 480 3932

E-mail: mtaranto@adinet.com.uy

Web site: <http://acd.ufrj.br/consumo/alaccta>

This association has links to member associations in Latin America and the Caribbean.

Uruguayan Chemical and Pharmaceutical Association

Address: Asociacion de Quimica y Farmacia del Uruguay (AQFU)

Ejido 1589, Montevideo, Uruguay

Phone: +598 2 900 0711

Fax: +598 2 900 6340

E-mail: info@aqfu.org.uy

Web site: www.aqfu.org.uy

Uruguayan Chemical Industry Association

Address: Asociación de la Industria Química de Uruguay
Sudy Lever SA, Treinta y Tres 1269, Casilla de Correo 1385, U – 11000 Montevideo, Uruguay

VENEZUELA

Venezuelan Chemical Society

Address: Sociedad Venezolana de Quimica (SVQ)
Central University of Venezuela, Institute of Chemistry,
Apartado 3895, Caracas 1040, Venezuela

Fax: +582 962-1025

Web site: <http://socvenquim.org>

Appendix F: Directory of Hotlines, Databases, and Web Sites

Air Risk Information Support Center

Address: Office of Air Quality Planning and Standards
U.S. Environmental Protection Agency
Research Triangle Park, NC 27711, USA

Hotline: +1 919 541-0888

Fax: +1 919 541-1818

Web site: www.epa.gov/ttn/atw/hepindex.html

Assists state and local air pollution control agencies and EPA regional offices with technical matters pertaining to health, exposure, and risk assessment of air pollutants. Services are also extended to the general public, small businesses and international agencies. Hours: Thursday 8:00 a.m. to 5:00 p.m., EST; Friday 8:00 a.m. to 4 p.m., EST.

Aerometric Information Retrieval System

Address: Office of Air and Radiation, Office of Air Quality Planning and Standards, U.S. Environmental Agency, Research Triangle Park, NC 27711, USA

Hotline: +1 800 334-7909

Fax: +1 919 541-0028

Web site: www.epa.gov/airs/

AIRS is a computer-based repository of information about airborne pollution in the United States and various World Health Organization member countries. The system is administered by the U.S. Environmental Protection Agency, Office of Air Quality Planning and Standards (OAQPS), Information Transfer and Program Integration Division (ITPID), located in Research Triangle Park, North Carolina, and provides a national repository for air pollution data that is reported to the EPA by states and local agencies. Call for other network addresses and available linkage types. Hours: Voice, 8:30 a.m. to 5:00 p.m. EST, Monday through Friday. Electronic: 24 hours, everyday.

Aquatic Toxicity Information Retrieval Database

Address: Mid-Continent Ecology Division Laboratory
National Health and Environmental Effects Research Laboratory

U.S. Environmental Protection Agency
6201 Congdon Boulevard, Duluth, MN 55804-2595, USA

Phone: +1 218 529-5225

Fax: +1 218 529-5003

E-mail: ecotox.support@epa.gov

Web site: www.epa.gov/ecotox

Contains information on the toxic effects of 5,600 chemicals on more than 2,800 aquatic species of animals and plants, excluding birds, aquatic mammals, and bacteria. Has now been incorporated into ECOTOX Data System. Hours: 8:00 a.m. to 4:30 p.m. CST, Monday - Friday.

Canadian Centre for Occupational Health and Safety - CCINFO MSDS Series

Address: Canadian Centre for Occupational Health and Safety, 250 Main St. East, Hamilton, Ontario, L8N 1H6, Canada

Phone: +1 905 570-8094, 800 668-4284, (toll-free in Canada and USA)

Fax: +1 905 572-2206

E-mail: custserv@ccohs.ca

Web site: www.ccohs.ca

A bundle of subscription services of more than 50 databases on occupational health and safety information, are fully operable in both English and French. Contains over 70,000 MSDSs as well as CHEMINFO database of hazardous information on over 1,044 chemicals. Available online through CCINFOline; on CD-ROM through CCINFOdisc.

Canadian Pollution Prevention Information Clearinghouse

Address: The National Office of Pollution Prevention
351 St. Joseph Boulevard, Hull, Quebec K1A 0H3, Canada

Phone: +1 819 997-2800

Hotline: +1 800 668-6767

Fax: +1 819 953-2225

E-mail: enviroinfo@ec.gc.ca

Fax: +1 519 337 3486

Web site: www.ec.gc.ca/cppic

Provides pollution information from 1,200 references.

Center for Environmental and Regulatory Information Systems

Address: Entomology Department, Purdue University
1231 Cumberland Ave., Ste. A, West Lafayette, IN 47906-1317, USA

Phone: +1 765 494-6616

Fax: +1 765 494-9727

E-mail: info@ceris.purdue.edu

Web site: www.ceris.purdue.edu

The Center for Environmental and Regulatory Information Systems is home to a collection of databases of information on pesticides, plant export/import, and exotic pest tracking. Data are received or derived principally from the US Environmental Protection Agency, US Department of Agriculture, and USA state agencies. CERIS is a center within the Entomology Department at Purdue University. Provides current information on EPA product registration and tolerance data for pesticides and hazardous chemicals. It uses the National Pesticides Information Retrieval System (NPIRS), EPA, U.S. Department of Agriculture, and state information to provide pesticide product information, registration guidelines, and descriptions of studies in the field. This a membership clearinghouse operated for the Office of Pesticide Programs, U. S. Environmental Protection Agency.

CHEMDEX

Web site: www.chemdex.org

A directory of more than 5800 international chemistry links on the World Wide Web. Maintained at the Department of Chemistry, University of Sheffield, UK.

The Chemical Alliance**Web site:** www.chemalliance.org

Provides regulatory information for the chemical process industry. The ChemAlliance site was made possible in large part due to funding provided by the United States Environmental Protection Agency. ChemAlliance is a partnership between the Chemical Industry, EPA's Office of Enforcement and Compliance Assurance, and the ChemAlliance staff, who reside at Michigan Technological University, Pacific Northwest National Laboratory, and University of Wisconsin.

Chemical Carcinogenicity Research Information System**Address:** National Library of Medicine

8600 Rockville Pike, Bethesda, MD 20894, USA

Phone: +1 800 272-4787**Fax:** +1 301 496-0822**Web site:** www.toxnet.nlm.nih.gov/cgi-bin/sis/htmlgen?ccris

A scientifically evaluated and fully referenced data bank, developed and maintained by the National Cancer Institute (NCI). It contains some 8,000 chemical records with carcinogenicity, mutagenicity, tumor promotion, and tumor inhibition test results. Data are derived from studies cited in primary journals, current awareness tools, NCI reports, and other special sources. Test results have been reviewed by experts in carcinogenesis and mutagenesis.

ChemConnect**Web site:** <http://my.chemconnect.com>

A membership site for daily, world-wide news and resources for the chemical industry. Also a buyers' trading forum.

Chemyclopedia**Web site:** www.chemyclopedia.ims.ca

A buyer's guide of commercially available chemicals in the United States, as submitted by the suppliers. Sponsored by the American Chemical Society.

Chemical Evaluation Search & Retrieval System

Address: Michigan State Department of Natural Resources and the Ontario Ministry of the Environment
Great Lakes and Environmental Assessment Section
Knapp's Office Centre, P.O. Box 30273, Lansing, MI 48909, USA

Phone: +1 800 668-4284**Fax:** +1 905 572-2200**Web site:** www.ccohs.ca/products/databases/cesars.html

The CESARS database contains comprehensive environmental and health information on chemicals. It provides detailed descriptions of chemical toxicity to humans, mammals, aquatic and plant life, as well as data on physical chemical properties, and environmental fate and persistence. Each record consists of chemical identification information and provides descriptive data on up to 23 topic areas, ranging from chemical properties to toxicity to environmental transport and fate. Records are in English. Available online through CCINFOLine from the Canadian Centre For Occupational Health and Safety (CCOHS) and

Chemical Information System (CIS); on CD-ROM through CCINFODisc.

ChemExper Chemical Directory**Web site:** www.chemexper.com

A Belgian site giving details of over 70,000 chemicals, as submitted by the suppliers.

ChemExtra**Web site:** www.chemextra.com

A British site that lists over 28,000 companies from 135 countries, with 100,000 chemicals, products and services as submitted by the suppliers. Sponsored by the British Chemical Industries Association. Very extensive and easy to use, but discontinued in August, 2004. May be reinstated in the future.

ChemFinder.com**Web site:**<http://chemfinder.cambridgesoft.com/siteslist.asp>

Database and Internet searching.

Chemical Hazard Response Information System - CHRIS**Address:** Office of Marine Environmental Protection Division

U.S. Coast Guard

2100 2nd St., SW, Washington, DC 20593, USA**Phone:** +1 202 267-2611**Fax:** +1 202 426-7881**E-mail:** stinet@dtic.mil**Web site:** www.chrismanual.com

Provides emergency response and chemical handling information for more than 1,200 chemical substances that would be involved in chemical transport accidents, particularly by water. Contains information on labeling, physical and chemical properties, health and fire hazards and hazard classifications, chemical reactivity, and water pollution. Includes safety procedures for preventing emergency situations. Available online through Chemical Information System (CIS) and Canadian Centre for Occupational Health and Safety (CCOHS); on CD-ROM through CCINFODisc, SilverPlatter CHEM-BANK, as part of TOMES Plus System; on magnetic tape through TOMES Plus System; and from National Information Service Corporation.

ChemIndustry.com**Web site:** <http://chemindustry.com>

A marvelous chemical directory to industry sectors, manufacturers, services, careers, equipment and software, portals, events, organizations, institutions, software, and much, much more. Has links to other search sites.

Chemical Registry System**Address:** Office of Environmental Information

U.S. Environmental Protection Agency

Web site: www.epa.gov/crs

CRS provides information on chemical substances and how they are represented in the Environmental Protection Agency regulations and data systems. A search engine for chemicals by CAS number, name, molecular formula, chemical type, definition, or other data identifiers.

CHEMTREC (24-hour emergency number for chemical accidents and spills)

Address: Chemical Transportation Emergency Center
American Chemistry Council (ACC)

1300 Wilson Boulevard, Arlington, VA 22209, USA

Phone: +1 703 741-5525; Continental US emergency phone only: +1 800 424-9300; Non-emergency, +1 800 262-8200; International emergencies only, +1 703 527-3887; Non-emergency, +1 703 741-5516

Fax: Emergency only, +1 703 741-6090; Non-emergency, +1 703 741-6089

E-mail: chemtrec@cmahq.org

Web site: www.chemtrec.com

Handles emergency calls regarding chemical spills, leaks, fires, exposures, or accidents. Chemical emergency number open 24 hours, every day. CHEMTREC provides emergency response information for incidents involving hazardous materials, serving the chemical and transportation industries and emergency services who may be called upon as first responders. Also provides referrals to manufacturers, regulatory agencies, and research institutions. A public service of the American Chemistry Council.

Clean Air Technology Center

Address: Office of Air Quality, Planning and Standards (AOQPS)

U.S. Environmental Protection Agency

Hotline: +1 919 541-0800 (English); 919 541-1800 (Spanish)

Fax: +1 919 541-0242

E-mail: catcmail@epamail.epa.gov

Web site: www.epa.gov/atn/catc

Serves as a resource on all areas of emerging and existing air pollution prevention and control technologies, and provides public access to data and information on their use, effectiveness and cost. In addition, CATC provides technical support, including access to EPA's knowledge base, to government agencies and others, as resources allow, related to the technical and economic feasibility, operation and maintenance of these technologies.

Clean Water Act

Address: Office of Water

U.S. Environmental Protection Agency

Hotline: +1 202 260-5700

E-mail: OW-general@epamail.epa.gov

Web site: www.epa.gov/OW

EPA's Office of Water directs callers with questions about the Clean Water Act to the appropriate EPA office. EPA also maintains a bibliographic database of Office of Water publications. The Safe Drinking Water Hotline number is +1 800 426-4791.

ChemWeb.com

Address: Web site: www.chemweb.com

A home page for chemical information.

China Chemical Network

Address: Web site: www.hi2000.net

A one-stop site for contacts and information about the chemical industry in China.

Compliance Resource Center for CFR Information

Web site:

www.setonresourcecenter.com/40CFR/Docs/wcd00000/wcd0008d.asp

A quick-find instrument to CFR titles 29 (OSHA), 40 and 49 (Transportation). Its index to 40 CFR 180 is an easy-to-use reference to "Tolerances and Exemptions from Tolerances for Pesticide Chemicals in Food." Presented by the Seton Company. A similar web site is maintained by the EPA but not in as concise format. The EPA site can be located at

<http://www.epa.gov/pesticides/food/viewtols.htm>.

Comprehensive Chemical Contaminant Series

Electronic version of Lewis "Sax's Dangerous Properties of Industrial Materials," 9th ed., "Hawley's Condensed Chemical Dictionary," "Prager's "Environmental Contaminant Reference Databook, Vols. I, II & III." Verschueren's "Handbook of Environmental Data on Organic Chemicals, 3rd ed., " and Pohanish and Greene's "Hazardous Materials Handbook," on CD-ROM. available from John Wiley and Sons, New York, NY, 1998.

Comprehensive Environmental Response, Compensation, and Liability Information System

Address: Office of Solid Waste and Emergency Response (OSW), U.S. Environmental Protection Agency

401 M St., SW, Washington, DC 20460, USA

Phone: +1 202 260-8321; 800 775-5037

Fax: +1 703 603-9133

Web site: www.epa.gov/superfund/sites/cursites

The Superfund database containing information on all aspects of hazardous waste sites from initial discovery to listing on the National Priorities List. Magnetic tapes are available quarterly from NTIS. Summary data under the Freedom of Information Act is available free by calling the Superfund Automated Phone System +1 800 775-5037.

COSMOS Online

Web site: www.cosmos.com.mx

The online directory to chemicals and chemical companies in Mexico and South America. Includes links to companies.

ECOTOX Database System

Address: Office of Research and Development, National Health and Environmental Effects Research Laboratory

Mid-Continent Ecology Division, U.S. Environmental Protection Agency, 6201 Congdon Boulevard, Duluth, MN 55804-2595, USA.

Phone: +1 218 529-5225

Fax: +1 218 529-5003

E-mail: ecotox.support@epa.gov

Web site: www.epa.gov/ecotox

The ECOTOXicology database is a source for locating single chemical toxicity data for aquatic life, terrestrial plants and wildlife. ECOTOX integrates three toxicology effects databases: AQUIRE (aquatic life), PHYTOTOX (terrestrial plants), and TERRETOX (terrestrial wildlife). These databases were created by the U.S. EPA, Office of Research and Development, and the National Health and Environmental Effects Research Laboratory (NHEERL), Mid-Continent Ecology Division. Hours: 8:00 a.m. to 4:30 p.m. CST, Monday - Friday.

Emergency Planning and Community Right-to-Know Act (EPCRA)

Address: Office of Solid Waste, U.S. Environmental Protection Agency

401 M St., SW, Washington, DC 20460, USA

Phone: +1 703 412-9810; TDD 703 412-3323

Hotline: +1 800 424-9346; TDD 800 535-7672

E-mail: tri.us@epamail.gov

Web site: www.epa.gov/epaoswer/hotline

Answers questions and distributes guidance regarding the emergency planning and community right-to-know regulations. Programs include the Resource Conservation and Recovery Act (RCRA), Underground Storage Tank program, the Risk Management Program (RMP), the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA or Superfund), and the EPA's Oil Program. The EPCRA Hotline operates weekdays from 9:00 a.m. to 6:00 p.m., EST, excluding federal holidays. Services are also available in Spanish.

Envirofacts Master Chemical Integrator (EMCI)

Address: Web site:

www.epa.gov/enviro/html/emci/chemref/

Lists chemicals monitored by the EPA major programs: Air (AFS), Water (PCS), Hazardous Waste (RCRIS), Superfund (CERCLIS), and Toxic Release Inventory (TRIS).

Environmental RouteNet

Address: Cambridge Scientific Abstracts

7200 Wisconsin Ave., Ste. 601 NW, Bethesda, MD 20814, USA

Phone: +1 301 961-6700; 800 843-7751

Fax: +1 301 961-6720

E-mail: fred@csa.com

Web site: www.csa.com/routenet

Environmental RouteNet provides a single gateway to the world's foremost databases and information sources available on the Internet. The service includes searchable links to hundreds of carefully-screened environmentally-related resources, selected and indexed by the editors at Cambridge Scientific Abstracts. In addition, the site provides access to proprietary environmentally-related databases and to daily updates of environmentally-related

news stories, regulations and legislation, plus much, much more.

European Environmental Information and Observation Network

Address: Kongens Nytorv 6, DK-1050 Copenhagen K, Denmark

Phone: +45 33 367 100

Fax: +45 333 671 99

Web site: www.eionet.eu.int

EIONET is a collaborative network of the European Environment Agency and its member countries, connecting national agencies in the European Union, European reference centers, and principal organizations. These organizations jointly provide the information that is used for making decisions for improving the state of the environment in Europe and making EU policies more effective. EIONET is both a network of organizations and a electronic network (e-EIONET).

India Chemical Manufacturers Directory

Web site:

<http://epages.webindia.com/bycategory/chemicals>

Links to Indian chemical manufacturers.

Indian Mart

Address: Web site: www.indiamart.com

Indian Chemical Manufacturers and Exporters Directory.

International Council of Chemical Associations

Web site: www.icca-chem.org

This site has articles and papers on issues facing the chemical industry throughout the world.

Inventory of Information Sources on Chemicals

Address: UNEP Chemicals

11-13, chemin des Anemones, 1219 chatelaine, Geneva, Switzerland

Phone: +41 22 917 81 11

Fax: +41 22 797 34 60

E-mail: chemicals@unep.ch

Web site: www.chem.unep.ch/irptc

Acts as a central point from which the existence and whereabouts of international chemical information can be obtained.

Integrated Risk Information Hotline

Address: Office of Research and Development, U.S. Environmental Protection Agency

26 W. Martin Luther King Dr., Cincinnati, OH 45268, USA

Phone: +1 513 569-7254

Hotline: +1 513 569-7159

E-mail: Hotline.IRIS@epa.gov

Web site: www.epa.gov/iris

Provides information on how levels of exposure of hazardous chemicals affect human health. Covers levels of exposure to hazardous chemicals below which no adverse health effects are expected to occur in various segments of

the human population. The reference dose and carcinogenicity assessments on IRIS can serve as guides in evaluating potential health hazards and selecting response to alleviate a potential risk to human health. Hours: 8:00 a.m. to 4:40 p.m. EST, Monday - Friday.

Malaysia Company Directory

Web site: www.malysiacompany.com

A directory of Malaysia industry.

MBendi Information for Africa

Web site: <http://mbendi.co.za>

National overviews and product finder for the African chemical industry. Includes links to chemical companies.

MDL Information Systems, Inc.

Address: 14600 Catalina St., San Leandro, CA 94577, USA

Phone: +1 510 895-1313

Fax: +1 510 614-3608

E-mail: info@mdli.com

Web site: www.mdli.com

Provides information for the life science and chemical industries, including an enterprise framework for identifying successful new products.

MEDLINE

Address: National Center for Biotechnology Information, National Library of Medicine

Bldg. 38A, Rm. 8N805, Bethesda, MD 20894, USA

Phone: +1 301 496-2475; 800 272-4787

Fax: +1 301 480-9241; +1 301 496-0822

Web site: www.nlm.nih.gov

MEDLINE is the National Library of Medicine's premier bibliographic database covering the fields of medicine, nursing, dentistry, veterinary medicine, the health care system, and the preclinical sciences. MEDLINE contains bibliographic citations and author abstracts from more than 4,000 biomedical journals published in the United States and 70 other countries. The file contains over 11 million citations dating back to the mid-1960's. Coverage is worldwide, but most records are from English-language sources or have English abstracts. Especially useful for researching toxicology of a particular chemical; for biological monitoring of a particular chemical; for linking a disease to chemical exposure, and similar medical and health matters. PubMed is the electronic service feature of MEDLINE, linking users directly to publishers' sites and full texts.

National Pesticide Information Center

Address: Oregon State University, Department of Agricultural Chemistry Extension

Weniger, Room 333, Corvallis, OR 97331-6502, USA

Hotline: +1 800 858-7378 (general public) or 800 858-7377 (medical and government personnel)

Fax: +1 503 737-0761

E-mail: nptn@npic.orst.edu

Web site: <http://npic.orst.edu>

Provides access to detailed information on all categories of pesticides including herbicides, fungicides, insecticides, and rodenticides. Included is information on pesticide toxicity, health effects, residual data, efficacy, and other information. NPIC is a cooperative effort of the U.S. EPA and the Oregon State University Department of Agricultural Chemistry. NPIC is staffed from 6:30 a.m. to 4:30 p.m. Pacific Standard Time.

National Response Center

Address: U.S. Coast Guard Headquarters

2100 2nd Street, S.W., Room 2611, Washington, DC 20593, USA

Hotline: +1 800 424-8802

Fax: +1 202-267-2675

Web site: www.nrc.uscg.mil

The federal government's national communication center that receives all reports of releases involving hazardous substances and oil. Hours: 24 hours, everyday.

National Technical Information Service Information Center

Address: U.S. Department of Commerce

5285 Port Royal Road, Springfield, VA 22161, USA

Phone: +1 703 605-6000

Fax: +1 703 605-6900

Web site: www.ntis.gov

The federal government's central source for the sale of scientific, technical, engineering and related business information produced by or for the U.S. government. Information on more than 600,000 information products covering over 350 subject areas from more than 200 federal agencies.

New Jersey Right to Know Hazardous Substance Fact Sheets

Address: New Jersey Department of Health and Senior Services, Division of Epidemiology, Environmental and Occupational Health

Right to Know Program

P.O. Box 360, Trenton, NJ 08625-0360, USA

Phone: +1 609-984-1863

Fax: +1 609-292-5677

Web site:

www.state.nj.us/health/eoh/rtkweb/rtkhsfs.htm#A

This agency produces "Right to Know Hazardous Substance Fact Sheets" that summarize information from many sources. Industrial hygienists are available to answer questions regarding the control of chemical exposures.

NIOSH Technical Information Center Database - NIOSHTIC

Address: Standards Development and Technology Transfer Division, Technical Information Branch

U.S. National Institute for Occupational Safety and Health
4676 Columbia Pkwy., Cincinnati, OH 45226-1998, USA

Phone: +1 513 533-8328; 1+800 356-4674

Fax: +1 513 533-8573

E-mail: pubstaf@cdc.gov

Web site: www.cdc.gov/niosh/nioshtic.html

The electronic, bibliographic database of more than 2,000 journals and 70,000 monographs on all aspects of occupational safety and health. Available through DIALOG Information Services, MEDLARS as part of TOXLINE, Silver Platter and other commercial systems.

Online Library System

Address: Public Information Center, U.S. Environmental Protection Agency

406 M. St., SW, Washington, DC 20460, USA

Phone: +1 919 541-7862; 800 334-2405

Fax: +1 202 260-6257

E-mail: public-access@epamail.epa.gov

Web site: www.epa.gov/natlbra/ols.htm

OLS is the Online Library System for the Library Network of the United States Environmental Protection Agency. It consists of several related databases that can be used to locate books, reports, and audiovisual materials on a variety of topics.

Pesticides and Foods - Residue Limits on Foods

Address: U.S. Environmental Protection Agency

401 M St., SW, Washington, DC 20460, USA

Web site: www.epa.gov/pesticides/food/viewtols.htm

EPA database of tolerance limits for pesticide residue on foods. The EPA tolerance database is being updated; meanwhile this site leads to 40 CFR 180 published July 1, 2004. See above: Compliance Resource Center for CFR Information.

Pollution Prevention Information Clearinghouse

Address: Office of Pollution Prevention, Pesticides and Toxic Substances Chemical Library (OPPTS Chemical Library)

U. S. Environmental Protection Agency

401 M St., SW, Washington, DC 20460, USA

Hotline: +1 202 260-1023

Fax: +1 202 260-4659

E-mail: ppic@epa.gov

Web site: www.epa.gov/oppt/library/ppicindex.htm

A free, non-regulatory service of the EPA dedicated to reducing or eliminating industrial pollutants through technology transfer, education, and public awareness. Hours: 8:30 a.m. - 4:00 p.m. EST; 24-hour-a-day voice mail.

RCRA, Superfund & EPCRA Hotline

Address: Office of Solid Waste

U. S. Environmental Protection Agency

Hotline: +1 800 424-9346; +1 703 412-9810

E-mail: tri.us@epamail.gov

Web site: www.epa.gov/epaoswer/hotline

Provides information about all RCRA regulations and programs including the Resource Conservation and Recovery Act (RCRA); Comprehensive Environmental Response Compensation and Liability Act (CERCLA, or Superfund); and Emergency Planning and Community

Right-to-Know Act (EPCRA)/Superfund Amendments Reauthorization Act

(SARA) Title III. Operates weekdays from 9:00 a.m. to 6:00 p.m., EST, excluding federal holidays. Services are also available in Spanish.

Registry of Toxic Effects of Chemical Substances

Address: Standards Development and Technology Transfer Division, Technical Information Branch

U.S. National Institute for Occupational Safety and Health

4676 Columbia Pkwy., Cincinnati, OH 45226-1998, USA

Phone: +513 533-8328; +1 800 356-4674

Fax: +1 513 533-8573

E-mail: pubstaf@cdc.gov

Web site: www.cdc.gov/niosh/rtecs.html

RTECS provides toxicology data for more than 130,000 chemicals in four categories: substance identification; toxicity/biomedical effects; toxicology and carcinogenicity review; and exposure standards and regulations. Built and maintained by the National Institute for Occupational Safety and Health (NIOSH) as a segment of the Toxic Release Inventory database. Available online, CD-ROM and computer tape from NIOSH and from commercial database vendors.

Safe Drinking Water Data & Databases

Address: Office of Water (OW), Ground Water and Drinking Water

U.S. Environmental Protection Agency

401 M St., SW, Washington, DC 20460, USA

Hotline: +1 703 285-1098; +1 800 426-4791

Fax: +1 703 285-1101

E-mail: hotline-sdwa@epamail.epa.gov

Web site: www.epa.gov/safewater/databases.html

Provides information about drinking water regulations and related topics. Hours: 9:00 a.m. through 5:30 p.m. EST, weekdays except federal holidays.

TOMES PLUS Information System.

Address: Micromedex Inc

6200 S. Syracuse Way, Ste. 300, Greenwood Village, CO 80111-4740, USA

Phone: +1 303 486-6400; 800 525-9083

Fax: +1 303 486-6464

E-mail: info@mdx.com

Web site: www.micromedex.com

Contains a collection of proprietary and government databases on toxicology, environment, and industrial medicine and the hazardous effects related to chemical exposure in manufacturing and transportation, and gives the proper response in chemical emergency situations. Contains several proprietary files as well as files of major international journals, standard reference sources, professional specialists, chemical manufacturers, government agencies, and poison centers. Databases include Hazardtext Hazards Management, SARAtext System, HSDB (Hazardous Substance Data Bank) from NLM, CHRIS from the U.S. Coast Guard, IRIS, and New Jersey Fact Sheets.

Toxic Substances Control Act (TSCA) Hotline

Address: TSCA Assistance Information Service,
Office of Prevention, Pesticides, and Toxic Substances
(OPPTS), Office of Pollution Prevention and Toxics,
U. S. Environmental Protection Agency

Phone: +1 202 554-1404; TDD 202 554-0551

Fax: +1 202 554-5603

E-mail: tsca-hotline@epa.gov

Web site: www.epa.gov/Region5/defs/html/tsca.htm

Operating under contract to EPA, the TSCA Hotline provides technical assistance and information about programs under the Toxic Substances Control Act (TSCA), including the Asbestos School Hazard Abatement Act, the Asbestos Hazard Emergency Response Act, and the Lead Exposure Reduction Act. Hours: 8:30 a.m. - 5:00 p.m. EST, weekdays.

TOXNET - Toxicology Data Network

Address: National Library of Medicine, Specialized Information Services

8600 Rockville Pike, Bethesda, MD 20894, USA

Phone: +1 800 272-4787

Fax: +1 301 480-3537

E-mail: tehip@tehl.nlm.nih.gov

Web site: <http://toxnet.nlm.nih.gov>

A cluster of databases on toxicology, hazardous chemicals and related areas, i.e. the pharmacological, biochemical, physiological, and toxicological effects of drugs and other chemicals.

University of Iowa Center for Global and Regional Environmental Research

Address: University of Iowa, 204 IATL, Iowa City, IA 52242, USA

E-mail: webadm@cgrer.uiowa.edu

Web site: www.cgrer.uiowa.edu

Has a world-wide database of federal and non-profit environmental research organizations that focus on the multiple aspects of global environmental change, including the regional effects on natural ecosystems, environments and resources as well as on human health, culture and social systems.

U.S. Federal Government Agencies Directory

Web site: www.lib.lsu.edu/gov/fedgov

A list of federal agencies on the Internet. Maintained by Louisiana State University.

Vermont SIRI - Safety Information Resources, Inc.

Address: University of Vermont

E-mail: dan@siri.org

Web site: <http://siri.uvm.edu/msds>

An exhaustive source of environmental health and occupational safety information: MSDSs; links to other MSDS sites; links to safety sites on the Internet; links to occupational safety and health and environmental organizations and research programs; OSHA and EPA

regulations; NIOSH databases; discussion boards; and much more.

Yahoo Chemistry Web Directory

Web site: <http://dir.yahoo.com/science/chemistry>

An exhaustive directory of resources on the web for chemists in varied fields: industrial, research, and academia.

Appendix G: Agrochemical Web Sites

Sources of Information about Agrochemicals and Food Safety

AGRICOLA

Web site: www.nal.usda.gov/ag98

AGRICOLA (AGRICultural OnLine Access) is a bibliographic database of citations to the agricultural literature created by the National Agricultural Library and its cooperators. Production of these records in electronic form began in 1970, but the database covers materials in all formats, including printed works from the 15th century. The records describe publications and resources encompassing all aspects of agriculture and allied disciplines, including animal and veterinary sciences, entomology, plant sciences, forestry, aquaculture and fisheries, farming and farming systems, agricultural economics, extension and education, food and human nutrition, and earth and environmental sciences. Although AGRICOLA does not contain the materials, thousands of AGRICOLA records are linked to online full-text documents, with new links being added every day. AGRICOLA is searchable on the World Wide Web at <http://www.nal.usda.gov/ag98>. For information on how to obtain library materials from NAL, see NAL's Document Delivery Services

Web site: <http://www.nal.usda.gov/ddsb/>

The AGRICOLA database is organized into two bibliographic data sets, which must be searched separately. One data set is the Online Public Access Catalog, known as "Books, etc.," that contains citations to books, audiovisual materials, serial publications, and other materials in the NAL collection. AGRICOLA also contains bibliographic records for items cataloged by other libraries and not held in NAL's collection. The other data set is the Journal Article Citation Index, known as "Articles, etc." It includes citations, many with abstracts, to journal articles (see "List of Journals Indexed"), book chapters, reports, and reprints, selected primarily from the materials cataloged in Books, etc. Both data sets are updated daily with newly cataloged and indexed materials.

AGRICOLA is searchable via the Web using the VTLS Web Gateway. For those who prefer a text-oriented interface for searching the two data sets, Telnet access to ISIS (Integrated System for Information Services) is also available. AGRICOLA and ISIS are the same database, but ISIS is accessed from the production side of the system, via the VTLS99 interface. AGRICOLA can be accessed for a fee through several commercial vendors, both online and on CD-ROM. Users can also lease the AGRICOLA file from the National Technical Information Service (NTIS).

Agriculture Network Information Center (AgNIC)

Web site: <http://www.agnic.org/>

AgSearch - a service of Ceres OnLine

Web site: www.ceresgroup.com/col/agsearch/index

A service of Ceres Online, AgSearch is a gateway to over seventy search engines within the field of agriculture. Users are provided subject categories within the main menu and

also able to specify searches through a series of simple commands. AgSearch provides searches in the following categories: news (publications); research; genetics; production, economics, pest management, Internet and computer subjects; trade; government subjects; and water and irrigation.

Australia Agrifood Awareness

Address: P.O. Box E10, Kingston, ACT, 2604, Australia

Phone: +2 6273-9535

Fax: +2 6273-2331

E-mail : info@afaa.com.au

Web site: www.afaa.com.au

Agrifood Awareness Australia is an industry initiative, established to increase public awareness of, and encourage informed debate about, gene technology.

Australian and Asian Agriculture Links

Web site: <http://www.sanondaos.com>

A directory of more than 125 links to agriculture and pesticide matters in the Pacific rim. Part of the Sanonda Ltd. company web site. Includes links to herbicides, insecticides, crop production and control, literature, weather, and much more.

California Department of Pesticide Regulation (DPR) USEPA/OPP Database Queries

Web site: www.cdpr.ca.gov/docs/epa/epamenu

The California Department of Pesticide Regulation works closely with the USEPA Office of Pesticide Programs to develop internet access to data that are of significant value to the general public, chemical and agricultural industries. Brief registration information on approximately 90,000 products is currently online. The data include product number and name, company number and name, registration date, cancellation date, existing stocks date, and reason (if canceled), and product manager name and telephone number.

In addition, OPP's databases contain chemical ingredient and firm information. The chemical data is searchable by common, technical, synonym, CAS number, or trade names. The firm data is searchable by firm number, name, or portions thereof. These chemical, firm, and product databases have complementary links and are searchable by multiple variables. More information about the data and structure of EPA's PPIS can be found at: Pesticide Product Information System

With the advent of online access to PPLS (a collection of product label images in TIF format) has been linked directly to the product reports, enabling a user to look for products by any of the above criteria and then view the EPA Label image. *Note:* these label images do not reflect the California Registered label. For information regarding California registered labels contact CDPR's Label Resource Center at 916-324-0399.

Chemical Carcinogenicity Research Information System

Address: National Library of Medicine
8600 Rockville Pike, Bethesda, MD 20894, USA

Phone: +1 800 272-4787

Fax: +1 301 496-0822

Web site: www.toxnet.nlm.nih.gov/cgi-bin/sis/htmlgen?ccris

A scientifically evaluated and fully referenced data bank, developed and maintained by the National Cancer Institute (NCI). It contains some 8,000 chemical records with carcinogenicity, mutagenicity, tumor promotion, and tumor inhibition test results. Data are derived from studies cited in primary journals, current awareness tools, NCI reports, and other special sources. Test results have been reviewed by experts in carcinogenesis and mutagenesis.

Chemical Contaminants in Food

Web site:

www.who.int/fsf/Chemicalcontaminants/index2.htm

An excellent entry point to world-wide information about food safety. Includes access to GEMS/Food - the Global Environment Monitoring system/Food Contamination Monitoring and Assessment Programme. Includes links to documents and position papers on chemical hazards in the food supply chain, monitoring chemical contaminants, acute hazards exposure assessments, mycotoxins, and industrial and environmental contaminants.

Compliance Resource Center for CFR Information

Web site:

www.setonresourcecenter.com/40CFR/Docs/wcd00000/wcd0008d.asp

A quick-find instrument to CFR titles 29 (OSHA), 40 and 49 (Transportation). Its index to 180 CFR 180 is an easy-to-use reference to "Tolerances and Exemptions from Tolerances for Pesticide Chemicals in Food." Presented by the Seton Company. A similar web site is maintained by the EPA but not in as concise format. The EPA site can be located at <http://www.epa.gov/pesticides/food/viewtols.htm>

ENVIRO-ONE - Environmental News Information Service

Web site:

<http://enviroone.com/searchresults.php?searchtext=pesticides>

A nifty source for all things related to environmental information. The Pesticide site, alone, lists 109 resources for U.S. federal and state statistics, foreign information, a many, many resources.

EPA Envirofacts Warehouse

Web site: www.epa.gov/enviro

Public access to databases maintained by the U.S. Environmental Protection Agency. Databases such as Air, Chemicals, Facility Information, Releases, Water Permits, Drinking Water Contaminant Occurrence, Maps, and more.

EXTOXNET - Extension Toxicology Network

Web site: <http://extoxnet.orst.edu/>

This is a comprehensive entry gate for information on individual pesticides and data sources. EXTOXNET is a cooperative effort of University of California-Davis, Oregon State University, Michigan State University, Cornell University, and the University of Idaho. Primary files are maintained and archived at Oregon State University.

FASonline

International Maximum Residue Limit Database
USDA Foreign Agricultural Service

Web site: www.mrldatabase.com

This residue data base allows one to search for residue limits in nearly 90 countries. Searches can be made by specifying the commodity, pesticide, or pesticide type. It is managed by the Foreign Agricultural Service. The FAS web site provides resources of agricultural data bases and search engines, export data, and reports, statistics and contact information.

Food Safety Web Site

Web site: www.foodsafety.gov

The gateway to food safety information. Managed by the U.S. Department of Agriculture. Topics include consumer safety alerts and advice, industry assistance, foodborne pathogens, chemical contaminants, and food additives. This is the place to report illnesses and product complaints.

National Agricultural Library

Web site: www.nal.usda.gov

The National Agricultural Library is one of four National Libraries in the United States. NAL is a major international source for agriculture and related information. This Web site provides access to NAL's many resources and a gateway to its associated institutions.

National Agriculture Safety Database (NASD)

Address: Robert A. Taft Laboratories, 4676 Columbia Pkwy., Cincinnati, OH 45226, USA

Phone: +1 800-35-NIOSH; +1 800-356-4674

Web site: www.cdc.gov/nasd

The National Agriculture Safety Database (NASD) is a collection of information about health, safety and injury prevention in agriculture. The information in the database was contributed by safety professionals and organizations from across the nation in an effort to promote safety in agriculture. The database contains agriculture health and safety publications from 32 states, 4 federal agencies and 5 national organizations. The collection includes OSHA and EPA Standards; extension publications; abstracts and ordering information for agriculture safety-related videos; a NIOSH bibliography with abstracts for over 500 scientific publications; training materials; posters; sample new releases; and public service announcement scripts. Materials are categorized into topical, organizational, language, and state menus. Information in the database can be accessed on-screen and/or printed on demand.

National Integrated Pest Management Centers Information System, U.S. Department of Agriculture**Web site:** <http://www.ipmcenters.org>

The National IPM Network is a cooperating group of universities, government agencies, and other organizations that provides up-to-date information for pest management. There are four regional centers whose purpose are to identify, prioritize and coordinate a national pest management research, extension, and education program that is implemented on a regional basis.

National Library of Medicine, Specialized Information Services**Web site:** <http://sis.nlm.nih.gov>

A super list of world-wide sources of information about drugs, pesticides, environmental pollutants and other potential toxins. Ties into ASDTR, EPA, the National Toxicology Program Carcinogen List (NTPA), and other governmental sources.

National Pesticide Information Center

Address: Oregon State University
Department of Agricultural Chemistry Extension
Weniger, Room 333, Corvallis, OR 97331-6502, USA
Hotline: +1 800 858-7378 (general public) or 800 858-7377 (medical and government personnel)
Fax: +1 503 737-0761

E-mail: nptn@npic.orst.edu**Web site:** <http://npic.orst.edu>

Provides access to detailed information on all categories of pesticides including herbicides, fungicides, insecticides, and rodenticides. Included is information on pesticide toxicity, health effects, residual data, efficacy, and other information. NPIC is a cooperative effort of the U.S. EPA and the Oregon State University Department of Agricultural Chemistry. NPIC is staffed from 6:30 a.m to 4:30 p.m, Pacific Standard Time.

National Pesticide Information Retrieval System

Address: Center for Environmental and Regulatory Information Systems (CERIS)
Purdue University
1231 Cumberland Ave., Ste. A, West Lafayette, IN 47907, USA

Phone: +1 765 494-5249**Fax:** +1 765 494-0535**E-mail:** vcassens@purdue.edu**Web site:** www.ceris.purdue.edu/npirs

A collection of pesticide-related databases available by subscription which provides current information on products registered with the EPA and tolerance data for pesticides and hazardous chemicals. It also provides state registration information, registration guideline information, and descriptions of studies on pesticides and hazardous chemicals. It is administered by CERIS at Purdue University.

Office of Pesticide Programs**Address:** U. S. Environmental Protection Agency

Ariel Rios Building, 1200 Pennsylvania Ave., N.W.,
Washington, D.C. 20460, USA

Phone: +1 703-305-5805**Web site:** www.epa.gov/pesticides

This site leads you into everything you need to know about the federal pesticide programs, including notices about open comment periods, various pesticide uses, restricted use products, labeling, sources of information, safety programs, tolerance index files, and much more.

Office of Pesticide Programs, Pesticide Residue Limits**Web site:** www.epa.gov/pesticides/food/viewtols.htm

EPA sets limits on how much of a pesticide residue can remain on food. These pesticide residue limits are known as tolerances. Inspectors from the Food and Drug Administration and the United States Department of Agriculture monitor food in interstate commerce to ensure that these limits are not exceeded. The site can be searched by crop or by chemical.

Pesticide Action Network (PAN); Pesticide Action Network North America (PANNA)**Address:** 49 Powell St., Ste. 500, San Francisco, CA 94102, USA**Phone:** +1 415-981-1771**Fax:** +1 415-981-1991**E-mail:** panna@panna.org**Web site:** www.pesticideinfo.org

Pesticide Action Network North America is the regional center for PAN International. PANNA has campaigned to replace pesticides with ecologically sound alternatives since 1982. The PAN Pesticide Database brings together a diverse array of information on pesticides from many different sources, providing human toxicity (chronic and acute), ecotoxicity and regulatory information for about 5,400 pesticide active ingredients and their transformation products, as well as adjuvants and solvents used in pesticide products. This database of active ingredients has been integrated with the U.S. EPA product databases, which provide information on formulated products (the form of the pesticide that growers and consumers purchase for use) containing the active ingredients. The information is most complete for pesticides registered for use in the United States and provides a wealth of information useful to anyone in the industry. There are five regional networks which can be used for more specific information world-wide: PAN North America, PAN Europe, PAN Asia and the Pacific, PAN Africa, and PAN Latin America.

Pesticide.net**Address:** Wright & Sielaty, P.C.

1990 Old Bridge Rd., Ste. 202, Lake Ridge, VA 22192, USA

Phone: +1 703-492-0055**Fax:** +1 703-492-0066**Web site:** www.pestlaw.com

A comprehensive source of pesticide related news, laws, and regulatory information. Full text documents and other resources. Subscription needed for full access.

Pesticides and Food: Pesticide Residue Limits**Web site:**

<http://www.epa.gov/pesticides/food/viewtols.htm>

Pesticide residue tolerances limits for crops as reported by the EPA with references to EPA data bases and the Code of federal Regulations.

Pesticide Product Information System

Address: Office of Pesticide Programs

U. S. Environmental Protection Agency

Ariel Rios Building, 1200 Pennsylvania Ave., N.W.,
Washington, D.C. 20460, USA

Phone: +1 703-305-5805

Web site: www.epa.gov/opppmsd1/PPISdata

The Pesticide Product Information System contains information concerning all pesticide products registered in the United States. The files located in this download area are presented in ASCII to enable interested parties to access them using a variety of database and spreadsheet software.

Specific Pesticides Fact Sheets**Web site:**

http://www.epa.gov/pesticides/factsheets/chemical_fs.htm

Each Fact Sheet, prepared by the EPA, contains information about pesticides such as their physical properties, how they are used, scientific findings and pertinent regulatory activity. This site will also lead the user to a broader spectrum of regulatory information. They are most comprehensive and should be incorporated in any pesticide investigation.

Toxicology Information Response Center

Address: Toxicology and Risk Assessment Section (TARA)

Oak Ridge National Laboratory

1060 Commerce Park, MS 6480, Oak Ridge, TN 37830,
USA

Phone: +1 865 576-1746

Fax: +1 865 574-9888

Web site:

www.ornl.gov/sci/techresources/tirc/hmepg.shtml

Offers direct access to virtually all of the world's scientific and data bases for toxicology and related information. Covers chemicals, pesticides, food additives, industrial chemicals, heavy metals, environmental pollutants, and pharmaceuticals. The Center is online to more than 400 computerized databases, including DIALOG, MEDLARS, STN International, ITIS, and DROLS. It performs searches for outside users for a fee.

Tolerance Reassessment & Reregistration, EPA

Web site: www.epa.gov/oppsrrd1/reregistration

EPA is reviewing older pesticides (those initially registered prior to November 1984) under the federal Insecticide, Fungicide, and Rodenticide Act to ensure that they meet current scientific and regulatory standards. This process,

called reregistration, considers the human health and ecological effects of pesticides and results in actions to reduce risks that are of concern. EPA also is reassessing tolerances (pesticide residue limits in food) to ensure that they meet the safety standard established by the Food Quality Protection Act of 1996. EPA has integrated reregistration and tolerance reassessment to most effectively accomplish the goals of both programs. They reregistration eligibility statements are the most comprehensive studies available from the EPA.

University of Florida Institute of Food and Agricultural Science (AGRIGATOR)

Web site: <http://agrigator.ifas.ufl.edu/>

Web-agri

Address: Hyltel Multimedia

12a Rue de Brest, Rennes 35000, France

Web site: www.web-agri.com

This is a French site that offers an agricultural search engine porporting to search 859,512 agricultural web pages.

World Health Organization Food Safety Page

Web site: <http://www.who.int/fsf>

An excellent entry point to world-wide information about food safety. Includes links to documents and position papers on chemical hazards in the food supply chain, monitoring chemical contaminants, acute hazards exposure assessments, mycotoxins, and industrial and environmental contaminants.

Phosphoric acid, *O,O*-diethyl *O*-6-methyl-2-(1-methylethyl)-4-pyrimidinyl ester *see* . .Diazinon
Phosphoric acid, diethyl 4-nitrophenyl ester *see* . .Paraoxon
Phosphoric acid, diethyl *p*-nitrophenyl ester *see* . .Paraoxon
Phosphoric acid, 3-(dimethylamino)-1-methyl-3-oxo-1-propenyl dimethyl ester, (*E*)- *see* . .Dicrotophos
Phosphoric acid, dimethyl ester with 2-chloro-*N,N*-diethyl-3-hydroxycrotonamide *see* . .Phosphamidon
Phosphoric acid, dimethyl ester with *cis*-3-hydroxy-*N,N*-dimethylcrotonamide *see* . .Dicrotophos
Phosphoric acid, dimethyl ester with (*E*)-3-hydroxy-*N,N*-dimethylcrotonamide *see* . .Dicrotophos
Phosphoric acid, dimethyl ester with *cis*-3-hydroxy-*n*-methylcrotonamide *see* . .Monocrotophos
Phosphoric acid, dimethyl ester with methyl 3-hydroxycrotonate *see* . .Mevinphos
Phosphoric acid, (1-methoxycarboxypropen-2-yl) dimethyl ester *see* . .Mevinphos
Phosphoric acid, tetraethyl ester *see* . .TEPP
Phosphoric acid, trisodium salt *see* . .Trisodium Phosphate
Phosphoroamidic acid, 1,3-dithiolan-2-ylidene-, diethyl ester *see* . .Phosfolan
Phosphorodithioic acid-*O,O*-bis(1-methylethyl)-*S*-[2-((phenylsulfonyl)amino)ethyl]ester *see* . .Bensulide
Phosphorothioic acid, *O*-(4-bromo-2-chlorophenyl)-*O*-ethyl-*S*-propyl ester *see* . .Profenfos
Phosphorothioic acid, *O*-(4-bromo-2,5-dichlorophenyl) *O,O*-diethyl ester *see* . .Bromophos-ethyl
Phosphorothioic acid, *O*-(4-bromo-2,5-dichlorophenyl) *O,O*-dimethyl ester *see* . .Bromophos
Phosphorodithioic acid *S*-[(*tert*-butylthio)methyl]-*O,O*-diethylester *see* . .Terbufos
Phosphorodithioic acid *S*-[2-chloro-1-(1,3-dihydro-1,3-dioxo-2*H*-isoindol-2-yl)ethyl]*O,O*-diethyl ester *see* . .Dialifor
Dialifor
Phosphorodithioic acid, *S*-[(6-chloro-3-(mercaptomethyl)-2-benzoxazolinone] *O,O*-diethyl ester *see* . .Phosalone
Phosphorodithioic acid, *S*-(chloromethyl) *O,O*-diethyl ester *see* . .Chlormephos
Phosphorodithioic acid-*S*-(2-chloro-1-phthalimidoethyl)-*O,O*-diethyl ester *see* . .Dialifor
Phosphorothioic acid, *O*-(4-cyanophenyl)-*O,O*-dimethyl ester *see* . .Cyanofos
Phosphorodithioic acid, *O,O*-diethyl ester, *S,S*-diester with *p*-dioxane-2,3-dithiol *see* . .Dioxathion
Phosphorodithioic acid, *O,O*-diethyl ester, *S,S*-diester with methanedithiol *see* . .Ethion
Phosphorodithioic acid *O,O*-diethylesters-ester with *N*-isopropyl-2-mercaptoacetamide *see* . .Prothoate
Phosphorodithioic acid, *O,O*-diethyl *S*-[2-((1-methylethyl)amino)-2-oxoethyl]ester *see* . .Prothoate
Phosphorodithioic acid, *S*-[(1,3-dihydro-1,3-dioxo-isoindol-2-yl)methyl] *O,O*-dimethyl ester *see* . .Phosmet
Phosphorodithioic acid, *O,O*-dimethyl ester, *S*-ester with ethylmercaptophenylacetate *see* . .Phenthoate
Phosphorodithioic acid, *O,O*-dimethyl ester, *S*-ester with *N*-(mercaptomethyl)phthalimide *see* . .Phosmet
Phosphorodithioic acid *S*-[(1,1-dimethylethyl)thio)methyl]-*O,O*-diethyl ester *see* . .Terbufos
Phosphorodithioic acid, *O,O*-dimethyl *S*-[2-(methylamino)-2-oxoethyl] ester *see* . .Dimethoate

- Phosphorodithioic acid, *S,S'*-1,4-dioxane-2,3-diyl-*O,O,O',O'*-tetraethyl ester **see**. .Dioxathion
- Phosphorodithioic acid-*S,S'*-1,4-dioxane-2,3-diyl, *O,O,O',O'*-tetraethyl ester **see**. .Dioxathion

 WESLEY TRIPLE TIN 4L[®] see...Triphenyltin
 Compounds

WESPURIL[®] *see* . . . Dichlorophene
 WEST AGRO ACID SANITIZER[®] *see* . . . Pelargonic Acid
 WHAM! EZ[®] *see* . . . Propanil
 WHIP[®] *see* . . . Fenoxaprop-ethyl
 White arsenic *see* . . . Arsenous Oxide
 White-copperas *see* . . . Zinc Sulfate Heptahydrate
 White phosphoric acid *see* . . . Phosphoric Acid
 White phosphorus *see* . . . Phosphorus
 White spirits *see* . . . Stoddard Solvent
 White-vitriol *see* . . . Zinc Sulfate Heptahydrate
 Whiting *see* . . . Calcium Carbonate
 WHITMIRE[®] PT-110 *see* . . . Resmethrin
 WHITMIRE PT 527 WITH ALLETHRIN[®] *see* Allethrin
 WIDEMATCH[®] *see* . . . Clopyralid
 WIDEMATCH[®] *see* . . . Fluroxypyr 1-methylheptyl Ester
 WIE OBEN[®] *see* . . . Quinalphos
 WILBRO[®] *see* . . . Oxadiazon
 WILTHIN[®] *see* . . . Monocarbamide Dihydrogen Sulfate
 WILTZ[®]-65 *see* . . . Copper Naphthenate
 WING STOP- B[®] *see* . . . Sodium Dimethylthiocarbamate
 WINNER[®] *see* . . . Acetochlor
 WINTERWASH[®] *see* . . . Dinitro-*o*-cresol (DNOC)
 WINYLOPHOS[®] *see* . . . Dichlorvos
 WIPEOUT[®] *see* . . . Hydramethylnon
 WIRKSTOFF[®] 37289 *see* . . . Trichloronate
 WITCONATE[®]-60L *see* . . . Triethanolamine Dodecylbenzene Sulfonate
 WITCONATE[®]-60T *see* . . . Triethanolamine Dodecylbenzene Sulfonate
 WITCONATE[®]-79S *see* . . . Triethanolamine Dodecylbenzene Sulfonate
 WITCONATE[®]-5725 *see* . . . Triethanolamine Dodecylbenzene Sulfonate
 WITCONATE[®] S-1280 *see* . . . Triethanolamine Dodecylbenzene Sulfonate
 WITCONATE[®] TAB *see* . . . Triethanolamine Dodecylbenzene Sulfonate
 WITTOX[®]- C *see* . . . Copper Naphthenate
 WL 1650[®] *see* . . . Isobenzan
 WL 18236[®] *see* . . . Methomyl
 WL 19805[®] *see* . . . Cyanazine
 WL 41706[®] *see* . . . Fenpropathrin
 WL 43423[®] *see* . . . Perfluidone
 WL 43467[®] *see* . . . Cypermethrin
 WL 43775[®] *see* . . . Fenvalerate
 WL 85871[®] *see* . . . *alpha*-Cypermethrin
 WOCOSIN[®] *see* . . . Propiconazole
 WOFATOX 50 EC[®] *see* . . . Methyl Parathion
 WOLMAN SALTS[®] *see* . . . Sodium Dichromate
 WOLMAN[®] *see* . . . Tebuconazole
 WONUK[®] *see* . . . Atrazine
 WOODFUME VAPAM[®] *see* . . . Metham-Sodium
 WOODLIFE[®] *see* . . . Tebuconazole

WOODTREAT A[®] *see* . . . Pentachlorophenol
 WOTEXIT[®] *see* . . . Trichlorfon
 WR 62[®] *see* . . . Chlormequat Chloride
 WRDC149[®] *see* . . . Cypermethrin
 WSB 1 *see* . . . Cimectacarb
 WURM-THIONAL[®] *see* . . . Phenothiazine

- X -

X 149[®] *see* . . . Busulfan
 X-11085[®] *see* . . . Aminoethoxyvinylglycine Hydrochloride
 X-ALL[®] LIQUID *see* . . . Amitrole
 XDE-565[®] *see* . . . Cloransulam-methyl
 XE-938[®] *see* . . . Fenpropathrin
 Xenene *see* . . . Biphenyl
o-Xenol *see* . . . *o*-Phenylphenol
 XL 2G[®] *see* . . . Benefin
 XL 2G[®] *see* . . . Oryzalin
 XL 7[®] *see* . . . Bithionol
 XL-50[®] *see* . . . Phenothiazine
 XL ALL INSECTICIDE[®] *see* . . . Nicotine
 XR-29[®] *see* . . . Ammonium Hexafluorosilicate
 XRD 473[®] *see* . . . Hexaflumuron
 XRD-498[®] *see* . . . Flumetsulam
 XRM-3972[®] *see* . . . Clopyralid
 XRM-5019[®] *see* . . . Flumetsulam
 XRM-5084[®] *see* . . . Fluroxypyr 1-methylheptyl Ester
 XRM-5202[®] *see* . . . Triclopyr, Triethylammonium Salt
 XRM-5313[®] *see* . . . Flumetsulam
 3,5-Xylenol, 4-(dimethylamino)-, methylcarbamate *see* Mexacarbate
 3,4-Xylidine, 2,6-dinitro-*N*-(1-ethylpropyl)- *see* Pendimethalin
 2,4-Xylidine, *N,N'*-(methyliminodimethylidyne)bis- *see* Amitraz
 Xylofop-ethyl *see* . . . Quizalofop-Ethyl

- Y -

YALAN[®] *see* . . . Molinate
 YALTOX[®] *see* . . . Carbofuran
 YANOCK[®] *see* . . . Fluoroacetamide
 YARDER[®] *see* . . . Fluvalinate
 YASOKNOCK[®] *see* . . . Sodium Fluoroacetate
 Yellow cuprocide *see* . . . Cuprous Oxide
 Yellow mercuric oxide *see* . . . Mercuric Oxide
 Yellow oxide of mercury *see* . . . Mercuric Oxide
 Yellow phosphorus *see* . . . Phosphorus
 Yellow precipitate *see* . . . Mercuric Oxide
 Yellow pyoctanine *see* . . . Auramine
 YUKON[®] *see* . . . Dicamba
 YUKON[®] *see* . . . Sodium Dicamba
 YULAN[®] *see* . . . Molinate
